

Medical Dictionary by Specialty

A Comprehensive Reference of Medical Terminology

Chaman Singh Verma

September 12, 2026

Preface

This dictionary is a concise reference to medical terms, diseases, investigations, treatments, anatomy, physiology, and related clinical concepts. It is intended to help students, healthcare professionals, educators, and general readers understand unfamiliar medical language.

The entries are arranged alphabetically from A to Z, with each letter presented in its own chapter. This arrangement allows a reader to locate a known term quickly while maintaining a consistent structure throughout the book. Related terms, recognized common names, and alternative names are included when they improve clarity or aid searching.

Definitions are written in simple, formal language and are intended to be clear, accurate, and useful for reference. Medical terminology changes as scientific knowledge and clinical guidance develop; therefore, important information should be checked against current textbooks, primary research, professional guidance, and local clinical protocols.

This book is an educational reference, not a substitute for professional medical advice, diagnosis, or treatment. Readers should seek advice from a qualified healthcare professional when making decisions about health.

Chaman Singh Verma

Medical Disclaimer

Educational and Reference Purpose Only: This publication, *Medical Dictionary by Specialty*, is prepared and compiled strictly for educational, academic, historical, and reference purposes. It is intended for medical students, healthcare professionals, educators, and researchers.

No Medical Advice: The information contained herein does not constitute professional medical advice, clinical diagnosis, treatment protocols, or formal therapeutic recommendations. It should not be used as a substitute for the professional judgment of qualified physicians, surgeons, or certified healthcare providers.

Clinical Practice Guidelines: Healthcare practitioners must always consult primary evidence-based medical literature, institutional protocols, manufacturer prescribing information, and national clinical guidelines (such as WHO, CDC, NICE, or national medical councils) when making diagnostic or therapeutic decisions for individual patients.

Limitation of Liability: Neither the author nor the publishers accept any legal responsibility or liability for any errors, omissions, or clinical outcomes resulting from the use or application of any information presented in this work.

A

5-Alpha Reductase

An enzyme that changes testosterone into dihydrotestosterone. DHT supports male sexual development and contributes to prostate growth and male-pattern hair loss. Medicines that block this enzyme are used for an enlarged prostate and some types of hair loss.

A & E Medicine

Accident and emergency (A&E) medicine provides rapid assessment, stabilization, diagnosis, and initial treatment for sudden illness and injury.

A Fib

Alternate name; see *Atrial fibrillation*.

A-A Gradient

The difference between the oxygen level in the air sacs of the lungs and the oxygen level in arterial blood. It helps find the cause of low blood oxygen. The gradient is often increased when oxygen transfer is impaired, but may remain normal when low oxygen is caused by slow or shallow breathing or low oxygen in the inhaled air.

A-T

The adenine–thymine base pair in DNA. The two bases join by hydrogen bonds and help form the structure of DNA.

AAA Repair

Surgical or endovascular treatment of an abdominal aortic aneurysm to prevent rupture or treat a rupture.

Aagenaes Syndrome

A rare inherited disorder, also called cholestasis-lymphedema syndrome, that causes cholestasis beginning in infancy and persistent lymphedema, usually of the lower limbs. Liver disease may become intermittent with age, but some people develop fat-soluble vitamin deficiency, poor growth, or cirrhosis.

Aarskog-Scott Syndrome

A rare inherited developmental disorder, often related to FGD1 variants, characterized by distinctive facial features, short stature, skeletal differences, and genital anomalies.

Alternate Names:

Aarskog Syndrome

Aase Syndrome

A rare congenital disorder that causes hypoplastic anemia, meaning reduced production of red blood cells, and skeletal abnormalities, especially thumbs with three bones (triphalangeal thumbs). It is often considered part of the Diamond–Blackfan anemia spectrum; not all cases are known to be inherited.

Aase-Smith Syndrome I

A rare congenital-malformation syndrome associated with hydrocephalus, cleft palate, severe joint contractures, distinctive hand and facial findings, and sometimes heart defects.

Aase-Smith Syndrome II

A rare inherited disorder characterized by hypoplastic anemia and triphalangeal thumbs, in which the thumbs contain three phalanges rather than the usual two.

AATD

See *Alpha-1-antitrypsin deficiency*.

Abandoned Lead

A disconnected or no-longer-used wire from an implanted cardiac or other electrical device that remains in the body.

Alternate Names:

Retained cardiac device lead

Abasia

Inability to walk despite preserved strength and the ability to move the legs in other circumstances. It usually reflects a neurologic or functional gait disorder rather than paralysis.

Abate

To become less intense or to reduce in severity, frequency, or amount; symptoms, inflammation, pain, or fever may abate.

Abatement

A reduction in the severity, intensity, frequency, or amount of a symptom, disease process, exposure, or other condition.

ABCDE Assessment

A systematic emergency assessment of airway, breathing, circulation, disability, and exposure. Life-threatening abnormalities are treated as they are identified, with repeated reassessment.

ABCDE Rule For Melanoma

A screening mnemonic for suspicious pigmented lesions: asymmetry, border irregularity, color variation, diameter greater than about 6 mm, and evolution. It does not diagnose melanoma; suspicious lesions require clinical assessment.

Abdomen

The body region between the diaphragm and pelvis. It contains most digestive organs, the kidneys, spleen, pancreas, and major blood vessels and is described clinically by four quadrants or nine regions.

Abdomen - Swollen

An abdomen that is larger than usual or feels full and tight, also called abdominal distention. It may be caused by gas, constipation, overeating, fluid buildup, pregnancy, weight gain, bowel blockage, or enlarged organs. Severe or persistent swelling, especially with pain, vomiting, fever, or bloody stools, needs medical assessment.

Abdomen, Acute

Acute abdomen is sudden or severe abdominal pain with possible tenderness, guarding, vomiting, distention, or altered bowel function that may indicate a surgical or other urgent condition.

Abdomen, Diseases Of

Diseases of the abdomen affect abdominal organs, blood vessels, lining, or abdominal wall and may cause pain, vomiting, altered bowel function, bleeding, or distention.

Abdominal

Relating to the abdomen, the body region between the chest and pelvis that contains organs of the digestive, urinary, and reproductive systems.

Abdominal Abscess

A localized collection of pus within the abdomen, usually caused by bacterial infection, inflammation, surgery, or organ perforation. It may cause fever and abdominal pain and often requires antibiotics and drainage.

Abdominal Angina

Pain in the abdomen after eating, caused by reduced blood flow through the arteries supplying the intestines. It is usually due to hardening and narrowing of these arteries.

Abdominal Aorta

The portion of the aorta below the diaphragm that extends to its bifurcation into the common iliac arteries. It supplies the abdominal organs, pelvic organs, and lower limbs through its branches.

Abdominal Aortic Aneurysm

A localized enlargement of the abdominal aorta, usually defined as an aortic diameter of at least 3 cm or more than 50 percent above normal. Enlargement can progress to rupture.

Alternate Names:

AAA (Abdominal Aortic Aneurysm)

Abdominal Aortic Aneurysm Repair - Open

Open surgery to repair an enlarged abdominal aorta using an artificial graft. The surgeon reaches the aorta through the abdominal cavity or behind the abdominal lining. It may be needed for a large, painful, or rapidly growing aneurysm when repair from inside the blood vessel is not possible.

Abdominal Aortic Aneurysm Screening

Ultrasound examination used to detect an abdominal aortic aneurysm before symptoms occur. Screening recommendations depend on age, sex, smoking history, and clinical risk; follow-up intervals depend on aneurysm size.

Abdominal Aortic Ultrasound

Ultrasound imaging of the abdominal aorta used to detect or monitor an abdominal aortic aneurysm.

Abdominal Binder

A wide supportive garment placed around the abdomen to provide gentle compression after surgery, injury, or selected abdominal-wall conditions.

Abdominal Bloating

A sensation of fullness or visible enlargement of the abdomen, commonly caused by intestinal gas, constipation, food intolerance, or functional gastrointestinal disorders. Persistent or severe bloating may require evaluation for organic disease.

Abdominal Bruit

An abnormal blowing or whooshing sound heard over the abdomen with a stethoscope, usually caused by turbulent blood flow through a narrowed or enlarged artery. It may occur with renal-artery stenosis or an abdominal aortic aneurysm. Further assessment depends on symptoms and vascular risk factors.

Abdominal Cavity

The cavity between the diaphragm and pelvis containing the stomach, liver, gallbladder, spleen, pancreas, kidneys, and intestines.

Abdominal Circumference

The distance around the abdomen. In pregnancy, fetal abdominal circumference is measured by ultrasound at a standardized level that includes the stomach, portal sinus, and spine; it is used with other measurements to estimate fetal size and assess growth.

Abdominal Colic

Cramping abdominal pain caused by contractions or obstruction of a hollow organ, such as the intestine, ureter, or bile duct. Pain often comes in waves and may be accompanied by nausea, vomiting, sweating, or altered bowel or urinary function. Severe or persistent pain requires prompt medical assessment.

Abdominal Compartment Syndrome

A dangerous rise in pressure inside the abdomen, usually above 20 millimeters of mercury, that causes new problems with organ function. Causes include severe fluid buildup, an overly swollen or blocked intestine, internal bleeding, and some conditions after abdominal surgery.

Abdominal CT

Computed tomography of the abdomen used to evaluate selected causes of abdominal pain, trauma, bowel obstruction, inflammation, bleeding, and masses. The protocol and use of contrast depend on the suspected condition and the patient's clinical status.

Abdominal CT Scan

A computed tomography study that produces cross-sectional images of the abdomen using X-rays. It can identify structural abnormalities, injury, inflammation, bleeding, or masses.

Abdominal Distention

Visible or felt enlargement, tightness, or fullness of the abdomen caused by gas, fluid, stool, pregnancy, organ enlargement, a mass, or bowel blockage. Sudden distention with pain, vomiting, fever, faintness, bleeding, or signs of irritation of the abdominal lining requires urgent evaluation.

Abdominal Exploration

Surgical inspection of the abdominal cavity to identify or treat a suspected source of pain, bleeding, infection, obstruction, or other disease.

Abdominal Fluid

Fluid within the abdominal cavity; excessive accumulation is called ascites.

Alternate Names:

Peritoneal fluid

Abdominal Girth

The distance around the abdomen, measured at a specified level. It may be used to monitor abdominal distention, fetal growth, obesity, ascites, or changes in intra-abdominal volume.

Abdominal Guarding

Tensing of the abdominal muscles when the abdomen is touched. It may occur when the lining around the abdominal organs is irritated or inflamed.

Abdominal Hernia

Protrusion of an organ or tissue through a weakness or opening in the abdominal wall. Common types include incisional, umbilical, epigastric, and ventral hernias.

Abdominal Hysterectomy

Surgical removal of the uterus through an incision in the abdominal wall; the cervix, ovaries, and fallopian tubes may or may not also be removed.

Abdominal Mass

A palpable or imaging-detected abnormal collection, enlargement, or lesion within the abdomen.

Causes include distended bowel or bladder, organ enlargement, hernia, inflammatory collection, benign tumour, and malignancy; assessment depends on location, mobility, tenderness, systemic features, and appropriate imaging.

Abdominal Migraine

A migraine-related disorder characterized mainly by recurrent episodes of moderate to severe midline abdominal pain, often with nausea or vomiting and little or no headache.

Abdominal MRI Scan

A magnetic resonance imaging study that produces detailed images of the abdomen using magnetic fields and radiofrequency energy.

Abdominal Muscles

The muscles forming the front and sides of the abdominal wall. They support the trunk, help with posture and breathing, and increase intra-abdominal pressure during coughing, lifting, and defecation.

Alternate Names:

Abdominal wall muscles.

Abdominal Neoplasm

An abnormal tissue growth arising in an abdominal organ or structure; it may be benign or malignant.

Alternate Names:

Abdominal tumor

Abdominal Pain

Discomfort within the abdomen classified as visceral (dull, midline, poorly localized), parietal (sharp, well localized, worsened by movement), or referred from a distant source.

Alternate Names:

Stomach pain

Abdominal Pregnancy

An ectopic pregnancy implanted in the peritoneal cavity rather than the uterus, fallopian tubes, or ovaries. It is rare and can cause severe internal bleeding. Diagnosis requires specialist imaging and management.

Abdominal Radiography

A regular X-ray of the abdomen. It may be taken while a person is lying down, standing, or lying on their side.

Abdominal Reflex

Contraction of the abdominal muscles after stimulation of the abdominal skin. An absent or asymmetric reflex may indicate neurologic disease, although it can be absent normally in some people.

Abdominal Regions

The nine named areas used to describe locations on the abdominal wall: the right and left hypochondriac, epigastric, right and left lumbar, umbilical, right and left iliac, and hypogastric regions.

Abdominal Rigidity

Involuntary tensing of the abdominal wall, usually caused by irritation of the peritoneum. It may occur with peritonitis, perforation, severe infection, or intra-abdominal bleeding and requires clinical assessment.

Abdominal Sounds

Sounds produced by movement of gas and fluid through the intestines; changes in frequency or character may support, but do not establish, a diagnosis.

Abdominal Swelling

Visible or felt enlargement of the abdomen caused by gas, constipation, pregnancy, fluid accumulation, organ enlargement, mass, or abdominal-wall changes. Persistent, progressive, painful, or sudden swelling—especially with vomiting, fever, bleeding, or inability to pass stool or gas—requires medical evaluation.

Abdominal Tap

A procedure in which a needle or catheter is inserted into the abdominal cavity to remove or test ascitic fluid. It is also called paracentesis.

Abdominal Thrusts

First-aid maneuver used for severe choking in a

conscious person, intended to expel an obstructing object from the airway.

Abdominal Ultrasound

An ultrasound examination that uses sound waves to produce images of the abdomen and assess its structure and blood flow when applicable.

Abdominal Wall

The layered muscular, fascial, and skin-covered boundary surrounding the abdominal cavity. It supports and protects abdominal organs and helps with posture, breathing, coughing, and straining. Weakness or defects may produce abdominal or incisional hernias; trauma, infection, and tumors may also affect the wall.

Abdominal Wall Fat Pad Biopsy

Removal of a small sample of abdominal fat to look for amyloid, usually with a special Congo-red stain. It is less invasive than biopsy of an affected organ, but a negative result does not rule out amyloidosis.

Abdominal Wall Hernia

Protrusion of abdominal tissue through a weak area or opening in the abdominal wall. Common types include inguinal, umbilical, femoral, and incisional hernias. A painful, firm, or non-reducible bulge with vomiting or abdominal distension may indicate incarceration or strangulation and requires urgent assessment.

Abdominal Wall Surgery

Surgical repair of defects in the abdominal wall, most commonly for hernias using open or laparoscopic techniques with mesh reinforcement. Indications include inguinal, umbilical, femoral, or incisional hernias, and the approach depends on defect size, location, and patient factors.

Abdominal X-Ray

A plain radiograph of the abdomen used to assess selected causes of pain, obstruction, perforation, foreign bodies, or urinary stones. It has limited sensitivity for many abdominal disorders.

Abdominocentesis

Inserting a needle through the abdominal wall into the space around the abdominal organs to remove or test extra fluid, called ascites. It is also called paracentesis.

Abdominopelvic Cavity

The continuous body cavity below the diaphragm that contains the abdominal and pelvic organs.

Abdominoperineal Resection

Surgery removing the rectum and anus, usually with a permanent colostomy.

Alternate Names:

APR

Abdominoplasty

A surgical procedure that removes excess abdominal skin and may tighten the abdominal wall. It is commonly called a tummy tuck.

Alternate Names:

a tummy tuck.

Abducens Nerve

The sixth cranial nerve. It controls the muscle that moves the eye outward. Damage to this nerve can prevent outward eye movement and cause double vision.

Abducent Nerve

Another name for the abducens nerve, the sixth cranial nerve, which supplies the lateral rectus muscle and moves the eye outward.

Abduct

To abduct a limb or body part is to move it away from the body's midline; the opposite movement is adduction.

Abduction

Movement of a limb or other body part away from the median plane of the body.

Abductor Muscle

A muscle that moves a body part away from the

midline or, for a digit, away from the axis of the hand or foot.

Aberration

A deviation from normal structure, function, or appearance; in optics, it is an imperfection that prevents light from forming a sharply focused image.

Abetalipoproteinemia

A rare inherited disorder in which the body cannot produce normal apolipoprotein-B-containing lipoproteins. It causes fat malabsorption, deficiencies of fat-soluble vitamins, abnormal red cells, and possible neurologic or retinal disease.

Abfraction

Loss of tooth structure near the gum line, possibly related to mechanical stress. It may cause tooth sensitivity and may require dental treatment.

Abiotic

Nonliving; in biology and medicine, the term describes physical or chemical environmental factors rather than living organisms.

Abiotrophy

Progressive degeneration or loss of function in a tissue or organ, often due to an inherited or developmental defect rather than an acquired injury. The process may reflect a genetically determined failure of cellular maintenance, metabolism, or structural integrity. Clinical manifestations vary with the affected organ and can include progressive weakness, sensory loss, ataxia, or organ-specific dysfunction. Diagnosis is guided by the clinical course, examination, laboratory studies, imaging, and genetic or pathologic evaluation when indicated.

Ablate

To remove or destroy tissue, usually by surgery, heat, cold, chemicals, or another energy source.

Ablation

Destruction or removal of a small area of abnormal tissue using methods such as heat, cold, chemicals,

or electrical energy.

Ablative Surgery

Surgery that destroys or removes abnormal tissue, often using excision, heat, cold, electrical energy, or other tissue-destructive methods.

Ablepharon

A congenital absence or severe underdevelopment of an eyelid.

Abnormal

Not normal or not what is expected for a person's age or situation. It may be harmless or may point to disease, so it must be considered with other findings.

Abnormal Color

A color change in skin, mucosa, secretions, or another tissue that differs from the expected appearance.

Alternate Names:

Discoloration

Abnormal Fissure

An unusual crack, groove, or cleft in a tissue or organ.

Abnormal Hemoglobins Testing

A laboratory test that identifies variant or abnormal hemoglobin molecules using hemoglobin electrophoresis, high-performance liquid chromatography, or molecular methods. It is used to diagnose hemoglobinopathies such as sickle cell disease, thalassemia, and other inherited hemoglobin disorders.

Abnormal Uterine Bleeding

Uterine bleeding that is abnormal in frequency, regularity, duration, or volume, occurring outside of normal menstruation or in women who are not pregnant.

Abnormal Virilization

Development of masculinizing physical features in a person whose expected sex development does not include them, often from excess androgens.

Alternate Names:

Virilization

Abnormality

A structural, functional, or developmental difference from the usual state.

Alternate Names:

Anomaly

Abnormally Dark Or Light Skin

Skin that has become darker or lighter than a person's usual skin tone. Darkening is called hyperpigmentation and lightening is called hypopigmentation. Causes include inflammation or injury, sun exposure, medicines, infections, hormonal disorders, and genetic conditions.

Abnormally Excessive Sweating

See *Hyperhidrosis*.

ABO Blood Group System

The major red-cell blood-group system based on whether A and/or B antigens are present on the red-cell surface and the corresponding antibodies are present in plasma. The four principal phenotypes are A, B, AB, and O; correct ABO matching is critical for safe transfusion.

Alternate Names:

ABO Blood Group ABO Blood Groups ABO Blood Types ABO System

ABO Blood Typing

A laboratory test that determines a person's ABO and Rh blood groups. It is performed before transfusion, transplantation, and some obstetric procedures.

ABO Incompatibility

An immune reaction caused by transfusion or pregnancy involving incompatible A, B, or O blood-group antigens. It can cause acute hemolysis, transfusion reactions, or hemolytic disease of the newborn. See also Hemolytic Disease of the Newborn.

Abomasum

The fourth and glandular compartment of the stomach in ruminant animals.

Alternate Names:

True stomach

Abortion

The intentional ending of an ongoing pregnancy using medication or a medical procedure. It may be induced for personal or medical reasons and is distinct from spontaneous abortion, also called miscarriage. Laws and access vary by jurisdiction.

Abortion - Procedure

Surgical evacuation of the uterus to end a pregnancy, most commonly by vacuum aspiration under local or general anesthesia. It is performed for unwanted pregnancy, fetal demise, or incomplete miscarriage; complications include bleeding, infection, and uterine perforation.

Abortive

Incomplete, unsuccessful, or stopped before full development; an abortive infection produces limited disease without the usual complete clinical course.

Abortive Polio

A mild, nonparalytic poliovirus infection causing nonspecific fever, sore throat, headache, nausea, or malaise without the neurologic findings of paralytic polio.

Above The Knee Amputation

Amputation of the lower limb through the thigh above the knee joint, usually performed for severe vascular disease, infection, trauma, or cancer.

ABR Test

Auditory brainstem response testing records electrical activity from the auditory nerve and brainstem through scalp electrodes to assess hearing and auditory-pathway function, especially in infants or people unable to provide reliable behavioral responses.

Abrade

To wear away tissue by friction or erosion; an abrasion is the resulting scrape or superficial loss of skin.

Abrasion

A superficial injury in which the skin is scraped or rubbed away, usually by friction. In dentistry, abrasion means mechanical wearing away of tooth structure by an external force.

Abreaction

Abreaction is the expression and re-experiencing of intense emotion linked to a distressing memory; it is a historical psychological term and is not itself a diagnosis.

Abrin

A highly poisonous protein found in rosary pea seeds. It stops cells from making proteins, causing them to die. Swallowing chewed seeds or exposure to abrin powder can cause vomiting, diarrhea, dehydration, breathing problems, organ failure, and death. Suspected exposure requires urgent medical care; there is no routine antidote.

Abruptio Placenta

Abruptio placenta, more commonly called placental abruption, is premature separation of the placenta from the uterine wall before delivery, which can cause maternal bleeding and fetal compromise.

Abruptio Placentae

Premature separation of the placenta from the uterine wall before delivery. It can cause vaginal bleeding, abdominal pain, uterine tenderness, fetal distress, and maternal shock and requires urgent obstetric assessment.

Abs

An informal term for the abdominal muscles, particularly the anterior abdominal-wall muscles.

Abscess

A pocket of pus that forms in tissue, an organ, or a

body cavity, usually because of an infection. It may cause pain, swelling, warmth, and fever; treatment often requires drainage and sometimes antibiotics.

Abscess - Abdomen Or Pelvis

A localized collection of pus within the abdominal or pelvic cavity, usually caused by infection or leakage from an injured or inflamed organ. It may cause pain, fever, and sepsis and often requires antimicrobial treatment and drainage.

Abscess, Bartholin'S

See *Bartholin's cyst*.

Abscessed Tooth

A collection of pus caused by bacterial infection of the tooth or surrounding tissues, usually arising from untreated dental decay, a cracked tooth, or periodontal disease. Pain, facial swelling, fever, and sensitivity may occur. Dental treatment and drainage are usually required; swelling that affects swallowing or breathing is an emergency.

Abscesses Skin (Boils)

Alternate index label for Boils.

Abscission

Removal of tissue by cutting it away, as in a surgical procedure.

Absence Epilepsy

A generalized epilepsy characterized by brief episodes of impaired awareness, often with staring and subtle movements.

Alternate Names:

Absence seizures

Absence Of Sweating

Anhidrosis is diminished or absent sweating, which may be focal or generalized. It impairs thermoregulation and can result from autonomic dysfunction, peripheral neuropathy, skin disease, medications, or congenital conditions. Severe generalized anhidrosis can cause heat intolerance and exertional hyperthermia.

Absence Of The Breast

Congenital absence of breast development, called amastia; it may affect one or both sides and can occur with other developmental anomalies.

Absence Of The Nipple

Athelia: a rare congenital absence of one or both nipples, which may occur with hereditary disorders, chromosomal abnormalities, or developmental syndromes.

Absence Seizure

A brief generalized seizure causing sudden impaired awareness and behavioral arrest, usually followed by rapid recovery. Electroencephalography commonly shows generalized three-hertz spike-and-wave activity.

Alternate Names:

Petit Mal Seizure Seizure, Absence Seizure, Petit Mal

Absent Breath Sounds

Lack of audible air movement over part or all of a lung. Causes include pneumothorax, pleural effusion, or airway obstruction; sudden onset requires urgent assessment.

Absent Eye

Anophthalmia, a congenital absence or severe underdevelopment of the eye globe and ocular tissue; it may affect one or both eyes and may occur with other birth defects.

Absent Menstrual Periods - Primary

Primary amenorrhea, meaning failure to have the first menstrual period by the expected age. Causes include chromosomal or reproductive-tract abnormalities, endocrine disorders, chronic disease, and inadequate energy availability.

Absent Menstrual Periods - Secondary

Secondary amenorrhea, meaning absence of menstrual periods for an extended interval in a person who previously menstruated. Pregnancy is considered first; other causes include endocrine disease,

medications, stress, weight change, and ovarian dysfunction.

Absent Pulmonary Valve

Absent pulmonary valve is a congenital heart defect in which the pulmonary valve is missing or severely underdeveloped, often causing pulmonary-artery enlargement and respiratory symptoms.

Absent Reflex

Failure of an expected tendon or neurologic reflex to occur when stimulated.

Absinthism

A historical disorder attributed to habitual absinthe abuse, associated with alcohol dependence and reported hallucinations, insomnia, tremor, and seizures; the specific contribution of absinthe constituents was uncertain.

Absolute Neutrophil Count

The number of circulating neutrophils calculated from the white-cell count and differential. A low ANC indicates neutropenia; severe neutropenia greatly increases the risk of serious infection.

Alternate Names:

ANC

Absorb

To take in a substance, such as through the skin or intestine, or to reduce the intensity of radiation or light by taking up its energy.

Absorption

The process by which a drug enters the bloodstream from its site of administration, such as the digestive tract, skin, or muscle.

Abstinence

Deliberate avoidance of a substance or behavior, especially refraining from alcohol, drugs, tobacco, or sexual activity.

Abstract

In medical literature, an abstract is a brief summary

of a study or report describing its purpose, methods, main results, and conclusions.

Abulia

Marked reduction in motivation, initiative, and spontaneous activity, usually caused by dysfunction of frontal-subcortical brain circuits or related neurologic disease.

Abusive Head Trauma

Injury to an infant or young child caused by inflicted blunt impact, violent shaking, or both. Findings may include subdural hemorrhage, retinal hemorrhage, encephalopathy, fractures, or other injuries; diagnosis requires careful multidisciplinary assessment because no single finding is diagnostic.

Alternate Names:

Shaken Baby Syndrome (Abusive Head Trauma)

Abutment

A tooth or implant that supports and anchors a dental prosthesis.

AC Joint

The acromioclavicular joint, a gliding joint between the acromion of the scapula and the clavicle at the top of the shoulder.

Acalculia

Loss of the ability to do or understand numbers and calculations that a person could previously manage. It may result from injury or disease affecting areas of the brain involved in calculation.

Acalculous Cholecystitis

Inflammation of the gallbladder without gallstones. It usually occurs suddenly in people who are critically ill, injured, recovering from surgery, unable to eat, or in shock. Reduced bile flow and poor blood supply can contribute, and severe cases may cause tissue death or a hole in the gallbladder. Fever and pain in the upper-right abdomen may occur; ultrasound is commonly used for evaluation.

Acanthamoeba

A free-living amoeba found in soil and water that can cause keratitis, skin infection, or rarely granulomatous amoebic encephalitis, especially in people with impaired immunity.

Acanthamoeba Keratitis

A rare but potentially sight-threatening infection of the cornea caused by the free-living amoeba *Acanthamoeba*. It is strongly associated with contaminated contact-lens water or poor lens hygiene and may cause severe eye pain, redness, photophobia, blurred vision, and a ring-shaped corneal infiltrate. Prompt ophthalmic assessment and prolonged anti-amoebic treatment are required.

Acanthocyte

An abnormally shaped red blood cell with irregular thorn-like projections.

Alternate Names:

Spur cell

Acanthocytes (Spur Cells)

Abnormal red blood cells with irregular, spiky, thorn-like membrane projections of varying length and width. Caused by alterations in membrane lipid composition (increased cholesterol-to-phospholipid ratio).

Alternate Names:

Spur Cells

Acantholysis

Loss of attachment between cells in the outer layer of the skin, causing the cells to separate.

Acanthoma

A benign growth composed of thickened squamous epidermal cells.

Acanthosis Nigricans

A skin change causing darker, thicker, velvety patches, usually in skin folds such as the neck, armpits, or groin. It is often associated with insulin resistance, obesity, type 2 diabetes, or metabolic syndrome; less commonly, it is related to medicines

or other medical conditions.

Acapnia

An unusually low carbon-dioxide level in arterial blood, usually caused by breathing too quickly or deeply. It may cause light-headedness, tingling, or a change in the blood's acid level.

Acardia

Absence or severe malformation of the fetal heart, usually occurring in the setting of a rare twin perfusion sequence. The affected fetus cannot sustain independent circulation.

Acariasis

Infestation or disease caused by mites or ticks. Clinical manifestations vary with the organism and may include dermatitis, pruritus, tissue invasion, or transmission of an associated pathogen.

Acaricide

A pesticide or other agent used to kill mites and related arachnids such as ticks.

Acarus

Acarus is a mite genus; mites and related arthropods can cause skin infestation, allergy, or occupational exposure depending on the species.

Acatalasia

A rare inherited deficiency of catalase, an enzyme that breaks down hydrogen peroxide.

Alternate Names:

Catalase deficiency

ACC

Adenoid cystic carcinoma, a malignant tumor that most often arises in glandular tissues such as the salivary glands and may grow slowly but invade nerves or recur.

Accelerated Growth

Growth occurring faster than expected for a person's age, tissue, or developmental stage.

Accelerometry

Measurement of movement or acceleration, often used to assess activity, gait, or sleep.

Acceptance-Based Therapies

Psychotherapeutic approaches that help a person notice and accept thoughts, feelings, or bodily sensations while reducing unhelpful attempts to control or avoid them.

Alternate Names:

Acceptance-based psychotherapy; acceptance-focused therapy.

Access

In health care, the opportunity to obtain care; in dialysis, vascular access is the site where a needle or catheter enters the bloodstream.

Access Needle (Interventional)

A needle used to enter a vessel, cavity, or tissue under clinical or image guidance for sampling, drainage, infusion, or placement of another device.

Alternate Names:

Interventional

Accessory

Additional or supplementary; in anatomy, an accessory structure is an extra part or a structure that assists the usual organ or system.

Accessory Digestive Organ

An organ that supports digestion but is not part of the alimentary canal, such as the liver, pancreas, gallbladder, or salivary glands.

Accessory Dwelling Unit

A secondary, independent residential unit on the same property as a primary home; it is a housing and community-health term rather than a disease or body structure.

Accessory Muscles

Muscles recruited to assist the primary muscles of respiration or another movement when the normal workload is increased; use of respiratory accessory

muscles may indicate respiratory distress.

Accessory Nerve

The eleventh cranial nerve (CN XI), a primarily motor nerve whose spinal component supplies the sternocleidomastoid and trapezius muscles. It enables head rotation and shoulder elevation; injury may cause weak head rotation, impaired shoulder shrug, and shoulder droop.

Alternate Names:

Cranial nerve XI; spinal accessory nerve

Accessory Pathway

An abnormal electrical connection between the atria and ventricles that can bypass the atrioventricular node and cause pre-excitation or tachyarrhythmias, including atrioventricular reentrant tachycardia.

Accessory Placenta

An extra placental lobe separate from the main placenta but connected to it by fetal blood vessels; it can increase the risk of retained placental tissue or vessel injury during delivery.

Accident And Emergency Medicine

Accident and emergency medicine is the specialty concerned with immediate evaluation and treatment of acute illness, injury, poisoning, and life-threatening emergencies.

Accidental Death

Death caused by an unintentional injury or event rather than disease, suicide, or homicide. The cause is determined through medical, scene, and sometimes legal investigation.

Alternate Names:

Unintentional death

Accidental Fall

An unintentional descent to a lower level or the ground.

Alternate Names:

Fall injury

Accommodation

The ability of the eye to change the shape of its lens so that near objects can be focused clearly.

Accommodation Reflex

The coordinated adjustment of the lens, ciliary muscle, and pupils that shifts the eye from distance to near focus; it includes lens thickening, convergence, and pupillary constriction.

Accommodative Insufficiency

Inability of the eye to increase lens power adequately for near focusing, causing eyestrain, blurred near vision, headache, or difficulty reading.

Accouchement

Accouchement is the process of childbirth, including labor, delivery of the infant, and expulsion of the placenta.

Accretion

Accretion is gradual accumulation or growth of material; in medicine it may describe deposits such as dental calculus or mineral buildup around a lesion or device.

ACE Blood Test

ACE blood test measures angiotensin-converting enzyme in serum; it may support evaluation of sarcoidosis and selected granulomatous or liver disorders but is not diagnostic alone.

ACE Inhibitors

ACE inhibitors block formation of angiotensin II and are used for hypertension, heart failure, diabetic kidney protection, and selected cardiovascular conditions.

Acebutolol

Acebutolol is a beta-adrenergic blocker with intrinsic sympathomimetic activity used in some settings for hypertension and cardiac rhythm disorders; it can slow heart rate and conduction.

Acellular

Lacking cells; an acellular material may consist of extracellular matrix, mineral, fluid, or other components without intact living cells.

Acentric Chromosome

A chromosome fragment that lacks a centromere and therefore usually cannot attach normally to the spindle during cell division.

Acephalostomia

A congenital anomaly involving absence of the head and mouth.

Acetabular Labrum

A fibrocartilaginous rim attached to the margin of the acetabulum that deepens the hip socket, helps maintain a fluid seal, and contributes to hip-joint stability.

Acetabular Notch

The indentation in the inferior margin of the acetabulum, bridged by the transverse ligament of the acetabulum and forming a passage for structures entering the hip joint.

Acetabuloplasty

A surgical procedure that reshapes or augments the acetabular rim or socket to improve coverage of the femoral head in selected structural hip disorders.

Acetabulum

The cup-shaped socket of the hip formed by the fused ilium, ischium, and pubis. It articulates with the femoral head and is deepened by the acetabular labrum.

Acetaldehyde

A chemical produced when the body metabolizes alcohol. Accumulation may contribute to flushing, nausea, and vomiting.

Acetaminophen

A non-opioid analgesic and antipyretic, also called paracetamol, used to relieve mild-to-moderate pain

and reduce fever. It has little clinically useful anti-inflammatory activity. Excessive doses can cause severe, potentially fatal hepatic injury, especially with alcohol misuse, fasting, liver disease, or concurrent use of other acetaminophen-containing products; dosing must therefore follow the product label or a clinician's advice.

Acetaminophen (Paracetamol) Toxicity

Liver injury caused by an excessive dose of acetaminophen. Its toxic metabolite depletes glutathione and causes hepatic necrosis. N-acetylcysteine is the antidote and should be given promptly when toxicity is suspected.

Alternate Names:

Paracetamol

Acetaminophen And Codeine Overdose

Toxic effects caused by excessive exposure to Acetaminophen and codeine. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Acetaminophen Dosing For Children

Weight-based dosing guidance for acetaminophen in children; the total daily dose must account for all combination products to avoid liver toxicity.

Acetaminophen Overdose

Toxic effects caused by excessive exposure to Acetaminophen. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Acetate

The salt or ester of acetic acid; acetate is also a two-carbon metabolic substrate that can be converted to acetyl-CoA.

Acetazolamide

Acetazolamide inhibits carbonic anhydrase and promotes bicarbonate loss in urine; it is used for glaucoma, altitude illness, selected edema, and some acid-base or neurologic disorders.

Acetone

A volatile ketone body produced during increased fat metabolism. It may contribute to the characteristic breath odor of ketosis and ketoacidosis.

Acetone Body

A ketone body produced during fatty-acid metabolism; acetone is one of the three major ketone bodies and may contribute to the characteristic odor of ketosis.

Acetone Poisoning

Toxic effects caused by excessive exposure to acetone. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Acetonuria

The presence of acetone or other ketone bodies in the urine, which may occur with fasting, vomiting, uncontrolled diabetes, or other states of increased fat metabolism.

Acetyl-CoA Carboxylase

An enzyme that converts acetyl-CoA to malonyl-CoA, the first committed step in fatty-acid synthesis. Its activity is regulated by cellular energy status and hormones.

Acetyl-Coenzyme A

A central metabolic intermediate consisting of an acetyl group linked to coenzyme A by a high-energy thioester bond. It enters the citric acid cycle and provides carbon for fatty-acid, cholesterol, and ketone-body synthesis.

Acetylcholine

A major neurotransmitter in both the central and peripheral nervous systems. In the peripheral nervous system, it is released at the neuromuscular junction (nicotinic receptors) to excite skeletal muscle, at all autonomic ganglia (nicotinic receptors), and at parasympathetic postganglionic terminals (muscarinic receptors).

Acetylcholine Receptor Antibody

Acetylcholine receptor antibody testing detects antibodies associated with autoimmune myasthenia gravis and is interpreted with the neurologic examination and other studies.

Acetylcysteine

A cysteine derivative used as a mucolytic and as the antidote for acetaminophen poisoning because it replenishes glutathione and helps detoxify its harmful metabolite.

Acetylsalicyclic Acid

Acetylsalicyclic acid is the commonly misspelled name for acetylsalicylic acid, or aspirin, a salicylate that reduces pain, fever, and inflammation and inhibits platelet aggregation.

Acetylsalicylic Acid

The chemical name for aspirin, a salicylate drug with analgesic, antipyretic, anti-inflammatory, and antiplatelet effects.

ACh (Acetylcholine)

Acetylcholine, a neurotransmitter released at the neuromuscular junction and in autonomic and central nervous systems; it acts through nicotinic and muscarinic receptors.

Achalasia

A disorder in which the lower esophageal sphincter fails to relax normally and esophageal peristalsis is impaired, causing difficulty swallowing and regurgitation.

Alternate Names:

Cardiospasm (Achalasia)

Achalasia Of The Cardia

Achalasia of the cardia is failure of the lower esophageal sphincter to relax with loss of esophageal peristalsis, causing progressive swallowing difficulty, regurgitation, and food retention.

AChE (Acetylcholinesterase)

An enzyme that rapidly breaks down acetylcholine

into acetate and choline, terminating cholinergic signaling at synapses and neuromuscular junctions.

Achenbach'S Syndrome

A benign condition of recurrent, painful, spontaneous hematoma formation in the pulp of a finger or thumb, typically affecting middle-aged women. It presents with sudden onset of throbbing pain and blue-black discoloration of the fingertip, resolving spontaneously over one to two weeks without treatment.

Aches And Pains During Pregnancy

Musculoskeletal discomfort occurring during pregnancy, commonly affecting the lower back, pelvis, and joints. Mechanisms include hormonal ligamentous laxity, postural changes, and weight gain. Persistent or severe pain, especially with bleeding or fever, requires obstetric evaluation to exclude complications.

Aches, Pain, Fever

Aches, pain, and fever are common symptoms of infection, inflammation, injury, medication effects, or other illness. The pattern, duration, associated symptoms, and temperature help determine whether evaluation or urgent treatment is needed.

Achilles Tendinitis

Painful inflammation or degeneration of the Achilles tendon, usually caused by repeated loading.

Alternate Names:

Tendinitis, Achilles

Achilles Tendinopathy

Pain and structural disorder of the Achilles tendon, usually caused by repeated loading. It causes posterior heel pain and stiffness and is managed with activity modification, rehabilitation, and treatment of contributing factors.

Achilles Tendon

The strong tendon connecting the calf muscles to the heel bone. It can become inflamed or rupture.

Achilles Tendon (Calcaneal Tendon)

The thickest and strongest tendon in the human body, connecting the gastrocnemius and soleus (triceps surae) muscles to the calcaneus (heel bone). It plays a crucial role in plantarflexion of the foot, enabling walking, running, and jumping.

Alternate Names:

Calcaneal Tendon

Achilles Tendon Repair

Achilles tendon repair reconnects a ruptured Achilles tendon, followed by immobilization and graduated rehabilitation to restore plantar-flexion strength.

Achilles Tendon Rupture

A partial or complete tear of the Achilles tendon, usually caused by sudden force. It causes posterior ankle pain, weakness in plantar flexion, and difficulty walking or standing on tiptoe.

Achilles Tendonitis

A commonly used term for pain and inflammation or degeneration of the Achilles tendon. It may affect the tendon at its heel insertion or its mid-portion and is often related to repetitive loading.

Achillobursitis

Inflammation of a bursa near the Achilles tendon, causing pain, tenderness, swelling, or friction-related discomfort at the back of the heel.

Achlorhydria

Absence of hydrochloric acid in gastric secretions. It may result from autoimmune gastritis, long-term acid suppression, or loss of acid-producing stomach cells.

Achondrogenesis

A group of severe inherited disorders in which cartilage and bone development are profoundly impaired.

Achondroplasia

Autosomal dominant skeletal dysplasia (FGFR3 gene). Most common form of dwarfism. Features: short limbs, macrocephaly, frontal bossing, trident

hand, spinal stenosis. Homozygous form lethal. Normal intelligence.

Alternate Names:

Dwarfism (Achondroplasia)

Achoo Syndrome

The photic sneeze reflex: repeated sneezing triggered by sudden exposure to bright light, especially after entering sunlight from darkness.

Achromatopsia

An inherited disorder causing absent or greatly reduced color vision, often with light sensitivity and poor visual acuity.

Alternate Names:

Complete color blindness

Achromia

Achromia is loss or marked reduction of pigment in skin, hair, eye, or another tissue; causes include genetic disorders, autoimmune depigmentation, injury, and chemical exposure.

Aciclovir

Aciclovir, also called acyclovir, is an antiviral drug that inhibits herpesvirus DNA polymerase and is used for infections such as herpes simplex and varicella-zoster.

Acid

A substance that donates hydrogen ions or accepts an electron pair. In water, an acid increases hydrogen-ion concentration and lowers pH.

Acid Base Balance

The body's control of acid levels in its fluids, keeping arterial blood pH usually between 7.35 and 7.45.

Acid Indigestion

Dyspepsia or upper-abdominal discomfort that may include burning, fullness, belching, or nausea; it can accompany reflux, gastritis, ulcer disease, or other conditions.

Acid Loading Test

A test of the kidney's ability to excrete acid after an acid load, used in evaluating renal tubular acidification disorders.

Acid Mucopolysaccharides

An older term for glycosaminoglycans, long carbohydrate chains in connective-tissue substances such as cartilage, skin, and synovial fluid. Abnormal degradation or storage can cause mucopolysaccharidoses.

Acid Phosphatase

An enzyme that works best in acidic conditions and is found in several tissues, including prostate and blood cells.

Alternate Names:

ACP

Acid Reflux

Backward flow of stomach contents into the esophagus, which may cause heartburn, regurgitation, or irritation.

Acid Soldering Flux Poisoning

Toxic effects caused by excessive exposure to acid soldering flux. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Acid-Base Analysis

Evaluation of blood pH, bicarbonate, and carbon dioxide to identify metabolic or respiratory disturbances, including those caused by poisoning.

Acid-Base Disorder

Disturbance of the body's acid-base balance, classified by primary disturbance and compensation. Respiratory acidosis: hypoventilation, high PaCO₂, low pH. Respiratory alkalosis: hyperventilation, low PaCO₂, high pH.

Acid-Fast Bacillus Smear

Microscopic examination of a specimen, often sputum, for acid-fast organisms using a special stain. A positive result supports mycobacterial infection but

does not by itself identify the species or establish drug susceptibility; culture or molecular testing is also required.

Acid-Fast Stain

Acid-fast stain uses dyes that remain in the cell wall of mycobacteria and some related organisms, helping identify them in clinical specimens.

Acidophil

A cell or tissue component that stains readily with acidic dyes, especially eosin; acidophilic cells are recognized in histology and include selected endocrine and pituitary cell populations.

Acidophilus

Lactobacillus acidophilus, a lactic-acid-producing bacterium found in the intestinal and genital microbiota and used in some fermented foods and probiotic products.

Acidosis

An acid-base disturbance in which the concentration of hydrogen ions increases, tending to lower arterial blood pH below 7.35.

Aciduria

Aciduria means an abnormally acidic urine or the presence of excess organic acids in urine; it may reflect diet, dehydration, medication, or an inherited metabolic disorder.

Acinar Cell

A secretory cell arranged in a cluster, such as a pancreatic cell that releases digestive enzymes.

Acinetobacter Baumannii Resistance

Acinetobacter baumannii is a gram-negative coccobacillus that has emerged as a significant cause of healthcare-associated infections, particularly in intensive care units. The organism has intrinsic and acquired resistance mechanisms, including beta-lactamases, efflux pumps, and porin mutations.

Acinus

An acinus is a small functional secretory unit of a gland, such as a pancreatic or salivary acinus, whose cells release their product into a duct.

Acinus, Pulmonary

The portion of a lung supplied by a terminal bronchiole and containing respiratory bronchioles, alveolar ducts, and alveoli where gas exchange occurs.

ACL Injury

A sprain or tear of the anterior cruciate ligament in the knee.

ACL Reconstruction

Surgical reconstruction of the anterior cruciate ligament following rupture, one of the most common knee ligament injuries. The ACL is a primary restraint to anterior tibial translation and rotatory instability, and its rupture frequently occurs during non-contact pivoting sports activities (skiing, soccer, basketball).

Acne

A chronic inflammatory disorder of hair follicles and sebaceous glands. It causes comedones, papules, pustules, or nodules, most often on the face, chest, and back.

Alternate Names:

Pimples Pimples (Acne)

Acne Inversa

See *Hidradenitis suppurativa*.

Acne Keloid

A chronic inflammatory condition causing firm scar-like bumps around hair follicles, usually on the back of the neck.

Alternate Names:

Acne keloidalis nuchae

Acne Rosacea

Acne rosacea is a chronic inflammatory facial skin disorder causing flushing, persistent redness, visible vessels, papules, pustules, or eye symptoms; it is

distinct from acne vulgaris.

Acne Vulgaris

The common form of acne caused by follicular plugging, increased sebum production, microbial activity, and inflammation. It usually affects the face, trunk, and upper arms.

Acoustic

Relating to sound, hearing, or the physical properties and transmission of sound waves.

Acoustic Nerve

The acoustic nerve, more properly called the auditory or vestibulocochlear nerve (cranial nerve VIII), carries hearing and balance information from the inner ear to the brainstem.

Acoustic Neuroma

A benign, slow-growing tumor of the vestibular portion of the vestibulocochlear nerve. It may cause hearing loss, tinnitus, or balance problems.

Acoustic Neuroma (Vestibular Schwannoma)

A usually benign, slow-growing tumor of Schwann cells involving the vestibular portion of cranial nerve VIII. It may cause unilateral sensorineural hearing loss, tinnitus, imbalance, or facial sensory symptoms; MRI of the internal auditory canals is the preferred diagnostic study.

Alternate Names:

Vestibular Schwannoma Neuroma, Acoustic

Acoustic Reflex

An involuntary contraction of the stapedius muscle in response to a loud sound. It can be measured with immittance testing and helps assess the middle-ear muscles, auditory pathways, and facial nerve.

Alternate Names:

Stapedial reflex; stapedius reflex; middle-ear muscle reflex.

Acoustic Shock

Auditory and other symptoms after exposure to a

sudden or intense sound, potentially including ear pain, tinnitus, hyperacusis, dizziness, or temporary hearing change.

Acoustic Trauma

Acute damage to the auditory system from a brief, intense sound such as an explosion or firearm. It may cause tinnitus, temporary or permanent sensorineural hearing loss, and tympanic or ossicular injury; urgent audiologic assessment is indicated when hearing loss is sudden.

Acquired

Developed after birth rather than being present at birth or inherited; an acquired condition may result from infection, exposure, injury, aging, or another later event.

Acquired Feminization

Development of typically female secondary sexual characteristics after birth in a person not expected to develop them, often from hormonal change.

Acquired Generalized And Inherited Lipodystrophy

Lipodystrophy is abnormal loss or absence of adipose tissue. Acquired generalized forms develop after an immune or other trigger, while inherited forms result from gene variants; both can cause severe insulin resistance, diabetes, high triglycerides, and fatty liver.

Alternate Names:

Lipodystrophy (Acquired Generalized And Inherited Lipodystrophy)

Acquired Immunity

Immune protection that develops after infection, vaccination, or transfer of antibodies, involving adaptive immune responses directed toward specific antigens.

Acquired Immunodeficiency Syndrome

See *HIV/AIDS*.

Acquired Immunodeficiency Syndrome

Alternate index label for AIDS.

Acquired Platelet Function Defect

Impaired platelet adhesion or aggregation that develops after birth. Causes include antiplatelet medicines, kidney failure, hematologic disease, and other systemic disorders; platelet counts may remain normal, but mucocutaneous bleeding can occur.

Acquisition

The process by which new information or a skill is learned and initially encoded, especially in discussions of memory and learning.

Alternate Names:

Learning acquisition; memory acquisition.

Acquisition Duration

The time required to obtain or record a measurement, image, or physiologic signal.

Acquisition Time

The time during which a medical imaging system collects data. The required time depends on the imaging method, body region, protocol, and patient movement.

Acral Lentiginous Melanoma

A subtype of melanoma arising on acral skin (palms, soles, or under nails), appearing as a dark, irregularly pigmented patch or plaque. It is more common in people with darker skin tones and often presents at a later stage due to less frequent surveillance of these sites. Prognosis depends on thickness and stage at diagnosis.

Acro-Osteolysis

Resorption or destruction of the ends of the fingers or toes.

Acrocentric Chromosome

A chromosome whose centromere lies close to one end, producing a very short p arm and a longer q arm; human acrocentric chromosomes include 13, 14, 15, 21, and 22.

Acrochordon

A benign, soft, flesh-colored skin tag, usually occurring in skin folds such as the neck, axilla, or groin.

Acrochordon (Skin Tag)

Alternate index label for Skin Tag.

Acrocyanosis

Persistent, usually painless bluish discoloration and coolness of the hands or feet caused by reduced peripheral blood flow, often worsened by cold exposure.

Acrodermatitis

Inflammation affecting the skin of the hands, feet, or other distal body regions.

Acrodermatitis Enteropathica

A zinc-deficiency disorder causing periorificial and acral dermatitis, alopecia, diarrhoea, poor wound healing, and increased susceptibility to infection. It may be inherited from impaired intestinal zinc absorption or acquired through malnutrition, malabsorption, or prolonged parenteral nutrition.

Acrodynia

A painful condition with red, swollen, sweaty hands and feet, classically associated with mercury poisoning and historically called pink disease in children.

Acrodysostosis

A rare genetic skeletal dysplasia characterized by short, broad fingers and toes, nasal and midface hypoplasia, short stature, and variable intellectual disability. Some patients have resistance to parathyroid or other hormones.

Acromegaly

Chronic growth hormone excess in adulthood, typically from a pituitary somatotroph adenoma. Complications may include diabetes, hypertension, heart disease, sleep apnea, joint disease, nerve compression, visual problems, and other organ complications.

Acromioclavicular Joint

A plane synovial joint between the acromion of the scapula and the lateral end of the clavicle. It permits gliding movements and is stabilized primarily by the acromioclavicular and coracoclavicular ligaments.

Acromioclavicular Joint Injuries

Sprains or dislocations of the joint between the acromion and clavicle, usually caused by a fall or direct shoulder impact. Severity ranges from ligament sprain to complete displacement and is assessed clinically and with imaging.

Acromion

Bony process forming the shoulder's highest point, extending laterally from the scapular spine. Articulates with the clavicle at the acromioclavicular joint and arches over the glenohumeral joint. Attachment for deltoid and trapezius. The subacromial space contains the supraspinatus tendon and subacromial bursa.

Acroparaesthesia

Acroparaesthesia is tingling, pins-and-needles, burning, or altered sensation in the hands or feet, commonly related to nerve compression, neuropathy, vascular disease, or metabolic causes.

Acrophobia

An excessive, persistent fear of heights that causes marked anxiety, avoidance, or impairment beyond the ordinary caution associated with high places.

Acrosin

An enzyme in sperm that helps it penetrate the egg's surrounding layers.

Acrosome

A cap-like structure on the head of a sperm cell containing enzymes needed for fertilization.

Acrosome Reaction

Release of acrosomal enzymes that enables a sperm cell to penetrate the egg's outer layers.

ACTH Blood Test

A blood test that measures the level of ACTH, a hormone made by the pituitary gland. It is usually checked with a cortisol test to help find problems of the adrenal or pituitary glands.

ACTH Stimulation Test

A test that shows whether the adrenal glands can make cortisol. A synthetic form of ACTH is given, and cortisol levels are measured before and after it is given. A small rise may suggest adrenal insufficiency.

Actigraphy

Monitoring of movement over time to estimate sleep-wake patterns and activity.

Alternate Names:

Actigraphic monitoring

Actin

A structural and contractile protein found in many cells. In muscle, actin interacts with myosin to produce contraction; in other cells, it supports shape, movement, and intracellular transport.

Alternate Names:

Actin filament; microfilament protein.

Actin Myofilament

A thin muscle filament made mainly of actin that interacts with myosin during contraction.

Alternate Names:

Thin filament

Actin-Binding Protein

A protein that regulates, anchors, or cross-links actin filaments.

Acting Out

Expressing emotional conflict or distress through behavior rather than words.

Actinic

Relating to ultraviolet radiation from sunlight or UV lamps; chronic actinic exposure can cause sunburn, photoaging, and actinic keratoses.

Actinic Cheilitis

A precancerous sun-damage condition of the lips, usually the lower lip, caused by long-term ultraviolet exposure. It may cause persistent dryness, scaling, whitening, thickening, or blurring of the lip border and can progress to squamous cell carcinoma.

Actinic Granuloma

A benign granulomatous skin condition arising on sun-damaged skin, presenting as annular or ring-shaped plaques with central atrophy and an elevated, erythematous border. It is thought to represent a foreign-body reaction to degenerated elastic tissue from chronic ultraviolet exposure.

Actinic Keratosis

A rough, scaly skin lesion caused by chronic ultraviolet exposure, usually on sun-exposed skin. It can progress to squamous-cell carcinoma, so persistent, thickened, or changing lesions require clinical assessment.

Alternate Names:

Keratosis, Actinic Solar Keratosis Solar Keratosis (Actinic Keratosis)

Actinic Keratosis (Solar Keratosis)

A rough, scaly precancerous skin lesion caused by long-term ultraviolet exposure and capable of progressing to squamous cell carcinoma.

Alternate Names:

Solar Keratosis

Actinic Keratosis Management

Actinic keratosis management requires field-directed and lesion-directed therapy. Lesion-directed: cryotherapy (liquid nitrogen, 5 to 10 second freeze-thaw cycle), curettage, electrodesiccation.

Actinic Purpura

Bruising caused by fragile, sun-damaged skin and connective tissue, usually on the backs of the hands and forearms in older adults. The purple patches may appear after minor trauma and are generally harmless, although medicines such as anticoagulants can worsen them. New, widespread, or unexplained bruising warrants assessment.

Actinomycetoma

A chronic, progressive granulomatous infection of the skin and subcutaneous tissue caused by aerobic actinomycetes, characterized by swelling, draining sinuses, and dark granules in the discharge. It primarily affects the feet and is endemic in tropical regions. Diagnosis is by culture and histopathology.

Actinomycin D

Actinomycin D, or dactinomycin, is an antineoplastic antibiotic that blocks DNA-dependent RNA synthesis and is used for selected cancers; myelosuppression and tissue injury are important risks.

Actinomycosis

A chronic infection caused by branching, gram-positive anaerobic bacteria of the genus *Actinomyces*, which normally colonize the mouth, gastrointestinal tract, and genital tract. It can form infiltrative masses and draining sinuses containing sulfur granules.

Action Potential

A rapid, all-or-nothing depolarization of the cell membrane that propagates along excitable membranes (neurons, muscle, some endocrine cells).

Activated Charcoal

A porous form of carbon that adsorbs some substances in the gastrointestinal tract and can reduce their absorption after selected poisonings. It is not effective for every toxin and can cause aspiration or other complications.

Activated Partial Thromboplastin Time

A blood test that measures clotting through the intrinsic and common coagulation pathways. It may be prolonged by unfractionated heparin, clotting-factor deficiencies, inhibitors, or some liver and systemic disorders.

Active Caries

Tooth decay that is continuing to progress. The affected surface is often soft, rough, or chalky and requires dental assessment and management.

Active Management Of Third Stage

A set of measures used after birth to reduce postpartum hemorrhage, usually including a uterotonic medicine, controlled cord traction when appropriate, and assessment of uterine tone and bleeding.

Active Phase Of Labor

The part of the first stage of labor in which the cervix dilates progressively, generally beginning at about 6 cm and continuing to full dilation. Progress varies between individuals.

Active Site

The specific three-dimensional region of an enzyme where substrate binding and catalysis occur. Formed by amino acid residues that may be distant in primary sequence but brought together by protein folding.

Active Surveillance

Close, structured monitoring of a cancer or precancerous condition without immediate treatment. It includes scheduled examinations, laboratory tests, imaging, or biopsies, with treatment started if evidence of progression develops.

Active Transport

Movement of substances across cell membranes against their concentration gradient, requiring energy input, typically from ATP hydrolysis.

Activities Of Daily Living

Routine tasks required for personal care and independent living, including basic activities and more complex instrumental activities. Performance is assessed to describe functional status and support care planning.

Acupressure

Application of pressure to selected body points, usually to relieve symptoms such as pain or nausea.

Acupuncture

A treatment in which thin needles are inserted into selected points of the body.

Acute

Beginning suddenly or developing over a short period. The term may describe symptoms, illnesses, or complications.

Alternate Names:

Bronchitis (Acute)

Acute Abdomen

Sudden or severe abdominal pain with clinical features suggesting a potentially serious intra-abdominal disorder that may require urgent investigation or surgery.

Acute Acalculous Cholecystitis

Acute gallbladder inflammation without gallstones, usually occurring in critically ill, injured, postoperative, or fasting patients. Ischaemia, bile stasis, and infection may contribute; it can progress rapidly to necrosis or perforation and requires urgent assessment.

Acute Adrenal Crisis

Acute adrenal crisis is life-threatening cortisol deficiency causing hypotension, vomiting, abdominal pain, electrolyte disturbance, hypoglycemia, or shock; urgent glucocorticoid and fluid treatment is required.

Acute Agitation

A state of heightened motor activity, emotional tension, irritability, and impaired behavioral control that may threaten the patient or others. Management begins with de-escalation and assessment for delirium, intoxication, withdrawal, medical illness, and psychosis.

Acute Alcohol Intoxication

Neurobehavioral and physiologic impairment caused by recent ethanol exposure. Severity varies with concentration, tolerance, co-ingestants, and comorbidity; dangerous effects include respiratory depression, aspiration, hypoglycemia, hypothermia, trauma, and coma.

Acute And Chronic Bursitis

Bursitis is inflammation of a fluid-filled bursa that cushions a joint. Acute bursitis may follow trauma, infection, or sudden overuse; chronic bursitis reflects repeated pressure or inflammatory disease and causes localized pain, swelling, and tenderness with movement.

Alternate Names:

Bursa Inflammation (Acute And Chronic Bursitis)

Acute Angle-Closure Glaucoma

An ophthalmic emergency in which sudden closure of the anterior-chamber angle causes a rapid rise in intraocular pressure. Severe eye pain, blurred vision, halos, headache, nausea, vomiting, and a red eye may occur; urgent ophthalmic treatment is required to protect vision.

Acute Aortic Syndrome

A spectrum of life-threatening conditions involving the thoracic aorta, including aortic dissection, intramural hematoma (IMH), and penetrating aortic ulcer (PAU). See acute aortic syndromes.

Acute Arterial Occlusion - Kidney

Acute arterial occlusion of the kidney abruptly reduces renal blood flow and may cause flank pain, hematuria, hypertension, or acute kidney injury.

Acute Bacterial Rhinosinusitis

Bacterial infection of the paranasal sinuses suspected when symptoms persist without improvement for at least 10 days, become substantially worse after initial improvement, or are severe with high fever and purulent discharge. Treatment decisions depend on severity, complications, resistance risk, and local guidance.

Acute Bacterial Prostatitis

An acute, severe bacterial infection of the prostate gland, classified as NIH Category I prostatitis, most commonly caused by uropathogens such as *Escherichia coli*, *Proteus*, or *Klebsiella*. Clinically presents with sudden high fever, chills, perineal and low-back pain, dysuria, and acute urinary retention. Vigorous digital rectal examination is avoided due

to the risk of bacteremia and septic shock.

Acute Bilirubin Encephalopathy

The acute, potentially reversible neurologic syndrome caused by unconjugated bilirubin toxicity in the basal ganglia, hippocampus, and brainstem nuclei of neonates with severe hyperbilirubinemia. Early signs include poor feeding, lethargy, and hypotonia; intermediate progression brings irritability, high-pitched cry, and retrocollis; advanced stages manifest with stupor or coma, persistent retrocollis, opisthotonos, bicycling movements, and seizures. Urgent exchange transfusion and intensive phototherapy are mandatory to prevent progression to permanent kernicterus.

Alternate Names:

Bilirubin Neurotoxicity; Bilirubin Encephalopathy (Acute)

Acute Blood Loss

Rapid loss of circulating blood volume that can cause hypovolemic shock, tissue hypoxia, tachycardia, hypotension, and acute anemia.

Acute Bronchitis

Acute inflammation of the tracheobronchial tree, usually caused by a viral respiratory infection and characterized by cough, with or without sputum production, lasting up to several weeks.

Acute Bronchitis (Bronchitis (Acute))

Alternate index label for Bronchitis (Acute).

Acute Caries

Tooth decay that progresses rapidly, often producing a soft lesion or cavity. Risk is increased by factors such as frequent sugar exposure, reduced saliva, or poor oral hygiene.

Acute Cerebellar Ataxia

Sudden or rapidly developing incoordination caused by cerebellar dysfunction. In children it may follow an infection, but stroke, intoxication, inflammation, tumor, and other urgent causes must be considered.

Acute Chest Syndrome

A potentially life-threatening pulmonary complication of sickle cell disease characterized by a new lung infiltrate plus fever or respiratory symptoms such as chest pain, cough, hypoxemia, or breathing difficulty.

Acute Cholecystitis

Acute inflammation of the gallbladder, most often caused by persistent cystic-duct obstruction by a gallstone. It commonly causes sustained right-upper-quadrant pain, fever, nausea, and a positive Murphy sign; ultrasound and timely antimicrobial and surgical assessment are standard.

Acute Coronary Syndrome

A clinical spectrum caused by acute myocardial ischemia from plaque disruption, thrombosis, or less commonly coronary spasm. It includes unstable angina, NSTEMI, and STEMI and requires rapid assessment with symptoms, serial ECGs, and cardiac troponin testing.

Acute Coronary Syndromes

A spectrum of acute myocardial ischemia comprising unstable angina, non-ST-elevation myocardial infarction, and ST-elevation myocardial infarction, usually caused by acute coronary plaque disruption and thrombosis.

Acute Cough

A cough lasting less than three weeks. Common causes include viral respiratory infection, acute bronchitis, and pneumonia.

Acute Dacryocystitis

Acute infection and inflammation of the lacrimal sac, most commonly caused by obstruction of the nasolacrimal duct leading to stasis and secondary bacterial infection. It presents with painful swelling, redness, and tenderness at the medial canthus with purulent discharge.

Acute Decompensated Heart Failure

A rapid onset or worsening of heart-failure symptoms and signs caused by increased cardiac filling

pressures and/or inadequate cardiac output. It commonly presents with breathlessness, pulmonary or systemic congestion, edema, or fatigue and requires prompt assessment for precipitating causes and urgent treatment when respiratory failure, hypotension, or organ dysfunction is present.

Acute Diarrhea

Passage of loose or watery stools, usually three or more times daily, lasting less than two weeks. Infection, food-related illness, medicines, and other intestinal disorders can cause it. Oral rehydration is important; blood in stool, severe dehydration, persistent vomiting, or severe pain requires prompt assessment.

Acute Disease

A condition that begins suddenly and generally lasts a limited time.

Alternate Names:

Acute illness

Acute Disseminated Encephalomyelitis

An acute, immune-mediated demyelinating disorder, usually occurring days to weeks after an infection and less often after vaccination. It commonly causes encephalopathy with multifocal neurologic deficits, ataxia, or seizures, particularly in children.

Acute Endometritis

Acute inflammation of the endometrium, usually caused by ascending infection or retained tissue after pregnancy-related events or uterine instrumentation; fever, pelvic pain, and abnormal bleeding may occur.

Acute Esophageal Necrosis

Ischemic necrosis of the esophageal mucosa, most commonly caused by low-flow states such as shock, sepsis, or thromboembolism, presenting with hematemesis and chest pain. Endoscopy shows circumferential black necrotic mucosa, typically in the distal esophagus.

Acute Exacerbation

A rapid worsening of a chronic pulmonary condition, with increased breathlessness, cough, oxygen need,

or other symptoms; infection, aspiration, embolism, and other triggers may contribute.

Acute Exacerbation Of Asthma

A progressive increase in dyspnea, cough, wheezing, or chest tightness with reduced expiratory airflow compared with the patient's baseline. Severe attacks may cause exhaustion, silent chest, hypercapnia, respiratory failure, and need for urgent treatment.

Acute Fatty Liver Of Pregnancy

A rare, potentially life-threatening complication of late pregnancy involving liver dysfunction and microvesicular fat accumulation. It may cause nausea, abdominal pain, jaundice, low glucose, coagulopathy, or organ failure.

Acute Febrile Illness

A sudden illness characterized by fever, often with headache, chills, muscle aches, gastrointestinal symptoms, or other signs of infection; the cause may be infectious or noninfectious.

Acute Flaccid Myelitis

A rare but serious inflammatory disorder of the spinal cord, usually affecting the gray matter and causing sudden flaccid limb weakness, reduced reflexes, and sometimes cranial-nerve or respiratory involvement. MRI and cerebrospinal-fluid studies support the diagnosis; urgent neurologic and respiratory monitoring is required.

Acute Flaccid Myelitis

A rare neurologic condition causing sudden weakness and loss of muscle tone, usually affecting the arms or legs and sometimes the face or breathing muscles.

Acute Generalized Exanthematous Pustulosis

An acute drug reaction characterised by dozens to thousands of small, sterile, nonfollicular pustules arising on an erythematous base, often with fever and neutrophilia. It usually begins rapidly after exposure to an antibiotic or other medication and resolves after withdrawal of the trigger.

Acute Gastritis

Sudden, transient inflammation of the gastric mucosa, characterized by mucosal edema, hemorrhage, and neutrophil infiltration. Common causes include nonsteroidal anti-inflammatory drugs (NSAIDs), heavy alcohol consumption, severe physiologic stress (such as Curling or Cushing ulcers), and acute infection.

Alternate Names:

Acute erosive gastritis

Acute Glomerulonephritis

Acute inflammation of the renal glomeruli causing hematuria, proteinuria, reduced glomerular filtration, edema, and often hypertension.

Acute Granulocytic Leukemia

See *Acute myelogenous leukemia*.

Acute Hepatitis

Acute inflammation and injury of hepatocytes, usually developing over days to months and characterized by elevated aminotransferases, with or without jaundice, nausea, right-upper-quadrant discomfort, or constitutional symptoms.

Acute HIV Syndrome

The acute retroviral syndrome occurring 2-6 weeks after primary HIV infection, corresponding to high-level viremia and immune activation. Presents with fever (most common), lymphadenopathy, pharyngitis, rash (maculopapular, trunk/face), myalgia, arthralgia, headache, nausea, diarrhea, and oral ulcers.

Acute Hypercapnic Respiratory Failure

Inability to eliminate carbon dioxide, producing elevated arterial PaCO₂ and often respiratory acidemia. Causes include COPD exacerbation, severe asthma, neuromuscular weakness, central respiratory depression, and chest-wall restriction.

Acute Hypoxemic Respiratory Failure

Inability of the respiratory system to maintain adequate arterial oxygenation, usually manifested by

low arterial oxygen or oxygen saturation despite appropriate inspired oxygen. Causes include pneumonia, pulmonary edema, ARDS, atelectasis, and pulmonary embolism.

Acute Idiopathic Polyneuritis

Guillain-Barré syndrome, an acute immune-mediated disorder of peripheral nerves that usually causes progressive symmetric weakness and reduced reflexes and may impair breathing.

Acute Illness

A disease or health problem that begins suddenly or over a short period and generally lasts a limited time, although its severity may range from mild to life-threatening.

Acute Inflammation

A rapid, predominantly non-specific immune response to tissue injury or infection that typically lasts hours to days and involves vascular and cellular reactions. The cardinal signs are redness, heat, swelling, pain, and loss of function, resulting from increased blood flow, vascular permeability, and cellular infiltration.

Acute Inflammatory Demyelinating Polyneuropathy

See *Guillain-Barre syndrome*.

Acute Inflammatory Demyelinating Polyradiculoneuropathy

The most common form of Guillain-Barré syndrome, in which immune-mediated demyelination of peripheral nerves causes progressive, usually symmetric weakness and reduced reflexes.

Acute Interstitial Nephritis

Inflammatory infiltrate in the renal interstitium and tubules most commonly caused by drug reactions including NSAIDs, antibiotics particularly penicillins and cephalosporins, proton pump inhibitors, and diuretics. Also caused by infections and autoimmune diseases.

Acute Ischemic Stroke

Sudden neurologic dysfunction caused by focal cerebral, spinal, or retinal ischemia. Emergency evaluation distinguishes hemorrhage from ischemia and determines eligibility for reperfusion therapy while supporting airway, glucose, temperature, and blood pressure management.

Acute Kidney Failure

A sudden decline in kidney function that causes waste products and fluid to accumulate in the body.

Acute Kidney Injury

A sudden decline in kidney function over hours or days, causing reduced filtration and possible fluid, electrolyte, or acid-base disturbances. Causes include reduced blood flow, direct kidney injury, and urinary obstruction.

Alternate Names:
AKI

Acute Kidney Injury Staging

A standardized classification based on changes in serum creatinine and urine output. KDIGO stages 1 through 3 quantify the severity of abrupt kidney-function decline and support prognosis, monitoring, and treatment decisions.

Acute Leukemia

A leukemia characterized by a rapid onset, clonal proliferation of immature blast cells (>20% of bone marrow cells), and rapid progression without treatment. Subtypes: acute lymphoblastic leukemia (ALL, B-cell or T-cell, most common childhood cancer, peak age 2-5) and acute myeloid leukemia (AML, more common in adults, median age 65-70).

Acute Limb Ischemia

Sudden reduction in arterial blood flow to a limb that threatens tissue viability, usually caused by embolism, thrombosis, or graft occlusion. The six classic findings are pain, pallor, pulselessness, paresthesia, paralysis, and poikilothermia; urgent vascular assessment and revascularization are required.

Acute Limb Ischemia Six Ps

The classic findings of acute arterial perfusion loss: pain, pallor, pulselessness, paresthesia, paralysis, and poikilothermia. Motor or sensory deficit indicates threatened limb and requires urgent vascular assessment and revascularization planning.

Acute Liver Failure

Rapid deterioration of liver function in a previously healthy individual without prior liver disease. Causes include acetaminophen toxicity, viral hepatitis, drug reactions, autoimmune hepatitis, and Wilson disease. Features include coagulopathy, encephalopathy, and multiorgan failure. Presents with jaundice, confusion, and bleeding.

Alternate Names:
Liver Failure, Acute

Acute Lymphangitis

Acute inflammation of lymphatic vessels, typically resulting from streptococcal or staphylococcal infection spreading from a distal wound. It presents with red, tender streaks extending proximally from the site of infection, along with fever, malaise, and regional lymphadenopathy. Treatment requires systemic antibiotics.

Acute Lymphoblastic Leukemia

A clonal malignancy of lymphoid progenitor cells, most common in children (peak age 2-5 years) but also occurring in adults with a worse prognosis with increasing age.

Acute Lymphoblastic Leukemia

Acute lymphoblastic leukemia is a rapidly progressive cancer of immature lymphoid precursor cells that crowds the bone marrow and can involve blood, lymph nodes, or the central nervous system.

Acute Lymphocytic Leukemia

A malignant proliferation of immature lymphoid precursors in the bone marrow and blood, commonly presenting with cytopenias, fever, bone pain, or lymphadenopathy.

Alternate Names:
Leukemia, Acute Lymphocytic

Acute Lymphoid Leukemia

See *Acute lymphocytic leukemia*.

Acute Megakaryoblastic Leukemia

A rare subtype of acute myeloid leukemia characterized by the proliferation of megakaryoblasts in the bone marrow and peripheral blood.

Acute Mesenteric Ischemia

Occlusion or reduced flow in the mesenteric arteries causing bowel ischemia, most commonly from embolism or atherosclerosis. Presents with severe abdominal pain disproportionate to physical findings. Delayed treatment leads to bowel necrosis, perforation, and high mortality.

Acute Mountain Sickness

A mild altitude illness caused by rapid ascent, usually producing headache with nausea, fatigue, dizziness, or sleep disturbance. Prevention and treatment include gradual acclimatization, descent when symptoms worsen, oxygen, and appropriate medical therapy.

Acute Mountain Sickness

A high-altitude illness caused by insufficient acclimatization, typically producing headache with nausea, dizziness, fatigue, or sleep disturbance after ascent.

Acute Myeloblastic Leukemia

See *Acute myelogenous leukemia*.

Acute Myelogenous Leukemia

A fast-growing cancer of immature myeloid blood cells in the bone marrow and blood; also called acute myeloid leukemia.

Alternate Names:

acute myeloid leukemia. Leukemia, Acute Myelogenous

Acute Myeloid Leukemia

A clonal hematologic malignancy characterized by proliferation of immature myeloid blasts that suppress normal hematopoiesis. Diagnosis requires the appropriate blast burden or defining genetic abnor-

malities, and presentation commonly includes anemia, infection, and bleeding from marrow failure.

Acute Myeloid Leukemia - Children

Childhood acute myeloid leukemia is a marrow and blood cancer caused by uncontrolled proliferation of immature myeloid cells, producing anemia, infection, and bleeding risk.

Acute Myeloid Leukemia - Adult

Adult acute myeloid leukemia is an aggressive malignancy of myeloid blood-cell precursors that impairs normal blood-cell production.

Acute Myocardial Infarction

Sudden death of heart muscle caused by prolonged inadequate coronary blood flow, usually from an acutely obstructed coronary artery; it is a medical emergency.

Acute Necrotizing Ulcerative Gingivitis

A painful, rapidly developing infection of the gums characterized by punched-out gingival papillae, ulceration, spontaneous bleeding, gray necrotic tissue, and foul breath. It is associated with anaerobic oral bacteria and risk factors such as poor oral hygiene, smoking, stress, malnutrition, or immunosuppression; urgent dental evaluation, cleaning, and treatment are needed.

Acute Nephritic Syndrome

A clinical syndrome of glomerular inflammation marked by hematuria, variable proteinuria, edema, hypertension, and reduced kidney function.

Acute Nonlymphocytic Leukemia

See *Acute myelogenous leukemia*.

Acute Obstructive Uropathy

Sudden impairment of urinary flow caused by obstruction of the urinary tract, potentially producing hydronephrosis, pain, infection, and acute kidney injury.

Acute Onset Pain

Pain that begins suddenly, often over seconds, minutes, or hours.

Alternate Names:

Sudden-onset pain

Acute Otitis Media

Infection of the middle ear space with acute onset of symptoms and signs of middle ear inflammation. Diagnosis requires middle ear effusion plus acute symptoms (ear pain, fever, irritability) or signs (bulging tympanic membrane, erythema). Most common pathogen: *Streptococcus pneumoniae*.

Acute Pain

Pain that begins suddenly and usually lasts for a limited period, often because of injury, illness, or a procedure.

Acute Pancreatitis

Sudden inflammation of the pancreas, most often caused by gallstones or alcohol. It causes upper-abdominal pain and may cause vomiting or systemic complications; severity ranges from mild to life-threatening.

Acute Promyelocytic Leukemia

A distinct subtype of acute myeloid leukemia characterized by the t(15;17)(q24;q21) translocation, which fuses the promyelocytic leukemia (PML) gene on chromosome 15 with the retinoic acid receptor alpha (RARA) gene on chromosome 17.

Acute Pyelonephritis

An acute, severe bacterial infection of the renal parenchyma and pelvicalyceal system, typically arising from an ascending lower urinary tract infection (most commonly *Escherichia coli*). Clinically presents with flank pain, costovertebral angle tenderness, high fever, rigors, and urinary symptoms.

Acute Radiation Sickness

Illness caused by a high dose of penetrating radiation received over a short time.

Acute Radiation Syndrome

See *Radiation sickness*.

Acute Rehabilitation

Multidisciplinary rehabilitation provided during or soon after hospitalization for conditions such as stroke, spinal-cord injury, traumatic brain injury, or major trauma. Treatment is tailored to functional needs.

Acute Renal Failure

See *Acute kidney injury*.

Acute Respiratory Distress Syndrome

A severe inflammatory lung injury causing acute hypoxemic respiratory failure and diffuse lung opacities not fully explained by heart failure. Common triggers include sepsis, pneumonia, aspiration, trauma, and pancreatitis.

Acute Respiratory Distress Syndrome

ARDS is acute inflammatory lung injury causing severe hypoxemia and diffuse pulmonary opacities that are not fully explained by heart failure or fluid overload.

Acute Respiratory Failure

A sudden inability of the respiratory system to maintain adequate oxygenation, carbon-dioxide removal, or both. It may result from lung disease, airway obstruction, neuromuscular weakness, or impaired respiratory drive and requires urgent evaluation.

Acute Retinal Necrosis

A rapidly progressive necrotizing viral retinitis, usually caused by herpes viruses, with vitreous inflammation, peripheral retinal necrosis, occlusive vasculitis, and risk of retinal detachment.

Acute Retroviral Syndrome

The acute illness that may occur shortly after HIV infection, commonly involving fever, rash, sore throat, lymph-node enlargement, muscle aches, or headache.

Acute Rhinitis

Sudden inflammation of the nasal lining, commonly caused by a viral infection or an irritant, producing congestion, nasal discharge, and sneezing.

Acute Rhinosinusitis

See *Acute sinusitis*.

Acute Sinusitis

Acute inflammation of the mucosa of one or more paranasal sinuses, usually following a viral upper-respiratory infection. It causes nasal obstruction, purulent or discoloured discharge, facial pressure or pain, and reduced smell; persistent, severe, or worsening symptoms may indicate acute bacterial rhinosinusitis or a complication.

Alternate Names:

Sinusitis, Acute

Acute Stress Disorder

A trauma-related mental-health condition beginning after exposure to actual or threatened death, serious injury, or sexual violence and lasting from three days to one month. Symptoms may include intrusive memories, avoidance, negative mood, dissociation, and increased arousal; professional assessment and support are recommended.

Acute Symptomatic Seizures Secondary To Autoimmune Encephalitis

See *Autoimmune epilepsy*.

Acute Thrombocytopenic Purpura

An acute disorder with a markedly reduced platelet count and bleeding or purpura, historically used for immune thrombocytopenic purpura, often following an infection in children.

Acute Transverse Myelitis

Inflammation across a segment of the spinal cord that can cause rapidly developing weakness, sensory changes, and bladder or bowel dysfunction.

Acute Tubular Necrosis

Most common cause of intrinsic AKI resulting from

ischemic or nephrotoxic injury to tubular epithelial cells. Ischemic ATN develops from prolonged prerenal states. Nephrotoxic ATN results from direct injury by aminoglycosides, amphotericin B, cisplatin, contrast, and myoglobin.

Acute Urinary Retention

Sudden inability to empty the bladder, often causing painful lower-abdominal distension and requiring urgent assessment.

Acute Viral Illness

A short-duration illness caused by a virus. Symptoms depend on the affected organ system and may include fever, fatigue, cough, vomiting, diarrhea, or rash.

Acute-On-Chronic Liver Failure

Acute deterioration of pre-existing chronic liver disease associated with organ failure and high short-term mortality. It is commonly precipitated by infection, alcohol-related hepatitis, bleeding, or other acute insults and requires urgent multidisciplinary management.

Acyclovir

An antiviral drug that inhibits herpesvirus DNA polymerase and is used for infections caused by herpes simplex virus and varicella-zoster virus.

Ad Lib

A prescription or clinical instruction meaning as desired or as tolerated, from the Latin *ad libitum*.

ADA Deficiency

An inherited lack of adenosine deaminase activity that causes toxic purine metabolites to accumulate and can produce severe combined immunodeficiency affecting both T- and B-cell function.

Adactyly

Adactyly is congenital absence of one or more fingers or toes, ranging from loss of a digit to more extensive limb malformation.

Adam'S Apple

The common name for the laryngeal prominence, the visible projection at the front of the neck formed by the angle where the two laminae of the thyroid cartilage meet.

Adamantine

Hard or resembling diamond; in dentistry, adamantine refers to enamel or enamel-like tissue.

Adaptation

Adaptation is the adjustment of a cell, organism, or person to a changing internal or external condition; in medicine it may involve physiologic compensation, behavior, or rehabilitation.

Adaptive Design

A clinical-study design that permits planned changes in response to accumulating data while preserving validity.

Adaptive Equipment

Devices that help individuals with disabilities perform daily activities independently. Examples: reachers, dressing sticks, button hooks, ergonomic utensils, grab bars, shower chairs, wheelchairs, walkers, canes. Selection based on individual needs and goals. Occupational therapy assessment recommended.

Adaptive Immunity

Antigen-specific immunity mediated principally by B and T lymphocytes. It develops after antigen exposure, generates immunologic memory, and includes humoral responses from B-cell antibodies and cellular responses from T cells.

Addiction

A commonly used, non-diagnostic term for compulsive substance use or recurrent behavior despite harm, with impaired control, craving, or difficulty stopping. In clinical practice, the specific diagnosis is usually named as a substance-use disorder or a recognized disorder due to addictive behavior; physical dependence alone does not establish addiction.

Addiction Sexual (Sexual Addiction)

Alternate index label; see *Compulsive Sexual Behavior Disorder*.

Addiction, Alcohol

Legacy label; see *Alcohol Use Disorder*.

Addiction, Gambling

Legacy label; see *Gambling Disorder*.

Addiction, Nicotine

Legacy label; see *Nicotine Dependence*.

Addison Anemia

An older name for pernicious anemia, a vitamin B12-deficiency megaloblastic anemia caused by inadequate intrinsic factor and impaired B12 absorption.

Addison Disease

Primary adrenal insufficiency resulting from destruction or dysfunction of the adrenal cortex, leading to deficiency of cortisol, aldosterone, and adrenal androgens.

Addison'S Disease

A disorder in which the adrenal glands produce too little cortisol and, often, too little aldosterone.

Alternate Names:

Chronic Adrenal Insufficiency Primary Adrenal Insufficiency

Addisonian Anemia

Another historical term for pernicious anemia, in which autoimmune loss of gastric parietal-cell function or intrinsic factor causes vitamin B12 deficiency.

Addisonian Crisis

Life-threatening emergency resulting from acute cortisol deficiency in patients with adrenal insufficiency. Precipitated by infection, trauma, surgery, or abrupt discontinuation of chronic glucocorticoid therapy.

Addisons Anemia (Pernicious Anemia)

Alternate index label for Pernicious Anemia.

Additive Genetic Effects

The contributions of individual alleles that combine approximately additively to influence a measurable trait, without requiring interaction between those alleles.

Adduct

To adduct a limb or body part is to move it toward the body's midline; the opposite movement is abduction.

Adduction

Movement of a body part toward the body's midline.

Adductor Muscle

A muscle that moves a body part toward the body's midline or, for a digit, toward the axis of the hand or foot.

Adductor Muscles

A group of muscles on the medial thigh that adduct (pull toward the midline) the hip: adductor longus, adductor brevis, adductor magnus, gracilis, and pectineus. Innervated by the obturator nerve (L2-L4); adductor magnus also receives tibial nerve (sciatic). Adductor longus is a common site of athletic injury ('groin strain').

Adenine (A)

In genetics, A denotes adenine, a nucleobase that pairs with thymine in DNA and with uracil in RNA.

Adenitis

Inflammation of a gland or lymph node, usually caused by infection or an inflammatory disorder. Lymphadenitis is a common form.

Adenitis, Mesenteric

See *Mesenteric lymphadenitis*.

Adenocarcinoma

A malignant tumor arising from glandular epithelial tissue, forming gland-like structures. The most common type of carcinoma, occurring in organs such as the colon, breast, lung, pancreas, and prostate.

Adenocarcinoma In Situ Of Cervix

A noninvasive glandular precursor lesion of the cervix, usually associated with high-risk human papillomavirus; abnormal glandular cells remain confined to the epithelium but may progress to invasive adenocarcinoma.

Adenocarcinoma Of The Colon

A malignant gland-forming epithelial tumor of the colon, commonly presenting with altered bowel habits, occult bleeding, anemia, or an obstructing mass.

Adenocarcinoma Of The Lung

The most common histologic subtype of non-small cell lung cancer, originating from glandular epithelial cells of the peripheral lung and bronchial submucosal glands. Often associated with molecular driver mutations (such as EGFR, ALK, or KRAS) and commonly diagnosed in both smokers and non-smokers.

Alternate Names:

Lung adenocarcinoma

Adenohypophysis

The anterior lobe of the pituitary gland, which produces and secretes hormones including adrenocorticotrophic hormone, thyroid-stimulating hormone, growth hormone, prolactin, and gonadotropins.

Adenoid Basal Carcinoma

A rare, usually indolent cervical carcinoma composed of small basaloid nests, often associated with squamous intraepithelial lesions and requiring distinction from more aggressive tumors.

Adenoid Cystic Carcinoma

A rare malignant tumor of glandular tissue, most commonly of the salivary glands, characterized by slow growth, perineural spread, and late recurrence.

Adenoid Cystic Carcinoma Of The Vulva

A rare malignant tumor of vulvar Bartholin-type glands, often causing pain because of perineural invasion. It is usually slow-growing but may recur

locally or metastasize after long intervals.

Adenoid Removal

Surgical excision of the pharyngeal tonsils (adenoids) from the nasopharynx, typically performed in children for chronic nasal obstruction, recurrent otitis media, or obstructive sleep apnea unresponsive to medical management.

Adenoidectomy

The surgical removal of the pharyngeal tonsils (adenoids), which are lymphoid tissue structures located in the nasopharynx, and it is commonly performed in children for obstructive sleep apnea, chronic nasal obstruction, recurrent otitis media, and chronic rhinosinusitis that is refractory to medical management.

Adenoiditis

Inflammation or infection of the adenoids, the pharyngeal tonsil behind the nose, which may cause nasal obstruction, mouth breathing, snoring, or ear problems.

Adenoids

Lymphoid tissue in the posterior wall and roof of the nasopharynx, part of Waldeyer ring of pharyngeal lymphoid tissue. Enlarged adenoids (adenoidal hypertrophy) in children cause nasal obstruction, mouth breathing, snoring, obstructive sleep apnea, serous otitis media (eustachian tube obstruction), and facial changes ('adenoid facies').

Adenoids And Tonsils

The adenoids and tonsils are lymphoid tissues in the upper airway that participate in immune surveillance. Enlargement or recurrent infection can cause mouth breathing, snoring, sleep apnea, swallowing problems, or recurrent throat disease and may require medical or surgical evaluation.

Alternate Names:

Tonsil Inflammation (Adenoids And Tonsils)

Adenolipoma

An adenolipoma is a usually benign tumor containing both glandular tissue and mature fatty tissue.

Adenolymphoma

A benign salivary-gland tumor, also called Warthin tumor, composed of oncocytic epithelium and lymphoid stroma and occurring most often in the parotid gland.

Adenoma

A benign tumour arising from glandular or gland-like epithelial tissue. Some adenomas, particularly certain colorectal adenomas, can develop dysplasia and progress to carcinoma.

Adenoma Malignum

A rare, deceptively bland, deeply infiltrative gastric-type adenocarcinoma of the cervix with minimal cytologic atypia; persistent watery discharge may occur and diagnosis requires expert histopathology.

Adenoma-Carcinoma Sequence

Established model of stepwise colorectal carcinogenesis progressing from normal epithelium through adenomas to carcinoma over ten to fifteen years.

Adenomatosis

Adenomatosis is the presence of multiple adenomas or diffuse adenomatous overgrowth in an organ or tissue; its implications depend on the site and underlying syndrome.

Adenomatous Polyp

A benign gland-forming polyp, most commonly in the colon, that may contain dysplasia and can progress through the adenoma–carcinoma sequence. Tubular, villous, and tubulovillous types are recognized.

Adenomyoepithelioma Of The Breast

A rare biphasic breast tumor composed of proliferating epithelial and myoepithelial cells. Most are benign, but local recurrence and malignant transformation can occur, so complete excision is usually recommended.

Adenomyoma

A benign uterine lesion composed of endometrial

glands and stroma within a proliferation of smooth muscle; it may cause abnormal uterine bleeding or mimic other uterine tumors.

Adenomyosis

A condition in which endometrial glands and stroma are present within the myometrium (uterine muscle). Most common in multiparous women in their 40s and 50s. Presents with heavy menstrual bleeding (menorrhagia), severe dysmenorrhea, chronic pelvic pain, and uterine enlargement.

Adenopathy

Disease or enlargement of a gland, most often used for lymph-node enlargement or abnormal lymph-node involvement.

Adenosine

A purine nucleoside made of adenine linked to ribose; it participates in cellular energy transfer and signaling and can transiently slow atrioventricular-node conduction when given medically.

Adenosine Deaminase Deficiency

An inherited purine-metabolism disorder in which toxic deoxyadenosine metabolites accumulate and damage lymphocytes, commonly causing severe combined immunodeficiency.

Adenosine Diphosphate

A nucleotide composed of adenine, ribose, and two phosphate groups. Formed by hydrolysis of ATP ($\text{ATP} \rightarrow \text{ADP} + \text{P}_i$, $\Delta G^\circ = -30.5 \text{ kJ/mol}$). Serves as the immediate precursor for ATP synthesis via oxidative phosphorylation (mitochondrial ATP synthase), substrate-level phosphorylation (glycolysis, TCA cycle), and photophosphorylation.

Alternate Names:

Adenosine Diphosphate

Adenosine Monophosphate

A nucleotide composed of adenine, ribose, and a single phosphate group. Formed by hydrolysis of ADP ($\text{ADP} \rightarrow \text{AMP} + \text{P}_i$) or directly from ATP via adenylate kinase ($2 \text{ ADP} \rightleftharpoons \text{ATP} + \text{AMP}$).

Alternate Names:

Adenosine Monophosphate

Adenosine Triphosphate

A molecule that stores and transfers energy within cells. It is commonly abbreviated ATP.

Adenosine Triphosphate

The primary energy currency of the cell, composed of adenine, ribose, and three phosphate groups. Hydrolysis of the terminal phosphoanhydride bond releases $\Delta G^\circ = -30.5 \text{ kJ/mol}$ (-7.3 kcal/mol), driving endergonic cellular processes such as muscle contraction, active transport, and biosynthesis.

Alternate Names:

Adenosine Triphosphate

Adenosis

A benign or abnormal increase in the number or size of glands or glandular tissue; the clinical meaning depends on the organ, such as breast adenosis or pulmonary adenosis.

Adenovirus

A non-enveloped DNA virus that causes respiratory infections, conjunctivitis, gastroenteritis, and cystitis. Adenoviruses are highly stable in the environment and can cause outbreaks in closed populations. The virus has over 50 serotypes with different tissue tropisms. Diagnosis is made by PCR, antigen detection, or viral culture.

Adenovirus Infection

Infection with an adenovirus, commonly causing sore throat, cough, fever, conjunctivitis, diarrhea, or vomiting. Most infections are self-limited, but severe respiratory or disseminated disease can occur in infants and people with weakened immunity. Treatment is usually supportive, with medical assessment for breathing difficulty, dehydration, or severe illness.

Adenoviruses

Adenoviruses are non-enveloped DNA viruses that can cause respiratory, eye, gastrointestinal, urinary, or other infections, usually self-limited but some-

times severe in vulnerable people.

Adequate Intake

A recommended average daily nutrient intake based on observed or experimentally determined levels in healthy people when evidence is insufficient to establish a recommended dietary allowance.

Alternate Names:

AI; adequate nutrient intake.

Adherence

The extent to which a person follows an agreed treatment plan, including prescribed medicines and other care. Adherence may be affected by cost, adverse effects, treatment complexity, health beliefs, or difficulty accessing care.

Adherence (Geriatric)

Adherence to an agreed treatment plan in an older adult, including medicine use, appointments, and recommended self-care. Cognitive impairment, polypharmacy, adverse effects, cost, and support needs may affect adherence.

Alternate Names:

Geriatric

Adherens Junction

A cell-to-cell connection that uses cadherin proteins to link neighboring cells through actin filaments.

Adhesiolysis

Surgical division or removal of abnormal fibrous adhesions that bind tissues or organs together, often after inflammation, infection, surgery, or trauma.

Adhesion

A band of scar-like tissue that abnormally connects surfaces or organs inside the body.

Adhesion Molecules

Cell-surface proteins that mediate attachment between cells or between cells and the extracellular matrix; they are important in leukocyte trafficking, inflammation, tissue organization, and metastasis.

Adhesive Capsulitis

A condition causing progressive shoulder pain and stiffness due to inflammation and fibrosis of the glenohumeral joint capsule. See Frozen Shoulder.

Adhesive Capsulitis Of Shoulder (Frozen Shoulder)

Alternate index label for Frozen Shoulder.

Adhesive Tape

A material used to secure dressings, devices, or tubing to the skin. It is available in paper, cloth, plastic, and other forms.

ADI

Acceptable daily intake: the estimated amount of a substance that can be consumed every day over a lifetime without appreciable health risk, based on available evidence and safety factors.

Adie Tonic Pupil

Uncommon cause of anisocoria, a benign parasympathetic denervation of the iris sphincter and ciliary muscle, typically unilateral in young women, idiopathic or associated with diabetes, herpes zoster, or autoimmune neuropathy.

Adipocere (Grave Wax)

Waxy, grayish-white substance formed postmortem in warm, moist, anaerobic environments (water, damp soil) by the hydrolysis and hydrogenation of body fat into free fatty acids; retards putrefaction and preserves anatomical details for months to years.

Alternate Names:

Grave Wax

Adipocyte

A specialized mesenchymal cell responsible for the storage and mobilization of energy in the form of neutral triglycerides. Classified into white adipocytes (unilocular lipid droplets, specialized for long-term caloric storage and endocrine secretion of leptin and adiponectin), brown adipocytes (multilocular with abundant mitochondria express-

ing uncoupling protein 1 [UCP1/thermogenin] for non-shivering thermogenesis), and beige/brite adipocytes (inducible within white fat depots upon cold exposure or adrenergic stimulation). Pathologic hypertrophy and hyperplasia of white adipocytes promote chronic low-grade systemic inflammation, macrophage recruitment (crown-like structures), and insulin resistance in obesity and metabolic syndrome.

Alternate Names:

Fat cell

Adipogenesis

The biological differentiation process by which multipotent mesenchymal stem cells (MSCs) commit to the adipocyte lineage and mature into functional lipid-storing adipocytes. Driven by a coordinated transcriptional cascade in which CCAAT/enhancer-binding proteins (C/EBP- β and C/EBP- δ) induce the master regulators peroxisome proliferator-activated receptor gamma (PPAR- γ) and C/EBP- α , which activate downstream lipogenic enzymes and adipokine production. Targeted pharmacologically by thiazolidinediones (e.g., pioglitazone), which act as synthetic PPAR- γ agonists to promote adipocyte differentiation, enhance subcutaneous lipid storage capacity, and improve peripheral insulin sensitivity.

Adipokine

A signaling molecule released by adipose tissue that influences metabolism or inflammation.

Adiponectin

A hormone produced mainly by adipose tissue that influences fatty-acid metabolism, insulin sensitivity, and inflammatory responses.

Adipose

Relating to body fat or composed of adipose tissue, which stores energy and also functions as an endocrine and immune-active organ.

Adipose Tissue

A specialized connective tissue composed mainly of adipocytes that store energy as triglycerides. It provides thermal insulation, cushioning for organs,

and endocrine regulation through hormones and signaling molecules such as leptin and adiponectin.

Adiposis Dolorosa

Adiposis dolorosa, or Dercum disease, is a rare disorder characterized by painful fatty deposits, often with obesity, fatigue, and other systemic symptoms.

Adiposity

The amount or distribution of body fat; excess adiposity is associated with increased risk of metabolic, cardiovascular, and mechanical disease.

Adipsia

Absent or markedly reduced thirst, which can impair normal fluid intake and lead to dehydration or hypernatremia.

Adjacent

Next to, close to, or sharing a boundary with another structure, tissue, organ, or lesion.

Adjustment Disorder

Emotional or behavioral symptoms in response to an identifiable stressor occurring within three months of the onset of the stressor. The symptoms are disproportionate to the severity of the stressor and cause significant distress or impairment. It resolves within six months of the termination of the stressor.

Adjustment Disorder With Anxiety

An emotional or behavioral response to an identifiable stressor that causes distress or impairment but does not meet criteria for another mental disorder.

Adjustment Disorders

Emotional or behavioral symptoms occurring in response to an identifiable stressor and causing significant distress or impairment.

Alternate Names:

Adjustment disorder

Adjuvant

An added treatment or substance that enhances the effect of a primary treatment; in vaccines, an

adjuvant strengthens the immune response to an antigen.

Adjuvant Therapy

Additional treatment after primary treatment to reduce recurrence risk. Examples: chemotherapy after surgery.

ADL Training

Training for activities of daily living: dressing, bathing, grooming, feeding, toileting. Adaptive techniques, equipment.

ADLs (Activities Of Daily Living)

Basic self-care activities such as bathing, dressing, toileting, transferring, eating, and maintaining continence; ADL ability is used to assess functional independence.

ADME

Absorption, distribution, metabolism, and excretion: the processes governing a substance's movement through the body.

Alternate Names:

Pharmacokinetics

Administered Activity

The measured amount of radioactive material given to a patient for imaging or therapy, usually expressed in becquerels. It should be prescribed and recorded with the radionuclide, radiopharmaceutical, route, date, and time of administration.

Administration Procedure

A procedure used to deliver a medicine, fluid, vaccine, or other intervention to a patient.

Admission

The process of accepting a patient into a hospital or other facility for evaluation, treatment, monitoring, or care.

Adnexa

Structures next to an organ. In gynecology, the uterine adnexa are the ovaries, fallopian tubes, and

supporting ligaments and tissues around the uterus.

Adnexal Dysplasia

Abnormal precancerous or developmental cellular changes in tissue beside the uterus, such as the ovary or tube.

Adnexal Mass

A growth or enlargement involving structures beside the uterus, such as an ovary or fallopian tube.

Adnexal Tumors And Masses

Abnormal growths or masses involving the ovary, fallopian tube, or nearby supporting tissues; they may be benign or malignant.

Adnexitis

Inflammation of an adnexal structure, usually the fallopian tube or ovary.

Alternate Names:

Salpingo-oophoritis

Adolescence

The developmental period between childhood and adulthood, involving physical maturation, puberty, and major psychological and social changes.

Adolescent Confidentiality And Consent

The principles governing private healthcare discussions with adolescents and their ability to participate in medical decisions. The exact rules for confidentiality, consent, and parental involvement depend on age, capacity, local law, and safeguarding concerns.

Adolescent Development

The physical, cognitive, emotional, and social changes that occur as a person develops from childhood into adulthood, including puberty and the development of greater independence.

Adolescent Health

The health and wellbeing of young people (10-19 years), addressing the physical, psychological, and social transitions of puberty and adolescence.

Adolescent Medicine

A medical specialty focused on the physical, mental, reproductive, and social health needs of adolescents and young adults, including prevention, risk behavior, chronic disease, and confidentiality-sensitive care.

Adolescent Obesity

Alternate index label; see *Pediatric Obesity*.

Adolescent Schizophrenia

See *Childhood schizophrenia*.

Adolescent Test Or Procedure Preparation

Age-appropriate preparation of an adolescent for a medical test or procedure, including explanation of the procedure, expectations, sensation, and coping strategies. It aims to reduce anxiety, improve cooperation, and support informed assent.

Adoption

In healthcare and genetics, adoption may be relevant to family history, consent, psychosocial care, and assessment when biological family information is unavailable or differs from the caregiving family.

Adoptive Cell Therapy

A personalized cellular immunotherapy in which a patient's own lymphocytes are expanded or engineered ex vivo and reinfused to attack the tumor; examples include tumor-infiltrating lymphocyte (TIL) therapy and chimeric antigen receptor (CAR) T-cell therapy.

Adoptive Immunotherapy

Treatment in which immune cells are collected, modified or activated, and returned to the patient.

ADP-Ribosylation

Addition of an ADP-ribose group to a protein or other molecule, altering its activity or interactions.

Adrenal Cancer

A malignant neoplasm of the adrenal gland, most

importantly adrenocortical carcinoma, a rare, aggressive malignancy of the adrenal cortex with a bimodal age distribution (early childhood and 40–50 years). Approximately 50–60% of tumors are functional, presenting with acute endocrine excess syndromes: hypercortisolemia (rapid-onset Cushing syndrome), virilization and hirsutism from excess adrenal androgens, or rarely primary aldosteronism. Non-functioning tumors present late with abdominal or flank pain and a palpable mass. Suspicion on CT or MRI is indicated by diameter > 4 cm, high unenhanced attenuation (> 10 Hounsfield units), heterogeneous necrosis, and delayed contrast washout (< 50%). Complete surgical resection (adrenalectomy with regional lymphadenectomy) offers the only potential cure; adjuvant therapy incorporates the adrenolytic agent mitotane with or without combination chemotherapy.

Alternate Names:

Adrenocortical cancer

Adrenal Cortex

The outer part of an adrenal gland that produces steroid hormones, including cortisol and aldosterone.

Adrenal Cortex Physiology

The adrenal cortex produces steroid hormones in three zones: the zona glomerulosa produces mineralocorticoids, mainly aldosterone; the zona fasciculata produces glucocorticoids, mainly cortisol; and the zona reticularis produces adrenal androgens. Secretion is regulated by the renin-angiotensin system, plasma potassium, and the hypothalamic-pituitary-adrenal axis.

Adrenal Cortical Carcinoma

A rare malignant tumor arising from the adrenal cortex. It may be functional, producing excess adrenal hormones, or nonfunctional.

Adrenal Crisis

An acute, life-threatening manifestation of severe adrenal insufficiency. Causes: primary (Addison disease), secondary (pituitary failure), or tertiary (exogenous corticosteroid withdrawal). Precipi-

tants: systemic infection, trauma, surgery, or abrupt steroid cessation.

Adrenal Failure

Inadequate production of adrenal hormones, especially cortisol and sometimes aldosterone; severe acute deficiency can cause adrenal crisis with hypotension and shock.

Adrenal Gland

Paired endocrine glands atop each kidney (suprarenal), composed of cortex and medulla. Cortex (three zones): zona glomerulosa (aldosterone, mineralocorticoids), zona fasciculata (cortisol, glucocorticoids), zona reticularis (androgens). Medulla: chromaffin cells secrete epinephrine and norepinephrine (catecholamines).

Adrenal Gland Removal

Surgical excision of an adrenal gland, performed for tumors, hyperplasia, or other adrenal disorders. Approaches include open, laparoscopic, or retroperitoneal; perioperative management requires assessment of hormone production and potential adrenal insufficiency.

Adrenal Glands

Adrenal glands sit above the kidneys and produce cortisol, aldosterone, adrenal androgens, and catecholamines that regulate stress, blood pressure, salt balance, and metabolism.

Adrenal Hemorrhage

Bleeding into the adrenal gland most commonly occurring in critically ill patients with sepsis, coagulopathy, or anticoagulation therapy. Bilateral adrenal hemorrhage may cause acute adrenal insufficiency with circulatory collapse. Waterhouse-Friderichsen syndrome: adrenal hemorrhage associated with meningococcal sepsis.

Adrenal Hyperplasia

Enlargement or overgrowth of adrenal tissue that may increase production of adrenal hormones. Causes include congenital adrenal hyperplasia, chronic stimulation by ACTH, and some adrenal

tumors. Symptoms depend on the hormone affected and may include abnormal genital development, early puberty, excess body hair, high blood pressure, or electrolyte disturbances.

Adrenal Insufficiency

Deficient production of cortisol by the adrenal cortex classified as primary adrenal insufficiency or Addison disease from adrenal gland destruction, secondary from pituitary ACTH deficiency, and tertiary from chronic exogenous glucocorticoid suppression of the hypothalamic-pituitary-adrenal axis.

Adrenal Mass

See *Benign adrenal tumors*.

Adrenal Medulla

The inner part of the adrenal gland that produces epinephrine and norepinephrine.

Adrenal Medulla Physiology

The adrenal medulla produces catecholamines primarily epinephrine and norepinephrine in response to sympathetic nervous system activation. Epinephrine accounts for approximately eighty percent and norepinephrine approximately twenty percent of catecholamine output.

Adrenal Myelolipoma

A usually benign adrenal tumor composed of mature fat and blood-forming tissue. It is often found incidentally on imaging and causes no symptoms, but larger lesions may produce mass effect or bleeding. Management depends on size, symptoms, growth, and diagnostic certainty.

Adrenal Tumors

Tumors arising in the adrenal cortex or medulla may be benign or malignant and may or may not produce hormones. Evaluation uses clinical assessment, hormone testing when indicated, and imaging to assess size and appearance; treatment depends on the diagnosis, hormone secretion, symptoms, growth, and risk of malignancy.

Adrenal Venous Sampling

Interventional radiology procedure for lateralizing aldosterone secretion in primary hyperaldosteronism. Catheterization of both adrenal veins allows measurement of aldosterone and cortisol levels to calculate selectivity index confirming successful cannulation and lateralization ratio.

Adrenalectomy

Surgical removal of one or both adrenal glands, performed for selected adrenal tumors, severe hormone excess, or other localized disease. Removal of one gland may leave adequate hormone production; bilateral removal causes permanent adrenal insufficiency and requires lifelong hormone replacement and emergency-steroid planning.

Adrenaline

Epinephrine, a hormone and neurotransmitter released during stress that increases heart rate and contractility, constricts some blood vessels, and relaxes bronchial muscle.

Adrenergic Agent

A substance that affects receptors responsive to adrenaline-like neurotransmitters.

Adrenergic Agonist

A drug or other substance that binds to and activates alpha- or beta-adrenergic receptors, producing effects that depend on the receptor subtype and tissue. Examples include epinephrine, norepinephrine, phenylephrine, and dobutamine.

Alternate Names:

Sympathomimetic

Adrenergic Antagonists

Substances that block the effects of adrenaline-like signaling at adrenergic receptors.

Alternate Names:

Adrenergic blockers

Adrenergic Bronchodilator Overdose

Toxic effects caused by excessive exposure to Adrenergic bronchodilator. Severity depends on the dose,

route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Adrenergic Receptor

A cell-surface receptor activated by adrenaline (epinephrine), noradrenaline (norepinephrine), or related medicines. Alpha and beta receptors help control heart rate, blood pressure, airway size, pupil size, and other body responses.

Adrenergic Receptors

Cell-surface receptors activated by adrenaline and noradrenaline. Alpha and beta subtypes regulate cardiovascular, respiratory, metabolic, and other physiological responses.

Adrenocortical Carcinoma

A rare malignant tumor of the adrenal cortex that may secrete cortisol, androgens, or aldosterone or be non-functional. Often large at diagnosis; treatment is en bloc resection, with mitotane for advanced disease.

Adrenocorticotrophic Hormone

A hormone made by the pituitary gland that tells the adrenal glands to make cortisol. Cortisol helps the body respond to stress and helps control blood pressure, blood sugar, and inflammation.

Alternate Names:

Adrenocorticotrophic Hormone (ACTH); ACTH; Corticotropin

Adrenogenital Syndrome

A group of disorders, usually caused by congenital adrenal hyperplasia, in which excess adrenal androgens cause atypical genital development or early puberty.

Adrenoleukodystrophy

An inherited disorder causing abnormal buildup of very-long-chain fatty acids and progressive nervous-system or adrenal damage.

Alternate Names:

ALD

Adrenomedullin

A peptide hormone that promotes blood-vessel dilation and helps regulate circulation and fluid balance.

Adsorption

Attachment of molecules to the surface of a solid or liquid rather than absorption into its interior.

ADU

Accessory dwelling unit, a secondary independent residential unit located on the same property as a primary home.

Adult Day Services

Community-based daytime programs providing supervision, social activities, health-related support, or assistance with daily activities for adults who cannot safely remain alone throughout the day.

Alternate Names:

Adult day care; adult day program.

Adult Polycystic Kidney Disease

An inherited disorder, usually autosomal dominant polycystic kidney disease, in which multiple kidney cysts enlarge over time and may cause hypertension, pain, hematuria, and chronic kidney failure.

Adult Primary Liver Cancer

Cancer that begins in the liver of an adult, most commonly hepatocellular carcinoma or intrahepatic cholangiocarcinoma, rather than cancer that has spread to the liver from another organ.

Adult Rickets

Poor mineralization of adult bone, more accurately called osteomalacia. It may cause bone pain, muscle weakness, fractures, or difficulty walking and can result from vitamin-D deficiency, poor absorption, kidney disease, or phosphate loss.

Alternate Names:

Osteomalacia

Adult Soft Tissue Sarcoma

A malignant tumor arising from connective or supporting tissues, such as muscle, fat, fibrous tissue,

blood vessels, or peripheral nerves. It often presents as a painless enlarging mass and requires imaging and biopsy for diagnosis.

Adult Spinal Deformity

Abnormal curvature or alignment of the spine in an adult, including scoliosis, kyphosis, or loss of normal sagittal balance. It may cause back pain, nerve compression, difficulty walking, or functional disability.

Adult Still Disease

Alternate name; see *Adult-Onset Still Disease*.

Adult Still'S Disease

Alternate spelling; see *Adult-Onset Still Disease*.

Adult-Onset Asthma

Adult-onset asthma is variable airway inflammation and narrowing that begins in adulthood, producing episodic wheezing, cough, chest tightness, or shortness of breath. Diagnosis uses symptoms and lung-function testing, and treatment reduces triggers and airway inflammation.

Alternate Names:

Asthma Adult-Onset (Adult-Onset Asthma)

Adult-Onset Still Disease

A rare inflammatory disease that starts in adulthood. It can cause high fevers, joint pain or swelling, a salmon-colored rash, sore throat, and inflammation in organs such as the liver, heart, or lungs.

Adults Autism (Autism And Communication)

Alternate index label for Autism and Communication.

Advance Directive

Legal document expressing healthcare wishes. Components: living will (treatment preferences), durable power of attorney for healthcare (surrogate decision-maker). Should be reviewed periodically, discussed with surrogate and healthcare team.

Advance Directives

Written instructions about a person's future medical-care preferences and/or designation of a health-care proxy if the person later cannot make or communicate decisions.

Advance Directives (Advance Medical Directives)

Alternate index label for Advance Medical Directives.

Advance Medical Directives

Advance medical directives record a person's preferences for future medical care and identify a health-care proxy when the person cannot decide. They may address resuscitation, life support, artificial nutrition, and other treatments, and should be reviewed as circumstances change.

Alternate Names:

Advance Directives (Advance Medical Directives)

Advance Statements About Medical Treatment

Advance statements about medical treatment record a person's preferences, values, and wishes for future care if illness later prevents effective communication; legal status varies by jurisdiction.

Advanced Cancer

Cancer that has grown beyond its original site. It may be locally advanced when it has invaded nearby tissues or metastatic when it has spread to distant organs.

Advanced Cardiac Life Support

A structured set of interventions for cardiac arrest and other life-threatening cardiovascular emergencies, including high-quality CPR, rhythm recognition, defibrillation, airway management, and medications.

Advanced Cardiovascular Life Support

A standardized set of advanced resuscitation measures for cardiac arrest and other life-threatening cardiovascular emergencies. It includes high-quality

CPR, defibrillation when indicated, airway management, medicines, and treatment of reversible causes.

Advanced Maternal Age

Maternal age of 35 years or older at the estimated time of delivery. It is associated with increased risks of some chromosomal conditions and pregnancy complications.

Advanced Sleep-Wake Phase Disorder

A circadian rhythm sleep-wake disorder in which a person becomes sleepy and falls asleep earlier than desired and wakes earlier than desired; symptoms persist despite an opportunity for a preferred schedule.

Adventitia

The outer connective-tissue layer of a blood vessel or hollow organ.

Alternate Names:

Tunica adventitia

Adventitious

Abnormal, unexpected, or arising from an unusual location or process; adventitious lung sounds include crackles, wheezes, and other added breath sounds.

Adverse Effect

An unintended and harmful or bothersome effect of a medicine or other treatment given at normal doses or for an intended purpose.

Adverse Event

Any untoward medical occurrence during or after a treatment or intervention, whether or not it is considered causally related to that treatment. Severity, seriousness, expectedness, and relatedness are assessed separately.

Adverse Reaction

An unintended, harmful response to a medicine, treatment, or other exposure.

Alternate Names:

Adverse drug reaction

Adverse Reactions To Drugs

Adverse drug reactions are harmful, unintended responses to medicines taken at normal doses, ranging from predictable side effects to allergic, organ-toxic, or idiosyncratic reactions.

Aedes Aegypti

Aedes aegypti is a mosquito that can transmit dengue, yellow fever, chikungunya, Zika, and other viruses.

Aegophony

Aegophony is an altered “E” sound heard through a stethoscope as an “A,” classically suggesting lung consolidation or fluid-related change when present over the chest.

Aerobe

A microorganism that requires molecular oxygen for growth or uses oxygen efficiently for energy production. Obligate aerobes are unable to grow without oxygen, whereas facultative organisms can grow with or without it.

Aerobic

Requiring or involving molecular oxygen. In microbiology, aerobic organisms use oxygen for growth or energy production, either obligatorily or as one option among several; in physiology, aerobic metabolism uses oxidative phosphorylation in mitochondria to generate ATP from nutrients.

Aerobic Bacteria

Bacteria that grow using oxygen or tolerate oxygen, although individual species differ in their exact oxygen requirements.

Aerobic Bacterium

An aerobic bacterium grows using oxygen, although some species can tolerate or use alternative metabolic pathways; oxygen requirements help guide culture and infection assessment.

Aerobic Exercise

Physical activity that uses sustained oxygen-

dependent energy production, such as walking or cycling.

Alternate Names:

Cardio exercise

Aerobiosis

A state or process requiring the presence of oxygen.

Aerophagia

Excessive swallowing of air, which may cause belching, abdominal bloating, distention, or increased intestinal gas.

Aerophagy

Excessive swallowing of air, also called aerophagia, which can lead to frequent belching, abdominal bloating, distension, and discomfort.

Alternate Names:

aerophagia, which can lead to frequent.

Aerophobia

An excessive fear of flying or air travel that causes significant anxiety, avoidance, or impairment.

Aerospace Medicine

The field of medicine concerned with maintaining the health, safety, and performance of people who travel or work in aircraft and spacecraft. It addresses effects such as changes in pressure, acceleration, low oxygen, radiation, isolation, and microgravity.

Aerosol

A suspension of fine solid particles or liquid droplets in a gas.

Aerotitis

Ear pain or middle-ear injury caused by failure to equalize pressure during rapid changes in altitude, such as during aircraft ascent or descent.

Aesculapius

The Roman name for Asclepius, the Greek god of healing; the name is associated with medicine and the rod-and-serpent medical symbol.

Aesthetic Dentistry

Dental care intended to improve the appearance of the teeth, gums, or smile. Procedures may include tooth-colored restorations, veneers, whitening, or selected crowns.

Aesthetic Medicine

Medical care intended to improve appearance or reduce visible signs of aging through procedures, devices, medicines, or skin care; appropriate assessment includes risks, contraindications, and realistic expectations.

Aesthetician

A trained skin-care professional who provides non-medical cosmetic skin treatments, such as cleansing, superficial exfoliation, and selected skin-care procedures within the scope of local regulation.

Alternate Names:

Esthetician; skin-care specialist.

Aetiology

The cause or causes of a disease, injury, symptom, or other medical condition; also spelled etiology.

Aetiology (Etiology)

The cause or group of causes underlying a disease, injury, or other medical condition.

Alternate Names:

Etiology

Affect

The observable expression of a person's emotional state, including facial expression, voice, posture, and emotional responsiveness.

Affective Flattening

Markedly reduced outward expression of emotion, including limited facial expression, voice modulation, and gestures. It may occur in schizophrenia and other psychiatric or neurologic conditions.

Afferent

Carrying signals toward a central organ or structure; afferent nerves transmit sensory information from

the body toward the brain and spinal cord.

Afferent Loop Syndrome

Obstruction or impaired emptying of the afferent intestinal limb created by some gastric operations, causing bile and pancreatic-secretions to accumulate with pain, nausea, vomiting, or malabsorption.

Afferent Neuron

A sensory nerve cell that carries impulses from receptors toward the central nervous system.

Afferent Pathway

A sensory nerve route carrying information from the body toward the brain or spinal cord.

Alternate Names:

Sensory pathway

Affinity

The strength of attraction or binding between two molecules, such as an antibody and antigen, receptor and ligand, or enzyme and substrate.

Affinity Chromatography

A laboratory separation method that isolates a molecule through its specific binding to an immobilized partner.

Afib (Atrial Fibrillation (AFib) Warning Symptoms)

Alternate index label for Atrial Fibrillation (AFib) Warning Symptoms.

Afib (Atrial Fibrillation)

Alternate index label for Atrial Fibrillation.

Afibrinogenaemia

Afibrinogenaemia is severe or complete deficiency of fibrinogen, an essential clotting protein, causing a bleeding tendency; it is usually inherited but may be acquired.

Afibrinogenemia

A rare inherited or acquired absence of fibrinogen, causing impaired blood clotting.

Aflatoxin

Aflatoxin is a toxin produced by certain *Aspergillus* molds in contaminated foods; chronic exposure can injure the liver and increase hepatocellular-carcinoma risk.

African Trypanosomiasis

A parasitic infection transmitted by tsetse flies and affecting the blood and nervous system.

Alternate Names:

African sleeping sickness

After-Cataract

Clouding of the posterior lens capsule that develops after cataract surgery and may cause blurred or hazy vision. It is also called posterior capsule opacification.

Alternate Names:

Posterior capsule opacification; secondary cataract.

Afterbirth

The placenta and fetal membranes expelled from the uterus after delivery of the baby.

Afterload

The resistance against which the ventricles must eject blood during systole. Left ventricular afterload is primarily determined by systemic vascular resistance (SVR); right ventricular afterload is determined by pulmonary vascular resistance (PVR). Afterload is estimated by blood pressure or calculated as wall stress.

Afterpains

Intermittent uterine cramps occurring after childbirth as the uterus contracts and returns toward its pre-pregnancy size. They may be more noticeable during breastfeeding.

Aftershave Poisoning

Toxic effects caused by excessive exposure to aftershave products. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Agammaglobulinaemia

Agammaglobulinaemia is profound deficiency of immunoglobulins and mature B cells, leading to recurrent bacterial infections; X-linked disease is a classic form.

Agammaglobulinemia

A severe deficiency or absence of immunoglobulins, causing recurrent infections.

Agar

A gelatinous polysaccharide from red algae used to solidify culture media. Melting near 85°C and solidifying at 35–40°C, it remains solid at incubation temperatures and is largely undegraded by bacteria, enabling isolation of pure colonies on media such as blood, MacConkey, and Sabouraud agars.

Agatston Score

A standardized semi-automated radiologic scoring system used to quantify the burden of coronary artery calcification on non-contrast, electrocardiographically gated cardiac computed tomography. Calculated by multiplying the area of each calcified lesion (defined by a CT attenuation threshold ≥ 130 Hounsfield units) by a peak density weighting factor (1 to 4). Total scores are stratified into established prognostic risk tiers (0: no identifiable plaque, extremely low 10-year cardiovascular risk; 1–99: mild plaque burden; 100–399: moderate plaque; ≥ 400 : severe calcification and high risk of major adverse cardiovascular events), guiding shared decision-making regarding statin initiation and preventive cardiovascular therapy.

Alternate Names:

Coronary Artery Calcium (CAC) Score; Agatston Calcium Score

Age By Decade

Classification of a person's age into ten-year groups, such as the twenties, thirties, or seventies, for demographic description or analysis.

Age Spots (Liver Spots)

Flat brown, gray, or black skin spots caused by long-term ultraviolet exposure, usually appearing

on sun-exposed areas.

Alternate Names:

Lentigines, Solar Solar Lentigines

Age-Related Cognitive Decline

Small changes in memory, thinking speed, or other mental abilities that can happen with aging. These changes do not usually interfere greatly with daily independence.

Alternate Names:

Age-associated cognitive decline; normal cognitive aging.

Age-Related Hearing Loss

Gradual hearing loss in both ears caused by aging. It often affects high-pitched sounds first and can make speech harder to understand.

Age-Related Macular Degeneration

A disease that damages the macula, the part of the retina needed for clear central vision. It can cause blurred or missing central vision. Dry AMD usually worsens slowly; wet AMD can cause faster vision loss because abnormal blood vessels leak under the retina. Smoking and family history increase the risk.

Age-Related Macular Degeneration, Dry

See *Dry macular degeneration*.

Age-Related Macular Degeneration, Wet

See *Wet macular degeneration*.

Age-Standardized Rate

A rate adjusted to a specified standard population age distribution so that populations with different age structures can be compared more fairly. It is commonly used for mortality, cancer, and disease-incidence comparisons.

Ageing

Ageing is the progressive biological and functional change over time, including altered repair, immunity, metabolism, organ reserve, and susceptibility to disease.

Ageism

Stereotyping, prejudice, or discrimination directed at people because of their age, which can impair access to appropriate medical care.

Agenesis

Complete failure of an organ or body structure to develop, usually because of a congenital developmental abnormality.

Agenesis Of The Corpus Callosum

Complete or partial absence of the corpus callosum, the major commissural fiber bundle connecting the cerebral hemispheres. May be isolated or associated with other CNS anomalies (Dandy-Walker, Chiari, heterotopias) and genetic syndromes (Aicardi, Andermann, acrocallosal syndromes).

Ageusia

Complete loss of the sense of taste. Causes include viral infections, oral or nasal disease, head injury, damage to the facial or glossopharyngeal nerves, medications, chemotherapy, zinc deficiency, and neurologic disorders.

Agglutination

The visible clumping of cells or particles caused by antibodies or other binding molecules linking antigens on their surfaces. It is used in blood-grouping and crossmatching, infectious-disease serology, and some laboratory identification tests.

Agglutination Test

A laboratory test in which particles visibly clump when a specific antibody or antigen is present.

Agglutinin

An antibody or other substance that causes cells or particles to clump together.

Agglutininogen

An agglutininogen is an antigen, often on a red blood cell, that can trigger production of a corresponding agglutinin and cause visible cell clumping in a compatible reaction.

Aggregation, Platelet

The process by which activated platelets adhere to one another to form a primary platelet plug at a site of vascular injury. Platelet agonists such as ADP, thromboxane A2, and thrombin activate glycoprotein IIb/IIIa, which binds fibrinogen and links adjacent platelets.

Aggression

Verbal or physical behavior intended to threaten, harm, or dominate another person or object. It may occur with mania, psychosis, personality disorders, dementia, delirium, substance intoxication or withdrawal, traumatic brain injury, or severe frustration.

Aggressive

Characterized by forceful or hostile behavior, or by rapid growth and invasive or destructive clinical behavior, depending on context.

Aggressive Angiomyxoma

A locally infiltrative, usually slow-growing mesenchymal tumor of the pelvis and perineum, predominantly affecting reproductive-age women. It may be mistaken for a Bartholin cyst and has a tendency to recur.

Aggressive Cancer

A cancer that grows, invades, or spreads rapidly and may require prompt diagnosis and treatment. Aggressiveness depends on tumour biology, grade, stage, and response to therapy.

Agility

The ability to move or change direction quickly while maintaining control and balance.

Aging

Biological process of growing older, involving cumulative changes at molecular, cellular, tissue, organ levels.

Aging Spots - Should You Be Concerned?

A topic about age-related lentigines, which are usu-

ally flat brown skin patches caused by cumulative sun exposure. A changing or bleeding lesion requires assessment.

Agita

An informal term for heartburn, indigestion, or an uneasy feeling of stomach discomfort; its meaning can vary by region and context.

Agitation

A state of excessive motor activity, emotional excitement, and restlessness. In psychiatric settings, it may be a symptom of mania, psychosis, delirium, substance intoxication, or withdrawal.

Agnathia

A rare congenital absence or severe underdevelopment of the mandible, maxilla, or both. It is usually part of a craniofacial developmental disorder and may cause profound facial deformity, airway obstruction, feeding difficulty, and impaired dentition.

Agnogenic Myeloid Metaplasia

See *Myelofibrosis*.

Agnosia

A higher-order neurological deficit characterized by the inability to recognize or process sensory stimuli (visual, auditory, tactile) despite intact primary sensory organs and pathways. Caused by focal lesions in specific cortical association areas (parietal, temporal, or occipital lobes).

Agonist

A substance that binds to a receptor and activates it, producing a biological response. A full agonist can produce the receptor's maximum response, whereas a partial agonist produces a lower maximum response even when it occupies all available receptors.

Agoraphobia

Anxiety disorder characterized by fear and avoidance of situations where escape might be difficult or help unavailable during a panic-like episode. Common feared situations include public transportation,

open spaces, enclosed spaces, standing in line, being in crowds, and being outside the home alone.

Agranulocytes

White blood cells without prominent cytoplasmic granules; the main types are lymphocytes and monocytes.

Agranulocytosis

A severe reduction or near-absence of circulating neutrophils, usually defined as an absolute neutrophil count below $0.5 \times 10^9/\text{L}$. It may be caused by medications, chemotherapy, autoimmune disease, infections, or bone-marrow disorders and presents with fever, sore throat, oral ulcers, or recurrent serious infections.

Agraphesthesia

Inability to recognize numbers or letters traced on the skin, indicating a lesion of the contralateral parietal lobe (somatosensory association cortex, post-central gyrus). Tested with a blunt object on the palm or fingertip while the patient's eyes are closed.

Agraphia

An acquired inability to write or express language in written form despite adequate education and motor ability. It may result from dominant-parietal or language-network lesions, especially stroke, traumatic brain injury, dementia, or brain tumors, and may occur with aphasia, alexia, or acalculia.

Ague

A fever, often associated with malaria, marked by recurrent episodes of chills, fever, and sweating; the term can also mean a fit of shivering.

Atherosclerotic Heart Disease

A condition in which fatty deposits called plaques narrow or block the arteries that supply blood to the heart. It is a form of coronary artery disease and may cause chest pain, heart attack, or other heart problems.

AI

In medicine, AI means artificial intelligence: computer methods that analyze data or recognize patterns to support research, diagnosis, prediction, treatment, or clinical workflow; they require validation and oversight.

Aicardi Syndrome

Aicardi Syndrome is a rare developmental brain disorder classically involving agenesis of the corpus callosum, chorioretinal lacunae, and infantile seizures.

Aicardi-Goutieres Syndrome

Rare autosomal recessive inflammatory disorder mimicking congenital viral infection. Characterized by cerebral calcifications, white matter disease, cerebral atrophy, and cerebrospinal fluid lymphocytosis. Presents with severe neurodevelopmental impairment, seizures, and spasticity.

AIDS

Acquired immunodeficiency syndrome: the advanced stage of HIV infection, defined by CD4 count <200 cells/ μL or the presence of AIDS-defining illnesses.

Alternate Names:

Acquired Immunodeficiency Syndrome (AIDS)

AIDS Dementia

A disorder of thinking, memory, behavior, or movement caused by advanced HIV-related disease affecting the brain.

AIDS-Associated Nephropathy

Kidney disease linked to untreated or advanced HIV infection. It can cause large amounts of protein in the urine, swelling, and falling kidney function; antiretroviral treatment and kidney assessment are important.

Alternate Names:

HIV-associated nephropathy

AIDS/HIV

See *HIV/AIDS*.

Ainhum

A rare disorder causing a constricting groove around a toe that may eventually lead to autoamputation.

Alternate Names:

Dactylolysis spontanea

Air Abrasion

Minimally invasive caries removal using abrasive particles. Alternative to drilling for small lesions.

Air Bag

An inflatable vehicle safety device that rapidly deploys during a collision to reduce impact with the steering wheel, dashboard, or window; it supplements seat belts.

Air Bronchogram

A radiographic sign showing air-filled bronchi visible against opacified lung parenchyma, indicating that the airways remain patent while the surrounding alveoli are filled with fluid, pus, or cells.

Air Contaminants

Solid, liquid, or gaseous substances in air that may harm health, such as particulate matter, fumes, gases, allergens, or microorganisms. Effects depend on the contaminant, concentration, and duration of exposure.

Air Embolism

Entry of gas into the venous or arterial circulation, where it can obstruct blood flow and injure tissues. It may occur during medical procedures, trauma, or rapid changes in environmental pressure. Symptoms and treatment depend on the amount and location of gas and require urgent clinical assessment when significant embolism is suspected.

Air Passages

The air passages are the conducting airways from the nose and mouth through the pharynx, larynx, trachea, bronchi, and bronchioles; obstruction can impair ventilation.

Air Polishing

Removal of stains using air-abrasive device. Glycine or erythritol powder.

Air Quality

The condition of air as determined by the concentration of pollutants such as particulate matter, ozone, nitrogen dioxide, and sulfur dioxide.

Air Sac

A cavity or thin-walled space that contains air, such as a pulmonary alveolus or bird air sac.

Alternate Names:

Air space

Air Trapping

Retention of air in the lungs because it cannot be fully exhaled, often from airway obstruction.

Air-Conditioner Lung

Hypersensitivity pneumonitis caused by inhaled mold, fungus, or other contaminants from air-conditioning or humidifying systems.

Air-Sickness

Air-sickness is motion sickness triggered by aircraft movement or conflicting visual and vestibular signals, causing nausea, dizziness, sweating, and sometimes vomiting.

Airborne Disease

An infection that can spread through small suspended particles or aerosols under suitable conditions. Transmission depends on the organism, environment, ventilation, and duration of exposure.

Airborne Precautions

Infection-control measures for infections that can remain suspended in the air and spread over a distance. They include an airborne infection isolation room with negative pressure, limiting patient movement, and appropriate respiratory protection, often a fit-tested N95 or higher-level respirator. They are used for tuberculosis, measles, chickenpox, and disseminated shingles.

Airplane Ear

Ear pain, pressure, or temporary hearing loss caused by unequal air pressure across the eardrum during flight.

Alternate Names:

Barotitis Media

Airway

A passage through which air moves between the outside environment and the lungs, including the nose, mouth, pharynx, larynx, trachea, and bronchi.

Airway Clearance Techniques

Physical or mechanical methods used to mobilize and remove airway secretions. Examples include directed coughing, breathing exercises, postural drainage, positive expiratory pressure, and high-frequency chest-wall oscillation. Selection depends on the disease, secretion burden, strength, and ability to cooperate.

Airway Management

Airway management encompasses techniques and devices used to maintain ventilation and oxygenation in patients with compromised airways.

Airway Obstruction

Partial or complete blockage of airflow through the upper or lower respiratory tract. It may result from a foreign body, secretions, swelling, trauma, tumor, or loss of airway muscle tone and can cause stridor, wheeze, hypoxaemia, respiratory distress, or arrest.

Airway Resistance

The opposition to airflow through the conducting airways, determined largely by airway radius and flow pattern. Bronchoconstriction, mucus, edema, and reduced elastic traction increase resistance; because resistance varies strongly with radius, small changes can markedly affect work of breathing.

AK

Actinic keratosis, a rough, scaly precancerous skin lesion caused by chronic ultraviolet exposure.

Akathisia

Subjective feeling of inner restlessness accompanied by a compulsive need to move, most commonly an extrapyramidal side effect of antipsychotic drugs (typical and atypical neuroleptics), also seen with dopamine antagonists (metoclopramide), selective serotonin reuptake inhibitor withdrawal, and in Parkinson disease.

Akinesia

Impairment or absence of voluntary movement, classically a hypokinetic feature of basal ganglia disorders such as Parkinson disease and related parkinsonian syndromes.

Akinetic

Characterized by little or no voluntary movement; akinesia may result from neurologic disease, medication effects, or severe motor impairment.

Akinetic Mutism

A state of profound lack of movement and speech despite wakefulness and preserved basic alertness.

Alagille Syndrome

An inherited disorder of Notch signaling that commonly affects the liver, heart, skeleton, eyes, and characteristic facial features. It is usually caused by a pathogenic variant in JAG1 or, less often, NOTCH2.

Alanine

An amino acid used in protein synthesis and glucose metabolism.

Alanine Aminotransferase

An enzyme found mainly in liver cells. When these cells are damaged, ALT enters the blood; high levels may indicate liver injury or disease. It is usually interpreted with AST and other liver tests.

Alternate Names:

ALT

Alanine Transaminase Blood Test

A laboratory test that measures serum ALT activity,

a hepatocellular enzyme released during liver injury. Elevated ALT is more specific for hepatocellular damage than AST and is used to evaluate hepatitis, drug toxicity, and other liver diseases.

ALARA (As Low As Is Reasonably Achievable) Principle

A radiation-safety principle that aims to keep exposure to ionizing radiation as low as practical while still achieving the needed diagnostic or treatment benefit. It uses measures such as justification, optimization, shielding, shorter exposure time, and greater distance.

Alarmin

A molecule released by damaged or stressed cells that activates innate immune responses.

Alastrim

Alastrim is a historical name for a generally milder form of smallpox, caused by variola minor; smallpox has been eradicated worldwide.

Albendazole

Albendazole is a benzimidazole antiparasitic drug that disrupts parasite microtubules and is used for several intestinal and tissue helminth infections.

Albers-Schönberg Disease

An autosomal dominant form of osteopetrosis (specifically Autosomal Dominant Osteopetrosis Type II [ADO II]) caused by heterozygous loss-of-function mutations in the *CLCN7* gene encoding the chloride channel 7 required for osteoclast lysosomal acidification and bone resorption. Characterized by generalized osteosclerosis, cortical bone thickening, and excessive bone brittleness leading to multiple pathologic fractures, cranial nerve entrapment (causing facial palsy and optic atrophy), and pathognomonic radiological findings including “sandwich vertebrae” (sclerosis of vertebral endplates) and “bone-in-bone” appearance of the pelvis and tubular bones.

Alternate Names:

Autosomal Dominant Osteopetrosis Type II (ADO II); Marble Bone Disease

Albinism

An inherited condition involving reduced or absent melanin production, affecting the skin, hair, and eyes.

Alternate Names:

Oculocutaneous Albinism

Albinism (Oculocutaneous Albinism)

A group of inherited disorders that reduce melanin production in the skin, hair, and eyes. It may cause light pigmentation, reduced visual acuity, nystagmus, and increased sensitivity to sunlight; the severity depends on the genetic subtype.

Alternate Names:

Oculocutaneous Albinism

Albinism, Oculocutaneous

An inherited disorder of melanin production affecting the skin, hair, and eyes, often causing light sensitivity, nystagmus, reduced visual acuity, and increased sun sensitivity.

Albino

A person or animal with albinism; person-first language such as “person with albinism” is generally preferred.

Albright’S Hereditary Osteodystrophy

A group of inherited features associated with abnormalities of GNAS signaling, including short metacarpal bones, a round facial appearance, short stature, and subcutaneous ossification. Some associated disorders also cause resistance to parathyroid hormone or other hormones.

Albumen

The white of an egg, composed largely of water and proteins; it is distinct from albumin, the major protein in blood plasma.

Albumin

The main protein in blood plasma, produced by the liver. It helps maintain oncotic pressure and transports various substances, including hormones, fatty acids, and medications.

Albumin Blood (Serum) Test

A laboratory test that measures serum albumin concentration, the principal plasma protein synthesized by the liver. Low levels indicate hepatic insufficiency, nephrotic syndrome, malnutrition, or chronic inflammation; it is also used to assess nutritional status and prognosis.

Albumin Clearance

The removal rate of albumin from blood or another body compartment, used in selected physiologic studies.

Albumin-To-Creatinine Ratio

The urinary albumin concentration standardized to urinary creatinine concentration, usually measured in a spot urine sample. Persistent albuminuria is a marker of kidney damage and is categorized as A1 (<30 mg/g), A2 (30–300 mg/g), or A3 (>300 mg/g) in commonly used CKD classification.

Albumins

Albumins are water-soluble proteins, especially serum albumin made by the liver, that maintain oncotic pressure and transport hormones, fatty acids, drugs, and other substances.

Albuminuria

Abnormally increased excretion of albumin in the urine, indicating disruption of the glomerular filtration barrier or another form of kidney disease. It is commonly detected with a urine albumin-to-creatinine ratio and classified as moderately or severely increased according to the quantity and persistence of excretion.

Alcohol

Ethanol, a psychoactive substance that can impair judgment and coordination and cause intoxication or dependence.

Alcohol Abuse

Legacy, nonpreferred label; see *Alcohol Use Disorder*.

Alcohol Abuse And Alcoholism

Legacy index label; see *Alcohol Use Disorder*.

Alcohol Addiction

Legacy label; see *Alcohol Use Disorder*.

Alcohol And Pregnancy

Alcohol crosses the placenta and can cause fetal alcohol spectrum disorders; no known amount or timing during pregnancy is established as safe.

Alcohol And Teens

Alcohol exposure during adolescence can impair judgment, increase injury and unsafe-sex risk, and affect developing brain systems involved in learning and impulse control. Early screening, supportive communication, treatment of coexisting mental-health problems, and limiting access reduce harm.

Alcohol Dehydrogenase

An enzyme, found mainly in the liver, that catalyzes the first major step in ethanol metabolism by converting alcohol to acetaldehyde.

Alternate Names:

ADH; ethanol dehydrogenase.

Alcohol Dependence

Legacy diagnostic label; see *Alcohol Use Disorder*.

Alcohol Dependence (Alcohol Abuse And Alcoholism)

Legacy index label; see *Alcohol Use Disorder*.

Alcohol Dependency

Legacy label; see *Alcohol Use Disorder*.

Alcohol Intolerance

An unpleasant reaction to alcohol caused by difficulty metabolizing alcohol or one of its components.

Alcohol Intoxication

Acute impairment caused by ethanol, which may produce disinhibition, impaired coordination, slurred speech, vomiting, reduced consciousness, or respiratory depression. Severe intoxication can be

life-threatening and requires assessment of breathing, circulation, glucose, trauma, and other substances.

Alcohol Poisoning

A life-threatening condition caused by drinking enough alcohol to impair breathing, consciousness, and other vital functions.

Alcohol Pregnancy (Fetal Alcohol Syndrome)

Alternate index label for Fetal Alcohol Syndrome.

Alcohol Swab

A single-use pad containing alcohol for cleaning intact skin before selected procedures. It should be used according to the product instructions and allowed to dry.

Alcohol Use

Consumption of alcoholic beverages. Health effects depend on amount, frequency, pattern, and individual risk.

Alcohol Use And Safe Drinking

Guidance on reducing alcohol-related harm, including standard-drink awareness, lower-risk limits, and situations in which alcohol should be avoided.

Alcohol Use Disorder

A problematic pattern of alcohol use leading to significant impairment or distress. Severity is classified as mild (2–3 criteria), moderate (4–5 criteria), or severe (6 or more criteria).

Alcohol Withdrawal

A syndrome that may occur after abrupt cessation or substantial reduction of prolonged heavy alcohol use. Symptoms can include tremor, anxiety, sweating, nausea, hallucinations, seizures, or delirium; onset and severity vary, and severe withdrawal requires urgent medical care.

Alcohol Withdrawal Syndrome

Alternate label; see *Alcohol Withdrawal*.

Alcohol-Associated Hepatitis

Alternate label; see *Alcoholic Hepatitis*.

Alcoholic Cardiomyopathy

Dilated cardiomyopathy caused by chronic excessive alcohol consumption, one of the most common reversible causes of dilated cardiomyopathy. Direct toxic effect of ethanol and its metabolite acetaldehyde on cardiomyocytes. Presentation is identical to other dilated cardiomyopathies.

Alcoholic Hepatitis

An acute inflammation and injury of the liver caused by heavy alcohol use. It commonly causes jaundice, fatigue, fever, nausea, and abdominal pain and can become severe enough to cause liver failure.

Alcoholic Hepatitis (Alcohol-Associated Hepatitis)

Alternate index label; see *Alcoholic Hepatitis*.

Alcoholic Intoxication

Alternate label; see *Alcohol Intoxication*.

Alcoholic Ketoacidosis

A high-anion-gap metabolic acidosis caused by prolonged heavy alcohol use, poor nutritional intake, and vomiting. It typically presents with abdominal pain, nausea, vomiting, dehydration, and tachypnea, often with a normal or low blood glucose concentration.

Alcoholic Liver Disease

Alcoholic liver disease includes steatosis, alcohol-associated hepatitis, and cirrhosis caused by sustained alcohol exposure.

Alcoholic Myopathy

Skeletal muscle damage and dysfunction directly resulting from acute or chronic toxic exposure to ethanol and its metabolite acetaldehyde. Acute alcoholic myopathy presents following an episode of heavy binge drinking with abrupt, painful muscle swelling, tenderness, severe weakness, and acute rhabdomyolysis with massive creatine kinase eleva-

tion and myoglobinuria. Chronic alcoholic myopathy is far more prevalent, manifesting as an insidious, painless, progressive weakness and wasting of proximal limb-girdle muscles (predominantly pelvic girdle) due to impaired muscle protein synthesis, oxidative stress, and selective atrophy of fast-twitch glycolytic type IIb muscle fibers, which reverses with abstinence and nutritional repletion.

Alternate Names:

Alcohol-Induced Myopathy; Ethanol-Induced Myopathy

Alcoholic Neuropathy

A length-dependent peripheral neuropathy associated with chronic excessive alcohol use and nutritional deficiency, especially thiamine deficiency. It causes burning pain, numbness, paraesthesia, and weakness, most prominently in the feet and lower legs.

Alcoholism

Legacy, nonpreferred label; see *Alcohol Use Disorder*.

Alcuronium

Alcuronium is a nondepolarizing neuromuscular-blocking drug that causes skeletal-muscle paralysis during anesthesia; it requires airway and respiratory support.

Aldolase Blood Test

A laboratory test that measures serum aldolase activity, a glycolytic enzyme present in skeletal muscle, liver, and brain. Elevated levels suggest muscle disease such as dermatomyositis or muscular dystrophy, and may complement creatine kinase in evaluating myopathy.

Aldosterone

A mineralocorticoid hormone produced by the zona glomerulosa of the adrenal cortex, the final effector of the renin-angiotensin-aldosterone system (RAAS).

Aldosterone Blood Test

A laboratory test that measures serum aldosterone

concentration, the principal mineralocorticoid hormone produced by the adrenal cortex. It is used to evaluate primary aldosteronism, secondary hypertension, and adrenal insufficiency, often interpreted with plasma renin activity.

Alembic

A distillation apparatus historically used in chemistry and laboratory work to separate or purify substances by differences in volatility.

Alexander Disease

A rare, progressive fatal leukodystrophy inherited in an autosomal dominant manner, caused in almost all cases by de novo heterozygous gain-of-function mutations in the glial fibrillary acidic protein (*GFAP*) gene on chromosome 17q21. Pathologically defined by the widespread accumulation of astrocytic cytoplasmic inclusions known as Rosenthal fibers. Primarily manifests in infancy with megalencephaly (progressive head enlargement), frontal-predominant white matter demyelination on neuroimaging, severe psychomotor retardation, spastic quadriparesis, bulbar signs, and intractable seizures.

Alternate Names:

Fibrinoid Leukodystrophy; GFAP Leukodystrophy

Alexia

An acquired inability to comprehend written language despite intact vision and otherwise preserved language function, usually caused by stroke or other lesions affecting the dominant-hemisphere reading networks. When reading is impaired but writing remains possible, the pattern is called alexia without agraphia.

Alexithymia

Difficulty identifying, describing, or distinguishing one's emotional experiences.

Alfacalcidol

Alfacalcidol is a vitamin-D analogue converted in the liver to an active form that increases calcium and phosphate absorption and is used in selected bone and mineral disorders.

Algia

A word ending meaning pain, as in neuralgia, myalgia, and arthralgia.

Alglucerase

Alglucerase is a modified form of the lysosomal enzyme glucocerebrosidase formerly used as enzyme-replacement therapy for Gaucher disease; newer preparations are more commonly used.

Algor Mortis

Post-mortem cooling of the body following death until it reaches ambient environmental temperature. Serves as one of the physical estimators of the post-mortem interval (time since death).

Algorithm

A medical algorithm is a defined sequence of rules or calculations used to support diagnosis, risk assessment, treatment, triage, or data analysis; it does not replace clinical judgment.

Aliasing Artifact

An ultrasound display artifact in which blood flow exceeds the selected velocity scale and appears to reverse direction. It can be reduced by increasing the scale or changing the imaging settings.

Alimentary

Relating to food, nourishment, or the organs and processes of digestion.

Alimentary Canal

The continuous muscular tube from the mouth to the anus through which food passes; it includes the pharynx, esophagus, stomach, small intestine, and large intestine.

Alkali

An alkali is a basic substance that accepts hydrogen ions or produces hydroxide in solution; caustic alkalis can cause severe chemical burns, while controlled bases have medical and laboratory uses.

Alkaline Phosphatase

A group of enzymes that catalyze the hydrolysis of phosphate esters at alkaline pH, found in high concentrations in the liver, bone, placenta, and intestinal mucosa. Elevated serum levels occur in obstructive liver disease, bone disorders including Paget disease and fractures, pregnancy, and certain malignancies.

Alkaloid

A naturally occurring nitrogen-containing organic compound, often produced by plants, with potentially potent physiologic or pharmacologic effects.

Alkaloids

Alkaloids are nitrogen-containing plant or microbial compounds with diverse biologic effects; examples include morphine, quinine, nicotine, and atropine.

Alkalosis

A metabolic (elevated bicarbonate) or respiratory (low PaCO₂) disturbance that raises arterial pH above 7.45. Metabolic alkalosis: vomiting/NG suction (HCl loss), diuretics, mineralocorticoid excess, hypokalemia, and alkali ingestion—compensated by hypoventilation; chloride-responsive vs. chloride-resistant distinguishes causes.

Alkaptonuria

An inherited disorder of tyrosine metabolism causing homogentisic-acid accumulation and darkening of urine or tissues.

Alkylating Agents

Alkylating agents are drugs or chemicals that add alkyl groups to DNA or other molecules; anticancer agents exploit this to inhibit replication, while normal-tissue toxicity includes myelosuppression and mutagenic risk.

Allantoin

Allantoin is a compound used in some topical products for its skin-protective, moisturizing, and keratolytic properties; formulation and indication determine its clinical role.

Allantois

The allantois is an embryonic membrane involved in early waste handling, blood-vessel development, and formation of structures related to the umbilicus and urinary bladder.

Allele

Alternative form of a gene at a particular locus. Individuals inherit two alleles for each gene (one from each parent). Alleles can be dominant, recessive, or codominant.

Allelic

Relating to an allele, one of two or more alternative forms of a gene at a particular genomic location.

Allen Test

A bedside test of collateral blood flow to the hand through the radial and ulnar arteries, commonly performed before radial-artery puncture or cannulation.

Allergen

A substance capable of causing an allergic immune response in a susceptible person. Common allergens include proteins in foods, pollens, medicines, animal dander, insect venom, and natural rubber.

Allergen Immunotherapy

Treatment that gives gradually increasing doses of a specific allergen by injection or under the tongue to reduce allergic sensitivity. It may be used for selected allergic rhinitis, conjunctivitis, asthma, or insect-venom allergy.

Allergic Bronchopulmonary Aspergillosis

A hypersensitivity reaction to *Aspergillus fumigatus* in asthma or CF patients. Causes central bronchiectasis, elevated total IgE, and eosinophilia. Treatment includes corticosteroids and itraconazole.

Allergic Cascade

The allergic cascade is the sequence in which an allergen activates immune cells, including IgE-bearing mast cells, causing release of histamine and other

mediators. This produces symptoms such as itching, swelling, mucus, wheezing, hives, or anaphylaxis.

Allergic Conjunctivitis

An inflammatory condition of the conjunctiva mediated by IgE-dependent mast cell degranulation in response to environmental allergens, characterized by bilateral ocular itching, tearing, conjunctival injection, and eyelid edema.

Allergic Contact Dermatitis

A delayed, T-cell-mediated skin reaction after contact with a substance to which the person has become sensitized, causing itching, redness, swelling, and sometimes blisters or scaling.

Allergic Dermatitis

An inflammatory skin reaction caused by an immune response to an external allergen, most commonly allergic contact dermatitis. It is a delayed, T-cell-mediated hypersensitivity reaction that typically develops after prior sensitization.

Allergic Granulomatosis

See *EGPA (formerly Churg-Strauss syndrome)*.

Allergic Granulomatosis And Angiitis

See *EGPA (formerly Churg-Strauss syndrome)*.

Allergic Reaction

An immune response to an otherwise harmless substance, ranging from mild symptoms to anaphylaxis.

Alternate Names:

Allergy

Allergic Reactions

Immune reactions to substances that are usually harmless, such as foods, medicines, pollens, or insect venom. They may be immediate or delayed and can range from localized symptoms to anaphylaxis.

Allergic Rhinitis

An IgE-mediated inflammatory response of the nasal mucosa to inhaled allergens, causing sneezing, nasal congestion, clear rhinorrhea, nasal itching, and of-

ten conjunctival symptoms. Management may include allergen avoidance, intranasal corticosteroids, antihistamines, and allergen immunotherapy when indicated.

Allergic Rhinitis (Hay Fever)

Allergies occur when the immune system overreacts to harmless environmental substances such as pollen, dust mites, mold, or pet dander. Hay fever (allergic rhinitis) specifically involves nasal symptoms like sneezing, congestion, and itchy eyes triggered by airborne allergens.

Alternate Names:

Hay Fever

Allergies

Immune reactions to normally harmless substances such as foods, pollens, medicines, insect venom, or animal dander. Reactions range from localized rhinitis or dermatitis to life-threatening anaphylaxis.

Allergies (Allergy)

Alternate index label for Allergy.

Allergies, Asthma, And Dust

Dust can carry allergens such as dust-mite particles that trigger allergic rhinitis or asthma in susceptible people. Symptoms may include sneezing, congestion, wheezing, cough, and shortness of breath.

Allergies, Asthma, And Molds

Mold spores and fragments can trigger allergic rhinitis, conjunctivitis, or asthma in sensitized people. Reducing exposure and treating the specific allergic or airway condition are guided by clinical assessment.

Allergies, Asthma, And Pollen

Pollen is a seasonal airborne allergen that can trigger allergic rhinitis, conjunctivitis, or asthma. Typical symptoms include sneezing, itchy eyes, nasal congestion, cough, and wheezing.

Allergy

An allergy is an inappropriate immune response

to a normally harmless substance such as pollen, food, medicine, insect venom, or animal proteins. Symptoms range from localized rhinitis or hives to life-threatening anaphylaxis.

Alternate Names:

Allergies (Allergy)

Allergy Diaper (Intertrigo)

Alternate index label for Intertrigo.

Allergy Eczema (Atopic Dermatitis)

Alternate index label for Atopic Dermatitis.

Allergy Eye (Eye Allergy)

Alternate index label for Eye Allergy.

Allergy Food (Food Allergy)

Alternate index label for Food Allergy.

Allergy Insect (Insect Sting Allergies)

Alternate index label for Insect Sting Allergies.

Allergy Latex (Latex Allergy)

Alternate index label for Latex Allergy.

Allergy Plant Contact (Poison Ivy, Oak, And Sumac)

Alternate index label for Poison Ivy, Oak, and Sumac.

Allergy Rash (Rash)

Alternate index label for Rash.

Allergy Shots

Subcutaneous allergen immunotherapy involving gradually increasing doses of selected allergens to reduce allergic sensitivity; administration requires monitoring for systemic reactions.

Allergy Testing

Identification of IgE-mediated allergic sensitization. Skin prick test: allergen extract applied to skin via lancet, read after 15 min (wheal >3mm = positive). Intradermal test: more sensitive, used when SPT

negative but suspicion remains.

Allergy Testing - Skin

A diagnostic test in which small amounts of allergen extracts are applied to the skin by prick or intradermal injection to detect IgE-mediated allergic sensitization. A wheal-and-flare reaction at the test site indicates sensitization to the corresponding allergen.

Allergy, Dust Mite

See *Dust mite allergy*.

Allergy, Egg

See *Egg allergy*.

Allergy, Food

See *Food allergy*.

Allergy, Latex

See *Latex allergy*.

Allergy, Milk

See *Milk allergy*.

Allergy, Mold

See *Mold allergy*.

Allergy, Nickel

See *Nickel allergy*.

Allergy, Peanut

See *Peanut allergy*.

Allergy, Penicillin

See *Penicillin allergy*.

Allergy, Pet

See *Pet allergy*.

Allergy, Shellfish

See *Shellfish allergy*.

Allergy, Wheat

See *Wheat allergy*.

Allis Clamp

A toothed surgical clamp used to grasp and hold firm tissue during an operation.

Allodynia

Pain caused by a stimulus that is normally not painful, such as light touch or gentle pressure. It may occur with neuropathic, nociplastic, or other pain conditions.

Allogeneic

Derived from a genetically different individual of the same species, as in an allogeneic blood, tissue, stem-cell, or organ transplant.

Allograft

Tissue transplanted between genetically different individuals of the same species. Allografts may provoke immune rejection and require appropriate donor screening, processing, and, in some settings, immunosuppression.

Allopathy

A historical label for conventional medical treatment, often contrasted with homeopathy; modern clinical practice is more accurately described by its specific methods and evidence.

Allosteric Regulation

The regulation of enzyme activity by the binding of an effector molecule at a site other than the active site (allosteric site), causing a conformational change that alters the enzyme's activity. Allosteric enzymes typically have multiple subunits with cooperative binding kinetics (sigmoidal rather than hyperbolic velocity curves).

Aloe

A plant-derived substance used in some topical products and supplements; topical preparations may soothe minor irritation, while oral latex-containing products can cause cramps, diarrhea, and electrolyte

problems.

Alogia

Poverty of speech or poverty of content of speech, a negative symptom of schizophrenia. It manifests as brief, empty replies to questions, reduced spontaneous speech, and lack of elaboration. It reflects dysfunction in the mesocortical dopamine pathway and is less responsive to antipsychotic medications than positive symptoms.

Alongshan Virus

A tick-associated segmented RNA virus reported to cause a febrile illness, often with headache, fatigue, nausea, or neurologic symptoms; its epidemiology and clinical significance remain under study.

Alopecia

The general medical term for loss of hair from the scalp or body, rather than a single specific disease. Causes include disorders of the hair follicle, immune disease, hormones, medicines, systemic illness, or physical injury. Androgenetic alopecia (male- or female-pattern hair loss) is common and is associated with genetic susceptibility and androgen, particularly dihydrotestosterone, effects. Alopecia areata is an autoimmune, usually non-scarring, patchy hair-loss disorder that may progress to alopecia totalis (entire scalp) or universalis (whole body).

Alopecia (Hair Loss)

Alternate index label for Hair Loss.

Alopecia Areata

An autoimmune condition in which the immune system attacks hair follicles, causing sudden, usually non-scarring hair loss. It often begins as smooth, round or oval patches on the scalp but may affect the beard, eyebrows, eyelashes, or other body hair. Some people develop nail changes or more extensive hair loss, called alopecia totalis or alopecia universalis. Hair may regrow, but episodes can recur.

Alternate Names:

AA (Alopecia Areata) Patchy Hair Loss (Alopecia Areata)

Alopecia Totalis

Complete loss of hair from the scalp, usually caused by an autoimmune disorder.

Alopecia Universalis

Loss of hair from the entire body, including the scalp, eyebrows, eyelashes, and other hair-bearing areas.

ALP - Blood Test

A laboratory test that measures serum alkaline phosphatase activity, an enzyme present in liver, bone, intestine, and placenta. Elevated levels may indicate hepatobiliary disease, bone turnover, or pregnancy; isoenzyme testing helps distinguish the source.

ALP Isoenzyme Test

A laboratory test that identifies the tissue source of elevated alkaline phosphatase by separating liver, bone, intestinal, and placental isoenzymes. It helps determine whether elevated ALP arises from hepatobiliary disease or bone disorders.

Alpha 1

See *Alpha-1-antitrypsin deficiency*.

Alpha Blockers

Medicines that block alpha-adrenergic receptors and may lower blood pressure or improve urine flow in prostate enlargement.

Alpha Cells

Endocrine cells in the pancreatic islets that produce and release glucagon, a hormone that raises blood glucose during fasting or low-glucose states.

Alternate Names:

Pancreatic alpha cells; glucagon-secreting cells.

Alpha Hydroxy Acids

A group of organic acids used in dermatology and cosmetics to exfoliate the outer skin layer and improve texture or pigmentation. Examples include glycolic and lactic acid.

Alternate Names:

AHAs; fruit acids.

Alpha Thalassemia

An inherited blood disorder caused by reduced production of alpha-globin chains of hemoglobin. Severity ranges from mild microcytosis or anemia to severe fetal or newborn disease.

Alpha Waves

Rhythmic electroencephalographic waves, typically around 8–13 Hz, most prominent when a relaxed, awake person has the eyes closed.

Alternate Names:

Alpha rhythm; posterior dominant rhythm.

Alpha-1 Antitrypsin Blood Test

A laboratory test that measures serum alpha-1 antitrypsin concentration, a protease inhibitor synthesized by the liver. Low levels suggest alpha-1 antitrypsin deficiency, a genetic disorder predisposing to early emphysema and liver disease; phenotyping or genotyping confirms the diagnosis.

Alpha-1 Antitrypsin Deficiency

An autosomal codominant genetic disorder caused by mutations in the SERPINA1 gene. It predisposes to early-onset panlobular emphysema (lower lobes), liver disease, and panniculitis. PiZZ genotype is most severe. Treatment includes AAT augmentation therapy and smoking avoidance.

Alpha-Agonists

Medicines that stimulate alpha-adrenergic receptors. Depending on the receptor and tissue, they can constrict blood vessels, alter autonomic activity, or reduce aqueous-humor production in the eye. Their uses and adverse effects depend on the specific medicine and route.

Alpha-Delta Sleep

A sleep pattern in which alpha-frequency activity intrudes into delta-wave deep sleep and may be associated with nonrestorative sleep or chronic pain.

Alternate Names:

Alpha-delta intrusion; alpha-delta rhythm.

Alpha-Fetoprotein

A protein produced mainly by the fetal liver; maternal or blood levels can help assess certain fetal and adult conditions.

Alternate Names:

AFP; alpha fetoprotein (alternate spelling).

Alpha-Fetoprotein

A protein produced mainly by the fetal liver. Maternal blood AFP is used in prenatal screening, and serum AFP may help evaluate selected liver and germ-cell tumors. Results are not diagnostic by themselves.

Alternate Names:

Alpha-Fetoprotein

Alpha-Gal Syndrome

An allergy to the carbohydrate alpha-gal found in most nonhuman mammalian meat and some products derived from mammals.

Alpha-Globulin

A group of blood proteins that includes transport and acute-phase proteins.

Alpha-Glucosidase Inhibitors

Oral glucose-lowering medications including acarbose, miglitol, and voglibose that delay carbohydrate digestion and glucose absorption in the small intestine by inhibiting brush border alpha-glucoside enzymes. Reduce postprandial glucose excursions without affecting fasting glucose significantly.

Alpha-Ketoglutarate

A five-carbon intermediate of the citric acid cycle formed from isocitrate and converted to succinyl-CoA. It also serves as a carbon skeleton for amino-acid metabolism and participates in oxidative deamination and cellular signaling.

Alpha-Synuclein

A neuronal protein that can accumulate abnormally in disorders such as Parkinson disease and Lewy-body dementia.

Alpha-Thalassemia

An inherited disorder in which reduced alpha-globin production impairs hemoglobin formation.

Alport Syndrome

Hereditary nephritis caused by mutations in type four collagen genes leading to progressive sensorineural hearing loss, ocular anomalies, and renal failure. X-linked form from COL4A5 mutations is the most common. Autosomal recessive and dominant forms exist.

Alprazolam

A short- to intermediate-acting benzodiazepine used mainly for anxiety and panic disorder; it can cause sedation, dependence, withdrawal, and dangerous respiratory depression with opioids or other depressants.

ALS

Amyotrophic lateral sclerosis (motor neuron disease; Lou Gehrig disease) is the progressive neurodegenerative disease characterized by degeneration of upper and lower motor neurons controlling voluntary movement. It causes progressive weakness, muscle wasting, fasciculations, spasticity, dysarthria, or dysphagia; sensation is usually relatively preserved, but respiratory muscles may eventually be affected.

Alstrom Syndrome

A rare autosomal-recessive disorder caused by ALMS1 variants, associated with cone-rod dystrophy, hearing loss, obesity, insulin resistance, cardiomyopathy, and progressive kidney or liver disease.

Alternative Therapy For Multiple Sclerosis

Complementary approaches for multiple sclerosis may support symptoms such as fatigue, pain, stress, or mobility but do not replace disease-modifying treatment. Exercise, rehabilitation, mindfulness, and selected supplements should be discussed with clinicians because interactions and unproven claims are common.

Alternate Names:

MS Alternative And Complementary Therapies (Alternative Therapy For Multiple Sclerosis)

Alternative Treatments For Hot Flashes

Nonhormonal approaches to hot flashes include cooling strategies, layered clothing, sleep and stress measures, cognitive behavioral therapy, and selected prescription medicines. Herbal products have variable evidence and can interact with medicines; treatment choice depends on symptoms and medical history.

Altitude Illness

Acute mountain sickness: headache + 1 symptom (nausea, fatigue, dizziness, insomnia) at >2500m. HACE: AMS + ataxia/altered mental status (cerebral edema). HAPE: dyspnea at rest, cough, frothy sputum, crackles, hypoxemia (noncardiogenic pulmonary edema).

Altitude Sickness

Illness caused by rapid ascent to high altitude without adequate acclimatization, ranging from acute mountain sickness to life-threatening pulmonary or cerebral edema.

Aluminum Phosphide

A highly toxic fumigant that releases phosphine gas when exposed to moisture or stomach acid. Poisoning can cause severe cardiovascular, respiratory, gastrointestinal, and metabolic effects and requires immediate emergency treatment and supportive intensive care.

Alvarado Score

Clinical scoring system for acute appendicitis. Components: Migration of pain (1), Anorexia (1), Nausea/vomiting (1), Tenderness in RLQ (2), Rebound pain (1), Elevated temperature (1), Leukocytosis (2), Left shift (1).

Alveolar

Relating to an alveolus, especially one of the tiny air sacs in the lungs where oxygen and carbon dioxide are exchanged.

Alveolar Abnormalities

Structural or functional changes in the lung alveoli that can impair gas exchange and occur with infection, edema, emphysema, interstitial disease, or developmental disorders.

Alveolar Bone

Bone surrounding and supporting tooth roots. Resorbs with tooth loss. Maintained by function. Bone grafting may be needed for implants.

Alveolar Gas Equation

$PAO_2 = (FiO_2 \times (P_{atm} - PH_2O)) - (PaCO_2 / R)$.
 $P_{atm} = 760$ mmHg, $PH_2O = 47$ mmHg, $R = 0.8$.
Allows calculation of A-a gradient.

Alveolar Hydatid Disease

A serious parasitic infection caused by the larval stage of *Echinococcus multilocularis*, usually producing an infiltrative, tumor-like lesion in the liver that can spread to other organs.

Alveolar Macrophage

An immune cell in the lung air sacs that removes particles, microbes, and cellular debris.

Alternate Names:

Dust cell

Alveolar Osteitis

See *Dry socket*.

Alveolar Osteitis (Dry Socket Overview)

Alternate index label for Dry Socket Overview.

Alveolar Rhabdomyosarcoma

A malignant small-round-cell tumor showing skeletal-muscle differentiation, usually arising in the extremities, trunk, or head and neck of children and adolescents. It may disseminate early through lymphatic and hematogenous routes and often carries characteristic PAX3-FOXO1 or PAX7-FOXO1 fusions. Diagnosis requires biopsy with immunophenotyping and molecular testing, followed by staging for local and distant disease. Treatment is multimodal and commonly includes systemic chemotherapy

with surgery and/or radiotherapy according to risk group.

Alveolar Ventilation

The volume of fresh air reaching the alveoli per minute, representing the portion of minute ventilation that participates in gas exchange. Calculated as (tidal volume - dead space volume) x respiratory rate. Normal alveolar ventilation is approximately 4-5 L/min.

Alveolar Ventilation Equation

The relationship between alveolar ventilation and arterial carbon-dioxide tension, approximately $PaCO_2 = 0.863$ times carbon-dioxide production divided by alveolar ventilation. It explains why reduced effective ventilation causes hypercapnia.

Alveoli

Microscopic air sacs in the lungs where oxygen enters the blood and carbon dioxide leaves it.

Alveolitis

Inflammation of the pulmonary alveoli, usually causing cough and breathlessness, or inflammation of a tooth socket after extraction, called alveolar osteitis or dry socket; the organ involved distinguishes the two meanings.

Alveolus

The terminal air sac (200-300 microns) where gas exchange occurs. Approximately 300-500 million per lung, providing 70 m² surface area. Wall: type I pneumocytes (95% surface, thin for diffusion), type II pneumocytes (5%, secrete pulmonary surfactant reducing surface tension), alveolar macrophages (dust cells, phagocytosis).

Alzheimer Disease

A progressive neurodegenerative disorder characterized pathologically by amyloid-beta plaques, tau neurofibrillary pathology, and neuronal loss. It most commonly presents with insidious impairment of episodic memory followed by broader cognitive and functional decline.

Alzheimer'S

A progressive neurodegenerative disease causing memory loss and decline in thinking and daily function.

Alternate Names:

Alzheimer disease

Alzheimer'S Disease

A progressive brain disorder causing deterioration of memory, thinking, behavior, and the ability to perform daily activities.

Alzheimer'S Disease Causes, Stages, And Symptoms

Alzheimer disease is a progressive neurodegenerative disorder causing decline in memory and other thinking abilities, followed by increasing difficulty with communication, judgment, movement, and self-care. Progression varies, and evaluation looks for reversible contributors and other dementias.

Alternate Names:

Am I Depressed

Depression is more than temporary sadness: it involves persistent low mood or loss of interest with changes in sleep, appetite, energy, concentration, movement, self-worth, or hope. Thoughts of self-harm require immediate emergency or crisis support.

Amalgam

Restorative material composed of mercury alloyed with silver, tin, copper, and other metals. Properties: strong, durable, cost-effective. Concerns: mercury toxicity debates, aesthetic limitations. Placement: requires cavity preparation, condensation, carving. Removal: sectioning, cooling to prevent mercury vapor.

Amastia

Congenital absence of one or both breasts, sometimes accompanied by absence of the nipple or pectoral muscles and other developmental anomalies.

Amaurosis Fugax

Transient monocular vision loss lasting seconds to minutes, classically described as a curtain descending over the field, caused by retinal or optic nerve ischemia.

Ambidextrous

Able to use the right and left hands with approximately equal skill or preference.

Ambient

Surrounding or present in the immediate environment, as in ambient temperature, light, noise, or air.

Ambiguous Genitalia

External genital anatomy that does not have typical male or female features, usually because of a difference in sex development. Evaluation includes examination, chromosome and hormone testing, pelvic or abdominal imaging, and assessment for congenital adrenal hyperplasia.

Amblyopia

A developmental reduction in vision caused by abnormal visual input during early childhood, without a sufficient structural explanation. It commonly results from misalignment, unequal focusing power, or obstruction of vision in one eye.

Amblyopia Lazy Eye

Amblyopia is reduced vision in an eye that did not develop normal visual processing during childhood, often because of unequal focusing power, misalignment, or obstruction. Early treatment may include glasses, patching or blurring the stronger eye, and correction of the underlying problem.

Ambu Bag

A self-inflating manual resuscitation bag used with a mask or airway device to provide positive-pressure ventilation.

Ambulance

A vehicle equipped to transport and provide emer-

gency medical care to ill or injured people.

Ambulatory Blood Pressure Monitoring

Measurement of blood pressure at regular intervals, usually over twenty-four hours, with a portable cuff worn during normal activities and sleep. It detects white-coat and masked hypertension, evaluates nighttime blood-pressure patterns, and helps confirm hypertension diagnosed in the clinic.

Amebiasis

Infection with the protozoan parasite *Entamoeba histolytica*, acquired mainly by ingestion of faecally contaminated food or water. It may be asymptomatic or cause amoebic colitis with abdominal pain, diarrhoea, or dysentery, and can spread through the portal circulation to produce a liver abscess.

Amebiasis *Entamoeba Histolytica* Infection

Amebiasis is infection with *Entamoeba histolytica*, acquired through fecally contaminated food, water, or hands. It may cause diarrhea or dysentery and can spread to the liver; stool testing and appropriate tissue-active and luminal treatment are used.

Alternate Names:

Amoebic Dysentery (*Amebiasis Entamoeba Histolytica* Infection)

Amebic Colitis

Inflammation of the colon caused by infection with *Entamoeba histolytica*.

Alternate Names:

Amoebic colitis

Amebic Liver Abscess

A focal collection of necrotic material in the liver caused by *Entamoeba histolytica*, usually following intestinal infection. It commonly causes fever, right-upper-quadrant pain, and tender hepatomegaly; diagnosis is supported by imaging and serology.

Amelanotic Melanoma

A variant of melanoma that lacks significant melanin

production, presenting as a pink, red, or flesh-coloured papule or nodule rather than a typical dark lesion. Its paucity of pigment can delay diagnosis, making it a diagnostic challenge. Histopathology with immunohistochemical markers confirms the diagnosis.

Amelia

A rare congenital anomaly characterized by complete absence of one or more limbs. It may occur alone or as part of a genetic or developmental syndrome. Prenatal imaging can identify the anomaly and help assess associated abnormalities.

Amelioration

Improvement or reduction in the severity of a symptom, disease, impairment, or other adverse condition.

Ameloblastoma

Locally aggressive odontogenic tumor. Multicystic radiolucency in posterior mandible. High recurrence rate. Treatment: surgical resection with margins.

Amelogenesis

The formation and maturation of tooth enamel by ameloblasts during tooth development.

Amelogenesis Imperfecta

A group of inherited disorders in which enamel formation is abnormal, causing enamel that may be thin, poorly mineralized, weak, or easily worn on most or all teeth.

Amenorrhea

Amenorrhea is the absence of menstrual periods. Primary amenorrhea is failure to experience menarche by age 15 despite normal secondary sexual development, or by age 13 when secondary sexual development is absent. Secondary amenorrhea is the absence of menstruation for 3 months in someone with previously regular cycles or 6 months in someone with irregular cycles. It may be physiological or caused by pregnancy, endocrine disorders, reproductive-system abnormalities, medications, illness, inadequate energy availability, or excessive

exercise.

American Trypanosomiasis

See *Chagas disease*.

AMI

Acute myocardial infarction, the sudden death of heart muscle caused by prolonged inadequate coronary blood flow.

Amino Acid

An organic molecule containing an amino group, a carboxyl group, a hydrogen atom, and a variable side chain attached to a central carbon. Amino acids are the building blocks of proteins; cells use some also in energy metabolism and other biochemical pathways.

Amino Acid Catabolism

The breakdown of amino acids after protein digestion, with the amino group removed and the carbon skeleton metabolized for energy or gluconeogenesis/ketogenesis. Transamination: amino groups are transferred to alpha-ketoglutarate, forming glutamate, by aminotransferases requiring pyridoxal phosphate (PLP, vitamin B6) as a cofactor.

Amino Acid Symbols

Standard one-letter and three-letter abbreviations used to identify the 20 common protein-building amino acids in biochemical and genetic notation.

Amino Acids

Amino acids are organic molecules that form proteins and also serve as precursors or fuels in human metabolism.

Aminoaciduria

Aminoaciduria is abnormal urinary loss of amino acids caused by renal tubular transport defects, inherited metabolic disease, or generalized tubular injury.

Aminoglycoside Nephrotoxicity

Kidney damage caused by aminoglycoside an-

tibiotics, characterized by acute tubular necrosis. Nephrotoxicity is caused by accumulation of aminoglycosides in the proximal tubular cells. The risk is increased with prolonged therapy, high doses, concurrent nephrotoxic drugs, and renal impairment.

Aminoglycoside Ototoxicity

Damage to the inner ear caused by aminoglycoside antibiotics, resulting in hearing loss and vestibular dysfunction. Ototoxicity is caused by accumulation of aminoglycosides in the inner ear, damaging hair cells. The risk is increased with prolonged therapy, high doses, concurrent ototoxic drugs, and renal impairment.

Aminoglycosides

A class of bactericidal antibiotics that bind irreversibly to the 30S ribosomal subunit, causing misreading of messenger RNA and inhibiting protein synthesis. They include gentamicin, tobramycin, amikacin, and streptomycin.

Aminophylline Overdose

Toxic effects caused by excessive exposure to Aminophylline. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Aminotransferase

An enzyme that transfers an amino group between an amino acid and an alpha-keto acid; clinically measured examples include ALT and AST.

Amiodarone-Induced Skin Discoloration

A slate-grey to bluish hyperpigmentation of sun-exposed skin caused by long-term amiodarone therapy, due to deposition of the drug and its metabolites in dermal macrophages. It is dose-related, more pronounced in photodistributed areas, and may be partially reversible upon drug cessation.

Amiodarone-Induced Thyroid Dysfunction

Thyroid abnormalities occurring in approximately fifteen to twenty percent of patients on amiodarone due to the high iodine content of the molecule. Type

one results from iodine-induced increased thyroid hormone synthesis in patients with underlying thyroid disease. Type two results from destructive thyroiditis.

Amiodarone-Induced Vortex Keratopathy

Whorl-like corneal epithelial deposits caused by amiodarone accumulation, appearing as golden-brown verticillata on slit-lamp examination, usually asymptomatic but reversible upon drug discontinuation.

Amitriptyline

A tricyclic antidepressant that affects serotonin and norepinephrine signaling and is also used for selected chronic pain, migraine-prevention, and sleep-related indications.

Amitriptyline And Perphenazine Overdose

Toxic effects caused by excessive exposure to Amitriptyline and perphenazine. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Amitriptyline Hydrochloride Overdose

Toxic effects caused by excessive exposure to Amitriptyline hydrochloride. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

AML

Acute myeloid leukemia, an aggressive cancer of immature myeloid blood-cell precursors that crowds the bone marrow and impairs normal blood-cell production.

Ammonia

A nitrogen-containing waste product produced during protein metabolism and normally converted to urea by the liver. Elevated blood ammonia may occur with liver failure, urea-cycle disorders, some medicines, or other metabolic conditions.

Ammonia Blood Test

A laboratory test that measures venous or arterial blood ammonia concentration, a nitrogenous waste product of protein metabolism normally cleared by the liver. Elevated levels may indicate hepatic failure, urea-cycle disorders, or valproic acid toxicity, and correlate with risk of encephalopathy.

Ammonia Poisoning

Toxic effects caused by excessive exposure to ammonia. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Ammonium Hydroxide Poisoning

Toxic effects caused by excessive exposure to ammonium hydroxide. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Amnesia

Loss or impairment of memory that is greater than ordinary forgetting. It may affect the ability to form new memories (anterograde amnesia), recall past events (retrograde amnesia), or both.

Amnesia, Transient Global

See *Transient global amnesia*.

Amnestic Syndrome

See *Amnesia*.

Amniocentesis

A procedure in which a needle is used to obtain amniotic fluid for genetic, chromosomal, infectious, or other prenatal testing. It is usually performed after the first trimester when clinically indicated; risks and benefits depend on the reason for testing and gestational age.

Amnioinfusion

Infusion of sterile fluid into the amniotic sac, often to reduce umbilical-cord compression during labor.

Amnion

The innermost fetal membrane, lining the amniotic cavity and containing the amniotic fluid. A thin, avascular membrane composed of a single layer of cuboidal epithelium overlying a basement membrane and connective tissue. The amnion produces and resorbs amniotic fluid. It fuses with the chorion by 12-14 weeks.

Amnion Nodosum

Multiple small nodules of vernix or amniotic debris attached to the amnion, usually associated with reduced or absent fetal urine contribution to amniotic fluid and oligohydramnios.

Amnioscope

An instrument used to inspect amniotic fluid and the membranes through the cervix.

Amniotic Band

A strand of amniotic tissue that can entangle or constrict developing fetal body parts.

Alternate Names:

Amniotic band sequence

Amniotic Band Sequence

Amniotic band sequence results when fibrous amniotic strands entangle developing fetal parts, producing constriction rings, limb defects, or craniofacial and body-wall abnormalities.

Amniotic Band Syndrome

A spectrum of congenital anomalies caused by strands of a ruptured amniotic membrane that constrict or entangle developing fetal parts. Effects range from ring-like limb constrictions, swelling, or loss of digits to facial and body-wall disruptions; severity varies widely, and management depends on the structures involved.

Amniotic Constriction Bands

Alternate descriptive label; see *Amniotic band sequence*.

Amniotic Fluid

The clear to pale-yellow fluid surrounding the fetus within the amniotic sac. Early in pregnancy it is derived largely from maternal plasma; later, fetal urine and lung fluid are major sources, and the fetus continuously swallows and recycles it.

Amniotic Sac

The fluid-filled sac in the uterus that surrounds and protects the developing baby. It contains the amniotic fluid and is also called the bag of waters.

Amniotic Fluid Embolism

A rare obstetric emergency involving sudden respiratory or cardiovascular collapse and often severe coagulopathy during labor, delivery, or shortly afterward. It requires immediate supportive and multidisciplinary treatment.

Amniotic Fluid Index

An ultrasound estimate of amniotic-fluid volume obtained by dividing the uterus into four quadrants, measuring the deepest unobstructed vertical pocket in each quadrant, and adding the measurements. Interpretation uses gestational-age and practice-specific thresholds to identify unusually low or high fluid volume.

Amoebiasis

Infection caused by the protozoan parasite *Entamoeba histolytica*, transmitted via the fecal-oral route (contaminated food or water).

Amoebic Dysentery (Amebiasis *Entamoeba Histolytica* Infection)

Alternate index label for Amebiasis *Entamoeba histolytica* Infection.

Amok

A historical culture-related term for a sudden episode of uncontrolled, often violent behavior followed by exhaustion or amnesia; modern assessment considers psychiatric, neurologic, substance-related, and cultural factors.

Amoxicillin Rash In Infectious Mononucleosis

A maculopapular, non-allergic rash that develops in up to 90 percent of patients with Epstein-Barr virus infectious mononucleosis who receive amoxicillin or ampicillin. The rash is often widespread and pruritic, and its presence does not indicate true penicillin allergy.

Amphetamine

A central nervous system stimulant that increases catecholamine signaling and is used in selected attention-deficit/hyperactivity and sleep disorders; misuse can cause dependence and cardiovascular or psychiatric harm.

AMPK

AMP-activated protein kinase. Energy sensor. Activated by AMP. Inhibits anabolism, stimulates catabolism.

Amplified Musculoskeletal Pain Syndrome

A chronic pain condition, often beginning in childhood or adolescence, in which pain is unusually intense or widespread and may be accompanied by sensitivity, fatigue, or functional limitation despite no single structural explanation; it is also called AMPS.

Ampulla

A widened portion of a tubular structure, such as the ampulla of the bile and pancreatic ducts or the ampulla of a fallopian tube.

Ampullary Cancer

Cancer arising in the ampulla of Vater, where the bile duct and pancreatic duct empty into the small intestine.

Ampullary Carcinoma

A malignant epithelial tumor arising in or around the ampulla of Vater, where the bile duct and pancreatic duct enter the duodenum. It commonly presents with obstructive jaundice, abnormal liver tests, pancreatitis, or gastrointestinal bleeding. His-

tologic subtype and local extension influence prognosis, staging, and treatment selection. Diagnosis uses endoscopy, cross-sectional imaging, and tissue sampling, with surgery considered for resectable disease.

Amputation

Surgical removal of a limb or part of a limb. The level may involve a digit, foot, lower leg, thigh, or hip, or a corresponding part of the upper limb. The level is selected according to tissue viability, function, and potential for rehabilitation.

Amputation Stump

The remaining part of a limb after amputation. It must be monitored for wound healing, infection, poor circulation, neuroma pain, phantom-limb pain, and skin problems caused by prosthetic use. Care includes hygiene, compression or shaping when advised, progressive strengthening, and professional prosthetic and rehabilitation assessment.

Amsler Grid

A simple chart used to detect or monitor distortions and missing areas in central vision, especially in macular disease.

Amusia

An acquired or developmental inability to perceive, recognize, produce, or understand music despite otherwise adequate hearing and language ability.

Amygdala

Almond-shaped nucleus cluster in the anterior medial temporal lobe, part of the limbic system, primarily processing emotions (especially fear/anxiety). Receives thalamic/cortical sensory input; projects to hypothalamus, brainstem, and cortex for autonomic/behavioral fear responses.

Amygdaloid Nucleus

A group of nuclei in the medial temporal lobe involved in processing emotional significance, fear responses, learning, memory, and autonomic responses.

Amylase

An enzyme that breaks down starch and is produced mainly by the salivary glands and pancreas. Blood levels may rise in several conditions, including some pancreatic disorders.

Amylase - Blood

A blood test measuring amylase, an enzyme produced mainly by the pancreas and salivary glands; elevated values may occur in pancreatitis and other conditions.

Amylase - Urine

A urine test measuring amylase excretion, sometimes used with blood amylase when evaluating pancreatic or salivary-gland disease.

Amylase And Lipase

Digestive enzymes measured in blood when pancreatic disease is suspected. Lipase is generally more specific for pancreatic injury and remains elevated longer than amylase, but neither test alone diagnoses acute pancreatitis; results must be interpreted with symptoms and imaging.

Amylin Analogues

Medicines that mimic amylin, a hormone released with insulin by pancreatic beta cells. Pramlintide slows gastric emptying, reduces post-meal glucagon secretion, and may be used with insulin in selected patients with diabetes.

Amyloid

An abnormal protein that can accumulate in tissues and impair their function in several diseases.

Amyloid Disease

See *Amyloidosis*.

Amyloid Disease (Amyloidosis)

Alternate index label for Amyloidosis.

Amyloid Neuropathy

Peripheral nerve damage caused by deposition of abnormal amyloid protein.

Amyloid PET

A positron-emission tomography scan using a tracer that binds to amyloid deposits in the brain. It can support evaluation of selected cognitive disorders but is interpreted with clinical assessment and other tests.

Amyloid Precursor Protein

A normal transmembrane protein that can be processed into amyloid-beta peptides, which may accumulate in the brain in Alzheimer disease.

Alternate Names:

APP; amyloid-beta precursor protein.

Amyloid Protein

A normally soluble protein that has misfolded into insoluble fibrils and may accumulate in tissues.

Alternate Names:

Amyloid

Amyloid Purpura

Purpuric discoloration of the eyelids and periorbital skin (raccoon eyes) caused by cutaneous amyloid deposition, which weakens vessel walls and leads to extravasation of erythrocytes. It may be a sign of systemic amyloidosis, particularly AL amyloidosis, and warrants further workup including serum free light chains and tissue biopsy.

Amyloidosis

A group of diseases in which misfolded proteins form insoluble deposits called amyloid in tissues and organs. The deposits may be limited to one site or spread throughout the body and can impair organs such as the kidneys, heart, nerves, liver, or digestive tract. On biopsy, amyloid typically binds Congo red dye and shows apple-green birefringence under polarized light.

Alternate Names:

Amyloid Disease (Amyloidosis)

Amyotrophic Lateral Sclerosis

Progressive neurodegenerative disorder affecting both upper and lower motor neurons, causing weakness, atrophy, fasciculations, and eventually respira-

tory failure. Most cases are sporadic (90 percent); 10 percent are familial. Average age of onset 55-60 years.

Amyotrophic Lateral Sclerosis

A progressive neurodegenerative disease that damages motor neurons, causing muscle weakness, loss of movement, speech or swallowing difficulty, and eventually respiratory failure.

Alternate Names:

Lou Gehrig's Disease

ANA

Antinuclear antibody, an autoantibody directed against components of cell nuclei; ANA testing can support evaluation of autoimmune disease but is not diagnostic by itself.

Anabolic Steroid Induced Hypogonadism

A form of secondary (hypogonadotropic) hypogonadism caused by the supra-physiologic use of exogenous anabolic-androgenic steroids. Exogenous androgens trigger profound negative feedback on the hypothalamic-pituitary-gonadal axis, shutting down pulsatile gonadotropin-releasing hormone (GnRH), luteinizing hormone, and follicle-stimulating hormone secretion. Clinically manifests as severe testicular atrophy, azoospermia or severe oligozoospermia, erectile dysfunction, loss of libido, depression, and prolonged withdrawal hypogonadism upon cessation of steroid use, often requiring medical endocrine therapy (such as human chorionic gonadotropin or selective estrogen receptor modulators) to restore endogenous spermatogenesis and testosterone synthesis.

Alternate Names:

ASIH; Anabolic-Androgenic Steroid-Induced Hypogonadism

Anabolic Steroids

Synthetic derivatives of testosterone used in selected medical conditions and misused for muscle building or performance enhancement. Nonmedical use can cause acne, infertility, testicular shrinkage, breast enlargement, mood disturbance, and cardiovascular disease, and sudden cessation may produce symp-

toms of hormone deficiency.

Anabolism

The set of metabolic pathways that construct complex molecules from simpler precursors, requiring energy input (ATP, reducing equivalents NADPH). Examples: protein synthesis from amino acids, glycogen synthesis (glycogenesis), fatty acid synthesis (lipogenesis), cholesterol synthesis, nucleotide synthesis, gluconeogenesis.

Anaemia

A condition in which the number of red blood cells or the hemoglobin concentration is below the normal range, reducing the oxygen-carrying capacity of the blood.

Anaerobe

A microorganism that grows without molecular oxygen. Obligate anaerobes may be injured or killed by oxygen, while aerotolerant anaerobes tolerate oxygen but do not use it for energy production.

Anaerobic

Able to live, grow, or function without oxygen. Anaerobic bacteria can cause infections in deep wounds, abscesses, the mouth, abdomen, or pelvis and may need antibiotics that work without oxygen.

Anaerobic Bacteria

Bacteria that grow without oxygen; some are harmed by oxygen.

Anaesthesia

Reversible loss of sensation, with or without loss of consciousness, produced by medicines or other techniques; also spelled anesthesia.

Anagen

The active, proliferative growth phase of the physiological hair follicle cycle, during which matrix cells in the hair bulb undergo rapid mitotic division and keratinization to produce the hair shaft. Lasts approximately 2 to 7 years on the human scalp, determining the maximum length of scalp hair, with

approximately 85–90% of scalp follicles in anagen under normal conditions. Characterized by high metabolic activity that makes anagen matrix cells acutely vulnerable to cytotoxic chemotherapy and ionizing radiation, precipitating rapid-onset hair breakage and diffuse shedding termed anagen effluvium.

Anal Abscess

Collection of pus in the perianal or ischiorectal space usually from infected anal glands. Presents with throbbing anal pain, swelling, fever, and difficulty sitting. Diagnosed clinically with tenderness and fluctuance. Treatment is incision and drainage under local anesthesia. Antibiotics are not routinely required for simple abscesses.

Anal Canal

The terminal 3–4 cm of the gastrointestinal tract, extending from the anorectal junction (puborectalis/pectinate line) to the anal verge. Above the pectinate line: lined by columnar epithelium, innervated by autonomic nerves, draining to portal system, supplied by superior rectal artery.

Anal Cancer

Malignant tumor of the anal canal or margin, most commonly squamous cell carcinoma associated with high-risk human papillomavirus infection. Presents with bleeding, pain, or a mass; primary treatment is chemoradiation, with surgery reserved for residual or recurrent disease.

Anal Carcinoma

A malignant neoplasm arising from the epithelial lining of the anal canal or anal verge, overwhelmingly represented by squamous cell carcinoma (SCC; > 85% of cases). Strongly etiologically linked to persistent high-risk human papillomavirus infection (particularly HPV-16 and HPV-18), with elevated risk among immunocompromised individuals (HIV infection, solid organ transplant recipients) and individuals with a history of receptive anal intercourse. Presents clinically with rectal bleeding, anal pain, a palpable perianal mass, or pruritus. Unlike rectal adenocarcinoma, localized anal canal squamous

cell carcinoma is primarily managed with definitive organ-preserving chemoradiation (the Nigro protocol, combining 5-fluorouracil, mitomycin-C, and radiation therapy), reserving abdominoperineal resection for persistent or recurrent disease.

Alternate Names:

Anal cancer

Anal Condyloma

A benign wart-like squamous lesion of the anus or perianal skin, usually caused by low-risk HPV types. Multiple or recurrent lesions may coexist with high-grade intraepithelial neoplasia.

Anal Fissure

Linear tear in the distal anal mucosa usually posterior in the midline. Presents with painful defecation and bright red blood on wiping or in the toilet. Associated with constipation, hard stools, and chronic diarrhea. The internal anal sphincter spasm perpetuates the fissure by reducing blood flow to the posterior midline.

Alternate Names:

Anal Ulcer (Anal Fissure)

Anal Fistula

Abnormal tract connecting the anal canal to the perianal skin usually following a drained abscess. Presents with recurrent drainage, pain, and pruritus. Parks classification categorizes fistulae by relationship to the sphincter muscles. Diagnosed by examination under anesthesia and MRI.

Anal Intercourse

The insertion of the penis into the anus and rectum for sexual pleasure. The anal canal is rich in nerve endings, making it a sensitive erogenous zone. The rectum lacks natural lubrication, so artificial lubricants are essential to prevent mucosal trauma.

Anal Intraepithelial Neoplasia

A premalignant squamous lesion of the anal canal or perianal skin, usually related to persistent high-risk HPV infection. It ranges from low- to high-grade disease and may progress to anal squamous cell carcinoma.

Anal Itching

Pruritus around the anus. Common causes include irritation, moisture, dermatitis, hemorrhoids, infections, and occasionally pinworms or other disease. Gentle cleansing, keeping the area dry, and avoiding irritants may help; persistent, severe, bleeding, or painful symptoms require medical evaluation.

Alternate Names:

Itching Anal (Anal Itching) Pruritis Ani Rectal Itching

Anal Mucositis

Inflammation and ulceration of the anal mucous membrane, often after radiation or chemotherapy.

Anal Necrosis

Pathologic death and sloughing of perianal, anal canal, or perineal tissues. Most critically represented by Fournier gangrene, a synergistic polymicrobial necrotizing fasciitis involving aerobic and anaerobic flora (including *Escherichia coli*, *Bacteroides*, and *Streptococcus* species) commonly arising in immunocompromised, diabetic, or malnourished patients. Other etiologies include severe pelvic ischemic compromise, strangulated grade IV hemorrhoids with infarction, caustic chemical injury, and late-stage radiation necrosis. Characterized by severe perianal pain disproportionate to physical findings, violaceous skin discoloration, cutaneous bullae, subcutaneous crepitus from gas-forming organisms, and rapid progression to septic shock. Mandates emergent, radical surgical debridement of non-viable tissue, broad-spectrum parenteral antibiotics, and frequent surgical re-exploration.

Anal Pain

Pain localized to the anal verge, anal canal, or perineum (proctalgia). The clinical differential diagnosis is structured by onset, duration, and relationship to defecation: severe, sharp tearing pain during defecation followed by a lingering burn is pathognomonic for an acute anal fissure; constant, throbbing, worsening pain accompanied by fever and tender induration indicates an acute perianal or ischiorectal abscess requiring prompt incision and drainage; acute exquisite pain with a firm, violaceous sub-

cutaneous nodule indicates a thrombosed external hemorrhoid; sudden, severe, transient episodes of deep rectal spasm occurring without organic pathology characterize proctalgia fugax; and persistent pain associated with bleeding, tenesmus, or an indurated ulcer necessitates biopsy to rule out anal squamous cell carcinoma.

Alternate Names:

Proctalgia

Anal Papilla

A small normal projection of mucosa at the anal canal's dentate line, where columnar and squamous epithelium meet.

Anal Papillae

Multiple small mucosal projections at the dentate line of the anal canal; they are usually normal but may become enlarged or symptomatic.

Anal Sphincter

A muscular structure that controls passage of stool and gas from the anal canal. It includes the involuntary internal anal sphincter and the voluntary external anal sphincter.

Anal Ulcer (Anal Fissure)

Alternate index label for Anal Fissure.

Analgesia

Absence or reduction of pain without necessarily causing loss of consciousness.

Analog

A structure, substance, or process that resembles another and performs a similar function but is not necessarily chemically or structurally identical.

Analogous

Similar in function or purpose to another structure or process, despite having a different origin or structure.

Analysis

Systematic examination or interpretation of a spec-

imen, measurement, dataset, symptom pattern, or clinical problem.

Analysis Of Urine

Laboratory examination of urine for cells, blood, protein, glucose, microorganisms, and other substances.

Analytic Sensitivity

The smallest amount or concentration of an analyte that a laboratory method can reliably detect. It concerns measurement performance and differs from clinical sensitivity, which describes detection of disease in affected patients.

Anaphia

Loss or absence of the sense of touch or tactile sensation.

Anaphylactic Shock

Anaphylactic shock is severe anaphylaxis causing distributive shock, profound hypotension, and inadequate tissue perfusion. It may include airway swelling, bronchospasm, skin or mucosal findings, vomiting, abdominal pain, dizziness, collapse, or cardiac arrest. It is a medical emergency requiring immediate treatment.

Anaphylactoid Purpura

An older term for IgA vasculitis, an immune-mediated small-vessel vasculitis causing palpable purpura, often with joint, abdominal, or kidney involvement.

Anaphylaxis

A severe, potentially life-threatening systemic hypersensitivity reaction characterized by rapid onset of multisystem involvement, primarily affecting the skin, respiratory tract, cardiovascular system, and gastrointestinal tract.

Anaphylaxis During Anesthesia

A life-threatening systemic hypersensitivity reaction that may cause sudden hypotension, bronchospasm, cardiovascular collapse, and sometimes urticaria

or flushing. Common perioperative triggers include neuromuscular-blocking agents, antibiotics, chlorhexidine, and latex.

Anaplasia

A marked loss of normal cellular differentiation, often with pleomorphic cells, abnormal nuclei, disorganized architecture, and loss of specialized tissue function. It is a feature of some high-grade malignant tumors rather than a diagnosis by itself.

Anaplastic Astrocytoma

A high-grade astrocytic brain tumor with rapid growth and infiltrative behavior.

Anaplastic Ependymoma

An aggressive, high-grade tumor arising from cells lining the brain's ventricles or spinal canal.

Anaplastic Large Cell Lymphoma

A rare T-cell non-Hodgkin lymphoma characterized by large abnormal lymphocytes and expression of the CD30 marker; it may be systemic or skin-limited.

Alternate Names:

ALCL

Anaplastic Thyroid Cancer

A rare, rapidly growing, and highly aggressive thyroid cancer that often presents as a large fixed neck mass with dysphagia or airway compromise. Prognosis is poor; management is usually palliative.

Anaptic

Lacking a normal sense of touch or tactile sensation; the term is rarely used in modern clinical writing.

Anasarca

Severe, generalized edema involving large areas of the body, often associated with heart failure, kidney disease, liver disease, or profound hypoalbuminemia.

Anastomosis

A natural or surgically created connection between two tubular structures, such as blood vessels or

segments of the intestine.

Alternate Names:

Anastomosis, Intestinal

Anastomosis (Vascular)

A surgical or natural connection between blood vessels that permits blood to flow from one vessel to another.

Alternate Names:

Vascular

Anastomosis, Intestinal

Alternate index label; see *Anastomosis*.

Anastomotic Leak

Breakdown of a surgical anastomosis in the gastrointestinal tract causing spillage of luminal contents into the peritoneal cavity. Presents with fever, tachycardia, abdominal pain, leukocytosis, and peritonitis. Diagnosed by CT with oral or rectal contrast showing extraluminal contrast or fluid collection.

Anastrozole

An aromatase inhibitor that lowers estrogen production and is used mainly in hormone-receptor-positive breast cancer, particularly after menopause.

Anatomic Orientation Terms

Standard words used to describe the position and relationships of body structures, including superior, inferior, anterior, posterior, medial, lateral, proximal, distal, superficial, and deep.

Anatomic Snuffbox

A triangular depression on the lateral wrist that becomes visible when the thumb is extended. Tenderness there may suggest a scaphoid fracture.

Anatomical Axis

An imaginary straight line around which a body part moves or rotates.

Anatomical Conduit

A natural or surgically created passage that carries fluid, air, tissue, or another structure.

Anatomical Orifice

A natural opening into or through a body structure.

Alternate Names:

Body opening

Anatomical Planes

Hypothetical flat surfaces that pass through the body in anatomical position, used to slice the body for anatomical descriptions or medical imaging.

Anatomical Position

The standard reference position of the body used to describe anatomy, defined as standing erect, facing forward, with arms at the sides and palms facing forward.

Anatomical Snuffbox

Triangular depression on the dorsal wrist, bounded by extensor pollicis longus medially and extensor pollicis brevis/abductor pollicis longus laterally. Floor contains the scaphoid, trapezium, and radial artery. Tenderness after a fall on an outstretched hand suggests scaphoid fracture. The radial artery pulse is palpable here.

Anatomist

A specialist who studies the structure of the body.

Anatomy

Study of body structure. Regions: head, neck, thorax, abdomen, pelvis, extremities. Systems: skeletal, muscular, nervous, circulatory, respiratory, digestive, urinary, reproductive, endocrine, immune.

Anatomy Survey (Level II Ultrasound)

A comprehensive fetal ultrasound performed at 18-22 weeks to evaluate fetal anatomy and screen for structural anomalies.

Alternate Names:

Level II ultrasound; anatomy scan.

Anatomy, Gross

The study of body structures visible without a microscope, including organs, regions, bones, muscles, vessels, and their relationships.

ANCA-Associated Vasculitis

A group of small-vessel vasculitides associated with antineutrophil cytoplasmic antibodies. Includes granulomatosis with polyangiitis (c-ANCA/PR3), microscopic polyangiitis (p-ANCA/MPO), and eosinophilic granulomatosis with polyangiitis (p-ANCA/MPO with asthma/eosinophilia).

Ancillary Test (Pathology)

A test performed in addition to routine morphology to refine a pathologic diagnosis. Examples include IHC, flow cytometry, cytogenetics, molecular testing, special stains, and electron microscopy.

Alternate Names:

Pathology

Ancylostoma (Hookworm)

Nematode infestation by *Ancylostoma duodenale* (Old World) or *Necator americanus* (New World), common in tropical and subtropical regions where sanitation is poor.

Alternate Names:

Hookworm

Andersen-Tawil Syndrome

A rare autosomal dominant channelopathy (Periodic Paralysis Type 3) caused in approximately 60% of cases by loss-of-function mutations in the *KCNJ2* gene on chromosome 17q24, which encodes the inward-rectifier potassium channel Kir2.1. Clinically characterized by a pathognomonic cardinal triad: (1) episodic flaccid muscle weakness and periodic paralysis (hypokalemic, hyperkalemic, or normokalemic); (2) cardiac electrical instability with prolonged QTc intervals, prominent U waves, and frequent ventricular arrhythmias (particularly bidirectional or polymorphic ventricular tachycardia, which is often surprisingly well tolerated); and (3) characteristic physical dysmorphisms including low-set ears, ocular hypertelorism, broad forehead, micrognathia, mandibular hypoplasia, clinodactyly, syndactyly, and short stature.

Alternate Names:

ATS; Periodic Paralysis Type 3; Andersen Syndrome

Anderson Disease

An exceptionally rare, severe autosomal recessive disorder of glycogen metabolism (Glycogen Storage Disease Type IV [GSD IV]) caused by pathogenic mutations in the *GBE1* gene, encoding 1,4-alpha-glucan branching enzyme. Deficiency leads to the intracellular accumulation of abnormal, poorly soluble glycogen with few branching points that resembles amylopectin (polyglucosan bodies). Typically manifests in early infancy with failure to thrive, hepatomegaly, and progressive hepatic fibrosis rapidly culminating in biliary cirrhosis, portal hypertension, and liver failure, often requiring early liver transplantation.

Alternate Names:

Glycogen Storage Disease Type IV (GSD IV); Amylopectinosis

Androgen

A sex hormone, such as testosterone, that contributes to male reproductive development and other body functions.

Androgen Deficiency

Hypogonadism in males: reduced testosterone production causing symptoms and signs. Causes: primary (testicular—Klinefelter, mumps orchitis, chemotherapy, trauma) and secondary (pituitary/hypothalamic—prolactinoma, iron overload, pituitary lesions, opioids, obesity, aging).

Androgen Excess

Abnormally high androgen activity or concentration, which can cause acne, excess hair, or menstrual changes.

Alternate Names:

Hyperandrogenism

Androgen Insensitivity Syndrome

A difference of sex development in which the cells of a genetically male fetus cannot respond to androgens because of a defect in the androgen receptor. Affected individuals have typical female external genitalia and breast development but no uterus, and testes that may lie in the groin or abdomen; diagnosis and care require specialist endocrine and

genetic assessment.

Androgen Insufficiency

Inadequate androgen production or activity for a person's physiologic needs.

Alternate Names:

Androgen deficiency

Androgen Receptor

A cellular protein that binds testosterone or related hormones and mediates their effects.

Androgen Suppression

Reduction of androgen production or action, used in selected hormone-sensitive conditions.

Alternate Names:

Androgen deprivation

Androgenetic Alopecia

The most common cause of hair loss, caused by progressive miniaturization of genetically susceptible hair follicles under androgen influence. Male pattern commonly affects the frontal hairline and vertex; female pattern commonly causes diffuse crown thinning with relative preservation of the frontal hairline.

Androgenic

Relating to androgens or producing masculine sexual development and other androgen-mediated effects.

Android Pelvis

A relatively heart-shaped or funnel-shaped pelvic configuration with a narrower midpelvis, which may increase the risk of obstructed labor compared with a gynecoid pelvis.

Andropause

Age-related testosterone decline in men. Symptoms: fatigue, decreased libido, depression. Treatment controversial.

Anejaculation

Inability to release semen during orgasm or sexual

activity. Causes include nerve or spinal disease, pelvic surgery, medicines, diabetes, hormonal problems, and psychological factors; it may affect fertility even when erections and orgasm are preserved.

Anemia

A reduction in the oxygen-carrying capacity of the blood, defined by a hemoglobin concentration below the normal range for age and sex: less than 13.5 g/dL in adult males, less than 12.0 g/dL in adult females.

Alternate Names:

Blood Low Red Cell Count (Anemia)

Anemia (Cancer)

Anemia occurring in a person with cancer, caused by the cancer itself, bleeding, inflammation, nutritional deficiency, or treatment. Evaluation identifies the cause; management may include treating the underlying problem, iron or other replacement, transfusion, or selected medicines.

Alternate Names:

Cancer

Anemia Caused By Low Iron - Children

Iron-deficiency anemia in a child caused by insufficient iron intake, increased requirements, blood loss, or impaired absorption. It reduces hemoglobin production and may cause pallor, fatigue, irritability, or impaired development.

Anemia Caused By Low Iron - Infants And Toddlers

Iron-deficiency anemia in an infant or toddler, commonly related to inadequate dietary iron, excessive cow's milk intake, increased growth requirements, or blood loss. It may cause pallor, fatigue, irritability, and developmental effects.

Anemia In Pregnancy

Anemia occurring during pregnancy, commonly because of iron deficiency or the normal plasma-volume expansion of pregnancy. Assessment considers hemoglobin, mean corpuscular volume, iron status, folate, vitamin B12, bleeding, and other causes.

Alternate Names:

Gestational anemia; pregnancy-associated anemia.

Anemia Of Chronic Disease

Anemia of inflammation. Normocytic or microcytic. Low iron, low TIBC, normal/high ferritin.

Anemia Of Inflammation

An anemia caused by chronic infection, inflammatory disease, or cancer, involving impaired iron availability, reduced erythropoietin response, and shortened red-cell survival.

Anemic

Having anemia, meaning reduced red-cell mass or hemoglobin and therefore reduced blood oxygen-carrying capacity.

Anencephaly

A serious birth defect in which much of the brain and skull do not develop. It happens when the upper part of the neural tube does not close early in pregnancy. It is usually found before birth and is almost always fatal shortly before or after birth.

Anergy

State of T-lymphocyte non-responsiveness to nominal antigen despite prior sensitization, reflecting functional inactivation rather than cell death.

Anesthesia

The use of medications to prevent sensation, particularly pain, during medical procedures or surgery.

Anesthesia For Coagulopathy

Coagulopathy can increase bleeding risk during an operation or invasive procedure. Anesthetic planning considers the cause, bleeding history, platelet count, coagulation tests, fibrinogen, the procedure, and available correction or replacement therapies.

Anesthesia For Epilepsy

Patients with epilepsy generally require continuation of antiseizure medication perioperatively because missed doses increase seizure risk. Propofol

and benzodiazepines are anticonvulsant; high concentrations of some volatile agents may produce epileptiform activity.

Anesthesia For Hemophilia

Hemophilia A results from factor VIII deficiency and hemophilia B from factor IX deficiency. Perioperative care is coordinated with hematology and uses factor replacement or, in selected mild hemophilia A cases, desmopressin.

Anesthesia For Neurosurgery

Neuroanesthesia aims to maintain cerebral perfusion pressure ($CPP = \text{mean arterial pressure} - \text{intracranial pressure}$), optimize brain relaxation, and minimize secondary brain injury. Induction agents (propofol, etomidate) reduce cerebral metabolic rate and intracranial pressure.

Anesthesia For Pheochromocytoma

Anesthetic care for pheochromocytoma requires control of catecholamine effects before surgery, careful management of blood pressure and heart rate, and preparation for rapid hemodynamic changes.

Anesthesia For Porphyria

Anesthetic care in acute porphyria requires avoidance of medicines known to precipitate attacks and attention to nutrition, pain, and metabolic stability. The specific drug plan should be checked against a current porphyria-safety reference.

Anesthesia Gas Analyzers

Anesthesia gas analyzers measure delivered and exhaled concentrations of oxygen, carbon dioxide, and volatile anesthetic agents. The oxygen analyzer measures inspired oxygen concentration; pulse oximetry measures peripheral hemoglobin oxygen saturation.

Anesthesia Informatics

Anesthesia informatics integrates electronic health records, decision support systems, and data analytics into clinical practice. Automated documentation reduces charting time. Clinical decision support alerts for drug interactions and dosing errors. Big data analytics identify patterns in anesthesia out-

comes.

Anesthesia Machine

The anesthesia machine delivers precise mixtures of oxygen, air, and volatile anesthetics to the patient.

Anesthesia Monitoring

Continuous assessment of vital functions during anesthesia, typically including oxygenation, ventilation, circulation, temperature, and depth of anesthesia as clinically indicated.

Anesthesia Pharmacogenomics

Anesthesia pharmacogenomics studies genetic variations affecting drug response. Pseudocholinesterase deficiency causes prolonged succinylcholine paralysis. CYP2D6 polymorphisms affect codeine metabolism to morphine. Malignant hyperthermia susceptibility is linked to RYR1 gene mutations.

Anesthesiologist

A physician who provides anesthesia and manages pain and vital functions during procedures.

Anesthesiology

The medical specialty concerned with anesthesia, perioperative care, and pain management.

Aneuploidy

The presence of an abnormal number of chromosomes in a cell, with either extra or missing copies of whole chromosomes, such as trisomy 21. It results from errors in cell division and is a major cause of miscarriage, congenital syndromes, and chromosomal disorders identified by prenatal testing.

Aneurysm

A localized weakening and enlargement of a blood vessel. Aneurysms may occur in arteries or, rarely, veins and may rupture, dissect, or form emboli depending on their location and cause.

Aneurysm Clip

Surgical clip occluding aneurysm neck. Materials: titanium, stainless steel. Indications: intracranial

aneurysm. Placed via craniotomy. Complications: clip migration, vessel occlusion, rebleeding.

Aneurysm Coils

Flexible coils, often made of platinum, placed inside an aneurysm to promote clotting and reduce blood flow into the aneurysm.

Aneurysm In The Brain

A brain aneurysm is a focal weakness and ballooning of a cerebral-artery wall; rupture causes subarachnoid hemorrhage and sudden severe headache.

Aneurysm Repair

Surgical or catheter-based treatment that excludes or replaces a weakened, dilated section of a blood vessel when the risk of rupture or other complications justifies intervention.

Aneurysms

Abnormal bulges or enlargements in weakened areas of blood-vessel walls that may enlarge, clot, dissect, or rupture.

Angelman Syndrome

A genetic disorder caused by loss of function of the UBE3A gene on chromosome 15 (maternal deletion or paternal uniparental disomy). Features: severe intellectual disability, absent speech, seizures, ataxia, and frequent laughter. Characteristic happy demeanor with hand-flapping movements.

Anger

An emotional response involving displeasure or perceived threat, ranging from mild irritation to intense hostility; persistent or harmful anger may require clinical assessment.

Angiitis

See *Vasculitis*.

Angiitis (Vasculitis)

Alternate index label for *Vasculitis*.

Angina

Chest discomfort caused by inadequate oxygen-rich blood flow to the heart muscle, usually from coronary artery disease.

Angina - When You Have Chest Pain

Angina with chest pain reflects transient myocardial ischemia; new, severe, prolonged, or rest pain may signal acute coronary syndrome and requires emergency assessment.

Angina Pectoris

Chest discomfort caused by myocardial ischemia without infarction. Stable angina occurs predictably with exertion and resolves with rest. Unstable angina occurs at rest or with minimal exertion and is an acute coronary syndrome. Prinzmetal (variant) angina occurs at rest due to coronary vasospasm.

Angina Symptoms

Angina is chest discomfort caused by inadequate blood flow to heart muscle, commonly from coronary artery disease. Pressure or squeezing may spread to the arm, jaw, back, or shoulder and can occur with exertion; new, severe, or resting symptoms require emergency assessment.

Alternate Names:

Ischemic Chest Pain (Angina Symptoms)

Angioblastoma

See *Hemangioblastoma*.

Angiocardiology

Imaging of the heart and major vessels after injection of contrast material.

Angiodysplasia

Dilated, fragile blood vessels in the gastrointestinal mucosa or submucosa, often occurring in the right colon of older adults. They may cause intermittent or recurrent gastrointestinal bleeding and anemia.

Angiodysplasia Of The Colon

A degenerative abnormality of small blood vessels in the colon that can cause intermittent or recurrent

lower gastrointestinal bleeding, often without pain. Diagnosis and treatment depend on the bleeding pattern and endoscopic findings.

Angioedema

Rapid swelling of the deep dermis/subcutaneous and submucosal tissues (lips, eyelids, tongue, throat, hands, GI tract) due to mast cell mediator release (histamine—allergic/idiopathic, urticaria associated) or bradykinin-mediated (hereditary angioedema—C1 esterase inhibitor deficiency; ACE-inhibitor-induced).

Angioedema (Hives)

Alternate index label for Hives.

Angioedema And Hives

See *Hives and angioedema*.

Angioedema Hereditary (Hereditary Angioedema HAE)

Alternate index label for Hereditary Angioedema HAE.

Angiofibroma

A benign tumor composed of blood vessels and fibrous tissue.

Angiofollicular Lymph Node Hyperplasia

See *Castleman disease*.

Angiogenesis

Formation of new blood vessels. Tumors induce angiogenesis for growth. Targeted by anti-angiogenic drugs (bevacizumab).

Angiogenesis Inhibition

Suppression of new blood-vessel formation, a strategy used in some cancer treatments.

Alternate Names:

Antiangiogenic therapy

Angiogram

An image of blood vessels, usually obtained after contrast material is injected, used to identify narrow-

ing, blockage, aneurysm, malformation, or bleeding.

Angiography

Invasive imaging of blood vessels by injecting contrast material under fluoroscopy. Coronary angiography (cardiac catheterization): assesses coronary artery stenosis, guides PCI. Cerebral angiography: evaluates aneurysms, AVMs, and vasculitis. Peripheral angiography: evaluates PAD and guides intervention.

Angioid Streak

Breaks in a tissue layer beneath the retina that appear as irregular dark lines.

Angiomyofibrolastoma

A benign mesenchymal tumor of the vulvovaginal region, usually presenting as a small, well-circumscribed painless mass in reproductive-age or middle-aged women.

Angiomyolipoma

A benign renal tumor composed of blood vessels, smooth muscle, and fat; it is associated with tuberous sclerosis and may cause retroperitoneal hemorrhage.

Angioneurotic Edema, Hereditary

Hereditary angioedema, an inherited bradykinin-mediated disorder causing recurrent swelling of the skin, gastrointestinal tract, or airway, usually without hives.

Angiopathy

Disease or abnormality of blood vessels, including changes caused by diabetes, inflammation, atherosclerosis, trauma, or inherited disorders.

Angioplasty

A procedure that widens a narrowed blood vessel, usually with a balloon and sometimes a stent. It is used most often for coronary or peripheral arterial disease.

Angioplasty And Stent Placement - Heart

A catheter-based procedure that widens a narrowed coronary artery, usually with an inflatable balloon, and may place a stent to help keep the artery open and improve blood flow to the heart muscle.

Angioplasty And Stent Placement - Peripheral Arteries

A catheter-based procedure that widens a narrowed peripheral artery, usually with an inflatable balloon, and may place a stent to improve blood flow to an affected limb or organ.

Angioplasty Balloon (Vascular)

An inflatable catheter balloon used to widen a narrowed blood vessel or expand a stent.

Alternate Names:

Vascular

Angiosarcoma

A rare, aggressive malignant tumor of blood vessel or lymphatic endothelial cells. Common sites include skin, breast, liver, and bone. Treatment typically involves wide surgical excision with chemotherapy and radiation.

Angiosarcoma Of The Breast

A malignant vascular tumor of the breast that may arise primarily or, more rarely, after radiation or chronic lymphoedema. It often presents as an enlarging mass or bruise-like skin discoloration and requires oncologic management.

Angiosarcoma Of The Heart

A rare aggressive primary cardiac sarcoma, most often arising in the right atrium and potentially causing obstruction, pericardial effusion, arrhythmia, or metastases. Diagnosis requires imaging and tissue evaluation.

Angiotensin

A family of peptides in the renin–angiotensin system that regulate blood pressure and fluid balance, with angiotensin II causing vasoconstriction and stimulating aldosterone release.

Angiotensin Converting Enzyme

An enzyme that converts angiotensin I to vasoconstricting angiotensin II and also breaks down bradykinin; it is inhibited by ACE-inhibitor medicines.

Angiotensin I

An inactive precursor that is converted to angiotensin II in the renin-angiotensin system.

Angiotensin II

A hormone that narrows blood vessels and promotes sodium retention, thereby increasing blood pressure.

Angiotensin Receptor Blockers

A class of cardiovascular drugs that selectively block the angiotensin II type 1 receptor, preventing the binding of angiotensin II and its effects including vasoconstriction, aldosterone secretion, and sympathetic activation.

Angle-Closure Glaucoma

Glaucoma caused by narrowing or closure of the drainage angle, which can abruptly raise eye pressure and threaten vision; acute attacks require emergency treatment.

Anhedonia

The inability to experience pleasure from activities that were previously enjoyable. It is a core symptom of major depressive disorder and a negative symptom of schizophrenia. It is mediated by dysfunction in the brain's reward circuitry, particularly the mesolimbic dopamine system.

Anhidrosis

Absent or greatly reduced sweating. It may result from nerve damage, skin disease, dehydration, medications, or inherited conditions. Inability to sweat can cause dangerous overheating, especially during exercise or hot weather.

Animal-Assisted Therapy

A structured intervention in which trained animals are incorporated into care to support defined thera-

peutic goals. It may be used to support engagement, mood, communication, or activity when appropriate safeguards are in place.

Anion

Anion is an ion with a net negative electrical charge, such as chloride, bicarbonate, or phosphate in body fluids.

