Penis carcinoma is cancer of the penis, most often arising from skin or squamous cells and sometimes linked to HPV infection.

Penis Care (Uncircumcised)

Care of an uncircumcised penis includes gently retracting the foreskin only as far as comfortable, cleaning underneath, drying, and returning the foreskin to its normal position.

Penis Disorder (Priapism (Penis Disorder))

Alternate index label for Priapism (Penis Disorder).

Penis Disorder Balantis (Balanitis (Penis Disorder))

Alternate index label for Balanitis (Penis Disorder).

Penis Pain

Penis pain may result from infection, injury, inflammation, urinary problems, or sexual conditions; severe pain, swelling, discharge, or inability to urinate requires prompt assessment.

Penis, Erection Of The

Penile rigidity produced by increased arterial inflow and reduced venous outflow after sexual or reflex stimulation; persistent difficulty is erectile dysfunction.

tion.

Penis, Small

A penis that is substantially below expected stretched length for age, usually assessed as micropenis in a newborn or child after excluding measurement and developmental variation.

Penoscrotal Transposition

A congenital difference in which the penis and scrotum are positioned abnormally relative to each other, often associated with hypospadias or other genital and urinary anomalies.

Pentad Of TTP

Classic clinical pentad of Thrombotic Thrombocytopenic Purpura: (1) Thrombocytopenia, (2) Microangiopathic Hemolytic Anemia (schistocytes), (3) Neurological symptoms, (4) Renal insufficiency, and (5) Fever. See Thrombotic Thrombocytopenic Purpura (TTP).

Pentadecanoic Acid

A 15-carbon saturated fatty acid found in small amounts in dairy and ruminant fats and used in nutritional and lipid-metabolism research.

Pentaerythritol Tetranitrate

An organic nitrate with vasodilator activity, mainly of historical or specialized pharmaceutical interest.

Pentamidine

An antiprotozoal and antimicrobial medicine used for selected leishmaniasis, trypanosomiasis, and Pneumocystis infections.

Pentamidine Isethionate

An antiprotozoal and antimicrobial drug used in selected cases of Pneumocystis pneumonia, leishmaniasis, trypanosomiasis, and other infections; toxicity includes hypoglycemia, kidney injury, and arrhythmia.

Pentatrichomonas Hominis

Pentatrichomonas hominis is a flagellated intesti-

nal protozoan generally regarded as nonpathogenic; finding it in stool usually indicates exposure to fecal contamination.

Pentazocine

An opioid pain medicine with mixed agonist and antagonist effects, used for some moderate or severe pain. It can cause drowsiness, dependence, and slowed breathing and may trigger withdrawal in a person dependent on other opioids.

Pentazocine Overdose

Pentazocine overdose involves toxic or environmental exposure to pentazocine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Pentetic Acid

A chelating compound that binds metal ions and is used in selected radiopharmaceuticals, contrast agents, or laboratory applications.

Pentobarbital Overdose

Pentobarbital overdose involves toxic or environmental exposure to pentobarbital overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Pentosan Polysulfate

A semi-synthetic sulfated polysaccharide used for selected bladder pain syndrome and historically as an anticoagulant; prolonged use can cause pigmentary maculopathy and bleeding.

Pentose

A pentose is a five-carbon sugar, including ribose in RNA and deoxyribose in DNA, and participates in nucleotide and carbohydrate metabolism.

Pentose Phosphate Pathway

A cytoplasmic glucose oxidation pathway running parallel to glycolysis, primarily in the liver, adipose tissue, adrenal cortex, and red blood cells. It has two phases: the oxidative phase (producing NADPH and ribose-5-phosphate) and the non-oxidative phase

(interconverting sugar phosphates).

Pentoxifylline

A methylxanthine derivative that improves red-cell flexibility and is used in some countries for peripheral vascular disease; benefit varies by condition.

Pentylenetetrazole

Pentylenetetrazole is a convulsant research compound formerly used as a respiratory stimulant; it is not a routine modern medicine.

Penumbra

Brain tissue surrounding an area of infarction that is functionally impaired but potentially salvageable if blood flow is restored promptly.

Peplomycin

Peplomycin is a bleomycin-related chemotherapy medicine used in some countries for selected cancers; lung toxicity is an important risk.

Peppermint

Mentha piperita, used as a flavoring and in some preparations for dyspeptic symptoms; concentrated oil can be hazardous.

Peppermint Oil Overdose

Peppermint oil overdose involves toxic or environmental exposure to peppermint oil overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Pepsin

A stomach enzyme that breaks proteins into smaller fragments. It is released as inactive pepsinogen and activated by stomach acid.

Pepsin A

Pepsin A is a stomach protease activated by acid that begins digestion of dietary proteins into smaller peptides.

Pepsinogen

An inactive precursor released by gastric chief cells

and converted to pepsin in acidic conditions.

Peptic Esophagitis

Inflammation and injury of the esophageal lining caused mainly by repeated gastroesophageal reflux of acid or bile, producing heartburn, chest discomfort, swallowing pain, or strictures.

Peptic Ulcer

An open sore in the lining of the stomach or duodenum, most commonly caused by *Helicobacter pylori* infection or NSAID use.

Alternate Names:

Stomach Ulcer (Peptic Ulcer) Ulcer, Peptic

Peptic Ulcer Bleeding

Haemorrhage caused by erosion of an artery or other blood vessel beneath a gastric or duodenal peptic ulcer. It is a common cause of upper gastrointestinal bleeding and may present with haematemesis, coffee-ground vomiting, melaena, or haemodynamic instability.

Peptic Ulcer Disease

Condition characterized by ulceration of the gastrointestinal mucosa extending through the muscularis mucosae into the submucosa or deeper layers, occurring most commonly in the duodenal bulb and gastric antrum.

Peptichemio

An investigational or historical anticancer drug name related to peptide-linked chemotherapy compounds.

Peptidase

An enzyme that breaks peptide bonds in proteins or peptides.

Peptide

A short chain of amino acids linked by peptide bonds.

Peptide Biosynthesis

peptide biosynthesis concerns peptide biosynthesis,

a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Peptide Bond

A covalent amide bond formed between the carboxyl group of one amino acid and the amino group of another, releasing water. Peptide bonds link amino acids into polypeptide chains and have partial double-bond character that restricts rotation.

Peptide Hormone

A hormone made of amino acids that binds a cell-surface receptor and regulates processes such as metabolism, growth, reproduction, stress, and fluid balance.

Peptide Library

peptide library concerns peptide library, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Peptide Metabolism

peptide metabolism concerns peptide metabolism, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Peptide Transport

peptide transport concerns peptide transport, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Peptide Yy

peptide yy concerns peptide yy, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Peptidoglycan

A mesh-like polymer forming the bacterial cell wall, made of sugars and short peptides and targeted by several antibiotics.

Peptococcaceae

A family of anaerobic gram-positive cocci found in the human microbiota and sometimes associated with infection.

Peptococcus

A genus of anaerobic gram-positive cocci that can contribute to mixed infections, especially in damaged or poorly oxygenated tissue.

Peptococcus Niger

An anaerobic gram-positive coccus found in the human microbiota and rarely associated with mixed infection.

Peptoniphilus

A genus of anaerobic gram-positive cocci found on skin and mucosal surfaces that can cause opportunistic infection.

Peptoniphilus Hareii

An anaerobic gram-positive coccus occasionally recovered from wounds, abscesses, or other clinical specimens.

Peptoniphilus Indolicus

An anaerobic gram-positive coccus found in the genital and other microbiota that can occasionally contribute to mixed infection.

Peptostreptococcus

A group of anaerobic gram-positive cocci associated with dental, skin, abdominal, pelvic, and other mixed infections.

Peracetic Acid

A strong oxidizing disinfectant and sterilant used for equipment and surfaces; concentrated exposure irritates or burns skin, eyes, and airways.

Peracute

Peracute describes disease or a clinical event that develops extremely rapidly, often over minutes to hours, with little time for adaptation or diagnosis.

PERC Rule

The Pulmonary Embolism Rule-out Criteria, a validated clinical decision rule designed to identify emergency department patients with suspected acute pulmonary embolism who have an exceptionally low

pretest probability (less than 1.5 to 2 percent), in whom diagnostic testing with D-dimer or CT pulmonary angiography can be safely omitted without increasing adverse thrombotic outcomes. It comprises eight clinical criteria: age under 50 years, heart rate under 100 bpm, pulse oximetry saturation ≥ 95 percent on room air, no unilateral leg swelling, no hemoptysis, no recent surgery or trauma within 4 weeks, no prior history of venous thromboembolism, and no estrogen use; all eight criteria must be satisfied to be PERC-negative.

Alternate Names:

Pulmonary Embolism Rule-out Criteria; PERC Score

Percentile

A percentile indicates the percentage of a reference population with a value below a measurement, such as height, weight, or test score.

Perception

The brain's process of organizing and interpreting sensory information into an experience of objects, events, body sensations, or the environment.

Perceptual

Relating to the process of detecting and interpreting sensory information.

Perceptual Disorder

A clinically significant disturbance in the way sensory information is interpreted, including altered visual, auditory, tactile, or body perception.

Perceptual Distortion

An inaccurate or altered interpretation of a real sensory stimulus, which may occur with neurologic disease, psychiatric illness, drugs, migraine, seizures, or sensory impairment.

Perceptual Masking

Reduction in the ability to detect or identify one sensory stimulus because another stimulus overlaps it in time, space, or processing.

Percussion

Tapping the body surface to assess the underlying tissue by its sound and transmitted vibration.

Percussion Note

The sound produced by percussing the chest wall. Normal lung produces a resonant note. Dullness suggests consolidation or fluid. Hyperresonance suggests pneumothorax or emphysema. Stony dullness suggests pleural effusion.

Percutaneous

Performed through the skin, usually with a needle, catheter, or other instrument.

Percutaneous Biopsy

Removal of tissue through the skin using a needle or other instrument, often guided by ultrasound, CT, or another imaging method.

Percutaneous Coronary Intervention

A catheter-based procedure to open blocked coronary arteries, typically involving balloon angioplasty and stent placement. Indications include acute STEMI (primary PCI), NSTEMI (early invasive strategy), and stable CAD with significant stenosis. Drug-eluting stents have reduced restenosis rates compared to bare-metal stents.

Percutaneous Discectomy

Percutaneous discectomy removes or decompresses part of a herniated spinal disc through a small needle or incision.

Percutaneous Diskectomy

Removal of part of a herniated spinal disk through a small skin incision.

Percutaneous Drainage

Placement of a needle or catheter through the skin to drain a fluid collection or obstructed body space, often with imaging guidance.

Percutaneous Electrical Nerve

Stimulation

Electrical stimulation delivered through the skin to reduce pain signals.

Alternate Names:

PENS

Percutaneous Endoscopic Gastrostomy

Endoscopic placement of a feeding tube through the abdominal wall directly into the stomach. Indications: long-term enteral feeding (>4 weeks) for dysphagia (stroke, ALS, dementia, head/neck cancer) and malnutrition.

Percutaneous Kidney Procedures

A medical procedure, treatment, device, or care topic related to percutaneous kidney procedures; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Percutaneous Nephrolithotomy

Minimally invasive surgical procedure for removing large, complex, or staghorn renal calculi. Access: a needle track is established under fluoroscopic or ultrasound guidance from the flank through the renal parenchyma into the target renal calyx, dilated to allow passage of a nephroscope and working sheath.

Percutaneous Nephrolithotripsy

Percutaneous nephrolithotripsy removes or fragments kidney stones through a tract made through the skin into the kidney, usually for larger or complex stones.

Percutaneous Transhepatic Cholangiogram

A percutaneous transhepatic cholangiogram uses a needle through the liver to inject contrast into bile ducts for imaging and may guide drainage or stent placement.

Percutaneous Transhepatic Cholangiography

PTC is imaging of the bile ducts after contrast is injected through a needle passed through the skin and liver; drainage or stenting may follow.

Percutaneous Transluminal Angioplasty

Balloon dilation of arterial stenosis. Often combined with stenting.

Percutaneous Transluminal Coronary Angioplasty

Balloon-based treatment that widens a narrowed coronary artery, often followed by stent placement.

Alternate Names:

PTCA; balloon angioplasty

Percutaneous Umbilical Blood Sampling

An invasive procedure for fetal blood sampling from the umbilical vein under ultrasound guidance, typically performed after 18-20 weeks.

Percutaneously Inserted Central Catheter - Infants

A medical procedure, device, or treatment involving percutaneously inserted central catheter - infants. Its purpose, risks, and follow-up depend on the specific intervention and patient.

Perforant Pathway

A major hippocampal input pathway carrying signals from the entorhinal cortex to the dentate gyrus and related memory structures.

Perforated Bowel

A perforated bowel is a hole through the intestinal wall allowing contents to leak into the abdomen, causing peritonitis and potentially life-threatening sepsis.

Perforated Eardrum

Alternate index label; see *Ruptured eardrum (perforated eardrum)*.

Perforation

A hole or rupture through the wall of an organ or tissue.

Perforation Of A Viscus

Full-thickness breach of the wall of a hollow abdominal organ, most commonly the stomach, duodenum,

or colon, resulting in leakage of luminal contents into the peritoneal cavity. Causes include peptic ulcer disease, diverticulitis, appendicitis, inflammatory bowel disease, ischemia, and trauma.

Performance

Performance describes how effectively a person, organ, treatment, test, or system carries out a defined task; the relevant measure depends on the clinical context.

Performance Anxiety

Anxiety about sexual performance that can interfere with sexual function.

Performance Status

A standardized measure of a patient's functional ability and activity level, commonly recorded with ECOG or Karnofsky scales. It helps estimate prognosis, determine treatment eligibility, and quantify change during cancer care.

Performed Diagnosis

A diagnosis established after clinical assessment and appropriate testing identifies the condition explaining a patient's findings; it should be distinguished from a symptom or provisional impression.

Performed Histopathology

Microscopic examination of tissue that has been processed and stained to identify disease, tumor type, inflammation, or structural change.

Perfusion

Passage of blood or another fluid through a tissue or organ.

Perfusion Culture

A laboratory culture system in which cells or tissue receive continuously renewed nutrient medium, supporting controlled study of growth, metabolism, infection, or drug effects.

Perfusion Defect

An area receiving abnormally low blood flow, iden-

tified by an imaging or functional test.

Perfusion Imaging

Imaging tissue blood flow. CT perfusion, MR perfusion, PET perfusion. Used for stroke, tumor characterization.

Perfusion PET

Tracers: Rb-82, N-13 ammonia, O-15 water. Measure blood flow.

Perianal

Located around the anus; the term describes the skin, glands, pain, inflammation, abscesses, fistulas, and other findings in that region.

Perianal Abscess

A localized collection of pus near the anus caused by infected anal glands or surrounding tissue, producing severe throbbing pain, swelling, fever, and sometimes a fistula.

Perianal Glands

Small glands near the anus that contribute secretions to the local tissue; obstruction or infection can contribute to perianal abscesses and fistulas.

Perianal Streptococcal Cellulitis

A bacterial skin infection around the anus, usually caused by group A *Streptococcus*. It may cause bright-red skin, pain, itching, discharge, or pain during bowel movements.

Periapical Abscess

An acute or chronic localized collection of pus at the apex of a tooth's root, arising from pulpal infection and necrosis (usually due to untreated dental caries or trauma).

Periapical Granuloma

A chronic inflammatory lesion at the apex of a tooth, usually resulting from pulpal necrosis and persistent apical infection. It may be asymptomatic and is diagnosed through clinical, radiographic, and sometimes histopathologic assessment.

Periappendiceal

Periappendiceal means located around the appendix, as in inflammation, fluid, an abscess, or fat stranding near the appendiceal tissue.

Periarteritis Nodosa

An older name for polyarteritis nodosa, a necrotizing vasculitis of medium-sized arteries that can cause skin, nerve, muscle, kidney, and abdominal ischemic symptoms without typical glomerulonephritis.

Periarticular

Periarticular means located around a joint, including nearby tendons, bursae, ligaments, capsule, and soft tissues rather than the joint surface itself.

Pericardial

Relating to the pericardium, the sac and membranes surrounding the heart.

Pericardial Cavity

The narrow, fluid-filled space between the layers of the pericardium surrounding the heart.

Pericardial Disease (Pericarditis)

Alternate index label for Pericarditis.

Pericardial Effusion

Excess fluid in the pericardial sac surrounding the heart; rapid accumulation can cause tamponade.

Pericardial Effusion Etiology

Causes include infection, malignancy, kidney failure, hypothyroidism, autoimmune disease, inflammation after myocardial injury or cardiac surgery, radiation, trauma, and some medications. The likely cause varies with geography, age, medical history, and immune status.

Pericardial Fluid Culture

A microbiologic culture of fluid from the pericardial space to identify bacteria, fungi, or other organisms in suspected infectious pericarditis.

Pericardial Fluid Gram Stain

A microscopic stain of pericardial fluid that can rapidly suggest bacterial organisms, although a negative result does not exclude infection.

Pericardial Inflammation

Alternate index label; see *Pericarditis*.

Pericardial Knock

A high-pitched, early diastolic sound caused by sudden cessation of ventricular filling in constrictive pericarditis. It is heard at the left sternal border and may be confused with an S3 or opening snap. The knock is typically louder with inspiration and is a characteristic finding in constrictive pericarditis.

Pericardial Mesothelioma

A rare malignant tumor arising from the mesothelial lining around the heart, which can cause effusion, constriction, or impaired cardiac filling.

Pericardial Metastases

Cancer deposits in the pericardium, which may cause inflammation or accumulation of fluid around the heart.

Pericardial Stripping

Surgical removal of diseased pericardium, usually performed to relieve constrictive pericarditis.

Pericardial Tamponade

Fluid accumulation in pericardial space compromising cardiac filling. Beck triad: hypotension, jugular venous distension, muffled heart sounds. Electrical alternans on ECG. Diagnosis: echocardiography. Treatment: emergent pericardiocentesis, pericardial window.

Pericardial Wall

The layered wall of the pericardial sac that surrounds and protects the heart.

Pericardial Window

A surgical procedure in which a portion of the pericardium is surgically excised to create a permanent

or semi-permanent communication between the pericardial space and the pleural cavity or subcutaneous tissues. Performed via a subxiphoid approach or video-assisted thoracoscopic surgery, it allows continuous internal drainage and absorption of pericardial fluid, preventing recurrent cardiac tamponade and providing tissue biopsy in patients with large, recurrent, or malignant pericardial effusions.

Alternate Names:

Subxiphoid Pericardiostomy; Pleuropericardial Window; Pericardiostomy

Pericardiectomy

Pericardiectomy removes part or all of the sac around the heart, usually to treat severe constrictive pericarditis.

Pericardiocentesis

Pericardiocentesis is needle or catheter drainage of fluid from the pericardial sac, usually to relieve cardiac tamponade or diagnose an effusion; bleeding, arrhythmia, coronary injury, and pneumothorax are possible complications. Cardiac tamponade or diagnostically for pericardial effusion. The subxiphoid approach is most commonly used, with the needle directed toward the left shoulder under echocardiographic guidance.

Pericardiostomy

A surgical opening made in the pericardium to drain fluid or prevent recurrent accumulation around the heart.

Pericarditis

Inflammation of the sac around the heart. It often causes sharp chest pain that worsens with deep breathing or lying down and improves when sitting up and leaning forward. It may be caused by infections, autoimmune diseases, heart injury, kidney disease, cancer, or some medicines. Severe cases can cause fluid buildup around the heart.

Alternate Names:

Inflamed Pericardium Pericardial Inflammation Pericardial Disease (Pericarditis)

Post-Myocardial Infarction Pericarditis

Inflammation of the sac around the heart that occurs after a heart attack. It may begin soon after the heart attack or develop later as part of a delayed immune reaction.

Pericarditis - Constrictive

A chronic condition in which a thickened, scarred, or calcified pericardium restricts ventricular filling and causes systemic venous congestion and heart-failure symptoms.

Pericardium

The double-layered sac surrounding the heart and the roots of the great vessels.

Perichondrial Hematoma (Cauliflower Ear)

Alternate index label for Cauliflower Ear.

Perichondritis

Perichondritis is inflammation or infection of tissue surrounding cartilage, often affecting the outer ear after trauma or piercing and potentially damaging cartilage.

Perichondritis Of The Ear

Infection or inflammation of the auricular perichondrium, often after trauma, piercing, or surgery. *Pseudomonas aeruginosa* is an important cause; delayed treatment can produce cartilage necrosis and permanent deformity.

