P-glycoprotein denotes p-glycoprotein, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

pH meter

pH meter is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phagocyte

phagocyte is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phagocytic vesicle

phagocytic vesicle is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phagolysosome

phagolysosome is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phagophores

phagophores is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phalanx unspecified

phalanx unspecified is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phantom pain

phantom pain describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

pharmaceutical adjuvant

pharmaceutical adjuvant is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pharmaceutical excipient

pharmaceutical excipient is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pharmaceutical solutions

pharmaceutical solutions is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pharmacist

pharmacist is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pharmacogenomic testing

pharmacogenomic testing is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat pharmacogenomic testing.

Synonyms:

pharmacologic substance

pharmacologic substance is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pharmacotherapy

pharmacotherapy is used in relation to pharmacotherapy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

pharmacy facility

pharmacy facility is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pharyngeal carcinoma

pharyngeal carcinoma describes a neoplastic process involving the tissue or organ named by the term. Di-

agnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

pharyngeal disease

pharyngeal disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

pharyngeal hemorrhage

pharyngeal hemorrhage describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

pharyngeal mucositis

pharyngeal mucositis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pharyngeal stenosis

pharyngeal stenosis describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

pharyngectomy

pharyngectomy is used in relation to pharyngectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

pharyngolaryngeal pain

pharyngolaryngeal pain describes a clinical disorder or finding in the body system or process named

by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

pharynx necrosis

pharynx necrosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pharynx neoplasm

pharynx neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

phase-contrast microscopy

phase-contrast microscopy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenacetin

phenacetin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenazopyridine

phenazopyridine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenelzine

phenelzine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

phenethyl isothiocyanate

phenethyl isothiocyanate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenethylamines

phenethylamines is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenformin

phenformin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenobarbital

phenobarbital concerns phenobarbital, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

phenocopy

phenocopy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenol

phenol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenolphthalein

phenolphthalein is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenols

phenols is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenothiazine

phenothiazine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenothiazines

phenothiazines is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenoxodiol

phenoxodiol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenoxybenzamine

phenoxybenzamine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenprocoumon

phenprocoumon is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phentermine

phentermine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenthoate

phenthoate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phentolamine

phentolamine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenylacetate

phenylacetate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenylalanine

phenylalanine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenylbutyrate

phenylbutyrate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenylephrine

phenylephrine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenylpropanolamine

phenylpropanolamine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenytoin

phenytoin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phenytoin sodium

phenytoin sodium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pheromone

pheromone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phialemonium atrogriiseum

phialemonium atrogriiseum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phialophora

phialophora is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phialophora verrucosa

phialophora verrucosa is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phlebovirus

phlebovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

phlegm

phlegm is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phobia

phobia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phonation

phonation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phorate

phorate is a medical condition or clinical finding

involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phorbol ester

phorbol ester is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phorbols

phorbols is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phosgene

phosgene denotes phosgene, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

phosgene oxime

phosgene oxime denotes phosgene oxime, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

phosmet

phosmet is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phosphamidon

phosphamidon is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phosphatidic acid

phosphatidic acid denotes phosphatidic acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

phosphatidylcholine

phosphatidylcholine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phosphatidylethanolamines

phosphatidylethanolamines is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phosphatidylinositol

phosphatidylinositol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phosphatidylserine

phosphatidylserine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phosphatidylserines

phosphatidylserines is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

phosphine

phosphine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pigmentation disorder

pigmentation disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

pilocarpine

pilocarpine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pilocytic astrocytoma

pilocytic astrocytoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

piloerection

piloerection is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pilomatrixoma

pilomatrixoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pilonidal fistula

pilonidal fistula is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pilot project

pilot project is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pilus

pilus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pimozide

pimozide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pinch strength

pinch strength is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pindolol

pindolol concerns pindolol, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

pineal cyst

pineal cyst is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

pineal germinoma

pineal germinoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pineoblastoma

pineoblastoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

pineocytoma

pineocytoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pinhole meatus

pinhole meatus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pinocytosis

pinocytosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pint

pint is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pinta

pinta is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pioglitazone

pioglitazone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pipemidic acid

pipemidic acid denotes pipemidic acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

pipendoxifene

pipendoxifene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

piperacillin

piperacillin concerns piperacillin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

piperazine

piperazine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

piperonyl butoxide

piperonyl butoxide describes an infectious or toxic process involving the site or exposure named by the

term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

pipette

pipette is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pipobroman

pipobroman is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pirfenidone

pirfenidone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pirimicarb

pirimicarb is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pirinitramide

pirinitramide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

piritrexim

piritrexim is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

piromidic acid

piromidic acid denotes piromidic acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

piroxicam

piroxicam is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pisiform bone

pisiform bone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pithomyces

pithomyces is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pituicytoma

pituicytoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pituitary

pituitary is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pituitary carcinoma

pituitary carcinoma describes a neoplastic process involving the tissue or organ named by the term. Di-

agnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

pituitary disease

pituitary disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

pituitary dwarfism

pituitary dwarfism is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pituitary hormone

pituitary hormone denotes pituitary hormone, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

pituitary neoplasm

pituitary neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

pityriasis lichenoides

pityriasis lichenoides is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pivampicillin

pivampicillin concerns pivampicillin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and

adverse effects.

Synonyms:

pixantrone

pixantrone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

place

place is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

placebo control

placebo control is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

placenta accreta

placenta accreta is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

placenta disorder

placenta disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

placenta percreta

placenta percreta is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

placental hormone

placental hormone denotes placental hormone, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

placental infarction

placental infarction is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

placental lactogen

placental lactogen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

placentation

placentation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plagiocephaly

plagiocephaly is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

planococcaceae

planococcaceae is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

planococcus bacteria

planococcus bacteria is a microorganism or microbial group identified by its biologic and taxo-

nomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

plant development

plant development is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plant extract

plant extract is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plant oils

plant oils is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plant part

plant part is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plant poisoning

plant poisoning describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

plant proteins

plant proteins denotes plant proteins, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

plant tumor

plant tumor describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

plant virus

plant virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

plantar nerve

plantar nerve is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plantar wart

plantar wart is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plantaris muscle

plantaris muscle is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plasma cell neoplasm

plasma cell neoplasm denotes plasma cell neoplasm, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

plasma kallikrein

plasma kallikrein is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plasma membrane

plasma membrane is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plasma substitutes

plasma substitutes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plasmablastic lymphoma

plasmablastic lymphoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

plasmalogen

plasmalogen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plasmapheresis

plasmapheresis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plasmid

plasmid is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plasminogen

plasminogen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plasminogen activator

plasminogen activator is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plasminogen inactivators

plasminogen inactivators is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plasmodesma

plasmodesma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plasmodium

plasmodium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pleural neoplasm

pleural neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic

behavior, and appropriate management.

Synonyms:

pleural sac

pleural sac is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pleural tuberculosis

pleural tuberculosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pleuritic pain

pleuritic pain describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

pleuropulmonary blastoma

pleuropulmonary blastoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

plexiform neurofibroma

plexiform neurofibroma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pliability

pliability is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plitidepsin

plitidepsin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Ploidies

Ploidies is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

plozalizumab

plozalizumab concerns plozalizumab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

pluralibacter gergoviae

pluralibacter gergoviae describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

pluripotent stem cell

pluripotent stem cell denotes pluripotent stem cell, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

plutonium

plutonium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pneumococcal infection

pneumococcal infection describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

pneumococcal vaccine

pneumococcal vaccine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pneumocystis

pneumocystis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pneumocystis carinii

pneumocystis carinii is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pneumocystis infection

pneumocystis infection describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

pneumocystis jiroveci

pneumocystis jiroveci is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pneumovirinae

pneumovirinae is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pneumovirus

pneumovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

pocket erosion

pocket erosion is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

podiatrist

podiatrist is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

podocyte

podocyte is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

podofilox

podofilox is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

podophyllin

podophyllin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

podosome

podosome is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

poikilocytosis

poikilocytosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

poikiloderma

poikiloderma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pokeweed mitogen

pokeweed mitogen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pol gene

pol gene denotes pol gene, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

polarity

polarity is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

polarography

polarography is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

policy

policy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polidocanol

polidocanol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

poliosis

poliosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

poliovirus vaccine

poliovirus vaccine is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

pollakisuria

pollakisuria is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pollen

pollen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pollen tube

pollen tube is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pollination

pollination is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

poly A

poly A is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

poly I-C

poly I-C is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

poly ICLC

poly ICLC is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polyadenylation

polyadenylation is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polyamine

polyamine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polyamine catabolism

polyamine catabolism is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polyarthritis

polyarthritis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polybrominated biphenyl

polybrominated biphenyl is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polychlorinated biphenyl

polychlorinated biphenyl is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polychromasia

polychromasia is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polyene

polyene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polyethylene

polyethylene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polygenic obesity

polygenic obesity is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polyglutamate camptothecin

polyglutamate camptothecin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polygraphy

polygraphy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polyketide synthase

polyketide synthase is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polylysine

polylysine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polymer

polymer is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polymerization

polymerization is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polymyxin b

polymyxin b is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polyneuritis

polyneuritis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polynucleotide

polynucleotide concerns polynucleotide, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

polyoma virus

polyoma virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

polyomavirus hominis 2

polyomavirus hominis 2 is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

polyphenol

polyphenol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polyploid

polyploid is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polyposis

polyposis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polypropylene

polypropylene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polyradiculopathy

polyradiculopathy is a medical condition or clinical

finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polysaccharide

polysaccharide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polysome

polysome is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polysplenia

polysplenia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polystyrene

polystyrene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polytene chromosome

polytene chromosome denotes polytene chromosome, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

polythiazide

polythiazide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polyurethane

polyurethane is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

polyvinyl

polyvinyl is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pomalidomide

pomalidomide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Pontiac fever

Pontiac fever describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

popliteal cyst

popliteal cyst is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

population density

population density is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

population genetics

population genetics denotes population genetics, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

population group

population group is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

population health

population health is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pore

pore is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

porfimer sodium

porfimer sodium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

porfiromycin

porfiromycin concerns porfiromycin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

porifera

porifera is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

porin

porin concerns porin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

porokeratosis

porokeratosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

poroma

poroma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

porphyria

porphyria is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

porphyrin

porphyrin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

porphyromonas

porphyromonas is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

porphyromonas bennonis

porphyromonas bennonis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

porphyromonas catoniae

porphyromonas catoniae is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

porphyromonas endodontalis

porphyromonas endodontalis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

porphyromonas levii

porphyromonas levii is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

porphyromonas somerae

porphyromonas somerae is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

portion of cytosol

portion of cytosol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

port-wine stain

port-wine stain is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

positive

positive is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

positive finding

positive finding is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

positron camera

positron camera is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

postal service

postal service is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

posterior rhinorrhea

posterior rhinorrhea is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

postganglionic fiber

postganglionic fiber is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

postnatal care

postnatal care is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

postoperative hemorrhage

postoperative hemorrhage describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

postoperative infection

postoperative infection describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

postoperative period

postoperative period is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

postprandial period

postprandial period is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

postsynaptic membrane

postsynaptic membrane is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

potassium acetate

potassium acetate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

potassium channel

potassium channel is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

potassium chloride

potassium chloride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

potassium citrate

potassium citrate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

potassium cyanide

potassium cyanide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

potassium deficiency

potassium deficiency describes a clinical disorder

or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

potassium dichromate

potassium dichromate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

potassium iodide

potassium iodide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

potassium ion

potassium ion is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

potential

potential is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

potentiometry

potentiometry is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

poultice

poultice is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pound

pound is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

povidone

povidone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

povidone-iodine

povidone-iodine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

powder diffraction

powder diffraction is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

poxviridae

poxviridae identifies poxviridae, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

poxviridae infection

poxviridae infection identifies poxviridae infection, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

ppar alpha

ppar alpha is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ppar delta

ppar delta is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pracinostat

pracinostat is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

practitioner

practitioner is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pragmatic trial

pragmatic trial is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pralatrexate

pralatrexate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pravastatin

pravastatin concerns pravastatin, a pharmacologic or chemical agent; clinical use depends on its mech-

anism, indication, dose, interactions, and adverse effects.

Synonyms:

pravastatin sodium

pravastatin sodium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

praziquantel

praziquantel is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prealbumin

prealbumin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

precancerous condition

precancerous condition describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

precancerous polyp

precancerous polyp describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

precipitating factor

precipitating factor is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

preclinical study

preclinical study is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

preconception care

preconception care is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prediabetes syndrome

prediabetes syndrome describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

prednimustine

prednimustine concerns prednimustine, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

prednisolone

prednisolone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prednisone

prednisone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

preexcitation syndrome

preexcitation syndrome describes a clinical disorder

or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

prefix

prefix is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prefrontal cortex

prefrontal cortex is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pregabalin

pregabalin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

preganglionic fiber

preganglionic fiber is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pregnancy complication

pregnancy complication is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pregnancy outcome

pregnancy outcome is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pregnancy status

pregnancy status is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pregnancy trimester

pregnancy trimester is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pregnane

pregnane is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pregnanolone

pregnanolone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pregnenolone

pregnenolone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prealignant

prealignant is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

premature adrenarche

premature adrenarche is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

premature closure

premature closure is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

premature labor

premature labor is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

premature thelarche

premature thelarche is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pre-medication

pre-medication is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pre-miRNA

pre-miRNA denotes pre-mirna, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

prenylation

prenylation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

preoperative care

preoperative care is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

preoptic area

preoptic area is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

presenile dementia

presenile dementia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

presenilin

presenilin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

preservation

preservation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

preservative

preservative is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pressoreceptor

pressoreceptor denotes pressoreceptor, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

presynaptic terminals

presynaptic terminals is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

primary endpoint

primary endpoint is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

primary hypersomnia

primary hypersomnia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

primary hypoparathyroidism

primary hypoparathyroidism is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

primary hypothyroidism

primary hypothyroidism is a medical condition or clinical finding involving the body system or process

named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

primary microrna

primary microrna denotes primary microrna, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

primidone

primidone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

primitive node

primitive node is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

primitive streak

primitive streak is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prinomastat

prinomastat is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

privacy

privacy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

privacy breach

privacy breach is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

probability

probability is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

probenecid

probenecid is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proboscis

proboscis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

probucol

probucol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

procainamide

procainamide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

procaine

procaine concerns procaine, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

procarbazine

procarbazine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

procarbazine hydrochloride

procarbazine hydrochloride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

procentriole

procentriole is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

procerus muscle

procerus muscle is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

processing bodies

processing bodies is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

processor

processor is a medical condition or clinical finding

involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prochlorperazine

prochlorperazine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

procollagen

procollagen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proctoscope

proctoscope is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proctoscopy

proctoscopy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

product recall

product recall is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

productive cough

productive cough is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proestrus

proestrus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

progesterone antagonist

progesterone antagonist is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

progestin

progestin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prognostic factor

prognostic factor is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

program development

program development is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

programmed instruction

programmed instruction is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proinsulin

proinsulin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

projectile vomiting

projectile vomiting is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prokaryote

prokaryote is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prolactin

prolactin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prolactin receptor

prolactin receptor denotes prolactin receptor, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

prolapsed cord

prolapsed cord is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proliferation

proliferation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prolindac

prolindac is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proline

proline is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prolymphocyte count

prolymphocyte count is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prolymphocytic leukemia

prolymphocytic leukemia describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

promazine

promazine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

promecarb

promecarb is a medical condition or clinical finding

involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

promegapoietin

promegapoietin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prometaphase

prometaphase is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

promethazine

promethazine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

promonocyte count

promonocyte count is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

promyelocytes

promyelocytes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prone

prone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pronephric

pronephric is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

propane

propane is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

propanol

propanol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

propellant

propellant is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

properdin

properdin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

propetamphos

propetamphos is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prophage

prophage is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prophase

prophase is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prophenofos

prophenofos is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prophylactic mastectomy

prophylactic mastectomy is used in relation to prophylactic mastectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

propiolactone

propiolactone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

propionates

propionates is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

propionibacteriaceae

propionibacteriaceae is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on

pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

propionibacterium

propionibacterium is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

propionibacterium acnes

propionibacterium acnes is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

propofol

propofol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

propoxur

propoxur is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

propoxycaine

propoxycaine concerns propoxycaine, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

propoxyphene

propoxyphene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

propranolol

propranolol concerns propranolol, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

propylene glycol

propylene glycol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prosencephalon

prosencephalon is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prosopagnosia

prosopagnosia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prosoposchisis

prosoposchisis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prostaglandin

prostaglandin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prostaglandin antagonist

prostaglandin antagonist is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prostaglandin degradation

prostaglandin degradation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prostaglandin receptor

prostaglandin receptor denotes prostaglandin receptor, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

prostaglandins e

prostaglandins e is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prostaglandins f

prostaglandins f is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prostate carcinoma

prostate carcinoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

prostate disease

prostate disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

prostate infection

prostate infection describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

prostate neoplasm

prostate neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

prostatic fluid

prostatic fluid is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prostatic obstruction

prostatic obstruction describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

prostatism

prostatism is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prosthetic heart valve

prosthetic heart valve is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

protamine

protamine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

protanopia

protanopia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proteaphagy

proteaphagy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proteasome

proteasome is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proteasome binding

proteasome binding is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proteasome inhibitor

proteasome inhibitor is a medical condition or clin-

ical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

protective agent

protective agent is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

protegrin

protegrin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

protein acetylation

protein acetylation denotes protein acetylation, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein biosynthesis

protein biosynthesis denotes protein biosynthesis, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein deficiency

protein deficiency denotes protein deficiency, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein denaturation

protein denaturation denotes protein denaturation, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and

laboratory findings.

Synonyms:

protein dephosphorylation

protein dephosphorylation denotes protein dephosphorylation, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein engineering

protein engineering denotes protein engineering, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein expression

protein expression denotes protein expression, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein glycosylation

protein glycosylation denotes protein glycosylation, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein import

protein import denotes protein import, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein isoform

protein isoform denotes protein isoform, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein kinase

protein kinase denotes protein kinase, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein metabolism

protein metabolism denotes protein metabolism, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein methylation

protein methylation denotes protein methylation, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein overexpression

protein overexpression denotes protein overexpression, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein phosphorylation

protein phosphorylation denotes protein phosphorylation, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein prenylation

protein prenylation denotes protein prenylation, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein purification

protein purification denotes protein purification, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

preted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein refolding

protein refolding denotes protein refolding, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein secretion

protein secretion denotes protein secretion, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein sequence

protein sequence denotes protein sequence, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein splicing

protein splicing denotes protein splicing, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein subunit

protein subunit denotes protein subunit, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein translocation

protein translocation denotes protein translocation, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein transport

protein transport denotes protein transport, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

protein unfolding

protein unfolding denotes protein unfolding, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

proteinaceous plug

proteinaceous plug denotes proteinaceous plug, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

proteobacteria

proteobacteria is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

proteogenomics

proteogenomics is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proteoglycan

proteoglycan is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proteolipids

proteolipids denotes proteolipids, a biological com-

ponent or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

proteolysis

proteolysis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proteome

proteome is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proteomic profile

proteomic profile is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proteomics

proteomics is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proteus

proteus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proteus hauseri

proteus hauseri is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proteus mirabilis

proteus mirabilis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proteus penneri

proteus penneri is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

proteus syndrome

proteus syndrome describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

proteus vulgaris

proteus vulgaris is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prothionamide

prothionamide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

prothrombin

prothrombin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

protista

protista is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

protocol agent

protocol agent is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychoacoustics

psychoacoustics is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychobiology

psychobiology is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychodidae

psychodidae is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychodrama

psychodrama is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psycholinguistics

psycholinguistics is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychological adjustment

psychological adjustment is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychological dependence

psychological dependence is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychological transfer

psychological transfer is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychology

psychology is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychometrics

psychometrics is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychomotor agitation

psychomotor agitation is a medical condition or clinical finding involving the body system or process

named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychomotor disorder

psychomotor disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

psychomotor performance

psychomotor performance is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychoneuroimmunology

psychoneuroimmunology is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychopathology

psychopathology is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychophysics

psychophysics is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychophysiology

psychophysiology is a medical condition or clinical

finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychosexual development

psychosexual development is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychosurgery

psychosurgery is used in relation to psychosurgery during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

Psychotic Disorder

Psychotic Disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

psychotropic drug

psychotropic drug is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

psychrobacter

psychrobacter describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

psychrobacter immobilis

psychrobacter immobilis describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route

of exposure, affected tissues, severity, and host response.

Synonyms:

pteridine

pteridine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pubertal failure

pubertal failure is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

public assistance

public assistance is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

public policy

public policy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

publication

publication is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

puerperal disorder

puerperal disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

puerperal infection

puerperal infection describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

pulmonary blastoma

pulmonary blastoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

pulmonary circulation

pulmonary circulation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pulmonary compliance

pulmonary compliance is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pulmonary fistula

pulmonary fistula is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pulmonary hemorrhage

pulmonary hemorrhage describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

pulmonary infection

pulmonary infection describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

pulmonary mass

pulmonary mass is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pulmonary nodule

pulmonary nodule is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pulmonary reactance

pulmonary reactance is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pulmonary trunk

pulmonary trunk is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pulmonary valve insufficiency

pulmonary valve insufficiency is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pulmonologist

pulmonologist is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pulp canal

pulp canal is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pulp disease

pulp disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

pulpitis

pulpitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pulse irregular

pulse irregular is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pulse radiolysis

pulse radiolysis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pulse rate

pulse rate is a medical condition or clinical finding

involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pulvinar

pulvinar is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

puncture biopsy

puncture biopsy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

punicic acid

punicic acid denotes punicic acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

punishment

punishment is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

purine

purine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

purine nucleosides

purine nucleosides is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

purine nucleotides

purine nucleotides is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

purinoceptor

purinoceptor is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

purkinje cell

purkinje cell denotes purkinje cell, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

puromycin

puromycin concerns puromycin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

purulent discharge

purulent discharge is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

putamen

putamen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

putrescine

putrescine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

p-value

p-value is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pynodysostosis

pynodysostosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyelitis

pyelitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyloric antrum

pyloric antrum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyoderma

pyoderma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyometra

pyometra is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyramidal cell

pyramidal cell denotes pyramidal cell, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

pyramidal tract

pyramidal tract is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyrazinamide

pyrazinamide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyrazines

pyrazines is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyrazole

pyrazole concerns pyrazole, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

pyrazoles

pyrazoles is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyrene

pyrene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyrenochaeta

pyrenochaeta is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyridine

pyridine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyridostigmine bromide

pyridostigmine bromide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyridoxal phosphate

pyridoxal phosphate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyrimethamine

pyrimethamine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyrimidine analog

pyrimidine analog is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyrimidine dimer

pyrimidine dimer is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyrimidine nucleosides

pyrimidine nucleosides is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyrimidine nucleotides

pyrimidine nucleotides is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyrogen

pyrogen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyroglyphidae

pyroglyphidae is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyronine

pyronine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyrophosphatase

pyrophosphatase is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyropoikilocytosis

pyropoikilocytosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyroptosis

pyroptosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyrosequencing

pyrosequencing is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyroxamide

pyroxamide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyrroles

pyrroles is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyrrolidonecarboxylic acid

pyrrolidonecarboxylic acid denotes pyrrolidonecarboxylic acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

pyrrolnitrin

pyrrolnitrin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyruvate decarboxylase

pyruvate decarboxylase is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

pyruvate kinase

pyruvate kinase is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

It is guided by personal and family history, previous pregnancy outcomes, ancestry, and test findings.

Synonyms: Pregnancy genetic counseling; antenatal genetic counseling.

Painful urination (dysuria)

Pain, burning, or discomfort during urination, commonly caused by urinary infection, inflammation, stones, irritation, or sexually transmitted infection.

Synonyms:

Peeling skin

Loss or shedding of the outer layer of skin, which

may result from dryness, sunburn, irritation, allergy, infection, inflammation, or a systemic illness. **Synonyms:**

Protein in urine (proteinuria)

An abnormal amount of protein in the urine, which may be temporary or indicate kidney disease, diabetes, high blood pressure, infection, or another condition. **Synonyms:**

Testicle pain

Pain in one or both testicles that may result from injury, infection, inflammation, torsion, hernia, or referred pain; sudden severe pain requires urgent assessment. **Synonyms:**

PA/IVS

Alternate index label; see *Pulmonary atresia with intact ventricular septum*. **Synonyms:**

PAES

Alternate index label; see *Popliteal artery entrapment*. **Synonyms:**

Pain, back

Alternate index label; see *Back pain*. **Synonyms:**

Pain, breast

Alternate index label; see *Breast pain*. **Synonyms:**

Pain, chest

Alternate index label; see *Chest pain*. **Synonyms:**

Pain, knee

Alternate index label; see *Knee pain*. **Synonyms:**

Pain, neck

Alternate index label; see *Neck pain*. **Synonyms:**

Pain, wrist

Alternate index label; see *Wrist pain*. **Synonyms:**

Painful bladder syndrome

Alternate index label; see *Interstitial cystitis*. **Syn-**

onyms:

Painful periods

Alternate index label; see *Menstrual cramps*. **Synonyms:**

Palsy, Bell's

Alternate index label; see *Bell's palsy*. **Synonyms:**

Palsy, cerebral

Alternate index label; see *Cerebral palsy*. **Synonyms:**

Palsy, facial

Alternate index label; see *Bell's palsy*. **Synonyms:**

Pancreas inflammation

Alternate index label; see *Pancreatitis*. **Synonyms:**

PAPVR

Alternate index label; see *Partial anomalous pulmonary venous return*. **Synonyms:**

Paraneoplastic neurological disorder

Alternate index label; see *Paraneoplastic syndromes of the nervous system*. **Synonyms:**

Paraneoplastic neurological syndrome

Alternate index label; see *Paraneoplastic syndromes of the nervous system*. **Synonyms:**

Partial anomalous pulmonary venous connection

Alternate index label; see *Partial anomalous pulmonary venous return*. **Synonyms:**

Pathological gambling

Alternate index label; see *Compulsive gambling*. **Synonyms:**

Pathological laughter and crying

Alternate index label; see *Pseudobulbar affect*. **Synonyms:**

Pathological stealing

Alternate index label; see *Kleptomania*. **Synonyms:**

PBA

Alternate index label; see *Pseudobulbar affect*. **Synonyms:**

PDA

Alternate index label; see *Patent ductus arteriosus (PDA)*. **Synonyms:**

Pelvic pain, chronic

Alternate index label; see *Chronic pelvic pain*. **Synonyms:**

Pelvic support problems, uterine prolapse

Alternate index label; see *Uterine prolapse*. **Synonyms:**

Perforated eardrum

Alternate index label; see *Ruptured eardrum (perforated eardrum)*. **Synonyms:**

Pericardial inflammation

Alternate index label; see *Pericarditis*. **Synonyms:**

Periodontal disease, gingivitis

Alternate index label; see *Gingivitis*. **Synonyms:**

Periodontal disease, periodontitis

Alternate index label; see *Periodontitis*. **Synonyms:**

Peripheral neurofibromatosis

Alternate index label; see *Neurofibromatosis type 1*. **Synonyms:**

Pernio

Alternate index label; see *Chilblains*. **Synonyms:**

Peroneal muscular atrophy

Alternate index label; see *Charcot-Marie-Tooth disease*. **Synonyms:**

Personality disorder, antisocial

Alternate index label; see *Antisocial personality disorder*. **Synonyms:**

Personality disorder, borderline

Alternate index label; see *Borderline personality disorder*. **Synonyms:**

Personality disorder, narcissistic

Alternate index label; see *Narcissistic personality disorder*. **Synonyms:**

Personality disorder, schizoid

Alternate index label; see *Schizoid personality disorder*. **Synonyms:**

Personality disorder, schizotypal

Alternate index label; see *Schizotypal personality disorder*. **Synonyms:**

Pes planus

Alternate index label; see *Flatfeet*. **Synonyms:**

Petit mal seizure

Alternate index label; see *Absence seizure*. **Synonyms:**

Phobia, social

Alternate index label; see *Social anxiety disorder (social phobia)*. **Synonyms:**

PHT

Alternate index label; see *Portal hypertension*. **Synonyms:**

PID

Alternate index label; see *Pelvic inflammatory disease (PID)*. **Synonyms:**

Pilonidal dimple

Alternate index label; see *Sacral dimple*. **Synonyms:**

Pimples

Alternate index label; see *Acne*. **Synonyms:**

Pituitary insufficiency

Alternate index label; see *Hypopituitarism*. **Synonyms:**

Pituitary neuroendocrine tumor

Alternate index label; see *Pituitary tumors and adenomas*. **Synonyms:**

Pityriasis versicolor

Alternate index label; see *Tinea versicolor*. **Synonyms:**

PJI

Alternate index label; see *Periprosthetic joint infection (PJI)*. **Synonyms:**

PJS

Alternate index label; see *Peutz-Jeghers syndrome*. **Synonyms:**

PKD

Alternate index label; see *Polycystic kidney disease*. **Synonyms:**

PKU

Alternate index label; see *Phenylketonuria (PKU)*. **Synonyms:**

Plantar neuroma

Alternate index label; see *Morton neuroma*. **Synonyms:**

PLS

Alternate index label; see *Primary lateral sclerosis (PLS)*. **Synonyms:**

PMBCL

Alternate index label; see *Primary mediastinal large B-cell lymphoma*. **Synonyms:**

PMBL

Alternate index label; see *Primary mediastinal large B-cell lymphoma*. **Synonyms:**

PN

Alternate index label; see *Plexiform neurofibroma*. **Synonyms:**

PNF

Alternate index label; see *Plexiform neurofibroma*. **Synonyms:**

Polyps, colon

Alternate index label; see *Colon polyps*. **Synonyms:**

Polyps, endometrial

Alternate index label; see *Uterine polyps*. **Synonyms:**

Polyps, nasal

Alternate index label; see *Nasal polyps*. **Synonyms:**

Polyps, stomach

Alternate index label; see *Stomach polyps*. **Synonyms:**

Polyps, uterine

Alternate index label; see *Uterine polyps*. **Synonyms:**

Pompholyx

Alternate index label; see *Dyshidrosis*. **Synonyms:**

Poor color vision

Alternate index label; see *Color blindness*. **Synonyms:**

Post-cardiac injury syndrome

Alternate index label; see *Dressler syndrome*. **Synonyms:**

Post-chemotherapy cognitive impairment

Alternate index label; see *Chemo brain*. **Synonyms:**

Posterior prolapse

Alternate index label; see *Posterior vaginal prolapse (rectocele)*. **Synonyms:**

Postmyocardial infarction syndrome

Alternate index label; see *Dressler syndrome*. **Synonyms:**

Postural hypotension

Alternate index label; see *Orthostatic hypotension (postural hypotension)*. **Synonyms:**

Prader-Labhart-Willi syndrome

Alternate index label; see *Prader-Willi syndrome*. **Synonyms:**

Pregnancy-related hypertension

Alternate index label; see *Preeclampsia*. **Synonyms:**

Premature ovarian failure

Premature ovarian failure is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. **Synonyms:**

Premature puberty

Alternate index label; see *Precocious puberty*. **Synonyms:**

Pressure sore

Alternate index label; see *Bedsore (pressure ulcer)*. **Synonyms:**

Prickly heat

Alternate index label; see *Heat rash*. **Synonyms:**

Primary adrenal insufficiency

Alternate index label; see *Addison's disease*. **Synonyms:**

Primary biliary cirrhosis

Alternate index label; see *Primary biliary cholangi-*

tis (PBC). **Synonyms:**

Primary polycythemia

Alternate index label; see *Polycythemia vera*. **Synonyms:**

Prolapse, mitral valve

Alternate index label; see *Mitral valve prolapse*. **Synonyms:**

Prolapsed bladder

Alternate index label; see *Anterior vaginal prolapse (cystocele)*. **Synonyms:**

Prolapsed uterus

Alternate index label; see *Uterine prolapse*. **Synonyms:**

Prostate gland enlargement

Alternate index label; see *Benign prostatic hyperplasia (BPH)*. **Synonyms:**

Pruritis ani

Alternate index label; see *Anal itching*. **Synonyms:**

PTCL

Alternate index label; see *Peripheral T-cell lymphoma*. **Synonyms:**

Puffy eyes

Alternate index label; see *Bags under eyes*. **Synonyms:**

PVCs

Alternate index label; see *Premature ventricular contractions (PVCs)*. **Synonyms:**

PVD

Alternate index label; see *Peripheral artery disease (PAD)*. **Synonyms:**

PVPS

Alternate index label; see *Post-vasectomy pain syndrome*. **Synonyms:**

Paget disease of the bone

Paget disease of bone is abnormal remodeling that produces enlarged, weakened, or deformed bone and may cause pain, fractures, hearing loss, or nerve compression.

Synonyms:

Pain and your emotions

Pain and your emotions addresses care related to pain and your emotions, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Pain medications - narcotics

Pain medications - narcotics addresses care related to pain medications - narcotics, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Painful menstrual periods

Painful menstrual periods addresses care related to painful menstrual periods, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Painful swallowing

Painful swallowing addresses care related to painful swallowing, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Paint, lacquer, and varnish remover poisoning

Paint, lacquer, and varnish remover poisoning involves toxic or environmental exposure to paint, lacquer, and varnish remover poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Palatal myoclonus

Palatal myoclonus is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Palliative care - fear and anxiety

Palliative care - fear and anxiety addresses care related to palliative care - fear and anxiety, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Palliative care - fluid, food, and digestion

Palliative care - fluid, food, and digestion addresses care related to palliative care - fluid, food, and digestion, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Palliative care - managing pain

Palliative care - managing pain addresses care related to palliative care - managing pain, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Palliative care - shortness of breath

Palliative care - shortness of breath addresses care related to palliative care - shortness of breath, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Palliative care - what the final days are like

Palliative care - what the final days are like addresses care related to palliative care - what the final days are like, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Palpebral slant - eye

Palpebral slant - eye concerns palpebral slant - eye, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Pancreas transplant

Pancreas transplant involves toxic or environmental exposure to pancreas transplant; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Pancreatitis - children

Pancreatitis in children is inflammation of the pancreas causing abdominal pain, nausea, vomiting, and elevated pancreatic enzymes from structural, genetic, medication, infectious, or other causes.

Synonyms:

Pancreatitis - discharge

Pancreatitis - discharge is a treatment or care intervention for pancreatitis - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Panniculectomy

Panniculectomy examines panniculectomy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pantothenic acid and biotin

Pantothenic acid and biotin concerns pantothenic acid and biotin; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Pap test

Pap test examines pap test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Para-aminobenzoic acid

Para-aminobenzoic acid concerns para-aminobenzoic acid; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Paradichlorobenzene poisoning

Paradichlorobenzene poisoning involves toxic or environmental exposure to paradichlorobenzene poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Paraffin poisoning

Paraffin poisoning involves toxic or environmental exposure to paraffin poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Paranoid personality disorder

Paranoid personality disorder is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Paraquat poisoning

Paraquat poisoning involves toxic or environmental exposure to paraquat poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Parathyroid adenoma

Parathyroid adenoma concerns parathyroid adenoma; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Parathyroid cancer

Parathyroid cancer is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Parathyroid gland removal

Parathyroid gland removal is a treatment or care intervention for parathyroid gland removal; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Parathyroid hormone (PTH) blood test

Parathyroid hormone (PTH) blood test examines parathyroid hormone (pth) blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Parathyroid hormone-related protein blood test

Parathyroid hormone-related protein blood test examines parathyroid hormone-related protein blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Parinaud oculoglandular syndrome

Parinaud oculoglandular syndrome is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Parkinson disease - discharge

Parkinson disease - discharge is a treatment or care intervention for parkinson disease - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Parkinson disease - resources

Parkinson disease - resources addresses care related to parkinson disease - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Paroxysmal cold hemoglobinuria (PCH)

Paroxysmal cold hemoglobinuria (PCH) concerns paroxysmal cold hemoglobinuria (pch); its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Paroxysmal nocturnal hemoglobinuria (PNH)

Paroxysmal nocturnal hemoglobinuria (PNH) examines paroxysmal nocturnal hemoglobinuria (pnh); interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Paroxysmal supraventricular tachycardia (PSVT)

Paroxysmal supraventricular tachycardia is an abrupt-onset and abrupt-ending rapid rhythm arising above the ventricles, causing palpitations, dizziness, chest discomfort, or syncope.

Synonyms:

Partial breast brachytherapy

Partial breast brachytherapy is a treatment or care intervention for partial breast brachytherapy; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Partial breast radiation therapy - external beam

Partial breast radiation therapy - external beam is a treatment or care intervention for partial breast radiation therapy - external beam; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Partial knee replacement

Partial knee replacement is a treatment or care intervention for partial knee replacement; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Partial thromboplastin time (PTT)

Partial thromboplastin time (PTT) concerns partial thromboplastin time (ptt); its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Patches

Patches concerns patches; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Patchy skin color

Patchy skin color concerns patchy skin color, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Patent urachus repair

Patent urachus repair is a treatment or care intervention for patent urachus repair; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Patient portals - an online tool for your health

Patient portals - an online tool for your health concerns patient portals - an online tool for your health; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

PBG urine test

PBG urine test examines pbg urine test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pectus excavatum - discharge

Pectus excavatum - discharge examines pectus excavatum - discharge; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pectus excavatum repair

Pectus excavatum repair examines pectus excavatum repair; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pediatric heart surgery

Pediatric heart surgery is a treatment or care intervention for pediatric heart surgery; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Pediatric heart surgery - discharge

Pediatric heart surgery - discharge is a treatment or care intervention for pediatric heart surgery - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Pediatric sleep apnea

Pediatric sleep apnea concerns pediatric sleep apnea; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Pedicle

Pedicle concerns pedicle; its medical significance is established from the defining features, setting,

associated findings, and clinical question.

Synonyms:

PEG tube insertion - discharge

PEG tube insertion - discharge is a treatment or care intervention for peg tube insertion - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Pelvic CT scan

Pelvic CT scan examines pelvic ct scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pelvic floor muscle training exercises

Pelvic floor muscle training exercises addresses care related to pelvic floor muscle training exercises, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Pelvic inflammatory disease (PID)

Pelvic inflammatory disease is infection and inflammation of the upper female reproductive tract, often caused by sexually transmitted organisms and capable of causing infertility, ectopic pregnancy, or chronic pain.

Synonyms:

Pelvic inflammatory disease (PID) - aftercare

Pelvic inflammatory disease (PID) - aftercare is a treatment or care intervention for pelvic inflammatory disease (pid) - aftercare; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Pelvic laparoscopy

Pelvic laparoscopy is a treatment or care intervention for pelvic laparoscopy; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Pelvic radiation - discharge

Pelvic radiation - discharge is a treatment or care intervention for pelvic radiation - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Pelvic ultrasound - abdominal

Pelvic ultrasound - abdominal examines pelvic ultrasound - abdominal; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pelvis MRI scan

Pelvis MRI scan examines pelvis mri scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pelvis x-ray

Pelvis x-ray examines pelvis x-ray; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pencil eraser swallowing

Pencil eraser swallowing involves toxic or environmental exposure to pencil eraser swallowing; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Pencil swallowing

Pencil swallowing involves toxic or environmental exposure to pencil swallowing; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Penis care (uncircumcised)

Penis care (uncircumcised) addresses care related to penis care (uncircumcised), including practical

measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Penis pain

Penis pain addresses care related to penis pain, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Pentazocine overdose

Pentazocine overdose involves toxic or environmental exposure to pentazocine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Pentobarbital overdose

Pentobarbital overdose involves toxic or environmental exposure to pentobarbital overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Peppermint oil overdose

Peppermint oil overdose involves toxic or environmental exposure to peppermint oil overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Peptic ulcer disease - discharge

Peptic ulcer disease discharge care addresses healing of a stomach or duodenal mucosal ulcer, medication adherence, bleeding warning signs, and avoidance of contributing irritants.

Synonyms:

Percutaneous kidney procedures

Percutaneous kidney procedures is a treatment or care intervention for percutaneous kidney procedures; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Percutaneous transhepatic cholangiogram

Percutaneous transhepatic cholangiogram is a treatment or care intervention for percutaneous transhepatic cholangiogram; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Percutaneous urinary procedures - discharge

Percutaneous urinary procedures - discharge is a treatment or care intervention for percutaneous urinary procedures - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Percutaneously inserted central catheter - infants

Percutaneously inserted central catheter - infants is a treatment or care intervention for percutaneously inserted central catheter - infants; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Perianal streptococcal cellulitis

Perianal streptococcal cellulitis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pericardial fluid culture

Pericardial fluid culture examines pericardial fluid culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pericardial fluid Gram stain

Pericardial fluid Gram stain examines pericardial fluid gram stain; interpretation depends on the specimen or body region, test method, reference range,

and clinical question.

Synonyms:

Pericarditis - after heart attack

Pericarditis - after heart attack is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pericarditis - constrictive

Pericarditis - constrictive examines pericarditis - constrictive; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Perichondritis

Perichondritis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Periorbital cellulitis

Periorbital cellulitis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Peripheral arterial line - infants

Peripheral arterial line - infants concerns peripheral arterial line - infants, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Peripheral artery bypass - leg

Peripheral artery bypass - leg concerns peripheral artery bypass - leg, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Peripheral artery bypass - leg - discharge

Peripheral artery bypass - leg - discharge is a treatment or care intervention for peripheral artery bypass - leg - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Peripheral artery disease - legs

Peripheral artery disease of the legs is atherosclerotic reduction in arterial blood flow causing exertional claudication, diminished pulses, nonhealing wounds, or critical limb ischemia.

Synonyms:

Peripheral artery disease of the legs - self-care

Peripheral artery disease of the legs - self-care is a treatment or care intervention for peripheral artery disease of the legs - self-care; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Peripheral intravenous line - infants

Peripheral intravenous line - infants concerns peripheral intravenous line - infants, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Peripherally inserted central catheter - dressing change

Peripherally inserted central catheter - dressing change is a treatment or care intervention for peripherally inserted central catheter - dressing change; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Peripherally inserted central catheter - flushing

Peripherally inserted central catheter - flushing is a

treatment or care intervention for peripherally inserted central catheter - flushing; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Peripherally inserted central catheter - insertion

Peripherally inserted central catheter - insertion is a treatment or care intervention for peripherally inserted central catheter - insertion; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Perirenal abscess

Perirenal abscess concerns perirenal abscess; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Peritoneal fluid analysis

Peritoneal fluid analysis examines peritoneal fluid analysis; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Peritoneal fluid culture

Peritoneal fluid culture examines peritoneal fluid culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Peritonitis - secondary

Peritonitis - secondary is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Peritonitis - spontaneous bacterial

Peritonitis - spontaneous bacterial examines peritonitis - spontaneous bacterial; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Personality disorders

Personality disorders is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pesticides

Pesticides involves toxic or environmental exposure to pesticides; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Pesticides on fruits and vegetables

Pesticides on fruits and vegetables involves toxic or environmental exposure to pesticides on fruits and vegetables; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

PET scan for breast cancer

PET scan for breast cancer examines pet scan for breast cancer; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Petroleum jelly overdose

Petroleum jelly overdose involves toxic or environmental exposure to petroleum jelly overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Petrositis

Petrositis examines petrositis; interpretation depends on the specimen or body region, test method,

reference range, and clinical question.

Synonyms:

Pets and the immunocompromised person

Pets and the immunocompromised person examines pets and the immunocompromised person; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pharmacogenetic testing

Pharmacogenetic testing examines pharmacogenetic testing; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pharyngitis - sore throat

Pharyngitis is inflammation of the throat causing pain with swallowing, commonly from viral infection and sometimes from group A streptococcal infection or other causes.

Synonyms:

Pharyngitis - viral

Pharyngitis - viral is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pharyngomaxillary space abscess

Pharyngomaxillary space abscess is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Phencyclidine overdose

Phencyclidine overdose involves toxic or environmental exposure to phencyclidine overdose; dose, route, timing, symptoms, and organ involvement

determine urgency and treatment.

Synonyms:

Pheniramine overdose

Pheniramine overdose involves toxic or environmental exposure to pheniramine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Phenobarbital overdose

Phenobarbital overdose involves toxic or environmental exposure to phenobarbital overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Phenothiazine overdose

Phenothiazine overdose involves toxic or environmental exposure to phenothiazine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Phenytoin overdose

Phenytoin overdose involves toxic or environmental exposure to phenytoin overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Philodendron poisoning

Philodendron poisoning involves toxic or environmental exposure to philodendron poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Phobia - simple/specific

Phobia - simple/specific is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Phonological disorder

Phonological disorder is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Phosphorus blood test

Phosphorus blood test examines phosphorus blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Phosphorus in diet

Phosphorus in diet addresses care related to phosphorus in diet, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Photodynamic therapy for cancer

Photodynamic therapy for cancer is a treatment or care intervention for photodynamic therapy for cancer; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Photographic fixative poisoning

Photographic fixative poisoning involves toxic or environmental exposure to photographic fixative poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Physical activity

Physical activity examines physical activity; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Physical exam frequency

Physical exam frequency concerns physical exam frequency; its medical significance is established from

the defining features, setting, associated findings, and clinical question.

Synonyms:

Physical medicine and rehabilitation

Physical medicine and rehabilitation concerns physical medicine and rehabilitation; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Physician Assistant profession (PA)

Physician Assistant profession (PA) concerns physician assistant profession (pa); its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Pin care

Pin care addresses care related to pin care, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Pine oil poisoning

Pine oil poisoning involves toxic or environmental exposure to pine oil poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Pinworm test

Pinworm test examines pinworm test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pinworms

Pinworms concerns pinworms; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Piperonyl butoxide with pyrethrins

Poisoning

Piperonyl butoxide with pyrethrins poisoning involves toxic or environmental exposure to piperonyl butoxide with pyrethrins poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Piroxicam overdose

Piroxicam overdose involves toxic or environmental exposure to piroxicam overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Pityriasis alba

Pityriasis alba is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pityriasis rubra pilaris

Pityriasis rubra pilaris is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Placenta abruptio

Placental abruption is premature separation of the placenta from the uterine wall, causing bleeding, abdominal pain, uterine tenderness, fetal compromise, or maternal shock.

Synonyms:

Placenta abruptio - definition

Placenta abruptio - definition is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Placental insufficiency

Placental insufficiency is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Plant fertilizer poisoning

Plant fertilizer poisoning involves toxic or environmental exposure to plant fertilizer poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Plaque and tartar on teeth

Plaque and tartar on teeth concerns plaque and tartar on teeth; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Plasma amino acids

Plasma amino acids concerns plasma amino acids, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Plastic casting resin poisoning

Plastic casting resin poisoning involves toxic or environmental exposure to plastic casting resin poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Plastic resin hardener poisoning

Plastic resin hardener poisoning involves toxic or environmental exposure to plastic resin hardener poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Platelet aggregation test

Platelet aggregation test examines platelet aggrega-

tion test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Platelet antibodies blood test

Platelet antibodies blood test examines platelet antibodies blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pleural fluid analysis

Pleural fluid analysis examines pleural fluid analysis; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pleural fluid culture

Pleural fluid culture examines pleural fluid culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pleural fluid Gram stain

Pleural fluid Gram stain examines pleural fluid gram stain; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pleural fluid smear

Pleural fluid smear is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pleural needle biopsy

Pleural needle biopsy examines pleural needle biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

ical question.

Synonyms:

Pneumococcal conjugate vaccine - what you need to know

Pneumococcal conjugate vaccine - what you need to know is a treatment or care intervention for pneumococcal conjugate vaccine - what you need to know; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Pneumococcal meningitis

Pneumococcal meningitis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pneumococcal polysaccharide vaccine (PPSV23) - what you need to know

Pneumococcal polysaccharide vaccine (PPSV23) - what you need to know is a treatment or care intervention for pneumococcal polysaccharide vaccine (ppsv23) - what you need to know; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Pneumonia - weakened immune system

Pneumonia - weakened immune system is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pneumonia in adults - discharge

Pneumonia in adults - discharge is a treatment or care intervention for pneumonia in adults - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Pneumonia in children - community acquired

Pneumonia in children - community acquired is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pneumonia in children - discharge

Pneumonia in children - discharge is a treatment or care intervention for pneumonia in children - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Pneumothorax - infants

Pneumothorax - infants is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Poinsettia plant exposure

Poinsettia plant exposure involves toxic or environmental exposure to poinsettia plant exposure; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Point tenderness - abdomen

Point tenderness - abdomen concerns point tenderness - abdomen; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Poison control center - emergency number

Poison control center - emergency number concerns poison control center - emergency number; its medical significance is established from the defining features, setting, associated findings, and clinical

question.

Synonyms:

Poison ivy - oak - sumac

Poison ivy - oak - sumac concerns poison ivy - oak - sumac; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Poison ivy - oak - sumac rash

Poison ivy - oak - sumac rash is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Poisoning - fish and shellfish

Poisoning - fish and shellfish involves toxic or environmental exposure to poisoning - fish and shellfish; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Poisoning first aid

Poisoning first aid involves toxic or environmental exposure to poisoning first aid; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Pokeweed poisoning

Pokeweed poisoning involves toxic or environmental exposure to pokeweed poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Polio vaccine - what you need to know

Polio vaccine - what you need to know is a treatment or care intervention for polio vaccine - what you need to know; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Polychromatophilia

Polychromatophilia is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Polycythemia - newborn

Polycythemia - newborn is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Polyendocrine metabolic ovarian syndrome

Polyendocrine metabolic ovarian syndrome is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Polymorphous light eruption

Polymorphous light eruption is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Polymyositis - adult

Polymyositis - adult is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Polyp biopsy

Polyp biopsy examines polyp biopsy; interpreta-

tion depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pompholyx eczema

Pompholyx eczema concerns pompholyx eczema; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Porphyrins blood test

Porphyrins blood test examines porphyrins blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Porphyrins urine test

Porphyrins urine test examines porphyrins urine test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Portacaval shunting

Portacaval shunting concerns portacaval shunting; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Portion size

Portion size concerns portion size; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Positioning your baby for breastfeeding

Positioning your baby for breastfeeding is a treatment or care intervention for positioning your baby for breastfeeding; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Positive airway pressure treatment

Positive airway pressure treatment concerns positive airway pressure treatment; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Post-splenectomy complications

Post-splenectomy complications examines post-splenectomy complications; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Posterior cruciate ligament (PCL) injury - aftercare

Posterior cruciate ligament (PCL) injury - aftercare is a treatment or care intervention for posterior cruciate ligament (pcl) injury - aftercare; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Posterior fossa tumor

Posterior fossa tumor is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Postherpetic neuralgia - aftercare

Postherpetic neuralgia - aftercare examines postherpetic neuralgia - aftercare; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Poststreptococcal glomerulonephritis (GN)

Poststreptococcal glomerulonephritis (GN) is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Postsurgical pain treatment in adults

Postsurgical pain treatment in adults addresses care related to postsurgical pain treatment in adults, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Potassium carbonate poisoning

Potassium carbonate poisoning involves toxic or environmental exposure to potassium carbonate poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Potassium hydroxide poisoning

Potassium hydroxide poisoning involves toxic or environmental exposure to potassium hydroxide poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Potassium in diet

Potassium in diet addresses care related to potassium in diet, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Potassium test

Potassium test examines potassium test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Potassium urine test

Potassium urine test examines potassium urine test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Potato plant poisoning - green tubers

and sprouts

Potato plant poisoning - green tubers and sprouts involves toxic or environmental exposure to potato plant poisoning - green tubers and sprouts; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Potbellies and toddlers

Potbellies and toddlers concerns potbellies and toddlers; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Potential acuity meter

Potential acuity meter concerns potential acuity meter; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

PPD skin test

PPD skin test examines ppd skin test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pre-existing diabetes and pregnancy

Pre-existing diabetes and pregnancy is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Preeclampsia - self-care

Preeclampsia - self-care is a treatment or care intervention for preeclampsia - self-care; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Pregnancy - health risks

Pregnancy - health risks is a disorder affecting the

body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pregnancy - identifying fertile days

Pregnancy - identifying fertile days is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pregnancy and herpes

Pregnancy and herpes is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pregnancy and the flu

Pregnancy and the flu is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pregnancy and travel

Pregnancy and travel is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pregnancy and work

Pregnancy and work is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pregnancy care

Pregnancy care addresses care related to pregnancy care, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Premature infant

Premature infant concerns premature infant; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Premenstrual breast changes

Premenstrual breast changes concerns premenstrual breast changes; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Premenstrual syndrome - self-care

Premenstrual syndrome - self-care is a treatment or care intervention for premenstrual syndrome - self-care; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Prenatal care in your first trimester

Prenatal care in your first trimester addresses care related to prenatal care in your first trimester, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Prenatal care in your second trimester

Prenatal care in your second trimester addresses care related to prenatal care in your second trimester, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Prenatal care in your third trimester

Prenatal care in your third trimester addresses care

related to prenatal care in your third trimester, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Preparing children for pregnancy and a new baby

Preparing children for pregnancy and a new baby is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Preparing for surgery when you have diabetes

Preparing for surgery when you have diabetes is a treatment or care intervention for preparing for surgery when you have diabetes; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Preschooler development

Preschooler development concerns preschooler development; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Preschooler test or procedure preparation

Preschooler test or procedure preparation examines preschooler test or procedure preparation; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pressure injuries - what to ask your doctor

Pressure injuries - what to ask your doctor examines pressure injuries - what to ask your doctor; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Preventing falls

Preventing falls concerns preventing falls; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Preventing falls - what to ask your doctor

Preventing falls - what to ask your doctor examines preventing falls - what to ask your doctor; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Preventing food poisoning

Preventing food poisoning involves toxic or environmental exposure to preventing food poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Preventing head injuries in children

Preventing head injuries in children concerns preventing head injuries in children; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Preventing hepatitis A

Preventing hepatitis A is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Preventing hepatitis B or C

Preventing hepatitis B or C is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Preventing infections when visiting

someone in the hospital

Preventing infections when visiting someone in the hospital examines preventing infections when visiting someone in the hospital; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Preventing pressure injuries

Preventing pressure injuries concerns preventing pressure injuries; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Preventing stroke

Preventing stroke concerns preventing stroke; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Preventive health care

Preventive health care addresses care related to preventive health care, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Primary alveolar hypoventilation

Primary alveolar hypoventilation concerns primary alveolar hypoventilation; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Primary amyloidosis

Primary amyloidosis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Primary and secondary

hyperaldosteronism

Primary and secondary hyperaldosteronism concerns primary and secondary hyperaldosteronism; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Primary lymphoma of the brain

Primary lymphoma of the brain is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Problems sleeping during pregnancy

Problems sleeping during pregnancy is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Prochlorperazine overdose

Prochlorperazine overdose involves toxic or environmental exposure to prochlorperazine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Prognathism

Prognathism concerns prognathism; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Progressive multifocal leukoencephalopathy

Progressive multifocal leukoencephalopathy is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Prolactin blood test

Prolactin blood test examines prolactin blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Promethazine overdose

Promethazine overdose involves toxic or environmental exposure to promethazine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Propane poisoning

Propane poisoning involves toxic or environmental exposure to propane poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Propyl alcohol

Propyl alcohol concerns propyl alcohol; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Prostate brachytherapy

Prostate brachytherapy is a treatment or care intervention for prostate brachytherapy; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Prostate brachytherapy - discharge

Prostate brachytherapy - discharge is a treatment or care intervention for prostate brachytherapy - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Prostate cancer - resources

Prostate cancer - resources addresses care related to prostate cancer - resources, including practical

measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Prostate cancer screening

Prostate cancer screening addresses care related to prostate cancer screening, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Prostate cancer staging

Prostate cancer staging is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Prostate cancer treatment

Prostate cancer treatment is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Prostate radiation - discharge

Prostate radiation - discharge is a treatment or care intervention for prostate radiation - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Prostate resection - minimally invasive

Prostate resection - minimally invasive examines prostate resection - minimally invasive; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Prostate resection - minimally invasive - discharge

Prostate resection - minimally invasive - discharge examines prostate resection - minimally invasive -

discharge; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Prostate-specific antigen (PSA) blood test

Prostate-specific antigen (PSA) blood test examines prostate-specific antigen (psa) blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Prostatitis - bacterial

Prostatitis - bacterial examines prostatitis - bacterial; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Prostatitis - bacterial - self-care

Prostatitis - bacterial - self-care examines prostatitis - bacterial - self-care; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Prostatitis - nonbacterial

Prostatitis - nonbacterial examines prostatitis - nonbacterial; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Prosthetic graft

Prosthetic graft concerns prosthetic graft; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Protecting yourself from cancer scams

Protecting yourself from cancer scams examines protecting yourself from cancer scams; interpretation depends on the specimen or body region, test

method, reference range, and clinical question.

Synonyms:

Protein C blood test

Protein C blood test examines protein c blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Protein electrophoresis - serum

Protein electrophoresis - serum examines protein electrophoresis - serum; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Protein in diet

Protein in diet addresses care related to protein in diet, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Protein S blood test

Protein S blood test examines protein s blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Protein-losing enteropathy

Protein-losing enteropathy is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Prothrombin deficiency

Prothrombin deficiency is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Proton pump inhibitors

Proton pump inhibitors concerns proton pump inhibitors; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Protuberance

Protuberance concerns protuberance; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Provisional tic disorder

Provisional tic disorder is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Proximal renal tubular acidosis

Proximal renal tubular acidosis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Psoriasis - resources

Psoriasis - resources addresses care related to psoriasis - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Ptois - infants and children

Ptois - infants and children is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Puberty in boys

Puberty in boys concerns puberty in boys; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Puberty in girls

Puberty in girls concerns puberty in girls; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Pubic lice

Pubic lice concerns pubic lice; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Pulling a patient up in bed

Pulling a patient up in bed concerns pulling a patient up in bed; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Pulmonary actinomycosis

Pulmonary actinomycosis examines pulmonary actinomycosis; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pulmonary aspergilloma

Pulmonary aspergilloma concerns pulmonary aspergilloma; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Pulmonary embolus

Pulmonary embolus concerns pulmonary embolus; its medical significance is established from the defining features, setting, associated findings, and clinical

question.

Synonyms:

Pulmonary hypertension - at home

Pulmonary hypertension - at home addresses care related to pulmonary hypertension - at home, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Pulmonary nocardiosis

Pulmonary nocardiosis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pulmonary veno-occlusive disease

Pulmonary veno-occlusive disease is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pulmonary ventilation/perfusion scan

Pulmonary ventilation/perfusion scan examines pulmonary ventilation/perfusion scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pulmonic valve stenosis

Pulmonic valve stenosis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pulse - bounding

Pulse - bounding concerns pulse - bounding; its medical significance is established from the defining features, setting, associated findings, and clinical

question.

Synonyms:

Pupil - white

Pupil - white concerns pupil - white; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Pustules

Pustules concerns pustules; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Pyloric stenosis in infants

Pyloric stenosis in infants examines pyloric stenosis in infants; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pyloroplasty

Pyloroplasty is a treatment or care intervention for pyloroplasty; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Pyogenic liver abscess

Pyogenic liver abscess is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Pyruvate kinase blood test

Pyruvate kinase blood test examines pyruvate kinase blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Pagets Disease (Paget's Disease)

Alternate index label for Paget's Disease.

Synonyms:

Pain Cancer (Cancer Pain)

Alternate index label for Cancer Pain.

Synonyms:

Pain Elbow (Elbow Pain)

Alternate index label for Elbow Pain.

Synonyms:

Pain Gallbladder (Gallbladder Pain (Gall Bladder Pain))

Alternate index label for Gallbladder Pain (Gall Bladder Pain).

Synonyms:

Pain Heel (Heel Spurs)

Alternate index label for Heel Spurs.

Synonyms:

Pain Kidney (Kidney Pain)

Alternate index label for Kidney Pain.

Synonyms:

Pain Knee (Knee Pain Facts)

Alternate index label for Knee Pain Facts.

Synonyms:

Pain Lower Right Abdomen (Appendicitis)

Alternate index label for Appendicitis.

Synonyms:

Pain Management: Neuropathic Pain

Neuropathic pain arises from injury or dysfunction of nerves and may feel burning, electric, shooting, numb, or hypersensitive. Treatment can include the cause-specific therapy, physical and psychological rehabilitation, topical agents, anticonvulsants, antidepressants, or specialist procedures.

Synonyms:

Pain Nerve (Neuropathic Pain (Nerve Pain))

Alternate index label for Neuropathic Pain (Nerve Pain).

Synonyms:

Pain Scrotum (Testicular Disorders)

Alternate index label for Testicular Disorders.

Synonyms:

Pain Stomach (Abdominal Pain (Causes, Remedies, Treatment))

Alternate index label for Abdominal Pain (Causes, Remedies, Treatment).

Synonyms:

Pain Tailbone (Coccydynia)

Alternate index label for Coccydynia.

Synonyms:

Pain Tooth (Toothache Overview)

Alternate index label for Toothache Overview.

Synonyms:

Pain Vaginal (Vaginal Pain (Vulvodynia))

Alternate index label for Vaginal Pain (Vulvodynia).

Synonyms:

Pain Whiplash (Whiplash)

Alternate index label for Whiplash.

Synonyms:

Palm Sweating Excessive (Hyperhidrosis)

Alternate index label for Hyperhidrosis.

Synonyms:

Palpitations Overview

Palpitations are awareness of a racing, pounding, fluttering, or skipped heartbeat. They may result from normal stress, stimulants, anemia, thyroid disease, medicines, or arrhythmia; fainting, chest pain, breathlessness, or sustained rapid rhythm requires urgent assessment.

Synonyms:

Palsy Cerebral (Cerebral Palsy)

Alternate index label for Cerebral Palsy.

Synonyms:

PAN (Polyarteritis Nodosa)

Alternate index label for Polyarteritis Nodosa.

Synonyms:

pancreas inflammation (Pancreatitis)

Alternate index label for Pancreatitis.

Synonyms:

Pancreas Inflammatory Cysts (Pancreatic Cysts)

Alternate index label for Pancreatic Cysts.

Synonyms:

Pancreas Intraductal Papillary Mucinous Nneoplasm (Pancreatic Cysts)

Alternate index label for Pancreatic Cysts.

Synonyms:

Pancreas IPMN (Pancreatic Cysts)

Alternate index label for Pancreatic Cysts.

Synonyms:

Pancreas Mucinous Cyst Adenomas (Pancreatic Cysts)

Alternate index label for Pancreatic Cysts.

Synonyms:

Pancreas Non-Inflammatory Cysts (Pancreatic Cysts)

Alternate index label for Pancreatic Cysts.

Synonyms:

Pancreas Pseudocysts (Pancreatic Cysts)

Alternate index label for Pancreatic Cysts.

Synonyms:

Pancreas Serous Cyst Adenomas (Pancreatic Cysts)

Alternate index label for Pancreatic Cysts.

Synonyms:

Pancreas Solid Pseudopapillary Tumor (Pancreatic Cysts)

Alternate index label for Pancreatic Cysts.

Synonyms:

Panniculitis Idiopathic Nodular (Weber-Christian Disease)

Alternate index label for Weber-Christian Disease.

Synonyms:

Parenchymal Diffuse Lung Disease (Interstitial Lung Disease (Interstitial Pneumonia))

Alternate index label for Interstitial Lung Disease (Interstitial Pneumonia).

Synonyms:

Parkinsons Disease (Parkinson's Disease)

Alternate index label for Parkinson's Disease.

Synonyms:

Parkinsons Disease diet (Parkinson's Disease: Eating Right)

Alternate index label for Parkinson's Disease: Eating Right.

Synonyms:

parotitis (Mumps)

Alternate index label for Mumps.

Synonyms:

Paroxysmal Nocturnal Hemoglobinuria (Paroxysmal Nocturnal Hemoglobinuria PNH)

Alternate index label for Paroxysmal Nocturnal Hemoglobinuria PNH.

Synonyms:

patchy hair loss (Alopecia Areata)

Alternate index label for Alopecia Areata.

Synonyms:

PBC (Primary Biliary Cirrhosis (PBC))

Alternate index label for Primary Biliary Cirrhosis (PBC).

Synonyms:

PCOS (Polycystic Ovary)

Alternate index label for Polycystic Ovary.

Synonyms:

PDB (Paget's Disease)

Alternate index label for Paget's Disease.

Synonyms:

Pemphigoid Bullous (Bullous Pemphigoid)

Alternate index label for Bullous Pemphigoid.

Synonyms:

penile fibrosis (Peyronie's Disease (Curvature of the Penis))

Alternate index label for Peyronie's Disease (Curvature of the Penis).

Synonyms:

Penis Disorder (Priapism (Penis Disorder))

Alternate index label for Priapism (Penis Disorder).

Synonyms:

Penis Disorder Balantis (Balanitis (Penis Disorder))

Alternate index label for Balanitis (Penis Disorder).

Synonyms:

Pericardial disease (Pericarditis)

Alternate index label for Pericarditis.

Synonyms:

perichondrial hematoma (Cauliflower Ear)

Alternate index label for Cauliflower Ear.

Synonyms:

Period vs. Spotting (Spotting vs. Period)

Differences)

Alternate index label for Spotting vs. Period Differences.

Synonyms:

Periodic Paralysis Syndrome

Periodic paralysis syndromes are rare inherited or acquired disorders causing episodic muscle weakness associated with abnormal potassium handling or thyroid disease. Attacks may follow rest after exercise, meals, or stress; ECG, potassium testing, and genetic or endocrine evaluation guide care.

Synonyms:

Periodontitis (Gum Disease)

Alternate index label for Gum Disease.

Synonyms:

peripheral neuritis (Peripheral Neuropathy)

Alternate index label for Peripheral Neuropathy.

Synonyms:

Peripheral Neuropathy Diabetic (Diabetic Neuropathy)

Alternate index label for Diabetic Neuropathy.

Synonyms:

Personality Disorder Antisocial (Antisocial Personality Disorder)

Alternate index label for Antisocial Personality Disorder.

Synonyms:

Pes Planus (Flatfoot (Pes Planus))

Alternate index label for Flatfoot (Pes Planus).

Synonyms:

Peyronie's Disease (Curvature of the Penis)

Alternate index label for Curvature of the Penis.

Synonyms:

PH (Pulmonary Hypertension)

Alternate index label for Pulmonary Hypertension.

Synonyms:

Pharyngit Contagious (Is Sore Throat Pharyngitis Contagious)

Alternate index label for Is Sore Throat Pharyngitis Contagious.

Synonyms:

pharyngitis (Sore Throat (Pharyngitis))

Alternate index label for Sore Throat (Pharyngitis).

Synonyms:

Phimosis and Paraphimosis (Penis Disorders)

Alternate index label for Penis Disorders.

Synonyms:

Phlebitis and Thrombophlebitis

Phlebitis is inflammation of a vein, while thrombophlebitis includes a clot within the inflamed vein. Superficial disease causes localized pain and redness; deep-vein thrombosis can embolize to the lungs and is suspected with limb swelling, pain, or breathlessness.

Synonyms:

piles (Hemorrhoids (Piles))

Alternate index label for Hemorrhoids (Piles).

Synonyms:

pilonidal sinus (Pilonidal Cyst)

Alternate index label for Pilonidal Cyst.

Synonyms:

Pimples (Acne)

Alternate index label for Acne.

Synonyms:

Pinched Nerve Overview

A pinched nerve is compression or irritation of a nerve root or peripheral nerve, causing pain, tingling, numbness, weakness, or radiating symptoms.

Causes include disc disease, narrowing, injury, or entrapment; progressive weakness or bowel or bladder change is urgent.

Synonyms:

Pinkeye Contagious (Is Pinkeye Contagious)

Alternate index label for Is Pinkeye Contagious.

Synonyms:

Pinky Broken Finger (Broken Finger)

Alternate index label for Broken Finger.

Synonyms:

Pinworm Infection

Pinworm infection is an intestinal infestation by *Enterobius vermicularis*, causing nighttime anal itching, disturbed sleep, and sometimes abdominal or genital irritation. Treatment of the person and close household contacts, hygiene, and repeat dosing reduce reinfection.

Synonyms:

PiriformSyndrome (Piriformis Syndrome)

Alternate index label for Piriformis Syndrome.

Synonyms:

Pituitary Tumor (Prolactinoma)

Alternate index label for Prolactinoma.

Synonyms:

pityriasis rosea gibert (Pityriasis Rosea)

Alternate index label for Pityriasis Rosea.

Synonyms:

Plague (Plague Facts)

Alternate index label for Plague Facts.

Synonyms:

Plague Facts

Plague is an infection caused by *Yersinia pestis*, usually acquired from infected flea exposure or animals. Bubonic disease causes painful lymph nodes, while pneumonic disease can spread through respira-

tory droplets; prompt antibiotics and public-health action are essential.

Synonyms:

plasmodium infection (Malaria Facts)

Alternate index label for Malaria Facts.

Synonyms:

Platelet Count Low (Thrombocytopenia (Low Platelet Count))

Alternate index label for Thrombocytopenia (Low Platelet Count).

Synonyms:

Platelet Disorder - Immune Thrombocytopenia (ITP)

Alternate index label for ITP.

Synonyms:

Pleural Effusion (Fluid In the Chest or On Lung)

Alternate index label for Fluid In the Chest or On Lung.

Synonyms:

Pleurisy Contagious (Is Pleurisy Contagious)

Alternate index label for Is Pleurisy Contagious.

Synonyms:

pleuritis (Pleurisy)

Alternate index label for Pleurisy.

Synonyms:

PM (Polymyositis)

Alternate index label for Polymyositis.

Synonyms:

PMDD (Premenstrual Dysphoric Disorder (PMDD))

Alternate index label for Premenstrual Dysphoric Disorder (PMDD).

Synonyms:

PMR (Polymyalgia Rheumatica)

Alternate index label for Polymyalgia Rheumatica.

Synonyms:

Poison Ivy, Oak, and Sumac

Poison ivy, oak, and sumac cause allergic contact dermatitis through urushiol oil, producing intensely itchy streaks or patches of redness, blisters, and swelling. Washing exposed skin and clothing promptly helps; breathing difficulty or facial swelling is an emergency.

Synonyms:

Poisoning Arsenic (Arsenic Poisoning)

Alternate index label for Arsenic Poisoning.

Synonyms:

Poisoning Ciguatera (Ciguatera Poisoning)

Alternate index label for Ciguatera Poisoning.

Synonyms:

Poisoning Thallium (Thallium)

Alternate index label for Thallium.

Synonyms:

Polio Facts

Polio is infection with poliovirus, which may be asymptomatic or cause meningitis, muscle weakness, paralysis, and respiratory failure. Vaccination is highly effective prevention; suspected disease requires urgent medical and public-health evaluation.

Synonyms:

Polycystic Ovary

Polycystic ovaries contain many small follicles and may occur as a normal variant or with polycystic ovary syndrome. PCOS additionally involves ovulatory dysfunction, androgen excess, irregular periods, infertility, acne, or metabolic risk and requires clinical—not ultrasound alone—diagnosis.

Synonyms:

Polycythemia (High Red Blood Cell

Count)

Alternate index label for High Red Blood Cell Count.

Synonyms:

Polyps Colon (Colon Polyps)

Alternate index label for Colon Polyps.

Synonyms:

Polyps Rectal (Colon Polyps)

Alternate index label for Colon Polyps.

Synonyms:

Polyps Uterus (Uterine Fibroids)

Alternate index label for Uterine Fibroids.

Synonyms:

Popcorn Lung Bronchiolitis Obliterans

Bronchiolitis obliterans is irreversible scarring and narrowing of small airways that can follow toxic inhalation, infection, transplantation, or autoimmune disease. It causes persistent cough and breathlessness with obstructive lung testing; exposure avoidance and specialist care are important.

Synonyms:

popliteal cyst (Baker Cyst)

Alternate index label for Baker Cyst.

Synonyms:

Post-Nasal Drip (Chronic Rhinitis)

Alternate index label for Chronic Rhinitis.

Synonyms:

Pot Marijuana (Marijuana)

Alternate index label for Marijuana.

Synonyms:

Powassan Virus Disease

Powassan virus disease is a rare tick-borne infection that can cause fever, headache, vomiting, confusion, seizures, meningitis, or encephalitis. Treatment is supportive, and prevention relies on avoiding ticks and removing them promptly.

Synonyms:

PPD (Postpartum Depression)

Alternate index label for Postpartum Depression.

Synonyms:

Pregnancy Diet (Pregnancy: Your Guide to Eating Right)

Alternate index label for Pregnancy: Your Guide to Eating Right.

Synonyms:

Pregnancy Ectopic (Ectopic Pregnancy)

Alternate index label for Ectopic Pregnancy.

Synonyms:

Pregnancy High Blood Pressure (Pregnancy: Preeclampsia and Eclampsia)

Alternate index label for Pregnancy: Preeclampsia and Eclampsia.

Synonyms:

Pregnancy Planning (Preparing for Pregnancy)

Alternate index label for Preparing for Pregnancy.

Synonyms:

Pregnancy Tubal (Ectopic Pregnancy)

Alternate index label for Ectopic Pregnancy.

Synonyms:

Pregnancy vs. PMS (PMS vs. Pregnancy Differences and Similarities)

Alternate index label for PMS vs. Pregnancy Differences and Similarities.

Synonyms:

Pregnancy: Bleeding During the First Trimester

First-trimester bleeding may occur with implantation, cervical changes, miscarriage, ectopic pregnancy, or other causes. Assessment uses symptoms, examination, serial pregnancy hormone testing, and

ultrasound; heavy bleeding, severe pain, faintness, or shoulder pain is urgent.

Synonyms:

Pregnancy: Pain Relief Options for Birth

Labor pain relief may include breathing and movement, water, massage, nitrous oxide, intravenous medicines, epidural analgesia, or spinal anesthesia. Choice depends on labor stage, maternal and fetal status, contraindications, availability, and informed preference.

Synonyms:

Pregnancy: Placenta Previa

Placenta previa occurs when the placenta lies over or near the cervical opening and can cause painless bright-red bleeding, especially later in pregnancy. Digital vaginal examination is avoided until location is known; recurrent bleeding requires obstetric planning and sometimes cesarean delivery.

Synonyms:

Pregnancy: Preeclampsia and Eclampsia

Preeclampsia is new hypertension during pregnancy with proteinuria or organ dysfunction; eclampsia is the occurrence of seizures. Severe headache, visual symptoms, upper-abdominal pain, shortness of breath, or seizure requires emergency obstetric treatment.

Synonyms:

Pregnant (Pregnancy Planning (Preparing for Pregnancy))

Alternate index label for Pregnancy Planning (Preparing for Pregnancy).

Synonyms:

Premature Menopause (Medical Procedural Causes)

Alternate index label for Medical Procedural Causes.

Synonyms:

Premenstrual Dysphoric Disorder

(PMDD)

Alternate index label for PMDD.

Synonyms:

Premenstrual Syndrome (Menstrual Cramps and PMS Medication Guide)

Alternate index label for Menstrual Cramps and PMS Medication Guide.

Synonyms:

Prevention IBS (Irritable Bowel Syndrome (IBS) Triggers, Prevention)

Alternate index label for Irritable Bowel Syndrome (IBS) Triggers, Prevention.

Synonyms:

Priapism (Penis Disorder)

Alternate index label for Penis Disorder.

Synonyms:

Primary Biliary Cirrhosis (PBC)

Alternate index label for PBC.

Synonyms:

Primary Biliary Cirrhosis Treatment (PBC)

Alternate index label for PBC.

Synonyms:

Primary Immunodeficiency Disease PID

Primary immunodeficiency diseases are inherited disorders of immune development or function that cause unusual, severe, recurrent, or persistent infections and sometimes autoimmunity or inflammation. Evaluation may include blood counts, immunoglobulins, functional tests, and genetic testing.

Synonyms:

Primary Sclerosing Cholangitis (PSC)

Alternate index label for PSC.

Synonyms:

Primary vs. Secondary Progressive MS

Primary progressive multiple sclerosis worsens from

onset without clear early relapses, while secondary progressive MS follows an earlier relapsing course and later develops steady progression. Disability, MRI activity, relapses, and treatment response guide management.

Synonyms:

Profunda Miliaria (Heat Rash)

Alternate index label for Heat Rash.

Synonyms:

prostate inflammation (Prostatitis (Inflammation of the Prostate Gland))

Alternate index label for Prostatitis (Inflammation of the Prostate Gland).

Synonyms:

prostatic carcinoma (Prostate Cancer)

Alternate index label for Prostate Cancer.

Synonyms:

Prostatitis (Inflammation of the Prostate Gland)

Alternate index label for Inflammation of the Prostate Gland.

Synonyms:

Prostatitis vs BPH Enlarged Prostate Gland

Prostatitis is inflammation or infection of the prostate and may cause pelvic pain, painful urination, fever, or urinary symptoms. Benign prostatic hyperplasia is age-related prostate enlargement causing weak stream, hesitancy, and incomplete emptying without infection.

Synonyms:

Proximal Neuropathy Diabetic (Diabetic Neuropathy)

Alternate index label for Diabetic Neuropathy.

Synonyms:

Pruritus (Itch)

Alternate index label for Itch.

Synonyms:

PSC (Primary Sclerosing Cholangitis (PSC))

Alternate index label for Primary Sclerosing Cholangitis (PSC).

Synonyms:

Psoriasis of the scalp (Scalp Psoriasis)

Alternate index label for Scalp Psoriasis.

Synonyms:

PSVT (Paroxysmal Supraventricular Tachycardia (PSVT))

Alternate index label for Paroxysmal Supraventricular Tachycardia (PSVT).

Synonyms:

Psychosis ICU (ICU Psychosis)

Alternate index label for ICU Psychosis.

Synonyms:

Psychotic Disorder Brief (Brief Psychotic Disorder)

Alternate index label for Brief Psychotic Disorder.

Synonyms:

Psychotic Disorders

Psychotic disorders involve impaired reality testing, such as hallucinations, delusions, disorganized thought, or marked behavioral change. Causes include schizophrenia-spectrum illness, mood disorders, substances, medicines, neurologic disease, and medical illness; new psychosis requires prompt assessment and safety planning.

Synonyms:

PTSD (Posttraumatic Stress Disorder)

Alternate index label for Posttraumatic Stress Disorder.

Synonyms:

Pugilistica Dementia (Dementia)

Alternate index label for Dementia.

Synonyms:

Pulled Hamstring (Hamstring Injury)

Alternate index label for Hamstring Injury.

Synonyms:

Pulmonary FibrosisIdiopathic (Idiopathic Pulmonary Fibrosis (IPF))

Alternate index label for Idiopathic Pulmonary Fibrosis (IPF).

Synonyms:

PVC (Premature Ventricular Contractions)

Alternate index label for Premature Ventricular Contractions.

Synonyms:

PVD (Peripheral Vascular Disease)

Alternate index label for Peripheral Vascular Disease.

Synonyms:

PXE (Pseudoxanthoma Elasticum)

Alternate index label for Pseudoxanthoma Elasticum.

Synonyms:

Q

Q Fever

A zoonotic disease caused by *Coxiella burnetii*, an obligate intracellular Gram-negative bacterium. Q fever is transmitted to humans primarily by inhalation of contaminated aerosols from infected livestock (cattle, sheep, goats) and their products (placenta, birth fluids, urine, feces, milk). Incubation: 2–3 weeks.

Synonyms:

Quantitative Computed Tomography

CT-based imaging that measures bone mineral density as well as showing bone structure. **Synonyms:** QCT

Quick Relievers

Fast-acting medicines that relax airway muscle and rapidly ease bronchoconstriction. **Synonyms:** Rescue medicines

Quiet Sleep

Non-REM sleep, during which brain and body activity generally slow. **Synonyms:** Non-REM sleep

Q Wave

The negative deflection that follows the P wave in some electrocardiographic leads, representing initial ventricular depolarization.

Synonyms:

QALY

Quality-adjusted life year, a measure combining the length of life with a value assigned to health-related quality of life during that time.

Synonyms:

QRS Complex

The deflection representing ventricular depolarization, consisting of a Q wave (initial downward deflection), R wave (upward deflection), and S wave (downward deflection after R). Normal duration is 0.06-0.10 seconds (1.5-2.5 small boxes). Widened QRS (>0.12 s) indicates bundle branch block, ventricular rhythm, or hyperkalemia.

Synonyms:

QT Interval

The time from the onset of the QRS complex to the end of the T wave, representing total ventricular depolarization and repolarization. Normal QT is 0.35-0.44 seconds. The corrected QT (QTc) adjusts for heart rate using Bazett's formula: $QTc = QT / \text{square root of RR interval}$.

Synonyms:

QT Prolongation

An electrocardiographic finding characterized by prolongation of the QT interval, representing the time from ventricular depolarization to repolarization, which predisposes to the potentially fatal arrhythmia torsades de pointes. The corrected QT interval should be less than 440 milliseconds in men and 460 milliseconds in women.

Synonyms:

Quad Screen (Maternal Serum Screening)

Second-trimester prenatal screening (15-22 weeks) for fetal aneuploidy and neural tube defects. Measures 4 markers: AFP (alpha-fetoprotein: elevated in NTD, low in Down syndrome), hCG (elevated in Down syndrome), uE3 (unconjugated estriol: low in Down syndrome), and inhibin A (elevated in Down

syndrome).

Synonyms: Maternal Serum Screening

Quadrant

One of four sections of the abdomen (RUQ, LUQ, RLQ, LLQ) used for clinical description. RUQ: liver, gallbladder, duodenum, right kidney. LUQ: stomach, spleen, left kidney, pancreas tail. RLQ: appendix, cecum, right ovary. LLQ: sigmoid colon, left ovary.

Synonyms:

Quadrantectomy

Surgical removal of one quadrant of an organ, most commonly a breast-conserving operation removing a breast tumour with a surrounding margin of tissue. The exact procedure and need for additional treatment depend on pathology and clinical staging.

Synonyms:

Quadriceps Femoris

The four-headed muscle group on the anterior thigh consisting of rectus femoris and the three vasti. It extends the knee; rectus femoris also flexes the hip, and the group contributes to standing, walking, and shock absorption.

Synonyms:

Quadriceps Femoris Muscle

Four-muscle anterior thigh group: rectus femoris, vastus lateralis, vastus medialis, vastus intermedius, all inserting on the tibial tuberosity via the patellar ligament. Innervated by femoral nerve (L2-L4). Primary knee extensor for walking, running, rising from seated. VMO is important for patellar tracking.

Synonyms:

Quadriceps Injury

Damage to the quadriceps muscle or tendon caused by sudden force, overuse, or direct trauma. It may cause front-of-thigh pain, bruising, weakness, or difficulty extending the knee. Severe pain, a palpable defect, or inability to bear weight requires assessment for a significant tear or tendon rupture.

Synonyms:

Quadriceps tendon ruptures

A tear of the tendon connecting the quadriceps muscle to the patella, causing weakness or inability to extend the knee. Complete tears often require surgical repair; treatment depends on the extent of injury and the person's functional needs.

Synonyms:

Quadriplegia

Paralysis of all four limbs and trunk, resulting from a spinal cord lesion at the cervical level or a bilateral brainstem lesion. Common causes include traumatic spinal cord injury, stroke, multiple sclerosis, spinal cord tumors, and demyelinating disease.

Synonyms:

Quadruplet Pregnancy

A pregnancy involving four fetuses. It carries increased risks of preterm birth, fetal growth restriction, hypertensive and metabolic complications, and maternal morbidity and therefore requires specialized multidisciplinary antenatal care.

Synonyms:

Quality Assurance

Planned activities used to verify that healthcare services meet defined standards of safety, quality, and performance.

Synonyms:

Quality Control

Daily, weekly, monthly tests ensure system performance. Uniformity, energy, sensitivity, spatial resolution, count rate performance.

Synonyms:

Quality Control (Laboratory)

Procedures using control materials, calibration, equipment checks, and documented review to ensure that a laboratory method remains accurate and precise during routine testing.

Synonyms: Laboratory

Quality Improvement

Systematic efforts to improve healthcare. Methods:

PDSA cycles, Lean, Six Sigma. Outcomes: safety, effectiveness, patient-centeredness.

Synonyms:

Quality of Life

A person's perceived physical, psychological, social, and functional well-being.

Synonyms:

Quality-Adjusted Life Year

A health-economic measure combining length of life with health-related quality of life on a scale where 1 represents full health and 0 represents death. It is used to compare cost-effectiveness across interventions.

Synonyms:

Quantification

Measurement of radiotracer uptake or clearance. SUV (PET), clearance rates (renal), ejection fraction (cardiac). Essential for treatment monitoring.

Synonyms:

Quantitative PET

The measurement or estimation of radiotracer concentration and tissue kinetics from PET data, using measures such as standardized uptake value or compartmental modeling.

Synonyms:

Quarantine

Separation or restriction of movement of people who have been exposed to an infectious disease while monitoring whether they become ill. It differs from isolation of people who are already infected.

Synonyms:

Quickening

The first perception of fetal movement by the mother, typically felt between 16-20 weeks in multiparous women and 18-22 weeks in nulliparous women. Described initially as a subtle fluttering sensation that becomes stronger and more regular as pregnancy progresses.

Synonyms:

Quiescent

Inactive or dormant state of disease. Example: quiescent ulcerative colitis (no symptoms but histologic inflammation may persist).

Synonyms:

Quinine

An alkaloid derived from cinchona bark, with anti-malarial, antipyretic, and skeletal muscle relaxant properties. Quinine is a blood schizonticide with activity against all Plasmodium species, but resistance has emerged in *P. falciparum*.

Synonyms:

Quinsy

A peritonsillar abscess: a collection of pus between the tonsillar capsule and the superior pharyngeal constrictor muscle, usually developing as a complication of tonsillar infection.

Synonyms:

Quinupristin-dalfopristin

A streptogramin antibiotic combination that inhibits bacterial protein synthesis. It is used intravenously for selected serious gram-positive infections, including some resistant *Enterococcus faecium* infections, when appropriate alternatives are unavailable.

Synonyms:

Quorum Sensing

Cell-density-dependent bacterial communication system in which bacteria produce and detect small signaling molecules (autoinducers—acyl-homoserine lactones in gram-negative, autoinducing peptides in gram-positive, AI-2 inter-species) to coordinate population-wide behaviors.

Synonyms:

Quadripareisis

Weakness affecting all four limbs, usually resulting from cervical spinal-cord disease, brain injury, neuromuscular disease, or another disorder of the central or peripheral nervous system.

Synonyms:

Quinolone

A class of synthetic antibacterial drugs that inhibit bacterial DNA gyrase or topoisomerase IV. Examples include ciprofloxacin and levofloxacin.

Synonyms:

Quadrantanopia

Loss of vision in one quarter of the visual field, usually caused by a lesion affecting specific portions of the optic pathways.

Synonyms:

Quadriceps Tendon Rupture

A tear of the tendon connecting the quadriceps muscle to the patella, causing pain, swelling, and inability to actively extend the knee.

Synonyms:

Quadriceps Tendinitis

Overuse-related inflammation or degeneration of the quadriceps tendon, causing pain above the kneecap that worsens with jumping, running, or resisted knee extension.

Synonyms:

Quartan Fever

A fever pattern in which fever attacks recur approximately every 72 hours, classically associated with infection by *Plasmodium malariae*.

Synonyms:

Quincke's Disease (Angioneurotic Oedema)

Sudden swelling of deeper layers of the skin or mucosa, commonly affecting the lips, face, tongue, throat, or bowel; airway involvement is an emergency.

Synonyms: Angioneurotic Oedema

Quincke's Pulse

Visible capillary pulsation in the nail bed or skin, often associated with a wide pulse pressure and severe aortic regurgitation.

Synonyms:

Quincke's Sign

A sign of severe aortic regurgitation in which alternating flushing and blanching of the nail bed or skin can be seen with each heartbeat.

Synonyms:

Quotidian Fever

A fever pattern in which fever attacks occur approximately every 24 hours; it may occur in malaria and several other infections.

Synonyms:

qigong

qigong is used in relation to qigong during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

quality

quality is used in relation to quality during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

quantum dot

quantum dot is used in relation to quantum dot during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

quassins

quassins concerns quassins, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Synonyms:

quercetin

quercetin concerns quercetin, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Synonyms:

questionnaire

questionnaire is a clinical assessment, measurement,

or procedure used to investigate, monitor, classify, or treat questionnaire.

Synonyms:

quetiapine fumarate

quetiapine fumarate concerns quetiapine fumarate, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

quinalphos

quinalphos concerns quinalphos, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

quinapril

quinapril concerns quinapril, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

quinazoline

quinazoline is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

quinidine

quinidine concerns quinidine, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

quinolinic acid

quinolinic acid denotes quinolinic acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

quinone metabolism

quinone metabolism is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

quinones

quinones is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

quinuclidines

quinuclidines is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

quipazine

quipazine concerns quipazine, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

Quadruple screen test

The quadruple screen measures maternal blood markers to estimate risk of selected fetal chromosomal or neural-tube conditions; it is a screening test, not a diagnosis.

Synonyms:

Quantitative Bence-Jones protein test

A quantitative Bence-Jones protein test measures free monoclonal light chains in urine, supporting evaluation and monitoring of plasma-cell disorders such as multiple myeloma.

Synonyms:

Quantitative immunoglobulins

Quantitative immunoglobulin testing measures classes of antibodies in blood and helps evaluate im-

immune deficiency, chronic inflammation, monoclonal gammopathy, or abnormal immune activation.

Synonyms:

Quantitative nephelometry test

Quantitative nephelometry estimates specific proteins by measuring light scattered by immune complexes, supporting assessment of immunoglobulins, complement, and other serum proteins.

Synonyms:

Questions to ask your child's doctor about cancer

Questions about a child's cancer should clarify the diagnosis, stage, treatment options, expected benefits and risks, clinical trials, supportive care, and follow-up plan.

Synonyms:

Questions to ask your doctor about getting pregnant

Questions before pregnancy should address chronic conditions, medications, vaccinations, genetic risks, nutrition, fertility timing, and health changes that improve pregnancy safety.

Synonyms:

Questions to ask your doctor about going home with your baby

Questions before taking a newborn home should cover feeding, sleep safety, medicines, warning signs, follow-up, immunizations, and when to seek urgent care.

Synonyms:

Questions to ask your doctor about hospital care after delivery

Questions after delivery should clarify maternal recovery, bleeding, pain, wound care, mood symptoms, feeding, contraception, newborn care, and follow-up.

Synonyms:

Questions to ask your doctor about staying healthy during pregnancy

Pregnancy health questions should address nutri-

tion, activity, prenatal testing, medications, infection prevention, warning signs, and management of existing medical conditions.

Synonyms:

Questions to ask your doctor after knee replacement

Questions after knee replacement should clarify wound care, pain control, mobility restrictions, exercises, clot prevention, infection warning signs, and rehabilitation milestones.

Synonyms:

Questions to ask your doctor before knee replacement

Questions before knee replacement should address the diagnosis, alternatives, implant choice, surgical risks, preparation, expected recovery, rehabilitation, and long-term activity.

Synonyms:

Questions to ask your health care provider about labor and delivery

Labor and delivery questions should clarify birth-plan preferences, pain relief, monitoring, induction, cesarean indications, newborn care, and urgent situations.

Synonyms:

Questions to ask your health care provider about post pregnancy care

Post-pregnancy care questions should cover bleeding, pain, blood pressure, incision or tear healing, mood, contraception, lactation, pelvic recovery, and routine follow-up.

Synonyms:

Questions to ask your surgeon about spinal surgery

Questions before spinal surgery should clarify the pain generator, goals, alternatives, procedure, neurologic risks, recovery restrictions, rehabilitation, and expected outcomes.

Synonyms:

Quit Smoking (Smoking and Quitting Smoking)

Alternate index label for Smoking and Quitting Smoking.

Synonyms:

R

Rabies

Rabies is a nearly always fatal viral encephalitis transmitted through saliva, usually by an animal bite, but prompt wound care and post-exposure prophylaxis can prevent disease. infected animals. After inoculation, the virus travels to the CNS via peripheral nerves. Symptoms include hydrophobia, aerophobia, and progressive neurological deterioration. Diagnosis is made by direct fluorescent antibody testing of brain tissue.

Synonyms:

Radial Tunnel Syndrome

Compression of the radial nerve near the elbow, causing arm pain, tingling, or weakness. **Synonyms:**

Radiation

Energy transmitted as particles or electromagnetic waves, including X-rays and gamma rays. **Synonyms:**

Radical Prostatectomy

Surgery that removes the entire prostate, usually with nearby seminal vesicles. **Synonyms:**

Radioallergosorbent Test

A blood test used to detect allergen-specific IgE antibodies. **Synonyms:** RAST

Radiofrequency

Electromagnetic energy used in some diagnostic and therapeutic medical procedures. **Synonyms:** RF energy

Radiograph

An image produced using X-rays. **Synonyms:** X-

ray

Radionuclide Imaging or Scan

Imaging that detects radiation from a tracer administered to the patient. **Synonyms:** Nuclear scan; scintigraphy

Radionuclides

Radioactive atoms used as tracers in nuclear medicine imaging or treatment. **Synonyms:**

Randomized

Assigned by chance rather than choice or preference, as in a clinical trial. **Synonyms:**

Rapid Eye Movement Sleep

A sleep stage marked by rapid eye movements, vivid dreaming, and high brain activity. **Synonyms:** REM sleep

RAST

A blood test for allergen-specific IgE antibodies. **Synonyms:** Radioallergosorbent test

Raynaud's Syndrome

Episodic narrowing of small blood vessels in fingers or toes triggered by cold or stress. **Synonyms:** Raynaud phenomenon

RCT

Randomized controlled trial, a study comparing randomly assigned intervention and control groups. **Synonyms:** Randomized controlled trial

RDA

Recommended dietary allowance, the daily nutrient intake sufficient for nearly all healthy people in a defined group. **Synonyms:** Recommended dietary allowance

Rebound Insomnia

Return or worsening of insomnia after stopping a sleep medicine. **Synonyms:**

Receptors

Cell proteins or structures that bind specific signaling molecules and trigger a response. **Synonyms:**

Recombinant Tissue Plasminogen Activator

A laboratory-produced clot-dissolving medicine used in selected emergencies. **Synonyms:** Recombinant tPA

Recommended Dietary Allowance

The average daily intake expected to meet the nutrient needs of nearly all healthy people in a defined group. **Synonyms:** RDA

Recovery

The process of regaining health or overcoming an addiction or harmful behavior. **Synonyms:**

Rehabilitative Driving Specialist

A professional who evaluates driving ability and recommends adaptive equipment or training. **Synonyms:**

Rejection

An immune response in which the body attacks transplanted tissue or an organ. **Synonyms:** Transplant rejection

Relaxation Response

Physiological changes produced by relaxation practices that counter the stress response. **Synonyms:**

REM

Rapid eye movement, a sleep stage associated with

vivid dreams and intense brain activity. **Synonyms:** Rapid eye movement sleep

REM Behavior Disorder

A sleep disorder in which a person acts out dreams during REM sleep. **Synonyms:** REM sleep behavior disorder

REM Rebound

Increased REM sleep after REM deprivation or withdrawal of a REM-suppressing medicine. **Synonyms:**

Renal

Renal is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. **Synonyms:**

Reperfusion

Restoration of blood flow to tissue after an interruption. **Synonyms:**

Reperfusion Therapy

Treatment that restores circulation to tissue deprived of blood, such as clot-dissolving treatment or angioplasty. **Synonyms:**

Repetitions

The number of times an exercise movement is performed. **Synonyms:** Reps

Resistance

The ability of a microorganism to withstand a medicine that previously inhibited or killed it. **Synonyms:** Drug resistance

Resistant Hypertension

High blood pressure that remains above goal despite appropriate treatment with multiple medicines. **Synonyms:** Treatment-resistant hypertension

Restenosis

Re-narrowing of a blood vessel after it has been

opened by angioplasty or another procedure. **Synonyms:**

Resting Energy Expenditure

The calories the body uses at rest to maintain essential functions. **Synonyms:** Resting metabolic rate

Resuscitation

Emergency measures used to restore breathing and circulation. **Synonyms:** CPR; revival

Retinoid

A vitamin-A-related compound used in some skin treatments and other medical applications. **Synonyms:**

Retrieval

The process of recalling information stored in memory. **Synonyms:** Memory retrieval

Retrospective Study

A study that examines past records or exposures to investigate disease causes or outcomes. **Synonyms:**

Revascularization

Restoration of blood flow to an area through bypass surgery, angioplasty, or another procedure. **Synonyms:**

Reward Insufficiency Theory

The theory that inadequate pleasure responses may contribute to addictive behavior. **Synonyms:**

Reward Pathway

Interconnected brain regions involved in motivation, pleasure, reinforcement, and reward learning. **Synonyms:** Mesolimbic pathway

Rheumatic Disease

A disorder affecting joints, muscles, connective tissue, or related structures, often through inflammation. **Synonyms:**

Rheumatism

Pain, stiffness, or discomfort in joints and surrounding soft tissues. **Synonyms:**

Rheumatologist

A physician specializing in inflammatory and autoimmune diseases of joints and connective tissue. **Synonyms:**

Rhytidectomy

Cosmetic surgery that removes excess facial skin and tightens supporting tissues. **Synonyms:** Facelift

Risky Drinking

Alcohol use that increases the likelihood of health, safety, or social consequences. **Synonyms:** Hazardous drinking

RLS

Restless legs syndrome, an urge to move the legs with uncomfortable sensations, especially at night. **Synonyms:** Restless legs syndrome

Root

The part of a tooth below the gum line. **Synonyms:**

Root Canal

The channel inside a tooth root containing the pulp and its nerves and blood vessels. **Synonyms:**

Roughage

The indigestible portion of plant foods that adds bulk to stool. **Synonyms:** Dietary fiber

Rupture

A tear or complete break in an organ, vessel, muscle, or other tissue. **Synonyms:**

Ruptured Disk

A spinal disk whose outer layer has torn, allowing inner material to bulge outward. **Synonyms:** Herniated disk; slipped disk

Rabies vaccination

Immunization used before or after exposure to reduce the risk of rabies. Post-exposure management also includes wound care and, when indicated, rabies immunoglobulin.

Synonyms:

Radial Artery

The smaller terminal branch of the brachial artery, arising at the cubital fossa, running laterally along the radius to the wrist (palpable at the anatomical snuffbox) and hand. Supplies the lateral forearm and the thumb side of the hand; forms the deep palmar arch.

Synonyms:

Radial artery thrombosis

Formation of a thrombus in the radial artery, often at the site of arterial catheterization or in the setting of a hypercoagulable state or vasculitis. May cause hand ischemia with pain, pallor, and decreased pulse. Treatment includes anticoagulation and surgical intervention for limb-threatening ischemia.

Synonyms:

Radial Club Hand

A congenital longitudinal deficiency of the radial ray, ranging from thumb hypoplasia to complete absence of the radius. The hand is radially deviated due to the absent radial support, with the carpus displaced proximally and radially.

Synonyms:

Radial keratotomy

A refractive surgical procedure, now largely obsolete, in which radial incisions are made in the peripheral corneal stroma to flatten the central cornea and reduce myopia. It was superseded by laser refractive surgery (LASIK, PRK) due to complications including diurnal visual fluctuation, glare, and hyperopic shift.

Synonyms:

Radial Nerve

From posterior cord (C5-T1), the plexus's largest

branch. In the arm runs in the radial groove with the profunda brachii artery, innervating triceps and anconeus. At the elbow divides into superficial (sensory to dorsal hand) and deep (posterior interosseous) branches. Deep branch innervates forearm/hand extensors.

Synonyms:

Radiation Biology

The study of how ionizing or nonionizing radiation affects cells, tissues, organisms, and populations.

Synonyms:

Radiation Contamination

Unwanted radioactive material on a person, surface, object, or body site. Contamination may be removable or fixed and requires containment, monitoring, decontamination, and documentation according to radiation-safety procedures.

Synonyms:

Radiation Dose

The amount of ionizing radiation absorbed or received by a person or tissue. Dose varies with the examination, equipment, protocol, and patient size; imaging should be justified and optimized to obtain the needed information with the lowest reasonable exposure.

Synonyms:

Radiation Emergency

An event involving actual or suspected harmful radiation exposure or contamination that requires urgent protective and medical measures.

Synonyms:

Radiation Enteritis

Inflammation and injury of the small or large intestine caused by therapeutic ionizing radiation. It may be acute with diarrhea, cramping, and nausea or delayed with strictures, malabsorption, bleeding, fistula, or obstruction.

Synonyms:

Radiation Fibrosis

Permanent scarring and stiffening of tissue caused by radiation injury, which may develop months or years after treatment. It can affect the skin, lungs, bowel, or other organs and may cause pain, reduced function, or shortness of breath.

Synonyms:

Radiation Monitoring

Measurement of radiation levels or individual exposure using devices such as personal dosimeters and area monitors.

Synonyms:

Radiation Necrosis

Irreversible tissue injury caused by ionizing radiation, often developing months or years after treatment. In the brain it may produce edema, seizures, headache, or focal deficits and can resemble recurrent tumour on imaging.

Synonyms:

Radiation Oncologist

A physician who uses ionizing radiation and related treatments to manage cancer and selected other diseases.

Synonyms:

Radiation Oncology

A medical specialty that uses high-energy radiation (such as X-rays or gamma rays) to shrink tumors and destroy cancer cells.

Synonyms:

Radiation Physics

The study and application of physical principles governing radiation production, detection, imaging, therapy, and protection.

Synonyms:

Radiation Pneumonitis

An inflammatory lung injury occurring weeks to months after thoracic radiation. It may cause dry cough, fever, dyspnea, and hypoxemia within the irradiated field and can progress to radiation fibrosis.

Synonyms:

Radiation Poisoning

Illness caused by substantial exposure to ionizing radiation, potentially producing skin injury, bone-marrow suppression, gastrointestinal symptoms, or organ failure.

Synonyms:

Radiation Pregnancy Screening

Assessment of pregnancy status before procedures involving ionizing radiation or radioactive materials when pregnancy is possible. The decision to proceed requires clinical justification, risk optimization, and consideration of gestational age and fetal dose.

Synonyms:

Radiation Protection

The practice of keeping radiation exposure as low as reasonably achievable while obtaining the required diagnostic or therapeutic result. It relies on justification, optimization, time reduction, distance, shielding, and appropriate contamination control.

Synonyms:

Radiation recall

An inflammatory reaction that occurs in previously irradiated skin or mucosa after administration of certain chemotherapeutic agents, particularly antimetabolites and anthracyclines. It manifests as erythema, desquamation, or mucositis in the previously irradiated field, mimicking acute radiation dermatitis.

Synonyms:

Radiation Safety

Principles: time, distance, shielding. ALARA (As Low As Reasonably Achievable). Radioactive materials handled in designated areas. Waste disposal per regulations. Pregnancy screening for women of childbearing age.

Synonyms:

Radiation Sickness

Acute radiation syndrome caused by high-dose

whole-body or substantial partial-body exposure to ionizing radiation. It may produce nausea, vomiting, marrow failure, infection, bleeding, gastrointestinal injury, neurovascular collapse, and death depending on dose.

Synonyms:

Radiation Therapy

Use of ionizing radiation to kill cancer cells. Types: external beam, brachytherapy, stereotactic. Mechanisms: DNA damage, cell death. Side effects: fatigue, skin reactions, site-specific effects.

Synonyms:

Radiation-induced angiosarcoma

A rare, aggressive soft tissue sarcoma arising in previously irradiated tissue, typically with a long latency period. It carries a poor prognosis due to local recurrence and metastatic potential.

Synonyms:

Radiation-Recall Dermatitis

An inflammatory skin reaction that occurs in a previously irradiated area after exposure to a triggering substance, often months or years later. The area may become red, swollen, painful, or blistered and requires clinical evaluation.

Synonyms:

Radiculitis

Inflammation or irritation of a spinal nerve root, causing radiating pain, paresthesia, sensory loss, weakness, or reflex change in a dermatomal or myotomal distribution. Causes include infection, inflammatory disease, disc pathology, and compression.

Synonyms:

Radiculopathy

Dysfunction of a spinal nerve root, usually from disc herniation, narrowing, or inflammation. It may cause shooting pain, tingling, numbness, weakness, or altered reflexes along the affected nerve pathway.

Synonyms:

Radioactive Iodine

Used for thyroid imaging and treatment. I-131 emits beta particles (therapy) and gamma rays (imaging). Half-life: 8 days. Used for hyperthyroidism (Graves, toxic nodules) and thyroid cancer ablation. I-123 for diagnostics (shorter half-life, pure gamma).

Synonyms:

Radioactive Iodine Ablation

Treatment of differentiated thyroid carcinoma using iodine-131 to destroy residual thyroid tissue after total thyroidectomy. Indications include intermediate and high-risk disease for remnant ablation and treatment of residual or recurrent disease. Patients must be hypothyroid or receive recombinant TSH to maximize iodine uptake.

Synonyms:

Radioactivity

The spontaneous transformation of unstable atomic nuclei with emission of particles or electromagnetic radiation. Activity is the rate of nuclear transformations and is measured in becquerels.

Synonyms:

Radiobiology

Study of radiation effects on biological systems. DNA damage, cell death, repair mechanisms.

Synonyms:

Radiocarpal Joint

The wrist joint between the distal radius and articular disc proximally and the scaphoid, lunate, and triquetrum distally. It permits flexion, extension, radial deviation, ulnar deviation, and circumduction.

Synonyms:

Radiochemical Purity

The fraction of total radioactivity present in the intended chemical form of a radiopharmaceutical. Impurities may alter biodistribution, reduce target uptake, and increase radiation dose to nontarget tissues.

Synonyms:

Radiochemistry

Chemistry of radiopharmaceuticals. Labeling, purification, quality control.

Synonyms:

Radiocontrast

A substance administered during imaging to make selected tissues, vessels, or body spaces more visible.

Synonyms:

Radioembolization

Intra-arterial delivery of radioactive microspheres (yttrium-90) to liver tumors through the hepatic artery, used for hepatocellular carcinoma and liver metastases.

Synonyms:

Radiofrequency Ablation

A procedure that uses high-frequency electrical energy to heat and destroy selected tissue, often under imaging guidance.

Synonyms:

Radioimmunoassay

Sensitive immunoassay using radiolabeled antigens or antibodies. Competitive binding principle. Used for hormone measurement (thyroid, reproductive), tumor markers, drug levels. Largely replaced by non-radioactive methods (ELISA) but still used for some assays.

Synonyms:

Radiologic Technologist

A trained health professional who performs selected medical-imaging examinations and helps protect patients from unnecessary radiation exposure.

Synonyms:

Radiologic-Pathologic Correlation

Integration of imaging findings with gross and microscopic pathology to explain lesion location, extent, tissue composition, and sampling adequacy. It is important for discordant biopsy and imaging results.

Synonyms:

Radiologist

A physician trained to interpret medical images and, in some specialties, perform image-guided procedures.

Synonyms:

Radiology Report

Document describing imaging findings and interpretation. Structure: indication, technique, findings, impression. Clear, concise language essential. Critical findings require immediate communication.

Synonyms:

Radiology-Patient Identification

Verification of the correct patient, examination, body site, indication, pregnancy status when relevant, allergies, renal function, and prior imaging before image acquisition or intervention. It is a core diagnostic and procedural safety step.

Synonyms:

Radiolucent

Describing a material that allows relatively greater passage of X-rays and therefore appears darker on a radiograph or CT image. Air is highly radiolucent; some stones, foreign bodies, and lesions may also be radiolucent.

Synonyms:

Radionuclide Therapy

Internal radiation therapy using radiopharmaceuticals. Examples: I-131 (thyroid), Lu-177 DOTATATE (neuroendocrine tumors), Lu-177 PSMA (prostate cancer), Ra-223 (bone metastases), Y-90 microspheres (liver cancer).

Synonyms:

Radionuclidic Purity

The fraction of radioactivity arising from the intended radionuclide rather than contaminating radionuclides. It is important because contaminants may change radiation type, energy, half-life, dosimetry, and patient risk.

Synonyms:

Radiopaque

Describing a material that attenuates X-rays strongly and therefore appears relatively white on a radiograph or CT image. Bone, metal, and some contrast agents are radiopaque.

Synonyms:

Radiopharmaceutical

Radioactive compound used for diagnostic or therapeutic purposes. Components: radionuclide + targeting molecule. Selectivity determines biodistribution and image quality.

Synonyms:

Radiopharmaceutical Extravasation

Inadvertent leakage of a radiopharmaceutical from the injection vessel into surrounding tissue. It can reduce diagnostic accuracy and, with therapeutic agents, cause local radiation injury; the event requires documentation and dose assessment.

Synonyms:

Radiopharmaceutical Labeling Kit

A prepared set of reagents used to attach a radionuclide, commonly technetium-99m, to a compound for diagnostic imaging.

Synonyms:

Radiopharmaceutical Quality Control

Testing performed to verify identity, radionuclidic purity, radiochemical purity, pH, sterility, endotoxin limits, and other release specifications before clinical administration. Requirements depend on the preparation and jurisdiction.

Synonyms:

Radiopharmacy

Preparation and dispensing of radiopharmaceuticals. Good manufacturing practice (GMP) required. Sterility, pyrogen testing, quality control.

Synonyms:

Radiosensitization

Increased susceptibility of cells or tissues to injury from ionizing radiation.

Synonyms:

Radiotracer

A compound containing a radioactive nuclide that follows a biologic pathway and permits in-vivo imaging or measurement. Its distribution reflects the target physiology, receptor, enzyme, transporter, or tissue process.

Synonyms:

Radium-223

Alpha emitter, half-life 11.4 days. Used for bone metastases from prostate cancer. Mimics calcium, targets bone turnover sites.

Synonyms:

Radius

Lateral forearm bone in the anatomical position. Proximal end: head, neck, radial tuberosity. Shaft. Distal end: styloid process, articular surfaces. The radial head articulates with the capitulum and ulnar notch, allowing pronation/supination. **Synonyms:**

Rampant Caries

Widespread severe caries affecting multiple surfaces. Associated with sugary drinks, xerostomia, bulimia.

Synonyms:

Ramsay Hunt Syndrome

Reactivation of varicella-zoster virus in the geniculate ganglion causing ipsilateral facial paralysis, severe ear pain, and vesicular eruption in or around the ear or oral cavity. Hearing loss and vertigo may occur; prompt treatment is important.

Synonyms:

Random Events

Coincidence events from unrelated photons. Reduced by timing window and energy discrimination.

Synonyms:

Randomization

Assignment of study participants to intervention groups by chance, helping reduce systematic differences between groups.

Synonyms:

Randomized Controlled Trial

An experimental study in which participants are assigned by chance to different interventions or a control condition and followed for specified outcomes.

Synonyms:

Range of Motion

ROM: joint movement capacity. Goniometer measurement. Restrictions from contracture, pain, swelling.

Synonyms:

Ranson Criteria

Clinical scoring system for acute pancreatitis severity incorporating eleven parameters at two time points. Admission parameters include age, white blood cell count, glucose, LDH, and AST. Forty-eight hour parameters include hematocrit drop, BUN increase, calcium, oxygen tension, base deficit, and fluid sequestration.

Synonyms:

Ranula

A mucocoele (mucus extravasation cyst) of the sublingual salivary gland, presenting as a blue-translucent, fluctuant swelling in the floor of the mouth, typically lateral to the lingual frenulum. A ranula results from trauma or obstruction of a sublingual gland duct, causing mucus accumulation in the sublingual space.

Synonyms:

Rape

Sexual penetration of the mouth, vagina, or anus accomplished without consent or with a person unable to consent, often through force, threat, fraud, or impairment; many statutes subsume it under sexual assault.

Synonyms:

Rapid Sequence Induction

An intubation technique designed to minimize aspi-

ration risk in patients with full stomach.

Synonyms:

Rapid Strep Test

A test performed on a throat swab to detect Group A Streptococcus. It provides a rapid result, but a negative result may require confirmatory testing depending on the patient's age, symptoms, and local guidance.

Synonyms:

Rapid-Sequence Intubation

A planned emergency airway technique using a sedative-hypnotic and a neuromuscular blocker in rapid succession to facilitate tracheal intubation while minimizing aspiration risk. Preparation includes preoxygenation, backup airway plans, hemodynamic assessment, and confirmation of tube position.

Synonyms:

Rapidly Progressive Glomerulonephritis

A syndrome of rapidly worsening kidney function accompanied by glomerular inflammation, often with crescent formation on biopsy. Causes include anti-glomerular-basement-membrane disease, immune-complex disease, and pauci-immune vasculitis. It requires urgent evaluation and treatment.