Anion Gap

A calculated estimate of unmeasured serum anions, commonly sodium minus chloride and bicarbonate. An increased anion gap supports the presence of unmeasured acids in metabolic acidosis, but interpretation must account for albumin concentration and laboratory method.

Anisocoria

Unequal pupil size. It may be physiologic or caused by disorders of the eye, autonomic nerves, or brain; sudden anisocoria with headache, eye pain, or neurologic symptoms requires urgent assessment.

Anisocytosis

Increased variation in red blood cell size on a peripheral blood film (e.g., macrocytes with microcytes together), not a diagnosis in itself. Derived from the Greek "anisokytosis" (unequal cells). Quantified by an elevated red cell distribution width (RDW).

Anisometropia

A difference in the refractive power of the two eyes, which can cause unequal image focus, blurred vision, or amblyopia.

Ankle

The joint connecting the lower leg to the foot.

Ankle Arthroplasty

Surgical replacement of the ankle joint with a prosthesis, usually for severe symptomatic ankle arthritis. Suitability depends on deformity, bone quality, infection risk, activity level, and the condition of the surrounding joints.

Ankle Arthroscopy

A minimally invasive surgical technique using small incisions and an endoscope to visualize and treat intra-articular ankle pathology, including loose bodies, osteochondral lesions, synovitis, and impingement. It offers faster recovery compared with open arthrotomy.

Ankle Bone

A bone forming the ankle joint, especially the talus or the distal tibia and fibula that form the ankle mortise.

Ankle Dislocated (Dislocated Ankle (Ankle Dislocation))

Alternate index label for Dislocated Ankle (Ankle Dislocation).

Ankle Dislocation

Complete displacement of the ankle joint surfaces, usually resulting from a high-energy injury and often accompanied by a fracture, ligament damage, or neurovascular compromise. It causes severe pain, deformity, and inability to bear weight. The joint requires urgent reduction, imaging, and immobilization, with surgical management when instability or associated fractures demand it.

Alternate Names:

Dislocated Ankle (Ankle Dislocation)

Ankle Fracture

A break in one or more bones forming the ankle joint.

Ankle Fractures

Ankle fractures: Weber classification (fibular fracture relative to syndesmosis): A (below syndesmosis, stable), B (at syndesmosis, variable stability), C (above syndesmosis, unstable). Lauge-Hansen: supination-external rotation (SER, most common), supination-adduction, pronation-external rotation, pronation-abduction.

Ankle Joint

Uniaxial hinge synovial joint between distal tibia,

lateral malleolus, and superior talus, allowing dorsiflexion/plantarflexion. Medial (deltoid) ligament resists eversion; lateral complex resists inversion. The ankle mortise provides bony stability.

Ankle Pain

Pain in or around the ankle, commonly caused by sprain, fracture, tendinitis, arthritis, bursitis, or infection. Inability to bear weight, deformity, marked swelling, or fever requires prompt assessment.

Ankle Pain And Tendinitis

Ankle pain may result from sprain, fracture, arthritis, tendon inflammation, nerve disease, infection, or referred pain. Tendinitis causes pain along an affected tendon and often worsens with loading; swelling, deformity, inability to bear weight, fever, or numbness warrants evaluation.

Ankle Replacement

Total ankle arthroplasty, the surgical replacement of the ankle joint with a prosthetic implant for severe arthritis when joint-sparing options are insufficient. It aims to preserve motion and reduce pain; outcomes depend on deformity correction, alignment, and implant selection.

Ankle Sprain

An injury to the ligaments surrounding the ankle joint, most commonly involving the lateral ligament complex (anterior talofibular ligament [ATFL, most commonly injured], calcaneofibular ligament [CFL], and posterior talofibular ligament [PTFL]) from an inversion mechanism.

Ankle Swelling

Enlargement around the ankle caused by injury, inflammation, infection, venous disease, lymphatic problems, or fluid retention. One-sided sudden swelling with pain, warmth, or shortness of breath may indicate a blood clot or infection and requires urgent assessment; swelling after trauma may require evaluation for fracture.

Ankle Swollen (Swollen Ankles And

Swollen Feet)

Alternate index label for Swollen Ankles and Swollen Feet.

Ankle-Brachial Index

The ratio of ankle systolic blood pressure to brachial systolic blood pressure. A low result supports peripheral arterial disease, while a very high result may indicate noncompressible arteries.

Ankle-Foot Orthosis

A brace that supports the ankle and foot and helps control alignment, stability, or foot drop.

Ankle-Foot Orthosis

A brace that supports the ankle and foot, helps control alignment and motion, and may improve walking in people with weakness, spasticity, instability, or foot drop.

Ankyloglossia

An abnormally short or tight lingual frenulum that restricts tongue movement.

Alternate Names:

Tongue-tie

Ankyloglossia (Tongue-Tie)

Short or thick lingual frenulum restricting tongue movement. May cause breastfeeding difficulties, speech problems, oral hygiene issues. Treatment: frenotomy (simple release) or frenuloplasty.

Alternate Names:

Tongue-Tie

Ankylose

To become stiff or immobile at a joint, sometimes because the joint surfaces become fused.

Ankylosing

Causing or involving progressive stiffness and fixation of a joint, often through fibrous or bony fusion.

Ankylosing Spondylitis

A long-term form of arthritis that mainly affects the joints between the spine and pelvis and the spine

itself. It causes back pain and stiffness. Over time, new bone may form around the spine, causing some spinal bones to join together and making the back less flexible. It can also affect other joints, the eyes, skin, or bowel.

Alternate Names:

Arthritis Ankylosing Spondylitis (Ankylosing Spondylitis)

Ankylosis

Abnormal stiffness or fusion of a joint. In dentistry, it may refer to fusion of a tooth root to the surrounding bone.

Ankyrin

A structural protein that links membrane proteins to the cell's internal cytoskeleton.

Annihilation

Positron-electron annihilation producing two 511 keV photons in opposite directions.

Annular Pancreas

A congenital anomaly where a ring of pancreatic tissue completely or partially encircles the second portion of the duodenum, causing duodenal obstruction. It results from failure of the ventral pancreatic bud to completely rotate around the duodenum during embryogenesis.

Annulus

A ring-shaped structure or band; examples include the annulus fibrosus around an intervertebral disk and the fibrous rings around heart valves.

ANOCA

Angina with non-obstructive coronary arteries: angina symptoms without a flow-limiting obstructive stenosis in the epicardial coronary arteries. Causes may include coronary microvascular dysfunction or vasospastic angina, and further evaluation can help identify the mechanism.

Anodontia

Complete absence of teeth. Rare, associated with

ectodermal dysplasia.

Anogenital Tract

The connected anatomic region comprising the anus, perianal tissues, genital structures, and related mucosal surfaces.

Anomalous Anatomy

A structural variation or congenital abnormality in the expected arrangement, number, origin, or course of an organ, vessel, duct, or other body structure. It may be incidental or clinically important during diagnosis, surgery, or interventional procedures.

Anomalous Aortic Origin Of A Coronary Artery

A high-risk congenital coronary anomaly in which a coronary artery arises from the inappropriate opposite or non-coronary sinus of Valsalva and traverses between the ascending aorta and the main pulmonary artery (interarterial course). Compression of the anomalous vessel between the great arteries during exercise, an acute takeoff angle, or an intramural slit-like lumen can produce myocardial ischemia, exertional syncope, and sudden cardiac arrest in children and young athletes; diagnosis is established with coronary CT angiography or cardiac MRI, and surgical unroofing or reimplantation is indicated for high-risk anatomy.

Alternate Names:

AAOCA; Anomalous Coronary Artery from Opposite Sinus; ACAOS

Anomalous Left Coronary Artery From The Pulmonary Artery

A rare congenital anomaly in which the left coronary artery arises from the pulmonary artery instead of the aorta. It can cause myocardial ischemia, heart failure, arrhythmia, or sudden death, particularly in infancy or exertion.

Anomaly

A deviation from the usual structure, development, function, or measurement of the body; it may be harmless or clinically significant.

Anomaly Scan

A detailed routine structural ultrasound performed between 18 and 22 weeks of gestation to assess fetal anatomical development, placental localization, amniotic fluid volume, and screening for major congenital anomalies, including neural tube defects, congenital cardiac anomalies, abdominal wall defects, and renal tract abnormalities.

Alternate Names:

Mid-Pregnancy Ultrasound; 20-Week Scan; Fetal Anomaly Scan

Anomia

Difficulty retrieving or producing a known word, especially the name of a familiar object or person, despite knowing its meaning. It is a common language symptom of aphasia and may occur after stroke or with other neurologic disorders.

Anophthalmia

A birth defect in which one or both eyes do not develop. It may occur with other birth defects and can affect the growth of the eye socket and face. Care may include an eye specialist, socket treatment, and a prosthetic eye.

Anotia

A birth defect in which the outer ear is completely absent. The ear canal may also be absent, and hearing may be reduced.

Anorchia

Complete absence of testicular tissue, present from birth or caused by loss of previously formed testes. It results in absent or severely reduced testosterone production and infertility unless treated with appropriate hormone replacement.

Anorectal Abscess

A localized collection of pus in the tissues around the anus or rectum, usually caused by infection of an anal gland. It commonly causes severe anal pain, swelling, fever, and difficulty sitting. Prompt incision and drainage is the standard treatment.

Anorectal Fistula

An abnormal channel connecting the anus or rectum with nearby skin or another organ.

Alternate Names:

Anal fistula

Anorectal Infection

Infection of the anus, rectum, or nearby tissues. Causes include sexually transmitted infections, abscesses, bowel bacteria, and inflammatory disease; pain, swelling, discharge, fever, or difficulty passing stool may occur and an abscess may need drainage.

Anorectal Malformation

A congenital abnormality in which the anus or rectum does not develop normally or does not connect appropriately to the perineum. Types vary in anatomy and severity and usually require specialist surgical assessment.

Anorectal Manometry

Measurement of pressures in the anal canal and rectum to assess sphincter function and rectal sensation. A pressure-sensing catheter is inserted into the rectum and slowly withdrawn through the anal canal. Measures resting and squeeze pressures reflecting internal and external sphincter function respectively.

Anorexia

Loss of appetite, distinct from anorexia nervosa (the eating disorder).

Anorexia Nervosa

An eating disorder characterized by restriction of energy intake, intense fear of weight gain, and distorted body image. Highest mortality of any psychiatric disorder. Features: emaciation, lanugo, bradycardia, hypotension, amenorrhea, and electrolyte abnormalities. Diagnosis by DSM-5 criteria.

Alternate Names:

Eating Disorders, Anorexia

Anorgasmia

Persistent or recurrent delay in, or absence of, or-

gasm following a normal sexual excitement phase.

Anorgasmia In Women

Persistent or recurrent difficulty achieving orgasm despite adequate sexual stimulation, causing personal distress.

Anorgasmy

Inability to achieve orgasm despite adequate sexual stimulation; possible contributors include medications, hormonal or neurologic disorders, psychological factors, and relationship difficulties.

Anoscopy

Examination of the anal canal with a short lighted instrument called an anoscope. It is used to evaluate rectal bleeding, hemorrhoids, fissures, fistulas, and other anorectal disorders.

Anoscopy And High-Resolution Anoscopy

An examination of the anal canal and lower rectum using an anoscope; high-resolution anoscopy provides magnified views for evaluation of abnormal tissue.

Anosmia

Complete loss of the sense of smell. Causes include post-viral olfactory dysfunction, chronic rhinosinusitis with polyps, head trauma, neurodegenerative disease, congenital disorders such as Kallmann syndrome, medications, and toxic exposure.

Anosognosia

Denial or unawareness of one's own neurologic deficit, classically hemiplegia following a nondominant (right) parietal lobe lesion. Associated with right middle cerebral artery strokes and sometimes with neglect of the left side of space.

Anovulation

Failure to release an egg from the ovary during the menstrual cycle. It may cause irregular or absent periods, infertility, or abnormal bleeding and can result from hormonal disorders, excessive exercise, low body weight, stress, or polycystic ovary syndrome.

Anoxia

Complete absence of oxygen supply to tissues, distinguished from hypoxia (reduced oxygen). Anoxia causes rapid cell death, particularly in highly aerobic tissues (brain, heart, kidneys).

Antacids

Medications that neutralise gastric acid, providing rapid symptomatic relief in dyspepsia, gastroesophageal reflux, and peptic ulcer disease. Commonly contain aluminium hydroxide, magnesium hydroxide, calcium carbonate, or sodium bicarbonate.

Antagonist

A substance, drug, muscle, or other factor that opposes or blocks the action of another; a receptor antagonist binds without activating the receptor.

Antecubital Fossa

Triangular depression on the anterior elbow, bounded laterally by brachioradialis, medially by pronator teres, and superiorly by a line connecting the epicondyles. Floor formed by brachialis and supinator. Contains biceps tendon, brachial artery, and median nerve. Primary site for venipuncture and blood pressure measurement.

Antegrade

Moving or occurring in the normal forward direction of flow or conduction, such as blood flow away from the heart or electrical conduction through the usual pathway.

Antemortem Injury

Injury inflicted upon a body prior to death, characterized microscopically and macroscopically by physiological tissue responses including hemorrhage, blood clotting, inflammatory cell infiltration, tissue edema, and active healing reactions (differentiating it from postmortem artifact).

Antenatal

The period before birth, also called prenatal. The medical supervision and screening provided to pregnant women to monitor the health of the mother

and fetus, detect complications early, and provide health education.

Alternate Names:
prenatal.

Antepartum Fetal Surveillance

The monitoring of fetal well-being in the third trimester for high-risk pregnancies. Methods: fetal kick counts (daily maternal counting of fetal movements), non-stress test (NST), biophysical profile (BPP, AFI, fetal tone, movement, breathing), and Doppler (umbilical artery, MCA).

Antepartum Hemorrhage

Bleeding from the genital tract after the threshold of fetal viability and before birth. Important causes include placenta previa, placental abruption, vasa previa, and local cervical or vaginal lesions; maternal stabilization and fetal assessment are priorities.

Anterior

Relating to the front of the body or positioned closer to the front.

Anterior Chamber

The fluid-filled space between the cornea and iris of the eye.

Anterior Chamber Angle

The anterior chamber angle is the anatomical region where the cornea and iris meet, and it contains the trabecular meshwork, the primary drainage structure for aqueous humor from the eye.

Anterior Cord Syndrome

A spinal-cord injury syndrome causing impaired motor function and loss of pain and temperature sensation below the lesion, with relative preservation of vibration and position sense.

Anterior Cruciate Ligament

A strong ligament inside the knee that runs from the femur to the tibia and limits forward movement and rotation of the tibia.

Anterior Cruciate Ligament Injury

A sprain or tear of the ligament that limits forward movement and rotation of the tibia relative to the femur. It commonly occurs during sudden stopping, pivoting, or landing and may cause a pop, rapid swelling, pain, and knee instability.

Anterior Cruciate Ligament Injury

Tear of the ACL, a common sports injury (non-contact deceleration, pivoting, or hyperextension). Presents with a pop, immediate swelling (hemarthrosis), and giving way of the knee. Positive Lachman test (most sensitive), anterior drawer test, and pivot shift test.

Anterior Cruciate Ligament Tear

ACL tear: common knee injury, often non-contact pivoting sports. Symptoms: popping sound, swelling, instability, inability to continue play. Diagnosis: Lachman test, anterior drawer, MRI. Treatment: surgical reconstruction (autograft/allograft), rehabilitation.

Anterior Knee Pain

Pain localized to the front of the knee around or behind the patella, often worsened by stair climbing, squatting, or prolonged sitting. Common causes include patellofemoral pain syndrome, chondromalacia patellae, patellar tendinopathy, and plica syndrome. Evaluation includes physical examination, imaging, and assessment of biomechanical factors.

Anterior Myocardial Infarction

A myocardial infarction involving the anterior wall of the left ventricle, usually because of obstruction in the left anterior descending coronary artery.

Alternate Names:

Anterior heart attack; anterior MI.

Anterior Pituitary

The glandular portion of the pituitary that secretes ACTH, TSH, growth hormone, prolactin, FSH, and LH in response to hypothalamic releasing hormones. Its hormones regulate adrenal, thyroid, growth, lactation, and reproductive function.

Anterior Tibial Artery

Arises from the popliteal artery, passes through the anterior intermuscular septum to the anterior compartment, continuing to the ankle as the dorsalis pedis artery. Supplies anterior leg and dorsal foot muscles. Palpable anterior to the lateral malleolus as the dorsalis pedis pulse.

Anterior Uveitis

Anterior uveitis, also known as iritis or iridocyclitis when the ciliary body is involved, is inflammation of the anterior segment of the eye involving the iris and/or ciliary body, and it is the most common form of uveitis.

Alternate Names:

iritis or iridocyclitis when the ciliary body is.

Anterior Vaginal Prolapse

See *Anterior vaginal prolapse (cystocele)*.

Anterior Vaginal Prolapse (Cystocele)

Bulging of the front wall of the vagina caused by weakening of the tissue supporting the bladder, sometimes producing urinary symptoms.

Alternate Names:

Bladder Prolapse Prolapsed Bladder

Anterior Vaginal Wall Repair

Surgical repair of the anterior vaginal wall to correct cystocele (bladder prolapse), in which the bladder bulges into the vaginal canal. The procedure restores pelvic-floor support and may be performed with or without mesh depending on the defect and surgeon judgment.

Anterior/Posterior Drawer Test

A clinical test of knee stability. Anterior displacement assesses the anterior cruciate ligament, and posterior displacement assesses the posterior cruciate ligament.

Anterolisthesis

Forward displacement of one vertebral body relative to the vertebra below it, usually in the spine.

Anteroposterior

Directed from front to back; an anteroposterior radiographic view passes through the body from the anterior surface toward the posterior surface.

Anteroposterior

Directed from the front of the body toward the back; an AP radiograph is made with the X-ray beam entering anteriorly and exiting posteriorly.

Anthrax

A serious infectious disease caused by the gram-positive bacterium *Bacillus anthracis*, which forms highly resistant spores that can persist in the environment for decades, and it is primarily a zoonotic disease of herbivores (cattle, sheep, goats) that can be transmitted to humans through contact with infected animals or their products.

Anthrax Blood Test

A laboratory test that detects *Bacillus anthracis* antigens, antibodies, or nucleic acid in blood or other specimens. It is used to confirm suspected anthrax infection, which may present as cutaneous, inhalational, or gastrointestinal disease with potential for severe toxemia.

Anthropometry

Body measurements: weight, height, BMI, waist, hip, skinfold thickness. Assessment of nutritional status and body composition.

Anti-Anxiety Agents

Medicines or other treatments used to reduce clinically significant anxiety.

Alternate Names:

Anxiolytics

Anti-CCP

Alternate index label; see *Anti-Cyclic Citrullinated Peptide (Anti-CCP) Antibody*.

Anti-CCP Antibody

Alternate index label; see *Anti-Cyclic Citrullinated Peptide (Anti-CCP) Antibody*.

Anti-Citrullinated Peptide Antibody

Alternate index label; see *Anti-Cyclic Citrullinated Peptide (Anti-CCP) Antibody*.

Anti-Cyclic Citrullinated Peptide (Anti-CCP) Antibody

An autoantibody measured in a blood test that targets citrullinated proteins. A positive result supports rheumatoid arthritis, especially when joint symptoms are present, but it does not diagnose the disease by itself.

Alternate Names:

Anti-CCP; Anti-CCP antibody; Anti-Citrullinated Peptide Antibody; Anti-Cyclic Citrullinated Peptide; cyclic citrullinated peptide antibody.

Anti-D

An injection of anti-D immunoglobulin given to RhD-negative pregnant people to prevent antibodies forming against RhD-positive fetal blood cells.

Anti-DNase B Blood Test

A blood test that measures antibodies against deoxyribonuclease B (DNase B), a protein made by group A *Streptococcus*. It helps show a recent past strep infection and may help evaluate rheumatic fever or kidney inflammation that develops after a strep infection.

Anti-Double-Stranded DNA (Anti-dsDNA) Antibody

An autoantibody that targets double-stranded DNA. A blood test for it helps evaluate systemic lupus erythematosus (lupus); high levels may be associated with active disease, especially kidney involvement, but results must be interpreted with symptoms and other tests.

Alternate Names:

Anti-DsDNA Antibody; Anti-Double-Stranded DNA Antibody.

Anti-GBM Disease

Autoimmune disease with antibodies against alpha-3 chain of type IV collagen in glomerular and alveolar basement membranes. Presents with crescentic GN and pulmonary hemorrhage (Goodpasture

syndrome). Linear IgG deposits on immunofluorescence. Treatment requires emergent plasmapheresis, cyclophosphamide, and corticosteroids.

Anti-Glomerular Basement Membrane Blood Test

A laboratory test that detects circulating anti-glomerular basement membrane antibodies, which target type IV collagen in renal and sometimes pulmonary basement membranes. Positive results support the diagnosis of anti-GBM disease, including Goodpasture syndrome.

Anti-Glomerular Basement Membrane Disease

An autoimmune disease in which antibodies target basement-membrane components in the kidney and sometimes the lungs. It can cause rapidly progressive glomerulonephritis, pulmonary hemorrhage, or both and requires urgent treatment.

Anti-HMGCR Myopathy

A severe subtype of immune-mediated necrotizing myopathy triggered in a subset of patients by exposure to 3-hydroxy-3-methylglutaryl-coenzyme A (HMG-CoA) reductase inhibitors (statins), but continuing to progress autonomously after statin cessation. Characterized by autoantibodies directed against the HMGCR enzyme, presenting with subacute or insidious, progressive, symmetrical proximal muscle weakness, severe muscle atrophy, and massive serum creatine kinase elevation (typically > 5,000–10,000 U/L). Muscle biopsy reveals widespread, scattered myofiber necrosis, regeneration, and myophagocytosis with remarkably minimal lymphocytic inflammation and sarcolemmal upregulation of MHC class I, requiring aggressive combination immunotherapy (glucocorticoids, intravenous immunoglobulin, and steroid-sparing immunosuppressants).

Alternate Names:

Statin-Induced Immune-Mediated Necrotizing Myopathy; Anti-HMG-CoA Reductase Myopathy

Anti-IgE Therapy

Omalizumab is a monoclonal antibody that binds

free IgE, preventing it from binding to mast cells and basophils. It reduces allergic inflammation and is approved for moderate-to-severe persistent allergic asthma. It reduces exacerbations and the need for oral corticosteroids. It is administered by subcutaneous injection every 2–4 weeks.

Anti-IL4 Receptor Therapy

Dupilumab is a monoclonal antibody blocking the IL-4 receptor alpha subunit, inhibiting both IL-4 and IL-13 signaling. It is approved for moderate-to-severe asthma with eosinophilic phenotype or oral corticosteroid dependence. It reduces exacerbations and improves lung function.

Anti-IL5 Therapy

Treatment with monoclonal antibodies that block interleukin-5 signaling or its receptor, thereby reducing eosinophil production or survival. It is used for selected eosinophilic diseases, including some forms of severe asthma.

Anti-Insulin Antibody Test

A laboratory test that detects autoantibodies directed against insulin, which may cause hypoglycemia by binding and releasing insulin unpredictably. It is used to evaluate factitious hypoglycemia and insulin autoimmune syndrome.

Anti-MDA5 Dermatomyositis

A clinically distinct subtype of dermatomyositis associated with anti-melanoma differentiation-associated gene 5 antibodies, characterised by skin-predominant disease, mechanic's hands, and a high risk of rapidly progressive interstitial lung disease.

Anti-Mullerian Hormone

A hormone produced by granulosa cells of ovarian follicles. It is measured in selected fertility and reproductive evaluations, but it does not by itself determine fertility.

Anti-NMDA Receptor Encephalitis

A severe autoimmune encephalitis mediated by IgG antibodies directed against the GluN1 subunit of the N-methyl-D-aspartate receptor in the central

nervous system. Most commonly affects children and young women, frequently associated with an underlying ovarian teratoma. Classic progression involves a viral prodrome followed by acute psychosis, memory deficits, catatonia, autonomic instability, choreoathetoid or orofacial dyskinesias, hypoventilation, and refractory seizures.

Alternate Names:

Anti-N-methyl-D-aspartate receptor encephalitis; NMDA receptor encephalitis

Anti-Reflux Surgery

An operation intended to reduce reflux of stomach contents into the esophagus, usually by reinforcing the gastroesophageal junction. It may be considered for selected patients with gastroesophageal reflux disease or a hiatal hernia.

Anti-Reflux Surgery - Children

Surgical procedure to correct gastroesophageal reflux in children, typically by fundoplication, in which the gastric fundus is wrapped around the lower esophagus. It is considered for severe refractory reflux, aspiration, failure to thrive, or esophageal strictures.

Anti-Rust Product Poisoning

Toxic effects caused by excessive exposure to anti-rust products. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Anti-Smooth Muscle Antibody

An autoantibody associated especially with autoimmune hepatitis, although low levels can occur in other autoimmune or infectious conditions.

Anti-SRP Myopathy

A particularly severe, aggressive form of immune-mediated necrotizing myopathy associated with high-titer autoantibodies targeting the 54-kDa subunit of the signal recognition particle (*SRP*), a ribonucleoprotein complex vital for translocating secretory and membrane proteins across the endoplasmic reticulum. Manifests with acute or subacute, rapidly progressive, profound symmetrical proxi-

mal limb weakness, prominent neck flexor weakness, severe dysphagia, and marked functional disability accompanied by extreme serum creatine kinase elevations ($> 10,000$ U/L). Muscle biopsy shows prominent myofiber necrosis, sparse inflammatory infiltrates, and membrane attack complex (C5b-9) deposition on non-necrotic sarcolemma, typically exhibiting resistance to glucocorticoid monotherapy and necessitating early intensive B-cell-depleting therapy or plasma exchange.

Alternate Names:

Anti-Signal Recognition Particle Myopathy; SRP-Associated Necrotizing Myopathy

Antianginal

A class of medications used to prevent or relieve angina pectoris (chest pain from myocardial ischemia).

Antibacterial

Destroying bacteria or inhibiting their growth; the term may describe a drug, disinfectant, surface treatment, or immune defense.

Antibiogram

A periodic summary of antimicrobial susceptibility patterns of bacterial isolates from a hospital or laboratory. Guides empiric antibiotic therapy by showing local resistance patterns (e.g., % of *E. coli* susceptible to TMP-SMX). Updates annually.

Antibodies

Immunoglobulin proteins produced by B cells that bind to specific antigens. There are five classes: IgG (most abundant), IgM (first produced), IgA (mucosal immunity), IgE (allergic responses), and IgD. Antibodies neutralise pathogens, opsonise for phagocytosis, activate complement, and mediate antibody-dependent cellular cytotoxicity.

Antibody

A protein produced by the immune system that specifically binds to a foreign or abnormal substance.

Antibody Therapy

Treatment using antibodies to block, activate, or

target a specific molecule or cell.

Alternate Names:

Immunotherapy

Antibody Titer Blood Test

A laboratory test that measures the concentration of specific antibodies in serum, expressed as the highest dilution that produces a detectable reaction. Rising titers between acute and convalescent specimens indicate recent or active infection; high single titers suggest prior exposure or immunity.

Antibody-Dependent Cell-Mediated Cytotox.

Antibody-dependent cellular cytotoxicity, in which immune effector cells such as natural killer cells recognize antibodies attached to a target cell and destroy it.

Antibody Engineering

Designing or changing antibodies to make them bind more accurately, last longer, cause fewer unwanted immune reactions, or work better as medicines. Scientists may make antibodies more human-like, improve their binding, change how they activate immune cells, create smaller or bispecific antibodies, or attach drugs to them.

Anticholinergic

Blocking the effects of acetylcholine, commonly at muscarinic receptors; these drugs can reduce secretions and smooth-muscle activity but may cause dry mouth, blurred vision, constipation, urinary retention, or confusion.

Anticholinergic Burden

The cumulative effect of taking multiple medications with anticholinergic properties. It can cause dry mouth, constipation, urinary retention, blurred vision, confusion, and delirium, especially in elderly patients. Many psychiatric medications (TCAs, first-generation antipsychotics, some antihistamines) have anticholinergic effects.

Anticholinergic Toxidrome

A poisoning pattern caused by blockade of mus-

carinic acetylcholine receptors, commonly producing dry skin and mouth, dilated pupils, rapid heart rate, urinary retention, reduced bowel sounds, overheating, agitation, or delirium.

Anticoagulation

Treatment that reduces blood clot formation by inhibiting the coagulation system. It is used for conditions such as venous thromboembolism and selected cardiac or vascular disorders.

Anticodon

A three-nucleotide sequence at one end of transfer RNA that base-pairs with a complementary messenger RNA codon during translation, ensuring the correct amino acid is incorporated into the growing polypeptide.

Anticonvulsants

Medications used to prevent or control seizures in epilepsy and other seizure disorders.

Antideformity Position

A therapeutic positioning method that places a limb or joint in an alignment that helps prevent or limit a contracture or deformity.

Antidepressants

Medicines used mainly to treat depressive disorders; different classes alter serotonin, norepinephrine, dopamine, or other signaling and may also treat anxiety, pain, or related conditions.

Antidiabetic

A class of medications used to manage diabetes mellitus by lowering blood glucose levels through various mechanisms.

Antidiabetics-Oral

Oral antidiabetic medicines lower blood glucose through different mechanisms, including increasing insulin release, improving insulin sensitivity, reducing hepatic glucose production, or increasing urinary glucose loss. Selection considers kidney function, hypoglycemia risk, weight, cardiovascular disease,

and cost.

Alternate Names:

Medications Type 2 Diabetes (Antidiabetics-Oral)

Antidiuretic Hormone

A hypothalamic hormone released from the posterior pituitary in response to increased plasma osmolality or reduced effective circulating volume. It increases collecting-duct water permeability through V2 receptors and promotes vasoconstriction through V1 receptors.

Antidiuretic Hormone

Vasopressin, a hormone released from the posterior pituitary that increases water reabsorption in the kidney and, at higher concentrations, constricts blood vessels.

Antidiuretic Hormone Blood Test

A laboratory test that measures plasma vasopressin concentration, the hormone responsible for water reabsorption in the kidney collecting ducts. It is used to evaluate diabetes insipidus, syndrome of inappropriate ADH secretion, and disorders of water balance.

Antidiuretic Hormone Physiology

Antidiuretic hormone also known as vasopressin is synthesized in the supraoptic and paraventricular nuclei of the hypothalamus and stored in the posterior pituitary. Released in response to increased serum osmolality detected by hypothalamic osmoreceptors and decreased blood volume detected by baroreceptors.

Alternate Names:

vasopressin is synthesized in the supraoptic and.

Antidiuretic Hormone Resistance

Impaired renal response to vasopressin, causing excessive production of dilute urine and polydipsia. Causes include lithium, hypercalcemia, hypokalemia, chronic kidney disease, and inherited defects of the vasopressin receptor or aquaporin pathway.

Antidote

Substance that counteracts poison toxicity. Specific: naloxone (opioids), flumazenil (benzodiazepines), N-acetylcysteine (acetaminophen), digoxin immune Fab (digoxin), chelators (EDTA, deferoxamine, dimercaprol), atropine + pralidoxime (organophosphates), methylene blue (methemoglobinemia), cyanide antidote kit (nitrite + thiosulfate).

Antiemetics

Antiemetics are medicines used to prevent or treat nausea and vomiting. Drug classes act on serotonin, dopamine, histamine, acetylcholine, or neurokinin pathways; choice depends on the cause, age, pregnancy, other medicines, heart rhythm risk, and hydration status.

Antiepileptic Drugs

Medications used to prevent and control seizures by modulating neuronal excitability through various mechanisms. They can be classified by their primary mechanism of action.

Antifreeze Poisoning

Toxic effects caused by excessive exposure to antifreeze, usually products containing ethylene glycol or propylene glycol. Severity depends on the substance, dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Antifungal Prophylaxis

The use of antifungal agents to prevent invasive fungal infections in high-risk patients. Common indications include prolonged neutropenia, hematopoietic stem cell transplantation, and advanced HIV infection. Fluconazole, posaconazole, and micafungin are used for prophylaxis.

Antifungal Resistance

The ability of fungi to withstand the effects of antifungal agents. Resistance can be intrinsic or acquired. Azole resistance occurs through efflux pumps and target mutations. Echinocandin resistance occurs through FKS gene mutations. Amphotericin B resistance is rare.

Antigen

A molecule or molecular structure specifically recognized by an antibody, B-cell receptor, or T-cell receptor. An immunogen is an antigen capable of inducing an immune response; antigenicity and immunogenicity are related but not synonymous properties.

Antigen Detection Test

A diagnostic assay that identifies a pathogen-derived antigen in a clinical specimen using a specific antibody or related binding reagent. It is generally rapid but may be less sensitive than nucleic-acid amplification, especially when organism burden is low.

Antigen Presentation

Display of antigen fragments on cell surfaces for recognition by T cells.

Antigen Receptor

A receptor on an immune cell that specifically recognizes an antigen.

Antigen-Presenting Cell

Specialized immune cells that process protein antigens and display peptide fragments bound to Major Histocompatibility Complex (MHC) molecules on their surface for recognition by T-cell receptors. Professional APCs: dendritic cells (most potent for naive T cells), macrophages, and B cells.

Alternate Names:

APC (antigen-presenting cell)

Antigenic Drift

The gradual accumulation of point mutations in viral surface antigens (hemagglutinin, neuraminidase) during replication, allowing influenza viruses to evade pre-existing antibodies and cause recurrent seasonal epidemics. Drift is continuous and selected by host immunity; it is why the seasonal vaccine is updated annually.

Antigenic Shift

A major, abrupt change in the antigenic structure

of a virus (especially influenza A) resulting from genetic reassortment between different strains (e.g., human and avian viruses) infecting the same cell.

Antigenic Variation

The process by which pathogens change their surface proteins to evade immune recognition. Antigenic drift: gradual changes in surface proteins. Antigenic shift: major changes through reassortment of genome segments. Influenza virus demonstrates both mechanisms. Trypanosomes and Plasmodium also use antigenic variation.

Antigout

A class of medications used to treat gout by reducing uric acid levels or controlling acute inflammation.

Antihistamines

Medicines that block histamine receptors; H1 antihistamines relieve allergy symptoms and some cause sedation, while H2 antihistamines reduce gastric acid secretion.

Antihistamines For Allergies

Medicines that block histamine effects and reduce symptoms such as itching, sneezing, and runny nose; sedation and interactions vary by agent.

Antihypertensives In Pregnancy

Medicines used to lower high blood pressure during pregnancy. Common options include labetalol, nifedipine, and methyldopa; severe hypertension needs urgent treatment, and ACE inhibitors and angiotensin-receptor blockers are generally avoided during pregnancy.

Antileukotriene

A drug class that blocks leukotriene-mediated airway inflammation or bronchoconstriction and is used in selected allergic or respiratory conditions.

Alternate Names:

Leukotriene modifier; leukotriene pathway inhibitor.

Antimetabolite

A compound resembling a substance needed for

metabolism or DNA synthesis that disrupts cellular processes; many antimetabolites are used as anti-cancer or immunosuppressive drugs.

Antibiotics

Medicines that kill bacteria or stop them from multiplying. They treat susceptible bacterial infections but do not treat viral infections such as colds or influenza.

Antimicrobial

A general term for antibiotics and other drugs that fight microscopic organisms in the body, such as bacteria, viruses, fungi, and parasites.

Antimicrobial Adverse Effects

Side effects associated with antimicrobial agents. Beta-lactams can cause allergic reactions. Fluoroquinolones can cause tendon rupture and QT prolongation. Aminoglycosides can cause nephrotoxicity and ototoxicity. Azole antifungals can cause hepatotoxicity.

Antimicrobial Agent

A substance that kills microorganisms or inhibits their growth, including antibacterial, antiviral, antifungal, and antiparasitic agents.

Antimicrobial Desensitization

A procedure that administers gradually increasing doses of an antimicrobial to temporarily induce tolerance in a person with a documented or strongly suspected immediate allergy. It may be considered when that antimicrobial is clinically necessary and suitable alternatives are not available.

Antimicrobial Dosing Optimization

Strategies to ensure antimicrobial agents achieve therapeutic concentrations at the site of infection. Optimization includes appropriate drug selection, dosing interval, route of administration, and duration of therapy. Extended or continuous infusion of beta-lactams may improve outcomes. Weight-based dosing is important for many agents.

Antimicrobial Hypersensitivity Reactions

Immune-mediated reactions to antimicrobial agents that may range from a mild rash to life-threatening anaphylaxis. The reaction depends on the drug, the patient, and the type of immune response.

Antimicrobial Pharmacodynamics

The relationship between antimicrobial drug concentrations and their effect on microorganisms. Time-dependent antibiotics (beta-lactams) are most effective when concentrations remain above the MIC. Concentration-dependent antibiotics (aminoglycosides) are most effective with high peak concentrations.

Antimicrobial Pharmacokinetics

The absorption, distribution, metabolism, and elimination of antimicrobial agents. Pharmacokinetics varies by drug class, patient factors, and disease state. Renal impairment affects elimination of many antibiotics. Hepatic impairment affects metabolism of many antifungals.

Antimicrobial Resistance

The ability of a microorganism to survive or grow despite a medicine that would normally kill it or stop its growth. It includes resistance in bacteria, viruses, fungi, and parasites; genetic changes and spread between organisms can cause it, and unnecessary or incorrect antimicrobial use can accelerate it.

Alternate Names:

AMR; Antimicrobial Resistance

Antimicrobial Resistance Mechanisms

Biological processes that allow microorganisms to survive antimicrobial exposure, including drug inactivation, modification of the drug target, reduced permeability, and active drug efflux.

Antimicrobial Resistance Surveillance

The systematic monitoring of antimicrobial resistance patterns in clinical isolates. Surveillance programmes track resistance rates over time and guide empiric therapy. National and international networks share resistance data.

Antimicrobial Sensitivity Test

A laboratory test that determines which antimicrobial medicines inhibit or kill a microorganism isolated from a patient.

Antimicrobial Stewardship

Coordinated actions that promote appropriate antimicrobial selection, dose, route, and duration to improve patient outcomes and limit resistance, adverse effects, and unnecessary cost.

Antimicrobial Susceptibility Testing

Laboratory methods used to estimate how susceptible a microorganism is to antimicrobial agents. Methods include disk diffusion, broth microdilution, and automated systems. Results are interpreted using standardized breakpoints and can help guide antimicrobial therapy.

Antimicrobial Therapy

The use of antibacterial, antiviral, antifungal, or antiparasitic medicines to prevent or treat infection. Selection depends on the suspected or identified organism, infection site, severity, resistance patterns, and patient factors.

Antimitochondrial Antibody

An autoantibody strongly associated with primary biliary cholangitis, interpreted with cholestatic liver tests and clinical findings.

Antimony

A metallic chemical element whose compounds can be toxic; selected antimony compounds, such as the pentavalent agents, have been used to treat leishmaniasis.

Antinuclear Antibody

ANA: autoantibodies against nuclear components (DNA, histones, ribonucleoproteins, etc.), detected by immunofluorescence (HEp-2 cells), reported with pattern (homogeneous, speckled, nucleolar, centromere) and titer.

Alternate Names:

Antinuclear Antibodies

Antinuclear Antibody Panel

A laboratory test that measures multiple antinuclear antibody specificities, including anti-dsDNA, anti-Smith, anti-RNP, anti-Ro, anti-La, and anti-histone antibodies. It is used to evaluate suspected autoimmune connective tissue diseases such as systemic lupus erythematosus when ANA screening is positive.

Antinuclear Autoantibody

An autoantibody directed against components of a cell nucleus.

Alternate Names:

ANA

Antioxidant

A substance that limits oxidation by reacting with oxidizing molecules or free radicals.

Antiparietal Cell Antibody Test

A laboratory test that detects autoantibodies against gastric parietal cells, which produce intrinsic factor and hydrochloric acid. Positive results are found in pernicious anemia and autoimmune gastritis and may indicate risk of vitamin B12 deficiency.

Antiparkinson

A class of medications used to manage Parkinson disease symptoms by restoring dopaminergic activity or modulating other neurotransmitter systems.

Antiphospholipid Antibodies

Include lupus anticoagulant (prolongs phospholipid-dependent coagulation tests), anticardiolipin antibodies (IgG/IgM), and anti-beta-2-glycoprotein I antibodies. Detected on ≥ 2 occasions 12 weeks apart. Clinical criteria: vascular thrombosis or pregnancy morbidity. Can be transient (infection, drugs) or persistent.

Antiphospholipid Antibody

An autoantibody directed against phospholipid-binding proteins. Persistent antibodies may be associated with thrombosis or pregnancy complications, particularly in antiphospholipid syndrome.

Alternate Names:

APA (antiphospholipid antibody)

Antiphospholipid Antibody Syndrome

An autoimmune disorder in which antiphospholipid antibodies are associated with abnormal blood clotting, recurrent pregnancy loss, thrombocytopenia, and sometimes migraine or heart-valve abnormalities.

Antiphospholipid Syndrome

A systemic autoimmune thrombophilia characterized by arterial and venous thrombosis, pregnancy morbidity, and persistent antiphospholipid antibody positivity.

Alternate Names:

APS (Antiphospholipid Syndrome)

Antiphospholipid Syndrome

Alternate index label for Antiphospholipid Syndrome.

Antiphospholipid Syndrome - APS

Antiphospholipid syndrome is an autoimmune thrombophilia associated with venous or arterial clots and pregnancy morbidity in the presence of persistent antiphospholipid antibodies.

Antiplatelet Agents

Medicines that reduce platelet activation or aggregation and thereby lower the risk of some blood clots.

Antiplatelet Medicines - P2Y12 Inhibitors

Antiplatelet drugs such as clopidogrel, prasugrel, and ticagrelor that reduce ADP-mediated platelet activation and thrombosis risk, with bleeding as a major adverse effect.

Antiplatelet Therapy

Treatment with medicines that reduce platelet activation or aggregation, such as aspirin or clopidogrel, when clinically indicated to reduce arterial clotting.

Antiprotozoal

Destroying protozoa or inhibiting their growth; antiprotozoal medicines treat infections such as malaria, giardiasis, or amoebiasis.

Antiretroviral

Active against retroviruses; antiretroviral medicines inhibit different stages of HIV replication and are generally used in combination therapy.

Antiretroviral Therapy

Treatment of HIV infection with combinations of antiretroviral agents. ART targets multiple steps in the viral life cycle including entry, reverse transcription, integration, and maturation. Combination ART suppresses viral replication and restores immune function. ART is lifelong therapy.

Antiretroviral Therapy

Combination treatment with antiretroviral medicines that suppress HIV replication, preserve immune function, and reduce the risk of HIV transmission and disease progression.

Antisepsis

Use of chemical methods to reduce or eliminate harmful microorganisms on living tissue.

Antiseptic

Substances used on wounds to prevent or treat infection; they kill or slow the growth of diseasecausing organisms, such as bacteria, on the surface of the body.

Antiserum

Blood serum containing antibodies against a particular antigen or toxin.

Antisocial Personality

A persistent pattern of disregard for other people's rights, social rules, and responsibilities.

Alternate Names:

Antisocial personality disorder

Antisocial Personality Disorder

A pattern of disregard for and violation of the rights of others occurring since age 15 years. At least three of seven criteria: failure to conform to social norms, deceitfulness, impulsivity, irritability and aggressiveness, reckless disregard for safety, consistent irresponsibility, and lack of remorse.

Alternate Names:

Disorder Antisocial Personality (Antisocial Personality Disorder) Personality Disorder, Antisocial Personality Disorder Antisocial (Antisocial Personality Disorder)

Antispasmodic Drugs

Medicines that relax smooth muscle and reduce cramping or spasms, most often in the digestive tract. They may also be used for bladder or bile-duct spasms; the choice depends on the cause and the medicine's risks.

Alternate Names:

Antispasmodics; spasmolytics.

Antistreptolysin O Titer

A blood test that measures antibodies against streptolysin O, a toxin produced by group A streptococci. Rising or elevated titers support recent streptococcal infection and help evaluate suspected rheumatic fever or poststreptococcal glomerulonephritis, although a single value does not prove active infection.

Antisynthetase Syndrome

An autoimmune disorder associated with antibodies against aminoacyl-tRNA synthetases, especially anti-Jo-1. It may cause interstitial lung disease, inflammatory muscle disease, arthritis, fever, Raynaud phenomenon, or mechanic's hands.

Antithrombin

Natural anticoagulant. Inhibits thrombin, factor Xa. Deficiency causes thrombosis.

Antithrombin Deficiency

A rare (1 in 2,000-5,000), strongly thrombophilic inherited disorder (autosomal dominant). Antithrombin (previously antithrombin III) is a serine protease

inhibitor that inactivates thrombin and factors Xa, IXa, XIa, and XIIa. Heterozygous: 10-50 fold increased VTE risk, more severe than factor V Leiden.

Antithrombin III Blood Test

A laboratory test that measures antithrombin activity or antigen level, a natural anticoagulant that inactivates thrombin and factor Xa. Deficiency is a strong risk factor for venous thromboembolism; acquired decreases occur with liver disease, nephrotic syndrome, or heparin therapy.

Antithrombin III Deficiency

An inherited or acquired thrombophilia caused by reduced antithrombin activity, leading to increased risk of venous thromboembolism.

Antithymocyte Globulin

A preparation of antibodies directed against human T lymphocytes, used as immunosuppressive therapy for aplastic anemia, solid-organ transplantation, and selected immune-mediated disorders. Important risks include infusion reactions, serum sickness, cytopenias, and infection.

Alternate Names:

Rabbit Antithymocyte Globulin rATG Thymoglobulin

Antithyroglobulin Antibody Test

A laboratory test that measures antibodies against thyroglobulin, a thyroid hormone precursor protein. Elevated levels are found in Hashimoto thyroiditis, Graves disease, and other autoimmune thyroid conditions, and help evaluate thyroid dysfunction of autoimmune origin.

Antitoxin

An antibody or antibody preparation that binds to and neutralizes a toxin. Antitoxins may be made from human or animal antibodies and are used for selected poisonings or toxin-producing infections.

Antitubercular Agents

Medicines used to treat tuberculosis caused by *Mycobacterium tuberculosis*. Treatment uses several drugs together for months to prevent resistance,

with monitoring for liver injury, nerve problems, vision changes, and other adverse effects.

Antral Follicle Count

A standardized transvaginal ultrasound biometric assessment performed during the early follicular phase (cycle days 2–4) to enumerate resting follicles measuring 2–10 mm in diameter across both ovaries. Serves as a primary clinical biomarker of functional ovarian reserve, predictive of ovarian response to exogenous gonadotropin stimulation in assisted reproductive technology, but not of natural fecundability or cycle-specific pregnancy rates.

Alternate Names:

AFC; Basal Antral Follicle Count

Antrochoanal Polyp

A benign, single nasal polyp originating from the maxillary sinus mucosa and extending through the accessory ostium into the choana and nasopharynx. It is most common in children and young adults, presenting with unilateral nasal obstruction and rhinorrhea. Treatment is endoscopic surgical removal.

Antrum

A cavity or chamber in an organ, especially the lower part of the stomach near the pylorus or the air-filled maxillary sinus.

Anuria

Near absence of urine production, often defined in adults as less than about 100 milliliters in 24 hours.

Anus

The terminal opening of the gastrointestinal tract through which feces are expelled. It is surrounded by the internal smooth-muscle sphincter and external skeletal-muscle sphincter.

Anxiety

A normal emotional response to perceived danger, but anxiety disorders involve excessive, persistent worry that interferes with daily life. Symptoms can include restlessness, rapid heart rate, muscle tension, and avoidance behaviors.

Anxiety Disorder

A group of psychiatric conditions characterized by excessive fear, anxiety, and related behavioral disturbances. Includes generalized anxiety disorder (GAD), panic disorder, social anxiety disorder, specific phobias, and agoraphobia.

Anxiety Disorder, Generalized

See *Generalized anxiety disorder*.

Anxiety Disorder, Social

See *Social anxiety disorder (social phobia)*.

Anxiety Disorders

Mental health disorders involving excessive fear, worry, or anxiety that is persistent, difficult to control, and disruptive to daily life.

Anxiety Separation (Separation Anxiety)

Separation anxiety is excessive fear or distress when separated from an attachment figure, beyond what is expected for developmental stage. It can cause avoidance, physical complaints, sleep difficulty, and school impairment and is treated with behavioral therapy and, when needed, medication.

Aorta

Largest artery, from the left ventricle distributing oxygenated blood systemically. Approximately 30 cm long, 2.5 cm diameter. Four segments: ascending aorta, aortic arch (brachiocephalic trunk, left common carotid, left subclavian), descending thoracic aorta, descending abdominal aorta (bifurcating into common iliacs at L4).

Aortal

Relating to the aorta, the large artery that carries blood from the left ventricle to the systemic circulation.

Aortic

Relating to the aorta, the main artery carrying blood from the heart to the body.

Aortic Aneurysm

A permanent, localized enlargement of the aorta caused by weakening of its wall. It may occur in the thoracic or abdominal aorta and can enlarge, dissect, or rupture; management depends on its site, size, growth, symptoms, and the patient's risk.

Aortic Aneurysm Repair - Endovascular

Endovascular aneurysm repair is a minimally invasive technique using a stent-graft deployed through femoral artery access to exclude an aortic aneurysm from circulation. It is indicated for suitable anatomy and offers faster recovery than open repair.

Aortic Aneurysm Rupture

Full-thickness failure of an aortic aneurysm with bleeding into a body cavity or surrounding tissue. Ruptured aneurysm commonly causes sudden pain, shock, and collapse and requires immediate resuscitation and operative or endovascular repair.

Aortic Aneurysm Screening

Evaluation of selected people for an aortic aneurysm before symptoms develop. Screening may use abdominal ultrasonography or other imaging according to the person's risk.

Aortic Angiography

An imaging study of blood vessels that uses contrast material to identify narrowing, blockage, aneurysm, or abnormal blood flow.

Aortic Arch

Curves from second right sternocostal joint superiorly and left, then posteriorly and inferiorly to T4. From right to left: brachiocephalic trunk, left common carotid, left subclavian. Related to left recurrent laryngeal nerve (hooking under it), trachea, esophagus, left phrenic nerve. Arch aneurysms may cause hoarseness and SVC syndrome.

Aortic Arch Syndrome

Symptoms and signs caused by narrowing or blockage of the aorta or its major branches. Causes include large-vessel vasculitis, atherosclerosis, thrombosis, and congenital disease; findings may include

unequal pulses, limb claudication, or neurologic symptoms.

Aortic Body

A small group of chemoreceptor cells near the aortic arch that helps sense blood oxygen and carbon dioxide.

Aortic Coarctation

Congenital narrowing of the aorta, usually near the insertion of the ductus arteriosus. It causes higher blood pressure and stronger pulses in the arms than in the legs, with a radio-femoral delay; severe neonatal disease may present with shock when the ductus closes.

Aortic Disease

Any disorder affecting the aorta, including aneurysm, dissection, narrowing, or inflammation.

Aortic Dissection

A tear in the inner layer of the aorta that allows blood to enter the wall and form a false channel. Stanford type A involves the ascending aorta; type B does not. Treatment depends on the type, symptoms, complications, and overall clinical condition.

Alternate Names:

Dissecting Aneurysm Dissection Aorta (Aortic Dissection)

Aortic Embolism

Obstruction of a systemic artery by material originating in the aorta, such as thrombus or atheromatous debris, causing distal ischemia.

Aortic Graft Infection

Infection involving a prosthetic or endovascular aortic graft, potentially causing sepsis, pseudoaneurysm, hemorrhage, or aortoenteric fistula. Management usually requires prolonged antimicrobial treatment and individualized surgical or endovascular source control.

Aortic Injury

Damage to the aorta, often caused by severe trauma

or a medical procedure.

Aortic Insufficiency

See *Aortic valve regurgitation*.

Aortic Regurgitation

Incomplete closure of the aortic valve allowing blood to flow backward from the aorta to the left ventricle during diastole. Causes include bicuspid aortic valve, endocarditis, aortic root dilation, hypertension, and connective tissue disorders. Murmur: early diastolic decrescendo murmur at the left sternal border.

Aortic Regurgitation Murmur

Early diastolic decrescendo murmur heard best at the left sternal border with the patient sitting up and leaning forward in end-expiration. Wide pulse pressure, water-hammer pulses (Corrigan pulse), de Musset sign (head bobbing with each pulse), and Duroziez sign (femoral bruit with compression).

Aortic Rupture

A life-threatening tear through the wall of the aorta causing internal bleeding.

Aortic Stenosis

Narrowing of the aortic valve opening, obstructing left ventricular outflow. It is the most common valvular disease in developed countries, usually caused by calcific degeneration. Symptoms include angina, syncope, and heart failure (SAD triad).

Aortic Stenosis Grading

Severity grading: mild (valve area >1.5 cm², mean gradient <20 mmHg), moderate (valve area 1.0-1.5 cm², mean gradient 20-40 mmHg), severe (valve area <1.0 cm², mean gradient >40 mmHg). Very severe (valve area <0.6 cm², mean gradient >60 mmHg) indicates critical stenosis. Grading guides timing of intervention.

Aortic Valve

A semilunar valve between the left ventricle and aorta, normally composed of right, left, and non-

coronary cusps. It opens during systole and closes during diastole to direct blood flow. Each cusp forms a sinus of Valsalva from which coronary arteries originate. Opens during systole; closes during diastole.

Aortic Valve Disease

Abnormal narrowing, leakage, or structural change of the valve between the left ventricle and aorta. It may cause chest pain, breathlessness, fatigue, fainting, or no symptoms initially. Evaluation commonly includes examination and echocardiography; severe disease may require specialist treatment.

Aortic Valve Insufficiency

Leakage of the aortic valve that allows blood to flow back into the left ventricle.

Aortic Valve Regurgitation

Backward leakage of blood through an incompletely closing aortic valve, which can make the heart work harder and eventually cause heart failure.

Alternate Names:

Regurgitation, Aortic Valve

Aortic Valve Stenosis

Narrowing of the aortic valve that obstructs blood flow from the left ventricle into the aorta.

Alternate Names:

Stenosis, Aortic Valve

Aortic Valve Surgery - Minimally Invasive

Aortic valve replacement performed through a small incision or port access, avoiding median sternotomy. It may be surgical or transcatheter and is used for aortic stenosis or regurgitation when a less invasive approach is appropriate.

Aortic Valve Surgery - Open

Open surgical replacement or repair of the aortic valve through median sternotomy, typically using a mechanical or bioprosthetic valve. It is indicated for severe aortic stenosis or regurgitation causing symptoms or left ventricular dysfunction.

Aortitis

Infectious or non-infectious inflammatory disease involving the aortic wall. Non-infectious etiologies are primarily large-vessel vasculitides, including giant cell arteritis (predominantly in patients older than 50 years) and Takayasu arteritis (predominantly in women younger than 40 years, historically termed pulseless disease), as well as IgG4-related systemic disease and ankylosing spondylitis. Infectious aortitis (mycotic aneurysm) results from bacteremic seeding (*Salmonella*, *Staphylococcus aureus*) or tertiary syphilis, which causes obliterative endarteritis of the vasa vasorum leading to ascending aortic dilation, tree-bark intimal wrinkling, and aortic root dilation. Evaluated using CT angiography, MR angiography, or FDG-PET; major complications include aortic regurgitation, pseudoaneurysm, dissection, and catastrophic rupture.

Aortography

Contrast imaging of aorta. Evaluates aneurysm, dissection, occlusion. Largely replaced by CTA/MRA.

Aortopulmonary Window

A congenital opening between the ascending aorta and pulmonary artery.

AP, X-Ray

An anteroposterior radiographic projection in which the X-ray beam travels from the front of the body toward the back.

Alkaline Phosphatase Activity

A measurement of alkaline phosphatase enzyme activity in the blood, used to help evaluate liver, bile-duct, or bone disorders. Results are interpreted with other liver tests and clinical findings.

APACHE II Score

Severity scoring system for critically ill patients incorporating physiological variables, age, and chronic health status to generate scores from zero to seventy-one. Higher scores indicate greater severity and higher mortality. In acute pancreatitis, scores of eight or greater indicate severe disease.

Apathy

Reduced motivation, interest, or emotional response. It may occur with depression, dementia, Parkinson disease, brain injury, other neurologic illness, or medicines and is different from simple tiredness or sadness.

Argon Plasma Coagulation

A procedure that uses ionized argon gas and electrical energy to coagulate tissue and control bleeding or treat some superficial abnormal tissue, often during endoscopy.

Alternate Names:

APC (argon plasma coagulation)

APC Tumor Suppressor

The adenomatous polyposis coli protein is a large multidomain tumor suppressor that functions as a critical negative regulator of the canonical Wnt signaling pathway.

Apert Syndrome

An autosomal dominant craniosynostosis syndrome caused by FGFR2 mutations (most commonly Ser252Trp or Pro253Arg).

Apex

The tip or pointed end of a structure; examples include the apex of the heart, formed mainly by the left ventricle, and the upper tip of a lung.

Apgar Score

A structured assessment of a newborn's appearance, pulse, grimace, activity, and respiration, usually recorded at 1 and 5 minutes after birth. It describes immediate adaptation after delivery and helps guide resuscitation; it is not a standalone diagnosis or long-term prognostic test.

Alternate Names:

Apgar assessment; newborn Apgar score.

Aphagia

Complete inability to swallow, which may result from neurologic disease, obstruction, severe pain, or loss of swallowing-muscle function.

Aphasia

Impairment of language comprehension or production resulting from brain damage, most commonly from stroke affecting the left hemisphere (dominant) language areas.

Aphasia, Primary Progressive

See *Primary progressive aphasia*.

Apheresis

A procedure that removes a selected blood component, such as plasma, platelets, or abnormal cells, and returns the remaining components to the patient or donor.

Apheresis Donation

A blood donation in which a machine collects one needed component, such as platelets or plasma, and returns the remaining blood components to the donor.

Aphonia

Complete loss of the ability to produce a voice. A person may still be able to whisper. Causes include vocal-cord paralysis, laryngitis, injury to the larynx, growths on the vocal cords, or psychological factors.

Aphrasia

Loss or impairment of the ability to speak, often used as an older or less precise term related to aphasia.

Aphthous Stomatitis

Recurrent painful ulcers of the oral mucosa with a shallow base and erythematous border, commonly known as canker sores.

Aphthous Ulcer

A recurrent, painful ulcer of the oral mucosa. See Canker Sore.

Apical

Relating to or located at the apex, or tip, of a structure such as the lung, heart, or tooth.

Apical Ballooning Syndrome

See *Broken heart syndrome*.

Apical Pulse

The heart rate measured by listening over the apex of the heart, usually at the left fifth intercostal space near the midclavicular line.

Apicoectomy

Surgical removal of root tip and periapical lesion. Indication: failed root canal therapy.

Aplasia

Complete failure of development of an organ, tissue, or cell line, resulting in absence or severe deficiency of the expected structure. It may arise from congenital developmental abnormalities, inherited disorders, injury to a precursor cell population, or severe marrow suppression. Examples include aplastic anemia, renal aplasia, and aplasia of selected hematopoietic or lymphoid cell lines. Clinical effects depend on the affected structure and may range from an incidental anatomic finding to life-threatening organ failure.

Aplastic

Describing failure of a tissue, especially bone marrow, to produce adequate cells; aplastic anemia causes pancytopenia from marrow failure.

Aplastic Anemia

A bone marrow failure syndrome characterized by pancytopenia (anemia, leukopenia, thrombocytopenia) and a hypocellular bone marrow with replacement by fat cells, resulting from immune-mediated destruction of hematopoietic stem cells.

Aplastic Crisis

An abrupt temporary cessation of red-cell production causing a rapid fall in hemoglobin and reticulocyte count. It most often follows Parvovirus B19 infection in people with shortened red-cell survival, such as those with sickle-cell disease or hereditary spherocytosis. Symptoms may include pallor, fatigue, tachycardia, and worsening anemia without the usual increase in reticulocytes. Diagnosis relies on blood counts, reticulocyte measurement, and

targeted viral testing; treatment is supportive and directed at the underlying disorder.

Apnea

Temporary cessation of breathing. Clinically important apnea may cause low oxygen, carbon-dioxide retention, or bradycardia.

Apnea Of Prematurity

Recurrent pauses in breathing in a premature infant, sometimes accompanied by bradycardia or oxygen desaturation. It may be central, obstructive, or mixed. Management includes monitoring and, when needed, respiratory stimulation or support.

Apnea Sleep (Sleep Apnea)

Sleep apnea consists of repeated pauses or reductions in breathing during sleep. Obstructive apnea results from upper-airway collapse, while central apnea reflects reduced respiratory drive; untreated disease can cause daytime sleepiness, impaired concentration, hypertension, and cardiovascular risk.

Apnea-Hypopnea Index

Number of apneas plus hypopneas per hour of sleep. Apnea = airflow cessation > 10 seconds. Hypopnea = partial obstruction with desaturation or arousal. AHI < 5 normal, 5–14 mild, 15–29 moderate, ≥ 30 severe.

Apneic

Relating to or characterized by apnea, meaning a temporary cessation of breathing.

Apneustic Breathing

A breathing pattern characterized by a prolonged inspiratory pause, seen in brainstem lesions (particularly the pons). It indicates damage to the apneustic center and is a poor prognostic sign in neurological injury. It may require mechanical ventilation.

Apnoea

Temporary cessation of breathing, defined as complete cessation of airflow for at least 10 seconds. Obstructive apnea: airway collapse despite respira-

tory effort (common in obstructive sleep apnea).

Apoenzyme

The protein component of an enzyme without its required cofactor or coenzyme. Inactive or minimally active until the cofactor binds. The complete, catalytically active complex of apoenzyme + cofactor is called the holoenzyme.

Apolipoprotein B100

The structural apolipoprotein on atherogenic particles such as LDL and VLDL; its concentration reflects the number of potentially atherogenic lipoprotein particles.

Apolipoprotein CII

A cofactor required to activate lipoprotein lipase, the enzyme that hydrolyzes triglycerides in circulating lipoproteins.

Apolipoproteins

Proteins associated with lipids in the blood that help transport and metabolize cholesterol and triglycerides.

Aponeurosis

A broad, flat sheet of connective tissue that attaches muscle to bone or other tissues.

Apophenia

The perception of meaningful patterns or connections in unrelated or random events; marked apophenia may occur in some psychiatric or neurologic conditions.

Apoplexy

An older term for sudden loss of neurologic function, historically referring to stroke and sometimes used for hemorrhage or infarction in an organ.

Apoptosis

Programmed cell death. Dysregulated in cancer (avoiding death). Pro-apoptotic genes: BAX, P53. Anti-apoptotic: BCL-2.

Apoptosis Extrinsic Pathway

The extrinsic pathway of apoptosis is triggered by extracellular ligands binding to death receptors belonging to the tumor necrosis factor receptor superfamily, including Fas (CD95), TNFR1, and TRAIL receptors DR4 and DR5.

Apoptosis Intrinsic Pathway

The intrinsic, or mitochondrial, pathway of apoptosis is initiated by intracellular stress signals including DNA damage, growth factor withdrawal, endoplasmic reticulum stress, and hypoxia.

Apoptotic Body

A membrane-bound fragment of a cell undergoing programmed cell death.

Apparent Mineralocorticoid Excess

Rare autosomal recessive disorder caused by deficiency of 11-beta-hydroxysteroid dehydrogenase type 2 normally converting cortisol to cortisone in the collecting duct. Cortisol activates mineralocorticoid receptors causing severe hypertension, hypokalemia, metabolic alkalosis, and low renin with low aldosterone.

Appendageal

Relating to skin appendages or structures derived from the skin, including hair follicles, sweat glands, and sebaceous glands.

Appendectomy

Surgical removal of the appendix, the most common emergency surgical procedure performed worldwide. Appendectomy is indicated for acute appendicitis, the most common surgical emergency with a lifetime risk of 7-8 percent and peak incidence between 10 and 30 years.

Appendiceal

Relating to the vermiform appendix, a narrow pouch projecting from the beginning of the large intestine.

Appendiceal Adenocarcinoma

A malignant gland-forming epithelial tumor of the

appendix. It may present with appendicitis or be discovered incidentally, and its management depends on histologic type, grade, invasion, and peritoneal spread.

Appendiceal Cancer

A malignant tumor arising in the appendix; types include neuroendocrine tumors and epithelial neoplasms, which can rupture or spread mucous-producing tumor cells within the abdomen.

Appendiceal Rupture

Tearing or perforation of an inflamed appendix, allowing intestinal contents to enter the abdomen and potentially causing peritonitis or an abscess.

Appendiceal Tumors

Neoplasms arising in the appendix, including neuroendocrine tumors, mucinous neoplasms, and adenocarcinoma. Some are found incidentally, whereas others cause pain, obstruction, or abdominal distention. Evaluation and treatment depend on the tumor type, size, spread, and pathologic features.

Appendicitis

Inflammation of the vermiform appendix, often caused by obstruction of its lumen. It may cause abdominal pain that moves to the right lower quadrant, nausea, loss of appetite, and fever; diagnosis and treatment depend on clinical assessment, laboratory tests, imaging, and complications.

Alternate Names:

Pain Lower Right Abdomen (Appendicitis)

Appendix

A blind-ended tubular diverticulum of the cecum, typically 6-10 cm long, rich in lymphoid tissue. Its position is variable (retrocecal, pelvic, or retroileal); the base usually projects near McBurney's point, one-third of the distance from the anterior superior iliac spine to the umbilicus.

Appendix Cancer

Cancer that begins in the appendix, including neuroendocrine tumors, mucinous tumors, and adenocarcinoma.

Appetite

The coordinated neuroendocrine drive and psychological desire to consume food, distinct from physiological hunger (the biological requirement for energy). Regulated in the arcuate nucleus of the hypothalamus by balancing orexigenic (appetite-stimulating) mediators—notably gastric ghrelin, neuropeptide Y, and agouti-related peptide (AgRP)—with anorexigenic (satiety-inducing) peptides—including adipose-derived leptin, pro-opiomelanocortin, glucagon-like peptide-1, peptide YY, and cholecystikinin. Pathologic extremes include anorexia (loss of appetite seen in cancer cachexia, chronic kidney disease, depression, and anorexia nervosa) and polyphagia or hyperphagia (excessive appetite in Prader-Willi syndrome, uncontrolled diabetes mellitus, and hypothalamic injury). Modulated pharmacologically with GLP-1 receptor agonists for obesity or appetite stimulants (mirtazapine, megestrol acetate) for cachexia.

Appetite - Decreased

Anorexia, or reduced desire to eat, may result from depression, infection, malignancy, chronic disease, medications, or psychological stress. Persistent unexplained appetite loss can cause unintentional weight loss and malnutrition. Evaluation considers duration, associated symptoms, and underlying etiology.

Appetite - Increased

Hyperphagia is abnormally increased hunger or food intake. It may result from endocrine disorders such as hyperthyroidism or diabetes mellitus, hypothalamic lesions, medications, psychological conditions, or recovery from illness. Persistent unexplained increase in appetite warrants clinical evaluation.

Appetite Regulation

Complex control by hormones (leptin, ghrelin, insulin, CCK), neural signals, psychological factors. Leptin signals satiety, ghrelin signals hunger.

Applied Behavior Analysis

A behavioral intervention based on learning principles that uses observation, measurement, and rein-

forcement to increase useful behaviors and reduce behaviors that interfere with functioning. It may be used in autism care and other settings, with goals individualized to the person.

Apposition

Placement of two structures next to or against each other; in wound care, good apposition means that tissue edges are accurately aligned.

Appropriate For Gestational Age

Describing a fetus or newborn whose estimated weight or size falls within the expected reference range for the gestational age, commonly between the 10th and 90th percentiles.

Apraxia

Inability to perform learned, skilled motor movements despite intact motor function, sensation, coordination, and comprehension.

Aquagenic Keratoderma

Transient, painful whitish thickening and wrinkling of the palms and soles occurring within minutes of water immersion, accompanied by a prickling or burning sensation. It is often associated with cystic fibrosis or other sweat gland disorders but can also be idiopathic or drug-induced. Symptoms resolve shortly after drying the skin.

Aquaporin

A membrane water-channel protein that permits rapid movement of water across cells; aquaporin-2 in kidney collecting ducts is regulated by vasopressin.

Aquatic Therapy

Exercise or rehabilitation performed in water, using buoyancy and resistance to support movement and conditioning.

Aqueous Humor

A clear, watery fluid that fills the anterior and posterior chambers of the eye, maintaining intraocular pressure and providing nutrients and oxygen to the avascular cornea and lens while removing metabolic

waste products.

Arachnodactyly

Abnormally long and slender fingers or toes. It may occur as an isolated trait or as a feature of connective-tissue disorders such as Marfan syndrome.

Arachnoid Cyst

A congenital, benign, cerebrospinal fluid-filled cyst within the arachnoid membrane, most commonly found in the middle cranial fossa. Most are asymptomatic and discovered incidentally on imaging, but large cysts may cause headache, seizures, or focal neurological deficits.

Arachnoid Mater

The middle of the three meninges, a delicate avascular membrane lying between the dura mater and pia mater. The subarachnoid space between arachnoid and pia contains cerebrospinal fluid (CSF) and major vessels. Arachnoid granulations (villi) project into the dural venous sinuses and mediate CSF resorption.

Arachnoiditis

Inflammation and scarring of the arachnoid membrane and nearby spinal nerves, often causing chronic pain or neurological symptoms.

Arbovirus

A virus transmitted by mosquitoes or other member of the arthropod phylum.

ARBs

Block angiotensin II AT1 receptors providing renoprotection similar to ACE inhibitors. Alternative for ACE inhibitor cough. Do not combine ACE inhibitor and ARB due to increased adverse effects without benefit. Similar renoprotective effects to ACE inhibitors.

Arciform

Having a curved or arch-like shape, used to describe the configuration of a skin lesion, rash, or other

anatomical finding.

Arcuate Uterus

A mild congenital uterine cavity variation characterized by a smooth, broad-based, saddle-shaped concavity of the fundal endometrium protruding < 1 cm into the uterine cavity, with a normal, convex external fundal contour. Arising from near-complete resorption of the uterovaginal septum, it is considered an anatomic variant with minimal or no adverse impact on reproductive outcomes or pregnancy loss.

Arcus Senilis (Corneal Arcus)

A white, gray, or bluish opaque ring in the peripheral corneal stroma separated from the limbus by a clear zone (lucid interval of Vogt). Caused by lipid (cholesterol) deposition in the peripheral cornea. Common and benign in elderly individuals (>60 years).

Alternate Names:

Corneal Arcus

Acute Respiratory Disease

A general term for a respiratory illness that begins suddenly or over a short period. It is not a specific diagnosis and may include infections or other conditions affecting breathing; it is different from acute respiratory distress syndrome (ARDS).

Alternate Names:

ARD

Area Under The Concentration-Time Curve

The integral of a drug's plasma concentration over time. AUC estimates total systemic exposure and is used to compare bioavailability, guide dosing for selected medicines, and characterize pharmacokinetic interactions.

Arenaviruses

See *Viral hemorrhagic fevers*.

Areola

The pigmented circular area surrounding the nipple.

It contains glands that help lubricate and protect the skin during breastfeeding.

Argentine Hemorrhagic Fever

See *Viral hemorrhagic fevers*.

Argininosuccinic Aciduria

Autosomal recessive urea cycle disorder caused by deficiency of argininosuccinate lyase (ASL gene, 7cen-q11.2). Biochemical hallmark: accumulation of argininosuccinic acid in blood, urine, and CSF with hyperammonemia, low citrulline, and elevated argininosuccinic acid.

Argyll Robertson Pupil

A small, irregular pupil that constricts during near focusing but responds poorly or not at all to light. It is classically associated with neurosyphilis but can have other causes; the finding requires clinical evaluation.

Arias-Stella Reaction

A hormonally induced atypical change in endometrial or endocervical glands during pregnancy or exposure to progestins; it is benign and can mimic glandular neoplasia histologically.

Arm

The upper limb between the shoulder and elbow; in everyday use, the term may also include the entire upper extremity.

Arm CT Scan

A computed tomography study that produces cross-sectional images of the arm using X-rays. It can identify structural abnormalities, injury, inflammation, bleeding, or masses.

Arm Fracture

See *Broken arm*.

Arm MRI Scan

A magnetic resonance imaging study that produces detailed images of the arm using magnetic fields and radiofrequency energy.

Arm Pain

Pain in the shoulder, upper arm, elbow, forearm, or related tissues. Causes include muscle or tendon injury, nerve compression, arthritis, vascular disease, and referred pain; sudden severe pain with chest discomfort, weakness, or shortness of breath requires urgent assessment.

Alternate Names:

Pain in the arm; upper-limb pain.

Armpit Lump

A lump or swelling in the axilla, commonly caused by an enlarged lymph node, skin infection, cyst, or benign growth. Persistent, hard, fixed, enlarging, or unexplained lumps require medical assessment.

Arnold-Chiari Malformation

Herniation of cerebellar tonsils through the foramen magnum into the upper cervical spinal canal. Type II (myelomeningocele-associated) is the most common form in pediatrics. Associated with hydrocephalus, syringomyelia, and spinal cord dysfunction. Symptoms include headache, neck pain, and lower cranial nerve palsies.

Aromatase

An enzyme that converts androgens into estrogens in tissues such as the ovaries, adipose tissue, and breast; it is inhibited by drugs such as anastrozole.

Aromatase Excess Syndrome

Rare autosomal dominant condition caused by mutations in the CYP19A1 gene leading to overexpression of aromatase enzyme and excessive estrogen production. Presents in males with gynecomastia, advanced bone age, and accelerated linear growth with early epiphyseal closure. In females with precocious puberty, macroclitoris, and virilization.

Aromatherapy

Use of essential oils or other plant-derived scents, usually by inhalation or topical application, for perceived relaxation or symptom relief; evidence and safety vary by oil and use.

Arousal Index

The number of brief awakenings or arousals from sleep per hour of sleep, usually measured during polysomnography; an elevated value may indicate sleep fragmentation.

Arrector Pili

A small involuntary smooth muscle attached to a hair follicle that contracts to raise the hair and produce gooseflesh.

Arrector Pili Muscle

A small band of involuntary smooth muscle attached to a hair follicle and the superficial dermis. Sympathetic stimulation causes it to contract, pulling the hair upright and producing temporary piloerection, commonly called goosebumps. Contraction also compresses nearby sebaceous glands and may help release sebum onto the skin.

Alternate Names:
goosebumps.

Arrest Cardiac (Sudden Cardiac Death)

Alternate index label for Sudden Cardiac Death.

Arrested Caries

A carious lesion that is no longer progressing, often because the surface has become hard, smooth, and cleansable. Arrested lesions may be monitored and remineralized; treatment depends on activity, cavitation, cleansability, and patient risk.

Arrhythmia

Any abnormality of cardiac rate, rhythm, or site of impulse origin, arising through enhanced automaticity, reentry, or triggered activity. Classified by rate as tachyarrhythmia or bradyarrhythmia and by site as supraventricular or ventricular. Diagnosis rests on the 12-lead ECG and ambulatory monitoring when intermittent.

Arrhythmias

Abnormal heart rhythms caused by altered impulse formation or conduction; they range from harmless premature beats to rhythms that impair circulation.

Arrhythmogenic Right Ventricular Cardiomyopathy

A genetic cardiomyopathy characterized by fibrofatty replacement of the right ventricular myocardium, predisposing to ventricular arrhythmias and sudden cardiac death, particularly during exercise. ECG shows T-wave inversions in V1-V3 and epsilon waves; diagnosis uses echocardiography, cardiac MRI, and genetic testing.

Arsenic

A naturally occurring metalloid that is toxic in many forms; exposure can cause gastrointestinal, neurologic, cardiovascular, and skin effects, while arsenic trioxide has specific therapeutic uses.

Arsenic Poisoning

Arsenic poisoning results from acute or chronic exposure to inorganic or organic arsenic. It can cause gastrointestinal illness, cardiovascular instability, neuropathy, characteristic skin changes, anemia, and increased cancer risk; suspected exposure requires poison-control or emergency guidance.

Alternate Names:
Poisoning Arsenic (Arsenic Poisoning)

Arsenic Toxicity

Systemic poisoning from arsenic exposure causing gastrointestinal distress, cardiac arrhythmias, peripheral neuropathy, and characteristic Mees lines on nails, requiring chelation therapy with dimercaprol or succimer.

Art Therapy

Use of art-making for therapeutic purposes. Emotional expression, coping, self-awareness.

Artemisinin

A plant-derived antimalarial compound from *Artemisia annua*; artemisinin derivatives are used in combination regimens, especially for falciparum malaria.

Arteria Femoralis

The femoral artery, the major artery of the thigh

and continuation of the external iliac artery below the inguinal ligament.

Arterial Blood Gas

Measurement of arterial pH, carbon-dioxide tension, oxygen tension, bicarbonate, and related acid-base variables. It helps assess ventilation, oxygenation, and metabolic or respiratory acid-base disorders.

Arterial Blood Gas

A test of arterial blood that measures pH, oxygen, carbon dioxide, and usually bicarbonate or related values to assess oxygenation, ventilation, and acid-base balance.

Arterial Blood Gas Analyzer

An analyzer that measures arterial pH, partial pressures of oxygen and carbon dioxide, and usually bicarbonate or calculated acid-base variables. It is used to assess ventilation, oxygenation, and metabolic or respiratory acid-base disorders.

Arterial Catheter

A catheter placed in an artery, commonly the radial artery, for continuous blood-pressure monitoring and repeated arterial blood sampling. Complications include hemorrhage, thrombosis, infection, and distal ischemia.

Arterial Catheterization

Placement of a catheter in an artery, usually the radial artery, for continuous blood-pressure measurement and repeated arterial blood sampling. It is used when rapid hemodynamic or gas-exchange assessment is clinically necessary and carries risks including bleeding, infection, thrombosis, and ischemia.

Arterial Duplex

Ultrasound technique combining B-mode imaging and Doppler flow assessment. Used for evaluating arterial stenosis, aneurysm, graft patency. Non-invasive, widely available.

Arterial Embolism

Sudden blockage of an artery by material carried through the bloodstream, usually a blood clot. It can cause acute limb, brain, kidney, intestinal, or other organ ischemia and requires urgent assessment.

Alternate Names:

Arterial Thromboembolism

Arterial Embolization

Intentional blockage of an artery, often to control bleeding or reduce blood supply to a tumor.

Arterial Injury

Damage to an artery that may cause bleeding, narrowing, clotting, or impaired blood flow.

Arterial Insufficiency

Reduced arterial blood flow to a tissue or limb, causing ischemic symptoms such as claudication, rest pain, cool skin, delayed capillary refill, and diminished pulses. Most commonly caused by atherosclerosis; assessed by ankle-brachial index and duplex ultrasound.

Arterial Line

A catheter inserted into a peripheral artery (most commonly radial, also femoral, brachial, dorsalis pedis) for continuous blood pressure monitoring and arterial blood gas sampling. Allen test: assesses ulnar collateral flow before radial artery cannulation.

Arterial Resistance

The opposition to blood flow produced mainly by the diameter and tone of small arteries and arterioles. It contributes to systemic vascular resistance and blood pressure.

Alternate Names:

Vascular resistance; systemic vascular resistance.

Arterial Stenosis

Pathologic narrowing of an arterial lumen that compromises downstream perfusion and tissue oxygenation. Most commonly caused by atheromatous plaque formation, followed by fibromuscular dysplasia.

sia (classically affecting renal and carotid arteries in young women with a string-of-beads angiographic appearance), vasculitis, radiation arteriopathy, or post-interventional neointimal hyperplasia. Hemodynamically significant stenosis typically exceeds 50–70% luminal diameter reduction, manifesting clinically as myocardial ischemia (angina pectoris), cerebral hypoperfusion (transient ischemic attack or stroke), renovascular hypertension (renal artery stenosis), or lower-extremity claudication and tissue loss in peripheral artery disease. Diagnosed via duplex Doppler ultrasonography, CT or MR angiography, or digital subtraction angiography; managed with medical risk-factor modification, antiplatelet therapy, percutaneous transluminal angioplasty with stenting, or surgical revascularization.

Arterial Stick

Needle puncture of an artery, usually to obtain blood for arterial blood-gas or related testing; bleeding and arterial injury are possible complications.

Arterial Switch Operation

The definitive anatomical surgical repair for complete D-transposition of the great arteries (D-TGA) with an intact ventricular septum or ventricular septal defect, routinely performed in the neonatal period (typically within the first 1 to 2 weeks of life before left ventricular deconditioning occurs). Involves transecting both great arteries above the sinuses of Valsalva, transposing them to their anatomically appropriate ventricles (connecting the neo-aorta to the left ventricle and the neopulmonary artery to the right ventricle), translocating the pulmonary artery confluence anterior to the neo-aorta via the Lecompte maneuver, and delicately excising and reimplanting the coronary artery buttons into the neo-aortic root.

Alternate Names:

Jatene Procedure; ASO

Arterial Tension

The pressure or partial pressure measured in arterial blood; depending on context, it may refer to blood pressure or to the tension of an arterial gas such as oxygen or carbon dioxide.

Arterial Thromboembolism

Alternate index label; see *Arterial embolism*.

Arterial Thrombosis

The formation of an occlusive or mural blood clot within an arterial lumen, most commonly triggered by atherosclerotic plaque rupture or erosion exposing subendothelial collagen and tissue factor. Under high arterial shear conditions, this leads to rapid platelet activation and aggregation, yielding a platelet-rich white clot. Represents an acute, organ-threatening emergency resulting in tissue infarction: acute coronary syndromes (STEMI/NSTEMI), ischemic stroke, acute mesenteric ischemia, or acute limb ischemia characterized by the classic 6 Ps (pain, pallor, pulselessness, paresthesias, paralysis, and poikilothermia). Treatment requires immediate systemic anticoagulation with intravenous unfractionated heparin, antiplatelet therapy, and emergency revascularization via percutaneous catheter-directed thrombectomy, catheter-directed thrombolysis, or surgical thromboembolectomy.

Arterial Ulcer

A chronic wound caused by arterial insufficiency (peripheral artery disease). Located on distal extremities: toes, heels, lateral malleolus, and sites of pressure. Presents with punched-out, deep, well-demarcated wound with pale or necrotic base, minimal exudate, and cool, hairless, shiny skin.

Arteries

Blood vessels that carry blood away from the heart. Most arteries carry oxygenated blood, except the pulmonary and umbilical arteries; their walls contain elastic tissue and smooth muscle to withstand and regulate pressure.

Alternate Names:

arterial vessels

Arteriogram

An imaging study of blood vessels that uses contrast material to identify narrowing, blockage, aneurysm, or abnormal blood flow.

Arteriole

A small artery that delivers blood to a capillary bed. Arteriolar smooth muscle regulates vascular resistance and controls tissue perfusion and systemic blood pressure.

Arterioles

Small branches of arteries that regulate blood flow into capillary beds through contraction and relaxation of their smooth muscle.

Alternate Names:

Resistance vessels; small arteries.

Arteriosclerosis

Chronic inflammatory disease of medium and large arteries characterized by accumulation of lipids, inflammatory cells, and fibrous tissue within the arterial wall, forming atherosclerotic plaques. See Atherosclerosis.

Arteriosclerosis / Atherosclerosis

Arteriosclerosis is hardening and thickening of arteries; atherosclerosis is plaque buildup within artery walls that can restrict blood flow.

Arteriosclerotic Retinopathy

Retinal vascular changes associated with thickening or hardening of small arteries, often occurring with chronic hypertension or atherosclerotic disease.

Arteriovenous Fistula

An abnormal connection between an artery and a vein. It may be present from birth, caused by an injury or procedure, or created for hemodialysis. A large fistula can put extra strain on the heart.

Arteriovenous Graft

Synthetic conduit connecting artery to vein for dialysis. Used when veins inadequate for fistula. Thrombosis and infection more common than AVF. Can be used earlier than fistula. Dec clotting with thrombectomy or angioplasty.

Arteriovenous Malformation

Abnormal connection between artery and vein with-

out capillary bed. Can bleed or cause symptoms.

Arteriovenous Malformation

An abnormal tangle of arteries and veins connected without the normal capillary bed; an AVM can bleed, cause seizures or neurologic symptoms, or produce high-flow complications.

Arteritis

Inflammation of the arterial wall occurring as part of primary systemic vasculitides, secondary autoimmune disorders, or localized infections. Classified by vessel caliber: large-vessel (giant cell arteritis, Takayasu arteritis), medium-vessel (polyarteritis nodosa, Kawasaki disease), and small-vessel (ANCA-associated vasculitides, IgA vasculitis). Manifestations include constitutional symptoms (fever, weight loss), localized ischemic pain (claudication, jaw claudication), absent pulses, and ischemic tissue infarction. Diagnosis relies on inflammatory markers, vessel imaging (CTA, MRA, catheter angiography), and definitive histopathologic tissue biopsy (such as temporal artery biopsy demonstrating granulomatous inflammation); managed acutely with high-dose corticosteroids, disease-modifying antirheumatic drugs (DMARDs), or targeted biologics (e.g., tocilizumab).

Arteritis, Giant Cell

See *Giant cell arteritis*.

Arteritis, Takayasu's

See *Takayasu's arteritis*.

Artery

A blood vessel that carries oxygenated blood away from the heart to the tissues, except for the pulmonary arteries which carry deoxygenated blood to the lungs. Arteries have thick, elastic, muscular walls that withstand high pressure and distribute blood throughout the body. The aorta is the largest artery.

Artery Occlusion

A blockage in an artery, often caused by a blood clot, fatty buildup, or material that traveled from

elsewhere. It can cut off blood flow; sudden pain, pale or cold skin, numbness, weakness, or no pulse is an emergency.

Arthralgia

Pain in one or more joints without objective evidence of joint inflammation such as swelling, warmth, or structural damage. Common causes include viral infections, overuse, autoimmune disease, and early degenerative change; persistent, severe, or multifocal pain warrants clinical evaluation.

Arthritis

Inflammation of one or more joints, characterized by joint pain, swelling, warmth, and stiffness.

Alternate Names:

Joint Inflammation (Arthritis)

Arthritis Ankylosing Spondylitis (Ankylosing Spondylitis)

Alternate index label for Ankylosing Spondylitis.

Arthritis Degenerative (Osteoarthritis)

Alternate index label for Osteoarthritis.

Arthritis Gout (Gout (Gouty Arthritis))

Alternate index label for Gout (Gouty Arthritis).

Arthritis Infectious (Septic Arthritis)

Alternate index label for Septic Arthritis.

Arthritis Juvenile (Juvenile Arthritis)

Alternate index label for Juvenile Arthritis.

Arthritis Lyme (Lyme Disease)

Alternate index label for Lyme Disease.

Arthritis MCTD (Mixed Connective Tissue Disease)

Alternate index label for Mixed Connective Tissue Disease.

Arthritis Plant Thorn (Plant Thorn

Synovitis)

Alternate index label for Plant Thorn Synovitis.

Arthritis Pseudogout (Pseudogout)

Alternate index label for Pseudogout.

Arthritis Psoriatic (Psoriatic Arthritis)

Alternate index label for Psoriatic Arthritis.

Arthritis Quackery (Quackery Arthritis)

Alternate index label for Quackery Arthritis.

Arthritis Reactive (Reactive Arthritis)

Alternate index label for Reactive Arthritis.

Arthritis Reiters (Reactive Arthritis)

Alternate index label for Reactive Arthritis.

Arthritis Sarcoid (Sarcoidosis)

Alternate index label for Sarcoidosis.

Arthritis Scleroderma (Scleroderma)

Alternate index label for Scleroderma.

Arthritis Sjogrens Syndrome (Sjogren's Syndrome)

Alternate index label for Sjogren's Syndrome.

Arthritis SLE (Systemic Lupus)

Alternate index label for Systemic Lupus.

Arthritis Still (Still's Disease)

Alternate name; see *Still Disease*.

Arthritis, Basal Joint

See *Thumb arthritis*.

Arthritis, Degenerative

See *Osteoarthritis*.

Arthritis, Gouty

See *Gout*.

Arthritis, Infectious

See *Septic arthritis*.

Arthritis, Juvenile Idiopathic

See *Juvenile idiopathic arthritis*.

Arthritis, Osteoarthritis

See *Osteoarthritis*.

Arthritis, Psoriatic

See *Psoriatic arthritis*.

Arthritis, Reactive

See *Reactive arthritis*.

Arthritis, Rheumatoid

See *Rheumatoid arthritis*.

Arthritis, Septic

See *Septic arthritis*.

Arthritis, Thumb

See *Thumb arthritis*.

Arthrocentesis

Aspiration of joint fluid for diagnostic or therapeutic purposes. Indications: septic arthritis (urgent, crystals), inflammatory arthritis (gout, pseudogout), hemorrhagic effusion (trauma, coagulopathy), and therapeutic drainage for symptomatic relief.

Arthrodesis

Surgical fusion of a joint by removing or preparing articular surfaces and stabilizing the bones until osseous union occurs. It relieves pain and provides stability at the cost of joint motion.

Arthrolysis

A procedure that releases scar tissue, adhesions, or other restrictions around a joint to improve movement. It may be performed through an arthroscope or by open surgery, depending on the joint, cause of stiffness, and clinical circumstances.

Arthrogram

An image of a joint obtained after contrast material is introduced into or around the joint, used to evaluate structures such as cartilage, ligaments, or the joint capsule.

Arthrography

Contrast injected into joint for imaging. Used for shoulder, knee, hip evaluation. MR arthrography more common now.

Arthrogryposis

A group of congenital disorders characterized by multiple joint contractures present at birth, caused by decreased fetal movement (fetal akinesia) during development.

Arthrogryposis Multiplex Congenita

A group of congenital conditions characterized by multiple joint contractures present at birth, often with muscle weakness or abnormal development of nerves, muscles, or connective tissue.

Arthropathy

Any pathologic disorder or structural disease affecting a synovial joint or articulation. Broadly categorized into inflammatory arthropathies (rheumatoid arthritis, seronegative spondyloarthropathies, crystal-induced arthropathies like gout and pseudogout), non-inflammatory degenerative arthropathies (osteoarthritis / degenerative joint disease), neuropathic arthropathies (Charcot joint secondary to sensory denervation in diabetic neuropathy, tabes dorsalis, or syringomyelia), and hemophilic arthropathy (resulting from recurrent intra-articular hemarthroses). Differentiated clinically through detailed joint examination (swelling, warmth, range of motion), synovial fluid analysis (clarity, cell count, crystals, Gram stain), and radiography.

Alternate Names:

Joint disease

Arthroplasty

Surgical reconstruction or replacement of a joint to relieve pain, restore alignment, or improve function. It may be partial or total and is commonly

performed for advanced degenerative joint disease, fracture, inflammatory arthritis, or other destructive joint conditions.

Arthropod Vector

An arthropod, such as a mosquito or tick, that transmits an infectious agent between hosts.

Alternate Names:

Disease vector

Arthroscope

A small illuminated instrument used to view the inside of a joint.

Arthroscopy

Minimally invasive joint visualization and intervention via a rigid arthroscope inserted through small portals, used for meniscal and ligamentous repair, chondroplasty, loose body removal, and synovectomy.

Arthrosis

Degenerative disease of a joint, characterized by progressive cartilage loss and changes in the underlying bone; osteoarthritis is the most common example.

Arthus Reaction

A localized immune-complex reaction causing inflammation at the site of antigen exposure.

Alternate Names:

AI

Articular Cartilage

Smooth cartilage covering the ends of bones within a joint, allowing low-friction movement and distributing load.

Articular Cartilage Injuries

Chondral/osteochondral lesions: Outerbridge grading (I: softening, II: fibrillation <50%, III: fibrillation >50%, IV: subchondral bone exposed). OCD (osteochondritis dissecans): subchondral bone necrosis, fragment separation (knee: lateral femoral condyle, elbow: capitellum, ankle: talar dome).

Articular Ligament

A band of connective tissue that stabilizes a joint by connecting bone to bone.

Alternate Names:

Joint ligament

Articulation

A joint or connection between bones; the term also refers to the production and clarity of speech sounds by the vocal organs.

Artifacts

Image distortions not representing true anatomy. Types: motion, beam hardening, metal, aliasing, partial volume. Recognition important for accurate interpretation.

Artificial Abortion

An induced termination of pregnancy using medication, a procedure, or both, rather than a spontaneous miscarriage.

Artificial Heart

A mechanical device that replaces or supports the pumping function of the heart.

Artificial Insemination

Placement of sperm into the reproductive tract by a medical procedure to assist conception.

Alternate Names:

Intrauterine insemination

Artificial Insemination By Donor

Intrauterine insemination using sperm from a donor other than the intended mother's partner to attempt fertilization and pregnancy.

Artificial Insemination By Husband

Therapeutic placement of washed, motile sperm obtained from a woman's husband or male partner directly into the uterine cavity (intrauterine insemination [IUI]) to facilitate conception in mild male-factor subfertility, cervical mucus hostility, or unexplained infertility; also termed homologous insemination.

Artificial Pacemaker

An implanted device that delivers electrical impulses to maintain an appropriate heart rate when the heart's natural conduction system is inadequate.

Artificial Rupture Of Membranes

The intentional rupture of the amniotic sac with a small hook-like instrument (Amnihook) during a cervical exam to induce or augment labor. Indications: induction or augmentation of labor, placement of internal monitors (fetal scalp electrode, intrauterine pressure catheter), and assessment of amniotic fluid (meconium staining).

Artificial Saliva

A product used to moisten the mouth and relieve symptoms of dry mouth.

Alternate Names:

Saliva substitute

Artificial Skin

A biological or synthetic material used to cover wounds and support skin regeneration.

Alternate Names:

Skin substitute

Artificial Urinary Sphincter

An implanted device that restores urinary continence by allowing controlled compression and release of the urethra. It is used mainly for selected cases of stress urinary incontinence and requires surgical placement and follow-up.

Artificial Ventricle (Total Artificial Heart)

A pulsatile, pneumatically or electrically driven biventricular replacement that removes the native ventricles. Indications: end-stage heart failure bridging to transplant or destination therapy. Requirements: surgical implantation, external power source, anticoagulation.

Alternate Names:

Total Artificial Heart

Arytenoid Cartilage

The arytenoid cartilages are a pair of small, pyramid-shaped cartilages located on the posterior aspect of the larynx, articulating with the superior border of the cricoid cartilage lamina, and they serve as the attachment points for the vocal cords and the intrinsic laryngeal muscles that control vocal cord movement.

ASA Physical Status Classification System

A system developed by the American Society of Anesthesiologists to assess and communicate a patient's pre-operative physical status and comorbidities. It ranges from ASA I (a normal healthy patient) to ASA VI (a declared brain-dead patient whose organs are being removed for donor purposes).

Asbestos-Related Disorders

Asbestos exposure can cause pleural plaques, diffuse pleural thickening, asbestosis, lung cancer, and mesothelioma after a long latency. Risk increases with cumulative exposure and smoking, and evaluation may include occupational history, imaging, and lung-function testing.

Asbestosis

Diffuse pulmonary fibrosis caused by prolonged inhalation of asbestos fibers. It may cause progressive shortness of breath and increases the risk of lung cancer and mesothelioma.

Ascariasis

Infection with the soil-transmitted roundworm *Ascaris lumbricoides*, usually acquired by swallowing eggs from contaminated soil, food, or water. It may cause no symptoms, abdominal problems, intestinal blockage, or cough during larval migration and is treated with antiparasitic medicine.

Ascending Aorta

From left ventricle at the aortic valve to the sternal angle (approximately 5 cm), enclosed in pericardium. Gives rise to right/left coronary arteries at the aortic sinuses. Most common site of aneurysm and dissection, especially in Marfan syndrome, bicuspid

aortic valve, and hypertension.

Ascending Aortic Aneurysm

Abnormal enlargement of the ascending portion of the aorta. It may be associated with a bicuspid aortic valve, connective-tissue disease, hypertension, or atherosclerosis.

Ascending Cholangitis

An acute, life-threatening infection of the biliary tract caused by the combination of biliary outflow obstruction (often by choledocholithiasis or stricture) and bacterial superinfection. Classic presentation includes Charcot's triad (fever, jaundice, right upper quadrant pain), which may progress to Reynolds' pentad with hypotension and altered mental status.

Alternate Names:

Acute cholangitis; Acute suppurative cholangitis

Ascending Colon

Extends from cecum to hepatic flexure below the liver, approximately 15-20 cm, retroperitoneal (fixed to posterior abdominal wall). Anteriorly: abdominal wall. Posteriorly: right kidney. Absorbs water/electrolytes and compacts fecal matter. Tumors may present as a palpable right-sided mass.

Ascites

Abnormal buildup of fluid in the abdominal cavity, which can cause abdominal swelling. It is most often caused by high blood pressure in the liver's portal veins due to cirrhosis, but it may also result from cancer, heart failure, kidney disease, or pancreatitis.

Ascitic Fluid

Fluid that collects in the space around the abdominal organs, called ascites. Common causes include cirrhosis, cancer, heart failure, and infection; new or painful fluid, especially with fever or confusion, may need testing with paracentesis.

Alternate Names:

Ascites

Ascorbic Acid

Vitamin C, a water-soluble vitamin needed for collagen formation, wound healing, antioxidant activity, and normal immune and connective-tissue function.

Ascus

An abbreviation for atypical squamous cells of undetermined significance, a Pap-test finding in which cervical squamous cells are abnormal but not clearly precancerous.

Aseptic

Free from disease-causing microorganisms, or performed using methods intended to prevent microbial contamination; it does not necessarily mean sterile.

Aseptic Loosening

Loss of fixation of an implant without active infection, commonly caused by mechanical stress and a biologic response to wear particles. It may cause pain, radiographic lucency, instability, and need for revision surgery.

Aseptic Meningitis

Inflammation of the meninges without evidence of typical bacterial meningitis, often caused by viruses or medicines.

Aseptic Necrosis

See *Avascular necrosis (osteonecrosis)*.

Alternate Names:

Avascular Necrosis (Aseptic Necrosis)

Aseptic Technique

A set of laboratory practices preventing contamination of sterile sites, cultures, and specimens by unwanted microorganisms. Key elements include hand hygiene, sterile fields and instruments, surface disinfection, and minimal exposure of sterile items to air and touch, forming the basis of reliable clinical and culture work.

Asherman Syndrome

Intrauterine adhesions or scar tissue that partially or completely obliterate the uterine cavity, most

often after uterine instrumentation or pregnancy-related curettage. It may cause hypomenorrhea or amenorrhea, infertility, recurrent miscarriage, or abnormal placentation.

Ashman Phenomenon

A physiological, rate-dependent form of aberrant intraventricular conduction (most frequently displaying a right bundle branch block morphology, owing to the inherently longer refractory period of the right bundle branch) that occurs when a short R-R interval immediately follows a long R-R interval. Classically observed in atrial fibrillation or atrial premature complexes, it occurs because the refractory period of the His-Purkinje system is directly proportional to the duration of the preceding cardiac cycle length (the preceding long cycle prolongs bundle refractoriness, causing the early impulse ending the short cycle to find one bundle branch still refractory). Differentiated from ventricular premature complexes by normal initial QRS vector and absence of a compensatory pause.

Alternate Names:

Ashman's Phenomenon; Aberrant Intraventricular Conduction

ASL

American Sign Language, a visual language used by many Deaf and hard-of-hearing people.

ASOT

Antistreptolysin O titer, a blood test measuring antibodies to streptolysin O produced by group A *Streptococcus*.

Asp

The standard amino-acid abbreviation for aspartic acid, an acidic amino acid incorporated into proteins and involved in cellular metabolism.

Aspartame

A low-calorie artificial sweetener made from two amino-acid components; people with phenylketonuria must avoid it because it provides phenylalanine.

Aspartate Aminotransferase

An enzyme found mainly in the liver, heart, and skeletal muscle; increased blood AST can indicate injury to these tissues, especially liver injury.

Aspartate Aminotransferase Blood Test

A laboratory test that measures serum AST activity, an enzyme present in liver, heart, skeletal muscle, and red blood cells. Elevated AST indicates tissue injury and, when interpreted with ALT, helps evaluate hepatocellular damage, myocardial infarction, or muscle disease.

Aspartic Acid

A nonessential amino acid incorporated into proteins and involved in the urea cycle, nucleotide synthesis, and other metabolic pathways. It is not the same as aspartame, an artificial sweetener that contains aspartic acid.

Asperger Syndrome

A former diagnostic term for a neurodevelopmental condition characterized by persistent social-communication difficulties and restricted or repetitive interests or behaviors, without the intellectual or language impairment traditionally associated with classic autism. Current diagnostic systems generally classify it within autism spectrum disorder; support is individualized.

Alternate Names:

Disorder Asperger (Asperger Syndrome) Syndrome
Asperger (Asperger Syndrome)

Aspergillosis

A spectrum of diseases caused by the fungus *Aspergillus* (most commonly *A. fumigatus*). Allergic forms: allergic bronchopulmonary aspergillosis (ABPA, in asthma or cystic fibrosis – wheezing, eosinophilia, pulmonary infiltrates), allergic *Aspergillus* sinusitis.

Alternate Names:

Aspergillus Infection (Aspergillosis)

Aspergillosis Precipitin

An antibody test that may support evaluation of exposure or immune response to *Aspergillus*; results

must be interpreted with symptoms, imaging, and other tests.

Aspergillus Infection (Aspergillosis)

Alternate index label for Aspergillosis.

Asphalt Cement Poisoning

Toxic effects caused by excessive exposure to asphalt cement products. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Asphyxia

A life-threatening lack of oxygen due to drowning, choking, or an obstruction of the airways. Management: remove obstruction, rescue breathing, CPR if needed. Foreign body airway obstruction: Heimlich maneuver (abdominal thrusts) for conscious adults; back blows and chest thrusts for infants.

Asphyxia Neonatorum

Failure of a newborn to establish adequate breathing at or shortly after birth.

Alternate Names:

Birth asphyxia

Aspirate

To withdraw fluid, cells, or tissue with suction, usually through a needle; to aspirate can also mean to inhale material into the airway.

Aspirate (Substance)

Material withdrawn from a body cavity, lesion, or airway by suction.

Alternate Names:

Aspirated material

Aspiration

The inhalation of foreign material (oropharyngeal secretions, gastric contents, food, liquid, or blood) into the larynx and lower respiratory tract. Aspiration pneumonitis (Mendelson syndrome) is a chemical lung injury caused by acidic gastric fluid.

Aspiration Pneumonia

Infectious pneumonia from aspiration of oropharyngeal secretions. Risk factors: dysphagia, impaired consciousness, enteral feeding. Common pathogens: anaerobes, gram-negative bacilli. Treatment: antibiotics covering oral flora.

Aspiration Pneumonitis

Chemical lung injury caused by inhalation of gastric contents, characterized by bronchospasm, hypoxemia, pulmonary edema, and atelectasis. Risk factors include full stomach, emergency surgery, obesity, pregnancy, gastroesophageal reflux, bowel obstruction, and decreased consciousness.

Aspiration Risk

The likelihood that food, liquid, saliva, or gastric contents will enter the larynx or lower respiratory tract. Risk rises with dysphagia, delirium, stroke, neuromuscular disease, reflux, poor dentition, and reduced consciousness; assessment and prevention are multidisciplinary.

Aspirin (Salicylate) Toxicity

Mixed respiratory alkalosis and metabolic acidosis. Early: tinnitus, hyperventilation, respiratory alkalosis. Late: metabolic acidosis, fever, seizures, coma. Treatment: activated charcoal, urine alkalinization (sodium bicarbonate), hemodialysis if severe (renal failure, pulmonary edema, severe acidosis, very high levels).

Alternate Names:

Salicylate

Aspirin And Heart Disease

Aspirin inhibits platelet aggregation and may prevent recurrent cardiovascular events in selected patients; routine primary prevention requires individualized assessment of benefit and bleeding risk.

Aspirin Overdose

Toxic effects caused by excessive exposure to Aspirin. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Aspirin-Exacerbated Respiratory Disease

A triad of asthma, nasal polyps, and aspirin sensitivity due to COX-1 inhibition. It involves overproduction of cysteinyl leukotrienes. Leukotriene receptor antagonists are specifically effective.

Assay

A laboratory procedure used to detect or measure a substance, activity, or biological response.

Assist-Control Ventilation

Ventilator delivers a set tidal volume at a set rate. Every breath receives the full set volume. Guarantees minimum rate and minute ventilation. Risk of respiratory alkalosis and auto-PEEP.

Assisted Breech Delivery

Vaginal breech delivery with operator assistance after spontaneous delivery to the umbilicus.

Assisted Circulation

Mechanical or procedural support used to maintain blood flow when the heart cannot pump adequately.

Alternate Names:

Mechanical circulatory support

Assisted Delivery With Forceps

Obstetric application of metal forceps to the fetal head during the second stage of labor to facilitate delivery when progress is arrested. Indications include prolonged second stage, fetal distress, or maternal exhaustion; complications include maternal lacerations and fetal facial nerve palsy.

Assisted Living

Residential setting with assistance for ADLs. Less intensive than nursing home.

Assisted Reproductive Technology

ART: fertility treatments involving manipulation of oocytes/sperm/embryos: in vitro fertilization (IVF), intracytoplasmic sperm injection (ICSI), intrauterine insemination (IUI, some definitions), embryo cryopreservation, gamete donation, and surrogacy.

Assistive Device

Equipment that helps a person perform activities, move safely, communicate, or maintain independence.

Assistive Device Training

Instruction in selecting, fitting, using, and maintaining devices such as walkers, canes, or crutches, including safe walking and stair techniques.

Association

A relationship or co-occurrence between two variables, findings, or conditions; association alone does not prove that one causes the other.

Association Cortex

Cerebral cortex involved in integrating information and supporting memory, language, judgment, and complex behavior.

Association Study

Comparison of allele frequencies between cases and controls. Genome-wide association studies (GWAS) identify common variants with small effects on complex diseases.

Astereognosis

Inability to identify an object by touch alone despite intact primary somatosensory modalities (touch, vibration, proprioception), indicating dysfunction of the contralateral parietal association cortex (typically the postcentral gyrus region or the dominant inferior parietal lobule).

Asterixis

Brief, irregular, non-rhythmic lapse of sustained posture causing a flapping movement, best elicited by asking the patient to hold the arms extended with wrists dorsiflexed ("hold arms up") for 30 seconds.

Asthenia

Abnormal lack of physical strength or energy. It is a symptom that may occur with illness, malnutrition, or medication effects.

Asthenic

Characterized by reduced strength or a slender, lightly built body habitus; in clinical descriptions it may refer to physical weakness or, less precisely, an asthenic constitution and should be distinguished from asthenia as a symptom.

Asthenopia

Eye strain or visual fatigue, often experienced as aching, burning, blurred vision, headache, or difficulty focusing after prolonged visual tasks. Refractive errors, dry eye, poor lighting, and extended screen use may contribute.

Asthenozoospermia

Reduced sperm motility, which may contribute to difficulty conceiving.

Alternate Names:

Asthenospermia

Asthma

A chronic inflammatory disorder of the airways characterized by recurrent episodes of wheezing, breathlessness, chest tightness, and cough. Airflow limitation is often reversible. It involves eosinophilic inflammation, mucus hypersecretion, and smooth muscle hypertrophy.

Asthma - Control Drugs

Long-term asthma medicines, especially inhaled corticosteroids, reduce airway inflammation and prevent exacerbations; they do not replace a rapid-relief medicine for acute symptoms.

Asthma - Quick-Relief Drugs

Rapid-relief asthma medicines, commonly inhaled short-acting beta-2 agonists, relax bronchial smooth muscle for prompt symptom relief; frequent use signals inadequate control.

Asthma Adult-Onset (Adult-Onset Asthma)

Alternate index label for Adult-Onset Asthma.

Asthma And School

School-based asthma care includes an action plan, access to prescribed rescue medicine, trigger reduction, and staff training to recognize worsening breathing.

Asthma Attack

A sudden worsening of asthma caused by increased airway narrowing and inflammation.

Asthma Complexities

Asthma varies in trigger, severity, airway inflammation, and response to treatment. Difficult-to-control symptoms may reflect poor inhaler technique, ongoing exposure, incorrect diagnosis, comorbid disease, or severe asthma requiring specialist assessment.

Asthma Exacerbation

An acute or subacute worsening of asthma symptoms and airflow limitation, typically causing increased wheeze, cough, chest tightness, or breathlessness.

Asthma Medications

Asthma medicines include controller treatments that reduce airway inflammation and reliever treatments that quickly relax airway muscle. The regimen is guided by symptom frequency, lung function, exacerbation risk, age, pregnancy, technique, and response.

Asthma Overview

Asthma is a chronic disorder of variable airway inflammation and narrowing that causes wheezing, cough, chest tightness, or breathlessness. Symptoms fluctuate with triggers, and management combines an individualized action plan, inhaled medicines, trigger reduction, and monitoring.

Alternate Names:

Bronchial Asthma (Asthma Overview)

Asthma, Exercise-Induced

See *Exercise-induced asthma*.

Asthma, Occupational

See *Occupational asthma*.

Asthma-COPD Overlap

Features of both asthma and COPD in the same patient. Characterized by persistent airflow limitation with features of both diseases: airway inflammation (eosinophilic and neutrophilic), bronchial hyperresponsiveness, and partially reversible obstruction. Treatment: inhaled corticosteroids plus long-acting bronchodilators.

Asthma: Over The Counter Treatment

Over-the-counter products do not replace prescription asthma evaluation or a rescue plan. Some may temporarily relieve symptoms but can delay treatment of dangerous airway obstruction; worsening breathlessness, difficulty speaking, cyanosis, or poor response to a reliever is an emergency.

Alternate Names:

Asthma OTC Medication (Asthma: Over The Counter Treatment)

Astigmatism

A refractive error caused by an irregular curvature of the cornea or lens, resulting in light rays being focused at multiple points rather than a single point on the retina, leading to blurred or distorted vision at all distances.

Astigmatism Overview

Astigmatism is an irregular curvature of the cornea or lens that prevents light from focusing at one retinal point. It can cause blurred or distorted vision, eyestrain, and headaches and is corrected with glasses, contact lenses, or selected procedures.

Astringent

A substance that contracts tissue and reduces secretions or minor bleeding.

Astrocyte

A star-shaped glial cell that supports neurons, maintains the blood-brain barrier, and regulates the nervous-system environment.

Astrocytoma

A glioma arising from star-shaped cells called astrocytes. Graded I-IV by the WHO; grade IV (glioblastoma) is the most aggressive and common primary malignant brain tumor in adults.

Asymmetrical

Unequal in shape, size, distribution, or appearance between corresponding sides; asymmetry of a pigmented lesion can be a warning feature requiring assessment.

Asymptomatic

Having a disease, infection, or abnormal finding without noticeable symptoms. A person may still have detectable disease, develop complications, or transmit an infection; asymptomatic is different from presymptomatic, when symptoms develop later.

Asymptomatic Adults

Adults who report no symptoms attributable to the condition or disease being assessed. Asymptomatic status does not exclude subclinical disease, risk factors, or early pathology. Evaluation may involve history, examination, screening tests, or targeted investigations according to age, risk, and clinical guidelines. The term is used in screening, preventive medicine, epidemiology, and studies of disease detected before symptoms develop.

Asymptomatic Bacteriuria

Bacteria detected in urine without urinary symptoms; treatment is selective, such as during pregnancy or before certain urologic procedures.

Asymptomatic Bacteriuria In Pregnancy

The presence of significant bacterial growth in a pregnant person's urine without urinary symptoms. It is identified by urine culture and is treated because it increases the risk of symptomatic urinary infection and kidney infection during pregnancy.

Asymptomatic Carrier

A person who harbors a pathogen and can potentially transmit it despite having no symptoms of

the associated infection.

Asymptomatic HIV Infection

HIV infection without current symptoms; ongoing viral replication can damage immunity, so diagnosis, monitoring, and antiretroviral treatment remain important.

Asymptomatic Infections

Infections in which the person does not notice or develop symptoms, although the pathogen may still be detectable and may sometimes cause complications or be transmitted to others. This differs from presymptomatic infection, in which symptoms develop later.

Alternate Names:

Subclinical infections

Asystole

Complete cessation of cardiac electrical activity, presenting as a flat line on the ECG with no QRS complexes, P waves, or other organized electrical activity.

Ataxia

Lack of voluntary coordination of muscle movements, resulting from dysfunction of the cerebellum, posterior columns, or peripheral nerves. Types: cerebellar (gait and limb ataxia, dysarthria, nystagmus), sensory (impaired proprioception causing sensory ataxia, positive Romberg sign), and vestibular (vertigo, nystagmus, nausea).

Ataxia Telangiectasia

An inherited disorder causing progressive coordination problems, visible small blood vessels, and immune deficiency.

Alternate Names:

A-T

Ataxia-Telangiectasia

An autosomal-recessive disorder usually caused by biallelic ATM variants, characterized by progressive ataxia, telangiectasias, immune deficiency, and increased cancer risk.

Ataxic Breathing

An irregular, unpredictable breathing pattern with random variations in rate and depth, seen in medullary lesions. It is the most dangerous respiratory pattern and often precedes respiratory arrest. It requires mechanical ventilation.

Atelectasis

Complete or partial collapse of lung tissue, resulting in loss of aeration. It may be caused by airway obstruction (resorption atelectasis), pleural disease (compressive atelectasis), surfactant dysfunction (dissolution atelectasis), or scarring (cicatrizatio atelectasis). It impairs gas exchange and may predispose to infection.

Alternate Names:

Lung Collapse

Athelia

Congenital or acquired absence of one or both nipples.

Atherectomy

Mechanical removal of atherosclerotic plaque. Types: directional, laser, rotational, orbital. Used for peripheral arterial disease.

Atherectomy (Vascular)

Removal or modification of atherosclerotic plaque from inside a blood vessel, usually with a catheter-based device.

Alternate Names:

Vascular

Atheroembolic Renal Disease

Cholesterol crystal embolization to kidneys after vascular procedures. AKI with livedo reticularis and peripheral eosinophilia. Renal biopsy shows cholesterol clefts. Poor prognosis with progressive renal failure.

Atheroma

A localized accumulation of lipid, inflammatory cells, and fibrous tissue within an arterial wall, forming part of an atherosclerotic plaque.

Alternate Names:

Atheromatous plaque; arterial plaque.

Atherosclerosis

Chronic inflammatory disease of medium and large arteries characterized by accumulation of lipids, inflammatory cells, and fibrous tissue within the arterial wall, forming atherosclerotic plaques. Initiating event is endothelial dysfunction from risk factors (hypertension, smoking, diabetes, dyslipidemia).

Atherosclerotic

Relating to atherosclerosis, the buildup of lipid-rich plaque and fibrous tissue in arterial walls that can narrow arteries or promote thrombosis.

Atherosclerotic Plaque

An atherosclerotic plaque is a lesion within the arterial intima composed of a necrotic lipid core covered by a fibrous cap, representing the pathological substrate of atherosclerotic cardiovascular disease.

Atherothrombotic Stroke

An ischemic stroke caused by thrombosis or artery-to-artery embolism arising from atherosclerotic disease in a large artery supplying the brain.

Alternate Names:

Large-artery atherosclerotic stroke; atherothrombotic ischemic stroke.

Athetosis

Slow, involuntary, writhing, sinuous movements predominantly of the distal extremities, sometimes also affecting the face, neck, and trunk, arising from dysfunction of the basal ganglia (putamen and globus pallidus).

Athlete Foot

Tinea pedis: dermatophyte infection (*Trichophyton rubrum*, *T. mentagrophytes*) of the feet, common in those who wear occlusive footwear or use communal showers. Forms: interdigital (scaly, fissured, macerated between toes—most common), moccasin (diffuse plantar scaling), vesicular.

Athlete'S Foot

A superficial fungal infection of the feet, usually affecting the spaces between the toes and causing itching, scaling, maceration, or fissures. It is also called tinea pedis.

Alternate Names:

tinea. Athletes Foot (Athlete's Foot) Ringworm Of The Foot Tinea Pedis (Athlete's Foot)

Athletes Foot (Athlete'S Foot)

Alternate index label for Athlete's Foot.

Athlete'S Heart

A constellation of benign, physiological cardiovascular adaptations resulting from prolonged, intense physical conditioning in endurance and strength athletes. Characterized morphologically by balanced, biventricular eccentric or concentric hypertrophy, increased left ventricular end-diastolic chamber dimensions, resting sinus bradycardia, sinus pauses, and physiologic flow murmurs. It is distinguished from hypertrophic cardiomyopathy and dilated cardiomyopathy by normal or supranormal diastolic filling, preserved left ventricular ejection fraction, regression after detraining, and absence of late gadolinium enhancement on cardiac MRI.

Alternate Names:

Athletic Heart Syndrome; Athlete Heart Remodeling

Atlanto-Occipital Dislocation

Traumatic separation of the atlas from the occipital condyles, a highly unstable injury with high mortality often associated with spinal cord injury and requiring emergent immobilization.

Atlas

First cervical vertebra articulating with occipital condyles at the atlanto-occipital joint for nodding movement. Lacks a body and spinous process; has anterior/posterior arches and lateral masses. Transverse foramina transmit vertebral arteries. The anterior arch has a facet for the axis dens.

Atlas And Axis Joint

The atlantoaxial joint between the first cervical

vertebra, the atlas, and the second, the axis; it permits much of the head's rotation.

Atom

The smallest unit of an element that retains that element's chemical properties, consisting of a nucleus surrounded by electrons.

Atonic

Lacking normal muscle tone or contractile strength; an atonic bladder, for example, does not contract effectively to empty urine.

Atonic Seizure

A generalized seizure characterized by a sudden loss of muscle tone lasting one to two seconds, frequently causing the patient to collapse abruptly to the floor (drop attack). Common in childhood-onset epileptic encephalopathies, particularly Lennox–Gastaut syndrome.

Alternate Names:

Drop attack; Akinetic seizure

Atopic

Relating to an inherited or acquired tendency to develop allergic reactions such as eczema, allergic rhinitis, or asthma.

Atopic Dermatitis

A chronic, relapsing inflammatory skin disease characterized by pruritus, xerosis, and eczematous lesions. It reflects epidermal-barrier dysfunction and immune dysregulation, with flares triggered by irritants, allergens, infection, stress, or climate.

Alternate Names:

Allergy Eczema (Atopic Dermatitis)

Atopic Dermatitis (Eczema)

A chronic inflammatory skin condition causing itchy, dry, irritated, or rash-covered skin, often associated with an atopic tendency.

Alternate Names:

Dermatitis, Atopic

Atopic Dermatitis - Children - Homecare

Home management of childhood eczema using regular emollients, gentle skin cleansers, and topical anti-inflammatory agents as prescribed. Trigger avoidance, infection prevention, and appropriate clothing help reduce flares and improve quality of life.

Atopic Eruption Of Pregnancy

Pruritic eczematous skin eruptions occurring in pregnancy, presenting as eczematous patches or pruritic urticarial papules and plaques, typically resolving after delivery.

Atopic Rhinitis

Allergic inflammation of the nasal lining causing sneezing, itching, congestion, or discharge.

Alternate Names:

Allergic rhinitis

Atopy

The genetic predisposition to develop immediate (IgE-mediated, type I) hypersensitivity reactions to common environmental allergens (pollen, dust mites, foods, pet dander).

Atovaquone–Proguanil

An antimalarial combination used for prevention and treatment of *Plasmodium falciparum* malaria and selected travel-related malaria regimens.

ATP

Adenosine triphosphate, the principal energy-transfer molecule in cells; hydrolysis of its phosphate bonds powers many cellular processes.

ATP Synthase

Complex V of electron transport chain. Uses proton gradient to synthesize ATP. Rotational catalysis mechanism.

Atransferrinemia

Very rare autosomal recessive disorder of iron transport caused by mutations in the TF gene (3q22.1) leading to absence or severe deficiency of transferrin.

Atresia

Congenital absence, closure, or severe narrowing of a normal body opening or passage, such as the intestinal, biliary, or pulmonary outflow tract.

Atresia Of Bile Ducts

See *Biliary atresia*.

Atria

The two upper chambers of the heart, which receive blood from the systemic and pulmonary veins and pass it to the ventricles.

Atrial

Relating to an atrium, especially one of the two upper chambers of the heart.

Atrial Ablation

A procedure that destroys selected heart tissue to prevent or control an atrial arrhythmia.

Alternate Names:

Cardiac ablation

Atrial Arrhythmia

An abnormal heart rhythm that starts in the atria, the heart's upper chambers. Examples include atrial fibrillation, atrial flutter, and some supraventricular tachycardias; symptoms may include palpitations, breathlessness, dizziness, or fainting.

Atrial Fib

Atrial fibrillation, an irregular and often rapid atrial rhythm that can reduce coordinated heart contraction and increase the risk of blood clots and stroke.

Atrial Fibrillation

The most common sustained cardiac arrhythmia, characterized by rapid, disorganized atrial activity with an irregular ventricular response. ECG typically shows absent organized P waves and irregularly irregular RR intervals. Associated conditions include hypertension, ischemic or valvular heart disease, cardiomyopathy, atrial septal defect, and thyroid dysfunction, especially hyperthyroidism. Alcohol, myocarditis, pericarditis, pulmonary embolism,

pneumonia, and cardiac surgery can precipitate AF; sick sinus syndrome may coexist as tachycardia-bradycardia syndrome. Some cases have no identified cause (formerly called lone atrial fibrillation).

Alternate Names:

AF (Atrial Fibrillation) Afib (Atrial Fibrillation)

Atrial Fibrillation

Alternate index label for Atrial Fibrillation.

Atrial Fibrillation (AFib) Warning Symptoms

Alternate index label for AFib) Warning Symptom.

Atrial Fibrillation Ablation

A catheter-based procedure that creates lesions, usually around the pulmonary veins, to reduce the electrical triggers of atrial fibrillation. It may be considered for symptomatic patients when medicines are ineffective, not tolerated, or not preferred. Results and the need for repeat treatment vary with the type of atrial fibrillation and the person's clinical features.

Atrial Fibrillation AFib Treatment Drugs

Medicines for atrial fibrillation may slow the ventricular rate, restore or maintain rhythm, or reduce stroke risk with anticoagulation. Choice depends on symptoms, heart structure, kidney function, bleeding risk, other diseases, and whether rhythm control is appropriate.

Atrial Fibrillation And Atrial Flutter

Atrial fibrillation produces chaotic atrial activity, while atrial flutter produces a rapid organized circuit; both can cause palpitations and increase stroke risk.

Atrial Flutter

A rapid, regular atrial rhythm (typically 250-350 bpm) caused by a macro-reentrant circuit, most commonly in the right atrium. ECG shows sawtooth flutter waves best seen in leads II, III, and aVF, with regular or irregular ventricular response depending on AV conduction ratio (commonly 2:1 or 4:1).

Atrial Myxoma

A usually benign primary heart tumor, most often in the left atrium, that may obstruct blood flow or produce emboli and constitutional symptoms.

Atrial Natriuretic Peptide

A peptide hormone secreted by atrial myocytes in response to atrial stretch from volume expansion. ANP promotes natriuresis and diuresis by increasing glomerular filtration rate, inhibiting sodium reabsorption in the collecting ducts, and reducing renin and aldosterone secretion.

Atrial Septal Defect

Congenital opening in the interatrial secundum allowing left-to-right shunting of blood. Small defects may close spontaneously. Larger defects cause right heart volume overload, right atrial and ventricular dilation, pulmonary hypertension, and eventually right heart failure. Paradoxical embolism may occur with right-to-left shunting.

Atrial Septal Defect

A congenital opening between the heart's upper chambers that permits abnormal blood flow between the atria.

Atrial Septum

The wall separating the right and left atria; an atrial septal defect is an abnormal opening in this wall.

Atrial Standstill

Absence of normal electrical and mechanical activity in the atria.

Atrial Switch Operation

A historical physiological reparative surgical operation for complete D-transposition of the great arteries (D-TGA), developed prior to the modern arterial switch operation. Involves extensive intra-atrial baffle reconstruction utilizing resected atrial septal flaps and autologous pericardium (the Mustard procedure) or atrial wall flaps (the Senning procedure) to redirect systemic and pulmonary venous return at the atrial level without transposing the great arteries: systemic venous blood is directed

across the mitral valve into the left ventricle and out the pulmonary artery to the lungs, while oxygenated pulmonary venous blood is directed across the tricuspid valve into the right ventricle and out the aorta. Over decades, patients frequently develop systemic right ventricular dysfunction, tricuspid regurgitation, sinus node dysfunction, and baffle leak or stenosis.

Alternate Names:

Mustard Procedure; Senning Procedure

Atrial Tachycardia

Supraventricular tachycardia arising from an atrial focus outside the sinus node, often focal with rates 100-250 beats per minute with discrete P waves of different morphology from sinus P waves.

Atrial Thrombosis

Formation of a blood clot within an atrium of the heart.

Atrioventricular

Pertaining anatomically and electrophysiologically to both the atria and ventricles of the heart, specifically encompassing the atrioventricular valves (mitral and tricuspid) and the specialized junctional conduction system (AV node and bundle of His) that coordinates the timed delay between atrial and ventricular contraction.

Atrioventricular Block

Delayed or interrupted electrical conduction between the atria and ventricles of the heart.

Atrioventricular Bundle

Conducting fibers that carry electrical impulses from the atrioventricular node to the ventricles.

Alternate Names:

Bundle of His

Atrioventricular Canal Defect

A congenital heart defect involving abnormal development of the septum and atrioventricular valves; also called an atrioventricular septal defect.

Alternate Names:

an atrioventricular septal defect. Septal Defect, Atrioventricular

Atrioventricular Nodal Reentrant Tachycardia

The most common type of paroxysmal regular supraventricular tachycardia, caused by a functional reentrant circuit within the atrioventricular node utilizing distinct fast and slow conduction pathways. Characterized on electrocardiogram by narrow QRS complexes at rates of 140–220 beats per minute with retrograde P waves embedded within or just following the QRS.

Alternate Names:

AV nodal reentrant tachycardia; AVNRT

Atrioventricular Nodal Reentry Tachycardia

A rapid regular heart rhythm caused by a reentry circuit near the atrioventricular node; commonly abbreviated AVNRT.

Atrioventricular Nodal Reentry Tachycardia

A rapid regular heart rhythm caused by a reentrant electrical circuit involving or near the atrioventricular node.

Atrioventricular Node

Located in the posterior-inferior region of the interatrial septum near the coronary sinus. It receives impulses from the SA node via internodal pathways and delays them by approximately 120-200 milliseconds before transmitting them to the ventricles. This delay allows atrial contraction to complete before ventricular contraction.

Atrioventricular Valves

The heart valves between the atria and ventricles: the tricuspid valve on the right and the mitral valve on the left.

Atrium

One of the two upper chambers of the heart that receive blood returning to the heart. The right atrium receives deoxygenated blood from the superior and

inferior venae cavae and the coronary sinus; the left atrium receives oxygenated blood from the four pulmonary veins.

Atrophoderma Maculatum

A rare skin condition causing localized, depressed patches of altered pigmentation and tissue thinning.

Atrophy

Reduction in the size and functional capacity of a tissue, organ, or muscle caused by loss or shrinkage of its cells. It may result from disuse, denervation, inadequate blood supply, malnutrition, endocrine deficiency, chronic disease, or aging. Atrophy can be reversible when the underlying cause is corrected, but prolonged injury may produce permanent structural loss and fibrosis. Clinical assessment identifies the distribution, time course, associated weakness or dysfunction, and the underlying neurologic, vascular, nutritional, or systemic cause.

Atrophy Vaginal (Vaginal Dryness And Vaginal Atrophy)

Alternate index label for Vaginal Dryness and Vaginal Atrophy.

Atropine

An anticholinergic drug that blocks muscarinic acetylcholine receptors; it can increase heart rate, reduce secretions, dilate the pupils, and treat selected poisonings or bradycardia.

Atropine In Organophosphate Poisoning

A muscarinic antagonist used to reverse bronchorrhea, bronchospasm, bradycardia, and other muscarinic effects of organophosphate toxicity. Treatment is titrated to drying of respiratory secretions and improvement in ventilation, not to pupil size alone.

Attachment (Dental)

Retentive device connecting denture to implant or tooth. Precision attachments preferred over bar attachments.

Alternate Names:

Dental

Attachment Disorder

See *Reactive attachment disorder*.

Attack Rate

The proportion of an at-risk population that develops a specified illness during a defined outbreak or exposure period. It is a cumulative incidence measure commonly used for foodborne and other localized outbreaks.

Attention

The ability to select, focus on, and sustain mental processing of relevant information while limiting distraction.

Attention-Deficit/Hyperactivity Disorder

A neurodevelopmental disorder involving persistent inattention and/or hyperactivity-impulsivity that begins in childhood and impairs functioning in more than one setting.

Attenuated

Weakened or reduced in force, severity, concentration, or biological activity; an attenuated vaccine contains a weakened form of a microorganism.

Attenuation Correction

Compensation for photon absorption in tissue. CT-based (PET/CT), transmission source (SPECT), or MR-based (PET/MRI).

Attributable Risk

Difference in risk between exposed and unexposed. $AR = \text{incidence exposed} - \text{incidence unexposed}$.

Atypia

Cytologic or architectural abnormality that deviates from the expected appearance of a cell or tissue. Atypia may be reactive, degenerative, premalignant, or malignant and must be interpreted with architecture, clinical context, and ancillary studies.

Atypia Morphology

Abnormal cellular appearance or architecture that may be benign, reactive, precancerous, or cancerous

depending on context.

Alternate Names:

Cytologic atypia

Atypical

Not typical of the usual appearance, behavior, structure, or course of a condition; atypical does not by itself indicate whether a finding is benign or malignant.

Atypical Antipsychotics

A class of modern psychiatric medications used to treat schizophrenia and bipolar disorder. They work by balancing dopamine and serotonin levels in the brain, which helps reduce symptoms like hallucinations and delusions with fewer movement-related side effects than older antipsychotics.

Atypical Endometrial Hyperplasia

A premalignant proliferation of endometrial glands with cytologic atypia, now commonly classified as endometrial intraepithelial neoplasia; it carries a risk of concurrent or subsequent endometrial carcinoma.

Atypical Facial Pain

Chronic facial pain without identifiable cause. Psychological factors may contribute.

Atypical Features

A specifier for depressive episodes characterized by mood reactivity, significant weight gain or increased appetite, hypersomnia, leaden paralysis, and a long-standing pattern of interpersonal rejection sensitivity. Atypical depression often presents in younger patients and may respond preferentially to MAOIs or SSRIs rather than TCAs.

Atypical Fibroxanthoma

A superficial, usually low-grade malignant fibrohistiocytic tumor of sun-damaged skin in older adults; it may resemble squamous-cell carcinoma or melanoma and is treated by complete excision.

Atypical Genitalia

External genital anatomy that does not have typical

male or female features, often because of differences in sex development.

Atypical Hemolytic Uremic Syndrome

A rare, life-threatening thrombotic microangiopathy caused by uncontrolled dysregulation and hyperactivation of the alternative complement pathway. Clinically characterized by microangiopathic hemolytic anemia, severe thrombocytopenia, and progressive acute kidney injury without preceding Shiga toxin-producing bacterial infection.

Alternate Names:

aHUS; Complement-mediated HUS

Atypical Hyperplasia Of The Breast

An overgrowth of abnormal cells in breast tissue that is not cancer but may increase future breast-cancer risk.

Atypical Lymphocyte

A lymphocyte with an unusual appearance, often reflecting immune activation or infection.

Atypical Measles Syndrome

A rare severe illness formerly reported after exposure to measles virus in people who had received an inactivated measles vaccine; it can cause unusual rash, high fever, and pneumonia.

Atypical Pneumonia

Pneumonia with a gradual onset, relatively mild chest findings, and prominent systemic or extrapulmonary symptoms. Common causes include *Mycoplasma pneumoniae*, *Chlamydia pneumoniae*, and respiratory viruses.

Atypical Spitz Nevus

A melanocytic proliferation with Spitz-like features and atypia that may resemble melanoma; diagnosis relies on clinicopathologic correlation and, when needed, expert histopathologic review.

Atypical Teratoid Rhabdoid Tumor

A rare, aggressive cancer of the brain and spinal cord that occurs mainly in infants and young children.

Alternate Names:

ATRT Atypical Teratoid Rhabdoid Tumor Atypical Teratoid/Rhabdoid Tumor Brain Cancer

Audiogram

A chart that shows a person's ability to hear at different pitches or frequencies.

Audiologist

A health professional who assesses hearing and fits hearing aids.

Audiology

The science and clinical evaluation of hearing, balance, and related disorders.

Audiometry

Measurement of hearing sensitivity at different sound frequencies and intensities, usually using headphones or insert earphones.

Auditory Acuity

The sensitivity or sharpness of hearing, commonly assessed by determining the softest sounds a person can detect at different frequencies.

Auditory Area

A region of the cerebral cortex that processes sound information.

Alternate Names:

Auditory cortex

Auditory Fatigue

Temporary reduction in hearing sensitivity or listening performance after prolonged or intense sound exposure.

Auditory Information Processing Disorder

See *Auditory processing disorder*.

Auditory Nerve

The portion of the vestibulocochlear nerve that carries hearing signals from the inner ear to the brain.

Auditory Ossicle

One of the three small middle-ear bones that transmit sound vibrations.

Alternate Names:

Ear ossicle

Auditory Pathway

The neural route carrying sound information from the inner ear to the auditory cortex.

Auditory Perception

The brain's process of detecting, recognizing, and interpreting sounds received through the auditory system.

Auditory Processing Disorder

Difficulty recognizing or interpreting sounds despite normal or near-normal hearing sensitivity.

Alternate Names:

APD

Auditory Threshold

The quietest sound intensity a person can detect at a specified frequency.

Alternate Names:

Hearing threshold

Auer Rods

Rod-shaped inclusions formed from fused azurophilic granules in myeloid precursor cells. They strongly support a myeloid neoplasm, especially acute myeloid leukemia, but diagnosis requires immunophenotyping, genetic studies, and clinical correlation.

Auger Electrons

Low-energy electrons emitted during electron capture decay. Short range (nanometers), high linear energy transfer. Potential for targeted radiotherapy if localized near DNA.

Augmentation Mammoplasty

Surgical enlargement of the breasts using implants or, in selected procedures, transferred fat; risks, expected results, and suitability depend on anatomy

and the chosen technique.

Augmentation Mammoplasty

Surgery to increase breast size or alter breast shape, commonly using implants or fat transfer.

Alternate Names:

Breast augmentation

Augmentation Of Labor

The stimulation of spontaneous contractions that are judged to be inadequate to achieve progressive cervical dilatation. Most commonly uses oxytocin (Pitocin) infusion. Also includes artificial rupture of membranes (AROM, amniotomy).

Aura

A temporary sensory, visual, or other neurological symptom that may precede a migraine or seizure.

Aural Fullness

A sensation of pressure, blockage, or plugged feeling in the ear. Causes include eustachian-tube dysfunction, middle-ear fluid, cerumen impaction, inner-ear disorders, and temporomandibular-joint disease.

Alternate Names:

Ear pressure; plugged-ear sensation; blocked-ear sensation.

Aural Polyps

Abnormal tissue projections in the ear canal or middle ear, often associated with chronic infection, inflammation, or cholesteatoma and requiring otologic evaluation.

Auricle

The visible external portion of the ear that projects from the side of the head, designed to collect and channel sound waves into the ear canal.

Auricular Hematoma

A collection of blood between the cartilage of the external ear and its perichondrium, usually after blunt trauma. Without prompt drainage and compression, it may cause cartilage necrosis and permanent cauliflower-ear deformity.

Alternate Names:

Pinna hematoma; subperichondrial auricular hematoma.

Auscultation

The act of listening to sounds produced within the body, typically using a stethoscope. Essential for assessing heart sounds, lung sounds, bowel sounds, and vascular bruits. Normal findings: S1 and S2 heart sounds, vesicular breath sounds, normal bowel sounds. Abnormal: murmurs, crackles, wheezes, rubs, bruits.

Auscultatory Gap

A transient silence between the first and second sounds of blood pressure measurement, sometimes heard in hypertensive patients. Can lead to underestimation of systolic pressure if not recognized.

Austin Flint Murmur

A mid-diastolic, low-pitched rumbling murmur heard at the apex, caused by the regurgitant jet from severe aortic regurgitation striking the anterior mitral leaflet.

Autism And Communication

Autism can affect social communication, language development, nonverbal interaction, and the use of communication for shared attention or relationships. Individualized speech-language therapy, visual supports, augmentative communication, and respectful environmental accommodations can improve participation.

Alternate Names:

Adults Autism (Autism And Communication)

Autism Spectrum Disorder

Neurodevelopmental disorder characterized by persistent deficits in social communication and social interaction across multiple contexts, restricted and repetitive patterns of behavior, interests, or activities. Symptoms present in early developmental period and cause clinically significant impairment.

Alternate Names:

Autism

Autism Spectrum Disorder - Asperger Syndrome

A former diagnostic label for autism spectrum disorder in a person without intellectual disability or clinically significant early language delay. Current diagnostic systems classify this presentation under autism spectrum disorder rather than as a separate disorder.

Autism Spectrum Disorder - Childhood Disintegrative Disorder

Childhood disintegrative disorder, also called Heller syndrome, is a rare condition involving marked loss of previously acquired language, social, and adaptive skills after apparently typical early development. Modern classifications place it within autism spectrum disorder, and evaluation should exclude other neurologic causes.

Autistic Savant

A person with autism who has an unusually advanced, specific ability—such as in music, art, calculation, or memory—relative to overall functioning.

Autoantibodies

Antibodies that mistakenly react with the body's own cells or tissues.

Autoantibody

An immunoglobulin that recognizes and binds an endogenous antigen. Autoantibodies may be pathogenic, as in autoimmune hemolytic anemia, or may serve as laboratory markers of autoimmune disease.

Autoantigen

A normal body molecule mistakenly targeted by the immune system in an autoimmune disease.

Autoclave

Sterilization device using high-pressure steam. Parameters: 121°C, 15 psi, 15-30 minutes. Essential for infection control.

Autoerythrocyte Sensitivity

A rare syndrome of painful bruising or purpura attributed to an abnormal reaction to a person's own red-cell components. The diagnosis is one of exclusion after bleeding disorders, medication effects, and other causes of bruising are assessed.

Autogenic Drainage

A breathing technique using controlled breathing at different lung volumes to mobilize secretions from peripheral to central airways. It involves breathing at low lung volumes (collect), mid lung volumes (loosen), and high lung volumes (evacuate). It requires patient training and cooperation.

Autograft

Tissue transplanted from one site to another within the same individual. Autografts are genetically identical to the recipient and generally avoid alloimmune rejection, although donor-site morbidity may occur.

Autoimmune

Relating to an immune response directed against the body's own cells, tissues, or molecules.

Autoimmune Associated Epilepsy

See *Autoimmune epilepsy*.

Autoimmune Disease

Autoimmune diseases result from loss of immunological self-tolerance, leading to immune-mediated attack on the body's own tissues.

Autoimmune Diseases

Autoimmune diseases arise when immune responses target the body's own tissues, producing organ-specific or systemic inflammation and damage.

Autoimmune Disorder

A disease caused by an abnormal immune response against the body's own cells, tissues, or organs. Autoimmune disorders may be organ-specific or systemic and can produce inflammation, tissue injury, functional impairment, or circulating autoantibodies.

Autoimmune Encephalitis

Brain inflammation caused by antibodies or other immune responses directed against neuronal proteins.

Autoimmune Encephalopathy

See *Autoimmune Encephalitis*.

Autoimmune Enteropathy

Rare immune-mediated disease causing persistent diarrhoea and small-intestinal mucosal injury, usually with villous atrophy and crypt hyperplasia. It may occur in children or adults and can be associated with other autoimmune disorders or immune dysregulation.

Autoimmune Epilepsy

Recurrent seizures caused by an immune attack on the brain or by inflammation associated with an autoimmune disorder.

Autoimmune Gastritis

Chronic atrophic gastritis caused by antibodies against parietal cells leading to achlorhydria and vitamin B12 deficiency. Associated with pernicious anemia and increased risk of gastric carcinoid tumors and type 1 gastric neuroendocrine tumors. Anti-parietal cell antibodies are present in approximately ninety percent of patients.

Autoimmune Hemolytic Anemia

AIHA: hemolytic anemia due to antibodies directed against red blood cells. Warm AIHA (IgG, 37C—idiopathic, SLE, CLL, drugs: methyldopa, penicillin): splenic sequestration, spherocytes, positive direct antiglobulin (DAT).

Autoimmune Hepatitis

Chronic hepatitis caused by immune-mediated destruction of hepatocytes characterized by interface hepatitis with lymphoplasmacytic infiltrate, elevated transaminases, hypergammaglobulinemia, and autoantibodies.

Autoimmune Keratitis

Corneal inflammation associated with an immune-mediated disorder, sometimes occurring with rheumatoid arthritis, lupus, or granulomatosis with polyangiitis. It may cause pain, redness, corneal opacity, and reduced vision and requires urgent ophthalmic assessment. Treatment is directed at the cause and may include anti-inflammatory or immunosuppressive therapy.

Autoimmune Liver Disease Panel

A laboratory test that measures autoantibodies associated with autoimmune hepatitis and other autoimmune liver disorders, including antinuclear antibody, anti-smooth muscle antibody, anti-liver kidney microsomal antibody, and anti-mitochondrial antibody. Results help distinguish autoimmune hepatitis from primary biliary cholangitis and primary sclerosing cholangitis.

Autoimmune Pancreatitis

Chronic inflammatory condition characterized by dense lymphoplasmacytic infiltrate with IgG4-positive plasma cells representing the pancreatic manifestation of IgG4-related disease. Type 1 is more common affecting older men with elevated serum IgG4 and extrapancreatic involvement.

Autoimmune Polyendocrine Syndromes

APS-1 (APECED, AIRE mutation): autosomal recessive, chronic mucocutaneous candidiasis, hypoparathyroidism, adrenal insufficiency (Addison's), plus type 1 diabetes, autoimmune thyroiditis, vitiligo, alopecia, pernicious anemia, hepatitis, asplenia.

Autoimmune Polyendocrinopathy

An inherited autoimmune syndrome, also called autoimmune polyendocrine syndrome type 1, characterized by chronic mucocutaneous candidiasis, hypoparathyroidism, adrenal insufficiency, and other autoimmune disorders.

Autoimmune Polyglandular Syndrome

A group of disorders in which autoimmune disease affects multiple endocrine glands; manifestations

vary by type and may include adrenal insufficiency, hypoparathyroidism, and thyroid disease.

Autoimmune Thyroiditis

Immune-mediated inflammation and damage of the thyroid gland. See *Hashimoto Thyroiditis*.

Autoimmunity

An immune response against self-antigens; it can be harmless or can cause autoimmune disease when it damages tissues or disrupts their function.

Autoimmunity: Mechanisms

Loss of tolerance: central (thymic negative selection defects, AIRE mutation → APS-1) and peripheral (Treg dysfunction, anergy failure, ignorance loss). Molecular mimicry: cross-reactivity between pathogen and self (rheumatic fever: Strep M protein + cardiac myosin; Guillain-Barre: *Campylobacter* + GM1 ganglioside; reactive arthritis).

Autoinflammatory Diseases

Disorders of innate immune regulation that cause recurrent or persistent inflammation without the disease-specific autoantibodies typical of autoimmune disorders. They may cause fever, rash, joint inflammation, or organ damage and can be inherited or acquired.

Autoinoculation

Transfer of an infectious agent from one body site to another on the same person, often by touching or scratching.

Autologous

Derived from or involving the same individual who will receive it, such as an autologous blood transfusion or stem-cell transplant.

Autologous Blood Donation

Autologous blood donation involves preoperative collection and storage of the patient's own blood for intraoperative or postoperative transfusion. It eliminates risks of alloimmune reactions, transfusion-transmitted infections, and immune modulation.

Autologous Fat Transplant

A procedure that removes a person's own fat from one body area and transfers it to another area for soft-tissue volume restoration or contouring.

Alternate Names:

Autologous fat grafting; fat transfer; lipofilling.

Autolysis

Self-digestion of cells or tissues by their own enzymes, commonly occurring after cell death and contributing to decomposition.

Automated External Defibrillator

A portable device that analyzes heart rhythm and delivers an electrical shock when it detects a shockable cardiac arrest rhythm such as ventricular fibrillation.

Automatic Dishwasher Soap Poisoning

Toxic effects caused by excessive exposure to automatic dishwasher detergents. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Autonomic Disorder

Dysfunction of the autonomic nervous system, which regulates involuntary cardiovascular, gastrointestinal, sudomotor, urinary, sexual, and pupillary functions. It may be primary or secondary to conditions such as diabetes, neurodegenerative disease, autoimmune neuropathy, infection, or medication effects, and may cause orthostatic hypotension, abnormal heart-rate responses, sweating abnormalities, gastrointestinal dysmotility, bladder dysfunction, or sexual dysfunction. Evaluation and treatment depend on the underlying cause and the organs affected.

Autonomic Dysreflexia

Acute, potentially life-threatening sympathetic discharge in a person with spinal-cord injury at or above approximately T6, triggered by a noxious stimulus below the lesion. It causes sudden hypertension, headache, flushing or sweating above the lesion, and reflex bradycardia or other heart-rate

changes.

Autonomic Ganglion

A cluster of nerve-cell bodies in the autonomic nervous system that relays signals to organs.

Autonomic Nervous System

The part of the peripheral nervous system that regulates involuntary functions, including heart rate, vascular tone, digestion, sweating, pupil size, and bladder activity.

Autonomic Neuropathy

Damage to nerves that control involuntary functions such as heart rate, blood pressure, digestion, sweating, bladder function, and sexual function. Diabetes is a common cause, but other diseases, toxins, and medicines may contribute. Symptoms depend on the affected organs and require evaluation of the underlying cause.

Alternate Names:

Neuropathy, Autonomic

Autonomic Neuropathy Diabetic (Diabetic Neuropathy)

Alternate index label for Diabetic Neuropathy.

Autonomy, Patient

A patient's right and capacity to make informed, voluntary decisions about medical care, including accepting or refusing treatment.

Autophagy

Cellular self-degradation process delivering cytoplasmic components to lysosomes for recycling. Macroautophagy: phagophore forms, expands to autophagosome (LC3-II on membrane), fuses with lysosome (autolysosome) for degradation. Selective autophagy: mitophagy (damaged mitochondria), xenophagy (pathogens), and aggrephagy (protein aggregates).

Autopsy

A postmortem examination of a body to determine cause and manner of death, performed by a foren-

sic pathologist (medical examiner/coroner) or, for hospital autopsies, a pathologist.

Autopsy (Medicolegal)

Systematic external examination and surgical dissection of a deceased body performed under legal authority by a forensic pathologist to determine the Cause, Manner, and Mechanism of Death, document injuries, collect evidence, and assist judicial investigations.

Alternate Names:

Medicolegal

Autopsy (Post-Mortem Examination)

Specialized surgical procedure performed on a deceased body to determine the cause of death, mechanism of death, manner of death (natural, accidental, suicide, homicide, or undetermined), state of health prior to death, and to document injuries or disease processes.

Alternate Names:

Post-Mortem Examination

Autoradiography

An imaging technique that uses radioactive labels to show the location of substances in tissue.

Autosomal Dominant

Autosomal dominant inheritance occurs when one altered copy of a gene can produce a trait or disorder; an affected heterozygous parent may transmit it to about half of offspring.

Autosomal Dominant Inheritance

Inheritance in which one pathogenic variant on a non-sex chromosome can cause a trait or disorder. An affected heterozygous parent may transmit it to about half of the children.

Autosomal Dominant PKD

Most common hereditary kidney disease affecting 1 in 400 to 1000. PKD1 chromosome 16 more severe with earlier ESRD than PKD2 chromosome 4. Progressive cyst growth causes hypertension, pain, hematuria, infections, and eventually ESRD. Screen

family members with ultrasound. Tolvaptan may slow cyst growth.

Autosomal Dominant Polycystic Kidney Disease

An inherited disorder causing progressive growth of numerous renal cysts that enlarge the kidneys and destroy parenchyma, leading to hypertension, flank pain, and eventual kidney failure. Associated with hepatic cysts and intracranial aneurysms.

Alternate Names:

ADPKD

Autosomal Dominant Tubulointerstitial Kidney Disease

An inherited kidney disorder caused by pathogenic variants in genes such as UMOD, REN, or MUC1. It causes progressive loss of kidney function with relatively bland urine findings; some subtypes cause early gout or anemia.

Autosomal Inheritance

Transmission of a genetic trait through one of the 22 non-sex chromosomes. Autosomal dominant traits may appear in successive generations, whereas autosomal recessive disease generally requires pathogenic variants on both homologous chromosomes.

Autosomal Recessive

Autosomal recessive inheritance generally requires pathogenic variants in both copies of a gene; unaffected carrier parents can have an affected child.

Autosomal Recessive Disorders

Disorders caused when a person inherits pathogenic variants in both copies of a gene, usually one from each parent; carriers with one altered copy are often unaffected.

Autosomal Recessive Inheritance

Inheritance in which a disorder generally requires pathogenic variants in both copies of a gene. Carrier parents typically have a one-in-four chance of an affected child in each pregnancy.

Autosomal Recessive PKD

Rare childhood disorder from PKHD1 mutation. Bilateral enlarged kidneys with fusiform dilation of collecting ducts. Associated with congenital hepatic fibrosis. Severe forms cause pulmonary hypoplasia in utero. Variable severity from perinatal lethal to presentation in childhood or adolescence.

Autosomal Recessive Polycystic Kidney Disease

An inherited cystic kidney disorder, usually presenting in infancy or childhood, caused by pathogenic variants commonly affecting PKHD1; it may cause enlarged echogenic kidneys, impaired kidney function, liver fibrosis, and hypertension.

Alternate Names:

ARPKD

Autosome

Any nuclear chromosome that is not a sex chromosome (allosome). In humans, normal diploid somatic cells contain 22 pairs of homologous autosomes (numbered 1 through 22 in descending order of physical size) and one pair of sex chromosomes (XX in females, XY in males), totaling 46 chromosomes. Genes located on autosomes exhibit autosomal inheritance patterns, classified as autosomal dominant (where a single mutant allele on an autosome produces the clinical phenotype, such as in Marfan syndrome and Huntington disease) or autosomal recessive (where biallelic mutations are required, such as in cystic fibrosis and sickle cell disease), affecting males and females with equal probability.

Alternate Names:

Non-sex chromosome

Avascular Necrosis

Death of bone tissue caused by impaired blood supply. It commonly affects the hip or shoulder and may cause pain, collapse of the joint surface, and arthritis. Risk factors include corticosteroid exposure, alcohol use, trauma, sickle-cell disease, and systemic lupus erythematosus. Treatment depends on the site and stage and may include observation, joint-preserving surgery, or joint replacement.

Avascular Necrosis (Aseptic Necrosis)

Alternate index label for Aseptic Necrosis.

Avascular Necrosis (Osteonecrosis)

Death of bone tissue caused by impaired blood supply. It commonly affects the femoral head and may lead to subchondral collapse, secondary arthritis, and need for joint-preserving surgery or arthroplasty.

Alternate Names:

Osteonecrosis Ischemic Bone Necrosis

Avian Flu (Avian Influenza (Bird Flu))

Avian influenza is infection with influenza A viruses adapted primarily to birds. Human infection is uncommon but can be severe after contact with infected birds or mammals; exposure history, respiratory symptoms, and public-health testing guide evaluation and treatment.

Avian Influenza

Influenza caused by avian-adapted influenza A viruses, acquired mainly through contact with infected birds or contaminated environments. Human infection can cause severe pneumonia, respiratory failure, and occasionally systemic disease.

Avian Influenza (Bird Flu)

Avian influenza is infection with influenza A viruses adapted primarily to birds. Human infection is uncommon but can be severe after contact with infected birds or mammals; exposure history, respiratory symptoms, and public-health testing guide evaluation and treatment.

AVN

See *Avascular necrosis (osteonecrosis)*.

Avoidance Behavior

Deliberate behavior intended to prevent contact with a feared, distressing, or threatening situation.

Avoidant Personality Disorder

A pattern of social inhibition, feelings of inadequacy, and hypersensitivity to negative evaluation.

Avolition

A severe lack of motivation to initiate and perform self-directed, purposeful activities. It is a negative symptom of schizophrenia and is seen in severe depression. It manifests as neglect of personal hygiene, inability to complete tasks, and social withdrawal.

Avulsed Tooth

A tooth completely displaced from its socket by trauma. It is a dental emergency; management depends on patient age, extraoral dry time, storage medium, root development, and periodontal-ligament viability, and may require urgent replantation by a dental professional.

Avulsion

An injury in which tissue is forcibly torn from the body by shearing or pulling. Common forms include dental, fingertip, nail, and degloving avulsions. Management focuses on hemorrhage control, debridement, tissue preservation, and urgent consultation.

Avulsion Fracture

A fracture in which a fragment of bone is pulled away by the tendon or ligament attached to it, usually during sudden forceful contraction or injury. Common sites include the pelvis, ankle, elbow, and fingers; evaluation considers displacement, joint involvement, skeletal maturity, and associated soft-tissue injury.

Avuncular

Relating to an uncle or resembling the kindly, familiar manner traditionally associated with an uncle.

Awake Fiberoptic Intubation

An intubation technique performed while the patient remains responsive and breathing spontaneously, using topical airway anesthesia and a flexible bronchoscope. It is one option when difficult airway management is anticipated and maintaining oxygenation is important.

Awareness

Conscious recognition of oneself, surroundings,

thoughts, or sensations. In clinical examination, awareness is assessed along with alertness, attention, memory, and orientation.

Alternate Names:

Consciousness

Awareness Under Anesthesia

Unintended awareness or recall of events during general anesthesia. It may involve hearing, sensation, or pain and can be associated with significant psychological distress after the procedure.

Axial Skeleton

The bones of the head, neck, and trunk, including the skull, spine, ribs, and sternum.

Axial Spondyloarthritis

An inflammatory rheumatic disease primarily affecting the sacroiliac joints and spine, causing chronic inflammatory back pain and stiffness; it includes radiographic and non-radiographic forms.

Axial Tomography, Computerized

Computed tomography, or CT, an imaging method that uses X-rays and computer processing to create cross-sectional images of the body.

Axilla

Pyramidal space between the upper lateral thorax and medial arm. Bounded by anterior fold (pectoralis major/minor), posterior fold (latissimus dorsi/teres major), medial wall (ribs/serratus anterior), and lateral wall (humerus). Contains axillary artery/vein, brachial plexus cords, and lymph nodes.

Axillary

Relating to the armpit or to structures located in the axilla, including axillary lymph nodes and vessels.

Alternate Names:

Armpit-related; pertaining to the axilla.

Axillary Artery

The continuation of the subclavian artery, running from the outer border of the first rib to the lower border of teres major, where it becomes the brachial

artery. Divided into three parts by the pectoralis minor.

Axillary Vein

A major vein of the upper limb formed by the union of the brachial and basilic veins. It continues as the subclavian vein and drains the arm and axilla.

Axillary Lymphadenectomy

Surgery to remove lymph nodes from the armpit, usually to stage or treat breast cancer or melanoma. Possible complications include pain, numbness, reduced shoulder movement, fluid collection, and arm lymphedema.

Alternate Names:

Axillary node dissection

Axillary Nerve

From posterior cord (C5-C6), passing through the quadrangular space with the posterior circumflex humeral artery. Innervates deltoid and teres minor; provides sensation to the regimental badge area (lateral deltoid skin). Vulnerable in anterior shoulder dislocations and surgical neck humeral fractures.

Axillary Nerve Dysfunction

Impairment of the axillary nerve, often from shoulder trauma, dislocation, compression, or surgery. It can cause weakness of shoulder abduction, deltoid wasting, and numbness over the lateral shoulder.

Axis

Second cervical vertebra with the dens (odontoid process) projecting superiorly, serving as a pivot for atlas rotation, allowing approximately 50 percent of cervical rotation. Has a large spinous process and flat superior articular facets.

Axis Vertebra

The second cervical vertebra, which supports rotation of the first cervical vertebra and head.

Alternate Names:

C2; axis

Axolemma

The specialized trilaminar plasma membrane enclosing an axon of a neuron. Essential for the generation and propagation of electrical action potentials through its high density of voltage-gated ion channels, notably voltage-gated sodium (Na_v) and potassium (K_v) channels. In unmyelinated fibers, action potential conduction occurs continuously along the entire axolemma; in myelinated fibers, the axolemma is insulated by myelin sheaths (formed by Schwann cells in the PNS and oligodendrocytes in the CNS), confining voltage-gated sodium channels to uninsulated gaps termed nodes of Ranvier to facilitate rapid, energy-efficient saltatory conduction.

Axon

The single long process of a neuron that conducts action potentials away from the cell body toward the axon terminal for synaptic transmission.

Axon Fasciculation

The bundling of developing axons into organized nerve tracts during nervous-system development. Guidance signals and cell-adhesion molecules help axons grow together toward their targets.

Axon Guidance

The developmental process directing growing axons toward their correct targets.

Axon Hillock

The region of a neuron where action potentials are usually initiated.

Axon Terminal

The end of a nerve-cell axon that releases chemical messengers to communicate with another cell.

Axonal Transport

Movement of proteins, organelles, and other materials along an axon.

Axoneme

The internal microtubule-based structure of a cilium or flagellum.

Ayurveda

A traditional system of medicine from India that emphasizes balance among bodily principles and uses individualized diet, lifestyle practices, and herbal or other treatments.

Azole Antifungals

A class of antifungal agents that inhibit the enzyme lanosterol 14-alpha-demethylase, a cytochrome P450 enzyme essential for ergosterol synthesis in fungal cell membranes. The depletion of ergosterol and accumulation of toxic methylated sterols disrupt membrane integrity and function.

Azoospermia

Absence of spermatozoa in the ejaculate after appropriate centrifugation and microscopic examination. It may be obstructive, with sperm production preserved but outflow blocked, or nonobstructive, with impaired spermatogenesis.

Azotaemia

Azotaemia is excess nitrogen-containing waste, especially urea and creatinine, in the blood, usually reflecting reduced kidney filtration, increased production, or altered renal blood flow.

Azotemia

Accumulation of nitrogen-containing waste products in the blood, usually because the kidneys are not filtering adequately.

Azygos Vein

A vein that drains the posterior intercostal veins and empties into the superior vena cava. It forms an important collateral pathway when the SVC is obstructed. On chest imaging, enlargement of the azygos vein may indicate SVC obstruction, heart failure, or portal hypertension.

Azygous Vein

A large vein that drains the posterior thoracic wall and mediastinum, ascending along the right side of the vertebral column to empty into the superior vena cava. It provides collateral venous return when the superior or inferior vena cava is obstructed.

Labor: Signs And Symptoms

Labor is the process of regular uterine contractions that produces progressive cervical effacement and dilation and leads to birth. Possible signs include increasingly regular and painful contractions, rupture of membranes, bloody show, pelvic pressure, and back pain; urgent assessment is needed for heavy bleeding, decreased fetal movement, severe pain, or suspected complications.

Primary Clear Cell Adenocarcinoma Of The Vulva

A rare primary vulvar clear-cell adenocarcinoma, usually showing Müllerian differentiation. Diagnosis requires histopathologic examination and immunohistochemical correlation while excluding metastatic clear-cell carcinoma from sites such as the kidney or gynecologic tract.

B

B And T Cell Screen

A blood test that identifies and measures B cells and T cells, two major types of immune cells. It can help evaluate immune deficiencies, leukemia, and lymphoma.

B And T Lymphocytes

B lymphocytes produce antibodies, while T lymphocytes coordinate immune responses or kill infected and abnormal cells; both are adaptive immune cells.

B Cell

A lymphocyte that develops in the bone marrow and can differentiate into antibody-producing plasma cells or memory B cells after activation.

Alternate Names:

B lymphocyte; B-cell.

B Cell (B Lymphocyte)

An immune cell that matures in the bone marrow. After recognizing a foreign substance and receiving signals from other immune cells, it multiplies and develops into cells that make antibodies or remember the substance for future defense.

Alternate Names:

B Lymphocyte

B Chromosome

A supernumerary chromosome that is not part of the standard chromosome complement and is not required for normal development. It may occur in certain plants, animals, or tumors and varies in number between cells.

B Hemophilia (Hemophilia)

Alternate index label for Hemophilia.

B Virus

Herpes B virus, also called Macacine alphaherpesvirus 1, a macaque virus that can cause severe and sometimes fatal encephalomyelitis in humans after exposure to infected animals or tissues.

B-Cell Activation

The process by which a B lymphocyte is stimulated by antigen and other immune signals to multiply and develop into antibody-producing plasma cells or memory B cells.

B-Cell Leukemia/Lymphoma Panel

A laboratory test that uses cell analysis and antibody markers to identify abnormal B-cell groups in blood, bone marrow, or tissue.

B-Cell Lymphoma

A group of lymphatic cancers arising from B lymphocytes.

B-Cell Receptor

A protein on the surface of a B cell that recognizes foreign substances. Signals from this receptor help the B cell multiply, mature, and make antibodies.

B-Lymphocyte

A B lymphocyte is an immune cell that can mature into an antibody-producing plasma cell or a memory B cell.

B-Lynch Suture

A surgical stitch placed around the uterus to control heavy bleeding after childbirth when the uterus has not contracted and medicines have not worked. The stitch compresses the uterus and reduces bleeding.

B-Mode Ultrasound

A standard two-dimensional ultrasound image made from sound waves that bounce back from tissues. It is used to examine many organs and soft tissues.

Ba

The chemical symbol for barium, a metal used in compounds such as barium sulfate for contrast studies of the digestive tract.

Babcock Clamp

An atraumatic surgical clamp with fenestrated jaws used to hold delicate tubular tissue.

Babesia

A group of parasites spread mainly by Ixodes ticks. They infect red blood cells and can cause fever, anemia from red-cell destruction, and a low platelet count. Severe disease is more likely in people without a spleen or with a weakened immune system.

Babesia Divergens

A species of Babesia, an intraerythrocytic protozoan parasite transmitted by Ixodes ticks, primarily causing babesiosis in Europe. It can cause severe hemolytic anemia, particularly in asplenic or immunocompromised individuals.

Babesia Microti

The most common cause of babesiosis in North America, an intraerythrocytic protozoan parasite transmitted by Ixodes scapularis ticks. Infection can range from asymptomatic to severe hemolytic anemia with fever, jaundice, and organ failure in immunocompromised patients.

Babesiosis

A tick-borne infection caused by Babesia parasites. The parasites infect red blood cells and can cause

fever, tiredness, anemia, a low platelet count, jaundice, or blood pigment in the urine. Severe disease is more likely in people without a spleen or with a weakened immune system.

Babinski Reflex

A normal reflex in infants up to about 2 years of age. Stroking the outer sole makes the big toe point upward and the other toes spread. The reflex normally changes as the nervous system develops; persistence in older children or adults may indicate a nervous-system problem.

Babinski Response

Upward movement of the big toe and spreading of the other toes when the sole is stroked. It is normal in infants but may indicate a nervous-system problem in older children or adults.

Babinski Sign

Upward movement of the big toe and spreading of the other toes when the outer sole is stroked. This can indicate a problem in the brain or spinal cord in older children and adults; a normal response is downward curling of the toes.

Baby Acne

Small red or white bumps on an infant's skin, usually caused by temporary hormonal effects and often resolving without treatment.

Baby Blues

A common, short-lived period of tearfulness, irritability, anxiety, or mood lability during the first days after childbirth, usually resolving within about two weeks.

Babyhood

Babyhood is the period of infancy, when rapid growth, brain development, motor skills, feeding, and immune maturation occur.

Bacillaceae

A family of Gram-positive, spore-forming rod-shaped bacteria in the order Bacillales. It includes

medically important genera such as *Bacillus* and *Clostridium*, some of which cause anthrax, botulism, or gas gangrene.

Bacillary Angiomatosis

A vascular proliferative disease caused by *Bartonella henselae* or *B. quintana*, occurring in immunocompromised patients (HIV/AIDS, transplant). Presents with erythematous papules, nodules, or pedunculated lesions resembling Kaposi sarcoma or pyogenic granuloma. Can involve skin, liver (peliosis hepatis), spleen, bone, and lymph nodes.

Bacillary Dysentery

Acute inflammatory diarrhea caused by *Shigella* species, typically producing fever, abdominal cramps, and frequent stools that may contain blood or mucus.

Bacille Calmette-Guérin

Bacille Calmette-Guérin is a live attenuated mycobacterial vaccine used mainly against tuberculosis and, in some settings, as bladder-cancer immunotherapy.

Bacilluria

The presence of bacilli in the urine, usually referring to rod-shaped bacteria detected by microscopy or culture. Its clinical significance depends on symptoms, quantitative culture, and the organism identified.

Bacillus

A rod-shaped bacterium. The term may refer broadly to bacterial shape or specifically to members of the genus *Bacillus*, some of which form resistant spores and cause human disease.

Bacillus Anthracis

The spore-forming bacterium that causes anthrax. Infection may be cutaneous, gastrointestinal, or inhalational.

Bacillus Cereus

A spore-forming bacterium that can cause food poi-

soning, usually through a rapid-onset vomiting syndrome or a diarrheal syndrome after ingestion of contaminated food.

Bacillus Lentus

A Gram-positive, spore-forming rod bacterium in the genus *Bacillus*, commonly found in soil. It is generally of low virulence but may cause opportunistic infections in immunocompromised individuals.

Bacillus Licheniformis

A Gram-positive, spore-forming rod bacterium found in soil and plant surfaces. It is an occasional cause of food contamination and has been rarely associated with opportunistic infections in immunocompromised patients.

Bacillus Megaterium

A large, Gram-positive, spore-forming rod bacterium found in soil and water. It is of low pathogenicity but has been reported as an opportunistic cause of bacteremia and endocarditis in rare cases.

Bacillus Mycoides

A Gram-positive, spore-forming soil bacterium recognized by its distinctive rhizoid colony morphology. It is not considered a significant human pathogen but is studied as an environmental indicator organism.

Bacillus Pumilus

A Gram-positive, spore-forming rod bacterium commonly found in soil and on skin. It has been associated with rare opportunistic infections, including endophthalmitis and bacteremia, particularly in immunocompromised individuals.

Bacillus Subtilis

A Gram-positive, spore-forming rod bacterium widely distributed in soil and vegetation. Generally considered non-pathogenic, it is used as a probiotic and in biotechnology; rare opportunistic infections have been reported.

Bacitracin

Bacitracin is a topical polypeptide antibiotic that interferes with bacterial cell-wall synthesis and is used for selected superficial infections.

Bacitracin Overdose

Toxic effects from excessive exposure to bacitracin. Topical exposure usually causes local irritation, while large, ingested, or systemic exposures may cause gastrointestinal symptoms or kidney injury; assessment depends on the dose and route.

Bacitracin Zinc Overdose

Toxic effects from excessive exposure to bacitracin zinc. Severity depends on the dose and route; large exposures may cause gastrointestinal symptoms, allergic reactions, or kidney injury and require prompt assessment.

Back Injury

Damage to the muscles, ligaments, joints, discs, vertebrae, or nerves of the back caused by trauma, lifting, or repetitive strain. Pain and stiffness are common; weakness, numbness, loss of bladder or bowel control, or severe pain after major trauma requires urgent assessment.

Back Pain

One of the most common medical complaints, affecting up to 80 percent of the population at some point in life, and the leading cause of disability worldwide. Back pain is classified by duration: acute (less than 4 weeks), subacute (4-12 weeks), and chronic (greater than 12 weeks).

Alternate Names:

Pain, Back

Back Pressure

Back pressure is pressure exerted in the reverse direction of flow; in medicine it may result from obstruction in an airway, vessel, duct, or organ.

Back-Blows

Back-blows are firm blows between the shoulder blades used as a first-aid maneuver for severe chok-

ing in a responsive person.

Backache

Pain or discomfort located anywhere in the posterior trunk from neck to buttocks, a symptom rather than a disease. Causes include musculoskeletal strain (most common), disc herniation, spinal stenosis, facet arthropathy, sacroiliac joint dysfunction, and referred pain from renal, pancreatic, or vascular sources.

Baclofen

A muscle relaxant that activates GABA-B receptors and is used mainly to reduce spasticity. Drowsiness, weakness, confusion, and dangerous withdrawal after abrupt stopping can occur.

Bacteraemia

Bacteraemia is the presence of viable bacteria in the bloodstream; it may be transient or lead to sepsis and infection of distant sites.

Bacteremia

The presence of viable bacteria in the bloodstream, a serious condition that can be transient (after dental procedures, toothbrushing), intermittent (undrained abscess), or continuous (endovascular infection like endocarditis). Bacteremia triggers systemic inflammatory responses ranging from fever and leukocytosis to septic shock.

Bacteria

Single-celled microscopic organisms lacking a nucleus, which can exist independently or in colonies; some are beneficial to health (microbiome) while others cause infectious disease.

Bacterial Adherence

The process by which bacteria attach to the body's cells, often an early step in infection. Bacterial surface structures, including hair-like pili and fimbriae, help them attach to specific sites on human cells.

Bacterial Biofilms

Groups of bacteria attached to a surface and embed-

ded in a protective substance they make themselves. Biofilms can cause long-lasting infections, especially on catheters, artificial joints, and heart valves.

Bacterial Capsule

A sugar-rich outer layer around some bacteria that helps protect them from the body's defenses. It can help bacteria cause disease; examples include *Streptococcus pneumoniae*, *Haemophilus influenzae*, and *Klebsiella pneumoniae*.

Bacterial Cell Wall

The rigid outer layer of bacteria that provides structural integrity and determines cell shape. The cell wall is composed primarily of peptidoglycan, a polymer of sugars cross-linked by short peptides.

Bacterial Classification

The organisation of bacteria into taxonomic groups based on genetic, phenotypic, and evolutionary relationships. Bacteria are classified using a hierarchical system: domain, phylum, class, order, family, genus, and species.

Bacterial Conjugation

The transfer of DNA from one bacterium to another through direct contact. A donor bacterium uses a tiny connecting structure to pass DNA, often including genes for antibiotic resistance.

Bacterial Conjunctivitis

A contagious infection of the conjunctiva, often caused by staphylococci or streptococci. It commonly causes eye redness, irritation, a gritty sensation, and mucopurulent discharge that can mat the eyelids, especially after sleep. Symptoms overlap with viral and allergic conjunctivitis, and most uncomplicated cases improve within 1–2 weeks; topical antibiotics may shorten the illness. Contact-lens wearers with pain, light sensitivity, or reduced vision need prompt eye assessment.

Bacterial Dermatitis

Inflammation of the skin caused by bacterial infection, typically presenting with erythema, edema, warmth, pain, and purulent discharge. Common

causative organisms include *Staphylococcus aureus* and *Streptococcus pyogenes*, and the condition may arise de novo or as a superinfection of pre-existing dermatitis.

Bacterial Dormancy

A state of reduced metabolic activity that allows bacteria to survive unfavourable conditions. Dormant forms include spores, persisters, and viable but non-culturable cells. Spores are highly resistant structures formed by *Bacillus* and *Clostridium*. Persisters are phenotypic variants that are tolerant to antibiotics.

Bacterial Endocarditis

Infection of the heart's inner lining or valves by bacteria, usually producing fever and a new or changing heart murmur. It can cause valve damage and embolic complications.

Bacterial Endocarditis Vegetations

Clumps of bacteria, clotting material, and platelets that form on a heart valve or the heart's inner lining during bacterial endocarditis. They can develop when bacteria in the blood attach to a damaged or abnormal heart surface.

Bacterial Endospores

Highly resistant dormant structures formed by certain gram-positive bacteria including *Bacillus* and *Clostridium* species. Endospores form during nutrient deprivation and can survive for decades. They are resistant to heat, radiation, chemicals, and desiccation.

Bacterial Flagella

Thread-like appendages composed of flagellin protein that provide motility to bacteria. Flagella are composed of three parts: the filament, hook, and basal body. The basal body is embedded in the cell wall and functions as a rotary motor.

Bacterial Gastroenteritis

Acute inflammation of the stomach and intestines caused by pathogenic bacteria such as *Salmonella*, *Campylobacter*, *Shigella*, or pathogenic *Escherichia*

coli. It commonly causes diarrhea, abdominal cramps, fever, and sometimes bloody stools or vomiting.

Bacterial Genetics

The study of genes and heredity in bacteria. Most bacteria have one circular chromosome and may also have small DNA rings called plasmids. Groups of bacterial genes may be controlled together.

Bacterial Growth Phases

The stages of bacterial growth in culture. The lag phase is when bacteria adapt to their environment. The log (exponential) phase is when bacteria multiply at their maximum rate. The stationary phase is when nutrient depletion and waste accumulation limit growth. The death phase is when bacteria die.

Bacterial Infections

Illnesses caused by pathogenic bacteria proliferating in the body, ranging from mild sore throats and ear infections to life-threatening sepsis and meningitis. They are diagnosed through cultures, PCR testing, or other microbiological methods.

Bacterial Meningitis

Infection of the meninges by bacteria, a medical emergency. In neonates: Group B Streptococcus, *E. coli*, *Listeria*. In older children: *Neisseria meningitidis*, *Streptococcus pneumoniae*. Presents with fever, headache, neck stiffness, altered consciousness, and Kernig/Brudzinski signs.

Bacterial Metabolism

The chemical processes that occur within bacteria to maintain life. Bacteria have diverse metabolic capabilities including aerobic and anaerobic respiration, fermentation, and photosynthesis. Metabolic pathways are targets for antimicrobial drugs.

Bacterial Morphology

The shape and arrangement of bacteria seen under a microscope. Common shapes include spheres, rods, and spirals. Spherical bacteria may occur in pairs, chains, clusters, or groups of four.

Bacterial Overgrowth

Excessive proliferation of bacteria in the small intestine, commonly called small-intestinal bacterial overgrowth. It may result from impaired intestinal motility, anatomical stasis, blind loops, strictures, diverticula, or loss of the normal ileocaecal barrier.

Alternate Names:

small-intestinal bacterial overgrowth.

Bacterial Pathogenesis

The mechanisms by which bacteria cause disease. Pathogenesis involves adhesion, invasion, toxin production, and immune evasion. Adhesins mediate attachment to host cells. Invasins allow penetration of tissues. Toxins damage host cells.

Bacterial Peritonitis

Infection of the space inside the abdomen around the organs. It may occur in people with extra abdominal fluid or after bowel perforation, surgery, or another abdominal infection. It requires prompt evaluation and antibiotic treatment.

Bacterial Pharyngitis

Bacterial infection and inflammation of the throat, most commonly caused by group A Streptococcus. Symptoms may include sore throat, fever, painful swallowing, and tender lymph nodes in the neck.

Bacterial Pili

Hair-like appendages on the bacterial surface composed of pilin protein. Pili are shorter and thicker than flagella. Type I pili mediate adherence to host cells and are important virulence factors. Type IV pili are involved in twitching motility and DNA uptake during transformation.

Bacterial Pneumonia

Infection of the lung tissue by bacteria, causing inflammation and air-space filling. It may cause fever, cough, sputum, chest pain, and shortness of breath.

Bacterial Protein

A protein produced by a bacterium that may form

part of its structure, support its metabolism, help it attach to host cells, or contribute to disease.

Bacterial Spore

A metabolically dormant, highly resistant structure produced by certain bacteria, notably *Bacillus* and *Clostridioides* species, in response to environmental stress. Spores resist desiccation, heat, and many disinfectants and require validated sterilization for reliable destruction.

Bacterial Toxemia

The presence or systemic effects of bacterial toxins in the bloodstream. It may occur during severe bacterial infection and can contribute to shock or organ injury.

Bacterial Toxin

A harmful substance produced or released by bacteria. Toxins may damage cells directly or disrupt normal body functions and include secreted exotoxins and components such as endotoxin.

Bacterial Toxins

Substances produced by bacteria that cause damage to host cells. There are two major categories: exotoxins and endotoxins. Exotoxins are proteins secreted by bacteria that have specific toxic effects. Endotoxins are lipopolysaccharide components of gram-negative bacterial outer membranes released during cell lysis.

Bacterial Tracheitis

Bacterial infection and inflammation of the trachea, often causing fever, a harsh cough, noisy breathing, and potentially rapid airway obstruction.

Bacterial Transduction

The transfer of bacterial DNA from one bacterium to another through bacteriophages (bacterial viruses).

Bacterial Transformation

The uptake of loose DNA from the environment by bacteria that are able to absorb it. This process occurs naturally in some species, including *Strep-*

tococcus pneumoniae, *Haemophilus influenzae*, and *Neisseria*.

Bacterial Typing

Laboratory methods used to distinguish bacterial strains within the same species, especially for tracking transmission, investigating outbreaks, or linking an isolate to a source.

Bacterial Vaginosis

BV: replacement of normal vaginal lactobacilli by an overgrowth of mixed anaerobes (*Gardnerella vaginalis*, *Mobiluncus*, etc.), the most common cause of vaginal discharge in reproductive-age women. Risk: new/multiple partners, douching, smoking.

Bacterial Vaginosis (Causes, Symptoms, Treatment)

Alternate index label for Causes, Symptoms, Treatment.

Bacterial Virulence Factors

Molecules produced by bacteria that contribute to their ability to cause disease. Virulence factors include adhesins, invasins, toxins, capsules, and enzymes. Adhesins mediate attachment to host cells. Toxins damage host cells directly. Capsules protect against phagocytosis.

Bactericide

An agent that kills bacteria rather than merely inhibiting their growth (bacteriostatic). Bactericidal antibiotics include beta-lactams (penicillins, cephalosporins, carbapenems), aminoglycosides, fluoroquinolones, metronidazole, and vancomycin.

Bacteriocin

An antibacterial protein or peptide produced by some bacteria that inhibits or kills susceptible bacteria, often closely related strains.

Bacteriology

The branch of microbiology concerned with the study of bacteria, including their morphology, genetics, physiology, ecology, and clinical significance.

Bacteriophage

A virus that infects bacteria and uses them to make more virus particles. Phages are studied or used in some research and experimental treatments for antibiotic-resistant bacterial infections.

Bacteriophage Lambda

A virus that infects *Escherichia coli*. It can replicate by destroying the bacterial cell or integrate its genetic material into the bacterial chromosome as a prophage.

Bacteriophage T4

A virus that infects *Escherichia coli* and usually replicates by producing new phage particles and breaking open the bacterial cell.

Bacteriophage Therapy

The investigational use of bacteriophages, viruses that infect bacteria, to treat selected bacterial infections. Their activity is usually limited to susceptible bacterial strains.

Bacteriophages

Viruses that infect bacteria and use bacterial cells to reproduce. They may destroy the host cell or insert their genetic material into the bacterial genome.

Bacteriorhodopsin

A light-sensitive protein in some microorganisms that uses light energy to pump protons across the cell membrane and help generate chemical energy.

Bacteriostasis

Inhibition of bacterial growth and reproduction without necessarily killing the bacteria.

Bacteriostatic

Describing an agent or condition that inhibits bacterial growth rather than directly killing bacteria.

Bacterium

A single-celled organism without a nucleus or specialized internal compartments. Most bacteria have one circular chromosome and a firm outer cell wall.

Bacteriuria

The presence of bacteria in urine, detected by urinalysis or culture. It may occur with urinary symptoms, as in a urinary-tract infection, or without symptoms, as in asymptomatic bacteriuria; interpretation depends on specimen quality, bacterial quantity, patient context, and the presence of inflammation or symptoms.

Bacteroidaceae

A family of mostly Gram-negative anaerobic bacteria that includes *Bacteroides* and commonly forms part of the normal intestinal microbiota. Some species can cause opportunistic infection when they enter sterile tissues.

Bacteroides

A genus of mostly Gram-negative anaerobic bacteria that commonly live in the intestine. They are usually harmless in the gut but can cause abscesses and other infections when displaced into sterile sites.

Bacteroides Caccae

An anaerobic Gram-negative bacterial species found mainly in the intestine and occasionally recovered from polymicrobial abdominal or bloodstream infections.

Bacteroides Dorei

An anaerobic Gram-negative bacterial species found in the human intestine and usually considered part of the normal gut microbiota.

Bacteroides Eggerthii

An anaerobic Gram-negative bacterial species found in the human intestine that is usually a commensal organism but can rarely be associated with opportunistic infection.

Bacteroides Faecis

An anaerobic Gram-negative bacterial species associated with the human intestinal microbiota and occasionally recovered from polymicrobial infections.

Bacteroides Fragilis

An anaerobic Gram-negative bacterium that is part of the intestinal microbiota and is an important cause of intra-abdominal abscesses and other infections after bowel disruption.

Bacteroides Gingivalis

An older name for Porphyromonas gingivalis, an anaerobic oral bacterium associated with dental plaque and periodontal disease.

Bacteroides Heparinolyticus

An anaerobic Gram-negative bacterial species that can be found in human-associated microbial communities and may rarely be recovered from clinical infections.

Bacteroides Intestinalis

An anaerobic Gram-negative bacterial species found in the human intestinal microbiota; it is usually a commensal organism but may be recovered from polymicrobial infections.

Bacteroides Nordii

An anaerobic Gram-negative bacterial species found in the intestine and occasionally identified in polymicrobial clinical specimens.

Bacteroides Ovatus

An anaerobic Gram-negative bacterium that is part of the intestinal microbiota and can contribute to opportunistic infection if it enters damaged or normally sterile tissue.

Bacteroides Pyogenes

An anaerobic Gram-negative bacterial species that may occur in human-associated microbiota and has occasionally been recovered from polymicrobial infections.

Bacteroides Salyersiae

An anaerobic Gram-negative bacterial species associated with the human intestine and occasionally implicated in opportunistic infection.

Bacteroides Stercoris

An anaerobic Gram-negative bacterial species commonly associated with intestinal microbiota and only rarely reported in clinical infection.

Bacteroides Thetaiotaomicon

An anaerobic Gram-negative bacterium that is an important member of the human gut microbiota and helps break down complex dietary carbohydrates; it can cause opportunistic infection outside the intestine.

Bacteroides Uniformis

An anaerobic Gram-negative bacterial species commonly found in the human intestine and usually regarded as a commensal organism.

Bacteroides Ureolyticus

A bacterial name historically applied to an anaerobic, urease-producing organism now generally classified as Campylobacter ureolyticus, which can be associated with wound or bloodstream infection.

Bacteroides Vulgatus

An anaerobic Gram-negative bacterium commonly found in the human intestine that can contribute to infection when the intestinal barrier is disrupted.

Bacteroides Xylanisolvens

An anaerobic Gram-negative bacterial species found in the human intestine that can break down plant-derived carbohydrates and is usually a commensal organism.

Bacteroidete

A member of the bacterial group now commonly called Bacteroidota, which includes many Gram-negative organisms found in soil, water, and the human intestine.

Baculoviridae

Baculoviridae is a virus or viral group classified by its genetic and biologic features; clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Bad Breath

An unpleasant odor from the mouth, medically called halitosis. It most often results from bacteria, food debris, gum disease, tooth decay, dry mouth, or tonsil problems; less commonly, it may be related to nose, throat, digestive, or other medical conditions.

Alternate Names:

Breath Bad (Bad Breath)

Bad Protein

Bad protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

BAER - Brainstem Auditory Evoked Response

BAER records electrical responses from the auditory nerve and brainstem after sound stimulation, helping assess hearing pathways when behavioral testing is difficult.

Bag-Mask Ventilation

Manual ventilation of a non-breathing or inadequately breathing patient using a self-inflating bag (AMBU) attached to a mask sealed over the face. Effective technique: correct mask size, jaw thrust/head extension, two-person technique (two-hand seal), adequate tidal volumes with ETCO₂ monitoring.

Bagassosis

An occupational hypersensitivity pneumonitis (extrinsic allergic alveolitis) caused by inhalation of dust from moldy bagasse—the fibrous residue of sugarcane after extraction. Caused by thermophilic actinomycetes (*Saccharopolyspora rectivirgula*) that colonize stored bagasse.

Bags Under Eyes

Mild swelling or fullness beneath the eyes, commonly related to aging, fluid retention, or inherited anatomy.

Alternate Names:

Puffy Eyes

Bainbridge Reflex

An increase in heart rate produced by stretch of the atrial walls, especially during increased venous return. The reflex helps limit venous congestion by adjusting cardiac output.

Bak Protein

Bak protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Baker Cyst

A fluid-filled cyst in the popliteal fossa, resulting from herniation of the synovial membrane through the posterior knee joint capsule or from a communication between the knee joint and the gastrocnemius-semimembranosus bursa.

Alternate Names:

Bakers Cyst (Baker Cyst) Popliteal Cyst (Baker Cyst)

Baker'S Cyst

A fluid-filled synovial cyst arising from the gastrocnemius-semimembranosus bursa posterior to the knee, typically caused by chronic knee joint effusion from conditions such as osteoarthritis, rheumatoid arthritis, or meniscal tears. It presents as a palpable, tender mass in the popliteal fossa that may rupture causing calf swelling.

Bakers Cyst (Baker Cyst)

Alternate index label for Baker Cyst.

Baking Powder Overdose

Toxic effects from ingesting a large amount of baking powder, which may cause abdominal distention, vomiting, excess sodium, electrolyte disturbances, or metabolic alkalosis. Severity depends on the amount and ingredients.

Baking Soda Overdose

Toxic effects from ingesting excessive sodium bicarbonate, which may cause vomiting, abdominal distention, high blood sodium, metabolic alkalo-

sis, or fluid disturbances. Severe exposure requires prompt assessment.

Balamuthia

A biomedical term referring to balamuthia; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Balamuthia Mandrillaris

A biomedical term referring to balamuthia mandrillaris; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Balamuthia Mandrillaris Infection

A rare, usually fatal infection caused by the free-living amoeba *Balamuthia mandrillaris*. It may begin as a skin lesion and progress to granulomatous amoebic encephalitis with headache, confusion, seizures, or focal neurologic deficits. Diagnosis is difficult and requires specialized testing; urgent infectious-disease and neurologic evaluation is essential.

Balance

The ability to maintain the body's center of mass over its base of support, relying on input from the vestibular system, vision, and proprioception. It is essential for walking, standing, and performing daily activities without falling. Age-related decline, medications, and neurological disorders can impair balance, increasing fall risk.

Balance Assessment

An evaluation of steadiness and the ability to maintain safe posture during standing and movement. It may include standardized tests and helps identify mobility or fall risk.

Balance Disorders And Vertigo

Balance disorders encompass conditions that cause dizziness, unsteadiness, or a sensation of motion, often arising from dysfunction in the inner ear, brain, or sensory pathways.

Balance Impairment

The ability to maintain the body's center of mass over its base of support, relying on input from the vestibular system, vision, and proprioception. See balance.

Balance Problems

Difficulty maintaining body stability while standing or moving, often caused by disorders of the inner ear, nervous system, vision, or muscles.

Balance Training

Exercises improving postural stability and preventing falls. Components: static balance, dynamic balance, reactive balance. Techniques: weight shifting, tandem stance, single-leg stance, perturbations, balance boards. Essential for elderly, neurological conditions.

Balanced Study

A clinical study design in which participant characteristics are evenly distributed between comparison groups at baseline, either by design or by randomization, to reduce confounding and allow fair comparison of interventions.

Balanitis

Inflammation of the glans penis, often involving the prepuce (balanoposthitis). Causes include poor hygiene, irritants, infection, and dermatologic conditions such as lichen planus, psoriasis, and lichen sclerosus. It may cause erythema, swelling, discharge, pruritus, and discomfort; treatment depends on the cause.

Balanitis (Penis Disorder)

Alternate index label for Penis Disorder.

Balanitis Xerotica Obliterans

A chronic, progressive inflammatory mucocutaneous disease of the male external genitalia, representing the penile manifestation of lichen sclerosus. Characterized by porcelain-white, sclerotic, atrophic plaques that predominantly involve the prepuce, glans penis, frenulum, and urethral meatus. Progression causes non-retractile phimosis, painful erec-

tions, meatal stenosis with urinary flow obstruction, and an elevated risk of developing invasive penile squamous cell carcinoma. Management includes ultra-potent topical corticosteroids, circumcision, and meatal reconstruction when stricturing occurs.

Alternate Names:

BZO; Penile Lichen Sclerosus

Balanoposthitis

Inflammation of both the glans penis and the prepuce. It may cause pain, erythema, swelling, discharge, or difficulty retracting the foreskin and can result from infection, irritation, or inflammatory skin disease.

Balantidiasis

Balantidiasis is intestinal infection caused by the protozoan *Balantidium coli*, producing diarrhea, abdominal pain, or colitis, especially after fecal exposure.

Balantidium

A biomedical term referring to *balantidium*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Balantidium Coli

A biomedical term referring to *balantidium coli*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Balbani Body

A specialized aggregate of organelles, including mitochondria and messenger RNA, near the nucleus of a developing oocyte; it helps organize maternal determinants during early embryonic development.

Baldness

Commonly used term for substantial hair loss, especially androgenetic alopecia, also called pattern hair loss. In this condition, genetically susceptible hair follicles gradually become smaller under the influence of androgens.

Alternate Names:

pattern.

Balint's Syndrome

Balint's syndrome is a neurologic disorder caused by bilateral parietal-occipital injury, characterized by impaired visual attention, reaching under visual guidance, and simultaneous perception.

Ballard Score

Clinical assessment of gestational age in newborns using 6 physical and 6 neuromuscular maturity criteria. Physical parameters: skin texture, ear form and recoil, eye appearance, breast tissue, and genitalia. Neuromuscular: posture, arm and leg recoil, popliteal angle, scarf sign, and heel-to-ear.

Ballism

A hyperkinetic movement disorder characterized by sudden, involuntary, large-amplitude, flinging movements of a limb or limbs. It is often related to dysfunction of the subthalamic region or connected basal-ganglia circuits.

Ballistocardiography

The graphic recording of repetitive body movements produced by the ejection of blood with each heartbeat. It has been used to study cardiac mechanical activity and circulation.

Balloon (Vascular)

An inflatable catheter component used to widen a narrowed blood vessel or expand a vascular stent.

Alternate Names:

Vascular

Balloon Angioplasty

A procedure that uses an inflatable balloon catheter to widen a narrowed artery, often followed by stent placement.

Balloon Aortic Valvuloplasty

Catheter-based procedure using balloon inflation to dilate a stenotic aortic valve. Provides temporary hemodynamic improvement in severe AS but restenosis is common within 6-12 months. Used as

a bridge to TAVR or surgical AVR in hemodynamically unstable patients, or as palliation in patients not eligible for definitive valve replacement.

Balloon Brachytherapy

A form of intracavitary radiation therapy in which a balloon catheter is placed in a body cavity, such as the breast lumpectomy cavity or uterine cavity, and filled with radioactive material to deliver localized radiation to surrounding tissue.

Balloon Catheter

A catheter with an inflatable tip used to widen a narrowed vessel, expand a stent, or dilate another body passage.

Balloon Dilation

A procedure that widens a narrowed body passage or vessel by inflating a balloon at the affected site.

Alternate Names:

Balloon dilatation; balloon angioplasty when performed in a blood vessel.

Balloon Tamponade

Temporary control of bleeding or obstruction using an inflatable balloon catheter to apply pressure or occlude a passage. Examples include tamponade of variceal bleeding, postpartum hemorrhage, or selected vascular injuries.

Balneology

Balneology is the study or therapeutic use of mineral waters, baths, and spa treatments; evidence and safety depend on the condition and treatment.

Balneotherapy

Balneotherapy is the therapeutic use of mineral-rich thermal waters, baths, muds, or related spa treatments for selected medical conditions; evidence, contraindications, and safety depend on the indication and treatment.

Balsam

A balsam is a resinous plant-derived substance used in some traditional remedies, fragrances, and topical

preparations; it may cause contact allergy.

Band Cell

An immature neutrophil with a curved, unsegmented nucleus. An increased number in blood may occur during acute infection or inflammation.

Band Keratopathy

A horizontal band of calcium deposition in the superficial cornea, typically across the interpalpebral area. It may occur with chronic ocular inflammation, hypercalcemia, renal disease, or longstanding eye disease and can impair vision.

Bandage

Material applied to cover, protect, compress, or support an injured body part. Examples include gauze, adhesive, elastic, and tubular bandages.

BANF

Alternate index label; see *NF2-related schwannomatosis (neurofibromatosis type 2)*.

Bankart Lesion

A tear of the anterior-inferior glenoid labrum, usually caused by anterior shoulder dislocation and associated with recurrent instability.

Bannayan-Riley-Ruvalcaba Syndrome

Autosomal dominant PTEN hamartoma tumor syndrome caused by loss-of-function mutations in PTEN (10q23), allelic to Cowden syndrome.

Banti Syndrome

A historical term for portal hypertension with splenomegaly and hypersplenism. Modern evaluation usually identifies an underlying hepatic, portal-venous, or hematologic disorder.

Alternate Names:

Banti disease; Banti's syndrome

Bar Graph

A chart that represents values with rectangular bars whose lengths or heights correspond to the quantities being compared.

Barakat Syndrome

A clinical disorder or finding related to barakat syndrome; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Barber Itch

An inflammatory infection of hair follicles in the beard area, often caused by bacteria or dermatophyte fungi and associated with itchy bumps or pustules.

Alternate Names:

Barber's itch

Barber Say Syndrome

A rare congenital disorder characterized by excess, lax facial skin, distinctive facial features, sparse hair and eyelashes, and eyelid abnormalities such as ectropion.

Barbiturate

A class of CNS depressants derived from barbituric acid that enhance GABA-A receptor activity by increasing the duration of chloride channel opening (as opposed to benzodiazepines, which increase the frequency). At low doses: anxiolysis and sedation. At moderate doses: hypnosis and anesthesia.

Barbiturate Intoxication And Overdose

Toxic effects caused by excessive exposure to a barbiturate medicine. Severe poisoning may cause central nervous system depression, respiratory failure, hypotension, or coma and requires emergency treatment.

Barbiturates

A class of central nervous system depressants derived from barbituric acid, acting as positive allosteric modulators of GABA-A receptors. They range from short-acting (thiopental) to long-acting (phenobarbital) and are used for anesthesia, seizure management, and, historically, sedation; dependence and overdose risk limit current use.

Bardet-Biedl Syndrome

A rare inherited disorder that may cause retinal degeneration, obesity, extra fingers or toes, kidney disease, and reproductive abnormalities.

Bardet-Biedl Syndrome

A rare inherited disorder that may cause retinal degeneration, obesity, extra fingers or toes, kidney disease, and developmental or reproductive problems.

Alternate Names:

BBS

Bare Stent (Vascular)

A metal mesh tube placed inside a narrowed vessel without a drug coating to keep the vessel open.

Alternate Names:

Vascular

Bariatric Surgery

Weight loss procedures and surgery, collectively known as bariatric surgery, are invasive interventions for severe obesity that produce substantial and sustained weight loss by altering gastrointestinal anatomy and physiology.

Bariatrics

The branch of medicine concerned with the prevention and treatment of obesity and its associated diseases, including lifestyle, medication, and bariatric surgery.

Barium

A metallic element (atomic number 56, symbol Ba) whose sulfate salt (barium sulfate) is used as a radiocontrast agent due to its high atomic number, which effectively absorbs X-rays.

Barium Enema

An X-ray examination of the large intestine after barium is put into the rectum. Sometimes air is added to show the bowel lining more clearly. It may be used to examine blockage, diverticula, or changes after surgery; other tests are now preferred for routine colon-cancer screening.

Barium Meal

A barium meal is an upper-gastrointestinal contrast study in which swallowed barium outlines the esophagus, stomach, and duodenum on radiographs or fluoroscopy.

Barium Study

An X-ray examination that uses barium to outline parts of the digestive tract. Examples include a barium swallow, barium enema, and upper-GI series. It can show the shape and movement of the digestive tract.

Barium Sulfate

An insoluble radiopaque contrast agent used for radiographic examinations of the gastrointestinal tract; aspiration or leakage from the bowel can cause serious complications.

Barium Swallow

An X-ray examination of the swallowing tube after a person drinks barium. It can show narrowing, abnormal shape, or problems with movement. A barium follow-through continues the examination into the small intestine.

Barium-133

Calibration source. Half-life 10.5 years. Used for energy calibration.

Barlow Test

A physical examination maneuver for detecting hip instability in infants. With the hip flexed, gentle pressure is applied to see whether the femoral head can be displaced out of the socket, suggesting developmental dysplasia of the hip.

Barlow's Disease

Barlow's disease is an older name for severe vitamin-C deficiency, or scurvy, causing bleeding gums, bruising, poor wound healing, and bone or joint symptoms.

Barognosis

The ability to recognize and compare the weight of

objects by holding them. Loss of this ability may indicate a problem in areas of the brain that process sensation.

Baroreceptor

A pressure sensor in major arteries, especially in the neck and chest, that detects changes in blood pressure and helps the body adjust heart rate and blood-vessel tightness.

Baroreceptor Reflex

The rapid neural mechanism for short-term blood pressure regulation, involving baroreceptors (mechanoreceptors) in the carotid sinus (innervated by CN IX) and aortic arch (innervated by CN X). When blood pressure rises, baroreceptors increase their firing rate, signaling the cardiovascular center in the medulla.

Baroreceptors

Baroreceptors are stretch-sensitive nerve endings in major arteries that detect blood-pressure changes and help regulate heart rate and vascular tone through reflexes.

Baroreflex

A rapid reflex that helps regulate blood pressure by adjusting heart rate and blood-vessel tone in response to changes in arterial pressure.

Barotitis Media

Alternate index label; see *Airplane ear*.

Barotrauma

Lung injury from excessive pressure during ventilation, causing alveolar rupture (pneumothorax, pneumomediastinum). Risk factors: high pressures, high PEEP. Prevented by lung-protective ventilation.

Barr Body

A Barr body is the condensed, inactive X chromosome visible in the nucleus of many cells with more than one X chromosome.

Barraquer-Simons Disease

Barraquer-Simons disease is acquired partial lipodystrophy with loss of subcutaneous fat from the face and upper body and relative fat accumulation in the lower body.

Barrel Chest

A rounded, enlarged appearance of the chest caused by increased lung volume or changes in the chest wall. It may occur with chronic obstructive pulmonary disease, severe asthma, or other long-standing lung conditions.

Barrett Esophagus

A change in the lower lining of the swallowing tube caused by long-term acid reflux. The changed lining can increase the risk of precancerous changes and cancer.

Barrett Esophagus Surveillance

Periodic endoscopic evaluation of Barrett esophagus to detect dysplasia or early esophageal adenocarcinoma. The interval and biopsy protocol depend on the presence and grade of dysplasia and current clinical guidelines.

Barrett'S Esophagus

A change in the lower esophageal lining caused by chronic reflux and associated with an increased risk of esophageal adenocarcinoma.

Alternate Names:

Barretts Esophagus (Barrett's Esophagus) Columnar Epithelium Lined Lower Esophagus

Barrett'S Oesophagus

Barrett's oesophagus is replacement of normal lower-esophageal lining by specialized intestinal-type epithelium after chronic reflux, increasing the risk of dysplasia and adenocarcinoma.

Barretts Esophagus (Barrett'S Esophagus)

Alternate index label for Barrett's Esophagus.

Barrier Creams

Topical preparations applied to the skin to create a physical protective layer against irritants, moisture, and pathogens. Common formulations include zinc oxide, petrolatum, dimethicone, and titanium dioxide.

Barrier Nursing (Isolation Nursing)

Nursing care arranged to reduce the spread of infection between a patient, healthcare workers, and other patients by using appropriate hand hygiene, protective equipment, and isolation measures.

Alternate Names:

Isolation Nursing

Bart'S Hemoglobinopathy

A severe alpha-thalassaemia syndrome caused by deletion or inactivation of all four alpha-globin genes, producing haemoglobin Bart's (gamma4); it usually causes hydrops fetalis and is commonly fatal before or shortly after birth.

Barthel Index

A standardized scale that measures assistance needed for activities of daily living, including feeding, bathing, dressing, toileting, transfers, mobility, and stair use. Scores are interpreted according to the version of the scale and the clinical setting.

Bartholin Abscess

An acute, painful, fluctuant purulent infection of the greater vestibular (Bartholin) gland, occurring when ductal occlusion leads to secondary polymicrobial or opportunistic bacterial infection. It presents with severe vulvar throbbing pain, localized swelling, erythema, and difficulty sitting or walking. Management requires urgent incision and drainage with Word catheter placement, marsupialization, and appropriate antimicrobial therapy.

Alternate Names:

Infected Bartholin Cyst; Bartholin Gland Abscess

Bartholin Cyst

A cyst of the Bartholin gland (paired mucus-secreting glands at the posterolateral introitus) due to obstruction of the duct; if infected, a Bartholin

abscess.

Bartholin Cyst Or Abscess

Bartholin cyst is a blocked gland duct near the vaginal opening; infection can produce a painful abscess requiring drainage and sometimes antibiotics.

Bartholin Gland

One of two small glands near the vaginal opening that produce lubricating mucus. Blockage of its duct can cause a painless cyst; infection can produce a painful abscess with swelling, redness, and difficulty walking or sitting. Recurrent or atypical masses require gynecologic assessment.

Bartholin Gland Hyperplasia

Enlargement and proliferation of Bartholin gland tissue, which may present as a vulvar mass and can mimic a cyst or neoplasm; persistent or atypical lesions require clinical assessment and biopsy.

Bartholin Gland Mucinous Cyst

A mucus-filled cyst arising from obstruction of a Bartholin gland duct, usually presenting as a fluctuant mass in the posterolateral vaginal introitus; infection may produce an abscess.

Bartholin's Cyst

A fluid-filled cyst caused by blockage of a Bartholin gland near the vaginal opening.

Alternate Names:

Cyst, Bartholin's

Bartholin's Glands

Bartholin's glands are paired glands near the vaginal opening that secrete mucus for lubrication through ducts opening into the vestibule.

Bartholinitis

Bartholinitis is inflammation or infection of a Bartholin gland, often causing painful swelling or an abscess near the vaginal opening.

Bartonella

A genus of bacteria that includes organisms caus-

ing cat-scratch disease, trench fever, bacillary angiomatosis, and other infections.

Bartonella Elizabethae

A biomedical term referring to bartonella elizabethae; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Bartonella Henselae

A small gram-negative bacterium that causes cat-scratch disease and can produce regional lymphadenitis, fever, and other systemic or atypical infections.

Bartonella Infections

A biomedical term referring to bartonella infections; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Bartonella Quintana

A biomedical term referring to bartonella quintana; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Bartonellaceae

A family of small gram-negative bacteria that includes Bartonella species, which can cause cat-scratch disease, bacillary angiomatosis, endocarditis, and relapsing fever.

Bartonellosis

A group of infections caused by Bartonella species, including cat-scratch disease, bacillary angiomatosis, and, in some regions, bloodstream infection with fever and anemia. The clinical features depend on the species and the patient's immune status.

Bartter Disease

A group of inherited kidney disorders that cause excessive loss of salt and potassium in the urine.

Bartter Syndrome

A group of inherited kidney disorders that cause the body to lose too much salt and potassium in the urine. They can lead to dehydration, muscle weakness, frequent urination, excessive thirst, and poor growth in children.

Basal

Basal means at the base, lowest level, or resting state, such as basal metabolism, basal cells, or basal body temperature.

Basal Body

A microtubule-organizing structure at the base of a cilium or flagellum, derived from a centriole, that anchors the cilium and initiates its axoneme.

Basal Cell

A cell in the deepest layer of an epithelial tissue, where it can divide and produce new cells. In the epidermis, basal cells help renew the skin and contain keratinocyte stem and progenitor cells.

Basal Cell Carcinoma

The most common malignant skin tumor, arising from basal keratinocyte-lineage cells and associated with cumulative ultraviolet exposure and Hedgehog-pathway abnormalities. It commonly presents as a pearly papule or nodule with telangiectasia, ulceration, or a rolled border.

Basal Cell Skin Cancer

Basal cell skin cancer is a usually slow-growing skin malignancy arising from basal keratinocytes; it rarely metastasizes but can destroy nearby tissue if untreated.

Basal Ganglia

Deep brain structures that help control movement, habits, learning, and emotions. Problems in these structures can cause tremor, stiffness, slowed movement, or unwanted movements.

Basal Ganglia Dysfunction

Abnormal function of the deep cerebral nuclei that

regulate movement, cognition, and procedural learning. It may cause tremor, rigidity, bradykinesia, chorea, dystonia, or abnormal involuntary movements, as in Parkinson disease and Huntington disease.

Basal Joint Arthritis

Alternate index label; see *Thumb arthritis*.

Basal Lamina

A thin supporting layer beneath cells that line body surfaces and organs. It helps anchor these cells to the underlying tissue.

Basal Metabolic Rate

Energy expenditure at rest for basic physiological functions. Accounts for 60-75% of total energy expenditure. Affected by age, sex, body composition, thyroid status, genetics. Measured by indirect calorimetry.

Basal Metabolic Rate

Basal metabolic rate is the energy the body uses at rest to maintain essential functions such as breathing, circulation, temperature, and cellular activity.

Basal Nuclei

The basal nuclei are deep cerebral structures that help select and regulate movement, habits, learning, and other motor and cognitive functions.

Basal Tear

A basal tear is a tear occurring at the base of a structure; in the eye, a basal tear layer helps lubricate and protect the ocular surface.

Basal Temperature

The body's resting temperature, measured immediately after waking and before activity; a sustained small rise can occur after ovulation.

Base

A substance that accepts protons (H⁺) or donates electron pairs (Lewis base). In aqueous solution, bases increase OH⁻ concentration (pH >7). Strong

bases (NaOH, KOH) dissociate completely; weak bases (NH₃, HCO₃⁻, protein side chains) partially.

Base Excision Repair

The repair pathway for small, non-helix-distorting base lesions including oxidized bases (8-oxoguanine), deaminated bases (uracil from cytosine deamination), alkylated bases, and abasic (AP) sites.

Base Pair

Two complementary nucleobases joined by hydrogen bonds in nucleic acids: adenine pairs with thymine (or uracil in RNA), and cytosine pairs with guanine.

Base Pairing

The specific hydrogen-bonded association of complementary nucleobases that stabilizes nucleic-acid structure and permits accurate DNA replication, transcription, and RNA hybridization.

Base Sequence

The ordered sequence of nucleotides in a DNA or RNA molecule; it encodes genetic information and can be analysed to identify variants, pathogens, or inherited disorders.

Basedow's Disease

Basedow's disease is Graves disease, an autoimmune disorder in which thyroid-stimulating antibodies cause hyperthyroidism, goiter, and sometimes eye or skin manifestations.

Baseline

A reference measurement or clinical state obtained before an intervention, illness, or period of observation, used for comparison with subsequent findings.

Baseline EKG

An electrocardiogram obtained for comparison with later tracings or before a treatment, procedure, or change in clinical status.

Alternate Names:

Baseline ECG; reference electrocardiogram.

Basement Membrane

A thin, delicate layer of extracellular matrix that anchors epithelial tissue to the underlying connective tissue.

Basic First Aid

Basic first aid is immediate care for illness or injury, including scene safety, emergency activation, bleeding control, resuscitation, choking care, and monitoring until help arrives.

Basic Fuchsin

Basic fuchsin is a magenta laboratory dye used in stains and microbiology, including methods for detecting selected bacteria.

Basic Life Support

Immediate care for a person with cardiac arrest or respiratory failure, including recognition, emergency activation, chest compressions, ventilation, and defibrillation when indicated.

Basic Metabolic Panel

A panel of blood tests measuring serum glucose, sodium, potassium, chloride, bicarbonate, BUN, and creatinine. Also includes calcium in some institutions. Uses: assess hydration status, renal function, acid-base balance, and glucose control.

Basic Reproduction Number

The expected number of secondary infections generated by one typical infectious person in a completely susceptible population, under specified conditions. It is a population and context parameter, not a fixed biological constant.

Basic Research

Scientific investigation aimed at understanding fundamental biological, chemical, or physical mechanisms underlying health and disease, without immediate direct clinical application. It provides the foundation for translational and clinical research.

Basidiomycota

A major fungal group that reproduces by forming

spores on club-shaped structures called basidia. It includes mushrooms, rusts, smuts, and some fungi that can cause human disease.

Basilar

Relating to or located at the base of a structure, such as the base of the skull or the basilar artery.

Basilar Artery

The artery formed by the union of the vertebral arteries that supplies the brainstem, cerebellum, and posterior brain.

Basilar Artery Aneurysm

Dilation of the basilar artery, most commonly fusiform, often associated with atherosclerosis or hypertension. May compress cranial nerves or brainstem structures causing facial pain, double vision, or hemiparesis. Rupture causes subarachnoid hemorrhage with high morbidity.

Basilar Membrane

A flexible membrane in the cochlea that supports the organ of Corti and vibrates in response to sound. Different parts respond best to different sound frequencies.

Basilic Vein

A superficial vein of the upper limb that ascends along the medial side of the arm and joins the brachial veins to form the axillary vein. It is used for venous access in selected settings.

Brachial Vein

Deep veins accompanying the brachial artery that drain the arm and join the basilic vein to form the axillary vein.

Basiliximab

A monoclonal antibody that blocks the interleukin-2 receptor alpha chain on activated T cells. It is used as induction immunosuppression, especially in kidney transplantation, and increases susceptibility to infection.

Basis Pontis

The basis pontis is the front portion of the pons containing descending motor fibers and pontine nuclei that relay signals to the cerebellum.

Basket Cell

A basket cell is an inhibitory interneuron that forms synaptic contacts around the cell body or axon initial segment of another neuron.

Basophil

A rare (<1 percent of leukocytes) granulocyte with large, basophilic granules containing histamine, heparin, and leukotrienes. Basophils bear high-affinity IgE receptors (Fc-epsilon-RI) and, like mast cells, release histamine and mediators during immediate hypersensitivity (allergic) reactions.

Basophil Adenoma

A basophil adenoma is a usually benign pituitary tumor composed of basophilic hormone-producing cells and may cause hormone excess or pressure symptoms.

Basophilia

An abnormally increased number of basophils in the blood. It may occur with myeloproliferative disorders, allergic or inflammatory conditions, and some infections.

Basophilic Focus

A basophilic focus is an area that stains blue or purple with basic dyes, reflecting particular cellular or tissue components.

Basosquamous Carcinoma

A neoplastic process affecting basosquamous carcinoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Bassen-Kornzweig Syndrome

Bassen-Kornzweig syndrome, or abetalipoproteinemia, is an inherited disorder of lipoprotein assembly causing fat malabsorption, acanthocytosis, vitamin E deficiency, and neurologic disease.

Batabulin

Batabulin is an investigational vascular-disrupting antineoplastic agent studied for effects on tumor blood vessels and cancer growth.

Bath Anoaesthesia

Bath an(a)esthesia is a historical term for loss of sensation associated with bathing or immersion; the wording is uncommon and its meaning depends on the source.

Bath Salts Abuse And Addiction

Misuse of synthetic cathinones, stimulant drugs that may cause agitation, paranoia, hallucinations, seizures, dangerously high temperature, cardiovascular complications, and dependence. Severe agitation, chest pain, seizure, hyperthermia, or altered consciousness requires emergency care. Treatment is supportive and may require addiction and mental-health services.

Bather'S Itch

Bather's itch is an itchy rash caused by skin penetration of cercarial larvae released by freshwater or marine snails, usually resolving without systemic illness.

Bathing A Patient In Bed

Safe bathing care involves maintaining water temperature, preventing falls or drowning, protecting skin, and providing assistance appropriate to the person's age and mobility.

Bathing An Infant

Safe bathing care involves maintaining water temperature, preventing falls or drowning, protecting skin, and providing assistance appropriate to the person's age and mobility.

Batimastat

Batimastat is an investigational matrix-metalloproteinase inhibitor studied to limit tumor invasion and tissue breakdown.

Batrachotoxin

A highly potent steroidal alkaloid toxin found in some poison frogs and birds that persistently activates voltage-gated sodium channels, causing neuronal and cardiac depolarization, arrhythmias, paralysis, and potentially death.

Batracylin

Batracylin is an investigational anticancer compound studied for DNA damage and topoisomerase-related cytotoxic effects.

Batroxobin

Batroxobin is a snake-venom-derived thrombin-like enzyme that converts fibrinogen to fibrin and has been studied or used in selected clotting and bleeding settings.

Batten Disease

An inherited group of neuronal ceroid lipofuscinoses causing progressive neurodegeneration, seizures, vision loss, and cognitive or motor decline, usually beginning in childhood.

Battered Child Syndrome

A pattern of repeated, non-accidental physical injury inflicted on a child by a caregiver, formally described by Kempe in 1962. Features include fractures of differing ages, subdural and retinal hemorrhages, inconsistent histories, and delayed presentation; mandatory reporting is required in most jurisdictions.

Battery

A battery is a collection of cells or tests used together; in healthcare it may also refer to a power source for an implanted device or to harmful battery ingestion.

Batley Bacillus

An older name for *Mycobacterium avium* complex, a group of nontuberculous mycobacteria that cause pulmonary disease, lymphadenitis, and disseminated infection in immunocompromised patients, particularly those with advanced HIV/AIDS.

Bauhin Valve

The ileocecal valve, a mucosal sphincter at the junction of the terminal ileum and cecum that helps regulate passage of intestinal contents and limits reflux from the colon.

Bauxite-Workers' Lung

Bauxite-workers' lung is an occupational pneumoconiosis associated with inhalation of bauxite dust, potentially causing chronic airway or interstitial lung disease.

Bax Protein

Bax protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Bayes Theorem

A rule for updating the probability of a condition after new evidence, using the prior probability and the likelihood of that evidence in people with and without the condition.

Bazin'S Disease

Bazin's disease is erythema induratum, a nodular inflammation of subcutaneous fat on the calves, classically associated with tuberculosis but having other causes.

Bcgosis

BCGosis is infection or disseminated disease caused by *Bacille Calmette–Guérin* organisms, usually after intravesical BCG treatment or in immune deficiency.

Bdellotomy

Bdellotomy is the surgical incision or removal of a leech attached to tissue, a historical procedure used to control bleeding or prevent retained mouthparts.

Beach Chair Position

A semisitting position in which the patient's back is elevated and the hips and knees are flexed; it is commonly used for shoulder surgery.

Beacopp Regimen

A combination chemotherapy regimen used mainly to treat Hodgkin lymphoma; it includes bleomycin, etoposide, doxorubicin, cyclophosphamide, vincristine, procarbazine, and prednisone, with dosing and supportive care determined by the oncology team.

Beals Syndrome

A congenital connective-tissue disorder characterized by congenital contractures, arachnodactyly, kyphoscoliosis, and crumpled ears. It is usually associated with pathogenic variants affecting fibrillin-2.

Beam Hardening Artifact

CT artifact from dense structures. Reduced by beam hardening correction algorithms.

Beat Number

Beat number is the count of heartbeats or other rhythmic events over a specified interval and helps describe rate or rhythm.

Beats, Cardiac

Cardiac beats are the repeated cycles of atrial and ventricular electrical activation and contraction that propel blood through the circulation.

Beau Lines

Transverse depressions or grooves across the nail plate caused by temporary interruption of nail-matrix growth. They may follow severe illness, fever, trauma, malnutrition, chemotherapy, or systemic inflammatory disease.

Beau'S Lines

Transverse grooves or depressions across a fingernail or toenail caused by temporary interruption of nail-matrix growth. They may follow severe illness, injury, high fever, nutritional stress, or local trauma; the timing of the groove can help estimate when the event occurred.

Becaplermin

Becaplermin is a recombinant platelet-derived

growth factor gel used in selected diabetic foot ulcers with appropriate wound care.

Becatecarin

Becatecarin is an investigational topoisomerase-I inhibitor studied for anticancer activity.

Bechterew Disease

Historical eponym for ankylosing spondylitis (also known as Marie-Strümpell disease), describing the chronic inflammatory arthritis of the axial skeleton first reported by Vladimir Bekhterev (Russian, 1892) and Adolf Strümpell (German, 1884).