Perichondrium

A vascular connective-tissue sheath surrounding most cartilage, with an outer fibrous layer and an inner layer containing cartilage-forming cells. It supports cartilage nutrition, growth, and repair but is absent from articular cartilage and fibrocartilage.

Pericoronitis

Inflammation of the soft tissue around the crown of a partially erupted tooth, most often a mandibular third molar. Food retention and bacterial accumulation may cause pain, swelling, trismus, fever, or

spread into deeper spaces.

Pericytes

Pericytes are contractile support cells wrapped around small blood vessels that help regulate capillary stability, blood flow, repair, and the blood-brain barrier.

Periductal Mastitis

Inflammation around the major subareolar ducts, often associated with smoking, causing a painful periareolar mass, discharge, or recurrent breast abscess.

Perifosine

Perifosine is an investigational alkylphospholipid that affects cell-membrane signaling, including AKT pathways, and has been studied in cancer treatment.

Perillyl Alcohol

Perillyl alcohol is a monoterpene found in some plant oils and studied experimentally for effects on cell signaling and cancer growth.

Perilymph

Fluid in the bony labyrinth of the inner ear that surrounds the membranous labyrinth and helps transmit sound and balance signals.

Perilymphatic Fistula

Abnormal communication between the inner ear fluid spaces and the middle ear or mastoid, often after trauma, barotrauma, or surgery. It may cause episodic vertigo, hearing loss, tinnitus, or pressure-induced symptoms and requires specialist evaluation.

Perimenopausal

Perimenopausal describes the years of hormonal and menstrual transition before and around menopause, when cycles, bleeding, hot flashes, sleep, and fertility may change.

Perimenopause

The transition time in a woman's life that begins

when ovaries produce less estrogen and menstruation becomes less frequent, and ends when the ovaries no longer produce eggs and menstruation stops.

Perinatal

Perinatal refers to the period around birth, conventionally including late pregnancy and the first days or weeks after delivery depending on the definition used.

Perinatal Asphyxia

Impaired oxygenation or ventilation before, during, or shortly after birth that may cause neonatal encephalopathy, organ injury, or death. Immediate newborn assessment and resuscitation are essential.

Perinatal Death

Death of a fetus or newborn during the late pregnancy, birth, or early newborn period; the exact time range varies by definition.

Perinatal Psychiatry

The subspecialty focused on psychiatric disorders during pregnancy and the postpartum period. Common conditions include perinatal depression, perinatal anxiety, perinatal OCD, and postpartum psychosis. Medication selection must balance maternal mental health with fetal or neonatal exposure risks.

Perinatal Transmission

Transmission of an infection or condition from mother to infant during pregnancy, labor, delivery, or breastfeeding, as with HIV, hepatitis B, syphilis, or certain genetic and congenital disorders.

Perinatologist

A perinatologist is an obstetrician specializing in high-risk pregnancy, fetal medicine, prenatal diagnosis, and complications affecting the pregnant person or fetus.

Perindopril

Perindopril is an ACE inhibitor used for high blood pressure and cardiovascular risk reduction; it can cause cough, high potassium, or rarely angioedema.

Perineal

Relating to the perineum, the region between the external genitalia and the anus.

Perineal Laceration

Tearing of the perineal tissues during vaginal delivery. The injury is graded by depth: it may involve skin, perineal muscle, the anal sphincter, or the rectal mucosa.

Perineal Laceration Classification

Obstetric perineal tears are graded by depth: first degree involves skin, second degree involves perineal muscle, third degree involves the anal sphincter complex, and fourth degree extends through the rectal mucosa. Accurate examination and repair reduce long-term pelvic-floor and continence complications.

Perineal Protection

Techniques used during the second stage to minimize perineal trauma (lacerations, episiotomy). Manual protection: the attendant's hand applies gentle pressure to the fetal head to control the speed of delivery (not too fast), supporting the perineum and flexing the fetal head.

Perineal Tear

Laceration of the perineum during vaginal delivery, classified by degree: first degree (skin only), second degree (perineal muscles), third degree (sphincter complex involvement), and fourth degree (rectal mucosa). Most deliveries involve first or second degree tears. Third and fourth degree tears risk fecal incontinence.

Perineum

The area between the external genitalia and the anus. It contains skin, muscles, nerves, and connective tissue and may be affected by injury, infection, childbirth, or surgery.

Perineural

Perineural means around a nerve; the term may describe normal connective tissue, inflammation, tumor spread, or imaging findings surrounding a nerve.

Perineuronal Satellitosis

Clustering of glial cells around a neuron, seen microscopically in some brain tumors, inflammatory conditions, and reactive processes; its significance depends on the surrounding pathology.

Perinuclear Space

The narrow compartment between the inner and outer nuclear membranes, continuous with the endoplasmic-reticulum lumen and involved in nuclear-envelope structure.

Periodic Abstinence

Periodic abstinence is avoiding intercourse during estimated fertile days to reduce pregnancy likelihood; cycle timing is imperfect and does not prevent infections.

Periodic Acid

An oxidizing acid used in histochemistry, especially the periodic-acid-Schiff reaction, which highlights carbohydrates, mucosubstances, fungi, and basement membranes.

Periodic Breathing

Periodic breathing consists of repeated cycles of shallow or absent breathing followed by deeper breaths, occurring in some infants, during sleep, or with neurologic or cardiopulmonary disease.

Periodic Fever, Aphthous Stomatitis, Pharyngitis, Adenitis Syndrome

A recurrent fever syndrome, usually beginning in childhood, characterized by periodic fever with some combination of mouth ulcers, sore throat, and swollen neck lymph nodes; it is commonly abbreviated PFAPA.

Periodic Limb Movement Disorder

Repeated involuntary limb movements during sleep that may disrupt rest.

Alternate Names:

PLMD Sleep Disorder Periodic Limb Movement (Periodic Limb Movement Disorder)

Periodic Paralysis Syndrome

Periodic paralysis syndromes are rare inherited or acquired disorders causing episodic muscle weakness associated with abnormal potassium handling or thyroid disease. Attacks may follow rest after exercise, meals, or stress; ECG, potassium testing, and genetic or endocrine evaluation guide care.

Periodization

Planned variation of exercise volume and intensity over time.

Periodontal Abscess

A localized accumulation of pus within periodontal tissues, commonly associated with a periodontal pocket, foreign material, or impaired drainage. It may cause pain, swelling, suppuration, tooth mobility, and systemic symptoms and requires urgent dental assessment.

Periodontal Cyst

A periodontal cyst is a fluid-filled epithelial-lined lesion near the tooth-supporting tissues, with effects ranging from incidental discovery to local bone destruction.

Periodontal Disease

Inflammatory or infectious disease of the tissues supporting the teeth, including gingivitis and periodontitis.

Periodontal Disease, Gingivitis

Alternate index label; see *Gingivitis*.

Periodontal Disease, Periodontitis

Alternate index label; see *Periodontitis*.

Periodontal Dressing

A medical procedure, device, or treatment involving periodontal dressing. Its purpose, risks, and follow-up depend on the specific intervention and patient.

Periodontal Flap Surgery

Surgical access for deep debridement. Flap reflected, calculus removed, bone contoured, flap repositioned.

Periodontal Ligament

Connective tissue attaching tooth to bone. Contains collagen fibers, cells, blood vessels, nerves. Provides proprioception, shock absorption. Expanded in bruxism.

Periodontal Pocket

A pathologically deepened gingival sulcus caused by apical migration of the junctional epithelium and loss of periodontal attachment. Pocket depth and clinical attachment level are measured with a periodontal probe and interpreted with bleeding, inflammation, and radiographic bone loss.

Periodontal Probing

Measurement of the depth of the gingival sulcus/pocket using a periodontal probe with millimeter markings. Normal: 1–3 mm. Periodontal pockets: ≥ 4 mm (indicates attachment loss and periodontitis). Full-mouth probing at 6 sites per tooth: mesio-buccal, mid-buccal, disto-buccal, mesio-lingual, mid-lingual, disto-lingual.

Periodontics

The dental specialty concerned with the gums and supporting tissues of the teeth.

Periodontist

A periodontist is a dentist specializing in prevention, diagnosis, and treatment of gum disease and supporting tissues, including periodontal surgery and implants.

Periodontitis

A chronic inflammatory disease caused by dysbiotic dental plaque that destroys the periodontal ligament and alveolar bone supporting the teeth. It can cause bleeding gums, periodontal pockets, tooth mobility, recession, bad breath, and tooth loss; severity and progression vary and require dental evaluation.

Alternate Names:

Periodontal Disease, Periodontitis

Periodontitis (Gum Disease)

Alternate index label for Gum Disease.

Periodontium

The tissues supporting a tooth: gingiva, periodontal ligament, cementum, and alveolar bone.

Periodontium Disease

Disease of the tissues supporting the teeth, including gingiva, periodontal ligament, cementum, and alveolar bone; periodontitis can cause attachment loss and tooth loss.

Perionychium

The skin and soft tissue surrounding a fingernail or toenail, including the nail folds and nearby cuticle; infection or inflammation causes paronychia.

Perioperative

Perioperative means relating to the period before, during, and after an operation, including preparation, anesthesia, recovery, and complication prevention.

Perioral Dermatitis

A papulopustular eruption around the mouth, sparing the vermilion border. It is more common in young women and associated with topical corticosteroid use. Other triggers include fluoridated toothpaste, cosmetics, and inhaler steroids.

Periorbital

Located around the eye socket or eyelids. Periorbital swelling may result from injury, allergy, infection, or fluid retention.

Periorbital Cellulitis

A bacterial infection of the eyelid and tissues around the eye that causes redness, swelling, and tenderness. It must be distinguished from orbital cellulitis, which can threaten vision and spread more deeply.

Periorbital Edema

Swelling of the tissues around the eye, caused by allergy, infection, trauma, venous or lymphatic congestion, kidney disease, thyroid eye disease, or other systemic conditions.

Periorbital Infection

Infection of the tissues around the eye; it can cause swelling and redness and must be distinguished from orbital cellulitis, which threatens vision.

Periosteal Osteosarcoma

A surface osteosarcoma arising beneath the periosteum, usually producing cartilage and affecting the shaft of a long bone. It is generally intermediate grade and requires specialist orthopedic-oncology management.

Periosteum

A vascular connective-tissue membrane covering the outer surface of bone except at articular cartilage.

Periostitis

Inflammation of the periosteum, the dense, richly vascularized and innervated fibrous connective tissue membrane covering the outer cortical surfaces of bones. Manifests as localized bone tenderness, swelling, and characteristic radiographic periosteal reaction (e.g., solid, laminated "onion-skin", or spicular "sunburst" patterns). Etiologies range from chronic mechanical overuse (medial tibial stress syndrome / "shin splints" in athletes), acute or chronic infectious osteomyelitis, vascular stasis in severe chronic venous insufficiency, and systemic diseases such as secondary syphilis, hypertrophic osteoarthropathy (associated with lung carcinoma), and osteogenic malignancies.

Peripancreatic Malignancy

Neoplastic process involving tissues surrounding the pancreas, including primary pancreatic adenocarcinoma with peripancreatic extension and metastatic disease from adjacent or distant organs. Often presents at an advanced stage with abdominal pain, weight loss, obstructive jaundice, and new-onset diabetes.

Peripartum

The period immediately before, during, and shortly after childbirth.

Peripartum Cardiomyopathy

A form of dilated cardiomyopathy occurring in the last month of pregnancy or within 5 months postpartum, with no other identifiable cause. Risk factors include advanced maternal age, multiple gestations, preeclampsia, and African American race. Presents with heart failure symptoms.

Peripartum Cardiomyopathy Prognosis

Recovery of ventricular function varies widely. Prognosis is influenced by the initial ejection fraction, ventricular size, symptoms, treatment, complications, and follow-up; persistent dysfunction requires ongoing cardiac care.

Peripheral

Peripheral means away from the center or central nervous system; in clinical use it may describe nerves, vessels, lesions, circulation, or symptoms outside the brain, spinal cord, or central structures.

Peripheral Arterial Line - Infants

A small catheter placed in an infant's artery to continuously measure blood pressure and obtain blood samples. It requires careful monitoring for bleeding, infection, or reduced blood flow to the limb.

Peripheral Artery Bypass - Leg

Surgery that creates a new route around a blocked leg artery to improve blood flow. A vein or artificial graft may be used as the bypass.

Peripheral Artery Disease

Narrowing of arteries supplying the limbs, usually caused by atherosclerosis. It may cause exertional leg pain relieved by rest, reduced pulses, nonhealing wounds, or critical limb ischemia. Also called peripheral arterial disease.

Alternate Names:

Peripheral Arterial Disease; PAD

Peripheral Artery Disease - Legs

Peripheral artery disease of the legs is atherosclerotic reduction in arterial blood flow causing exer-

tional claudication, diminished pulses, nonhealing wounds, or critical limb ischemia.

Peripheral Blood

Peripheral blood is blood obtained from a vein or capillary rather than directly from an organ or marrow, used for counts, smears, chemistry, and other testing.

Peripheral Blood Smear

Microscopic examination of a stained blood smear (Wright-Giemsa stain).

Peripheral Blood Stem Cells

Hematopoietic stem cells collected from circulating blood, usually after mobilization from the bone marrow; they can be used for autologous or allogeneic stem-cell transplantation.

Peripheral Edema

Swelling due to accumulation of fluid in the interstitial space of the limbs, most commonly the lower extremities.

Peripheral Intravenous Line - Infants

A small tube placed in an infant's vein, usually in the hand, foot, or scalp, to give medicines or fluids. The site should be checked for swelling, leakage, or infection.

Peripheral Ischemia

Inadequate arterial blood flow to an arm, leg, digit, or other peripheral tissue, causing pain, pallor, coolness, weak pulses, numbness, ulcers, or tissue loss.

Peripheral Nerve

A nerve outside the brain and spinal cord that carries motor, sensory, and autonomic signals between the central nervous system and the rest of the body.

Peripheral Nerve Blocks

Peripheral nerve blocks provide targeted anesthesia and analgesia for specific surgical sites. Ultrasound-guided blocks improve success rates and reduce complications.

Peripheral Nerve Injuries

Damage to nerves outside the brain and spinal cord caused by trauma, compression, stretching, disease, or toxins. It may cause pain, numbness, weakness, or loss of function; recovery depends on the severity and location of the injury.

Peripheral Nerve Tumors

Tumors that arise from or around nerves outside the brain and spinal cord.

Peripheral Nervous System

The portion of the nervous system consisting of nerves and ganglia outside the brain and spinal cord. The PNS connects the central nervous system (CNS) to peripheral tissues and organs. Components: (1) Cranial nerves (12 pairs)—emerging from the brain/brainstem, innervating head, neck, and viscera.

Peripheral Nervous System

The peripheral nervous system includes nerves and ganglia outside the brain and spinal cord and carries sensory, motor, and autonomic signals between the body and central nervous system.

Peripheral Neuritis (Peripheral Neuropathy)

Alternate index label for Peripheral Neuropathy.

Peripheral Neurofibromatosis

Alternate index label; see *Neurofibromatosis type 1*.

Peripheral Neuropathy

A disorder of peripheral nerves causing sensory, motor, and/or autonomic symptoms in a distal, symmetric 'stocking-glove' pattern.

Alternate Names:

Neuropathy, Peripheral Peripheral Neuritis (Peripheral Neuropathy)

Peripheral Neuropathy Diabetic (Diabetic Neuropathy)

Alternate index label for Diabetic Neuropathy.

Peripheral Oedema

Alternate spelling of Peripheral Edema; swelling caused by excess interstitial fluid, usually in the limbs.

Peripheral Vascular Disease

Disease involving narrowed or blocked blood vessels outside the heart and brain.

Alternate Names:

Peripheral arterial disease PVD (Peripheral Vascular Disease)

Peripheral Vascular Disease

Alternate index label for Peripheral Vascular Disease.

Peripheral Vision

The portion of the visual field outside the direct line of sight.

Alternate Names:

Side vision

Peripherally Inserted Central Catheter

A long, flexible catheter inserted into the basilic or cephalic vein and advanced so the tip sits in the superior vena cava. Inserted at the bedside, often by a specialized PICC nurse, with ultrasound and ECG or X-ray confirmation. Indications: long-term IV antibiotics (>2 weeks), TPN, chemotherapy, and frequent blood draws.

Peripherally Inserted Central Catheter - Dressing Change

A medical procedure, device, or treatment involving peripherally inserted central catheter - dressing change. Its purpose, risks, and follow-up depend on the specific intervention and patient.

Peripherally Inserted Central Catheter - Flushing

A medical procedure, device, or treatment involving peripherally inserted central catheter - flushing. Its purpose, risks, and follow-up depend on the specific intervention and patient.

Peripherally Inserted Central Catheter - Insertion

A medical procedure, treatment, device, or care topic related to peripherally inserted central catheter - insertion; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Periplasm

The periplasm is the space between the inner and outer membranes of Gram-negative bacteria, containing enzymes, transport proteins, and structural components.

Periprosthetic Joint Infection

Infection involving a joint prosthesis and adjacent tissues. Diagnosis integrates clinical findings, inflammatory markers, joint-fluid analysis and culture, and imaging; treatment may require debridement, implant retention, staged exchange, or resection arthroplasty.

Perirenal Abscess

A perirenal abscess is a collection of pus around the kidney, usually from spread of a urinary or kidney infection, causing fever, flank pain, and possible sepsis.

Perirenal Extramedullary Hematopoiesis

Formation of blood cells in the tissue surrounding the kidney, occurring as a compensatory response to chronic severe anemia such as myelofibrosis or thalassemia major.

Perirenal Hematoma

A collection of blood around the kidney, usually caused by trauma, a bleeding lesion, a procedure, or anticoagulation.

Peristalsis

Peristalsis is coordinated, wave-like contraction of smooth muscle that propels food, fluid, or other contents through the gastrointestinal tract and some ducts.

Peritoneal

Peritoneal means relating to the peritoneum, the thin membrane lining the abdominal cavity and covering many abdominal organs.

Peritoneal Carcinomatosis

Diffuse metastatic seeding of the peritoneal cavity from gastrointestinal or ovarian malignancies. Presents with ascites, bowel obstruction, and cachexia. Diagnosed by CT and paracentesis showing malignant cells. Prognosis is generally poor.

Peritoneal Cavity

The potential space between the parietal and visceral peritoneum surrounding abdominal and pelvic organs; fluid, blood, pus, or tumor cells can accumulate there.

Peritoneal Dialysis

Dialysis using the peritoneal membrane as the exchange surface. Continuous ambulatory peritoneal dialysis uses manual exchanges, whereas automated peritoneal dialysis uses a cycler, often overnight. It can provide home-based therapy and may offer hemodynamic stability. Complications include peritonitis, catheter infection, inadequate ultrafiltration, and fluid imbalance. A Tenckhoff catheter is commonly used.

Peritoneal Dialysis Catheter

Flexible tube surgically placed into the peritoneal cavity for peritoneal dialysis. The Tenckhoff catheter is the most commonly used type with one or two cuffs that promote tissue ingrowth and anchor the catheter. Placement can be done surgically, laparoscopically, or percutaneously under radiological guidance.

Peritoneal Diseases

Disorders affecting the peritoneum, including infection, inflammation, malignancy, hemorrhage, adhesions, and fluid accumulation.

Peritoneal Fluid

Peritoneal fluid is the small amount of lubricating fluid in the abdominal cavity; excess or infected

fluid may cause ascites, peritonitis, or diagnostic findings.

Peritoneal Fluid Analysis

Laboratory examination of ascitic fluid, including cell count, albumin, protein, culture, and selected chemical tests, to determine the cause of ascites and detect infection or malignancy.

Peritoneal Fluid Culture

Culture of ascitic fluid to detect microorganisms, particularly in suspected spontaneous bacterial peritonitis or secondary peritoneal infection.

Peritoneal Infection

Infection of the lining of the abdominal cavity, often called peritonitis. Causes include a ruptured appendix or bowel, abdominal surgery, pelvic infection, or contamination during dialysis. Severe abdominal pain, fever, vomiting, or a rigid abdomen requires urgent assessment.

Peritoneal Lavage

Peritoneal lavage is washing or sampling the abdominal cavity with sterile fluid, historically used to detect internal bleeding or contamination and sometimes used therapeutically.

Peritoneal Necrosis

Death of peritoneal tissue caused by ischemia, severe infection, inflammation, trauma, or tumor, potentially leading to peritonitis, adhesions, sepsis, or organ failure.

Peritoneal Sac

The peritoneal sac is the potential space enclosed by the peritoneum, containing lubricating fluid and allowing abdominal organs to move with minimal friction.