Synonyms:

Rasburicase

A recombinant urate-oxidase enzyme that converts uric acid to the more soluble allantoin. It is used in selected patients at risk of or experiencing tumorlysis-related hyperuricemia. It can cause serious hypersensitivity or hemolysis in people with glucose-6-phosphate dehydrogenase deficiency and requires appropriate screening and monitoring.

Synonyms:

Rash

A general term for any visible skin eruption, change in skin color, texture, or appearance.

Synonyms:

Rashes

Rashes is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Rat bite fever

A systemic bacterial infection caused by *Streptobacillus moniliformis* or *Spirillum minus*, transmitted through rat bites or contact with rat-contaminated food or water. It presents with relapsing fever, rash, polyarthrititis, and lymphadenopathy. The characteristic rash is petechial or maculopapular on the extremities.

Synonyms:

Rat-Bite Fever

Systemic infection caused by *Streptobacillus moniliformis* or *Spirillum minus* after exposure to infected rodents. Fever, migratory arthralgia, vomiting, and a maculopapular or petechial rash may occur.

Synonyms:

Raynaud Phenomenon

Exaggerated vasospastic response of digital arteries to cold or stress, causing well-demarcated color changes (white-blue-red) in fingers or toes. Primary Raynaud: idiopathic, symmetric, no tissue damage, normal capillaries.

Synonyms:

Raynaud Syndrome

A vasospastic disorder causing episodic digital color changes (white -> blue -> red) triggered by cold or stress, due to exaggerated vasoconstriction of digital arteries. Primary Raynaud: benign, symmetric, in young women, no underlying disease.

Synonyms:

Raynaud's phenomenon

Episodic constriction of small arteries in the fingers or toes, causing color changes, numbness, or pain after cold exposure or emotional stress.

Synonyms:

Reaction Time

Time from stimulus to response. Declines with age, neurological disease.

Synonyms:

Reactivation Tuberculosis

Reactivation of latent infection, typically years later. Characteristically affects apical and posterior upper lobe segments. Features include chronic cough, hemoptysis, night sweats, weight loss, and cavitation.

Synonyms:

Reactive Arthritis

An inflammatory arthritis that develops after certain genitourinary or gastrointestinal infections. It may involve the joints, eyes, skin, or urinary tract; not every person has all of these features.

Synonyms:

Reactive Attachment Disorder

A pattern of inhibited, emotionally withdrawn behavior toward adult caregivers. The child rarely or minimally seeks comfort when distressed and rarely or minimally responds to comfort when distressed. The child shows a pattern of persistently irritable and sad mood that is not limited to interactions with caregivers.

Synonyms:

Reactive Oxygen Species

Superoxide, hydrogen peroxide, hydroxyl radical. Normal metabolism byproducts.

Synonyms:

Reactive perforating collagenosis

A perforating dermatosis in which dermal collagen is extruded through the epidermis, presenting as discrete, dome-shaped papules with a central keratotic plug, most commonly on the extensor extremities.

Synonyms:

Receiver Operating Characteristic

ROC curve: plot of sensitivity vs. 1-specificity. Area under curve measures test accuracy.

Synonyms:

Receptor

A protein that binds a specific signaling molecule (ligand) and initiates a cellular response. Types: (1) Cell surface: ion channel (nicotinic AChR), G-protein coupled (GPCR: adrenergic, muscarinic, opioid), enzyme-linked (RTK: insulin receptor, cytokine receptors).

Synonyms:

Receptor Desensitization

A rapid decrease in the response of a receptor to continuous or repeated agonist stimulation, occurring within minutes to hours.

Synonyms:

Receptor Downregulation

A decrease in the number or sensitivity of receptors in response to chronic receptor stimulation by agonists. When receptors are chronically activated, the cells compensate by internalizing and degrading receptors, reducing receptor density on the cell surface, and decreasing receptor responsiveness.

Synonyms:

Receptor Tyrosine Kinases

Single-pass transmembrane receptors with intrinsic tyrosine kinase activity in their intracellular domain. Ligand binding (e.g., insulin, EGF, PDGF, FGF) induces receptor dimerization and autophosphorylation of tyrosine residues.

Synonyms:

Receptor Upregulation

An increase in the number or sensitivity of receptors in response to chronic receptor blockade or decreased neurotransmitter activity. When receptors are chronically blocked by antagonists, the cells compensate by synthesizing more receptors to maintain homeostatic signaling, leading to increased sensitivity to agonists.

Synonyms:

Recessive

Allele whose phenotype is masked in heterozygotes. Autosomal recessive disorders: cystic fibrosis, sickle cell anemia, Tay-Sachs disease. Requires two copies for expression.

Synonyms:

RECIST

Response Evaluation Criteria in Solid Tumors, standardized imaging-based criteria that categorize response to anticancer therapy as complete response, partial response, stable disease, or progressive disease.

Synonyms:

Recombinant DNA

DNA molecule formed by combining genetic material from different sources. Basis of biotechnology. Used to produce insulin, growth hormone, vaccines, gene therapy vectors.

Synonyms:

Recreational Therapy

Use of recreation for therapeutic purposes. Improves quality of life, socialization, coping.

Synonyms:

Rectal Bleeding

Passage of bright-red or dark blood from the rectum, caused by hemorrhoids, fissures, polyps, inflammatory bowel disease, diverticular disease, or cancer. Persistent, heavy, or unexplained bleeding requires evaluation.

Synonyms:

Rectal Prolapse

Protrusion of rectal tissue through the anal opening. Complete prolapse involves all layers of the rectal wall and presents as a concentric cylindrical mass with visible mucosal folds. Partial prolapse involves only the mucosa. Associated with chronic straining, pelvic floor dysfunction, and neurological conditions.

Synonyms:

Rectocele

A weakening of the vaginal wall that allows the rectum to bulge into the vagina.

Synonyms:

Rectovaginal Fistula

Abnormal connection between the rectum and vagina causing passage of stool or gas through the vagina. Causes include obstetric injury particularly third and fourth degree perineal tears, Crohn disease, radiation therapy, and surgical complications. Presents with vaginal discharge of stool, flatus, or recurrent vaginal infections.

Synonyms:

Rectum

The final straight section of the large intestine, approximately 12-15 cm long, extending from the sigmoid colon to the anal canal. The rectum stores feces before defecation.

Synonyms:

Rectus Abdominis Muscle

Long flat vertical anterior abdominal wall muscle from pubic symphysis to xiphoid process/costal cartilages 5-7, divided by tendinous intersections ("six-pack"). Innervated by T7-T12. Flexes trunk, compresses abdomen, increases intra-abdominal pressure. Diastasis recti common in pregnancy/obesity.

Synonyms:

Rectus Abdominis Sheath

A fibrous aponeurotic envelope formed by the abdominal wall muscles and surrounding the rectus abdominis muscle. It contains the superior and inferior epigastric vessels and related nerves.

Synonyms:

Recurrence

Return of cancer after treatment. Can be local, regional, or distant.

Synonyms:

Recurrence Risk

The probability that a genetic condition will occur

again in a future pregnancy or relative, estimated from the inheritance pattern, parental testing, penetrance, and observed or presumed pathogenic variant.

Synonyms:

Recurrence-Free Survival

Time without cancer return after treatment.

Synonyms:

Recurrent

Disease returning after remission. Examples: recurrent UTI, herpes.

Synonyms:

Recurrent Caries

Caries under or around restoration. Due to microleakage, marginal breakdown.

Synonyms:

Red Blood Cell Labeling

Nuclear medicine technique labeling RBCs with Tc-99m. Used for GI bleeding detection, cardiac blood pool imaging.

Synonyms:

Red Flag

A symptom, sign, or test result suggesting a potentially serious condition that requires urgent assessment or escalation of care. Red flags are context-specific and should not be used as a substitute for clinical judgment.

Synonyms:

Red Infarction

Red infarction, also known as hemorrhagic infarction, occurs in tissues with dual blood supply, loose tissue architecture, or venous obstruction, allowing blood to accumulate in the necrotic area and produce a dark red appearance.

Synonyms: hemorrhagic infarction, occurs in tissues with dual blood.

Redundant mitral valve

Excess leaflet tissue of the mitral valve, most commonly the posterior leaflet, which may prolapse into the left atrium during systole. Often associated with myxomatous degeneration and mitral valve prolapse. May be asymptomatic or cause mild mitral regurgitation detected incidentally on echocardiography.

Synonyms:

Reemerging Disease

Previously controlled disease increasing. Examples: tuberculosis, measles, drug-resistant infections.

Synonyms:

Reexpansion pulmonary edema

Noncardiogenic pulmonary edema developing rapidly after rapid reexpansion of a collapsed lung, typically following chest tube drainage of a large or long-standing pneumothorax.

Synonyms:

Refeeding Syndrome

Life-threatening fluid and electrolyte shifts when nutrition restarted in malnourished patient. Hypophosphatemia, hypokalemia, hypomagnesemia, fluid overload, cardiac failure. Prevention: start low (25-30 kcal/kg), advance slowly, supplement electrolytes, monitor closely.

Synonyms:

Reference Interval

The range of laboratory results expected in a defined reference population, usually encompassing the central 95 percent of values. A result outside the interval is not by itself diagnostic and must be interpreted with clinical context, biologic variation, and the laboratory's method-specific range.

Synonyms:

Referred Pain

An unpleasant sensory and emotional experience associated with actual or potential tissue damage, serving as a protective alerting system but becoming maladaptive when chronic (lasting >3 months). See pain.

Synonyms:

Reflex anoxic seizure

A brief seizure-like episode caused by transient cerebral hypoperfusion after a sudden painful or emotional stimulus, usually with pallor, bradycardia, and rapid recovery.

Synonyms:

Reflex Arc

The neural pathway that mediates a reflex action, bypassing conscious brain processing for rapid, automatic responses. A reflex arc consists of five components: (1) Receptor—sensory nerve ending detecting a stimulus (e.g., pain, stretch).

Synonyms:

Reflux

Gastroesophageal reflux in infants: effortless regurgitation of gastric contents, very common (physiologic 'spitting up') and usually benign, resolving by 12 months with maturation of the lower esophageal sphincter.

Synonyms:

Reflux Nephropathy

Renal scarring and chronic kidney damage caused by vesicoureteral reflux, recurrent urinary infection, or both. It may lead to hypertension, proteinuria, impaired growth, and chronic kidney disease.

Synonyms:

Refraction

Refraction examines refraction; interpretation depends on the specimen or body region, test method, reference range, and clinical question. humour, crystalline lens, vitreous humour) to focus a sharp image on the retina. The refractive power of the eye is measured in dioptres (D). Emmetropia: normal refractive state—parallel light rays focus exactly on the retina without accommodation.

Synonyms:

Refractive Errors and Astigmatism

Refractive errors are vision disorders caused by the

eye's inability to properly focus light onto the retina, resulting in blurred vision.

Synonyms:

Refractive Surgery

Surgical procedures that reshape the cornea or alter the eye to correct refractive errors and reduce dependence on eyeglasses or contact lenses. Laser techniques include LASIK (corneal flap with excimer ablation), photorefractive keratectomy (surface ablation), and small-incision lenticule extraction (SMILE).

Synonyms:

Refractory

Resistant to a treatment or not responding adequately to it. The term may refer to cancer or other diseases.

Synonyms:

Refractory Period

The period after an action potential during which a cell cannot (absolute refractory period) or can only partially (relative refractory period) generate a new action potential.

Synonyms:

Refsum Disease

An autosomal-recessive peroxisomal disorder of phytanic-acid metabolism. It causes retinitis pigmentosa, anosmia, peripheral neuropathy, ataxia, hearing loss, ichthyosis, and shortened metacarpals or metatarsals with variable onset.

Synonyms:

Regadenoson Pharmacological Stress

Selective A_{2A} adenosine receptor agonist used as a pharmacological vasodilator for nuclear myocardial perfusion imaging. Single IV bolus injection produces coronary vasodilation with fewer side effects than adenosine (less bronchospasm, AV block). Contraindicated in severe asthma or COPD requiring oxygen.

Synonyms:

Regional Anesthesia

Regional anesthesia involves the administration of local anesthetic agents to specific nerves or nerve plexuses to provide surgical anesthesia and postoperative analgesia for a defined body region.

Synonyms:

Regulatory Approval

Authorization by a competent regulatory authority for a medicine, device, or procedure to be marketed or used for specified purposes after review of evidence.

Synonyms:

Regulatory T Cells

Tregs (CD4+ CD25+ FOXP3+): essential for peripheral tolerance. Thymic (tTreg) vs peripheral (pTreg) origin. FOXP3: master transcription factor; mutations cause IPEX.

Synonyms:

Regurgitation

The backward flow of blood through a heart valve that fails to close properly (valvular incompetence or insufficiency).

Synonyms:

Rehabilitation

A coordinated process that helps a person restore or adapt physical, cognitive, psychological, and social function after illness, injury, surgery, or disability.

Synonyms:

Rehabilitation Clinic

Outpatient rehabilitation facility.

Synonyms:

Rehabilitation Engineering

Technology development for disability: prosthetics, orthotics, assistive devices, environmental control.

Synonyms:

Rehabilitation Hospital

Inpatient facility specializing in rehabilitation.

Synonyms:

Rehabilitation Medicine

Physician specialty focusing on function, quality of life for patients with impairment, disability. Also called physiatry.

Synonyms: physiatry.

Rehabilitation Motivation

Patient factors that influence participation in rehabilitation, including intrinsic and extrinsic motivation and engagement with therapeutic goals.

Synonyms:

Rehabilitation Potential

The expected capacity to improve function, independence, participation, or quality of life through rehabilitation. It depends on diagnosis, prognosis, cognition, motivation, comorbidity, social support, and environmental resources.

Synonyms:

Rehabilitation Unit

Hospital ward dedicated to rehabilitation.

Synonyms:

Reinfection

A new episode of infection by the same or a related pathogen after the original infection has resolved. Reinfection is distinct from relapse, in which the original infection persists or returns from an incompletely eradicated focus.

Synonyms:

Relapse

Return or worsening of a disease after a period of improvement or remission. The term is used for cancer and many noncancerous disorders.

Synonyms:

Relapse-Free Survival

The time from completion of treatment to recurrence of the cancer or death from any cause.

Synonyms:

Relapsing Fever

An acute febrile illness caused by *Borrelia* species, characterized by recurrent episodes of fever separated by afebrile intervals.

Synonyms:

Relapsing Polychondritis

A systemic autoimmune disorder causing inflammation and destruction of cartilage throughout the body. Airway involvement can cause tracheal and bronchial stenosis. Other features include auricular chondritis, nasal chondritis, ocular inflammation, and arthritis. Treatment is corticosteroids and immunosuppressants.

Synonyms:

Relative Afferent Pupillary Defect

An asymmetric reduction in the direct pupillary light response caused by unequal afferent input from the retina or optic nerve. It is detected with the swinging-flashlight test and is also called a Marcus Gunn pupil.

Synonyms: a Marcus Gunn pupil.

Relative Biological Effectiveness

Ratio of dose of reference radiation to dose of test radiation for same effect. Alpha particles: RBE 10-20.

Synonyms:

Relative Risk

Ratio of disease risk in exposed vs. unexposed. $RR = (a/(a+b)) / (c/(c+d))$. $RR > 1$: increased risk. $RR < 1$: protective.

Synonyms:

Reliability

Consistency of measurement. Test-retest, inter-rater reliability.

Synonyms:

REM Sleep Behavior Disorder

A sleep disorder in which the normal muscle paralysis of REM sleep is reduced or absent, allowing a person to move or vocalize while dreaming.

Synonyms:

Remifentanyl

An ultra-short-acting synthetic opioid analgesic metabolized by non-specific plasma and tissue esterases, producing context-sensitive half-time of approximately 3 to 10 minutes regardless of infusion duration. This makes it ideal for total intravenous anesthesia (TIVA) combined with propofol, and for procedures requiring rapid emergence.

Synonyms:

Remission

Decrease or disappearance of cancer signs. Complete remission: no detectable disease. Partial remission: significant reduction but not complete.

Synonyms:

Remitting Seronegative Symmetrical Synovitis with Pitting Edema

RS3PE: an acute-onset, symmetric polyarthritis (usually in elderly) with pitting edema of the hands/feet, negative rheumatoid factor and anti-CCP, and marked response to low-dose corticosteroids.

Synonyms:

Remodeling

Bone adaptation to implant stress. Wolff's law: bone remodels along lines of stress.

Synonyms:

Renal Abscess

A localized collection of pus within or around the kidney, usually caused by infection. Diagnosis and treatment may require imaging, antibiotics, and drainage.

Synonyms:

Renal Agenesis

Congenital absence of one (unilateral, 1 in 1,000) or both (bilateral, 1 in 4,000) kidneys. Unilateral renal agenesis: usually asymptomatic, discovered incidentally — the solitary kidney undergoes compensatory hypertrophy. The contralateral kidney

may have VUR, UPJ obstruction, or ectopia.

Synonyms:

Renal Anemia

Anemia associated with chronic kidney disease, caused by reduced erythropoietin production and other factors such as iron deficiency, inflammation, and shortened red-cell survival. Evaluation and treatment are individualized; iron replacement and erythropoiesis-stimulating therapy may be considered when appropriate.

Synonyms:

Renal Artery

A paired branch of the abdominal aorta supplying a kidney. It divides into segmental, interlobar, arcuate, and interlobular arteries within the renal parenchyma.

Synonyms:

Renal Artery Aneurysm

A focal enlargement of a renal artery, often asymptomatic but capable of causing hypertension, thromboembolism, or rupture. Management depends on size, symptoms, anatomy, pregnancy, and growth, and may involve surveillance, endovascular treatment, or surgery.

Synonyms:

Renal Artery Doppler

Ultrasound assessing renal artery stenosis. Screening for renovascular hypertension.

Synonyms:

Renal Artery Embolism

Acute occlusion of renal artery from cardiac emboli typically from atrial fibrillation or mural thrombus. Presents with acute flank pain and hematuria. CT angiography shows filling defect. Treat with anticoagulation and possibly thrombolysis or embolectomy if caught early.

Synonyms:

Renal Artery Stenosis

Narrowing of renal artery causing renovascular hy-

pertension. Atherosclerotic most common in elderly at ostium. Fibromuscular dysplasia in young women causing mid-distal stenosis with string-of-beads appearance. Flash pulmonary edema and declining function on ACE inhibitors indicate intervention.

Synonyms:

Renal Biopsy

Percutaneous needle biopsy for histological diagnosis. Indicated for unexplained AKI, nephrotic syndrome, hematuria with renal involvement, and transplant dysfunction. Ultrasound-guided for accuracy. Complications include bleeding, arteriovenous fistula, and rarely loss of kidney.

Synonyms:

Renal Calculi (Kidney Stones)

Crystalline mineral deposits that form in the kidneys or urinary tract. They may cause severe colicky pain, blood in the urine, urinary obstruction, or infection.

Synonyms: Kidney Stones

Renal Cell Carcinoma

A malignant tumor arising from the kidney's renal tubular epithelium. Major subtypes include clear-cell, papillary, and chromophobe carcinoma; symptoms and treatment depend on the tumor's extent.

Synonyms:

Renal Changes in Pregnancy

Pregnancy increases renal blood flow and glomerular filtration. These changes lower usual serum creatinine values and may increase urinary loss of glucose and amino acids.

Synonyms:

Renal Clearance

The volume of plasma completely cleared of a substance by the kidneys per unit time, measured in mL/min. Clearance of any substance X is calculated as: $CX = (Ux \times V)/Px$, where Ux is urine concentration, V is urine flow rate, and Px is plasma concentration.

Synonyms:

Renal Colic

Severe, paroxysmal flank pain caused by ureteral obstruction, typically by a kidney stone, with radiation to the groin; often the worst pain experienced.

Synonyms:

Renal Cortex

Outer kidney portion between capsule and medulla. Granular tissue with glomeruli, convoluted tubules, and cortical collecting ducts. Extends between pyramids as renal columns. Receives approximately 90 percent of renal blood flow; primary filtration site.

Synonyms:

Renal cryptococcosis

Infection of the kidney by *Cryptococcus* species, usually as part of disseminated cryptococcosis in an immunocompromised person.

Synonyms:

Renal Diet

Restricted protein, sodium, potassium, phosphorus for kidney disease. Individualized based on stage. Dialysis increases protein need requirement.

Synonyms:

Renal Dose Adjustment

Modification of a medication dose, dosing interval, or both to account for reduced kidney clearance. The adjustment should use an appropriate estimate of renal function, drug-specific pharmacokinetics, treatment indication, and therapeutic monitoring when available.

Synonyms:

Renal Drug Excretion

The elimination of drugs by the kidney through glomerular filtration, active tubular secretion, and passive tubular reabsorption. Drugs eliminated renally (e.g., aminoglycosides, vancomycin, lithium, metformin) require dose adjustment in renal impairment.

Synonyms:

Renal Failure

Decline in kidney function leading to accumulation of waste products (azotemia) and electrolyte abnormalities. Acute kidney injury (AKI): rapid decline over hours to days, potentially reversible. Chronic kidney disease (CKD): progressive decline over months to years.

Synonyms:

Renal Infarction

Renal infarction results from occlusion of the renal artery or its branches, causing coagulative necrosis of the renal parenchyma. The kidney has end-arterial supply with limited collateral circulation, making it susceptible to ischemic injury even from small vessel occlusion.

Synonyms:

Renal Leukemia Infiltration

Kidney involvement by chronic lymphocytic leukemia or other hematological malignancies causing bilateral renomegaly and renal dysfunction. Leukemic cells infiltrate the interstitium and peritubular capillaries. May cause AKI from compression of tubules and vessels or chronic kidney disease.

Synonyms:

Renal Mass

Abnormality in kidney detected on imaging. Solid masses may be renal cell carcinoma. Cystic masses classified by Bosniak system.

Synonyms:

Renal Medulla

The inner part of the kidney containing the renal pyramids, loops of Henle, vasa recta, and collecting ducts. Its structure and blood supply help establish the concentration gradient used to concentrate urine.

Synonyms:

Renal Osteodystrophy

Bone disease in CKD including osteitis fibrosa, osteomalacia, adynamic bone disease, and osteoporosis. Results from calcium-phosphate imbalance, sec-

ondary hyperparathyroidism, and vitamin D deficiency. Manage with phosphate binders, vitamin D analogues, and parathyroidectomy for refractory hyperparathyroidism.

Synonyms:

Renal Pelvis

The funnel-shaped expansion of the ureter within the kidney, formed by the union of major calyces. It collects urine from the renal papillae and directs it into the ureter.

Synonyms:

Renal Replacement Therapy

Treatment that substitutes for inadequate kidney excretory and regulatory function. Modalities include intermittent hemodialysis, continuous kidney replacement therapy, peritoneal dialysis, and kidney transplantation.

Synonyms:

Renal Replacement Therapy Indications

Urgent indications for dialysis include refractory hyperkalemia, severe metabolic acidosis, toxin exposure by a dialyzable agent, refractory fluid overload or pulmonary edema, and symptomatic uremia. The decision incorporates the patient's trajectory and overall goals of care.

Synonyms:

Renal Scan

Nuclear medicine imaging using Tc-99m compounds. Evaluates renal function, obstruction, blood flow. MAG3 for function, DTPA for GFR.

Synonyms:

Renal Scintigraphy

Renal imaging using Tc-99m compounds. MAG3 (tubular secretion) for functional assessment, DTPA (glomerular filtration) for GFR measurement. Used for obstruction, function, transplant monitoring, renin-mediated hypertension.

Synonyms:

Renal Transplant (Renal

Transplantation)

Surgical placement of a functioning donor kidney into a person with advanced kidney failure. It can restore kidney function but requires suitability assessment and long-term immunosuppression.

Synonyms: Renal Transplantation

Renal Trauma

Kidney injury from trauma. CT staging guides management. Grades I-V based on injury severity.

Synonyms:

Renal Tubular Acidosis

Group of disorders with normal anion gap metabolic acidosis from impaired renal acid excretion or bicarbonate reabsorption. Type 1 distal with impaired H⁺ secretion and urine pH greater than 5.5. Type 2 proximal with impaired bicarbonate reabsorption. Type 4 hyperkalemic from aldosterone deficiency or resistance.

Synonyms:

Renal Ultrasound

Noninvasive imaging used to assess kidney size, structure, blood flow, and urinary obstruction. It is particularly useful when obstruction, cystic disease, or structural abnormality is suspected and is often used in the evaluation of acute or chronic kidney disease.

Synonyms:

Renal Vein

A paired vein draining each kidney into the inferior vena cava. The left renal vein is longer and crosses anterior to the aorta, receiving the left gonadal and suprarenal veins.

Synonyms:

Renin Inhibitor

A class of antihypertensive drugs that directly inhibit renin, the first and rate-limiting enzyme in the renin-angiotensin-aldosterone system. Renin catalyzes the conversion of angiotensinogen to angiotensin I, which is then converted to angiotensin II by ACE. Aliskiren is the only direct renin inhibitor

available.

Synonyms:

Renin-Angiotensin-Aldosterone System

A hormonal system in which renin initiates formation of angiotensin II, promoting vasoconstriction and aldosterone secretion. Aldosterone increases distal sodium reabsorption and potassium and hydrogen-ion secretion; RAAS dysregulation contributes to hypertension, heart failure, and CKD progression.

Synonyms:

Renin-Angiotensin-Aldosterone System Physiology

The RAAS regulates blood pressure and fluid electrolyte balance. Renin released from juxtaglomerular cells cleaves angiotensinogen to angiotensin I. Angiotensin converting enzyme converts angiotensin I to angiotensin II which causes vasoconstriction and stimulates aldosterone secretion from the adrenal cortex.

Synonyms:

Renography

Nuclear medicine imaging of kidneys. Evaluates function, obstruction, blood flow.

Synonyms:

Renovascular Hypertension

Hypertension due to renal artery stenosis. Diagnosis: Doppler ultrasound, CTA, MRA, renography. Treatment: angioplasty, stenting, surgery.

Synonyms:

Reperfusion Injury

Tissue damage following restoration of blood flow after ischemia. Mechanisms: oxidative stress, calcium overload, inflammation. Examples: myocardial reperfusion injury, stroke reperfusion injury. Mitigation: antioxidants, reperfusion protocols.

Synonyms:

Replantation of an Avulsed Tooth

Replacement of an avulsed permanent tooth into its

socket after trauma, followed by flexible stabilization and endodontic and periodontal follow-up when indicated. Prognosis depends strongly on extraoral dry time, storage conditions, root maturity, and contamination.

Synonyms:

Repolarization

The return of the membrane potential toward the resting value after depolarization. In neurons and skeletal/cardiac muscle, repolarization is primarily caused by the efflux of potassium through voltage-gated potassium channels and inactivation of sodium channels.

Synonyms:

Reporting Standards

Standards for structured reporting. ACR guidelines, BI-RADS, LI-RADS, PI-RADS.

Synonyms:

Reproductive Organs

The organs involved in reproduction. Female: ovaries (produce eggs and hormones), fallopian tubes (transport eggs, site of fertilization), uterus (nurtures the developing fetus), cervix (lower part of uterus, dilates during labor), vagina (passage for sperm and baby), and vulva (external genitalia).

Synonyms:

Reproductive Toxicity

Effects on reproduction: infertility, teratogenesis, fetal toxicity, developmental toxicity. Testing required for pharmaceuticals.

Synonyms:

Reproductive Years

The period of a woman's life during which she is capable of conceiving, typically from menarche (first menstrual period, average age 12-13) to menopause (final menstrual period, average age 51).

Synonyms:

Research

The systematic investigation and scientific study of

new materials, methods, or clinical trials to advance medical knowledge and patient care.

Synonyms:

Research Ethics

Principles that protect the rights, safety, welfare, privacy, and informed participation of people or animals involved in research.

Synonyms:

Reservoir

A human, animal, or environmental habitat in which an infectious agent normally lives, multiplies, and persists. A reservoir may serve as the source from which the agent is transmitted to a susceptible host.

Synonyms:

Residual Limb

The portion of a limb remaining after amputation. Care includes edema control, skin inspection, shaping, strengthening, desensitization, contracture prevention, and prosthetic preparation.

Synonyms:

Residual Volume

The volume of air remaining in the lungs after a maximal forced expiration, approximately 1.2 L in adults. Residual volume cannot be measured by simple spirometry because it cannot be exhaled; it is measured by body plethysmography, helium dilution, or nitrogen washout.

Synonyms:

Resilience

Ability to recover from stressors. Important for healthy aging.

Synonyms:

Resolution

Ability to distinguish small structures. Spatial, temporal, contrast resolution.

Synonyms:

Resolution Recovery

Correction for detector resolution degradation with distance.

Synonyms:

Resorption Atelectasis

Atelectasis caused by complete obstruction of an airway, leading to absorption of trapped air by the pulmonary capillaries. Common causes include mucus plugging, foreign body, tumor, and post-surgical shallow breathing. The affected area appears as increased density on CXR with volume loss.

Synonyms:

Respiratory Acidosis

Acid-base disturbance due to accumulation of CO₂ from hypoventilation, lowering pH (acidemia). Causes: respiratory depression (opioids, sedatives, CNS disease), airway obstruction, neuromuscular weakness (GBS, myasthenia), chest wall restriction, severe COPD/asthma, and ventilation-perfusion mismatch.

Synonyms:

Respiratory Alkalosis

Acid-base disturbance from excessive elimination of CO₂ by hyperventilation, raising pH (alkalemia). Causes: anxiety/hyperventilation, hypoxia, pulmonary embolism, sepsis, fever, pain, salicylate toxicity, liver failure, pregnancy, high altitude. Compensation: renal bicarbonate excretion (days).

Synonyms:

Respiratory Changes in Pregnancy

The growing uterus elevates the diaphragm, while hormonal changes increase ventilatory drive. Tidal volume and minute ventilation generally increase, while functional residual capacity decreases.

Synonyms:

Respiratory Depression

Breathing that is abnormally slow or shallow, causing inadequate ventilation and possible carbon-dioxide retention or low oxygen. Medicines, brain disorders, and metabolic illness can cause it.

Synonyms:

Respiratory Distress

Difficulty breathing due to various causes. Assessment: work of breathing (retractions, nasal flaring, tripod position), oxygen saturation, breath sounds. Causes: asthma, COPD, pneumonia, pulmonary embolism, pneumothorax, anaphylaxis, heart failure.

Synonyms:

Respiratory Distress Syndrome

A condition primarily affecting premature infants caused by pulmonary surfactant deficiency, leading to alveolar collapse and respiratory failure. Presents with tachypnea, grunting, nasal flaring, retractions, and cyanosis. Chest X-ray shows diffuse ground-glass opacity.

Synonyms:

Respiratory Drive

The neural output that stimulates respiratory muscles and determines ventilation. It is generated by brainstem networks and modified by chemoreceptor input, mechanoreceptors, wakefulness, metabolic state, medications, and behavioral control.

Synonyms:

Respiratory Failure

Inadequate gas exchange resulting in hypoxemia (PaO₂ <60 mmHg), hypercapnia (PaCO₂ >50 mmHg), or both. Type 1 (hypoxemic): V/Q mismatch, shunt, diffusion impairment. Type 2 (hypercapnic): hypoventilation from neuromuscular disease, COPD exacerbation, or opioid overdose.

Synonyms:

Respiratory Health

The proper functioning of the lungs and airways, enabling efficient gas exchange and oxygen delivery to the body. Maintaining respiratory health involves avoiding tobacco smoke, minimizing exposure to air pollutants and occupational hazards, and receiving vaccinations against respiratory infections like influenza and pneumococcal disease.

Synonyms:

Respiratory Infections

Illnesses caused by pathogens including viruses, bacteria, and fungi that affect the airways and lungs.

Synonyms:

Respiratory Physiology

The study of pulmonary function encompassing ventilation (movement of air), gas exchange (diffusion of O₂ and CO₂ across the alveolar-capillary membrane), transport of gases in blood, and regulation of breathing.

Synonyms:

Respiratory Protection

Measures and equipment used to reduce inhalation of harmful dusts, fumes, gases, aerosols, or infectious particles.

Synonyms:

Respiratory Quotient

The ratio of carbon dioxide production to oxygen consumption for a particular substrate or metabolic state. It differs from the respiratory exchange ratio measured at the mouth and is used in metabolic and ventilatory physiology.

Synonyms:

Respiratory Rate

The number of breaths taken per minute. The expected rate varies with age, activity, temperature, illness, and other factors.

Synonyms:

Respiratory Rehabilitation

A program of exercise, education, breathing techniques, and self-management that improves function and quality of life in people with chronic respiratory disease.

Synonyms:

Respiratory Syncytial Virus

A respiratory virus that commonly causes bronchiolitis and pneumonia in infants and young children.

Infection is usually mild in adults but may be severe in infants, older adults, and people with chronic heart or lung disease.

Synonyms:

Respiratory System

The anatomical and physiological system responsible for gas exchange—delivering oxygen to the blood and removing carbon dioxide. Components: (1) Upper respiratory tract—nose, nasal cavity, paranasal sinuses, pharynx (nasopharynx, oropharynx, laryngopharynx).

Synonyms:

Respiratory Tract Infections

Infections affecting any part of the respiratory tract, classified by anatomical location into upper respiratory tract infections (URTIs) and lower respiratory tract infections (LRTIs).

Synonyms:

Respiratory viruses

Viruses that cause respiratory tract infections. Major respiratory viruses include influenza, respiratory syncytial virus (RSV), parainfluenza virus, adenovirus, and human metapneumovirus. SARS-CoV-2 causes COVID-19. Symptoms range from mild upper respiratory illness to severe pneumonia.

Synonyms:

Response Assessment

Evaluation of treatment response. RECIST criteria for solid tumors. PET response criteria for lymphoma.

Synonyms:

Response Evaluation Criteria

RECIST criteria for tumor response. PERCIST for PET.

Synonyms:

Resting Membrane Potential

The steady electrical potential difference across the cell membrane of an unstimulated cell, typically -70 mV in neurons, -80 to -90 mV in skeletal and cardiac

muscle, and -50 to -60 mV in smooth muscle.

Synonyms:

Restless Legs Syndrome

An urge to move the legs, usually accompanied by uncomfortable sensations, that begins or worsens during rest, is relieved by movement, and occurs predominantly in the evening or night. The condition causes significant distress or impairment. It is associated with iron deficiency, renal failure, pregnancy, and peripheral neuropathy.

Synonyms:

Restorative Dentistry

Specialty of restoring damaged teeth. Procedures: fillings, inlays, onlays, crowns, bridges, implants. Goals: function, aesthetics, durability.

Synonyms:

Restraint

Device or medication limiting movement. Physical restraints: vests, wrist restraints, lap traps. Chemical restraints: antipsychotics, benzodiazepines for behavior control. Should be last resort, time-limited, with monitoring. Alternatives: addressing underlying causes, environmental modification.

Synonyms:

Restraint-Related Harm

Physical or psychological injury associated with using a device, medication, or environmental restriction to limit a person's movement. Older adults are at risk of falls, pressure injury, delirium, aspiration, and functional decline; the least restrictive alternatives should be prioritized.

Synonyms:

Restriction Enzyme

Bacterial enzyme cutting DNA at specific recognition sequences. Used in molecular cloning, DNA fingerprinting, restriction fragment length polymorphism (RFLP) analysis.

Synonyms:

Restrictive Cardiomyopathy

A cardiomyopathy characterized by impaired ventricular relaxation and filling due to stiff, noncompliant myocardium, with preserved systolic function and normal or reduced ventricular volumes. Causes include amyloidosis, sarcoidosis, hemochromatosis, endomyocardial fibrosis, and radiation.

Synonyms:

Retained Placenta

Failure of the placenta to deliver after birth within the interval expected for safe management. It may result from failure of separation, abnormal placental attachment, or trapping behind a closed cervix and can cause severe bleeding.

Synonyms:

Retained Products of Conception

Fragments of placental or fetal tissue retained in the uterus after delivery, miscarriage, or abortion. Causes: incomplete placental separation, succenturiate lobe, and placenta accreta. Presents: persistent or heavy bleeding, pain, and fever in the postpartum period.

Synonyms:

Retention Time

The time required for a compound to pass through a chromatographic system from injection to detection. In analytical toxicology, comparison with validated standards helps identify compounds, but retention time alone is not definitive identification.

Synonyms:

Reticular Formation

A network of interconnected nuclei in the brainstem (midbrain, pons, medulla) that regulates arousal, consciousness, sleep-wake transitions, and alertness (ascending reticular activating system), as well as muscle tone, posture, cardiovascular and respiratory control (vasomotor and respiratory centers), pain modulation, and attention.

Synonyms:

Reticulocyte Count

The number or percentage of immature red blood cells in blood. It reflects recent bone-marrow red-cell production and helps assess anemia, especially when interpreted with the hemoglobin and clinical context.

Synonyms:

Retina

Retina concerns retina, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context. globe for phototransduction (light to neural signals). Ten layers, with photoreceptors (rods for low-light vision, cones for color vision) in the outer nuclear layer.

Synonyms:

Retinal Detachment

A separation of the neurosensory retina from the underlying retinal pigment epithelium, creating a potential space that fills with fluid and resulting in progressive vision loss in the affected area, and it is classified into three main types based on the underlying mechanism.

Synonyms:

Retinal Artery Occlusion

Blockage of a retinal artery causing sudden, usually painless loss of vision. It requires urgent ophthalmic and vascular evaluation because it may indicate a systemic embolic or vascular disorder.

Synonyms:

Retinal Detachment Repair

Surgical or pneumatic treatment to close retinal breaks and reattach the retina. Techniques include vitrectomy, scleral buckling, and pneumatic retinopexy, selected according to the type and location of detachment.

Synonyms:

Retinal Hemorrhages

Bleeding within the retina, a hallmark finding in abusive head trauma (shaken baby syndrome). Found on dilated fundoscopic examination, often

bilateral and multi-layered. Also seen in severe accidental trauma, bleeding disorders, and increased intracranial pressure.

Synonyms:

Retinal ischemia

Inadequate blood flow to the retina, often caused by a retinal artery occlusion or severe vascular disease. It may cause sudden, painless visual loss and requires emergency ophthalmic and vascular assessment; treatment depends on the cause and time of presentation.

Synonyms:

Retinal Layers

The retina consists of ten distinct layers that process visual information through a complex neural circuit.

Synonyms:

Retinal Prosthesis

Experimental device for blindness. Argus II system: camera to processor to electrode array stimulates retina. Indications: retinitis pigmentosa. Provides light perception, pattern recognition.

Synonyms:

Retinal Tear

A full-thickness break in the neurosensory retina, often caused by vitreoretinal traction. It can permit fluid to enter the subretinal space and progress to rhegmatogenous retinal detachment; symptomatic tears are generally treated urgently with laser photocoagulation or cryotherapy.

Synonyms:

Retinal Vein Occlusion

Obstruction of a retinal vein producing retinal hemorrhages, edema, and variable visual loss. Branch and central forms may cause macular edema, retinal ischemia, and neovascular complications.

Synonyms:

Retinitis Pigmentosa

A group of inherited retinal disorders in which rod and cone photoreceptors gradually degenerate.

Symptoms may include night blindness, narrowing of the visual field, and progressive loss of vision.

Synonyms:

Retinoblastoma

Retinoblastoma is a malignant retinal tumor of childhood that may present with leukocoria, strabismus, or visual loss and can be hereditary or sporadic (cases common). Hereditary form: bilateral, multifocal, earlier onset. Sporadic: unilateral, single focus. Treatment: chemotherapy, radiation, surgery, enucleation.

Synonyms:

Retinol

Vitamin A (retinol) is a fat-soluble vitamin essential for vision, immune function, cell differentiation, and reproduction. See Vitamin A: Retinal.

Synonyms:

Retinopathy

Disease or damage of the retina, often related to diabetes, hypertension, vascular disease, inflammation, or inherited disorders.

Synonyms:

Retinopathy of Prematurity

Abnormal vascularization of the retina in premature infants, a leading cause of childhood blindness. Affects infants less than 32 weeks gestation and less than 1500 grams. Stages range from mild (avascular retina) to severe (retinal detachment). Screening began at 31-33 weeks corrected gestational age or 4 weeks chronological age.

Synonyms:

Retinoschisis

Splitting of the retinal layers, producing a separation between inner and outer retinal tissue. It may be degenerative and peripheral or inherited and juvenile, and can cause visual-field loss, reduced acuity, or complications resembling retinal detachment.

Synonyms:

Retract (Vascular)

To pull a vessel or tissue away from an operative field using a surgical retractor.

Synonyms: Vascular

Retraction (Self-Retaining)

Holding tissue away from an operative field with a retractor that remains in position without continuous manual support.

Synonyms: Self-Retaining

Retractor

Holds tissue aside for exposure. Types: handheld, self-retaining (Weitlaner, Gelpi).

Synonyms:

Retractor (Abdominal)

A surgical instrument used to hold back the abdominal wall or organs to improve access and visibility during an operation.

Synonyms: Abdominal

Retractor (Hand)

A handheld surgical instrument used to hold tissue or an organ away from the operative field.

Synonyms: Hand

Retractor (Surgical)

An instrument used to separate or hold tissues aside during a surgical procedure.

Synonyms: Surgical

Retrograde Ejaculation

Semen enters bladder instead of exiting urethra. Causes: diabetes, surgery, medications. Dry orgasm. Treatment: medications, sperm retrieval for fertility.

Synonyms:

Retroperitoneal Fibrosis

Chronic fibroinflammatory tissue formation in the retroperitoneum, often encasing the ureters and great vessels. It can cause hydronephrosis, flank pain, reduced kidney function, hypertension, or lower-limb edema and may be idiopathic, immune-

mediated, drug-related, or secondary to malignancy.

Synonyms:

Retroperitoneal hemorrhage

Bleeding into the retroperitoneal space, which may result from aortic rupture, anticoagulation therapy, retroperitoneal hematoma following femoral catheterization, trauma, or retroperitoneal neoplasms. Presents with flank pain, abdominal distension, hypotension, and anemia.

Synonyms:

Retroperitoneum

The anatomical space posterior to the peritoneum. It contains the kidneys, adrenal glands, ureters, aorta, and inferior vena cava, as well as portions of the duodenum, pancreas, and colon. Some organs are secondarily retroperitoneal after development. It is divided into anterior pararenal, perirenal, and posterior pararenal spaces.

Synonyms:

Retropharyngeal Abscess

A collection of pus in the retropharyngeal space, located between the posterior pharyngeal wall and the prevertebral fascia. Most common in children aged 2-4 years, arising from suppurative lymphadenitis of the retropharyngeal lymph nodes that drain the nasopharynx, adenoids, and sinuses.

Synonyms:

Retrovirus

An RNA virus that replicates by reverse transcribing its RNA genome into DNA, which is then integrated into the host cell genome. Family Retroviridae. Key enzyme: reverse transcriptase (RNA-dependent DNA polymerase) converts viral RNA into double-stranded DNA; integrase inserts the viral DNA (provirus) into the host chromosome.

Synonyms:

Rett Syndrome

An X-linked dominant neurodevelopmental disorder affecting almost exclusively females, caused by mutations in the MECP2 gene.

Synonyms:

Return of Spontaneous Circulation

Restoration of sustained cardiac mechanical activity after cardiac arrest, evidenced by a palpable pulse or measurable blood pressure and signs of circulation. Post-arrest care addresses oxygenation, ventilation, blood pressure, temperature, neurologic injury, and the cause of arrest.

Synonyms:

Reverberation Artifact

Ultrasound artifact from multiple reflections. Reduced by changing angle, using tissue harmonic imaging.

Synonyms:

Reverse Transcription

Synthesis of DNA from an RNA template by the enzyme reverse transcriptase.

Synonyms:

Reversible Cell Injury

Cellular dysfunction caused by a harmful stimulus that can resolve when the stimulus is removed. Common changes include cellular swelling, fatty change, membrane blebbing, and reduced oxidative phosphorylation without irreversible membrane or nuclear destruction.

Synonyms:

Revision Arthroplasty

Surgical replacement, exchange, or repair of a failed or painful joint prosthesis. Indications include infection, aseptic loosening, instability, periprosthetic fracture, wear, and recurrent dislocation.

Synonyms:

Reye Syndrome

A rare acute encephalopathy with hepatic dysfunction, classically occurring in children recovering from a viral illness. It causes persistent vomiting, altered mental status, cerebral edema, and elevated liver enzymes without primary inflammatory liver failure.

Synonyms:

Reynolds Pentad

Extension of the Charcot triad to include hypotension and altered mental status representing suppurative cholangitis, a severe life-threatening form of ascending cholangitis. Patients present with high fever, rigors, right upper quadrant pain, jaundice, hypotension, and confusion.

Synonyms:

Rezafungin

A long-acting echinocandin antifungal medicine that inhibits fungal cell-wall synthesis. It is used for selected invasive candidiasis infections; its long duration permits an intermittent dosing schedule under specialist supervision.

Synonyms:

Rh Factor

A system of blood group antigens (the Rh system) on the surface of red blood cells, the most important of which is the D antigen (RhD). See Rhesus (Rh) Factor.

Synonyms:

Rh Isoimmunization

Maternal alloantibody production against fetal Rh D-positive red blood cells in an Rh D-negative mother, occurring when fetal RBCs enter the maternal circulation (fetomaternal hemorrhage).

Synonyms:

Rhabdoid Tumor

A highly aggressive malignant tumor of infancy, occurring in the kidney (malignant rhabdoid tumor) or brain (atypical teratoid/rhabdoid tumor), characterized by loss of the SMARCB1 (INI1) gene.

Synonyms:

Rhabdomyolysis

Rhabdomyolysis is rapid skeletal-muscle breakdown releasing myoglobin and electrolytes into blood, potentially causing hyperkalemia, acute kidney injury, arrhythmia, and compartment complications. crush injury, extreme exertion, seizures, heat illness, and some diseases; it can lead to acute kidney injury

and requires prompt medical assessment.

Synonyms:

Rhabdomyolysis and AKI

Severe muscle breakdown releases myoglobin and other intracellular contents, potentially causing acute kidney injury, electrolyte abnormalities, and cardiac arrhythmias. Findings may include muscle pain, weakness, dark urine, and elevated creatine kinase; treatment requires urgent assessment and cause-directed fluid and supportive therapy.

Synonyms:

Rhabdomyoma

A benign cardiac tumour composed of striated muscle cells, occurring predominantly in infants and children and strongly associated with tuberous sclerosis. It commonly involves the ventricular myocardium and may regress spontaneously, although large or multiple tumours can cause obstruction or arrhythmias.

Synonyms:

Rhabdomyosarcoma

Rhabdomyosarcoma concerns rhabdomyosarcoma; its medical significance is established from the defining features, setting, associated findings, and clinical question. children and commonly involving the head and neck, genitourinary tract, or extremities.

Synonyms:

Rhegmatogenous Retinal Detachment

The most common type of retinal detachment, caused by a full-thickness break or tear in the retina that allows liquefied vitreous humor to enter the subretinal space, separating the neurosensory retina from the underlying retinal pigment epithelium.

Synonyms:

Rhesus (Rh) Factor

A system of antigens on the surface of red blood cells, especially the D antigen. A person is Rh-positive when the D antigen is present and Rh-negative when it is absent. Rh incompatibility can affect pregnancy and transfusion safety.

Synonyms: Rh

Rheumatic Fever

A nonsuppurative inflammatory complication of Group A Streptococcal pharyngitis, occurring 2-4 weeks after infection. Diagnosed by Jones criteria: major manifestations (carditis, polyarthritides, chorea, erythema marginatum, subcutaneous nodules) plus evidence of prior streptococcal infection. Major criterion plus two minor criteria.

Synonyms:

Rheumatic Heart Disease

Valvular damage resulting from acute rheumatic fever, an autoimmune response to Group A streptococcal pharyngitis. Most commonly affects the mitral valve (stenosis/regurgitation), followed by aortic. Prevention through prompt treatment of streptococcal pharyngitis.

Synonyms:

Rheumatoid Arthritis

A chronic autoimmune inflammatory disease that commonly causes symmetric pain, swelling, and progressive damage in the small joints of the hands and feet. It may also affect other organs.

Synonyms:

Rheumatoid Factor

An autoantibody, usually of the IgM class, directed against part of IgG. It may support a diagnosis of rheumatoid arthritis but can also occur in other autoimmune diseases, infections, and healthy people.

Synonyms:

Rhinencephalon

The part of the brain concerned chiefly with the sense of smell and related limbic functions.

Synonyms:

Rhinitis

Inflammation or dysfunction of the nasal mucosa causing congestion, rhinorrhea, sneezing, or itching.

Synonyms:

Rhinophyma

Rhinophyma concerns rhinophyma; its medical significance is established from the defining features, setting, associated findings, and clinical question. Characterized by progressive nodular thickening, hypertrophy, and lobular enlargement of the nasal skin with prominent, dilated pilosebaceous pores. Pathophysiology: sebaceous gland hyperplasia, fibrosis, and chronic inflammation.

Synonyms:

Rhinoplasty

Rhinoplasty is surgery that changes nasal shape or function for cosmetic, structural, or reconstructive reasons, with risks involving breathing, bleeding, infection, and appearance. cosmetic reasons (aesthetic rhinoplasty—improving nasal appearance) or functional reasons (functional rhinoplasty—improving nasal airflow by correcting internal/external nasal valve collapse, deviated septum, or turbinate hypertrophy).

Synonyms:

Rhinovirus

A genus of non-enveloped, positive-sense RNA viruses in the Picornaviridae family. Rhinoviruses are a common cause of the common cold and spread mainly through respiratory secretions and contaminated hands or surfaces.

Synonyms:

RhoGAM

Rh immune globulin containing anti-D antibodies, used to prevent Rh isoimmunization in Rh-negative mothers. Administered intramuscularly at 28 weeks gestation and within 72 hours after delivery of an Rh-positive infant. Also given after amniocentesis, chorionic villus sampling, miscarriage, ectopic pregnancy, or abdominal trauma.

Synonyms:

Rhonchi

Low-pitched, continuous adventitious sounds heard primarily during expiration, caused by secretions in the large airways. They may clear with coughing. They are heard in COPD, bronchitis, and bronchiec-

tasis. They are different from wheezes in their lower pitch and coarser quality.

Synonyms:

Rib

One of 12 paired, curved bones forming the thoracic cage, protecting the heart, lungs, and great vessels. True ribs (1–7) attach directly to the sternum via costal cartilage. False ribs (8–10) attach indirectly to the sternum via the costal cartilage of rib 7. Floating ribs (11–12) have no anterior attachment.

Synonyms:

Riboflavin (Vitamin B2)

A water-soluble vitamin that forms the coenzymes FAD and FMN. These cofactors participate in oxidation-reduction reactions, including electron transfer, fatty-acid oxidation, and energy metabolism.

Synonyms: Vitamin B2

Ribosomal RNA

RNA component of ribosomes, catalyzing peptide bond formation (peptidyl transferase activity). Eukaryotic ribosome: 60S (28S, 5.8S, 5S rRNAs + proteins) + 40S (18S rRNA + proteins) = 80S. Prokaryotic: 50S (23S, 5S rRNAs) + 30S (16S rRNA) = 70S. rRNA genes are highly conserved, used in phylogenetics.

Synonyms:

Ribosome

Ribonucleoprotein complexes (rRNA + proteins) that synthesize proteins by translating mRNA. Two subunits: 60S (large, 28S/5.8S/5S rRNA) and 40S (small, 18S rRNA) in eukaryotes (80S complete). Prokaryotes have 50S/30S (70S complete).

Synonyms:

Ribozyme

RNA molecule with catalytic activity. Peptidyl transferase is a ribozyme.

Synonyms:

Rickets

Rickets is defective mineralization of growing bone, usually from vitamin D, calcium, or phosphate disturbance, causing skeletal deformity, growth impairment, pain, or fractures. disorders. It may cause bone pain, poor growth, deformity, fractures, or widening at the growth plates.

Synonyms:

Rickettsia

A genus of obligate intracellular Gram-negative coccobacillary bacteria transmitted by arthropod vectors (ticks, fleas, lice, mites). Rickettsia are the causative agents of the spotted fever group (SFG) and typhus group (TG) rickettsioses.

Synonyms:

Rickettsialpox

Rickettsialpox is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. headache, and an inoculation eschar. It is usually self-limited but may resemble other febrile exanthems.

Synonyms:

Ridge Preservation

Socket grafting after extraction to maintain bone volume. Reduces ridge resorption.

Synonyms:

Right Atrium

Receives deoxygenated blood from superior vena cava, inferior vena cava, and coronary sinus. Smooth posterior part (sinus venosus) and rough anterior auricle with pectinate muscles. The fossa ovalis is the fetal foramen ovale remnant. The SA node pacemaker is near the superior vena cava opening.

Synonyms:

Right Bundle Branch

A continuation of the bundle of His that travels along the right side of the interventricular septum to the right ventricle. It supplies the right ventricu-

lar myocardium and Purkinje fibers. Right bundle branch block (RBBB) occurs when this branch is damaged, causing delayed right ventricular activation.

Synonyms:

Right Coronary Artery

Arises from the right aortic sinus and travels in the right atrioventricular groove. It supplies the right atrium, right ventricle, SA node (60% of individuals), AV node (85% of individuals), and the inferior wall of the left ventricle.

Synonyms:

Right coronary artery occlusion

Blockage of the right coronary artery, reducing blood flow to areas of the heart it supplies and potentially causing myocardial infarction or rhythm disturbances.

Synonyms:

Right Heart Failure

Failure of the right ventricle to adequately pump blood to the lungs, causing systemic venous congestion. Causes include left heart failure (most common), pulmonary hypertension, right ventricular infarction, pulmonary embolism, and constrictive pericarditis. Signs include elevated JVD, peripheral edema, hepatomegaly, and ascites.

Synonyms:

Right Hypochondriac Region

One of nine abdominal regions in the upper right abdomen, bounded medially by the right midclavicular line and superiorly by the right costal margin. Contains the cecum, appendix, ascending colon, and inferior right liver lobe. Pain here may indicate appendicitis (McBurney's point), cecal pathology, or hepatic disease.

Synonyms:

Right Iliac Region

Lower right abdomen containing the cecum, appendix, and terminal ileum. McBurney's point (junction of lateral and middle thirds from umbili-

cus to ASIS) is critical for appendicitis diagnosis. Also significant for evaluating inguinal and femoral hernias, and the right ureter's course.

Synonyms:

Right Lymphatic Duct

Short lymphatic vessel (approximately 1.5 cm) draining lymph from the right upper quadrant: right arm, right side of the head and neck, and right thorax. Formed by the junction of right jugular, subclavian, and bronchomediastinal trunks, emptying into the right venous angle (junction of right internal jugular and subclavian veins).

Synonyms:

Right sixth cranial nerve palsy

Weakness or paralysis of the right abducens nerve (CN VI), causing inability to abduct the right eye and resulting in horizontal diplopia worse at distance and on right gaze.

Synonyms:

Right ureterovesical calculus

A stone lodged at the junction of the right ureter and bladder, causing flank pain, hematuria, and urinary urgency or frequency. May require endoscopic or lithotripsy intervention.

Synonyms:

Right Ventricle

Receives deoxygenated blood from the right atrium through the tricuspid valve, pumping into the pulmonary trunk via the pulmonary valve. Thinner walls (3-5 mm) than the left ventricle due to low pulmonary resistance.

Synonyms:

Rigor Mortis

Post-mortem stiffening of body muscles resulting from loss of ATP synthesis following death. Without ATP, actin and myosin filaments remain permanently cross-linked in a rigid state.

Synonyms:

Ringing in the Ears

Perception of ringing, buzzing, hissing, or other sound without an external source, medically called tinnitus. It may be associated with hearing loss, loud-noise exposure, earwax, ear infection, medicines, or jaw disorders. Sudden hearing loss, one-sided symptoms, or pulsatile ringing requires medical evaluation.

Synonyms:

Ringworm

Ringworm is a contagious superficial dermatophyte infection of skin, hair, or nails that produces scaly annular lesions, itching, or localized hair loss. by dermatophytes (Trichophyton, Microsporum, Epidermophyton). See Tinea.

Synonyms:

Rinne Test

The Rinne test is a screening test that compares air conduction and bone conduction hearing using a vibrating tuning fork (typically 512 Hz) to help differentiate between conductive and sensorineural hearing loss.

Synonyms:

RIPE Therapy

Standard 4-drug regimen for active TB: Rifampin, Isoniazid, Pyrazinamide, Ethambutol. Intensive phase 2 months, continuation phase 4 months (total 6 months). Pyridoxine prevents isoniazid-induced neuropathy.

Synonyms:

Rippling Muscle Disease

A rare, benign myopathy characterized by mechanically-induced muscle contractions that spread across the muscle as a visible wave (rippling), typically triggered by stretch, percussion, or movement.

Synonyms:

RIS

Radiology Information System. Workflow management for radiology department.

Synonyms:

Risk Assessment

Process: hazard identification, dose-response, exposure assessment, risk characterization. Used for regulatory decisions.

Synonyms:

Risk Factor

Attribute increasing probability of disease. Examples: smoking (lung cancer), hypertension (stroke), obesity (diabetes).

Synonyms:

Risk Factor Modification

Smoking cessation, blood pressure control, lipid management, diabetes control, exercise.

Synonyms:

Risk-Benefit Analysis

Weighing therapeutic benefit against potential harm.

Synonyms:

Ristocetin-Induced Platelet Aggregation

A platelet-function assay that evaluates platelet agglutination in the presence of ristocetin, which depends on von Willebrand factor and platelet glycoprotein Ib.

Synonyms:

Ritalin

A central nervous system stimulant, a piperidine derivative that blocks the reuptake of dopamine and noradrenaline (norepinephrine) by inhibiting the dopamine transporter (DAT) and noradrenaline transporter (NAT) in the prefrontal cortex, increasing their synaptic concentrations. See Methylphenidate.

Synonyms:

River Blindness

Onchocerciasis, a parasitic infection caused by *Onchocerca volvulus* and transmitted by blackflies. It can cause severe itching, skin disease, and visual

impairment.

Synonyms:

RNA

Ribonucleic acid, single-stranded nucleic acid (ribose sugar, uracil instead of thymine).

Synonyms:

Robot-Assisted Rehabilitation

Robotic devices for repetitive task training. Upper extremity, lower extremity, gait training. Objective measurement, high repetition.

Synonyms:

Romberg Test

The Romberg test is a clinical neurological test used to assess the integrity of the dorsal column-medial lemniscus pathway (proprioception) and the cerebellum in maintaining balance. The test is performed by asking the patient to stand with feet together and eyes open, and then to close the eyes.

Synonyms:

Romberg's sign

Increased unsteadiness when a person stands with the feet together and closes the eyes, suggesting impaired proprioception or vestibular function.

Synonyms:

Root Caries

Caries on exposed root surfaces. Common in elderly with recession. Fluoride effective.

Synonyms:

Root Fracture

Vertical or horizontal fracture of root. Prognosis depends on location and direction. Vertical root fractures typically require extraction.

Synonyms:

Rooting Reflex

A primitive reflex present from birth to 3-4 months, triggered by stroking the infant's cheek or corner of the mouth. The infant turns toward the stimu-

lus and opens the mouth, searching for the nipple. Facilitates breastfeeding. Absence may indicate neurologic impairment. Disappears as voluntary feeding develops.

Synonyms:

Ropinirole

A non-ergot dopamine agonist (D2/D3) used for Parkinson disease and restless legs syndrome. Adverse effects: nausea, dizziness, somnolence (sudden sleep attacks), orthostatic hypotension, impulse control disorders (gambling, hypersexuality), hallucinations, and leg edema. Extended-release for once-daily Parkinson dosing.

Synonyms:

Rosacea

Rosacea is a chronic inflammatory facial skin disorder with flushing, persistent redness, papules, pustules, visible vessels, and sometimes ocular or nasal changes. erythema, flushing, telangiectasia, inflammatory papules or pustules, phymatous change, or ocular involvement. It is classified by phenotype rather than by obligatory subtypes.

Synonyms:

Roseola

Roseola concerns roseola; its medical significance is established from the defining features, setting, associated findings, and clinical question. a rash as the fever resolves.

Synonyms:

Roseola Infantum

A viral illness caused by Human Herpesvirus 6 (HHV-6), affecting children 6 months to 2 years. Characterized by high fever (39-40.5 degrees Celsius) for 3-5 days followed by defervescence and appearance of a maculopapular rash starting on the trunk and spreading outward. Rash appears as fever resolves. Diagnosis is clinical.

Synonyms:

Rostral

Positioned toward the snout or front of the head; in

the brain, it means toward the forehead.

Synonyms:

Rotator Cuff

A group of four muscles and their tendons that stabilize the glenohumeral (shoulder) joint and allow a wide range of motion. The muscles are the supraspinatus (abduction), infraspinatus (external rotation), teres minor (external rotation), and subscapularis (internal rotation)—collectively remembered by the acronym SITS.

Synonyms:

Rotator Cuff Arthropathy

Glenohumeral joint degeneration associated with chronic, irreparable rotator-cuff deficiency. Superior migration of the humeral head, altered joint mechanics, pain, and loss of elevation may lead to consideration of reverse shoulder arthroplasty.

Synonyms:

Rotavirus

A double-stranded RNA virus that is the leading cause of severe gastroenteritis in children worldwide. The virus has a segmented genome and infects enterocytes of the small intestine. Rotavirus causes profuse watery diarrhea, vomiting, and dehydration. Diagnosis is made by antigen detection in stool.

Synonyms:

Rotavirus Vaccine

An oral live attenuated vaccine that protects infants and young children against severe rotavirus gastroenteritis. The product, schedule, and age limits depend on the immunization program; mild fever or diarrhea may occur.

Synonyms:

Roth Spots

Retinal hemorrhages with pale centers, seen on fundoscopic examination in infective endocarditis. They are a minor criterion in the Duke criteria. Roth spots are caused by immune complex-mediated vasculitis of retinal vessels.

Synonyms:

Rothmund-Thomson Syndrome

A genetically heterogeneous disorder characterized by poikiloderma beginning in infancy, short stature, sparse hair, skeletal abnormalities, juvenile cataracts in some forms, and increased risk of osteosarcoma or other cancers.

Synonyms:

Rouleau

A stack or column of red blood cells, commonly seen in blood with increased plasma proteins.

Synonyms:

Round Pneumonia

Pneumonia appearing as a round opacity on CXR rather than typical consolidation. More common in children and elderly. May mimic lung mass.

Synonyms:

Roundworm

Ascariasis: infection by *Ascaris lumbricoides*, the most common human soil-transmitted helminth, acquired by ingesting eggs from contaminated food/soil.

Synonyms:

Route of Administration

The path by which a drug enters the body, influencing absorption, onset, bioavailability, and first-pass metabolism. Enteral routes: oral, sublingual, buccal, rectal. Parenteral: intravenous (100 percent bioavailability, immediate onset), intramuscular, subcutaneous, intradermal.

Synonyms:

Rovsing Sign

Physical exam sign of acute appendicitis: palpation of the left lower quadrant elicits pain in the right lower quadrant due to displacement of gas stretching the inflamed appendix. See Appendicitis.

Synonyms:

RPR/VDRL (Syphilis Serology)

Nontreponemal blood tests used to screen for and monitor syphilis. Reactive results require interpreta-

tion with clinical findings and, usually, a treponemal confirmatory test.

Synonyms: Syphilis Serology

RSV

Respiratory syncytial virus, a contagious respiratory virus that can cause bronchiolitis and pneumonia, especially in infants and young children.

Synonyms:

Rubella

Rubella is a contagious viral infection causing mild fever, lymph-node enlargement, and rash but can produce severe congenital abnormalities when infection occurs during pregnancy. in children. Dangerous in pregnancy due to congenital rubella syndrome (cataracts, heart defects, deafness). Rash similar to measles but milder, with postauricular and suboccipital lymphadenopathy. Prevention by MMR vaccination.

Synonyms:

Rubella virus

A togavirus that causes rubella (German measles), a mild febrile illness with rash. The virus is transmitted by respiratory droplets. Rubella is most dangerous during pregnancy, causing congenital rubella syndrome (CRS) with deafness, cataracts, and cardiac defects. Diagnosis involves serology. Treatment is supportive.

Synonyms:

Rubin Maneuver

An internal rotational maneuver for shoulder dystocia: the operator inserts a hand and applies pressure to the posterior aspect of the anterior fetal shoulder, rotating it toward the fetal chest (adducting the shoulders). This reduces the bisacromial diameter and disimpacts the anterior shoulder from the pubic symphysis.

Synonyms:

Rubinstein-Taybi Syndrome

A genetic developmental disorder associated with characteristic facial features, short stature, broad

thumbs and toes, and intellectual disability. It is commonly caused by pathogenic variants in CREBBP or EP300.

Synonyms:

Rumination Disorder

Recurrent effortless regurgitation of recently ingested food, followed by rechewing, reswallowing, or spitting, without the retching typical of vomiting. It can cause weight loss, malnutrition, and dental complications.

Synonyms:

Running Total

The cumulative amount of a measured exposure, dose, or other quantity up to a specified time.

Synonyms:

Runny Nose

Excess nasal drainage, medically called rhinorrhea, caused by infection, allergy, irritation, or structural nasal disease. It may occur with congestion, sneezing, cough, or sore throat. Persistent one-sided, bloody, or clear drainage after head injury requires medical assessment.

Synonyms:

Ruptured Abdominal Aortic Aneurysm

A tear through an abdominal aortic aneurysm causing internal bleeding, shock, and usually sudden abdominal or back pain. It requires emergency repair.

Synonyms:

Russell-Silver Syndrome

A congenital growth disorder involving prenatal and postnatal growth restriction, relative macrocephaly, triangular face, body asymmetry, and feeding difficulty. It is often associated with abnormalities of genomic imprinting on chromosomes 7 or 11.

Synonyms:

Rx

Prescription or treatment. Symbol derives from Latin "requirere" (to take). Also used as abbrevia-

tion for remedy. Rx symbol: Rx or %x;.

Synonyms:

Reverse Trendelenburg Position

A supine position in which the head and upper body are elevated above the feet.

Synonyms:

Rapid Gastric Emptying

Abnormally rapid movement of food from the stomach into the small intestine, sometimes called dumping syndrome.

Synonyms:

Rectal Cancer

Cancer that develops in the tissues of the rectum.

Synonyms:

Recurrent Breast Cancer

Breast cancer that returns after a period in which it was undetectable.

Synonyms:

Residual Limb Pain

Pain in the remaining portion of a limb after amputation.

Synonyms:

Retinal Diseases

Disorders that damage the retina, the light-sensitive tissue at the back of the eye.

Synonyms:

Reye's Syndrome

A rare condition causing sudden brain and liver dysfunction, most often in children recovering from a viral infection.

Synonyms:

Ringworm of the Body

A contagious fungal infection causing an itchy, ring-shaped rash on the skin.

Synonyms:

Ringworm of the Scalp

A fungal infection of the scalp and hair that can cause scaling, broken hairs, and hair loss.

Synonyms:

Rotator Cuff Injury

Damage to one or more tendons or muscles that stabilize and move the shoulder.

Synonyms:

Rales

Crackling or bubbling sounds heard in the lungs, often caused by fluid or narrowed airways.

Synonyms:

Retinitis

Inflammation of the retina that may impair vision.

Synonyms:

Romberg Sign

Loss of balance when standing with the feet together and the eyes closed, suggesting impaired proprioception or vestibular function.

Synonyms:

Rule of Nines

A method for estimating the percentage of body-surface area affected by burns.

Synonyms:

Rongeur

A strong, jawed surgical instrument used to bite and remove small pieces of bone or other hard tissue.

Synonyms:

Rabies Virus

The virus that causes rabies, a usually fatal viral infection of the central nervous system transmitted most often through the saliva of an infected animal.

Synonyms:

Radioactive Iodine Uptake Test

A nuclear medicine test that measures how much radioactive iodine the thyroid gland absorbs. It

helps evaluate hyperthyroidism and some thyroid disorders.

Synonyms:

Radiography

Medical imaging that uses X-rays to create two-dimensional images of internal structures, especially bones and the chest.

Synonyms:

Radiology

The medical specialty that uses imaging to diagnose and sometimes treat disease.

Synonyms:

Radioisotope (Radionuclide)

An unstable isotope that emits radiation as it decays; radioisotopes are used in medical imaging, diagnosis, and selected treatments.

Synonyms: Radionuclide

Rale (Rhonchus)

An abnormal sound heard through a stethoscope during breathing, caused by air moving through fluid, mucus, narrowed airways, or abnormal lung tissue.

Synonyms: Rhonchus

Respiratory Arrest

Complete cessation of breathing, resulting in rapid loss of oxygen and requiring immediate resuscitation.

Synonyms:

Renal Dialysis

A treatment that removes waste products and excess fluid from the blood when the kidneys cannot do so adequately, using haemodialysis or peritoneal dialysis.

Synonyms:

Retinol (Vitamin A)

A fat-soluble vitamin required for vision, epithelial health, immune function, and normal growth;

deficiency may cause night blindness and xerophthalmia.

Synonyms: Vitamin A

Revascularisation

Restoration of blood flow to an organ or limb by a procedure such as angioplasty, stenting, or surgical bypass.

Synonyms:

Root Canal Therapy

Dental treatment in which infected or inflamed pulp is removed from a tooth, the canal is cleaned and sealed, and the tooth is restored.

Synonyms:

Roth's Spots

Small retinal haemorrhages with pale centres, associated with conditions such as infective endocarditis, severe anaemia, leukaemia, and diabetes.

Synonyms:

Radionuclide

An unstable atom that emits radiation as it decays. Radionuclides are used in diagnostic imaging and some treatments.

Synonyms:

Radionuclide Heart Scan

A nuclear medicine study that uses a radioactive tracer to evaluate myocardial blood flow, heart muscle viability, or ventricular function.

Synonyms:

Rasp

A roughened surgical instrument used to file, shape, or smooth bone or other hard tissue.

Synonyms:

Red Blood Cells

Blood cells that contain hemoglobin and transport oxygen from the lungs to tissues while carrying some carbon dioxide back to the lungs.

Synonyms:

Reed-Sternberg Cells

Large abnormal cells derived from B lymphocytes and characteristic of classic Hodgkin lymphoma.

Synonyms:

Reflexes

Automatic, rapid responses to stimuli mediated through neural pathways called reflex arcs.

Synonyms:

Renal Corpuscle

The filtration unit at the beginning of a nephron, consisting of the glomerulus enclosed by Bowman capsule.

Synonyms:

Renal Pyramids

Cone-shaped structures in the renal medulla that contain tubules and collecting ducts and drain urine toward the renal papillae.

Synonyms:

Renin

An enzyme released mainly by juxtaglomerular cells of the kidney. It initiates the renin-angiotensin-aldosterone system and helps regulate blood pressure and fluid balance.

Synonyms:

Repetitive Strain Injury

Pain or dysfunction caused by repeated forceful movements, sustained positions, or overuse of muscles, tendons, nerves, or other tissues.

Synonyms:

Resection

Surgical removal of part or all of an organ, tissue, or lesion.

Synonyms:

Resectoscope

An endoscopic surgical instrument with a viewing system and working loop used to remove or cauterize tissue, especially during prostate or bladder

procedures.

Synonyms:

Resorption

The removal and absorption of tissue, especially the breakdown of bone by osteoclasts.

Synonyms:

Respiration

The process of exchanging oxygen and carbon dioxide between an organism and its environment, including ventilation and gas exchange in the lungs.

Synonyms:

Reticular Activating System

A network involving the brainstem reticular formation and related structures that helps regulate wakefulness, alertness, attention, and sleep-wake transitions.

Synonyms:

Retinoscope

An instrument that shines light into the eye to help determine refractive error.

Synonyms:

Rheumatology

The medical specialty concerned with musculoskeletal disorders and systemic autoimmune and inflammatory diseases.

Synonyms:

Rh Incompatibility

An immune reaction that can occur when an Rh-negative pregnant person carries an Rh-positive fetus and forms antibodies against fetal red blood cells. Anti-D immune globulin can prevent sensitization.

Synonyms:

Ribonucleic Acid

A nucleic acid involved in carrying, translating, and regulating genetic information, especially during protein synthesis.

Synonyms:

Rift Valley Fever

A mosquito-borne viral disease that usually causes fever and muscle pain but can occasionally cause hepatitis, eye disease, encephalitis, or hemorrhage.

Synonyms:

Rods

Retinal photoreceptor cells that provide vision in dim light and contribute to peripheral vision but do not detect color.

Synonyms:

Rubeola

Measles, a highly contagious viral illness caused by measles virus and characterized by fever, cough, conjunctivitis, and a widespread maculopapular rash.

Synonyms:

Radius Fracture

A break in the radius, one of the two bones of the forearm, often occurring near the wrist after a fall onto an outstretched hand.

Synonyms:

Rotator Cuff Tear

A partial or complete tear of one or more tendons stabilizing the shoulder, causing pain, weakness, and difficulty raising or rotating the arm.

Synonyms:

Radial Nerve Palsy

Dysfunction of the radial nerve causing weakness of wrist and finger extension, often producing wrist drop, with sensory loss over part of the back of the hand in some cases.

Synonyms:

Radiation Proctitis

Inflammation and injury of the rectum after pelvic radiation therapy, causing rectal pain, urgency, diarrhea, mucus, or bleeding.

Synonyms:

Rhinorrhea

Excessive watery or mucoid discharge from the nose, commonly caused by infection, allergy, irritants, or changes in temperature.

Synonyms:

Rib Fracture

A break in one or more ribs, usually causing localized chest pain worsened by breathing, coughing, or movement and sometimes associated with injury to underlying organs.

Synonyms:

Rocky Mountain Spotted Fever

A potentially severe tick-borne infection caused by *Rickettsia rickettsii*, often producing fever, headache, and a rash that may involve the palms and soles.

Synonyms:

Retrograde Amnesia

Loss of memory for events that occurred before an injury, illness, or other triggering event, with variable preservation of more remote memories.

Synonyms:

rabeprazole

rabeprazole concerns rabeprazole, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

rabies vaccine

rabies vaccine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

raclopride

raclopride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

radiation dosage

radiation dosage is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

radiation exposure

radiation exposure is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

radiation field

radiation field is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

radiation leukemia

radiation leukemia describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

radiation oncologists

radiation oncologists is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

radiation tolerance

radiation tolerance is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

radical cystoprostatectomy

radical cystoprostatectomy is used in relation to radical cystoprostatectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

radical hysterectomy

radical hysterectomy is used in relation to radical hysterectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

radical lymphadenectomy

radical lymphadenectomy is used in relation to radical lymphadenectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

radical mastectomy

radical mastectomy is used in relation to radical mastectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

radical nephrectomy

radical nephrectomy is used in relation to radical nephrectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

radicular cyst

radicular cyst is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

radiodermatitis

radiodermatitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

radioembolisation

radioembolisation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

radioimmunodetection

radioimmunodetection is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

radioimmunoguided surgery

radioimmunoguided surgery is used in relation to radioimmunoguided surgery during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

radioimmunotherapy

radioimmunotherapy is used in relation to radioimmunotherapy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

radioisotope

radioisotope is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

radiologic health

radiologic health is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

radiologic response

radiologic response is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

radiometry

radiometry is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

radionuclide angiography

radionuclide angiography is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

radionuclide generator

radionuclide generator denotes radionuclide generator, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

radionuclide imaging

radionuclide imaging is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat radionuclide imaging.

Synonyms:

radioprotective agent

radioprotective agent is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

radiosurgery

radiosurgery is used in relation to radiosurgery during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

radiotherapy bolus

radiotherapy bolus is used in relation to radiotherapy bolus during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

radiotherapy dosage

radiotherapy dosage is used in relation to radiotherapy dosage during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

radium

radium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

radon

radon is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

raffinose

raffinose is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rahnella

rahnella identifies rahnella, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

rahnella aquatilis

rahnella aquatilis identifies rahnella aquatilis, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

rale

rale is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

raloxifene

raloxifene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

raloxifene hydrochloride

raloxifene hydrochloride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ralstonia

ralstonia identifies ralstonia, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

ralstonia mannitolilytica

ralstonia mannitolilytica identifies ralstonia mannitolilytica, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

ralstonia pickettii

ralstonia pickettii identifies ralstonia pickettii, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

raltegravir potassium

raltegravir potassium is a medical condition or clinical finding involving the body system or process

named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

raltitrexed

raltitrexed is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ramipril

ramipril concerns ramipril, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

ramucirumab

ramucirumab concerns ramucirumab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

random allocation

random allocation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

randomization validation

randomization validation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ranibizumab

ranibizumab concerns ranibizumab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

ranitidine

ranitidine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ranolazine

ranolazine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ranpirnase

ranpirnase denotes ranpirnase, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

raoultella

raoultella identifies raoultella, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

raoultella planticola

raoultella planticola identifies raoultella planticola, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

raoultella terrigena

raoultella terrigena identifies raoultella terrigena, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

raphe nuclei

raphe nuclei is a medical condition or clinical finding

involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rare diseases

rare diseases describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

ras peptide

ras peptide is a defined chemical or biologic substance involved in ras peptide and studied in physiology, pharmacology, laboratory medicine, or treatment.

Synonyms:

ratio

ratio is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rationalization

rationalization is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rauscher virus

rauscher virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

rauwolfia alkaloid

rauwolfia alkaloid is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

ravuconazole

ravuconazole concerns ravuconazole, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

Raynaud's disease

Raynaud's disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

razoxane

razoxane is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reaction

reaction is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reactive hypoglycemia

reactive hypoglycemia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reagent

reagent is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reality testing

reality testing is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat reality testing.

Synonyms:

rebeccamycin

rebeccamycin concerns rebeccamycin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

receive

receive is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

receptor binding

receptor binding denotes receptor binding, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

recombinant

recombinant is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

recombinant protein

recombinant protein denotes recombinant protein, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

recombinase

recombinase is a medical condition or clinical finding

involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

recombinational repair

recombinational repair is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

record

record is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

recreation therapy

recreation therapy is used in relation to recreation therapy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

rectal

rectal is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rectal carcinoma

rectal carcinoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

rectal disease

rectal disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant

complications.

Synonyms:

rectal fistula

rectal fistula is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rectal hemorrhage

rectal hemorrhage describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

rectal mucositis

rectal mucositis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rectal necrosis

rectal necrosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rectal neoplasm

rectal neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

rectal obstruction

rectal obstruction describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

rectal perforation

rectal perforation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rectal polyposis

rectal polyposis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rectal route

rectal route is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rectal stenosis

rectal stenosis describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

rectal tenesmus

rectal tenesmus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rectosigmoid neoplasm

rectosigmoid neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

rectus abdominis

rectus abdominis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

recurrent disease

recurrent disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

recurrent fractures

recurrent fractures describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

red nucleus

red nucleus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reducing agents

reducing agents is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reducing diet

reducing diet is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reductase deficiency

reductase deficiency describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

reduviidae

reduviidae identifies reduviidae, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

referral

referral is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reflex

reflex is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reflex epilepsy

reflex epilepsy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

refractive error

refractive error is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

refractometer

refractometer is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

refractometry

refractometry is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

refractory anemia

refractory anemia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

refractory cancer

refractory cancer describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

refractory disease

refractory disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

regeneration

regeneration denotes regeneration, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

regional

regional is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

regional chemotherapy

regional chemotherapy is used in relation to regional chemotherapy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

regulatory assessment

regulatory assessment is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

regulatory authority

regulatory authority is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

regulatory gene

regulatory gene denotes regulatory gene, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

regulatory report

regulatory report is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reifenstein syndrome

reifenstein syndrome describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

reiki

reiki is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Reiter's syndrome

Reiter's syndrome describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

relaxation

relaxation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

relaxation therapy

relaxation therapy is used in relation to relaxation therapy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

relaxin

relaxin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

religion

religion is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

REM sleep

REM sleep is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

removal technique

removal technique is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

renal adenoma

renal adenoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

renal carcinoma

renal carcinoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

renal circulation

renal circulation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

renal cyst

renal cyst is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

renal function

renal function is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

renal glomerulus

renal glomerulus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

renal hamartoma

renal hamartoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

renal hypertension

renal hypertension is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

renal hypertrophy

renal hypertrophy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

renal insufficiency

renal insufficiency is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

renal necrosis

renal necrosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

renal oncocytoma

renal oncocytoma is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

renal parenchyma

renal parenchyma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

renal reabsorption

renal reabsorption is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

renal sarcoma

renal sarcoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

renal tubule

renal tubule is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

renal tubule acidosis

renal tubule acidosis denotes renal tubule acidosis, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

renaut body

renaut body is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

renshaw cell

renshaw cell denotes renschaw cell, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

reoviridae

reoviridae identifies reoviridae, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

reoviridae infection

reoviridae infection identifies reoviridae infection, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

repeat surgery

repeat surgery is used in relation to repeat surgery during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

replication initiation

replication initiation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

replicon

replicon is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reporter gene

reporter gene denotes reporter gene, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory

findings.

Synonyms:

repression

repression is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reproduction

reproduction is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reproduction spores

reproduction spores is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reproductive behavior

reproductive behavior is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reproductive history

reproductive history is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reproductive process

reproductive process is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical

context.

Synonyms:

reproductive system

reproductive system is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reproductive technique

reproductive technique is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reprogram

reprogram is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reptiles

reptiles is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

research activity

research activity is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

research design

research design is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

research personnel

research personnel is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

research study

research study is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

resectable

resectable is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reserpine

reserpine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

residential mobility

residential mobility is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

residual neoplasm

residual neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

residual risk

residual risk is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

residual tumor

residual tumor describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

resin

resin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

resiquimod

resiquimod is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

resistance training

resistance training is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

resistant starch

resistant starch is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

respiratory burst

respiratory burst is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

respiratory disorder

respiratory disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

respiratory infection

respiratory infection describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

respiratory muscle

respiratory muscle is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

respiratory neoplasm

respiratory neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

respiratory paralysis

respiratory paralysis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

respiratory therapy

respiratory therapy is used in relation to respiratory therapy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

respiratory transport

respiratory transport is a medical condition or clin-

ical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

respirovirus

respirovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

respite care

respite care is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

response element

response element is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

restlessness

restlessness is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

restriction mapping

restriction mapping is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

resveratrol

resveratrol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

retainer

retainer is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retching

retching is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reticular dermis

reticular dermis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reticulin

reticulin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reticulocyte

reticulocyte is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reticulocytopenia

reticulocytopenia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reticulocytosis

reticulocytosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reticuloendothelial system

reticuloendothelial system is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reticulophagy

reticulophagy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

reticulosarcoma

reticulosarcoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

reticulum

reticulum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retina disorder

retina disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

retina hemorrhage

retina hemorrhage describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

retinal cone

retinal cone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retinal damage

retinal damage is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retinal degeneration

retinal degeneration denotes retinal degeneration, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

retinal dysplasia

retinal dysplasia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retinal dystrophy

retinal dystrophy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retinal fold

retinal fold is a medical condition or clinical finding

involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retinal ganglion

retinal ganglion is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retinal macula

retinal macula is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retinal neoplasm

retinal neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

retinal perforation

retinal perforation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retinal pigment

retinal pigment is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retinal vasculitis

retinal vasculitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retinaldehyde

retinaldehyde is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retinoblastoma protein

retinoblastoma protein denotes retinoblastoma protein, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

retirement

retirement is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retortamonas intestinalis

retortamonas intestinalis is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat retortamonas intestinalis.

Synonyms:

retractile testis

retractile testis is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat retractile testis.

Synonyms:

retreatment

retreatment is used in relation to retreatment during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

retrobulbar hemorrhage

retrobulbar hemorrhage describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying

mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

retroesophageal

retroesophageal is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retrognathia

retrognathia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retrograde degeneration

retrograde degeneration denotes retrograde degeneration, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

retroperitoneal neoplasm

retroperitoneal neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

retroperitoneal space

retroperitoneal space is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retrospective studies

retrospective studies is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical

context.

Synonyms:

retrotracheal

retrotracheal is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retrotransposition

retrotransposition is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retroviral vector

retroviral vector is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

retroviridae

retroviridae identifies retroviridae, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

retroviridae infection

retroviridae infection identifies retroviridae infection, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

revascularization surgery

revascularization surgery is used in relation to revascularization surgery during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

reversal learning

reversal learning is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

R-factor

R-factor is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rgs proteins

rgs proteins denotes rgs proteins, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

rhabdoviridae

rhabdoviridae identifies rhabdoviridae, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

rhamnose

rhamnose is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhesus incompatibility

rhesus incompatibility is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rheumatic chorea

rheumatic chorea is a medical condition or clinical

finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rheumatoid nodule

rheumatoid nodule is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhinocephaly

rhinocephaly is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhinoscopy

rhinoscopy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhinovirus A

rhinovirus A is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

rhinovirus C

rhinovirus C is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

rhizobiaceae

rhizobiaceae is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhizobium

rhizobium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhizomucor

rhizomucor is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhizomucor pusillus

rhizomucor pusillus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhizopus

rhizopus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhizopus oryzae

rhizopus oryzae is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhizoxin

rhizoxin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhodium

rhodium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhodobacteraceae

rhodobacteraceae describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

rhodococcus

rhodococcus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhodococcus equi

rhodococcus equi is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhodopseudomonas

rhodopseudomonas is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhodopsin

rhodopsin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhodospirillaceae

rhodospirillaceae is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhodospirillales

rhodospirillales is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhodospirillum

rhodospirillum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhodotorula glutinis

rhodotorula glutinis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rhombencephalon

rhombencephalon is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ribavirin

ribavirin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

riboflavin

riboflavin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

riboflavin assay

riboflavin assay is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat riboflavin assay.

Synonyms:

riboflavin deficiency

riboflavin deficiency describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

ribonuclease

ribonuclease is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ribonuclease h

ribonuclease h is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ribonuclease iii

ribonuclease iii is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ribonucleoprotein

ribonucleoprotein denotes ribonucleoprotein, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

ribonucleoside

ribonucleoside is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ribonucleotide reductase

ribonucleotide reductase is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ribonucleotides

ribonucleotides is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ribophagy

ribophagy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ribose

ribose is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ribosomal protein

ribosomal protein denotes ribosomal protein, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

ribosome subunit

ribosome subunit is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ribostamycin

ribostamycin concerns ribostamycin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

Richter's syndrome

Richter's syndrome describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

ricin

ricin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rickettsia felis

rickettsia felis identifies rickettsia felis, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

rickettsia infections

rickettsia infections identifies rickettsia infections, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

rickettsia japonica

rickettsia japonica identifies rickettsia japonica, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

rickettsia prowazekii

rickettsia prowazekii identifies rickettsia prowazekii, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

rickettsia rickettsii

rickettsia rickettsii identifies rickettsia rickettsii, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

rickettsia typhi

rickettsia typhi identifies rickettsia typhi, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

rickettsiaceae

rickettsiaceae identifies rickettsiaceae, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

ridaforolimus

ridaforolimus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ridged nail

ridged nail is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Riedel's thyroiditis

Riedel's thyroiditis is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Rieger syndrome

Rieger syndrome describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

rifabutin

rifabutin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rifampin

rifampin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rifamycin

rifamycin concerns rifamycin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

rifaximin

rifaximin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

right eye

right eye is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

right kidney

right kidney is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

right lung

right lung is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

righting reflex

righting reflex is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rigosertib sodium

rigosertib sodium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rilotumumab

rilotumumab concerns rilotumumab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

rilpivirine

rilpivirine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

riluzole

riluzole is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rimantadine

rimantadine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ring chromosome

ring chromosome denotes ring chromosome, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

risedronate sodium

risedronate sodium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

risk

risk is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

risk adjustment

risk adjustment is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

risk factors

risk factors is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

risk management

risk management is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

risk-taking

risk-taking is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

risperidone

risperidone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ristocetin

ristocetin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ritodrine

ritodrine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ritonavir

ritonavir concerns ritonavir, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

ritual

ritual is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rituximab

rituximab concerns rituximab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

rivaroxaban

rivaroxaban concerns rivaroxaban, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

RNA binding

RNA binding denotes rna binding, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

RNA biosynthesis

RNA biosynthesis denotes rna biosynthesis, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

RNA degradation

RNA degradation denotes rna degradation, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

RNA folding

RNA folding denotes rna folding, a biological component or molecular process interpreted through

relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

RNA helicase

RNA helicase denotes rna helicase, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

RNA interference

RNA interference denotes rna interference, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

RNA splicing

RNA splicing denotes rna splicing, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

RNA transport

RNA transport denotes rna transport, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

RNA virus

RNA virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

RNase P

RNase P denotes rnase p, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

Robinow syndrome

Robinow syndrome describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

rod photoreceptor

rod photoreceptor denotes rod photoreceptor, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

roentgen

roentgen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rofecoxib

rofecoxib is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

romidepsin

romidepsin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

romiplostim

romiplostim is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ronnel

ronnel is a medical condition or clinical finding in-

volving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ropivacaine

ropivacaine concerns ropivacaine, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

ropivacaine hydrochloride

ropivacaine hydrochloride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rose bengal

rose bengal is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

roseolovirus

roseolovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

roseomonas

roseomonas is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

roseomonas gilardii

roseomonas gilardii is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

roseomonas mucosa

roseomonas mucosa is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rosiglitazone

rosiglitazone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rosiglitazone maleate

rosiglitazone maleate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ross river virus

ross river virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

rostaporfin

rostaporfin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rosuvastatin calcium

rosuvastatin calcium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rotation

rotation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rotavirus infection

rotavirus infection is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

rotenone

rotenone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rothia dentocariosa

rothia dentocariosa is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rothia mucilaginosa

rothia mucilaginosa is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rotifera

rotifera is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

round ligament

round ligament is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

roxithromycin

roxithromycin concerns roxithromycin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

rubber

rubber is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rubber dams

rubber dams is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rubeosis iridis

rubeosis iridis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rubidium

rubidium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rubitecan

rubitecan is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rubivirus

rubivirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

rubredoxins

rubredoxins is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rubricyte count

rubricyte count is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rubulavirus

rubulavirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

rumen

rumen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rumination

rumination is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ruminococcus

ruminococcus is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

ruminococcus gnavus

ruminococcus gnavus is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

rural health

rural health is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Russell-Siver syndrome

Russell-Siver syndrome describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

ruthenium

ruthenium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

rutin

rutin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ryanodine

ryanodine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context. **Synonyms:**

Red eye

Redness of the white part of the eye caused by irritation, dryness, allergy, infection, injury, inflammation, or increased surface blood flow. **Synonyms:**

RA

Alternate index label; see *Rheumatoid arthritis*. **Synonyms:**

Rapid eye movement sleep behavior disorder

Alternate index label; see *REM sleep behavior disorder*. **Synonyms:**

Rapid heartbeat

Alternate index label; see *Tachycardia*. **Synonyms:**

Rash, poison ivy

Alternate index label; see *Poison ivy rash*. **Synonyms:**

Reading disability, specific

Alternate index label; see *Dyslexia*. **Synonyms:**

Rebound headache

Alternate index label; see *Medication overuse headaches*. **Synonyms:**

Rectal inflammation

Alternate index label; see *Proctitis*. **Synonyms:**

Rectal itching

Alternate index label; see *Anal itching*. **Synonyms:**

Rectal ulcer

Alternate index label; see *Solitary rectal ulcer syndrome*. **Synonyms:**

Recurrent oral ulcers

Alternate index label; see *Canker sore*. **Synonyms:**

Recurrent prostate cancer

Alternate index label; see *Prostate cancer recurrence*. **Synonyms:**

Reflux, bile

Alternate index label; see *Bile reflux*. **Synonyms:**

Reflux, vesicoureteral

Alternate index label; see *Vesicoureteral reflux*. **Synonyms:**

Regurgitation, aortic valve

Alternate index label; see *Aortic valve regurgitation*. **Synonyms:**

Regurgitation, mitral valve

Alternate index label; see *Mitral valve regurgitation*. **Synonyms:**

Renal artery disease

Alternate index label; see *Renal artery stenosis*. **Synonyms:**

Renal cancer

Alternate index label; see *Kidney cancer*. **Synonyms:**

Renal lithiasis

Alternate index label; see *Kidney stones*. **Synonyms:**

Renal vascular disease

Alternate index label; see *Renal artery stenosis*. **Synonyms:**

Retinopathy, diabetic

Alternate index label; see *Diabetic retinopathy*. **Synonyms:**

Rhinitis, allergic

Alternate index label; see *Hay fever*. **Synonyms:**

Rhinitis, nonallergic

Alternate index label; see *Nonallergic rhinitis*. **Synonyms:**

Rhinitis, vasomotor

Alternate index label; see *Nonallergic rhinitis*. **Synonyms:**

Ringling in the ear

Alternate index label; see *Tinnitus*. **Synonyms:**

Ringworm of the foot

Alternate index label; see *Athlete's foot*. **Synonyms:**

Road rage

Alternate index label; see *Intermittent explosive disorder*. **Synonyms:**

Round back

Alternate index label; see *Kyphosis*. **Synonyms:**

Runner's knee

Alternate index label; see *Patellofemoral pain syndrome*. **Synonyms:**

Radial head fracture - aftercare

Radial head fracture - aftercare examines radial head fracture - aftercare; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Radial nerve dysfunction

Radial nerve dysfunction examines radial nerve dysfunction; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Radiation therapy - questions to ask your doctor

Radiation therapy - questions to ask your doctor examines radiation therapy - questions to ask your

doctor; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Radiation therapy - skin care

Radiation therapy - skin care is a treatment or care intervention for radiation therapy - skin care; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Radical prostatectomy - discharge

Radical prostatectomy - discharge examines radical prostatectomy - discharge; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Radioactive iodine uptake

Radioactive iodine uptake examines radioactive iodine uptake; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Radiofrequency ablation for chronic pain

Radiofrequency ablation for chronic pain is a treatment or care intervention for radiofrequency ablation for chronic pain; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Radioiodine therapy

Radioiodine therapy is a treatment or care intervention for radioiodine therapy; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Radionuclide cisternogram

Radionuclide cisternogram examines radionuclide cisternogram; interpretation depends on the specimen or body region, test method, reference range,

and clinical question.

Synonyms:

Radionuclide cystogram

Radionuclide cystogram examines radionuclide cystogram; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Rapid shallow breathing

Rapid shallow breathing concerns rapid shallow breathing; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Rash - child under 2 years

Rash - child under 2 years is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

RBC count

RBC count examines rbc count; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

RBC indices

RBC indices examines rbc indices; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

RBC nuclear scan

RBC nuclear scan examines rbc nuclear scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

RBC urine test

RBC urine test examines rbc urine test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Reactive attachment disorder of infancy or early childhood

Reactive attachment disorder of infancy or early childhood examines reactive attachment disorder of infancy or early childhood; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Recognizing medical emergencies

Recognizing medical emergencies concerns recognizing medical emergencies; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Recognizing teen depression

Recognizing teen depression concerns recognizing teen depression; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Recombinant zoster (shingles) vaccine, RZV - what you need to know

Recombinant zoster (shingles) vaccine, RZV - what you need to know is a treatment or care intervention for recombinant zoster (shingles) vaccine, rzv - what you need to know; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Recovering after stroke

Recovering after stroke concerns recovering after stroke; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Rectal biopsy

Rectal biopsy examines rectal biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Rectal culture

Rectal culture examines rectal culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Rectal prolapse repair

Rectal prolapse repair examines rectal prolapse repair; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Red birthmarks

Red birthmarks concerns red birthmarks; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Refractive corneal surgery - discharge

Refractive corneal surgery - discharge examines refractive corneal surgery - discharge; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Refractive corneal surgery - what to ask your doctor

Refractive corneal surgery - what to ask your doctor examines refractive corneal surgery - what to ask your doctor; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Refrigerant poisoning

Refrigerant poisoning involves toxic or environmental exposure to refrigerant poisoning; dose, route,

timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Relaxation techniques for stress

Relaxation techniques for stress addresses care related to relaxation techniques for stress, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Remembering tips

Remembering tips concerns remembering tips; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Renal and urological diseases

Renal and urological diseases is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Renal arteriography

Renal arteriography is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Renal papillary necrosis

Renal papillary necrosis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Renal pelvis or ureter cancer

Renal pelvis or ureter cancer is a disorder affecting the body system or process named by the term.

Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Renal perfusion scintiscan

Renal perfusion scintiscan examines renal perfusion scintiscan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Renal vein thrombosis

Renal vein thrombosis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Renal venogram

Renal venogram examines renal venogram; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Renin blood test

Renin blood test examines renin blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Repair of webbed fingers or toes

Repair of webbed fingers or toes is a treatment or care intervention for repair of webbed fingers or toes; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Replantation of digits

Replantation of digits is a treatment or care intervention for replantation of digits; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Reportable diseases

Reportable diseases is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Resources

Resources addresses care related to resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Respiratory

Respiratory is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Respiratory syncytial virus (RSV)

Respiratory syncytial virus is a common respiratory infection that can cause bronchiolitis or pneumonia in infants and serious disease in older adults or people with chronic illness.

Synonyms:

Respiratory syncytial virus (RSV) preventive antibody - what you need to know

Respiratory syncytial virus (RSV) preventive antibody - what you need to know is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Respiratory viruses and face masks

Respiratory viruses and face masks addresses care related to respiratory viruses and face masks, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Responsible drinking

Responsible drinking addresses care related to responsible drinking, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Retrograde cystography

Retrograde cystography concerns retrograde cystography; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Retroperitoneal inflammation

Retroperitoneal inflammation is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Retrosternal thyroid surgery

Retrosternal thyroid surgery is a treatment or care intervention for retrosternal thyroid surgery; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Retroversion of the uterus

Retroversion of the uterus concerns retroversion of the uterus; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Returning to sports after a back injury

Returning to sports after a back injury addresses care related to returning to sports after a back injury, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Returning to work after cancer: know

your rights

Returning to work after cancer: know your rights addresses care related to returning to work after cancer: know your rights, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Reverse total shoulder replacement

Reverse total shoulder replacement is a treatment or care intervention for reverse total shoulder replacement; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Reverse total shoulder replacement - discharge

Reverse total shoulder replacement - discharge is a treatment or care intervention for reverse total shoulder replacement - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Reye syndrome - resources

Reye syndrome - resources addresses care related to reye syndrome - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Rheumatoid factor (RF)

Rheumatoid factor (RF) examines rheumatoid factor (rf); interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Rheumatoid lung disease

Rheumatoid lung disease is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Rheumatoid pneumoconiosis

Rheumatoid pneumoconiosis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Rhubarb leaves poisoning

Rhubarb leaves poisoning involves toxic or environmental exposure to rhubarb leaves poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Rib fracture - aftercare

Rib fracture - aftercare examines rib fracture - aftercare; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Ribcage pain

Ribcage pain addresses care related to ribcage pain, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Right heart ventricular angiography

Right heart ventricular angiography examines right heart ventricular angiography; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Risks of hip and knee replacement

Risks of hip and knee replacement is a treatment or care intervention for risks of hip and knee replacement; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Risks of tobacco

Risks of tobacco concerns risks of tobacco; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Risks of underage drinking

Risks of underage drinking concerns risks of underage drinking; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Robotic surgery

Robotic surgery is a treatment or care intervention for robotic surgery; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Rotator cuff - self-care

Rotator cuff - self-care is a treatment or care intervention for rotator cuff - self-care; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Rotator cuff exercises

Rotator cuff exercises addresses care related to rotator cuff exercises, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Rotator cuff problems

Rotator cuff problems include tendinopathy, bursitis, and tears that cause shoulder pain, weakness, painful motion, and difficulty with overhead activity.

Synonyms:

Rotator cuff repair

Rotator cuff repair is a treatment or care intervention for rotator cuff repair; indication, preparation, risks, technical details, and recovery depend on the

patient and goal.

Synonyms:

Rotavirus antigen test

Rotavirus antigen test examines rotavirus antigen test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Rotavirus vaccine - what you need to know

Rotavirus vaccine - what you need to know is a treatment or care intervention for rotavirus vaccine - what you need to know; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

RPR test

RPR test examines rpr test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

RSV (respiratory syncytial virus) vaccine - what you need to know

RSV (respiratory syncytial virus) vaccine - what you need to know is a treatment or care intervention for rsv (respiratory syncytial virus) vaccine - what you need to know; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

RSV antibody test

RSV antibody test examines rsv antibody test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Rubber cement poisoning

Rubber cement poisoning involves toxic or environmental exposure to rubber cement poisoning; dose, route, timing, symptoms, and organ involvement

determine urgency and treatment.

Synonyms:

Ruptured eardrum

A ruptured eardrum is a tear in the tympanic membrane caused by infection, pressure, trauma, or foreign objects and may cause pain, drainage, hearing loss, or dizziness.

Synonyms:

RA (Rheumatoid Arthritis)

Alternate index label for Rheumatoid Arthritis.

Synonyms:

Rape (Sexual Assault)

Alternate index label for Sexual Assault.

Synonyms:

Rash Heat (Heat Rash)

Alternate index label for Heat Rash.

Synonyms:

Raynauds Phenomenon (Raynaud's Phenomenon)

Alternate index label for Raynaud's Phenomenon.

Synonyms:

Raynauds syndrome (Raynaud's Phenomenon)

Alternate index label for Raynaud's Phenomenon.

Synonyms:

Reasons You Are Tired After Surgery (7 Reasons You are Tired after Surgery)

Alternate index label for 7 Reasons You are Tired after Surgery.

Synonyms:

Rectal Bleeding (Blood in the Stool (Rectal Bleeding))

Alternate index label for Blood in the Stool (Rectal Bleeding).

Synonyms:

Reflex Sympathetic Dystrophy Syndrome

Reflex sympathetic dystrophy is the former name for complex regional pain syndrome, usually following injury or surgery. Disproportionate burning pain, swelling, temperature or color change, sweating, and stiffness can spread beyond the original site.

Synonyms:

Renal Failure (Kidney Failure)

Alternate index label for Kidney Failure.

Synonyms:

Repetitive Motion Disorders (RMDs)

Alternate index label for RMDs.

Synonyms:

Resistance Antibiotic (Antibiotic Resistance)

Alternate index label for Antibiotic Resistance.

Synonyms:

Respiratory Syncytial Virus Contagious (Is Respiratory Syncytial Virus (RSV) Contagious)

Alternate index label for Is Respiratory Syncytial Virus (RSV) Contagious.

Synonyms:

Restless Leg Syndrome

Restless legs syndrome causes an urge to move the legs with uncomfortable sensations that worsen at rest and in the evening and improve temporarily with movement. Iron deficiency, kidney disease, medicines, pregnancy, and genetics may contribute.

Synonyms:

Reye Johnson syndrome (Reye Syndrome)

Alternate index label for Reye Syndrome.

Synonyms:

Rheumatoid Arthritis Cause Gastrointestinal Issues

Rheumatoid arthritis can affect the gastrointesti-

nal system indirectly through inflammation, associated autoimmune disease, reduced mobility, or medicines such as nonsteroidal anti-inflammatory drugs. Abdominal pain, bleeding, persistent diarrhea, or weight loss needs evaluation rather than attribution to arthritis alone.

Synonyms:

Rheumatoid Arthritis Inflammation of the Brain

Direct brain inflammation is uncommon in rheumatoid arthritis, but vasculitis, medication effects, infection, stroke risk, or another autoimmune process can cause neurologic symptoms. New confusion, seizure, weakness, severe headache, or vision change requires urgent assessment.

Synonyms:

Rigid and Flexible Sigmoidoscopy

A sigmoidoscopy examines the rectum and lower colon with a flexible or rigid instrument. It can evaluate bleeding, pain, altered bowel habits, inflammation, polyps, or tumors; preparation, reach, comfort, and biopsy capability differ by technique.

Synonyms:

Ring Schatzki (Schatzki Ring)

Alternate index label for Schatzki Ring.

Synonyms:

Ring in the Ears (Tinnitus (Ringing in the Ears))

Alternate index label for Tinnitus (Ringing in the Ears).

Synonyms:

RMDs (Repetitive Motion Disorders (RMDs))

Alternate index label for Repetitive Motion Disorders (RMDs).

Synonyms:

RMSF (Rocky Mountain Spotted Fever (RMSF))

Alternate index label for Rocky Mountain Spotted

Fever (RMSF).

Synonyms:

Synonyms:

Rocky Mountain Spotted Fever (RMSF)

Alternate index label for RMSF.

Synonyms:

Roseola Contagious (Is Roseola Contagious)

Alternate index label for Is Roseola Contagious.

Synonyms:

RSD (Reflex Sympathetic Dystrophy Syndrome)

Alternate index label for Reflex Sympathetic Dystrophy Syndrome.

Synonyms:

RSI (Repetitive Motion Disorders (RMDs))

Alternate index label for Repetitive Motion Disorders (RMDs).

Synonyms:

RSV (Respiratory Syncytial Virus)

Alternate index label for Respiratory Syncytial Virus.

Synonyms:

Ruba Miliaria (Heat Rash)

Alternate index label for Heat Rash.

Synonyms:

rubeola (Measles (Rubeola))

Alternate index label for Measles (Rubeola).

Synonyms:

Ruptured Perforated Eardrum

A perforated eardrum is a tear in the tympanic membrane from infection, pressure change, trauma, or an inserted object. Pain, drainage, hearing loss, or ringing may occur; keeping the ear dry and avoiding unprescribed drops helps while healing or repair is assessed.

S

16S Ribosomal RNA Sequencing

Molecular identification of bacteria and archaea using conserved and variable regions of the 16S ribosomal RNA gene. It is useful for difficult-to-culture organisms but may not distinguish closely related species or provide susceptibility data.

Synonyms:

SAD

Seasonal affective disorder, a recurring mood disorder linked to seasonal changes and reduced daylight.

Synonyms: Seasonal affective disorder

Saline

A sterile water solution containing sodium chloride, commonly used for fluids, irrigation, or drug delivery.

Synonyms: Normal saline

Sarcolemma

The specialized cell membrane surrounding a muscle fiber. **Synonyms:**

Satisficer

A person who chooses an option that meets acceptable criteria without seeking the absolute best option. **Synonyms:**

Sausage Digit

Diffuse swelling of an entire finger or toe, often seen with inflammatory arthritis. **Synonyms:** Dactylitis

Scapulothoracic Joint

The functional gliding connection between the scapula and the back of the chest wall. **Synonyms:**

Schlemm's Canal

A circular channel that drains aqueous humor from the eye. **Synonyms:** Canal of Schlemm

Scintillations

Perceived flashes or zigzag lines, often occurring during a migraine aura. **Synonyms:**

Secondary Osteoporosis

Bone loss caused by another illness, medication, or prolonged immobility. **Synonyms:**

Sed Rate

A blood test measuring how quickly red blood cells settle, used as a nonspecific marker of inflammation.

Synonyms: Erythrocyte sedimentation rate; ESR

Selective Estrogen Receptor Modulators

Medicines that activate estrogen receptors in some tissues and block them in others. **Synonyms:** SERMs

Selective Serotonin Reuptake Inhibitors

Antidepressants that increase serotonin signaling by reducing its reuptake into nerve cells. **Synonyms:** SSRIs

Self-Help Group

A peer group in which members support one another while changing a harmful behavior or coping with a problem. **Synonyms:** Support group

Seminal Vesicles

Glands behind the bladder that produce much of the fluid in semen. **Synonyms:**

Senescence

Gradual biological decline associated with aging. **Synonyms:** Biological aging

Senile Dementia

An outdated term formerly used for dementia in older adults. **Synonyms:** Dementia

Sensate Focus Techniques

Structured touch exercises used in sex therapy to reduce performance pressure and improve intimacy. **Synonyms:** Sensate focus

SERMs

Selective estrogen receptor modulators that have estrogen-like effects in some tissues and blocking effects in others. **Synonyms:** Selective estrogen receptor modulators

Seroma

A pocket of clear fluid that develops near a surgical incision or injured tissue. **Synonyms:**

Serotonin

A neurotransmitter involved in mood, sleep, appetite, and pain regulation. **Synonyms:** 5-hydroxytryptamine; 5-HT

Sesamoiditis

Inflammation and pain around a small sesamoid bone, often beneath the big toe. **Synonyms:**

Set

A group of consecutive repetitions of an exercise. **Synonyms:**

Short-Term Memory

The temporary storage and use of information over seconds to minutes. **Synonyms:** Working memory

Sigmoidoscopy

Sigmoidoscopy examines sigmoidoscopy; interpretation depends on the specimen or body region, test method, reference range, and clinical question. **Synonyms:**

Signature Strengths

Personal character strengths that a person values and naturally uses. **Synonyms:**

Silent Heart Attack

A myocardial infarction without recognized pain or typical warning symptoms. **Synonyms:** Unrecognized myocardial infarction

Silent Ischemia

Inadequate blood flow to heart muscle without noticeable symptoms. **Synonyms:** Asymptomatic ischemia

Single-Photon Absorptiometry

An older technique using gamma rays to measure bone density, usually in an arm or peripheral bone. **Synonyms:** SPA

Sinus Node

The heart's natural pacemaker, located in the right atrium. **Synonyms:** Sinoatrial node

Skeletal Muscles

Muscles attached to bones that produce voluntary movement. **Synonyms:** Voluntary muscles

Skin Resurfacing

Procedures that improve skin texture or pigmentation by removing or remodeling superficial skin layers. **Synonyms:**

Sleep Architecture

The pattern and organization of sleep stages across a sleep period. **Synonyms:**

Sleep Spindles

Brief bursts of rhythmic brain activity during stage 2 non-REM sleep. **Synonyms:**

Sling

A supportive device or surgically placed strip used to support an injured limb or urinary structures. **Synonyms:**

Slipped Disk

A spinal disk that bulges or herniates through a tear in its outer layer. **Synonyms:** Herniated disk

Slipped Vertebra

Forward displacement of one vertebra relative to the one below it. **Synonyms:** Spondylolisthesis

Slit Lamp

An instrument using magnification and a narrow beam of light to examine the eye. **Synonyms:** Biomicroscope

Slow-Twitch Fiber

A muscle fiber adapted for sustained, aerobic activity and fatigue resistance. **Synonyms:** Type I muscle fiber

Slow-Wave Sleep

Deep non-REM sleep characterized by slow brain waves and reduced responsiveness. **Synonyms:** Deep sleep

SMART

A goal-setting framework emphasizing specific, measurable, achievable, realistic, and time-bound goals. **Synonyms:** SMART goals

Somatization

Expression of psychological distress through physical symptoms. **Synonyms:**

Somniloquy

Talking during sleep. **Synonyms:** Sleep talking

Sorbitol

A sugar alcohol used as a sweetener and, in larger amounts, as an osmotic laxative. **Synonyms:**

Spacer

A chamber used with a metered-dose inhaler to improve delivery of medicine to the lungs. **Synonyms:** Valved holding chamber

Sphincter

A ring-shaped muscle that regulates an opening by contracting and relaxing. **Synonyms:**

Spinal Tap

A procedure that withdraws cerebrospinal fluid from the lower spinal canal for testing. **Synonyms:** Lumbar puncture

Spinous Process

The posterior bony projection of a vertebra to which muscles and ligaments attach. **Synonyms:**

Splenic Flexure Syndrome

Left-upper-abdominal pain caused by gas trapped at the bend between the transverse and descending colon. **Synonyms:**

Spongy Bone

Porous trabecular bone found inside many bones, especially near joints. **Synonyms:** Cancellous bone; trabecular bone

Squamous Cell

A thin, flat epithelial cell. **Synonyms:**

Stable Angina

Predictable exertional chest pain caused by temporary inadequate coronary blood flow. **Synonyms:** Chronic stable angina

Stable Coronary Artery Disease

Coronary artery narrowing causing a consistent, predictable pattern of angina. **Synonyms:** Stable ischemic heart disease

Stages of Change

A model describing gradual phases people pass through while changing behavior. **Synonyms:** Transtheoretical model

Standardized Extract

An herbal extract adjusted to contain a specified amount of a selected constituent. **Synonyms:**

Statins

Cholesterol-lowering medicines that inhibit HMG-CoA reductase. **Synonyms:** HMG-CoA reductase inhibitors

Steroids

Hormone-like medicines or compounds with a four-ring chemical structure; corticosteroids are used to reduce inflammation. **Synonyms:** Corticosteroids

Stimulant

A substance that increases activity of the central nervous system or other body systems. **Synonyms:**

Stratum Corneum

The outermost layer of the epidermis, composed mainly of dead keratinized cells. **Synonyms:**

Strength

The ability of a muscle or muscle group to exert force. **Synonyms:**

Strength Training

Exercise using resistance to increase muscle strength and capacity. **Synonyms:** Resistance training; weight training

Stress Response

Physiological changes that prepare the body to respond to a perceived threat. **Synonyms:** Fight-or-flight response

Stressors

Events, conditions, or circumstances that trigger a stress response. **Synonyms:**

Stria

A line, streak, or band in tissue, such as a stretch mark. **Synonyms:** Striae

Stricture

Abnormal narrowing of a hollow body passage. **Synonyms:**

Subarachnoid Space

The space between the arachnoid and pia mater containing cerebrospinal fluid. **Synonyms:**

Subcutaneous

Subcutaneous concerns subcutaneous; its medical significance is established from the defining features, setting, associated findings, and clinical question. **Synonyms:** Subcuticular

Subendocardial Myocytes

Heart-muscle cells in the inner layer of the myocardium, which are especially vulnerable to reduced blood flow. **Synonyms:**

S3 Gallop Pathology

A third heart sound produced during rapid ventricular filling. In some adults it may indicate volume overload or ventricular dysfunction, although it can be physiologic in children, young adults, and pregnancy. Its significance depends on the complete clinical assessment.