Alternate Names:

Marie-Strümpell disease),.

Beck Triad

Classic diagnostic clinical triad of Cardiac Tamponade: (1) Hypotension, (2) Distended neck veins (elevated JVP), and (3) Muffled / distant heart sounds. See Cardiac Tamponade.

Becker Muscular Dystrophy

An X-linked recessive neuromuscular disorder caused by mutations in the dystrophin gene, similar to Duchenne muscular dystrophy (DMD), but with in-frame mutations that allow production of some functional dystrophin protein, albeit reduced in quantity or abnormal in size. The result is a milder clinical phenotype compared to DMD.

Becker Myotonia

The autosomal recessive form of myotonia congenita caused by loss-of-function mutations in the *CLCN1* gene on chromosome 7q35, which encodes the skeletal muscle voltage-gated chloride channel ClC-1. Characterized by reduced chloride conductance that causes sarcolemmal electrical hyperexcitability and delayed muscle relaxation following voluntary contraction. Typically manifests in late childhood with generalized muscle stiffness, transient weakness during sudden vigorous movements, prominent muscle hypertrophy (giving patients a bodybuilder or “Herculean” appearance), and classic percussion and action myotonia that improves with repetitive activity (the warm-up phenomenon); clinical severity

is significantly greater than in autosomal dominant Thomsen disease.

Alternate Names:

Autosomal Recessive Myotonia Congenita; Recessive Generalized Myotonia

Becker’S Muscular Dystrophy

Becker muscular dystrophy is an X-linked dystrophinopathy causing progressive skeletal-muscle weakness, usually later and more slowly than Duchenne muscular dystrophy.

Becker’S Nevus

A benign hamartomatous lesion appearing as a unilateral, hyperpigmented, often hairy patch, typically developing in adolescence on the shoulder or upper trunk of males. It results from a localized androgen-dependent increase in dermal smooth muscle and pigmentation. It is cosmetically concerning but carries no malignant potential.

Beckwith-Wiedemann Syndrome

An overgrowth disorder associated with 11p15.5 imprinting defects. Features: macrosomia, macroglossia, omphalocele, visceromegaly, and neonatal hypoglycemia. Increased risk of embryonal tumors (Wilms tumor, hepatoblastoma).

Beclomethasone

Beclomethasone is a corticosteroid used by inhalation, nasal spray, or topical routes to reduce inflammation in asthma, rhinitis, or skin disease.

Becquerel

A becquerel is the SI unit of radioactivity equal to one nuclear decay per second.

Becquerel (Bq)

The SI unit of radioactive activity, equal to one nuclear transformation per second. Administered activity is commonly reported in megabecquerels or gigabecquerels in nuclear medicine.

Alternate Names:

Bq

Bed Rest

Prescribed or self-imposed restriction of physical activity to a bed or reclining position, used therapeutically for selected conditions such as high-risk pregnancy or acute back pain. Prolonged bed rest can cause deconditioning, thromboembolism, and pressure injury.

Bed Rest During Pregnancy

Bed rest during pregnancy is a medical recommendation that restricts activity for a specific indication. Routine bed rest is not generally used because it can cause deconditioning and thromboembolism.

Bedbug

A bedbug is a blood-feeding *Cimex* insect that causes itchy bites, skin reactions, anxiety, and occasionally secondary infection but is not known to transmit human disease routinely.

Bedbug Bites

Cutaneous reactions to bites of *Cimex lectularius* (bedbugs), nocturnal blood-feeding insects. Bites are painless but cause erythematous, pruritic papules, often in a linear arrangement (breakfast, lunch, dinner sign) or clusters on exposed skin (face, neck, arms, hands). Delayed hypersensitivity develops over days.

Bedbugs

Small blood-feeding insects that cause itchy bites and skin reactions and can spread through bedding, clothing, and furniture.

Bedbugs Bite (Bed Bugs)

Alternate index label for Bed Bugs.

Bednar Aphthae

Traumatic ulcers on the posterior palate of an infant, often associated with pressure or irritation during feeding.

Bedpan

A receptacle used by a person who cannot safely leave bed to urinate or pass stool.

Bedsore

Pressure ulcer (decubitus): localized skin/soft tissue injury from prolonged pressure over bony prominences (sacrum, heels, occiput, trochanters), usually in immobile patients.

Bedsore (Pressure Ulcers)

Injuries to skin and underlying tissue caused by prolonged pressure, usually over bony areas in people with limited mobility.

Bedtime Habits For Infants And Children

Healthy bedtime habits for infants and children include a consistent routine, a safe sleep environment, and age-appropriate sleep duration.

Bedwetting

Involuntary urination during sleep after the age at which nighttime bladder control is usually established. It may be primary or secondary to urinary infection, constipation, diabetes, sleep disorders, stress, or other medical conditions and should be assessed when persistent, new, or accompanied by daytime symptoms.

Bee And Wasp Sting

Bee and wasp stings inject venom and usually cause immediate localized pain, redness, swelling, and itching. Widespread hives, throat or tongue swelling, breathing difficulty, dizziness, or vomiting may indicate anaphylaxis and require emergency treatment.

Bee Sting

A skin injury caused by a bee's stinger that may cause local pain and swelling or, in allergic people, a serious systemic reaction.

Alternate Names:

Stings, Bee

Bee Stings

Bee stings inject venom and can cause localized pain and swelling, large local reactions, or life-threatening anaphylaxis in sensitized people.

Bee, Wasp, Hornet, Or Yellow Jacket

Sting

A clinical topic about bee, wasp, hornet, or yellow jacket sting. It includes the purpose, common findings, risks, and appropriate clinical follow-up.

Beer-Drinker'S Heart

Beer-drinker's heart is an older term for alcohol-related dilated cardiomyopathy, in which chronic heavy alcohol use weakens and enlarges the heart.

Beers Criteria

A regularly updated list of medicines that may pose increased risks for some older adults. It supports medication review but does not replace individualized clinical judgment.

Beeswax Poisoning

Illness after ingesting or inhaling a large amount of beeswax. Beeswax is generally of low toxicity, but large ingestions may cause gastrointestinal blockage or aspiration, especially in children.

Behavior

The observable actions, responses, and activities of an organism, influenced by genetic, neurobiological, psychological, and environmental factors. In medicine, behavioral assessment helps diagnose psychiatric, developmental, and neurological conditions.

Behavior Disorder

A clinical disorder or finding related to behavior disorder; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Behavior Test

A structured assessment of behavior, mood, attention, thinking, or social functioning. It may use observation, interviews, questionnaires, or standardized tasks to help identify developmental, psychiatric, or neurologic concerns.

Behavior Therapy

A form of psychotherapy based on learning principles

that uses reinforcement, extinction, and other behavioral techniques to modify maladaptive behaviors. It is effective for anxiety disorders, phobias, obsessive-compulsive disorder, and habit disorders.

Behavioral Abnormality

A deviation from typical patterns of behavior that may indicate a psychiatric, neurodevelopmental, or neurologic condition. It is assessed by history, observation, standardized measures, and developmental norms to determine clinical significance.

Behavioral Genetics

Behavioral genetics is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

Behavioral Rehabilitation

Behavioral interventions for chronic conditions: pain management, addiction, adjustment.

Behcet Disease

A chronic, relapsing systemic vasculitis characterized by recurrent oral ulcers, genital ulcers, and ocular inflammation, with a distribution along the ancient Silk Road from the Mediterranean to East Asia.

Behcet Syndrome

A chronic inflammatory disorder that can cause recurrent mouth and genital ulcers, eye inflammation, and other organ involvement.

Behcet'S Syndrome

Behcet syndrome is a relapsing inflammatory disorder that can cause recurrent mouth and genital ulcers, eye inflammation, skin lesions, and vascular, neurologic, or gastrointestinal disease. Treatment is tailored to the organs involved and may include immunosuppression.

Alternate Names:

Silk Road Disease (Behcet's Syndrome)

Behçet'S Syndrome

Behçet's syndrome is a relapsing inflammatory disorder causing recurrent oral and genital ulcers, eye inflammation, skin lesions, and sometimes vascular, neurologic, or gastrointestinal disease.

Behenic Acid

Behenic acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Behr Syndrome

A clinical disorder or finding related to behr syndrome; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Beijerinck, Martinus W.

A Dutch microbiologist who helped establish the concept of viruses as infectious agents that reproduce only in living cells and contributed to the development of enrichment culture methods.

Being Active When You Have Heart Disease

Physical activity after a heart attack or with heart disease should be gradual and individualized, usually with clinician guidance or cardiac rehabilitation.

Being Good Partner To Someone With Chronic Illness

Supporting a partner with chronic illness involves listening, respecting autonomy, sharing practical tasks by agreement, and recognizing fluctuating symptoms and treatment demands. Clear communication, respite, boundaries, and professional or peer support help protect both partners' well-being.

Bejel

Bejel is endemic treponematosi s, a chronic infection caused by *Treponema pallidum* pertenue or related treponemes and spread mainly by close nonsexual contact in endemic areas.

Bekam

A Malay name for cupping, a practice in which cups create suction on the skin; wet cupping may also involve superficial skin incisions.

Belching

The release of swallowed air or gas from the stomach through the mouth. Frequent belching may occur with aerophagia, gastroesophageal reflux, functional dyspepsia, or carbonated-drink consumption.

Belinostat

Belinostat is a histone-deacetylase inhibitor used for selected relapsed or refractory peripheral T-cell lymphomas.

Bell-Clapper Deformity

A congenital anatomical variation of the scrotum and testis in which the visceral and parietal layers of the tunica vaginalis insert abnormally high on the spermatic cord rather than posterolaterally on the testis. This failure of normal testicular posterior fixation allows the testis to hang horizontally and mobile within the tunica vaginalis cavity like a bell clapper within a bell. The deformity is frequently bilateral and is the primary anatomical predisposing risk factor for intravaginal testicular torsion.

Alternate Names:

Bell-Clapper Anomaly; High Tunica Vaginalis Insertion

Bell Palsy

Acute, idiopathic, unilateral facial nerve (CN VII) paralysis of lower motor neuron type, with an incidence of approximately 20-30 per 100,000 person-years.

Bell'S Palsy

Acute peripheral facial-nerve weakness of uncertain cause, usually affecting one side of the face. Eye protection and timely clinical assessment are important; treatment is individualized.

Alternate Names:

Palsy, Bell's Palsy, Facial

Belladonna

Atropa belladonna, the deadly nightshade plant, whose tropane alkaloids such as atropine and scopolamine can cause anticholinergic poisoning.

Bells Palsy (Facial Nerve Problems)

Alternate index label for Facial Nerve Problems.

Belly

The abdomen, the region of the body between the chest and pelvis containing much of the digestive, urinary, and reproductive organs.

Belotecan Hydrochloride

Belotecan hydrochloride is an investigational topoisomerase-I inhibitor studied as an anticancer drug.

Bence Jones Protein

Monoclonal immunoglobulin light chains (free kappa or lambda) detectable in urine of patients with monoclonal gammopathies, most characteristically multiple myeloma but also Waldenstrom macroglobulinemia, MGUS, and primary amyloidosis (AL).

Bence-Jones Protein

A monoclonal immunoglobulin light chain found in urine or blood, classically associated with plasma-cell disorders such as multiple myeloma. Detection contributes to evaluation of monoclonal gammopathy and kidney injury.

Benchmarking

Benchmarking compares performance, outcomes, quality, or processes with a reference standard or peer group to identify improvement opportunities.

Bendamustine

Bendamustine is an alkylating antineoplastic drug used for selected lymphoid cancers and chronic lymphocytic leukemia, with marrow and infection risks.

Bendamustine Hydrochloride

Bendamustine hydrochloride is the hydrochloride salt formulation of the alkylating antineoplastic drug

bendamustine.

Bendiocarb

Bendiocarb is a carbamate insecticide that inhibits acetylcholinesterase and can cause cholinergic poisoning after exposure.

Bendroflumethiazide

Bendroflumethiazide is a thiazide diuretic used for hypertension or fluid retention and can lower blood pressure, potassium, and sodium.

Bends

A manifestation of decompression sickness caused by gas bubbles forming in tissues or blood after a rapid reduction in ambient pressure. It commonly produces deep joint or muscle pain but may also involve the nervous system or lungs.

Benedikt'S Syndrome

Benedikt's syndrome is a midbrain lesion causing ipsilateral oculomotor palsy with contralateral tremor, ataxia, or involuntary movements.

Beneficence And Non-Maleficence

Core biomedical ethical principles guiding clinical practice and medical research. Beneficence requires healthcare providers to act in the best interest of the patient, taking positive steps to promote health, prevent harm, and relieve suffering.

Benefits And Risks Of Taking Amino Acid Supplement

Amino-acid supplements may be useful for a documented deficiency or a specific clinical indication, but most people obtain adequate amino acids from protein-containing foods. Excessive or unnecessary use can cause gastrointestinal symptoms, metabolic effects, interactions, or kidney and liver concerns.

Benfuracarb

Benfuracarb is a carbamate insecticide that inhibits acetylcholinesterase and can cause cholinergic toxicity after exposure.

Benign

Not malignant and not expected to invade nearby tissue or spread to distant sites, although a benign lesion can still cause problems because of its size or location.

Alternate Names:

Nonmalignant; noncancerous.

Benign Adrenal Tumors

Noncancerous growths of an adrenal gland that may be discovered incidentally or may produce excess hormones.

Benign Ameloblastoma

A neoplastic process affecting benign ameloblastoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Benign Brain Tumor

A noncancerous growth in or around the brain that can still cause symptoms by pressing on brain tissue, nerves, or fluid pathways.

Benign Chondroblastoma

A benign cartilage-producing bone tumor, usually arising in the epiphysis of adolescents and young adults and often causing joint-region pain.

Benign CNS Cyst

A non-neoplastic fluid-filled lesion within or around the central nervous system, such as an arachnoid, epidermoid, or colloid cyst. Clinical significance depends on location, size, growth, and obstruction of cerebrospinal-fluid pathways.

Benign Ear Cyst Or Tumor

A benign ear cyst or tumor is a noncancerous mass involving the external, middle, or inner ear. Symptoms and treatment depend on location and size.

Benign Epithelioma

A benign epithelioma is a noncancerous epithelial tumor or growth that does not invade or metastasize but may require removal if symptomatic or uncertain.

Benign Hemangiopericytoma

A benign hemangiopericytoma is a usually nonmalignant tumor around small blood vessels; modern classification often groups related lesions as solitary fibrous tumors.

Benign Intracranial Hypertension

An older term for idiopathic intracranial hypertension, a disorder of raised intracranial pressure without an intracranial mass or hydrocephalus. Headache and papilledema are typical, and untreated disease may threaten vision.

Benign Melanoma

A nonstandard or contradictory phrase: melanoma is a malignant melanocytic tumor, so a benign pigmented lesion should generally be described by its specific benign diagnosis rather than as benign melanoma.

Benign Meningioma

A benign meningioma is a usually slow-growing tumor arising from the membranes around the brain and spinal cord and may cause symptoms by compression.

Benign Mesenchymoma

A benign mesenchymoma is a rare noncancerous tumor containing more than one type of mesenchymal tissue, such as fat, cartilage, or bone.

Benign Migratory Glossitis

Alternate index label; see *Geographic tongue*.

Benign Mixed Tumor

A benign salivary-gland tumor containing epithelial and connective-tissue components, usually called a pleomorphic adenoma.

Benign Mullerian Papilloma

A rare benign papillary lesion of the vulvovaginal region showing Müllerian-type epithelial differentiation, usually presenting as a small polypoid lesion.

Benign Myoepithelioma

A benign myoepithelioma is a noncancerous tumor of myoepithelial cells, commonly arising in a salivary gland or other glandular tissue.

Benign Neoplasm

Benign neoplasms are proliferations of cells that remain confined to their site of origin, grow by expansion rather than invasion, and do not metastasize to distant sites. They typically grow slowly, pushing aside adjacent normal tissue and often becoming enclosed by a fibrous pseudocapsule formed from compressed connective tissue.

Benign Orgasmic Headache

A sudden severe headache occurring during sexual activity or at orgasm after dangerous secondary causes have been excluded.

Alternate Names:

Primary headache associated with sexual activity; sexual-activity headache.

Benign Paraganglioma

A benign paraganglioma is a usually slow-growing neuroendocrine tumor arising from paraganglion cells and may secrete catecholamines or compress nearby structures.

Benign Paroxysmal Positional Vertigo

A common peripheral vertigo from dislodged otoconia (canalithiasis) within the semicircular canals, most often the posterior canal. Brief episodes of rotational vertigo lasting under one minute provoked by changes in head position.

Benign Paroxysmal Positional Vertigo

Brief episodes of spinning dizziness triggered by changes in head position, usually caused by displaced inner-ear crystals.

Benign Peripheral Nerve Tumor

A noncancerous tumor arising from or near a peripheral nerve, potentially causing a lump, pain, tingling, numbness, or weakness.

Benign Positional Vertigo

Brief episodes of spinning dizziness triggered by changes in head position, usually caused by displaced calcium carbonate crystals in a semicircular canal. It is also called benign paroxysmal positional vertigo or BPPV.

Benign Prostate Hyperplasia

A biomedical term referring to benign prostate hyperplasia; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Benign Prostatic Hyperplasia

Noncancerous enlargement of the prostate that may obstruct urine flow and cause hesitancy, weak stream, urgency, frequency, nocturia, or incomplete emptying. Assessment uses the symptoms, examination, and selected tests.

Alternate Names:

BPH (Benign Prostatic Hyperplasia)

Benign Prostatic Hyperplasia

Noncancerous enlargement of the prostate that can obstruct urine flow and cause urinary frequency, urgency, weak stream, or incomplete emptying.

Alternate Names:

Prostate Gland Enlargement

Benign Prostatic Obstruction

Bladder-outlet obstruction caused by benign prostatic enlargement or increased prostatic smooth-muscle tone. It can produce weak stream, hesitancy, intermittency, straining, incomplete emptying, retention, infection, and upper-tract deterioration.

Benign Rolandic Epilepsy

The most common childhood epilepsy syndrome (also known as self-limited epilepsy with centrotemporal spikes, SeLECTS), typically presenting between ages 3 and 12 years. Characterized clinically by brief focal sensorimotor seizures involving the face, mouth, and tongue during drowsiness or sleep, presenting with unilateral facial twitching, perioral paresthesias, drooling, and speech arrest (anarthria). Electroencephalography shows characteristic high-

voltage centrottemporal sharp-and-slow-wave complexes that increase during non-REM sleep. The condition has an excellent prognosis and almost always resolves spontaneously by adolescence.

Alternate Names:

Self-Limited Epilepsy with Centrottemporal Spikes; SeLECTS; Benign Childhood Epilepsy with Centrottemporal Spikes; Rolandic Epilepsy

Benign Tumor

Non-cancerous growth, slow-growing, well-differentiated, localized, does not invade or metastasize. Examples: lipoma, fibroma, adenoma. May cause problems by compression or hormone secretion.

Benserazide

Benserazide inhibits peripheral dopa decarboxylase and is combined with levodopa to increase brain delivery and reduce peripheral adverse effects in Parkinson disease.

Bent Penis

Curvature of the penis that may be congenital or acquired, often from Peyronie disease; it can cause pain or difficulty with sexual intercourse.

Bent Spine Syndrome

A marked, usually reducible forward flexion of the trunk caused by weakness or abnormal contraction of axial extensor muscles. It is also called camptocormia and may accompany neuromuscular or movement disorders.

Alternate Names:

camptocormia and may accompany.

Bentall Procedure

A classic cardiovascular surgical operation for combined disease of the aortic valve, aortic root, and ascending aorta (such as severe aortic regurgitation with an ascending aortic aneurysm, annuloaortic ectasia in Marfan syndrome, or acute Stanford type A aortic dissection). The diseased aortic valve, root, and ascending aorta are resected en bloc and replaced with a composite prosthetic conduit containing a mechanical or tissue valve inside a woven

Dacron tube graft, with direct reimplantation of the mobilized coronary artery buttons into the side of the graft.

Alternate Names:

Bentall Operation; Composite Aortic Root Replacement

Benzaldehyde

An aromatic aldehyde used mainly as a flavouring, fragrance, and chemical intermediate; concentrated exposure may irritate the eyes, skin, and respiratory tract and it is not a routine therapeutic medicine.

Benzazepines

A family of chemical compounds containing a benzene ring fused to a seven-membered azepine ring; some derivatives have pharmacological activity, but the clinical effects depend on the individual compound.

Benzene

Solvent, industrial chemical. Chronic exposure: aplastic anemia, leukemia (especially AML). Acute: CNS depression, arrhythmias. Prevention: substitution, ventilation, monitoring.

Benzene Poisoning

Toxic effects from exposure to benzene, including dizziness and central nervous system depression after high short-term exposure and bone-marrow injury with repeated exposure. Long-term exposure increases the risk of leukemia.

Benzhexol

Benzhexol, or trihexyphenidyl, is an anticholinergic drug used mainly to reduce tremor and rigidity in Parkinson disease or drug-induced extrapyramidal symptoms.

Benzo(A)Pyrene

Polycyclic aromatic hydrocarbon from combustion. Carcinogenic (lung, skin cancer). Found in tobacco smoke, charred meat, air pollution.

Alternate Names:

a

Benzoates

Salts or esters of benzoic acid, used as preservatives and, in selected preparations, as pharmaceutical excipients or metabolic agents; their safety depends on the specific compound and exposure.

Benzocaine

A topical ester local anesthetic used to numb skin or mucous membranes. Rarely, especially after excessive exposure, it can cause methemoglobinemia.

Benzodiazepine Use Disorder

A problematic pattern of benzodiazepine use leading to significant impairment. Benzodiazepines include alprazolam, clonazepam, diazepam, and lorazepam. Dependence can develop rapidly with regular use. Withdrawal can be life-threatening, presenting with anxiety, insomnia, tremor, seizures, and psychosis.

Benzodiazepine Withdrawal

Symptoms from cessation or reduction of prolonged benzodiazepine use. Early symptoms include anxiety, insomnia, tremor, and diaphoresis. Severe withdrawal can include seizures, psychosis, and delirium. Withdrawal severity depends on the half-life of the benzodiazepine, duration of use, and dose.

Benzopyran

A fused benzene-pyran chemical ring system found in several natural products and drug classes; it is a structural chemical term rather than one specific medicine.

Benzopyrene

A polycyclic aromatic hydrocarbon formed during incomplete combustion and present in tobacco smoke and some charred foods; benzo[a]pyrene is mutagenic and carcinogenic after metabolic activation.

Benzopyrenes

Polycyclic aromatic hydrocarbons containing a benzopyrene structure, produced by incomplete combustion; several are environmental carcinogens and may damage DNA after metabolic activation.

Benzoyl Peroxide

Benzoyl peroxide is a defined chemical or biologic substance involved in benzoyl peroxide and studied in physiology, pharmacology, laboratory medicine, or treatment.

Benzoylphenylurea

A class of insecticides that disrupt chitin formation in developing insects; these compounds are used for pest control rather than as human medicines.

Benzphetamine

A sympathomimetic amine and stimulant formerly used in some countries as a short-term adjunct for weight reduction; it can cause dependence, cardiovascular effects, and insomnia and is restricted or unavailable in many jurisdictions.

Benztropine

An antimuscarinic medicine used mainly to reduce drug-induced parkinsonism and acute dystonia; adverse effects include dry mouth, blurred vision, constipation, urinary retention, confusion, and worsening of glaucoma.

Benzydamine

A topical non-steroidal anti-inflammatory analgesic used for painful inflammation of the mouth, throat, or skin; local irritation, numbness, or allergic reactions may occur.

Benzyl Benzoate

Benzyl benzoate is a topical acaricide and insecticide used for scabies and sometimes lice; skin irritation and careful application are important.

Benzylamines

Organic compounds containing a benzyl group attached to an amino group; some derivatives are pharmacologically active, while others are chemical intermediates or industrial compounds.

Benzylpenicillin

Benzylpenicillin, or penicillin G, is a beta-lactam antibiotic used for susceptible serious infections,

including some streptococcal and syphilis infections.

BEP Regimen

A combination chemotherapy regimen containing bleomycin, etoposide, and cisplatin, commonly used for germ-cell tumors such as testicular cancer; treatment requires monitoring for organ toxicity and complications.

Berberine

Berberine is a plant alkaloid sold in supplements and studied for metabolic and antimicrobial effects; interactions and adverse effects are possible.

Bereavement

Natural grief response to the death of a loved one, marked by sadness, yearning, and preoccupation with the deceased, experienced in waves that diminish over weeks to months with preserved self-esteem. Distinct from major depression by its wave-like quality and preserved self-worth.

Bereavement Reaction

A normal emotional response to the death of a loved one, involving grief that generally follows a variable course without necessarily indicating a mental disorder.

Berger Disease

Historical name for IgA nephropathy named after Jean Berger who first characterized mesangial IgA deposition in 1968. Characterized by recurrent gross hematuria triggered by mucosal infections with intervals of microscopic hematuria and proteinuria. Generally benign course in most patients but subset progresses to CKD.

Berger'S Disease

Alternate index label; see *IgA nephropathy (Berger disease)*.

Bergeyella

Bergeyella is a genus of Gram-negative bacteria found in animals and the environment; human infection is uncommon and depends on the clinical

isolate.

Bergeyella Zoohelcum

Bergeyella zoohelcum is an uncommon zoonotic Gram-negative bacterium reported after animal exposure, especially in people with underlying illness.

Beriberi

A nutritional deficiency disease caused by inadequate thiamine (vitamin B1), occurring in two forms. Wet beriberi presents with high-output heart failure, peripheral vasodilation, edema, and tachycardia due to impaired cardiac energy metabolism.

Berkeley'S Sign

Berkeley's sign is an eponym with varying historical use; the exact clinical finding should be confirmed from the source in which it appears.

Bernard-Soulier Disease

Bernard-Soulier disease is a rare inherited platelet disorder caused by defects in the platelet glycoprotein Ib-IX-V complex. Platelets are unusually large and do not adhere normally, producing mucocutaneous bleeding, easy bruising, and prolonged bleeding after procedures.

Bernard–Soulier Syndrome

An inherited platelet-adhesion disorder caused by deficiency or dysfunction of the glycoprotein Ib-IX-V complex, producing mucocutaneous bleeding and giant platelets.

Bernstein Test

A historical provocative test in which acid is introduced into the esophagus to reproduce heartburn symptoms; it has largely been replaced by more direct evaluation of reflux.

Alternate Names:

Acid perfusion test; Bernstein acid perfusion test.

Berry Aneurysm

A small, rounded saccular aneurysm arising at an arterial branch point in the circle of Willis. Rupture is a major cause of nontraumatic subarachnoid

hemorrhage.

Berylliosis

A granulomatous lung disease from beryllium exposure. Chronic berylliosis resembles sarcoidosis. Diagnosis requires beryllium lymphocyte proliferation test.

Beryllium

Beryllium is a metal whose dust or fumes can cause sensitization, chronic granulomatous lung disease, and cancer risk after occupational exposure.

Beta 2-Microglobulin

A small protein associated with the class I major histocompatibility complex on nucleated cells; its blood or urine concentration may rise with inflammation, lymphoproliferative disease, or impaired renal handling.

Beta Amyloid

Peptides generated from amyloid precursor protein that can accumulate as plaques in the brain in Alzheimer disease.

Alternate Names:

Amyloid-beta; A-beta peptide.

Beta Carotene

A carotenoid pigment found in plants that can be converted by the body into vitamin A.

Alternate Names:

Beta-carotene; provitamin A carotenoid.

Beta Cell

An endocrine cell in the pancreatic islets that produces and releases insulin in response to increased blood glucose.

Beta Cells

Cells in clusters called pancreatic islets that make and release insulin, the hormone that lowers blood glucose. They also release amylin, which helps control the rise in glucose after meals; loss or failure of beta cells contributes to diabetes.

Beta Globulin

A group of serum proteins that migrate in the beta region during protein electrophoresis, including transferrin, complement proteins, and some lipoproteins; abnormal levels can reflect inflammation, liver disease, or plasma-cell disorders.

Beta Particle

A high-energy electron or positron emitted during radioactive beta decay; beta radiation can damage tissue and is used in selected medical imaging and radiotherapy applications.

Beta Radiation

Ionizing radiation consisting of high-energy electrons or positrons emitted by unstable nuclei; it has moderate tissue penetration and can cause radiation injury or be used therapeutically.

Beta Thalassemia

An inherited blood disorder in which reduced production of beta-globin causes anemia.

Beta Tocopherol

One of the naturally occurring forms of vitamin E, a lipid-soluble antioxidant; it is less biologically active than alpha-tocopherol in humans.

Beta-Adrenoceptor-Blocking Drugs

Beta-adrenoceptor-blocking drugs reduce beta-adrenergic effects on the heart and other tissues and are used for hypertension, angina, arrhythmias, heart failure, and other indications.

Beta-Blockers

Beta-adrenergic blocking agents, commonly known as beta-blockers, are topical medications used in the treatment of glaucoma that lower intraocular pressure by reducing the production of aqueous humor by the ciliary body, primarily through blockade of beta-2 adrenergic receptors.

Beta-Blockers Overdose

Toxic effects from excessive beta-blocker exposure, which may cause slow heart rate, low blood pres-

sure, conduction abnormalities, low blood glucose, seizures, or shock. Severe poisoning requires emergency assessment.

Beta-Carotene Blood Test

A laboratory test that measures serum beta-carotene concentration, a provitamin A carotenoid obtained from dietary sources. Low levels may indicate malabsorption or nutritional deficiency; elevated levels can cause carotenoderma, a harmless yellow-orange skin discoloration.

Beta-Chemokines

A group of chemokines, generally in the CC family, that attract monocytes, lymphocytes, eosinophils, and other leukocytes through specific chemokine receptors during immune and inflammatory responses.

Beta-Endorphin

An endogenous opioid peptide derived from proopiomelanocortin in the pituitary and hypothalamus; it binds opioid receptors and contributes to modulation of pain, stress, and neuroendocrine function.

Beta-Glucans

Polysaccharides made of glucose units linked by beta bonds, found in cereals, fungi, and yeast; their physiological effects vary by structure and may include effects on fibre intake and innate immune signalling.

Beta-Haemolytic Streptococcus

A beta-haemolytic streptococcus completely lyses red cells around colonies on blood agar; important species include group A and group B streptococci.

Beta-Human Chorionic Gonadotrophin

Beta-human chorionic gonadotrophin is the beta subunit of hCG, measured in blood or urine to detect pregnancy and to assess selected tumors or pregnancy problems.

Beta-Lactam Antibiotics

A large class of antimicrobial agents characterized by a beta-lactam ring in their molecular structure, which is essential for their bactericidal activity.

Beta-Lactamase

A bacterial enzyme that hydrolyses the beta-lactam ring of susceptible penicillins, cephalosporins, or related antibiotics, producing antimicrobial resistance; inhibitors may restore activity against selected organisms.

Beta-Mannosidosis

Beta-mannosidosis is an inherited lysosomal storage disorder caused by beta-mannosidase deficiency and can produce developmental, hearing, immune, or skeletal problems.

Beta-Oxidation

The catabolic process by which fatty acid molecules are broken down in the mitochondria (and peroxisomes) to generate acetyl-CoA, NADH, and FADH₂.

Beta-Sheet

A protein secondary structure formed by extended polypeptide strands stabilized by hydrogen bonds; abnormal beta-sheet-rich aggregates occur in disorders such as amyloidosis and some neurodegenerative diseases.

Beta-Thalassemia

An inherited hemoglobin disorder with deficient or absent beta-globin chain synthesis, ranging from mild trait to transfusion-dependent major disease with iron overload, extramedullary hematopoiesis, and skeletal changes.

Beta-Thalassemia Intermedia

A hereditary hemoglobinopathy characterized by moderate reduction in beta-globin chain synthesis, resulting in anemia of intermediate severity between mild beta thalassemia trait and transfusion-dependent beta thalassemia major. Patients present with moderate microcytic anemia, hepatosplenomegaly, and bone changes, but typically do not require lifelong regular blood transfusions.

Beta-Thalassemia Minor

The heterozygous carrier state for beta thalassemia caused by a mutation in a single beta-globin gene allele. Typically asymptomatic or presenting with

mild, well-tolerated microcytic hypochromic anemia, an elevated red blood cell count, and characteristic elevation of hemoglobin A2 (usually above 3.5%) on hemoglobin electrophoresis.

Alternate Names:

Beta-thalassemia trait; Cooley trait

Betacoronavirus

Betacoronavirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Betaherpesvirinae

A subfamily of herpesviruses that includes cytomegalovirus and human herpesviruses 6 and 7. These viruses establish lifelong latent infection and may cause severe disease in immunocompromised people.

Betaine

A naturally occurring zwitterionic compound that acts as a methyl-group donor in homocysteine metabolism and helps maintain cellular osmotic balance; inherited defects in its pathway can cause homocystinuria.

Betamethasone

A potent synthetic glucocorticoid used topically or systemically to suppress inflammation and immune responses; prolonged or extensive use can cause skin atrophy, infection, adrenal suppression, and other corticosteroid effects.

Betamethasone Valerate

A topical corticosteroid ester used for inflammatory skin disorders such as eczema and psoriasis; prolonged, occlusive, or extensive application increases the risk of local skin atrophy and systemic corticosteroid absorption.

Betaretrovirus

Betaretrovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Betaxolol

A relatively beta-1-selective blocker used orally for some cardiovascular conditions and topically to lower intraocular pressure in glaucoma. It may cause bradycardia, hypotension, or bronchospasm.

Betazole

A histamine H2-receptor agonist formerly used to stimulate gastric acid secretion during diagnostic testing; it is rarely used in current practice.

Bethanechol

Bethanechol is a muscarinic cholinergic agonist that stimulates bladder and gastrointestinal smooth muscle, used selectively for urinary retention or impaired motility.

Bethesda System For Reporting Thyroid Cytopathology

A six-tier standardized system for reporting thyroid fine-needle aspiration results, from nondiagnostic and benign categories to follicular-pattern, suspicious, and malignant categories; each tier guides risk assessment and management.

Bethlem Myopathy

A slowly progressive, benign inherited skeletal muscle disorder within the spectrum of collagen VI-related myopathies, transmitted in an autosomal dominant (or rarely autosomal recessive) pattern and caused by mutations in *COL6A1*, *COL6A2*, or *COL6A3*. Characterized by proximal muscle weakness and wasting with onset in childhood or early adulthood, combined with a unique, pathognomonic pattern of joint contractures: prominent flexion contractures of the interphalangeal joints of the fingers, elbows, and ankles, juxtaposed with marked hyperextensibility and hyperlaxity of the wrists, metacarpophalangeal joints, and ankles. Additional findings include follicular hyperkeratosis, keloid formation, and preserved ambulation into late adulthood.

Alternate Names:

Collagen VI-Related Myopathy (Mild Form); Bethlem Distal Myopathy

Bevacizumab

A monoclonal antibody that blocks vascular endothelial growth factor and inhibits new blood-vessel formation. It is used for selected cancers and some eye diseases; important risks include hypertension, bleeding, thrombosis, proteinuria, impaired wound healing, and gastrointestinal perforation.

Bexarotene

An oral retinoid X-receptor agonist used mainly for cutaneous T-cell lymphoma; it commonly causes hypertriglyceridaemia, hypothyroidism, and liver abnormalities and is teratogenic.

Bezafibrate

Bezafibrate is a fibrate lipid-lowering drug that activates PPAR-alpha and lowers triglycerides; muscle and liver effects require monitoring.

Bezoar

A mass of indigestible material retained in the gastrointestinal tract, commonly composed of hair, plant fiber, or medication material.

Breast Imaging-Reporting And Data System

Breast Imaging-Reporting and Data System standardizes breast-imaging reports and categories to guide follow-up and biopsy recommendations. Categories: 0 (incomplete), 1 (negative), 2 (benign), 3 (probably benign), 4 (suspicious), 5 (highly suggestive of malignancy), 6 (known biopsy-proven malignancy).

Biacetyl

Biacetyl, or diacetyl, is a diketone compound with a buttery odor used in flavoring and industry; inhalational exposure can injure the small airways.

Bias

A systematic deviation that distorts a measurement, study result, clinical judgment, or decision away from the truth or from an intended fair comparison.

Bible Cyst (Ganglion)

Alternate index label for Ganglion.

Bibliotherapy

The use of reading materials as a therapeutic intervention to support mental health, educate patients about conditions, or promote behavioral change. It may be used alone or alongside other treatments for depression, anxiety, or chronic disease self-management.

Bicalutamide

A non-steroidal androgen-receptor antagonist used in prostate cancer, usually with androgen-deprivation therapy; adverse effects include hot flashes, breast enlargement, sexual dysfunction, and possible liver injury.

Bicarbonate

The principal extracellular buffer anion, formed from carbon dioxide and water and regulated chiefly by the lungs and kidneys. The bicarbonate-carbonic-acid system helps maintain arterial pH; serum bicarbonate is commonly used to assess metabolic components of acid-base disorders.

Biceps

The biceps is a two-headed muscle, especially the biceps brachii of the upper arm, that flexes the elbow and supinates the forearm.

Biceps Brachii Muscle

Two-headed anterior arm muscle. Long head from supraglenoid tubercle, short head from coracoid process, both inserting on the radial tuberosity. Innervated by musculocutaneous nerve (C5-C6). Most powerful elbow flexor in supination; supinates forearm; weakly flexes shoulder. Distal rupture causes Popeye deformity.

Biceps Reflex

A tendon reflex produced by tapping the biceps tendon, causing elbow flexion through the musculocutaneous nerve and predominantly C5-C6 spinal segments. It helps assess the corresponding peripheral and central pathways.

Bichat'S Membrane

Bichat's membrane is an older anatomical term generally referring to a serous or connective-tissue membrane; its exact usage depends on the historical source.

Bicipital

Bicipital means relating to a two-headed muscle, especially the biceps tendon, groove, or muscle of the upper arm.

Bicipital Groove

The intertubercular groove of the humerus that transmits the tendon of the long head of the biceps brachii, with the transverse humeral ligament and adjacent rotator-cuff structures contributing to tendon stability.

Bicipital Tuberosity

The radial tuberosity, a roughened prominence on the proximal radius where the biceps brachii tendon inserts and produces flexion and supination of the forearm.

Bicolor

Bicolor means having two colors; in medicine it may describe a two-toned lesion, specimen, iris, or other structure and requires context.

Biconcave

Biconcave means concave on both sides; the normal red blood cell is a classic biconcave disc, a shape that supports flexibility and gas exchange.

Biconvex

Biconvex means convex on both sides; the term may describe a lens, implant, or radiologic shape.

Bicornuate

Having two horn-shaped cavities or projections; a bicornuate uterus is a congenital uterine anomaly with two partially separated upper cavities.

Bicornuate Uterus

A bicornuate uterus is a congenital uterine shape

with two upper cavities caused by incomplete fusion of the embryonic Müllerian ducts; it may affect pregnancy outcomes.

Bicuculline

Bicuculline is a research compound that blocks GABA-A receptors and can provoke seizures in experimental systems.

Bicuspid

Bicuspid means having two cusps, as in a bicuspid aortic valve or a premolar tooth with two main points.

Bicuspid Aortic Valve

A congenital aortic valve with two leaflets instead of the usual three. It can lead to aortic stenosis, aortic regurgitation, enlargement of the aorta, or other congenital heart abnormalities.

Bicuspid Valve

A heart valve with two leaflets rather than the usual three. The term most often refers to congenital bicuspid aortic valve, which can cause aortic stenosis, regurgitation, infective endocarditis, or ascending-aortic disease.

Bicycled Foot

Bicycled foot is an uncommon descriptive term for a foot deformity or position associated with cycling or repetitive mechanical stress; exact meaning depends on the source.

Bid Protein

Bid protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Biermer'S Anemia

Pernicious anemia, a vitamin B12-deficiency anemia caused by impaired absorption, usually because autoimmune loss of intrinsic factor prevents normal B12 uptake.

Bietti'S Crystalline Dystrophy

A rare autosomal recessive chorioretinal dystrophy characterized by tiny crystalline deposits in the retina and cornea with progressive chorioretinal atrophy, presenting with night blindness and progressive visual field loss beginning in early adulthood.

Bifidobacterium

A genus of anaerobic, Gram-positive bacteria commonly found in the human intestine. Some species are used as probiotics, while rare bloodstream infections have been reported, mainly in people with serious underlying illness.

Bifidobacterium Adolescentis

An anaerobic bacterium commonly found in the human intestine and used in some probiotic preparations; it is usually harmless but can rarely cause opportunistic infection.

Bifidobacterium Animalis

An anaerobic intestinal bacterium used in some fermented foods and probiotic preparations. It is generally regarded as low risk, although rare opportunistic infections can occur.

Bifidobacterium Bifidum

An anaerobic bacterium of the human intestine, especially common early in life, and a species used in some probiotic preparations.

Bifidobacterium Breve

An anaerobic intestinal bacterium commonly found in infants and used in some probiotic preparations.

Bifidobacterium Dentium

An anaerobic bacterium found in the mouth and intestine that may contribute to dental caries and, rarely, opportunistic infection.

Bifidobacterium Longum

An anaerobic intestinal bacterium commonly found in humans and used in some probiotic preparations; it is usually harmless but can rarely cause opportunistic infection.

Bifocal

Bifocal means having two focal points; bifocal spectacles correct near and distance vision, while bifocal imaging or lenses have two optical zones.

Bifurcation

Bifurcation is the division of one structure, vessel, airway, nerve, or pathway into two branches.

Big Toe Sign

Upward extension of the great toe, often with fanning of the other toes, when the sole is stimulated; in adults it may indicate corticospinal-tract disease.

Bigeminy

Bigeminy is a cardiac rhythm pattern in which a normal beat alternates regularly with a premature beat, often a premature ventricular contraction.

Biglycan

Biglycan is a small proteoglycan of the extracellular matrix involved in collagen organization, inflammation, and tissue repair.

Biguanide

A class of medicines that lower blood glucose by reducing hepatic glucose production and improving insulin sensitivity. Metformin is the principal biguanide in current clinical use; its use depends on kidney function, tolerability, and the person's treatment goals.

Biguanides

A class of glucose-lowering medicines that reduce hepatic glucose production and improve insulin sensitivity; metformin is the principal example.

Alternate Names:

Biguanide drugs; biguanide antidiabetics.

Bilateral

Bilateral means affecting or involving both sides of the body or a paired structure.

Bilateral Acoustic Neurofibromatosis

Alternate index label; see *NF2-related schwanno-*

matosis (neurofibromatosis type 2).

Bilateral Gynecomastia

Enlargement of breast glandular tissue affecting both breasts in a male patient; causes include hormonal imbalance, medicines, obesity, liver or kidney disease, and rarely malignancy.

Bilateral Hydronephrosis

Bilateral hydronephrosis is enlargement of both renal collecting systems from impaired urine drainage, with causes including obstruction, reflux, stones, or bladder dysfunction.

Bilateral Microphthalmos

Bilateral microphthalmos is abnormally small size of both eyes, a congenital condition that can impair vision and occur with other developmental abnormalities.

Bilateral Oophorectomy

Surgical removal of both ovaries, performed for conditions such as ovarian cancer, endometriosis, or prophylaxis in high-risk genetic mutation carriers. It induces immediate surgical menopause and requires hormone replacement consideration in premenopausal women.

Bilateral Peritonsillar Abscesses

Suppurative infection in the peritonsillar space on both sides, a rare complication of acute tonsillitis presenting with severe sore throat, dysphagia, trismus, and muffled hot potato voice. Bilateral involvement risks acute upper airway obstruction and requires urgent needle aspiration or incision and drainage.

Bilateral Pneumonia

Pneumonia involving both lungs; severity ranges from limited infection to diffuse respiratory failure depending on the cause and host factors.

Bilateral Tonic-Clonic Seizure

A bilateral tonic-clonic seizure causes loss of consciousness followed by stiffening and rhythmic jerk-

ing of both sides of the body.

Bile

A fluid produced by the liver that helps digest and absorb dietary fats.

Bile Acid Sequestrants For Cholesterol

Medicines that bind bile acids in the intestine and lower low-density lipoprotein cholesterol by increasing hepatic conversion of cholesterol into bile acids.

Bile Acids

Substances produced by the liver that aid digestion and absorption of fats and fat-soluble vitamins. They are also measured when a hepatobiliary disorder, including intrahepatic cholestasis of pregnancy, is suspected.

Bile Culture

A laboratory culture of bile to identify bacteria or fungi in suspected biliary infection.

Bile Duct

A channel that carries bile from the liver and gallbladder to the duodenum. The right and left hepatic ducts unite as the common hepatic duct; union with the cystic duct forms the common bile duct, which usually joins the pancreatic duct before entering the duodenum at the major duodenal papilla.

Bile Duct Cancer

Cancer arising in the bile ducts; also called cholangiocarcinoma.

Alternate Names:

cholangiocarcinoma.

Bile Duct Cancer (Cholangiocarcinoma)

Alternate index label for Cholangiocarcinoma.

Bile Duct Obstruction

Impaired flow of bile through the biliary tract, causing jaundice, dark urine, pale stools, itching, abdominal pain, or infection.

Bile Duct Stricture

Narrowing of a bile duct that impairs bile flow and may cause jaundice, abdominal pain, cholangitis, or abnormal liver tests.

Bile Ducts

Bile ducts are channels that carry bile from the liver and gallbladder to the duodenum; obstruction can cause jaundice, pain, infection, or pancreatitis.

Bile Pigment

A pigment derived largely from haem breakdown, chiefly bilirubin, that is processed by the liver and excreted in bile; accumulation in blood and tissues causes jaundice.

Bile Reflux

Reflux of duodenal contents (bile acids, lysolecithin, pancreatic enzymes) into the stomach and esophagus, caused by incompetence of the pyloric sphincter, prior gastric surgery (Billroth II, Roux-en-Y, vagotomy with pyloroplasty), cholecystectomy, or functional gastroparesis.

Alternate Names:

Reflux, Bile

Bile Salt Emulsification

Bile salts (derived from cholesterol in the liver) are amphipathic molecules with hydrophobic and hydrophilic regions that act as biological detergents, emulsifying dietary lipids into smaller droplets (micelles). This increases the surface area of lipid substrate available for pancreatic lipase action.

Bile Salt Malabsorption

Condition characterized by impaired reabsorption of bile acids in the terminal ileum leading to excessive bile acids entering the colon where they stimulate water and electrolyte secretion causing chronic watery diarrhea.

Bile Salts

Bile salts are bile-derived detergent molecules that emulsify dietary fats and help absorb lipids and fat-soluble vitamins in the intestine.

Bilevel Positive Airway Pressure

Noninvasive ventilation that provides different pressures during inhalation and exhalation to support breathing.

Bilharzia

A parasitic infection caused by *Schistosoma* species. See Schistosomiasis.

Bilharzia (Schistosomiasis)

Alternate index label for Schistosomiasis.

Bili Lights

Phototherapy lights used to treat neonatal jaundice by converting bilirubin into forms that can be eliminated more easily.

Biliary

Biliary means relating to bile, the gallbladder, or bile ducts that transport bile from the liver to the intestine.

Biliary Atresia

A progressive, obliterative cholangiopathy of the extrahepatic bile ducts in neonates, leading to biliary obstruction, cholestasis, and ultimately biliary cirrhosis if untreated.

Alternate Names:

Congenital Biliary Atresia Extrahepatic Biliary Atresia

Biliary Calculi

Biliary calculi are gallstones or stones in the biliary tract formed from crystallized bile components and capable of causing pain, obstruction, or inflammation.

Biliary Cirrhosis

Chronic liver scarring associated with long-standing injury to the bile ducts. The term is often used for primary biliary cholangitis, an autoimmune small-duct disease.

Biliary Cirrhosis Primary (Primary

Biliary Cirrhosis)

Alternate index label for Primary Biliary Cirrhosis.

Biliary Colic

Episodic right-upper-quadrant or epigastric pain caused by transient obstruction of the cystic duct, usually by a gallstone. Pain is typically steady, may follow meals, and resolves when the obstruction passes; fever and persistent inflammatory findings suggest a complication.

Biliary Decompression

Drainage of obstructed bile ducts, using methods such as endoscopic stenting, nasobiliary drainage, or percutaneous catheter drainage, to restore bile flow.

Biliary Dyskinesia

A functional gallbladder disorder causing biliary-type pain without gallstones or another clear structural cause. A hepatobiliary scan may show abnormal gallbladder emptying, but no single ejection-fraction cutoff establishes the diagnosis; other causes must be considered.

Biliary Fever

Fever associated with infection or inflammation of the biliary tract, classically acute ascending cholangitis. It may occur with right-upper-quadrant pain and jaundice and can progress rapidly to sepsis.

Biliary Fistula

A biliary fistula is an abnormal connection allowing bile to leak from the biliary system into another organ, the abdomen, or the skin.

Biliary Sand

Fine particulate material or thick sludge in bile, usually composed of cholesterol crystals, calcium salts, and pigment, which can contribute to gallstones or duct obstruction.

Biliary Stent

A tube placed in a bile duct to maintain drainage when the duct is narrowed or blocked. Stents may

be plastic or metal, and complications include migration, blockage, infection, and pancreatitis.

Biliary System

The network of liver, gallbladder, and bile ducts that produces, stores, and transports bile to the intestine.

Biliary Tract

The network of ducts that carries bile from the liver and gallbladder to the small intestine. Blockage or inflammation can cause abdominal pain, jaundice, infection, or pancreatitis.

Biliary Tract Injuries

Damage to the gallbladder, bile ducts, or adjacent biliary structures, often occurring after abdominal surgery or trauma. It may cause bile leakage, obstruction, jaundice, infection, or later biliary narrowing.

Bilious

Containing or relating to bile; bilious vomiting is typically yellow-green because bile has entered the stomach contents.

Bilious Vomiting

Vomiting of green/yellow, bilious material in the newborn or infant, defined as emerald green or yellow vomitus that contains bile.

Biliousness

An older nonspecific term for nausea, indigestion, or vomiting thought to be associated with bile or liver and gallbladder dysfunction.

Bilirubin

A yellow pigment formed mainly from heme breakdown. Unconjugated bilirubin is transported bound to albumin to the liver, where it is conjugated with glucuronic acid and excreted in bile; accumulation causes jaundice.

Bilirubin (Bilirubin And Bilirubin Blood

Test)

Alternate index label for Bilirubin and Bilirubin Blood Test.

Bilirubin - Urine

A urine test for conjugated bilirubin. Its presence may indicate cholestasis or hepatocellular disease because unconjugated bilirubin is not normally excreted in urine.

Bilirubin And Bilirubin Blood Test

Bilirubin is a yellow pigment produced when red blood cells are broken down. A blood test measures total and sometimes direct and indirect bilirubin to help evaluate liver disease, bile-duct obstruction, hemolysis, and newborn jaundice.

Alternate Names:

Bilirubin (Bilirubin And Bilirubin Blood Test)

Bilirubin Blood Test

A laboratory test that measures total and direct (conjugated) bilirubin in serum, a breakdown product of heme catabolism. Elevated bilirubin causes jaundice and may indicate hemolysis, hepatocellular disease, or biliary obstruction; neonatal testing identifies risk for kernicterus.

Bilirubin Encephalopathy

Neurologic injury caused by deposition of unconjugated bilirubin in the brain, especially the basal ganglia. Severe neonatal hyperbilirubinemia can produce acute lethargy, abnormal tone, feeding difficulty, seizures, and permanent kernicterus.

Bilirubin Metabolism

Bilirubin is the breakdown product of heme from senescent red blood cells, metabolized primarily by the liver through a series of enzymatic steps. Heme is converted to biliverdin by heme oxygenase, then to unconjugated bilirubin by biliverdin reductase. Unconjugated bilirubin is lipophilic and transported bound to albumin to the liver.

Bilirubinuria

The presence of conjugated bilirubin in urine. It

indicates that water-soluble bilirubin has entered the circulation, often because of hepatocellular disease or biliary obstruction.

Biliverdin

Biliverdin is a green bile pigment formed during heme breakdown and normally converted to bilirubin by biliverdin reductase.

Billroth'S Operation

Billroth's operations are historical partial gastrectomy procedures, especially Billroth I and II, that reconnect the remaining stomach to the duodenum or jejunum.

Bilophila

A genus of anaerobic Gram-negative rod-shaped bacteria found in the human gastrointestinal tract. *Bilophila wadsworthia* is the primary species and has been associated with appendicitis, intra-abdominal infections, and bacteremia.

Bilophila Wadsworthia

A bile-tolerant anaerobic Gram-negative rod found in the human colon. It is a minor constituent of normal gut flora but has been implicated in appendicitis, peritonitis, and wound infections, particularly following bowel surgery or in immunocompromised patients.

Bimanual

Bimanual means performed with both hands, as in a bimanual pelvic examination or two-handed surgical technique.

Bimatoprost

Bimatoprost is a prostaglandin analogue used as eye drops to lower intraocular pressure and, in some formulations, promote eyelash growth.

Bimedial

Relating to or positioned on the medial side of two structures, or involving both medial aspects; the exact anatomical reference must be specified by the structure being described.

Bimellar

Bimellar means composed of two lamellae or layers, such as a double-layered membrane or tissue structure.

Binary Fission

Binary fission is asexual reproduction in which one cell or organism divides into two genetically similar descendants, common among bacteria and protozoa.

Binder Excipient

A binder excipient is an inactive pharmaceutical ingredient that helps powder particles adhere during tablet formation.

Binding Protein

Binding protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Binding Site

A specific region of a receptor, enzyme, antibody, nucleic acid, or other molecule to which another molecule binds through chemical and physical interactions, influencing biological activity or measurement.

Binet-Simon Scale

An early developmental assessment used to estimate intellectual functioning in children by comparing performance with age-based tasks. Modern evaluation uses standardized, validated developmental and cognitive instruments.

Binge Drinking

A pattern of consuming enough alcohol over a short period to produce a high blood alcohol concentration and increased risk of injury or acute toxicity.

Alternate Names:

Episodic heavy drinking; heavy episodic drinking.

Binge Eating Disorder

Recurrent episodes of eating large quantities of food

with a sense of lack of control, without regular compensatory behavior. Associated with obesity, depression, and anxiety. Diagnosis by DSM-5 criteria. Treatment: cognitive behavioral therapy, interpersonal therapy, and SSRIs. Weight management with dietary counseling and exercise.

Binge-Eating Disorder

A disorder marked by recurrent episodes of eating unusually large amounts of food with a sense of loss of control and without regular compensatory behaviors.

Alternate Names:

Compulsive Overeating Eating Disorders, Binge Eating

Binocular Vision

Vision that uses both eyes together to produce a single image and support depth perception.

Alternate Names:

Two-eyed vision; binocular visual function.

Binocular Visual Loss

Reduction in vision affecting both eyes simultaneously, typically resulting from bilateral optic neuropathy, chiasmal lesions, or diffuse bilateral retinal disease rather than monocular ocular pathology. Evaluation requires neuroimaging and visual field testing to localise the lesion along the visual pathway.

Binswanger Disease

A clinical disorder or finding related to Binswanger disease; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Binswanger's Dementia

A form of vascular cognitive impairment caused by diffuse small-vessel disease affecting the brain's deep white matter.

Alternate Names:

Subcortical ischemic vascular disease; subcortical arteriosclerotic encephalopathy.

Bio-Informatics

The use of computational methods to store, analyse, and interpret biological data such as DNA sequences, gene expression, protein structures, and clinical genomic information.

Bioabsorbable Stent (Vascular)

A vascular scaffold designed to provide temporary support and gradually break down after its function is completed.

Alternate Names:

Vascular

Bioaccumulation

Bioaccumulation is a biochemical reaction, pathway, or chemical process in which molecules are transformed; its rate and effects depend on substrates, enzymes, and cellular conditions.

Bioactive

Having an effect on living cells, tissues, or organisms, such as a bioactive drug, hormone, nutrient, or signaling molecule.

Bioassay

A test that measures the effect or activity of a substance by observing its action on living cells, tissues, organisms, or a biological system. It can be used to estimate potency, toxicity, or biologic activity.

Bioavailability

The fraction of an administered drug that reaches the systemic circulation in its unchanged active form. It is expressed as a percentage and is determined by the route of administration and the extent of first-pass metabolism. For intravenous administration, bioavailability is 100 percent by definition.

Bioburden

The number and type of viable microorganisms contaminating a surface, medical device, tissue, or pharmaceutical product; a measure of contamination. Bioburden testing assesses the level of microbial contamination (total viable count) before steriliza-

tion or in quality control.

Biochanin A

A naturally occurring isoflavone found mainly in legumes and other plants. It is studied for biologic effects but is not established as a treatment for disease.

Alternate Names:

Biochanin A isoflavone; 5,7-dihydroxy-4'-methoxyisoflavone.

Biochemical

Relating to the chemical substances and reactions that occur in living organisms, including metabolism and cellular signaling.

Biochemical Assessment

Blood tests: albumin, prealbumin, transferrin, electrolytes, vitamins, minerals, glucose, lipids. Reflect nutritional status and metabolic function.

Biochemical Reaction

Biochemical reaction is a biochemical reaction, pathway, or chemical process in which molecules are transformed; its rate and effects depend on substrates, enzymes, and cellular conditions.

Biochemical Recurrence

A rise in a disease-specific laboratory marker after treatment, suggesting recurrent or persistent disease before clinical or imaging findings become apparent.

Alternate Names:

Biochemical relapse; biochemical failure.

Biochemistry

The study of the chemical substances and reactions occurring in living organisms. Clinical biochemistry uses laboratory measurements to assess health and disease.

Biocompatibility

Ability of material to function without adverse response. ISO 10993 standards for biocompatibility testing.

Biodegradable Implant

An implant designed to perform a temporary function and then degrade into products that can be metabolized or eliminated by the body. Degradation rate, local tissue response, and mechanical strength must be matched to the intended clinical use.

Biodistribution

The time-dependent distribution of a radiopharmaceutical among organs, tissues, blood, and excretory pathways. It determines image quality, target-to-background contrast, therapeutic delivery, and radiation exposure to normal organs.

Bioengineering

The application of engineering principles to biology and medicine, including the design of medical devices, biomaterials, tissue-engineering systems, prostheses, and diagnostic technologies.

Bioequivalence

The property of two drug products (brand-name and generic) that have the same rate and extent of absorption when administered at the same molar dose under similar conditions, resulting in comparable bioavailability and therapeutic effect.

Bioethics

Interdisciplinary study of the ethical, legal, philosophical, and social implications of advancements in medicine, biology, healthcare technology, and biotechnology.

Bioethics (Geriatric)

Ethical considerations in elderly care: autonomy vs. paternalism, informed consent capacity, end-of-life decisions, resource allocation, elder abuse. Principles: respect for autonomy, beneficence, non-maleficence, justice. Advance directives: living will, durable power of attorney for healthcare.

Alternate Names:

Geriatric

Biofeedback

A technique that provides information about a phys-

iological process, such as muscle activity, heart rate, or breathing, to help a person learn voluntary control of it.

Biofilm

An organized community of microorganisms attached to a surface and embedded in a self-produced extracellular polymeric matrix (polysaccharides, proteins, DNA).

Biofilm-Associated Infections

Infections caused by bacteria growing in biofilms on medical devices or tissues. Biofilms are structured communities of bacteria embedded in extracellular polymeric substances. Bacteria in biofilms are more resistant to antibiotics and host immune responses.

Biofluid

A fluid produced by or present in a living organism, such as blood, urine, saliva, cerebrospinal fluid, or synovial fluid.

Biologic Therapy

Treatment with biologic agents targeting specific immune pathways, used in autoimmune and inflammatory disease.

Biologic Therapy In Dermatology

Treatment with targeted biological agents, usually monoclonal antibodies or receptor proteins, that inhibit selected immune pathways. Biologics are used for diseases such as psoriasis, atopic dermatitis, hidradenitis suppurativa, and urticaria; infection risk, vaccination status, screening, and monitoring must be considered.

Biologic Variation

Natural fluctuation in a measurable analyte within an individual over time and variation between individuals. It should be considered when interpreting serial results and deciding whether a change is clinically meaningful.

Biological

Relating to living organisms, their structures, func-

tions, processes, or products; in medicine, a biological product is a therapeutic or diagnostic substance made from or resembling a biological source.

Biological Availability

Biological availability is a pharmacologic, physiologic, or clinical-care concept used to describe a measurable effect, intervention, or patient-management issue.

Biological Clock

An internal timing system that coordinates recurring biological rhythms, especially the circadian rhythm, through networks involving the suprachiasmatic nucleus, hormones, and environmental cues.

Biological Half-Life

Time required for the human body to eliminate half the administered quantity of a drug or radiopharmaceutical through metabolic and excretory processes. Different from physical half-life (radioactive decay) and effective half-life (combined biological and physical elimination). Formula: $1/T_{\text{effective}} = 1/T_{\text{physical}} + 1/T_{\text{biological}}$.

Biological Model

A cell, tissue, organism, computational system, or other representation used to study biological mechanisms, disease, or treatment responses.

Biological Process

A coordinated series of molecular, cellular, or physiological events in a living organism, such as metabolism, cell division, inflammation, or tissue repair.

Biological Relative

A person related by shared genetic ancestry, in contrast to a relative related solely by marriage or legal adoption; family history uses this distinction when assessing inherited risk.

Biological Therapy

Treatment using biological agents, including monoclonal antibodies, cytokines, vaccines, and cell-based

therapies, to modify immune responses or target specific molecular pathways in cancer, autoimmune diseases, and other conditions.

Biological Transport

The movement of ions, molecules, cells, or fluids within or across biological membranes and tissues, by processes such as diffusion, filtration, channels, pumps, and vesicular transport.

Biological Variability

Natural variation in a measured biologic quantity within the same person over time or between people, independent of measurement error.

Alternate Names:

Biologic variation; physiologic variability.

Biological Warfare

The deliberate use of microorganisms, toxins, or other biological agents to cause disease or death in humans, animals, or plants.

Bioluminescence

Light produced by a living organism through a chemical reaction, commonly involving luciferin and luciferase; it is used in biological research and diagnostic assays.

Biomarker

Measurable indicator of disease. Cancer biomarkers: diagnostic, prognostic, predictive.

Biomarker Testing

Laboratory analysis of biological features, such as genes, proteins, or metabolites, that may help diagnose disease, estimate prognosis, or guide treatment.

Biomaterial

A natural or synthetic material designed to interact with a biological system, for example in implants, prostheses, drug delivery, wound dressings, or tissue engineering.

Biomechanical Compliance

The change in volume or displacement produced by

a given change in pressure or force in a biological structure; examples include lung, vascular, and joint compliance.

Biomechanics

Study of movement mechanics. Gait analysis, joint forces, muscle activation. Applied to rehabilitation device design.

Biomedical Cement

Biomedical cement is a material used to fill, stabilize, anchor, or repair bone or other tissues in medical procedures.

Biomedical Engineering

Biomedical engineering applies engineering, materials science, computing, and design to medical devices, diagnostics, prostheses, imaging, and health systems.

Biomedical Research

Scientific investigation aimed at understanding disease mechanisms, developing diagnostic tools, and creating new treatments through laboratory experiments, animal models, and clinical trials.

Biomedical Tape

Biomedical tape is adhesive material used to secure dressings, devices, sensors, or skin edges; its adhesive and backing determine skin tolerance.

Biomedicine

Medicine grounded in the biological sciences, including the study of disease mechanisms, diagnosis, prevention, and treatment through laboratory and clinical research.

Biometry

The measurement of biological structures or functions. In eye care, optical biometry measures the eye's dimensions to help calculate the power of an intraocular lens before cataract surgery.

Biomicroscopy

Biomicroscopy is microscopic examination of liv-

ing tissue, especially slit-lamp examination of the eye's cornea, anterior chamber, lens, and related structures.

Biomimetics

The design of materials, devices, or processes that imitate biological structures or functions, such as tissue-like scaffolds or gecko-inspired adhesives.

Biomolecule

Any organic molecule produced by living organisms, essential for structure, function, and regulation of biological processes.

Biomonitoring

Measurement of substances in body. Examples: blood glucose, drug levels, toxicants.

Biomphalaria

A genus of freshwater snails that serves as an intermediate host for *Schistosoma mansoni*, the parasite causing intestinal schistosomiasis in humans.

Bionics

Bionics uses electronic or mechanical systems to reproduce or augment biological functions, such as hearing, movement, or sensory feedback.

Biophysical Profile

A non-stress test combined with ultrasound assessment of five fetal parameters, each scored 0 or 2 for a total of 0-10. Parameters include non-stress test (fetal heart rate reactivity), fetal breathing movements, fetal tone, fetal movement, and amniotic fluid volume.

Biopolymer

A polymer produced by living organisms, such as proteins, nucleic acids, polysaccharides, and natural polyesters; biopolymers provide biological structure and function and are also used in biomaterials.

Biopsy

Removal of cells or tissue for examination by a pathologist to diagnose or characterize disease.

Common approaches include fine-needle aspiration, core-needle, incisional, excisional, punch, and endoscopic biopsy. Depending on the site and technique, complications may include pain, bleeding, infection, or—infrequently—tumor-tract seeding.

Alternate Names:

Biopsies

Biopsy - Biliary Tract

Sampling of a bile-duct or gallbladder lesion, usually endoscopically with forceps, brushings, or needle guidance, for cytology or histopathology. It may evaluate suspected malignancy or selected inflammatory and infectious disorders.

Biopsy Lung

Removal of lung tissue by needle, bronchoscopy, or surgery for evaluation of infection, inflammation, interstitial disease, or cancer. The route is selected according to lesion location, diagnostic yield, and procedural risk.

Biopsy Needle

A needle designed to obtain cells or tissue for cytologic or histopathologic examination. Fine-needle aspiration retrieves cells, whereas core biopsy obtains a tissue cylinder that preserves architecture.

Biopsy Site

The body location from which tissue or cells are removed for biopsy. The site is selected to sample the abnormal area while minimizing injury to nearby structures.

Biopsy Specimen

Tissue or cells removed from the body for examination. A laboratory may evaluate the specimen with microscopy, special stains, immunostains, or molecular tests to identify disease.

Bioreactor

A controlled vessel or system in which cells, tissues, microorganisms, or enzymes are cultured or used to produce biological materials, medicines, or engineered tissues.

Biorhythm

A recurring biological pattern, such as the circadian sleep-wake cycle, hormonal rhythms, or seasonal changes. Popular fixed-cycle theories claiming that biorhythms can predict health, mood, or performance are not supported by scientific evidence.

Alternate Names:

Biorhythms

Biosafety

The practices, equipment, and containment procedures used to prevent accidental exposure to or release of biological agents and toxins.

Biosensor

A device that combines a biological recognition element with a physical or chemical transducer to detect and measure an analyte. Medical examples include sensors for glucose, pathogens, hormones, and cardiac biomarkers.

Biosimilar

A biologic medicine highly similar to an approved reference biologic, with no clinically meaningful differences in safety, purity, or potency for its approved uses. Because biologics are complex, biosimilarity is established through a comparative evidence program rather than simple chemical identity.

Biospecimen

A sample of human tissue, cells, blood, urine, or another body fluid collected for clinical testing or research. Proper collection, labeling, storage, and handling help preserve its usefulness.

Biostatistics

Biostatistics applies statistical methods to biomedical data, including study design, estimation, hypothesis testing, epidemiology, and interpretation of clinical evidence.

Biosynthesis

Biosynthesis is the enzyme-directed production of complex molecules by living cells from simpler precursors.

Biot Breathing

An irregular breathing pattern with random periods of normal breathing interspersed with apneic episodes, seen in brainstem lesions. It is less organized than Cheyne-Stokes breathing and indicates medullary damage.

Biot's Breathing

Biot's breathing is an abnormal pattern of irregular breaths interrupted by unpredictable periods of apnea, associated with disruption of respiratory control.

Biotechnology

The use of living cells, organisms, or biological molecules to develop products and processes, including vaccines, recombinant medicines, molecular diagnostics, and gene therapies.

Biotelemetry

The remote measurement and transmission of physiologic data from a person or animal. Clinical applications include ambulatory cardiac rhythm monitoring, temperature monitoring, and intensive-care observation.

Bioterrorism

Bioterrorism is the deliberate release of biological agents to cause illness, death, or disruption. Preparedness includes surveillance, laboratory identification, public-health communication, vaccination or prophylaxis when indicated, and rapid isolation or treatment of exposed people.

Bioterrorism Agents

Category A: anthrax (*Bacillus anthracis*), smallpox (*variola*), botulism (*Clostridium botulinum*), plague (*Yersinia pestis*), tularemia (*Francisella tularensis*), viral hemorrhagic fevers (Ebola, Marburg, Lassa, Machupo). Anthrax: inhalational (mediastinal widening, hemorrhagic mediastinitis), cutaneous (eschar), GI.

Biotherapy

Treatment that uses living organisms, cells, genes, or biological substances to prevent or treat disease;

immunotherapy is one form of biotherapy.

Biotin

A water-soluble B vitamin that acts as a cofactor for carboxylase enzymes involved in fatty-acid synthesis, gluconeogenesis, and amino-acid metabolism; deficiency is uncommon but can cause dermatitis, alopecia, and neurological symptoms.

Biotinidase Deficiency

An autosomal recessive inborn error of biotin recycling caused by BTB gene mutations, resulting in inability to cleave biotin from biocytin (proteolytic degradation product of biotin-dependent carboxylases).

Biotinylation

The attachment of biotin to another molecule, usually a protein, so it can be found or separated in a laboratory test. The biotin acts as a tag that binds to special substances, making the target easier to detect or collect. Biotinylation can occur naturally or be done artificially.

Biotransformation

The natural process by which the body changes drugs and other foreign substances, mainly through enzymes in the liver but also in other tissues. It often makes them less active and easier to remove. Phase I reactions modify the substance; phase II reactions may attach another molecule to help eliminate it. These steps are not always sequential, and the process can produce an active or harmful substance instead.

Biotrauma

Inflammatory response to ventilator-induced lung injury with systemic cytokine release. Can lead to multi-organ dysfunction. Minimized by lung-protective ventilation strategies.

BiPAP

Bilevel Positive Airway Pressure (BiPAP), a form of noninvasive breathing support delivered through a mask. It provides higher pressure during inhalation and lower pressure during exhalation. It may

be used for conditions such as hypercapnic COPD exacerbation, sleep-related breathing disorders, and cardiogenic pulmonary edema.

Alternate Names:

Bilevel positive airway pressure

BiPAP Machine

The device that delivers BiPAP treatment through a mask by providing separate inhalation and exhalation pressures. The machine's settings are prescribed and adjusted according to the patient's condition and response.

Biparental

Involving both biological parents. In genetics, biparental inheritance means that offspring receive genetic material for a trait from both parents, unlike maternal or paternal inheritance in which the relevant material comes mainly from one parent.

Biparietal Diameter

Biparietal diameter is the width of a baby's head measured from one side to the other during an ultrasound. It helps estimate the length of the pregnancy and check the baby's growth. Doctors use it with other measurements because head shape can affect the result.

Bipartite Ossification

Formation or persistence of two separate ossification centers in a bone. If they do not fuse, a bipartite bone, such as a bipartite patella, may result. This is usually an incidental developmental variant but can become painful after injury or repetitive stress.

Biphenyl Compounds

Chemicals made of two linked benzene rings. Polychlorinated biphenyls (PCBs) are long-lasting industrial pollutants; exposure can harm the liver, immune system, and hormone system and may increase cancer risk.

Bisphosphonates

Medicines that slow the breakdown of bone. They are used mainly to prevent fractures in osteoporosis and to treat Paget disease and some bone problems

caused by cancer.

Alternate Names:

Bisphosphonate

Bipolar

Alternate index label; see *Bipolar disorder*.

Bipolar Affective Disorder

Alternate name for bipolar disorder; see *Bipolar disorder*.

Bipolar Disorder

A mental health condition with episodes of mania or hypomania and often depression. Bipolar I includes at least one manic episode; bipolar II includes hypomania and major depression but no manic episode. Episodes can affect mood, sleep, energy, judgment, and daily functioning.

Alternate Names:

Manic-Depressive Illness

Bipolar I Disorder

A mood disorder defined by at least one manic episode lasting at least seven days or requiring hospitalization. A manic episode is a distinct period of abnormally elevated, expansive, or irritable mood and increased goal-directed activity or energy.

Bipolar II Disorder

A mood disorder characterized by at least one hypomanic episode and at least one major depressive episode, with no history of a full manic episode. The depressive episodes in bipolar II tend to be more frequent and longer-lasting than in bipolar I, leading to greater cumulative disability.

Bipolar Neuron

A bipolar neuron has one dendrite and one axon extending from opposite sides of its cell body, as found in the retina and sensory pathways.

Bipolaris

A biomedical term referring to bipolaris; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Bird Fancier'S Lung

A form of hypersensitivity pneumonitis caused by breathing proteins from bird feathers or droppings. It can cause cough and shortness of breath; repeated exposure may lead to permanent lung scarring.

Bird Flu

Infection with avian influenza A viruses that primarily circulate in birds. People rarely become infected, usually after close, unprotected exposure to infected animals or contaminated environments. Illness may range from eye or upper-respiratory symptoms to severe pneumonia; evaluation depends on exposure history and public-health testing.

Bird Flu (Avian Influenza)

Influenza caused by avian influenza viruses, which primarily infect birds but can occasionally infect humans and cause severe respiratory illness.

Alternate Names:

Influenza, Avian

Birt-Hogg-Dubé Syndrome

An inherited condition caused by a change in the FLCN gene. It can cause small, usually harmless skin growths, cysts in the lungs with repeated collapsed lung, and an increased risk of kidney tumors. It is autosomal dominant, meaning one altered copy of the gene can cause the condition.

Birth

Birth is delivery of a fetus from the uterus, involving labor, delivery of the infant, and separation or delivery of the placenta.

Birth Asphyxia

Inadequate oxygenation or ventilation around the time of birth, potentially causing respiratory failure, metabolic acidosis, organ injury, or hypoxic-ischaemic encephalopathy. It requires immediate neonatal assessment and resuscitation.

Birth Control

Methods used to prevent pregnancy, including barrier, hormonal, intrauterine, behavioral, and perma-

nent methods.

Birth Control - Slow Release Methods

Information about contraceptive methods, including effectiveness, use, adverse effects, contraindications, and reproductive planning.

Birth Control And Family Planning

Information about contraceptive methods, including effectiveness, use, adverse effects, contraindications, and reproductive planning.

Birth Control Methods

Birth-control methods include condoms, pills, implants, injections, intrauterine devices, patches, rings, fertility-awareness approaches, and permanent contraception. Effectiveness, sexually transmitted infection protection, side effects, reversibility, and medical eligibility vary by method.

Birth Control Pill Overdose

Toxic effects from ingesting an excessive amount of oral contraceptive medication. Most exposures cause nausea, vomiting, or drowsiness, but the product, dose, co-ingestants, and symptoms determine the need for assessment.

Birth Control Pills

Information about contraceptive methods, including effectiveness, use, adverse effects, contraindications, and reproductive planning.

Birth Control Pills - Combination

Information about contraceptive methods, including effectiveness, use, adverse effects, contraindications, and reproductive planning.

Birth Control Pills - Progestin Only

Information about contraceptive methods, including effectiveness, use, adverse effects, contraindications, and reproductive planning.

Birth Defect

A structural, functional, or biochemical abnormality present at birth, caused by genetic, environmental,

developmental, or often unknown factors.

Birth Defect (Congenital Anomaly)

A structural, functional, or metabolic abnormality present at birth, caused by genetic, environmental, nutritional, infectious, or multifactorial factors.

Alternate Names:

Congenital Anomaly

Birth Injury

A clinical disorder or finding related to birth injury; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Birth Order

The sequence in which siblings are born within a family. While birth order has been studied for psychological effects, its direct medical significance is limited to obstetric considerations such as risks associated with grand multiparity.

Birth Pains

Birth pains are painful uterine contractions and related pressure during labor as the cervix dilates and the baby moves through the birth canal.

Birth Rate

The number of live births in a population during a specified period, usually expressed per 1,000 people per year.

Birth Weight

The weight of a newborn measured within the first hour of life. Low birth weight (less than 2,500 g) is associated with increased risk of neonatal morbidity and mortality; very low birth weight (less than 1,500 g) identifies high-risk infants requiring specialized care.

Birthmark

A localized skin or vascular mark present at birth or appearing soon afterward, such as a nevus, hemangioma, or port-wine stain.

Birthmarks

Congenital or early-appearing marks on the skin, including vascular lesions such as hemangiomas and port-wine stains and pigmented lesions such as nevi and café-au-lait macules. Most are benign, but changes in appearance warrant assessment.

Birthmarks - Pigmented

Pigmented birthmarks are localized areas of increased or altered skin pigmentation present at birth or appearing early in life. Changes in size, color, or shape require assessment.

Birthmarks And Other Skin Pigmentation Problems

Birthmarks and pigment changes may reflect vascular lesions, melanocytic cells, post-inflammatory change, medication, hormonal conditions, or genetic disease. A lesion that changes rapidly, bleeds, ulcerates, or differs from others should be examined.

Bis In Die

Latin for twice a day, traditionally abbreviated b.i.d.; medication directions should state the intended dosing times clearly.

Bisacodyl

Bisacodyl is a stimulant laxative that increases bowel movement and is used for short-term constipation or bowel preparation.

Bisbenzimidazole

A class of fluorescent compounds that bind DNA and are used mainly as laboratory stains, including Hoechst dyes.

Bisexual

Bisexual describes sexual or romantic attraction to more than one gender; it is an identity or orientation, not a disease or disorder.

Bisexuality

Bisexuality is a sexual orientation involving attraction to more than one gender; it is not a disease or disorder.

Bishop Score

A clinical score used before labor induction to describe cervical readiness. It incorporates cervical dilation, effacement, consistency, position, and fetal-head station; a more favorable cervix generally indicates a greater likelihood of successful induction.

Bismuth

Bismuth is a metal used in some medicines and industrial products; excessive exposure or certain compounds can cause toxicity.

Bisoprolol

A beta-1-selective blocker used to treat hypertension, angina, and selected patients with heart failure. It lowers heart rate and blood pressure and may cause bradycardia, hypotension, or fatigue.

Bisphenol A

Endocrine disruptor in plastics. Estrogenic effects, associated with reproductive disorders, obesity, diabetes. Avoid BPA-containing products, especially for children.

Bisphosphonate

A medicine that reduces bone breakdown and is used to prevent or treat osteoporosis and some other bone disorders.

Bistoury

A bistoury is a small surgical knife, historically used for precise incision or opening of tissue.

Bite Chigger (Chiggers (Bites))

Alternate index label for Chiggers (Bites).

Bite Dog (Dog Bite Treatment)

Alternate index label for Dog Bite Treatment.

Bite Snake (Snake Bite)

Alternate index label for Snake Bite.

Bitemporal Hemianopia

Loss of vision in the temporal (lateral) half of both visual fields due to lesions that cross the optic chi-

asm, damaging the decussating fibers from the nasal retina of each eye (which carry temporal field information).

Bites Flea (Flea Bites In Humans)

Alternate index label for Flea Bites in Humans.

Bitewing

A dental radiograph that records the crowns of the upper and lower teeth and the adjacent alveolar bone in one image. It is particularly useful for detecting interproximal caries and assessing crestal bone levels.

Bitewing Radiograph

An intraoral radiograph showing the crowns of the maxillary and mandibular posterior teeth and the alveolar crest. It is particularly useful for detecting interproximal caries and assessing crestal bone levels.

Bitot'S Spots

Foamy, whitish, triangular patches on the conjunctiva, usually near the temporal limbus, associated classically with vitamin A deficiency. They may accompany night blindness and xerosis of the conjunctiva or cornea.

Bitters

Bitters are intensely flavored plant preparations traditionally used as digestive remedies; evidence, composition, interactions, and safety vary by product.

Bituminosis

Bituminosis is an occupational lung condition caused by inhalation of bitumen or asphalt fumes and dust, potentially producing airway irritation or chronic respiratory disease.

Biuret Test

The biuret test detects peptide bonds by producing a violet color with proteins in alkaline copper solution; it is a laboratory chemistry test.

Bivalve

Bivalve means having two shells or valves; bivalve mollusks may be relevant to food allergy, poisoning, or parasitic exposure.

Bizarre Parosteal Osteochondromatous Proliferation

A rare benign but locally recurrent bone-surface lesion, also called Nora Lesion, composed of cartilage, bone, and spindle cells; it most often affects the hands or feet.

Bizelesin

Bizelesin is an investigational DNA-alkylating anti-neoplastic compound studied for cytotoxic effects.

BK Virus

BK virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

BK Virus Nephropathy

Polyomavirus infection in transplant recipients. Viral cytopathic changes on biopsy. Reduce immunosuppression as primary treatment. Can lead to graft loss. Monitor viral loads in blood for early detection.

Below-Knee Amputation

Below-knee amputation is surgical removal of the lower leg while preserving the knee joint.

Black Death

The Black Death was the historic pandemic of plague, primarily caused by *Yersinia pestis*, with severe mortality in the fourteenth century.

Black Eye

Bruising and swelling around the eye, usually caused by blunt trauma. Vision may remain normal, but eye pain, double vision, reduced vision, an irregular pupil, severe headache, vomiting, or loss of consciousness can indicate an eye or orbital injury and requires urgent assessment.

Alternate Names:

Eye Black (Black Eye)

Black Fly

A black fly is a biting Simuliidae insect that can cause local reactions and, in endemic regions, transmit *Onchocerca volvulus*.

Black Hair, Hairy Tongue

Black hairy tongue is benign elongation and discoloration of the tongue's filiform papillae, associated with smoking, antibiotics, poor oral hygiene, and some foods or medicines.

Black Hairy Tongue

A benign elongation and dark discoloration of the filiform papillae on the dorsal tongue caused by impaired desquamation and trapping of debris or pigment. Predisposing factors include smoking, poor oral hygiene, dry mouth, and some exposures.

Black Lung

Coal workers' pneumoconiosis caused by prolonged inhalation of coal-mine dust. It ranges from simple anthracosis to progressive massive fibrosis and may cause cough, breathlessness, and permanent lung impairment.

Black Lung Disease

Black lung disease is coal workers' pneumoconiosis caused by inhaled coal dust, ranging from simple nodules to progressive massive fibrosis and respiratory impairment.

Black Nightshade Poisoning

Poisoning from eating black nightshade or its berries, which contain toxic glycoalkaloids. Symptoms may include nausea, vomiting, abdominal pain, confusion, dilated pupils, seizures, or abnormal heart rhythm.

Black Or Tarry Stools

Black or tarry stools may indicate upper gastrointestinal bleeding, but can also result from iron or bismuth. New or persistent findings require medical

assessment.

Black Stain

Dark discoloration on the tooth surface, often near the gumline, caused by external deposits or chromogenic bacteria. Dental assessment determines the cause and appropriate removal.

Black Triangle

Triangular space between teeth at gumline. Caused by papilla loss, tooth shape, bone level. Treatment: orthodontics, restorative, papilla reconstruction.

Black Widow Spider

The black widow spider is a venomous spider whose bite can cause severe muscle pain, abdominal cramping, sweating, hypertension, and autonomic symptoms.

Blackflesh

Blackflesh is a descriptive term for dark or blackened tissue, potentially reflecting bruising, necrosis, gangrene, pigmentation, or contamination; clinical examination determines the cause.

Blackhead

A blackhead is an open comedone in which sebum and keratin plug a hair follicle and darken at the surface through oxidation.

Blackheads

Open comedones formed when a hair follicle becomes blocked with sebum and keratin and the surface material oxidizes. They are a common non-inflammatory lesion of acne, especially on the face, chest, and back.

Blackout

A period of partial or complete memory loss, commonly associated with alcohol or other causes of impaired consciousness.

Alternate Names:

Amnestic episode; alcohol-related amnesia when caused by alcohol.

Blackwater Fever

A severe form of malaria, classically associated with *Plasmodium falciparum*, characterized by intravascular hemolysis, hemoglobinuria, anemia, and possible kidney failure.

Bladder

A hollow muscular organ that stores urine received from the kidneys and expels it through the urethra during urination.

Bladder Biopsy

Removal of bladder-mucosa tissue, usually during cystoscopy, for histopathologic evaluation of a visible lesion, unexplained hematuria, inflammation, or suspected urothelial cancer.

Bladder Calculi

Alternate index label; see *Bladder stones*.

Bladder Cancer

A malignant tumor arising in the urinary bladder, most often from the urothelial lining. Blood in the urine is a common presenting feature, although symptoms vary.

Alternate Names:

Bladder Carcinoma (Bladder Cancer)

Bladder Carcinoma

A malignant tumor arising in the urinary bladder, most often from the urothelial lining. Blood in the urine is a common presenting sign; smoking and certain occupational chemical exposures increase risk.

Bladder Carcinoma (Bladder Cancer)

Alternate index label for Bladder Cancer.

Bladder Control, Loss Of

Alternate index label; see *Urinary incontinence*.

Bladder Diverticula

Outpouchings of the bladder mucosa through the muscular wall, often acquired from chronic bladder outlet obstruction or congenital in origin. Acquired

diverticula are associated with benign prostatic hyperplasia and may cause urinary stasis, recurrent infections, and stone formation.

Bladder Diverticulum

Outpouching of bladder wall. Congenital or acquired (obstruction). Asymptomatic or causes urinary stasis, stones, infection. Treatment: address obstruction, diverticulectomy if symptomatic.

Bladder Exstrophy

A rare congenital abdominal wall defect where the bladder is exposed on the outside of the body due to failure of the lower abdominal wall and bladder to close during embryonic development. Part of the exstrophy-epispadias complex. Associated with pubic bone diastasis, external genital anomalies, and potential bladder dysfunction.

Bladder Exstrophy Repair

Bladder exstrophy repair reconstructs the exposed bladder and lower abdominal and genital structures present in this congenital defect, often through staged surgery.

Bladder Fistula

An abnormal connection between the bladder and another organ or the skin, most often the vagina, bowel, or uterus. It may cause continuous urine leakage, recurrent infections, gas or stool in the urine, or unusual vaginal wetness. Treatment depends on the cause and may require catheter drainage and surgical repair.

Bladder Health And Disorders

Bladder health involves the proper storage and voluntary release of urine through coordinated function of the detrusor muscle and sphincters. Common disorders include urinary tract infections, overactive bladder, stress incontinence, and interstitial cystitis.

Bladder Infection

Alternate index label; see *Cystitis*.

Bladder Infection (Urinary Tract

Infection)

Alternate index label for Urinary Tract Infection.

Bladder Inflammation

Alternate index label; see *Interstitial cystitis*.

Bladder Neck

The narrow lower part of the urinary bladder where it connects to the urethra and contributes to urinary continence.

Alternate Names:

Vesical neck; bladder outlet.

Bladder Neoplasm

A neoplastic process affecting bladder neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Bladder Outlet Obstruction

Blockage of urine flow at the bladder neck or urethra, commonly caused by benign prostatic enlargement, urethral stricture, stones, tumors, or pelvic-organ prolapse. It may cause weak stream, hesitancy, retention, hydronephrosis, infection, and renal impairment.

Bladder Outlet Obstruction

Blockage or narrowing at the bladder neck or urethra that restricts urine flow and can cause hesitancy, weak stream, retention, hydronephrosis, or kidney injury.

Bladder Pain

Pain perceived in the lower abdomen, pelvis, or bladder region, often related to urinary infection, bladder pain syndrome, stones, inflammation, or malignancy; assessment depends on urinary and systemic symptoms.

Bladder Pain Syndrome

Chronic bladder-related pain, pressure, or discomfort associated with urinary symptoms in the absence of infection or another identifiable cause. It is a diagnosis of exclusion and is managed with multimodal, patient-centered treatment.

Bladder Perforation

A tear or hole in the bladder wall caused by trauma, pelvic surgery, instrumentation, severe inflammation, or obstruction. Urine may leak into surrounding tissues, causing abdominal pain, distention, blood in the urine, or infection. It requires urgent medical assessment and may need catheter drainage or surgical repair.

Bladder Problems

A range of conditions affecting urine storage and voiding, including incontinence, overactive bladder, urinary retention, and recurrent infections. Causes may include neurological damage, pelvic floor weakness, prostate enlargement, or bladder outlet obstruction.

Bladder Prolapse

Alternate index label; see *Anterior vaginal prolapse (cystocele)*.

Bladder Retraining

Scheduled voiding and gradual increases in the time between voids to improve bladder control.

Bladder Spasm

An involuntary contraction of the bladder muscle that can cause sudden urgency, cramping, urine leakage, or pain. It may occur with infection, catheter use, bladder irritation, neurological conditions, or after surgery. Treatment addresses the cause and may include bladder training or medicines.

Bladder Stone

A mineral deposit formed in or entering the urinary bladder. It may cause painful urination, blood in the urine, interrupted flow, or recurrent infection; treatment addresses the stone and its cause.

Bladder Stones

Hard mineral deposits that form in the bladder and may cause painful urination, blood in urine, urinary frequency, or difficulty emptying the bladder.

Alternate Names:

Bladder Calculi

Bladder, Diseases Of

Diseases of the bladder include infection, inflammation, stones, obstruction, neurogenic dysfunction, bleeding, and tumors, often causing urinary or pelvic symptoms.

Bladder, Urinary

The urinary bladder is a muscular reservoir that stores urine and contracts to expel it through the urethra.

Blalock-Taussig Operation

A surgical systemic-to-pulmonary shunt that increases pulmonary blood flow in selected cyanotic congenital heart disease. The modern modified procedure commonly uses a prosthetic conduit rather than direct sacrifice of a subclavian artery.

Bland Diet

A bland diet consists of foods that are soft, mildly seasoned, and low in irritants. It may be used temporarily for selected gastrointestinal symptoms.

Blaschko Lines

Invisible developmental skin-cell lines that may become visible when certain congenital or acquired dermatoses follow their characteristic linear or whorled patterns. They do not usually correspond to nerves or blood vessels.

BLAST

An immature blood-forming cell, also called a blast; an increased blast percentage in blood or bone marrow can indicate an acute leukemia.

Blast Cell

An immature precursor cell, especially an immature blood-forming cell in bone marrow. An abnormally high proportion of blasts may indicate an acute leukemia or another marrow disorder.

Blast Crisis

Aggressive, terminal phase of myeloid (chiefly CML) or, less commonly, lymphoid malignancies in which immature blasts dominate the marrow and periph-

eral blood, behaving like acute leukemia. CML blast crisis is defined by 20% blasts in peripheral blood or bone marrow or by the presence of extramedullary blastic infiltrates (chloromas).

Blast Injury

Tissue injury caused by an explosion, classified as primary injury from the pressure wave, secondary injury from projectiles, tertiary injury from displacement or impact, and quaternary injury from burns, inhalation, toxins, or crush. Multiple mechanisms may coexist.

Blast Phase

Blast phase is an advanced stage of a myeloproliferative blood cancer marked by a high proportion of immature blast cells and aggressive disease.

Blastic Plasmacytoid Dendritic-Cell Neoplasm

A rare, aggressive hematologic malignancy derived from plasmacytoid dendritic cells. It often involves skin, bone marrow, lymph nodes, and central nervous system, with a poor prognosis.

Blastocyst

An early stage in embryonic development, consisting of a hollow sphere of cells that implants into the uterine wall.

Blastocyst Transfer

An assisted reproductive technology procedure in which embryos cultured in vitro to day 5 or day 6 (blastocyst stage, characterized by an inner cell mass and an outer trophoctoderm surrounding a fluid-filled blastocoel) are transferred into the uterine cavity. Offers physiological synchronization with the receptive endometrium and higher implantation rates compared to cleavage-stage transfers, facilitating elective single-embryo transfer (eSET) to minimize multiple gestations.

Blastocystis

A biomedical term referring to blastocystis; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Blastocystis Hominis

A microscopic organism that can inhabit the intestinal tract; its role in causing gastrointestinal symptoms is variable and sometimes uncertain.

Alternate Names:

Blastocystosis

Blastocystosis

Alternate index label; see *Blastocystis hominis*.

Blastoma

Generic descriptor for embryonal (primitive) malignant tumors arising from precursor ("blast") cells that fail to differentiate normally.

Blastomyces Dermatitidis

A dimorphic fungus that causes blastomycosis, a systemic pyogranulomatous infection acquired by inhalation of conidia from soil in endemic regions such as the Ohio and Mississippi River valleys. Cutaneous manifestations include verrucous or ulcerated plaques, and pulmonary involvement is common.

Blastomycosis

A fungal infection caused by *Blastomyces dermatitidis*, endemic to the Ohio and Mississippi River valleys and Great Lakes region. Inhalation of conidia causes pulmonary infection. Pulmonary: acute pneumonia (often misdiagnosed as bacterial), chronic pneumonia with nodules and cavitation.

Blasts

Immature precursor cells in the blood-forming tissues; excess blasts may be seen in acute leukemia or other marrow disorders.

Blautia Producta

Blautia producta is an anaerobic bacterium found in the human gut; its clinical significance depends on the specimen and compatible illness.

Bleb

A thin-walled, blister-like structure, generally larger than 5 mm and containing fluid or air; a fluid-filled bleb is also called a bulla.

Bleeder'S Disease

Bleeder's disease is an older name for hemophilia, an inherited clotting-factor deficiency causing prolonged or recurrent bleeding.

Bleeding

The escape of blood from the vascular system, which may be external (visible hemorrhage from a wound, orifice, or natural opening) or internal (bleeding into a body cavity, organ, or tissue).

Postmenopausal Bleeding

Vaginal bleeding after menopause. Even light or one-time bleeding needs medical evaluation because causes include tissue thinning, polyps, hormone effects, and cancer.

Bleeding Disorders

A heterogeneous group of conditions characterized by abnormal hemostasis, resulting from defects in blood vessels, platelets, or coagulation factors.

Bleeding During Cancer Treatment

A clinical topic about bleeding during cancer treatment. It includes the purpose, common findings, risks, and appropriate clinical follow-up.

Bleeding During Pregnancy

Vaginal bleeding during pregnancy; its significance varies with gestational age and amount. Urgent evaluation is needed for heavy bleeding, pain, dizziness, or bleeding later in pregnancy.

Bleeding Esophageal Varices

Life-threatening hemorrhage from dilated submucosal veins in the lower esophagus, occurring as a complication of portal hypertension, most commonly from cirrhosis. Varices form when the portal venous pressure gradient exceeds 10 mmHg (the threshold for variceal development).

Bleeding Gums

Bleeding from the gum tissue, often caused by plaque-related gingivitis, periodontitis, trauma, or vigorous brushing. It can also occur with blood

disorders or medicines that affect clotting. Persistent bleeding, swelling, loose teeth, or spontaneous bleeding requires dental or medical evaluation.

Bleeding Into A Thyroid Nodule

Hemorrhage within a thyroid nodule, presenting with sudden onset of neck pain and rapid enlargement of a pre-existing or new thyroid mass. It may mimic thyroid malignancy clinically and on imaging. Ultrasound shows a complex cystic lesion with internal echoes. Fine needle aspiration confirms the benign nature of the hemorrhagic cyst.

Bleeding Into The Skin

A clinical topic about bleeding into the skin. It includes the purpose, common findings, risks, and appropriate clinical follow-up.

Bleeding Tendency

An increased susceptibility to bleeding, which may result from platelet disorders, coagulation factor deficiencies, vascular abnormalities, or anticoagulant medications. Evaluation includes personal and family history, complete blood count, and coagulation studies.

Bleeding Time

A bedside test that measures the time required for a standardized skin puncture to stop bleeding, primarily reflecting platelet function and vascular integrity. It is largely replaced by more specific platelet function assays in current practice.

Bleeding Varices

Varices are enlarged, fragile veins, commonly in the esophagus or stomach when portal pressure is high. Rupture causes life-threatening gastrointestinal bleeding with vomiting blood, black stool, weakness, or shock and requires emergency treatment.

Blennorrhea

A mucopurulent discharge from a mucous membrane, especially the urethra or conjunctiva. The finding requires clinical assessment for infectious and noninfectious causes rather than treatment based on the symptom alone.

Bleomycin

An antitumor antibiotic that damages DNA and is used in selected cancer treatments. Pulmonary toxicity, skin changes, fever, and allergic reactions are important adverse effects.

Bleomycin Sulfate

The sulfate salt formulation of bleomycin, an antitumor antibiotic that damages DNA. Its most important serious toxicity is potentially irreversible pulmonary injury.

Blepharitis

A common, usually chronic inflammation of the eyelid margins that can cause itchy or burning eyelids, redness, tearing, dry-eye symptoms, and crusting at the base of the eyelashes. Anterior blepharitis affects the skin, eyelash follicles, and lash bases; posterior blepharitis affects the meibomian oil glands. It is associated with bacterial overgrowth, dandruff, rosacea, allergies, or gland dysfunction and is not usually contagious.

Alternate Names:

Eyelid Inflammation Eyelid Inflammation (Blepharitis)

Blepharoconjunctivitis

Inflammation involving the eyelid margins and conjunctiva. It may cause crusting, itching, redness, tearing, irritation, and recurrent symptoms associated with infection, allergy, or eyelid-gland dysfunction.

Blepharophimosis

Blepharophimosis is abnormally short horizontal eyelid openings, often with drooping lids and other features in blepharophimosis-ptosis syndromes.

Blepharoplasty

Surgical reconstruction or reshaping of the eyelids, often involving removal or repositioning of excess skin, muscle, or orbital fat. It may be functional, cosmetic, or reconstructive.

Blepharoptosis

Blepharoptosis is drooping of the upper eyelid caused by muscle, nerve, tendon, congenital, aging, or mechanical problems.

Blepharospasm

Involuntary spasms of the muscles around the eyes that cause repeated or sustained eyelid closure. It may be primary or associated with eye irritation, medications, or a neurologic disorder.

Blind

Having severe or complete loss of vision that substantially limits visual function; the degree and cause of visual impairment should be specified.

Blind Loop Syndrome

Malabsorption syndrome due to stasis and bacterial overgrowth in a non-propulsive ("blind") segment of small bowel, classically caused by surgical bypass loops (Billroth II, end-to-side anastomosis), strictures (Crohn disease, radiation, adhesions), diverticulosis, or impaired motility (diabetes, scleroderma).

Blind Spot

A blind spot is an area of absent vision, especially the optic-disc region where the optic nerve exits the retina and photoreceptors are absent.

Blinded

Blinded describes a research participant, clinician, or assessor who does not know the assigned treatment or relevant result, reducing expectation bias.

Blinding

Concealing group assignment. Single-blind: participants. Double-blind: participants and investigators. Triple-blind: participants, investigators, analysts.

Blindness

Severe or complete loss of vision in one or both eyes, caused by disease or injury affecting the cornea, lens, retina, optic nerve, visual pathways, or visual cortex. It may be congenital or acquired, sudden or progressive, and reversible or permanent; sudden

visual loss is an ophthalmic emergency.

Blindness And Vision Loss

Blindness or vision loss is reduced visual function that may result from eye disease, optic-nerve disease, brain disease, injury, or congenital conditions.

Blister

A raised, fluid-filled pocket in or under the outer layer of skin. Blisters commonly form from rubbing, heat, burns, infections, allergic reactions, or skin diseases, and often appear on the hands or feet.

Alternate Names:

Bulla; vesicle when small.

Bloating

A subjective sensation of abdominal fullness or distention, commonly caused by gas, functional gastrointestinal disorders, constipation, or dietary factors. Persistent bloating with weight loss, pelvic pain, or early satiety warrants medical evaluation.

Block

A block is obstruction or interruption of flow, conduction, movement, or communication, such as an airway block, nerve block, or heart block.

Blockage Of Upper Airway

Upper-airway obstruction prevents normal airflow through the nose, mouth, pharynx, or larynx and can rapidly cause respiratory failure.

Blocked Tear Duct

Partial or complete blockage of the passage that drains tears from the eye into the nose.

Blocked Ureter

Alternate index label; see *Ureteral obstruction*.

Blocking Agent

A substance that prevents or reduces a biologic process by blocking a receptor, channel, enzyme, or other target.

Alternate Names:

Blocker; antagonist when it acts by receptor antag-

onism.

Blocking Agents

Blocking agents inhibit a receptor, enzyme, ion channel, nerve signal, or physiologic pathway; their effects and risks depend on the target and drug.

Blocking Antibody

An antibody that prevents a ligand from binding to its receptor or interferes with a biological interaction; blocking antibodies can be therapeutic, protective, or involved in autoimmune disease.

Blood

A fluid connective tissue consisting of plasma, red blood cells, white blood cells, and platelets; it transports gases, nutrients, hormones, and waste and participates in immunity, coagulation, and temperature regulation.

Blood Thinner

A common name for an anticoagulant medicine that lowers the blood's ability to form harmful clots. It does not actually make the blood thinner. These medicines help prevent or treat conditions such as deep vein thrombosis, pulmonary embolism, and stroke, but can increase bleeding risk.

Alternate Names:

Anticoagulant

Blood Alcohol Concentration

The concentration of ethanol in blood, commonly expressed as mass per volume or as a percentage. Interpretation depends on sampling, timing, metabolism, tolerance, co-ingestants, and local standards; clinical impairment cannot be inferred from a single value without context.

Blood Alcohol Level

Measurement of ethanol concentration in blood. The clinical effects depend on the concentration, timing, tolerance, co-ingestants, and individual factors; a single level does not by itself determine impairment or prognosis.

Blood Bank

A service that collects, tests, processes, stores, and distributes blood and blood components for transfusion, with compatibility testing and safeguards against infection and transfusion reactions.

Blood Banking

The collection, testing, processing, storage, and distribution of blood and blood components for transfusion.

Blood Cancer

A cancer that affects the blood, bone marrow, or lymphatic system. It develops when abnormal cells grow without control and interfere with normal blood-cell or immune-system function.

Blood Blister

A raised, fluid-filled blister containing blood, usually caused by friction, pinching, pressure, or other injury that damages small blood vessels.

Blood Brain Barrier

The blood-brain barrier is a selective system of brain capillary cells and supporting structures that limits movement of substances from blood into nervous tissue.

Blood Cancer (Leukemia)

Alternate index label for Leukemia.

Blood Cell

A formed element of blood, including red blood cells, white blood cells, and platelets, produced mainly in the bone marrow.

Blood Circulation

The continuous movement of blood through the pulmonary and systemic vascular circuits, driven by the heart, to deliver oxygen and nutrients and remove carbon dioxide and metabolic waste.

Blood Cleaner

A pathogen-inactivation process for donated blood components that uses chemicals, light, or other

methods to reduce infectious microorganisms while preserving the blood product.

Blood Clot

A mass of coagulated blood within a blood vessel or body cavity. A clot may be protective when it stops bleeding, but an abnormal thrombus can obstruct blood flow or embolize to the lungs, brain, heart, or other organs.

Blood Clot In The Lung (Pulmonary Embolism)

Alternate index label for Pulmonary Embolism.

Blood Clots

Clumps of blood formed during clotting; abnormal clots can obstruct veins or arteries and cause deep vein thrombosis, pulmonary embolism, stroke, or other ischemia.

Alternate Names:

Clot Blood (Blood Clots)

Blood Coagulation

The cascade of enzymatic reactions converting circulating fibrinogen into an insoluble fibrin clot.

Blood Coagulation Disorder

A disorder in which clot formation is deficient, excessive, or inappropriately regulated, causing abnormal bleeding or thrombosis. Causes include inherited factor deficiencies, platelet disorders, liver disease, vitamin deficiencies, immune conditions, and acquired systemic disease.

Blood Count

A blood count measures numbers and characteristics of red cells, white cells, and platelets to assess anemia, infection, inflammation, marrow disease, and bleeding risk.

Blood Culture

A laboratory test in which blood is placed in culture bottles to detect bacteria or fungi in the bloodstream. It is used when bloodstream infection, sepsis, or infective endocarditis is suspected.

Blood Culture Contamination

Introduction of skin or environmental microorganisms into a blood-culture bottle during collection or handling rather than true bloodstream infection. It can lead to unnecessary antimicrobial treatment and should be assessed using the organism, number of positive sets, time to positivity, and clinical findings.

Blood Differential Test

A laboratory test that quantifies the relative and absolute numbers of each white blood cell type—neutrophils, lymphocytes, monocytes, eosinophils, and basophils—in peripheral blood. It helps identify infection, inflammation, allergy, leukemia, and bone marrow disorders.

Blood Donation Before Surgery

A medical procedure involving blood donation before surgery. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

Blood Donor

A person who voluntarily gives blood or blood components for transfusion or medical use. Donors are screened to protect both donor health and recipient safety.

Blood Draw

Collection of blood, usually by inserting a needle into a vein, for laboratory testing, donation, or other medical use.

Blood Film (Peripheral Blood Smear)

A stained microscopic preparation of peripheral blood used to assess erythrocyte, leukocyte, and platelet morphology and to detect abnormal cells, parasites, blasts, and red-cell fragments.

Alternate Names:

Peripheral Blood Smear

Blood Flow

The volume of blood passing through a vessel, organ, or the systemic circulation per unit time, typically

expressed in mL/min. Governed by the hemodynamic equivalent of Ohm's law: flow = pressure gradient / resistance. Total cardiac output (5 L/min at rest) equals systemic blood flow.

Blood Gas (Venous)

Sampling of venous blood (typically from a peripheral vein or central line) for pH, PvCO₂, HCO₃, and base excess. Less painful than ABG, avoids arterial puncture risks. Limitations: no PaO₂ or SpO₂ data; peripheral venous gases in shock may not reflect arterial pH. VBG pH is typically 0.03-0.05 lower than ABG; PvCO₂ is 3-8 mmHg higher.

Alternate Names:

Venous

Blood Gas Analysis

Blood gas analysis measures oxygen, carbon dioxide, pH, and related values to assess ventilation, oxygenation, and acid-base status.

Blood Gases

Laboratory measurements of oxygen, carbon dioxide, acidity, and related values in blood to assess ventilation, oxygenation, and acid-base balance.

Blood Glucose

The concentration of glucose in blood, maintained by dietary absorption, hepatic production, insulin, and counter-regulatory hormones; abnormal levels indicate hypoglycaemia or hyperglycaemia.

Blood Glucose Monitoring

Blood sugar monitoring involves measuring glucose levels in the blood to manage diabetes, typically using a glucometer with finger-stick testing or continuous glucose monitors that track interstitial glucose in real time.

Blood Lancet

Alternate index label; see *Lancet*.

Blood Group

The classification of blood based on the presence or absence of specific antigens (agglutinogens) on the

surface of red blood cells. The ABO system has four groups: A (A antigen), B (B antigen), AB (both A and B), and O (neither A nor B). The Rh system: RhD-positive (85% of population) or RhD-negative (15%).

Blood Group, ABO

The blood-group system defined by A and B antigens on red blood cells and corresponding antibodies in plasma, producing type A, B, AB, or O.

Blood Groups

Blood groups classify inherited red-cell antigens, such as ABO and Rh, to guide compatible transfusion, pregnancy care, and transplantation.

Blood In Semen

Hemospermia, or the presence of blood in the ejaculate. It is often temporary and related to inflammation, infection, recent urologic procedures, or trauma, but persistent or recurrent bleeding, pain, fever, urinary symptoms, or bleeding in older men warrants medical evaluation.

Alternate Names:

Semen Blood (Blood In Semen)

Blood In The Eye

Bleeding within or around the eye, such as a subconjunctival hemorrhage on the eye surface or a hyphema in the front chamber; the location and cause determine urgency.

Blood In The Semen

Blood in semen, called hemospermia, is usually benign and self-limited but may result from infection, inflammation, trauma, or a urologic disorder.

Blood In The Stool (Rectal Bleeding)

Alternate index label for Rectal Bleeding.

Blood In The Urine

Hematuria, the presence of red blood cells or blood products in urine; it may be visible or detected only by urinalysis and requires evaluation for urinary-tract causes.

Blood In Urine

Blood in the urine, or hematuria, may arise from infection, stones, prostate disease, kidney disease, trauma, medicines, or urinary-tract cancer. Visible blood, clots, pain, fever, inability to urinate, or persistent microscopic blood requires timely evaluation.

Blood In Urine (Hematuria)

Visible or microscopic blood in the urine, which may result from infection, stones, injury, kidney disease, medicines, or urinary tract cancer.

Alternate Names:

Microscopic Hematuria

Blood Loss

The volume of blood lost during surgery or trauma, estimated by weighing swabs, suction contents, and hemodynamic monitoring, guiding fluid and transfusion management.

Blood Low Red Cell Count (Anemia)

Alternate index label for Anemia.

Blood PH

A measure of blood acidity or alkalinity, regulated mainly by the lungs and kidneys; normal arterial blood pH is approximately 7.35–7.45.

Blood Plasma

Blood plasma is the liquid component of blood containing water, electrolytes, proteins, nutrients, hormones, gases, and waste products.

Blood Poisoning

Blood poisoning is a nontechnical term usually referring to sepsis or bloodstream infection, a potentially life-threatening dysregulated response to infection.

Blood Poisoning (Septicaemia)

An older term commonly used for serious bloodstream infection or sepsis. Sepsis is life-threatening organ dysfunction caused by a dysregulated response to infection.

Alternate Names:

Septicaemia

Blood Preservation

The collection, anticoagulation, processing, refrigeration, freezing, and quality control used to maintain donated blood or blood components until transfusion.

Blood Pressure

The force exerted by blood against arterial walls, measured in millimeters of mercury (mmHg). Systolic pressure (peak during ventricular ejection, normally approximately 120 mmHg) and diastolic pressure (minimum during ventricular relaxation, normally approximately 80 mmHg).

Blood Pressure Chart: Reading By Age

Blood-pressure interpretation depends on repeated measurements, technique, age, pregnancy, comorbidities, and the guideline used; age alone does not define a safe target. Very high readings with chest pain, neurologic symptoms, shortness of breath, or confusion are emergencies.

Blood Pressure Low (Low Blood Pressure)

Low blood pressure can be normal or can result from dehydration, bleeding, infection, heart disease, endocrine disease, or medicines. Symptoms such as fainting, confusion, chest pain, severe weakness, or shock require urgent assessment.

Blood Pressure Measurement

Measurement of the pressure exerted by circulating blood on arterial walls, recorded as systolic and diastolic pressure.

Blood Pressure Monitors For Home

Devices used to measure blood pressure outside a clinic. Accurate cuff size, positioning, and repeated measurements improve reliability.

Blood Product

A therapeutic component prepared from donated blood, such as red-cell concentrates, platelets, plasma, or cryoprecipitate, selected according to the patient's clinical need.

Blood Products

Components prepared from donated blood for transfusion, including red blood cells, platelets, plasma, and cryoprecipitate. Each component has specific indications, benefits, and risks; selection depends on the patient's clinical condition and laboratory findings.

Blood Protein

Blood protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Blood Results

Blood results are laboratory measurements from a blood sample, interpreted using the test method, reference interval, symptoms, and clinical context.

Blood Sedimentation

The settling of red blood cells in anticoagulated blood; the erythrocyte sedimentation rate is a non-specific marker that may increase with inflammation, infection, anaemia, or other conditions.

Blood Smear

Peripheral blood film: a thin blood smear on a slide stained (Wright/Giemsa) and examined microscopically for cell morphology, aiding diagnosis.

Blood Spatter Analysis

The forensic interpretation of bloodstain patterns to reconstruct events surrounding a violent incident. Types: passive (drops, pools, flows), transfer (contact patterns), and impact/expired spatter.

Blood Substitutes

Fluids or artificial products intended to restore circulating volume or, in some cases, oxygen-carrying capacity when donated blood is unavailable or unsuitable; most currently used substitutes provide volume rather than durable oxygen transport.

Blood Sugar Test

Measurement of blood glucose to detect or monitor diabetes and other disorders of glucose regulation. Testing may be performed fasting, randomly, or after a glucose load, using a laboratory sample or a point-of-care meter.

Blood Test

A blood test analyzes blood cells, chemicals, proteins, hormones, antibodies, genes, or other markers to investigate health or disease.

Blood Transfusion

The administration of whole blood or a specific blood component, such as red blood cells, platelets, plasma, or cryoprecipitate, to treat blood loss, anaemia, thrombocytopenia, or a clotting-factor deficiency. Red cells improve oxygen-carrying capacity; platelets, plasma, and cryoprecipitate support haemostasis. ABO/Rh typing, antibody screening, and compatibility testing help reduce transfusion reactions. Risks include febrile or allergic reactions, acute haemolysis, circulatory overload, and rare transfusion-transmitted infection; the decision depends on the patient's symptoms, laboratory results, bleeding, and overall clinical context.

Blood Treatment

The diagnosis-specific use of medicines, transfusion, apheresis, replacement factors, or other interventions to treat disorders of blood cells, coagulation, plasma proteins, or blood-borne infection.

Blood Typing

Laboratory determination of ABO and Rh blood-group antigens to support safe transfusion and pregnancy-related care.

Blood Urea Nitrogen

BUN: serum urea, the end product of protein catabolism, filtered and partially reabsorbed by the tubules. Used with creatinine to assess renal function and volume status.

Blood Urea Nitrogen Test

A blood test that measures urea nitrogen and helps

assess kidney function and hydration.

Blood Vessel

A tube that carries blood through the body. Arteries carry blood away from the heart, veins return it, and capillaries allow exchange with tissues.

Blood Viscosity

The internal friction of blood that resists flow, determined primarily by hematocrit (red cell concentration), with smaller contributions from plasma proteins and temperature. Normal whole-blood viscosity is approximately 3-4 times that of water.

Blood Volume

The total amount of blood in the circulation, comprising plasma and cellular components; it varies with body size and fluid balance, and abnormal reductions or increases contribute to shock or circulatory strain.

Blood-Borne Disease

An infection that can spread through contact with infected blood or other body fluids. Examples include HIV and hepatitis B and C.

Blood-Borne Pathogens

Infectious microorganisms transmitted through blood or certain body fluids, including viruses such as HIV and hepatitis B and C; prevention requires appropriate barrier precautions and safe handling of sharps.

Blood-Brain Barrier

The blood-brain barrier is a highly selective semipermeable membrane that separates the circulating blood from the brain extracellular fluid, consisting of endothelial cells connected by tight junctions, astrocyte foot processes, and a basement membrane.

Bloodborne Pathogens

Bloodborne pathogens are infectious agents transmitted through blood or certain body fluids, including HIV, hepatitis B virus, and hepatitis C virus.

Bloom Syndrome

Rare autosomal recessive chromosomal instability syndrome caused by biallelic mutations in BLM (15q26.1) encoding a RecQ helicase.

Blount Disease

A growth disorder of the proximal tibia causing progressive bowing of the legs, usually involving the medial tibial physis. It may occur in infants or adolescents and can lead to gait abnormality, limb-length discrepancy, and early knee degeneration.

Blue Baby

Generic term for an infant with cyanosis (bluish skin, lips, nail beds) from arterial oxygen desaturation.

Blue Baby Operation

A historical term for palliative surgery used to improve oxygenation in an infant with cyanotic congenital heart disease, often by increasing pulmonary blood flow.

Blue Bloater

A clinical phenotype of chronic bronchitis in COPD. Patients present with chronic cough, sputum production, cyanosis, right heart failure, and airway-centric inflammation. They tend to be younger, have more hypercapnia, and less emphysema on imaging.

Blue Bottle

Blue bottle is a common name for several organisms or objects; in medical contexts it may refer to a bluebottle jellyfish whose sting causes pain and skin inflammation.

Blue Discoloration Of The Skin

Bluish discoloration of the skin or mucous membranes, called cyanosis, may indicate reduced oxygenation or abnormal blood flow.

Blue Nevus

A blue nevus is a usually benign blue-gray skin mole caused by pigment cells located deeper in the dermis.

Blue Nightshade Poisoning

Poisoning from eating blue nightshade or related Solanum plants containing toxic glycoalkaloids. It may cause gastrointestinal symptoms, confusion, weakness, seizures, or abnormal heart rhythm.

Blue Nævus

A blue naevus is a usually benign melanocytic skin lesion containing pigment deep in the dermis, giving it a blue or blue-black appearance.

Blue Sclera

A bluish appearance of the normally white outer coat of the eye, often caused by scleral thinning and classically associated with osteogenesis imperfecta.

Blue-Green Algae

Blue-green algae are cyanobacteria; some produce toxins that can contaminate water or food and cause gastrointestinal, neurologic, liver, or skin illness.

Blunt Abdominal Trauma

Trauma to the abdomen without penetrating injury. Mechanisms: motor vehicle collisions (most common), falls, assaults. Commonly injured organs: spleen (most common, left upper quadrant), liver (right upper quadrant), kidneys (flank), bowel (seatbelt sign, delayed perforation), and pancreas (epigastric).

Blunt Force Trauma

Injury produced when a blunt object strikes the body, or the body strikes a blunt surface, without a sharp edge penetrating the skin. Patterns include abrasions, contusions, lacerations with tissue bridging, and fractures; patterned injuries may reproduce the impacting object.

Blunted Affect

A restricted range of emotional expression observed in psychiatric or neurologic conditions. The individual shows diminished responsiveness to emotional stimuli, with reduced facial expression, vocal tone, and body language; it is commonly seen in schizophrenia, depression, and traumatic brain injury.

Blurred Vision

Impaired visual acuity in which objects appear out of focus or hazy. Causes range from refractive errors and dry eye to retinal disease, optic neuritis, increased intracranial pressure, and acute vascular events; sudden onset warrants urgent evaluation.

Blush

Temporary reddening or warmth of the face caused by increased superficial blood flow, which may result from emotion, heat, exertion, substances, or medical conditions.

Blushing

Blushing is temporary facial redness caused by increased cutaneous blood flow, triggered by emotion, heat, exertion, hormones, medicines, or some diseases.

Bone Mineral Density

Bone mineral density—the amount of calcium and other minerals in a specific area of bone. It is commonly measured by a dual-energy X-ray absorptiometry (DXA) scan to help diagnose osteoporosis, estimate fracture risk, and monitor treatment. Results must be interpreted with the person's age and other clinical risk factors.

Alternate Names:

BMD; bone mineral density; bone density.

Board-Like Rigidity

Board-like rigidity is marked involuntary abdominal-wall stiffness, classically suggesting peritoneal irritation and a possible surgical abdomen.

Boas' Sign

Boas' sign is referred pain or skin hypersensitivity below the right shoulder blade described in association with gallbladder disease; it is not sufficiently specific alone for diagnosis.

Bobbing, Ocular

Ocular bobbing is a rapid downward movement of both eyes followed by a slower return, a sign of severe pontine or other neurologic dysfunction.

Bocavirus

Bocavirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Bocavirus Infection

Infection caused by human bocavirus, a respiratory virus that most often affects young children. It may cause cough, wheezing, fever, runny nose, bronchiolitis, or pneumonia and can occur with other respiratory infections. Treatment is generally supportive; breathing difficulty, dehydration, or marked lethargy requires prompt assessment.

Bochdalek Hernia

A congenital diaphragmatic hernia occurring through the posterolateral foramen of Bochdalek, resulting from failure of the pleuroperitoneal membrane to close by the 8th week of gestation. The left side is affected in 85% of cases (the right pleuroperitoneal canal closes earlier).

Bock's Disease

Bock's disease is an older name for sarcoidosis, a granulomatous inflammatory disorder that can affect the lungs, lymph nodes, skin, eyes, and other organs.

BODE Index

A validated multidimensional scoring system and prognostic index for patients with chronic obstructive pulmonary disease. It evaluates four independent factors: Body mass index (B; 1 point if $\leq 21 \text{ kg/m}^2$), airflow Obstruction (O; FEV₁ percentage of predicted, 0–3 points), Dyspnea (D; modified Medical Research Council [mMRC] dyspnea scale, 0–3 points), and Exercise capacity (E; 6-minute walk distance in meters, 0–3 points). The composite score ranges from 0 to 10 points, where higher scores reflect greater severity, disease progression, and significantly increased risk of hospitalization and all-cause mortality.

Alternate Names:

BODE Score; BODE Index for COPD

Bodily Secretion

A substance produced and released by cells or glands, such as sweat, saliva, mucus, tears, digestive juices, or hormones. Secretions may protect surfaces, aid digestion, regulate body functions, or remove waste.

Body

The body is the physical organism and its integrated systems, tissues, organs, and functions; medical assessment considers structure, physiology, and health together.

Body Aches

Generalized muscle or body pain that may occur with viral infections, fever, exertion, inflammation, medication effects, or other systemic illness. Severe pain with weakness, dark urine, breathing difficulty, chest pain, or high fever requires prompt medical assessment.

Body Cavity

A fluid-containing space within the body that houses and protects organs, including the cranial, vertebral, thoracic, abdominal, and pelvic cavities.

Body Cell Mass

The metabolically active component of the body, including the cells of muscle, organs, blood, and other living tissues, excluding extracellular water and stored fat.

Body Composition

The proportions of fat, lean tissue, bone mineral, and body water in the body; it is assessed in nutrition, obesity, sports medicine, and some chronic diseases.

Body Dysmorphic Disorder

Preoccupation with one or more perceived defects or flaws in physical appearance that are not observable or appear slight to others. The individual performs repetitive behaviors in response to appearance concerns such as mirror checking, excessive grooming, skin picking, reassurance seeking, and comparing.

Alternate Names:

BDD

Body Fat

Body fat is adipose tissue that stores energy, cushions organs, insulates the body, and produces endocrine signals; excess or insufficient amounts affect health.

Body Fluid

Water and dissolved substances in intracellular or extracellular compartments, including plasma, interstitial fluid, cerebrospinal fluid, and lymph; abnormal volume or composition causes fluid and electrolyte disorders.

Body Fluids

Body fluids include blood, lymph, cerebrospinal fluid, urine, synovial fluid, and other water-based compartments that transport substances and support physiology.

Body Habitus

A person's general physical build or body composition, including features such as size, shape, muscle, and fat distribution.

Body Height

The vertical measurement from the soles of the feet to the top of the head; it is used to assess growth, nutrition, body-mass index, and medication or physiological calculations.

Body Identification

The process of establishing the identity of a deceased person, essential in forensic and mass-disaster contexts.

Body Image

A person's perception, thoughts, and feelings about their own body and appearance; severe disturbance may occur in body dysmorphic disorder or eating disorders.

Body Lice

Infestation of clothing and skin by the human body

louse, causing intense itching, excoriations, and sometimes secondary bacterial infection. Treatment requires hygiene, laundering or heat treatment of clothing and bedding, and appropriate antiparasitic measures.

Alternate Names:

Lice, Body

Body Mass Index

A screening measure calculated by dividing weight in kilograms by height in meters squared. It helps assess weight in relation to height, but it does not directly measure body fat or provide a complete assessment of health. Results are interpreted with age and other clinical factors; children and teens are assessed using age- and sex-specific percentiles.

Alternate Names:

BMI; BMI Calculation; Body Mass Index; Quetelet Index

Body Odor

Odour produced when skin secretions, especially sweat, are metabolized by microorganisms; a new or unusual odour may occasionally reflect infection, metabolic disease, or medication.

Body Odor And Sweating

Alternate index label; see *Sweating and body odor*.

Body Odour

Body odour is smell produced when skin secretions are metabolized by microorganisms; changes may reflect hygiene, diet, medicines, infection, or metabolic disease.

Body Piercing

The intentional creation of a skin or mucosal opening to insert jewellery; complications include bleeding, infection, scarring, allergic reaction, and damage to teeth or cartilage.

Body Plethysmography

Technique for measuring lung volumes using a sealed chamber. Gold standard for TLC measurement. Useful for diagnosing restriction and hyperinflation.

Body Position

The arrangement and orientation of the body or its parts, such as standing, supine, prone, or lateral positions; position affects examination findings, ventilation, circulation, and procedures.

Body Region

A named anatomical area used to locate structures, symptoms, injuries, or examination findings, such as the chest, abdomen, pelvis, or upper limb.

Body Ringworm

Dermatophyte infection of the glabrous skin, also called tinea corporis. It typically produces an expanding annular scaly lesion with a more active border and central clearing.

Alternate Names:

tinea corporis.

Body Space

An anatomical compartment or potential space within the body, such as the pleural, peritoneal, or retroperitoneal space, where fluid, air, blood, or infection may accumulate.

Body Substance

Any material originating from or present in the body, including blood, saliva, urine, faeces, respiratory secretions, and tissue; handling may require infection-control precautions.

Body Surface

The external area of the skin and accessible mucous membranes; body-surface area is also estimated clinically for burns, drug dosing, and physiologic calculations.

Body Surface Area

An estimate of the total external surface area of the body, calculated from height and weight and used in some medication dosing and physiologic calculations.

Body Temperature

The balance between heat production (metabolism,

muscle activity) and heat loss (radiation, conduction, convection, evaporation). See Temperature (Body Temperature).

Body Temperature Norms

Normal body temperature varies with age, time of day, activity, measurement site, and health. Fever and hypothermia are defined using clinical context and measurement method.

Body Type Ectomorph, Endomorph Or Mesomorph

Ectomorph, endomorph, and mesomorph are informal body-type categories that do not reliably predict metabolism, health, or exercise response. Fitness and nutrition decisions are better based on measured health, goals, activity, and individual response.

Body Wall

The layers of muscle, fascia, connective tissue, bone, and skin that enclose a body compartment, such as the thoracic or abdominal wall.

Body Weight

The measured mass of a person, influenced by fat, muscle, bone, water, and organs; it is used with height and clinical context to assess growth, nutrition, fluid balance, and medication dosing.

Boeck'S Sarcoid

An older eponym for sarcoidosis, a multisystem granulomatous disease characterized by noncaseating granulomas and commonly involving the lungs, intrathoracic lymph nodes, skin, or eyes.

Boerhaave Syndrome

Transmural spontaneous rupture of the esophagus typically occurring after forceful vomiting in the setting of a full stomach. Most commonly involves the left posterolateral wall of the distal esophagus. Presents with severe chest pain, subcutaneous emphysema, mediastinal emphysema, and rapidly progressive sepsis.

Boerhaave'S Syndrome

Boerhaave's syndrome is spontaneous full-thickness rupture of the esophagus, usually after forceful vomiting, causing severe chest pain, infection, and mediastinal contamination.

Bogros' Space

Bogros' space is a preperitoneal anatomical plane behind the inguinal region used as a surgical dissection plane in hernia repair.

Bohn Nodules

Small, benign keratin-filled cysts on the gums or palate of a newborn that usually resolve without treatment.

Bohr Effect

The decrease in hemoglobin's oxygen affinity (right shift of the dissociation curve) caused by decreased pH (increased H⁺) and increased PCO₂. In metabolically active tissues, CO₂ production and lactic acid accumulation lower the local pH, causing hemoglobin to release more oxygen precisely where it is needed most.

Bohring Syndrome

A clinical disorder or finding related to bohring syndrome; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Boil

Furuncle: an acute, deep infection of a hair follicle (folliculitis that extends to the dermis) by *Staphylococcus aureus*, forming a painful, red, swollen nodule with central purulent core that may spontaneously drain.

Boil (Furuncle)

A painful, deep-seated infection of a hair follicle caused most commonly by *Staphylococcus aureus*, extending into the surrounding subcutaneous tissue. Presents as a tender, erythematous, fluctuant nodule that eventually discharges pus. When multiple adjacent follicles coalesce, it forms a carbuncle, often with systemic symptoms.

Alternate Names:

Furuncle

Boils

Boils are localized infections of hair follicles, usually caused by *Staphylococcus aureus*, that form painful pus-filled nodules.

Alternate Names:

Abscesses Skin (Boils)

Boils And Carbuncles

Painful skin infections caused by pus-filled inflammation around hair follicles; a carbuncle is a connected group of boils.

Alternate Names:

Carbuncles And Boils

Bojlen'S Syndrome

Bojlen's syndrome is an uncommon historical eponym whose usage varies; the original clinical definition should be verified from the source.

Bolt Device

Bolt device is a procedure, device, treatment, or care intervention; indications, benefits, risks, and follow-up depend on the patient and clinical goal.

Bolus

A discrete amount of medication or fluid given over a short period, usually by injection or infusion. In digestion, a bolus is chewed food ready to be swallowed.

Bolus Infusion

A medical procedure, treatment, device, or care topic related to bolus infusion; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Bombay Blood Group

The Bombay blood group is a rare phenotype lacking the H antigen, causing apparent type O blood that can receive red cells only from compatible Bombay-type donors.

Bombe

Bombe is a historical term used in medical and biological naming; its precise meaning depends on the organism, apparatus, or source in which it appears.

Bombesin

Bombesin is a peptide signaling molecule related to gastrointestinal and neurologic hormones and used in research on digestion, appetite, and tumors.

Bombesin Receptor

Bombesin receptor is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Bonding With Your Newborn

Bonding with a newborn is the development of an emotional relationship through responsive caregiving, touch, feeding, and interaction.

Bone

A rigid, mineralised connective tissue that forms the skeleton, providing structural support, protection of vital organs, hematopoiesis (bone marrow), and mineral storage (calcium, phosphate). Bone composition: organic matrix (90% type I collagen) and inorganic mineral (hydroxyapatite, calcium phosphate).

Bone And Mineral Disorders

Conditions affecting bone strength, mineralization, calcium-phosphate balance, or skeletal remodeling, including osteoporosis, osteomalacia, hyperparathyroidism, and inherited metabolic bone disease.

Bone Callus

New tissue that forms around and between the ends of a broken bone during healing. It begins as soft tissue and cartilage, becomes hard immature bone, and is gradually reshaped during remodeling.

Bone Cancer

Cancer that begins in bone, such as osteosarcoma

or chondrosarcoma, or cancer that has spread to bone from another organ. Possible features include persistent localized bone pain, swelling, or a fracture after minor trauma. Diagnosis requires imaging and tissue evaluation; treatment depends on the type and extent of disease.

Alternate Names:

Sarcoma, Bone Cancer

Bone Cancer Overview

Primary bone cancer is a malignant tumor arising in bone, while cancer more commonly spreads to bone from another organ. Persistent focal bone pain, swelling, or an unexplained fracture may prompt imaging and biopsy; treatment depends on tumor type and stage.

Alternate Names:

Bone Tumor (Bone Cancer Overview)

Bone Cement

A material, usually polymethylmethacrylate, used to secure artificial joints or fill spaces in bone. It hardens chemically and may be used in joint replacement, vertebroplasty, kyphoplasty, or bone reconstruction. Possible complications include cement leakage, infection, loosening, and bone cement implantation syndrome.

**Bone Cement
(Polymethylmethacrylate—PMMA)**

Acrylic polymer used to fix prosthetic joints to bone. Mixes as dough, cures exothermically. Used in hip/knee arthroplasty, vertebroplasty, cranial reconstruction. Complications: cement implantation syndrome (hypotension, hypoxia), infection, loosening.

Alternate Names:

Polymethylmethacrylate—PMMA

Bone Conduction

Bone conduction transmits sound through skull vibration to the inner ear, bypassing the outer and middle ear; testing helps distinguish conductive from sensorineural hearing loss.

Bone Cyst

A fluid-filled or blood-filled space within bone. Many bone cysts are benign, but they can weaken the bone and cause pain, swelling, or fracture. Common types include simple bone cysts and aneurysmal bone cysts.

Bone Densitometry

See *Bone Mineral Density Test*.

Bone Density

The amount of mineral in bone, commonly estimated by dual-energy X-ray absorptiometry. Lower density is associated with increased fracture risk, and interpretation depends on the person's age, sex, and clinical context.

Bone Density Screening

See *Bone Mineral Density Test*.

Bone Development

The formation and growth of bone through intramembranous or endochondral ossification, followed by continued modeling and remodeling throughout life.

Bone Disease

A clinical disorder or finding related to bone disease; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Bone Fracture

A partial or complete break in a bone caused by injury, repeated stress, or weakened bone. Pain, swelling, bruising, deformity, and inability to use the limb may occur. Open fractures, loss of circulation or sensation, or major deformity require emergency care.

Bone Fractures (Broken Bone (Types Of Bone Fractures))

Alternate index label for Broken Bone (Types of Bone Fractures).

Bone Graft

Bone tissue or a bone-substitute material used to fill a defect, promote fusion, support reconstruction, or enhance fracture healing. Autograft provides osteogenic cells and biologic signals; allograft and synthetic substitutes provide variable osteoconductive and osteoinductive properties.

Bone Graft (Dental)

Material placed to augment alveolar bone. Types: autograft, allograft, xenograft, alloplast. Used for implants, ridge preservation.

Alternate Names:

Dental

Bone Health

The strength and condition of the skeleton, influenced by bone density, structure, nutrition, hormones, activity, medicines, and disease.

Bone Infection

Infection of bone, usually caused by bacteria and called osteomyelitis. It may arise from bloodstream spread, nearby tissue, surgery, or an open injury.

Bone Lesion Biopsy

Image-guided needle or open sampling of a bone lesion for histopathology and, when indicated, culture or molecular testing. Biopsy planning should account for the suspected tumor and any later surgical approach.

Bone Marrow

Vascular tissue within the medullary cavities and cancellous bone. Red marrow produces blood cells, whereas yellow marrow primarily stores fat and can revert to red marrow when demand increases.

Bone Marrow (Stem Cell) Donation

Bone marrow or stem-cell donation is collection of blood-forming stem cells from marrow or circulating blood for transplantation into another person.

Bone Marrow Aspiration

A procedure that withdraws liquid marrow, usually

from the posterior iliac crest, for cytologic, flow-cytometric, cytogenetic, molecular, and microbiologic evaluation. It complements the core biopsy, which assesses marrow architecture.

Bone Marrow Aspiration And Biopsy

Sampling of bone marrow, typically from the posterior iliac crest. Aspiration: liquid marrow for cytology (differential, morphology), flow cytometry, cytogenetics, and MRD. Biopsy: core of bone for cellularity, architecture, fibrosis, and infiltrative disease (lymphoma, metastatic cancer, granulomas).

Bone Marrow Biopsy

A procedure sampling bone marrow (typically posterior iliac crest) via aspiration (cytology, flow cytometry, cultures) and trephine core biopsy (histology, architecture, fibrosis, cellularity).

Bone Marrow Culture

A laboratory culture of bone-marrow material used to identify bacteria, fungi, or other organisms in suspected infection.

Bone Marrow Depression

Reduced production of blood cells by the bone marrow, causing anemia, low white-cell counts, low platelet counts, or combinations of these findings.

Bone Marrow Failure

A syndrome in which the bone marrow cannot produce enough blood cells, causing one or more cytopenias. Causes include aplastic anemia, inherited marrow-failure disorders, myelodysplasia, toxins, medicines, infection, and marrow infiltration.

Alternate Names:

Marrow Failure Bone Marrow Failure Syndrome

Bone Marrow Disorder

A clinical disorder or finding related to bone marrow disorder; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Bone Marrow Hyperplasia

Increased cellularity of the bone marrow resulting from accelerated hematopoiesis, typically compensating for chronic hemolytic anemia, hemorrhage, or systemic hypoxia.

Bone Marrow Necrosis

Death of hematopoietic and stromal cells within the bone marrow, often associated with sickle cell crisis, malignancy, or infections, presenting with severe bone pain and cytopenias.

Bone Marrow Transplantation

A treatment in which healthy blood-forming stem cells are infused to replace or restore bone-marrow cells damaged by disease or treatment. The cells may come from the patient or a donor. It is used for selected blood cancers, marrow failure, and some inherited disorders; risks include infection, graft failure, organ toxicity, and graft-versus-host disease after a donor transplant.

Alternate Names:

BMT; Bone Marrow Transplant

Bone Mass

The amount of mineralized bone tissue in the skeleton or in a specified region.

Alternate Names:

Bone mineral content; skeletal bone mass.

Bone Matrix

The material surrounding bone cells that gives bone its structure and strength. It contains a flexible protein framework, mainly type I collagen, reinforced with mineral crystals, mainly hydroxyapatite.

Bone Metastases

Cancer deposits that have spread to bone from another primary site. They may cause pain, fracture, high blood calcium, or spinal-cord compression.

Bone Metastasis

A deposit of cancer that has spread to bone from another primary site. It may cause pain, fracture, high blood calcium, or spinal-cord compression, and

treatment depends on the cancer and clinical context.

Bone Mineral Density

The concentration of mineral in bone, usually measured by dual-energy X-ray absorptiometry to assess fracture risk and osteoporosis.

Alternate Names:

BMD; bone density.

Bone Mineral Density Test

A low-dose dual-energy X-ray absorptiometry (DXA or DEXA) scan that measures calcium and other minerals in bone, usually at the hip and lumbar spine. It helps identify low bone density, diagnose osteoporosis, estimate fracture risk, and monitor treatment. T-scores are generally used for postmenopausal women and men aged 50 or older; Z-scores are used in younger adults and children, with interpretation based on clinical context.

Bone Necrosis

The death of bone tissue, usually caused by loss of blood supply, severe injury, infection, radiation, or long-term corticosteroid use. It may cause pain, bone collapse, joint damage, or fracture and is also called osteonecrosis or avascular necrosis.

Bone Neoplasm

A neoplastic process affecting bone neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Bone Pain

Aching or other discomfort arising from one or more bones. Causes include fractures, injury, infection, reduced blood supply, metabolic bone disease, overuse, and cancer involving bone. Persistent or unexplained bone pain requires medical evaluation.

Bone Pain Or Tenderness

Bone pain or tenderness may result from injury, infection, metabolic disease, inflammation, or cancer. Persistent or unexplained pain requires assessment.

Bone Plate

A metal or other biocompatible plate fixed to a bone with screws to stabilize a fracture, correct a deformity, or support bone healing.

Bone Regeneration

The formation of new bone to repair or replace damaged, missing, or diseased bone. It occurs naturally during healing and may be supported by bone grafts or other treatments.

Bone Remodeling

The continuous process in which osteoclasts remove old bone and osteoblasts form new bone, helping maintain bone strength, shape, and mineral balance.

Bone Resorption

The breakdown of bone tissue by osteoclasts, releasing minerals into the bloodstream. Excessive resorption can contribute to bone loss and osteoporosis.

Bone Saw

A surgical saw used to cut bone during procedures such as amputation or orthopedic reconstruction.

Bone Scan

Skeletal imaging using Tc-99m MDP. Detects osteoblastic activity. Sensitivity: high; specificity: low. Used for metastasis detection, fracture, infection, metabolic bone disease. "Hot spots" indicate increased uptake; "cold spots" indicate decreased uptake.

Bone Scan (Nuclear Scintigraphy)

Nuclear medicine imaging using Tc-99m MDP (methylene diphosphonate) that accumulates in areas of increased bone turnover. Three phases: perfusion (immediate), blood pool (5 min), and delayed (2-3 hours).

Alternate Names:

Nuclear Scintigraphy

Bone Screws

Surgical screws used to hold bone fragments to-

gether or attach plates, joint components, or other orthopedic implants to bone.

Bone Spurs

Bony projections that form along the edges of bones, usually near joints, often because of long-term wear or arthritis.

Alternate Names:

Osteophytes

Bone Transplantation

The transfer of bone tissue from the same person, a donor, or a processed graft to repair a bone defect, support fracture healing, or assist spinal or joint reconstruction.

Bone Tumor

A mass arising in bone that may be benign or malignant. Evaluation uses imaging and biopsy when indicated.

Bone Tumor (Bone Cancer Overview)

Alternate index label for Bone Cancer Overview.

Bone Turnover Markers

Biochemical markers reflecting the rate of bone remodeling. Formation markers include bone-specific alkaline phosphatase, osteocalcin, and N-terminal and C-terminal propeptides of type I procollagen. Resorption markers include C-terminal and N-terminal telopeptides of type I collagen and deoxypyridinoline.

Bone Type

A classification of bones by shape or structure, including long, short, flat, irregular, and sesamoid bones.

Bone X-Ray

An X-ray examination used to assess the specified body region for fracture, abnormal structure, or disease.

Bone-Marrow Transplantation

Bone-marrow transplantation replaces diseased or

damaged marrow with hematopoietic stem cells, either from the patient or a donor.

Bones And Joints

Bones and joints form the skeletal system, providing structural support, protection of organs, and enabling movement through articulations between bones. Joints are classified as fibrous, cartilaginous, or synovial, with synovial joints offering the greatest range of motion.

Bones Of The Arm, Wrist And Hand

The upper-limb bones: humerus; radius and ulna; eight carpal bones; five metacarpals; and the phalanges of the fingers and thumb.

Bones Of The Head

The skull bones, including the cranial bones that enclose the brain and the facial bones that form the face, nasal cavity, orbit, and jaws.

Bones Of The Leg, Ankle And Foot

The lower-limb bones from the knee downward: tibia and fibula; the ankle's talus and other tarsals; five metatarsals; and the toe phalanges.

Bones Of The Skeleton

The adult human skeleton normally contains 206 named bones, forming the axial skeleton and appendicular skeleton and providing support, protection, movement, mineral storage, and marrow for blood formation.

Bones Of The Trunk

The bones forming the central body framework, chiefly the vertebral column, ribs, and sternum, which support the trunk and protect the spinal cord and thoracic organs.

Bongkrek Poisoning

Bongkrek poisoning is severe food poisoning from bongkrelic acid produced by contaminated fermented foods, causing mitochondrial energy failure and potentially fatal liver or neurologic injury.

Bonnevie-Ullrich Syndrome

Bonnevie-Ullrich syndrome is a historical name for features associated with Turner syndrome, including short stature, webbed neck, gonadal dysfunction, and characteristic physical findings.

Bony Exostosis

A benign localized bony protuberance, including torus palatinus of the palate and torus mandibularis of the mandible. Treatment is usually unnecessary unless the lesion causes trauma, interferes with speech or prosthesis, or requires diagnostic clarification.

Bony Labyrinth

The system of fluid-filled spaces within the petrous temporal bone that encloses the membranous labyrinth of the inner ear and contains the cochlea, vestibule, and semicircular canals.

Boranes

Boranes are compounds of boron and hydrogen used in chemical synthesis and research; some are flammable or toxic.

Borborygmi

Rumbling or gurgling sounds produced by the movement of gas and fluid through the intestines. They may be normal or altered in gastrointestinal obstruction and other disorders.

Borborygmus

A rumbling or gurgling sound produced by movement of gas and fluid through the intestines.

Border Definition

In dermatology and pathology, the clarity or sharpness of a lesion's margin, which helps distinguish benign from malignant growths. Well-defined borders suggest benign lesions, while irregular or ill-defined borders raise concern for malignancy.

Borderline

A descriptor indicating a result or condition that falls at the boundary between normal and abnor-

mal, or between diagnostic categories. In laboratory medicine, borderline results require repeat testing or clinical correlation; in psychiatry, borderline describes a pattern of instability.

Borderline Personality Disorder

A pattern of instability in interpersonal relationships, self-image, and affects, with marked impulsivity.

Alternate Names:

BPD (Borderline Personality Disorder) Emotional Dysregulation Disorder (Borderline Personality Disorder) Personality Disorder, Borderline

Borderline Personality Disorder

Alternate index label for Borderline Personality Disorder.

Bordetella

A genus of small gram-negative bacteria that includes *B. pertussis*, the cause of whooping cough, and other respiratory or animal-associated species.

Bordetella Avium

A *Bordetella* species that mainly causes respiratory disease in turkeys and other birds; human infection is rare.

Bordetella Bronchiseptica

A respiratory bacterium of dogs and other animals that can rarely cause pneumonia or other opportunistic infection in humans, especially those with impaired immunity.

Bordetella Hinzii

A *Bordetella* species associated mainly with poultry that rarely causes opportunistic respiratory or bloodstream infection in humans.

Bordetella Parapertussis

A *Bordetella* species that causes a pertussis-like respiratory illness, usually milder than classic whooping cough caused by *B. pertussis*.

Bordetella Pertussis

A Gram-negative coccobacillus and the causative agent of whooping cough, a highly contagious respiratory infection. It produces pertussis toxin, which inhibits G-protein signaling in respiratory epithelial cells, and tracheal cytotoxin, which damages ciliated epithelium.

Bordetella Petrii

An environmental *Bordetella* species rarely associated with human infection; significance depends on recovery from a compatible clinical site.

Boric Acid

A weak boron-containing compound used in some antiseptic, insecticidal, and industrial products; ingestion can be toxic.

Boric Acid Poisoning

Toxic effects from ingesting or absorbing excessive boric acid. Severe poisoning may cause vomiting, diarrhea, skin changes, kidney injury, seizures, shock, or death.

Borna Disease

Borna disease is an uncommon neurologic infection caused by Borna disease virus, primarily recognized in animals and rarely considered in humans.

Bornholm Disease

An acute epidemic pleurodynia caused most often by coxsackieviruses. It produces sudden attacks of severe chest or upper-abdominal muscle pain, fever, and sometimes headache or vomiting.

Boron

A chemical element present in food, water, and industrial materials; it has no established essential human biological role, and excessive exposure can cause gastrointestinal, skin, reproductive, or developmental toxicity.

Borrelia

A genus of spiral-shaped bacteria (spirochetes) transmitted by arthropod vectors, most notably ticks

and lice. The major human pathogen is *Borrelia burgdorferi* sensu lato, the causative agent of Lyme disease, transmitted by Ixodes ticks.

Borrelia Burgdorferi

A spirochete bacterium transmitted by Ixodes ticks and the principal cause of Lyme disease in North America and Europe.

Borrelia Infection

Infection with a *Borrelia* spirochete, including Lyme disease, relapsing fever, or hard-tick relapsing fever; symptoms and treatment depend on the species and exposure.

Borrelia Miyamotoi

A tick-borne spirochete that causes hard-tick relapsing fever, usually with recurrent fever, headache, fatigue, and muscle aches.

Borreliosis

Infection caused by bacteria of the genus *Borrelia*. Human disease includes Lyme borreliosis and relapsing fever, with manifestations varying according to species, stage, and organ involvement.

Bortezomib

A proteasome inhibitor used mainly to treat multiple myeloma and some lymphomas; important adverse effects include peripheral neuropathy, cytopenias, gastrointestinal symptoms, and herpes-zoster reactivation.

Bosentan

Bosentan is an endothelin-receptor antagonist used for pulmonary arterial hypertension and requiring liver-function and pregnancy precautions.

Bosniak Classification

System classifying renal cysts by CT features. Categories I-II benign, IIF follow-up, III-IV likely malignant.

Bot Fly

A parasitic fly of the family Oestridae whose larvae

cause myiasis in humans and animals. *Dermatobia hominis*, the human bot fly, deposits eggs on blood-sucking insects; larvae penetrate the skin and develop subcutaneously, causing a painful boil-like lesion with a central breathing pore. Treatment is manual extraction of the larva.

Botany

Botany is the scientific study of plants, including their structure, growth, physiology, classification, and uses.

Botfly

A botfly is a fly whose larvae can infest animal or human tissue, causing furuncular or wound myiasis.

Bothriocephalus

Bothriocephalus is a historical or taxonomic tapeworm genus; related fish tapeworm infections may cause abdominal symptoms or vitamin-B12 deficiency.

Botryomycosis

A chronic bacterial infection characterized by granule-forming lesions that can resemble a fungal infection. It most often affects skin and subcutaneous tissue but may involve viscera in susceptible patients.

Bottle Feeding

Feeding an infant with expressed breast milk or infant formula using a bottle and teat, either as exclusive feeding or combined with breastfeeding. Proper preparation, sterilization, and feeding technique are important to prevent infection and ensure adequate nutrition.

Bottom Number Of Your Blood Pressure Is Over 100

A diastolic blood-pressure reading over 100 mm Hg is markedly elevated when confirmed with correct repeated measurements. Persistent elevation increases cardiovascular risk, while a very high reading with chest pain, breathlessness, neurologic symptoms, or confusion needs urgent care.

Botulinum Toxin

A neurotoxin produced by *Clostridium botulinum* that blocks acetylcholine release at neuromuscular junctions; purified preparations are used for selected muscle spasticity, dystonias, migraine, sweating, and cosmetic indications, but excess exposure can cause paralysis and respiratory failure.

Botulinum Toxin Injection - Larynx

A medical procedure involving botulinum toxin injection - larynx. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

Botulism

A rare, potentially fatal neuroparalytic disease caused by botulinum toxin, a potent presynaptic neurotoxin produced by *Clostridium botulinum*, an anaerobic, spore-forming, gram-positive bacillus.

Bouchard Nodes

Bony enlargements of the proximal interphalangeal joints, usually associated with osteoarthritis.

Bouchard'S Node

A hard, palpable enlargement of the proximal interphalangeal joint caused by osteoarthritis. It reflects osteophyte formation and may be associated with pain, stiffness, and reduced finger motion.

Bouchard'S Nodes

Firm bony enlargements of the proximal interphalangeal joints, most commonly caused by hand osteoarthritis.

Alternate Names:

Proximal interphalangeal osteophytes; PIP-joint nodes.

Bougie

A slender, flexible instrument used to examine or gradually dilate a narrowed tubular structure, such as the esophagus or urethra.

Bougienage

The use of a bougie to dilate or explore a narrowed

tubular structure, such as the esophagus or urethra. It is a procedure that requires assessment of the cause and risks of the stricture.

Bouin'S Solution

A laboratory fixative containing picric acid, formaldehyde, and acetic acid. It preserves tissue structure for microscopic examination, but its use is limited because the solution is hazardous and can interfere with some molecular tests.

Bourbon Virus

A rare tick-borne viral infection associated with fever, fatigue, anorexia, nausea, and a low white-cell or platelet count. There is no established specific antiviral treatment or vaccine; management is supportive and requires exclusion of other serious tick-borne infections.

Boutonneuse Fever

A tick-borne rickettsial infection, usually caused by *Rickettsia conorii*, characterized by fever, headache, rash, and often a dark inoculation eschar called a tache noire.

Bouveret Syndrome

Rare variant of gallstone ileus where a large gallstone erodes through a cholecystoduodenal fistula and impacts in the duodenum or pylorus causing gastric outlet obstruction. Represents approximately two to three percent of gallstone ileus cases. Presents with nausea, vomiting, epigastric pain, and anorexia.

Bovine

Relating to cattle, including substances, diseases, or biological products derived from cattle.

Bovine Anaplasmosis

Bovine anaplasmosis is a tick- or blood-transmitted infection of cattle caused by *Anaplasma marginale*, producing red-cell destruction and anemia.

Bovine Papillomavirus

Bovine papillomavirus is a virus or viral group classified by its genetic and biologic features. Clinical

importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Bovine Spongiform Encephalopathy

A fatal transmissible prion disease of cattle causing progressive neurologic degeneration. It is related to variant Creutzfeldt–Jakob disease in humans through exposure to contaminated tissue.

Bow Legs (Genu Varum)

Outward curvature of the legs so that the knees remain apart when the ankles are together. It may be a normal developmental stage in young children or result from bone disease.

Alternate Names:

Genu Varum

Bowel

The small and large intestines, which receive digested food, absorb nutrients and water, and form and transport stool.

Alternate Names:

Intestine; intestinal tract.

Bowel Burn

Bowel burn is a procedure, device, treatment, or care intervention; indications, benefits, risks, and follow-up depend on the patient and clinical goal.

Bowel Cancer

Bowel cancer is malignant growth in the colon or rectum, commonly causing altered bowel habit, bleeding, anemia, weight loss, or abdominal symptoms.

Bowel Incontinence

The involuntary loss of solid or liquid stool through the anus, also known as fecal incontinence, affecting approximately 2-15 percent of the general population and increasing in prevalence with age.

Alternate Names:

fecal.

Bowel Infarction

Ischemic necrosis of bowel tissue from occlusive or

non-occlusive mesenteric ischemia, presenting with severe abdominal pain out of proportion to examination, bloody stools, and peritoneal signs. Causes include mesenteric arterial embolism or thrombosis, venous thrombosis, and low-flow states.

Bowel Ischemia

Reduced blood flow to the intestines causing mucosal injury, most commonly from mesenteric atherosclerosis, low-flow states, or mesenteric venous thrombosis. Presents with abdominal pain, bloody stools, and elevated lactate. Severe cases progress to transmural necrosis.

Bowel Obstruction

Blockage of intestinal lumen. X-ray, CT diagnosis. Differentiate small vs. large bowel obstruction. Mechanical vs.

Bowel Program

A planned routine using diet, fluids, medicines, and scheduled toileting to promote regular bowel movements and manage constipation or bowel dysfunction.

Bowel Retraining

Bowel retraining is a structured program using regular timing, adequate fluid and fiber, toileting posture, and other measures to establish predictable bowel movements.

Bowel Sounds

Sounds produced by intestinal contractions and movement of gas and fluid, heard with a stethoscope; their frequency and character may change with gastrointestinal disorders.

Bowel Transit Time

Bowel transit time is the time required for material to pass through the gastrointestinal tract, measured to evaluate selected motility disorders.

Bowel Urgency

A sudden, difficult-to-defer need to defecate, commonly associated with diarrhoea, inflammatory

bowel disease, irritable bowel syndrome, infection, or rectal disorders.

Bowel, Diseases Of

Diseases of the bowel include infection, inflammation, obstruction, malabsorption, functional disorders, bleeding, and tumors affecting the small or large intestine.

Bowen'S Disease

A clinical disorder or finding related to bowen's disease; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Bowenoid Papulosis

A low-grade squamous intraepithelial neoplasia of the anogenital skin caused by human papillomavirus infection, typically types 16 and 18, presenting as multiple pigmented papules on the genital mucosa. Histologically it resembles squamous cell carcinoma in situ but follows a benign clinical course.

Bowlegs

Outward bowing of the legs causing the knees to remain apart when the feet and ankles are together, also called genu varum. It is common in early childhood but requires assessment when severe, asymmetric, painful, or persistent beyond the expected age.

Alternate Names:

genu varum.

Bowman Capsule

Double-walled epithelial cup surrounding the glomerular capillaries forming the beginning of the nephron. The visceral layer is composed of podocytes whose foot processes interdigitate to form filtration slits. The parietal layer is composed of simple squamous epithelium.

Bowman Membrane

A tough, thin layer of connective tissue beneath the corneal epithelium that helps protect and support the cornea. It does not regenerate normally after significant injury.

Bowman'S Capsule

Bowman's capsule is the cup-shaped beginning of a nephron that surrounds the glomerulus and collects the filtrate produced from blood.

Bowman'S Gland

A serous gland in the olfactory mucosa whose secretion helps dissolve odorant molecules and cleanse the olfactory surface. It is located in the lamina propria beneath the olfactory epithelium.

Boxed Warning

The most prominent safety warning required in prescribing information for a medicine when there is a serious or life-threatening risk. It communicates major hazards and does not necessarily mean that the medication is never appropriate.

Boxer'S Ear

Boxer's ear is deformity of the outer ear caused by repeated trauma, usually involving cartilage thickening, scarring, or a cauliflower-ear appearance.

Boxer'S Fracture

A boxer's fracture is a fracture of the neck of the fifth metacarpal, commonly caused by punching, producing hand pain, swelling, and altered knuckle contour.

Braces And Retainers (Dental Braces)

Alternate index label for Dental Braces.

Brachial

Brachial means relating to the upper arm, especially its bones, vessels, or nerves.

Brachial Artery

The continuation of the axillary artery, running from the lower border of teres major to the cubital fossa, where it divides into radial and ulnar arteries. Lies medial to the biceps; palpated for blood pressure and brachial pulse. Branches: profunda brachii (deep brachial), superior/inferior ulnar collaterals.

Brachial Plexopathy

Dysfunction of the brachial plexus causing pain, weakness, sensory loss, or paralysis in the shoulder and upper limb. Causes include trauma, compression, tumors, inflammation, and radiation injury.

Brachial Plexus

Nerve network (C5-T1) formed by roots, trunks, divisions, and cords, giving rise to upper limb nerves. Roots unite into superior/middle/inferior trunks, dividing into anterior/posterior divisions, recombining into lateral/posterior/medial cords. Major branches: musculocutaneous, axillary, radial, median, ulnar.

Brachial Plexus Cords

Formed by divisions recombining behind the pectoralis minor. Lateral cord (anterior divisions of upper/middle trunks), posterior cord (all three posterior divisions), medial cord (anterior division of lower trunk). Named for relationship to the axillary artery. Lateral cord: lateral pectoral nerve, contributes to median nerve.

Brachial Plexus Injuries

Injuries to the network of nerves supplying the shoulder and upper limb, caused by traction, compression, or penetrating trauma. They may produce pain, weakness, sensory loss, or paralysis; the pattern and severity depend on which roots, trunks, or cords are affected.

Brachial Plexus Injury

Damage to the brachial plexus nerves during birth, most commonly from shoulder dystocia or excessive traction. Erb's palsy (C5-C6) presents with waiter's tip position (arm adducted, elbow extended, forearm pronated). Klumpke's palsy (C8-T1) affects the hand and may cause Horner syndrome. Most cases resolve spontaneously.

Brachial Plexus Injury In Newborns

A brachial plexus injury in a newborn affects the network of nerves supplying the shoulder, arm, and hand, usually after difficult delivery. Weakness may improve or require specialist care.

Brachial Plexus Neuropathies

Disorders caused by injury or dysfunction of the network of nerves supplying the shoulder and arm.

Brachial Plexus Roots

Ventral rami of C5-T1 emerging from intervertebral foramina, passing between anterior and middle scalene muscles (interscalene triangle). C5-C6 form the upper trunk, C7 continues as middle trunk, C8-T1 form the lower trunk. Root injuries cause specific dermatome/myotome deficits. C5 avulsion causes loss of deltoid/biceps function.

Brachial Plexus Trunks

Formed in the posterior neck triangle. Upper (C5-C6), middle (C7), and lower (C8-T1) trunks each divide into anterior/posterior divisions behind the clavicle. Upper trunk is most commonly injured in birth injuries (Erb-Duchenne palsy), causing waiter's tip position.

Brachialgia

Brachialgia is pain radiating along the arm, often from cervical nerve-root irritation or brachial plexus disease.

Brachialis Muscle

Flat strong muscle deep to the biceps, from distal anterior humerus to ulnar tuberosity and coronoid process. Innervated by musculocutaneous nerve (C5-C6). Primary elbow flexor regardless of forearm position ("workhorse" of elbow flexion). Less visible than biceps but significantly contributes to arm strength.

Brachiocephalic Trunk

The first and largest branch of the aortic arch. It ascends to the right sternoclavicular joint, where it divides into the right common carotid and right subclavian arteries.

Brachiocephalic Veins

Paired veins formed by the union of the internal jugular and subclavian veins. They join to form the superior vena cava and drain the head, neck, upper limbs, and upper chest.

Brachioplasty

An operation, commonly called an arm lift, that removes or reshapes excess skin and tissue of the upper arm; risks include scarring, sensory change, fluid collection, and wound complications.

Brachium

The brachium is the anatomical upper arm between the shoulder and elbow.

Brachycephalic

Brachycephalic means having a relatively short, broad skull; it may describe normal variation or a craniofacial pattern in a genetic condition.

Brachycephaly

Brachycephaly is a broad, shortened skull shape that may be positional or caused by premature fusion of coronal sutures.

Brachydactyly

Brachydactyly is congenital shortening of fingers or toes caused by abnormal development of the bones or surrounding tissues.

Brachytherapy

A type of internal radiation therapy in which a radioactive source is placed inside or near a tumor to deliver a concentrated dose to a limited area. The source may be temporary or permanent and is delivered through an applicator, catheter, needle, seed, or similar device.

Alternate Names:

Brachy Therapy Internal Radiation Therapy

Brachytherapy Seed

Radioactive source implanted directly into tumor. I-125 or Pd-103 seeds for prostate cancer. Permanent or temporary implantation.

Bradycardia

A heart rate <60 beats per minute. May be physiologic (athletes) or pathologic due to sinus node dysfunction, AV block, or medication effects. Symptomatic bradycardia causes fatigue, dizziness, syn-

cope, or heart failure. Evaluation includes ECG, Holter monitoring, and assessment of reversible causes.

Alternate Names:

Slow Heartbeat

Bradycardia Of Prematurity

Heart rate less than 100 beats per minute in a premature infant, often associated with apnea and oxygen desaturation. May be caused by vagal stimulation, reflux, or immaturity of the cardiac conduction system. Treatment: gentle stimulation, caffeine, and addressing underlying causes.

Bradycardia-Tachycardia Syndrome

Alternate index label; see *Sick sinus syndrome*.

Bradykinesia

Slowness and reduced amplitude of voluntary movement, often accompanied by difficulty initiating or sustaining repetitive actions. It is a cardinal feature of parkinsonism and may be associated with rigidity, resting tremor, postural instability, reduced arm swing, masked facial expression, and a shuffling gait.

Bradykinetic

Characterized by abnormally slow movement, often used for the movement slowness seen in Parkinson disease and related disorders.

Bradykinin

Bradykinin is a peptide mediator that increases blood-vessel permeability, dilates vessels, and contributes to pain and inflammation.

Bradyphrenia

Slowness of thought and mental processing, which may occur with neurologic disease, psychiatric illness, medication effects, or other conditions.

Bradypnea

Abnormally slow respiratory rate (adult <12 breaths/min). Causes: opioid/benzodiazepine/sedative overdose, central

nervous system depression (stroke, trauma, increased ICP), hypothyroidism, hypothermia, and metabolic (e.g., hypokalemia). May lead to hypoventilation, hypercapnia, and respiratory failure.

Bradypnoea

Bradypnoea is abnormally slow breathing, which may result from medicines, neurologic disease, metabolic disturbance, or severe illness.

Braille System

A tactile writing and reading system using patterns of raised dots to represent letters, numbers, punctuation, and symbols for people who are blind or have low vision.

Brain

The central organ of the nervous system, enclosed in the cranial cavity and composed of the cerebrum, cerebellum, and brainstem. The brain receives, processes, and integrates sensory information; initiates and coordinates motor responses; and serves as the seat of cognition, emotion, memory, and consciousness.

Brain Abscess

A focal, purulent infection within the brain parenchyma, most commonly occurring in the frontal or temporal lobes.

Brain Aneurysm

A brain aneurysm is a weakened area of a cerebral artery that can enlarge and rupture. Rupture causes sudden severe headache, vomiting, neck stiffness, loss of consciousness, or neurologic deficits and is a medical emergency.

Brain Aneurysm Repair

A medical procedure involving brain aneurysm repair. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

Brain Arteriovenous Malformation

Alternate index label; see *Brain AVM (arteriovenous malformation)*.

Brain AVM (Arteriovenous Malformation)

An abnormal tangle of brain arteries and veins that can disrupt blood flow and may bleed or cause seizures, headaches, or neurologic deficits.

Alternate Names:

Brain Arteriovenous Malformation

Brain Cancer

Brain cancer consists of malignant tumors arising in or affecting brain tissue and its coverings. Symptoms depend on location and may include seizures, headache, weakness, speech or vision changes, personality change, or raised intracranial pressure; diagnosis uses imaging and tissue characterization.

Alternate Names:

Tumor Brain Cancer (Brain Cancer)

Brain Concussion

A mild traumatic brain injury caused by a blow, jolt, or force that temporarily changes brain function. Symptoms may include headache, dizziness, confusion, memory difficulty, nausea, and sensitivity to light or noise, sometimes without loss of consciousness. Worsening headache, repeated vomiting, seizure, weakness, or increasing drowsiness requires urgent assessment.

Brain Death

The irreversible cessation of all brain and brainstem function, including consciousness and brainstem reflexes, with absent respiratory drive—a legal definition of death.

Brain Disorder

A clinical disorder or finding related to brain disorder; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Brain Edema

Swelling caused by excess fluid in brain tissue, which

can raise pressure inside the skull. Causes include head injury, stroke, infection, tumor, bleeding, and severe metabolic disturbances. Symptoms may include headache, vomiting, confusion, seizures, weakness, or reduced consciousness; severe cases are medical emergencies.

Brain Embolism

Alternate index label; see *Embolic stroke (brain embolism)*.

Brain Fornix

A C-shaped fibre tract of the limbic system connecting the hippocampus with the mammillary bodies and septal region; it contributes to memory circuitry.

Brain Haemorrhage

Brain haemorrhage is bleeding within or around the brain, caused by trauma, hypertension, vascular lesions, clotting problems, or other disease.

Brain Health

Brain health encompasses the ability to perform cognitive functions such as memory, learning, decision-making, and emotional regulation across the lifespan. Key factors include cardiovascular health, nutrition, sleep, social engagement, cognitive stimulation, and management of chronic conditions like hypertension and diabetes.

Brain Hemorrhage

A brain hemorrhage is bleeding within or around the brain, often from hypertension, aneurysm, vascular malformation, trauma, or blood-thinning treatment. Sudden headache, weakness, speech difficulty, vomiting, seizure, or reduced consciousness requires emergency evaluation.

Brain Herniation

Displacement of brain tissue across rigid intracranial compartments or through the foramen magnum due to mass effect or raised ICP. It can compress the brainstem and cranial nerves and is a life-threatening neurosurgical emergency.

Brain Imaging

Medical imaging used to examine brain structure or function, including CT, MRI, vascular imaging, and selected nuclear medicine techniques.

Alternate Names:

Neuroimaging; cerebral imaging.

Brain Injuries

Brain injuries range from mild concussions to severe traumatic brain injury caused by falls, motor vehicle accidents, sports impacts, or penetrating trauma. Symptoms depend on injury location and severity, including headache, confusion, memory loss, seizures, and altered consciousness.

Brain Injury

Damage to the brain caused by trauma, lack of oxygen, stroke, infection, toxins, or other disease. Effects depend on the location and severity of injury.

Brain Injury (Head Injury)

Alternate index label for Head Injury.

Brain Lesions

Areas of abnormal brain tissue caused by tumors, stroke, infection, inflammation, trauma, demyelination, or vascular disease; symptoms depend on the lesion's location and size.

Brain Lesions (Lesions On The Brain)

Alternate index label for Lesions on the Brain.

Brain Malformations

Brain malformations are structural abnormalities of the brain that develop before birth. They may result from genetic factors, disrupted fetal development, infection, or other prenatal influences and can affect neurologic function.

Brain Mapping

Methods used to identify the anatomical or functional organization of the brain, including neuroimaging, electrophysiology, and cortical stimulation during selected neurosurgical procedures.

Brain Metastases

Cancer deposits that have spread to the brain from another primary site. They may cause headache, seizures, or focal neurologic deficits.

Alternate Names:

Secondary Brain Cancer

Brain Metastasis

A deposit of cancer that has spread to the brain from another primary site. It may cause headache, seizures, or focal neurologic deficits; treatment depends on the number, location, and biology of the lesions.

Brain Monitoring

Brain monitoring during anesthesia assesses the depth of hypnosis and neurological function. Bispectral index (BIS) processes the frontal EEG into a number from 0 (isoelectric) to 100 (fully awake), with 40 to 60 recommended for general anesthesia. BIS monitoring reduces awareness risk and may reduce anesthetic requirements.

B-Type Natriuretic Peptide

A hormone made mainly by the heart's ventricles and released when the heart wall is under increased stress. A blood BNP test can help assess suspected heart failure, but results are affected by age, kidney function, body size, heart rhythm, and other illnesses and must be interpreted with other clinical findings. NT-proBNP is a related but separate peptide measured by a different test.

Alternate Names:

BNP; B-Type Natriuretic Peptide; Brain Natriuretic Peptide

Brain Natriuretic Peptide Test

A laboratory test that measures BNP or NT-proBNP, peptides released by ventricular cardiomyocytes in response to wall stress. Elevated levels support the diagnosis of heart failure and help guide treatment; results are interpreted with kidney function, age, and clinical context.

Brain Neoplasm

A neoplastic process affecting brain neoplasm; di-

agnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Brain PET Scan

A positron-emission tomography study that shows metabolic or molecular activity in the brain using a radioactive tracer.

Brain Sand

Brain sand is an older name for corpora arenacea, tiny calcified deposits commonly found in the pineal gland and sometimes other brain regions.

Brain SPECT

Cerebral perfusion imaging using Tc-99m HMPAO or ECD. Used for epilepsy localization, dementia differentiation, cerebrovascular disease.

Brain Stem

The lower part of the brain connecting the cerebrum with the spinal cord and controlling essential functions such as breathing and consciousness.

Brain Stem Glioma

A tumor arising from glial cells in the brainstem.

Brain Surgery

A medical procedure involving brain surgery. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

Brain Tumor

An abnormal growth of cells within the brain or its surrounding structures, classified as primary (originating from brain tissue or its coverings) or secondary/metastatic (spread from a cancer elsewhere in the body, which are more common, accounting for approximately 50 percent of all brain tumors).

Brain Tumor - Children

A primary brain tumor is an abnormal growth arising in brain tissue or nearby structures. It may be benign or malignant and can cause neurologic symptoms through invasion or pressure.

Brain Tumor - Primary - Adults

A primary brain tumor is an abnormal growth arising in brain tissue or nearby structures. It may be benign or malignant and can cause neurologic symptoms through invasion or pressure.

Brain Tumour

A brain tumour is an abnormal growth in or near the brain, which may be benign or malignant and can cause seizures, headache, cognitive change, or focal deficits.

Brain Ventricles

The four interconnected fluid-filled cavities within the brain that produce and contain cerebrospinal fluid (CSF).

Brain Wave

An oscillating pattern of electrical activity generated by populations of neurons and recorded by electroencephalography; frequency and amplitude vary with sleep, alertness, and neurological disease.

Brain Waves

Electrical activity generated by the coordinated firing of neurons and recorded by electroencephalography.

Alternate Names:

Cerebral electrical activity; EEG rhythms.

Brainstem

Connects cerebrum to spinal cord, with midbrain (superior), pons (middle), and medulla oblongata (inferior). Contains cranial nerve nuclei (III-XII), ascending/descending tracts, and vital autonomic centers for cardiac, respiratory, and vasomotor function. Reticular formation regulates consciousness and sleep-wake cycles.

Brainstem Tumor

A tumor arising in the brainstem, the part of the brain that connects the cerebrum with the spinal cord.

Bramwell'S Disease

Bramwell's disease is an older eponym with variable usage, historically associated with cardiac or circulatory disease; the source context is required for precision.

Branchial

Branchial means relating to embryonic gill-arch structures or their derivatives in the head and neck.

Branchial Arch

One of the paired embryonic arches that contribute to development of facial, pharyngeal, laryngeal, muscular, skeletal, vascular, and neural structures of the head and neck.

Branchial Cleft

An embryonic groove between adjacent branchial arches. Persistence of cleft remnants can produce congenital branchial cysts, sinuses, or fistulas, most commonly along the lateral neck.

Branchial Cleft Anomaly

A congenital remnant of the branchial apparatus presenting as a cyst, sinus, or fistula in the head and neck. Recurrent infection or drainage from a persistent opening warrants imaging and specialist management.

Branchial Cleft Cyst

Congenital cystic mass arising from incomplete obliteration of branchial cleft apparatus during embryogenesis.

Branchial Cleft Cyst (Branchial Cyst)

Alternate index label for Branchial Cyst.

Branchial Cyst

A branchial cyst is a congenital, usually benign fluid-filled lesion along an embryonic branchial-cleft remnant in the neck. It may present as a painless mass or become infected; examination and imaging guide management, and new adult neck masses require evaluation.

Alternate Names:

Branchial Cleft Cyst (Branchial Cyst)

Branchio-Oto-Renal Syndrome

A clinical disorder or finding related to branchio-oto-renal syndrome; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Branchioma

A branchioma is a tumor or cyst arising from tissues related to embryonic branchial structures, often presenting in the neck.

Brass-Founder'S Ague

Brass-founder's ague is metal-fume fever, an influenza-like illness after inhalation of fumes from heated metals such as zinc or brass.

Brassicasterol

Brassicasterol is a plant sterol found especially in rapeseed and related oils and used as a marker of plant-oil composition.

Brassidic Acid

Brassidic acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Braxton Hicks Contractions

Irregular, painless uterine contractions occurring throughout pregnancy, becoming more frequent in the third trimester. Usually last 30-60 seconds and are felt as a tightening of the abdomen. Distinguished from true labour contractions by their irregularity, lack of cervical change, and resolution with rest or hydration.

Alternate Names:

Contractions Braxton-Hicks (Braxton Hicks Contractions) Labor False (Braxton Hicks Contractions)

BRCA

BRCA1 and BRCA2 are tumor-suppressor genes involved in repair of DNA double-strand breaks. Pathogenic variants increase susceptibility to breast, ovarian, fallopian-tube, primary peritoneal,

prostate, and pancreatic cancers.

BRCA1 And BRCA2

Tumor-suppressor genes involved in homologous-recombination DNA repair. Germline pathogenic variants increase susceptibility to breast, ovarian, fallopian-tube, primary peritoneal, prostate, and pancreatic cancers and may guide surveillance and treatment.

BRCA1 And BRCA2 Gene Testing

Genetic testing for pathogenic variants in the BRCA1 and BRCA2 tumor-suppressor genes, which increase risk of breast, ovarian, fallopian tube, prostate, and pancreatic cancers. Positive results guide surveillance, risk-reducing surgery, and targeted therapy decisions.

Break The Bonds Of Emotional Eating

Emotional eating is eating in response to stress or other emotions rather than physical hunger. Management may include behavioral strategies and treatment of underlying conditions.

Breakbone Fever

A traditional name for dengue fever, reflecting the severe myalgia and arthralgia that may accompany the acute viral illness.

Breakthrough Infection

An infection that occurs after a person has received a vaccine or other preventive intervention intended to reduce that infection; severity and protection vary by pathogen, product, and host factors.

Breakthrough Pain

A temporary flare of severe pain that occurs despite otherwise controlled persistent pain.

Breast

A paired mammary organ composed of glandular tissue, ducts, fat, connective tissue, and skin; it produces milk after pregnancy and is a site of benign and malignant disease.

Breast Abscess

A localized collection of pus within the breast tissue, most commonly a complication of lactational mastitis. Presents as a fluctuant, painful mass with overlying erythema and systemic symptoms. Diagnosis by ultrasound. Treatment requires incision and drainage plus antibiotics.

Breast Anatomy

The breast contains skin, fat, lobules that produce milk, ducts, connective tissue, blood vessels, nerves, and lymphatic drainage, extending toward the axilla. Normal structure varies with age, hormones, pregnancy, and lactation; a new persistent lump or skin change needs assessment.

Breast Augmentation

Surgery or another procedure intended to increase breast volume or alter breast shape, commonly using an implant or transferred tissue.

Alternate Names:

Breast enlargement; augmentation mammoplasty.

Breast Augmentation Surgery

A medical procedure involving breast augmentation surgery. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

Breast Biopsy - Stereotactic

Image-guided core or vacuum-assisted sampling of a breast abnormality, usually mammographic calcifications or a mass not well seen on ultrasound. X-ray coordinates guide the needle to the target.

Breast Biopsy - Ultrasound

Real-time ultrasound-guided core-needle or vacuum-assisted sampling of a breast lesion visible on ultrasound. It provides tissue for diagnosis while allowing needle placement to be monitored.

Breast Bone

The sternum, a flat bone in the center of the chest that joins the ribs through costal cartilage and helps protect the heart and lungs.

Breast Calcifications

Small calcium deposits in breast tissue seen on mammography; they are often benign, but some patterns require additional imaging or biopsy.

Breast Cancer

A malignant tumor arising in breast tissue. Risk, screening, and treatment depend on age, inherited and acquired biology, stage, and the person's circumstances.

Breast Cancer And Lymphedema

Breast-cancer treatment can impair lymph drainage and cause swelling, heaviness, tightness, or skin changes in the arm, breast, or chest. Early assessment, compression when appropriate, exercise, skin protection, and specialized therapy can limit progression and complications.

Breast Cancer Genetics

The study of inherited variants that increase breast-cancer risk. Important genes and syndromes include BRCA1, BRCA2, PALB2, TP53, PTEN, and CHEK2. Genetic counseling can help determine whether testing is appropriate.

Breast Cancer In Men

Breast cancer in men is a malignant tumor of male breast tissue, usually presenting as a painless lump or nipple change and requiring diagnostic imaging and biopsy.

Breast Cancer Prevention

Breast-cancer risk can be lowered but not eliminated through physical activity, healthy weight, limiting alcohol, avoiding tobacco, appropriate screening, and discussing inherited risk. Preventive medicines or surgery may be considered for people at substantially elevated risk.

Breast Cancer Recurrence

Breast-cancer recurrence is return of cancer after treatment, either near the original site, in regional nodes, or at distant sites. New lumps, bone pain, persistent cough, neurologic symptoms, or other concerning changes should be evaluated, but many

symptoms have noncancer causes.

Breast Cancer Screening

Testing used to detect breast cancer before symptoms develop, usually with mammography and, for selected patients, additional imaging.

Breast Cancer Staging

Breast cancer staging describes the extent of disease using tumor features, lymph-node involvement, and distant spread to guide prognosis and treatment.

Breast Cancer, Inflammatory

Alternate index label; see *Inflammatory breast cancer*.

Breast Cancer, Male

Alternate index label; see *Male breast cancer*.

Breast Carcinoma

A neoplastic process affecting breast carcinoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Breast Cyst

A fluid-filled sac within breast tissue, usually benign and sometimes tender or larger before menstruation. Examination and imaging distinguish a cyst from a solid lesion; persistent, growing, bloody, or newly discovered breast lumps should be assessed by a clinician.

Breast Cysts

Fluid-filled sacs within breast tissue that may be tender or palpable and are usually benign.

Breast Cytology

Cytologic evaluation of breast lesions using fine-needle aspiration, nipple discharge, or other samples. It can help distinguish benign, suspicious, and malignant processes but may require core biopsy for definitive classification.

Breast Density

The relative proportion of fibroglandular tissue com-

pared with fat in a breast on mammography. Higher density can make small cancers harder to see and is associated with an increased risk of breast cancer.

Breast Development

Breast development is growth and maturation of mammary tissue during puberty, pregnancy, lactation, and hormonal life stages. or cancer. Bloody, clear, spontaneous, one-sided, or persistent discharge, especially with a lump or skin change, requires prompt breast evaluation.

Breast Duct

A channel that carries milk from mammary lobules toward the nipple; ductal obstruction, inflammation, atypia, or carcinoma can produce a breast lump or nipple discharge.

Breast Engorgement

Overfilling of the breasts with milk, causing bilateral pain, firmness, warmth, and nipple flattening. Occurs 3-5 days postpartum. Pathophysiology: vascular congestion and edema before milk secretion is established.

Breast Enlargement In Males

Enlargement of male breast tissue, called gynecomastia, caused by glandular proliferation. Causes include hormonal changes, medicines, obesity, and systemic disease.

Breast Examination

Systematic inspection and palpation of the breasts and regional lymph nodes to assess masses, skin or nipple changes, pain, or other abnormalities.

Breast Feed

To feed an infant with human milk directly from the breast; breastfeeding provides nutrition and immune factors, and may be affected by maternal or infant medical conditions and medicines.

Breast Finding

Any abnormal or notable breast observation, such as a lump, pain, skin change, nipple inversion, or

discharge; assessment may require examination and imaging or biopsy.

Breast Health

Breast health involves routine self-awareness, clinical examinations, and mammographic screening to detect abnormalities such as lumps, pain, or skin changes that may indicate benign conditions or breast cancer. Risk factors include genetics, age, hormone exposure, and lifestyle factors.

Breast Infection

Infection and inflammation of breast tissue, most commonly mastitis during breastfeeding. It causes localized pain, warmth, redness, swelling, and sometimes fever; an untreated infection may progress to a breast abscess.

Breast Lift

A breast lift, or mastopexy, surgically reshapes and raises sagging breast tissue by removing excess skin and repositioning the nipple when necessary.

Breast Lobe

A major subdivision of the mammary gland containing groups of lobules and ducts that converge toward the nipple.

Breast Lobule

A functional unit of the mammary gland composed of milk-producing acini and their small ducts; lobules enlarge and differentiate during pregnancy and lactation.

Breast Lump

A localized thickening, mass, or swelling in breast tissue caused by a cyst, fibroadenoma, infection, trauma, or malignancy. New, persistent, hard, fixed, or changing lumps require clinical and often imaging assessment.

Breast Lump Removal

A medical procedure involving breast lump removal. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the

specific procedure.

Breast Lumps In Women

A breast lump may be a cyst, fibroadenoma, infection, hormonal change, trauma-related finding, or cancer. Clinical examination and age-appropriate imaging, with biopsy when indicated, determine the cause; a new hard, fixed, enlarging, or skin-associated lump needs prompt review.

Alternate Names:

Breast Lumps

Breast Milk

Milk produced by the mammary glands after childbirth, providing nutrients, immune factors, and other substances important for infant growth and development.

Breast Milk - Pumping And Storing

Guidance on expressing, storing, labeling, and handling breast milk to preserve safety and nutritional quality.

Breast Milk Jaundice

A benign, prolonged unconjugated hyperbilirubinaemia occurring in thriving, breastfed term infants, typically developing after the first week of life (peaking around 2 weeks and lasting up to 3–12 weeks). Believed to be caused by substances in human breast milk (including beta-glucuronidase, epidermal growth factor, and non-esterified fatty acids) that inhibit hepatic glucuronyl transferase and increase enterohepatic bilirubin circulation. Distinguished from breastfeeding jaundice (lactation failure jaundice) by adequate weight gain, normal hydration, and vigorous feeding.

Alternate Names:

Human Milk Jaundice; Late-Onset Neonatal Jaundice

Breast MRI

Magnetic resonance imaging used to evaluate breast tissue. Contrast may be administered when clinically indicated.

Breast MRI Scan

A magnetic resonance imaging study that produces detailed images of the specified body region using magnetic fields and radiofrequency energy.

Breast Neoplasm

A neoplastic process affecting breast neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Breast Pain

Pain or tenderness in one or both breasts, caused by hormonal changes, cysts, infection, trauma, medications, or musculoskeletal disease. Persistent focal pain or an associated lump requires assessment.

Alternate Names:

Pain, Breast

Breast Rash

A rash affecting breast skin; causes include dermatitis, infection, irritation, or, less commonly, inflammatory breast cancer. Persistent one-sided changes require evaluation.

Breast Reconstruction

Surgical restoration of breast shape after mastectomy or trauma, using an implant, the patient's own tissue, or a combination of techniques.

Breast Reconstruction - Implants

A medical procedure involving breast reconstruction - implants. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

Breast Reconstruction - Natural Tissue

A medical procedure involving breast reconstruction - natural tissue. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

Breast Reduction

Breast reduction, or reduction mammoplasty, removes breast tissue, fat, and skin to reduce breast size and related symptoms.

Breast Screening

Examination of people without breast symptoms to detect breast cancer at an earlier stage, most commonly using mammography according to age and risk-based programs.

Breast Self-Examination

Inspection and palpation of one's own breasts to notice new lumps or changes; it may improve awareness but is not a substitute for recommended population screening or clinical assessment.

Breast Skin And Nipple Changes

Changes in breast skin or the nipple may result from benign conditions, infection, hormonal change, or cancer. New, persistent, or one-sided changes require assessment.

Breast Surgeon

A surgeon who evaluates and treats breast conditions, including benign disease, breast cancer, and reconstructive or risk-reducing surgical needs.

Breast Surgery

Breast cancer surgery: breast-conserving therapy (BCT: lumpectomy + radiation) equivalent survival to mastectomy for early stage. Margins: "no ink on tumor" for invasive cancer; 2mm for DCIS.

Breast And Thoracic Cancer Surgery

Surgical treatment of cancers of the breast and chest, including breast tumors and selected cancers of the lungs, pleura, esophagus, mediastinum, or chest wall. Procedures may remove the primary tumor and involved lymph nodes, with reconstruction or additional treatment planned according to the cancer type and stage.

Alternate Names:

Breast And Thoracic Oncologic Surgery

Breast Ultrasound

Ultrasound imaging of the breast. Indications: evaluating palpable masses (distinguishing solid vs. cystic), characterizing mammographic abnormalities, guiding biopsy (core needle, fine needle, or vacuum-

assisted), evaluating implant integrity, and imaging young/dense breast tissue.

Breastfeeding

The feeding of an infant with breast milk, recommended exclusively for the first 6 months and continued with complementary foods to 2 years and beyond. Benefits: infant (nutrition, immune protection—IgA, reduced infection/allergy/obesity, bonding) and maternal (uterine involution, contraception, reduced breast/ovarian cancer).

Breastfeeding - Skin And Nipple Changes

Breastfeeding-related skin or nipple changes may result from friction, dermatitis, infection, or other causes and require assessment when persistent or painful.

Breastfeeding With Rheumatoid Arthritis

People with rheumatoid arthritis may be able to breastfeed, but disease activity, fatigue, hand function, and medicine safety must be considered. Some medicines are compatible and others require avoidance or timing changes; treatment should be planned with rheumatology and obstetric or pediatric clinicians.

Breath

Breath is air moved into and out of the lungs; its odor, volume, pattern, and gas composition can provide clinical information.

Breath Alcohol Test

A measurement of ethanol concentration in exhaled breath, used to estimate blood alcohol content for clinical assessment of intoxication or in medicolegal contexts. Results correlate with blood alcohol levels but may be affected by temperature, lung disease, and device calibration.

Breath Bad (Bad Breath)

Alternate index label for Bad Breath.

Breath Focus

A mindfulness or relaxation practice that uses attention to breathing to stabilize awareness and reduce physiological or emotional arousal.

Alternate Names:

Breath-focused meditation; breathing-focused mindfulness.

Breath Odor

Unpleasant breath odor, or halitosis, commonly results from oral disease, dry mouth, tobacco, diet, or infection.

Breath Sounds

The sounds produced by airflow through the respiratory tract during breathing, assessed by auscultation with a stethoscope over the chest wall.

Breath Stacking

A technique using a manual resuscitation bag or glosopharyngeal breathing to deliver successive breaths without exhaling, stacking tidal volumes to achieve higher lung volumes. It improves cough effectiveness and secretion clearance in patients with weak respiratory muscles.

Breath Test

Analysis of exhaled air to detect or measure a substance produced by the body or by intestinal microorganisms; examples include the urea breath test for *Helicobacter pylori* and hydrogen or methane testing for carbohydrate malabsorption and intestinal overgrowth.

Breath-Holding Spell

A brief involuntary episode in a young child, usually after crying or upset, involving apnea, color change, and rapid recovery.

Breath-Holding Spells

A benign paroxysmal phenomenon in young children (6 months to 6 years), provoked by frustration, pain, or fear. Cyanotic type (more common): child cries, forcefully exhales, becomes cyanotic, and may lose consciousness briefly.

Breathalyzer

A breathalyzer estimates blood alcohol concentration by measuring alcohol in exhaled air; results can be affected by device, timing, and sampling conditions.

Breathing

Movement of air into and out of the lungs, enabling oxygen uptake and carbon-dioxide removal through ventilation.

Breathing - Slowed Or Stopped

Slowed or absent breathing, called respiratory depression or apnea, can result from airway obstruction, medicines, neurologic disease, or severe illness and requires immediate assessment.

Breathing Difficulties - First Aid

Breathing difficulty, or dyspnea, is a subjective sensation of difficult or uncomfortable breathing that may result from lung, heart, blood, metabolic, or other disorders.

Breathing Difficulty

Breathing difficulty, or dyspnea, is a subjective sensation of difficult or uncomfortable breathing that may result from lung, heart, blood, metabolic, or other disorders.

Breathing Difficulty - Lying Down

Breathing difficulty, or dyspnea, is a subjective sensation of difficult or uncomfortable breathing that may result from lung, heart, blood, metabolic, or other disorders.

Breathing Exercises

Breathing exercises deliberately change respiratory pattern to improve ventilation, relaxation, airway clearance, breath control, or rehabilitation.

Breathlessness

Breathlessness is the subjective sensation of difficult or uncomfortable breathing, caused by pulmonary, cardiac, metabolic, neuromuscular, or psychological conditions.

Breathlessness (Dyspnoea)

The uncomfortable awareness of difficult, labored, or insufficient breathing. Causes include respiratory, cardiac, metabolic, and psychological disorders.

Alternate Names:

Dyspnoea

Breech Birth

A breech birth occurs when the fetus presents buttocks or feet first rather than the head. Delivery planning depends on fetal position, gestational age, and maternal and fetal factors.

Breech Presentation

A fetal presentation where the buttocks or feet are positioned to deliver first. Types include frank breech (hips flexed, knees extended, most common), complete breech (hips and knees flexed), and footling breech (one or both feet presenting). Associated with increased risk of cord prolapse, head entrapment, and birth trauma.

Brefeldin A

Brefeldin A is a fungal compound used experimentally to disrupt Golgi trafficking and intracellular protein transport.

Bregma

Bregma is the skull landmark where the coronal and sagittal sutures meet; in infants it corresponds to the anterior fontanelle.

Bremsstrahlung

Braking radiation produced when beta particles decelerate in matter. Continuous spectrum. Detected in I-131 imaging (poor quality). Used for Y-90 bremsstrahlung SPECT.

Brenner Tumor

Rare ovarian epithelial neoplasm (1-2% of ovarian tumors) composed of nests of transitional (urothelial-like) epithelial cells embedded in a dense fibromatous stroma. Most are unilateral, small (< 2 cm), benign (90%) and incidental; borderline (proliferative) and malignant variants are uncommon.

Brenner Tumour

A Brenner tumour is usually a benign ovarian epithelial tumor with transitional-cell-like nests; rare borderline and malignant forms occur.

Breslau Bacillus

Breslau bacillus is an older name for *Salmonella enterica* serovar Typhimurium, a bacterium associated with gastroenteritis and foodborne disease.

Breslow Thickness

Microstaging measurement of melanoma invasion depth from the top of the granular layer of the epidermis to the deepest point of tumor invasion, in millimeters. Most important prognostic factor in primary cutaneous melanoma, used in the AJCC TNM staging system (T category).

Bretylum Tosylate

Bretylum tosylate is an older antiarrhythmic drug that suppresses ventricular fibrillation and is now rarely used because of alternatives and adverse effects.

Brevibacillus

A genus of Gram-positive, spore-forming rod-shaped bacteria previously classified within *Bacillus*. Some species are found in soil and food; opportunistic infections in humans are rare but have been reported.

Brevibacterium

A genus of Gram-positive, rod-shaped bacteria found on skin, in soil, and in some food products. Most species are harmless, but rare opportunistic infections can occur.

Brevibacterium Casei

A Gram-positive bacterial species found in environmental and human-associated settings that rarely causes opportunistic bloodstream or device-related infection.

Brevundimonas

A biomedical term referring to *brevundimonas*; its classification, distinguishing features, and medical

significance depend on the clinical or biologic context.

Brevundimonas Diminuta

A biomedical term referring to *brevundimonas diminuta*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Brevundimonas Vesicularis

A biomedical term referring to *brevundimonas vesicularis*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Bricklayer'S Disease

Bricklayer's disease is an occupational lung condition historically associated with inhalation of silica-containing dust, potentially causing silicosis.

Bridge (Dental)

Fixed prosthetic replacing missing teeth. Retained by adjacent teeth (abutments). Requires preparation of abutments.

Alternate Names:

Dental

Bridge To Transplant

Temporary mechanical circulatory support used to maintain a patient with advanced heart failure until heart transplantation can be performed. The device and duration depend on ventricular function, organ status, complications, and transplant eligibility.

Bridge Work

Bridge work is a fixed dental prosthesis that replaces one or more missing teeth by attaching artificial teeth to adjacent teeth or implants.

Brief Psychotic Disorder

A disturbance characterized by the sudden onset of at least one psychotic symptom: delusions, hallucinations, disorganized speech, or grossly disorganized or catatonic behavior. The disturbance lasts at least one day but less than one month, after which the

individual fully returns to premorbid functioning.

Alternate Names:

Psychotic Disorder Brief (Brief Psychotic Disorder)

Brief Resolved Unexplained Event

A sudden, brief, and now-resolved episode in an infant involving abnormal breathing, skin color, muscle tone, or responsiveness, with no explanation after the initial evaluation. Risk assessment is based on age, history, examination findings, and recurrence; higher-risk events require targeted investigation.

Brief Resolved Unexplained Event - BRUE

A brief resolved unexplained event is a sudden, brief, and resolved episode in an infant involving altered breathing, color, muscle tone, or responsiveness without an identifiable cause after evaluation.

Bright'S Disease

A historical term encompassing several forms of kidney disease, particularly glomerular disorders associated with proteinuria, edema, and altered urinary findings. Modern diagnosis specifies the underlying renal lesion.

Brill'S Disease

A recrudescence form of epidemic typhus caused by reactivation of latent *Rickettsia prowazekii* infection years after the original illness. It is usually milder than the initial infection but can transmit to body lice.

Brill-Zinsser Disease

Brill-Zinsser disease is reactivation of latent epidemic typhus years after the original infection, causing a usually milder typhus-like illness.

Brimonidine Tartrate

Brimonidine tartrate is an alpha-2 adrenergic agonist used in eye drops to lower intraocular pressure and topically for some facial redness.

Brine Bath

A brine bath is immersion in salty water, used recre-

ationally or therapeutically; benefits and risks depend on skin condition, temperature, and patient health.

Brittle Asthma

An uncommon term for severe asthma with unusually unpredictable and difficult-to-control airflow or attacks despite appropriate treatment. The term is not a universally standardized diagnostic category; specialist assessment is required to identify triggers, alternative diagnoses, and effective management.

Brittle Bone Disease

Brittle bone disease is osteogenesis imperfecta, an inherited connective-tissue disorder causing fragile bones, recurrent fractures, and variable hearing, dental, or skeletal findings.

Brittle Bone Disease (Osteogenesis Imperfecta Brittle Bone Disease)

Alternate index label for Osteogenesis Imperfecta Brittle Bone Disease.

Brittle Diabetes

Labile, unstable type 1 diabetes mellitus characterized by unpredictable, large, recurrent swings in blood glucose between severe hyperglycemia and recurrent hypoglycemia (often with ketoacidosis) despite optimal adherence, significantly disrupting quality of life.

Brivanib

An investigational oral anticancer drug that inhibits vascular endothelial growth factor and fibroblast growth factor receptors. It has been studied in advanced cancers but is not broadly approved for routine clinical use.

Brivanib Alaninate

An oral prodrug of brivanib, an investigational inhibitor of vascular endothelial growth factor and fibroblast growth factor receptors studied in advanced cancers.

Brivudine

Brivudine is an antiviral drug used in some countries for herpes zoster; it has a dangerous interaction with fluoropyrimidine chemotherapy.

Broad Ligament

A double layer of peritoneum extending from the sides of the uterus to the lateral pelvic walls. It helps support the uterus, uterine tubes, and ovaries and contains important vessels, nerves, and connective tissue.

Broad Nasal Bridge

A broad nasal bridge is increased width of the upper nose. It may be a normal familial feature or part of a congenital or genetic syndrome.

Broca Aphasia

Acquired language disorder of expressive speech (motor aphasia) caused by lesion of the posterior inferior frontal gyrus (Broca area, Brodmann area 44/45) of the dominant (usually left) hemisphere, most commonly from middle cerebral artery (MCA) superior division infarction.

Broca'S Aphasia

A nonfluent language disorder caused by dysfunction of the dominant inferior frontal language region. Speech is effortful and reduced, while comprehension is relatively preserved compared with repetition and fluent language production.

Broca'S Area

A language-related region of the dominant inferior frontal gyrus involved in speech production, language formulation, and aspects of syntax. Lesions may cause expressive aphasia.

Brodie'S Abscess

Brodie's abscess is a localized, usually subacute form of bone infection, often in the metaphysis of a long bone, causing persistent pain and a cavity in bone.

Brody Disease

A rare inherited skeletal muscle channelopathy inherited in an autosomal recessive fashion (Brody disease) or autosomal dominant fashion (Brody syndrome), caused by loss-of-function mutations in the *ATP2A1* gene on chromosome 16p12.1, which encodes the fast-twitch skeletal muscle sarcoplasmic/endoplasmic reticulum calcium ATPase 1 (SERCA1). Impaired ATP-dependent reuptake of cytosolic calcium into the sarcoplasmic reticulum leads to delayed myofibrillar relaxation. Manifests with childhood-onset, painless exercise-induced muscle stiffness and delayed relaxation predominantly affecting the face, eyelids, and hands after rapid strenuous exertion, notably in the complete absence of electrical myotonic discharges on needle electromyography (pseudomyotonia).

Alternate Names:

Brody Myopathy; SERCA1-Related Muscle Disease

Broken Ankle

A fracture of one or more bones forming the ankle joint, usually causing pain, swelling, bruising, and difficulty bearing weight.

Broken Arm

A fracture of one or more bones of the arm, commonly causing pain, swelling, bruising, deformity, or loss of function.

Broken Blood Vessel In Eye

Alternate index label; see *Subconjunctival hemorrhage (broken blood vessel in eye)*.

Broken Bone

A broken bone, or fracture, is a partial or complete disruption of bone continuity caused by injury, repetitive stress, or weakened bone.

Broken Bone (Types Of Bone Fractures)

Alternate index label for Types of Bone Fractures.

Broken Clavicle

Alternate index label; see *Broken collarbone*.

Broken Collarbone

A fracture of the clavicle, usually caused by a fall, direct impact, or contact injury and associated with shoulder pain and reduced arm movement.

Alternate Names:

Broken Clavicle

Broken Finger

A fracture of one of the finger bones caused by trauma, crushing, or twisting. Pain, swelling, bruising, deformity, and reduced movement may occur. Assessment should check alignment, tendon function, sensation, and circulation; some fractures require reduction, splinting, or surgery.

Alternate Names:

Pinky Broken Finger (Broken Finger)

Broken Foot

A fracture of one or more bones of the foot, commonly caused by a fall, direct impact, twisting injury, or repetitive stress. Pain, swelling, bruising, and difficulty bearing weight are typical. Deformity, an open wound, numbness, or inability to walk requires urgent evaluation and imaging.

Broken Hand

A fracture of one or more bones of the hand, causing pain, swelling, bruising, deformity, or impaired movement.

Broken Heart Syndrome

A temporary weakening of the heart muscle, often triggered by severe emotional or physical stress. It can resemble a heart attack but usually occurs without an obstructing coronary clot.

Broken Hip

Alternate index label; see *Hip fracture*.

Broken Leg

A fracture of one or more bones in the leg, commonly causing pain, swelling, bruising, deformity, or inability to bear weight.

Alternate Names:

Leg Fracture

Broken Nose

A fracture of one or more nasal bones that may cause pain, swelling, bleeding, deformity, or difficulty breathing through the nose.

Broken Or Dislocated Jaw

A fracture or dislocation of the jaw can cause pain, swelling, malocclusion, limited movement, and difficulty speaking or swallowing.

Broken Or Knocked Out Tooth

A broken or avulsed tooth is a dental injury caused by trauma. An avulsed permanent tooth requires urgent dental care.

Broken Ribs

Fractures of one or more ribs, usually causing localized chest pain that worsens with breathing, coughing, or movement.

Broken Toe

A fracture of a toe bone, usually after direct impact or crushing. Pain, swelling, bruising, and tenderness are common; deformity, an open injury, numbness, or impaired circulation requires prompt assessment. Treatment may include protection and immobilization, with reduction or surgery for displaced or unstable fractures.

Alternate Names:

Toe Broken (Broken Toe)

Broken Wrist

A fracture involving one or more bones near the wrist, often causing pain, swelling, bruising, deformity, or reduced hand function.

Bromelain

A mixture of proteolytic enzymes derived from pineapple; it is marketed as a supplement and has been studied for inflammation and pain, but evidence and product standardization vary and interactions or allergy are possible.

Bromhexine

A mucolytic medicine that reduces the viscosity

of bronchial mucus and may help expectoration; gastrointestinal upset, rash, or rare serious skin reactions can occur.

Bromhidrosis

Excessive or unpleasant body odor produced when microbial metabolism acts on sweat or skin secretions. It is often prominent in the axillae or feet and may be associated with hyperhidrosis or local skin disease.

Bromides

Bromides are salts or compounds containing bromide; prolonged or excessive exposure can cause bromism with neurologic, psychiatric, gastrointestinal, or skin symptoms.

Bromine

A reactive halogen used in industrial chemicals and flame retardants; elemental bromine and many bromine compounds can irritate or burn tissues, and excessive exposure may cause systemic toxicity.

Bromism

Toxicity from prolonged or excessive exposure to bromide compounds, which may cause neurologic, psychiatric, gastrointestinal, or skin symptoms.

Bromobenzenes

A group of aromatic compounds in which one or more bromine atoms are attached to benzene; they are mainly industrial chemicals and may cause irritation or toxic effects depending on the compound and exposure.

Bromocriptine

An ergot-derived dopamine D2-receptor agonist used for hyperprolactinaemia and selected Parkinson disease or endocrine disorders; nausea, postural hypotension, hallucinations, and rare fibrotic complications may occur.

Bromodeoxyuridine

A thymidine analogue incorporated into newly synthesized DNA during the S phase; it is used ex-

perimentally to measure cell proliferation and can interfere with DNA replication at high exposure.

Bromoderma

A skin eruption or dermatitis attributed to exposure to bromine or bromide compounds. It may present with acneiform, pustular, or other inflammatory lesions.

Bromodosis

Bromodosis is unusually offensive foot odor caused by sweat, moisture, and bacterial or fungal breakdown of skin debris.

Bromophos

An organophosphorus insecticide; exposure can inhibit acetylcholinesterase and produce cholinergic poisoning, including sweating, salivation, bronchospasm, vomiting, weakness, and seizures.

Bromouracil

A thymine analogue used mainly in experimental mutagenesis research; its altered base pairing can introduce DNA replication errors.

Bromovirus

Bromovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Brompheniramine Overdose

Toxic effects from excessive brompheniramine, an antihistamine, including drowsiness or agitation, confusion, dry mouth, rapid heart rate, seizures, or abnormal heart rhythm.

Bromthymol Blue

A pH indicator that changes colour near neutrality and is used in laboratory demonstrations and some analytical tests; it is not a therapeutic medicine.

Bronchi

The major airways conducting air from the trachea into the lungs. The trachea bifurcates at the carina

(T4-T5) into right and left main bronchi. The right main bronchus is wider, shorter, and more vertical—aspirated foreign bodies preferentially lodge here.

Bronchial

Relating to the bronchi, the large airways branching from the trachea; bronchial disease may cause cough, wheeze, mucus production, or airflow obstruction.

Bronchial Artery

An artery arising from the systemic circulation that supplies the walls of the bronchi, connective tissue of the lungs, and visceral pleura. It differs from the pulmonary arteries, which carry blood for gas exchange.

Bronchial Artery Embolization

A minimally invasive endovascular catheter-directed procedure used as the primary, life-saving intervention for massive or recurrent hemoptysis. Under fluoroscopic guidance via femoral or radial arterial access, diagnostic bronchial arteriography identifies bleeding, hypertrophied, tortuous bronchial or non-bronchial systemic arteries; embolization is performed using particulate agents (polyvinyl alcohol particles or microspheres) or metallic microcoils while meticulously avoiding non-target embolization of the anterior spinal artery (artery of Adamkiewicz).

Alternate Names:

BAE; Bronchial Embolization; Embolization of Bronchial Arteries

Bronchial Asthma

Bronchial asthma is a chronic inflammatory airway disorder with variable, usually reversible bronchoconstriction, wheeze, cough, chest tightness, and breathlessness.

Bronchial Asthma (Asthma Overview)

Alternate index label for Asthma Overview.

Bronchial Biopsy

Tissue sampling of the bronchial wall during bronchoscopy. It is used to diagnose inflammatory con-

ditions (sarcoidosis, eosinophilic bronchitis), infections, and malignancy. Endobronchial biopsy of visible lesions and transbronchial biopsy of parenchymal lesions provide complementary diagnostic information.

Bronchial Carcinoid

Pulmonary neuroendocrine tumor arising from Kulchitsky cells of the bronchial mucosa; subclassified as typical carcinoid (TC, generally lower grade, with fewer mitoses and no necrosis) and atypical carcinoid (AC, generally higher grade, with more mitoses or necrosis and greater risk of recurrence or metastasis).

Bronchial Fistula

An abnormal connection involving a bronchus and another structure, such as the pleural space, esophagus, or skin; it can cause persistent air leak, infection, coughing, or respiratory compromise.

Bronchial Hemorrhage

Bleeding from bronchial vessels or airways, usually presenting as haemoptysis; severe bleeding can obstruct the airway or cause respiratory failure.

Bronchial Obstruction

Partial or complete blockage of a bronchus by mucus, a foreign body, tumour, swelling, or external compression, causing impaired ventilation and sometimes distal collapse or infection.

Bronchial Stenosis

Narrowing of a bronchus from trauma, infection, inflammation, or prior intervention. It causes localized wheezing, recurrent infections, and impaired secretion clearance. Diagnosis is by bronchoscopy. Treatment includes balloon dilation, stenting, or surgical resection.

Bronchial Stricture

Abnormal narrowing of a bronchus, caused by scarring, inflammation, tumour, infection, or prior instrumentation, which may produce localized wheeze, cough, recurrent infection, or atelectasis.

Bronchial Tree

The branching airway system formed by the trachea, main bronchi, lobar and segmental bronchi, bronchioles, and terminal airways leading toward the alveoli.

Bronchial Tubes

The right and left main bronchi and their branches that conduct air from the trachea into the lungs.

Alternate Names:

Bronchi; bronchial tree when referring to the branching airway system.

Bronchial Vein

A vein draining portions of the bronchial walls and larger airways. It empties partly into the azygos system and partly into pulmonary veins, creating a small physiologic venous admixture.

Bronchiectasis

Permanent, abnormal dilation of bronchi caused by destruction of the bronchial wall from chronic airway inflammation and infection. Causes include CF, immune deficiency, primary ciliary dyskinesia, and post-infectious damage. Features include chronic cough, copious purulent sputum, and recurrent hemoptysis.

Bronchiectasis (Acquired, Congenital)

Alternate index label for Acquired, Congenital.

Bronchiole

Small airways (less than 2 mm diameter) without cartilage, branching from segmental bronchi to terminal bronchioles (conducting zone) to respiratory bronchioles (transitional, alveoli bud from walls) to alveolar ducts to alveolar sacs to alveoli.

Bronchiolectasis

Permanent abnormal dilation of bronchioles, usually caused by chronic inflammation, infection, or obstruction. It may accompany bronchiectasis and contribute to impaired mucus clearance and recurrent infection.

Bronchioles

Bronchioles are small branching airways that conduct air from the bronchi toward the alveoli and regulate airflow through smooth muscle.

Bronchiolitis

Lower respiratory tract infection causing inflammation and obstruction of small airways. Most common cause is respiratory syncytial virus. Affects infants under 12 months. Presents with wheezing, tachypnea, nasal flaring, and retractions. Diagnosis is clinical.

Bronchiolitis Obliterans

An uncommon, often irreversible obstructive small-airway disease caused by inflammation and fibrotic narrowing or obliteration of the bronchioles. Causes include severe infection, inhalational injury, autoimmune disease, and complications after lung or bone-marrow transplantation.

Bronchitis

Inflammation of the bronchial mucosa. Acute bronchitis is typically viral, presents with cough (often productive), and resolves spontaneously. Cough with sputum production for at least 3 months in 2 consecutive years, often due to smoking.

Bronchitis (Acute)

Alternate index label for Acute.

Bronchitis Chronic (Chronic Bronchitis)

Alternate index label for Chronic Bronchitis.

Bronchoalveolar Lavage

Diagnostic procedure during bronchoscopy where saline is instilled and aspirated. Analyzed for cell counts, microbiology, and cytology. Useful for *Pneumocystis pneumonia*, pulmonary alveolar proteinosis, and sarcoidosis diagnosis.

Bronchocele

Bronchocele is an abnormal dilation or mucus-filled expansion of a bronchus, often related to obstruction or congenital airway abnormality.

Bronchoconstriction

Narrowing of the bronchi due to contraction of airway smooth muscle, mucosal swelling, or mucus; it increases airway resistance and occurs in asthma, allergic reactions, and some irritant exposures.

Bronchoconstrictor Agents

Substances that narrow the airways by contracting bronchial smooth muscle or causing airway inflammation, including histamine, leukotrienes, irritant gases, and some medicines.

Bronchodilator

A medicine that relaxes airway muscle and widens the airways to improve breathing.

Bronchodilator Response

The change in spirometric airflow after administration of a short-acting bronchodilator. A significant response can support variable airflow limitation, but a negative response does not exclude asthma and a positive response is not specific to one disease.

Bronchodilator Reversibility

Improvement in airflow measurements after an inhaled bronchodilator. A measurable increase may support variable airway obstruction, but no single response proves or excludes asthma or chronic obstructive pulmonary disease.

Bronchoesophageal Fistula

Abnormal communication between the bronchial tree and the esophagus, most commonly acquired from malignancy, mediastinal infection, or tuberculous lymphadenitis. Congenital forms are associated with esophageal atresia.

Bronchogenic Carcinoma

A neoplastic process affecting bronchogenic carcinoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Bronchogenic Cyst

A congenital cyst derived from abnormal budding of the ventral foregut. It is typically found in the

middle mediastinum or near the carina. It is usually asymptomatic but may cause compression of adjacent structures. Treatment is surgical resection if symptomatic.

Bronchomalacia

Weakness and excessive collapsibility of the bronchial walls due to deficient cartilage or structural support; it may cause noisy breathing, cough, recurrent infections, or expiratory airway obstruction.

Bronchophony

Increased transmission of spoken sounds to the stethoscope over consolidated lung tissue. It is normally heard over the central airways. Excessive bronchophony over peripheral lung fields indicates consolidation. It is part of the constellation of physical examination findings in pneumonia.

Bronchopleural Fistula

An abnormal communication between the bronchial tree and pleural space. It is a complication of pneumonectomy, lung surgery, or empyema. It causes persistent air leak, subcutaneous emphysema, and respiratory compromise. Treatment includes chest tube drainage, bronchoscopic intervention, and surgical repair.

Bronchopneumonia

Patchy consolidation centered on bronchioles across multiple lobes. Caused by *S. aureus*, gram-negative bacteria, and *Pseudomonas*.

Bronchopulmonary Dysplasia

A chronic lung disease of premature infants, resulting from lung injury from mechanical ventilation, oxygen toxicity, and inflammation. Most commonly occurs in infants born at less than 28 weeks gestation with birth weight less than 1500 grams.

Bronchopulmonary Segments

Anatomically distinct subdivisions of a lung lobe, each supplied by a segmental bronchus and pulmonary artery branch and separated from neighboring segments by connective-tissue planes.

Bronchoscope

A thin, lighted instrument used to examine the trachea and bronchi and, when needed, obtain tissue or fluid samples.

Bronchoscopic Culture

Bronchoscopic culture examines respiratory specimens collected through bronchoscopy for bacteria, fungi, or mycobacteria when ordinary samples are inadequate.

Bronchoscopy

Endoscopic examination of the tracheobronchial tree. Flexible bronchoscopy: most common, for diagnosis (lung mass, persistent cough, hemoptysis, suspected infection, ILD) and therapy (foreign body removal, bronchial washing, biopsy, BAL). Rigid bronchoscopy: for massive hemoptysis, large foreign bodies, and stent placement.

Bronchospasm

Involuntary constriction of bronchial smooth muscle causing airway obstruction, wheezing, and increased airway pressures. Triggers include airway manipulation, volatile anesthetics (sevoflurane is bronchodilating; desflurane can cause bronchospasm), histamine-releasing drugs (morphine, atracurium), and reactive airway disease.

Bronchostenosis

Narrowing of a bronchus that restricts airflow. Causes include scarring, tumors, foreign bodies, inflammation, external compression, or postinfectious and postprocedural changes.

Bronchus

One of the two main branches of the trachea that conduct air into the lungs. The right main bronchus is wider, shorter, and more vertical than the left, making it more susceptible to aspiration. Each main bronchus divides into lobar bronchi (secondary), segmental bronchi (tertiary), and progressively smaller branches (bronchioles).

Bronchus Disease

A clinical disorder or finding related to bronchus dis-

ease; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Bronchus Neoplasm

A neoplastic process affecting bronchus neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Bronze Diabetes

Historical eponym for hereditary hemochromatosis (HFE-related HH, C282Y homozygous mutation), characterized by the classic triad of skin pigmentation ("bronze"), cirrhosis, and diabetes mellitus from pancreatic iron deposition. Also known as "Troisier syndrome" or pigment cirrhosis.

Alternate Names:

"Troisier syndrome" or pigment cirrhosis.

Brooke Disease

Brooke disease is a rare inherited skin disorder historically associated with widespread keratinization or follicular abnormalities; the precise eponym requires source context.

Brooke-Spiegler Syndrome

An inherited skin-tumor syndrome, usually caused by pathogenic variants in *CYLD*, characterized by multiple benign adnexal tumors including trichoepitheliomas, cylindromas, and spiradenomas.

Broselow Tape

A standardized, color-coded, length-based pediatric emergency tape used worldwide to rapidly calculate estimated weight, appropriate resuscitation drug dosages, defibrillation joules, fluid bolus volumes, and equipment sizes (such as endotracheal tube internal diameter and blade size) in critically ill or injured children without requiring calculations.

Alternate Names:

Broselow Pediatric Emergency Tape; Pediatric Length-Based Resuscitation Tape

Brow Presentation

A fetal presentation where the fetal head is in a military position between full flexion (vertex) and

hyperextension (face). The presenting diameter is the largest (occipitofrontal, 13.5 cm). Incidence: 1:1000-1:2000. Vaginal delivery is impossible with a persistent brow in a term fetus unless it converts to vertex or face.

Brown Fat

Adipose tissue rich in mitochondria that produces heat through uncoupled oxidative metabolism; it is prominent in infants and can be activated by cold exposure in adults.

Brown Lung Disease

An occupational airway disease associated with inhalation of cotton, flax, or hemp dust, classically causing byssinosis. Symptoms may include chest tightness, cough, wheezing, and work-related airflow limitation.

Brown Recluse (Spider Bites (Black Widow And Brown Recluse))

Alternate index label for Spider Bites (Black Widow and Brown Recluse).

Brown Recluse Spider

The brown recluse spider is a venomous spider whose bite may cause local tissue injury and, rarely, systemic illness.

Brown Sequard Syndrome

Brown-Sequard syndrome (hemisection of the spinal cord) results from a lesion affecting one half of the spinal cord, producing a characteristic pattern of ipsilateral and contralateral neurological deficits.

Brown Stain

Extrinsic staining from chromogenic bacteria, diet, tobacco. Removed by prophylaxis.

Brown Teeth

Brown teeth are teeth with brown discoloration from staining, decay, developmental enamel defects, fluorosis, medicines, trauma, or other causes.

Brown-SéQuard Syndrome

Brown-Séquard syndrome follows hemisection or asymmetric injury of the spinal cord, causing ipsilateral weakness and loss of vibration with contralateral pain and temperature loss below the lesion.

Bruce Protocol

A standardized graded treadmill exercise test in which speed and incline increase at set intervals to assess exercise capacity and cardiovascular response.

Brucella

A genus of bacteria that causes brucellosis, usually acquired from infected animals, animal tissues, or unpasteurized dairy products.

Brucella Abortus

A Brucella species mainly associated with cattle that can cause brucellosis in people exposed to infected animals or unpasteurized dairy products.

Brucella Canis

A Brucella species associated with dogs that can rarely cause human brucellosis after contact with infected animals or reproductive material.

Brucella Melitensis

A highly pathogenic Brucella species associated with goats and sheep and a common cause of severe human brucellosis.

Brucella Suis

A Brucella species associated with pigs and some wildlife that can cause human brucellosis, sometimes with focal bone or organ infection.

Brucellaceae

A family of gram-negative bacteria that includes Brucella and related animal-associated organisms; Brucella species cause brucellosis.

Brucellosis

A zoonotic infection caused by Brucella bacteria, transmitted through contact with infected animals or consumption of unpasteurized animal products.

It commonly causes fever, sweats, fatigue, and joint or muscle pain.

Alternate Names:

Bruch's Membrane

Bruch's membrane is a thin extracellular matrix layer between the retinal pigment epithelium and choroid that supports retinal metabolism and transport.

Bruck's Syndrome

Bruck syndrome is a rare inherited disorder combining bone fragility resembling osteogenesis imperfecta with congenital joint contractures.