Peritoneum

The serous membrane lining the abdominal cavity and covering the abdominal organs. Parietal peritoneum lines the abdominal wall (innervated by somatic nerves—pain is well-localized); visceral

peritoneum covers organs (innervated by visceral afferents—pain is dull, poorly localized).

Peritoneum Neoplasm

A peritoneal neoplasm is an abnormal growth in the lining of the abdominal cavity and may be primary or spread from another cancer.

Peritonitis

Peritonitis is inflammation or infection of the peritoneum, often from perforation, surgery, ascites infection, or abdominal disease, and may cause severe pain, ileus, sepsis, and shock. organ, appendicitis, abdominal trauma, or infection of ascitic fluid. Severe abdominal pain, guarding, fever, vomiting, or shock requires urgent medical evaluation.

Peritonitis - Secondary

Secondary peritonitis is infection of the abdominal lining caused by a perforated or injured gastrointestinal or other abdominal organ and may rapidly lead to sepsis.

Peritonitis - Spontaneous Bacterial

Infection of ascitic fluid without an evident surgically treatable intra-abdominal source, most often in advanced cirrhosis or other severe liver disease.

Peritonitis In PD

Infection or inflammation of the peritoneum in a person receiving peritoneal dialysis. Cloudy effluent, abdominal pain, or fever requires prompt evaluation of the effluent and other causes. Treatment usually includes antibiotics selected for the suspected organisms; recurrent or refractory infection may require catheter removal.

Peritonsillar Abscess

A collection of pus beside the tonsil, usually developing as a complication of tonsillar infection. See Quinsy.

Periungual Fibroma

Benign, flesh-colored or pink fibrous tumors arising from the nail fold or nail bed, presenting as firm, exo-

phytic nodules that may distort the nail plate. They occur sporadically or in association with tuberous sclerosis complex. When multiple periungual fibromas are present, they raise suspicion for tuberous sclerosis.

Periurethral

Situated, occurring, or distributed immediately surrounding the female or male urethra. Clinically significant in urology and gynecology, describing periurethral glands (such as the Skene glands in females, which can develop infection, abscess, or urethral diverticula), periurethral collagen or bulking agent injections for female stress urinary incontinence, and periurethral prostate zones (the transition zone surrounding the proximal urethra, which undergoes progressive hyperplasia in benign prostatic hyperplasia [BPH], producing lower urinary tract obstructive symptoms).

Periventricular Leukomalacia

Ischemic white matter injury in the premature infant brain, a major cause of cerebral palsy. Risk factors include prematurity, hypotension, and inflammation. Diagnosis by cranial ultrasound showing periventricular echodensities or cystic changes. Prevention: avoiding hypotension, maintaining normothermia, and managing infection.

Perivitelline Space

The perivitelline space is the narrow region between an egg's plasma membrane and surrounding vitelline or zona material, important in fertilization and early development.

Perleche

Angular cheilitis, inflammation and cracking at the corners of the mouth.

Permanent Teeth

The adult set of teeth that replaces the deciduous teeth.

Permease

A permease is a membrane transport protein that facilitates movement of a specific molecule or ion

across a cell membrane.

Permethrin

A topical pyrethroid medicine used mainly to treat scabies and head lice.

Permissive Hypercapnia

A ventilator strategy that allows PaCO₂ to rise above normal (and pH to fall) in exchange for lung-protective ventilation with lower tidal volumes and airway pressures. It is used in severe ARDS when achieving normal PaCO₂ would require harmful ventilation parameters.

Permissiveness

Permissiveness is the ability of a cell or host environment to allow a biological process, such as viral replication, gene expression, or tissue response, to occur.

Pernicious Anaemia

An autoimmune cause of vitamin B12 deficiency due to impaired intrinsic-factor-mediated absorption.

Pernicious Anemia

A type of vitamin B12 deficiency anemia caused by autoimmune destruction of gastric parietal cells, leading to lack of intrinsic factor and impaired B12 absorption in the terminal ileum.

Alternate Names:

Addisons Anemia (Pernicious Anemia)

Pernio

Alternate index label; see *Chilblains*.

Peroneal

Relating to the fibula or the muscles and nerve on the outer side of the lower leg.

Peroneal Muscular Atrophy

Alternate index label; see *Charcot-Marie-Tooth disease*.

Peroneal Nerve

The common fibular nerve, a branch of the sciatic

nerve that winds around the fibular neck and supplies sensation and muscles responsible for ankle dorsiflexion and eversion.

Peroxidase

An enzyme that uses hydrogen peroxide or another peroxide to oxidize a substrate; thyroid peroxidase is essential for thyroid-hormone synthesis.

Peroxisomal Disorder

An inherited disorder of peroxisome formation or enzyme function that disrupts lipid and plasmalogen metabolism and may cause neurologic, hepatic, skeletal, or sensory disease.

Peroxisome

Single-membrane organelles containing oxidative enzymes (catalase, urate oxidase, D-amino acid oxidase) that produce and degrade hydrogen peroxide (H₂O₂).

Peroxisome Proliferation

An increase in the number or size of peroxisomes, organelles involved in fatty-acid oxidation and reactive-oxygen metabolism, triggered by selected chemicals, hormones, or metabolic states.

Perphenazine

A first-generation (typical) phenothiazine antipsychotic used for schizophrenia and, in some settings, severe nausea or vomiting. Adverse effects can include sedation, orthostatic hypotension, extrapyramidal symptoms, tardive dyskinesia, and neuroleptic malignant syndrome.

Perseveration

Involuntary repetition of a word, idea, movement, or response after the appropriate stimulus has changed, associated with frontal or basal-ganglia disease, aphasia, delirium, or psychiatric illness.

Persistent Asthma

Asthma requiring daily controller therapy. Mild persistent: symptoms > 2 days/week but not daily. Moderate persistent: daily symptoms, nighttime

awakenings > 1/week. Severe persistent: symptoms throughout the day, frequent nighttime awakenings, SABA use several times/day, extremely limited activity.

Persistent Cloaca

Persistent cloaca is a congenital malformation in which the rectum, vagina, and urinary tract join into one channel, requiring specialist evaluation and reconstructive care.

Persistent Depressive Disorder

formerly called dysthymia, a chronic depressive mood lasting at least two years in adults (one year in children and adolescents).

Persistent Organic Pollutant

POCPs: organochlorines, PCBs, dioxins. Bioaccumulate, long-range transport, persistent. Stockholm Convention bans/restricts.

Persistent Pulmonary Hypertension Of The Newborn

Failure of the normal fall in pulmonary vascular resistance after birth, causing right-to-left shunting and hypoxaemia. Management requires urgent neonatal respiratory and circulatory support.

Persistent Pupillary Membranes

Remnants of the fetal tunica vasculosa lentis that fail to regress after birth, appearing as fine pigmented strands bridging across the pupil or attaching from the iris collarette to the lens capsule. They are usually benign and asymptomatic but may rarely obstruct the visual axis requiring surgical or laser treatment.

Person With Disability

A person with disability has a long-term physical, sensory, intellectual, or mental-health impairment that may interact with barriers to limit participation; care should be accessible and person-centered.

Personal Emergency Response System

A wearable or nearby device that lets a person

summon help during an emergency.

Alternate Names:

Medical alert system

Personal Protective Equipment

PPE: gloves, gowns, masks, eye protection. Used based on transmission-based precautions.

Personality

Personality is the relatively enduring pattern of thoughts, emotions, motivations, and behaviors through which a person experiences and responds to the world.

Personality Change

Personality change is a new or marked alteration in behavior, emotional responses, judgment, or interpersonal style, which may reflect neurologic disease, psychiatric illness, substances, or medical conditions.

Personality Disorder

A group of mental disorders characterized by enduring maladaptive patterns of thinking, feeling, and behaving that deviate from cultural expectations and cause functional impairment. Cluster A (odd/eccentric): paranoid, schizoid, schizotypal. Cluster B (dramatic/erratic): antisocial, borderline, histrionic, narcissistic.

Personality Disorder Antisocial (Antisocial Personality Disorder)

Alternate index label for Antisocial Personality Disorder.

Personality Disorder, Antisocial

Alternate index label; see *Antisocial personality disorder*.

Personality Disorder, Borderline

Alternate index label; see *Borderline personality disorder*.

Personality Disorder, Narcissistic

Alternate index label; see *Narcissistic personality*

disorder.

Personality Disorder, Schizoid

Alternate index label; see *Schizoid personality disorder*.

Personality Disorder, Schizotypal

Alternate index label; see *Schizotypal personality disorder*.

Personality Disorders

Personality disorders are enduring patterns of thought, emotion, and behavior that differ markedly from cultural expectations and cause distress or impaired functioning.

Personality Test

A psychological assessment using structured questions or stimuli to describe enduring traits, patterns, or possible personality pathology; results require validated instruments and clinical interpretation.

Perspiration

Sweat released by skin glands. Eccrine glands mainly help cool the body, while apocrine glands contribute to odor after their secretions are changed by skin bacteria; unusually heavy sweating is called hyperhidrosis.

Persuasive Communication

Communication intended to influence beliefs, decisions, or behavior through information, reasoning, emotion, or framing; healthcare use should preserve informed choice and avoid coercion.

Pertussis

Whooping cough, a contagious respiratory infection caused by *Bordetella pertussis*.

Pertussis Toxin

A toxin produced by *Bordetella pertussis* that disrupts cell signaling and contributes to the cough and systemic effects of whooping cough.

Pertuzumab

A monoclonal antibody targeting the HER2 receptor and blocking its dimerization, used with other medicines for selected HER2-positive cancers.

Pervasive Developmental Disorders

An obsolete group term for disorders involving social communication and restricted repetitive behavior, including autism-spectrum conditions.

Pes

Pes means foot; it is also used in terms describing foot shape or deformity, such as pes planus or pes cavus.

Pes Anserinus

The combined tendon insertion of the sartorius, gracilis, and semitendinosus muscles on the antero-medial proximal tibia; inflammation there is pes-anserine bursitis.

Pes Planus

Alternate index label; see *Flatfeet*.

Pes Planus (Flatfoot (Pes Planus))

Alternate index label for Flatfoot (Pes Planus).

Pessaries

Devices inserted into the vagina to support pelvic organs in cases of pelvic organ prolapse (cystocele, rectocele, uterine prolapse). Types: ring pessary (most common, with or without supportive membrane), shelf pessary (for severe prolapse), cube pessary (suction-based), and Gellhorn pessary (for advanced prolapse).

Pessary

A device placed in the vagina to support pelvic organs or deliver medication.

Pessimism

A tendency to expect negative outcomes or interpret situations unfavorably.

Pestalotiopsis

A genus of plant-associated molds that can rarely cause eye, skin, or subcutaneous infection in humans.

Pesticide

A substance used to control insects, weeds, fungi, or other pests; exposure can cause poisoning.

Pesticides

Pesticides involves toxic or environmental exposure to pesticides; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Pesticides On Fruits And Vegetables

Pesticides on fruits and vegetables involves toxic or environmental exposure to pesticides on fruits and vegetables; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Pestilence

Pestilence is an old term for a severe, widespread, often fatal infectious disease outbreak; modern usage usually specifies the pathogen and epidemiologic event.

Pet Allergy

An allergic reaction to proteins in an animal's skin flakes, saliva, or urine, commonly causing rhinitis, conjunctivitis, or asthma.

PET Scan

An imaging study using a positron-emitting tracer to measure metabolism, receptor activity, or tissue function.

PET Scan (Positron Emission Tomography)

Nuclear medicine imaging using radioactive tracers (most commonly FDG, a glucose analog) to detect metabolically active tissues.

Alternate Names:

Positron Emission Tomography

PET Scan For Breast Cancer

Positron-emission tomography, usually combined with computed tomography, used selectively to assess metabolically active breast cancer, staging, recurrence, or treatment response.

PET Scanner

Ring of detectors capturing coincidence events. BGO, LSO, or LYSO crystals. Time-of-flight PET improves signal-to-noise.

PET Tracers

18F-FDG: glucose metabolism (cancer, infection, inflammation). 18F-fluoride: bone turnover. 11C-metionine: protein synthesis. 68Ga-DOTATATE: somatostatin receptors. 68Ga-PSMA: prostate cancer.

PET/CT

Combined PET and CT imaging. CT provides anatomical localization and attenuation correction. Essential for accurate interpretation. Low-dose CT for attenuation correction; diagnostic CT for detailed anatomy.

PET/MRI

Combined PET and MRI. Superior soft tissue contrast, no ionizing radiation from CT. Useful for neurology, oncology, cardiology. Longer scan time, higher cost.

Petechia

A petechia is a tiny nonblanching red, purple, or brown spot caused by bleeding from small vessels into the skin or mucosa; numerous or rapidly spreading petechiae need assessment.

Petechiae

Tiny nonblanching red or purple spots caused by small areas of bleeding into the skin or mucosa.

Petit Mal

An older term for absence seizures, brief episodes of impaired awareness with characteristic generalized EEG activity.

Petit Mal Seizure

Alternate index label; see *Absence seizure*.

Petri Dish

A Petri dish is a shallow lidded laboratory container used to culture microorganisms or cells and to hold specimens or small samples.

Petrissage

A massage technique involving kneading or lifting soft tissues.

Petrolatum

A semisolid mixture of hydrocarbons used as a protective skin ointment and moisture barrier.

Petroleum Jelly Overdose

Petroleum jelly overdose involves toxic or environmental exposure to petroleum jelly overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Petrositis

Inflammation or infection of the petrous portion of the temporal bone, usually arising from complicated otitis media and potentially affecting nearby cranial nerves.

Petrous

Dense and rock-like; usually referring to the petrous part of the temporal bone.

Pets And The Immunocompromised Person

People with weakened immunity can often keep pets but should reduce exposure to animal waste, scratches, bites, and unsafe food and follow individualized medical advice.

Peutz-Jeghers Syndrome

An autosomal dominant neurocutaneous disorder caused by germline loss-of-function mutations in the STK11 (LKB1) tumor suppressor gene on chromosome 19p13.

Alternate Names:

PJS

Peutz-Jeghers'S Syndrome

An autosomal dominant condition caused by STK11 gene mutations, characterized by hamartomatous polyps throughout the gastrointestinal tract and mucocutaneous hyperpigmented macules on the lips, buccal mucosa, and digits. The polyps may cause gastrointestinal bleeding, intussusception, and obstruction.

PEWS

Alternate name; see *Pediatric Early Warning Score*.

Pexophagy

Pexophagy is selective autophagic degradation of peroxisomes, allowing cells to remove damaged or excess organelles and recycle their components.

Peyer Patches

Aggregated lymphoid follicles in the mucosa and submucosa of the ileum that monitor intestinal contents and support immune defense.

Peyer'S Patches

Organized lymphoid tissue in the mucosa and submucosa of the ileum. These aggregates sample intestinal contents and contribute to immune surveillance of the gastrointestinal tract.

Alternate Names:

ileal lymphoid nodules

Peyronie Disease

Fibrous plaque in penis causing curvature, pain, erectile dysfunction. Treatment: observation, medications, injection therapy, surgery.

Peyronie'S Disease

A condition in which scar tissue in the penis causes curvature or pain during erection.

Peyronie'S Disease (Curvature Of The Penis)

Alternate index label for Curvature of the Penis.

Peyronie'S Disease

Scar tissue within the penis that can cause curvature and pain during erection.

Alternate Names:

Peyronie disease

Pfeiffer Syndrome

An autosomal dominant craniosynostosis syndrome caused by FGFR1 or FGFR2 mutations. Features: craniosynostosis (bilateral coronal), midface hypoplasia, proptosis, hypertelorism, broad thumbs and great toes (medial deviation), and variable syndactyly.

Alternate Names:

Syndrome Pfeiffer (Pfeiffer Syndrome)

PH

Measure of hydrogen ion concentration: $\text{pH} = -\log[\text{H}^+]$. Normal blood pH: 7.35-7.45. Acidemia: $\text{pH} < 7.35$. Alkalemia: $\text{pH} > 7.45$. Buffers minimize pH changes.

PH Meter

An instrument that measures acidity or alkalinity as pH in a solution or specimen; clinical applications include gastric, urinary, laboratory, and environmental measurements.

PH Monitoring

Measurement of acidity, usually in the esophagus, over time with a small sensor. It can help detect and measure acid reflux when symptoms or endoscopy do not give a clear answer.

Ph.D.

A Ph.D. is a doctoral research degree awarded after advanced study and an original dissertation; it does not by itself confer a clinical license.

Phacoemulsification

A cataract-surgery technique that uses ultrasound to break up and remove the cloudy lens through a small incision. An intraocular lens is usually implanted to restore focusing ability.

Phagocyte

A cell that engulfs and digests microorganisms, dead cells, or foreign particles.

Phagocytes

Immune cells that engulf and digest microorganisms, dead cells, and other particles.

Phagocytic Vesicle

A phagocytic vesicle, or phagosome, is the membrane-bound compartment formed when a cell engulfs a particle before fusion with lysosomes for digestion.

Phagocytosis

The process by which a cell surrounds, ingests, and digests a particle or microorganism.

Phagolysosome

A phagolysosome forms when a phagosome fuses with a lysosome, exposing engulfed microbes or debris to enzymes and toxic substances for destruction.

Phagophores

Phagophores are isolation membranes that expand around cytoplasmic material during autophagy and close to form autophagosomes.

Phalanges

The 56 tubular small long bones constituting the skeletal architecture of the digits (fingers and toes) in humans. Each human hand and foot contains 14 phalanges: two in the first digit (pollex/thumb and hallux/great toe, consisting of proximal and distal phalanges) and three in each of the four lateral digits (digits II–V, consisting of proximal, middle, and distal phalanges). Connected by hinge-type interphalangeal joints (proximal PIP and distal DIP joints) reinforced by collateral ligaments and volar plates; commonly fractured in manual trauma, affected by inflammatory erosions in rheumatoid arthritis (PIP synovitis) and osteoarthritis (Bouchard and Heberden nodes).

Phalanx

A single individual tubular bone of any digit of the hand or foot. Anatomically consists of an expanded base (articulating proximally), a slender shaft (body), and a distal head (trochlea) articulating with the adjacent phalanx or terminating in a flattened, spatulate apical tuft on distal phalanges. Distal phalanges support the overlying nail bed and dense fibrofatty pulp space of the digital pad, where closed space infection can lead to a painful digital felon.

Phalanx Unspecified

A phalanx is one of the bones of a finger or toe; “unspecified” indicates that the particular digit or proximal, middle, or distal segment is not identified.

Phalen Test

Wrist flexion test for carpal tunnel syndrome. Symptoms reproduced within 60 seconds.

Phallic Stage

A historical psychoanalytic developmental stage centered on genital awareness; it is not a modern disease classification.

Phantom

Device simulating human anatomy for quality control and calibration. Types: line source, uniform, Jaszczak, NEMA IU body phantom.

Phantom Limb

The sensation that an amputated limb is still present, sometimes with pain.

Alternate Names:

Phantom-limb sensation

Phantom Limb Pain

Painful sensations perceived in a limb that has been amputated, caused by persistent or reorganized activity in peripheral nerves and central sensory pathways. It may feel burning, shooting, cramping, or electric.

Phantom Pain

Pain perceived in a body part that has been amputated, caused by changes in peripheral nerves and central pain-processing pathways.

Phantosmia

Perception of a smell when no corresponding odor is present. It may occur with sinonasal disease, migraine, seizures involving olfactory networks, head injury, neurodegenerative disease, infection, or other neurological conditions.

Pharmaceutical Adjuvant

A pharmaceutical adjuvant is an inactive or auxiliary ingredient added to improve a medicine’s stability, absorption, preservation, delivery, or therapeutic effect.

Pharmaceutical Excipient

A pharmaceutical excipient is a non-active ingredient in a dosage form, such as a filler, binder, coating, solvent, preservative, or disintegrant.

Pharmaceutical Solutions

Liquid preparations in which one or more active pharmaceutical ingredients are dissolved in a suitable vehicle for administration, with concentration, sterility, stability, and route determining safe use.

Pharmacist

A healthcare professional trained in medicines, including their preparation, dispensing, safety, and use.

Pharmacodynamics

The study of what a drug does to the body, including its molecular targets, mechanism of action, dose-response relationship, therapeutic effects, and adverse effects.

Pharmacogenetic Testing

Testing for genetic variants that influence a person’s response, metabolism, efficacy, or toxicity of particular medicines and may support individualized prescribing.

Pharmacogenetics

Pharmacogenetics studies how inherited genetic variation alters a person's response to medicines, including efficacy, metabolism, and adverse-effect risk, to support individualized prescribing. toxicity), CYP2C9/VKORC1 (warfarin dosing), HLA-B*1502 (carbamazepine SJS in Asians), HLA-B*5701 (abacavir hypersensitivity), UGT1A1 (irinotecan toxicity).