Synonyms:

S4 Gallop Pathology

A fourth heart sound indicates atrial contraction against a stiff ventricle (decreased compliance). Associated with left ventricular hypertrophy from hypertension, aortic stenosis, and hypertrophic cardiomyopathy. S4 is best heard at the apex with the bell, and is accentuated by exertion, expiration, and isorhythmic AV dissociation.

Synonyms:

Sacral Nerve Stimulation

Neuromodulation for urinary/fecal incontinence, constipation. Sacral nerve root (S3) stimulation. Implantable pulse generator + electrode. Indications: refractory urge incontinence, fecal incontinence, non-obstructive urinary retention.

Synonyms:

Sacral Nerve Stimulator

An implanted device that delivers electrical stimulation to sacral nerves to alter bladder, bowel, or

pelvic-floor function in selected patients.

Synonyms:

Sacral Vertebrae

Five vertebrae fused to form the sacrum. They transmit body weight from the vertebral column to the pelvic girdle and contain anterior and posterior sacral foramina for spinal nerves.

Synonyms:

Sacroiliac Joint

The synovial joint between the sacrum and the ilium (auricular surfaces), forming the connection between the axial skeleton and the pelvis. The sacroiliac joint is reinforced by strong ligaments (anterior, interosseous, and posterior sacroiliac ligaments, sacrotuberous and sacrospinous ligaments).

Synonyms:

Sacroiliitis

Inflammation of one or both sacroiliac joints, causing pain in the lower back, buttock, or posterior thigh that may worsen with prolonged rest. Causes include axial spondyloarthritis, psoriatic or enteropathic arthritis, infection, trauma, and degenerative disease.

Synonyms:

Sacrum

Large triangular bone from 5 fused sacral vertebrae between the hip bones. Articulates with L5 superiorly and coccyx inferiorly. The sacral promontory is an obstetric landmark. Contains 4 pairs of sacral foramina. Forms the posterior pelvic wall.

Synonyms:

Safety Plan

A collaboratively written, practical plan for responding to escalating suicidal thoughts or emotional crisis. It identifies warning signs, internal coping strategies, supportive contacts, professional resources, and methods to restrict access to lethal means.

Synonyms:

Sagittal Plane

A vertical plane that divides the body or an organ into right and left sides.

Synonyms:

Salbutamol (Albuterol)

A selective beta-2 adrenergic agonist bronchodilator used for acute relief and prevention of bronchospasm in asthma and COPD. Relaxes airway smooth muscle; short-acting (SABA), onset 5-15 minutes, duration 4-6 hours via inhaler or nebulizer. Adverse effects: tremor, tachycardia, palpitations, hypokalemia, and headache.

Synonyms: Albuterol

Salicylate

A group of compounds that includes aspirin and has analgesic, antipyretic, and anti-inflammatory effects.

Synonyms:

Salicylate Toxicity

Poisoning caused by excessive aspirin or another salicylate, potentially producing vomiting, ringing in the ears, fever, abnormal breathing, confusion, and acid-base disturbances.

Synonyms:

Saline Infusion Sonohysterography

Ultrasound evaluation of uterus using saline contrast. Evaluates intrauterine pathology.

Synonyms:

Saliva

Secretion of salivary glands (1-1.5 L/day). Functions: lubrication, digestion (amylase), buffering, antimicrobial, remineralization. Xerostomia (dry mouth) increases caries risk. Causes: medications, Sjogren syndrome, radiation, dehydration.

Synonyms:

Salivary Gland

Any exocrine gland that secretes saliva into the oral cavity. The major paired glands are the parotid, submandibular, and sublingual glands; numerous

minor glands occur throughout the oral mucosa.

Synonyms:

Salivary Gland Cancer

A rare malignancy most often arising in the parotid gland. Histologic types include mucoepidermoid carcinoma, adenoid cystic carcinoma, and acinic cell carcinoma; facial nerve preservation is a key surgical consideration.

Synonyms:

Salivary Gland Infection

Infection of a salivary gland, usually bacterial and often involving the parotid or submandibular gland. Painful swelling, fever, dry mouth, and purulent drainage from the duct may occur.

Synonyms:

Salivary Gland Scintigraphy

Salivary gland function assessment using Tc-99m pertechnetate. Used for Sjogren syndrome, obstruction, radiation sialadenitis.

Synonyms:

Salivary Gland Tumors

Tumors arising in the salivary glands. Many are benign, especially in the parotid gland; pleomorphic adenoma is a common benign type. Malignant types include mucoepidermoid, adenoid cystic, and acinic cell carcinoma.

Synonyms:

Salivation

The secretion of saliva by the salivary glands.

Synonyms:

Salmonella

A genus of Gram-negative, facultatively anaerobic, rod-shaped bacteria in the Enterobacteriaceae family. It includes non-typhoidal strains that cause gastroenteritis and typhoidal strains that can cause enteric fever.

Synonyms:

Salmonellosis

Infection with Salmonella bacteria (non-typhoidal), typically acquired from contaminated food (eggs, poultry, meat). Presents with acute gastroenteritis: diarrhea, fever, and abdominal cramps within 6-72 hours of ingestion. Self-limited in immunocompetent patients. Bacteremia can occur, especially in immunocompromised.

Synonyms:

Salpingectomy

Surgical removal of a fallopian tube. It may be used to treat a tubal ectopic pregnancy, hydrosalpinx, or other tubal disease. The approach and whether the tube is removed depend on the clinical condition, fertility plans, and the state of the opposite tube.

Synonyms:

Salpingitis

Inflammation of the fallopian tubes, most commonly caused by ascending infection from the lower genital tract. Salpingitis is a component of pelvic inflammatory disease and is often bilateral.

Synonyms:

Salpingo-oophorectomy

Surgical removal of one or both fallopian tubes and ovaries. Bilateral salpingo-oophorectomy treats and stages ovarian cancer and is used as risk-reducing surgery in BRCA mutation carriers.

Synonyms:

Salpingography

Contrast imaging of fallopian tubes. Part of hysterosalpingography.

Synonyms:

Salpingostomy (Salpingotomy)

A fertility-preserving surgical procedure for tubal ectopic pregnancy: a linear incision on the antimesenteric border of the fallopian tube to remove the ectopic gestation, leaving the tube in situ. Indications: unruptured ectopic, desire for future fertility, contralateral tubal damage or absence.

Synonyms: Salpingotomy

Saltatory Conduction

The rapid propagation of action potentials along myelinated nerve fibers, where the action potential appears to "jump" from one Node of Ranvier to the next. Myelin (produced by Schwann cells in the PNS and oligodendrocytes in the CNS) insulates the axon, preventing ion flow across the internodal membrane.

Synonyms:

Salvage Therapy

Treatment given for cancer that has not responded to, or has returned after, an earlier course of treatment.

Synonyms:

Sandhoff Disease

An autosomal-recessive lysosomal storage disorder caused by deficiency of beta-hexosaminidase A and B, leading to accumulation of GM2 ganglioside. It causes progressive neurodegeneration, developmental regression, seizures, hypotonia, and sometimes organ enlargement.

Synonyms:

Sandpaper Tooth

Rough enamel surface retains plaque. May indicate early demineralization or fluorosis.

Synonyms:

Saphenous Vein

A superficial vein of the lower limb that drains the foot and leg. The great and small saphenous veins are clinically important in venous disease and may be used as graft material in selected vascular or cardiac bypass procedures.

Synonyms:

SAPHO Syndrome

A rare inflammatory disorder involving synovitis, acne, pustulosis, hyperostosis, and osteitis. It commonly affects the anterior chest wall, spine, or jaw and may resemble infection or malignancy. Diagnosis is clinical and treatment may include anti-inflammatory or specialist immunomodulatory therapy.

apy.

Synonyms:

Sarcoidosis

Sarcoidosis is multisystem granulomatous inflammation, commonly affecting lungs and lymph nodes but also skin, eyes, heart, nerves, and other organs. It commonly affects the lungs and lymph nodes but may involve the skin, eyes, heart, nervous system, or other organs.

Synonyms:

Sarcoidosis Skin Manifestations

Cutaneous sarcoidosis affects 25 percent of patients with systemic sarcoidosis.

Synonyms:

Sarcoma

A malignant tumor arising from connective or supporting tissues, including bone, cartilage, fat, muscle, and blood vessels. Examples include osteosarcoma, liposarcoma, and rhabdomyosarcoma.

Synonyms:

Sarcopenia

Age-related loss of muscle mass and function. Prevalence increases with age. Risk factors: reduced protein intake, decreased physical activity, chronic disease. Assessment: grip strength, gait speed, muscle mass measurement. Treatment: protein supplementation, resistance exercise, vitamin D, hormonal therapy if deficient.

Synonyms:

Sarcopenic Obesity

The coexistence of excess adiposity with reduced skeletal-muscle mass, strength, or physical performance. It increases risks of disability, falls, metabolic disease, and poor surgical outcomes and requires assessment beyond body-mass index alone.

Synonyms:

Sarcoptes scabiei

A mite that causes scabies, a contagious skin infestation transmitted by prolonged skin-to-skin contact.

The female mite burrows into the stratum corneum, laying eggs along the burrow, which appears as a greyish, serpiginous line. The life cycle from egg to adult takes approximately 10-14 days.

Synonyms:

SARS-CoV-2

A coronavirus belonging to the Coronaviridae family that causes COVID-19. SARS-CoV-2 has a positive-sense single-stranded RNA genome and a spike glycoprotein that mediates attachment to ACE2 receptors. The virus replicates in the cytoplasm using its own RNA-dependent RNA polymerase.

Synonyms:

Satiety

Feeling of fullness after eating. Affected by meal composition, volume, fiber, protein. Satiety hormones: CCK, PYY, GLP-1.

Synonyms:

Saturated Fat

Solid at room temperature. Sources: meat, dairy, coconut oil, palm oil. Controversial cardiovascular effects. Current guidelines limit intake.

Synonyms:

Saturation

Occupancy of available binding, metabolic, transport, or elimination capacity such that further increases in concentration or dose produce a nonlinear response. Saturable metabolism can cause disproportionate rises in plasma concentration and toxicity.

Synonyms:

Scabies

Scabies is infestation by *Sarcoptes scabiei* mites, causing intense nighttime itching and a characteristic rash or burrows, with spread through close contact. mite *Sarcoptes scabiei* var. *hominis*. The hallmark symptom is severe, generalized pruritus that characteristically worsens at night, driven by a hypersensitivity reaction to the mite's proteins, eggs, and feces.

Synonyms:

Scaffold

Three-dimensional structure for tissue engineering. Porous, biodegradable. Cells populate scaffold.

Synonyms:

Scaling and Root Planing

Nonsurgical periodontal instrumentation that removes supra- and subgingival deposits and smooths contaminated root surfaces. It reduces inflammation and pocket depth in appropriate patients but does not regenerate lost periodontal attachment by itself.

Synonyms:

Scalp Psoriasis

Psoriasis affecting the scalp, causing sharply demarcated red plaques covered by silvery scale that may extend beyond the hairline. It can itch, crack, or bleed and is not contagious. Treatment may include medicated shampoos, topical corticosteroids, vitamin-D analogues, or systemic therapy for extensive disease.

Synonyms:

Scalpel

Surgical knife with interchangeable blades. Blade numbers indicate size and shape. #10: common for incisions. #11: puncture. #15: precise work.

Synonyms:

Scalpel Handle

Handle for holding scalpel blades. #3 handle common.

Synonyms:

Scaphoid

Largest proximal carpal row bone on the radial wrist side. Most commonly fractured carpal bone from falls on an outstretched hand. Unique distal blood supply makes waist fractures prone to proximal fragment avascular necrosis. Anatomical snuffbox tenderness is characteristic.

Synonyms:

Scaphoid Fractures

Scaphoid fractures: most common carpal fracture (young males, FOOSH). Classification: Herbert: A (incomplete), B (complete: B1 distal waist, B2 proximal waist, B3 proximal pole, B4 distal tubercle, B5 transverse). Vascularity: retrograde from distal radius -> proximal pole at risk for AVN.

Synonyms:

Scapula

Flat triangular bone on the posterior thorax between ribs 2-7. Key features: acromion, coracoid process, glenoid cavity, spine, supraspinous/infraspinous fossae. Stabilized by 17 muscles and serves as rotator cuff attachment. Has 3 borders, 3 angles, and 2 surfaces. Fractures are uncommon, usually from high-energy trauma.

Synonyms:

Scar Management

Measures used to reduce symptoms and abnormal scar formation. Options include silicone products, pressure therapy, massage, corticosteroid injections, or other specialist treatments, depending on the scar and its cause.

Synonyms:

Scarlatina

Scarlet fever, an illness caused by toxin-producing group A Streptococcus and characterized by sore throat, fever, and a fine rough-textured rash.

Synonyms:

Scarlet Fever

A toxin-mediated illness caused by Group A Streptococcus producing erythrogenic toxin. Presents with fever, pharyngitis, and a characteristic diffuse, erythematous, sandpaper-textured rash that blanches with pressure. Circumoral pallor, Pastia lines (linear petechiae in skin folds), and strawberry tongue are classic findings.

Synonyms:

Scarring Alopecia

Permanent hair loss caused by destruction and fi-

brosis of the hair follicle. Causes include lichen planopilaris, discoid lupus, central centrifugal cicatricial alopecia, folliculitis decalvans, and severe infection; early diagnosis and biopsy can prevent progression.

Synonyms:

Scatter Correction

Correction for scattered photons. Dual energy window method.

Synonyms:

Scatter Events

Photons deflected from original path. Corrected by energy windowing and scatter correction algorithms.

Synonyms:

Scavenging System

The anesthesia gas scavenging system collects and removes waste anesthetic gases from the operating room environment to protect staff from chronic exposure. Active scavenging uses negative pressure from vacuum source; passive scavenging vents to exhaust through gravity.

Synonyms:

Schatzki Ring

Thin circumferential mucosal ring located at the squamocolumnar junction of the distal esophagus at the superior margin of a hiatal hernia. The ring is composed of mucosa and submucosa. May be asymptomatic or cause episodic dysphagia particularly to solid food and acute food bolus impaction.

Synonyms:

Schedule I

A United States controlled-substance category for drugs with high misuse potential and no accepted medical use under federal law.

Synonyms:

Schedule II

A United States controlled-substance category for drugs with accepted medical uses but high misuse potential.

Synonyms:

Schedule III

A United States controlled-substance category for drugs with lower misuse potential than Schedule II drugs.

Synonyms:

Schedule IV

A United States controlled-substance category for drugs with accepted medical uses and lower misuse potential than Schedule III drugs.

Synonyms:

Schedule V

A United States controlled-substance category for drugs with the lowest level of misuse potential among the federal schedules.

Synonyms:

Schilling Test

A historical test of vitamin B12 absorption, formerly used to investigate pernicious anaemia and intestinal malabsorption. It has largely been replaced by serum vitamin B12, methylmalonic acid, homocysteine, and intrinsic-factor antibody testing.

Synonyms:

Schistocytes

Fragmented, helmet-shaped, or triangular red blood cells produced by mechanical shearing as erythrocytes pass through obstructed or fibrin-laden microvessels.

Synonyms:

Schistosoma haematobium

A parasitic blood fluke that can cause urinary schistosomiasis, including hematuria and chronic injury of the urinary tract.

Synonyms:

Schistosomiasis

Schistosomiasis concerns schistosomiasis; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Schistosoma. Infection occurs when cercariae in contaminated freshwater penetrate the skin.

Synonyms: bilharzia, caused by blood flukes of the genus.

Schizencephaly

A rare brain malformation characterized by a full-thickness, gray matter-lined cleft extending from the pial surface to the lateral ventricle. Caused by early focal neuronal migration abnormalities, often associated with prenatal vascular disruption or COL4A1 mutations. Closed-lip (Type I): the cleft walls are apposed.

Synonyms:

Schizoaffective Disorder

A disorder characterized by an uninterrupted period of illness during which there is a major mood episode concurrent with criterion A of schizophrenia (delusions, hallucinations, disorganized speech, grossly disorganized or catatonic behavior, or negative symptoms).

Synonyms:

Schizoid Personality Disorder

A pattern of detachment from social relationships with a restricted range of emotional expression.

Synonyms:

Schizophrenia

Schizophrenia is a chronic psychotic disorder involving delusions, hallucinations, disorganized thought or behavior, negative symptoms, and impaired functioning. delusions, disorganized thinking) and negative symptoms (avolition, alogia, anhedonia, blunted affect), with cognitive impairment and functional decline. Diagnosis: at least two core symptoms for ≥ 1 month with continuous signs for ≥ 6 months.

Synonyms:

Schizotypal Personality Disorder

A pattern of social and interpersonal deficits marked by acute discomfort with and reduced capacity for close relationships, cognitive or perceptual distortions, and eccentricities of behavior.

Synonyms:

Schnitzler Syndrome

A rare autoinflammatory syndrome characterized by chronic urticarial rash, intermittent fever, bone pain, arthralgia or arthritis, and elevated inflammatory markers, usually with a monoclonal IgM protein and less commonly IgG.

Synonyms:

School-Based Rehabilitation

Therapy and other support services provided in a school setting to help a child participate in education and daily school activities.

Synonyms:

Schwannoma

A benign peripheral nerve sheath tumor arising from Schwann cells. It presents as a solitary, slow-growing, painless nodule along a peripheral nerve course. It can be moved laterally but not longitudinally along the nerve. Vestibular schwannoma (acoustic neuroma) arises from CN VIII. Diagnosis is by MRI.

Synonyms:

Sciatic Nerve

Body's largest nerve (L4-S3), formed from the lumbosacral plexus, exiting via the greater sciatic foramen below the piriformis. Descends in the posterior thigh, dividing into tibial and common peroneal nerves at the popliteal fossa. Innervates hamstrings and provides lower leg/foot motor/sensory innervation via its branches.

Synonyms:

Sciatica

Sciatica is radiating leg pain or sensory symptoms along a lumbosacral nerve-root distribution, commonly from disk herniation or spinal narrowing, through the buttock and down the posterior thigh to the foot. Most commonly caused by lumbar disc herniation compressing the nerve root (L4-L5 or L5-S1). Other causes: spinal stenosis, spondylolisthesis, piriformis syndrome, and epidural abscess.

Synonyms:

Scimitar Syndrome

A congenital cardiopulmonary anomaly involving partial or total anomalous pulmonary venous return from the right lung to the inferior vena cava, often with right-lung hypoplasia and dextroposition of the heart. It may cause recurrent respiratory infection, pulmonary hypertension, or heart failure.

Synonyms:

Scintillation

The emission of light by a material after it absorbs ionizing radiation. Scintillation detectors use this light to measure radiation.

Synonyms:

Scintillation Crystal

Sodium iodide doped with thallium (NaI:Tl) crystal converts gamma rays to light photons. Coupled to photomultiplier tubes.

Synonyms:

Scissors

Cutting instruments. Types: Mayo (tissue), Metzenbaum (delicate), suture.

Synonyms:

Scissors (Surgical)

Cutting instruments used to divide tissue, sutures, dressings, or other materials during medical procedures.

Synonyms: Surgical

Scissors (Vascular)

A surgical instrument with two blades used to cut tissue, sutures, dressings, or other materials during vascular procedures.

Synonyms: Vascular

Sclera

Sclera is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. muscle

attachment. White, covering approximately five-sixths of the globe. Continuous with cornea anteriorly (limbus) and dura mater posteriorly through the optic nerve sheath. **Synonyms:**

Scleral Buckling

A retinal-detachment repair procedure in which a silicone band or buckle is placed around the outside of the eye to support the retinal break and reduce traction.

Synonyms:

Scleritis

Scleritis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. blurred vision, and tenderness and can be associated with autoimmune disease; vision changes or severe eye pain require urgent ophthalmic assessment.

Synonyms:

Scleroderma

Scleroderma is an autoimmune connective-tissue disease causing skin thickening and variable fibrosis or vascular injury in the gastrointestinal tract, lungs, kidneys, or heart.

Synonyms:

Scleromyxedema

A rare, chronic, progressive mucinosis characterised by generalised papular and sclerodermoid thickening of the skin with firm, waxy papules in a "peau d'orange" pattern, most prominently on the face, neck, and hands.

Synonyms:

Sclerosing sialadenitis

A chronic fibrosing inflammation of the salivary glands characterized by progressive glandular enlargement and firmness, sometimes associated with IgG4-related disease.

Synonyms:

Sclerosteosis

A rare inherited sclerosing bone dysplasia characterized by progressive thickening of the skull and long bones, tall stature or syndactyly in some forms, and possible cranial-nerve compression. Hearing loss, facial palsy, headache, and raised intracranial pressure may occur.

Synonyms:

Scoliosis

Scoliosis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. radiographs. It may be idiopathic, congenital, or associated with neuromuscular disease.

Synonyms:

Scotoma

A focal area of diminished or absent vision within an otherwise intact visual field, classified by location and morphology.

Synonyms:

Screening

Testing people without symptoms to identify a disease or an increased risk of disease. The appropriate test, age range, interval, and follow-up depend on the condition, individual risk, and current guidance; screening benefits must be balanced against harms.

Synonyms:

Screening (Geriatric)

Detection of disease in asymptomatic elderly. Balance benefits vs. harms, life expectancy, preferences. Examples: bone density, abdominal aortic aneurysm, colorectal cancer (individualized), depression, falls.

Synonyms: Geriatric

Screening Guidelines

Recommendations describing who should be screened for a disease, which test to use, and when to begin or repeat testing.

Synonyms:

Screening Program

An organized public-health service that systematically invites a defined population to undergo testing for an asymptomatic condition, with quality-assured follow-up, diagnosis, treatment, and evaluation of benefits and harms.

Synonyms:

Screening Test

A test applied to people without symptoms or a known diagnosis to identify those at increased risk of a condition. A screening result usually requires a diagnostic or confirmatory evaluation before treatment is initiated.

Synonyms:

Screws

Threaded devices used to hold bone fragments together or attach implants to bone.

Synonyms:

Scrofula

Scrofula concerns scrofula; its medical significance is established from the defining features, setting, associated findings, and clinical question. nodes, caused by *Mycobacterium tuberculosis* or atypical mycobacteria. It presents as chronic, painless, matted lymphadenopathy that may develop into cold abscesses with draining sinuses.

Synonyms:

Scrotal calcinosis

The deposition of calcium within the scrotal skin, presenting as multiple, firm, whitish, painless nodules on the scrotum, which may be solitary or numerous and may ulcerate. The exact aetiology is debated and may involve dystrophic calcification of pre-existing epidermal inclusion cysts, dermal cysts, or eccrine duct abnormalities.

Synonyms:

Scrotal Infection

Infection of the scrotal skin or underlying structures, which may cause redness, swelling, warmth, pain, or drainage. Rapidly worsening pain, fever, discoloration, or severe swelling is an emergency because serious soft-tissue infection must be excluded.

Synonyms:

Scrotal Pain

Pain in the scrotum caused by infection, trauma, hernia, fluid collections, varicocele, or testicular torsion. Sudden severe pain, nausea, a high-riding testis, or abnormal testicular position requires immediate assessment for torsion.

Synonyms:

Scrotum

Scrotum concerns scrotum, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context. spermatic cords. The scrotal wall has multiple layers reflecting the abdominal wall layers.

Synonyms:

Scurvy

Scurvy concerns scurvy; its medical significance is established from the defining features, setting, associated findings, and clinical question. is essential for collagen synthesis. Vitamin C serves as a cofactor for prolyl and lysyl hydroxylases, which hydroxylate collagen fibers to allow stable cross-linking.

Synonyms:

Seasonal Affective Disorder

A specifier of recurrent major depressive episodes that occur at a specific time of year, most commonly winter (with remission in spring/summer). Symptoms: hypersomnia, hyperphagia with carbohydrate craving, weight gain, fatigue, and low energy.

Synonyms:

Sebaceous Gland

A small gland in the skin that secretes sebum (oil) into hair follicles to lubricate and waterproof the skin and hair.

Synonyms:

Seborrheic Dermatitis

A chronic inflammatory skin condition affecting

sebum-rich areas: scalp, face (nasolabial folds, eyebrows), chest, and intertriginous areas. Presents with erythematous patches with greasy, yellowish scales. Dandruff is a mild form. More common and severe in Parkinson disease, HIV/AIDS, and Down syndrome.

Synonyms:

Seborrheic keratoses

Common, benign, epidermal skin tumors presenting as waxy, stuck-on, pigmented plaques with a rough, verrucous surface, typically appearing on the trunk and face of middle-aged and older adults. They are the most common benign skin neoplasm and are caused by keratinocyte proliferation.

Synonyms:

Seborrheic Keratosis

A benign epidermal tumor appearing as stuck-on, waxy, hyperpigmented plaques with a verrucous surface. They are extremely common in older adults and increase in number with age. Seborrheic keratoses are not premalignant.

Synonyms:

Seborrhoea

A chronic inflammatory skin condition affecting sebum-rich areas: scalp, face (nasolabial folds, eyebrows), chest, and intertriginous areas. See Seborrheic Dermatitis.

Synonyms:

Seckel Syndrome

A rare recessive primordial dwarfism syndrome featuring severe proportionate growth restriction, microcephaly, characteristic facial features, and developmental or intellectual impairment. Skeletal, hematological, and other congenital abnormalities may occur.

Synonyms:

Second Malignancy

New cancer after initial cancer treatment. Risk from radiation, chemotherapy.

Synonyms:

Second Messenger Systems

Intracellular signaling molecules that relay extracellular signals (first messengers: hormones, neurotransmitters, growth factors) to cellular responses.

Synonyms:

Second Messengers

Intracellular signaling molecules generated in response to extracellular signals (first messengers like hormones or neurotransmitters). cAMP (cyclic adenosine monophosphate): produced from ATP by adenylyl cyclase, activated by Gs-protein coupled receptors, activates protein kinase A (PKA); degraded by phosphodiesterase.

Synonyms:

Second Opinion

An independent medical assessment by another qualified clinician to help confirm or clarify a diagnosis, prognosis, or treatment plan.

Synonyms:

Second Stage of Labor

From full cervical dilatation (10 cm) to delivery of the baby. The mother feels the urge to push as the presenting part descends. Pushing: closed-glottis (Valsalva) or open-glottis. Duration: up to 3 hours in nulliparas with regional anesthesia (2 hours without), and 2 hours in multiparas (1 hour without).

Synonyms:

Second Trimester

The period from 13 to 27 weeks gestational age. Fetal growth accelerates, mother begins to feel quickening (fetal movement) between 16-20 weeks. Anatomy ultrasound at 18-22 weeks screens for structural anomalies. Maternal serum screening offered. Nausea typically resolves. **Synonyms:**

Second-Degree AV Block

Intermittent failure of AV conduction. Mobitz Type I (Wenckebach): progressive PR prolongation then dropped QRS; usually benign (AV nodal, narrow QRS). Mobitz Type II: constant PR interval with

sudden dropped QRS; more serious (infranodal, wide QRS), risk of progression to complete heart block and Stokes-Adams attacks.

Synonyms:

Second-Degree Burn

Partial-thickness burn involving the epidermis and dermis: superficial partial-thickness (blisters, moist, painful, pink) vs. deep partial-thickness (blanching, painful, may have thrombosed capillaries). Causes: thermal (scalds, flames), chemical, electrical.

Synonyms:

Second-Hand Smoke

Smoke inhaled from burning tobacco products or exhaled by a person who is smoking. It contains toxic substances and increases health risks in exposed people.

Synonyms:

Secondary Attack Rate

The proportion of susceptible contacts who develop infection after exposure to a primary case within a defined period. It helps estimate transmissibility in households, schools, healthcare settings, and other close-contact groups.

Synonyms:

Secondary Hyperparathyroidism

Compensatory PTH increase in CKD from decreased phosphate excretion, low calcitriol, and hypocalcemia. Leads to renal osteodystrophy and vascular calcification. Managed with dietary phosphorus restriction, phosphate binders, active vitamin D, and calcimimetics. Refractory cases may require parathyroidectomy.

Synonyms:

Secondary Immune Response

The rapid, enhanced immune response on re-exposure to an antigen, mediated by memory B cells and memory T cells generated during the primary response. Features: shorter lag phase, higher and faster antibody titers (predominantly high-affinity IgG), and more effective cell-mediated responses.

Synonyms:

Secondary Immunodeficiency

Reduced immune function caused by an acquired condition or exposure rather than a primary genetic disorder. Causes include HIV infection, cancer, malnutrition, medicines, and chronic disease; the manifestations depend on which immune functions are impaired.

Synonyms:

Secondary Prevention

Early detection and treatment. Examples: screening (mammography, colonoscopy, blood pressure), self-examination.

Synonyms:

Secondary syphilis

The systemic dissemination stage of *Treponema pallidum* infection, occurring weeks to months after the primary chancre, characterised by a generalised maculopapular rash (including the palms and soles), mucous patches, condylomata lata, lymphadenopathy, and systemic symptoms such as fever and malaise.

Synonyms:

Secondary Tumor

A tumor formed when cancer cells spread from the original site to another part of the body.

Synonyms:

Secretin

A peptide hormone produced by S-cells in the duodenal and jejunal mucosa in response to acidic chyme (pH less than 4.5) entering the duodenum from the stomach.

Synonyms:

Secretion

Active movement of a substance from cells into a body fluid, lumen, or external environment. In toxicokinetics, renal tubular or biliary secretion can contribute to elimination of a toxin or metabolite.

Synonyms:

Secretory Diarrhea

Diarrhea caused by active secretion or reduced absorption of electrolytes and water by the intestine. It persists despite fasting and may result from infections, medications, bile-acid disorders, endocrine tumors, or inflammatory disease.

Synonyms:

Sedation Dentistry

Pharmacological techniques for anxiety management: nitrous oxide (laughing gas), oral sedation, IV sedation, general anesthesia. Indications: dental phobia, special needs, prolonged procedures. Monitoring required for deeper sedation.

Synonyms:

Sedation Levels

A continuum ranging from minimal sedation, in which normal responses to verbal commands are preserved, to moderate or deep sedation, in which responses and airway or breathing support may be reduced. The level can change and requires appropriate monitoring.

Synonyms:

Sedative

A medication that reduces central nervous system activity, producing calming effects, drowsiness, and sleep at higher doses. Sedatives are used for anxiety, procedural sedation, insomnia, and as adjuncts in anesthesia.

Synonyms:

Sedative-Hypnotic

CNS depressants. Benzodiazepines, barbiturates, Z-drugs. Overdose: respiratory depression, coma. Treatment: supportive, flumazenil (benzodiazepines only), airway management.

Synonyms:

Segmental Pressures

Blood pressure measurements at different leg levels. Localizes level of obstruction.

Synonyms:

Segmentation

A pattern of intestinal motility involving localized, rhythmic contractions of circular muscle that segment the intestinal contents, mixing them with digestive secretions and increasing contact with the absorptive mucosal surface. Unlike peristalsis, segmentation does not propel contents distally.

Synonyms:

Seizure

A transient occurrence of signs and/or symptoms due to abnormal, excessive, or synchronous neuronal activity in the brain. Provoked seizures have an identifiable acute cause (fever, electrolyte disturbance, drug toxicity, withdrawal). Unprovoked seizures occur without an acute trigger.

Synonyms:

Selective Estrogen Receptor Modulator

A class of medications that bind to estrogen receptors (ER-alpha and ER-beta) with tissue-specific agonist or antagonist activity, depending on the target tissue and differential co-regulator recruitment.

Synonyms:

Selective Mutism

Consistent failure to speak in specific social situations where speaking is expected despite speaking in other situations. The disturbance interferes with educational or occupational achievement or social communication. Must last for at least one month and is not attributable to lack of knowledge of or comfort with the spoken language.

Synonyms:

Selenium

Trace mineral, component of antioxidant enzymes. Deficiency: Keshan disease (cardiomyopathy), Kashin-Beck disease (osteoarthropathy). Sources: Brazil nuts, seafood, meat.

Synonyms:

Selenium-75

Calibration source. Half-life 119 days. Used for uniformity correction.

Synonyms:

Self-Efficacy

Patient belief in ability to manage condition. Influences adherence, outcomes.

Synonyms:

Self-Experimentation

Research in which an investigator deliberately uses an intervention or procedure on themselves. It requires careful attention to consent, safety, and scientific validity.

Synonyms:

Self-Harm

Intentional self-inflicted injury without suicidal intent, also termed non-suicidal self-injury; common methods include cutting, burning, and self-hitting. Prevalent in adolescents and in borderline personality disorder, depression, eating disorders, and trauma, serving affect regulation or self-punishment.

Synonyms:

Self-Management

Actions a person takes to monitor and manage a health condition, including treatment use, symptom monitoring, and lifestyle measures.

Synonyms:

Semen

The fluid ejaculated from the male reproductive tract, containing sperm (produced in the testes) suspended in seminal plasma (produced by the seminal vesicles, prostate, and bulbourethral glands). Semen provides nutrients (fructose, amino acids), protective agents (zinc, antioxidants), and a medium for sperm transport.

Synonyms:

Semen Analysis

Laboratory assessment of ejaculate volume, sperm concentration, total count, motility, morphology, vitality, and other characteristics. It is a key initial test in male-factor infertility and should usually be repeated because results vary biologically.

Synonyms:

Semicircular Canals

Three fluid-filled (endolymph) loops in each inner ear, oriented approximately orthogonally to detect angular (rotational) acceleration in three planes: horizontal (lateral), anterior (superior), and posterior. Each has an ampulla with a crista containing hair cells embedded in a gelatinous cupula.

Synonyms:

Seminal Vesicle

One of a paired set of male accessory reproductive glands behind the urinary bladder. Its fructose-rich secretion contributes substantially to semen and joins the vas deferens through the ejaculatory duct.

Synonyms:

Seminoma

A malignant germ-cell tumor of the testis, typically presenting as a painless testicular mass and highly sensitive to radiation and chemotherapy.

Synonyms:

Senna

A stimulant laxative containing anthraquinone glycosides (sennosides) that are activated by colonic bacteria to stimulate colonic motility and fluid secretion. Onset: 6-12 hours; used for constipation and bowel preparation. Common side effects: abdominal cramps, nausea; chronic use may cause melanosis coli and electrolyte disturbances.

Synonyms:

Sensitivity

The proportion of people who truly have a disease who obtain a positive test result. A highly sensitive test has few false-negative results and is useful when a negative result is intended to help rule out disease in an appropriate clinical setting.

Synonyms:

Sensorineural Hearing Loss

Hearing loss from pathology of the cochlea or auditory (eighth cranial) nerve, characterized on

pure-tone audiometry by elevated bone conduction thresholds and no air-bone gap.

Synonyms:

Speech Audiometry

Hearing testing that measures detection or recognition of speech at different loudness levels. It commonly includes speech reception threshold and word-recognition testing, complementing pure-tone audiometry.

Synonyms: Speech testing; speech audiometric testing.

Sensorium

The state or level of consciousness and awareness of one's surroundings.

Synonyms:

Sensory Level

A sharply demarcated horizontal boundary below which sensation is altered on the trunk or limbs. A sensory level strongly suggests a spinal-cord lesion, although its localization requires correlation with motor, reflex, and autonomic findings.

Synonyms:

Sensory Nerves

Nerves that transmit sensory information from peripheral receptors to the central nervous system. Sensory (afferent) neurons have their cell bodies in the dorsal root ganglia (spinal nerves) or cranial nerve ganglia (cranial nerves).

Synonyms:

Sentinel Event

Unexpected occurrence involving death or serious physical/psychological injury. Requires root cause analysis.

Synonyms:

Sentinel Injury

A minor but potentially significant injury in a non-mobile infant, such as unexplained bruising, oral injury, or a fracture, that may precede more severe abuse. It warrants careful history, complete

examination, safeguarding assessment, and documentation.

Synonyms:

Sentinel Lymph Node

First lymph node draining tumor site. Biopsy assesses nodal spread.

Synonyms:

Sentinel Lymph-Node Biopsy

Surgical removal and pathologic examination of the first draining lymph node or nodes from a primary skin cancer. It is used for selected melanomas and other tumors to assess regional metastatic risk and guide staging.

Synonyms:

Sentinel Surveillance

Ongoing collection of health data from selected reporting sites, providers, or populations chosen to represent trends rather than enumerate every event. It can provide early warning and monitor changes in disease activity.

Synonyms:

Separation Anxiety Disorder

Developmentally inappropriate and excessive fear or anxiety concerning separation from attachment figures. The individual may have recurrent excessive distress when anticipating or experiencing separation from home or major attachment figures.

Synonyms:

Separation of the iris

Disinsertion or dialysis of the iris root from its attachment at the ciliary body, typically caused by blunt ocular trauma. It appears as a peripheral iridodialysis visible on slit-lamp examination and may cause monocular double vision, glare, or secondary glaucoma if extensive.

Synonyms:

Sepsis

Sepsis is life-threatening organ dysfunction caused by a dysregulated response to infection, with pos-

sible shock, respiratory failure, kidney injury, coagulation abnormalities, or altered consciousness. Sepsis-3 definition: infection + SOFA score increase ≥ 2 . Septic shock: sepsis with vasopressor requirement and lactate >2 mmol/L.

Synonyms:

Sepsis Syndrome

The spectrum of the host's dysregulated response to infection: sepsis (infection + organ dysfunction, SOFA increase ≥ 2), septic shock (sepsis + hypotension requiring vasopressors with lactate >2 mmol/L despite adequate fluid), and severe organ dysfunction/multi-organ failure.

Synonyms:

Septal Hematoma

Accumulation of blood between the perichondrium and the septal cartilage of the nose, typically following nasal trauma (nasal fracture). Presents with nasal obstruction, pain, and a bluish, boggy swelling of the nasal septum.

Synonyms:

Septic Arthritis

Joint infection, usually bacterial (Staph, Strep, Gonorrhea). Emergency: fever, severe joint pain, swelling, inability to bear weight. Diagnosis: joint aspiration (WBC $>50,000$, positive culture). Treatment: antibiotics, joint drainage (arthroscopy/open).

Synonyms:

Septic Embolism

Septic embolism occurs when infected material, typically thrombi containing bacteria, embolizes through the bloodstream to distant sites, causing metastatic infection. The most common source is infective endocarditis, where infected vegetations on heart valves break off and lodge in peripheral vessels.

Synonyms:

Septic Shock

A life-threatening form of sepsis in which infection-

related circulatory and cellular dysfunction causes persistent inadequate tissue perfusion, often requiring vasopressor support despite fluid resuscitation. It can cause multiorgan failure and requires urgent treatment.

Synonyms:

Septicaemia

An older term often used for sepsis, a life-threatening condition in which a dysregulated response to infection causes organ dysfunction.

Synonyms:

Septicemia

Septicemia is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. generally favors bacteremia or sepsis, depending on the condition described.

Synonyms:

Septo-Optic Dysplasia

A congenital disorder characterized by variable combinations of optic-nerve hypoplasia, midline brain abnormalities, and pituitary hormone deficiencies. It may cause visual impairment, nystagmus, developmental differences, seizures, and growth or endocrine problems.

Synonyms:

Septoplasty

Septoplasty is a treatment or care intervention for septoplasty; indication, preparation, risks, technical details, and recovery depend on the patient and goal. improving sinus drainage, and correcting related epistaxis or sleep disturbance, most often through an endonasal approach. It reshapes rather than resects the cartilaginous and bony septum while preserving support to avoid saddle nose deformity.

Synonyms:

Sequelae

Conditions resulting from previous disease. Examples: post-polio syndrome, stroke sequelae.

Synonyms:

Sequential Therapy

Treatments given in sequence. Used when combination not suitable.

Synonyms:

Serodiagnostic

Relating to diagnosis by detecting antibodies or other markers in blood serum.

Synonyms:

Serology

The laboratory evaluation of serum for antibodies, antigens, or other immune markers. Results may indicate current infection, previous exposure, vaccination, autoimmune reactivity, or passive antibody transfer and must be interpreted with timing and clinical context.

Synonyms:

Seronegative Arthritis

Arthritis with negative rheumatoid factor and anti-CCP. Includes spondyloarthropathies, psoriatic arthritis, reactive arthritis.

Synonyms:

Serotonin Syndrome

A potentially life-threatening condition caused by excessive serotonergic activity in the central and peripheral nervous systems, typically resulting from drug interactions or overdose involving serotonergic medications.

Synonyms:

Serotonin-Norepinephrine Reuptake Inhibitors

Antidepressants that block the reuptake of both serotonin and norepinephrine. They include venlafaxine, duloxetine, desvenlafaxine, and levomilnacipran. SNRIs are used for major depressive disorder, generalized anxiety disorder, diabetic neuropathy, fibromyalgia, and chronic pain.

Synonyms:

Serotonin-Norepinephrine-Dopamine Reuptake Inhibitors

A class of antidepressants that inhibit reuptake of serotonin, norepinephrine, and dopamine. The primary agent is bupropion, which also acts as a norepinephrine-dopamine reuptake inhibitor. It is used for depression, smoking cessation, and as augmentation. It lacks sexual side effects and weight gain associated with SSRIs.

Synonyms:

Serotype

A group within a species of microorganisms (or viruses) distinguished by antigenic differences, usually surface antigens (capsular polysaccharides, O/H antigens, viral surface proteins).

Synonyms:

Serpentine supravenuous hyperpigmentation

A dermatological finding characterized by dark, wavy, serpiginous hyperpigmentation along the course of superficial veins, most commonly on the upper chest and neck. Associated with venous stasis, thrombophlebitis, and certain malignancies. The pigmentation results from hemosiderin deposition in the perivenous dermis.

Synonyms:

Serrated Pathway

Alternative molecular pathway to colorectal carcinogenesis accounting for fifteen to thirty percent of cases. It involves serrated polyps as precursors including sessile serrated lesions with dysplasia. Molecular features include CpG island methylator phenotype, BRAF mutations, and microsatellite instability from MLH1 silencing.

Synonyms:

Serratus Anterior Muscle

Fan-shaped muscle from ribs 1-8/9 to the medial scapular border. Innervated by long thoracic nerve (C5-C7). Protracts scapula, upwardly rotates glenoid for overhead elevation, stabilizes against thorax. Long thoracic nerve injury causes medial scapular winging, especially visible during wall push-

ups. Commonly injured in breast surgery.

Synonyms:

Sertoli-cell tumor

A sex-cord stromal tumor that may produce androgens or estrogens and can cause endocrine manifestations.

Synonyms:

Serum Concentration

The concentration of a substance measured in the liquid component of clotted blood. Interpretation depends on sampling time, exposure history, distribution, metabolism, elimination, and the relationship between concentration and toxicity.

Synonyms:

Serum Osmolal Gap

The difference between measured serum osmolality and calculated osmolality. An increased gap suggests unmeasured osmoles, including toxic alcohols, but interpretation must consider timing, renal function, lactate, ketones, and laboratory variation.

Synonyms:

Serum Protein Electrophoresis

Separation of serum proteins by electrophoresis into 5 fractions: albumin, alpha-1, alpha-2, beta, and gamma. Monoclonal gammopathy: M-spike in gamma region (multiple myeloma, MGUS, Waldenstrom macroglobulinemia). Immunofixation: identifies heavy chain (IgG, IgA, IgM, IgD, IgE) and light chain (kappa, lambda) isotype.

Synonyms:

Serum Sickness

Type III hypersensitivity reaction. Fever, rash, arthritis, proteinuria. Caused by drugs (penicillin, cephalosporins), antivenoms. Treatment: stop offending agent, antihistamines, corticosteroids.

Synonyms:

Sever Disease

Calcaneal apophysitis in children/adolescents. Heel pain, worse with activity. Treatment: rest, heel

cups, stretching.

Synonyms:

Severe Acute Respiratory Syndrome

A severe respiratory illness caused by SARS coronavirus, characterized by fever, dry cough, dyspnea, and viral pneumonia that may progress to respiratory failure.

Synonyms:

Severe Combined Immunodeficiency

Severe combined immunodeficiency (SCID) represents a group of genetic disorders characterized by profoundly defective T cell development and function, with variable B and NK cell involvement, resulting in severe susceptibility to life-threatening infections in infancy.

Synonyms:

Sevoflurane

A volatile inhaled anesthetic with relatively low blood-gas solubility, permitting rapid changes in anesthetic depth and recovery. It can cause dose-dependent cardiovascular and respiratory depression and is a recognized trigger of malignant hyperthermia in susceptible patients.

Synonyms:

Sexual Assault

A broad legal category of any non-consensual sexual contact or penetration, encompassing rape, indecent assault, and drug-facilitated assault. Examination documents general and anogenital injuries, collects biological and trace samples, and screens for drug-facilitated assault by extended-window testing.

Synonyms:

Sexual Dysfunction

Persistent difficulty in sexual activity causing distress. In women: low sexual desire (hypoactive), arousal disorder, orgasmic disorder (anorgasmia), and genito-pelvic pain/penetration disorder (dyspareunia, vaginismus). In men, it may involve erectile dysfunction, delayed or premature ejaculation, or reduced sexual desire. Causes include medical

and psychological conditions, relationship factors, and adverse effects of substances or medicines.

Synonyms:

Sexual Intercourse (Coitus)

The insertion of a penis into a partner's body for sexual pleasure, reproduction, or both. Most commonly vaginal intercourse (penile-vaginal penetration) but may also include anal intercourse. Sexual intercourse is a key component of human pair bonding and reproduction.

Synonyms: Coitus

Sexual Masochism Disorder

A paraphilic disorder characterized by recurrent, intense sexual arousal from the act of being humiliated, beaten, bound, or otherwise made to suffer, lasting ≥ 6 months and causing distress or impairment or involving acting on these urges.

Synonyms:

Sexual Rehabilitation

Address sexual function after injury, illness. Counseling, devices, medications.

Synonyms:

Sexual Sadism Disorder

A paraphilic disorder characterized by recurrent, intense sexual arousal from the physical or psychological suffering of another person, lasting ≥ 6 months and causing distress or impairment or involving acting on these urges with a nonconsenting person.

Synonyms:

Sexually Transmitted Infection

STI: infection transmitted via sexual contact. Examples: syphilis, gonorrhea, chlamydia, HIV.

Synonyms:

SGLT2 Inhibitor

A drug that reduces sodium-glucose cotransport in the proximal renal tubule, increasing urinary glucose and sodium excretion.

Synonyms:

Shadowing Artifact

Ultrasound artifact from attenuating structures. Enhanced by harmonic imaging.

Synonyms:

Shaken Baby Syndrome

A form of abusive head trauma caused by violent shaking, typically in infants under 1 year. The triad: subdural hemorrhage, retinal hemorrhages, and encephalopathy. May present with irritability, lethargy, vomiting, seizures, and apnea. CT shows subdural hematoma; MRI shows diffuse axonal injury.

Synonyms:

Shared Decision-Making

A collaborative process in which clinicians and patients combine best available evidence with patient values, preferences, goals, and circumstances to choose among reasonable options.

Synonyms:

Sharp Force Trauma

Injury produced by an edged or pointed instrument that cuts or penetrates the skin, divided into incised wounds (longer than deep, clean margins) and stab wounds (deeper than wide). Wound length, depth, angle, hesitation marks, and defense injuries infer weapon type and manner.

Synonyms:

Sharps Container

Puncture-resistant container for used needles and sharp instruments. Red, labeled biohazard.

Synonyms:

Sharps Injury

A percutaneous or mucocutaneous injury caused by a needle or other sharp instrument that may expose a person to blood or body fluids. Immediate wound care, incident reporting, risk assessment, and pathogen-specific post-exposure management are required.

Synonyms:

Shave Biopsy

Removal of a raised skin lesion by horizontal slicing with a scalpel at the level of the dermis; used for exophytic lesions such as seborrheic keratoses and superficial basal cell carcinomas.

Synonyms:

Sheehan Syndrome

Postpartum pituitary necrosis resulting from severe hemorrhage and hypotension during delivery. The pituitary gland is enlarged during pregnancy and particularly vulnerable to ischemic injury from blood loss. Presentation varies from fatigue and failure to lactate to panhypopituitarism. Growth hormone and prolactin deficiency occur first.

Synonyms:

Sheehan Syndrome (Postpartum Pituitary Necrosis)

Ischemic necrosis of the anterior pituitary gland due to severe postpartum hemorrhage (PPH) and hypotension. The pituitary enlarges during pregnancy and is vulnerable to ischemia from hypotensive episodes.

Synonyms: Postpartum Pituitary Necrosis

Shielding

Lead, tungsten, acrylic shielding for radiation protection.

Synonyms:

Shigellosis

Shigellosis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. countries). Presents with fever, abdominal cramps, tenesmus, and frequent bloody, mucoid stools. Highly contagious with low infectious dose. **Synonyms:**

Shingles

Shingles is reactivation of varicella-zoster virus in a sensory nerve ganglion, producing painful grouped vesicles in a dermatomal pattern and possible persistent neuralgia. causing a painful, unilateral vesic-

ular rash in a dermatomal distribution ('belt-like'), often preceded by burning pain. Risk increases with age and immunosuppression.

Synonyms:

Shirodkar Cerclage

A transvaginal cervical cerclage technique that involves dissection of the bladder and rectum to place the suture (Mersilene tape) as high as possible at the level of the internal os. Technically more difficult than McDonald cerclage with higher risk of hemorrhage and bladder injury.

Synonyms:

Shivering

Involuntary, rhythmic skeletal muscle contraction generating heat in response to cold exposure or fever, a key thermoregulatory response under hypothalamic (preoptic area) control. Shivering can increase heat production 3-5 fold.

Synonyms:

Shock

Shock is inadequate tissue perfusion and oxygen delivery, caused by hypovolemia, pump failure, obstruction, or abnormal vascular tone and leading to cellular and organ injury. failure, and severe loss of vascular tone.

Synonyms:

Shock Wave Lithotripsy

Non-invasive procedure using extracorporeal shock waves to fragment renal and ureteral stones. The patient is positioned over a water cushion coupling the shock wave generator to the body. Shock waves are focused on the stone under fluoroscopic or ultrasound guidance.

Synonyms:

Shone Complex

A group of congenital left-sided obstructive heart lesions, classically including supravulvular mitral ring, parachute mitral valve, subaortic stenosis, and coarctation of the aorta. The combination and severity vary and may lead to heart failure or systemic

outflow obstruction.

Synonyms:

Short Bowel Syndrome

Clinical condition resulting from surgical resection or functional loss of a significant portion of the small intestine leading to inadequate absorption of nutrients.

Synonyms:

Shortness of Breath

An uncomfortable awareness of difficult or insufficient breathing. See Dyspnea.

Synonyms:

Shoulder Dislocation

Complete displacement of the upper arm bone from the shoulder socket, usually caused by a fall, collision, or forceful twisting. It causes severe pain, deformity, and inability to move the arm; urgent reduction and assessment for associated fractures or nerve and blood-vessel injury are required.

Synonyms:

Shoulder Dystocia

An obstetric emergency where the fetal head delivers but the anterior shoulder is impacted behind the maternal symphysis pubis. Defined as head-to-body delivery time exceeding 60 seconds or need for ancillary maneuvers. Risk factors include macrosomia, diabetes, prior shoulder dystocia, and operative vaginal delivery.

Synonyms:

Shoulder Impingement

Pain associated with movement of the shoulder, often involving the rotator-cuff tendons or subacromial tissues. Symptoms include pain with overhead activity and sometimes weakness; assessment and treatment are individualized and may include exercise-based rehabilitation.

Synonyms:

Shoulder Instability

Excessive or recurrent movement of the shoul-

der joint caused by injury, laxity, or altered joint anatomy. Associated lesions may include a Bankart tear, Hill-Sachs lesion, or injury to the joint capsule or ligaments.

Synonyms:

Shoulder Pain

Pain in or around the shoulder caused by injury, tendon or bursa disorders, arthritis, nerve disease, or referred pain. Sudden weakness, deformity, chest symptoms, fever, or pain after major trauma requires prompt evaluation.

Synonyms:

Shunt

Tube diverting fluid. Types: ventriculoperitoneal (CSF), ventriculoatrial, lumboperitoneal, ventriculopleural. Indications: hydrocephalus. Complications: obstruction, infection, overdrainage, migration. Valves regulate pressure.

Synonyms:

Shunt (Vascular)

A surgically created or implanted pathway that redirects blood or another fluid from one vessel or body space to another.

Synonyms: Vascular

Shwachman Syndrome

An inherited multisystem disorder usually involving exocrine pancreatic insufficiency, bone-marrow dysfunction, and skeletal abnormalities. Children may have steatorrhea, poor growth, recurrent infections, neutropenia, anemia, or increased risk of myeloid malignancy.

Synonyms:

SIADH

Syndrome of Inappropriate Antidiuretic Hormone secretion characterized by hyponatremia (dilutional) with inappropriately concentrated urine (>100 mOsm/kg) and elevated urine sodium (>40 mEq/L). Euvolemic hyponatremia.

Synonyms:

SIADH (Syndrome of Inappropriate Antidiuretic Hormone Secretion)

Excessive vasopressin activity causing impaired free-water excretion, euvolemic hyponatremia, and inappropriately concentrated urine after exclusion of other causes. Treatment depends on severity and cause and may include fluid restriction or carefully monitored hypertonic saline for severe symptomatic cases.

Synonyms: Syndrome of Inappropriate Antidiuretic Hormone Secretion

Sialadenitis

Inflammation of salivary gland. Acute (bacterial) or chronic (recurrent). Treatment: antibiotics, hydration, gland massage, surgery if chronic.

Synonyms:

Sialography

Contrast imaging of salivary ducts. Evaluates obstruction, stricture, tumors. Rarely performed now.

Synonyms:

Sialolithiasis

Formation of a stone in a salivary gland or its duct, most often the submandibular gland. It may cause recurrent swelling and pain, especially during meals, and can lead to infection or obstruction.

Synonyms:

Sialorrhea

Excessive salivation. Neurological causes, medications, dental causes. Treatment: hydration, glycopyrrolate, botulinum toxin, surgery.

Synonyms:

Sialorrhoea

Excessive saliva production or inability to clear saliva, resulting in drooling. Causes include medicines, oral disease, and neurologic or swallowing disorders.

Synonyms:

Sialuria

A rare inherited disorder of sialic-acid metabolism

caused by abnormal regulation of the GNE enzyme. Excess free sialic acid accumulates in cells and urine and may cause developmental delay, coarse facial features, hepatosplenomegaly, and variable intellectual disability.

Synonyms:

Sicca Syndrome

Dry eyes and dry mouth due to decreased tear and saliva production. Primary: Sjogren syndrome. Secondary: associated with RA, SLE, scleroderma, graft-versus-host disease, hepatitis C, sarcoidosis, HIV, medications (anticholinergics, antidepressants). Diagnosis: Schirmer test (<5 mm/5 min), rose bengal staining, salivary gland biopsy.

Synonyms:

Sick Sinus Syndrome

Sinus node dysfunction causing a spectrum of arrhythmias: sinus bradycardia, sinus arrest, sinoatrial block, and tachycardia-bradycardia syndrome. Most common in elderly patients. Presents with syncope, fatigue, palpitations, and exercise intolerance. Diagnosis: ECG, Holter monitor (pauses >3 seconds).

Synonyms:

Sickle Cell Anemia

The most severe form of sickle cell disease (HbSS), causing chronic hemolytic anemia and vaso-occlusive crises. Features: jaundice, splenomegaly (infancy), pain crises, acute chest syndrome, stroke, and increased infection risk from functional asplenia. Diagnosis: hemoglobin electrophoresis showing HbS.

Synonyms:

Sickle Cell Crisis

An acute clinical complication of sickle cell disease, most commonly a vaso-occlusive episode producing ischemic pain. Other acute crises include acute chest syndrome, splenic or hepatic sequestration, and aplastic crisis; treatment depends on the specific complication and severity.

Synonyms:

Sickle Cell Dactylitis

Painful swelling of the hands or feet caused by blockage of small blood vessels during a sickle-cell episode, especially in infants and young children. It may be an early sign of sickle-cell disease and requires appropriate clinical evaluation.

Synonyms:

Sickle Cell Disease

Autosomal recessive hemoglobinopathy (HbS). Glutamic acid → valine at position 6 of beta-globin. Homozygous (HbSS) most severe. Sickling under hypoxia causes vaso-occlusion, hemolysis. Symptoms: pain crises, acute chest syndrome, stroke, splenic sequestration, aplastic crisis (parvovirus B19).

Synonyms:

Sickle Cell Trait

An inherited carrier state in which a person has one hemoglobin S allele and one normal beta-globin allele, usually producing both hemoglobin A and hemoglobin S. Most people are asymptomatic, but complications can occur in severe physiologic conditions.

Synonyms:

Side Effect

An unintended pharmacological effect of a drug occurring at therapeutic doses, usually predictable from the drug's mechanism of action (a Type A reaction).

Synonyms:

Siderosis

Benign pneumoconiosis from iron dust, seen in welders. Causes small opacities on CXR but minimal impairment. Reversible with removal of exposure.

Synonyms:

SIDS

Sudden unexpected death of an apparently healthy infant during sleep that remains unexplained after investigation.

Synonyms:

Sievert (Sv)

The SI unit used for equivalent and effective dose, incorporating radiation type and, for effective dose, tissue sensitivity. It is used to estimate stochastic radiation risk rather than simply physical energy deposition.

Synonyms: Sv

Sigmoid Colon

S-shaped segment from descending colon to rectum in the left iliac fossa, approximately 40-50 cm, with complete mesentery (intraperitoneal, mobile). Most common diverticular disease site from narrow lumen and high pressure. Common volvulus site, particularly in elderly/institutionalized patients. Second most common colorectal cancer site.

Synonyms:

Sigmoid volvulus

Axial twisting of the sigmoid colon around its mesentery, the most common cause of colonic volvulus, typically occurring in elderly, institutionalized, or neuropsychiatric patients with chronic constipation and a redundant sigmoid. Presents with acute large bowel obstruction, abdominal distension, and absent bowel sounds.

Synonyms:

Sign

Objective evidence of disease. Examples: rash, murmur, edema. Observed by examiner.

Synonyms:

Signal Transduction

The process by which an extracellular signal (hormone, neurotransmitter, growth factor, drug) binding to a cell-surface or intracellular receptor is converted into a specific intracellular response.

Synonyms:

Signal-to-Noise Ratio

Ratio of true counts to statistical noise. Improved by longer acquisition, higher activity.

Synonyms:

Signet Ring Cell Carcinoma

A poorly differentiated adenocarcinoma in which intracellular mucin displaces the nucleus to the periphery, most often of the stomach or colon; associated with an aggressive course and diffuse growth pattern.

Synonyms:

Silicone oil hyperoleon

Emulsification of silicone oil tamponade used in vitreoretinal surgery, where the oil breaks into tiny droplets that migrate into the anterior chamber or trabecular meshwork. It can cause elevated intraocular pressure, band keratopathy, and chronic inflammation requiring oil removal and anterior chamber washout.

Synonyms:

Silicosis

Silicosis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. mining, quarrying, construction, or stone-cutting work. It causes progressive breathlessness and increases the risk of tuberculosis, chronic airflow limitation, and lung cancer.

Synonyms:

Silver Diamine Fluoride

Liquid that arrests caries and stains cavity black. Used in young children, special needs patients.

Synonyms:

Sinding-Larsen-Johansson Syndrome

Traction apophysitis of inferior patellar pole in adolescents. Similar to Osgood-Schlatter but at knee. Treatment: rest, activity modification.

Synonyms:

single nucleotide polymorphism

Single base pair variation occurring in >1% of population. Most common genetic variation. Used in GWAS, forensics, pharmacogenetics.

Synonyms:

Single Photon Emission Computed Tomography

Nuclear medicine imaging using gamma-emitting isotopes (technetium-99m most common). Rotating gamma camera acquires images. Applications: myocardial perfusion, bone scans, thyroid imaging, renal scans, brain perfusion. Lower resolution than PET but more widely available and cost-effective.

Synonyms:

Single Ventricle

A group of congenital heart defects where one functional ventricle supports both the systemic and pulmonary circulations. Includes tricuspid atresia, mitral atresia, double inlet left ventricle, hypoplastic left heart syndrome, and unbalanced AV canal.

Synonyms:

Single-Dose Toxicity

Harm caused by one exposure to a substance or medicine, assessed according to dose, route, timing, and the exposed person's characteristics.

Synonyms:

Sinoatrial Node

The heart's natural pacemaker, located at the junction of the superior vena cava and right atrium. It consists of specialized cells that spontaneously depolarize at a rate of 60-100 beats per minute, setting the normal sinus rhythm.

Synonyms:

Sinus Lift

Procedure to increase bone height in posterior maxilla. Subperiosteal or transalveolar approach. Graft material placed.

Synonyms:

Sinus Pain

Pressure or pain around the forehead, cheeks, nose, or eyes caused by sinus inflammation, infection, migraine, or other conditions. Severe headache, eye swelling, vision change, high fever, or neurologic symptoms requires urgent assessment.

Synonyms:

Sinus Rhomboidalis

A diamond-shaped depression in the floor of the fourth ventricle of the brain.

Synonyms:

Sinuses

Air-filled cavities within the skull bones lined by respiratory mucosa, connected to the nasal cavity via ostia.

Synonyms:

Sinusitis

Sinusitis is inflammation or infection of the paranasal sinuses causing congestion, facial pressure, nasal discharge, reduced smell, cough, or headache. resolves in <10 days) or bacterial (symptoms >10 days, double worsening, or severe: *Streptococcus pneumoniae*, *Haemophilus influenzae*, *Moraxella catarrhalis*). Chronic sinusitis: symptoms >12 weeks with radiographic evidence.

Synonyms:

Sinusitis and Sinus Problems

Inflammation or infection of the paranasal sinuses that may cause nasal congestion, discharge, facial pressure, headache, or reduced smell. Symptoms may also arise from other nasal or facial conditions and require assessment when persistent or severe.

Synonyms:

Sinusoidal Fetal Heart Rate Pattern

A rare, ominous FHR pattern characterized by a smooth, sine-wave-like undulation with a fixed frequency (2-5 cycles/minute) and absent variability. Strongly associated with severe fetal anemia (Rh isoimmunization, fetomaternal hemorrhage, parvovirus B19), fetal hypoxia, and fetal acidosis.

Synonyms:

Sirenomelia

A rare congenital malformation in which the lower limbs are partially or completely fused. It is usually associated with severe abnormalities of the genitourinary, gastrointestinal, vascular, and spinal systems and is often fatal in the neonatal period.

Synonyms:

Sister Mary Joseph's nodule

A firm, hard nodule in the umbilicus resulting from metastatic malignancy, most commonly from intra-abdominal or pelvic cancers including gastric, ovarian, and colorectal carcinoma. It indicates advanced, disseminated disease with a poor prognosis. Diagnosis is by fine needle aspiration biopsy.

Synonyms:

Sitosterolemia

An autosomal-recessive disorder of plant-sterol transport caused by ABCG5 or ABCG8 variants. It can produce premature atherosclerosis, xanthomas, hemolytic anemia, macrothrombocytopenia, and elevated plasma plant sterols.

Synonyms:

Situs Inversus

A congenital condition in which the thoracic and abdominal organs are reversed or mirrored from their normal positions. Complete situs inversus (situs inversus totalis) involves all organs.

Synonyms:

Situs inversus totalis

A congenital condition in which the major visceral organs are mirrored from their normal positions, with the liver on the left, heart on the right, and other viscera similarly reversed.

Synonyms:

Sjogren Syndrome

Primary Sjogren syndrome (pSS) is a chronic autoimmune exocrinopathy characterized by lymphocytic infiltration of lacrimal and salivary glands causing dry eyes (keratoconjunctivitis sicca) and dry mouth (xerostomia), with female predominance (9:1) and peak onset 40-60. Secondary SS occurs with RA, SLE, SSc.

Synonyms:

Sjögren Syndrome

A systemic autoimmune disease characterized by

lymphocytic destruction and dysfunction of lacrimal and salivary glands, producing dry eyes and dry mouth. It may involve multiple organs and increases the risk of salivary-gland lymphoma.

Synonyms:

Sjögren's syndrome

A chronic autoimmune disorder characterized by lymphocytic infiltration and destruction of exocrine glands, primarily the salivary and lacrimal glands, resulting in dry eyes (keratoconjunctivitis sicca) and dry mouth (xerostomia).

Synonyms:

Skeletal Muscle

Voluntary, striated muscle attached to bones by tendons or directly by connective tissue. Its contraction produces movement, maintains posture, and generates heat.

Synonyms:

Skeletal Muscle Relaxant

A medication that reduces muscle spasm, spasticity, and associated pain.

Synonyms:

Skeletal Survey

A series of radiographs obtained when child abuse is suspected. Includes AP and lateral views of the skull, chest (including oblique views), abdomen, spine, and bilateral upper and lower extremities. Identifies fractures of varying ages, which is highly suggestive of non-accidental trauma.

Synonyms:

Skeletonization

Final stage of postmortem decomposition where soft tissues, organs, and skin have completely decayed or been scavenged, leaving only clean osseous skeletal remains.

Synonyms:

Skilled Nursing Facility

Inpatient facility providing skilled nursing and therapy. For recovery after hospitalization.

Synonyms:

Skin

The largest organ of the body (approximately 1.5–2 m²), forming a protective barrier against physical injury, pathogens, UV radiation, and water loss.

Synonyms:

Skin Absorption

Movement of a substance through the skin into underlying tissues or the bloodstream. Absorption depends on the substance, skin condition, contact time, and exposed area.

Synonyms:

Skin Aging

Skin aging has intrinsic (chronological) and extrinsic (photoaging) components. Photoaging causes wrinkle formation, telangiectasias, lentigines, leather-like texture, and actinic keratoses. Intrinsic aging causes thinning, wrinkling, and delayed wound healing. Prevention includes sun protection (broad-spectrum SPF 30 or greater daily).

Synonyms:

Skin Aging and Appearance

Skin aging is a complex biological process influenced by both intrinsic factors, such as genetics and natural aging, and extrinsic factors, particularly ultraviolet radiation exposure.

Synonyms:

Skin Allergies and Contact Dermatitis

Inflammatory skin reactions triggered by exposure to allergens or irritants that come into direct contact with the skin.

Synonyms:

Skin Allergy Testing

Skin allergy testing includes prick testing (immediate hypersensitivity, IgE-mediated) and intradermal testing (more sensitive, used for drug and venom allergy). Prick testing introduces allergen extract into the epidermis; wheal and flare reaction at 15 minutes indicates sensitization. Intradermal testing

injects dilute allergen into the dermis.

Synonyms:

Skin and Aging

Skin aging involves intrinsic and extrinsic changes. Intrinsic aging causes thinning, wrinkling, and fragility. Extrinsic (photo)aging causes wrinkles, telangiectasias, lentigines, and actinic keratoses. Collagen loss, elastin degradation, and decreased cell turnover contribute to aging skin.

Synonyms:

Skin and Environment

Environmental factors significantly affect skin health. Pollution causes oxidative stress, inflammation, and accelerated aging. Particulate matter penetrates skin, generating free radicals. Blue light from screens causes hyperpigmentation, particularly in darker skin tones. Indoor heating and air conditioning cause dryness.

Synonyms:

Skin Appendages

Skin structures include hair follicles, sebaceous glands, eccrine sweat glands, and apocrine sweat glands. Hair follicles cycle through anagen (growth), catagen (transition), and telogen (resting) phases. Sebaceous glands produce sebum, an oily substance lubricating skin and hair.

Synonyms:

Skin Barrier Function

The skin barrier prevents water loss and protects against environmental insults. The stratum corneum acts as a physical barrier, while the acid mantle (pH 4 to 6) provides chemical defense. Lipids (ceramides, cholesterol, free fatty acids) in the intercellular space form a waterproof barrier.

Synonyms:

Skin Biopsy Methods

Skin biopsy methods vary by lesion characteristics. Punch biopsy (2 to 6 mm circular blade) provides full-thickness specimen for most diagnoses. Shave biopsy (razor or scalpel) removes superficial lesions;

deep shave (saucerization) includes subcutaneous fat for suspected melanoma.

Synonyms:

Skin Biopsy Techniques

Skin biopsy is selected according to the suspected diagnosis and lesion depth. Punch biopsy samples full-thickness skin; shave biopsy samples superficial lesions; excisional biopsy removes an entire small lesion; and incisional biopsy samples part of a large lesion.

Synonyms:

Skin Cancer

Most common cancer. Types: basal cell, squamous cell, melanoma. Prevention: sun protection. Early detection critical.

Synonyms:

Skin Cancer Epidemiology

Skin cancers are common and include basal-cell carcinoma, squamous-cell carcinoma, and melanoma. Incidence and mortality vary by tumor type, geography, skin phenotype, ultraviolet exposure, immune status, and access to diagnosis and treatment.

Synonyms:

Skin Cancer Prevention

Prevention focuses on reducing ultraviolet exposure through shade, protective clothing, hats, sunglasses, and appropriately used broad-spectrum sunscreen. Avoiding tanning beds also reduces ultraviolet exposure.

Synonyms:

Skin Cancer Screening

Skin cancer screening uses the ABCDE criteria for melanoma, the ugly duckling sign, and total body skin examination. Dermoscopy (dermatoscopy) magnifies skin lesions revealing structures invisible to the naked eye, improving diagnostic accuracy. Skin self-examination teaches patients to monitor moles for changes.

Synonyms:

Skin Cancer Staging

Skin cancer staging guides treatment and prognosis. Melanoma: Breslow thickness (most important prognostic factor), ulceration, mitotic rate, sentinel lymph node status (AJCC 8th edition).

Synonyms:

Skin Cancer Surgery

Skin cancer surgical techniques maximize cure while minimizing morbidity. Wide local excision with appropriate margins (BCC: 4 mm, SCC: 4 to 6 mm, melanoma: based on Breslow thickness). Mohs micrographic surgery provides 99 percent cure rate for BCC and 97 percent for SCC with tissue preservation.

Synonyms:

Skin Flaps

Skin flaps transfer tissue with its blood supply. Rotation flaps rotate adjacent tissue into defect. Advancement flaps slide tissue forward. Transposition flaps move tissue across intervening skin. Random pattern flaps rely on dermal plexus; axial pattern flaps have named vascular pedicle.

Synonyms:

Skin Graft

Transfer of skin from a donor site to a recipient site to cover a wound. Split-thickness skin graft (STSG): epidermis + partial dermis (0.008-0.018 inches), harvested with dermatome, donor site heals spontaneously (2-3 weeks). Full-thickness skin graft (FTSG): epidermis + full dermis, donor site requires closure, better cosmetic outcome.

Synonyms:

Skin Immune System

The skin immune system (SALT: skin-associated lymphoid tissue) provides immunological surveillance. Langerhans cells (dendritic cells in epidermis) capture antigens and present them to T cells. Dermal dendritic cells, mast cells, and resident T cells form an innate and adaptive immune network.

Synonyms:

Skin Infection

Infection of the skin or underlying soft tissue, commonly caused by bacteria, fungi, or viruses. Redness, warmth, swelling, pain, drainage, or fever may occur; rapidly spreading redness, severe pain, blisters, or systemic illness requires prompt medical assessment.

Synonyms:

Skin Integrity

Localized damage to the skin and/or underlying soft tissue caused by prolonged pressure, shear, or friction, most commonly over bony prominences. See pressure injury.

Synonyms:

Skin Irritation

Inflammation or discomfort caused by direct contact with an irritant, often producing redness, burning, itching, dryness, or scaling.

Synonyms:

Skin Microbiome

The skin microbiome is the community of microorganisms (bacteria, fungi, viruses) residing on the skin. *Staphylococcus aureus* colonization is increased in atopic dermatitis and psoriasis. *Cutibacterium acnes* plays a role in acne. Diversity is decreased in diseased skin.

Synonyms:

Skin of Color

Skin of color (Fitzpatrick IV to VI) has unique dermatologic considerations. It is more prone to hyperpigmentation disorders (post-inflammatory hyperpigmentation, melasma, acanthosis nigricans) and keloid formation. It is less prone to skin cancer but presents with more advanced disease when it occurs.

Synonyms:

Skin Pigmentation

Determined by melanin produced by melanocytes in the stratum basale. Eumelanin (brown-black) and pheomelanin (red-yellow) are the two types. Melanin production is stimulated by UV radiation

through melanocyte-stimulating hormone (MSH). Fitzpatrick skin type classification (I to VI) describes pigmentation and sun response.

Synonyms:

Skin Tags

Benign fibroepithelial polyps occurring in intertriginous areas (neck, axillae, groin, under breasts). They are associated with obesity, insulin resistance, and pregnancy. Skin tags are asymptomatic but may become irritated or bleed. Treatment includes snipping, cryotherapy, electrocautery, and shave excision.

Synonyms:

Skull

Bony framework of the head with 22 bones: cranium (8: frontal, 2 parietal, 2 temporal, occipital, sphenoid, ethmoid) and facial (14). Joined by sutures: coronal, sagittal, lambdoid, squamous. The skull base has foramina for cranial nerves and vessels.

Synonyms:

Skull fracture

Skull fracture examines skull fracture; interpretation depends on the specimen or body region, test method, reference range, and clinical question. linear, depressed, basilar, or comminuted, with potential for intracranial injury and cerebrospinal fluid leak.

Synonyms:

SLAP Lesion

Superior labrum anterior to posterior tear. Associated with overhead activities, trauma. Treatment: rest, physical therapy, surgical repair if symptomatic.

Synonyms:

SLAP Tears

Tears of the superior glenoid labrum extending from anterior to posterior, sometimes involving the biceps tendon attachment. They may cause pain, clicking, or instability, especially with overhead activity.

Synonyms:

Sleep

A naturally recurring physiological state characterized by altered consciousness, reduced sensory responsiveness, and distinct brain wave patterns that is essential for physical restoration, memory consolidation, and metabolic regulation.

Synonyms:

Sleep (Geriatric)

Sleep patterns and sleep problems in older adults, including insomnia, sleep apnea, circadian changes, and medication-related disturbances.

Synonyms: Geriatric

Sleep Apnea

Repeated pauses or reductions in breathing during sleep. It may be obstructive, central, or mixed and can disturb sleep and oxygenation.

Synonyms:

Sleep Apnea (Dental)

Oral appliance for obstructive sleep apnea. Mandibular advancement device. Indications: mild to moderate OSA, CPAP intolerance.

Synonyms: Dental

Sleep Apnea (Obstructive Sleep Apnea - OSA)

A sleep disorder characterized by repeated episodes of partial or complete upper airway obstruction during sleep (obstructive sleep apnea—OSA, most common) or cessation of respiratory drive (central sleep apnea—CSA), causing intermittent hypoxia, hypercapnia, and sleep fragmentation.

Synonyms: Obstructive Sleep Apnea - OSA

Sleep Bruxism

Repeated grinding or clenching of the teeth during sleep, which may cause tooth wear, jaw pain, or headaches.

Synonyms:

Sleep Hygiene

A set of behavioral and environmental practices designed to promote consistent, uninterrupted, and

restorative sleep. Key elements include maintaining a regular sleep schedule, creating a cool, dark, and quiet sleep environment, avoiding caffeine and electronic screens before bedtime, and engaging in relaxing pre-sleep routines.

Synonyms:

Sleep Medications and Supplements

Pharmacological agents used to treat insomnia and other sleep disorders when behavioral interventions alone are insufficient.

Synonyms:

Sleep Paralysis

Temporary inability to move or speak when falling asleep or waking, while awareness is partly or fully preserved. Episodes usually last seconds to minutes and may include frightening hallucinations. Recurrent episodes can be associated with sleep deprivation, irregular sleep, narcolepsy, or other sleep disorders.

Synonyms:

Sleep Studies (Polysomnography)

Sleep tests, most commonly polysomnography, are diagnostic studies used to evaluate sleep architecture and identify sleep disorders. Polysomnography records brain waves, eye movements, heart rate, breathing patterns, blood oxygen levels, and limb movements throughout the night in a controlled laboratory setting.

Synonyms: Polysomnography

Sleep-Related Hypoventilation

Inadequate ventilation during sleep causing elevated carbon dioxide, oxygen desaturation, or both. Causes include obesity, neuromuscular disease, chest-wall disorders, chronic lung disease, medications, and central respiratory-control abnormalities.

Synonyms:

Sleepwalking

Sleepwalking addresses care related to sleepwalking, including practical measures, warning signs, follow-

up, and decisions to discuss with a clinician. sleep, usually with little or no memory afterward. It is more common in children and may be triggered by sleep deprivation, stress, fever, or other sleep disorders; injury prevention and evaluation of recurrent or dangerous episodes are important.

Synonyms:

Sleeve Gastrectomy

Removal of major stomach, leaving sleeve. Restrictive procedure. Lower malabsorption risk than bypass. Effective weight loss.

Synonyms:

Sliding Filament

The mechanism of muscle contraction in which actin filaments slide past myosin filaments, shortening the sarcomere without changing filament lengths. Myosin cross-bridges bind actin, undergo a power stroke using ATP hydrolysis, detach, and reattach to new actin sites in a cyclic manner.

Synonyms:

Slipped Capital Femoral Epiphysis

Displacement of the femoral head relative to the femoral neck through the growth plate (physis) in adolescents. Most common hip disorder in adolescents (10-16 years). Risk factors: obesity, male sex, African American, and endocrine disorders (hypothyroidism, growth hormone deficiency).

Synonyms:

Slit Lamp Biomicroscopy

A fundamental ophthalmological examination technique that uses a high-intensity, adjustable slit beam of light combined with a binocular microscope to provide a magnified, stereoscopic view of the anterior segment and, with the use of auxiliary lenses, the posterior segment of the eye.

Synonyms:

Small Airway Disease

Disease affecting airways with diameter < 2 mm (bronchioles). It is the earliest site of damage in COPD and is often subclinical until advanced. It

is characterized by narrowing, mucus plugging, and inflammation of small airways. PFTs may show air trapping (increased RV/TLC) before FEV1 decline.

Synonyms:

Small Bowel Follow-Through

Extended upper GI series tracking barium through small bowel.

Synonyms:

Small Bowel Obstruction

Partial or complete blockage of the small intestine. Common causes include adhesions, hernias, tumors, and inflammatory narrowing. Symptoms may include abdominal pain, vomiting, distension, and inability to pass stool or gas.

Synonyms:

Small Bowel Series

X-ray imaging of small intestine using barium. Evaluates Crohn disease, tumors, obstructions.

Synonyms:

Small Cell Carcinoma

A high-grade neuroendocrine carcinoma, most often of the lung, strongly associated with smoking. Highly responsive initially to chemotherapy and radiation but prone to rapid recurrence and early brain metastases.

Synonyms:

Small Cell Lung Cancer

Aggressive lung cancer, strongly associated with smoking. Early metastasis, responds to chemotherapy.

Synonyms:

Small Fiber Neuropathy

Damage to small sensory and autonomic nerve fibers, often causing burning pain, tingling, altered temperature or pain sensation, abnormal sweating, or gastrointestinal and cardiovascular symptoms. Diabetes, autoimmune disease, vitamin deficiency, toxins, and inherited disorders may contribute; evaluation seeks an underlying cause.

Synonyms:

Small Intestinal Bacterial Overgrowth

An abnormal increase or change in bacteria within the small intestine, often causing bloating, abdominal pain, nausea, diarrhea, fullness, weight loss, or nutrient deficiency. Causes include impaired intestinal movement, structural problems, surgery, and some systemic diseases; persistent symptoms require medical evaluation.

Synonyms:

Small Intestine

Longest GI segment (approximately 6 meters) from pylorus to ileocecal valve. Primary nutrient digestion and absorption site. Three segments: duodenum (25 cm, chyme/bile/pancreatic enzymes), jejunum (2.5 m, prominent folds/villi for absorption), ileum (3.5 m, Peyer's patches for immunity).

Synonyms:

Small-bowel volvulus

Twisting of the small intestine around its mesentery, causing mechanical obstruction and potentially compromising mesenteric blood flow. It may be primary (idiopathic, more common in developing countries) or secondary to adhesions, malrotation, hernias, or intraluminal tumors.

Synonyms:

Smallpox

Smallpox was a severe contagious variola-virus disease with fever and a distinctive progressive pustular rash; global eradication was achieved through vaccination. rash; it was eradicated through vaccination, although variola virus is retained in authorized high-security laboratories.

Synonyms:

SMART Goals for Antibiotic Stewardship

Stewardship objectives that are specific, measurable, achievable, relevant, and time-limited. They define a clear antimicrobial-use or patient-outcome target and a way to monitor progress.

Synonyms:

SMILE

Small incision lenticule extraction, commonly known as SMILE, is a minimally invasive refractive surgical procedure that corrects myopia and myopic astigmatism by creating and removing a thin, disc-shaped piece of corneal stroma called a lenticule through a small incision, without creating a corneal flap.

Synonyms:

Smile Design

Planning smile based on facial features, gum display, tooth proportions. Digital smile design software available.

Synonyms:

Smith-Lemli-Opitz Syndrome

An autosomal recessive disorder of cholesterol metabolism caused by mutations in DHCR7, encoding 7-dehydrocholesterol reductase, the final enzyme in the cholesterol biosynthetic pathway.

Synonyms:

Smith-Magenis Syndrome

A genetic neurodevelopmental disorder, usually involving deletion of 17p11.2 or an RAI1 variant. It causes developmental delay, intellectual disability, distinctive facial features, sleep disturbance, behavioral dysregulation, and variable congenital abnormalities.

Synonyms:

Smoke Evacuator

A device that captures and filters airborne surgical plume generated by electrosurgery, laser use, or ultrasonic energy. Evacuation reduces exposure to particulate matter, toxic gases, and potentially infectious biologic material.

Synonyms:

Smoke Inhalation Injury

Pulmonary injury caused by inhalation of toxic products of combustion.

Synonyms:

Smoking Cessation

The process of stopping tobacco or nicotine use. It may involve counseling, behavioral support, medicines, or nicotine replacement.

Synonyms:

Smooth Muscle

Involuntary, non-striated muscle found in the walls of hollow organs and blood vessels. It produces slow, sustained contractions under autonomic, hormonal, and local control.

Synonyms:

Smothering

Mechanical obstruction of the external nose and mouth that prevents effective ventilation. It may be caused by a covering, compression, or an obstructing soft material; findings are often nonspecific and must be interpreted with the scene, history, and complete examination.

Synonyms:

Snapping Hip Syndrome

Hip pain/clicking from tendon snapping over bony prominence. Internal (iliopsoas), external (IT band), intra-articular (labral tear). Treatment: physical therapy, injection, surgery if refractory.

Synonyms:

Sneddon Syndrome

A non-inflammatory thrombotic vasculopathy characterized by livedo racemosa and recurrent ischemic cerebrovascular events. Headache, hypertension, cognitive impairment, and cardiac-valve abnormalities may occur; evaluation addresses vascular risk and autoimmune or thrombophilic causes.

Synonyms:

Snoring and Sleep Apnea

Snoring is the sound produced by vibrating soft tissues in the upper airway during sleep, often resulting from partial airway obstruction. Sleep apnea is a more serious condition characterized by repeated episodes of complete or partial airway collapse during sleep, leading to intermittent hypoxia, frequent

arousal, and fragmented sleep.

Synonyms:

SNRIs

Serotonin-norepinephrine reuptake inhibitors are a class of antidepressant drugs that inhibit the reuptake of both serotonin and norepinephrine from the synaptic cleft, increasing both serotonergic and noradrenergic neurotransmission. Common SNRIs include venlafaxine, duloxetine, desvenlafaxine, and levomilnacipran.

Synonyms:

Social Anxiety Disorder

Marked fear or anxiety about one or more social situations in which the individual may be scrutinized by others. The individual fears acting in a way or showing anxiety symptoms that will be negatively evaluated.

Synonyms:

Social Isolation

Limited contact or interaction with other people. Persistent isolation may adversely affect mental and physical health.

Synonyms:

Sodium

Major extracellular cation. Fluid balance, nerve function, muscle contraction. Recommended intake <2300 mg/day. Excess associated with hypertension. Sources: salt, processed foods.

Synonyms:

Sodium Bicarbonate Therapy

Alkalinizing agent for metabolic acidosis in CKD. Target serum bicarbonate greater than 22 mEq/L. Slows CKD progression and improves muscle wasting. Dose titrated to serum levels.

Synonyms:

Sodium Polystyrene Sulfonate

Potassium-binding resin for hyperkalemia. Risk: colonic necrosis, especially with sorbitol.

Synonyms:

Soft Markers for Aneuploidy

Sonographic findings in the second trimester that are common in normal fetuses but have a statistically higher prevalence in aneuploid fetuses (especially trisomy 21).

Synonyms:

Soft Tissue Injury

Damage to muscles, tendons, ligaments, fascia, skin, or other non-bony tissues, often caused by trauma or overuse.

Synonyms:

Soft Tissue Rheumatism

Pain conditions affecting muscles, tendons, ligaments, bursae. Examples: frozen shoulder, lateral epicondylitis, rotator cuff tendinopathy. Treatment: rest, physiotherapy, injections, surgery if refractory.

Synonyms:

Soft Tissue Sarcoma

A group of malignant tumors arising in muscle, fat, fibrous tissue, blood vessels, or other connective tissues. Treatment depends on the subtype, location, stage, and relationship to nearby structures.

Synonyms:

Soft Tissue Tumors

Lipoma: most common benign soft tissue tumor, subcutaneous, encapsulated. Liposarcoma: most common malignant STS in adults, deep, subtypes (well-differentiated/dedifferentiated, myxoid/round cell, pleomorphic). Synovial sarcoma: t(X;18), SS18-SSX, young adults, deep extremity, "triple sign" on MRI.

Synonyms:

Soft-tissue calcinosis

The deposition of insoluble calcium phosphate salts in soft tissues such as skin, subcutaneous tissue, muscles, and tendons, which may be metastatic (due to hypercalcaemia or hyperphosphataemia), dystrophic (in damaged or devitalised tissue), or idiopathic.

Synonyms:

Soil Contamination

Environmental toxicology. Heavy metals, pesticides, industrial waste. Remediation: excavation, bioremediation, containment.

Synonyms:

Solar Urticaria

A rare form of inducible urticaria triggered by ultraviolet or visible light, producing pruritic erythema and wheals within minutes on exposed skin. Symptoms usually improve after removal from the light source. Diagnosis may involve phototesting.

Synonyms:

Soleus Muscle

Broad flat deep posterior leg muscle from posterior tibia, fibula, and tendinous arch to the calcaneus via the Achilles tendon. Innervated by tibial nerve (S1-S2). Powerful ankle plantarflexor, the primary anti-gravity muscle for upright posture. One-joint muscle.

Synonyms:

Solitary Pulmonary Nodule

Single, well-circumscribed lesion < 3 cm surrounded by normal lung. Differential includes granuloma, hamartoma, and carcinoma. PET-CT and tissue sampling help determine etiology.

Synonyms:

Solution

A homogeneous mixture in which a drug (solute) is dissolved in a liquid vehicle (solvent, usually water, saline, alcohol, or polyethylene glycol). Solutions provide rapid absorption (oral solutions, parenteral IV solutions), ease of swallowing, and flexible dosing; they require preservatives and have limited stability.

Synonyms:

Solvent Exposure

Contact with organic solvents by inhalation, ingestion, or skin absorption. Acute exposure may cause irritation or central nervous system effects; repeated exposure may damage organs.

Synonyms:

Somatic Mutation

Acquired genetic change in cancer cells. Not inherited.

Synonyms:

Somatic Symptom Disorder

Characterized by one or more somatic symptoms that are distressing or result in significant disruption of daily life, accompanied by excessive thoughts, feelings, or behaviors related to the somatic symptoms.

Synonyms:

Somatic Variant

A DNA variant acquired after conception in a non-germline cell lineage. It is not usually transmitted to offspring and may produce mosaic disease or contribute to cancer when it affects growth-control pathways.

Synonyms:

Somatostatin Analog

A class of synthetic peptides that mimic the actions of native somatostatin, a hormone that inhibits the secretion of growth hormone, thyroid-stimulating hormone, insulin, glucagon, gastrin, and other GI hormones.

Synonyms:

Somatostatinoma

Rare pancreatic or duodenal tumor producing somatostatin causing diabetes, gallstones, steatorrhea, and hypochlorhydria from suppression of insulin, gallbladder contraction, pancreatic enzymes, and gastric acid respectively. Diagnosed by elevated somatostatin levels. Treatment is surgical resection for localized disease.

Synonyms:

Somatotropic pituitary adenoma

A benign neoplasm of the anterior pituitary arising from growth hormone-secreting cells, causing acromegaly in adults and gigantism in children if occurring before epiphyseal closure.

Synonyms:

Sonographer

A healthcare professional trained to perform ultrasound scans (sonography).

Synonyms:

Sore Throat

Pain, scratchiness, or irritation of the throat, most often caused by pharyngitis, typically viral but also bacterial, allergic, irritant, reflux, voice strain, traumatic, or neoplastic.

Synonyms:

Source Control

A procedure or intervention that eliminates, drains, debrides, or otherwise controls an anatomic focus of infection or contamination. Examples include drainage of an abscess, removal of infected tissue or device, and repair of a perforation.

Synonyms:

Soy Protein Intolerance

Adverse gastrointestinal reaction to soy proteins, most often seen in infants and young children. It may cause vomiting, diarrhoea, abdominal pain, blood or mucus in the stool, feeding difficulty, or poor growth.

Synonyms:

Spasm

A sudden, involuntary, sustained or repetitive contraction of a muscle or group of muscles.

Synonyms:

Spasticity

Spasticity concerns spasticity; its medical significance is established from the defining features, setting, associated findings, and clinical question. reflex after an upper motor-neuron lesion. It may impair movement, hygiene, positioning, comfort, gait, and function.

Synonyms:

Spasticity Management

Assessment and treatment of abnormal muscle stiffness and spasms. Measures may include stretch-

ing, therapy, positioning, medicines, injections, or surgery.

Synonyms:

Spatial Resolution

Ability to distinguish small objects. PET: 4-6 mm. SPECT: 8-12 mm.

Synonyms:

Special Care Baby Unit

A ward within a hospital that provides specialist care for newborn babies who need additional support but not intensive care.

Synonyms:

Special Stain

A histochemical stain that highlights a particular tissue component, organism, or deposited substance not adequately demonstrated by routine hematoxylin and eosin. Examples include periodic acid-Schiff, Ziehl-Neelsen, Congo red, and Gomori methenamine silver stains.

Synonyms:

Specific Absorbed Fraction

Fraction of emitted energy absorbed in target organ.

Synonyms:

Specific Activity

Radioactivity per unit mass of compound. High specific activity essential for receptor targeting (low receptor density).

Synonyms:

Specific Gravity

Ratio of urine density to water density reflecting solute concentration. Normal 1.005 to 1.030. Less precise than osmolality but faster to measure. Elevated in dehydration, glycosuria, proteinuria, and contrast. Decreased in diabetes insipidus and fluid overload.

Synonyms:

Specific Learning Disorder

A neurodevelopmental disorder causing persistent difficulty acquiring or using academic skills in reading, writing, or mathematics. The difficulties interfere with functioning and are not better explained by another condition or inadequate instruction.

Synonyms:

Specific Phobia

A disorder involving marked, persistent fear or anxiety about a particular object or situation. The fear is excessive relative to the actual danger, leads to avoidance or intense distress, and interferes with daily functioning.

Synonyms:

Specificity

The proportion of people who do not have a disease who obtain a negative test result. A highly specific test has few false-positive results and a positive result can provide strong evidence for disease when applied to the intended population.

Synonyms:

Specimen Adequacy

The degree to which a collected clinical specimen is sufficient in quantity, correctly identified, properly transported, and representative of the site being tested. Inadequacy can cause invalid, misleading, or falsely negative results.

Synonyms:

Specimen Container

Container for collecting specimens. Types: urine cup, stool container, sputum cup, biohazard bag.

Synonyms:

Specimen Cup

Container for urine or stool samples.

Synonyms:

Specimen Transport Medium

A formulated medium that preserves the viability and diagnostic characteristics of microorganisms during transport from the collection site to the lab-

oratory. The required medium, temperature, container, and transport time depend on the specimen and suspected pathogen.

Synonyms:

SPECT Scan (Single Photon Emission CT)

Nuclear medicine imaging using gamma-emitting radioisotopes (Tc-99m, Tl-201, I-123) with a rotating gamma camera to create 3D images.

Synonyms: Single Photon Emission CT

Spectral Analysis

Energy discrimination to reject scatter. Energy window typically 20% centered on photopeak.

Synonyms:

Speculum

Device for opening body passage for examination. Types: vaginal, nasal, ear, anal.

Synonyms:

Speech

Phonation and articulation. Teeth, tongue, lips, palate involved. Dental prostheses may affect speech initially.

Synonyms:

Speech Delay

A delay in language development compared to peers: by 12 months—no single words; 18 months—<10-20 words/no word combinations by 24 months; or regression.

Synonyms:

Speech Discrimination

Speech discrimination testing, also known as word recognition scoring, measures the ability to understand speech at a comfortable listening level, and it is an important component of the audiometric evaluation that provides information about cochlear and neural function beyond what pure tone audiometry alone can reveal.

Synonyms: word recognition scoring, measures the.

Speech Therapy

Assessment and treatment of disorders affecting speech, language, voice, communication, or swallowing.

Synonyms:

Speech-Language Pathology Assessment

Evaluate communication, swallowing, cognition. Standardized tests, clinical observation.

Synonyms:

Sperm

The male gamete (reproductive cell), produced in the seminiferous tubules of the testis through spermatogenesis. Sperm consists of: head (contains the haploid nucleus and acrosome containing enzymes for egg penetration), midpiece (contains mitochondria for energy), and tail (flagellum for motility).

Synonyms:

Spermatocele

Benign, painless, fluid-filled cystic retention cavity arising from the epididymis (usually the head/caput), containing avascular fluid and non-viable spermatozoa. Etiology: obstruction of an efferent ductule of the epididymis.

Synonyms:

Spermatogonium

A germ cell in the testis that divides and develops into primary spermatocytes.

Synonyms:

Spermarche

The onset of sperm production and the first ejaculation, marking an important stage of male puberty.

Synonyms:

Spermatorrhea

Involuntary discharge of semen, especially without orgasm.

Synonyms:

Sphenoid Bone

Butterfly-shaped bone at the skull base, with body (sphenoid sinuses), greater/lesser wings, and pterygoid processes. The sella turcica houses the pituitary gland.

Synonyms:

Sphenoid Sinusitis

Inflammation or infection of the sphenoid sinus, which lies deep behind the nasal cavity. It may cause deep headache, facial pain, or visual symptoms and can rarely spread to nearby nerves or the brain; persistent or severe symptoms require medical assessment.

Synonyms:

Sphenoidal Sinus

A paired air-filled sinus within the sphenoid bone at the base of the skull. It lies near important nerves and blood vessels, so inflammation or surgery in this area requires careful assessment.

Synonyms:

Spherocytes

Small, dark, sphere-shaped red blood cells lacking central pallor. Formed when RBC membrane is lost without loss of volume, reducing the surface area-to-volume ratio.

Synonyms:

Sphygmomanometer

An instrument used to measure arterial blood pressure, consisting of an inflatable cuff and a pressure-measuring system. Manual devices use Korotkoff sounds; automated devices use an electronic sensor. Correct cuff size and technique are essential for reliable measurement.

Synonyms:

Spider angioma

Spider angioma concerns spider angioma; its medical significance is established from the defining features, setting, associated findings, and clinical question. Resembling a spider, most commonly found on the face, neck, and upper trunk. They are associated

with hyperestrogenic states including pregnancy, oral contraceptive use, and chronic liver disease, particularly cirrhosis.

Synonyms:

Spider bite

A cutaneous envenomation resulting from the bite of a spider, ranging from minor local reactions to severe systemic envenomation. The brown recluse spider may cause loxoscelism with necrotic skin lesions, while the black widow spider may cause latrodectism with muscle cramps, hypertension, and autonomic dysfunction.

Synonyms:

Spina Bifida

A neural tube defect: incomplete closure of the neural tube (days 22-28), causing spinal cord/meningeal malformation.

Synonyms:

Spina Bifida Meningocele

A form of spina bifida where the meninges (but not neural tissue) herniate through a vertebral defect, forming a CSF-filled sac. The spinal cord remains in its normal position and is not involved. Presents as a visible, fluid-filled, translucent sac on the back, typically without neurologic deficits.

Synonyms:

Spina Bifida Myelomeningocele

The most severe form of spina bifida, where both the meninges and neural tissue (spinal cord and nerve roots) herniate through a vertebral defect. Presents as a visible, flat or sac-like lesion on the back with neurologic deficits below the level of the lesion (paralysis, sensory loss, bowel/bladder dysfunction).

Synonyms:

Spina Bifida Occulta

A usually mild form of spina bifida in which the vertebral arch does not fully close without herniation of the spinal cord or meninges. It is often asymptomatic but may be associated with a skin

dimple, hair tuft, or other finding over the lower spine.

Synonyms:

Spinal Analgesia

Intrathecal administration of a local anesthetic and/or opioid primarily to provide analgesia, often with limited motor block. Intrathecal opioids can extend postoperative pain relief but may cause pruritus, urinary retention, respiratory depression, and other opioid effects.

Synonyms:

Spinal Anesthesia

Injection of local anesthetic into the lumbar subarachnoid space to produce temporary sensory, motor, and sympathetic blockade below the level of injection. Complications include hypotension, bradycardia, urinary retention, post-dural puncture headache, high or total spinal block, infection, and bleeding.

Synonyms:

Spinal Anesthesia for Cesarean Delivery

A neuraxial anesthetic technique used for elective and many emergency cesarean deliveries. A small dose of local anesthetic (hyperbaric bupivacaine 12-15 mg) with opioid (fentanyl 15-25 mcg, morphine 0.15-0.25 mg) is injected into the subarachnoid space. Produces rapid surgical anesthesia (T4 sensory level for cesarean).

Synonyms:

Spinal Angiography

Contrast imaging of spinal vessels. Evaluates vascular malformations.

Synonyms:

Spinal Cord

The cylindrical bundle of nerve fibers extending from the medulla oblongata (at the foramen magnum) to the conus medullaris (L1-L2 in adults), surrounded by the vertebral column and meninges (dura mater, arachnoid mater, pia mater). The spinal cord is divided into 31 segments: 8 cervical, 12 thoracic, 5

lumbar, 5 sacral, and 1 coccygeal.

Synonyms:

Spinal Cord Compression

Oncologic emergency. Back pain, weakness, sensory loss, bowel/bladder dysfunction. MRI diagnostic. Treatment: steroids, radiation, surgery.

Synonyms:

Spinal Cord Injury

Spinal cord injury: ASIA impairment scale (A-E). Complete (ASIA A) vs incomplete.

Synonyms:

Spinal dysraphism

A group of congenital malformations resulting from incomplete closure of the neural tube during embryonic development, affecting the spinal cord and overlying vertebral structures. Includes open defects (myelomeningocele) and closed defects (spina bifida occulta, lipomyelomeningocele, dermal sinus).

Synonyms:

Spinal Epidural Abscess

A collection of pus in the spinal epidural space, usually caused by haematogenous or contiguous infection. It may present with severe local back pain, fever, spinal tenderness, radicular pain, neurological deficit, or sphincter disturbance, although the classic triad is often incomplete.

Synonyms:

Spinal Fusion

Surgical union of two or more vertebrae using bone graft or bone graft substitutes with instrumentation (rods, screws, cages). Approaches: posterior (posterolateral fusion, transforaminal lumbar interbody fusion TLIF), anterior (anterior lumbar interbody fusion ALIF), and lateral (extreme lateral interbody fusion XLIF).

Synonyms:

Spinal Muscular Atrophy

An inherited disorder causing progressive loss of motor neurons and muscle weakness, often beginning

in infancy or childhood but sometimes appearing in adulthood. Severity varies; breathing, swallowing, and mobility may be affected. Early diagnosis allows genetic counseling and disease-modifying care.

Synonyms:

Spinal Nerve

A mixed nerve formed by the union of dorsal and ventral roots as it exits the vertebral canal. There are 31 pairs, carrying sensory, motor, and autonomic fibers to and from the spinal cord.

Synonyms:

Spinal Precautions

Immobilization of spine in trauma patients to prevent neurological injury. Indications: mechanism (fall >3 feet, MVC, gunshot), altered mental status, focal neurological deficit, midline spinal tenderness. Technique: cervical collar, backboard, log roll. Clearance: NEXUS criteria or Canadian C-spine rule.

Synonyms:

Spinal Shock

A state of transient physiological areflexia and flaccid paralysis occurring immediately after acute spinal cord injury, below the level of the lesion.

Synonyms:

Spinal Stenosis

Narrowing of the spinal canal causing compression of the spinal cord or nerve roots. Lumbar stenosis (most common): neurogenic claudication (leg pain/weakness with walking, relieved by sitting/leaning forward), often bilateral.

Synonyms:

Spindle-cell sarcoma

A group of sarcomas characterized by elongated, spindle-shaped malignant cells. It includes entities like leiomyosarcoma, fibrosarcoma, and malignant peripheral nerve sheath tumor, with variable behavior.

Synonyms:

Spine

The vertebral column, consisting of stacked vertebrae that support the body and protect the spinal cord.

Synonyms:

Spine Disorders

The spine, or vertebral column, is a complex bony and soft-tissue structure that provides axial support, protects the spinal cord, and enables flexible movement of the trunk. It consists of 33 vertebrae divided into cervical, thoracic, lumbar, sacral, and coccygeal regions, separated by intervertebral discs that act as shock absorbers.

Synonyms:

Spinocerebellar Ataxias

A group of autosomal dominant neurodegenerative disorders characterized by progressive cerebellar ataxia, often with additional neurological features. Over forty different SCA types have been identified, with SCA1, SCA2, SCA3 (Machado-Joseph disease, the most common worldwide), SCA6, and SCA7 being the most prevalent.

Synonyms:

Spirochaete

A slender, spiral-shaped bacterium of the group Spirochaetes.

Synonyms:

Spirochete

A thin, coiled gram-negative bacterium with internal periplasmic flagella conferring corkscrew motility, requiring darkfield or special stains. Pathogenic genera include *Treponema* (syphilis), *Borrelia* (Lyme disease, relapsing fever), and *Leptospira* (leptospirosis), diagnosed mainly by serology and darkfield microscopy.

Synonyms:

Spirometry

Most common PFT measuring air volume and flow during forced breathing. Key measurements: FVC, FEV1, FEV1/FVC ratio. Used to diagnose and

classify obstructive and restrictive diseases.

Synonyms:

Spiroinolactone

A nonselective aldosterone (mineralocorticoid) receptor antagonist and potassium-sparing diuretic. Used for heart failure with reduced ejection fraction (NYHA II-IV—reduces mortality, often with ACE/ARB + beta-blocker), resistant hypertension, primary hyperaldosteronism, ascites in cirrhosis, and acne/hirsutism in women (off-label).

Synonyms:

Spleen

Largest lymphoid organ in the left upper quadrant under ribs 9-11, approximately 12 cm long and 150-200 g. Red pulp filters blood (removing old/damaged RBCs and platelets); white pulp mounts immune responses (lymphoid follicles and periarteriolar lymphoid sheaths). Enclosed by a fibroelastic capsule with trabeculae.

Synonyms:

Spleen Hilum

Concave medial surface where the tortuous splenic artery (celiac trunk branch) enters and splenic vein exits, with lymphatics and nerves. Artery divides into 5 segmental branches at the hilum (basis for partial splenectomy). Splenic vein joins the superior mesenteric vein forming the portal vein.

Synonyms:

Splenectomy

Indications: trauma (grade IV/V, hemodynamic instability), ITP (refractory), hereditary spherocytosis/elliptocytosis, thalassemia major, sickle cell (sequestration crisis), TTP (refractory), lymphoma staging (historical), hypersplenism, splenic cysts/tumors, Wandering spleen. Laparoscopic preferred.

Synonyms:

Splenic cyst

A fluid-filled lesion within the spleen, classified as true cysts with an epithelial lining, including congen-

ital, epidermoid, and dermoid cysts, or pseudocysts without a lining, typically resulting from trauma, infection, or pancreatitis. Most are asymptomatic and discovered incidentally on imaging.

Synonyms:

Splenic Infarction

Splenic infarction occurs when the splenic artery or its branches are occluded, typically by emboli from the heart. The spleen has end-arterial supply with limited collateral circulation, making it vulnerable to infarction even with small vessel occlusion.

Synonyms:

Splenic Rupture

Traumatic or spontaneous splenic injury. CT diagnosis. May require splenectomy.

Synonyms:

Splenomegaly

Splenomegaly is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. Splenomegaly can be detected by percussion (Castell sign—dullness in the lowest intercostal space on inspiration) and palpation (normal spleen is not palpable; a palpable spleen indicates at least 2–3 times enlargement).

Synonyms:

Splice-Site Variant

A variant affecting the sequences required for accurate removal of introns and joining of exons during RNA processing. It may cause abnormal transcripts, exon skipping, intron retention, or reduced functional protein.

Synonyms:

Splint

Immobilizes injured body part. Types: aluminum, plastic, canvas, pneumatic.

Synonyms:

Splint (Dental)

Fixation of mobile teeth or fractured tooth. Wire and composite, orthodontic bracket splint.

Synonyms: Dental

Splinter Hemorrhages

Linear hemorrhages under the nail bed, oriented longitudinally. In infective endocarditis, they are caused by septic microemboli to the nail bed capillaries. They are a minor Duke criterion. Splinter hemorrhages can also result from trauma, psoriasis, and systemic vasculitis.

Synonyms:

Splitting

A psychological defense pattern in which a person or situation is viewed as entirely good or entirely bad, with difficulty integrating positive and negative qualities. It can occur in several mental-health conditions and is not diagnostic by itself.

Synonyms:

Spondyloarthritis

Group of inflammatory arthritis associated with HLA-B27. Includes ankylosing spondylitis, psoriatic arthritis, reactive arthritis, enteropathic arthritis. Features: axial involvement, enthesitis, dactylitis.

Synonyms:

Spondylolisthesis

Spondylolisthesis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. II, most common in children/adolescents): defect in pars interarticularis (spondylolysis), often L5-S1. Degenerative (Type III, most common in adults): facet joint and disc degeneration, often L4-L5.

Synonyms:

Sponge (Vascular)

A sterile absorbent material used during vascular procedures to control minor bleeding or protect tissue.

Synonyms: Vascular

Spontaneous Bacterial Peritonitis

Infection of ascitic fluid without an identifiable intra-abdominal source representing a serious complication of cirrhosis with ascites. The pathogenesis involves impaired immune function, bacterial translocation from the intestinal lumen, and seeding of ascitic fluid which provides a favorable medium for bacterial growth.

Synonyms:

Spontaneous Breathing Trial

A period of unsupported breathing to assess a patient's readiness for extubation. The patient breathes through a T-piece or with minimal pressure support for 30–120 minutes. Successful SBT predicts successful extubation.

Synonyms:

Spontaneous Pneumothorax

Pneumothorax without trauma. Primary in healthy individuals; secondary with underlying lung disease. Treatment depends on size.

Synonyms:

Spore

A resistant reproductive or survival structure produced by some fungi and bacteria. Bacterial endospores can survive unfavorable environmental conditions and germinate when conditions become suitable. Their resistance has important implications for infection control and sterilization.

Synonyms:

Sporotrichosis

Sporotrichosis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. in soil, moss, and plant matter (rose thorns, sphagnum moss).

Synonyms:

Sports Rehabilitation

Rehabilitation that restores safe movement and performance after a sports-related injury.

Synonyms:

Sprain

An injury to a ligament (connective tissue connecting bone to bone) caused by excessive stretching or tearing. Grading: Grade I (mild stretching, microscopic tears), Grade II (partial tear with laxity), Grade III (complete tear with instability).

Synonyms:

Sprengel Deformity

A congenital elevation of the scapula due to failure of the scapula to descend from its embryonic cervical position to its normal thoracic position during weeks 9–12 of gestation. The scapula is higher, smaller, and rotated inferiorly compared to the normal side. Range of motion is limited, especially in shoulder abduction.

Synonyms:

Spur-cell hemolytic anemia

A severe hemolytic anemia seen in advanced liver disease where acanthocytosis develops due to altered membrane cholesterol, causing premature red cell destruction in the spleen.

Synonyms:

Sputum

Mucus or phlegm produced in the lower airways and expelled by coughing. Its amount, color, odor, or blood content may provide clues to infection, inflammation, or bleeding, but appearance alone does not establish a diagnosis.

Synonyms:

Squamous Cell Carcinoma

Cutaneous squamous cell carcinoma is a malignant keratinocyte tumor commonly arising on chronically sun-exposed skin or in areas of chronic inflammation or immunosuppression. It may present as a scaly, indurated, hyperkeratotic papule, plaque, or ulcer.

Synonyms:

Squint

A misalignment of the visual axes of the two eyes,

where one eye is deviated inward (esotropia), outward (exotropia), upward (hypertropia), or downward (hypotropia) relative to the other, disrupting binocular vision and potentially leading to amblyopia in children. See Strabismus.

Synonyms:

SSRIs

Selective serotonin reuptake inhibitors are a class of antidepressant drugs that selectively inhibit the reuptake of serotonin from the synaptic cleft into the presynaptic neuron by blocking the serotonin transporter, increasing serotonergic neurotransmission.

Synonyms:

ST Segment

The isoelectric period between ventricular depolarization (QRS) and repolarization (T wave). It corresponds to the plateau phase of ventricular action potentials. ST segment elevation (>1 mm in limb leads or >2 mm in precordial leads) suggests acute myocardial infarction, pericarditis, or early repolarization.

Synonyms:

ST-Segment Elevation

Elevation of the ECG ST segment above the isoelectric baseline, reflecting abnormal ventricular repolarization. It may indicate acute coronary occlusion but can also occur in pericarditis, early repolarization, ventricular aneurysm, or other conditions; interpretation requires clinical context and serial testing.

Synonyms:

St. John's Wort

Herbal supplement. CYP3A4 inducer, reduces efficacy of many drugs (oral contraceptives, warfarin, antiretrovirals).

Synonyms:

Stab Wound

A penetrating sharp-force injury in which wound track depth exceeds skin defect length, produced

by a pointed or sharp-edged implement. The skin defect approximates blade width only when perpendicular to Langer's lines, and a single-edged blade produces one sharp and one blunt end.

Synonyms:

Stable Disease

Cancer neither growing nor shrinking significantly.

Synonyms:

Stage I

A cancer stage that generally indicates limited disease, although the exact definition and prognosis depend on the cancer type and staging system.

Synonyms:

Stage II

A cancer stage whose meaning depends on the cancer type and may indicate a larger primary tumor or limited local spread without distant metastasis.

Synonyms:

Stage III

A cancer stage that often indicates more extensive local or regional disease, with the precise criteria depending on the cancer type.

Synonyms:

Stage IV

A cancer stage that generally indicates spread to distant organs or sites. Prognosis and treatment vary by cancer type and individual factors.

Synonyms:

Stages of Labor

Four stages describing the progression from uterine contractions to delivery of the placenta. First stage: onset of regular contractions to full cervical dilatation (10 cm). Second stage: full dilatation to delivery of the baby. Third stage: delivery of the baby to delivery of the placenta.

Synonyms:

Staghorn Calculus

A large renal stone that occupies the renal pelvis and extends into at least two calyces, creating a cast of the collecting system. Composition: struvite (magnesium ammonium phosphate), associated with urease-producing bacteria (*Proteus mirabilis*, *Klebsiella*, *Pseudomonas*) causing urinary tract infection.

Synonyms:

Staining

A laboratory technique applying dyes to microbial smears or tissue sections to visualise microorganisms and reveal structural characteristics. Major methods include Gram, acid-fast, Giemsa, and fluorescent stains, providing rapid presumptive identification from clinical specimens and guiding initial empiric therapy.

Synonyms:

Stainless Steel

Alloy for preformed crowns, orthodontic bands, instruments. Corrosion-resistant.