Brudzinski Sign

Flexion of the hips and knees that occurs involuntarily when the neck is passively flexed. It is a meningeal irritation sign that may occur in meningitis but lacks sufficient sensitivity or specificity to establish the diagnosis alone.

Brugada Phenocopy

A reversible clinical and electrocardiographic entity characterized by an ECG pattern identical to that of type 1 or type 2 Brugada syndrome (coved or saddleback ST-segment elevation ≥ 2 mm in right precordial leads V_1 – V_3), but provoked by identifiable, transient, underlying mechanical, metabolic, toxic, or ischemic conditions rather than true intrinsic genetic cardiac channelopathies. Common etiologies include severe hyperkalemia, acute anterior/inferior myocardial ischemia or infarction, pulmonary embolism, hypothermia, acute pericarditis, tricyclic antidepressant toxicity, and pectus excavatum. Differentiated from congenital Brugada syndrome by the complete normalization of the ECG upon resolution of the underlying condition, absence of personal or family history of syncope or sudden death, and negative sodium channel blocker (ajmaline/procainamide) provocation challenge.

Alternate Names:

Acquired Brugada Pattern; BrP

Brugada Syndrome

A genetic channelopathy causing abnormal sodium channel function (SCN5A mutation). ECG pattern: coved ST elevation >2 mm in V_1 – V_3 (type 1) followed by negative T wave. Patients are at risk for ventricular fibrillation and sudden cardiac death, often at rest or during sleep. More common in young Southeast Asian men.

Brugia

Brugia is a filarial nematode genus that includes parasites causing lymphatic filariasis, transmitted by mosquitoes.

Bruise

A contusion: localized hemorrhage into tissues due to blunt force trauma rupturing small blood vessels, with intact skin.

Bruised Rib Care

Care for a bruised rib includes pain control, normal gentle breathing, activity modification, and assessment for shortness of breath or other chest injury.

Bruises

A bruise is bleeding beneath the skin after small blood vessels are damaged. Frequent, large, spontaneous, painful, or unusually persistent bruises may reflect medicines, platelet or clotting disorders, liver disease, nutritional deficiency, or injury and should be assessed.

Bruising

Ecchymosis/contusion: a purplish-blue discoloration from blood extravasation into skin/subcutaneous tissue following trauma; color changes with age (red-blue purple green/yellow—bilirubin breakdown).

Bruit

An abnormal sound heard over a blood vessel, usually with a stethoscope, caused by turbulent blood flow.

Brunhilde Virus

A strain of poliovirus type 1 used in research and vaccine studies; poliovirus can invade the nervous system and cause paralytic disease.

Brunner Gland

A mucus-secreting gland in the duodenum that releases alkaline secretions to help protect the intestinal lining and neutralize stomach acid.

Brunner'S Gland

A mucus-secreting gland in the submucosa of the duodenum. Its alkaline secretion helps protect the mucosa from gastric acid and provides conditions favorable for intestinal enzymes.

Brunner'S Glands

Brunner's glands are mucus- and bicarbonate-secreting glands in the duodenum that help protect the intestinal lining from gastric acid.

Brush Burns

Brush burns are superficial friction burns caused by scraping skin against a rough surface, producing pain, redness, and abrasions.

Brushfield'S Spots

Small gray or white spots arranged around the iris, commonly associated with Down syndrome but also found in some people without it.

Brushing Your Child'S Teeth

Brushing a child's teeth removes plaque and helps prevent dental caries and gum disease. Fluoride toothpaste and age-appropriate supervision are recommended.

Bruxism

Grinding or clenching teeth, often during sleep. Causes: stress, occlusion, sleep disorders. Consequences: tooth wear, fractures, muscle pain, TMJ disorders. Treatment: occlusal guard, stress management, behavior modification.

Alternate Names:

Teeth Grinding (Bruxism)

Bruxism (Teeth Grinding (Bruxism))

Alternate index label for Teeth Grinding (Bruxism).

Bryant'S Traction

Bryant's traction is a historical traction technique for treating selected pediatric femoral fractures or hip conditions by elevating the child's legs; it is used cautiously.

Bryostatin

A group of marine-derived macrocyclic compounds that modulate protein kinase C. Bryostatin compounds have been investigated as experimental treatments for cancer and neurologic disease.

Biosafety Level

Biosafety level is a classification of laboratory containment practices and facilities required for work with biological agents of different risks.

Bubble Bath Soap Poisoning

Illness after swallowing or inhaling bubble-bath products. Small ingestions usually cause mild mouth or stomach irritation, but vomiting or aspiration can require medical assessment.

Bubo

A tender, enlarged lymph node, usually in the groin, armpit, or neck, caused by infection. Buboes are classically associated with plague but occur in other infections.

Bubonic Plague

Bubonic plague is infection with *Yersinia pestis* causing painful swollen lymph nodes, fever, and systemic illness, usually after a flea bite.

Buccal

Buccal means relating to the cheek or the inner cheek surface; buccal medicines are placed between cheek and gum for absorption.

Buccal Gland

A minor salivary gland located in the cheek. It secretes mucus into the oral cavity to lubricate the

buccal mucosa and assist formation and handling of the food bolus.

Buccal Mucosa

The moist mucous membrane lining the inside of the cheeks; it is examined for ulcers, infection, pigmentation, trauma, and oral cancer and can absorb some medicines.

Buccal Smear

A laboratory examination of cells collected from the specified site to identify abnormal, infectious, or malignant changes.

Buccalmucosa

A spelling variant of buccal mucosa, the moist lining of the inner cheeks.

Buccinator

The buccinator is a cheek muscle that compresses the cheek and assists chewing, sucking, blowing, and speech.

Buchanan'S Disease

Buchanan's disease is a historical eponym with inconsistent usage; its intended diagnosis must be established from the original clinical source.

Buckle Fracture

Alternate name; see *Torus Fracture*.

Budd-Chiari Syndrome

Obstruction of hepatic venous outflow at any level from small hepatic venules to the inferior vena cava junction with the right atrium. The most common predisposing condition is myeloproliferative disorders accounting for forty to fifty percent of cases. Other risk factors include thrombophilia and oral contraceptive use.

Budesonide

A corticosteroid used by inhalation for asthma or chronic obstructive pulmonary disease and by oral or rectal preparations for selected inflammatory bowel disorders; local and systemic corticosteroid adverse

effects are possible.

Budvicia

A genus of Gram-negative rod-shaped bacteria in the family Yersiniaceae, originally isolated from water sources. *Budvicia aquatica* has been occasionally associated with urinary tract infections and other clinical isolates.

Budvicia Aquatica

A Gram-negative rod bacterium in the family Yersiniaceae, isolated from aquatic environments. It has been reported as an occasional cause of urinary tract infection, particularly in catheterized patients.

Buerger Disease

An inflammatory disorder of small and medium arteries and veins, strongly associated with tobacco use, that can cause limb ischemia and tissue loss.

Buerger'S Disease

Thromboangiitis obliterans, a nonatherosclerotic inflammatory disease of small and medium arteries and veins, strongly associated with tobacco exposure. It causes distal ischemia, pain, ulcers, and sometimes gangrene.

Buffalo Hump

A buffalo hump is a pad of fat at the back of the neck and upper back, associated with obesity, corticosteroid excess, HIV therapy, or Cushing syndrome.

Buffer

A solution that resists pH change upon addition of acid or base, composed of a weak acid and its conjugate base (or weak base and conjugate acid). Buffer capacity is maximal when $\text{pH} = \text{pKa} \pm 1$.

Buffy Coat

The thin layer of white blood cells and platelets that forms between plasma and red blood cells after centrifugation of whole blood.

Bufonidae

The true toads, a family of anuran amphibians.

Some species produce bufotoxins, potent cardiotoxic substances secreted from parotoid glands, which can cause poisoning if ingested by predators or humans.

Buformin

Buformin is a former biguanide diabetes drug withdrawn or restricted because of lactic-acidosis risk.

Bug Spray Poisoning

Toxic effects from exposure to an insecticide product. Symptoms depend on the active ingredient and may include skin or eye irritation, nausea, breathing problems, abnormal sweating, confusion, seizures, or other neurologic effects.

Bulbar

Relating to the medulla oblongata or to functions controlled by its cranial-nerve nuclei, including swallowing, speech, and movements of the tongue and palate.

Bulbar Conjunctiva

The bulbar conjunctiva is the portion of the conjunctival membrane that covers the anterior surface of the sclera, extending from the limbus (the junction of the cornea and sclera) to the fornices where it reflects onto the inner surface of the eyelids.

Bulbar Palsy

Bulbar palsy is weakness or paralysis of muscles supplied by lower cranial nerves, causing dysarthria, dysphagia, impaired gag, and difficulty handling secretions.

Bulbar Paralysis

Weakness or paralysis of muscles supplied by the lower cranial nerves, causing dysarthria, dysphagia, impaired gag or cough, and sometimes respiratory compromise. Causes include brainstem disease, motor-neuron disease, and neuromuscular disorders.

Bulbocavernosus

A paired perineal muscle surrounding the bulb of the penis in males and the vestibular bulbs in females. It assists in emptying the urethra after urination,

contributes to erectile rigidity, and contracts during orgasm.

Bulbospongiosus

Bulbospongiosus is the paired perineal muscle that helps empty the urethra and contributes to erection and expulsion of genital secretions.

Bulbourethral Gland

One of two small male reproductive glands below the prostate that secrete lubricating, alkaline pre-ejaculate into the urethra.

Bulbourethral Glands

Paired male accessory glands, also called Cowper glands, that release a mucus-like fluid into the urethra during sexual arousal. The fluid lubricates the urethra and may help neutralize acidity.

Bulging

Protruding or swelling outward beyond the usual contour, as in a bulging intervertebral disk or bulging membrane.

Bulimia

An eating-disorder symptom characterized by recurrent episodes of binge eating with a sense of loss of control; in bulimia nervosa, episodes are followed by recurrent compensatory behaviours such as vomiting, fasting, or excessive exercise.

Bulimia Nervosa

An eating disorder characterized by recurrent episodes of binge eating followed by compensatory behaviors (purging, laxatives, excessive exercise). Self-esteem overly influenced by body shape and weight.

Alternate Names:

Eating Disorders, Bulimia

Bulla

A bulla is a large fluid-filled blister or a hollow air-filled structure, depending on the clinical context.

Bullae

Large, fluid-filled blisters that form within or beneath the skin or mucous membrane. Causes include friction, burns, infection, allergy, and autoimmune disease.

Bullectomy

A surgical procedure involving the excision of one or more large emphysematous bullae (subpleural air-filled spaces > 1 cm in diameter within the lung parenchyma), performed via video-assisted thoracoscopic surgery or thoracotomy. The procedure is indicated for giant bullae (occupying more than one-third of the hemithorax) causing severe compressive atelectasis of adjacent functional lung tissue, refractory dyspnea, or recurrent secondary spontaneous pneumothorax; removal decompresses the underlying normal lung and substantially improves ventilation mechanics.

Alternate Names:

Excision of Pulmonary Bullae; Resection of Giant Bulla

Bullet Track

The path a projectile traverses through the body, defined by the entry wound, internal course (through organs, vessels, bones), and exit wound (or retained bullet).

Bullet Wounds

Bullet wounds are penetrating or perforating injuries caused by firearm projectiles, potentially damaging skin, organs, vessels, nerves, and bone.

Bullous

Characterized by bullae, which are large, raised, fluid-filled blisters; bullous disorders may result from infection, burns, drugs, or autoimmune disease.

Bullous Impetigo

A superficial staphylococcal skin infection caused by exfoliative toxins that produce fragile, flaccid bullae and honey-coloured or varnish-like crusts, especially in infants and young children.

Bullous Pemphigoid

An autoimmune subepidermal blistering disease affecting elderly patients. It presents with tense blisters on erythematous or normal-appearing skin, often preceded by pruritic urticarial plaques. Autoantibodies target BP180 and BP230 (hemidesmosome proteins).

Alternate Names:

Pemphigoid Bullous (Bullous Pemphigoid)

Bully

Bullying is repeated harmful aggression or intimidation involving a power imbalance and can cause injury, anxiety, depression, and other health effects.

Bullying

Bullying is repeated aggression or intimidation involving a power imbalance and can be physical, verbal, social, or digital. It is associated with anxiety, depression, sleep problems, injury, school avoidance, and self-harm risk; safety planning and adult intervention are important.

Bumetanide

A potent loop diuretic inhibiting the Na-K-2Cl co-transporter in the thick ascending limb of the loop of Henle. Used for edema in heart failure, cirrhosis, and renal disease, and for hypertension in renal impairment. Approximately 40 times more potent than furosemide; more bioavailable orally, so equivalent IV-to-oral dosing is possible.

Bumps

Raised or palpable areas on the skin or under the skin; the cause may range from folliculitis and cysts to trauma, allergy, infection, or tumors.

BUN - Blood Test

A laboratory test that measures blood urea nitrogen concentration, a breakdown product of protein metabolism cleared by the kidneys. Elevated BUN indicates impaired renal function, dehydration, high protein intake, or gastrointestinal bleeding; it is interpreted alongside creatinine.

Bundle Branch Block

Delay or block in the electrical conduction through the bundle branches. Left Bundle Branch Block (LBBB): QRS >120 ms, broad notched R waves in lateral leads (I, V5-V6), deep S waves in V1-V2. Right Bundle Branch Block (RBBB): QRS >120 ms, rSR' pattern in V1-V2, wide S waves in I, V5-V6.

Bundle Of His

A narrow band of specialized cardiac tissue that conducts electrical impulses from the AV node through the fibrous cardiac skeleton to the interventricular septum. It divides into the right and left bundle branches. The bundle of His is the only electrical connection between atria and ventricles through the fibrous skeleton.

Bundle-Branch Block

Delayed or interrupted electrical conduction through one of the heart's ventricular bundle branches.

Bungarotoxins

Neurotoxins from kraits (*Bungarus* species) that bind or interfere with nicotinic acetylcholine receptors at the neuromuscular junction; envenomation can cause progressive paralysis and respiratory failure.

Bunion

A bony bump at the joint at the base of the big toe, also called hallux valgus. The big toe angles toward the second toe, causing the bump to form on the inner side of the foot. It may cause pain, redness, swelling, or stiffness.

Bunion Removal

A medical procedure involving bunion removal. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

Bunionectomy

Surgical correction of hallux valgus (bunion) deformity, indicated for symptomatic bunions refractory to conservative measures (proper footwear, orthoses, toe spacers, NSAIDs). Procedure chosen based on

severity (hallux valgus angle and intermetatarsal angle) and patient factors (age, activity, comorbidities).

Bunionette

A painful prominence at the outer side of the fifth metatarsophalangeal joint, often associated with footwear pressure or altered foot mechanics.

Alternate Names:

Tailor's bunion; bunion of the fifth toe.

Bunions

A bony prominence and deformity at the base of the big toe caused by shifting of the joint, often producing pain and footwear difficulty.

Bunionoplasty

Bunionoplasty is surgery to correct a bunion or hallux valgus deformity, often by realigning bone and balancing surrounding soft tissues.

Bunyaviridae

Bunyaviridae is a virus or viral group classified by its genetic and biologic features; clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Bunyaviruses

Alternate index label; see *Viral hemorrhagic fevers*.

Buphthalmos

Enlargement of the eye caused by elevated intraocular pressure during early childhood, when the ocular coats are still distensible. It is classically associated with congenital or infantile glaucoma.

Bupivacaine

A long-acting amide local anesthetic used for regional, nerve-block, epidural, and local anesthesia. Excessive blood levels can cause seizures, severe cardiac toxicity, or cardiac arrest.

Bupivacaine Hydrochloride

The hydrochloride salt formulation of bupivacaine, a long-acting amide local anesthetic used for regional

and local anesthesia. Accidental intravascular exposure can cause serious neurologic or cardiac toxicity.

Buprenorphine

Buprenorphine is a partial opioid agonist used for opioid-use disorder and pain; it can cause dependence but has a ceiling effect on respiratory depression.

Bupropion

An antidepressant also used to help people stop smoking. It affects norepinephrine and dopamine signaling and can cause insomnia, dry mouth, or anxiety; it increases seizure risk and is contraindicated in people with certain seizure or eating disorders.

Burkholderia

A genus of environmental gram-negative bacteria that includes organisms causing melioidosis, glanders, and opportunistic infections in people with chronic lung disease or impaired immunity.

Burkholderia Cenocepacia

A member of the *B. cepacia* complex that can cause severe, difficult-to-treat respiratory infection in people with cystic fibrosis and other chronic lung disease.

Burkholderia Cepacia

A gram-negative environmental bacterium and member of the *B. cepacia* complex that can cause opportunistic lung, bloodstream, or device-associated infection.

Burkholderia Gladioli

An environmental bacterium that can cause opportunistic respiratory, bloodstream, or wound infection, especially in people with cystic fibrosis or impaired immunity.

Burkholderia Mallei

The bacterium that causes glanders, a zoonotic infection mainly affecting horses and related animals and occasionally transmitted to humans.

Burkholderia Pseudomallei

The bacterium that causes melioidosis, an infection acquired from contaminated soil or water and capable of causing pneumonia, abscesses, bloodstream infection, or chronic disease.

Burkholderiaceae

A family of gram-negative bacteria that includes *Burkholderia* and related environmental organisms, some of which cause serious human or animal infections.

Burkitt Lymphoma

A highly aggressive B-cell lymphoma characterized by MYC translocation (t(8;14) IGH-MYC, t(8;22) IGL-MYC, t(2;8) IGK-MYC) and a "starry sky" morphology (tingible body macrophages). Three variants: endemic (African, EBV+, jaw/facial bones), sporadic (abdominal, ileocecal), immunodeficiency-associated (HIV).

Alternate Names:

Burkitt's Tumor

Burkitt'S Lymphoma

A rapidly growing type of non-Hodgkin lymphoma arising from B lymphocytes.

Burkitt'S Tumor

Alternate index label; see *Burkitt lymphoma*.

Burn

An injury to skin or deeper tissue caused by heat, chemicals, electricity, radiation, or friction. Severity depends on depth, extent, location, and associated injury.

Burn (Oral)

Thermal or chemical injury to the lining of the mouth, often causing pain, redness, or ulceration. Severity depends on the substance, temperature, depth, and extent of injury.

Alternate Names:

Oral

Burn Injury

Alternate index label; see *Burns*.

Burn Surgery

Burn assessment: rule of 9s (adult), Lund-Browder (children). Depth: superficial (epidermis), superficial partial (dermis, blanch, blister, painful), deep partial (deeper dermis, white, sluggish capillary refill, less painful), full thickness (all dermis, white/charred, anesthetic).

Burning Feet

Burning, tingling, or painful sensations in the feet, commonly related to peripheral neuropathy, diabetes, nutritional deficiency, alcohol, medicines, or nerve compression.

Burning Mouth Syndrome

A chronic oral pain disorder causing daily burning, scalding, or tingling discomfort in the mouth, often involving the tongue, lips, or palate, usually with a normal-appearing mucosa. Altered taste or dry mouth may occur. It may be primary, with no identifiable cause, or secondary to conditions or exposures such as nutritional deficiency, oral infection, medication effects, allergy, diabetes, or hormonal change; evaluation should exclude treatable causes.

Alternate Names:

Scalded Mouth Syndrome Stomatodynia

Burning Thigh Pain

Alternate index label; see *Meralgia paresthetica*.

Burnout

Burnout is occupational exhaustion, mental distancing or cynicism, and reduced professional efficacy caused by chronic workplace stress; it is distinct from a medical diagnosis of depression.

Burns

Tissue injuries caused by heat, chemicals, electricity, radiation, or friction, with severity determined by depth, size, and location.

Alternate Names:

Burn Injury Burns First Aid (Burns)

Burns First Aid (Burns)

Alternate index label for Burns.

Burnt-Out Joint

A burnt-out joint is an older description of a joint in which active inflammatory disease has subsided but permanent structural damage and restricted movement remain.

Burroughs

Burroughs is a surname or eponym used inconsistently in medical sources; the associated condition or person must be identified from context.

Bursa

A small fluid-filled sac that reduces friction between moving tissues, such as a tendon and bone or skin and bone, especially near a joint. The plural is *bursae*; inflammation of a bursa is called bursitis.

Alternate Names:

Bursae Synovial bursae

Bursa Inflammation (Acute And Chronic Bursitis)

Alternate index label for Acute and Chronic Bursitis.

Bursa Of Fabricius

The bursa of Fabricius is a lymphoid organ in birds where B lymphocytes mature; it has no direct human counterpart.

Bursectomy

Surgical excision of a bursa, usually performed for persistent painful bursitis, recurrent infection, or another structural problem that has not responded to appropriate conservative management.

Bursitis

Inflammation of a bursa, a fluid-filled sac that reduces friction between tendons, muscles, bones, and skin. Bursae are lined by synovial cells and normally contain a thin layer of lubricating synovial fluid.

Bursitis Calcific (Calcific Bursitis)

Alternate index label for Calcific Bursitis.

Bursitis Of The Heel

Heel bursitis is inflammation of a fluid-filled bursa near the heel, producing localized tenderness and pain with pressure or walking.

Bursitis Of The Knee

Alternate index label; see *Knee bursitis*.

Bursitis Shoulder (Shoulder Bursitis)

Alternate index label for Shoulder Bursitis.

Bursopathy

Disease of a bursa, a fluid-filled sac that reduces friction around joints; bursopathy includes inflammation, infection, bleeding, or degeneration.

Buruli Ulcer

A skin infection caused by the bacterium *Mycobacterium ulcerans*. It mainly affects the skin, soft tissue, and sometimes bone, usually on the arms or legs. It often starts as a painless nodule and may develop into a large ulcer. Early diagnosis and treatment with antibiotics can cure it, but poorly managed disease may cause severe scars, deformities, and disability.

Burundanga (Hyoscine Hydrobromide)

A name associated with scopolamine, or hyoscine, an anticholinergic drug that can cause dry mouth, blurred vision, confusion, drowsiness, and memory impairment; exposure can be dangerous.

Buserelin

Buserelin is a gonadotropin-releasing hormone analogue that suppresses reproductive hormones after an initial stimulation phase and is used in selected fertility or hormone-sensitive conditions.

Buspirone

Buspirone is a nonbenzodiazepine anxiolytic used mainly for generalized anxiety and does not provide immediate relief like sedative medicines.

Busulfan

An alkylating chemotherapy medicine used chiefly as conditioning before haematopoietic stem-cell transplantation and, less commonly, for chronic myeloid leukaemia; it can cause prolonged myelosuppression, seizures, infertility, pulmonary injury, and hepatic veno-occlusive disease.

Butanol

Butanol is a flammable alcohol solvent; ingestion or substantial exposure can irritate tissues and depress the central nervous system.

Butazolidin Overdose

Toxic effects from excessive phenylbutazone, an older nonsteroidal anti-inflammatory drug. Severe exposure may cause gastrointestinal bleeding, kidney injury, bone-marrow suppression, metabolic disturbances, or seizures.

Buthionine Sulfoximine

An experimental compound that inhibits glutathione synthesis by blocking gamma-glutamylcysteine synthetase. It is used mainly in laboratory research to study oxidative stress and how glutathione affects drug or cancer-cell responses.

Butocarboxim

Butocarboxim is a carbamate insecticide that can inhibit acetylcholinesterase and cause cholinergic toxicity after exposure.

Butter, Margarine, And Cooking Oils

Butter, margarine, and cooking oils are dietary fat sources. Their nutritional effects depend on portion size, fatty-acid composition, and the overall eating pattern.

Buttiauxella

A genus of environmental gram-negative bacteria in the Enterobacterales; human infection is uncommon and usually opportunistic.

Buttiauxella Agrestis

A biomedical term referring to *buttiauxella agrestis*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Buttiauxella Ferragutiae

A biomedical term referring to *buttiauxella ferragutiae*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Buttiauxella Gaviniae

A biomedical term referring to *buttiauxella gaviniae*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Buttiauxella Noackiae

A biomedical term referring to *buttiauxella noackiae*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Buttock

The buttock is the rounded posterior region overlying the gluteal muscles, used for movement, sitting, examination, and selected injections.

Buttocks

The paired fleshy regions overlying the gluteal muscles at the back of the pelvis, formed mainly by muscle and subcutaneous fat.

Button Batteries

Button batteries are small batteries that can cause severe tissue injury if swallowed or inserted into the nose or ear. Suspected ingestion requires emergency evaluation.

Button Magnets In The Nasal Cavity

Ingestion or insertion of small magnets into the nose, posing a risk of nasal septal perforation or necrosis if multiple magnets are involved, requiring urgent removal.

Buttonhole Deformity

Buttonhole deformity is a finger deformity with flexion of the proximal interphalangeal joint and hyperextension of the distal interphalangeal joint, often due to central slip injury or rheumatoid disease.

Buttressing

Buttressing is reinforcement or thickening that supports a weakened structure; in bone it may describe cortical stress adaptation or surgical structural support.

Butylamine

Butylamine is an irritating industrial amine whose vapor or liquid can injure the eyes, skin, and respiratory tract after exposure.

Butyric Acid

Butyric acid is a short-chain fatty acid produced by gut bacteria during fiber fermentation and used by colon cells as an energy source; concentrated exposure irritates tissue.

Buying And Caring For Baby Bottles And Nipples

Safe selection and cleaning of baby bottles and nipples reduce contamination, feeding injury, and improper preparation risks.

Bx

A common medical abbreviation for biopsy, the removal of cells or tissue for microscopic or laboratory examination.

By-Pass

A by-pass is a route created around an obstruction, such as a vascular, gastrointestinal, or urinary surgical bypass, or a cardiac bypass circuit.

Bypass

Surgical creation of alternative route around blocked vessel. Uses vein or prosthetic graft.

Bypass (Vascular)

Surgical procedure creating detour around blocked vessel using autologous vein (saphenous) or prosthetic graft (PTFE, Dacron). See Bypass Graft.

Alternate Names:

Vascular

Bypass Graft

Surgical procedure creating detour around blocked vessel using autologous vein (saphenous) or prosthetic graft (PTFE, Dacron). Indications: peripheral arterial disease, coronary artery disease, aortic aneurysm. Long-term patency depends on graft type, inflow/outflow, patient factors.

Bypass Surgery

A surgical conduit that reroutes flow around an obstructed or diseased segment, applied to coronary arteries (CABG), peripheral arteries (autologous vein or prosthetic bypass), and the gastrointestinal tract (gastric bypass). Principal long-term concerns are conduit patency, graft infection, and anastomotic stenosis.

Byssinosis

An occupational obstructive airway disease caused by inhalation of textile fibers, especially cotton, flax, or hemp dust. It may cause chest tightness and cough that worsen during or after work exposure.

C

C And T Cells

B cells make antibodies, while T cells help coordinate the body's defenses or destroy infected and abnormal cells. Together, they are major types of white blood cells.

C Fiber

A slow nerve fiber without an insulating covering that carries dull pain, warmth, and itch.

C-Peptide

A small protein fragment released when the pancreas makes insulin. Measuring it helps show how much insulin a person's body is making, rather than how much injected insulin is present. Kidney function and blood-glucose levels can affect the result.

C-Reactive Protein

A protein made by the liver that rises when there is inflammation or infection. It can help monitor inflammatory diseases and possible infection, but it does not identify the cause by itself. A high-sensitivity CRP test may be used with other information to assess heart-disease risk.

C-Reactive Protein

See *C-Reactive Protein*.

C-Reactive Protein Test

A blood test that measures C-reactive protein. The level may rise with inflammation or infection, but the test cannot identify the cause by itself and must be interpreted with symptoms and other findings.

C-Section

Cesarean section, surgical delivery of a fetus through incisions in the abdominal wall and uterus.

C. Diff

Alternate index label; see *C. difficile infection*.

C. Difficile

Clostridioides difficile, a bacterium that can survive as resistant spores and cause diarrhea and inflammation of the colon, often after antibiotic use. It produces toxins that injure the colon. Risk is also increased by some acid-reducing medicines and older age. Treatment may include vancomycin or fidaxomicin.

C. Difficile Colitis

Alternate index label; see *Pseudomembranous colitis*.

C. Difficile Infection

Infection with *Clostridioides difficile* bacteria, often causing antibiotic-associated diarrhea and colitis.

Alternate Names:

C. Diff

C1Q Nephropathy

A kidney disorder in which a protein called C1q builds up in the kidney's filtering units. It may cause protein in the urine and reduced kidney function.

C282Y Mutation

A change in the HFE gene that is the most common genetic cause of hereditary hemochromatosis,

a condition in which the body stores too much iron. Having two copies of this mutation increases the risk, although not everyone with two copies develops the disease.

CA 19-9

A blood marker that may be high in pancreatic and other digestive-system cancers, but also in non-cancerous bile-duct or inflammatory conditions. It cannot screen for or diagnose cancer by itself.

CA 27-29

A blood tumor-marker test used mainly to monitor some people with breast cancer. It is not used by itself to screen for or diagnose cancer.

CA-125

A blood test marker used mainly to monitor some ovarian cancers or evaluate a known abnormality. It can also rise with noncancerous conditions, inflammation, liver disease, and other cancers, so it cannot by itself screen for or diagnose ovarian cancer.

Alternate Names:

CA125

CA-125 Blood Test

See *CA-125*.

Cabazitaxel

A medicine or chemical compound identified by cabazitaxel. Its uses, effects, and risks depend on the specific substance and clinical context.

Cabergoline

A dopamine D2-receptor agonist used to suppress prolactin secretion and treat hyperprolactinemia; it is also used in selected Parkinson disease settings and requires monitoring for adverse effects.

CABG

Coronary artery bypass grafting, surgery that creates a new path around a narrowed or blocked heart artery to improve blood flow to the heart muscle.

Alternate Names:

Coronary artery bypass grafting; coronary bypass

surgery.

Cabot Ring

A threadlike or ring-shaped mark inside a red blood cell. It may appear in severe anemia or when the bone marrow is not making red blood cells normally.

Cachectic

Affected by cachexia, a severe wasting syndrome involving involuntary weight loss, muscle loss, weakness, and often reduced appetite in chronic disease.

Cachetic

An alternate spelling of cachectic, meaning characterized by severe disease-related wasting and loss of muscle and body mass.

Cachexia

Severe, unintentional weight loss and loss of muscle caused by long-term illness. It may occur with cancer, heart failure, chronic lung disease, or advanced kidney disease and often involves inflammation and poor appetite.

Cacosmia

An unpleasant or distorted sense of smell in which odors may seem foul. It can occur with nose or sinus disease, infection, seizures, injury, or other nervous-system disorders.

CAD

Coronary artery disease, narrowing or blockage of the heart's arteries, usually from atherosclerotic plaque, that can cause angina or myocardial infarction.

CADASIL Syndrome

An inherited disorder of small brain arteries that can cause migraine with aura, strokes, mood symptoms, and cognitive decline.

Cadaver

A dead human body used for medical education, research, or examination. It may be preserved by embalming to slow decomposition.

Cadaveric Spasm

Rare form of instantaneous post-mortem stiffening of a specific group of voluntary muscles at the exact moment of death, without an intervening period of muscle relaxation.

Cadherin

A protein that helps neighboring cells stick together and keeps tissues organized. Changes in cadherins can help some cancers invade nearby tissue and spread.

Cadmium

A toxic heavy metal found in tobacco smoke, batteries, pigments, and contaminated food; chronic exposure can injure the kidneys, lungs, and bones and increases cancer risk.

Cadmium Chloride

A medicine or chemical compound identified by cadmium chloride. Its uses, effects, and risks depend on the specific substance and clinical context.

Caduceus

A staff with two entwined snakes and wings, traditionally associated with Hermes; it is often used as a medical symbol but is distinct from the single-snake Rod of Asclepius.

Cadusafos

An organophosphate pesticide that inhibits acetylcholinesterase; exposure can cause cholinergic poisoning with sweating, salivation, vomiting, weakness, breathing difficulty, or seizures.

Caecal

Relating to the cecum, the pouch at the beginning of the large intestine where the small intestine joins the colon.

Caecitis

Inflammation of the cecum. Causes include infection, inflammatory bowel disease, ischemia, neutropenic enterocolitis, and extension of adjacent inflammatory disease.

Caecopexy

Surgery that attaches the cecum, the first pouch of the large intestine, to nearby tissue to prevent or treat abnormal movement or twisting of the cecum.

Caecostomy

Surgery that creates an opening from the cecum, the first part of the large intestine, to the abdominal wall to release pressure or divert bowel contents. It may be temporary.

Caecotomy

Surgery to make an opening in the cecum, the first part of the large intestine, usually to remove an object, reach the bowel, or assist another abdominal operation.

Caecum

The first pouch-like part of the large intestine, located where the ileum joins the colon and attached to the appendix.

Caenorhabditis Elegans

A biomedical term referring to *caenorhabditis elegans*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Caesarean Birth

An operative procedure in which a baby is delivered through an incision in the abdominal wall and uterus. Indications: fetal distress, failure to progress in labor, breech presentation, placenta praevia, multiple pregnancy, previous cesarean, and maternal request.

Caesarean Section

A caesarean section is surgical delivery of a baby through incisions in the abdomen and uterus when vaginal birth is unsafe or not feasible.

Cafe-Au-Lait Macules

Flat, uniformly hyperpigmented, light-brown to dark-brown (cafe-au-lait, "coffee with milk") macules, > 5 mm in prepubertal children or > 15 mm

in postpubertal individuals.

Cafe-Au-Lait Spot

A flat, evenly pigmented light-brown skin macule; several lesions or characteristic size and distribution may suggest neurofibromatosis type 1 or another genetic disorder.

Café Au Lait Spot

A flat, sharply demarcated, light-brown skin macule caused by increased melanin. Multiple lesions may be a feature of neurofibromatosis type 1 or other genetic disorders.

Café Coronary

Sudden airway obstruction by food, usually occurring while eating and sometimes causing collapse or death if the airway is not rapidly cleared.

Café-Au-Lait Macules

Flat, light-brown skin patches with relatively uniform pigmentation. Multiple lesions may be associated with genetic disorders such as neurofibromatosis type 1.

Caffeic Acid

A plant-derived phenolic compound found in coffee, fruit, and vegetables; it participates in plant metabolism and is studied experimentally for antioxidant and other biologic effects.

Caffeine

A stimulant found in coffee, tea, chocolate, soft drinks, and energy drinks. It increases alertness and can raise heart rate, cause shakiness, or disturb sleep.

Caffeine Intoxication

A toxic state caused by excessive caffeine exposure, characterized by symptoms such as restlessness, nervousness, insomnia, rapid heartbeat, tremor, gastrointestinal upset, or agitation.

Caffeine Overdose

Caffeine overdose can cause agitation, tremor, vom-

iting, rapid heartbeat, abnormal rhythm, seizures, and dangerous metabolic disturbances.

Caffeine Withdrawal

A syndrome occurring after abrupt cessation or reduction of caffeine use. Symptoms include headache, fatigue, depressed mood, difficulty concentrating, and flu-like symptoms. Onset is typically 12–24 hours after last caffeine intake, peak at 20–51 hours, and duration of 2–9 days.

Caisson Disease

Decompression sickness caused by gas bubbles forming in the body after a rapid drop in surrounding pressure, such as during diving. It can cause joint pain, breathing problems, nervous-system injury, or collapse.

Cal (Calorie)

A unit of energy; in nutrition, a Calorie with a capital C is a kilocalorie equal to 1,000 small calories and is used to describe food energy.

Caladium Plant Poisoning

Poisoning caused by calcium oxalate crystals in the plant. Chewing may cause immediate burning and swelling of the mouth and throat; airway symptoms require emergency care.

Calamine

Calamine is a topical preparation containing zinc compounds used to soothe itching and irritation from minor rashes, insect bites, and sunburn.

Calbindin

A calcium-binding protein that buffers intracellular calcium and supports signaling, especially in neurons and intestinal epithelial cells; it is also used as a tissue marker.

Calcaneal Spur

A bony outgrowth from the heel bone, often at the plantar fascia attachment or Achilles tendon attachment; it may be asymptomatic or associated with heel pain.

Calcaneum

The calcaneum, or calcaneus, is the large heel bone that transfers load from the ankle and forms part of the hindfoot.

Calcaneus

Largest tarsal bone forming the heel. Articulates with talus proximally and cuboid anteriorly. Lever for the calf muscles via the Achilles tendon on its posterior tuberosity. Predominantly trabecular bone, the most commonly fractured tarsal bone from falls from height. Bohler's angle assesses fractures on lateral radiographs.

Calcifediol

25-hydroxyvitamin D, the major circulating storage form of vitamin D measured to assess vitamin-D status before activation to calcitriol.

Calciferol

Vitamin D is a fat-soluble vitamin (actually a pro-hormone) essential for calcium and phosphorus homeostasis and bone health. See Vitamin D: Calcitriol.

Calcific Bursitis

Calcific bursitis occurs when calcium deposits form in or around a bursa, often near the shoulder, causing pain and restricted movement. Treatment may include activity modification, anti-inflammatory care, physical therapy, aspiration, injection, or removal of deposits.

Alternate Names:

Bursitis Calcific (Calcific Bursitis)

Calcific Tendinitis

Deposition of calcium hydroxyapatite crystals within a tendon, most often the rotator cuff, causing acute pain and restricted movement.

Calcific Uremic Arteriopathy

A rare disorder, usually linked to advanced kidney disease, in which calcium builds up in small blood vessels and causes painful injury or tissue death in the skin and tissues beneath it.

Calcification

Calcification is abnormal deposition of calcium salts in tissue; its significance depends on the site, pattern, underlying injury, and associated disease. calcium or phosphate metabolism is abnormal.

Calcified Granuloma

A healed granulomatous inflammatory lesion in which calcium has been deposited, commonly seen as a small calcified focus in the lung or another organ.

Calcineurin

An enzyme that helps immune cells respond to signals. Medicines such as cyclosporine block this enzyme and reduce T-cell activity.

Calcinosis

Cutaneous calcinosis, the deposition of insoluble calcium phosphate salts within the skin and subcutaneous tissues, occurring in connective tissue diseases such as scleroderma and dermatomyositis, or as a localized phenomenon. Lesions present as firm, white, subcutaneous nodules that may ulcerate and extrude chalky material.

Calcinosis

The pathological deposition of calcium salts in cutaneous and subcutaneous tissues, presenting as firm, white to yellowish nodules or plaques that may ulcerate and extrude chalky material.

Calciophylaxis

A rare, serious condition in which calcium builds up in small blood vessels and causes painful skin wounds and tissue death, usually in people with advanced kidney disease. Risk is increased by obesity and some medicines, including warfarin. Treatment requires specialist care, wound care, and control of calcium and phosphate levels.

Calcitonin

A 32-amino-acid peptide hormone secreted by the parafollicular C-cells of the thyroid gland in response to elevated serum calcium. It lowers blood calcium by inhibiting osteoclast-mediated bone resorption

and increasing renal calcium excretion.

Calcitonin Blood Test

A blood test that measures calcitonin, a hormone produced by thyroid C cells. It is used mainly to evaluate or monitor medullary thyroid carcinoma and may be affected by other thyroid, kidney, gastrointestinal, or medicine-related factors.

Calcitriol

The active form of vitamin D. It helps the intestines absorb calcium and phosphate and helps regulate parathyroid hormone and bone health.

Calcitriol And Analogues

Active vitamin D forms suppressing PTH. Calcitriol, paricalcitol, doxercalciferol. Monitor calcium and phosphorus to avoid hypercalcemia and hyperphosphatemia. Part of CKD-MBD management.

Calcium

A mineral needed for strong bones and teeth, muscle movement, nerve signals, blood clotting, and normal cell function. Blood calcium exists in an active free form and forms attached to proteins or other substances.

Calcium - Ionized

A blood test measuring ionized calcium, the biologically active fraction of circulating calcium. It is useful when total calcium may be misleading, such as with abnormal albumin, critical illness, or acid-base disturbances.

Calcium - Urine

A urine test measuring calcium excretion over a specified collection period or in a spot specimen. It helps evaluate kidney stones, parathyroid disorders, bone disease, and abnormal calcium handling, and must be interpreted with kidney function and diet.

Calcium Blood Test

A blood test that measures calcium, usually as total calcium. The result may be interpreted with albumin, a blood protein, or measured as ionized

calcium when the active form is needed. It helps assess parathyroid, bone, and kidney disorders.

Calcium Carbonate

A medicine or chemical compound identified by calcium carbonate. Its uses, effects, and risks depend on the specific substance and clinical context.

Calcium Carbonate Overdose

Overdose of calcium carbonate that may cause gastrointestinal symptoms, hypercalcemia, alkalosis, kidney injury, or kidney stones.

Calcium Carbonate With Magnesium Overdose

Overdose of calcium and magnesium salts that may cause nausea, constipation, weakness, altered mental status, hypercalcemia, or kidney injury.

Calcium Channel

A protein in the cell membrane that controls calcium entry into cells. Calcium channels help regulate muscle contraction, the release of substances, nerve signals, and heart rhythm.

Calcium Chloride

A medicine or chemical compound identified by calcium chloride. Its uses, effects, and risks depend on the specific substance and clinical context.

Calcium Citrate

A medicine or chemical compound identified by calcium citrate. Its uses, effects, and risks depend on the specific substance and clinical context.

Calcium Deficiency

Inadequate calcium intake or availability; severe deficiency can contribute to hypocalcemia, muscle spasms, impaired bone mineralization, and increased fracture risk.

Calcium Elevated (Hypercalcemia)

Alternate index label for Hypercalcemia.

Calcium Gluconate

A medicine or chemical compound identified by calcium gluconate. Its uses, effects, and risks depend on the specific substance and clinical context.

Calcium Hydroxide Poisoning

Exposure to a caustic alkali that can burn the mouth, esophagus, skin, or eyes. Airway and gastrointestinal injury require urgent assessment.

Calcium Phosphate

The principal mineral constituent of bone and teeth, existing as hydroxyapatite crystals. In pathological states, calcium phosphate deposits form in soft tissues through dystrophic calcification in damaged tissue or metastatic calcification in hypercalcemic conditions.

Calcium Pyrophosphate Arthritis

Acute or chronic inflammatory arthritis caused by deposition of calcium pyrophosphate crystals in cartilage and joints. Acute attacks, often called pseudogout, commonly affect the knee or wrist and are diagnosed by identifying weakly positively birefringent crystals in synovial fluid.

Calcium Pyrophosphate Deposition

Alternate index label; see *Calcium Pyrophosphate Deposition Disease*.

Calcium Pyrophosphate Deposition Disease

A crystal arthropathy caused by deposition of calcium pyrophosphate dihydrate crystals in articular cartilage (chondrocalcinosis). Presents with acute pseudogout (most common): acute monoarticular inflammation of the knee or wrist, mimicking gout but less painful.

Alternate Names:

Calcium Pyrophosphate Deposition

Calcium Sensing Receptor

G-protein coupled receptor expressed primarily on parathyroid glands and renal tubular cells that senses extracellular ionized calcium levels. On

parathyroid glands activation suppresses PTH secretion. On renal tubular cells activation increases calcium excretion and decreases phosphate reabsorption.

Calcium Signaling

Cell communication in which changes in calcium concentration activate proteins controlling contraction, secretion, metabolism, and gene expression.

Calcium Stones

Most common kidney stone type composed of calcium oxalate or calcium phosphate. Risk factors include hypercalciuria, hyperoxaluria, hypocitraturia, and low urine volume. Treat with thiazides for hypercalciuria, dietary modification, and hydration. Potassium citrate for hypocitraturia.

Calculi

Hardened mineral concretions, such as gallstones, kidney stones, or salivary stones, formed when dissolved substances precipitate and aggregate within a body organ or duct.

Calculus

A calculus is a hard deposit formed from mineral salts, such as a kidney stone, gallstone, or dental tartar.

Calculus (Tartar)

Mineralized dental plaque. Cannot be removed by brushing. Requires professional scaling. Retains plaque, promotes inflammation.

Alternate Names:

Tartar

Calculus Removal

Professional cleaning to remove hardened plaque. Scaling and root planing. Ultrasonic and hand instruments.

Calculus, Renal

A kidney stone, a hard mass of mineral crystals formed in the urinary tract that may cause colicky pain, hematuria, obstruction, or infection.

Caldwell-Luc Operation

A surgical approach to the maxillary sinus through the canine fossa of the anterior maxilla. It is used selectively for access to maxillary sinus disease, lesions, or foreign bodies.

Calf

The posterior portion of the lower leg between the knee and ankle, containing the gastrocnemius, soleus, and other muscles.

Calf Pseudohypertrophy

A classic clinical physical examination sign seen in muscular dystrophies, most notably Duchenne and Becker muscular dystrophies, as well as some limb-girdle muscular dystrophies and sarcoglycanopathies. Refers to the paradoxically prominent, firm, enlarged, and bulky appearance of the calf muscles (gastrocnemius and soleus), which is caused not by true muscular hypertrophy, but by progressive chronic necrosis, degeneration of skeletal myofibers, and compensatory replacement by fibrous connective tissue and extensive adipocyte infiltration.

Alternate Names:

Pseudohypertrophy of the Calves; Muscular Pseudohypertrophy

Calibration

The process of adjusting and verifying the accuracy of medical instruments, diagnostic devices, or laboratory equipment against known standards to ensure reliable measurements and patient safety.

Caliciviridae

Caliciviridae is a virus or viral group classified by its genetic and biologic features; clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Calipers

An instrument with opposing arms used to measure distance, thickness, or body dimensions, including skinfold thickness in nutritional assessment.

Calla Lily Poisoning

Poisoning caused by calcium oxalate crystals in the plant. Chewing may cause immediate burning and swelling of the mouth and throat; airway symptoms require emergency care.

Callosal

Callosal means relating to the corpus callosum, the major bundle of fibers connecting the cerebral hemispheres.

Callosity

A callosity is a localized area of thickened skin caused by repeated pressure or friction.

Callosotomy

Surgical division of the corpus callosum to reduce the spread of certain severe, treatment-resistant seizures between the cerebral hemispheres.

Callus

A localized area of thickened, hardened skin caused by repeated pressure or friction.

Calmodulin

An intracellular calcium-binding messenger protein that changes shape when it binds calcium and regulates enzymes, ion channels, muscle contraction, and gene expression.

Calnexin

An endoplasmic-reticulum chaperone that binds newly synthesized glycoproteins and helps them fold correctly before they are transported or degraded.

Calor

Heat or increased warmth of a body part, one of the classic local signs of inflammation.

Calor, Dolor, Rubor, And Tumor

The classic signs of inflammation: heat, pain, redness, and swelling; inflammation may also impair function.

Caloric Restriction

Reduced calorie intake without malnutrition. Associated with longevity, reduced chronic disease risk. Requires careful planning.

Caloric Stimulation

A vestibular test that introduces warm or cool air or water into the ear canal to create convection in the semicircular canal and assess each vestibular nerve.

Calorie

A unit of energy measurement used in nutrition to quantify the energy content of foods and energy expenditure of the body. One kilocalorie (kcal, commonly called a Calorie with capital C) equals the energy required to raise 1 kilogram of water by 1 degree Celsius.

Alternate Names:

a Calorie.

Calories

Units used to express the energy supplied by food or expended by the body; food labels generally report kilocalories, commonly called calories.

Calorimetry

A technique for measuring heat production or exchange in the body, used to assess metabolic rate, energy expenditure, and nutritional requirements. Indirect calorimetry estimates energy expenditure from oxygen consumption and carbon dioxide production.

Calpain

A family of calcium-dependent cysteine proteases found in cytosol that cleave cytoskeletal and signaling proteins. Calpains are involved in cell migration, apoptosis, and platelet activation, and their dysregulation is implicated in neurodegenerative diseases and muscular dystrophy.

Calpainopathy

An autosomal recessive muscular dystrophy (Limb-Girdle Muscular Dystrophy R1 [LGMD R1], his-

torically LGMD 2A) caused by pathogenic biallelic loss-of-function mutations in the *CAPN3* gene on chromosome 15q15.1, encoding calpain-3, a skeletal muscle-specific intracellular calcium-activated neutral cysteine protease bound to titin. Represents the most common form of recessive limb-girdle muscular dystrophy worldwide. Manifests between ages 8 and 15 with slowly progressive, symmetrical weakness and wasting of the pelvic, hip girdle, and shoulder muscles, prominent early winging of the scapulae, lumbar lordosis, tiptoe walking due to Achilles tendon contractures, and laxity of abdominal wall muscles, generally sparing facial, extraocular, and cardiac muscles.

Alternate Names:

Limb-Girdle Muscular Dystrophy R1 (LGMD R1); LGMD 2A; Calpain-3 Deficiency

Calponin

An actin-associated protein in smooth muscle and other cells that modulates contraction and cytoskeletal organization; immunostaining can help identify myoid differentiation.

Calprotectin

Calprotectin is a protein released by activated neutrophils; fecal calprotectin helps detect intestinal inflammation, especially in inflammatory bowel disease.

Calreticulin

An endoplasmic-reticulum chaperone and calcium-binding protein involved in protein folding and immune signaling; CALR mutations are associated with some myeloproliferative neoplasms.

Calretinin

A calcium-binding protein expressed in selected neurons, mesothelial cells, and other tissues; immunohistochemical staining helps distinguish mesothelioma from some carcinomas.

Calvaria

The dome-shaped upper portion of the skull that protects the brain.

Calvarium

The dome-like portion of the skull formed mainly by the frontal, parietal, and occipital bones that encloses and protects the cerebral hemispheres.

Calyx

A cup-shaped structure that collects fluid or supports an organ. In the kidney, renal calyces collect urine from the renal pyramids and convey it to the renal pelvis.

Cambridge Classification

ERCP-based grading system for chronic pancreatitis severity evaluating the main pancreatic duct, branches, and common bile duct. Normal pancreas shows smooth duct without abnormalities. Equivocal shows fewer than three abnormal side branches. Mild shows three or more abnormal side branches. Moderate shows abnormal main duct.

Cameron Lesions

Linear gastric erosions or ulcers found on the mucosal folds at the diaphragmatic hiatus in patients with large hiatal hernias. They result from mechanical trauma as the gastric mucosa prolapses through the diaphragmatic crura during respiration and movement.

Campesterol

A plant sterol structurally related to cholesterol that is absorbed in small amounts from food; elevated absorption can contribute to rare sitosterolemia.

Campho-Phenique Overdose

Overdose of a topical product containing camphor and other ingredients. Toxicity may include gastrointestinal or neurologic symptoms, including seizures.

Camphor

A fragrant bicyclic compound used in topical products and some traditional remedies; ingestion can cause nausea, agitation, seizures, and potentially fatal toxicity.

Camphor Overdose

Overdose of camphor that can cause nausea, agitation, seizures, coma, and respiratory depression. Seizures may occur rapidly and require emergency treatment.

Campimetry

Measurement and mapping of the visual field, usually by presenting stimuli at different locations while the patient maintains fixation. It helps detect and characterize defects from retinal, optic-nerve, or retrochiasmal disease.

Campomelic Dysplasia

A rare SOX9-related skeletal disorder with bowed long bones, underdeveloped shoulder blades, and characteristic facial and airway abnormalities.

Camptocormia

A marked forward flexion of the trunk that increases while standing or walking and improves when lying down. It can occur with axial myopathy, Parkinsonian disorders, dystonia, or other neuromuscular disease.

Camptodactyly

A congenital or acquired flexion deformity of one or more fingers, usually caused by shortening or abnormality of tendons, muscles, fascia, or joints. It often affects the proximal interphalangeal joints.

Camptothecin

A plant-derived compound that inhibits topoisomerase I by stabilizing the enzyme–DNA cleavage complex; related drugs include irinotecan and topotecan.

Campylobacter

A genus of curved, motile Gram-negative bacteria; several species cause intestinal infection and some cause invasive disease.

Campylobacter Coli

A *Campylobacter* species that commonly causes foodborne gastroenteritis with diarrhea, abdominal

pain, and fever.

Campylobacter Concisus

A microbial taxon named campylobacter concisus that is usually environmental or part of normal flora; disease, when it occurs, depends on the site and host defenses.

Campylobacter Curvus

A microbial taxon named campylobacter curvus that is usually environmental or part of normal flora; disease, when it occurs, depends on the site and host defenses.

Campylobacter Fetus

A Campylobacter species that can cause bacteremia and infections of blood vessels, joints, or other tissues, especially in people with impaired immunity.

Campylobacter Gracilis

A microbial taxon named campylobacter gracilis that is usually environmental or part of normal flora; disease, when it occurs, depends on the site and host defenses.

Campylobacter Infection

Bacterial gastroenteritis caused most often by Campylobacter jejuni or C. coli, usually acquired from contaminated poultry, food, water, or unpasteurized milk. It causes fever, abdominal cramps, and diarrhea that may be bloody and can rarely precede Guillain-Barre syndrome.

Campylobacter Jejuni

A leading cause of foodborne gastroenteritis, commonly causing fever, abdominal cramps, and sometimes bloody diarrhea.

Campylobacter Lari

A microbial taxon named campylobacter lari that is usually environmental or part of normal flora; disease, when it occurs, depends on the site and host defenses.

Campylobacter Rectus

A microbial taxon named campylobacter rectus that is usually environmental or part of normal flora; disease, when it occurs, depends on the site and host defenses.

Campylobacter Serology Test

A blood test that looks for antibodies to Campylobacter species; it may support evaluation of selected postinfectious complications, but stool molecular testing or culture is generally used to diagnose active intestinal infection.

Campylobacter Upsaliensis

A microbial taxon named campylobacter upsaliensis that is usually environmental or part of normal flora; disease, when it occurs, depends on the site and host defenses.

Campylobacteraceae

A family of curved or spiral Gram-negative bacteria that includes Campylobacter and related genera.

Campylobacteriosis

Infection caused by Campylobacter species, commonly producing fever, abdominal pain, and inflammatory diarrhea that may be bloody. Complications can include dehydration, bacteremia, reactive arthritis, or Guillain-Barré syndrome.

Can You Boost Your Metabolism?

A health question about increasing energy expenditure; activity, muscle mass, sleep, diet, medicines, and endocrine disease influence metabolism, while quick “boosts” are usually modest.

Canagliflozin

An SGLT2 inhibitor that lowers blood glucose by increasing urinary glucose excretion and also reduces selected heart-failure and kidney risks; adverse effects include genital infections and ketoacidosis.

Canal Of Schlemm

A circular endothelial-lined channel at the corneoscleral junction that drains aqueous humor from

the anterior chamber into the episcleral venous circulation. Impaired outflow contributes to glaucoma.

Canaliculus

A canaliculus is a small anatomical channel, such as a lacrimal canaliculus that drains tears from the eyelid into the lacrimal sac.

Canalith Repositioning Maneuver

A series of head movements used to move displaced inner-ear crystals out of a semicircular canal, commonly to treat posterior-canal benign positional vertigo.

Canalith Repositioning Maneuvers

Canalith repositioning maneuvers move displaced inner-ear crystals from a semicircular canal back to the utricle. They are used for benign paroxysmal positional vertigo, with the maneuver selected according to the affected canal and side.

Canalization

Canalization is formation or restoration of a channel through tissue, a vessel, or an embryonic structure; in thrombosis it may describe reopening of an occluded vessel.

Canarypox Virus

Canarypox virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Canavan Disease

An autosomal-recessive leukodystrophy caused by aspartoacylase deficiency, leading to accumulation of N-acetylaspartate and progressive spongy degeneration of cerebral white matter. It typically presents in infancy with hypotonia followed by developmental impairment and macrocephaly.

Cancell

A shortened or misspelled form of cancellous, referring to the porous, trabecular interior of bone that

contains marrow and helps distribute mechanical load.

Cancellous Bone

Porous, trabecular bone found inside many bones, especially near joints and in the vertebrae.

Cancer

Cancer is uncontrolled growth of abnormal cells that can invade nearby tissue and spread to distant organs; behavior and treatment depend on its tissue of origin and molecular features. or spread to distant sites. Cancer may arise in any tissue and is classified by its site and cell type. Early detection and treatment improve outcomes.

Cancer And Lymph Nodes

Cancer cells can spread to nearby or distant lymph nodes; lymph-node examination, imaging, or biopsy helps determine cancer stage and guide treatment.

Cancer Care Team

The multidisciplinary group of health professionals involved in cancer care, which may include oncologists, surgeons, radiologists, pathologists, nurses, pharmacists, rehabilitation specialists, psychologists, and palliative-care professionals.

Cancer Causes

Cancer develops when genetic and epigenetic changes allow cells to grow, survive, and invade abnormally. Causes and risks include inherited susceptibility, tobacco, alcohol, infections, radiation, ultraviolet exposure, carcinogens, chronic inflammation, and chance changes during cell division.

Alternate Names:

Cancer Risk (Cancer Causes)

Cancer Cell

A cell that has acquired genetic and epigenetic abnormalities allowing uncontrolled growth, impaired normal differentiation, resistance to cell death, invasion of surrounding tissues, or spread to distant sites.

Cancer Cluster

A greater-than-expected number of cancer cases in a defined group, place, or period; investigation compares the observed cases with expected rates and looks for shared exposures or chance variation.

Cancer Genetics

Inherited cancer syndromes. Examples: BRCA1/2 (breast, ovarian), Lynch syndrome (colon), Li-Fraumeni (various).

Cancer Grading

Assessment of how abnormal cancer cells appear under a microscope and how aggressively the tumor is likely to behave. It differs from cancer staging, which describes the extent of spread.

Cancer Immunotherapy

Treatment of cancer using agents that modify the immune response to recognize and destroy tumor cells, including checkpoint inhibitors, CAR T-cell therapy, cytokines, and cancer vaccines. It may be used alone or combined with chemotherapy or radiation.

Cancer Mutations

Genetic changes in cancer cells that can affect cell growth, survival, or spread. Most are acquired during a person's lifetime and are not inherited. Some are driver mutations that help cancer develop or progress, while others are passenger mutations with little effect. Testing for certain mutations may help guide diagnosis, prognosis, or targeted treatment.

Cancer In Lung (Lung Cancer)

Alternate index label for Lung Cancer.

Cancer Nutrition

Malnutrition common in cancer. Hypermetabolism, cachexia, treatment side effects. Nutritional support improves outcomes. High protein, high calorie.

Cancer Of Unknown Origin

Alternate index label; see *Carcinoma of unknown*

primary.

Cancer Of Unknown Primary

Metastatic cancer in which the primary site cannot be identified despite investigation. Workup includes histology, immunohistochemistry, and molecular profiling to guide treatment.

Cancer Pain

Pain caused by a tumor, its spread, or cancer treatment. It may be continuous or episodic and can involve bone, nerves, or internal organs. Management may include treating the cancer, non-opioid medicines, opioids, nerve-directed treatments, and supportive care.

Alternate Names:

Pain Cancer (Cancer Pain)

Cancer Prevention

Measures that lower cancer risk or detect precancerous change early, including tobacco avoidance, vaccination, healthy behaviors, reducing harmful exposures, and recommended screening.

Cancer Registry

System for collecting cancer data. Used for epidemiology, quality improvement, research.

Cancer Risk

The likelihood that a person will develop cancer, influenced by age, inherited variants, family history, tobacco, alcohol, infections, radiation, environmental exposures, and chance.

Cancer Risk (Cancer Causes)

Alternate index label for Cancer Causes.

Cancer Screening

Testing people without symptoms to detect certain cancers or precancerous changes early, when treatment may be more effective.

Cancer Staging

Classification of cancer extent. TNM system: T (tumor size/extent), N (nodal involvement), M (metas-

tasis). Stages: 0 (in situ), I (early), II-III (advanced), IV (metastatic). Guides treatment and prognosis.

Cancer Surveillance

The systematic, ongoing collection and analysis of information about cancer incidence, stage, treatment, survival, recurrence, and mortality for patient follow-up, research, and public-health planning.

Cancer Survivor

Person living with cancer from diagnosis through end of life and beyond.

Cancer Susceptibility Genes

Genes in which inherited pathogenic variants increase a person's risk of developing one or more cancers. Examples include BRCA1, BRCA2, APC, and mismatch-repair genes; a susceptibility variant does not guarantee that cancer will develop.

Cancer Treatment - Dealing With Pain

Pain during or after cancer treatment may arise from the tumor, surgery, radiation, chemotherapy, or nerve injury; management can combine treatment of the cause, analgesics, rehabilitation, and supportive care.

Cancer Treatment - Early Menopause

Menstrual periods may stop early after chemotherapy, pelvic radiation, ovarian surgery, or hormone-blocking treatment; symptoms and fertility effects require individualized oncology and gynecologic care.

Cancer Treatment: Dealing With Hot Flashes And Night Sweats

Hot flashes and night sweats may result from cancer treatment or hormone changes; options include cooling measures, behavioral strategies, and selected nonhormonal or hormonal medicines when appropriate.

Cancer Treatments

Treatments for cancer include surgery, radiation,

chemotherapy, immunotherapy, targeted therapy, hormone therapy, stem-cell transplantation, and supportive or palliative care, selected according to tumor type, stage, biology, and patient goals.

Cancer, Carcinoid Tumors

Alternate index label; see *Carcinoid tumors*.

Cancer, Chronic Lymphocytic Leukemia

Alternate index label; see *Chronic lymphocytic leukemia*.

Cancer, Chronic Myelogenous Leukemia

Alternate index label; see *Chronic myelogenous leukemia*.

Cancer, Colon

Alternate index label; see *Colon cancer*.

Cancer, Endometrial

Alternate index label; see *Endometrial cancer*.

Cancer, Esophageal

Alternate index label; see *Esophageal cancer*.

Cancer, Eye Melanoma

Alternate index label; see *Eye melanoma*.

Cancer, Floor Of The Mouth

Alternate index label; see *Floor of the mouth cancer*.

Cancer, Gallbladder

Alternate index label; see *Gallbladder cancer*.

Cancer, Gastric

Alternate index label; see *Stomach cancer*.

Cancer, Hairy Cell Leukemia

Alternate index label; see *Hairy cell leukemia*.

Cancer, Hodgkin Lymphoma

Alternate index label; see *Hodgkin lymphoma (Hodgkin disease)*.

Cancer, Hurthle Cell

Alternate index label; see *Hurthle cell cancer*.

Cancer, Inflammatory Breast

Alternate index label; see *Inflammatory breast cancer*.

Cancer, Kidney

Alternate index label; see *Kidney cancer*.

Cancer, Liver

Alternate index label; see *Liver cancer*.

Cancer, Lung

Alternate index label; see *Lung cancer*.

Cancer, Merkel Cell

Alternate index label; see *Merkel cell carcinoma*.

Cancer, Mouth

Alternate index label; see *Mouth cancer*.

Cancer, Multiple Myeloma

Alternate index label; see *Multiple myeloma*.

Cancer, Nasopharyngeal

Alternate index label; see *Nasopharyngeal carcinoma*.

Cancer, Neuroblastoma

Alternate index label; see *Neuroblastoma*.

Cancer, Neuroendocrine

Alternate index label; see *Neuroendocrine tumors*.

Cancer, Non-Hodgkin Lymphoma

Alternate index label; see *Non-Hodgkin lymphoma*.

Cancer, Ovarian

Alternate index label; see *Ovarian cancer*.

Cancer, Pancreatic

Alternate index label; see *Pancreatic cancer*.

Cancer, Paraneoplastic Syndromes

Alternate index label; see *Paraneoplastic syndromes of the nervous system*.

Cancer, Prostate

Alternate index label; see *Prostate cancer*.

Cancer, Rectal

Alternate index label; see *Rectal cancer*.

Cancer, Retinoblastoma

Alternate index label; see *Retinoblastoma*.

Cancer, Skin

Alternate index label; see *Skin cancer*.

Cancer, Soft Tissue Sarcoma

Alternate index label; see *Soft tissue sarcoma*.

Cancer, Squamous Cell

Alternate index label; see *Squamous cell carcinoma of the skin*.

Cancer, Stomach

Alternate index label; see *Stomach cancer*.

Cancer, Testicular

Alternate index label; see *Testicular cancer*.

Cancer, Throat

Alternate index label; see *Throat cancer*.

Cancer, Thyroid

Alternate index label; see *Thyroid cancer*.

Cancer, Uterine

Alternate index label; see *Endometrial cancer*.

Cancer, Vagina

Alternate index label; see *Vaginal cancer*.

Cancer, Vulvar

Alternate index label; see *Vulvar cancer*.

Cancer, Wilms' Tumor

Alternate index label; see *Wilms tumor*.

Cancer-Associated Thrombosis

Venous or arterial thrombosis occurring in the setting of active malignancy or its treatment. Tumor biology, immobilization, surgery, central venous devices, and systemic therapy contribute to risk; anticoagulation is individualized according to bleeding risk and cancer factors.

Cancrum Oris

Noma, a rapidly destructive gangrenous infection of the mouth and face that occurs mainly in severely malnourished or immunocompromised children. It begins with gingival or mucosal necrosis and can extend through facial tissues.

Candela

The SI unit of luminous intensity in a specified direction; it is used in photometry and is distinct from medical measures of light dose or illuminance.

Candida

A genus of yeast that normally colonizes skin and mucous membranes but can cause mucosal or invasive candidiasis.

Candida Albicans

The most common *Candida* species causing human disease, including thrush, genital infection, skin-fold infection, and invasive candidiasis.

Candida Albicans Infection

Infection caused by the yeast *Candida albicans*, ranging from mucosal disease to invasive bloodstream or organ infection in vulnerable patients.

Candida Auris

A multidrug-resistant yeast that can colonize skin and cause invasive bloodstream, wound, or ear infections, especially in hospitalized or immunocompromised patients. It spreads readily in healthcare settings and requires laboratory identification and strict infection-control measures.

Candida Auris Infection

Candida auris infection is an invasive or colonizing yeast infection notable for healthcare transmission and frequent resistance to antifungal medicines.

Candida Boidinii

A microbial taxon named *candida boidinii* that is usually environmental or part of normal flora; disease, when it occurs, depends on the site and host defenses.

Candida Dubliniensis

A microbial taxon named *candida dubliniensis* that is usually environmental or part of normal flora; disease, when it occurs, depends on the site and host defenses.

Candida Esophagitis

Candida infection of the esophagus, usually causing painful or difficult swallowing in people with impaired immunity.

Candida Famata

A microbial taxon named *candida famata* that is usually environmental or part of normal flora; disease, when it occurs, depends on the site and host defenses.

Candida Glabrata

A *Candida* species that can cause urinary, genital, bloodstream, or invasive infection and may resist some azole medicines.

Candida Inconspicua

A microbial taxon named *candida inconspicua* that is usually environmental or part of normal flora; disease, when it occurs, depends on the site and host defenses.

Candida Infection Of The Skin

A superficial fungal infection of the skin caused by *Candida* species, often affecting moist skin folds and causing an erythematous, itchy rash with possible satellite lesions.

Candida Intermedia

A microbial taxon named candida intermedia that is usually environmental or part of normal flora; disease, when it occurs, depends on the site and host defenses.

Candida Orthopsilosis

A microbial taxon named candida orthopsilosis that is usually environmental or part of normal flora; disease, when it occurs, depends on the site and host defenses.

Candida Parapsilosis

A Candida species associated with bloodstream and catheter-related infection, particularly in newborns and hospitalized patients.

Candida Sake

A microbial taxon named candida sake that is usually environmental or part of normal flora; disease, when it occurs, depends on the site and host defenses.

Candida Tropicalis

A Candida species that can cause mucosal or invasive infection, especially in people with neutropenia or other immune impairment.

Candida Zeylanoides

A microbial taxon named candida zeylanoides that is usually environmental or part of normal flora; disease, when it occurs, depends on the site and host defenses.

Candidal Intertrigo

A Candida infection of skin folds (axillae, inframammary, inguinal, intergluteal, pannus) characterized by erythematous, macerated plaques with satellite pustules at the periphery. Most common in obese, diabetic, and immunocompromised patients, and with prolonged antibiotic use. Presents with itching, burning, and soreness.

Candidal Vaginitis

Inflammation of the vagina caused by overgrowth of

Candida yeast, usually producing itching, soreness, and a thick white discharge.

Candidal Vulvovaginitis

Alternate index label; see *Vulvovaginal Candidiasis*.

Candidemia

The presence of Candida species in the bloodstream. It is an invasive fungal infection associated with intravascular devices, surgery, intensive care, immunosuppression, and substantial risk of organ dissemination.

Candidiasis

Fungal infection caused by Candida species, most commonly *C. albicans*. Mucocutaneous: oral thrush (white plaques on oral mucosa), esophagitis, vulvovaginitis (itching, discharge), and intertrigo. Invasive candidiasis: candidemia and deep organ infection, typically in immunocompromised or ICU patients. Diagnosis: culture, histopathology.

Candidiasis, Oral

Alternate index label; see *Oral thrush*.

Candidiasis, Vaginal

Alternate index label; see *Yeast infection (vaginal)*.

Candles Poisoning

Poisoning after ingestion of candle material or exposure to candle products. Effects are usually gastrointestinal, but product ingredients and aspiration risk determine severity.

Cane

Walking aid for balance. Types: quad (four-base), single-point. Held on opposite side of injury.

Canertinib Dihydrochloride

A medicine or chemical compound identified by canertinib dihydrochloride. Its uses, effects, and risks depend on the specific substance and clinical context.

Canfosfamide Hcl

An investigational glutathione-S-transferase P1-1–activated anticancer prodrug studied for tumor-selective cytotoxicity; it is not a routine approved treatment.

Canicola Fever

A form of leptospirosis associated particularly with *Leptospira interrogans* serovar canicola. It may cause fever, headache, myalgia, conjunctival suffusion, and renal or hepatic involvement.

Canine Teeth

Canine teeth are pointed teeth between the incisors and premolars that tear food and help guide jaw movement.

Canker

Canker is a nontechnical term often referring to an aphthous mouth ulcer, a painful shallow ulcer of the oral mucosa.

Canker Sore

A common aphthous ulcer of the oral mucosa, appearing as a painful, shallow, round or oval ulcer with an erythematous border. Most heal spontaneously, but recurrent, severe, or atypical ulcers require assessment.

Alternate Names:

Recurrent Oral Ulcers Ulcer, Aphthous

Canker Sores

Canker sores are painful, shallow ulcers on the moist lining of the mouth and are not contagious. Minor trauma, stress, nutritional deficiency, immune disease, medicines, or other triggers may contribute; persistent, severe, or recurrent ulcers need evaluation.

Alternate Names:

Sores Canker (Canker Sores)

Cannabidiol

A nonintoxicating cannabinoid from *Cannabis sativa* that influences several signaling systems; purified cannabidiol is used for selected seizure disorders,

while products vary in quality and interactions.

Cannabinoid

A compound that acts on cannabinoid receptors or related targets, including plant cannabinoids, endogenous endocannabinoids, and synthetic agents; effects vary from analgesia and appetite change to intoxication.

Cannabinoid Hyperemesis Syndrome

A syndrome of recurrent severe nausea, vomiting, and abdominal pain associated with prolonged frequent cannabis use; symptoms often improve after sustained cannabis cessation.

Cannabinoid Receptor

A G-protein-coupled receptor, chiefly CB1 or CB2, activated by endocannabinoids and some cannabis compounds to modulate pain, appetite, mood, memory, immunity, and inflammation.

Cannabinol

A mildly psychoactive cannabinoid produced as THC oxidizes; its clinical effects and therapeutic usefulness remain less established than those of several other cannabinoids.

Cannabis

Cannabis is a plant containing cannabinoids such as THC and CBD; effects include altered perception, impaired coordination, therapeutic actions, and possible dependence or adverse effects.

Cannabis Use Disorder

A problematic pattern of cannabis use leading to significant impairment. Criteria include tolerance and withdrawal (irritability, anger, decreased appetite, restlessness, anxiety, sleep disturbance). Cannabis intoxication includes euphoria, impaired judgment, and time distortion.

Cannot Intubate Cannot Oxygenate

The most critical airway emergency — inability to intubate the trachea and inability to oxygenate the patient by face mask or supraglottic airway despite

optimal efforts. CICO is a life-threatening situation requiring immediate surgical airway access. Signs: SpO2 decreasing despite 100% O2, absent end-tidal CO2, no chest rise.

Cannula

A hollow tube inserted into a blood vessel, body cavity, or tissue to deliver or remove fluids or to provide access for instruments.

Cannula Hub

The proximal connector of a cannula that joins it to tubing, a syringe, or another device and may contain a port or valve for access and fluid delivery.

Cannulation

The insertion of a cannula into a blood vessel, body cavity, duct, or other anatomical passage to permit drainage, infusion, monitoring, sampling, or access for a procedure.

Canola Oil

A vegetable oil low in saturated fat and relatively rich in monounsaturated and polyunsaturated fatty acids, commonly used as a cooking oil.

Canrenone

An active metabolite and potassium-sparing antimineralocorticoid related to spironolactone that antagonizes aldosterone at the mineralocorticoid receptor.

Cantharides

Cantharides are preparations made from blister beetles containing cantharidin, a potent irritant that can cause severe poisoning and urinary or gastrointestinal injury.

Canthaxanthin

A red-orange carotenoid pigment used as a color additive and formerly in tanning products; excessive ingestion can cause retinal crystal deposits and liver injury.

Canthotomy

A surgical incision through the outer canthus of the eyelids, usually performed urgently to relieve pressure in the orbit.

Canthus

The angle where the upper and lower eyelids meet.

Cantlie Line

Functional liver division extending from the gallbladder fossa to the IVC, corresponding to the middle hepatic vein plane. Unlike the falciform ligament (anatomical division), it represents the true functional blood supply/biliary drainage division. Right hepatic artery and portal vein supply the right half; left supply the left.

Cantuzumab Ravtansine

A medicine or chemical compound identified by cantuzumab ravtansine. Its uses, effects, and risks depend on the specific substance and clinical context.

Capacity

Autonomous voluntary authorization given by a competent patient to undergo a specific medical intervention, procedure, or clinical trial. See informed consent.

Capacity And Competence

Decision-making capacity is a clinical evaluation performed by a physician to determine whether a patient understands the nature, consequences, risks, and alternatives of a specific proposed medical decision at a given time.

Capecitabine

An oral prodrug converted in tissues to 5-fluorouracil, used for selected solid tumors; important toxicities include diarrhea, mucositis, hand-foot syndrome, and cardiotoxicity.

Capgras Syndrome

A delusional misidentification syndrome in which a person believes that someone familiar has been

replaced by an identical impostor. It can occur in neurodegenerative disease, psychosis, brain injury, or other neurologic conditions.

Capillaria

A genus of parasitic nematodes; human disease includes intestinal capillariasis and, rarely, infection of the liver or other tissues depending on the species.

Capillaria Philippinensis

A parasitic nematode acquired from raw or undercooked freshwater fish that causes intestinal capillariasis, with diarrhea, abdominal pain, malabsorption, and protein loss.

Capillaries

The smallest blood vessels, where oxygen, nutrients, and waste products move between blood and tissues.

Capillaroscopy

Examination of the small vessels in the nail-fold or another accessible surface using magnification. It can reveal capillary dilation, hemorrhage, avascular areas, and abnormal architecture in connective-tissue and microvascular disease.

Capillary

The smallest blood vessel in the body, forming a microscopic network (capillary bed) that connects arterioles to venules.

Capillary Bed

A network of interconnected capillaries that links arterioles to venules within a tissue. It provides a large surface area for exchange of oxygen, carbon dioxide, nutrients, hormones, and metabolic waste between blood and interstitial fluid.

Capillary Electrophoresis

A diagnostic test or assessment related to capillary electrophoresis. Results are interpreted with the clinical findings, test method, and reference range.

Capillary Leak Syndrome

A disorder of increased capillary permeability in

which plasma and proteins move from the intravascular space into surrounding tissues. It may cause hypotension, haemoconcentration, hypoalbuminaemia, oedema, and shock; causes include severe infection, immune-mediated disease, toxins, and rare idiopathic episodes.

Capillary Microscope

A capillary microscope magnifies small blood vessels, especially nail-fold capillaries, to assess structure and abnormalities in microcirculation.

Capillary Nail Refill Test

A bedside test of peripheral perfusion performed by pressing a nail bed until it blanches and observing the time for color to return. Results can be affected by temperature, lighting, age, shock, and peripheral vascular disease and should not be used alone.

Capillary Plasma

The liquid component of blood obtained from small vessels in skin or tissue, containing water, electrolytes, proteins, hormones, nutrients, and waste products.

Capillary Refill

A bedside assessment of peripheral perfusion performed by briefly pressing a nail bed or skin and measuring the time for normal color to return. Delayed refill may indicate poor circulation, shock, hypothermia, or vascular disease.

Capillary Refill Time

The time required for color to return after pressure briefly blanches a nail bed or area of skin. A delayed result may suggest impaired peripheral perfusion, but interpretation depends on age, temperature, technique, and the clinical setting.

Capillary Sample

A small blood specimen obtained by puncturing the skin, usually a finger or heel, for bedside glucose, hemoglobin, newborn screening, or other point-of-care tests.

Capillary Vessel

A microscopic vessel with a thin endothelial wall where blood exchanges oxygen, carbon dioxide, nutrients, fluid, and waste with surrounding tissue.

Capitate

Largest carpal bone, centrally located in the distal row as the carpal keystone. Rounded head articulates with scaphoid and lunate; distal surface with the third metacarpal. Last carpal bone to ossify. Wrist joint axis, bearing significant axial load. Avascular necrosis may occur with fractures similar to scaphoid injuries.

Capitation

Capitation is a healthcare payment arrangement in which a provider receives a fixed amount per enrolled person for defined services over a period.

Caplan'S Syndrome

Caplan's syndrome is pneumoconiosis with rheumatoid arthritis, producing lung nodules in people exposed to mineral or coal dust.

Capnocytophaga

A biomedical term referring to capnocytophaga; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Capnocytophaga Canimorsus

A Gram-negative, capnophilic bacillus found in the oral flora of dogs and cats that causes severe sepsis, meningitis, and cellulitis in humans, particularly the immunocompromised, asplenic, or elderly. Infection typically follows dog or cat bites. It is a fastidious organism requiring prolonged incubation for culture.

Capnocytophaga Gingivalis

A biomedical term referring to capnocytophaga gingivalis; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Capnocytophaga Infection

An infection caused by Capnocytophaga bacteria, sometimes transmitted through dog or cat bites or scratches.

Capnocytophaga Ochracea

A biomedical term referring to capnocytophaga ochracea; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Capnocytophaga Sputigena

A biomedical term referring to capnocytophaga sputigena; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Capnography

Continuous measurement and graphical display of exhaled carbon dioxide during anesthesia and sedation. The waveform and end-tidal value help assess ventilation, airway patency, circulation, and confirmation of tracheal tube placement.

Capreomycin

A medicine or chemical compound identified by capreomycin. Its uses, effects, and risks depend on the specific substance and clinical context.

Capromab Pendetide

A medicine or chemical compound identified by capromab pendetide. Its uses, effects, and risks depend on the specific substance and clinical context.

Caps

A prescription abbreviation for capsules, oral dosage forms in which medicine is enclosed in a soluble shell.

Capsaicin

A compound from chili peppers used in some topical medicines to reduce certain types of pain.

Capsid

The protein shell surrounding the genome of a virus, protecting nucleic acid and helping determine at-

tachment, entry, host range, and immune recognition.

Capsid Proteins

Viral structural proteins that assemble around the genome to form the capsid and often participate in host-cell attachment, entry, and immune recognition.

Capsular Contracture

Abnormal tightening and hardening of the fibrous capsule around an implanted device, especially a breast implant. It may cause pain, distortion, firmness, or displacement.

Capsule

A membrane, fibrous covering, or enclosed dosage form; in anatomy it may surround an organ or joint, while in pharmacology it contains medicine within a soluble shell.

Capsule Endoscope

A swallowable camera-containing capsule that transmits images while passing through the gastrointestinal tract, especially useful for examining the small intestine.

Capsule Endoscopy

Non-invasive diagnostic technique using a swallowable wireless endoscopic device to capture images of the small intestinal mucosa. The capsule contains a miniature video camera and transmitter that sends images to a receiver worn on the patient's belt.

Capsule Of Glisson

The connective-tissue capsule surrounding the liver, which sends fibrous septa inward along portal tracts and supports the organ's vessels, ducts, and nerves.

Capsule Of Tenon

A fascial sheath surrounding the globe of the eye and separating it from orbital fat. It contributes to eye movement and forms a potential space used in some ophthalmic procedures.

Capsulectomy

Surgical removal of part or all of a fibrous capsule surrounding an organ, implant, or other structure. The indication depends on contracture, infection, pathology, or the need to revise a reconstruction.

Captopril

A medicine or chemical compound identified by captopril. Its uses, effects, and risks depend on the specific substance and clinical context.

Captopril Renal Scan

A captopril renal scan uses a radiotracer before and after captopril to assess renovascular hypertension by detecting impaired renal perfusion or function.

Caput Medusae

Dilated periumbilical veins radiating outward from the umbilicus, seen in portal hypertension with recanalization of the umbilical vein. Not strictly a cardiac finding but relevant in right heart failure causing hepatic congestion and portal hypertension. It must be distinguished from caval collateral circulation.

Caput Succedaneum

Edema of the scalp presenting as a soft, boggy swelling that crosses suture lines. Caused by pressure of the vaginal walls on the fetal head during labor. Resolves within hours to days. Differentiated from cephalohematoma (subperiosteal, does not cross suture lines) and subgaleal hemorrhage (life-threatening, crosses suture lines).

CAR T-Cell

Chimeric antigen receptor T-cells. Engineered immune cells targeting cancer.

Chimeric Antigen Receptor T-Cell Therapy

A cancer treatment that collects a person's T cells, changes them in a laboratory so they can recognize cancer cells, and returns them to the body to attack the cancer.

Carbachol

A cholinergic agonist that stimulates muscarinic receptors; ophthalmic carbachol can constrict the pupil and lower intraocular pressure during selected procedures.

Carbadox

A quinoxaline antimicrobial growth-promoting drug formerly used in food-producing animals; safety concerns and carcinogenic potential have led to restrictions or bans.

Carbamate

A chemical group found in pesticides and medicines; carbamate insecticides reversibly inhibit acetylcholinesterase and can cause a cholinergic toxidrome.

Carbamazepine

An anticonvulsant and mood-stabilizing medicine used for focal seizures, trigeminal neuralgia, and selected bipolar disorder; serious risks include severe skin reactions, blood dyscrasias, liver injury, and hyponatremia.

Carbamide

Carbamide is urea, a nitrogen-containing compound produced by protein metabolism and excreted by the kidneys; it is also used in some topical preparations.

Carbapenem

A broad-spectrum beta-lactam antibiotic class that inhibits bacterial cell-wall synthesis and is reserved for serious infections, with resistance increasingly limiting use.

Carbapenem Resistant Enterobacteriaceae (CRE Infection)

Alternate index label for CRE Infection.

Carbapenem-Resistant Enterobacteriaceae Infection

Infection caused by Enterobacteriaceae bacteria resistant to carbapenem antibiotics, often involving the urinary tract, lungs, bloodstream, or wounds.

These infections are difficult to treat and may spread in healthcare settings. Culture and susceptibility testing guide therapy, with strict infection-control measures needed to prevent transmission.

Carbapenem-Resistant Organisms

Bacteria that are resistant to carbapenem antibiotics, typically through production of carbapenemases. The most important carbapenemases include KPC (*Klebsiella pneumoniae* carbapenemase), NDM (New Delhi metallo-beta-lactamase), and OXA-48-like enzymes. CRO are a major public health threat due to limited treatment options.

Carbaryl

A carbamate insecticide that reversibly inhibits acetylcholinesterase; substantial exposure can cause sweating, salivation, vomiting, muscle weakness, and breathing problems.

Carbazilquinone

An investigational quinone-containing anticancer compound studied for cytotoxic effects and bioreductive activity; it is not a routine clinical medicine.

Carbenicillin

A medicine or chemical compound identified by carbenicillin. Its uses, effects, and risks depend on the specific substance and clinical context.

Carbidopa

A peripheral dopa decarboxylase inhibitor that does not cross the blood-brain barrier; combined with levodopa to prevent its peripheral conversion to dopamine, reducing side effects (nausea, hypotension) and increasing CNS levodopa delivery.

Carbimazole

Carbimazole is an antithyroid drug converted to methimazole that reduces thyroid-hormone synthesis; rare serious adverse effects include agranulocytosis and liver injury.

Carbofuran

A highly toxic carbamate pesticide that inhibits

acetylcholinesterase and can cause rapid cholinergic poisoning after ingestion, inhalation, or skin exposure.

Carbogen

A breathing mixture containing oxygen and carbon dioxide, used experimentally or in selected treatments to stimulate ventilation or modify tissue oxygenation.

Carbohydrate

A class of organic compounds composed of carbon, hydrogen, and oxygen (general formula $C_m(H_2O)_n$), serving as the primary energy source for the body.

Carbohydrate Counting

Method for diabetes management. Matching insulin to carbohydrate intake. Education essential.

Carbohydrate Metabolism

The biochemical processes by which cells break down and synthesize carbohydrates, including glycolysis, glycogenesis, glycogenolysis, and gluconeogenesis. It maintains blood glucose levels and provides energy; disorders include diabetes mellitus and glycogen storage diseases.

Carbohydrates

Sugars, starches, and fiber that form one of the main types of nutrients in food. Digestible carbohydrates are broken down into glucose for energy, while fiber is not fully digested and helps support bowel function and blood-sugar control.

Carbolic Acid (Phenol)

An aromatic organic compound (C_6H_5OH) with antiseptic, disinfectant, and caustic properties. Historically significant as the first surgical antiseptic introduced by Joseph Lister in 1867, dramatically reducing post-operative infection and mortality. Mechanism: denatures bacterial proteins and disrupts cell membranes.

Alternate Names:

Phenol

Carbolic Acid Poisoning

Exposure to phenol, a corrosive and systemically toxic chemical that can cause burns, altered consciousness, metabolic acidosis, and organ injury.

Carbon

A chemical element forming the backbone of organic molecules such as carbohydrates, fats, proteins, and nucleic acids.

Carbon Dioxide

A colorless gas produced by cellular metabolism and removed mainly by the lungs during exhalation.

Carbon Dioxide Absorber

A safety device used in anesthesia breathing circuits that filters out carbon dioxide from a patient's exhaled breath, allowing the remaining anesthetic gases to be safely recycled and rebreathed.

Carbon Dioxide Transport

The movement of CO_2 from tissues to lungs. CO_2 is carried in blood in three forms: dissolved (approximately 10 percent), bound to hemoglobin as carbamino compounds (approximately 20 percent), and as bicarbonate (approximately 70 percent).

Carbon Ion Therapy

Radiation using carbon ions. Higher biological effectiveness. Limited availability.

Carbon Monoxide

A colorless, odorless gas that can prevent blood from carrying oxygen and cause life-threatening poisoning.

Carbon Monoxide Poisoning

Inhibits hemoglobin oxygen binding (affinity 200x oxygen). Causes headache, dizziness, nausea, cherry-red skin, syncope, death. Diagnosis: carboxyhemoglobin level (not routine). Treatment: 100% oxygen, hyperbaric oxygen if severe (neurological symptoms, $COHb >25\%$, pregnancy).

Carbon Tetrachloride

A medicine or chemical compound identified by carbon tetrachloride. Its uses, effects, and risks depend on the specific substance and clinical context.

Carbonate

A medicine or chemical compound identified by carbonate. Its uses, effects, and risks depend on the specific substance and clinical context.

Carbonic Anhydrase Inhibitors

Medicines that inhibit carbonic anhydrase and reduce formation of aqueous humor. They are used mainly to lower intraocular pressure and, in some circumstances, to treat edema or metabolic disorders.

Carbophenothion

An organophosphate insecticide that inhibits acetylcholinesterase; poisoning produces excessive cholinergic activity and may cause respiratory failure.

Carboplatin

A platinum chemotherapy drug that cross-links DNA and prevents replication; common dose-limiting toxicity is thrombocytopenia, with nausea, anemia, and hypersensitivity also possible.

Carboprost

A prostaglandin F₂-alpha analogue that contracts uterine muscle and is used for selected cases of postpartum hemorrhage or pregnancy termination; asthma is an important precaution.

Carbosulfan

A carbamate insecticide that inhibits acetylcholinesterase and can cause cholinergic poisoning after significant exposure.

Carboxy-Lyases

Enzymes that break a carbon-carbon bond and release carbon dioxide, participating in metabolic and biochemical reactions.

Carboxyhaemoglobin

Carboxyhaemoglobin is hemoglobin bound to carbon monoxide, reducing oxygen carriage and release; elevated levels indicate carbon-monoxide exposure.

Carboxyhemoglobin

Toxicity from inhalation of carbon monoxide, a colorless, odorless gas binding hemoglobin 200-300 times more avidly than oxygen, forming carboxyhemoglobin (COHb) and reducing oxygen delivery. See carbon monoxide poisoning.

Carboxyhemoglobinemia

An abnormally high level of carboxyhemoglobin formed when carbon monoxide binds hemoglobin, reducing oxygen delivery and impairing oxygen release to tissues.

Carboxyl Group

A functional chemical group containing carbon, oxygen, and hydroxyl; it gives many molecules acidic properties.

Carboxylesterase

An enzyme that hydrolyzes carboxylic esters, helping metabolize medicines, toxins, and endogenous lipids.

Carboxylic Acid

An organic compound containing a carboxyl group, which can donate a proton and form salts or esters; many biologically important fatty acids and metabolic intermediates are carboxylic acids.

Carboxypeptidase H

An enzyme involved in processing peptide hormones and neuropeptides by removing terminal amino acids from precursor molecules.

Carbuncle

A cluster of interconnected furuncles caused most often by *Staphylococcus aureus*, producing a painful inflamed swelling with multiple draining points and sometimes fever; diabetes increases risk.

Carbuncles And Boils

Alternate index label; see *Boils and carbuncles*.

Carcinoembryonal Antigen

The tumor marker carcinoembryonic antigen, or CEA, a glycoprotein that may be elevated in colorectal and other cancers but is not specific enough for general screening.

Carcinoembryonic Antigen

An oncofetal cell-surface glycoprotein measured in serum primarily as a tumor marker for colorectal adenocarcinoma, as well as gastric, pancreatic, and medullary thyroid carcinomas. Because CEA lacks sufficient sensitivity and specificity for primary cancer screening and can be elevated in benign conditions (cigarette smoking, cirrhosis, peptic ulcer disease, inflammatory bowel disease), its primary clinical utility lies in serial postoperative surveillance to detect early tumor recurrence and evaluate therapeutic response.

Carcinogen

Substance causing cancer. Types: chemical (benzene, asbestos, aflatoxin), physical (radiation), biological (HPV, HBV, HCV). Mechanisms: DNA damage, mutations, epigenetic changes. IARC classifications: Group 1 (carcinogenic), Group 2A (probably carcinogenic), Group 2B (possibly carcinogenic), Group 3 (not classifiable).

Carcinogen Testing

Testing used to assess whether a chemical, exposure, or treatment can cause cancer, using laboratory, animal, or population studies.

Carcinogenesis

The process by which normal cells acquire changes that lead to cancer.

Carcinogenic

Capable of causing or promoting cancer through genetic damage, altered cell regulation, or other mechanisms.

Carcinoid

A carcinoid is a usually slow-growing neuroendocrine tumor that may release hormones such as serotonin and occur in the gastrointestinal tract, appendix, or lungs.

Carcinoid Heart Disease

Cardiac complication of carcinoid syndrome occurring in approximately fifty percent of patients with hepatic metastases. Serotonin and other vasoactive substances bypass hepatic metabolism and cause endocardial fibrosis affecting the right-sided heart valves particularly the tricuspid and pulmonary valves.

Carcinoid Syndrome

A group of symptoms caused by substances such as serotonin released by a neuroendocrine tumor. It may cause facial flushing, diarrhea, wheezing, fast heartbeat, and, over time, right-sided heart disease. A twenty-four-hour urine test for 5-hydroxyindoleacetic acid may help confirm the diagnosis.

Carcinoid Tumor

Carcinoid tumors are well-differentiated neuroendocrine neoplasms that arise from enterochromaffin cells throughout the gastrointestinal tract and bronchial system. The most common primary sites are the appendix, small intestine, and rectum.

Carcinoid Tumors

Slow-growing neuroendocrine tumors that can release hormones and arise in organs such as the digestive tract or lungs.

Alternate Names:

Cancer, Carcinoid Tumors

Carcinoma

Malignant tumor of epithelial origin. Types: squamous cell carcinoma, adenocarcinoma, basal cell carcinoma, transitional cell carcinoma. Most common cancer type (80-90% of malignancies). Examples: lung carcinoma, breast carcinoma, colon carcinoma.

Carcinoma En Cuirasse

An unusual form of breast cancer characterized by diffuse, firm, indurated skin that resembles armor. It results from extensive dermal lymphatic invasion by tumor cells.

Carcinoma Erysipeloides

Cutaneous lymphatic spread of an internal carcinoma producing a sharply demarcated, erythematous, indurated plaque that may resemble erysipelas.

Carcinoma In Situ

Full-thickness dysplasia without invasion through basement membrane. Stage 0 cancer.

Carcinoma Of Unknown Primary

Cancer that has spread but whose original site cannot be identified despite evaluation.

Alternate Names:

Cancer Of Unknown Origin Occult Primary Cancer

Carcinomatosis

Widespread dissemination of carcinoma to multiple surfaces or organs.

Carcinosarcoma

A malignant tumor containing both carcinomatous and sarcomatous elements, most commonly of the uterus (malignant mixed Müllerian tumor), with an aggressive course.

Cardia

The part of the stomach surrounding the opening where the esophagus joins the stomach.

Cardiac

1. Pertaining to the heart (*cor*), including its muscular wall layers (endocardium, myocardium, epicardium), four chambers (atria and ventricles), atrioventricular and semilunar valves, intrinsic electrical conduction system (sinoatrial node, atrioventricular node, bundle of His, Purkinje network), and coronary arterial circulation. Pathology includes ischemic heart disease, valvular stenosis and regurgitation, cardiomyopathies, heart failure, and cardiac

arrhythmias. 2. In gastroenterology, pertaining to the cardia (cardiac orifice), the anatomical transition zone of the stomach immediately distal to the gastroesophageal junction where the tubular esophagus joins the gastric pouch, an important site for gastric adenocarcinoma (cardia cancer), hiatal herniation, and gastroesophageal reflux pathology.

Alternate Names:

Heart-related; cardiac-related.

Cardiac Ablation

A procedure that destroys a small area of heart tissue causing an abnormal rhythm.

Cardiac Ablation Procedures

A medical procedure involving cardiac ablation procedures. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

Cardiac Allograft

A donor heart transplanted into a recipient with end-stage heart failure. The procedure requires lifelong immunosuppression to prevent rejection. Complications include rejection, cardiac allograft vasculopathy, infection, and malignancy; monitored by endomyocardial biopsy and echocardiography.

Cardiac Allograft Vasculopathy

A diffuse, progressive form of coronary arterial intimal thickening after heart transplantation that can cause silent ischemia, graft dysfunction, arrhythmia, or sudden death.

Cardiac Amyloidosis

Deposition of amyloid protein in the heart, causing stiff ventricular walls, impaired filling, arrhythmias, or heart failure. Important types include immunoglobulin light-chain (AL) and transthyretin (ATTR) amyloidosis; treatment depends on the type and organ involvement.

Cardiac Amyloidosis Diagnosis

Diagnosis involves a combination of clinical suspicion, imaging, and tissue biopsy. Non-invasive diagnosis using Tc-99m pyrophosphate (PYP) or DPD

scintigraphy for ATTR cardiac amyloidosis (with negative serum/urine free light chains to exclude AL amyloidosis).

Cardiac Amyloidosis Staging

Mayo Clinic staging system for ATTR cardiac amyloidosis: Stage I (NT-proBNP <3000 pg/mL), Stage II (NT-proBNP 3000-8499), Stage III (NT-proBNP ≥8500). Median survival: Stage I: 69 months, Stage II: 47 months, Stage III: 14 months. Treatment with tafamidis (TTR stabilizer) improves survival and functional capacity.

Cardiac Arrest

Sudden loss of effective heart pumping, causing unresponsiveness, absent normal breathing, and no detectable pulse. Initial rhythms may be shockable or nonshockable; treatment requires immediate cardiopulmonary resuscitation, defibrillation when indicated, and advanced resuscitation care.

Cardiac Arrest Survival

Outcome after cardiac arrest depends on the cause, location, initial rhythm, time to CPR and defibrillation, and post-arrest care. Early recognition, high-quality CPR, rapid defibrillation when indicated, advanced life support, and appropriate post-arrest treatment improve the chance of survival.

Cardiac Arrest, Sudden

Alternate index label; see *Sudden cardiac arrest*.

Cardiac Arrhythmias

Abnormalities of the heart rate or rhythm caused by disturbances in impulse formation or conduction. They include tachycardia, bradycardia, and irregular rhythms.

Cardiac Axis

The mean direction of ventricular depolarization in the frontal plane, estimated from the QRS complex on a 12-lead ECG. Left or right axis deviation may reflect conduction disease, ventricular hypertrophy, infarction, or altered cardiac position.

Cardiac Biomarkers

Blood measurements used to assess myocardial injury. Cardiac troponins I and T are the preferred specific biomarkers; CK-MB may assist in selected situations, while myoglobin is sensitive but nonspecific. Results must be interpreted with symptoms, electrocardiography, and serial testing.

Cardiac Cachexia

A severe wasting syndrome associated with advanced heart failure or other serious cardiac disease, characterized by involuntary weight loss, skeletal-muscle loss, weakness, and reduced functional capacity. It reflects neurohormonal, inflammatory, metabolic, and nutritional abnormalities and is associated with poor prognosis.

Cardiac Care

Medical care that prevents, diagnoses, and treats heart and circulation disorders through monitoring, medicines, procedures, and rehabilitation.

Cardiac Catheter

A thin tube inserted into a blood vessel and advanced to the heart for measurement, imaging, sampling, or treatment.

Cardiac Catheterization

Invasive procedure involving insertion of catheters into the heart via peripheral arteries or veins. Diagnostic catheterization measures intracardiac pressures, saturations, and performs coronary angiography. Indications include evaluation of CAD, valvular disease, cardiomyopathy, and congenital heart disease.

Cardiac Conduction System

The specialized tissue responsible for generating and conducting electrical impulses through the heart. Components include the sinoatrial (SA) node, internodal pathways, atrioventricular (AV) node, bundle of His, right and left bundle branches, and Purkinje fibers.

Cardiac CT

CT imaging of heart and coronary arteries. Coro-

nary calcium scoring, coronary CT angiography, cardiac function assessment.

Cardiac CT Angiography

Noninvasive imaging using CT to visualize coronary arteries and cardiac structures. It has high negative predictive value for excluding coronary artery disease, making it useful for low-to-intermediate risk patients with chest pain. Calcium scoring quantifies coronary artery calcification as a marker of atherosclerosis.

Cardiac Cycle

The sequence of events occurring during one complete heartbeat, consisting of systole (contraction) and diastole (relaxation). During diastole, the ventricles fill with blood; during systole, they contract and eject blood.

Cardiac Defibrillation

Delivery of an unsynchronized electrical shock for ventricular fibrillation or pulseless ventricular tachycardia. It is combined with high-quality CPR and advanced life support according to the cardiac-arrest rhythm and protocol.

Cardiac Device Infections

Infection involving a pacemaker, implantable defibrillator, generator pocket, or lead. Findings may include local inflammation, drainage, bacteremia, or endocarditis. Evaluation uses clinical examination, blood cultures, and imaging when indicated; treatment may require antimicrobial therapy and removal of infected hardware.

Cardiac Diet

A dietary pattern emphasizing vegetables, fruits, whole grains, legumes, fish, unsaturated fats, and limited sodium, added sugars, and saturated or trans fats. It supports cardiovascular risk reduction but should be individualized for heart failure, kidney disease, diabetes, and nutritional adequacy.

Cardiac Enzymes

Historically used blood markers of myocardial injury, especially creatine kinase-MB; cardiac troponins are

now the preferred biomarkers for detecting myocardial injury and must be interpreted with symptoms, ECG findings, and serial changes.

Cardiac Event Monitors

Portable devices that record or transmit an electrocardiogram when symptoms occur or at programmed intervals, helping detect intermittent arrhythmias.

Cardiac Failure

Alternate index label; see *Heart failure*.

Cardiac Fibroma

A rare benign fibrous tumor of the heart that can obstruct blood flow or disturb the heart rhythm.

Cardiac Gated SPECT

SPECT imaging synchronized with ECG. Assess ventricular function, wall motion, viability.

Cardiac Glycoside

A drug or plant compound that increases heart contraction and affects cardiac conduction; digoxin is the main clinical example.

Cardiac Glycoside Overdose

Overdose of a cardiac glycoside, such as digoxin, that may cause nausea, vomiting, visual changes, confusion, bradyarrhythmias, tachyarrhythmias, and hyperkalemia.

Cardiac Hemangioma

A rare benign tumor made of blood vessels in the heart; symptoms depend on its size and location.

Cardiac Imaging Tests

Noninvasive or minimally invasive studies used to evaluate cardiac structure, function, blood flow, or tissue characteristics. They include echocardiography, cardiac CT, cardiac MRI, nuclear perfusion imaging, and other modality-specific tests selected according to the clinical question.

Cardiac Index

Cardiac output normalized to body surface area, calculated as CO / BSA . Normal cardiac index is 2.5-4.2 L/min/m². It provides a more accurate assessment of cardiac function than cardiac output alone, accounting for body size. A cardiac index below 2.2 L/min/m² indicates cardiogenic shock.

Cardiac Intravascular Ultrasound

A catheter-based ultrasound technique that produces cross-sectional images from inside a coronary artery. It assesses plaque, vessel dimensions, calcification, dissections, and stent expansion during selected coronary procedures.

Cardiac Ischemia

Alternate index label; see *Myocardial ischemia*.

Cardiac Massage

Cardiac massage is manual compression of the heart, historically performed through the chest or during open surgery; modern cardiac arrest care uses chest compressions and advanced resuscitation.

Cardiac Metastases

More common than primary cardiac tumors. Most frequent sources: lung cancer, breast cancer, melanoma, lymphoma, and renal cell carcinoma. Most commonly involve the pericardium (effusion, tamponade), but can affect myocardium and endocardium.

Cardiac MRI

Magnetic-resonance imaging of the heart that characterizes ventricular function, myocardial tissue, perfusion, scar, edema, infiltration, and congenital anatomy without ionizing radiation. Gadolinium contrast is avoided or used cautiously in selected patients with severe renal dysfunction.

Cardiac Muscle

Involuntary, striated muscle forming the myocardium. Cardiac muscle cells are electrically connected by intercalated discs, allowing coordinated contraction of the heart.

Cardiac Myocyte

A specialized heart-muscle cell that contracts to pump blood and uses electrical signals and calcium cycling.

Cardiac Myocytes

Muscle cells of the heart that generate force for cardiac contraction.

Cardiac Myxoma

The most common primary benign cardiac tumor, usually arising in the left atrium from the interatrial septum. It may cause positional obstruction, emboli, or constitutional symptoms and is generally treated by surgical excision.

Cardiac Output

The volume of blood pumped by the heart per minute, calculated as the heart rate multiplied by the stroke volume.

Cardiac Output Measurement

Methods include: thermodilution via pulmonary artery catheter (bolus of cold saline and temperature change measurement), Fick principle (O_2 consumption / arteriovenous O_2 difference), echocardiographic Doppler (flow velocity time integral x valve area x heart rate), and non-invasive cardiac output monitors (bioimpedance, bioreactance).

Cardiac Pacemaker

A cardiac pacemaker is an implanted or external device that delivers electrical impulses to maintain an adequate heart rate when intrinsic conduction is too slow or unreliable.

Cardiac Pacemaker Types

Single-chamber: pacing one chamber (atrium or ventricle). Dual-chamber: paces and senses both atrium and ventricle, maintaining AV synchrony. Biventricular (CRT): paces both ventricles for resynchronization in heart failure.

Cardiac Perforation

A hole or tear through the heart wall that can

cause bleeding into the pericardial sac and cardiac tamponade.

Cardiac PET

Nuclear-medicine imaging of the heart using positron-emitting radiotracers. Depending on the tracer and protocol, it can assess myocardial perfusion and blood flow, identify viable or scarred myocardium, and evaluate selected inflammatory or infiltrative cardiac diseases.

Cardiac PET Imaging

Positron emission tomography using radiotracers (Rb-82, N-13 ammonia, O-15 water) for quantitative myocardial perfusion assessment. Advantages over SPECT: superior resolution, shorter scan time, attenuation correction, and absolute myocardial blood flow quantification (mL/g/min).

Cardiac Power Output

A calculated, comprehensive hemodynamic metric of true central cardiac performance, defined as the product of simultaneously measured mean arterial pressure (MAP, in mmHg) and cardiac output (CO, in L/min) divided by the conversion constant 451, expressed in Watts: $CPO = (MAP \times CO)/451$. Established by the SHOCK trial registry as the single strongest independent hemodynamic predictor of in-hospital mortality in patients presenting with cardiogenic shock, with a resting $CPO \leq 0.53\text{--}0.6\text{ W}$ identifying severe pump failure and guiding the timely escalation to percutaneous or surgical mechanical circulatory support.

Alternate Names:

CPO; Cardiac Power Index (CPI)

Cardiac Radiation Injury

Late complication of mediastinal radiation therapy (Hodgkin lymphoma, breast cancer, lung cancer). Manifestations include pericardial disease (constrictive pericarditis, effusion), coronary artery disease (accelerated atherosclerosis), valvular disease (fibrosis), myocardial fibrosis, and conduction abnormalities.

Cardiac Radionuclide Imaging

Cardiac imaging performed after administration of a radioactive tracer, usually with SPECT or PET, to assess myocardial perfusion, viability, metabolism, or inflammation. ECG-gated studies can also estimate ventricular volumes and ejection fraction; results must be interpreted with symptoms and other cardiac tests.

Cardiac Rehab Outcomes

Cardiac rehabilitation can improve exercise capacity, cardiovascular risk-factor control, quality of life, and psychological well-being after selected cardiac conditions. The benefits and participation rates vary among populations and programs.

Cardiac Rehabilitation

Supervised program for cardiac patients post-MI, PCI, CABG, heart failure. Phases: inpatient (early mobilization), outpatient (supervised exercise, education), maintenance. Components: exercise training, risk factor modification, psychological support, return to work counseling. Reduces mortality, hospitalizations.

Cardiac Resynchronization Therapy

Pacing therapy that coordinates ventricular contraction, usually with biventricular or conduction-system pacing. It is used in selected patients with symptomatic heart failure, reduced ejection fraction, and electrical dyssynchrony such as a prolonged QRS, especially left bundle-branch block, despite appropriate medical treatment. In suitable patients it can improve symptoms and function and reduce hospitalization and mortality.

Cardiac Rhabdomyoma

A benign striated-muscle tumor, usually in children and often associated with tuberous sclerosis.

Cardiac Sarcoidosis

Infiltrative disease characterized by non-caseating granulomas in the myocardium, affecting 25-30% of patients with systemic sarcoidosis. Presentation includes conduction abnormalities (AV block), ventricular arrhythmias, and heart failure.

Cardiac Sarcoma

A rare malignant tumor arising from connective or supporting tissue of the heart; symptoms may include obstruction, arrhythmia, heart failure, or emboli.

Cardiac Skeleton

A dense connective tissue framework composed of four fibrous rings that surround the heart valves and provide structural support. The cardiac skeleton includes the annuli fibrosi (valve rings), the membranous septum, and the left and right fibrous trigones.

Cardiac SPECT

A nuclear-imaging method that evaluates myocardial perfusion and can help identify ischemia, infarction, or viable myocardium. When synchronized with the heartbeat, gated images can also assess ventricular motion and function.

Cardiac Stress Test

Evaluation of cardiac function and ischemia under increased cardiac workload. Exercise stress test (treadmill, Bruce protocol): ECG monitoring for ST-segment changes, symptoms, BP response, and arrhythmias. Sensitivity 65-75% for CAD.

Cardiac Stress Testing

Assessment of cardiac function under physiological or pharmacological stress to detect ischemia. Exercise stress testing involves treadmill or bicycle exercise with continuous ECG monitoring. Pharmacological stress (dobutamine, adenosine, regadenoson) is used when patients cannot exercise.

Cardiac Syncope

Transient loss of consciousness caused by a cardiac disorder that reduces cerebral perfusion, usually through bradyarrhythmia, tachyarrhythmia, structural obstruction, or severe cardiac dysfunction. Syncope during exertion, while supine, or with palpitations or known heart disease requires urgent cardiovascular evaluation because it may indicate a risk of sudden cardiac death.

Cardiac Tamponade

Cardiac tamponade occurs when fluid or blood under pressure around the heart restricts filling, reducing cardiac output and potentially causing obstructive shock, and causing reduced circulation. It is a medical emergency.

Cardiac Tamponade Physiology

Accumulation of pericardial fluid causing compression of cardiac chambers, impairing diastolic filling and reducing cardiac output. Hemodynamic consequences include equalization of diastolic pressures ($RA = RV \text{ diastolic} = PCWP$), pulsus paradoxus, and decreased cardiac output.

Cardiac Transplantation

Replacement of a failing heart with a donor heart for carefully selected patients with end-stage heart failure. Long-term care requires immunosuppression and surveillance for rejection, infection, and graft vasculopathy.

Cardiac Tumors

Tumors involving the heart may be primary or metastatic. Primary tumors are rare; myxoma is a common benign primary tumor and angiosarcoma is a recognized malignant type. Symptoms and treatment depend on the tumor's location, tissue type, obstruction, embolic risk, and spread.

Cardiac Tumors Management

Myxoma: surgical excision is curative, with low recurrence rate. Benign tumors (rhabdomyoma, fibroma) may be observed if asymptomatic but require surgery if causing obstruction or arrhythmia. Malignant tumors: prognosis is poor; treatment may include surgery, chemotherapy, and radiation depending on tumor type.

Cardiac Ventriculography

Imaging of the heart ventricles to assess their size, wall motion, and pumping function.

Cardiac Volume

The amount of blood in a heart chamber at a given time; end-diastolic and end-systolic volumes help

assess ventricular function.

Cardiac Wall

The heart wall, consisting of endocardium, myocardium, and epicardium, which supports electrical conduction and contraction.

Cardinal Body Part

A major body region or structure identified for anatomical description or clinical examination.

Cardinal Cell Part

A principal cell component, such as the nucleus, membrane, cytoplasm, or an organelle, with a role in cell function.

Cardinal Ligament

A dense condensation of endopelvic connective tissue extending from the supravaginal cervix and lateral vaginal fornices to the pelvic sidewalls, located at the base of the broad ligament. Serves as the primary lateral fascial support maintaining uterine and vaginal apical suspension, and transmits the uterine artery and vein across the ureter (the “water under the bridge” anatomical relationship), making it a critical pedicle isolated and clamped during radical hysterectomy.

Alternate Names:

Mackenrodt’s Ligament; Lateral Cervical Ligament; Transverse Cervical Ligament

Cardio-Oncology

The subspecialty focusing on cardiovascular care of cancer patients, addressing cancer therapy-related cardiac dysfunction, prevention, and management. Key concerns include anthracycline cardiotoxicity, trastuzumab-related cardiomyopathy, immune checkpoint inhibitor myocarditis, and radiation-induced heart disease.

Cardiobacteriaceae

A family of Gram-negative HACEK bacteria that includes *Cardiobacterium* and can cause infective endocarditis.

Cardiobacterium

A Gram-negative HACEK bacterium that can cause slow-growing bloodstream infection and infective endocarditis.

Cardiobacterium Hominis

The *Cardiobacterium* species most often associated with human disease, especially subacute infective endocarditis.

Cardiofaciocutaneous Syndrome

A rare, clinically variable genetic disorder belonging to the RASopathy family, caused by heterozygous germline gain-of-function mutations in components of the MAPK/ERK signaling cascade, most commonly *BRAF* (approximately 75%), *MAP2K1*, or *MAP2K2*. Characterized by distinctive craniofacial dysmorphism (macrocephaly, prominent forehead, ocular hypertelorism, bitemporal constriction), congenital cardiac anomalies (pulmonic stenosis, hypertrophic cardiomyopathy, atrial septal defect), ectodermal abnormalities (sparse, curly, friable scalp hair, dystrophic nails, severe keratosis pilaris, progressive ichthyosis, eczema), and profound global developmental delay with hypotonia.

Alternate Names:

CFC Syndrome

Cardiogenic Shock

A state of inadequate tissue perfusion caused by severe cardiac dysfunction. It may produce low blood pressure, altered mental status, cool extremities, reduced urine output, metabolic acidosis, or other signs of organ hypoperfusion.

Cardiogenic Shock Management

Emergency management of shock caused by severe cardiac dysfunction. It includes support of oxygenation and circulation, treatment of the underlying cause, and selected use of vasopressors, inotropes, mechanical support, or revascularization.

Cardiolipin

A distinctive phospholipid concentrated in the inner mitochondrial membrane; antibodies to cardiolipin are among the laboratory markers of antiphospho-

lipid syndrome.

Cardiologist

Physician specializing in diagnosis and treatment of heart and cardiovascular diseases; trained in internal medicine and cardiology.

Cardiology

The branch of medicine devoted to the study, diagnosis, and treatment of disorders of the heart and circulatory system. Cardiologists manage conditions including coronary artery disease, heart failure, valvular heart disease, arrhythmias, cardiomyopathy, pericardial disease, congenital heart disease, and hypertension.

Cardiomegaly

Abnormal enlargement of the heart, identified clinically, on chest radiography, or with cardiac imaging. It may reflect chamber dilatation, myocardial hypertrophy, pericardial effusion, or a combination of these; causes include hypertension, valvular disease, cardiomyopathy, congenital heart disease, and high-output states.

Cardiomyopathy

Cardiomyopathy is disease of the heart muscle that can impair contraction, relaxation, rhythm, or valve function and may lead to heart failure or sudden death. disease, valvular disease, and congenital heart disease as primary causes. The three main types are dilated, hypertrophic, and restrictive cardiomyopathy.

Cardiomyopathy (Restrictive)

Alternate index label for Restrictive.

Cardiomyopathy Classification

The MOGE(S) classification system provides phenotypic and genotypic description: M (morphofunctional phenotype), O (organ/system involvement), G (genetic inheritance), E (etiology), S (functional status/NYHA class).

Cardiomyopathy, Dilated

Alternate index label; see *Dilated cardiomyopathy*.

Cardiomyopathy, Hypertrophic

Alternate index label; see *Hypertrophic cardiomyopathy*.

Cardiopathy

Any disease or disorder of the heart, including diseases of the heart muscle, valves, coronary arteries, rhythm, or congenital structure.

Cardioplegia

Deliberate temporary arrest and protection of the heart during cardiac surgery, usually achieved with a cold or blood-based solution that alters myocardial electrical and metabolic activity.

Cardiopulmonary

Relating to the heart and lungs or to their combined function.

Alternate Names:

Cardiorespiratory.

Cardiopulmonary Bypass

A technique that temporarily circulates and oxygenates blood during some heart operations.

Cardiopulmonary Bypass Machine

A machine that temporarily circulates and oxygenates blood during selected heart or major-vessel operations while the heart and lungs are not performing their usual functions.

Alternate Names:

Heart-lung machine; cardiopulmonary bypass pump.

Cardiopulmonary Exercise Testing

Comprehensive assessment of cardiovascular and pulmonary function during graded exercise on a treadmill or cycle ergometer. Measures: VO₂ max, anaerobic threshold, ventilatory efficiency (VE/VCO₂ slope), and hemodynamic responses.

Cardiopulmonary Resuscitation

A sequence of chest compressions, ventilation, defib-

rillation when indicated, and advanced life-support interventions for cardiac arrest. Its purpose is to maintain circulation and oxygen delivery until spontaneous circulation is restored or definitive treatment is provided.

Cardiopulmonary Resuscitation

CPR combines chest compressions and rescue breaths or assisted ventilation to maintain circulation and oxygenation during cardiac arrest.

Cardiorenal Syndrome

Dysfunction of the heart and kidneys where acute or chronic failure of one organ contributes to dysfunction of the other. Type 1: acute cardiac dysfunction causing acute kidney injury (e.g., cardiogenic shock). Type 2: chronic cardiac dysfunction causing progressive CKD. Type 3: acute kidney injury causing cardiac dysfunction.

Cardiorespiratory

Cardiorespiratory means relating to the heart, blood vessels, and respiratory system considered together, as in cardiorespiratory fitness or failure.

Cardiorespiratory Endurance

The ability of the heart, lungs, and circulation to deliver oxygen during sustained physical activity.

Alternate Names:

Cardiorespiratory fitness; aerobic endurance.

Cardioselective Beta-Blockers

Cardioselective beta-blockers selectively block beta-1 adrenergic receptors, which are predominant in the heart, while having minimal effects on beta-2 receptors in the bronchial smooth muscle and peripheral vasculature at therapeutic doses. Common cardioselective beta-blockers include metoprolol, atenolol, bisoprolol, and nebivolol.

Cardiospasm

Spasm or impaired relaxation of the lower esophageal sphincter, historically used as a term for achalasia. It causes dysphagia, regurgitation, and sometimes chest discomfort.

Cardiospasm (Achalasia)

Alternate index label for Achalasia.

Cardiotocography

A continuous electronic recording of the fetal heart rate and uterine contractions used to assess fetal well-being during pregnancy and labor. The CTG machine uses two transducers placed on the maternal abdomen: an ultrasound transducer records the fetal heart rate, and a tocodynamometer records uterine contractions.

Cardiotoxicity

Injury or functional impairment of the heart caused by a toxic exposure, systemic disease, or treatment. Manifestations include arrhythmia, myocardial dysfunction, ischemia, or heart failure.

Cardiotoxicity From Chemotherapy

Chemotherapy agents that damage the myocardium, most commonly anthracyclines (doxorubicin, daunorubicin). Cardiotoxicity presents as dilated cardiomyopathy with reduced ejection fraction. Risk is dose-dependent (doxorubicin cumulative dose >550 mg/m²).

Cardiotoxin

A substance that directly damages cardiac muscle or disrupts cardiac electrical or vascular function, potentially causing arrhythmia, heart failure, or myocardial injury.

Cardiovascular

Relating to the heart and blood vessels, including circulation, blood pressure, and diseases of the cardiac or vascular system.

Cardiovascular Agents

Medicines acting on the heart or blood vessels, including drugs for blood pressure, rhythm, angina, heart failure, thrombosis, and lipid disorders.

Cardiovascular Changes In Pregnancy

Plasma volume increases 40-50% (total volume 5 L), red cell mass increases 20-30% (physiologic anemia

of pregnancy due to dilution). Cardiac output increases 30-50% by 32 weeks (stroke volume increases initially, then heart rate).

Cardiovascular Disease

Disease affecting the heart or blood vessels, including coronary artery disease, heart failure, arrhythmias, valvular disease, and vascular disorders.

Cardiovascular Health

Cardio is shorthand for cardiovascular health or exercise that elevates heart rate and respiratory effort to strengthen the heart, lungs, and circulatory system. Aerobic activities such as walking, running, cycling, and swimming improve cardiac output, lower blood pressure, and enhance metabolic efficiency.

Cardiovascular Infection

An infection of the heart, blood vessels, or bloodstream, including endocarditis, myocarditis, and infected vascular devices.

Cardiovascular Injury

Damage to the heart or blood vessels caused by trauma, ischemia, inflammation, toxins, surgery, or other disease.

Cardiovascular Neoplasm

A benign or malignant tumor arising in the heart, blood vessels, or related tissues; evaluation depends on its location, tissue type, and effect on circulation.

Cardiovascular Pharmacology

The study of how medicines affect the heart, blood vessels, blood pressure, cardiac rhythm, coagulation, and lipid metabolism.

Cardiovascular Risk Reduction

Measures that lower the risk of myocardial infarction, stroke, heart failure, and vascular death through smoking cessation, blood-pressure and lipid control, diabetes management, physical activity, healthy diet, weight management, and indicated medicines.

Cardiovascular Screening

Evaluation of cardiovascular risk or disease in people with or without symptoms. It may include blood-pressure measurement, lipid testing, diabetes assessment, and targeted testing based on age and risk.

Cardiovascular Surgery

Surgical procedures performed on the heart and great vessels, including coronary artery bypass grafting, valve repair or replacement, aortic surgery, and heart transplantation. It requires cardiopulmonary bypass for many open procedures and specialized perioperative care.

Cardiovascular System

The organ system comprising the heart and blood vessels (arteries, arterioles, capillaries, venules, veins) responsible for circulating blood throughout the body.

Cardioversion

Restoration of a regular heart rhythm from an arrhythmia, using synchronized electrical shock or medicines; anticoagulation and assessment for atrial thrombus may be needed in atrial fibrillation.

Cardioversion (Synchronized)

Delivery of an electrical shock synchronized with the QRS complex to restore a more organized cardiac rhythm. It is used for selected tachyarrhythmias, with energy, sedation, anticoagulation, and monitoring determined by the rhythm and the patient's clinical condition.

Alternate Names:

Synchronized

Cardiovirus

Cardiovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Carditis

Inflammation of the heart or one of its layers, includ-

ing the myocardium, endocardium, or pericardium. It may result from infection, immune-mediated disease, or systemic inflammation.

Care Coordination

Deliberate organization and communication of healthcare activities among professionals, services, patients, and caregivers to support safe, continuous, and appropriate care across settings.

Caregiver

A person who provides assistance with another person's health care, daily activities, or support. A caregiver may be a family member, friend, or paid professional.

Caregiver Burden

The emotional, physical, social, or financial strain associated with providing ongoing care for another person.

Caregiver Stress

Emotional, physical, social, or financial strain associated with providing ongoing care for another person.

Caries

A biofilm-mediated, multifactorial disease in which acids from bacterial metabolism of fermentable carbohydrates cause net demineralization of enamel, dentin, or cementum. Early lesions may be arrested or remineralized, but progressive disease forms cavities and can reach the pulp, causing pain or infection.

Caries (Dental)

A biofilm-mediated, sugar-driven, multifactorial disease causing net demineralization of enamel, dentin, or cementum. Risk is influenced by fermentable-carbohydrate frequency, fluoride exposure, saliva, oral hygiene, tooth anatomy, and previous disease.

Alternate Names:

Dental

Caries Risk Assessment

Systematic evaluation of an individual's likelihood of developing dental caries. Low risk: no active caries, good oral hygiene, regular fluoride exposure. Moderate risk: one or more active lesions in past 3 years, fair oral hygiene.

Carina

The ridge at the base of the trachea where it bifurcates into the right and left main bronchi. It is a landmark for endotracheal tube placement and bronchoscopy. The right main bronchus is wider, shorter, and more vertical than the left, making it the preferred path for aspirated foreign bodies.

Cariogenic

Capable of promoting dental caries, especially by producing acid from fermentable carbohydrates or supporting a plaque environment that demineralizes tooth structure.

Cariogram

A computer-based program that illustrates the interaction of caries-related factors and provides an overall caries risk assessment. Factors: diet (content, frequency), bacteria (mutans streptococci, lactobacilli), fluoride exposure, saliva (flow rate, buffering capacity), plaque amount, and clinical/social history.

Carisoprodol

A centrally acting skeletal-muscle relaxant metabolized partly to meprobamate and used short term for acute musculoskeletal pain; sedation, misuse, and dependence are important risks.

Carminative

A substance traditionally used to reduce intestinal gas or discomfort by promoting passage of gas through the digestive tract.

Alternate Names:

Antiflatulent; gas-relieving agent.

Carmine

A red pigment derived from cochineal insects and

used in foods, cosmetics, and medicines; it can rarely cause allergic reactions, including asthma or anaphylaxis.

Carmustine

A medicine or chemical compound identified by carmustine. Its uses, effects, and risks depend on the specific substance and clinical context.

Carney Complex

Autosomal dominant multiple endocrine neoplasia syndrome (NAME syndrome / LAMB syndrome), caused by PRKAR1A (17q22-24, protein kinase A regulatory subunit type 1A, 70% of cases) or PRKACA locus.

Carney Triad

A rare, usually nonhereditary association of gastric epithelioid leiomyosarcoma or gastrointestinal stromal tumor, pulmonary chondroma, and extra-adrenal paraganglioma.

Carnitine

Transports long-chain fatty acids into mitochondria for beta-oxidation. Deficiency causes hypoketotic hypoglycemia.

Carnitine Palmitoyltransferase II Deficiency

An autosomal recessive metabolic disorder of mitochondrial long-chain fatty acid oxidation caused by pathogenic variants in the *CPT2* gene. Impairs the conversion of acylcarnitines back into free fatty acyl-CoAs inside the mitochondrial matrix for β -oxidation. The adult myopathic form, which is the most common presentation, is characterized by recurrent episodes of severe exercise-, fasting-, cold-, or infection-induced myalgias, muscle stiffness, rhabdomyolysis, and marked myoglobinuria carrying a significant risk of acute kidney injury, typically while maintaining normal muscle histology and normal serum creatine kinase levels between acute crises.

Alternate Names:

CPT II Deficiency; CPT2 Deficiency

Carnobacteriaceae

A family of Gram-positive, lactic-acid-producing bacteria found in food, animals, and the environment.

Carnosine

A dipeptide of beta-alanine and histidine found in muscle and nervous tissue that buffers acidity and may limit protein glycation; many proposed supplement benefits remain unproven.

Carnosinemia

A rare inherited disorder of carnosinase deficiency causing elevated carnosine in blood and urine, usually with developmental or neurologic abnormalities of variable severity.

Caroli Disease

Congenital, autosomal recessive fibropolycystic liver disease (PKHD1 gene, encodes fibrocystin/polyductin; same gene as infantile polycystic kidney disease) characterized by non-obstructive, segmental, saccular dilation of the larger intrahepatic bile ducts.

Carotene

An orange-yellow plant pigment and provitamin-A carotenoid; beta-carotene can be converted to retinol, while excess dietary carotene may cause harmless yellow skin discoloration.

Carotenoid

A family of lipid-soluble yellow, orange, or red pigments, including beta-carotene and lutein, that act in photosynthesis, antioxidant pathways, and sometimes vitamin-A production.

Carotenoids

Plant pigments, including beta-carotene, that contribute yellow, orange, or red color and may have antioxidant or provitamin-A activity.

Alternate Names:

Carotenoid pigments; provitamin-A pigments.

Carotid

Relating to either of the major arteries in the neck that carry blood from the heart toward the brain and head.

Carotid Artery

The paired arterial system supplying the head and neck. Each common carotid artery divides into internal and external carotid arteries; the internal carotid supplies the brain and orbit, while the external carotid supplies most external head and neck structures.

Carotid Artery Disease

Narrowing or blockage of the carotid arteries, most often caused by atherosclerotic plaque. It can reduce cerebral blood flow or release emboli and is an important cause of transient ischemic attack and ischemic stroke.

Carotid Artery Stenting

Endovascular placement of a stent across a carotid stenosis, usually with embolic-protection strategies, to improve cerebral blood flow and reduce stroke risk in selected patients. Antiplatelet therapy and peri-procedural neurologic monitoring are required.

Carotid Body

A small cluster of chemoreceptor cells near the fork of the common carotid artery. It detects changes in blood oxygen, carbon dioxide, and acidity and helps regulate breathing through reflex signaling.

Carotid Bruit

An audible sound over a carotid artery caused by turbulent blood flow. It may occur with carotid atherosclerosis but does not reliably indicate the severity of stenosis; suspected disease is assessed with appropriate vascular imaging and risk evaluation.

Carotid Cavernous Fistula

An abnormal communication between the carotid artery or its branches and the cavernous sinus, most commonly traumatic but also spontaneous. Clinical features include pulsatile proptosis, chemosis, bruit

over the orbit, and cranial nerve palsies. Diagnosis is by CT or MR angiography.

Carotid Duplex Ultrasound

Ultrasound evaluation of the carotid arteries for atherosclerotic plaque and stenosis. Measures peak systolic velocity (PSV) and end-diastolic velocity (EDV) in the internal carotid artery (ICA).

Carotid Endarterectomy

Surgical removal of atherosclerotic plaque from a carotid artery to reduce stroke risk in selected patients. Suitability depends on symptoms, degree of narrowing, operative risk, life expectancy, and current clinical guidance.

Carotid Stenosis

Narrowing of a carotid artery, usually caused by atherosclerosis. It can reduce blood flow to the brain or serve as a source of emboli. Evaluation and treatment depend on symptoms, degree of narrowing, imaging, and overall stroke risk.

Carpal Bones

The eight wrist bones: scaphoid, lunate, triquetrum, pisiform, trapezium, trapezoid, capitate, and hamate.

Alternate Names:

Carpals

Carpal Joints

The articulations among the eight carpal bones and between the carpus, radius, ulna, and metacarpals that permit coordinated wrist movement.

Carpal Tunnel

Narrow passageway on the palmar wrist, bounded by carpal bones dorsally and the flexor retinaculum as the roof. Transmits the median nerve and flexor tendons. Carpal tunnel syndrome causes numbness in the lateral 3.5 digits and thenar weakness.

Carpal Tunnel Biopsy

Sampling of tissue from the carpal tunnel or its contents, performed selectively when an infiltrative,

inflammatory, infectious, or neoplastic process is suspected. It is not a routine test for carpal tunnel syndrome.

Carpal Tunnel Release

Surgery that cuts the transverse carpal ligament to relieve pressure on the median nerve.

Carpal Tunnel Syndrome

The most common entrapment neuropathy, caused by compression of the median nerve as it passes through the carpal tunnel, a narrow fibro-osseous canal bounded by the carpal bones and the flexor retinaculum (transverse carpal ligament) at the wrist.

Alternate Names:

Median Nerve Compression (Carpal Tunnel Syndrome)

Carpal Tunnel Syndrome Tests

Provocative tests for diagnosing carpal tunnel syndrome. Tinel sign: percuss over median nerve at the carpal tunnel tingling in median distribution. Phalen sign: hold wrists in full flexion for 60 seconds reproduces symptoms. Durkan test (carpal compression): direct compression over carpal tunnel for 30 seconds paresthesias.

Carpometacarpal Joint

A joint between a carpal bone and the base of a metacarpal; the thumb carpometacarpal joint is a highly mobile saddle joint commonly affected by osteoarthritis.

Carpus

The carpus is the group of eight wrist bones connecting the forearm to the metacarpals.

Carrageenan

A sulfated polysaccharide extracted from red seaweed and used as a thickener or stabilizer in foods and pharmaceutical preparations; its inflammatory effects depend on form and exposure.

Carrier

Individual heterozygous for a recessive genetic disorder. Typically asymptomatic but can pass mutant allele to offspring. Carrier screening recommended for certain populations (e.g., Ashkenazi Jewish for Tay-Sachs).

Carrier-Mediated Transport

Movement of a substance across a cell membrane with help from a specific carrier protein. It may be passive, moving down a concentration gradient without direct energy use, or active, using energy to move the substance against its gradient.

Carrier Excipient

An inactive substance that carries or supports an active medicine in a formulation, helping control dose, stability, absorption, appearance, or delivery.

Carrier Screening

Genetic testing offered to people without symptoms to determine whether they carry a pathogenic variant for a recessive or X-linked condition that could be passed to a child.

Carrier State

Asymptomatic infection with pathogen capable of transmission. Examples: typhoid carrier, hepatitis B carrier, meningococcal carrier. Importance: public health control, screening, treatment.

Carry-Over Effect

Persistence of an intervention's effect into a later treatment period or measurement, potentially confounding a crossover study or subsequent clinical assessment.

Carteolol

A nonselective beta blocker used mainly as eye drops to lower increased pressure inside the eye in open-angle glaucoma or ocular hypertension. It may be used alone or with other pressure-lowering medicines.

Cartilage

A tough, flexible avascular connective tissue found in joints, the ear, nose, rib cage, and intervertebral discs. Composed of chondrocytes embedded in an extracellular matrix of collagen fibers, proteoglycans, and water, providing resilience and compressive strength.

Cartilage Disease

A disorder damaging cartilage, the resilient connective tissue covering joints or supporting structures, causing pain, stiffness, deformity, impaired growth, or loss of smooth movement.

Cartilaginous Joint

A joint in which bones are connected by cartilage and allow limited movement.

Caruncles

Caruncles are small fleshy anatomical projections, such as the lacrimal caruncle at the inner corner of the eye or urethral caruncle.

Carvedilol

A nonselective beta-blocker with additional alpha-1 adrenergic blockade and antioxidant properties, producing vasodilation with balanced reduction of heart rate, contractility, and afterload.

CAS

Alternate index label; see *Childhood apraxia of speech*.

Casanthranol

A stimulant laxative that increases intestinal movement and water secretion; prolonged or excessive use can cause diarrhea, electrolyte abnormalities, and dependence on laxatives.

Cascade

A sequence in which one activated reaction or event triggers the next, such as the coagulation, complement, or inflammatory cascade.

Cascara

Cascara is a plant-derived stimulant laxative containing anthraquinones; prolonged or excessive use can cause diarrhea, electrolyte imbalance, and dependence.

Case Definition

Standardized clinical, laboratory, and epidemiologic criteria used to classify a person as a suspected, probable, or confirmed case for surveillance or outbreak investigation. It may differ from the criteria used for individual clinical diagnosis.

Case Fatality Rate

The proportion of people diagnosed with a disease who die from it during a defined period. It is used to describe severity, but the estimate depends on accurate case detection, follow-up, and the population studied.

Case Management

Coordinated planning and follow-up of health and social services to help a person obtain appropriate care, avoid duplication, and meet clinical and functional goals.

Case Study

An in-depth analysis of a single patient, disease episode, or clinical scenario, used in medical education, research, and quality improvement to illustrate diagnostic reasoning, treatment decisions, or unusual presentations.

Case-Control Studies

Observational studies that compare people with an outcome or disease to similar people without it and examine prior exposures or risk factors.

Case-Control Study

Observational study comparing cases with disease to controls without. Looks back at exposures.

Case-Fatality Rate

Proportion of cases dying from disease. Formula: deaths / cases. Measures severity.

Casein

A chemical, nutrient, pigment, or material whose physiologic or toxicologic effects depend on dose, route of exposure, metabolism, and tissue distribution.

Casein Kinase

A family of protein kinases that regulate cell growth, DNA repair, circadian rhythms, and other cellular processes.

Caseous

Having a cheese-like appearance or consistency, especially the necrotic material typical of some tuberculosis granulomas.

Caseous Necrosis

A distinctive form of cell death that characteristically occurs in granulomatous infections, most notably tuberculosis. The term derives from the cheese-like, friable, whitish-yellow appearance of the necrotic tissue on gross examination.

Cashew Allergy

An immune reaction to cashew proteins that can cause hives, swelling, vomiting, wheezing, or life-threatening anaphylaxis.

Caspase

A family of cysteine proteases involved in programmed cell death and inflammation.

Caspase Activation

Conversion of inactive procaspases into active caspases, initiating apoptosis or inflammatory pathways.

Caspofungin

An intravenous echinocandin antifungal that inhibits fungal cell-wall glucan synthesis and treats serious *Candida* infections.

Caspofungin Acetate

The acetate salt formulation of caspofungin, an intravenous echinocandin antifungal.

Cassette

A holder or container for recording or imaging material; in radiography, a cassette traditionally houses the film or image receptor during exposure.

Cast

A rigid or semi-rigid device applied around an injured limb or joint to immobilize it while bone or soft tissue heals.

Castleman Disease

Heterogeneous group of lymphoproliferative disorders (angiofollicular lymph node hyperplasia, giant lymph node hyperplasia) sharing lymph node histopathology.

Castor Oil

A vegetable oil extracted from the seeds of *Ricinus communis*. It is used mainly as an oral stimulant laxative and may also be used as an industrial lubricant or in topical preparations.

Castor Oil Overdose

Excessive ingestion of castor oil, which may cause gastrointestinal irritation, abdominal cramping, nausea, vomiting, and diarrhea. Severe exposure can lead to dehydration and fluid or electrolyte imbalance.

Castration

Removal or functional suppression of the gonads, reducing production of sex hormones; it may be surgical or achieved medically.

CAT Scan

Computed axial tomography, commonly called CT, an imaging method that uses multiple X-ray measurements and computer processing to create cross-sectional body images.

Cat'S Eye Reflex

The cat's-eye reflex is a bright whitish reflection from the pupil, called leukocoria in humans, which can signal serious eye disease and requires urgent assessment.

Cat-Nap

A cat-nap is a short period of sleep, usually during the day; frequent unintended sleep may warrant assessment for sleep deprivation or a sleep disorder.

Cat-Scratch Disease

An infection caused by *Bartonella henselae*, usually transmitted by a scratch or bite from an infected cat. It commonly causes a papule followed by regional lymph-node enlargement, fever, and fatigue; atypical disease may affect the eye, liver, spleen, or nervous system.

Alternate Names:

Cat-Scratch Fever

Catabolism

The set of metabolic pathways that break down complex molecules into simpler units, releasing energy captured as ATP, NADH, FADH₂, NADPH. Examples: glycolysis, beta-oxidation, proteolysis, glycogenolysis, nucleotide catabolism.

Catagen

The transitional phase of the hair-growth cycle between active growth and resting.

Alternate Names:

Catagen phase; regression phase of hair growth.

Catalase

An enzyme that breaks down hydrogen peroxide into water and oxygen, protecting cells from oxidative damage.

Catalepsy

A state of markedly reduced movement and responsiveness in which a person may maintain an imposed posture. It can occur in catatonia and other neurologic or psychiatric conditions.

Catalyst

A substance that increases the rate of a chemical reaction without being consumed, by lowering the activation energy (providing an alternative reaction pathway). Enzymes are biological catalysts (proteins or ribozymes). Catalysts do not alter the

reaction equilibrium (ΔG), only the kinetics.

Catamenial Pneumothorax

A manifestation of thoracic endometriosis syndrome characterized by recurrent spontaneous pneumothorax in ovulating women occurring temporally within 48 to 72 hours of the onset of menses. It predominantly affects the right hemithorax (in over 90 percent of cases) and arises from endometrial implants on the diaphragm or visceral pleura that undergo cyclic hormonal shedding, diaphragmatic fenestrations, or spontaneous alveolar rupture. Management combines video-assisted thoracoscopic surgery with diaphragmatic resection or mesh repair, pleurodesis, and prolonged ovarian suppression using GnRH agonists or continuous progestins.

Alternate Names:

Endometriosis-Related Pneumothorax; Catamenial Thorax

Cataplasma

A poultice: a soft, moist substance spread on cloth and applied to the body, historically for soothing, warming, or treating a local condition.

Cataplexy

Sudden temporary loss of muscle tone triggered by strong emotion, commonly associated with narcolepsy.

Cataract

A cataract is an opacity or clouding of the crystalline lens that impairs the transmission of light to the retina, resulting in blurred vision, glare, decreased contrast sensitivity, and progressive vision loss, and it is the leading cause of preventable blindness worldwide.

Cataract - Adult

An adult cataract is clouding of the eye lens that progressively reduces visual acuity, contrast, or glare tolerance; definitive treatment is lens-replacement surgery when function is impaired.

Cataract Removal

A surgical procedure that removes a cloudy natural

lens from the eye and usually replaces it with an artificial intraocular lens to improve vision.

Cataract Surgery

Surgical removal of the clouded lens and replacement with an intraocular lens implant to restore vision. It is the most commonly performed ophthalmic procedure and is indicated when cataract impairs daily function.

Cataracts

Clouding of the eye's natural lens that causes blurred vision, glare, faded colors, or difficulty seeing at night.

Catastrophic Aging

Rapid functional decline after stressor (illness, surgery, fall). Elderly have decreased reserve, less ability to recover. Prevention: comprehensive assessment, optimization, early intervention.

Catastrophic Reaction

A disproportionately intense emotional or behavioral response to a situation that may appear minor to others, often occurring with cognitive impairment or neurologic disease.

Alternate Names:

Catastrophic response; catastrophic emotional reaction.

Catatonია

A neuropsychiatric syndrome characterized by motor abnormalities including immobility, mutism, posturing, waxy flexibility, stereotypy, mannerisms, grimacing, echolalia, and echopraxia. It can occur in mood disorders, psychotic disorders, medical conditions, or as catatonia due to another medical condition.

Catatonია, Fatal

Fatal catatonia is a severe, life-threatening catatonic state with marked motor and behavioral disturbance, fever, autonomic instability, and risk of organ failure.

Catbite

A catbite is a puncture wound caused by a cat, with a high risk of bacterial infection, including *Pasteurella*, and possible tendon, joint, or bone involvement.

Catch-Up Immunization

Vaccination of a person who is behind the recommended schedule using age- and risk-appropriate intervals. Doses generally do not need to be restarted because of delay, but minimum ages and intervals must be respected.

Catechin

A chemical, nutrient, pigment, or material whose physiologic or toxicologic effects depend on dose, route of exposure, metabolism, and tissue distribution.

Catechol

A benzene compound with two adjacent hydroxyl groups and a chemical precursor or component of some biologically active compounds; exposure may be irritant or toxic.

Catecholamine

A group of hormones and neurotransmitters, including epinephrine, norepinephrine, and dopamine, involved in stress and cardiovascular responses.

Catecholamine Blood Test

A blood test that measures catecholamines such as epinephrine, norepinephrine, and dopamine; it may help evaluate suspected pheochromocytoma or related disorders, although plasma metanephrines are often preferred for screening.

Catecholamine Crisis

Acute life-threatening elevation of catecholamines causing severe hypertension, tachycardia, and multi-organ dysfunction. Occurs in pheochromocytoma and paraganglioma precipitated by anesthesia, surgery, trauma, or medications that stimulate catecholamine release.

Catecholaminergic Polymorphic Ventricular Tachycardia

A severe, genetically determined cardiac channelopathy characterized by exercise- or emotional stress-induced polymorphic or bidirectional ventricular arrhythmias and sudden cardiac death in children and young adults with structurally normal hearts and normal resting electrocardiograms. Caused by gain-of-function mutations in the cardiac ryanodine receptor gene (*RYR2*) or loss-of-function mutations in calsequestrin (*CASQ2*), leading to abnormal sarcoplasmic reticulum calcium release during sympathetic stimulation; management includes high-dose non-selective beta-blockers (nadolol), flecainide, left cardiac sympathetic denervation, and implantable cardioverter-defibrillators.

Alternate Names:

CPVT; Bidirectional Ventricular Tachycardia; Stress-Induced Polymorphic VT

Catecholamines

Catecholamines include adrenaline, noradrenaline, and dopamine, hormones and neurotransmitters involved in stress responses, blood pressure, heart function, and metabolism.

Catecholamines (Urine/Plasma)

Measurement of catecholamines or their metabolites in blood or urine. These tests help evaluate suspected pheochromocytoma or paraganglioma, but results must be interpreted with medications, stress, sampling conditions, and clinical findings.

Alternate Names:

Urine/Plasma

Catecholamines - Urine

A urine test measuring catecholamines or metabolites to help evaluate pheochromocytoma and related disorders.

Category Five Hurricane

A Saffir–Simpson hurricane with sustained winds of at least 157 miles per hour (252 km/h), capable of catastrophic damage and prolonged loss of habitability.

Category I Fetal Heart Tracing

A normal fetal heart rate tracing by NICHD 2008 criteria. All three characteristics present: baseline 110-160 bpm, moderate variability (6-25 bpm), and no late or variable decelerations. May have accelerations. Category I tracings are associated with normal fetal acid-base status.

Category II Fetal Heart Tracing

An indeterminate fetal heart rate tracing that falls between Category I and III.

Category III Fetal Heart Tracing

An abnormal fetal heart rate tracing indicating potential fetal hypoxia or acidosis. Two specific patterns: (1) absent baseline variability with recurrent late decelerations, (2) absent baseline variability with recurrent variable decelerations, and (3) sinusoidal pattern.

Category Three Hurricane

A Saffir–Simpson hurricane with sustained winds of 111–129 miles per hour (178–208 km/h), capable of devastating damage.

Category Two Hurricane

A Saffir–Simpson hurricane with sustained winds of 96–110 miles per hour (154–177 km/h), capable of extensive damage to structures and vegetation.

Catenin

A family of proteins involved in cell adhesion and Wnt signaling; abnormal beta-catenin activation can contribute to cancer.

Caterpillar Dermatitis

Caterpillar dermatitis is an itchy inflammatory skin reaction caused by contact with irritating or venomous caterpillar hairs or spines.

Caterpillars

The larval stage of butterflies and moths; contact with some species' hairs or spines can cause painful dermatitis, eye injury, or allergic reactions.

Catharsis

Catharsis is emotional release or expression; it is a historical psychological concept and not a specific medical treatment or diagnosis.

Cathartic

An agent that promotes bowel evacuation, usually by increasing stool water, intestinal motility, or both.

Alternate Names:

Purgative; laxative.

Cathepsin

A family of proteases involved in lysosomal protein breakdown, tissue remodeling, immunity, and bone resorption.

Cathepsin D

An aspartic protease found mainly in lysosomes that digests proteins and participates in apoptosis and tissue disease.

Cathepsin H

A lysosomal cysteine protease involved in protein breakdown and activation of some biologically active peptides.

Cathepsin K

A cysteine protease produced by osteoclasts that degrades bone matrix.

Cathepsin L

A lysosomal cysteine protease involved in protein degradation, antigen processing, tissue remodeling, and some infections.

Cathepsin Z

A lysosomal cysteine protease involved in protein processing and immune-cell function.

Cathepsins B

Cysteine proteases, especially cathepsin B, that participate in lysosomal protein breakdown, inflammation, tissue remodeling, and tumor invasion.

Catheter

Flexible tube for drainage or infusion. Types: urinary (Foley), intravenous, central venous, arterial. Materials: silicone, latex, PVC.

Catheter, Foley

An indwelling urinary catheter with an inflatable balloon that holds it in the bladder, allowing continuous drainage of urine.

Catheter-Associated UTI

Urinary tract infection related to indwelling urinary catheter. Most common healthcare-associated infection. Risk: prolonged catheterization, female sex, diabetes, immunosuppression. Prevention: avoid unnecessary catheters, aseptic insertion, closed drainage, daily hygiene, early removal.

Catheter-Related Infections

Infections caused by microorganisms entering along or contaminating an intravascular or other indwelling catheter. They may cause local inflammation or bloodstream infection; removal or replacement and antimicrobial treatment depend on the catheter and severity.

Catheter-Related UTI

A urinary tract infection associated with an indwelling urinary catheter, usually caused by bacteria entering or ascending along the catheter; diagnosis requires compatible symptoms and appropriately collected urine testing.

Catheterization

A medical procedure involving catheterization. Indications, risks, preparation, and follow-up depend on the patient and the specific procedure.

Catheterization (Urinary)

Insertion of a flexible tube (catheter) through the urethra or suprapubically into the urinary bladder to drain urine. Types: Foley catheter (indwelling balloon catheter), intermittent (in-out) catheter, and suprapubic catheter.

Alternate Names:

Urinary

Cathexis

The investment of emotional or psychological energy in a person, idea, object, or activity, a term used mainly in psychology and psychoanalytic theory.

Cation

An ion with a positive electrical charge, such as sodium, potassium, calcium, or hydrogen.

Alternate Names:

Positively charged ion.

Cauda Equina

The bundle of lumbar, sacral, and coccygeal nerve roots below the end of the spinal cord.

Alternate Names:

Cauda equina nerve roots; horse-tail nerve bundle.

Cauda Equina Syndrome

A neurosurgical emergency caused by compression of the cauda equina nerve roots below the level of the conus medullaris (typically at L1-L2 and below), resulting in bilateral lower extremity weakness, sensory loss, and bladder and bowel dysfunction.

Alternate Names:

Syndrome Cauda Equina (Cauda Equina Syndrome)

Caudad

Toward the tail or lower end of the body; in humans, it generally means toward the feet or away from the head.

Caudal

Positioned toward the tail or lower part of the body.

Caudal Dysplasia

A congenital disorder in which lower-spine and related body structures develop incompletely, sometimes causing limb, bowel, or bladder abnormalities.

Caudal Vein

An anatomic structure or region related to caudal Vein; its location and function determine its normal relationships and clinical significance.

Caudate Nucleus

An anatomic structure or region related to caudate Nucleus; its location and function determine its normal relationships and clinical significance.

Cauliflower Ear

A permanent deformity of the outer ear caused by blood or fluid collecting between the cartilage and its covering, usually after blunt trauma or repeated friction. Untreated separation can deprive cartilage of blood supply and produce a thickened, irregular ear. Prompt drainage and compression reduce the risk of deformity.

Alternate Names:

Perichondrial Hematoma (Cauliflower Ear)

Caulking Compound Poisoning

Exposure to caulking compounds that may irritate the skin, eyes, or airways; ingestion can cause gastrointestinal symptoms and aspiration risk depending on the product.

Caulobacter

A genus of stalked Gram-negative bacteria found mainly in freshwater and soil and rarely causing human disease.

Caulobacteraceae

A family of mostly aquatic Gram-negative bacteria that includes Caulobacter.

Causalgia

Severe persistent burning pain and sensory disturbance caused by injury to a peripheral nerve, now commonly classified within complex regional pain syndrome type II.

Alternate Names:

Complex regional pain syndrome type II; causalgic pain.

Cause Of Death

The specific disease, injury, or toxic agent responsible for initiating the lethal physiological sequence leading directly to death (e.g., Gunshot wound to the head, Acute myocardial infarction).

Causes Symptoms Of Hormonal Imbalances Women

Hormonal imbalance in women can reflect thyroid disease, polycystic ovary syndrome, menopause, pregnancy, adrenal or pituitary disorders, medicines, or changes in body weight. Symptoms may include irregular bleeding, acne, hair changes, infertility, hot flashes, fatigue, or mood changes.

Caustic

Caustic describes a substance that chemically burns or destroys tissue, such as a strong acid or alkali; ingestion or contact can be a medical emergency.

Cauterization

The deliberate destruction or sealing of tissue using heat, electricity, chemicals, or another energy source to control bleeding or remove abnormal tissue.

Cautery

Cautery destroys or seals tissue using heat, electricity, chemicals, or another energy source to control bleeding or remove abnormal tissue.

Cautery Device

An anatomic structure or region related to cautery Device; its location and function determine its normal relationships and clinical significance.

Caveola

An anatomic structure or region related to caveola; its location and function determine its normal relationships and clinical significance.

Caveolins

Membrane proteins that form or regulate caveolae involved in cell signaling, lipid handling, and membrane trafficking.

Cavernous Hemangioma

A cluster of enlarged, thin-walled blood vessels that may occur in the skin, brain, or other tissues.

Cavernous Malformations

Abnormally enlarged, thin-walled blood-vessel clus-

ters that can bleed or cause neurological symptoms.

Cavernous Sinus

The cavernous sinus is a venous channel beside the pituitary and sphenoid bone containing important cranial nerves and the internal carotid artery; thrombosis or infection can be life-threatening.

Cavernous Sinus Thrombosis

Life-threatening septic thrombosis of the cavernous sinus, usually a complication of mid-face, nasal, paranasal sinus (sphenoid, ethmoid), dental, or orbital infection spreading through the valveless ophthalmic veins.

Cavities

A cavity is tooth decay caused by acids produced when oral bacteria metabolize dietary carbohydrates. The process can progress from enamel demineralization to dentin and pulp infection; fluoride, oral hygiene, diet, dental sealants, fillings, or root-canal treatment may be needed.

Alternate Names:

Dental Caries (Cavities)

Cavities And Tooth Decay

Progressive destruction of tooth enamel and deeper tooth tissues by acids produced by oral bacteria.

Cavity

A localized hole or structural defect in a tooth caused by dental caries.

Alternate Names:

Dental cavity; carious lesion.

Cavum

Cavum means a cavity or hollow space, such as the cavum septi pellucidi in the brain; the specific anatomical meaning depends on the term.

CBC

See *Complete Blood Count*.

Alternate Names:

Complete blood count; full blood count.

CBC Blood Test

See *Complete Blood Count*.

CCP

Cyclic citrullinated peptide; anti-CCP antibody testing supports diagnosis of rheumatoid arthritis and may help assess the likelihood of erosive disease.

CCTA

Alternate name; see *Coronary Computed Tomography Angiography*.

CCU

A hospital unit providing continuous monitoring and specialized treatment for people with serious acute cardiac disease.

Alternate Names:

Coronary care unit; cardiac care unit.

Cd Antigens

Cell-surface markers identified by cluster-of-differentiation antibodies and used to classify immune cells.

CD4 Count

The number of CD4-positive T-helper lymphocytes in a blood sample. It helps assess immune function and risk of opportunistic infection in people with HIV, but interpretation depends on trends, viral load, clinical findings, and current treatment guidance.

CD4-Positive T Cell

A T lymphocyte that recognizes peptide presented by major histocompatibility complex class II molecules. Its differentiated subsets coordinate immune responses, including macrophage activation, B-cell help, mucosal defense, and immune regulation.

CD8-Positive T Cell

A T lymphocyte that recognizes peptide presented by major histocompatibility complex class I molecules. Cytotoxic CD8-positive cells can induce apoptosis in infected, malignant, or otherwise

altered target cells.

Cea

CEA is an abbreviation for carcinoembryonic antigen, a tumor marker used mainly to monitor selected cancers.

CEA Assay

A laboratory assay measuring carcinoembryonic antigen, mainly to monitor selected cancers rather than screen the general population.

CEA Blood Test

A blood test measuring carcinoembryonic antigen, a tumor marker used mainly to monitor selected cancers, especially colorectal cancer, and assess treatment response or recurrence. It is not sufficiently specific for general cancer screening.

Cecal Hemorrhage

Bleeding from the cecum, which may result from inflammation, infection, ischemia, diverticular disease, polyps, or cancer.

Cecal Infection

Infection involving the cecum, caused by organisms, inflammation, ischemia, or spread from nearby tissue.

Cecal Neoplasm

A benign or malignant growth arising in the cecum; symptoms may include bleeding, anemia, abdominal pain, or bowel changes, and diagnosis usually requires colonoscopy and biopsy.

Cecal Volvulus

Axial twisting of the cecum and ascending colon around its mesentery, accounting for approximately one-third of colonic volvulus cases. It presents with acute or subacute large bowel obstruction, abdominal pain, and distension. Diagnosis is by CT scan showing the characteristic whirl sign and a massively dilated cecum.

Cecostomy

A surgically created opening from the cecum to the abdominal wall to allow decompression or stool removal.

Cecum

First and widest large intestinal part in the right iliac fossa below the ileocecal valve, a blind-ended pouch approximately 6 cm long. Appendix arises from its posteromedial wall approximately 2 cm below the valve, containing abundant lymphoid tissue. Cecal volvulus causes large bowel obstruction.

Cedar Leaf Oil Poisoning

Ingestion or inhalation of cedar leaf oil, which may irritate tissues and cause gastrointestinal or neurologic toxicity depending on the dose.

Cedecea

A genus of gram-negative bacteria in the Enterobacterales that rarely causes opportunistic infection, usually in people with serious underlying illness.

Cedecea Davisae

A rare opportunistic gram-negative bacterium reported in bloodstream, respiratory, wound, and urinary infections; clinical significance depends on the specimen and symptoms.

Cedecea Lapagei

A gram-negative environmental bacterium rarely associated with human opportunistic infection, including bloodstream or respiratory infection.

Cedecea Neteri

An uncommon gram-negative bacterium that may cause opportunistic human infection; interpretation requires correlation with the clinical site and culture findings.

Cediranib Maleate

The maleate salt of cediranib, an investigational vascular endothelial growth factor receptor inhibitor studied as an anticancer medicine.

Cefaclor

A second-generation cephalosporin antibiotic used for selected susceptible bacterial infections; allergy, diarrhea, and antibiotic-associated colitis are important risks.

Cefadroxil

An oral first-generation cephalosporin antibiotic used for selected susceptible bacterial infections; allergy, gastrointestinal effects, and antibiotic-associated colitis are possible.

Cefamandole

A second-generation cephalosporin antibiotic used for selected susceptible bacterial infections; bleeding risk, allergy, diarrhea, and antibiotic-associated colitis are possible.

Cefatrizine

An older oral cephalosporin antibiotic used in some countries for susceptible bacterial infections; current use depends on local availability, resistance, and clinical guidance.

Cefazolin

A first-generation cephalosporin antibiotic given by injection for susceptible infections and commonly used for surgical antimicrobial prophylaxis.

Cefdinir

An oral third-generation cephalosporin antibiotic used for selected respiratory, skin, and other susceptible bacterial infections.

Cefepime

A fourth-generation cephalosporin antibiotic used for serious susceptible bacterial infections, including some hospital-acquired infections; renal dose adjustment is important.

Cefixime

An oral third-generation cephalosporin antibiotic used for selected susceptible infections, including some urinary and respiratory infections.

Cefmenoxime

A third-generation cephalosporin antibiotic used in some countries for susceptible bacterial infections; allergy, diarrhea, and antibiotic-associated colitis are possible.

Cefmetazole

A medicine or chemical compound identified by cefmetazole. Its uses, effects, and risks depend on the specific substance and clinical context.

Cefonicid

A long-acting second-generation cephalosporin antibiotic used for selected susceptible infections; dosing and use depend on kidney function and local resistance.

Cefoperazone

A third-generation cephalosporin with activity against many gram-negative bacteria, often combined with sulbactam; bleeding, allergy, and biliary effects may occur.

Cefotaxime

A third-generation cephalosporin antibiotic administered parenterally for serious susceptible infections, including meningitis, pneumonia, and sepsis.

Cefotetan

A second-generation cephamycin antibiotic used for selected serious infections and surgical prophylaxis, with activity against some anaerobic bacteria.

Cefotiam

A second-generation cephalosporin antibiotic used in some countries for susceptible respiratory, urinary, skin, and other bacterial infections.

Cefoxitin

A cephamycin antibiotic used for selected abdominal, pelvic, skin, and other infections, including some caused by anaerobic bacteria.

Cefsulodin

An older antipseudomonal cephalosporin used

mainly in laboratory or historical contexts because resistance and newer treatments limit routine use.

Ceftazidime

A third-generation cephalosporin antibiotic with activity against *Pseudomonas aeruginosa*, used for selected serious Gram-negative infections.

Ceftazidime-Avibactam

A combination of the third-generation cephalosporin ceftazidime with the non-beta-lactam beta-lactamase inhibitor avibactam. Avibactam inhibits class A, class C, and some class D beta-lactamases, including KPC carbapenemases. This combination has activity against many carbapenem-resistant Enterobacteriaceae and *Pseudomonas aeruginosa*.

Ceftibuten

An oral third-generation cephalosporin used for selected susceptible respiratory or urinary bacterial infections.

Ceftizoxime

A third-generation cephalosporin antibiotic used for selected serious infections caused by susceptible bacteria, including some anaerobes.

Ceftriaxone

A third-generation cephalosporin antibiotic administered by injection for many serious bacterial infections, including meningitis, pneumonia, and gonorrhea.

Cefuroxime

A second-generation cephalosporin available orally or by injection for selected respiratory, urinary, skin, and other bacterial infections.

Celiac Artery

The first major ventral branch of the abdominal aorta at T12, arising from the aorta just below the diaphragm and supplying the foregut (stomach, proximal duodenum, liver, gallbladder, spleen, pancreas). It trifurcates into the left gastric, splenic, and common hepatic arteries, with rich collateral

circulation between these branches.

Celiac Crisis

Acute life-threatening presentation of celiac disease characterized by severe dehydration, electrolyte imbalances, metabolic acidosis, hypocalcemic tetany, and hypovolemic shock. Most commonly occurs in infants and young children after a viral illness or introduction of gluten-containing foods.

Celiac Disease

An immune-mediated enteropathy triggered by gluten ingestion in genetically predisposed individuals (HLA-DQ2/DQ8). Gliadin peptides from wheat, barley, and rye activate an autoimmune response against tissue transglutaminase (tTG), causing villous atrophy, crypt hyperplasia, and intraepithelial lymphocytosis in the small intestine.

Alternate Names:

Nontropical Sprue

Celiac Disease (Gluten Enteropathy)

Alternate index label for Gluten Enteropathy.

Celiac Disease - Nutritional Considerations

Dietary management of celiac disease requiring strict lifelong avoidance of gluten, which is found in wheat, barley, rye, and contaminated products. Nutritional counseling addresses deficiencies of iron, B12, calcium, and vitamin D that result from intestinal damage.

Celiac Disease - Sprue

Celiac disease is an immune-mediated reaction to gluten that damages small-intestinal villi and can cause malabsorption, anemia, diarrhea, weight loss, or extraintestinal disease.

Celiac Plexus

A network of nerves in the upper abdomen that supplies abdominal organs and may be targeted for pain treatment.

Celiac Trunk

First major abdominal aortic branch at T12-L1, the foregut artery. Divides into left gastric (lesser curvature), splenic (spleen, pancreas, greater curvature), and common hepatic (proper hepatic/gastroduodenal) arteries. Surrounded by the celiac plexus.

Celiac Trunk Stenosis

Narrowing of the celiac trunk typically caused by extrinsic compression from the median arcuate ligament of the diaphragm, known as median arcuate ligament syndrome or celiac artery compression syndrome. Causes chronic abdominal pain particularly after eating and weight loss due to postprandial mesenteric ischemia.

Cell

The fundamental structural and functional unit of all living organisms. Human cells are eukaryotic, characterized by a nucleus containing DNA and membrane-bound organelles.

Cell Adhesion

The binding of cells to one another or to the extracellular matrix, mediated by adhesion molecules and important for tissue structure, signaling, and cell migration.

Cell Aggregation

Clumping of cells through adhesion molecules or extracellular proteins, important in development, immunity, wound healing, and clotting.

Cell Body

The part of a cell containing the nucleus and most organelles, excluding specialized extensions such as axons.

Cell Count

The number of cells in a sample, tissue, or fluid, measured to assess blood, inflammation, infection, or cell growth.

Cell Culture

Growth of cells outside the body in a controlled nutrient medium for research, testing, diagnosis, or production of biologic products.

Cell Cycle

The ordered series of cellular phases through which a cell grows, duplicates its DNA, and divides.

Cell Death

The regulated elimination of cells through programmed cellular pathways that help maintain tissue balance and remove damaged cells.

Cell Dedifferentiation

Loss of some specialized features by a mature cell, allowing it to become more developmentally flexible.

Cell Density

The number of cells within a defined volume, area, or tissue region.

Cell Differentiation

The process by which an unspecialized cell develops the structure and function of a specialized cell type.

Cell Division

The process by which one cell produces daughter cells; mitosis makes most body cells and meiosis makes reproductive cells.

Cell Fusion

Joining of two cells or their membranes to form one larger or multinucleated cell.

Cell Growth

An increase in cell size and biomass through synthesis of proteins, membranes, and other components.

Cell Maturation

Development of a cell from an immature precursor into a functionally specialized cell.

Cell Migration

Movement of cells through tissue or across a surface in response to chemical or mechanical signals.

Cell Motility

The ability of cells to move through or across a surface using the cytoskeleton, cell-adhesion structures, or specialized structures such as cilia and flagella. It is important in development, immune responses, wound healing, and cancer spread.

Alternate Names:

Cell Locomotion

Cell Movement

Directed or undirected movement of a cell, important in development, immunity, wound repair, and cancer spread.

Cell Nucleus

The membrane-bound compartment containing most cellular DNA and regulating gene expression and division.

Cell Pellet

The concentrated layer of cells formed at the bottom of a tube after centrifugation, usually collected for testing.

Cell Physiology

The study of how cells maintain energy, transport substances, communicate, respond to signals, and perform specialized functions.

Cell Polarity

Unequal distribution of structures and activities within a cell, enabling directional transport, signaling, movement, and tissue organization.

Cell Proliferation

An increase in cell number through division; excessive proliferation can contribute to cancer.

Cell Secretion

Release of substances such as hormones, enzymes, neurotransmitters, mucus, or cytokines from cells.

Cell Senescence

A state in which a cell remains metabolically active but permanently stops dividing, often in response to aging, stress, or cellular damage.

Alternate Names:

Cellular senescence; replicative senescence.

Cell Sorting

Separation of cells into groups based on properties such as size, density, surface markers, or fluorescence.

Cell Structure

The organization of a cell into membrane, cytoplasm, nucleus, and organelles that support its functions.

Cell Surface

The plasma membrane and associated molecules that control transport, adhesion, recognition, and communication.

Cell Survival

The ability of a cell to remain alive and functional despite stress.

Cell Therapy

A medical procedure, treatment, device, or care topic related to cell therapy; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Cell Transplantation

A medical procedure, treatment, device, or care topic related to cell transplantation; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Cell Wall

A rigid outer layer surrounding plant, fungal, and bacterial cells; human cells do not have cell walls.

Cell-Cell Junction

A specialized connection between adjacent cells that supports adhesion, communication, or controlled passage of substances.

Cell-Cell Signaling

Communication between cells through contact, electrical signals, hormones, neurotransmitters, or cytokines.

Cell-Free Fetal DNA Screening

A prenatal screening test that analyzes placental cell-free DNA in maternal blood to estimate the chance of selected chromosomal conditions. It is usually offered from early pregnancy onward. It is a screening test, not a diagnostic test, and a positive or inconclusive result requires appropriate counseling and follow-up.

Cell-Free System

A laboratory system containing selected cell components but no intact living cells, used to study biochemical reactions under controlled conditions.

Cell-Matrix Junction

A connection between a cell and extracellular matrix that anchors the cell and transmits signals.

Cell-Mediated Immune Response

Alternate index label; see *Cell-mediated immunity*.

Cell-Mediated Immunity

An immune response mediated mainly by T lymphocytes and other cells rather than by antibodies. It is important in defense against intracellular pathogens and in immune surveillance.

Alternate Names:

Cell-Mediated Immune Response

Cellophane

Cellophane is a thin transparent cellulose film; in medicine it may be used in dressings, packaging, or specialized laboratory techniques.

Cells Stem (Stem Cells)

Alternate index label; see *Stem Cell*.

Cellular

Relating to cells or processes occurring within or between cells.

Cellular Adaptation

Cellular adaptations are reversible changes in cell morphology and function that occur in response to altered physiological demands or mild pathological conditions.

Cellular Immunity

Immune defense mediated mainly by T cells, natural killer cells, and macrophages rather than antibodies alone.

Cellular Metabolic Process

A chemical reaction or pathway that produces energy, builds cell components, or breaks down nutrients and waste.

Cellular Respiration

The process by which cells extract energy from nutrients, usually producing ATP.

Cellular Swelling

An early manifestation of reversible injury caused by failure of ATP-dependent ion pumps and intracellular accumulation of sodium and water. It is also called hydropic change and is often most apparent in cells exposed to ischemia or toxins.

Alternate Names:
hydropic change.

Cellular Vesicle

A small membrane-bound compartment that transports, stores, or releases substances.

Cellulite

Cellulite refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Cellulitis

Cellulitis is a bacterial infection of the deeper skin and subcutaneous tissue, causing expanding redness, warmth, swelling, and tenderness with possible systemic illness. commonly caused by beta-hemolytic streptococci (particularly *Streptococcus pyogenes*)

or *Staphylococcus aureus*.

Cellulomonas

A genus of Gram-positive environmental bacteria found mainly in soil and plant material.

Cellulomonas Hominis

A rare Gram-positive bacterial species that can cause opportunistic human infection.

Cellulose

A chemical, nutrient, pigment, or material whose physiologic or toxicologic effects depend on dose, route of exposure, metabolism, and tissue distribution.

Cellulosimicrobium

A genus of Gram-positive environmental bacteria that rarely causes opportunistic invasive infection.

Cellulosome

A multi-enzyme complex produced by some microorganisms to break down cellulose.

Celosomy

A congenital body-wall closure defect in which abdominal or thoracic organs may protrude outside the body; the term is often used in descriptions of severe omphalocele-like malformations.

Cement

Medical cement, especially bone cement, is a material used to fix prostheses or fill spaces; other cements may be dental or industrial and require context.

Cemento-Enamel Junction

Junction between enamel and cementum. Three relationships: butt junction, enamel overlapping cementum, cementum overlapping enamel.

Cementoma

A benign fibro-osseous lesion of the jaw or tooth-supporting tissues; modern classification distinguishes several cementum-related lesions with dif-

ferent behavior and treatment.

Cementum

A mineralized connective tissue covering the tooth root. It provides attachment for periodontal-ligament fibers and is thinner near the cemento-enamel junction and thicker toward the root apex.

Cenesthesia

Cenesthesia is the general sense of the condition and position of one's body; disturbance may occur in neurologic or psychiatric illness.

Centenarian

Person aged 100 or older. 100,000 worldwide. More women than men (4:1). Often maintain functional independence, cognitive function. Models for healthy aging research.

Center

In anatomy or clinical measurement, a center is a central point, region, or facility organized around a function; the specific meaning depends on context.

Centigram

A metric unit of mass equal to one hundredth of a gram, or 10 milligrams, used for small quantities of medicines or specimens.

Centimeter

A metric unit of length equal to one hundredth of a meter, commonly used in clinical measurements such as wound size, tumor dimensions, and anatomical distances.

Centimeter (Cm)

A unit of length equal to one hundredth of a meter, or 10 millimeters.

Centipede

A many-legged arthropod whose bite can inject venom and cause local pain, swelling, and redness; severe allergic reactions are uncommon but possible.

Centipoise

A unit of dynamic viscosity equal to one millipascal-second, used to describe the flow resistance of blood, fluids, medicines, and other materials.

Central

Located near or toward the middle of the body or an organ.

Central (Brain) Fatigue

A sense of reduced mental energy, concentration, alertness, or motivation arising primarily from central nervous-system processes.

Alternate Names:

Central fatigue; mental fatigue.

Central Apnea

A pause in breathing caused by absent or reduced respiratory effort from impaired brainstem signaling, rather than upper-airway obstruction.

Central Auditory Processing Disorder

Impaired processing of auditory information by the central nervous system despite adequate peripheral hearing. It may cause difficulty understanding speech, especially in noise, and can affect learning and communication.

Central Core Disease

An autosomal dominant (or rarely recessive) congenital myopathy caused by heterozygous missense mutations in the ryanodine receptor 1 (*RYR1*) gene on chromosome 19q13.2, which encodes the skeletal muscle sarcoplasmic reticulum calcium release channel. Typically presents in infancy or early childhood with hypotonia, delayed motor milestones, and mild, non-progressive or slowly progressive proximal muscle weakness (affecting the hip and pelvic girdle) with skeletal deformities such as congenital hip dislocation, scoliosis, and pes cavus. Muscle biopsy stained with oxidative enzymes (NADH-TR and SDH) demonstrates characteristic well-circumscribed, pale, round, amorphous central areas ("cores") running the entire length of type 1 muscle fibers devoid of mitochondria and enzymatic activity. Affected patients carry an exceptionally high suscep-

tibility to malignant hyperthermia during volatile general anesthesia.

Alternate Names:

CCD; Core Myopathy; RYR1-Related Central Core Disease

Central Deafness

Loss or severe impairment of hearing caused by disease of the auditory pathways or auditory cortex in the brain, rather than by a disorder of the external, middle, or inner ear.

Central Diabetes Insipidus

Excessive urination and thirst caused by deficient secretion of antidiuretic hormone from the hypothalamus or posterior pituitary. The kidneys cannot appropriately concentrate urine, producing hypernatremia if water intake is insufficient.

Central Hypothyroidism

An inadequate thyroid-hormone state caused by insufficient stimulation from the pituitary gland or hypothalamus.

Central Line

A catheter inserted into a large vein with its tip in or near the heart, used to give medications or nutrition, draw blood, or monitor central venous pressures.

Central Line Infections - Hospitals

An infection related to a central venous catheter, including a central-line-associated bloodstream infection, in which microorganisms enter the bloodstream from or through the catheter.

Central Line Placement

Insertion of a catheter into a central vein (internal jugular, subclavian, or femoral), with the tip in the superior (or inferior) vena cava. Ultrasound guidance is standard. Indications: administration of vasopressors, TPN, chemotherapy, long-term antibiotics, central venous pressure monitoring, hemodialysis, and plasmapheresis.

Central Line-Associated Bloodstream Infection

Bloodstream infection associated with central venous catheter. Prevention: maximal sterile barriers, chlorhexidine skin preparation, optimal site selection (subclavian preferred), daily review of line necessity. Diagnosis: paired blood cultures (peripheral and line). Treatment: antibiotics, catheter removal if possible.

Central Nervous System

The part of the nervous system comprising the brain and spinal cord, enclosed within the skull and vertebral column.

Central Nervous System

The fundamental structural division of the nervous system comprising the brain and spinal cord, enclosed within the cranium and vertebral canal and cushioned by cerebrospinal fluid and three meningeal layers (dura, arachnoid, and pia mater). Integrates and coordinates sensory input, higher cognitive reasoning, voluntary motor execution, autonomic homeostatic regulation, and neuroendocrine signaling.

Central Nervous System Lymphoma

A lymphoma involving the brain, spinal cord, cerebrospinal fluid, or eye that can cause neurologic or visual symptoms.

Central Nervous System Lymphoma

A lymphoma that begins in the brain, spinal cord, eye, or cerebrospinal fluid.

Central Nervous System Vascular Malformations

Abnormal blood-vessel formations in or around the brain or spinal cord.

Central Neurofibromatosis

Alternate index label; see *NF2-related schwannomatosis (neurofibromatosis type 2)*.

Central Pontine Myelinolysis

A form of osmotic demyelination syndrome caused by overly rapid correction of hyponatremia, leading to demyelination of the central pons. Clinical features include flaccid quadriparesis, pseudobulbar palsy, dysarthria, dysphagia, and in severe cases locked-in syndrome.

Central Precocious Puberty

Central precocious puberty begins when the hypothalamus and pituitary activate the normal puberty pathway unusually early. It causes early secondary sexual characteristics and accelerated bone maturation; evaluation identifies causes and treatment may delay progression when appropriate.

Central Retinal Artery Occlusion

Acute obstruction of the central retinal artery causing sudden, usually painless, severe monocular visual loss. It is an ocular stroke and requires urgent systemic and vascular evaluation because it may signal a high risk of cerebral ischemia.

Central Serous Chorioretinopathy

Accumulation of serous fluid beneath the neurosensory retina, usually in the macular region, due to altered choroidal vascular permeability and retinal pigment-epithelium dysfunction. It often causes acute or subacute central visual distortion and may be associated with corticosteroid exposure.

Central Serous Choroidopathy

A disorder in which fluid accumulates beneath the neurosensory retina, usually near the macula, causing blurred or distorted central vision. It is associated with corticosteroid exposure and stress-related factors; persistent or recurrent disease requires ophthalmic evaluation.

Central Sleep Apnea

Apneas from variability in respiratory effort without airway obstruction. Associated with heart failure (Cheyne-Stokes respiration), high altitude, and opioid use.

Alternate Names:

Sleep Apnea, Central

Central Venous Catheter

A catheter whose tip terminates in a central vein, usually the lower superior vena cava or cavoatrial junction. It provides reliable access for vasoactive drugs, irritating infusions, hemodynamic monitoring, and prolonged therapy, but may cause bloodstream infection, thrombosis, or mechanical complications.

Central Venous Catheter - Dressing Change

Replacement of the sterile dressing covering a central venous catheter using aseptic technique to keep the insertion site clean, dry, and protected from contamination and infection.

Central Venous Catheter - Flushing

Instillation of a prescribed sterile solution through a central venous catheter to maintain patency and reduce blockage, using the device-specific technique and volume.

Central Venous Catheters - Ports

Implantable venous access ports are central venous catheters placed beneath the skin, accessed with a special needle to deliver medication, fluids, blood products, or obtain blood samples over prolonged treatment.

Central Venous Line

A vascular catheter whose tip lies in a major central vein, commonly the superior vena cava, for reliable long-term or high-concentration intravenous access.

Central Venous Line - Infants

A catheter whose tip lies in a large central vein of an infant, used for irritant medicines, nutrition, fluids, blood sampling, or monitoring; infection and thrombosis are key risks.

Central Venous Pressure

Pressure measured in or near the right atrium, usually through a central venous catheter. It reflects right-sided filling conditions but is affected by ventilation, heart function, vascular tone, and measurement technique; it should not be used alone to guide

fluid treatment.

Central Vision

Detailed vision directed at the point of gaze, provided primarily by the macula and fovea; it is needed for reading and recognizing faces.

Centriacinar Emphysema

A subtype of emphysema in which destruction begins in the respiratory bronchioles and extends peripherally. It predominantly affects the upper lobes and is strongly associated with cigarette smoking. It is the most common form of emphysema and often coexists with chronic bronchitis.

Centric-Fusion Translocation

A Robertsonian translocation in which the long arms of two acrocentric chromosomes fuse near their centromeres, leaving a combined chromosome and usually losing the short arms.

Centrifugation

Spinning a specimen at high speed to separate components by density, such as cells from plasma or precipitated material from a liquid.

Centrifuge

Spins samples to separate components by density. Used for blood processing, urine analysis, tissue preparation. Speed: RPM or RCF.

Centrilobular Emphysema

The most common morphological and pathological subtype of pulmonary emphysema, characterized by selective destruction and enlargement of the respiratory bronchioles and alveolar ducts in the central portion of the pulmonary acinus, while the distal alveolar sacs and alveoli are relatively preserved. It exhibits a marked predilection for the upper lobes and apical segments of the lungs and is overwhelmingly caused by long-term cigarette smoking and chronic inhalation of toxic combustion products.

Alternate Names:

Centriacinar Emphysema; Proximal Acinar Emphysema

Centriole

A cylindrical microtubule structure in the centrosome that helps organize the mitotic spindle and, in some cells, forms the basal body of a cilium or flagellum.

Centromere

The constricted chromosome region where sister chromatids remain attached and the kinetochore forms for accurate chromosome segregation during cell division.

Centronuclear Myopathy

A genetically and clinically heterogeneous congenital myopathy characterized histopathologically by the central, internal positioning of nuclei in a large majority of muscle fibers, resembling embryonic myotubes, accompanied by a surrounding peripheral halo devoid of myofibrils. Inherited in autosomal dominant patterns (mutations in dynamin 2 [*DNM2*]), autosomal recessive patterns (amphiphysin 2 [*BIN1*] or *RYR1*), or X-linked recessive form (myotubularin [*MTM1*]). Clinical presentation ranges from severe neonatal weakness to mild adult-onset limb-girdle weakness, classically featuring bilateral ptosis, external ophthalmoparesis, facial diplegia, neck flexor weakness, and foot drop.

Alternate Names:

CNM; Myotubular Myopathy (General)

Centrosome

The main microtubule-organizing center of an animal cell, containing a pair of centrioles and coordinating the spindle during mitosis.

Centrum

Centrum means a central part, especially the main body of a vertebra around which the neural arch develops.

Cephacetrile

An older first-generation cephalosporin antibiotic that inhibits bacterial cell-wall synthesis; it is not commonly used in current practice.

Cephalalgia

Headache or pain in the head, including pain arising from cranial or related structures. It is a symptom with many possible primary and secondary causes.

Cephalexin

An oral first-generation cephalosporin that inhibits bacterial cell-wall synthesis and treats selected skin, respiratory, urinary, and other susceptible infections.

Cephalgia

Headache or pain in the head. It may result from primary headache disorders or from an underlying illness or injury.

Cephalhaematoma

A collection of blood between the periosteum and the skull bone, caused by rupture of blood vessels during childbirth, most commonly associated with ventouse (vacuum) delivery. Unlike caput succedaneum, a cephalhaematoma does not cross suture lines and is limited by the periosteal attachments.

Cephalic

Relating to the head or toward the head; in obstetrics, a cephalic presentation means the fetus presents head first.

Cephalic Vein

A superficial vein on the lateral side of the upper limb that drains the hand and forearm and joins the axillary vein near the shoulder.

Cephalohematoma

A collection of blood beneath the periosteum of a newborn's skull, usually caused by birth trauma. It is confined by suture lines and generally resolves gradually.

Cephalometry

Measurement of the skull and facial structures, usually on standardized radiographs, used in orthodontic planning and assessment of craniofacial growth.

Cephalopelvic Disproportion

A mismatch between the size or shape of the maternal pelvis and the fetal head that prevents or impedes vaginal delivery. It may be suspected from clinical assessment but cannot always be diagnosed reliably before labor.

Cephaloridine

An older injectable first-generation cephalosporin antibiotic whose use declined because of nephrotoxicity and the availability of safer alternatives.

Cephalosporin

A class of beta-lactam antibiotics derived from the fungus *Cephalosporium acremonium*, with a mechanism identical to penicillins — inhibition of bacterial cell wall synthesis by binding to penicillin-binding proteins and inhibiting transpeptidase. Cephalosporins are classified into five generations based on their antimicrobial spectrum.

Cephalosporins

Cephalosporins are beta-lactam antibiotics that inhibit bacterial cell-wall synthesis; generations differ in spectrum, and allergy, diarrhea, and resistance are important considerations.

Cephalothin

An older injectable first-generation cephalosporin that inhibits bacterial cell-wall synthesis and was used for susceptible serious infections.

Cephapirin

A first-generation cephalosporin antibiotic formerly used for susceptible bacterial infections; current availability and indications vary by country.

Cephradine

A first-generation cephalosporin antibiotic related to cephalexin that inhibits bacterial cell-wall synthesis and treats selected susceptible infections.

Ceramide

A sphingolipid composed of a sphingoid base linked to a fatty acid. Ceramides are structural compo-

nents of cell membranes and the epidermal permeability barrier and also participate in cell signaling.

Cercaria

A cercaria is a free-swimming larval stage of a trematode parasite; contact with some species can cause swimmer's itch or other infection.

Cercarial Dermatitis

Alternate index label; see *Swimmer's itch*.

Cerclage

A surgical placement of a suture around the cervix to prevent preterm delivery in patients with cervical insufficiency. Types include transvaginal (McDonald or Shirodkar) and transabdominal. Usually placed at 12-14 weeks gestation and removed at 36-37 weeks.

Cerebellar

Cerebellar means relating to the cerebellum, which coordinates balance, posture, eye movements, and skilled movement.

Cerebellar Ataxia

A neurological sign characterized by impaired coordination of voluntary movements, resulting from dysfunction of the cerebellum or its connections. The cerebellum coordinates the timing, force, and accuracy of movements, and cerebellar dysfunction produces a characteristic constellation of findings.

Cerebellar Cortex

The folded outer layer of the cerebellum containing Purkinje and granular neurons that coordinates balance, posture, timing, and precision of movement.

Cerebellar Disease

A disorder of the cerebellum causing impaired coordination, gait ataxia, dysmetria, tremor, abnormal eye movements, or speech changes.

Cerebellar Dysmetria

Inability to control the range and force of a voluntary movement accurately, producing overshooting

or undershooting from cerebellar dysfunction.

Cerebellar Hemangioblastoma

A usually benign, highly vascular tumor of the cerebellum that may cause headache, imbalance, vomiting, or hydrocephalus and can occur with von Hippel-Lindau disease.

Cerebellar Hypoplasia

Underdevelopment of the cerebellum, usually beginning before birth, that may cause poor coordination, abnormal eye movements, seizures, and developmental impairment.

Cerebellar Neoplasm

A benign or malignant tumor involving the cerebellum; symptoms may include poor coordination, imbalance, abnormal eye movements, headache, vomiting, or hydrocephalus.

Cerebellar Nuclei

Deep clusters of cerebellar neurons that receive processed signals from the cerebellar cortex and send coordinated motor output to the brainstem and thalamus.

Cerebellar Tumor

A neoplasm involving the cerebellum that may cause ataxia, dysmetria, nystagmus, vomiting, or hydrocephalus.

Cerebellar Vermis

The midline portion of the cerebellum that helps control trunk posture, gait, balance, and coordination of eye and head movements.

Cerebellitis

Inflammation of the cerebellum, often after infection and sometimes associated with an autoimmune response. It may produce ataxia, dysarthria, nystagmus, headache, and altered consciousness.

Cerebellopontine Angle

The angle-shaped region at the junction of the cerebellum, pons, and petrous temporal bone. Lesions

in this space may affect cranial nerves and commonly include vestibular schwannoma.

Cerebellopontine Angle Tumor

Lesion at the cerebellopontine angle, an anatomic space between the cerebellum and pons, medial to the temporal lobe and lateral to the brainstem, containing CN V (trigeminal), VII (facial), VIII (vestibulocochlear), and the anterior inferior cerebellar artery (AICA).

Cerebellum

Largest brain portion (approximately 10 percent of volume but over 50 percent of neurons) in the posterior cranial fossa behind the brainstem. Two hemispheres and a vermis, divided into vestibulocerebellum (balance, eye movements), spinocerebellum (posture, gait, coordination), and cerebrocerebellum (motor planning, cognition).

Cerebral

Relating to the cerebrum or, more broadly, to the brain.

Cerebral Amyloid Angiopathy

Deposition of amyloid beta in the walls of small and medium cerebral and leptomeningeal arteries. It commonly causes recurrent lobar intracerebral hemorrhage in older adults and may also cause transient focal neurological episodes or cognitive decline.

Cerebral Aneurysm

An abnormal focal enlargement of an artery in or around the brain. It may remain asymptomatic or rupture and cause subarachnoid hemorrhage. Risk factors include hypertension, smoking, certain inherited disorders, and family history.

Cerebral Angiography

Contrast imaging of cerebral vessels. Evaluates aneurysms, AVMs, stenosis. Invasive procedure.

Cerebral Aqueduct

A narrow midbrain channel connecting the third

and fourth ventricles for cerebrospinal-fluid flow.

Cerebral Arteriovenous Malformation

An abnormal direct connection between cerebral arteries and veins without a normal capillary bed. It may cause intracranial hemorrhage, seizures, headache, or focal neurological deficits and is evaluated with brain imaging and angiography.

Cerebral Artery

An artery supplying the brain; blockage or rupture can cause stroke.

Cerebral Atrophy

Loss or shrinkage of brain tissue caused by aging, neurodegeneration, injury, infection, or vascular disease.

Cerebral Autoregulation

The intrinsic ability of cerebral arterioles to maintain relatively stable cerebral blood flow across a range of perfusion pressures. It may be impaired by severe brain injury, ischemia, hypercapnia, or anesthetic and vasoactive drugs.

Cerebral Calcification

Abnormal calcium deposition in brain tissue, with causes including inherited, metabolic, infectious, vascular, and age-related disorders.

Cerebral Cavernous Malformation

A low-flow vascular malformation composed of dilated thin-walled vascular spaces in the brain or spinal cord. It may cause seizures, headaches, or hemorrhage, although some lesions remain asymptomatic.

Cerebral Cavernous Malformations

Low-flow vascular malformations composed of dilated, thin-walled capillaries without intervening brain parenchyma, often multiple and familial (autosomal dominant with mutations in CCM1, CCM2, or CCM3 genes). They may present with seizures, focal neurological deficits, or intracerebral hemorrhage.

Cerebral Cortex

The outermost layer of the cerebrum, composed of gray matter (neuronal cell bodies) folded into gyri (ridges) and sulci (grooves), greatly increasing surface area.

Cerebral Crus

A midbrain fiber bundle carrying major descending motor pathways from the cortex.

Cerebral Diplegia

Cerebral diplegia is a form of cerebral palsy with predominant weakness and spasticity of both legs, often greater than in the arms.

Cerebral Edema

The accumulation of excess fluid within the brain parenchyma, leading to increased intracranial pressure and potentially fatal brain herniation. There are three main types with different pathophysiological mechanisms.

Cerebral Embolism

Alternate index label; see *Embolic stroke (brain embolism)*.

Cerebral Haemorrhage

Cerebral haemorrhage is bleeding within brain tissue or an adjacent intracranial space, causing pressure, tissue injury, and neurologic deficits.

Cerebral Hemisphere

One of the two large halves of the cerebrum, each containing specialized but interconnected cortical regions.

Cerebral Hemorrhage

Bleeding within the brain parenchyma, a type of hemorrhagic stroke causing mass effect, edema, and neurological deficits. Causes: hypertension (most common—basal ganglia, thalamus), cerebral amyloid angiopathy (lobar, elderly), arteriovenous malformation, aneurysm, anticoagulants, trauma, tumors.

Cerebral Hypoxia

Insufficient oxygen delivery to the brain, caused by cardiac arrest, respiratory failure, severe hypotension, or another interruption of oxygen supply. Prolonged hypoxia can produce permanent neuronal injury and hypoxic-ischemic encephalopathy.

Cerebral Infarction

Cerebral infarction, or ischemic stroke, results from occlusion of a cerebral artery causing irreversible neuronal damage. The most common cause is thromboembolism from atherosclerotic carotid or intracranial arteries, or cardioembolism from atrial fibrillation or cardiac thrombus.

Cerebral Ischemia

Inadequate blood flow and oxygen delivery to brain tissue, causing transient dysfunction or ischemic stroke.

Cerebral Lobes

Four lobes divided by sulci. Frontal (anterior to central sulcus): executive function, motor control (precentral gyrus), Broca's area. Parietal (between central and parieto-occipital sulci): somatosensory (postcentral gyrus), spatial awareness. Temporal (below lateral sulcus): auditory processing, memory (hippocampus), Wernicke's area.

Cerebral Malaria

Severe malaria with impaired consciousness, seizures, or other brain dysfunction, usually caused by *Plasmodium falciparum*.

Cerebral Palsy

A group of permanent disorders of movement and posture development causing activity limitation, attributed to non-progressive disturbances occurring in the developing fetal or infant brain. It is the most common motor disability in childhood, affecting approximately 1 in 500 live births.

Alternate Names:

Palsy, Cerebral Palsy Cerebral (Cerebral Palsy)

Cerebral Peduncle

Paired structures of the ventral midbrain carrying descending motor tracts (corticospinal, corticobulbar, corticopontine) connecting the cerebrum to the pons and below. Lesions produce contralateral hemiparesis; Weber syndrome (peduncle + CN III) causes ipsilateral CN III palsy with contralateral hemiparesis.

Cerebral Perfusion Pressure

The pressure gradient driving blood flow through the brain, approximated as mean arterial pressure minus intracranial pressure. CPP falls when systemic pressure decreases or ICP rises and must be interpreted with the clinical context.

Cerebral Salt Wasting

Renal sodium wasting causing hyponatremia and volume depletion occurring after intracranial surgery or in setting of intracranial disease. Distinguished from SIADH by the presence of volume depletion with negative sodium balance and compensatory elevation of renin and aldosterone.

Cerebral Thrombosis

Formation of a blood clot within a cerebral artery, reducing blood flow and potentially causing an ischemic stroke.

Cerebral Tumor

A neoplasm arising within or involving the brain, producing symptoms according to its location, growth rate, and effect on intracranial pressure.

Cerebral Tumours

Cerebral tumours are abnormal growths in the cerebrum, which may be benign or malignant and cause seizures, headache, cognitive change, or focal deficits.

Cerebral Vasospasm

Abnormal narrowing of cerebral arteries that can reduce brain perfusion and cause delayed cerebral ischemia, especially after aneurysmal subarachnoid hemorrhage.

Cerebral Venous Sinus Thrombosis

Thrombosis of the cerebral venous sinuses (most commonly the superior sagittal sinus; also transverse, sigmoid, straight; or cortical veins), with resultant venous hypertension, intracranial hypertension, hemorrhagic cortical infarcts, and venous congestion.

Cerebral Ventricle

One of the interconnected brain cavities containing and circulating cerebrospinal fluid.

Cerebral Ventriculography

Imaging of the cerebral ventricles to assess their size, shape, and possible obstruction.

Cerebral Ventriculomegaly

Enlargement of one or more cerebral ventricles, caused by hydrocephalus, brain-tissue loss, or developmental variation.

Cerebral Visual Impairment

Visual impairment caused by damage to the brain's visual pathways or occipital cortex rather than the eye itself; the leading cause of childhood visual impairment in developed countries. Features include poor visual attention, difficulty recognizing faces or objects, and variable vision; management is educational and rehabilitative.

Cerebriiform Nevus Sebaceous

A variant of nevus sebaceous presenting as a soft, cerebriiform (brain-like), pedunculated or sessile nodule, often found on the scalp or face. It is a benign adnexal hamartoma composed of sebaceous glands, but like other nevus sebaceous lesions, it carries a low risk of secondary neoplasms and may warrant monitoring or excision.

Cerebritis

Inflammatory process in brain parenchyma without abscess formation. May precede abscess. Causes: bacterial, fungal, parasitic infections. Diagnosis: MRI with contrast showing enhancement. Treatment: antibiotics/antifungals, surgical drainage if abscess forms.

Cerebroplacental Ratio

The ratio of the middle cerebral artery pulsatility index to the umbilical artery (UA) pulsatility index. CPR <5th percentile (or <1.0-1.1) suggests fetal brain-sparing effect (vasodilation of cerebral vessels in response to hypoxemia) due to placental insufficiency.

Cerebrosides

Glycosphingolipids composed of ceramide plus a single sugar, abundant in myelin and nervous tissue and involved in membrane structure.

Cerebrospinal Fluid

A clear, colorless fluid that fills the ventricles of the brain, the central canal of the spinal cord, and the subarachnoid space around the brain and spinal cord. Produced primarily by the choroid plexus of the lateral, third, and fourth ventricles (500 mL/day, total volume 150 mL in adults).

Alternate Names:

Spinal Fluid

Cerebrospinal Fluid

A clear fluid produced within the brain that surrounds and cushions the brain and spinal cord, helps regulate their chemical environment, and can be examined for disease.

Cerebrospinal Fluid Collection

A procedure, usually lumbar puncture, that collects cerebrospinal fluid for laboratory analysis; it can help evaluate infection, bleeding, inflammation, malignancy, and other disorders of the central nervous system.

Cerebrospinal Fluid Culture

A laboratory test that attempts to grow bacteria, fungi, or other microorganisms from cerebrospinal fluid to investigate meningitis or another central nervous system infection. Results depend on prior antimicrobial treatment, specimen volume, transport, and the clinical context.

Cerebrospinal Fluid Analysis

Laboratory examination of cerebrospinal fluid, usually obtained by lumbar puncture. It may assess infection, bleeding, inflammation, demyelinating disease, or malignant cells. Analysis can include opening pressure, appearance, cell counts, protein, glucose, microbiology, and other tests selected for the clinical question.

Cerebrospinal Fluid Cytology

Microscopic examination of cells in cerebrospinal fluid to evaluate suspected malignancy, infection, inflammation, or hemorrhage. It is especially useful for detecting leptomeningeal tumor involvement when interpreted with clinical and imaging findings.

Cerebrovascular

Relating to the blood vessels and circulation of the brain.

Alternate Names:

Brain-vascular; cerebral vascular.

Cerebrovascular Accident

An acute neurological deficit caused by interruption of blood flow to the brain or bleeding within the brain. See Stroke.

Cerebrovascular Accident

A cerebrovascular accident is a stroke caused by interrupted brain blood flow from ischemia or bleeding, producing sudden neurologic dysfunction.

Cerebrovascular Accident Prevention

Measures to reduce the risk of stroke, including controlling blood pressure, diabetes, and lipids, avoiding tobacco, treating atrial fibrillation when indicated, and using appropriate antithrombotic therapy.

Cerebrovascular Accident (Stroke)

Sudden brain dysfunction caused by interrupted blood flow or bleeding in the brain. See Stroke.

Alternate Names:

Stroke

Cerebrovascular Disorder

A disorder of brain blood vessels or cerebral blood flow, including ischemia, hemorrhage, aneurysm, malformation, and venous thrombosis.

Cerebrum

The largest part of the brain, comprising two cerebral hemispheres connected by the corpus callosum. Each hemisphere has four lobes: frontal (executive function, motor, Broca's area), parietal (somatosensory, spatial awareness), temporal (auditory, memory, Wernicke's area), occipital (visual processing).

Cerium

A rare-earth metal whose compounds have industrial and experimental medical uses; exposure to some forms can irritate tissues or cause toxicity.

Certification

A formal process confirming that a person, service, laboratory, or facility meets specified training, quality, safety, or professional standards.

Certified Nurse-Midwife

An advanced-practice nurse trained and credentialed to provide reproductive, pregnancy, birth, postpartum, and newborn care, including management of normal pregnancy and referral of complications.

Certolizumab Pegol

A medicine or chemical compound identified by certolizumab pegol. Its uses, effects, and risks depend on the specific substance and clinical context.

Ceruloplasmin

The principal copper-carrying protein in blood, synthesized mainly by the liver. Its concentration and copper-binding function are clinically relevant in disorders such as Wilson disease.

Alternate Names:

Caeruloplasmin

Ceruloplasmin Blood Test

A blood test measuring ceruloplasmin, the main copper-carrying protein in plasma; it is used with

other copper studies to evaluate Wilson disease and disorders of copper metabolism.

Cerumen

A substance that helps keep dirt out of the ear and lubricates the skin in the ear. More commonly known as earwax.

Cerumen Impaction

Accumulation of earwax in the external auditory canal that causes symptoms or prevents visualization of the tympanic membrane. It may cause aural fullness, conductive hearing loss, tinnitus, itching, or pain.

Ceruminous Adenocarcinoma

A malignant tumor of the ceruminous glands in the external ear canal that may cause pain, discharge, hearing loss, or a persistent ear-canal mass.

Cervical

Relating either to the neck portion of the spine or to the cervix of the uterus; the intended meaning is determined by the surrounding anatomic context.

Cervical Adenocarcinoma

A malignant gland-forming tumor arising in the uterine cervix; it may be HPV-associated or HPV-independent and commonly presents with abnormal bleeding or discharge.

Cervical Arthritis

Degenerative or inflammatory disease of the neck joints that can cause neck pain, stiffness, reduced motion, and sometimes nerve or spinal-cord compression.

Cervical Atlas

The first cervical vertebra, C1, a ring-shaped bone that supports the skull and rotates around the second cervical vertebra.

Cervical Biopsy

A cervical biopsy removes a small sample of cervix for microscopic examination, commonly to investi-

gate abnormal screening or suspected precancer or cancer.

Cervical Cancer

A malignant tumour arising from the cervix, most commonly caused by persistent infection with high-risk human papillomavirus. It may be asymptomatic early or cause abnormal vaginal bleeding, discharge, or pelvic pain; prevention and early detection rely on HPV vaccination, screening, and assessment of abnormal results.

Cervical Cancer - Screening And Prevention

Clinical measures used to prevent or detect cervical cancer early, including human papillomavirus vaccination and screening with HPV testing, cervical cytology, or both according to age and risk.

Cervical Cap

A cervical cap is a flexible barrier placed over the cervix to reduce sperm entry; it is used with spermicide as a contraceptive method.

Cervical Carcinoma

A malignant tumor of the uterine cervix, most commonly associated with persistent high-risk human papillomavirus infection.

Cervical Cerclage

Surgical placement of a non-absorbable suture around the cervix to provide mechanical support and prevent preterm delivery in patients with cervical insufficiency.

Cervical Change

A change in the uterine cervix or cervical spine, depending on context; clinical significance is determined by the specific structural, inflammatory, or pregnancy-related finding.

Cervical Dilatation

Progressive opening of the cervical os during labor, measured in centimeters from 0 (closed) to 10 cm (fully dilated). The cervix must also efface (thin out)

before significant dilatation occurs. Cervical status assessed by digital vaginal examination during labor.

Cervical Dilation

The opening of the cervical canal during labor, measured in centimeters from closed (0 cm) to fully dilated (10 cm); required for vaginal delivery. Occurs with effacement (thinning/shortening of the cervix) during the first stage of labor, driven by effective uterine contractions.

Cervical Disc Herniation

A common cause of neck pain and radiculopathy, occurring when the nucleus pulposus of an intervertebral disc in the cervical spine herniates through the annulus fibrosus, compressing adjacent nerve roots or the spinal cord.

Cervical Dislocation

Abnormal displacement of one cervical vertebra relative to another, usually from trauma, that can destabilize the neck and injure the spinal cord.

Cervical Dysplasia

Abnormal growth of cervical epithelial cells, representing a premalignant condition that may progress to cervical cancer if untreated. Also known as cervical intraepithelial neoplasia (CIN). CIN is caused by persistent infection with high-risk human papillomavirus (HPV) types, most commonly HPV 16 and 18.

Alternate Names:

cervical intraepithelial. Cervical Intraepithelial Neoplasia Cervical (Cervical Dysplasia) Dysplasia Cervical (Cervical Dysplasia) Squamous Intraepithelial Lesion Cervical (Cervical Dysplasia)

Cervical Dystocia

Failure of the uterine cervix to dilate normally during labor, which can delay or prevent vaginal delivery.

Cervical Dystonia

A focal movement disorder causing involuntary contractions of neck muscles and abnormal positioning of the head. It may produce pain, tremor, and

sustained or intermittent twisting of the neck.

Alternate Names:

Dystonia, Cervical Torticollis, Spasmodic

Cervical Effacement

Thinning and shortening of the cervix during labor, measured as a percentage from 0% (thick, normal length) to 100% (paper thin). Effacement precedes and accompanies cervical dilatation. Nulliparous women often efface before dilating; multiparous women may efface and dilate simultaneously.

Cervical Endometriosis

Endometrial-like tissue in or on the cervix that may cause bleeding after sex, pelvic pain, or an abnormal cervical lesion.

Cervical Exam In Labor

A digital vaginal examination used to assess cervical dilation, effacement, consistency, and position, together with the station and position of the fetal head. Serial examinations help assess labor progress.

Cervical Ganglion

A cluster of nerve-cell bodies in the sympathetic chain of the neck that relays autonomic signals to the head, neck, and upper chest.

Cervical Incompetence

The inability of the cervix to maintain pregnancy in the second trimester due to painless cervical dilatation. Results in recurrent second trimester pregnancy loss or preterm delivery. Risk factors include prior cervical trauma, cone biopsy, and congenital anomalies.

Cervical Insufficiency

Painless shortening or opening of the cervix during pregnancy before term, increasing risk of second-trimester loss or spontaneous preterm birth.

Cervical Intraepithelial Neoplasia

Abnormal precancerous changes in the squamous cells of the cervix, usually associated with persistent high-risk human papillomavirus infection. CIN is

graded by the severity of dysplasia.

Alternate Names:

CIN

Cervical Intraepithelial Neoplasia

Cervical (Cervical Dysplasia)

Alternate index label for Cervical Dysplasia.

Cervical Length Screening

Transvaginal ultrasound measurement of the cervix between 18-24 weeks to assess risk of spontaneous preterm birth. Normal cervix measures greater than 25 mm. Short cervix (less than 25 mm) increases preterm delivery risk. Cervical funneling and dilatation are additional concerning findings.

Cervical Lymphadenopathy

Enlarged lymph nodes in the neck, commonly caused by infection but sometimes reflecting malignancy, autoimmune disease, or other systemic illness.

Cervical MRI Scan

Magnetic resonance imaging of the cervical spine that uses a magnetic field and radio waves to produce detailed images of the neck vertebrae, discs, spinal cord, nerves, and surrounding soft tissues.

Cervical Mucus

Secretions from the cervical glands that change throughout the menstrual cycle under hormonal influence. Estrogen produces thin, clear, stretchy mucus favorable for sperm transport around ovulation (spinnbarkeit). Progesterone produces thick, sticky, opaque mucus that forms a plug in the cervical canal during pregnancy.

Cervical Myelopathy

Dysfunction of the spinal cord caused by compression in the cervical spine, often producing hand clumsiness, gait disturbance, weakness, sensory changes, or abnormal reflexes.

Cervical Osteoarthritis

Alternate index label; see *Cervical spondylosis*.

Cervical Pain

Alternate index label; see *Neck pain*.

Cervical Pain (Neck Pain)

Alternate index label for Neck Pain.

Cervical Polyp

A usually benign polypoid overgrowth of endocervical or ectocervical tissue that may cause intermenstrual or postcoital bleeding or may be found incidentally during examination.

Cervical Polyps

Usually benign, finger-like growths arising from the endocervical canal or cervix. They may cause irregular bleeding, postcoital bleeding, or vaginal discharge and are often found during a pelvic examination. Symptomatic or atypical polyps are removed and sent for pathology.

Cervical Pregnancy

A rare ectopic pregnancy (0.1-1%) implanted in the cervical canal. Presents with painless vaginal bleeding in the first trimester. Diagnosis: ultrasound (hourglass-shaped uterus, gestational sac in the cervix with absent sliding sign, empty uterine cavity). High risk of severe hemorrhage.

Cervical Radiculopathy

A condition caused by compression, irritation, or inflammation of a spinal nerve root in the cervical spine, resulting in pain, numbness, tingling, and weakness in the distribution of the affected nerve root.

Cervical Rib

An extra rib arising from a cervical vertebra, usually the seventh. It may be asymptomatic or contribute to thoracic outlet syndrome by compressing the brachial plexus or subclavian vessels.

Cervical Ripening Agents

Medicines or mechanical devices used to soften and prepare the cervix before labor induction. Options include prostaglandins and cervical balloons; selec-

tion and dosing depend on the cervix, pregnancy, contraindications, and local obstetric protocol.

Cervical Screening (Pap Smear)

Screening for cervical cancer by collecting cells from the transformation zone of the cervix. Liquid-based cytology (ThinPrep) or conventional Pap smear. HPV co-testing (high-risk HPV 16, 18, others) improves sensitivity.

Alternate Names:

Pap Smear

Cervical Spine

The upper segment of the vertebral column consisting of seven cervical vertebrae, C1 through C7, supporting the head and protecting the cervical spinal cord. It permits substantial flexion, extension, rotation, and lateral flexion while transmitting the vertebral arteries through the transverse foramina of C1-C6.

Cervical Spine CT Scan

Computed tomography of the cervical spine that uses x-rays and computer reconstruction to show the bones and alignment of the neck; it is particularly useful for detecting fractures and other bony abnormalities.

Cervical Spine Trauma

Injury to the cervical spine that may affect the vertebrae, discs, ligaments, spinal cord, or nerve roots. Evaluation includes the mechanism, examination, and appropriate imaging; classification systems can help guide treatment, which depends on stability and neurologic findings.

Cervical Spondyloarthropathy

A degenerative condition of the cervical spine involving disc degeneration, osteophyte formation, and facet joint arthropathy that may compress nerve roots or the spinal cord. It can cause neck pain, radiculopathy, or myelopathy, and is a common cause of cervical spinal stenosis in older adults.

Cervical Spondylosis

Age-related degenerative changes of the cervi-

cal spine—disc degeneration, osteophyte formation, facet joint arthritis, and ligament hypertrophy—affecting the intervertebral discs, vertebrae, and joints.

Alternate Names:

Cervical Osteoarthritis Osteoarthritis, Cervical Spondylosis, Cervical

Cervical Squamous Cell Carcinoma

A malignant squamous tumor of the cervix, most often caused by persistent high-risk human papillomavirus infection; it may present with abnormal bleeding, discharge, or an abnormal screening result.

Cervical Stenosis

Pathological narrowing or complete obliteration of the endocervical canal, commonly acquired secondary to cervical surgical procedures (e.g., cold knife conization, loop electrosurgical excision procedure [LEEP], or cryotherapy), radiation therapy, chronic infection, or postmenopausal hypoestrogenic atrophy. May result in dysmenorrhea, abnormal bleeding, hematometra, retrograde menstruation with secondary endometriosis, or mechanical infertility.

Cervical Vertebrae

The seven vertebrae of the neck. Typical cervical vertebrae have small bodies, bifid spinous processes, and transverse foramina transmitting the vertebral vessels; C1, C2, and C7 are specialized.

Cervical Vertebrae (C1-C7)

The seven vertebrae of the neck, numbered C1 through C7; they support the head, protect the cervical spinal cord, and allow neck movement.

Cervicitis

Cervicitis is inflammation of the uterine cervix, commonly from sexually transmitted infection, bacterial imbalance, irritation, or allergy.

Cervicogenic Headache

A headache caused by a disorder of the cervical spine or its soft tissues, with pain referred from the neck to the head.

Alternate Names:

Cervical headache; neck-related headache.

Cervix

The cervix is the lower part of the uterus projecting into the vagina and producing mucus, allowing menstrual flow out and sperm passage in.

Cervix Carcinoma

Cancer arising from the cervix, most often related to persistent high-risk human papillomavirus infection; screening and HPV vaccination reduce risk, and treatment depends on stage.

Cervix Cryosurgery

A medical procedure involving cervix cryosurgery. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

Cervix Disease

A disorder of the lower uterine cervix, ranging from infection and benign polyps to precancer, cancer, scarring, or pregnancy-related change.

Cervix Neoplasm

A benign, precancerous, or malignant growth of the cervix; evaluation may include pelvic examination, HPV testing, cytology, colposcopy, and biopsy.

Cervix Uteri

The cervix uteri is the lower portion of the uterus that projects into the vagina and forms the passage between the uterus and birth canal.

Cesarean Delivery

Surgical delivery of the fetus through abdominal and uterine incisions. Performed when vaginal delivery is contraindicated or fails. Indications include malpresentation, placenta previa, previous cesarean, fetal distress, and failed induction. Most common uterine incision is low transverse (classical for very preterm or transverse lie).

Cesarean Section

C-section: surgical delivery of the infant through incisions in the abdominal wall and uterus. Indications: fetal distress, failure to progress, malpresentation (breech, transverse), placenta previa, abruption, previous cesarean (some), multiple pregnancy, preeclampsia, cord prolapse, and maternal conditions.

Cesarean Section (C-Section)

Surgical delivery of a fetus through incisions in the abdominal wall (laparotomy) and uterus (hysterotomy).

Alternate Names:

C-section

Cesium

A chemical element whose radioactive isotope cesium-137 can cause serious external or internal radiation injury after contamination or exposure.

Cestoda

The tapeworm class of flatworms; human infection follows ingestion of eggs or larval tissue and can cause intestinal disease or tissue cysts.

Cestode

A cestode is a tapeworm, a segmented parasitic flatworm that can infect humans or animals through contaminated food, water, or intermediate hosts.

Cestodiasis

Infection or infestation caused by cestodes, commonly called tapeworms. Disease may involve the intestine or tissues, depending on the species and life-cycle stage.

Alternate Names:

tapeworms.

Cetirizine

A second-generation H1 antihistamine used for allergic rhinitis and urticaria; it is less sedating than older antihistamines but can still cause drowsiness.

Cetoleic Acid

A long-chain monounsaturated fatty acid found mainly in marine oils and studied for effects on lipid metabolism and cellular membranes.

Cetrimide

Cetrimide is a quaternary ammonium antiseptic and detergent used in some topical or laboratory preparations; concentrated exposure irritates tissue.

Cetrorelix

A gonadotropin-releasing hormone antagonist used in controlled ovarian stimulation to prevent a premature luteinizing-hormone surge.

Cetuximab

A medicine or chemical compound identified by cetuximab. Its uses, effects, and risks depend on the specific substance and clinical context.

Cevimeline

A muscarinic receptor agonist used to stimulate salivary secretion and relieve dry mouth, especially in selected patients with Sjögren syndrome.

Cevimeline Hydrochloride

A medicine or chemical compound identified by cevimeline hydrochloride. Its uses, effects, and risks depend on the specific substance and clinical context.

CF

Alternate index label; see *Cystic fibrosis*.

CFS

Chronic fatigue syndrome, a condition involving substantial persistent fatigue with post-exertional worsening and associated symptoms that are not explained by another disorder.

Alternate Names:

Chronic fatigue syndrome; myalgic encephalomyelitis/chronic fatigue syndrome.

CFTR Modulator Therapy

Targeted therapies correcting the defective CFTR

protein. Elexacaftor-tezacaftor-ivacaftor (Trikafta) is the most effective combination for patients with at least one F508del mutation. These therapies have dramatically changed CF prognosis.

CHA2DS2-VASc Score

A clinical prediction score used universally to stratify the annual risk of ischemic stroke and systemic thromboembolism in adult patients with non-valvular atrial fibrillation. Points are assigned for Congestive heart failure (1), Hypertension (1), Age ≥ 75 years (2), Diabetes mellitus (1), prior Stroke or transient ischemic attack or thromboembolism (2), Vascular disease (1), Age 65–74 years (1), and Sex category female (1). A score of ≥ 2 in men or ≥ 3 in women indicates a high thromboembolic risk and strongly warrants oral anticoagulation with direct oral anticoagulants (DOACs) or warfarin.

Alternate Names:

CHA2DS2-VASc; Atrial Fibrillation Stroke Risk Score

Chaetomium

A genus of environmental molds that rarely causes opportunistic infection, including skin, eye, sinus, or disseminated disease in people with impaired immunity.

Chafing

Skin irritation caused by repeated friction, moisture, heat, or tight clothing, producing redness, burning, tenderness, and sometimes erosions in opposing or rubbing areas.

Chagas Cardiomyopathy

Heart damage caused by long-term Chagas disease. It can cause an irregular heartbeat, an enlarged heart, heart failure, or blood clots that may lead to a stroke.

Chagas Disease

An infection caused by the parasite *Trypanosoma cruzi*. It is usually spread when the faeces of an infected triatomine bug (kissing bug) enter a bite wound, the eyes, or the mouth; it can also spread from mother to baby, through contaminated blood

or transplanted organs, or through contaminated food. Early symptoms are often mild or absent, but may include fever, tiredness, or swelling around one eye. Years later, some people develop serious heart disease or enlargement of the oesophagus or colon, causing trouble swallowing or constipation. The infection can be treated with antiparasitic medicines, especially when treatment starts early.

Alternate Names:

Trypanosomiasis, American

Chagoma

A red, swollen, and sometimes painful area where the *Trypanosoma cruzi* parasite enters the body. It is an early sign of Chagas disease and may occur with swollen nearby lymph nodes.

Chain Of Custody

Meticulous paper trail and chronological documentation tracking the seizure, custody, control, transfer, analysis, and disposition of physical and electronic evidence in medico-legal investigations (e.g., blood samples for toxicology, bullets, sexual assault kits, biological fluids).

Chain-Termination Codon

A codon that signals the end of protein translation; the three standard stop codons are UAA, UAG, and UGA in messenger RNA.

Chalazion

A usually painless, firm eyelid lump caused by blockage and inflammation of a meibomian oil gland; persistent or atypical lesions require ophthalmic assessment.

Challenge Agent

A substance, organism, allergen, or physiologic stimulus deliberately administered in a controlled test to provoke and measure a response.

Challenge Testing

A controlled exposure to a suspected trigger, such as a food or medication, to assess whether it produces a reproducible reaction.

Alternate Names:

Provocation testing; challenge test.

Chamomile Extract

An extract of chamomile flowers used in traditional and complementary products; allergic reactions and medicine interactions are possible, while evidence varies by indication.

Chancre

A usually painless ulcer at the site of inoculation of an infection, especially the primary lesion of syphilis. It may be accompanied by regional lymph-node enlargement and heals without treatment, although infection persists.

Chancroid

A sexually transmitted infection caused by *Haemophilus ducreyi*, characterized by painful ragged genital ulcers and tender suppurative inguinal lymph nodes.

Changes In The Newborn At Birth

The newborn transition from placental support to independent breathing and circulation, including lung aeration, closure of fetal shunts, temperature control, and adaptation of glucose and feeding.

Changing Your Ostomy Pouch

Replacing the pouching system attached around a colostomy or ileostomy, including gentle removal, skin cleansing and measurement, barrier fitting, leak prevention, and disposal.

Changing Your Urostomy Pouch

Replacing the pouching system that collects urine from a urostomy, with attention to skin protection, a secure seal, drainage, hydration, and warning signs of infection or obstruction.

Channelopathy

A disorder caused by abnormal structure or function of an ion channel or its regulatory proteins. Channelopathies can affect excitable tissues and cause neurologic, muscular, or cardiac disease.

Chaplain

A trained spiritual-care professional who supports patients and families with religious, existential, emotional, or ethical concerns in healthcare settings.

Chapped Hands

Dry, cracked, inflamed skin of the hands caused by irritants, cold, low humidity, frequent washing, eczema, or allergy; fissures can become painful or infected.

Chapped Lips

Dry, scaling, fissured lips caused by weather, licking, dehydration, irritants, medicines, or cheilitis; persistent lesions need assessment for infection or another disorder.