Pharmacogenomic Testing

Testing that examines genetic variants affecting drug metabolism, transport, targets, or adverse reactions to help select or dose certain medicines.

Pharmacogenomics

The study of how genetic variations influence individual responses to drugs, including drug efficacy, toxicity, and metabolism. Genetic polymorphisms in drug-metabolizing enzymes, transporters, and receptors can lead to significant inter-individual variability in drug response.

Pharmacokinetics

The study of what the body does to a drug, including absorption, distribution, metabolism, and excretion, and how drug concentrations change over time.

Pharmacologic Substance

A pharmacologic substance is a chemical that produces a biological effect by interacting with cells, receptors, enzymes, transporters, or other targets.

Pharmacological Stress Test

Stress testing using medications (dobutamine, adenosine, regadenoson). For patients unable to exercise.

Pharmacologist

A pharmacologist studies how medicines and chemicals act in living systems, including mechanisms, metabolism, toxicity, and therapeutic effects.

Pharmacology

The study of drugs, their actions, uses, adverse

effects, and interactions.

Pharmacopoeia

A pharmacopoeia is an official reference specifying standards for identity, purity, strength, testing, and preparation of medicines.

Pharmacotherapy

Pharmacotherapy is treatment with medicines chosen to prevent, relieve, or control a disease or symptom.

Pharmacovigilance

The science and activities relating to the detection, assessment, understanding, and prevention of adverse drug reactions and other drug-related problems.

Pharmacy

The science and practice of preparing, supplying, and advising on medicines.

Pharmacy Facility

A pharmacy facility is an authorized location where medicines may be stored, prepared, dispensed, monitored, and supplied under applicable professional and safety standards.

Pharyngeal

Relating to or located in the pharynx, the fibromuscular conduit extending from the base of the skull to the lower border of the cricoid cartilage (level of C6), connecting the oral and nasal cavities to the larynx and esophagus. Divided anatomically into three regions: nasopharynx, oropharynx, and laryngopharynx (hypopharynx). Pathologies include acute infectious pharyngitis (viral or group A beta-hemolytic *Streptococcus*), pharyngeal diverticulum (Zenker diverticulum through Killian triangle), obstructive sleep apnea due to retropalatal pharyngeal collapse, and squamous cell carcinomas (frequently HPV-positive in the oropharynx).

Pharyngeal Carcinoma

Pharyngeal carcinoma is cancer arising in the throat

and may cause persistent sore throat, swallowing difficulty, hoarseness, or a neck mass.

Pharyngeal Disease

A disorder affecting the pharynx, including infection, inflammation, obstruction, trauma, neuromuscular dysfunction, or tumor.

Pharyngeal Hemorrhage

Bleeding from the pharynx caused by trauma, surgery, infection, vascular lesions, tumor, or severe mucosal disease and potentially threatening the airway.

Pharyngeal Mucositis

Inflammation and ulceration of the throat lining, commonly caused by radiation, chemotherapy, infection, trauma, or medications and producing pain, difficulty swallowing, and reduced intake.

Pharyngeal Stenosis

Narrowing of the pharyngeal passage caused by scarring, congenital abnormality, tumor, inflammation, or surgery, which may impair swallowing or breathing.

Pharyngeal Tonsil

The adenoid tissue located in the roof of the nasopharynx, behind the nose.

Pharyngectomy

Pharyngectomy is surgical removal of part or all of the pharynx, usually to treat cancer.

Pharyngitis

Inflammation of the pharynx, commonly causing sore throat and pain on swallowing.

Alternate Names:

Sore Throat (Pharyngitis)

Pharyngitis (Sore Throat (Pharyngitis))

Alternate index label for Sore Throat (Pharyngitis).

Pharyngitis - Sore Throat

Pharyngitis is inflammation of the throat causing

pain with swallowing, commonly from viral infection and sometimes from group A streptococcal infection or other causes.

Pharyngitis - Viral

Viral pharyngitis is inflammation of the throat caused by a virus, commonly producing sore throat, cough, runny nose, or fever and usually resolving with supportive care.

Pharyngolaryngeal Pain

Pain involving the pharynx and larynx, commonly associated with infection, inflammation, irritation, trauma, reflux, or malignancy.

Pharyngomaxillary Space Abscess

A pharyngomaxillary space abscess is a deep infection containing pus near the pharynx and maxilla that can cause severe pain, swelling, difficulty swallowing, and airway risk.

Pharynx

The muscular throat passage behind the nose and mouth that leads to the larynx and oesophagus.

Pharynx Necrosis

Death of tissue in the throat caused by severe infection, ischemia, radiation, caustic injury, or tumor, with risk of deep infection, bleeding, airway compromise, and sepsis.

Pharynx Neoplasm

A pharynx neoplasm is an abnormal growth in the throat that may be benign or malignant.

Phase I Metabolism

Phase I metabolism involves chemical modification of drug molecules through oxidation, reduction, and hydrolysis reactions, primarily catalyzed by the cytochrome P450 enzyme system in the liver.

Phase II Metabolism

Phase II metabolism, also known as conjugation reactions, involves the attachment of endogenous hydrophilic molecules to drugs or their Phase I metabo-

lites, dramatically increasing water solubility and facilitating renal excretion.

Alternate Names:

conjugation reactions, involves the attachment of.

Phase-Contrast Microscopy

A diagnostic or laboratory method related to phase-contrast microscopy. Results are interpreted with the method, reference range, and clinical findings.

Phe

Phe is the standard abbreviation for phenylalanine, an essential amino acid incorporated into proteins and metabolized through a pathway disrupted in phenylketonuria.

Phelan-McDermid Syndrome

A contiguous gene microdeletion syndrome caused by terminal microdeletions of chromosome 22q13.3 or pathogenic loss-of-function variants in the *SHANK3* gene, which encodes a master scaffold protein in the postsynaptic density of excitatory glutamatergic synapses. Characterized by neonatal hypotonia, global developmental delay, severe intellectual disability, profound expressive speech delay or complete absence of speech, autistic spectrum behaviors, high pain tolerance, and minor dysmorphic findings such as long eyelashes, large fleshy hands, and hypoplastic dysplastic toenails.

Alternate Names:

22q13.3 Deletion Syndrome

Phenacetin

Phenacetin is a former analgesic and fever-reducing drug withdrawn or restricted because long-term use can cause kidney damage and increase cancer risk.

Phenazopyridine

Phenazopyridine is a urinary analgesic that temporarily relieves dysuria without treating its cause; it can turn urine orange and prolonged or excessive use may cause haemolysis or methemoglobinaemia.

Phencyclidine

A dissociative drug that can cause altered percep-

tion, agitation, hallucinations, impaired coordination, or dangerous behavior.

Phencyclidine Overdose

Phencyclidine overdose involves toxic or environmental exposure to phencyclidine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Phenelzine

A monoamine oxidase inhibitor antidepressant requiring attention to interactions and dietary precautions.

Phenethyl Isothiocyanate

Phenethyl isothiocyanate is a sulfur-containing compound found in some plants and studied experimentally for antimicrobial and anticancer effects.

Phenethylamines

Phenethylamines are a chemical family including neurotransmitters, medicines, and psychoactive substances that can affect adrenergic, dopaminergic, or serotonergic signaling.

Phenformin

Phenformin is a former biguanide diabetes medicine withdrawn because it can cause life-threatening lactic acidosis.

Phenindione

An older oral anticoagulant that interferes with vitamin-K-dependent clotting factors.

Pheniramine Overdose

Pheniramine overdose involves toxic or environmental exposure to pheniramine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Phenobarbital

Phenobarbital is a long-acting barbiturate anti-seizure medicine that enhances GABA-A receptor inhibition; sedation, respiratory depression, cognitive effects, dependence, and enzyme-inducing drug

interactions are important risks.

Phenobarbital Overdose

Phenobarbital overdose involves toxic or environmental exposure to phenobarbital overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Phenobarbitone

The British name for phenobarbital, a barbiturate anticonvulsant and sedative.

Phenocopy

A phenocopy is a trait resembling an inherited phenotype but produced by an environmental exposure, disease, or other non-genetic cause.

Phenol

A corrosive aromatic compound used in chemical and laboratory applications and in some medical preparations.

Phenolphthalein

A chemical indicator formerly used in some laxatives; long-term use is avoided because of safety concerns and more suitable alternatives.

Phenols

A group of aromatic chemicals that can burn skin and mucous membranes and cause systemic poisoning if absorbed or swallowed.

Phenomenon

An observable biological occurrence, clinical physical sign, physiological event, or characteristic disease manifestation recognized in clinical medicine. Prominent medical eponyms include the Raynaud phenomenon (episodic digital vasospasm triggered by cold or emotional stress, progressing through classic triphasic pallor, cyanosis, and reactive rubor), the Koebner phenomenon (isomorphic skin lesion development at sites of cutaneous trauma in psoriasis or lichen planus), the Dawn phenomenon (early-morning hyperglycemia secondary to physiological circadian cortisol and growth hormone surges

in diabetes mellitus), and the Bell phenomenon (normal reflex upward and outward deviation of the eye during forced eyelid closure).

Phenothiazine

Phenothiazine is a chemical class that includes several antipsychotic and antiemetic medicines, with possible sedation, movement, and cardiac adverse effects.

Phenothiazine Overdose

Phenothiazine overdose involves toxic or environmental exposure to phenothiazine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Phenothiazines

A class of medicines including antipsychotic and antiemetic drugs.

Phenotype

Observable characteristics of an individual, resulting from genotype and environmental interactions. Includes morphology, development, biochemical properties, behavior.

Phenoxodiol

Phenoxodiol is an investigational anticancer compound studied for effects on apoptosis and cellular signaling.

Phenoxybenzamine

An irreversible alpha-adrenergic blocker used mainly before surgery for pheochromocytoma.

Phenoxymethylpenicillin

Penicillin V, an oral penicillin used for selected susceptible infections.

Phenprocoumon

Phenprocoumon is a long-acting vitamin-K antagonist anticoagulant that reduces clotting-factor production and requires coagulation monitoring.

Phentermine

A sympathomimetic appetite suppressant used short term in selected weight-management plans.

Phenthoate

Phenthoate is an organophosphate insecticide that can inhibit acetylcholinesterase and cause cholinergic poisoning after exposure.

Phentolamine

Phentolamine is a short-acting alpha-adrenergic blocker used for catecholamine-related hypertension and to limit tissue injury after certain vasoconstrictor leaks.

Phenylacetate

A salt or ester of phenylacetic acid used in some metabolic and experimental medical applications; it can bind nitrogen-containing metabolites.

Phenylalanine

An essential amino acid incorporated into proteins and converted to tyrosine; impaired metabolism causes phenylketonuria and requires dietary or medical management.

Phenylbutazone

An older NSAID with serious blood, kidney, gastrointestinal, and other toxicity risks.

Phenylbutyrate

A nitrogen-scavenging medicine converted to phenylacetate, which combines with glutamine and facilitates nitrogen excretion in selected urea-cycle disorders.

Phenylephrine

An alpha-adrenergic agonist used as a decongestant, vasopressor, or pupil dilator.

Phenylketonuria

An inherited metabolic disease, usually caused by reduced phenylalanine hydroxylase activity, that leads to phenylalanine accumulation and reduced tyrosine availability. Without early treatment, it

can impair brain development and cause intellectual disability, seizures, eczema, or a musty odor. Newborn screening and lifelong dietary or medical treatment can prevent or reduce complications.

Alternate Names:

Phenylketonuria (PKU) PKU

Phenylpropanolamine

A sympathomimetic decongestant formerly used in some products; it can raise blood pressure and has been restricted because of safety concerns.

Phenytoin

An anticonvulsant that blocks voltage-gated sodium channels and treats selected seizures.

Phenytoin Overdose

Phenytoin overdose involves toxic or environmental exposure to phenytoin overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Phenytoin Sodium

The sodium salt of phenytoin, an anticonvulsant used for selected focal and generalized tonic-clonic seizures; toxicity can cause nystagmus, ataxia, arrhythmia, or severe skin reactions.

Pheochromocytoma

A catecholamine-producing tumor of chromaffin cells, usually in the adrenal medulla, causing episodic or sustained hypertension.

Alternate Names:

Tumor Adrenal Gland (Pheochromocytoma)

Pheresis

Pheresis is removal of a selected component from blood by an apheresis machine while returning the remaining blood components to the donor or patient.

Pheromone

A pheromone is a chemical signal released by an organism that alters behavior or physiology in another member of the same species.

Phialemonium Atrogriseum

A darkly pigmented environmental mold that can rarely cause opportunistic eye, skin, bloodstream, or disseminated infection.

Phialophora

A genus of darkly pigmented fungi that can cause chromoblastomycosis or other subcutaneous and opportunistic infections.

Phialophora Verrucosa

A dematiaceous fungus that commonly causes chromoblastomycosis, a chronic warty skin and subcutaneous infection.

Philadelphia Chromosome

A chromosome rearrangement, usually t(9;22), that creates the BCR::ABL1 fusion gene and is characteristic of most cases of chronic myeloid leukemia.

Philodendron Poisoning

Philodendron poisoning involves toxic or environmental exposure to philodendron poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Phimosis

Inability to retract the foreskin behind the glans; pathologic cases may cause pain, infection, or urinary difficulty.

Phimosis And Paraphimosis (Penis Disorders)

Alternate index label for Penis Disorders.

Phlebitis

Inflammation of a vein, causing pain, warmth, redness, or tenderness along its course. It may occur with a blood clot, called thrombophlebitis, or after irritation from an intravenous line.

Phlebitis And Thrombophlebitis

Phlebitis is inflammation of a vein, while thrombophlebitis includes a clot within the inflamed vein. Superficial disease causes localized pain and redness;

deep-vein thrombosis can embolize to the lungs and is suspected with limb swelling, pain, or breathlessness.

Phlebography

Venography using contrast dye. Used for diagnosing venous thrombosis, malformations. Largely replaced by duplex ultrasound.

Phlebotomy

The collection of blood from a vein, usually with a needle.

Alternate Names:

Venipuncture

Phlebovirus

A genus of segmented RNA viruses, many transmitted by sandflies or mosquitoes; some cause fever, encephalitis, or hemorrhagic disease.

Phlegm

Thick mucus coughed up from the lower respiratory tract.

Phlegmasia Cerulea Dolens

Phlegmasia cerulea dolens is a severe, extensive deep-vein thrombosis that obstructs venous outflow, causing painful swollen blue discoloration and risking limb ischemia or pulmonary embolism.

Phobia

An excessive, persistent fear of a specific object or situation that leads to avoidance or distress.

Phobia - Simple/Specific

A specific phobia is intense, persistent fear of a particular object or situation that is excessive, leads to avoidance, and interferes with life.

Phobia, Social

Alternate index label; see *Social anxiety disorder (social phobia)*.

Phobias

Persistent, excessive fear of a specific object or situ-

ation that leads to avoidance or significant distress.

Phobic Disorder

A disorder characterized by clinically significant fear and avoidance of a particular object or situation.

Phocomelia

A rare congenital limb-development defect in which hands or feet are attached close to the trunk because of absent or severely shortened long bones.

Phonation

Production of voiced sound when exhaled air makes the vocal folds vibrate in the larynx; disorders cause hoarseness, weak voice, or loss of voice.

Phonocardiogram

A graphic recording of heart sounds and murmurs, traditionally made with a microphone over the chest. It can document timing and duration but is usually interpreted with examination and echocardiography.

Phonocardiography

Graphic recording of heart sounds and murmurs using a microphone and recording system.

Phonological Disorder

A communication disorder involving persistent difficulty producing or organizing speech sounds beyond what is expected for age and language development.

Phonophobia

Abnormal sensitivity to or fear of sound, often associated with migraine.

Phorate

Phorate is a highly toxic organophosphate pesticide whose exposure can produce excessive cholinergic activity and medical emergency.

Phorbol Ester

A phorbol ester is a plant-derived compound that activates protein kinase C and is used in research on inflammation, signaling, and tumor promotion.

Phorbols

Phorbols are diterpene compounds related to phorbol esters that can activate cellular protein kinase C signaling.

Phorometer

An instrument used to measure ocular alignment and the amount of prism correction needed for binocular vision disorders.

Phosgene

A highly toxic industrial gas that reacts with moist respiratory tissues and can cause delayed pulmonary edema, cough, chest tightness, and respiratory failure after exposure.

Phosgene Oxime

A highly corrosive chemical warfare agent that causes immediate severe pain, skin and eye injury, airway damage, and tissue necrosis on contact.

Phosmet

Phosmet is an organophosphate insecticide that can inhibit acetylcholinesterase and cause cholinergic toxicity after substantial exposure.

Phosphamidon

An organophosphate insecticide that can cause cholinergic poisoning by inhibiting acetylcholinesterase.

Phosphate

A salt or ester of phosphoric acid; phosphate is important in bone, energy metabolism, and cellular signaling.

Phosphate Binders

Calcium acetate, sevelamer, lanthanum. Bind dietary phosphate in GI tract. Target normal serum phosphorus in CKD-MBD. Avoid calcium-based binders in patients with vascular calcification.

Phosphate Homeostasis

Serum phosphate is regulated by the interplay of PTH vitamin D and fibroblast growth factor 23.

PTH promotes renal phosphate excretion. Active vitamin D stimulates intestinal phosphate absorption. FGF23 produced by osteocytes inhibits renal phosphate reabsorption and suppresses 1-alpha-hydroxylase reducing active vitamin D production.

Phosphatidic Acid

A membrane phospholipid and signaling intermediate that serves as a precursor for other glycerolipids and influences membrane curvature, trafficking, and cell growth.

Phosphatidylcholine

A major membrane phospholipid and component of pulmonary surfactant, lipoproteins, and bile; it also participates in cell signaling.

Phosphatidylethanolamines

Membrane phospholipids containing ethanolamine that help determine membrane structure, fusion, and cell signaling.

Phosphatidylinositol

A membrane phospholipid that serves as a precursor for signaling molecules and helps anchor proteins to cell membranes.

Phosphatidylserine

A membrane phospholipid normally concentrated on the inner cell surface that becomes exposed during apoptosis and helps signal cell removal.

Phosphatidylserines

Molecules of phosphatidylserine, a membrane phospholipid involved in apoptosis, coagulation, membrane structure, and cell signaling.

Phosphaturic Mesenchymal Tumor

A usually benign mesenchymal tumor that secretes fibroblast growth factor 23 and causes tumor-induced osteomalacia with phosphate wasting, bone pain, weakness, and fractures; removal is usually curative.

Phosphine

A highly toxic gas used in some industrial or pest-control settings that can cause severe lung, heart, liver, kidney, and neurologic injury.

Phosphodiesterase-5 Inhibitors

Medications that inhibit PDE-5, increasing cGMP and causing smooth muscle relaxation and vasodilation. Sildenafil and tadalafil are used for PAH and erectile dysfunction. In PAH, they reduce pulmonary vascular resistance and improve exercise capacity.

Phosphofructokinase-1

Rate-limiting enzyme of glycolysis. Activated by AMP, fructose-2,6-bisphosphate. Inhibited by ATP, citrate.

Phospholipase C Pathway

A GPCR signaling pathway activated primarily by Gq-protein coupled receptors (e.g., alpha-1 adrenergic, muscarinic M1/M3, vasopressin V1, angiotensin II AT1 receptors).

Phospholipid

A type of lipid with a water-attracting phosphate-containing head and water-repelling fatty-acid tails. Phospholipids form the basic double-layered structure of cell membranes and also help with cell signaling and transport.

Phosphorus

An essential element in bone, nucleic acids, phospholipids, and ATP.

Phosphorus Blood Test

A blood test measuring inorganic phosphate, interpreted with calcium, parathyroid hormone, vitamin D, and kidney function to evaluate mineral and renal disorders.

Phosphorus In Diet

Dietary phosphorus comes from protein-rich foods and many processed foods; people with kidney disease may need individualized limits.

Phosphorylation

Addition of a phosphate group to a molecule, often regulating protein activity or energy transfer.

Photoallergy

An immune-mediated skin reaction that occurs when ultraviolet light activates a sensitizing substance on or in the skin, causing an eczematous rash.

Photocoagulation

Coagulation of tissue by intense light, often laser light, to treat lesions such as abnormal retinal vessels.

Photodermatosis

A skin disorder caused or aggravated by exposure to ultraviolet or visible light, including polymorphous light eruption, phototoxic reactions, and photoallergic reactions.

Photodynamic Therapy

A treatment that combines a photosensitizing agent with light to generate reactive oxygen species and destroy cancer cells, used for actinic keratosis, superficial skin cancers, and selected visceral tumors.