Synonyms:

Standard of Care

The conduct, skill, diligence, and judgment a reasonably prudent practitioner of the same specialty would exercise under similar circumstances; the benchmark for medical negligence. It is established through guidelines, peer practice, and expert testimony rather than fixed statute.

Synonyms:

Standard Precautions

Precautions for all patient care. Examples: hand hygiene, PPE, safe injection, respiratory hygiene.

Synonyms:

Standardized Uptake Value

Quantitative PET measure: tissue activity divided by injected dose per body weight. Normalizes for body size, injection dose. SUVmax: maximum pixel value in lesion. SUVmean: average lesion uptake. Background: blood pool, liver.

Synonyms:

Stapedectomy

A microsurgical procedure performed to treat otosclerosis, a condition characterized by abnormal bone remodeling in the otic capsule that fixes the stapes footplate in the oval window, preventing its normal vibratory movement and causing progressive conductive hearing loss.

Synonyms:

Stapes

The stapes, commonly known as the stirrup, is the smallest bone in the human body and the most medially positioned ossicle in the middle ear, articulating with the incus at the incudostapedial joint and transmitting sound vibrations to the inner ear through its footplate, which is attached to the oval window by the annular ligament.

Synonyms:

Staph Infection

Infections caused by *Staphylococcus aureus* (and coagulase-negative staphylococci), a gram-positive coccus in clusters.

Synonyms:

Staphylococcal Infection

An infection caused by *Staphylococcus aureus* or another *Staphylococcus* species. It may affect the skin, bone, joints, lungs, heart valves, blood, or other tissues. Diagnosis and antimicrobial treatment depend on the site, severity, and susceptibility of the organism.

Synonyms:

Staphylococcal Pneumonia

Severe pneumonia from *S. aureus*, often post-influenza. May cause necrotizing pneumonia, lung abscess, and empyema.

Synonyms:

Staphylococcal scalded skin

A toxin-mediated *Staphylococcus aureus* infection causing superficial separation and tenderness of the

outer skin, usually in infants or young children. Widespread redness and fragile blisters may rupture to leave painful, moist areas resembling a scald burn and require prompt medical assessment.

Synonyms:

Staphylococcus aureus

A gram-positive, catalase-positive, coagulase-positive coccus that causes a wide range of infections including skin infections, pneumonia, endocarditis, and osteomyelitis. *S. aureus* produces numerous virulence factors including toxins, enzymes, and surface proteins. MRSA strains carry the *mecA* gene encoding PBP2a.

Synonyms:

Staple (Vascular)

A small metal or polymer device used to close tissue or connect vascular structures.

Synonyms: Vascular

Stargardt Disease

The most common inherited macular dystrophy, usually autosomal recessive and caused by ABCA4 gene mutations. Presents in childhood or adolescence with progressive central vision loss, retinal flecks, and bull's-eye maculopathy; no curative treatment exists.

Synonyms:

Starling Forces

Starling forces describe the balance of hydrostatic and oncotic pressures that govern fluid movement across capillary walls, determining the distribution of fluid between the intravascular and extravascular compartments.

Synonyms:

Statin

An inhibitor of HMG-CoA reductase that lowers hepatic cholesterol synthesis and increases hepatic LDL-receptor expression. Statins reduce atherosclerotic cardiovascular events; adverse effects include muscle symptoms, rare severe myopathy, and liver-enzyme abnormalities.

Synonyms:

Statins in Diabetes

Use of HMG-CoA reductase inhibitors to reduce atherosclerotic cardiovascular risk in people with diabetes. The decision, intensity, and treatment target are individualized according to age, cardiovascular risk, kidney function, and other clinical factors.

Synonyms:

Station

The relationship of the fetal presenting part to the level of the ischial spines, measured in centimeters.

Synonyms:

Status Asthmaticus

A severe, life-threatening asthma exacerbation unresponsive to standard bronchodilator therapy. Characterized by severe airflow obstruction, hypoxemia, and hypercapnia. Treatment includes continuous nebulized albuterol, IV magnesium sulfate, systemic corticosteroids, and possibly intubation.

Synonyms:

Status Epilepticus

A seizure lasting at least 5 minutes or recurrent seizures without recovery to baseline consciousness between them, requiring urgent treatment. Ongoing convulsive or nonconvulsive status can cause neuronal injury, systemic complications, and death.

Synonyms:

Steady State

The condition where the rate of drug administration equals the rate of elimination, resulting in constant average plasma concentrations with repeated dosing. During regular dosing at fixed intervals, steady state is achieved after approximately 4 to 5 half-lives, regardless of the dosing frequency or dose size.

Synonyms:

Steal Syndrome

Ischemia of distal extremity due to blood flow diversion to bypass graft or AV fistula. Most com-

mon: upper extremity after AV fistula creation.
Symptoms: hand pain, pallor, numbness, weakness.
Treatment: banding, ligation, revision.

Synonyms:

Steatorrhea

The passage of excess fat in the stool, causing greasy, pale, foul-smelling, floating stools—a hallmark of fat malabsorption.

Synonyms:

Stem Cell Transplantation

Hematopoietic stem cell transplantation (HSCT) replaces diseased or ablated bone marrow with healthy donor or autologous stem cells.

Synonyms:

STEMI

ST-elevation myocardial infarction: transmural myocardial necrosis from acute total occlusion of a coronary artery, an emergency requiring immediate reperfusion. ECG: ST-segment elevation in contiguous leads (or new LBBB); troponin elevated.

Synonyms:

Stenosis

Narrowing of vessel lumen. Causes: atherosclerosis, thrombosis, dissection, external compression. Symptoms depend on location and severity. Treatment: medical, angioplasty, stenting, bypass.

Synonyms:

Stenosis of the left anterior descending artery

Narrowing of the left anterior descending coronary artery, which can reduce blood flow to the front of the heart and cause ischemia.

Synonyms:

Stenotrophomonas maltophilia resistance

Resistance in *Stenotrophomonas maltophilia* results from intrinsic and acquired mechanisms that limit the activity of several antibiotics. Treatment should be guided by the site of infection, susceptibility testing, illness severity, and specialist advice.

Synonyms:

Stent

Stent concerns stent; its medical significance is established from the defining features, setting, associated findings, and clinical question. cobalt-chrome, nitinol), polymer. Types: bare-metal, drug-eluting. Applications: coronary, peripheral, biliary, ureteral, tracheal. Complications: restenosis, thrombosis, migration, fracture.

Synonyms:

Stent (Vascular)

A small mesh or tube placed inside a narrowed or blocked vessel to help keep it open.

Synonyms: Vascular

Stent Balloon (Vascular)

A balloon catheter used to expand a stent against the wall of a blood vessel.

Synonyms: Vascular

Stent Graft

A fabric-covered stent placed inside a blood vessel to reinforce the vessel wall or exclude an aneurysm from blood flow.

Synonyms:

Stent Placement

Image-guided deployment of stent. Vascular, biliary, ureteral, esophageal. Maintains patency.

Synonyms:

Stent-Graft (Vascular)

A fabric-covered vascular stent used to reinforce a vessel or exclude an aneurysm or leak.

Synonyms: Vascular

Stenting

Placement of mesh tube to keep vessel open. Drug-eluting stents reduce restenosis.

Synonyms:

Stepping Reflex

A primitive reflex present from birth to 2 months, elicited by holding the infant upright with feet touching a flat surface. The infant makes stepping-like movements as if walking. Disappears by 2 months as voluntary motor control develops. Reappears around 9-10 months as voluntary walking emerges.

Synonyms:

Stereotactic Biopsy

Biopsy using stereotactic guidance. Breast, brain, lung.

Synonyms:

Stereotactic Body Radiation Therapy

A highly precise form of external radiation delivering high-dose ablative treatment in few fractions, used for early-stage lung cancer and selected liver, pancreatic, spinal, and kidney tumors.

Synonyms:

Stereotactic Radiosurgery

Single high-dose radiation to small target. Used for brain metastases, AVMs, acoustic neuroma.

Synonyms:

Sterile Field

A designated area maintained free of viable microorganisms during an invasive procedure. Only sterile equipment and materials may contact the field or the sterile portions of instruments.

Synonyms:

Sterile Site

A body site or specimen type expected to contain no viable microorganisms in health, such as blood, cerebrospinal fluid, synovial fluid, or tissue from a closed space. Recovery of a pathogen from a sterile site is generally clinically significant, subject to contamination assessment.

Synonyms:

Sterilisation

A permanent method of contraception. Female sterilization (tubal occlusion): the fallopian tubes

are blocked or cut to prevent the egg from reaching the uterus, performed by laparoscopy (clip or diathermy) or at the time of cesarean delivery.

Synonyms:

Sterilization

A process eliminating all microbial life including spores, achieving a sterility assurance level of at least 10^{-6} .

Synonyms:

Sternoclavicular Joint

A saddle-type synovial joint between the clavicle and manubrium of the sternum. It is the only bony connection between the upper limb and axial skeleton and permits movement of the shoulder girdle.

Synonyms:

Sternocleidomastoid Muscle

Strap-like anterior neck muscle from manubrium and medial clavicle to the mastoid process. Innervated by CN XI and C2-C3. Divides neck into anterior/posterior triangles. Unilaterally: laterally flexes to opposite side, rotates face to same side. Bilaterally: flexes neck, assists forced inspiration.

Synonyms:

Sternum

Flat bone in the anterior midline thorax, with manubrium, body, and xiphoid process. The sternal angle (of Louis) at the manubriosternal junction is a key landmark at the 2nd costal cartilage, T4-T5, and tracheal bifurcation. Common site for bone marrow biopsy. Median sternotomy is the standard cardiac surgical approach.

Synonyms:

Stethoscope

Acoustic device for listening to internal body sounds. Components: chest piece (bell and diaphragm), tubing, earpieces. Bell: low-frequency sounds. Diaphragm: high-frequency sounds. Essential for cardiac, pulmonary, abdominal auscultation.

Synonyms:

Stevens-Johnson Syndrome

A severe, life-threatening mucocutaneous reaction characterized by widespread skin erythema, necrosis, and bullae formation with mucosal involvement (oral, ocular, genital). It is most commonly caused by drug reactions (sulfonamides, anticonvulsants, allopurinol, NSAIDs) and infections (*Mycoplasma pneumoniae*).

Synonyms:

Stickler Syndrome

An autosomal dominant connective tissue disorder caused by mutations in collagen genes (COL2A1 most common, also COL11A1, COL11A2, COL9A1).

Synonyms:

Stillbirth

Intrauterine fetal death (IUFD) at or after 20-24 weeks (definition varies by country); fetal death before viability (<20 weeks) is miscarriage.

Synonyms:

Stimulant Use Disorder

A problematic pattern of stimulant use (cocaine, amphetamines, methamphetamine, MDMA) leading to significant impairment. Stimulants increase dopamine and norepinephrine activity. Withdrawal is characterized by fatigue, depression, increased appetite, hypersomnia, psychomotor retardation, and vivid unpleasant dreams.

Synonyms:

Stippling (Tattooing)

Patterned dermal abrasions and punctate hemorrhages surrounding a firearm entrance wound, caused by unburned and partially burned gunpowder grains striking the skin at close range (15–75 cm).

Synonyms: Tattooing

Stochastic Effects

Random radiation effects with no threshold. Cancer, genetic effects. Probability increases with dose.

Synonyms:

Stoma Complications

Complications related to intestinal or urinary stomas.

Synonyms:

Stomach

J-shaped muscular organ in the left upper quadrant, connecting esophagus to duodenum. Regions: cardia, fundus, body, antrum, pylorus. Functions: food storage, mechanical churning, chemical digestion (pepsin, HCl), intrinsic factor secretion (B12 absorption). Mucosa has rugae (folds) allowing expansion.

Synonyms:

Stomach Cancer

Malignant cancer arising in the stomach, most often an adenocarcinoma. Risk factors include *Helicobacter pylori* infection, smoking, certain dietary exposures, chronic gastric inflammation, and inherited syndromes. Symptoms, stage, and tumor type guide treatment.

Synonyms:

Stomach Ulcer

An open sore in the lining of the stomach, commonly associated with *Helicobacter pylori* infection or medicines such as NSAIDs.

Synonyms:

Stomatitis

Inflammation of the oral mucosa, presenting as erythema, ulceration, pain, and difficulty eating.

Synonyms:

STOPP/START

Screening Tool of Older Person's Prescriptions (STOPP) and Potential Older Person's Prescriptions (START). Identifies inappropriate prescribing.

Synonyms:

Storage Diseases

A group of inherited metabolic disorders characterized by accumulation of substrates within cells due to specific enzyme deficiencies. Lysosomal storage

diseases result from defects in lysosomal hydrolytic enzymes, leading to accumulation of undigested macromolecules within lysosomes.

Synonyms:

Strabismus

Strabismus concerns strabismus; its medical significance is established from the defining features, setting, associated findings, and clinical question. (esotropia), outward (exotropia), upward (hyperopia), or downward (hypotropia) relative to the other, disrupting binocular vision and potentially leading to amblyopia in children.

Synonyms:

Strain

An injury to a muscle or tendon (connective tissue connecting muscle to bone) caused by excessive stretching, contraction, or overload. Grading: Grade I (mild stretching with few muscle fibers torn), Grade II (moderate partial tear), Grade III (complete muscle/tendon rupture).

Synonyms:

Strain Imaging

Echocardiographic or magnetic-resonance imaging that measures deformation of the myocardium during contraction and relaxation. It can detect abnormalities in myocardial function that may not be apparent from ejection fraction alone.

Synonyms:

Strangulation

Compression of the neck that impairs breathing or blood flow to and from the brain. It may cause voice changes, neck injury, loss of consciousness, or delayed complications and requires urgent medical assessment.

Synonyms:

Strength Testing

Manual muscle testing, dynamometry, isokinetic testing. Quantifies weakness, tracks progress.

Synonyms:

Strep Throat

Acute streptococcal pharyngitis caused by group A Streptococcus (*S. pyogenes*), most common in children 5-15 years. Features: sudden sore throat, fever, tonsillar exudate, palatal petechiae, anterior cervical lymphadenopathy, and headache/abdominal pain; cough, coryza, and oral ulcers suggest viral.

Synonyms:

Streptococcal cellulitis with lymphangitis

Streptococcal infection of the skin and subcutaneous tissue with inflammation of the draining lymphatic vessels.

Synonyms:

Streptococcal Infection

Infections caused by *Streptococcus pyogenes* (Group A Strep, GAS). Common presentations: pharyngitis (strep throat), scarlet fever (pharyngitis with erythematous rash), impetigo, cellulitis, and necrotizing fasciitis.

Synonyms:

Streptococcal pharyngitis

Sore throat caused by infection with group A Streptococcus, often accompanied by fever and swollen cervical lymph nodes.

Synonyms:

Streptococcus agalactiae

A gram-positive, beta-hemolytic streptococcus (Group B Streptococcus) that is a leading cause of neonatal sepsis, meningitis, and pneumonia. The organism colonises the gastrointestinal and genital tracts. Transmission occurs during birth. Risk factors include prematurity, prolonged rupture of membranes, and maternal colonisation.

Synonyms:

Streptococcus pneumoniae

A gram-positive, encapsulated diplococcus that causes pneumonia, otitis media, sinusitis, meningitis, and sepsis.

Synonyms:

Streptococcus pyogenes

A gram-positive, beta-hemolytic streptococcus (Group A Streptococcus) that causes pharyngitis, skin infections, and post-infectious complications including rheumatic fever and glomerulonephritis. The organism produces streptolysins, erythrogenic toxin, and streptokinase.

Synonyms:

Streptokinase

A thrombolytic agent that forms a plasminogen activator complex, converting plasminogen to plasmin and lysing fibrin clots. Used for STEMI, massive pulmonary embolism, and deep vein thrombosis (largely replaced by tissue plasminogen activator, which is more fibrin-specific and less antigenic).

Synonyms:

Stress

A physiological and psychological response to perceived threats or demands that activates the sympathetic nervous system and the hypothalamic-pituitary-adrenal axis.

Synonyms:

Stress Cardiomyopathy

A temporary weakening of the heart muscle, often following intense emotional or physical stress, with symptoms that can resemble acute coronary syndrome.

Synonyms:

Stress Echocardiography

Echocardiography during exercise or pharmacological stress. Detects coronary artery disease by identifying wall motion abnormalities.

Synonyms:

Stress Fracture

A bone injury caused by repetitive submaximal loading that exceeds the rate of remodeling and repair. It often presents with gradually increasing, localized activity-related pain and may progress to a complete fracture if loading continues.

Synonyms:

Stress Shielding

Reduction in physiologic loading of adjacent bone caused by an implant that carries a disproportionate share of mechanical force. Chronic stress shielding may lead to bone resorption and compromise fixation.

Synonyms:

Stress Ulcer Prophylaxis

Prevention of stress-related mucosal disease in critically ill patients. Risk factors: mechanical ventilation >48 hours, coagulopathy, trauma, burns, sepsis. Agents: H2 blockers, proton pump inhibitors. Duration: while risk factors present.

Synonyms:

Stress Urinary Incontinence

Involuntary leakage of urine, significantly affecting psychological, social, and physical well-being. See urinary incontinence.

Synonyms:

Stretch Reflex

A monosynaptic spinal reflex in which stretching a muscle (e.g., a tap on the patellar tendon) excites muscle spindles, generating an afferent signal (Ia fibers) that directly excites the alpha motor neurons of the same muscle, causing contraction and resistance to stretch.

Synonyms:

Striae Gravidarum

Stretch marks that develop during pregnancy, commonly on the abdomen, breasts, thighs, or buttocks. They may begin as red or purple lines and gradually fade to lighter bands.

Synonyms:

Stridor

Stridor concerns stridor; its medical significance is established from the defining features, setting, associated findings, and clinical question. narrowed upper airway. Inspiratory stridor usually indicates supraglottic or glottic obstruction; biphasic or expiratory patterns help localize disease, but any severe

or progressive stridor is an airway emergency.

Synonyms:

Stripping of Membranes (Membrane Sweep)

A procedure performed during a cervical exam where the examiner inserts a finger through the internal os and sweeps the membranes circumferentially, separating them from the lower uterine segment. Releases endogenous prostaglandins, promoting cervical ripening and potentially initiating labor.

Synonyms: Membrane Sweep

Stroke

Stroke is sudden neurologic dysfunction from interrupted cerebral blood flow or bleeding, causing focal deficits and requiring urgent evaluation for reperfusion or hemorrhage management. neuronal death and neurological deficits.

Synonyms:

Stroke Volume

The volume of blood ejected by the left ventricle with each heartbeat, normally 60-100 mL. It is determined by three factors: preload, afterload, and myocardial contractility. Stroke volume equals end-diastolic volume minus end-systolic volume. Reduced stroke volume occurs in heart failure, hypovolemia, and cardiogenic shock.

Synonyms:

Strongyloides stercoralis

A soil-transmitted nematode that can infect the human intestine and cause strongyloidiasis.

Synonyms:

Strongyloidiasis

Strongyloidiasis concerns strongyloidiasis; its medical significance is established from the defining features, setting, associated findings, and clinical question. Most infections asymptomatic or mild (abdominal pain, diarrhea, urticaria). Larvae migration causes larva currens (rapidly migrating serpiginous rash, perianal).

Synonyms:

Structured Reporting

Reporting using standardized templates. Improves consistency, completeness.

Synonyms:

Struvite Stones

Infection stones composed of magnesium ammonium phosphate. Form in alkaline urine with urease-producing organisms including Proteus and Klebsiella. Staghorn calculi fill renal pelvis almost exclusively from Proteus. Treatment requires complete stone removal with antibiotics and urinary acidification. High recurrence if infection persists.

Synonyms:

Stupor

A state of reduced consciousness in which the patient is unresponsive to most environmental stimuli but can be temporarily aroused by vigorous, repeated stimulation (painful stimuli, loud shouting).

Synonyms:

Sturge-Weber Syndrome

A neurocutaneous syndrome (phakomatosis) characterized by a facial capillary malformation (port-wine stain) in the V1 distribution of the trigeminal nerve (forehead and upper eyelid) and ipsilateral leptomeningeal angiomas (venous malformations of the pia mater). Caused by a somatic activating mutation in GNAQ.

Synonyms:

Stye

A common infection of the eyelid. External hordeolum: acute bacterial infection of the Zeis or Moll glands at the eyelash follicle, typically caused by Staphylococcus aureus. Presents as a tender, red, well-localized swelling at the lid margin. Internal hordeolum: infection of the meibomian gland, larger and more painful than external.

Synonyms:

Subacute

Between acute and chronic. Examples: subacute thyroiditis.

Synonyms:

Subacute Rehabilitation

Less intensive than acute rehab. For patients needing continued therapy but not as intensive. Skilled nursing facility setting.

Synonyms:

Subacute Thyroiditis

Inflammatory condition of the thyroid most likely viral in etiology presenting with painful tender thyroid enlargement, fever, and malaise. Associated with elevated erythrocyte sedimentation rate and C-reactive protein.

Synonyms:

Subarachnoid

Situated beneath the arachnoid membrane surrounding the brain and spinal cord.

Synonyms:

Subarachnoid Hemorrhage

Bleeding into the subarachnoid space, the area between the arachnoid membrane and the pia mater surrounding the brain, most commonly caused by rupture of a cerebral (berry) aneurysm.

Synonyms:

Subclavian Artery

The artery supplying the upper limb, arising on the right from the brachiocephalic trunk and on the left directly from the aortic arch, passing over the first rib and becoming the axillary artery. Branches: vertebral, internal thoracic, thyrocervical trunk, costocervical trunk.

Synonyms:

Subclavian Vein

The continuation of the axillary vein beyond the lateral border of the first rib. It joins the internal jugular vein behind the sternoclavicular joint to form the brachiocephalic vein.

Synonyms:

Subclavian vein thrombosis

Formation of a blood clot in the subclavian vein, often associated with central venous catheterization, thoracic outlet syndrome, or Paget-Schroetter syndrome (effort-related thrombosis in young, active individuals). Presents with arm swelling, pain, and cyanosis.

Synonyms:

Subcorneal pustular dermatosis

A chronic relapsing skin disorder characterized by superficial sterile pustules beneath the stratum corneum, often on the trunk and flexural areas. It may be associated with IgA or other monoclonal gammopathies and can resemble pustular psoriasis.

Synonyms:

Subculture

The transfer of microorganisms from one culture to fresh culture medium, used to maintain pure cultures, isolate colonies, increase viability, prepare standardized inocula, and perform identification/susceptibility testing. On solid media, subculture aims to obtain isolated single colonies from a mixed or stock culture.

Synonyms:

Subcutaneous Emphysema

Air in the subcutaneous tissues, often from pneumothorax, pneumomediastinum, or chest trauma. It causes a characteristic crepitus on palpation. It is usually benign and resolves when the underlying air leak is treated. Severe cases may cause skin necrosis and compartment syndrome.

Synonyms:

Subcutaneous Tissue

Subcutaneous tissue (hypodermis, superficial fascia) lies beneath the dermis and connects skin to underlying structures. It contains adipose tissue (fat), blood vessels, nerves, and the superficial muscular aponeurotic system (SMAS). Subcutaneous fat provides insulation, cushioning, and energy storage.

Synonyms:

Subdural Hematoma

A collection of blood between the dura mater and the arachnoid mater, caused by tearing of bridging veins that traverse the subdural space.

Synonyms:

Subgaleal Hemorrhage

A potentially life-threatening accumulation of blood in the space beneath the scalp's epicranial aponeurosis. It can expand rapidly in a newborn, particularly after vacuum-assisted delivery, and requires urgent recognition and treatment.

Synonyms:

Sublingual epidermoid cyst

A benign cyst lined by stratified squamous epithelium beneath the tongue mucosa, presenting as a slow-growing midline swelling that may require surgical excision if symptomatic.

Synonyms:

Sublingual Gland

One of the paired major salivary glands, located beneath the tongue. It produces mainly mucous saliva that enters the mouth through several small ducts and helps lubricate the oral cavity.

Synonyms:

Submandibular Gland

One of the three paired major salivary glands, located in the submandibular triangle beneath the mandible. Mixed gland (predominantly serous) secreting saliva via Wharton's duct opening at the sublingual caruncle (floor of mouth). Saliva contains amylase, mucins, lysozyme, IgA.

Synonyms:

Subscapular Artery

An artery arising from the axillary artery that supplies the scapular region and adjacent muscles.

Synonyms:

Substance Abuse

An older, nonspecific term for harmful or problematic substance use. Current clinical language generally uses substance-use disorder.

Synonyms:

Substance Abuse Psychiatry

The subspecialty focused on the evaluation and treatment of substance use disorders and co-occurring psychiatric conditions. Dual diagnosis patients require integrated treatment addressing both disorders simultaneously.

Synonyms:

Substance Dependence

A state in which repeated substance use produces physiologic adaptation, so that reducing or stopping the substance may cause withdrawal. It is distinct from, but may occur with, substance-use disorder.

Synonyms:

Substance Intoxication

A reversible substance-specific syndrome caused by recent use that produces clinically significant behavioral or physiologic changes. Diagnosis requires assessing timing, dose or exposure, expected pharmacology, co-ingestants, and medical complications.

Synonyms:

Substance Use

The consumption of alcohol, drugs, or other chemical substances, which can lead to health, social, and psychological issues if used excessively.

Synonyms:

Substance Use Disorder

A problematic pattern of substance use leading to clinically significant impairment or distress, manifested by at least two of eleven criteria within a twelve-month period.

Synonyms:

Substance Use in Pregnancy

Use of alcohol, tobacco, cannabis, opioids, cocaine, or other substances during pregnancy. Effects de-

pend on the substance, dose, timing, and other factors and may include maternal complications, impaired fetal growth, preterm birth, or neonatal withdrawal. Evaluation and treatment should be individualized.

Synonyms:

Substance Withdrawal

A substance-specific syndrome occurring after reduction or cessation of heavy or prolonged use. Withdrawal can range from discomfort to life-threatening complications such as seizures, delirium tremens, severe autonomic instability, or respiratory depression depending on the substance.

Synonyms:

Substernal goiter

Extension of thyroid tissue into the mediastinum, typically arising from the thyroid gland in the neck and growing downward through the thoracic inlet. It may cause compressive symptoms including dyspnea, dysphagia, and superior vena cava syndrome. Most are multinodular goiters. Diagnosis is by CT or MRI.

Synonyms:

Succenturial Lobe

An accessory lobe of the placenta, connected to the main placenta by blood vessels that traverse the membranes. If undetected after delivery, the succenturial lobe may be retained in the uterus, causing postpartum hemorrhage or infection. Diagnosis: careful inspection of the placenta and membranes after delivery.

Synonyms:

Succinate Dehydrogenase

Complex II of electron transport chain. Also TCA cycle enzyme. Produces FADH₂.

Synonyms:

Succinylcholine

A depolarizing neuromuscular-blocking drug that produces rapid, brief skeletal-muscle paralysis by activating nicotinic acetylcholine receptors at the

neuromuscular junction. It can cause hyperkalemia, bradycardia, myalgia, masseter spasm, prolonged apnea in pseudocholinesterase deficiency, and malignant hyperthermia.

Synonyms:

Sucking Reflex

A primitive reflex present from birth, elicited by placing an object in the infant's mouth. The infant rhythmically sucks on the object. Coordinated sucking and swallowing typically develop by 34-36 weeks gestational age. Premature infants may lack coordinated suck-swallow, requiring gavage feeding.

Synonyms:

Sucrose Lysis Test

A historical screening test for paroxysmal nocturnal haemoglobinuria in which patient red blood cells are exposed to serum in a low-ionic-strength sucrose solution, allowing complement-mediated lysis to be detected.

Synonyms:

Suction (Vascular)

A suction device used during a vascular procedure to remove blood or other fluid from the operative field.

Synonyms: Vascular

Suction Device

Creates negative pressure for fluid removal. Components: canister, tubing, suction catheter. Used for airway clearance, surgical field, wound drainage.

Synonyms:

Suction Tip

The end attachment of a suction device used to remove blood, fluid, secretions, or debris. Common types include the Yankauer tip for oropharyngeal suction and surgical suction tips such as the Frink tip.

Synonyms:

Sudden Cardiac Death

Unexpected death from a cardiac cause, usually oc-

curing rapidly after symptom onset or without witnessed symptoms. Causes include coronary disease, cardiomyopathy, inherited arrhythmia syndromes, and bradyarrhythmia; prevention depends on the underlying risk.

Synonyms:

Sudden Infant Death Syndrome

SIDS: the sudden, unexplained death of an infant <1 year (peak 2-4 months) that remains unexplained after a thorough investigation (autopsy, scene examination, and review of clinical history). Risk factors: prone sleep, bed-sharing, soft bedding, overheating, maternal smoking, prematurity/low birth weight, and co-sleeping.

Synonyms:

Sudden Sensorineural Hearing Loss

Rapid sensorineural hearing loss, conventionally at least 30 dB over three contiguous frequencies within 72 hours. It requires urgent audiologic and otologic assessment because early treatment may improve recovery in selected patients.

Synonyms:

Sudden Unexpected Infant Death

The sudden and unexpected death of an infant younger than 1 year, whether or not the cause is known before investigation. Sudden infant death syndrome is the unexplained subtype after complete scene, history, and autopsy evaluation.

Synonyms:

Suffocation

Death or injury from failure of oxygen to reach the lungs, a category of asphyxia distinct from strangulation. Subtypes include smothering (airway obstruction), choking or foreign-body obstruction, mechanical asphyxia (positional, chest compression), and entrapment in oxygen-deficient environments.

Synonyms:

Sugammadex

A selective relaxant binding agent that reverses aminosteroid neuromuscular blockers (rocuronium

and vecuronium) by encapsulating them in a cyclodextrin molecule, forming a 1:1 complex that is renally excreted. Onset of action is within 2 to 3 minutes.

Synonyms:

Suicidal Ideation

Thoughts about killing oneself, ranging from passive (wish to be dead, wishes to fall asleep and not wake) to active (thoughts of killing oneself with varying degrees of intent, plan, and means). The C-SSRS grades severity from 1 (wish to be dead) to 5 (active suicidal ideation with specific plan and intent).

Synonyms:

Suicide

The intentional act of taking one's own life. Suicide is a major public health problem worldwide, causing 700,000 deaths annually.

Synonyms:

Suicide Risk Assessment

A clinical evaluation of suicidal thoughts, intent, plan, access to means, past attempts, self-harm, psychiatric and medical illness, substance use, protective factors, and immediate safety. It informs but does not replace ongoing clinical judgment and safety planning.

Synonyms:

Sulfa Drugs

A class of bacteriostatic antibiotics that competitively inhibit dihydropteroate synthase, an enzyme essential for folic acid synthesis in bacteria. See sulfonamides.

Synonyms:

Sulfasalazine

A DMARD combining sulfapyridine and 5-aminosalicylic acid, used in rheumatoid arthritis, psoriatic arthritis, and inflammatory bowel disease (ulcerative colitis). Slows disease progression in RA; onset over 1-3 months.

Synonyms:

Sulfatide

A sulfated glycolipid found particularly in myelin and nervous tissue.

Synonyms:

Sulfonamide

A class of antibiotics (sulfamethoxazole, sulfadiazine, sulfasalazine) that inhibit bacterial dihydropteroate synthase, blocking folate synthesis—bacteriostatic. Often combined with trimethoprim (co-trimoxazole: TMP-SMX). Used for UTIs, PCP (pneumocystis pneumonia), toxoplasmosis, Nocardia, and MRSA.

Synonyms:

Sulfonylureas

Oral antidiabetic agents that stimulate insulin secretion from pancreatic beta cells by blocking ATP-sensitive potassium channels on the beta cell membrane. This causes membrane depolarization, opening of voltage-gated calcium channels, calcium influx, and exocytosis of insulin-containing granules.

Synonyms:

Sulfur Colloid Scan

Nuclear medicine imaging using Tc-99m sulfur colloid. Evaluates liver, spleen, bone marrow, lymph nodes.

Synonyms:

Sulphonamides

A class of antimicrobial agents containing the sulfonamide group (SO_2NH_2). Sulphonamides were the first effective systemic antibacterial agents (Prontosil, 1935—Gerhard Domagk). Mechanism: competitive inhibition of dihydropteroate synthase, blocking folate synthesis (para-aminobenzoic acid analogue)—bacteriostatic.

Synonyms:

Sun Protection (Photoprotection)

Sun protection involves measures taken to reduce exposure to ultraviolet radiation from the sun, which is the primary environmental risk factor for skin cancer and photoaging.

Synonyms: Photoprotection

Sunburn

Sunburn concerns sunburn; its medical significance is established from the defining features, setting, associated findings, and clinical question. ultraviolet (UV) radiation (UVB predominantly), causing DNA damage and inflammatory response. Risk: repeated sunburn increases skin cancer risk (melanoma, basal/squamous cell carcinoma) and photoaging.

Synonyms:

Superantigen

A protein that bypasses antigen processing and non-specifically activates large T-cell populations by binding MHC class II and the T-cell receptor V region, triggering massive cytokine release. Staphylococcal TSST-1 and enterotoxins, and streptococcal pyrogenic exotoxins, cause toxic shock and scarlet fever.

Synonyms:

Superficial

Located near or on the surface of the body.

Synonyms:

Superficial Fascia

A layer of loose connective tissue beneath the dermis, also called subcutaneous tissue or the hypodermis.

Synonyms: subcutaneous tissue.

Superficial thrombophlebitis

Superficial thrombophlebitis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. along the vein.

Synonyms:

Superimposed Preeclampsia

Preeclampsia developing in a person who already has chronic hypertension. It may present with new or worsening proteinuria, thrombocytopenia, abnormal liver or kidney tests, neurologic symptoms, or other features of maternal organ dysfunction.

Synonyms:

Superinfection

A new infection that develops during or after treatment of a previous infection, often involving an antimicrobial-resistant organism or an organism not susceptible to the original therapy, such as *Clostridioides difficile* after antibiotic exposure.

Synonyms:

Superior

Positioned higher or closer to the head.

Synonyms:

Superior Mesenteric Artery

Second major abdominal aortic branch at L1, the midgut artery. Supplies distal duodenum through proximal two-thirds of transverse colon. Branches: inferior pancreaticoduodenal, jejunal, ileal, ileocolic, right colic, middle colic. Arises anterior to the pancreatic uncinate process, crosses the third duodenal part.

Synonyms:

Superior mesenteric artery syndrome

Compression of the duodenum between the aorta and the superior mesenteric artery, causing proximal duodenal obstruction. Presents with postprandial nausea, vomiting, and epigastric pain, often after significant weight loss that narrows the SMA-aortic angle. Treatment includes nutritional rehabilitation and surgical duodenal mobilization.

Synonyms:

Superior Semicircular Canal Dehiscence

A defect or marked thinning of the bony covering of the superior semicircular canal that can produce sound- or pressure-induced vertigo, autophony, and conductive-appearing hearing findings. Diagnosis combines characteristic symptoms, physiologic testing, and high-resolution temporal-bone CT.

Synonyms:

Superior Vena Cava

Formed by brachiocephalic vein junction at the first right costal cartilage, returning upper body deoxygenated blood to the right atrium. Approximately

7 cm, valveless. Related to right lung/pleura, right phrenic nerve, and azygos vein.

Synonyms:

Superior Vena Cava Syndrome

Obstruction of SVC by tumor. Facial swelling, dyspnea, dilated neck veins. Emergency: radiation, stenting.

Synonyms:

Superior vena caval obstruction

Compression or thrombosis of the superior vena cava impairing venous return from the head, neck, and upper extremities. Most commonly caused by malignancy (lung cancer, lymphoma) or indwelling central venous devices. Presents with facial swelling, plethora, distended neck veins, and upper extremity edema.

Synonyms:

Supernumerary rib

An extra rib beyond the typical twelve pairs, most commonly a cervical rib above the first thoracic rib, which may compress the brachial plexus or subclavian vessel causing thoracic outlet syndrome.

Synonyms:

Supernumerary Teeth

Extra teeth beyond normal complement. Most common: mesiodens between maxillary centrals. May cause impaction or malocclusion.

Synonyms:

Supervised Exercise Therapy

A structured, monitored exercise program used to improve walking ability and reduce claudication symptoms in people with peripheral artery disease. The exercise plan is adjusted to the person's symptoms and functional capacity.

Synonyms:

Supination

Rotation of the forearm so that the palm faces anteriorly in anatomical position, or upward when the elbow is flexed. The radius and ulna become

parallel.

Synonyms:

Supine Hypotensive Syndrome

Compression of the inferior vena cava by the gravid uterus when the pregnant woman lies flat on her back after 20 weeks gestation. Results in decreased venous return, reduced cardiac output, and maternal hypotension, dizziness, pallor, and syncope.

Synonyms:

Supplement Safety

Supplements not strictly regulated. Contamination, mislabeling risks. Consult healthcare provider before use.

Synonyms:

Supplemental Oxygen Therapy

Administration of oxygen at a concentration above that of room air to treat or prevent clinically important hypoxemia. Delivery method and oxygen target depend on the illness, baseline oxygenation, risk of carbon-dioxide retention, and monitoring results; excessive oxygen can also cause harm.

Synonyms:

Supplementation

Use of a vitamin, mineral, protein, fiber, or other nutrient preparation to correct a deficiency or meet a clinically identified increased requirement. The indication, dose, interactions, product quality, and risk of toxicity should be assessed before use.

Synonyms:

Supportive Care

Treatment that maintains essential body functions, relieves symptoms, prevents complications, and supports recovery while the underlying cause is treated.

Synonyms:

Suppository

A solid, single-dose dosage form designed to be inserted into a body orifice (rectum, vagina, or urethra) where it melts, softens, or dissolves, releasing the active pharmaceutical ingredient for local or

systemic effects.

Synonyms:

Supraglottic Airway Device

An airway device positioned above the glottis to maintain oxygenation and ventilation without passing through the vocal cords. It is used for selected anesthetized or unconscious patients and is not a definitive substitute for a cuffed tracheal tube when aspiration protection is required.

Synonyms:

Suprascapular Nerve

A branch of the brachial plexus that supplies the supraspinatus and infraspinatus muscles.

Synonyms:

Supraventricular Tachycardia

A rapid rhythm (150-250 bpm) originating above the ventricles, characterized by narrow QRS complexes. Most common forms are AV nodal reentrant tachycardia (AVNRT) and AV reentrant tachycardia (AVRT). Episodes are typically paroxysmal with sudden onset and offset. Vagal maneuvers and adenosine are diagnostic and therapeutic.

Synonyms:

Surfactant

A phospholipid-protein complex produced by type II pneumocytes that reduces alveolar surface tension, preventing atelectasis. Deficiency causes respiratory distress syndrome in premature infants. Exogenous surfactant (beractant, poractant alfa) administered via endotracheal tube.

Synonyms:

Surgery

Treatment in which an operation is performed to diagnose, remove, repair, reconstruct, or otherwise treat a disease or injury.

Synonyms:

Surgical Drain

A device placed to remove blood, pus, bile, urine, lymph, or other fluid from a surgical site or body

cavity. Indications, output characteristics, duration, and removal criteria should be documented because drains can also cause infection, bleeding, or tissue injury.

Synonyms:

Surgical Hemostasis

Control of bleeding during an operation using pressure, ligation, sutures, clips, electrosurgery, topical agents, vessel sealing, or other techniques. Effective hemostasis requires identification of the bleeding source and correction of coagulopathy when present.

Synonyms:

Surgical Instruments

Instruments for surgery. Categories: cutting (scalpel, scissors), grasping (forceps, clamps), retraction, hemostasis (hemostat, electrocautery).

Synonyms:

Surgical Margin

The edge of tissue removed during an excision or resection, assessed microscopically for residual disease. A negative margin has no tumor at the examined edge; a positive margin indicates tumor extends to the inked or designated margin.

Synonyms:

Surgical Repair

An operation that restores or reconstructs damaged tissue, an organ, or an anatomic function.

Synonyms:

Surgical Risk Stratification

Estimation of the likelihood of perioperative complications using patient factors, urgency, procedure risk, functional capacity, and disease-specific assessment. It informs optimization, monitoring level, shared decisions, and postoperative planning but cannot eliminate uncertainty.

Synonyms:

Surgical Safety Checklist

A structured checklist used at defined points before anesthesia, before incision, and before leaving

the operating room to verify patient identity, procedure, site, consent, equipment, specimens, and team communication.

Synonyms:

Surgical Site Infection

Infection involving the incision, organ, or operative space within the surveillance period after surgery. It may be superficial incisional, deep incisional, or organ-space and requires appropriate culture, antimicrobial therapy, drainage, debridement, or reoperation when indicated.

Synonyms:

Surgical Time-Out

A deliberate team pause immediately before incision to verify patient identity, procedure, site, consent, allergies, antibiotics, imaging, implants, equipment, and anticipated critical events. It is a core surgical-safety intervention.

Synonyms:

Surgical Wound Classification

Categorization of an operative wound as clean, clean-contaminated, contaminated, or dirty/infected according to the degree of microbial exposure and existing infection. The class helps estimate surgical-site infection risk and guide prophylaxis.

Synonyms:

Surrogate Decision-Maker

A person authorized to make healthcare decisions for someone who lacks decision-making capacity, guided by the person's known values and preferences.

Synonyms:

Surveillance

Systematic collection, analysis, interpretation of health data. Types: passive (reporting), active (proactive case finding), sentinel (selected sites).

Synonyms:

Surveillance Imaging

Repeat imaging to detect recurrence. Protocol varies by cancer type, stage, treatment.

Synonyms:

Survival

Length of life after diagnosis or event. In elderly, consider comorbidities, functional status, preferences. Life expectancy estimates based on age, sex, health status. Shared decision-making essential.

Synonyms:

Survival Rate

Percentage of patients surviving for specified time after diagnosis. 5-year survival commonly used.

Synonyms:

Survivorship

Care for cancer survivors. Addresses late effects, surveillance, quality of life.

Synonyms:

Survivorship Care Plan

Document summarizing treatment, follow-up, late effects. Provided to cancer survivors.

Synonyms:

Susac Syndrome

An autoimmune microangiopathy affecting the brain, retina, and inner ear. The characteristic triad is encephalopathy, branch retinal-artery occlusions, and sensorineural hearing loss, though all features may not be present initially.

Synonyms:

Susceptibility Testing

Laboratory tests determining the sensitivity of a bacterial isolate to antimicrobials to guide therapy. Methods: disk diffusion (Kirby-Bauer—zone sizes), broth dilution (MIC—minimum inhibitory concentration, MBC—minimum bactericidal concentration), E-test (gradient strips), and automated systems (VITEK).

Synonyms:

Suspected Cause

A condition or factor believed to explain a disease or symptom but not yet confirmed.

Synonyms:

Suspension

A pharmaceutical formulation in which fine solid drug particles are dispersed (not dissolved) in a liquid vehicle, often with suspending agents and stabilizers. Suspensions are used when a drug is poorly soluble, for oral (antibiotic suspensions, antacids), topical, ophthalmic, and parenteral (depot) administration.

Synonyms:

Suture

A thread or strand of material used to approximate tissues (bring wound edges together) and hold them in place until healing occurs.

Synonyms:

Suture (Perineal)

A thread or strand of material used to approximate tissues (bring wound edges together) and hold them in place until healing occurs. See Suture.

Synonyms: Perineal

Suture Anchor

A small implant that secures a tendon, ligament, or other soft tissue to bone. It may be made from metal, polymer, or bioabsorbable material and can fail through pullout, breakage, migration, or inflammatory reaction.

Synonyms:

SUV

Standardized uptake value, a semiquantitative measure of radiotracer concentration used mainly in PET imaging.

Synonyms:

SVC Syndrome

Obstruction of the superior vena cava causing facial swelling, plethora, and distended neck veins. Commonly from lung cancer (SCLC, squamous) and lymphoma. Oncologic emergency.

Synonyms:

Swallow Study

X-ray imaging of swallowing using barium. Evaluates dysphagia, aspiration, structural abnormalities.

Synonyms:

Swallowing

Difficulty swallowing, classified as oropharyngeal (difficulty initiating a swallow, choking, coughing, nasal regurgitation) or esophageal (sensation of food sticking retrosternally). See dysphagia.

Synonyms:

Swallowing Assessment

Clinical and, when indicated, instrumental evaluation of oral, pharyngeal, and esophageal swallowing to identify dysphagia, aspiration, and appropriate food or liquid consistency. Videofluoroscopic or endoscopic studies may be required when bedside assessment is insufficient.

Synonyms:

Swallowing Therapy

Assessment and treatment to improve the safety and efficiency of swallowing and reduce aspiration risk.

Synonyms:

Sweat Chloride Test

A test that measures chloride concentration in sweat after pilocarpine stimulation. It is an important diagnostic test for cystic fibrosis, but results must be interpreted with the clinical findings and, when needed, genetic or other testing. Some illnesses and technical factors can produce misleading results.

Synonyms:

Sweat Gland

A skin gland that produces sweat, which contributes mainly to temperature regulation and skin surface function.

Synonyms:

Sweating

Sweating concerns sweating; its medical significance is established from the defining features, setting, as-

sociated findings, and clinical question. controlled by sympathetic cholinergic innervation (in contrast to the catecholaminergic sympathetic response elsewhere).

Synonyms:

Sweet Syndrome

An inflammatory skin disorder characterized by sudden fever and tender red or violaceous plaques or nodules containing many neutrophils. It may be associated with infection, medicines, inflammatory disease, or cancer.

Synonyms:

Sweet's syndrome

Acute febrile neutrophilic dermatosis, characterized by fever, neutrophilia, and painful, erythematous plaques or nodules on the skin, histologically showing dense neutrophilic infiltration of the dermis. It may be idiopathic, drug-induced, or associated with malignancy, particularly hematological cancers.

Synonyms:

Swine Flu

A contagious respiratory illness caused by influenza A or B viruses, characterized by sudden onset of fever, myalgia, headache, malaise, nonproductive cough, sore throat, and nasal congestion. See Influenza.

Synonyms:

Swollen Ankles and Swollen Feet

Enlargement of the ankles or feet caused by injury, venous insufficiency, lymphatic disease, medication, pregnancy, or systemic fluid retention from heart, kidney, or liver disease. Sudden one-sided swelling with pain, redness, warmth, or breathlessness may indicate thrombosis or infection and requires urgent assessment.

Synonyms:

Symblepharon

Adhesion of the palpebral conjunctiva (inner eyelid) to the bulbar conjunctiva or cornea, most commonly resulting from chemical burns, Stevens-Johnson syn-

drome, ocular cicatricial pemphigoid, or repeated surgical intervention. It restricts eye movement and may require surgical lysis with amniotic membrane or mucous membrane grafting.

Synonyms:

Sympathetic Nervous System

The division of the autonomic nervous system responsible for the 'fight or flight' response, preparing the body for intense physical activity or stress. Sympathetic preganglionic neurons originate in the intermediolateral column of the spinal cord gray matter (T1–L2), making it the thoracolumbar system.

Synonyms:

Sympatholytic

An agent that blocks the sympathetic nervous system, used to treat hypertension, sympathetic overactivity, and catecholamine excess. Classes: beta-blockers (propranolol, metoprolol), alpha-blockers (prazosin, doxazosin, phenoxybenzamine), centrally acting agents (clonidine, methyldopa), and neuron blockers (reserpine, guanethidine).

Synonyms:

Symptom

Subjective experience of disease. Examples: pain, fatigue, nausea. Reported by patient.

Synonyms:

Synapse

The specialized junction between a neuron and another neuron (or effector cell—muscle, gland) where information is transmitted from one cell to another.

Synonyms:

Synaptic Plasticity

Activity-dependent change in the strength or structure of synaptic transmission. Long-term potentiation and long-term depression are important cellular mechanisms underlying learning, memory, adaptation, and some forms of chronic pain.

Synonyms:

Synaptic Transmission

The fundamental process by which neurons communicate with each other through specialized junctions called synapses.

Synonyms:

Syncope

A transient loss of consciousness caused by temporary global cerebral hypoperfusion. See Fainting.

Synonyms:

Syncope (Fainting)

A transient loss of consciousness caused by temporary global cerebral hypoperfusion. See Fainting.

Synonyms: Fainting

Syndactyly

A congenital connection of two or more adjacent digits by skin, and sometimes by bone or other tissues. It may occur alone or as part of a genetic syndrome; treatment depends on function, anatomy, and associated abnormalities.

Synonyms:

Syndrome

Group of symptoms and signs occurring together. Examples: metabolic syndrome, irritable bowel syndrome.

Synonyms:

Syndrome of inappropriate ADH secretion

Excessive antidiuretic hormone activity causing eu-volemic hyponatremia with inappropriately concentrated urine and elevated urinary sodium.

Synonyms:

Syndrome Surveillance

The public health monitoring of pre-diagnostic clinical indicators (symptoms, syndromes—fever, rash, GI illness, influenza-like illness) in real time to detect outbreaks, bioterrorism, or emerging infections earlier than laboratory confirmation.

Synonyms:

Syndromic Surveillance

Monitoring of symptoms, clinical encounters, laboratory requests, or other near-real-time signals before definitive diagnoses are available. It supports early detection of outbreaks and public-health threats but may have lower specificity.

Synonyms:

Synovial chondromatosis

A benign, metaplastic condition characterized by the formation of multiple cartilaginous loose bodies within joint synovium, bursae, or tendon sheaths. It presents with joint pain, swelling, locking, and restricted range of motion, most commonly affecting the knee, hip, and elbow.

Synonyms:

Synovial Fluid Analysis

Laboratory examination of aspirated joint fluid for appearance, viscosity, leukocyte count and differential, crystals under polarized light, Gram stain, and culture. It helps distinguish noninflammatory, inflammatory, crystal-associated, and septic arthritis.

Synonyms:

Synovial Sarcoma

A soft tissue sarcoma typically arising near joints of the extremities in young adults, characterized by the t(X;18) chromosomal translocation.

Synonyms:

Synovitis

Inflammation of the synovial membrane lining a joint, causing swelling, pain, warmth, and joint effusion. Causes: inflammatory arthritis (RA, psoriatic, gout, reactive, septic), autoimmune (SLE), and trauma/overuse.

Synonyms:

Synovium

The inner layer of the joint capsule in synovial joints, composed of synovial lining cells (type A macrophage-like, type B fibroblast-like) on a vascularized connective tissue base. Produces synovial fluid (hyaluronic acid, lubricin, proteinases) for lu-

brication and chondrocyte nutrition.

Synonyms:

Synovography

Contrast imaging of joint cavity. Evaluates synovial pathology.

Synonyms:

Synthesis Module

Automated system for radiopharmaceutical preparation. PET tracer synthesis: FDG, Florbetapir. Quality control: radiochemical purity, pH, sterility.

Synonyms:

Syphilis

Syphilis concerns syphilis; its medical significance is established from the defining features, setting, associated findings, and clinical question. latent, and tertiary stages, although the stages can overlap or be unrecognized. Diagnosis uses clinical assessment and serologic testing. Treatment depends on the stage and site of infection; penicillin is used in many cases.

Synonyms:

Syphilitic alopecia

Non-scarring hair loss occurring as a manifestation of secondary syphilis, presenting with diffuse thinning or patchy, moth-eaten alopecia of the scalp, eyebrows, or beard. It is thought to result from direct spirochaetal invasion of hair follicles during the spirochaetaemic phase.

Synonyms:

Syphilitic gumma

A destructive, granulomatous lesion occurring in tertiary syphilis, characterized by a center of necrotic tissue surrounded by plasma cells, lymphocytes, and fibroblasts. Gummas may affect any organ, most commonly the skin, bones, liver, and central nervous system. They present as painless, firm nodules that may ulcerate.

Synonyms:

Syringe

Cylindrical device for injecting or withdrawing fluids. Components: barrel, plunger, luer lock. Various sizes: 1 mL to 60 mL.

Synonyms:

Syringomyelia

Syringomyelia is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. spinal cord, which can expand and elongate over time, compressing and destroying the surrounding spinal cord tissue.

Synonyms:

Syrinx

A syrinx is a fluid-filled cavity within the spinal cord, typically containing cerebrospinal fluid or a similar fluid, that develops as a result of abnormal CSF flow dynamics within the spinal cord. Syringomyelia: a syrinx in the central spinal cord. Hydromyelia: dilation of the central canal.

Synonyms:

Systematic Review

Comprehensive summary of research on specific question. Uses explicit methods to minimize bias. Cochrane reviews example.

Synonyms:

Systemic Antifungals

Antifungal medicines taken orally or given intravenously for infections that are extensive, invasive, refractory, or unsuitable for topical treatment. Choice and duration depend on the organism, site, severity, drug interactions, organ function, and local resistance patterns.

Synonyms:

Systemic Effects

Whole-body effects of toxins. Cardiac, neurological, renal, hepatic, hematological.

Synonyms:

Systemic Inflammatory Response Syndrome

A systemic inflammatory response that may occur with infection, trauma, burns, pancreatitis, surgery, or other insults. It can involve abnormal temperature, heart rate, respiratory rate, or white-cell count. Modern sepsis assessment uses broader clinical criteria rather than SIRS alone.

Synonyms:

Systemic Juvenile Idiopathic Arthritis

A subtype of juvenile idiopathic arthritis with prominent systemic inflammation—daily spiking fevers, evanescent salmon-pink rash, arthritis, lymphadenopathy, hepatosplenomegaly, and elevated inflammatory markers (ferritin).

Synonyms:

Systemic Lupus Erythematosus

Multisystem autoimmune disease, more common in women. Features: malar rash, photosensitivity, oral ulcers, arthritis, serositis, renal disorder, neurologic disorder, hematologic disorder, immunologic disorder. Diagnosis: ANA positive plus clinical/immunologic criteria.

Synonyms:

Systemic Sclerosis

Systemic sclerosis, also known as scleroderma, is a chronic autoimmune disease characterized by progressive fibrosis of the skin and internal organs, vasculopathy, and immune dysfunction.

Synonyms: scleroderma, is a chronic autoimmune disease.

Systemic Therapy

Treatment that reaches the whole body, including chemotherapy, endocrine therapy, targeted therapy, and immunotherapy, as opposed to local therapies such as surgery and radiation.

Synonyms:

Systemic Vascular Resistance

The resistance to blood flow offered by the systemic circulation, determined mainly by arteriolar tone.

It is calculated from the pressure gradient across the systemic circulation and cardiac output and is a major determinant of arterial pressure.

Synonyms:

Systolic Murmurs

Murmurs occurring between S1 and S2. Ejection systolic murmurs (crescendo-decrescendo) are caused by flow across semilunar valves (aortic stenosis, pulmonary stenosis) or increased flow across normal valves.

Synonyms:

Sézary Syndrome

The leukemic variant of cutaneous T-cell lymphoma, characterized by erythroderma, lymphadenopathy, pruritus, and circulating atypical lymphocytes (Sézary cells).

Synonyms:

Sclerosing Peritonitis

Thickening and scarring of the peritoneum that can restrict movement of the intestines.

Synonyms:

Scheuermann's Disease

A condition in adolescents that causes abnormal rounding of the upper back because of vertebral growth changes.

Synonyms:

Sjogren's Syndrome

An autoimmune disease that commonly causes dry eyes and dry mouth by damaging tear- and saliva-producing glands.

Synonyms:

Staghorn Calculi

Large branching kidney stones that fill part or all of the renal collecting system.

Synonyms:

Sunstroke

A life-threatening form of heat illness in which body

temperature rises dangerously high and the nervous system is impaired.

Synonyms:

Systemic Mastocytosis

A disorder in which excessive mast cells accumulate in one or more organs and release inflammatory chemicals.

Synonyms:

Semi-Fowler Position

A semiupright position in which the head and upper body are elevated about 30 to 45 degrees.

Synonyms:

Sitting Position

An upright or semiupright position in which the patient's torso is elevated and the hips and knees are flexed; it is used for selected shoulder and neurosurgical procedures.

Synonyms:

Supine Position

A position in which the patient lies on the back with the face upward; it is the most commonly used surgical position.

Synonyms:

Sacral Dimple

A small indentation in the skin over the lower spine that is present at birth.

Synonyms:

Salmonella Infection

An intestinal infection caused by *Salmonella* bacteria, usually acquired through contaminated food or water.

Synonyms:

Schwannomatosis

A disorder in which multiple schwannomas, tumors of nerve-sheath cells, develop.

Synonyms:

Sclerosing Mesenteritis

A rare inflammatory and fibrotic disorder affecting the mesentery, the tissue supporting the intestines.

Synonyms:

Scorpion Sting

A venomous injury caused by a scorpion, producing local pain and sometimes systemic toxicity.

Synonyms:

Scrotal Masses

Abnormal lumps or swellings in the tissues of the scrotum.

Synonyms:

Sebaceous Carcinoma

An uncommon skin cancer arising from oil-producing sebaceous glands.

Synonyms:

Secondary Hypertension

High blood pressure caused by another medical condition or by a medication.

Synonyms:

Selective IgA Deficiency

An immune disorder characterized by very low or absent immunoglobulin A levels.

Synonyms:

Sex Headaches

Headaches triggered by sexual activity, including orgasm.

Synonyms:

Sexually Transmitted Diseases

Infections transmitted primarily through sexual contact; also called sexually transmitted infections.

Synonyms: sexually transmitted infections.

Sezary Syndrome

An uncommon form of cutaneous T-cell lymphoma involving widespread red skin and abnormal lymphocytes in the blood.

Synonyms:

Sinus Rhythm

The normal heart rhythm generated by electrical impulses from the sinoatrial node.

Synonyms:

Suppuration

Formation or discharge of pus during an inflammatory or infectious process.

Synonyms:

Surgical Drill

A powered instrument used to cut, shape, or bore bone during surgery.

Synonyms:

Surgical Stapler

A device that places metal or absorbable staples to close skin, tissue, or a hollow organ.

Synonyms:

Schwann Cells

Glial cells of the peripheral nervous system that form myelin around many axons and support the repair and maintenance of peripheral nerves.

Synonyms:

Scintigraphy

Nuclear medicine imaging in which a radiotracer is administered and its distribution is recorded to evaluate the structure or function of an organ.

Synonyms:

Senile Lentigines

Flat, sharply defined brown or tan spots caused by chronic ultraviolet exposure, commonly appearing on sun-exposed skin with age.

Synonyms:

Sensory Neuron

A nerve cell that carries information from sensory receptors toward the central nervous system.

Synonyms:

Sensory Receptors

Specialized cells or nerve endings that detect stimuli such as touch, temperature, pain, light, sound, or chemical changes.

Synonyms:

Sentinel Node Biopsy

Removal and examination of the first lymph node or nodes to which a tumor is likely to spread, used to assess regional metastasis.

Synonyms:

Septal Defect

An abnormal opening in the septum between the heart's chambers that permits blood to pass between the right and left sides of the heart.

Synonyms:

Seroconversion

The development of detectable antibodies in the blood after infection, vaccination, or another immune stimulus.

Synonyms:

Sella Turcica

A saddle-shaped depression in the sphenoid bone that houses the pituitary gland.

Synonyms:

Semilunar Valves

The aortic and pulmonary valves, which open during ventricular contraction and close during ventricular relaxation to prevent backflow into the ventricles.

Synonyms:

Single-Photon Emission Computed Tomography

A nuclear medicine imaging technique that detects gamma rays from an injected radiotracer to create cross-sectional images of organ function and blood flow.

Synonyms:

Simmonds Disease

An uncommon form of hypopituitarism caused by inadequate pituitary hormone production, often resulting in fatigue, weight loss, low blood pressure, and impaired endocrine function.

Synonyms:

Skin Turgor

The skin's ability to return to its normal position after being gently pinched. Reduced turgor may occur with dehydration, although it is less reliable in older adults.

Synonyms:

Slit-Lamp Biomicroscope

An instrument that provides a magnified, illuminated view of the eye, especially the cornea, anterior chamber, iris, lens, and conjunctiva.

Synonyms:

Snellen Chart

An eye chart used to measure distance visual acuity by testing the smallest line of letters a person can identify at a standard distance.

Synonyms:

Somatoform Disorders

A former term for disorders involving prominent physical symptoms or health concerns associated with significant psychological distress. Current classifications use more specific diagnoses, such as somatic symptom disorder.

Synonyms:

Somatotropin

Growth hormone, a pituitary hormone that promotes growth and influences protein, fat, and carbohydrate metabolism.

Synonyms:

Somnambulism

Sleepwalking; a parasomnia involving complex behaviors that arise during partial arousal from non-rapid-eye-movement sleep.

Synonyms:

Sound

A mechanical wave produced by vibration and transmitted through a medium. Hearing depends on its frequency, intensity, and processing by the auditory system.

Synonyms:

Spermatic Cord

A bundle extending from the abdomen to the testis that contains the vas deferens, testicular vessels, lymphatic vessels, nerves, and associated connective tissue.

Synonyms:

Spermatozoa

Mature male reproductive cells, commonly called sperm, that carry genetic material and can fertilize an oocyte.

Synonyms: sperm, that carry genetic material and can fertilize an oocyte.

Spermatozoon

A single mature male reproductive cell, or sperm cell.

Synonyms:

Sphincter of Oddi

A muscular valve controlling the flow of bile and pancreatic secretions into the duodenum.

Synonyms:

Spinal Cavity

The posterior body cavity formed by the vertebral column that contains and protects the spinal cord.

Synonyms:

Spiral Organ

The organ of Corti, a sensory structure in the cochlea containing hair cells that convert sound vibrations into nerve signals.

Synonyms:

Spirogram

A graphical record of air volumes and flow during

pulmonary function testing.

Synonyms:

Spirometer

An instrument that measures the volume and flow of air inhaled and exhaled during pulmonary function testing.

Synonyms:

Splenic Flexure

The bend of the colon where the transverse colon becomes the descending colon, near the spleen.

Synonyms:

Split-Thickness Skin Graft

A graft containing the epidermis and part of the dermis, used to cover wounds or burns and allowing the donor site to heal from remaining skin structures.

Synonyms:

Spondee

A two-syllable test word with equal emphasis on both syllables, used in speech audiometry.

Synonyms:

Spondylolysis

A stress fracture or defect in the pars interarticularis of a vertebral arch, most often in the lower lumbar spine.

Synonyms:

Spondylosis

Degenerative changes of the spine, including disc degeneration and bony overgrowth, commonly associated with aging.

Synonyms:

Staging

Assessment of the extent of cancer, including the size of the primary tumor, lymph-node involvement, and distant metastases.

Synonyms:

Stapedius

A small middle-ear muscle that helps limit movement of the stapes and may protect the inner ear from loud sounds.

Synonyms:

Stapling

Closure or joining of tissue with surgical staples.

Synonyms:

Stasis

Slowing or stopping of the normal flow of a body fluid, such as blood, lymph, or urine.

Synonyms:

Sterility

The inability to reproduce. In clinical use, the term may refer to infertility or to the absence of viable microorganisms, depending on context.

Synonyms:

Steroid Hormones

Lipid-soluble hormones derived from cholesterol, including cortisol, aldosterone, estrogen, progesterone, and testosterone.

Synonyms:

Stimulants

Stimulants concerns stimulants; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Stress Incontinence

Involuntary leakage of urine during activities that increase intra-abdominal pressure, such as coughing, sneezing, lifting, or exercise.

Synonyms:

Stress Injuries

Tissue injuries caused by repeated loading or overuse without sufficient recovery. Examples include stress fractures, tendinopathy, and muscle strain.

Synonyms:

Stress Tests

Diagnostic tests that assess organ function under controlled physical, pharmacologic, or physiologic stress, commonly evaluating the heart for inducible ischemia or abnormal rhythm.

Synonyms:

Striae Atrophicae

Linear bands of thin, wrinkled skin caused by stretching and disruption of dermal connective tissue; commonly called stretch marks.

Synonyms: stretch marks.

Student's Elbow

Olecranon bursitis, an inflammation of the bursa over the point of the elbow, often related to repeated pressure or trauma.

Synonyms:

Subacute Bacterial Endocarditis

A slowly progressive infection of the endocardium or heart valves, usually caused by less-virulent bacteria and often involving previously abnormal valves.

Synonyms:

Subcutaneous Layer

The layer of tissue beneath the dermis, composed mainly of fat and connective tissue. It insulates the body, stores energy, and contains larger vessels and nerves.

Synonyms:

Subluxation

A partial loss of normal contact between the articular surfaces of a joint.

Synonyms:

Surgical Fixation

Stabilization of a bone, joint, or other structure with devices such as plates, screws, rods, wires, or external frames.

Synonyms:

Swan-Ganz Catheter

A pulmonary artery catheter used to measure pressures in the right heart and pulmonary artery and, when indicated, estimate cardiac output and pulmonary capillary wedge pressure.

Synonyms:

Sympathectomy

Surgical interruption or destruction of sympathetic nerves to reduce abnormal vasoconstriction, sweating, or pain in selected conditions.

Synonyms:

Symphysis

A cartilaginous joint in which two bones are united by fibrocartilage, such as the pubic symphysis.

Synonyms:

Symphysis Pubis

The fibrocartilaginous joint connecting the left and right pubic bones at the front of the pelvis.

Synonyms:

Synechia

An abnormal adhesion between adjacent tissues, especially between parts of the iris or between the iris and the lens or cornea.

Synonyms:

Synergist

A muscle that assists the prime mover during a movement or helps stabilize a joint.

Synonyms:

Synovial Fluid

A viscous fluid within a synovial joint that lubricates articular surfaces and helps nourish cartilage.

Synonyms:

Synovial Joint

A freely movable joint in which the articulating bones are separated by a fluid-filled joint cavity enclosed by a capsule.

Synonyms:

Systemic Circuit

The circulation that carries oxygenated blood from the left ventricle through the body and returns deoxygenated blood to the right atrium.

Synonyms:

Systole

The phase of the cardiac cycle during which the ventricles contract and eject blood into the pulmonary artery and aorta.

Synonyms:

Suprapubic

Located above or immediately behind the pubic bone, especially in reference to the lower abdominal or urinary-bladder region.

Synonyms:

Salter-Harris Fracture

A fracture involving the growth plate of a child or adolescent. Types I through V describe progressively different patterns and risks to bone growth.

Synonyms:

Sternotomy

Surgical division of the sternum, usually along the midline, to provide access to the heart or mediastinal structures.

Synonyms:

Telangiectasia

A visible, permanent dilation of small superficial blood vessels, appearing as fine red lines or web-like marks on the skin or mucous membranes.

Synonyms:

Serrated Polyposis Syndrome

A disorder characterized by multiple serrated lesions or polyps in the colon and an increased risk of colorectal cancer, requiring colonoscopic surveillance and removal of significant lesions.

Synonyms:

Staphylococcal Scalded Skin Syndrome

A toxin-mediated skin disorder caused by *Staphylococcus aureus*, usually affecting infants or young children and producing widespread superficial blistering and peeling of the skin.

Synonyms:

Stent Restenosis

Re-narrowing of a blood vessel within or adjacent to a previously placed stent, usually caused by tissue growth, recurrent atherosclerosis, or thrombosis.

Synonyms:

Sinus Tachycardia

A heart rhythm originating in the sinoatrial node with a rate faster than normal, commonly occurring as a physiologic response to exercise, fever, pain, dehydration, or stress.

Synonyms:

Status Migrainosus

A severe migraine attack that persists for more than 72 hours and may require urgent medical treatment, especially when dehydration, vomiting, or medication overuse is present.

Synonyms:

Subclinical Hypothyroidism

A condition with an elevated thyroid-stimulating hormone level and normal circulating free thyroid-hormone levels, often without symptoms or with only mild nonspecific symptoms.

Synonyms:

Syndrome of Inappropriate Antidiuretic Hormone

Excessive release or effect of antidiuretic hormone causing impaired free-water excretion, low serum sodium, and inappropriately concentrated urine in the absence of an appropriate physiologic stimulus.

Synonyms:

Sclerotherapy

A treatment in which an irritating or closing agent is injected into a blood vessel or body cavity to

make it scar and seal, commonly used for varicose veins and selected vascular lesions.

Synonyms:

Septum

A wall or partition separating two spaces, such as the nasal septum between the nasal cavities or the cardiac septum between heart chambers.

Synonyms:

Serum

The clear, liquid part of blood that remains after clotting and contains water, electrolytes, proteins, hormones, antibodies, and other dissolved substances.

Synonyms:

Sleep Apnoea

Repeated pauses or reductions in breathing during sleep, most commonly because of upper-airway obstruction or less commonly inadequate respiratory drive.

Synonyms:

Snoring

A noisy vibration of tissues in the upper airway during sleep, sometimes associated with obstructive sleep apnoea.

Synonyms:

Smoking

Inhaling smoke from burning tobacco or other substances; it is a major cause of cardiovascular disease, chronic lung disease, cancer, and pregnancy complications.

Synonyms:

Steatorrhoea

Excess fat in the stool, producing pale, bulky, greasy, foul-smelling stools that may be difficult to flush and indicate fat malabsorption.

Synonyms:

Strangulated Hernia

A hernia in which the blood supply to the trapped tissue is cut off, causing ischaemia and possible tissue death; it is a surgical emergency.

Synonyms:

Subarachnoid Haemorrhage

Bleeding into the space between the arachnoid membrane and pia mater around the brain, classically causing a sudden severe thunderclap headache.

Synonyms:

Subdural Haematoma

Accumulation of blood between the dura mater and arachnoid membrane, usually caused by tearing of bridging veins after head injury and sometimes developing gradually.

Synonyms:

s phase

s phase is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sabarubicin

sabarubicin concerns sabarubicin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

saccade

saccade is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

saccharomyces

saccharomyces is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

saccharomyces cerevisiae

saccharomyces cerevisiae is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

saccular aneurysm

saccular aneurysm is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sacral fistula

sacral fistula is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sacral region

sacral region is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sacral vertebra

sacral vertebra is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sacroccygeal teratoma

sacroccygeal teratoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sad mood

sad mood is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

s-adenosylmethionine

s-adenosylmethionine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

safety

safety is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

safety study

safety study is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

safflower oil

safflower oil is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

safingol

safingol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

safrole

safrole is a medical condition or clinical finding

involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sagopilone

sagopilone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

salicylic acid

salicylic acid denotes salicylic acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

salivary gland neoplasm

salivary gland neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

salmonella arizonae

salmonella arizonae identifies salmonella arizonae, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

salmonella choleraesuis

salmonella choleraesuis identifies salmonella choleraesuis, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

salmonella enterica

salmonella enterica identifies salmonella enterica, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

salmonella gallinarum

salmonella gallinarum identifies salmonella gallinarum, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

salmonella pullorum

salmonella pullorum identifies salmonella pullorum, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

salmonella typhi

salmonella typhi identifies salmonella typhi, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

salmonella typhimurium

salmonella typhimurium identifies salmonella typhimurium, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

salmonella typhisuis

salmonella typhisuis identifies salmonella typhisuis, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

salmonella vaccines

salmonella vaccines identifies salmonella vaccines, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

salt

salt is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

salt gland

salt gland is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sample fixation

sample fixation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sample size

sample size is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sanitation

sanitation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sapovirus

sapovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

sapporo virus

sapporo virus is a virus or viral group classified by its genetic and biologic features. Clinical importance

depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

sapropterin

sapropterin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

saquinavir

saquinavir concerns saquinavir, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

saquinavir mesylate

saquinavir mesylate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

saracatinib

saracatinib concerns saracatinib, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

saralasin

saralasin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sarcocystis

sarcocystis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sarcocystis hominis

sarcocystis hominis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sarcocystis sui hominis

sarcocystis sui hominis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sarcocystosis

sarcocystosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sarcoglycan complex

sarcoglycan complex is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sarcomere

sarcomere is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sarcoplasm

sarcoplasm is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sarcoplasmic reticulum

sarcoplasmic reticulum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sarcosine

sarcosine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sarcosinemia

sarcosinemia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sardomozide

sardomozide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sargramostim

sargramostim is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

SARS virus

SARS virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

satellite DNA

satellite DNA denotes satellite dna, a biological

component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

satellite virus

satellite virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

satiation

satiation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

satisfaction

satisfaction is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

satraplatin

satraplatin concerns satraplatin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

saturated phytosterol

saturated phytosterol concerns saturated phytosterol, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

saxitoxin

saxitoxin describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

scab

scab is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

scaffold seeding

scaffold seeding is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

scalp

scalp is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

scan gallium

scan gallium is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat scan gallium.

Synonyms:

scanning

scanning is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat scanning.

Synonyms:

scanning electron microscopy

scanning electron microscopy is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat scanning electron microscopy.

Synonyms:

scaphoid abdomen

scaphoid abdomen is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

scaphoid bone

scaphoid bone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

scaphycephaly

scaphycephaly is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

scar

scar is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

scavenger receptor

scavenger receptor denotes scavenger receptor, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

scedosporium

scedosporium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

scedosporium apiospermum

scedosporium apiospermum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

scedosporium prolifican

scedosporium prolifican is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

schaalia radingae

schaalia radingae is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

schaalia turicensis

schaalia turicensis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

scheduled notification

scheduled notification is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

schiff base

schiff base is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Schiller test

Schiller test is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat schiller test.

Synonyms:

schistocyte count

schistocyte count is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

schistosoma

schistosoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

schistosoma intercalatum

schistosoma intercalatum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

scolecobasidium terreum

scolecobasidium terreum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

scopolamine

scopolamine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

scopolamine hydrobromide

scopolamine hydrobromide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

scopoletin

scopoletin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

scopulariopsis

scopulariopsis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

scrapie

scrapie is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

screening procedure

screening procedure is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat screening procedure.

Synonyms:

screening study

screening study is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat screening study.

Synonyms:

sea-blue histiocyte

sea-blue histiocyte is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sebaceous adenoma

sebaceous adenoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sebaceous gland carcinoma

sebaceous gland carcinoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

sebum

sebum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

secondary amenorrhea

secondary amenorrhea is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

secondary hypothyroidism

secondary hypothyroidism is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

secondary metabolism

secondary metabolism is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

second-look surgery

second-look surgery is used in relation to second-look surgery during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

sign language

sign language is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

signal peptide

signal peptide is a defined chemical or biologic substance involved in signal peptide and studied in physiology, pharmacology, laboratory medicine, or treatment.

Synonyms:

sildenafil citrate

sildenafil citrate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

silent mutation

silent mutation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

silicate

silicate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

silicon dioxide

silicon dioxide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

silicone

silicone is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

silicone elastomer

silicone elastomer is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

silk

silk is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

siltuximab

siltuximab concerns siltuximab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

silver

silver is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

silver nitrate

silver nitrate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

silver sulfadiazine

silver sulfadiazine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

silymarin

silymarin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

simeprevir

simeprevir concerns simeprevir, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

simethicone

simethicone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

simian virus 40

simian virus 40 is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

simple mastectomy

simple mastectomy is used in relation to simple mastectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

simplexvirus

simplexvirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

simuliidae

simuliidae is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

simultanagnosia

simultanagnosia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

simvastatin

simvastatin concerns simvastatin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

sincalide

sincalide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sindbis virus

sindbis virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

sinecatechins

sinecatechins is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

singlet oxygen

singlet oxygen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sinuatrial node

sinuatrial node is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sinus

sinus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sinus arrhythmia

sinus arrhythmia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sinus bradycardia

sinus bradycardia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sinus histiocytosis

sinus histiocytosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sinusoid

sinusoid is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

siplizumab

siplizumab concerns siplizumab, a pharmacologic or chemical agent; clinical use depends on its mech-

anism, indication, dose, interactions, and adverse effects.

Synonyms:

sipuleucel-T

sipuleucel-T is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sirolimus

sirolimus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sisomicin

sisomicin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sitagliptin phosphate

sitagliptin phosphate concerns sitagliptin phosphate, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

site-directed mutagenesis

site-directed mutagenesis denotes site-directed mutagenesis, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

sitosterols

sitosterols is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

situs ambiguus

situs ambiguus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

size perception

size perception is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sizofiran

sizofiran is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

skeletal development

skeletal development is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

skeletal dysplasia

skeletal dysplasia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

skeletal muscle tissue

skeletal muscle tissue is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

skeletal myocytes

skeletal myocytes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

skeletal system

skeletal system is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

skeleton

skeleton is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

skin carcinoma

skin carcinoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

skin care

skin care is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

skin erosion

skin erosion is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

skin examination

skin examination is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

skin induration

skin induration is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

skin mastocytoma

skin mastocytoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

skin necrosis

skin necrosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

skin neoplasm

skin neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

spinal artery

spinal artery is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spinal block

spinal block is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spinal canal

spinal canal is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spinal cord disease

spinal cord disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

spinal cord neoplasms

spinal cord neoplasms describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

spinal disease

spinal disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

spinal fracture

spinal fracture describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

spinal ganglion

spinal ganglion is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spinal neoplasms

spinal neoplasms describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

spindle pole

spindle pole is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spindle pole body

spindle pole body is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spine injury

spine injury describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

spinocerebellar ataxia

spinocerebellar ataxia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spiral colon

spiral colon is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spiramycin

spiramycin concerns spiramycin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

spirillum

spirillum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spirillum minus

spirillum minus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spiritual support

spiritual support is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spirochaetaceae

spirochaetaceae identifies spirochaetaceae, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

spirochaetales infection

spirochaetales infection identifies spirochaetales infection, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

spitting

spitting is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

splanchnic nerve

splanchnic nerve is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spleen development

spleen development is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spleen disorder

spleen disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

spleen hemangioma

spleen hemangioma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

splenic abscess

splenic abscess is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

splenic infection

splenic infection describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

splenic neoplasm

splenic neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

spliceosome

spliceosome is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

split brain

split brain is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spondylarthritis

spondylarthritis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spondylitis

spondylitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sponge

sponge is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spontaneous abortion

spontaneous abortion is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spontaneous perforation

spontaneous perforation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sporothrix

sporothrix is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sporothrix schenckii

sporothrix schenckii is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sports medicine

sports medicine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spousal abuse

spousal abuse is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spouse

spouse is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spray drying

spray drying is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

spumavirus

spumavirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

squalamine lactate

squalamine lactate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

squalene

squalene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

square foot

square foot is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

square inch

square inch is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

square metres

square metres is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sscp analysis

sscp analysis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sweat

sweat is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

symbolism

symbolism is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

sympathetic ganglion

sympathetic ganglion is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

symptomatic

symptomatic describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant

complications.

Synonyms:

synapse assembly

synapse assembly is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

synapsins

synapsins is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

synaptic cleft

synaptic cleft is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

synaptic membrane

synaptic membrane is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

synaptic vesicle

synaptic vesicle is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

synaptonemal complex

synaptonemal complex is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

synaptophysin

synaptophysin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

synaptosome

synaptosome is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

synaptotagmin

synaptotagmin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

synarthrosis

synarthrosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

syncephalastrum

syncephalastrum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

synchrotron

synchrotron is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

syndecan

syndecan is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

synesthesia

synesthesia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

syngeneic

syngeneic denotes syngeneic, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

synovectomy

synovectomy is used in relation to synovectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

synovial bursa

synovial bursa is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

synovial cyst

synovial cyst is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

synovial membrane

synovial membrane is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

synoviocytes

synoviocytes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

syntax

syntax is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

synthesis

synthesis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

synthetic androgen

synthetic androgen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

syringoma

syringoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

syrup

syrup is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

systemic chemotherapy

systemic chemotherapy is used in relation to systemic chemotherapy during assessment, diagnosis,

treatment, monitoring, or patient support.

Synonyms:

systemic disease

systemic disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

systemic scleroderma

systemic scleroderma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

systemic venous

systemic venous is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

systolic pressure

systolic pressure is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

A

A is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

B

B is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

C

C is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

D

D is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

E

E is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

F

F is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

G

G is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

H

H is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

I

I is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

J

J is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

K

K is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

L

L is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

M

M is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

N

N is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

O

O is a medical condition or clinical finding involving the body system or process named by the term.

Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

P

P is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Q

Q is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

R

R is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

S

S is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

T

T is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

U

U is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

V

V is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

W

W is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

X

X is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Y

Y is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Z

Z is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Sarcoma, bone cancer

Alternate index label; see *Bone cancer*. **Synonyms:**

Sarcoma, soft tissue

Alternate index label; see *Soft tissue sarcoma*. **Synonyms:**

SBBO

Alternate index label; see *Small intestinal bacterial overgrowth (SIBO)*. **Synonyms:**

SCAD

Alternate index label; see *Spontaneous coronary artery dissection (SCAD)*. **Synonyms:**

Scalded mouth syndrome

Alternate index label; see *Burning mouth syndrome*. **Synonyms:**

Schizophrenia, adolescent

Alternate index label; see *Childhood schizophrenia*. **Synonyms:**

Schizophrenia, childhood

Alternate index label; see *Childhood schizophrenia*. **Synonyms:**

Schizophrenia, juvenile

Alternate index label; see *Childhood schizophrenia*. **Synonyms:**

SCI

Alternate index label; see *Spinal cord injury*. **Synonyms:**

Sclerosing cholangitis

Sclerosing cholangitis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. **Synonyms:**

Sclerosis, multiple

Alternate index label; see *Multiple sclerosis*. **Synonyms:**

Sclerosis, systemic

Alternate index label; see *Scleroderma*. **Synonyms:**

Seasonal allergy

Alternate index label; see *Hay fever*. **Synonyms:**

Sebaceous cysts

Alternate index label; see *Epidermoid cysts*. **Synonyms:**

Secondary brain cancer

Alternate index label; see *Brain metastases*. **Synonyms:**

SEID

Alternate index label; see *Myalgic encephalomyelitis/chronic fatigue syndrome (ME/CFS)*. **Synonyms:**

Seizure disorder

Alternate index label; see *Epilepsy*. **Synonyms:**

Seizure, absence

Alternate index label; see *Absence seizure*. **Synonyms:**

Seizure, febrile

Alternate index label; see *Febrile seizure*. **Synonyms:**

Seizure, grand mal

Alternate index label; see *Tonic-clonic (grand mal) seizure*. **Synonyms:**

Seizure, petit mal

Alternate index label; see *Absence seizure*. **Synonyms:**

Seizure, temporal lobe

Alternate index label; see *Temporal lobe seizure*. **Synonyms:**

Self harming

Alternate index label; see *Self-injury/cutting*. **Synonyms:**

Septal defect, atrioventricular

Alternate index label; see *Atrioventricular canal defect*. **Synonyms:**

Septal defect, ventricular

Alternate index label; see *Ventricular septal defect (VSD)*. **Synonyms:**

Severe brain injury, coma

Alternate index label; see *Coma*. **Synonyms:**

Sexual dysfunction, female

Alternate index label; see *Female sexual dysfunction*.

Synonyms:

Sexual obsession

Alternate index label; see *Compulsive sexual behavior*. **Synonyms:**

Sezary disease

Alternate index label; see *Sezary syndrome*. **Synonyms:**

Shy-Drager syndrome

Alternate index label; see *Multiple system atrophy*.

Synonyms:

SIBO

Alternate index label; see *Small intestinal bacterial overgrowth (SIBO)*. **Synonyms:**

Sin Nombre virus infection

Alternate index label; see *Hantavirus pulmonary syndrome*. **Synonyms:**

Sinusitis, acute

Alternate index label; see *Acute sinusitis*. **Synonyms:**

Sinusitis, chronic

Alternate index label; see *Chronic sinusitis*. **Synonyms:**

SJS

Alternate index label; see *Stevens-Johnson syndrome*. **Synonyms:**

Skin cancer, melanoma

Alternate index label; see *Melanoma*. **Synonyms:**

Skin writing

Alternate index label; see *Dermatographia (Der-*

matographism). **Synonyms:**

Skin, itchy

Alternate index label; see *Itchy skin (pruritus)*. **Synonyms:**

Skipped heartbeats

Alternate index label; see *Heart palpitations*. **Synonyms:**

Slapped cheek disease

Alternate index label; see *Parvovirus infection*. **Synonyms:**

Sleep apnea in children, obstructive

Alternate index label; see *Pediatric obstructive sleep apnea*. **Synonyms:**

Sleep apnea, central

Alternate index label; see *Central sleep apnea*. **Synonyms:**

Sleep apnea, obstructive

Alternate index label; see *Obstructive sleep apnea*. **Synonyms:**

Sleepiness, daytime

Alternate index label; see *Narcolepsy*. **Synonyms:**

Sleeplessness

Alternate index label; see *Insomnia*. **Synonyms:**

SLL

Alternate index label; see *Small lymphocytic lymphoma*. **Synonyms:**

Slow heartbeat

Alternate index label; see *Bradycardia*. **Synonyms:**

Small bowel bacterial overgrowth

Small bowel bacterial overgrowth examines small bowel bacterial overgrowth; interpretation depends on the specimen or body region, test method, reference range, and clinical question. **Synonyms:**

Small bowel prolapse

Alternate index label; see *Small bowel prolapse (enterocele)*. **Synonyms:**

Small intestine prolapse

Alternate index label; see *Small bowel prolapse (enterocele)*. **Synonyms:**

Solar keratosis

Alternate index label; see *Actinic keratosis*. **Synonyms:**

Solar lentigines

Alternate index label; see *Age spots (liver spots)*. **Synonyms:**

Spasmodic torticollis

Alternate index label; see *Cervical dystonia*. **Synonyms:**

Specific reading disability

Alternate index label; see *Dyslexia*. **Synonyms:**

Spinal curvature

Alternate index label; see *Scoliosis*. **Synonyms:**

Spinal fluid leak

Alternate index label; see *CSF leak (Cerebrospinal fluid leak)*. **Synonyms:**

Spondylosis, cervical

Alternate index label; see *Cervical spondylosis*. **Synonyms:**

Stage 4 prostate cancer

Alternate index label; see *Metastatic (stage 4) prostate cancer*. **Synonyms:**

Stammering

Alternate index label; see *Stuttering*. **Synonyms:**

STDs

Alternate index label; see *Sexually transmitted diseases (STDs)*. **Synonyms:**

Steele-Richardson-Olszewski syndrome

Alternate index label; see *Progressive supranuclear palsy*. **Synonyms:**

Stein-Leventhal syndrome

Alternate index label; see *Polyendocrine metabolic ovarian syndrome (PMOS)*. **Synonyms:**

Stenosing tenosynovitis

Alternate index label; see *Trigger finger*. **Synonyms:**

Stenosis, aortic valve

Alternate index label; see *Aortic valve stenosis*. **Synonyms:**

Stenosis, mitral valve

Alternate index label; see *Mitral valve stenosis*. **Synonyms:**

Stenosis, pulmonary valve

Alternate index label; see *Pulmonary valve stenosis*. **Synonyms:**

Stenosis, pyloric

Alternate index label; see *Pyloric stenosis*. **Synonyms:**

Stenosis, spinal

Alternate index label; see *Spinal stenosis*. **Synonyms:**

Stings, bee

Alternate index label; see *Bee sting*. **Synonyms:**

Stings, jellyfish

Alternate index label; see *Jellyfish stings*. **Synonyms:**

Stings, scorpion

Alternate index label; see *Scorpion sting*. **Synonyms:**

Stomach flu

Alternate index label; see *Viral gastroenteritis (stomach flu)*. **Synonyms:**

Stomatodynia

Alternate index label; see *Burning mouth syndrome*. **Synonyms:**

Stool holding

Alternate index label; see *Encopresis*. **Synonyms:**

Strawberry hemangioma

Alternate index label; see *Hemangioma*. **Synonyms:**

Stump pain

Alternate index label; see *Residual limb pain*. **Synonyms:**

Subfertility

Alternate index label; see *Infertility*. **Synonyms:**

Substance abuse disorder

Alternate index label; see *Drug addiction (substance use disorder)*. **Synonyms:**

Sun poisoning

Alternate index label; see *Polymorphous light eruption*. **Synonyms:**

Sunken chest

Alternate index label; see *Pectus excavatum*. **Synonyms:**

Supranuclear palsy

Alternate index label; see *Progressive supranuclear palsy*. **Synonyms:**

SVT

Alternate index label; see *Supraventricular tachycardia*. **Synonyms:**

Sweating, abnormally excessive

Alternate index label; see *Hyperhidrosis*. **Syn-**

onyms:

Swelling

Swelling concerns swelling; its medical significance is established from the defining features, setting, associated findings, and clinical question. **Synonyms:**

Syndrome X

Alternate index label; see *Metabolic syndrome*. **Synonyms:**

Synostosis

Alternate index label; see *Craniosynostosis*. **Synonyms:**

Systemic exertional intolerance disease

Alternate index label; see *Myalgic encephalomyelitis/chronic fatigue syndrome (ME/CFS)*. **Synonyms:**

Sachet poisoning

Sachet poisoning involves toxic or environmental exposure to sachet poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Sacroiliac joint pain - aftercare

Sacroiliac joint pain - aftercare is a treatment or care intervention for sacroiliac joint pain - aftercare; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Safe driving for teens

Safe driving for teens addresses care related to safe driving for teens, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Safe eating during cancer treatment

Safe eating during cancer treatment addresses care related to safe eating during cancer treatment, including practical measures, warning signs, follow-up,

and decisions to discuss with a clinician.

Synonyms:

Safe sex

Safe sex addresses care related to safe sex, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Salads and nutrients

Salads and nutrients concerns salads and nutrients; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Saline nasal washes

Saline nasal washes concerns saline nasal washes; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Salivary duct stones

Salivary duct stones examines salivary duct stones; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Salivary gland biopsy

Salivary gland biopsy examines salivary gland biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Salivary gland infections

Salivary gland infections examines salivary gland infections; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Salmonella enterocolitis

Salmonella enterocolitis is intestinal infection causing diarrhea, fever, abdominal cramps, and sometimes bacteremia after contaminated food, water, or animal exposure.

Synonyms:

Sassafras oil overdose

Sassafras oil overdose involves toxic or environmental exposure to sassafras oil overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Satiety - early

Satiety - early concerns satiety - early, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Savings account for health care costs

Savings account for health care costs examines savings account for health care costs; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Scalded skin syndrome

Scalded skin syndrome is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Scales

Scales concerns scales; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Scar revision

Scar revision concerns scar revision; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Schirmer test

Schirmer test examines schirmer test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

School age test or procedure preparation

School age test or procedure preparation examines school age test or procedure preparation; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

School-age children development

School-age children development concerns school-age children development; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Scleredema diabeticorum

Scleredema diabeticorum is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Scleroderma - resources

Scleroderma - resources addresses care related to scleroderma - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Scleroma

Scleroma is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Scoliosis - resources

Scoliosis - resources addresses care related to scoliosis - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Scoliosis surgery in children

Scoliosis surgery in children is a treatment or care intervention for scoliosis surgery in children; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Scorpion fish sting

Scorpion fish sting involves toxic or environmental exposure to scorpion fish sting; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Scorpions

Scorpions involves toxic or environmental exposure to scorpions; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Scrape

Scrape concerns scrape; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Screen time and children

Screen time and children concerns screen time and children; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Screening and diagnosis for HIV

Screening and diagnosis for HIV examines screening and diagnosis for hiv; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Scrotal swelling

Scrotal swelling concerns scrotal swelling; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Scrotal ultrasound

Scrotal ultrasound examines scrotal ultrasound; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Secobarbital overdose

Secobarbital overdose involves toxic or environmental exposure to secobarbital overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Secondary infections

Secondary infections examines secondary infections; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Secondary parkinsonism

Secondary parkinsonism is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Secondary systemic amyloidosis

Secondary systemic amyloidosis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Secretin stimulation test

Secretin stimulation test examines secretin stimulation test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Seizures

Seizures are transient episodes of abnormal excessive brain electrical activity causing changes in awareness, movement, sensation, behavior, or autonomic function.

Synonyms:

Selective deficiency of IgA

Selective deficiency of IgA examines selective deficiency of iga; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Selective mutism - resources

Selective mutism - resources examines selective mutism - resources; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Selenium in diet

Selenium in diet addresses care related to selenium in diet, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Self catheterization - female

Self catheterization - female is a treatment or care intervention for self catheterization - female; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Self catheterization - male

Self catheterization - male is a treatment or care intervention for self catheterization - male; indication, preparation, risks, technical details, and recovery

depend on the patient and goal.

Synonyms:

Self-testing for COVID-19

Self-testing for COVID-19 involves toxic or environmental exposure to self-testing for covid-19; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Sensitivity analysis

Sensitivity analysis examines sensitivity analysis; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Sensorimotor polyneuropathy

Sensorimotor polyneuropathy is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Sensorineural deafness

Sensorineural deafness concerns sensorineural deafness; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Separation anxiety in children

Separation anxiety in children concerns separation anxiety in children; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Septoplasty - discharge

Septoplasty - discharge is a treatment or care intervention for septoplasty - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Serology for brucellosis

Serology for brucellosis examines serology for brucellosis; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Serosanguineous

Serosanguineous concerns serosanguineous; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Serotonin blood test

Serotonin blood test examines serotonin blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Sertoli-Leydig cell tumor

Sertoli-Leydig cell tumor is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Serum free hemoglobin test

Serum free hemoglobin test examines serum free hemoglobin test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Serum herpes simplex antibodies

Serum herpes simplex antibodies concerns serum herpes simplex antibodies; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Serum iron test

Serum iron test examines serum iron test; interpre-

tation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Serum phenylalanine screening

Serum phenylalanine screening examines serum phenylalanine screening; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Serum progesterone

Serum progesterone concerns serum progesterone; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Severe acute respiratory syndrome (SARS)

Severe acute respiratory syndrome is a viral respiratory illness caused by SARS coronavirus, with fever and pneumonia that may progress to severe respiratory failure.

Synonyms:

Severe COVID-19 - discharge

Severe COVID-19 - discharge is a treatment or care intervention for severe covid-19 - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Sex-linked dominant

Sex-linked dominant concerns sex-linked dominant; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Sex-linked recessive

Sex-linked recessive concerns sex-linked recessive; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Sexual abuse in children - what to know

Sexual abuse in children - what to know concerns sexual abuse in children - what to know; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Sexual assault - prevention

Sexual assault - prevention addresses care related to sexual assault - prevention, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Sexual violence

Sexual violence concerns sexual violence; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Shampoo - swallowing

Shampoo - swallowing concerns shampoo - swallowing; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Shaving cream poisoning

Shaving cream poisoning involves toxic or environmental exposure to shaving cream poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Shellac poisoning

Shellac poisoning involves toxic or environmental exposure to shellac poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Shin splints - self-care

Shin splints - self-care is a treatment or care in-

intervention for shin splints - self-care; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Shingles - aftercare

Shingles - aftercare is a treatment or care intervention for shingles - aftercare; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Short bones

Short bones concerns short bones, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Short philtrum

Short philtrum concerns short philtrum; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Short stature

Short stature concerns short stature; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Shoulder arthroscopy

Shoulder arthroscopy is a treatment or care intervention for shoulder arthroscopy; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Shoulder CT scan

Shoulder CT scan examines shoulder ct scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Shoulder MRI scan

Shoulder MRI scan examines shoulder mri scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Shoulder replacement

Shoulder replacement is a treatment or care intervention for shoulder replacement; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Shoulder replacement - discharge

Shoulder replacement - discharge is a treatment or care intervention for shoulder replacement - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Shoulder separation - aftercare

Shoulder separation - aftercare is a treatment or care intervention for shoulder separation - aftercare; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Shoulder surgery - discharge

Shoulder surgery - discharge is a treatment or care intervention for shoulder surgery - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Sialogram

Sialogram examines sialogram; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Sickle cell anemia - resources

Sickle cell anemia - resources addresses care related to sickle cell anemia - resources, including practical measures, warning signs, follow-up, and decisions

to discuss with a clinician.

Synonyms:

Sickle cell test

Sickle cell test examines sickle cell test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

SIDS - resources

SIDS - resources addresses care related to sids - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Signs of an asthma attack

Signs of an asthma attack concerns signs of an asthma attack; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Silent thyroiditis

Silent thyroiditis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Silver-Russell syndrome

Silver-Russell syndrome is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Simple goiter

Simple goiter concerns simple goiter; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Simple prostatectomy

Simple prostatectomy examines simple prostatectomy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Simple pulmonary eosinophilia

Simple pulmonary eosinophilia concerns simple pulmonary eosinophilia; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Simple, heart-smart substitutions

Simple, heart-smart substitutions concerns simple, heart-smart substitutions, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Single palmar crease

Single palmar crease concerns single palmar crease; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Sinus CT scan

Sinus CT scan examines sinus ct scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Sinus MRI scan

Sinus MRI scan examines sinus mri scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Sinus x-ray

Sinus x-ray examines sinus x-ray; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Sinusitis in adults - aftercare

Sinusitis in adults - aftercare is a treatment or care intervention for sinusitis in adults - aftercare; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Sitz bath

Sitz bath concerns sitz bath; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Skeletal limb abnormalities

Skeletal limb abnormalities concerns skeletal limb abnormalities; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Skier's thumb - aftercare

Skier's thumb - aftercare is a treatment or care intervention for skier's thumb - aftercare; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Skilled nursing facilities after joint replacement

Skilled nursing facilities after joint replacement is a treatment or care intervention for skilled nursing facilities after joint replacement; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Skilled nursing or rehabilitation facilities

Skilled nursing or rehabilitation facilities addresses care related to skilled nursing or rehabilitation facilities, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Skin - clammy

Skin - clammy concerns skin - clammy, a body struc-

ture, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Skin abscess

Skin abscess concerns skin abscess, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Skin and hair changes during pregnancy

Skin and hair changes during pregnancy is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Skin blushing/flushing

Skin blushing/flushing concerns skin blushing/flushing, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Skin care and incontinence

Skin care and incontinence addresses care related to skin care and incontinence, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Skin findings in newborns

Skin findings in newborns concerns skin findings in newborns, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Skin flaps and grafts - self-care

Skin flaps and grafts - self-care is a treatment or care intervention for skin flaps and grafts - self-care; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Skin lesion aspiration

Skin lesion aspiration concerns skin lesion aspiration, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Skin lesion biopsy

Skin lesion biopsy examines skin lesion biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Skin lesion KOH exam

Skin lesion KOH exam examines skin lesion koh exam; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Skin lesion of blastomycosis

Skin lesion of blastomycosis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Skin lesion removal

Skin lesion removal is a treatment or care intervention for skin lesion removal; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Skin lesion removal - aftercare

Skin lesion removal - aftercare is a treatment or care intervention for skin lesion removal - aftercare; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Skin lumps

Skin lumps is a disorder affecting the body system or process named by the term. Clinical features and

causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Skin nodules

Skin nodules concerns skin nodules, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Skin or nail culture

Skin or nail culture examines skin or nail culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Skin sagging treatment - underarms

Skin sagging treatment - underarms concerns skin sagging treatment - underarms, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Skin self-exam

Skin self-exam examines skin self-exam; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Skull x-ray

Skull x-ray examines skull x-ray; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Sleep and your health

Sleep and your health addresses care related to sleep and your health, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Sleep disorders

Sleep disorders addresses care related to sleep disorders, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Sleep disorders in older adults

Sleep disorders in older adults addresses care related to sleep disorders in older adults, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Sleeping sickness

Sleeping sickness addresses care related to sleeping sickness, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Sleepwalking and children

Sleepwalking and children addresses care related to sleepwalking and children, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Slipping rib syndrome

Slipping rib syndrome is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Slit-lamp exam

Slit-lamp exam examines slit-lamp exam; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Slow heart rate - bradycardia

Slow heart rate - bradycardia concerns slow heart rate - bradycardia, a body structure, substance, or clinical concept whose meaning depends on location,

function, and patient context.

Synonyms:

Small bowel resection

Small bowel resection examines small bowel resection; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Small bowel resection - discharge

Small bowel resection - discharge examines small bowel resection - discharge; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Small bowel tissue smear/biopsy

Small bowel tissue smear/biopsy examines small bowel tissue smear/biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Small for gestational age (SGA)

Small for gestational age (SGA) concerns small for gestational age (sga); its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Small intestinal ischemia and infarction

Small intestinal ischemia and infarction examines small intestinal ischemia and infarction; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Small intestine aspirate and culture

Small intestine aspirate and culture examines small intestine aspirate and culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Smallpox/monkeypox vaccine (JYNNEOS) - what you need to know

Smallpox/monkeypox vaccine (JYNNEOS) - what you need to know is a treatment or care intervention for smallpox/monkeypox vaccine (jynneos) - what you need to know; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Smashed fingers

Smashed fingers concerns smashed fingers; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Smear of duodenal fluid aspirate

Smear of duodenal fluid aspirate examines smear of duodenal fluid aspirate; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Smell - impaired

Smell - impaired concerns smell - impaired; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Smoking and asthma

Smoking and asthma concerns smoking and asthma; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Smoking and COPD

Smoking and COPD concerns smoking and copd; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Smoking and surgery

Smoking and surgery is a treatment or care intervention for smoking and surgery; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Smoking cessation medications

Smoking cessation medications concerns smoking cessation medications; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Snacking when you have diabetes

Snacking when you have diabetes concerns snacking when you have diabetes; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Snacks and sweetened drinks - children

Snacks and sweetened drinks - children concerns snacks and sweetened drinks - children; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Snacks for adults

Snacks for adults concerns snacks for adults; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Snake bites

Snake bites involves toxic or environmental exposure to snake bites; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Sneezing

Sneezing concerns sneezing; its medical significance is established from the defining features, setting,

associated findings, and clinical question.

Synonyms:

Snoring - adults

Snoring - adults concerns snoring - adults; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Sodium bisulfate poisoning

Sodium bisulfate poisoning involves toxic or environmental exposure to sodium bisulfate poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Sodium blood test

Sodium blood test examines sodium blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Sodium carbonate poisoning

Sodium carbonate poisoning involves toxic or environmental exposure to sodium carbonate poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Sodium hydroxide poisoning

Sodium hydroxide poisoning involves toxic or environmental exposure to sodium hydroxide poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Sodium hypochlorite poisoning

Sodium hypochlorite poisoning involves toxic or environmental exposure to sodium hypochlorite poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Sodium in diet

Sodium in diet addresses care related to sodium in diet, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Sodium urine test

Sodium urine test examines sodium urine test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Solder poisoning

Solder poisoning involves toxic or environmental exposure to solder poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Solitary fibrous tumor

Solitary fibrous tumor is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Soluble vs. insoluble fiber

Soluble vs. insoluble fiber concerns soluble vs. insoluble fiber; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Soy

Soy concerns soy; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Spasmodic dysphonia

Spasmodic dysphonia is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate inves-

tigations.

Synonyms:

Spasmus nutans

Spasmus nutans concerns spasmus nutans; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Speech disorders - children

Speech disorders - children is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Speech impairment in adults

Speech impairment in adults concerns speech impairment in adults; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Spina bifida - resources

Spina bifida - resources addresses care related to spina bifida - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Spinal and epidural anesthesia

Spinal and epidural anesthesia is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Spinal cord abscess

Spinal cord abscess is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

tions.

Synonyms:

Spinal cord stimulation

Spinal cord stimulation is a treatment or care intervention for spinal cord stimulation; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Spinal cord trauma

Spinal cord trauma is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Spinal injury

Spinal injury is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Spinal injury - resources

Spinal injury - resources addresses care related to spinal injury - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Spinal tumor

Spinal tumor is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Spine surgery - discharge

Spine surgery - discharge is a treatment or care intervention for spine surgery - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Spitting up - self-care

Spitting up - self-care is a treatment or care intervention for spitting up - self-care; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Spleen removal

Spleen removal is a treatment or care intervention for spleen removal; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Spleen removal - child - discharge

Spleen removal - child - discharge is a treatment or care intervention for spleen removal - child - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Splinter removal

Splinter removal is a treatment or care intervention for splinter removal; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Spores

Spores concerns spores; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Sports cream overdose

Sports cream overdose involves toxic or environmental exposure to sports cream overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Sports physical

Sports physical addresses care related to sports physical, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Sprains

Sprains are ligament injuries caused by excessive stretching or tearing, producing pain, swelling, bruising, and variable joint instability.

Synonyms:

Sputum culture

Sputum culture examines sputum culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Sputum direct fluorescent antibody (DFA) test

Sputum direct fluorescent antibody (DFA) test examines sputum direct fluorescent antibody (dfa) test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Sputum fungal smear

Sputum fungal smear examines sputum fungal smear; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Sputum Gram stain

Sputum Gram stain examines sputum gram stain; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Sputum stain for mycobacteria

Sputum stain for mycobacteria examines sputum stain for mycobacteria; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Squamous cell skin cancer

Squamous cell skin cancer is a malignant keratinocyte tumor often arising on sun-exposed skin and capable of local invasion or metastasis, especially when high risk.

Synonyms:

Standard eye exam

Standard eye exam examines standard eye exam; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Staph infections - self-care at home

Staph infections - self-care at home examines staph infections - self-care at home; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Staph infections in the hospital

Staph infections in the hospital examines staph infections in the hospital; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Staphylococcal meningitis

Staphylococcal meningitis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Starch poisoning

Starch poisoning involves toxic or environmental exposure to starch poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Stasis dermatitis and ulcers

Stasis dermatitis and ulcers is a disorder affecting

the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Stay active and exercise when you have arthritis

Stay active and exercise when you have arthritis examines stay active and exercise when you have arthritis; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Stay away from asthma triggers

Stay away from asthma triggers concerns stay away from asthma triggers; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Staying safe at home

Staying safe at home addresses care related to staying safe at home, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Steam iron cleaner poisoning

Steam iron cleaner poisoning involves toxic or environmental exposure to steam iron cleaner poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Steps to take before you get pregnant

Steps to take before you get pregnant concerns steps to take before you get pregnant; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Stereotactic radiosurgery - CyberKnife

Stereotactic radiosurgery - CyberKnife examines

stereotactic radiosurgery - cyberknife; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Stereotactic radiosurgery - discharge

Stereotactic radiosurgery - discharge examines stereotactic radiosurgery - discharge; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Stereotactic radiosurgery - Gamma Knife

Stereotactic radiosurgery - Gamma Knife examines stereotactic radiosurgery - gamma knife; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Stereotypic movement disorder

Stereotypic movement disorder is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Sterile technique

Sterile technique concerns sterile technique; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Sterilization surgery - making a decision

Sterilization surgery - making a decision is a treatment or care intervention for sterilization surgery - making a decision; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Sternal exploration or closure

Sternal exploration or closure concerns sternal exploration or closure; its medical significance is estab-

lished from the defining features, setting, associated findings, and clinical question.

Synonyms:

Steroid injections - tendon, bursa, joint

Steroid injections - tendon, bursa, joint examines steroid injections - tendon, bursa, joint; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Stimulus

Stimulus concerns stimulus; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Stingray

Stingray involves toxic or environmental exposure to stingray; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Stoddard solvent poisoning

Stoddard solvent poisoning involves toxic or environmental exposure to stoddard solvent poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Stonefish sting

Stonefish sting involves toxic or environmental exposure to stonefish sting; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Stool C difficile toxin

Stool C difficile toxin concerns stool c difficile toxin; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Stool Gram stain

Stool Gram stain examines stool gram stain; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Stool guaiac test

Stool guaiac test examines stool guaiac test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Stool ova and parasites exam

Stool ova and parasites exam examines stool ova and parasites exam; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Stools – floating

Stools – floating concerns stools – floating; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Stools - foul smelling

Stools - foul smelling concerns stools - foul smelling; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Stools - pale or clay-colored

Stools - pale or clay-colored concerns stools - pale or clay-colored; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Stop smoking support programs

Stop smoking support programs addresses care related to stop smoking support programs, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Storing your medicines

Storing your medicines concerns storing your medicines; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Stork bite

Stork bite concerns stork bite; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Strains

Strains concerns strains; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Strategies for getting through labor

Strategies for getting through labor concerns strategies for getting through labor; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Streptococcal screen

Streptococcal screen is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Stress and your health

Stress and your health addresses care related to stress and your health, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Stress and your heart

Stress and your heart addresses care related to stress

and your heart, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Stress in childhood

Stress in childhood addresses care related to stress in childhood, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Stretch marks

Stretch marks concerns stretch marks; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

String test for intestinal parasites

String test for intestinal parasites examines string test for intestinal parasites; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Stroke - discharge

Stroke - discharge is a treatment or care intervention for stroke - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Stroke risk factors

Stroke risk factors examines stroke risk factors; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Stuffy or runny nose – adult

Stuffy or runny nose – adult concerns stuffy or runny nose – adult; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Stuffy or runny nose - children

Stuffy or runny nose - children concerns stuffy or runny nose - children; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Stuttering

Stuttering concerns stuttering; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Subacute combined degeneration

Subacute combined degeneration concerns subacute combined degeneration, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Subacute sclerosing panencephalitis

Subacute sclerosing panencephalitis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Subareolar abscess

Subareolar abscess concerns subareolar abscess; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Subconjunctival hemorrhage

Subconjunctival hemorrhage examines subconjunctival hemorrhage; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Subcutaneous (SQ) injections

Subcutaneous (SQ) injections examines subcutaneous (sq) injections; interpretation depends on the

specimen or body region, test method, reference range, and clinical question.

Synonyms:

Subcutaneous implantable cardioverter-defibrillator

Subcutaneous implantable cardioverter-defibrillator concerns subcutaneous implantable cardioverter-defibrillator; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Subdural effusion

Subdural effusion is a treatment or care intervention for subdural effusion; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Substance use - amphetamines

Substance use - amphetamines concerns substance use - amphetamines; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Substance use - cocaine

Substance use - cocaine concerns substance use - cocaine; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Substance use - inhalants

Substance use - inhalants concerns substance use - inhalants; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Substance use - LSD

Substance use - LSD concerns substance use - lsd; its medical significance is established from the defining features, setting, associated findings, and clinical

question.

Synonyms:

Substance use - marijuana

Substance use - marijuana concerns substance use - marijuana; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Substance use - phencyclidine (PCP)

Substance use - phencyclidine (PCP) concerns substance use - phencyclidine (pcp); its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Substance use - prescription drugs

Substance use - prescription drugs concerns substance use - prescription drugs; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Substance use recovery and diet

Substance use recovery and diet addresses care related to substance use recovery and diet, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Sugar-water hemolysis test

Sugar-water hemolysis test examines sugar-water hemolysis test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Suicide and suicidal behavior

Suicide and suicidal behavior concerns suicide and suicidal behavior; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Sulfuric acid poisoning

Sulfuric acid poisoning involves toxic or environmental exposure to sulfuric acid poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Sulindac overdose

Sulindac overdose involves toxic or environmental exposure to sulindac overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Sun protection

Sun protection examines sun protection; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Supernumerary nipples

Supernumerary nipples concerns supernumerary nipples; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Supporting your child with weight loss

Supporting your child with weight loss addresses care related to supporting your child with weight loss, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Supranuclear ophthalmoplegia

Supranuclear ophthalmoplegia concerns supranuclear ophthalmoplegia, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Suprapubic catheter care

Suprapubic catheter care is a treatment or care intervention for suprapubic catheter care; indication, preparation, risks, technical details, and recovery

depend on the patient and goal.

Synonyms:

Surgery for pancreatic cancer

Surgery for pancreatic cancer is a treatment or care intervention for surgery for pancreatic cancer; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Surgery for pancreatic cancer - discharge

Surgery for pancreatic cancer - discharge is a treatment or care intervention for surgery for pancreatic cancer - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Surgery for pilonidal cyst

Surgery for pilonidal cyst is a treatment or care intervention for surgery for pilonidal cyst; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Surgical excision

Surgical excision concerns surgical excision; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Surgical wound care - closed

Surgical wound care - closed addresses care related to surgical wound care - closed, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Surgical wound care - open

Surgical wound care - open addresses care related to surgical wound care - open, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Surgical wound infection - treatment

Surgical wound infection - treatment examines surgical wound infection - treatment; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Sutures - ridged

Sutures - ridged concerns sutures - ridged; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Sutures - separated

Sutures - separated concerns sutures - separated; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

SVC obstruction

SVC obstruction examines svc obstruction; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Swallowing chalk

Swallowing chalk concerns swallowing chalk; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Swallowing difficulty

Swallowing difficulty concerns swallowing difficulty; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Swallowing problems

Swallowing problems concerns swallowing problems; its medical significance is established from the defining features, setting, associated findings, and clinical

question.