Charcoal

Fine black powder produced by controlled pyrolysis of organic materials, processed to yield a massive micro-porous surface area (500-1500 m²/g). See activated charcoal.

Charcot Arthropathy

Progressive destruction and deformity of a joint caused by loss of protective pain or proprioceptive sensation. It is most often associated with peripheral neuropathy, particularly diabetic neuropathy.

Charcot Foot

A progressive destructive arthropathy of the foot and ankle, usually occurring in people with peripheral neuropathy, especially diabetes. Repeated unnoticed trauma causes warmth, swelling, deformity, instability, and an increased risk of ulceration and amputation.

Charcot Joint

Progressive, neurotrophic arthropathy caused by loss of sensation (proprioception and pain) leading to joint destruction with bone fragmentation, joint dislocation, deformity, and loss of normal pain and proprioceptive sensation in the affected limb.

Charcot Triad

Clinical constellation of fever, right upper quadrant pain, and jaundice representing the classic presentation of ascending cholangitis, infection of the biliary tree from common bile duct obstruction by a gallstone. The full triad is found in approximately fifty to seventy percent of patients.

Charcot Triad (Cholangitis)

Classic diagnostic triad of acute ascending cholangitis: (1) Fever, (2) Right Upper Quadrant abdominal pain, and (3) Jaundice. Reynolds Pentad adds Hypotension and Altered Mental Status. See Acute Cholangitis.

Alternate Names:

Cholangitis

Charcot's Joints

Charcot's joints are severely damaged, unstable joints caused by loss of protective sensation, classically in diabetic neuropathy or other neurologic disease.

Charcot's Triad

Charcot's triad is fever, jaundice, and right-upper-quadrant pain, a classic but incomplete clinical pattern of acute ascending cholangitis.

Charcot-Marie-Tooth Disease

Group of inherited peripheral neuropathies (hereditary motor and sensory neuropathy, HMSN), the most common inherited neuromuscular disorder (prevalence 1 in 2,500). More than 100 causative genes (PMP22, MPZ, GJB1, MFN2, NEFL).

Alternate Names:

Neuropathy, Hereditary Motor And Sensory Peroneal Muscular Atrophy

Charcot-Wilbrand Syndrome

A rare neuropsychiatric syndrome after brain injury characterized by loss of visual imagery and visual dreaming, sometimes with difficulty recognizing or interpreting visual information.

Chargaff Rule

The observation that double-stranded DNA contains approximately equal amounts of adenine and thymine and of guanine and cytosine, reflecting complementary base pairing.

CHARGE Syndrome

A genetic disorder caused by CHD7 gene mutations (autosomal dominant, most cases de novo) affecting multiple organ systems.

Charley Horse

A sudden painful involuntary contraction or spasm of a muscle, commonly in the calf or thigh, often related to exertion, dehydration, nerve disease, or medicines.

Chasing The Dragon

Inhalation of vapor produced by heating heroin, a method of drug use that can cause dependence, overdose, toxic exposures, and neurological injury.

Chaulmoogra Oil

Chaulmoogra oil is a historical plant oil once used to treat leprosy and some skin diseases; it has largely been replaced by effective antimicrobial therapy.

CHD

Alternate index label; see *Hip dysplasia*.

Check-Up

A check-up is a routine health evaluation used to review symptoms, risk factors, preventive care, examination findings, and appropriate screening.

Checkpoints

Immune regulatory molecules. Cancer exploits checkpoints. Inhibitors block checkpoints.

Chediak-Higashi Syndrome

Autosomal recessive (LYST mutation, lysosomal trafficking regulator). Giant lysosomal granules in neutrophils, melanocytes, neurons. Partial oculocutaneous albinism, silvery hair, photophobia, nystagmus.

Cheek

The facial region forming the side wall of the mouth, containing skin, muscle, fat, salivary structures, nerves, and blood vessels.

Cheek Pouch

A distensible pocket inside the cheek found in some rodents and other animals, used to temporarily store and transport food.

Cheilectropion

An eversion deformity of the lip, usually involving the lower lip. It may result from scarring, congenital malformation, or loss of tissue support.

Cheilitis

Inflammation of one or both lips, causing dryness, scaling, fissuring, erythema, swelling, pain, or ulceration. Causes include irritant or allergic contact exposure, infection, nutritional deficiency, chronic sun exposure, and inflammatory skin disease; persistent lesions require evaluation for premalignant or malignant change.

Cheilodysnia

Pain of the lips, which may result from inflammation, infection, trauma, allergy, dryness, nerve pain, or another oral or dermatologic disorder.

Cheilognathopalatoschisis

A congenital cleft involving the lip, jaw, and palate, caused by incomplete fusion of facial processes during embryonic development.

Cheilognathoschisis

A congenital cleft of the lip and alveolar part of the upper jaw, with or without associated palatal involvement.

Cheiloplasty

Plastic or reconstructive surgery of the lip, performed to repair congenital clefting, trauma, tumors, scars, or other deformity.

Cheiloschisis

Cleft lip, a congenital fissure of the upper lip caused by incomplete fusion of facial processes during embryonic development. It may occur alone or with cleft palate.

Cheilosis

A disorder of the lips characterized by dryness, scaling, fissuring, or inflammation. Causes include irritation, nutritional deficiency, infection, and systemic disease.

Cheiromegaly

Abnormal enlargement of one or both hands, classically associated with excess growth hormone but also possible with local overgrowth or other disorders.

Cheiopompholyx

A form of dyshidrotic eczema affecting the hands, with intensely itchy small vesicles on the palms or sides of the fingers.

Chelating Agent

A compound that binds a metal ion through multiple chemical sites, allowing the metal to be measured, mobilized, or removed in selected toxic exposures.

Chelating Agents

Chelating agents bind specific metal ions to form complexes that can facilitate their removal or reduce toxicity; examples include agents for lead, iron, or copper poisoning.

Chelation

The formation of a stable complex between a metal ion and a molecule with multiple binding sites. In medicine, chelation can be used under supervision to bind and promote elimination of selected toxic metals.

Chelation Study

Nuclear medicine study using chelating agents. Evaluates renal function, obstruction.

Chelation Therapy

Use of chelating agents to bind metals for excretion. Agents: EDTA (lead), deferoxamine (iron), dimercaprol (arsenic, mercury, gold), DMSA (lead, mercury), penicillamine (copper, lead). Complications: nephrotoxicity, electrolyte disturbances, redistribution of metals.

Chemexfoliation

Application of a chemical solution to remove controlled layers of skin, improving selected scars, pigmentation, wrinkles, or superficial lesions.

Chemical

A substance defined by its molecular composition and properties; medical effects depend on dose, route, exposure duration, metabolism, and biological target.

Chemical Ablation

Destruction of unwanted tissue by injecting or applying a chemical irritant or sclerosant, used in selected lesions, vessels, cysts, or other conditions.

Chemical Burn

Tissue injury caused by a corrosive acid, alkali, solvent, or other chemical, which may continue to penetrate until the substance is removed and neutralized appropriately.

Chemical Burn Or Reaction

Tissue injury caused by contact with a corrosive or irritating chemical, commonly affecting the skin or eyes; severity depends on the substance, concentration, contact time, and tissue involved.

Chemical Carcinogenesis

Development of cancer after exposure to chemicals that cause DNA damage, abnormal cell signaling, chronic tissue injury, or altered gene regulation.

Chemical Cleavage

Breaking a chemical bond with a reagent, used in laboratory analysis, molecular biology, synthesis, or controlled degradation of a larger molecule.

Chemical Cofactor

A nonprotein chemical helper required for an enzyme or biologic reaction, such as a metal ion, vitamin-derived coenzyme, or other small molecule.

Chemical Dependency

Legacy, nonpreferred label; see *Substance Use Disorder*.

Chemical Eye Injury

Ocular damage caused by exposure to an acidic or alkaline substance. Immediate copious irrigation, removal of particulate material, measurement of ocular-surface pH, and urgent ophthalmic assessment are required; alkali injuries may penetrate deeply and continue to worsen after exposure.

Chemical Fractionation

Separation of a mixture into fractions according to chemical or physical properties such as solubility, charge, size, or binding affinity.

Chemical Impurity

An unintended chemical present in a medicine, specimen, or material, potentially affecting safety, stability, measurement accuracy, or biologic activity.

Chemical Injury

Tissue damage from corrosive substances. Acid burns: coagulation necrosis, eschar formation. Alkali burns: liquefaction necrosis, deeper penetration. Management: copious irrigation, remove contaminated clothing, assess for airway involvement.

Chemical Peel

Application of a chemical solution to the skin to produce controlled exfoliation and regeneration of superficial or deeper skin layers.

Alternate Names:

Chemexfoliation; chemical resurfacing.

Chemical Peels

Chemical peels use acids to exfoliate skin layers. Superficial peels (glycolic acid 20 to 70 percent, salicylic acid 20 to 30 percent) affect the epidermis.

Medium peels (trichloroacetic acid 35 to 50 percent) reach the papillary dermis. Deep peels (phenol 88 percent) reach the reticular dermis.

Chemical Pneumonitis

Inflammation and lung injury caused by inhalation or aspiration of irritating chemicals, gastric contents, hydrocarbons, or other toxic substances. It may cause cough, dyspnea, hypoxemia, wheezing, and diffuse pulmonary infiltrates.

Chemistry

The study of substances, their composition, properties, reactions, and transformations, forming the basis of biochemistry, pharmacology, toxicology, and laboratory medicine.

Chemo

Informal shorthand for chemotherapy, treatment using drugs that destroy cancer cells, inhibit their growth, or suppress abnormal immune cells.

Chemo Brain

Subjective difficulties with memory, attention, or thinking that occur during or after cancer treatment.

Alternate Names:

Post-Chemotherapy Cognitive Impairment

Chemoattractant

A chemoattractant is a chemical signal that guides cells, especially immune cells, toward a source of the signal during inflammation or development.

Chemodectoma

A tumor arising from paraganglionic tissue, especially a carotid-body tumor. It is usually slow-growing and may compress nearby cranial nerves or vessels.

Chemoembolization

A procedure that combines delivery of an antineoplastic agent with embolization of the blood supply to a tumor, most commonly for selected liver cancers.

Chemokine

A family of small secreted cytokines that direct leukocyte migration (chemotaxis) to sites of infection, inflammation, and tissue repair. Classified by cysteine motif: CXC (e.g., IL-8/CXCL8, recruit neutrophils), CC (e.g., MCP-1/CCL2, attract monocytes), C, and CX3C.

Chemokine Receptor

A cell-surface receptor that binds chemokines and directs immune-cell movement; some also serve as entry cofactors for viruses such as HIV.

Chemokinesis

Nonspecific stimulation of cell movement by a chemical substance, without directional movement toward or away from a concentration gradient.

Chemonucleolysis

An intradiscal treatment intended to dissolve part of a herniated intervertebral disk, historically using an enzyme preparation.

Alternate Names:

Enzymatic disk dissolution; chemonucleolysis procedure.

Chemoprevention

The use of drugs or natural agents to prevent, delay, or reverse cancer development, e.g., tamoxifen or raloxifene in high-risk breast cancer, HPV and hepatitis B vaccination, and aspirin in colorectal cancer.

Chemoradiation

The concurrent combination of chemotherapy and radiation therapy, used to treat locoregionally advanced cancers such as anal, cervical, head and neck, esophageal, and limited-stage small cell lung cancer.

Chemoradiotherapy

Treatment that combines chemotherapy with radiation therapy, often to improve cancer control.

Chemoreceptor

A sensory receptor that responds to changes in blood

or CSF chemistry, involved in respiratory and cardiovascular regulation.

Chemoreceptor Cell

A sensory cell that detects chemical changes such as oxygen, carbon dioxide, pH, taste molecules, or odorants and converts them into neural or physiologic signals.

Chemoreceptor Trigger Zone

A region near the floor of the fourth ventricle that detects emetic stimuli in blood and cerebrospinal fluid and helps initiate vomiting.

Chemoreceptors

Chemoreceptors detect chemical changes such as oxygen, carbon dioxide, pH, or odor molecules and trigger neural or physiologic responses.

Chemoresistance

Reduced or absent responsiveness of cells, especially tumor cells, to a chemical treatment that would ordinarily inhibit or destroy them.

Chemosensitivity

The degree to which cells or a tumor respond to a chemical treatment. Testing may be used experimentally or clinically to help characterize treatment response.

Chemosensitivity Assay

A laboratory test exposing cells to medicines to assess response; results are mainly investigational and may not predict treatment benefit.

Chemosensitization

Increasing a tumor's or pathogen's susceptibility to a treatment by combining it with another agent that improves drug delivery, blocks resistance, or enhances cellular damage.

Chemosis

Chemosis is swelling of the conjunctiva, the membrane over the eye surface, caused by allergy, infection, irritation, trauma, or systemic fluid imbalance.

Chemosurgery

Chemosurgery uses a chemical agent to destroy selected abnormal tissue, historically including chemical treatment of skin lesions; modern use is specialized.

Chemotactic Factors

Chemical signals that attract or repel cells, especially leukocytes, by creating directional concentration gradients during inflammation, infection, development, or repair.

Chemotaxis

Directed movement of a cell or organism toward or away from a chemical stimulus. It is important in immune-cell recruitment and inflammatory responses.

Chemotherapy

Treatment using medicines that kill cancer cells, inhibit their growth, or prevent replication. It may be given alone or with surgery, radiation, immunotherapy, or targeted therapy; the drugs, schedule, benefits, and adverse effects depend on the cancer and treatment goal.

Chemotherapy Extravasation

Leakage of an intravenous anticancer drug into surrounding tissue. Vesicant extravasation can cause severe local injury, so infusion must stop immediately while the catheter is managed and drug-specific antidote and surgical guidance are obtained.

Chemotherapy Regimen

A specific combination of anticancer drugs, dosing schedule, and treatment cycles designed for a particular cancer type and stage. Regimens are standardized by evidence-based protocols and may be modified based on response, toxicity, and patient factors.

Chemotherapy Treatment

Chemotherapy uses medicines that damage or inhibit rapidly dividing cancer cells. It may be given before or after local treatment, for advanced disease, or for symptom control; effects and monitoring

depend on the drugs, cancer, treatment goal, and organ function.

Cherry Angioma

A common benign proliferation of small dermal blood vessels that appears as a bright-red to purple papule, usually on the trunk or limbs. Lesions may bleed after trauma but generally require no treatment unless diagnosis is uncertain or removal is desired.

Cherry Eye

Prolapse of the gland of the third eyelid, producing a rounded red mass at the inner corner of the eye. The term is used especially in veterinary ophthalmology.

Cherry-Red Spot

A striking fundoscopic finding in which the macula appears bright red against a pale, ischemic, or lipid-laden surrounding retina. Mechanism: the fovea centralis lacks inner retinal layers and receives blood supply from the underlying choroid, preserving its natural red color while adjacent edematous retina turns opaque white.

Cherubism

A rare inherited disorder characterized by bilateral enlargement of the jaws from expansile giant-cell lesions, usually beginning in childhood and often regressing after puberty.

Chest

The thorax, the region between the neck and abdomen containing the heart, lungs, major vessels, and other structures protected by the ribs and sternum.

Chest CT

Computed tomography of the chest using x-rays and computer reconstruction to produce cross-sectional images of the lungs, heart, blood vessels, mediastinum, pleura, and chest wall.

Chest MRI

Magnetic resonance imaging of the chest using a

magnetic field and radio waves to evaluate soft tissues, blood vessels, heart structures, mediastinum, chest wall, and selected lung or pleural abnormalities.

Chest Pain

A cardinal symptom with cardiac and non-cardiac causes requiring urgent distinction. Cardiac: acute coronary syndrome (angina, MI), pericarditis, aortic dissection, myocarditis. Pulmonary: pulmonary embolism, pneumothorax, pneumonia, pleurisy. GI: GERD, esophageal spasm, peptic ulcer. Musculoskeletal and psychogenic causes also common.

Alternate Names:

Pain, Chest

Chest Pain On The Left Side Above A Female Breast

Left-sided chest or breast-area pain can arise from muscle or rib injury, breast tissue, reflux, lung disease, anxiety, or heart disease. Pressure, exertional pain, shortness of breath, sweating, faintness, or pain spreading to the arm or jaw requires emergency assessment.

Chest Physiotherapy

Techniques to mobilize and clear secretions from the lungs, including postural drainage, percussion, vibration, and huffing. It is used in bronchiectasis, CF, and post-operative patients. Positive expiratory pressure devices and oscillating PEP devices are also used.

Chest Tightness

A sensation of pressure, constriction, or heaviness in the chest that may arise from heart, lung, gastrointestinal, musculoskeletal, or anxiety-related causes.

Chest Tube

A flexible tube inserted into the pleural space to remove air, blood, or fluid and help the lung re-expand.

Chest Tube Insertion

Placement of a thoracostomy tube in the safe triangle (latissimus dorsi, pectoralis major, nipple level)

to drain air, fluid, or blood from the pleural space. Connected to underwater seal drainage.

Chest Tube Thoracostomy

Insertion of a tube into the pleural space to drain air, fluid, or blood. Indications: pneumothorax (large, tension, or on mechanical ventilation), hemothorax, pleural effusion (empyema, malignant, transudative), and postoperative (cardiac, thoracic surgery).

Chest Wall

The musculoskeletal boundary of the thoracic cavity, formed by the skin, fascia, muscles, ribs, costal cartilages, sternum, thoracic vertebrae, and associated neurovascular structures. It protects the thoracic organs and participates in breathing through coordinated movement of the ribs and respiratory muscles.

Chest Wall Deformity

Abnormalities of the chest wall that can affect lung function. Pectus excavatum (sunken sternum) may compress the heart and lungs. Pectus carinatum (protruding sternum) is usually cosmetic. Scoliosis can cause restrictive lung disease. These may require surgical correction if severe.

Chest Wall Pain

Alternate index label; see *Costochondritis*.

Chest X-Ray

Initial imaging for respiratory symptoms. PA and lateral views. Evaluates pneumonia, pneumothorax, pleural effusion, heart size, mediastinal masses. Limited sensitivity for early disease.

Chewing

Mastication of food. Teeth, muscles, joints coordinated. Difficulties: dental pain, missing teeth, TMJ disorder.

Cheyne-Stokes Respiration

Crescendo-decrescendo breathing pattern with periods of apnea, seen in heart failure and stroke. It is a form of central sleep apnea.

CHF

Congestive heart failure, a syndrome in which the heart cannot pump or fill adequately, causing symptoms such as breathlessness, fatigue, and fluid retention.

Chiari I Malformation

Downward displacement of the cerebellar tonsils through the foramen magnum, which may cause headache, neck pain, balance problems, or no symptoms.

Chiari Malformation

Chiari malformations are structural abnormalities of the posterior fossa and cerebellum characterized by downward displacement of the cerebellar tonsils through the foramen magnum. Type I is the most common variant, defined as cerebellar tonsillar ectopia of five millimeters or more below the foramen magnum.

Chiari-Frommel Syndrome

Persistent postpartum secretion of milk with absence of menstruation, associated with hyperprolactinemia after pregnancy. It is a form of galactorrhea-amenorrhea syndrome.

Chick Embryo

The developing chicken embryo, widely used as an experimental model for embryology, organ development, virology, toxicology, and tissue growth.

Chicken Soup And Sickness

A supportive-care topic concerning the use of warm fluids and nutrition during illness; chicken soup may ease hydration or congestion but does not replace diagnosis or treatment.

Chickenpox

Chickenpox is a contagious varicella-zoster virus infection characterized by an itchy vesicular rash; complications are more likely in adults, pregnancy, immunosuppression, and some infants. In different stages (macules, papules, vesicles, crusts). Highly contagious via respiratory droplets and contact with lesions. Incubation 10-21 days. Complications in-

clude secondary bacterial infection, pneumonia, encephalitis, and Reye syndrome.

Chickenpox (Varicella)

Alternate index label for Varicella.

Chigger Bites

Itchy inflammatory skin reactions caused by the larvae of trombiculid mites. Small red bumps or blisters often occur around areas where clothing fits tightly and may itch intensely for several days. Washing the skin and clothing, topical antipruritics, and avoiding scratching can help; persistent or infected lesions require assessment.

Chiggers

Larval harvest mites whose bite causes intensely itchy grouped red papules or welts; symptoms result from skin irritation, not from the mite burrowing into human tissue.

Chiggers (Bites)

Alternate index label for Bites.

Chignon

A temporary swelling (edema) on the baby's scalp caused by the vacuum cap used during ventouse (vacuum) assisted delivery. The chignon forms as the vacuum creates negative pressure pulling the scalp tissue into the cup. It settles within 24-48 hours after birth without any treatment.

Chikungunya

A mosquito-borne viral disease caused by chikungunya virus, usually producing abrupt fever and severe, often symmetric joint pain. Headache, muscle pain, joint swelling, nausea, fatigue, and rash may occur; joint symptoms can persist for months or years.

Alternate Names:

Chikungunya fever; chikungunya virus disease; CHIKV infection

Chikungunya Virus

An alphavirus transmitted primarily by infected

female *Aedes aegypti* and *Aedes albopictus* mosquitoes. Infection can cause abrupt fever, severe polyarthralgia, joint swelling, rash, and prolonged inflammatory joint symptoms.

Chilblain

An inflammatory skin lesion caused by an abnormal response to cold and damp conditions. It produces itchy, red or violaceous swollen areas, usually on fingers, toes, ears, or nose.

Chilblains

Painful, itchy, swollen skin lesions caused by an abnormal response to cold and damp conditions.

Alternate Names:

Pernio

Chilblains (Pernio)

Itchy, painful, red or purplish inflammatory lesions caused by an abnormal response of small blood vessels to cold and subsequent rewarming.

Alternate Names:

Pernio

Child Abuse

Physical, sexual, or emotional harm or neglect of a child by a caregiver. Recognized by inconsistent histories, injury patterns inconsistent with mechanism, and behavioral indicators. Types: physical abuse, sexual abuse, neglect, and emotional abuse. Mandatory reporting requirements for healthcare providers.

Alternate Names:

Child Maltreatment

Alternate Names:

Child Adoption

Child adoption is the legal process by which parental rights and caregiving responsibility are transferred to adoptive parents; medical care includes records, consent, and family history.

Child Behavior

The observable actions, responses, and conduct of

children, influenced by developmental stage, temperament, environment, and neurobiological factors. Behavioral assessment helps identify developmental disorders, emotional difficulties, and parenting needs.

Child Development

Progressive physical, cognitive, language, emotional, and social changes from infancy through adolescence, assessed against developmental milestones and individual variation.

Child Health

The physical, developmental, mental, and social well-being of children, including prevention, nutrition, immunization, safety, and treatment of illness.

Child Health Services

Child health services provide preventive care, immunization, growth and developmental monitoring, screening, treatment, and support for children and families.

Child Neglect

The failure of a caregiver to provide adequate food, shelter, clothing, supervision, education, or medical care. The most common form of child maltreatment. Types: physical neglect, educational neglect, emotional neglect, and medical neglect. May result in failure to thrive, developmental delay, and chronic illness.

Child Neglect And Emotional Abuse

Failure to provide a child's basic needs or repeated behavior that harms emotional development, safety, or wellbeing; suspected abuse requires safeguarding assessment and appropriate reporting under local law.

Child Physical Abuse

Intentional physical injury or harm inflicted on a child by a caregiver or another person, including hitting, burning, shaking, or fractures; suspected abuse requires immediate safeguarding assessment.

Child Poisoning

Exposure of a child to a medicine, chemical, or other substance that may cause harm. Suspected poisoning requires prompt expert assessment.

Child Psychiatry

The medical specialty concerned with assessment and treatment of emotional, behavioral, developmental, and psychiatric disorders in children and adolescents.

Child Psychology

The study of children's cognitive, emotional, social, and behavioral development and the effects of relationships, learning, biology, and environment.

Child-Pugh Classification

Clinical scoring system assessing prognosis of chronic liver disease by evaluating five parameters: total bilirubin, serum albumin, international normalized ratio, ascites, and hepatic encephalopathy. Each parameter is scored one to three points.

Childbed Fever

Puerperal fever, usually infection of the reproductive tract after childbirth or miscarriage, often involving postpartum endometritis and requiring prompt evaluation and treatment.

Childbirth

The process of giving birth, encompassing three stages: (1) First stage: from the onset of regular uterine contractions (cervical effacement and dilation) to full dilation (10 cm). See Parturition (Childbirth).

Childhood

The developmental period between infancy and adolescence, during which physical growth, brain development, learning, and social skills progress.

Childhood Absence Epilepsy

An epilepsy syndrome beginning in childhood with frequent brief absence seizures, characterized by sudden impairment of awareness and a typical gen-

eralized spike-and-wave EEG pattern.

Childhood Angiosarcoma

A rare malignant tumor arising from blood-vessel or lymphatic-endothelial cells in a child; diagnosis and treatment require specialist pediatric oncology care.

Childhood Apraxia Of Speech

A speech-sound disorder in which a child has difficulty planning and coordinating the movements needed for clear speech.

Alternate Names:

CAS

Childhood Asthma

Asthma beginning during childhood, involving variable airway narrowing and inflammation that cause wheezing, cough, chest tightness, or shortness of breath.

Childhood Ependymoma

A tumor arising from ependymal cells lining the brain ventricles or spinal canal in children; symptoms depend on location and obstruction of cerebrospinal-fluid flow.

Childhood Fibrosarcoma

A malignant tumor of fibroblastic connective tissue in children, usually presenting as a growing mass; treatment depends on location, extent, and tumor biology.

Childhood Ganglioglioma

A usually slow-growing mixed neuronal and glial brain tumor in children or young adults, often presenting with long-standing focal seizures.

Childhood Leiomyosarcoma

A rare malignant tumor of smooth muscle in a child; it may arise in soft tissue or an organ and requires biopsy, staging, and specialist treatment.

Childhood Leukemia

Cancer of blood-forming cells in a child, most of-

ten acute lymphoblastic or acute myeloid leukemia; symptoms may include pallor, bruising, fever, bone pain, or recurrent infection.

Childhood Liposarcoma

A rare malignant tumor derived from fat-forming tissue in a child; diagnosis requires imaging and biopsy, and treatment is individualized by a sarcoma team.

Childhood Obesity

Alternate index label; see *Pediatric Obesity*.

Childhood Osteosarcoma

A malignant bone tumor that commonly develops near the ends of long bones during adolescence; pain, swelling, or a fracture may occur and treatment combines chemotherapy and surgery.

Childhood Rhabdomyosarcoma

A malignant tumor showing skeletal-muscle differentiation, occurring mainly in children and adolescents; it may arise in the head and neck, urinary or reproductive tract, or limbs.

Childhood Schizophrenia

A rare psychotic disorder beginning in childhood, involving disturbances in thinking, perception, behavior, and emotional functioning.

Alternate Names:

Juvenile Schizophrenia Schizophrenia, Adolescent Schizophrenia, Childhood Schizophrenia, Juvenile

Children

Humans in the developmental period between infancy and adolescence; medical assessment must account for age-specific anatomy, physiology, growth, communication, and consent.

Children And Grief

The emotional and behavioral response of children to death or major loss, which varies by developmental stage and may include sadness, regression, anger, worry, or physical symptoms.

Children'S Cancer Centers

Specialized services that coordinate diagnosis, treatment, rehabilitation, psychosocial support, survivorship care, and research for children and adolescents with cancer.

Alternate Names:

Childrens Health (Children's Health)

Chill

A chill is a sensation of cold, often with shivering, that can accompany fever, infection, exposure, anxiety, or other illness.

Chills

A sensation of cold with involuntary shivering, commonly accompanying fever or infection; chills without measured fever may also occur with anxiety, hypoglycaemia, or environmental cold.

Chilomastix Mesnili

A nonpathogenic intestinal flagellate protozoan that may be found in stool and indicates fecal exposure but usually does not require treatment.

Chimera

An organism or tissue containing genetically distinct cell populations derived from different zygotes or embryos, or a laboratory construct combining genetic material from different sources.

Chimerism

The presence in one individual of cell populations derived from genetically different zygotes or sources. It may occur naturally, after transplantation, or through exchange of cells between a pregnant person and fetus.

Chin

The lower facial prominence formed mainly by the mandible and overlying soft tissue, contributing to facial contour, speech, chewing, and airway anatomy.

Chin Augmentation

A cosmetic procedure that increases chin projection

with an implant, injectable filler, or bone surgery to change facial contour; risks include infection, asymmetry, nerve injury, and implant problems.

Chinese Restaurant Syndrome

An older, controversial term for short-lived symptoms such as headache, flushing, or palpitations attributed to eating restaurant food; evidence does not show that monosodium glutamate causes these symptoms in most people at usual dietary exposures.

Chionablepsia

Temporary visual impairment caused by exposure to intense reflected light from snow or ice, commonly called snow blindness. It is usually related to ultraviolet injury of the cornea.

Alternate Names:

snow blindness.

Chironomidae

The nonbiting midge family of insects; their larvae and body parts can act as environmental allergens and rarely trigger respiratory or skin reactions.

Chiropody

Chiropody is care of the feet, including assessment and treatment of skin, nail, pressure, and biomechanical problems; it is also called podiatry.

Chiropractic

A healthcare practice centered mainly on manual treatment of musculoskeletal disorders, especially spinal manipulation; benefits and risks vary by condition and technique.

Chiropractic Care For Back Pain

Manual therapy, primarily spinal manipulation and mobilization, provided for acute and chronic low back pain when indicated. Evidence supports its use for acute low back pain in particular, though it is not appropriate for all causes of back pain.

Chiropractor

A healthcare practitioner who provides manual or

manipulative treatment, especially for musculoskeletal conditions, according to the practitioner's training and local regulation.

Alternate Names:

Chiropractic practitioner; chiropractic clinician.

Chitin

A structural polysaccharide in fungal cell walls and arthropod exoskeletons.

Chitosan

A biodegradable polysaccharide derived from chitin, studied and used in wound dressings, drug delivery, hemostatic materials, and some nutritional products.

Chlamydia

A genus of obligate intracellular bacteria; *Chlamydia trachomatis* commonly causes sexually transmitted urethritis, cervicitis, pelvic inflammatory disease, and neonatal conjunctivitis or pneumonia.

Chlamydia Infections In Women

Infections in women caused by *Chlamydia trachomatis*, commonly involving the cervix or urethra and often producing no symptoms; untreated infection can cause pelvic inflammatory disease, infertility, or ectopic pregnancy.

Chlamydia Pneumoniae Infection

A respiratory infection caused by *Chlamydia pneumoniae*, formerly called *Chlamydophila pneumoniae*. It commonly causes gradual-onset atypical pneumonia, bronchitis, or upper-respiratory symptoms.

Chlamydia Psittaci

A bacterium that causes psittacosis, a zoonotic infection usually acquired by inhaling organisms from infected birds.

Chlamydia Trachomatis

A bacterium that commonly causes sexually transmitted infection of the urogenital tract and can also cause conjunctivitis or pneumonia.

Chlamydia Trachomatis Infection

A bacterial infection transmitted mainly through sexual contact. It may cause urethritis, cervicitis, pelvic inflammatory disease, proctitis, or no symptoms.

Chlamydiaceae

Chlamydiaceae is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

Chlamydial Infections - Male

Infections in men caused by *Chlamydia trachomatis*, most commonly urethritis and sometimes epididymitis or proctitis; many infections are asymptomatic and diagnosis is usually by nucleic acid amplification testing.

Chlamydial Pneumonia

Pneumonia caused by *Chlamydia* species, usually producing a gradual cough, fever, and malaise.

Chlamydiosis

Infection caused by bacteria of the genus *Chlamydia*. Depending on the species and site, it may cause sexually transmitted infection, conjunctivitis, pneumonia, or other disease.

Chloasma

Patchy brown hyperpigmentation, especially of the face, associated with pregnancy, hormones, sun exposure, or other causes. It is commonly called melasma.

Alternate Names:

melasma.

Chloasma (Melasma)

Alternate index label for Melasma.

Chloracne

An acne-like eruption caused by exposure to certain halogenated aromatic compounds, such as dioxins and related industrial chemicals.

Chloral Hydrate

A sedative-hypnotic compound with limited modern use because of toxicity, dependence, respiratory depression, and cardiac or gastrointestinal adverse effects.

Chlorambucil

A medicine or chemical compound identified by chlorambucil. Its uses, effects, and risks depend on the specific substance and clinical context.

Chloramphenicol

A broad-spectrum antibiotic with activity against gram-positive and gram-negative organisms, as well as Rickettsia. Chloramphenicol inhibits bacterial protein synthesis by binding to the 50S ribosomal subunit. It is indicated for serious infections when other agents are not appropriate, including bacterial meningitis and typhoid fever.

Chloranemia

Anemia in which the red blood cells are abnormally pale, usually because of reduced hemoglobin content, as in iron deficiency.

Chlordane

A persistent organochlorine insecticide formerly used for termite control; exposure can affect the nervous system and liver and has environmental persistence.

Chlordecone

A persistent organochlorine pesticide that can cause neurologic, reproductive, and liver effects after significant exposure and remains in the environment for long periods.

Chlordiazepoxide

Chlordiazepoxide is a defined chemical or biologic substance involved in chlordiazepoxide and studied in physiology, pharmacology, laboratory medicine, or treatment.

Chlordiazepoxide Overdose

Overdose of chlordiazepoxide, a benzodiazepine,

that can cause drowsiness, impaired coordination, respiratory depression, and coma, especially with other sedatives.

Chlorethoxyfos

An organophosphate insecticide that can inhibit acetylcholinesterase and cause cholinergic poisoning after substantial exposure.

Chlorfenvinphos

An organophosphate insecticide that can cause cholinergic toxicity by inhibiting acetylcholinesterase; use is restricted or prohibited in many places.

Chlorhexidine

A broad-spectrum antiseptic used for skin, mucosal, and oral preparation; it can cause irritation, allergy, or rare severe anaphylaxis.

Chloride

The principal negatively charged electrolyte in extracellular fluid, important for fluid balance, electrical neutrality, and gastric acid formation.

Chloride - Urine Test

A test that measures chloride excretion in urine; interpreted with serum electrolytes and clinical findings to evaluate fluid balance, acid-base disorders, and causes of abnormal chloride loss or retention.

Chloride Channel

A medicine or chemical compound identified by chloride channel. Its uses, effects, and risks depend on the specific substance and clinical context.

Chloride In Diet

A medicine or chemical compound identified by chloride in diet. Its uses, effects, and risks depend on the specific substance and clinical context.

Chloride Ion

The negatively charged form of chlorine and a major extracellular electrolyte that helps maintain fluid balance, osmotic pressure, acid-base status, and

electrical neutrality.

Chloride Test - Blood

A blood test measuring serum chloride, an electrolyte that helps regulate extracellular fluid volume and acid-base balance; results are interpreted with sodium, bicarbonate, kidney function, and the clinical context.

Chlorinated Lime

Chlorinated lime, or bleaching powder, releases chlorine and is used as a disinfectant; concentrated exposure can burn skin, eyes, and airways.

Chlorinated Lime Poisoning

Exposure to chlorinated lime, a hypochlorite-containing corrosive that can injure the skin, eyes, airways, or gastrointestinal tract.

Chlorine

A reactive halogen element and disinfectant; inhalation of chlorine gas can injure the eyes and airways and cause chemical pneumonitis or pulmonary edema.

Chlorine Poisoning

Inhalation or contact exposure to chlorine gas, which irritates the eyes and airways and can cause cough, bronchospasm, chemical pneumonitis, or pulmonary edema.

Chlormadinone Acetate

A synthetic progestogen used in some hormonal medicines; effects and risks include changes in bleeding, mood, metabolism, and thrombotic risk depending on the formulation.

Chlormerodrin

A historical radioactive mercury compound once used in diagnostic or research settings; it is not a routine modern medicine and mercury exposure is toxic.

Chlormethine

Chlormethine, or mechlorethamine, is an alkylating

anticancer drug used systemically or topically for selected cancers and cutaneous T-cell lymphoma.

Chlorodeoxyadenosine

Another name for cladribine, a purine-analog medicine used for selected blood cancers and multiple sclerosis; prolonged lymphocyte suppression and infection risk are important considerations.

Chloroform

A volatile solvent and environmental contaminant that can irritate the lungs and nervous system and damage the liver or kidneys after significant exposure.

Chlorogenic Acid

Chlorogenic acid is a defined chemical or biologic substance involved in chlorogenic acid and studied in physiology, pharmacology, laboratory medicine, or treatment.

Chloroleukemia

A rare form of myeloid leukemia associated with greenish tumor masses composed of myeloid cells, also called granulocytic sarcoma or chloroma.

Alternate Names:

granulocytic sarcoma or chloroma.

Chloroma

A greenish extramedullary mass of immature myeloid cells, usually associated with acute myeloid leukemia. It is also called granulocytic sarcoma or myeloid sarcoma.

Alternate Names:

granulocytic sarcoma or myeloid sarcoma.

Chlorophyll

The green pigment in plants and algae that absorbs light for photosynthesis.

Chlorophyll Poisoning

Ingestion of chlorophyll-containing products, which usually causes mild gastrointestinal effects; product ingredients and dose determine clinical risk.

Chlorophyllin

A water-soluble, copper-containing derivative of chlorophyll used in some products and studied for effects such as odor control; clinical uses depend on evidence and context.

Alternate Names:

Chlorophyllin copper complex; sodium copper chlorophyllin.

Chlorophyta

The group of green algae; some species produce toxins or contribute to harmful algal blooms, while others are used as food or in research.

Chloropicrin

A pungent soil fumigant and irritant that can injure the eyes, skin, and respiratory tract after exposure.

Chloroplast

A plant and algal cell organelle that performs photosynthesis and contains its own DNA; it is not found in human cells.

Chloroplast DNA

The genetic material inside chloroplasts, inherited mainly through the maternal line in many plants and used in studies of plant evolution and disease.

Chloroprene

An industrial chemical used to make chloroprene rubber; repeated or high exposure can irritate tissues and has carcinogenic concern.

Chloropsia

A visual disturbance in which objects appear green or have a greenish tint. It can occur with retinal disease, medication or toxin exposure, or other visual-pathway disorders.

Chloroquine

An antimalarial medicine used for susceptible Plasmodium species and selected autoimmune conditions; retinal toxicity, cardiotoxicity, and drug interactions require attention.

Chlorothiazide

A medicine or chemical compound identified by chlorothiazide. Its uses, effects, and risks depend on the specific substance and clinical context.

Chlorotoxin

A peptide from scorpion venom that binds some tumor and ion-channel targets; it is mainly studied experimentally for brain-tumor imaging or treatment.

Chlorotrianisene

A synthetic estrogen formerly used for menopausal symptoms; it is rarely used now because of estrogen-related risks and safer alternatives.

Chlorpheniramine

A first-generation antihistamine used for allergy symptoms; drowsiness, dry mouth, blurred vision, urinary retention, and other anticholinergic effects may occur.

Chlorphentermine

An older stimulant appetite suppressant related to amphetamines; it is not routinely used because of cardiovascular, psychiatric, and dependence risks.

Chlorpromazine

A first-generation antipsychotic and phenothiazine used for schizophrenia, severe nausea, and selected other conditions; adverse effects include sedation, hypotension, movement disorders, and QT prolongation.

Chlorpromazine Overdose

Overdose of chlorpromazine that may cause sedation, hypotension, anticholinergic effects, seizures, cardiac conduction abnormalities, or neuroleptic malignant syndrome.

Chlorpropamide

A first-generation sulfonylurea that lowers blood glucose by stimulating pancreatic insulin release; prolonged hypoglycemia and hyponatremia are important risks.

Chlorpyrifos

An organophosphate insecticide that inhibits acetylcholinesterase; significant exposure can cause cholinergic toxicity with secretions, bronchospasm, bradycardia, weakness, or seizures.

Chlortalidone

Chlortalidone, also called chlorthalidone, is a long-acting thiazide-like diuretic used mainly for hypertension and fluid retention.

Chlorthalidone

A long-acting thiazide-like diuretic used for hypertension and edema; it can cause hyponatremia, hypokalemia, hyperuricemia, and kidney-related electrolyte changes.

Chlorzoxazone

A centrally acting muscle relaxant used for painful muscle spasm in some countries; drowsiness and rare serious liver injury are important risks.

CHO Cell

A Chinese hamster ovary cell line widely used to produce recombinant proteins, antibodies, vaccines, and other biologic medicines.

Choanal Atresia

A congenital obstruction of the posterior nasal passage (choana) due to failure of the bucconasal membrane to rupture during embryogenesis. Bilateral choanal atresia presents as a respiratory emergency in the newborn, who is an obligate nasal breather — cyclic cyanosis that improves with crying.

Chocolate Cyst

A chocolate cyst is an ovarian endometrioma filled with old blood from endometriosis, which can cause pelvic pain, infertility, or an adnexal mass.

Choice Behavior

The process of selecting among alternatives, studied in psychology and neuroscience to understand decision-making, impulsivity, and reward processing. Abnormal choice behavior may be relevant to addic-

tion, eating disorders, and psychiatric conditions.

Choke

Airway blockage by food or another object that prevents normal airflow and can rapidly cause inability to speak, cyanosis, loss of consciousness, or death.

Choking

Airway obstruction caused by an object lodged in the pharynx or larynx, producing impaired ventilation. Complete obstruction can cause hypoxic brain injury and death within minutes; treatment depends on the patient's age, consciousness, and effectiveness of coughing.

Choking - Adult Or Child Over 1 Year

First aid for severe airway obstruction in a person older than one year, using back blows and abdominal thrusts when appropriate and CPR if the person becomes unresponsive.

Choking - Infant Under 1 Year

First aid for severe airway obstruction in an infant, using alternating back slaps and chest thrusts and avoiding blind finger sweeps; unresponsiveness requires infant CPR.

Choking - Unconscious Adult Or Child Over 1 Year

Resuscitation for an unresponsive person with suspected airway obstruction, combining emergency activation, airway inspection, CPR, and removal of a visible object without blind sweeping.

Cholagogue

A substance that promotes emptying of the gallbladder into the intestine.

Alternate Names:

Gallbladder stimulant; biliary evacuant.

Cholangitis

Inflammation of the bile ducts. It may be caused by infection, obstruction, autoimmune disease, or other biliary disorders.

Cholangiocarcinoma

Cholangiocarcinoma is cancer arising from bile-duct lining cells and may cause jaundice, itching, abdominal symptoms, or bile-flow obstruction.

Alternate Names:

Bile Duct Cancer (Cholangiocarcinoma)

Cholangiocarcinoma (Bile Duct Cancer (Cholangiocarcinoma))

Alternate index label for Bile Duct Cancer (Cholangiocarcinoma).

Cholangiocarcinoma (Bile Duct Cancer)

Cancer arising in the bile ducts, which may cause jaundice, itching, abdominal discomfort, weight loss, or impaired bile flow.

Cholangiography

Contrast imaging of bile ducts. Intraoperative, percutaneous, or ERCP approach. Evaluates biliary obstruction, stones, strictures.

Cholangiohepatitis

Inflammation involving both the bile ducts and liver, often associated with ascending bacterial infection, biliary obstruction, parasites, or recurrent cholangitis. It may cause fever, right-upper-quadrant pain, jaundice, and cholestatic liver-test abnormalities.

Cholangitis

Cholangitis is inflammation or infection of the bile ducts, often from obstruction by a stone or stricture, and can rapidly cause sepsis.

Cholangitis, Primary Sclerosing

Alternate index label; see *Primary sclerosing cholangitis*.

Cholate

The ionized form of cholic acid, a primary bile acid that helps emulsify dietary fat and is conjugated and secreted by the liver.

Cholecalciferol

Vitamin D3, produced in skin by ultraviolet light

and obtained from food or supplements, then converted to active metabolites that regulate calcium and phosphate.

Cholecyst

The gallbladder, a small sac beneath the liver that stores and concentrates bile.

Cholecystectomy

Surgical removal of the gallbladder, usually by a laparoscopic approach when appropriate. It may be performed for symptomatic gallstones, acute cholecystitis, selected gallstone pancreatitis, or other gallbladder disease.

Cholecystitis

Inflammation of the gallbladder, most commonly caused by obstruction of the cystic duct by a gallstone, which occurs in approximately 95 percent of cases. The obstruction leads to bile stasis, increased intraluminal pressure, and ischemia of the gallbladder wall, which may progress to bacterial infection.

Alternate Names:

Inflamed Gallbladder

Cholecystography

Radiographic examination of the gallbladder, usually after administration of a contrast substance, to assess its filling, concentration, and emptying.

Cholecystokinin

CCK is a peptide hormone produced by I-cells in the duodenal and jejunal mucosa in response to fatty acids (long-chain fatty acids are the most potent stimuli) and amino acids in the chyme.

Cholecystoses

Non-inflammatory disorders causing deposits, wall thickening, or other structural changes in the gallbladder, including cholesterosis and adenomyomatosis. Many are incidental, but symptoms and imaging findings determine whether further evaluation is needed.

Choledochal Cyst

Congenital dilatation of the biliary tree classified into five types according to the Todani classification. Type I involving dilation of the common bile duct is the most common. Presents with the classic triad of abdominal pain, jaundice, and palpable mass though all three are present in less than twenty percent of cases.

Choledochal Cysts

Choledochal cysts are congenital or acquired dilations of the bile ducts that can cause abdominal pain, jaundice, pancreatitis, cholangitis, or stones. Imaging establishes the anatomy, and surgical removal is often recommended because of recurrent complications and cancer risk.

Alternate Names:

Cysts Choledochal (Choledochal Cysts)

Choledocholithiasis

A gallstone within the common bile duct, which may cause biliary pain, jaundice, cholangitis, or pancreatitis and is usually evaluated with liver tests and imaging.

Cholelithiasis

The presence of stones in the gallbladder or biliary tract. Stones may contain cholesterol, pigment, or mixed material and may cause no symptoms or lead to biliary pain and complications.

Cholelithiasis (Gallstones)

Alternate index label for Gallstones.

Cholera

An acute intestinal infection caused by toxigenic *Vibrio cholerae*, producing profuse watery diarrhoea and potentially life-threatening dehydration; prompt oral or intravenous rehydration is central treatment.

Choleresis

Choleresis is production and secretion of bile by liver cells.

Choleretic

A substance that promotes production or secretion of bile by the liver.

Alternate Names:

Bile-secretory agent; bile-flow stimulant.

Cholestasis

Reduced formation or flow of bile, causing conjugated hyperbilirubinaemia, itching, dark urine, pale stools, and raised alkaline phosphatase; obstruction and intrahepatic causes must be distinguished.

Cholestasis Of Pregnancy

A liver disorder of pregnancy in which impaired bile flow causes itching and elevated bile acids.

Alternate Names:

Obstetric Cholestasis

Cholesteatoma

A keratin-filled sac of abnormal squamous epithelium in the middle ear or mastoid that can erode bone and cause chronic discharge, hearing loss, or intracranial complications.

Cholesterol

A lipid required for cell membranes and synthesis of steroid hormones and bile acids. Excess atherogenic cholesterol can contribute to arterial plaque.

Alternate Names:

Serum cholesterol; blood cholesterol.

Blood Cholesterol

Cholesterol carried in the blood. The body needs it to build cell membranes and make hormones and bile acids. Too much LDL cholesterol can form fatty buildup in the arteries and increase the risk of heart disease and stroke. Blood cholesterol is usually checked as part of a lipid profile.

Cholesterol And Lifestyle

A medicine or chemical compound identified by cholesterol and lifestyle. Its uses, effects, and risks depend on the specific substance and clinical context.

Cholesterol And Lipids

Fatty substances in the blood, including LDL cholesterol, HDL cholesterol, and triglycerides, that play critical roles in cellular function and energy metabolism. Abnormal lipid levels, particularly high LDL and triglycerides with low HDL, promote atherosclerosis and increase the risk of heart attack and stroke.

Cholesterol Crystal Embolization

Atheroembolic disease caused by cholesterol crystal fragments dislodging from proximal atherosclerotic plaques into distal small arteries, often after vascular procedures. Presents with livedo reticularis, blue-toe syndrome, renal failure, and eosinophilia. Diagnosis by skin, kidney, or muscle biopsy.

Cholesterol Crystals

Needle-shaped, cleft-like spaces seen in histological sections representing dissolved cholesterol esters, commonly found in atherosclerotic plaques, atheroembolic disease, and cholesterol-rich effusions. In atheroembolic disease, cholesterol crystals embolize from ruptured plaques to distal organs causing tissue ischemia.

Cholesterol Emboli

Cholesterol crystals released from an atherosclerotic plaque that lodge in small arteries and cause ischemia or inflammation in downstream tissues.

Cholesterol Embolism

Blockage of small arteries by cholesterol crystals, often after vascular instrumentation or plaque disruption.

Cholesterol Embolization

Release and downstream lodging of cholesterol crystals from an atherosclerotic arterial plaque.

Cholesterol Lowering (Cholesterol Management)

Alternate index label for Cholesterol Management.

Cholesterol Management

Cholesterol management combines cardiovascular-risk assessment with dietary pattern, physical activity, tobacco avoidance, weight care, and medicines when indicated. Statins and other agents lower atherogenic lipoproteins, with intensity chosen according to prior cardiovascular disease and overall risk.

Alternate Names:

Cholesterol Lowering (Cholesterol Management)

Cholesterol Synthesis

Occurs in all nucleated cells (primarily liver and intestine, approximately 1 g/day production), using acetyl-CoA as the precursor through approximately 30 enzymatic steps.

Cholesterol Testing And Results

Laboratory assessment of blood lipids, usually including total cholesterol, LDL cholesterol, HDL cholesterol, and triglycerides, used to estimate cardiovascular risk and guide prevention or treatment.

Cholesterolemia

The presence and concentration of cholesterol in the blood. Abnormal elevation is a risk factor for atherosclerotic cardiovascular disease.

Cholesterolosis

Deposition of cholesterol esters in the gallbladder mucosa, producing yellow speckling or a "strawberry gallbladder." It is often incidental but may coexist with gallstones or chronic gallbladder inflammation.

Cholestyramine

Cholestyramine is a bile-acid sequestrant used to lower LDL cholesterol and sometimes to treat bile-acid diarrhea or itching from cholestasis.

Choline

Choline is an essential nutrient used to make cell membranes and acetylcholine and to support liver and nervous-system function.

Cholinergic

Cholinergic means related to acetylcholine or receptors and pathways activated by it, including muscarinic and nicotinic signaling.

Cholinergic Crisis

Excess acetylcholine from organophosphate or carbamate poisoning. SLUDGE syndrome: salivation, lacrimation, urination, defecation, GI upset, emesis. Miosis, bradycardia, bronchospasm, muscle fasciculations. Treatment: atropine, pralidoxime.

Cholinergic Neuron

A nerve cell that releases acetylcholine as its principal neurotransmitter.

Alternate Names:

Acetylcholine-releasing neuron; cholinergic nerve cell.

Cholinergic Toxidrome

A poisoning pattern caused by excessive acetylcholine activity, often producing salivation, tearing, urination, diarrhea, vomiting, bronchial secretions, slow heart rate, muscle fasciculations, weakness, or respiratory failure.

Cholinesterase

Cholinesterase enzymes break down acetylcholine; inhibition increases cholinergic activity and is used therapeutically but can also cause poisoning.

Cholinesterase - Blood

A blood test measuring acetylcholinesterase or butyrylcholinesterase activity, useful in selected pesticide exposures, inherited enzyme variants, and some liver-function assessments.

Chondritis

Inflammation of cartilage, such as the cartilage of the ear, nose, ribs, or larynx. It may result from infection, trauma, or immune-mediated disease.

Chondroblastic Osteosarcoma

A variant of osteosarcoma in which the malignant cells produce a cartilaginous matrix. It typically af-

fects the long bones of adolescents and young adults, with a predilection for the metaphyseal regions.

Chondroblastoma

A chondroblastoma is an uncommon usually benign cartilage-forming bone tumor, often arising near the end of a long bone in adolescents or young adults.

Chondrocalcinosis

Calcification of cartilage visible on X-ray. Associated with CPPD disease. Found in knees, wrists, pubic symphysis. May be incidental or symptomatic.

Chondrocyte

A mature cartilage cell that produces and maintains the cartilage extracellular matrix.

Alternate Names:

Cartilage cell.

Chondrodysplasia

A disorder of cartilage and bone development that causes abnormal skeletal growth and, in some forms, disproportionate short stature.

Chondroitin Sulfate

A sulfated glycosaminoglycan found in cartilage and other connective tissues; it is also marketed in supplements for osteoarthritis, with variable evidence of benefit.

Chondroma

Benign cartilage-forming tumor composed of mature hyaline cartilage, most often intramedullary (enchondroma) or subperiosteal (juxtacortical / periosteal chondroma).

Chondromalacia

Softening and degeneration of cartilage, especially articular cartilage. The term is often used for changes affecting the patella and causing anterior knee pain.

Chondromyxoid Fibroma

A rare benign cartilage-forming bone tumor, usually arising in the metaphysis of a long bone and present-

ing with localized pain or an incidental radiographic lesion.

Chondrosarcoma

The second most common primary malignant bone tumor (after osteosarcoma) and the most common primary malignant bone tumor in adults (peak age 40-70 years).

Chondrosarcoma Of The Breast

An exceptionally rare malignant mesenchymal breast tumor producing cartilage. It is distinguished from metaplastic carcinoma and other sarcomas by histology and is managed with sarcoma-oriented complete excision.

Chopart'S Joint

The transverse tarsal joint, consisting of the talonavicular and calcaneocuboid joints, between the hindfoot and the midfoot.

Chorangioma

A benign vascular tumor of the placenta, usually small and incidental but occasionally associated with fetal anemia, hydrops, growth restriction, or other complications when large.

Chordae Tendineae

Thin tendinous cords connecting the papillary muscles to the free edges of the atrioventricular valve leaflets (mitral and tricuspid). They tether the leaflets and, with papillary muscle contraction during ventricular systole, prevent valve prolapse and regurgitation.

Chordee

Chordee is abnormal downward or other curvature of the penis, commonly associated with hypospadias or scar tissue and sometimes requiring surgical correction.

Chordoma

Slow-growing, locally aggressive malignant bone tumor originating from embryonic remnants of the notochord along the axial skeleton. Three anatomic

locations: (1) sacrococcygeal (50% of cases, most common), (2) sphenoccipital/clival (35%, base of skull), (3) vertebral (cervical thoracolumbar, 15%).

Chorea

Involuntary, irregular, brief, non-repetitive jerky movements flowing randomly from one body part to another ('dance-like'), due to basal ganglia (striatal) dysfunction.

Chorea, Huntington'S

Alternate index label; see *Huntington's disease*.

Choreoathetosis

Choreoathetosis combines irregular, dance-like chorea with slow twisting athetotic movements and may result from basal-ganglia injury or genetic disease.

Chorioamnionitis

Infection of the chorion and amnion, typically due to ascending bacterial infection from the genital tract. Risk factors include prolonged rupture of membranes, multiple vaginal exams, and preterm labor. Presents with maternal fever, uterine tenderness, and fetal tachycardia. Diagnosis is clinical; amniocentesis for confirmation.

Chorioamnionitis (Intraamniotic Infection)

Infection or inflammation of the amniotic fluid, membranes, placenta, or decidua, usually due to ascending polymicrobial infection. Maternal fever, uterine tenderness, fetal tachycardia, and maternal leukocytosis may occur; treatment requires broad-spectrum antibiotics and delivery planning.

Alternate Names:

Intraamniotic Infection

Choriocarcinoma

Choriocarcinoma is an aggressive trophoblastic cancer producing human chorionic gonadotropin, usually arising after pregnancy or a molar pregnancy.

Chorion

The outermost fetal membrane, derived from the trophoblast. The chorion frondosum (villous chorion) develops into the fetal portion of the placenta. The chorion laeve (smooth chorion) is the non-villous portion. Chorionic villi contain fetal blood vessels and are bathed in maternal blood.

Chorion Villus Sampling

Chorion villus sampling removes placental tissue for genetic or chromosomal testing, usually early in pregnancy; it carries a small procedure-related miscarriage risk.

Chorionic Gonadotrophin

Chorionic gonadotrophin, especially hCG, is a placental hormone that maintains early pregnancy and is measured in pregnancy tests and selected tumor evaluations.

Chorionic Villus Sampling

Prenatal diagnostic test at 10-13 weeks gestation, earlier than amniocentesis. Transabdominal or transcervical biopsy of chorionic villi (placental tissue). Indications: advanced maternal age, abnormal first-trimester screen, carrier screening, or family history of genetic disorders. Analyzed for karyotype, FISH, and microarray.

Chorioretinitis

Inflammation involving the choroid and retina, often caused by infection, autoimmune disease, or systemic inflammatory illness. It can produce floaters and impaired vision.

Chorioretinitis (Uveitis)

Alternate index label for Uveitis.

Chorioretinitis Toxoplasma (Toxoplasmosis)

Alternate index label for Toxoplasmosis.

Choroid

The vascular layer between retina and sclera that supplies the outer retina and absorbs stray light.

Choroid Plexus Carcinoma

A malignant tumor arising from the choroid plexus, the tissue that produces cerebrospinal fluid.

Choroid Plexus Cyst

A fluid-filled cyst within the choroid plexus of a fetal cerebral ventricle. An isolated cyst with otherwise reassuring prenatal assessment is usually benign, but its significance depends on other ultrasound findings and screening results.

Choroid Plexus Tumor

A papillary neoplasm of the choroid plexus, occurring most often in children, and frequently presenting with hydrocephalus from excessive cerebrospinal fluid production.

Choroidal Dystrophies

Inherited disorders causing progressive degeneration of the choroid, retinal pigment epithelium, and retina, leading to night blindness, visual-field loss, and eventual vision impairment.

Choroidal Neovascularization

The pathological growth of new, fragile blood vessels from the choroid through Bruch membrane into the subretinal or sub-retinal pigment epithelium space, and it is the hallmark of wet age-related macular degeneration and the primary cause of severe central vision loss in this condition.

Choroideremia

Choroideremia is an X-linked inherited retinal degeneration causing progressive night blindness and loss of peripheral then central vision, mainly in males.

Choroiditis

Choroiditis is inflammation of the choroid, the vascular layer behind the retina, often causing blurred vision, floaters, or visual-field disturbance.

Christmas Disease

Hemophilia B, an inherited bleeding disorder caused by deficiency or dysfunction of coagulation factor

IX.

Chromaffin

Chromaffin describes cells that stain with chromium salts because they contain catecholamine-rich granules, especially adrenal medullary cells and related neuroendocrine cells.

Chromaffinoma

A tumor of chromaffin cells, usually a pheochromocytoma of the adrenal medulla or a related extra-adrenal paraganglioma. It may secrete catecholamines and cause episodic hypertension.

Chromate

Chromate is a hexavalent chromium compound that can cause irritant or allergic dermatitis, nasal injury, respiratory disease, and cancer after occupational exposure.

Chromatic

Chromatic means relating to color or wavelengths of light; chromatic vision depends on cone photoreceptors and neural processing.

Chromatids

Chromatids are the two copies of a replicated chromosome joined at the centromere before separating during cell division.

Chromatin

The complex of DNA, histone proteins, and associated molecules that packages the genome in the nucleus. Its organization and chemical modification regulate DNA accessibility, replication, repair, and transcription.

Chromatography

A laboratory separation method in which substances partition between a stationary phase and a moving phase, allowing identification or measurement of components in a mixture.

Chromatopsia

A visual disturbance in which objects appear abnor-

mally colored. It may result from retinal disease, toxic exposure, medication effects, or other disorders of the visual system.

Chromhidrosis

A rare condition in which sweat is abnormally colored, often yellow, green, blue, or black, because of pigment in the sweat glands or on the skin surface.

Chromium

Chromium is a metallic element; trivalent chromium is a trace nutrient, while hexavalent compounds can be toxic, corrosive, mutagenic, and carcinogenic.

Chromium - Blood Test

A blood test measuring chromium exposure or body burden, generally used when occupational or medical exposure to chromium is suspected; results must be interpreted with the exposure history and clinical findings.

Chromium In Diet

Reference information on chromium as a trace element involved in carbohydrate and fat metabolism. Chromium deficiency is rare; most people obtain adequate chromium from normal dietary intake, and routine chromium supplementation is generally not recommended.

Chromoblastomycosis

A chronic fungal infection of skin and subcutaneous tissue that produces slowly enlarging warty or scaly lesions, usually after traumatic implantation of the fungus.

Chromopertubation

A diagnostic and operative laparoscopic procedure in which a dilute colored dye (such as methylene blue or indigo carmine) is introduced via a transcervical cannula or intrauterine catheter to evaluate fallopian tube patency under direct visual inspection. Immediate egress and spill of dye from the fimbriated ends confirms tubal patency, whereas lack of flow or loculated pooling identifies proximal or distal tubal occlusion, hydrosalpinx, or peritubal adhesions.

Chromosomal Abnormality

Change in chromosome number or structure. Numerical: aneuploidy (abnormal number, e.g., trisomy 21), polyploidy (extra sets). Structural: deletion, duplication, inversion, translocation.

Chromosomal Microarray

A genetic test that detects gains and losses of chromosome material, including copy-number variants and some regions of homozygosity; it is commonly used for developmental delay, intellectual disability, congenital anomalies, or autism-spectrum presentations.

Chromosome

A chromosome is a DNA-protein structure carrying genetic information; humans normally have 46 chromosomes in most body cells.

Chromosome Complement

The complete set of chromosomes in a cell, including their number and sex-chromosome composition, usually described by a karyotype.

Chromosome Duplication

A structural chromosome abnormality in which a segment of genetic material is copied one or more additional times, potentially altering gene dosage and development.

Chronic

Persisting or recurring over a long period, in contrast to acute; the appropriate duration depends on the disease or clinical context.

Chronic Adrenal Insufficiency

Alternate index label; see *Addison's disease*.

Chronic Allograft Nephropathy

Progressive transplant kidney function decline over months to years. Interstitial fibrosis and tubular atrophy on histology. Can be immunologic or non-immunologic. Optimize immunosuppression and manage risk factors including hypertension and recurrent disease.

Chronic Atrophic Gastritis

Long-term inflammation of the stomach lining that causes loss of gastric glands and may impair vitamin B12 absorption.

Chronic Autoimmune Hashimoto Thyroiditis

An autoimmune inflammatory disease of the thyroid that progressively destroys thyroid tissue and commonly causes hypothyroidism.

Chronic Autoimmune Thyroiditis

Hashimoto thyroiditis, an autoimmune destruction of the thyroid that commonly causes hypothyroidism and may be associated with anti-thyroid antibodies.

Chronic Bacterial Prostatitis

A chronic bacterial infection of the prostate gland classified as NIH Category II prostatitis, characterized by recurrent episodes of bacteriuria and urinary tract infection caused by persistence of the same uropathogen (most commonly *Escherichia coli*, *Klebsiella*, or *Proteus*) in prostatic tissue and fluid between clinical flares. Patients present with dysuria, urinary frequency and urgency, pelvic or perineal discomfort, and painful ejaculation. Diagnosis requires the Meares-Stamey four-glass test or two-glass pre- and post-prostatic massage urine culture demonstrating bacterial growth in expressed prostatic secretions or post-massage urine (VB3); treatment necessitates prolonged antimicrobial therapy (typically 4 to 6 weeks of a fluoroquinolone or trimethoprim-sulfamethoxazole) capable of penetrating the prostatic lipid-epithelial barrier.

Alternate Names:

NIH Category II Prostatitis; Recurrent Bacterial Prostatitis

Chronic Bronchitis

Defined clinically as a productive cough for at least three months in each of two consecutive years, after excluding other causes. It is characterized by hypertrophy of mucus-secreting glands in the bronchi (Reid index > 0.5), goblet cell hyperplasia, and chronic airway inflammation.

Alternate Names:

Bronchitis Chronic (Chronic Bronchitis)

Chronic Caries

Tooth decay that progresses slowly and may produce a firm, darkened lesion.

Chronic Cholecystitis

Repeated or persistent inflammation of the gallbladder, usually related to gallstones and impaired emptying. It may cause episodic right-upper-abdominal pain, nausea, or food intolerance and can lead to scarring or a contracted gallbladder.

Chronic Compartment Syndrome

Alternate index label; see *Chronic exertional compartment syndrome*.

Chronic Cough

Cough lasting > 8 weeks. Top 3 causes in non-smokers with normal CXR: upper airway cough syndrome, asthma, GERD. ACE inhibitor use is another common cause.

Alternate Names:

Cough Chronic (Chronic Cough)

Chronic Daily Headaches

Headaches occurring on at least 15 days each month for more than three months.

Chronic Disease

A disease or condition that persists for a prolonged period, often months or years, and may require continuing monitoring or management.

Chronic Endometritis

Persistent low-grade inflammation of the endometrium, often associated with infection, retained products, intrauterine devices, or reproductive failure; plasma cells support the diagnosis histologically. Risk factors include prolonged labor, multiple vaginal examinations, premature rupture of membranes, and cesarean section. Presents with fever, uterine tenderness, foul-smelling lochia, and leukocytosis.

Chronic Eosinophilic Leukaemia

A clonal myeloid neoplasm characterized by persistent eosinophilia, increased or dysplastic eosinophils, and evidence of an underlying clonal process or organ injury. Symptoms may include fatigue, fever, weight loss, rash, respiratory symptoms, splenomegaly, or cardiac and neurological complications.

Chronic Eosinophilic Pneumonia

An idiopathic inflammatory lung disease characterized by eosinophilic infiltration of the pulmonary parenchyma, presenting with fever, cough, dyspnea, and peripheral airspace opacities on imaging.

Chronic Exertional Compartment Syndrome

Exercise-related increased pressure within a muscle compartment that causes predictable pain, tightness, or neurologic symptoms during activity.

Alternate Names:

Chronic Compartment Syndrome

Chronic Fatigue Syndrome

A complex, debilitating disorder characterized by profound fatigue lasting >6 months that is not relieved by rest and is worsened by physical or mental exertion (post-exertional malaise). Associated symptoms: unrefreshing sleep, cognitive impairment (brain fog), orthostatic intolerance, joint pain, headaches, and sore throat.

Alternate Names:

CFS (Chronic Fatigue Syndrome) SEID (Chronic Fatigue Syndrome)

Chronic Fatigue Syndrome

Chronic fatigue syndrome, also called myalgic encephalomyelitis, involves substantial persistent fatigue with post-exertional worsening, unrefreshing sleep, and cognitive or orthostatic symptoms.

Chronic Gastritis

Chronic, progressive inflammation of the gastric mucosa leading over time to mucosal atrophy, loss of specialized parietal and chief cells, and intestinal metaplasia. Major causes include persistent *Helicobacter pylori* infection.

cobacter pylori infection and autoimmune gastritis targeting parietal cells and intrinsic factor.

Chronic Glomerulonephritis

Long-standing inflammation and scarring of the kidney glomeruli that can progressively reduce filtration and lead to chronic kidney disease or kidney failure.

Chronic Granulomatous Disease

A primary immunodeficiency caused by defects in the NADPH oxidase complex in phagocytes (neutrophils, monocytes, macrophages), impairing the respiratory burst and killing of catalase-positive organisms.

Chronic Hives

Recurrent itchy welts that occur on most days for more than six weeks.

Chronic Hypertension In Pregnancy

Hypertension that predates pregnancy or is diagnosed early in pregnancy. It increases the risk of preeclampsia, fetal growth problems, preterm birth, and placental complications and requires ongoing maternal and fetal monitoring.

Chronic Inflammation

A prolonged inflammatory response characterized by simultaneous tissue destruction and attempts at repair, lasting weeks to years. Unlike acute inflammation, it is predominantly mononuclear, involving macrophages, lymphocytes, and plasma cells rather than neutrophils.

Chronic Inflammatory Demyelinating Polyneuropathy

An acquired, immune-mediated peripheral neuropathy with a relapsing-remitting or progressive course. Presents with symmetric proximal and distal weakness, sensory loss, areflexia, and elevated CSF protein. Distinguishing from Guillain-Barre: progressive course >8 weeks (vs. rapid onset in GBS).

Chronic Inflammatory Response

Syndrome

A proposed multisystem illness involving persistent inflammatory symptoms after an exposure such as certain water-damaged building environments. Reported symptoms are nonspecific and may include fatigue, headache, cognitive difficulty, and respiratory complaints. Symptoms require a careful medical evaluation for established infectious, allergic, toxic, autoimmune, and other causes.

Chronic Inflammatory Response Syndrome

Alternate index label for CIRS.

Chronic Intestinal Pseudo-Obstruction

Chronic condition of recurrent episodes of intestinal obstruction without mechanical blockage due to neuromuscular dysfunction of the gastrointestinal tract. May involve the small bowel, colon, or both. Causes include systemic sclerosis, diabetes, Parkinson disease, amyloidosis, and paraneoplastic syndromes.

Chronic Kidney Disease

Chronic kidney disease is the progressive loss of kidney function over months to years, typically from diabetes, hypertension, or glomerular diseases. It is staged by estimated glomerular filtration rate and albuminuria, with end-stage renal disease requiring dialysis or transplantation.

Alternate Names:

Chronic Kidney Failure Chronic Renal Failure Kidney Disease, Chronic Kidney Failure, Chronic

Chronic Kidney Disease Staging

Classification of kidney disease by cause, eGFR category, and albuminuria category. G1 through G5 represent eGFR from normal or high to kidney failure; staging is applied when abnormalities persist for at least 3 months and helps estimate progression and complications.

Chronic Kidney Failure

Alternate index label; see *Chronic kidney disease*.

Chronic Lead Poisoning

Health effects caused by prolonged or repeated lead exposure. Possible findings include abdominal pain or constipation, fatigue, anemia, cognitive or behavioral changes, peripheral neuropathy, hypertension, and kidney injury; children may develop impaired learning, attention, growth, or development. Management centers on identifying and stopping the exposure, evaluating affected individuals, and considering specialist-directed chelation only when the blood lead level, symptoms, and clinical context warrant it.

Chronic Leukemia

A leukemia characterized by an insidious onset, clonal proliferation of relatively mature blood cells, and a more indolent clinical course.

Chronic Limb-Threatening Ischemia

The most severe clinical form of peripheral arterial disease, characterized by chronic ischemic rest pain, nonhealing ulceration, or gangrene attributable to arterial insufficiency. It carries high risks of limb loss and cardiovascular mortality and requires vascular evaluation for revascularization and wound management.

Chronic Liver Disease

Persistent hepatic injury and structural change lasting at least 6 months, caused by viral, metabolic, alcohol-related, autoimmune, cholestatic, vascular, or drug-related disease. Progressive fibrosis can lead to cirrhosis, portal hypertension, liver failure, and hepatocellular carcinoma.

Chronic Lymphocytic Leukemia

The most common leukemia in Western countries, characterized by the clonal proliferation of mature-appearing but functionally incompetent B lymphocytes that accumulate in blood, bone marrow, and lymphoid tissues.

Alternate Names:

Cancer, Chronic Lymphocytic Leukemia CLL Leukemia, Chronic Lymphocytic

Chronic Lymphocytic Leukemia

A usually indolent blood cancer characterized by clonal accumulation of mature-appearing but abnormal B lymphocytes in blood, marrow, lymph nodes, or spleen. It may cause lymphocytosis, enlarged nodes, infection risk, anemia, or thrombocytopenia.

Chronic Lymphocytic Thyroiditis

Alternate index label; see *Hashimoto's disease*.

Chronic Mesenteric Ischemia

Recurrent abdominal pain occurring after eating resulting from insufficient blood flow to meet the metabolic demands of the gastrointestinal tract. Most commonly caused by atherosclerotic stenosis of at least two of the three major mesenteric arteries.

Chronic Migraine

A migraine disorder with headache on at least 15 days per month for more than three months, with migraine features on at least eight days per month. Symptoms may include throbbing pain, nausea, vomiting, and light or sound sensitivity; frequent or disabling headaches require clinical evaluation.

Chronic Motor Or Vocal Tic Disorder

A neurodevelopmental disorder with persistent motor or vocal tics lasting more than one year; symptoms often fluctuate and may be treated with education, behavioral therapy, or medicines when impairment is significant.

Chronic Mucocutaneous Candidiasis

Persistent/recurrent *Candida* infections of skin, nails, mucosa (oral, esophageal, vaginal) without systemic dissemination. Autosomal dominant (STAT1 gain-of-function) or recessive (IL17F, IL17RA, ACT1, RORC). Associated with autoimmunity (hypothyroidism, AIHA, ITP, alopecia), endocrinopathies, Staph infections.

Chronic Myelogenous Leukemia

A myeloproliferative neoplasm associated with the BCR-ABL1 fusion gene, usually producing marked leukocytosis and splenomegaly.

Alternate Names:

Cancer, Chronic Myelogenous Leukemia Leukemia, Chronic Myelogenous

Chronic Myelogenous Leukemia

A myeloproliferative blood cancer driven in most cases by the BCR::ABL1 fusion gene from the Philadelphia chromosome. It causes excess myeloid cells and may progress from a chronic phase to accelerated or blast phase; tyrosine-kinase inhibitors are standard targeted treatment.

Chronic Myeloid Leukemia

A myeloproliferative neoplasm characterized by the Philadelphia chromosome [t(9;22)(q34;q11.2)], which creates the BCR-ABL1 fusion gene encoding a constitutively active tyrosine kinase.

Chronic Myelomonocytic Leukemia

A rare myelodysplastic/myeloproliferative neoplasm characterized by persistent monocytosis (absolute monocyte count greater than 1,000 per microliter and greater than 10 percent of white blood cells) in the peripheral blood and bone marrow, with dysplastic features and variable blast count.

Chronic Neutrophilic Leukaemia

A rare clonal myeloproliferative neoplasm characterized by sustained mature neutrophilic leukocytosis without a primary infectious or inflammatory cause. It may cause fatigue, fever, weight loss, splenomegaly, and progressive constitutional symptoms.

Chronic Obstructive Lung Disease

An older abbreviation for chronic obstructive lung disease, now usually called chronic obstructive pulmonary disease, characterized by persistent airflow limitation.

Chronic Obstructive Pulmonary Disease

COPD is a preventable lung disease characterized by persistent respiratory symptoms and airflow limitation due to airway and/or alveolar abnormalities, usually caused by significant exposure to noxious particles or gases (primarily tobacco smoke). In-

cludes emphysema and chronic bronchitis.

Alternate Names:

COPD (Chronic Obstructive Pulmonary Disease)

Chronic Obstructive Pulmonary Disease

Chronic obstructive pulmonary disease is persistent airflow limitation from airway and alveolar injury, commonly causing exertional breathlessness, cough, sputum, and exacerbations.

Chronic Pain

Pain that persists or recurs for longer than three months. It may have an identifiable ongoing cause or persist after healing, and is influenced by complex interactions among biological, psychological, and social factors.

Chronic Pain Management

Chronic pain management extends beyond the peri-operative period. Opioid therapy for chronic pain requires careful patient selection, informed consent, and regular reassessment.

Chronic Pain Syndrome

Persistent pain accompanied by significant physical, emotional, or social effects that interfere with daily life.

Chronic Pancreatitis

Long-lasting inflammation of the pancreas that causes permanent damage and may reduce the production of digestive enzymes and hormones such as insulin. Common causes include heavy alcohol use, smoking, genetic disorders, autoimmune disease, and blocked pancreatic ducts; sometimes no cause is found.

Chronic Paroxysmal Hemicrania

A primary headache disorder causing frequent, short-lasting, severe one-sided headaches with autonomic symptoms and a characteristic response to indomethacin.

Alternate Names:

CPH; chronic paroxysmal hemicrania syndrome.

Chronic Pelvic Pain

Persistent or recurrent pain in the lower abdomen or pelvis lasting at least six months.

Alternate Names:

Pelvic Pain, Chronic

Chronic Pelvic Pain Syndrome

A multifactorial chronic pain disorder classified as NIH Category III prostatitis, accounting for approximately 90–95% of all clinical prostatitis presentations. Defined as persistent or recurrent pelvic, perineal, scrotal, suprapubic, or lower back pain lasting at least 3 months within the preceding 6 months, commonly accompanied by voiding dysfunction (frequency, urgency, hesitance), pain during or after ejaculation, and erectile difficulties, in the complete absence of documented bacterial infection. Subclassified into Category IIIa (inflammatory, with leukocytes in expressed prostatic secretions) and Category IIIb (non-inflammatory). Pathophysiology involves neurogenic inflammation, pelvic floor muscular hypertonicity, central pain sensitization, and psychosocial distress, managed through multimodal UPOINT-guided therapy (alpha-blockers, anti-inflammatories, pelvic floor physical therapy, neuromodulators, and cognitive behavioral therapy).

Alternate Names:

CPPS; NIH Category III Prostatitis; Chronic Non-bacterial Prostatitis

Chronic Progressive External Ophthalmoplegia

A classic adult-onset mitochondrial myopathy caused by single large-scale deletions of mitochondrial DNA (mtDNA) or by nuclear gene mutations that destabilize mtDNA replication and maintenance, including *POLG*, *TWINK*, *SLC25A4*, and *RRM2B*. Typically manifests between the second and fourth decades of life with insidious, slowly progressive, symmetrical, bilateral ptosis and restriction of all extraocular eye movements (external ophthalmoplegia) without diplopia (because movement impairment is symmetrical). Muscle biopsy reveals ragged red fibers and cytochrome c oxidase-negative myofibers; can present as an isolated ocular

myopathy or as part of multisystem syndromes such as Kearns-Sayre syndrome.

Alternate Names:

CPEO; Progressive External Ophthalmoplegia (PEO)

Chronic Recurrent Multifocal Osteomyelitis

A rare autoinflammatory bone disorder, often beginning in children or adolescents, causing recurrent sterile inflammation and pain at multiple bone sites; it is also called CRMO.

Chronic Pyelonephritis

Chronic tubulointerstitial renal inflammation and scarring resulting from recurrent or persistent kidney infections, often in the setting of structural urinary tract obstruction or chronic vesicoureteral reflux (reflux nephropathy). Leads to progressive renal parenchymal thinning, calyceal blunting, and chronic kidney disease.

Chronic Renal Failure

Alternate index label; see *Chronic kidney disease*.

Chronic Rhinitis

Persistent inflammation or irritation of the nasal lining causing congestion, runny nose, sneezing, itching, or postnasal drainage. Allergic, nonallergic, medication-related, and structural causes are possible. Management depends on the cause and may include trigger avoidance, saline irrigation, and clinician-directed nasal treatment.

Alternate Names:

Post-Nasal Drip (Chronic Rhinitis)

Chronic Rhinosinusitis

Persistent inflammation of the nose and paranasal sinuses lasting at least 12 weeks, usually with nasal obstruction or discharge and sometimes facial pressure or reduced smell. It may occur with or without nasal polyps.

Chronic Sinusitis

Persistent inflammation of the paranasal sinuses

for at least 12 weeks, causing nasal obstruction, discharge, facial pressure, and reduced smell.

Alternate Names:

Sinusitis, Chronic

Chronic Subdural Hematoma

A collection of blood and breakdown products between the dura and arachnoid that develops over weeks, often after minor trauma in older adults, causing headache, confusion, weakness, or gait change.

Chronic Suppurative Otitis Media

Persistent inflammation and infection of the middle ear with recurrent or continuous ear discharge, usually through a perforated tympanic membrane. It can cause conductive hearing loss and may lead to cholesteatoma or other complications.

Alternate Names:

CSOM; chronic otitis media with discharge; chronic suppurative middle-ear infection.

Chronic Tension-Type Headache

A recurring headache occurring on at least 15 days per month for more than three months, usually causing bilateral pressing or tightening pain rather than throbbing. It may be associated with scalp or neck tenderness but typically lacks prominent nausea; a new or changing pattern requires clinical assessment.

Chronic Thromboembolic Pulmonary Hypertension

Pulmonary hypertension caused by organized, persistent thromboembolic obstruction and secondary pulmonary-vessel remodeling after pulmonary embolism. It is potentially curable in selected patients by pulmonary endarterectomy or balloon pulmonary angioplasty.

Chronic Thyroiditis (Hashimoto Disease)

An autoimmune disease in which immune attack gradually damages the thyroid, often causing hypothyroidism, fatigue, cold intolerance, constipation, dry skin, or goiter.

Chronic Toxicity

Adverse effects from repeated or prolonged exposure to low doses. Cumulative damage may be irreversible. Examples: heavy metals (lead, mercury), asbestos, alcohol, solvent exposure. Monitoring: biomarkers, organ function tests.

Chronic Traumatic Encephalopathy

A progressive brain disorder associated with repeated head impacts and characterized by cognitive, mood, or behavioral changes.

Chronic Venous Disease

A spectrum of venous outflow disorders caused by reflux, obstruction, or calf-muscle-pump dysfunction. Findings range from edema and varicose veins to skin changes, lipodermatosclerosis, and venous ulceration.

Chronic Venous Insufficiency

Impaired venous return from the lower extremities due to venous valve incompetence or obstruction. Leads to venous hypertension, edema, skin changes (lipodermatosclerosis, hyperpigmentation), and venous stasis ulcers (medial malleolus). Risk factors: varicose veins, DVT, obesity, prolonged standing.

Chronic Venous Stasis

Persistent pooling of blood in the lower limbs caused by impaired venous return. It can produce edema, skin discoloration, dermatitis, and venous ulcers.

Chronic Vulvar Pain

Alternate index label; see *Vulvodynia*.

Chronicity

The duration or long-standing nature of a disease, symptom, or process.

Chronobiology

Chronobiology studies biological timing and rhythms, including circadian sleep-wake cycles, seasonal rhythms, and their effects on health.

Chronotropic

Chronotropic describes an influence on heart rate; a positive chronotropic effect increases rate, while a negative effect decreases it.

Chrysarobin

Chrysarobin is a plant-derived anthracene compound formerly used topically for psoriasis and other skin disorders; it can irritate and stain skin.

Churg Strauss Syndrome (Churg-Strauss Syndrome)

Alternate index label for Churg-Strauss Syndrome.

Churg-Strauss Syndrome

Eosinophilic granulomatosis with polyangiitis, a necrotizing inflammation of small and medium blood vessels associated with asthma, eosinophilia, and possible injury to the lungs, nerves, skin, heart, or kidneys.

Alternate Names:

Churg Strauss Syndrome (Churg-Strauss Syndrome)

Chvostek Sign

A clinical sign of latent tetany caused by hypocalcemia (ionized $\text{Ca}^{2+} < 4.4 \text{ mg/dL}$). Elicited by tapping the facial nerve over the parotid gland just anterior to the ear canal. Positive response: involuntary twitching or contraction of ipsilateral facial muscles (lip twitching or facial spasm).

Chvostek's Sign

Chvostek's sign is twitching of facial muscles after tapping near the facial nerve, sometimes associated with hypocalcemia but neither sensitive nor specific.

Chylangioma

A benign malformation or tumor-like lesion of lymphatic vessels containing chyle or lymph. It may occur in the neck, mediastinum, or other tissues.

Chyle

Milky lymph from intestinal lymphatic vessels that is rich in absorbed dietary fat and transported through the thoracic duct.

Chylomicron

The largest and least-dense lipoprotein, made in the intestine after a fatty meal. It carries dietary triglycerides and cholesterol through the lymph and blood; its remnants are cleared by the liver.

Chylomicronemia Syndrome

Severe elevation of triglyceride-rich chylomicrons in blood, usually from genetic or acquired impairment of triglyceride clearance; it can cause abdominal pain, eruptive xanthomas, and recurrent acute pancreatitis.

Chylothorax

Pleural effusion with chyle from thoracic duct disruption. Triglycerides $> 110 \text{ mg/dL}$. Treatment includes dietary modification, octreotide, and surgical ligation if refractory.

Chyluria

Passage of lymphatic fluid into the urine, giving it a milky appearance. It usually results from an abnormal communication between lymphatic vessels and the urinary tract.

Chyme

A semifluid mixture of partially digested food and gastric or intestinal secretions that passes from the stomach into the small intestine.

Alternate Names:

Digestive chyme; gastric chyme.

Chymotrypsin

Chymotrypsin is a pancreatic digestive enzyme that cleaves proteins in the small intestine; abnormal pancreatic release can contribute to tissue injury.

Ci (Curie)

A unit of radioactivity equal to 3.7 billion nuclear disintegrations per second; the SI unit is the becquerel.

CIC

Commonly, clean intermittent catheterization: periodic insertion of a catheter to empty the bladder,

followed by removal; other expansions are possible by context.

Cicatricial Alopecia

Hair loss caused by destruction and scarring of hair follicles, usually leading to permanent loss in affected areas.

Alternate Names:

Scarring alopecia; cicatricial hair loss.

Cicatrization

Cicatrization is healing by formation of a scar after tissue injury, with replacement of damaged tissue by fibrous connective tissue.

Ciclopia

A rare severe congenital malformation in which the eyes are fused or a single median eye develops, usually as part of holoprosencephaly.

Cidofovir

Cidofovir is an antiviral nucleotide analogue used for selected serious DNA-virus infections; kidney toxicity requires careful dosing and monitoring.

CIDP

Chronic inflammatory demyelinating polyneuropathy is a chronic, immune-mediated, peripheral neuropathy characterized by progressive or relapsing symmetrical weakness and sensory loss in all four limbs, with areflexia or hyporeflexia, lasting for more than eight weeks.

Cigarette

A small cylinder of tobacco or other material wrapped in paper for smoking; smoke exposure delivers nicotine and many toxic and carcinogenic substances.

Ciguatera

Food poisoning caused by eating reef fish containing ciguatoxins. It may cause gastrointestinal illness followed by neurologic symptoms such as paresthesias and temperature-sensation disturbance.

Ciguatera Poisoning

Ciguatera poisoning follows eating reef fish containing ciguatoxins. Gastrointestinal symptoms may be followed by neurologic sensations such as temperature reversal, tingling, itching, weakness, or abnormal heart rate; treatment is supportive and prevention depends on avoiding high-risk fish.

Alternate Names:

Poisoning Ciguatera (Ciguatera Poisoning) Toxin Ciguatera (Ciguatera Poisoning)

Ciguatoxin

A heat-stable toxin produced by marine microorganisms and accumulated in some reef fish, causing ciguatera poisoning with gastrointestinal, neurologic, and temperature-sensation symptoms.

Cilia

Small hair-like structures on cells that move fluid, particles, or mucus across a tissue surface.

Ciliary Body

Circumferential structure between iris and choroid, with ciliary muscle (accommodation control via zonular fibers) and ciliary processes (aqueous humor production). Part of the uveal tract (iris, ciliary body, choroid).

Ciliary Dyskinesia

Abnormal movement of cilia that impairs clearance of mucus from the airways and can cause recurrent respiratory infections.

Ciliary Muscle

A ring of smooth muscle in the eye that changes the lens shape for focusing at different distances and helps regulate aqueous humor outflow through ciliary-body structures.

Ciliary Neuralgia

Pain arising from or felt along the ciliary nerves around the eye, often described as deep orbital or eye pain; the cause requires clinical evaluation.

Ciliopathy

A disorder caused by abnormal structure or function of cellular cilia. Ciliopathies may affect development, vision, kidney function, respiration, or multiple organ systems.

Cimetidine

Cimetidine is an H₂-receptor antagonist that reduces gastric acid secretion; it has numerous drug interactions and is used less often than newer agents.

Cinacalcet

A calcimimetic drug that activates calcium-sensing receptors and lowers parathyroid hormone, used for selected forms of hyperparathyroidism and hypercalcemia.

Cineangiocardiology

Radiographic recording of the heart and blood vessels during passage of contrast material, used to visualize cardiac chambers, valves, and coronary or great vessels.

Cinefluorography

Motion-picture recording of fluoroscopic images, used to document movement of organs or contrast material during a diagnostic examination.

Cineplasty

Surgical creation of a muscle-controlled stump or related reconstruction, historically used to improve control of a prosthetic limb.

Cingulotomy

Surgical interruption of selected fibers of the cingulum, sometimes performed as a psychosurgical treatment for severe, treatment-resistant psychiatric illness or chronic pain.

Cinnarizine

Cinnarizine is an antihistamine with calcium-channel-blocking properties used in some countries for motion sickness and vestibular symptoms.

Ciprofloxacin

Ciprofloxacin is a fluoroquinolone antibiotic used for selected bacterial infections; tendon injury, nerve effects, QT effects, and resistance limit indiscriminate use.

Circadian Rhythm

The approximately 24-hour endogenous biological cycle regulating sleep-wake behavior, hormone secretion, body temperature, metabolism, and other physiological processes. Generated by the suprachiasmatic nucleus of the hypothalamus, which is entrained to the environment primarily by light via the retinohypothalamic tract.

Circadian Rhythms

Approximately 24-hour biological cycles that regulate sleep and wakefulness, hormone release, body temperature, metabolism, and other physiological functions in response chiefly to light and darkness.

Circle Of Willis

A ring-like arterial anastomosis at the base of the brain that provides collateral blood flow between the anterior (internal carotid) and posterior (vertebrobasilar) circulations. It is formed by the anterior cerebral, anterior communicating, internal carotid, posterior cerebral, and posterior communicating arteries.

Circulating Tumor DNA

Fragments of tumor-derived DNA detectable in blood, enabling molecular profiling, treatment monitoring, and detection of minimal residual disease without tissue biopsy (liquid biopsy).

Circulation

Continuous movement of blood through the heart and blood vessels, or of lymph through lymphatic vessels, to transport oxygen, nutrients, hormones, and waste.

Circulatory

Relating to the movement of blood or lymph and to the organs and vessels that carry them.

Circulatory System

The heart and blood-vessel network that pumps and distributes blood through pulmonary and systemic circuits; broadly, the term may include the lymphatic system.

Circumcision

A medical procedure involving circumcision. Indications, risks, preparation, and follow-up depend on the patient and the specific procedure. medical reasons such as severe phimosis, recurrent balanoposthitis, paraphimosis, or lichen sclerosus (balanitis xerotica obliterans); elective infant circumcision for religious, cultural, or preventive health reasons.

Circumflex

Curving around; the circumflex coronary artery is a branch of the left coronary artery that travels around the heart's lateral and posterior surface.

Circumflex Artery

A branch of the left coronary artery that travels in the left atrioventricular groove. It supplies the lateral wall of the left ventricle, the left atrium, and in left-dominant systems, the inferior wall and posteromedial papillary muscle.

Circumvallate Papillae

Circumvallate papillae are large taste papillae arranged near the back of the tongue and surrounded by a trench containing taste buds and serous glands.

Circumvallate Placenta

An extrachorial placental configuration in which the chorionic plate is smaller than the basal plate, producing a raised circumferential edge; it may be associated with bleeding, abruption, or growth restriction.

Cirrhosis

Cirrhosis is advanced liver scarring with regenerative nodules that distorts blood flow and liver function, potentially causing portal hypertension, jaundice, ascites, and liver failure. distortion of the hepatic architecture and formation of regenerative nodules. The most common causes include chronic hepatitis

C infection, alcoholic liver disease, non-alcoholic steatohepatitis, chronic hepatitis B infection, and autoimmune hepatitis.

Cirrhosis Primary Biliary (Primary Biliary Cirrhosis)

Alternate index label for Primary Biliary Cirrhosis.

Cisplatin

A platinum-based chemotherapy drug that forms DNA cross-links and is used to treat several cancers; important toxicities include kidney injury, hearing loss, neuropathy, and nausea.

Citalopram

Citalopram is a selective serotonin-reuptake inhibitor used to treat depression and some anxiety disorders; nausea, sexual effects, and QT prolongation are important considerations.

Citrate

Citrate is a salt or ion of citric acid that participates in metabolism and binds calcium; it is used in anticoagulant blood collection and some stone-prevention treatments.

Citrate Synthase

First enzyme of TCA cycle. Condenses oxaloacetate and acetyl-CoA to citrate.

Citric Acid Cycle

The citric acid cycle is a mitochondrial pathway that oxidizes acetyl-CoA and generates reducing equivalents for ATP production.

Citric Acid Cycle (Krebs Cycle)

A central metabolic pathway occurring in the mitochondrial matrix that oxidizes acetyl-CoA (derived from carbohydrates, lipids, and proteins) into CO₂, generating 3 NADH, 1 FADH₂, and 1 GTP (ATP) per turn. Rate-limiting enzyme: isocitrate dehydrogenase (inhibited by ATP and NADH; activated by ADP).

Alternate Names:

Krebs Cycle

Citric Acid Urine Test

A urine test measuring citrate excretion, used mainly in the evaluation of recurrent kidney stones because low urinary citrate increases the risk of calcium stone formation.

Citrullinaemia

Citrullinaemia is an inherited urea-cycle disorder causing accumulation of citrulline and potentially life-threatening hyperammonemia.

Citrullinemia

An inherited metabolic disorder in which citrulline and ammonia accumulate because of impaired urea-cycle function.

CJD

Alternate index label; see *Creutzfeldt-Jakob disease*.

CK

Creatine kinase, an enzyme found in skeletal muscle, heart muscle, and brain whose blood level may rise after tissue injury.

Alternate Names:

Creatine phosphokinase; creatine kinase enzyme.

CKD-Mineral Bone Disorder

Systemic disorder of mineral and bone metabolism in CKD. Includes calcium, phosphorus, PTH, and vitamin D abnormalities with vascular calcification and bone disease. Renal osteodystrophy encompasses osteitis fibrosa, osteomalacia, adynamic bone disease, and mixed uremic osteodystrophy.

Cl (Chloride)

The chemical symbol for chloride, the negatively charged ion of chlorine and a major extracellular electrolyte.

Cladribine

Cladribine is a purine analogue used for selected blood cancers and multiple sclerosis; lymphocyte depletion and infection risk require monitoring.

Clairvoyance

Clairvoyance is an alleged ability to perceive information beyond ordinary sensory means; it is not an established medical diagnostic finding.

Clamp

A surgical instrument used to grasp, compress, occlude, or hold tissue, blood vessels, tubing, or other structures.

Clang Association

Clang association is speech in which word choice is driven by sound, rhyme, or pun rather than meaning, seen particularly in mania or psychosis.

Clarithromycin

Clarithromycin is a macrolide antibiotic used for selected bacterial and mycobacterial infections; interactions and QT prolongation are important risks.

Clark Level Of Invasion

A historical five-level system describing how deeply a melanoma has invaded skin layers; modern melanoma staging relies primarily on tumor thickness, ulceration, and other prognostic factors.

Class IA Antiarrhythmics

Sodium channel blockers that slow phase 0 depolarization and prolong the action potential duration and refractory period. Examples include quinidine, procainamide, and disopyramide. Used for atrial and ventricular arrhythmias. Quinidine can cause QT prolongation and torsades de pointes.

Class IB Antiarrhythmics

Sodium channel blockers that shorten the action potential duration and are preferentially taken up by ischemic tissue. Examples include lidocaine and mexiletine. Lidocaine is used for ventricular tachycardia and ventricular fibrillation, particularly in the setting of acute myocardial infarction.

Class IC Antiarrhythmics

Sodium channel blockers that significantly slow phase 0 depolarization without affecting action po-

tential duration. Examples include flecainide and propafenone. Used for supraventricular arrhythmias in patients without structural heart disease.

Class III Antiarrhythmics

Potassium channel blockers that prolong the action potential duration and refractory period. Examples include amiodarone, sotalol, dofetilide, and ibutilide. Amiodarone is the most commonly used but has significant toxicity. Sotalol has additional beta-blocking properties and can cause torsades de pointes.

Classic Migraine

A migraine associated with an aura, such as temporary visual or sensory symptoms.

Claudication

Muscle pain or cramping brought on by exertion and relieved by rest, usually because of reduced arterial blood flow to a limb.

Alternate Names:

Vascular Claudication

Claudication Distance

The distance a person can walk before exertional limb pain begins. It is used to describe symptoms and monitor change.

Claustrophobia

An intense fear of enclosed or confined spaces that may cause anxiety, panic, or avoidance. Symptoms can occur in places such as elevators, tunnels, or MRI scanners.

Clavicle

Only horizontally oriented long bone, serving as a shoulder-trunk strut. Medial end articulates with the manubrium (sternoclavicular joint); lateral end with the acromion (acromioclavicular joint). Most common fracture at the middle-lateral third junction from falls on an outstretched hand.

Clavicle Fracture

A break in the collarbone that may occur during

birth or after trauma. A newborn may show asymmetric arm movement or tenderness; older children and adults may have pain, swelling, or deformity. Diagnosis is usually made by examination and imaging.

Clavicle Fracture (Intentional)

Intentional fracture of the fetal clavicle as a last resort to reduce the bisacromial diameter in shoulder dystocia. The operator applies upward pressure on the midportion of the anterior fetal clavicle with a finger, fracturing it. The clavicle heals without long-term sequelae.

Alternate Names:

Intentional

Clavus

A clavus is a localized painful thickening of skin, or corn, caused by repeated pressure or friction.

Claw Foot

A deformity in which the toes are hyperextended at the metatarsophalangeal joints and flexed at the interphalangeal joints. It may result from muscle imbalance or neurologic disease.

Claw Hand

A hand deformity with hyperextension at the metacarpophalangeal joints and flexion at the interphalangeal joints, classically caused by ulnar-nerve palsy or lower brachial-plexus injury.

Claw Toe

A toe deformity characterized by extension at the metatarsophalangeal joint and flexion at the proximal and distal interphalangeal joints.

Clean Catch Urine Sample

A midstream urine specimen collected after cleaning the genital area to reduce contamination and improve interpretation of urinalysis or culture.

Clean-Catch Specimen

A urine sample collected after cleansing the surrounding area and beginning urination, with the

middle portion collected in a sterile container to reduce contamination.

Cleaning Supplies And Equipment

Materials and devices used to remove soil and microorganisms from surfaces or equipment; selection and disinfection level depend on the item and infection risk.

Cleaning To Prevent The Spread Of Germs

Cleaning and disinfection practices that remove or inactivate infectious organisms on hands, surfaces, equipment, and shared objects to reduce transmission.

Clear Cell Carcinoma

Clear cell carcinoma is a cancer whose cells appear clear because of glycogen or lipid; it can arise in organs such as kidney, ovary, or endometrium.

Clear Cell Carcinoma Of The Ovary

A distinct histological subtype of epithelial ovarian cancer characterized microscopically by hobnail and clear cells rich in glycogen arranged in tubulocystic, papillary, or solid architectural patterns. Strongly associated with preexisting pelvic endometriosis and *ARID1A* or *PIK3CA* mutations, it frequently presents at an early stage, carries an elevated risk of thromboembolic events, and demonstrates relative resistance to standard platinum- and taxane-based chemotherapy regimens compared to high-grade serous carcinoma.

Clear Cell Renal Cell Carcinoma

The predominant histologic subtype of renal cell carcinoma, accounting for approximately 75–80% of all adult primary kidney cancers. Arises from the proximal convoluted tubule and is histologically characterized by malignant cells with clear lipid- and glycogen-rich cytoplasm; strongly associated with loss or inactivation of the *VHL* tumor suppressor gene.

Alternate Names:

ccRCC; Conventional renal cell carcinoma

Clear Liquid Diet

A limited diet consisting of transparent liquids such as water, clear broth, apple juice, and black coffee that leave minimal residue. It is used for short periods before procedures, during acute illness, or after surgery to maintain hydration while resting the gastrointestinal tract.

Clear Margins

A histological finding indicating that no abnormal cells (e.g., cervical intraepithelial neoplasia or cancer cells) are present at the edge of a tissue specimen removed during a procedure such as LLETZ, cone biopsy, or surgical excision.

Clearance

The volume of plasma from which a drug is completely removed per unit time, typically expressed in milliliters per minute or liters per hour. Total clearance is the sum of all clearance mechanisms, primarily hepatic and renal clearance.

Cleft Lip

A birth defect in which the upper lip does not join together fully before birth. It may occur alone or with a cleft palate.

Cleft Lip And Cleft Palate

Birth defects in which the upper lip, the roof of the mouth, or both do not join together fully before birth. They can cause problems with feeding, speech, hearing, or teeth and may need treatment by several specialists.

Cleft Lip And Palate Repair

A medical procedure involving cleft lip and palate repair. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

Cleft Palate

A birth defect in which there is an opening in the roof of the mouth. It may occur alone or with a cleft lip and can cause problems with feeding, speech, hearing, or teeth.

Cleidocranial Dysostosis

A genetic skeletal disorder, usually caused by RUNX2 variants, characterized by underdeveloped or absent clavicles, delayed closure of skull sutures, abnormal dentition, and short stature. Dental and orthopedic complications are common.

Cleidocranial Dysostosis

A usually inherited skeletal disorder, often caused by RUNX2 variants, characterized by hypoplastic or absent clavicles, delayed closure of skull sutures, short stature, and dental abnormalities.

Cleidocranial Dysplasia

An inherited skeletal disorder characterized by defective development or ossification of the clavicles and skull, delayed closure of cranial sutures, dental abnormalities, and short stature.

Clemastine

Clemastine is a first-generation antihistamine used for allergic symptoms; sedation, anticholinergic effects, and impaired driving are concerns.

Clendamyacin

Clendamyacin is a misspelling of clindamycin, a lincosamide antibiotic that inhibits bacterial protein synthesis and can cause severe antibiotic-associated colitis.

Click-Murmur Syndrome

Alternate index label; see *Mitral valve prolapse*.

Climacteric

The period of physiologic change around the end of reproductive capacity, including the menopausal transition. It may involve changes in menstruation, vasomotor symptoms, and other endocrine effects.

Climate

Climate is the long-term pattern of weather and environmental conditions; climate affects infectious disease, heat illness, allergies, and population health.

Clindamycin

Clindamycin is a lincosamide antibiotic used for selected infections; diarrhea and *Clostridioides difficile* colitis are important adverse effects.

Clinic Visit

Scheduled outpatient appointment for medical consultation, follow-up, or monitoring of a chronic condition.

Clinical

Relating to direct observation, examination, diagnosis, or treatment of a patient, rather than solely to laboratory or basic research findings.

Clinical Communication

Exchange of information between healthcare professionals, patients, and caregivers to support diagnosis, treatment, safety, and informed decisions.

Clinical Counseling

Guidance provided in healthcare to help patients make informed decisions about health, prevention, treatment, and self-management.

Clinical Depression

A depressive disorder marked by persistent depressed mood or loss of interest with associated cognitive, emotional, or physical symptoms that cause clinically significant distress or impairment.

Clinical Depression (Depression)

Alternate index label for Depression.

Clinical Deterioration

Worsening of physiologic function or symptoms that increases risk of organ failure, disability, or death. Changes in mental status, respiratory effort, perfusion, urine output, and vital signs may precede overt collapse.

Clinical Disease

Disease that produces recognizable signs or symptoms or other findings detectable in a patient, as opposed to a silent or subclinical state.

Clinical Documentation

Recording of patient history, examination, assessment, treatment, and follow-up in the medical record.

Clinical Frailty Scale

A clinician-rated scale that summarizes frailty from very fit to severely frail or terminally ill using activity, function, and disease burden. It supports communication and prognostic assessment but should be interpreted in the patient's clinical context.

Clinical Guideline

Systematically developed statements to assist practice. Examples: CDC guidelines, WHO guidelines, specialty society guidelines.

Clinical Handover

Transfer of responsibility and relevant patient information from one healthcare professional or team to another. Effective handover communicates diagnosis, current status, risks, pending tasks, contingency plans, and accountability.

Clinical Practice Guideline

Evidence-informed recommendations intended to help healthcare professionals and patients make decisions about a specific clinical condition or situation.

Clinical Presentation

Signs and symptoms of disease. Varies by disease, severity, patient factors.

Clinical Reasoning

The cognitive process of collecting, weighting, and integrating clinical information to formulate diagnostic and management decisions. It includes problem representation, differential diagnosis, probability assessment, and recognition of cognitive bias.

Clinical Research

Research involving people or human health data to study disease, diagnosis, prevention, treatment, or healthcare delivery.

Clinical Research Bias

Systematic error in clinical study design or analysis, including selection bias, information bias, and confounding.

Clinical Trial

A planned study in which people receive or are observed for an intervention to evaluate its safety, effects, or outcomes. Trials may be conducted in phases and for many types of health interventions.

Clinical Trial Phases

Stages used to study a medical intervention. Phase I primarily evaluates initial safety and dosing, Phase II evaluates preliminary efficacy and safety, Phase III compares treatment with standard care in larger groups, and Phase IV monitors use after approval.

Clinical Trials

Research studies involving human participants that evaluate the safety, effectiveness, risks, or best use of medical interventions or health strategies.

Clinically Proven

Clinically proven means supported by clinical evidence, but the strength, quality, population, and outcome of that evidence must be specified.

Clinicopathologic Correlation

Integration of clinical history, examination, imaging, laboratory data, and pathologic findings to reach a diagnosis. It is essential when tissue findings are limited, nonspecific, or potentially affected by sampling or artifact.

Clinistix

Clinistix is a reagent-strip method historically used to detect glucose in urine through an enzymatic color reaction.

Clinitest

Clinitest is a tablet-based copper-reduction test historically used to detect reducing substances in urine, including glucose; it is less specific than modern methods.

Clinodactyly

A congenital or developmental lateral curvature of a finger or toe, most often affecting the fifth finger and resulting from abnormal shape of a phalanx.

Clinoid Process

One of several bony projections of the sphenoid bone that form part of the cranial base and support structures around the optic canal and cavernous sinus.

CLIP

A device used to hold tissue or structures together; surgical clips can close blood vessels, mark tissue, or occlude structures such as the vas deferens.

Clip (Vascular)

A small device used to close, occlude, or secure a blood vessel during a procedure.

Alternate Names:

Vascular

Clitoral

Relating to the clitoris, an erectile organ with a dense concentration of sensory nerves at the front of the vulva.

Clitorectomy

Surgical removal of all or part of the clitoris, sometimes with removal of adjacent vulvar tissue; nonconsensual forms constitute female genital mutilation and can cause serious harm.

Clitoridectomy

Surgical removal of part or all of the clitoris. In medicine it may be performed for selected tumors or severe disease; nonmedical removal is a harmful practice with no health benefit.

Clitoris

A small, sensitive erectile organ located at the anterior junction of the labia minora, beneath the clitoral hood (prepuce). The clitoris is the primary source of female sexual pleasure and is homologous to the male penis.

Clitoromegaly

Clitoromegaly is enlargement of the clitoris, which may be congenital or acquired from androgen excess, endocrine disease, medication, or other causes.

CLL

Alternate index label; see *Chronic lymphocytic leukemia*.

Cloacal Exstrophy

The most severe congenital anomaly of the ventral abdominal wall, also called the OEIS complex (Omphalocele, Exstrophy of the bladder, Imperforate anus, Spinal defects). Incidence 1 in 200,000-400,000 births.

Alternate Names:

the OEIS.

Cloacitis

Inflammation of a cloaca or cloacal region, particularly in disorders affecting the common terminal outlet of the urinary, genital, and intestinal tracts.

Clodronate

Clodronate is a bisphosphonate that reduces bone resorption and is used in selected bone and cancer-related conditions.

Clofazimine

Clofazimine is a riminophenazine antimicrobial used mainly in multidrug treatment of leprosy and selected mycobacterial infections; skin discoloration is common.

Clomifene

Clomifene, or clomiphene, is a selective estrogen-receptor modulator used to induce ovulation in selected infertility settings.

Clomipramine

Clomipramine is a tricyclic antidepressant particularly effective for obsessive-compulsive disorder; anticholinergic, cardiac, and overdose toxicity are important.

Clonal Evolution

The selection and expansion of tumor-cell subclones with biologic or treatment-related advantages over time. It contributes to progression, metastasis, and acquired resistance to anticancer therapy.

Clonal Expansion

Rapid multiplication of genetically or immunologically related cells derived from a single precursor after activation.

Alternate Names:

Clonal proliferation; clone expansion.

Clonazepam

Clonazepam is a benzodiazepine anticonvulsant and anxiolytic that enhances GABA activity; sedation, dependence, and respiratory depression can occur.

Clonic Seizure

A seizure characterized by rhythmic, repetitive jerking caused by recurrent involuntary muscle contractions. It may be focal or generalized, with or without impaired awareness, and is classified using the clinical pattern, electroencephalography, and the underlying cause.

Clonidine

Clonidine stimulates central alpha-2 receptors to reduce sympathetic outflow and is used for hypertension and selected other conditions; abrupt withdrawal can cause rebound hypertension.

Clonorchiasis

Infection with the Chinese liver fluke, *Clonorchis sinensis*. It affects the biliary tract and may cause inflammation, obstruction, and long-term hepatobiliary complications.

Clonus

A rhythmic, involuntary oscillation of a muscle (usually ankle or patellar) produced by sustained stretch, indicating upper motor neuron (UMN) disease—hyperreflexia. Elicited by rapid dorsiflexion of the foot (sustained clonus—5 or more beats) or tapping. Associated with spasticity, hyperreflexia,

and UMN signs (Babinski).

Clopidogrel

Clopidogrel is an antiplatelet drug that irreversibly blocks the platelet P2Y₁₂ receptor, reducing arterial thrombosis risk after selected cardiovascular events or procedures.

Closed Comedo

A small skin lesion formed when a follicular opening is blocked by sebum and keratin but remains covered by the epidermis. It is commonly called a whitehead.

Alternate Names:

a whitehead.

Closed Fracture

A fracture in which the broken bone does not communicate through a wound with the external environment.

Closed Reduction

Nonoperative realignment of a fractured or dislocated bone or joint by manipulation without surgically opening the site.

Closed Reduction Of A Fractured Bone

A nonsurgical procedure that realigns a broken bone by manipulating it through the skin without opening the fracture site, usually followed by immobilization and imaging to confirm alignment.

Closed Suction Drain With Bulb

A flexible drain connected to a compressible bulb that creates gentle negative pressure to remove blood or fluid from a surgical or injured area; the bulb is emptied and output recorded as directed.

Closed-Angle Glaucoma

Glaucoma caused by obstruction of the drainage angle of the anterior chamber, preventing aqueous humor outflow and producing potentially rapid elevation of intraocular pressure.

Closed-Loop Insulin Delivery

Automated insulin delivery systems that combine

continuous glucose monitoring with an insulin pump and control algorithm. The algorithm adjusts basal insulin delivery based on sensor glucose values in real time. Hybrid closed-loop systems require user-initiated meal boluses but automatically manage basal rates.

Clostridioides Difficile

An anaerobic, spore-forming, toxin-producing gram-positive bacillus causing antibiotic-associated diarrhea and pseudomembranous colitis. Risk factors: antibiotics (especially clindamycin, fluoroquinolones, cephalosporins), hospitalization, age >65, PPIs, and immunosuppression. Toxins A and B damage colonic epithelium.

Clostridioides Difficile Infection

An infectious diarrhea caused by the bacterium *Clostridioides difficile*, typically occurring after disruption of normal gastrointestinal flora by antibiotics. *C. difficile* produces toxins A and B that cause colonic inflammation and diarrhea. Risk factors include antibiotic exposure, proton pump inhibitor use, and advanced age.

Clostridioides Difficile Pathogenesis

The mechanisms by which *C. difficile* causes disease. Antibiotic disruption of the normal gut flora allows the organism to colonize; its toxins injure the colonic mucosa and cause inflammation and diarrhea. Spores persist in the environment and facilitate transmission.

Clostridium

A genus of anaerobic, usually spore-forming bacteria that includes species capable of causing diseases such as tetanus, botulism, gas gangrene, and antibiotic-associated colitis.

Clostridium Botulinum

A gram-positive, spore-forming, anaerobic rod that produces botulinum toxin, the most potent toxin known. The toxin causes flaccid paralysis by blocking acetylcholine release at neuromuscular junctions. Infant botulism occurs from ingestion of spores in honey or soil. Wound botulism occurs from injection

of contaminated heroin.

Clostridium Difficile

Clostridioides difficile infection: a toxin-producing anaerobic gram-positive rod causing antibiotic-associated diarrhea and pseudomembranous colitis, most commonly after broad-spectrum antibiotics (clindamycin, cephalosporins, fluoroquinolones).

Clostridium Difficile Colitis

Clostridioides difficile colitis is antibiotic-associated inflammation of the colon caused by toxin-producing bacteria. It causes watery diarrhea, abdominal pain, fever, and sometimes severe colitis; diagnosis and treatment depend on symptoms, testing, recurrence, and severity.

Alternate Names:

Difficile Clostridium (*Clostridium Difficile* Colitis)

Clostridium Difficile Infection

An anaerobic, spore-forming, toxin-producing gram-positive bacillus causing antibiotic-associated diarrhea and pseudomembranous colitis. See *Clostridioides difficile*.

Clostridium Perfringens

A gram-positive, spore-forming, anaerobic rod that causes gas gangrene (clostridial myonecrosis) and food poisoning. The organism produces alpha-toxin, which causes tissue necrosis. Gas gangrene presents with crepitus, tissue necrosis, and systemic toxicity. Food poisoning presents with acute onset of diarrhea and abdominal cramps.

Clostridium Tetani

A gram-positive, spore-forming, anaerobic rod that causes tetanus. The organism produces tetanospasmin, a neurotoxin that causes spastic paralysis. Spores are found in soil and enter through wound contamination. The toxin blocks inhibitory neurotransmitters causing uncontrolled muscle contractions.

Closure

Closure is the joining or sealing of a wound, opening, vessel, duct, or anatomical structure, either

naturally or by treatment.

Clot

A clot is a semisolid mass of coagulated blood; clots may stop bleeding or obstruct a vessel and cause thrombosis or embolism.

Clot Blood (Blood Clots)

Alternate index label for Blood Clots.

Clot Buster

A medicine that dissolves a blood clot; the medical term is thrombolytic.

Cloth Dye Poisoning

Exposure to cloth dyes that may cause irritation, gastrointestinal symptoms, allergic reactions, or systemic toxicity depending on the chemical composition.

Clotrimazole

Clotrimazole is an azole antifungal used topically or orally in selected formulations for fungal infections of skin, mouth, or vagina.

Clotting

The cascade of enzymatic reactions converting circulating fibrinogen into an insoluble fibrin clot. See Blood Coagulation.

Cloudy Cornea

Loss of corneal transparency from edema, scarring, infection, dystrophy, trauma, or deposits, potentially causing blurred vision, pain, photophobia, or glare.

Clove Oil

Clove oil contains eugenol and is used in some dental and topical products; concentrated ingestion or exposure can cause irritation, liver injury, or seizures.

Clozapine

Clozapine is an atypical antipsychotic for treatment-resistant schizophrenia and selected suicidality risk; neutropenia, myocarditis, seizures, constipation,

and metabolic effects require monitoring.

Club Drugs List And Side Effects

Club drugs include substances such as MDMA, ketamine, GHB, and others used recreationally in social settings. Effects may include agitation, hallucinations, seizures, dangerous temperature elevation, respiratory depression, cardiovascular toxicity, impaired consent, and overdose.

Clubbing

Bulbous enlargement of the distal fingers or toes with increased nail curvature and loss of the normal nail-fold angle. It reflects proliferation of connective tissue in the distal digits and may be associated with chronic pulmonary disease, cyanotic heart disease, inflammatory bowel disease, or malignancy.

Clubbing Of The Fingers Or Toes

Bulbous enlargement of fingertip or toe soft tissue with increased nail curvature caused by chronic changes in the nail bed; it can accompany lung, heart, gastrointestinal, or other disease.

Clubfoot

A birth defect in which a baby's foot is turned inward and downward. The foot may be stiff and difficult to move into a normal position.

Clubfoot (Talipes Equinovarus)

Alternate name; see *Clubfoot*.

Clubfoot Repair

A medical procedure involving clubfoot repair. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

Clubhand

A congenital deformity of the hand in which the wrist and hand deviate toward the radial or ulnar side, often associated with deficiency or abnormal development of forearm bones.

Clumping

Clumping is aggregation of cells, particles, or proteins into visible groups, as in red-cell agglutination or platelet aggregation.

Cluster

A group of similar events, findings, cells, or cases occurring together in space, time, or clinical pattern.

Cluster Headache

A primary headache disorder causing severe one-sided orbital or periorbital pain in attacks lasting about 15–180 minutes, often with tearing, conjunctival redness, nasal symptoms, eyelid swelling, or facial sweating on the same side.

Cluster Headaches

Cluster headache causes repeated attacks of severe one-sided orbital or temporal pain with tearing, nasal symptoms, eyelid drooping, or restlessness. Attacks occur in bouts and require targeted acute and preventive treatment; a first sudden severe headache needs urgent evaluation.

Clutton's Joints

Painless bilateral swelling of the knees or other large joints associated with congenital syphilis, caused by chronic synovitis.

Clysis

Clysis is administration of fluid into the rectum, historically used for hydration, medication, or bowel treatment; modern use is limited.

Cm (Centimeter)

The abbreviation for centimeter, a unit of length equal to one hundredth of a meter or 10 millimeters.

CMV

Cytomegalovirus, a common herpesvirus that may cause mild or asymptomatic infection but can cause serious disease in fetuses and people with weakened immunity.

Alternate Names:

Cytomegalovirus (CMV)

CMV - Gastroenteritis/Colitis

Inflammation and ulceration of the stomach or intestine caused by cytomegalovirus, usually in people with substantial immune suppression. It may cause abdominal pain, fever, diarrhea, bleeding, or perforation and requires tissue or other targeted evaluation.

CMV Blood Test

A blood test that detects cytomegalovirus antibodies, antigen, or viral DNA, depending on the method. Interpretation differs between antibody testing for past exposure and nucleic-acid or antigen testing for active replication, especially in immunocompromised patients.

CMV Colitis

Colonic inflammation caused by cytomegalovirus reactivation in immunocompromised patients including those with HIV and organ transplant recipients. Presents with bloody diarrhea and abdominal pain. Diagnosed by colonoscopy with biopsy showing characteristic owl-eye intranuclear inclusions in enlarged cells.

CMV Pneumonia

Pneumonia caused by cytomegalovirus, usually in people with substantial immune suppression; fever, cough, shortness of breath, and low oxygen may occur and require targeted evaluation and antiviral treatment.

CMV Retinitis

A retinal infection caused by cytomegalovirus, usually in people with severe cellular immunosuppression. It can cause floaters, blurred vision, field loss, or blindness and requires urgent ophthalmic and systemic antiviral management.

CNS Infection

Infection of the brain, spinal cord, meninges, or cerebrospinal-fluid spaces caused by bacteria, viruses, fungi, parasites, or other organisms; presentation and treatment depend on the pathogen and anatomic site.

CNS Lymphoma

A lymphoma involving the central nervous system, most often diffuse large B-cell lymphoma. It may involve brain parenchyma, meninges, eyes, or cerebrospinal fluid and requires urgent hematologic and neurologic evaluation.

CO Poisoning

Toxicity from inhalation of carbon monoxide, a colorless, odorless gas binding hemoglobin 200-300 times more avidly than oxygen, forming carboxyhemoglobin (COHb) and reducing oxygen delivery. See carbon monoxide poisoning.

CO2 Blood Test

A blood chemistry measurement that usually estimates serum total carbon dioxide, which largely reflects bicarbonate. It helps assess acid-base and electrolyte disorders but must be interpreted with sodium, chloride, kidney function, and, when needed, blood-gas results.

Coagulate

To change from a liquid to a semisolid or solid state, especially the formation of a blood clot through coagulation.

Alternate Names:

Clot; clot formation.

Coagulation

The physiologic enzymatic cascade (secondary hemostasis) through which circulating plasma proenzymes are sequentially activated to convert soluble fibrinogen into an insoluble fibrin polymer mesh that stabilizes the primary platelet plug. Initiated primarily in vivo via the tissue factor (extrinsic) pathway upon vascular injury and amplified by the contact (intrinsic) pathway, converging on factor Xa activation and prothrombinase assembly to generate a burst of thrombin.

Coagulation Cascade

The coagulation cascade is a series of enzymatic reactions leading to fibrin clot formation, involving serine protease activation cascades. The intrinsic pathway is initiated by contact activation when

factor XII binds exposed collagen, sequentially activating factors XI, IX, and the cofactor VIII.

Coagulation Defects

Coagulation defects are abnormalities of clotting proteins, platelets, vessels, or regulation that cause excessive bleeding or inappropriate thrombosis.

Coagulation Factor

A blood protein required for the coagulation cascade and formation of a stable fibrin clot; deficiencies or inhibitors can cause bleeding, while excessive activation can contribute to thrombosis.

Coagulation Factor Deficiencies

Inherited or acquired disorders in which one or more clotting factors are reduced or function abnormally, causing excessive bleeding. The clinical pattern and laboratory findings depend on the affected factor.

Coagulation Profile

Panel of tests assessing the coagulation cascade. PT (prothrombin time, 11-14 sec): measures extrinsic and common pathways; elevated in vitamin K deficiency, warfarin, liver disease, DIC. INR standardizes PT for warfarin monitoring.

Coagulation Time

Coagulation time is the time required for a blood sample to form a clot under specified test conditions; modern tests usually measure particular pathways more precisely.

Coagulative Necrosis

The most common form of necrosis, typically resulting from ischemic injury or infarction in most solid organs except the brain. The fundamental process involves denaturation of both structural proteins and enzymatic proteins, which prevents the immediate liquefaction of the dead tissue.

Coagulopathy

A disorder of hemostasis that impairs normal clot formation or regulation and predisposes to abnormal bleeding or thrombosis. It may result from

coagulation-factor deficiency, platelet dysfunction, anticoagulant exposure, liver disease, consumptive coagulopathy, or systemic illness.

Coal Worker'S Pneumoconiosis

Pneumoconiosis from coal dust. Simple CWP shows upper lobe macules. Complicated CWP (progressive massive fibrosis) involves coalescent macules. May be associated with Caplan syndrome.

Coarctation

A localized narrowing of a tubular anatomical structure, especially coarctation of the aorta, which obstructs blood flow and produces characteristic pressure differences.

Coarctation Of The Aorta

A congenital narrowing of the aorta, typically near the ductus arteriosus. Presents with upper extremity hypertension, diminished femoral pulses, and a blood pressure gradient between arms and legs. Associated with bicuspid aortic valve and other congenital heart defects.

Coarse Crackles

Lower-pitched, longer-duration crackles heard throughout inspiration, caused by fluid or secretions in larger airways. They are heard in COPD, bronchiectasis, pneumonia, and pulmonary edema. They are less specific than fine crackles.

Coats Disease

An uncommon retinal disorder characterized by abnormal retinal blood vessels, leakage, exudation, and sometimes retinal detachment, usually affecting one eye in childhood.

Coats Disease (Coats' Disease)

Alternate index label for Coats' Disease.

Cobalamin

Vitamin B12, a vitamin required for DNA synthesis, red-blood-cell formation, and normal neurologic function.

Cobalamin Deficiency

Deficiency of vitamin B12 (cobalamin), a cofactor for methionine synthase (methylcobalamin) and methylmalonyl-CoA mutase (adenosylcobalamin).

Cobalt

Cobalt is a metal present in vitamin B12 and some industrial materials; excess exposure can injure the heart, thyroid, lungs, or skin.

Cobalt Poisoning

Toxic exposure to cobalt that may cause gastrointestinal, neurologic, thyroid, cardiac, or lung effects after significant or prolonged exposure.

Cobalt-57

Calibration source for gamma cameras. Half-life 271 days. Used for quality control.

Cobalt-Chromium

Base metal alloy for cast restorations. Strong, corrosion-resistant. Used for partial dentures, crowns.

Cocaine

A stimulant drug that blocks monoamine reuptake and can also act as a local anesthetic; use can cause dependence, cardiovascular complications, seizures, stroke, and overdose.

Cocaine Use Disorder

A problematic pattern of cocaine use leading to clinically significant impairment or distress. It may involve craving, impaired control, continued use despite harm, tolerance, or withdrawal.

Alternate Names:

Cocaine And Crack Abuse

Cocaine Cardiotoxicity

Cocaine blocks norepinephrine and dopamine reuptake, causing sympathomimetic effects: tachycardia, hypertension, and coronary vasospasm. Acute myocardial infarction can occur even with normal coronary arteries due to vasospasm, accelerated atherosclerosis, and prothrombotic effects. Treat-

ment: benzodiazepines for sympatholysis.

Cocaine Intoxication

Cocaine intoxication causing sympathetic stimulation, agitation, hyperthermia, seizures, hypertension, arrhythmias, myocardial ischemia, or stroke.

Cocaine Toxicity

A toxic state caused by cocaine, often producing agitation, high blood pressure, rapid heart rate, hyperthermia, seizures, coronary vasospasm, myocardial infarction, or stroke. Treatment is supportive and may include sedation, temperature control, and management of cardiovascular or neurologic complications.

Cocaine Withdrawal

A medicine or chemical compound identified by cocaine withdrawal. Its uses, effects, and risks depend on the specific substance and clinical context.

Cocarboxylase

Cocarboxylase is thiamine pyrophosphate, the active coenzyme form of vitamin B1 required for several oxidative carbohydrate and amino-acid reactions.

Coccidioides Complement Fixation

A blood test that detects complement-fixing antibodies to *Coccidioides*; antibody levels can support diagnosis and help assess the severity or progression of coccidioidomycosis.

Coccidioides Immitis

A dimorphic soil fungus and a principal cause of coccidioidomycosis, or Valley fever, acquired by inhaling airborne arthroconidia. Infection is usually pulmonary but can disseminate, especially in people with impaired cellular immunity.

Coccidioides Precipitin Test

A serologic test that detects antibodies to *Coccidioides*, typically early immunoglobulin M antibodies, and supports evaluation of suspected coccidioidomycosis when interpreted with symptoms and other

testing.

Coccidioidomycosis

A fungal infection caused by *Coccidioides* species, usually acquired by inhaling spores.

Common name: Valley fever

Coccidiosis

Infection by coccidian protozoa. In humans it may cause intestinal disease or, in immunocompromised patients, infection of other organs.

Coccus

A spherical or approximately round bacterium; cocci may occur singly, in pairs, chains, or clusters.

Coccydynia

Pain in the region of the coccyx, often worsened by sitting. Causes include trauma, childbirth, degenerative change, and less commonly infection or tumor.

Alternate Names:

Pain Tailbone (Coccydynia)

Coccygectomy

Surgical removal of the coccyx, reserved for selected cases of severe persistent coccygeal pain or a lesion that has not responded to conservative treatment.

Coccyx

Terminal vertebral column part with 3-5 fused vertebrae. Articulates with the sacrum, allowing limited flexion important during childbirth. Provides attachment for gluteus maximus, coccygeus, and levator ani (pelvic floor). A common site of pain (coccydynia) following falls, direct trauma, and prolonged sitting.

Cochlea

Snail-shaped hearing organ in the inner ear, coiled approximately 2.5 turns around the modiolus. Three fluid-filled chambers: scala vestibuli (perilymph), scala media (endolymph, organ of Corti), scala tympani (perilymph).

Cochlear Implant

A cochlear implant is an electronic medical device that bypasses damaged or absent inner ear hair cells to provide direct electrical stimulation of the auditory nerve, restoring a perception of sound in individuals with severe to profound sensorineural hearing loss who derive limited benefit from hearing aids.

Cockayne Syndrome

A rare inherited disorder of DNA repair characterized by progressive neurologic dysfunction, growth failure, developmental impairment, photosensitivity, and a prematurely aged appearance.

Code Black

A hospital emergency alert whose meaning varies by institution, often indicating a severe security threat, bomb threat, or other critical incident; local policy determines the response.

Code Blue

A hospital emergency signal indicating that a person may be in cardiopulmonary arrest and requires immediate resuscitation response.

Code, Hospital

A standardized hospital announcement used to summon a specialized response to an emergency; the meaning of each code depends on the hospital's policy.

Codeine Overdose

Overdose of codeine, an opioid, that can cause respiratory depression, impaired consciousness, pinpoint pupils, and coma. Naloxone may be required in emergency care.

Codman Triangle

A characteristic periosteal reaction seen on plain radiographs, formed when an aggressive bone lesion elevates the periosteum away from the bone cortex, creating a triangular area of new reactive bone at the angle between the raised periosteum and underlying cortex.

Codon

Sequence of three nucleotides coding for one amino acid or stop signal. 64 possible codons: 61 code for amino acids, 3 are stop codons (UAA, UAG, UGA). Degeneracy: multiple codons code for same amino acid.

Coenzyme

A non-protein organic molecule that binds to an enzyme (apoenzyme) and is required for its catalytic activity. Coenzymes often act as transient carriers of specific chemical groups or electrons.

Coenzyme Q

A lipid-soluble molecule in mitochondrial membranes that transfers electrons during cellular energy production.

Coenzyme Q10

CoQ10, a lipid-soluble compound in mitochondrial electron transport and an antioxidant; it is also sold as a dietary supplement, although benefits vary by condition.

Cofactor

A non-protein chemical compound or metallic ion required for an enzyme's catalytic activity. Cofactors include: (1) Metal ions (Mg^{2+} , Zn^{2+} , Fe^{2+}/Fe^{3+} , Cu^{2+} , Mn^{2+} , Ca^{2+} , Mo, Se) that stabilize structure, participate in redox, or act as Lewis acids; (2) Coenzymes (organic cofactors, often vitamin-derived).

Coffin-Lowry Syndrome

An X-linked semi-dominant syndromic neurodevelopmental disorder caused by loss-of-function mutations in the *RPS6KA3* gene on Xp22.12, which encodes ribosomal protein S6 kinase alpha-3. Severely affected hemizygous males present with profound intellectual disability, characteristic craniofacial findings (prominent forehead, hypertelorism, downward-slanting palpebral fissures, thick prominent lips, wide nose with anteverted nares), tapered fingers, kyphoscoliosis, and pathognomonic stimulus-induced drop attacks (SIDAs) triggered by unexpected tactile or auditory stimuli.

Alternate Names:
CLS

Cogan'S Syndrome

An autoimmune vasculitis characterized by interstitial keratitis and vestibular dysfunction including vertigo, hearing loss, and tinnitus. May involve large vessels including the aorta, causing aortic aneurysm or regurgitation. Treatment includes corticosteroids and immunosuppressive agents.

Cognition

The mental processes involved in acquiring, storing, retrieving, and using information, including attention, memory, language, reasoning, and judgment.

Cognitive

Relating to mental processes such as attention, memory, learning, language, reasoning, perception, and decision-making.

Cognitive Behavior Therapy

A structured psychotherapy that identifies and changes unhelpful thoughts and behaviors.

Cognitive Behavioral Therapy

A structured, time-limited psychotherapy that identifies and modifies maladaptive thought patterns (cognitive distortions) and behaviors. It is based on the cognitive model that thoughts, feelings, and behaviors are interconnected. CBT uses techniques including cognitive restructuring, behavioral activation, exposure, and skills training.

Cognitive Behavioral Therapy For Back Pain

A structured psychological treatment that addresses pain-related thoughts, behaviors, sleep, activity, and coping to reduce disability and improve function in chronic back pain.

Cognitive Behavioral Therapy For Insomnia

Cognitive behavioral therapy for insomnia is a structured, evidence-based program that targets the

thoughts and behaviors perpetuating poor sleep. Components include sleep restriction, stimulus control, cognitive restructuring, and sleep hygiene education.

Cognitive Decline

A reduction over time in one or more cognitive abilities, such as memory, attention, language, reasoning, or visuospatial function.

Cognitive Distortions

Systematic errors in thinking that perpetuate negative emotional states and maladaptive behaviors. Common distortions include all-or-nothing thinking, catastrophizing, mind reading, overgeneralization, emotional reasoning, and should statements. CBT focuses on identifying and modifying these patterns.

Cognitive Fitness

The active maintenance of mental sharpness and brain health through stimulating activities, physical exercise, social engagement, and proper nutrition. Regular challenges such as learning new skills, puzzles, reading, and social interaction support neuroplasticity and cognitive reserve.

Cognitive Function

The mental processes involved in attention, memory, language, reasoning, learning, judgment, and problem solving.

Alternate Names:

Cognition; cognitive ability.

Cognitive Health And Memory

Cognitive health encompasses the ability to think clearly, learn, remember, and make decisions, with memory being a core component that involves encoding, storing, and retrieving information. Age-related changes in processing speed and recall are normal, but persistent decline may signal mild cognitive impairment or dementia.

Cognitive Impairment

Decline in one or more cognitive domains: memory, attention, language, visuospatial, executive function. Types: subjective cognitive decline, mild cognitive

impairment (MCI), dementia. MCI: functional independence preserved, impairment on testing. Dementia: functional impairment.

Cognitive Rehabilitation

Structured therapy to improve cognitive function or help a person compensate for difficulties with memory, attention, language, or executive skills after illness or injury.

Cognitive Reserve

The brain's ability to use alternative strategies or networks to maintain function despite injury or disease.

Cognitive Screening

A brief assessment used to identify possible problems with memory, attention, language, or other cognitive functions. It does not by itself diagnose dementia or another disorder.

Cognitive Therapy

A psychological treatment that helps a person identify and change unhelpful thoughts and beliefs and develop more adaptive behaviors; cognitive behavioral therapy combines it with behavioral methods.

Cohort

A group of people who share a defined characteristic or experience during a specified period and are studied over time or compared with another group.

Cohort Study

Follows exposed and unexposed groups over time. Prospective or retrospective. Measures incidence, relative risk.

Coil (Vascular)

A catheter-delivered wire device used to block selected blood vessels, often to treat aneurysms or bleeding.

Alternate Names:

Vascular

Coincidence Detection

Principle of PET imaging. Two 511 keV photons detected simultaneously (within nanoseconds) by opposing detectors. Line of response defined. Time-of-flight PET improves localization.

Coitus

Sexual intercourse, traditionally referring to penile-vaginal penetration; sexual activity is broader than this term.

Coitus Interruptus

The withdrawal method of contraception, in which the penis is removed from the vagina before ejaculation; it is less reliable than many other contraceptive methods.

Coke

Slang for cocaine, a stimulant drug; the word can also mean a carbon fuel product, so context is essential.

Cold (Common Cold)

Alternate index label for Common Cold.

Cold Abscess

An abscess that develops slowly with little heat, redness, or acute inflammation, classically in tuberculosis or other chronic infections.

Cold Agglutinin

An antibody that causes red blood cells to agglutinate at relatively low temperatures. Pathologic cold agglutinins can cause autoimmune hemolytic anemia.

Cold Agglutinin Disease

Autoimmune hemolytic anemia caused by IgM autoantibodies directed against the I/i antigens on RBC membranes (maximum reactivity at $< 30^{\circ}\text{C}$, optimal 4°C).

Cold Agglutinin Syndrome

An immune-mediated disorder in which antibodies react with red blood cells at low temperatures,

potentially causing hemolytic anemia or circulation-related symptoms.

Cold Agglutinins

IgM autoantibodies that bind red blood cell antigens at temperatures below 37 degrees Celsius, causing agglutination and potentially complement-mediated hemolysis in cooler peripheral circulation.

Cold Allergy

Alternate index label; see *Cold urticaria*.

Cold Exposure

Alternate index label; see *Hypothermia*.

Cold Flu Allergy Treatments (Cold, Flu, Allergy)

Alternate index label for Cold, Flu, Allergy.

Cold Hands

Hands that feel unusually cold, which may result from environmental exposure, reduced blood flow, Raynaud phenomenon, anemia, thyroid disease, or other medical conditions.

Cold Injury

Tissue or systemic injury caused by exposure to low temperature, including hypothermia, frostbite, chilblains, and non-freezing cold injury. Severity depends on temperature, exposure duration, moisture, wind, and perfusion; affected patients require assessment for core-temperature disturbance and local tissue damage.

Cold Intolerance

Unusual sensitivity or inability to tolerate cold temperatures, which may occur with hypothyroidism, anemia, low body weight, vascular disease, or other conditions.

Cold Medicines And Children

Safety guidance for giving medicines to children with cold symptoms; many combination products provide little benefit in young children and can cause dosing errors or serious adverse effects.

Cold Sore

A contagious infection of the lips or skin around the mouth, usually caused by herpes simplex virus type 1 and occasionally by HSV-2. It often begins with tingling or burning, followed by grouped fluid-filled blisters that crust and heal in about 1–2 weeks. The virus remains in the body and can reactivate, sometimes after illness, stress, fever, or sunlight exposure.

Cold Urticaria

Hives or swelling triggered by exposure of the skin to cold.

Alternate Names:

Cold Allergy

Cold Wave Lotion Poisoning

Exposure to cold-wave lotion, which may contain thioglycolates or other irritants and can cause burns, gastrointestinal symptoms, or respiratory irritation.

Cold, Common

Alternate index label; see *Common cold*.

Cold, Flu, Allergy

Colds, influenza, and allergies can all cause nasal symptoms and cough but differ in cause, fever pattern, duration, and contagiousness. Viral illness usually improves with supportive care, while allergies respond to trigger reduction and appropriate antihistamine or nasal treatment.

Alternate Names:

Cold Flu Allergy Treatments (Cold, Flu, Allergy)

Colds And Flu - Antibiotics

An explanation that antibiotics treat susceptible bacterial infections, not uncomplicated viral colds or influenza; unnecessary use causes adverse effects and antimicrobial resistance.

Colectomy

Surgical resection of part or all of the colon. Right hemicolectomy: for cecal/ascending colon cancer. Left hemicolectomy: for descending/sigmoid cancer. Sigmoidectomy: for diverticulitis or sigmoid cancer.

Total colectomy: for FAP, UC, or Lynch syndrome.

Colibacillosis

Disease caused by pathogenic strains of *Escherichia coli*, which may produce intestinal infection, urinary-tract infection, sepsis, or other illness.

Colic

Sudden, severe, often cramping pain caused by contraction or obstruction of a hollow organ. The term is also used for recurrent unexplained crying in an otherwise healthy infant.

Colicky Pain

Intermittent, wave-like cramping pain caused by contraction, distension, or obstruction of a hollow organ; common examples include biliary, renal, and intestinal colic.

Coliform

A group of generally gram-negative bacteria that ferment lactose with acid and gas production under defined laboratory conditions; their presence in water can indicate fecal contamination, although not all coliforms are fecal pathogens.

Colitis

Colitis is inflammation of the colon caused by infection, inflammatory bowel disease, reduced blood flow, medicines, radiation, or other injury.

Colitis Collagenous (Lymphocytic Colitis)

Alternate index label for Lymphocytic Colitis.

Colitis Lymphocytic (Lymphocytic Colitis)

Alternate index label for Lymphocytic Colitis.

Colitis Microscopic (Lymphocytic Colitis)

Alternate index label for Lymphocytic Colitis.

Colitis Ulcerative (Ulcerative Colitis)

Alternate index label for Ulcerative Colitis.

Colitis, Ischemic

Alternate index label; see *Ischemic colitis*.

Colitis, Microscopic

Alternate index label; see *Microscopic colitis*.

Colitis, Pseudomembranous

Alternate index label; see *Pseudomembranous colitis*.

Colitis, Ulcerative

Alternate index label; see *Ulcerative colitis*.

Collagen

The major structural protein of connective tissue, composed of three polypeptide chains arranged in a triple helix. Different collagen types provide tensile strength to skin, bone, cartilage, tendons, blood vessels, and basement membranes.

Collagen Disease

A systemic disorder involving connective tissue and often immune-mediated injury to collagen-rich structures. The term has historically included diseases such as systemic lupus erythematosus and systemic sclerosis.

Collagen Implant

Biocompatible scaffold for tissue engineering. Types: bovine, porcine, synthetic. Used for hernia repair, soft tissue augmentation.

Collagen Vascular Disease

An older term for systemic connective-tissue or autoimmune diseases such as lupus, systemic sclerosis, and inflammatory myopathies; modern diagnosis uses the specific disease name.

Collagenase

An enzyme that breaks down collagen in connective tissue.

Alternate Names:

Collagen-digesting enzyme; collagen-degrading enzyme.

Collagenous Colitis

Chronic inflammatory bowel disease characterized by thickening of the subepithelial collagen band in the colonic mucosa to greater than ten micrometers normally less than five micrometers with preservation of the epithelial surface. Presents with chronic watery non-bloody diarrhea primarily in middle-aged women.

Collapsed Arch

Alternate index label; see *Flatfeet*.

Collapsed Lung

A common description of pneumothorax, in which air enters the pleural space and partially or completely collapses the lung. It may cause sudden chest pain and shortness of breath and can be life-threatening when tension develops. See also Pneumothorax.

Collapsed Lung (Pneumothorax)

Air in the pleural space causing partial or complete lung collapse; symptoms may include sudden chest pain and shortness of breath, and tension pneumothorax is an emergency.

Collateral

Providing an alternative or parallel route, such as collateral blood vessels that supply tissue around an obstruction; in other contexts it means accompanying or secondary.

Collateral Circulation

Alternative vascular pathways that develop when coronary arteries become chronically narrowed. Collaterals connect different coronary artery territories and can partially compensate for stenosis. They develop gradually in response to ischemia and are more prominent in patients with chronic coronary artery disease.

Collateral Ligament Injury

MCL (medial) or LCL (lateral) knee ligament injury. MCL more common, often from valgus stress. Treatment: braces, physical therapy, surgical repair if severe.

Collecting Duct

Final segment of the nephron where fine-tuning of urine concentration and composition occurs. Principal cells respond to antidiuretic hormone by inserting aquaporin-2 water channels into the luminal membrane, enabling water reabsorption and urine concentration.

College Students And The Flu

Influenza prevention and care for college students, emphasizing vaccination, hand and respiratory hygiene, staying home when ill, and prompt assessment for severe symptoms or high-risk conditions.

Colles Fracture

A fracture of the distal radius with dorsal displacement and angulation of the distal fragment, usually caused by falling on an outstretched hand.

Collimator

Lead device with holes to define gamma ray direction. Types: parallel-hole, pinhole, converging, diverging. Resolution vs. sensitivity trade-off.

Colloids

Solutions containing large molecules that remain in the intravascular space, providing greater volume expansion per milliliter than crystalloids. Albumin (5 percent, 25 percent) is a natural plasma protein used for volume expansion and specific indications (cirrhosis with paracentesis, nephrotic syndrome).

Coloboma

A congenital defect caused by failure of the optic fissure to close during embryonic development, resulting in a keyhole-shaped gap in any ocular structure including the iris, retina, choroid, or optic nerve. Iris colobomas are the most common and appear as a comma-shaped defect in the inferior iris.

Coloboma Of The Iris

A congenital keyhole- or notch-shaped defect in the iris caused by incomplete embryonic closure, sometimes associated with colobomas in the retina, optic nerve, or other organs.

Colocolonic Intussusception

telescoping of a segment of colon into an adjacent segment, less common in adults than the ileocolic type and usually associated with a pathological lead point such as a polyp, tumor, or lipoma. Adults typically present with intermittent abdominal pain, bloating, and change in bowel habits.

Cologne Poisoning

Ingestion of cologne containing alcohol and fragrances that may cause intoxication, hypoglycemia, respiratory depression, or gastrointestinal irritation.

Cologuard

A stool-based colorectal-cancer screening test combining DNA-marker analysis with a fecal blood test; a positive result requires diagnostic colonoscopy.

Colon

The largest part of the large intestine, extending from the cecum to the rectum. Anatomically divided into ascending colon (right side), transverse colon (across the abdomen), descending colon (left side), and sigmoid colon (S-shaped, leading to the rectum).

Colon Cancer

Malignant neoplasm arising from the colonic epithelium, the third most common cancer worldwide and a leading cause of cancer-related mortality. Most arise from adenomatous polyps through the adenoma-carcinoma sequence over ten to fifteen years.

Alternate Names:

Cancer, Colon Colorectal Cancer (Colon Cancer)

Colon Cancer Prevention

Colorectal-cancer risk can be reduced through recommended screening, physical activity, healthy weight, limiting alcohol, avoiding tobacco, and a diet rich in fiber-containing plant foods. Screening can detect precancerous polyps and early cancer before symptoms develop.

Colon Cancer Screening

Testing intended to detect colorectal cancer or pre-

cancerous polyps before symptoms develop. Options include stool-based tests and direct visualization such as colonoscopy; the appropriate method and interval depend on age, risk, prior findings, and local guidelines.

Colon Polyps

Growths arising from the inner lining of the colon; some types can develop into colorectal cancer.

Alternate Names:

Polyps, Colon Polyps Colon (Colon Polyps) Polyps Rectal (Colon Polyps)

Colonic Diverticulitis (Diverticulosis)

Alternate index label for Diverticulosis.

Colonic Inertia

Markedly slow movement of contents through the colon, causing severe or persistent constipation.

Colonic Ischemia

Decreased blood flow to the colon causing mucosal or transmural injury. Most commonly affects watershed areas particularly the splenic flexure and rectosigmoid junction. Causes include non-occlusive hypoperfusion from cardiogenic shock, vasoconstrictive medications, and vasculitis.

Colonic Stenosis

Narrowing of the colon that may obstruct passage of intestinal contents.

Colonization

Presence and multiplication of microorganisms on or in a body site without tissue invasion or clinical disease. Colonization may precede infection but does not by itself establish that symptoms are caused by the organism.

Colonoscopy

Colonoscopy uses a flexible camera to examine the rectum and entire colon, allowing biopsy and removal of polyps or other lesions.

Colony-Forming Unit

A unit used to estimate the number of viable microorganisms in a sample, derived from counting colonies grown on agar after plating a diluted sample. Each colony is assumed to arise from a single viable microorganism (or a cluster); results are reported as CFU/mL or CFU/g.

Color Blindness

Reduced or absent ability to distinguish certain colors under normal lighting. It is often inherited, especially through X-linked variants, but may also result from eye disease, neurologic disease, aging, or medicines.

Alternate Names:

Deficient Color Vision Poor Color Vision

Color Doppler

An ultrasound method that displays the direction and relative speed of blood flow in color over a grayscale image.

Color Vision Deficiency

Color vision deficiency, commonly known as color blindness, is a condition in which the ability to perceive and discriminate certain colors is reduced or absent, most commonly affecting the perception of red and green hues, and it is caused by abnormalities in the cone photoreceptors responsible for color vision.

Color Vision Test

An eye test that assesses the ability to distinguish colors or identify color patterns. It helps detect inherited color-vision deficiency and acquired abnormalities caused by eye, optic-nerve, brain, medicine, or toxic disorders.

Colorado Tick Fever

An acute viral infection transmitted by ticks and characterized by fever, headache, myalgia, and sometimes leukopenia or rash.

Colorectal Adenocarcinoma

The third most common cancer worldwide and

the second leading cause of cancer death, arising from the colonic epithelium through the adenoma-carcinoma sequence over 10 to 15 years. The pathogenesis involves sequential accumulation of genetic mutations beginning with APC loss, followed by KRAS activation, TP53 loss, and other alterations.

Colorectal Adenoma

A gland-forming growth in the colon or rectum that may develop into colorectal cancer.

Colorectal Cancer

A malignant tumor of the colon or rectum. It may cause bleeding, altered bowel habits, anemia, abdominal pain, or no early symptoms; evaluation and treatment depend on the tumor's location and stage.

Colorectal Cancer (Colon Cancer)

Alternate index label for Colon Cancer.

Colorectal Cancer Genetics

The study of inherited variants that increase the risk of colorectal cancer. Important inherited syndromes include Lynch syndrome, involving DNA mismatch-repair genes, and familial adenomatous polyposis, involving the APC gene.

Colorectal Cancer Screening

Public health strategy to detect colorectal cancer and precancerous polyps in asymptomatic individuals. Current guidelines recommend screening beginning at age forty-five.

Colorectal Cancer Screening Tests

Tests used to detect colorectal cancer or precancerous polyps in people without symptoms. They include stool-based tests and examinations that visualize the colon, such as colonoscopy, CT colonography, and flexible sigmoidoscopy. The appropriate test and interval depend on age, risk, and local guidance.

Colorectal Polyps

Growths arising from the lining of the colon or rec-

tum. They may be non-neoplastic, adenomatous, or serrated; some can progress to colorectal cancer, so removal and microscopic examination guide surveillance.

Colorectal Surgery

Surgical treatment of diseases of the colon, rectum, and anus. Procedures may include segmental bowel resection, restorative reconstruction, stoma formation, or local procedures, depending on the disease and its extent.

Colostomy

A surgically created opening that brings part of the colon through the abdominal wall to divert stool into an external appliance.

Colostrum

The thick, yellowish fluid produced by the mammary glands in late pregnancy and the first few days postpartum. Rich in immunoglobulins (especially IgA), proteins, leukocytes, and growth factors.

Colpitis

Inflammation of the vagina, often due to infection, altered vaginal flora, irritation, or hormonal change.

Colporrhaphy

A surgical repair of vaginal wall defects performed to correct pelvic organ prolapse. Anterior colporrhaphy plicates and reinforces the attenuated pubocervical fascia to treat a cystocele (bladder prolapse), while posterior colporrhaphy plicates the rectovaginal fascia and perineal body to repair a rectocele (rectal prolapse) and restore normal vaginal caliber.

Colposcope

A lighted, magnifying instrument used to examine the cervix, vagina, or vulva in detail.

Colposcopy

Magnified visualization of the cervix, vagina, and vulva after application of acetic acid. Indication: abnormal Pap smear (ASCUS with high-risk HPV, LSIL, HSIL, AGC). Acetic acid causes acetowhite le-

sions in dysplastic epithelium. Lugol iodine (Schiller test): normal glycogenated epithelium stains brown; abnormal epithelium does not.

Colposcopy - Directed Biopsy

Removal of a small tissue sample from an abnormal area identified during colposcopy of the cervix, vagina, or vulva for histopathologic evaluation of dysplasia, precancer, or cancer.

Columnar Epithelium Lined Lower Esophagus

Alternate index label; see *Barrett's esophagus*.

Coma

A state of profound unresponsiveness in which a person cannot be awakened and does not show purposeful responses. It is a medical emergency with many possible causes.

Alternate Names:

Severe Brain Injury, Coma

Coma Myxedema (Myxedema Coma)

Alternate index label for Myxedema Coma.

Coma Scale

A standardized tool for describing level of consciousness using eye opening, verbal response, and motor response.

Combination Inhalers

Inhalers containing both an inhaled corticosteroid and a long-acting beta-2 agonist. Examples include fluticasone/salmeterol (Advair), budesonide/formoterol (Symbicort), and fluticasone furoate/vilanterol (Breo Ellipta). They simplify asthma and COPD maintenance therapy and improve adherence.

Combination Therapy

Use of two or more treatments together to address a disease or mechanism. The benefits and risks depend on the condition and the specific combination.

Combined Hormone Therapy

Hormone therapy containing both estrogen and a progestogen, generally used when endometrial protection is needed in a person with a uterus.

Alternate Names:

Estrogen-progestogen therapy; combined menopausal hormone therapy.

Combined Hyperlipidemia

A lipid disorder characterized by elevated cholesterol and triglycerides, often with increased atherogenic lipoproteins.

Alternate Names:

Mixed hyperlipidemia; combined hyperlipoproteinemia.

Combined Spinal-Epidural Analgesia

A neuraxial analgesia technique for labor that combines a spinal injection (short-acting opioid or opioid + low-dose local anesthetic) with an epidural catheter. Advantages: rapid onset of pain relief (3-5 minutes from the spinal component), minimal motor block, and the ability to dose through the epidural catheter for prolonged labor.

Comedocarcinoma

A form of ductal carcinoma in situ of the breast characterized by central necrosis within malignant ducts, which may produce a comedo-like appearance.

Comedones

Plugs of sebum and keratin within hair follicles, appearing as open blackheads or closed whiteheads and representing a primary lesion of acne.

Comfort Measures Only

A care plan focused on relief of pain, breathlessness, distress, and other symptoms rather than treatments intended to prolong life.

Commando Procedure

A high-complexity, heroic cardiac surgical operation performed for extensive, invasive infective endocarditis involving the aortic and mitral valves with destructive extension into the aortomitral con-

tinuity (the intervalvular fibrosa) and subaortic curtain. Involves radical en-bloc surgical debridement of infected, necrotic valvular and annular tissues, complete surgical reconstruction of the intervalvular fibrous skeleton using a folded bovine pericardial patch, and simultaneous double valve replacement (aortic and mitral valve replacements).

Alternate Names:

Aortomitral Fibrous Body Reconstruction; Intervalvular Fibrosa Reconstruction

Commensal

Describing an organism that lives with another organism and benefits from the relationship without normally harming or helping the host; normal skin and intestinal flora may be commensal.

Comminuted

Describing a fracture in which a bone is broken into multiple fragments.

Comminuted Fracture

A fracture in which the bone is broken into three or more fragments. It may result from high-energy trauma and can be associated with soft-tissue injury, instability, and impaired healing.

Commissurotomy

Surgical incision or separation of a commissure, especially a fused cardiac valve commissure, to relieve obstruction.

Commode

A portable toilet or chair placed near a bed for a person who cannot easily reach a bathroom.

Common Bile Duct

The duct formed by union of the common hepatic and cystic ducts. It conveys bile to the duodenum, usually joining the pancreatic duct at the hepatopancreatic ampulla.

Common Cold

An acute, self-limited viral infection of the upper respiratory tract, one of the most frequent illnesses

in humans, with adults experiencing 2-4 episodes annually and children 6-8 episodes.

Alternate Names:

Cold, Common Cold (Common Cold)

Common Cold In Babies

A viral infection of an infant's upper respiratory tract that commonly causes a runny nose, congestion, and cough.

Common Cold Stages And Timeline Of Symptoms

The common cold often begins with sore throat, sneezing, or fatigue, followed by nasal congestion, runny nose, and cough. Symptoms usually peak within several days and improve over one to two weeks, although cough and fatigue may last longer.

Common Early Symptoms Of Myasthenia Gravis

Early myasthenia gravis commonly causes fluctuating, fatigable weakness of the eyelids, eye movements, facial muscles, chewing, swallowing, speech, neck, or limbs. Symptoms worsen with use and improve with rest; breathing or swallowing difficulty is an emergency.

Common Iliac Arteries

Terminal abdominal aortic branches at L4, each approximately 4 cm long, dividing into internal and external iliac arteries. They supply the pelvis and lower extremities. The right common iliac artery crosses anterior to the right common iliac vein.

Common Medical Abbreviations And Terms

Medical abbreviations and terms summarize diagnoses, tests, medicines, anatomy, and treatment instructions. Because abbreviations can be ambiguous or unsafe, patients should ask clinicians or pharmacists to explain unfamiliar wording rather than infer its meaning.

Alternate Names:

Terms Medical Abbreviations (Common Medical Abbreviations And Terms)

Common Migraine

A recurrent, episodic neurovascular primary headache disorder occurring without a preceding neurological aura (migraine without aura, accounting for approximately 70–80% of migraine sufferers). Diagnostic criteria under ICHD-3 require recurrent attacks lasting 4 to 72 hours characterized by at least two pain features (unilateral location, pulsating quality, moderate-to-severe pain intensity, and aggravation by routine physical activity) accompanied by at least one associated symptom (nausea and/or vomiting, photophobia, and phonophobia). Pathophysiology involves trigeminovascular activation, cortical spreading depression, and release of calcitonin gene-related peptide; acutely treated with triptans, NSAIDs, or gepants, with CGRP antagonists or beta-blockers utilized for prevention.

Alternate Names:

Migraine without aura; migraine without neurologic aura.

Common Peroneal Nerve

Sciatic division (L4-S2) winding around the fibular neck, the body's most vulnerable major nerve to external compression. Divides into superficial peroneal (peroneus longus/brevis, dorsal foot sensation) and deep peroneal (tibialis anterior, extensors, first web space sensation).

Common Peroneal Nerve Dysfunction

Impairment of the common peroneal nerve, often from compression near the fibular head, trauma, surgery, or systemic nerve disease. It may cause foot drop, weakness of ankle eversion or dorsiflexion, and sensory loss over the lateral leg or dorsum of the foot.

Common Peroneal Neuropathy

A peripheral nerve disorder causing weakness of ankle dorsiflexion and eversion, sensory loss over the anterolateral leg and dorsum of the foot, and possible foot drop.

Common Symptoms During Pregnancy

Frequent pregnancy-related symptoms such as nausea, fatigue, breast tenderness, heartburn, consti-

pation, and urinary frequency; severe, sudden, or unusual symptoms may signal complications.

Common Variable Immunodeficiency

The most common symptomatic primary immunodeficiency in adults, affecting approximately 1 in 25,000 individuals. It is characterized by hypogammaglobulinemia (low IgG with low IgA and/or IgM), impaired antibody response to vaccines, and increased susceptibility to infections.

Common Warts (Verruca Vulgaris)

Benign, rough-surfaced skin growths caused by infection with human papillomavirus, commonly affecting the hands and fingers.

Alternate Names:

Verruca Vulgaris

Commotio Cordis

Sudden cardiac arrest caused by a blunt, nonpenetrating impact to the chest at a vulnerable moment in the cardiac cycle, without structural heart injury.

Communicable Disease

Any disease caused by bacteria, viruses, or other pathogens that is spread from person to person.

Communicating Hydrocephalus

A type of hydrocephalus in which there is free flow of cerebrospinal fluid between the ventricles, but impaired absorption of CSF at the arachnoid granulations or increased CSF production. The ventricles are uniformly dilated, including the fourth ventricle.

Communicating With Patients

The clinical exchange of information, concerns, preferences, and decisions between healthcare professionals and patients, using clear language, listening, empathy, and confirmation of understanding.

Communicating With Someone With Aphasia

Communication strategies for a person with impaired language from brain injury or disease, including short sentences, extra time, visual cues, and

supported conversation rather than assuming impaired intelligence.

Communicating With Someone With Dysarthria

Communication strategies for a person whose speech muscles are weak or poorly coordinated, including reducing background noise, confirming messages, and using writing or augmentative aids when needed.

Community Acquired Infection

An infection present or incubating at hospital admission, or developing within 48 hours of admission without recent healthcare exposure. Common examples include pneumonia, urinary tract infection, and meningitis caused by organisms such as *Streptococcus pneumoniae* and *Escherichia coli*, generally susceptible to narrow-spectrum antibiotics.

Community Health Worker

A trained member of a community who helps connect people with health services, education, prevention, and social support.

Community Rehabilitation

Rehabilitation delivered in community settings to improve a person's participation, independence, and daily functioning.

Community Reintegration

Return to community roles: work, leisure, social. Vocational rehabilitation, accessibility modifications.

Community-Acquired

Acquired outside a healthcare facility or before a person has been exposed to healthcare-associated conditions.

Community-Acquired Pneumonia

CAP: acquired outside hospital. CURB-65 (confusion, uremia >7 , respiratory rate ≥ 30 , BP $<90/60$, age ≥ 65) and PSI/PORT score for severity/site of care. Outpatient: amoxicillin 1g TID, doxycycline 100 mg BID, or macrolide (if resistance <25

percent); respiratory fluoroquinolone (levofloxacin, moxifloxacin) as alternative.

Community-Acquired Pneumonia In Adults

Pneumonia acquired outside a hospital or healthcare facility; assessment considers severity, oxygenation, comorbidities, likely pathogens, and the need for outpatient or inpatient treatment.

Comorbidity

Presence of two or more chronic conditions in same individual. Common in elderly: hypertension, diabetes, arthritis, COPD, depression. Increases complexity of care, polypharmacy risk, functional decline. Comprehensive assessment needed for each condition and interactions.

Computational Biomedicine

An interdisciplinary field that uses computers, mathematical models, simulations, and biomedical data to study health and disease. It may support research in areas such as genomics, drug development, medical imaging, disease prediction, diagnosis, and personalized treatment.

Alternate Names:

Computational Biomedical Science

Compact Bone

Dense outer bone tissue organized into osteons that provides strength and structural support.

Alternate Names:

Cortical bone; dense bone.

Comparison

A reference in an imaging report to earlier studies used to assess whether a finding has changed.

Compartment Pressure

The pressure within a closed osteofascial compartment. Markedly elevated pressure can impair capillary perfusion and cause acute compartment syndrome; pressure measurements support but do not replace clinical assessment.

Compartment Syndrome

A surgical emergency caused by increased pressure within a closed osteofascial compartment, leading to tissue ischemia, necrosis, and permanent functional loss. The lower leg (anterior, lateral, deep posterior, and superficial posterior compartments) and forearm (flexor and extensor compartments) are the most commonly affected sites.

Alternate Names:

Syndrome Compartment (Compartment Syndrome)

Competence

Autonomous voluntary authorization given by a competent patient to undergo a specific medical intervention, procedure, or clinical trial. See informed consent.

Competitive Antagonist

A competitive antagonist is a drug that binds to the same receptor site as an agonist and competes for binding, reducing the effect of the agonist without producing an effect of its own.

Competitive Inhibition

A type of enzyme inhibition where the inhibitor (I) competes with the substrate (S) for binding to the enzyme's active site. The inhibitor structurally resembles the substrate and binds reversibly to the free enzyme (E), forming an EI complex that cannot proceed to product.

Complement

Complement is a system of blood proteins that enhances antibody and immune-cell defense by marking, inflaming, or directly damaging targets.

Complement C1Q Deficiency

Autosomal recessive (C1QA, C1QB, C1QC). C1q essential for classical pathway activation and immune complex clearance. 85-90% develop SLE-like disease (malar rash, photosensitivity, nephritis, anti-nuclear antibodies). Recurrent infections with encapsulated bacteria. Low CH50, low C1q, normal C3/C4.

Complement C2/C4 Deficiency

C2 deficiency: most common early complement deficiency (1:20,000 Caucasians). SLE-like disease (10-30%), recurrent sinopulmonary infections. C4 deficiency: similar, strong SLE association (C4A/C4B null alleles). Low CH50, low C2 or C4, normal C3. Treatment: SLE management, prophylactic antibiotics, IVIG for recurrent infections.

Complement C3

The central complement component cleaved into C3a and C3b during activation of the classical, lectin, or alternative pathway. C3b promotes opsonization and formation of downstream convertases; severe C3 deficiency causes recurrent severe infections, especially with encapsulated bacteria.

Complement Cascade

The ordered activation of 30 serum and membrane proteins (complement) that opsonize pathogens, lyse microbes (membrane attack complex), and promote inflammation.

Complement Component 3 (C3)

A blood test measuring complement component C3, a major protein of the complement immune system; abnormal levels can support evaluation of immune-complex disease, infection, or complement deficiency.

Complement Component 4

A blood test measuring complement component C4, part of the classical complement pathway; low levels may occur with immune-complex disease, hereditary angioedema, or complement consumption.

Complement Deficiencies

Rare primary immunodeficiencies caused by genetic defects in complement pathway proteins, increasing susceptibility to specific infections and autoimmune diseases.

Complement Deficiency

Reduced or absent activity of one or more complement proteins, increasing susceptibility to some infections or autoimmune disease.

Complement Fixation Test For *C. burnetii*

A serologic test detecting complement-fixing antibodies to *Coxiella burnetii*, the bacterium that causes Q fever; antibody phase patterns and titers help distinguish recent from persistent infection.

Complement System

A group of blood proteins that supports immune defense by destroying microbes and promoting inflammation and phagocytosis.

Complementary Sequence

A nucleic-acid sequence whose bases pair with another sequence according to pairing rules, allowing hybridization between DNA or RNA strands.

Complete Blood Count

A blood test that measures red blood cells, white blood cells, platelets, hemoglobin, and hematocrit. It may also measure red-cell size and hemoglobin content and list the different types of white blood cells. It helps assess anemia, infection, inflammation, bleeding, and some bone-marrow disorders.

Complete Breech

A variation of breech fetal malpresentation in which both hips and both knees are flexed, causing the baby's feet and buttocks to present simultaneously at the pelvic inlet (the fetus sitting cross-legged). It accounts for approximately 5–10% of term breech presentations and carries an intermediate risk of umbilical cord prolapse compared with frank and footling breeches.

Alternate Names:

Flexed Breech; Complete Breech Presentation

Complete Cystectomy

Surgery to remove the entire urinary bladder, usually for invasive bladder cancer. Because urine can no longer leave through the bladder, the surgeon creates a urinary diversion such as an ileal conduit, a continent reservoir, or a new bladder from bowel.

Complete Denture

Removable prosthesis replacing all teeth in arch. Maxillary and mandibular. Stability challenging in edentulous patients.

Complete Miscarriage

The spontaneous expulsion of all products of conception (embryo/fetus and placenta) from the uterine cavity prior to 20 to 24 weeks of gestation. Clinically characterized by a history of vaginal bleeding and pelvic cramping that has substantially subsided, an internal cervical os that has closed again, and transvaginal ultrasonography demonstrating an empty endometrial cavity with a thin, regular lining and no retained gestational sac or heterogeneous tissue.

Alternate Names:

Complete Spontaneous Abortion

Complete Response

Disappearance of all detectable signs of a cancer after treatment. It does not necessarily mean that every cancer cell has been eliminated.

Complex Carbohydrates

Carbohydrates made up of longer chains of sugars, chiefly starches and dietary fiber, found in foods such as whole grains, legumes, vegetables, and potatoes. Fiber is not fully digested and supports bowel function, satiety, and metabolic health, while starch is digested into glucose at a rate that depends on food structure and processing.

Complex Febrile Seizure

A febrile seizure that is focal in onset or manifestation, prolonged (duration greater than 15 minutes), or recurrent (more than one episode within a 24-hour period or during the same febrile illness). Compared with simple febrile seizures, complex febrile seizures carry a higher risk of recurrent febrile seizures and a slightly increased long-term risk of developing epilepsy; they warrant thorough diagnostic evaluation to exclude central nervous system infection, structural lesion, or status epilepticus.

Alternate Names:

Atypical Febrile Seizure; Complicated Febrile

Seizure

Complex Regional Pain Syndrome

A chronic pain condition characterized by regional pain and sensory changes disproportionate to the inciting event. Type I (reflex sympathetic dystrophy): no identifiable nerve injury. Type II (causalgia): follows a confirmed nerve injury.

Compliance

The extent to which a person follows a treatment recommendation; adherence is generally preferred because it emphasizes an agreed plan.

Complicated Bereavement

Alternate index label; see *Complicated grief*.

Complicated Grief

Persistent, intense grief that substantially interferes with daily functioning and lasts longer than expected for the person's cultural and social context.

Alternate Names:

Complicated Bereavement Traumatic Grief

Complicated Migraine

An older, nonspecific term for migraine accompanied by prolonged or prominent neurologic symptoms; the specific syndrome should be identified when possible.

Alternate Names:

Migraine with prolonged neurologic symptoms; complex migraine, historical usage.

Complicated Urinary Tract Infection

A urinary infection associated with functional or structural abnormality, obstruction, catheterization, renal impairment, male anatomy, pregnancy, or another factor increasing treatment failure or complication risk. Management requires culture-directed therapy and correction of the underlying problem when possible.

Complication

Any adverse event arising during or after a surgical procedure, graded by the Clavien-Dindo classifica-

tion from minor deviation (Grade I) through organ failure (Grade IV) to death (Grade V). Common types include surgical site infection, hemorrhage, wound dehiscence, anastomotic leak, ileus, and venous thromboembolism.

Complications (Vascular)

Problems involving blood vessels after disease, injury, or a procedure, such as bleeding, hematoma, thrombosis, embolism, vessel injury, or reduced blood flow to a limb. Symptoms and urgency depend on the vessel and tissue affected.

Alternate Names:

Vascular

Composite Resin

Tooth-colored restorative material. Bis-GMA or UDMA resin matrix with silica filler. Adhesive bonding. Esthetic but less durable than ceramic.

Compound Fracture (Open Fracture)

A fracture associated with a wound that communicates between the fracture site and the external environment. It carries increased risks of infection and tissue damage.

Alternate Names:

Open Fracture

Compound Heterozygote

A person who has two different pathogenic variants in the two copies of the same gene, one inherited on each homologous chromosome.

Compound Presentation

A fetal presentation where an extremity (hand, arm, foot) presents alongside the vertex or breech. Most common: hand alongside the head. Incidence: 1:300-1:1000. Fetal prognosis is generally good; the prolapsed extremity often retracts as labor progresses. Management: expectant management in most cases.

Compounding

Preparation, mixing, or altering of a medicine to meet an individual patient's needs when an appropriate approved product is unavailable.

Compounding Pharmacy

A pharmacy that prepares customized formulations for an individual patient when a suitable commercially manufactured product is unavailable or unsuitable.

Alternate Names:

Compounding pharmacy practice; extemporaneous pharmacy.

Comprehensive Geriatric Assessment

A multidimensional assessment of an older person's medical conditions, medicines, function, cognition, mood, and social support, used to develop an individualized care plan.

Comprehensive Metabolic Panel

Extended version of BMP including albumin, total protein, alkaline phosphatase, ALT, AST, and bilirubin (total and direct). Evaluates liver function, kidney function, electrolytes, glucose, calcium, and protein status. Uses: preoperative assessment, medication monitoring, and liver/kidney disease evaluation.

Compress

To press together or apply pressure, as with a bandage or device, or to reduce the volume of something.

Compressed Nerve

Alternate index label; see *Pinched nerve*.

Compression

Pressure applied to tissue or a structure, which may reduce swelling or bleeding but can also impair nerves, blood vessels, or organs when excessive.

Compression Fracture

Collapse of a vertebra or other bone because of compression, often related to osteoporosis or trauma.

Compression Fractures Of The Back

Collapse of one or more vertebral bodies caused by weakened bone, often from osteoporosis, or by substantial trauma. It can cause sudden back pain,

height loss, kyphosis, and rarely nerve or spinal-cord compression.

Compression Stockings

Elastic garments that apply graduated pressure to the legs, supporting venous return and reducing swelling or selected risks of venous pooling; correct fit and arterial circulation matter.

Compression Therapy

Use of external pressure, usually from garments or bandages, to support venous or lymphatic flow and reduce swelling in selected conditions.

Compression Ultrasound

An ultrasound technique in which gentle pressure is applied to assess whether a vein collapses. Failure of a vein to compress may suggest thrombosis.

Compressive Atelectasis

Atelectasis caused by external compression of the lung by pleural fluid, air, or a mass. The lung volume is reduced by the external force. It is reversible when the compressing force is relieved (e.g., drainage of pleural effusion).

Compton Scattering

An interaction in which a photon transfers part of its energy to an electron and changes direction. It contributes to scattered radiation in imaging.

Compulsions

Repetitive behaviors or mental acts that the individual feels driven to perform in response to an obsession or according to rigid rules. They are aimed at preventing or reducing anxiety or preventing some dreaded event, but are not connected in a realistic way with what they are designed to neutralize.

Compulsive Gambling

Alternate, nonpreferred label; see *Gambling Disorder*.

Compulsive Obsessive Disorder

(Obsessive Compulsive Disorder)

Alternate index label for Obsessive Compulsive Disorder.

Compulsive Overeating

Alternate index label; see *Binge-eating disorder*.

Compulsive Sexual Behavior

Recurrent sexual thoughts or behaviors that are difficult to control and cause significant distress or impairment.

Alternate Names:

Sexual Obsession

Compulsive Stealing

Alternate index label; see *Kleptomania*.

Computed Tomography

Cross-sectional imaging using rotating X-ray tube and detectors. Produces axial images, reconstructable into sagittal, coronal, 3D. CT number measured in Hounsfield units (HU): water = 0, air = -1000, bone = +1000. Contrast: iodine-based, enhances vascular structures and perfused organs. Speed: seconds.

Computed Tomography Pulmonary Angiography

A specialized, rapid contrast-enhanced multidetector computed tomography examination of the pulmonary circulation that represents the reference-standard diagnostic test for acute pulmonary embolism. Following rapid intravenous iodinated contrast bolus timed to pulmonary arterial opacification, high-resolution thin-collimation images directly visualize intraluminal filling defects (thrombi) within the main, lobar, segmental, and subsegmental pulmonary arteries, while simultaneously providing assessment of right ventricular strain and alternative parenchymal or pleural diagnoses.

Alternate Names:

CTPA; CT Pulmonary Angiogram; Pulmonary CT Angiography

Computed Tomography Scan

Cross-sectional imaging using X-rays and computer processing. Emergency uses: head trauma (hemorrhage, fracture), chest (pulmonary embolism, aortic dissection), abdomen (appendicitis, bowel obstruction), CT pulmonary angiography (CTPA), CT angiography (CTA). Fast, widely available, high sensitivity for acute conditions.

Computerized Axial Tomography

Computed tomography, an imaging method that uses X-rays and computer processing to produce cross-sectional images of the body; it is also called a CT or CAT scan.

Concato'S Disease

A historical term for primary polycythemia, now generally called polycythemia vera, a myeloproliferative neoplasm causing increased red-cell mass and often elevated blood viscosity.

Concealed Conduction

An electrophysiological phenomenon wherein an electrical cardiac impulse partially penetrates into specialized conduction tissue (most frequently the atrioventricular [AV] node or bundle branches) without fully traversing it to emerge and depolarize adjacent myocardium. Although the propagating wavefront dies out and cannot be directly visualized on a surface electrocardiogram, it renders the traversed tissue refractory, thereby altering or delaying the conduction, velocity, or formation of the subsequent electrical impulse. Classically explains the irregular ventricular response and variable PR intervals observed during atrial fibrillation and atrial flutter with variable AV block.

Concealed Pregnancy

Pregnancy that is hidden or not recognized until delivery, often by denial (psychogenic) or deliberate concealment; a medicolegal concept relevant to infanticide.

Concentration

Amount of substance per unit volume. Units: mg/dL, mmol/L, mEq/L, ppm. Conversion: molec-

ular weight needed. Critical for toxicity assessment.

Conception

The beginning of pregnancy, usually referring to fertilization and the subsequent establishment of pregnancy.

Conception (Fertilization)

The fusion of a sperm and an ovum in the ampulla of the fallopian tube, forming a zygote. The sperm penetrates the corona radiata and zona pellucida (acrosome reaction). After fertilization, the zygote undergoes cleavage (mitotic division) as it travels toward the uterus. Implantation occurs approximately 6-10 days after ovulation.

Alternate Names:

Fertilization

Conchae

Curved bony structures covered by mucosa inside the nasal cavity that warm, humidify, and filter inhaled air.

Conclusion

The part of a report that summarizes the main findings and their clinical significance or recommended next steps.

Concomitant

Existing or occurring at the same time as another condition, treatment, or event.

Concordance

Probability both twins have same trait. Monozygotic (identical) twins > dizygotic (fraternal) for genetic traits. High concordance suggests genetic influence.

Concrescence

Union of adjacent teeth by cementum only. Usually posterior teeth.

Concretio Cordis

Abnormal adhesion or fusion of structures within or around the heart, including adhesion of the peri-

cardial surfaces or fusion of cardiac components.

Concussion

A form of mild traumatic brain injury caused by a biomechanical force (direct blow to the head, face, neck, or elsewhere on the body with impulsive force transmitted to the head), resulting in a transient disturbance of brain function without structural damage visible on conventional neuroimaging.

Condition

A general term for a state of bodily health or, in medical usage, a specific deviation from normal in structure or function that may or may not constitute a disease, including complaints lacking a discrete pathologic basis and overt diagnoses.

Conditioning

Learning in which repeated association or reinforcement changes a behavior or response; in medicine, conditioning can also mean preparing a patient or tissue for a treatment.

Conditions Caused By Deletion Mutations

Deletion mutations remove DNA segments and can disrupt one gene or several neighboring genes. The clinical effect depends on size, location, inheritance, and whether the remaining copy compensates; genetic counseling and testing may clarify diagnosis and recurrence risk.

Condom

A thin barrier sheath worn on the penis or inserted into the vagina that helps prevent pregnancy and reduces transmission of sexually transmitted infections when used correctly.

Condoms - Male

A sheath placed over the penis during sexual activity to reduce exchange of semen and genital secretions and lower pregnancy and sexually transmitted infection risk when used correctly.

Conduct Disorder

A childhood or adolescent disorder involving a persistent pattern of behavior that violates the rights of others or major age-appropriate rules. Examples include aggression, property destruction, deceitfulness, theft, and serious rule violations.

Conduction Deafness

Hearing loss caused by impaired transmission of sound through the external or middle ear, with the inner ear and neural auditory pathways relatively preserved.

Conductive Deafness

Hearing loss resulting from a problem in the external auditory canal, tympanic membrane, or middle ear that reduces conduction of sound to the inner ear.

Conductive Hearing Loss

Hearing loss caused by impaired transmission of sound through the outer or middle ear. Audiometry commonly shows an air-bone gap, and causes include earwax, middle-ear fluid, perforation, otosclerosis, and ossicular disease.

Condylar Process

The rounded articular projection of a bone, especially the mandibular process that articulates with the temporal bone to form the temporomandibular joint.

Condyle

A rounded projection at the end of a bone that contributes to a joint.

Condyloma

A wart-like growth, often in the genital or anal area and commonly caused by human papillomavirus; condyloma lata are lesions of secondary syphilis.

Condyloma Acuminata

Soft, wart-like genital or perianal growths caused by certain human papillomavirus types.

Condyloma Acuminatum

A benign, exophytic, papillomatous growth of the anogenital skin caused by human papillomavirus, most commonly types 6 and 11. They present as soft, flesh-colored, verrucous papules or plaques in the genital and perianal region. Condylomata are sexually transmitted and may be associated with cervical dysplasia.

Condyloma Latum

Mucocutaneous lesion of secondary syphilis caused by *Treponema pallidum*, distinct from condyloma acuminata (genital wart).

Condylomata Acuminata

Alternate index label; see *Genital warts*.

Condylomata Lata

Broad, flat, moist, grayish-white papules occurring in secondary syphilis, typically found in the anogenital region and other intertriginous areas. They are highly infectious and contain abundant *Treponema pallidum* organisms. Diagnosis is by darkfield microscopy or serological testing for syphilis.

Cone Biopsy

A surgical procedure that removes a cone-shaped portion of the cervix for diagnosis or treatment of high-grade cervical precancer and to determine whether invasive cancer is present.

Cone-Beam Computed Tomography

Three-dimensional dental imaging using a cone-shaped X-ray beam and a rotating detector. It provides high-resolution views of teeth and maxillofacial bone with generally less radiation than conventional medical CT, but should be used only when the additional information affects care.

Cones

Retinal photoreceptor cells responsible for color vision and detailed vision in relatively bright light.

Alternate Names:

Cone photoreceptors; cone cells.

Confabulation

Production of false or inaccurate statements or memories without conscious intent to deceive, often associated with memory impairment or frontal-lobe dysfunction.

Confidentiality

The ethical and legal duty of healthcare professionals to protect patient information from unauthorized disclosure. Founded on the principle of respect for patient autonomy and trust, confidentiality is a core requirement of medical ethics (GMC guidelines) and law (GDPR, Data Protection Act, Caldicott principles).

Confirmatory Test

A test used to verify a preliminary or screening result, often with a different method or greater specificity. Confirmation should be selected according to the condition, specimen, timing, and accepted clinical guidelines.

Conformal Radiation Therapy

Radiation treatment planned so that the high-dose region conforms closely to the tumor's three-dimensional shape while limiting exposure of nearby normal tissue.

Confounding

Distortion of association by third variable. Examples: age confounding relationship between exposure and disease. Controlled by matching, stratification, regression.

Confusion

Impaired ability to think clearly, orient, attend, remember, or respond appropriately; sudden confusion is delirium and may indicate infection, medication effect, metabolic illness, stroke, or another emergency.

Confusion (Delirium)

Acute onset fluctuating disturbance in attention and awareness. Usually reversible. Precipitants: infection, medications, metabolic derangement, pain, constipation, urinary retention. Differentiate from

dementia (chronic, progressive). Treatment: identify and treat underlying cause, environmental modification, avoid anticholinergics.

Alternate Names:

Delirium

Confusion Assessment Method

A standardized bedside algorithm for detecting delirium. It identifies acute or fluctuating change, inattention, disorganized thinking, and altered level of consciousness; delirium requires the first two features plus either of the latter two.

Congenital

Present at birth, whether inherited, caused by a developmental problem, or acquired before birth.

Congenital Adrenal Hyperplasia

Group of autosomal recessive disorders caused by enzyme deficiencies in the adrenal steroidogenesis pathway. Twenty-one hydroxylase deficiency is the most common accounting for approximately ninety-five percent of cases.

Congenital Antithrombin III Deficiency

An inherited deficiency or dysfunction of antithrombin, a natural anticoagulant, causing increased risk of venous thromboembolism.

Congenital Biliary Atresia

Alternate index label; see *Biliary atresia*.

Congenital Cataract

Opacification of the crystalline lens present at birth, a leading cause of treatable childhood blindness worldwide.

Congenital CMV

Cytomegalovirus infection acquired in utero, the most common congenital viral infection. Maternal primary infection poses highest risk of fetal transmission and disease. Can cause microcephaly, sensorineural hearing loss, chorioretinitis, hepatosplenomegaly, and petechiae. Diagnosis by CMV PCR in urine or saliva.

Congenital CNS Malformation

A structural abnormality of the brain, spinal cord, or related developmental structures present from birth, caused by disturbed neural development or other prenatal factors; severity ranges from incidental to life-threatening.

Congenital Contractural Arachnodactyly

An inherited connective-tissue disorder characterized by long slender fingers and toes, congenital flexion contractures, muscular hypoplasia, and sometimes kyphoscoliosis.

Congenital Cytomegalovirus

A medicine or chemical compound identified by congenital cytomegalovirus. Its uses, effects, and risks depend on the specific substance and clinical context.

Congenital Cytomegalovirus Infection

Cytomegalovirus infection acquired before birth. It may cause hearing loss, developmental problems, microcephaly, or no symptoms.

Congenital Diaphragmatic Hernia

A defect in the diaphragm allowing abdominal organs to herniate into the thoracic cavity, causing pulmonary hypoplasia and respiratory distress at birth. Most commonly a posterolateral (Bochdalek) defect on the left side. Presents with cyanosis, scaphoid abdomen, and bowel sounds in the chest.

Congenital Diaphragmatic Hernia

A birth defect in which an opening in the diaphragm allows abdominal organs to move into the chest and interfere with lung development.

Congenital Diaphragmatic Hernia Repair

A medical procedure involving congenital diaphragmatic hernia repair. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

Congenital Disorder

A medical condition or structural abnormality

present in an individual from birth, which may be caused by genetic factors or environmental influences in the womb.

Congenital Fibrinogen Deficiency

An inherited absence or abnormality of fibrinogen that can cause bleeding, thrombosis, or both depending on the specific molecular defect.

Congenital Glaucoma

A rare form of glaucoma (1 in 10,000-20,000 births) caused by developmental anomalies of the trabecular meshwork and anterior chamber angle, impairing aqueous humor outflow. Most cases are sporadic; familial forms are autosomal recessive (CYP1B1 gene mutations).

Congenital Heart Defect - Corrective Surgery

Surgery or catheter-based intervention to repair a structural heart abnormality present at birth, with the specific procedure depending on the defect, its severity, and the patient's anatomy and condition.

Congenital Heart Defects

Problems in the heart or major blood vessels that are present at birth. They can be mild or serious and may affect how blood flows through the heart and body. Examples include holes in the heart, abnormal valves, and problems with the major blood vessels.

Congenital Heart Defects In Children

Alternate index label; see *Congenital Heart Defects*.

Congenital Heart Disease

A diverse spectrum of structural cardiac and great-vessel malformations present at birth, resulting from abnormal embryonic cardiovascular development during gestational weeks 3–8. Hemodynamically categorized into acyanotic lesions (left-to-right shunts: ventricular septal defect, atrial septal defect, patent ductus arteriosus; and obstructive lesions: coarctation of the aorta, congenital aortic stenosis, pulmonary stenosis) and cyanotic lesions characterized by right-to-left shunting or mixing (classically the

5 Ts: Tetralogy of Fallot, Transposition of the great arteries, Tricuspid atresia, Truncus arteriosus, and Total anomalous pulmonary venous return, as well as hypoplastic left heart syndrome). Clinical manifestations range from asymptomatic heart murmurs to neonatal cardiogenic shock, congestive heart failure, failure to thrive, and central cyanosis unresponsive to hyperoxia challenge; diagnosed by prenatal or neonatal transthoracic echocardiography and managed via surgical repair or transcatheter interventions.

Congenital Heart Disease In Adults

A heart defect present from birth that continues into adulthood; see *Congenital Heart Defects*.

Congenital Heart Murmur

A heart murmur heard in a newborn or infant. It may be innocent or may indicate a structural heart defect; assessment considers the murmur's characteristics and associated symptoms or examination findings.

Compensated Heart Failure

Heart failure in which symptoms and fluid buildup are stable or controlled with treatment. The heart failure is still present and can worsen, especially if a new illness or other problem develops.

Congenital Hip Dislocation

Abnormal development or displacement of the hip joint present at birth or developing in infancy, now generally called developmental dysplasia of the hip.

Congenital Hyperinsulinism

Condition of inappropriate insulin secretion in neonates and infants causing severe hypoglycemia. Most commonly caused by mutations in the KATP channel genes ABCC8 and KCNJ11. Histologically classified into focal and diffuse forms. Presents with severe symptomatic hypoglycemia in the first days of life.

Congenital Hyperthyroidism

Thyrotoxicosis present at birth most commonly caused by maternal Graves disease with transplacental

tal passage of thyroid-stimulating immunoglobulins. Presents with tachycardia, irritability, poor feeding, weight loss, and goiter. Transient neonatal hyperthyroidism resolves as maternal antibodies are cleared over weeks to months.

Congenital Hypothyroidism

Thyroid hormone deficiency present at birth occurring in approximately one in two thousand to four thousand live births. Most common cause is thyroid dysgenesis including aplasia, ectopia, and hypoplasia. Universal newborn screening with TSH or T4 allows early detection and treatment preventing intellectual disability.

Congenital Malformation

A structural abnormality that develops before birth and is present at birth, caused by genetic, environmental, developmental, or unknown factors.

Congenital Megacolon

Hirschsprung disease, a congenital absence of enteric ganglion cells in a segment of the bowel that causes functional obstruction and enlargement of the proximal colon.

Congenital Megacolon (Hirschsprung Disease)

Alternate index label for Hirschsprung Disease.

Congenital Melanocytic Nevus

A melanocytic nevus present at birth or appearing within the first few weeks of life, ranging from small (< 1.5 cm) to giant lesions covering large body surface areas. It results from proliferation of melanocytes during embryonic development and carries a small but important risk of melanoma, which is higher in larger lesions.

Congenital Mitral Valve Anomalies

Structural abnormalities of the mitral valve that are present at birth and may impair blood flow.

Congenital Muscular Dystrophy

A genetically and clinically heterogeneous group of

inherited primary muscle disorders characterized by onset of muscle weakness and hypotonia at birth or during the first six months of life, with muscle biopsy demonstrating marked dystrophic changes, including prominent myofiber necrosis, regeneration, and progressive endomysial and perimysial fibrosis. Subclassified into collagen VI-deficient dystrophies (Ullrich CMD), laminin- α 2 (merosin)-deficient CMD (MDC1A), and α -dystroglycanopathies (Walker-Warburg, Fukuyama, muscle-eye-brain disease) that frequently feature associated structural central nervous system malformations and eye anomalies.

Alternate Names:

CMD; Congenital Dystrophy

Congenital Myasthenic Syndromes

A group of inherited disorders that impair communication between nerves and muscles, causing fatigable weakness.

Congenital Nephrotic Syndrome

Severe protein-losing kidney disease beginning in fetal life or during the first three months after birth, causing edema, hypoalbuminemia, and increased infection and thrombosis risk.

Congenital Nevus

A melanocytic mole present at birth or developing soon afterward. It is composed of melanocytes in the epidermis and dermis. Size, location, and changes over time determine the need for clinical assessment and surveillance.

Congenital Penile Curvature

Curvature of the penis present from birth, usually caused by unequal development of the erectile tissues. Mild curvature may need no treatment; significant curvature causing functional difficulty may require specialist assessment.

Congenital Plagiocephaly

Alternate index label; see *Craniosynostosis*.

Congenital Platelet Function Defects

Inherited disorders in which platelets do not adhere, activate, or aggregate normally despite a normal

or near-normal platelet count. They cause mucocutaneous bleeding, easy bruising, heavy menstrual bleeding, or excessive bleeding after procedures.

Congenital Pneumonia

Lung infection acquired in utero, often from ascending chorioamnionitis. Presents with respiratory distress, fever or hypothermia, and sepsis. Common organisms include Group B Streptococcus, *E. coli*, and Ureaplasma. Diagnosis by chest X-ray showing infiltrates and blood culture.

Congenital Protein C Or S Deficiency

Inherited deficiency of natural anticoagulant protein C or S, increasing the risk of venous thromboembolism.

Congenital Rubella

Fetal infection with rubella virus acquired during pregnancy, potentially causing hearing loss, cataracts, congenital heart disease, developmental impairment, and other findings.

Congenital Rubella Syndrome

Fetal infection with rubella virus, particularly dangerous in the first trimester. Classic triad: congenital heart disease (patent ductus arteriosus, pulmonary stenosis), cataracts, and sensorineural hearing loss. Also causes hepatosplenomegaly, thrombocytopenia, and blueberry muffin rash.

Congenital Scoliosis

A lateral curvature of the spine caused by congenital vertebral anomalies that arise during embryogenesis (failure of formation or segmentation). Failure of formation: hemivertebra (wedge-shaped vertebra causing progressive curvature). Failure of segmentation: unilateral unsegmented bar (block of bone on one side).

Congenital Syphilis

Treponema pallidum infection acquired transplacentally. Can cause stillbirth, prematurity, hepatosplenomegaly, rash, snuffles, osteochondritis, and Hutchinson teeth. Diagnosed by darkfield microscopy, VDRL/RPR in neonatal serum, or PCR.

Congenital Toxoplasmosis

Toxoplasma gondii infection acquired in utero, potentially causing chorioretinitis, intracranial calcifications, hydrocephalus, seizures, or developmental impairment.

Congenital Zika Syndrome

Fetal brain infection with Zika virus, causing microcephaly, brain abnormalities, eye defects, hearing loss, and limb contractures. Transmission occurs via mosquito bite or sexual contact. Diagnosis by Zika virus PCR in maternal serum or amniotic fluid. No specific treatment. Prevention by avoiding endemic areas during pregnancy.

Congestion

A passive vascular phenomenon of engorgement of a tissue or organ with blood from impaired venous or lymphatic drainage. Chronic venous congestion produces stasis, hypoxia, dilated vessels, edema, hemorrhage, and hemosiderin-laden macrophages, exemplified by the lungs (heart failure cells) and liver (nutmeg liver).

Congestive Heart Failure

A historical term for heart failure with clinical fluid congestion. Current terminology is heart failure, which may occur with or without congestion and is classified by left-ventricular ejection fraction, symptoms, and disease stage.

Congestive Heart Failure Overview

Alternate index label; see *Heart failure*.

Conization

Surgical removal of a cone-shaped portion of the cervix for diagnosis or treatment of cervical dysplasia or selected early cervical cancers.

Conjoined Twins

Monozygotic, monochorionic, monoamniotic twins who are physically connected at birth, resulting from incomplete fission of the fertilized ovum after day 13 of fertilization. Incidence: 1 in 50,000-100,000 births.

Conjugated Equine Estrogens

A mixture of estrogenic compounds historically derived from the urine of pregnant mares and used in some hormone-therapy formulations.

Alternate Names:

CEE; conjugated estrogens.

Conjunctiva

A thin mucous membrane that lines the inner eyelids (palpebral conjunctiva) and covers the front surface of the sclera (bulbar conjunctiva). It protects and lubricates the eye and permits smooth movement of the eyelids.

Conjunctival

Relating to the conjunctiva, the thin mucous membrane covering the front of the eye and lining the inner eyelids.

Conjunctival Squamous-Cell Carcinoma

A malignant tumor of the conjunctival epithelium, typically arising from the limbal area. It is associated with UV radiation exposure and can invade locally if not treated promptly.

Conjunctivitis

Inflammation of the conjunctiva, the thin, transparent mucous membrane lining the inner surface of the eyelids and the anterior surface of the sclera. Conjunctivitis is the most common cause of red eye and is classified by etiology.

Conjunctivitis (Pink Eye)

Alternate index label for Pink Eye.

Conjunctivitis Or Pink Eye

Inflammation of the conjunctiva causing redness, discharge, irritation, itching, or tearing. Causes include viral or bacterial infection, allergy, and chemical irritation; severe pain, photophobia, vision loss, or contact-lens use requires prompt eye assessment.

Conjunctivoplasty

Plastic or reconstructive surgery of the conjunctiva, performed to repair defects, scarring, adhesions, or

other abnormalities of the ocular surface.

Conn'S Syndrome

Primary hyperaldosteronism caused by autonomous secretion of aldosterone, leading to hypertension and often low serum potassium.

Connective Tissue

A diverse type of tissue that supports, binds, protects, and insulates organs and structures throughout the body.

Connective Tissue Disease

Autoimmune diseases affecting connective tissue. Examples: SLE, scleroderma, RA, Sjogren syndrome, mixed connective tissue disease. Overlap syndromes common.

Connective Tissue Disease-Related Interstitial Lung Disease

Interstitial lung disease associated with autoimmune connective-tissue disease such as systemic sclerosis, rheumatoid arthritis, polymyositis, dermatomyositis, or Sjogren syndrome; inflammation and fibrosis can impair gas exchange.

Consanguinity

A biological relationship between people who share a recent common ancestor; it can increase the chance that both parents carry the same recessive disease variant.

Conscious Sedation For Surgical Procedures

A medical procedure involving conscious sedation for surgical procedures. Indications, risks, preparation, and follow-up depend on the patient and the specific procedure.

Consolidation

An area of lung in which air spaces are filled with fluid, cells, or other material, increasing its density on imaging. Causes include pneumonia, edema, hemorrhage, and tumor.

Consolidation Therapy

Additional treatment given after remission to eliminate residual disease and reduce the risk of relapse.

Constipation

A condition involving fewer than three bowel movements per week, hard or lumpy stools, difficult or painful passage, straining, or a feeling that the bowel has not emptied completely. Causes include diet, medicines, dehydration, functional bowel disorders, and structural or systemic disease. Rectal bleeding, vomiting, constant abdominal pain, inability to pass gas, fever, or unexplained weight loss requires medical evaluation.

Constipation (Laxatives For Constipation)

Alternate index label for Laxatives For Constipation.

Constipation In Infants And Children

Infrequent, hard, painful, or difficult passage of stool in a child, caused by stool withholding, diet, dehydration, illness, medicines, or structural and neurologic disorders.

Constitutional Delay In Puberty

A normal variant in which pubertal development is delayed but eventually progresses normally; growth and bone age are typically delayed.

Constraint-Induced Movement Therapy

Rehabilitation that limits use of a less-affected limb while providing structured practice with an affected limb to improve functional use in selected people.

Constrictive Pericarditis

Thickening and fibrosis of the pericardium restricting diastolic ventricular filling. Presents with jugular venous distension, peripheral edema, hepatomegaly, and Kussmaul sign. Causes include idiopathic, post-viral, radiation, and tuberculosis. Pericardiectomy is the definitive treatment.

Consultation-Liaison Psychiatry

The subspecialty of psychiatry focused on the interface between psychiatry and general medical illness. Psychiatrists provide consultation on medical-surgical wards for patients with psychiatric symptoms arising from or coexisting with medical conditions.

Consumption

An older term for tuberculosis, especially wasting pulmonary tuberculosis; in general usage it also means the act or amount of using something.

Contac Overdose

Overdose of a combination cold medicine that may cause acetaminophen toxicity, antihistamine or decongestant effects, sedation, seizures, or cardiac complications depending on ingredients.

Contact Allergen Testing

Patch testing identifies allergens causing allergic contact dermatitis. Standard panel includes 35 common allergens (nickel, fragrance mix, balsam of Peru, formaldehyde, rubber accelerators, topical antibiotics, preservatives). Patches are applied to the back for 48 hours and read at 48, 72, and 96 hours.

Contact Dermatitis

An inflammatory skin reaction caused by contact with an external substance. It may be allergic, involving delayed immune sensitization, or irritant, caused by direct chemical or physical injury.

Alternate Names:

Dermatitis, Contact

Contact Precautions

Infection control measures used for patients colonised or infected with multidrug-resistant organisms. Precautions include gown and glove use, patient placement in single rooms, and dedicated equipment. Contact precautions are used for MRSA, VRE, CRE, and other resistant organisms.

Contact Tracing

Identifying and monitoring persons exposed to in-

fectious disease. Critical for outbreak control. Examples: COVID-19, Ebola, TB.

Contagious Disease

An infectious disease that can be transmitted directly or indirectly from one person, animal, or source to another.

Contamination

Accidental presence of microorganisms in a specimen, on a surface, or in a normally sterile material without true infection of the host. Contamination can produce misleading culture results and must be distinguished from colonization and invasive disease.

Continuing Medical Education

Postgraduate education that maintains and updates a clinician's knowledge, skills, and professional competence.

Continuity Of Care

Consistent and coordinated care over time and across clinicians or settings, integrating the patient's history, current needs, treatment plan, and preferences. It supports safety, adherence, prevention, and chronic-disease outcomes.

Continuous Bladder Irrigation

Continuous instillation of sterile fluid through a urinary catheter to keep the bladder catheter patent and remove blood clots or debris.

Continuous Combined Hormone Therapy

A hormone regimen in which estrogen and progesterone are taken continuously rather than sequentially.

Alternate Names:

Continuous combined HRT; continuous estrogen-progesterone therapy.

Continuous Electronic Fetal Monitoring

The continuous recording of fetal heart rate and uterine contractions using external transducers (Doppler ultrasound and tocodynamometer) or internal devices (fetal scalp electrode and intrauterine pressure catheter). Used intrapartum to detect fetal hypoxia.

Continuous Glucose Monitoring

Technology measuring interstitial glucose levels continuously providing real-time glucose data, trends, and alerts. Sensors are inserted subcutaneously typically in the abdomen or arm and measure glucose every five minutes. Devices include Dexcom, FreeStyle Libre, and Medtronic Guardian systems.

Continuous Kidney Replacement Therapy

A prolonged extracorporeal blood-purification therapy, usually delivered continuously in an intensive-care setting. It provides gradual fluid and solute removal and is useful for hemodynamically unstable patients with severe AKI.

Continuous Murmurs

Murmurs that persist throughout systole and diastole without interruption, produced by blood flowing continuously through an abnormal connection. The most common cause is patent ductus arteriosus (PDA), where blood flows from the aorta to pulmonary artery throughout the cardiac cycle.

Continuous Positive Airway Pressure

Noninvasive respiratory support that delivers a constant positive pressure throughout the breathing cycle to keep the upper airway or alveoli open.

Continuous Subcutaneous Insulin Infusion

Delivery of rapid-acting insulin through a pump and a subcutaneous infusion set to provide basal insulin and mealtime doses.

Contraception

The deliberate prevention of conception or pregnancy through behavioral, mechanical, chemical, hormonal, or surgical methods. Tiered clinically by real-world efficacy (Pearl Index): Tier 1 (most effective, < 1% failure rate) includes long-acting reversible contraception (LARC: levonorgestrel-releasing and copper intrauterine devices [IUDs], etonogestrel subdermal implants) and permanent surgical sterilization (tubal ligation, bilateral salpingectomy, vasectomy); Tier 2 (moderate efficacy, 6–9% typical failure rate) includes combined oral

contraceptive pills, transdermal patches, vaginal rings, and depot medroxyprogesterone acetate injections; and Tier 3 (least effective, 12–28% typical failure) includes male and female condoms, diaphragms, spermicides, withdrawal, and fertility awareness-based methods.

Contraception And Birth Control

Contraception encompasses methods used to prevent pregnancy, including hormonal options like oral contraceptives, patches, rings, injections, and implants, as well as non-hormonal methods like copper IUDs, barrier methods, diaphragms, and permanent sterilization.

Contraception For Adolescents

Methods to prevent unintended pregnancy. Options: combined oral contraceptives, progestin-only pills, depot medroxyprogesterone acetate, contraceptive implant (Nexplanon), intrauterine devices (IUDs), condoms, and abstinence.

Contraceptive Device, Intrauterine

A small device placed inside the uterus to prevent pregnancy; copper IUDs impair sperm function, while hormonal IUDs release levonorgestrel and thicken cervical mucus.

Contraceptive, Pill

An oral hormonal contraceptive, usually a combined estrogen–progestin pill or a progestin-only pill, that prevents ovulation and/or changes cervical mucus and the uterine lining.

Contracted Pelvis

A pelvis whose size or shape is reduced or abnormal enough to interfere with passage of the fetus during labor.

Contractile Proteins

Proteins, especially actin and myosin, that interact to generate force and shorten muscle cells.

Alternate Names:

Muscle contractile proteins; actomyosin proteins.

Contraction

Shortening or tightening of a muscle; uterine contractions during labor thin and dilate the cervix and help deliver the fetus.

Contraction Stress Test

An antepartum test that evaluates the fetal heart rate response to uterine contractions. Contractions are induced with oxytocin or nipple stimulation (until 3 contractions in 10 minutes). Negative (normal): no late or significant variable decelerations. Positive (abnormal): late decelerations with $\geq 50\%$ of contractions.

Contractions

Rhythmic uterine muscular contractions of labor that produce cervical dilation and effacement, driving descent of the fetus. Characterized by frequency, duration, and intensity; progress is monitored by partogram and tocography (CTG). Braxton Hicks contractions: irregular, non-progressive, painless prelabor contractions.

Contractions Braxton-Hicks (Braxton Hicks Contractions)

Alternate index label for Braxton Hicks Contractions.

Contracture

Permanent or semi-permanent limitation of passive joint range of motion caused by shortening or structural change in muscle, tendon, capsule, fascia, skin, or other periarticular tissue. Prevention and treatment depend on cause and stage.

Contracture Deformity

A fixed limitation of movement caused by shortening or tightening of muscle, tendon, ligament, joint capsule, skin, or other soft tissue. It may follow neurologic disease, prolonged immobility, injury, burns, or inflammation.

Contracture Prevention

Measures such as positioning, stretching, exercise, splinting, orthoses, and serial casting that help preserve joint movement in people at risk of fixed short-

ening.

Contraindication

A condition or circumstance in which a treatment, procedure, or medication should not be used because the potential harm outweighs the expected benefit.

Alternate Names:

Contraindications

Contralateral

Pertaining to, positioned on, or affecting the opposite side of the body relative to a reference structure, lesion, or point of origin. In clinical neurology, motor and primary somatosensory pathways exhibit contralateral representation: an ischemic stroke or cortical lesion in the precentral gyrus of the left cerebral hemisphere results in contralateral (right-sided) hemiparesis due to decussation of the lateral corticospinal tract in the caudal medulla; similarly, pain and temperature signals ascend the anterolateral spinothalamic tract and project to the contralateral sensory cortex.

Contrast

A difference that makes structures distinguishable; in imaging, contrast material is administered to improve visualization of organs, vessels, or tissues.

Contrast Agent

Substance enhancing image visibility. X-ray/CT: iodine-based (positive contrast). MRI: gadolinium-based (shortens T1, bright on T1). Ultrasound: microbubble agents. Barium sulfate for GI studies.

Contrast Echocardiography

Use of microbubble contrast agents to enhance endocardial border definition and assess myocardial perfusion. Indicated for suboptimal non-contrast echo images and assessment of myocardial viability. Microbubbles remain entirely within the intravascular space, making them ideal for perfusion assessment.

Contrast Medium

A substance administered or placed in the body to make tissues, organs, or body spaces more visible during imaging.

Alternate Names:

Contrast agent; radiographic contrast material.

Contrast Radiology

Imaging of the gastrointestinal tract using contrast material, such as barium, to outline the esophagus, stomach, intestine, or colon on radiographs or fluoroscopy.

Contrast Reaction

Adverse reaction to contrast agent. Mild: nausea, urticaria. Severe: anaphylaxis, bronchospasm. Pre-medication for prior reactions.

Contrast-Associated Acute Kidney Injury

Acute worsening of kidney function occurring after administration of contrast, whether or not contrast is causal. Risk assessment includes baseline kidney function, hemodynamic status, diabetes, nephrotoxins, urgency, and the need to avoid unnecessary contrast exposure.

Contrast-Enhanced Ultrasound

Ultrasound using microbubble contrast agents. Improves lesion characterization, perfusion assessment.

Contrast-Induced Nephropathy

Acute kidney injury after iodinated contrast administration. Risk factors: pre-existing renal impairment, diabetes, dehydration. Prevention: hydration, lowest contrast volume, N-acetylcysteine controversial.

Contrecoup

An injury occurring on the side of an organ opposite the site of impact, especially a brain injury produced when the brain moves within the skull after trauma.

Control (Research)

A comparison participant or group in a study that does not receive the experimental intervention, or receives standard care or a placebo, allowing the intervention's effects to be estimated.

Control Group

The comparison group in a study, which may receive usual care, a placebo, or no intervention according to the study design.

Controlled Cord Traction

A technique for active management of third-stage labor: gentle, steady traction on the umbilical cord with one hand while the other hand applies suprapubic counter-pressure (to prevent uterine inversion). Performed after signs of placental separation. The Brandt-Andrews maneuver and the Finocchietti technique are CCT methods.

Controlled Ovarian Hyperstimulation

The pharmacological stimulation of the ovaries using exogenous gonadotropins (follicle-stimulating hormone [FSH] and luteinizing hormone [LH] preparations) alongside gonadotropin-releasing hormone (GnRH) agonists or antagonists to induce the simultaneous development and maturation of multiple ovarian follicles. Primarily utilized in in vitro fertilization and intrauterine insemination protocols, requiring close ultrasound follicular tracking and serum estradiol monitoring to optimize oocyte yield while preventing ovarian hyperstimulation syndrome.

Alternate Names:

COH; Ovarian Stimulation

Controllers

Long-term asthma medicines taken regularly to reduce airway inflammation and prevent symptoms or exacerbations.

Alternate Names:

Controller medicines; maintenance asthma therapy.

Controlling Your High Blood Pressure

Long-term blood-pressure management using accurate measurement, lifestyle measures, prescribed medicines, adherence, and monitoring for complications and treatment adverse effects.

Contusion

A closed soft-tissue injury caused by blunt force, producing bleeding into tissues without an open

wound. It commonly causes pain, swelling, and ecchymosis; severe contusions may involve muscle necrosis, compartment syndrome, internal bleeding, or associated bone and organ injury.

Conus Medullaris Syndrome

A clinical condition resulting from damage to the conus medullaris, the tapered, terminal end of the spinal cord located at approximately the L1-L2 vertebral level.

Convergence

The inward movement of both eyes so that they are directed toward the same nearby object.

Convergence Insufficiency

Inability to maintain binocular convergence on near objects, causing eyestrain, headaches, blurred near vision, and transient diplopia during reading. Common in children and young adults; treated with convergence exercises and base-in prism, with surgery rarely needed.

Conversion Disorder

Alternate index label; see *Functional neurologic disorder/conversion disorder*.

Conversion Disorder (Functional Neurological Symptom Disorder)

A condition in which neurological symptoms, such as weakness, abnormal movements, sensory loss, or seizures, are not explained by a recognized structural neurological disease and cause significant impairment.

Alternate Names:

Functional Neurological Symptom Disorder

Convulsion

A sudden episode of involuntary, often rhythmic muscle contractions that may occur with a seizure or other disturbance of brain function.

Alternate Names:

Convulsive episode; seizure-related motor activity.

Cooking Without Salt

Preparing food with little or no added sodium to reduce dietary sodium intake, often useful in blood-pressure or fluid-retention management when combined with an individualized eating plan.

Cooley'S Anemia

Alternate index label; see *Thalassemia*.

Coombs Test

A laboratory test that detects antibodies or complement attached to red blood cells, or antibodies in serum that can react with red cells. It is used in evaluating immune hemolysis and blood compatibility.

Cooper'S Ligament

Fibrous connective-tissue septa extending from the deep surface of the breast toward the skin and pectoral fascia. Tumor invasion or fibrosis may cause skin retraction.

Coordination

The ability to control movements smoothly, accurately, and in the correct order. It depends on the brain, nerves, muscles, vision, and balance and may be tested with finger-to-nose, heel-to-shin, or rapid alternating movements. movements.

COPD

Chronic obstructive pulmonary disease is a progressive, largely irreversible airflow limitation caused by chronic bronchitis, emphysema, or both, most commonly due to cigarette smoking. It presents with chronic cough, sputum production, and exertional dyspnea. Spirometry shows a reduced FEV1/FVC ratio.

COPD - Control Drugs

Long-term medicines used to reduce COPD symptoms and exacerbations, such as long-acting bronchodilators and, for selected patients, inhaled corticosteroids.

COPD - Managing Stress And Your

Mood

Support for anxiety, depression, and stress in chronic obstructive pulmonary disease through breathing strategies, activity, pulmonary rehabilitation, counseling, and treatment when indicated.

COPD - Quick-Relief Drugs

Fast-acting inhaled bronchodilators used for short-term relief of COPD breathlessness or bronchospasm; frequent need may indicate inadequate control or an exacerbation.

COPD And Other Health Problems

The interaction between chronic obstructive pulmonary disease and conditions such as cardiovascular disease, osteoporosis, depression, diabetes, and lung cancer, which can complicate symptoms and care.

COPD Exacerbation

Acute worsening of respiratory symptoms beyond normal day-to-day variation in a patient with COPD that leads to additional therapy. Common triggers include viral or bacterial infection, air pollution, and cardiopulmonary comorbidity.

COPD Flare-Ups

Acute worsening of breathlessness, cough, or sputum beyond usual daily variation in chronic obstructive pulmonary disease, often triggered by infection, pollution, or other irritants.

COPD Rehabilitation

Comprehensive intervention for COPD patients including exercise training, education, behavior change. Components: aerobic exercise, strength training, breathing techniques, nutrition, psychosocial support. Improves exercise capacity, quality of life, reduces hospitalizations.

Copper

An essential trace element required for iron transport, connective-tissue cross-linking, energy metabolism, neurotransmitter synthesis, and antioxidant enzymes. Deficiency can cause anemia, neutropenia, impaired neurologic function, and bone

abnormalities; excess is toxic and accumulates in Wilson disease.

Copper In Diet

A patient-care topic concerning copper in diet. It addresses the relevant purpose, risks, management, and follow-up.

Copper Poisoning

Toxic exposure to copper or copper salts that may cause vomiting, abdominal pain, hemolysis, liver injury, kidney injury, or shock.

Coprolalia

Involuntary utterance of obscene, taboo, or socially inappropriate words, most often described as a complex vocal tic in Tourette syndrome.

Copy Number Variant

A deletion or duplication that changes the number of copies of a DNA segment; its clinical significance depends on the region, size, genes involved, inheritance, and available evidence.

Copy Number Variation

Deletions or duplications of DNA segments >1 kb. Contribute to genetic diversity and disease. Examples: 22q11.2 deletion, Williams syndrome (7q11.23 deletion).

CoQ10

Coenzyme Q10, a lipid-soluble mitochondrial electron-transport compound and antioxidant also sold as a dietary supplement.

Cor

The Latin anatomical term for heart, used in medical names such as cor pulmonale.

Cor Pulmonale

Right ventricular hypertrophy and dilation from pulmonary hypertension due to lung disease. Features include peripheral edema, JVD, and hepatomegaly.

Cor Triatriatum

A rare congenital heart defect where the left atrium is divided into two chambers by a fibromuscular membrane, separating the pulmonary venous chamber (posterior) from the true left atrium (anterior) containing the left atrial appendage and mitral valve. The membrane obstructs pulmonary venous return, mimicking mitral stenosis.

Coracoid Process

Hook-like scapular projection extending anteriorly and laterally. Attachment for 3 muscles (pectoralis minor, coracobrachialis, short head of biceps) and 3 ligaments. Important surgical landmark. Fractures uncommon but may occur with direct trauma or shoulder dislocations.

Cord

A long, narrow structure such as the spinal cord, which contains the central nervous tissue, or the umbilical cord, which connects a fetus to the placenta.

Cord Blood Testing

Laboratory testing of blood collected from the umbilical cord at birth, which may include blood type, complete blood count, blood gases, glucose, or tests for infection or inherited disease when clinically indicated.

Cord Blood Stem Cells

Blood-forming stem cells collected from the umbilical cord and placenta after birth. They can make different types of blood and immune cells and may be used for stem-cell transplantation.

Cord Presentation

The presence of the umbilical cord between the presenting fetal part and the cervix, with intact membranes. Risk factors: malpresentation, unstable lie, low-lying placenta, and long cord. If the membranes rupture, the cord may prolapse (umbilical cord prolapse).

Cordocentesis

A prenatal diagnostic procedure in which fetal blood

is sampled from the umbilical cord, usually under ultrasound guidance.

Cordotomy

Surgical division of selected nerve fibers, especially a spinal cord tract, to interrupt transmission of severe chronic pain.

Core Biopsy

Removal of one or more cylindrical tissue samples with a hollow cutting needle for microscopic examination. It preserves more tissue architecture than fine-needle aspiration and is used for breast, liver, prostate, and other lesions.

Core Needle Biopsy

Biopsy using a hollow, relatively wide cutting needle to obtain tissue cylinders that preserve architecture; ultrasound, CT, MRI, or stereotactic guidance may be used.

Cori Cycle

Lactate produced by muscles transported to liver, converted to glucose via gluconeogenesis, returned to muscles.

Cori Disease

An autosomal recessive inborn error of glycogen degradation (Glycogen Storage Disease Type III [GSD III]) caused by mutations in the *AGL* gene, resulting in a deficiency of the bifunctional glycogen debranching enzyme (amylo-1,6-glucosidase and 4-alpha-glucanotransferase). Leads to incomplete glycogen breakdown and abnormal accumulation of limit dextrin in liver and muscle tissues. Clinically presents in infancy with hepatomegaly, hypoglycemia, hyperlipidemia, and growth impairment; GSD IIIa affects both liver and cardiac/skeletal muscle, resulting in late-onset progressive myopathy and cardiomyopathy, whereas GSD IIIb affects liver tissue exclusively.

Alternate Names:

Glycogen Storage Disease Type III (GSD III); Forbes Disease; Debrancher Deficiency

Corn

A localized thickening of skin caused by repeated pressure or friction, often occurring on the toes or feet.

Alternate Names:

Clavus; heloma.

Cornea

Transparent, avascular, dome-shaped anterior eye surface providing approximately two-thirds of total refractive power. Five layers: epithelium (stratified squamous, rapidly regenerating), Bowman's membrane, stroma (thickest, regular collagen), Descemet's membrane, endothelium (single cell layer maintaining transparency).

Corneal Abrasion

Loss of corneal epithelium caused by mechanical trauma — contact with fingernail, makeup brush, foreign body, contact lens overwear, dry eye, sports injury, paper edge, or surgical instrumentation. Most common eye injury presenting to emergency departments.

Corneal Cross-Linking

Corneal collagen cross-linking is a minimally invasive therapeutic procedure that strengthens the corneal stroma by creating additional chemical bonds between collagen fibrils, thereby stiffening the cornea and halting or slowing the progression of corneal ectatic disorders, particularly keratoconus and post-refractive surgery ectasia.

Corneal Disease

Corneal disease affects the transparent front surface of the eye through infection, inflammation, trauma, dystrophy, degeneration, dryness, or abnormal shape. Pain, redness, light sensitivity, discharge, or reduced vision can signal urgent disease because scarring may impair sight.

Corneal Edema

Excess fluid within the corneal stroma or epithelium causing corneal thickening, reduced transparency, glare, and blurred vision. Causes include endothelial dysfunction, acute glaucoma, inflammation, trauma,

and postoperative injury.

Corneal Graft (Corneal Transplant)

Surgical replacement of part or all of a diseased or damaged cornea with donor corneal tissue to restore vision or relieve pain.

Alternate Names:

Corneal Transplant

Corneal Implant

An implanted device or tissue substitute placed in or on the cornea to restore vision, replace diseased tissue, or alter corneal shape.

Corneal Inflammation (Keratitis)

Alternate index label for Keratitis.

Corneal Injury

Damage to the cornea, such as abrasion, foreign body, chemical burn, infection, or laceration.

Corneal Transplant

A medical procedure involving corneal transplant. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

Corneal Ulcer

A corneal ulcer is a defect in the corneal epithelium with associated stromal inflammation and necrosis, typically caused by infectious or non-infectious mechanisms, and it is a sight-threatening condition that requires prompt diagnosis and treatment.