Photodynamic Therapy For Cancer

A medical procedure, treatment, device, or care topic related to photodynamic therapy for cancer; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Photoelectric Effect

Photon absorption by inner shell electron. Major interaction at low energies, high Z materials.

Photographic Fixative Poisoning

Photographic fixative poisoning involves toxic or environmental exposure to photographic fixative poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Photomultiplier Tube

Converts light photons to electrical signals. Array of

PMTs positioned behind crystal. Positioning circuit determines interaction location.

Photopeak

Full-energy peak in gamma spectrum. Used for energy window setting.

Photopheresis

Extracorporeal treatment in which white blood cells are exposed to a photosensitizer and ultraviolet A light before being returned to the patient.

Photophobia

An abnormal, pathological ocular discomfort, intolerance, or painful avoidance of light exposure. Not a true phobia, but a sensory symptom mediated by trigeminal nerve innervation of the anterior eye and central thalamocortical visual pathways. Cardinal ocular causes include anterior uveitis (iritis/iridocyclitis, where ciliary muscle contraction provokes severe pain), corneal abrasions or infectious keratitis, and acute angle-closure glaucoma. Systemic and neurologic causes include acute bacterial or viral meningitis, subarachnoid hemorrhage (meningeal irritation), migraine headache attacks, and concussion.

Photoreceptors

Specialized retinal cells that detect light; rods and cones are the two main types.

Photorefractive Keratectomy

Laser eye surgery that reshapes the cornea to correct refractive errors.

Photosensitivity

An abnormal skin reaction to sunlight (UVA/UVB), manifesting as rash, erythema, or burning on sun-exposed areas.

Photosensitization

Increased sensitivity to ultraviolet or visible light caused by a medication, chemical, or disease, producing an exaggerated skin reaction.

Phototherapy

Treatment using controlled light, such as for neonatal jaundice, psoriasis, or seasonal affective disorder.

Phototoxic Dermatitis

An acute, dose-dependent inflammatory skin reaction occurring when certain ingested or topically applied chemicals (such as psoralens, tetracyclines, NSAIDs, or thiazides) absorb ultraviolet radiation, leading to direct cellular damage and a sunburn-like eruption in exposed areas.

Phototoxicity

Skin reaction from UV light + chemical. Sunburn-like. Examples: tetracyclines, thiazides, NSAIDs, psoralens.

Phrenic

Relating to the diaphragm or the phrenic nerves, which arise from the neck and carry the main motor supply to the diaphragm for breathing.

Phrenic Nerve

The nerve arising mainly from C3-C5 that supplies the diaphragm and carries sensory fibers from nearby structures.

PHT

Alternate index label; see *Portal hypertension*.

Phthiriasis

Infestation with lice, especially pubic lice, causing itching and sometimes visible lice or eggs attached to hair. Treatment usually includes an approved lice-killing product, washing or sealing recently used clothing and bedding, and evaluation or treatment of close or sexual contacts.

Phthisis

An obsolete term for wasting or shrinkage of an organ, especially a severely damaged eye or lung.

Phyllodes Tumor

A breast tumor composed of both stromal and epithelial elements, ranging from benign through bor-

derline to malignant. Typically a large, rapidly growing mass; treatment is surgical excision with clear margins.

Physiatrist

Physician specialty focusing on function, quality of life for patients with impairment, disability. See rehabilitation medicine.

Physical Activity

Any movement produced by skeletal muscles that increases energy expenditure, including occupational, household, transportation, and recreational movement. Regular activity supports cardiovascular, metabolic, musculoskeletal, and mental health.

Physical Child Abuse

Physical child abuse is intentional physical injury or harmful force inflicted on a child, requiring immediate safety assessment, medical care, and safeguarding action.

Physical Dependence

A state in which the body adapts to a substance or medication and develops withdrawal symptoms when it is reduced or stopped.

Physical Exam Frequency

Physical exam frequency is a laboratory test, imaging method, instrument, score, or measurement used to characterize a specimen or clinical finding; interpretation depends on the method and clinical context.

Physical Examination

A systematic assessment of the body using inspection, palpation, percussion, auscultation, and other examination methods.

Physical Half-Life

The time required for half of the radioactive nuclei in a sample to undergo nuclear decay. It is distinct from biologic half-life, which describes biological elimination, and effective half-life, which combines both processes.

Physical Medicine

The medical specialty focused on function, rehabilitation, pain, and restoration of independence after illness or injury.

Physical Therapy

Rehabilitation using exercise, movement training, manual techniques, and physical modalities to improve function, mobility, and reduce disability.

Physical Therapy Assessment

Comprehensive evaluation: history, observation, ROM, strength, sensation, coordination, balance, gait, functional tasks.

Physician

A licensed medical doctor who diagnoses, treats, and prevents disease.

Physician Assistant

A licensed clinician who evaluates patients and provides medical care under a physician's practice framework.

Alternate Names:

PA

Physician Assistant

A nationally certified and state-licensed medical clinician who practices medicine collaboratively with or under the supervision of physicians. PAs obtain medical histories, perform physical examinations, order and interpret diagnostic studies, formulate medical diagnoses, prescribe pharmacotherapy, assist in surgery, and perform clinical procedures across primary care and surgical specialties.

Physicians' Desk Reference

A reference source containing prescribing information, indications, contraindications, dosing, warnings, and adverse effects for medicines and selected products.

Physiologic

Physiologic means relating to normal body function or a process occurring within the expected biological

range.

Physiologic Jaundice Of Newborn

A common, benign condition characterized by unconjugated hyperbilirubinemia appearing after 24 hours of age (peak at 3-5 days) in healthy term newborns. Caused by increased bilirubin production (high RBC turnover, short RBC lifespan) and immature hepatic conjugation (low UDP-glucuronyl transferase activity).

Physiologic Jaundice Of The Newborn

Physiologic newborn jaundice is a temporary bilirubin rise after birth caused by immature bilirubin processing, but early or severe jaundice needs urgent evaluation.

Physiological Dead Space

Volume of ventilated respiratory tract that does not participate in gas exchange, including anatomic and alveolar dead space.

Physiology

The study of normal functions and processes of living organisms and their parts.

Physiotherapy

Assessment and treatment using movement, exercise, manual techniques, education, and physical modalities to improve function.

Physostigmine

A reversible acetylcholinesterase inhibitor that may reverse severe central anticholinergic delirium in carefully selected patients after assessment for contraindications and cardiac conduction abnormalities.

Phytomedicine

The evidence-based use of medicinal products derived from plants to prevent or treat disease.

Phytomenadione

Vitamin K is a fat-soluble vitamin essential for the post-translational gamma-carboxylation of gluta-

mate residues to gamma-carboxyglutamate (Gla) in specific clotting factors (II, VII, IX, X, protein C, protein S) and anticoagulant proteins (protein C, protein S, protein Z). See Vitamin K: Phylloquinone.

PI-RADS

Prostate Imaging-Reporting and Data System. Standardizes multiparametric MRI reporting for prostate cancer detection and staging.

Pia Mater

The delicate innermost membrane closely covering the brain and spinal cord.

Pica

Persistent eating of nonnutritive substances inappropriate for developmental level or culture.

Pick'S Disease

An older term for frontotemporal dementia associated with characteristic Pick bodies; current classification uses specific frontotemporal dementia syndromes.

Pickwickian Syndrome

An older name for obesity hypoventilation syndrome, involving obesity, daytime hypercapnia, and sleep-disordered breathing.

PID

Alternate index label; see *Pelvic inflammatory disease*.

Piebaldism

A rare congenital disorder of melanocyte development caused most often by pathogenic variants affecting the KIT signaling pathway. It produces stable, sharply demarcated depigmented patches of skin and a characteristic white forelock or localized poliosis from birth. The lesions usually remain non-progressive, although their distribution and degree of pigment loss vary among affected individuals. Diagnosis is generally clinical, with genetic assessment considered when features suggest a broader

pigmentary or syndromic disorder.

Pierre Robin Sequence

A congenital anomaly triad: micrognathia (small mandible), glossoptosis (posteriorly displaced tongue causing airway obstruction), and U-shaped cleft palate. The sequence arises from early mandibular hypoplasia, which prevents the tongue from descending, thereby impairing palatal shelf fusion.

Pierson Syndrome

A rare autosomal-recessive disorder caused by LAMB2 variants, classically combining congenital nephrotic syndrome with microcoria and structural abnormalities of the eyes. Kidney failure, developmental impairment, and severe visual disability may occur.

Pigment

A substance that gives tissue, hair, skin, or other material its color.

Pigment Cirrhosis

Liver cirrhosis associated with abnormal pigment or iron deposition, as may occur in hereditary hemochromatosis.

Pigmentary Mosaicism

A pattern of alternating hyperpigmented and hypopigmented skin patches arranged in a linear, segmental, or blaschkoid distribution, caused by genetic mosaicism from post-zygotic mutations affecting melanocyte development. It is a cosmetic condition without systemic involvement.

Pigmentation

Coloration of skin, hair, eyes, or other tissue produced mainly by melanin, carotenoids, blood, or exogenous material; abnormal changes may reflect inflammation, endocrine disease, drugs, or tumors.

Pigmentation Disorder

A condition causing abnormal increase, decrease, or uneven distribution of pigment in the skin, mucosa,

hair, or eye.

Pilar Cyst

A benign cyst arising from the outer root sheath of hair follicles, most commonly on the scalp. It presents as a firm, mobile, subcutaneous nodule without a central punctum. Unlike epidermoid cysts, pilar cysts have smooth walls and contain dense keratin. They may be multiple in familial cases. Treatment is simple excision.

Piles

Enlarged or swollen veins in the anus or lower rectum.

Alternate Names:

Hemorrhoids

Piles (Hemorrhoids (Piles))

Alternate index label for Hemorrhoids (Piles).

Piles (Hemorrhoids)

Swollen, inflamed vascular cushions in the anal canal that normally aid continence. Internal hemorrhoids (above the dentate line, painless) present with painless bright red rectal bleeding and prolapse; graded I-IV by degree of prolapse.

Alternate Names:

Hemorrhoids

Pill

A solid oral dosage form containing medicine or another active ingredient.

Alternate Names:

Tablet

Pilocarpine

A muscarinic agonist used to constrict the pupil, lower intraocular pressure, or stimulate salivation.

Pilocytic Astrocytoma

Pilocytic astrocytoma is usually a slow-growing low-grade astrocytic brain tumor, often occurring in children and commonly involving the cerebellum or optic pathway.

Piloerection

Elevation of hair shafts producing gooseflesh, caused by contraction of arrector pili muscles under sympathetic stimulation from cold, fear, pain, fever, or certain drugs.

Pilomatrix Carcinoma

A rare malignant tumor showing matrical hair-follicle differentiation, usually presenting as a firm dermal or subcutaneous nodule on the head, neck, or upper extremity; it may recur or metastasize.

Pilomatrixoma

Pilomatrixoma is a usually benign skin tumor derived from hair-matrix cells, presenting as a firm subcutaneous nodule, often on the head or neck.

Pilonidal Cyst

A cyst or sinus in the cleft between the buttocks, usually containing hair and skin debris. It may become infected, painful, swollen, and drain pus.

Alternate Names:

Cyst, Pilonidal Pilonidal Sinus (Pilonidal Cyst)

Pilonidal Dimple

Alternate index label; see *Sacral dimple*.

Pilonidal Disease

A chronic inflammatory condition of the sacrococcygeal region involving hair follicles. Pilonidal sinus: epithelialized tract containing hair and debris. Pilonidal abscess: acute infection of the sinus. Most common in young, hirsute males, exacerbated by prolonged sitting, obesity, and local trauma.

Pilonidal Fistula

An abnormal tunnel from a pilonidal sinus to the skin, usually in the natal cleft, that can drain pus or recur after abscess formation.

Pilonidal Sinus (Pilonidal Cyst)

Alternate index label for Pilonidal Cyst.

Pilonidal Sinus Disease

A chronic sinus or cyst in the natal cleft, usually

containing hair and debris. It may cause recurrent pain, swelling, drainage, or abscess formation.

Pilot Project

A pilot project is a small preliminary implementation used to test feasibility, identify problems, and refine methods before broader rollout.

Pilus

A pilus is a hair-like bacterial surface structure used for attachment, movement, or transfer of genetic material between cells.

Pimozide

An antipsychotic medicine used in selected disorders, with important cardiac and neurologic adverse effects.

Pimple

A common lay term for a small inflamed or blocked skin lesion, often an acne papule or pustule.

Pimples (Acne)

Alternate index label for Acne.

Pin Care

Pin care keeps the skin around external fixation or traction pins clean and monitored for redness, swelling, drainage, loosening, or infection.

Pinch Strength

Pinch strength is the force produced when the thumb presses against one or more fingers and can help assess hand, nerve, muscle, and functional impairment.

Pinched Nerve

Compression or irritation of a nerve that can cause pain, tingling, numbness, or weakness along the nerve's distribution.

Alternate Names:

Compressed Nerve Nerve Compression

Pinched Nerve Overview

A pinched nerve is compression or irritation of a

nerve root or peripheral nerve, causing pain, tingling, numbness, weakness, or radiating symptoms. Causes include disc disease, narrowing, injury, or entrapment; progressive weakness or bowel or bladder change is urgent.

Alternate Names:

Nerve Pinched (Pinched Nerve Overview)

Pindolol

Pindolol is a beta-blocker used for selected cardiovascular conditions; it can slow the heart rate and worsen asthma in susceptible people.

Pine Oil Poisoning

Pine oil poisoning involves toxic or environmental exposure to pine oil poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Pineal Cyst

A pineal cyst is a fluid-filled lesion of the pineal gland, usually incidental and harmless but occasionally associated with headache, hydrocephalus, or visual symptoms.

Pineal Germinoma

A pineal germinoma is a malignant germ-cell tumor in the pineal region, often causing headache, eye-movement abnormalities, or hydrocephalus and usually responsive to radiotherapy and chemotherapy.

Pineal Gland

An endocrine gland in the brain that secretes melatonin and helps regulate circadian timing.

Pineal Gland Tumor

A tumor of the pineal region, including germinoma, pineocytoma, and pineoblastoma. Presents with Parinaud syndrome, hydrocephalus, and raised intracranial pressure; germinomas are highly radiosensitive.

Pineal Parenchymal Tumor

A tumor arising from pineal cells, ranging from pi-

neocytoma to pineal parenchymal tumor of intermediate differentiation and pineoblastoma. Symptoms may result from hydrocephalus or compression of nearby visual and ocular-motor pathways.

Pineoblastoma

A malignant embryonal tumor of the pineal region, occurring mainly in children and requiring neuroimaging, histologic diagnosis, staging, and multimodal treatment.

Pineocytoma

Pineocytoma is a usually slow-growing tumor of pineal cells that may obstruct cerebrospinal-fluid flow and cause raised intracranial pressure.

Pinguecula

A pinguecula is a benign yellowish raised growth on the conjunctiva near the cornea, often associated with ultraviolet light, wind, and dust; it may irritate the eye.

Pinhole Meatus

A pinhole meatus is an abnormally narrow external opening, commonly referring to the urethral meatus, that can obstruct urine flow or complicate catheterization.

Pink Eye

A lay term for conjunctivitis, inflammation of the conjunctiva causing redness and discharge.

Alternate Names:

Conjunctivitis (Pink Eye)

Pink Eye (Conjunctivitis)

Inflammation or infection of the conjunctiva causing eye redness, discharge, irritation, itching, or tearing.

Pink Puffer

A clinical phenotype of emphysema in COPD. Patients present with severe dyspnea, minimal cough, thin habitus, pursed-lip breathing, accessory muscle use, and relatively normal PaO₂ with late hypercapnia. They tend to be older and have more extensive emphysema.

Pinky Broken Finger (Broken Finger)

Alternate index label for Broken Finger.

Pinna

The visible external part of the ear that collects sound.

Pinocytosis

Cellular uptake of extracellular fluid and dissolved substances in small vesicles.

Pint

A unit of volume; its exact value varies by measurement system and country.

Pinta

A chronic skin infection caused by *Treponema carateum*, producing changing stages of pigmentary lesions.

Pinworm

The intestinal nematode *Enterobius vermicularis*, which commonly causes nocturnal perianal itching.

Pinworm Infection

Pinworm infection is an intestinal infestation by *Enterobius vermicularis*, causing nighttime anal itching, disturbed sleep, and sometimes abdominal or genital irritation. Treatment of the person and close household contacts, hygiene, and repeat dosing reduce reinfection.

Alternate Names:

Infection Pinworms (Pinworm Infection) Worms Pinworms (Pinworm Infection)

Pinworm Test

A test for *Enterobius vermicularis*, usually the early-morning adhesive-tape test applied to the perianal skin before bathing or defecation.

Pinworms

Pinworms are intestinal nematodes, *Enterobius vermicularis*, that cause nighttime anal itching; treatment, hand hygiene, and laundering help prevent household reinfection.

Pioglitazone

Pioglitazone is a PPAR-gamma agonist that improves insulin sensitivity in type 2 diabetes; weight gain, oedema, heart-failure worsening, fractures, and bladder-cancer concerns require patient-specific assessment.

Pipemidic Acid

An older quinolone antibacterial formerly used mainly for urinary-tract infections; resistance and safety limitations have greatly reduced its clinical use.

Pipendoxifene

Pipendoxifene is an investigational selective estrogen-receptor modulator studied for possible effects on breast, bone, and reproductive tissues.

Piperacillin

Piperacillin is an extended-spectrum penicillin antibiotic often combined with tazobactam to treat serious infections including *Pseudomonas*; allergy, diarrhoea, cytopenias, electrolyte effects, and renal dosing are important.

Piperazine

An older antiparasitic medicine that paralyzes certain intestinal worms, especially roundworms and pinworms. Its use depends on local guidance and the particular infection.

Piperonyl Butoxide

A pesticide synergist that inhibits insect detoxification enzymes and increases the activity of certain insecticides; it can irritate skin, eyes, or airways.

Piperonyl Butoxide With Pyrethrins Poisoning

Piperonyl butoxide with pyrethrins poisoning involves toxic or environmental exposure to piperonyl butoxide with pyrethrins poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Pipette

A pipette is a laboratory instrument used to measure and transfer small volumes of liquid accurately.

Pipobroman

Pipobroman is an oral alkylating antineoplastic drug used historically for some blood disorders and associated with marrow suppression and later cancer risk.

Pipotiazine

A long-acting phenothiazine antipsychotic given by injection in selected settings. It can cause movement disorders, drowsiness, and other adverse effects and requires clinical monitoring.

Pipradrol

An older central nervous system stimulant with limited current use.

Piracetam

A nootropic compound used in some countries for selected neurologic indications; evidence and approval vary.

Pirfenidone

Pirfenidone is an antifibrotic medicine used to slow decline in idiopathic pulmonary fibrosis; nausea, photosensitivity, fatigue, and liver-enzyme elevation may occur and require monitoring.

Piriformis Syndrome

Sciatic nerve compression by piriformis muscle. Buttock pain, radiating down leg. Diagnosis: clinical, exclude disc herniation. Treatment: stretching, injection, surgical release.

Alternate Names:

PiriformSyndrome (Piriformis Syndrome)

PiriformSyndrome (Piriformis Syndrome)

Alternate index label for Piriformis Syndrome.

Pirimicarb

Pirimicarb is a selective carbamate insecticide targeting aphids; exposure can inhibit acetyl-

cholinesterase and cause cholinergic symptoms.

Pirinitramide

Pirinitramide is a synthetic opioid analgesic used historically in some countries; opioid effects include sedation, constipation, dependence, and respiratory depression.

Piritrexim

Piritrexim is an investigational antifolate that inhibits dihydrofolate reductase and has been studied as an anticancer agent.

Piromidic Acid

An older quinolone-like antibacterial investigated or used for urinary and gastrointestinal infections; current use depends on local availability, susceptibility, and safety guidance.

Piroplasmosis

An animal disease caused by *Babesia* or *Theileria* parasites; human babesiosis is a related infection.

Piroxicam

A long-acting nonsteroidal anti-inflammatory drug used for pain and inflammation; gastrointestinal bleeding, kidney injury, cardiovascular events, and hypersensitivity are important risks.

Piroxicam Overdose

Piroxicam overdose involves toxic or environmental exposure to piroxicam overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Pisa Syndrome

A sustained involuntary sideways flexion of the trunk, often associated with medicines, Parkinson disease, or other neurologic disorders.

Pisiform

Small pea-shaped sesamoid bone in the flexor carpi ulnaris tendon, in the proximal row. Articulates only with the triquetrum. Forms the medial border of Guyon's canal (ulnar nerve/artery passage).