Synonyms:

Swallowing soap

Swallowing soap concerns swallowing soap; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Swallowing sunscreen

Swallowing sunscreen concerns swallowing sunscreen; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Swan-Ganz - right heart catheterization

Swan-Ganz - right heart catheterization is a treatment or care intervention for swan-ganz - right heart catheterization; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Sweat electrolytes test

Sweat electrolytes test examines sweat electrolytes test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Sweetened beverages

Sweetened beverages concerns sweetened beverages; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Sweeteners - sugar substitutes

Sweeteners - sugar substitutes concerns sweeteners - sugar substitutes; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Sweeteners - sugars

Sweeteners - sugars concerns sweeteners - sugars; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Swimmer's ear

Swimmer's ear concerns swimmer's ear, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Swimming pool cleaner poisoning

Swimming pool cleaner poisoning involves toxic or environmental exposure to swimming pool cleaner poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Swimming pool granuloma

Swimming pool granuloma concerns swimming pool granuloma; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Swollen lymph nodes

Swollen lymph nodes is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Sydenham chorea

Sydenham chorea concerns sydenham chorea; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Syndrome of inappropriate antidiuretic

hormone secretion

Syndrome of inappropriate antidiuretic hormone secretion is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Synovial biopsy

Synovial biopsy examines synovial biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Syphilitic aseptic meningitis

Syphilitic aseptic meningitis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Systemic

Systemic is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Sacroiliac Joint Dysfunction (Sacroiliac Joint Pain)

Alternate index label for Sacroiliac Joint Pain.

Synonyms:

Sacroiliac Joint Pain

Sacroiliac-joint pain arises near the junction of the lower spine and pelvis and may follow injury, pregnancy, arthritis, leg-length or gait changes, or inflammation. Pain can radiate to the buttock or thigh; examination distinguishes it from hip or spine disease.

Synonyms:

SAD (Seasonal Affective Disorder (SAD))

Alternate index label for Seasonal Affective Disorder

(SAD).

Synonyms:

Salmonella Contagious (Is Salmonella Contagious)

Alternate index label for Is Salmonella Contagious.

Synonyms:

Salmonella Food Poisoning (Salmonellosis)

Alternate index label for Salmonellosis.

Synonyms:

sarcoptic mange (Scabies)

Alternate index label for Scabies.

Synonyms:

Scabies Contagious (Is Scabies Contagious)

Alternate index label for Is Scabies Contagious.

Synonyms:

scalp and body (Ringworm)

Alternate index label for Ringworm.

Synonyms:

Scar Excessive (Keloid)

Alternate index label for Keloid.

Synonyms:

Scarlatina (Scarlet Fever (Scarlatina))

Alternate index label for Scarlet Fever (Scarlatina).

Synonyms:

Scarlet Fever (Scarlatina)

Alternate index label for Scarlatina.

Synonyms:

Scarlet Fever Contagious (Is Scarlet Fever Contagious)

Alternate index label for Is Scarlet Fever Contagious.

Synonyms:

Scars

A scar is fibrous tissue formed during healing after injury, surgery, inflammation, or burns. Scars may be flat, depressed, raised, or contractured and can itch, hurt, restrict movement, or affect appearance; treatment depends on maturity and type.

Synonyms:

school sores (Impetigo)

Alternate index label for Impetigo.

Synonyms:

sciatic neuritis (Sciatica)

Alternate index label for Sciatica.

Synonyms:

Sciatica: Causes, Treatment, and Symptoms

Sciatica is radiating pain, tingling, numbness, or weakness along the sciatic-nerve distribution, commonly from lumbar disc herniation or spinal narrowing. Most cases improve with conservative care, but saddle numbness, bowel or bladder dysfunction, or progressive weakness is urgent.

Synonyms:

Seasonal Affective Disorder (SAD)

Alternate index label for SAD.

Synonyms:

Seasonal allergies (Hay Fever)

Alternate index label for Hay Fever.

Synonyms:

Seborrhea

Seborrhea is excessive or altered oil production that contributes to greasy scale and inflammation, commonly in seborrheic dermatitis of the scalp, face, or chest. Gentle cleansing, medicated shampoos, and topical anti-inflammatory or antifungal treatment may help.

Synonyms:

SEID (Chronic Fatigue Syndrome)

Alternate index label for Chronic Fatigue Syndrome.

Synonyms:

Seizure Febrile (Febrile Seizures)

Alternate index label for Febrile Seizures.

Synonyms:

Seizure Fever induced (Febrile Seizures)

Alternate index label for Febrile Seizures.

Synonyms:

Seizures Symptoms and Types

Seizures are episodes of abnormal electrical brain activity that may cause staring, altered awareness, unusual sensations, stiffening, rhythmic movements, loss of tone, or post-event confusion. First seizure, prolonged seizure, injury, pregnancy, or repeated events requires urgent care.

Synonyms:

Self Gratification Sexual (Masturbation)

Alternate index label for Masturbation.

Synonyms:

Self-Diagnosing Body Dysmorphic Disorder (BDD)

Alternate index label for BDD.

Synonyms:

semaglutide

Semaglutide is a glucagon-like peptide-1 receptor agonist used for selected patients with type 2 diabetes or chronic weight management. It slows gastric emptying and reduces appetite and glucose levels; nausea, gallbladder disease, pancreatitis risk, and contraindications require review.

Synonyms:

Semen Blood (Blood In Semen)

Alternate index label for Blood In Semen.

Synonyms:

Sensitivity, Gluten (Nonceliac Gluten

Sensitivity (Intolerance))

Alternate index label for Nonceliac Gluten Sensitivity (Intolerance).

Synonyms:

Sentinel Lymph Node Biopsy for Melanoma

Sentinel lymph-node biopsy identifies and removes the first draining lymph node or nodes from a melanoma site to detect microscopic spread. The result helps stage disease and guide further treatment; it does not remove all regional nodes routinely.

Synonyms:

Separation Anxiety

Separation anxiety is developmentally excessive fear or distress when apart from an attachment figure, causing avoidance, physical complaints, sleep problems, or impairment. Treatment may include gradual exposure, family-based support, cognitive behavioral therapy, and selected medication.

Synonyms:

SepsContagious (Is Sepsis Contagious)

Alternate index label for Is Sepsis Contagious.

Synonyms:

septicemia (Sepsis)

Alternate index label for Sepsis.

Synonyms:

Septum Deviated (Deviated Septum)

Alternate index label for Deviated Septum.

Synonyms:

Serious Diseases and Health Problems (Symptoms of Serious Diseases and Health Problems)

Alternate index label for Symptoms of Serious Diseases and Health Problems.

Synonyms:

Serous Cyst Adenomas Pancreas

(Pancreatic Cysts)

Alternate index label for Pancreatic Cysts.

Synonyms:

Severe acute respiratory syndrome (Severe Acute Respiratory Syndrome (SARS))

Alternate index label for Severe Acute Respiratory Syndrome (SARS).

Synonyms:

Severe Condition (Sever Condition)

Alternate index label for Sever Condition.

Synonyms:

Sexual (Sex) Problems in Men

Alternate index label for Sex) Problems in Me.

Synonyms:

Sexual Addiction

Compulsive sexual behavior involves persistent difficulty controlling sexual thoughts or behaviors despite distress or harm. It is not simply a high sex drive; assessment considers mood disorders, trauma, substance use, relationships, consent, and evidence-based behavioral treatment.

Synonyms:

Sexual Health Overview

Sexual health includes physical, emotional, mental, and social well-being in relation to sexuality and relationships. It includes consent, contraception, sexually transmitted infection prevention and testing, fertility, sexual function, safety, and respectful communication.

Synonyms:

Sexually Transmitted Disease (STD) Treatments

Alternate index label for STD) Treatment.

Synonyms:

Sexually Transmitted Diseases (STDs In

Women)

Alternate index label for STDs In Women.

Synonyms:

Sexually Transmitted Diseases and Pregnancy (STDs)

Alternate index label for STDs.

Synonyms:

Shaken Baby Syndrome (Abusive Head Trauma)

Alternate index label for Abusive Head Trauma.

Synonyms:

Sharp Pains in Your Stomach During Pregnancy

Sharp abdominal pain in pregnancy may result from ligament stretching, gas, constipation, uterine contractions, urinary disease, ectopic pregnancy, placental complications, or other causes. Severe or persistent pain, bleeding, fever, faintness, vomiting, or reduced fetal movement needs urgent obstetric assessment.

Synonyms:

Shin Splints

Shin splints is common exertional pain along the inner border of the shin, often caused by increased training load, surface, footwear, or biomechanics. Rest from aggravating activity, gradual conditioning, and rehabilitation help; focal bone pain may indicate a stress injury.

Synonyms:

Shingles (Herpes Zoster)

Alternate index label for Herpes Zoster.

Synonyms:

Shingles and Pregnancy

Shingles is reactivation of varicella-zoster virus and usually causes a painful one-sided blistering rash. It is not the same as primary chickenpox exposure, but pregnancy requires prompt clinical advice about treatment, pain, and contact with people at risk.

Synonyms:

Shoulder Bursitis

Shoulder bursitis is inflammation of a fluid-filled sac around the shoulder, often associated with rotator-cuff disease or repetitive overhead activity. Pain with elevation and lying on the affected side is common; activity modification, therapy, medicines, injection, or treatment of the underlying cause may help.

Synonyms:

Shulmans Syndrome (Eosinophilic Fasciitis)

Alternate index label for Eosinophilic Fasciitis.

Synonyms:

Sick Building Syndrome

Sick building syndrome describes nonspecific symptoms such as headache, fatigue, eye or throat irritation, cough, dizziness, or nausea associated with time in a building and improving away from it. Ventilation, humidity, pollutants, mold, and other environmental factors should be assessed.

Synonyms:

Sick to Work (Are You Too Sick to Work)

Alternate index label for Are You Too Sick to Work.

Synonyms:

Sickle Cell

Sickle-cell disease is an inherited hemoglobin disorder causing red cells to become rigid and sickle-shaped, leading to anemia, painful vaso-occlusive episodes, infection risk, stroke, acute chest syndrome, and organ damage. Comprehensive preventive and disease-modifying care is needed.

Synonyms:

Sickle Cell Anemia (Sickle Cell)

Alternate index label for Sickle Cell.

Synonyms:

Sickness Motion (Motion Sickness (Sea Sickness, Car Sickness))

Alternate index label for Motion Sickness (Sea Sickness, Car Sickness).

Synonyms:

Silent Sinus Syndrome

Silent sinus syndrome is painless inward collapse of the maxillary sinus and floor of the orbit, often causing facial asymmetry, enophthalmos, or a sunken eye. Imaging confirms the diagnosis, and endoscopic treatment restores sinus ventilation when indicated.

Synonyms:

silk road disease (Behcet's Syndrome)

Alternate index label for Behcet's Syndrome.

Synonyms:

Sinus Headache

Pain attributed to a sinus headache is often migraine, but sinus inflammation can cause facial pressure, congestion, reduced smell, and pain that worsens with bending. Fever, purulent discharge, persistent symptoms, or eye or neurologic signs guide evaluation.

Synonyms:

sixth disease (Roseola)

Alternate index label for Roseola.

Synonyms:

Skin Anatomy Picture Definition Function

Skin consists of epidermis, dermis, and subcutaneous tissue with appendages such as hair, nails, glands, nerves, vessels, and immune cells. It forms a barrier, regulates temperature, senses the environment, prevents fluid loss, and participates in immunity and vitamin D production.

Synonyms:

Skin Cancer Overview

Skin cancer includes basal-cell carcinoma, squamous-cell carcinoma, melanoma, and less common tumors. Ultraviolet exposure, immune suppression, genetic susceptibility, and certain lesions increase risk; a changing, bleeding, nonhealing, or unusual lesion needs examination.

Synonyms:

Skin Rashes Contagious (Are Skin Rashes Contagious)

Alternate index label for Are Skin Rashes Contagious.

Synonyms:

Skin Tag

A skin tag is a benign soft growth of connective tissue, commonly in body folds and associated with friction, age, pregnancy, obesity, or insulin resistance. Removal may be performed for irritation or appearance, but a changing or atypical lesion should be diagnosed first.

Synonyms:

SLE (Systemic Lupus)

Alternate index label for Systemic Lupus.

Synonyms:

Sleep and Sleep Disorders in Children and Teens

Children and teens need age-appropriate sleep, and disorders may involve insomnia, circadian delay, sleep apnea, parasomnias, restless legs, or insufficient opportunity. Snoring, pauses in breathing, unusual daytime sleepiness, mood change, or poor school performance warrants evaluation.

Synonyms:

Sleep Disorder Periodic Limb Movement (Periodic Limb Movement Disorder)

Alternate index label for Periodic Limb Movement Disorder.

Synonyms:

Sleep Related Breathing Disorders

Sleep-related breathing disorders cause abnormal ventilation or oxygenation during sleep, including obstructive and central sleep apnea and sleep-related hypoventilation. Snoring, witnessed pauses, gasping, morning headache, or daytime sleepiness may prompt sleep testing and treatment.

Synonyms:

Small Intestinal Bacterial Overgrowth

(SIBO)

Alternate index label for SIBO.

Synonyms:

Small Intestinal Bacterial Overgrowth (Small Intestinal Bacterial Overgrowth (SIBO))

Alternate index label for Small Intestinal Bacterial Overgrowth (SIBO).

Synonyms:

Smoke Secondhand (Secondhand Smoke)

Alternate index label for Secondhand Smoke.

Synonyms:

Smokeless Tobacco

Smokeless tobacco delivers nicotine and causes dependence, oral lesions, gum recession, tooth loss, cardiovascular risk, and cancers of the mouth, throat, and pancreas. Quitting reduces harm, and counseling plus approved medicines improve cessation success.

Synonyms:

smokers keratosis (Leukoplakia)

Alternate index label for Leukoplakia.

Synonyms:

Smokers Lung (Smoker's Lung: Pathology Photo Essay)

Alternate index label for Smoker's Lung: Pathology Photo Essay.

Synonyms:

Snake Bite

Snake bites can cause puncture wounds, tissue injury, bleeding, paralysis, or venom-related effects on clotting, nerves, muscles, kidneys, or the heart. Call emergency services, keep the person still, and do not cut, suck, ice, or tourniquet the wound.

Synonyms:

Snoring How to Stop (How to Stop

Snoring)

Alternate index label for How to Stop Snoring.

Synonyms:

Social and Psychological Causes of Alcoholism

Alcohol-use disorder reflects interactions among genetics, brain reward pathways, stress, trauma, mental illness, social environment, and alcohol availability—not a moral failure. Treatment may include withdrawal care, counseling, peer support, and medicines that reduce drinking or relapse.

Synonyms:

Sodium Low Levels in the Blood (Hyponatremia)

Alternate index label for Hyponatremia.

Synonyms:

solar keratosis (Actinic Keratosis)

Alternate index label for Actinic Keratosis.

Synonyms:

Sole Sweating Excessive (Hyperhidrosis)

Alternate index label for Hyperhidrosis.

Synonyms:

Sore Throat (Pharyngitis)

Alternate index label for Pharyngitis.

Synonyms:

Sore Throat Contagious (Is Sore Throat Pharyngitis Contagious)

Alternate index label for Is Sore Throat Pharyngitis Contagious.

Synonyms:

Sores Canker (Canker Sores)

Alternate index label for Canker Sores.

Synonyms:

Sores Canker Contagious (Are Canker Sores Contagious)

Alternate index label for Are Canker Sores Conta-

gious.

Synonyms:

Spastic colon (Irritable Bowel Syndrome (IBS))

Alternate index label for Irritable Bowel Syndrome (IBS).

Synonyms:

Spherocytos (Spherocytosis (Hereditary, HS))

Alternate index label for Spherocytosis (Hereditary, HS).

Synonyms:

Spherocytosis (Hereditary, HS)

Alternate index label for Hereditary, HS.

Synonyms:

Spider Bites (Black Widow and Brown Recluse)

Alternate index label for Black Widow and Brown Recluse.

Synonyms:

Spinal Cord Injury: Treatments and Rehabilitation

Spinal-cord injury can cause temporary or permanent weakness, sensory loss, autonomic dysfunction, and bowel or bladder problems. Acute care protects the spine and treats complications; rehabilitation addresses mobility, skin, breathing, function, equipment, sexuality, and community participation.

Synonyms:

Spleen Enlarged (Enlarged Spleen)

Alternate index label for Enlarged Spleen.

Synonyms:

splenomegaly Gaucher (Gaucher Disease)

Alternate index label for Gaucher Disease.

Synonyms:

Sprain Neck (Whiplash)

Alternate index label for Whiplash.

Synonyms:

Sprained Ankle

An ankle sprain is stretching or tearing of ligaments, usually after rolling the ankle inward. Pain, swelling, bruising, and instability occur; protection, relative rest, compression, elevation, and progressive rehabilitation help, while inability to bear weight may require imaging.

Synonyms:

Spring fever (Henoch-Schonlein Purpura)

Alternate index label for Henoch-Schonlein Purpura.

Synonyms:

Spur Heel (Heel Spurs)

Alternate index label for Heel Spurs.

Synonyms:

Squamous Intraepithelial Lesion Cervical (Cervical Dysplasia)

Alternate index label for Cervical Dysplasia.

Synonyms:

Staph Infection Contagious (Is a Staph Infection Contagious)

Alternate index label for Is a Staph Infection Contagious.

Synonyms:

staphylococcus infection (Staph Infection)

Alternate index label for Staph Infection.

Synonyms:

STD (Sexually Transmitted Diseases (STDs In Women))

Alternate index label for Sexually Transmitted Diseases (STDs In Women).

Synonyms:

STD (Syphilis in Women Overview)

Alternate index label for Syphilis in Women Overview.

Synonyms:

Stenosis Lumbar (Lumbar Stenosis)

Alternate index label for Lumbar Stenosis.

Synonyms:

Stenosis Spinal (Lumbar Stenosis)

Alternate index label for Lumbar Stenosis.

Synonyms:

Still's Disease

Still disease is a systemic inflammatory disorder causing high spiking fever, arthritis, rash, and sometimes organ inflammation. Adult-onset and systemic juvenile forms can affect the heart, lungs, liver, or blood and require specialist anti-inflammatory or immunomodulatory treatment.

Synonyms:

Stomach ulcer (Peptic Ulcer)

Alternate index label for Peptic Ulcer.

Synonyms:

Strain Neck (Whiplash)

Alternate index label for Whiplash.

Synonyms:

Strains (Sprained Ankle)

Alternate index label for Sprained Ankle.

Synonyms:

Strep Throat (GAS)

Alternate index label for GAS.

Synonyms:

Streptococcal Infections

Streptococcal bacteria can cause throat infection, scarlet fever, skin infection, pneumonia, invasive bloodstream disease, and post-infectious complications. Diagnosis and antibiotic choice depend on site and testing; severe pain, rapid spread, sepsis

signs, or breathing difficulty is urgent.

Synonyms:

streptococcal pharyngitis (Strep Throat (GAS))

Alternate index label for Strep Throat (GAS).

Synonyms:

Stress Breast Cancer (Breast Cancer and Coping With Stress)

Alternate index label for Breast Cancer and Coping With Stress.

Synonyms:

Strictures Esophagus (Schatzki Ring)

Alternate index label for Schatzki Ring.

Synonyms:

Stroke Heat (Heat Stroke)

Alternate index label for Heat Stroke.

Synonyms:

Stroke Symptoms and Treatment

Stroke is brain injury from blocked blood flow or bleeding. Sudden facial droop, arm weakness, speech trouble, vision change, imbalance, or severe headache requires emergency activation; treatment may include clot-busting medicine, thrombectomy, bleeding control, and rehabilitation.

Synonyms:

Sty (Stye)

Alternate index label for Stye.

Synonyms:

Stye (Sty (Stye))

Alternate index label for Sty (Stye).

Synonyms:

Sun-Sensitive Drugs (Photosensitivity to Drugs)

Alternate index label for Photosensitivity to Drugs.

Synonyms:

Sun-Sensitive Drugs (Sun-Sensitive Drugs (Photosensitivity to Drugs))

Alternate index label for Sun-Sensitive Drugs (Photosensitivity to Drugs).

Synonyms:

Supraventricular Tachycardia Paroxysmal (Paroxysmal Supraventricular Tachycardia (PSVT))

Alternate index label for Paroxysmal Supraventricular Tachycardia (PSVT).

Synonyms:

SVCS (Superior Vena Cava Syndrome)

Alternate index label for Superior Vena Cava Syndrome.

Synonyms:

Swimmers Ear (Otitis Externa)

Alternate index label for Otitis Externa.

Synonyms:

Swine Flu Contagious (Is Swine Flu (H1N1) Contagious)

Alternate index label for Is Swine Flu (H1N1) Contagious.

Synonyms:

Syndrome Asperger (Asperger Syndrome)

Alternate index label for Asperger Syndrome.

Synonyms:

Syndrome Cauda Equina (Cauda Equina Syndrome)

Alternate index label for Cauda Equina Syndrome.

Synonyms:

Syndrome Compartment (Compartment Syndrome)

Alternate index label for Compartment Syndrome.

Synonyms:

Syndrome Cyclic Vomiting (Cyclic

Vomiting Syndrome (CVS))

Alternate index label for Cyclic Vomiting Syndrome (CVS).

Synonyms:

Syndrome Loeys-Dietz (Loeys-Dietz Syndrome)

Alternate index label for Loeys-Dietz Syndrome.

Synonyms:

Syndrome Pfeiffer (Pfeiffer Syndrome)

Alternate index label for Pfeiffer Syndrome.

Synonyms:

Syndrome Restless Legs (Restless Leg Syndrome)

Alternate index label for Restless Leg Syndrome.

Synonyms:

Syphilis in Women Overview

Syphilis is a sexually transmitted infection caused by *Treponema pallidum* and progresses through stages that may include painless sores, rash, neurologic or cardiovascular disease, or no symptoms. Penicillin treatment cures infection and is essential in pregnancy to prevent congenital disease.

Synonyms:

Systemic Lupus

Systemic lupus erythematosus is an autoimmune disease that can affect skin, joints, kidneys, blood, nervous system, lungs, and heart. Symptoms fluctuate, and treatment is tailored to organ involvement with sun protection, monitoring, and immunomodulatory medicines.

Synonyms:

T

Sensory Processing Disorder

Difficulty detecting, interpreting, or responding to sensory input such as sound, touch, movement, light, or body position. It may affect behavior, learning, coordination, or daily activities and can occur with other neurodevelopmental conditions. Assessment and occupational-therapy strategies are individualized.

Synonyms:

Thyroid-Stimulating Hormone

A pituitary hormone that stimulates the thyroid to produce thyroid hormones. **Synonyms:** TSH

Thyroxine

The main thyroid hormone containing four iodine atoms. **Synonyms:** T4

TIA

A transient ischemic attack, a temporary episode of neurological dysfunction from reduced brain blood flow. **Synonyms:** Transient ischemic attack; mini-stroke

Ticlopidine

An antiplatelet medicine that reduces platelet aggregation and clot formation. **Synonyms:**

Tolerable Upper Intake Level

The highest usual daily nutrient intake unlikely to cause harm in nearly all healthy people. **Synonyms:** UL

Toll-Like Receptors

Innate-immune receptors that detect characteristic microbial or tissue-danger signals. **Synonyms:**

TLRs

Tonic

A substance or preparation traditionally believed to invigorate or strengthen the body. **Synonyms:**

Tonometry

Tonometry examines tonometry; interpretation depends on the specimen or body region, test method, reference range, and clinical question. **Synonyms:**

Tooth Decay

Destruction of tooth structure caused by acids produced by bacteria. **Synonyms:** Dental caries; cavities

Topical

Applied directly to a body surface, usually the skin or a mucous membrane. **Synonyms:**

Toxic

Poisonous or capable of causing injury to living tissue. **Synonyms:**

Toxic Nodular Goiter

An enlarged thyroid with nodules that produce excessive thyroid hormone. **Synonyms:**

Toxin

A poisonous substance produced by a living organism. **Synonyms:** Biological poison

tPA

Tissue plasminogen activator, a clot-dissolving enzyme or medicine. **Synonyms:** Tissue plasminogen

activator

Trabecular Bone

Porous, lattice-like bone tissue found inside bones and near many joints. **Synonyms:** Spongy bone; cancellous bone

Trabecular Meshwork

A porous tissue in the eye through which aqueous humor drains. **Synonyms:**

Trabeculoplasty

Laser treatment that improves aqueous-humor drainage through the trabecular meshwork. **Synonyms:**

Trace Mineral

A mineral required by the body in very small amounts. **Synonyms:**

Trans Fatty Acid

An unsaturated fatty acid with trans configuration, often formed during industrial oil processing. **Synonyms:** Trans fat

Transcranial Doppler Scanning

Ultrasound measurement of blood flow through major arteries at the base of the brain. **Synonyms:** Transcranial Doppler; TCD

Transcutaneous Electrical Nerve Stimulation

Low-voltage electrical stimulation delivered through skin electrodes to reduce pain. **Synonyms:** TENS

Transferrin Saturation

The percentage of transferrin iron-binding sites occupied by iron. **Synonyms:** TSAT

Transfusion

Administration of donated blood or blood components into a person's circulation. **Synonyms:**

Transient Pain

Pain that is brief and resolves rather than persisting.

Synonyms:

Transmural Infarction

A heart attack involving the full thickness of part of the heart wall. **Synonyms:**

Transplantation

Transfer of an organ, tissue, or cells from a donor to a recipient. **Synonyms:** Transplant

Transrectal Ultrasonography

Ultrasound imaging of the prostate or nearby structures using a rectal probe. **Synonyms:** TRUS

Transurethral Incision of the Prostate

An operation using small prostate incisions to relieve obstruction of urine flow. **Synonyms:** TUIP

Transurethral Microwave Thermotherapy

Heat treatment using microwaves to destroy prostate tissue obstructing urine flow. **Synonyms:** TUMT

Transurethral Needle Ablation

Treatment using radiofrequency heat delivered by needles to destroy obstructing prostate tissue. **Synonyms:** TUNA

Stasis Dermatitis

Inflammation of the lower-leg skin caused by chronic venous hypertension and edema. It may cause itching, redness, scaling, brown discoloration, weeping, or ulcers around the ankles. Management focuses on treating venous disease, compression when safe, skin care, and evaluation for infection or arterial insufficiency.

Synonyms:

T Wave

The electrocardiographic deflection representing ventricular repolarization. Its shape and direction vary by lead and clinical context. Abnormal T waves may occur with ischemia, electrolyte disorders, ventricular strain, or other conditions.

Synonyms:

T-Cell Lymphomas

Lymphomas arising from mature or immature T lymphocytes. They include several biologically distinct diseases that may involve lymph nodes, skin, blood, or other organs; behavior and treatment depend on the subtype.

Synonyms:

T-Cell Receptor

A clonally distributed receptor on T lymphocytes that recognizes a peptide antigen presented by a major histocompatibility complex molecule. TCR signaling requires accessory and co-stimulatory signals for effective T-cell activation.

Synonyms:

T-Cells (T-Lymphocytes)

A type of lymphocyte that matures in the thymus and is the central effector of cell-mediated immunity. T-cells express the T-cell receptor (TCR) on their surface, which recognises peptide antigens presented by major histocompatibility complex (MHC) molecules on antigen-presenting cells.

Synonyms: T-Lymphocytes

T3

Triiodothyronine, the most biologically active thyroid hormone, produced by deiodination of T4 in peripheral tissues (liver, kidney) and secreted by the thyroid. Regulates metabolism (BMR), protein/carbohydrate/lipid metabolism, growth, and development.

Synonyms:

T4

Thyroxine, the main hormone secreted by the thyroid gland (thyroxine, 80-90 percent of secretion), converted to the active T3 in tissues. Bound largely to thyroxine-binding globulin (TBG); free T4 is the active unbound fraction. Regulates metabolism, growth, and development.

Synonyms:

Tabes dorsalis

Tabes dorsalis concerns tabes dorsalis; its medical

significance is established from the defining features, setting, associated findings, and clinical question. loss of proprioception, sensory ataxia, and characteristic pain.

Synonyms:

Tablet

A solid dosage form of compressed drug plus excipients (binders, fillers, disintegrants, lubricants, coatings). Types: immediate-release, enteric-coated (resistant to gastric acid), sustained/controlled-release, sublingual, buccal, effervescent, chewable, and orally disintegrating.

Synonyms:

Tachyarrhythmia

An abnormally fast heart rhythm, which may arise from the atria, ventricles, or the heart's conduction system. Symptoms can include palpitations, dizziness, chest discomfort, shortness of breath, or fainting; fainting or severe symptoms require urgent assessment.

Synonyms:

Tachycardia

A faster-than-expected heart rate that may be a normal response or a sign of disease. See Fast Heart Rate.

Synonyms:

Tachyphylaxis

A rapid, acute decrease in response to a drug after repeated administration over a short period, distinct from tolerance which develops more gradually. Tachyphylaxis results from rapid depletion of neurotransmitter stores, receptor desensitization, or receptor downregulation.

Synonyms:

Tachypnea

Abnormally rapid respiratory rate (adult >20 breaths/min). Physiologic (exercise, anxiety) or pathologic: hypoxia, fever, sepsis, metabolic acidosis (Kussmaul), pulmonary embolism, pneumonia, heart failure, pain, and compensation for metabolic

derangement.

Synonyms:

Tachypnoea

Abnormally rapid breathing, defined as a respiratory rate >20 breaths per minute in adults (age-dependent: >60 in neonates, >40 in 1–12 months, >30 in 1–5 years, >20 in >5 years). Tachypnoea is a non-specific sign of respiratory or metabolic distress.

Synonyms:

Tachysystole (Uterine Hyperstimulation)

More than 5 contractions in 10 minutes averaged over 30 minutes, or contractions lasting ≥ 2 minutes. Tachysystole with fetal heart rate changes (late decelerations, prolonged deceleration, loss of variability) is more concerning. Causes: oxytocin (most common), prostaglandins (misoprostol > dinoprostone), and cocaine.

Synonyms: Uterine Hyperstimulation

TACO

Transfusion-Associated Circulatory Overload, a complication of blood transfusion due to volume overload causing pulmonary edema. Risk factors: pre-existing cardiac or renal disease, extremes of age, large transfusion volume, rapid infusion rate.

Synonyms:

Tactile Fremitus

Vibrations transmitted through the lung to the chest wall, felt during palpation. It is increased in consolidation (pneumonia) due to better sound transmission through solid tissue. It is decreased in pleural effusion, pneumothorax, and atelectasis due to impaired transmission.

Synonyms:

Taeniasis (Tapeworm Infection)

Intestinal infection caused by adult *Taenia* tapeworms, usually acquired by eating undercooked meat containing larval cysts. *Taenia solium* and *Taenia saginata* are important species; *Taenia solium* eggs can also cause cysticercosis in tissues.

Synonyms: Tapeworm Infection

Takayasu Arteritis

A chronic granulomatous vasculitis primarily affecting the aorta and its major branches, most commonly diagnosed in women under 50 years of age, particularly in Asian populations.

Synonyms:

Takayasu Disease

A large-vessel vasculitis that primarily affects the aorta and its major branches. It may cause limb claudication, weak or unequal pulses, blood-pressure differences, bruits, fever, fatigue, or arterial narrowing and aneurysms. Imaging and inflammatory assessment guide immunosuppressive and vascular treatment.

Synonyms:

Takayasu's arteritis

A chronic granulomatous vasculitis of the aorta and its major branches, predominantly affecting young women of Asian descent. Causes arterial stenosis, occlusion, or aneurysm formation. Presents with limb claudication, absent pulses, bruit, hypertension, and constitutional symptoms. Treatment: corticosteroids and immunosuppressives.

Synonyms:

Takotsubo Cardiomyopathy

Transient left ventricular apical ballooning resembling a Japanese octopus trap (takotsubo), typically triggered by emotional or physical stress. ECG may show ST elevation mimicking STEMI. Coronary angiography shows no obstructive disease. Most patients recover normal ventricular function within weeks.

Synonyms:

Talcosis

Pneumoconiosis from talc dust inhalation or IV injection of crushed oral medications. Causes upper lobe nodular fibrosis. HRCT may show "galaxy sign" of calcified nodules.

Synonyms:

Talus

Second largest tarsal bone articulating with tibia/fibula proximally at the ankle. Approximately 60 percent of its surface is articular cartilage with no muscular attachments. Transmits entire body weight to the calcaneus. Talar neck fractures may disrupt blood supply causing avascular necrosis in up to 50 percent.

Synonyms:

Tangier Disease

An autosomal-recessive disorder of HDL metabolism caused by ABCA1 dysfunction. It produces very low HDL cholesterol, enlarged yellow-orange tonsils, hepatosplenomegaly, peripheral neuropathy, thrombocytopenia, and premature atherosclerosis in some patients.

Synonyms:

Tanner Staging

A scale for assessing sexual maturity during puberty. Stage 1: prepubertal. Stage 2: breast buds (girls), testicular enlargement (boys). Stage 3: breast enlargement, pubic hair. Stage 4: areolar development, more pubic hair. **Synonyms:**

Thelarche

The onset of breast development, usually the first visible sign of female puberty. It commonly begins between ages 8 and 13, with substantial normal variation.

Synonyms:

Tapeworm

A parasitic flatworm with a segmented body that may live in the intestine or form larval cysts in tissues. People acquire different species by eating infected meat or fish or by ingesting eggs from contaminated sources. Symptoms and complications depend on the species and site.

Synonyms:

Tapeworm Infection

Infection caused by parasitic tapeworms. *Taenia* species may live as adult worms in the intestine,

while some tapeworm larvae can form cysts in tissues.

Synonyms:

Tardive Dyskinesia

Involuntary, repetitive, purposeless movements caused by prolonged use of antipsychotic medications, typically developing after months to years of exposure. Movements include choreoathetoid movements of the tongue, face, and extremities (lip smacking, tongue protrusion, grimacing, choreiform movements of limbs).

Synonyms:

Target-Controlled Infusion

A computerized infusion pump system that maintains a predetermined drug concentration in plasma or effect site using pharmacokinetic modeling. TCI systems use three-compartment pharmacokinetic models to calculate infusion rates that achieve and maintain target concentration.

Synonyms:

Targeted Temperature Management

Controlled therapeutic hypothermia for comatose survivors of cardiac arrest. Target: 32-36 degrees C for 24-72 hours followed by gradual rewarming. Mechanism: reduces metabolic demand, limits reperfusion injury, and reduces free radical generation. TTM2 trial showed 33 degrees C was not superior to 36 degrees C.

Synonyms:

Targeted Therapy

Drugs targeting specific molecular abnormalities in cancer. Examples: imatinib (BCR-ABL), trastuzumab (HER2), rituximab (CD20), tyrosine kinase inhibitors. Requires molecular testing.

Synonyms:

Tarlov Cyst

A cerebrospinal-fluid-filled perineural cyst, usually located near the dorsal root ganglia in the sacral spine. Many are incidental, but larger or symptomatic cysts can cause sacral pain, radiculopathy,

sensory change, bowel or bladder dysfunction, or sexual dysfunction.

Synonyms:

Tarsal Coalition

An abnormal connection between two bones in the rear or middle foot, usually present from birth. It can cause a stiff, painful flatfoot, recurrent ankle sprains, and limited foot motion, often becoming more noticeable during adolescence.

Synonyms:

Tarsal Tunnel Syndrome

Tibial nerve compression at ankle. Symptoms: burning pain, tingling in foot sole. Tinel sign at ankle. Treatment: orthotics, corticosteroid injection, surgical decompression.

Synonyms:

Tarsus

The collection of seven bones forming the posterior part of the foot, between the tibia/fibula and the metatarsals.

Synonyms:

Taste

The sensation produced by the interaction of chemical substances with taste receptor cells (TRCs) on the tongue, palate, pharynx, epiglottis, and upper esophagus. Taste is one of the five primary senses (gustation).

Synonyms:

Tau PET

Tracers: Flortaucipir, MK-6240. Detect tau tangles in neurodegenerative diseases.

Synonyms:

Taurodontism

Enlarged pulp chamber, short roots. Molars most affected. Associated with genetic conditions.

Synonyms:

Tay-Sachs Disease

Autosomal recessive lysosomal storage disorder (HEXA gene, hexosaminidase A). Accumulation of GM2 ganglioside in neurons. Ashkenazi Jewish prevalence higher. Symptoms: developmental regression, cherry-red spot on macula, seizures, paralysis, death by age 4. No cure. **Synonyms:**

TCA Cycle

The tricarboxylic acid (Krebs) cycle occurs in the mitochondrial matrix, completing the oxidation of acetyl-CoA (from carbohydrates, fats, and proteins) to CO₂ while generating reducing equivalents (NADH, FADH₂) for the electron transport chain.

Synonyms:

TCAs

Tricyclic antidepressants are a class of drugs that inhibit the reuptake of serotonin and norepinephrine, similar to SNRIs, but also block histamine H₁ receptors, muscarinic acetylcholine receptors, and alpha-1 adrenergic receptors, producing numerous side effects.

Synonyms:

TCAs (Tricyclic Antidepressants)

Antidepressants that block reuptake of serotonin and norepinephrine, with additional anticholinergic, antihistaminic, and alpha-adrenergic blocking effects. Examples include amitriptyline, nortriptyline, imipramine, and desipramine. They are effective for depression, neuropathic pain, and migraine prophylaxis.

Synonyms: Tricyclic Antidepressants

Tdap Vaccination in Pregnancy

Administration of tetanus, diphtheria, and acellular pertussis (Tdap) vaccine during each pregnancy, optimally at 27-36 weeks. The goal: boost maternal antibodies to protect the newborn from pertussis (whooping cough) before the infant can be vaccinated at 2 months.

Synonyms:

Tdap Vaccine

Tetanus, Diphtheria, and acellular Pertussis booster given at 11-12 years and during each pregnancy (27-36 weeks gestation). Replaces one dose of Td. Important for pertussis protection, particularly for protecting newborns through maternal antibody transfer. Also given to adolescents and adults to maintain tetanus and diphtheria immunity.

Synonyms:

Technetium-99m

Most widely used radionuclide in nuclear medicine. Half-life: 6 hours. Emits 140 keV gamma rays. Produced from molybdenum-99/technetium-99m generator. Used with various ligands: MDP (bone), sestamibi (myocardium), DTPA (renal), nanocolloid (lymphatic), HMPAO (brain perfusion).

Synonyms:

Technique

The method, equipment, and protocol used to perform a medical examination, procedure, or imaging study.

Synonyms:

Tedizolid pharmacokinetics

The study of how tedizolid is absorbed, distributed, metabolized, and eliminated. Tedizolid is available orally and intravenously and has pharmacokinetic properties that support once-daily treatment; its clinical use depends on the infection and patient factors.

Synonyms:

Teenage Pregnancy

Pregnancy in adolescents (usually 10-19 years), associated with higher maternal and fetal risks: preterm birth, low birth weight, preeclampsia, anemia, and increased neonatal mortality; also socioeconomic and educational consequences. Causes: unprotected intercourse, lack of contraception/education, poverty, and peer/family factors.

Synonyms:

Teeth

Hard, mineralized structures in the mouth used for cutting, tearing, and grinding food.

Synonyms:

Teething

Teething concerns teething; its medical significance is established from the defining features, setting, associated findings, and clinical question. 3-12), with lower central incisors first; 20 teeth by 2-3 years.

Synonyms:

Tele radiology

Remote interpretation of imaging studies.

Synonyms:

Tele-Rehabilitation

Remote rehabilitation via technology. Video consultations, remote monitoring, home exercise programs. Increases access, especially rural.

Synonyms:

Telemedicine

Remote delivery of healthcare using technology. Examples: video visits, remote monitoring, store-and-forward. Increases access.

Synonyms:

Telogen Effluvium

Diffuse hair shedding caused by premature entry of hair follicles into the telogen (resting) phase. Triggers include severe illness, surgery, childbirth, rapid weight loss, emotional stress, medications (beta-blockers, retinoids, anticoagulants), and nutritional deficiencies (iron, zinc, vitamin D).

Synonyms:

Telomere

Protective DNA sequence at chromosome ends. Shortens with cell division. Associated with aging.

Synonyms:

Temperature

A measurement of body heat. The result varies with the measurement site, time, activity, age, and illness.

Synonyms:

Temperature (Body Temperature)

The balance between heat production (metabolism, muscle activity) and heat loss (radiation, conduction, convection, evaporation). Normal core body temperature: 36.5–37.5°C (97.7–99.5°F), regulated by the hypothalamus (preoptic anterior hypothalamus—thermoregulatory center).

Synonyms: Body Temperature

Temple Syndrome

A genomic-imprinting disorder involving chromosome 14q32 that causes prenatal and postnatal growth restriction, hypotonia, developmental delay, feeding difficulty, short stature, and abnormal pubertal development.

Synonyms:

Temporal Arteritis

A vasculitic disorder affecting medium and large arteries, particularly the temporal artery, predominantly occurring in adults over 50 years of age.

Synonyms:

Temporal Bones

Paired bones forming the cranial floor and lateral wall, with squamous, petrous, mastoid, tympanic, and styloid parts. Contain the external auditory canal, middle and inner ear, and foramina: carotid canal (internal carotid), jugular foramen (CN IX-XI, IJV), and foramen lacerum.

Synonyms:

Temporal Lobe

One of the four major lobes of the cerebral hemisphere, located beneath the lateral fissure (Sylvian fissure) on the lateral surface of the brain, extending medially to the parahippocampal gyrus. The temporal lobe is involved in auditory processing, language comprehension, memory, and emotion.

Synonyms:

Temporal Lobe Epilepsy

The most common form of focal (partial) epilepsy, arising from the medial temporal lobe structures (hippocampus, amygdala, parahippocampal gyrus).

Synonyms:

Temporomandibular Joint

Synovial ginglymoarthrodial joint between mandibular condyle and temporal bone's mandibular fossa, separated by an articular disc. Only bilateral body joint, allowing hinge and sliding movements. Disc divides into superior/inferior compartments. Temporomandibular disorders cause pain, clicking, limited movement, common with bruxism.

Synonyms:

Temporomandibular Joint Disorder

Pain and dysfunction of TMJ and masticatory muscles. Symptoms: jaw pain, clicking, limited opening, headache, ear pain. Etiology: multifactorial (bruxism, stress, trauma, occlusion). Treatment: conservative (reassurance, self-care, splint, NSAIDs), physical therapy, rare surgery.

Synonyms:

Temporomandibular Joint Replacement

Total joint replacement for severe TMJ pathology. Indications: ankylosis, severe degenerative disease, failed previous surgery.

Synonyms:

Temporomandibular Joint Syndrome

Pain or dysfunction involving the jaw joint and chewing muscles, often causing jaw pain, clicking, restricted opening, headache, or tooth-related symptoms. Causes include clenching, trauma, arthritis, and stress-related muscle tension. Persistent locking, severe pain, or inability to eat requires dental or medical evaluation.

Synonyms:

Tendinitis

Tendinitis is a disorder affecting the body system or

process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Tendon

Dense regular connective tissue connecting muscle to bone, composed primarily of type I collagen fibers arranged in parallel bundles. Transmits muscle force to bone to produce movement. Poor vascularity (slower healing). Enclosed in tendon sheath (synovial) at friction points.

Synonyms:

Tendon Transfer

Surgical relocation of a functioning tendon to restore movement or balance when the original muscle-tendon unit is absent, paralyzed, or irreparable. Successful transfer requires an adequate donor, appropriate excursion, and a stable recipient joint.

Synonyms:

Tendonitis

Tendinopathy: inflammation or degeneration of a tendon from overuse, repetitive strain, or trauma, causing localized pain, swelling, and tenderness with activity. Common sites: rotator cuff (supraspinatus), lateral elbow (tennis elbow), medial elbow (golfer's elbow), Achilles, patellar (jumper's knee), biceps, and De Quervain.

Synonyms:

Tenecteplase

A modified tissue plasminogen activator (TNK-tPA) thrombolytic with longer half-life, higher fibrin specificity, and resistance to PAI-1. Used for acute ischemic stroke and STEMI. Given as a single IV bolus (weight-based), simplifying administration. Adverse effects: hemorrhage (intracranial—major concern), allergic reactions.

Synonyms:

Tenesmus

Tenesmus concerns tenesmus; its medical significance is established from the defining features, set-

ting, associated findings, and clinical question. pass stool accompanied by straining, pain, and cramping, despite little or no stool being passed. Tenesmus is a symptom, not a diagnosis.

Synonyms:

Tennis Elbow

Lateral epicondylitis, a tendinopathy of the common extensor tendon at the lateral epicondyle (extensor carpi radialis brevis). Caused by repetitive wrist extension and overuse, not limited to tennis. Presents with lateral elbow pain worsened by wrist extension and grip. Tenderness over the lateral epicondyle.

Synonyms:

Tenosynovitis

Tenosynovitis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. along the tendon.

Synonyms:

Tension Headache

The most common headache type, characterized by bilateral, pressing/tightening head pain of mild-moderate intensity (like a band around the head), lasting 30 min to days, without nausea or vomiting; photophobia or phonophobia may be present but not both.

Synonyms:

Tension Pneumothorax

Life-threatening pneumothorax with mediastinal shift. Emergency needle decompression (2nd intercostal space, midclavicular line) followed by chest tube. Signs: respiratory distress, hypotension, tracheal deviation, distended neck veins, unilateral absent breath sounds.

Synonyms:

Teratogen

Substance causing birth defects. Examples: thalidomide, isotretinoin, alcohol, warfarin, valproate, ACE inhibitors. Prenatal exposure critical.

Synonyms:

Teratogenicity

The ability of a drug, chemical, or infectious agent to cause birth defects or developmental abnormalities when exposure occurs during pregnancy. The risk of teratogenic effects depends on the timing of exposure, with the embryonic period from 3 to 8 weeks after fertilization being the most critical for organogenesis.

Synonyms:

Teratoma

A type of germ cell tumor composed of tissues derived from two or three germ layers (ectoderm, endoderm, mesoderm), reflecting pluripotent differentiation.

Synonyms:

Terbinafine

An allylamine antifungal agent that inhibits squalene epoxidase, an early enzyme in the ergosterol biosynthesis pathway, causing accumulation of squalene and depletion of ergosterol in the fungal cell membrane. The accumulation of squalene is fungicidal, while ergosterol depletion disrupts membrane function.

Synonyms:

Teriparatide for Osteoporosis

Recombinant human parathyroid hormone fragments one through thirty-four that stimulate osteoblast-mediated bone formation. Indicated for severe osteoporosis with fractures or very low T-scores and for patients who have failed or are intolerant to bisphosphonates. Daily subcutaneous injection for up to two years.

Synonyms:

Terminal Delirium

Delirium occurring near the end of life, often caused by advanced organ failure, medication effects, metabolic disturbance, infection, or reduced cerebral perfusion. Management prioritizes comfort, reversible contributors when consistent with goals,

and support for the patient and family.

Synonyms:

Terminal Illness

An advanced disease that is expected to lead to death, although the timing and response to available treatment may vary.

Synonyms:

Tertiary Prevention

Reducing complications from established disease. Examples: rehabilitation, chronic disease management, palliative care.

Synonyms:

Test Strips

Reagents for diagnostic testing. Types: urine dipstick, blood glucose, ketone.

Synonyms:

Testicular Cancer

Most common solid malignancy in young men 15-35 years. Types: germ cell tumors (seminoma, non-seminoma), sex cord-stromal tumors. Presentation: painless testicular mass, heaviness, ache. Diagnosis: scrotal ultrasound, tumor markers (AFP, beta-hCG, LDH).

Synonyms:

Testicular Disorders

Conditions affecting the testes or surrounding structures, including torsion, infection, inflammation, trauma, tumors, and hormonal disorders. Symptoms may include pain, swelling, a mass, infertility, or changes in sexual development and require appropriate evaluation.

Synonyms:

Testicular Microlithiasis

Multiple tiny calcifications within the testicular tissue seen on ultrasound. The finding alone does not establish cancer, and follow-up depends on other risk factors and clinical findings.

Synonyms:

Testicular Torsion

Surgical emergency caused by twisting of the spermatic cord around its longitudinal axis, cutting off venous return and leading to arterial occlusion, ischemia, and infarction of the testicle.

Synonyms:

Testicular Torsion Emergency

Rotation of the spermatic cord that compromises testicular blood flow, causing sudden unilateral scrotal pain, nausea, a high-riding testis, and an abnormal cremasteric reflex. Immediate surgical exploration and detorsion are required; imaging must not delay treatment when suspicion is high.

Synonyms:

Testis

The male reproductive gland that produces spermatozoa in seminiferous tubules and secretes testosterone from interstitial Leydig cells. It is normally located in the scrotum.

Synonyms:

Testis (Testicle)

The male gonad, a paired ovoid organ (4–5 cm × 2–3 cm, weight 15–20 g) located in the scrotum, responsible for sperm production (spermatogenesis) and testosterone secretion. Each testis is covered by the tunica vaginalis (peritoneal remnant) and tunica albuginea (dense fibrous capsule).

Synonyms: Testicle

Testosterone

Testosterone examines testosterone; interpretation depends on the specimen or body region, test method, reference range, and clinical question. essential for the development of male reproductive tissues, secondary sexual characteristics, and overall health.

Synonyms:

Tetanus

Tetanus is toxin-mediated neurologic disease caused by *Clostridium tetani* entering a wound, producing painful muscle rigidity, spasms, autonomic insta-

bility, and respiratory failure. introduced through wounds. Characterized by generalized rigidity and painful muscle spasms (trismus/lockjaw, risus sardonicus, opisthotonos). Autonomic instability can occur in severe cases. Diagnosis: clinical.

Synonyms:

Tetany

A clinical syndrome of neuromuscular hyperexcitability caused by hypocalcaemia (most common—total calcium <2.1 mmol/L, ionised calcium <1.1 mmol/L), but also caused by hypomagnesaemia, hypokalaemia, and alkalosis (respiratory or metabolic).

Synonyms:

Tethered Cord Syndrome

A congenital or acquired condition where the spinal cord is abnormally attached (tethered) to surrounding tissues, restricting its normal upward movement within the spinal canal. Caused by a thickened filum terminale, lipomeningomyelocele, diastematomyelia, or previous myelomeningocele repair.

Synonyms:

Tetracycline Stain

Intrinsic discoloration from tetracycline antibiotics during tooth development. Gray or brown bands. Treatment: bleaching, veneers, crowns.

Synonyms:

Tetracyclines

A class of bacteriostatic antibiotics that bind reversibly to the 30S ribosomal subunit and block the attachment of aminoacyl-tRNA to the acceptor site, inhibiting protein synthesis. They include tetracycline, doxycycline, and minocycline.

Synonyms:

Tetralogy of Fallot

Tetralogy of Fallot is a congenital heart defect combining ventricular septal defect, right-ventricular outflow obstruction, overriding aorta, and right-ventricular hypertrophy.

Synonyms:

Th1/Th2/Th17/Tfh/Treg Balance

CD4+ T helper subsets defined by master transcription factors and signature cytokines: Th1 (Tbet, IFN-gamma, IL-12, STAT4): intracellular pathogens, autoimmunity (RA, MS, type 1 diabetes). Th2 (GATA3, IL-4/5/13, IL-4/STAT6): helminths, allergy, asthma.

Synonyms:

Thalamus

Bilateral ovoid gray matter structure forming the third ventricle's lateral walls, the brain's relay station for nearly all sensory (except olfaction), motor, and limbic information to the cortex. Numerous nuclei: VPL (spinothalamic, dorsal column), VPM (trigeminal), LGN (visual), MGN (auditory), VL/VA (motor).

Synonyms:

thalassemia

A group of inherited hemoglobin disorders caused by reduced or absent synthesis of one or more globin chains, leading to microcytic hypochromic anemia.

Synonyms:

Thalassemia Major

Beta-thalassemia, an autosomal recessive hemoglobin disorder with absent or minimal beta-globin chain production. Presents in infancy with severe anemia, failure to thrive, hepatosplenomegaly, and skeletal deformities. Diagnosis by hemoglobin electrophoresis showing absent HbA and elevated HbF and HbA2.

Synonyms:

Thallium Scan

Nuclear medicine imaging using Tl-201. Myocardial perfusion, tumor detection. Largely replaced by Tc-99m agents.

Synonyms:

Thallium-201

SPECT radionuclide, half-life 73 hours. Used for myocardial perfusion imaging. Mechanism: K⁺ analog, taken up by Na⁺/K⁺ ATPase.

Synonyms:

Thanatology

The scientific study of death, dying, postmortem changes, and the psychological, social, and ethical aspects of bereavement. In forensic medicine, it also examines the circumstances and evidence surrounding death.

Synonyms:

Thanatophoric Dysplasia

A severe skeletal dysplasia, usually caused by an FGFR3 variant, with markedly shortened limbs, narrow thorax, macrocephaly, and characteristic skull and vertebral abnormalities. The severe thoracic restriction commonly causes neonatal respiratory failure.

Synonyms:

Theranostic Pair

Combined therapy and diagnostics using matched radiopharmaceutical pairs. See theranostics.

Synonyms:

Theranostics

Combined therapy and diagnostics using matched radiopharmaceutical pairs. Diagnostic isotope (e.g., Ga-68) identifies target, therapeutic isotope (e.g., Lu-177) delivers treatment. Examples: Ga-68/Lu-177 DOTATATE (neuroendocrine tumors), PSMA theranostics (prostate cancer).

Synonyms:

Therapeutic Alliance

The collaborative, trusting relationship between therapist and patient that is foundational to effective psychotherapy. It includes agreement on goals, tasks, and the bond between therapist and patient. It is the strongest predictor of psychotherapy outcome across all therapeutic modalities.

Synonyms:

Therapeutic Drug Monitoring

The clinical practice of measuring specific drug concentrations in blood or plasma to individualize drug

dosing and ensure therapeutic effectiveness while minimizing toxicity. TDM is particularly important for drugs with narrow therapeutic indices, where small changes in concentration can lead to therapeutic failure or toxicity.

Synonyms:

Therapeutic Exercise

Exercise prescribed to improve function, reduce pain, prevent disability. Types: stretching, strengthening, aerobic, balance, functional. Progression: low to high intensity.

Synonyms:

Therapeutic Hypothermia

Controlled cooling of the body temperature used in psychiatric practice for severe catatonia and neuroleptic malignant syndrome. In NMS, cooling is a key treatment alongside discontinuation of the offending agent and dantrolene administration.

Synonyms:

Therapeutic Index

The therapeutic index is a quantitative measure of the relative safety of a drug, defined as the ratio of the dose that produces toxicity in 50 percent of the population to the dose that produces the desired therapeutic effect in 50 percent of the population.

Synonyms:

Therapeutic Window

The range of plasma drug concentrations between the minimum effective concentration (producing a therapeutic effect) and the minimum toxic concentration (producing toxicity), in which efficacy is achieved with acceptable toxicity.

Synonyms:

Therapeutics

The branch of medicine concerned with the treatment of disease, encompassing all interventions used to prevent, manage, or cure illness.

Synonyms:

Therapy

Treatment intended to prevent, relieve, or cure disease or to improve function and quality of life.

Synonyms:

Therapy Monitoring

Repeated clinical assessment, laboratory testing, or imaging used to evaluate response, adverse effects, and ongoing need for treatment.

Synonyms:

Thermal Injury

Tissue damage caused by heat, flame, hot liquid, steam, or cold. Burn severity depends on depth, total body surface area, location, inhalation injury, associated trauma, and patient factors; assessment should include airway and circulatory complications.

Synonyms:

Thermal Injury (Burns)

Tissue damage caused by heat. Initial care includes stopping the exposure, removing loose constricting material, cooling briefly with clean water, covering the injury, and assessing depth and extent. Larger or deeper burns require specialized evaluation, fluid management, pain control, wound care, and tetanus assessment.

Synonyms: Burns

Thermal Therapy

Treatment using heat or cold to influence pain, swelling, muscle tension, or tissue temperature. Effects and safety depend on the condition and method used.

Synonyms:

Thermogenesis

Heat production from food digestion, muscle activity, brown fat. Diet-induced thermogenesis 10% of TDEE.

Synonyms:

Thermometer

Device measuring body temperature. Types: mercury (phased out), digital, tympanic, temporal

artery, infrared. Normal oral: 36.5-37.5°C.

Synonyms:

Thermoneutral Zone

The range of ambient temperatures over which body temperature is maintained by basal metabolic heat production alone, without additional thermoregulatory responses such as shivering or sweating. In humans the zone is approximately 27-32 degrees C for a resting nude adult. Within the zone, vasomotor tone adjusts heat loss.

Synonyms:

Thermoplasty

A bronchoscopic procedure that uses radiofrequency energy to ablate smooth muscle in the airways, reducing bronchospasm. It is approved for severe, persistent asthma in adults not controlled with ICS/LABA. It reduces exacerbations and emergency department visits but does not improve lung function.

Synonyms:

Thermoregulation

The physiological maintenance of core body temperature near the set point (37 degrees C) via a balance of heat production and heat loss, controlled by the preoptic area of the hypothalamus.

Synonyms:

Thiamine

Vitamin B1, a water-soluble vitamin required for carbohydrate metabolism and nerve function. Severe deficiency can cause beriberi or Wernicke encephalopathy.

Synonyms:

Thiamine (Vitamin B1)

A water-soluble vitamin whose active coenzyme form, thiamine pyrophosphate, is required by pyruvate dehydrogenase, alpha-ketoglutarate dehydrogenase, transketolase, and branched-chain ketoacid dehydrogenase. Deficiency causes beriberi and Wernicke encephalopathy.

Synonyms: Vitamin B1

Thiazide Diuretics

Thiazide diuretics act on the distal convoluted tubule by inhibiting the sodium-chloride cotransporter, reducing sodium and chloride reabsorption and producing natriuresis and diuresis. They are less potent than loop diuretics but have a longer duration of action, typically 6 to 12 hours.

Synonyms:

Thiazolidinediones

Insulin sensitizers activating peroxisome proliferator-activated receptors primarily in adipose tissue and skeletal muscle. Agents include pioglitazone and rosiglitazone. Mechanisms include enhanced insulin-mediated glucose uptake, altered adipokine secretion, and reduced hepatic glucose output.

Synonyms:

Thiopental Sodium

An ultra-short-acting barbiturate, used for induction of general anesthesia (IV, onset 30–60 seconds, duration 5–10 minutes) and as a third-line agent for raised intracranial pressure (cerebroprotective effect: reduces cerebral metabolism, cerebral blood flow, and intracranial pressure).

Synonyms:

Third Stage of Labor

From delivery of the baby to delivery of the placenta. The placenta separates from the uterine wall and is expelled spontaneously or with gentle cord traction. Normal duration: 5-30 minutes.

Synonyms:

Third Trimester

The period from 28 weeks to delivery. Rapid fetal weight gain occurs, lungs mature with surfactant production. Fetal movements become regular and countable. Braxton Hicks contractions begin. Group B Streptococcus screening at 36 weeks. **Synonyms:**

Third-Degree AV Block

Complete heart block with no conduction between atria and ventricles. Atria and ventricles beat in-

dependently (AV dissociation). Ventricular escape rhythm: junctional (40-60, narrow QRS) or ventricular (20-40, wide QRS).

Synonyms:

Third-Degree Burn

A full-thickness burn that destroys the epidermis and dermis and may extend into subcutaneous tissue. The skin may appear white, brown, or charred and sensation may be reduced. Assessment includes burn depth, extent, inhalation injury, and associated trauma; deep or extensive burns require specialist treatment and may need grafting.

Synonyms:

Thoracentesis

Thoracentesis concerns thoracentesis; its medical significance is established from the defining features, setting, associated findings, and clinical question. diagnosis and symptom relief. Ultrasound guidance improves safety.

Synonyms:

Thoracic Aortic Aneurysm

Aneurysm of thoracic aorta. Associated with hypertension, Marfan syndrome, bicuspid aortic valve.

Synonyms:

Thoracic Cage

The bony and cartilaginous framework formed by the thoracic vertebrae, ribs, costal cartilages, and sternum. It protects thoracic organs and assists respiratory movements.

Synonyms:

Thoracic Cavity

The chest cavity, enclosed by the ribs and chest muscles, containing the lungs, heart, esophagus, and trachea.

Synonyms:

Thoracic Duct

Body's largest lymphatic vessel, approximately 40 cm long, draining lymph from the entire body below the diaphragm and left side above it (approximately

75 percent of total lymph).

Synonyms:

Thoracic endometriosis

Endometrial tissue within the thoracic cavity causing catamenial pneumothorax, hemothorax, or lung nodules, recurring cyclically with menstruation and often requiring hormonal suppression.

Synonyms:

Thoracic Outlet Syndrome

Compression of neurovascular bundle at thoracic outlet. Types: neurogenic (most common), venous, arterial. Symptoms: neck/shoulder/arm pain, paresthesia, weakness, vascular symptoms. Diagnosis: clinical, imaging, nerve conduction. Treatment: physical therapy, surgical decompression.

Synonyms:

Thoracic Vertebrae

Have costal facets on bodies and transverse processes for rib articulation. Heart-shaped bodies, long downward spinous processes, coronally-oriented facets allowing rotation and lateral flexion but limiting flexion/extension. Small circular vertebral foramen.

Synonyms:

Thoracolumbar Spine Trauma

Injury to the thoracic or lumbar spine. Assessment includes fracture morphology, posterior ligamentous complex integrity, and neurologic status. Classification systems such as AO Spine and TLICS help guide management, which depends on stability and the clinical context.

Synonyms:

Thoracotomy

A surgical incision into the chest wall to access the thoracic cavity (pleural space, lungs, heart, great vessels, esophagus, diaphragm, mediastinum).

Synonyms:

Thought Blocking

An abrupt interruption in the train of thought before

it is completed, as if the thought was removed or pushed out of the patient's mind. The patient may pause mid-sentence, appear confused, and report that the thought was "taken out" or "blocked." It is a formal thought disorder seen in schizophrenia.

Synonyms:

Threadworm (Enterobiasis)

An intestinal parasitic infection caused by *Enterobius vermicularis*, also called pinworm. Infection spreads when eggs are swallowed, often after contact with contaminated hands, bedding, food, or surfaces.

Synonyms: Enterobiasis

Three-Dimensional Ultrasound

Ultrasound creating 3D images. Used in obstetrics, gynecology.

Synonyms:

Throat Cancer

Cancer arising in the pharynx or nearby structures of the throat. Persistent hoarseness, difficulty or pain with swallowing, a neck lump, unexplained weight loss, or persistent sore throat requires medical evaluation, especially in people who use tobacco or alcohol.

Synonyms:

Thrombectomy

A surgical or interventional radiology procedure to remove a blood clot (thrombus) from a blood vessel, restoring blood flow. Types: (1) Endovascular thrombectomy (mechanical thrombectomy)—for acute ischemic stroke due to large vessel occlusion (LVO—internal carotid artery, middle cerebral artery M1 segment).

Synonyms:

Thrombectomy (Vascular)

Removal of a blood clot from a blood vessel, using an open surgical or catheter-based procedure.

Synonyms: Vascular

Thromboangiitis Obliterans (Buerger

Disease)

An inflammatory disease of small and medium blood vessels, strongly associated with tobacco use. It can cause pain, color changes, ulcers, or gangrene in the hands or feet. Complete tobacco cessation is essential; further treatment depends on ischemia, tissue loss, and other complications.

Synonyms: Buerger Disease

Thrombocytes

Small, anucleate, disc-shaped cell fragments (2–4 μm diameter) derived from megakaryocytes in the bone marrow, circulating at $150\text{--}400 \times 10^9/\text{L}$. See Platelets (Thrombocytes).

Synonyms:

Thrombocytopathy

A disorder of platelet function that impairs primary hemostasis despite a normal or near-normal platelet count. It may be inherited or acquired and can cause mucocutaneous bleeding, easy bruising, prolonged bleeding after procedures, or menorrhagia.

Synonyms:

Thrombocytopenia

Thrombocytopenia is a low platelet count caused by reduced production, increased destruction or consumption, sequestration, or dilution and may increase bleeding risk.

Synonyms:

Thrombocytosis

An elevated platelet count ($>450,000/\mu\text{L}$). Reactive (secondary): infection, inflammation, iron deficiency, malignancy, post-splenectomy, hemorrhage, exercise—usually mild, no thrombotic risk.

Synonyms:

Thromboelastography

A viscoelastic whole-blood assay that measures the initiation, formation, strength, and breakdown of a clot. It provides a functional overview of coagulation and fibrinolysis and may guide targeted blood-component therapy in major bleeding.

Synonyms:

Thromboembolism

Obstruction of a blood vessel by a clot that formed elsewhere and traveled through the circulation.

Synonyms:

Thrombolysis

The dissolution of a blood clot using a medicine such as a fibrinolytic agent. It is used only in selected conditions because it can cause serious bleeding.

Synonyms:

Thrombolysis for PE

Systemic thrombolytics (alteplase) for massive PE with hemodynamic instability. Rapid clot dissolution but significant bleeding risk.

Synonyms:

Thrombolysis for Stroke

Thrombolysis with intravenous alteplase (tPA) is the primary acute treatment for ischemic stroke when administered within the time window of symptom onset. Alteplase is a recombinant tissue plasminogen activator that converts plasminogen to plasmin, which degrades fibrin in the thrombus, restoring blood flow to the ischemic brain.

Synonyms:

Thrombolytic

A drug that dissolves blood clots by activating plasminogen to plasmin, which degrades fibrin. Agents: alteplase (tPA), tenecteplase (TNK-tPA), reteplase, streptokinase, urokinase. Indications: acute ischemic stroke (within 4.5 hours), STEMI, massive pulmonary embolism, and acute limb ischemia.

Synonyms:

Thrombophilia

A tendency to develop venous thromboembolism (VTE) due to inherited or acquired hypercoagulable states. Inherited: factor V Leiden, prothrombin G20210A mutation, antithrombin deficiency, protein C deficiency, protein S deficiency.

Synonyms:

Thrombophilia Testing

Thrombophilia testing evaluates for inherited and acquired hypercoagulable states in patients with venous thromboembolism, recurrent pregnancy loss, or strong family history of VTE.

Synonyms:

Thrombophlebitis

Thrombophlebitis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. It may cause a tender, red, firm cord under the skin. Deep-vein involvement can lead to pulmonary embolism and requires prompt medical assessment.

Synonyms:

Thrombopoiesis

The production of platelets from megakaryocytes in the bone marrow. It is regulated principally by thrombopoietin and involves megakaryocyte maturation, proplatelet formation, and release of circulating platelets.

Synonyms:

Thrombosed intracranial aneurysm

An intracranial arterial aneurysm that has undergone partial or complete thrombosis of its lumen, which may reduce rupture risk but can cause mass effect on adjacent brain structures. Presents with headache, cranial nerve palsies, or seizures depending on location. Diagnosis: CT, MRI, or conventional angiography.

Synonyms:

Thrombosis

The formation of a blood clot within the cardiovascular system during life, potentially obstructing blood flow and causing tissue ischemia or infarction. Arterial thrombi typically form on ruptured atherosclerotic plaques, are composed primarily of platelets and fibrin, and appear pale and grossly attached to the vessel wall.

Synonyms:

Thrombosis of the inferior vena cava

Formation of a blood clot within the inferior vena cava, which may occur in the setting of IVC filters, malignancy, hypercoagulable states, or extension from iliofemoral deep vein thrombosis. May cause bilateral lower extremity edema, abdominal pain, and hepatic or renal dysfunction. Requires anticoagulation and possible thrombectomy.

Synonyms:

Thrombotic Microangiopathy

Endothelial damage with platelet-rich microthrombi causing MAHA with schistocytes, thrombocytopenia, and organ ischemia. TTP from ADAMTS13 deficiency treated with plasmapheresis. HUS from Shiga toxin managed supportively. Atypical HUS from complement dysregulation responds to eculizumab.

Synonyms:

Thrombotic Thrombocytopenic Purpura

A life-threatening thrombotic microangiopathy usually caused by acquired or inherited deficiency of ADAMTS13, the enzyme that cleaves large von Willebrand factor multimers. It causes platelet consumption, red-cell fragmentation, and possible organ ischemia.

Synonyms:

Thrombotic vasculopathy

A spectrum of disorders characterized by thrombus formation within blood vessels of various sizes, often associated with antiphospholipid syndrome, disseminated intravascular coagulation, thrombotic thrombocytopenic purpura, or malignancy.

Synonyms:

Thrombus Organization

The process by which a thrombus is gradually replaced by granulation tissue and eventually fibrous scar tissue. The process begins when inflammatory cells, particularly macrophages, infiltrate the thrombus and begin digesting the fibrin and dead cells through fibrinolysis.

Synonyms:

Thrush

A common vaginal infection caused by the yeast *Candida albicans* (also called candidiasis, vaginal thrush, or candida vulvovaginitis). Symptoms: itching, soreness, white discharge (like cottage cheese), dyspareunia, and external dysuria. Risk factors: pregnancy, antibiotic use, diabetes, immunosuppression, and high estrogen states.

Synonyms: candidiasis, vaginal thrush, or candida vulvovaginitis).

Thumb CMC Arthritis

Thumb carpometacarpal (CMC) arthritis: Eaton-Littler classification: I (normal), II (slight narrowing, osteophytes <2mm), III (narrowing, osteophytes >2mm, subluxation), IV (pantrapezial arthritis). Clinical: base of thumb pain, pinch weakness, thenar wasting, squaring (subluxation).

Synonyms:

Thymoma

A tumor of thymic epithelial cells, associated with myasthenia gravis, pure red cell aplasia, and hypogammaglobulinemia. Malignant behavior is determined by capsular invasion and stage.

Synonyms:

Thymus

Primary lymphoid organ in the anterior mediastinum, largest in childhood, involutes with age. Site of T-cell maturation (thymopoiesis): thymocytes undergo positive and negative selection to produce self-tolerant, MHC-restricted T cells. Epithelial cells produce thymic hormones (thymosin, thymopoietin).

Synonyms:

Thyroglobulin Surveillance

Thyroglobulin produced only by thyroid follicular cells serves as a tumor marker after total thyroidectomy for differentiated thyroid carcinoma. In patients who have undergone complete thyroidectomy and radioactive iodine ablation thyroglobulin should be undetectable.

Synonyms:

Thyroglossal Duct Cyst

Congenital midline neck mass resulting from persistence of the thyroglossal duct the embryological tract of thyroid descent. Most common congenital neck mass presenting in childhood. Located at or near the hyoid bone and moves with swallowing and tongue protrusion. Diagnosis is by ultrasound demonstrating a cystic midline neck mass.

Synonyms:

Thyroid Cancer

A malignant tumor of the thyroid. Major types include papillary, follicular, medullary, and anaplastic carcinoma, which differ in behavior and treatment.

Synonyms:

Thyroid Cancer Staging

American Joint Committee on Cancer TNM staging for differentiated thyroid carcinoma incorporates tumor size, extent of invasion, lymph node metastases, and distant metastases. Age is a critical prognostic factor with patients under fifty having more favorable outcomes. Stage I is any tumor without metastases in patients under fifty.

Synonyms:

Thyroid Cartilage

The largest cartilage of the larynx, formed by two plates that meet in front and create the laryngeal prominence. It protects the vocal folds and provides attachment for muscles and ligaments.

Synonyms:

Thyroid Disorders

Conditions affecting the thyroid gland, a butterfly-shaped endocrine organ in the neck that produces hormones regulating metabolism, growth, and development.

Synonyms:

Thyroid Eye Disease

Autoimmune inflammatory disorder of the orbital tissues associated with Graves disease characterized by expansion of extraocular muscles and orbital fat. Pathogenesis involves orbital fibroblasts expressing

the TSH receptor targeted by the same thyroid-stimulating immunoglobulins affecting the thyroid.

Synonyms:

Thyroid Fine-Needle Aspiration

Image-guided sampling of thyroid-nodule cells for cytologic classification. Results are commonly reported using the Bethesda system and guide surveillance, molecular testing, surgery, or other management.

Synonyms:

Thyroid Follicular Carcinoma

approximately 10 to 15 percent of thyroid cancers and is the second most common differentiated thyroid malignancy. Unlike papillary carcinoma, follicular carcinoma typically spreads hematogenously to distant sites including bone, lung, and liver, rather than to regional lymph nodes.

Synonyms:

Thyroid Function Tests

Laboratory assessment of the hypothalamic-pituitary-thyroid axis. TSH is the most sensitive screening test with elevated levels indicating primary hypothyroidism and suppressed levels indicating hyperthyroidism. Free T4 measures the biologically active unbound thyroxine.

Synonyms:

Thyroid Gland

An endocrine gland located in the anterior neck, consisting of two lobes (right and left) connected by an isthmus, lying anterior to the trachea between the cricoid cartilage and the suprasternal notch.

Synonyms:

Thyroid Hormone

T3 and T4. Increase basal metabolic rate. Required for normal development.

Synonyms:

Thyroid Nodule

A discrete lump within the thyroid gland that may be solid, cystic, benign, or malignant. Most are

benign, but evaluation uses clinical assessment, thyroid testing, ultrasound, and biopsy when indicated.

Synonyms:

Thyroid Nodule Evaluation

Systematic approach to evaluation of thyroid nodules detected by physical examination or imaging. Thyroid ultrasound characterizes nodule features including size, composition, echogenicity, margins, calcifications, and shape. TI-RADS classification stratifies malignancy risk and guides biopsy decisions.

Synonyms:

Thyroid Papillary Carcinoma

The most common differentiated thyroid cancer, arising from thyroid follicular cells. It often grows slowly and has a favorable prognosis, although outcome depends on tumor features, spread, age, and response to treatment.

Synonyms:

Thyroid Peroxidase Antibody

An autoantibody against thyroid peroxidase, an enzyme required for thyroid-hormone synthesis. It supports autoimmune thyroid disease, especially Hashimoto thyroiditis, but may be present in some euthyroid individuals.

Synonyms:

Thyroid Scan

Nuclear medicine imaging using I-123 or Tc-99m. Evaluates thyroid function and nodules. Hot nodules rarely malignant. Cold nodules require further evaluation.

Synonyms:

Thyroid Scintigraphy

Thyroid imaging using I-123, I-131, or Tc-99m pertechnetate. Assesses function, nodules, ectopic tissue. Hot nodules (functioning) rarely malignant; cold nodules require ultrasound/FNA.

Synonyms:

Thyroid Stimulating Hormone

TSH (thyrotropin): the anterior pituitary hormone that stimulates the thyroid to produce and release T4 and T3, controlled by TRH (hypothalamus) and negative feedback from thyroid hormones.

Synonyms:

Thyroid Storm

Life-threatening exacerbation of thyrotoxicosis presenting with hyperpyrexia, tachycardia, heart failure, altered mental status, and multi-organ dysfunction. Precipitated by infection, surgery, trauma, or iodine load in patients with untreated hyperthyroidism. Mortality rates range from twenty to thirty percent.

Synonyms:

Thyroid Surgery

Operations that remove part or all of the thyroid gland. They may be performed for selected cancers, enlarging or compressive nodules, goiter, hyperthyroidism, or diagnostic uncertainty; the procedure depends on the disease and its extent.

Synonyms:

Thyroid Ultrasound

High-frequency sonographic imaging used to evaluate thyroid size, nodules, cysts, cervical lymph nodes, and structural features associated with malignancy. Suspicious nodules may require ultrasound-guided fine-needle aspiration.

Synonyms:

Thyroiditis

Inflammation of the thyroid gland with various etiologies. Hashimoto thyroiditis: autoimmune, most common cause of hypothyroidism in iodine-sufficient areas. Subacute (De Quervain) thyroiditis: post-viral, presents with painful thyroid and transient hyperthyroidism followed by hypothyroidism.

Synonyms:

Thyroiditis Classification

Inflammatory conditions of the thyroid classified by clinical presentation and etiology. Hashimoto thy-

roiditis is chronic autoimmune with hypothyroidism. Graves disease is autoimmune with hyperthyroidism. Subacute thyroiditis is painful and likely viral.

Synonyms:

Thyrotoxic Periodic Paralysis

Recurrent episodes of transient flaccid weakness associated with thyrotoxicosis, usually accompanied by hypokalemia caused by intracellular potassium shift. Attacks often affect the proximal limbs and are triggered by rest after exercise or carbohydrate-rich meals.

Synonyms:

TI-RADS

The Thyroid Imaging Reporting and Data System is an ultrasound-based system that assigns a risk category to thyroid nodules using features such as composition, echogenicity, shape, margins, and calcification. It helps guide follow-up and biopsy decisions.

Synonyms:

Tibia

Tibia concerns tibia, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context. Proximal: tibial plateau (medial/lateral condyles) and tibial tuberosity (patellar ligament insertion). Shaft: sharp subcutaneous anterior border. Distal: medial malleolus articulating with the talus at the ankle.

Synonyms:

Tibial Nerve

Sciatic division (L4-S3) continuing from posterior thigh through the popliteal fossa into the deep posterior leg, innervating gastrocnemius, soleus, tibialis posterior, flexor digitorum longus, and flexor hallucis longus. Passes behind the medial malleolus as the tarsal tunnel, dividing into medial/lateral plantar nerves for the foot.

Synonyms:

Tibial Shaft Fractures

Tibial shaft fractures: most common long bone

fracture. AO/OTA: 42-A (simple), 42-B (wedge), 42-C (complex). Soft tissue critical: Gustilo for open.

Synonyms:

Tibialis Anterior Muscle

Superficial anterior leg muscle from lateral tibial condyle and shaft to medial cuneiform and first metatarsal base. Innervated by deep peroneal nerve (L4-L5). Primary dorsiflexor for foot clearance during gait swing phase; inverts foot. Weakness causes foot drop with steppage gait.

Synonyms:

Tibialis Posterior Muscle

Deepest posterior leg muscle from posterior tibia, fibula, and interosseous membrane to navicular tuberosity, medial cuneiform, and sustentaculum tali. Innervated by tibial nerve (L4-L5). Plantarflexes and inverts foot; primary dynamic medial longitudinal arch stabilizer.

Synonyms:

Tic Douloureux

A chronic pain condition characterized by recurrent, sudden, severe, electric shock-like pain in the distribution of the trigeminal nerve (typically V2/V3). See Trigeminal Neuralgia.

Synonyms:

Tick Paralysis

Acute, progressive flaccid paralysis caused by neurotoxin released by an attached tick. Weakness usually begins in the legs and ascends; respiratory failure can occur and symptoms improve after prompt tick removal.

Synonyms:

Tickborne relapsing fever

A vector-borne illness caused by *Borrelia hermsii* and related species, transmitted by *Ornithodoros* ticks. It presents with recurrent episodes of fever, headache, myalgia, and arthralgia, separated by afebrile intervals. The relapsing pattern results from antigenic variation of the spirochete's surface

lipoproteins.

Synonyms:

Tics

Sudden, rapid, recurrent, nonrhythmic stereotyped movements (motor tics) or vocalizations (vocal tics) that are usually brief and suppressible. Transient tics (most common in childhood) vs. chronic tic disorder; Tourette syndrome: multiple motor + at least one vocal tic for >1 year beginning before age 18.

Synonyms:

Tidal Volume

The volume of air inspired or expired during each normal breath, approximately 500 mL (6-8 mL/kg) in a resting adult. Tidal volume is measured by spirometry. Minute ventilation = tidal volume x respiratory rate (6 L/min). Only a portion reaches the alveoli (alveolar ventilation) after subtracting dead space (150 mL).

Synonyms:

Tilt Table Test

Evaluation of unexplained syncope by reproducing orthostatic stress. Patient is strapped to a motorized table tilted from supine to 60-80 degrees for 20-45 minutes. Positive: reproduction of symptoms with hypotension and/or bradycardia (vasovagal syncope, delayed orthostatic hypotension).

Synonyms:

Time in Range

Percentage of time that continuous glucose monitoring readings remain within the target glucose range of seventy to one hundred eighty milligrams per deciliter for most adults with diabetes. General target is greater than seventy percent corresponding to approximately seventeen hours per day.

Synonyms:

Time of Death

The moment or estimated time at which biological death occurred, a key medicolegal question. Estimated from postmortem changes: body cooling (al-

gor mortis), rigor mortis, lividity (livor mortis), decomposition/putrefaction, insect colonization, and chemical changes (vitreous potassium, vitreous glucose, body temperature).

Synonyms:

Time-of-Flight PET

A PET acquisition and reconstruction technique that uses the measured arrival-time difference of coincident annihilation photons to improve localization of the annihilation event. It can improve signal-to-noise performance, especially in larger patients.

Synonyms:

Timed Up-and-Go Test

A functional mobility test measuring the time required to stand from a chair, walk a short distance, turn, return, and sit. Prolonged performance suggests impaired mobility and increased fall risk but must be interpreted with gait, vision, cognition, and environment.

Synonyms:

Timothy Syndrome

A rare multisystem disorder caused by pathogenic variants in CACNA1C, characterized by marked QT prolongation and congenital heart disease with syndactyly. Developmental, neurological, immune, and facial features may also occur.

Synonyms:

Tin

Component of dental amalgam. Reduces strength, increases creep.

Synonyms:

Tincture

Alcohol extract of plant or chemical substance. Common concentration: 10-40% alcohol. Examples: tincture of iodine (antiseptic), tincture of benzoin (skin protector). Also used for liquid medications.

Synonyms:

Tinea

Dermatophytosis: superficial fungal infection of keratinized tissue (skin, hair, nails) by dermatophytes (Trichophyton, Microsporum, Epidermophyton).

Synonyms:

Tinea (Dermatophytosis)

Superficial fungal infection by dermatophytes. Tinea corporis (ringworm): annular, scaly, erythematous plaque with central clearing. Tinea pedis (athlete's foot): interdigital scaling, maceration, and fissuring. Tinea cruris (jock itch): erythematous, pruritic rash in groin with raised border.

Synonyms: Dermatophytosis

Tinea barbae

Dermatophyte infection of the beard and mustache area, presenting with erythematous, scaly, follicular papulopustules or deep inflammatory nodules, often acquired from contact with infected animals or through grooming. It may be inflammatory (kerion-like) or superficial, and differential diagnosis includes bacterial folliculitis and acne.

Synonyms:

Tinea Capitis

A dermatophyte infection of the scalp and hair shafts, most common in children. It may cause scaling, alopecia, broken hairs, black dots, or an inflammatory kerion.

Synonyms:

Tinea circinata

An older term for tinea corporis (ringworm) of the body, presenting as annular, erythematous, scaly plaques with active, raised borders and central clearing. It is caused by dermatophyte fungi and may be acquired through direct contact with infected humans, animals, or fomites.

Synonyms:

Tinea Corporis

A dermatophyte infection of glabrous skin, presenting as annular, erythematous, scaly plaques with raised, active borders and central clearing. It is

contagious through direct contact with infected persons, animals, or contaminated objects. Diagnosis is by KOH preparation showing branching septate hyphae.

Synonyms:

Tinea faciei

Dermatophyte infection of the facial skin, often presenting with erythematous, scaly, annular or ill-defined plaques that may mimic eczema or rosacea, leading to frequent misdiagnosis. It is commonly caused by Trichophyton or Microsporum species and may be acquired from pets, other humans, or self-inoculation from other body sites.

Synonyms:

Tinea imbricata

A chronic dermatophyte infection caused by Trichophyton concentricum, endemic in the South Pacific and Southeast Asia, characterised by widespread, concentric, overlapping, polycyclic scaly rings producing a "wood-grain" pattern on the trunk and limbs.

Synonyms:

Tinea Incognito

A dermatophyte infection whose clinical appearance has been altered by inappropriate topical corticosteroid or immunosuppressive treatment. It may become less scaly and more extensive or atypical; fungal testing is often needed before directed therapy.

Synonyms:

Tinea nigra

A superficial fungal infection of the stratum corneum caused by Hortaea werneckii, presenting as a painless, brown to black, non-scaly macule or patch, most commonly on the palms or soles. It is acquired in tropical and subtropical regions and is often confused with acral melanoma.

Synonyms:

Tinea Pedis

A dermatophyte infection of the feet presenting in

interdigital, moccasin, vesiculobullous, or ulcerative patterns. It may coexist with tinea unguium. Diagnosis is clinical or mycologic when uncertain; treatment uses topical antifungals for limited disease and oral therapy for extensive, refractory, or nail-associated infection.

Synonyms:

Tinea Versicolor

A superficial fungal infection caused by *Malassezia* species, presenting as hypo- or hyperpigmented macules with fine scale on the trunk and proximal extremities. It is more noticeable after sun exposure due to unaffected tanning of surrounding skin.

Synonyms:

Tinel Sign

Tapping over nerve produces tingling in distribution. Indicates nerve irritation/regeneration. Used for carpal tunnel, cubital tunnel, tarsal tunnel.

Synonyms:

Tinnitus

Tinnitus is perception of sound without an external source, often related to hearing loss, noise exposure, ear disease, medications, vascular causes, or neurologic factors.

Synonyms:

Tiotropium Bromide

A long-acting muscarinic antagonist (LAMA) bronchodilator used for maintenance therapy in COPD. Once-daily dosing provides sustained bronchodilation. It reduces exacerbations and improves lung function. It is often combined with a LABA for additive bronchodilation.

Synonyms:

TIPS (Transjugular Intrahepatic Portosystemic Shunt)

A radiologically placed shunt connecting the portal vein to a hepatic vein within the liver, creating a portosystemic shunt to reduce portal pressure. Indications: variceal bleeding (refractory or recurrent), refractory ascites, and hepatic hydrothorax.

Synonyms: Transjugular Intrahepatic Portosystemic Shunt

Tissue

A group of similar cells and their surrounding materials that work together to perform a specific function.

Synonyms:

Tissue Distribution

Reversible movement of a chemical from blood into tissues and organs. Distribution is influenced by perfusion, lipid solubility, protein binding, tissue affinity, barriers, body composition, and time after exposure.

Synonyms:

Tissue Expander

Balloon implanted under skin/muscle, gradually filled with saline to expand tissue. Used for breast reconstruction, scalp reconstruction, burn coverage. Removed after expansion, replaced with permanent implant or flap.

Synonyms:

Tissue Fixation

Preservation of tissue morphology and molecular components by chemical or physical methods before processing. Neutral buffered formalin is commonly used for routine histopathology, while fixation choice affects antigen detection, nucleic-acid testing, and tissue architecture.

Synonyms:

Tissue plasminogen activator-associated angioedema

Angioedema occurring as a complication of tissue plasminogen activator therapy for acute ischemic stroke or myocardial infarction, affecting approximately 1 to 5 percent of patients. It typically involves the face, tongue, and upper airway and may be life-threatening.

Synonyms:

Titanium

Biocompatible metal for implants and frameworks. Osseointegration capability.

Synonyms:

Titer

Titer examines titer; interpretation depends on the specimen or body region, test method, reference range, and clinical question. expressed as the highest dilution that still produces a detectable reaction (e.g., 1:128).

Synonyms:

TLC

Thin-layer chromatography for radiochemical purity.

Synonyms:

TNF Alpha

Tumor necrosis factor alpha is a potent pro-inflammatory cytokine produced primarily by activated macrophages, as well as by T cells, NK cells, mast cells, and endothelial cells. TNF-alpha exists as a 26-kilodalton transmembrane protein that is cleaved by the metalloprotease TACE to release a soluble 17-kilodalton active form.

Synonyms:

TNM Staging

A cancer-staging system describing the primary tumor, regional lymph nodes, and distant metastases to estimate disease extent and prognosis.

Synonyms:

Tobacco

A plant product containing nicotine and many toxic combustion or processing chemicals. Its use causes dependence and increases the risk of cancer, cardiovascular disease, and lung disease.

Synonyms:

Tocolysis

The use of medication to delay preterm birth for a limited time, often to allow corticosteroid treatment or transfer to a facility with appropriate neonatal care. The drug, gestational-age range, and con-

traindications depend on local guidance and the clinical situation.

Synonyms:

Tocolytic Therapy

Medications used to inhibit uterine contractions temporarily to prolong pregnancy, allowing time for corticosteroid administration and transport to a tertiary care center. Indications: preterm labor with intact membranes, 24-34 weeks.

Synonyms:

Tocolytics

Medications used to suppress preterm labor (contractions before 37 weeks gestation), to delay delivery for corticosteroid administration (fetal lung maturity) and in utero transport to a tertiary care center.

Synonyms:

Toe Pressure

Pressure in toe digits. Useful when ankle pressures non-compressible (diabetes, renal disease).

Synonyms:

Toe-Brachial Index

The ratio of systolic toe pressure to brachial systolic pressure. It can support diagnosis of peripheral arterial disease when ankle arteries are noncompressible because of medial arterial calcification.

Synonyms:

Tolbutamide

A first-generation sulfonylurea oral hypoglycaemic agent used in the management of type 2 diabetes. Mechanism: stimulates insulin secretion from pancreatic -cells by binding to the sulfonylurea receptor (SUR1) on ATP-sensitive potassium (KATP) channels, causing membrane depolarisation, calcium influx, and exocytosis of insulin granules.

Synonyms:

Tolerance

A decreased response to a drug after repeated administration, requiring dose escalation to achieve

the same effect. Unlike tachyphylaxis, tolerance develops over weeks to months of chronic use.

Synonyms:

Toll-Like Receptor

A class of single-pass membrane-spanning pattern recognition receptors (PRRs) expressed on innate immune cells (macrophages, dendritic cells). Recognize evolutionary conserved microbial structures (PAMPs).

Synonyms:

Tongue

A muscular organ in the mouth that aids in tasting, chewing, swallowing, and speech.

Synonyms:

Tongue Cleaning

Removal of tongue coating using scraper or brush. Reduces bad breath.

Synonyms:

Tonic Neck Reflex

A primitive reflex present from birth to 6 months, also called fencer's pose. When the head is turned to one side, the arm on that side extends while the opposite arm flexes. Present in both directions. Asymmetry may indicate neurologic injury. Disappears as voluntary head control develops.

Synonyms: fencer's pose.

Tonic-clonic seizure

A generalized seizure with a tonic stiffening phase followed by rhythmic clonic jerking, impaired consciousness, and a postictal state.

Synonyms:

Tonsillar cancer

A malignancy arising from the palatine tonsils, most commonly squamous cell carcinoma associated with HPV infection. It often presents with throat pain, otalgia, and cervical lymphadenopathy.

Synonyms:

Tonsillectomy

Tonsillectomy examines tonsillectomy; interpretation depends on the specimen or body region, test method, reference range, and clinical question. apnea, or other selected conditions after assessment of potential benefits and risks.

Synonyms:

Tonsillitis

Tonsillitis is inflammation or infection of the tonsils causing sore throat, painful swallowing, fever, swollen tonsils, and sometimes abscess or airway complications. tissue structures located in the oropharynx between the palatoglossal and palatopharyngeal.

Synonyms:

Tonsils

Aggregated lymphoid tissue forming Waldeyer's ring at the pharyngeal entrance. Pharyngeal tonsils (adenoids) in the nasopharynx, palatine tonsils at the oropharyngeal pillars, lingual tonsils at the tongue base, and tubal tonsils near the Eustachian tube orifices. They are the first line of defense against inhaled or ingested pathogens.

Synonyms:

Tooth

A mineralized organ composed primarily of enamel, dentin, cementum, and dental pulp. Teeth cut and grind food, contribute to speech and facial support, and are anchored in alveolar bone by the periodontal ligament.

Synonyms:

Tooth Eruption

Process by which tooth moves from intraosseous position to functional occlusion. Primary (deciduous) dentition: 20 teeth, eruption 6-30 months. Permanent dentition: 32 teeth (including third molars), eruption 6-21 years. Delayed eruption may indicate systemic conditions, local obstruction, or normal variant.

Synonyms:

Tooth Infection

Infection of the tooth, its pulp, or surrounding tissues, commonly caused by untreated decay, cracks, or gum disease. It may cause toothache, sensitivity, swelling, fever, or drainage. Facial swelling, difficulty swallowing or breathing, or spreading infection requires emergency assessment.

Synonyms:

Tooth Luxation

Traumatic displacement of a tooth without complete avulsion. Concussion and subluxation involve periodontal injury with little or no displacement, whereas extrusive, lateral, and intrusive luxation involve increasingly marked displacement and require prompt dental evaluation.

Synonyms:

Tooth Replantation

Replacement of an accidentally displaced or avulsed tooth into its socket, followed by stabilization and dental follow-up.

Synonyms:

Tooth Sensibility Testing

Clinical testing of a tooth's response to thermal, electric, or dentin stimulation. It assesses neural response rather than directly measuring pulp blood flow, so results must be interpreted with history, examination, and imaging.

Synonyms:

Tooth Sensitivity

Pain in response to thermal, sweet, acidic, or tactile stimulus. Caused by dentin exposure (recession, erosion, abrasion, abfraction). Management: desensitizing toothpaste, fluoride varnish, restorative coverage, gum graft for recession.

Synonyms:

Tooth Whiteness

Aesthetic concern driving bleaching. Natural shade varies. Over-bleaching causes sensitivity and translucency.

Synonyms:

Toothache

Common dental symptom indicating underlying pathology. Causes: dental caries, pulpitis (reversible or irreversible), periapical abscess, cracked tooth, periodontal disease, sinusitis (referred pain). Evaluation: history, clinical exam, radiographs. Management: treat underlying cause, analgesics, antibiotics if infection present.

Synonyms:

Tophaceous gout

Chronic tophaceous gout represents advanced gout with deposition of large, visible tophi consisting of monosodium urate crystals surrounded by granulomatous inflammation. Tophi typically develop after years of inadequately treated gout and occur on the ears, fingers, toes, and olecranon bursa.

Synonyms:

Tophus

Deposits of monosodium urate crystals in soft tissues, characteristic of chronic gout. Appear as subcutaneous nodules over joints, ears, olecranon, Achilles tendon. Can erode through skin, forming draining sinus tracts. Radiographically: punched-out erosions with overhanging edges.

Synonyms:

Topical Antibiotics

Antibiotics applied to the skin to treat selected superficial bacterial infections. The choice and duration depend on the organism, site, extent of infection, resistance patterns, and local guidance. Unnecessary or prolonged use can cause irritation and antimicrobial resistance.

Synonyms:

Topical Antifungals

Topical antifungals treat superficial fungal infections. Allylamines (terbinafine, naftifine) inhibit squalene epoxidase, fungicidal. Azoles (clotrimazole, miconazole, ketoconazole, econazole) inhibit ergosterol synthesis, fungistatic. Ciclopirox has broad-spectrum activity. Tolnaftate is effective against dermatophytes.

Synonyms:

Topical Calcineurin Inhibitors

Non-steroidal anti-inflammatory agents used for atopic dermatitis and facial eczema. They inhibit T-cell activation by blocking calcineurin, preventing cytokine production. Advantages over corticosteroids: no skin atrophy, safe for face and intertriginous areas. Side effects include transient burning and itching at application site.

Synonyms:

Topical Corticosteroid Potency

Topical corticosteroids are classified into seven potency groups. Group 1 (ultra-high): clobetasol propionate 0.05 percent. Group 2 (high): betamethasone dipropionate 0.05 percent. Group 3 to 4 (medium): triamcinolone acetonide 0.1 percent. Group 5 to 6 (low): hydrocortisone 1 percent.

Synonyms:

Topical Retinoids

Vitamin A derivatives used for acne, photoaging, and hyperpigmentation. Tretinoin (all-trans retinoic acid) is the most studied. Adapalene is more stable and less irritating. Tazarotene is the most potent. Mechanism: normalizes follicular keratinization, increases cell turnover, and stimulates collagen production.

Synonyms:

TORCH Panel

Serologic screening for congenital infections: Toxoplasma, Rubella, CMV, Herpes simplex (and others: syphilis, parvovirus B19, VZV, Zika). IgM: indicates recent/active infection (maternal or fetal). IgG: past infection or passive immunity. Paired maternal and neonatal testing.

Synonyms:

Torsades de Pointes

A specific form of polymorphic ventricular tachycardia with QRS complexes that twist around the baseline, occurring in the setting of QT prolongation. It may degenerate to ventricular fibrillation.

Synonyms:

Torticollis

Torticollis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. contracture.

Synonyms:

Torticollis (Wryneck)

A condition in which the head is tilted to one side (ear toward the shoulder) and rotated to the opposite side (chin toward opposite shoulder), due to contraction or shortening of the sternocleidomastoid muscle.

Synonyms: Wryneck

Torus mandibularis

A bony outgrowth arising from the lingual surface of the mandible, typically bilateral and located in the premolar region above the mylohyoid ridge. It is a common, asymptomatic developmental anomaly, more prevalent in women and certain ethnic populations.

Synonyms:

Torus palatinus

A bony exostosis arising from the midline of the hard palate, typically presenting as a slow-growing, asymptomatic, hard, bony protuberance discovered incidentally. It is more common in women and certain ethnic groups.

Synonyms:

Total Anomalous Pulmonary Venous Return

A congenital heart defect in which the pulmonary veins drain into the systemic venous circulation instead of the left atrium. The clinical effects depend on the anatomic type, the degree of obstruction, and associated defects; affected newborns require specialist cardiac evaluation.

Synonyms:

Total Body Surface Area

The percentage of body surface involved by a burn or other extensive skin process. It is estimated using methods such as the rule of nines, Lund-Browder chart, or the patient's palm and is used to guide burn severity assessment and resuscitation.

Synonyms:

Total Breech Extraction

A maneuver where the operator grasps the fetal feet and delivers the entire baby in breech presentation. The most common indication is delivery of the second twin (malpresentation). Contraindicated for term singleton breech due to high risk of head entrapment, nuchal arms, and birth trauma.

Synonyms:

Total Daily Energy Expenditure

Total calories burned in 24 hours: BMR + thermic effect of food + physical activity. Estimation guides dietary recommendations. Activity factor multiplies BMR.

Synonyms:

Total Haemolytic Complement Test

A functional assay of the classical complement pathway, commonly reported as CH50.

Synonyms:

Total Hip Arthroplasty

Replacement of the hip joint with prosthetic components. Acetabular component: metal shell + polyethylene liner. Femoral component: metal stem + femoral head (cobalt-chrome or ceramic). Fixation: cemented (PMMA, for elderly, osteoporotic bone), cementless (porous-coated, for younger patients, biologic fixation), and hybrid.

Synonyms:

Total Intravenous Anesthesia

Total intravenous anesthesia (TIVA) uses intravenous agents exclusively for induction and maintenance of anesthesia, avoiding volatile inhalation agents. The most common TIVA regimen combines propofol infusion (50 to 200 mcg/kg/min)

with remifentanyl infusion (0.1 to 0.5 mcg/kg/min).

Synonyms:

Total Iron Binding Capacity

TIBC: a measure of the maximum iron-binding capacity of transferrin in serum, reflecting total iron-transport capacity. Calculated from transferrin or measured directly.

Synonyms:

Total Knee Arthroplasty

Replacement of the knee joint with prosthetic components. Femoral component (cobalt-chrome), tibial component (titanium tray + polyethylene insert), and patellar component (polyethylene, optional). Fixation: cement (PMMA) most common in older adults; cementless in younger.

Synonyms:

Total Lesion Glycolysis

Product of metabolic tumor volume and mean SUV. Prognostic marker.

Synonyms:

Total Lung Capacity

The total volume of air in the lungs after maximal inspiration. It is measured by lung-volume testing, such as body plethysmography, and may be increased in hyperinflation or decreased in restrictive lung disease.

Synonyms:

Total Parenteral Nutrition

Intravenous administration of nutrients sufficient to meet essentially all nutritional requirements when the gastrointestinal tract cannot be used adequately.

Synonyms:

Tourette Disorder

A neurodevelopmental disorder characterized by multiple motor tics and one or more vocal tics lasting >1 year, with onset before age 18. Motor tics: eye blinking, head jerking, shoulder shrugging, facial grimacing. Vocal tics: throat clearing, sniffing, grunting, barking, coprolalia (obscene words, occurs

in <10%).

Synonyms:

Tourette Syndrome

A neurodevelopmental disorder characterized by multiple motor tics and at least one vocal tic occurring over at least one year. Tics are sudden, rapid, recurrent, stereotyped movements or vocalizations. They are often preceded by premonitory urges. Tics typically worsen in adolescence and may improve in adulthood.

Synonyms:

Tourniquet

A device applied proximally to a limb to compress arterial inflow and control life-threatening extremity hemorrhage when direct pressure is inadequate or impractical. Application time, bleeding control, distal perfusion, and the need for definitive hemorrhage management must be documented.

Synonyms:

Townes Syndrome

A congenital disorder caused by pathogenic variants in SALL1, classically involving anal atresia and characteristic thumb abnormalities. Renal, cardiac, hearing, foot, and genital anomalies are common and variable.

Synonyms:

Toxemia

An outdated term formerly used for preeclampsia. Preeclampsia is a pregnancy-associated disorder of hypertension with proteinuria or other maternal organ dysfunction, usually developing after 20 weeks of gestation.

Synonyms:

Toxic Dose

Dose causing toxicity. Varies by substance, individual, route, duration.

Synonyms:

Toxic Encephalopathy

Brain dysfunction caused by exposure to a toxic

substance or medicine. Symptoms may include confusion, altered behavior, seizures, or reduced consciousness.

Synonyms:

Toxic Epidermal Necrolysis

A severe, potentially fatal mucocutaneous reaction, usually to a medication, causing extensive epidermal necrosis and skin detachment. It is on the severe end of the Stevens–Johnson syndrome and toxic epidermal necrolysis spectrum and requires urgent specialist care.

Synonyms:

Toxic Megacolon

Acute life-threatening dilation of the colon associated with systemic toxicity, representing one of the most serious complications of inflammatory bowel disease, particularly ulcerative colitis. It can also occur in infectious colitis caused by *Clostridioides difficile* and cytomegalovirus.

Synonyms:

Toxic Shock Syndrome

An acute, life-threatening illness caused by bacterial exotoxins. Staphylococcal TSS: associated with tampon use, surgical wounds, and nasal packing; presents with fever, hypotension, diffuse rash, and multi-organ involvement. Streptococcal TSS: associated with invasive GAS infections. Diagnosis: CDC case definition.

Synonyms:

Toxicokinetics

The study of absorption, distribution, metabolism, and excretion of a toxic substance and its relationship to concentration over time. Toxicokinetics helps estimate exposure, timing, accumulation, and expected duration of toxicity.

Synonyms:

Toxicology

Study of poisons and their effects. Branches: clinical, forensic, environmental, occupational, regulatory.

Synonyms:

Toxicology Specimen Preservation

Collection, labeling, storage, and transport of biological specimens to preserve analytes and prevent contamination or degradation. Appropriate specimens may include peripheral blood, urine, vitreous humor, bile, liver, hair, or gastric contents depending on the suspected exposure and timing.

Synonyms:

Toxidrome

A recognizable pattern of signs and symptoms produced by a class of toxins. Important patterns include opioid, sympathomimetic, anticholinergic, cholinergic, sedative-hypnotic, and serotonin toxidromes; treatment combines supportive care, targeted antidotes when available, and decontamination decisions.

Synonyms:

Toxocariasis

Infection by dog roundworm (*Toxocara canis*) or cat (*T. cati*), acquired by ingesting infective eggs from soil contaminated by animal feces (pica in children a risk).

Synonyms:

Toxoid vaccines

Vaccines that protect against harmful bacterial toxins. These vaccines contain toxins that have been detoxified and rendered inactive.

Synonyms:

Toxoplasma gondii

An obligate intracellular protozoan parasite that causes toxoplasmosis. The definitive host is the cat (family Felidae), which sheds environmentally resistant oocysts in feces.

Synonyms:

Toxoplasmosis

Toxoplasmosis is infection with *Toxoplasma gondii*, usually mild in healthy people but potentially causing congenital disease or severe brain, eye, or sys-

temic disease in immunocompromised people. (shed oocysts in feces). Humans are intermediate hosts, infected via ingestion of undercooked meat (containing tissue cysts), cat feces, or transplacentally. Immunocompetent: usually asymptomatic or mild flu-like illness with lymphadenopathy.

Synonyms:

TPMT Polymorphism

Thiopurine S-methyltransferase is an enzyme that metabolizes thiopurine drugs including azathioprine, 6-mercaptopurine, and thioguanine, which are used in the treatment of leukemia, inflammatory bowel disease, and autoimmune conditions.

Synonyms:

Trabeculectomy

A conventional glaucoma filtration surgery that creates a new drainage pathway for aqueous humor by removing a small piece of the trabecular meshwork and creating a partial-thickness scleral flap under which aqueous humor filters from the anterior chamber into the subconjunctival space, forming a filtering bleb.

Synonyms:

Trace Elements

Minerals needed in small amounts. Zinc, copper, manganese, selenium, chromium, molybdenum, iodine. Deficiency or toxicity possible.

Synonyms:

Tracer Principle

Administered in amounts too small to produce pharmacological effect. Dose optimized for imaging, not therapeutic.

Synonyms:

Trachea

The windpipe, a 10-12 cm fibrocartilaginous tube from the larynx (C6) to the carina (T4/T5) where it bifurcates into main bronchi. Sixteen to twenty C-shaped hyaline cartilage rings (open posteriorly, completed by trachealis muscle) maintain patency.

Synonyms:

Tracheal agenesis with bronchoesophageal fistula

Congenital malformation characterized by absent or severely hypoplastic trachea with an abnormal communication between the bronchus and esophagus, a rare and typically fatal condition presenting in neonates with respiratory distress, cyanosis, and inability to intubate.

Synonyms:

Tracheal Foreign Body

A foreign object lodged in the trachea, causing severe respiratory distress, stridor, and complete airway obstruction. It is a medical emergency requiring immediate bronchoscopic removal. In complete obstruction, emergency cricothyrotomy may be needed.

Synonyms:

Tracheal Stenosis

Narrowing of the trachea, often a complication of prolonged endotracheal intubation or tracheostomy. It presents with progressive dyspnea, stridor, and wheezing that may be mistaken for asthma. Diagnosis is by bronchoscopy or CT. Treatment is balloon dilation, stenting, or surgical resection.

Synonyms:

Tracheitis

Tracheitis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. life-threatening cause of upper airway obstruction in children, typically presenting as a superinfection following viral croup (parainfluenza).

Synonyms:

Tracheobronchomalacia

Abnormal softening of the trachea and/or bronchi causing excessive airway collapse during breathing. It may be congenital or acquired. Symptoms include chronic cough, recurrent infections, and expiratory airflow obstruction. Diagnosis is by dynamic CT or bronchoscopy. Treatment includes CPAP, stenting, or surgical reconstruction.

Synonyms:

Tracheobronchomegaly

Abnormal enlargement of the trachea and main bronchi, usually associated with connective-tissue weakness. It may cause recurrent lower-respiratory infection, bronchiectasis, ineffective cough, dyspnea, and difficulty clearing airway secretions.

Synonyms:

Tracheoesophageal Fistula

An abnormal connection between the trachea and esophagus, often associated with esophageal atresia. Presents with recurrent aspiration, coughing with feedings, and cyanosis during meals. The H-type fistula may present later in infancy with chronic aspiration and failure to thrive. Diagnosis by esophagram or bronchoscopy.

Synonyms:

Tracheomalacia

Softening of the tracheal cartilage causing excessive collapse of the trachea during expiration. It may be congenital or acquired (prolonged intubation, relapsing polychondritis). Symptoms include expiratory stridor and difficulty clearing secretions. Diagnosis is by dynamic CT or bronchoscopy.

Synonyms:

Tracheostomy

Tracheostomy is a treatment or care intervention for tracheostomy; indication, preparation, risks, technical details, and recovery depend on the patient and goal. a tube. Indications include prolonged airway support, upper-airway obstruction, and selected secretion-management needs; complications include bleeding, infection, obstruction, displacement, and tracheal injury.

Synonyms:

Tracheostomy Tube

A tube inserted through a tracheostomy opening to maintain access to the airway and permit breathing, suction, or mechanical ventilation.

Synonyms:

Tracheotomy

An operation that creates an opening through the neck into the trachea. The opening is called a tracheostomy.

Synonyms:

Trachoma

Trachoma concerns trachoma; its medical significance is established from the defining features, setting, associated findings, and clinical question. leading infectious cause of blindness worldwide. Repeated infection causes conjunctival scarring, trichiasis (in-turned eyelashes), corneal abrasion, opacification, and blindness. Transmission: direct contact, flies, fomites.

Synonyms:

Traction

Traction examines traction; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Tractional retinal detachment

Separation of the neurosensory retina caused by contraction of fibrovascular membranes, commonly associated with proliferative diabetic retinopathy.

Synonyms:

Tractotomy

Surgical interruption of a nerve tract in the brain or spinal cord.

Synonyms:

Train-of-Four Monitoring

Train-of-four monitoring assesses neuromuscular blockade by delivering four supramaximal electrical stimuli at 2 Hz to a peripheral nerve, commonly the ulnar nerve at the wrist. The ratio of the fourth twitch height to the first twitch height estimates recovery from non-depolarizing blockade.

Synonyms:

Trained Immunity

Innate immune memory: epigenetic/metabolic re-

programming of monocytes/macrophages/NK cells after initial stimulus (BCG, beta-glucan, Candida, oxidized LDL) -> enhanced response to secondary challenge (heterologous protection).

Synonyms:

Trajectory

The path a projectile follows in flight and, in wound ballistics, the course it traverses through tissue from entrance to exit or rest. Internal trajectory is reconstructed from entrance and exit defects, the organ track, recovered fragments, and clothing damage; angles disclose shooter position and victim posture.

Synonyms:

TRALI

Transfusion-Related Acute Lung Injury, a life-threatening complication of blood transfusion characterized by acute hypoxemia and bilateral pulmonary edema within 6 hours of transfusion, without evidence of volume overload.

Synonyms:

Tram-Track Appearance

Histological finding on silver stain of MPGN representing GBM duplication. Results from mesangial cell interposition into capillary wall with new basement membrane formation. Creates double-contour pattern on Jones methenamine silver stain.

Synonyms:

Tranexamic Acid

An antifibrinolytic agent that inhibits lysine-binding sites on plasminogen and reduces clot breakdown. It is used in selected trauma, obstetric, cardiac, orthopedic, and bleeding indications according to current protocols. Dose and route depend on the indication and renal function.

Synonyms:

Tranquillisers

A class of drugs that have a calming or sedative effect, reducing anxiety, tension, and agitation. Historically classified as major tranquillisers (antipsychotics/neuroleptics—for psychosis) and minor tran-

quillisers (anxiolytics—for anxiety). The term is now less common in clinical practice.

Synonyms:

Trans Fat

A type of unsaturated fat with at least one trans double bond. Industrial trans fats are associated with increased cardiovascular risk and have been restricted in many jurisdictions.

Synonyms:

Transabdominal Scan

An ultrasound scan performed with the transducer placed on the maternal abdomen. A full bladder improves visualization of pelvic structures. Used in early pregnancy to confirm viability and gestational age, and throughout pregnancy to assess fetal growth, anatomy, amniotic fluid volume, and placental location.

Synonyms:

Transarterial Chemoembolization

A procedure in which chemotherapy and embolizing particles are infused selectively into tumor-feeding hepatic arteries, combining regional chemotherapy with ischemic tumor necrosis; used for unresectable hepatocellular carcinoma.

Synonyms:

Transbronchial Biopsy

Bronchoscopic biopsy of lung parenchyma obtained through the bronchial wall. It is used to diagnose interstitial lung diseases (sarcoidosis, HP), reject lung transplant rejection, and sample peripheral lung lesions. It carries a higher risk of pneumothorax than endobronchial biopsy.

Synonyms:

Transcervical Foley Catheter for Cervical Ripening

A mechanical method for cervical ripening: a Foley catheter (16-30 Fr) is inserted through the cervix, the balloon is inflated with 30-60 mL of saline, and traction is applied (or the catheter is taped to the thigh with gentle tension). The balloon applies

direct pressure to the internal os, stimulating endogenous prostaglandin release.

Synonyms:

Transcranial Doppler

Ultrasound measuring blood flow velocity in cerebral arteries. Used for vasospasm detection, stroke risk assessment.

Synonyms:

Transcription

Synthesis of RNA from DNA template by RNA polymerase. Eukaryotic: RNA Pol II transcribes mRNA, rRNA, snRNA; RNA Pol I transcribes rRNA; RNA Pol III transcribes tRNA, 5S rRNA. Steps: initiation (promoter recognition, transcription factors), elongation (5' to 3'), termination. Promoter elements: TATA box, CAAT box, GC box.

Synonyms:

Transcription Factor

Protein binding to specific DNA sequences, regulating transcription. Activators enhance transcription; repressors inhibit. Examples: p53, NF-kB, steroid hormone receptors.

Synonyms:

Transdermal

A route of drug administration delivering drug through intact skin into the systemic circulation via a patch or gel, bypassing first-pass metabolism and providing steady plasma concentrations over hours to days. Examples: nitroglycerin, fentanyl, nicotine, estrogen, clonidine, rotigotine.

Synonyms:

Transfer Training

Teaching safe transfer techniques: bed to chair, chair to toilet, floor to standing. Use of transfer boards, lift equipment.

Synonyms:

Transferase

An enzyme that transfers a functional group from one molecule to another.

Synonyms:

Transference

A psychoanalytic concept in which feelings, attitudes, and expectations originally directed toward a significant figure from childhood are unconsciously redirected onto the therapist. In psychodynamic therapy, transference is a therapeutic tool for understanding the patient's relational patterns and resolving conflicts.