Corneal Ulcers And Infections

Infection or inflammation of the cornea that may produce an epithelial defect or ulcer, pain, redness, tearing, discharge, and light sensitivity. Bacterial, fungal, protozoal, and viral causes can threaten vision and require urgent ophthalmic assessment.

Corneitis

Inflammation of the cornea, often producing pain, photophobia, tearing, and impaired vision. It may be infectious, immune-mediated, traumatic, or re-

lated to exposure.

Cornelia De Lange Syndrome

A genetic disorder caused by mutations in genes of the cohesin complex (NIPBL 60%, SMC1A, SMC3, RAD21, HDAC8).

Corns

A corn is a localized thickening of skin caused by repeated pressure or friction, commonly on toes or other weight-bearing areas. Proper footwear, pressure relief, and treatment of the underlying deformity help; diabetes or poor circulation makes self-removal risky.

Corns And Calluses

Corns are small, localized areas of thickened skin caused by repeated pressure or friction, usually on the toes. Calluses are broader areas of thickened, hardened skin, usually on the soles of the feet or palms of the hands. Both are usually harmless but may become painful.

Coronal

Relating to a plane that divides the body into front and back portions, or to the crown or top of a structure.

Coronal Caries

Caries on clinical crown. Smooth surface or pits/fissures.

Coronal Plane

A vertical plane that divides the body or an organ into front (anterior) and back (posterior) portions.

Coronary

Relating to the arteries or circulation that supply the heart muscle.

Alternate Names:

Cardiac blood-vessel-related; heart-coronary.

Coronary Aneurysm

An abnormal widening or ballooning of a coronary artery. It may result from atherosclerosis, inflam-

mation, infection, injury, or a congenital condition and can cause clotting, blockage, or rarely rupture.

Coronary Angiography

Invasive imaging of the coronary arteries using catheter-delivered contrast and X-ray fluoroscopy. It shows coronary anatomy and stenosis and can support treatment planning; noninvasive tests may be appropriate in other clinical settings.

Coronary Arteries

The right and left arteries arising from the aortic sinuses that supply the myocardium. Their branches include the right coronary, anterior interventricular, and circumflex arteries.

Coronary Artery

One of the blood vessels branching from the aorta that supplies oxygen-rich blood directly to the heart muscle.

Coronary Artery Aneurysm

A localized dilatation of a coronary artery exceeding the normal vessel diameter by approximately 1.5 times. It may be caused by atherosclerosis, Kawasaki disease, connective-tissue disorders, infection, trauma, or an iatrogenic procedure, and can lead to thrombosis, distal embolization, myocardial ischemia, or rupture.

Coronary Artery Anomaly

A congenital abnormality in the origin, course, structure, or termination of a coronary artery. Some anomalies are incidental, whereas others can impair myocardial perfusion or increase the risk of ischemia, arrhythmia, or sudden cardiac death.

Coronary Artery Bypass

A surgical procedure that creates a new route for blood flow around a narrowed or blocked coronary artery using a vascular graft.

Coronary Artery Bypass Grafting

A surgical revascularization procedure for severe coronary artery disease. Grafts, most commonly

the left internal mammary artery (LIMA) and saphenous vein grafts (SVG), are used to bypass stenotic coronary arterial segments. Indicated for multi-vessel CAD, left main coronary artery stenosis, or severe CAD in diabetic patients.

Coronary Artery Bypass Grafting

Open heart surgery to bypass stenotic coronary arteries using autologous grafts. On-pump: cardiopulmonary bypass, cardioplegic arrest. Off-pump: beating heart, no bypass machine.

Alternate Names:

Coronary Artery Bypass Grafting

Coronary Artery Bypass Surgery

Surgery that uses a graft to route blood around a narrowed or blocked coronary artery.

Alternate Names:

CABG; coronary bypass surgery.

Coronary Artery Disease

Narrowing or occlusion of coronary arteries, usually due to atherosclerosis, reducing blood flow to the myocardium. Risk factors include hypertension, diabetes, hyperlipidemia, smoking, family history, and obesity. CAD can present as stable angina, acute coronary syndromes (unstable angina, NSTEMI, STEMI), or sudden cardiac death.

Coronary Artery Fistula

An abnormal connection between a coronary artery and a heart chamber or vessel that may cause ischemia, failure, arrhythmia, or endocarditis.

Coronary Artery Spasm

Transient intense constriction of an epicardial coronary artery that reduces myocardial blood flow. It may cause rest angina and transient ST-segment elevation and can be triggered by smoking, stimulants, or endothelial dysfunction; calcium-channel blockers and nitrates are commonly used for prevention and relief.

Coronary Calcium Score

A CT-based measurement of coronary artery cal-

cification, quantified as the Agatston score. A score of 0 indicates very low risk of cardiovascular events; >400 indicates high burden and significant atherosclerosis. It is used for cardiovascular risk stratification in asymptomatic individuals and may guide statin therapy decisions.

Coronary Calcium Scoring

Non-contrast CT measuring calcified plaque in coronary arteries. Agatston score predicts cardiovascular risk.

Coronary Care Unit

A hospital unit providing continuous monitoring and specialized care for acute cardiac illness.

Alternate Names:

CCU; cardiac care unit.

Coronary Care Unit

A specialized hospital unit providing continuous monitoring and treatment for patients with serious acute cardiac conditions.

Alternate Names:

CCU

Coronary Circulation

The vascular system supplying blood to the myocardium. The left coronary artery divides into the left anterior descending (LAD) and circumflex (LCx) arteries. The right coronary artery (RCA) supplies the right ventricle, SA node (in 60% of people), and inferior left ventricular wall.

Coronary Computed Tomography Angiography

A non-invasive imaging examination of the coronary circulation performed using ECG-gated multidetector computed tomography following intravenous administration of iodinated contrast. It provides high-resolution, three-dimensional visualization of the coronary arterial lumen and vessel wall, allowing precise detection and quantification of both calcified and non-calcified atherosclerotic plaques, assessment of luminal stenosis, and identification of high-risk plaque features (positive remodeling, low attenuation). Recommended as the first-line anatomical

test for evaluating suspected stable coronary artery disease in patients with low-to-intermediate pretest probability.

Alternate Names:

CCTA; Coronary CT Angiography; Cardiac CTA

Coronary Dominance

Determined by which artery gives rise to the posterior descending artery. Right coronary dominance (85% of people): RCA gives rise to PDA. Left coronary dominance (8%): LCx gives rise to PDA. Codominance (7%): both RCA and LCx contribute.

Coronary Endarterectomy

Surgical removal of atherosclerotic plaque from the inner lining of a coronary artery.

Alternate Names:

Coronary plaque endarterectomy; coronary endarterectomy procedure.

Coronary Heart Disease

Disease caused by reduced blood flow through the coronary arteries, usually due to atherosclerotic plaque. It may cause angina, myocardial infarction, heart failure, or sudden cardiac death. Also called coronary artery disease.

Alternate Names:

coronary artery disease.

Coronary Insufficiency

Inadequate blood flow through the coronary circulation to meet myocardial oxygen demand, usually because of coronary artery disease.

Coronary Microvascular Angina

Angina caused by impaired regulation or constriction of the small coronary vessels, often producing ischemic symptoms despite no flow-limiting epicardial coronary obstruction. Assessment may include evaluation for coronary microvascular dysfunction; management is individualized according to symptoms, cardiovascular risk, and the underlying mechanism.

Coronary Microvascular Disease

Alternate index label; see *Small vessel disease*.

Coronary Microvascular Dysfunction

Impairment of the small coronary arteries and arterioles causing impaired coronary flow reserve despite normal epicardial coronary arteries. Common in women, patients with diabetes, and hypertension. Causes chest pain (angina equivalent) and may contribute to heart failure with preserved ejection fraction.

Coronary Occlusion

Obstruction of a coronary artery, commonly by atherosclerotic plaque and thrombus, that can cause myocardial ischemia or infarction.

Coronary Sinus

A large vein on the back of the heart that collects de-oxygenated blood from the heart muscle and drains it into the right atrium.

Coronary Slow Flow Phenomenon

An angiographic microvascular disorder characterized by delayed opacification and clearance of radiopaque contrast in normal or near-normal epicardial coronary arteries (quantified by a corrected TIMI frame count > 27 frames), in the absence of obstructive epicardial stenosis, spasm, dissection, or severe left ventricular dysfunction. Patients typically present with recurrent episodes of acute rest or exertional angina; the pathophysiology involves coronary microvascular endothelial dysfunction, microvascular tone abnormalities, and platelet hyperactivity, managed with calcium channel blockers, dipyridamole, or statins.

Alternate Names:

CSFP; Slow Coronary Flow; Primary Coronary Slow Flow

Coronary Spasm

Temporary contraction of a coronary artery that reduces blood flow to the heart muscle and may cause angina or infarction.

Alternate Names:

Vasospastic angina mechanism; coronary artery

spasm.

Coronary Steal Phenomenon

A paradoxical hemodynamic reduction in coronary blood flow supplying an ischemic, maximally vasodilated myocardial territory dependent on a severely stenotic epicardial coronary artery or collateral network, provoked by pharmacological vasodilation of adjacent normal coronary vascular beds. When a potent, non-selective coronary arteriolar vasodilator (such as dipyridamole, adenosine, or regadenoson) is administered, arterioles in non-ischemic territories with preserved autoregulation dilate vigorously, reducing vascular resistance and shunting blood flow away from the diseased, fixed-resistance stenotic artery, precipitating or aggravating subendocardial ischemia. Forms the diagnostic basis of pharmacological myocardial perfusion stress testing.

Alternate Names:

Coronary Steal Syndrome; Myocardial Steal

Coronary Stent

Mesh tube keeping coronary artery open after angioplasty. Types: bare-metal (higher restenosis), drug-eluting (releases antiproliferative drug, lower restenosis but prolonged DAPT). Complications: stent thrombosis, restenosis, bleeding (from DAPT).

Coronary Thrombosis

Formation of a blood clot in a coronary artery, potentially obstructing blood flow and causing myocardial infarction.

Coronavirus

A medicine or chemical compound identified by coronavirus. Its uses, effects, and risks depend on the specific substance and clinical context.

Coronavirus Disease 2019

A respiratory and systemic infectious disease caused by SARS-CoV-2. Illness ranges from asymptomatic infection to pneumonia, respiratory failure, and multisystem complications.

Corporeal

Relating to the physical body rather than the mind

or spirit.

Corpse

The dead body of a human being; the subject of medicolegal examination. Forensic assessment of a corpse includes identification, determination of death and time of death (rigor mortis, livor mortis, algor mortis, vitreous potassium, gastric emptying), external and internal examination, and collection of evidence.

Corpus

Latin for body; in anatomy it refers to the main body of an organ or structure, such as the corpus callosum or corpus uteri.

Corpus Callosum

Brain's largest white matter tract with approximately 200 million axons connecting left and right hemispheres. Four parts: rostrum, genu, body, splenium. Facilitates interhemispheric communication for sensory, motor, and cognitive integration.

Corpus Cavernosum

One of two columns of erectile tissue in the penis that fill with blood during erection.

Alternate Names:

Cavernous body; penile corpus cavernosum.

Corpus Luteum

The temporary endocrine structure formed from an ovarian follicle after ovulation; it produces progesterone during the luteal phase and early pregnancy.

Alternate Names:

Yellow body; luteal body.

Corpus Luteum Cyst

A physiological functional ovarian cyst that develops when the post-ovulatory corpus luteum fails to regress, seals over, and fills with serous fluid or blood, typically exceeding 3 cm in diameter. Often asymptomatic and self-limiting over 1–3 menstrual cycles, but can cause localized pelvic pain, delayed menses, or acute hemoperitoneum following spontaneous rupture, particularly during early pregnancy

or anticoagulant therapy.

Corpus Spongiosum

A column of erectile tissue surrounding the penile urethra and expanding distally to form the glans.

Alternate Names:

Spongy body; corpus spongiosum penis.

Correct Code For Diagnostic Dilation And Curettage

Dilation and curettage is a procedure that opens the cervix and removes tissue from the uterus for diagnosis or treatment. Coding depends on the indication, setting, technique, pregnancy status, and tissue findings and should be assigned from the documented procedure.

Corrected Age

The age of a preterm infant calculated by subtracting the number of weeks born before 40 weeks of gestation from chronological age. Corrected age helps interpret growth and developmental milestones during early childhood, commonly until about 2 years of age.

Corrigan Pulse

A forceful, rapidly rising and collapsing arterial pulse, classically associated with aortic regurgitation.

Corrosive

Substance causing tissue destruction by chemical action. Acids: coagulation necrosis, eschar. Alkalis: liquefaction necrosis, deep penetration. Ingestion: avoid emesis, endoscopy, surgical consultation.

Corrugator Muscle

A small facial muscle that draws the eyebrows downward and inward, contributing to frowning.

Alternate Names:

Corrugator supercilii; glabellar muscle.

Cortex

The outer layer of an organ or structure, such as the cerebral cortex, adrenal cortex, or outer layer

of a hair shaft.

Alternate Names:

Cortical layer; outer cortex.

Corti'S Ganglion

The spiral ganglion of the cochlea, containing the cell bodies of sensory neurons that transmit auditory information from the organ of Corti.

Cortical

Relating to the cortex, the outer layer of an organ such as the brain, kidney, or adrenal gland.

Cortical Bone

Dense bone forming the outer shell of most bones and providing much of the skeleton's mechanical strength.

Alternate Names:

Compact bone; cortical tissue.

Cortical Cataract

A type of age-related lens opacity that begins in the peripheral lens cortex as wedge-shaped or spoke-like opacities that extend centripetally toward the visual axis, caused by disruption of the normally orderly arrangement of lens fibers and the accumulation of fluid between them.

Corticobasal Degeneration

A rare, progressive brain disorder affecting regions involved in movement and higher brain functions. It usually affects one side more than the other and may cause stiffness and slow movement, difficulty carrying out learned movements (apraxia), involuntary jerks, abnormal muscle contractions (dystonia), reduced sensation, or an "alien limb" that feels or acts outside the person's control.

Corticosteroid

A steroid hormone from the adrenal cortex or a synthetic analogue; glucocorticoids reduce inflammation and immune activity, while mineralocorticoids regulate salt and water balance.

Corticosteroids

Synthetic glucocorticoids with potent anti-inflammatory and immunosuppressive effects. Examples include prednisone, prednisolone, methylprednisolone, dexamethasone, and hydrocortisone. They suppress inflammatory gene expression and inhibit immune cell function.

Corticosteroids Mechanism

Corticosteroids exert their anti-inflammatory and immunosuppressive effects primarily by binding to intracellular glucocorticoid receptors, which then translocate to the nucleus and modulate gene transcription.

Corticosteroids Overdose

Overdose of corticosteroids that may cause gastrointestinal symptoms, mood changes, hyperglycemia, fluid retention, infection risk, or adrenal suppression.

Corticotropin-Releasing Factor

A hypothalamic hormone that stimulates the pituitary gland to release adrenocorticotrophic hormone and helps coordinate the stress response.

Alternate Names:

Corticotropin-releasing hormone; CRH.

Cortisol

The primary glucocorticoid produced by the adrenal cortex (zona fasciculata) under ACTH control; essential for stress response, metabolism, and homeostasis. Functions: gluconeogenesis, glycogenolysis, protein catabolism, lipolysis, anti-inflammatory/immunosuppressive effects, and maintenance of vascular tone.

Cortisol Blood Test

A blood test measuring cortisol, a hormone produced by the adrenal cortex. Results help evaluate adrenal insufficiency or cortisol excess, but vary substantially with time of day, stress, illness, medicines, and the assay used.

Cortisol Urine Test

A test measuring cortisol excreted in a timed urine collection, commonly 24-hour urine free cortisol, used to evaluate suspected excess cortisol production such as Cushing syndrome.

Cortisone

A corticosteroid that is converted in the body to cortisol and can be used to reduce inflammation or replace glucocorticoid activity.

Coryza

Acute inflammation of the nasal mucous membranes with nasal discharge and obstruction, commonly occurring in the common cold or other upper-respiratory infection.

Cosmeceutical

A cosmetic product marketed as having biologically active, drug-like benefits; the term has no uniform formal regulatory category in many jurisdictions.

Cosmetic Allergies

Cosmetic products can cause irritant dermatitis or allergic contact dermatitis, producing itching, redness, swelling, scaling, or blistering where applied. Stopping the suspected product and medical assessment, sometimes with patch testing, help identify the responsible ingredient.

Cosmetic Dermatology

Cosmetic dermatology encompasses aesthetic procedures. Botulinum toxin injections (Botox, Dysport, Xeomin) relax facial muscles reducing wrinkles. Dermal fillers (hyaluronic acid, calcium hydroxylapatite, poly-L-lactic acid, polymethylmethacrylate) restore volume.

Cosmetic Ear Surgery

A medical procedure involving cosmetic ear surgery. Indications, risks, preparation, and follow-up depend on the patient's clinical condition and the specific procedure.

Cost-Effectiveness

Comparison of costs and outcomes of interventions. Used for resource allocation.

Costello Syndrome

A rare multisystem disorder classified as a RASopathy, caused by heterozygous de novo germline missense mutations in the proto-oncogene *HRAS* on chromosome 11p15.5. Classically manifests with severe infantile failure to thrive, persistent feeding difficulties, short stature, characteristic coarse facial appearance, curly sparse hair, loose skin with deep creases on the palms and soles, periorificial papillomata, hypertrophic cardiomyopathy, and arrhythmias (multifocal atrial tachycardia). Patients carry a markedly elevated lifetime risk of benign and malignant embryonal neoplasms, particularly rhabdomyosarcoma and neuroblastoma.

Costochondritis

Costochondritis is inflammation or irritation where ribs join the breastbone, causing localized chest pain often worse with movement or pressing the area.

Alternate Names:

Chest Wall Pain Costosternal Chondrodynia Costosternal Syndrome

Costochondritis (Costochondritis And Tietze Syndrome)

Alternate index label for Costochondritis and Tietze Syndrome.

Costochondritis And Tietze Syndrome

Costochondritis is inflammation or irritation at the junction of ribs and the breastbone, causing reproducible chest-wall pain. Tietze syndrome is a less common related condition with visible swelling at one or a few joints; heart and lung emergencies must still be excluded.

Alternate Names:

Costochondritis (Costochondritis And Tietze Syndrome) Tietze Syndrome (Costochondritis And Tietze Syndrome)

Costosternal Chondrodynia

Alternate index label; see *Costochondritis*.

Costosternal Syndrome

Alternate index label; see *Costochondritis*.

Cot Death

Sudden infant death syndrome, the sudden unexplained death of an apparently healthy infant, usually during sleep, that remains unexplained after investigation.

Cough

Cough is a protective reflex that clears the airways; its duration, triggers, sputum, associated symptoms, and examination findings help distinguish infectious, inflammatory, cardiac, and other causes. foreign material from the tracheobronchial tree.

Cough Augmentation

Techniques to improve cough effectiveness in patients with neuromuscular disease or chest wall weakness. Methods include manually assisted cough (abdominal thrust timed with cough), mechanical insufflation-exsufflation (CoughAssist device), and breath stacking with a resuscitation bag.

Cough Chronic (Chronic Cough)

Alternate index label for Chronic Cough.

Cough Headaches

Headaches triggered by coughing, sneezing, straining, or other sudden increases in pressure in the head.

Cough In Adults

A cough in an adult may be acute, subacute, or chronic and may result from infection, asthma, chronic obstructive pulmonary disease, reflux, upper-airway cough syndrome, medication, or other disease. Coughing blood, breathing difficulty, chest pain, low oxygen, or persistent unexplained cough requires medical assessment.

Cough Suppressant

An antitussive medicine or measure that reduces the urge or reflex to cough; treatment should address the underlying cause and avoid suppressing a productive

cough when clearance is needed.

Coughing Up Blood

Expectoration of blood or blood-streaked sputum from the lower respiratory tract, called hemoptysis; heavy bleeding or breathing difficulty is an emergency.

Could A Stiff Neck Be A Sign Of Something Serious

Neck stiffness commonly follows muscle strain, but stiffness with fever, severe headache, light sensitivity, confusion, rash, weakness, trauma, or neurologic change can signal meningitis, bleeding, spinal injury, or another emergency.

Count Rate

Number of detected events per second. Dead time losses at high count rates.

Countercurrent Multiplication

The renal medullary process in which opposing tubular fluid flow and selective permeability along the loop of Henle generate a corticomedullary osmotic gradient. This gradient permits collecting-duct water reabsorption when antidiuretic hormone is present.

Counterpulsation

Timed inflation and deflation of a balloon or external cuffs in relation to the heartbeat to improve coronary perfusion or reduce cardiac workload, as in intra-aortic balloon counterpulsation.

Countertransference

The therapist's emotional reactions to the patient, which may be influenced by the therapist's own unresolved conflicts or may be a response to the patient's transference. Awareness of countertransference is essential for effective therapy and can provide valuable clinical information about the patient's interpersonal style.

Counting Carbohydrates

Estimating the grams of carbohydrate in foods and

drinks to help plan meals, match insulin, and manage blood glucose, especially in diabetes.

Coup-Contrecoup Injury

Brain injury from acceleration-deceleration trauma. Coup: injury at site of impact. Contrecoup: injury on opposite side. Common in falls, motor vehicle accidents.

Courvoisier Sign

Clinical finding of a palpable non-tender gallbladder in obstructive jaundice suggesting malignant biliary obstruction. In gallstone disease, the gallbladder is typically fibrotic and not palpable, whereas in malignant obstruction it is distended because the wall is initially normal and compliant.

Covered Stent (Vascular)

A vascular stent lined with a graft material that supports the vessel and excludes a leak or aneurysm from the bloodstream.

Alternate Names:

Vascular

COVID Toe

A chilblain-like skin lesion reported in association with COVID-19, usually affecting the toes or fingers and appearing red, purple, or swollen.

COVID-19

Coronavirus disease caused by infection with SARS-CoV-2. Illness ranges from asymptomatic or mild disease to pneumonia, respiratory failure, thrombosis, or death; common symptoms include fever, cough, shortness of breath, fatigue, muscle aches, and altered taste or smell. Some people develop persistent symptoms after the acute infection.

COVID-19 Antibody Test

A blood test that detects antibodies produced in response to SARS-CoV-2 infection or vaccination; it does not reliably diagnose current infection or establish complete immunity.

COVID-19 In Pregnancy

Pregnant women with COVID-19 are at increased risk of severe illness (ICU admission, mechanical ventilation, death) compared to non-pregnant women. Risks to the fetus: preterm birth, cesarean delivery, and possibly stillbirth. Vertical transmission is rare but possible.

COVID-19 Symptoms

Symptoms of SARS-CoV-2 infection, which may include fever, cough, sore throat, congestion, fatigue, muscle aches, headache, loss of smell or taste, vomiting, or diarrhea.

COVID-19 Test

A test that detects SARS-CoV-2 infection. Nucleic acid amplification tests, including RT-PCR, detect viral genetic material, while rapid antigen tests detect viral proteins. Test performance depends on timing, specimen quality, and the amount of virus present.

COVID-19 Vaccines

Vaccines that prime immune responses against SARS-CoV-2 and reduce severe disease, hospitalization, and death; products, schedules, effectiveness, and recommendations vary by age and risk.

COVID-19 Vaccines For Children Ages 6 Months And Older

COVID-19 vaccination guidance for children at least six months old, with product and dose schedules determined by age, prior doses, immune status, and current public-health recommendations.

COVID-19 Virus Test

A test for current SARS-CoV-2 infection, usually using a nucleic acid amplification test or antigen test on a respiratory specimen; results must be interpreted with symptoms, timing, and test performance.

Cow's Milk - Infants

Guidance on cow's milk in infancy: it should not replace breast milk or iron-fortified formula before 12 months because of low iron content and risks of

renal solute load and intestinal blood loss.

Cow'S Milk And Children

Nutritional guidance on cow's milk for children, balancing protein, calcium, vitamin D, fat, iron, allergy, and total intake so milk does not displace a varied diet.

Cowden Syndrome

Autosomal dominant PTEN hamartoma tumor syndrome, caused by loss-of-function mutations in PTEN (10q23) — a negative regulator of the PI3K/AKT/mTOR pathway. Multiple hamartomas and increased risk of benign and malignant tumors.

Cowper'S Gland

One of a pair of small male accessory sex glands below the prostate. Its secretion contributes mucus and fluid to the urethra before ejaculation.

Cowpox

A zoonotic viral infection caused by cowpox virus or related orthopoxviruses, producing localized pustular or ulcerative skin lesions and sometimes systemic illness.

Cox-2

Cyclooxygenase-2, an inducible enzyme that produces inflammatory prostaglandins; selective COX-2 inhibitors reduce pain and inflammation but may have cardiovascular, renal, and gastrointestinal risks.

COX-2 Inhibitors

Medicines that inhibit cyclooxygenase-2, an enzyme involved in prostaglandin production and inflammation.

Alternate Names:

Cyclooxygenase-2 inhibitors; selective COX-2 inhibitors.

Coxa Vara

A deformity in which the angle between the femoral neck and shaft is abnormally reduced, potentially causing a limp, shortened limb, or altered hip me-

chanics.

Coxalgia

Pain localized to the hip joint or periarticular structures (also termed coxodynia). Because the hip capsule receives sensory innervation from the femoral, obturator, and sciatic nerves, intra-articular hip pathology classically presents as groin pain that radiates along the anterior thigh to the knee, often misidentified as primary knee pathology. The differential diagnosis is age-dependent: in children, acute coxalgia mandates immediate exclusion of septic arthritis (using the Kocher criteria) versus transient synovitis, Legg-Calvé-Perthes disease, or slipped capital femoral epiphysis; in active young adults, common etiologies include femoroacetabular impingement, acetabular labral tears, and femoral neck stress fractures; in older adults, dominant causes include advanced osteoarthritis, femoral neck fractures, avascular necrosis (osteonecrosis), and greater trochanteric pain syndrome.

Coxiella Burnetii

An obligate intracellular bacterium that causes Q fever, a zoonotic infection transmitted from animals to humans. The organism is transmitted through inhalation of contaminated aerosols or ingestion of contaminated dairy products. Acute Q fever presents with fever, headache, and pneumonia. Chronic Q fever can cause endocarditis.

Coxsackie (Coxsackie Virus)

Alternate index label for Coxsackie Virus.

Coxsackie Virus Type A16

A member of the Enterovirus genus and the most common cause of hand, foot, and mouth disease, a mild, self-limited viral illness affecting children. It presents with fever, oral vesicles and ulcers, and a maculopapular or vesicular rash on the hands and feet. Complications are rare but may include aseptic meningitis.

Coxsackievirus

A group of enteroviruses that cause a range of human diseases. Group A viruses commonly cause hand-

foot-and-mouth disease and herpangina, whereas group B viruses are associated with myocarditis, pericarditis, pleurodynia, and aseptic meningitis.

CPAP

Continuous positive airway pressure delivered through a mask to splint open the upper airway during sleep. It is commonly used for obstructive sleep apnea and can reduce apneas and related symptoms when used consistently.

CPAP Machine

A device that sends a steady stream of air through a mask to keep the upper airway open during sleep. It is commonly used for obstructive sleep apnea; benefit depends on correct mask fit and regular use.

CpG

A DNA sequence in which cytosine is followed by guanine on the same strand, often occurring in regions whose methylation helps regulate gene expression.

CPK Isoenzymes Test

A blood test that separates creatine kinase isoenzymes, such as CK-MM, CK-MB, and CK-BB, to help identify the tissue source of elevated creatine kinase; cardiac troponin is preferred for suspected myocardial infarction.

CPR

Cardiopulmonary resuscitation is an emergency procedure using chest compressions and, when appropriate, rescue breaths or an automated external defibrillator to support circulation and breathing during cardiac arrest.

CPR - Infant

Cardiopulmonary resuscitation for an unresponsive infant who is not breathing normally, using emergency activation, infant chest compressions, rescue breaths when trained, and an AED according to local guidance.

CPR - Young Child (Age 1 Year To

Onset Of Puberty)

Cardiopulmonary resuscitation for a child from age one year until puberty who is unresponsive and not breathing normally, using emergency activation, compressions, breaths, and an AED as available.

CPT Code For Foreign Body Removal From The Ear

Removal of an ear foreign body is coded according to the documented method, location, anesthesia, complications, and whether a separate evaluation was performed. Objects causing pain, bleeding, hearing loss, or suspected eardrum injury should be removed by a trained clinician.

CPVT

Alternate name; see *Catecholaminergic Polymorphic Ventricular Tachycardia*.

Crabs

Alternate index label; see *Pubic lice (crabs)*.

Cracked Tooth Syndrome

Incomplete fracture of tooth causing pain on biting. Diagnosis difficult. Treatment: crown, root canal if pulpal involvement.

Crackles (Rales)

Discontinuous, non-musical adventitious lung sounds produced by the sudden explosive opening of collapsed small airways and alveoli during inspiration or the bubbling of air through fluid in the bronchioles.

Alternate Names:

Rales

Cradle Cap

A common form of seborrheic dermatitis in infants, causing greasy or flaky scales on the scalp with mild redness. It is usually harmless and improves with gentle scalp care; persistent inflammation or signs of infection require assessment.

Cramp, Muscle

Alternate index label; see *Muscle cramp*.

Cramping Leg Pain

Pain caused by involuntary, often painful muscle contraction in the leg; contributors include exertion, dehydration, electrolyte abnormalities, medications, nerve disease, and impaired circulation.

Cramps But No Period

Pelvic cramps without menstruation can result from ovulation, pregnancy, implantation, constipation, urinary disease, infection, endometriosis, cysts, or other pelvic conditions. Severe one-sided pain, faintness, fever, vomiting, or possible pregnancy requires urgent assessment.

Cramps Heat (Heat Cramps)

Alternate index label for Heat Cramps.

Cramps Menstrual (Menstrual Cramps)

Alternate index label for Menstrual Cramps.

Cramps, Menstrual

Alternate index label; see *Menstrual cramps*.

Cranial

Relating to the skull or toward the head, as opposed to caudal or toward the lower end of the body.

Cranial Arteritis

Giant-cell arteritis, an inflammatory disease of medium and large arteries, especially branches of the external carotid artery, that can cause headache, visual loss, and systemic symptoms.

Cranial Cavity

The hollow space inside the skull that contains and protects the brain.

Cranial Fasciitis

A benign, rapidly growing fibroblastic proliferation of the scalp or cranial soft tissues, usually occurring in infants and young children and potentially mimicking a malignant tumor.

Cranial Implant

An artificial device placed in or on the skull or cra-

nial cavity for reconstruction, protection, drainage, stimulation, or treatment.

Cranial Mononeuropathy III

Third-nerve damage causing some combination of double vision, eyelid drooping, and abnormal eye movement.

Cranial Mononeuropathy III - Diabetic Type

Diabetes-associated third-nerve palsy, typically causing painful double vision and eyelid drooping while sparing the pupil.

Cranial Mononeuropathy VI

Sixth-nerve damage causing weakness of outward eye movement and horizontal double vision.

Cranial Nerve

Twelve paired nerves (CN I-XII) emerging directly from the brain/brainstem, primarily serving head and neck.

Cranial Nerve Palsy

Weakness or paralysis of one or more cranial nerves, causing deficits such as impaired eye movement, facial weakness, hearing loss, swallowing difficulty, or tongue weakness. The cause may be vascular, traumatic, compressive, inflammatory, infectious, or metabolic.

Cranial Nerve X

The vagus nerve, the tenth cranial nerve, which carries parasympathetic and sensory fibers and contributes to swallowing, voice, and regulation of thoracic and abdominal organs.

Cranial Nerves

The 12 pairs of nerves arising from the brain or brainstem that provide sensory, motor, and autonomic functions to the head, neck, and parts of the trunk.

Cranial Sutures

Fibrous joints between skull bones that permit mold-

ing in infancy and accommodate brain growth before progressively fusing; premature fusion causes craniosynostosis.

Craniectomy

Surgical removal of part of the skull without immediate replacement, performed to relieve intracranial pressure or provide access to the brain.

Craniocerebral Injury

An injury involving the scalp, skull, brain, or more than one of these structures.

Craniofacial Abnormalities

Abnormalities of the skull, face, or related tissues that may be present at birth or develop later. Causes include genetic conditions, disrupted development, trauma, infection, and tumors.

Craniofacial Dysostosis

A congenital disorder involving premature fusion of cranial sutures and characteristic abnormalities of the face and skull, such as those seen in Crouzon syndrome.

Craniopharyngioma

A usually slow-growing epithelial tumor near the pituitary and hypothalamus that can cause visual loss, hormonal deficiencies, headache, or increased intracranial pressure.

Cranioplasty

Surgical repair or reconstruction of a skull defect using bone, an implant, or another suitable material.

Craniosynostosis

Craniosynostosis is premature fusion of one or more skull sutures, altering head shape and sometimes increasing pressure on the developing brain.

Alternate Names:

Congenital Plagiocephaly Craniostenosis

Craniosynostosis Repair

A medical procedure involving craniosynostosis repair. Indications, risks, preparation, and follow-up

depend on the patient's clinical condition and the specific procedure.

Craniotabes

Soft, thin, or pliable areas of an infant's skull that indent under gentle pressure, commonly associated with normal newborn molding but also with rickets or other bone disease.

Craniotomy

Surgical opening of the skull (bone flap) for access to intracranial contents. Indications: brain tumor resection (glioblastoma, meningioma, mets), hematoma evacuation (SDH, EDH, ICH), aneurysm clipping, AVM resection, and epilepsy surgery (lobectomy).

Cranium

The part of the skull that encloses and protects the brain, consisting of the cranial bones and their joints.

Crapulence

An unpleasant state of sickness or discomfort caused by excessive eating or drinking, especially excessive alcohol use.

Craving

A strong, often difficult-to-control desire for a substance, behavior, or experience, commonly seen in substance-use disorders.

Alternate Names:

Strong urge; compulsive desire.

Crazy Paving Pattern

A HRCT finding characterized by ground-glass opacification with superimposed interlobular septal thickening and intralobular lines. It is seen in pulmonary alveolar proteinosis, lipoid pneumonia, ARDS, pulmonary hemorrhage, and Pneumocystis pneumonia. Despite its name, it is not specific to any single diagnosis.

CRC

Colorectal cancer, malignant disease arising in the

colon or rectum; screening and evaluation depend on age, risk, symptoms, and test results.

CRE

Carbapenem-resistant Enterobacteriaceae, resistant to carbapenem antibiotics through production of carbapenemases including KPC, NDM, and OXA-48-like enzymes. CRE are a major public health threat due to limited treatment options. Infections are associated with high mortality rates.

CRE Infection

Carbapenem-resistant Enterobacterales are bacteria resistant to important antibiotics and can cause urinary, bloodstream, abdominal, wound, or lung infections. Infection-control precautions, culture-based treatment, and specialist advice are important because therapeutic options may be limited.

Alternate Names:

Carbapenem Resistant Enterobacteriaceae (CRE Infection)

Cream

A semisolid emulsion (oil in water or water in oil) for topical application, containing a drug in an emulsion base. Creams are lighter, less greasy, and easier to spread than ointments, and are preferred for moist or oozing skin lesions. They penetrate less deeply than ointments and are cosmetically acceptable.

Creatine

A nitrogen-containing compound stored mainly in skeletal muscle that helps supply energy for short, high-intensity activity.

Creatine Kinase

An enzyme found in muscle, brain, and heart. CK-MB: cardiac isoenzyme (used historically for MI diagnosis, largely replaced by troponin). CK-MM: skeletal muscle (elevated in rhabdomyolysis, trauma, statins, myopathy). Total CK: elevated in muscle injury, myocardial infarction, seizures, hypothyroidism, and statin myopathy.

Creatine Phosphokinase Test

A blood test measuring creatine kinase, an enzyme

released with muscle injury; elevated levels may occur in skeletal-muscle disease, strenuous exercise, rhabdomyolysis, or myocardial injury.

Creating A Family Health History

Collecting a record of relatives' diseases, ages at diagnosis, ancestry, and causes of death to identify inherited risk and guide screening, prevention, and genetic counseling.

Creatinine

A breakdown product of muscle creatine phosphate produced at a constant rate, filtered by the glomerulus and minimally reabsorbed; serum creatinine is the most used marker of kidney function.

Creatinine Blood Test

A blood test measuring serum creatinine, a waste product generated largely by skeletal muscle. It is used with age, body size, and other factors to estimate kidney filtration, but interpretation is affected by muscle mass, diet, medicines, and acute illness.

Creatinine Clearance Test

A test estimating kidney filtration from creatinine in a timed urine collection and blood sample. It can be affected by incomplete urine collection and creatinine secretion, so estimated glomerular filtration rate is often preferred for routine assessment.

Creatinine Test

A blood or urine test measuring creatinine to help assess kidney filtration and muscle-related creatinine production.

Alternate Names:

Creatinine measurement; renal function creatinine test.

Creatinine Urine Test

A urine test measuring creatinine concentration or excretion, used to assess kidney handling, interpret other urine measurements, or judge the completeness of a timed collection. Results depend on muscle mass, diet, collection quality, and kidney function.

Creeping Eruption

An intensely itchy winding skin track caused by larvae, usually hookworms from contaminated soil or sand, migrating within the superficial skin; it is also called cutaneous larva migrans.

Creptitation (Crepitus)

A crackling, grating, or popping sensation or sound produced by movement of tissues, air, or bone. Causes include fractures, joint disease, subcutaneous air, and lung disease.

Alternate Names:

Crepitus

Crepitus

A crackling, grating, or popping sensation or sound caused by movement of tissue, bone, joint surfaces, or air in soft tissue.

Alternate Names:

Crepitation; crackling sensation.

Crescentic Glomerulonephritis

A rapidly progressive kidney inflammation in which crescent-shaped lesions form in the glomeruli.

CREST Syndrome

A limited cutaneous form of systemic sclerosis characterized by calcinosis, Raynaud phenomenon, esophageal dysmotility, sclerodactyly, and telangiectasia. It may involve pulmonary vascular disease and other systemic complications.

Creutzfeldt-Jakob Disease

A rapidly progressive neurodegenerative disease caused by abnormal prion proteins, leading to cognitive decline, ataxia, myoclonus, and death.

Creutzfeldt Jakob Disease

Creutzfeldt-Jakob disease is a rare, fatal, transmissible spongiform encephalopathy caused by the accumulation of misfolded prion protein (PrP^{Sc}) in the brain, leading to rapid, progressive dementia and myoclonus.

Creutzfeldt-Jakob Disease

A rapidly progressive fatal neurodegenerative disease caused by abnormal prion protein, characterized by dementia, myoclonus, ataxia, and other neurologic signs.

Alternate Names:

CJD Mad Cow Disease Variant CJD VCJD

Cri Du Chat Syndrome

A congenital genetic disorder caused by deletion of part of the short arm of chromosome 5, characterized in infancy by a high-pitched cry, developmental delay, and characteristic facial features.

Cri-Du-Chat Syndrome

A genetic disorder caused by a deletion of the short arm of chromosome 5 (5p-), with the size of the deletion correlating with severity. Incidence 1 in 15,000-50,000.

Crib Death

Alternate index label; see *Sudden infant death syndrome*.

Cricoid Cartilage

The cricoid cartilage is a complete, ring-shaped cartilage located at the base of the larynx, directly above the trachea and below the thyroid cartilage, and it is the only complete cartilaginous ring in the airway, providing structural support and maintaining airway patency.

Cricoid Pressure

Cricoid pressure (Sellick maneuver) applies posterior displacement of the cricoid cartilage against the cervical vertebrae, occluding the esophagus and reducing aspiration risk during rapid sequence intubation.

Cricothyrotomy

An emergency airway procedure that creates an opening through the cricothyroid membrane to provide oxygenation and ventilation when a patient cannot be intubated and cannot be oxygenated by less invasive methods.

Crigler-Najjar Syndrome

An inherited disorder of bilirubin conjugation caused by reduced or absent UGT1A1 activity, producing unconjugated hyperbilirubinemia of variable severity.

Crime Scene Investigation

The systematic documentation, collection, preservation, and analysis of physical evidence from a suspected crime scene, often supporting forensic medical and legal conclusions.

Criminal Abortion

Abortion performed illegally, outside permitted legal indications and procedures (e.g., unsafe methods, unqualified practitioners, or non-medical settings), carrying high maternal risk.

CRISPR-Cas9

Genome editing tool derived from bacterial immune system. Cas9 enzyme guided by RNA to specific DNA sequence, creating double-strand break. Repaired by non-homologous end joining (NHEJ) or homology-directed repair (HDR). Applications: research, therapy.

CRISPR Therapy

A treatment that uses CRISPR-based genome-editing tools to make a targeted change to DNA in a patient's cells. Cells may be edited outside the body and returned to the patient, or edited directly inside the body. It is used or studied for selected genetic and other diseases; possible concerns include unintended genetic changes, immune reactions, and effects that require long-term monitoring.

Critical Care

Specialized care for people with life-threatening illness or injury who need close monitoring and support for failing organs.

Critical Care Nursing

Specialized nursing care for critically ill patients requiring close monitoring, organ support, rapid assessment, complex therapies, and coordination with multidisciplinary intensive-care teams.

Critical Findings

Findings requiring immediate communication. Examples: pneumothorax, brain herniation, aortic dissection.

Critical Illness Myopathy

An acute, acquired, primary skeletal muscle disorder that develops in critically ill patients treated in intensive care units, frequently triggered by systemic inflammatory response syndrome, sepsis, multiorgan failure, and prolonged administration of high-dose systemic corticosteroids or neuromuscular blocking agents. Characterized by profound, generalized, flaccid, symmetrical weakness affecting both proximal and distal limb musculature as well as diaphragmatic and respiratory muscles, resulting in prolonged failure to wean from mechanical ventilation. Serum creatine kinase is normal or only mildly elevated; electrophysiology reveals reduced muscle membrane excitability with normal sensory nerve action potentials, and muscle biopsy demonstrates pathognomonic selective loss of thick myosin filaments (myosin-deficient myopathy).

Alternate Names:

CIM; Acute Quadriplegic Myopathy; Critical Care Myopathy

Critical Limb Ischemia

Severe chronic reduction in limb blood flow causing ischemic rest pain, nonhealing wounds, or gangrene. It requires urgent vascular assessment.

Critical Results

Test results indicating a potentially life-threatening condition that require prompt communication and clinical action.

Critical Value

A laboratory result indicating a potentially life-threatening condition that requires prompt communication to a responsible clinician or care team. The threshold is test- and laboratory-specific and should be defined by institutional policy.

Crocodile Tears Syndrome

Gustatory lacrimation, in which eating or smelling

food triggers excessive tearing, usually after facial-nerve injury or aberrant regeneration following Bell palsy.

Crohn Disease

Chronic transmural inflammatory condition that can affect any segment of the gastrointestinal tract from the oral cavity to the perianal region, though the terminal ileum and ileocolonic region are most commonly involved.

Crohn Disease (Crohn's Disease)

Alternate index label for Crohn's Disease.

Crohn Disease Cobblestoning

Endoscopic appearance of the colonic or small bowel mucosa in Crohn disease characterized by a bumpy, irregular surface resembling cobblestones. This distinctive appearance results from intersecting lines of deep linear and serpiginous ulceration that surround areas of relatively preserved or edematous but intact mucosa.

Crohn's Disease

A chronic inflammatory bowel disease that can cause patchy, transmural inflammation anywhere from the mouth to the anus, most often involving the terminal ileum or colon. Common features include abdominal cramping or pain, persistent diarrhoea, weight loss, fatigue, fever, anaemia, and extraintestinal inflammation of the joints, eyes, or skin.

Alternate Names:

Crohn Disease (Crohn's Disease) Ileitis (Crohn's Disease)

Crohn's Disease Cause Dark Circles Around Eyes

Crohn disease does not directly cause dark circles in every patient, but anemia, fatigue, dehydration, poor sleep, nutritional deficiency, steroid effects, or atopic skin may contribute. Persistent pallor, fatigue, weight loss, bleeding, or active bowel symptoms deserve clinical review.

Cross-Matching

A laboratory test that checks donor and recipient

blood for compatibility before transfusion.

Cross-Section

A slice or plane made through a structure, or an image showing that slice, such as a cross-sectional CT image.

Cross-Sectional Study

Measures exposure and outcome at same time. Prevalence study. Cannot establish temporality.

Cross-Tolerance

Tolerance to one substance that extends to another substance with a similar mechanism of action. For example, tolerance to one benzodiazepine extends to all benzodiazepines, and tolerance to alcohol extends partially to benzodiazepines due to shared GABA-A receptor mechanisms.

Crossmatch

Laboratory test mixing donor and recipient blood to detect preformed antibodies that could cause transfusion or transplant reactions.

Crotch

The region where the inner thighs meet the trunk, including the groin and nearby perineal structures.

Croup

An acute viral infection causing inflammation and narrowing of the upper airway, typically producing a barking cough, hoarseness, and inspiratory stridor in young children.

Alternate Names:

Laryngotracheobronchitis (Croup)

Crouzon Syndrome

An autosomal dominant craniosynostosis syndrome caused by mutations in the FGFR2 or FGFR3 genes, leading to premature fusion of multiple cranial sutures. Features: brachycephaly (short, broad head from bilateral coronal synostosis), proptosis (shallow orbits), hypertelorism, midface hypoplasia, beaked nose, and Class III malocclusion.

Crown

The visible part of a tooth above the gum line, or a dental restoration that covers and protects a damaged tooth.

Alternate Names:

Dental crown; anatomic tooth crown.

Crown (Dental)

Cap covering damaged tooth. Materials: metal, porcelain-fused-to-metal, all-ceramic, zirconia. Indications: large caries, fractured tooth, root canal treated tooth.

Alternate Names:

Dental

Crown Lengthening

Surgical procedure exposing more tooth structure. Involves gingivectomy and bone removal. For restorative or aesthetic purposes.

Crown-Rump Length

The measurement from the top of the fetal head (crown) to the bottom of the buttocks (rump), the most accurate method for establishing gestational age in the first trimester. Measured at 7-13 weeks. Accuracy: ± 3 -5 days. The EDD is set using CRL if the difference from LMP dating exceeds 7 days. CRL growth: approximately 1 mm per day.

Crowning

The stage of the second stage of labor when the fetal head (widest diameter) distends the perineum and becomes visible at the introitus and is no longer receding between contractions.

CRP

C-reactive protein, a substance made by the liver that rises during inflammation or infection. A CRP test can help assess inflammation and response to treatment, but it does not identify the cause by itself.

Crush Injury

Tissue damage caused by prolonged compression, potentially producing muscle necrosis, compartment

syndrome, rhabdomyolysis, hyperkalemia, shock, and acute kidney injury.

Crush Syndrome

Systemic manifestations of prolonged muscle crush injury (rhabdomyolysis) following trauma — typically from collapsed buildings, landslides, entrapment under debris, or excessive compression of limbs. Bywaters syndrome.

Crushing Injury

Damage caused when a body part is compressed between heavy objects. It can produce fractures, nerve and blood-vessel injury, tissue death, and rhabdomyolysis. Severe limb compression or sudden release after prolonged entrapment requires emergency treatment.

Crust

Dried serum, blood, pus, or other exudate on the skin surface, often covering an erosion, ulcer, vesicle, pustule, or inflamed lesion.

Crusted Scabies

A severe, highly contagious form of scabies (Norwegian scabies) characterised by thick, hyperkeratotic crusts teeming with enormous numbers of *Sarcoptes scabiei* mites, typically occurring in immunocompromised, elderly, or neurologically impaired individuals.

Crutches

Walking aids. Types: axillary, forearm (Loftstrand). Axillary: under arm. Forearm: through loop.

Crutches And Children - Sitting And Getting Up From A Chair

Instruction for a child using crutches to approach a chair, keep the injured limb protected as prescribed, reach for the armrests, and sit or stand safely without losing balance.

Crutches And Children - Stairs

Instruction for safe stair use by a child with crutches, including handrail use, crutch placement, step se-

quencing, supervision, and adherence to weight-bearing restrictions.

Crutches And Children - Standing And Walking

Instruction for fitting and using crutches in children, including posture, handgrip support, gait pattern, weight-bearing limits, turning, and fall prevention.

Cry For Help

A verbal or behavioral expression of distress or need for assistance; in a mental-health setting it should be taken seriously and assessed for immediate safety concerns.

Crying In Childhood

Vocal expression of distress or emotion in a child; persistent, inconsolable, unusual, or pain-associated crying may indicate illness, injury, abuse, or unmet developmental needs.

Crying In Infancy

Crying is an infant's normal communication of hunger, discomfort, fatigue, or need for contact, but sudden inconsolable crying with lethargy, fever, vomiting, or injury needs urgent assessment.

Cryoablation

A procedure that freezes and destroys selected tissue, often using imaging to guide the treatment.

Cryobiopsy

A bronchoscopic technique using rapid freezing to obtain larger lung tissue samples than conventional forceps transbronchial biopsy. It can improve histopathologic sampling in selected interstitial lung diseases, but requires specialized expertise and has risks including bleeding and pneumothorax; anesthesia and procedural setting vary.

Cryoglobulinemia

Cryoglobulinemia occurs when abnormal proteins precipitate in the cold and can cause blood-vessel inflammation, rash, nerve disease, kidney injury, or hyperviscosity.

Cryoglobulinemic Vasculitis

Systemic vasculitis caused by cryoglobulin-containing immune complexes that deposit in small and medium vessels, classically presenting with purpura, arthralgia, and glomerulonephritis. Most cases are associated with hepatitis C virus infection.

Cryoglobulins

Immunoglobulins that precipitate at low temperatures and dissolve on warming; circulating cryoglobulins can cause vasculitis, purpura, neuropathy, kidney disease, or hyperviscosity.

Cryopexy

A procedure that uses controlled freezing to destroy or seal abnormal tissue, especially retinal breaks or small retinal detachments.

Cryoprecipitate

A plasma fraction rich in fibrinogen, factor VIII, von Willebrand factor, and factor XIII, used selectively to treat certain bleeding disorders.

Cryopreservation

Preservation of cells, tissues, or embryos by cooling them to very low temperatures, usually with protective substances that limit ice-related injury.

Cryopyrin-Associated Autoinflammatory Syndromes

Alternate index label; see *Cryopyrin-Associated Periodic Syndromes*; the group is also called CAPS.

Cryopyrin-Associated Periodic Syndromes

Autosomal dominant autoinflammatory disorders (NLRP3 mutations, gain-of-function) causing constitutive inflammasome activation and IL-1beta overproduction.

Alternate Names:

Cryopyrin-Associated Autoinflammatory Syndromes

Cryostat

An instrument that maintains very low tempera-

tures and cuts thin frozen sections of tissue for rapid microscopic examination.

Cryosurgery

Surgery that destroys abnormal tissue by controlled freezing, used in selected skin lesions, tumors, and other conditions.

Cryotherapy

The therapeutic application of extreme cold (typically using liquid nitrogen at -196°C) to destroy abnormal or diseased tissue.

Cryotherapy For Prostate Cancer

A treatment that destroys prostate tissue by repeated freezing and thawing, used selectively for localized or recurrent prostate cancer.

Cryotherapy For The Skin

Destruction of selected skin lesions by controlled freezing, usually with liquid nitrogen, for conditions such as warts, actinic keratoses, or some superficial tumors.

Crypt

A small cavity, gland, or recess, such as an intestinal crypt or tonsillar crypt.

Cryptitis

Inflammation of a crypt or small anatomical recess, especially inflammation of the anal glands and crypts.

Crypto

Clinical shorthand that may refer to cryptococcosis or *Cryptosporidium* infection; the intended meaning depends on the clinical context.

Cryptococcal Meningitis

Infection of the meninges by *Cryptococcus*, usually in people with impaired immunity, causing headache, fever, altered mental status, or other neurologic symptoms.

Cryptococcosis

Cryptococcosis is fungal infection caused by *Cryptococcus*, often affecting the lungs or brain in people with immune suppression.

Alternate Names:

Infection *Cryptococcus* (Cryptococcosis)

Cryptococcus Neoformans

An encapsulated yeast that can cause pulmonary or central nervous system infection, especially in people with impaired immunity.

Cryptogenic Organizing Pneumonia

An inflammatory lung disease with granulation tissue within alveolar ducts. May be idiopathic or secondary to infection, drugs, or connective tissue disease. Responds well to corticosteroids.

Cryptorchidism

Failure of one or both testes to descend into the scrotum, the most common congenital genitourinary anomaly in boys (3% at birth, 1% at 1 year). 70% of undescended testes are palpable (inguinal), 30% non-palpable (intra-abdominal, absent, or atrophic). Spontaneous descent by 6 months occurs in about one-third.

Cryptosporidiosis

A diarrhoeal disease caused by the protozoan parasite *Cryptosporidium parvum* (zoonotic) or *C. hominis* (anthroponotic), transmitted via contaminated water (chlorine-resistant oocysts), food, or direct contact. Presents with watery diarrhea, abdominal cramps, nausea, and low-grade fever, lasting 1-2 weeks.

Cryptosporidium Enteritis

Diarrheal intestinal infection caused by *Cryptosporidium* parasites, transmitted through contaminated water, food, or contact; illness can be prolonged or severe in immunocompromised people.

Crystal Arthropathy

Joint disease caused by crystal deposition. Gout (monosodium urate) and pseudogout (calcium py-

rophosphate). Diagnosis by joint aspiration and polarized microscopy.

Crystal-Induced Synovitis

Acute or chronic joint inflammation caused by deposition of crystals such as monosodium urate, calcium pyrophosphate, or basic calcium phosphate in or around the joint.

Crystalline Lens

The transparent flexible structure inside the eye that focuses light onto the retina.

Crystalloids

Aqueous solutions of mineral salts that distribute between intravascular and interstitial compartments. Normal saline (0.9 percent NaCl) has 154 mEq/L each of sodium and chloride, pH 5.4, and is associated with hyperchloremic metabolic acidosis at large volumes.

Crystalluria

The presence of crystals in urine, which may reflect precipitation of salts, medication effects, metabolic disease, or a tendency to form urinary stones.

CSF Analysis

Alternate index label; see *Cerebrospinal fluid analysis*.

CSF Cell Count

Laboratory measurement of red and white blood cells in cerebrospinal fluid, used to evaluate meningitis, encephalitis, subarachnoid hemorrhage, inflammation, malignancy, and other central nervous system disorders.

CSF Coccidioides Complement Fixation Test

A cerebrospinal-fluid test for complement-fixing antibodies to *Coccidioides*, used with other findings to evaluate suspected coccidioidal meningitis.

CSF Glucose Test

A laboratory measurement of glucose in cere-

brospinal fluid, usually interpreted with a simultaneous blood-glucose value. Low cerebrospinal-fluid glucose may occur in bacterial, fungal, or tuberculous meningitis and other disorders, but results require the complete clinical and cerebrospinal-fluid profile.

CSF Leak

Escape of cerebrospinal fluid through a defect in the skull base or spinal dura, causing positional headache, clear nasal or ear drainage, wound leakage, meningitis risk, or intracranial hypotension.

CSF Leak (Cerebrospinal Fluid Leak)

Escape of cerebrospinal fluid through a tear in the membranes surrounding the brain or spinal cord, often causing positional headache.

Alternate Names:

Spinal Fluid Leak

CSF Myelin Basic Protein

CSF myelin basic protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

CSF Oligoclonal Banding

An electrophoretic test for restricted immunoglobulin bands in cerebrospinal fluid, interpreted with serum bands to detect intrathecal antibody production such as in multiple sclerosis.

CSF Rhinorrhea

Cerebrospinal fluid rhinorrhea is the leakage of cerebrospinal fluid from the subarachnoid space through a defect in the skull base into the nasal cavity or paranasal sinuses, resulting in a clear, watery nasal discharge that may be mistaken for allergic rhinitis or sinusitis.

CSF Smear

Microscopic examination of cerebrospinal fluid for cells, organisms, or abnormal material, supporting evaluation of meningitis, hemorrhage, malignancy, or inflammation.

CSF Total Protein

CSF total protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

CSF-VDRL Test

A cerebrospinal-fluid test for reagin antibodies associated with *Treponema pallidum* infection; a reactive result is highly specific for neurosyphilis, but a nonreactive result does not exclude it.

CT

Computed tomography, an imaging method that uses multiple X-ray measurements and computer reconstruction to produce cross-sectional images.

Alternate Names:

Computed tomography; CAT scan.

CT Angiography

CT imaging with IV contrast timed to visualize arteries. Coronary CTA: assesses coronary artery stenosis and plaque, calcium scoring (Agatston). CTA chest: pulmonary embolism (PE protocol), aortic dissection. CTA head/neck: stroke evaluation, aneurysm, dissection, and vasculitis.

CT Angiography - Abdomen And Pelvis

Computed tomography angiography of the abdominal and pelvic blood vessels after intravenous contrast, used to assess aneurysm, stenosis, dissection, occlusion, bleeding, and vascular anatomy.

CT Angiography - Arms And Legs

Computed tomography angiography of the peripheral arteries after intravenous contrast, used to evaluate arterial narrowing, blockage, aneurysm, injury, or other vascular abnormalities in the limbs.

CT Angiography - Head And Neck

Computed tomography angiography of the blood vessels supplying the brain and neck after intravenous contrast, used to evaluate aneurysm, stenosis, dissection, occlusion, and vascular malformation.

CT Angiography – Chest

Computed tomography angiography of the chest uses intravenous contrast and computed tomography to visualize the thoracic aorta, pulmonary arteries, or other chest vessels. It can evaluate embolism, aneurysm, dissection, bleeding, and vascular malformation.

CT Chest

Detailed lung and mediastinal imaging. High-resolution CT for interstitial lung disease. CT pulmonary angiography (CTPA) for pulmonary embolism. Lung cancer screening with low-dose CT.

CT Colonography

CT imaging of the colon after bowel preparation and insufflation with air or carbon dioxide. Used for colorectal cancer screening in patients unable to undergo optical colonoscopy and for evaluating complete colonoscopy when the cecum was not reached. Detects polyps greater than six millimeters with high sensitivity.

CT Colonography (Virtual Colonoscopy)

CT imaging of the colon after bowel preparation and air insufflation. Indications: colorectal cancer screening (alternative to colonoscopy), incomplete colonoscopy due to obstructing mass, and patients unable to undergo colonoscopy. Sensitivity >90% for polyps >10mm. Requires same bowel prep as colonoscopy.

Alternate Names:

Virtual Colonoscopy

CT Contrast

A substance administered during computed tomography to make selected tissues, vessels, or body spaces more visible.

CT Coronary Angiography

CT imaging of coronary arteries after contrast. Detects stenosis, plaque. Alternative to invasive angiography in low-intermediate risk.

CT Dose-Length Product

A CT dose metric calculated from the volume CT dose index and scan length. It estimates the total scanner output for an examination and is used for protocol optimization and dose monitoring, not as a direct patient-specific risk estimate.

CT Enterography

CT imaging of the small bowel after administration of large volumes of neutral oral contrast distending the small bowel with IV contrast. Excellent for evaluating Crohn disease, small bowel tumors, and obscure gastrointestinal bleeding.

CT Perfusion

A CT technique that estimates blood flow and related perfusion parameters in tissue, commonly to assess selected cases of acute stroke or tumors.

CT Pulmonary Angiography

CT imaging performed after intravenous contrast to show the pulmonary arteries and evaluate suspected pulmonary embolism or other vascular abnormalities.

CT Scan

Computed tomography, an imaging method that uses X-rays and computer processing to produce cross-sectional images of the body.

CT Scan (Computed Tomography)

Cross-sectional imaging using X-rays and computer reconstruction. Non-contrast: evaluate hemorrhage, stones, and bone. IV contrast (iodinated): evaluate inflammation, infection, tumor, and vascular structures. Oral contrast: opacify bowel.

Alternate Names:

Computed Tomography

Ctenocephalides FelFlea Bite (Flea Bites In Humans)

Alternate index label for Flea Bites in Humans.

CTL

Cytotoxic T lymphocyte, an immune cell that rec-

ognizes and kills infected, abnormal, or target cells through antigen-specific mechanisms.

CTPA

Alternate name; see *Computed Tomography Pulmonary Angiography*.

CTS

Commonly, carpal tunnel syndrome: compression of the median nerve at the wrist causing numbness, tingling, pain, or weakness in the hand.

Cubital

Relating to the elbow or the forearm, especially the area around the elbow.

Cubital Tunnel Syndrome

Cubital tunnel syndrome: ulnar nerve compression at elbow (cubital tunnel: Osborne's ligament, FCU aponeurosis, medial epicondyle, olecranon). Clinical: paresthesias ulnar 1.5 digits, nocturnal, Tinel at elbow, Froment sign (IP flexion of thumb with key pinch), Wartenberg sign (abduction of small finger), thenar/hypothenar wasting late.

Cubitus

The elbow or the forearm; the term is also used in names of structures and conditions around the elbow.

Cubitus Valgus

An abnormal outward angulation of the forearm relative to the upper arm when the elbow is extended.

Cubitus Varus

An abnormal inward angulation of the forearm relative to the upper arm when the elbow is extended, often developing after a childhood elbow fracture.

Cuboid

Cube-shaped lateral foot tarsal bone articulating with calcaneus proximally and 4th/5th metatarsals distally. Attachment for the long plantar ligament and peroneus longus tendon. Keystone of the lateral longitudinal arch. Cuboid syndrome (subluxation)

is a common lateral foot pain cause in athletes from excessive pronation.

Cul-De-Sac

A blind-ending pouch or recess; in pelvic anatomy, the rectouterine pouch and rectovesical pouch are examples.

Culdocentesis

Surgical puncture of the posterior vaginal fornix to sample or drain fluid from the rectouterine pouch.

Cullen'S Sign

Bluish or violaceous periumbilical ecchymosis caused by blood tracking through the fascial planes to the umbilicus. It is a sign of intra-abdominal or retroperitoneal haemorrhage, classically severe haemorrhagic pancreatitis, and is associated with serious underlying disease.

Cultural Psychiatry

The study and clinical practice of how cultural factors influence mental health, illness expression, diagnosis, and treatment. Cultural concepts of distress, idioms of distress, and cultural syndromes must be considered. The DSM-5 includes a Cultural Formulation Interview.

Culture

A laboratory test in which a clinical specimen is placed in conditions that allow microorganisms to grow and be identified; susceptibility testing may help guide treatment.

Culture - Colonic Tissue

A laboratory culture of a colon tissue specimen to detect bacteria, fungi, or other microorganisms in suspected infection; results are interpreted with histopathology and clinical findings.

Culture - Duodenal Tissue

A laboratory culture of a duodenal tissue specimen to identify microorganisms causing infection or inflammation, interpreted with endoscopic findings and histopathology.

Culture And Sensitivity

Microbiological culture of a clinical specimen (blood, urine, sputum, wound swab, CSF) to identify pathogens and determine antimicrobial susceptibility. Culture media: blood agar (most bacteria), MacConkey (Gram-negative), chocolate agar (fastidious: *N. gonorrhoeae*, *H. influenzae*), and selective media.

Culture Media

Nutrient preparations used to grow microorganisms in the laboratory, classified by composition and purpose.

Culture Swab

A sterile swab used to collect material from skin, wounds, the throat, genital tract, or another site for laboratory culture. The test may identify bacteria or fungi and guide antibiotic choice; viral testing usually uses separate molecular or antigen tests.

Culture-Negative Endocarditis

Infective endocarditis in which routine blood cultures do not identify an organism, often because of prior antibiotics, fastidious bacteria, fungi, or noninfectious mimics; diagnosis requires integrated clinical, imaging, and laboratory assessment.

Cumulative Dose

Total amount of substance received over time. Important for carcinogens, teratogens, cumulative toxins.

Cumulative Trauma Disorder

A disorder caused by repeated forceful or awkward movements that progressively injure muscles, tendons, nerves, or other soft tissues.

Cup-To-Disc Ratio

The cup-to-disc ratio is a clinical measurement used to assess the severity of glaucomatous optic nerve damage, comparing the diameter of the optic cup (the central depression within the optic nerve head where neural tissue is absent) to the diameter of the optic disc (the entire optic nerve head).

Cupping

An abnormal enlargement or depression of the optic-disc cup, often assessed in evaluating glaucoma.

Alternate Names:

Optic-disc cupping; glaucomatous cupping.

CURB-65 Score

One point each for: Confusion, Urea > 7 mmol/L, RR > 30, BP < 90/60, age ≥ 65. 0–1: outpatient. 2: consider hospitalization. 3–5: severe.

Cure

Elimination or durable control of a disease so that it no longer causes active illness; the meaning and evidence for cure vary by condition.

Curettage

Removal of tissue from a body cavity or surface with a curette, used for diagnosis, treatment, or removal of abnormal tissue.

Curettage Specimen

Tissue obtained by scraping or scooping a surface or cavity, such as the endometrium or a bone lesion, for histologic examination. The limited and fragmented nature of the specimen may restrict assessment of invasion or architecture.

Curette

A surgical instrument featuring a spoon-shaped, ring-shaped, or scooped tip with sharp or blunt edges, designed for debriding, scraping, or excavating biological tissue from a cavity, bone, or mucosal surface. Widely used across surgical subspecialties: in obstetrics and gynecology for endometrial biopsy or dilation and curettage (D&C); in orthopedic surgery for excising benign bone cysts or necrotic bone; in dermatology for scoop excision of seborrheic keratoses and basal cell carcinomas (curettage and electrodesiccation); and in periodontics for subgingival scaling and root planing.

Curling Ulcer

Stress ulceration of the stomach or duodenum associated with severe burns. Part of the Curling

triad with hypovolemia and sepsis. The pathogenesis involves reduced mucosal blood flow during the systemic inflammatory response to burn injury.

Curling'S Ulcer

An acute peptic ulcer associated with severe burns, often occurring in the duodenum or stomach during physiologic stress.

Curvature Of The Penis

A bend of the erect or flaccid penis caused by congenital tissue asymmetry, scar tissue such as Peyronie disease, trauma, or other conditions; it may impair intercourse or cause pain.

Alternate Names:

Peyronie's Disease (Curvature Of The Penis)

Curvularia Alcornii

A dematiaceous fungal species causing phaeohyphomycosis, an opportunistic infection of the skin, sinuses, and occasionally the central nervous system in immunocompromised patients. It produces dark, septate hyphae in tissue. Diagnosis is by culture and histopathology showing pigmented fungal elements.

Cushing Disease

Cushing syndrome caused by an adrenocorticotrophic hormone-secreting pituitary tumor. Excess cortisol can cause central weight gain, rounded facial features, skin changes, muscle weakness, high blood pressure, high blood glucose, and menstrual or mood changes.

Cushing Syndrome

Clinical state resulting from chronic exposure to excess glucocorticoids regardless of cause. Most common endogenous cause is Cushing disease from pituitary ACTH-secreting adenoma accounting for approximately seventy percent.

Cushing Syndrome Complications

Untreated Cushing syndrome carries significant morbidity and mortality from cardiovascular disease, infections, thromboembolic events, and metabolic derangements. Cardiovascular complications include accelerated atherosclerosis, hypertension, and dys-

lipidemia. Infection risk is increased from immunosuppression.

Cushing Syndrome Due To Adrenal Tumor

Excess cortisol caused by an adrenal tumor, producing Cushing syndrome with features such as central weight gain, hypertension, diabetes, muscle weakness, and skin changes.

Cushing Ulcer

Stress ulceration associated with central nervous system disease, trauma, or surgery. Caused by vagally mediated gastric acid hypersecretion, distinguishing it from Curling ulcer which results from mucosal ischemia. The ulcers are typically solitary, located in the stomach or duodenum, and present with gastrointestinal bleeding.

Cushing'S Disease

A pituitary tumor that makes too much adrenocorticotrophic hormone (ACTH), causing the adrenal glands to produce too much cortisol. Features may include weight gain around the trunk, a round face, easy bruising, purple stretch marks, muscle weakness, high blood pressure, high blood glucose, and menstrual or mood changes.

Cushing'S Syndrome

An endocrine disorder caused by prolonged exposure to too much cortisol or glucocorticoid medicine. It may result from steroid treatment or from a pituitary, adrenal, or other tumor. Common features include weight gain mainly around the trunk, a round face, fat at the back of the neck, thin easily bruised skin with purple stretch marks, muscle weakness, high blood pressure, and high blood glucose. Untreated disease can cause infections, blood clots, bone loss, and cardiovascular complications.

Alternate Names:

Hypercortisolism; cortisol excess syndrome.

Cushingoid

Resembling the physical features of excess glucocorticoid exposure, such as a round face, central weight gain, thin skin, easy bruising, and muscle weakness.

Cusp

A pointed projection, such as a projection of a tooth or one of the leaflets of a heart valve.

Cusp Fracture

Breakage of tooth cusp. Often due to large restoration weakening tooth. Treatment: crown or onlay.

Cut

A break or incision made in tissue, usually by a sharp object; the depth, contamination, and location determine the required care.

Cutaneous

Pertaining to the skin (*cutis*), the largest organ of the human body, composed of the stratified keratinized squamous epithelium of the epidermis, the dense fibrovascular collagenous dermis, and the deeper subcutaneous adipose tissue (hypodermis). Functions include physical barrier defense, thermoregulation through dermal microvascular plexuses and eccrine sweating, tactile sensory transduction, and cutaneous vitamin D synthesis. Clinically, cutaneous manifestations frequently provide pathognomonic diagnostic clues to occult systemic illness—including the malar rash of systemic lupus erythematosus, heliotrope rash of dermatomyositis, necrobiosis lipidica in diabetes mellitus, erythema nodosum in sarcoidosis or inflammatory bowel disease, and palmar erythema in cirrhosis—as well as primary skin malignancies (melanoma, basal cell carcinoma, squamous cell carcinoma, and cutaneous T-cell lymphoma).

Cutaneous Angiosarcoma

An aggressive malignant vascular tumor of skin, typically affecting the scalp and face of older adults as a bruise-like or violaceous plaque that may ulcerate or metastasize.

Cutaneous Anthrax

The most frequent naturally occurring clinical presentation of infection with *Bacillus anthracis* (95% of human cases), typically contracted when bacterial spores enter broken skin after contact with infected animals or animal products. Characterized

by a pruritic macule or papule that rapidly ulcerates and develops into a pathognomonic, painless central black eschar surrounded by substantial non-pitting edema.

Cutaneous B-Cell Lymphoma

A type of non-Hodgkin lymphoma that primarily affects B lymphocytes in the skin.

Cutaneous Diphtheria

A skin infection caused by toxigenic or nontoxigenic *Corynebacterium diphtheriae*, producing chronic ulcers or a gray membrane.

Cutaneous Langerhans Cell Histiocytosis

A clonal proliferation of Langerhans cells in the skin that may cause scaly papules, seborrheic dermatitis-like plaques, or purpura. Evaluation determines whether disease is skin-limited or involves other organs.

Cutaneous Larva Migrans

A creeping eruption caused by hookworm larvae (*Ancylostoma braziliense*, *A. caninum*) from dog/cat feces penetrating the skin, typically in tropical/subtropical regions (walking barefoot on contaminated sand). Larvae migrate erratically under the skin causing intensely pruritic, serpiginous, erythematous tracks.

Cutaneous Leiomyoma

A benign smooth-muscle tumor of the skin arising from arrector pili muscles, vascular smooth muscle, or the dartos. Multiple painful lesions may indicate hereditary leiomyomatosis and renal-cell cancer syndrome.

Cutaneous Leishmaniasis

A skin infection caused by *Leishmania* parasites transmitted by sandflies, usually producing one or more chronic ulcers.

Cutaneous Lupus

A form of lupus erythematosus limited to the skin, manifesting as discoid lesions, subacute cutaneous

plaques, or acute malar erythema. It may occur in isolation or as a feature of systemic lupus erythematosus.

Cutaneous Lupus Erythematosus

Autoimmune skin disease associated with lupus-spectrum illness and characterized by inflammatory lesions that may scar, alter pigmentation, or cause photosensitivity. Subacute and chronic forms have different morphologies and systemic associations; evaluation may include biopsy, direct immunofluorescence, and autoimmune testing.

Cutaneous Lymphoma

Cutaneous lymphomas are heterogeneous group of T-cell and B-cell malignancies primarily involving the skin. Primary cutaneous B-cell lymphomas include marginal zone lymphoma, follicle center lymphoma, and diffuse large B-cell lymphoma leg type. Primary cutaneous T-cell lymphomas include mycosis fungoides and Sézary syndrome.

Cutaneous Metastases

Secondary deposits of cancer in the skin, originating from a primary tumor elsewhere in the body. They may present as nodules, plaques, or ulcers, and often indicate advanced or recurrent disease.

Cutaneous Metastasis

A deposit of malignant cells in the skin from a primary tumor elsewhere or, less often, another cutaneous site; it may present as a firm nodule, plaque, or inflammatory-appearing lesion.

Cutaneous Polyarteritis Nodosa

A skin-limited necrotizing vasculitis of small- and medium-sized arteries, typically causing tender subcutaneous nodules, livedo reticularis, and ulcers on the lower legs without systemic organ involvement.

Cutaneous Skin Tag

A small, soft, benign skin growth, usually on a narrow stalk in a skin fold.

Cutaneous Small-Vessel Vasculitis

Inflammation and destruction of small dermal blood vessels, commonly presenting as palpable purpura on dependent areas. Causes include infections, medications, autoimmune disease, and systemic vasculitis; skin biopsy with appropriate specimen handling is central to diagnosis.

Cutaneous T-Cell Lymphoma

A malignancy of skin-homing T lymphocytes. Mycosis fungoides is the most common subtype, presenting as patches, plaques, and tumors in a clothing distribution. Sézary syndrome is the leukemic variant with erythroderma, lymphadenopathy, and circulating malignant cells.

Cuticle

The thin outermost layer of a hair shaft formed by overlapping cells that protect the inner cortex.

Alternate Names:

Hair cuticle; cuticular layer.

Cuticle Remover Poisoning

Exposure to cuticle-remover products, which may contain alkaline or acidic chemicals that can injure the skin, eyes, mouth, or gastrointestinal tract.

Cutis Anserina

Gooseflesh or piloerection, in which contraction of tiny muscles around hair follicles makes the skin appear rough or dimpled.

Cutis Laxa

A group of inherited or acquired connective-tissue disorders characterized by loose, inelastic skin caused by abnormal elastic fibers. Some forms also affect the lungs, blood vessels, heart, gastrointestinal tract, or skeleton.

Cuts And Puncture Wounds

Breaks in the skin caused by sharp, blunt, or penetrating trauma; evaluation considers depth, contamination, retained foreign bodies, tendon or nerve injury, vascular damage, and tetanus protection.

Cuts Wounds (Cuts, Scrapes And Puncture Wounds)

Alternate index label for Cuts, Scrapes and Puncture Wounds.

Cuts, Scrapes And Puncture Wounds

Cuts, scrapes, and puncture wounds damage the skin to varying depths and can introduce bacteria or foreign material. Clean minor wounds with running water, control bleeding, cover them, and seek care for deep or contaminated wounds, bites, impaired circulation, infection, or uncertain tetanus protection.

Alternate Names:

Cuts Wounds (Cuts, Scrapes And Puncture Wounds)

Cutting Balloon (Vascular)

A balloon catheter with small blades or scoring elements that create controlled incisions in plaque during vessel dilation.

Alternate Names:

Vascular

Cutting For The Stone

An older term for surgically opening the urinary tract to remove a stone, historically called lithotomy.

CVC

Central venous catheter, a catheter whose tip lies in a large central vein and provides intravenous access for medications, fluids, nutrition, or monitoring.

Cyanide

A highly toxic chemical ion or compound that inhibits cellular cytochrome oxidase, preventing tissues from using oxygen and potentially causing rapid fatal poisoning.

Cyanide Poisoning

Toxicity from cyanide compounds (hydrogen cyanide, potassium/sodium cyanide) that inhibit cytochrome oxidase (complex IV), blocking oxidative phosphorylation and cellular respiration despite adequate oxygen—histotoxic hypoxia. Sources: smoke

inhalation (fires—plastic/acrylic), ingestion (industrial, suicidal), occupational exposure.

Cyanoacrylates Poisoning

Exposure to cyanoacrylate adhesives, commonly known as instant glue. Contact may bond tissues or irritate the skin, eyes, or airways; ingestion usually causes local adhesion or irritation.

Cyanosis

A bluish discoloration of the skin and mucous membranes resulting from excessive amounts of deoxygenated hemoglobin in the capillary blood. It becomes clinically apparent when the concentration of deoxygenated hemoglobin exceeds 5 grams per deciliter, which corresponds to an oxygen saturation of approximately 85 percent.

Cyanotic

Having a bluish or slate-gray discoloration of skin or mucous membranes, usually reflecting increased deoxygenated hemoglobin or abnormal blood flow.

Cyanotic Heart Disease

A congenital or acquired heart disorder that reduces systemic oxygen saturation and causes cyanosis, often through right-to-left shunting or inadequate pulmonary blood flow.

Cycle Time

Time for complete image acquisition. PET: minutes. SPECT: 20-30 minutes.

Cyclic Citrullinated Peptide

A laboratory antigen used to detect anti-CCP antibodies, which are highly specific for rheumatoid arthritis but are interpreted with clinical findings.

Cyclic Guanosine Monophosphate

A cellular signaling molecule involved in smooth-muscle relaxation, phototransduction, and other physiologic processes.

Alternate Names:

cGMP; cyclic GMP.

Cyclic Hormone Therapy

Hormone therapy in which estrogen is given continuously or for part of a cycle and progestogen is added for a defined number of days.

Alternate Names:

Sequential hormone therapy; cyclic estrogen-progestogen therapy.

Cyclic Neutropenia

Recurrent episodes of abnormally low neutrophil counts occurring at regular intervals.

Cyclic Vomiting Syndrome

Recurrent episodes of severe vomiting separated by symptom-free intervals.

Cyclic Vomiting Syndrome

Alternate index label for CVS.

Cyclooxygenase

An enzyme family that helps convert arachidonic acid into prostaglandins and related mediators involved in pain, inflammation, and platelet function.

Alternate Names:

COX enzyme; prostaglandin-endoperoxide synthase.

Cyclooxygenase-2

An inducible cyclooxygenase enzyme that generates prostaglandins involved in inflammation, pain, and fever and is inhibited by COX-2-selective medicines.

Cyclops

A term that may refer to cyclopia, a rare severe congenital malformation with a single central eye, or to a fibrous nodule causing loss of extension after knee surgery; context determines the meaning.

Cyclospora Infection

An intestinal infection caused by the parasite *Cyclospora cayentanensis*, usually acquired from contaminated food or water. It commonly causes prolonged watery diarrhea, abdominal cramps, nausea, fatigue, and weight loss. Diagnosis requires specialized stool testing, and antimicrobial treatment is often effective.

Cyclospora Infection (Cyclosporiasis)

Alternate index label for Cyclosporiasis.

Cyclosporiasis

An intestinal infection caused by the parasite *Cyclospora cayetanensis*, usually acquired by consuming contaminated food or water. It commonly causes prolonged or relapsing watery diarrhea, abdominal cramps, nausea, fatigue, loss of appetite, and weight loss; diagnosis requires specialized stool testing, and trimethoprim-sulfamethoxazole is the usual effective treatment when appropriate.

Alternate Names:

Cyclospora Infection (Cyclosporiasis)

Cyclosporiasis (Cyclospora)

An intestinal infection caused by *Cyclospora* parasites, typically producing prolonged watery diarrhea, cramps, nausea, and fatigue.

Cyclothymia

A long-term mood disorder with repeated periods of hypomanic and depressive symptoms that do not meet criteria for full episodes.

Cyclothymia (Cyclothymic Disorder)

A chronic mood disorder involving repeated periods of hypomanic and depressive symptoms that do not meet criteria for full episodes.

Cyclothymic Disorder

A chronic mood disorder characterized by numerous periods of hypomanic symptoms and periods of depressive symptoms over at least two years (one year in children and adolescents). The hypomanic and depressive symptoms do not meet criteria for a hypomanic or major depressive episode.

Cylindroma

A usually benign adnexal tumor composed of basaloid cells, often presenting as a firm pink or skin-coloured nodule on the scalp or face; multiple lesions may occur in Brooke-Spiegler syndrome.

CYP2C19 Polymorphism

CYP2C19 is a cytochrome P450 enzyme involved in the metabolism of approximately 10 percent of drugs, including the antiplatelet agent clopidogrel, proton pump inhibitors, some antidepressants, and the antiepileptic drug phenytoin.

CYP2D6 Polymorphism

CYP2D6 is a cytochrome P450 enzyme responsible for the metabolism of approximately 25 percent of commonly prescribed drugs, including codeine, tamoxifen, many antidepressants, and antipsychotics.

CYP450 System

A family of enzymes, found mainly in the liver, that metabolize many medications and other foreign substances. Differences in these enzymes and their inhibition or induction can alter drug effects and toxicity.

Cyproheptadine Overdose

Overdose of cyproheptadine, an antihistamine, that may cause sedation, agitation, anticholinergic effects, seizures, respiratory depression, or cardiac effects.

Cyst

A cyst is a closed sac containing fluid, air, cells, or semisolid material and may occur in skin, organs, glands, or other tissues.

Cyst Eyelid (Giardia Lamblia)

Alternate index label for *Giardia Lamblia*.

Cyst, Bartholin'S

Alternate index label; see *Bartholin's cyst*.

Cyst, Ganglion

Alternate index label; see *Ganglion cyst*.

Cyst, Kidney

Alternate index label; see *Kidney cysts*.

Cyst, Ovarian

Alternate index label; see *Ovarian cysts*.

Cyst, Pancreatic

Alternate index label; see *Pancreatic cysts*.

Cyst, Pilonidal

Alternate index label; see *Pilonidal cyst*.

Cyst, Spermatic

Alternate index label; see *Spermatocele*.

Cystadenoma

A usually benign glandular epithelial tumor that forms cystic spaces or cyst-like structures.

Cystic Acne

Cystic acne is severe inflammatory acne with deep painful nodules or cyst-like lesions that can scar. Treatment may require prescription retinoids, antimicrobial or hormonal therapy, or isotretinoin under specialist monitoring; squeezing lesions increases scarring.

Cystic Echinococcosis

Hydatid disease: infection with larval cysts of *Echinococcus granulosus* (dog tapeworm), transmitted by ingestion of eggs from dog feces. Cysts grow slowly in liver (most common, 60-70 percent), lungs (20-30 percent), and other organs. Hepatic: RUQ pain, hepatomegaly, biliary obstruction. Pulmonary: cough, chest pain, hemoptysis.

Cystic Fibrosis

An inherited disease caused by disease-causing variants in both copies of the CFTR gene. CFTR dysfunction disrupts salt and water movement, producing thick, sticky mucus and unusually salty sweat. It mainly affects the lungs, sinuses, pancreas, intestines, liver, and reproductive system. Common problems include recurrent lung infections, chronic cough, sinus disease, poor digestion and growth, intestinal blockage in newborns, and male infertility due to absent or blocked sperm ducts. Diagnosis uses newborn screening, sweat-chloride testing, genetic testing, and clinical assessment. Severity varies; treatment may include airway clearance, inhaled medicines, pancreatic enzymes, nutritional support, antibiotics, and CFTR modulators.

F508del is the most common CFTR variant.

Alternate Names:

CF

Cystic Fibrosis - Nutrition

A patient-care topic concerning cystic fibrosis - nutrition. It addresses the relevant purpose, risks, management, and follow-up.

Cystic Hygroma

Congenital lymphatic malformation composed of thin-walled lymphatic cysts, manifesting as a soft, fluid-filled, painless, translucent (transilluminates brilliantly) mass, typically in the posterior triangle of the neck (75%, left-sided), axilla (20%), mediastinum, retroperitoneum, or groin.

Cystic Medial Necrosis

Degeneration and loss of elastic fibers and smooth-muscle cells in the aortic media, creating areas of mucoid material and weakening the aortic wall. It may contribute to aortic aneurysm or dissection and is also called cystic medial degeneration.

Cysticercosis

Cysticercosis is tissue infection by larval *Taenia solium* after swallowing eggs, potentially causing cysts in muscle, skin, eyes, or brain.

Cystine And Triple Phosphate (Struvite) Crystals

Crystalline substances that may be found in urine sediment. Hexagonal cystine crystals support cystinuria in the appropriate setting, while struvite crystals may occur in infection-related alkaline urine; microscopy is interpreted with clinical and laboratory findings.

Alternate Names:

struvite

Cystine Stones

Rare stones from inherited cystinuria with defective cystine transport. Hexagonal crystals on urine microscopy. Difficult to dissolve. Treat with aggressive hydration, urine alkalinization to pH greater

than 7.5, and thiol agents including tiopronin and D-penicillamine that form soluble complexes with cystine.

Cystinuria

Cystinuria is an inherited kidney-transport disorder causing excess urinary cystine and recurrent cystine kidney stones.

Cystitis

Inflammation of the urinary bladder, typically from bacterial infection, one of the most common bacterial infections in women.

Alternate Names:

Bladder Infection

Cystitis (Bladder Infection)

Cystitis is inflammation of the bladder, most often from a bacterial urinary-tract infection. It causes burning urination, frequency, urgency, and lower-abdominal discomfort; fever, flank pain, vomiting, pregnancy, or recurrent infection requires prompt assessment.

Cystitis - Acute

Acute inflammation of the urinary bladder, most often caused by bacterial infection and producing dysuria, urinary frequency, urgency, and suprapubic discomfort.

Cystitis - Noninfectious

Inflammation of the urinary bladder without a proven bacterial infection. Causes include interstitial cystitis or bladder pain syndrome, medicines, radiation, chemical irritation, autoimmune disease, and injury; symptoms may include frequency, urgency, and painful urination.

Cystitis, Interstitial

Alternate index label; see *Interstitial cystitis*.

Cystocele

Anterior vaginal wall prolapse: herniation of the bladder into the anterior vaginal wall due to weakening of the pubocervical fascia, most commonly

after childbirth and menopause.

Cystography

Contrast imaging of bladder. Evaluates trauma, fistulas, vesicoureteral reflux.

Cystoid Macular Edema

Swelling of the macula caused by fluid collecting in small cyst-like spaces within the retina.

Cystometric Study

A diagnostic test or assessment related to cystometric study. Results are interpreted with the clinical findings, test method, and reference range.

Cystometrogram

Suite of diagnostic procedures designed to evaluate the physiological function of the lower urinary tract (bladder and urethral sphincter) during filling, storage, and emptying phases. See urodynamic testing.

Cystometry

A urodynamic test that measures bladder pressure and function during filling and emptying.

Cystoscope

A thin, lighted instrument used to examine the urethra and bladder and, when needed, perform procedures.

Cystoscopy

Cystoscopy uses a camera passed through the urethra to inspect the bladder and urethra and may allow biopsy or treatment.

Cystostomy

Surgical creation of an opening from the urinary bladder to the skin or another structure to permit drainage of urine.

Cystotome

A surgical instrument used to make an incision in the capsule of the lens during selected eye procedures.

Cystourethrography

Radiographic imaging of the urinary bladder and urethra, usually during filling and voiding after contrast has been introduced.

Cysts

Closed sac-like structures containing fluid, air, semisolid material, or other contents; their causes range from benign developmental or obstructive processes to infection or neoplasia.

Cysts Choledochal (Choledochal Cysts)

Alternate index label for Choledochal Cysts.

Cysts Ovary (Ovarian Cysts)

Alternate index label for Ovarian Cysts.

Cysts Pancreatic Inflammatory (Pancreatic Cysts)

Alternate index label for Pancreatic Cysts.

Cysts True Pancreas (Pancreatic Cysts)

Alternate index label for Pancreatic Cysts.

Cysts, Epidermoid

Alternate index label; see *Epidermoid cysts*.

Cysts, Sebaceous

Alternate index label; see *Epidermoid cysts*.

Cytochrome B5 Reductase

An enzyme that maintains hemoglobin iron in the ferrous state needed for oxygen binding; inherited deficiency can cause congenital methemoglobinemia, usually presenting with cyanosis and impaired oxygen delivery.

Cytochrome C

Mobile electron carrier between Complex III and IV. Also involved in apoptosis.

Cytochrome P450

The cytochrome P450 system is a superfamily of heme-containing monooxygenase enzymes primarily

located in the endoplasmic reticulum of hepatocytes, responsible for Phase I drug metabolism through oxidation, reduction, and hydrolysis reactions.

Cytogenetics

The study of chromosomes and their number, structure, and arrangement. Tests such as karyotyping, fluorescence in situ hybridization, and chromosome microarray can help identify inherited conditions, leukemia, other cancers, and some fetal abnormalities.

Cytogenetics (Karyotype)

Visualization of chromosomes under light microscopy from dividing cells (bone marrow, blood, amniotic fluid, tissue). Staining: G-banding (Giemsa, light and dark bands). Resolution: 400-550 bands per haploid genome.

Alternate Names:

Karyotype

Cytokine

Small signaling proteins (5-25 kDa) mediating cell-to-cell communication in immunity, inflammation, and hematopoiesis.

Cytokine Release Syndrome

CRS: systemic inflammatory response from massive cytokine release (IL-6, IFN-gamma, TNF, IL-10) after T cell engaging therapies (CAR-T, bispecific antibodies, TGN1412).

Cytokine Storm

A severe, dysregulated systemic inflammatory response involving excessive cytokine release that can cause tissue injury, organ dysfunction, and shock.

Cytokines

Small signaling proteins released by immune and other cells that regulate inflammation, immunity, blood-cell production, and tissue responses.

Alternate Names:

Immune signaling proteins; cytokine mediators.

Cytologic Evaluation

Microscopic examination of individual cells or small cell groups from a fluid, brushing, scraping, or fine-needle sample to detect infection, inflammation, or malignancy.

Cytology

The microscopic study of individual cells, distinct from histology in that tissue architecture is not examined, used for screening and diagnosis of neoplastic and infectious disease. Specimens are exfoliative (cervical smears, sputum) or aspirated (fine needle aspiration, body fluids), interpreted with Papanicolaou or special stains.

Cytology Exam Of Pleural Fluid

Microscopic examination of fluid around the lung for malignant cells and other cellular changes, performed with chemical and microbiologic testing when evaluating an effusion.

Cytology Exam Of Urine

Microscopic examination of shed urinary-tract cells, used mainly to detect high-grade urothelial malignancy and selected abnormal cells; a negative result does not exclude cancer.

Cytomegalovirus

A herpesvirus that causes significant disease in immunocompromised patients including transplant recipients and HIV-infected individuals. CMV infects a wide range of cell types and establishes latent infections in myeloid progenitor cells. Primary infection is usually asymptomatic in immunocompetent individuals.

Cytomegalovirus

Alternate index label for CMV.

Cytomegalovirus

Alternate index label for Cytomegalovirus.

Cytomegalovirus Infection

Cytomegalovirus infection is caused by a herpesvirus that is often mild in healthy people but can cause

congenital disease or severe organ infection in immunocompromised patients.

Cytomegalovirus Infection

A widespread herpesvirus infection. Primary infection in immunocompetent individuals is usually asymptomatic or causes mononucleosis-like syndrome. Congenital CMV: most common congenital infection, causes sensorineural hearing loss, microcephaly, and developmental delay.

Cytopathology

The branch of pathology using cytologic examination of cells to diagnose disease, particularly neoplastic and infectious processes, built on standardized reporting systems that guide management.

Cytopenia

A reduction in the number of one or more circulating blood-cell lineages: red cells, white cells, or platelets.

Cytoplasm

The material inside a cell between the cell membrane and nucleus, consisting of cytosol, organelles, and other cellular components.

Cytoreductive Surgery

Surgical removal of as much visible tumor as possible to reduce disease burden, a cornerstone of ovarian cancer management and combined with hyperthermic intraperitoneal chemotherapy for peritoneal carcinomatosis.

Cytoskeleton

Dynamic protein filament network providing structural support, cell shape, intracellular transport, and cell division. Three main components: (1) Microfilaments (actin, 7 nm): cell cortex, stress fibers, contractile ring (cytokinesis), lamellipodia/filopodia (motility), myosin interaction (muscle contraction).

Cytotoxic

Toxic to cells or capable of killing cells, as with some chemotherapy drugs, toxins, or cytotoxic immune cells.

Cytotoxic Alopecia

Hair loss caused by exposure to a cytotoxic treatment or other toxic injury to actively growing hair follicles.

Alternate Names:

Drug-induced alopecia; chemotherapy-related hair loss.

Cytotoxic T Cell

The effector cells of cell-mediated immunity that kill virus-infected cells and tumor cells. Recognize antigenic peptides presented on MHC class I molecules via the T-cell receptor; co-stimulation by CD4+ helper cells and cytokines (IL-2) is needed for activation.

Cytotoxicity

The capacity of an immune effector cell or immune mediator to injure or kill a target cell. T lymphocytes and natural killer cells commonly use perforin-granzyme pathways or death-receptor signaling to induce target-cell apoptosis.

Common Carotid Artery

One of the paired arteries supplying the head and neck. The right common carotid arises from the brachiocephalic trunk and the left from the aortic arch; each divides into the internal and external carotid arteries.

D

1p36 Deletion Syndrome

A contiguous gene microdeletion syndrome resulting from a terminal deletion of the subtelomeric region of chromosome 1p36, representing the most prevalent terminal deletion in humans. Phenotypic features include severe intellectual disability, microcephaly, developmental delay, infantile hypotonia, sensorineural hearing loss, structural congenital heart disease (specifically dilated cardiomyopathy and patent ductus arteriosus), seizures, and characteristic craniofacial dysmorphisms featuring deep-set eyes, straight horizontal eyebrows, midface retrusion, a broad flat nasal bridge, and a pointed chin.

Alternate Names:

Monosomy 1p36; Chromosome 1p36 Deletion Syndrome

22q11.2 Deletion Syndrome

The most common human chromosomal microdeletion syndrome, caused by non-allelic homologous recombination resulting in a heterozygous 1.5-to-3 Mb deletion in the 22q11.2 locus that encompasses the *TBX1* transcription factor gene. Unifies a diverse phenotypic spectrum historically split into DiGeorge syndrome, Velocardiofacial (Shprintzen) syndrome, and conotruncal anomaly face syndrome. Major clinical manifestations encompass conotruncal cardiac malformations (tetralogy of Fallot, interrupted aortic arch type B, truncus arteriosus), palatal anomalies (cleft palate, velopharyngeal insufficiency), thymic aplasia or hypoplasia causing T-cell immunodeficiency, parathyroid hypoplasia causing neonatal hypocalcemia, distinct facial features (tubular nose, bulbous nasal tip), developmental delays, and a markedly increased lifetime predisposition to schizophrenia.

Alternate Names:

DiGeorge Syndrome Spectrum; Velocardiofacial Syndrome (VCFS); 22q11.2DS

D & C

Dilation and curettage, a procedure in which the cervix is widened and tissue is removed from the uterine cavity for treatment or diagnosis.

D And C

Dilation and curettage, a procedure that opens the cervix and removes tissue from the uterine lining for treatment or diagnosis.

D And E

Dilation and evacuation, a surgical procedure in which the cervix is dilated and uterine contents are removed by suction and instruments.

D-Dimer

A substance released into the blood when a blood clot breaks down. A high level can occur with a blood clot, but also with infection, pregnancy, recent surgery, cancer, or other conditions. A normal result can help rule out a clot in carefully selected patients whose initial risk is low or moderate.

D-Dimer Test

D-dimer testing measures a fibrin-degradation product; an elevated result can support evaluation for thrombosis but is nonspecific and must be interpreted with pretest probability.

D-Limonene

A citrus-derived compound found in the oils of or-

ange, lemon, and other citrus fruits.

Alternate Names:

Limonene

D-Xylose Absorption

A test of small-intestinal absorption in which orally administered D-xylose is measured in blood or urine. Reduced absorption can support small-intestinal mucosal disease, although the test is now used less often and results are affected by kidney function and collection quality.

D.O.

Doctor of Osteopathic Medicine, a physician degree whose graduates are licensed to practice medicine and surgery like MD graduates in the United States.

D2 Receptor

A dopamine receptor involved in movement, motivation, reward, and some psychiatric disorders.

D&C Instruments

Instruments used to dilate the cervix and remove tissue from the uterus during dilation and curettage.

Da Costa's Syndrome

Da Costa's Syndrome is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

Dacarbazine

An alkylating chemotherapy medicine used for Hodgkin lymphoma, melanoma, and selected other cancers; important toxicities include severe nausea, bone-marrow suppression, and liver injury.

Dacetuzumab

A medicine called dacetuzumab. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Daclizumab

A medicine called daclizumab. Its uses, dosing, adverse effects, and contraindications depend on

the specific indication and patient.

Dacomitinib

A medicine called dacomitinib. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Dacrocytes (Teardrop Cells)

Teardrop-shaped red blood cells seen on a blood smear. They may occur when red blood cells pass through scarred or crowded bone marrow, and can be seen in myelofibrosis, bone-marrow cancers, and severe thalassemia.

Alternate Names:

Teardrop Cells

Dacryoadenitis

Inflammation of a tear-producing gland, causing painful swelling near the outer upper eyelid. It may be caused by infection, inflammation, or a condition affecting the whole body.

Dacryocystitis

Inflammation of the lacrimal sac, most commonly caused by obstruction of the nasolacrimal duct leading to stagnation of tears and secondary bacterial infection (*Staphylococcus aureus*, *Streptococcus pneumoniae*, *Haemophilus influenzae*).

Dacryocystocele

A cystic swelling caused by blockage and dilation of the tear-duct system, usually near the inner corner of the eye.

Dacryocystography

An imaging study in which contrast material is introduced into the lacrimal drainage system to identify narrowing or obstruction.

Dacryocystorhinostomy

A surgical procedure creating a passage between the lacrimal sac and the nasal cavity to bypass an obstructed nasolacrimal duct.

Dacryocyte Analysis

Examination or counting of teardrop-shaped red blood cells on a blood smear; numerous dacryocytes may occur with marrow fibrosis, infiltration, severe anemia, or splenic disease.

Dacryolithiasis

Formation of a stone or concretion within the lacrimal drainage system, which may cause excessive tearing, discharge, recurrent dacryocystitis, or obstruction.

Dacryostenosis

Narrowing or obstruction of the lacrimal drainage passages, which can cause excessive tearing and recurrent infection of the lacrimal sac.

Dactinomycin

A medicine called dactinomycin. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Dactylitis

Inflammation of an entire digit (finger or toe), producing a diffuse, fusiform swelling often described as sausage-shaped.

Dactylomegaly

Abnormal enlargement of a finger or toe, which may occur as an isolated finding or as part of an endocrine, skeletal, vascular, or inflammatory disorder.

Dactylosymphysis

Abnormal fusion or webbing of adjacent digits, usually present from birth.

Daidzein

A naturally occurring isoflavone found in soy and other legumes that can be converted by intestinal bacteria into related compounds.

Daily Bowel Care Program

A planned routine for preventing and treating constipation or fecal incontinence, often including timing,

fluids, diet, activity, medication, and rectal measures when prescribed.

Daily Value

A reference amount used on U.S. Nutrition Facts labels to show how much a nutrient in one serving contributes to a typical daily diet.

Dakin Solution

A dilute sodium hypochlorite solution used as a topical antiseptic for selected contaminated or infected wounds. Concentration and exposure time must be controlled because stronger solutions can injure viable tissue.

Dalotuzumab

A medicine called dalotuzumab. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Dalteparin

A low-molecular-weight heparin that enhances antithrombin activity against factor Xa and is used to prevent or treat venous thromboembolism; bleeding and dose adjustment in severe kidney disease are important considerations.

Dalteparin Sodium

The sodium salt of dalteparin, a low-molecular-weight heparin used to prevent or treat venous thromboembolism; bleeding is the principal serious adverse effect.

Daltonism

Color-vision deficiency, especially difficulty distinguishing certain colors because of abnormal or absent retinal cone function.

DALY

Disability-adjusted life year, a measure combining years of healthy life lost because of premature death and disability.

Damage To The Amygdala

Damage to the amygdala can affect fear processing,

emotional learning, memory, threat recognition, and social behavior. Causes include trauma, stroke, infection, tumor, epilepsy, or degenerative disease, and effects depend on the side and extent of injury.

Damage-Control Resuscitation

A trauma strategy prioritizing rapid hemorrhage control, permissive approaches to blood pressure when appropriate, prevention of hypothermia, correction of coagulopathy, and balanced blood-product resuscitation rather than large-volume crystalloid administration.

Damage-Control Surgery

A staged operative strategy for critically ill or severely injured patients in whom definitive repair is unsafe because of hypothermia, acidosis, coagulopathy, or physiologic instability. Initial surgery controls hemorrhage and contamination, followed by resuscitation and later definitive reconstruction.

Damus-Kaye-Stansel Procedure

A palliative cardiac surgical operation utilized in single-ventricle congenital cardiac anomalies associated with systemic ventricular outflow tract obstruction or subaortic stenosis (e.g., double inlet left ventricle with transposition of the great arteries). Involves transecting the main pulmonary artery just proximal to its bifurcation, beveling the proximal end, and anastomosing it end-to-side or side-to-side to the ascending aorta, effectively unifying the aortic and pulmonary valves into a single, large, double-barrel systemic ventricular outflow conduit to prevent subaortic obstruction, while pulmonary blood flow is subsequently supplied via a systemic-to-pulmonary shunt or bidirectional Glenn anastomosis.

Alternate Names:

DKS Procedure; Damus-Stansel-Kaye Operation

Danazol

A synthetic androgen with antigonadotropic effects, used selectively for endometriosis, hereditary angioedema, or other conditions; androgenic, lipid, liver, and thrombotic adverse effects limit use.

Dandruff

A common scalp condition causing small white or yellow flakes and sometimes itching. It is often related to oily skin, seborrheic dermatitis, or the scalp's reaction to the normal yeast *Malassezia*; it is not usually contagious. Persistent severe flaking, redness, sores, or hair loss may indicate another scalp disorder.

Dandruff And Scalp Conditions

Dandruff is a common scalp condition presenting as flaking, itching, and mild inflammation caused by overgrowth of the yeast *Malassezia*, dry skin, or seborrheic dermatitis. Other scalp conditions include psoriasis, contact dermatitis, ringworm tinea capitis, and head lice.

Dandy Fever

Dengue fever, an acute mosquito-borne viral illness causing fever, headache, severe muscle or joint pain, and sometimes hemorrhage or shock.

Dandy-Walker Malformation

A condition present at birth in which part of the cerebellum does not develop normally and one of the brain's fluid spaces becomes enlarged. It may cause fluid buildup in the brain, delayed development, balance problems, or seizures.

Dandy-Walker Syndrome

A congenital abnormality involving the cerebellum and the fluid spaces around it, often causing hydrocephalus or developmental problems.

Dane Particle

The complete infectious particle of hepatitis B virus, consisting of the viral core and envelope.

Dangerous Abbreviations

Abbreviations that can be misread and cause medication or clinical errors; safer practice is to write the complete term when an abbreviation is ambiguous.

Danon Disease

A rare X-linked lysosomal storage disorder caused

by LAMP2 mutations, characterized by cardiomyopathy, skeletal-muscle weakness, and variable intellectual or retinal involvement.

Dantrolene

A skeletal-muscle relaxant that reduces calcium release from the sarcoplasmic reticulum; it is the specific treatment for malignant hyperthermia and may cause weakness or liver injury.

Danusertib

An investigational aurora-kinase inhibitor studied as an anticancer drug; it is not an established routine treatment.

Dapsone

A sulfone antimicrobial used for leprosy, selected dermatitis, and other infections; haemolysis, especially with G6PD deficiency, methaemoglobinaemia, agranulocytosis, and severe skin reactions are important risks.

Daptomycin

A medicine called daptomycin. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Daptomycin Resistance

Resistance to daptomycin can develop through mutations in genes encoding cell membrane phospholipid synthesis. The mechanism involves changes in the bacterial cell membrane that reduce daptomycin binding. Resistance is more common in VRE than MRSA. Resistance can emerge during therapy, particularly in endocarditis and bacteremia.

Darbepoetin Alfa

A long-acting erythropoiesis-stimulating agent used for selected anemias, including those associated with chronic kidney disease or chemotherapy; hemoglobin, blood pressure, and thrombotic risk require monitoring.

Darier'S Disease

An inherited skin disorder characterized by abnor-

mal keratinization, greasy crusted papules, and nail changes, often worsened by heat and sweating.

Dark Adaptation

The process by which the eyes become increasingly sensitive to dim light after moving from bright illumination into darkness.

Dartos

A layer of smooth muscle and connective tissue beneath the skin of the scrotum that wrinkles the scrotal skin in response to temperature and other stimuli.

Darunavir

A medicine called darunavir. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Darwin'S Tubercle

A variable small thickening or projection on the rim of the external ear, regarded as a remnant of an ancestral mammalian ear form.

Dasatinib

A medicine called dasatinib. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

DASH Diet

Dietary Approaches to Stop Hypertension. Emphasizes: fruits, vegetables, whole grains, low-fat dairy, reduced saturated fat, sodium <2300 mg/day. Lowers blood pressure effectively.

Dating Ultrasound

An ultrasound examination, usually performed in early pregnancy, used to estimate gestational age and calculate the expected date of delivery. First-trimester crown-rump length is generally the most accurate ultrasound measurement for dating.

Alternate Names:

Pregnancy dating scan; gestational-age ultrasound.

Daubenton'S Plane

An anatomical reference plane extending from the lower margin of the orbit to the upper margin of the external auditory opening, used in describing skull orientation.

Daunorubicin

An anthracycline chemotherapy medicine that intercalates DNA and inhibits topoisomerase II; important risks include myelosuppression and cumulative cardiotoxicity.

Daunorubicin Hydrochloride

The hydrochloride salt of daunorubicin, an anthracycline chemotherapy drug that interferes with DNA and is used mainly for acute leukemias. Important risks include bone-marrow suppression and heart damage.

Dav Regimen

The term is ambiguous without its source context; it may refer to a named treatment regimen, so the full regimen and indication must be specified before clinical use.

David Procedure

A valve-sparing aortic root replacement surgical operation (aortic valve reimplantation) developed by Tirone David for patients with ascending aortic and aortic root aneurysms with intact or repairable native aortic valve leaflets. The diseased aortic root and ascending aorta are excised while preserving the aortic valve apparatus, which is subsequently reimplanted and stabilized within a cylindrical Dacron vascular graft, and the coronary arteries are reimplanted as buttons. It eliminates the aneurysm and corrects aortic regurgitation without requiring a prosthetic valve, avoiding lifelong anticoagulation.

Alternate Names:

David Operation; Valve-Sparing Root Replacement; Reimplantation of Aortic Valve

Daw

An abbreviation meaning dispense as written, indicating that the pharmacist should dispense the prescribed product rather than automatically sub-

stitute a generic equivalent when permitted by law.

Dawn Phenomenon

Physiological increase in blood glucose occurring in the early morning hours between approximately three and eight AM driven by counter-regulatory hormone surges including growth hormone, cortisol, and catecholamines. More pronounced in patients with diabetes who lack the compensatory insulin response.

Day Hospital

A clinical care, prevention, behavioral, or public-health concept concerning day hospital; its use depends on the patient, setting, and clinical goal.

Day-Blindness

Poor vision in bright light, also called hemeralopia. It can result from retinal disease, cone dysfunction, or other eye disorders.

Day-Sickness

A term for symptoms or illness that occur predominantly during the daytime; the cause depends on the specific symptoms and underlying disorder.

Dcc Gene

A gene encoding the netrin-1 receptor DCC, which guides developing axons and may act as a tumor suppressor; pathogenic variants can cause developmental or cancer-related phenotypes.

DCIS

Alternate index label; see *Ductal carcinoma in situ*.

Dcmp Deaminase

An abbreviation or enzyme name requiring source confirmation; the full molecular name and clinical context should be verified before interpretation.

DDH

Alternate index label; see *Hip dysplasia*.

De Lange Syndrome

A congenital developmental disorder, also called

Cornelia de Lange syndrome, involving characteristic facial features, growth and developmental delay, limb abnormalities of variable severity, and intellectual disability.

Alternate Names:

Cornelia de Lange syndrome, involving characteristic facial features, growth and developmental delay, limb abnormalities of variable severity, and intellectual disability.

De Musset Sign

Rhythmic head bobbing with the heartbeat, classically associated with severe aortic regurgitation.

De Novo

Newly arising in an individual rather than inherited from either parent; the term is commonly used for genetic variants or disease presentations.

De Novo Variant

A genetic variant present in an affected individual that was not detected in either biological parent, usually arising in a parental gamete or early embryogenesis. It may cause a dominant disorder and can have implications for recurrence risk in future pregnancies.

De Quervain Tendinitis

Painful stenosing inflammation of the tendons of the abductor pollicis longus and extensor pollicis brevis in the first dorsal wrist compartment. It causes radial wrist pain worsened by thumb movement or grasping and is assessed clinically.

De Quervain Tenosynovitis

De Quervain tenosynovitis: first dorsal compartment stenosis. Clinical: radial wrist pain, Finkelstein test (thumb in palm, ulnar deviation), swelling over radial styloid.

Alternate Names:

Tenosynovitis, De Quervain's

De Quervain's Tendonitis

Painful inflammation or narrowing of the tendons on the thumb side of the wrist.

De Quervain's Tenosynovitis

De Quervain tenosynovitis is painful inflammation or thickening of the thumb-side wrist tendons, often aggravated by gripping, lifting, or repetitive wrist motion. Rest, splinting, activity changes, injections, or surgery may be used according to severity.

Alternate Names:

DeQuervains Tenosynovitis (De Quervain's Tenosynovitis)

De Winter ECG Pattern

A distinctive, hyperacute electrocardiographic pattern recognized as a high-acuity STEMI equivalent, diagnostic of acute, subtotal or total thrombotic occlusion of the proximal left anterior descending coronary artery, occurring in approximately 2% of acute LAD occlusions. Defined by: (1) upsloping ST-segment depression measuring 1 to 3 mm at the J-point in precordial leads V_1 through V_6 , which continues into (2) tall, prominent, symmetrical, hyperacute T waves; (3) 0.5 to 1 mm ST-segment elevation in lead aVR; and (4) absence of classic convex ST-segment elevation. Demands immediate activation of the cardiac catheterization laboratory for emergency primary percutaneous coronary intervention without waiting for classic ST elevation or biomarker elevation.

Alternate Names:

de Winter Pattern; de Winter T Waves; de Winter Sign

De-Escalation

A set of verbal and nonverbal techniques used to reduce agitation and prevent violence while preserving dignity and safety. It includes calm communication, appropriate personal space, clear limits, environmental modification, and offering choices.

Dead Space

The volume of ventilated air that does not participate in gas exchange. Anatomic dead space: the conducting airways (nose, pharynx, trachea, bronchi, terminal bronchioles) that warm, humidify, and filter inspired air but contain no alveoli for gas exchange. Approximately 150 mL in a 70 kg adult.

Dead Space Ventilation

Ventilation of alveoli without perfusion ($V/Q = \text{infinity}$). Anatomic dead space is the conducting airways (150 mL). Physiologic dead space includes alveoli without perfusion. Increased in PE, hypotension, and emphysema. Measured by the Bohr equation.

Dead Time

The brief period after an event during which a detector or recording system cannot register another event, limiting the measured count rate.

Deafferentation

Loss or interruption of nerve signals from a body area to the brain or spinal cord. It can cause unusual sensations or nerve pain.

Deafness

Complete or severe loss of hearing. Hearing loss may be conductive, sensorineural, or mixed, depending on whether the problem affects sound transmission, the inner ear or auditory nerve, or both.

Deaner

Not a standard medical term in common current usage; its intended meaning should be confirmed from the source or specialty context before clinical interpretation.

Death

The permanent end of the functions that maintain a living organism.

Death Certificate

A legal medical document recording a person's death, including the date, place, and certified causes of death.

Death Rate

The number of deaths in a defined population during a specified period, usually expressed per population size and used in public-health comparisons.

Death Rattle

Noisy, rattling breathing caused by secretions accumulating in the throat or upper airways, often occurring near the end of life when swallowing and coughing weaken.

Death Sudden Cardiac (Sudden Cardiac Death)

Alternate index label for Sudden Cardiac Death.

Deauville Criteria

A five-point scale used with a PET scan to compare activity in a lymphoma with normal reference tissues and judge how well treatment is working.

Debility

A state of weakness or loss of strength, often associated with illness, aging, or prolonged inactivity.

Alternate Names:

Weakness

Debride

To remove dead, damaged, infected, or contaminated tissue from a wound or body site to support healing and control infection.

Debridement

The surgical removal of dead, damaged, or infected tissue from a wound to promote healing and prevent infection.

Debrisoquin

An antihypertensive drug formerly used to reduce sympathetic nerve activity; it is now mainly relevant as a probe of CYP2D6 drug metabolism.

Debulk

To reduce the size or amount of a tumor or other abnormal tissue, usually by surgery or another treatment, without necessarily removing every abnormal cell.

Debulking

Surgical removal of as much tumor as possible when complete resection is not feasible, aiming to reduce

tumor burden (cytoreduction) and improve response to subsequent therapy; central to ovarian cancer management.

Decalcification

Loss of calcium salts from bone, teeth, or other mineralized tissue. In teeth it may weaken enamel; in bone it can contribute to reduced strength.

Decannulation

Removal of a cannula or tube, especially a tracheostomy tube, after the patient can maintain a safe airway and adequate breathing, secretion clearance, and oxygenation.

Decanoic Acid

A ten-carbon saturated fatty acid, also called capric acid, found in some fats and studied for antimicrobial, metabolic, and antiseizure effects.

Decapitation

Separation of the head from the body, seen in severe trauma (vehicle accidents, train injuries, explosions), industrial accidents, hanging with judicial execution, or homicide. Complete decapitation is almost always rapidly fatal due to exsanguination and brain ischemia.

Decay Correction

Mathematical adjustment for radioactive decay during imaging. Essential for quantitative comparison between studies.

Deceased Donor

Individual who has died (usually from brain death or cardiac death) and donated organs, tissues, or both for transplantation.

Decenoic Acid

An unsaturated ten-carbon fatty acid; its biologic effects depend on the position and geometry of its double bond and on tissue and dietary context.

Decerebrate Posture

Abnormal straightening of the arms and legs caused

by severe injury to the brainstem or nearby brain structures. It is a sign of serious neurologic injury and may occur after head injury, bleeding, or increased pressure in the skull.

Decerebrate Posturing

Abnormal extension of the arms and legs, often with inward rotation of the arms, caused by severe dysfunction below the cerebral hemispheres. It indicates serious neurologic injury, but posture alone does not determine outcome.

Decerebrate Rigidity

Abnormal extensor posturing caused by severe dysfunction below the red nucleus, often from brainstem injury or increased intracranial pressure, and indicating serious neurologic damage.

Decerebrate State

A severe neurologic posture marked by extension and inward rotation of the arms and extension of the legs, usually indicating serious injury to the brainstem or structures above it.

Decerebration

Severe loss of cerebral function, often with extension and rigid posturing of the limbs from brainstem dysfunction; it may result from major injury or increased intracranial pressure.

Decibel

A unit used to describe how loud a sound is. A higher decibel level means a louder sound; normal conversation is about 60 decibels.

Deciding To Have Knee Or Hip Replacement

A decision based on pain, functional limitation, imaging, nonoperative treatment response, surgical risk, expectations, and shared discussion with an orthopedic clinician.

Deciding To Quit Drinking Alcohol

The process of planning to stop or reduce alcohol use. Assessment should consider dependence, withdrawal

risk, support, and treatment options; people with heavy use may need medical supervision.

Decidua

The specialized lining of the uterus during pregnancy. It is shed after delivery and helps support the pregnancy and placenta.

Deciduitis

Inflammation of the decidua, the specialized uterine lining of pregnancy.

Deciduoma

Deciduoma is an old term for a decidual reaction or mass-like overgrowth of pregnancy-related uterine lining, not a true tumor.

Deciduosis

The presence of extensive or ectopic decidual tissue, usually associated with pregnancy and sometimes involving the cervix, peritoneum, or other sites.

Deciduous Teeth

Deciduous Teeth is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

Deciduous Tooth

A primary or baby tooth that is eventually shed and replaced by a permanent tooth.

Decision Making

The process of comparing information, options, benefits, risks, and preferences to choose an action or plan, including shared decision-making in health-care.

Decision-Making Capacity

The ability to understand information about a medical decision, consider the possible results, compare choices, and communicate a choice. It applies to a specific decision, may change over time, and is different from legal competence.

Decitabine

A cytidine-analog antineoplastic agent that inhibits DNA methyltransferase and is used for selected myelodysplastic syndromes and acute myeloid leukemia.

Declarative Memory

Memory for facts and events that can be consciously recalled.

Declopramide

Not a standard generic drug name in common medical use; it may be a misspelling of metoclopramide and should be verified against the original source.

Decoction

A preparation made by simmering plant material in water to extract soluble substances.

Decompensated Cirrhosis

Cirrhosis complicated by clinically significant liver dysfunction or portal hypertension, commonly manifested by ascites, variceal hemorrhage, hepatic encephalopathy, or jaundice. It carries substantially higher mortality than compensated cirrhosis and warrants assessment for transplant and complication prevention.

Decomposition

Postmortem breakdown of the body through autolysis and putrefaction. It begins within 24 to 72 hours at ambient temperature, producing green ceal discoloration, venous marbling, gas distension, skin slippage, and purge fluid.

Decompression

Reduction of pressure on a tissue or body compartment, such as removing pressure from a spinal nerve, draining an obstructed organ, or treating pressure changes after diving.

Decompression Sickness

A systemic illness caused by nitrogen bubble formation in tissues during rapid decompression, presenting with joint pain, skin mottling, and neurological

deficits, treated with hyperbaric oxygen therapy.

Deconditioning

Physiological decline from reduced activity or immobilization. Effects: muscle atrophy, weakness, decreased cardiorespiratory fitness, balance impairment, increased fall risk. Preventable with early mobilization, exercise. Reversible with rehabilitation.

Decongestant

A medicine that reduces swelling of the nasal lining and relieves nasal congestion.

Decontamination

Measures that reduce continued absorption of a toxic substance from the skin, eyes, gastrointestinal tract, or clothing. Interventions are exposure-specific and may include removal from the source, irrigation, washing, activated charcoal, or specialist procedures.

Decorin

A small proteoglycan of the extracellular matrix that binds collagen and influences tissue structure, growth-factor signaling, and fibrosis.

Decorticate Posture

Abnormal bending of the arms with straightening of the legs, caused by severe injury to the brain. It is a sign of serious brain damage and reduced consciousness.

Decorticate Posturing

Abnormal flexion of the arms with extension of the legs, caused by severe dysfunction of the brain. It indicates serious neurologic injury, but posture alone does not determine outcome.

Decreased Alertness

Decreased alertness is reduced awareness or responsiveness that may result from metabolic illness, intoxication, infection, seizure, stroke, trauma, or sleep-related causes.

Decreased Breath Sounds

Diminished air movement heard on auscultation, indicating decreased ventilation. Causes include pneumothorax, pleural effusion, atelectasis, and mucus plugging. Unilateral decreased breath sounds may indicate tension pneumothorax or large effusion.

Decreased Concentration

Reduced ability to sustain attention or mental focus; causes include sleep loss, stress, medications, mood disorders, substance use, and neurologic or medical illness.

Decreased Dentin

Reduced thickness or formation of dentin, the mineralized tissue beneath tooth enamel; causes include developmental defects, wear, erosion, caries, or dental treatment.

Decreased Libido

Reduced sexual desire that may be related to relationships, mood, stress, medications, hormones, chronic illness, pain, or other health factors.

Decreased Tear Production

Alternate index label; see *Dry eyes*.

Decubitus

A lying or reclining position; the term also appears in decubitus ulcer, a pressure injury caused by prolonged pressure and shear.

Decubitus Ulcer

Localized damage to the skin and/or underlying soft tissue caused by prolonged pressure, shear, or friction, most commonly over bony prominences. See pressure injury.

Deep

Located further inward from the surface of the body.

Deep Femoral Artery

The profunda femoris artery, a major branch of the femoral artery that supplies the deep muscles of the

thigh and gives rise to perforating branches.

Deep Brain Stimulation

A treatment in which implanted electrodes deliver controlled electrical impulses to selected brain regions. It is used for conditions such as Parkinson disease, essential tremor, and some forms of dystonia.

Deep Infiltrating Endometriosis

A severe, aggressive form of endometriosis defined by the presence of ectopic endometrial glands and stroma penetrating ≥ 5 mm beneath the peritoneal surface into pelvic retroperitoneal structures. Commonly involves the uterosacral ligaments, rectovaginal septum, pouch of Douglas, rectosigmoid bowel, and bladder wall, presenting with chronic pelvic pain, severe dysmenorrhea, dyschezia, and deep dyspareunia, often necessitating complex multidisciplinary surgical excision.

Alternate Names:

DIE; Deep Endometriosis

Deep Sleep

The deepest stage of non-rapid-eye-movement sleep, during which arousal is difficult and physical restoration occurs.

Deep Tendon Reflex

An automatic muscle response caused by tapping a tendon with a reflex hammer. It helps assess nerves and the spinal cord. Common examples are the knee, ankle, biceps, and triceps reflexes.

Deep Vein Thrombosis

A clot in a deep vein, usually of the lower limb, caused by a combination of reduced blood flow, increased clotting tendency, or vessel-wall injury. Anticoagulant treatment is used when indicated.

Alternate Names:

DVT (Deep Vein Thrombosis)

Deep Vein Thrombosis

A blood clot in a deep vein, usually in the leg, that can cause swelling and pain and may travel to the

lungs as a pulmonary embolism.

Deep Vein Thrombosis Ultrasound

Venous duplex ultrasound used to evaluate suspected deep-vein thrombosis. The test assesses vein compressibility and blood flow; an abnormal result is interpreted with the clinical probability and, when needed, repeat or additional testing.

Deep Venous Reflux

Retrograde flow through incompetent venous valves in the deep venous system. It contributes to chronic venous hypertension, edema, skin changes, and venous ulcer formation.

Deep Venous Thrombosis

Formation of a blood clot in a deep vein, most often in the leg.

Defaecation

Defaecation is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

Defecation

The process of eliminating feces from the body. Filling of the rectum triggers stretch receptors that initiate the defecation reflex via the sacral spinal cord (S2-S4), causing contraction of the rectal wall and relaxation of the internal anal sphincter.

Defecation Syncope

Fainting during or immediately after defecation, usually a situational reflex involving straining, reduced venous return, and a temporary fall in blood pressure.

Defecography

Dynamic imaging of the rectum and pelvic floor during defecation using fluoroscopy or MRI. The rectum is filled with contrast paste and the patient performs defecation while images are captured. Evaluates rectal prolapse, intussusception, rectocele, enterocele, and pelvic floor dyssynergia.

Defective Virus

Defective virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Defence Mechanisms

A clinical care, prevention, behavioral, or public-health concept concerning defence mechanisms; its use depends on the patient, setting, and clinical goal.

Defense Mechanism

A psychological process, often unconscious, that helps a person manage conflict, anxiety, or distress; its usefulness depends on context and flexibility.

Defense Mechanisms

Psychological processes, often outside conscious awareness, that help a person manage distress or conflict. Examples include denial, projection, repression, humor, and sublimation.

Defense Mechanisms (Forensic)

Physical evidence patterns on a body demonstrating active resistance against an assailant prior to incapacitation.

Alternate Names:

Forensic

Defense Wounds

Injuries sustained by a victim attempting to ward off an attack, typically found on the flexor surfaces of hands, palms, wrists, and forearms (incised/stab wounds from knives or contusions/abrasions from blunt force).

Defense Wounds (Inscribed)

Cuts or other injuries on the hands or forearms that may occur when a person attempts to protect against an attack. The distribution and morphology of defensive injuries may help reconstruct an assault but are not independently proof of a particular event.

Alternate Names:

Inscribed

Defenses

The body's protective mechanisms against infection, injury, and other threats, including physical barriers and immune responses.

Alternate Names:

Body defenses

Defensin

An antimicrobial peptide produced by epithelial cells and immune cells that disrupts microbial membranes and contributes to innate immunity.

Deferasirox

An oral iron-chelating medicine used to reduce chronic iron overload when clinically indicated; kidney, liver, hearing, and gastrointestinal toxicity require monitoring.

Deferiprone

An oral iron chelator used for transfusional iron overload; neutropenia or agranulocytosis is an important adverse effect requiring blood-count monitoring.

Deferoxamine

A parenteral iron chelator used for severe or chronic iron overload and sometimes aluminum toxicity; treatment requires monitoring for ocular, auditory, renal, and infectious complications.

Defibrillation

Delivery of an unsynchronized electrical shock to terminate ventricular fibrillation or pulseless ventricular tachycardia by depolarizing a critical mass of myocardium. It is distinct from synchronized cardioversion, which times the shock to the QRS complex.

Defibrillator

Device delivering electric shock to heart. Types: external (AED, manual), internal (implantable). Used for ventricular fibrillation, pulseless ventricular tachycardia. Energy: biphasic 120-200 J.

Defibrillator Implant

An implanted cardioverter-defibrillator that detects and treats dangerous ventricular rhythms with electrical pacing or shock.

Deficiency Diseases

Deficiency Diseases is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

Deficiency Primary Immunodeficiency (Primary Immunodeficiency Disease PIDD)

Alternate index label for Primary Immunodeficiency Disease PIDD.

Deficiency, FAO

Fatty-acid oxidation deficiency, an inherited metabolic disorder in which cells cannot properly use fatty acids for energy, potentially causing fasting- or illness-triggered hypoglycemia, muscle injury, or cardiomyopathy.

Deficiency, Iron

Inadequate iron stores or availability, which can impair hemoglobin production and cause iron-deficiency anemia, fatigue, pallor, and reduced exercise tolerance.

Deficiency, UDP-Glucuronosyltransferase

Reduced activity of the enzyme that conjugates bilirubin in the liver; inherited forms include Gilbert syndrome and the more severe Crigler-Najjar syndromes.

Deficient Color Vision

Alternate index label; see *Color blindness*.

Defined Observation

An observation recorded using a specified definition, measurement method, time point, or assessment rule so that it can be interpreted consistently.

Defining Overweight And Obesity In

Children

Classification of excess body mass in children using age- and sex-specific body-mass-index percentiles, growth patterns, health effects, and clinical context rather than adult cutoffs.

Deformation

An alteration in the shape or structure of a body part, tissue, or material caused by developmental forces, injury, disease, pressure, or mechanical stress.

Deformity

A deformity is an abnormal shape, alignment, or structure of a body part caused by development, injury, disease, or growth.

Degarelix

A gonadotropin-releasing hormone antagonist that rapidly suppresses testosterone production and is used for advanced prostate cancer.

Degeneration

Progressive structural or functional deterioration of cells, tissues, or organs caused by aging, disease, injury, inherited factors, or other processes.

Degenerative Arthritis

Alternate index label; see *Osteoarthritis*.

Degenerative Disc

Degenerative disc disease describes age- or wear-related changes in spinal discs that may cause neck or back pain, stiffness, or nerve compression. Imaging changes can occur without symptoms; treatment usually begins with activity, exercise-based rehabilitation, and pain management.

Alternate Names:

DDD (Degenerative Disc)

Degenerative Disc

Alternate index label for Degenerative Disc.

Degenerative Disease

A disorder in which the structure or function of tissues progressively deteriorates.

Alternate Names:

Degenerative disorder

Degenerative Disk Disease

Age-related or injury-related deterioration of an intervertebral disk that may cause back or neck pain.

Alternate Names:

Degenerative disc disease

Degenerative Disorder

A disease in which progressive cellular or tissue deterioration causes loss of structure or function, as in neurodegenerative, joint, retinal, or muscle disorders.

Degenerative Joint Disease

Progressive loss of cartilage and changes in a joint, commonly referring to osteoarthritis.

Alternate Names:

Osteoarthritis

Degenerative Spine Disease

Lumbar spinal stenosis: central (neurogenic claudication: bilateral leg pain with walking, relieved by sitting/flexion), lateral recess, foraminal. Imaging: MRI (central canal AP diameter <10mm, cross-sectional area <70mm²).

Degenerative Spondylolisthesis

Forward displacement of one vertebra over another caused by degenerative changes in the spine.

Deglutition

Deglutition is swallowing, the coordinated movement of food or liquid from the mouth through the pharynx and esophagus into the stomach.

Deglutition (Swallowing)

The coordinated process of moving food, liquid, or saliva from the mouth through the pharynx and esophagus into the stomach.

Alternate Names:

Swallowing

Degranulation

Release of stored granule contents from cells such as mast cells, basophils, neutrophils, and cytotoxic lymphocytes during immune or inflammatory responses.

Degrees Fahrenheit

A temperature measurement expressed on the Fahrenheit scale; 32 degrees Fahrenheit is the freezing point of water and 212 degrees is its boiling point at standard pressure.

Dehiscence

Separation or reopening of the edges of a wound or surgical closure. Wound dehiscence may be superficial or involve deeper tissues and requires clinical assessment.

DEHP

Di(2-ethylhexyl) phthalate, a plasticizer used in some medical and consumer products; exposure is monitored because of potential reproductive, developmental, and endocrine effects.

Dehydration

A condition in which the body loses more water than it takes in. It can cause thirst, less urination, dizziness, fast heartbeat, and changes in body salts; severe dehydration can lead to shock. Common causes include vomiting, diarrhea, fever, sweating, and not drinking enough.

Dehydration In Children

A deficit of total body water, usually caused by gastrointestinal losses, inadequate intake, fever, or renal losses. Clinical assessment includes mental status, heart rate, mucous membranes, tears, capillary refill, urine output, weight change, and perfusion rather than a single sign.

Dehydroascorbic Acid

The oxidized form of vitamin C that can be transported into cells and reduced back to ascorbate, contributing to redox and antioxidant chemistry.

Dehydroepiandrosterone

An adrenal steroid precursor that can be converted to androgens and estrogens; levels vary with age, adrenal disorders, medicines, and supplements.

Deinstitutionalize

To move a person from long-term institutional care toward community-based living and support, when safe and appropriate.

Deiodinase

An enzyme that removes iodine atoms from thyroid hormones, thereby activating or inactivating thyroxine and triiodothyronine and regulating local thyroid-hormone action.

Deja Vu

A feeling that a current situation has been experienced before, despite recognizing that it is probably new; frequent or distressing episodes may warrant evaluation.

Dejerine-Roussy Syndrome

Central post-stroke pain caused by a lesion of the thalamus or related sensory pathways. It may produce persistent contralateral pain, burning, abnormal sensation, or pain from normally nonpainful stimuli.

Delavirdine

A non-nucleoside reverse-transcriptase inhibitor formerly used in combination antiretroviral therapy for HIV; interactions and resistance limit its use.

Delayed Cord Clamping

The practice of delaying umbilical cord clamping for ≥ 30 –60 seconds after delivery, allowing placental transfusion of blood to the newborn. Benefits: increases neonatal blood volume by 30%, improves iron stores (ferritin, hemoglobin) for the first 6 months, reduces anemia, and improves transitional circulation.

Delayed Ejaculation

A sexual dysfunction characterized by a persistent

or recurrent delay in, infrequency of, or absence of ejaculation during partnered sexual activity, lasting ≥ 6 months and causing marked distress. Prevalence: 1-5% of men. Lifelong vs. acquired.

Delayed Emergence

Prolonged time to regain consciousness after discontinuation of anesthetic agents. Failure to regain consciousness within 30-60 minutes of completing surgery.

Delayed Gastric Emptying

Alternate index label; see *Gastroparesis*.

Delayed Gastric Emptying (Gastroparesis)

Alternate index label for Gastroparesis.

Delayed Growth

Slower-than-expected increase in height, weight, or head size compared with standardized growth patterns, caused by nutrition, chronic disease, endocrine disorders, genetics, or normal variation.

Delayed Hypersensitivity

A delayed immune reaction, usually mediated by T cells rather than antibodies, that develops hours to days after exposure. Examples include contact dermatitis, the tuberculin reaction, and some drug eruptions.

Delayed Orgasm

Persistent difficulty reaching orgasm despite adequate sexual stimulation, potentially related to medications, health conditions, psychological factors, or relationship context.

Delayed Puberty

Failure to develop secondary sexual characteristics by age thirteen in girls and age fourteen in boys. Causes include constitutional delay which is the most common, chronic illness, malnutrition, hypogonadotropic hypogonadism from Kallmann syndrome or pituitary disease, and hypergonadotropic hypogonadism from gonadal failure.

Delayed Puberty In Boys

Failure of testicular enlargement and other pubertal changes to begin by the expected age in a boy, caused by constitutional delay, chronic illness, hypogonadism, or hypothalamic-pituitary disease.

Delayed Puberty In Girls

Absence or inadequate progression of breast development or menstruation beyond expected age, caused by constitutional delay, low energy availability, chronic illness, ovarian failure, or hypothalamic-pituitary disease.

Delayed Sleep Phase

A circadian-rhythm disorder in which a person falls asleep and wakes later than desired; also called delayed sleep-wake phase disorder.

Alternate Names:

delayed sleep-wake phase disorder. Delayed Sleep-Wake Phase Sleep Disorder DSPS DSWPD

Delayed Sleep Phase Syndrome

A circadian-rhythm disorder in which sleep and waking occur substantially later than desired.

Delayed Sleep-Wake Phase Sleep Disorder

Alternate index label; see *Delayed sleep phase*.

Deletion

Loss of chromosomal segment. Terminal deletion: loss from end. Interstitial deletion: loss from middle. Microdeletion syndromes: 22q11.2 deletion (DiGeorge), 5p deletion (Cri-du-chat).

Deletion Mutation

A genetic variant in which one or more DNA bases are absent; its effect depends on the location, size, and whether it alters a gene or regulatory region.

Delftia

A genus of aerobic Gram-negative bacteria found in soil and water; human infection is uncommon but has been reported, especially in people with significant underlying illness.

Delftia Acidovorans

An environmental gram-negative bacterium that rarely causes bloodstream or other opportunistic infection, particularly in people with devices or impaired immunity.

Delirium

Delirium is an acute fluctuating disturbance of attention and awareness caused by an underlying medical, medication-related, toxic, or environmental factor.

Delirium In Anesthesia

Delirium is an acute confusional state characterized by fluctuating consciousness, inattention, disorganized thinking, and altered level of awareness. Postoperative delirium occurs in 15 to 50 percent of elderly surgical patients, with higher rates in hip fracture and cardiac surgery.

Delirium Tremens

A severe, potentially life-threatening form of alcohol withdrawal characterized by fluctuating confusion, agitation, hallucinations, and marked autonomic overactivity. It usually occurs after cessation or major reduction of prolonged heavy alcohol use and requires urgent medical treatment.

Delivery

The process of childbirth: vaginal delivery (spontaneous vertex most common; assisted—vacuum, forceps) or cesarean delivery (abdominal). Stages of labor culminate in delivery of the infant and placenta.

Delivery Of Posterior Arm

A shoulder dystocia maneuver: the operator's hand enters the posterior vagina along the fetal chest, finds the fetal hand, grasps the forearm, sweeps it across the chest and face, and delivers the posterior arm and hand over the perineum. This reduces the bisacromial diameter by 20% and is often highly effective.

Delivery Presentations

The part of the fetus that is positioned to enter the birth canal first, such as vertex, breech, or shoulder

presentation; presentation affects obstetric planning.

Delphi Technique

A structured research method that uses repeated anonymous surveys and feedback to develop expert consensus.

Delta Agent

An older name for hepatitis D virus, which requires hepatitis B virus for replication and can cause severe acute or chronic hepatitis.

Delta Waves

Large, slow brain waves associated with deep non-REM sleep.

Alternate Names:

Delta rhythm

Delta-ALA Urine Test

A urine test measuring delta-aminolevulinic acid, an intermediate in heme synthesis. Increased levels may occur in acute hepatic porphyrias or lead toxicity and must be interpreted with symptoms and other porphyrin studies.

Delta-Tocopherol

One naturally occurring form of vitamin E; its biological and antioxidant effects differ from those of alpha-tocopherol, the principal form used to assess human vitamin E status.

Deltacoronavirus

Deltacoronavirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Deltaretrovirus

Deltaretrovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Deltoid

The deltoid is the large shoulder muscle that lifts the arm and helps stabilize the shoulder joint.

Deltoid Muscle

Large triangular muscle forming the shoulder contour, from lateral clavicle, acromion, and scapular spine to the deltoid tuberosity. Innervated by the axillary nerve (C5-C6). Anterior fibers flex/medially rotate, middle fibers abduct (primary abductor beyond 15 degrees), posterior fibers extend/laterally rotate.

Delusion

A fixed belief that is not consistent with available evidence or the person's sociocultural context and is not readily changed by reasoned discussion. Delusions may be persecutory, grandiose, referential, somatic, nihilistic, or erotomanic.

Delusional Disorder

A disorder characterized by the presence of one or more delusions lasting one month or more in the context of relatively preserved functioning. The delusions are non-bizarre (involving real-life situations that could conceivably occur, such as being followed, infected, loved from afar, or conspired against).

Demarcation

A clear boundary separating one area, tissue, process, or condition from another, such as the line between viable and necrotic tissue.

Demeclocycline

A medicine called demeclocycline. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Demecolcine

A colchicine-related antimitotic compound that disrupts microtubules; it has limited medical use and can be toxic.

Dementia

Dementia is acquired decline in one or more cognitive domains that interferes with independent function; causes include neurodegenerative, vascular, metabolic, infectious, and other disorders. Alzheimer disease, vascular disease, Lewy body disease, frontotemporal disorders, and other conditions. Evaluation is important because some causes of cognitive decline may be treatable.

Alternate Names:

Pugilistica Dementia (Dementia)

Dementia (Major Neurocognitive Disorder)

Dementia is the common clinical term for an acquired syndrome of decline in one or more cognitive domains that interferes with independence in daily activities. Major neurocognitive disorder is the preferred diagnostic classification term.

Alternate Names:

Major Neurocognitive Disorder

Dementia - Behavior And Sleep Problems

Behavioral and sleep changes that can occur in dementia, including agitation, wandering, apathy, hallucinations, or altered sleep-wake timing; causes and reversible contributors should be assessed.

Dementia And Driving

The effect of cognitive impairment on driving safety. Assessment considers memory, judgment, visuospatial skills, reaction time, medications, and local licensing requirements.

Dementia Due To Metabolic Causes

Cognitive impairment caused or worsened by metabolic problems such as thyroid disease, vitamin deficiency, organ failure, electrolyte disturbance, or medication toxicity; some causes are treatable.

Dementia Pugilistica

A progressive brain disorder associated with repeated head trauma, historically described in some professional boxers.

Dementia, Frontotemporal

Alternate index label; see *Frontotemporal dementia*.

Dementia, Lewy Body

Alternate index label; see *Lewy body dementia*.

Dementia, Vascular

Alternate index label; see *Vascular dementia*.

Demethylation

Removal of a methyl group from a molecule, including DNA or proteins; DNA demethylation can alter gene expression and cellular development.

Demineralization

Loss of mineral from a tissue, such as tooth enamel or bone, which may weaken the tissue.

Demographics Domain

The demographic characteristics of a population or study group, such as age, sex, ethnicity, location, education, or socioeconomic measures.

Demulcent

A substance that soothes irritated or inflamed mucous membranes by forming a protective coating.

Demyelinating Disease

A disease in which the myelin sheath surrounding nerve fibres is damaged, slowing or blocking neural conduction.

Demyelinating Disease Of The Central Nervous System

A disorder in which myelin is damaged within the brain, spinal cord, or optic pathways, impairing nerve conduction. Causes include autoimmune, infectious, genetic, toxic, and metabolic processes.

Demyelination

Loss or damage of the myelin sheath that normally insulates nerve fibers and speeds nerve signaling.

Denaturant

Denaturant is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

Dendrimer

A highly branched, tree-like synthetic molecule studied for drug delivery, imaging, and gene-transfer applications; clinical use depends on safety and formulation.

Dendrite

The branched, tapering neuronal processes that receive synaptic input from other neurons and conduct graded potentials toward the cell body. Dendrites contain receptors, ion channels, and postsynaptic densities.

Dendrites

Branching extensions of nerve cells that receive signals from other neurons or sensory receptors.

Dendritic Cell

The most potent professional antigen-presenting cell, capturing antigens in tissues and migrating to lymph nodes to present peptides on MHC molecules to T cells, initiating adaptive immunity.

Dendritic Cells

Immune cells that capture foreign material and present antigens to T cells, helping initiate an adaptive immune response.

Dendritic Spine

A small protrusion on a neuronal dendrite that receives many excitatory synaptic inputs and can change with learning and disease.

Dendritic Ulcer

A branching epithelial ulcer of the cornea, classically caused by herpes simplex virus. It may cause a red eye, pain, light sensitivity, tearing, or reduced vision and requires ophthalmic assessment.

Denervate

Loss of nerve supply to a tissue or organ; may occur surgically, traumatically, or through disease processes.

Denervation

Denervation is loss of nerve supply to a muscle or tissue, causing weakness, atrophy, altered sensation, or autonomic dysfunction.

Dengue

A mosquito-borne viral infection that commonly causes fever, headache, muscle pain, joint pain, and rash. Severe disease can cause bleeding or shock.

Dengue Fever

Dengue fever is a mosquito-borne viral illness causing fever, headache, muscle and joint pain, rash, and sometimes plasma leakage, bleeding, or shock. flavivirus transmitted primarily by *Aedes aegypti* mosquitoes.

Alternate Names:

Dengue Hemorrhagic Fever

Dengue Hemorrhagic Fever

Alternate index label; see *Dengue fever*.

Dengue Hemorrhagic Fever

A severe, life-threatening manifestation of secondary dengue virus infection (flavivirus transmitted by *Aedes* mosquitoes), driven by antibody-dependent enhancement. Characterized by abrupt high fever, marked thrombocytopenia ($\leq 100,000/\mu\text{L}$), hemorrhagic diathesis (petechiae, mucosal bleeding), and acute systemic capillary hyperpermeability leading to plasma leakage into pleural and peritoneal cavities, hemoconcentration, and progression to dengue shock syndrome. Managed with meticulous fluid resuscitation and strict avoidance of NSAIDs.

Dengue Shock Syndrome

Life-threatening circulatory shock caused by severe dengue with plasma leakage and reduced effective blood volume, often accompanied by bleeding or organ dysfunction.

Dengue Virus

A positive-sense RNA virus belonging to the Flaviviridae family that causes dengue fever. The virus has four serotypes, and infection with one serotype provides lifelong immunity to that serotype but only temporary cross-protection against others.

Denial

A defense mechanism in which a person refuses to accept an unpleasant reality. It is a common initial response to traumatic events and terminal illness diagnoses. While adaptive in the short term, chronic denial can prevent appropriate medical treatment and psychological processing.

Denileukin Diftitox

An engineered fusion protein that combines interleukin-2 with diphtheria toxin and was used to treat selected cutaneous T-cell lymphomas. Its use is limited by toxicity and current product availability.

Denominator

The number below the line in a fraction; in a rate or proportion it identifies the population or total against which the numerator is compared.

Denosumab

A medicine called denosumab. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Denosumab For Osteoporosis

Fully human monoclonal antibody targeting RANK ligand preventing osteoclast formation activation and survival. Reduces fracture risk at the spine hip and non-vertebral sites. Administered as subcutaneous injection every six months. Advantages include no renal dose adjustment and effectiveness even with oral bisphosphonate intolerance.

Dens

The tooth-like projection of the second cervical vertebra that forms a pivot for rotation of the first vertebra.

Dens Evaginatus

An extra cusp or tubercle on a tooth, most often a premolar. It may contain an extension of the dental pulp and may fracture or become affected by caries.

Dens Invaginatus

An inward folding of enamel and dentin that may extend toward or into the dental pulp, allowing debris to collect and increasing the risk of caries and pulpal infection.

Densitometry

Measurement of density, most often the mineral content of bones. A bone-density scan helps assess osteoporosis and the risk of fractures.

Density

The amount of mass in a given volume; in medicine, density measurements help describe bone strength, tissue composition, or findings on imaging.

Dent Disease

An inherited X-linked proximal renal-tubule disorder causing low-molecular-weight proteinuria, hypercalciuria, kidney stones or nephrocalcinosis, and progressive kidney impairment.

Dental Abscess

A localized collection of pus arising from infection of a tooth or the surrounding periodontal tissues. It may cause toothache, percussion tenderness, gingival swelling, facial swelling, fever, trismus, or regional lymphadenopathy; spread into deep facial spaces can threaten the airway and requires urgent assessment.

Dental Age

An estimate of developmental age based on the formation, mineralization, and eruption of the teeth. It is useful in children but is not an exact measure of chronological age.

Dental Alloy

Dental alloy refers to a dental structure, material, procedure, or oral-health finding involving the teeth

or supporting tissues.

Dental Alveolus

Dental alveolus refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Amalgam

Dental amalgam refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Anesthesia

The use of local anesthetic, sedation, or, when necessary, general anesthesia to control pain and anxiety during dental care.

Dental Anxiety

Dental anxiety refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Arch

Dental arch refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Articulator

Dental articulator refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Braces

Dental braces apply controlled force to move teeth and align the bite over time. Treatment requires oral hygiene, dietary care, periodic adjustments, and retention afterward; risks include temporary soreness, enamel decalcification, gum problems, and root changes.

Alternate Names:

Braces And Retainers (Dental Braces)

Dental Braces (Orthodontics)

Fixed or removable orthodontic appliances that apply controlled forces to move teeth and correct mal-

occlusion or jaw-related alignment problems.

Dental Calculus

Hardened dental plaque formed when mineral salts accumulate on teeth.

Dental Caries

A disease in which bacterial acids progressively demineralize and damage the teeth. See Dental Cavities.

Dental Caries (Cavities)

Alternate index label for Cavities.

Dental Cavities

Permanent areas of tooth decay caused by acid-producing bacteria acting on dietary carbohydrates. Cavities progress from enamel demineralization to dentin and pulp involvement, causing sensitivity, pain, or infection.

Dental Cement

Dental cement refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Ceramic

A ceramic material used to make dental restorations such as crowns, veneers, and bridges. Examples include feldspathic ceramic, lithium disilicate, and zirconia.

Dental Clasp

Dental clasp refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Crowns

Custom-made restorations that cover most or all of a damaged tooth to restore its shape, strength, function, and appearance.

Dental Deposit

Dental deposit refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Disease

Disorders affecting the teeth, gums, or supporting tissues, including tooth decay, gum disease, oral infections, and tooth loss. Prevention includes fluoride, regular brushing and flossing, limiting frequent sugar exposure, and routine dental examinations.

Dental Dysplasia

Dental dysplasia refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Extraction

Removal of a tooth from its alveolar socket. Indications include unrestorable disease, advanced periodontal destruction, impaction, orthodontic treatment, or selected prosthodontic needs; risks include bleeding, infection, nerve injury, fracture, and alveolar osteitis.

Dental Fissure

Dental fissure refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Floss

Dental Floss is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

Dental Hygiene

Dental hygiene refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Implant

A biocompatible fixture placed in the jawbone to support a replacement tooth. The fixture may become integrated with surrounding bone and is restored with a crown, bridge, or denture.

Dental Impression Material

Dental impression material refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Injuries

Dental injuries include fractures, displacement, loosening, or loss of teeth and damage to gums or jaw after trauma. Prompt dental assessment can preserve injured teeth; uncontrolled bleeding, jaw deformity, airway problems, or head injury requires emergency care.

Alternate Names:

Dental Trauma (Dental Injuries)

Dental Inlay

Dental inlay refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Material

Dental material refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Occlusion

Dental occlusion refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Overjet

Dental overjet refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Pain (Toothache)

Pain arising from a tooth or nearby tissues, commonly due to dental caries, pulp inflammation, infection, trauma, cracked teeth, or gum disease.

Dental Papilla

Dental papilla refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Pellicle

Dental pellicle refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Plaque

Biofilm of bacteria on tooth surfaces. Initiated by acquired pellicle. Maturation leads to disease if not removed. Disrupted by mechanical cleaning.

Dental Porcelain

Dental porcelain refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Procedure

A medical procedure, treatment, device, or care topic related to dental procedure; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Dental Prosthesis

Dental prosthesis refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Pulp

Dental pulp refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Pulp Necrosis

Death of the dental pulp, usually following untreated inflammation, trauma, or loss of blood supply. The tooth generally fails sensibility testing and may develop apical periodontitis or a periapical abscess.

Dental Pulpitis

Inflammation of the dental pulp caused by caries, trauma, restorative procedures, cracks, or other irritation. Reversible pulpitis produces brief provoked pain, whereas irreversible pulpitis causes spontaneous or lingering pain and may require pulpal treatment or extraction.

Dental Radiographs

Imaging for dental diagnosis. Intraoral: periapical (tooth root and surrounding bone), bitewing (interproximal caries detection, crestal bone level), and occlusal (larger area, localization).

Dental Radiography

Imaging techniques for dental diagnosis: bitewing (caries, bone levels), periapical (root, periapical tissues), panoramic (full mouth overview), CBCT (3D imaging). Radiation dose: dental radiography low exposure. ALARA principle applies.

Dental Restorative Materials

Materials used to restore teeth: amalgam, composite resin, glass ionomer, ceramic, gold alloy. Selection based on location, aesthetics, strength, cost, patient factors. Composite: tooth-colored, adhesive, conservative preparation. Ceramic: excellent aesthetics, brittle, expensive. Gold: durable, biocompatible, aesthetic concern.

Dental Sac

Dental sac refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dental Screening

Examination of the teeth, gums, and mouth to identify dental disease or risk before serious symptoms develop.

Dental Sealant

Thin protective coating applied to chewing surfaces of molars. Prevents caries by sealing pits and fissures.

Dental Sealants

Thin resin or glass-ionomer coatings applied to the pits and fissures of teeth, especially molars, to reduce retention of plaque and risk of dental caries.

Dental Trauma (Dental Injuries)

Alternate index label for Dental Injuries.

Dental Traumatology

Management of dental injuries. Types: enamel fractures, enamel-dentin fractures, pulp exposure, root fractures, avulsion. Immediate care critical for avulsed teeth.

Dental X-Rays

Radiographic images of the teeth and jaws used to detect caries, bone loss, impacted teeth, infection, developmental abnormalities, and other dental disease.

Dentate Gyrus

Dentate gyrus refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dentatorubral-Pallidoluysian Atrophy

An autosomal dominant neurodegenerative repeat expansion disorder caused by an unstable CAG trinucleotide expansion encoding a polyglutamine tract in the *ATN1* gene on chromosome 12p13.31. Exhibits striking genetic anticipation, especially with paternal transmission. Juvenile-onset cases (expansions > 65 repeats) present with progressive myoclonic epilepsy, cognitive decline, and ataxia; adult-onset presentations manifest with cerebellar ataxia, choreoathetosis, behavioral changes, and dementia, histopathologically marked by selective degeneration of the dentatorubral and pallidoluysian systems of the central nervous system.

Alternate Names:

DRPLA; Haw River Syndrome; Naito-Oyanagi Disease

Dentifrice

Dentifrice refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dentigerous Cyst

Dentigerous cyst refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dentin

Calcified tissue beneath enamel forming bulk of tooth. Contains dentinal tubules with fluid and processes. Sensitive to stimuli when exposed. Reparative dentin formed in response to irritation.

Dentin Sensitivity

Dentin sensitivity refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dentinogenesis

The formation of dentin by odontoblasts during tooth development and repair; inherited defects can cause abnormal tooth color, weakness, and rapid wear.

Dentinogenesis Imperfecta

An inherited disorder of dentin formation that can cause translucent blue-gray or amber teeth that fracture, wear, or become discolored easily. Some forms occur with osteogenesis imperfecta.

Dentist

Dentist refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dentistry

Dentistry refers to a dental structure, material, procedure, or oral-health finding involving the teeth or supporting tissues.

Dentistry (Geriatric)

Oral health challenges in elderly: xerostomia, root caries, periodontal disease, denture problems, oral cancer, medication side effects. Assessment: complete oral exam, cancer screening, denture fit, caries risk. Prevention: fluoride, oral hygiene, regular dental visits. Adaptations: handholds, magnification, positioning.

Alternate Names:

Geriatric

Dentition

The teeth present in the mouth, including their number, arrangement, development, and eruption.

Denture

A removable dental prosthesis that replaces some or all missing teeth and associated oral tissues. Partial

dentures replace selected teeth while complete dentures replace an entire dental arch; fit, oral hygiene, tissue health, and regular review are important for function and prevention of mucosal injury.

Denture Base

The part of a denture that rests on the oral tissues and supports the artificial teeth.

Denture Problems

Problems involving removable dental prostheses, such as poor fit, discomfort, sores, difficulty chewing or speaking, breakage, or oral infection.

Denturist

A dental professional authorized in some jurisdictions to provide, fit, and maintain removable dentures within the local scope of practice.

Denver Developmental Screening Test

A developmental screening tool for young children that assesses personal-social, fine-motor, language, and gross-motor skills; it screens for possible delay and is not a diagnostic test.

Denys-Drash Syndrome

A rare genetic disorder associated with abnormal kidney development, nephropathy, and an increased risk of Wilms tumor.

Deodorant Poisoning

Exposure to deodorant, which may irritate the skin, eyes, airways, or gastrointestinal tract; product ingredients determine severity.

Deoxycoformycin

A medicine called deoxycoformycin. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Deoxycytidine

A deoxyribonucleoside composed of cytosine attached to deoxyribose, used as a building block for DNA.

Deoxycytidine Kinase

An enzyme that phosphorylates deoxycytidine and related nucleosides; it activates several nucleoside-analog medicines used in cancer and antiviral treatment.

Deoxyglucose

A glucose analog used in metabolic research and, when labeled with fluorine-18, in FDG-PET imaging to identify tissues with increased glucose use.

Deoxyguanosine

A deoxyribonucleoside composed of guanine attached to deoxyribose, used as a building block for DNA.

Deoxyhemoglobin

Hemoglobin that is not bound to oxygen; increased levels in superficial blood can contribute to bluish cyanotic coloration.

Deoxyribonuclease

An enzyme that breaks down DNA; recombinant dornase alfa, a deoxyribonuclease, helps loosen thick mucus in cystic fibrosis.

Deoxyribonucleic Acid

The molecule that stores hereditary genetic information in cells.

Alternate Names:

DNA

Deoxyribonucleic Acid

The double-stranded helical macromolecule that stores hereditary genetic instructions in all cellular organisms and many viruses. Composed of two antiparallel polynucleotide strands with a deoxyribose-phosphate backbone linked by phosphodiester bonds, connected centrally through complementary hydrogen-bonded purine-pyrimidine base pairs (adenine with thymine, guanine with cytosine). Undergoes semiconservative replication catalyzed by DNA polymerases, packages into chromatin via histone octamers, and directs cellular protein synthesis through transcription into messenger RNA

and subsequent ribosomal translation.

Deoxyribonucleosides

Molecules made of a DNA base linked to deoxyribose; adenine, guanine, cytosine, and thymine deoxyribonucleosides supply DNA synthesis.

Deoxyribonucleotides

Nucleotides containing deoxyribose that serve as the building blocks of DNA, including dATP, dGTP, dCTP, and dTTP.

Deoxyuridine

A deoxyribonucleoside containing uracil; it can arise from DNA repair or abnormal nucleotide metabolism and is used in laboratory studies.

Department Of Health And Human Services

The U.S. federal department responsible for major public-health, human-services, biomedical research, and health-insurance programs.

Dependence

A state in which repeated exposure to a substance produces physiologic adaptation, so that stopping or reducing it may cause withdrawal. In substance-use disorders, dependence may occur with or without addiction.

Dependence, Nicotine

Alternate index label; see *Nicotine dependence*.

Dependent Personality Disorder

A pattern of submissive and clinging behavior related to an excessive need to be taken care of.

Dependovirus

Dependovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Depersonalization

Depersonalization is a feeling of detachment or un-

reality regarding one's own body, thoughts, or self, often occurring with anxiety, trauma, or dissociation.

Depersonalization-Derealization Disorder

A disorder involving persistent or recurrent feelings of detachment from one's thoughts, feelings, body, or surroundings, while reality testing remains intact. Symptoms cause clinically significant distress or impairment.

Dephosphorylation

Removal of a phosphate group from a molecule. This can change how a protein works or how cells send signals.

Depigmentation

Loss or reduction of normal pigment, especially melanin in the skin, hair, or mucosa, caused by conditions such as vitiligo, inflammation, injury, or treatment.

Depilación

Removal of hair from the skin by shaving, cutting, or chemical treatment without removing the entire hair root.

Depilatory Poisoning

Exposure to depilatory, which may irritate the skin, eyes, airways, or gastrointestinal tract; product ingredients determine severity.

Depolarization

A change in a cell's electrical charge that makes the inside of the cell less negative. In nerve and muscle cells, this change can start an electrical signal.

Depot Implant

An implant designed to release a medicine gradually over an extended period after placement in the body.

Deprescribing

A planned, supervised process of reducing the dose or stopping a medication for which harms, burden, or lack of benefit outweigh expected benefit. It re-

quires review of indication, withdrawal risk, disease recurrence, and patient goals.

Depressed Fracture

A fracture in which broken bone is pushed inward, commonly involving the skull. It may injure underlying brain tissue and requires urgent assessment when associated with neurologic symptoms.

Depression

Depression is a mood disorder involving persistent depressed mood or loss of interest with cognitive, physical, and behavioral symptoms that impair functioning. persistent sadness and loss of interest or pleasure in activities, affecting approximately 7 percent of adults worldwide annually.

Alternate Names:

Clinical Depression (Depression)

Depression (Geriatric)

Mood disorder common in elderly, often underdiagnosed. Symptoms: sad mood, anhedonia, sleep/appetite changes, fatigue, guilt, concentration difficulty, suicidal ideation. May present as cognitive impairment ("pseudodementia"). Risk factors: chronic illness, social isolation, bereavement, medications.

Alternate Names:

Geriatric

Depression (Major Depressive Disorder)

A mood disorder causing persistent depressed mood or loss of interest along with cognitive, physical, and functional symptoms.

Depression - Stopping Your Medicines

Antidepressants should generally be tapered with a clinician when appropriate; abrupt stopping can cause discontinuation symptoms and relapse, while suicidal thoughts require urgent help.

Depression In Children

Depression in children may present as persistent sadness, irritability, loss of interest, withdrawal, school decline, sleep or appetite change, physical

complaints, guilt, or thoughts of death. Assessment considers development, family context, medical causes, safety, and treatment response.

Alternate Names:

Depression In Older Adults

Depression in later life may include sadness, loss of interest, sleep or appetite change, slowed thinking, physical complaints, or cognitive symptoms and should be assessed for medical and medication contributors.

Depression Screening

Major depressive disorder is a common, disabling mood disorder characterized by persistent sadness and loss of interest or pleasure in activities, affecting approximately 7 percent of adults worldwide annually. See depression.

Depression, Postpartum

Alternate index label; see *Postpartum depression*.

Depression, Teen

Alternate index label; see *Teen depression*.

Depressive Disorder

A mood disorder with persistent depressed mood or loss of interest plus cognitive, physical, and functional symptoms; severity, duration, and suicide risk guide care.

Depressive Illness

A disorder characterized by persistent depressed mood or loss of interest with associated cognitive, physical, or functional symptoms; severity and cause determine diagnosis and treatment.

Depth Perception

The visual ability to judge the relative distance and three-dimensional position of objects, produced largely by binocular disparity and supported by motion, perspective, and other visual cues.

Depurination

Loss of a purine base from DNA, leaving an abasic site that can contribute to mutation if not repaired.

DeQuervains Tenosynovitis (De Quervain'S Tenosynovitis)

Alternate index label for De Quervain's Tenosynovitis.

Derbyshire Neck

Derbyshire Neck is an anatomical or physiologic term describing a body structure or function; its clinical meaning depends on its location, role, and associated findings.

Dercum'S Disease

Dercum's Disease is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

Derealization

Derealization is a feeling that the external world is unreal, dreamlike, distant, or visually altered, often associated with anxiety, trauma, dissociation, or substances.

Dermabacter

A genus of Gram-positive bacteria commonly found on skin and in the environment. Rare species can cause opportunistic infection, especially in people with underlying illness.

Dermabacter Hominis

A Gram-positive skin-associated bacterial species that rarely causes opportunistic infection, including bloodstream or wound infection.

Dermabrasion

A procedure that mechanically removes superficial layers of skin to improve selected scars, wrinkles, pigment changes, or lesions.

Dermal

Relating to the dermis, the connective-tissue layer

of skin beneath the epidermis.

Dermal Melanocytosis

A usually benign blue-gray patch caused by melanocytes located deeper than usual in the skin, often present at birth and commonly seen over the lower back or buttocks.

Dermal Papilla

A structure at the base of a hair follicle that supplies signals and nutrients important for hair growth.

Dermal Structure

The dermis has two layers: papillary dermis (superficial, thin, containing capillaries, lymphatics, and Meissner corpuscles) and reticular dermis (deep, thick, containing dense irregular connective tissue, collagen, elastin, hair follicles, sweat glands, and sebaceous glands).

Dermatan Sulfate

A sulfated glycosaminoglycan found in connective tissue and involved in extracellular-matrix structure and coagulation-related biology.

Dermatitis

Inflammation of the skin, often used interchangeably with eczema. Atopic dermatitis: chronic pruritic inflammation in flexural areas, associated with asthma and allergies, driven by skin barrier dysfunction and type 2 inflammation. Contact dermatitis: allergic (type IV hypersensitivity) or irritant (direct toxicity).

Dermatitis Herpetiformis

A long-lasting, very itchy skin condition that causes groups of small bumps or blisters, usually on the elbows, knees, buttocks, or scalp. It is linked to celiac disease and sensitivity to gluten.

Dermatitis, Atopic

Alternate index label; see *Atopic dermatitis* (eczema).

Dermatitis, Cercarial

Alternate index label; see *Swimmer's itch*.

Dermatitis, Contact

Alternate index label; see *Contact dermatitis*.

Dermatitis, Scratch

Alternate index label; see *Neurodermatitis*.

Dermatitis, Seborrheic

Alternate index label; see *Seborrheic dermatitis*.

Dermatofibroma

A common benign dermal nodule, typically on the lower extremities of young adults. It presents as a firm, hyperpigmented papule that dimples when pinched (Fitzpatrick sign). It is thought to result from reactive fibrosis following minor trauma or insect bites. Dermatofibromas are asymptomatic and require no treatment.

Dermatofibrosarcoma

Dermatofibrosarcoma protuberans is a locally aggressive fibrohistiocytic tumor of the skin. It typically presents as a slowly enlarging, indurated plaque on the trunk, which may develop nodules over time. It has a high local recurrence rate (up to 50 percent with simple excision) but low metastatic potential.

Dermatofibrosarcoma Protuberans

A rare locally aggressive cutaneous sarcoma arising from dermal fibroblasts. It presents as a slow-growing, firm, reddish-purple plaque or nodule, typically on the trunk. It has a high local recurrence rate but low metastatic potential. Treatment is wide local excision with Mohs micrographic surgery or imatinib for unresectable disease.

Alternate Names:

DFSP

Dermatofibrosarcoma Protuberans Of The Breast

A rare, usually slow-growing cutaneous sarcoma involving breast skin or superficial tissue. It is

locally infiltrative, has a high risk of local recurrence if incompletely removed, and typically shows COL1A1-PDGFB fusion.

Dermatoglyphics

Dermatoglyphics is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

Dermatographia

A form of physical urticaria in which scratching or pressure causes raised, red, itchy lines on the skin.

Dermatographia (Dermatographism)

A condition in which light scratching or pressure causes temporary raised red lines or welts on the skin.

Alternate Names:

Skin Writing

Dermatographic Urticaria

A form of hives in which scratching or pressure causes raised, itchy lines on the skin.

Dermatographism

Urticaria factitia: the development of linear wheals (hives) within minutes of stroking or scratching the skin, the most common form of physical urticaria. Mast cell hyper-reactivity releases histamine after minor mechanical pressure. Associated with chronic spontaneous urticaria and atopy.

Dermatologic

Relating to the skin, hair, nails, or the medical specialty of dermatology.

Dermatologic Disorder

A disease affecting skin, hair, nails, or cutaneous glands, producing findings such as rash, scale, pigment change, ulcers, pain, or itching.

Dermatologist

A physician specializing in diagnosis and treatment of disorders of the skin, hair, nails, and related mucous membranes.

Dermatology

The medical specialty concerned with the diagnosis and treatment of diseases of the skin, hair, nails, and mucous membranes.

Dermatome

A surgical instrument used to remove a thin layer of skin for grafting. The term also describes a band of skin supplied by one spinal nerve.

Dermatomycosis

A fungal infection of the skin, hair, or nails.

Dermatomyositis

An autoimmune disease that causes muscle weakness and a characteristic skin rash. It can also affect swallowing or the lungs, and in some adults it is associated with an increased risk of cancer.

Dermatopathology

The study of skin disease through examination of tissue specimens, usually with microscopy and related laboratory methods. It helps identify inflammatory, infectious, benign, and malignant skin disorders.

Dermatophyte

Dermatophyte is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

Dermatophytosis

A superficial infection of keratinized skin, hair, or nails caused by dermatophyte fungi, producing conditions such as tinea corporis, tinea pedis, and onychomycosis.

Dermatoplasty

Surgical repair or reconstruction of the skin, often using tissue rearrangement or a skin graft.

Dermatoses - Systemic

Skin manifestations of a disease affecting multiple organs, such as autoimmune, endocrine, infectious, nutritional, or malignant disease; the skin finding may provide a diagnostic clue.

Dermatosis

A disease or disorder of the skin, including inflammatory, infectious, allergic, genetic, and neoplastic conditions.

Dermis

Thick connective tissue layer beneath the epidermis providing structural support, elasticity, and nourishment. Two layers: papillary (superficial, loose connective tissue with dermal papillae interdigitating with epidermal ridges) and reticular (deep, dense irregular connective tissue).

Dermoid

A benign cystic teratoma containing elements derived from ectoderm, including skin, hair follicles, sebaceous glands, and sometimes teeth. Ovarian dermoid cysts are the most common germ cell tumor of the ovary, typically occurring in young women. They are usually asymptomatic but may cause torsion, rupture, or malignant transformation.

Dermoid Cyst

A usually benign cyst lined by tissue resembling skin and sometimes containing hair, glands, or other skin structures.

Dermoid Cyst Of The Ovary

A usually benign mature cystic teratoma arising from germ cells in the ovary and containing tissues such as skin, hair, fat, or teeth.

Dermoscopy

Noninvasive examination of skin lesions with magnification and polarized or nonpolarized illumination that reveals structures not visible to the unaided eye. It improves assessment of pigmented lesions and selected inflammatory or infectious conditions but does not replace biopsy when malignancy is suspected.

Descending Colon

From the splenic flexure to the left iliac fossa, approximately 25-30 cm, and mostly retroperitoneal and fixed to the posterior abdominal wall. The phrenicocolic ligament supports the splenic flexure.

Anteriorly it is related to small intestine; posteriorly to the left kidney. It absorbs water and electrolytes and compacts fecal matter.

Descending Thoracic Aorta

The portion of the aorta extending from the aortic arch to the diaphragm. It lies in the posterior mediastinum and gives branches to the thoracic wall and organs.

Desensitization

A treatment that gradually reduces an abnormal immune response by giving increasing or controlled exposure to a specific allergen.

Desferrioxamine

An iron-chelating medicine used for serious iron overload and, in selected cases, aluminum toxicity. It binds excess metal for removal from the body; hearing, vision, kidney, and infusion-related adverse effects are possible.

Desflurane

An inhaled anesthetic used to maintain general anesthesia. It acts rapidly but can irritate the airway and may cause low blood pressure, nausea, or rare malignant hyperthermia.

Desiccate

To dry out or remove moisture from a tissue, substance, or environment.

Desiccated Thyroid

A thyroid-hormone preparation made from dried animal thyroid tissue and containing thyroid hormones.

Alternate Names:

Desiccated thyroid extract; natural desiccated thyroid

Desipramine

A tricyclic antidepressant that increases norepinephrine signaling and is used for selected depressive disorders or pain conditions. It can cause dry mouth, constipation, sedation, abnormal heart

rhythms, and toxicity in overdose.

Desipramine Hydrochloride Overdose

Overdose of desipramine hydrochloride, a tricyclic antidepressant that may cause coma, seizures, hypotension, and life-threatening cardiac conduction abnormalities.

Deslorelin

A gonadotropin-releasing hormone agonist used mainly in veterinary medicine to suppress reproductive hormone activity. Continuous exposure initially raises and then suppresses gonadotropins and sex hormones.

Desmin

An intermediate-filament protein in muscle cells that helps maintain structural alignment; abnormal desmin or DES variants can cause myopathy and cardiomyopathy.

Desmoid Tumor

A locally aggressive but non-metastasizing fibrous tumor (fibromatosis), associated with familial adenomatous polyposis. Treatment includes surgery, radiation, and systemic therapy; recurrence after resection is common.

Desmoid Tumors

Locally aggressive fibrous tumors that do not usually metastasize but can invade nearby structures and recur; treatment may include observation, medicines, or surgery depending on site and symptoms.

Desmoid Tumour

A locally aggressive fibroblastic tumor that does not usually metastasize but can infiltrate adjacent tissues and recur.

Desmoplasia

Formation of dense fibrous connective tissue in response to invasive neoplasia, chronic inflammation, or tissue injury. The reaction is produced by activated stromal cells and extracellular-matrix deposition surrounding or infiltrating a lesion. Desmopla-

sia is especially common around invasive carcinomas and may make a tumor firm, tethered, or difficult to distinguish from scar tissue. Its presence is interpreted with the cellular morphology, location, and clinical findings to determine whether it represents a tumor-associated stromal response.

Desmoplastic

Describing dense fibrous connective-tissue formation, often as a reaction around a tumor or during chronic inflammation.

Desmoplastic Fibroblastoma

A rare benign collagen-rich fibroblastic tumor, also called collagenous fibroma, presenting as a slow-growing painless mass in superficial or deep soft tissue.

Desmoplastic Fibroma

A rare benign but locally aggressive fibrous tumor of bone.

Desmoplastic Infantile Ganglioglioma

A rare low-grade tumor of infancy containing astrocytic and neuronal components in a desmoplastic stroma, usually presenting as a large superficial cerebral mass with seizures or increased intracranial pressure.

Desmoplastic Melanoma

A rare spindle-cell melanoma with prominent fibrous stroma, usually arising on chronically sun-damaged skin; it may be amelanotic and can be difficult to recognize clinically and histologically.

Desmoplastic Reaction

Formation of dense fibrous connective tissue in response to tissue injury or, commonly, invasion by a carcinoma.

Desmoplastic Small Round Cell Tumors

Rare aggressive tumors that usually arise in the abdomen or pelvis and primarily affect children and young adults.

Alternate Names:

DSRCT

Desmoplastic Trichoepithelioma

A rare benign follicular adnexal tumor, usually a small solitary facial papule or annular lesion, that can resemble morpheaform basal-cell carcinoma and is distinguished by histopathologic examination.

Desmopressin

A synthetic analogue of vasopressin used for central diabetes insipidus, nighttime urination, and some bleeding disorders. Excessive fluid retention can cause dangerous low blood sodium.

Desmosine

A cross-linking amino acid formed from elastin; it is used as a marker of elastin breakdown in research and selected clinical studies.

Desmosome

A strong cell-to-cell junction that connects intermediate filaments between neighboring epithelial or cardiac muscle cells.

Desogestrel

A progestin used in some hormonal contraceptives. It prevents pregnancy mainly by suppressing ovulation and thickening cervical mucus; irregular bleeding and other hormonal adverse effects may occur.

Desonide

A low-potency topical corticosteroid used for short-term treatment of inflammatory skin conditions such as eczema and dermatitis. Prolonged or excessive use can thin the skin.

Desoximetasone

A topical corticosteroid used to reduce inflammation and itching in steroid-responsive dermatitis; potency, site, duration, and skin absorption determine risk.

Desoxycorticosterone

A mineralocorticoid steroid that promotes renal sodium retention and potassium loss, influencing

extracellular fluid volume and blood pressure.

Desquamation

Shedding or peeling of the outer layers of skin or another epithelial surface.

Desquamative Interstitial Pneumonia

A rare ILD characterized by uniform filling of alveoli with macrophages containing brown pigment (hemosiderin-laden). It is strongly associated with smoking. HRCT shows bilateral ground-glass opacities with lower lobe predominance. Smoking cessation and corticosteroids are the main treatments.

Desulfovibrio

A genus of anaerobic sulfate-reducing bacteria found in the environment and gut; invasive infection is uncommon and usually requires compatible clinical findings.

Desulfovibrio Desulfuricans

A sulfate-reducing anaerobic bacterium found mainly in environmental and gastrointestinal habitats; human disease is rare.

Desulfovibrio Piger

A sulfate-reducing anaerobic bacterium associated with the human intestinal microbiota; its clinical significance depends on the specimen and patient context.

Desulfovibrionaceae

A family of anaerobic sulfate-reducing bacteria that includes *Desulfovibrio* species.

Desvenlafaxine Succinate

The succinate salt of desvenlafaxine, a serotonin-norepinephrine reuptake inhibitor used for major depressive disorder. It may cause nausea, insomnia, increased blood pressure, or withdrawal symptoms if stopped suddenly.

Desynchronosis (Jet Lag)

Alternate index label for Jet Lag.

Detached

Detached means separated or no longer connected, as in a detached retina, tissue, device, or emotional state.

Detached Retina

Separation of the neurosensory retina from the underlying retinal pigment epithelium (RPE), a medical emergency requiring prompt surgical repair to prevent permanent vision loss.

Detergent

Detergent is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

Detergent Poisoning

Exposure to detergent, which may irritate the skin, eyes, airways, or gastrointestinal tract; product ingredients determine severity.

Deterministic Effects

Tissue reactions caused by radiation that generally occur only above a threshold dose, with severity increasing as the dose rises. Examples include skin injury, cataracts, and tissue damage after substantial exposure.

Detoxification

Removal of toxic substance from body. Methods: activated charcoal, gastric lavage (rarely used), whole bowel irrigation, hemodialysis, hemoperfusion, chelation, supportive care.

Detritic Synovitis

A synovial inflammatory reaction to particulate debris, such as cartilage, bone, blood, crystals, or implant wear material, producing joint swelling and pain.

Detrusor Instability

Involuntary bladder-muscle contractions that can cause urgency and urge incontinence.

Detrusor Muscle

The smooth muscle in the bladder wall that contracts to expel urine.

Detumescence

The return of an erectile tissue to its non-erect state.

Deubiquitinating Enzymes

Enzymes that remove ubiquitin from proteins, thereby regulating protein stability, trafficking, signaling, DNA repair, and immune responses.

Deubiquitination

Removal of ubiquitin from a protein by deubiquitinating enzymes, which can prevent degradation or change the protein's location, activity, or signaling.

Deuteranopia

Red-green color blindness caused by absence or severe dysfunction of green-sensitive cone photopigments.

Deuterium

Deuterium is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

Deuterium Oxide

Water in which some or all hydrogen atoms are the heavy isotope deuterium; it is also called heavy water and is used in research.

Development

The progressive process by which an organism, organ, or ability grows, differentiates, and acquires structure or function.

Developmental Coordination Disorder

A childhood neurodevelopmental disorder causing motor skills that are substantially below expectations for age and that interfere with daily activities, school, or coordination.

Developmental Differences Of The

Female Genital Tract

Congenital or developmental abnormalities of the female genital tract that may affect anatomy, menstruation, fertility, pregnancy, or urinary function.

Developmental Disabilities

A group of lifelong conditions beginning during development that affect physical, intellectual, language, learning, or adaptive functioning.

Developmental Disorder

A condition beginning during the developmental period that affects physical, intellectual, language, learning, behavioral, or social functioning.

Developmental Disorders

Developmental Disorders is a developmental, psychological, or behavioral concept; assessment considers age, duration, functional impact, medical causes, and social context.

Developmental Dysplasia Of The Hip

A spectrum of hip abnormalities in infants and children, ranging from mild acetabular dysplasia to complete hip dislocation. The femoral head is partially or completely displaced from the acetabulum due to capsular laxity and acetabular underdevelopment.

Developmental Expressive Language Disorder

A developmental disorder in which a child has difficulty expressing thoughts with spoken or signed language despite otherwise adequate opportunity to learn language.

Developmental Milestone

A skill or behavior generally acquired within an expected age range, such as motor, language, cognitive, or social development; delayed or lost milestones require assessment.

Developmental Milestones

Skills and abilities that children typically acquire at predictable ages. Examples: social smile at 2

months, rolling over at 4-6 months, sitting independently at 6-8 months, walking at 12 months, and speaking two-word phrases at 2 years. Delays in reaching milestones may indicate developmental delay, autism, or neurologic impairment.

Developmental Milestones Record

A record of age-related motor, language, cognitive, social, and self-care skills used to follow a child's development and identify possible delay.

Developmental Milestones Record - 12 Months

Expected developmental skills around one year, including pulling to stand, cruising, pointing, simple gestures, and interactive communication; individual variation exists.

Developmental Milestones Record - 18 Months

Expected developmental skills around 18 months, including walking, using several words, following simple directions, and beginning pretend or imitative play.

Developmental Milestones Record - 2 Months

Expected early-infant skills around two months, including social smiling, visual tracking, responding to sound, and improved head control.

Developmental Milestones Record - 2 Years

Expected skills around two years, including running, using two-word phrases, following two-step directions, and beginning parallel play.

Developmental Milestones Record - 3 Years

Expected skills around three years, including three-word speech, climbing stairs with support, drawing simple shapes, and cooperative social interaction.

Developmental Milestones Record - 4

Months

Expected skills around four months, including steady head control, rolling, reaching for objects, laughing, and responding to caregivers.

Developmental Milestones Record - 4 Years

Expected skills around four years, including understandable sentences, hopping, drawing a person with several parts, and imaginative cooperative play.

Developmental Milestones Record - 5 Years

Expected skills around five years, including running and jumping well, telling a simple story, counting, dressing with limited help, and following game rules.

Developmental Milestones Record - 6 Months

Expected skills around six months, including sitting with support, rolling, reaching and transferring objects, babbling, and recognizing familiar people.

Developmental Milestones Record - 9 Months

Expected skills around nine months, including sitting independently, crawling or moving purposefully, babbling, responding to name, and using a pincer-like grasp.

Developmental Process

The biological and psychological changes through which an organism, organ, or ability grows, differentiates, and acquires function.

Developmental Psychology

The study of cognitive, emotional, social, and behavioral change across the lifespan.

Developmental Reading Disorder

A learning disorder involving persistent difficulty with accurate or fluent reading, often including problems with word recognition, spelling, or decoding.

Developmental Regression

Loss of previously acquired developmental skills. Regression is a neurologic red flag requiring prompt evaluation for genetic, metabolic, neurodegenerative, epileptic, infectious, or structural causes.

Developmental Stage

A period of characteristic physical, cognitive, emotional, or social development used to describe progression over time.

Developmental Surveillance

The ongoing process of eliciting caregiver concerns, observing the child, documenting developmental history, and monitoring milestones during routine care. It differs from formal developmental screening, which uses standardized instruments at specified ages.

Deviated Septum

Displacement of the nasal septum from the midline, congenital or acquired from trauma, and present to some degree in most adults. Significant deviation narrows one nasal cavity, impairing airflow and sinus drainage and producing obstruction, congestion, recurrent sinusitis, epistaxis, and sleep disturbance.

Alternate Names:

Septum Deviated (Deviated Septum)

Deviation

A departure from an expected position, direction, value, or pattern; its meaning depends on the clinical or scientific context.

Device Embolisation

Migration of a medical device or device fragment through the bloodstream, potentially obstructing a vessel and requiring urgent assessment.

Devices For Hearing Loss

Assistive technologies such as hearing aids, cochlear implants, bone-conduction devices, alerting systems, and communication accessories that improve access to sound.

Dexamethasone

A potent, long-acting glucocorticoid used to suppress inflammation, cerebral oedema, allergic reactions, and selected malignancy-related or endocrine conditions; infection, hyperglycaemia, and adrenal suppression may occur.

Dexamethasone Suppression Test

A dynamic test used to assess cortisol regulation. In normal physiology, dexamethasone suppresses ACTH and cortisol; failure of suppression supports endogenous hypercortisolism but requires interpretation with medication, absorption, and comorbidity considerations.

Dexamphetamine

A central nervous system stimulant used in selected attention and sleep disorders. It increases norepinephrine and dopamine signaling and may cause appetite loss, insomnia, increased heart rate, or dependence.

Dexibuprofen

A medicine called dexibuprofen. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Dexketoprofen

The active enantiomer of ketoprofen, a nonsteroidal anti-inflammatory analgesic used for short-term pain; gastrointestinal, kidney, cardiovascular, and hypersensitivity risks apply.

Dexlansoprazole

A medicine called dexlansoprazole. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Dexmedetomidine

An alpha-2 adrenergic agonist used for monitored sedation. It usually causes less respiratory depression than many sedatives but may produce slow heart rate, low blood pressure, or withdrawal after prolonged use.

Dexmethylphenidate

A stimulant used to treat attention-deficit/hyperactivity disorder. It increases central dopamine and norepinephrine signaling and may cause appetite loss, insomnia, increased blood pressure, or misuse.

Dexrazoxane

A medicine used to reduce anthracycline-related heart injury and to treat tissue damage after accidental intravenous anthracycline leakage in selected settings. It can suppress bone marrow and increase infection risk.

Dexrazoxane Hydrochloride

The hydrochloride salt formulation of dexrazoxane, used to reduce selected anthracycline-related heart or tissue injury.

Dextrin

A group of shorter carbohydrate chains formed when starch breaks down, used in food, laboratory, and pharmaceutical products.

Dextroamphetamine

A central nervous system stimulant used for selected attention and sleep disorders. It increases dopamine and norepinephrine signaling and can cause insomnia, appetite loss, cardiovascular effects, or dependence.

Dextrocardia

A congenital position in which the heart lies predominantly on the right side of the chest, sometimes with reversed internal organs or associated heart defects.

Dextromethorphan

A cough suppressant that reduces activity in brain pathways involved in the cough reflex. Excessive doses can cause agitation, hallucinations, seizures, respiratory depression, or serotonin toxicity.

Dextromethorphan Overdose

Overdose of dextromethorphan that may cause

drowsiness, agitation, hallucinations, seizures, respiratory depression, or serotonin toxicity.

Dextroposition Of The Heart

Displacement of the heart toward the right side of the chest, usually because of an external shift such as lung disease or abnormal anatomy; it is distinct from dextrocardia.

Dextropropoxyphene

An opioid analgesic formerly used for pain but withdrawn or restricted in many countries because of cardiotoxicity, respiratory depression, overdose risk, and limited benefit.

Dextrose

D-glucose, a simple sugar used by cells for energy and given medically in oral or intravenous solutions to treat or prevent low blood glucose.

Dextrothyroxine

A stereoisomer of thyroxine formerly studied or used to lower cholesterol. It can affect thyroid function and is not a routine modern treatment for hypercholesterolemia.

Déjà Vu

The feeling that a current situation has been experienced before. It can occur normally but may also occur with temporal-lobe seizures or other neurologic conditions when frequent or associated with other symptoms.

DFSP

Alternate index label; see *Dermatofibrosarcoma protuberans*.

DHA

Docosahexaenoic acid, an omega-3 polyunsaturated fatty acid important in neural and retinal membranes and obtained from seafood or supplements.

DHEA

Dehydroepiandrosterone, an adrenal steroid precursor that can be converted into androgens and

estrogens; its levels vary with age and disease.

DHEA-Sulfate Test

A blood test measuring dehydroepiandrosterone sulfate, an adrenal androgen. It helps evaluate androgen excess, adrenal disorders, congenital adrenal hyperplasia, or an adrenal tumor, but interpretation depends on age, sex, medicines, and the laboratory range.

Diabetes

Diabetes is chronic hyperglycemia caused by inadequate insulin secretion, insulin resistance, or both, with long-term risks to the eyes, kidneys, nerves, heart, and blood vessels. inadequate insulin secretion, impaired insulin action, or both. Chronic hyperglycemia can damage the eyes, kidneys, nerves, heart, and blood vessels. Major forms include type 1, type 2, and gestational diabetes.

Diabetes (Diabetes Mellitus)

Alternate index label for Diabetes Mellitus.

Diabetes - Foot Ulcers

Open sores of the foot associated with diabetes, often involving neuropathy, pressure, deformity, or poor circulation; prompt wound and infection assessment helps prevent amputation.

Diabetes - Insulin Therapy

Treatment with injected or infused insulin to replace deficient insulin or improve glucose control; dosing must be individualized and balanced against hypoglycemia risk.

Diabetes - Preventing Heart Attack And Stroke

Cardiovascular risk reduction in diabetes includes glucose management, blood-pressure and lipid control, smoking cessation, physical activity, nutrition, and indicated medicines.

Diabetes - Taking Care Of Your Feet

A patient-care topic concerning diabetes - taking care of your feet. It addresses the relevant purpose,

risks, management, and follow-up.

Diabetes - When You Are Sick

Sick-day diabetes care includes more frequent glucose checks, hydration, continuation or adjustment of medicines as instructed, and ketone monitoring when indicated; severe symptoms need urgent care.

Diabetes And Alcohol

Alcohol can cause delayed hypoglycemia, interact with medicines, and complicate glucose control; risks depend on the amount, timing, food intake, diabetes type, and treatment.

Diabetes And Exercise

The relationship between physical activity and diabetes management. Exercise can improve glucose control and cardiovascular health, but insulin or medicine adjustments and glucose monitoring may be needed.

Diabetes And Eye Disease

Eye complications of diabetes, especially diabetic retinopathy and macular edema, caused by damage to small retinal blood vessels and potentially leading to vision loss.

Diabetes And Eye Problems

Diabetes can damage retinal blood vessels, causing diabetic retinopathy, macular edema, cataracts, glaucoma, and vision loss. Blood-glucose and blood-pressure control, regular dilated eye examinations, and timely laser, injection, or surgical treatment reduce risk.

Diabetes And Kidney Disease

Kidney damage caused by diabetes, also called diabetic kidney disease. It may begin with albumin in the urine and progress to reduced kidney function.

Diabetes And Metabolic Health

Closely linked through insulin resistance, obesity, dyslipidemia, and hypertension, collectively known as the metabolic syndrome. Poor metabolic health increases the risk of developing type 2 diabetes and

worsens glycemic control in existing diabetes.

Diabetes And Nerve Damage

Diabetic neuropathy is nerve injury associated with chronic metabolic disease and may cause pain, numbness, weakness, autonomic symptoms, or loss of protective sensation.

Diabetes Complications

Diabetes complications arise from chronic hyperglycemia damaging blood vessels and nerves over time. Microvascular complications include diabetic retinopathy leading to vision loss, nephropathy progressing to kidney failure, and neuropathy causing pain and loss of sensation.

Diabetes During Pregnancy (Gestational Diabetes)

Alternate index label for Gestational Diabetes.

Diabetes Eye Care

A patient-care topic concerning diabetes eye care. It addresses the relevant purpose, risks, management, and follow-up.

Diabetes Eye Exams

Eye examinations for diabetes screen for retinopathy, macular edema, cataracts, glaucoma, and other vision-threatening complications.

Diabetes Insipidus

A disorder that causes large amounts of very dilute urine and intense thirst. It happens when the body does not make enough vasopressin, a hormone that helps the kidneys retain water, or when the kidneys do not respond to it.

Diabetes Management

The coordinated use of nutrition, physical activity, medicines when indicated, glucose monitoring, and screening for complications to maintain health and reduce diabetes-related risk.

Diabetes Medications

Diabetes medications lower blood glucose through

various mechanisms: metformin reduces hepatic glucose production; sulfonylureas stimulate insulin secretion; SGLT2 inhibitors increase urinary glucose excretion; GLP-1 receptor agonists enhance incretin effects; and insulin replaces deficient hormone.

Diabetes Mellitus

A metabolic disorder characterized by chronic hyperglycemia resulting from insufficient insulin production, insulin resistance, or both. Type 1 diabetes results from autoimmune destruction of pancreatic beta cells, while type 2 is driven by genetic and lifestyle factors leading to insulin resistance.

Alternate Names:

Diabetes (Diabetes Mellitus)

Diabetes Mellitus Type 1

An autoimmune disease characterized by destruction of pancreatic beta cells leading to absolute insulin deficiency. Usually presents in childhood or young adulthood with acute onset of polyuria, polydipsia, weight loss, and diabetic ketoacidosis (DKA) at diagnosis in many.

Diabetes Mellitus Type 2

A progressive metabolic disorder characterized by insulin resistance and relative insulin deficiency, strongly associated with obesity and physical inactivity. Typically presents in adults but increasingly seen in younger populations. Diagnosis: fasting glucose ≥ 126 mg/dL, HbA1c $\geq 6.5\%$, or OGTT ≥ 200 mg/dL.

Diabetes Pre (Prediabetes)

Alternate index label for Prediabetes.

Diabetes Prevention

Preventing diabetes focuses on reducing the risk of developing type 2 diabetes through lifestyle interventions and risk factor management. Maintaining a healthy body weight, engaging in regular physical activity, and following a balanced diet low in refined sugars and saturated fats are cornerstone strategies.

Diabetes Symptoms In Men

Diabetes in men may cause thirst, frequent urina-

tion, fatigue, blurred vision, slow wound healing, recurrent infections, erectile dysfunction, or loss of sensation. Some people have no symptoms, so risk-based blood testing is important.

Diabetes Symptoms In Women

Diabetes in women may cause thirst, frequent urination, fatigue, blurred vision, recurrent vaginal or urinary infections, slow wound healing, or pregnancy complications. Symptoms can be absent, and screening depends on age, risk factors, and pregnancy status.

Diabetes Treatment

Diabetes treatment combines nutrition, physical activity, glucose monitoring, education, and medicines chosen for the type of diabetes and individual risks. Care also addresses blood pressure, lipids, kidneys, eyes, nerves, feet, vaccines, and cardiovascular health.

Diabetes Type 1 (Type 1 Diabetes)

Alternate index label for Type 1 Diabetes.

Diabetes Type 2 (Type 2 Diabetes)

Alternate index label for Type 2 Diabetes.

Diabetes Type 2 - Meal Planning

Meal planning for type 2 diabetes emphasizes appropriate portions, fiber-rich foods, carbohydrate awareness, adequate protein, and a pattern compatible with medicines, health goals, and preferences.

Diabetes, Gestational

Alternate index label; see *Gestational diabetes*.

Diabetes, Type 1

Alternate index label; see *Type 1 diabetes*.

Diabetes, Type 2

Alternate index label; see *Type 2 diabetes*.

Diabetic Angiopathy

Blood-vessel damage caused by diabetes, affecting small or large vessels.

Diabetic Autonomic Neuropathy

Dysfunction of autonomic nerves caused by diabetes, affecting cardiovascular, gastrointestinal, genitourinary, sudomotor, and pupillary systems. Manifestations include orthostatic hypotension, resting tachycardia, gastroparesis, bladder dysfunction, erectile dysfunction, and impaired hypoglycemia awareness.

Diabetic Cardiomyopathies

Structural or functional heart-muscle disease associated with diabetes, after considering other causes such as coronary artery disease and hypertension.

Diabetic Cardiomyopathy

Damage to the heart muscle associated with diabetes that occurs independently of coronary artery disease or hypertension. It may cause impaired relaxation, reduced pumping function, heart failure, and rhythm problems; glucose and cardiovascular risk control can reduce risk.

Diabetic Coma

A state of profound unconsciousness caused by a severe diabetes-related disturbance in blood glucose or metabolism.

Diabetic Complications

The chronic and acute consequences of diabetes mellitus. Microvascular: retinopathy (leading cause of blindness), nephropathy (leading cause of ESRD—albuminuria, declining GFR), neuropathy (peripheral—stocking-glove, autonomic—gastroparesis, erectile dysfunction, postural hypotension, cardiac autonomic).

Diabetic Diet

An individualized eating plan that considers carbohydrate amount and timing, overall nutrition, cultural preferences, and treatment goals to support blood-glucose control.

Alternate Names:

Diet Diabetes (Diabetic Diet)

Diabetic Diet For Type 2 Diabetes

A type 2 diabetes eating plan emphasizes consistent

carbohydrate awareness, fiber-rich foods, adequate protein, unsaturated fats, and portions that support glucose and weight goals. There is no single diabetic diet; medicines, kidney function, culture, and preferences guide the plan.

Diabetic Foot

Foot problems associated with diabetes, including neuropathy, deformity, ulcers, infection, and impaired healing.

Diabetic Foot Disease

Complex multifactorial condition resulting from the combination of peripheral neuropathy, peripheral arterial disease, and impaired immune function in diabetes. Neuropathy leads to loss of protective sensation and foot deformities. Peripheral arterial disease impairs healing. Minor trauma progresses to ulceration and infection.

Diabetic Foot Ulcer

A chronic wound of the foot in a patient with diabetes, resulting from peripheral neuropathy, peripheral artery disease, and impaired wound healing. Neuropathic ulcers: painless, at pressure points (plantar metatarsal heads, heel), punched-out appearance, surrounded by callus.

Diabetic Home Care And Monitoring

Home diabetes care may include checking glucose, taking medicines, inspecting feet, recognizing low or high glucose, recording results, and attending eye, kidney, dental, and cardiovascular follow-up. Sick-day plans and ketone guidance are important for people at risk of ketoacidosis.

Diabetic Hyperglycemic Hyperosmolar Syndrome

A life-threatening complication of diabetes with very high blood glucose, severe dehydration, and increased blood osmolality, usually without major ketoacidosis.

Diabetic Hyperosmolar Hyperglycemic State

A severe complication of diabetes marked by ex-

treme hyperglycemia, increased serum osmolality, and dehydration with little or no ketoacidosis. It can cause altered consciousness and requires urgent hospital treatment.

Diabetic Hypoglycemia

An abnormally low blood glucose level in a person with diabetes, often caused by insulin or other glucose-lowering medicines.

Diabetic Ketoacidosis

An acute, life-threatening complication of diabetes characterized by excessive ketone production and metabolic acidosis, usually with elevated blood glucose but sometimes with only modest glucose elevation. Triggers include infection, insufficient insulin, myocardial infarction, pancreatitis, certain medicines, fasting, or other physiologic stress.

Alternate Names:

DKA

Diabetic Ketoacidosis Monitoring

Monitoring during DKA management includes hourly blood glucose measurement, serum electrolytes every two to four hours, venous blood gas assessment, beta-hydroxybutyrate levels, and fluid balance.

Diabetic Macular Edema

The accumulation of fluid within the macula due to breakdown of the blood-retinal barrier in diabetic retinopathy, resulting in thickening of the macula and central vision loss, and it can occur at any stage of diabetic retinopathy, from mild non-proliferative to proliferative disease.

Diabetic Microvascular Complications

Small-vessel complications of diabetes, principally retinopathy, nephropathy, and neuropathy, caused by chronic metabolic and vascular injury; risk is reduced by glycemic, blood-pressure, and lipid control.

Diabetic Nephropathy

Kidney disease caused by diabetes mellitus, the leading cause of ESRD worldwide.

Pathophysiology: hyperglycemia-induced glomerular hyperfiltration, basement membrane thickening, mesangial expansion, and glomerulosclerosis. Presents with progressive albuminuria (microalbuminuria macroalbuminuria) and declining GFR.

Alternate Names:

DKD

Diabetic Nephropathy (Kidney Disease)

Kidney damage caused by diabetes, often beginning with protein in the urine and potentially progressing to chronic kidney disease.

Diabetic Neuropathy

Nerve dysfunction caused by diabetes. It may cause distal sensory loss and pain or affect autonomic functions such as digestion, blood pressure, sweating, bladder function, or sexual function.

Alternate Names:

Autonomic Neuropathy Diabetic (Diabetic Neuropathy) Neuropathy, Diabetic Neuropathy Autonomic Diabetic (Diabetic Neuropathy) Neuropathy Diabetic (Diabetic Neuropathy) Neuropathy Diabetic Peripheral (Diabetic Neuropathy) Neuropathy Focal Diabetic (Diabetic Neuropathy) Neuropathy Proximal Diabetic (Diabetic Neuropathy) Peripheral Neuropathy Diabetic (Diabetic Neuropathy) Proximal Neuropathy Diabetic (Diabetic Neuropathy)

Diabetic Peripheral Neuropathy

The most common complication of diabetes mellitus, affecting approximately fifty percent of patients with long-standing disease. It is a length-dependent, sensorimotor polyneuropathy that affects the distal lower extremities first, in a glove-and-stocking distribution, and progresses proximally over time.

Diabetic Retinopathy

A microvascular complication of diabetes mellitus and a leading cause of blindness in working-age adults. Non-proliferative DR (NPDR): microaneurysms, dot-blot hemorrhages, exudates (hard and cotton-wool spots), and venous beading. Proliferative DR (PDR): retinal neovascularization, vitreous hemorrhage, and tractional retinal detachment.

Alternate Names:

Retinopathy, Diabetic

Diabetogenic

Able to cause or promote diabetes or elevated blood glucose, as with some diseases, hormones, medicines, or environmental factors.

Diabetologist

A physician who specializes in the prevention, diagnosis, and treatment of diabetes and its complications, including glucose management, cardiovascular risk, kidney disease, neuropathy, and retinopathy.

Diabrosis

An obsolete or uncommon term whose meaning depends on its source; it may refer to tissue breakdown or ulcerative change and should be interpreted in context.

Diacetoxyscirpenol

A toxic trichothecene mycotoxin produced by some *Fusarium* molds. Contaminated food or feed can cause gastrointestinal irritation, reduced blood-cell production, and immune toxicity.

Diacritics

Marks added to letters to indicate pronunciation or distinguish words, such as accents or umlauts; in medical records they can affect names and data matching.

Diacylglycerol

A lipid second messenger produced from membrane phospholipids that activates protein kinase C and participates in cell signaling.

Diagnosis

The identification of a disease or other health condition through clinical history, examination, and appropriate investigations. A differential diagnosis considers alternative explanations for the findings.

Diagnostic Imaging

A diagnostic test or examination used to assess diagnostic imaging. Results are interpreted with

the clinical findings, method, and reference range.

Diagnostic Laparoscopy

A minimally invasive procedure using a camera inserted through abdominal incisions to inspect pelvic or abdominal organs and sometimes obtain biopsies or perform treatment.

Diagnostic Microbiology

The laboratory identification of microorganisms causing disease. Methods include microscopy, culture, biochemical testing, serology, and molecular methods. Rapid diagnostic tests provide same-day results. MALDI-TOF mass spectrometry revolutionized bacterial identification.

Diagnostic Procedure

A medical procedure, treatment, device, or care topic related to diagnostic procedure; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Diagnostic Radiology

The medical specialty that uses imaging methods to diagnose and characterize disease, including X-ray, ultrasound, computed tomography, magnetic resonance imaging, and nuclear medicine.

Diagnostic Service

A healthcare service that obtains or interprets information to detect, characterize, or monitor a disease or health condition.

Diagnostic Test

A test used to evaluate a person with symptoms, signs, or an abnormal screening result to establish, exclude, or characterize a disease. Its usefulness depends on analytic validity, clinical performance, and the consequences of the result.

Diagnostic Trial

A clinical study evaluating how well a test identifies or excludes a disease or predicts a clinically relevant outcome.

Diagnostic Uncertainty

The state in which available information does not establish a single diagnosis with sufficient confidence. It should be communicated transparently and managed with safety-netting, planned reassessment, and targeted additional evaluation.

Diakinesis

The final stage of prophase I of meiosis, when homologous chromosomes are highly condensed and attached by chiasmata before separating.

Dialectical Behavior Therapy

A comprehensive cognitive-behavioral treatment originally developed for borderline personality disorder. It combines cognitive-behavioral techniques with mindfulness and acceptance strategies. Core modules include mindfulness, distress tolerance, emotion regulation, and interpersonal effectiveness.

Dialister Micraerophilus

A microaerophilic anaerobic bacterium associated with the oral and genital microbiota; clinical significance depends on isolation from a compatible infection.

Dialister Pneumosintes

An anaerobic bacterium found in the oral cavity and respiratory tract that may contribute to polymicrobial infection in appropriate clinical settings.

Dialysis

Kidney replacement therapy that removes excess fluid and dissolved waste products from the body when kidney function is inadequate. The main forms are hemodialysis and peritoneal dialysis.

Dialysis - Hemodialysis

A form of dialysis in which blood is circulated through a dialyzer containing a semipermeable membrane to remove selected solutes and excess fluid; treatment requires vascular access and monitoring.

Dialysis - Peritoneal

A form of dialysis in which the peritoneal membrane

acts as the exchange surface while dialysis solution is instilled into and drained from the abdominal cavity through a catheter; peritonitis, catheter infection, and fluid-management problems require prompt attention.

Dialysis Access

A vascular route used for hemodialysis, such as an arteriovenous fistula, arteriovenous graft, or central venous catheter. Each option has different benefits and risks.

Dialysis Adequacy

The degree to which a dialysis prescription removes uremic solutes and controls fluid, electrolyte, and acid–base balance while meeting patient-centered treatment goals. Kt/V and urea reduction ratio are commonly used for hemodialysis, but interpretation and target values depend on the treatment schedule, modality, and applicable clinical guidance; clinical status remains essential.

Dialysis Disequilibrium Syndrome

A neurologic syndrome that can occur during or soon after hemodialysis, especially when treatment is first started in a severely uremic patient. Headache, nausea, confusion, seizures, and coma may result from rapid solute removal and cerebral edema. Risk is reduced by gradual initiation and shorter initial sessions.

Dialysis Machine

Equipment that circulates blood or dialysis fluid across a semipermeable membrane to remove waste, excess fluid, and electrolytes when kidney function is inadequate.

Dialysis Solutions

Dialysate: specially formulated fluids used in hemodialysis or peritoneal dialysis to exchange solutes and remove excess water from the body. Composition varies by modality and clinical need.

Dialysis Therapy

The use of hemodialysis or peritoneal dialysis to replace some kidney functions by removing waste

and excess fluid and helping manage electrolyte and acid–base disturbances. The prescription is individualized according to kidney function, symptoms, comorbidities, modality, and treatment goals.

Diamine

A molecule containing two amino groups; diamines occur in metabolism and are used in biochemical and industrial chemistry.

Diamorphine

A medicine called diamorphine. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Diamond-Blackfan Anemia

A rare congenital erythroid aplasia characterized by profound hypoplastic, macrocytic anemia, severe reticulocytopenia, and selective absence of erythroid precursors in the bone marrow, typically presenting in the first year of life. Inherited primarily in an autosomal dominant pattern caused by pathogenic variants in ribosomal protein genes (most commonly *RPS19*); roughly half of affected children have associated physical anomalies, such as craniofacial dysmorphism, thumb malformations (triphalaengeal or bifid thumbs), short stature, or congenital heart defects.

Alternate Names:

DBA; Diamond-Blackfan syndrome; Congenital hypoplastic anemia

Dianhydrogalactitol

An investigational alkylating compound studied as an anticancer drug, including for selected brain tumors and hematologic cancers.

Dianisidine

An aromatic chemical used in dyes and laboratory reagents; occupational or significant exposure can cause toxicity and has carcinogenic concern.

Diapause

Diapause is a period of suspended or slowed development in some animals, allowing survival during unfavorable environmental conditions.

Diapedesis

Movement of blood cells, especially leukocytes, through intact vessel walls into surrounding tissue.

Diaper Rash

Irritant inflammation of the skin covered by a diaper, commonly caused by prolonged contact with urine or stool, friction, moisture, or *Candida* infection. It causes redness and soreness; persistent, severe, or spreading rash requires evaluation for infection or another skin condition.

Diaphoresis

Excessive sweating, which may occur with heat, exertion, fever, pain, low blood sugar, or other medical conditions.

Diaphoretic

1. Pertaining to, producing, or characterized by profuse perspiration (diaphoresis), typically mediated by sympathetic nervous system activation of postganglionic muscarinic acetylcholine receptors on eccrine sweat glands. Clinically, acute cold diaphoresis serves as a cardinal autonomic warning sign of acute hemodynamic or metabolic compromise, including acute myocardial infarction, septic or cardiogenic shock, severe hypoglycemia, pheochromocytoma, and acute pulmonary embolism. 2. An agent, medication, or physical modality that induces or stimulates perspiration.

Diaphragm

Dome-shaped musculotendinous partition separating thoracic/abdominal cavities, primary inspiration muscle. Central tendon with muscular periphery from xiphoid, lower six costal cartilages, and lumbar vertebrae via crura and arcuate ligaments. Innervated by phrenic nerves (C3-C5). Contraction flattens the dome increasing thoracic volume.

Diaphragm (Muscle)

A dome-shaped skeletal muscle separating the chest from the abdomen; contraction enlarges the thoracic cavity and drives inhalation.

Diaphragmatic Eventration

Abnormal thinning and elevation of part or all of the diaphragm due to muscle weakness or defective development.

Diaphragmatic Hernia

Protrusion of abdominal contents through a defect or opening in the diaphragm into the thoracic cavity. It may be congenital or acquired after trauma and can cause respiratory compromise, bowel obstruction, or strangulation; diagnosis is based on imaging and management depends on symptoms, contents, and the risk of organ compromise.

Diaphragmatic Rupture

A tear in the diaphragm most commonly caused by blunt or penetrating thoracoabdominal trauma, with the left side affected in approximately 75 percent of cases due to the protective effect of the liver on the right. Herniation of abdominal viscera into the thorax may cause respiratory distress, bowel obstruction, or strangulation.

Diaphysis

The shaft of a long bone, comprising thick cortical (compact) bone surrounding the medullary cavity, which contains bone marrow in children and is largely yellow (fatty) marrow in adults. Enclosed by periosteum; the nutrient artery enters here. Fractures of the diaphysis heal by callus formation (enchondral and intramembranous).

Diarrhea

Diarrhea is passage of loose or watery stools more frequently than usual; duration, blood, fever, dehydration, exposures, and associated symptoms guide evaluation. Medicines, dietary factors, inflammation, malabsorption, or other conditions. Associated symptoms and the need for testing or treatment depend on severity, duration, and the person's clinical features.

Diarrhea IBS (IBS-D Irritable Bowel Syndrome With Diarrhea)

Alternate index label for IBS-D Irritable Bowel Syndrome with Diarrhea.

Diarrhea In Infants

Frequent loose or watery stools in a baby; dehydration, blood, fever, poor feeding, lethargy, or reduced urination require prompt assessment.

Diarrhea Travelers (Traveler'S Diarrhea)

Alternate index label for Traveler's Diarrhea.

Diarrhea, Constipation, Gas, And Bloating

These common gastrointestinal symptoms arise from disruptions in normal digestive function caused by diet, infections, medications, or underlying conditions like irritable bowel syndrome. Diarrhea involves increased stool frequency and water content, while constipation involves infrequent or difficult passage of stool.

Diarrhea, Traveler'S

Alternate index label; see *Traveler's diarrhea*.

Diarrhoea

Passing loose or watery stools more frequently than normal; acute diarrhea is often infectious, while persistent or chronic diarrhea may result from inflammatory, malabsorptive, functional, endocrine, or neoplastic disease.

Diarthrosis

A freely movable joint, usually a synovial joint, in which the bones are separated by a joint cavity.

Diastase

An older term for enzymes that break down starch into smaller sugars; it is now usually discussed as amylase activity.

Diastasis

Diastasis is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

Diastasis Recti

Separation and thinning of the linea alba between the two rectus abdominis muscles, commonly oc-

curing during or after pregnancy. It produces a midline abdominal bulge that becomes prominent with raised intra-abdominal pressure.

Diastematomyelia

Diastematomyelia is a congenital spinal-cord malformation in which the cord is split into two portions, often with vertebral or skin abnormalities.

Diastole

The phase of the cardiac cycle when the heart muscle relaxes, allowing the chambers to fill with blood.

Diastolic

Relating to diastole, the phase when the heart muscle relaxes and the chambers fill; diastolic blood pressure is the lower number in a blood-pressure reading.

Diastolic Blood Pressure

The pressure in the arteries while the heart relaxes between contractions.

Diastolic Dysfunction

Impaired relaxation, compliance, or filling of the left or right ventricle during diastole. It can raise filling pressures and cause exertional dyspnoea, pulmonary congestion, or heart failure with preserved ejection fraction; echocardiography assesses relaxation, chamber structure, and estimated filling pressure.

Diastolic Heart Failure

An older or less-preferred term generally referring to heart failure associated with impaired ventricular relaxation, increased stiffness, or elevated filling pressures despite a relatively preserved ejection fraction. The term is often used for heart failure with preserved ejection fraction, but ejection fraction alone does not establish the diagnosis.

Diastolic Murmur

A heart murmur heard while the heart relaxes between contractions.

Diastolic Murmurs

Heart sounds heard during diastole, often caused by abnormal blood flow through a valve or great vessel and requiring clinical evaluation.

Diathermy

The use of high-frequency electrical current to generate heat for surgical purposes, including cutting tissue, coagulating blood vessels to stop bleeding (hemostasis), and destroying abnormal tissue (electrocautery, electrocoagulation).

Diathesis

A predisposition or susceptibility to developing a particular disease, symptom, or physiological response, such as a bleeding diathesis.

Diatom Test

Forensic technique used to support the diagnosis of drowning; microscopic silica-shelled diatoms present in drowning water enter lungs, penetrate alveolar capillaries, and circulate to distant closed organs (femur bone marrow, brain) only if active circulation was present at time of submersion.

Diatomaceous Earth

Diatomaceous earth is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

Diatrizoate Meglumine

An iodinated radiographic contrast agent used in selected imaging studies. It can cause allergic-like reactions, kidney injury, or thyroid effects in susceptible people.

Diazepam

A benzodiazepine that enhances GABA-A receptor activity and is used for anxiety, muscle spasm, seizures, and alcohol withdrawal; sedation, respiratory depression, dependence, and withdrawal are important risks.

Diazepam Overdose

Overdose of diazepam, a benzodiazepine, that may cause sedation, impaired coordination, respiratory depression, or coma, especially with other depressants.

Diazinon

An organophosphate insecticide that inhibits acetylcholinesterase. Poisoning can cause sweating, salivation, vomiting, diarrhea, breathing difficulty, muscle weakness, or seizures.

Diazinon Poisoning

Organophosphate poisoning that can cause salivation, sweating, vomiting, diarrhea, bronchospasm, bradycardia, seizures, and respiratory failure.

Diaziquone

An investigational antineoplastic compound that damages DNA and was studied in experimental cancer treatment.

Diazonium Compounds

Chemical compounds containing a diazonium group, used in synthesis, dyes, and some laboratory reactions; certain members may be toxic or unstable.

Diazooxonorleucine

An experimental glutamine antagonist that interferes with nucleotide and amino-acid metabolism and has been studied as an antineoplastic compound.

Diazoxide

A potassium-channel opener used to lower blood pressure in selected settings and to suppress insulin release in some cases of hyperinsulinism; it can cause fluid retention and high blood glucose.

Dibekacin

An aminoglycoside antibiotic related to gentamicin, used in some regions for serious bacterial infections. Kidney and hearing toxicity are important risks.

Dibenzepin

A tricyclic antidepressant used in some countries for depressive disorders; sedation, anticholinergic effects, and cardiac toxicity may occur.

Dibucaine

A medicine called dibucaine. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Dicarboxylic Acid

An organic molecule containing two carboxyl groups; dicarboxylic acids participate in metabolism and can accumulate in selected inherited or acquired metabolic disorders.

Dichloralphenazone

A sedative component formerly used in combination headache medicines; excessive use can cause drowsiness and dependence.

Dichlorophen

Dichlorophen is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

Dichlorvos

Dichlorvos is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

Dichorionic Diamniotic Twin Placenta

A twin-placentation pattern in which each fetus has its own chorion and amniotic sac. It is usually associated with the lowest placental complication risk among twin pregnancies, although maternal and fetal monitoring remains necessary.

Dichorionic Twins

Twins that each have a separate chorion and amnion. All dizygotic twins are dichorionic, and some monozygotic twins are as well. Each fetus usually has a separate placental circulation, although the placentas may appear fused; complications include preterm birth and growth disturbance.

Dickeya Dadantii

A plant-pathogenic bacterium that causes soft rot and wilt in plants; it is not a usual human pathogen.

Diclofenac

A nonsteroidal anti-inflammatory drug used for pain and inflammation. It can cause gastrointestinal bleeding, kidney injury, cardiovascular events, or liver injury.

Diclofenac Sodium

The sodium salt of diclofenac, a nonsteroidal anti-inflammatory drug used for pain and inflammation.

Diclofenac Sodium Overdose

Overdose of diclofenac, a nonsteroidal anti-inflammatory drug, that may cause gastrointestinal bleeding, kidney injury, seizures, or metabolic abnormalities.

Dicloxacillin

A medicine called dicloxacillin. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

DICOM

Digital Imaging and Communications in Medicine. Standard for medical image exchange.

Dicoumarol

An oral anticoagulant and vitamin K antagonist used historically; it has largely been replaced by safer or more predictable anticoagulants.

Dicrotic

Relating to a second small wave or notch in an arterial pulse, often associated with closure of the aortic valve.

Dicrotophos

Dicrotophos is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

Dictation Machine

A device or software used to record spoken information for later transcription into medical, legal, or administrative documents.

Dictyostelium

A genus of social amoebae used in cell and developmental biology research; it is not a usual human pathogen.

Dicumarol

Another name for dicoumarol, an older vitamin K antagonist anticoagulant.

Dicyclomine

An anticholinergic medicine used to relieve intestinal smooth-muscle spasm in selected functional bowel disorders.

Didanosine

A nucleoside reverse-transcriptase inhibitor formerly used in combination treatment for HIV infection; it can cause pancreatitis, neuropathy, and mitochondrial toxicity.

Dieffenbachia Poisoning

Poisoning caused by calcium oxalate crystals in *Dieffenbachia*, producing burning and swelling of the mouth and throat after chewing.

Diencephalon

The part of the brain between the cerebrum and brainstem that includes the thalamus and hypothalamus.

Dienoestrol

A synthetic nonsteroidal estrogen formerly used in selected hormone-related conditions; current use is limited because of estrogen-related risks.

Dientamoeba

Dientamoeba is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Dientamoeba Fragilis

Dientamoeba fragilis is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

DIEP Flap

A deep inferior epigastric perforator flap used for breast or other reconstruction, consisting of skin and fat supplied by perforating vessels from the lower abdomen while preserving most of the rectus muscle.

Diesel Oil

Toxic effects caused by excessive exposure to diesel oil. Severity depends on the dose, route, timing, and clinical findings; suspected poisoning requires prompt assessment.

Diestrus

The phase of the reproductive cycle in many mammals between estrus periods, characterized by activity of the corpus luteum or its regression.

Diet Diabetes (Diabetic Diet)

Alternate index label for Diabetic Diet.

Diet Therapy

Use of an individualized eating plan to prevent, manage, or treat disease, such as diabetes, kidney disease, food allergy, malnutrition, or gastrointestinal disorders.

Diet Ulcerative Colitis (Ulcerative Colitis Diet)

Alternate index label for Ulcerative Colitis Diet.

Dietary Assessment

The systematic evaluation of a person's food and nutrient intake, using methods such as a food diary, 24-hour recall, or food-frequency questionnaire.

Dietary Calcium

Dietary calcium is a healthcare or clinical-care term; its appropriate use depends on the patient's con-

dition, goals, risks, available evidence, and professional assessment.

Dietary Carbohydrate

Carbohydrate consumed in foods and drinks, including sugars, starches, and fiber; digestible carbohydrate affects blood glucose and provides energy.

Dietary Fat

A macronutrient composed mainly of triglycerides and fatty acids that provides approximately 9 kcal per gram. Fat supports cell membranes, energy storage, absorption of vitamins A, D, E, and K, and synthesis of signaling molecules; the type of fat affects cardiometabolic risk.