Only sesamoid carpal bone, subcutaneous and easily palpable on the ulnar palm.

Pisiform Bone

A small pea-shaped carpal bone embedded in the tendon of flexor carpi ulnaris on the ulnar side of the wrist; fracture or arthritis can cause localized wrist pain.

Pithomyces

A genus of environmental molds associated with plant disease and rarely with human opportunistic infection.

Pits

Small depressions or holes; in dermatology, pits may occur in nails or skin lesions.

Pitting Edema

Swelling in which pressure applied to the skin leaves a temporary indentation, usually because of excess interstitial fluid.

Pituicytoma

Pituicytoma is a rare typically slow-growing tumor arising from specialized glial cells of the pituitary stalk or posterior pituitary region.

Pituitary

The pituitary is an endocrine gland at the base of the brain that releases hormones controlling growth, thyroid and adrenal function, reproduction, lactation, and water balance.

Pituitary Adenoma

Pituitary adenomas are benign neoplasms arising from the adenohypophysis (anterior pituitary gland), accounting for approximately ten to fifteen percent of all intracranial neoplasms.

Pituitary Apoplexy

Acute hemorrhage or infarction within a pituitary adenoma causing sudden headache, visual field defects, ophthalmoplegia, and altered consciousness. Medical emergency requiring urgent glucocorticoid

administration to prevent adrenal crisis from acute ACTH deficiency.

Pituitary Carcinoma

Pituitary carcinoma is a rare malignant pituitary tumor defined by spread to distant or separate sites, often producing excess hormones.

Pituitary Disease

A disorder of the pituitary gland that alters hormone secretion or causes mass effects, including adenomas, inflammation, hemorrhage, genetic disease, or hypopituitarism.

Pituitary Dwarfism

Pituitary dwarfism is severe short stature caused by deficient growth hormone or broader pituitary dysfunction, with evaluation focused on endocrine and genetic causes.

Pituitary Gland

An endocrine gland at the base of the brain that regulates growth, thyroid, adrenal, reproductive, lactation, and water-balance hormones.

Pituitary Hormone

A hormone secreted by the anterior or posterior pituitary that regulates growth, thyroid and adrenal function, reproduction, lactation, water balance, or other endocrine organs.

Pituitary Insufficiency

Alternate index label; see *Hypopituitarism*.

Pituitary Neoplasm

A pituitary neoplasm is an abnormal growth in or near the pituitary gland and may affect hormones, vision, or nearby brain structures.

Pituitary Neuroendocrine Tumor

Alternate index label; see *Pituitary tumors and adenomas*.

Pituitary Tumor

A pituitary tumor is a growth in the pituitary gland

that may be noncancerous but can cause hormone excess, hormone deficiency, or visual problems.

Pituitary Tumor (Prolactinoma)

Alternate index label for Prolactinoma.

Pityriasis

A group of skin disorders characterized by fine scaling, including pityriasis rosea and versicolor.

Pityriasis Alba

Pityriasis alba is a common benign skin condition causing faint, dry, lighter patches, especially on children's faces, often more noticeable after tanning.

Pityriasis Lichenoides

An uncommon inflammatory skin disorder producing recurrent small scaly papules, with forms ranging from mild chronic lesions to an acute ulceronecrotic eruption.

Pityriasis Rosea

An acute, self-limited eruption often beginning with a herald patch followed by oval scaly lesions distributed along skin-cleavage lines. It usually resolves within several weeks; treatment is symptomatic, and atypical, severe, recurrent, or persistent disease should be reassessed.

Alternate Names:

Pityriasis Rosea Gibert (Pityriasis Rosea)

Pityriasis Rosea Gibert (Pityriasis Rosea)

Alternate index label for Pityriasis Rosea.

Pityriasis Rubra Pilaris

Pityriasis rubra pilaris is an uncommon inflammatory skin disorder producing reddish-orange scaly plaques, follicular bumps, and areas of relatively normal skin.

Pityriasis Versicolor

Alternate index label; see *Tinea versicolor*.

Pivampicillin

An orally absorbed prodrug of ampicillin used for

selected bacterial infections; its use is limited in some settings by adverse effects and availability.

Pixantrone

Pixantrone is an anthracenedione antineoplastic drug developed for selected aggressive lymphomas, with potential marrow, infection, and cardiac risks.

PJI

Alternate index label; see *Periprosthetic joint infection*.

PJS

Alternate index label; see *Peutz-Jeghers syndrome*.

PKD

Alternate index label; see *Polycystic kidney disease*.

Place

Place describes a location or position; in healthcare, the relevant place may be an anatomic site, care setting, or environmental context.

Placebo

An inactive substance, treatment, or procedure designed to resemble an active treatment. In a clinical trial, it is given to a control group so researchers can compare outcomes and estimate the specific effect of the treatment being studied.

Alternate Names:

Dummy Treatment Inactive Treatment

Placebo Control

A placebo control is an inactive treatment designed to resemble the intervention in a clinical trial, helping separate treatment effects from expectation and natural change.

Placebo Effect

A psychological and physiological phenomenon where a patient experiences a real improvement in health or symptoms after receiving an inactive treatment (like a sugar pill) due to their expectations of healing.

Placenta

The temporary organ connecting mother and fetus, allowing exchange of oxygen, nutrients, wastes, and hormones.

Placenta Abruptio

Placental abruption is premature separation of the placenta from the uterine wall, causing bleeding, abdominal pain, uterine tenderness, fetal compromise, or maternal shock.

Placenta Abruptio - Definition

Placental abruption is premature separation of the placenta from the uterine wall before birth, causing bleeding, abdominal pain, uterine tenderness, and possible fetal or maternal compromise.

Placenta Accreta

Placenta accreta spectrum occurs when placental tissue abnormally attaches to or invades the uterine wall, creating major risk of hemorrhage during attempted delivery or removal.

Placenta Accreta Spectrum

Abnormal adherence or invasion of placental villi into the uterine wall, ranging from accreta to increta and percreta; it can cause severe postpartum hemorrhage and requires planned obstetric management.

Placenta Disorder

A disorder of placental implantation, structure, perfusion, or separation, including previa, accreta spectrum, abruption, infarction, or placental insufficiency.

Placenta Increta

Abnormal placental invasion into the myometrium without reaching the serosa, increasing the risk of massive hemorrhage at delivery and often requiring cesarean hysterectomy.

Placenta Percreta

Placenta percreta is the most invasive form of placenta accreta spectrum, with villi growing through

the uterine wall and sometimes into nearby organs such as the bladder.

Placenta Praevia

Placental implantation over or near the cervical opening, causing risk of painless late-pregnancy bleeding.

Placenta Previa

Implantation of the placenta over or near the internal cervical opening, which can cause painless bleeding during the second half of pregnancy.

Placenta, Succenturiate

A succenturiate placenta has one or more accessory placental lobes separate from the main placenta, which can cause retained tissue or fetal-vessel complications after delivery.

Placental Abnormalities

Disorders of placental location, attachment, structure, or separation that may affect pregnancy or cause bleeding.

Placental Abruption

Premature separation of the placenta from the uterine wall before delivery. It may cause vaginal bleeding, abdominal pain, uterine tenderness, fetal distress, and maternal or fetal compromise.

Placental Accreta Spectrum

Abnormal placental attachment to the myometrium, ranging from accreta (adherent to decidua basalis) to increta (invading myometrium) to percreta (invading through serosa). Major risk factor is prior caesarean section with anterior placenta previa.

Placental Hormone

A hormone produced by placental tissue, such as hCG, progesterone, estrogens, or human placental lactogen, that supports pregnancy, fetal growth, and maternal metabolic adaptation.

Placental Infarction

A region of placental tissue damaged by inadequate

maternal blood flow and coagulation, which may be incidental or, when extensive, associated with fetal growth restriction or pregnancy complications.

Placental Insufficiency

Placental insufficiency is inadequate placental delivery of oxygen and nutrients, which can cause fetal growth restriction, abnormal Doppler findings, reduced fluid, or fetal distress.

Placental Lactogen

Placental lactogen is a hormone made by the placenta that alters maternal metabolism and supports breast development and fetal nutrient availability during pregnancy.

Placental Mesenchymal Dysplasia

A rare placental lesion with enlarged cystic stem villi and abnormal chorionic vessels that can mimic a partial mole and may be associated with fetal growth restriction or other fetal abnormalities.

Placental Separation Signs

Clinical signs indicating the placenta has separated from the uterine wall and is ready for delivery. Classic signs: lengthening of the umbilical cord (cord lengthens as the placenta descends), a sudden gush of blood, and uterine elevation and firming (the uterus rises and becomes globular as the placenta moves into the lower segment).

Placental Site Nodule

A benign, usually incidental remnant of intermediate trophoblast at a prior implantation site, composed of small nests of chorionic-type or extravillous trophoblast.

Placentation

The developmental process by which the placenta forms and attaches to the uterus, establishes maternal–fetal circulation, and develops the exchange and endocrine functions needed for pregnancy.

Plagiocephaly

Plagiocephaly is asymmetric flattening or shaping of an infant's skull, caused by position or premature suture fusion; its evaluation distinguishes benign molding from craniosynostosis.

Plague

A serious infection caused by *Yersinia pestis*, transmitted mainly by infected fleas or respiratory droplets in pneumonic disease.

Alternate Names:

Plan B

Plan B is a levonorgestrel emergency contraceptive intended to reduce pregnancy risk after unprotected intercourse or contraceptive failure; it does not end an established pregnancy.

Planar

Flat or lying in a single plane; planar imaging produces a two-dimensional projection.

Plane Warts (Verruca Plana)

Small, smooth, relatively flat warts caused by HPV, often occurring in groups on the face, hands, or legs.

Alternate Names:

Verruca Plana

Planococcaceae

A family of gram-positive bacteria found in soil, water, and other environments; human infection is uncommon.

Planococcus Bacteria

Bacteria in the genus *Planococcus*, generally environmental gram-positive cocci that rarely cause human infection.

Plant Development

Plant development is the progression from seed or meristem through growth, differentiation, flowering, reproduction, and senescence.

Plant Extract

A plant extract is a preparation made by removing selected constituents from plant material; composition, dose, contamination, interactions, and evidence vary widely.

Plant Fertilizer Poisoning

Plant fertilizer poisoning involves toxic or environmental exposure to plant fertilizer poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Plant Oils

Plant oils are lipid mixtures extracted from seeds, fruits, or other plant parts and used as foods, medicines, cosmetics, or industrial materials.

Plant Part

A plant part is a structural component such as a root, stem, leaf, flower, fruit, or seed that may contain distinct nutrients, chemicals, or medicinal constituents.

Plant Poisoning

Illness caused by eating, touching, or inhaling a toxic plant or plant product; effects range from local irritation to organ failure.

Plant Proteins

Proteins supplied by legumes, grains, nuts, seeds, vegetables, and other plants; combining varied sources can provide essential amino acids, with nutritional needs depending on age and health.

Plant Thorn Arthritis

Plant thorn arthritis is persistent joint inflammation after a thorn puncture introduces plant material, sometimes requiring removal of foreign material and treatment of infection or inflammation.

Plant Thorn Synovitis

Inflammation of a joint after penetration by a plant thorn or splinter, sometimes involving an infection introduced by the injury. Symptoms may develop gradually as persistent joint pain, swelling, and

limited movement; evaluation may require removal of retained material and targeted treatment.

Alternate Names:

Arthritis Plant Thorn (Plant Thorn Synovitis)

Plant Tumor

A plant tumor is an abnormal plant growth caused by uncontrolled cell multiplication, infection, insects, or other environmental factors.

Plant Virus

A virus that infects plants; plant viruses do not generally cause infection in humans, although contaminated plants may carry other hazards.

Plantar

Pertaining to the inferior weight-bearing surface or sole of the human foot (*planta pedis*). Structurally supported by thick keratinized epidermis, a dense shock-absorbing heel fat pad, and the longitudinally spanning plantar fascia (plantar aponeurosis). Pathologies include plantar fasciitis (degenerative enthesopathy at the medial calcaneal tuberosity causing sharp post-rest heel pain), plantar warts (verruca plantaris induced by human papillomavirus [HPV]), plantar ulcers (neuropathic pressure ulcers in diabetic feet), and the plantar reflex (Babinski sign in upper motor neuron lesions).

Plantar Flexion

Downward movement of the foot at the ankle, pointing the toes away from the shin. It is produced mainly by the calf muscles and is used in standing on tiptoe, walking, running, and jumping.

Plantar Fasciitis

The most common cause of heel pain, caused by degeneration and microtears of the plantar fascia at its calcaneal origin. Presents with sharp, stabbing heel pain with the first steps in the morning (post-static dyskinesia), improving after a few minutes but worsening with prolonged standing or activity.

Plantar Nerve

A nerve supplying sensation to the sole of the foot and motor branches to intrinsic foot muscles; com-

pression can cause burning pain, numbness, or altered toe movement.

Plantar Neuroma

Alternate index label; see *Morton neuroma*.

Plantar Reflex

The response produced by stroking the sole of the foot; an extensor response in an adult suggests corticospinal-tract dysfunction.

Plantar Response

Movement of the toes and sole after stimulation of the foot; an extensor response in an adult may indicate corticospinal-tract dysfunction.

Plantar Wart (Verruca Plantaris)

A wart (verruca) located on the sole of the foot, caused by human papillomavirus (HPV, typically types 1, 2, 4, 63). Plantar warts are endophytic (grow inward due to pressure) rather than exophytic like common warts, and are often painful with direct pressure (walking, standing).

Alternate Names:

Verruca Plantaris

Plantaris Muscle

A small posterior-leg muscle with a long tendon that assists weakly with knee flexion and plantar flexion; it can be strained during sudden athletic movement.

Plaque

A flat, raised, or deposited area of material or tissue; examples include dental plaque, arterial plaque, and skin plaques.

Plaque And Tartar On Teeth

Dental plaque is a bacterial biofilm that forms on teeth, while tartar is hardened mineralized plaque; both contribute to cavities, gingivitis, and periodontitis.

Plaque Assay

A method for quantifying viruses: serial dilutions of

a viral suspension are added to a monolayer of host cells, forming zones of cell destruction (plaques), each plaque representing one infectious unit; results expressed as plaque-forming units per mL (PFU/mL).

Plaque Psoriasis

The most common form of psoriasis, producing well-demarcated raised red plaques with silvery scale, commonly on elbows, knees, scalp, and lower back and sometimes associated with arthritis.

Plasma

The liquid portion of blood in which blood cells and dissolved substances circulate.

Plasma Amino Acids

A blood test that measures amino acids in plasma. It can help evaluate inherited metabolic disorders, poor nutrition, liver disease, or other conditions affecting amino-acid processing.

Plasma Cell

The terminally differentiated antibody-secreting cell derived from activated B lymphocytes (after antigen stimulation, class switching, and affinity maturation in germinal centers).

Plasma Cell Mastitis

A chronic benign inflammatory breast lesion with prominent plasma-cell infiltration, often involving ducts beneath the nipple and potentially causing a mass, nipple retraction, or discharge. It can clinically mimic carcinoma.

Plasma Cell Myeloma

A malignant neoplasm of clonal plasma cells, usually producing a monoclonal immunoglobulin or light chain. It may cause hypercalcemia, renal impairment, anemia, and destructive bone lesions, collectively known as CRAB features, together with recurrent infection and hyperviscosity in some patients.

Plasma Cell Neoplasm

A clonal disorder of antibody-producing plasma cells, ranging from localized plasmacytoma to multiple myeloma with marrow, bone, kidney, calcium, or blood abnormalities.

Plasma Cells

Fully differentiated, terminal effector B lymphocytes specialized for the high-volume synthesis and secretion of antigen-specific immunoglobulin antibodies. Characteristically demonstrate eccentric round nuclei with distinctive "clock-face" or "cartwheel" chromatin patterns, abundant deeply basophilic cytoplasm, and a prominent pale perinuclear halo (representing an extensive Golgi apparatus). While essential for humoral immunity against pathogens, clonal neoplastic proliferation of plasma cells drives plasma cell dyscrasias, prominently multiple myeloma (characterized by monoclonal protein spikes, osteolytic bone lesions, hypercalcemia, renal impairment, and anemia) and Waldenström macroglobulinemia.

Plasma Concentration

The amount of a substance present in a defined volume of plasma at a given time. It is used to interpret exposure, toxicity, therapeutic drug monitoring, and pharmacokinetic relationships.

Plasma Expanders

Intravenous fluids intended to increase circulating volume, including crystalloids and selected colloids.

Plasma Kallikrein

A serine protease in the contact and kallikrein-kinin systems that generates bradykinin and contributes to vascular permeability and inflammation.

Plasma Membrane

The selectively permeable lipid bilayer surrounding a cell, containing proteins that control transport, signaling, adhesion, recognition, and communication with the extracellular environment.

Plasma Osmolarity

A chemical or physiological term involving plasma osmolarity. Its effects and clinical importance de-

pend on its concentration, route of exposure, and patient context.

Plasma Substitutes

Intravenous fluids intended to expand plasma volume, including crystalloids and colloid solutions; choice depends on the clinical indication and risks.

Plasmablastic Lymphoma

Plasmablastic lymphoma is an aggressive B-cell lymphoma often associated with immune deficiency, HIV infection, or immunosuppression.

Plasmacytoma

A localized tumor of abnormal plasma cells, occurring in bone or soft tissue and sometimes progressing to multiple myeloma.

Plasmalogen

An ether phospholipid abundant in cell membranes, especially in heart, brain, and myelin; impaired synthesis occurs in some peroxisomal disorders.

Plasmapheresis

Removal of plasma from blood, with return of cellular components and replacement fluid, to remove pathogenic antibodies or substances.

Plasmid

A plasmid is a small usually circular DNA molecule separate from a bacterial chromosome that can replicate independently and sometimes carries antibiotic-resistance genes.

Plasmids

Small, circular, extrachromosomal DNA elements that replicate independently of the bacterial chromosome. Plasmids carry non-essential genes that provide selective advantages including antibiotic resistance, virulence factors, and metabolic capabilities.

Plasmin

A proteolytic enzyme that breaks down fibrin and helps dissolve blood clots.

Plasminogen

Plasminogen is the inactive circulating precursor of plasmin, the enzyme that degrades fibrin; tissue or urokinase-type activators convert it to plasmin during fibrinolysis.

Plasminogen Activator

A plasminogen activator is an enzyme, such as tissue plasminogen activator or urokinase, that converts plasminogen to plasmin and promotes fibrin clot breakdown; therapeutic use carries bleeding risk.

Plasminogen Inactivators

Substances or medicines that reduce plasminogen activation and thereby limit conversion of plasminogen to the clot-dissolving enzyme plasmin.

Plasmodesma

A plasmodesma is a microscopic channel through a plant cell wall connecting neighboring cells and allowing controlled movement of molecules and signals.

Plasmodium

A genus of parasites transmitted by *Anopheles* mosquitoes and responsible for malaria.

Plasmodium Vivax

A malaria parasite transmitted by *Anopheles* mosquitoes. It infects red blood cells and can persist in the liver as dormant hypnozoites that cause relapses.

Plasmodium Vivax Malaria

Malaria caused by the protozoan parasite *Plasmodium vivax*, the most geographically widespread form of human malaria. Characterized by recurring paroxysms of fever every 48 hours (benign tertian malaria) and the unique ability of dormant hypnozoite liver stages to cause late clinical relapses months to years after the initial mosquito bite, requiring radical cure with primaquine or tafenoquine.

Alternate Names:

Vivax malaria; Benign tertian malaria

Plaster Of Paris

Calcium sulfate hemihydrate that sets into a hard material, used for casts, splints, and models.

Plastic Bronchitis

A rare condition producing large, branching mucous casts that form in the airways, causing life-threatening airway obstruction, often associated with congenital heart disease or post-fontan circulation.

Plastic Casting Resin Poisoning

Plastic casting resin poisoning involves toxic or environmental exposure to plastic casting resin poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Plastic Resin Hardener Poisoning

Plastic resin hardener poisoning involves toxic or environmental exposure to plastic resin hardener poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Plastic Surgery

Surgery that reconstructs, restores, or alters body tissues for functional or cosmetic reasons.

Plate Method

Simple portion control: half plate vegetables, quarter plate protein, quarter plate grains. Promotes balanced eating.

Platelet

A small piece of a blood cell that helps stop bleeding. Platelets have no nucleus, gather at damaged blood vessels, and stick together to form an early blood clot. They are made in the bone marrow from larger cells called megakaryocytes.

Platelet Aggregation

The adhesion and clumping of platelets to form a hemostatic plug at sites of vascular injury.