Synonyms:

Transferrin

An iron transport protein synthesized by the liver, carrying iron in plasma (2 iron-binding sites). In iron deficiency: transferrin is elevated with low ferritin, giving high TIBC and low transferrin saturation; in iron overload/inflammation/chronic disease: transferrin is low (acute phase).

Synonyms:

Transfusion Medicine

Blood components: PRBCs (leukoreduced, irradiated for at-risk), FFP (coagulation factors), platelets (apheresis pooled, leukoreduced), cryoprecipitate (fibrinogen, vWF, factor VIII, XIII). ABO/Rh compatibility.

Synonyms:

Transfusion of Neonate

Administration of a blood product to a newborn for clinically significant anemia, bleeding, or another specific indication. The decision, product characteristics, volume, and rate depend on the infant's symptoms, laboratory results, gestational age, and local transfusion protocol.

Synonyms:

Transfusion Reaction

An adverse reaction to transfusion of blood products. Acute hemolytic transfusion reaction: ABO incompatibility, immediate fever/chills, hypotension, back pain, DIC, renal failure; management: STOP transfusion, maintain BP/urine output, supportive care.

Synonyms:

Transient Ischemic Attack

A transient ischemic attack (TIA) is a temporary episode of neurological dysfunction caused by focal brain, spinal cord, or retinal ischemia without acute infarction.

Synonyms:

Transient Tachypnea of the Newborn

Temporary rapid breathing after birth, usually caused by delayed clearance of fetal lung fluid. It is more common after caesarean birth and typically improves within one to three days with supportive care.

Synonyms:

Transition to Adulthood

Support for youth with disabilities transitioning to adult services.

Synonyms:

Transitional Care

Coordinated care provided when a person moves between healthcare settings or levels of care, such as from hospital to home.

Synonyms:

Translation

Decoding of mRNA sequence into polypeptide chain by ribosomes. Occurs in cytoplasm. tRNAs carry specific amino acids and recognize codons via anticodons. Steps: initiation, elongation, termination. Energy: GTP hydrolysis. **Synonyms:**

Translocation

Translocation concerns translocation; its medical significance is established from the defining features, setting, associated findings, and clinical question. between chromosomes. Robertsonian: fusion of two acrocentric chromosomes. Balanced: no genetic material lost; unbalanced: gain or loss.

Synonyms:

Transplacental

Passing through or occurring across the placenta.

Synonyms:

Transplant Immunology

Hyperacute rejection: preformed anti-donor antibodies (ABO, HLA) -> immediate graft failure (minutes-hours); prevented by crossmatch.

Synonyms:

Transplant Rejection

Immune-mediated destruction of a transplanted organ or tissue, classified by timing and mechanism. Hyperacute: preformed donor-specific antibodies, minutes to hours post-transplant, immediate graft thrombosis, irreversible; prevention by cross-matching.

Synonyms:

Transplant Surgery

Transplant surgery involves replacing a failing organ with a healthy donor organ. Kidney transplant: living donors (laparoscopic nephrectomy, left kidney preferred) or deceased donors (standard criteria, expanded criteria, DCD).

Synonyms:

Transport

Regulations for shipping radioactive materials. Package types: excepted, A, B.

Synonyms:

Transposition of the Great Arteries

A congenital heart defect in which the aorta arises from the right ventricle and the pulmonary artery from the left ventricle. This creates parallel circulations, so survival after birth depends on adequate mixing through an associated opening or ductus until definitive treatment is provided.

Synonyms:

Transposons

Mobile genetic elements that can move between different locations within the bacterial genome or between the chromosome and plasmids. Transposons

carry genes including antibiotic resistance genes and can facilitate the spread of resistance.

Synonyms:

Transudate

A transudate is a type of edema fluid with low protein content and few cells, resulting from imbalances in hydrostatic and oncotic pressures across capillary walls rather than from inflammation or increased vascular permeability.

Synonyms:

Transudative Pleural Effusion

From systemic factors altering hydrostatic/oncotic pressures. Most commonly from heart failure. Low protein, low LDH. Treatment addresses the underlying cause.

Synonyms:

Transurethral Resection of the Prostate

An endoscopic operation that removes obstructing prostate tissue to improve urine flow in selected people with benign prostatic enlargement. Alternatives and indications depend on symptoms, prostate size, complications, and patient preference.

Synonyms:

Transverse Colon

Longest, most mobile colonic segment from hepatic to splenic flexure, approximately 45 cm, with complete mesentery (transverse mesocolon). Crosses anterior to duodenum, pancreas, and major vessels. Splenic flexure is the highest colon point and common gas trapping site. Most common diverticular disease site along with the sigmoid.

Synonyms:

Transverse Lie

A fetal lie where the long axis of the fetus is perpendicular to the long axis of the mother. The presenting part is a shoulder or arm. Occurs in approximately 1% of term pregnancies. Risk of cord prolapse and obstructed labor. Cesarean delivery required as vaginal delivery is not possible.

Synonyms:

Transverse Myelitis

An inflammatory disorder of the spinal cord causing acute or subacute motor, sensory, and autonomic dysfunction.

Synonyms:

Transverse Plane

A horizontal plane that divides the body or an organ into upper (superior) and lower (inferior) portions.

Synonyms:

Transversus Abdominis Muscle

Deepest flat abdominal muscle with horizontal fibers, from inguinal ligament, iliac crest, thoracolumbar fascia, and inner lower six costal cartilages. Innervated by T7-T12 and L1. Compresses abdomen without trunk movement, providing core stability and increased intra-abdominal pressure during coughing, lifting, Valsalva.

Synonyms:

Transvestic Disorder

A paraphilic disorder involving recurrent sexual arousal from cross-dressing that causes marked distress, impairment, or harm, or is acted on without consent. It is distinct from gender dysphoria, which concerns gender identity rather than sexual arousal.

Synonyms:

TRAP Sequence

Twin Reversed Arterial Perfusion sequence, a complication of monochorionic twin gestations where one twin (the pump twin) perfuses the other (the acardiac twin) via arterioarterial anastomoses.

Synonyms:

Trapezium

Saddle-shaped distal row carpal bone on the radial side, articulating with the first metacarpal at the CMC joint of the thumb. This saddle joint allows thumb opposition essential for grip and fine motor function. Basal joint arthritis is common in postmenopausal women, causing pinch grip pain and weakness.

Synonyms:

Trapezius Muscle

Large triangular muscle from occipital bone and C7-T12 spinous processes to clavicle, acromion, and scapular spine. Innervated by CN XI and C3-C4. Upper fibers elevate scapula, middle fibers retract, lower fibers depress. Essential for shoulder stability and scapulothoracic motion.

Synonyms:

Trapezoid

Smallest distal row carpal bone between trapezium and capitate, articulating with the second metacarpal. Wedge shape provides stability for the firmly fixed second metacarpal. Fractures rare (less than 1 percent of carpal fractures). Contributes to the radial column wrist stability.

Synonyms:

Trauma

Physical injury from external force. Primary survey: ABCDE (Airway, Breathing, Circulation, Disability, Exposure). Secondary survey: head-to-toe examination, history (AMPLE), diagnostic tests. Injuries: fractures, dislocations, internal bleeding, organ damage. ATLS protocol guides management.

Synonyms:

Trauma (Vascular)

Injury to a blood vessel caused by blunt force, penetrating injury, fracture, medical procedures, or other mechanisms.

Synonyms: Vascular

Trauma Center

Hospital designated to provide comprehensive care for injured patients. Levels: Level I (complete care, research, prevention), Level II (similar but limited resources), Level III (stabilization, transfer), Level IV (advanced trauma life support, transfer). Transfer criteria: need for higher level of care, specific injuries.

Synonyms:

Trauma Surgery

Trauma surgery encompasses the acute care of in-

jured patients, guided by ATLS (ABCDE) principles: Airway maintenance with cervical spine protection, Breathing and ventilation, Circulation with hemorrhage control, Disability/neurologic assessment, and Exposure/environmental control.

Synonyms:

Traumatic bleb

A filtering bleb formed after glaucoma filtration surgery (trabeculectomy) that develops complications from trauma, or a thin-walled, elevated bleb that leaks or is at risk of rupture. Traumatic bleb failure or overfiltering can lead to hypotony, choroidal detachment, and endophthalmitis risk.

Synonyms:

Traumatic Brain Injury

Disruption of brain function caused by an external mechanical force. Severity: mild (GCS 13-15, concussion), moderate (GCS 9-12), severe (GCS 3-8). Primary injury: direct damage at moment of impact (contusion, diffuse axonal injury, intracranial hemorrhage).

Synonyms:

Traumatic spondylolisthesis of the axis (hangman's fracture)

A bilateral fracture of the pars interarticularis of the C2 vertebra (axis), typically caused by hyperextension of the head. Classically associated with judicial hanging but also occurs in motor vehicle accidents and falls. May present with neck pain, torticollis, or neurological deficits if the spinal cord is compressed.

Synonyms: hangman's fracture

Travel medicine

The branch of medicine dealing with health problems associated with international travel. Pre-travel consultation includes vaccinations, malaria prophylaxis, and travel advice. Common travel-related illnesses include traveller's diarrhea, malaria, and hepatitis A.

Synonyms:

Treacher Collins Syndrome

An autosomal dominant craniofacial disorder caused by mutations in TCOF1 (most common), POLR1C, or POLR1D genes, encoding ribosomal RNA transcription factors.

Synonyms:

Treat-to-Target Strategy

A management approach in which treatment is adjusted at regular intervals toward a predefined goal such as remission or low disease activity. It requires validated disease-activity measures, shared decisions, monitoring, and timely escalation or modification.

Synonyms:

Treatment

Medical intervention for disease. Includes pharmacological, surgical, lifestyle, supportive.

Synonyms:

Treatment-Resistant Depression

Depression that does not improve adequately after appropriate trials of standard treatments. It requires reassessment of diagnosis, adherence, comorbidity, and treatment options.

Synonyms:

Tremor

Tremor is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. from neurologic disease, medicines, metabolic disorders, or normal physiologic responses.

Synonyms:

Trephining (Trepanation)

A surgical procedure in which a hole is drilled or scraped into the skull (cranium), exposing the dura mater. Historically, trephining dates back to Neolithic times (10,000 BCE) and was performed for ritual, therapeutic (releasing 'evil spirits'), and post-traumatic indications.

Synonyms: Trepanation

Treponema pallidum

A spirochete that causes syphilis, a sexually transmitted infection. The organism is transmitted through sexual contact or transplacentally (congenital syphilis). Primary syphilis presents with a painless genital ulcer (chancre). Secondary syphilis presents with rash, mucous patches, and condylomata lata.

Synonyms:

Treponema pallidum infection

Infection with the bacterium *Treponema pallidum*, which causes syphilis and can affect the skin, nervous system, cardiovascular system, and other organs.

Synonyms:

Trepopnea

Dyspnea that occurs in one lateral decubitus position but not the other. It is typically worse when lying on the side of the affected lung. It may be caused by unilateral lung disease, pleural effusion, or mediastinal mass.

Synonyms:

Triage

The rapid sorting of patients according to urgency, clinical risk, and expected resource needs so that those requiring immediate intervention are prioritized. Triage is dynamic and must be repeated when a patient's condition changes.

Synonyms:

Trial of Labor After Cesarean

An attempt to give birth vaginally after a previous cesarean delivery. Whether it is appropriate depends on the prior uterine incision, obstetric history, current pregnancy, facility resources, and the person's preferences. Counseling includes the possibility of successful VBAC, repeat cesarean delivery, and uterine rupture.

Synonyms:

Triceps Brachii Muscle

Three-headed posterior arm muscle. Long head from infraglenoid tubercle, lateral head from posterior

humerus above radial groove, medial head below. All insert on the olecranon. Innervated by radial nerve (C7-C8). Primary elbow extensor; assists shoulder extension/adduction. **Synonyms:**

Trichinosis

Trichinosis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. pork or wild game (bear, boar) containing encysted larvae. Larvae are released in the intestine (enteric phase: diarrhea, abdominal pain), then migrate to skeletal muscle (parenteral phase: myositis, periorbital edema, fever, eosinophilia).

Synonyms:

Trichobezoar

A gastrointestinal mass composed mainly of swallowed hair, usually located in the stomach.

Synonyms:

Trichomonas

A flagellated protozoan, *Trichomonas vaginalis*, that infects the urogenital tract and causes trichomoniasis. It is transmitted mainly through sexual contact and may cause discharge, irritation, or no symptoms.

Synonyms:

Trichomoniasis

Trichomoniasis is a sexually transmitted infection caused by *Trichomonas vaginalis*, often producing genital irritation, discharge, dysuria, or no symptoms. asymptomatic in men; women present with vaginal discharge (frothy, yellow-green, malodorous), itching, dysuria, and inflammation. Associated with preterm birth and increased HIV acquisition risk. Diagnosis: wet mount microscopy, culture, NAAT.

Synonyms:

Trichothiodystrophy Syndrome

A group of inherited disorders characterized by brittle sulfur-deficient hair with a distinctive banded appearance, often accompanied by photosensitivity,

ichthyosis, developmental delay, short stature, or recurrent infection.

Synonyms:

Trichotillomania

Trichotillomania concerns trichotillomania; its medical significance is established from the defining features, setting, associated findings, and clinical question. repeated attempts to decrease or stop hair pulling. The hair pulling causes clinically significant distress or impairment. It is not attributable to another medical condition.

Synonyms:

Tricuspid Atresia

Absence of the tricuspid valve, resulting in no direct communication between the right atrium and right ventricle. Blood flow depends on an atrial septal defect and ventricular septal defect for mixing. Presents with cyanosis.

Synonyms:

Tricuspid Regurgitation

Incomplete closure of the tricuspid valve allowing blood to flow backward from the right ventricle to the right atrium during systole. Causes include right ventricular dilation (from pulmonary hypertension or left heart failure), endocarditis, rheumatic disease, and carcinoid syndrome.

Synonyms:

Tricuspid Stenosis

Narrowing of the tricuspid valve opening, most commonly caused by rheumatic heart disease. It is often associated with mitral stenosis. Symptoms include fatigue, edema, and hepatic congestion. Murmur: low-pitched mid-diastolic rumble at the left lower sternal border that increases with inspiration.

Synonyms:

Tricuspid Valve

Right atrioventricular valve with anterior, posterior, and septal cusps supported by chordae tendineae and three papillary muscles. Largest cardiac valve. Most commonly affected in IV drug use-associated

endocarditis. Tricuspid regurgitation from right ventricular dilation, endocarditis, or carcinoid. Stenosis is rare, mostly rheumatic.

Synonyms:

Tricyclic Antidepressant Overdose

Anticholinergic effects, cardiac toxicity (QRS prolongation, arrhythmias), seizures, hypotension. Treatment: sodium bicarbonate (QRS >100 ms), seizure control, supportive care.

Synonyms:

Tricyclic Antidepressants

Older antidepressants that non-selectively inhibit the reuptake of serotonin and norepinephrine. They include amitriptyline, nortriptyline, imipramine, clomipramine, and desipramine.

Synonyms:

Trigeminal Nerve

The fifth cranial nerve, providing most sensation from the face, scalp, mouth, and cornea. Its mandibular division also supplies the muscles of chewing.

Synonyms:

Trigeminal Neuralgia

A chronic pain condition characterized by recurrent, sudden, severe, electric shock-like pain in the distribution of the trigeminal nerve (typically V2/V3). Often triggered by light touch, chewing, or brushing teeth. Most cases are caused by vascular compression of the trigeminal nerve root.

Synonyms:

Trigger Finger

Trigger finger (stenosing tenosynovitis): A1 pulley thickening, flexor tendon nodule -> catching/locking. Clinical: triggering, palpable nodule at distal palmar crease, morning stiffness. Grades: I (pain only), II (catching, active extension), III (catching, passive extension), IV (locked flexed).

Synonyms:

Triglyceride

A blood lipid consisting of three fatty acids attached to glycerol. Persistently high levels increase the risk of pancreatitis and contribute to cardiovascular risk.

Synonyms:

Trimethoprim-sulfamethoxazole

A fixed-dose combination of trimethoprim and sulfamethoxazole that synergistically inhibits folate synthesis. TMP-SMX is indicated for urinary tract infections, *Pneumocystis jirovecii* pneumonia, and community-acquired pneumonia. The combination is bactericidal against many gram-positive and gram-negative organisms.

Synonyms:

Trimethylaminuria

A metabolic disorder in which impaired oxidation of trimethylamine causes a characteristic fish-like body odor in sweat, urine, and breath. It may be inherited or acquired and can cause substantial psychosocial distress despite limited physical illness.

Synonyms:

trinucleotide repeat

Expansion of three-nucleotide sequences causes diseases: Huntington (CAG), Fragile X (CGG), myotonic dystrophy (CTG), Friedreich ataxia (GAA). Anticipation common.

Synonyms:

Tripe palms

Diffuse, velvety, thickened hyperkeratosis of the palmar skin with a cerebriform, corrugated appearance resembling the lining of a cow's stomach (tripe), which is strongly associated with underlying malignancy, most commonly gastric adenocarcinoma. It may occur alone or in conjunction with acanthosis nigricans.

Synonyms:

Triple-Negative Breast Cancer

Breast cancer lacking ER, PR, HER2. Aggressive, limited treatment options.

Synonyms:

Triplets

A multiple pregnancy with three fetuses (trichorionic, dichorionic, or monochorionic combinations); commonly results from assisted reproductive technology. High-risk: preterm delivery (average 32-33 weeks), low birth weight, preeclampsia, gestational diabetes, growth restriction, and complications of monochorionicity (TTTS).

Synonyms:

Triploidy Syndrome

A chromosomal condition in which cells contain three complete haploid chromosome sets. It causes severe fetal growth restriction and multiple congenital anomalies and is usually incompatible with prolonged survival; partial or mosaic forms vary.

Synonyms:

Triptan

A class of medications used for acute migraine treatment, acting as 5-HT_{1B/1D} receptor agonists. 5-HT_{1B} receptors are located on cranial blood vessels; activation causes vasoconstriction of dilated meningeal arteries.

Synonyms:

Triquetrum

Pyramidal proximal row carpal bone on the ulnar side, articulating with lunate, hamate, pisiform, and TFCC. Second most commonly fractured carpal bone. Contributes to proximal carpal row and ulnar wrist stability. Pisiform articulates with its volar surface.

Synonyms:

Trisomy

Presence of three copies of a chromosome instead of two. Trisomy 21 (Down syndrome): intellectual disability, characteristic facies, heart defects. Trisomy 18 (Edwards): severe intellectual disability, multiple anomalies. Trisomy 13 (Patau): severe intellectual disability, holoprosencephaly, cleft lip/palate.

Synonyms:

Trisomy 21

Down syndrome: the most common chromosomal disorder, caused by an extra chromosome 21 (trisomy 21; 95 percent meiotic nondisjunction, mosaicism, translocation).

Synonyms:

Trophoderm

The outer cellular layer of a blastocyst that contributes to formation of the placenta.

Synonyms:

Tropical Sprue

Chronic diarrhea and malabsorption syndrome of uncertain etiology occurring predominantly in tropical and subtropical regions. The condition is characterized by villous atrophy of the small intestinal mucosa leading to malabsorption of nutrients including folate, iron, and vitamin B12.

Synonyms:

Troponin

Cardiac-specific troponin I and T, the preferred biomarkers for myocardial injury (MI). Highly sensitive and specific. Rise 2-4 hours after symptom onset, peak at 12-24 hours, remain elevated for 7-10 days. High-sensitivity troponin (hs-cTn) allows earlier detection (1-2 hours).

Synonyms:

Trousseau Sign of Latent Tetany

A sensitive and specific clinical sign of hypocalcemia. Elicited by inflating a blood pressure cuff on the upper arm to a pressure greater than systemic systolic blood pressure for 3 minutes.

Synonyms:

Trousseau Syndrome

Recurrent or migratory venous thrombosis associated with active malignancy, particularly mucin-producing adenocarcinoma. It reflects tumor-associated activation of coagulation and is distinct from Trousseau sign of latent tetany.

Synonyms:

True Ribs

Ribs 1-7 articulating directly with the sternum via their own costal cartilages. Each has a head, neck, tubercle, and shaft. The first two are short and strongly curved for neck/shoulder muscle attachment. Costal cartilages provide thoracic cage elasticity for respiratory expansion.

Synonyms:

Truncus Arteriosus

A congenital heart defect where a single large vessel arises from both ventricles, receiving a mixed blood supply. Associated with a large ventricular septal defect and abnormal semilunar valve. Presents with cyanosis and heart failure early in life.

Synonyms:

Trypanosoma brucei

A protozoan parasite transmitted by tsetse flies that causes African trypanosomiasis, or sleeping sickness. The human-infecting subspecies differ in geographic distribution and typical disease course; infection can progress from fever and lymph-node enlargement to neurologic involvement.

Synonyms:

Trypanosomiasis

Two forms: African trypanosomiasis (sleeping sickness, transmitted by tsetse fly, caused by *Trypanosoma brucei gambiense* – chronic West African form, or *T. b. rhodesiense* – acute East African form) and American trypanosomiasis (Chagas disease, transmitted by triatomine bugs, caused by *Trypanosoma cruzi*).

Synonyms:

TSH-Receptor Antibody

An antibody that binds the thyrotropin receptor. Stimulating antibodies cause Graves disease, while blocking antibodies can cause hypothyroidism; measurement supports diagnosis and can help assess fetal or neonatal risk in pregnancy.

Synonyms:

Tubal Ligation

Surgical sterilization by occluding the fallopian tubes, preventing the ovum from reaching the uterus. Postpartum tubal ligation: after vaginal or cesarean delivery (Pomeroy technique, Parkland). Interval: laparoscopic (bands, clips, bipolar cautery) or mini-laparotomy (Hulka or Filshie clip).

Synonyms:

Tubal Pregnancy

An ectopic pregnancy implanted in a fallopian tube rather than in the uterine cavity. Risk factors include a previous ectopic pregnancy, tubal disease or surgery, pelvic inflammatory disease, smoking, and assisted reproduction. Symptoms may include abdominal pain, missed menstruation, and vaginal bleeding.

Synonyms:

Tuberculin Skin Test

Intradermal injection of purified protein derivative (PPD) to test for *Mycobacterium tuberculosis* infection. Read at 48-72 hours measuring induration (not erythema). Positive: greater than 5 mm in HIV or close contacts; greater than 10 mm in high-risk groups; greater than 15 mm in low-risk populations.

Synonyms:

Tuberculous leprosy

The paucibacillary pole of the leprosy spectrum characterised by strong cell-mediated immunity to *Mycobacterium leprae*, resulting in well-formed granulomas and few or no organisms in tissue.

Synonyms:

Tuberculosis

A chronic infection caused by *Mycobacterium tuberculosis*, transmitted by airborne droplets; pulmonary TB is most common, extrapulmonary forms occur (lymph node, pleural, meningeal, miliary, skeletal, renal). Features: chronic cough (>3 weeks), hemoptysis, fever, night sweats, weight loss; Ghon complex, apical cavitation on imaging.

Synonyms:

Tuberculosis in Children

Infection with *Mycobacterium tuberculosis*, often from household contacts. Latent TB infection (LTBI) positive tuberculin skin test or interferon-gamma release assay with no symptoms or radiographic findings. Active TB presents with cough, fever, weight loss, and lymphadenopathy. Diagnosis by PPD, chest X-ray, and sputum culture.

Synonyms:

Tuberous sclerosis

Tuberous sclerosis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. TSC2 (tuberin) genes, leading to benign tumor growth in multiple organs. Neurological manifestations include cortical tubers, subependymal nodules, subependymal giant cell astrocytomas (SEGAs), and epilepsy (often infantile spasms).

Synonyms:

Tuberous Sclerosis Complex

An autosomal dominant genetic disorder caused by mutations in TSC1 (hamartin) or TSC2 (tuberin) genes, leading to mTOR pathway activation. Features: cortical tubers, subependymal nodules, cardiac rhabdomyomas, angiomyolipomas, facial angiofibromas, and seizures (often infantile spasms).

Synonyms:

Tubography

Contrast imaging of fallopian tubes. Evaluates patency.

Synonyms:

Tubular Reabsorption

The process by which the renal tubules return filtered water and solutes from the tubular lumen to the blood, reclaiming 99 percent of the glomerular filtrate. Proximal tubule: reabsorbs 65 percent of sodium, most glucose, amino acids, water, bicarbonate, phosphate, and urate.

Synonyms:

Tubular Secretion

The transport of substances from the peritubular capillary blood into the tubular lumen, a second mechanism (besides filtration) by which the kidney eliminates waste and regulates ions.

Synonyms:

Tubuloglomerular Feedback

A feedback mechanism at the juxtaglomerular apparatus (JGA) that adjusts GFR based on tubular fluid NaCl concentration. The macula densa cells (specialized tubular epithelial cells in the thick ascending limb) sense NaCl concentration via the NKCC2 cotransporter.

Synonyms:

Tularemia

Tularemia is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. tick bites, handling infected animals (rabbits, rodents), contaminated water, or aerosolization. Ulceroglandular (most common): ulcer at inoculation site + tender lymphadenopathy.

Synonyms:

Tumor

Tumor is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. origin. Terminology: -oma usually benign, but exceptions (melanoma, lymphoma, seminoma are malignant).

Synonyms:

Tumor Board

A multidisciplinary conference of oncologists, surgeons, radiologists, and pathologists who review individual cancer cases to coordinate diagnosis and treatment planning.

Synonyms:

Tumor Burden

The total amount of cancer in the body, estimated

from the number, size, and extent of tumor deposits; higher burden is generally associated with worse prognosis.

Synonyms:

Tumor Differentiation

The degree to which neoplastic cells morphologically and functionally resemble their normal counterparts of origin.

Synonyms:

Tumor Embolism

Tumor embolism occurs when malignant cells, tumor fragments, or tumor thrombi enter the venous circulation and travel to distant sites. The pulmonary vasculature is the most common site of embolization, as venous blood from most organs drains to the lungs through the pulmonary arteries.

Synonyms:

Tumor Grade

A histologic measure of how much tumor cells resemble normal tissue; low-grade (well-differentiated) tumors behave less aggressively than high-grade (poorly differentiated) tumors. Grading is a prognostic, not staging, feature.

Synonyms:

Tumor Grading

A description of a tumor based on how abnormal the cancer cells look under a microscope compared to normal cells; a lower grade indicates slower-growing cancer.

Synonyms:

Tumor Heterogeneity

The presence of genetically, epigenetically, or phenotypically distinct subpopulations within the same tumor or between primary and metastatic sites. Heterogeneity can influence prognosis, sampling, treatment response, and resistance.

Synonyms:

Tumor Lysis Syndrome

Metabolic emergency from rapid cell death. Hy-

peruricemia, hyperkalemia, hyperphosphatemia, hypocalcemia. Prevention: hydration, allopurinol, rasburicase.

Synonyms:

Tumor Marker

Substance produced by cancer or body in response to cancer. Used for diagnosis, monitoring, prognosis. Examples: PSA (prostate), CA-125 (ovarian), CEA (colon), AFP (liver), CA 19-9 (pancreas).

Synonyms:

Tumor Microenvironment

Surrounding tissue influencing tumor growth. Includes immune cells, blood vessels, fibroblasts, signaling molecules.

Synonyms:

Tumor Mutational Burden

The number of somatic mutations per unit of coding DNA in a tumor specimen. TMB may correlate with production of neoantigens and response to some immune checkpoint inhibitors, but interpretation requires a validated assay and disease-specific context.

Synonyms:

Tumor Necrosis Factor

A proinflammatory cytokine (TNF-alpha) produced mainly by macrophages, acting on TNFR1/TNFR2 receptors. Functions: activation of endothelium and leukocytes, fever, cachexia, apoptosis, and coordination of inflammation and the acute-phase response.

Synonyms:

Tumor Necrosis Factor Inhibitor

TNF inhibitor (biologic): monoclonal antibodies/fusion proteins blocking TNF-alpha—infliximab, adalimumab (monoclonals), etanercept (soluble receptor), certolizumab, golimumab. Used in rheumatoid arthritis (after methotrexate failure), ankylosing spondylitis, psoriatic arthritis, psoriasis, IBD (Crohn, UC).

Synonyms:

Tumor Staging

A system of describing the size of a cancer and how far it has spread throughout the body from its original location (e.g., using the TNM system).

Synonyms:

Tumor Suppressor

A gene or protein that helps limit cell growth, repair DNA damage, or promote removal of abnormal cells. Loss of its function can contribute to cancer.

Synonyms:

Tumor Suppressor Gene

Gene that prevents uncontrolled cell growth. Examples: TP53, RB1, BRCA1, BRCA2, APC. Loss of function contributes to cancer.

Synonyms:

Tumor-Suppressor Gene

A gene whose normal product restrains cell proliferation, promotes DNA repair, induces apoptosis, or maintains genomic stability. Loss or inactivation of both functional copies is common in the development of many cancers, although mechanisms vary by gene.

Synonyms:

Tungiasis

A skin infestation caused by the sand flea *Tunga* penetrans, producing an itchy or painful lesion, usually on the feet.

Synonyms:

Tunica Adventitia

The outer connective-tissue layer of a blood-vessel wall. It contains collagen and elastic fibers that provide structural support, along with nerves and, in larger vessels, small vessels called vasa vasorum that supply the outer wall. It is relatively prominent in veins and helps anchor vessels to surrounding tissues.

Synonyms:

Tunica Media

The middle layer of a blood-vessel wall, located

between the tunica intima and tunica adventitia. It consists primarily of smooth muscle and elastic fibers; its contraction or relaxation changes vascular diameter, regulating blood pressure and tissue perfusion. It is thickest in arteries and thinner in veins.

Synonyms:

Turbinates

Curved bony shelves on the lateral walls of the nasal cavity, covered by vascular mucosa. They increase surface area and help warm, humidify, and filter inhaled air.

Synonyms:

Turbinates Hypertrophy

Chronic enlargement of the nasal turbinates, most commonly the inferior turbinates, resulting in nasal airway obstruction, which can be caused by chronic inflammation from allergic rhinitis, non-allergic rhinitis, chronic sinusitis, hormonal changes, or vasomotor dysfunction.

Synonyms:

Turner Hypoplasia

Enamel defect on permanent tooth from infection of overlying primary tooth. Localized hypoplasia.

Synonyms:

Turner Syndrome

Chromosomal abnormality in females with complete or partial absence of one X chromosome most commonly with a karyotype of 45,X occurring in one in two thousand five hundred live female births.

Synonyms:

Twin-to-Twin Transfusion Syndrome

A complication of monochorionic twin pregnancy in which shared placental vessels cause unequal blood flow between the twins.

Synonyms:

Twin-Twin Transfusion Syndrome

A complication of monochorionic diamniotic twin pregnancies where placental vascular anastomoses

(arteriovenous connections) cause unbalanced blood flow from one twin (the donor) to the other (the recipient). The donor twin becomes hypovolemic, anemic, and growth-restricted with oligohydramnios ("stuck twin").

Synonyms:

Tympanic Cavity

The air-filled space of the middle ear containing the malleus, incus, and stapes.

Synonyms:

Tympanic hyperectasis

Abnormal outward bulging or retraction of the tympanic membrane from chronic middle ear pressure changes, potentially causing conductive hearing loss and requiring tympanostomy tube placement.

Synonyms:

Tympanic membrane

The tympanic membrane (eardrum) is a thin, cone-shaped, translucent membrane at the medial end of the external auditory canal that separates the external ear from the middle ear and serves as the interface for sound transmission by converting acoustic energy into mechanical vibrations of the ossicular chain.

Synonyms:

Tympanometry

Tympanometry examines tympanometry; interpretation depends on the specimen or body region, test method, reference range, and clinical question. membrane and the pressure within the middle ear as a function of air pressure in the external auditory canal, providing information about middle ear function that supplements otoscopic examination.

Synonyms:

Tympanosclerosis

Scarring and calcification of the tympanic membrane or middle-ear lining, often following recurrent infection or previous inflammation. It may be asymptomatic or cause conductive hearing loss when the ossicles are affected.

Synonyms: Tympanic-membrane sclerosis; myringosclerosis when limited to the tympanic membrane.

Tympanostomy Tubes

Small tubes inserted through the tympanic membrane to ventilate the middle ear and prevent fluid accumulation. Indicated for recurrent acute otitis media (3 episodes in 6 months or 4 in 12 months) or persistent otitis media with effusion greater than 3 months with hearing loss. Performed as outpatient procedure under general anesthesia.

Synonyms:

Type 1 Diabetes Mellitus

Type 1 diabetes is an autoimmune disease in which the immune system attacks and destroys the insulin-producing beta cells of the pancreas, resulting in absolute insulin deficiency.

Synonyms:

Type 2 Diabetes Mellitus

Type 2 diabetes is a chronic metabolic disorder characterized by insulin resistance and progressive pancreatic beta-cell dysfunction, leading to hyperglycemia.

Synonyms:

Type I Hypersensitivity

An immediate (anaphylactic) hypersensitivity reaction mediated by allergen-specific IgE bound to mast cells and basophils; re-exposure cross-links IgE, triggering degranulation and release of histamine and mediators within minutes. Manifestations: allergic rhinitis, asthma, urticaria, food allergy, and anaphylaxis.

Synonyms:

Type II Hypersensitivity

An antibody-mediated (cytotoxic) hypersensitivity reaction in which IgG or IgM binds to cell-surface or matrix antigens, causing cell destruction by complement activation (MAC), opsonization/phagocytosis, or antibody-dependent cellular cytotoxicity.

Synonyms:

Type III Hypersensitivity

An immune complex-mediated hypersensitivity reaction in which circulating antigen-antibody complexes deposit in tissues and vessels, activating complement and attracting neutrophils, causing inflammation and tissue damage. Local forms: Arthus reaction, serum sickness.

Synonyms:

Type III hypersensitivity reaction

Tissue injury caused by deposition of antigen-antibody complexes, activating complement and inflammation.

Synonyms:

Type IV Hypersensitivity

A delayed-type hypersensitivity (cell-mediated) reaction mediated by sensitized T cells (not antibody), occurring 24-72 hours after antigen exposure.

Synonyms:

Typhlitis

Inflammation of the cecum in immunocompromised patients particularly those with neutropenia from chemotherapy. Also known as neutropenic enterocolitis. Presents with right lower quadrant pain, fever, and diarrhea. Diagnosis is by CT showing cecal wall thickening.

Synonyms: neutropenic enterocolitis.

Typhoid

A systemic infection caused by *Salmonella enterica* serovar Typhi, usually acquired through contaminated food or water and characterized by prolonged fever and gastrointestinal or systemic symptoms.

Synonyms:

Typhoid Fever

A systemic infection caused by *Salmonella typhi*, acquired through contaminated food or water. Incubation 7-14 days. Presents with prolonged fever, headache, abdominal pain, rose spots, and relative bradycardia. Diagnosis: blood culture (first week), stool culture (second week), Widal test.

Synonyms:

Typhus

Typhus refers to several rickettsial infections transmitted by lice, fleas, or mites and characterized by fever, headache, rash, and variable systemic complications. arthropod vectors. Three main forms: (1) Epidemic (louse-borne) typhus—*Rickettsia prowazekii*, transmitted by the human body louse (*Pediculus humanus corporis*). Associated with overcrowding, poverty, cold climate, and refugees ('war typhus').

Synonyms:

Typical Antipsychotics

Typical antipsychotics, also known as first-generation antipsychotics, primarily block dopamine D2 receptors in the mesolimbic pathway, reducing positive symptoms of schizophrenia including hallucinations, delusions, and disorganized thinking.

Synonyms: first-generation antipsychotics, primarily block.

Tyramine

A naturally occurring amine found in some aged or fermented foods. In people taking monoamine oxidase inhibitors, excessive tyramine can cause a dangerous rise in blood pressure.

Synonyms:

Tyrosine Kinase Inhibitor

A class of targeted cancer therapy drugs that inhibit tyrosine kinases, enzymes that phosphorylate tyrosine residues on proteins and activate signaling pathways involved in cell growth, proliferation, differentiation, and survival. Tyrosine kinase mutations or overexpression drive many cancers.

Synonyms:

Tyrosinemia

An inherited disorder of tyrosine metabolism that causes accumulation of tyrosine or its metabolites. Type I can cause severe liver and kidney disease and is associated with fumarylacetoacetate hydrolase deficiency.

Synonyms:

Tonic Seizures

Seizures that cause sustained stiffening of muscles, usually lasting seconds to minutes.

Synonyms:

Traumatic Shock

A life-threatening state in which severe injury causes inadequate blood flow and oxygen delivery to tissues.

Synonyms:

Trendelenburg Position

A supine position in which the head and upper body are lower than the feet.

Synonyms:

Teen Depression

A depressive disorder in an adolescent that causes persistent low mood or loss of interest and impairs daily functioning.

Synonyms:

Temporal Lobe Seizure

A seizure that begins in the temporal lobe of the brain and may cause altered awareness, unusual sensations, or repetitive movements.

Synonyms:

Tendinopathy

A disorder involving tendon pain and impaired tendon structure, usually related to overuse or degeneration.

Synonyms:

Thyrotoxicosis

A clinical state caused by excessive thyroid hormone activity in the body.

Synonyms:

Tuberculin Test

A skin test that assesses whether the immune system has reacted to tuberculosis proteins.

Synonyms:

Towel Clamp

A clamp used to secure surgical drapes or hold them in position.

Synonyms:

Trocar

A pointed instrument used to create access through tissue, usually to place a cannula for minimally invasive surgery.

Synonyms:

Tactile Sense

The ability to perceive touch, pressure, vibration, texture, and related mechanical stimuli through receptors in the skin and deeper tissues.

Synonyms:

Target Tissue

A tissue containing receptors or other molecular targets on which a hormone, drug, toxin, or signaling molecule acts.

Synonyms:

Tarsorrhaphy

A procedure that partially or completely closes the eyelids to protect the cornea or reduce exposure in conditions such as severe dry eye or facial nerve palsy.

Synonyms:

Testes

Testes examines testes; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Thyroxine-Binding Globulin

The principal transport protein for thyroid hormones in the blood, binding most circulating thyroxine and triiodothyronine.

Synonyms:

Tissue Plasminogen Activator

An enzyme that converts plasminogen to plasmin,

helping dissolve fibrin in blood clots. Recombinant forms are used as thrombolytic medicines in selected emergencies.

Synonyms:

Tomosynthesis

An imaging technique that acquires multiple low-dose X-ray projections and reconstructs thin section images, commonly used for three-dimensional breast imaging.

Synonyms:

Tonometer

An instrument used to measure intraocular pressure, an important part of glaucoma assessment.

Synonyms:

Tonus

The normal resting partial contraction of a muscle or the baseline tension of a tissue.

Synonyms:

Tussis

Cough; a forceful reflex expiration that helps clear secretions, irritants, or foreign material from the airways.

Synonyms:

Tenodesis

Surgical fixation of a tendon to bone or another tendon to restore function, stabilize a joint, or treat tendon imbalance.

Synonyms:

Tibial Fracture

A break in the tibia, the major weight-bearing bone of the lower leg, often caused by high-energy trauma, twisting injury, or repetitive stress.

Synonyms:

Transaminitis

Elevation of blood levels of aminotransferase enzymes, usually alanine aminotransferase and aspartate aminotransferase, indicating possible liver-cell

injury but not identifying its cause.

Synonyms:

Travelers' Diarrhea

Acute diarrhea occurring during or shortly after travel, usually caused by contaminated food or water and commonly involving bacterial, viral, or parasitic infection.

Synonyms:

Tubular Adenoma

A benign glandular polyp, most often in the colon, that can develop dysplastic changes and is considered a precursor lesion for some colorectal cancers.

Synonyms:

Tympanoplasty

Surgical repair or reconstruction of the tympanic membrane and, when necessary, the middle-ear ossicles to close a perforation or improve hearing.

Synonyms:

Tympanic Membrane Perforation

A tear or hole in the eardrum caused by infection, trauma, pressure changes, or instrumentation, potentially producing pain, drainage, or conductive hearing loss.

Synonyms:

Tachycardia-Induced Cardiomyopathy

Weakening and dilation of the heart muscle caused by a persistent or frequently recurring rapid heart rhythm, often improving when the arrhythmia is controlled.

Synonyms:

Toxic Metabolic Encephalopathy

Diffuse brain dysfunction caused by systemic metabolic or toxic disturbances, producing confusion, altered alertness, agitation, seizures, or coma.

Synonyms:

Tensile Strength

The ability of a tissue or material to resist being

pulled apart; it is important in wound healing and the integrity of sutures, tendons, and other connective tissues.

Synonyms:

Teratogenesis

The process by which an exposure or genetic factor causes abnormal development of an embryo or fetus.

Synonyms:

Terminal Care

Care focused on comfort, symptom relief, dignity, and support for a person with an advanced illness who is approaching the end of life.

Synonyms:

Terry's Nails

A nail change in which most of the nail plate appears white with a narrow pink or brown distal band; it may be associated with liver disease, heart failure, diabetes, or ageing.

Synonyms:

Tertian Fever

A fever pattern in which attacks recur approximately every 48 hours, classically associated with *Plasmodium vivax* or *Plasmodium falciparum* malaria.

Synonyms:

Tetraplegia (Quadriplegia)

Paralysis or severe weakness affecting all four limbs and usually the trunk, commonly caused by cervical spinal-cord injury or disease.

Synonyms: Quadriplegia

Thalassaemia

An inherited disorder of haemoglobin production causing microcytic anaemia of variable severity; severe forms may require regular transfusions.

Synonyms:

Thirst

The conscious desire to drink, usually triggered by increased plasma osmolality, reduced circulating

volume, or both.

Synonyms:

Thoracoscopy

A minimally invasive procedure using a camera inserted through the chest wall to examine or treat the pleura, lungs, or mediastinum.

Synonyms:

Threadworms (Pinworms)

Small intestinal worms, *Enterobius vermicularis*, whose females lay eggs around the anus and commonly cause nocturnal itching.

Synonyms: Pinworms

Thymus Gland

A lymphoid organ in the upper chest where T lymphocytes mature, especially active during childhood and gradually involuting after puberty.

Synonyms:

Transient Ischaemic Attack (TIA)

A brief episode of neurological dysfunction caused by temporary focal brain, spinal-cord, or retinal ischaemia without persistent tissue infarction.

Synonyms: TIA

Tick-Borne Encephalitis

A viral infection transmitted mainly by ticks that can cause fever, meningitis, encephalitis, or lasting neurological complications.

Synonyms:

Tiredness (Fatigue)

A subjective lack of energy or exhaustion that may result from inadequate sleep, illness, psychological stress, anaemia, or many other causes.

Synonyms: Fatigue

Tongue-Tie (Ankyloglossia)

Restricted movement of the tongue caused by an unusually short or tight lingual frenulum, sometimes affecting feeding, speech, or oral hygiene.

Synonyms: Ankyloglossia

Tourette's Syndrome

A neurodevelopmental disorder involving persistent motor and vocal tics that begin in childhood and fluctuate in severity.

Synonyms:

Trimester

One of the three approximately three-month divisions of pregnancy: first, second, and third trimester.

Synonyms:

Tropical Diseases

Diseases occurring predominantly in tropical and subtropical regions, including malaria, dengue, schistosomiasis, leishmaniasis, and other parasitic or infectious diseases.

Synonyms:

Tumour (Neoplasm)

An abnormal mass of tissue produced by uncontrolled or inappropriate cell growth; it may be benign or malignant.

Synonyms: Neoplasm

Turner's Syndrome

A chromosomal condition affecting females, usually involving complete or partial absence of one X chromosome and commonly causing short stature, ovarian insufficiency, and characteristic physical features.

Synonyms:

Tzanck Smear

A microscopic examination of cells from the base of a skin blister or erosion, historically used to support diagnoses such as herpesvirus infection or pemphigus.

Synonyms:

Twin Pregnancy

A pregnancy involving two fetuses. Clinical risk depends on chorionicity and amnionicity, with increased risks including preterm birth, fetal growth problems, and hypertensive disorders.

Synonyms:

TAC regimen

TAC regimen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tacedinaline

tacedinaline is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tachykinin

tachykinin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tachyphrenia

tachyphrenia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tacrine

tacrine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tacrolimus

tacrolimus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tactile agnosia

tactile agnosia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tadalafil

tadalafil is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taenia

taenia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taenia saginata

taenia saginata is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taenia solium

taenia solium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taeniasis

taeniasis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tail

tail is a medical condition or clinical finding involving the body system or process named by the term.

Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talabostat

talabostat is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talactoferrin alfa

talactoferrin alfa is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talaporfin sodium

talaporfin sodium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talc

talc is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talipes

talipes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talipes calcaneovalgus

talipes calcaneovalgus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tall stature

tall stature is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talotrexin

talotrexin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tamoxifen

tamoxifen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tamoxifen citrate

tamoxifen citrate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tamsulosin

tamsulosin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tamsulosin hydrochloride

tamsulosin hydrochloride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tandutinib

tandutinib concerns tandutinib, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tanespimycin

tanespimycin concerns tanespimycin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tannic acid

tannic acid denotes tannic acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

tanomastat

tanomastat is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tantalum

tantalum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tapentadol

tapentadol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taq polymerase

taq polymerase is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tarenflurbil

tarenflurbil is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

target population

target population is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tariquidar

tariquidar is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tarsal bones

tarsal bones is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tarsal joints

tarsal joints is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taste bud

taste bud is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taste disorder

taste disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tenascin

tenascin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tendon injury

tendon injury describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tendon sheath

tendon sheath is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tenericutes

tenericutes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

teniposide

teniposide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tenofovir

tenofovir concerns tenofovir, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tension-type headache

tension-type headache is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tenuazonic acid

tenuazonic acid denotes tenuazonic acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

teprotumumab

teprotumumab concerns teprotumumab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

terameprocol

terameprocol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

teratocarcinoma

teratocarcinoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

teratozoospermia

teratozoospermia is a medical condition or clinical

finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terazosin

terazosin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terazosin hydrochloride

terazosin hydrochloride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terbufos

terbufos is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terbutaline

terbutaline is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terfenadine

terfenadine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terlipressin

terlipressin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

term birth

term birth is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terminal insomnia

terminal insomnia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terpene

terpene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tertiary hyperparathyroidism

tertiary hyperparathyroidism is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tertiary protein

tertiary protein denotes tertiary protein, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

tesetaxel

tesetaxel concerns tesetaxel, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

testicular atrophy

testicular atrophy is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testicular atrophy.

Synonyms:

testicular feminization

testicular feminization is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testicular feminization.

Synonyms:

testicular gonadoblastoma

testicular gonadoblastoma is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testicular gonadoblastoma.

Synonyms:

testicular hydrocele

testicular hydrocele is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testicular hydrocele.

Synonyms:

testicular mass

testicular mass is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testicular mass.

Synonyms:

testis disorder

testis disorder is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testis disorder.

Synonyms:

testis neoplasm

testis neoplasm is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testis neoplasm.

Synonyms:

testolactone

testolactone is a clinical assessment, measurement,

or procedure used to investigate, monitor, classify, or treat testolactone.

Synonyms:

testosterone propionate

testosterone propionate is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testosterone propionate.

Synonyms:

tetanus toxin

tetanus toxin describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

tetracaine

tetracaine concerns tetracaine, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tetrachloroethylene

tetrachloroethylene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tetrachlorvinphos

tetrachlorvinphos is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

thyroidectomy

thyroidectomy is used in relation to thyroidectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

thyrotroph adenoma

thyrotroph adenoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

thyrotropin

thyrotropin concerns thyrotropin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

thyrotropin alfa

thyrotropin alfa is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tiazofurin

tiazofurin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tibia vara

tibia vara is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tibial artery

tibial artery is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tibialcrural artery

tibialcrural artery is a medical condition or clinical

finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tibialis cranialis

tibialis cranialis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tic disorder

tic disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

ticarcillin

ticarcillin concerns ticarcillin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tick

tick is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tigecycline

tigecycline concerns tigecycline, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tight junction

tight junction is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

tilorone

tilorone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

time

time is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

time perception

time perception is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

timolol

timolol concerns timolol, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tinea favosa

tinea favosa is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tinidazole

tinidazole concerns tinidazole, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tinzaparin

tinzaparin concerns tinzaparin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tinzaparin sodium

tinzaparin sodium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tiopronin

tiopronin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tipifarnib

tipifarnib concerns tipifarnib, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tirapazamine

tirapazamine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tirbanibulin

tirbanibulin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tirofiban

tirofiban is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissierella

tissierella is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissierella praeacuta

tissierella praeacuta is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue adhesions

tissue adhesions is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue banks

tissue banks is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue congestion

tissue congestion is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue culture

tissue culture is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue elastance

tissue elastance is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue engineering

tissue engineering is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue kallikrein

tissue kallikrein is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue membrane

tissue membrane is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue processor

tissue processor is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue scaffold

tissue scaffold is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

t-lymphocyte

t-lymphocyte is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tmax

tmax is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tobacco use

tobacco use is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tobramycin

tobramycin concerns tobramycin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tocolytic agents

tocolytic agents is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tocopherol

tocopherol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tocotrienols

tocotrienols is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toe

toe is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toe joint

toe joint is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

togaviridae

togaviridae identifies togaviridae, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

togaviridae infections

togaviridae infections identifies togaviridae infections, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

toilet training

toilet training is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolazamide

tolazamide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolcapone

tolcapone is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolmetin

tolmetin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolnaftate

tolnaftate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolonium chloride

tolonium chloride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolterodine tartrate

tolterodine tartrate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toluene

toluene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolvaptan

tolvaptan is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tomography

tomography is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tomotherapy

tomotherapy is used in relation to tomotherapy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

tongue carcinoma

tongue carcinoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

tongue disease

tongue disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tongue neoplasm

tongue neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

tonic pupil

tonic pupil is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tonsil

tonsil is a medical condition or clinical finding involving the body system or process named by the

term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tonsillar neoplasm

tonsillar neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

tooth abrasion

tooth abrasion is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth ankylosis

tooth ankylosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth attrition

tooth attrition is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth calcification

tooth calcification is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth component

tooth component is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth crowding

tooth crowding is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth crown

tooth crown is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth discoloration

tooth discoloration is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth disease

tooth disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tooth enamel

tooth enamel is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth extraction

tooth extraction is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth fracture

tooth fracture describes a clinical disorder or find-

ing in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tooth loss

tooth loss is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth resorption

tooth resorption is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth root

tooth root is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toothbrushing

toothbrushing is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toothpaste

toothpaste is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

topiramate

topiramate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

topoisomerase ii

topoisomerase ii is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

topoisomerase inhibitors

topoisomerase inhibitors is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

topotecan

topotecan is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

topotecan hydrochloride

topotecan hydrochloride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toremifene

toremifene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

torsade de pointes

torsade de pointes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

torsemide

torsemide concerns torsemide, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

torsion dystonia

torsion dystonia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

torulaspora

torulaspora is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

torulaspora delbrueckii

torulaspora delbrueckii is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tositumomab

tositumomab concerns tositumomab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

total laryngectomy

total laryngectomy is used in relation to total laryngectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

total pancreatectomy

total pancreatectomy is used in relation to total pancreatectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

total tissue

total tissue is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

touch

touch is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

touch perception

touch perception is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toxaphene

toxaphene describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxic effect

toxic effect describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxicity grade

toxicity grade describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure,

affected tissues, severity, and host response.

Synonyms:

toxicity test

toxicity test is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat toxicity test.

Synonyms:

toxicogenomics

toxicogenomics describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxicokinetic description

toxicokinetic description describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxocara

toxocara describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxocara canis

toxocara canis describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxocara cati

toxocara cati describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxoid

toxoid describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxoplasma

toxoplasma describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

tra gene

tra gene denotes tra gene, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

trabectedin

trabectedin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trabulsiella

trabulsiella is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trabulsiella guamensis

trabulsiella guamensis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transitional epithelium

transitional epithelium is a medical condition or clinical finding involving the body system or process

named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transitory

transitory is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

translation initiation

translation initiation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

translucent

translucent is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transmembrane transport

transmembrane transport is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transmission

transmission is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transplant

transplant is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transplantation conditioning

transplantation conditioning is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transplantation immunology

transplantation immunology is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transport protein

transport protein denotes transport protein, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

transport vesicle

transport vesicle is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transtracheal

transtracheal is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transtympanic

transtympanic is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

transvestism

transvestism is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trapezoid bone

trapezoid bone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trastuzumab

trastuzumab concerns trastuzumab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

traumatic injury

traumatic injury describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

Traumeel S

Traumeel S is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

travoprost

travoprost concerns travoprost, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

trazodone

trazodone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trb gene

trb gene denotes trb gene, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

trd gene

trd gene denotes trd gene, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

treatment epoch

treatment epoch is used in relation to treatment epoch during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

trematoda

trematoda is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trematosphaeria grisea

trematosphaeria grisea is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tremelimumab

tremelimumab concerns tremelimumab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

trendelenburg

trendelenburg is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

treosulfan

treosulfan is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trephine

trephine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

treponema

treponema is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

treponemal infections

treponemal infections describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

tretinoin

tretinoin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

TRG gene

TRG gene denotes trg gene, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

trial compliance

trial compliance is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trial indication

trial indication is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trial phase

trial phase is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trial screening

trial screening is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat trial screening.

Synonyms:

triamcinolone

triamcinolone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triamcinolone acetonide

triamcinolone acetonide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical

context.

Synonyms:

triamterene

triamterene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triazenes

triazenes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triazine

triazine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triaziquone

triaziquone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triazolam

triazolam is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triazole

triazole concerns triazole, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

triazophos

triazophos is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tributyrin

tributyrin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

T-wave alternans

T-wave alternans denotes t-wave alternans, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

twin

twin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tympanic bulla

tympanic bulla is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tyrosinase peptide

tyrosinase peptide is a defined chemical or biologic substance involved in tyrosinase peptide and studied in physiology, pharmacology, laboratory medicine, or treatment.

Synonyms:

tyrosine

tyrosine is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Twin gestation; twin-bearing pregnancy.

TAPVR

Alternate index label; see *Total anomalous pulmonary venous return (TAPVR)*. **Synonyms:**

TB

Alternate index label; see *Tuberculosis*. **Synonyms:**

TBI

Alternate index label; see *Traumatic brain injury*. **Synonyms:**

Tears, decreased production

Alternate index label; see *Dry eyes*. **Synonyms:**

Teeth grinding

Alternate index label; see *Teeth grinding (bruxism)*. **Synonyms:**

Temporomandibular disorders

Alternate index label; see *TMJ disorders*. **Synonyms:**

Temporomandibular joint disorders

Alternate index label; see *TMJ disorders*. **Synonyms:**

TEN

Alternate index label; see *Toxic epidermal necrolysis*. **Synonyms:**

Tendinitis, Achilles

Alternate index label; see *Achilles tendinitis*. **Synonyms:**

Tendinitis, patellar

Alternate index label; see *Patellar tendinitis*. **Synonyms:**

Tenosynovitis, de Quervain's

Alternate index label; see *De Quervain tenosynovitis*. **Synonyms:**

Testicle, retractile

Alternate index label; see *Retractile testicle*. **Synonyms:**

Testicle, undescended

Alternate index label; see *Undescended testicle*. **Synonyms:**

Testosterone deficiency

Alternate index label; see *Male hypogonadism*. **Synonyms:**

TGA

Alternate index label; see *Transient global amnesia*. **Synonyms:**

Three-day measles

Alternate index label; see *Rubella*. **Synonyms:**

Thromboangiitis obliterans

Thromboangiitis obliterans is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. **Synonyms:**

Thrush, oral

Alternate index label; see *Oral thrush*. **Synonyms:**

Thyroid gland enlargement

Alternate index label; see *Goiter*. **Synonyms:**

Thyroid, overactive

Alternate index label; see *Hyperthyroidism (overactive thyroid)*. **Synonyms:**

Thyroiditis, chronic lymphocytic

Alternate index label; see *Hashimoto's disease*. **Synonyms:**

Tinea cruris

Alternate index label; see *Jock itch*. **Synonyms:**

TMD

Alternate index label; see *TMJ disorders*. **Synonyms:**

TNBC

Alternate index label; see *Triple-negative breast cancer (TNBC)*. **Synonyms:**

Toenail fungus

Alternate index label; see *Nail fungus*. **Synonyms:**

Tongue tie

Tongue tie concerns tongue tie, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context. **Synonyms:**

Tonic-clonic seizure

Alternate index label; see *Tonic-clonic (grand mal) seizure*. **Synonyms:**

Tooth decay

Alternate index label; see *Cavities and tooth decay*. **Synonyms:**

Torsion, testicular

Alternate index label; see *Testicular torsion*. **Synonyms:**

Torticollis, spasmodic

Alternate index label; see *Cervical dystonia*. **Synonyms:**

Total anomalous pulmonary venous connection

Alternate index label; see *Total anomalous pulmonary venous return (TAPVR)*. **Synonyms:**

Tourette's

Alternate index label; see *Tourette syndrome*. **Synonyms:**

Transposition of great vessels

Alternate index label; see *Transposition of the great arteries*. **Synonyms:**

Traumatic grief

Alternate index label; see *Complicated grief*. **Synonyms:**

Trisomy 21 syndrome

Alternate index label; see *Down syndrome*. **Synonyms:**

Trisomy X

Alternate index label; see *Triple X syndrome*. **Synonyms:**

Trouble swallowing

Alternate index label; see *Dysphagia*. **Synonyms:**

Trypanosomiasis, American

Alternate index label; see *Chagas disease*. **Synonyms:**

Tumor, salivary gland

Alternate index label; see *Salivary gland tumors*. **Synonyms:**

Tumor, spinal

Alternate index label; see *Spinal tumor and spinal mass*. **Synonyms:**

T-cell count

T-cell count examines t-cell count; interpretation depends on the specimen or body region, test method, reference range, and clinical question. **Synonyms:**

T3 test

T3 test examines t3 test; interpretation depends on the specimen or body region, test method, reference range, and clinical question. **Synonyms:**

T3RU test

T3RU test examines t3ru test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Tailbone trauma

Tailbone trauma is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Tailbone trauma - aftercare

Tailbone trauma - aftercare is a treatment or care intervention for tailbone trauma - aftercare; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Taking antacids

Taking antacids addresses care related to taking antacids, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Taking care of your back at home

Taking care of your back at home addresses care related to taking care of your back at home, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Taking care of your new hip joint

Taking care of your new hip joint addresses care related to taking care of your new hip joint, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Taking care of your new knee joint

Taking care of your new knee joint addresses care related to taking care of your new knee joint, including practical measures, warning signs, follow-up,

and decisions to discuss with a clinician.

Synonyms:

Taking care of your vascular access for hemodialysis

Taking care of your vascular access for hemodialysis addresses care related to taking care of your vascular access for hemodialysis, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Taking iron supplements

Taking iron supplements addresses care related to taking iron supplements, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Taking medicine at home - create a routine

Taking medicine at home - create a routine addresses care related to taking medicine at home - create a routine, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Taking medicines - what to ask your provider

Taking medicines - what to ask your provider addresses care related to taking medicines - what to ask your provider, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Taking medicines to treat tuberculosis

Taking medicines to treat tuberculosis addresses care related to taking medicines to treat tuberculosis, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Taking multiple medicines safely

Taking multiple medicines safely addresses care re-

lated to taking multiple medicines safely, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Taking narcotics for back pain

Taking narcotics for back pain addresses care related to taking narcotics for back pain, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Taking warfarin

Taking warfarin addresses care related to taking warfarin, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Taking warfarin (Coumadin, Jantoven) - what to ask your doctor

Taking warfarin (Coumadin, Jantoven) - what to ask your doctor examines taking warfarin (coumadin, jantoven) - what to ask your doctor; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Talcum powder poisoning

Talcum powder poisoning involves toxic or environmental exposure to talcum powder poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Talking to someone with hearing loss

Talking to someone with hearing loss addresses care related to talking to someone with hearing loss, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Talking to your child about smoking

Talking to your child about smoking addresses care related to talking to your child about smoking, including practical measures, warning signs, follow-up,

and decisions to discuss with a clinician.

Synonyms:

Talking to your teen about drinking

Talking to your teen about drinking addresses care related to talking to your teen about drinking, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Talking with a child about a parent's terminal illness

Talking with a child about a parent's terminal illness addresses care related to talking with a child about a parent's terminal illness, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Tapeworm infection - beef or pork

Tapeworm infection - beef or pork examines tapeworm infection - beef or pork; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Tapeworm infection - hymenolepis

Tapeworm infection - hymenolepis examines tapeworm infection - hymenolepis; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Tar remover poisoning

Tar remover poisoning involves toxic or environmental exposure to tar remover poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Tarantula spider bite

Tarantula spider bite involves toxic or environmental exposure to tarantula spider bite; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Targeted therapies for cancer

Targeted therapies for cancer involves toxic or environmental exposure to targeted therapies for cancer; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Targeted therapy: questions to ask your doctor

Targeted therapy: questions to ask your doctor involves toxic or environmental exposure to targeted therapy: questions to ask your doctor; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Taste - impaired

Taste - impaired concerns taste - impaired; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Tay-Sachs - resources

Tay-Sachs - resources addresses care related to tay-sachs - resources, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

TBG blood test

TBG blood test examines tbg blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Td (tetanus, diphtheria) vaccine - what you need to know

Td (tetanus, diphtheria) vaccine - what you need to know is a treatment or care intervention for td (tetanus, diphtheria) vaccine - what you need to know; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Tdap (tetanus, diphtheria and pertussis) vaccine - what you need to know

Tdap (tetanus, diphtheria and pertussis) vaccine - what you need to know is a treatment or care intervention for tdap (tetanus, diphtheria and pertussis) vaccine - what you need to know; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Teenagers and drugs

Teenagers and drugs concerns teenagers and drugs; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Teenagers and sleep

Teenagers and sleep is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Telangiectasia

Telangiectasia examines telangiectasia; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Telehealth

Telehealth concerns telehealth; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Temper tantrums

Temper tantrums concerns temper tantrums; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Temperature measurement

Temperature measurement concerns temperature measurement; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Tendon repair

Tendon repair is a treatment or care intervention for tendon repair; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Tennis elbow surgery

Tennis elbow surgery is a treatment or care intervention for tennis elbow surgery; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Tennis elbow surgery - discharge

Tennis elbow surgery - discharge is a treatment or care intervention for tennis elbow surgery - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Tensilon test

Tensilon test examines tensilon test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Testicle lump

Testicle lump examines testicle lump; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Testicle pain

Testicle pain examines testicle pain; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Testicular biopsy

Testicular biopsy examines testicular biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Testicular self-exam

Testicular self-exam examines testicular self-exam; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Testicular torsion repair

Testicular torsion repair examines testicular torsion repair; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Tests and visits before surgery

Tests and visits before surgery examines tests and visits before surgery; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Tests for H pylori

Tests for H pylori examines tests for h pylori; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Tetrahydrozoline poisoning

Tetrahydrozoline poisoning involves toxic or environmental exposure to tetrahydrozoline poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

The day of surgery for your child

The day of surgery for your child is a treatment or care intervention for the day of surgery for your child; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

The day of your surgery - adult

The day of your surgery - adult is a treatment or care intervention for the day of your surgery - adult; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

The night before your surgery

The night before your surgery is a treatment or care intervention for the night before your surgery; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

The night before your surgery - children

The night before your surgery - children is a treatment or care intervention for the night before your surgery - children; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Therapeutic drug levels

Therapeutic drug levels concerns therapeutic drug levels; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Thiamin

Thiamin concerns thiamin; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Thiazide overdose

Thiazide overdose involves toxic or environmental exposure to thiazide overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Thioridazine overdose

Thioridazine overdose involves toxic or environmental exposure to thioridazine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Thirst - absent

Thirst - absent concerns thirst - absent; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Thirst - excessive

Thirst - excessive concerns thirst - excessive; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Thoracic spine CT scan

Thoracic spine CT scan examines thoracic spine ct scan; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Thoracic spine x-ray

Thoracic spine x-ray examines thoracic spine x-ray; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Throat or larynx cancer

Throat or larynx cancer is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Throat swab culture

Throat swab culture examines throat swab culture; interpretation depends on the specimen or body

region, test method, reference range, and clinical question.

Synonyms:

Thrombolytic drugs for heart attack

Thrombolytic drugs for heart attack is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Thrombolytic therapy

Thrombolytic therapy is a treatment or care intervention for thrombolytic therapy; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Thrush - children and adults

Thrush - children and adults concerns thrush - children and adults; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Thrush in newborns

Thrush in newborns concerns thrush in newborns; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Thumb sucking

Thumb sucking concerns thumb sucking; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Thyroid cancer - medullary carcinoma

Thyroid cancer - medullary carcinoma is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Thyroid cancer - papillary carcinoma

Thyroid cancer - papillary carcinoma is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Thyroid gland removal

Thyroid gland removal is a treatment or care intervention for thyroid gland removal; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Thyroid gland removal - discharge

Thyroid gland removal - discharge is a treatment or care intervention for thyroid gland removal - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Thyroid preparation overdose

Thyroid preparation overdose involves toxic or environmental exposure to thyroid preparation overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Tick bite

Tick bite involves toxic or environmental exposure to tick bite; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Tick removal

Tick removal is a treatment or care intervention for tick removal; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Time outs

Time outs concerns time outs; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Timing of breastfeeding

Timing of breastfeeding is a treatment or care intervention for timing of breastfeeding; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Tips for labor coaches

Tips for labor coaches addresses care related to tips for labor coaches, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Tips on how to quit smoking

Tips on how to quit smoking addresses care related to tips on how to quit smoking, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

TMJ disorders

TMJ disorders is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Toddler development

Toddler development concerns toddler development; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Toddler test or procedure preparation

Toddler test or procedure preparation examines toddler test or procedure preparation; interpretation depends on the specimen or body region, test method,

reference range, and clinical question.

Synonyms:

Toilet bowl cleaners and deodorizers poisoning

Toilet bowl cleaners and deodorizers poisoning involves toxic or environmental exposure to toilet bowl cleaners and deodorizers poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Toilet training tips

Toilet training tips addresses care related to toilet training tips, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Tolmetin overdose

Tolmetin overdose involves toxic or environmental exposure to tolmetin overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Toluene and xylene poisoning

Toluene and xylene poisoning involves toxic or environmental exposure to toluene and xylene poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Tongue biopsy

Tongue biopsy examines tongue biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Tongue problems

Tongue problems concerns tongue problems, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Tonsil and adenoid removal - discharge

Tonsil and adenoid removal - discharge is a treatment or care intervention for tonsil and adenoid removal - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Tonsil removal - what to ask your doctor

Tonsil removal - what to ask your doctor examines tonsil removal - what to ask your doctor; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Tonsillectomies and children

Tonsillectomies and children examines tonsillectomies and children; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Tooth - abnormal colors

Tooth - abnormal colors is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Tooth - abnormal shape

Tooth - abnormal shape is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Tooth abscess

Tooth abscess is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Tooth anatomy

Tooth anatomy is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Tooth decay - early childhood

Tooth decay - early childhood is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Tooth formation - delayed or absent

Tooth formation - delayed or absent is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Toothaches

Toothaches is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Toothpaste overdose

Toothpaste overdose involves toxic or environmental exposure to toothpaste overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

TORCH screen

TORCH screen concerns torch screen; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Total abdominal colectomy

Total abdominal colectomy examines total abdomi-

nal colectomy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Total cholesterol

Total cholesterol concerns total cholesterol; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Total colectomy or proctocolectomy - discharge

Total colectomy or proctocolectomy - discharge examines total colectomy or proctocolectomy - discharge; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Total hip joint replacement - revision

Total hip joint replacement - revision is a treatment or care intervention for total hip joint replacement - revision; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Total knee joint replacement - revision

Total knee joint replacement - revision is a treatment or care intervention for total knee joint replacement - revision; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Total parenteral nutrition - infants

Total parenteral nutrition - infants addresses care related to total parenteral nutrition - infants, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Total proctocolectomy and ileal-anal

pouch

Total proctocolectomy and ileal-anal pouch examines total proctocolectomy and ileal-anal pouch; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Total proctocolectomy with ileostomy

Total proctocolectomy with ileostomy examines total proctocolectomy with ileostomy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Total protein

Total protein concerns total protein, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Toxic synovitis

Toxic synovitis involves toxic or environmental exposure to toxic synovitis; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Toxicology screen

Toxicology screen involves toxic or environmental exposure to toxicology screen; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Toxins

Toxins concerns toxins; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Toxoplasma blood test

Toxoplasma blood test examines toxoplasma blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical

question.

Synonyms:

Tracheal rupture

Tracheal rupture is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Tracheoesophageal fistula and esophageal atresia repair

Tracheoesophageal fistula and esophageal atresia repair is a treatment or care intervention for tracheoesophageal fistula and esophageal atresia repair; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Tracheomalacia - acquired

Tracheomalacia - acquired is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Tracheomalacia - congenital

Tracheomalacia - congenital is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Tracheostomy care

Tracheostomy care is a treatment or care intervention for tracheostomy care; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Tracheostomy tube - eating

Tracheostomy tube - eating is a treatment or care intervention for tracheostomy tube - eating; indi-

cation, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Tracheostomy tube - speaking

Tracheostomy tube - speaking is a treatment or care intervention for tracheostomy tube - speaking; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Transcatheter aortic valve replacement

Transcatheter aortic valve replacement is a treatment or care intervention for transcatheter aortic valve replacement; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Transcranial Doppler ultrasound

Transcranial Doppler ultrasound examines transcranial doppler ultrasound; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Transient familial hyperbilirubinemia

Transient familial hyperbilirubinemia is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Transient tachypnea - newborn

Transient tachypnea - newborn concerns transient tachypnea - newborn; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Transillumination

Transillumination examines transillumination; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Transjugular intrahepatic portosystemic shunt (TIPS)

Transjugular intrahepatic portosystemic shunt (TIPS) addresses care related to transjugular intrahepatic portosystemic shunt (tips), including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Transplant services

Transplant services is a treatment or care intervention for transplant services; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Transurethral resection of the prostate - discharge

Transurethral resection of the prostate - discharge examines transurethral resection of the prostate - discharge; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Transvaginal ultrasound

Transvaginal ultrasound examines transvaginal ultrasound; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Traumatic amputation

Traumatic amputation is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Traumatic events and children

Traumatic events and children is a disorder affecting the body system or process named by the term.

Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Traumatic injury of the bladder and urethra

Traumatic injury of the bladder and urethra is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Traveler's diarrhea diet

Traveler's diarrhea diet addresses care related to traveler's diarrhea diet, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Traveler's guide to avoiding infectious diseases

Traveler's guide to avoiding infectious diseases examines traveler's guide to avoiding infectious diseases; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Traveling with breathing problems

Traveling with breathing problems concerns traveling with breathing problems; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Traveling with children

Traveling with children concerns traveling with children; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Trazodone overdose

Trazodone overdose involves toxic or environmental exposure to trazodone overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Treatment for childhood cancer - long-term risks

Treatment for childhood cancer - long-term risks is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Tremor - self-care

Tremor - self-care is a treatment or care intervention for tremor - self-care; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Trench mouth

Trench mouth concerns trench mouth; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Trichorrhexis nodosa

Trichorrhexis nodosa concerns trichorrhexis nodosa; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Triglyceride level

Triglyceride level concerns triglyceride level; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Trisodium phosphate poisoning

Trisodium phosphate poisoning involves toxic or

environmental exposure to trisodium phosphate poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Trisomy 13

Trisomy 13 concerns trisomy 13; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Trisomy 18

Trisomy 18 concerns trisomy 18; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Troponin test

Troponin test examines troponin test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Trypsin and chymotrypsin in stool

Trypsin and chymotrypsin in stool examines trypsin and chymotrypsin in stool; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Trypsinogen test

Trypsinogen test examines trypsinogen test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Tryptophan

Tryptophan concerns tryptophan; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

TSH test

TSH test examines tsh test; interpretation depends

on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

TSI test

TSI test examines tsi test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Tubal ligation - discharge

Tubal ligation - discharge is a treatment or care intervention for tubal ligation - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Tubal ligation reversal

Tubal ligation reversal is a treatment or care intervention for tubal ligation reversal; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Tubercle

Tubercle is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Tularemia blood test

Tularemia blood test examines tularemia blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Turbinate surgery

Turbinate surgery is a treatment or care intervention for turbinate surgery; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Turning patients over in bed

Turning patients over in bed concerns turning patients over in bed; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Turpentine oil poisoning

Turpentine oil poisoning involves toxic or environmental exposure to turpentine oil poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Type 1 diabetes

Type 1 diabetes is autoimmune destruction of pancreatic beta cells causing absolute insulin deficiency, hyperglycemia, and risk of diabetic ketoacidosis without insulin replacement.

Synonyms:

Type 1 diabetes - self-care

Type 1 diabetes - self-care is a treatment or care intervention for type 1 diabetes - self-care; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Type 2 diabetes

Type 2 diabetes is chronic hyperglycemia caused by insulin resistance and progressive beta-cell dysfunction, with risks to the eyes, kidneys, nerves, heart, and blood vessels.

Synonyms:

Type 2 diabetes - oral medicines

Type 2 diabetes - oral medicines is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Type 2 diabetes - self-care

Type 2 diabetes - self-care is a treatment or care in-

tervention for type 2 diabetes - self-care; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Type 2 diabetes - what to ask your doctor

Type 2 diabetes - what to ask your doctor examines type 2 diabetes - what to ask your doctor; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Type V glycogen storage disease

Type V glycogen storage disease is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Types of chemotherapy

Types of chemotherapy is a treatment or care intervention for types of chemotherapy; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Types of health care providers

Types of health care providers addresses care related to types of health care providers, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Types of hormone therapy

Types of hormone therapy is a treatment or care intervention for types of hormone therapy; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Types of ileostomy

Types of ileostomy concerns types of ileostomy; its medical significance is established from the defining features, setting, associated findings, and clinical

question.

Synonyms:

Tachycardia Paroxysmal Atrial (Paroxysmal Supraventricular Tachycardia (PSVT))

Alternate index label for Paroxysmal Supraventricular Tachycardia (PSVT).

Synonyms:

Tachycardia Paroxysmal Supraventricular (Paroxysmal Supraventricular Tachycardia (PSVT))

Alternate index label for Paroxysmal Supraventricular Tachycardia (PSVT).

Synonyms:

TB (Tuberculosis (TB) Facts)

Alternate index label for Tuberculosis (TB) Facts.

Synonyms:

Teeth Grinding (Bruxism)

Alternate index label for Bruxism.

Synonyms:

Temporomandibular Joint Syndrome (TMJ)

Alternate index label for TMJ.

Synonyms:

Tendinitis Rotator Cuff (Rotator Cuff)

Alternate index label for Rotator Cuff.

Synonyms:

Tennis Elbow (Lateral Epicondylitis)

Alternate index label for Lateral Epicondylitis.

Synonyms:

Terms Medical Abbreviations (Common Medical Abbreviations and Terms)

Alternate index label for Common Medical Abbreviations and Terms.

Synonyms:

Testosterone Low (Low Testosterone (Low T))

Alternate index label for Low Testosterone (Low T).

Synonyms:

Thallium

Thallium is a toxic heavy metal that can cause gastrointestinal illness followed by painful peripheral neuropathy, hair loss, skin changes, kidney or liver injury, seizures, and cardiovascular or neurologic toxicity. Suspected exposure requires immediate poison-control or emergency guidance.

Synonyms:

Throat cancer (Larynx Cancer)

Alternate index label for Larynx Cancer.

Synonyms:

Thrombocytopenia (Low Platelet Count)

Alternate index label for Low Platelet Count.

Synonyms:

Thrush and Other Yeast Infections in Children

Thrush is Candida overgrowth in the mouth, producing white plaques, soreness, or feeding difficulty; Candida can also affect skin folds or diaper areas. Persistent, recurrent, severe, or immune-associated infection needs pediatric evaluation and appropriate antifungal treatment.

Synonyms:

Thrush Contagious (Is Thrush Contagious)

Alternate index label for Is Thrush Contagious.

Synonyms:

Thymic Hyperplasia

Thymic hyperplasia is enlargement of the thymus from increased lymphoid tissue or rebound growth and may be incidental. It can be associated with autoimmune disease, infection, endocrine conditions, or stress; imaging and clinical context distinguish it from a mass.

Synonyms:

Thyroid Disease Symptoms and Signs

Thyroid disease can cause symptoms of underactivity, overactivity, inflammation, nodules, or hormone excess, including fatigue, weight change, heat or cold intolerance, palpitations, bowel change, tremor, neck swelling, or menstrual disturbance. Blood testing guides evaluation.

Synonyms:

Thyroid Nodules

A thyroid nodule is a discrete growth within the thyroid and is often benign. Ultrasound, thyroid-function testing, and selected needle biopsy assess cancer risk; rapid growth, hoarseness, swallowing difficulty, or breathing problems needs prompt review.

Synonyms:

TIA (Transient Ischemic Attack (TIA, Mini-Stroke))

Alternate index label for Transient Ischemic Attack (TIA, Mini-Stroke).

Synonyms:

tic douloureux (Trigeminal Neuralgia)

Alternate index label for Trigeminal Neuralgia.

Synonyms:

Ticks

Ticks are blood-feeding parasites that can transmit infections such as Lyme disease, ehrlichiosis, anaplasmosis, babesiosis, and Rocky Mountain spotted fever. Prompt removal with fine-tipped tweezers and monitoring for fever or rash reduce complications.

Synonyms:

Ticks Bite (Ticks)

Alternate index label for Ticks.

Synonyms:

Tietze Syndrome (Costochondritis and

Tietze Syndrome)

Alternate index label for Costochondritis and Tietze Syndrome.

Synonyms:

tinea pedis (Athlete's Foot)

Alternate index label for Athlete's Foot.

Synonyms:

Tinnitus (Ringing in the Ears)

Alternate index label for Ringing in the Ears.

Synonyms:

TMJ (Temporomandibular Joint Syndrome (TMJ))

Alternate index label for Temporomandibular Joint Syndrome (TMJ).

Synonyms:

Tobacco Chewing (Smokeless Tobacco)

Alternate index label for Smokeless Tobacco.

Synonyms:

Toddlers Sleep (Sleep and Sleep Disorders in Children and Teens)

Alternate index label for Sleep and Sleep Disorders in Children and Teens.

Synonyms:

Toe Broken (Broken Toe)

Alternate index label for Broken Toe.

Synonyms:

Tonsil Inflammation (Adenoids and Tonsils)

Alternate index label for Adenoids and Tonsils.

Synonyms:

Tonsil Stones

Tonsil stones are calcified collections of debris and bacteria in tonsil crypts, causing bad breath, throat irritation, or a foreign-body sensation. Gargling and oral hygiene may help; recurrent symptoms, bleeding, or one-sided enlargement requires examination.

Synonyms:

Tooth Infected (Abscessed Tooth Guide)

Alternate index label for Abscessed Tooth Guide.

Synonyms:

Toothache Overview

Toothache usually reflects decay, pulp inflammation, fracture, gum disease, abscess, trauma, or referred pain. Dental treatment is needed to correct the cause; facial swelling, fever, difficulty swallowing, or breathing difficulty requires urgent care.

Synonyms:

Torn ACL

A torn anterior cruciate ligament is a knee injury commonly caused by sudden pivoting, landing, or contact, producing a pop, swelling, instability, and difficulty changing direction. Rehabilitation, bracing, or reconstruction is selected according to activity, associated injury, and goals.

Synonyms:

Torn Meniscus

A torn meniscus is a split in the knee's shock-absorbing cartilage caused by twisting or degeneration. Pain, swelling, catching, or locking may occur; physical therapy or arthroscopic treatment depends on tear pattern, symptoms, age, and associated disease.

Synonyms:

Torsion Testicle (Testicular Disorders)

Alternate index label for Testicular Disorders.

Synonyms:

TOS (Thoracic Outlet Syndrome)

Alternate index label for Thoracic Outlet Syndrome.

Synonyms:

Toxic Shock Syndrome (TSS)

Alternate index label for TSS.

Synonyms:

Toxin Ciguatera (Ciguatera Poisoning)

Alternate index label for Ciguatera Poisoning.

Synonyms:

Transient Ischemic Attack (TIA, Mini-Stroke)

Alternate index label for TIA, Mini-Stroke.

Synonyms:

trigger thumb (Trigger Finger)

Alternate index label for Trigger Finger.

Synonyms:

Triggers IBS (Irritable Bowel Syndrome (IBS) Triggers, Prevention)

Alternate index label for Irritable Bowel Syndrome (IBS) Triggers, Prevention.

Synonyms:

Trisomy 18 (Edwards Syndrome)

Alternate index label for Edwards Syndrome.

Synonyms:

trisomy 21 (Down Syndrome Overview)

Alternate index label for Down Syndrome Overview.

Synonyms:

Trochanteric bursitis (Hip Bursitis)

Alternate index label for Hip Bursitis.

Synonyms:

TSS (Toxic Shock Syndrome (TSS))

Alternate index label for Toxic Shock Syndrome (TSS).

Synonyms:

Tuberculos Contagious (Is Tuberculosis (TB) Contagious)

Alternate index label for Is Tuberculosis (TB) Contagious.

Synonyms:

Tuberculosis (TB) Facts

Alternate index label for TB) Fact.

Synonyms:

Tubes Ear Problems (Eustachian Tube Problems)

Alternate index label for Eustachian Tube Problems.

Synonyms:

Tumor Adrenal Gland (Pheochromocytoma)

Alternate index label for Pheochromocytoma.

Synonyms:

Tumor Brain Cancer (Brain Cancer)

Alternate index label for Brain Cancer.

Synonyms:

Tumor Testicle (Testicular Disorders)

Alternate index label for Testicular Disorders.

Synonyms:

Tumors Uterine (Uterine Fibroids)

Alternate index label for Uterine Fibroids.

Synonyms:

Tweens Sleep (Sleep and Sleep Disorders in Children and Teens)

Alternate index label for Sleep and Sleep Disorders in Children and Teens.

Synonyms:

U

U Wave

A small deflection following the T wave, best seen in precordial leads V2-V3. U waves are thought to represent repolarization of the Purkinje fibers or papillary muscles. Prominent U waves are associated with hypokalemia, bradycardia, and certain drugs (digitalis, quinidine).

Synonyms:

Unopposed Estrogen

Estrogen therapy given without a progestogen in a person with a uterus. **Synonyms:**

Unresolved Losses

Significant losses that have not been fully acknowledged or emotionally processed. **Synonyms:**

Unsaturated Fat

A dietary fat containing one or more carbon-carbon double bonds. **Synonyms:**

Upper Airway Resistance Syndrome

Increased effort to breathe through a narrowed upper airway, often causing sleep disruption and daytime sleepiness. **Synonyms:** UARS

Upper Esophageal Sphincter

A muscular valve at the top of the esophagus that opens during swallowing. **Synonyms:** UES

Urethral Hypermobility

Excessive movement of the urethra during increased abdominal pressure, contributing to stress incontinence. **Synonyms:**

Urinary Tract

The kidneys, ureters, bladder, and urethra, which produce, transport, store, and excrete urine. **Synonyms:**

Urologist

A physician specializing in urinary-tract disorders and the male reproductive system. **Synonyms:**

Uvulopalatopharyngoplasty

Surgery that removes or reshapes the uvula, tonsils, and soft-palate tissue to treat obstructive sleep apnea. **Synonyms:** UPPP

Ulcer, aphthous

Alternate index label; see *Canker sore*. **Synonyms:**

Ulcer, peptic

Alternate index label; see *Peptic ulcer*. **Synonyms:**

Ulcer, rectal

Alternate index label; see *Solitary rectal ulcer syndrome*. **Synonyms:**

Ulnar-sided wrist pain

Alternate index label; see *Ulnar wrist pain*. **Synonyms:**

Uncontrollable laughter and crying

Alternate index label; see *Pseudobulbar affect*. **Synonyms:**

Underactive thyroid

Alternate index label; see *Hypothyroidism (underactive thyroid)*. **Synonyms:**

Under-eye puffiness

Alternate index label; see *Bags under eyes*. **Synonyms:**

Upset stomach

Alternate index label; see *Indigestion*. **Synonyms:**

Urine, blood in

Alternate index label; see *Blood in urine (hematuria)*. **Synonyms:**

Uterine leiomyoma

Alternate index label; see *Uterine fibroids*. **Synonyms:**

Uterine myoma

Alternate index label; see *Uterine fibroids*. **Synonyms:**

Uterus didelphys

Alternate index label; see *Double uterus*. **Synonyms:**

Unexplained weight loss

Unintentional loss of body weight without a clear cause, which may be associated with inadequate intake, gastrointestinal disease, infection, endocrine disease, cancer, or other illness. **Synonyms:**

Urine odor

Urine odor is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. **Synonyms:**

Ubiquinone

A lipid-soluble electron carrier in the mitochondrial membrane. See Coenzyme Q. **Synonyms:**

Uhl Anomaly

A rare congenital absence or severe deficiency of right-ventricular myocardium, leaving a thin-walled right ventricle. It may cause right-sided heart fail-

ure, arrhythmia, cyanosis, or sudden deterioration in infancy or childhood.

Synonyms:

Ulcer

Full-thickness loss of epidermis extending into the dermis or deeper tissue, often healing with a scar. Causes include vascular disease, pressure, infection, neuropathy, inflammatory disease, trauma, and malignancy.

Synonyms:

Ulcer (Vascular)

A persistent break in the skin caused or maintained by inadequate blood flow, venous hypertension, neuropathy, or related vascular disease.

Synonyms: Vascular

Ulcerative Colitis

A chronic inflammatory disease of the colon and rectum, usually causing continuous mucosal inflammation that begins in the rectum and extends proximally. Symptoms may include bloody diarrhea, urgency, abdominal pain, and extraintestinal manifestations.

Synonyms:

Ulna

Medial forearm bone, longer than the radius. Proximal end: trochlear notch, olecranon, coronoid process. Shaft. Distal end: head, styloid process. The trochlear notch articulates with the trochlea forming the primary elbow hinge. **Synonyms:**

Ulnar

Relating to the ulna bone of the forearm or the ulnar side (medial side) of the hand. Ulnar nerve compression causes paresthesia in medial one and a half fingers.

Synonyms:

Ulnar Artery

The larger terminal branch of the brachial artery at the cubital fossa, running medially down the forearm to the wrist (palpable medial to the pisiform)

and hand. Supplies the medial forearm and ulnar side of the hand; forms the superficial palmar arch. Provides the common interosseous artery.

Synonyms:

Ulnar Hypoplasia

Underdevelopment or partial absence of the ulna, usually presenting as a congenital forearm and hand anomaly. It may cause forearm shortening, radial deviation of the hand, limited elbow or wrist movement, and associated digital or systemic abnormalities.

Synonyms:

Ulnar Nerve

From medial cord (C8-T1), passing behind the medial epicondyle (cubital tunnel), into the forearm innervating flexor carpi ulnaris and medial FDP half. In the hand innervates hypothenar muscles, interossei, medial two lumbricals, and adductor pollicis. Sensation to medial 1.5 digits.

Synonyms:

Ulnar Nerve Dysfunction

Impairment of the ulnar nerve, commonly caused by compression at the elbow (cubital tunnel) or wrist (Guyon canal). Symptoms include numbness or tingling in the little and ring fingers, weakened grip, and hand-muscle wasting; severe lesions may produce an ulnar claw.

Synonyms:

Ultrasonography

Imaging that uses high-frequency sound waves to produce pictures of tissues and organs.

Synonyms:

Ultrasound

Ultrasound uses high-frequency sound waves to create images of organs, vessels, tissues, or a developing fetus without ionizing radiation. quadrant (RUQ): gallbladder (gallstones, cholecystitis), liver (steatosis, cysts), kidneys, and pancreas. Pelvic: uterus, ovaries, adnexa. Renal: hydronephrosis, stones, cysts, tumors. Scrotal: testicular torsion,

epididymitis, varicocele, hydrocele.

Synonyms:

Ultrasound Contrast

A substance administered during ultrasound to increase the visibility of blood flow or selected tissues.

Synonyms:

Ultrasound Therapy

Therapeutic ultrasound for tissue healing, pain, scar tissue.

Synonyms:

Ultrasound Transducer

A device that emits and receives high-frequency sound waves to generate diagnostic images or guide procedures. Linear, curvilinear, phased-array, and endocavitary transducers are selected according to depth and anatomic application.

Synonyms:

Umbilical Artery Doppler

Ultrasound assessment of blood flow in the umbilical arteries to evaluate placental resistance. Normal flow shows a pulsatility index decreasing throughout pregnancy with forward diastolic flow. Absent or reversed end-diastolic flow indicates severe placental dysfunction and is associated with increased perinatal morbidity and mortality.

Synonyms:

Umbilical Cord

The connection between the fetus and the placenta, containing two umbilical arteries (carrying deoxygenated blood from the fetus to the placenta) and one umbilical vein (carrying oxygenated blood from the placenta to the fetus). The vessels are embedded in Wharton jelly, a mucopolysaccharide matrix that prevents compression.

Synonyms:

Umbilical Cord Blood Gas

Analysis of arterial and venous cord blood collected after delivery. The umbilical artery best reflects fetal acid-base status, while the umbilical vein re-

flects placental blood. Results are interpreted using gestational age, delivery circumstances, pH, carbon dioxide, and base deficit or excess.

Synonyms:

Umbilical Cord Prolapse

Descent of the umbilical cord through the cervix alongside or past the presenting fetal part, occurring when the membranes rupture. Risk factors: malpresentation (transverse lie, breech), preterm/low birth weight, polyhydramnios, multiparity, and artificial ROM with high presenting part.

Synonyms:

Umbilical Hernia

A hernia through the umbilical ring, common in infants (most umbilical hernias close spontaneously by age 4-5) and adults (risk factors: obesity, pregnancy, ascites, cirrhosis). Presents as a reducible bulge at the umbilicus, worse with increased intra-abdominal pressure. In adults: risk of incarceration and strangulation is higher.

Synonyms:

Umbilical Region

Central region around the umbilicus containing small intestine, transverse colon, and great vessels. The umbilicus is a landmark for assessing ascites, caput medusae in portal hypertension, and umbilical hernias. Percussion and auscultation here are essential components of the abdominal examination.

Synonyms:

Umbilication

Formation of a central depression or navel-like indentation in a lesion or structure.

Synonyms:

Umbilicus (Navel)

The scar on the anterior abdominal wall marking the site of attachment of the umbilical cord in fetal life, located at the level of the L3-L4 intervertebral disc, approximately midway between the xiphoid process and the pubic symphysis.

Synonyms: Navel

Uncompetitive Inhibition

A type of enzyme inhibition where the inhibitor binds only to the enzyme-substrate (ES) complex at a site distinct from the active site, forming an inactive ESI complex. The inhibitor cannot bind to the free enzyme.

Synonyms:

Unconsciousness

Loss of awareness and responsiveness, ranging from brief fainting to prolonged coma.

Synonyms:

Underweight

BMI < 18.5 kg/m². Associated with osteoporosis, infertility, anemia, weakened immunity, surgical complications. Causes: hypermetabolism, malabsorption, eating disorders, malignancy, chronic infection.

Synonyms:

Undescended Testis

Failure of one or both testes to descend into the scrotum. Some descend during early infancy, but persistent cryptorchidism can impair fertility and increase the risk of torsion, hernia, or testicular cancer.

Synonyms:

Undescended Testis (Cryptorchidism)

Congenital failure of one or both testes to descend along the normal path into the scrotum. Persistent cases require evaluation because they may affect fertility and increase the risk of torsion, hernia, or testicular cancer.

Synonyms: Cryptorchidism

Undulant Fever

A zoonotic infectious disease caused by gram-negative coccobacilli of the genus *Brucella*, transmitted to humans through contact with infected animals (cattle, goats, pigs, sheep) or consumption of unpasteurized dairy products. See Brucellosis.

Synonyms:

Unguentum

A semisolid, greasy preparation intended for application to the skin or, when formulated for that purpose, to mucous membranes or the eyes.

Synonyms:

Uniparental Disomy

Inheritance of both copies of a chromosome or chromosome segment from one parent and none from the other. It can cause disease through abnormal genomic imprinting, homozygosity for a recessive variant, or chromosomal dosage effects.

Synonyms:

Unresponsive Coma

A state of profound unresponsiveness in which the person cannot be awakened or follow commands.

Synonyms:

Unstable Angina

Myocardial ischemia at rest, new-onset severe angina, or a crescendo pattern (more frequent, longer, lower-threshold) without evidence of myocardial necrosis (normal troponin). Pathophysiology: acute plaque rupture with thrombosis causing transient severe coronary obstruction.

Synonyms:

Upper Airway Obstruction

Narrowing of the airway above the carina, causing inspiratory stridor, dyspnea, and characteristic changes on flow-volume loops (flattening of the inspiratory limb). Causes include tumors, stenosis, goiter, and vocal cord dysfunction. It is a medical emergency when severe.

Synonyms:

Upper Endoscopy

Upper endoscopy: flexible endoscopic examination of the esophagus, stomach, and duodenum. See Esophagogastroduodenoscopy (EGD).

Synonyms:

Upper Extremity Venous Doppler

An ultrasound examination of the arm and related

veins that assesses compressibility and blood flow, commonly to evaluate suspected venous thrombosis.

Synonyms:

Upper Gastrointestinal Bleeding

Bleeding from esophagus, stomach, or duodenum. Causes: peptic ulcer, varices, Mallory-Weiss tear, gastritis. Presentation: hematemesis, melena, hematochezia. Management: ABCs, IV access, type and crossmatch, PPI infusion, endoscopy within 24 hours. Variceal bleeding: octreotide, antibiotics, band ligation.

Synonyms:

Upper GI Series

Fluoroscopic examination of the esophagus, stomach, and duodenum after oral barium contrast. Single-contrast: looks for gross abnormalities (obstruction, masses). Double-contrast (barium + gas): better mucosal detail for ulcers, erosions, and early malignancies.

Synonyms:

Upper Motor Neuron Syndrome

A pattern caused by injury to corticospinal pathways above the anterior horn cell or cranial motor nucleus. Findings may include weakness with spasticity, hyperreflexia, clonus, and an extensor plantar response, although acute lesions can initially produce flaccidity.

Synonyms:

Upright Labor Positions

Maternal positions during labor, such as walking, standing, squatting, kneeling, or sitting upright. They may improve comfort and mobility and can be used when safe and acceptable to the laboring person and clinical team.

Synonyms:

Uptake

Cellular accumulation of radiotracer. Depends on blood flow, membrane transport, metabolism, binding.

Synonyms:

Urachal Cyst

A cystic remnant of the embryonic urachus between the bladder and umbilicus. It may be asymptomatic or become infected, causing lower-abdominal pain, fever, umbilical discharge, or urinary symptoms.

Synonyms:

Urachal mucinous cystic tumor

A rare tumor arising from the urachal remnant between the bladder dome and umbilicus. It may be benign or malignant, with mucinous histology, and requires surgical excision.

Synonyms:

Uraemia

The clinical syndrome resulting from accumulation of urea and other nitrogenous waste products in the blood in advanced chronic kidney disease (CKD stage 4-5) and acute kidney injury.

Synonyms:

Urate-Lowering Therapy

Long-term treatment that reduces serum urate to dissolve monosodium urate deposits and prevent gout flares and structural damage. Xanthine oxidase inhibitors and uricosuric medicines are selected according to renal function, comorbidity, and treatment goals.

Synonyms:

Urea Cycle

A metabolic pathway occurring in both the mitochondria and cytoplasm of hepatocytes that converts toxic ammonia (NH₃), derived from amino acid catabolism, into nontoxic, water-soluble urea for excretion by the kidneys.

Synonyms:

Urea Cycle Disorder

A group of inherited disorders caused by deficiency of an enzyme or transporter in the urea cycle, leading to impaired ammonia clearance. Ornithine transcarbamylase deficiency is an X-linked form; presentation and severity vary by the gene and residual enzyme activity.

Synonyms:

Uremia

A clinical syndrome caused by advanced kidney failure and accumulation of waste products and other biologically active substances. Symptoms may include nausea, itching, fatigue, confusion, bleeding, or pericarditis; laboratory values and symptoms must be interpreted together.

Synonyms:

Uremic Encephalopathy

Neurological syndrome in severe renal failure. Confusion, asterixis, seizures, coma. Results from uremic toxin accumulation. Diagnosis is clinical in context of advanced renal failure. Emergent dialysis indicated with rapid neurological improvement typically.

Synonyms:

Uremic Frost

Urea crystallization on skin in severe untreated uremia. Rare finding indicating extremely advanced uremia. White crystalline deposits on skin. Indicates immediate need for dialysis. Extremely rare in developed countries due to early detection.

Synonyms:

Uremic Pericarditis

Pericardial inflammation in advanced uremia. Pleuritic chest pain, friction rub, diffuse ST elevation. Indicates need for emergent dialysis. Does not respond to anti-inflammatory therapy. Complications include tamponade. **Synonyms:**

Uremic Platelet Dysfunction

Impaired platelet adhesion and aggregation in uremia causing bleeding tendency. Easy bruising, epistaxis, GI bleeding. Improves with dialysis and desmopressin. Cryoprecipitate provides temporary benefit before procedures.

Synonyms:

Uremic stomatitis

Oral mucosal inflammation occurring in advanced

kidney failure, presenting as white plaques, ulceration, or bleeding of the gums and tongue due to accumulation of uremic toxins.

Synonyms:

Ureter

The paired muscular tubes (25-30 cm) conveying urine from the renal pelvis to the urinary bladder, crossing the pelvic brim at the pelvic inlet. Three anatomical narrowings (pelviureteric junction, pelvic brim, vesicoureteric junction) are common sites of ureteric stone impaction.

Synonyms:

Ureter Duplex

A congenital duplication of the ureter, complete or partial, draining one kidney. It may be asymptomatic or associated with vesicoureteral reflux, ureterocele, obstruction, recurrent urinary infection, or impaired renal drainage.

Synonyms:

Ureteral Obstruction

Blockage of urine flow causing proximal dilation and increased pressure. Acute causes renal colic with flank pain. Chronic leads to hydronephrosis and CKD. Emergent decompression with stent or nephrostomy for infected obstructed kidney. Diagnosis by CT or ultrasound showing hydronephrosis.

Synonyms:

Ureteral Perforation

A tear or hole in the ureter, sometimes caused by a stone, trauma, surgery, or an endoscopic procedure. Urine may leak into surrounding tissues, causing pain, infection, or inflammation; prompt imaging and urologic assessment are required.

Synonyms:

Ureteral Stent

Double-J stent maintaining ureteral patency. Indications: obstruction (stone, stricture, malignancy), post-ureteroscopy. Materials: silicone, polyurethane. Sizes: 4.7-7 Fr, lengths 24-30 cm. Complications: irritation, hematuria, encrustation,

migration.

Synonyms:

Ureteral Stent (Double-J Stent)

A tube placed in the ureter from the renal pelvis to the bladder to maintain patency, with pigtail coils at both ends (hence double-J). Indications: ureteral obstruction (stones, stricture, malignancy), after ureteroscopy (prevent post-op obstruction), and as a pre-treatment for complex ureteral stones.

Synonyms: Double-J Stent

Ureteral Stricture

Narrowing of the ureter caused by fibrosis, surgery, instrumentation, radiation, infection, malignancy, or congenital disease. It can produce upstream hydronephrosis, pain, infection, and declining renal function.

Synonyms:

Ureteritis

Inflammation of the ureter, usually related to infection, obstruction, stone passage, instrumentation, or adjacent inflammatory disease. It may cause flank or abdominal pain, urinary symptoms, hematuria, and fever.

Synonyms:

Ureterocele

Ureterocele concerns ureterocele, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context. can obstruct urine flow and cause urinary infection, hydronephrosis, reflux, stone formation, or impaired renal function.

Synonyms:

Ureterolithiasis

The presence of kidney stones (calculi) within the ureter, causing ureteral obstruction and renal colic. Stones form from calcium oxalate/phosphate (most), uric acid, struvite (infection), and cystine.

Synonyms:

Ureteropelvic Junction Obstruction

Impaired drainage from the renal pelvis into the proximal ureter, caused by intrinsic narrowing, aberrant vessels, scarring, or functional peristaltic abnormality. It may cause hydronephrosis, flank pain, infection, stones, or loss of renal function.

Synonyms:

Ureteroscopy

Ureteroscopy uses a small endoscope passed through the urinary tract to inspect, biopsy, or treat ureteral or kidney stones and other lesions. the urethra, bladder, and into the ureter or renal collecting system. Used primarily for the diagnostic evaluation and therapeutic management of ureteral and renal calculi, ureteral strictures, and upper tract urothelial carcinoma (UTUC).

Synonyms:

Urethra

The tube conveying urine from the bladder to the exterior. Male urethra (18-20 cm): prostatic, membranous, and spongy (penile) parts; carries urine and semen; longer and more tortuous than female. Female urethra (3-4 cm): short, straight, predisposing to ascending urinary tract infections.

Synonyms:

Urethracele

A herniation or prolapse of the urethra into the anterior vaginal wall, often occurring together with a cystocele (bladder prolapse). Urethracele is caused by weakening of the pubocervical fascia, often from childbirth, aging, or increased intra-abdominal pressure.

Synonyms:

Urethral Diverticulum

A periurethral outpouching that communicates with the urethral lumen, usually arising from infected or obstructed periurethral glands. It may cause dysuria, post-void dribbling, recurrent urinary infection, dyspareunia, or a palpable anterior-vaginal wall mass.

Synonyms:

Urethral Infection

Infection involving the urethra, commonly caused by bacteria, including sexually transmitted organisms. Symptoms may include burning urination, discharge, frequency, or pelvic discomfort; testing and appropriate treatment help prevent complications and transmission.

Synonyms:

Urethral Meatus

External opening of urethra. Position abnormal in hypospadias, epispadias.

Synonyms:

Urethral Pressure Profile

Measurement of urethral closure pressure along urethra. Used in incontinence evaluation.

Synonyms:

Urethral Pressures

Measurements of pressure within or along the urethra used to assess urethral closure and urinary continence.

Synonyms:

Urethral Sling

Synthetic or fascial tape supporting urethra for stress incontinence. Mid-urethral sling (TVT, TOT) standard. Minimally invasive. Complications: erosion, urgency, retention.

Synonyms:

Urethral Stricture

Narrowing of the urethra caused by scar tissue. It may produce a weak urinary stream, spraying, straining, incomplete emptying, infections, or urinary retention and can result from injury, instrumentation, infection, or inflammatory disease.

Synonyms:

Urethritis

Urethritis is inflammation of the urethra, commonly from sexually transmitted infection, causing dysuria, irritation, or discharge and requiring evaluation of partners and complications. (Chlamydia tra-

chomatis, *Neisseria gonorrhoeae*) or non-infectious causes. Presents with dysuria, urethral discharge, and meatal itching. Diagnosis: urine nucleic acid amplification testing (NAAT).

Synonyms:

Urethrography

Contrast imaging of urethra. Evaluates urethral strictures, trauma, anomalies.

Synonyms:

Urge Urinary Incontinence

Involuntary leakage of urine, significantly affecting psychological, social, and physical well-being. See urinary incontinence.

Synonyms:

Urgency

A sudden, compelling desire to urinate that is difficult to defer—a lower urinary tract symptom. Causes: overactive bladder (detrusor overactivity, often idiopathic), urinary tract infection (urgency + dysuria), bladder outlet obstruction (BPH), neurogenic bladder, interstitial cystitis, and pelvic floor disorders.

Synonyms:

Uric Acid Nephropathy

Acute kidney injury from uric acid crystal precipitation in tubules. Occurs in tumor lysis syndrome and severe hyperuricemia. Prevent with hydration and rasburicase. Alkalinization of urine may be harmful as uric acid precipitates at alkaline pH unlike other stone types.

Synonyms:

Uric Acid Stones

Kidney stones composed primarily of uric acid. They form more readily in acidic urine and are associated with hyperuricemia, gout, high purine intake, or chronic diarrhea. Some can dissolve when urine is alkalinized.

Synonyms:

Urinal

Male bedside container.

Synonyms:

Urinalysis

Urinalysis examines urine appearance, chemistry, and sediment for evidence of infection, kidney disease, bleeding, diabetes, dehydration, or other systemic conditions. (bacteria), protein, glucose, ketones, bilirubin, urobilinogen, blood, and hemoglobin.

Synonyms:

Urinary Bladder

A hollow, distensible muscular organ located in the pelvic cavity posterior to the pubic symphysis, serving as a reservoir for urine.

Synonyms:

Urinary Incontinence

Involuntary leakage of urine, significantly affecting psychological, social, and physical well-being.

Synonyms:

Urinary Retention

Inability to completely empty the bladder, which can be acute (sudden, painful, inability to void) or chronic (gradual, often painless, with overflow incontinence). Causes: benign prostatic hyperplasia, urethral stricture, neurogenic bladder, medications (anticholinergics), and pelvic organ prolapse.

Synonyms:

Urinary Retraining

Scheduled voiding and behavioral techniques used to improve bladder control and reduce urgency or incontinence.

Synonyms:

Urinary Tract Infection

Infection of the urinary tract, classified as lower infection such as cystitis or urethritis, or upper infection such as pyelonephritis. Symptoms vary; dysuria, frequency, urgency, fever, flank pain, or nausea may occur. *Escherichia coli* is a common

cause, but organisms vary by setting and patient factors.

Synonyms:

Urinary Tract Infection in Pregnancy

A urinary infection or asymptomatic bacterial growth occurring during pregnancy. Pregnancy increases the risk of upper urinary infection, so screening and treatment follow pregnancy-specific clinical guidance.

Synonyms:

Urinary Urgency

A sudden, difficult-to-delay need to urinate. It may occur with urinary infection, bladder irritation, overactive bladder, stones, neurologic disease, or other conditions. Urgency with fever, flank pain, blood in the urine, or inability to urinate requires medical assessment.

Synonyms:

Urination

The biological process of releasing urine from the bladder through the urethra out of the body; also known as micturition.

Synonyms: micturition.

Urine Albuminuria

Abnormal urinary loss of albumin resulting from increased glomerular permeability or impaired tubular reclamation. Persistent albuminuria is independently associated with CKD progression and cardiovascular risk, even when eGFR is preserved.

Synonyms:

Urine Analysis

Laboratory examination of urine for cells, blood, proteins, glucose, microorganisms, and other substances.

Synonyms:

Urine Drug Screen

Immunoassay-based screening for common drugs of abuse in urine. Detects: amphetamines, benzodiazepines, cocaine (benzoylecgonine), opiates (mor-

phine, codeine, heroin), oxycodone, methadone, fentanyl, barbiturates, PCP, THC (cannabinoids), and alcohol. Pros: rapid (minutes at POC), inexpensive.

Synonyms:

Urine Formation

The process by which the kidney produces urine through three steps: glomerular filtration (formation of 180 L/day ultrafiltrate), tubular reabsorption (return of 99 percent of water and most solutes), and tubular secretion (active addition of waste and ions).

Synonyms:

Urine hCG (Pregnancy Test)

Rapid point-of-care test detecting human chorionic gonadotropin in urine. Sensitivity: detects as low as 25 mIU/mL. Positive as early as 12-14 days after conception (before missed period). Results in 3-5 minutes. False negative: dilute urine, very early pregnancy, ectopic pregnancy.

Synonyms: Pregnancy Test

Urine Osmolality

Concentration of urine relative to plasma normally 50 to 1200 mOsm/kg. High greater than 500 in prerenal states reflecting intact concentrating ability. Low less than 350 indicates impaired concentrating ability in diabetes insipidus, chronic kidney disease, and excessive fluid intake. More precise than specific gravity.

Synonyms:

Urine Sediment

Microscopic examination of centrifuged urine providing diagnostic information about renal pathology. Normal findings include few RBCs, WBCs, and hyaline casts.

Synonyms:

Urine Sodium

Concentration of sodium in urine measured in mEq/L. Low less than 20 in prerenal states reflecting avid tubular reabsorption. High greater than 40 in intrinsic renal disease, diuretic use, and salt-

wasting nephropathies. Should be interpreted in context of volume status, medications, and concurrent therapies.

Synonyms:

Urine Toxicology

Laboratory analysis of urine for medicines, drugs, or their metabolites. Results require interpretation because detection does not always establish impairment or the timing of exposure.

Synonyms:

Urodynamic Testing

Suite of diagnostic procedures designed to evaluate the physiological function of the lower urinary tract (bladder and urethral sphincter) during filling, storage, and emptying phases.

Synonyms:

Urodynamics

A set of tests that assess the function of the lower urinary tract (bladder and urethra).

Synonyms:

Uroflow

Measurement of the rate and pattern of urine flow during voiding.

Synonyms:

Uroflowmetry

Uroflowmetry examines uroflowmetry; interpretation depends on the specimen or body region, test method, reference range, and clinical question. and testing conditions; a low or abnormal flow may reflect obstruction, weak bladder contraction, or inadequate effort and requires clinical correlation.

Synonyms:

Urolithiasis

Formation of stones in the urinary tract, including the kidneys, ureters, bladder, or urethra. Stone composition varies by population and may include calcium oxalate, calcium phosphate, uric acid, struvite, or cystine.

Synonyms:

Urologic Diagnostic Yield

The proportion of urologic diagnostic procedures or tests that provide a definitive and clinically useful result.

Synonyms:

Urology

Surgical and medical specialty concerned with the study, diagnosis, and management of diseases affecting the male and female urinary tract (kidneys, ureters, urinary bladder, urethra) and the male reproductive system (prostate, testes, epididymis, seminal vesicles, penis).

Synonyms:

Urothelial Carcinoma

Urothelial carcinoma, previously called transitional cell carcinoma, is the most common malignancy of the urinary tract, arising from the urothelium that lines the renal pelvis, ureters, bladder, and proximal urethra.

Synonyms:

Urothelium

The specialized transitional epithelium lining the renal pelvis, ureters, bladder, and part of the urethra.

Synonyms:

Urticaria

A skin reaction causing transient, itchy raised welts that change location and usually resolve within 24 hours. It may occur with angioedema, which is deeper swelling often affecting the lips, eyelids, tongue, or extremities.

Synonyms:

Urticaria multiforme

A hypersensitivity reaction in children, often triggered by infections or medications, characterised by widespread, annular or polycyclic erythematous plaques with dusky, ecchymotic, or targetoid centres and pseudovesication, differing from true urticaria by the presence of dusky discolouration and prolonged lesion duration.

Synonyms:

Urticaria Pigmentosa

A cutaneous form of mastocytosis in which excessive mast cells accumulate in the skin, producing tan or brown macules or papules that may swell and itch when rubbed. Flushing, abdominal symptoms, or systemic involvement can occur.

Synonyms:

Usher Syndrome

An inherited disorder combining sensorineural hearing loss with retinitis pigmentosa, the most common cause of combined deaf-blindness. Three types are distinguished by severity and age of onset; management requires coordinated audiological, ophthalmological, and genetic care.

Synonyms:

Usual Interstitial Pneumonia

The histopathological pattern in IPF with temporal heterogeneity, fibroblast foci, and honeycombing. HRCT shows basal-predominant, subpleural reticular opacities with traction bronchiectasis.

Synonyms:

Uterine Atony

Failure of the uterus to contract adequately after delivery, resulting in postpartum hemorrhage. The most common cause of PPH. Risk factors include prolonged labor, multiple gestation, macrosomia, oxytocin augmentation, and uterine fibroids. Diagnosis is clinical: boggy, soft uterus with excessive bleeding.

Synonyms:

Uterine Balloon Tamponade

A minimally invasive technique for managing postpartum hemorrhage due to uterine atony when uterotonics fail. A balloon (Bakri Postpartum Balloon, 500-1000 mL capacity) is inserted transvaginally into the uterine cavity and inflated with saline until bleeding stops. The balloon provides mechanical compression against the uterine wall.

Synonyms:

Uterine Cancer

Cancer arising in the uterus, most commonly from the endometrium. Abnormal vaginal bleeding, bleeding after menopause, pelvic pain, or unusual discharge requires evaluation; early diagnosis often permits effective treatment.

Synonyms:

Uterine Fibroid (Leiomyoma)

A benign tumor arising from the smooth muscle of the uterus. Fibroids may be submucosal, intramural, or subserosal and may cause heavy menstrual bleeding, pelvic pressure, pain, urinary symptoms, or reproductive problems.

Synonyms: Leiomyoma

Uterine Fibroids

Benign tumors of uterine smooth muscle, also called leiomyomas. They may cause heavy menstrual bleeding, pelvic pressure, pain, infertility, or no symptoms.

Synonyms: leiomyomas.