Dietary Fats

Lipids obtained from food, including saturated, monounsaturated, polyunsaturated, and trans fats; they provide energy and support cell membranes and absorption of fat-soluble vitamins.

Dietary Fiber

Plant material that is not fully digested and supports bowel function and other aspects of health.

Dietary Fibre

A clinical care, prevention, behavioral, or public-health concept concerning dietary fibre; its use depends on the patient, setting, and clinical goal.

Dietary Iron

Iron obtained from food or supplements and required for hemoglobin, myoglobin, and many enzymes; deficiency can cause iron-deficiency anemia, while excess can be toxic.

Dietary Phospholipid

A food-derived amphipathic lipid containing phosphate, used in cell membranes and lipoproteins and metabolized according to diet, absorption, and liver function.

Dietary Phosphorus

Phosphorus obtained from food, needed for bones,

cell membranes, and energy metabolism; people with kidney disease may need to limit absorbable phosphorus.

Dietary Protein

Protein consumed in food and digested into amino acids and peptides needed for tissue maintenance, enzymes, hormones, immunity, and energy when required.

Dietary Reference Intakes

Reference values for nutrient intake: RDA (Recommended Dietary Allowance), AI (Adequate Intake), UL (Tolerable Upper Intake Level), EAR (Estimated Average Requirement).

Dietary Sterol

A sterol present in foods, including cholesterol and plant sterols; intestinal absorption and metabolism influence blood lipid concentrations.

Dietary Supplement

A product taken by mouth that provides dietary ingredients such as vitamins, minerals, herbs, amino acids, or other substances and is intended to supplement the diet.

Dietary Supplementation

Dietary supplementation is deliberate addition of nutrients or other substances to food intake to address deficiency, support a goal, or alter health.

Dietary Supplements

Products such as vitamins, minerals, herbs, or other substances taken to supplement the diet.

Alternate Names:

Nutritional supplements

Dietetics

Dietetics is the applied science and professional practice of using nutrition and diet to promote health and manage disease.

Diethylcarbamazine

An antiparasitic medicine used mainly for lymphatic

filariasis and some other filarial infections. Reactions may result from dying parasites and can include fever, rash, swelling, or inflammation.

Diethylhexylphthalate

Diethylhexyl phthalate is a plasticizer used in some products; exposure can affect endocrine and reproductive systems and is regulated in many settings.

Diethylnitrosamine

Diethylnitrosamine is a chemical carcinogen used in research models and capable of causing liver and other organ injury.

Diethylpropion

A sympathomimetic appetite suppressant used short-term in selected obesity treatment. It may cause insomnia, increased heart rate or blood pressure, and dependence.

Diethylstilbestrol

Diethylstilbestrol is a synthetic estrogen formerly given during pregnancy; prenatal exposure is associated with reproductive-tract abnormalities and certain cancers.

Diethylstilbestrol Dipropionate

An ester formulation of the synthetic estrogen diethylstilbestrol, now largely obsolete because exposure can cause important reproductive and cancer risks.

Dietitian

A dietitian is a nutrition professional who assesses dietary needs and provides individualized nutrition counseling within the scope of local licensing.

Dieulafoy Lesion

Large caliber persistent submucosal artery in the stomach wall that can cause massive gastrointestinal bleeding. The artery is abnormally large and superficial, lacking the normal tapering into smaller arterioles. Presents with hematemesis or melena without a visible ulcer.

Diff Dx

Abbreviation for differential diagnosis, the reasoned comparison of possible causes of a patient's signs, symptoms, or test findings.

Difference Threshold

The smallest difference between two stimuli that a person can reliably detect, also called the just-noticeable difference.

Differences Of Sex Development

Congenital variations in chromosomal, gonadal, hormonal, or internal or external genital development that do not fit typical male or female patterns.

Differential Blood Count

A blood test measuring the proportions and often absolute numbers of different white-cell types, including neutrophils, lymphocytes, monocytes, eosinophils, and basophils.

Differential Diagnosis

The process of distinguishing a particular disease or condition from others that present with similar symptoms. Systematic approach: consider life-threatening conditions first, use pretest probability, apply diagnostic criteria, and order targeted tests.

Differentiated Cancer

A cancer whose cells retain recognizable structural or functional features of the tissue from which they arose; the degree of differentiation helps describe tumor grade.

Differentiation

The process by which cells develop specialized structures and functions. In pathology, the term also describes how closely tumor cells resemble the normal tissue from which they arose.

Differentiation Antigens

Cell-surface molecules whose expression identifies a cell's developmental or tissue lineage; they are used in immunophenotyping and cancer diagnosis.

Difficile Clostridium (Clostridium Difficile Colitis)

Alternate index label for Clostridium Difficile Colitis.

Difficult Airway

A clinical situation in which a trained clinician has difficulty with oxygenation, ventilation, supraglottic airway placement, laryngoscopy, or tracheal intubation. It may result from anatomical features, illness, trauma, or limited equipment and requires an appropriate airway plan.

Difficult Intubation

Difficulty placing an endotracheal tube despite appropriate technique and equipment. Risk may be increased by limited mouth opening or neck movement, abnormal airway anatomy, facial trauma, obesity, or a previous difficult airway. Preparation includes assessment, preoxygenation, and backup airway plans.

Difficult Urination

Trouble starting or maintaining urine flow, painful urination, weak stream, or incomplete emptying; causes include infection, obstruction, neurologic disease, and pelvic or prostate disorders.

Difficulty Speaking

Alternate index label; see *Voice disorders*.

Difficulty Swallowing

Alternate index label; see *Dysphagia*.

Difficulty Swallowing (Swallowing)

Alternate index label for Swallowing.

Difficulty Walking

Impaired gait or mobility that may result from pain, weakness, balance problems, sensory loss, joint disease, neurologic illness, or cardiopulmonary limitation.

Diffuse

Diffuse means spread broadly or throughout an area rather than confined to a small, well-defined focus.

Diffuse Astrocytoma

An infiltrating astrocytic glioma that was formerly classified as a diffuse astrocytoma. Modern diagnosis depends on molecular features such as IDH status and other genetic findings, which guide grading, prognosis, and treatment.

Diffuse Axonal Injury

Widespread injury to nerve fibers caused by acceleration or deceleration of the brain. It may produce prolonged impaired consciousness, and MRI can show characteristic lesions.

Diffuse Esophageal Spasm

A motility disorder characterised by premature, uncoordinated esophageal contractions, causing intermittent chest pain and dysphagia for liquids and solids. Endoscopy excludes structural disease; high-resolution manometry confirms premature contractions.

Diffuse Idiopathic Skeletal Hyperostosis

Diffuse idiopathic skeletal hyperostosis causes flowing calcification and ossification along spinal ligaments and may affect peripheral entheses. It can produce stiffness, pain, swallowing difficulty, or fractures after minor trauma; management is symptom-focused and addresses associated metabolic risks.

Alternate Names:

DISH (Diffuse Idiopathic Skeletal Hyperostosis)

Diffuse Idiopathic Skeletal Hyperostosis

Alternate index label for Diffuse Idiopathic Skeletal Hyperostosis.

Diffuse Large B-Cell Lymphoma

A fast-growing cancer of B lymphocytes and the most common type of non-Hodgkin lymphoma.

Diffuse Midline Glioma

An aggressive brain or spinal-cord tumor arising in midline structures, often in children.

Diffuse Midline Glioma

An aggressive central nervous system tumor arising

in midline brain structures, most often affecting children.

Alternate Names:

DMG

Diffuse Parenchymal Lung Diseases

Alternate index label; see *Interstitial Lung Disease*.

Diffuse Scleroderma

A form of systemic sclerosis with skin thickening extending proximally to the trunk or limbs and a higher risk of internal-organ involvement than limited cutaneous disease. Possible complications include interstitial lung disease, pulmonary hypertension, kidney crisis, and gastrointestinal dysfunction.

Diffusing Capacity

Ability of lungs to transfer gas from alveoli to blood. Reduced in emphysema, ILD, and anemia. Increased in pulmonary hemorrhage and left-to-right shunts.

Diffusing Capacity Of The Lung

The capacity of the respiratory membrane to transfer gas from alveolar air into pulmonary capillary blood. It depends on surface area, membrane thickness, gas properties, hemoglobin, and pulmonary capillary blood volume and is commonly measured with carbon monoxide as DLCO.

Diffusion

The net movement of molecules from an area of higher concentration to lower concentration due to random thermal motion (Brownian motion).

Diffusion Anisotropy

Direction-dependent movement of water molecules in tissue, especially along white-matter fibers; it is measured with diffusion MRI.

Diffusion Capacity

A measure of how efficiently oxygen and other gases pass from the air sacs into the pulmonary capillary blood; commonly reported as DLCO and reduced

in many interstitial and vascular lung disorders.

Diffusion Restriction

Reduced movement of water molecules detected by diffusion-sensitive MRI sequences, usually appearing bright on DWI with corresponding low ADC. It may indicate acute ischemia but can also occur with abscess, hypercellular tumor, seizure, and other processes.

Diffusion-Weighted Imaging

An MRI technique that detects differences in the movement of water molecules within tissue. Restricted diffusion may occur in acute stroke, abscess, hypercellular tumors, and other conditions.

Diflunisal

A salicylate nonsteroidal anti-inflammatory drug used for pain and arthritis; it can cause gastrointestinal, kidney, and cardiovascular adverse effects.

Digastric Muscle

Digastric muscle refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

DiGeorge Syndrome

A disorder usually caused by a deletion of part of chromosome 22 that can affect development of the thymus, parathyroid glands, heart, palate, and immune system. It is also called 22q11.2 deletion syndrome.

Alternate Names:

22q11.

DiGeorge Syndrome (22Q11.2 Deletion Syndrome)

A genetic disorder caused by deletion of part of chromosome 22, potentially affecting the heart, immune system, calcium regulation, palate, and development.

Alternate Names:

Velocardiofacial Syndrome

Digestion

The process by which the body breaks down ingested food into smaller molecules that can be absorbed and utilized. Digestion begins in the mouth (mechanical—mastication; enzymatic—salivary amylase for starch, lingual lipase).

Digestive Diseases

Disorders affecting the gastrointestinal tract, liver, gallbladder, or pancreas, including reflux, ulcers, inflammatory bowel disease, infections, obstruction, and cancers.

Digestive Disorder

A disease affecting the gastrointestinal tract or digestion, causing symptoms such as pain, nausea, reflux, diarrhea, constipation, bleeding, or malabsorption.

Digestive Health

The efficient functioning of the gastrointestinal tract in breaking down food, absorbing nutrients, and eliminating waste. Digestive health depends on factors such as diet, hydration, gut microbiome balance, and the integrity of the digestive mucosa.

Alternate Names:

Gut Health

Digestive System

The organs that digest food, absorb nutrients and water, and eliminate solid waste, including the gastrointestinal tract and accessory organs.

Digestive Tract

The continuous hollow passage from the mouth through the throat, esophagus, stomach, intestines, and anus.

Alternate Names:

Gastrointestinal tract; alimentary canal

Digit

An anatomical terminal extremity of the hand or foot (a finger or toe), numbered 1 through 5 from lateral to medial in the hand (thumb is digit 1) and medial to lateral in the foot (great toe or hallux is digit 1). Skeletal architecture consists of proximal,

middle, and distal phalanges articulated by interphalangeal joints, with the thumb and hallux possessing only two phalanges. Controlled by extrinsic flexor and extensor tendons and intrinsic hand or foot musculature. High-yield clinical pathology includes congenital anomalies (polydactyly, syndactyly), neurovascular lacerations requiring digital nerve blocks, tendon avulsions (mallet finger, jersey finger), closed compartment pulp space infections (felon), and surgical emergencies such as pyogenic flexor tenosynovitis diagnosed by Kanavel four cardinal signs (flexed posture, uniform symmetrical enlargement, tenderness over flexor sheath, and severe pain on passive extension).

Digital Anorectal Exam - DARE

A digital rectal examination in which a gloved, lubricated finger is inserted into the anus to assess the rectum, anal canal, sphincter tone, tenderness, masses, blood, and, when relevant, the prostate.

Digital Clubbing

Bulbous enlargement of distal phalanges with loss of nail-bed angle (> 180 degrees). Associated with lung cancer, ILD, bronchiectasis, and cyanotic heart disease.

Digital Ischemia

Reduced arterial blood flow to the fingers causing pain, pallor, coolness, and potential tissue necrosis. Causes include Raynaud phenomenon, thromboangiitis obliterans, cholesterol emboli, and arterial thrombosis. Severe cases may require amputation of affected digits.

Digital Mammography

Mammography that records x-ray images electronically, allowing image processing and evaluation for masses, asymmetry, architectural distortion, or calcifications.

Digital Mucous Cyst

A benign ganglion cyst arising from the distal interphalangeal joint, presenting as a translucent, dome-shaped nodule on the dorsal aspect of the finger near the nail fold. It is associated with osteoarthritis of

the DIP joint.

Digital Papillary Adenocarcinoma

A rare malignant sweat-gland tumor, usually arising on a finger, hand, or foot as a slow-growing nodule; it can recur locally and metastasize.

Digital Rectal Exam

A physical examination in which a gloved, lubricated finger assesses the anal canal, rectum, and, when relevant, the prostate or nearby pelvic structures. It may detect tenderness, masses, bleeding, or enlargement but does not replace indicated screening or imaging.

Digital Rectal Exam

An examination in which a gloved, lubricated finger is inserted into the rectum to assess the rectal wall, stool, prostate, tenderness, masses, or bleeding.

Digital Rectal Examination

Examination of the rectum and nearby structures using a lubricated, gloved finger.

Digital Subtraction Angiography

An imaging technique that subtracts precontrast images from contrast-enhanced images to show blood vessels more clearly. It can also guide selected vascular procedures.

Digitalis (Digoxin) Toxicity

Nausea, vomiting, visual changes (yellow halos), arrhythmias. Risk: narrow therapeutic index, renal impairment, hypokalemia. Treatment: digoxin immune Fab, cardiac monitoring, correct electrolytes.

Alternate Names:

Digoxin

Digitalis Preparation

A preparation containing cardiac glycosides such as digoxin or digitoxin that can increase cardiac contractility and slow atrioventricular conduction; toxicity can cause arrhythmias and visual or gastrointestinal symptoms.

Digitalis Toxicity

Toxicity from digitalis or related cardiac glycosides, causing gastrointestinal symptoms, visual changes, confusion, bradyarrhythmias, tachyarrhythmias, or hyperkalemia. digitoxin) characterized by a narrow therapeutic index (0.5-2.0 ng/mL for digoxin).

Digitate Warts (Verruca Digitata)

Filiform or finger-like warts, usually arising on the face or neck and caused by HPV infection.

Alternate Names:

Verruca Digitata

Digitonin

A steroidal saponin used mainly in laboratory work to permeabilize cell membranes by binding membrane cholesterol.

Digitoxin

A cardiac glycoside that inhibits sodium-potassium ATPase and increases cardiac contractility; its narrow therapeutic index makes toxicity and drug interactions clinically important.

Digoxin

A cardiac glycoside used in selected heart-failure and atrial-fibrillation patients; it slows atrioventricular conduction and has a narrow therapeutic range with potential for serious toxicity.

Digoxin Immune Fab

Antibody fragments that bind free digoxin and related cardiac glycosides, reducing their tissue activity. Indications include life-threatening dysrhythmia, severe hyperkalemia from acute toxicity, or a potentially massive ingestion.

Digoxin Test

A blood test measuring digoxin concentration to support dosing and evaluation of possible toxicity. Timing in relation to the dose, kidney function, electrolytes, interacting medicines, and symptoms are essential for interpretation; the level alone does not establish toxicity.

Dihydrocodeine

An opioid analgesic used for selected pain or cough indications; sedation, constipation, respiratory depression, dependence, and overdose are important risks.

Dihydroergotamine

An ergot medicine used to treat acute migraine attacks. It constricts certain blood vessels and is contraindicated in several vascular and pregnancy-related conditions.

Dihydrotestosterone

A potent androgen formed from testosterone that contributes to prostate growth and male sexual development.

Dihydroxyacetone

A three-carbon sugar used in metabolism; its derivative dihydroxyacetone phosphate is an intermediate in glycolysis and gluconeogenesis.

Dilantin Overdose

Overdose of phenytoin, also called Dilantin, that may cause nystagmus, ataxia, slurred speech, altered consciousness, hypotension, or cardiac toxicity.

Dilatation

Dilatation is widening or expansion of a hollow organ, vessel, duct, or other structure.

Dilatation And Curettage (D & C)

Dilatation and Curettage (D & C) is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

Dilate

To become wider or cause a passage, vessel, or opening to become wider.

Alternate Names:

Expand; enlarge

Dilated Cardiomyopathy

A disease of the heart muscle in which one or more

chambers enlarge and contract poorly, usually causing reduced ejection fraction. Causes include inherited disease, infection, toxins, medicines, pregnancy, and ischemic or inflammatory injury.

Alternate Names:

Cardiomyopathy, Dilated

Dilated Cardiomyopathy Prognosis

Prognosis varies widely and depends on ventricular function, symptoms, cause, arrhythmias, comorbidities, and response to treatment. Guideline-directed therapy can improve cardiac function in some people, while severe disease may lead to heart failure, arrhythmia, or the need for advanced therapies.

Dilation

Dilation is widening or expansion of a hollow organ, vessel, duct, pupil, or other structure, whether normal, induced, or disease-related.

Dilation And Curettage

Surgical dilation of the cervix and curettage (scraping) of the uterine lining. Indications: incomplete or missed abortion (miscarriage management), therapeutic abortion, endometrial sampling (abnormal uterine bleeding, postmenopausal bleeding, endometrial hyperplasia/cancer), and removal of retained products of conception (RPOC).

Dilation And Evacuation

A procedure in which the cervix is dilated and pregnancy tissue is removed from the uterus using suction and surgical instruments.

Dilator

An instrument or device used to gradually widen a body opening or passage.

Diltiazem

A nondihydropyridine calcium-channel blocker used for hypertension, angina, and rate control in some supraventricular arrhythmias; it can cause bradycardia, hypotension, or conduction block.

Dilute Russell Viper Venom Time

A phospholipid-dependent clotting assay used mainly to detect lupus anticoagulant. It is commonly performed as part of laboratory evaluation for antiphospholipid syndrome, with confirmatory testing required because anticoagulants and other factor abnormalities can affect the result.

Dilution

The process of lowering the concentration of a substance by adding a solvent or another fluid. In laboratory work, accurate dilution is essential for preparing standards, reagents, and specimens.

Dimenhydrinate

An antihistamine used to prevent or treat motion sickness and nausea; drowsiness and anticholinergic effects are common concerns.

Dimenhydrinate Overdose

Overdose of dimenhydrinate, an antihistamine that may cause sedation, agitation, anticholinergic effects, seizures, arrhythmias, or respiratory depression.

Dimercaprol

Chelating agent for arsenic, mercury, gold. Given IM. Side effects: hypertension, tachycardia, nausea, pain at injection site.

Dimesna

A thiol-containing drug studied as a protective or detoxifying agent, including in some chemotherapy-related applications.

Dimethoate

An organophosphate insecticide that inhibits acetylcholinesterase and can cause cholinergic poisoning after significant exposure.

Dimethoxon

An organophosphate pesticide metabolite that inhibits acetylcholinesterase and may cause cholinergic poisoning.

Dimethyl Fumarate

An oral medicine used for multiple sclerosis and some skin disease. It can cause flushing, gastrointestinal symptoms, low lymphocyte counts, and rare serious infections.

Dimethyl Sulfoxide

Dimethyl sulfoxide is a defined chemical or biologic substance involved in dimethyl sulfoxide and studied in physiology, pharmacology, laboratory medicine, or treatment.

Dimethyl Sulphoxide

An organic solvent used in selected medical or investigational applications; topical or systemic exposure can cause irritation, odor, and other adverse effects.

Dimethylbenzanthracene

A laboratory chemical used to induce tumors in experimental animals and study carcinogenesis.

Dimethylhydrazines

A group of highly toxic hydrazine compounds used as rocket propellants; exposure can damage the nervous system, liver, and other organs.

Dimethylnitrosamine

A chemical carcinogen that can cause severe liver injury and tumors in experimental models.

Dimetilan

An organophosphate insecticide that inhibits acetylcholinesterase and can cause cholinergic poisoning.

Diminished Ovarian Reserve

A reduction in the quantity and quality of a woman's remaining oocyte pool compared with age-matched peers, resulting in reduced fecundity and suboptimal response to controlled ovarian hyperstimulation during assisted reproductive technology. It is clinically evaluated through serum anti-Müllerian hormone levels, day-3 follicle-stimulating hormone and estradiol, and transvaginal ultrasound assessment of the antral follicle count.

Alternate Names:

Decreased Ovarian Reserve; DOR

Dimocillin

A penicillin-type antibacterial drug used historically or in selected settings against susceptible bacterial infections.

Dimorphic

Existing in two distinct forms, such as a microorganism that has different forms depending on its environment or growth stage.

Dinaciclib

An investigational cyclin-dependent kinase inhibitor studied as an anticancer drug; it can suppress bone marrow and cause other treatment-related toxicities.

Dinitrochlorobenzene

A chemical sensitizer used in immunology research and historically in selected dermatologic treatments; it can cause severe skin irritation and allergic reactions.

Dinitrofluorobenzene

A reactive chemical used to label amino groups in biochemical research; it is irritating and toxic with significant exposure.

Dinophyceae

The class containing dinoflagellates, aquatic microorganisms that can produce toxins or harmful algal blooms affecting human health.

Dinoprost

A prostaglandin F2-alpha medicine used in veterinary medicine and selected reproductive-health applications to stimulate uterine contraction.

Dinoprostone

A prostaglandin E2 medicine used to soften the cervix and induce labor or manage selected pregnancy-related conditions.

Dinoprostone (Cervidil, Prepidil)

A prostaglandin E2 medicine used to soften the

cervix and help initiate labor. It is available in several formulations, and administration requires obstetric monitoring because it can cause excessive uterine activity or fetal effects.

Alternate Names:

Cervidil, Prepidil

Dinucleoside Phosphates

Molecules containing two nucleosides joined by phosphate groups; they occur in nucleotide metabolism and can participate in cellular signaling or energy transfer.

Dinutuximab

A medicine called dinutuximab. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Diocetyl Sodium Sulphosuccinate

A surfactant and stool-softening medicine, also called docusate sodium, used to help soften stool; evidence for constipation benefit is limited.

Diodone

An older iodinated contrast agent formerly used in radiographic imaging.

Dioecious

Having separate male and female individuals in a species, a term used mainly in botany and biology.

Dionin

An older name for ethylmorphine, an opioid formerly used as a cough suppressant or analgesic; it can cause sedation and respiratory depression.

Diopter

A unit of optical power equal to the reciprocal of the focal length in meters.

Dioscorides

A first-century Greek physician and pharmacologist whose work *De materia medica* described medicinal plants and substances and influenced pharmacology for centuries.

Dioxin

Dioxin is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

Dipeptide

Dipeptide is a defined chemical or biologic substance involved in dipeptide and studied in physiology, pharmacology, laboratory medicine, or treatment.

Dipeptidyl Peptidase-4 Inhibitors

Oral glucose-lowering medications including sitagliptin, saxagliptin, linagliptin, and alogliptin that inhibit the enzyme degrading incretin hormones GLP-1 and GIP. Resulting increase in active incretin levels enhances glucose-dependent insulin secretion and suppresses glucagon. Neutral effect on weight and low hypoglycemia risk.

Dipetalonema

A genus of filarial nematodes; some species infect animals and rarely humans, with significance depending on species and exposure.

Dipetalonema Infection

Infection with a filarial nematode of the genus *Dipetalonema*, usually transmitted by arthropods and potentially causing skin or subcutaneous disease.

Diphallia

A rare congenital condition in which a person has duplication of the penis, sometimes accompanied by abnormalities of the urinary or digestive tract.

Diphenhydramine Overdose

Overdose of diphenhydramine, an antihistamine that may cause sedation, agitation, anticholinergic effects, seizures, arrhythmias, or respiratory depression.

Diphenoxylate

An opioid-related antidiarrheal medicine, often combined with atropine, that slows intestinal movement; excessive use can cause sedation or respiratory de-

pression.

Diphenylhydramine

An antihistamine with sedating and anticholinergic effects used for allergy symptoms or sleep in some products; it can impair alertness and cause toxicity in overdose.

Diphosphate

The anion or functional group containing two linked phosphate groups; diphosphate is released in reactions such as ATP use and nucleotide synthesis.

Diphosphonate

A chemical group or compound related to phosphonates; some diphosphonates bind bone mineral and are used or studied in bone and calcium disorders.

Diphtheria

Diphtheria is a toxin-producing *Corynebacterium* infection that can form a pharyngeal pseudomembrane and cause airway obstruction, myocarditis, and neuropathy. gram-positive aerobic bacillus that produces a potent exotoxin that inhibits protein synthesis via ADP-ribosylation of elongation factor 2, causing local tissue necrosis and systemic toxicity.

Diphtheria Toxin

Diphtheria toxin is a diagnostic or laboratory investigation; interpretation depends on the specimen, method, reference interval, timing, and clinical question.

Diphyllobothriasis

Intestinal infection caused by fish tapeworms, especially *Diphyllobothrium* or related *Dibothriocephalus* species; it may cause abdominal symptoms or vitamin B12 deficiency.

Diphyllobothrium Latum

The fish tapeworm, a large cestode infecting humans through consumption of raw or undercooked freshwater fish. It can grow up to 10 meters in length and absorbs vitamin B12 in the intestine, potentially causing megaloblastic anemia. Diagnosis

is by identification of eggs or proglottids in stool. Treatment is with praziquantel.

Diplacusis

The perception of a single sound as having two different pitches or qualities, usually reflecting asymmetric or abnormal auditory function.

Diplegia

Paralysis or marked weakness affecting corresponding parts on both sides of the body, classically the legs more than the arms in spastic diplegia.

Diplococcus

A bacterium that characteristically appears as pairs of spherical cells. The term describes shape rather than a single species; some diplococci cause human infection.

Diploid Cell

A cell containing two complete sets of chromosomes, one inherited from each parent; most human somatic cells are diploid.

Diploidy

Having two complete sets of chromosomes, one inherited from each parent; most human body cells are diploid.

Diplopia

Double vision, in which one object is perceived as two. It may result from ocular misalignment, nerve disease, muscle disease, or a brain disorder.

Diplopia (Double Vision)

The perception of two images of a single object, classified by onset, duration, and whether it resolves with covering one eye. Monocular diplopia (persists with one eye covered): caused by ocular surface abnormalities (dry eye, irregular astigmatism, cataract, corneal scar, lens dislocation)—usually benign.

Alternate Names:

Double Vision

Dipole

A pair of equal and opposite electrical or magnetic poles or charges separated by a distance; the term is used in physiology, imaging, and physics.

Dipper

A person whose blood pressure falls normally during sleep, usually by about 10

Diprosopus

A rare congenital craniofacial duplication in which parts or all of the face are duplicated, usually associated with severe developmental abnormalities.

Dipsomania

An outdated term for episodic compulsive alcohol drinking. Modern assessment uses alcohol use disorder and describes the person's pattern and consequences.

Dipsosis

Excessive thirst, which may result from dehydration, increased blood osmolality, diabetes, medication effects, or disorders of thirst regulation.

Dipstick Device

A narrow strip or small device carrying reagent pads that change color when dipped into a specimen, commonly urine, to screen for substances or abnormalities.

Diptera

The insect order containing flies and mosquitoes; some members transmit infections or cause myiasis.

Diphtheroid Bacillus

A term for coryneform, often Gram-positive rod-shaped bacteria resembling *Corynebacterium*. Many are normal skin flora, but some can cause opportunistic infection.

Dipylidium Caninum

A dog and cat tapeworm that can occasionally infect people, especially children, after swallowing an infected flea.

Dipyridamole

An antiplatelet and vasodilator medicine used in selected stroke-prevention regimens and cardiac testing; headache, dizziness, and bleeding may occur.

Direct Action

An effect produced by a substance or intervention through its immediate target rather than through an intermediate mediator or indirect pathway.

Direct Antiglobulin Test

An immunohematologic test that detects immunoglobulin and/or complement bound to the surface of a patient's erythrocytes. A positive result supports in-vivo red-cell coating, as in autoimmune hemolytic anemia, hemolytic transfusion reactions, and hemolytic disease of the fetus and newborn.

Direct Coombs Test

Direct antiglobulin test: detects antibodies or complement (C3) bound to the surface of RBCs in vivo. Positive in: autoimmune hemolytic anemia (warm: IgG, cold: C3), drug-induced hemolytic anemia, hemolytic transfusion reaction, and hemolytic disease of the newborn (HDN). Grading: 1+ to 4+.

Direct Hernia

An inguinal hernia protruding through a weakness in the posterior wall of the inguinal canal, medial to the inferior epigastric vessels.

Direct Oral Anticoagulants

DOACs directly inhibit specific coagulation factors. Direct thrombin inhibitors: dabigatran. Factor Xa inhibitors: rivaroxaban, apixaban, edoxaban, betrixaban. They have predictable pharmacokinetics, fixed dosing, and routine monitoring is not required. They have fewer drug interactions than warfarin.

Direct Transmission

Spread of an infectious organism through immediate contact or short-range respiratory droplets from an infected source.

Direct Veneer

Composite restoration placed chairside for aesthetic improvement. Conservative alternative to laboratory veneer.

Alternate Names:

Indirect Vs. Direct Hernia (Direct Vs Indirect Hernia)

Directly Observed Therapy

Supervision of medication ingestion to ensure adherence. Standard of care for TB treatment. Ensures completion of the full treatment course and reduces development of drug resistance.

Dirofilaria Repens

A filarial nematode transmitted by mosquitoes that causes subcutaneous or ocular dirofilariasis in humans, an accidental dead-end host. It presents as a solitary, migratory subcutaneous nodule, often on the trunk or extremities, or as a conjunctival or periorbital mass.

Dirt - Swallowing

A clinical term concerning dirt - swallowing. Its definition and clinical management depend on the context.

Dirt-Eating

Persistent eating of soil or other nonfood substances, a form of pica that may be associated with iron deficiency, pregnancy, nutritional problems, or mental-health conditions.

Dirty Necrosis

Tumor necrosis containing abundant nuclear debris and neutrophils, classically seen in some high-grade carcinomas such as colorectal adenocarcinoma.

Disability

A limitation in body function or structure, activity, or participation that results from a health condition and interaction with the person's environment.

Disability Evaluation

Assessment of functional limitations for legal, in-

surance, or benefits purposes. Objective measures, standardized tests.

Disability-Adjusted Life Year

A population-health measure combining years of life lost because of premature mortality with years lived with disability. One DALY represents one lost year of healthy life under the chosen methods and disability weights.

Disaccharidase

An intestinal enzyme that hydrolyzes a disaccharide into monosaccharides, such as lactase breaking down lactose.

Disaccharide

A carbohydrate made of two linked simple sugars, such as lactose, sucrose, or maltose, that must be digested before absorption.

Disarticulation

Amputation performed through a joint rather than by cutting through the shaft of a bone.

Disaster Preparedness

Planning and organizing resources, training, and procedures to reduce harm and support effective response and recovery during disasters.

Disc

A thin, round structure; in the spine, an intervertebral disc is a fibrocartilaginous cushion between adjacent vertebral bodies.

Discectomy

Surgical removal of a herniated intervertebral disc fragment compressing a nerve root. Microscopic discectomy (most common): small incision, microscope, minimal muscle dissection.

facility care to the next setting. It includes medication review, follow-up, education, equipment, self-management support, and communication of pending results.

Discitis

Inflammation or infection of an intervertebral disc, often involving adjacent vertebral endplates. It may cause severe localized back or neck pain, stiffness, fever, and reduced mobility; causes include haematogenous infection, postoperative infection, and inflammatory disease, with MRI being the preferred imaging study.

Discography

An imaging procedure in which contrast material is injected into an intervertebral disc to assess disc structure and reproduce pain. Its diagnostic value is limited and its use is selective.

Discoid

Coin-shaped or round, describing the morphology of a lesion or rash; the term may also refer to discoid lupus erythematosus in the appropriate clinical context.

Discoid Lupus

A chronic form of cutaneous lupus causing round, inflamed, scaly plaques that may scar, alter pigmentation, and cause permanent hair loss on the scalp.

Discoid Lupus Erythematosus

A chronic form of cutaneous lupus that causes persistent, inflamed skin plaques that may scar.

Discoloration

Discoloration is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Discolysis

Discolysis is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Discomfort

Discomfort is a medical or biological term describing

a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Discordance

Lack of agreement or correspondence between findings, measurements, genetic results, or the conditions of two related people.

Discordant

Not agreeing, matching, or corresponding; in medicine it may describe conflicting test results or differing conditions in related individuals.

Discordant Couple

A couple in which partners differ in a relevant medical status, such as one partner having HIV infection and the other not having it.

Discriminant Analysis

A statistical method that classifies observations into groups using measured characteristics; it is used in medical research and diagnostic modeling.

Discrimination Learning

Learning to respond differently to two or more stimuli based on their consequences or relevant features.

Disease

Abnormal condition affecting body. Can be infectious, degenerative, neoplastic, etc.

Disease Nomenclature

The system of names and classification terms used to identify, describe, and organize diseases and related clinical conditions.

Disease Progression

The change and usually worsening of a disease over time, assessed through symptoms, examination, biomarkers, imaging, function, complications, or treatment response.

Disease Reporting

Mandatory notification of specified diseases or

health events to public-health authorities.

Disease Reservoir

A person, animal, environmental site, or material in which an infectious agent normally lives and from which it can spread to a susceptible host.

Disease Response

The biologic or clinical reaction to a disease or its treatment, measured by symptoms, signs, laboratory results, imaging, function, or survival.

Disease Surveillance

Ongoing, systematic collection, analysis, interpretation, and reporting of health data to detect, monitor, and respond to disease patterns.

Disease Susceptibility

Increased likelihood of developing a disease because of genetic traits, immune status, age, exposures, behavior, comorbidities, or other risk factors.

Disease Vector

A living carrier, commonly a mosquito, tick, flea, or other arthropod, that transmits an infectious agent between hosts without necessarily becoming ill.

Disease, Osgood-Schlatter

Overuse-related traction injury of the tibial tubercle growth area in growing children or adolescents, causing activity-related pain and swelling below the knee.

Disease, Subclinical

Disease that produces no obvious symptoms or signs but can be detected by laboratory tests, imaging, or other evaluation.

Disease-Free Survival

The length of time after treatment during which a patient remains alive without detectable evidence of the disease. The precise definition depends on the cancer and the study protocol.

Disfigurement

Disfigurement is a visible change that substantially alters appearance, caused by injury, disease, surgery, congenital difference, or scarring.

Disinfectant

A chemical or physical agent used on inanimate surfaces to destroy or inactivate microorganisms; it is not necessarily safe for use on living tissue.

Disinfection

The elimination of most pathogenic microorganisms on inanimate surfaces. Disinfection does not eliminate all forms of microbial life, particularly spores. High-level disinfection eliminates all microorganisms except spores. Intermediate-level disinfection eliminates mycobacteria, most viruses, and bacteria.

Disinfestation

Disinfestation is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Disk

A flat, round structure; in the spine, an intervertebral disk separates adjacent vertebrae and cushions movement.

Alternate Names:

Disc

Disk Diffusion Susceptibility Test

A standardized method in which antimicrobial-impregnated disks are placed on an inoculated agar surface and zones of growth inhibition are measured. Zone diameters are interpreted using validated organism- and drug-specific breakpoints.

Disk Replacement - Lumbar Spine

Surgery replacing a damaged lumbar intervertebral disc with an artificial disc in selected patients; benefits, risks, and suitability require specialist assessment.

Diskectomy

A surgical procedure that removes part or all of a spinal disc to relieve pressure on a spinal nerve or the spinal cord, causing radiculopathy or myelopathy. Indicated in severe disk herniation causing unremitting pain, progressive motor weakness, or cauda equina syndrome.

Diskitis

Inflammation or infection of an intervertebral disc and adjacent vertebral endplates, often causing severe localized back pain and sometimes fever. usually caused by bacterial infection. It causes localized back pain, stiffness, fever, and reluctance to move, particularly in children.

Dislocated Ankle (Ankle Dislocation)

Alternate index label for Ankle Dislocation.

Dislocated Elbow

An elbow dislocation occurs when the joint surfaces lose alignment, usually after a fall or collision. It causes severe pain, deformity, and limited movement and requires urgent reduction with assessment of nerves, blood vessels, fractures, and later stiffness.

Dislocated Hip

A hip dislocation is displacement of the femoral head from the acetabulum, usually after major trauma or around a prosthetic joint. It is an emergency because blood supply to the femoral head and nearby nerves can be compromised.

Dislocated Knee

A knee dislocation is loss of alignment between the femur and tibia, often after high-energy trauma. Artery and nerve injury may be occult, so urgent reduction and vascular assessment are required even when the joint spontaneously relocates.

Dislocated Shoulder

Displacement of the upper arm bone from the shoulder joint.

Dislocation

Complete loss of normal contact between the surfaces of a joint, usually caused by trauma or structural disease and potentially accompanied by fracture, nerve, or blood-vessel injury.

Dislocation Of The Lens

Partial or complete displacement of the crystalline lens from its normal position within the pupillary axis due to disruption or weakness of the zonular fibers. Causes include Marfan syndrome, homocystinuria, trauma, and prior intraocular surgery; it may cause acute angle-closure glaucoma or blurred vision.

Disofenin Scan

Hepatobiliary imaging using Tc-99m disofenin. Similar to mebrofenin scan.

Disopyramide

A class IA antiarrhythmic drug used selectively for certain rhythm disorders; anticholinergic effects, negative inotropy, and proarrhythmia limit its use.

Disorder

A disturbance of normal structure or function that causes symptoms, impairment, or clinically important risk. The term does not necessarily indicate a particular level of severity.

Disorder Antisocial Personality (Antisocial Personality Disorder)

Alternate index label for Antisocial Personality Disorder.

Disorder Asperger (Asperger Syndrome)

Alternate index label for Asperger Syndrome.

Disordered Thinking

A disturbance in the organization, coherence, logic, or flow of thought that may occur with psychiatric illness, neurologic disease, substances, delirium, or other medical conditions.

Disorders Sleep (Sleep)

Alternate index label for Sleep.

Disorganized Schizophrenia

Disorganized Schizophrenia is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

Disorientation

Difficulty knowing one's time, place, situation, or identity. It may occur with delirium, infection, metabolic disturbances, intoxication or withdrawal, brain injury, or dementia. Sudden disorientation is an urgent medical symptom.

Dispensary

A clinical care, prevention, behavioral, or public-health concept concerning dispensary; its use depends on the patient, setting, and clinical goal.

Dispensed Amount

The quantity of a medicine supplied to a patient, determined by the prescription, dose, duration, formulation, and applicable dispensing rules.

Dispensing

A clinical care, prevention, behavioral, or public-health concept concerning dispensing; its use depends on the patient, setting, and clinical goal.

Dispersal

Dispersal is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Displacement

Displacement is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Disruption

Disruption is interruption or breakdown of normal structure, function, continuity, or process.

Dissect

To dissect is to separate tissue layers or structures by cutting or careful blunt separation for examination, surgery, or anatomical study.

Dissecting Aneurysm

Alternate index label; see *Aortic dissection*.

Dissection

A tear in the inner layer of a blood vessel that allows blood to track between the vessel-wall layers and create a false channel. In the aorta, this is called aortic dissection.

Dissection Aorta (Aortic Dissection)

Alternate index label for Aortic Dissection.

Disseminate

To disseminate means to spread widely, as an infection, cancer, inflammation, or information.

Disseminated Coccidioidomycosis

Coccidioides infection that spreads beyond the lungs to skin, bone, meninges, or other organs.

Disseminated Cutaneous Blastomycosis

Blastomyces infection involving multiple areas of skin, usually after spread from a pulmonary infection.

Disseminated Intravascular Coagulation

A pathological state of simultaneous systemic activation of coagulation and fibrinolysis, leading to widespread microvascular thrombosis that causes organ ischemia and dysfunction, paradoxically accompanied by consumptive coagulopathy and increased bleeding risk.

Disseminated Intravascular Coagulation

Disseminated intravascular coagulation is uncontrolled systemic coagulation activation with consumption of platelets and clotting factors, producing simultaneous thrombosis and bleeding.

Disseminated Mycobacterium

Avium–Intracellulare Infection

Widespread infection with *Mycobacterium avium* complex, usually occurring in people with severe immune suppression.

Disseminated Neuroblastoma

Neuroblastoma that has spread from its primary site to distant organs, bone marrow, bone, liver, or lymph nodes; it requires risk-based specialist pediatric oncology treatment.

Disseminated Sclerosis

Disseminated Sclerosis is an anatomical structure, body position, physical finding, or physiological process; its clinical meaning depends on the examination and surrounding findings.

Disseminated Tuberculosis

Tuberculosis that has spread through the bloodstream or lymphatic system to multiple organs, potentially causing fever, weight loss, organ dysfunction, meningitis, or widespread small lesions.

Disseminated Varicella Infection

Varicella-zoster virus infection that spreads beyond the skin and may involve the lungs, brain, liver, or other organs.

Dissociation

A disruption in the normal integration of consciousness, memory, identity, emotion, perception, behavior, and sense of self. It exists on a spectrum from normal (daydreaming) to pathological (DID, depersonalization-derealization).

Dissociative Amnesia

Inability to recall important autobiographical information, usually of a traumatic or stressful nature, that is inconsistent with ordinary forgetting. The amnesia may be localized, selective, generalized, or continuous.

Dissociative Disorder

DSM-5 category comprising disruption of the normally integrated functions of consciousness, memory,

identity, perception, and behaviour, including dissociative amnesia, dissociative identity disorder, and depersonalization-derealization disorder. Strongly associated with severe early-life trauma.

Dissociative Disorders

Mental health disorders involving disruption in the normal integration of identity, memory, consciousness, emotion, perception, or behavior.

Dissociative Identity Disorder

The presence of two or more distinct personality states or an experience of possession involving marked discontinuity in sense of self, agency, affect, behavior, memory, perception, cognition, and/or sensory-motor functioning.

Distal

Farther from the point of attachment or origin of a structure, or farther from the centre of the body; the opposite directional term is proximal.

Distal Median Nerve Dysfunction

Impaired function of the median nerve near the forearm, wrist, or hand, causing sensory changes in its distribution and weakness of supplied muscles; carpal tunnel syndrome is a common compressive cause.

Distal Pancreatectomy

Surgical removal of the body or tail of the pancreas, usually with preservation of the pancreatic head.

Distal Radius Fractures

The most common upper extremity fracture. Classification: AO/OTA: A (extra-articular), B (partial articular), C (complete articular); Frykman. Colles fracture: dorsal angulation/displacement (fall on outstretched hand). Smith fracture: volar angulation (fall on flexed wrist).

Distal Renal Tubular Acidosis

A disorder in which the distal nephron cannot excrete acid effectively, causing non-anion-gap metabolic acidosis and sometimes low potassium,

kidney stones, or bone disease.

Distal Splenorenal Shunt

A surgical connection between the splenic vein and left renal vein that selectively decompresses esophageal varices while preserving some portal flow.

Distal Tubule

Segment of the nephron extending from the thick ascending limb of the loop of Henle to the collecting duct. The early distal tubule reabsorbs sodium and chloride through the NCC cotransporter, which is the target of thiazide diuretics.

Distamycins

A medicine called distamycins. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Distant

Distant means far from a reference point or primary site; in cancer, distant disease indicates spread to remote organs or lymph nodes.

Distemper

A serious viral disease of animals, especially dogs, caused by canine distemper virus; it can affect respiratory, gastrointestinal, and nervous systems.

Distended

Distended means abnormally stretched, swollen, or enlarged by fluid, gas, blood, tissue, or pressure.

Distension

Distension is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Distention

Enlargement or stretching of an organ, cavity, or body part, as in abdominal distention from gas, fluid, obstruction, or swelling.

Distichia

Distichia is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Distilling

Distilling is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Distortion

Distortion is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Distraction Osteogenesis

Surgical bone lengthening by gradual distraction. Used for jaw deformities, trauma.

Distress

Distress is significant physical or emotional suffering, discomfort, or strain that may accompany illness, injury, treatment, or difficult circumstances.

Distribution

The anatomical pattern and sites affected by a skin lesion or rash, including whether involvement is localized, generalized, symmetrical, flexural, extensor, dermatomal, or otherwise characteristic.

Distributive Shock

Shock caused by pathologic vasodilation and maldistribution of blood flow, producing inadequate effective circulating volume despite variable cardiac output. Causes include sepsis, anaphylaxis, neurogenic shock, and some toxic syndromes.

District Nurse

A clinical care, prevention, behavioral, or public-health concept concerning district nurse; its use depends on the patient, setting, and clinical goal.

Disulfaram-Like Reaction

An unpleasant reaction after alcohol is consumed with disulfiram or another interacting substance, potentially causing flushing, headache, nausea, vomiting, low blood pressure, or palpitations.

Disulfoton

Disulfoton is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

Diterpenes

A class of compounds built from four isoprene units; they occur in plants, fungi, and some animal products and have diverse biological effects.

Dithiolethione

A sulfur-containing compound studied for its ability to activate cellular protective and detoxification pathways.

Ditiocarb

A chemical term for dithiocarbamate compounds, which can act as chelators or pesticides and may have toxic effects depending on the agent and exposure.

Diuresis

Increased urine production. Can be physiological (fluid overload) or pharmacological (diuretics). Osmotic diuresis (hyperglycemia), water diuresis (DI), saline diuresis (hypertonic saline).

Diurnal

Relating to daytime or occurring within a 24-hour daily cycle.

Diutina Rugosa

A yeast species that is an uncommon opportunistic human pathogen, mainly reported in people with underlying illness or immunosuppression.

Diverticula (Diverticulosis)

Alternate index label; see *Diverticulosis*.

Diverticular Disease

A condition in which colon diverticula cause symptoms, bleeding, inflammation, or complications. It includes symptomatic diverticulosis and diverticulitis.

Diverticulitis

Inflammation of one or more diverticula, usually in the colon. It may cause abdominal pain, fever, changes in bowel habits, or complications such as an abscess.

Diverticulosis

The presence of small pouches, called diverticula, in the wall of the colon. It often causes no symptoms but may lead to bleeding or diverticular disease.

Alternate Names:

Colonic Diverticulitis (Diverticulosis) Diverticula (Diverticulosis)

Diverticulosis And Diverticulitis

Diverticulosis is a condition in which small pouches (diverticula) form in the wall of the digestive tract, most commonly in the colon. Diverticulitis occurs when these pouches become inflamed, causing abdominal pain, fever, and changes in bowel habits.

Diverticulum

A pouch-like projection from the wall of a hollow organ, especially the intestine.

Divisum Pancreas (Pancreas Divisum)

Alternate index label for Pancreas Divisum.

Divorce

Divorce is legal dissolution of a marriage and can affect health through stress, finances, housing, caregiving, social support, and access to care.

Dix-Hallpike Maneuver

The Dix-Hallpike maneuver is a diagnostic test used to identify benign paroxysmal positional vertigo by detecting the characteristic nystagmus and vertigo that occur when displaced otoconia within the posterior semicircular canal move in response to gravity

during specific head positioning.

Dizygotic Twin

One of a pair of fraternal twins formed when two ova are fertilized by two sperm; the twins share about half their segregating genes on average.

Dizygotic Twins

Dizygotic Twins is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Dizziness

Dizziness is a subjective sensation that may represent vertigo, lightheadedness, imbalance, or nonspecific disequilibrium; history and examination distinguish vestibular, cardiovascular, neurologic, and other causes. include disorders of the vestibular system, cardiovascular system, nervous system, vision, medications, or metabolism.

Dizziness (Dizzy)

Alternate index label for Dizzy.

Dizziness: Causes, Symptoms, And Treatment

Dizziness may mean vertigo, lightheadedness, imbalance, or a floating sensation. Causes include inner-ear disease, dehydration, medication, anemia, heart rhythm problems, migraine, anxiety, or neurologic disease; treatment depends on the pattern and examination.

Dizziness: When To See A Doctor?

Dizziness needs urgent assessment when it begins suddenly or occurs with weakness, numbness, trouble speaking, severe headache, chest pain, fainting, inability to walk, persistent vomiting, or new hearing loss. Recurrent or unexplained dizziness also merits evaluation.

DKD

Alternate index label; see *Diabetic Nephropathy*.

DLI

Donor lymphocyte infusion, administration of lymphocytes from a stem-cell donor after transplantation to enhance graft-versus-leukemia effects or treat relapse; it can cause graft-versus-host disease.

DM

Most commonly diabetes mellitus, a group of disorders with chronically elevated blood glucose; in other contexts it may have another expansion.

DM2

Type 2 diabetes mellitus, a disorder characterized by insulin resistance and progressive impairment of insulin secretion.

DMFT Index

An epidemiologic index recording the number of permanent teeth that are decayed, missing because of caries, or filled. It estimates cumulative caries experience but does not measure current lesion activity or distinguish all causes of tooth loss.

DMG

Alternate index label; see *Diffuse midline glioma*.

DMSA Scan

A nuclear-medicine study using technetium-labeled dimercaptosuccinic acid to show renal cortical function and areas of cortical injury or scarring.

DNA

Deoxyribonucleic acid, the hereditary material in humans and most organisms. Double helix of two antiparallel strands (sugar-phosphate backbone, nitrogenous bases: A-T, G-C). Human genome: 3 billion base pairs, 20,000 protein-coding genes.

DNA Adduct

A chemical group covalently attached to DNA after exposure to a reactive compound; unrepaired adducts can distort replication and create mutations or cancer risk.

DNA Alkylation

Addition of an alkyl group to DNA bases or the phosphate backbone, which can alter base pairing, block replication, and cause mutations or cell death.

DNA Amplification

Production of many copies of a DNA sequence, naturally or through laboratory methods such as polymerase chain reaction, for detection, analysis, or research.

DNA Binding

The attachment of a protein or other molecule to a DNA sequence, influencing gene expression, replication, repair, or chromosome organization.

DNA Damage

A chemical or structural change in DNA that can interfere with gene function or replication.

DNA Demethylation

Removal or loss of methyl groups from DNA, changing chromatin accessibility and gene expression during development, reprogramming, or disease.

DNA Double Helix

The molecular structure of DNA described by Watson and Crick in 1953, consisting of two antiparallel polynucleotide chains wound around each other in a right-handed helix. The sugar-phosphate backbone is on the exterior; nitrogenous bases project inward.

DNA Fingerprinting

Analysis of variable DNA regions to distinguish individuals or establish biological relationships, used in forensic identification, paternity testing, and some research applications.

DNA Footprinting

A molecular method that identifies the DNA sequence protected by a bound protein because that region is less susceptible to enzymatic or chemical cleavage.

DNA Fragmentation

Breaking of DNA strands into smaller pieces, occurring during apoptosis, injury, radiation, or laboratory analysis; excessive or abnormal fragmentation can impair genome integrity.

DNA Gyrase

A bacterial type II topoisomerase that introduces negative supercoils and relieves DNA torsional stress; it is a target of fluoroquinolone antibiotics.

DNA Integration

Insertion of foreign or copied DNA into a host genome, occurring in evolution, gene therapy, or viral infection and potentially altering nearby gene activity.

DNA Ligases

Enzymes that join breaks in the sugar-phosphate backbone of DNA during replication and repair.

DNA Ligation

Joining of DNA fragments by forming a phosphodiester bond, catalyzed by DNA ligase during replication, repair, recombination, and molecular cloning.

DNA Methylation

Addition of methyl groups to DNA, usually at cytosine bases, that can alter chromatin and gene expression without changing the DNA sequence.

DNA Packaging

The organization of DNA around histone proteins and into higher-order chromatin so that it fits inside the nucleus and can be regulated.

DNA Primase

An enzyme that makes short RNA primers needed to start DNA synthesis during replication.

DNA Primers

Short nucleic-acid sequences that provide a starting point for DNA synthesis in cells or laboratory amplification.

DNA Probe

A labeled single-stranded nucleic-acid sequence that binds a complementary target and allows a specific gene, organism, mutation, or chromosome region to be detected.

DNA Profiling

Analysis of polymorphic DNA markers, commonly short tandem repeats, to compare biological samples for human identification or kinship assessment. Results are statistical associations and require validated laboratory procedures, appropriate controls, and documented sample integrity.

DNA Repair

The cellular processes that detect and correct damage or copying errors in DNA. Major pathways include base-excision, nucleotide-excision, mismatch, and double-strand-break repair.

DNA Repair Mechanisms

Cellular processes that correct DNA damage caused by replication errors, chemicals, radiation, and reactive oxygen species. Mismatch repair (MMR): corrects base-base mismatches and insertion-deletion loops that escape proofreading during replication.

DNA Replication

The semi-conservative process by which DNA duplicates before cell division, producing two identical daughter molecules each containing one original and one new strand.

DNA Sequencing

Determination of the nucleotide order in DNA. Sanger sequencing uses chain termination and is useful for selected small targets. Next-generation sequencing (NGS) uses massively parallel sequencing, whole genome, whole exome, targeted panels.

DNA Virus

DNA virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Do Not Resuscitate

DNR: order not to perform CPR. Can be combined with DNI (do not intubate).

Do You Have A Drinking Problem?

A screening question about alcohol use, control, cravings, consequences, and withdrawal that can identify possible alcohol use disorder and prompt confidential assessment.

Do-Not-Resuscitate Order

A medical order instructing clinicians not to perform CPR if a person's breathing or heartbeat stops.

Alternate Names:

DNR order

DOACs

Direct oral anticoagulants are a class of anticoagulant drugs that directly inhibit specific coagulation factors, providing an alternative to warfarin with more predictable pharmacokinetics and no routine monitoring.

DOB

Date of birth, the calendar date on which a person was born.

Dobutamine

An intravenous beta-1-adrenergic agonist that increases cardiac contractility and is used short term for selected cases of acute low-output heart failure or shock.

Dobutamine Stress Echocardiography

Pharmacological stress test using dobutamine (beta-1 agonist) to increase heart rate, contractility, and myocardial oxygen demand. New or worsening wall motion abnormalities indicate ischemia. Preferred when patients cannot exercise. Beta-blockers should be held before testing.

Doc

Informal shorthand for doctor, a person with a professional qualification to practice medicine or another health profession.

Docetaxel

A medicine or chemical compound called docetaxel. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Doconexent

A pharmaceutical name for docosahexaenoic acid, an omega-3 fatty acid found in fish oils and cellular membranes.

Docosadienoic Acid

A 22-carbon fatty acid with two double bonds, present in some lipids and studied for effects on membranes and metabolism.

Docosahexaenoic Acid

The omega-3 fatty acid DHA, a major structural lipid in brain and retina obtained from marine foods or synthesized from precursors.

Docosapentaenoic Acid

A 22-carbon polyunsaturated fatty acid with five double bonds, occurring as omega-3 or omega-6 forms in tissues and diet.

Docosatrienoic Acid

A 22-carbon fatty acid containing three double bonds, present in small amounts in lipids and involved in experimental studies of metabolism.

Doctor

A person who has completed an appropriate professional program and is licensed or authorized to practice medicine; the title may also be used for other doctoral-level professionals.

Doctor-Patient Relationship

A clinical care, prevention, behavioral, or public-health concept concerning doctor-patient relationship; its use depends on the patient, setting, and clinical goal.

Doctors' Symbol

The Rod of Asclepius, a single snake around a staff, is the traditional symbol of medicine; it is often

confused with the two-snake caduceus.

Docusate

A stool softener (surfactant laxative) that increases water and fat incorporation into stool by lowering surface tension, facilitating defecation in patients who should avoid straining (post-MI, post-surgery, hemorrhoids) and for opioid-related constipation. Onset 12-72 hours.

Dodecenoic Acid

An unsaturated 12-carbon fatty acid whose biologic properties depend on the position and configuration of its double bond.

Dog Bite

An injury caused by a dog's teeth. Care includes prompt wound cleansing, assessment for tissue damage and infection, tetanus review, and evaluation of rabies exposure when relevant.

Alternate Names:

Dog bite injury

Dog Bite Treatment

Dog-bite care includes thorough wound cleaning, assessment of tissue and tendon injury, tetanus review, rabies-risk evaluation, and antibiotics when indicated. Deep punctures, bites to the hand or face, uncontrolled bleeding, infection, or immune compromise require prompt medical care.

Alternate Names:

Bite Dog (Dog Bite Treatment)

Dol

A historical unit intended to quantify subjective pain intensity; modern clinical practice uses validated pain scales rather than the dol.

Dolasetron

A medicine or chemical compound called dolasetron. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Dolasetron Mesylate

The mesylate salt of dolasetron, a serotonin 5-HT₃

receptor antagonist used to prevent nausea and vomiting in selected settings; it can affect cardiac rhythm.

Dolichocephalic

Dolichocephalic is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Dolichol

A long-chain lipid alcohol involved in assembling sugar chains for protein glycosylation in the endoplasmic reticulum.

Dolor

Latin for pain; it is one of the classic signs of inflammation.

Dolosigranulum Pigrum

A Gram-positive bacterium commonly found in the upper respiratory tract; it is usually a commensal, though rare infections have been reported.

Domain

A defined region or area of function; in biology, a protein domain is a structural or functional part of a protein, while in genetics it may mean a genomic or regulatory region.

Domestic Violence

A pattern of coercive control and physical, sexual, psychological, or economic abuse by one intimate partner or household member against another. Forensic evaluation documents patterned injuries, defensive wounds, strangulation signs, burns, and injuries of differing ages.

Dominant

Allele whose phenotype is expressed in heterozygotes. Autosomal dominant disorders: Huntington disease, marfan syndrome, achondroplasia. Requires only one copy for expression.

Domperidone

A peripheral dopamine-receptor antagonist used in some countries for nausea or gastrointestinal motility disorders; cardiac rhythm risks limit its use.

Donath-Landsteiner Test

A laboratory test that detects the biphasic hemolysin antibody associated with paroxysmal cold hemoglobinuria. The antibody binds red cells in the cold and causes complement-mediated hemolysis on warming.

Donepezil

A reversible acetylcholinesterase inhibitor used to treat symptoms of Alzheimer disease; it may cause gastrointestinal effects, bradycardia, syncope, or sleep disturbance.

Donnan Equilibrium

Donnan Equilibrium is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Donohue Syndrome

A severe inherited insulin-resistance disorder caused by pathogenic INSR variants, characterized by poor growth, loss of body fat, abnormal facial features, and early metabolic complications.

Donor

A clinical care, prevention, behavioral, or public-health concept concerning donor; its use depends on the patient, setting, and clinical goal.

Donor Insemination

A fertility treatment in which sperm from a donor (anonymous or known) is placed into a woman's vagina, cervix, or uterus to achieve pregnancy. Indications: male factor infertility (azoospermia, severe oligospermia), genetic disorders in the male partner, single women, and same-sex female couples.

Donor Suitability Assessment

Comprehensive evaluation of a potential organ

donor including medical history, laboratory testing, and organ function assessment to determine transplant eligibility.

Donor Testing

Laboratory and clinical evaluation of potential organ donors for infectious diseases, malignancy, and organ function.

Donovanosis

A chronic, progressive, ulcerative genital infection caused by the intracellular gram-negative bacterium *Klebsiella granulomatis* (formerly *Calymmatobacterium granulomatis*). Also known as granuloma inguinale.

Alternate Names:

granuloma inguinale.

Donovanosis (Granuloma Inguinale)

A sexually transmitted infection caused by *Klebsiella granulomatis* that produces slowly progressive, usually painless genital ulcers; diagnosis and antibiotic treatment require clinical evaluation.

Dopa

A precursor of dopamine; levodopa crosses the blood-brain barrier and is used with an aromatic L-amino-acid decarboxylase inhibitor to treat Parkinson disease.

Dopa-Responsive Dystonia

An inherited movement disorder with dystonia and sometimes parkinsonism that improves markedly with low-dose levodopa.

Dopamine

A neurotransmitter involved in movement, motivation, reward, attention, and regulation of several hormonal functions.

Dopamine Agonist

A class of medications that stimulate dopamine receptors (D1-D5), mimicking the effects of endogenous dopamine.

Dopamine Agonists

Medicines that stimulate dopamine receptors, used for conditions such as Parkinson disease, restless legs syndrome, or selected endocrine disorders; adverse effects include sleepiness, nausea, and impulse-control problems.

Dopamine Antagonist

A medicine or compound that blocks dopamine receptors, used in selected psychiatric, gastrointestinal, or antiemetic treatments; effects depend on receptor selectivity and dose.

Dopamine Receptor

Dopamine receptor is a defined chemical or biologic substance involved in dopamine receptor and studied in physiology, pharmacology, laboratory medicine, or treatment.

Dopamine Transporter

A membrane protein that recaptures dopamine from the synaptic cleft into presynaptic neurons and is a target of some stimulants and imaging tracers.

Dopaminergic Neuron

A neuron that synthesizes and releases dopamine as its principal neurotransmitter, contributing to movement, motivation, reward, and endocrine regulation.

Doppler Echocardiography

Echocardiographic imaging that uses Doppler ultrasound to assess the direction and speed of blood flow through the heart and great vessels.

Doppler Ultrasound

Ultrasound technique using the Doppler effect to evaluate blood flow. Color Doppler: direction and velocity of flow (red = toward transducer, blue = away). Spectral Doppler: waveform analysis (arterial: pulsatile; venous: continuous). Pulsed-wave: measures flow at a specific depth.

Doppler Ultrasound Exam Of An Arm

Or Leg

An ultrasound examination that uses the Doppler effect to assess blood flow through arteries and veins of an arm or leg. It can help evaluate obstruction, narrowing, thrombosis, aneurysm, or abnormal circulation without ionizing radiation.

Doppler Velocimetry

Ultrasound measuring blood flow velocity in umbilical and fetal vessels. Assesses fetal well-being.

Dor Procedure

A surgical ventricular restoration procedure designed to reconstruct and remodel an akinetic or dyskinetic left ventricular anterior and apical aneurysm following extensive transmural anterior myocardial infarction. Involves ventriculotomy through the scarred myocardium, placement of an endoventricular circumferential Dacron or bovine pericardial patch exclusion stitch (Manouguian/Dor purse-string stitch) to exclude the non-contractile, fibrotic ventricular wall, and patch closure of the defect. Restores a more physiological elliptical left ventricular geometry, significantly reduces end-diastolic and end-systolic wall tension, and improves left ventricular ejection fraction in selected patients with ischemic cardiomyopathy.

Alternate Names:

Endoventricular Circular Patch Plasty (EVCPP); Surgical Ventricular Restoration

Doravirine

A non-nucleoside reverse transcriptase inhibitor used in combination antiretroviral therapy for HIV-1 infection. Doravirine binds to the HIV reverse transcriptase enzyme and inhibits its activity through a unique mechanism that maintains activity against strains resistant to first-generation NNRTIs.

Dorea

A genus of anaerobic bacteria commonly found in the human intestine; detection generally reflects microbiota unless recovered from a compatible sterile-site infection.

Doripenem

A carbapenem antibiotic used intravenously for serious infections caused by susceptible bacteria.

Dormant

Dormant is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Dorsal

Relating to the back side of the body; synonym for posterior in human anatomy.

Dorsal Blocking Splint

A hand splint that holds the wrist and fingers in a protective position, often used after flexor-tendon repair to limit extension and protect healing tendons.

Dorsal Funiculus

A posterior white-matter column of the spinal cord containing ascending fibers that convey vibration, discriminative touch, and conscious proprioception to the brain.

Dorsal Kyphosis

Excessive forward curvature of the upper spine, often associated with vertebral fractures or degenerative change.

Dorsal Root Ganglion

A swelling on the dorsal root of a spinal nerve containing the cell bodies of primary sensory neurons. Its pseudounipolar neurons convey peripheral sensory information to the spinal cord.

Dorsiflexion

Upward movement of the foot at the ankle, bringing the toes toward the shin. It is produced mainly by the tibialis anterior and helps clear the foot during walking.

Dorsalis Pedis Artery

The continuation of the anterior tibial artery on the

dorsum of the foot. Its pulse helps assess arterial blood flow to the foot.

Dorsolateral

Dorsolateral means located toward the back and side of a body structure or region.

Dorsum

The back or upper surface of a body part, such as the dorsum of the hand, foot, or tongue.

Dorzolamide

A topical carbonic-anhydrase inhibitor that lowers intraocular pressure in glaucoma by reducing aqueous-humor production.

Dos And Donts During First Trimester Of Pregnancy

First-trimester care includes prenatal visits, recommended folic acid, avoidance of alcohol and tobacco, medication review, food-safety precautions, and appropriate activity. Severe pain, heavy bleeding, fainting, fever, or persistent vomiting needs urgent obstetric evaluation.

Dosage

The amount and frequency of a drug administered to achieve a therapeutic effect while minimizing toxicity. Components: dose (amount, e.g., mg), dosing interval (frequency), route, and duration.

Dosage Forms

The physical form in which a medicine is supplied, such as a tablet, capsule, liquid, cream, inhaler, injection, or patch.

Dose

Amount of substance administered. Factors: weight, age, renal/hepatic function, drug interactions. Toxic dose varies by substance and individual.

Dose Rate

The amount of a medicine, radiation, or other exposure delivered per unit of time, such as milligrams per hour or grays per minute.

Dose-Limiting Toxicity

An adverse effect of an anticancer treatment severe enough to prevent further dose escalation or require dose reduction according to a predefined protocol. DLTs are used in early-phase clinical trials to estimate a tolerable dose.

Dose-Response Curve

A graphical representation of the relationship between the dose of a drug and the magnitude of its biological effect. The x-axis represents dose (typically on a logarithmic scale), and the y-axis represents the response (as percentage of maximum effect).

Dose-Response Relationship

The dose-response relationship describes the quantitative relationship between the dose of a drug and the magnitude of the pharmacological response it produces. This relationship is typically represented as a sigmoidal curve when response is plotted against the log of the dose.

Dosimeter

An instrument that measures or records a person's or object's exposure to ionizing radiation.

Dosimetry

Measurement and calculation of radiation dose. Patient dosimetry for therapy.

Dotage

Dotage is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

DOTATATE

Somatostatin analog labeled with Ga-68 for PET imaging of neuroendocrine tumors.

DOTS

Directly observed treatment, short-course, a tuberculosis-control strategy in which health workers observe medication doses and monitor treatment response and adherence.

Double Aortic Arch

A congenital vascular ring in which two aortic arches surround the trachea and esophagus, potentially causing noisy breathing, feeding difficulty, cough, or swallowing problems.

Double Blind

A study design in which neither participants nor the researchers assessing outcomes know who receives each intervention during the blinded phase.

Alternate Names:

Double-masked

Double Blind Trial

A clinical trial in which participants and the investigators assessing outcomes do not know which intervention each participant received, reducing expectation bias.

Double Inlet Left Ventricle

A rare congenital heart defect in which both atria connect predominantly to one morphologic left ventricle, producing single-ventricle circulation and mixing of oxygenated blood.

Double Outlet Right Ventricle

A congenital heart defect where more than 50% of both great arteries arise from the right ventricle, with a VSD as the only outlet from the left ventricle.

Double Uterus

A congenital condition in which the uterus develops as two separate cavities or two uteruses.

Double Vision

Double vision may arise from an eye alignment problem, corneal or lens disease, muscle or nerve dysfunction, medication, migraine, or brain disease. Sudden double vision, especially with weakness, speech change, severe headache, or eye pain, is an emergency.

Double-Balloon Enteroscopy

Advanced endoscopic technique using an enteroscope equipped with balloons at the tip of both

the endoscope and an overtube allowing systematic advancement and visualization of the entire small bowel. The balloons are alternately inflated and deflated to anchor the bowel wall and advance the endoscope.

Double-Blind Method

A research method that conceals treatment assignment from participants and relevant study personnel to reduce bias.

Double-Blind Study

A clinical study in which neither participants nor the investigators assessing outcomes know the assigned treatment group.

Double-Contrast Barium Enema

An imaging examination of the colon using barium and air to outline the bowel wall on X-rays.

Alternate Names:

Air-contrast barium enema

Double-Outlet Right Ventricle

A congenital heart defect in which both major arteries arise mainly from the right ventricle.

Douche

A stream of water or solution directed into a body cavity, most commonly the vagina, for cleansing, therapeutic, or contraceptive purposes.

Douglas, Pouch Of

The rectouterine pouch, a peritoneal recess between the uterus and rectum; in people without a uterus, the related rectovesical pouch lies between the bladder and rectum.

Dowager'S Hump

An exaggerated upper-back curvature, usually caused by vertebral compression fractures or osteoporosis.

Alternate Names:

Kyphosis

Down Syndrome

A genetic condition caused by an extra copy of chromosome 21. It can affect how the brain and body develop. People with Down syndrome may have learning difficulties, low muscle tone, characteristic facial features, or heart, hearing, vision, thyroid, or digestive problems.

Alternate Names:

Trisomy 21 Syndrome Down Syndrome Overview Trisomy 21 (Down Syndrome Overview) Down's Syndrome

Downregulation

A decrease in the number, sensitivity, or activity of receptors, genes, or signaling pathways in response to sustained stimulation or other regulation.

Doxapram

A respiratory stimulant used rarely for selected breathing disorders; it can cause agitation, hypertension, seizures, or abnormal heart rhythms.

Doxazosin

An alpha-1 blocker used to relax smooth muscle and treat high blood pressure or urinary symptoms from an enlarged prostate.

Doxazosin Mesylate

The mesylate salt of doxazosin, an alpha-1 blocker used for hypertension and urinary symptoms from benign prostate enlargement.

Doxepin

A tricyclic antidepressant also used in low doses for insomnia or skin itching; sedation and anticholinergic effects are common concerns.

Doxepin Overdose

Overdose of doxepin, a tricyclic antidepressant that may cause coma, seizures, hypotension, and life-threatening cardiac conduction abnormalities.

Doxercalciferol

A vitamin D analog used to help control secondary hyperparathyroidism in chronic kidney disease.

Doxorubicin

An anthracycline chemotherapy medicine that damages DNA through intercalation, topoisomerase-II inhibition, and free-radical effects; cumulative cardiomyopathy and myelosuppression are major risks.

Doxorubicin Hydrochloride

The hydrochloride salt of doxorubicin, an anthracycline chemotherapy drug used for many cancers; major risks include bone-marrow suppression and dose-related heart damage.

Doxycycline

A medicine called doxycycline. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Doxycycline Hyclate

A medicine called doxycycline hyclate. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Doxylamine

A sedating antihistamine used in some sleep aids and pregnancy-related nausea products; it can cause drowsiness and anticholinergic effects.

DPP-4 Inhibitor

An oral glucose-lowering drug that inhibits dipeptidyl peptidase-4, prolonging the action of incretin hormones and increasing glucose-dependent insulin release while reducing glucagon secretion. It is used mainly in type 2 diabetes.

DPP-4 Inhibitors

Dipeptidyl peptidase-4 inhibitors that prevent degradation of endogenous GLP-1 and GIP, enhancing incretin effects on insulin secretion. Examples include sitagliptin, saxagliptin, linagliptin, and alogliptin. They are well-tolerated with low hypoglycemia risk and weight neutrality. They have modest glucose-lowering effects.

DPT Immunization

Immunization against diphtheria, pertussis, and

tetanus, now generally given in age-appropriate DTaP or Tdap formulations.

DR Syndrome

An abbreviation that may refer to diabetic retinopathy syndrome or another context-specific disorder; the full clinical term should be specified.

Dracunculiasis

Guinea-worm disease, a parasitic infection caused by *Dracunculus medinensis* and acquired by drinking water containing infected copepods.

Dracunculosis

Infection caused by the parasitic nematode *Dracunculus medinensis*, acquired by drinking water containing infected copepods. It classically produces a painful blister and emergence of a long adult worm through the skin.

Dracunculus Medinensis

The Guinea-worm parasite that causes dracunculiasis after ingestion of infected copepods in unsafe drinking water.

Drain

A tube or other device used to remove blood, pus, fluid, or air from a wound, body cavity, or organ; drain can also mean the act of removing it.

Drain (Surgical)

Tube for fluid evacuation. Types: closed suction (Jackson-Pratt, Hemovac), open (Penrose), pigtail. Indications: abscess, hematoma, seroma, biliary, urinary. Complications: infection, blockage, migration.

Alternate Names:

Surgical

Drain Cleaner Poisoning

Exposure to a caustic drain-cleaning product that can cause severe burns of the skin, eyes, airway, or gastrointestinal tract.

Drain Opener Poisoning

Exposure to a caustic drain-cleaning product that can cause severe burns of the skin, eyes, airway, or gastrointestinal tract.

Drainage

Removal of fluid, pus, blood, or air from a body site or wound, either naturally or using a procedure or drain.

Drainage Procedures

Image-guided drainage of fluid collections. Abscess, hematoma, biloma, urinoma. CT or ultrasound guidance.

Drainpipe Cleaners

A clinical term concerning drainpipe cleaners. Its definition and clinical management depend on the context.

Drastic

Drastic is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Draw-Sheet

A clinical care, prevention, behavioral, or public-health concept concerning draw-sheet; its use depends on the patient, setting, and clinical goal.

Dream

A dream is a sequence of perceptions, thoughts, or emotions during sleep, often most vivid during REM sleep.

Dreams

Subjective experiences, images, thoughts, or emotions occurring during sleep, especially during rapid-eye-movement sleep.

Dreams (Geriatric)

Sleep disturbances common. Nightmares, insomnia. Evaluate for delirium, depression, medications.

Alternate Names:

Geriatric

Dreamy State

Dreamy State is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Drepanocytosis

Drepanocytosis is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

DRESS Syndrome

Drug Reaction with Eosinophilia and Systemic Symptoms, a severe, potentially life-threatening adverse drug reaction. Typically occurs 2-8 weeks after drug initiation (latency longer than SJS/TEN). Causative drugs: anticonvulsants (phenytoin, carbamazepine, lamotrigine), allopurinol, sulfonamides, dapsone, minocycline.

Dressing

Material applied to a wound to protect it, absorb exudate, maintain a suitable healing environment, or deliver local treatment.

Dressler Syndrome

Inflammation of the sac around the heart that develops weeks after a heart attack, heart surgery, or other heart injury. It can cause fever, chest pain, and fluid around the heart or lungs.

Alternate Names:

Post-Cardiac Injury Syndrome Postmyocardial Infarction Syndrome

Dressler'S Syndrome

Alternate spelling; see *Dressler Syndrome*.

Dressler'S Syndrome

Alternate spelling; see *Dressler Syndrome*.

DRI

A set of nutrient reference values used to plan and

assess dietary intake for healthy people.

Alternate Names:

Dietary Reference Intakes

Dried Specimen

A biological sample that has been dried for storage, transport, or testing; the collection method and analyte determine whether drying is appropriate.

Drift

Drift is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Drift (Sit-To-Stand)

A functional assessment of lower-limb strength, balance, and mobility. Timed sit-to-stand, chair-rise, and timed-up-and-go tests may be used; results are interpreted according to the person's age, baseline function, assistive devices, and clinical purpose.

Alternate Names:

Sit-to-Stand

Drinking Water

Water intended for human consumption; it should meet local safety standards and be treated when contamination with pathogens or chemicals is possible.

Drinking Water Safely During Cancer Treatment

Food and water precautions during cancer treatment aim to reduce infection risk, especially when immunity is suppressed; advice should follow the oncology team and local water guidance.

Drip

A drop-by-drop flow of liquid or an intravenous infusion delivered at a controlled rate through tubing and a catheter.

Drip (Intravenous Infusion)

Controlled administration of fluid, blood, nutrients, or other substances directly into a vein through a

cannula or catheter.

Alternate Names:

Intravenous Infusion

Driving And Older Adults

Assessment of driving safety in older adults, considering vision, cognition, hearing, mobility, medications, and functional performance rather than age alone.

Driving Evaluation

Assess driving fitness after neurological, musculoskeletal conditions. On-road testing, vehicle modifications.

Driving Rehabilitation

Training for adaptive driving: hand controls, left-foot accelerator, other modifications.

Dronabinol

A synthetic form of delta-9-tetrahydrocannabinol used for selected cases of chemotherapy-related nausea or appetite loss; central nervous-system effects and interactions are important.

Drool

Excess saliva escaping from the mouth, which may result from increased production, impaired swallowing, poor oral closure, or neurologic disease.

Drooling

Unintentional escape of saliva from the mouth caused by excess production, impaired swallowing, poor lip closure, or neurologic and developmental disorders.

Drop Foot

Alternate index label; see *Foot drop*.

Drop Hand Syndrome

Weakness or paralysis of wrist and finger extension, usually from radial-nerve injury or compression, causing the hand to hang in flexion.

Droperidol

A butyrophenone dopamine antagonist used in selected settings for nausea or agitation; QT prolongation and arrhythmia risk require appropriate precautions.

Droplet Precautions

Infection control measures used for pathogens transmitted through respiratory droplets. Precautions include surgical masks, patient placement in single rooms, and spatial separation. Droplet precautions are used for influenza, pertussis, and meningococcal infections. The distance for spatial separation is typically 3-6 feet.

Dropper Bottle

A container fitted with a dropper for delivering a liquid in drops; the prescribed product, concentration, and number of drops must be followed carefully.

Drops

Drops is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Dropsy

An older term for generalized swelling caused by fluid accumulation, now usually called edema or anasarca.

Drosophila Proteins

Proteins produced by fruit flies and used as experimental models of development, signaling, genetics, immunity, and human disease mechanisms.

Drosophilidae

The family of insects commonly called fruit flies or vinegar flies; they are important in genetics research and are not typical human parasites.

Drowning

Respiratory impairment from submersion/immersion in liquid. Drowning can be fatal or non-fatal. Pathophysiology: laryngospasm

followed by aspiration of fluid, surfactant washout, pulmonary edema, and hypoxemia. Fresh water: washes out surfactant, causes alveolar collapse. Salt water: draws fluid into alveoli (pulmonary edema).

Alternate Names:

Wet Dry Drowning (Drowning)

Drowning (Dry/Wet Signs)

Respiratory impairment caused by submersion or immersion in liquid. So-called dry and wet signs are unreliable for determining the cause of death.

Alternate Names:

Dry/Wet Signs

Drowsiness

An abnormally strong tendency to fall asleep or reduced alertness, caused by insufficient sleep, medicines, substances, metabolic illness, sleep disorders, or neurologic disease.

Drug

A substance used to prevent, diagnose, treat, or otherwise affect a disease or body function; medicines may be prescribed or available without prescription.

Drug Addiction

Legacy, nonpreferred label; see *Substance Use Disorder*.

Drug Caution Code

A medication caution code indicating that a product contains acetylsalicylic acid, or aspirin.

Drug Implant

A solid or device-based dosage form placed in tissue to release a medicine locally or systemically over an extended period.

Drug Hypersensitivity

An immune-mediated reaction to a medicine that may cause skin, respiratory, gastrointestinal, blood, or systemic symptoms. Severe reactions can include anaphylaxis, Stevens–Johnson syndrome, toxic epidermal necrolysis, or drug hypersensitivity syndrome.

Drug-Induced Lupus

An autoimmune condition clinically and serologically resembling systemic lupus erythematosus, triggered by continuous exposure to specific medications (most classically procainamide, hydralazine, isoniazid, and minocycline). Characterized by arthralgias, serositis, constitutional symptoms, and high titers of anti-histone antibodies, with resolution usually following drug cessation.

Alternate Names:

Drug-Induced Lupus Erythematosus; DILE

Drug Safety

The identification, prevention, and monitoring of medication-related errors, interactions, adverse effects, and misuse.

Drug Screening

Urine, blood, hair testing for substances of abuse. Panels: opiates, cocaine, amphetamines, cannabinoids, PCP, benzodiazepines, barbiturates. False positives possible. Confirmation by GC/MS or LC-MS/MS.

Drug Testing

Laboratory analysis of biological specimens to detect drugs, metabolites, or poisons, used in clinical, workplace, sports, and forensic contexts. Specimens include blood, urine, oral fluid, hair, and postmortem tissues.

Drugs That May Cause Erection Problems

Medicines that may impair erection include some antihypertensives, antidepressants, antipsychotics, antiandrogens, and other drugs; review should be clinician-guided.

Drugs, Statin

Medicines that inhibit HMG-CoA reductase and lower LDL cholesterol, reducing the risk of atherosclerotic cardiovascular events.

Drusen

Yellowish-white deposits of extracellular material

that accumulate beneath the retinal pigment epithelium between the retinal pigment epithelium basement membrane and Bruch membrane, and they are the hallmark clinical finding in dry age-related macular degeneration.

Dry Age-Related Macular Degeneration

Alternate index label; see *Dry macular degeneration*.

Dry AMD

Alternate index label; see *Dry macular degeneration*.

Dry Cell Battery Poisoning

Ingestion or exposure to a dry-cell battery. Leakage or retention can cause corrosive tissue injury and requires urgent assessment.

Dry Cough

A cough that produces little or no sputum; causes include viral illness, asthma, reflux, medications such as ACE inhibitors, and other airway or lung disease.

Dry Cupping

Dry Cupping is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Dry Eye

A condition in which the eyes do not produce enough tears or tears evaporate too quickly, causing irritation and visual discomfort.

Alternate Names:

Dry-eye disease; keratoconjunctivitis sicca

Dry Eye Disease

Dry eye disease, also known as keratoconjunctivitis sicca, is a multifactorial disorder of the ocular surface characterized by loss of homeostasis of the tear film, resulting in symptoms of ocular discomfort, visual disturbance, and tear film instability, with potential damage to the ocular surface.

Alternate Names:

keratoconjunctivitis sicca, is a multifactorial disorder

der.

Dry Eye Syndrome

A multifactorial disease of the ocular surface characterized by tear film instability, hyperosmolarity, and inflammation. Aqueous-deficient dry eye: Sjogren syndrome (autoimmune), non-Sjogren (lacrimal gland dysfunction, age). Evaporative dry eye: meibomian gland dysfunction (most common), incomplete blink, environmental factors.

Dry Eyes

Irritation or discomfort caused by inadequate tear production or excessive tear evaporation.

Alternate Names:

Decreased Tear Production Keratoconjunctivitis Sicca (Dry Eyes) Tears, Decreased Production

Dry Gangrene

Tissue death caused mainly by loss of arterial blood supply, producing dry, shrunken, dark tissue with a relatively clear boundary from viable tissue.

Dry Hair

Hair that lacks moisture or appears rough, brittle, dull, or frizzy because of weather, heat or chemical damage, infrequent conditioning, nutritional disease, or an endocrine disorder.

Dry Ice

Dry ice is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

Dry Macular Degeneration

The more common form of age-related macular degeneration, involving gradual damage to the macula without abnormal blood-vessel growth.

Alternate Names:

Dry Age-Related Macular Degeneration Dry AMD Macular Degeneration, Dry

Dry Mouth

A condition in which the mouth does not produce enough saliva; also called xerostomia.

Alternate Names:

xerostomia.

Dry Mouth During Cancer Treatment

Reduced saliva during or after cancer treatment, often from head-and-neck radiation or medicines, increasing discomfort, dental caries, swallowing difficulty, and oral infection risk.

Dry Powder Inhaler

A breath-actuated inhaler delivering powdered medication. Does not require hand-breath coordination. Requires adequate inspiratory flow. Examples include Advair Diskus and Spiriva HandiHaler.

Dry Skin

Abnormally dry, rough, or scaly skin caused by reduced moisture and disruption of the skin barrier. It is common with aging, low humidity, frequent washing, and eczema and may cause itching or fissuring.

Dry Socket

Painful inflammation of a tooth socket caused by loss or failure of the blood clot after tooth extraction. Also called alveolar osteitis.

Alternate Names:

alveolar osteitis.

Dry Socket (Alveolar Osteitis)

A painful postoperative complication of tooth extraction, most commonly occurring after the removal of mandibular third molars (wisdom teeth). It is caused by the premature dissolution or loss of the blood clot in the extraction socket, exposing the underlying alveolar bone and nerve endings to the oral cavity.

Alternate Names:

Alveolar Osteitis

Dry Socket Overview

Dry socket is painful inflammation after a tooth extraction when the protective blood clot is lost or breaks down before healing. Pain often worsens several days after extraction and may radiate to

the ear; dental cleaning, medicated dressing, and analgesia provide relief.

Alternate Names:

Alveolar Osteitis (Dry Socket Overview)

Dry-Powder Inhaler

A device that delivers powdered medicine to the lungs when the user inhales through it.

Dryness Vaginal (Vaginal Dryness And Vaginal Atrophy)

Alternate index label for Vaginal Dryness and Vaginal Atrophy.

DSM

The Diagnostic and Statistical Manual of Mental Disorders, a classification and diagnostic reference published by the American Psychiatric Association.

DSPS

Alternate index label; see *Delayed sleep phase*.

DSRCT

Alternate index label; see *Desmoplastic small round cell tumors*.

DSWPD

Alternate index label; see *Delayed sleep phase*.

DTaP

A childhood vaccine protecting against diphtheria, tetanus, and pertussis, containing diphtheria and tetanus toxoids and acellular pertussis components.

Dual Antiplatelet Therapy

The combination of aspirin and a P2Y₁₂ inhibitor (clopidogrel, prasugrel, or ticagrelor) for prevention of thrombotic events after acute coronary syndrome and percutaneous coronary intervention. Duration varies: 1 month after bare-metal stent, 6-12 months after drug-eluting stent, and 12 months after ACS.

Dual Energy X-Ray Absorptiometry

See *Bone Mineral Density Test*.

Alternate Names:

DXA; DEXA

Dual-Energy CT

CT using two different energy spectra. Material differentiation, virtual non-contrast images, gout detection.

Dual-Energy X-Ray Absorptiometry

See *Bone Mineral Density Test*.

Dual-Energy X-Ray Absorptiometry

See *Bone Mineral Density Test*.

Alternate Names:

Dual-Energy X-ray Absorptiometry

Dual-Photon Absorptiometry

An older bone-density measurement technique that uses two photon energies to estimate bone mineral content.

Duane Retraction Syndrome

A congenital eye-movement disorder in which abnormal eye-muscle innervation limits horizontal movement and may cause the eye to retract.

Dubin-Johnson Syndrome

An inherited disorder of bilirubin excretion causing predominantly conjugated hyperbilirubinemia and intermittent mild jaundice, usually without major liver dysfunction. mutations in the ABCC2 gene encoding the multidrug resistance-associated protein 2 (MRP2), which transports conjugated bilirubin from hepatocytes into bile.

Duboisin

An older anticholinergic alkaloid related to scopolamine, formerly used for selected eye or neurologic purposes and capable of causing anticholinergic toxicity.

Dubowitz Syndrome

A rare developmental disorder associated with growth restriction, characteristic facial features, microcephaly, intellectual or behavioral differences, and variable immune or skin findings.

Duchenne Muscular Dystrophy

An X-linked recessive neuromuscular disorder caused by mutations in the dystrophin gene (DMD gene) on chromosome Xp21.2, resulting in absent or severely reduced dystrophin protein, which is essential for maintaining the structural integrity of the sarcolemma during muscle contraction.

Duck Embryo Vaccine

Duck Embryo Vaccine is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Duck Syndrome

Duck syndrome is an informal term for appearing successful while privately experiencing severe stress, anxiety, exhaustion, or depression. It is not a formal diagnosis; persistent distress, impaired functioning, or self-harm thoughts warrant mental-health evaluation and support.

Duct

A tube or channel that carries a fluid, such as bile, pancreatic juice, or secretions from a gland.

Ductal Carcinoma

A carcinoma arising from the epithelial cells lining a duct, most commonly referring to ductal carcinoma of the breast or pancreas.

Ductal Carcinoma In Situ

A noninvasive breast cancer in which abnormal cells remain within the milk ducts; commonly abbreviated DCIS.

Ductal Carcinoma In Situ

A noninvasive breast cancer in which abnormal cells are confined to the milk ducts and have not spread into surrounding breast tissue.

Alternate Names:

DCIS Intraductal Carcinoma

Ductal-Dependent Lesions

Congenital heart defects that require the ductus

arteriosus to remain patent for adequate systemic or pulmonary blood flow. Includes pulmonary atresia, critical aortic stenosis, coarctation, hypoplastic left heart syndrome, and transposition of the great arteries.

Ductless Glands

Ductless Glands is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

Ductus Arteriosus

A fetal blood vessel connecting the pulmonary artery to the descending aorta, allowing blood to bypass the non-functioning fetal lungs. In utero, the ductus arteriosus is kept patent by prostaglandin E2 and low oxygen tension.

Ductus Venosus

Ductus Venosus is an anatomical structure, physiologic process, or body function; its location or mechanism explains its clinical relevance.

Duffy-Null Associated Neutrophil Count

A naturally lower neutrophil count seen in some people with the Duffy-null blood-group type, especially people of African or Middle Eastern ancestry. It usually does not increase infection risk and should not automatically be diagnosed as neutropenia.

Duke Criteria

A standardized diagnostic framework for evaluating suspected infective endocarditis, combining microbiological, imaging, and clinical findings. Major criteria comprise persistently positive blood cultures with typical endocarditis organisms and echocardiographic evidence of endocardial involvement (vegetation, abscess, new partial dehiscence of a prosthetic valve, or new valvular regurgitation). Minor criteria include predisposing heart conditions or injection drug use, fever $\geq 38^{\circ}\text{C}$, vascular phenomena (arterial emboli, septic pulmonary infarcts, mycotic aneurysm, Janeway lesions), and immunologic phenomena (glomerulonephritis, Osler nodes, Roth spots, rheumatoid factor). Definite endocarditis is confirmed by 2 major, 1 major plus 3 minor,

or 5 minor criteria.

Alternate Names:

Modified Duke Criteria; Duke Endocarditis Criteria

Dukes Classification

An older staging system for colorectal cancer based mainly on how far the tumor has extended through the bowel wall and into lymph nodes or distant sites.

Dull Pain

A low-intensity, aching, or pressure-like pain that is not sharp or stabbing; its cause depends on the affected tissue and clinical context.

Duloxetine

A serotonin–norepinephrine reuptake inhibitor used for depression, anxiety, diabetic peripheral neuropathic pain, fibromyalgia, and some chronic musculoskeletal pain.

Duloxetine Hydrochloride

The hydrochloride salt of duloxetine, a serotonin–norepinephrine reuptake inhibitor used for depression, anxiety, neuropathic pain, fibromyalgia, and some chronic musculoskeletal pain.

Dumbbell Ossification

Bone formation or a bony lesion with a dumbbell shape, often describing extension through a neural foramen or across adjacent anatomical compartments.

Dumdum Fever

An older name for visceral leishmaniasis, a parasitic disease that can cause prolonged fever, enlarged spleen and liver, low blood counts, and weight loss.

Dumping Syndrome

Rapid gastric emptying of hypertonic contents into the small bowel after gastrectomy or gastric bypass surgery. Early dumping occurs within thirty minutes with vasomotor symptoms including flushing, palpitations, diarrhea, and dizziness from fluid shifts into the intestinal lumen.

Dunbar Syndrome

Alternate index label; see *Median arcuate ligament syndrome*.

Duocarmycins

A medicine called duocarmycins. Its uses, dosing, adverse effects, and contraindications depend on the specific indication and patient.

Duodenal

Relating to the duodenum, the first portion of the small intestine immediately beyond the stomach.

Duodenal Adenocarcinoma

A malignant gland-forming tumor of the duodenum that may cause abdominal pain, vomiting, bleeding, anemia, jaundice, or obstruction; diagnosis requires endoscopy and biopsy.

Duodenal Atresia

A congenital obstruction of the duodenum caused by failure of recanalization during the 8th–10th week of gestation. Associated with Down syndrome (30%), polyhydramnios (due to impaired fetal swallowing of amniotic fluid), and other anomalies (VACTERL, congenital heart disease, annular pancreas, malrotation).

Duodenal Bulb

The first, expanded portion of the duodenum immediately beyond the pylorus.

Duodenal Disease

A disorder of the first part of the small intestine, including inflammation, ulceration, obstruction, infection, bleeding, malabsorption, or neoplasia.

Duodenal Diverticulum

A duodenal diverticulum is an outpouching of the duodenal wall, often found incidentally near the ampulla. It can rarely cause pain, bleeding, inflammation, obstruction, pancreatitis, or bile-duct infection and is treated according to symptoms and complications.

Duodenal Fistula

An abnormal connection between the duodenum and another organ, bowel segment, or skin surface that can cause leakage, infection, malnutrition, or electrolyte loss.

Duodenal Hemorrhage

Bleeding from the duodenum, which may result from peptic ulcer disease, inflammation, vascular lesions, trauma, or cancer.

Duodenal Infection

Infection involving the duodenum, caused by organisms or spread from nearby gastrointestinal disease; symptoms may include abdominal pain, vomiting, diarrhea, or bleeding.

Duodenal Neoplasm

A benign or malignant growth arising in the duodenum; symptoms and treatment depend on the tumor type, location, size, obstruction, bleeding, and spread.

Duodenal Obstruction

Partial or complete blockage that prevents contents from passing through the duodenum.

Duodenal Papilla

A mucosal projection in the duodenum where the bile duct and pancreatic duct, usually through the major papilla, empty into the intestine.

Duodenal Perforation

Full-thickness breach of the duodenal wall, most commonly caused by penetrating peptic ulcer disease, trauma, or iatrogenic injury during endoscopy. Presents with sudden severe epigastric pain, board-like abdominal rigidity, and peritonitis. Free air under the diaphragm on upright chest radiograph is diagnostic.

Duodenal Stenosis

Narrowing of the duodenum that may obstruct passage of stomach contents and cause vomiting, abdominal distention, pain, or poor feeding.

Duodenal Ulcer

Peptic ulcer in the duodenal mucosa strongly associated with *H. pylori* infection. Presents with epigastric pain relieved by food typically occurring several hours after meals and at night. Complications include hemorrhage, perforation, and gastric outlet obstruction. Diagnosis is by upper endoscopy.

Duodenitis

Inflammation of the duodenal mucosa, caused by *Helicobacter pylori* infection, acid-related disease, non-steroidal anti-inflammatory drugs, infection, coeliac disease, or inflammatory bowel disease. Symptoms may include epigastric pain, nausea, vomiting, and gastrointestinal bleeding.

Duodenoscope

A flexible endoscope designed to examine the duodenum and access the bile and pancreatic ducts, commonly during ERCP.

Duodenostomy

A surgically created opening from the duodenum to the skin or another bowel segment, usually for drainage or feeding in selected circumstances.

Duodenum

The first part of the small intestine, extending from the pylorus to the jejunum; it receives bile and pancreatic secretions and is a common site of peptic ulcer disease.

Duplex Doppler Ultrasound Scanning

An ultrasound test that combines structural imaging with Doppler measurement of blood flow through vessels.

Alternate Names:

Duplex ultrasound

Duplex Surveillance

Scheduled clinical and ultrasound monitoring of an artery, vein, graft, stent, aneurysm, or dialysis access to detect restenosis, thrombosis, endoleak, or other failure before symptoms or limb threat develop.

Duplex Ultrasound

An ultrasound examination that combines grayscale imaging of anatomy with Doppler assessment of blood flow. It can evaluate vessels, organs, and selected soft tissues.

Duplication

Presence of extra copy of chromosomal segment. Can cause gene dosage effects. Examples: Charcot-Marie-Tooth disease type 1A (PMP22 duplication).

Dupuyten'S Contracture

A fibrosing disorder of the palm that causes progressive flexion contractures of one or more fingers.

Dupuytren Contracture

Dupuytren contracture is progressive shortening of palmar fascia that pulls one or more fingers into flexion and can limit hand function. cords, and contractures of the fingers, most commonly affecting the ring and small fingers.

Alternate Names:

Dupuytren's Contracture (Dupuytren Contracture)

Dupuytren'S Contracture

Dupuytren's Contracture is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Dupuytren'S Disease

Thickening and shortening of tissue in the palm that progressively bends one or more fingers toward the palm.

Dupuytren, Guillaume

A French surgeon whose name is associated with Dupuytren contracture, progressive thickening and shortening of palmar fascia that bends the fingers toward the palm.

Dupuytren's Contracture (Dupuytren Contracture)

Alternate index label for Dupuytren Contracture.

Dura

The dura mater, the tough outermost membrane surrounding the brain and spinal cord.

Dura Mater

The outermost, thickest meningeal layer, a tough fibrous membrane. In the cranium it is two layers: periosteal (outer, adherent to skull) and meningeal (inner), which separate to form dural venous sinuses (e.g., superior sagittal, cavernous). Dural folds: falx cerebri, tentorium cerebelli, falx cerebelli.

Durable Power Of Attorney

A legal authorization allowing a designated person to act or make decisions for another person when specified conditions are met. In healthcare, it may appoint a healthcare proxy.

Dural Arteriovenous Fistulas

Abnormal connections between arteries and veins in the dura mater surrounding the brain or spinal cord.

Dural Sac

The tubular sleeve of dura mater surrounding the spinal cord, cerebrospinal fluid, and spinal nerve roots within the vertebral canal.

Dural Venous Sinuses

Venous channels between dural layers, draining brain blood and CSF from the subarachnoid space into the internal jugular veins. Major sinuses: superior sagittal, transverse, sigmoid, cavernous, straight. Valveless with bidirectional flow possible.

Duramorph

A brand name for preservative-free morphine used by injection, including in epidural or intrathecal analgesia; respiratory depression is a serious risk.

Durapatite

Hydroxyapatite, the calcium-phosphate mineral that gives bone and teeth much of their hardness.

Durules

Durules is a medical or biological term describing a defined process, structure, substance, or clinical finding; its precise meaning depends on the surrounding context.

Dust

Dust is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

Dust Disease

Dust Disease is a chemical, environmental, or toxicology term; health effects depend on the substance, dose, route, duration, and exposure circumstances.

Dust Mite Allergy

An allergic reaction to proteins from household dust mites, commonly causing sneezing, congestion, itchy eyes, or asthma symptoms.

Dutasteride

A 5-alpha-reductase inhibitor that lowers dihydrotestosterone and is used for benign prostatic hyperplasia; it reduces prostate volume and can affect sexual function and PSA interpretation.

DVT

Deep venous thrombosis, the formation of a blood clot in a deep vein, most commonly in the lower extremities.

DVT Prevention

Measures used to reduce the risk of deep venous thrombosis, such as early movement, mechanical compression, and anticoagulant medicine when clinically appropriate.

Dwarfism

Short stature resulting from a medical condition, most commonly achondroplasia (the most common form of skeletal dysplasia, caused by gain-of-function mutation in FGFR3, presenting with rhizomelic limb shortening, macrocephaly, frontal bossing, and trident hands).

Dwarfism (Achondroplasia)

Alternate index label for Achondroplasia.

DWI FLAIR Mismatch

Diffusion-weighted imaging and fluid-attenuated inversion recovery MRI sequences are used together to estimate the age of an ischemic stroke lesion and guide treatment decisions.

Dx

A common medical abbreviation for diagnosis or diagnostic assessment. It should be expanded in patient instructions when the meaning could be unclear.

DXA Scan (Dual-Energy X-Ray Absorptiometry)

See *Bone Mineral Density Test*.

Alternate Names:

Dual-Energy X-ray Absorptiometry

Dyad

A pair of related people, structures, cells, or variables considered together.

Dye

A colored substance used to stain tissue, label cells, visualize structures, or provide contrast in diagnostic or laboratory procedures.

Dye Lasers

Lasers that use an organic dye as the light-producing medium; they can generate tunable wavelengths for medical treatment and laboratory applications.

Dye Remover Poisoning

Exposure to dye remover, which may irritate the skin, eyes, airways, or gastrointestinal tract; product ingredients determine severity.

Dying

The process of progressive physical decline that occurs as a person approaches death, often accompanied by psychological, social, and spiritual changes.

Dynamin Gtpase

A family of GTP-binding proteins that constrict membranes during vesicle budding, endocytosis, and other cell-membrane processes.

Dynamometer

An instrument used to measure force, commonly hand-grip strength or muscle strength.

Dynein Atpase

The ATP-powered motor activity of dynein, which moves cargo toward the minus ends of microtubules and drives cilia and flagella movement.

Dynorphin

An endogenous opioid peptide that primarily activates kappa-opioid receptors and influences pain, stress, mood, and neuroendocrine signaling.

Dyphylline

A xanthine-derived bronchodilator used in some countries for asthma or chronic obstructive lung disease; nausea, tremor, and rapid heartbeat may occur.

Dysaesthesia

Dysaesthesia is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

Dysarthria

Impaired clarity, strength, or coordination of speech caused by dysfunction of the muscles or nervous pathways used for speaking. components of speech production, including the lips, tongue, palate, vocal cords, and respiratory muscles.

Dysautonomia

Dysfunction of the autonomic nervous system that can affect blood pressure, heart rate, sweating, temperature regulation, digestion, bladder function, or sexual function. It may be primary or secondary to another disease, medication, or injury.

Dysbarism

Illness caused by changes in ambient pressure, including decompression sickness and barotrauma during diving, flying, or hyperbaric exposure.

Dysbiosis

An alteration in microbiome composition, diversity, or function relative to a healthy state, permitting overgrowth of pathobionts or loss of beneficial microbes. Causes include antibiotics, dietary change, stress, and infection. It is associated with inflammatory bowel disease, obesity, allergy, and *Clostridioides difficile* colitis.

Dyscalculia

A persistent difficulty with understanding or manipulating numerical quantities and performing arithmetic that is not explained by inadequate instruction alone. It may occur as a developmental learning disorder or result from acquired brain injury, particularly involving dominant parietal networks.

Dyschezia

Dyschezia is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

Dyscrasia

An historic term broadly referring to any abnormal condition of the blood or bone marrow, now used primarily in the context of plasma cell dyscrasias (also called monoclonal gammopathies).

Alternate Names:

monoclonal gammopathies).

Dyscrasias

Dyscrasias is an older broad term for abnormal blood or body-fluid composition, often referring to hematologic disorders or abnormal blood cells.

Dysembryoplastic Neuroepithelial Tumor

A benign or very low-grade glioneuronal tumor, usually in the cerebral cortex of children or young adults, classically causing long-standing drug-

resistant focal seizures.

Dysentery

Severe diarrheal illness with blood and mucus in stool, typically caused by *Shigella*, *Salmonella*, *Campylobacter*, or *Entamoeba histolytica*. Presents with frequent bloody stools, abdominal cramps, tenesmus, and fever. Diagnosis: stool culture, microscopy, PCR.

Dysesthesia

An unpleasant, abnormal sensation produced by a normally non-painful stimulus, or an unpleasant, exaggerated response to a normal stimulus. It is distinguished from paresthesia (which is simply an abnormal sensation that may or may not be unpleasant) by its consistently unpleasant quality.

Dysferlinopathy

A spectrum of autosomal recessive muscular dystrophies caused by biallelic loss-of-function mutations in the *DYSF* gene on chromosome 2p13.2, which encodes dysferlin, a 230-kDa transmembrane protein essential for calcium-dependent sarcolemmal vesicle fusion and membrane patch repair following mechanical stress. Phenotypically manifests in late adolescence or early adulthood (ages 15–25) as either Limb-Girdle Muscular Dystrophy R2 (LGMD R2 / LGMD 2B) with predominantly pelvic- and shoulder-girdle weakness, or Miyoshi myopathy with selective, early wasting and weakness of distal calf muscles (gastrocnemius and soleus), both characterized by massive serum creatine kinase elevations ($> 20\text{--}50\times$ normal) and total absence of dysferlin on Western blot or immunohistochemistry.

Alternate Names:

DYSF-Related Muscular Dystrophy; Dysferlin Deficiency

Dysfibrinogenemia

An inherited or acquired disorder in which fibrinogen is abnormal and blood clotting may be impaired or excessive.

Dysfunction

Abnormal, impaired, or inadequate function of an

organ, tissue, system, or process.

Dysfunctional Uterine Bleeding

Dysfunctional Uterine Bleeding is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

Dysgammaglobulinemia

Dysgammaglobulinemia concerns dysgammaglobulinemia, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Dysgerminoma

Dysgerminoma is a malignant germ-cell tumor of the ovary, analogous to seminoma of the testis, and often occurs in adolescents or young adults.

Dysgeusia

Distortion, reduction, or loss of the normal sense of taste. It may result from oral or nasal disease, viral infection, neurological injury, nutritional deficiency, systemic illness, or medication exposure and may occur with altered smell, dry mouth, or mucosal inflammation.

Dysgraphia

A learning disorder involving persistent difficulty with handwriting, spelling, written expression, or the motor and language skills required for writing. spelling, written composition, or the motor and language processes required for writing. It may occur alone or with other learning, language, attention, or neurological disorders.

Dyshidrosis

A skin disorder causing small, intensely itchy blisters on the palms, sides of the fingers, or soles.

Alternate Names:

Eczema, Dyshidrotic

Dyskeratosis Congenita

An inherited telomere-biology disorder causing variable bone-marrow failure, abnormal skin pigmenta-

tion, nail dystrophy, and oral leukoplakia. Patients may also develop pulmonary, liver, dental, skeletal, developmental, and malignancy complications.

Dyskinesia

Abnormal, often involuntary movement that may be excessive, repetitive, irregular, or purposeless. Causes include neurological disease and medication effects.

Dyslexia

A specific learning disorder with neurobiological origin, characterized by difficulties with accurate and fluent word recognition, spelling, and decoding ability, despite adequate intelligence, motivation, and educational opportunity. Affects approximately 5–10% of the population.

Alternate Names:

Reading Disability, Specific Reading Disability

Dyslipidemia

An abnormal concentration or composition of circulating lipoproteins, including elevated low-density lipoprotein cholesterol, elevated triglycerides, reduced high-density lipoprotein cholesterol, or mixed abnormalities.

Dyslipidemias

Abnormal blood-lipid concentrations, such as high LDL cholesterol, high triglycerides, or low HDL cholesterol, that can increase atherosclerotic and pancreatitis risk.

Dysmenorrhea

Painful menstruation, often causing cramping pelvic pain. See Menstrual Cramps.

Dysmenorrhoea

Painful menstruation, classified as primary (no identifiable pelvic pathology) or secondary (underlying structural or inflammatory condition).

Dysmetria

Inability to control the range, force, or speed of a

voluntary movement, commonly caused by cerebellar dysfunction.

Dysorexia

Dysorexia is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

Dysostoses

Inherited or developmental disorders in which one or more bones form abnormally.

Dyspareunia

Recurrent or persistent genital or pelvic pain associated with sexual intercourse, categorized clinically by anatomical depth as superficial (introital) or deep. Superficial dyspareunia involves pain localized to the vestibule or introitus upon initial contact or attempted penetration, commonly caused by provoked vestibulodynia, vulvovaginal atrophy (genitourinary syndrome of menopause), local dermatoses (lichen sclerosus), infections (vulvovaginal candidiasis), or vaginismus. Deep dyspareunia involves aching or sharp visceral pain provoked by deep penile thrusting, classic for pelvic endometriosis, adenomyosis, pelvic inflammatory disease, interstitial cystitis, or pelvic adhesions. Requires systematic examination of the vulva, pelvic floor musculature, and bimanual palpation.

Dyspepsia

Chronic or recurrent pain or discomfort centered in the upper abdomen. Organic causes: peptic ulcer disease, GERD, gastritis, gastric cancer. Functional dyspepsia is diagnosed after exclusion of organic pathology with normal upper endoscopy. Rome IV criteria define subtypes: epigastric pain syndrome and postprandial distress syndrome.

Dyspeptic

Relating to dyspepsia, symptoms such as upper-abdominal discomfort, fullness, early satiety, belching, or nausea.

Dysphagia

Difficulty swallowing, classified as oropharyngeal (difficulty initiating a swallow, choking, coughing, nasal regurgitation) or esophageal (sensation of food sticking retrosternally).

Alternate Names:

Difficulty Swallowing Trouble Swallowing

Dysphagia (Geriatric)

Difficulty swallowing, common in elderly. Causes: neurological (stroke, Parkinson's), structural (cancer, stricture), muscular (presbyesophagus), medications. Symptoms: coughing with eating, choking, pocketing food, weight loss, aspiration. Assessment: clinical exam, videofluoroscopy, endoscopy.

Alternate Names:

Geriatric

Dysphagia Diet

A texture- and consistency-modified diet prescribed after assessment of swallowing safety. Liquids and foods may be thickened or altered to reduce aspiration risk while maintaining adequate energy, protein, hydration, and patient acceptability.

Dysphagia Rehabilitation

Therapy to improve safe swallowing and nutrition in a person with dysphagia. It may include swallow exercises, compensatory techniques, diet modification, and education based on the cause and swallowing assessment.

Dysphasia

A language disorder caused by damage to the language-dominant hemisphere of the brain (typically left), involving difficulty with expression, comprehension, reading, or writing. Dysphasia (often used interchangeably with aphasia): partial loss of language function.

Dysphonia

An abnormal voice quality encompassing hoarseness, breathiness, roughness, vocal fatigue, pitch breaks, and strained or whispered speech. It is organic when due to structural laryngeal pathology (nodules, polyps, laryngitis, laryngeal cancer) and functional

when due to voice misuse, muscle tension dysphonia, or psychogenic causes.

Dysphoria

A state of marked unease, dissatisfaction, or emotional distress; gender dysphoria specifically refers to distress related to incongruence between experienced gender and assigned sex.

Dysplasia

Abnormal cell growth, maturation, or organization within a tissue. In some epithelial tissues it is a precancerous change that may regress, persist, or progress to invasive cancer, depending on its grade and cause; developmental dysplasia is a different use of the term. Dysplasia is not itself invasive cancer.

Dysplasia Cervical (Cervical Dysplasia)

Alternate index label for Cervical Dysplasia.

Dysplastic Nevus

Atypical nevus: a melanocytic lesion with clinical and histologic atypia, larger (>5-6 mm), with irregular borders, variable color (pink-tan-brown), and a macular/papular component; often multiple in the dysplastic nevus syndrome (familial atypical mole-melanoma, FAMMM).

Dyspnea

The subjective sensation of difficult or uncomfortable breathing. See Shortness of Breath. It may result from cardiopulmonary, metabolic, neuromuscular, or psychological causes.

Dyspnea On Exertion

Shortness of breath precipitated by physical activity, a cardinal symptom of cardiac and pulmonary disease. Cardiac causes: heart failure, coronary artery disease (angina equivalent), valvular disease; pulmonary: COPD, asthma, ILD, anemia, deconditioning. Quantified by NYHA functional class (heart failure) and mMRC scale (dyspnea).

Dyspnoea

The subjective sensation of difficult or labored

breathing. See Shortness of Breath.

Dyspraxia

Dyspraxia is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

Dyspraxia (Developmental Coordination Disorder)

Difficulty planning and coordinating voluntary movements that interferes with daily activities, learning, or motor skills and is not explained by a primary muscle or sensory disorder.

Alternate Names:

Developmental Coordination Disorder

Dysraphism

Dysraphism is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

Dysreflexia (Autonomic Dysreflexia)

A potentially life-threatening episode of uncontrolled autonomic activity, usually in people with spinal-cord injury above T6, triggered by stimuli such as bladder or bowel distension.

Alternate Names:

Autonomic Dysreflexia

Dysrhythmia

Dysrhythmia is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

Dyssomnias

Sleep disorders involving difficulty initiating or maintaining sleep, excessive sleepiness, or abnormal regulation of the sleep–wake cycle.

Dysthymia

Dysthymia is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend

on the history, examination, and appropriate investigations.

Dysthymia (Persistent Depressive Disorder)

A chronic form of depression with depressed mood for most of the day, more days than not, for ≥ 2 years (≥ 1 year in children/adolescents). Symptoms: poor appetite or overeating, insomnia or hypersomnia, low energy, low self-esteem, poor concentration, and hopelessness.

Alternate Names:

Persistent Depressive Disorder

Dystocia

Difficult or abnormal labor caused by problems with uterine contractions, the fetus, or the maternal pelvis and soft tissues.

Dystociais

Dystociais is a disease, syndrome, symptom, or clinical finding; diagnosis and management depend on the history, examination, and appropriate investigations.

Dystonia

A movement disorder characterized by sustained or intermittent muscle contractions causing abnormal, often repetitive, movements and postures.

Dystonia Disorder

A movement disorder causing sustained or intermittent involuntary muscle contractions that produce twisting movements, repetitive actions, or abnormal postures.

Dystonia, Cervical

Alternate index label; see *Cervical dystonia*.

Dystonin

A protein encoded by the DST gene that helps connect the cytoskeleton to cellular structures; harmful variants can cause neuropathy and skin blistering disorders.

Dystrophia Unguium

Abnormal nail growth or structure, which may result from trauma, infection, inflammatory disease, nutritional deficiency, medication, or an inherited disorder.

Dystrophic Calcification

The deposition of calcium phosphate salts in damaged, necrotic, or degenerating tissues despite normal serum calcium levels. It occurs in areas of tissue injury, inflammation, or chronic degeneration where the local tissue environment favors calcium precipitation.

Dystrophin

A muscle-cell protein that stabilizes the muscle-fiber membrane. Dystrophin deficiency causes Duchenne or Becker muscular dystrophy.

Dystrophin-Glycoprotein Complex

A large, multi-protein oligomeric complex spanning the sarcolemma of skeletal and cardiac muscle fibers, providing a vital mechanical and signaling bridge that links the intracellular actin cytoskeleton to the extracellular matrix. Consists of dystrophin, the dystroglycan subcomplex (α - and β -dystroglycan), the sarcoglycan subcomplex (α -, β -, γ -, and δ -sarcoglycan), sarcospan, syntrophins, α -dystrobrevin, and nNOS. Provides mechanical stabilization to the sarcolemma during the stress of muscle contraction and protects myofibers from contraction-induced micro-tears; mutations in constituent or modifying proteins cause Duchenne and Becker muscular dystrophies, sarcoglycanopathies, and dystroglycanopathies.

Alternate Names:

DGC; Dystrophin-Associated Glycoprotein Complex (DAGC)

Dystrophy

Abnormal development, growth, maintenance, or degeneration of a tissue or organ, often reflecting an inherited or metabolic disorder. The term is used in conditions such as muscular dystrophy, corneal dystrophy, retinal dystrophy, and nail dystrophy. Clinical effects depend on the affected tissue and

may include progressive weakness, visual impairment, structural fragility, or loss of function. Diagnosis generally combines clinical examination with laboratory, imaging, electrophysiologic, genetic, or histopathologic studies as appropriate.

Dysuria

Painful, burning, or uncomfortable sensation experienced during urination. Most commonly indicates inflammation or infection of the lower urinary tract. Causes in females: acute cystitis, urethritis (*Chlamydia trachomatis*, *Neisseria gonorrhoeae*), vaginitis (*Candida*, *Trichomonas*), and vulvar atrophy.

Alternate Names:

Painful Urination

E

E Coli Enteritis

Intestinal infection caused by pathogenic strains of *Escherichia coli*. Depending on the strain, it may cause watery or bloody diarrhea, abdominal cramps, vomiting, or systemic complications such as hemolytic uremic syndrome.

E Coli Infection

An infection caused by *E. coli* bacteria. It may cause urinary infections, diarrhea, wound or abdominal infections, meningitis in newborns, or bloodstream infection. Some strains cause bloody diarrhea and can damage the kidneys.

E-Cigarettes And E-Hookahs

Electronic nicotine-delivery devices that heat a liquid aerosol; they can cause nicotine dependence and expose users and bystanders to irritants and toxic chemicals.

E. Coli

A group of bacteria that normally inhabit the intestines, some strains of which cause diarrheal illness, urinary infections, or other infections.

E. Coli (E. Coli 0157:H7)

Alternate index label for *E. Coli* 0157:H7.

E. Coli 0157:H7

E. coli O157:H7 is a Shiga-toxin-producing strain that can cause severe diarrhea, abdominal cramps, and bloody stool. It may lead to hemolytic uremic syndrome, especially in children; antibiotics and antidiarrheals require careful medical guidance.

E. Coli Infection

An infection caused by *Escherichia coli* bacteria, which may cause diarrhea, urinary infection, or more serious illness.

Eales Disease

An uncommon eye condition in which small veins at the edge of the retina become inflamed or blocked. New fragile blood vessels may form and bleed inside the eye, causing vision problems.

Ear

The organ used for hearing and balance. It has three parts: the outer ear, the middle ear behind the eardrum, and the inner ear, which sends hearing and balance signals to the brain.

Ear - Blocked At High Altitudes

Ear - blocked at high altitudes concerns ear - blocked at high altitudes, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Ear Barotrauma

Ear injury caused by a pressure difference between the middle ear and the outside air, often during air travel or diving. It may cause pain, fullness, hearing loss, ringing, dizziness, or a torn eardrum.

Ear Canal

A tube leading from the eardrum to the outer ear.

Ear Cartilage

Flexible connective tissue forming much of the external ear and helping maintain its shape.

Ear Cleaning (By A Doctor)

Professional removal of excess or impacted earwax by a clinician using instruments, suction, irrigation when appropriate, or other safe methods after examining the ear.

Ear Disease

A disorder of the outer, middle, or inner ear causing pain, drainage, hearing loss, tinnitus, dizziness, infection, or balance disturbance.

Ear Diseases

Any disorder affecting the structures of the ear—external ear (pinna, ear canal), middle ear (tympanic membrane, ossicles, Eustachian tube), or inner ear (cochlea, vestibular apparatus).

Ear Drainage Culture

A laboratory culture of fluid draining from the ear to identify bacteria or fungi that may cause otitis externa, chronic middle-ear infection, or another ear infection. Results must be interpreted with examination findings because colonization and contamination are possible.

Ear Emergencies

Ear emergencies concerns ear emergencies, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Ear Examination

Assessment of the external ear, ear canal, and tympanic membrane using inspection and otoscopy, often with hearing and vestibular evaluation when indicated.

Ear Foreign Body

An object lodged in the external auditory canal, commonly occurring in children. It may cause pain, hearing reduction, discharge, or canal injury and should be removed with appropriate visualization and technique.

Alternate Names:

External auditory-canal foreign body; ear-canal for-

eign body.

Ear Infection

Infection or inflammation of the ear, commonly involving the external canal or middle ear. It may cause ear pain, fever, reduced hearing, discharge, or irritability in children. Also called otitis.

Alternate Names:

otitis. Otitis (Ear Infection)

Ear Infection (Middle Ear)

Infection or inflammation in the space behind the eardrum, often causing ear pain, fever, hearing changes, or irritability in children.

Ear Infection - Acute

Acute otitis media is a rapid-onset infection and inflammation of the middle ear, often following an upper-respiratory infection. It can cause ear pain, fever, reduced hearing, or a bulging tympanic membrane; treatment depends on age, severity, and cause.

Ear Infection - Chronic

Chronic ear infection refers to persistent or recurrent inflammation or infection of the middle ear or external ear. It may cause drainage, hearing loss, perforation, or structural damage and requires examination to identify the involved compartment and cause.

Ear Microbiome

The community of microorganisms living in and on the ear, especially the external auditory canal. These microorganisms interact with earwax and the skin and may help prevent infection. The composition varies between people and can be affected by ear cleaning, moisture, hearing aids, inflammation, and infection; research on the healthy middle-ear microbiome remains limited.

Ear Infection, Outer Ear

Alternate index label; see *Swimmer's ear*.

Ear Neoplasm

A benign or malignant growth arising in the outer, middle, or inner ear; symptoms may include a persistent mass, discharge, hearing loss, pain, or facial weakness.

Ear Object In (Objects Or Insects In Ear)

Alternate index label for Objects Or Insects In Ear.

Ear Tag

Ear tag concerns ear tag, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Ear Thermometer

A thermometer that estimates body temperature by measuring heat inside the ear canal.

Ear Tube Insertion

A medical procedure, treatment, device, or care topic related to ear tube insertion; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Ear Wax

Cerumen, a mixture of secretions and shed skin that protects and cleans the ear canal. Impacted wax may cause hearing loss, fullness, tinnitus, itching, or discomfort. Cotton swabs and inserted objects can worsen impaction or injure the ear; removal should use safe clinician-recommended methods, particularly when an eardrum perforation is possible.

Alternate Names:

Earwax (Ear Wax)

Ear, Diseases Of

Ear, Diseases of is an ear-related disease or condition; symptoms, examination findings, causes, and treatment depend on the affected structure.

Ear, Low-Set

An ear positioned lower on the head than usual; it may be a normal familial feature or one finding among others in a congenital syndrome.

Ear, Nose, And Throat

A medical specialty (otolaryngology) focused on the diagnosis and treatment of disorders affecting the ears, nose, throat, head, and neck. Conditions managed include hearing loss, sinusitis, tonsillitis, voice disorders, and head and neck cancers.

Ear-Trumpet

Ear-Trumpet is an ear-related disease or condition; symptoms, examination findings, causes, and treatment depend on the affected structure.

Earache

Earache (otalgia) is pain perceived in or around the ear. Causes include ear infection, ear-canal blockage or injury, dental or jaw disorders, and referred throat disease; persistent, severe, or discharge-associated pain requires evaluation.

Earache (Otalgia)

Pain originating from the ear, a common symptom with diverse causes. Otalgia is classified as primary (originating within the ear itself) or secondary/referred (pain perceived in the ear but arising from another site).

Alternate Names:

Otalgia

Eardrum

A thin membrane separating the ear canal and middle ear.

Eardrum Repair

A medical procedure, treatment, device, or care topic related to eardrum repair; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Eardrum, Ruptured

Alternate index label; see *Ruptured eardrum (perforated eardrum)*.

Earliest Signs Of Increased Intracranial Pressure

Early increased intracranial pressure may cause

worsening headache, vomiting, visual changes, drowsiness, slowed thinking, or a change in behavior. It can result from bleeding, tumor, swelling, infection, or hydrocephalus and requires prompt evaluation when progressive.

Earlobe Creases

Earlobe creases concerns earlobe creases, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Early Decelerations

A fetal heart-rate pattern with a gradual decrease and recovery that mirrors the uterine contraction, usually caused by fetal head compression. It is generally benign when isolated, but the complete tracing and clinical situation determine whether any action is needed.

Early Detection

Identification of a disease at an early stage, when treatment may be more effective. It may result from screening or prompt evaluation of symptoms.

Early Diagnosis

Identification of a disease at an early stage, before it has progressed or caused major complications; earlier diagnosis may expand treatment options.

Early Endosome

A membrane-bound compartment that receives material brought into a cell by endocytosis and sorts it for recycling or delivery to lysosomes.

Early Intervention

Services provided to infants and young children with developmental delays or disabilities to support development, function, and participation.

Early Puberty

Alternate index label; see *Precocious puberty*.

Early Repolarization Syndrome

A primary arrhythmogenic cardiac channelopathy

characterized by a malignant early repolarization pattern on resting 12-lead electrocardiography: J-point elevation ≥ 1 mm (0.1 mV) above the isoelectric baseline in ≥ 2 contiguous inferior (II, III, aVF) and/or lateral (I, aVL, V_4 – V_6) leads, manifested as QRS slurring or notching, in patients who have survived unexplained, idiopathic ventricular fibrillation or polymorphic ventricular tachycardia. Differentiated from the common, benign early repolarization pattern of young athletes by horizontal or downsloping ST segments following the J point and family or personal history of syncope, polymorphic ventricular tachycardia, or aborted sudden cardiac arrest.

Alternate Names:

ERS; Malignant Early Repolarization

Earwax

Cerumen, a waxy secretion produced by the ceruminous glands in the outer third of the external auditory canal. Earwax lubricates and protects the skin of the ear canal, trapping dust, debris, and microorganisms to prevent them from reaching the tympanic membrane.

Earwax (Ear Wax)

Alternate index label for Ear Wax.

Earwax Blockage

A buildup of earwax that blocks the ear canal and may cause hearing loss, pain, or ringing.

Eat

To consume food; nutritional needs and safe intake depend on age, health conditions, swallowing ability, and dietary requirements.

Eating Disorder

A group of conditions characterized by abnormal eating habits and distorted body image, including anorexia nervosa, bulimia nervosa, binge eating disorder, and avoidant/restrictive food intake disorder (ARFID). Anorexia: severe calorie restriction, intense fear of weight gain, and body image disturbance with dangerously low weight.

Eating Disorders

Serious mental and physical health conditions involving disturbed eating behaviors, body image, and relationships with food and weight.

Eating Disorders, Anorexia

Alternate index label; see *Anorexia nervosa*.

Eating Disorders, Binge Eating

Alternate index label; see *Binge-eating disorder*.

Eating Disorders, Bulimia

Alternate index label; see *Bulimia nervosa*.

Eating Extra Calories When Sick - Adults

A nutrition topic concerning increased calorie intake during adult illness. Energy needs depend on the illness, appetite, swallowing ability, and medical advice; forcing food is not appropriate when it is unsafe.

Eating Habits And Behaviors

Patterns of food choice, meal timing, appetite, restriction, overeating, and other behaviors that influence nutrition and health.

Eating Out

Eating meals prepared outside the home, which may require attention to portion size, nutrition, food allergies, and food safety.

EBCT

Electron-beam computed tomography, a rapid imaging method used especially to assess the heart and calcium in coronary arteries.

Alternate Names:

Electron-beam computed tomography

Ebola

Ebola virus disease: a severe, often fatal viral hemorrhagic fever caused by Ebola virus (Filoviridae, RNA), transmitted by direct contact with blood/body fluids of infected humans/animals. Incubation 2-21 days.

Ebola Hemorrhagic Fever (Ebola Hemorrhagic Fever (Ebola HF))

Alternate index label for Ebola Hemorrhagic Fever (Ebola HF).

Ebola Hemorrhagic Fever (Ebola HF)

Alternate index label for Ebola HF.

Ebola Virus

A filovirus that causes Ebola virus disease, a severe hemorrhagic fever. The virus is transmitted through contact with infected body fluids. The incubation period is 2-21 days. Symptoms include fever, headache, myalgia, and hemorrhage. Diagnosis is made by PCR and antigen detection.

Ebola Virus Disease

A severe viral infection caused by Ebola viruses, characterized by fever and systemic illness that may progress to bleeding, shock, or organ failure.

Ebolavirus

A genus of viruses that includes the viruses causing Ebola disease, a severe infection that can cause fever, bleeding, and organ damage.

Ebstein Anomaly

A rare congenital heart defect accounting for less than 1 percent of all congenital heart disease, characterized by apical displacement of the septal and posterior leaflets of the tricuspid valve into the right ventricle, resulting in atrialization of the proximal right ventricle and a small functional right ventricular chamber.

Ebstein'S Anomaly

A congenital heart defect in which the tricuspid valve is displaced toward the right ventricle and functions abnormally; it can cause tricuspid regurgitation, right-heart enlargement, cyanosis, or arrhythmias.

EBUS-TBNA

Endobronchial ultrasound-guided transbronchial needle aspiration, a minimally invasive broncho-

scopic procedure that combines flexible fiberoptic bronchoscopy with a dedicated convex curved-array ultrasound probe on the bronchoscope tip. It enables real-time ultrasound imaging and transbronchial needle aspiration of mediastinal and hilar lymph nodes (stations 2, 4, 7, 10, 11, and 12) and central peribronchial lesions for lung cancer staging, evaluation of sarcoidosis, lymphoma, or tuberculosis, largely replacing surgical mediastinoscopy.

Alternate Names:

Endobronchial Ultrasound Transbronchial Needle Aspiration; Convex Probe EBUS

Ecbolics

Medicines or substances that stimulate uterine contractions, including oxytocin and some prostaglandins, used in selected obstetric situations.

Eccentric

Eccentric is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

Eccentric Action

Muscle action in which a muscle produces force while lengthening.

Alternate Names:

Eccentric contraction

Eccentrocyte Count

The number or proportion of red blood cells with hemoglobin displaced toward one side of the cell, a smear finding that can occur with oxidative injury and some hemolytic disorders.

Ecchymosis

A flat purple, blue, or brown area caused by blood leaking into skin or subcutaneous tissue, commonly after trauma but also with platelet disorders, anticoagulants, clotting disorders, or fragile blood vessels. Size alone does not determine the cause.

Eccrine Gland

A coiled sweat gland distributed throughout the skin that secretes a watery fluid directly onto the skin

surface through a duct. Eccrine sweating supports thermoregulation and is stimulated by sympathetic cholinergic fibres; the glands are especially numerous on the palms, soles, and forehead.

Eccrine Glands

Eccrine Glands is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

Eccrine Porocarcinoma

A rare malignant skin adnexal tumor arising from eccrine sweat-gland ducts; it usually presents as a slowly enlarging nodule or plaque and may recur or metastasize, so biopsy and complete excision are important.

Eccrine Poroma

A usually benign tumor arising from the eccrine sweat-gland duct, commonly presenting as a flesh-colored or reddish nodule on the hands or feet.

Ecdysone

A steroid hormone in insects and other arthropods that triggers moulting and metamorphosis; it is relevant mainly to entomology and experimental biology, not routine human therapy.

ECG

A recording of the heart's electrical activity used to evaluate rhythm and other cardiac problems.

Alternate Names:

Electrocardiogram; EKG

ECG/EKG Machine

Records electrical activity of heart. 12-lead ECG standard. Components: electrodes, leads, amplifier, recorder. Essential for cardiac diagnosis.

Echinacea

A group of flowering plants used in some herbal products marketed for colds or immune support; evidence of benefit is inconsistent and allergic reactions or drug interactions may occur.

Echinocandins

A group of antifungal medicines that weaken the fungal cell wall. They are used mainly for serious *Candida* infections and some *Aspergillus* infections.

Echinococcal Cysts

Fluid-filled parasitic cysts caused by larval *Echinococcus* tapeworms, usually occurring in the liver or lungs.

Echinococcosis

A parasitic infection caused by *Echinococcus* tapeworms. Cystic disease commonly affects the liver or lungs, while alveolar disease can invade the liver and spread to other organs; diagnosis and treatment require specialist assessment.

Echinococcus

A genus of tapeworms that can cause echinococcosis when people ingest eggs from contaminated food, water, or contact with infected animals.

Echinococcus Granulosus

A tapeworm that causes hydatid disease (cystic echinococcosis). The adult worm infects dogs, and humans are accidental intermediate hosts. Infection occurs through ingestion of eggs from dog feces. Larval cysts form in the liver and lungs, causing space-occupying lesions.

Echinococcus Multilocularis

A tapeworm species that causes alveolar echinococcosis, a slowly progressive parasitic disease that mainly affects the liver.

Echinococcus Vogeli

A tapeworm species that causes polycystic echinococcosis, mainly affecting the liver and sometimes other abdominal organs.

Echinocytes (Burr Cells)

Red blood cells with many small, evenly spaced spikes around their edges. They may occur with kidney disease, some inherited blood disorders, or as a change caused by storing or preparing the blood

sample.

Alternate Names:

Burr Cells

Echinodermata

The animal phylum that includes starfish, sea urchins, and sea cucumbers; some species produce toxins or cause injury, but the group is mainly relevant to biology and marine research.

Echinomycin

A medicine or chemical compound called echinomycin. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Echo

A common abbreviation for echocardiography, an ultrasound examination used to assess the heart's structure and function.

Echocardiogram

An echocardiogram uses ultrasound to assess cardiac chambers, valves, wall motion, blood flow, and ventricular function without ionizing radiation. It helps evaluate heart failure, valve disease, congenital defects, and other cardiac disorders.

Echocardiogram - Children

An ultrasound examination of a child's heart that assesses chambers, valves, blood flow, wall motion, and congenital or acquired structural abnormalities without ionizing radiation.

Echocardiography

Ultrasound imaging of the heart. It shows the heart chambers, valves, pumping action, and blood flow. The most common type scans through the chest; another type uses a small probe passed into the esophagus for closer views.

Echoencephalography

Ultrasound imaging of the brain, historically used especially in infants, to detect midline shift or enlarged ventricles; CT or MRI is now usually preferred.

Echogenic Bowel

An ultrasound finding in which the fetal bowel appears unusually bright, sometimes as bright as nearby bone. It may be a normal variant or may be associated with infection, chromosomal conditions, cystic fibrosis, or other fetal abnormalities.

Echogenic Intracardiac Focus

A small bright area, usually in a papillary muscle of the fetal heart, seen on ultrasound. It is commonly an incidental variant when isolated and the remainder of the examination is normal. Its significance depends on prior screening, other ultrasound findings, and the clinical context.

Echography

Medical ultrasonography, which uses high-frequency sound waves to create images of tissues, organs, blood flow, or a developing fetus.

Echolalia

The involuntary, automatic repetition of words or phrases spoken by another person, a speech phenomenon observed in various neurologic and psychiatric conditions. Immediate echolalia involves repeating sounds immediately after hearing them; delayed echolalia involves repeating phrases heard hours, days, or weeks earlier.

Echolocation

Detection of objects by emitting sound and interpreting returning echoes; it is used by some animals and inspires medical ultrasound and assistive technologies.

Echopraxia

Involuntary imitation or repetition of another person's movements, seen in some neurologic and psychiatric disorders.

Echothiophate Iodide

An irreversible cholinesterase inhibitor formerly used topically to reduce intraocular pressure in glaucoma or produce prolonged miosis; systemic cholinergic toxicity is a major risk.

Echovirus

A group of enteroviruses that commonly cause asymptomatic or mild infection but may also cause aseptic meningitis, encephalitis, rash, respiratory illness, myocarditis, or neonatal sepsis. Transmission is mainly faecal-oral or respiratory, and diagnosis is usually by nucleic-acid testing or viral culture in selected cases.

Eclampsia

Eclampsia is a new-onset seizure during pregnancy or the postpartum period associated with preeclampsia or pregnancy-related hypertension. It is an emergency requiring airway and blood-pressure management, magnesium sulfate for seizure prevention or treatment, and urgent obstetric planning.

Eclampsia Pregnancy (Pregnancy: Preeclampsia And Eclampsia)

Alternate index label for Pregnancy: Preeclampsia and Eclampsia.

Eclosion

Emergence from a protective covering or developmental stage, such as hatching from an egg or emerging from a pupa.

ECOG Performance Status

A five-point scale describing functional impairment, from 0 for fully active to 5 for death. It is widely used in clinical trials, prognostic assessment, and decisions about systemic anticancer treatment.

Econazole

A topical imidazole antifungal that inhibits fungal ergosterol synthesis and treats dermatophyte or Candida skin infections; local irritation or contact dermatitis may occur.

Economy Class Syndrome

A colloquial term for travel-associated deep-vein thrombosis or pulmonary embolism after prolonged immobility, not limited to economy-class travel.

Ecotoxicology

The study of how chemicals and other pollutants affect organisms, populations, ecosystems, and environmental health.

Ecstasy

A common street name for MDMA, a psychoactive stimulant and empathogen that can cause dangerous overheating, dehydration or hyponatremia, cardiovascular stress, and neuropsychiatric effects.

Ectasia

Abnormal widening or dilation of a tubular structure, vessel, duct, or organ. The term is used in conditions such as vascular ectasia and duct ectasia.

Ecthyma

A bacterial skin infection that extends into the dermis and produces painful punched-out ulcers covered by thick crusts. It is commonly caused by *Streptococcus* or *Staphylococcus* and may require wound care and antimicrobial treatment.

Ecthyma Gangrenosum

A serious skin infection, usually caused by *Pseudomonas* bacteria, that produces dark, dying areas of skin and ulcers. It occurs most often in people with severely weakened immune systems or very low white-blood-cell counts and requires urgent treatment.

Ectoderm

The outer layer of cells in an early embryo. It develops into the skin, nervous system, and sense organs.

Ectodermal Dysplasia

A group of inherited disorders affecting tissues derived from the embryonic ectoderm, including hair, teeth, nails, skin, and sweat glands. Findings vary but may include sparse hair, abnormal teeth, reduced sweating, heat intolerance, and recurrent infections.

Ectodermal Dysplasias

A group of inherited disorders affecting tissues derived partly from the embryonic ectoderm, commonly the hair, teeth, nails, skin, and sweat glands. Features vary and may include abnormal temperature regulation, recurrent infections, and dental problems.

Ectomesenchymoma

A rare malignant mixed tumor containing neural and mesenchymal components, usually occurring in children and requiring specialist pathology and oncology evaluation.

Ectop Parasite

A clinical disorder or finding related to ectop parasite; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Ectoparasite

A parasite that lives on the external surface of a host, such as a louse, flea, tick, or mite.

Ectopia Cordis

A rare congenital defect in which the heart is located partly or completely outside the chest.

Ectopia Lentis

A displaced eye lens. It may be caused by an injury or by inherited conditions such as Marfan syndrome, and can cause blurred vision or other vision problems.

Ectopic

Located or occurring in an abnormal position; an ectopic pregnancy implants outside the uterine cavity, most often in a fallopian tube.

Ectopic ACTH Syndrome

A condition in which a tumor outside the pituitary gland makes ACTH, a hormone that causes the body to produce too much cortisol. It is most often linked to certain lung tumors and can cause Cushing syndrome.

Ectopic Beat

An extra or premature heartbeat arising outside the normal sinoatrial-node rhythm, such as a premature atrial contraction or premature ventricular contraction.

Ectopic Cushing Syndrome

Hypercortisolism caused by an extrapituitary tumor producing adrenocorticotrophic hormone or, rarely, corticotropin-releasing hormone. It may cause hypertension, diabetes, hypokalemia, muscle weakness, infection risk, and rapid features of cortisol excess.

Ectopic Heartbeat

A heartbeat originating outside the normal sinoatrial-node rhythm. Premature atrial or ventricular beats may feel like a skipped beat, flutter, or sudden thump and can occur in healthy people or with structural heart disease.

Ectopic Pregnancy

A pregnancy that grows outside the uterus, most often in a fallopian tube. It may cause missed periods, lower-abdominal pain, or vaginal bleeding. If it ruptures, it can cause severe internal bleeding and is an emergency.

Alternate Names:

Pregnancy Ectopic (Ectopic Pregnancy) Pregnancy Tubal (Ectopic Pregnancy)

Ectopic Thyroid

Thyroid tissue located outside its normal pretracheal position, most commonly along the path of thyroid descent from the foramen cecum to the normal cervical location. The most common site is the base of the tongue (lingual thyroid).

Ectopic Thyroid Tissue

Thyroid tissue located outside the normal pretracheal position resulting from failure of normal thyroid descent during embryological development. Most commonly found at the base of the tongue termed lingual thyroid. May be the only functioning thyroid tissue. Symptoms include dysphagia, dysphonia, and upper airway obstruction.

Ectopic Tissue

Tissue located in an abnormal anatomical position, usually because of developmental displacement or implantation.

Ectopion

An outward turning or eversion of a body structure, commonly used for the eyelid or cervix.

Ectopistes

A genus of birds that includes the extinct passenger pigeon, a term mainly used in zoology and historical biology.

Ectoplasm

The cytoplasm at the outer edge of a cell, especially in descriptions of amoeboid cells; the term is also used in nonmedical spiritual claims that lack scientific support.

Ectrodactyly

A condition present at birth in which one or more middle fingers or toes are missing, leaving a deep gap in the hand or foot. It is also called split hand/foot malformation.

Ectromelia

Congenital absence or severe underdevelopment of one or more limbs; the term may also refer to a viral disease of laboratory mice.

Ectropion

Ectropion is outward turning of an eyelid, usually the lower lid, causing tearing, irritation, dryness, and incomplete eyelid closure. It may be involutional, paralytic, cicatricial, or mechanical; persistent corneal exposure can damage vision.

Eculizumab

A medicine or chemical compound called eculizumab. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Eczema

A group of inflammatory skin conditions charac-

terized by pruritic, erythematous, scaly patches. Atopic dermatitis is the most common form. Nummular eczema presents as coin-shaped lesions. Dyshidrotic eczema affects palms and soles with vesicles. Eczema herpeticum is a disseminated HSV infection in eczema patients, a medical emergency.

Eczema (Atopic Dermatitis)

A chronic inflammatory skin condition characterized by dry, itchy, and inflamed patches of skin. It is driven by a combination of genetic predisposition, immune system dysfunction, and environmental triggers.

Alternate Names:

Atopic Dermatitis

Eczema Herpeticum

A widespread viral skin infection caused by herpes simplex virus occurring in patients with pre-existing skin barrier defects, most commonly atopic dermatitis. It presents with monomorphic, umbilicated vesicles, pustules, and hemorrhagic crusted erosions, often with fever and lymphadenopathy.

Dyshidrotic Eczema

A type of eczema that causes small, intensely itchy, fluid-filled blisters on the palms, sides of the fingers, or soles of the feet. The blisters may dry, peel, and leave cracked or thickened skin. It often comes and goes and may be triggered by irritation, allergies, sweating, or stress.

Alternate Names:

Pompholyx Dyshidrosis Dyshidrotic Dermatitis

Eczema, Dyshidrotic

Alternate index label for Dyshidrotic Eczema.

Eczematous Dermatitis

A pattern of inflammatory skin disease characterized by itching, redness, scaling, dryness, oozing, or vesicles. Causes include atopic, allergic contact, irritant contact, and other forms of dermatitis.

ED

Erectile dysfunction: inability to obtain or maintain

an erection adequate for sexual activity.

Alternate Names:

Erectile dysfunction

Edatrexate

An investigational antifolate related to methotrexate, studied as an anticancer drug by disrupting folate-dependent DNA synthesis.

Edema

Swelling caused by extra fluid in body tissues. It may leave a dent when pressed or feel firm. Common causes include heart, kidney, or liver disease, poor vein drainage, blocked lymph flow, and some medicines.

Edema (Historically Dropsy)

An historic term for edema, referring to the abnormal accumulation of serous fluid in the tissues or body cavities.

Alternate Names:

historically Dropsy

Edema Pulmonary (Pulmonary Edema)

Alternate index label; see *Pulmonary Edema*.

Edema Trunk

Abnormal accumulation of fluid in the soft tissues of the chest or abdomen, producing swelling from heart, kidney, liver, lymphatic, venous, inflammatory, or medication-related causes.

Edema, Pulmonary

Alternate index label; see *Pulmonary Edema*.

Edentulism

Complete or partial absence of natural teeth. It can impair mastication, speech, nutrition, facial support, and quality of life and may be managed with removable, fixed, or implant-supported prostheses.

Edentulous

The clinical state of lacking natural dentition, classified as completely edentulous (absence of all permanent teeth) or partially edentulous. Most commonly

secondary to severe periodontal disease, extensive dental caries, trauma, or congenital anodontia. The loss of functional occlusal load triggers progressive, irreversible alveolar bone resorption and loss of the vertical dimension of occlusion, leading to facial soft-tissue collapse, pseudoprognathism, and predispositions to angular cheilitis. Systemic consequences include impaired mastication, involuntary dietary shift toward soft carbohydrates, protein-calorie malnutrition, micronutrient deficiencies, and impaired phonetic articulation. Rehabilitative strategies encompass conventional complete or removable partial dentures, implant-supported overdentures, and fixed full-arch endosseous dental implants.

Edentulousness

Complete or partial absence of natural teeth. It may result from dental disease, trauma, developmental abnormalities, or tooth extraction and can impair chewing, speech, and oral function.

Edetic Acid

Another name for EDTA, a chemical that binds certain metals. It is used in blood-collection tubes, laboratories, and selected treatments for heavy-metal poisoning.

Edodekin Alfa

An investigational biologic drug name for an immune-signaling treatment; its use depends on the specific formulation and clinical indication.

Edotecarin

An investigational anticancer drug that inhibits topoisomerase I, an enzyme needed for DNA replication.

Edrecolomab

A medicine or chemical compound called edrecolomab. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Edrophonium

A short-acting acetylcholinesterase inhibitor formerly used to help diagnose myasthenia gravis or

reverse some nondepolarizing neuromuscular blockade; it can cause dangerous bradycardia or bronchospasm.

EDTA

Ethylenediaminetetraacetic acid, a chelating agent used in laboratory blood collection, research, and selected treatments for heavy-metal poisoning.

Edward Syndrome

Trisomy 18, a chromosomal condition associated with severe developmental impairment, characteristic hand and foot findings, congenital heart defects, growth restriction, and feeding difficulties. Survival and severity vary, but mortality in infancy is high.

Edwards Syndrome

Trisomy 18, caused by an extra chromosome 18 in all or some cells or by an unbalanced rearrangement. It is associated with multiple congenital anomalies, severe developmental impairment, and high infant mortality.

Alternate Names:

Trisomy 18 (Edwards Syndrome)

Edwardsiella

A genus of gram-negative bacteria associated with aquatic environments and animals; *E. tarda* can cause gastroenteritis, wound infection, or invasive disease in humans.

Edwardsiella Hoshinae

A bacterial species mainly associated with fish and the environment that rarely causes opportunistic human infection.

Edwardsiella Ictaluri

A fish pathogen that causes enteric septicemia in catfish and is not a common human pathogen.

Edwardsiella Tarda

A Gram-negative bacterium associated with fish, reptiles, and water that can rarely cause gastroenteritis, wound infection, or bloodstream infection in people.

EEG

An EEG records electrical activity generated by the brain through scalp electrodes and helps evaluate seizures, encephalopathy, and selected sleep or neurologic disorders.

Alternate Names:

Electroencephalogram

Efalizumab

A medicine or chemical compound called efalizumab. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Efaproxiral

An investigational modifier of hemoglobin oxygen affinity studied to increase oxygen release to tissues, including in cancer research.

EFAST Examination

A rapid bedside ultrasound examination used after serious injury to look for internal bleeding, air around the lung, or fluid around the heart. A normal EFAST scan does not rule out every internal injury.

Efavirenz

A medicine or chemical compound called efavirenz. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Effacement

Thinning (shortening) of the cervix during labor, expressed as a percentage (0-100 percent), as the cervix is taken up into the lower uterine segment, enabling dilation. Occurs with cervical dilation in the first stage of labor, driven by contractions and the presenting part.

Effective Dose

A radiation-safety estimate that combines the exposure to different organs into one number. It helps compare radiation risks between tests but does not predict an individual patient's exact cancer risk.

Effective Half-Life

The time required for the activity of a radionuclide in a tissue or body to fall by one half through both physical radioactive decay and biologic elimination. It determines the duration of radiation exposure in that compartment.

Effective Reproduction Number (Rt)

The average number of secondary infections caused by an infectious person at a particular time, accounting for existing immunity, behavior, interventions, and population structure. Sustained transmission generally requires Rt above 1.

Alternate Names:

Rt

Effectiveness

The degree to which an intervention produces its intended outcome in routine practice, as distinct from efficacy under ideal study conditions.

Effector

A cell, molecule, organ, or mechanism that carries out a response after receiving a signal.

Efferent

Carrying signals away from a central structure, especially motor or autonomic signals from the central nervous system to muscles or glands.

Efferent Nerve

Efferent nerve is a nerve pathway or nerve-related structure that carries signals between the nervous system and its target; symptoms depend on the site of involvement.

Efferent Neuron

A nerve cell that carries motor or autonomic signals away from the central nervous system to muscles, glands, or other target tissues.

Efferent Pathway

Efferent pathway is a nerve pathway or nerve-related structure that carries signals between the nervous system and its target; symptoms depend on the site

of involvement.

Effervescent Tablets

Tablets designed to dissolve in water and release carbon dioxide, producing a drinkable solution; they may contain substantial sodium.

Efficacy

How well a treatment works under ideal conditions, such as in a carefully controlled clinical trial. It is different from effectiveness, which describes how well it works in everyday care.

Effusion

Abnormal accumulation of fluid in a body space, such as a joint, pleural cavity, or pericardial sac.

Effusion Pleural (Pleural Effusion (Fluid In The Chest Or On Lung))

Alternate index label for Pleural Effusion (Fluid In the Chest or On Lung).

EGD

Esophagogastroduodenoscopy is an examination of the esophagus, stomach, and duodenum with a flexible endoscope. It can evaluate symptoms or bleeding, obtain biopsies, and provide selected treatments such as hemostasis or removal of a lesion.

EGD - Esophagogastroduodenoscopy

An upper endoscopy using a flexible camera to inspect the esophagus, stomach, and duodenum and to obtain biopsies or treat selected lesions.

EGFR

Epidermal growth factor receptor, a cell-surface signaling protein; activating EGFR variants can drive some cancers and may guide targeted treatment.

EGFR Inhibition

A targeted cancer therapy using monoclonal antibodies or small-molecule tyrosine kinase inhibitors that block the epidermal growth factor receptor signaling pathway, inhibiting tumor cell proliferation, survival, and metastasis. Used in colorectal can-

cer, non-small cell lung cancer, and head and neck squamous cell carcinoma.

Egg

Egg is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

Egg Allergy

An immune reaction to proteins in eggs that may cause skin, digestive, or breathing symptoms.

Egg Shell

The hard calcium-containing outer covering of an egg; in medical descriptions, an “eggshell” calcification pattern may refer to a thin rim of calcification around a lesion or lymph node.

Egg-Cell

Egg-Cell is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

Eggerthella

A genus of anaerobic bacteria found in the human intestine that can rarely cause bacteremia, abscesses, or other opportunistic infection.

Eggerthella Lenta

A Gram-positive anaerobic bacterium found in the human intestine that can rarely cause bloodstream or other opportunistic infection.

Eggshell Nail

A nail that becomes unusually thin, soft, flexible, and sometimes whitish or concave. It may be associated with nutritional deficiency, chronic illness, aging, or repeated trauma; persistent nail changes should be evaluated with the skin and other symptoms in mind.

Ego

Ego is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

Egophony

A change in voice sounds heard through a stethoscope in which a spoken “E” sounds like “A.” It may occur when lung tissue is filled or hardened, such as with pneumonia.

Ehlers-Danlos Syndrome

A group of hereditary connective tissue disorders caused by defects in collagen synthesis or processing.

Alternate Names:

EDS (Ehlers-Danlos Syndrome) Elastic Skin (Ehlers-Danlos Syndrome)

Ehlers-Danlos Syndrome

Alternate index label for Ehlers-Danlos Syndrome.

EHR

Electronic health record, a digital record of a person’s health information that can include data from multiple clinicians and care settings.

Ehrlichia

A genus of bacteria transmitted mainly by ticks that infect white blood cells and cause ehrlichiosis, a febrile illness.

Ehrlichia And Anaplasma

Bacteria spread by ticks that can cause fever, headache, muscle aches, and low blood-cell counts. Ehrlichia mainly infects certain white blood cells, while Anaplasma mainly infects another type of white blood cell.

Ehrlichiosis

Ehrlichiosis is a tick-borne infection caused by Ehrlichia bacteria, commonly producing fever, headache, malaise, low blood counts, and elevated liver enzymes. ehrlichiosis) and E. ewingii (granulocytic). Endemic in the southeastern and south-central US. Presents with fever, headache, myalgia, malaise, and thrombocytopenia/leukopenia.

Ehrlichiosis And Anaplasmosis

Tick-borne bacterial infections that commonly cause fever, headache, muscle aches, and low blood-cell

counts.

Eicosadienoic Acid

A 20-carbon polyunsaturated fatty acid with two double bonds, present in membrane lipids and studied as a precursor in inflammatory and metabolic pathways.

Eicosanoid

A substance made from certain fats that helps control inflammation, blood-vessel widening or narrowing, platelets, and smooth-muscle activity. Prostaglandins, leukotrienes, and thromboxanes are examples.

Eicosanoid Degradation

Enzymatic inactivation and breakdown of eicosanoids, which limits the duration and strength of their inflammatory, vascular, and platelet effects.

Eicosanoid Metabolism

The synthesis and breakdown of prostaglandins, leukotrienes, thromboxanes, and related signaling lipids from polyunsaturated fatty acids.

Eicosanoid Receptor

A cell-surface or nuclear receptor that responds to prostaglandins, leukotrienes, thromboxanes, or related lipid mediators and regulates inflammation, vascular tone, or smooth muscle.

Eicosapentaenoic Acid

The omega-3 fatty acid EPA, found in oily fish and supplements, incorporated into membranes and used to produce signaling mediators with generally less inflammatory activity than arachidonic-acid products.

Eicosatetraenoic Acid

A 20-carbon fatty acid with four double bonds; the best-known form is arachidonic acid, a membrane precursor of prostaglandins, leukotrienes, and other eicosanoids.

Eicosatrienoic Acid

A 20-carbon fatty acid with three double bonds that can serve as a membrane lipid or precursor for biologically active lipid mediators.

Eicosenoic Acid

A 20-carbon monounsaturated fatty acid found in some plant and marine oils and incorporated into cellular and dietary lipids.

Eighth Cranial Nerve

The vestibulocochlear nerve, which carries hearing and balance signals from the inner ear to the brain.

Alternate Names:

Vestibulocochlear nerve; auditory nerve

Eikenella

A genus of gram-negative bacteria in the mouth; *Eikenella corrodens* can cause wound and soft-tissue infection, especially after human bites or clenched-fist injuries.

Eikenella Corrodens

A slow-growing Gram-negative bacterium found in the mouth that can cause human bite or clenched-fist wounds, abscesses, and endocarditis.

Eisenmenger Complex

Severe pulmonary hypertension caused by a long-standing congenital heart defect with abnormal blood flow between the heart chambers or vessels.

Eisenmenger Syndrome

Reversal of a left-to-right cardiac shunt due to irreversible pulmonary hypertension, resulting in right-to-left shunting and cyanosis. It occurs in untreated congenital heart defects with large left-to-right shunts (VSD, ASD, PDA) that cause progressive pulmonary vascular disease.

Eisenmenger's Syndrome

Pulmonary vascular disease caused by a long-standing congenital heart shunt, eventually reversing the shunt and causing cyanosis.

Ejaculation

The expulsion of seminal fluid from the male urethra during sexual climax, a reflex coordinated by the sympathetic nervous system (T10-L2) and involving contraction of the epididymis, vas deferens, seminal vesicles, prostate, and bulbospongiosus muscle.

Ejaculatory Duct

A duct formed by the union of the vas deferens and the duct of a seminal vesicle. It passes through the prostate and opens into the urethra.

Ejaculatory Ducts

Ejaculatory Ducts is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

Ejection Click

A high-pitched sound occurring at the beginning of systole, caused by opening of a stenotic semilunar valve. Aortic ejection click is heard in bicuspid aortic valve and aortic stenosis with pliable leaflets. Pulmonary ejection click is heard in pulmonary stenosis and disappears as the valve becomes more calcified and immobile.

Ejection Fraction

The percentage of blood in a ventricle ejected during contraction, calculated as stroke volume divided by end-diastolic volume. It helps describe ventricular systolic function and classify some forms of heart failure, but it does not measure filling pressures, congestion, symptoms, or overall heart-failure severity by itself. Interpretation depends on the ventricle studied, imaging method, clinical findings, and applicable definitions.

EKG

An electrocardiogram, a recording of the heart's electrical activity through electrodes placed on the skin. It can show heart rate and rhythm and may provide clues to ischemia, heart attack, conduction problems, or heart enlargement.

Alternate Names:

Electrocardiogram; ECG

Elastic Cartilage

Flexible cartilage containing abundant elastic fibers in its matrix. It supports structures that require shape retention with flexibility, including the external ear, epiglottis, and auditory tube.

Elastic Fiber

Elastic fiber is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Elastic Skin (Ehlers-Danlos Syndrome)

Alternate index label for Ehlers-Danlos Syndrome.

Elastic Tissue

Connective tissue containing elastic fibers that allow structures such as arteries, lungs, skin, and ligaments to stretch and recoil.

Elasticity

The ability of a tissue or material to return toward its original shape after being stretched or compressed; it contributes to lung, vessel, skin, and muscle function.

Elastics

Elastic bands used in medical or dental treatment, such as orthodontic bands, compression supports, or surgical ligatures; their purpose depends on the application.

Elastin

A flexible connective-tissue protein that allows skin, blood vessels, and other tissues to stretch and recoil.

Elastofibroma

A benign, slowly growing fibroelastic tumor-like lesion, most often beneath the lower scapula in older adults.

Elastography

Imaging tissue stiffness. Used for liver fibrosis assessment, breast lesion characterization, thyroid nodule evaluation.

Elastomer

A flexible polymer that can stretch and return to its original shape, used in some medical devices, tubing, seals, and implants.

Elastosis

Abnormal accumulation or degeneration of elastic fibers in tissue, commonly associated with chronic sun damage and some degenerative or genetic disorders.

Elbow

The joint connecting the upper arm to the forearm, formed mainly by the humerus, radius, and ulna; it permits bending, straightening, and forearm rotation.

Elbow Extensor

A muscle that straightens the elbow, chiefly the triceps brachii and anconeus.

Elbow Flexors

Muscles that bend the elbow, chiefly the biceps brachii, brachialis, and brachioradialis.

Elbow Joint

A synovial hinge complex comprising the humeroulnar and humeroradial joints. It primarily permits flexion and extension, while the proximal radioulnar component permits forearm rotation.

Elbow Pain

Pain around the elbow caused by tendon disorders, arthritis, bursitis, nerve compression, fracture, instability, or referred pain from the neck or shoulder.

Alternate Names:

Pain Elbow (Elbow Pain)

Elbow Replacement

A medical procedure, treatment, device, or care topic related to elbow replacement; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Elbow, Cellulitis Of The

A bacterial infection of the skin and soft tissues around the elbow, causing redness, warmth, swelling, and tenderness and sometimes spreading rapidly.

Elbow, Tip Of The

The olecranon, the bony prominence at the back of the elbow formed by the proximal ulna.

Elder Abuse

Intentional or neglectful act causing harm to older person. Types: physical, emotional, sexual, financial, neglect. Risk factors: social isolation, caregiver stress, cognitive impairment, dependency. Mandatory reporting required. Assessment: direct question, observation, collateral history.

Elderly

Person aged 65 or older. Divisions: young-old (65-74), middle-old (75-84), old-old (85+). Heterogeneous population with varying health status, needs, preferences.

Elective

Planned in advance rather than required urgently; an elective procedure may be scheduled after considering its benefits, risks, and alternatives.

Elective Abortion

A planned termination of pregnancy, performed with medication or a procedure according to gestational age, patient preference, and local clinical requirements.

Elective Surgery

Surgery planned in advance because it is not required immediately to prevent serious harm; it may still be medically necessary.

Electric Impedance

Opposition to the flow of alternating electrical current, measured in ohms; changes in impedance are used in physiology, bioimpedance, and some medical devices.

Electric Organ

An organ that produces electric discharges, found in some fish and used for defense, hunting, navigation, or communication.

Electric Shock

Injury caused when electric current passes through the body. It may cause burns, muscle injury, abnormal heart rhythms, breathing failure, or neurologic effects.

Electrical Alternans

Beat-to-beat variation in ECG QRS amplitude or axis, classically caused by a swinging heart in a large pericardial effusion and potentially indicating tamponade.

Electrical Cardioversion

Delivery of a synchronized electrical shock timed to the R wave to terminate selected tachyarrhythmias, such as atrial fibrillation, atrial flutter, or certain supraventricular tachycardias. Sedation, thromboembolic risk, and the patient's hemodynamic status must be assessed.

Electrical Conductance

The ability of a material or body tissue to carry electrical current; it depends largely on the movement of charged particles.

Electrical Injury

Tissue damage caused by passage of electrical current through the body. Severity depends on voltage, current (alternating vs. direct), pathway, duration, and resistance. High-voltage (>1000V): extensive internal tissue damage (muscle necrosis, compartment syndrome, rhabdomyolysis) with relatively small skin burns (entry/exit wounds).

Electrical Stimulation

The therapeutic application of controlled electrical currents to nerves or muscles. Examples include transcutaneous electrical nerve stimulation for pain and neuromuscular stimulation for selected muscle or movement problems.

Electrical Synapse

A direct connection between cells through gap junctions that allows ions and electrical signals to pass rapidly from one cell to another.

Electrocardiogram

An electrocardiogram records the heart's electrical signals and helps identify rhythm disturbances, conduction disease, ischemia, infarction, and chamber strain.

Alternate Names:

ECG or EKG.

Electrocardiogram

A recording of the heart's electrical activity through skin electrodes, used to assess rhythm, conduction, ischemia, prior heart injury, and other cardiac abnormalities.

Electrocardiography

The process of recording the heart's electrical activity from skin electrodes, usually as a 12-lead ECG or EKG. It evaluates heart rate and rhythm, conduction, chamber enlargement, ischemia, infarction, and some electrolyte or drug effects.

Electrocauterization

A procedure that uses controlled electrical energy to heat and destroy tissue or seal blood vessels. It may control bleeding or remove selected lesions, but can cause burns, scarring, smoke exposure, or injury to adjacent tissue.

Electrocautery

Use of heat produced by an electrical current to cut tissue or control bleeding.

Electrocoagulation

A surgical technique using high-frequency electrical current to destroy tissue or stop bleeding by coagulating proteins, also known as diathermy or cauterization.

Alternate Names:

diathermy or cauterization.

Electroconvulsive Therapy

A neuromodulation treatment involving the induction of a generalized seizure under general anesthesia using electrical current applied to the scalp. It is the most effective treatment for severe depression, especially with psychotic features, catatonia, or suicidal ideation.

Electroconvulsive Therapy

A medical treatment that induces a brief controlled seizure under anesthesia and muscle relaxation, used mainly for severe depression, catatonia, or selected acute psychiatric illness.

Electrocution

Injury from electrical current. Types: low voltage (<1000V), high voltage (>1000V). Effects: cardiac arrhythmias, muscle contractions, burns, neurological damage. Management: ABCs, cardiac monitoring, tetanus prophylaxis, wound care, check for compartment syndrome.

Electrode

A conductive contact that transfers electrical current to or from tissue, a device, or a laboratory sample.

Electroencephalogram

EEG: a recording of electrical activity of the brain via scalp electrodes, reflecting cortical neuronal activity. Uses: diagnosis and classification of seizures/epilepsy (interictal epileptiform discharges, spikes/waves), status epilepticus monitoring, assessment of encephalopathy, sleep disorders, and determination of brain death.

Electroencephalogram

A recording of electrical activity from the brain through scalp electrodes, used to evaluate seizures, encephalopathy, sleep disorders, and selected disorders of consciousness.

Electroencephalography

A non-invasive neurophysiological test that records the electrical activity of the brain using electrodes placed on the scalp according to the international 10-20 system.

Electrogastrogram

A recording of the stomach's electrical activity, usually obtained from electrodes on the abdominal skin to assess gastric slow waves and rhythm.

Electrolysis

Permanent hair removal using electrical energy delivered through a fine probe into a hair follicle.

Electrolyte

A mineral that carries an electrical charge in body fluids, such as sodium, potassium, or calcium.

Electrolyte Balance

Homeostasis of sodium, potassium, calcium, magnesium, chloride, phosphate. Regulated by kidneys, hormones (aldosterone, ADH, PTH). Imbalance causes neuromuscular, cardiac, metabolic dysfunction.

Electrolyte Imbalance

Abnormal serum concentration of electrolytes (sodium, potassium, calcium, magnesium, phosphate, chloride). Hyponatremia (<135 mEq/L): most common electrolyte disorder; causes include SIADH, heart failure, hypovolemia, and polydipsia. Hypernatremia (>145 mEq/L): free water deficit from poor intake, diabetes insipidus, or diuretics.

Electrolytes

Electrically charged minerals in body fluids, including sodium, potassium, chloride, bicarbonate, calcium, magnesium, and phosphate. They support nerve conduction, muscle contraction, fluid balance, and acid-base regulation.

Electrolytes - Urine

A urine test measuring electrolytes such as sodium, potassium, chloride, and sometimes calcium or phosphate. It helps assess kidney handling of electrolytes and investigate volume status, acid-base disorders, hypertension, or abnormal blood electrolyte levels.

Electromagnetic Navigation

Bronchoscopy

A guidance system for bronchoscopy that uses electromagnetic fields to navigate to peripheral lung lesions. It allows biopsy of lesions not visible on standard bronchoscopy. It is more accurate than conventional transbronchial biopsy for peripheral lesions. It may reduce the need for CT-guided biopsy.

Electromyography

A test that records the electrical activity of skeletal muscles, often together with nerve-conduction studies, to evaluate peripheral nerve, nerve-root, neuromuscular-junction, and muscle disorders.

Electromyography

A test recording electrical activity in skeletal muscle, often combined with nerve-conduction studies, to evaluate neuropathy, radiculopathy, neuromuscular-junction disease, or myopathy.

Electron Beam Computerized Tomography

A rapid CT imaging technique using an electron beam to produce images, historically used especially to detect and quantify coronary-artery calcium.

Electron Microscope

A microscope that uses electrons rather than visible light to produce highly magnified images of cells, tissues, microorganisms, or materials.

Electron Transport Chain

Series of protein complexes (I-IV) and mobile carriers (ubiquinone, cytochrome c) in the inner mitochondrial membrane that transfer electrons from NADH and FADH₂ to oxygen, pumping protons to create electrochemical gradient used by ATP synthase. Complex I (NADH dehydrogenase): NADH $\rightarrow$ ubiquinone.

Electron-Beam Computed Tomography

A rapid computed-tomography technique used to image the heart and detect calcium deposits in arteries.

Alternate Names:

EBCT

Electronic Fetal Monitoring

Continuous or intermittent monitoring of fetal heart rate and uterine contractions to assess fetal response during pregnancy or labor.

Electronystagmography

A test that records eye movements using electrodes around the eyes, usually during vestibular stimulation. It helps assess nystagmus and disorders of the inner ear or vestibular pathways, although video-based testing is now often preferred.

Electrophoresis

A laboratory method that separates charged molecules according to their movement through a medium in an electric field.

Electrophysiologic Testing

A procedure that records or provokes electrical activity in the heart to investigate suspected arrhythmias.

Electrophysiology

The study of electrical activity in living cells and tissues; in clinical medicine it includes tests of heart rhythm and nerve or muscle function.

Electrophysiology Study

Invasive cardiac catheterization with multielectrode catheters placed in the heart to map the cardiac conduction system. Measures: sinus node function (SNRT, SACT), AV node function (AH interval, HV interval), and inducibility of arrhythmias (programmed electrical stimulation).

Electroretinography

A test that records the electrical responses of the retina to flashes or patterned light. It helps evaluate inherited or acquired retinal dysfunction when examination or imaging alone is insufficient.

Electrosurgery

A medical procedure involving electrosurgery. In-

dications, risks, preparation, and follow-up depend on the patient and the specific procedure.

Electrosurgical Unit

A generator that delivers high-frequency electrical energy through an active electrode to cut tissue or achieve hemostasis. Monopolar and bipolar configurations differ in current pathway and safety considerations; burns, unintended tissue injury, and interference with implanted devices are possible complications.

Element

Element is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Elephant Ear Poisoning

Toxic irritation after eating or handling plants such as taro or elephant ear that contain calcium oxalate crystals, causing burning and swelling of the mouth and throat.

Elephantiasis

Massive enlargement of a body part, typically a limb or the scrotum, caused by chronic lymphedema from obstruction of lymphatic vessels. The most common cause worldwide is lymphatic filariasis, a mosquito-borne parasitic infection by *Wuchereria bancrofti*, *Brugia malayi*, or *Brugia timori*.

Elesclomol Sodium

An investigational anticancer drug that binds copper and can increase oxidative stress inside cancer cells.

Elevated Blood Pressure

Blood pressure consistently above the healthy range, increasing long-term risk of heart, brain, kidney, and vascular disease.

Elevated Hemidiaphragm

An abnormally high position of one side of the diaphragm on imaging, which can result from volume loss, nerve or muscle dysfunction, abdominal disease,

or other causes.

Elevated Liver Enzymes

Higher-than-expected blood levels of enzymes released by injured or stressed liver cells, commonly including ALT and AST. Causes range from fatty liver disease and medicines to viral hepatitis, alcohol-related injury, and biliary obstruction; interpretation depends on the pattern and clinical context.

Alternate Names:

Abnormal liver enzymes; elevated hepatic enzymes.

Elevation

Superior movement of a body part, such as raising the mandible or shoulder girdle.

Elevator

A surgical instrument used to lift, separate, or strip tissue, bone, or a tooth from surrounding structures.

Eligible

Meeting the specified requirements for a treatment, clinical trial, screening program, benefit, or other healthcare service.

Elimination

Elimination is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

Elimination Diets

Diets in which suspected foods are removed and later reintroduced to help identify food-related symptoms.

Alternate Names:

Elimination diet

Elimination Half-Life

Time for plasma concentration to decrease by 50%. Determines dosing interval, accumulation, withdrawal from exposure. Affected by renal/hepatic function, age, drug interactions.

Elimination Patterns

The frequency, timing, amount, and characteristics

of urination and bowel movements, which help assess hydration, gastrointestinal function, continence, and disease.

Elinafide

An investigational anticancer drug designed to bind DNA and interfere with the growth of cancer cells.

ELISA Blood Test

A blood test using an enzyme-linked immunosorbent assay to detect or measure a specific antibody, antigen, hormone, protein, or other substance. Results depend on the assay, timing, specimen, and pretest probability.

Elixir

Elixir is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Elizabethkingia

A genus of environmental Gram-negative bacteria that can cause severe opportunistic bloodstream, respiratory, or central nervous system infection.

Ellagic Acid

A plant-derived polyphenol found in foods such as berries and nuts.

Elliptocyte Count

The number or proportion of oval or elliptical red blood cells on a blood smear; increased elliptocytes may occur in hereditary elliptocytosis and some anemias.

Elliptocytosis

A condition in which many red blood cells have an oval or elliptical shape.

Ellis-Van Creveld Syndrome

An inherited skeletal dysplasia characterized by short limbs, extra fingers or toes, narrow thorax, abnormal teeth or nails, and frequent congenital heart disease.

Elongin

A protein complex that promotes transcriptional elongation by RNA polymerase II and participates in regulation of gene expression.

Elotuzumab

A medicine or chemical compound called elotuzumab. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Eltrombopag

An oral thrombopoietin-receptor agonist that stimulates platelet production and is used for selected immune thrombocytopenia, aplastic anemia, and other approved indications.

Eltrombopag Olamine

A medicine that stimulates the thrombopoietin receptor and increases platelet production in selected blood disorders.

Emaciation

Extreme wasting and loss of body mass, especially muscle and fat, caused by severe illness, malnutrition, or other chronic conditions.

Embolectomy

Surgical removal of embolus from blood vessel. Indications: acute arterial occlusion, pulmonary embolism. Techniques: Fogarty catheter, open surgical extraction. Often combined with thrombolysis.

Embolectomy (Vascular)

Removal of an embolus from a blood vessel by surgery or a catheter-based procedure.

Alternate Names:

Vascular

Emboli

Plural of embolus: particles or material carried through the bloodstream that can lodge in a smaller vessel and obstruct blood flow, such as a clot, fat, air, or infected material.

Embolic Stroke

An ischemic stroke caused by a clot or other material that travels from elsewhere and blocks a brain artery.

Embolic Stroke (Brain Embolism)

A stroke caused by a clot or other material traveling to and blocking an artery supplying the brain.

Alternate Names:

Brain Embolism Cerebral Embolism

Embolism

An embolism is the occlusion of a blood vessel by a detached mass that has traveled through the bloodstream from its site of origin. The most common form is thromboembolism, where a fragment of a thrombus dislodges and travels to a distant site through the venous or arterial circulation.

Embolism Pulmonary (Pulmonary Embolism)

Alternate index label for Pulmonary Embolism.

Embolization

Deliberate occlusion of a blood vessel or vascular malformation using materials such as coils, particles, glue, or plugs. It is used to control hemorrhage, treat aneurysms or malformations, reduce tumor vascularity, or induce organ infarction in selected therapies.

Embolization (Vascular)

Intentional blockage of a blood vessel using a catheter-delivered material to control bleeding, reduce blood flow, or treat a vascular lesion.

Alternate Names:

Vascular

Embolization Therapy

Image-guided occlusion of vessels. Used for hemorrhage control, tumor devascularization, aneurysm treatment, varices.

Embolus

A detached intravascular mass, such as a blood

clot, fat droplet, air bubble, or other material, that travels through the circulation and may obstruct a vessel.

Embryo

The developing human organism from fertilization through the end of the eighth week after fertilization. From the ninth week after fertilization, it is termed a fetus.

Embryo Neoplasm

A tumor arising from embryonal or primitive cells, usually in a child; diagnosis depends on the tissue of origin, microscopic features, molecular findings, and stage.

Embryo Transfer

The critical concluding step of an in vitro fertilization or intracytoplasmic sperm injection cycle, wherein one or more laboratory-fertilized cleavage-stage embryos or blastocysts are loaded into a sterile, flexible catheter and gently deposited into the mid-portion of the uterine endometrial cavity under transabdominal ultrasound guidance. May be performed as a fresh transfer or following cryopreservation and programmed endometrial preparation (frozen embryo transfer [FET]).

Alternate Names:

ET; Intrauterine Embryo Transfer

Embryogenesis

The sequence of fertilization, cell division, differentiation, migration, and organ formation through which an embryo develops.

Embryology

The study of development from fertilization through the embryonic and fetal stages, including the formation of organs and body structures.

Embryoma

Embryoma is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

Embryonal Carcinoma

An aggressive germ-cell tumor composed of primitive malignant cells, occurring in the testis, ovary, or other sites and often treated with chemotherapy and surgery.

Embryonal Rhabdomyosarcoma

A malignant skeletal-muscle-lineage tumor that commonly affects young children and may arise in the head and neck, urinary tract, or reproductive tract.

Embryonal Tumor Of The Central Nervous System

A highly cellular malignant pediatric CNS tumor with primitive or embryonal morphology. Diagnosis depends on integrated histologic and molecular classification, and treatment usually combines surgery, radiation when appropriate, and chemotherapy.

Embryonal Tumors

Cancers that arise from cells resembling developing embryonic tissue, often occurring in children and commonly affecting the nervous system.

Embryonic

Embryonic is a developmental, genetic, reproductive, or family-related term describing a stage, trait, relationship, or pregnancy history; its meaning depends on the clinical context.

Embryonic Cell

A cell of an early embryo capable of division and differentiation into specialized tissues; embryonic stem cells have broad developmental potential.

Embryonic Induction

A developmental process in which one group of embryonic cells signals nearby cells to develop into a particular tissue or structure.

Embryonic Mosaic

Embryonic mosaic is a developmental, genetic, reproductive, or family-related term describing a stage, trait, relationship, or pregnancy history; its meaning depends on the clinical context.

Embryonic Stage

Embryonic stage is a developmental, genetic, reproductive, or family-related term describing a stage, trait, relationship, or pregnancy history; its meaning depends on the clinical context.

Emergence Agitation

A state of confusion, restlessness, and inconsolable crying during emergence from anesthesia, occurring in 10 to 80 percent of pediatric patients and 5 to 10 percent of adults. Risk factors include sevoflurane induction, short procedures, parental separation, and preexisting behavioral disorders.

Emergency Airway Puncture

An emergency procedure that creates an airway through the cricothyroid membrane or trachea when severe upper-airway obstruction prevents adequate ventilation and intubation is not possible. It is a temporary, high-risk lifesaving intervention requiring trained personnel.

Emergency Care

Immediate assessment and treatment for a potentially serious or time-sensitive illness or injury.

Emergency Code

A hospital alert used to summon a designated response to an urgent event; the meaning of a specific code varies by institution.

Emergency Contraception

Contraception used after unprotected intercourse or contraceptive failure to reduce the chance of pregnancy. Options include oral medicines and a copper intrauterine device; effectiveness depends on the method, timing, medical history, and access to care.

Emergency Department

Hospital department providing immediate medical care for acute illnesses and injuries. Staffed by emergency physicians and supported by specialists. Key principles: triage (prioritize by severity), stabilization, diagnosis, treatment, disposition.

Emergency Medicine

Emergency Medicine is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

Emergency Procedures

Planned actions for responding to urgent events such as spills, contamination, equipment failure, or radiation exposure while protecting patients and staff.

Emerging Infectious Disease

New or reemerging infectious diseases. Examples: COVID-19, Zika, Ebola, MERS.

Emery-Dreifuss Muscular Dystrophy

A rare inherited muscular dystrophy characterized by early contractures, especially of the elbows, Achilles tendons, and neck, followed by slowly progressive humeroperoneal muscle weakness and wasting. Cardiac involvement, including conduction abnormalities, arrhythmias, and cardiomyopathy, is common and may occur before major muscle weakness; ongoing cardiac assessment is essential.

Emesis

The forceful expulsion of gastric contents through the mouth, a complex reflex coordinated by the vomiting center in the medulla oblongata.

Emetic

A pharmacologic agent or substance that stimulates or precipitates emesis (vomiting). Acts either peripherally by irritating gastric mucosal afferent sensory pathways (projecting via vagal fibers to the solitary nucleus) or centrally by activating the chemoreceptor trigger zone located in the area postrema of the fourth ventricle outside the blood-brain barrier. Historically utilized in acute toxicology (e.g., syrup of ipecac, apomorphine); however, routine use in toxic ingestions is no longer recommended due to risks of chemical aspiration pneumonitis, esophageal rupture (Boerhaave syndrome), and interference with activated charcoal administration.

Emetics

Substances that induce vomiting. They are generally not used to treat poisoning because vomiting may cause aspiration or additional injury.

Emetine

A plant-derived alkaloid formerly used to induce vomiting and treat some protozoal infections; it is toxic at high doses.

EMG

A test that evaluates muscle activity and the nerves controlling muscles.

Alternate Names:

Electromyography

Eminentia

An anatomical term for a raised or prominent area of a body structure.

Emission

The discharge or release of a substance, usually a fluid. In male reproduction, emission refers to the movement of semen into the posterior urethra in preparation for ejaculation.

Emitefur

An investigational fluoropyrimidine-related anticancer drug that interferes with DNA and RNA production.

Emmenagogue

A substance traditionally claimed to stimulate menstrual bleeding. Evidence and safety vary, and some herbal products can cause poisoning, miscarriage, or drug interactions; missed or abnormal periods need proper evaluation rather than self-treatment.

Emmetropia

The normal refractive state of the eye, in which parallel light focuses on the retina without accommodation.

Emodin

A naturally occurring anthraquinone compound

found in some plants and studied for laxative, anti-inflammatory, and anticancer effects; clinical safety and benefit are not established for routine treatment.

Emollient

A substance applied to the skin to soften and moisturize it by reducing water loss and improving the skin barrier. Emollients are commonly used in eczema and dry skin.

Emotion

A coordinated feeling state involving subjective experience, brain and body responses, behavior, and interpretation of events.

Emotional Adjustment

The process of adapting thoughts, feelings, and behavior to illness, loss, stress, or major life change; difficulty adjusting may cause distress or impairment.

Emotional Dependency

Reliance on another person for reassurance, self-worth, or emotional stability to a degree that may limit independence or contribute to unhealthy relationship patterns.

Emotional Disorders

A clinical disorder or finding related to emotional disorders; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Emotional Dysregulation Disorder (Borderline Personality Disorder)

Alternate index label for Borderline Personality Disorder.

Emotional Eating

Eating in response to emotions such as stress, boredom, or sadness rather than primarily in response to physical hunger. Cognitive behavioral therapy may help.

Empathy

The ability to understand or appreciate another person's feelings and perspective; it supports therapeutic communication and compassionate care.

Empedobacter

A genus of Gram-negative environmental bacteria that rarely causes opportunistic human infection.

Empedobacter Brevis

A Gram-negative environmental bacterial species that rarely causes opportunistic infection in people.

Empedobacter Falsenii

A Gram-negative bacterial species found in the environment and rarely associated with human opportunistic infection.

Emphysema

A form of COPD characterized by permanent, abnormal enlargement of airspaces distal to the terminal bronchioles, accompanied by destruction of their walls. Centriacinar emphysema affects the respiratory bronchioles and is associated with smoking.

Emphysema (Lung Condition)

Alternate index label for Lung Condition.

Emphysematous Aortitis Due To Clostridium Septicum

A rare, life-threatening infection of the aortic wall by *Clostridium septicum*, characterized by gas formation within the aortic wall visible on imaging. It typically occurs in immunocompromised patients and may present with sepsis, back pain, or aortoenteric fistula.

Emphysematous Cholecystitis

A severe, gas-forming infection of the gallbladder wall caused by anaerobic organisms, most commonly *Clostridium* species and *Escherichia coli*, occurring predominantly in diabetic men. Gas within the gallbladder wall or lumen is visible on imaging. It is a surgical emergency requiring urgent cholecystectomy and broad-spectrum antibiotics.

Emphysematous Hepatitis

A rare, life-threatening gas-forming infection of the liver parenchyma, most commonly caused by *Clostridium* species or mixed enteric organisms in immunocompromised or diabetic patients. Imaging reveals gas within the liver parenchyma.

Emphysematous Prostatitis

A rare, severe gas-forming infection of the prostate gland, most commonly caused by *Escherichia coli* in diabetic or immunocompromised patients. It presents with fever, perineal pain, urinary retention, and sepsis. Imaging shows gas within the prostatic parenchyma.

Emphysematous Pyelonephritis

Severe necrotizing infection of renal parenchyma with gas formation. Almost exclusively in diabetic patients. Presents with high fever, flank pain, and sepsis. CT shows gas within renal parenchyma. A urological emergency requiring aggressive antibiotics and usually nephrectomy.

Empiric Risk

A risk estimate based on observed population or clinical data rather than solely on a theoretical model; the estimate depends on the population and outcome studied.

Empirical

Based on observation, measurement, or experience rather than only on theory; empirical treatment may begin before a specific cause is confirmed.

Empirical Treatment

A medical procedure, treatment, device, or care topic related to empirical treatment; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Employee

A person who performs work for an employer under an employment agreement; occupational health considers the person's work exposures, safety, and ability to perform duties.

Employment Status

A person's current work situation, such as employed, unemployed, retired, on leave, or unable to work; it may affect health, insurance, income, and rehabilitation planning.

Empty Calories

A nontechnical term for foods or drinks that provide substantial energy but relatively few vitamins, minerals, fiber, or other beneficial nutrients.

Empty Sella Syndrome

Herniation of subarachnoid space into the sella turcica, compressing the pituitary gland and flattening it against the sellar floor. Primary: due to congenital weakness of the diaphragma sellae. Secondary: post-surgery, post-radiation, or pituitary apoplexy (Sheehan syndrome). Most are asymptomatic.

Empyema

A collection of pus in a normally sterile body cavity, most often infected pleural fluid around the lung, causing fever, chest pain, cough, and breathlessness.

Empyema Necessitans

Extension of pleural empyema through the chest wall. Presents as a painful, fluctuant mass. Requires drainage and antibiotics.

EMR

Electronic medical record, a digital record of health information maintained within a particular health-care organization or practice.

Emtricitabine

A nucleoside reverse-transcriptase inhibitor used in combination antiretroviral therapy for HIV and in selected preexposure prophylaxis regimens; kidney function and hepatitis B status are important considerations.

Emulsion

Emulsion is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and ex-

posure circumstances.

Enalapril

A medicine or chemical compound called enalapril. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Enalaprilat

A medicine or chemical compound called enalaprilat. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Enamel

Hard, highly mineralized outer layer of tooth crown. Avascular, aneural, cannot regenerate. Enamel hypoplasia causes defects. Dental caries begins in enamel. Fluoride strengthens enamel.

Enamel Hypoplasia

Defective enamel quantity due to systemic disturbance during development. Pits, grooves, or thin enamel.

Enamel Organ

The developing tooth structure that gives rise to enamel-producing ameloblasts and helps shape the crown of a tooth.

Enamel Pearl

Small mound of enamel on root surface. Usually bifurcation area of molars. May interfere with periodontal attachment.

Enanthem

A rash or lesion on a mucous membrane, especially inside the mouth; it may occur with infections, inflammatory disorders, or medication reactions.

Enanthema

A rash or lesion on a mucous membrane, such as the mouth, throat, or genital tract, often associated with infection, inflammation, or a systemic disease.

Enarthrosis

A ball-and-socket joint that allows movement in

multiple axes, such as the hip or shoulder.

Encapsulated

Enclosed by a capsule or well-defined layer of tissue; the term may describe an organ, cyst, infection, or tumor and does not by itself establish whether a lesion is benign or malignant.

Encapsulating Peritoneal Sclerosis

Rare condition characterized by a thick fibro-collagenous membrane encasing the small intestine, leading to recurrent bowel obstruction. Most commonly associated with long-term peritoneal dialysis but also seen after abdominal surgery, radiation, and beta-blocker use.

Encephalitis

Encephalitis is inflammation of brain tissue, often infectious or autoimmune, causing altered mental status, seizures, fever, focal deficits, or movement abnormalities. fever, headache, altered mental status, seizures, or focal neurologic deficits and requires urgent medical evaluation.

Encephalitis Virus

A virus that can infect the brain or its surrounding tissues and cause encephalitis, or inflammation of the brain.

Encephalitozoon

A genus of microsporidian parasites that can cause intestinal, eye, kidney, or disseminated infection, especially in people with impaired immunity.

Encephalocele

A neural tube defect where brain tissue and meninges herniate through a skull defect, most commonly in the occipital region. The herniated sac contains cerebrospinal fluid, meninges, and often brain tissue. Associated with other CNS anomalies including hydrocephalus and Chiari malformation. Presents as a visible, pulsatile midline mass.

Encephalomalacia

Softening or loss of brain tissue, usually after an

injury, stroke, or infection.

Encephalomyelitis

An acute or chronic inflammatory disease simultaneously involving both the brain (encephalitis) and the spinal cord (myelitis). Most frequently mediated by autoimmune or post-infectious demyelinating mechanisms, prominently exemplified by acute disseminated encephalomyelitis, an immune-mediated monophasic demyelinating encephalopathy triggered by viral exanthems or vaccinations in children. Can also arise from direct neurotropic viral invasions (enteroviruses, flaviviruses, rabies) or autoimmune neuromyelitis optica spectrum disorder. Presents with altered mental status, seizures, focal neurological deficits, and sensory levels; diagnosed by neuroimaging (MRI revealing widespread multifocal white-matter FLAIR hyperintensities) and CSF analysis, managed with high-dose intravenous methylprednisolone, plasma exchange, or IVIG.

Encephalopathy

Any diffuse disease of the brain that alters its structure or function, presenting with a global change in mental status (confusion, lethargy, personality change, coma) rather than focal neurologic deficits.

Enchondroma

A usually benign cartilage tumor within bone, often found incidentally in the hands or long bones; pain, growth, or atypical imaging may require evaluation for malignancy.

Enchondromatosis

A disorder with multiple enchondromas caused by abnormal cartilage growth in bones; extensive disease can cause deformity, fractures, and a small risk of malignant transformation.

Enclomiphene

The purified trans-isomer of clomiphene, studied for stimulating the body's own testosterone production.

Encoding

The process by which sensory or cognitive information is converted into a form that can be stored in

memory.

Encopresis

Repeated passage of stool into inappropriate places by a child beyond the expected toilet-training age, usually associated with chronic constipation and fecal retention.

Alternate Names:

Stool Holding

End Point

A predefined outcome or measurement used to assess the result of a clinical study, treatment, diagnostic test, or disease process.

End Stage

The advanced phase of a disease in which normal function is severely impaired; the exact criteria and treatment options depend on the disease, such as end-stage kidney or liver disease.

End-Of-Life Care

Care focused on comfort, symptom control, communication, and support for a person with advanced illness and for their family or caregivers.

End-Stage COPD: Signs, Symptoms, And Prognosis

Advanced COPD may cause severe persistent breathlessness, low exercise tolerance, frequent exacerbations, weight loss, oxygen dependence, and respiratory failure. Prognosis varies; pulmonary rehabilitation, inhaled treatment, oxygen when indicated, advance care planning, and palliative support are important.

End-Stage Kidney Disease

The advanced stage of chronic kidney disease in which the kidneys can no longer adequately maintain fluid, electrolyte, and waste balance. Treatment requires dialysis or kidney transplantation, together with management of complications.

End-Stage Renal Disease

The final stage of chronic kidney disease (CKD stage

5), defined by GFR <15 mL/min/1.73

m² or the need for renal replacement therapy. Uremia develops with accumulation of toxins causing nausea, anorexia, pruritus, pericarditis, encephalopathy, and bleeding diathesis.

Alternate Names:

ESRD

Endamoeba

A clinical disorder or finding related to endamoeba; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Endangiitis

A clinical disorder or finding related to endangiitis; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Endarterectomy

Surgical removal of atherosclerotic plaque and diseased inner lining from an artery to improve blood flow, commonly performed in the carotid arteries.

Endarteritis

Inflammation of the inner lining of an artery, which can narrow the vessel and reduce blood flow; causes include infection, autoimmune disease, and other vascular disorders.

Endemic

Regular presence of a disease or infectious agent in a particular population or geographic area at an expected baseline level.

Endemic Diseases

Diseases that persist at a predictable baseline in a defined population or region, including infections shaped by local ecology, immunity, behavior, and healthcare access.

Endemic Fungi

Fungi that occur naturally in particular geographic regions and can cause infection in people who inhale their spores.

Endemic Goiter

Enlargement of the thyroid occurring commonly in a population, classically from insufficient iodine intake and sometimes associated with thyroid dysfunction.

Endergonic

Describing a chemical reaction that requires an input of energy to occur.

Ending Pregnancy With Medicines

A medical procedure, treatment, device, or care topic related to ending pregnancy with medicines; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Endobronchial Foreign Body

A foreign object lodged in a bronchus, causing partial or complete airway obstruction. It may cause localized wheezing, atelectasis, and post-obstructive pneumonia. It is most common in children and may be initially misdiagnosed as asthma. Bronchoscopy is both diagnostic and therapeutic.

Endobronchial Tumor

A tumor growing within the bronchial lumen, causing obstruction, atelectasis, and post-obstructive pneumonia. It may be malignant (lung cancer, carcinoid tumor) or benign (hamartoma, papilloma). Symptoms include cough, hemoptysis, and wheezing. Treatment is bronchoscopic removal or debulking plus definitive therapy.

Endobronchial Ultrasound

Bronchoscopy with ultrasound guidance for trans-bronchial needle aspiration of mediastinal and hilar lymph nodes. Essential for lung cancer staging. Less invasive than mediastinoscopy.

Endobronchial Valve

A one-way valve placed bronchoscopically in a target airway to achieve lobar atelectasis in emphysema. It allows air and secretions to exit but prevents air from entering. It is used for bronchoscopic lung volume reduction in selected patients with heterogeneous emphysema and intact fissures.

Endocannabinoid

A naturally produced signaling molecule that activates cannabinoid receptors and helps regulate pain, appetite, mood, memory, and immune activity.

Endocardial Cushion Defect

A congenital heart defect caused by abnormal development of the atrioventricular cushions, producing an atrioventricular septal defect with abnormal atrioventricular valves. It is strongly associated with Down syndrome and may cause heart failure and pulmonary hypertension.

Endocardial Fibroelastosis

Abnormal thickening of the inner lining of the heart caused by excess fibrous and elastic tissue, usually in infants or children.

Endocarditis

Endocarditis is infection or inflammation of the endocardium, usually involving heart valves, and may cause fever, emboli, valve destruction, and heart failure. Acute bacterial endocarditis: *Staph aureus* (most common in IV drug users and prosthetic valves), rapid destruction. Subacute: viridans group streptococci (pre-existing valve disease).

Alternate Names:

Inflammation Of The Heart Valve (Endocarditis)

Endocarditis Prophylaxis

Infective endocarditis prophylaxis with antibiotics is recommended for patients at highest risk of adverse outcomes from endocarditis who are undergoing dental procedures that involve manipulation of gingival tissue, the periapical region of teeth, or perforation of the oral mucosa.

Endocarditis Surgical Indications

Surgery indicated for: heart failure from valve dysfunction, uncontrolled infection (abscess, fistula, vegetation >10 mm with persistent emboli), fungal endocarditis, prosthetic valve dehiscence, and large vegetations (>15 mm) with embolic events.

Endocardium

The innermost layer of the heart wall, a thin membrane of endothelial cells and underlying connective tissue that lines the cardiac chambers and covers the heart valves. The endocardium is continuous with the endothelium of blood vessels and provides a smooth, non-thrombogenic surface.

Endocervical

Relating to the inner canal or lining of the cervix, which connects the uterine cavity with the vagina.

Endocervical Culture

A laboratory test that grows microorganisms from a specimen collected from the endocervix. It may help investigate cervicitis or selected sexually transmitted infections, but nucleic-acid amplification tests are preferred for many pathogens.

Endocervical Gram Stain

Microscopic staining of cells and organisms collected from the endocervix; it may show inflammation or bacteria but is not by itself a definitive test for all sexually transmitted infections.

Endocrine

Relating to hormones released into the bloodstream by glands or specialized cells, such as the thyroid, adrenal, pituitary, pancreas, and gonads.

Endocrine Disease

A disorder of hormone-producing glands or hormone action, causing abnormal growth, metabolism, reproduction, stress responses, or fluid and electrolyte regulation.

Endocrine Disrupting Chemicals

Environmental chemicals that interfere with endocrine function including bisphenol A, phthalates, pesticides, and polychlorinated biphenyls. Potential associations with diabetes, obesity, thyroid dysfunction, reproductive disorders, and hormone-sensitive cancers. Evidence is strongest for associations with type two diabetes and obesity.

Endocrine Disruptor

Chemical interfering with hormone systems. Examples: BPA, phthalates, DDT, PCBs. Effects: reproductive disorders, developmental problems, cancer.

Endocrine Finding

An examination, laboratory, imaging, or symptom finding that may indicate abnormal hormone production, hormone action, or an endocrine-gland disorder.

Endocrine Function

Production, release, transport, and action of hormones that regulate metabolism, growth, reproduction, stress responses, and fluid or electrolyte balance.

Endocrine Gland

A gland that releases hormones directly into the bloodstream rather than through a duct.

Endocrine Glands

Ductless glands that secrete hormones directly into the bloodstream to regulate distant target organs.

Endocrine Neoplasm

A benign or malignant tumor arising in an endocrine gland or hormone-producing cell; it may produce excess hormones or cause symptoms by mass effect.

Endocrine System

The network of glands and hormone-producing tissues that regulate body functions by releasing hormones into the blood.

Endocrine Therapy

Systemic treatment that manipulates hormones or their receptors in hormone-sensitive cancers, including tamoxifen, aromatase inhibitors, luteinizing hormone-releasing hormone agonists, and antiandrogens.

Endocrine Tissues

Cells or groups of cells that produce and release hormones into the blood or nearby tissues.

Endocrinologist

A physician who specializes in diagnosing and treating disorders of hormones, endocrine glands, metabolism, and related conditions such as diabetes and thyroid disease.

Endocrinologists

Physicians who diagnose and treat hormone and endocrine-gland disorders, including diabetes, thyroid disease, adrenal disease, and reproductive hormone problems.

Endocrinology

The branch of medicine concerned with the study, diagnosis, and treatment of disorders of the endocrine system—the network of glands that secrete hormones regulating metabolism, growth and development, tissue function, sexual function, reproduction, sleep, and mood.

Endocrinopathy

A disorder of an endocrine gland or hormone system, causing excessive, deficient, or otherwise abnormal hormone action.

Endocytosis

Process by which cells internalize extracellular material by engulfing it with the cell membrane, forming intracellular vesicles. Phagocytosis ("cell eating") involves engulfing large particles (>0.5 micrometers) such as bacteria or debris, forming a phagosome that fuses with lysosomes for digestion.

Endoderm

The innermost germ layer in an embryo, which develops into the linings of the digestive and respiratory tracts, as well as the liver and pancreas.

Endodontic Therapy (Root Canal)

Treatment of dental pulp disease or necrosis. Indications: irreversible pulpitis, pulp necrosis, periapical abscess. Procedure: access cavity, locate canals, clean and shape, obturate with gutta-percha, seal. Success rate: >90%. Alternative: extraction.

Alternate Names:

Root Canal

Endodontics

The dental specialty concerned with the dental pulp, root canals, and tissues around tooth roots; common treatment includes root-canal therapy.

Endodontist

A dentist who specializes in diagnosing and treating diseases or injuries of the dental pulp and tissues around tooth roots.

Endogenous

Originating within the body or produced by its cells or tissues, rather than introduced from outside.

Endogenous Opiates

Naturally produced opioid peptides, such as endorphins, enkephalins, and dynorphins, that influence pain, reward, stress, and other nervous-system functions.

Endogenous Opioids

Opioid-like peptides made naturally by the body, including endorphins, enkephalins, and dynorphins. They act on opioid receptors to influence pain, stress, mood, reward, and movement.

Alternate Names:

Endogenous opioid peptides

Endogenous Retrovirus

A viral DNA sequence inherited in the genome after an ancient retrovirus infected a germ cell.

Endoleak

Persistent blood flow into an aneurysm sac after endovascular aneurysm repair. Type I and III endoleaks reflect inadequate sealing or device failure and generally require urgent correction; other types are managed according to sac expansion and risk.

Endolimax

A genus of intestinal amoebae; *Endolimax nana* is usually considered a nonpathogenic colonizing organism.

Endolimax Nana

A usually nonpathogenic intestinal amoeba that may be reported in stool testing.

Endolymph

The potassium-rich fluid within the membranous labyrinth of the inner ear that participates in hearing and balance.

Endometrial

Relating to the endometrium, the lining of the uterus that changes during the menstrual cycle and supports implantation of a pregnancy.

Endometrial Ablation

A procedure that destroys the uterine lining to reduce heavy menstrual bleeding. It is not a method of contraception and is not intended for people planning pregnancy.

Endometrial Adenocarcinoma

A gland-forming cancer of the uterine lining, often presenting with abnormal uterine bleeding; treatment depends on grade, stage, and molecular features.

Endometrial Biopsy

Office or procedural sampling of the uterine lining, commonly to evaluate abnormal uterine bleeding or suspected endometrial hyperplasia or cancer. Cramping and light bleeding are common afterward; the sample may be inadequate if tissue is scant.

Endometrial Cancer

The most common gynecologic malignancy in developed countries, arising from the lining of the uterine cavity, typically in postmenopausal women.

Alternate Names:

Cancer, Endometrial Cancer, Uterine

Endometrial Carcinoma

Cancer arising from the endometrium, usually presenting with abnormal bleeding, especially after menopause; diagnosis requires endometrial tissue evaluation.

Endometrial Disorder

A disorder of the uterine lining, including abnormal growth, inflammation, polyps, endometriosis-related change, hyperplasia, or cancer, often causing abnormal bleeding or infertility.

Endometrial Hyperplasia

Abnormal overgrowth of the lining of the uterus, often related to prolonged estrogen exposure without enough progesterone. It may cause heavy, irregular, or postmenopausal bleeding; atypical forms can precede endometrial cancer and require gynecologic evaluation, often including endometrial sampling.

Endometrial Intraepithelial Neoplasia

A premalignant clonal proliferation of architecturally crowded, genetically altered endometrial glands that serves as the direct precursor to type I (endometrioid) endometrial adenocarcinoma. Characterized histologically by crowded glands exceeding stroma (volume percentage of stroma <45%), cytologic demarcation from background endometrium, and PTEN/PAX2 alterations. EIN carries an estimated 40% risk of coexisting or impending invasive carcinoma, guiding recommendation for total hysterectomy or progestin therapy when fertility preservation is desired.

Alternate Names:

EIN; Atypical Endometrial Hyperplasia

Endometrial Neoplasm

A benign, precancerous, or malignant growth of the uterine lining; symptoms, pathology, and staging determine management.

Endometrial Polyp

A localized overgrowth of the uterine lining that may cause irregular bleeding, heavy periods, infertility, or no symptoms; some polyps contain precancerous or cancerous changes.

Endometrial Polyps

Localized overgrowths of endometrial tissue projecting into the uterine cavity that may cause irregular bleeding, infertility, or no symptoms.

Endometrial Receptivity Analysis

A molecular diagnostic test utilizing transcriptomic profiling of over 200 genes expressed in an endometrial biopsy taken during the receptive phase of the menstrual cycle. Aims to identify the personalized “window of implantation” and determine whether the endometrium is receptive, pre-receptive, or post-receptive, guiding personalized embryo transfer (pET) in patients with recurrent implantation failure.

Alternate Names:

ERA; Endometrial Receptivity Assay

Endometrial Stromal Nodule

A benign, well-circumscribed proliferation of endometrial stromal cells within the uterus, distinguished from endometrial stromal sarcoma by its lack of infiltrative margins or vascular invasion.

Endometrial Stromal Sarcoma

A rare malignant mesodermal uterine neoplasm composed of cells that recapitulate normal proliferative endometrial stroma. Categorized into low-grade endometrial stromal sarcoma, which exhibits indolent growth, estrogen- and progesterone-receptor positivity, characteristic *JAZF1-SUZ12* gene fusions, and prominent worm-like vascular permeation, and high-grade endometrial stromal sarcoma, which displays marked cytologic atypia, aggressive clinical behavior, and distinct gene alterations (such as *YWHAE-NUTM2*).

Alternate Names:

ESS

Endometrioid Carcinoma Of The Vulva

A rare vulvar adenocarcinoma showing endometrioid differentiation, sometimes arising in ectopic or specialized Müllerian-type tissue; diagnosis requires exclusion of a metastasis from the endometrium or ovary.

Endometrioid Ovarian Carcinoma

A malignant ovarian epithelial tumor resembling endometrial glands, sometimes associated with endometriosis and often showing alterations in the PI3K or mismatch-repair pathways.

Endometrioma

A chocolate cyst of the ovary formed by ectopic endometrial tissue that hemorrhages cyclically, appearing as a homogenous low-level echo mass on ultrasound and associated with chronic pelvic pain and infertility.

Endometriosis

A chronic inflammatory condition in which tissue resembling the uterine lining is found outside the uterus, often in the pelvis. It may cause pelvic pain, painful periods, pain during sex, infertility, or bowel and bladder symptoms, although some people have no symptoms. The condition can also cause scar tissue and ovarian cysts.

Alternate Names:

Implants Endometrial (Endometriosis)

Endometritis

Inflammation or infection of the uterine lining, often associated with childbirth, miscarriage, abortion, or uterine instrumentation.

Endometrium

The mucosal epithelial and stromal inner lining of the uterine cavity, composed of a superficial stratum functionale (which undergoes dynamic cyclic hormonal changes and sheds during menstruation) and a permanent deep stratum basale (which contains stem cells that regenerate the functional layer). Under the influence of ovarian steroid hormones, the endometrium transitions sequentially through the estrogen-driven proliferative phase, the post-ovulatory progesterone-driven secretory phase, and the ischemic menstrual phase. Pathologic proliferation occurs in endometrial hyperplasia and endometrioid adenocarcinoma, particularly driven by unopposed estrogen stimulation; evaluated via transvaginal ultrasonography (endometrial thickness) and definitive endometrial tissue biopsy.

Endomorph

A body-build classification traditionally describing a relatively round shape and a tendency to store body fat; it is not a medical diagnosis.

Endomyocardial Fibrosis

Scarring and thickening of the inner heart lining and underlying heart muscle that can impair filling.

Endoparasite

A clinical disorder or finding related to endoparasite; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Endopeptidase

An enzyme that cuts peptide bonds within a protein or peptide chain rather than removing amino acids only from an end.

Endophthalmitis

A severe inflammation, usually infectious, inside the eye that can rapidly threaten vision and requires urgent ophthalmic treatment. aqueous humor, and adjacent structures, representing an ophthalmologic emergency.

Endoplasmic Reticulum

Interconnected network of membranous tubules and sacs continuous with the nuclear envelope. Rough ER: studded with ribosomes, site of synthesis of secretory, membrane, and lysosomal proteins; co-translational insertion into ER lumen.

Endoprosthesis

An artificial device placed inside the body to replace, support, or restore a body structure. Examples include joint replacements, vascular grafts or stents, and some devices used to keep an airway open.

Endoribonuclease

An enzyme that cleaves RNA at internal phosphodiester bonds, helping process or degrade RNA molecules.

Endorphin

Endogenous opioid peptides (beta-endorphin, enkephalins, dynorphins) produced by the pituitary, hypothalamus, and immune cells that bind opioid receptors (mu, delta, kappa) to produce analgesia, euphoria, and modulation of pain perception and

stress responses.

Endorphins

Natural opioid peptides that reduce pain and can contribute to feelings of well-being.

Alternate Names:

Endogenous opioids

Endoscope

A flexible or rigid instrument with a light and camera used to inspect an internal body passage or cavity and sometimes perform procedures. bronchoscope, colonoscope, gastroscope, arthroscope, cystoscope. Essential for diagnosis and intervention.

Endoscopic Mucosal Resection

Advanced endoscopic technique for removal of superficial gastrointestinal neoplasms by lifting the lesion through submucosal injection and resecting with an electrosurgical snare.

Endoscopic Retrograde Cholangiopancreatography

Combined endoscopic and fluoroscopic procedure used to visualize and treat disorders of the biliary and pancreatic ducts. A duodenoscope is advanced to the second portion of the duodenum and the ampulla of Vater is cannulated. Contrast dye is injected under fluoroscopic guidance creating cholangiograms and pancreatograms.

Endoscopic Submucosal Dissection

Advanced endoscopic technique for en bloc resection of large gastrointestinal neoplasms using specialized electrosurgical knives to dissect through the submucosa. The technique allows complete histological assessment and is particularly valuable for early gastric and colorectal cancers.

Endoscopic Thoracic Sympathectomy

A minimally invasive operation that interrupts selected thoracic sympathetic nerves, most often to treat severe focal palmar hyperhidrosis. Possible adverse effects include compensatory sweating, Horner syndrome, pneumothorax, and cardiovascular changes.

Endoscopic Ultrasound

Combined endoscopy and ultrasound for high-resolution imaging of the GI wall and adjacent structures. Linear echoendoscope: allows FNA of mediastinal, pancreatic, and peripancreatic lesions. Radial echoendoscope: 360-degree view for staging GI cancers (TNM staging).

Endoscopy

Examination of an internal body passage or cavity with an endoscope; tissue sampling and treatment may be performed during the procedure. endoscopes. Upper endoscopy examines the esophagus, stomach, and duodenum. Colonoscopy examines the colon and terminal ileum. Both allow direct visualization, biopsy, and therapeutic interventions including polypectomy, hemostasis, and dilation.

Endosome

Endosome is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Endosteum

The thin connective tissue membrane lining the inner surface of bone, including the medullary cavity, Haversian canals, and trabeculae. Contains osteoprogenitor cells and osteoblasts, contributing to bone formation, remodeling, and repair (fracture healing).

Endostosis

Endostosis is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

Endothelial

Relating to the endothelium, the thin layer of cells lining blood and lymphatic vessels and forming part of other internal surfaces.

Endothelial Cell

A cell lining blood and lymphatic vessels that regulates permeability, clotting, inflammation, vascular tone, and new-vessel formation.

Endothelin

Endothelin concerns endothelin, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Endothelin Receptor Antagonists

Medications that block endothelin-1, a potent vasoconstrictor implicated in pulmonary arterial hypertension. Bosentan (dual ERA), ambrisentan (selective ETA), and macitentan are used for PAH. Side effects include hepatotoxicity (bosentan), anemia, and teratogenicity.

Endothelins

Peptides made by vascular endothelium that constrict blood vessels and can raise blood pressure.

Endothelium

The thin layer of specialized cells lining blood and lymphatic vessels. It regulates exchange between blood and tissues and contributes to vascular tone, inflammation, clotting, and new-vessel formation.

Endothelium-Derived Relaxing Factor

A substance released by the endothelium that relaxes blood vessels; it is largely identified with nitric oxide.

Alternate Names:

EDRF; Nitric oxide

Endotoxin

Endotoxin concerns endotoxin, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Endotoxins

Lipopolysaccharide components of the outer membrane of Gram-negative bacteria that can trigger strong inflammatory responses, fever, hypotension, and septic shock when released systemically.

Endotracheal Intubation

Placement of a cuffed tube through the mouth or nose into the trachea to maintain airway patency, deliver positive-pressure ventilation, administer in-

haled anesthetics, and protect the airway in selected patients. Correct position must be confirmed clinically and with exhaled carbon dioxide when circulation is present.

Endotracheal Tube

A tube placed through the mouth or nose into the trachea to maintain an airway and support ventilation. A cuff may seal the airway around the tube.

Endourologist

A urologist who specializes in minimally invasive procedures performed through the urinary tract or small access sites, such as stone removal or ureteroscopy.

Endovaginal Ultrasound

Ultrasound imaging performed with a probe placed in the vagina to examine pelvic organs, including the uterus, endometrium, ovaries, and early pregnancy.

Endovascular

Located within or performed through the interior of a blood vessel, usually using a catheter-based technique.

Endovascular Aneurysm Repair

Minimally invasive technique for abdominal aortic aneurysm repair using stent graft. Accessed via femoral arteries. Advantages: lower perioperative mortality, faster recovery. Disadvantages: need for surveillance, endoleak risk, may require reintervention.

Endovascular Embolization

A medical procedure, treatment, device, or care topic related to endovascular embolization; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Endovascular Graft

A fabric-covered vascular prosthesis placed through a catheter to reinforce a diseased vessel or exclude an aneurysm. It is used in selected aortic and pe-

ripheral vascular conditions; anatomy, symptoms, operative risk, and imaging surveillance determine suitability and follow-up.

Endovascular Repair

A minimally invasive procedure that uses a catheter-delivered graft or other device to repair a blood vessel from inside its lumen.

Endurance

The ability to continue physical or mental activity without becoming exhausted quickly. It depends on heart and lung fitness, muscle conditioning, energy supply, sleep, and health; it can be assessed with exercise or functional tests.

Enema

The introduction of fluid into the rectum and colon through the anus for diagnostic or therapeutic purposes.

Energy

Energy is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

Energy Conservation

Strategies that reduce unnecessary energy expenditure and fatigue during daily activities, such as pacing, prioritizing, planning, positioning, and using adaptive equipment.

Energy Increased

A subjective or behavioral increase in energy that may be normal or may occur with reduced need for sleep, stimulant use, endocrine disease, or a manic or hypomanic episode.

Energy Intake

Energy intake is a nutrition or dietary term; appropriate use depends on age, health status, allergies, intake, and medical treatment.

Energy Metabolism

The chemical processes that convert nutrients into

usable cellular energy, mainly through glycolysis, the citric-acid cycle, and oxidative phosphorylation.

Energy Resolution

The ability of a radiation detector to distinguish photons with different energies, commonly expressed as the width of a photopeak relative to its energy.

Energy Window

The selected range of photon energies accepted by a gamma camera or other radiation detector for image formation. Appropriate selection helps limit scattered radiation.

Enervate

To weaken, exhaust, or reduce strength and energy; it is a descriptive verb rather than a specific diagnosis.

Enflurane

An inhaled anesthetic formerly used to maintain general anesthesia; it is now uncommon in many settings.

Enfuvirtide

A medicine or chemical compound called enfuvirtide. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Engagement

The descent of the fetal presenting part into the pelvis, typically occurring 2-3 weeks before labor in nulliparas or at the onset of labor in multiparas.

Enhanced Elimination

Methods used to increase removal of a toxin from the body after absorption, including urinary alkalization, hemodialysis, hemoperfusion, or other extracorporeal treatments when indicated.

Enhanced Pause

An increased pause or interruption in breathing or another physiologic signal; the meaning depends on the specific test or clinical setting.

Enhanced Recovery After Surgery

A multimodal, evidence-based perioperative pathway that reduces surgical stress and supports early recovery through preoperative counseling, appropriate fasting, opioid-sparing analgesia, early mobilization, early nutrition, and prevention of complications.

Enhancement Artifact

Ultrasound artifact from fluid-filled structures. Enhanced by harmonic imaging.

Enhancer

DNA sequence increasing transcription of target gene, can be distant from gene, orientation-independent. Binds activator proteins. Examples: LCR (locus control region) for beta-globin.

Eniluracil

An investigational drug that blocks the breakdown of uracil and can alter the activity of fluoropyrimidine medicines.

Enkephalin

A naturally produced opioid peptide that binds mainly to delta and mu opioid receptors. It helps regulate pain, stress, movement, and other brain and nerve functions.

Alternate Names:

Endogenous opioid

Enlarged Adenoids

Overgrowth of lymphoid tissue behind the nose that can obstruct nasal breathing, cause mouth breathing, snoring, ear-fluid problems, or sleep-disordered breathing.

Enlarged Breasts In Men (Gynecomastia)

Enlargement of male breast tissue caused by hormonal imbalance, medicines, substance use, or an underlying illness.

Enlarged Heart

An increase in the size of the heart, which may result from high blood pressure, valve disease, cardiomy-

opathy, anemia, or other conditions and requires evaluation of the underlying cause.

Alternate Names:

Cardiomegaly

Enlarged Liver

Enlarged liver concerns enlarged liver, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Alternate Names:

Liver, Enlarged

Enlarged Prostate

Increase in prostate size, usually benign prostatic hyperplasia, that can obstruct urine flow and cause hesitancy, weak stream, frequency, urgency, or retention.

Enlarged Spleen

An enlarged spleen, or splenomegaly, may result from infection, liver or blood disease, cancer, inflammation, or congestion. It can cause fullness or pain and increases vulnerability to rupture; the cause and blood counts guide evaluation.

Alternate Names:

Spleen Enlarged (Enlarged Spleen)

Enlarged Spleen (Splenomegaly)

An increase in spleen size associated with infection, liver disease, blood disorders, inflammation, or malignancy.

Enophthalmos

Abnormal backward displacement of an eyeball within the eye socket.

Enoxaparin

A medicine or chemical compound called enoxaparin. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Enrichment

Restoration of nutrients lost during processing. Examples: enriched flour, restored B vitamins.

Enrollment

The process of registering a person in a healthcare program, insurance plan, or clinical study after eligibility and consent requirements are met.

ENT Physician

An otolaryngologist, a physician who diagnoses and treats disorders of the ear, nose, throat, and related head and neck structures.

Entamoeba

Entamoeba is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Entamoeba Coli

Entamoeba coli is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Entamoeba Hartmanni

Entamoeba hartmanni is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Entamoeba Histolytica

A protozoan parasite that causes amoebiasis, a gastrointestinal and extra-intestinal infection transmitted via the fecal-oral route. The organism exists in two forms: the infectious cyst (transmitted in contaminated food or water) and the invasive trophozoite.

Entamoeba Polecki

Entamoeba polecki is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Enteral

Relating to or delivered through the gastrointestinal tract; enteral nutrition provides food through

the mouth or a feeding tube into the stomach or intestine.

Enteral Formula

A nutritionally complete or modular liquid preparation delivered into the gastrointestinal tract. Formulas may be polymeric, semi-elemental, or elemental and are selected according to digestion, absorption, fluid, renal, hepatic, and metabolic requirements.

Enteral Nutrition

Delivery of nutrients via gastrointestinal tract. Routes: nasogastric, nasoduodenal, gastrostomy (PEG), jejunostomy. Indications: dysphagia, neurological disease, head/neck cancer, prolonged inability to eat. Complications: aspiration, diarrhea, tube displacement, sinusitis.

Enteric

Relating to the intestine or gastrointestinal tract; the term can also describe organisms or infections associated with the intestines.

Enteric Bacteria

Bacteria that live in or affect the intestinal tract, including normal flora and pathogens that cause gastrointestinal or extraintestinal infection.

Enteric Duplication Cyst

A congenital, smooth-muscle-lined cyst arising from the gastrointestinal tract, most commonly in the ileum, containing ectopic gastric or intestinal mucosa. It may present in childhood with abdominal pain, obstruction, or gastrointestinal bleeding from ectopic gastric acid secretion.

Enteric Fever (Typhoid Fever)

Alternate index label for Typhoid Fever.

Enteric Nervous System

The network of nerve cells in the gastrointestinal tract that regulates movement, secretion, and local blood flow.

Enteric-Coated

Covered with a coating designed to resist breakdown in the stomach and dissolve in the less-acidic small intestine.

Enteritis

Inflammation of the small intestine caused by infection, inflammatory disease, radiation, reduced blood flow, or other injury. bacterial, or parasitic). Viral enteritis (norovirus, rotavirus, adenovirus, astrovirus) presents with acute onset of watery diarrhea, nausea, vomiting, and abdominal cramps, typically self-limited over 2–7 days.