Platelet Aggregation Test

A laboratory test measuring platelet clumping in

response to agonists such as ADP, collagen, or epinephrine, used to evaluate platelet function disorders and medication effects.

Platelet Antibodies Blood Test

A blood test detecting antibodies directed against platelet antigens, used selectively in suspected immune thrombocytopenia, neonatal alloimmune thrombocytopenia, or platelet-transfusion refractoriness.

Platelet Count

The number of platelets in a given volume of blood, used to assess bleeding or clotting risk.

Platelet Count Low (Thrombocytopenia (Low Platelet Count))

Alternate index label for Thrombocytopenia (Low Platelet Count).

Platelet Disorder - Immune Thrombocytopenia

Alternate index label for ITP.

Platelet Function Disorders

Conditions in which platelets do not adhere, activate, or aggregate normally, causing impaired primary hemostasis. They may be inherited or acquired and can cause easy bruising, nosebleeds, heavy menstrual bleeding, or bleeding after procedures.

Platelet Plug Formation

The initial hemostatic response to vascular injury, involving platelet adhesion, activation, and aggregation. When the endothelium is disrupted, subendothelial von Willebrand factor and collagen are exposed to flowing blood.

Alternate Names:

Thrombocytes

Platelets (Thrombocytes)

Small, anucleate, disc-shaped cell fragments (2–4 μm diameter) derived from megakaryocytes in the bone marrow, circulating at $150\text{--}400 \times 10^9/\text{L}$.

Alternate Names:

Thrombocytes

Platybasia

Flattening of the skull base, measured by an increased basal angle and sometimes associated with neurologic compression.

Platypnea

Dyspnea that occurs in the upright position and is relieved by lying down. It is the opposite of orthopnea. It is rare and may be associated with hepatopulmonary syndrome, intracardiac shunting, or pulmonary arteriovenous malformations.

Platypnea-Orthodeoxia Syndrome

A rare clinical syndrome characterized by dyspnea (platypnea) and arterial oxygen desaturation (orthodeoxia) that is provoked by assuming an upright seated or standing posture and completely relieved by lying flat in the recumbent position. It is caused by position-dependent right-to-left shunting of deoxygenated blood into the systemic arterial circulation, most commonly arising from an anatomical communication (such as a patent foramen ovale or atrial septal defect) combined with an upright functional alteration (e.g., aortic root dilatation, pneumonectomy, or kyphoscoliosis), or from intrapulmonary vascular shunts in hepatopulmonary syndrome.

Alternate Names:

Orthodeoxia-Platypnea Syndrome; Postural Dyspnea and Deoxygenation

Platysma

A thin superficial muscle of the neck that tenses the skin and assists lower-jaw and lower-lip movement.

Pleat

A fold of tissue or material; in anatomy it may describe a fold of mucosa or serosa.

Pleiotropic Cytokine

A cytokine that acts on multiple cell types or produces several biological effects, such as changes in inflammation, blood formation, immunity, or tissue

repair.

Pleiotropy

Single gene influencing multiple phenotypic traits. Examples: phenylketonuria affects multiple systems; sickle cell anemia causes anemia, pain crises, organ damage.

Pleomorphic

Pleomorphic means having multiple forms or marked variation in cell or tissue appearance; in pathology, it may be a feature of malignancy but is not diagnostic alone.

Pleomorphic Adenoma

A usually benign salivary-gland tumor composed of epithelial and connective-tissue elements. It most often occurs in the parotid gland and may slowly enlarge; long-standing lesions can rarely undergo malignant transformation.

Pleomorphic Adenoma Of The Vulva

An exceptionally rare benign mixed epithelial and mesenchymal tumor of the vulva, resembling pleomorphic adenoma of salivary tissue and requiring histopathologic confirmation.

Pleomorphic Dermal Sarcoma

An uncommon high-grade cutaneous sarcoma, usually on chronically sun-damaged skin of older adults, composed of markedly pleomorphic cells and capable of local recurrence or metastasis.

Pleomorphic Xanthoastrocytoma

A circumscribed astrocytic tumor, often arising superficially in the cerebral hemispheres of younger patients and associated with seizures. Most are low grade, but anaplastic transformation can occur.

Pleomorphism

Variation in the size and shape of cells or their nuclei within a tissue. Marked pleomorphism is a feature of many high-grade malignancies but can also occur in some reactive or degenerative conditions.

Plethoric

Plethoric means unusually full, congested, or ruddy, often describing the appearance associated with increased blood volume or red-cell mass.

Plethysmography

A method measuring changes in volume or blood flow in a body part, used to evaluate vascular obstruction, respiratory volumes, or other physiologic responses.

Pleura

The double-layered membrane surrounding each lung and lining the inner chest wall.

Pleural

Relating to the pleura, the membranes surrounding the lungs and lining the inside of the chest.

Pleural Cavity

The narrow, fluid-filled space between the two layers of the pleura surrounding each lung.

Pleural Decortication

A major thoracic surgical operation involving the painstaking surgical excision and stripping of a thick, fibrous, non-compliant inflammatory membrane or peel (fibrothorax) from the visceral and parietal pleural surfaces of the lung and chest wall. The procedure is indicated for organized, stage III empyema thoracis, chronic hemothorax, or tuberculous pleurisy where the fibrous cortex entraps the underlying lung parenchyma and prevents re-expansion; successful decortication eliminates the restrictive pleural cage, restores diaphragmatic excursion, and obliterates the pleural dead space.

Alternate Names:

Decortication of the Lung; Pulmonary Decortication; Thoracoscopic Decortication

Pleural Disorders

Conditions affecting the pleura, including pleural effusion, pneumothorax, pleurisy, infection, and tumors.

Pleural Effusion

An abnormal buildup of fluid in the space between a lung and the chest wall. It may result from heart failure, infection, inflammation, cancer, or injury, and can cause shortness of breath, cough, or chest pain.

Pleural Effusion (Fluid In The Chest Or On Lung)

Alternate index label for Fluid In the Chest or On Lung.

Pleural Fluid Analysis

Laboratory examination of pleural fluid, including cell count, protein, lactate dehydrogenase, glucose, pH, and microbiology, to classify an effusion and identify its cause.

Pleural Fluid Culture

Culture of pleural fluid to detect bacteria, fungi, or mycobacteria in suspected pleural-space infection; specimens should be collected appropriately, often in blood-culture bottles.

Pleural Fluid Glucose

Pleural-fluid glucose may be reduced in empyema, complicated parapneumonic effusion, rheumatoid pleuritis, tuberculosis, and malignancy. It is interpreted with pH, cell count, protein, LDH, microbiology, imaging, and the clinical setting.

Pleural Fluid Gram Stain

A pleural-fluid Gram stain looks for bacteria in fluid around the lung and may support evaluation of empyema or bacterial pleural infection.

Pleural Fluid PH

Pleural-fluid pH helps assess infection and other causes of effusion. A markedly low pH supports a complicated parapneumonic effusion in the appropriate clinical setting, but drainage decisions also depend on imaging, fluid appearance, microbiology, glucose, and the patient's condition.

Pleural Fluid Smear

Pleural fluid smear is a diagnostic or laboratory investigation; interpretation depends on the specimen, method, reference interval, timing, and clinical question.

Pleural Friction Rub

A grating, leathery sound heard on auscultation caused by inflamed pleural surfaces rubbing against each other during breathing. It is a sign of pleurisy and may be heard in pneumonia, PE, and pleural effusion. It disappears when fluid accumulates and separates the pleural surfaces.

Pleural Needle Biopsy

A pleural needle biopsy removes a small sample of the pleural lining through a needle for evaluation of cancer, infection, or inflammation.

Pleural Neoplasm

A pleural neoplasm is an abnormal growth in the lining around the lung, such as mesothelioma or metastatic cancer.

Pleural Perforation

A breach in the pleural lining allowing air or fluid to enter the pleural space, potentially causing pneumothorax or hydropneumothorax, often from trauma, procedures, or underlying lung disease.

Pleural Plaque

Circumscribed fibrous tissue on parietal pleura, hallmark of asbestos exposure. Bilateral, often calcified. Does not indicate asbestosis.

Pleural Sac

The potential space and enclosing pleural membranes around a lung, normally containing a small amount of lubricating fluid.

Pleural Space

The potential space between the visceral and parietal pleura surrounding each lung.

Pleural Tuberculosis

Tuberculous infection or inflammation of the pleura, often producing a lymphocyte-rich pleural effusion, chest pain, fever, and breathlessness and requiring microbiologic or tissue evaluation.

Pleurectomy

Surgical removal of part or all of the pleura, used in the treatment of malignant pleural mesothelioma and recurrent malignant pleural effusion.

Pleurisy

Inflammation of the pleura, often causing sharp pain worsened by breathing.

Alternate Names:

Pleuritis (Pleurisy)

Pleuritic Pain

Sharp chest pain that worsens with breathing or coughing, often caused by inflammation of the pleura or nearby tissues.

Pleuritis

Inflammation of the pleural membranes (visceral and parietal pleura). Presents with pleuritic chest pain: sharp, stabbing pain exacerbated by deep breathing, coughing, or sneezing.

Pleuritis (Pleurisy)

Alternate index label for Pleurisy.

Pleurodesis

Fusion of visceral and parietal pleura to prevent recurrence of effusions or pneumothorax. Chemical pleurodesis uses talc, doxycycline, or bleomycin.

Pleurodynia

Severe, often episodic chest or upper-abdominal muscle pain associated with viral infection, especially coxsackievirus.

Pleuropulmonary Blastoma

A rare aggressive childhood cancer arising in the lung or pleura, usually associated with DICER1-related tumor predisposition.

Plexiform Fibrohistiocytic Tumor

A rare low-grade malignant fibroblastic and histiocytic tumor, usually arising in the dermis or subcutis of the upper extremities of young people; local recurrence is common and metastasis is uncommon.

Plexiform Neurofibroma

A plexiform neurofibroma is a diffuse nerve-sheath tumor, strongly associated with neurofibromatosis type 1, that can grow along multiple nerve branches and sometimes become malignant.

Alternate Names:

PN PNF

Plexus

A network of intersecting nerves, vessels, or other structures.

Pliability

Pliability is the ability of a material or tissue to bend, stretch, or deform without breaking; it is relevant to skin, vessels, lungs, and medical devices.

Plica

A fold of tissue, especially a synovial fold within a joint.

Plitidepsin

Plitidepsin is an antineoplastic compound that targets eukaryotic elongation factor 1A and has been studied for selected cancers and viral infections.

Ploidies

Ploidy describes the number of complete chromosome sets in a cell, such as haploid, diploid, or polyploid; abnormal ploidy can characterize tumors or developmental disorders.

Plozalizumab

An investigational monoclonal antibody studied as a targeted treatment for inflammatory or malignant disease.

PLS

Alternate index label; see *Primary lateral sclerosis*.

Plug (Vascular)

A vascular occlusion device used to block a selected vessel under image guidance.

Alternate Names:

Vascular

Plummer-Vinson Syndrome

Iron-deficiency anemia with dysphagia and esophageal webs, associated with increased upper gastrointestinal cancer risk.

Pluralibacter Gergoviae

A gram-negative environmental bacterium that can contaminate medicines or cosmetics and rarely cause opportunistic infection.

Pluripotent Stem Cell

A stem cell capable of producing derivatives of all three embryonic germ layers but not, by itself, a complete organism; embryonic and induced pluripotent stem cells are major research sources.

Pluripotential

Capable of differentiating into many, but not all, cell types.

Plutonium

A radioactive heavy metal whose inhalation or ingestion can cause internal radiation exposure and toxicity.

Pm

An abbreviation that may mean afternoon, post-mortem, or picometer; meaning depends on clinical context.

PMBCL

Alternate index label; see *Primary mediastinal large B-cell lymphoma*.

PMBL

Alternate index label; see *Primary mediastinal large B-cell lymphoma*.

PMDD

Premenstrual dysphoric disorder is a severe cyclic mood disorder occurring before menstruation with irritability, depression, anxiety, and functional impairment that improve after menses.

PML

PML commonly means progressive multifocal leukoencephalopathy, a JC-virus demyelinating brain infection during severe immune suppression, but it may have other meanings.

PN

Alternate index label; see *Plexiform neurofibroma*.

Pneumatic

Pertaining to, containing, operated by, or inflated with air or gas under pressure. In clinical medicine, utilized in diagnostic instruments such as the pneumatic otoscope (delivering a controlled air puff against the tympanic membrane to assess drum mobility, essential for diagnosing otitis media with effusion), medical devices such as pneumatic compression stockings (intermittent pneumatic compression [IPC] for deep vein thrombosis prophylaxis), and pneumatic tourniquets utilized to maintain a bloodless operative field during orthopedic extremity surgery.

Pneumatic Otoscopy

A diagnostic technique that combines visualization of the tympanic membrane with assessment of its mobility in response to positive and negative air pressure changes, providing information about the presence of middle ear fluid and the condition of the Eustachian tube.

Pneumatic Retinopexy

A procedure for selected retinal detachments in which an intravitreal gas bubble is injected and laser or cryotherapy seals the retinal break while positioning helps the bubble support the repair.

Pneumatic Tourniquet

An inflatable cuff used to temporarily reduce blood flow to a limb during surgery or selected procedures.

Pneumatocele

A thin-walled, air-filled cavity in the lung, often developing after infection or trauma.

Pneumatosis

Presence of gas within a tissue or organ wall, such as pneumatosis intestinalis.

Pneumatosis Cystoides Coli

Condition characterized by multiple gas-filled cysts within the wall of the colon, which may be primary (idiopathic) or secondary to intestinal mucosal disruption from conditions such as chronic obstructive pulmonary disease, ischemic bowel disease, or intestinal obstruction. Often discovered incidentally on imaging or colonoscopy.

Pneumatosis Cystoides Intestinalis

Gas-filled cysts within the bowel wall that may be primary or secondary to bowel ischemia, infection, chronic lung disease, or medications. Often an incidental finding on imaging. Primary pneumatosis is benign and asymptomatic. Secondary pneumatosis may indicate serious underlying disease. Managed by treating the underlying condition.

Pneumatosis Intestinalis

Presence of gas within the bowel wall appearing as linear or cystic radiolucencies on imaging. Primary pneumatosis is benign and idiopathic accounting for approximately fifteen percent of cases.

Pneumocephalus

The presence of air or gas within the cranial cavity, most commonly following trauma, surgery, or sinus disease, and potentially causing increased intracranial pressure if tension develops.

Pneumococcal Infection

Infection caused by *Streptococcus pneumoniae*, ranging from ear or sinus infection to pneumonia, meningitis, or bloodstream infection.

Pneumococcal Meningitis

Meningitis caused by *Streptococcus pneumoniae*, a

medical emergency requiring immediate antibiotics and supportive care.

Pneumococcal Sepsis

Sepsis caused by *Streptococcus pneumoniae*, often arising from pneumonia, meningitis, or another invasive pneumococcal infection.

Pneumoconiosis

A group of occupational lung diseases caused by inhalation of mineral or industrial dusts.

Pneumocystis

A genus of fungi that includes *Pneumocystis jirovecii*, which can cause pneumonia in people with weakened cellular immunity.

Pneumocystis Carinii

An older name associated with *Pneumocystis*; in humans, the usual species causing pneumonia is *Pneumocystis jirovecii*.

Pneumocystis Carinii Pneumonia

The historical name for *Pneumocystis jirovecii* pneumonia, an opportunistic lung infection in immunocompromised people.

Pneumocystis Infection

Infection by *Pneumocystis jirovecii*, most often causing pneumonia with dry cough, fever, and progressive shortness of breath in immunocompromised people.

Pneumocystis Jiroveci

Pneumocystis jirovecii is a fungus that causes opportunistic pneumonia, especially in advanced HIV or other cellular immunodeficiency; symptoms include progressive dry cough, fever, and hypoxaemia, and diagnosis requires appropriate respiratory testing.

Pneumocystis Jirovecii Pneumonia

Opportunistic pneumonia caused by *Pneumocystis jirovecii*, especially in people with advanced HIV infection or other cellular immunodeficiency. It causes progressive exertional dyspnea, dry cough,

fever, and hypoxemia.

Pneumocystis Pneumonia

Opportunistic pneumonia caused by *Pneumocystis jirovecii*, usually in people with impaired cell-mediated immunity. It may cause progressive exertional dyspnea, dry cough, fever, and hypoxemia with diffuse ground-glass changes. Diagnosis and treatment require clinical, microbiologic, and radiologic assessment; trimethoprim-sulfamethoxazole is commonly used.

Pneumocyte

An epithelial cell lining the alveoli; type I cells exchange gases and type II cells produce surfactant.

Pneumoencephalography

An obsolete imaging procedure that replaced cerebrospinal fluid with air to outline the brain on X-ray.

Pneumography

Contrast imaging of body cavities. Pneumoencephalography obsolete. Pneumoperitoneum for laparoscopy.

Pneumolysis

Surgical separation or freeing of lung tissue or pleural adhesions.

Pneumomediastinum

Air within the mediastinum, caused by trauma, rupture, barotrauma, or air tracking from the lungs or neck.

Pneumonectomy

The major surgical resection and removal of an entire lung (either right or left), historically performed via posterolateral thoracotomy and increasingly via minimally invasive video-assisted or robotic techniques. Indicated primarily for centrally located non-small cell lung cancer involving mainstem bronchi or the pulmonary hilum that cannot be excised by anatomical lobectomy or sleeve resection, and rarely for extensive unilateral destruction from multidrug-resistant tuberculosis or bronchiectasis.

Carries significant perioperative morbidity and mortality (higher on the right side due to larger resected lung volume, higher risk of post-pneumonectomy pulmonary edema, and bronchopleural fistula formation).

Pneumonia

Infection or inflammation of lung tissue causing symptoms such as cough, fever, breathlessness, and abnormal imaging.

Pneumonia - Weakened Immune System

Pneumonia in a person with impaired immunity, which may be caused by bacteria, viruses, fungi, or opportunistic organisms and can progress rapidly.

Pneumonia, Bilateral

Pneumonia affecting both lungs, which may cause more extensive oxygen-exchange impairment than disease confined to one lung.

Pneumonitis

Inflammation of lung tissue, often from immune, drug, radiation, aspiration, or environmental causes rather than infection.

Pneumopericardium

Air in the pericardial space, usually from trauma (penetrating chest injury), esophageal perforation, or iatrogenic causes (central line placement, cardiac surgery). Can cause cardiac tamponade if under tension. Diagnosis by chest X-ray showing air surrounding the heart (air-fluid level if combined with effusion).

Pneumoperitoneum

Air or gas within the peritoneal cavity, commonly from perforated bowel or abdominal surgery.

Pneumoplasty

Surgical repair or reconstruction of lung tissue or an airway.

Pneumotachometer

An instrument that measures the rate of airflow

during breathing.

Pneumothorax

Air in the pleural space causing partial or complete lung collapse.

Pneumothorax - Infants

Pneumothorax in an infant is air outside the lung that can compress it and cause breathing difficulty, low oxygen, or cardiovascular instability.

Pneumovirinae

Pneumovirinae is a subfamily of viruses that includes respiratory pathogens such as respiratory syncytial virus and human metapneumovirus.

Pneumovirus

A group or genus of respiratory viruses; human pneumovirus terminology often refers to human metapneumovirus or related paramyxoviruses.

PNF

Alternate index label; see *Plexiform neurofibroma*.

Pocket Erosion

Loss of tissue at the margin or base of a periodontal or surgical pocket, potentially exposing deeper structures and promoting infection, bleeding, or impaired healing.

Podagra

Acute gout affecting the first metatarsophalangeal joint, causing severe pain, redness, and swelling.

Podiatrist

A healthcare professional specializing in disorders of the feet and lower limbs.

Podiatry

The healthcare field concerned with the feet, ankles, and related lower-limb disorders.

Podocyte

A podocyte is a specialized epithelial cell covering glomerular capillaries; injury to its filtration slits

contributes to proteinuria and kidney disease.

Podofilox

Podofilox is a topical antimitotic medicine used to treat selected external anogenital warts caused by human papillomavirus; irritation and correct application are important.

Podophyllin

Podophyllin is a plant-derived resin with antimitotic activity formerly used topically for warts; it can be severely toxic if absorbed and is generally replaced by safer products.

Podophyllum

A plant genus containing podophyllotoxin, used in some topical wart treatments but toxic if misused.

Podosome

A podosome is an actin-rich adhesion and matrix-degrading structure in cells such as macrophages and osteoclasts.