Uterine Hemorrhage

Heavy or abnormal bleeding from the uterus, occurring during pregnancy, after childbirth, or at other times. Causes include pregnancy complications, fibroids, hormonal disorders, and malignancy; severe bleeding with dizziness or weakness is an emergency.

Synonyms:

Uterine Inversion

A rare but life-threatening obstetric emergency where the uterus turns inside out, protruding through the cervix or vaginal introitus. Occurs in 1:2000-1:20,000 deliveries. Causes: fundal pressure, excessive cord traction (especially with fundal placenta), uterine atony, and fundal fibroids.

Synonyms:

Uterine perforation

A full-thickness breach of the uterine wall, most commonly occurring during instrumentation such as dilation and curettage or hysteroscopy, potentially causing hemorrhage and requiring surgical repair.

Synonyms:

Uterine Prolapse

Descent of the uterus toward or through the vaginal opening because the supporting pelvic floor and ligaments have weakened. Risk factors include childbirth, aging, obesity, and conditions that increase chronic pressure in the abdomen.

Synonyms:

Uterine Rupture

A full-thickness tear through the uterine wall, potentially life-threatening to both mother and fetus. Risk factors include prior caesarean section (especially classical incision), oxytocin augmentation, and operative vaginal delivery. Presents with sudden abdominal pain, loss of fetal heart rate, and maternal hemorrhage.

Synonyms:

Uterine Tachysystole

More than five uterine contractions in 10 minutes averaged over 30 minutes, whether or not accompanied by fetal heart-rate abnormalities. It can reduce uteroplacental perfusion, particularly when caused by oxytocin or prostaglandins.

Synonyms:

Uterotonic

A medication that stimulates uterine contraction, used for induction/augmentation of labor, prevention and treatment of postpartum hemorrhage, and medical termination of pregnancy.

Synonyms:

Uterus

Hollow muscular organ in the pelvis between the bladder and rectum, approximately 7.5 cm long in adult females, responsible for menstruation, implantation, and fetal development during pregnancy.

Synonyms:

UTI

Infection of the urinary tract, classified as lower (cystitis, urethritis) or upper (pyelonephritis). See

Urinary Tract Infection.

Synonyms:

UV Light

Ultraviolet radiation, an invisible part of sunlight or artificial light that can affect the skin and eyes and may cause sunburn, aging, or skin cancer.

Synonyms:

Uvea

Uvea concerns uvea, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context. focus, and blood supply to the eye.

Synonyms:

Uveal melanoma

The most common primary intraocular malignancy in adults, arising from melanocytes within the uveal tract (choroid, ciliary body, or iris), presenting with visual symptoms, a pigmented intraocular mass, or incidental finding on examination.

Synonyms:

Uveitis

Uveitis is inflammation of the uveal tract and adjacent eye structures, causing pain, redness, light sensitivity, floaters, or impaired vision from infectious, autoimmune, traumatic, or other causes. or reduced vision; causes include infection, autoimmune disease, and other inflammatory conditions.

Synonyms:

Uveoparotid fever

A manifestation of sarcoidosis characterized by the triad of bilateral parotid gland enlargement, anterior uveitis, and fever, sometimes associated with facial nerve palsy. It reflects granulomatous inflammation and is treated with systemic corticosteroids and potentially disease-modifying agents.

Synonyms:

Uvula

A small, fleshy flap of tissue that hangs from the back of the throat over the root of the tongue.

Synonyms:

Uvulitis

Uvulitis is inflammation and swelling of the uvula from infection, trauma, allergy, dehydration, or irritation and may interfere with swallowing or airway protection. dehydration, or irritation. It may cause throat pain, difficulty swallowing, gagging, or a foreign-body sensation; marked swelling with breathing difficulty requires urgent assessment.

Synonyms:

Vibrio Infection

Infection caused by *Vibrio* bacteria, acquired through contaminated seafood or exposure of wounds to warm seawater. It may cause watery diarrhea, wound infection, or rapidly progressive sepsis, especially in people with liver disease or impaired immunity. Severe wound pain, blistering, fever, or shock requires emergency treatment.

Synonyms:

VOR Reflex

The vestibulo-ocular reflex stabilizes vision by producing eye movements opposite to head movement. Dysfunction can cause oscillopsia, vertigo, blurred vision, or imbalance and may result from inner-ear or brainstem disease. Vestibular and neurologic assessment can identify the cause.

Synonyms:

Ureteral Calculi

Stones that form in or pass through a ureter, the tube carrying urine from a kidney to the bladder.

Synonyms:

Urea

The principal nitrogen-containing waste product of protein metabolism, formed in the liver and excreted mainly by the kidneys.

Synonyms:

Urinary Frequency

The need to urinate more often than usual, which may result from infection, bladder irritation, in-

creased urine production, or other urinary disorders.

Synonyms:

Urinary Lithiasis

The formation or presence of stones anywhere in the urinary tract, including the kidneys, ureters, bladder, or urethra.

Synonyms:

Urinary Stasis

Slowing or stopping of normal urine flow, which can promote urinary infection, stone formation, or obstruction-related kidney injury.

Synonyms:

Urinometer

A hydrometer used to measure the specific gravity of urine.

Synonyms:

Urogenital Tract

The combined urinary and reproductive organs and passages, which develop from related embryologic structures.

Synonyms:

Uterine Fibroid Embolization

A minimally invasive procedure that blocks the arteries supplying uterine fibroids, causing them to shrink.

Synonyms:

Uterine Tube

A paired muscular tube that transports the oocyte from the ovary toward the uterus and is the usual site of fertilization.

Synonyms:

Ulnar Wrist Pain

Pain on the side of the wrist nearest the little finger, often involving the ulna or nearby tendons and ligaments.

Synonyms:

Undescended Testicle

A testicle that has not moved into the scrotum before birth.

Synonyms:

Undifferentiated Pleomorphic Sarcoma

An uncommon aggressive cancer of soft tissue or bone whose cells have no clearly identifiable line of differentiation.

Synonyms:

Urinary Catheter

A hollow, flexible tube inserted through the urethra into the bladder to drain urine; it may be used intermittently or left in place.

Synonyms:

Upper Respiratory Infection

An infection of the nose, sinuses, pharynx, or larynx, most often caused by a virus and producing symptoms such as congestion, sore throat, cough, or runny nose.

Synonyms:

Ulnar Nerve Entrapment

Compression or irritation of the ulnar nerve, commonly at the elbow or wrist, causing numbness or tingling in the ring and little fingers and sometimes weakness of the hand.

Synonyms:

Ulcerative Proctitis

Inflammation and ulceration limited to the lining of the rectum, often causing rectal bleeding, urgency, tenesmus, mucus, and diarrhea.

Synonyms:

Ulcerative Keratitis

An ulcerative infection or inflammatory defect of the cornea that can cause pain, redness, photophobia, and impaired vision and may threaten sight if untreated.

Synonyms:

Urticarial Vasculitis

Inflammation of small blood vessels associated with hive-like lesions that often last longer than ordinary urticaria and may burn, bruise, or leave residual discoloration.

Synonyms:

Ulnar Paradox

The clinical observation that a lesion of the ulnar nerve at the wrist may cause more clawing of the fingers than a lesion higher in the forearm, because the ulnar-innervated finger flexors remain intact.

Synonyms:

Uraemic Syndrome

The collection of symptoms and biochemical abnormalities caused by severe accumulation of uraemic waste products in advanced kidney failure.

Synonyms:

Urethral Syndrome

Urinary frequency, urgency, dysuria, or discomfort without a clear bacterial urinary-tract infection; causes may include irritation, pelvic-floor dysfunction, or inflammation.

Synonyms:

Urethroplasty

Surgical reconstruction or widening of the urethra, most commonly to treat a urethral stricture.

Synonyms:

Urethroscopy

Endoscopic examination of the urethra using a urethroscope, sometimes combined with treatment of a stricture or other lesion.

Synonyms:

Urinary Casts

Cylindrical structures formed in renal tubules and passed in urine; their type can help identify kidney disease, such as glomerular inflammation or tubular injury.

Synonyms:

Urobilinogen

A colourless product formed in the intestine from bilirubin and partly reabsorbed and excreted in urine; abnormal levels may provide clues to liver disease or haemolysis.

Synonyms:

Utricle

One of the otolith organs of the inner ear, detecting horizontal linear acceleration and head position relative to gravity.

Synonyms:

Uvulopalatopharyngoplasty (UPPP)

Uvulopalatopharyngoplasty (UPPP) concerns uvulopalatopharyngoplasty (uppp); its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

ubidecarenone

ubidecarenone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ubiquitin

ubiquitin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ubiquitination

ubiquitination is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ulocladium

ulocladium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

ultracentrifugation

ultracentrifugation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ultradian rhythm

ultradian rhythm is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ultrafiltration

ultrafiltration is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ultralente insulin

ultralente insulin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ultrasonic therapy

ultrasonic therapy is used in relation to ultrasonic therapy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

ultrasound biomicroscopy

ultrasound biomicroscopy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ultraviolet microscopy

ultraviolet microscopy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ultraviolet rays

ultraviolet rays is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ultraviolet therapy

ultraviolet therapy is used in relation to ultraviolet therapy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

umbilical vein

umbilical vein is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uncertainty

uncertainty is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

underage drinking

underage drinking is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

undetermined

undetermined is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

undifferentiated

undifferentiated is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

undifferentiated carcinoma

undifferentiated carcinoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

undulate ribs

undulate ribs is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unencoded data

unencoded data is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unequivocal

unequivocal is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unerupted tooth

unerupted tooth is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unevaluable

unevaluable is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unilaminar epithelium

unilaminar epithelium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unilateral

unilateral is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unilateral microphthalmos

unilateral microphthalmos is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uninodular goiter

uninodular goiter is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unipolar neuron

unipolar neuron is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unknown

unknown is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unresectable

unresectable is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unsaturated phytosterol

unsaturated phytosterol concerns unsaturated phytosterol, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

untranslated region

untranslated region is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

upamostat

upamostat is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

upper arm

upper arm is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

upper extremity

upper extremity is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urachus

urachus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uracil

uracil is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uracil mustard

uracil mustard is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uracil nucleotides

uracil nucleotides is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uranium

uranium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureaplasma

ureaplasma identifies ureaplasma, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

ureaplasma urealyticum

ureaplasma urealyticum identifies ureaplasma urealyticum, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

ureter fissus

ureter fissus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureter obstruction

ureter obstruction describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

ureteral catheters

ureteral catheters is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureteral polyp

ureteral polyp is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureteral stenosis

ureteral stenosis describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

ureteric perforation

ureteric perforation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureteroscopes

ureteroscopes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureterostomy procedure

ureterostomy procedure is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat ureterostomy procedure.

Synonyms:

urethan

urethan is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urethra disorder

urethra disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

urethral carcinoma

urethral carcinoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

urethral catheter

urethral catheter is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urethral fistula

urethral fistula is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urethral obstruction

urethral obstruction describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

urethral sphincter

urethral sphincter is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urethral stenosis

urethral stenosis describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

uric acid

uric acid denotes uric acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

uricosuric agent

uricosuric agent is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uridine

uridine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uridine diphosphate

uridine diphosphate concerns uridine diphosphate, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

uridine monophosphate

uridine monophosphate concerns uridine monophosphate, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

uridine triacetate

uridine triacetate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uridine triphosphate

uridine triphosphate concerns uridine triphosphate, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

urinary

urinary is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary bladder disorder

urinary bladder disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

urinary calculi

urinary calculi is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary catheterization

urinary catheterization is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary diversion

urinary diversion is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary fistula

urinary fistula is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary hesitation

urinary hesitation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary system

urinary system is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary tract disorder

urinary tract disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

urinary tract neoplasm

urinary tract neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

urination disorder

urination disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

urine

urine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urine conductivity

urine conductivity is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urine cytology

urine cytology is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urochordata

urochordata is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urogenital fistula

urogenital fistula is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urogenital system

urogenital system is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urostomy leak

urostomy leak is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urostomy procedure

urostomy procedure is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat urostomy procedure.

Synonyms:

urostomy prolapse

urostomy prolapse is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

urostomy stenosis

urostomy stenosis describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

ursodeoxycholic acid

ursodeoxycholic acid denotes ursodeoxycholic acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

ustekinumab

ustekinumab concerns ustekinumab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

ustilago

ustilago is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uterine adnexae

uterine adnexae is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uterine cavity

uterine cavity is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uterine fistula

uterine fistula is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uterine gland

uterine gland is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uterine leiomyosarcoma

uterine leiomyosarcoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

uterine monitoring

uterine monitoring is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uterine myomectomy

uterine myomectomy is used in relation to uterine myomectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

uterine obstruction

uterine obstruction describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

uterus disorder

uterus disorder describes a clinical disorder or finding in the body system or process named by the

term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

uterus neoplasm

uterus neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

uveal disease

uveal disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

uveal neoplasm

uveal neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

tabes dorsalis

tabes dorsalis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tablet

tablet is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

TAC regimen

TAC regimen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

tacedinaline

tacedinaline is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tachyarrhythmia

tachyarrhythmia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tachycardia

tachycardia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tachykinin

tachykinin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tachyphrenia

tachyphrenia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tachypnea

tachypnea is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tacrine

tacrine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tacrolimus

tacrolimus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tactile agnosia

tactile agnosia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tadalafil

tadalafil is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taenia

taenia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taenia saginata

taenia saginata is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taenia solium

taenia solium is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taeniasis

taeniasis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tail

tail is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

takayasu arteritis

takayasu arteritis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

takotsubo cardiomyopathy

takotsubo cardiomyopathy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talabostat

talabostat is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talactoferrin alfa

talactoferrin alfa is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talaporfin sodium

talaporfin sodium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talc

talc is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talipes

talipes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talipes calcaneovalgus

talipes calcaneovalgus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tall stature

tall stature is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talotrexin

talotrexin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talus

talus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tamoxifen

tamoxifen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tamoxifen citrate

tamoxifen citrate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tamsulosin

tamsulosin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tamsulosin hydrochloride

tamsulosin hydrochloride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tandutinib

tandutinib concerns tandutinib, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tanespimycin

tanespimycin concerns tanespimycin, a pharmaco-

logic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

Tangier disease

Tangier disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tannic acid

tannic acid denotes tannic acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

tanomastat

tanomastat is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tantalum

tantalum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tapentadol

tapentadol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taq polymerase

taq polymerase is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

tardive dyskinesia

tardive dyskinesia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tarenflurbil

tarenflurbil is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

target population

target population is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

targeted therapy

targeted therapy is used in relation to targeted therapy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

tariquidar

tariquidar is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Tarlov cyst

Tarlov cyst is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tarsal bones

tarsal bones is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tarsal coalition

tarsal coalition is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tarsal joints

tarsal joints is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taste

taste is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taste bud

taste bud is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taste disorder

taste disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tenascin

tenascin is a medical condition or clinical finding

involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tendinitis

tendinitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tendon

tendon is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tendon injury

tendon injury describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tendon sheath

tendon sheath is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tenecteplase

tenecteplase is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tenericutes

tenericutes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

teniposide

teniposide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tennis elbow

tennis elbow is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tenofovir

tenofovir concerns tenofovir, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tenosynovitis

tenosynovitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tensile strength

tensile strength is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tension-type headache

tension-type headache is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tenuazonic acid

tenuazonic acid denotes tenuazonic acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

teprotumumab

teprotumumab concerns teprotumumab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

terameprocol

terameprocol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

teratocarcinoma

teratocarcinoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

teratogen

teratogen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

teratogenesis

teratogenesis denotes teratogenesis, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

teratoma

teratoma is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

teratozoospermia

teratozoospermia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terazosin

terazosin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terazosin hydrochloride

terazosin hydrochloride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terbinafine

terbinafine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terbufos

terbufos is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terbutaline

terbutaline is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terfenadine

terfenadine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terlipressin

terlipressin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

term birth

term birth is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terminal illness

terminal illness is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terminal insomnia

terminal insomnia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terpene

terpene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tertiary hyperparathyroidism

tertiary hyperparathyroidism is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tertiary protein

tertiary protein denotes tertiary protein, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

tesetaxel

tesetaxel concerns tesetaxel, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

testicular atrophy

testicular atrophy is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testicular atrophy.

Synonyms:

testicular feminization

testicular feminization is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testicular feminization.

Synonyms:

testicular gonadoblastoma

testicular gonadoblastoma is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testicular gonadoblastoma.

Synonyms:

testicular hydrocele

testicular hydrocele is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testicular hydrocele.

Synonyms:

testicular mass

testicular mass is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testicular mass.

Synonyms:

testicular torsion

testicular torsion is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testicular torsion.

Synonyms:

testis

testis is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testis.

Synonyms:

testis disorder

testis disorder is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testis disorder.

Synonyms:

testis neoplasm

testis neoplasm is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testis neoplasm.

Synonyms:

testolactone

testolactone is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testolactone.

Synonyms:

testosterone

testosterone concerns testosterone, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

testosterone propionate

testosterone propionate is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testosterone propionate.

Synonyms:

tetanus

tetanus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tetanus toxin

tetanus toxin describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

tetany

tetany is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tetracaine

tetracaine concerns tetracaine, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tetrachloroethylene

tetrachloroethylene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tetrachlorvinphos

tetrachlorvinphos is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

thyroidectomy

thyroidectomy is used in relation to thyroidectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

thyroiditis

thyroiditis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

thyrotoxicosis

thyrotoxicosis describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

thyrotroph adenoma

thyrotroph adenoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

thyrotropin

thyrotropin concerns thyrotropin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

thyrotropin alfa

thyrotropin alfa is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

thyroxine

thyroxine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tiazofurin

tiazofurin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tibia

tibia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tibia vara

tibia vara is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tibial artery

tibial artery is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tibial fracture

tibial fracture describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tibial nerve

tibial nerve is a medical condition or clinical finding

involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tibialcrural artery

tibialcrural artery is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tibialis cranialis

tibialis cranialis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tic disorder

tic disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

ticarcillin

ticarcillin concerns ticarcillin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tick

tick is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ticlopidine

ticlopidine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

tidal volume

tidal volume is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tigecycline

tigecycline concerns tigecycline, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tight junction

tight junction is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tilorone

tilorone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

time

time is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

time perception

time perception is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

timolol

timolol concerns timolol, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

Timothy syndrome

Timothy syndrome describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tincture

tincture is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tinea

tinea is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tinea capitis

tinea capitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tinea favosa

tinea favosa is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tinea pedis

tinea pedis is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tinea versicolor

tinea versicolor is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tinidazole

tinidazole concerns tinidazole, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tinnitus

tinnitus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tinzaparin

tinzaparin concerns tinzaparin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tinzaparin sodium

tinzaparin sodium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tiopronin

tiopronin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tiotropium bromide

tiotropium bromide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tipifarnib

tipifarnib concerns tipifarnib, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tirapazamine

tirapazamine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tirbanibulin

tirbanibulin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tirofiban

tirofiban is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissierella

tissierella is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissierella praeacuta

tissierella praeacuta is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue

tissue denotes tissue, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

Synonyms:

tissue adhesions

tissue adhesions is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue banks

tissue banks is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue congestion

tissue congestion is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue culture

tissue culture is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue elastance

tissue elastance is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue engineering

tissue engineering is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue kallikrein

tissue kallikrein is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue membrane

tissue membrane is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue processor

tissue processor is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue scaffold

tissue scaffold is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

titanium

titanium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

t-lymphocyte

t-lymphocyte is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tmax

tmax is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

TNM staging

TNM staging is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tobacco

tobacco is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tobacco use

tobacco use is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tobramycin

tobramycin concerns tobramycin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tocolytic agents

tocolytic agents is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tocopherol

tocopherol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tocotrienols

tocotrienols is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toe

toe is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toe joint

toe joint is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

togaviridae

togaviridae identifies togaviridae, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

togaviridae infections

togaviridae infections identifies togaviridae infections, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

toilet training

toilet training is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolazamide

tolazamide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolbutamide

tolbutamide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolcapone

tolcapone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolerance

tolerance is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolmetin

tolmetin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolnaftate

tolnaftate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolonium chloride

tolonium chloride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolterodine tartrate

tolterodine tartrate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toluene

toluene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolvaptan

tolvaptan is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tomography

tomography is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tomotherapy

tomotherapy is used in relation to tomotherapy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

tongue

tongue refers to tongue, an anatomical or physiologic concept used to describe a body structure, process, or function.

Synonyms:

tongue carcinoma

tongue carcinoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

tongue disease

tongue disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tongue neoplasm

tongue neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

tonic pupil

tonic pupil is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tonic seizures

tonic seizures is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tonometer

tonometer is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tonometry

tonometry is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tonsil

tonsil is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tonsillar neoplasm

tonsillar neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

tonsillectomy

tonsillectomy is used in relation to tonsillectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

tonsillitis

tonsillitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth

tooth refers to tooth, an anatomical or physiologic concept used to describe a body structure, process, or function.

Synonyms:

tooth abrasion

tooth abrasion is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth ankylosis

tooth ankylosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth attrition

tooth attrition is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth calcification

tooth calcification is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth component

tooth component is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth crowding

tooth crowding is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth crown

tooth crown is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth discoloration

tooth discoloration is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth disease

tooth disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tooth enamel

tooth enamel is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth eruption

tooth eruption is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth extraction

tooth extraction is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth fracture

tooth fracture describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tooth infection

tooth infection describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

tooth loss

tooth loss is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth resorption

tooth resorption is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth root

tooth root is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toothache

toothache is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toothbrushing

toothbrushing is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toothpaste

toothpaste is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

topical

topical is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

topiramate

topiramate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

topoisomerase ii

topoisomerase ii is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

topoisomerase inhibitors

topoisomerase inhibitors is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

topotecan

topotecan is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

topotecan hydrochloride

topotecan hydrochloride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical

context.

Synonyms:

toremifene

toremifene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

torsade de pointes

torsade de pointes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

torsemide

torsemide concerns torsemide, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

torsion dystonia

torsion dystonia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

torticollis

torticollis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

torulaspora

torulaspora is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

torulaspora delbrueckii

torulaspora delbrueckii is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tositumomab

tositumomab concerns tositumomab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

total laryngectomy

total laryngectomy is used in relation to total laryngectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

total pancreatectomy

total pancreatectomy is used in relation to total pancreatectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

total tissue

total tissue is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

touch

touch is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

touch perception

touch perception is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

Tourette's syndrome

Tourette's syndrome describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tourniquet

tourniquet is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Townes syndrome

Townes syndrome describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

toxaphene

toxaphene describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxic

toxic describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxic effect

toxic effect describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxic shock syndrome

toxic shock syndrome describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxicity grade

toxicity grade describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxicity test

toxicity test is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat toxicity test.

Synonyms:

toxicogenomics

toxicogenomics describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxicokinetic description

toxicokinetic description describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxicokinetics

toxicokinetics describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxicology

toxicology describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxin

toxin describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxocara

toxocara describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxocara canis

toxocara canis describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxocara cati

toxocara cati describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxocariasis

toxocariasis describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxoid

toxoid describes an infectious or toxic process involving the site or exposure named by the term.

Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxoplasma

toxoplasma describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxoplasma gondii

toxoplasma gondii describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxoplasmosis

toxoplasmosis describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

tra gene

tra gene denotes tra gene, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

trabectedin

trabectedin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trabecular meshwork

trabecular meshwork is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trabeculectomy

trabeculectomy is used in relation to trabeculectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

trabulsiella

trabulsiella is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trabulsiella guamensis

trabulsiella guamensis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transitional epithelium

transitional epithelium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transitory

transitory is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

translation initiation

translation initiation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

translucent

translucent is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transmembrane transport

transmembrane transport is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transmission

transmission is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transplacental

transplacental is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transplant

transplant is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transplant rejection

transplant rejection is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transplantation

transplantation is a medical condition or clinical

finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transplantation conditioning

transplantation conditioning is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transplantation immunology

transplantation immunology is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transport protein

transport protein denotes transport protein, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

transport vesicle

transport vesicle is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transtracheal

transtracheal is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transtympanic

transtympanic is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transverse colon

transverse colon is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transvestism

transvestism is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trapezoid bone

trapezoid bone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trastuzumab

trastuzumab concerns trastuzumab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

traumatic injury

traumatic injury describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

traumatic shock

traumatic shock is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Traumeel S

Traumeel S is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

travoprost

travoprost concerns travoprost, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

trazodone

trazodone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trb gene

trb gene denotes trb gene, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

trd gene

trd gene denotes trd gene, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

treatment epoch

treatment epoch is used in relation to treatment epoch during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

trematoda

trematoda is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

trematosphaeria grisea

trematosphaeria grisea is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tremelimumab

tremelimumab concerns tremelimumab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tremor

tremor is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trendelenburg

trendelenburg is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

treosulfan

treosulfan is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trephine

trephine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

treponema

treponema is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

treponema pallidum

treponema pallidum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

treponemal infections

treponemal infections describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

tretinoin

tretinoin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

TRG gene

TRG gene denotes trg gene, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

trial compliance

trial compliance is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trial indication

trial indication is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trial phase

trial phase is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trial screening

trial screening is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat trial screening.

Synonyms:

triamcinolone

triamcinolone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triamcinolone acetonide

triamcinolone acetonide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triamterene

triamterene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triazenes

triazenes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triazine

triazine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triaziquone

triaziquone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triazolam

triazolam is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triazole

triazole concerns triazole, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

triazophos

triazophos is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tributylin

tributylin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

T-wave alternans

T-wave alternans denotes t-wave alternans, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and labo-

ratory findings.

Synonyms:

twin

twin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tympanic bulla

tympanic bulla is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tympanic membrane

tympanic membrane is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tympanometry

tympanometry is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tympanoplasty

tympanoplasty is used in relation to tympanoplasty during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

typhlitis

typhlitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

typhoid

typhoid is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tyramine

tyramine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tyrosinase peptide

tyrosinase peptide is a defined chemical or biologic substance involved in tyrosinase peptide and studied in physiology, pharmacology, laboratory medicine, or treatment.

Synonyms:

tyrosine

tyrosine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

UPPP

Ulcerative Colitis - children - discharge

Ulcerative Colitis - children - discharge is a treatment or care intervention for ulcerative colitis - children - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Ulcerative colitis - discharge

Ulcerative colitis - discharge is a treatment or care intervention for ulcerative colitis - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Ulcers

Ulcers is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Ultra-processed foods

Ultra-processed foods addresses care related to ultra-processed foods, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Ultrasound pregnancy

Ultrasound pregnancy examines ultrasound pregnancy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Umbilical catheters

Umbilical catheters provide vascular access through a newborn's umbilical vessels for fluids, medicines, monitoring, or blood sampling while complications are monitored.

Synonyms:

Umbilical cord care in newborns

Umbilical cord care in newborns is a treatment or care intervention for umbilical cord care in newborns; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Umbilical hernia repair

Umbilical hernia repair is a treatment or care intervention for umbilical hernia repair; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Unconsciousness - first aid

Unconsciousness - first aid is a disorder affecting the body system or process named by the term.

Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Understanding cancer staging

Understanding cancer staging is a treatment or care intervention for understanding cancer staging; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Understanding cardiovascular disease

Understanding cardiovascular disease is a treatment or care intervention for understanding cardiovascular disease; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Understanding health insurance plans

Understanding health insurance plans is a treatment or care intervention for understanding health insurance plans; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Understanding Medicare

Understanding Medicare is a treatment or care intervention for understanding medicare; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Understanding the DASH diet

Understanding the DASH diet is a treatment or care intervention for understanding the dash diet; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Understanding your breast cancer risk

Understanding your breast cancer risk is a treatment or care intervention for understanding your breast

cancer risk; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Understanding your cancer prognosis

Understanding your cancer prognosis is a treatment or care intervention for understanding your cancer prognosis; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Understanding your colorectal cancer risk

Understanding your colorectal cancer risk is a treatment or care intervention for understanding your colorectal cancer risk; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Understanding your health care costs

Understanding your health care costs is a treatment or care intervention for understanding your health care costs; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Understanding your hospital bill

Understanding your hospital bill is a treatment or care intervention for understanding your hospital bill; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Understanding your prostate cancer risk

Understanding your prostate cancer risk is a treatment or care intervention for understanding your prostate cancer risk; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Undescended testicle repair

Undescended testicle repair examines undescended testicle repair; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Upper airway biopsy

Upper airway biopsy examines upper airway biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Upper GI and small bowel series

Upper GI and small bowel series examines upper gi and small bowel series; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Urea nitrogen urine test

Urea nitrogen urine test examines urea nitrogen urine test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Ureteral reimplantation surgery - children

Ureteral reimplantation surgery - children is a treatment or care intervention for ureteral reimplantation surgery - children; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Ureteral retrograde brush biopsy

Ureteral retrograde brush biopsy examines ureteral retrograde brush biopsy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Urethral discharge culture

Urethral discharge culture examines urethral discharge culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Urge incontinence

Urge incontinence is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Uric acid - blood

Uric acid - blood concerns uric acid - blood; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Uric acid urine test

Uric acid urine test examines uric acid urine test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Urinary catheter - infants

Urinary catheter - infants examines urinary catheter - infants; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Urinary catheters

Urinary catheters drain the bladder when a person cannot empty it normally or accurate urine measurement is needed, with risks including infection, trauma, blockage, and discomfort.

Synonyms:

Urinary catheters - what to ask your

doctor

Urinary catheters - what to ask your doctor examines urinary catheters - what to ask your doctor; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Urinary incontinence - injectable implant

Urinary incontinence - injectable implant is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Urinary incontinence - retropubic suspension

Urinary incontinence - retropubic suspension is a treatment or care intervention for urinary incontinence - retropubic suspension; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Urinary incontinence - tension-free vaginal tape

Urinary incontinence - tension-free vaginal tape is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Urinary incontinence - urethral sling procedures

Urinary incontinence - urethral sling procedures is a treatment or care intervention for urinary incontinence - urethral sling procedures; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Urinary incontinence - what to ask your

doctor

Urinary incontinence - what to ask your doctor is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Urinary incontinence products

Urinary incontinence products is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Urinary incontinence products - self-care

Urinary incontinence products - self-care is a treatment or care intervention for urinary incontinence products - self-care; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Urinary incontinence surgery - female - discharge

Urinary incontinence surgery - female - discharge is a treatment or care intervention for urinary incontinence surgery - female - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Urinary tract infection - adults

Urinary tract infection in adults is microbial infection of the bladder, urethra, ureters, or kidneys, causing dysuria, frequency, urgency, pelvic pain, fever, or flank pain depending on location.

Synonyms:

Urinary tract infection - children

Urinary tract infection - children is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate

investigations.

Synonyms:

Urinary tract infection in girls - aftercare

Urinary tract infection in girls - aftercare is a treatment or care intervention for urinary tract infection in girls - aftercare; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Urinary tract infection in women - self-care

Urinary tract infection in women - self-care is a treatment or care intervention for urinary tract infection in women - self-care; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Urinating more at night

Urinating more at night concerns urinating more at night; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Urination - difficulty with flow

Urination - difficulty with flow is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Urination - excessive amount

Urination - excessive amount is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Urination - painful

Urination - painful is a disorder affecting the body

system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Urine - abnormal color

Urine - abnormal color is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Urine - bloody

Urine - bloody is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Urine 24-hour volume

Urine 24-hour volume is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Urine chemistry

Urine chemistry examines urine chemistry; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Urine collection - infants

Urine collection - infants is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Urine concentration test

Urine concentration test examines urine concentra-

tion test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Urine culture

Urine culture examines urine culture; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Urine culture - catheterized specimen

Urine culture - catheterized specimen examines urine culture - catheterized specimen; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Urine drainage bags

Urine drainage bags is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Urine output - decreased

Urine output - decreased is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Urine pH test

Urine pH test examines urine pH test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Urine protein dipstick test

Urine protein dipstick test examines urine protein dipstick test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Urine protein electrophoresis test

Urine protein electrophoresis test examines urine protein electrophoresis test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Urine specific gravity test

Urine specific gravity test examines urine specific gravity test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Urostomy - stoma and skin care

Urostomy care protects the stoma and surrounding skin, maintains pouch drainage, manages urine leakage, and monitors for infection, obstruction, or changes requiring clinical review.

Synonyms:

Urostomy pouches and supplies

Urostomy pouches and supplies is a treatment or care intervention for urostomy pouches and supplies; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Use of restraints

Use of restraints is a treatment or care intervention for use of restraints; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Using a cane

Using a cane is a treatment or care intervention for using a cane; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Using a walker

Using a walker is a treatment or care intervention

for using a walker; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Using an incentive spirometer

Using an incentive spirometer is a treatment or care intervention for using an incentive spirometer; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Using antibiotics wisely

Using antibiotics wisely is a treatment or care intervention for using antibiotics wisely; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Using crutches

Using crutches is a treatment or care intervention for using crutches; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Using over-the-counter medicines safely

Using over-the-counter medicines safely examines using over-the-counter medicines safely; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Using oxygen at home

Using oxygen at home is a treatment or care intervention for using oxygen at home; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Using oxygen at home - what to ask your doctor

Using oxygen at home - what to ask your doctor is a treatment or care intervention for using oxygen at home - what to ask your doctor; indication, preparation,

ration, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Using your shoulder after replacement surgery

Using your shoulder after replacement surgery is a treatment or care intervention for using your shoulder after replacement surgery; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Using your shoulder after surgery

Using your shoulder after surgery is a treatment or care intervention for using your shoulder after surgery; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Uterine artery embolization

Uterine artery embolization is a treatment or care intervention for uterine artery embolization; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Uterine artery embolization - discharge

Uterine artery embolization - discharge is a treatment or care intervention for uterine artery embolization - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Uterine sarcoma

Uterine sarcoma is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Ulcerative Colitis Diet

An ulcerative-colitis eating plan is individualized

around symptoms, disease activity, nutrition, and treatment. During flares, hydration and tolerated lower-residue foods may help, but no universal diet cures inflammation or replaces medical therapy.

Synonyms:

Ulcerative Colitis Intestinal Problems (Inflammatory Bowel Disease: Intestinal Problems)

Alternate index label for Inflammatory Bowel Disease: Intestinal Problems.

Synonyms:

underactive thyroid (Hypothyroidism)

Alternate index label for Hypothyroidism.

Synonyms:

Underarm Sweating Excessive (Hyperhidrosis)

Alternate index label for Hyperhidrosis.

Synonyms:

Understanding Pica Eating Disorder

Pica is persistent eating of nonfood substances for at least a month in a way that is developmentally or culturally inappropriate. It may be associated with iron deficiency, pregnancy, intellectual disability, autism, or mental illness and can cause poisoning, obstruction, or infection.

Synonyms:

Undetectable Viral Load Without Treatment

An undetectable viral load means a test found virus below its reporting threshold, but the meaning depends on the infection and treatment status. In HIV, sustained suppression is usually treatment-related; stopping therapy can allow rebound, so medicines should not be stopped without care.

Synonyms:

Units of Insulin Needed for 400 Blood Sugar

A blood glucose of 400 mg/dL can indicate severe hyperglycemia or diabetic ketoacidosis and should

not be self-treated with an improvised insulin dose. The required correction depends on the person's prescribed plan, insulin sensitivity, ketones, hydration, and diabetes type; urgent medical advice is needed.

Synonyms:

Upper Left Side Abdominal Pain Causes in Children

Upper-left abdominal pain in a child may come from the stomach, bowel, spleen, pancreas, kidney, ribs, muscles, or referred chest disease. Severe pain, injury, fever, repeated vomiting, breathing difficulty, faintness, or a rigid abdomen requires prompt evaluation.

Synonyms:

Urinary Incontinence in Children

Urinary incontinence in children may reflect normal development, constipation, urinary infection, bladder dysfunction, diabetes, sleep disorders, spinal disease, or psychosocial factors. New daytime wetting, pain, fever, excessive thirst, weakness, or recurrent accidents needs assessment.

Synonyms:

Urinary Tract Infection Contagious (Is a Urinary Tract Infection (UTI) Contagious)

Alternate index label for Is a Urinary Tract Infection (UTI) Contagious.

Synonyms:

Urinary Tract Infections in Children

Urinary-tract infection in children can cause fever, painful urination, frequency, abdominal or back pain, vomiting, or nonspecific irritability. Prompt diagnosis and treatment help prevent kidney injury, especially in infants or children with recurrent or atypical infections.

Synonyms:

urticaria (Hives)

Alternate index label for Hives.

Synonyms:

Usually the First Symptom of Testicular Cancer

A painless testicular lump or enlargement is a common first sign of testicular cancer, although heaviness, ache, or sudden pain may occur. Any persistent testicular change needs prompt examination and ultrasound; sudden severe pain is an emergency because torsion is possible.

Synonyms:

Uterine Growths

Uterine growths may include fibroids, polyps, adenomyosis, or rarely cancer. They can cause heavy or irregular bleeding, pelvic pressure, pain, infertility, or no symptoms; examination and imaging determine the type and treatment.

Synonyms:

UTI (Urinary Tract Infection)

Alternate index label for Urinary Tract Infection.

Synonyms:

V

Uveal Disease

A disorder affecting the uvea, the pigmented middle layer of the eye containing the iris, ciliary body, and choroid. Inflammation, infection, tumors, or vascular disease may cause pain, floaters, light sensitivity, or vision loss and require ophthalmic assessment.

Synonyms:

Vacuum Erection Devices

Pumps that draw blood into the penis to produce an erection. **Synonyms:** Vacuum erection pump

Variant Angina Pectoris

Chest pain caused by temporary coronary-artery spasm, often occurring at rest. **Synonyms:** Prinzmetal angina; vasospastic angina

Vascular

Relating to blood vessels. **Synonyms:**

Vascular Surgery

Surgery that repairs or reroutes blood vessels to improve circulation. **Synonyms:**

Vasoconstrictor

A substance that narrows blood vessels. **Synonyms:**

Vasodilator

A substance that widens blood vessels. **Synonyms:**

Vasospasm

Sudden involuntary narrowing caused by contraction of a blood vessel. **Synonyms:**

Venous

Relating to veins. **Synonyms:**

Venous Leak

Inadequate retention of blood in the penis during erection because blood escapes through veins. **Synonyms:** Veno-occlusive dysfunction

Ventricular Myocardium

Heart muscle forming the walls of the ventricles. **Synonyms:**

Ventricular Rupture

A tear in a ventricular wall, often a life-threatening complication of myocardial infarction. **Synonyms:**

Venules

Very small veins that collect blood from capillaries. **Synonyms:**

Vertebral Artery

An artery ascending through the neck that supplies blood to the brainstem and posterior brain. **Synonyms:**

Very Low-Calorie Diet

A medically supervised diet providing about 800 or fewer calories per day. **Synonyms:** VLCD

Very-Low-Density Lipoprotein

A lipoprotein that transports liver-produced triglycerides and can become LDL. **Synonyms:** VLDL

Vestibular System

Inner-ear and brain structures responsible for bal-

ance and spatial orientation. **Synonyms:**

Viral

Caused by or relating to a virus. **Synonyms:**

Virtues

Positive character qualities valued across cultures, such as courage, justice, and wisdom. **Synonyms:**

Virulent

Highly harmful, severe, or capable of causing serious disease. **Synonyms:**

Visualized Laser-Assisted Prostatectomy

Laser prostate surgery performed with direct visualization to remove obstructing tissue. **Synonyms:** VLAP

Vitamin D

Vitamin D supports calcium and phosphate balance, bone mineralization, muscle function, and immune processes; deficiency causes rickets in children and osteomalacia or bone loss in adults. **Synonyms:**

VO2 Max

The maximum rate at which the body can use oxygen during intense exercise. **Synonyms:** Maximal oxygen consumption

Volatile Oils

Plant oils containing compounds that evaporate readily at room temperature. **Synonyms:** Essential oils

VSD

Ventricular septal defect, a hole in the wall separating the heart's ventricles. **Synonyms:** Ventricular septal defect

Vulnerable

A substance traditionally believed to promote wound healing. **Synonyms:**

Vaccination

Administration of a vaccine to stimulate immune re-

sponse and provide protection against infectious disease. Types: live attenuated, inactivated, subunit, mRNA, viral vector. Schedule varies by country. Herd immunity achieved when sufficient proportion immune.

Synonyms:

Vaccination Schedule

A time-based plan for administering vaccines according to age, previous doses, medical conditions, exposure risks, and public-health guidance. Schedules vary by country and are updated as recommendations change.

Synonyms:

Vaccine

A biological preparation that stimulates an immune response to a pathogen or its components. Vaccines are used mainly to prevent infection or reduce disease severity; a limited number are used in therapeutic settings.

Synonyms:

Vaccine Immunology

The study of how vaccines stimulate innate and adaptive immune responses. Vaccine types include live attenuated, inactivated, subunit, conjugate, toxoid, viral-vector, and nucleic-acid vaccines; their immune responses, precautions, and schedules vary.

Synonyms:

Vaccines and Immunizations

Biological preparations that stimulate the immune system to develop protection against specific infectious diseases. By exposing the body to harmless components of a pathogen, vaccines enable the immune system to generate memory B and T cells that can mount a rapid response upon future exposure.

Synonyms:

VACTERL Association

A pattern of congenital abnormalities involving vertebral, anal, cardiac, tracheoesophageal, renal, and limb development. The diagnosis is considered when several component abnormalities occur together and

other syndromes have been excluded.

Synonyms:

Vacuum Delivery

Assisted vaginal delivery using a vacuum extractor (cup applied to the fetal scalp with negative pressure) to expedite delivery for prolonged second stage, fetal distress, or maternal indications.

Synonyms:

Vacuum-Assisted Delivery

Operative vaginal delivery using a vacuum extractor applied to the fetal scalp. Types: soft cup (Kiwi OmniCup, Mityvac, for outlet and low deliveries) and rigid cup (metal Kiwi, for posterior positions and midpelvic deliveries).

Synonyms:

Vagina

The vagina is a muscular canal connecting the cervix to the external genital tract and serving roles in menstruation, sexual function, and childbirth. cm long in adult females. Functions include receiving the penis during intercourse, serving as the birth canal, and channeling menstrual flow.

Synonyms:

Vaginal Atresia

Congenital absence or complete obstruction of the vaginal canal. It may cause absent menstrual flow, cyclic pelvic pain, or difficulty with sexual activity and requires specialist evaluation.

Synonyms:

Vaginal Birth After Cesarean

Vaginal delivery after a previous cesarean birth. The likelihood of success and the risk of uterine rupture depend on the prior uterine incision, number and indications of previous cesareans, medical and obstetric factors, and the resources available for emergency care.

Synonyms:

Vaginal Cancer

A rare gynecologic malignancy, most commonly

squamous cell carcinoma linked to human papillomavirus. Treatment depends on stage and includes surgery, radiation, and chemotherapy.

Synonyms:

Vaginal Delivery (Spontaneous)

The spontaneous passage of the fetus through the birth canal without the use of operative instruments (vacuum or forceps). Typically occurs in the second stage of labor with maternal pushing.

Synonyms: Spontaneous

Vaginal Dryness

Reduced vaginal lubrication, commonly associated with menopause, breastfeeding, hormonal changes, medications, or irritation. It may cause discomfort, itching, painful intercourse, or minor bleeding.

Synonyms:

Vaginal Dryness and Atrophy (Genitourinary Syndrome of Menopause)

Vaginal dryness and atrophy, collectively termed genitourinary syndrome of menopause, result from declining estrogen levels that cause thinning, drying, and loss of elasticity of the vaginal tissues. Symptoms include vaginal dryness, irritation, burning, dyspareunia, and urinary symptoms such as frequency and recurrent infections.

Synonyms: Genitourinary Syndrome of Menopause

Vaginal Foreign Body

An object retained in the vagina, most often a tampon or other inserted material. It may cause discharge, odor, bleeding, pain, or infection and should be removed safely with examination when necessary.

Synonyms:

Vaginal Intercourse

The insertion of the penis into the vagina for sexual pleasure or reproduction. The most common form of sexual intercourse. Vaginal intercourse can lead to pregnancy if sperm are deposited in the vagina.

Synonyms:

Vaginal Itching

Itching or irritation of the vulva or vagina caused by candidiasis, bacterial vaginosis, sexually transmitted infections, dermatitis, hormonal changes, or other conditions. It may occur with discharge, odor, soreness, or burning; recurrent or unexplained symptoms require examination and appropriate testing rather than self-diagnosis.

Synonyms:

Vaginal Microbiome

The community of microorganisms living in the vagina, commonly dominated by *Lactobacillus* species that help maintain an acidic environment. Changes in this community may contribute to bacterial vaginosis, candidiasis, or other symptoms.

Synonyms:

Vaginal Stenosis

Narrowing or shortening of the vaginal canal, which may result from surgery, radiation, scarring, inflammation, trauma, or congenital development. It can cause pain, difficult examination, or difficulty with penetration.

Synonyms:

Vaginal Trauma

Injury to the vaginal tissues caused by childbirth, sexual activity, foreign objects, procedures, or blunt or penetrating trauma. Bleeding, pain, swelling, or urinary symptoms require assessment; severe bleeding or suspected deep injury is urgent.

Synonyms:

Vaginal Hemorrhage

Heavy or clinically significant bleeding from the vagina. Causes include childbirth, pregnancy complications, trauma, infection, structural disease, hormonal disorders, and gynecologic malignancy; severe or pregnancy-related bleeding requires urgent evaluation.

Synonyms:

Vaginismus

Vaginismus concerns vaginismus; its medical sig-

nificance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Vaginitis

Inflammation of the vaginal mucosa, one of the most common gynecologic complaints.

Synonyms:

Vaginospasm

Involuntary contraction of the pelvic-floor muscles surrounding the vagina, causing pain or difficulty with vaginal penetration. It may be associated with fear of pain, prior trauma, pelvic-floor dysfunction, infection, hormonal factors, or other genitopelvic pain conditions.

Synonyms:

Vagus Nerve (Cranial Nerve X)

The tenth cranial nerve (CN X), the longest and most widely distributed cranial nerve in the body. It contains sensory, motor, and parasympathetic fibers, exiting the skull via the jugular foramen.

Synonyms: Cranial Nerve X

Vagus Nerve Stimulation

A neuromodulation treatment involving electrical stimulation of the left vagus nerve via an implanted device. It is FDA-approved for treatment-resistant depression and epilepsy. It requires surgical implantation and delivers intermittent stimulation. Improvement may take months to develop.

Synonyms:

Valgus/Varus Stress Test

Examination of a joint by applying inward or outward force to assess a collateral ligament. At the knee, valgus stress tests the medial collateral ligament and varus stress tests the lateral collateral ligament.

Synonyms:

Valinemia

A rare inherited disorder of branched-chain amino-acid metabolism causing elevated plasma valine.

It may present with developmental delay, feeding difficulty, hypotonia, or neurological symptoms, although some individuals are minimally affected.

Synonyms:

Valley Fever

The common name for coccidioidomycosis, a fungal infection caused by *Coccidioides* species and acquired by inhaling airborne spores from soil. It usually causes a mild respiratory illness but can disseminate to skin, bone, joints, or meninges, especially in people at higher risk.

Synonyms:

Valproate (Sodium Valproate)

Valproate is a broad-spectrum antiseizure medicine used for several generalized and focal seizure disorders and for selected mood disorders. Choice requires consideration of age, pregnancy potential, liver disease, interactions, and other safety risks.

Synonyms: Sodium Valproate

Valsalva's Manoeuvre

Forced expiratory effort against a closed airway (glottis closed or mouth and nose pinched shut), typically performed by bearing down as if straining during a bowel movement. The manoeuvre has four phases: Phase I (onset of straining): increased intrathoracic pressure compresses the aorta, causing a transient rise in blood pressure.

Synonyms:

Valvular Heart Disease

Valvular heart disease involves dysfunction of one or more heart valves, leading to stenosis, regurgitation, or a combination of both. The most common causes are degenerative calcification of aortic and mitral valves, rheumatic heart disease, infective endocarditis, and ischemic papillary muscle dysfunction.

Synonyms:

Vancomycin-resistant Enterococcus

Enterococcus bacteria that are resistant to vancomycin, usually because of altered cell-wall precursors. VRE can cause healthcare-associated urinary,

bloodstream, wound, or other infections and may require susceptibility-guided treatment.

Synonyms:

Variable Decelerations

Abrupt decreases in fetal heart rate that vary in timing, shape, and duration, commonly caused by umbilical-cord compression. Their significance depends on frequency, duration, associated baseline changes, variability, and the clinical setting.

Synonyms:

Variceal Hemorrhage

Life-threatening complication of portal hypertension involving rupture of dilated esophageal or gastric varices. The risk is determined by variceal size, red color signs, liver disease severity, and portal hypertension degree.

Synonyms:

Varicella

A primary infection with varicella-zoster virus that causes fever and a generalized itchy rash. See Chickenpox.

Synonyms:

Varicella Vaccine

A live attenuated vaccine that prevents or reduces the severity of chickenpox. The number and timing of doses depend on age, vaccination history, immune status, pregnancy, and local recommendations. It is generally avoided during pregnancy and in people with certain immune deficiencies.

Synonyms:

Varicella-zoster virus

A herpesvirus that causes chickenpox (varicella) and shingles (herpes zoster). VZV establishes latent infections in dorsal root ganglia and can reactivate decades later. Chickenpox is highly contagious and typically occurs in childhood. Reactivation as shingles causes painful dermatomal vesicular rash.

Synonyms:

Varicocele

A varicocele is enlargement of veins in the scrotum, often on the left, that may cause aching, testicular growth differences, infertility, or no symptoms. cord, resulting from incompetent or absent venous valves.

Synonyms:

Varicose Ulcer

Impaired venous return from the lower extremities due to venous valve incompetence or obstruction. See chronic venous insufficiency.

Synonyms:

Varicose Veins

Dilated, tortuous superficial veins, most commonly in the lower extremities. Caused by venous valve incompetence leading to venous reflux. Risk factors: family history, prolonged standing, obesity, pregnancy, and older age. Symptoms: leg heaviness, swelling, aching. Complications: skin changes, ulceration, thrombophlebitis.

Synonyms:

Variegate Porphyria

An inherited hepatic porphyria caused by reduced protoporphyrinogen oxidase activity. It can cause acute neurovisceral attacks with abdominal pain and neuropathy and/or photosensitive blistering skin disease.

Synonyms:

Variola

A highly contagious and deadly disease caused by variola virus, eradicated globally by 1980 through vaccination. See Smallpox.

Synonyms:

Vas Deferens

Muscular duct (approximately 45 cm long) transporting sperm from the epididymal tail to the ejaculatory duct. It ascends through the spermatic cord, passes through the inguinal canal, enters the pelvis, crosses over the ureter, and joins the seminal vesicle duct to form the ejaculatory duct (in the prostate).

Synonyms:

Vasa Previa

Fetal blood vessels traverse the membranes over or near the internal cervical os without protection from placental tissue or the umbilical cord. Rupture of membranes can cause rapid fetal exsanguination, so antenatal diagnosis and planned cesarean delivery are important.

Synonyms:

Vascular Access

A route into the bloodstream for treatment or monitoring. Hemodialysis access may be an arteriovenous fistula, arteriovenous graft, or central venous catheter; the choice depends on vascular anatomy, urgency, expected duration, and individual risks.

Synonyms:

Vascular Access for Hemodialysis

A surgically created or catheter-based route that permits high-flow blood removal and return during hemodialysis. Arteriovenous fistulae are generally preferred when feasible, followed by grafts; central venous catheters have higher infection and thrombosis risks.

Synonyms:

Vascular Dementia

Cognitive impairment caused by cerebrovascular disease, such as strokes or chronic small-vessel injury. Symptoms may develop suddenly or gradually and can include problems with attention, executive function, memory, or walking. Management addresses the underlying vascular risks and functional needs.

Synonyms:

Vascular Diagnostic Yield

The proportion of vascular diagnostic procedures or tests that provide a clinically useful result.

Synonyms:

Vascular Graft

Synthetic or biologic conduit for vascular reconstruction. PTFE, Dacron, saphenous vein.

Synonyms:

Vascular Graft Patency

Continued openness and functional blood flow through a vascular graft or bypass. Patency is monitored clinically and with duplex or other imaging because thrombosis, stenosis, infection, intimal hyperplasia, and anastomotic problems can cause failure.

Synonyms:

Vascular Imaging

Techniques for visualizing blood vessels: duplex ultrasound, CT angiography, MR angiography, conventional angiography.

Synonyms:

Vascular Malformation

Abnormal blood vessel development. Arteriovenous malformation, venous malformation, lymphatic malformation.

Synonyms:

Vascular Ring

A congenital abnormality of the aortic arch or its branches that encircles and may compress the trachea, esophagus, or both. Symptoms include stridor, wheezing, recurrent respiratory infection, dysphagia, feeding difficulty, or respiratory distress.

Synonyms:

Vascular Trauma

Injury to an artery or vein from blunt, penetrating, iatrogenic, or crush mechanisms. Assessment prioritizes hemorrhage control, distal perfusion, ischemia, expanding hematoma, bruit, thrill, and associated nerve or bone injury.

Synonyms:

Vascularity

The amount and distribution of blood vessels supplying a tissue or lesion.

Synonyms:

Vasculitis

Inflammation of blood vessels causing tissue ischemia and necrosis. Classification by vessel size.

Large vessel: giant cell arteritis, Takayasu arteritis. Medium vessel: polyarteritis nodosa (PAN), Kawasaki disease.

Synonyms:

Vasculitis (Systemic)

Inflammation of blood vessels that may involve large, medium, or small vessels and impair blood flow or cause tissue injury. Examples include ANCA-associated vasculitis and IgA vasculitis.

Synonyms: Systemic

Vasectomy

Vasectomy examines vasectomy; interpretation depends on the specimen or body region, test method, reference range, and clinical question. interruption, occlusion, or excision of a segment of both vasa deferentia, preventing spermatozoa from entering the ejaculate. Performed under local anesthesia using traditional incisional or no-scalpel vasectomy (NSV) techniques.

Synonyms:

Vasoconstriction

Vasoconstriction examines vasoconstriction; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Vasodilation

The widening of blood vessels during inflammation, resulting in increased blood flow to the affected area. This process is mediated primarily by histamine released from mast cell granules acting on H1 receptors, nitric oxide produced by endothelial nitric oxide synthase, and prostaglandins particularly PGE2.

Synonyms:

Vasomotor Rhinitis

Nonallergic inflammation of the nasal lining causing congestion, runny nose, or sneezing, often triggered by odors, temperature changes, or irritants.

Synonyms:

Vasopressin (Antidiuretic Hormone, ADH)

A hormone that increases water reabsorption in the kidney and can constrict blood vessels. It is released from the posterior pituitary.

Synonyms: Antidiuretic Hormone, ADH

Vasopressors in Anesthesia

Medicines that increase vascular tone or cardiac output to support blood pressure during anesthesia or critical illness. The choice and dose depend on the cause of hypotension, heart rate, cardiac function, and local protocol; monitoring is required.

Synonyms:

Vasovagal Syncope

Reflex syncope mediated by increased vagal tone and withdrawal of sympathetic activity, causing bradycardia and/or vasodilation resulting in transient cerebral hypoperfusion. Triggers: prolonged standing, heat, pain, emotional stress. Preceded by prodrome (lightheadedness, nausea, diaphoresis, visual tunneling).

Synonyms:

Vaughan Williams Classification

The Vaughan Williams classification categorizes antiarrhythmic drugs into four classes based on their primary mechanism of action.

Synonyms:

VEAL CHOP Mnemonic

A memory aid for interpreting fetal heart rate patterns. VEAL: Variable decelerations Cord compression, Early decelerations Head compression, Accelerations OK (fetal well-being), Late decelerations Placental insufficiency.

Synonyms:

Vector

A living carrier, commonly an arthropod, that transmits an infectious agent between hosts. Biological vectors support replication or development of the agent; mechanical vectors transfer it without such biologic change.

Synonyms:

Vector Control

Reduction of vector populations. Examples: insecticides, larvicides, environmental modification, personal protection.

Synonyms:

Vector-Borne Disease

Disease transmitted by vector (insect, tick). Examples: malaria, dengue, Lyme disease.

Synonyms:

Vector-borne diseases

Diseases transmitted by arthropod vectors including mosquitoes, ticks, fleas, and sandflies. Major vector-borne diseases include malaria, dengue, Zika, chikungunya, Lyme disease, and leishmaniasis. Prevention through vector control, personal protection, and chemoprophylaxis is essential.

Synonyms:

Vegan Diet

Excludes all animal products. Risk of deficiencies: vitamin B12, iron, calcium, vitamin D, omega-3, zinc, iodine. Requires planning or supplementation. Associated with lower BMI, reduced cardiovascular risk.

Synonyms:

Vegetarian Diet

Excludes meat, fish, poultry. Lacto-ovo includes dairy and eggs. Vegan excludes all animal products. Nutrient adequacy requires attention.

Synonyms:

Vegetation

A vegetation is a mass composed of platelets, fibrin, and microorganisms that forms on a heart valve or endocardial surface in the setting of infective endocarditis. The vegetation typically attaches to the valve leaflet on the low-pressure side and may progressively destroy the underlying valve tissue, causing valvular regurgitation.

Synonyms:

Vein

A blood vessel that carries deoxygenated blood toward the heart (except pulmonary veins, which carry oxygenated blood). Veins have thinner walls and larger lumens than arteries, with less smooth muscle and elastic tissue.

Synonyms:

Vein-graft aneurysms

Focal dilation of a venous bypass graft, most commonly a saphenous vein graft used in coronary artery bypass surgery. Rare but may cause graft thrombosis, distal embolization, compression of adjacent structures, or rupture. Diagnosis: coronary angiography or CT angiography. Treatment: re-intervention or medical management.

Synonyms:

Vena Cava

The two largest systemic veins returning deoxygenated blood to the right atrium. Superior Vena Cava (SVC): formed by brachiocephalic veins, drains head, neck, upper limbs, thorax (no valves). Inferior Vena Cava (IVC): formed by common iliac veins at L5, drains abdomen, pelvis, lower limbs (receives hepatic, renal, gonadal, lumbar veins).

Synonyms:

Venereal Diseases

Sexually transmitted infections are infections passed from one person to another through sexual contact, including vaginal, anal, and oral sex. See Sexually Transmitted Infections (STIs).

Synonyms:

Venesection (Phlebotomy)

The controlled removal of blood from a vein for therapeutic or diagnostic purposes.

Synonyms: Phlebotomy

Venipuncture

Venipuncture examines venipuncture; interpretation depends on the specimen or body region, test method, reference range, and clinical question. median cubital vein (most common), cephalic vein,

basilic vein, and dorsal hand veins.

Synonyms:

Venography

Imaging of veins, usually after contrast material is administered, to assess venous anatomy, obstruction, thrombosis, or malformation.

Synonyms:

Venom

A biological poison produced by a microorganism, plant, or animal that damages host tissues at low concentrations. See toxin.

Synonyms:

Venomous Bite

A bite that injects venom from an animal such as a snake, spider, or arthropod. Effects range from local pain and swelling to bleeding, paralysis, or systemic toxicity.

Synonyms:

Venous Insufficiency

Impaired venous return from the lower extremities due to venous valve incompetence or obstruction. See chronic venous insufficiency.

Synonyms:

Venous Stasis Ulcer

A chronic leg wound caused by venous hypertension and chronic venous insufficiency. It often occurs near the ankle and may be accompanied by edema, varicose veins, skin darkening, and lipodermatosclerosis.

Synonyms:

Venous Thromboembolism in Pregnancy

Pregnancy increases the risk of VTE (DVT and PE) by 5-10 fold due to a hypercoagulable state (increased fibrinogen, factors VII-XII, vWF, decreased protein S, and venous stasis from the gravid uterus).

Synonyms:

Venous Thromboembolism Prophylaxis

Measures used to reduce perioperative deep-vein thrombosis and pulmonary embolism, including early mobilization, mechanical compression, and pharmacologic anticoagulation when bleeding risk permits.

Synonyms:

Venous Thrombosis

The formation of a blood clot (thrombus) within a vein, most commonly in the deep veins of the lower extremities (deep vein thrombosis, DVT).

Synonyms:

Venous Ulcer

A chronic wound caused by impaired venous drainage, usually occurring near the ankle in a limb with chronic venous insufficiency.

Synonyms:

Ventilation-Perfusion Scan

Lung imaging assessing ventilation and perfusion. Mismatch indicates pulmonary embolism. Alternative to CTPA in renal impairment or contrast allergy.

Synonyms:

Ventilation-Perfusion Mismatch

Unequal matching of air reaching the alveoli and blood reaching the pulmonary capillaries. Low or high regional ratios can impair oxygen exchange and occur in conditions such as COPD, pneumonia, or pulmonary embolism.

Synonyms:

Ventilation-Perfusion Ratio

The relationship between alveolar ventilation and pulmonary capillary perfusion. Regional mismatch is a major cause of impaired oxygenation; low V/Q produces venous admixture, while high V/Q reflects wasted ventilation.

Synonyms:

Ventilation/Perfusion Scan

Pulmonary embolism diagnosis. Ventilation: in-

haled Tc-99m DTPA aerosol. Perfusion: injected Tc-99m MAA. Mismatch (perfusion defect with preserved ventilation) suggests PE. High single-photon emission computed tomography (SPECT) sensitivity.

Synonyms:

Ventilator

Mechanical device providing ventilatory support. Modes: assist-control, SIMV, CPAP, PRVC. Parameters: tidal volume, respiratory rate, FiO₂, PEEP.

Synonyms:

Ventilator-Associated Pneumonia

Pneumonia developing after at least 48 hours of mechanical ventilation. Diagnosis is based on clinical findings and respiratory evaluation; cultures may help identify the organism but are not interpreted in isolation.

Synonyms:

Ventilator-Induced Lung Injury

Lung injury caused or amplified by mechanical ventilation, including volutrauma, barotrauma, atelectrauma, and biotrauma. Lung-protective ventilation limits tidal volume and excessive airway pressures while maintaining appropriate oxygenation and carbon-dioxide targets.

Synonyms:

Ventral

Relating to the belly or front side of the body; synonym for anterior in human anatomy.

Synonyms:

Ventricle

One of the two lower, thicker-walled chambers of the heart that pump blood out of the heart. The right ventricle pumps deoxygenated blood into the pulmonary artery (low-pressure system); the left ventricle pumps oxygenated blood into the aorta (high-pressure system, generating systemic blood pressure).

Synonyms:

Ventricle (Brain)

The interconnected system of fluid-filled cavities within the brain producing and containing cerebrospinal fluid: two lateral ventricles (cerebrum), third ventricle (diencephalon), and fourth ventricle (pons/medulla, continuous with the central canal).

Synonyms: Brain

Ventricular Arrhythmia

An abnormal heart rhythm arising from the ventricles. It may cause palpitations, dizziness, fainting, chest discomfort, or sudden cardiac arrest; fainting or severe symptoms require emergency care.

Synonyms:

Ventricular Assist Device

A mechanical pump supporting circulation in advanced heart failure. Types include left-, right-, and biventricular devices. Uses may include temporary support, a bridge to transplantation, or long-term therapy; complications include bleeding, infection, stroke, and pump thrombosis.

Synonyms:

Ventricular Fibrillation

Chaotic electrical activity in ventricles, causing no cardiac output. Immediate defibrillation is treatment. Causes: coronary artery disease, cardiomyopathy, electrolyte disturbances, drug toxicity. Post-resuscitation care: targeted temperature management, coronary angiography, ICU admission.

Synonyms:

Ventricular Septal Defect

An opening in the wall between the ventricles that can allow blood to flow from the left ventricle to the right. The effects depend on the size and location of the defect and may range from no symptoms to heart failure or pulmonary vascular disease.

Synonyms:

Ventricular Tachycardia

A wide-complex tachycardia (QRS >0.12 s) originating from the ventricles, with a rate of 100-250 bpm. Monomorphic VT has uniform QRS com-

plexes; polymorphic VT has varying QRS morphology. VT is life-threatening and may degenerate to ventricular fibrillation.

Synonyms:

Ventriculoatrial

Relating to or connecting a ventricle of the brain or heart with an atrium; often describing a cerebrospinal-fluid shunt to the right atrium.

Synonyms:

Ventriculography

Imaging ventricular function. Radionuclide ventriculography (MUGA scan) accurately measures ejection fraction. Cardiac MRI also accurate.

Synonyms:

Ventriculoperitoneal Shunt

A surgically implanted system that drains cerebrospinal fluid from a brain ventricle into the abdominal cavity, where the fluid can be absorbed.

Synonyms:

Venturi Mask

Precise FiO₂ delivery. Color-coded adapters.

Synonyms:

Venule

A small vessel that drains blood from capillary beds into veins. Postcapillary venules are important sites for leukocyte migration and inflammatory fluid exchange.

Synonyms:

Vernal conjunctivitis

Vernal conjunctivitis examines vernal conjunctivitis; interpretation depends on the specimen or body region, test method, reference range, and clinical question. typically occurring in spring and summer. It presents with intense ocular itching, tearing, photophobia, and mucous discharge. Palpable cobblestone papillae on the upper tarsal conjunctiva are characteristic. It is associated with atopy and elevated IgE.

Synonyms:

Vernal keratoconjunctivitis

A recurrent allergic inflammation of the conjunctiva and cornea, usually affecting children or adolescents and causing itching, redness, and light sensitivity.

Synonyms:

Verruca (Wart)

Benign epidermal hyperplasia caused by human papillomavirus (HPV). Common warts (verruca vulgaris): rough papules on hands/fingers. Plantar warts: painful lesions on soles, grow inward due to pressure. Flat warts (verruca plana): smooth, flat-topped papules on face, hands, legs. Filiform warts: finger-like projections, often on face.

Synonyms: Wart

Verruciform Xanthoma

A rare benign lesion characterized by a verrucous epithelial surface with lipid-laden macrophages in the underlying connective tissue. It most often occurs in oral or genital mucosa and may resemble a wart or malignant lesion clinically.

Synonyms:

Verrucous carcinoma

A low-grade, well-differentiated variant of squamous cell carcinoma with a warty, exophytic appearance. It is locally invasive but rarely metastasizes, commonly affecting the oral cavity, skin, or genitalia.

Synonyms:

Vertebra

The individual bone of the vertebral column (33 vertebrae: 7 cervical, 12 thoracic, 5 lumbar, 5 sacral fused, 4 coccygeal). Parts: vertebral body, vertebral arch (pedicles, laminae), spinous and transverse processes, articular processes/facets, and vertebral foramen (spinal canal).

Synonyms:

Vertebral Canal

The bony canal formed by the vertebrae that encloses and protects the spinal cord.

Synonyms:

Vertebral Column

33 vertebrae: 7 cervical, 12 thoracic, 5 lumbar, 5 fused sacral, 4 fused coccygeal. Protects the spinal cord, supports the head/trunk, provides muscle/rib attachment. Each typical vertebra has a body, vertebral arch, and 7 processes. Intervertebral discs (nucleus pulposus/annulus fibrosus) provide cushioning.

Synonyms:

Vertebrobasilar Insufficiency

A condition of reduced blood flow through the vertebral arteries or basilar artery to the posterior circulation of the brain, including the brainstem, cerebellum, occipital lobes, and thalami.

Synonyms:

Vertebroplasty

Vertebroplasty is a treatment or care intervention for vertebroplasty; indication, preparation, risks, technical details, and recovery depend on the patient and goal. stabilization.

Synonyms:

Vertical Talus

A congenital rigid flatfoot deformity in which the talus is positioned vertically and the midfoot is dorsiflexed. It may be isolated or associated with neuromuscular or genetic syndromes and usually requires early orthopedic assessment and treatment.

Synonyms:

Vertigo

A false sensation of rotational or linear movement of the self or the environment, and it is a symptom rather than a disease, requiring differentiation from dizziness, disequilibrium, and presyncope.

Synonyms:

Vesical

Relating to bladder. Vesical carcinoma, vesical diverticulum, vesical neck.

Synonyms:

Vesicovaginal Fistula

An abnormal connection between the bladder and vagina that causes continuous or frequent leakage of urine through the vagina. It may follow childbirth injury, pelvic surgery, radiation, or advanced infection and usually requires specialist repair.

Synonyms:

Vesicle

A small (<1 cm) fluid-filled blister within the epidermis, containing clear fluid (serum) or, if infected, pus. Causes: viral (herpes simplex, herpes zoster, varicella, hand-foot-mouth disease), dermatitis (contact, dyshidrotic eczema), autoimmune (pemphigus, bullous pemphigoid early), and friction burns.

Synonyms:

Vesicoureteral Reflux

Retrograde flow of urine from the bladder into the ureters and potentially the kidneys, most commonly due to incompetent ureterovesical valve. Predisposes to pyelonephritis and renal scarring. More common in children, presenting with recurrent febrile UTIs. Diagnosis: voiding cystourethrogram (VCUG). Grading I-V.

Synonyms:

Vestibular Migraine

Episodic vestibular symptoms associated with migraine biology, with or without simultaneous headache. Episodes may include vertigo, motion sensitivity, visual aura, or sound sensitivity; diagnosis is clinical after exclusion of other vestibular and neurologic causes.

Synonyms:

Vestibular Neuritis

Acute vestibular dysfunction due to inflammation of the vestibular nerve, typically viral in origin. Presents with acute onset of vertigo, nausea, vomiting, and nystagmus lasting days. Hearing is normal (unlike labyrinthitis). Diagnosis: clinical, HINTS exam (Head Impulse, Nystagmus, Test of Skew) to differentiate from central causes.

Synonyms:

Vestibular papillomatosis

A normal anatomical variant of the female vulva characterised by multiple, soft, finger-like or filiform papules on the labia minora and vestibule, often mistaken for genital warts (condylomata acuminata).

Synonyms:

Vestibular Rehabilitation

Exercise-based therapy that improves balance, gaze stability, and adaptation in people with vestibular disorders or dizziness.

Synonyms:

Vestibular Schwannoma

A benign, slow-growing tumor of the vestibular portion of the eighth cranial nerve. See Acoustic Neuroma.

Synonyms:

Vestibule

Central bony labyrinth between cochlea and semi-circular canals, containing utricle (horizontal linear acceleration and head tilt detection) and saccule (vertical linear acceleration detection). Each has a macula with hair cells covered by gelatinous membrane embedded with otoconia (calcium carbonate crystals).

Synonyms:

VEXAS Syndrome

VEXAS (Vacuoles, E1 ubiquitin-activating enzyme, X-linked, Autoinflammatory, Somatic) syndrome is an adult-onset autoinflammatory disorder caused by somatic UBA1 mutations in hematopoietic stem cells, affecting men >50.

Synonyms:

Viagra (Sildenafil)

Sildenafil is a phosphodiesterase type 5 (PDE5) inhibitor used primarily for erectile dysfunction (ED) and pulmonary arterial hypertension (PAH, as Revatio).

Synonyms: Sildenafil

Vibrio cholerae

A gram-negative, curved rod that causes cholera, a severe diarrhoeal illness. The organism produces cholera toxin, which causes profuse watery diarrhea (rice-water stools). Transmission occurs through contaminated water and food. The infectious dose varies depending on stomach acidity.

Synonyms:

Vibrio vulnificus infections

Infections caused by *Vibrio vulnificus*, a gram-negative bacterium found in warm seawater and raw seafood. It can cause wound infection, bloodstream infection, or gastroenteritis, with particularly severe disease in people with chronic liver disease or other risk factors.

Synonyms:

Video Laryngoscope

An airway device with a camera near the blade tip that displays the laryngeal view on a monitor. It may improve visualization during tracheal intubation, particularly when direct laryngoscopy is difficult, but does not eliminate aspiration or airway-trauma risk.

Synonyms:

Video Laryngoscopy

Video laryngoscopy uses a camera-equipped blade to display an indirect view of the glottis on a screen.

Synonyms:

Videofluoroscopic Swallow Study

Real-time X-ray imaging of swallowing. Detailed assessment of oropharyngeal phase.

Synonyms:

Videostroboscopy

A diagnostic technique that uses synchronized stroboscopic light to create a slow-motion view of vocal-fold vibration. It assesses the mucosal wave, amplitude, symmetry, and glottic closure.

Synonyms:

Villous atrophy

Flattening and loss of the normal small-intestinal villi, reducing absorptive surface area and occurring in conditions such as coeliac disease.

Synonyms:

VIPoma

VIPoma concerns vipoma; its medical significance is established from the defining features, setting, associated findings, and clinical question. causing WDHA syndrome: watery diarrhea (large volume, 3-5 L/day), hypokalemia, and achlorhydria/acidosis. Most are malignant and located in the pancreatic tail. Diagnosis: elevated VIP levels, pancreatic tumor on imaging.

Synonyms:

Viral assembly

The process of packaging newly synthesised viral genomes and proteins into complete virions. Assembly typically occurs in the nucleus or cytoplasm, depending on the virus type. The process involves self-assembly of capsid proteins around the viral genome.

Synonyms:

Viral attachment

The initial step in viral infection where viral surface proteins bind to specific receptors on host cells. Attachment determines viral tropism and host range. The viral attachment protein is called the ligand, and the host cell receptor is typically a protein or glycan.

Synonyms:

Viral Conjunctivitis

The most common form of infectious conjunctivitis, caused predominantly by adenoviruses (serotypes 3, 4, 7, 8, 19, and 37), and it is highly contagious, spreading through direct contact with infected ocular secretions or contaminated surfaces.

Synonyms:

Viral culture

Growth of a virus in susceptible cell cultures to

identify an infectious agent. It can be useful for selected viruses, but molecular and antigen-based tests are often faster or more sensitive; the appropriate method depends on the suspected infection and specimen.

Synonyms:

Viral cytopathic effects

Observable changes in host cells caused by viral infection. CPE include cell rounding, detachment, syncytia formation (fusion of infected cells), inclusion bodies, and cell lysis. CPE are used in viral diagnosis and can be observed by light microscopy.

Synonyms:

Viral entry

The process by which viruses cross the host cell membrane to deliver their genome into the cytoplasm. Entry occurs through membrane fusion (enveloped viruses) or endocytosis (enveloped and non-enveloped viruses). For membrane fusion, viral fusion proteins mediate merger of the viral envelope with the host cell membrane.

Synonyms:

Viral gastroenteritis

Inflammation of the stomach or intestines caused by a virus. Common symptoms include watery diarrhea, vomiting, abdominal cramps, and fever. Diagnosis is usually clinical; stool testing is reserved for selected situations. Treatment focuses on fluid replacement and symptom control.

Synonyms:

Viral hepatitis

Inflammation of the liver caused by viral infections. The major hepatitis viruses include A, B, C, D, and E. Hepatitis A and E are transmitted through the fecal-oral route and cause acute, self-limited infections.

Synonyms:

Viral immune evasion

Mechanisms by which viruses evade host immune responses. Strategies include antigenic variation,

inhibition of interferon signalling, downregulation of MHC molecules, and encoding viral homologues of cytokines. Understanding viral immune evasion is essential for developing effective vaccines and antiviral therapies.

Synonyms:

Viral Infections

Illnesses caused by viruses, which are intracellular pathogens that hijack host cellular machinery to replicate. They range from self-limited conditions such as the common cold and gastroenteritis to serious diseases including influenza, hepatitis, HIV, and COVID-19.

Synonyms:

Viral latency

A state in which viral genomes persist in host cells without producing infectious particles. Latent viruses can reactivate under certain conditions including immunosuppression. Herpesviruses establish latent infections in specific cell types (HSV in neurons, EBV in B cells, CMV in myeloid cells).

Synonyms:

Viral latency mechanisms

The strategies by which viruses establish and maintain latent infections. Herpesviruses maintain their genomes as episomes in the nucleus. HIV integrates into the host genome as a provirus. Latent viruses express minimal proteins to avoid immune detection. Reactivation can be triggered by immunosuppression, stress, or other stimuli.

Synonyms:

Viral Load (HIV RNA)

The amount of HIV RNA in plasma, measured by a laboratory assay. It is used to assess viral replication and response to antiretroviral therapy. An undetectable result indicates that the amount is below the assay's reporting limit; testing intervals and treatment decisions follow current clinical guidance.

Synonyms: HIV RNA

Viral Meningitis

Inflammation of the meninges caused by viruses, usually Enteroviruses. Presents similarly to bacterial meningitis but generally less severe. CSF shows lymphocytic pleocytosis, normal glucose, and mildly elevated protein. Self-limited in most cases; supportive treatment.

Synonyms:

Viral pathogenesis

The mechanisms by which viruses cause disease. Pathogenesis involves attachment, entry, replication, and spread within the host. Viral damage can be direct (cytopathic effects) or indirect (immune-mediated). Direct effects include cell death, altered cell function, and cell transformation.

Synonyms:

Viral pneumonia

Viral pneumonia is infection and inflammation of lung tissue caused by respiratory viruses, producing cough, fever, breathlessness, hypoxemia, and variable severity. or low oxygen in more severe cases.

Synonyms:

Viral release

The process by which newly assembled virions exit the host cell to infect other cells. Release occurs through budding (enveloped viruses) or cell lysis (non-enveloped viruses). Budding allows the virus to acquire an envelope from host cell membranes without killing the cell.

Synonyms:

Viral replication

The process of synthesising new viral genomes and proteins within host cells. The mechanism varies by virus type. DNA viruses typically replicate in the nucleus using host cell DNA polymerases (except poxviruses). RNA viruses typically replicate in the cytoplasm using viral RNA-dependent RNA polymerase.

Synonyms:

Viral replication cycle

The series of steps by which viruses reproduce within host cells.

Synonyms:

Viral structure

The basic components of viral particles (virions). Viruses consist of a nucleic acid genome (DNA or RNA) surrounded by a protein coat called a capsid. Some viruses have an outer lipid envelope derived from host cell membranes. The capsid is composed of structural units called capsomeres.

Synonyms:

Viral uncoating

The process by which the viral capsid is disassembled to release the viral genome into the host cell cytoplasm. Uncoating occurs after entry and before replication. The mechanism varies by virus type and can involve pH-dependent conformational changes, proteolytic cleavage, or disassembly of capsid proteins.

Synonyms:

Virchow's Triad

Virchow's triad describes three broad categories of factors that contribute to thrombosis: endothelial injury or dysfunction, stasis or turbulent blood flow, and hypercoagulability. Endothelial injury exposes subendothelial collagen and tissue factor, initiating platelet adhesion and the coagulation cascade.

Synonyms:

Viremia

The presence of virus in the bloodstream. Viremia may be transient or persistent and can enable dissemination to target organs; it may be detected by culture, antigen testing, or nucleic-acid amplification.

Synonyms:

Virilisation

The development of male secondary sexual characteristics in females, resulting from excessive androgen production or exposure.

Synonyms:

Virilism Foetal

Prenatal or neonatal masculinization of a genetically female fetus or infant due to excess androgen exposure. Causes include congenital adrenal hyperplasia, maternal androgen-producing disease, or placental and fetal steroidogenic disorders.

Synonyms:

Virology

The branch of microbiology concerned with viruses: structure, classification (DNA/RNA, enveloped/nonenveloped, Baltimore scheme), replication, pathogenesis, epidemiology, diagnosis, treatment, and prevention. Diagnostic methods: cell culture, antigen detection, nucleic acid amplification (PCR), and serology (IgM/IgG).

Synonyms:

Virtual Reality

Immersive technology for rehabilitation. Engaging, motivates exercise. Used for balance, coordination, cognitive training.

Synonyms:

Virulence

The relative capacity of a microorganism to cause disease or tissue injury in a host. It depends on microbial factors such as toxins, adhesins, invasiveness, and immune evasion, together with host susceptibility.

Synonyms:

Virulence Factor

A microbial product or characteristic that helps an organism colonize, evade host defenses, injure tissue, or otherwise cause disease. Examples include adhesins, toxins, capsules, enzymes, and mechanisms that alter immune recognition.

Synonyms:

Viscera

The internal organs of the body, particularly those within the thoracic and abdominal cavities. The

thoracic viscera include the heart, lungs, esophagus, trachea, and thymus.

Synonyms:

Vision

The sensory ability to perceive light and interpret visual information processed by the eyes and brain, enabling recognition of shapes, colors, depth, and motion. Normal vision depends on the proper function of the cornea, lens, retina, and optic nerve, as well as intact neural pathways to the visual cortex.

Synonyms:

Vision and Hearing

The two primary sensory modalities through which humans perceive and interact with their environment. Age-related declines in both senses are common, with presbyopia and cataracts affecting vision and presbycusis affecting hearing, often beginning as early as the fourth decade of life.

Synonyms:

Vision Impairment

Reduced visual acuity or visual-field function that affects daily activities. Causes include refractive error, cataract, glaucoma, retinal disease, optic-nerve injury, and neurologic disease. Evaluation and treatment depend on the cause; rehabilitation and visual aids may improve function.

Synonyms:

Vision Loss

A decrease in the ability to see that cannot be fully corrected with eyeglasses, contact lenses, or medical treatment. It ranges from partial impairment to complete blindness and can result from conditions such as macular degeneration, glaucoma, diabetic retinopathy, cataracts, and traumatic injury.

Synonyms:

Vision Problems

Changes in visual acuity, field, color, or clarity caused by refractive error, eye disease, neurologic disease, or systemic illness. Sudden vision loss is an emergency.

Synonyms:

Vision Screening

Screening for visual problems in children: newborn—red reflex examination (cataract, retinoblastoma); 3-5 years—visual acuity, strabismus screening (cover test, photostereopsis), and amblyopia risk factors.

Synonyms:

Visual Acuity

The resolving power of the eye, defined as the ability to distinguish two points as distinct, and the most common clinical measure of visual function.

Synonyms:

Visual Agnosia

Inability to recognize or identify visually presented objects, faces, or symbols despite adequate vision and attention. It results from dysfunction of higher-order visual association cortex and may follow stroke, trauma, neurodegenerative disease, or other brain injury.

Synonyms:

Visual Field Defect

Loss or alteration of a portion of the normally perceived visual field caused by dysfunction of the retina, optic nerve, chiasm, optic tract, radiations, or visual cortex. The pattern can help localize the lesion.

Synonyms:

Visual Field Perimetry

A systematic method of measuring the sensitivity of the retina across the entire visual field using standardized light stimuli, providing a quantitative map of visual function that can detect, characterize, and monitor visual field loss caused by diseases of the retina, optic nerve, and visual pathways.

Synonyms:

Visual Impairment

Reduced vision that cannot be fully corrected by ordinary glasses or contact lenses. Causes include

refractive error, cataract, glaucoma, retinal disease, optic-nerve injury, and neurologic disease; new or sudden loss of vision requires urgent assessment.

Synonyms:

Vital Signs

Basic measurements of physiologic status, commonly including temperature, pulse, respiratory rate, blood pressure, and oxygen saturation. Values vary with age, activity, illness, and measurement conditions; trends and clinical context are important.

Synonyms:

Vital Tooth Bleaching

Whitening of natural teeth with peroxide gel. In-office or take-home trays. Effect temporary.

Synonyms:

Vitamin A deficiency

A nutritional disorder resulting from inadequate intake or absorption of retinol, causing xerophthalmia, night blindness, follicular hyperkeratosis, and impaired immunity. Severe deficiency leads to corneal ulceration and blindness, and is a leading cause of preventable childhood blindness worldwide.

Synonyms:

Vitamin A: Retinal

Vitamin A (retinol) is a fat-soluble vitamin essential for vision, immune function, cell differentiation, and reproduction. In the eye, retinol is oxidized to retinal (retinaldehyde), which binds to opsin in the photoreceptor outer segments forming rhodopsin (in rods) and photopsins (in cones).

Synonyms:

Vitamin B Complex

A group of eight water-soluble vitamins that support energy metabolism, blood-cell production, nervous-system function, and other biochemical processes. The group includes vitamins B1 through B7 and B9, as well as vitamin B12.

Synonyms:

Vitamin B1 (Thiamine)

Water-soluble vitamin, coenzyme in carbohydrate metabolism. Deficiency: beriberi (wet, dry), Wernicke-Korsakoff. Risk: alcoholism, bariatric surgery, dialysis. Treatment: supplementation.

Synonyms: Thiamine

Vitamin B12 (Cobalamin)

Required for nerve function, red blood cell formation, DNA synthesis. Deficiency: megaloblastic anemia, neurological damage. Risk: vegans, elderly, pernicious anemia, metformin use, bariatric surgery. Requires intrinsic factor for absorption.

Synonyms: Cobalamin

Vitamin B12 Deficiency

Megaloblastic anemia, neurological symptoms. Pernicious anemia, vegan diet. Treated with B12 supplementation.

Synonyms:

Vitamin B12 Deficiency in Older Adults

Deficiency caused by inadequate intake, malabsorption, autoimmune intrinsic-factor deficiency, gastric surgery, or medications. It may cause megaloblastic anemia, neuropathy, cognitive changes, gait impairment, and glossitis; neurologic injury can occur without anemia.

Synonyms:

Vitamin B12: Cobalamin

A water-soluble vitamin needed for red-blood-cell formation, DNA synthesis, and normal nerve function. Deficiency can cause megaloblastic anemia and neurologic abnormalities.

Synonyms:

Vitamin B1: Thiamine

A water-soluble vitamin that acts as a cofactor in carbohydrate and amino-acid metabolism and supports nerve function. Severe deficiency can cause beriberi or Wernicke-Korsakoff syndrome.

Synonyms:

Vitamin B2 (Riboflavin)

Precursor for FAD and FMN. Deficiency: cheilosis, glossitis, seborrheic dermatitis. Common with B-complex deficiency.

Synonyms: Riboflavin

Vitamin B3 (Niacin)

Precursor for NAD⁺ and NADP⁺. Deficiency: pellagra (diarrhea, dermatitis, dementia). Sources: meat, fish, poultry, grains.

Synonyms: Niacin

Vitamin B3: Niacin

A water-soluble vitamin that forms the coenzymes NAD and NADP, which participate in many oxidation-reduction and energy-producing reactions. Severe deficiency causes pellagra.

Synonyms:

Vitamin B5 (Pantothenic Acid)

Component of coenzyme A. Deficiency rare. Involved in fatty acid metabolism.

Synonyms: Pantothenic Acid

Vitamin B6 (Pyridoxine)

Coenzyme in amino acid metabolism. Deficiency: seizures, anemia, dermatitis. Risk: isoniazid therapy, alcoholism.

Synonyms: Pyridoxine

Vitamin B6: Pyridoxine

Pyridoxine (pyridoxal phosphate, PLP, the active form) is a water-soluble B vitamin essential as a cofactor for over 100 enzymatic reactions, particularly in amino acid metabolism.

Synonyms:

Vitamin B7 (Biotin)

Coenzyme for carboxylation reactions. Deficiency rare, may occur with raw egg consumption (avidin binds biotin).

Synonyms: Biotin

Vitamin B9 (Folate)

Essential for DNA synthesis, red blood cell formation. Deficiency: megaloblastic anemia, neural tube defects in pregnancy. Sources: leafy greens, legumes, fortified grains. Supplementation recommended before and during pregnancy.

Synonyms: Folate

Vitamin B9: Folate

Folate (folic acid, tetrahydrofolate/THF) is a water-soluble B vitamin essential for one-carbon transfer reactions in nucleotide synthesis (thymidylate synthesis for DNA, purine synthesis), amino acid metabolism (methionine synthesis from homocysteine), and methylation reactions.

Synonyms:

Vitamin C (Ascorbic Acid)

A water-soluble vitamin and a powerful antioxidant, essential for collagen synthesis (required for proline and lysine hydroxylation in collagen triple helix formation), carnitine synthesis, neurotransmitter synthesis (dopamine to norepinephrine), and iron absorption (reduces ferric to ferrous iron in the gut).

Synonyms: Ascorbic Acid

Vitamin D Deficiency

Inadequate vitamin-D status causing impaired calcium and phosphate homeostasis and, in severe cases, defective bone mineralization. It may result from low exposure or intake, malabsorption, liver or kidney disease, or altered metabolism.

Synonyms:

Vitamin D: Calcitriol

Vitamin D is a fat-soluble vitamin (actually a prohormone) essential for calcium and phosphorus homeostasis and bone health. Cholecalciferol (D3) is synthesized in the skin from 7-dehydrocholesterol by UVB radiation, or obtained from diet (ergocalciferol/D2 from plants, D3 from animal sources).

Synonyms:

Vitamin E: Tocopherol

Vitamin E (alpha-tocopherol) is a fat-soluble vita-

min and the body's primary lipid-soluble antioxidant, protecting polyunsaturated fatty acids in cell membranes from lipid peroxidation by free radicals (reactive oxygen species). It donates a hydrogen atom to lipid peroxyl radicals, breaking the chain reaction of lipid peroxidation.

Synonyms:

Vitamin K Deficiency

Coagulopathy, bleeding. Newborns receive prophylaxis. Antibiotics can cause deficiency.

Synonyms:

Vitamin K Prophylaxis

Administration of vitamin K to a newborn soon after birth to prevent vitamin K deficiency bleeding. Newborns have limited vitamin K stores, so the recommended route and dose are chosen according to local guidance and the infant's clinical circumstances.

Synonyms:

Vitamin K: Phylloquinone

Vitamin K is a fat-soluble vitamin essential for the post-translational gamma-carboxylation of glutamate residues to gamma-carboxyglutamate (Gla) in specific clotting factors (II, VII, IX, X, protein C, protein S) and anticoagulant proteins (protein C, protein S, protein Z).

Synonyms:

Vitamins

Vitamins is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. synthesized in sufficient quantities. Fat-soluble (A, D, E, K) absorbed with lipids, stored in liver/fat. Water-soluble (B complex, C) not stored, excess excreted.

Synonyms:

Vitiligo

Vitiligo is an autoimmune disorder causing loss of melanocytes and sharply demarcated depigmented

skin or hair, with variable extent and associated autoimmune disease. depigmented macules and patches caused by loss or dysfunction of epidermal melanocytes.

Synonyms:

Vitiligo and Pigmentation Disorders

Vitiligo is a chronic skin condition characterized by the loss of melanocytes, resulting in well-defined white patches on the skin and sometimes mucous membranes.

Synonyms:

Vitiligo Treatment

Management may include topical medicines, phototherapy, camouflage, or selected surgical procedures. Choice depends on the extent, location, activity, age, and effect on the person; treatment may restore or even out pigmentation but does not always stop progression.

Synonyms:

Vitrectomy

Surgical removal of the vitreous gel, typically via the pars plana approach, using a cutting probe under microscopic visualization. Indications include vitreous hemorrhage, complicated retinal detachment, macular holes, epiretinal membranes, intraocular foreign bodies, and endophthalmitis.

Synonyms:

Vitreous Body

The clear gel that fills the space between the lens and retina. It helps maintain the shape of the eye and transmits light to the retina.

Synonyms:

Vitreous Chemistry

Analysis of the fluid from the eye after death for substances such as electrolytes, glucose, urea, creatinine, and ethanol. It may support assessment of postmortem interval or metabolic disturbance but is not independently diagnostic of cause or time of death.

Synonyms:

Vitreous Hemorrhage

Bleeding into the vitreous cavity that causes sudden painless floaters, cobwebs, haze, or loss of vision. Common causes include proliferative diabetic retinopathy, retinal tear or detachment, trauma, and posterior vitreous separation.

Synonyms:

Vitreous Humor

The clear gel that fills the space between the lens and retina. It helps maintain the shape of the eye and transmits light to the retina.

Synonyms:

Vitriolage

The deliberate throwing or application of a corrosive chemical (vitriol—sulfuric acid, historically; now any strong acid/base) onto a person to disfigure, disable, or kill; a form of assault. Injuries: severe facial and body burns, scarring, blindness, respiratory injury from fumes, and psychological trauma.

Synonyms:

VLDL

Very low-density lipoprotein. Transports endogenous triglycerides.

Synonyms:

Vocal Cord Dysfunction

Episodic inappropriate narrowing or adduction of the vocal folds, often during inspiration, causing noisy breathing, throat tightness, or breathlessness. It can resemble asthma. Diagnosis is supported by laryngoscopy during symptoms, and treatment may include breathing or speech therapy and management of triggers.

Synonyms:

Vocal Cord Nodules

Benign, usually paired thickened areas of the vocal folds caused by repeated voice strain or overuse. They can cause hoarseness, vocal fatigue, and a rough or breathy voice.

Synonyms:

Vocal Cord Paralysis

Immobility of one or both vocal cords due to disruption of the recurrent laryngeal nerve (RLN). Unilateral vocal cord paralysis: hoarseness, breathy voice, aspiration, and ineffective cough.

Synonyms:

Vocal Cord Paresis

Partial paralysis or weakness of one or both vocal cords due to impaired function of the recurrent laryngeal nerve (RLN) or the vagus nerve. Unilateral paresis is more common and presents with hoarseness, breathy dysphonia, vocal fatigue, and sometimes aspiration.

Synonyms:

Vocal Cord Polyp

Vocal cord polyps are benign, unilateral, sessile or pedunculated lesions that arise from the vocal cord mucosa, typically as a result of a single traumatic vocal event such as shouting, screaming, or coughing, causing hemorrhage and edema in the superficial lamina propria (Reinke space).

Synonyms:

Vocal Cords

The vocal folds are two bands of tissue within the larynx that vibrate as air passes between them to produce voice.

Synonyms:

Vocal Folds

Paired mucosal folds within the larynx that vibrate as air passes between them to produce sound. They also close to protect the airway and assist in raising intrathoracic pressure.

Synonyms:

Vocal Resonance

The transmission of vocal sounds to the chest wall, assessed by having the patient speak while auscultating. It is increased in consolidation and decreased in pleural effusion or pneumothorax. It correlates with bronchophony and whispered pectoriloquy.

Synonyms:

Vocal-Cord Dysfunction

Episodic inappropriate adduction of the vocal folds, especially during inspiration, causing throat tightness, noisy breathing, and apparent asthma-like attacks. Diagnosis is supported by laryngoscopy during symptoms; speech therapy and trigger management are central treatments.

Synonyms:

Voice and Speech

The products of complex coordinated activity of the respiratory, laryngeal, and articulatory systems.

Synonyms:

Voiding Cystourethrogram

Fluoroscopic imaging of the bladder and urethra during voiding, after filling the bladder with contrast via a catheter. Indications: evaluation of vesicoureteral reflux (VUR) in children with recurrent UTIs, posterior urethral valves in males, and post-surgical assessment of the bladder/urethra.

Synonyms:

Volatile Anesthetics

Halogenated inhaled anesthetic agents, including sevoflurane, desflurane, and isoflurane, that reversibly depress central nervous system function. They provide dose-dependent hypnosis and immobility but may cause hypotension, respiratory depression, postoperative nausea, and malignant hyperthermia in susceptible individuals.

Synonyms:

Volkmann Contracture

Permanent flexion deformity of the wrist, hand, and fingers caused by ischemic fibrosis of forearm muscles, usually after compartment syndrome or severe vascular injury. It can produce pain, weakness, sensory deficits, and major loss of hand function.

Synonyms:

Volume of Distribution

A theoretical pharmacokinetic parameter that relates the total amount of drug in the body to the plasma concentration, calculated as V_d equals

amount of drug in the body divided by plasma concentration. It represents the apparent volume into which a drug distributes and is not a true anatomical volume.

Synonyms:

Volutrauma

Lung injury caused by excessive mechanical stretch, usually from an inappropriately large tidal volume during ventilation. Risk is reduced by lung-protective ventilation tailored to the patient's predicted body weight, lung mechanics, and clinical condition.

Synonyms:

Volvulus

Twisting of a loop of intestine around its mesenteric attachment point causing luminal obstruction and compromise of the mesenteric blood supply which can rapidly progress to bowel ischemia.

Synonyms:

Vomiting

Reflex expulsion of gastric contents. Causes: GI, neurological, metabolic, toxic, psychological. Treatment: antiemetics, identify cause, prevent aspiration.

Synonyms:

Von Hippel-Lindau Disease

Autosomal dominant syndrome caused by mutations in the VHL tumor suppressor gene on chromosome three predisposing to hemangioblastomas of the central nervous system and retina, clear cell renal cell carcinoma, pheochromocytoma, pancreatic cysts and neuroendocrine tumors, and endolymphatic sac tumors.

Synonyms:

von Willebrand Disease

An inherited or acquired bleeding disorder caused by deficient or abnormal von Willebrand factor, which helps platelets adhere and carries factor VIII. It commonly causes nosebleeds, easy bruising, heavy menstrual bleeding, or prolonged bleeding after pro-

cedures.

Synonyms:

Voriconazole

A triazole antifungal agent used in the treatment of invasive aspergillosis, candidemia, and other serious fungal infections. Voriconazole inhibits the fungal cytochrome P450 enzyme lanosterol 14-alpha demethylase, preventing ergosterol synthesis and disrupting fungal cell membrane integrity.

Synonyms:

Voyeuristic Disorder

A paraphilic disorder involving recurrent, intense sexual arousal from observing an unsuspecting person who is naked, disrobing, or engaging in sexual activity. The individual has acted on these urges or they cause marked distress or interpersonal difficulty. Duration $\geq$ 6 months. Most common in males with onset in adolescence.

Synonyms:

VRE

Enterococcus bacteria that are resistant to vancomycin, often because of acquired changes in cell-wall precursors. VRE can cause urinary, bloodstream, wound, or other healthcare-associated infections. Treatment requires susceptibility-guided selection of an effective antimicrobial and source control when needed.

Synonyms:

Vulva

Vulva is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations. glands. It protects the openings of the urinary and reproductive tracts.

Synonyms:

Vulvar Cancer

A malignant tumor of the vulva, most often arising from squamous cells. Risk factors include human papillomavirus, chronic vulvar inflammation, smoking,

immunosuppression, and age; other tumor types can occur.

Synonyms:

Vulvar vestibulitis

Pain and inflammation of the vulvar vestibule.

Synonyms:

Vulvitis

Inflammation of the vulva (external female genitalia), often presenting with pruritus, burning, irritation, erythema, edema, and discharge. Vulvitis is rarely isolated and is most commonly part of vulvovaginitis (inflammation of both vulva and vagina).

Synonyms:

Vulvodynia

Vulvodynia is chronic vulvar pain without an identifiable specific cause, often described as burning or rawness and triggered by touch, pressure, or occurring spontaneously.

Synonyms:

Vulvovaginal Candidiasis

Symptomatic infection of the vulva and vagina, usually caused by *Candida albicans*. Pruritus, soreness, erythema, and thick discharge are common; diagnosis is clinical with microscopy or culture when recurrent, severe, atypical, or treatment-resistant.

Synonyms:

Weber-Christian Disease

A historical term for idiopathic relapsing febrile lobular panniculitis, involving recurrent painful inflammation of subcutaneous fat with fever and nodules. The term is used inconsistently and other causes, including infection, autoimmune disease, and malignancy, must be excluded.

Synonyms:

Vagal Paraganglioma

A usually slow-growing tumor arising from paraganglion cells near the vagus nerve in the neck.

Synonyms:

Vaginal Agenesis

A condition in which the vagina is absent or incompletely developed.

Synonyms:

Vaginal Atrophy

Thinning, drying, and inflammation of vaginal tissues caused by reduced estrogen.

Synonyms:

Vaginal Fistula

An abnormal opening connecting the vagina to another organ, such as the bladder or rectum.

Synonyms:

Vertebral Tumor

A tumor arising in or near a vertebra of the spinal column.

Synonyms:

Valgus

An abnormal position in which a distal body segment angles away from the body's midline.

Synonyms:

Valsalva Maneuver

Forceful attempted exhalation against a closed airway, which increases pressure inside the chest and abdomen.

Synonyms:

Vagotomy

Surgical cutting of selected vagus-nerve branches, historically used to reduce stomach acid secretion.

Synonyms:

Vascular System

The network of arteries, veins, and capillaries that transports blood through the body.

Synonyms:

Verruca

A wart caused by infection with human papillomavirus.

Synonyms:

Vaginal Speculum

An instrument inserted into the vagina to separate its walls and permit examination of the vagina and cervix or collection of specimens.

Synonyms:

Valves

Flap-like structures that open and close to direct blood flow through the heart and veins and prevent backward flow.

Synonyms:

Vernix Caseosa

A white, greasy protective coating on the skin of a fetus or newborn, composed mainly of water, lipids, and shed skin cells.

Synonyms:

Vestibulocochlear Nerve

The eighth cranial nerve, carrying information for hearing and balance from the inner ear to the brain.

Synonyms:

Vibrios

Comma-shaped bacteria, usually Gram-negative, that include species capable of causing cholera and wound or gastrointestinal infections.

Synonyms:

Villi

Finger-like projections that increase the absorptive surface of the small-intestinal lining; similar structures occur in the placenta and other tissues.

Synonyms:

Vincent Disease

Acute necrotizing ulcerative gingivitis associated with fusospirochetal bacteria, causing painful bleeding gums, ulceration, and foul breath.

Synonyms:

Vision Receptors

Photoreceptors in the retina, mainly rods and cones, that convert light into neural signals.

Synonyms:

Vaginal Hematoma

A collection of blood within the vaginal wall or surrounding tissues, usually caused by childbirth, trauma, or surgery and potentially producing severe pain, swelling, or blood loss.

Synonyms:

Vertebral Compression Fracture

Collapse of a vertebral body, often caused by osteoporosis, trauma, or malignancy, producing back pain, loss of height, or progressive kyphosis.

Synonyms:

Veno-Occlusive Disease

Obstruction of small veins, particularly in the liver after certain chemotherapy or hematopoietic stem-cell transplantation, causing painful hepatomegaly, fluid retention, jaundice, and weight gain.

Synonyms:

Vaginal Intraepithelial Neoplasia

Precancerous abnormal growth of squamous cells in the vaginal epithelium, usually associated with human papillomavirus and graded according to the severity of dysplasia.

Synonyms:

Vitreous Detachment

Separation of the vitreous gel from the retina, usually related to aging and often causing new floaters or flashes. Sudden symptoms require assessment for retinal tears or detachment.

Synonyms:

Viral Exanthem

A widespread skin eruption caused by a viral infection, often accompanied by fever or other systemic symptoms.

Synonyms:

Vulvar Dermatitis

Inflammation and irritation of the vulvar skin caused by irritants, allergens, moisture, infection, or inflammatory skin disease, producing itching, burning, redness, or scaling.

Synonyms:

Valvuloplasty

A procedure used to widen or repair a narrowed or abnormal heart valve, by balloon catheter or open surgery depending on the valve and condition.

Synonyms:

Valvulotomy

Surgical incision of a stenosed heart valve to improve the opening through which blood flows.

Synonyms:

Varices

Abnormally dilated and tortuous veins, commonly occurring in the legs or in the oesophagus and stomach as a result of portal hypertension.

Synonyms:

Vasodilatation

Widening of blood vessels caused by relaxation of vascular smooth muscle, increasing blood flow and potentially lowering blood pressure.

Synonyms:

Vasomotor

Relating to the control of blood-vessel diameter by nerves, hormones, and local chemical factors.

Synonyms:

Vasopressor

An agent or physiological signal that raises blood pressure mainly by constricting blood vessels and sometimes by increasing cardiac activity.

Synonyms:

Venous Pressure

The pressure within the venous circulation, influenced by blood volume, venous tone, and the func-

tion of the right side of the heart.

Synonyms:

Ventilation

Movement of air into and out of the lungs; effective ventilation brings oxygen to the alveoli and removes carbon dioxide.

Synonyms:

Vesicoureteric Reflux

Backward flow of urine from the bladder into one or both ureters and sometimes the kidneys, increasing the risk of urinary infection and renal scarring.

Synonyms:

Visual Fields

The total area that can be seen while the eyes are fixed in one position; defects may indicate retinal, optic-nerve, or brain disease.

Synonyms:

Vital Capacity

The largest volume of air that can be exhaled after a maximal inhalation, equal to inspiratory reserve volume plus tidal volume plus expiratory reserve volume.

Synonyms:

Voice

Sound produced by vibration of the vocal folds as air passes through the larynx, then shaped by the throat, mouth, and nose for speech.

Synonyms:

Vomiting of Pregnancy (Morning Sickness)

Nausea and vomiting occurring during pregnancy, usually in early pregnancy; severe persistent vomiting may be hyperemesis gravidarum.

Synonyms: Morning Sickness

Von Willebrand's Disease

An inherited or acquired bleeding disorder caused by deficient or dysfunctional von Willebrand factor,

impairing platelet adhesion and sometimes factor VIII stability.

Synonyms:

Vulvectomy

Surgical removal of part or all of the vulva, performed for selected cancers, precancerous lesions, or severe persistent disease.

Synonyms:

Vulvovaginitis

Vulvovaginitis is inflammation of the vulva and vagina caused by infection, irritation, allergy, hormonal change, or dermatologic disease, producing itching, soreness, discharge, or odor.

Synonyms:

vaccine adjuvant

vaccine adjuvant is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vaccine development

vaccine development is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vaccine therapy

vaccine therapy is used in relation to vaccine therapy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

vaccinia virus

vaccinia virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

vacuole

vacuole is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vacuum curettage

vacuum curettage is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vadimezan

vadimezan is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vagina carcinoma

vagina carcinoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

vagina neoplasm

vagina neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

vaginal

vaginal is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vaginal adenosis

vaginal adenosis is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vaginal diaphragm

vaginal diaphragm is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vaginal dilator

vaginal dilator is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vaginal discharge

vaginal discharge is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vaginal disease

vaginal disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

vaginal douching

vaginal douching is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vaginal hysterectomy

vaginal hysterectomy is used in relation to vaginal hysterectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

vaginal obstruction

vaginal obstruction describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

vaginal perforation

vaginal perforation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vaginal polyp

vaginal polyp is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vaginal pruritus

vaginal pruritus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vaginal stricture

vaginal stricture is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vaginal system

vaginal system is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vaginectomy

vaginectomy is used in relation to vaginectomy dur-

ing assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

vagococcus

vagococcus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vagus nerve

vagus nerve is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

valacyclovir

valacyclovir concerns valacyclovir, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

valdecoxib

valdecoxib is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

valganciclovir

valganciclovir concerns valganciclovir, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

valid

valid is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

validation

validation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

valine

valine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

valinomycin

valinomycin concerns valinomycin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

valproic acid

valproic acid denotes valproic acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

valrubicin

valrubicin concerns valrubicin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

valsartan

valsartan concerns valsartan, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

valspodar

valspodar is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

valvular stenosis

valvular stenosis describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

vanadium

vanadium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vancomycin

vancomycin concerns vancomycin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

vandetanib

vandetanib concerns vandetanib, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

vanrija humicola

vanrija humicola is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vaping

vaping is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vapor

vapor is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vapreotide

vapreotide concerns vapreotide, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

varenicline

varenicline is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

variant

variant is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

varibaculum

varibaculum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

varibaculum cambriense

varibaculum cambriense is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

varicellovirus

varicellovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

varicose vein

varicose vein is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vascular calcification

vascular calcification is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vascular diseases

vascular diseases describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

vascular endothelium

vascular endothelium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vascular headache

vascular headache is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vascular neoplasm

vascular neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

vascular resistance

vascular resistance is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vasculostatin

vasculostatin concerns vasculostatin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

vasoactive

vasoactive is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vasoconstrictor agent

vasoconstrictor agent is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vasodilator agent

vasodilator agent is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vasomotion

vasomotion is a medical condition or clinical finding

involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vasopressin antagonist

vasopressin antagonist is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vasopressin receptor

vasopressin receptor denotes vasopressin receptor, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

vasotocin

vasotocin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vasovagal reaction

vasovagal reaction is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vasovasostomy

vasovasostomy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vatalanib

vatalanib concerns vatalanib, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse

effects.

Synonyms:

vecuronium bromide

vecuronium bromide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vegan

vegan is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

veillonella

veillonella is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

veillonella atypica

veillonella atypica is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

veillonella dispar

veillonella dispar is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

veillonella parvula

veillonella parvula is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

veillonellaceae

veillonellaceae is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

VeIP regimen

VeIP regimen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

velafermin

velafermin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

veliparib

veliparib is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

veltuzumab

veltuzumab concerns veltuzumab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

vemurafenib

vemurafenib concerns vemurafenib, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

venae cava

venae cava is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

venlafaxine

venlafaxine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

venlafaxine hydrochloride

venlafaxine hydrochloride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

venous injury

venous injury describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

venous plasma

venous plasma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

venous stenosis

venous stenosis describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

venous thromboembolism

venous thromboembolism is a medical condition or clinical finding involving the body system or process

named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ventral hernia

ventral hernia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ventral roots

ventral roots is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ventricular ablation

ventricular ablation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ventricular dysfunction

ventricular dysfunction is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ventricular flutter

ventricular flutter is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ventricular hypertrophy

ventricular hypertrophy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established

from its characteristic features, causes, and clinical context.

Synonyms:

ventriculostomy

ventriculostomy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ventrolateral

ventrolateral is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

verapamil

verapamil is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

veratrum alkaloids

veratrum alkaloids is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

verbal behavior

verbal behavior is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

verbal learning

verbal learning is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vernier caliper

vernier caliper is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vero cell

vero cell denotes vero cell, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

versican

versican is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vertebrate

vertebrate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

verteporfin

verteporfin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vertical transmission

vertical transmission is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

verticillium hypocreales

verticillium hypocreales is a medical condition or clinical finding involving the body system or process

named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vesiculovirus

vesiculovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

vestibular labyrinth

vestibular labyrinth is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vestibular nerve

vestibular nerve is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vestibular nuclei

vestibular nuclei is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

veterinarian

veterinarian is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

veterinary medicine

veterinary medicine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vial device

vial device is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vibration problem

vibration problem is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vibrator

vibrator is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vibrio

vibrio identifies vibrio, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

vibrio alginolyticus

vibrio alginolyticus identifies vibrio alginolyticus, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

vibrio fluvialis

vibrio fluvialis identifies vibrio fluvialis, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

vibrio furnissii

vibrio furnissii identifies vibrio furnissii, a biological

taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

vibrio infection

vibrio infection identifies vibrio infection, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

vibrio metschnikovii

vibrio metschnikovii identifies vibrio metschnikovii, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

vibrio mimicus

vibrio mimicus identifies vibrio mimicus, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

vibrio parahaemolyticus

vibrio parahaemolyticus identifies vibrio parahaemolyticus, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

vibrio vulnificus

vibrio vulnificus identifies vibrio vulnificus, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

vibrionaceae

vibrionaceae identifies vibrionaceae, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

vibrissae

vibrissae is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vidarabine

vidarabine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vidarabine phosphate

vidarabine phosphate concerns vidarabine phosphate, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

video microscopy

video microscopy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vildagliptin

vildagliptin concerns vildagliptin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

villous adenoma

villous adenoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

villus

villus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vimentin

vimentin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vinblastine

vinblastine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vinblastine sulfate

vinblastine sulfate concerns vinblastine sulfate, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

vinca alkaloid

vinca alkaloid is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vincristine

vincristine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vincristine sulfate

vincristine sulfate concerns vincristine sulfate, a pharmacologic or chemical agent; clinical use de-

pend on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

vinculin

vinculin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vindesine

vindesine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vinflunine

vinflunine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vinorelbine

vinorelbine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vinorelbine tartrate

vinorelbine tartrate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vinyl chloride

vinyl chloride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

violence

violence is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

viomycin

viomycin concerns viomycin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

viral antibody

viral antibody concerns viral antibody, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Synonyms:

viral carcinogenesis

viral carcinogenesis denotes viral carcinogenesis, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

viral encephalitis

viral encephalitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

viral envelope

viral envelope is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

viral genome

viral genome is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

viral vaccine

viral vaccine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

virginiamycin

virginiamycin concerns virginiamycin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

viridans streptococci

viridans streptococci is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

virion

virion is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

virogenic stroma

virogenic stroma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

viroid

viroid is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

virosome

virosome is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

virulizin

virulizin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

virus

virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

virus activation

virus activation is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

virus assembly

virus assembly is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

virus diseases

virus diseases is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

virus integration

virus integration is a virus or viral group classified by its genetic and biologic features. Clinical

importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

virus protein

virus protein is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

virus receptor

virus receptor is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

virus replication

virus replication is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

virus uncoating

virus uncoating is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

visceral

visceral is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

visceral pleura

visceral pleura is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

viscosity

viscosity is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

visilizumab

visilizumab concerns visilizumab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

vision disorder

vision disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

vision test

vision test is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat vision test.