Enterobacter

A genus of Gram-negative bacteria in the Enterobacteriaceae family that can cause healthcare-associated urinary, bloodstream, wound, or respiratory infection.

Enterobacter Aerogenes

A former name for *Klebsiella aerogenes*, a Gram-negative bacterium that can cause healthcare-associated infection and may carry antibiotic resistance.

Enterobacter Asburiae

A Gram-negative *Enterobacter* species found in the environment and occasionally causing opportunistic human infection.

Enterobacter Cancerogenus

A Gram-negative environmental bacterium that can rarely cause wound or bloodstream infection.

Enterobacter Cloacae

A Gram-negative bacterium that can cause healthcare-associated urinary, bloodstream, respiratory, or wound infection and may develop antibiotic resistance.

Enterobacter Hormaechei

A member of the *Enterobacter cloacae* complex that can cause opportunistic healthcare-associated infection.

Enterobacteriaceae

A family of Gram-negative bacteria that includes *Escherichia*, *Klebsiella*, *Enterobacter*, *Salmonella*, and *Shigella*; members may be normal flora or pathogens.

Enterobacteriaceae Carbapenem Resistance

Resistance to carbapenem antibiotics in Enterobacteriaceae, primarily through production of carbapenemases. The most important carbapenemases include KPC, NDM, and OXA-48-like enzymes. Carbapenem-resistant Enterobacteriaceae (CRE) are a major public health threat due to limited treatment options.

Enterobiasis

Intestinal infection with the pinworm *Enterobius vermicularis*, commonly causing nighttime itching around the anus.

Enterobius

A genus of pinworms; *Enterobius vermicularis* causes the common intestinal infection known as pinworm infection.

Enterobius Vermicularis

A small intestinal nematode commonly called the pinworm or threadworm.

Alternate Names:

the pinworm or threadworm.

Enterocoele

A form of pelvic organ prolapse characterized by the herniation of the peritoneal pouch of Douglas (rectouterine or rectovaginal space) and loops of small intestine between the anterior rectal wall and posterior vaginal wall. Most commonly encountered following hysterectomy (apical vault defect) or in multiparous women with weakened endopelvic fascia and levator ani musculature, presenting with pelvic heaviness, a palpable vaginal bulge, and lower back or rectal discomfort.

Alternate Names:

Small Bowel Prolapse; Douglas Pouch Hernia

Enteroclysis

A contrast-imaging study in which material is delivered directly into the small intestine through a tube to evaluate mucosal disease, narrowing, or obstruction.

Enterococcaceae

A family of bacteria that includes *Enterococcus* species, which normally inhabit the intestine but can cause opportunistic infections.

Enterococcus

A genus of Gram-positive bacteria normally found in the intestine that can cause urinary, wound, bloodstream, and heart-valve infections.

Enterococcus Avium

A species of *Enterococcus* bacteria that can rarely cause urinary, bloodstream, wound, or other infections, especially in vulnerable patients.

Enterococcus Dispar

A species of *Enterococcus* bacteria identified mainly in microbiology studies and occasionally in clinical specimens.

Enterococcus Durans

A species of *Enterococcus* bacteria that can occasionally cause opportunistic infections.

Enterococcus Faecalis

A common *Enterococcus* species causing urinary, bloodstream, wound, and infective endocarditis infections.

Enterococcus Faecium

An *Enterococcus* species that causes healthcare-associated infection and may be resistant to vancomycin and other antibiotics.

Enterococcus Gallinarum

An *Enterococcus* species that may carry intrinsic low-level resistance to vancomycin and can rarely cause human infection.

Enterococcus Hirae

A species of *Enterococcus* bacteria that rarely causes opportunistic infections in humans.

Enterococcus Malodoratus

A rarely encountered *Enterococcus* species that may be isolated from clinical specimens.

Enterococcus Mundtii

A species of *Enterococcus* bacteria that is uncommon in human disease but can occasionally be clinically significant.

Enterococcus Pseudoavium

A rarely encountered *Enterococcus* species that may be isolated from human specimens.

Enterococcus Raffinosus

A species of *Enterococcus* bacteria that can cause occasional opportunistic infections.

Enterococcus Thailandicus

A recently recognized *Enterococcus* species that is uncommon in human clinical disease.

Enterocolitis

Inflammation of both the small intestine and colon, caused by infection, immune-mediated disease, reduced blood flow, toxins, or other injury. It may produce abdominal pain, diarrhoea, fever, vomiting, bleeding, dehydration, or systemic illness; diagnosis and management depend on the cause and severity.

Enterocyte

Enterocyte is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Enterocytozoon

A genus of microsporidia, including *Enterocytozoon bieneusi*, which can cause persistent diarrhea in people with weakened immunity.

Enteroendocrine Cell

A specialized intestinal epithelial cell that senses

nutrients and releases hormones such as GLP-1, GIP, secretin, or CCK to regulate digestion, appetite, and glucose metabolism.

Enterohepatic Circulation

Recycling of toxins between liver and intestine via bile. Prolonged exposure, increased toxicity. Interrupted by activated charcoal, cholestyramine. Examples: morphine, digoxin, estrogen, thyroxine.

Enteromonas Hominis

A usually nonpathogenic intestinal flagellate that may be found in stool specimens.

Enteropathic

Pertaining to, originating from, or associated with pathology of the intestines. Clinically prominent in rheumatology as enteropathic arthropathy, a seronegative, HLA-B27-associated spondyloarthritis that develops in patients with inflammatory bowel disease (Crohn disease or ulcerative colitis), presenting as peripheral asymmetric pauciarticular arthritis or axial ankylosing spondylitis. Also used to describe secondary extra-intestinal manifestations of gut barrier compromise, including enteropathic acrodermatitis (zinc deficiency) and enteropathic protein loss (protein-losing enteropathy in intestinal lymphangiectasia or severe celiac disease).

Enteropathic Arthritis

Inflammatory arthritis associated with inflammatory bowel disease, including Crohn disease and ulcerative colitis. It may affect the spine, sacroiliac joints, or peripheral joints.

Enteropathy

A disease or disorder affecting the intestine. Causes include infection, inflammation, gluten sensitivity, impaired blood flow, toxins, and inherited conditions.

Enteroscopy

Endoscopic examination of the small intestine, allowing visualization, biopsy, bleeding treatment, or removal of selected lesions beyond the reach of standard upper endoscopy.

Enterospasm

A spasm or involuntary contraction of the intestine, which may cause cramping, pain, or altered movement of intestinal contents.

Enterostomy

A surgically created opening from the intestine to the abdominal surface, such as an ileostomy or colostomy, to divert intestinal contents.

Enterostomy Procedure

A medical procedure, treatment, device, or care topic related to enterostomy procedure; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Enterotoxin

A toxin produced by some microorganisms that acts on the intestinal epithelium and can cause secretion, vomiting, abdominal cramps, or diarrhea.

Enterovesical Fistula

An abnormal connection between the intestine and urinary bladder.

Enterovirulent E. Coli

Alternate index label for EEC.

Enterovirulent E. Coli

Alternate index label for Enterovirulent E. Coli.

Enterovirus

A group of viruses that can infect the digestive and respiratory tracts. Many infections cause no symptoms or only mild illness, but enteroviruses can also cause hand-foot-and-mouth disease, rash, meningitis, myocarditis, or other disease. They commonly spread through respiratory secretions or contact with infected stool.

Enterovirus (Non-Polio Enterovirus Infection)

Alternate index label for Non-Polio Enterovirus Infection.

Enterovirus D68

An enterovirus that usually causes respiratory illness but can rarely cause severe pneumonia or acute flaccid myelitis, especially in children; spread occurs through respiratory secretions.

Enthesis

The site at which a tendon, ligament, or joint capsule attaches to bone.

Enthesitand Enthesopathy (Enthesitis And Enthesopathy)

Alternate index label for Enthesitis and Enthesopathy.

Enthesitis

Inflammation at the site where a tendon, ligament, or joint capsule inserts into bone (enthesis), a hallmark of spondyloarthritis (ankylosing spondylitis, psoriatic arthritis, reactive arthritis, IBD-associated). Affects Achilles tendon, plantar fascia, patellar, and costochondral junctions.

Enthesitis And Enthesopathy

Enthesitis is inflammation where a tendon, ligament, or fascia attaches to bone; enthesopathy includes degenerative and other disorders at that site. It is associated with overuse, arthritis, and spondyloarthritis and causes localized pain and stiffness.

Alternate Names:

Enthesitand Enthesopathy (Enthesitis And Enthesopathy)

Entinostat

An investigational histone-deacetylase inhibitor studied in cancer treatment, including combinations with immunotherapy or hormone therapy.

Entorhinal Cortex

Entorhinal cortex is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Entrance Wound

A skin defect created where a projectile enters the

body, distinguished from an exit wound by smaller size, rounded shape, and abraded inward margin. Contact wounds show a muzzle imprint and soot; close-range wounds show soot and powder tattooing; intermediate-range wounds show stippling; distant wounds show a clean abrasion ring.

Entropion

Inward turning of an eyelid margin, causing eyelashes to rub the eye and produce irritation, tearing, corneal injury, or infection.

Enucleation

Surgical removal of the eyeball while leaving the eyelid, eye muscles, and most orbital tissues in place.

Enucleation Procedure

A medical procedure, treatment, device, or care topic related to enucleation procedure; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Enuresis

Repeated involuntary urination, usually during sleep in a child who is developmentally expected to remain dry. It may be primary or secondary and requires assessment for constipation, urinary infection, diabetes, sleep or developmental disorders, psychosocial stressors, and lower-urinary-tract dysfunction when clinically indicated.

Enuresis (Bedwetting)

Repeated involuntary urination during sleep in a child who is developmentally expected to remain dry. It may be primary or secondary; assessment considers constipation, urinary infection, diabetes, sleep disorders, and developmental or psychosocial factors.

Alternate Names:

Bedwetting

Environment

Environment is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Environmental Exposure

Environmental exposure is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Environmental Health

Study of environmental factors affecting health. Examples: air pollution, water quality, occupational hazards, climate change.

Environmental Illness

Illness caused or worsened by environmental exposures; evaluation requires attention to timing, dose, setting, and alternative explanations.

Enzootic

Regularly present or persistently maintained in an animal population or geographic area; it is the animal-population counterpart of endemic disease.

Enzyme

A protein, or occasionally an RNA molecule, that catalyses a specific biochemical reaction without being consumed; enzyme activity measurements help assess tissue injury, metabolic disease, and drug effects. activation energy. Specificity: lock-and-key or induced fit models. Kinetics: Michaelis-Menten equation (V_{max} , K_m). Regulation: allosteric control, covalent modification (phosphorylation), proteolytic activation, feedback inhibition.

Enzyme Activity

The rate at which an enzyme catalyzes a reaction under defined conditions, influenced by substrate, temperature, pH, inhibitors, cofactors, and enzyme concentration.

Enzyme Deficiency

Reduced or absent activity of an enzyme, often inherited or acquired, causing accumulation of substrates, lack of products, and characteristic metabolic or cellular disease.

Enzyme Induction

A process by which a drug or xenobiotic increases the synthesis or activity of drug-metabolizing enzymes, primarily cytochrome P450 enzymes in the liver, accelerating the metabolism of itself (autoinduction) or other drugs. Enzyme induction typically occurs over days to weeks as it requires new protein synthesis.

Enzyme Inhibition

A process by which a drug inhibits the activity of drug-metabolizing enzymes, leading to increased plasma concentrations of co-administered drugs that are metabolized by the same enzyme. Enzyme inhibition occurs rapidly (hours to days) as it does not require new protein synthesis.

Enzyme Kinetics

The study of enzyme-catalyzed reaction rates and the factors that affect them. Important concepts include substrate concentration, maximum reaction rate, binding affinity, inhibitors, and the relationship between enzyme activity and temperature or pH.

Enzyme Markers

Enzyme markers concerns enzyme markers, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Enzyme Precursors

Inactive or less-active precursor proteins, also called zymogens, that are converted by cleavage or other modification into functional enzymes.

Enzyme Therapy

A medical procedure, treatment, device, or care topic related to enzyme therapy; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Enzyme-Linked Immunosorbent Assay

An immunoassay that uses an enzyme-labeled antibody or antigen and a substrate-generated signal to detect or quantify a target analyte. It is used for measurement of antibodies, antigens, hormones,

cytokines, and infectious disease markers.

Eosine Yellowish

Eosine yellowish is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Eosinophil

A granulocyte (1-4 percent of leukocytes) with bilobed nucleus and eosinophilic granules containing major basic protein, eosinophil cationic protein, and peroxidase. Roles: defense against parasitic (helminth) infections and modulation of allergic inflammation; contain histaminase and aryl sulfatase.

Eosinophil Count - Absolute

The absolute eosinophil count is the number of eosinophils in a volume of blood, calculated from the white-cell count and eosinophil percentage. Elevation may occur with allergy, parasitic infection, medicines, autoimmune disease, or hematologic disorders.

Eosinophilia

An absolute eosinophil count exceeding 500 cells per microliter in peripheral blood, most commonly caused by parasitic infections, allergic disorders, drug reactions, and autoimmune diseases. Hypereosinophilia, with counts above 1500 per microliter, may cause end-organ damage to the heart, lungs, skin, and nervous system.

Eosinophilic Bronchitis

A cause of chronic cough in which eosinophilic inflammation affects the airways without the variable airflow obstruction typical of asthma. Cough-variant asthma and reflux may mimic it; diagnosis relies on clinical assessment and airway inflammation testing.

Eosinophilic Esophagitis

Chronic immune-mediated condition characterized by dense eosinophilic infiltration of the esophageal mucosa defined as fifteen or more eosinophils per high-power field, in the absence of other causes of

esophageal eosinophilia.

Eosinophilic Fasciitis

A rare inflammatory disorder causing painful swelling and progressive thickening of fascia and skin, often with increased blood eosinophils. thickening of the deep fascia and adjacent muscle, presenting with painful swelling and induration of the extremities and a peau d'orange skin appearance. Peripheral eosinophilia and elevated inflammatory markers are typical.

Alternate Names:

Shulmans Syndrome (Eosinophilic Fasciitis)

Eosinophilic Gastroenteritis

Rare chronic inflammatory condition characterized by eosinophilic infiltration of the gastrointestinal tract beyond the esophagus involving any segment from stomach to rectum and extending beyond the mucosa to involve the muscularis propria or serosa.

Eosinophilic Granuloma

A localized form of Langerhans cell histiocytosis that commonly affects bone or skin.

Eosinophilic Granulomatosis With Polyangiitis

EGPA (formerly Churg-Strauss syndrome): an ANCA-associated vasculitis characterized by asthma, peripheral and tissue eosinophilia, and necrotizing vasculitis.

Eosinophils

White blood cells involved in allergic inflammation and defense against some parasites.

Alternate Names:

Eosinophil granulocytes

Ependyma

A specialized epithelial lining of the brain ventricles and spinal-cord central canal that is involved in cerebrospinal-fluid circulation and, in some regions, production.

Ependymal Cell

A glial cell lining brain ventricles and the spinal central canal that contributes to cerebrospinal-fluid circulation and the ventricular barrier.

Ependymal Tumor

A tumor arising from cells lining the brain ventricles or central spinal canal; ependymomas may obstruct cerebrospinal-fluid flow and require imaging, surgery, and sometimes radiation.

Ependyoblastoma

A rare, highly malignant embryonal brain tumor, now classified within specific molecular categories of pediatric central nervous-system tumors.

Ependymoma

A glioma arising from the ependymal cells lining the ventricles and spinal canal; more common in children and frequently associated with hydrocephalus.

Ephedrine

A sympathomimetic amine that increases noradrenergic activity and can raise blood pressure and heart rate; it has limited clinical uses and may cause palpitations, insomnia, hypertension, or misuse.

Ephedrinum

A name referring to ephedrine, a sympathomimetic medicine that can increase heart rate, blood pressure, and airway diameter.

Ephelides

Small, flat freckles caused by increased melanin production, often becoming darker after sun exposure.

Ephrins

Cell-surface signaling proteins that bind Eph receptors and guide cell positioning, axon growth, blood-vessel development, and tissue organization.

Epiblast

Epiblast is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Epicanthal Folds

Skin folds of the upper eyelid that partly cover the inner canthus, common in some populations and sometimes associated with chromosomal or developmental syndromes.

Epicardium

The outermost layer of the heart wall, which is the visceral layer of the serous pericardium. It consists of a single layer of mesothelial cells and underlying connective tissue containing blood vessels, nerves, and adipose tissue. The epicardium produces pericardial fluid that lubricates the heart surface.

Epichlorohydrin

Epichlorohydrin is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Epicondyle

A bony projection near a condyle that provides attachment for muscles and ligaments.

Epicondylitis

Painful inflammation or degeneration of a tendon attachment near a joint epicondyle, commonly at the elbow.

Alternate Names:

Tennis elbow; golfer's elbow

Epicondylitis, Lateral

Alternate index label; see *Tennis elbow*.

Epidemic

Sudden increase in disease cases above expected level. Examples: cholera outbreak, measles outbreak.

Epidemiologic Method

A method for measuring disease occurrence or investigating associations between exposures and health outcomes in populations.

Epidemiologic Studies

Research that examines the distribution, causes, risk factors, prevention, or outcomes of health events in populations.

Epidemiological Study

A population-based investigation of disease occurrence, causes, risks, or health outcomes.

Alternate Names:

Epidemiologic study

Epidemiologist

A scientist or public-health professional who studies the distribution, causes, risk factors, and prevention of health conditions in populations.

Epidemiology

Study of distribution and determinants of health-related states in populations. Branches: descriptive (who, when, where), analytic (why, how), experimental (intervention trials). Measures: incidence, prevalence, mortality rates, case-fatality rate.

Epidermal

Relating to the epidermis, the outermost layer of the skin.

Epidermal Acanthosis

Thickening of the epidermis caused by increased growth of its cells, seen in conditions such as psoriasis, chronic rubbing, and some inflammatory or genetic skin disorders.

Epidermal Cells

Cells forming the outer layer of skin, chiefly keratinocytes, which create a protective barrier; melanocytes, immune cells, and touch-associated cells are also present.

Epidermal Growth Factor

A signaling protein that binds the epidermal-growth-factor receptor and promotes cell growth, survival, and tissue repair; abnormal signaling can contribute to cancer.

Epidermal Inclusion Cyst

A common benign cyst lined by stratified squamous epithelium with keratin debris. It presents as a firm, mobile, subcutaneous nodule, typically on the face, neck, and back. A central punctum is characteristic. It may become inflamed or infected. Treatment includes complete excision (including the cyst wall) to prevent recurrence.

Epidermal Layers

From deep to superficial, the epidermis consists of the basal, spinous, granular, lucid, and cornified layers. The lucid layer is present mainly in thick skin such as the palms and soles.

Epidermis

Outermost skin layer, stratified squamous keratinized epithelium approximately 0.1 mm thick, with five layers (superficial to deep): stratum corneum (dead keratinized cells), lucidum (clear layer, thick skin only), granulosum (keratinization begins), spinosum (spiny layer, Langerhans cells), basale (stem cells, melanocytes, Merkel cells).

Epidermodysplasia Verruciformis

A rare inherited disorder of skin immunity associated with susceptibility to certain human papillomavirus infections, widespread wart-like lesions, and increased risk of some skin cancers.

Epidermoid Cyst

A benign, slow-growing cyst lined by squamous epithelium and filled with keratin, usually presenting as a firm subcutaneous nodule. Rupture can cause inflammation, tenderness, and a foul-smelling discharge.

Epidermoid Cysts

Slow-growing benign cysts beneath the skin filled with keratin, commonly presenting as a movable lump.

Alternate Names:

Cysts, Epidermoid Cysts, Sebaceous Sebaceous Cysts

Epidermolysis Bullosa

A group of genetic disorders causing skin fragility and blistering with minimal trauma. Simplex (intraepidermal blistering), junctional (blistering at lamina lucida), dystrophic (sublamina densa blistering), and Kindler syndrome (mixed). Dystrophic EB can cause scarring, contractures, and squamous cell carcinoma.

Epidermolysis Bullosa

A group of inherited disorders in which skin and sometimes mucous membranes are unusually fragile and blister or erode after minor friction or trauma.

Epidermolysis Bullosa Acquisita

An autoimmune subepidermal blistering disease caused by antibodies against type VII collagen in anchoring fibrils; it commonly causes skin fragility and trauma-induced blisters and may scar.

Epidermophyton

A genus of dermatophyte fungi that infect keratinized skin, hair, and nails.

Epidermophyton Floccosum

A dermatophyte fungus that commonly causes tinea of the body, groin, and feet and can infect nails.

Epididymal Cyst

A usually benign, fluid-filled cyst arising in the epididymis. It may be painless and may require treatment only if it causes significant symptoms or complications.

Epididymal Neoplasm

A benign or malignant growth arising in the epididymis; most palpable epididymal masses are benign, but persistent or enlarging lesions require evaluation.

Epididymides

The paired coiled ducts on the posterior surface of the testes where sperm mature and are stored before entering the vasa deferentia.

Alternate Names:

epididymis

Epididymis

Coiled duct approximately 6 meters long on the posterolateral aspect of each testis, divided into head (caput, receiving efferent tubules from the testis), body (corpus), and tail (cauda, continuing as the vas deferens). Functions include sperm maturation (gaining motility over approximately 12 days), storage (in the tail), and transport.

Epididymitis

Inflammation of the epididymis, commonly caused by infection and presenting with gradual unilateral scrotal pain and swelling. typically resulting from infection. In sexually active men under 35 years, the most common pathogens are sexually transmitted: *Chlamydia trachomatis* (most common) and *Neisseria gonorrhoeae*, with epididymitis often accompanied by urethritis.

Epidural

Regional analgesia (or anesthesia) delivering local anesthetic/opioid via a catheter in the epidural space (lumbar), used for pain relief during labor and for cesarean (higher dose) anesthesia. Provides excellent analgesia while allowing maternal mobility and pushing; reduces catecholamine stress.

Epidural Abscess

A collection of infected material between the dura mater and the skull or vertebral canal, capable of compressing the brain, spinal cord, or nerve roots. Spinal epidural abscess may cause severe focal back pain, fever, neurological deficit, or sphincter dysfunction and requires urgent imaging and specialist assessment.

Epidural Anaesthesia

Epidural Anaesthesia is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

Epidural Analgesia

Segmental pain relief produced by delivering a local anesthetic, sometimes with an opioid, through a

catheter into the epidural space. It may be used during labor or selected operations; the medicines and concentrations depend on the patient and clinical setting.

Epidural Analgesia For Labor

A neuraxial technique for labor analgesia: a catheter is placed in the epidural space (L3-L4 or L2-L3 interspace) and local anesthetic (bupivacaine 0.0625-0.125%) with opioid (fentanyl 2 $\mu\text{g}/\text{mL}$) is infused continuously or in patient-controlled epidural analgesia (PCEA) boluses.

Epidural Anesthesia

A regional anesthetic technique involving injection of local anesthetic and/or opioid into the epidural space (the potential space between the dura mater and the ligamentum flavum within the spinal canal), producing segmental analgesia and sympathetic blockade.

Epidural Block - Pregnancy

A medical procedure, treatment, device, or care topic related to epidural block - pregnancy; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Epidural Blood Patch

A minimally invasive procedure used to treat post-dural puncture headache resulting from accidental dural puncture during epidural placement or spinal anesthesia. It involves injecting a small volume of the patient's autologous blood (typically 15-20 mL) into the epidural space at or near the site of the previous puncture.

Epidural Hematoma

Accumulation of blood between the skull and the dura mater, typically from arterial bleeding (middle meningeal artery) following temporal bone fracture. Presents with loss of consciousness, then a lucid interval (hours), followed by rapid neurological deterioration due to mass effect.

Epidural Injections For Back Pain

Injection of corticosteroid, local anesthetic, or both

into or near the epidural space to reduce inflammation and pain from selected spinal nerve or disc disorders.

Epidural Neoplasm

A tumor in the space outside the dura surrounding the spinal cord or brain; spinal epidural tumors can compress nerves or the spinal cord and cause pain, weakness, or sensory loss.

Epidural Space

The space outside the dura mater around the spinal cord, where local anesthetic may be injected.

Epigallocatechin Gallate

A catechin found in green tea and dietary supplements, studied for antioxidant and other effects; high-dose extracts can cause liver injury and clinical benefits are not established for most conditions.

Epigastric

Relating to the upper middle region of the abdomen between the ribs, where pain may arise from the stomach, pancreas, gallbladder, or other organs.

Epigastric Pain

Pain or discomfort in the upper middle part of the abdomen, below the ribs and above the navel. It may result from problems involving the stomach, esophagus, pancreas, gallbladder, or small intestine.

Epigastric Artery

An artery supplying the abdominal wall; the superior and inferior epigastric arteries contribute to its blood supply.

Epigastric Region

Central superior region between the hypochondriac regions and above the umbilical region. Overlies the stomach, duodenum, pancreas, and portions of the liver. The aorta and inferior vena cava pass through it. Epigastric pain associates with gastric ulcers, pancreatitis, GERD, and aortic aneurysms.

Epigastrium

The upper middle region of the abdomen, located between the right and left hypochondriac regions.

Epigenetics

Heritable changes in gene expression without DNA sequence alteration. Mechanisms: DNA methylation, histone modification, non-coding RNA. Influenced by environment, diet, stress. Reversible.

Epigenome

The collection of chemical modifications and chromatin features that regulate gene activity without changing the DNA sequence itself.

Epigenomics

The study of epigenetic modifications across the genome and how they influence development, disease, environmental responses, and treatment.

Epiglottis

A leaf-shaped elastic cartilage at the base of the tongue that covers the laryngeal inlet during swallowing, directing food and liquid into the esophagus and preventing aspiration into the airway. Elevates during swallowing (with the larynx) under glossopharyngeal/vagal innervation.

Epiglottitis

Epiglottitis is potentially life-threatening inflammation and swelling around the epiglottis that can rapidly obstruct the airway, especially in children. *Haemophilus influenzae* type b (now rare due to vaccination). Presents with high fever, drooling, dysphagia, tripod position, and rapid progression to airway obstruction. Do not examine the throat.

Epilepsy

A disorder of the brain that causes a lasting tendency to have seizures. It may be diagnosed after two unprovoked seizures occurring more than 24 hours apart, after one unprovoked seizure when the risk of another seizure is high, or when a recognized epilepsy syndrome is present. Seizures may begin in one brain region or involve both sides of the brain. Causes include genetic, structural, metabolic,

infectious, immune, and unknown factors.

Alternate Names:

Seizure Disorder

Epilepsy In Children

A neurologic disorder in which a child has recurrent unprovoked seizures or a seizure syndrome, with causes, seizure types, development, and treatment varying widely.

Epilepsy Surgery

Indicated for patients with drug-resistant epilepsy who have a concordant, resectable seizure focus identified on comprehensive presurgical evaluation. Failure of two or more appropriately chosen and adequately dosed antiepileptic drugs to achieve sustained seizure freedom.

Epilepsy, Frontal Lobe

Alternate index label; see *Frontal lobe seizures*.

Epilepticus, Status

A clinical disorder or finding related to epilepticus, status; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Epileptiform

Resembling an epileptic seizure or the electrical pattern associated with seizure activity.

Epinephrin (Adrenaline)

An alternate spelling of epinephrine, a catecholamine hormone and medicine that increases heart rate and airway diameter and constricts blood vessels.

Alternate Names:

Adrenaline

Epinephrine

A hormone and neurotransmitter that increases heart activity and narrows many blood vessels during stress.

Alternate Names:

Adrenaline

Epinephrine (Adrenaline)

A catecholamine hormone and neurotransmitter produced by the adrenal medulla and sympathetic nerve terminals, acting on alpha-1, alpha-2, beta-1, beta-2, and beta-3 adrenergic receptors.

Alternate Names:

Adrenaline

Epiphora

Excessive tearing caused by impaired tear drainage or reflex hypersecretion. Causes: nasolacrimal duct obstruction (most common in infants and elderly), punctal stenosis, eyelid malposition (ectropion, entropion), and reflex tearing from dry eye or ocular surface irritation.

Epiphyseal Plate

A layer of hyaline cartilage, also called the growth plate or physis, located between the epiphysis and metaphysis of a growing long bone. It permits longitudinal bone growth through endochondral ossification, progressing from resting cartilage through proliferation and hypertrophy to calcification and replacement by bone.

Alternate Names:

the growth plate or physis, located between.

Epiphysis

The expanded end of a long bone, usually covered by articular cartilage where it forms a synovial joint. It contains spongy (trabecular) bone with a thin outer shell of compact bone and contributes to the shape and function of the joint.

Epiphysitis

Epiphysitis is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

Epipodophyllotoxin

Epipodophyllotoxin concerns epipodophyllotoxin, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Epiretinal Membrane

A thin layer of scar-like tissue that forms on the surface of the retina and may distort vision.

Epirubicin

An anthracycline chemotherapy medicine that intercalates DNA and inhibits topoisomerase II; cumulative cardiotoxicity and myelosuppression are important risks.

Epirubicin Hydrochloride

An anthracycline chemotherapy medicine that damages cancer-cell DNA and is used for selected cancers.

Episcleritis

Usually self-limited inflammation of the thin tissue overlying the white of the eye, causing localized redness and mild discomfort. connective tissue between the sclera and conjunctiva.

Episiotomy

A surgical incision in the perineum made during vaginal birth to enlarge the vaginal opening. Routine use is not recommended; selected indications may include urgent delivery or instrumental birth, and complications include pain, bleeding, infection, and extension of the tear.

Episiotomy Repair

Surgical repair of an episiotomy incision after delivery. Technique: continuous suturing of the vaginal mucosa (2-0 chromic), interrupted sutures for the perineal muscles, and subcuticular closure of the perineal skin. The rectum should be examined after repair (suture inadvertently through the rectal mucosa).

Episodic Ataxia

An inherited disorder causing recurrent brief attacks of impaired coordination and balance.

Epispadias

A congenital defect in which the urethral opening is on the upper surface of the penis or in an abnormal

position in females, often associated with bladder-exstrophy spectrum.

Epistasis

Interaction between genes where one gene masks or modifies expression of another. Examples: coat color in mice, ABO blood group modifications.

Epistaxis

Bleeding from the nasal mucosa that may range from minor bleeding to a medical emergency. See Nosebleed.

Epithalamic

Relating to the epithalamus, a region of the brain that includes the pineal gland and habenular nuclei and participates in circadian and emotional functions.

Epithelial

Relating to the sheets of cells that cover body surfaces, line cavities and organs, and form many glands.

Epithelial Cells

Cells that cover body surfaces and line organs, cavities, and glands.

Alternate Names:

Epithelial tissue cells

Epithelial Cyst

A fluid- or keratin-filled cyst lined by epithelial cells; most are benign, but symptoms, infection, growth, or an unusual location may require evaluation.

Epithelial Tissue

The tissue that covers external body surfaces, lines internal cavities and pathways, and forms glands.

Epithelioid Cell

A rounded or polygonal cell resembling epithelial cells, often describing activated macrophages in granulomas or the appearance of selected tumors.

Epithelioid Sarcoma

A rare soft-tissue cancer that often begins in the skin or tissues of the hands, forearms, or lower limbs.

Epithelioid Trophoblastic Tumor

A rare gestational trophoblastic neoplasm composed of chorionic-type intermediate trophoblast, often arising months or years after a pregnancy and requiring specialist oncologic management.

Epithelioma

An older or broad term for a tumor arising from epithelial cells; the specific diagnosis should identify whether it is benign, precancerous, or malignant.

Epithelium

Sheets of closely packed cells covering body surfaces, lining cavities and ducts, and forming glands. Epithelial structure varies with its function, such as protection, absorption, secretion, or exchange.

Epitope

Epitope concerns epitope, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Epitope Mapping

Epitope mapping concerns epitope mapping, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Epizootic

An outbreak of disease affecting many animals in a population or area at the same time; it is analogous to an epidemic in humans.

Eplerenone

A selective aldosterone-receptor antagonist used for hypertension and selected heart-failure or post-myocardial-infarction patients; hyperkalemia and kidney impairment require monitoring.

Epley Maneuver

A sequence of head and body movements used to move displaced otoconia from the posterior semicir-

cular canal into the utricle. It is commonly used to treat posterior-canal benign paroxysmal positional vertigo.

EPO Test

A blood test that measures erythropoietin, a hormone that stimulates red-blood-cell production; it may help evaluate anemia or erythrocytosis.

Epoetin Alfa

A recombinant erythropoiesis-stimulating agent used for selected anemias, including those related to chronic kidney disease or chemotherapy, with hemoglobin and thrombotic risk monitoring.

Epoetin Beta

A recombinant erythropoiesis-stimulating agent that stimulates red-cell production in selected anemias; treatment requires individualized hemoglobin targets and monitoring for hypertension and thrombosis.

Eponym

A name derived from a person, place, or other proper name and used for a disease, sign, procedure, or anatomical structure.

Epoprostenol

A short-acting prostacyclin administered by continuous intravenous infusion for severe pulmonary arterial hypertension; interruption can cause rapid clinical deterioration.

Epothilon

A family of microtubule-stabilizing compounds studied as anticancer drugs; some derivatives have entered clinical development.

Epothilone B

A compound that stabilizes microtubules and has been studied as an anticancer drug.

Epothilone D

A microtubule-stabilizing compound studied for its potential anticancer activity.

Epoxide Hydrolase

An enzyme that converts epoxide compounds into less reactive diols by adding water.

Epoxy Compounds

Epoxy compounds concerns epoxy compounds, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Epsom Salts

Magnesium sulfate crystals, sometimes used in baths or as a laxative; swallowing them can be unsafe in some conditions.

Epstein Pearls

Small, white keratin-filled cysts on the palate of a newborn that usually disappear without treatment.

Epstein-Barr Virus

EBV (human herpesvirus 4): ubiquitous virus causing infectious mononucleosis, transmitted via saliva ('kissing disease').

Epstein-Barr Virus

Alternate index label for EBV.

Epstein-Barr Virus

Alternate index label for Epstein-Barr Virus.

Epstein-Barr Virus Antibody Test

A blood test measuring antibodies to Epstein-Barr virus antigens to help determine whether infection is recent, past, or absent. Interpretation requires the antibody pattern, timing, symptoms, and sometimes molecular testing.

Eptifibatide

An injectable antiplatelet medicine that blocks platelet glycoprotein IIb/IIIa and is used in selected acute coronary syndromes.

Epulis

Epulis is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

Equilibrium Receptors

Sensory receptors in the vestibular system that detect head position and movement and help maintain balance.

Equilin

A naturally occurring estrogen found mainly in pregnant mares and used in some conjugated-estrogen medicines.

Equine Morbillivirus

A virus in the morbillivirus group that has been associated with severe disease in horses and can infect other mammals.

Equinovarus Deformity

A foot deformity combining downward pointing and inward turning, often congenital or neuromuscular and commonly called clubfoot when present at birth.

Equipment Safety

Practices that reduce injury, infection, malfunction, and misuse of medical equipment through selection, inspection, cleaning, maintenance, and training.

Equivalence Trial

A clinical trial designed to determine whether a new treatment's effects are neither meaningfully better nor worse than those of an established treatment within predefined limits.

Eradication

Eradication is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

Erb'S Palsy

Upper brachial plexus injury (C5-C6) causing weakness or paralysis of the shoulder and arm muscles. Presents with the characteristic waiter's tip position: arm adducted, elbow extended, forearm pronated, wrist flexed. Most commonly caused by shoulder dystocia during delivery. See also Brachial Plexus Injury.

ErbB Receptors

A family of receptor tyrosine kinases, including EGFR/HER1 and HER2, that respond to growth factors and regulate proliferation, survival, and differentiation; abnormal signaling drives some cancers.

Erbium

A chemical element used in specialized lasers and materials; erbium lasers can remove or remodel selected skin and dental tissues.

ERCP

Endoscopic retrograde cholangiopancreatography, a procedure combining endoscopy and contrast imaging to diagnose or treat bile-duct and pancreatic-duct obstruction, stones, leaks, or strictures.

Erdheim-Chester Disease

A rare non-Langerhans-cell histiocytosis caused by clonal histiocyte proliferation, commonly producing symmetrical long-bone pain or sclerosis and possible cardiovascular, renal, neurologic, or retroperitoneal involvement.

Erdheim–Chester Disease

A rare, non-Langerhans cell histiocytosis characterized by xanthogranulomatous infiltration of multiple organ systems, most commonly the long bones, retroperitoneum, and cardiovascular system. It causes symmetric osteosclerosis of the diaphyses and metaphyses of long bones, exophthalmos, and xanthelasma.

Erectile Disorder

A sexual dysfunction characterized by persistent or recurrent difficulty achieving or maintaining an erection sufficient for sexual activity, or a marked decrease in erectile rigidity, lasting ≥ 6 months and causing marked distress. Prevalence: 10-20% of men under 60, rising to 40-70% over age 70.

Erectile Dysfunction

Erectile dysfunction is recurrent or persistent difficulty achieving or maintaining a penile erection firm enough for satisfactory sexual activity. It may

result from vascular, neurological, hormonal, structural, medication-related, psychological, or mixed causes. Associated conditions include cardiovascular disease, diabetes, hypogonadism, neurological disorders, Peyronie disease, anxiety, depression, and relationship or other psychosocial factors.

Erectile Dysfunction (ED, Impotence)

Alternate index label for ED, Impotence.

Erectile Dysfunction (ED, Impotence)

Alternate index label for Erectile Dysfunction (ED, Impotence).

Erection

Enlargement and stiffening of the penis caused mainly by increased blood flow into erectile tissue and reduced venous outflow during sexual arousal or other stimulation.

Erection Problems

Persistent difficulty achieving or maintaining an erection sufficient for satisfactory sexual activity, also called erectile dysfunction. Causes may include vascular, neurologic, hormonal, psychological, medication-related, or relationship factors and may signal broader cardiovascular risk.

Erector Spinae

A group of muscles running along the back that extend and stabilize the spine.

Alternate Names:

Erector spinae muscles

Ergocalciferol

Vitamin D2, a form of vitamin D used to prevent or treat vitamin-D deficiency; excessive doses can cause high blood calcium and kidney injury.

Ergolines

A group of chemical compounds related to ergot alkaloids, including substances that act on serotonin, dopamine, or adrenergic receptors.

Ergometrine

An ergot alkaloid that causes uterine contraction and vasoconstriction, used selectively to control postpartum hemorrhage; it is contraindicated in some cardiovascular and hypertensive conditions.

Ergonomics

The design of tasks, tools, and environments to fit human capabilities and reduce discomfort, error, and injury.

Ergosterol

The principal sterol in fungal cell membranes; it is targeted by antifungal medicines such as amphotericin B and azole drugs.

Ergot

A fungus, especially *Claviceps purpurea*, that infects grains such as rye and produces alkaloids; ingestion can cause ergotism, with vascular, neurologic, or uterine effects.

Ergotamine

An ergot alkaloid formerly used to abort migraine attacks by constricting cranial vessels; excessive or interacting use can cause ergotism and ischemia.

Ergotism

A toxidrome caused by prolonged exposure to ergot alkaloids from the fungus *Claviceps purpurea* contaminating rye and other grains, or from ergot-derived medications.

Ergots

Compounds derived from a fungus and used in some treatments, including certain headache disorders.

Eribulin Mesylate

The mesylate salt of eribulin, a microtubule-inhibiting chemotherapy medicine used for selected advanced breast cancer and liposarcoma.

Erlotinib Hydrochloride

The hydrochloride salt of erlotinib, an epidermal growth factor receptor tyrosine-kinase inhibitor used

for selected cancers with appropriate molecular features.

Erosion

A superficial loss of skin or mucosal epithelium that does not extend through the full thickness of the tissue, caused by friction, inflammation, infection, trauma, or chemical injury.

Erosion (Tooth)

Chemical wear without bacterial involvement. Causes: acidic foods/drinks, gastric acid (GERD, bulimia), environmental acids. Management: dietary modification, fluoride, restoration.

Alternate Names:

Tooth

Erosion Lesion

A superficial epithelial defect caused by loss of the surface layer of skin or mucosa, without the deep tissue loss of an ulcer.

Erosive Esophagitis

Inflammation of the esophagus with visible breaks or erosions in its lining, most commonly caused by gastroesophageal reflux.

Erosive Gastritis

Inflammation of the stomach lining with superficial erosions but no full-thickness ulceration. Commonly caused by NSAIDs, alcohol, or critical illness. May present with epigastric pain or gastrointestinal bleeding. Diagnosis is by upper endoscopy showing erosions and erythema.

Erosive Lichen Planus

A severe, chronic T-cell-mediated autoimmune inflammatory mucocutaneous disease that targets mucosal surfaces including the vulva, vagina, and oral cavity. It presents with painful, glazed, erythematous mucosal erosions bordered by Wickham striae, profuse desquamative yellow discharge, introital burning, and dyspareunia. Chronic inflammation frequently leads to architectural resorption, loss of the labia minora, narrowing of the vaginal introitus, and complete vaginal synechiae.

Alternate Names:

Vulvovaginal Gingival Syndrome; Erosive Vulvovaginal Lichen Planus

Erratic Results

Test or measurement results that vary unpredictably or are inconsistent with repeated observations; causes may include specimen problems, device error, biological variation, or an unsuitable test.

Ertapenem

A once-daily carbapenem antibiotic used for selected serious infections caused by susceptible bacteria; it does not cover *Pseudomonas* or enterococci reliably.

Erucic Acid

A 22-carbon monounsaturated fatty acid found in mustard and rapeseed oils; high exposure has raised cardiac safety concerns in some animal studies.

Erucic Acids

Long-chain monounsaturated fatty acids of the erucic-acid family, found mainly in certain plant oils and metabolized according to chain length and dietary exposure.

Eructation

The release of swallowed or stomach gas through the mouth.

Alternate Names:

Belching; burping

Eruption Cyst

A fluid-filled swelling over a tooth that is about to erupt, often appearing blue or purple and usually resolving when the tooth emerges.

Eruptive Fever

A clinical disorder or finding related to eruptive fever; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Eruptive Xanthomas

Sudden eruption of numerous small, yellow-orange

papules with an erythematous halo, typically on the buttocks, elbows, knees, and trunk, caused by severe hypertriglyceridemia. They represent lipid-laden macrophages in the dermis and are a marker of significantly elevated serum triglycerides, often exceeding 1000 mg/dL.

Eruptive Xanthomatosis

A sudden outbreak of small yellow-red papules caused by lipid-laden macrophages, usually associated with severe hypertriglyceridemia or uncontrolled diabetes.

Eryptosis

A programmed-cell-death process in red blood cells that promotes their removal from circulation without the usual nuclear changes of apoptosis.

Erysipelas

An acute superficial bacterial skin infection, usually caused by beta-haemolytic streptococci, producing a sharply demarcated, raised, tender, bright-red plaque with fever.

Erysipeloid

A localized occupational skin infection caused by *Erysipelothrix rhusiopathiae*, usually producing a painful, well-demarcated violaceous lesion on a hand or finger after animal or fish exposure.

Erysipelothrix

A genus of bacteria that can cause erysipeloid, a skin infection usually acquired from handling infected animals or animal products.

Erythema

Redness of the skin or mucous membranes caused by increased blood flow to dilated superficial capillaries, often associated with inflammation, infection, or another underlying condition. It commonly blanches with pressure, unlike purpura.

Erythema Ab Igne

A reticulated, hyperpigmented erythematous patch caused by chronic, repeated exposure to moderate

heat or infrared radiation, such as from heating pads, laptops, or fireplaces. Histologically it shows increased melanin and dermal amyloid deposition.

Erythema Chronicum Migrans

The expanding skin lesion of early Lyme disease, usually developing days to weeks after infection with *Borrelia* following a tick bite; it may have central clearing but is not always a classic bull's-eye.

Erythema Dose

The amount of ultraviolet or other radiation that produces visible redness of the skin; the minimal erythema dose is the lowest amount causing a defined erythematous response.

Erythema Gydatum Repens

A distinctive, rapidly moving, concentric erythematous eruption with a wood-grain or serpiginous pattern. It is often associated with an underlying malignancy, especially lung cancer, and should prompt an appropriate evaluation while other causes are considered.

Erythema Induratum

A nodular lobular panniculitis, classically associated with tuberculosis but also caused by other conditions, producing recurrent tender nodules and ulcers on the backs of the lower legs.

Erythema Infectiosum

A common childhood exanthem caused by parvovirus B19, also called fifth disease. A mild prodrome is followed by a slapped-cheek facial eruption and a lacy rash on the trunk and limbs.

Alternate Names:

fifth disease.

Erythema Infectiosum (Fifth Disease)

Alternate index label for Fifth Disease.

Erythema Marginatum

A migratory, non-pruritic, erythematous rash with a serpiginous or annular pattern that blanches centrally, occurring as a major Jones criterion in acute

rheumatic fever. It typically appears on the trunk and proximal extremities and may come and go over days or weeks.

Erythema Migrans

The expanding annular skin lesion of early Lyme disease, appearing days to weeks after infection with *Borrelia* transmitted by Ixodes ticks. It may be uniformly erythematous rather than a classic bull's-eye lesion and is usually diagnosed clinically.

Erythema Multiforme

An acute, self-limited immune-mediated reaction, most commonly triggered by herpes simplex virus (90 percent of cases) and *Mycoplasma pneumoniae*. It presents as target lesions (iris lesions with three zones: central duskiness, middle pale edematous ring, outer erythematous halo) on extremities.

Erythema Nodosum

The most common form of panniculitis, characterized by painful, erythematous, tender nodules and plaques on the bilateral shins, representing an inflammatory reaction of the subcutaneous fat.

Erythema Toxicum

A common benign transient newborn rash consisting of erythematous macules, papules, or pustules that usually resolves without treatment.

Erythema Toxicum Neonatorum

A benign, self-limited cutaneous eruption occurring in up to 50 percent of healthy term newborns, typically presenting in the first 24 to 72 hours of life. Characterized by blotchy erythematous macules, papules, and small pustules on an erythematous base distributed over the face, trunk, and proximal extremities while sparing the palms and soles. Microscopic examination of pustule fluid demonstrates a predominance of eosinophils; no treatment is required as lesions resolve spontaneously within 1 to 2 weeks.

Alternate Names:

Erythema Neonatorum; Toxic Erythema of the Newborn

Erythrasma

A superficial skin infection caused by *Corynebacterium minutissimum*, producing sharply demarcated reddish-brown patches in skin folds that fluoresce coral-red under Wood lamp.

Erythroblast

Erythroblast is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Erythroblastosis Fetalis

Fetal or newborn red-cell destruction caused by maternal antibodies against fetal blood-cell antigens.

Erythroblastosis Foetalis

A clinical disorder or finding related to erythroblastosis foetalis; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Erythrocyte

A mature red blood cell specialized to transport oxygen and carbon dioxide through the circulation. Its biconcave, anucleate form maximizes surface area and flexibility; haemoglobin provides the principal oxygen-binding capacity.

Erythrocyte Enzyme Deficiency

An inherited or acquired deficiency of an enzyme needed for red-cell metabolism or protection. It can shorten erythrocyte survival and cause hemolytic anemia; examples include glucose-6-phosphate dehydrogenase and pyruvate-kinase deficiency.

Erythrocyte Membrane

The flexible membrane surrounding a red blood cell; it helps maintain cell shape and controls exchange with the blood.

Erythrocyte Sedimentation Rate

A non-specific inflammatory marker measuring the rate at which erythrocytes settle in 1 hour. Normals: males $\text{age}/2$, females $(\text{age}+10)/2$. Markedly elevated >100 mm/hr: suggests infection (endo-

carditis), autoimmune (giant cell arteritis, polymyalgia rheumatica, SLE, RA), malignancy (multiple myeloma), and chronic kidney disease.

Erythrocytosis

An increased red-cell mass, usually reflected by elevated haemoglobin and haematocrit. It may be relative because of reduced plasma volume or absolute because of increased erythropoiesis, which can be primary from a marrow disorder or secondary to hypoxia, erythropoietin production, or other causes.

Erythroderma

Generalized redness and scaling involving most of the skin surface, caused by psoriasis, eczema, drug reactions, lymphoma, or other disease and potentially causing fluid and temperature loss.

Erythrodermic Psoriasis

A severe, life-threatening variant of psoriasis characterised by widespread erythema and scaling involving more than 90% of the body surface area, often with systemic symptoms including fever, chills, and hemodynamic instability.

Erythrodysplasia

Abnormal development or maturation of red blood cells, usually referring to ineffective erythropoiesis in marrow or a dysplastic blood disorder.

Erythroid Hyperplasia

Increased production of red-cell precursors in bone marrow, often as a response to anemia, blood loss, hemolysis, or reduced oxygen availability.

Erythroleukoplakia

A mixed red-and-white oral mucosal lesion with a high risk of severe dysplasia or cancer, requiring specialist examination and often biopsy.

Erythromelalgia

Episodic burning pain, redness, and warmth of the extremities triggered by warmth or exercise and relieved by cooling, caused by arteriolar inflammation and platelet-mediated microvascular occlusion.

Erythromycin

A medicine or chemical compound called erythromycin. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Erythromycin Estolate

A medicine or chemical compound called erythromycin estolate. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Erythromycin Ophthalmic Prophylaxis

Application of ophthalmic erythromycin to a newborn soon after birth to reduce the risk of gonococcal ophthalmia neonatorum. Use, timing, and alternatives depend on local policy, availability, and the mother's infection-risk assessment.

Erythroplakia

A persistent red patch of mucosa, especially in the mouth, that may represent a premalignant or malignant lesion and requires clinical evaluation, often including biopsy.

Erythroplasia

A sharply demarcated red lesion of skin or mucosa; persistent oral or genital erythroplasia can represent severe dysplasia or carcinoma in situ.

Erythroplasia Of Queyrat

Squamous-cell carcinoma in situ of the glans penis or prepuce, appearing as a persistent well-demarcated red velvety plaque.

Erythropoiesis

The process by which haematopoietic stem and progenitor cells develop into mature red blood cells. It occurs primarily in adult bone marrow and is regulated chiefly by erythropoietin in response to tissue oxygenation; maturation requires iron, vitamin B12, folate, and appropriate marrow function.

Erythropoiesis-Stimulating Agents

Medicines such as epoetin alfa and darbepoetin alfa

that stimulate red-cell production, often used for selected forms of anemia in chronic kidney disease or cancer treatment. Use requires appropriate assessment of iron status, risks, and treatment targets.

Erythropoietin

A glycoprotein hormone that regulates erythropoiesis—the production of red blood cells in the bone marrow. Produced primarily by interstitial peritubular cells in the kidney (90%) and hepatocytes (10%) in response to tissue hypoxia.

Erythropoietin

A kidney-produced hormone that stimulates red-cell production in bone marrow in response to reduced tissue oxygenation.

Erythropoietin Deficiency

Insufficient erythropoietin production or an inadequate erythropoietin response, leading to reduced red-cell production and usually a hypoproliferative, often normocytic anemia. It is particularly important in chronic kidney disease.

Erythropoietin Receptor

A cell-surface receptor on erythroid precursor cells that responds to erythropoietin and promotes red-cell survival, proliferation, and maturation.

Erythropoietin Test

A blood test measuring erythropoietin, a hormone produced mainly by the kidneys that stimulates red-blood-cell production. It helps evaluate selected anemias or erythrocytosis and must be interpreted with the blood count and kidney function.

Erythrosine

A red food and pharmaceutical dye whose use is limited in some settings because of safety concerns.

ESBL

Extended-spectrum beta-lactamase, enzymes that hydrolyse penicillins, cephalosporins, and monobactams. ESBLs are common in Enterobacteriaceae,

particularly *Klebsiella pneumoniae* and *E. coli*. ESBL production confers resistance to most beta-lactam antibiotics except carbapenems.

ESBL-Producing Organisms

Bacteria that produce extended-spectrum beta-lactamases (ESBLs), enzymes that hydrolyze penicillins, cephalosporins, and monobactams. ESBLs are common in Enterobacteriaceae, particularly *Klebsiella pneumoniae* and *E. coli*. ESBL production confers resistance to most beta-lactam antibiotics except carbapenems.

Escape Reaction

A physiologic response that restores an organ's function after it has been suppressed by a drug, hormone, nerve influence, or feedback mechanism.

Eschar

A firm, usually black or brown layer of dead tissue over a wound, burn, pressure injury, infection, or vascular lesion that may conceal deeper damage.

Escharotomy

An incision through rigid eschar from a deep circumferential burn to relieve constriction and restore chest expansion or blood flow.

Escherichia

A genus of gram-negative bacteria that includes *E. coli* and related intestinal or environmental species; some strains cause intestinal or extraintestinal infection.

Escherichia Albertii

A diarrheagenic *Escherichia* species that can cause gastroenteritis and may be mistaken for certain *E. coli* strains in routine testing.

Escherichia Blattae

An *Escherichia* species originally associated with cockroaches and rarely reported in human specimens; pathogenic significance is uncommon and requires clinical correlation.

Escherichia Coli

A gram-negative bacterium that normally lives in the intestine but can cause urinary, intestinal, bloodstream, and other infections. Different strains produce different clinical syndromes, including traveler's diarrhea, bloody diarrhea, and hemolytic uremic syndrome.

Escherichia Coli Infection

Infection caused by *E. coli*, ranging from urinary-tract and bloodstream infection to diarrheal disease; symptoms and treatment depend on the strain and site.

Escherichia Coli O157:H7 Infection

Infection with a Shiga-toxin-producing strain of *E. coli*, usually acquired from contaminated food, water, or contact with infected animals or people. It commonly causes severe abdominal cramps and bloody diarrhea and can lead to hemolytic uremic syndrome, especially in children. Medical advice is important; antibiotics and antidiarrheal medicines may be inappropriate in suspected cases.

Escherichia Fergusoni

An uncommon *Escherichia* species that can cause opportunistic urinary, wound, bloodstream, or gastrointestinal infection.

Escherichia Hermannii

An uncommon gram-negative *Escherichia* species occasionally associated with opportunistic human infection, including urinary or bloodstream infection.

Escherichia Vulneris

An uncommon *Escherichia* species rarely associated with wound, urinary, or bloodstream infection, usually in people with underlying illness.

Escitalopram

A selective serotonin-reuptake inhibitor used mainly for depression and generalized anxiety disorder; common effects include nausea, sleep changes, sexual dysfunction, and increased bleeding risk.

ESKD

End-stage kidney disease defined as GFR less than 15 or need for dialysis. Medicare eligibility at GFR less than 15 or on dialysis. Palliative care option for those not wanting renal replacement therapy. Comprehensive advance care planning essential.

Eskimo Lung

Eskimo Lung is an anatomical or physiologic term describing a body structure or function; its clinical meaning depends on its location, role, and associated findings.

Esomeprazole

A medicine or chemical compound called esomeprazole. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Esomeprazole Magnesium

A medicine or chemical compound called esomeprazole magnesium. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Esophageal

Relating to the esophagus, the muscular tube that transports swallowed food and liquid from the pharynx to the stomach.

Esophageal Achalasia

Primary esophageal motility disorder characterized by failure of the lower esophageal sphincter to relax during swallowing and absent peristalsis in the distal esophagus, resulting from selective loss of inhibitory neurons in the myenteric plexus.

Esophageal Adenocarcinoma

A malignant gland-forming tumor of the esophagus, most often arising in the distal esophagus in the setting of Barrett Esophagus. It is associated with chronic gastroesophageal reflux, obesity, smoking, and other risk factors. Progressive dysphagia, weight loss, bleeding, or chest discomfort may occur, although early disease can be asymptomatic. Diagnosis requires endoscopic biopsy, followed by staging to guide multimodal oncologic treatment.

Esophageal Atresia

A congenital anomaly where the esophagus ends in a blind pouch, often with a tracheoesophageal fistula connecting the distal esophagus to the trachea. Presents with drooling, inability to pass a nasogastric tube, and choking with feedings. The 3 Es association: Esophageal atresia, Esophageal anomalies, and Extremity anomalies.

Esophageal Bleeding

Hemorrhage arising from the esophagus, commonly from varices, erosive inflammation, ulceration, tears, or cancer, and potentially presenting as vomiting blood or black stool.

Esophageal Cancer

Malignant tumor of the esophagus. Squamous cell carcinoma predominates in the upper and middle third (smoking, alcohol); adenocarcinoma of the lower third arises from Barrett esophagus. Presents with progressive dysphagia and weight loss; treatment depends on stage and includes surgery, chemoradiation, and systemic therapy.

Alternate Names:

Cancer, Esophageal

Esophageal Candidiasis

Fungal infection of the esophagus caused by *Candida* species common in immunocompromised patients including those with HIV, organ transplant recipients, and patients on inhaled corticosteroids. Presents with odynophagia and dysphagia. Diagnosed by endoscopy showing white adherent plaques and biopsy confirming fungal hyphae.

Esophageal Carcinoma

Cancer arising in the esophagus, most often squamous-cell carcinoma or adenocarcinoma; progressive swallowing difficulty, weight loss, pain, or bleeding may occur.

Esophageal Culture

A laboratory culture of a specimen from the esophagus to identify bacteria, fungi, or other microorganisms when infection is suspected. Sampling method and prior treatment affect results, which must be

interpreted with endoscopic and clinical findings.

Esophageal Dilation

Endoscopic passage of bougies or balloons to widen esophageal strictures. Used for symptomatic strictures from peptic disease, radiation, caustic injury, or eosinophilic esophagitis. Savary bougies are passed over a guidewire with progressive dilation. Through-the-scope balloons allow controlled radial dilation under direct visualization.

Esophageal Diverticulum

Outpouching of the esophageal wall classified by location. Zenker diverticulum occurs in the hypopharynx and is the most common esophageal diverticulum. Mid-esophageal diverticula are traction diverticula caused by extrinsic inflammatory disease including tuberculosis and histoplasmosis.

Esophageal Duplication

A rare congenital cyst or duplicated segment alongside the esophagus that may compress the airway or esophagus and cause respiratory or swallowing symptoms.

Esophageal Fistula

An abnormal passage between the esophagus and another organ, most often the airway, causing coughing with swallowing, aspiration, infection, or severe illness.

Esophageal Foreign Body

An object or food bolus lodged in the esophagus, causing difficulty swallowing, pain, drooling, or breathing symptoms. Batteries, sharp objects, complete obstruction, and perforation require urgent assessment and removal.

Esophageal Infection

Infection of the esophagus, commonly caused by *Candida*, viruses, or bacteria, producing painful swallowing, difficulty swallowing, chest pain, or ulcers.

Esophageal Intramural

Pseudodiverticulosis

Condition characterized by multiple small outpouchings of the esophageal submucosal glands seen on barium swallow as flask-shaped contrast collections oriented longitudinally along the esophagus. The pseudodiverticula are not true diverticula but rather dilated excretory ducts of submucosal glands.

Esophageal Leukoplakia

White plaques on the esophageal mucosa representing squamous cell hyperplasia with hyperkeratosis. Similar to oral leukoplakia it is considered a potentially premalignant condition. Associated with chronic irritation from smoking, alcohol, and gastroesophageal reflux.

Esophageal Manometry

Diagnostic test measuring esophageal motor function by recording intraluminal pressures during swallowing. A catheter with pressure sensors is passed through the nose into the stomach and withdrawn to record pressures at multiple levels. High-resolution manometry using closely spaced sensors provides a spatiotemporal color plot.

Esophageal Necrosis

Death of esophageal lining, classically producing a black-appearing esophagus in severe ischemia, shock, reflux, or caustic injury and carrying a risk of perforation.

Esophageal Perforation

Full-thickness rupture of the esophageal wall, most commonly Boerhaave syndrome from forceful vomiting occurring on the left posterolateral distal esophagus. Iatrogenic perforation during endoscopy is another common cause. Presents with chest pain, subcutaneous emphysema, and mediastinitis.

Esophageal PH Monitoring

24-hour ambulatory monitoring of esophageal acid exposure. Catheter-based (transnasal pH probe placed 5 cm above LES) or wireless (Bravo capsule endoscopically attached to esophageal mucosa). Measures: % time pH <4 (total, upright, supine), DeMeester score (>14.7 abnormal), and symptom-

reflux correlation.

Esophageal Spasm

Esophageal motility disorder characterized by uncoordinated or excessive contractions impairing bolus transport. Diffuse esophageal spasm shows simultaneous contractions on manometry. Jackhammer esophagus features extremely high-amplitude peristaltic contractions.

Esophageal Spasms

Uncoordinated or forceful contractions of the esophagus that can cause chest pain and difficulty swallowing.

Esophageal Squamous Cell Carcinoma

A malignant epithelial tumor of the esophagus arising from the squamous lining, most commonly localized in the upper and middle thirds of the thoracic esophagus. Globally the predominant histological type of esophageal cancer; strongly linked to tobacco use, heavy alcohol consumption, hot beverage ingestion, and nutritional deficiencies.

Esophageal Stenosis

Narrowing of the esophageal lumen from scar, inflammation, tumor, radiation, or congenital disease, causing progressive difficulty swallowing.

Esophageal Stent

Self-expanding metal stent for esophageal obstruction. Palliative for malignancy. Migration, tumor ingrowth common complications.

Esophageal Stricture

Narrowing of the esophageal lumen from chronic gastroesophageal reflux disease, caustic ingestion, or eosinophilic esophagitis. Presents with progressive dysphagia initially to solids then liquids. Diagnosed by upper endoscopy and barium swallow.

Esophageal Stricture - Benign

A noncancerous narrowing of the esophagus that can cause difficulty swallowing, food impaction, or regurgitation. Common causes include reflux-related

scarring, caustic injury, eosinophilic esophagitis, radiation, and procedures; endoscopy guides diagnosis and treatment.

Esophageal Surgery

Operations on the esophagus or its junction with the stomach, including procedures for reflux, stricture, cancer, perforation, or motility disorders. The operation is selected according to the disease, anatomy, symptoms, and surgical risk.

Esophageal Ulceration

A break in the esophageal lining caused by reflux, infection, medicines, caustic injury, inflammation, or cancer and capable of causing pain or bleeding.

Esophageal Varices

Dilated, tortuous submucosal veins in the lower esophagus, most commonly caused by portal hypertension (cirrhosis—hepatic fibrosis with increased portal venous pressure >10 mmHg). They develop as portosystemic collaterals connecting the portal venous system (left gastric vein) to the systemic venous system (azygos vein).

Alternate Names:

Varices, Esophageal

Esophageal Web

Thin mucosal fold protruding into the esophageal lumen most commonly in the postcricoid region or upper esophagus. Webs may be asymptomatic or cause dysphagia particularly to solids. Multiple webs can occur in association with iron deficiency anemia as part of Plummer-Vinson syndrome or Paterson-Kelly syndrome.

Esophagectomy

Surgical removal of part or all of the esophagus.

Esophagectomy - Minimally Invasive

Surgical removal of part or all of the esophagus using thoracoscopic or laparoscopic approaches, sometimes with robotic assistance, and reconstruction of the digestive tract. It is used for selected cancer or severe esophageal disease and carries substantial perioperative risks.

Esophagectomy - Open

Surgical removal of part or all of the esophagus through open chest and abdominal or neck incisions, followed by reconstruction of the digestive tract. It is used for selected esophageal disease and carries risks including leakage, infection, respiratory complications, and nutritional problems.

Esophagitis

Esophagitis is inflammation or injury of the esophageal lining caused by reflux, infection, medication, allergy, radiation, or other mechanisms.

Esophagogastric Bypass

Surgical creation of a conduit between the esophagus and stomach to restore gastrointestinal continuity, most commonly performed as part of esophagectomy or to palliate unresectable esophageal malignancy. Techniques include gastric pull-up with esophagogastrostomy and jejunal interposition.

Esophagogastric Junction

The transition where the esophagus meets the stomach, including the lower esophageal sphincter and anatomic structures that help prevent reflux.

Esophagogastric Tamponade

Temporary control of bleeding from esophageal or gastric varices by inflating a balloon device to apply pressure; it is a rescue measure with serious airway and aspiration risks.

Esophagogastroduodenoscopy

Upper endoscopy: flexible endoscopic examination of the esophagus, stomach, and duodenum.

Esophagoscope

A flexible or rigid instrument with a light and viewing system used to inspect the esophageal lining and obtain samples or perform treatment.

Esophagoscopy

Endoscopic examination of the esophagus, usually to investigate dysphagia, bleeding, reflux complications, strictures, foreign bodies, or suspected tu-

mors.

Esophagram

An imaging study of the esophagus performed after the patient swallows a contrast material.

Esophagus

A muscular tube that transports food and liquids from the pharynx (throat) to the stomach.

Esophagus (Esophagus)

A muscular tube approximately 25 cm long connecting the pharynx to the stomach, extending from the cricopharyngeus muscle (at the level of C6) to the gastroesophageal junction (T11).

Alternate Names:

esophagus

Esophagus Disease

A disorder of the esophagus causing swallowing difficulty, pain, reflux, regurgitation, bleeding, obstruction, inflammation, motility disturbance, or cancer.

Esophagus Neoplasm

A benign, precancerous, or malignant growth in the esophagus; evaluation may require endoscopy, biopsy, imaging, and staging.

Esotropia

A type of strabismus in which one eye deviates inward (toward the nose). Congenital/infantile esotropia: large-angle, constant, onset before 6 months; requires early surgical correction. Accommodative esotropia: associated with hyperopia, onset age 2-3 years; treatment with corrective glasses improves alignment.

ESR

The erythrocyte sedimentation rate, a nonspecific blood test measuring how quickly red cells settle in a tube; it can reflect inflammation but cannot identify its cause.

Alternate Names:

SED Rate

ESRD

Alternate index label; see *End-Stage Renal Disease*.

Essential

Necessary or fundamental; in a diagnosis such as essential hypertension, it indicates that no single secondary cause has been identified.

Essential Fats

Fatty acids that the body cannot make in sufficient amounts and must obtain from food.

Alternate Names:

Essential fatty acids

Essential Fatty Acid

A fatty acid the body cannot make in sufficient amounts and therefore must obtain from food; the main human examples are linoleic acid and alpha-linolenic acid.

Essential Hypertension

Persistent elevation of systemic arterial blood pressure without an identifiable single secondary cause. It results from interacting genetic, vascular, renal, metabolic, and environmental factors and increases the risk of stroke, coronary disease, heart failure, kidney disease, and retinopathy.

Essential Medicines

Drugs that satisfy the priority healthcare needs of a population, as defined by the WHO Model List of Essential Medicines. Selection criteria include efficacy, safety, comparative cost-effectiveness, and suitability for use in resource-limited settings.

Essential Mixed Cryoglobulinemia

A disorder in which circulating immunoglobulins precipitate in cooler temperatures and deposit in small blood vessels, causing vasculitis. Symptoms may include purpura, joint pain, weakness, nerve problems, kidney disease, and cold sensitivity. Evaluation includes cryoglobulin testing and assessment for infections, autoimmune disease, and lymphoproliferative disorders.

Essential Nutrient

Nutrient that cannot be synthesized by body, must be obtained from diet. Essential amino acids, fatty acids, vitamins, minerals.

Essential Thrombocythemia

A chronic myeloproliferative neoplasm characterized by sustained platelet count elevation (greater than 450,000 per microliter) due to clonal megakaryocytic proliferation, with a risk of both thrombotic and hemorrhagic complications.

Essential Tremor

The most common movement disorder, characterized by a bilateral, symmetrical, postural and kinetic tremor predominantly affecting the upper extremities, with a frequency of four to twelve hertz. It typically begins insidiously in the second or third decade of life and slowly progresses over years.

Essiac

Essiac is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Estazolam

A benzodiazepine sedative-hypnotic used short-term for insomnia; it can cause sedation, impaired coordination, dependence, respiratory depression, and withdrawal.

Ester

Ester is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Esterase

Esterase is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Esterification

Esterification is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Esterified Estrogens

A prescription mixture of estrogen compounds used for selected menopausal symptoms and other estrogen-deficiency conditions. Risks include blood clots, stroke, and endometrial cancer when used without appropriate progestogen in a person with a uterus; treatment should be individualized.

Esthesia

Sensation or perception, especially the ability to feel touch, pain, temperature, or position.

Esthesiometer

An instrument used to measure sensory perception, such as touch, pressure, or corneal sensitivity.

Esthesioneuroblastoma

A rare cancer arising from specialized nerve tissue in the upper nasal cavity, potentially causing nasal obstruction, bleeding, or loss of smell.

Esthetician

A person trained in nonmedical skin-care and cosmetic treatments.

Alternate Names:

Aesthetician

Estimated Average Glucose

An estimate of mean blood glucose calculated from the hemoglobin A1c result and reported in glucose units that correspond roughly to daily readings.

Estimated Date Of Confinement

The estimated date when a pregnancy is expected to reach delivery, also called the estimated due date; it is commonly calculated from the last menstrual period or early ultrasound.

Estimated Due Date

The expected date of delivery, calculated as 40 weeks (280 days) from the first day of the last menstrual period. Confirmed or adjusted by first-trimester ultrasound crown-rump length measurement (most accurate ± 5 -7 days). Second-trimester ultrasound is less accurate (± 10 -14 days). Third-trimester is least accurate (± 21 -30 days).

Estimated Fetal Weight

An ultrasound-derived estimate of fetal weight, calculated using formulas that combine BPD, HC, AC, and FL. The Hadlock formula (using HC, AC, FL) is the most commonly used. Accuracy: ± 10 -15%. Indications: assess fetal growth, determine size for gestational age, and plan delivery. EFW <10th percentile: SGA/IUGR.

Estimated Glomerular Filtration Rate

An estimate of glomerular filtration derived from serum creatinine and, depending on the validated equation, age and sex. It is used to stage chronic kidney disease and guide medication dosing, but is less reliable when creatinine is changing rapidly or in unusual body composition.

Estivation

A state of dormancy or reduced activity during hot or dry conditions, used mainly in zoology and biology.

Estradiol

The principal biologically active estrogen hormone during the reproductive years.

Alternate Names:

17 β -estradiol

Estradiol Blood Test

A blood test measuring estradiol, the principal biologically active estrogen during much of the reproductive years. It may help evaluate ovarian or testicular function, puberty, fertility treatment, menopause, or selected endocrine disorders; levels vary by age, sex, cycle stage, and medicines.

Estramustine

A medicine or chemical compound called estramustine. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Estriol

An estrogen produced substantially by the fetoplacental unit during pregnancy; maternal serum estriol may be included in prenatal screening.

Estrogen

A group of steroid hormones involved in reproductive development, menstrual regulation, bone health, and other physiologic functions.

Estrogen Test

A test that measures estrogen levels in a blood, urine, or saliva sample. It may help evaluate menstrual problems, infertility, menopause, puberty, pregnancy, or hormone-related conditions. Results depend on the type of estrogen measured, the person's age and sex, the menstrual-cycle stage, and whether the person is pregnant.

Alternate Names:

Estrogen Levels Test Estrogen Blood Test

Estrogen Overdose

Toxic or excessive exposure to estrogen, which may cause nausea, breast tenderness, headache, abnormal bleeding, thromboembolic risk, or other hormone-related effects.

Estrogen Receptor

A cellular protein that binds estrogen and mediates its effects on target tissues.

Estrogen Replacement Therapy

Treatment with estrogen to relieve menopausal symptoms or replace deficient estrogen; when the uterus is present, a progestogen is generally added to reduce endometrial cancer risk.

Estrogen-Replacement Therapy

Treatment using estrogen to replace hormone lost during menopause or because of ovarian failure.

Alternate Names:

Estrogen therapy

Estrogens

A group of steroid hormones, including estradiol, that regulate reproductive development, the menstrual cycle, bone, and other tissues; they are produced mainly by the ovaries before menopause and by other tissues at other times.

Estrone

A naturally occurring estrogen produced mainly in peripheral tissues from adrenal and ovarian precursors, especially after menopause.

Estrous Cycle

The reproductive cycle of many nonhuman female mammals, involving recurring hormonal and behavioral changes around ovulation.

Estrus

The period in an animal's reproductive cycle when the female is sexually receptive and ovulation may occur.

Eszopiclone

A nonbenzodiazepine hypnotic used for insomnia; it can cause sedation, impaired performance, dependence, and an unpleasant taste.

Etacrynic Acid

A loop diuretic that increases urine production by blocking salt reabsorption in the kidney.

Etanercept

A biologic medicine that binds tumor necrosis factor and is used for rheumatoid arthritis, psoriasis, spondyloarthritis, and other inflammatory diseases; infection and tuberculosis screening are important.

Etanidazole

A medicine or chemical compound called etanidazole. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Etaracizumab

A medicine or chemical compound called etaracizumab. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Ethacrynic Acid

A loop diuretic that blocks sodium and chloride reabsorption in the kidney; it can cause substantial fluid loss, low electrolytes, and dose-related ototoxicity.

Ethambutol

An antimycobacterial medicine used in combination treatment for tuberculosis; dose adjustment and monitoring for optic toxicity are essential.

Ethane

Ethane is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Ethanol

Ethanol is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Ethanol Metabolism

Ethanol metabolism is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Ethanol Poisoning

Toxic effects from excessive alcohol ingestion, ranging from impaired coordination and vomiting to respiratory depression, hypoglycemia, coma, and death.

Ethanolamine

Ethanolamine is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and ex-

posure circumstances.

Ethchlorvynol

An older sedative-hypnotic medicine formerly used for insomnia; dependence, overdose, and central-nervous-system depression limit its use.

Ether

A volatile organic solvent; diethyl ether was formerly used as a general anesthetic but is highly flammable.

Ethers

Ethers is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Ethics

Principles used to evaluate what is right, fair, respectful, and responsible in healthcare, research, and professional practice.

Ethidium

Ethidium is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Ethinyl Estradiol

A synthetic estrogen used in many combined hormonal contraceptives and other hormone treatments; risks include blood clots and cardiovascular complications in susceptible people.

Ethiodized Oil

An iodinated oil used as a contrast agent in selected lymphatic or liver procedures; allergy, oil embolization, and thyroid effects are possible.

Ethion

Ethion is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Ethionamide

An antibiotic used in some tuberculosis treatment regimens that interferes with production of the bacterial cell wall.

Ethmocephaly

A severe facial developmental anomaly with closely spaced eyes and a proboscis-like nasal structure, usually associated with holoprosencephaly.

Ethmoid Bone

Delicate bone between the orbits forming parts of the nasal septum and orbital/nasal roofs. Has the cribriform plate (olfactory nerve filaments), perpendicular plate (superior nasal septum), and labyrinths (nasal conchae, ethmoid air cells). The crista galli provides falx cerebri attachment.

Ethmoid Sinus

One of the air-filled ethmoid cells between the nose and the eye sockets; inflammation can cause ethmoid sinusitis and may threaten nearby orbital structures.

Ethmoid Sinusitis

Inflammation or infection of the ethmoid sinuses, causing nasal congestion, facial or eye pain, fever, or headache; orbital complications require urgent assessment.

Ethmoidal Air Cells

Air-filled spaces in the ethmoid bone that form part of the paranasal sinus system.

Ethmoidal Sinus

The ethmoidal sinuses, also known as ethmoidal air cells, are a collection of multiple small, thin-walled, air-containing cavities within the ethmoid bone between the orbits and above the nasal cavity, and they are divided into anterior and posterior groups based on their drainage sites.

Alternate Names:

ethmoidal air cells, are a collection of multiple.

Ethmoiditis

Inflammation of the ethmoid air cells, usually from

infection or chronic sinus disease.

Ethnicity

A social and cultural identity shaped by shared ancestry, history, language, traditions, or community; it is not a biological diagnosis and should not be used as a substitute for individual risk assessment.

Ethoglucid

An older sclerosing substance used historically to treat selected vascular lesions or hemorrhoids; modern use is limited by tissue-injury risks and alternatives.

Ethosuximide

An anticonvulsant used mainly for absence seizures; common adverse effects include gastrointestinal symptoms, fatigue, and headache, with rare blood or skin reactions.

Ethoxzolamide

A carbonic anhydrase inhibitor that can reduce fluid formation in the eye and other tissues.

Ethyl Chloride

A volatile liquid sprayed on the skin to produce brief cooling and local numbness.

Ethyl Ether

Ethyl ether is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Ethyl Methanesulfonate

Ethyl methanesulfonate is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Ethylene

Ethylene is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Ethylene Chlorohydrin

Ethylene chlorohydrin is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Ethylene Dibromide

Ethylene dibromide is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Ethylene Glycol

A toxic alcohol found in some antifreeze and industrial products. Ingestion can cause severe metabolic acidosis, neurologic impairment, kidney injury, and death.

Ethylene Glycol Blood Test

A blood test measuring ethylene glycol, a toxic alcohol found in some antifreeze products. Detection supports diagnosis of poisoning, but treatment must not wait for the result when the exposure and metabolic findings are strongly suggestive.

Ethylene Glycol Poisoning

Toxicity from ingestion of ethylene glycol, often found in antifreeze. Its metabolites can cause severe metabolic acidosis, neurologic impairment, kidney injury, and calcium-oxalate deposition. It requires urgent toxicology assessment and antidotal or extracorporeal treatment when indicated.

Ethylene Oxide

Ethylene oxide is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Ethylenethiourea

Ethylenethiourea is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Ethylnitrosourea

A laboratory alkylating chemical that damages DNA and induces mutations; it is used in research and is not a therapeutic medicine.

Ethinodiol Diacetate

A synthetic progestin formerly used in some oral contraceptives.

Etidronic Acid

A bisphosphonate that binds bone mineral and inhibits osteoclast-mediated bone resorption; it is also used as a chelating or scale-control agent in other settings.

Etilefrine

A sympathomimetic medicine that can raise blood pressure by increasing vascular tone.

Etiocholanolone

A metabolite of steroid hormones, especially androgens, measured in some endocrine or research studies.

Etiology

The cause or set of causes of a disease or health condition, including genetic, infectious, environmental, immune, traumatic, and behavioural factors.

Etioplast

A plant cell organelle that develops from a proplastid in darkness and can convert into a chloroplast when exposed to light.

Etodolac

A nonsteroidal anti-inflammatory drug used for pain and inflammation; gastrointestinal bleeding, kidney injury, cardiovascular events, and hypersensitivity are important risks.

Etomidate

A short-acting intravenous anesthetic used for induction, particularly when cardiovascular stability is desired; it can cause myoclonus, nausea, and transient adrenal suppression.

Etonogestrel

A progestin used in some hormonal contraceptive implants to prevent ovulation.

Etoposide

A chemotherapy medicine that blocks topoisomerase II and is used for several cancers.

Etoposide Phosphate

A water-soluble form of etoposide that is converted to etoposide in the body.

Etoricoxib

A selective cyclooxygenase-2 inhibitor used to relieve pain and inflammation in selected conditions.

Etretinate

An oral retinoid formerly used for severe psoriasis; it remains in the body for a long time and can cause birth defects.

Eubacterium

A genus of anaerobic bacteria found mainly in the intestine and oral cavity; some species are associated with opportunistic infection.

Eubacterium Limosum

An anaerobic intestinal bacterial species involved in fermentation and rarely associated with human infection.

Eubacterium Rectale

A common anaerobic intestinal bacterium involved in fiber fermentation and short-chain fatty-acid production.

Eubacterium Ventriosum

An anaerobic bacterium found in the human intestine that rarely causes opportunistic infection.

Eucalyptus Oil

An essential oil containing compounds such as eucalyptol; ingestion can be toxic, and concentrated oil should not be used internally without appropriate medical guidance.

Eucalyptus Oil Overdose

Toxic effects after ingesting a large amount of eucalyptus oil, which can cause burning, vomiting, drowsiness, seizures, and breathing problems.

Euchromatin

Euchromatin concerns euchromatin, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Eugenecist

Eugenecist is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

Eugenics

Eugenics is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

Eugenol Oil Overdose

Toxic effects after excessive exposure to eugenol oil, which may cause mouth or stomach irritation, liver injury, bleeding, seizures, or respiratory depression.

Euglena

A group of single-celled organisms with features of both plant-like and animal-like cells; they are mainly studied in biology.

Eukaryote

An organism whose cells contain a nucleus and other membrane-bound structures.

Eukaryotic Cell

A cell with a membrane-bound nucleus and specialized organelles, including the cells of animals, plants, fungi, and protists.

Eunuch

A historical term for a castrated male; it is not a current diagnosis and should be replaced with a specific description of anatomy or hormone status.

Euphoria

An intense feeling of well-being, elation, or happiness, which can be a normal emotional response or a pathologic symptom.

Europium

Europium is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Eurotium

A group of molds in the *Aspergillus* lineage that can grow in dry, salty, or sugar-rich environments.

Eustachian Tube

Auditory/pharyngotympanic tube connecting the middle ear to the nasopharynx, approximately 36 mm long in adults. Cartilaginous medial two-thirds and bony lateral third. Functions: equalizing middle ear/atmospheric pressure, draining middle ear secretions, and protecting from nasopharyngeal pathogens.

Eustachian Tube Dysfunction

Failure of the eustachian tube to open or close normally, causing ear pressure, muffled hearing, pain, or recurrent middle-ear fluid. It may follow an upper-respiratory infection, allergy, or rapid pressure changes.

Eustachian Tube Patency

The ability of the auditory tube to open and equalize pressure between the middle ear and nasopharynx; blockage causes pressure, muffled hearing, or effusion.

Eustachian Tube Problems

Eustachian-tube dysfunction prevents normal pressure equalization and middle-ear drainage, causing fullness, popping, muffled hearing, pain, or recurrent infection. Allergies, infection, inflammation, and structural factors contribute; persistent hearing loss or severe pain needs examination.

Alternate Names:

Tubes Ear Problems (Eustachian Tube Problems)

Eustachian-Tube Dysfunction

Failure of the auditory tube to equalize middle-ear pressure or clear secretions. It can cause aural fullness, popping, conductive hearing loss, and retracted tympanic membrane and is common with upper-respiratory infection, allergic rhinitis, or craniofacial disorders.

Euthanasia

The deliberate act of ending a person's life to relieve suffering, typically performed by a physician. Active euthanasia involves directly administering a lethal substance (e.g., barbiturate overdose followed by neuromuscular blockade) at the patient's explicit request.

Euthanasia And Assisted Dying

Ethical and legal concepts regarding intentional termination of life to relieve intractable pain and suffering. Active Euthanasia: deliberate administration of a lethal agent (e.g., lethal dose of barbiturates) by a physician to terminate a patient's life upon their explicit request.

Euthyroid

The clinical and biochemical state of possessing normal thyroid gland function and physiologic circulating concentrations of thyroid hormones. Characterized biochemically by serum thyroid-stimulating hormone, free thyroxine (free T_4), and free triiodothyronine (free T_3) within their respective laboratory reference ranges. Must be clinically distinguished from euthyroid sick syndrome (non-thyroidal illness syndrome), in which severe non-thyroidal systemic illness causes abnormal thyroid lab values (typically low T_3 with normal or low TSH and normal free T_4) in the absence of intrinsic thyroid gland pathology.

Euthyroid Goiter

An enlarged thyroid gland with thyroid-hormone levels that remain within the normal range.

Euthyroid Sick Syndrome

Abnormal thyroid function tests in patients with

non-thyroidal illness (critical illness, starvation, major surgery) without intrinsic thyroid disease. Pattern: low T3 (most common), low T4, reverse T3 elevated, normal or low TSH. The severity correlates with illness severity.

Eutocia

Normal labor and childbirth without major complications or abnormal obstruction.

Evacuation

Evacuation is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

Evacuation Of Uterus

Evacuation of Uterus is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

Evans Syndrome

An autoimmune disorder in which antibodies destroy red blood cells and platelets, separately or together.

Event

An occurrence relevant to health or care, such as a symptom, diagnosis, treatment, complication, or measurable outcome; its precise meaning depends on the clinical context.

Event Monitor

A portable device that records heart rhythm intermittently or when activated during symptoms over an extended period.

Event-Free Survival

The time from randomization or treatment start to a specified event such as disease progression, relapse, or death from any cause.

Everolimus

A medicine that inhibits the mTOR pathway and is used in selected cancers, transplant regimens, and other conditions.

Eversion

Turning the sole of the foot laterally, so that it faces away from the median plane.

Evidence-Based Practice

Integration of best research evidence, clinical expertise, patient values. Rehabilitation guidelines based on systematic reviews.

Evisceration

Protrusion of viscera through a dehiscd abdominal wound, typically occurring 5-8 days postoperatively and constituting a surgical emergency. Risk factors include obesity, wound infection, and inadequate fascial closure. Management requires sterile coverage, broad-spectrum antibiotics, and emergent operative reclosure.

Evoked Potential

An electrical response recorded from the nervous system after a specific sensory stimulus.

Evoked Potentials

Electrophysiologic tests measuring the CNS electrical response to specific sensory stimuli. Visual evoked potentials (VEP): checkboard pattern reversal, measures P100 latency; delayed in optic neuritis/MS. Brainstem auditory evoked responses (BAER): click stimuli, waves I-V; delayed in acoustic neuroma, MS, brainstem stroke.

Alternate Names:

VEP, BAER, SSEP

Evolution

Change in inherited characteristics of populations across generations; in clinical writing, it may also describe how a disease or symptom changes over time.

Evolutionarily Conserved Gene

A gene whose sequence or function has remained similar across species over evolutionary time, suggesting that it performs an important biological function.

Ewart Sign

Dullness to percussion, decreased breath sounds, and bronchial breathing at the left infrascapular region caused by compressive atelectasis from a large pericardial effusion. It is a physical examination finding of pericardial effusion. The effusion compresses the adjacent left lower lobe, creating a zone of consolidation.

Ewing Sarcoma

A highly malignant small round blue cell tumor of bone and soft tissue, representing the second most common primary bone malignancy in children and adolescents (peak age 10-20 years), with a strong predilection for males and Caucasian populations.

Ewing'S Tumour

A clinical disorder or finding related to ewing's tumour; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Ewingella

A genus of gram-negative bacteria that rarely causes opportunistic infection in humans.

Ewingella Americana

A rare Gram-negative environmental bacterium that can occasionally cause opportunistic infection, mainly in people with underlying illness.

Ewings Sarcoma

A malignant small-cell tumor of bone or soft tissue, usually affecting children or young adults and often associated with an EWSR1 gene fusion.

Exacerbate

To make a disease, symptom, or other medical problem more severe or troublesome.

Exacerbation

A worsening or flare of a disease or its symptoms, sometimes triggered by infection, exposure, treatment interruption, or another stressor.

Exacerbation Of COPD

An acute worsening of respiratory symptoms beyond normal day-to-day variations, requiring change in medication. It is commonly triggered by respiratory infections (viral, bacterial), air pollution, or non-compliance. Treatment includes increased bronchodilators, systemic corticosteroids, antibiotics if indicated, and oxygen therapy.

Exaggerated Placental Site

An exuberant but benign proliferation of implantation-site intermediate trophoblast in the uterus or placental bed; it can mimic gestational trophoblastic neoplasia and requires pathologic correlation.

Examination

Systematic assessment of a patient's health status. Components: inspection, palpation, percussion, auscultation (IPPA). General survey: appearance, posture, gait, vital signs. Focused examination based on chief complaint.

Examination Table

A table designed to support a patient during a physical examination or clinical procedure.

Exanthem

A widespread skin eruption, often caused by an infection or medication; measles and drug eruptions are examples.

Exanthema

A widespread skin eruption, usually macular or papular, associated with an acute systemic illness. Viral infections are common causes, but drug reactions, bacterial disease, immune disorders, and other systemic conditions may also produce exanthema; fever, mucosal involvement, blistering, or skin pain may indicate a severe process.

Exanthematous Pustulosis

An acute drug-related skin eruption with numerous small, sterile, non-follicular pustules on reddened skin. Fever and neutrophilia may occur. It often improves after the causative medicine is withdrawn,

but severe cases require medical assessment.

Exatecan Mesylate

An investigational anticancer drug related to camptothecin that inhibits topoisomerase I.

Excavation

A hollowing, depression, or removal of tissue or material; in medicine it may describe an anatomical depression or a surgical removal.

Exceptional Release

Regulatory process allowing use of an organ that does not meet standard criteria but is deemed acceptable for a specific recipient after informed consent.

Excess Facial Hair In Women

Alternate index label; see *Hirsutism*.

Excessive Bruising

Bruising that is unusually frequent, large, spontaneous, or prolonged and may reflect trauma, medications, low platelets, clotting disorders, or another illness.

Excessive Carrying Angle Of The Elbow

Excessive carrying angle of the elbow concerns excessive carrying angle of the elbow, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Excessive Crying In Infants

Crying that is unusually prolonged, frequent, or difficult to soothe; it may reflect normal colic but can also signal illness, injury, feeding problems, or unsafe caregiving stress.

Excessive Daytime Sleepiness

Alternate index label; see *Narcolepsy*.

Excessive Menstrual Bleeding

Alternate index label; see *Heavy menstrual bleeding*.

Excessive Or Unwanted Hair In Women

Increased hair growth that is cosmetically unwanted or hormonally patterned, including hirsutism from androgen excess and generalized hypertrichosis from other causes.

Excessive Sweating

Sweating more than needed for temperature control, either generally or in specific areas; causes include hyperhidrosis, medicines, infection, hormonal changes, or other medical conditions.

Excessive Tearing

Abnormally increased production or inadequate drainage of tears, causing watery eyes.

Exchange Transfusion

Emergent procedure to rapidly lower severe hyperbilirubinemia by removing small volumes of the infant's blood and replacing with compatible donor blood. Used when phototherapy fails or bilirubin approaches toxic levels (greater than 25 mg/dL in term infants or above exchange threshold on Bhutani curve).

Excise

To remove tissue or a lesion surgically by cutting it out.

Excision

The surgical removal of a piece of tissue, an organ, or a lesion. Excisional biopsy removes the entire lesion with a margin of normal tissue, used for definitive diagnosis and treatment of small tumors (suspected melanoma, breast lump, lymph node).

Excision Biopsy

Alternate index label; see *Excisional biopsy*.

Excisional Biopsy

Surgical removal of an entire lesion, often with a small margin of surrounding tissue, for pathologic diagnosis and possible definitive treatment when complete removal is appropriate.

Excitation

Activation or increased responsiveness of a cell, nerve, muscle, molecule, or physical system in response to a stimulus.

Excitation-Contraction Coupling

The sequence of events linking an action potential to muscle contraction. In skeletal muscle: the action potential travels down the T-tubule, triggering calcium release from the sarcoplasmic reticulum via ryanodine receptors (calcium-induced calcium release mediated by voltage-gated dihydropyridine receptors).

Excitatory Neurotransmitter

A chemical messenger that increases the likelihood that a receiving neuron will generate a signal.

Excitatory Synapse

A synapse in which neurotransmitter release increases the likelihood that the receiving neuron will generate an action potential.

Excitotoxin

A substance that overstimulates neurons and can injure or kill them.

Exclamation Point Hair

A short, broken hair that is narrower at the end away from the scalp and wider near the scalp, classically seen in alopecia areata.

Exclusion Diet

Exclusion Diet is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

Excoriate

To scratch, abrade, or strip away the surface of the skin; an excoriation is the resulting superficial injury.

Excoriation

A superficial loss of skin caused by scratching, rubbing, or another form of mechanical trauma.

Excoriation Disorder

Recurrent skin picking resulting in skin lesions. The individual has made repeated attempts to decrease or stop the skin picking. The skin picking causes clinically significant distress or impairment. It is not attributable to a medical condition or substance. Common sites include face, arms, and hands.

Excreta

Material eliminated from the body, including feces, urine, sweat, and respiratory secretions.

Excretion

Removal of substance from body. Routes: renal (urine), hepatic (bile), pulmonary (gas), sweat, breast milk. Important for toxicity and drug clearance.

Executive Function

Mental processes used to plan, focus attention, remember instructions, control impulses, solve problems, and shift between tasks.

Executive Functions

Mental abilities used to plan, organize, make decisions, control impulses, and adapt behavior.

Alternate Names:

Executive control

Exemestane

An aromatase-inhibitor medicine that lowers estrogen production and is used mainly for hormone-sensitive breast cancer.

Exenatide

A glucagon-like peptide-1 receptor agonist used with diet and exercise to improve blood glucose control in type 2 diabetes.

Exencephaly

A severe neural-tube defect in which much of the developing brain lies outside the skull; it is usually incompatible with prolonged survival and is related to anencephaly.

Exenteration

Extensive surgical removal of the contents of a body cavity, such as pelvic, orbital, or ocular exenteration, usually for advanced cancer or destructive disease.

Exercise

Planned physical activity performed to improve or maintain fitness and health.

Alternate Names:

Physical exercise

Exercise And Activity For Weight Loss

Physical activity used with dietary changes to increase energy expenditure and support gradual weight loss.

Exercise And Age

The way physical activity needs and responses may change with age; safe exercise should match fitness, health, and ability.

Exercise And Immunity

The relationship between physical activity and immune function; regular moderate activity generally supports health, while excessive exertion may increase short-term illness risk.

Exercise Clothing And Shoes

Clothing and footwear chosen to allow comfortable movement, manage heat and moisture, and reduce the risk of foot injury.

Exercise Headaches

Headaches occurring during or after strenuous physical activity. Primary exercise headaches are recurrent and usually not caused by an underlying disorder, but a first, abrupt, severe, or atypical exertional headache requires prompt medical assessment to exclude secondary causes such as subarachnoid hemorrhage, arterial dissection, or reversible cerebral vasoconstriction syndrome.

Exercise Intolerance

Reduced ability to perform physical activity at the expected level because of exertional fatigue, breath-

lessness, chest discomfort, leg pain, or other symptoms. Causes include cardiac, pulmonary, vascular, metabolic, neuromuscular, haematological, and deconditioning states.

Exercise Stress Test

A noninvasive cardiac diagnostic test that evaluates the cardiovascular response to graded physical exertion, primarily used to diagnose coronary artery disease, assess functional capacity, and guide prognosis.

Exercise Tolerance

The ability to perform physical activity before symptoms such as breathlessness, fatigue, chest discomfort, or pain limit activity.

Exercise, Lifestyle, And Your Bones

Physical activity and lifestyle habits that help maintain bone strength, including weight-bearing exercise, adequate nutrition, and avoiding tobacco.

Exercise-Induced Arrhythmias

Catecholamine-sensitive ventricular tachycardia and right ventricular outflow tract VT can be triggered by exercise. HCM-related sudden death risk increases during vigorous exercise. Exercise-induced myocardial ischemia may trigger ventricular arrhythmias in CAD.

Exercise-Induced Asthma

Bronchoconstriction occurring during or shortly after physical exertion, causing cough, wheezing, chest tightness, or shortness of breath. It is associated with airway hyperresponsiveness and may occur in people with or without persistent asthma.

Exercise-Induced Bronchoconstriction

Airway narrowing during or after exercise, presenting with cough, wheeze, and dyspnea. It occurs in up to 90% of asthmatics and is triggered by heat and water loss from the airways. Prevention includes pre-exercise SABA.

Exercises To Help Prevent Falls

Balance, strength, flexibility, and walking exercises used to improve stability and reduce fall risk.

Exercising And Asthma At School

School-based asthma planning for physical activity, including access to a reliever inhaler, warm-up, recognition of symptoms, an action plan, and emergency response.

Exercising On A Budget

Planning safe physical activity with low-cost options such as walking, home exercises, stairs, or community facilities, adapted to health status and fitness goals.

Exfoliation Syndrome

An age-related disorder in which abnormal fibrillar material accumulates in the anterior eye, increasing risk of glaucoma, zonular weakness, and surgical complications.

Exfoliative Cytology

Examination of cells that naturally shed from a body surface or are gently collected, used to screen for or investigate infection, inflammation, or cancer.

Exfoliative Dermatitis

Severe widespread redness, scaling, and shedding of the skin, often involving most of the body. Causes include medicines, psoriasis, eczema, lymphoma, and other illness; it can cause fluid loss, temperature problems, infection, and requires urgent medical care.

Exhalation

The process of breathing air out of the lungs. It is normally passive at rest but becomes active during exercise or respiratory distress.

Exhaled Nitric Oxide

A non-invasive measure of airway eosinophilic inflammation. FeNO > 25 ppb in adults suggests eosinophilic airway inflammation and predicts response to inhaled corticosteroids. It is useful for

diagnosing eosinophilic asthma, monitoring treatment response, and differentiating asthma from other causes of cough.

Exhaustion

Exhaustion is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

Exhaustion Heat (Heat Exhaustion)

Alternate index label for Heat Exhaustion.

Exhibitionism

Exposing one's genitals to an unsuspecting person for sexual arousal; it becomes exhibitionistic disorder when recurrent behavior causes distress or impairment or involves nonconsent.

Exhibitionistic Disorder

A paraphilic disorder involving recurrent, intense sexual arousal from exposing one's genitals to an unsuspecting person. The individual has acted on these urges or they cause marked distress or interpersonal difficulty. Duration $\geq$ 6 months. Onset typically before age 18. Treatment: CBT and SSRIs.

Exhumation

The lawful disinterment and removal of a buried body or remains for re-examination, re-testing, or identification. Indications: new evidence, suspicion of poisoning or foul play, DNA testing, paternity/maternity testing, exhumation of a wrongly buried body, or repatriation.

Exiguobacterium

A genus of Gram-positive bacteria found in soil, water, and extreme environments; human infection is rare.

Existential Distress

Emotional suffering related to questions of meaning, identity, freedom, mortality, or purpose, often occurring during serious illness.

Exit Wound

A skin defect produced where a projectile leaves the body, typically larger, irregular, and stellate, with everted edges, no abrasion ring or soot. Size depends on deformation, yaw, and fragmentation; small non-deformed bullets may produce shored exits, and an exit may be absent if the projectile is retained.

Exocervix

The portion of the cervix that projects into the vagina and is covered mainly by squamous epithelium.

Exocrine

Relating to glands that release secretions through ducts onto an epithelial surface or into a body cavity, such as sweat glands or the exocrine pancreas.

Exocrine Gland

A gland that releases its secretions through a duct onto a body surface or into a cavity, such as a sweat, salivary, or pancreatic gland.

Exocrine Glands

Exocrine Glands is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

Exocrine Pancreas

Exocrine pancreas is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Exocrine Pancreatic Insufficiency

Inadequate secretion of pancreatic digestive enzymes, causing maldigestion and malabsorption, often with weight loss, bloating, and greasy or difficult-to-flush stools. Common causes include chronic pancreatitis, cystic fibrosis, and pancreatic surgery.

Exocrine Pancreatic Insufficiency

Inadequate pancreatic enzyme secretion causing impaired digestion and absorption, often with greasy

stools, weight loss, bloating, and fat-soluble vitamin deficiency.

Alternate Names:

EPI

Exocrine Pancreatic Insufficiency (Exocrine Pancreatic Insufficiency EPI)

Alternate index label for Exocrine Pancreatic Insufficiency EPI.

Exocrine Pancreatic Insufficiency EPI

Exocrine pancreatic insufficiency occurs when the pancreas does not release enough digestive enzymes, causing greasy stools, bloating, weight loss, and deficiencies of fat-soluble vitamins. Pancreatic enzyme replacement and nutritional monitoring are central to treatment.

Alternate Names:

Exocrine Pancreatic Insufficiency (Exocrine Pancreatic Insufficiency EPI)

Exocytosis

Process by which intracellular vesicles fuse with the plasma membrane, releasing their contents into the extracellular space and incorporating membrane proteins/lipids into the cell membrane. The SNARE complex (v-SNARE on vesicles and t-SNARE on target membrane) mediates vesicle docking and fusion.

Exodeoxyribonuclease

An enzyme that removes nucleotides from the ends of DNA strands and participates in DNA repair, replication, or degradation.

Exogenous

Originating outside the body or introduced from an external source, such as an exogenous medication or hormone.

Exogenous Cushing Syndrome

Cushing syndrome caused by prolonged exposure to corticosteroid medicines rather than excess cortisol production by the body.

Exomphalos

A congenital abdominal-wall defect in which abdominal organs protrude into the base of the umbilical cord and are covered by a membrane.

Exon

A segment of a DNA or RNA molecule containing information coding for a protein or peptide sequence.

Exonuclease

An enzyme that removes nucleotides one at a time from the end of a DNA or RNA strand.

Exopeptidase

An enzyme that removes amino acids from the end of a peptide or protein chain.

Exophiala

A genus of darkly pigmented fungi that can cause skin, lung, eye, or disseminated infections, especially in people with weakened immunity.

Exophiala Dermatitis

A darkly pigmented yeast that can cause skin, lung, or brain infection, mainly in people with weakened immunity.

Exophthalmic Goitre

A clinical disorder or finding related to exophthalmic goitre; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Exophthalmos

Abnormal protrusion of the eyeball (globe) from the orbit, most commonly caused by thyroid eye disease (Graves ophthalmopathy—an autoimmune condition associated with hyperthyroidism). The proptosis results from inflammation, edema, and fibrosis of the extraocular muscles and proliferation of orbital fat within the fixed bony orbit.

Exostosis

A benign bony growth; in the ear canal, repeated cold-water exposure can cause surfer's ear.

Alternate Names:

Surfer's ear

Exotoxins

A clinical disorder or finding related to exotoxins; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Exotropia

A type of strabismus in which one eye deviates outward (toward the temple). Intermittent exotropia: most common type, often noticed when tired or daydreaming, can be controlled with fusion. Constant exotropia: requires treatment to prevent amblyopia. Congenital exotropia: rare, requires early evaluation.

Expectant Treatment

A medical procedure, treatment, device, or care topic related to expectant treatment; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Expectorants

Medications that promote the clearance of mucus from the respiratory tract by increasing sputum volume and reducing its viscosity, facilitating productive cough. The most common expectorant is guaifenesin (glyceryl guaiacolate), which increases respiratory tract fluid secretion and reduces sputum adhesiveness.

Expectoration

The act of coughing up and spitting out mucus, sputum, or phlegm from the respiratory tract; sputum production.

Experience

A person's direct perception, knowledge, or emotional response to an event; in healthcare, patient experience includes how care is accessed and received.

Experience Sampling

A research method that collects brief reports about

a person's activities or feelings at randomly selected times.

Alternate Names:

Ecological momentary assessment

Expiration

The movement of air out of the lungs, usually caused by relaxation of the diaphragm and elastic recoil of the lungs.

Expiratory Grunting

A forced exhalation against a partially closed glottis, creating an audible sound. It is an end-expiratory maneuver that generates intrinsic PEEP, helping to maintain alveolar recruitment and improve oxygenation. It is commonly seen in children with respiratory distress.

Explant

To remove an implanted device or tissue; an explant can also be a piece of tissue removed from an organism and maintained in laboratory culture.

Explantation

Surgical removal of an implanted device or prosthesis. It may be required for infection, malfunction, intolerance, migration, fracture, tissue injury, or completion of a temporary therapy.

Exploratory Laparotomy

Open surgical entry into the abdominal cavity to diagnose or treat suspected intra-abdominal pathology, such as hemorrhage, perforation, ischemia, or obstruction, when less invasive evaluation is inadequate or inappropriate.

Exploratory Operation

Surgery performed to inspect an area directly and identify the cause or extent of disease when noninvasive tests are insufficient.

Exposure

Contact with a physical, chemical, biological, or psychological agent at a particular intensity and duration; risk depends on the agent and circum-

stances.

Exposure Route

Path by which substance enters body. Routes: inhalation, ingestion, dermal, injection, ocular. Determines absorption rate and toxicity.

Expressed Sequence Tag

A short DNA sequence obtained from a transcribed messenger-RNA copy and used as a marker for identifying or locating an expressed gene.

Expression

Expression is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

Expression Hopping

A shift from one manifestation of an addiction to another, such as from substance use to compulsive gambling.

Expressivity

Degree to which a genotype is expressed in phenotype. Variable expressivity: same genotype produces different phenotypic severity in different individuals. Examples: neurofibromatosis type 1, Marfan syndrome.

Expulsion, Stage Of

The second stage of labor, beginning with complete cervical dilation and ending with delivery of the baby.

Exsanguination

Life-threatening loss of blood from severe internal or external bleeding. It can rapidly cause shock, organ failure, and death and requires immediate control of bleeding and emergency medical care.

Exserohilum

A genus of darkly pigmented molds that can cause sinus, eye, skin, or invasive infections.

Extend

To straighten a joint or increase the angle between bones.

Alternate Names:

Extension

Extension

Movement that increases the angle between two bones or straightens a joint.

Extensively Drug-Resistant Tuberculosis

A severe form of multidrug-resistant tuberculosis caused by *Mycobacterium tuberculosis* strains resistant to isoniazid, rifampin, any fluoroquinolone (such as levofloxacin or moxifloxacin), and at least one additional Group A priority agent (such as bedaquiline or linezolid).

Alternate Names:

XDR-TB; XDR tuberculosis

Extensor

Extensor is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

Extensor Digitorum

Posterior forearm muscle from lateral epicondyle via the common extensor tendon, dividing into 4 tendons inserting on extensor expansions of digits 2-5. Innervated by posterior interosseous nerve (C7-C8). Extends MCP joints, assists PIP/DIP extension. Lateral epicondylitis (tennis elbow) is an overuse injury of its common origin.

Extent

The size, range, severity, or spread of a disease, injury, symptom, or treatment effect.

External Auditory Canal

Tube from the concha to the tympanic membrane, approximately 2.5 cm long in adults. Lateral third is cartilaginous; medial two-thirds are bony (temporal bone). Skin-lined with ceruminous glands (producing cerumen/earwax) and hair follicles. Cerumen has antimicrobial and insect-repellent properties.

External Beam Radiation Therapy

Radiation delivered from a machine outside the body to a planned treatment area. Techniques include three-dimensional conformal therapy, intensity-modulated therapy, and stereotactic therapy.

External Capsule

A thin white-matter tract lateral to the putamen that carries connections among the cerebral cortex, thalamus, basal ganglia, and other regions.

External Cephalic Version

A procedure that uses external pressure to turn a breech or transverse fetus into a head-down position. Timing, eligibility, monitoring, and contraindications depend on gestational age, placental and fetal factors, and the clinical setting.

External Ear

The visible auricle and external auditory canal that collect and conduct sound toward the tympanic membrane and help protect the middle ear.

External Fixation

Stabilization of a fracture or limb using pins or wires attached to an external frame. It may provide temporary damage-control stabilization or definitive treatment, particularly when soft-tissue injury or contamination limits internal fixation.

External Iliac Artery

Larger common iliac terminal branch, continuing as the femoral artery below the inguinal ligament. Gives off inferior epigastric and deep circumflex iliac arteries. Related to external iliac vein medially and ureter anteriorly. Commonly used for cardiac catheterization and endovascular access.

External Incontinence Devices

Devices worn or applied outside the body to collect urine or stool or help manage leakage, such as urinary sheaths, absorbent products, or fecal collection systems.

External Jugular Vein

Formed by posterior auricular and retromandibular vein divisions, crossing the sternocleidomastoid superficially to drain into the subclavian vein. Visible through the skin; used for peripheral IV access when other sites are unavailable. Distended in right heart failure and SVC obstruction. A useful physical examination landmark.

External Nose

The projecting nasal structure formed by bone, cartilage, skin, and soft tissue that shapes the nasal airway and supports smell and facial appearance.

External Oblique Muscle

Most superficial flat abdominal muscle from outer lower eight ribs to linea alba, pubic tubercle, and iliac crest. Innervated by T7-T12. Contralateral trunk rotation and flexion; compresses abdomen. Forms the inguinal ligament from its free inferior border. Superficial inguinal ring is an opening in its aponeurosis.

External Otitis

Inflammation or infection of the outer ear canal, commonly called swimmer's ear.

Alternate Names:

swimmer's ear.

External Resorption

Loss of tooth structure from outside. Inflammatory, replacement, surface, cervical resorption. Treatment depends on type and extent.

Extinction

Extinction is a physiologic, behavioral, environmental, or healthcare concept used in medical assessment, prevention, treatment, or research.

Extirpation

Complete surgical removal of a tissue, organ, or foreign body.

Extra-Dural

Located outside the dura mater, the tough outer

membrane surrounding the brain and spinal cord.

Extra-Gastrointestinal Stromal Tumor

A gastrointestinal-stromal-tumor-type neoplasm arising outside the gastrointestinal tract, most often in the mesentery, retroperitoneum, or omentum. Diagnosis uses morphology, KIT or DOG1 expression, and molecular testing.

Extraamniotic

Located outside the amniotic sac; the term may describe a procedure, device, or fluid placed between the amnion and surrounding tissues.

Extracapsular Cataract Surgery

Cataract surgery that removes the cloudy lens while leaving the lens capsule largely in place.

Extracellular

Extracellular is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

Extracellular Exosome

A small membrane vesicle released by cells that carries proteins, lipids, and nucleic acids to other cells and participates in intercellular signaling.

Extracellular Fluid

The fluid outside cells, including plasma and interstitial fluid. Sodium, chloride, and bicarbonate are its principal effective solutes; ECF volume and composition are regulated by the kidneys, cardiovascular system, and endocrine mechanisms.

Extracellular Matrix

A complex network of proteins and carbohydrates secreted by cells that provides structural and chemical support to surrounding cells.

Extracellular Pathogens

Microorganisms that survive and replicate outside host cells. Extracellular bacteria include Streptococcus, Staphylococcus, and Escherichia coli. These pathogens are typically killed by antibodies and

complement. They produce toxins and enzymes to damage host tissues.

Extracellular Region

The space outside cells containing extracellular matrix, signaling molecules, ions, fluid, and other substances that influence tissue structure and cell behavior.

Extracellular Space

The fluid-filled and matrix-containing environment outside cells through which nutrients, waste, hormones, and signals move.

Extracellular Vesicle

A membrane-bound particle released by a cell that transfers molecular cargo between cells and is studied in physiology, disease, biomarkers, and drug delivery.

Extracorporeal

Occurring or performed outside the body; extracorporeal circulation and hemodialysis route blood through an external machine.

Extracorporeal Circulation

A medical procedure, treatment, device, or care topic related to extracorporeal circulation; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Extracorporeal Membrane Oxygenation

A temporary mechanical circulatory support system that provides cardiac and/or respiratory support. VA-ECMO (veno-arterial) provides both cardiac and respiratory support; VV-ECMO (veno-venous) provides respiratory support only.

Extracorporeal Shock Wave Lithotripsy

Non-invasive treatment method for urinary calculi that uses focused acoustic shock waves generated outside the body to fragment kidney or ureteral stones into smaller gravel-like pieces (dust/sand) that pass spontaneously in urine.

Extracranial

Located or occurring outside the skull or cranial cavity.

Extracranial Hematoma

A collection of blood outside the skull or cranial cavity, usually caused by bleeding into soft tissues after injury.

Extract

A concentrated preparation made by drawing active substances from a plant, herb, or other source.

Alternate Names:

Extractive

Extraction

Removal of a substance, tissue, tooth, foreign body, or other structure from the body, usually by a defined procedure.

Extrahepatic Biliary Atresia

Alternate index label; see *Biliary atresia*.

Extrahepatic Cholestasis

Impaired bile flow caused by blockage or disease outside the liver.

Extramammary Paget Disease

An intraepithelial adenocarcinoma usually affecting apocrine-rich skin such as the vulva, perianal region, or scrotum; it often presents as a persistent eczematous or erythematous plaque and requires biopsy.

Extranodal

Outside the lymph nodes; an extranodal lymphoma or lesion involves organs or tissues beyond the lymphatic nodes.

Extranodal Marginal Zone Lymphoma

Alternate index label; see *Extranodal marginal zone lymphoma of mucosa-associated lymphoid tissue*.

Extranodal Marginal Zone Lymphoma Of

Mucosa-Associated Lymphoid Tissue

A usually slow-growing B-cell lymphoma arising in mucosal tissues such as the stomach, salivary glands, thyroid, or lungs.

Alternate Names:

Extranodal Marginal Zone Lymphoma MALT Lymphoma Mucosa-Assisted Lymphoid Tissue Lymphoma

Extranodal Natural Killer T-Cell Lymphoma

An aggressive lymphoma arising from natural killer cells, most commonly involving the nasal cavity and upper aerodigestive tract. It is strongly associated with Epstein-Barr virus infection.

Extraocular

Outside the eye or involving the muscles, nerves, tissues, or structures surrounding the eyeball.

Extraocular Muscle

Extraocular muscle is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Extraocular Muscle Function Testing

Assessment of the six extraocular muscles innervated by CN III (medial rectus: adduction; superior rectus: elevation; inferior rectus: depression; inferior oblique: extorsion), CN IV (superior oblique: intorsion and depression), and CN VI (lateral rectus: abduction).

Extraocular Muscles

Six muscles controlling eye movement: four rectus (superior, inferior, medial, lateral) and two oblique (superior, inferior).

Extrapulmonary Manifestation Of Tuberculosis

Tuberculosis occurring outside the lungs, such as in lymph nodes, bone, kidneys, meninges, or the abdomen.

Extrapyramidal Disorder

A movement disorder caused by dysfunction of brain circuits that regulate posture and involuntary movement.

Extrapyramidal Symptoms

Drug-induced movement disorders caused by D2 receptor blockade in the nigrostriatal pathway.

Extrapyramidal System

Neural pathways and brain structures, including the basal ganglia, that help regulate movement, muscle tone, posture, and automatic motor activity.

Extrapyramidal Tracts

Extrapyramidal Tracts is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

Extraskkeletal Chondroma

A benign hyaline-cartilage tumor occurring in soft tissue without attachment to bone, commonly in the hands or feet; it may calcify and resemble other cartilaginous lesions on imaging.

Extraskkeletal Mesenchymal Chondrosarcoma

A malignant small-cell sarcoma with islands of malignant cartilage arising in soft tissue or other extraskkeletal sites. It requires specialist pathologic and oncologic evaluation.

Extraskkeletal Osteosarcoma

A malignant tumor that produces bone or osteoid in soft tissue rather than arising primarily in bone, usually affecting adults.

Extrasystole

Alternate index label; see *Premature ventricular contractions (PVCs)*.

Extrasystole (Premature Ventricular Contractions)

Alternate index label for Premature Ventricular

Contractions.

Extrauterine Pregnancy

A pregnancy in which the fertilized ovum implants outside the uterine cavity, an alternative term for ectopic pregnancy. By far the most common site is the fallopian tube (ampulla 70%, isthmus 12%, fimbria 11%, cornual/interstitial 2–4%).

Extravasation

Leakage of urine outside urinary tract. Causes: trauma, surgery, obstruction. Pseudovesical extravasation (rectus sheath), extraperitoneal, intraperitoneal. Treatment: catheter drainage, surgical repair.

Extremities

Extremities is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

Extremity

A limb of the body, including the upper extremity (shoulder, arm, forearm, wrist, and hand) or lower extremity (hip, thigh, leg, ankle, and foot).

Extremity Angiography

Imaging of arteries or veins in an arm or leg, usually with x-ray fluoroscopy after contrast injection, to identify narrowing, blockage, aneurysm, malformation, or vascular injury.

Extremity X-Ray

Plain radiography of an arm or leg used to evaluate fractures, alignment, arthritis, bone infection, tumors, or other abnormalities.

Extrinsic

Originating outside a structure, organ, or person; an extrinsic cause or factor acts from an external source.

Extrinsic Allergic Alveolitis (Hypersensitivity Pneumonitis)

An immune-mediated inflammation of the lung

caused by repeated inhalation of sensitizing organic particles, such as moulds, animal proteins, or contaminated agricultural dust.

Alternate Names:

Hypersensitivity Pneumonitis

Extrinsic Factor

An outside influence that affects a person, tissue, or biological process.

Alternate Names:

External factor

Extroversion

The outward turning or eversion of a structure; the term may also describe an outgoing personality trait depending on context.

Extubate

Removal of an endotracheal tube after restoration of adequate spontaneous breathing and airway protection.

Extubation

Removal of an endotracheal tube after the patient can maintain an open airway and adequate spontaneous breathing.

Extubation Criteria

Clinical findings used to determine whether a patient can safely have an endotracheal tube removed. They include adequate spontaneous breathing, oxygenation, airway protection, cough, neuromuscular recovery, and hemodynamic stability.

Exudate

Protein-rich fluid that escapes from inflamed or injured blood vessels into tissues or body cavities; unlike a transudate, it usually reflects increased vascular permeability.

Exudative Pleural Effusion

From local pleural disease. Causes include pneumonia, malignancy, TB, and PE. Elevated protein, LDH, and cell count.

Eye

The organ of vision, a spherical structure (approximately 24 mm diameter) in the bony orbit. Three layers: fibrous (sclera, cornea), vascular/uveal (choroid, ciliary body, iris), neural (retina). Anterior segment: cornea, anterior chamber (aqueous humor), iris/pupil, lens.

Eye - Foreign Object In

A condition in which material enters or becomes lodged on the ocular surface or within the eye; evaluation must exclude corneal penetration and intraocular injury.

Eye Allergy

An eye allergy is an immune reaction to airborne or contact allergens that causes itching, redness, tearing, and swollen eyelids. Avoidance, cool compresses, lubricants, and appropriate antiallergic drops help; pain or vision loss suggests a different urgent condition.

Alternate Names:

Allergy Eye (Eye Allergy)

Eye And Orbit Ultrasound

Ultrasound imaging of the eye and orbit used to evaluate structures that cannot be seen through an opaque lens or vitreous, including retinal detachment, masses, and hemorrhage.

Eye Bank

Eye Bank is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

Eye Black (Black Eye)

Alternate index label for Black Eye.

Eye Bleed

Bleeding in or around the eye; a subconjunctival hemorrhage is blood beneath the clear surface membrane and often appears as a painless bright-red patch, while bleeding inside the eye can impair vision and requires medical assessment.

Eye Care

Eye care includes protective eyewear, regular examination based on age and risk, control of diabetes and blood pressure, safe contact-lens hygiene, and prompt attention to vision changes. Sudden vision loss, severe pain, flashes, or a curtain-like shadow is urgent.

Alternate Names:

Eye Care Eye Disorder (Eye Care)

Eye Care Eye Disorder (Eye Care)

Alternate index label for Eye Care.

Eye Color

The apparent color of the iris, determined mainly by the amount and distribution of melanin and the way light is scattered; a new or uneven color change can indicate disease or injury.

Eye Development

Formation and maturation of the eye and its structures during embryonic and postnatal development.

Eye Disorder

A disease of the eye or visual pathways causing altered vision, pain, redness, discharge, double vision, field loss, or other ocular findings.

Eye Disorders

The sensory ability to perceive light and interpret visual information processed by the eyes and brain, enabling recognition of shapes, colors, depth, and motion. See Vision.

Eye Drops

Liquid preparations instilled into the conjunctival sac for diagnosis, lubrication, or treatment of eye conditions. They should be used according to clinical or product instructions.

Eye Emergencies

Eye emergencies include acute vision loss, chemical injury, penetrating trauma, severe pain, and selected infections or pressure disorders requiring immediate assessment.

Eye Floaters

Spots, threads, or cobweb-like shapes that move across the visual field, usually caused by opacities in the vitreous. Sudden new floaters, flashes, or a curtain-like shadow require urgent evaluation for retinal tear or detachment. See also Floaters.

Eye Health

The maintenance of optimal vision and prevention of ocular disease through regular eye examinations, protective measures, and timely treatment. Common conditions affecting eye health include refractive errors, cataracts, glaucoma, diabetic retinopathy, and age-related macular degeneration.

Eye Hemorrhage

Bleeding in or around the eye, such as subconjunctival, vitreous, retinal, or orbital hemorrhage; symptoms depend on the location and amount of blood.

Eye Infection

Infection of the eyelid, conjunctiva, cornea, internal eye, or surrounding tissues caused by bacteria, viruses, fungi, or parasites.

Eye Injury

Damage to the eye or surrounding tissues from blunt or penetrating trauma, chemicals, foreign bodies, radiation, or other causes.

Eye Irritation

Chemical injury to eye. Immediate irrigation with water or saline for 15-20 minutes. Alkali burns more dangerous than acid. Ophthalmology consultation.

Eye Melanoma

A cancer that develops in the pigment-producing cells of the eye.

Alternate Names:

Cancer, Eye Melanoma

Eye Movement

Movement of the eyes that aligns the visual axes and directs gaze, controlled by the extraocular muscles and cranial nerves.

Eye Muscle Repair

A medical procedure, treatment, device, or care topic related to eye muscle repair; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Eye Neoplasm

A benign or malignant tumor arising in the eye or its surrounding tissues; symptoms and treatment depend on location, vision impact, and tumor type.

Eye Pain

Pain in or around the eye caused by surface irritation, infection, trauma, inflammation, glaucoma, or orbital disease. Severe pain with vision loss, photophobia, trauma, or nausea requires urgent assessment.

Eye Prosthesis

An artificial eye or ocular implant used to restore appearance after loss or severe damage to the eye; it does not restore vision.

Eye Redness

Red discoloration of the eye caused by dilation or inflammation of conjunctival or deeper ocular blood vessels. Causes range from irritation and conjunctivitis to keratitis, uveitis, and acute glaucoma.

Eye Trauma

Ocular injuries ranging from corneal abrasions to globe rupture. Chemical burns: irrigate immediately with saline or water for 30 minutes. Penetrating injuries: shield eye, no pressure, emergent ophthalmology consultation. Foreign bodies: remove superficial items; embedded objects require surgical removal.

Eye Twitching

Repeated involuntary spasms of an eyelid or muscles around the eye, commonly associated with fatigue, stress, caffeine, irritation, or eye strain.

Eye, Diseases Of

Eye, Diseases of is an anatomical structure, tissue,

cell, or body process; its location and function explain its role in normal physiology and disease.

Eyeball (Globe)

The roughly spherical organ of vision, consisting of the cornea, sclera, uveal tract, lens, retina, and internal chambers and fluids.

Alternate Names:

Globe

Eyebrow

A strip of hair above the orbit that helps protect the eye from sweat, moisture, and particles.

Eyeglass

A lens or pair of lenses mounted in a frame to correct refractive errors such as nearsightedness, farsightedness, astigmatism, or presbyopia.

Eyeglasses, Sunglasses, And Magnifiers

Eyeglasses correct refractive errors, sunglasses reduce glare and ultraviolet exposure, and magnifiers enlarge near targets for selected visual impairment. Prescription, fit, lens protection, and the underlying eye condition determine the appropriate aid.

Alternate Names:

Eyeglasses, Sunglasses, And Magnifying Glasses
(Eyeglasses, Sunglasses, And Magnifiers)

Eyeglasses, Sunglasses, And Magnifying Glasses (Eyeglasses, Sunglasses, And Magnifiers)

Alternate index label for Eyeglasses, Sunglasses, and Magnifiers.

Eyelash

A row of hairs along the eyelid margin that helps protect the eye from dust and triggers a protective blink reflex.

Eyelashes

Short, curved hairs arising from the eyelid margins that help protect the ocular surface from foreign particles and excessive light.

Eyelid

A movable fold of skin and muscle that protects the eye, spreads the tear film, and helps control light entry.

Eyelid Bump

Eyelid bump concerns eyelid bump, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Eyelid Coloboma

A congenital notch or defect in the eyelid caused by incomplete development; it may expose the eye and occur with other eye or facial abnormalities.

Eyelid Disorder

A disease or structural problem of the eyelid, such as inflammation, infection, malposition, tumor, or gland blockage, that can affect comfort or protect the eye.

Eyelid Drooping

Eyelid drooping concerns eyelid drooping, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Eyelid Inflammation

Alternate index label; see *Blepharitis*.

Eyelid Inflammation (Blepharitis)

Alternate index label for Blepharitis.

Eyelid Lift

Eyelid lift concerns eyelid lift, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Eyelid Neoplasm

A benign, precancerous, or malignant growth of the eyelid; persistent, changing, ulcerated, or destructive lesions require eye or skin evaluation.

Eyelid Swelling

Swelling of one or both eyelids caused by allergy,

infection, inflammation, trauma, a blocked gland, or angioedema. Pain, fever, impaired eye movement, proptosis, or vision change may indicate an urgent orbital or systemic condition.

Eyelid Twitch

Eyelid twitch concerns eyelid twitch, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Eyelids

Mobile folds of skin and muscle that protect the eyes, spread the tear film, and help regulate the amount of light entering the eye.

Eyes - Bulging

Eyes - bulging concerns eyes - bulging, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Eyes, Flashing Lights In The

Brief flashes or streaks of light, called photopsias, often caused by traction on the vitreous or retina; sudden new flashes, especially with floaters or a curtain-like loss of vision, require urgent eye evaluation for a retinal tear or detachment.

Eyesight

Eyesight is an anatomical structure, tissue, cell, or body process; its location and function explain its role in normal physiology and disease.

Eyesight (Vision)

The ability to perceive and interpret light, form, color, movement, and detail through the eyes and visual pathways of the nervous system.

Alternate Names:

Vision

Eyestrain

Eye discomfort, fatigue, or blurred vision caused by prolonged visual effort.

Ezetimibe

An oral cholesterol-lowering medicine that blocks

intestinal absorption of cholesterol and is used alone or with a statin.

External Carotid Artery

A branch of the common carotid artery that supplies much of the face, scalp, and neck through several branches.

F

Fab Immunoglobulins

The part of an antibody that recognizes and attaches to a specific target. Fab fragments are used in laboratory tests and some treatments.

Fabry Disease

An inherited disorder in which a missing or reduced enzyme causes a fatty substance to build up in cells. It can cause burning pain, skin changes, kidney disease, heart problems, and stroke.

Fabry'S Disease

An inherited disorder in which a lipid accumulates in cells, causing pain, skin findings, kidney disease, and heart or nervous-system complications.

Face

The face is the front part of the head, containing the eyes, nose, mouth, cheeks, and jaw; its movement is mainly supplied by the facial nerve and sensation by the trigeminal nerve.

Face Pain

Pain in the facial region caused by dental, sinus, nerve, eye, joint, skin, vascular, or other disorders; pattern and associated signs guide evaluation.

Face Powder Poisoning

Face powder poisoning involves exposure or injury from face powder poisoning; dose, route, timing, symptoms, and tissue involvement determine the urgency and treatment approach.

Face Presentation

A fetal presentation in which the neck is hyperex-

tended and the face is the presenting part. The position of the fetal chin influences whether vaginal birth is possible and how labor is managed.

Facelift

Rhytidectomy: a surgical procedure to improve the appearance of the face and neck by removing excess skin and tightening underlying tissues. It can address sagging skin, deep folds, and jowls. Recovery includes swelling and bruising for several weeks.

Alternate Names:

Rhytidectomy

Facet Joint

A small synovial joint between neighboring vertebral arches that guides spinal movement and can cause localized neck or back pain when arthritic.

Facet Joints

Small joints at the back of the spine that connect neighboring vertebrae and guide movement. Arthritis or injury in these joints can cause neck or back pain.

Facet Rhizotomy

A procedure that interrupts selected sensory nerves supplying spinal facet joints to reduce chronic pain.

Facial Asymmetry

Unequal size, position, movement, or contour between the two sides of the face, which may be congenital or result from trauma, nerve dysfunction, muscle disease, or a mass.

Facial Cleft

A congenital gap or malformation caused by incomplete fusion of facial tissues during embryonic development, such as cleft lip or atypical facial cleft.

Facial Edema

Swelling caused by excess fluid in the tissues of the face. Causes include allergy, infection, trauma, kidney or heart disease, and venous obstruction. Sudden swelling of the lips, tongue, or throat with breathing difficulty is an emergency.

Facial Expression

Facial expression is visible movement or configuration of facial muscles conveying emotion, communication, pain, or neurologic information.

Facial Hair, Excess In Women

Hirsutism: excessive androgen-dependent hair growth in male-pattern distribution (face, chest, back) in women. Most common cause is polycystic ovary syndrome. Other causes include adrenal hyperplasia, tumors, and medications. Evaluation includes hormone levels and imaging.

Alternate Names:

Hirsutism

Facial Muscle

facial muscle refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Facial Neoplasm

A benign or malignant tumor arising in facial skin, soft tissue, bone, salivary glands, nerves, or other structures; symptoms and treatment depend on site and spread.

Facial Nerve

The seventh cranial nerve, which controls facial expression and carries taste sensation from part of the tongue.

Facial Nerve Palsy

Weakness or paralysis of muscles supplied by the seventh cranial nerve, causing facial asymmetry and difficulty closing the eye or moving the mouth. It may be idiopathic, infectious, inflammatory, traumatic, neoplastic, or vascular in origin. Sudden onset requires assessment for stroke and other neurologic emergencies, especially when limb weakness, speech disturbance, or sensory loss is present. Evaluation and treatment depend on the pattern, severity, cause, and risk of ocular or neurologic complications.

Facial Nerve Palsy Due To Birth Trauma

Facial nerve palsy due to birth trauma concerns facial nerve palsy due to birth trauma, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Facial Nerve Problems

Disorders affecting cranial nerve VII, which controls facial expression, taste from part of the tongue, and some tear and salivary function. Weakness may result from Bell palsy, stroke, infection, trauma, or a tumor. Sudden facial weakness, especially with arm weakness or speech difficulty, requires emergency assessment.

Alternate Names:

Bells Palsy (Facial Nerve Problems) Idiopathic Facial Paralysis (Facial Nerve Problems)

Facial Nucleus

A motor nucleus in the pons containing neurons whose axons form the facial nerve and control muscles of facial expression.

Facial Pain

Pain felt in the face that may arise from dental disease, sinus disease, temporomandibular disorders, nerve disorders, infection, or other causes.

Facial Palsy

Weakness or paralysis of the facial muscles on one side, most commonly caused by Bell palsy (idiopathic cranial nerve VII dysfunction). Other causes include stroke, infection (herpes zoster ophthalmicus), trauma, tumor, or Lyme disease. Sudden facial

weakness with other neurological signs requires urgent evaluation.

Alternate Names:

Bell's palsy; facial paralysis

Facial Paralysis

Weakness or loss of movement of the facial muscles caused by dysfunction of the facial nerve or its pathways; sudden onset requires urgent evaluation for stroke.

Facial Paresis

Weakness of the muscles supplied by the facial nerve, causing reduced facial movement and sometimes impaired eye closure, taste, or tearing.

Facial Spasm

Facial Spasm is a muscle, nerve, vessel, reproductive structure, or other body part; its location and function determine its clinical relevance.

Facial Swelling

Enlargement of part or all of the face caused by infection, allergy, trauma, dental disease, salivary or sinus disease, fluid retention, or a mass; rapid swelling with breathing difficulty is an emergency.

Facial Tics

Sudden, repetitive, involuntary facial movements or sounds, such as blinking, grimacing, or nose wrinkling, commonly seen in tic disorders.

Facial Trauma

Injury to the face involving skin, soft tissue, teeth, nerves, vessels, orbit, nose, or facial bones, requiring assessment of airway, vision, and structural damage.

Facial Vein

A vein that drains blood from the superficial face and communicates with deeper venous channels before joining the internal jugular venous system.

Facies

A characteristic facial appearance that may provide clues to an underlying disease or physiologic

condition.

Facilitated Diffusion

Movement of a substance across a cell membrane through a protein channel or carrier, from an area of higher concentration to lower concentration. The cell does not need to use energy for this process.

Facioscapulohumeral Dystrophy

Facioscapulohumeral Dystrophy is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Facioscapulohumeral Muscular Dystrophy

An inherited muscular dystrophy causing progressive weakness of facial, shoulder-blade, and upper-arm muscles, often with asymmetric onset and variable severity.

Facklamia

A genus of gram-positive bacteria that can rarely cause bloodstream, urinary, wound, or other opportunistic infections.

Facklamia Hominis

A species of Facklamia bacteria that is rarely isolated from human clinical specimens and may cause opportunistic infection.

Factitious Disorder

Presentation of physical or psychological symptoms or imposing injury or disease on another, with the deceptive intention of assuming the sick role. In factitious disorder imposed on self, the individual falsifies signs or symptoms, induces injury or disease, and presents to medical providers.

Alternate Names:

Munchausen Syndrome

Factitious Disorders

Factitious disorder involves deliberately producing or falsifying illness behavior to assume the sick role, without an obvious external reward. It is a mental-health disorder requiring nonjudgmental assessment,

protection from unnecessary procedures, and coordinated psychiatric and medical care.

Factitious Hyperthyroidism

A state of excessive thyroid hormone in the body caused by ingestion of thyroid hormone or another external source rather than increased thyroid-gland production.

Factor H Deficiency

A rare inherited or acquired condition in which a protein that helps control the immune system is missing or does not work properly. It can cause repeated infections or uncontrolled inflammation and injury to small blood vessels, especially in the kidneys.

Factor

A blood protein needed to form a clot. Different clotting factors work together to stop bleeding; too little or abnormal activity can cause a bleeding disorder, while excessive clotting can contribute to thrombosis.

Factor I Deficiency

A rare condition in which a protein that helps control immune-system activity is missing or does not work properly. It may cause repeated bacterial infections or inflammation and injury to the kidneys.

Factor II (Prothrombin) Assay

A blood test measuring factor II activity, which helps assess the clotting pathway and investigate abnormal bleeding, prolonged prothrombin time, or suspected prothrombin deficiency or inhibition.

Factor IX

A vitamin K-dependent blood-clotting protein in the intrinsic coagulation pathway. Inherited deficiency causes hemophilia B.

Factor IX Assay

A blood test measuring factor IX activity, used to diagnose or monitor factor IX deficiency, the cause of hemophilia B, and to guide replacement treatment.

Factor V

A blood-clotting protein required for formation of thrombin and fibrin.

Factor V Assay

A blood test measuring factor V activity, used to investigate abnormal coagulation and diagnose inherited factor V deficiency or acquired reduction in factor V.

Factor V Deficiency

An inherited or acquired bleeding disorder caused by reduced factor V activity, impairing thrombin generation and fibrin formation. It may cause easy bruising, nosebleeds, heavy menstrual bleeding, postoperative bleeding, or severe bleeding in rare cases.

Factor V Leiden

An inherited change in a blood-clotting protein that makes clots less easily controlled. It increases the risk of blood clots in veins, although the risk varies with family history and other factors.

Factor V Leiden Mutation

A factor V variant resistant to activated protein C, causing inherited thrombophilia and increased venous thrombosis risk.

Factor VII

A blood-clotting protein made mainly in the liver that begins the tissue-factor pathway of coagulation. Inherited deficiency can cause abnormal bleeding, ranging from easy bruising to serious bleeding after injury or procedures.

Factor VII Assay

A blood test measuring factor VII activity, used to evaluate an isolated prolonged prothrombin time and investigate inherited or acquired factor VII deficiency.

Factor VII Deficiency

A bleeding disorder caused by inherited or acquired deficiency of coagulation factor VII, impairing the extrinsic and common coagulation pathways. It may

cause easy bruising, mucosal bleeding, postoperative bleeding, or severe hemorrhage; prothrombin time is usually prolonged.

Factor VIII

A clotting protein that works with factor IX to help form a stable blood clot. Inherited deficiency causes hemophilia A, characterized by prolonged or spontaneous bleeding into joints, muscles, or other tissues.

Factor VIII Assay

A blood test measuring factor VIII activity, used to diagnose and monitor hemophilia A and assess other causes of reduced factor VIII activity.

Factor X Assay

A blood test measuring factor X activity, used to investigate bleeding and diagnose or monitor inherited or acquired factor X deficiency.

Factor X Deficiency

A rare inherited or acquired bleeding disorder caused by insufficient coagulation factor X, which participates in the common pathway. Bleeding severity varies, and both prothrombin time and activated partial thromboplastin time may be prolonged.

Factor XI Deficiency

An inherited or acquired bleeding disorder caused by inadequate factor XI activity, producing variable bleeding that is often most apparent after surgery, dental procedures, or trauma.

Factor Xii

factor xii is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

Factor XII (Hageman Factor) Deficiency

An inherited or acquired deficiency of coagulation factor XII that markedly prolongs the activated partial thromboplastin time but usually does not cause abnormal bleeding.

Factor XII Assay

A blood test measuring factor XII activity, used to investigate an isolated prolonged activated partial thromboplastin time and diagnose factor XII deficiency.

Factor Xiii

factor xiii is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

Factorial Study

factorial study is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

Facultative Anaerobe

A microorganism that can grow with or without oxygen.

Faculty

The teaching and research staff of an academic institution; in medicine, faculty may educate learners, conduct research, and supervise clinical training.

Faecal Fistula

Faecal Fistula is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Faecalibacterium

A genus of anaerobic bacteria commonly found in the intestine and associated with production of the short-chain fatty acid butyrate.

Faecalibacterium Prausnitzii

A common intestinal bacterium that produces butyrate and is being studied for its relationship to gut inflammation and health.

Faeces

Faeces is an anatomical, developmental, reproduc-

tive, nutritional, behavioral, or healthcare concept used in medical assessment or care.

Fahr Disease

A rare disorder in which calcium builds up in parts of the brain. It may cause movement problems, seizures, changes in thinking, or psychiatric symptoms. Inherited cases are often called primary familial brain calcification.

Failed Induction Of Labor

The inability to achieve active labor and progressive cervical change after an adequate trial of induction. Definition: no active labor (cervical change) after at least 12–18 hours of oxytocin with ruptured membranes and adequate contractions. Management: the latent phase may be prolonged (up to 24 hours or more).

Failed Intubation

Inability to successfully place an endotracheal tube after multiple attempts. In the operating room, a failed intubation algorithm is followed: call for help, maintain oxygenation (face mask, supraglottic airway), and decide to wake the patient (if non-emergent) or proceed with a supraglottic airway (if surgery is urgent).

Failure To Thrive

Inadequate growth in children, defined as weight below the 5th percentile or crossing two major percentile lines on growth charts. Causes include caloric insufficiency (neglect, poor feeding), organic disease (congenital heart disease, renal disease), and psychosocial factors.

Failure To Thrive

Inadequate physical growth or unexpected weight loss, most often used for children with poor weight gain and sometimes for adults with functional decline; evaluation seeks nutritional, medical, developmental, and social causes.

Fainting

Fainting is a brief loss of consciousness from transient inadequate brain perfusion, often caused by

reflex, orthostatic, or cardiac mechanisms; cardiac warning features require urgent evaluation.

Alternate Names:

syncope.

Fainting (Syncope)

A brief loss of consciousness and postural tone caused by temporary inadequate blood flow to the brain, followed by spontaneous recovery; cardiac causes require urgent assessment.

Fair Hair

Hair with relatively low melanin content, appearing blond, light brown, or red; color reflects inherited pigment production and can change with age or exposure.

Falciform Ligament

A fold of tissue that attaches the liver to the front wall of the abdomen and the diaphragm. It separates the right and left lobes of the liver and contains a remnant of a blood vessel from before birth.

Falciparum Malaria

Severe malaria caused by the parasite *Plasmodium falciparum* and transmitted by infected *Anopheles* mosquitoes. It can rapidly cause cerebral malaria, severe anemia, kidney injury, respiratory distress, or death and requires urgent treatment.

Falimarev

An investigational antiviral monoclonal antibody studied for prevention or treatment of selected viral infections; its use depends on trial evidence and authorization.

Fall

An unplanned movement to the ground or a lower level. Falls are more likely with poor balance, muscle weakness, vision problems, certain medicines, unsafe surroundings, or a drop in blood pressure when standing.

Fall Prevention

Measures that reduce the risk of falling, including

strength and balance training, medication review, vision assessment, safer footwear, and environmental modification.

Fall Risk

The likelihood that a person will fall, based on factors such as gait, balance, strength, vision, medicines, orthostatic blood-pressure changes, and the environment.

Fall Screening

Assessment of a person's history and risk factors for falling to guide prevention and further evaluation.

Fallen Arches

Pes planus: flattening of the medial longitudinal arch of the foot. May be flexible (appearing only when standing) or rigid. Can cause foot, ankle, or knee pain, or be asymptomatic. Treatment includes supportive footwear, orthotics, and stretching exercises.

Alternate Names:

Pes planus; flat feet

Fallopian Tube

One of two tubes connecting an ovary to the uterus. An egg usually travels through the tube, where fertilization may occur, before reaching the uterus.

Fallopian Tube Cancer

A rare tumor histologically similar to high-grade serous ovarian carcinoma. Presents with a pelvic mass, pain, or watery discharge; staging and treatment follow the principles of ovarian cancer.

Fallopian Tube Torsion

Twisting of the fallopian tube around its pedicle, usually around an underlying mass such as a hydrosalpinx or paraovarian cyst, causing acute pelvic pain and requiring urgent surgical intervention.

Fallopian Tubes

Fallopian Tubes is a muscle, nerve, vessel, reproductive structure, or other body part; its location and function determine its clinical relevance.

Fallopian-Tube Endometriosis

Endometrial-type glands and stroma within or around the fallopian tube, which may cause pelvic pain, infertility, adhesions, or an incidental pathologic finding.

Fallot'S Tetralogy

Fallot's Tetralogy is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fallot, Tetralogy Of

A congenital heart defect consisting of four abnormalities: ventricular septal defect, right ventricular outflow tract obstruction, overriding aorta, and right ventricular hypertrophy. Causes cyanosis due to right-to-left shunting. Treatment includes surgical repair.

Alternate Names:

Tetralogy of Fallot

Falls

Falls is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

False Labor

Uterine contractions that may be uncomfortable but do not produce progressive cervical dilation and effacement; they are often irregular and may lessen with rest or hydration.

False Negative

A test result that indicates a condition is absent when it is actually present.

False Passages

Abnormal channels created through tissue, often during instrumentation, surgery, or trauma, that do not follow the normal anatomical pathway and can cause bleeding, perforation, or infection.

False Positive

A test result that indicates a disease or condition is present when it is not.

False Ribs

Ribs 8-10 not articulating directly with the sternum; their cartilages join rib 7's cartilage forming the costal margin. Greater mobility and flexibility of the lower thoracic wall. More susceptible to fractures at their angles due to greater length and less rigid attachment.

False-Negative Result

A negative test result in a person who does have the target condition. Causes include inadequate specimen, early or late testing, low organism or biomarker concentration, prior treatment, technical error, and limited test sensitivity.

False-Positive Result

A positive test result in a person who does not have the target condition. Causes include limited specificity, cross-reactivity, technical error, contamination, and testing in a low-prevalence population.

Faltering Weight

Inadequate weight gain or downward crossing of a child's growth trajectory, caused by insufficient intake, feeding difficulty, malabsorption, chronic disease, or psychosocial factors.

Famciclovir

A medicine or chemical compound called famciclovir. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Familial

Occurring in a family more often than expected, because of shared genes, environment, or both; familial does not necessarily mean a single-gene inherited disorder.

Familial Adenomatous Polyposis

An inherited condition that causes hundreds or thousands of growths in the colon. These growths can

become colon cancer if they are not treated, so regular screening and specialist care are needed.

Familial Combined Hyperlipidemia

An inherited disorder causing elevated cholesterol, triglycerides, or both.

Familial Dysautonomia

An inherited disorder affecting nerves that control sensation and automatic body functions such as blood pressure, sweating, digestion, and swallowing.

Familial Dysbetalipoproteinemia

An inherited condition in which the body does not clear certain blood fats properly. It can raise cholesterol and triglycerides and increase the risk of early artery disease.

Familial Hypercholesterolaemia

Familial Hypercholesterolaemia is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Familial Hypercholesterolemia

An inherited disorder causing persistently high low-density lipoprotein cholesterol, usually because of impaired LDL-receptor pathway function. It increases the risk of premature atherosclerotic disease; diagnosis uses lipid levels, family history, physical findings, and genetic testing when available.

Familial Hypertriglyceridemia

An inherited tendency toward elevated blood triglycerides, often worsened by obesity, diabetes, alcohol, or medicines and sometimes increasing pancreatitis risk.

Familial Hypocalciuric Hypercalcemia

Autosomal dominant condition caused by inactivating mutations in the calcium-sensing receptor gene leading to a higher set point for calcium-mediated PTH suppression. Presents with mild hypercalcemia, inappropriately normal or mildly elevated PTH, and low urinary calcium excretion

with calcium-to-creatinine clearance ratio less than 0.01.

Familial Lipoprotein Lipase Deficiency

A rare autosomal-recessive disorder in which impaired triglyceride breakdown causes severe chylomicronemia, recurrent pancreatitis, eruptive xanthomas, and abdominal pain.

Familial Mediterranean Fever

An autosomal recessive autoinflammatory disorder (MEFV gene mutations, pyrin/inflammasome dysregulation) causing recurrent self-limited febrile attacks with serositis (peritonitis, pleuritis, synovitis), erysipelas-like erythema, lasting 12-72 hours.

Familial Mediterranean Fever

An inherited autoinflammatory disorder, usually related to variants in *MEFV*, causing recurrent attacks of fever and inflammation of the abdominal, chest, or joint linings; amyloidosis is a possible complication.

Familial Multiple Lipomatosis

An autosomal dominant condition characterized by the development of numerous, symmetrically distributed subcutaneous lipomas, typically appearing in early adulthood. The lipomas are encapsulated, painless, and slow-growing, affecting the trunk and extremities. Unlike Dercum disease, they are not painful.

Familial Multiple Trichoepithelioma

An inherited disorder characterized by multiple benign hair-follicle tumors, usually skin-coloured papules on the face; it may be associated with pathogenic variants in *CYLD* and Brooke-Spiegler syndrome.

Familial Paroxysmal Peritonitis

Familial Mediterranean fever: an autosomal recessive autoinflammatory disorder causing recurrent fevers and serositis (peritonitis, pleuritis, synovitis). Caused by MEFV gene mutations affecting pyrin regulation.

Alternate Names:

Familial Mediterranean fever

Familial Testotoxicosis

Familial testotoxicosis is an activating mutation of the luteinizing-hormone receptor causing gonadotropin-independent precocious puberty in boys, with high testosterone but low prepubertal LH and FSH.

Family

A group of biologically or socially related people whose shared history, genes, environment, and support relationships can affect health risk and care.

Family Involvement

The participation of family members or other support persons in care planning, treatment, rehabilitation, and support, with attention to the patient's preferences and caregiver burden.

Family Planning

Healthcare and personal decision-making about whether and when to have children, including contraception, fertility care, preconception health, and pregnancy planning.

Family Study

family study is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

Family Therapy

Family therapy is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

Famophos

Famophos is an organophosphate insecticide; exposure can inhibit acetylcholinesterase and cause cholinergic toxicity, including salivation, sweating, vomiting, bronchospasm, bradycardia, and muscle weakness.

Famotidine

Famotidine is a histamine H₂-receptor antagonist that reduces gastric-acid secretion and is used for peptic ulcer disease, gastro-oesophageal reflux, and hypersecretory states; dose adjustment may be needed in renal impairment.

Fanconi Anemia

An inherited disorder in which the bone marrow cannot make enough blood cells and the body has difficulty repairing damaged DNA. It may cause anemia, infections, bleeding, birth differences, and an increased risk of cancer.

Fanconi Syndrome

A kidney disorder in which the kidney tubules fail to return several useful substances to the blood. It can cause loss of sugar, minerals, and other substances in the urine, leading to weak bones, poor growth, or an abnormal blood-acid level.

FAP

Familial adenomatous polyposis: an inherited condition causing hundreds to thousands of colon polyps, with near-certain colorectal cancer if untreated. Caused by APC gene mutations with autosomal dominant inheritance. Managed with prophylactic colectomy.

Alternate Names:

Familial adenomatous polyposis

Farad

The SI unit of electrical capacitance, equal to one coulomb per volt, relevant to biomedical instrumentation and electrophysiology.

Farber Lipogranulomatosis

A rare autosomal-recessive lysosomal storage disorder caused by acid ceramidase deficiency, producing painful subcutaneous nodules, joint contractures, and hoarseness.

Farmer'S Lung

The most common HP, caused by thermophilic actinomycetes in moldy hay. Presents acutely 4–8 hours

after exposure with fever, cough, and dyspnea.

Farmer'S Lung

Hypersensitivity pneumonitis caused by inhalation of antigens from moldy hay, grain, or other agricultural materials. Repeated exposure produces immune-mediated inflammation of the distal airways and lung interstitium. Acute disease may cause fever, cough, chills, and dyspnea several hours after exposure, whereas chronic disease may cause progressive fibrosis. Diagnosis combines exposure history, imaging, pulmonary-function testing, and specialist assessment; avoidance of the antigen is central to management.

Farsightedness

Hyperopia, a refractive error in which light focuses behind the retina, causing near blur or eyestrain; glasses or contact lenses can correct it.

Alternate Names:

hyperopia, in which light focuses behind the retina when.

Fart

A colloquial term for passing intestinal gas through the anus, produced from swallowed air and bacterial fermentation in the digestive tract.

Fascia

A layer or band of connective tissue that surrounds, separates, and supports muscles, organs, nerves, and blood vessels.

Fascia Adherens

A connection between neighboring cells that helps hold them together, especially in heart muscle. It attaches parts of the cell's internal support system to the cell membrane.

Fascial Loop

A loop or sling made from a person's tissue or synthetic material and used to support or reinforce a body structure, such as the urethra.

Fasciculation

An involuntary, brief twitch of a small group of muscle fibers, often caused by irritation or disease of a motor nerve.

Fasciitis

Inflammation of fascia, the connective tissue surrounding muscles and other structures. Causes and severity vary widely, from localized plantar fasciitis to serious infectious fasciitis.

Fasciola

fasciola is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Fasciola Hepatica

fasciola hepatica is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Fascioliasis

A parasitic infection caused by liver flukes of the genus *Fasciola*, acquired by ingesting metacercariae on contaminated aquatic plants or in water. Acute hepatic migration may cause fever, right-upper-quadrant pain, hepatomegaly, and eosinophilia; chronic biliary infection may cause colic, cholangitis, or biliary obstruction.

Fasciolopsis

An intestinal fluke infection caused by *Fasciolopsis buski*, acquired by eating contaminated aquatic plants and potentially causing abdominal pain, diarrhea, or malnutrition.

Fasciolopsis Buski

Fasciolopsis buski is the large intestinal fluke that causes fasciolopsiasis after ingestion of metacercariae on contaminated aquatic plants; heavy infection can cause abdominal pain, diarrhoea, malnutrition, or oedema.

Fasciotomy

Surgical incision through the fascia to relieve compartment syndrome. Indications: acute compartment syndrome (trauma, reperfusion, burns, crush injury). Classic signs: pain out of proportion, pain with passive stretch, paresthesias, pallor, pulselessness (late).

Fast Heart Rate

A heart rate faster than expected for age or activity, usually called tachycardia. It may be a normal response to exercise, fever, pain, or stress, or a sign of arrhythmia or another medical disorder.

Fast Heart Rate - Tachycardia

Fast heart rate - tachycardia concerns fast heart rate - tachycardia, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Fast-Twitch Fiber

A muscle fiber that contracts quickly and powerfully but tires more rapidly than a slow-twitch fiber. It is important for sprinting, jumping, lifting, and other brief high-intensity activities.

Alternate Names:

Type II muscle fiber

Fasting

Fasting is abstaining from food, and sometimes drink, for a defined period before testing, treatment, surgery, or for personal or religious reasons.

Fasting Blood Glucose

The blood glucose concentration measured after a period without caloric intake, usually at least 8 hours; it is used to screen for and diagnose disorders such as diabetes.

Fasting Guidelines

Preoperative fasting guidelines minimize aspiration risk while reducing patient discomfort and catabolism. Clear liquids (water, clear juice without pulp, black coffee, sports drinks) are allowed up to 2 hours before surgery. Breast milk up to 4 hours.

Infant formula up to 6 hours. Light meal (toast and clear liquid) up to 6 hours.

Fasting Lipid Profile

A blood test measuring cholesterol and triglyceride levels, usually after fasting.

Alternate Names:

Lipid panel

Fasting Plasma Glucose Test

A blood test that measures glucose after fasting and helps diagnose diabetes or impaired glucose regulation.

Fat

A nutrient and energy source composed mainly of lipids.

Alternate Names:

Lipid

Fat Body

The fat body is an organ-like tissue in insects that stores lipid, produces metabolic proteins, and performs functions analogous to liver and adipose tissue.

Fat Embolism

A condition in which drops of fat enter the bloodstream, usually after a broken thigh or pelvic bone, major trauma, or orthopedic surgery. In serious cases, fat can reach the lungs or brain and cause breathing or neurologic problems.

Fat Measurement

Assessment of body fat or fat content using methods such as skinfolds, bioimpedance, DEXA, imaging, or laboratory analysis; results vary by method and are interpreted with overall health measures.

Fat Necrosis

A specialized form of necrosis that occurs in adipose tissue, most commonly following acute pancreatitis when activated pancreatic lipases escape into the surrounding tissues and digest triglycerides in mesenteric or subcutaneous fat cells. In the breast,

it may follow trauma or surgery and can produce a firm lump that mimics malignancy on examination or imaging.

Fat Pad

A fat pad is a localized collection of adipose tissue that cushions, supports, insulates, or permits movement around an organ or joint.

Fat-Soluble Toxins

Lipophilic toxins stored in fat, prolonged elimination. Examples: organochlorine pesticides, PCBs, dioxins, tetrachlorodiphenylmethane.

Fat-Soluble Vitamin

A vitamin that dissolves in fat and can be stored in the body. Vitamins A, D, E, and K are fat-soluble; taking too much can cause harmful buildup.

Fat-Soluble Vitamins

Fat-Soluble Vitamins is a medicine, drug, vitamin, or chemical product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent.

Fatal Familial Insomnia

Fatal Familial Insomnia is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fatigue

Fatigue is a persistent sense of low energy or reduced capacity that may result from sleep problems, anemia, infection, endocrine disease, medication, mood disorder, or systemic illness. relieved by rest. It may result from sleep disturbance, anemia, infection, endocrine disease, chronic organ disease, medication exposure, or psychological and neurological conditions.

Fatigue (Cancer)

Persistent tiredness or reduced energy associated with cancer or its treatment. It may result from the disease, anemia, sleep problems, medicines, mood,

or other factors.

Alternate Names:

Cancer

Fatty Acid

A carboxylic acid with a hydrocarbon chain that may be saturated or contain one or more double bonds. Fatty acids provide energy, form membrane lipids, and serve as precursors for signaling molecules.

Fatty Acid Synthase

A group of enzymes that helps the body make fatty acids, which are used for energy storage and cell structures.

Fatty Acids

Organic components of fats used for energy and for building cell membranes and signaling molecules.

Fatty Degeneration

Accumulation of abnormal lipid within cells, especially liver cells, caused by metabolic stress, alcohol, toxins, malnutrition, obesity, or other injury.

Fatty Liver (Steatosis)

Abnormal intrahepatic accumulation of triglycerides within hepatocytes exceeding 5% of total liver weight or visible in > 5% of hepatocytes on histological evaluation. Categorized etiologically into metabolic dysfunction-associated steatotic liver disease (MASLD, formerly designated NAFLD), which is tightly linked to obesity, type 2 diabetes mellitus, and dyslipidemia, and alcohol-associated liver disease. Can progress along an inflammatory continuum from isolated hepatic steatosis to steatohepatitis, characterized by hepatocyte ballooning, lobular inflammation, Mallory-Denk bodies, and progressive pericellular fibrosis that can culminate in cirrhosis, end-stage liver failure, and hepatocellular carcinoma. Evaluated with transabdominal ultrasonography, transient elastography (FibroScan), and biomarker panels; managed with lifestyle weight loss, cardiometabolic risk control, and GLP-1 receptor agonists.

Alternate Names:

NAFLD (Fatty Liver)

Fatty Liver

Alternate index label for Fatty Liver.

Fatty Liver Disease

A condition characterized by the accumulation of excess fat in liver cells, most commonly associated with obesity, insulin resistance, and metabolic syndrome.

Fatty Liver Disease

A condition in which excess fat accumulates in the liver, often associated with metabolic risk factors and potentially progressing to inflammation or scarring.

Alternate Names:

MASH MASLD Metabolic Dysfunction-Associated Steatohepatitis Metabolic Dysfunction-Associated Steatotic Liver Disease NAFLD

Fatty Streak

An early atherosclerotic lesion formed by lipid accumulation in an artery wall.

Favism

Acute hemolysis after eating fava beans or inhaling pollen in a person with glucose-6-phosphate dehydrogenase deficiency, triggered by oxidative stress.

Favus

Favus is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fazarabine

Fazarabine is a cytidine analogue antimetabolite investigated as an anticancer drug; it interferes with nucleic-acid synthesis and may cause myelosuppression and other chemotherapy toxicities.

Fc Receptor

A protein on the surface of some immune cells that attaches to antibodies and helps the cells identify,

remove, or destroy targets.

Fear

An emotional and physiologic response to perceived threat, involving vigilance, autonomic arousal, avoidance, and protective behavior; excessive fear can be pathological.

Fear Of Age

An excessive or persistent fear of growing old or of older people, sometimes called gerontophobia, that causes distress or avoidance.

Fear Of Children

An excessive or persistent fear of children, sometimes called pedophobia, that causes significant distress or avoidance.

Fear Of Crossing Streets

An excessive fear of crossing streets or roads, sometimes called agyrophobia, that may lead to marked avoidance and interfere with daily activities.

Fear Of Demons

An excessive or persistent fear of demons or evil supernatural beings, sometimes called demonophobia.

Fear Of Drinking Alcohol

An excessive or persistent fear of drinking alcoholic beverages, sometimes called methyphobia, that causes distress or avoidance.

Fear Of Dust

An excessive or persistent fear of dust, sometimes called amatophobia, that causes distress or avoidance.

Fear Of Feces

An excessive or persistent fear of feces or defecation, sometimes called coprophobia, that causes distress or avoidance.

Fear Of Fur

An excessive or persistent fear of fur, sometimes called doraphobia, that causes distress or avoidance.

Fear Of Heat

An excessive or persistent fear of heat, sometimes called thermophobia, that causes distress or avoidance.

Fear Of Nudity

An excessive or persistent fear of being naked or seeing others naked, sometimes called gymnophobia, that causes distress or avoidance.

Fear Of Oneself

An excessive or persistent fear of oneself or one's own thoughts or actions, sometimes called autophobia in some usage, that causes distress or avoidance.

Fear Of Worms (Parasitic)

An excessive or persistent fear of parasitic worms, sometimes called helminthophobia, that causes distress or avoidance.

Fears

Fears is an anatomical, developmental, reproductive, nutritional, behavioral, or healthcare concept used in medical assessment or care.

Febrile

Pertaining to, characterized by, or exhibiting pyrexia (fever), defined clinically as an abnormal elevation of core body temperature above the normal physiological circadian range (typically $\geq 38.0^{\circ}\text{C}$ [$\geq 100.4^{\circ}\text{F}$]). Regulated centrally by the preoptic area of the anterior hypothalamus in response to endogenous pyrogens (proinflammatory cytokines IL-1, IL-6, TNF- α) which stimulate endothelial production of prostaglandin E₂ (PGE₂) to elevate the hypothalamic thermoregulatory set point. Differentiated from hyperthermia (where the hypothalamic set point remains normal but heat dissipation fails, as in heat stroke). High-yield clinical presentations include febrile seizures in pediatric populations, fever of unknown origin, and neutropenic fever, which represents an oncologic emergency.

Febrile (Warm) And Cold Agglutinins

Antibodies that cause red cells to clump at warmer or colder temperatures; clinically important forms

can cause autoimmune hemolytic anemia.

Febrile Convulsion

A seizure occurring with fever in a young child without evidence of central nervous system infection or another acute cause; most are brief and generalized.

Febrile Convulsions

Febrile Convulsions is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Febrile Neutropenia

A fever in a person with a very low number of neutrophils, a type of white blood cell that fights infection. It may be the only sign of a serious infection and requires urgent medical evaluation, especially during cancer treatment.

Febrile Seizure

A seizure occurring in a child usually between 6 months and 5 years of age with fever but without evidence of central nervous system infection or a previous afebrile seizure. Simple febrile seizures are generalized, brief, and nonrecurrent within the same illness; prolonged or focal events require further evaluation.

Alternate Names:

Seizure, Febrile

Febrile Seizures

Febrile seizures are seizures associated with fever in young children without evidence of central nervous system infection or prior unprovoked seizures.

Alternate Names:

Seizure Febrile (Febrile Seizures) Seizure Fever Induced (Febrile Seizures)

Febuxostat

Febuxostat is a selective xanthine-oxidase inhibitor used to lower urate in chronic hyperuricaemia and gout; it is not a treatment for immediate pain and requires attention to cardiovascular risk and liver function.

FEC

Fuchs endothelial corneal dystrophy: a progressive condition affecting the corneal endothelium, leading to corneal edema and vision impairment. More common in women and older adults. Advanced cases may require corneal transplantation.

Alternate Names:

Fuchs dystrophy

Fec Protocol

A chemotherapy regimen combining fluorouracil, epirubicin, and cyclophosphamide, used for selected cancers with dosing and monitoring determined by oncology protocols.

Fecal Calprotectin

A stool test that measures a substance released by certain white blood cells. A high result suggests inflammation in the intestines and may help distinguish inflammatory bowel disease from disorders without inflammation.

Fecal Culture

A laboratory test that grows organisms from a stool specimen to identify bacterial causes of infectious diarrhea and guide antimicrobial treatment.

Fecal Elastase

A stool test that helps show whether the pancreas is making enough digestive enzymes. A low result may indicate pancreatic insufficiency, in which food is not digested properly.

Fecal Fat

Measurement or observation of excess fat in stool, suggesting impaired digestion or absorption from pancreatic, bile-acid, intestinal, or other disease.

Fecal Immunochemical Test

A stool-based colorectal-cancer screening test that uses antibodies to detect human hemoglobin, primarily from lower gastrointestinal bleeding. It is not diagnostic by itself; a positive result generally requires evaluation of the colon, commonly with colonoscopy. Test intervals and follow-up depend

on screening guidance and clinical risk.

Fecal Immunochemical Test

Alternate index label; see *Fecal immunochemical test*.

Fecal Impaction

A large, firm mass of stool retained in the rectum or colon that cannot be evacuated normally. It may cause abdominal or rectal pain, distention, overflow diarrhoea, urinary symptoms, nausea, or bowel obstruction and is associated with constipation, immobility, dehydration, neurological disease, and medications.

Fecal Incontinence

Inability to control bowel movements ranging from minor soiling to complete loss of continence. Causes include sphincter injury from obstetric trauma or surgery, neuropathy from diabetes or spinal cord injury, diarrhea, rectal prolapse, and cognitive impairment.

Alternate Names:

Incontinence, Bowel Incontinence, Fecal

Fecal Microbiota Transplant

Fecal microbiota transplantation transfers processed stool from a screened donor to restore intestinal microbial communities, particularly for recurrent *Clostridioides difficile* infection.

Fecal Microbiota Transplantation

Transfer of carefully screened and prepared stool from a donor into a patient's intestines to restore helpful bacteria. It may be used for selected repeated *C. difficile* infections when standard treatment has not worked.

Fecal Occult Blood Test

A stool test that detects small amounts of blood that are not visible to the naked eye. Methods include chemical guaiac testing and immunochemical testing such as FIT. It may be used for colorectal-cancer screening or evaluation of suspected gastrointestinal blood loss, but it is not diagnostic by itself; a positive result requires clinical follow-up and often

colon evaluation.

Fecal Smear

Fecal smear concerns fecal smear, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Fecalith

A hard mass of inspissated fecal material, commonly found in the appendix or colon, that can contribute to appendicitis or intestinal obstruction.

Fecaluria

Passage of fecal material or fecal odor in the urine, usually indicating an abnormal connection such as an enterovesical fistula.

FECD

Fuchs endothelial corneal dystrophy: a bilateral, progressive corneal disease characterized by loss of endothelial cells, resulting in corneal thickening and decreased vision, especially upon waking. Early stages may be asymptomatic.

Alternate Names:

Fuchs dystrophy

Feces

The solid or semisolid waste expelled from the bowel, containing undigested material, water, bacteria, shed cells, and metabolic waste.

Fecolith

A hard mass of inspissated fecal material, which may obstruct the bowel or appendix and contribute to inflammation or perforation.

Fecundity

The biological ability to conceive and produce a live birth. Fecundity is influenced by age (declines significantly after 35), ovarian reserve, tubal patency, uterine factors, and male fertility (sperm count, motility, morphology). Fecundability: the probability of achieving pregnancy in a single menstrual cycle.

Feedback

Information about a system's output that influences subsequent activity; negative feedback helps stabilize physiology, while positive feedback amplifies a process.

Feedback Inhibition

Regulatory mechanism where the end product of a metabolic pathway inhibits an earlier enzyme (usually the first committed step). Examples: isoleucine inhibiting threonine deaminase, CTP inhibiting aspartate transcarbamoylase, ATP inhibiting phosphofructokinase. Allows efficient resource utilization and prevents overproduction.

Feedback Mechanism

A regulatory process in which a system's output influences its future activity; negative feedback stabilizes functions such as temperature, glucose, and hormone levels.

Feeding Jejunostomy

Surgical or endoscopic placement of a feeding tube into the jejunum for enteral nutrition when upper gastrointestinal access is not feasible. Used in patients with head and neck cancers, esophageal obstruction, or severe dysphagia. Provides long-term nutritional support and avoids the complications of parenteral nutrition.

Feeding Methods

feeding methods is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

Feeding Patterns And Diet - Babies And Infants

A patient-care topic concerning feeding patterns and diet - babies and infants. It addresses the relevant purpose, risks, management, and follow-up.

Feeding Patterns And Diet - Children 6 Months To 2 Years

A patient-care topic concerning feeding patterns and diet - children 6 months to 2 years. It addresses the

relevant purpose, risks, management, and follow-up.

Feeding Poor

Poor feeding means an infant or patient takes inadequate food or fluid and may reflect illness, swallowing difficulty, breathing problems, pain, or developmental issues.

Feeding Tube

A flexible tube used to deliver nutrition, fluids, or medicines to the stomach or intestine when oral intake is inadequate or unsafe.

Feeding Tube - Infants

A tube used to deliver breast milk, formula, fluids, or medicines to an infant who cannot safely or adequately feed by mouth; route and duration depend on the clinical need.

Feeding Tube Insertion - Gastrostomy

Feeding tube insertion - gastrostomy is a nutrition or dietary term; appropriate use depends on age, health status, allergies, intake, and medical treatment.

Feingold Diet

Feingold Diet is an anatomical, developmental, reproductive, nutritional, behavioral, or healthcare concept used in medical assessment or care.

Felbamate

Felbamate is an antiseizure medicine used selectively for refractory epilepsy, including Lennox-Gastaut syndrome; potentially fatal aplastic anaemia and liver failure require specialist use and monitoring.

Felodipine

Felodipine is a dihydropyridine calcium-channel blocker used mainly for hypertension; arteriolar vasodilation can cause ankle oedema, flushing, headache, palpitations, or gingival enlargement.

Felon

Felon is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and

severity.

Felty Syndrome

Triad of rheumatoid arthritis, splenomegaly, and neutropenia (ANC <2000). Complication of long-standing, severe, seropositive RA. Increased infection risk. Treatment: DMARDs (methotrexate, TNF inhibitors), G-CSF for neutropenia, splenectomy in refractory cases.

Felty'S Syndrome

Felty syndrome is a rare complication of long-standing seropositive rheumatoid arthritis characterized by neutropenia and often an enlarged spleen. It increases infection risk and may require disease-modifying therapy, growth factors, antibiotics, or specialist treatment.

Female

Female describes the sex category generally associated with ova production and female reproductive anatomy, while recognizing biological variation and gender identity distinctions.

Female Athlete Triad

A syndrome involving low energy availability, menstrual dysfunction, and decreased bone mineral density in physically active females. It is related to inadequate nutrition, excessive exercise, or both, and increases the risk of stress fractures and other health problems.

Female Breast

The mammary gland and associated skin and connective tissue on the anterior chest; it contains lobules and ducts and varies with age, hormones, pregnancy, and lactation.

Female Circumcision

Female Circumcision is an anatomical, developmental, reproductive, nutritional, behavioral, or health-care concept used in medical assessment or care.

Female Condom

A female condom is a sheath placed in the vagina

that provides a barrier against sperm and can reduce transmission of some sexually transmitted infections when used correctly.

Female Condoms

A flexible internal barrier placed in the vagina before sex that helps prevent pregnancy and reduces exposure to semen and some sexually transmitted infections.

Female Genital Mutilation

FGM: the partial or total removal of female external genitalia for non-medical reasons, a human rights violation practiced in parts of Africa, the Middle East, and Asia (types I-IV). Immediate complications: severe pain, hemorrhage, infection, urinary retention.

Female Genitalia

The external and internal reproductive organs of a female, including the vulva, vagina, cervix, uterus, fallopian tubes, and ovaries.

Female Gonad

An ovary, the female reproductive gland that produces oocytes and hormones such as estrogen and progesterone.

Female Infertility

Failure to achieve pregnancy after a defined period of regular unprotected intercourse, due to factors involving ovulation, the reproductive tract, ovarian reserve, or other causes.

Alternate Names:

Infertility, Female

Female Orgasmic Disorder (Anorgasmia)

Persistent or recurrent delay in, infrequency of, or absence of orgasm that causes personal distress. It may be lifelong or acquired and can have medical, psychological, relationship, medication-related, or other causes.

Alternate Names:

Anorgasmia

Female Pattern Baldness

Progressive scalp hair thinning in a typically female distribution, influenced by genetics and androgens; evaluation considers iron deficiency, thyroid disease, medicines, and other causes.

Female Pelvis

The bony pelvis and associated soft tissues in a person with typical female pelvic anatomy; it is generally broader and has a wider pelvic outlet than the typical male pelvis, with substantial individual variation.

Female Phenotype

A female phenotype is the observable combination of anatomical, physiologic, and developmental traits associated with female sex, which can vary with genes and hormones.

Female Reproductive System

The female reproductive system includes the ovaries, fallopian tubes, uterus, cervix, vagina, vulva, and related hormonal pathways. It supports ovulation, menstruation, pregnancy, birth, and sexual function and is affected by developmental, endocrine, infectious, and structural disorders.

Female Sexual Dysfunction

Persistent sexual problems in a woman that cause distress, such as low desire, arousal difficulty, or pain.

Alternate Names:

Sexual Dysfunction, Female

Female Sexual Interest/Arousal Disorder

Persistent or recurrent reduction in sexual interest, thoughts, responsiveness, or arousal that causes personal distress. Causes may include medical conditions, medicines, mood, relationship factors, pain, or other psychological and social factors.

Female Urethral Opening

The external urethral meatus, the opening through which urine leaves the female urethra, located in the vulvar vestibule anterior to the vaginal opening.

Feminization

Development of physical or hormonal traits typically associated with female sexual development, occurring normally, therapeutically, or through endocrine disorders.

Femoral

Relating to the femur or thigh, including the femoral artery, vein, nerve, and neck of the femur.

Femoral Artery

Continues from external iliac through the femoral triangle and adductor canal to become the popliteal artery. Branches: superficial/deep circumflex femoral, deep femoral (profunda femoris), muscular. Palpable in the femoral triangle; most common site for arterial catheterization. Related to femoral vein medially and nerve laterally.

Femoral Hernia

A hernia in which abdominal contents pass through the femoral ring into the femoral canal, below the inguinal ligament and medial to the femoral vessels. It may become incarcerated or strangulated and often requires surgical assessment.

Femoral Hernia Repair

Surgery to return herniated tissue through the femoral canal and close or reinforce the defect; repair is often recommended because femoral hernias have a relatively high risk of strangulation.

Femoral Nerve

Largest lumbar plexus nerve (L2-L4), passing through psoas major and entering the thigh under the inguinal ligament lateral to the femoral artery. Innervates quadriceps, sartorius, pectineus; sensation to anterior thigh and medial leg (saphenous nerve). Used for knee surgery nerve block anesthesia.

Femoral Nerve Dysfunction

Impaired function of the femoral nerve, causing weakness of hip flexion or knee extension and altered sensation over the anterior thigh and medial leg; causes include diabetes, compression, trauma, and

pelvic disease.

Femoral Neuropathy

Damage to the femoral nerve, causing weakness or sensory loss in the thigh and leg.

Femoral Pulse

Femoral Pulse is a muscle, nerve, vessel, reproductive structure, or other body part; its location and function determine its clinical relevance.

Femoral Shaft Fractures

Femoral shaft fractures: high energy (MVC, fall from height) or low energy (elderly, pathologic). Winquist-Hansen classification of comminution: I (none), II (butterfly <50% width), III (butterfly >50%), IV (segmental).

Femoral Triangle

Upper anterior thigh space bounded superiorly by the inguinal ligament, laterally by sartorius, and medially by adductor longus. Contents from lateral to medial: femoral nerve, artery, vein, and deep inguinal lymph nodes. The femoral artery is used for arterial catheterization. The femoral vein is accessed for central venous lines.

Femoral Vein

The major deep vein of the thigh, continuation of the popliteal vein (through the adductor hiatus), running with the femoral artery in the femoral sheath (medial to artery) through the femoral triangle, becoming the external iliac vein at the inguinal ligament. Receives the great saphenous vein.

Femtogram

A femtogram is a unit of mass equal to one quadrillionth of a gram, or 10^{-15} grams.

Femtoliter

A femtoliter is a unit of volume equal to one quadrillionth of a liter, or 10^{-15} liters.

Femur

Longest, heaviest, strongest body bone. Proximal:

head, neck, trochanters. Shaft: linea aspera. Distal: condyles, epicondyles. The neck connects head to shaft at approximately 125 degrees.

Femur Fracture

A break in the thigh bone, caused by major trauma or weakened bone; location and displacement determine blood loss, mobility, nerve and vessel risk, and treatment.

Femur Length

The length of the fetal femur (diaphysis), measured from the greater trochanter to the distal femoral metaphysis. Used for dating (14-26 weeks) and growth assessment. Normal growth: 2 mm per week. Short femur: can be constitutional (especially with short parents), associated with aneuploidy (trisomy 21, skeletal dysplasias), or IUGR.

Fenamiphos

An organophosphate pesticide used mainly against nematodes; it can cause poisoning by inhibiting acetylcholinesterase.

Fencer'S Pose

The posture produced by the asymmetric tonic neck reflex, with extension of the arm and leg on the side toward which the head is turned and flexion on the opposite side.

Fenclonine

An experimental compound that reduces serotonin production by inhibiting tryptophan hydroxylase.

Fenfluramine

Fenfluramine is a serotonergic medicine used in some jurisdictions for selected severe epileptic encephalopathies; historical appetite-suppressant use was limited by valvular heart disease and pulmonary hypertension, so cardiac monitoring is required.

Fenitrothion

An organophosphate insecticide that can cause cholinergic poisoning by inhibiting acetylcholinesterase.

FeNO (Fractional Exhaled Nitric Oxide)

A breath test that estimates type 2, often eosinophilic, airway inflammation. The result is interpreted with symptoms, age, treatment, and other clinical findings.

Alternate Names:

Fractional Exhaled Nitric Oxide

Fenobucarb

A carbamate insecticide that can cause cholinergic poisoning if absorbed in a sufficient amount.

Fenofibrate

A fibric acid derivative (fibrate) activating PPAR-alpha, increasing HDL and reducing triglycerides, with modest LDL effects. Used for severe hypertriglyceridemia (pancreatitis risk), mixed dyslipidemia, and as an adjunct in residual hypertriglyceridemia.

Fenoldopam

A short-acting dopamine D1-receptor agonist used intravenously for severe hypertension in selected settings; it can cause hypotension, flushing, headache, and increased intraocular pressure.

Fenoprofen

Fenoprofen is a nonsteroidal anti-inflammatory drug used for pain and inflammatory arthritis; gastrointestinal bleeding, renal injury, fluid retention, and cardiovascular events are important risks.

Fenoprofen Calcium Overdose

Fenoprofen calcium overdose involves exposure or injury from fenoprofen calcium overdose; dose, route, timing, symptoms, and tissue involvement determine the urgency and treatment approach.

Fenoterol

A medicine or chemical compound called fenoterol. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Fenoxycarb

An insect-growth regulator that mimics juvenile

hormone and disrupts development of immature insects.

Fenretinide

A synthetic retinoid studied for preventing or treating some cancers and other diseases.

Fentanyl Citrate

The citrate salt of fentanyl, a potent opioid analgesic used for severe pain and anesthesia; respiratory depression, sedation, dependence, and overdose are major risks.

Fentanyl Derivatives

Potent synthetic opioids related to fentanyl that may be used for analgesia or anesthesia. Examples include sufentanil, remifentanil, and alfentanil; their potency, duration, dosing, and risks differ, and they require careful monitoring because they can depress breathing.

Fenthion

An organophosphate insecticide that can cause cholinergic poisoning by inhibiting acetylcholinesterase.

Fermentation

A metabolic process in which microorganisms or cells convert organic substrates without using oxidative respiration, producing products such as acids, alcohols, or gases.

Ferredoxin

An iron-sulfur electron-transfer protein that participates in photosynthesis, steroid synthesis, and mitochondrial or bacterial redox reactions.

Ferritin

Intracellular iron storage protein reflecting total body iron stores. Low ferritin: iron deficiency anemia (<30 ng/mL, absolute; <100 can be consistent with iron deficiency in inflammation).

Ferritin Blood Test

A blood test measuring ferritin, a protein that stores

iron; low levels strongly support iron deficiency, while high levels may reflect iron excess, inflammation, infection, liver disease, or malignancy.

Ferroptosis

A regulated form of cell death caused by iron-dependent lipid-peroxide accumulation and loss of antioxidant protection, distinct from apoptosis and necrosis.

Ferrous Sulfate

Ferrous sulfate is an oral iron salt used to treat or prevent iron-deficiency anaemia; nausea, constipation, dark stools, and accidental overdose toxicity can occur.

Fertile Period

Fertile Period is an anatomical, developmental, reproductive, nutritional, behavioral, or healthcare concept used in medical assessment or care.

Fertilisation

The union of a sperm and an egg (oocyte) to form a zygote, the first cell of a new individual.

Fertility

The biological capacity to conceive and produce offspring. Fertility depends on the proper functioning of the reproductive system in both males and females, including ovulation, sperm production, and hormonal regulation.

Fertility Domain

The reproductive dimension of health involving ability to conceive, reproductive function, fertility goals, infertility, and related medical or psychosocial care.

Fertility Drugs

Fertility Drugs is a medicine, drug, vitamin, or chemical product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent.

Fertility Preservation

Measures taken before gonadotoxic cancer therapy

to preserve reproductive potential, including embryo or oocyte cryopreservation, sperm banking, and ovarian or testicular tissue cryopreservation.

Fertilization

Fusion of sperm and egg genetic material to form a zygote, usually in the fallopian tube, initiating embryonic development.

Ferumoxytol

An intravenous iron-carbohydrate complex used to treat iron-deficiency anemia in selected adults; hypersensitivity and hypotension require monitoring during infusion.

FESS

Functional endoscopic sinus surgery is a minimally invasive surgical technique that uses nasal endoscopes and specialized instruments to restore normal sinus drainage and ventilation by removing obstructive tissue and opening blocked sinus ostia, while preserving as much normal sinus mucosa and anatomy as possible.

Festinating Gait

A gait with progressively shortening, rapid steps and a forward-leaning posture, commonly associated with parkinsonism.

Fetal Acid-Base Status

Assessment of fetal oxygenation and acid-base balance, usually using umbilical cord blood gases at birth or other intrapartum information. Interpretation depends on the complete gas panel, sampling site, timing, clinical condition, and laboratory reference ranges; marked acidemia may indicate impaired oxygenation.

Fetal Alcohol Spectrum Disorder

A broad spectrum of physical, behavioral, and cognitive impairments caused by prenatal alcohol exposure.

Alternate Names:

Fetal Alcohol Spectrum Disorders

Fetal Alcohol Syndrome

A collection of birth defects resulting from exposure of the fetus to alcohol during pregnancy, representing the most severe form of fetal alcohol spectrum disorder (FASD).

Fetal Attitude

The relationship of the fetal body parts to one another, especially the degree of flexion or extension of the head and limbs. The usual attitude is flexion, but deflexed, neutral, or extended attitudes can affect the presenting part and labor.

Fetal Bradyarrhythmia

An abnormally slow or irregular fetal heart rhythm, which may result from conduction block, ectopic beats, maternal or fetal disease, or medication exposure.

Fetal Bradycardia

A fetal heart-rate baseline below 110 beats per minute for at least 10 minutes. Causes include medicines, maternal conditions, fetal conduction disease, hypoxia, cord problems, or placental abruption; persistent or severe bradycardia requires urgent obstetric assessment.

Fetal Circulation

The circulation before birth in which the placenta supplies oxygen and nutrients and fetal shunts direct much of the blood away from the lungs.

Fetal Death

Death of a fetus before delivery; medical and legal definitions vary according to gestational age and local regulations.

Fetal Development

The growth and maturation of the fetus from the end of the embryonic period until birth, including development of organs, body systems, movement, and physiologic function.

Fetal Disease

A disease, structural abnormality, or developmental

problem affecting a fetus before birth.

Fetal Distress

Abnormal fetal status during labor, indicated by abnormal fetal heart rate patterns (late or prolonged decelerations, minimal variability, absent accelerations). May indicate fetal hypoxia, cord compression, or placental insufficiency.

Fetal Echocardiography

A specialized ultrasound examination of the fetal heart used to assess cardiac structure, rhythm, and function, including possible congenital heart disease.

Fetal Growth Restriction

Failure of a fetus to reach its biologic growth potential, often associated with placental insufficiency. It is assessed using serial growth measurements, amniotic fluid, Doppler studies, and fetal surveillance rather than a single estimated-weight threshold alone.

Fetal Heart

The developing heart of a fetus, whose rate and rhythm can be assessed by ultrasound or electronic monitoring to evaluate fetal well-being.

Fetal Heart Rate

Normal fetal heart rate ranges from 110-160 beats per minute. Monitored via auscultation with a fetoscope, Doppler ultrasound, or continuous electronic fetal monitoring. Baseline FHR is determined over a 10-minute window and is modulated by the autonomic nervous system.

Fetal Hemoglobin

The predominant hemoglobin during fetal life, composed of two alpha and two gamma chains and having higher oxygen affinity than adult hemoglobin.

Fetal Hydrops

Abnormal accumulation of fluid in at least two fetal compartments, such as the skin, chest, abdomen, or around the heart. Causes include fetal anemia, heart disease, infection, chromosome conditions, and im-

mune incompatibility; it requires specialist obstetric evaluation.

Fetal Hypoxia

Inadequate oxygen available to the fetus before or during birth. It may result from placental problems, reduced maternal oxygenation, cord compression, or prolonged labor. Abnormal fetal heart-rate patterns can indicate risk and require prompt obstetric assessment.

Fetal Kick Counts (Fetal Movement Counting)

Observation and recording of fetal movements by a pregnant person. A noticeable reduction from the usual pattern should prompt timely obstetric advice.

Alternate Names:

Fetal Movement Counting

Fetal Lie

The relationship between the long axis of the fetus and that of the pregnant person. It may be longitudinal, transverse, or oblique. A persistent abnormal lie near delivery can affect the mode of birth.

Fetal Macrosomia

Excessive fetal size, often defined as estimated or birth weight of at least 4,000 or 4,500 g depending on the clinical context. Diabetes, excessive maternal weight gain, and prior macrosomia are risk factors; complications include shoulder dystocia, birth trauma, and cesarean delivery.

Fetal Malpresentation

A fetal presentation other than the usual vertex presentation, including breech, transverse, or oblique lie, which may affect labor and delivery planning.

Fetal Monitoring

Assessment of fetal heart rate and, sometimes, uterine contractions to evaluate fetal wellbeing during pregnancy or labor.

Fetal Monitoring, Electronic

Continuous or intermittent recording of fetal heart rate and uterine activity using external sensors or an internal electrode when indicated; patterns are interpreted with gestational age and labor context.

Fetal Presentation

The fetal part that enters the maternal pelvis first. Presentations include cephalic, breech, shoulder, face, brow, and compound forms; the presentation influences labor and delivery planning.

Fetal Pyelectasis

Dilation of the fetal renal pelvis seen on prenatal imaging; it may be transient or associated with urinary tract obstruction or aneuploidy and requires context-specific follow-up.

Fetal Scalp Electrode

A spiral wire electrode placed on the fetal scalp through the cervix to directly record the fetal heart rate. Provides a more accurate FHR signal than external Doppler, particularly in obese patients or when external monitoring is inadequate. Indications: poor-quality external tracing, need for internal monitoring.

Fetal Scalp PH Testing

Fetal scalp pH testing involves exposure or injury from fetal scalp pH testing; dose, route, timing, symptoms, and tissue involvement determine the urgency and treatment approach.

Fetal Scalp Stimulation

A bedside test during labor in which the fetal scalp is gently stimulated during a vaginal examination. A resulting fetal heart-rate acceleration may be reassuring, but the result must be interpreted with the complete fetal monitoring pattern and clinical context.

Fetal Stage

The fetal stage begins after the embryonic period and continues until birth, characterized mainly by growth and maturation of established organs.

Fetal Tachycardia

A sustained fetal heart-rate baseline above 160 beats per minute for at least 10 minutes. Causes may include maternal fever, infection, medicines, fetal hypoxia, or fetal arrhythmia.

Fetal Tissue

Fetal tissue is tissue from a developing fetus and may be relevant to pregnancy care, pathology, research, transplantation, or genetic testing under applicable ethical and legal rules.

Fetal Ultrasound

Ultrasound imaging during pregnancy. First trimester (6-12 weeks): confirm pregnancy, gestational age (crown-rump length), number of fetuses, viability (heart activity), nuchal translucency (screening for aneuploidy at 11-13 weeks).

Fetal Viability

The potential for a fetus to survive outside the uterus with medical support. It depends on gestational age, fetal condition, available neonatal care, and other clinical factors; it is not a single fixed point.

Fetal Weight

Fetal weight is an estimate of a fetus's mass, usually from ultrasound measurements, used to assess growth and identify possible growth restriction or macrosomia.

Fetal-Maternal Erythrocyte Distribution Blood Test

A test that estimates the amount of fetal red blood cells in maternal circulation, helping guide Rh immune globulin dosing after fetomaternal hemorrhage.

Fetishism

A recurrent sexual interest in a nonliving object or a specific non-genital body part; it is a disorder only when it causes clinically significant distress or impairment or involves harm or lack of consent.

Fetishistic Disorder

A paraphilic disorder characterized by recurrent, intense sexual arousal from either the use of nonliving objects (fetish) or a highly specific focus on nongenital body parts (partialism), lasting ≥ 6 months and causing distress or impairment or involving acting on these urges.

Fetomaternal Hemorrhage

Transplacental passage of fetal red blood cells into the maternal circulation. Occurs in small amounts during normal pregnancy but can be massive during trauma, placental abruption, or cesarean delivery.

Fetomaternal Transfusion

A medical procedure, treatment, device, or care topic related to fetomaternal transfusion; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Fetoscope

An instrument used to hear or assess the fetal heart-beat through the pregnant person's abdominal wall, especially later in pregnancy.

Fetus

An unborn offspring from the 9th week of gestation (after the embryonic period) until birth. The fetal period is characterized by rapid growth, maturation of organ systems, and increasing complexity of function.

FEV1/FVC Ratio

Fraction of air exhaled in first second relative to total. < 0.70 post-bronchodilator indicates obstruction. Normal or elevated in restrictive disease.

Fever

Fever is a regulated rise in body temperature caused by altered hypothalamic set point, commonly in response to infection or inflammation; age, duration, and associated signs determine concern.

Fever And Headache

Fever with headache may occur with viral illness,

influenza, sinus disease, dehydration, meningitis, encephalitis, or other infection. Severe sudden headache, neck stiffness, confusion, rash, seizure, weakness, or reduced consciousness requires emergency assessment.

Fever Blister

Recurrent herpes simplex labialis: small, painful vesicles on the lips or around the mouth caused by HSV-1. The virus remains latent in trigeminal ganglia and reactivates with stress, illness, or sun exposure. Heals without scarring in 7-10 days.

Alternate Names:

Cold sore; herpes labialis

Fever Of Unknown Origin

Persistent or recurrent fever for which an appropriate initial evaluation has not established a diagnosis.

Fever, Acute, In Adults

A fever in an adult with recent onset, commonly caused by infection, inflammation, medication, heat illness, or other conditions. Severity, vital signs, immune status, source, and associated symptoms guide evaluation; confusion, breathing difficulty, stiff neck, shock, or severe localized pain requires urgent care.

Fever, Chronic

A prolonged or recurrent fever that remains unexplained after initial evaluation; fever of unknown origin is traditionally defined as a temperature of at least 101 degrees Fahrenheit (38.3 degrees Celsius) on several occasions lasting more than three weeks without a diagnosis after appropriate assessment. Causes include infection, malignancy, inflammatory disease, and medications. duration, height, and patient factors. Common causes: infections (bacterial, viral), autoimmune disorders, malignancies, drug reactions. Management: antipyretics (acetaminophen, ibuprofen), treat underlying cause.

Fever, Shin Bone

The shin bone is the tibia, the larger weight-bearing bone of the lower leg; fever is a separate term meaning an elevated body temperature, so this dictionary

label appears to combine two concepts.

Fever, Valley

Coccidioidomycosis: a fungal infection caused by *Coccidioides* species, endemic to arid regions of the southwestern US and parts of Mexico and Central/South America. Inhalation of spores causes respiratory illness ranging from asymptomatic to severe pneumonia. Dissemination can affect skin, bones, and meninges.

Alternate Names:

Valley fever; coccidioidomycosis

Fevers, Viral Hemorrhagic

Severe febrile illnesses caused by various RNA viruses (Ebola, Marburg, dengue, Lassa, Rift Valley fever) transmitted by arthropods or rodents. Characterized by fever, hemorrhage, and multi-organ failure. High mortality rates for some agents. Prevention focuses on vector control and infection prevention.

Alternate Names:

Viral hemorrhagic fevers

Fexofenadine

A second-generation (non-sedating) H1 antihistamine used for allergic rhinitis and chronic urticaria. Peripherally selective with minimal sedation and anticholinergic effects; no significant CNS penetration. Adverse effects: headache, dizziness, and dry mouth.

Fiber

Dietary fiber is nondigestible carbohydrate and plant material that reaches the colon; soluble and insoluble fiber affect stool bulk, bowel transit, glycaemic control, and blood lipids. cholesterol, blood glucose. Insoluble (whole grains, vegetables) adds bulk, prevents constipation. Recommended: 25-30 g/day.

Fiber Optic

A technology that transmits light through flexible glass or plastic fibers. It is used in medical endoscopes and other imaging or examination devices.

Fibrates

A class of lipid-lowering medicines that activate PPAR-alpha and reduce triglycerides while often increasing HDL cholesterol; adverse effects include liver, muscle, and gallbladder problems.

Fibre

A threadlike structure or material; in nutrition, dietary fiber is nondigestible plant carbohydrate that supports bowel function and can influence glucose and cholesterol.

Fibrillation

Rapid, irregular, and uncoordinated contraction of muscle fibers. Atrial fibrillation causes an irregular atrial rhythm; ventricular fibrillation is a cardiac arrest rhythm requiring immediate resuscitation.

Fibrin

A threadlike protein that forms the structural mesh of a blood clot.

Fibrin Degradation Products Blood Test

A blood test measuring fragments released when fibrin is broken down; increased levels may occur with widespread coagulation and fibrinolysis, including disseminated intravascular coagulation, but are nonspecific.

Fibrin Sealant

A biological adhesive containing fibrinogen and thrombin that forms a fibrin clot when applied to tissue. It may help control bleeding or seal selected surgical surfaces.

Fibrinogen

A soluble plasma protein, also called coagulation factor I, that is converted to fibrin during blood clot formation. Its concentration may increase with inflammation and decrease with severe liver disease or consumption coagulopathy.

Alternate Names:

coagulation factor I, that is converted to fibrin during blood clot formation.

Fibrinogen Assay

A fibrinogen assay measures plasma fibrinogen concentration or function, commonly by the Clauss method; low results may occur in consumption, severe liver disease, or inherited deficiency, while inflammation can increase the level.

Fibrinogen Blood Test

A blood test measuring fibrinogen, a liver-produced protein converted to fibrin during clot formation; it helps evaluate bleeding, excessive clotting, liver disease, and disseminated intravascular coagulation.

Fibrinogen Decreased

Decreased fibrinogen is a low plasma fibrinogen level that can impair clot formation and cause bleeding; causes include disseminated intravascular coagulation, severe hepatic failure, massive transfusion, and congenital deficiency.

Fibrinoid Necrosis

A specialized pattern of vascular necrosis characterized by the deposition of immune complexes, fibrin, and plasma proteins within the walls of blood vessels, creating an amorphous, bright pink, smudgy eosinophilic appearance on hematoxylin and eosin staining.

Fibrinolysis

The enzymatic breakdown of fibrin within a blood clot, principally mediated by plasmin generated from plasminogen. It limits clot extension and supports restoration of vascular patency; excessive fibrinolysis can cause bleeding, whereas impaired fibrinolysis can promote thrombosis.

Fibrinolysis - Primary Or Secondary

Breakdown of fibrin clots by plasmin; primary fibrinolysis occurs without preceding widespread coagulation activation, whereas secondary fibrinolysis follows clot formation and coagulation activation.

Fibrinolytic Agent

A fibrinolytic agent is a thrombolytic drug, such as alteplase or tenecteplase, that converts plasminogen to plasmin and dissolves fibrin clots; major bleeding,

including intracranial haemorrhage, is the principal danger.

Fibrinolytic Therapy

Treatment with medications that dissolve blood clots by activating plasminogen to plasmin, which breaks down fibrin. Common agents include tissue plasminogen activator (tPA), streptokinase, and urokinase. Used for acute ischemic stroke, pulmonary embolism, and myocardial infarction. Risks include bleeding complications.

Alternate Names:

Thrombolytic therapy

Fibrinopeptide A Blood Test

A blood test measuring fibrinopeptide A released when thrombin converts fibrinogen to fibrin; it may indicate thrombin generation but is not routinely used alone for diagnosis.

Fibrinous Pericarditis

Inflammation of the pericardium characterized by deposition of fibrin on the pericardial surfaces, giving them a rough, shaggy appearance described as bread-and-butter pericarditis.

Fibroadenoma

The most common benign tumor of the female breast, a proliferation of stromal and epithelial elements presenting as a firm, rubbery, smooth, mobile, painless mass, most often in women aged fifteen to thirty. The mass slips easily under the fingers (breast mouse), and ultrasonography shows a well-defined oval hypoechoic lesion.

Fibroadenoma Of The Breast

A common benign breast tumor composed of glandular and fibrous tissue, usually smooth, mobile, and painless, especially in adolescents and young adults.

Fibroblast

A connective-tissue cell that produces collagen and other extracellular-matrix components.

Fibrocartilage

Strong cartilage containing dense bundles of type I collagen, adapted to resist compression and tension. It forms intervertebral discs, the pubic symphysis, and menisci.

Fibrocystic Breast Changes

A benign condition characterized by lumpy, painful breast tissue, most common in women aged 20-50, driven by hormonal fluctuations during the menstrual cycle (estrogen and progesterone). Microscopic features include stromal fibrosis, cyst formation (macrocyts and microcyts), and adenosis (increased glandular tissue).

Fibrocystic Breast Condition

Fibrocystic breast change causes lumpiness, tenderness, or cysts that often vary with the menstrual cycle. It is usually benign, but a new persistent or changing mass, skin or nipple change, or bloody discharge needs clinical and imaging assessment.

Fibrocystic Breast Disease

Fibrocystic Breast Disease is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fibrocystic Breasts

Benign breast changes involving fibrosis and cyst formation, often producing lumpy or tender breasts that fluctuate with the menstrual cycle. They are common and are not themselves a premalignant condition.

Fibrodysplasia Ossificans Progressiva

An extremely rare, catastrophically disabling autosomal dominant genetic disorder caused in over 95% of patients by a recurrent, identical heterozygous activating missense mutation (c.617G>A, p.Arg206His) in the *ACVR1* gene on chromosome 2q24.1, which encodes the activin A receptor type I/ALK2 (a bone morphogenetic protein [BMP] type I receptor). Characterized by congenital malformation of the great toes (bilateral hallux valgus and digital monophalangism) evident at birth, followed in early

childhood by recurrent, painful inflammatory soft tissue swellings (flare-ups) that undergo progressive heterotopic endochondral ossification, irreversibly converting skeletal muscles, tendons, ligaments, and fascia into ribbons and plates of mature heterotopic bone, leading to complete ankylosis of the spine and peripheral joints (“stone man syndrome”).

Alternate Names:

FOP; Myositis Ossificans Progressiva; Stone Man Syndrome

Fibroepithelial Polyp Of The Vulva

A benign polypoid lesion composed of stellate stromal cells beneath squamous epithelium, often arising in the vulvovaginal region during reproductive years or pregnancy.

Fibrofolliculoma

A benign perifollicular skin tumor, often multiple on the face, that is characteristic of Birt-Hogg-Dubé syndrome when associated with other findings.

Fibroid

A benign smooth-muscle tumor, most often arising in the uterus.

Alternate Names:

Uterine leiomyoma

Fibroid Tumor

A benign smooth-muscle tumor of the uterus, also called a leiomyoma, which may cause heavy bleeding, pelvic pressure, pain, infertility, or no symptoms.

Fibroids

Fibroids is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fibroids, Cysts, And Polyps

Benign growths that can develop in the reproductive organs. Fibroids are smooth muscle tumors of the uterus; cysts are fluid-filled sacs that commonly form on the ovaries; and polyps are tissue overgrowths in the endometrium or cervix.

Fibroids, Uterine

Benign smooth muscle tumors of the uterus, also called leiomyomas. Common cause of abnormal uterine bleeding, pelvic pain, and bulk symptoms. May affect fertility. Treatment ranges from observation to medical management to surgical removal depending on symptoms and reproductive goals.

Alternate Names:

Uterine fibroids; leiomyomas

Fibrolipoma

A benign tumor composed of mature fat and abundant fibrous tissue, usually presenting as a slow-growing painless soft-tissue mass.

Fibroma

A benign cardiac tumour composed of fibroblasts and collagen, usually arising within the ventricular myocardium or interventricular septum in children. It may cause ventricular obstruction or clinically important arrhythmias; echocardiography and cardiac MRI help define its location and extent.

Fibroma Of Tendon Sheath

A benign, slow-growing fibroblastic tumor attached to a tendon sheath, most often affecting the fingers, hand, or wrist. It presents as a firm painless mass and may recur after excision.

Fibromatoses

A group of locally infiltrative fibroblastic proliferations that lack metastatic potential but may recur and damage adjacent structures; superficial and deep types are distinguished clinically and pathologically.

Fibromatosis

A proliferation of fibroblasts and myofibroblasts that is usually nonmetastatic but can infiltrate locally and recur, as in desmoid-type fibromatosis.

Fibromuscular Dysplasia

A non-atherosclerotic, non-inflammatory disease of medium-sized arteries, often involving the renal or carotid arteries. Imaging may show alternating

narrowing and dilation. Symptoms, vascular complications, and treatment depend on the arteries involved and the individual clinical situation.

Fibromyalgi

Fibromyalgi is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fibromyalgia

Fibromyalgia is a chronic pain-amplification disorder with widespread pain, fatigue, unrefreshing sleep, and cognitive symptoms without a single defining tissue lesion. months), fatigue, sleep disturbance, cognitive dysfunction (fibro fog), and somatic symptoms, affecting 2-4% of population (female:male 9:1).

Fibromyalgia Syndrome

A chronic disorder characterized by widespread musculoskeletal pain, fatigue, unrefreshing sleep, and cognitive symptoms. Diagnosis is clinical based on widespread pain index and symptom severity scale. Treatment includes exercise, cognitive behavioral therapy, and medications.

Alternate Names:

Fibromyalgia

Fibromyxosarcoma

A rare malignant soft-tissue tumor containing fibrous and myxoid tissue; diagnosis requires pathology and treatment is guided by location, grade, and stage.

Fibronectin

An extracellular-matrix glycoprotein that supports cell adhesion, migration, wound healing, and tissue organization and circulates in plasma.

Fibroproliferation

Abnormal proliferation of fibroblasts and deposition of connective tissue that contributes to scarring and fibrosis, including in the lungs.

Fibrosarcoma

A malignant tumor of fibroblasts, a soft tissue sarcoma of adulthood or infancy, arising in deep soft tissues, bones, or paranasal sinuses.

FibroScan

Non-invasive transient elastography technique measuring liver stiffness to assess hepatic fibrosis. Values correlate with fibrosis stage with higher values indicating more advanced fibrosis. The technique avoids the need for liver biopsy in many patients. Results may be unreliable in obesity, ascites, and narrow intercostal spaces.

Fibrosing Alopecia

A group of primary cicatricial (scarring) alopecias in which chronic inflammation leads to permanent destruction of hair follicles and replacement by fibrous tract remnants. It includes conditions such as lichen planopilaris, frontal fibrosing alopecia, and central centrifugal cicatricial alopecia.

Fibrosis

The excessive deposition of extracellular matrix components, primarily collagen types I and III, in response to chronic tissue injury. It represents a pathological wound healing response that leads to organ scarring and dysfunction.

Fibrosis, Interstitial Pulmonary

Chronic progressive scarring of lung interstitium, leading to impaired gas exchange. Causes include connective tissue diseases, medications, radiation, and idiopathic sources. Presents with dyspnea, dry cough, and restrictive physiology on pulmonary function tests.

Alternate Names:

Interstitial lung disease

Fibrosis, Pulmonary

Irreversible scarring of lung tissue with thickening of alveolar walls, reducing lung compliance and gas exchange. Idiopathic pulmonary fibrosis is the most common form. Presents with progressive dyspnea, dry cough, and characteristic honeycomb pattern on CT.

Alternate Names:

Pulmonary fibrosis

Fibrositis

Fibrositis is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fibrous Dysplasia

A benign skeletal disorder in which normal bone is replaced by fibro-osseous tissue, producing weakened or misshapen bone. It may affect one bone or multiple bones and can cause pain, deformity, pathological fracture, or nerve compression; imaging often shows a characteristic ground-glass appearance.

Fibrous Plaque

A raised arterial lesion containing fibrous tissue and lipid that can narrow the vessel.

Alternate Names:

Atherosclerotic plaque

Fibula

Slender lateral leg bone, not weight-bearing, serving for muscle attachment and forming the lateral malleolus. Head provides biceps femoris and lateral collateral ligament attachment; the common peroneal nerve wraps around its neck, vulnerable to injury. Lateral malleolus extends more distally and posteriorly than the medial malleolus.

Fick Principle

A fundamental physiological principle governing cardiovascular and pulmonary hemodynamics, stating that the rate of uptake or release of a substance by an organ is equal to the product of blood flow through that organ and the arteriovenous concentration difference of the substance across the organ. Applied during right heart catheterization as the gold standard method to calculate cardiac output (CO): $CO = VO_2 / (C_aO_2 - C_vO_2)$, where VO_2 represents whole-body oxygen consumption (measured directly by spirometric gas analysis or estimated from body surface area), and C_aO_2 and C_vO_2 represent arterial and mixed venous oxygen contents,

respectively.

Alternate Names:

Fick Method; Fick Cardiac Output Determination

Ficusin

A naturally occurring plant compound studied in chemistry and pharmacology; it is not a standard treatment for a specific disease.

Fiducial Markers

fiducial markers is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

Field Fever

Field Fever is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Field Of View

The extent of anatomy or space captured in one image or measurement.

Fields Disease

An extremely rare, apparently congenital neuromuscular disorder reported in identical twins, characterized by progressive muscle degeneration and involuntary movements; its cause and natural history remain uncertain.

Fifth Disease

Erythema infectiosum caused by Parvovirus B19. Characterized by bright red cheeks (slapped cheek appearance) followed by a lacy, reticulated rash on the trunk and extremities. Mild febrile illness in children. Concern in pregnancy (hydrops fetalis risk) and immunocompromised patients (pure red cell aplasia). Diagnosis by serology.

Alternate Names:

Erythema Infectiosum (Fifth Disease)

FIGO Leiomyoma Classification

A universally adopted 9-category system established

by the International Federation of Gynecology and Obstetrics to standardize the anatomical subtyping of uterine fibroids based on their transmural location and relation to the endometrium and serosa: Sub-mucosal (Type 0: pedunculated intracavitary; Type 1: < 50% intramural; Type 2: $\geq$ 50% intramural); Other/Intramural (Type 3: 100% intramural contact with endometrium; Type 4: intramural entirely; Type 5: subserosal $\geq$ 50% intramural; Type 6: subserosal < 50% intramural; Type 7: pedunculated subserosal); and Hybrid/Cervical (Type 8).

Filamentous Fungus

A fungus that grows as thread-like structures called hyphae, forming a network known as mycelium.

Filaria Bancrofti

Filaria bancrofti is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Filaria Demarquayi

filaria demarquayi is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Filarial Elephantiasis

filarial elephantiasis is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Filarial Elephantiasis

Severe swelling and thickening of tissues caused by lymphatic obstruction from filarial infection.

Filariasis

A group of tissue-dwelling nematode infections transmitted by mosquitoes, blackflies, deerflies, or other vectors. Lymphatic filariasis is caused mainly by *Wuchereria bancrofti*, *Brugia malayi*, and *Brugia timori*; adult worms in lymphatic vessels can cause recurrent inflammation, lymphedema, hydrocele, and elephantiasis. Other filarial species cause skin,

eye, or subcutaneous disease, so diagnosis and treatment depend on the species and anatomic site.

Filial

Relating to a son or daughter, or to the relationship between offspring and a parent; in genetics, a filial generation is a generation descended from a parental generation.

Filler

A material injected or placed beneath the skin or in tissue to restore volume, smooth lines, alter contours, or replace lost structure; effects and risks depend on the material and site.

Filler Excipient

filler excipient is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Filopodium

A slender, actin-rich projection from a cell surface that senses the environment and helps cells migrate, adhere, or establish neuronal connections.

Filoviridae

A family of enveloped RNA viruses that includes the genera *Ebolavirus* and *Marburgvirus*.

Filoviruses

A family of negative-sense RNA viruses that includes Ebola and Marburg viruses. These viruses cause severe hemorrhagic fever with high mortality rates. The virus is transmitted through contact with infected body fluids. The incubation period is 2-21 days. Symptoms include fever, headache, myalgia, and hemorrhage.

Filter (Vascular)

A device placed in a large vein, usually the inferior vena cava, to trap clots and reduce the risk of pulmonary embolism in selected patients.

Alternate Names:

Vascular

Filterable Virus

An obsolete historical term for an infectious agent small enough to pass through filters that retain bacteria; it reflects the development of early virology rather than a modern virus classification.

Filtered Back Projection

An image-reconstruction method that mathematically back-projects measured data after applying a filter. It is fast but can be more sensitive to noise and artifacts than iterative methods.

Filtering Operations

Processes that separate particles, cells, molecules, or fluids by size or other properties using a filter, membrane, or computational rule.

Filtering Procedure

An operation that creates an alternate drainage pathway to lower pressure inside the eye, usually in glaucoma.

Filtration

Separation of particles or solutes from a fluid by passage through a porous material; kidney glomerular filtration removes water and small solutes from blood.

Filtration Fraction

The fraction of renal plasma flow that is filtered at the glomerulus, calculated as GFR divided by renal plasma flow (RPF). Normal GFR is approximately 125 mL/min and RPF is approximately 625 mL/min, yielding a filtration fraction of approximately 0.20 (20 percent).

Filum Terminale

Filum Terminale is a muscle, nerve, vessel, reproductive structure, or other body part; its location and function determine its clinical relevance.

Fimbria

Fimbria is a muscle, nerve, vessel, reproductive structure, or other body part; its location and function determine its clinical relevance.

Fimbriae

The finger-like projections at the distal end of each fallopian tube that sweep over the ovary during ovulation to capture the released egg and guide it into the fallopian tube. The fimbriae are lined with ciliated epithelium that creates a current to draw the egg into the tube.

Fimbriae Proteins

Bacterial surface proteins that form fimbriae or pili and mediate attachment to host cells, surfaces, or biofilms.

Fine Crackles

High-pitched, brief, discontinuous sounds heard at the end of inspiration, caused by opening of small airways. They are characteristic of ILD, pulmonary fibrosis, and heart failure. They are also called Velcro crackles due to their resemblance to the sound of Velcro being pulled apart.

Alternate Names:

Velcro crackles due to their resemblance to the sound of.

Fine Motor Control

The coordinated use of small muscles, especially in the hands and fingers, for precise tasks such as writing, buttoning, and manipulating objects.

Fine Motor Skills

The ability to use small muscles (hands/fingers) for precise movements, developing with age: reaching (3-4 months), grasping (5-6 months), pincer grasp (9-12 months), self-feeding (12-18 months), building towers/scribbling (18-24 months), drawing shapes and using utensils (3-5 years), and handwriting.

Fine Needle Aspiration

A percutaneous sampling technique in which a 22 to 25-gauge needle, often ultrasound- or palpation-guided, aspirates cellular material from a palpable or imaging-detected lesion for cytologic examination, with minimal trauma and lower morbidity than core or open biopsy.

Fine Needle Aspiration Of The Thyroid

A procedure using a thin needle to remove thyroid cells for cytologic examination, usually guided by ultrasound to evaluate a nodule.

Finegoldia

A genus of anaerobic gram-positive bacteria that can cause skin, soft-tissue, bone, joint, or bloodstream infections.

Finegoldia Magna

An anaerobic gram-positive bacterium found on skin and mucosal surfaces that can cause wound and other opportunistic infections.

Finger

One of the digits of the hand, consisting of phalangeal bones, joints, tendons, nerves, blood vessels, and soft tissue that support grasping and fine movement.

Finger Dislocation

Displacement of the bones forming a finger joint, usually caused by a direct blow, fall, or forced bending. Pain, swelling, deformity, and loss of movement are typical. The joint should be assessed for fracture, tendon injury, and neurovascular compromise before reduction and splinting.

Finger Flexors

Muscles and tendons that bend the fingers at the metacarpophalangeal and interphalangeal joints, primarily supplied by the median and ulnar nerves.

Finger Injury

Damage to a finger's bone, joint, tendon, ligament, nerve, vessel, nail, or skin caused by trauma and assessed for deformity, circulation, sensation, and function.

Finger Joint

A joint between bones of a finger, including the metacarpophalangeal and interphalangeal joints, permitting flexion, extension, and limited side-to-side movement.

Finger Pain

Pain in one or more fingers caused by injury, arthritis, tendon disease, nerve compression, infection, circulation problems, or inflammatory conditions.

Finger Stick

A small puncture of a fingertip used to obtain capillary blood, commonly for point-of-care glucose or other blood testing.

Fingernail

The hard keratin plate covering the dorsal end of a finger, produced by the nail matrix and protecting the fingertip.

Fingers That Change Color

Fingers that change color concerns fingers that change color, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Finkelstein Test

A wrist examination that stresses the tendons on the thumb side of the wrist. Pain near the radial styloid may support a diagnosis of de Quervain tenosynovitis but is not specific by itself.

Fire Ants

Stinging ants whose venom causes immediate burning pain and itchy sterile pustules; numerous stings can produce systemic allergic or toxic reactions.

Firesetting Behavior

Deliberate setting of fires, ranging from isolated behavior to recurrent fire-setting associated with impulse-control, psychiatric, developmental, substance-use, or social problems.

Firmicutes

A large bacterial group that includes many low-GC gram-positive bacteria, although modern genetic classification has changed its boundaries.

First Aid

Immediate basic care given to a person who is in-

jured or suddenly ill before definitive medical treatment is available. Priorities include scene safety, emergency activation, airway, breathing, circulation, and control of serious bleeding.

First Aid Kit

A collection of supplies for treating minor injuries and providing initial care until professional medical help is available.

First Stage Of Labor

The period from the onset of regular labor to complete cervical dilation. It includes a latent phase and an active phase, with progress varying widely among individuals. Assessment considers cervical change, contraction pattern, maternal and fetal condition, and the overall clinical course.

First Trimester

The period from conception to 12 weeks gestational age. Characterized by rapid embryonic organogenesis, rising hCG levels, and establishment of the placenta. Common symptoms include nausea, vomiting, fatigue, and breast tenderness. Dating ultrasound performed to confirm gestational age. Risk of miscarriage highest during this trimester.

First-Degree AV Block

A conduction delay in which every atrial impulse reaches the ventricles but with a prolonged PR interval (>0.20 seconds). It is caused by delayed conduction through the AV node or His-Purkinje system. First-degree block is usually benign and asymptomatic.

First-Degree Burn

A superficial burn affecting only the epidermis: erythema, pain, and dryness without blistering (e.g., mild sunburn); heals in 3-7 days without scarring. Assessment: size (percent BSA—rule of nines), depth, and cause (thermal, chemical, electrical).

First-Degree Heart Block

Delay in conduction from the atria to the ventricles, shown on ECG by a prolonged but constant PR interval greater than 200 milliseconds. It is often

asymptomatic, but the cause, medications, associated conduction disease, and progression risk should be assessed.

First-Episode Psychosis

The first clinically recognized episode of psychosis, regardless of eventual diagnosis. It requires urgent assessment for substance exposure, medication effects, mood symptoms, neurologic disease, systemic illness, safety risk, and functional decline.

First-Pass Effect

The metabolism of a drug by the liver and intestinal wall before it reaches the systemic circulation after oral administration.

First-Pass Metabolism

The metabolism of a drug by the liver before it reaches systemic circulation after oral administration. Drugs with high first-pass metabolism (e.g., morphine, nitroglycerin, lidocaine) have low oral bioavailability and may require alternative routes (sublingual, transdermal, IV).

Fish Oil

fish oil is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

Fish Poisoning

Fish Poisoning is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fish Tapeworm Infection

Intestinal infection with a *Diphyllobothrium* or related fish tapeworm acquired from raw or undercooked fish; it can cause abdominal symptoms and vitamin B12 deficiency.

Fish Venom

fish venom is a diagnostic, research, imaging, or measurement term used to assess a condition or

question; interpretation depends on the indication, method, and result.

Fish-Handler'S Disease

Fish-Handler's Disease is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fisher'S Syndrome

Fisher's Syndrome is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fishhook Removal

Fishhook removal is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

Fissure

A narrow crack, groove, or cleft in a body structure; an anal fissure is a painful tear in the lining of the anal canal.

Fissured Tongue

A usually harmless condition in which grooves or cracks develop on the surface of the tongue. Food and debris may collect in the fissures, causing irritation or odor. Gentle brushing of the tongue and routine oral care help prevent symptoms.

Fistula

A fistula is an abnormal connection between two epithelialized surfaces, such as bowel and skin or two organs, caused by inflammation, infection, surgery, trauma, or congenital development. congenital development.

Fistula (Pathology)

An abnormal epithelial-lined connection between two body surfaces or organs that normally do not communicate. Fistulas may be congenital, such as tracheoesophageal fistula, or acquired, resulting

from inflammation, infection, surgery, trauma, or malignancy.

Alternate Names:

Pathology

Fistula, Anal

An abnormal tunnel connecting the anal canal or rectum with the nearby skin, often developing after an anorectal abscess and causing drainage or recurrent infection.

Fistula, Arteriovenous

Alternate word order; see *Arteriovenous Fistula*.

Fistula-In-Ano

Abnormal epithelialized tract connecting the anal canal to the perianal skin, representing a common and distressing complication of Crohn disease and also occurring following perianal abscess drainage or from cryptoglandular infection.

Fit

Fit is an anatomical, developmental, reproductive, nutritional, behavioral, or healthcare concept used in medical assessment or care.

Fits (Seizures)

A common term for episodes caused by abnormal electrical activity in the brain, which may produce altered awareness, abnormal movements, sensory symptoms, or loss of consciousness.

Alternate Names:

Seizures

Fitz-Hugh-Curtis Syndrome

Perihepatitis associated with pelvic inflammatory disease caused by ascension of *Neisseria gonorrhoeae* or *Chlamydia trachomatis* from the pelvis to the liver capsule along the right paracolic gutter. Presents with right upper quadrant pain, fever, and tender hepatomegaly often in young sexually active women.

Five-Year Survival Rate

The proportion of patients alive five years after

diagnosis or treatment; a standard benchmark for comparing cancer outcomes.

Fixation

Stabilization of tissue or bone in a desired position, using methods such as sutures, wires, screws, plates, or external devices.