Synonyms:

vismodegib

vismodegib is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

visual accommodation

visual accommodation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

visual cortex

visual cortex is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

visual field

visual field is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

visual learning

visual learning is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

visual pathway

visual pathway is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

visual perception

visual perception is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vital sign

vital sign is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vital statistics

vital statistics is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vitamin

vitamin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vitamin A

vitamin A is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vitamin B12

vitamin B12 is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vitamin B6

vitamin B6 is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vitamin deficiency

vitamin deficiency describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

vitamin E

vitamin E is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vitamin K

vitamin K is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vitellin

vitellin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vitelline membrane

vitelline membrane is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vitellogenesis

vitellogenesis denotes vitellogenesis, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

vitellogenin

vitellogenin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vitespen

vitespen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vitreous floaters

vitreous floaters is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vitritis

vitritis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vitronectin

vitronectin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vivax malaria

vivax malaria is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vocabulary

vocabulary is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vocal cord

vocal cord is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vocational guidance

vocational guidance is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vocational rehabilitation

vocational rehabilitation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

voice disorder

voice disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

volatile oil

volatile oil is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

volition

volition is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Volkmann's canal

Volkmann's canal is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

volociximab

volociximab concerns volociximab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse

effects.

Synonyms:

volt

volt is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

volume fraction

volume fraction is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vomer bone

vomer bone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vomitus

vomitus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vorinostat

vorinostat is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

voyeurism

voyeurism is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

vulva neoplasm

vulva neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

vulval infection

vulval infection describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

vulvar adenocarcinoma

vulvar adenocarcinoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

vulvar disease

vulvar disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

vulvar melanoma

vulvar melanoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ubidecarenone

ubidecarenone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ubiquitin

ubiquitin is a medical condition or clinical finding

involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ubiquitination

ubiquitination is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uhl anomaly

uhl anomaly is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ulcer

ulcer is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ulcerative colitis

ulcerative colitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ulna

ulna is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ulnar hypoplasia

ulnar hypoplasia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ulocladium

ulocladium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ultracentrifugation

ultracentrifugation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ultradian rhythm

ultradian rhythm is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ultrafiltration

ultrafiltration is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ultralente insulin

ultralente insulin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ultrasonic therapy

ultrasonic therapy is used in relation to ultrasonic therapy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

ultrasonography

ultrasonography is a medical condition or clinical

finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ultrasound biomicroscopy

ultrasound biomicroscopy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ultraviolet microscopy

ultraviolet microscopy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ultraviolet rays

ultraviolet rays is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ultraviolet therapy

ultraviolet therapy is used in relation to ultraviolet therapy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

umbilical cord

umbilical cord is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

umbilical hernia

umbilical hernia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

umbilical vein

umbilical vein is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uncertainty

uncertainty is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unconsciousness

unconsciousness is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

underage drinking

underage drinking is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

undetermined

undetermined is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

undifferentiated

undifferentiated is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

undifferentiated carcinoma

undifferentiated carcinoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

undulate ribs

undulate ribs is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unencoded data

unencoded data is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unequivocal

unequivocal is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unerupted tooth

unerupted tooth is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unevaluable

unevaluable is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unilaminar epithelium

unilaminar epithelium is a medical condition or clinical finding involving the body system or process

named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unilateral

unilateral is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unilateral microphthalmos

unilateral microphthalmos is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uninodular goiter

uninodular goiter is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uniparental disomy

uniparental disomy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unipolar neuron

unipolar neuron is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unknown

unknown is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

unresectable

unresectable is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

unsaturated phytosterol

unsaturated phytosterol concerns unsaturated phytosterol, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

unstable angina

unstable angina is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

untranslated region

untranslated region is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

upamostat

upamostat is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

upper arm

upper arm is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

upper extremity

upper extremity is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urachal cyst

urachal cyst is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urachus

urachus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uracil

uracil is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uracil mustard

uracil mustard is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uracil nucleotides

uracil nucleotides is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uranium

uranium is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urea

urea is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urea cycle

urea cycle is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureaplasma

ureaplasma identifies ureaplasma, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

ureaplasma urealyticum

ureaplasma urealyticum identifies ureaplasma urealyticum, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

uremia

uremia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureter

ureter is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureter duplex

ureter duplex is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureter fissus

ureter fissus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureter obstruction

ureter obstruction describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

ureteral calculi

ureteral calculi is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureteral catheters

ureteral catheters is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureteral polyp

ureteral polyp is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureteral stenosis

ureteral stenosis describes a clinical disorder or find-

ing in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

ureteric perforation

ureteric perforation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureteritis

ureteritis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureterocele

ureterocele is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureterolithiasis

ureterolithiasis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureteroscopes

ureteroscopes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ureterostomy procedure

ureterostomy procedure is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat ureterostomy procedure.

Synonyms:

urethan

urethan is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urethra

urethra is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urethra disorder

urethra disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

urethral carcinoma

urethral carcinoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

urethral catheter

urethral catheter is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urethral diverticulum

urethral diverticulum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urethral fistula

urethral fistula is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urethral infection

urethral infection describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

urethral obstruction

urethral obstruction describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

urethral sphincter

urethral sphincter is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urethral stenosis

urethral stenosis describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

urethritis

urethritis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uric acid

uric acid denotes uric acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

uricosuric agent

uricosuric agent is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uridine

uridine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uridine diphosphate

uridine diphosphate concerns uridine diphosphate, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

uridine monophosphate

uridine monophosphate concerns uridine monophosphate, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

uridine triacetate

uridine triacetate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uridine triphosphate

uridine triphosphate concerns uridine triphosphate, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions,

and adverse effects.

Synonyms:

urinal

urinal is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinalysis

urinalysis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary

urinary is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary bladder

urinary bladder is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary bladder disorder

urinary bladder disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

urinary calculi

urinary calculi is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary catheter

urinary catheter is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary catheterization

urinary catheterization is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary diversion

urinary diversion is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary fistula

urinary fistula is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary hesitation

urinary hesitation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary incontinence

urinary incontinence is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary retention

urinary retention is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary system

urinary system is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary tract

urinary tract is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urinary tract disorder

urinary tract disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

urinary tract infection

urinary tract infection describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

urinary tract neoplasm

urinary tract neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

urinary urgency

urinary urgency is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urination

urination is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urination disorder

urination disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

urine

urine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urine conductivity

urine conductivity is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urine cytology

urine cytology is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urochordata

urochordata is a medical condition or clinical finding

involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urogenital fistula

urogenital fistula is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urogenital system

urogenital system is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urolithiasis

urolithiasis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urologist

urologist is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urology

urology is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urostomy leak

urostomy leak is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urostomy procedure

urostomy procedure is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat urostomy procedure.

Synonyms:

urostomy prolapse

urostomy prolapse is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urostomy stenosis

urostomy stenosis describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

urothelium

urothelium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ursodeoxycholic acid

ursodeoxycholic acid denotes ursodeoxycholic acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

urticaria

urticaria is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

urticaria pigmentosa

urticaria pigmentosa is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Usher syndrome

Usher syndrome describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

ustekinumab

ustekinumab concerns ustekinumab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

ustilago

ustilago is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uterine adnexae

uterine adnexae is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uterine cancer

uterine cancer describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

uterine cavity

uterine cavity is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uterine fibroids

uterine fibroids is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uterine fistula

uterine fistula is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uterine gland

uterine gland is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uterine hemorrhage

uterine hemorrhage describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

uterine leiomyosarcoma

uterine leiomyosarcoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

uterine monitoring

uterine monitoring is a medical condition or clinical

finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uterine myomectomy

uterine myomectomy is used in relation to uterine myomectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

uterine obstruction

uterine obstruction describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

uterine perforation

uterine perforation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uterine prolapse

uterine prolapse is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uterine rupture

uterine rupture is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uterus

uterus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uterus disorder

uterus disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

uterus neoplasm

uterus neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

uvea

uvea is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uveal melanoma

uveal melanoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uveal neoplasm

uveal neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

uveitis

uveitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

uvula

uvula is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tabes dorsalis

tabes dorsalis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tablet

tablet is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

TAC regimen

TAC regimen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tacedinaline

tacedinaline is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tachyarrhythmia

tachyarrhythmia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tachycardia

tachycardia is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tachykinin

tachykinin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tachyphrenia

tachyphrenia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tachypnea

tachypnea is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tacrine

tacrine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tacrolimus

tacrolimus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tactile agnosia

tactile agnosia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tadalafil

tadalafil is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taenia

taenia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taenia saginata

taenia saginata is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taenia solium

taenia solium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taeniasis

taeniasis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tail

tail is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

takayasu arteritis

takayasu arteritis is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

takotsubo cardiomyopathy

takotsubo cardiomyopathy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talabostat

talabostat is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talactoferrin alfa

talactoferrin alfa is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talaporfin sodium

talaporfin sodium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talc

talc is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talipes

talipes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talipes calcaneovalgus

talipes calcaneovalgus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tall stature

tall stature is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talotrexin

talotrexin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

talus

talus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tamoxifen

tamoxifen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tamoxifen citrate

tamoxifen citrate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tamsulosin

tamsulosin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tamsulosin hydrochloride

tamsulosin hydrochloride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tandutinib

tandutinib concerns tandutinib, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tanespimycin

tanespimycin concerns tanespimycin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

Tangier disease

Tangier disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tannic acid

tannic acid denotes tannic acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

tanomastat

tanomastat is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tantalum

tantalum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tapentadol

tapentadol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taq polymerase

taq polymerase is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tardive dyskinesia

tardive dyskinesia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tarenflurbil

tarenflurbil is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

target population

target population is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

targeted therapy

targeted therapy is used in relation to targeted therapy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

tariquidar

tariquidar is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Tarlov cyst

Tarlov cyst is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tarsal bones

tarsal bones is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tarsal coalition

tarsal coalition is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tarsal joints

tarsal joints is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taste

taste is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taste bud

taste bud is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

taste disorder

taste disorder describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tenascin

tenascin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tendinitis

tendinitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tendon

tendon is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tendon injury

tendon injury describes a clinical disorder or find-

ing in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tendon sheath

tendon sheath is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tenecteplase

tenecteplase is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tenericutes

tenericutes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

teniposide

teniposide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tennis elbow

tennis elbow is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tenofovir

tenofovir concerns tenofovir, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse

effects.

Synonyms:

tenosynovitis

tenosynovitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tensile strength

tensile strength is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tension-type headache

tension-type headache is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tenuazonic acid

tenuazonic acid denotes tenuazonic acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

teprotumumab

teprotumumab concerns teprotumumab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

terameprocol

terameprocol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

teratocarcinoma

teratocarcinoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

teratogen

teratogen is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

teratogenesis

teratogenesis denotes teratogenesis, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

teratoma

teratoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

teratozoospermia

teratozoospermia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terazosin

terazosin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terazosin hydrochloride

terazosin hydrochloride is a medical condition or clinical finding involving the body system or process

named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terbinafine

terbinafine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terbufos

terbufos is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terbutaline

terbutaline is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terfenadine

terfenadine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terlipressin

terlipressin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

term birth

term birth is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terminal illness

terminal illness is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terminal insomnia

terminal insomnia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

terpene

terpene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tertiary hyperparathyroidism

tertiary hyperparathyroidism is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tertiary protein

tertiary protein denotes tertiary protein, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

tesetaxel

tesetaxel concerns tesetaxel, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

testicular atrophy

testicular atrophy is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testicular atrophy.

Synonyms:

testicular feminization

testicular feminization is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testicular feminization.

Synonyms:

testicular gonadoblastoma

testicular gonadoblastoma is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testicular gonadoblastoma.

Synonyms:

testicular hydrocele

testicular hydrocele is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testicular hydrocele.

Synonyms:

testicular mass

testicular mass is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testicular mass.

Synonyms:

testicular torsion

testicular torsion is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testicular torsion.

Synonyms:

testis

testis is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testis.

Synonyms:

testis disorder

testis disorder is a clinical assessment, measurement,

or procedure used to investigate, monitor, classify, or treat testis disorder.

Synonyms:

testis neoplasm

testis neoplasm is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testis neoplasm.

Synonyms:

testolactone

testolactone is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testolactone.

Synonyms:

testosterone

testosterone concerns testosterone, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

testosterone propionate

testosterone propionate is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat testosterone propionate.

Synonyms:

tetanus

tetanus is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tetanus toxin

tetanus toxin describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

tetany

tetany is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tetracaine

tetracaine concerns tetracaine, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tetrachloroethylene

tetrachloroethylene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tetrachlorvinphos

tetrachlorvinphos is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

thyroidectomy

thyroidectomy is used in relation to thyroidectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

thyroiditis

thyroiditis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

thyrotoxicosis

thyrotoxicosis describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of expo-

sure, affected tissues, severity, and host response.

Synonyms:

thyrotroph adenoma

thyrotroph adenoma is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

thyrotropin

thyrotropin concerns thyrotropin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

thyrotropin alfa

thyrotropin alfa is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

thyroxine

thyroxine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tiazofurin

tiazofurin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tibia

tibia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tibia vara

tibia vara is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tibial artery

tibial artery is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tibial fracture

tibial fracture describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tibial nerve

tibial nerve is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tibialcrural artery

tibialcrural artery is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tibialis cranialis

tibialis cranialis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tic disorder

tic disorder describes a clinical disorder or find-

ing in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

ticarcillin

ticarcillin concerns ticarcillin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tick

tick is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ticlopidine

ticlopidine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tidal volume

tidal volume is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tigecycline

tigecycline concerns tigecycline, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tight junction

tight junction is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its

characteristic features, causes, and clinical context.

Synonyms:

tilorone

tilorone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

time

time is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

time perception

time perception is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

timolol

timolol concerns timolol, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

Timothy syndrome

Timothy syndrome describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tincture

tincture is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tinea

tinea is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tinea capitis

tinea capitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tinea favosa

tinea favosa is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tinea pedis

tinea pedis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tinea versicolor

tinea versicolor is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tinidazole

tinidazole concerns tinidazole, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tinnitus

tinnitus is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tinzaparin

tinzaparin concerns tinzaparin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tinzaparin sodium

tinzaparin sodium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tiopronin

tiopronin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tiotropium bromide

tiotropium bromide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tipifarnib

tipifarnib concerns tipifarnib, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tirapazamine

tirapazamine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tirbanibulin

tirbanibulin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tirofiban

tirofiban is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissierella

tissierella is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissierella praeacuta

tissierella praeacuta is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue

tissue denotes tissue, an anatomical structure or tissue whose clinical importance depends on location, connections, blood supply, innervation, and function.

Synonyms:

tissue adhesions

tissue adhesions is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue banks

tissue banks is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue congestion

tissue congestion is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue culture

tissue culture is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue elastance

tissue elastance is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue engineering

tissue engineering is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue kallikrein

tissue kallikrein is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue membrane

tissue membrane is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue processor

tissue processor is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tissue scaffold

tissue scaffold is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

titanium

titanium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

t-lymphocyte

t-lymphocyte is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tmax

tmax is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

TNM staging

TNM staging is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tobacco

tobacco is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tobacco use

tobacco use is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tobramycin

tobramycin concerns tobramycin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tocolytic agents

tocolytic agents is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tocopherol

tocopherol is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tocotrienols

tocotrienols is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toe

toe is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toe joint

toe joint is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

togaviridae

togaviridae identifies togaviridae, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

togaviridae infections

togaviridae infections identifies togaviridae infections, a biological taxon or infectious-disease concept whose clinical importance depends on the organism, host, and site involved.

Synonyms:

toilet training

toilet training is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolazamide

tolazamide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolbutamide

tolbutamide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolcapone

tolcapone is a medical condition or clinical finding involving the body system or process named by

the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolerance

tolerance is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolmetin

tolmetin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolnaftate

tolnaftate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolonium chloride

tolonium chloride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolterodine tartrate

tolterodine tartrate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toluene

toluene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tolvaptan

tolvaptan is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tomography

tomography is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tomotherapy

tomotherapy is used in relation to tomotherapy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

tongue

tongue refers to tongue, an anatomical or physiologic concept used to describe a body structure, process, or function.

Synonyms:

tongue carcinoma

tongue carcinoma describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

tongue disease

tongue disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tongue neoplasm

tongue neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic

behavior, and appropriate management.

Synonyms:

tonic pupil

tonic pupil is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tonic seizures

tonic seizures is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tonometer

tonometer is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tonometry

tonometry is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tonsil

tonsil is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tonsillar neoplasm

tonsillar neoplasm describes a neoplastic process involving the tissue or organ named by the term. Diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Synonyms:

tonsillectomy

tonsillectomy is used in relation to tonsillectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

tonsillitis

tonsillitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth

tooth refers to tooth, an anatomical or physiologic concept used to describe a body structure, process, or function.

Synonyms:

tooth abrasion

tooth abrasion is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth ankylosis

tooth ankylosis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth attrition

tooth attrition is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth calcification

tooth calcification is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth component

tooth component is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth crowding

tooth crowding is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth crown

tooth crown is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth discoloration

tooth discoloration is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth disease

tooth disease describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tooth enamel

tooth enamel is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth eruption

tooth eruption is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth extraction

tooth extraction is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth fracture

tooth fracture describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tooth infection

tooth infection describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

tooth loss

tooth loss is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth resorption

tooth resorption is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tooth root

tooth root is a medical condition or clinical finding

involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toothache

toothache is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toothbrushing

toothbrushing is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toothpaste

toothpaste is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

topical

topical is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

topiramate

topiramate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

topoisomerase ii

topoisomerase ii is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

topoisomerase inhibitors

topoisomerase inhibitors is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

topotecan

topotecan is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

topotecan hydrochloride

topotecan hydrochloride is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

toremifene

toremifene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

torsade de pointes

torsade de pointes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

torsemide

torsemide concerns torsemide, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

torsion dystonia

torsion dystonia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

torticollis

torticollis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

torulaspora

torulaspora is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

torulaspora delbrueckii

torulaspora delbrueckii is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tositumomab

tositumomab concerns tositumomab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

total laryngectomy

total laryngectomy is used in relation to total laryngectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

total pancreatectomy

total pancreatectomy is used in relation to total pancreatectomy during assessment, diagnosis, treat-

ment, monitoring, or patient support.

Synonyms:

total tissue

total tissue is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

touch

touch is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

touch perception

touch perception is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Tourette's syndrome

Tourette's syndrome describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

tourniquet

tourniquet is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Townes syndrome

Townes syndrome describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

toxaphene

toxaphene describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxic

toxic describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxic effect

toxic effect describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxic shock syndrome

toxic shock syndrome describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxicity grade

toxicity grade describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxicity test

toxicity test is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat toxicity test.

Synonyms:

toxicogenomics

toxicogenomics describes an infectious or toxic pro-

cess involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxicokinetic description

toxicokinetic description describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxicokinetics

toxicokinetics describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxicology

toxicology describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxin

toxin describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxocara

toxocara describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxocara canis

toxocara canis describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of expo-

sure, affected tissues, severity, and host response.

Synonyms:

toxocara cati

toxocara cati describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxocariasis

toxocariasis describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxoid

toxoid describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxoplasma

toxoplasma describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxoplasma gondii

toxoplasma gondii describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

toxoplasmosis

toxoplasmosis describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

tra gene

tra gene denotes tra gene, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

trabectedin

trabectedin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trabecular meshwork

trabecular meshwork is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trabeculectomy

trabeculectomy is used in relation to trabeculectomy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

trabulsiella

trabulsiella is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trabulsiella guamensis

trabulsiella guamensis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transitional epithelium

transitional epithelium is a medical condition or clinical finding involving the body system or process

named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transitory

transitory is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

translation initiation

translation initiation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

translucent

translucent is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transmembrane transport

transmembrane transport is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transmission

transmission is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transplacental

transplacental is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transplant

transplant is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transplant rejection

transplant rejection is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transplantation

transplantation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transplantation conditioning

transplantation conditioning is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transplantation immunology

transplantation immunology is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transport protein

transport protein denotes transport protein, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and labo-

ratory findings.

Synonyms:

transport vesicle

transport vesicle is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transtracheal

transtracheal is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transtympanic

transtympanic is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transverse colon

transverse colon is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

transvestism

transvestism is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trapezoid bone

trapezoid bone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trastuzumab

trastuzumab concerns trastuzumab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

traumatic injury

traumatic injury describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

traumatic shock

traumatic shock is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Traumeel S

Traumeel S is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

travoprost

travoprost concerns travoprost, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

trazodone

trazodone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trb gene

trb gene denotes trb gene, a biological component

or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

trd gene

trd gene denotes trd gene, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

treatment epoch

treatment epoch is used in relation to treatment epoch during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

trematoda

trematoda is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trematosphaeria grisea

trematosphaeria grisea is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tremelimumab

tremelimumab concerns tremelimumab, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

tremor

tremor is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trendelenburg

trendelenburg is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

treosulfan

treosulfan is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trephine

trephine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

treponema

treponema is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

treponema pallidum

treponema pallidum is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

treponemal infections

treponemal infections describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

tretinoin

tretinoin is a medical condition or clinical finding

involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

TRG gene

TRG gene denotes trg gene, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

trial compliance

trial compliance is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trial indication

trial indication is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trial phase

trial phase is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

trial screening

trial screening is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat trial screening.

Synonyms:

triamcinolone

triamcinolone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triamcinolone acetonide

triamcinolone acetonide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triamterene

triamterene is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triazenes

triazenes is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triazine

triazine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triaziquone

triaziquone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triazolam

triazolam is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

triazole

triazole concerns triazole, a pharmacologic or chem-

ical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

triazophos

triazophos is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tributyrim

tributyrim is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

T-wave alternans

T-wave alternans denotes t-wave alternans, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

twin

twin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tympanic bulla

tympanic bulla is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tympanic membrane

tympanic membrane is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tympanometry

tympanometry is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tympanoplasty

tympanoplasty is used in relation to tympanoplasty during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

typhlitis

typhlitis is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

typhoid

typhoid is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tyramine

tyramine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

tyrosinase peptide

tyrosinase peptide is a defined chemical or biologic substance involved in tyrosinase peptide and studied in physiology, pharmacology, laboratory medicine, or treatment.

Synonyms:

tyrosine

tyrosine is a medical condition or clinical finding

involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Vaginal bleeding

Bleeding from the vagina outside an expected menstrual period or after menopause; causes include hormonal changes, infection, pregnancy-related conditions, structural lesions, or cancer. **Synonyms:**

Vaginal odor

An unusual or unpleasant odor from vaginal discharge that may result from bacterial vaginosis, infection, retained material, hormonal changes, or other conditions. **Synonyms:**

Vomiting blood

Vomiting blood concerns vomiting blood; its medical significance is established from the defining features, setting, associated findings, and clinical question. **Synonyms:**

Vaginal candidiasis

Alternate index label; see *Yeast infection (vaginal)*. **Synonyms:**

Vaginal prolapse, posterior

Alternate index label; see *Posterior vaginal prolapse (rectocele)*. **Synonyms:**

Variant CJD

Alternate index label; see *Creutzfeldt-Jakob disease*. **Synonyms:**

Varices, esophageal

Alternate index label; see *Esophageal varices*. **Synonyms:**

Vascular claudication

Alternate index label; see *Claudication*. **Synonyms:**

vCJD

Alternate index label; see *Creutzfeldt-Jakob disease*.

Synonyms:

Velocardiofacial syndrome

Alternate index label; see *DiGeorge syndrome (22q11.2 deletion syndrome)*. **Synonyms:**

Venereal warts

Alternate index label; see *Genital warts*. **Synonyms:**

Ventricular premature contraction

Alternate index label; see *Premature ventricular contractions (PVCs)*. **Synonyms:**

Vertebral hemangioma

Alternate index label; see *Spinal hemangioma*. **Synonyms:**

V-fib

Alternate index label; see *Ventricular fibrillation*. **Synonyms:**

Vocal fold paralysis

Alternate index label; see *Vocal cord paralysis*. **Synonyms:**

Von Recklinghausen's disease

Alternate index label; see *Neurofibromatosis type 1*. **Synonyms:**

Von Recklinghausen's neurofibromatosis

Alternate index label; see *Neurofibromatosis type 1*. **Synonyms:**

Von Recklinghausen's phakomatosis

Alternate index label; see *Neurofibromatosis type 1*. **Synonyms:**

VPCs

Alternate index label; see *Premature ventricular contractions (PVCs)*. **Synonyms:**

Vacation health care

Vacation health care addresses care related to va-

cation health care, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Vaccines - immunizations

Vaccines train the immune system to recognize specific pathogens or toxins and reduce the risk of infection, severe disease, complications, and transmission.

Synonyms:

Vacuum erectile devices for erection problems

Vacuum erectile devices for erection problems examines vacuum erectile devices for erection problems; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Vaginal birth after C-section

Vaginal birth after C-section examines vaginal birth after c-section; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Vaginal bleeding between periods

Vaginal bleeding between periods is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Vaginal bleeding in early pregnancy

Vaginal bleeding in early pregnancy is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Vaginal bleeding in late pregnancy

Vaginal bleeding in late pregnancy is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Vaginal bleeding in pregnancy

Vaginal bleeding in pregnancy is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Vaginal cysts

Vaginal cysts is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Vaginal delivery - discharge

Vaginal delivery - discharge is a treatment or care intervention for vaginal delivery - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Vaginal dryness alternative treatments

Vaginal dryness alternative treatments is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Vaginal itching and discharge - adult and adolescent

Vaginal itching and discharge - adult and adolescent is a treatment or care intervention for vaginal itching and discharge - adult and adolescent; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Vaginal itching and discharge - child

Vaginal itching and discharge - child is a treatment or care intervention for vaginal itching and discharge - child; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Vaginal or uterine bleeding

Vaginal or uterine bleeding is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Vaginal sponge and spermicides

Vaginal sponge and spermicides is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Vaginal yeast infection

A vaginal yeast infection is usually Candida overgrowth causing itching, burning, soreness, and thick discharge without the odor typical of many bacterial infections.

Synonyms:

Vaginitis - self-care

Vaginitis - self-care is a treatment or care intervention for vaginitis - self-care; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Vaginitis test - wet mount

Vaginitis test - wet mount examines vaginitis test - wet mount; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Vancomycin-resistant enterococci - hospital

Vancomycin-resistant enterococci are enterococcal bacteria resistant to vancomycin and capable of causing healthcare-associated urinary, bloodstream, wound, or other infections.

Synonyms:

Varicella (chickenpox) vaccine - what you need to know

Varicella (chickenpox) vaccine - what you need to know is a treatment or care intervention for varicella (chickenpox) vaccine - what you need to know; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Varicose and other vein problems - self-care

Varicose and other vein problems - self-care is a treatment or care intervention for varicose and other vein problems - self-care; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Varicose vein - noninvasive treatment

Varicose vein - noninvasive treatment is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Varicose vein stripping

Varicose vein stripping is a treatment or care intervention for varicose vein stripping; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Varicose veins - what to ask your doctor

Varicose veins - what to ask your doctor examines varicose veins - what to ask your doctor; interpretation depends on the specimen or body region, test

method, reference range, and clinical question.

Synonyms:

Varnish poisoning

Varnish poisoning involves toxic or environmental exposure to varnish poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Vasoactive intestinal peptide test

Vasoactive intestinal peptide test examines vasoactive intestinal peptide test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

VDRL test

VDRL test examines vdr test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Venogram

Venogram examines venogram; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Venogram - leg

Venogram - leg examines venogram - leg; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Venous ulcers - self-care

Venous ulcers - self-care is a treatment or care intervention for venous ulcers - self-care; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Ventral hernia repair

Ventral hernia repair is a treatment or care inter-

vention for ventral hernia repair; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Ventriculoperitoneal shunt - discharge

Ventriculoperitoneal shunt - discharge is a treatment or care intervention for ventriculoperitoneal shunt - discharge; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Ventriculoperitoneal shunting

Ventriculoperitoneal shunting is a treatment or care intervention for ventriculoperitoneal shunting; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Vertebrobasilar circulatory disorders

Vertebrobasilar circulatory disorders is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Vertical sleeve gastrectomy

Vertical sleeve gastrectomy examines vertical sleeve gastrectomy; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Vertigo-associated disorders

Vertigo-associated disorders cause an illusion of movement from vestibular, neurologic, visual, medication-related, or systemic dysfunction and may be accompanied by imbalance, nausea, or hearing symptoms.

Synonyms:

Vesicles

Vesicles concerns vesicles; its medical significance

is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Victim assistance - resources

Victim assistance - resources examines victim assistance - resources; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Viral arthritis

Viral arthritis is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Viral gastroenteritis (stomach flu)

Viral gastroenteritis is infection of the stomach and intestines causing vomiting, watery diarrhea, cramps, and fever, with dehydration as the main acute risk.

Synonyms:

Virilization

Virilization concerns virilization; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Virtual colonoscopy

Virtual colonoscopy concerns virtual colonoscopy; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Visceral larva migrans

Visceral larva migrans concerns visceral larva migrans; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Visceromegaly

Visceromegaly concerns visceromegaly; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Vision - night blindness

Vision - night blindness concerns vision - night blindness, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Visiting your baby in the NICU

Visiting your baby in the NICU addresses care related to visiting your baby in the nicu, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Visual acuity test

Visual acuity test examines visual acuity test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Vitamin A blood test

Vitamin A blood test examines vitamin a blood test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Vitamin B12 deficiency anemia

Vitamin B12 deficiency anemia is megaloblastic anemia from inadequate B12, impaired absorption, or medication effects and may cause irreversible neurologic injury if prolonged.

Synonyms:

Vitamin B12 level

Vitamin B12 level is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

tions.

Synonyms:

Vitamin C

Vitamin C is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Vitamin C and colds

Vitamin C and colds is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Vitamin K deficiency bleeding of the newborn

Vitamin K deficiency bleeding of the newborn is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

VLDL test

VLDL test examines vldl test; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Volvulus - childhood

Volvulus - childhood concerns volvulus - childhood; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

von Gierke disease

von Gierke disease is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

tions.

Synonyms:

Vaccinations Hepatitis A and B (Hepatitis Immunizations)

Alternate index label for Hepatitis Immunizations.

Synonyms:

Vaccinations Travel (Travel Medicine)

Alternate index label for Travel Medicine.

Synonyms:

Vaginal Birth After Cesarean Delivery Concerns

Vaginal birth after cesarean may be appropriate for selected patients, but uterine-scar rupture and emergency cesarean risks must be weighed against avoiding repeat surgery. Prior incision, number of cesareans, facility resources, pregnancy factors, and patient preference guide planning.

Synonyms:

Vaginal Dryness and Vaginal Atrophy

Vaginal atrophy is thinning and reduced lubrication from lower estrogen, commonly around menopause but also after childbirth, breastfeeding, cancer treatment, or some medicines. Moisturizers, lubricants, pelvic care, and selected local or systemic treatments may relieve symptoms.

Synonyms:

Vaginal Pain (Vulvodynia)

Alternate index label for Vulvodynia.

Synonyms:

Vaginitis Overview

Vaginitis causes vaginal irritation, itching, burning, odor, discharge, or pain and may result from yeast, bacterial vaginosis, sexually transmitted infection, irritants, hormones, or skin disease. Testing is often needed because symptoms overlap and treatments differ.

Synonyms:

Vaginosis Bacterial (Bacterial Vaginosis

(Causes, Symptoms, Treatment))

Alternate index label for Bacterial Vaginosis (Causes, Symptoms, Treatment).

Synonyms:

Vancomycin-Resistant Enterococci (VRE)

Alternate index label for VRE.

Synonyms:

Varicella (Chickenpox (Varicella))

Alternate index label for Chickenpox (Varicella).

Synonyms:

Varices Bleeding (Bleeding Varices)

Alternate index label for Bleeding Varices.

Synonyms:

Vascular Disease

Vascular disease affects arteries, veins, or lymphatic vessels and includes atherosclerosis, aneurysm, peripheral artery disease, venous thrombosis, varicose disease, and inflammatory disorders. Symptoms and treatment depend on the vessel and may involve risk-factor control, medicines, procedures, or surgery.

Synonyms:

Veins Spider (Varicose Veins)

Alternate index label for Varicose Veins.

Synonyms:

Veins Varicose (Varicose Veins)

Alternate index label for Varicose Veins.

Synonyms:

Vertigo Overview

Vertigo is the false sensation of movement, often caused by inner-ear disorders such as benign positional vertigo, vestibular neuritis, or Ménière disease, but sometimes by migraine or brain disease. New neurologic deficits, severe headache, or inability to walk is urgent.

Synonyms:

Vibrio Infection (Vibriosis)

Alternate index label for Vibriosis.

Synonyms:

Virus Chikungunya (Chikungunya Virus Infection)

Alternate index label for Chikungunya Virus Infection.

Synonyms:

Vitamins & Exercise

Vitamins support defined physiologic functions, but exercise does not generally require high-dose supplementation when diet is adequate. Deficiency, malabsorption, pregnancy, age, and medical disease may justify targeted supplements; excess can be harmful.

Synonyms:

Vitamins and Calcium Supplements

Vitamin and calcium supplements are useful when dietary intake or laboratory findings show a need, such as deficiency or bone-health risk. Dose, absorption, kidney function, stone risk, and interactions with medicines should be reviewed rather than assumed safe.

Synonyms:

Vitamins Exercise Heart Attack Prevention Series (Vitamins & Exercise)

Alternate index label for Vitamins & Exercise.

Synonyms:

Vitamins in the Morning or in the Night

The best time for a vitamin depends on the nutrient, formulation, food requirements, side effects, and interactions. Fat-soluble vitamins are often absorbed with food, while some medicines and minerals need separation; consistency and appropriate dosing matter more than a universal time.

Synonyms:

Vomiting (Nausea and Vomiting)

Alternate index label for Nausea and Vomiting.

Synonyms:

Vomiting Cyclic (Cyclic Vomiting Syndrome (CVS))

Alternate index label for Cyclic Vomiting Syndrome (CVS).

Synonyms:

VOR Reflex

The vestibulo-ocular reflex stabilizes gaze by moving the eyes opposite to head movement through inner-ear, brainstem, and eye-muscle pathways. Damage can cause oscillopsia, vertigo, imbalance, and abnormal head-impulse testing.

Synonyms:

VRE (Vancomycin-Resistant Enterococci (VRE))

Alternate index label for Vancomycin-Resistant Enterococci (VRE).

Synonyms:

VSD (Ventricular Septal Defect)

Alternate index label for Ventricular Septal Defect.

Synonyms:

W

Waardenburg Syndrome

A group of inherited disorders characterized by sensorineural hearing loss and pigmentary abnormalities of the eyes, hair, or skin. Dystopia canthorum, limb abnormalities, or intestinal aganglionosis may occur in particular genetic forms.

Synonyms:

Wall Stress

Force exerted on a heart chamber wall by pressure inside the chamber. **Synonyms:**

Warfarin

An anticoagulant that reduces blood clot formation by inhibiting vitamin-K-dependent clotting factors. **Synonyms:**

Wart

A benign skin growth caused by infection with human papillomavirus. **Synonyms:** Verruca

Water Brash

A sudden increase in salty saliva associated with acid reflux. **Synonyms:**

Wernicke's Area

A brain region important for understanding spoken and written language. **Synonyms:** Wernicke area

White-Coat Hypertension

High blood pressure in a medical setting with normal readings outside it. **Synonyms:** White-coat effect

Will

A legal document specifying how a person's property

should be distributed after death. **Synonyms:** Last will and testament

Withdrawal

Physical or psychological symptoms that occur when an addictive substance is reduced or stopped. **Synonyms:** Withdrawal syndrome

Working Memory

The short-term holding and manipulation of information during a task. **Synonyms:**

WAGR Syndrome

A contiguous-gene deletion syndrome involving Wilms tumor predisposition, aniridia, genitourinary anomalies, and variable developmental delay. It usually involves chromosome 11p13 and requires tumor surveillance and multidisciplinary care.

Synonyms:

Waist Circumference

A measure of abdominal adiposity taken at a standardized site. Larger measurements are associated with increased cardiometabolic risk, but clinically used thresholds vary by sex, ancestry, and guideline; it complements, rather than replaces, body-mass index and other assessment.

Synonyms:

Waldenstrom Macroglobulinemia

A rare B-cell lymphoplasmacytic lymphoma characterized by bone marrow infiltration by lymphoplasmacytic cells and production of monoclonal IgM paraprotein. It accounts for less than 2 percent of hematologic malignancies and typically affects older adults (median age 63-65 years).

Synonyms:

Waldenstrom's macroglobulinemia

A lymphoplasmacytic cancer of the bone marrow that produces excess IgM and may cause anemia, enlarged lymph nodes, or hyperviscosity symptoms.

Synonyms:

Waldenström's macroglobulinemia

An indolent B-cell lymphoplasmacytic lymphoma characterized by the production of a monoclonal IgM paraprotein, causing hyperviscosity syndrome with visual disturbances, bleeding, and neurological symptoms. It typically affects elderly patients and involves the bone marrow, lymph nodes, spleen, and liver.

Synonyms:

Walker

Walking aid for stability. Types: standard, rollator (wheels), knee walkers.

Synonyms:

Wallerian Degeneration

The breakdown of the portion of a nerve fiber separated from its cell body after nerve injury.

Synonyms:

Walking Speed

The rate at which a person walks, often measured over a defined distance. It can provide information about mobility and function, but no single speed determines disability in every person.

Synonyms:

Wandering Spleen

Abnormal mobility of the spleen caused by laxity or absence of its supporting ligaments. It may be asymptomatic or cause abdominal pain, splenic enlargement, torsion, infarction, or acute abdomen.

Synonyms:

Warthin Tumor

A benign salivary-gland neoplasm composed of oncocytic epithelial and lymphoid tissue, usually arising

in the parotid gland. It is strongly associated with tobacco exposure, may be multifocal or bilateral, and is generally managed according to symptoms, diagnosis, and growth.

Synonyms:

Warts

Warts are benign epidermal growths caused by human papillomavirus, spreading by contact and varying in appearance by site and viral type.

Synonyms:

Warty Dyskeratoma

A benign follicular keratinizing tumor presenting as a solitary umbilicated papule or nodule, often on the head or neck. Histology shows a cup-shaped invagination filled with keratin and acantholytic dyskeratotic cells.

Synonyms:

Watchful Waiting

Planned observation without immediate active treatment, with clinical review and treatment if symptoms develop or the condition progresses. It may be used for selected cancers and other slowly progressive conditions.

Synonyms:

Water Birth (Underwater Delivery)

Delivery of a baby while the birthing person remains in a tub or pool of warm water. It may reduce perceived labor pain for some people, but evidence about delivery-related benefits and risks is limited. Eligibility, monitoring, and facility policies determine whether it is offered.

Synonyms: Underwater Delivery

Water Flosser

Device using water stream to clean between teeth. Adjunct to brushing and flossing.

Synonyms:

Water Intoxication

A potentially life-threatening dilutional hyponatremia caused by excessive water intake or retention

relative to the body's ability to excrete free water. Severe cases can cause headache, confusion, seizures, or coma.

Synonyms:

Water Soluble Toxins

Toxic substances that dissolve readily in water. Their elimination depends on the substance, kidney function, metabolism, protein binding, and other properties; some may be removed by dialysis.

Synonyms:

Water-Borne Disease

Disease transmitted via contaminated water. Examples: cholera, typhoid, hepatitis A.

Synonyms:

Water-Deprivation Test

A supervised dynamic test assessing the kidney's ability to concentrate urine when free-water intake is withheld, followed when appropriate by desmopressin. It helps distinguish central diabetes insipidus, nephrogenic diabetes insipidus, and primary polydipsia but requires careful monitoring for hypernatremia and dehydration.

Synonyms:

Watery Eyes

Excessive tearing caused by irritation, allergy, infection, dry-eye reflex tearing, or blockage of the tear-drainage system. Persistent unilateral tearing or pain requires ocular assessment.

Synonyms:

Waxy Casts

Broad refractile cylindrical structures with smooth appearance indicating severe chronic kidney disease. Form from degeneration of granular casts in dilated tubules. Broad diameter reflects formation in dilated collecting ducts. Relatively specific for advanced CKD with significant tubular atrophy.

Synonyms:

Weakness

Weakness is reduced force generation that may re-

flect muscle, nerve, neuromuscular-junction, brain, spinal cord, metabolic, systemic, or functional disease. limited to one body region. Causes include nerve or muscle disease, stroke, spinal disorders, metabolic abnormalities, infection, and deconditioning; sudden one-sided weakness is an emergency.

Synonyms:

Wear Debris

Particles generated by mechanical abrasion or degradation of implant materials. Macrophage-mediated inflammation around debris can produce osteolysis, implant loosening, and failure of an arthroplasty.

Synonyms:

Weaver Syndrome

A congenital overgrowth and neurodevelopmental disorder associated with pathogenic variants in EZH2. It may cause prenatal overgrowth, advanced bone age, characteristic facial features, hypotonia, developmental delay, and variable intellectual disability.

Synonyms:

Weber Test

The Weber test is a screening test for lateralization of hearing that uses a vibrating tuning fork (typically 512 Hz) placed on the midline of the skull (vertex or forehead) to determine whether the sound is heard equally in both ears or louder in one ear, providing information about the type and side of hearing loss.

Synonyms:

Wedge resection

Surgical removal of a wedge-shaped piece of tissue, typically lung or breast. Used for diagnosis or treatment of localized lesions. Less extensive than lobectomy.

Synonyms:

Wegener's Granulomatosis

Wegener's granulomatosis, now called granulomatosis with polyangiitis, is a systemic vasculitis characterized by necrotizing granulomatous inflammation

of the upper and lower respiratory tracts and pauci-immune necrotizing glomerulonephritis.

Synonyms:

Weight Gain in Pregnancy

Recommended gestational weight gain according to the Institute of Medicine (IOM) guidelines, based on prepregnancy BMI. Underweight (BMI <18.5): 28-40 lbs (12.5-18 kg). Normal weight (BMI 18.5-24.9): 25-35 lbs (11.5-16 kg). Overweight (BMI 25-29.9): 15-25 lbs (7-11.5 kg). Obese (BMI ≥ 30): 11-20 lbs (5-9 kg).

Synonyms:

Weight Loss

The intentional reduction of body weight, typically through a combination of dietary modification, increased physical activity, and behavioral changes. Achieving sustainable weight loss requires creating a consistent calorie deficit while preserving lean muscle mass through adequate protein intake and strength training.

Synonyms:

Weight Loss and Management

Weight loss and management encompasses the ongoing process of achieving and maintaining a healthy body weight through sustainable lifestyle modifications.

Synonyms:

Weight Loss Medications

Pharmacologic agents approved for the treatment of obesity when used in conjunction with lifestyle modifications.

Synonyms:

Weil's Disease

A zoonotic bacterial infection caused by spirochaetes of the genus *Leptospira*, transmitted through contact with water or soil contaminated with the urine of infected animals (rodents, cattle, dogs). See Leptospirosis.

Synonyms:

Wen (Epidermoid Cyst)

A common benign cyst beneath the skin that is lined by squamous epithelium and contains keratin debris.

Synonyms: Epidermoid Cyst

Werner Syndrome

An autosomal-recessive progeroid disorder caused most often by pathogenic variants in the WRN gene. It typically presents after puberty with premature ageing, short stature, bilateral cataracts, scleroderma-like skin changes, thin limbs, diabetes, osteoporosis, vascular disease, and increased risk of malignancy.

Synonyms:

Wernicke's Encephalopathy

An acute neurologic disorder caused by thiamine deficiency, classically involving confusion, eye-movement abnormalities, and gait or coordination impairment. It requires prompt thiamine treatment.

Synonyms:

Wernicke-Korsakoff Syndrome

A neurologic disorder caused by thiamine deficiency, combining acute or previous Wernicke encephalopathy with persistent memory impairment and confabulation in some patients. Causes include alcohol-use disorder, malnutrition, and prolonged vomiting.

Synonyms:

West Nile Encephalitis

Inflammation of the brain caused by neuroinvasive West Nile virus, transmitted mainly by mosquitoes. It may cause fever, headache, confusion, tremor, weakness, seizures, or coma. There is no specific routine antiviral treatment; severe illness requires hospital-based supportive care.

Synonyms:

West Nile Virus

A mosquito-borne flavivirus that can cause asymptomatic infection, a febrile illness, or neuroinvasive disease such as meningitis, encephalitis, or acute flaccid paralysis. Risk of severe disease is higher

in older adults and people with certain medical conditions.

Synonyms:

West Syndrome

An infantile epileptic encephalopathy characterized by epileptic spasms, hypsarrhythmia on electroencephalography, and developmental regression or arrest. Causes include structural brain disease, genetic disorders, metabolic disease, or acquired brain injury.

Synonyms:

Westermarck Sign

A focal area of decreased pulmonary vascularity distal to an occluded pulmonary artery segment on a chest radiograph. It may occur with pulmonary embolism but is neither sensitive nor specific.

Synonyms:

Wharton Jelly

A gelatinous substance (mucopolysaccharide matrix) surrounding the umbilical cord vessels, composed primarily of hyaluronic acid and chondroitin sulfate. It protects the umbilical vessels from compression and kinking during fetal movement and uterine contractions.

Synonyms:

Wheal

Raised, itchy swelling of skin (urticaria/hives). Caused by mast cell degranulation and histamine release. Examples: insect bite, allergic reaction, dermatographism.

Synonyms:

Wheelchair

Mobility device for patients with walking difficulties. Types: manual, power. Components: seat, backrest, wheels, footrests, armrests. Assessment: seating evaluation, pressure relief, posture. Training: mobility, transfers, safety.

Synonyms:

Wheelchair Seating and Positioning

Assessment and configuration of a wheelchair, cushion, supports, and posture to optimize stability, propulsion, comfort, function, pressure distribution, and prevention of musculoskeletal deformity.

Synonyms:

Wheelchair Skills

Training for wheelchair users: propulsion, maneuvering, obstacles, slopes, stairs, transfers.

Synonyms:

Wheezing

Wheezing is a musical sound from narrowed lower airways, commonly caused by asthma, infection, chronic lung disease, allergy, or an inhaled foreign body. airflow through narrowed or compressed lower airways during expiration (and occasionally inspiration). Pathophysiology: bronchospasm, mucosal edema, airway inflammation, or intraluminal secretions.

Synonyms:

Whiplash Injury

An acceleration-deceleration injury to the cervical spine, most commonly resulting from rear-end motor vehicle collisions. Mechanism: sudden hyperextension followed by hyperflexion of the neck causes stretching or tearing of cervical muscles, ligaments, facet joint capsules, and annulus fibrosus of intervertebral discs.

Synonyms:

Whipple Disease

A rare systemic bacterial infection caused by *Tropheryma whipplei*, affecting the small intestine and multiple organ systems. Presents with arthralgias (prodromal, years before GI symptoms), weight loss, chronic diarrhea, steatorrhea, and abdominal pain.

Synonyms:

Whipple Procedure

Pancreaticoduodenectomy for cancers of the pancreatic head, distal bile duct, or ampulla. Involves removal of the pancreatic head, duodenum, distal

bile duct, and gallbladder with three anastomoses: hepaticojejunostomy, pancreaticojejunostomy, and gastrojejunostomy. The pylorus-preserving variant maintains the entire stomach.

Synonyms:

Whipple Triad

A clinical framework supporting the diagnosis of symptomatic hypoglycemia: symptoms consistent with hypoglycemia, a documented low blood-glucose concentration, and improvement after the glucose level is raised. It is used when evaluating possible hypoglycemia, including suspected insulinoma.

Synonyms:

Whipworm (Trichuriasis)

Intestinal infection caused by the soil-transmitted helminth *Trichuris trichiura* (whipworm), endemic in tropical and subtropical regions with poor sanitation. Humans acquire infection by ingesting embryonated eggs from contaminated soil, food, or water.

Synonyms: Trichuriasis

Whispered Pectoriloquy

The ability to hear whispered words clearly through the stethoscope over consolidated lung tissue. It is a sign of pulmonary consolidation. Normally, whispered words are barely audible over the lung fields. It is one of the classic signs of pneumonia on physical examination.

Synonyms:

White Blood Cell Count

WBC count: the total number of leukocytes per unit volume (normal $4.0\text{--}11.0 \times 10^9/\text{L}$), part of the CBC with differential (neutrophils, lymphocytes, monocytes, eosinophils, basophils). Leukocytosis: infection (neutrophilia), inflammation, stress, steroids, leukemia (marked), corticosteroids.

Synonyms:

White Blood Cell Labeling

Nuclear medicine technique labeling WBCs with Tc-99m. Used for infection localization.

Synonyms:

White Cell

The cells of the immune system that defend the body against infection and foreign substances. Produced in the bone marrow from hematopoietic stem cells.

Synonyms:

White Cell Count

A laboratory measurement of the number of white blood cells (leukocytes) in a given volume of blood, part of the complete blood count (CBC). Normal range: 4,000-11,000 cells/ μL ($4\text{--}11 \times 10^9/\text{L}$). Differential white cell count measures the proportion of each leukocyte type: neutrophils, lymphocytes, monocytes, eosinophils, basophils.

Synonyms:

White Infarction

White infarction, also known as anemic infarction, occurs in solid organs with end-arterial circulation where collateral blood supply is limited, resulting in pale, well-demarcated areas of coagulative necrosis.

Synonyms: anemic infarction, occurs in solid organs with.

White Matter

Regions of the brain and spinal cord composed primarily of myelinated nerve fibers, responsible for transmitting signals between brain regions.

Synonyms:

Whites (Leucorrhoea)

A non-bloody, physiological or pathological vaginal discharge. Physiological leucorrhoea: normal, clear to whitish, odourless discharge that varies with the menstrual cycle (increased at ovulation, pre-menstrually, during pregnancy, sexual arousal, and with oral contraceptive use).

Synonyms: Leucorrhoea

Whole Exome Sequencing

Sequencing the protein-coding regions of the genome, which make up a small fraction of total DNA. It can identify variants associated with dis-

ease but does not detect all genetic causes; its yield depends on the disorder, test quality, and interpretation.

Synonyms:

Whole Genome Sequencing

Determining complete DNA sequence of an individual's genome. Cost decreasing, clinical applications expanding. Identifies coding and non-coding variants.

Synonyms:

Whole-Body Scan

Acquisition of images covering entire body. Used for oncology staging, infection localization. PET/CT typically neck-to-mid-thigh or full body.

Synonyms:

Whole-Brain Radiation Therapy

Radiation directed at the entire brain, used for multiple brain metastases, leptomeningeal disease, and prophylactic cranial irradiation in small cell lung cancer and acute lymphoblastic leukemia.

Synonyms:

Whole-Genome Sequencing

Sequencing of nearly the complete nuclear genome, including coding and noncoding regions, together with mitochondrial DNA when covered by the assay. It can detect a broad range of variants but generates substantial interpretation and incidental-finding challenges.

Synonyms:

Whooping Cough

A highly contagious bacterial infection caused by *Bordetella pertussis*, producing characteristic paroxysmal cough with whooping inspiratory sound. See Pertussis.

Synonyms:

Williams Syndrome

A microdeletion syndrome involving the elastin gene on chromosome 7q11.23. Features: elfin facies, supravalvular aortic stenosis, hypercalcemia,

intellectual disability with strong verbal skills, and overly friendly personality. Often associated with connective tissue abnormalities.

Synonyms:

Wilms Tumor

A malignant embryonal tumor of the kidney in children. It may present as an abdominal mass, pain, hematuria, or an incidental finding and may be associated with syndromes such as WAGR or Beckwith-Wiedemann syndrome. Treatment and prognosis depend on stage and tumor biology.

Synonyms:

Wilms' tumor (Nephroblastoma)

An embryonal malignant tumor of the kidney that usually occurs in young children. It may be associated with congenital syndromes, and treatment and prognosis depend on tumor stage, histology, and molecular features.

Synonyms: Nephroblastoma

Wilson Disease

Autosomal recessive copper metabolism disorder (ATP7B gene). Copper accumulation in liver, brain, cornea. Kayser-Fleischer rings, hepatopathy, movement disorder, psychiatric symptoms. Treatment: chelation (penicillamine, trientine), zinc, liver transplant.

Synonyms:

Wilson's disease

An autosomal recessive disorder of copper metabolism caused by mutations in the ATP7B gene, leading to impaired biliary copper excretion and toxic copper accumulation in the liver, brain, cornea, and other organs.

Synonyms:

Windowing

Adjusting CT image brightness and contrast to optimize visualization of specific tissues. Bone window: wide window width, high level. Soft tissue window: narrow width, mid level. Lung window: wide width, low level.

Synonyms:

Windpipe

The windpipe, a 10-12 cm fibrocartilaginous tube from the larynx (C6) to the carina (T4/T5) where it bifurcates into main bronchi. See Trachea.

Synonyms:

Wireless Motility Capsule

Ingestible capsule that measures pH, pressure, and temperature throughout the gastrointestinal tract. Provides regional transit times through the stomach, small bowel, and colon in a single test. The pH sensor identifies transition points between segments based on characteristic pH changes.

Synonyms:

Wiskott-Aldrich Syndrome

X-linked recessive disorder (WAS gene mutation, encodes WASP protein, regulates actin polymerization in hematopoietic cells). Triad: microthrombocytopenia (small platelets, <70 fl), eczema, recurrent infections (encapsulated bacteria, viruses). Combined immunodeficiency with progressive T-cell lymphopenia.

Synonyms:

Withdrawal Reflex

A protective polysynaptic spinal reflex in which a painful stimulus causes flexion (withdrawal) of the stimulated limb, removing it from the source of injury, with reciprocal extension of the contralateral limb (crossed extensor reflex) to maintain posture.

Synonyms:

Withdrawal Symptoms

Physical or psychological symptoms that occur when a person stops or reduces a substance or medicine after the body has adapted to it. The symptoms depend on the substance, duration of use, and the person's health.

Synonyms:

Withdrawal Syndrome

A predictable set of signs and symptoms that occur

when a drug is discontinued or the dose is reduced after chronic use, reflecting the physiological rebound from drug adaptation.

Synonyms:

Wolff-Parkinson-White Syndrome

A pre-excitation syndrome caused by an accessory pathway (bundle of Kent) connecting atria and ventricles, bypassing the AV node. ECG shows short PR interval (<0.12 s), delta wave (slurred upstroke of QRS), and widened QRS.

Synonyms:

Wolfram Syndrome

Autosomal recessive disorder caused by mutations in the WFS1 gene encoding wolframin. Classic triad of diabetes mellitus, optic atrophy, and diabetes insipidus. Additional features include sensorineural deafness, neurodegeneration, and psychiatric illness. Onset of diabetes typically in the first decade.

Synonyms:

Wolman's Disease

A severe lysosomal acid-lipase deficiency presenting in infancy with hepatosplenomegaly, adrenal calcification, malabsorption, vomiting, diarrhea, and failure to thrive. It is a severe form of lysosomal acid-lipase deficiency and can be fatal early without treatment.

Synonyms:

Wood Lamp Examination

Inspection of skin under long-wave ultraviolet A light in a darkened room. It can accentuate pigimentary differences and produce characteristic fluorescence in selected infections, but findings are not independently diagnostic.

Synonyms:

Woods Corkscrew Maneuver

An internal rotation maneuver for shoulder dystocia where the operator inserts a hand and rotates the fetal shoulders 180 degrees by applying pressure to the posterior aspect of the anterior shoulder. This disimpacts the shoulder from behind the symphysis

pubis. Can be repeated if the shoulder re-impacts in the new position.

Synonyms:

Woods Screw Maneuver

A rotational maneuver used during shoulder dystocia to rotate the fetal shoulders and assist delivery.

Synonyms:

Word Recognition Scoring

An audiologic test measuring how accurately a person repeats or identifies spoken words at a comfortable listening level.

Synonyms:

Word Salad

Severe disorganized speech consisting of a jumble of words and phrases that lack meaning or logical connection. It is a hallmark of formal thought disorder in schizophrenia and represents the most severe form of disorganized speech. It reflects profound disruption of language processing.

Synonyms:

Wound

An injury in which tissue is damaged by trauma, surgery, pressure, heat, chemicals, or other causes. Wounds may be open or closed and vary in depth, contamination, and effect on nearby structures.

Synonyms:

Wound Care

Management of traumatic wounds: irrigation, debridement, closure (sutures, staples, glue), dressing. Tetanus prophylaxis based on vaccination history and wound type. Antibiotics for contaminated wounds, animal/human bites, or signs of infection. Healing: primary, secondary, tertiary intention.

Synonyms:

Wound Complication

A problem that develops during healing, such as infection, separation of wound edges, bleeding, fluid collection, tissue death, or excessive scarring. Increasing pain, redness, swelling, drainage, fever, or

wound opening should be assessed promptly.

Synonyms:

Wound Dehiscence

Separation of the layers of a surgical wound after closure, most commonly occurring within 3-14 days postoperatively.

Synonyms:

Wound Healing

Complex process of tissue repair. Phases: hemostasis, inflammation, proliferation, remodeling. Implant integration depends on healing.

Synonyms:

Wound Healing Phases

Wound healing involves overlapping stages of hemostasis, inflammation, tissue formation, epithelial coverage, and remodeling. The duration and result depend on the wound, blood supply, infection, nutrition, and overall health.

Synonyms:

Wound Infection

Infection of a wound by microorganisms, causing findings such as increasing pain, redness, warmth, swelling, pus, fever, or delayed healing.

Synonyms:

Wound VAC

Vacuum-assisted closure for wound healing. Foam dressing connected to vacuum pump. Removes exudate, reduces edema, promotes granulation. Used for complex wounds, surgical sites, pressure ulcers.

Synonyms:

Wrisberg Ganglion

A sensory ganglion associated with the intermediate nerve of the facial nerve.

Synonyms:

Wrist Drop

Inability to extend the wrist and fingers, usually caused by radial nerve dysfunction.

Synonyms:

Wrist Joint

Condylod joint synovial joint between distal radius and articular disc proximally and scaphoid/lunate/triquetrum distally. Allows flexion, extension, radial/ulnar deviation, circumduction. The triangular fibrocartilage complex absorbs ulnar side load.

Synonyms:

Wrist Pain

Pain in or around the wrist, commonly caused by sprain, fracture, tendinitis, arthritis, or nerve compression such as carpal tunnel syndrome. Persistent pain, deformity, numbness, or weakness requires assessment.

Synonyms:

Wuchereria

A genus of filarial nematodes that includes *Wuchereria bancrofti*, a major cause of lymphatic filariasis. Infection is transmitted by mosquitoes and may cause lymphangitis, chronic lymphedema, hydrocele, and elephantiasis.

Synonyms:

Wheat Allergy

An immune reaction to proteins in wheat that may cause skin, digestive, or breathing symptoms.

Synonyms:

Whiplash

A neck injury caused by a rapid back-and-forth movement of the head.

Synonyms:

Whipple's Disease

A rare bacterial infection that can impair intestinal absorption and affect multiple organs.

Synonyms:

Wheeze

A high-pitched whistling sound produced by narrowed airways during breathing.

Synonyms:

Wright Stain

A blood-cell stain used to identify and classify cells in a blood smear.

Synonyms:

White Blood Cells

Leukocytes, immune cells that circulate in blood and protect the body against infection, foreign substances, and abnormal cells.

Synonyms:

Wolman Disease

A rare autosomal-recessive lysosomal storage disorder caused by lysosomal acid lipase deficiency, leading to accumulation of cholesteryl esters and triglycerides, adrenal calcification, hepatosplenomegaly, diarrhea, and severe early-onset disease.

Synonyms:

Wernicke Encephalopathy

An acute neurologic disorder caused by thiamine deficiency, classically producing confusion, impaired coordination, and abnormal eye movements. It is a medical emergency requiring prompt thiamine treatment.

Synonyms:

Wrist Fracture

A break in one or more bones near the wrist, most commonly the distal radius or ulna, usually caused by a fall, direct trauma, or weakened bone.

Synonyms:

Wrist Sprain

Stretching or tearing of one or more ligaments supporting the wrist, causing pain, swelling, bruising, and reduced movement after injury.

Synonyms:

Wet Macular Degeneration

The neovascular form of age-related macular degeneration in which abnormal blood vessels grow beneath or within the retina and leak fluid or blood,

causing rapid central-vision loss.

Synonyms:

Wound Evisceration

Separation of a surgical wound with protrusion of internal organs or tissue through the opening. It is a surgical emergency requiring protection of the exposed tissue and urgent medical evaluation.

Synonyms:

Common Warts (Verruca Vulgaris)

Benign, rough-surfaced skin growths caused by infection with human papillomavirus (HPV), commonly affecting the hands and fingers.

Synonyms: Verruca Vulgaris

Plane Warts (Verruca Plana)

Small, smooth, relatively flat warts caused by HPV, often occurring in groups on the face, hands, or legs.

Synonyms: Verruca Plana

Digitate Warts (Verruca Digitata)

Filiform or finger-like warts, usually arising on the face or neck and caused by HPV infection.

Synonyms: Verruca Digitata

Plantar Warts (Verruca Plantaris)

Warts on the soles of the feet caused by HPV. Pressure may push them inward and produce pain during walking.

Synonyms: Verruca Plantaris

Mucosal Warts

HPV-associated warts arising on mucous membranes, including the oral, genital, or anorectal mucosa.

Synonyms:

Laryngeal Warts (Recurrent Respiratory Papillomatosis)

Benign papillomatous growths caused by HPV in the larynx or respiratory tract. They may cause hoarseness, stridor, or airway obstruction.

Synonyms: Recurrent Respiratory Papillomatosis

Wassermann Reaction

A historical complement-fixation blood test for syphilis. It has largely been replaced by modern treponemal and nontreponemal serologic tests.

Synonyms:

Wasp Sting

A venomous insect sting that may cause localized pain, redness, and swelling; severe reactions can include anaphylaxis or, rarely, systemic envenomation.

Synonyms:

Water-Hammer Pulse (Corrigan Pulse)

A pulse with a rapid upstroke and collapse, classically associated with significant aortic regurgitation and other states of increased pulse pressure.

Synonyms: Corrigan Pulse

Weaning

Gradual reduction and eventual discontinuation of breastfeeding, bottle-feeding, or a medicine or other treatment, according to the relevant clinical context.

Synonyms:

Wenckebach Phenomenon (Mobitz Type I AV Block)

Progressive prolongation of the PR interval followed by a nonconducted atrial impulse and a dropped QRS complex. It reflects intermittent impairment of atrioventricular conduction.

Synonyms: Mobitz Type I AV Block

White Finger

Episodic pallor or whitening of the fingers caused by vasospasm, commonly associated with Raynaud phenomenon or hand-arm vibration syndrome.

Synonyms:

White Leg (Phlegmasia Alba Dolens)

Painful, marked swelling and pallor of a limb caused by extensive deep venous thrombosis, usually involving major venous outflow. It requires urgent assessment.

Synonyms: Phlegmasia Alba Dolens

Whitlow (Paronychia)

Acute or chronic infection and inflammation of the tissues around a fingernail or toenail, usually caused by bacteria, fungi, or repeated moisture and trauma.

Synonyms: Paronychia

Widal Reaction

An agglutination test historically used to detect antibodies associated with Salmonella Typhi and paratyphoid infection. Its diagnostic accuracy is limited, and results require clinical interpretation.

Synonyms:

Wisdom Tooth (Third Molar)

The last molar in each dental quadrant, usually erupting in late adolescence or early adulthood. Impaction may cause pain, infection, or damage to adjacent teeth.

Synonyms: Third Molar

Witch's Milk (Neonatal Galactorrhea)

A temporary milk-like breast secretion in a newborn caused by exposure to maternal hormones. It usually resolves without treatment; the breasts should not be squeezed.

Synonyms: Neonatal Galactorrhea

Wool-Sorter's Disease (Anthrax)

An occupational form of inhalational anthrax caused by inhalation of spores of Bacillus anthracis, historically associated with handling contaminated wool or animal products.

Synonyms: Anthrax

Word Blindness (Alexia)

An acquired neurological disorder in which a person loses or markedly impairs the ability to read despite adequate vision and previously acquired language skills.

Synonyms: Alexia

Word Deafness (Auditory Verbal Agnosia)

An acquired inability to understand spoken words despite adequate hearing, often caused by dysfunction

of auditory-language pathways.

Synonyms: Auditory Verbal Agnosia

Worm Infestation (Helminthiasis)

Infection by parasitic worms, including nematodes, cestodes, and trematodes. Manifestations depend on the species and the organs involved.

Synonyms: Helminthiasis

Writer's Cramp

A task-specific focal dystonia causing involuntary muscle contractions and abnormal postures during writing or closely related fine-motor activities.

Synonyms:

Wryneck (Torticollis)

Abnormal tilting or rotation of the head caused by involuntary contraction, shortening, or dysfunction of neck muscles. It may be congenital, acquired, painful, or neurological.

Synonyms:

wafer

wafer is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

waist-hip ratio

waist-hip ratio is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

wakefulness

wakefulness is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Ward's triangle

Ward's triangle is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Warfarin syndrome

Warfarin syndrome describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

warm ischemia

warm ischemia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

washout period

washout period is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

water

water is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

water channel

water channel is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

water consumption

water consumption is a medical condition or clinical

finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

water pollution

water pollution is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

water supply

water supply is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

water-soluble vitamin

water-soluble vitamin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

watt

watt is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

webbed neck

webbed neck is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

weber

weber is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its charac-

teristic features, causes, and clinical context.

Synonyms:

wedge excision

wedge excision is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

weeksella

weeksella is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

weeksella virosa

weeksella virosa is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

weight gain

weight gain is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Werner's syndrome

Werner's syndrome describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

wernicke area

wernicke area is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

western blotting

western blotting is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

wheeled stretcher

wheeled stretcher is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

whirlpool bath

whirlpool bath is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

whole-body irradiation

whole-body irradiation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

wickerhamiella pararugosa

wickerhamiella pararugosa is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

widow

widow is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

wolinella

wolinella is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

wolinella succinogenes

wolinella succinogenes denotes wolinella succinogenes, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

women's health

women's health is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

worker compensation

worker compensation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

world health organization

world health organization is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

wortmannin

wortmannin is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

wrist

wrist is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

wrist injury

wrist injury describes a clinical disorder or finding in the body system or process named by the term. Evaluation identifies the underlying mechanism, affected site, severity, and clinically relevant complications.

Synonyms:

written documentation

written documentation is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Torticollis

White tongue

A white coating or patches on the tongue caused by debris, dry mouth, irritation, infection, inflammation, or other oral conditions. **Synonyms:**

Warts, common

Alternate index label; see *Common warts*. **Synonyms:**

Warts, genital

Alternate index label; see *Genital warts*. **Synonyms:**

Warts, plantar

Alternate index label; see *Plantar warts*. **Synonyms:**

Warts, venereal

Alternate index label; see *Genital warts*. **Synonyms:**

Water on the knee

Alternate index label; see *Swollen knee*. **Synonyms:**

Wermer syndrome

Alternate index label; see *Multiple endocrine neoplasia, type 1 (MEN 1)*. **Synonyms:**

Wermer's syndrome

Alternate index label; see *Multiple endocrine neoplasia, type 1 (MEN 1)*. **Synonyms:**

Wet age-related macular degeneration

Alternate index label; see *Wet macular degeneration*. **Synonyms:**

Wet AMD

Alternate index label; see *Wet macular degeneration*. **Synonyms:**

White blood cell disorders in children

Alternate index label; see *Pediatric white blood cell disorders*. **Synonyms:**

White spot disease

Alternate index label; see *Lichen sclerosus*. **Synonyms:**

Whiteheads

Whiteheads concerns whiteheads; its medical significance is established from the defining features, setting, associated findings, and clinical question. **Synonyms:**

Wisdom teeth, impacted

Alternate index label; see *Impacted wisdom teeth*. **Synonyms:**

Wolff-Parkinson-White accessory pathway-related tachycardia

Alternate index label; see *Wolff-Parkinson-White (WPW) syndrome*. **Synonyms:**

Wrinkle

Alternate index label; see *Wrinkles*. **Synonyms:**

Walking abnormalities

Walking abnormalities is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Warning signs and symptoms of heart disease

Warning signs and symptoms of heart disease addresses care related to warning signs and symptoms of heart disease, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Wart remover poisoning

Wart remover poisoning involves toxic or environmental exposure to wart remover poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Water in diet

Water in diet addresses care related to water in diet, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Water safety and drowning

Water safety and drowning prevention rely on supervision, barriers, life jackets, swimming skills, safe rescue practices, and rapid emergency response to respiratory arrest.

Synonyms:

Watercolor paints - swallowing

Watercolor paints - swallowing involves toxic or environmental exposure to watercolor paints - swallowing; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Waterhouse-Friderichsen syndrome

Waterhouse-Friderichsen syndrome is adrenal hemorrhage and acute adrenal failure associated with overwhelming sepsis, classically meningococcal infection, causing shock and coagulopathy.

Synonyms:

Wax poisoning

Wax poisoning involves toxic or environmental exposure to wax poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Ways to burn more calories every day

Ways to burn more calories every day concerns ways to burn more calories every day; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

WBC count

WBC count examines wbc count; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

Wearing gloves in the hospital

Wearing gloves in the hospital is a treatment or care intervention for wearing gloves in the hospital; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Webbing of the fingers or toes

Webbing of the fingers or toes concerns webbing of the fingers or toes; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Weight gain – unintentional

Weight gain – unintentional addresses care related

to weight gain – unintentional, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Weight gain after quitting smoking:

What to do

Weight gain after quitting smoking: What to do addresses care related to weight gain after quitting smoking: what to do, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Weight loss - unintentional

Unintentional weight loss is reduction in body weight without planned dietary or activity change and may result from malignancy, endocrine disease, infection, gastrointestinal disease, medication, or mood disorder.

Synonyms:

Weight loss and alcohol

Weight loss and alcohol addresses care related to weight loss and alcohol, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Weight-loss medicines

Weight-loss medicines is a treatment or care intervention for weight-loss medicines; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Weight-loss surgery and children

Weight-loss surgery and children is a treatment or care intervention for weight-loss surgery and children; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Well-child visits

Well-child visits is a treatment or care intervention

for well-child visits; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

West Nile virus infection

West Nile virus infection is a mosquito-borne illness ranging from fever and body aches to neuroinvasive meningitis, encephalitis, weakness, or paralysis.

Synonyms:

Wet-to-dry dressing changes

Wet-to-dry dressing changes is a treatment or care intervention for wet-to-dry dressing changes; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

What causes bone loss?

What causes bone loss? addresses care related to what causes bone loss?, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

What if cancer comes back?

What if cancer comes back? addresses care related to what if cancer comes back?, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

What is palliative care?

What is palliative care? is a treatment or care intervention for what is palliative care?; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

What to bring to your labor and delivery

What to bring to your labor and delivery is a treatment or care intervention for what to bring to your labor and delivery; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

What to include in your birth plan

What to include in your birth plan is a treatment or care intervention for what to include in your birth plan; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

When to use the emergency room - adult

When to use the emergency room - adult is a treatment or care intervention for when to use the emergency room - adult; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

When to use the emergency room - child

When to use the emergency room - child is a treatment or care intervention for when to use the emergency room - child; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

When you are drinking too much - tips for cutting back

When you are drinking too much - tips for cutting back addresses care related to when you are drinking too much - tips for cutting back, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

When you feel like changing your medicine

When you feel like changing your medicine addresses care related to when you feel like changing your medicine, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

When you have diarrhea

When you have diarrhea addresses care related to

when you have diarrhea, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

When you have nausea and vomiting

When you have nausea and vomiting addresses care related to when you have nausea and vomiting, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

When you have urinary incontinence

When you have urinary incontinence addresses care related to when you have urinary incontinence, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

When you need to gain more weight during pregnancy

When you need to gain more weight during pregnancy addresses care related to when you need to gain more weight during pregnancy, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

When you pass your due date

When you pass your due date concerns when you pass your due date; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

When your baby is stillborn

When your baby is stillborn concerns when your baby is stillborn; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

When your baby or infant has a fever

When your baby or infant has a fever addresses care related to when your baby or infant has a fever,

including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

When your cancer treatment stops working

When your cancer treatment stops working is a treatment or care intervention for when your cancer treatment stops working; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

When your child has diarrhea

When your child has diarrhea addresses care related to when your child has diarrhea, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

When your child's cancer treatment stops working

When your child's cancer treatment stops working is a treatment or care intervention for when your child's cancer treatment stops working; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Whipworm infection

Whipworm infection examines whipworm infection; interpretation depends on the specimen or body region, test method, reference range, and clinical question.

Synonyms:

White matter of the brain

White matter of the brain concerns white matter of the brain, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Synonyms:

Whole breast radiation therapy

Whole breast radiation therapy treats remaining

breast tissue after breast-conserving surgery to reduce local recurrence risk, with planned dosing and monitoring for skin and tissue effects.

Synonyms:

Widely spaced teeth

Widely spaced teeth concerns widely spaced teeth; its medical significance is established from the defining features, setting, associated findings, and clinical question.

Synonyms:

Window cleaner poisoning

Window cleaner poisoning involves toxic or environmental exposure to window cleaner poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Windshield washer fluid

Windshield washer fluid involves toxic or environmental exposure to windshield washer fluid; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Wine and heart health

Wine and heart health addresses care related to wine and heart health, including practical measures, warning signs, follow-up, and decisions to discuss with a clinician.

Synonyms:

Wolff-Parkinson-White syndrome (WPW)

Wolff-Parkinson-White syndrome is pre-excitation through an extra atrioventricular pathway that can cause episodes of supraventricular tachycardia and rarely dangerous ventricular rhythms.

Synonyms:

Women and sexual problems

Women and sexual problems concerns women and sexual problems; its medical significance is established from the defining features, setting, associated

findings, and clinical question.

Synonyms:

Wood stain poisoning

Wood stain poisoning involves toxic or environmental exposure to wood stain poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Synonyms:

Working during cancer treatment

Working during cancer treatment is a treatment or care intervention for working during cancer treatment; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Working with a personal trainer

Working with a personal trainer is a treatment or care intervention for working with a personal trainer; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Wound care centers

Wound care centers is a treatment or care intervention for wound care centers; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Wrinkles

Wrinkles is a disorder affecting the body system or process named by the term. Clinical features and causes vary, so diagnosis is based on the history, examination, and appropriate investigations.

Synonyms:

Wrist arthroscopy

Wrist arthroscopy uses a small camera and instruments through portals to diagnose or treat cartilage, ligament, synovial, or other wrist problems.

Synonyms:

Wrist sprain - aftercare

Wrist sprain - aftercare is a treatment or care intervention for wrist sprain - aftercare; indication, preparation, risks, technical details, and recovery depend on the patient and goal.

Synonyms:

Warts (Common Warts)

Alternate index label for Common Warts.

Synonyms:

Warts (Warts (Common Warts))

Alternate index label for Warts (Common Warts).

Synonyms:

Warts Genital (Genital Warts In Women)

Alternate index label for Genital Warts In Women.

Synonyms:

Weber-Christian Disease

Weber-Christian disease is an older, nonspecific term historically used for relapsing fever and inflammation of subcutaneous fat, now often classified as panniculitis. Painful subcutaneous nodules and systemic symptoms require modern evaluation for infection, autoimmune disease, pancreatic disease, or other causes.

Synonyms:

Wegeners granulomatosis (Granulomatosis With Polyangiitis)

Alternate index label for Granulomatosis With Polyangiitis.

Synonyms:

Weils disease (Leptospirosis)

Alternate index label for Leptospirosis.

Synonyms:

Wet Dry Drowning (Drowning)

Alternate index label for Drowning.

Synonyms:

Wisdom Teeth

Wisdom teeth are the third molars that commonly emerge in late adolescence or adulthood. Impaction, infection, decay, cysts, gum disease, or crowding can cause pain and swelling; dental examination and imaging determine whether monitoring or removal is appropriate.

Synonyms:

Wolff Parkinson White Syndrome (Wolff-Parkinson-White Syndrome)

Alternate index label for Wolff-Parkinson-White Syndrome.

Synonyms:

Womb Growths (Uterine Fibroids)

Alternate index label for Uterine Fibroids.

Synonyms:

Women Breast Lumps (Breast Lumps In Women)

Alternate index label for Breast Lumps In Women.

Synonyms:

Women Disease Prevention (Disease Prevention in Women)

Alternate index label for Disease Prevention in Women.

Synonyms:

Womens Health (Women's Health)

Alternate index label for Women's Health.

Synonyms:

Worms Pinworms (Pinworm Infection)

Alternate index label for Pinworm Infection.

Synonyms:

Wuhan Coronavirus (2019-nCoV)

Alternate index label for 2019-nCoV.

Synonyms:

X

X Chromosome

One of the two human sex chromosomes, carrying genes involved in sex development and many non-sex-specific biological functions. Individuals typically have one or two X chromosomes, and dosage is partly regulated by X-chromosome inactivation.

Synonyms:

XXX syndrome

Alternate index label; see *Triple X syndrome* (trisomy X), a sex-chromosome variation in which a female has an additional X chromosome.

Synonyms:

X-Inactivation

Process inactivating one X chromosome in female mammals, forming Barr body. Occurs early in development, random in most tissues. Ensures dosage compensation.

Synonyms:

X-Linked Agammaglobulinemia

An inherited immunodeficiency, usually caused by a pathogenic variant in the BTK gene, that prevents normal B-cell maturation. It causes very low immunoglobulin levels and recurrent bacterial or enteroviral infections, usually beginning in infancy or early childhood.

Synonyms:

X-Linked Inheritance

Transmission of a pathogenic variant on the X chromosome. Phenotypes differ by sex, X-inactivation, and variant mechanism; fathers do not transmit an X-linked variant to their sons.

Synonyms:

X-linked retinoschisis

An inherited vitreoretinal dystrophy caused by mutations in the RS1 gene, characterized by splitting of the retinal nerve fibre layer producing a spoke-wheel pattern of cystic spaces at the macula and peripheral retinal schisis.

Synonyms:

X-ray

An X-ray is an imaging study that passes a small amount of ionizing radiation through the body to create a projection image. Differences in tissue density help show bones, lungs, teeth, and selected soft-tissue abnormalities.

Synonyms:

X-Ray (Plain Radiography)

An imaging method that uses X-rays to create a two-dimensional projection of internal structures. It is used to assess bones, the chest, abdomen, teeth, and other selected body regions.

Synonyms: Plain Radiography

X-ray (Radiography)

Projectional imaging using ionizing radiation. Dense structures (bone, contrast) appear white; air appears black. Fast, inexpensive, widely available. Two-dimensional projection of three-dimensional structures. Mammography: specialized breast X-ray for screening.

Synonyms: Radiography

X-ray Attenuation

Reduction in the intensity of an X-ray beam as it passes through tissue or another material.

Synonyms:

X-ray Shield

Lead apron, thyroid shield for radiation protection during imaging.

Synonyms:

X-Rays (Röntgen Rays)

Electromagnetic radiation used in radiography and other imaging techniques to create images by measuring differences in tissue attenuation.

Synonyms: Röntgen Rays

Xanax

A brand name for alprazolam, a benzodiazepine that enhances GABA-A receptor activity and produces anxiolytic and sedative effects. It can cause impaired coordination, dependence, and respiratory depression, especially when combined with other sedatives.

Synonyms:

Xanthelasma

Xanthelasma palpebrarum are soft, yellow, lipid-filled papules or plaques on the medial canthus of the eyelids (upper more commonly than lower), the most common form of cutaneous xanthoma. They are composed of foam cells (lipid-laden macrophages) in the superficial dermis.

Synonyms:

Xanthine Oxidase Inhibitor

A class of medications that inhibit xanthine oxidase, the enzyme that catalyzes the final steps of purine metabolism: hypoxanthine to xanthine and xanthine to uric acid. By inhibiting this enzyme, XOIs reduce uric acid production and lower serum uric acid levels, used for management of chronic gout and tumor lysis syndrome.

Synonyms:

Xanthogranulomatous

Chronic destructive renal infection with replacement of parenchyma by lipid-laden macrophages. See xanthogranulomatous pyelonephritis.

Synonyms:

Xanthogranulomatous Pyelonephritis

A chronic destructive kidney infection in which renal tissue is replaced by lipid-laden macrophages. It is often associated with obstruction or stones and may require antibiotics, drainage, surgery, or nephrectomy depending on the extent of damage.

Synonyms:

Xanthoma

A xanthoma is a yellowish deposit of lipid-laden macrophages in the skin, subcutaneous tissue, or tendons. It may occur with hyperlipidemia, diabetes, cholestatic liver disease, or an inherited lipid disorder and warrants assessment of the underlying cause. presenting as yellow-orange papules, nodules, or plaques.

Synonyms:

Xanthomatosis

A disorder in which fatty deposits called xanthomas develop in the skin, tendons, or organs. It may be associated with inherited or acquired lipid disorders and can signal increased cardiovascular or organ-specific risk requiring medical evaluation.

Synonyms:

Xenobiotic

Foreign chemical substance in body. Drugs, pollutants, pesticides, industrial chemicals. Metabolized by liver enzymes.

Synonyms:

Xenograft

Tissue or a biological material transplanted between different species, often used as a temporary graft or tissue substitute.

Synonyms:

Xenograft (Heterograft)

A surgical graft taken from a donor of a different species (xenos = foreign, Greek). Xenografts are used as temporary biological dressings or as tissue replacements.

Synonyms: Heterograft

Xeroderma

Abnormally dry skin that may cause scaling, roughness, itching, or cracking. It can result from environmental exposure, skin disease, age, or medicines.

Synonyms:

Xeroderma Pigmentosum

A rare autosomal recessive disorder of nucleotide-excision DNA repair that causes extreme sun sensitivity and a greatly increased risk of skin and eye damage and cancers. It is caused by pathogenic variants in genes involved in DNA repair.

Synonyms:

Xenophobia

An intense or persistent fear of unfamiliar people, cultures, or situations; when clinically significant, it may be considered a specific phobia.

Synonyms:

Xerophthalmia

Dryness of the conjunctiva and cornea, often caused by vitamin A deficiency. Severe disease can damage the cornea and impair vision.

Synonyms:

Xerosis

Abnormally dry skin, common in elderly patients and winter months. It results from decreased sebaceous and sweat gland activity, impaired skin barrier function, and environmental factors. Treatment includes regular emollient application (cream or ointment rather than lotion), gentle cleansing, and humidification.

Synonyms:

Xerostomia

The sensation of dry mouth caused by reduced or altered saliva production. It may result from medicines, dehydration, salivary-gland disease, radiation, or systemic illness and can impair speaking, swallowing, taste, and dental health.

Synonyms:

Xerostomia (Dry Mouth)

A subjective sensation of oral dryness caused by reduced or altered saliva production. It may result from medicines, dehydration, salivary-gland disease, radiation, or systemic illness and can contribute to difficulty speaking, swallowing, and dental decay.

Synonyms: Dry Mouth

Xylitol Toxicity

Poisoning caused by excessive xylitol exposure. It can cause marked hypoglycemia in dogs and may cause gastrointestinal symptoms in people.

Synonyms:

X-Linked Adrenoleukodystrophy

An inherited disorder of peroxisomal fatty-acid metabolism, usually affecting boys, that can cause progressive damage to the adrenal glands, nervous system, and myelin.

Synonyms:

X-Linked Ichthyosis

An inherited skin disorder caused by deficiency of steroid sulfatase, producing generalized dry, dark, plate-like scaling that often begins in infancy or early childhood.

Synonyms:

X-Linked Severe Combined Immunodeficiency

A severe inherited immune disorder, usually caused by defects affecting the interleukin-2 receptor gamma chain, resulting in profound T-cell dysfunction and vulnerability to serious infections.

Synonyms:

X-Linked Hypophosphatemia

An inherited disorder of phosphate regulation, commonly caused by excess fibroblast growth factor 23, leading to renal phosphate wasting, rickets or osteomalacia, bone pain, and growth abnormalities.

Synonyms:

XYY Syndrome

A sex-chromosome variation in which a male has

an extra Y chromosome. Many affected individuals have few or no obvious symptoms, though some have tall stature, learning difficulties, or developmental differences.

Synonyms:

xanthine

xanthine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

xanthine dehydrogenase

xanthine dehydrogenase is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

xanthine oxidase

xanthine oxidase is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

xanthomonadaceae

xanthomonadaceae is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

xanthomonas

xanthomonas is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

xenobiotic metabolism

xenobiotic metabolism is a medical condition or clinical finding involving the body system or process

named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

xenograft procedure

xenograft procedure is a clinical assessment, measurement, or procedure used to investigate, monitor, classify, or treat xenograft procedure.

Synonyms:

xenon

xenon is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

xenophagy

xenophagy is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

xeroradiograph

xeroradiograph is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

xipamide

xipamide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

X-ray crystallography

X-ray crystallography is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

X-ray therapy

X-ray therapy is used in relation to x-ray therapy during assessment, diagnosis, treatment, monitoring, or patient support.

Synonyms:

xylose

xylose is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

X-ray - skeleton

A skeletal X-ray series uses radiographs of selected bones and joints to evaluate fractures, alignment, bone density patterns, arthritis, infection, tumors, and developmental abnormalities.

Synonyms:

Y

Y Chromosome

The sex chromosome that typically carries the SRY gene and other genes involved in testicular development and male sex differentiation. It is present in most individuals with a typical 46,XY karyotype and is transmitted through the paternal line.

Synonyms:

Yohimbine

A plant-derived alkaloid that has been studied for erectile dysfunction and other uses. **Synonyms:**

YAG Capsulotomy

A laser procedure that creates an opening in an opaque posterior lens capsule after cataract surgery. It can improve vision when posterior capsule opacification is causing visual symptoms.

Synonyms:

Yaws

Yaws is a chronic infection caused by *Treponema pallidum* subsp. *pertenue* and spread mainly through close skin contact. It can cause an initial papilloma or ulcer and later destructive lesions of skin, bone, and cartilage; antibiotics can cure the infection.

Synonyms:

Yaws (Frambesia)

A chronic, non-venereal treponematoses caused by *Treponema pallidum* subspecies *pertenue*, closely related to the syphilis spirochete (*T. pallidum pallidum*).

Synonyms: Frambesia

Yeast

Unicellular fungi that reproduce by budding (blastoconidia formation) or fission. The clinically most important yeasts are *Candida* species (*Candida albicans*, *C. glabrata*, *C. parapsilosis*, *C. tropicalis*, *C.*

Synonyms:

Yeast Infection

Vulvovaginal candidiasis: infection by *Candida albicans* (most common), causing vulvar and vaginal itching, burning, thick white 'cottage cheese' discharge, dyspareunia, and erythema; more common in pregnancy, diabetes, antibiotic use, and immunosuppression. Diagnosis: clinical; wet mount (budding yeast/hyphae), KOH, or culture.

Synonyms:

Yellow Fever

Yellow fever is an acute mosquito-borne infection caused by yellow fever virus. Fever, headache, muscle aches, nausea, and vomiting may be followed by jaundice, bleeding, shock, and organ failure; vaccination is the main preventive measure.

Synonyms:

Yellow-nail syndrome

A rare triad of yellow, thickened, slow-growing nails, lymphedema, and chronic respiratory disease including bronchiectasis and pleural effusions. The nail changes result from impaired lymphatic drainage affecting nail growth. It typically affects middle-aged adults.

Synonyms:

Yersinia Enterocolitica

A gram-negative coccobacillus of the family Enter-

obacteriaceae, a common cause of enterocolitis and mesenteric lymphadenitis, especially in children and young adults in temperate climates.

Synonyms:

Yersinia Infection

Infection caused by *Yersinia* bacteria, commonly producing diarrhea, abdominal pain, fever, or vomiting. Some cases mimic appendicitis; severe illness, dehydration, bloody diarrhea, or persistent symptoms requires medical assessment.

Synonyms:

Yersinia pestis

A gram-negative rod that causes plague, a severe and potentially fatal infection; see *Plague*. The organism is transmitted by flea bites or direct contact with infected animals. Bubonic plague presents with painful lymphadenopathy (buboes). Pneumonic plague involves the lungs and is transmitted by respiratory droplets.

Synonyms:

Yolk Sac

An extraembryonic structure that supports the early embryo before the placenta is fully functional. It contributes to early blood-cell formation and development of the primitive gut and is assessed on early pregnancy ultrasound.

Synonyms:

Yolk-sac tumor

A malignant germ-cell tumor that commonly occurs in children and produces alpha-fetoprotein.

Synonyms:

Yttrium-90

Beta emitter, half-life 64 hours. Used in radioembolization (Y-90 microspheres) for liver cancer. Bremsstrahlung imaging possible.

Synonyms:

Yips

Sudden involuntary movements or muscle spasms that interfere with a skilled task, often in athletes

or musicians.

Synonyms:

Yergason Test

A shoulder examination maneuver used to assess the long head of the biceps tendon and transverse humeral ligament by resisted supination and external rotation.

Synonyms:

Yersiniosis

Infection caused by *Yersinia* bacteria, most often *Y. enterocolitica* or *Y. pseudotuberculosis*, producing diarrhea, abdominal pain, fever, or pseudoappendicitis.

Synonyms:

YAG Laser Capsulotomy

A laser procedure that creates an opening in a cloudy posterior lens capsule after cataract surgery, restoring the passage of light and improving vision.

Synonyms:

yarrowia

yarrowia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

yarrowia lipolytica

yarrowia lipolytica is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

yawn

yawn is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

yeast present

yeast present is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

yellow fever virus

yellow fever virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

yersinia

yersinia is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

yersinia aldovae

yersinia aldovae is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

yersinia bercovieri

yersinia bercovieri is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

yersinia frederiksenii

yersinia frederiksenii is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

yersinia intermedia

yersinia intermedia is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

yersinia kristensenii

yersinia kristensenii is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

yersinia mollaretii

yersinia mollaretii is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

yersinia pseudotuberculosis

yersinia pseudotuberculosis is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

yersinia rohdei

yersinia rohdei is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

yersinia ruckeri

yersinia ruckeri is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial

susceptibility.

Synonyms:

yoga

yoga is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

yokenella

yokenella is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

yokenella regensburgei

yokenella regensburgei is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ytterbium

ytterbium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

yttrium

yttrium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Yellow tongue

Yellow discoloration or coating of the tongue that may result from oral hygiene, smoking, dry mouth, diet, medicines, or an underlying illness. **Synonyms:**

Yawning - excessive

Excessive yawning is unusually frequent or difficult-to-control yawning. It may accompany sleep deprivation, excessive daytime sleepiness, medication effects, vasovagal reactions, or less commonly neurologic or cardiopulmonary disease; persistent unexplained episodes merit clinical evaluation.

Synonyms:

Yew poisoning

Yew poisoning follows ingestion of yew plant material, especially leaves or seeds containing taxine compounds. Toxicity can cause nausea, abdominal symptoms, dizziness, seizures, dangerous slowing or disruption of the heart rhythm, cardiovascular collapse, and death.

Synonyms:

Yoga for health

Yoga for health combines physical postures, breathing exercises, and meditation or relaxation. It may improve flexibility, balance, strength, stress, and some chronic symptoms when adapted to the person; instructors should account for injuries, pregnancy, and medical limitations.

Synonyms:

Your baby and the flu

Infants with influenza can develop fever, cough, poor feeding, vomiting, diarrhea, breathing difficulty, or unusual sleepiness. Care focuses on prompt medical advice, hydration, monitoring for respiratory distress, and age-appropriate antiviral treatment when indicated; influenza vaccination is preventive for eligible family members and children.

Synonyms:

Your baby in the birth canal

A baby in the birth canal is progressing through the maternal pelvis during labor. Clinicians assess fetal position, descent, heart rate, and the progress of cervical dilation to identify normal vaginal-birth progress or complications requiring intervention.

Synonyms:

Your cancer care team

A cancer care team is the group of oncology professionals who coordinate diagnosis, treatment, symptom control, rehabilitation, psychosocial support, and follow-up. It may include medical, surgical, and radiation oncologists, nurses, pharmacists, social workers, dietitians, and palliative-care specialists.

Synonyms:

Your cancer diagnosis - Do you need a second opinion?

A second opinion after a cancer diagnosis is an independent review of pathology, imaging, staging, and treatment options by another qualified clinician or cancer center. It can confirm the diagnosis, identify alternatives, and help the patient make an informed treatment decision without usually delaying urgent care.

Synonyms:

Your cancer survivorship care plan

A cancer survivorship care plan summarizes completed treatment, possible late effects, recommended surveillance, preventive care, rehabilitation, and communication between oncology and primary-care clinicians. It is updated as health needs change after active treatment.

Synonyms:

Your child and the flu

Children with influenza may have fever, cough, sore throat, fatigue, headache, muscle aches, vomiting, or diarrhea. Supportive care includes fluids and symptom monitoring; urgent assessment is needed for breathing difficulty, dehydration, confusion, severe weakness, or worsening after improvement.

Synonyms:

Your child's first vaccines - what you need to know

A child's first vaccines stimulate protection against serious infections according to the recommended immunization schedule. Clinicians review timing, contraindications, expected local or systemic reactions, catch-up options, and when urgent care is needed for a severe reaction.

Synonyms:

Your diet after gastric bypass surgery

Diet after gastric bypass surgery progresses from liquids to pureed, soft, and regular-textured foods in small portions as healing permits. Long-term care emphasizes protein, fluids separated from meals, vitamin and mineral supplements, avoidance of dumping-triggering foods, and monitoring for nutritional deficiencies.

Synonyms:

Yeast Infection in Women and Men

Genital yeast infection is usually caused by *Candida* and can cause itching, soreness, redness, and thick discharge in women or irritation and rash on the penis in men. Recurrent, severe, atypical, or treatment-resistant symptoms need confirmation and evaluation for contributing conditions.

Synonyms:

Yeast Infections: How Do You Know When It Heals

A yeast infection is generally improving when itching, soreness, redness, and abnormal discharge resolve and do not return after treatment. Persistent symptoms may reflect resistant yeast, another infection, dermatitis, or an incorrect diagnosis and warrant examination rather than repeated empiric treatment.

Synonyms:

Yeast Oral (Thrush)

Alternate index label for Thrush.

Synonyms:

Younger Children Sleep (Sleep and Sleep Disorders in Children and Teens)

Alternate index label for Sleep and Sleep Disorders in Children and Teens.

Synonyms:

Z

Z-Plasty

Surgical technique for contracture release using Z-shaped incision. Lengthens tissue, changes scar orientation.

Synonyms:

Zonules

Fibrous ligaments that suspend the lens from the ciliary body. **Synonyms:** Zonular fibers

Zoonotic Disease

An infection that can naturally pass between animals and humans. **Synonyms:** Zoonosis

Zavanelli Maneuver

The final, rarely performed maneuver for an irreducible shoulder dystocia: the fetal head is replaced into the vagina (cephalic replacement) and the patient undergoes emergency cesarean delivery.

Synonyms:

Zellweger Syndrome

The severe end of the Zellweger spectrum of peroxisomal biogenesis disorders, usually caused by PEX-gene variants. It presents in neonates with hypotonia, seizures, feeding difficulty, distinctive facial features, liver dysfunction, neuronal migration defects, and profound developmental impairment.

Synonyms:

Zenker Diverticulum

Pulsion diverticulum at the junction of the thyropharyngeus and cricopharyngeus muscles in the proximal esophagus. It presents with dysphagia, regurgitation of undigested food, halitosis, and aspiration. Diagnosis is by barium swallow showing

the characteristic outpouching.

Synonyms:

Zenker's diverticulum

A pouch formed through the wall near the upper esophagus, causing difficulty swallowing, regurgitation, cough, or aspiration.

Synonyms:

Ziehl-Neelsen Stain

An acid-fast stain retaining carbol fuchsin in waxy mycolic-acid cell walls despite acid-alcohol decolorization, with methylene blue counterstain rendering acid-fast organisms red. Clinically important for *Mycobacterium tuberculosis*, *M. leprae*, *Nocardia*, and *Cryptosporidium* oocysts, it is a rapid initial sputum test for tuberculosis.

Synonyms:

Zieve's Syndrome

A triad of haemolytic anemia, hyperlipidaemia, and jaundice occurring in the setting of chronic alcohol use disorder and alcoholic liver disease (acute alcoholic steatohepatitis or alcoholic cirrhosis).

Synonyms:

Zika

Zika virus: a mosquito-borne (*Aedes*) flavivirus, also sexually transmitted. Usually asymptomatic or mild (fever, rash, conjunctivitis, arthralgia). Major concern: congenital Zika syndrome if acquired in pregnancy—microcephaly, brain abnormalities, eye defects; also Guillain-Barré syndrome.

Synonyms:

Zika virus

A positive-sense RNA virus belonging to the Flaviviridae family that causes mild febrile illness. Zika virus is transmitted by Aedes mosquitoes and can also be transmitted sexually. Infection during pregnancy can cause congenital Zika syndrome including microcephaly. Most infections are asymptomatic or mild.

Synonyms:

Zinc

An essential trace element that acts as a structural or catalytic component of numerous proteins and enzymes, including DNA-binding zinc-finger proteins. Deficiency may impair growth, wound healing, immunity, taste, and reproductive function.

Synonyms:

Zinc Deficiency

A nutritional or malabsorptive disorder causing impaired wound healing, dermatitis, alopecia, diarrhoea, taste disturbance, and increased infection risk. Causes include inadequate intake, malabsorption, chronic diarrhoea, excessive losses, and inherited zinc-transport disorders.

Synonyms:

Zinc Ointment (Zinc Oxide)

A topical preparation that forms a protective barrier on the skin. It is used for irritation, moisture-associated dermatitis, minor skin injury, and selected dermatologic conditions.

Synonyms: Zinc Oxide

Zirconia

Strong ceramic material for dental restorations. High flexural strength. Can be monolithic or layered with porcelain.

Synonyms:

Zollinger-Ellison Syndrome

Zollinger-Ellison syndrome is caused by one or more gastrin-secreting tumors, usually in the pancreas or duodenum. Excess gastrin drives severe gastric acid production, leading to recurrent peptic ulcers,

abdominal pain, reflux, and diarrhea; tumors may occur with multiple endocrine neoplasia type 1.

Synonyms:

Zooglea

A gelatinous mass of bacteria embedded in a polysaccharide matrix.

Synonyms:

Zoon Balanitis

A chronic benign inflammatory disorder of the glans penis, usually presenting as a sharply demarcated shiny orange-red or rust-colored patch in uncircumcised men.

Synonyms:

Zoonosis

An infectious disease naturally transmitted between vertebrate animals and humans; the plural is *zoonoses*. Transmission may occur through direct contact, animal products, food, water, or arthropod vectors. Examples include rabies, brucellosis, leptospirosis, Lyme disease, psittacosis, toxoplasmosis, and avian influenza.

Synonyms:

Zoster

A painful, vesicular rash caused by reactivation of latent varicella-zoster virus (VZV, human herpesvirus 3) in the dorsal root ganglia; see *Shingles*.

Synonyms:

Zygoma (Zygomatic Bone)

A paired, quadrangular facial bone forming the prominence of the cheek and part of the lateral wall and floor of the orbit. It articulates with the frontal, sphenoid, temporal, and maxillary bones and transmits forces from the face to the cranial skeleton.

Synonyms: Zygomatic Bone

Zygomycosis

An infection caused by fungi historically classified in the class Zygomycetes, including organisms now placed among mucormycetes. It can produce rapidly

invasive disease of the nose, sinuses, orbit, lungs, skin, or gastrointestinal tract, especially in immunocompromised patients.

Synonyms:

Zygote

The cell formed when a sperm and an oocyte fuse at fertilization. It is usually diploid and begins the developmental process that follows fertilization.

Synonyms:

Zymogen

An inactive enzyme precursor that is converted into an active enzyme, often by cleavage.

Synonyms:

Zymogen (Proenzyme)

An inactive precursor of an enzyme that requires proteolytic cleavage to become catalytically active.

Synonyms: Proenzyme

Zonule

Fibers that suspend the lens of the eye from the ciliary body and help change its shape for focusing.

Synonyms:

Zieve Syndrome

A reversible complication of heavy alcohol use characterized by acute alcohol-associated hepatitis, hemolytic anemia, and transient hyperlipidemia, often accompanied by abdominal pain, nausea, or jaundice.

Synonyms:

Zygomatic Fracture

A break in the cheekbone or zygomatic complex, usually caused by facial trauma and potentially associated with orbital injury, numbness, double vision, or difficulty opening the mouth.

Synonyms:

Zinc Toxicity

Harmful effects caused by excessive zinc exposure or supplementation, which may produce nausea,

vomiting, abdominal symptoms, copper deficiency, anemia, or impaired immune function.

Synonyms:

zafirlukast

zafirlukast concerns zafirlukast, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

zalcitabine

zalcitabine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

zanamivir

zanamivir concerns zanamivir, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

zebrafish

zebrafish is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

zibotentan

zibotentan is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

ziconotide

ziconotide concerns ziconotide, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

zidovudine

zidovudine is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

zileuton

zileuton is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

zimmermannella

zimmermannella is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

zinc acetate

zinc acetate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

zinc oxide

zinc oxide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

zinc sulfate

zinc sulfate concerns zinc sulfate, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

zingiber officinale

zingiber officinale is a medical condition or clinical finding involving the body system or process named

by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

zinostatin

zinostatin concerns zinostatin, a pharmacologic or chemical agent; clinical use depends on its mechanism, indication, dose, interactions, and adverse effects.

Synonyms:

zirconium

zirconium is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

zoledronic acid

zoledronic acid denotes zoledronic acid, a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

zolpidem

zolpidem is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

zolpidem tartrate

zolpidem tartrate is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

zona pellucida

zona pellucida is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

zonisamide

zonisamide is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

zonula adherens

zonula adherens is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

zoology

zoology is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

zoophobia

zoophobia is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

zygomatic bone

zygomatic bone is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

zygomatic gland

zygomatic gland is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

A

A is a medical condition or clinical finding involving the body system or process named by the term.

Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

B

B is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

C

C is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

D

D is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

E

E is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

F

F is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

G

G is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

H

H is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

I

I is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

J

J is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

K

K is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

L

L is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

M

M is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

N

N is a medical condition or clinical finding involving the body system or process named by the term.

Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

O

O is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

P

P is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Q

Q is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

R

R is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

S

S is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

T

T is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

U

U is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

V

V is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

W

W is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

X

X is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Y

Y is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Z

Z

_____ is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

A disease caused by infection with the

yellow fever virus, which is carried by mosquitos. Symptoms include body aches, chills, fever, severe headache, weakness, and a yellow skin color. Bleeding, vomiting, and failure of the liver and other organs may occur in late stages of the disease.

A disease caused by infection with the yellow fever virus, which is carried by mosquitos. Symptoms include body aches, chills, fever, severe headache, weakness, and a yellow skin color. Bleeding, vomiting, and failure of the liver and other organs may occur in late stages of the disease. is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

Acute infectious disease primarily of the tropics, caused by a flavivirus and transmitted to humans by mosquito vectors.

Acute infectious disease primarily of the tropics, caused by a flavivirus and transmitted to humans by mosquito vectors. is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

An acute infectious disease primarily of the tropics, caused by a virus and transmitted to man by mosquitoes of the genera Aedes and Haemagogus. The severe form is characterized by fever, HEMOLYTIC JAUNDICE, and renal damage.

An acute infectious disease primarily of the tropics, caused by a virus and transmitted to man by mosquitoes of the genera Aedes and Haemagogus. The severe form is characterized by fever, HEMOLYTIC JAUNDICE, and renal damage. is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the

strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

An infection that is caused by the yellow fever virus, which is transmitted to humans by mosquitoes; the signs and symptoms range from a mild febrile illness to liver damage with jaundice and bleeding.

An infection that is caused by the yellow fever virus, which is transmitted to humans by mosquitoes; the signs and symptoms range from a mild febrile illness to liver damage with jaundice and bleeding. is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

Yellow fever (YF), caused by YF virus, is a zoonotic disease characterized by fever and constitutional symptoms, with the potential to progress to severe and fatal viral hemorrhagic fever with shock and multi-organ system failure.

Yellow fever (YF), caused by YF virus, is a zoonotic disease characterized by fever and constitutional symptoms, with the potential to progress to severe and fatal viral hemorrhagic fever with shock and multi-organ system failure. is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

(yellow fever virus infection) A viral infection caused by a flavivirus called yellow fever virus. It is transmitted to humans from infected mosquitoes. The signs and symptoms range from a mild febrile illness to liver damage with jaundice and hemorrhages.

(yellow fever virus infection) A viral infection caused by a flavivirus called yellow fever virus. It is trans-

mitted to humans from infected mosquitoes. The signs and symptoms range from a mild febrile illness to liver damage with jaundice and hemorrhages. is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

Yellow fever is a mosquito-borne flavivirus infection endemic in tropical South America and sub-Saharan Africa. Symptoms may include sudden onset of fever, relative bradycardia, headache, and, if severe, jaundice, hemorrhage, and multiple organ failure. Diagnosis is with viral culture, reverse transcription-polymerase chain reaction...

Yellow fever is a mosquito-borne flavivirus infection endemic in tropical South America and sub-Saharan Africa. Symptoms may include sudden onset of fever, relative bradycardia, headache, and, if severe, jaundice, hemorrhage, and multiple organ failure. Diagnosis is with viral culture, reverse transcription-polymerase chain reaction... is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

Yellow fever is one of many causes of viral hemorrhagic fever. It is a member of the flavivirus family (group B arbovirus).

Yellow fever is one of many causes of viral hemorrhagic fever. It is a member of the flavivirus family (group B arbovirus). is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

A viral hemorrhagic fever caused by a flavivirus transmitted by the Aedes or Haemagogus mosquito. It is endemic in

South America, the Caribbean, and Africa, and has been resurging in the last 2 decades. The clinical disease is variable, ranging from a nonspecific viral illness to hemorrhagic fever and death.

A viral hemorrhagic fever caused by a flavivirus transmitted by the Aedes or Haemagogus mosquito. It is endemic in South America, the Caribbean, and Africa, and has been resurging in the last 2 decades. The clinical disease is variable, ranging from a nonspecific viral illness to hemorrhagic fever and death. is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Synonyms:

(xenograft) The transplant of an organ, tissue, or cells to an individual of another species.

(xenograft) The transplant of an organ, tissue, or cells to an individual of another species. denotes (xenograft) the transplant of an organ, tissue, or cells to an individual of another species., a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

(xenotransplantation) Procedures in which live cells, tissues, or organs derived from one species are transplanted, implanted, or infused into another species; includes those procedures from an animal into a human or from one animal into another; also includes procedures in which human body fluids, cells, tissues, or organs are removed from the body, come into contact with live animal cells, tissues, or organs, and are then placed back into a human patient; this definition is based upon the DHHS definition; where appropriate, index donor and recipient species.

(xenotransplantation) Procedures in which live cells, tissues, or organs derived from one species are trans-

planted, implanted, or infused into another species; includes those procedures from an animal into a human or from one animal into another; also includes procedures in which human body fluids, cells, tissues, or organs are removed from the body, come into contact with live animal cells, tissues, or organs, and are then placed back into a human patient; this definition is based upon the DHHS definition; where appropriate, index donor and recipient species. denotes (xenotransplantation) procedures in which live cells, tissues, or organs derived from one species are transplanted, implanted, or infused into another species; includes those procedures from an animal into a human or from one animal into another; also includes procedures in which human body fluids, cells, tissues, or organs are removed from the body, come into contact with live animal cells, tissues, or organs, and are then placed back into a human patient; this definition is based upon the dhhs definition; where appropriate, index donor and recipient species., a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

(xenotransplantation) The transfer of cells, tissues, or organs from a donor into a recipient of another species.

(xenotransplantation) The transfer of cells, tissues, or organs from a donor into a recipient of another species. denotes (xenotransplantation) the transfer of cells, tissues, or organs from a donor into a recipient of another species., a biological component or molecular process interpreted through relevant cells, pathways, tissues, and laboratory findings.

Synonyms:

(transplantation, heterologous) Transplantation between animals of different species.

(transplantation, heterologous) Transplantation between animals of different species. is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

Xenotransplantation involves the transplantation of nonhuman tissues or organs into human recipients. The concept was pioneered a century ago, when transplanting human organs was considered ethically controversial.

Xenotransplantation involves the transplantation of nonhuman tissues or organs into human recipients. The concept was pioneered a century ago, when transplanting human organs was considered ethically controversial. is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:

A human and animal pathogen causing mesenteric lymphadenitis, diarrhea, and bacteremia.

A human and animal pathogen causing mesenteric lymphadenitis, diarrhea, and bacteremia. describes an infectious or toxic process involving the site or exposure named by the term. Diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Synonyms:

A species of facultatively anaerobic, Gram negative, rod shaped bacteria in the phylum Proteobacteria. This species is motile, urease positive and negative for ornithine decarboxylase, oxidase, indole, and pyrazinamidase. It is able to ferment rhamnose, and melibiose but not cellobiose, sorbitol, sorbose, sucrose, fucose, or raffinose. Y. pseudotuberculosis is found in many animal hosts and is a pathogen that can cause gastroenteritis in humans and many types of zoonotic infections.

A species of facultatively anaerobic, Gram negative, rod shaped bacteria in the phylum Proteobacteria. This species is motile, urease positive and negative for ornithine decarboxylase, oxidase, indole, and

pyrazinamidase. It is able to ferment rhamnose, and melibiose but not cellobiose, sorbitol, sorbose, sucrose, fucose, or raffinose. Y. pseudotuberculosis is found in many animal hosts and is a pathogen that can cause gastroenteritis in humans and many types of zoonotic infections.

Synonyms:

Any bacterial organism that can be assigned to the species Yersinia pseudotuberculosis.

Any bacterial organism that can be assigned to the species Yersinia pseudotuberculosis. is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:

A species of facultatively anaerobic, Gram negative, rod shaped bacteria in the phylum Proteobacteria. This species is motile, positive for coagulase and fibrinolysin and negative for urease, indole, ornithine decarboxylase, oxidase, and pyrazinamidase. Some strains are able to ferment melibiose but none can metabolize sorbose, rhamnose, cellobiose, sucrose, or sorbitol. Y. pestis is found in rodents and fleas and is a pathogen that can cause pneumonic, septicemic and bubonic plague types in humans.

A species of facultatively anaerobic, Gram negative, rod shaped bacteria in the phylum Proteobacteria. This species is motile, positive for coagulase and fibrinolysin and negative for urease, indole, ornithine decarboxylase, oxidase, and pyrazinamidase. Some strains are able to ferment melibiose but none can metabolize sorbose, rhamnose, cellobiose, sucrose, or sorbitol. Y. pestis is found in rodents and fleas and is a pathogen that can cause pneumonic, septicemic and bubonic plague types in humans.

Synonyms:

Any bacterial organism that can be

assigned to the species *Yersinia pestis*.

Any bacterial organism that can be assigned to the species *Yersinia pestis*. is a microorganism or microbial group identified by its biologic and taxonomic features. Clinical significance depends on pathogenicity, exposure, the site involved, and antimicrobial susceptibility.

Synonyms:**Etiologic agent of plague in humans, rats, ground squirrels, and other rodents.**

Etiologic agent of plague in humans, rats, ground squirrels, and other rodents. is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:**The etiologic agent of PLAGUE in man, rats, ground squirrels, and other rodents.**

The etiologic agent of PLAGUE in man, rats, ground squirrels, and other rodents. is a medical condition or clinical finding involving the body system or process named by the term. Its significance is established from its characteristic features, causes, and clinical context.

Synonyms:**Zika virus disease**

Zika virus disease is an infection caused by Zika virus, usually spread by infected *Aedes* mosquitoes and sometimes through sex or from a pregnant person to the fetus. Many infections are mild or asymptomatic, but infection during pregnancy can cause congenital Zika syndrome; Guillain-Barré syndrome is a rare adult complication.

Synonyms:**Zinc in diet**

Zinc in the diet is supplied by foods such as meat, shellfish, dairy products, beans, nuts, and fortified grains. It supports immune function, protein and DNA synthesis, wound healing, growth, and taste; requirements and supplement safety depend on age, pregnancy, diet, and medical conditions.

Synonyms:**Zinc oxide overdose**

Zinc oxide overdose occurs after ingesting an excessive amount of zinc oxide, often from a product or supplement. It can cause nausea, vomiting, abdominal pain, diarrhea, and, with substantial or repeated exposure, copper deficiency, anemia, and impaired immune function; poison-control or emergency guidance may be needed.

Synonyms:**Zinc poisoning**

Zinc poisoning is illness from excessive zinc exposure, commonly through large supplement doses or occupational sources. Acute exposure can cause gastrointestinal symptoms, while repeated excess can produce copper deficiency, anemia, altered lipid metabolism, and immune or neurologic effects.

Synonyms:

Bibliography and Sources

This is a selected bibliography of standard medical dictionaries and authoritative biomedical terminology resources used to guide terminology, spelling, synonyms, and general definitions in this dictionary. The source material is not mapped term-by-term, so this list should not be read as a claim that every entry was copied from every source. Clinical decisions should be based on current guidelines, specialist references, and primary literature.