POEMS Syndrome

A rare plasma-cell disorder named for polyneuropathy, organomegaly, endocrinopathy, monoclonal plasma-cell disorder, and skin changes. Other manifestations include sclerotic bone lesions, papilledema, fluid overload, thrombocytosis, and elevated vascular endothelial growth factor.

Poikilocytosis

The presence of an abnormal, marked variation in the physical shape of mature circulating red blood cells (erythrocytes) on a peripheral blood smear. While normal erythrocytes are uniform biconcave discs, poikilocytosis reflects disrupted erythropoiesis, mechanical shear injury, or hemoglobin defects. Specific morphologic poikilocytes offer vital diagnostic clues: schistocytes (fragmented helmet cells in microangiopathic hemolytic anemias like TTP, HUS, and DIC), spherocytes (hereditary spherocytosis, autoimmune hemolytic anemia), dacryocytes (teardrop cells in primary myelofibrosis), drepanocytes (sickle cells in sickle cell anemia), and target cells (codocytes in thalassemia and

hemoglobin C disease).

Poikiloderma

A skin pattern combining mottled pigmentation, visible small vessels, and epidermal thinning, seen in connective-tissue disease, chronic sun damage, inflammation, and some cutaneous lymphomas.

Poikilotherm

An organism whose body temperature varies substantially with environmental temperature; humans are homeothermic.

Poinsettia Plant Exposure

Poinsettia plant exposure involves toxic or environmental exposure to poinsettia plant exposure; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Point

A specific location, spot, or value; in medicine it may refer to a tender point, pressure point, or measurement point.

Point Mutation

Change in single nucleotide base pair. Substitutions: transition (purine to purine, pyrimidine to pyrimidine) or transversion (purine to pyrimidine). Effects: silent (same amino acid), missense (different amino acid), nonsense (stop codon).

Point Tenderness - Abdomen

Abdominal point tenderness is sharply localized pain when a particular abdominal site is pressed, which may indicate inflammation, infection, obstruction, or another focal process.

Point-Of-Care Testing

Diagnostic testing performed near the patient rather than in a central laboratory. POCT can shorten turnaround time but requires validated devices, quality control, operator training, and appropriate interpretation.

Point-Of-Care Ultrasound

Bedside ultrasonography performed and interpreted by the treating clinician to answer focused diagnostic or procedural questions. Emergency applications include cardiac activity, volume status, pulmonary pathology, abdominal free fluid, vascular thrombosis, and procedural guidance.

Poison

A substance capable of causing injury, illness, or death when absorbed in sufficient amount.

Poison Control

A specialized service that provides immediate advice about exposure to medicines, chemicals, or other potential poisons.

Poison Control Center - Emergency Number

A poison-control center provides immediate expert advice after a possible poisoning or toxic exposure; the correct emergency number depends on the country and life-threatening symptoms require emergency services.

Poison Ivy - Oak - Sumac

Poison ivy, oak, and sumac cause allergic contact dermatitis through urushiol oil, producing intensely itchy red patches and blisters after skin exposure.

Poison Ivy - Oak - Sumac Rash

A poison-ivy, oak, or sumac rash is itchy allergic contact dermatitis caused by urushiol, often appearing in streaks and spreading as exposed oil remains on skin or clothing.

Poison Ivy, Oak, And Sumac

Poison ivy, oak, and sumac cause allergic contact dermatitis through urushiol oil, producing intensely itchy streaks or patches of redness, blisters, and swelling. Washing exposed skin and clothing promptly helps; breathing difficulty or facial swelling is an emergency.

Alternate Names:

Allergy Plant Contact (Poison Ivy, Oak, And

Sumac)

Poison-Center Consultation

Specialist toxicology advice used to identify hazards, interpret exposure and laboratory data, select antidotes, guide observation or disposition, and coordinate public-health response. Consultation is appropriate for significant, uncertain, mixed, pediatric, or unusual exposures.

Poisoning

Harmful effects caused by exposure to a toxic substance.

Poisoning - Fish And Shellfish

Poisoning - fish and shellfish involves toxic or environmental exposure to poisoning - fish and shellfish; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Poisoning Arsenic (Arsenic Poisoning)

Alternate index label for Arsenic Poisoning.

Poisoning Ciguatera (Ciguatera Poisoning)

Alternate index label for Ciguatera Poisoning.

Poisoning First Aid

Poisoning first aid involves toxic or environmental exposure to poisoning first aid; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Poisoning Thallium (Thallium)

Alternate index label for Thallium.

Poisson Distribution

A probability distribution modeling the number of events occurring in a fixed interval when events occur independently at a stable average rate.

Pokeweed Mitogen

Pokeweed mitogen is a plant lectin used experimentally to stimulate lymphocyte proliferation and investigate immune-cell responses.

Pokeweed Poisoning

Pokeweed poisoning involves toxic or environmental exposure to pokeweed poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Pol Gene

The HIV gene encoding enzymes required for viral replication, including protease, reverse transcriptase, and integrase; antiretroviral drugs target these products.

Poland Syndrome

A congenital condition characterized by absence or underdevelopment of part of the pectoral muscles on one side, sometimes accompanied by abnormalities of the hand on the same side.

Polar

Relating to a pole, direction, or molecule with separated electrical charges.

Polarity

The distribution or orientation of positive and negative electrical or biological properties.

Polarography

Polarography is an electrochemical analytical method that measures current while voltage changes at an electrode to identify or quantify reducible substances.

Polidocanol

Polidocanol is a detergent sclerosant injected to close selected varicose veins or vascular lesions by damaging the vessel lining and promoting fibrosis.

Polio

Polio is poliomyelitis, an infection caused by poliovirus, an enterovirus of the Picornaviridae family. It is usually asymptomatic or mild but can cause meningitis or irreversible asymmetric flaccid paralysis; transmission is primarily fecal-oral.

Poliomyelitis

An infection caused by poliovirus, usually spread by the fecal-oral route. Most infections are asymptomatic or cause a mild febrile illness, but some cause meningitis or damage to anterior-horn motor neurons, resulting in acute asymmetric flaccid paralysis and sometimes permanent weakness.

Poliosis

A localized patch of white or depigmented hair caused by reduced melanin in follicles, occurring in vitiligo, alopecia areata, inflammatory disease, genetic syndromes, or after injury.

Poliovirus

An enterovirus that causes poliomyelitis. It is transmitted mainly by the fecal-oral route; most infections are asymptomatic, but a small proportion cause meningitis or acute flaccid paralysis by damaging motor neurons in the spinal cord. Diagnosis uses molecular testing, usually reverse-transcription PCR of stool or other appropriate specimens.

Polish (Dental)

Smoothing restorative surfaces to reduce plaque accumulation. Essential for longevity.

Alternate Names:

Dental

Politzerization

A historical method of inflating the middle ear through the nose during swallowing to improve Eustachian-tube ventilation.

Pollakisuria

Pollakisuria is unusually frequent urination, often in small amounts, caused by irritation, infection, stones, bladder disorders, anxiety, or other urinary conditions.

Pollakiuria

Frequent urination, often in small amounts. It may occur with urinary infection, irritation, diabetes, pregnancy, medicines, or anxiety; in some children it is a temporary benign pattern, but pain, fever,

blood, thirst, or weight loss needs assessment.

Pollen

Fine grains released by plants that can trigger allergic rhinitis, asthma, or conjunctivitis.

Pollen Tube

A pollen tube is a tube grown by a germinating pollen grain that carries sperm cells through plant tissue to the ovule for fertilization.

Pollex

The thumb; the first, most radial, and opposable digit of the human hand (digit I). Uniquely comprised of only two phalanges (proximal and distal) and articulated with the carpal trapezium bone via a mobile saddle-shaped carpometacarpal joint. Endowed with specialized intrinsic and extrinsic musculature (the thenar muscles, innervated by the recurrent branch of the median nerve, and adductor pollicis, innervated by the ulnar nerve), enabling precise tip-to-tip and pad-to-pad opposition that is critical for fine motor dexterity and human grasp.

Pollination

Transfer of pollen from anthers to a receptive stigma or ovule, allowing fertilization in flowering plants; it is not a human reproductive process.

Pollution

Contamination of air, water, soil, or surroundings by substances that may harm health or ecosystems.

Poly A

A sequence of adenine nucleotides added to the end of many messenger RNA molecules, helping regulate stability, transport, and translation.

Poly I-C

A synthetic double-stranded RNA molecule used experimentally to stimulate antiviral innate immune responses through pattern-recognition receptors.

Poly ICLC

A stabilized form of poly I-C studied as an experi-

mental immune stimulant and antiviral or anticancer treatment.

Polyadenylation

Addition of a polyadenosine tail to the 3' end of many eukaryotic messenger RNAs, promoting stability, nuclear export, and efficient translation.

Polyamine

A small positively charged molecule, such as putrescine, spermidine, or spermine, required for cell growth and nucleic-acid function.

Polyamine Catabolism

Enzymatic breakdown of polyamines, producing metabolites that influence cell growth, oxidative stress, and signaling.

Polyarteritis

Inflammation of multiple arteries; polyarteritis nodosa is a systemic necrotizing vasculitis.

Polyarteritis Nodosa

Necrotizing inflammation of medium-sized muscular arteries, spares lungs. Associated with hepatitis B (10-30%). Clinical: systemic symptoms, mononeuritis multiplex, livedo reticularis, renal involvement (hypertension, renal insufficiency—no glomerulonephritis), GI ischemia.

Alternate Names:

PAN (Polyarteritis Nodosa)

Polyarteritis Nodosa

Alternate index label for Polyarteritis Nodosa.

Polyarthrititis

Inflammation involving multiple joints, commonly defined as five or more. It is a clinical pattern rather than a single diagnosis and may result from autoimmune, infectious, crystal-related, or other inflammatory disorders.

Polybrominated Biphenyl

A group of brominated industrial chemicals that can persist in the environment and cause toxic effects

after exposure.

Polychlorinated Biphenyl

A group of persistent industrial chemicals that can accumulate in body fat and are associated with cancer, endocrine, immune, and neurologic effects.

Polychondritis

Relapsing inflammatory disorder targeting cartilage throughout the body, causing pain, swelling, and destruction of the ears, nose, larynx, trachea, and joints. May lead to airway collapse and hearing loss.

Polychromasia

Presence of immature, bluish red blood cells in peripheral blood, reflecting increased marrow release.

Polychromatophilia

Polychromatophilia is bluish-gray staining of red blood cells on a blood smear, reflecting increased circulating immature reticulocytes from stimulated red-cell production.

Polycystic Kidney Disease

An inherited disorder in which numerous kidney cysts enlarge the kidneys and may cause hypertension and renal failure.

Alternate Names:

PKD

Polycystic Liver Disease

Dominant polycystic liver disease is an autosomal dominant condition characterized by multiple hepatic cysts that may cause massive hepatomegaly, abdominal pain, and compressive symptoms. Usually associated with autosomal dominant polycystic kidney disease. Liver function is preserved even with extensive cyst involvement.

Polycystic Ovarian Syndrome

A hormonal and metabolic disorder involving ovulatory dysfunction and androgen excess, often causing irregular periods, acne, excess hair, infertility, or metabolic risk.

Polycystic Ovary

Polycystic ovaries contain many small follicles and may occur as a normal variant or with polycystic ovary syndrome. PCOS additionally involves ovulatory dysfunction, androgen excess, irregular periods, infertility, acne, or metabolic risk and requires clinical—not ultrasound alone—diagnosis.

Alternate Names:

PCOS (Polycystic Ovary)

Polycystic Ovary

Alternate index label for Polycystic Ovary.

Polycystic Ovary Syndrome

Common endocrine disorder affecting six to twelve percent of reproductive-aged women characterized by hyperandrogenism, ovulatory dysfunction, and polycystic ovarian morphology on ultrasound.

Polycystic Ovary Syndrome

A common endocrine disorder involving ovulatory dysfunction, androgen excess, and polycystic ovarian morphology in varying combinations.

Polycythaemia

An increased red-cell mass or concentration, which may be primary or secondary to another condition.

Polycythemia

Elevated red blood cell mass/hematocrit. Primary: polycythemia vera (JAK2 V617F mutation, tri-lineage proliferation, low EPO, risk of thrombosis and myelofibrosis/leukemia). Secondary: hypoxia (COPD, high altitude, congenital heart disease, sleep apnea) with high EPO, or EPO-secreting tumors (renal cell, hepatoma).

Polycythemia (High Red Blood Cell Count)

Alternate index label for High Red Blood Cell Count.

Polycythemia - Newborn

Neonatal polycythemia is an abnormally high red-cell concentration in a newborn that can increase

blood viscosity and cause poor feeding, lethargy, breathing problems, or low glucose.

Polycythemia Vera

A chronic myeloproliferative neoplasm characterized by increased red blood cell mass, often with increased white blood cell and platelet counts, driven by constitutive activation of the JAK-STAT signaling pathway.

Alternate Names:

Primary Polycythemia

Polycythemia Vera

Polycythemia vera is a myeloproliferative blood cancer, usually driven by a JAK2 mutation, causing excess red cells and increased risks of thrombosis, bleeding, and transformation.

Polydactylism (Polydactyly)

A common congenital limb malformation characterized by the presence of supernumerary (extra) fingers or toes. Classified anatomically into preaxial polydactyly (radial/thumb side in the hand, tibial/great toe side in the foot), postaxial polydactyly (ulnar/little finger side, fibular/little toe side; the most prevalent form, frequently inherited as an autosomal dominant trait in individuals of African ancestry), and central polydactyly (duplication of digits II, III, or IV). Can present as an isolated nonsyndromic trait or as part of complex genetic syndromes (e.g., Bardet-Biedl syndrome, Ellis-van Creveld syndrome, Patau syndrome [trisomy 13]); treated surgically by reconstructive excision and ligamentous balancing.

Polydactyly

The congenital presence of one or more additional digits (fingers or toes) beyond the normal pentadactyl complement of five per limb. Arises from aberrant signaling during embryonic limb bud patterning, particularly involving the zone of polarizing activity and the sonic hedgehog (*SHH*) signaling pathway. Categorized by location as preaxial (radial/tibial), postaxial (ulnar/fibular), or central. Supernumerary digits range from rudimentary, hypoplastic soft-tissue tags ("floating" digits) to fully

articulated, osseous-containing digits requiring complex orthopedic and reconstructive surgical excision to preserve normal hand or foot function.

Polydipsia

Excessive, abnormal, and unquenchable thirst leading to high fluid intake. Cardinal clinical symptom of osmotic diuresis driven by severe hyperglycemia in uncontrolled diabetes mellitus (type 1 or type 2), alongside polyuria and weight loss. Must be clinically differentiated from central diabetes insipidus (deficient antidiuretic hormone [ADH/vasopressin] secretion), nephrogenic diabetes insipidus (renal collecting duct resistance to ADH, frequently caused by lithium therapy), and psychogenic polydipsia (compulsive water drinking in psychiatric disorders, which can precipitate life-threatening dilutional hyponatremia and cerebral edema).

Polyendocrine Metabolic Ovarian Syndrome

An older or nonstandard term generally referring to polycystic ovary syndrome or a related endocrine-metabolic disorder affecting ovarian function.

Polyene

A molecule containing multiple carbon-carbon double bonds; polyene medicines such as amphotericin B act against fungal cell membranes.

Polyethylene

A plastic polymer used in packaging and medical devices; implanted polyethylene components may wear over time and produce foreign-body reactions.

Polyethylene Glycol

A polymer used as an osmotic laxative, excipient, and in various medical products.

Polygenic

Influenced by or caused by variants in multiple genes.

Polygenic Disease

A disease influenced by variants in many genes to

gether with environmental and lifestyle factors.

Polygenic Inheritance

Trait influenced by multiple genes, each with small effect. Examples: height, skin color, common diseases (diabetes, heart disease). Produces continuous variation.

Polygenic Obesity

Obesity arising from the combined effects of many genetic variants interacting with diet, activity, sleep, medications, and the wider environment rather than a single gene defect.

Polygenic Risk Score

A statistical estimate of disease susceptibility calculated from the combined effects of many genetic variants, each usually contributing a small amount of risk. It modifies but does not replace clinical risk assessment or environmental factors.

Polyglandular Autoimmune Syndrome

An autoimmune disorder in which two or more endocrine glands are damaged, causing combinations of thyroid, adrenal, parathyroid, pancreatic, or gonadal dysfunction.

Polyglutamate Camptothecin

An investigational polymer-linked form of camptothecin designed to alter delivery of a topoisomerase-I-inhibiting anticancer drug.

Polygraphy

Polygraphy is the simultaneous recording of several physiologic signals, such as breathing, heart rate, oxygen level, and movement, often during sleep testing.

Polyhydramnios

Polyhydramnios is excessive amniotic fluid during pregnancy and may increase the risk of maternal discomfort, preterm birth, or complications during delivery.

Polyketide Synthase

An enzyme system that builds complex natural products from repeated carbon units, producing many antibiotics, toxins, and other biologically active molecules.

Polylysine

A polymer made of lysine residues used in research, biomaterials, food preservation, and some medical applications.

Polymagia (Polyphagia)

An abnormally ravenous appetite and excessive consumption of food (hyperphagia). In clinical internal medicine, polyphagia forms one of the classic "3 Ps" of newly diagnosed or poorly controlled diabetes mellitus (along with polyuria and polydipsia), arising because cellular glucose starvation from absolute or relative insulin deficiency triggers hypothalamic appetite centers despite severe intravascular hyperglycemia. Also observed in thyrotoxicosis/hyperthyroidism (high metabolic rate), Prader-Willi syndrome (ghrelin dysregulation and loss of hypothalamic satiety), and atypical depressive or bulimic eating disorders.

Polymastia

The presence of extra breast tissue or additional nipples.

Polymenorrhea

Menstrual periods that occur unusually often, commonly at intervals shorter than about 21 days. Causes include hormonal changes, thyroid disease, fibroids, bleeding disorders, medicines, and the menopausal transition; persistent frequent bleeding needs evaluation.

Polymenorrhoea

British spelling of polymenorrhea: menstrual periods occurring unusually often, commonly at intervals shorter than about 21 days.

Polymer

A large molecule made of repeating smaller units called monomers; polymers are widely used in biol-

ogy, medicines, and medical materials.

Polymerase Chain Reaction

An in-vitro method that exponentially amplifies a defined DNA segment through repeated cycles of denaturation, primer annealing, and DNA synthesis by a thermostable polymerase. It is used in diagnosis, research, forensics, and pathogen detection.

Polymerase Chain Reaction

An enzymatic molecular biology technique for exponentially amplifying targeted DNA sequences in vitro. Driven by repeated thermal cycles consisting of three steps: thermal denaturation of double-stranded DNA (94–98°C), sequence-specific oligonucleotide primer annealing (50–65°C), and primer extension by a thermostable DNA polymerase (e.g., *Taq* polymerase) at 72°C. Used in infectious disease diagnostics, forensic identification, oncologic mutation testing, and quantitative real-time PCR (RT-qPCR) for viral load quantification.

Polymerization

Chemical joining of many small monomers into a larger polymer, a process important in biomolecules, plastics, dental materials, drug delivery, and laboratory techniques.

Polymicrobial Infections

Infections caused by multiple microbial species. Polymicrobial infections are common in wound infections, intra-abdominal infections, and respiratory infections. The interactions between organisms can be synergistic or antagonistic. Understanding polymicrobial infections is essential for selecting appropriate antimicrobial therapy.

Polymicrogyria

A brain malformation characterized by an excessive number of abnormally small, fused gyri, resulting in an irregular, bumpy cortical surface with shallow sulci. Caused by abnormal late neuronal migration or post-migrational cortical organization. May be focal or diffuse, unilateral or bilateral, and symmetric or asymmetric.

Polymorphic

A clinical or therapeutic concept involving polymorphic. Its features, uses, and clinical significance depend on the relevant medical context.

Polymorphism

The occurrence of two or more genetic forms or phenotypes in a population.

Polymorphonuclear Leukocyte

A white blood cell with a multilobed nucleus, especially a neutrophil, eosinophil, or basophil, involved in innate immune defense and inflammation.

Polymorphous

Having lesions or clinical features that differ in shape, size, or stage and therefore show multiple forms.

Polymorphous Light Eruption

Polymorphous light eruption is an itchy inflammatory rash triggered by sunlight, usually appearing hours to days after exposure and recurring seasonally in susceptible people.

Alternate Names:

Sun Poisoning

Polymyalgia Rheumatica

An inflammatory disorder causing aching and morning stiffness around the shoulders and hips in older adults.

Alternate Names:

PMR (Polymyalgia Rheumatica)

Polymyalgia Rheumatica

Polymyalgia rheumatica causes abrupt bilateral shoulder and hip-girdle aching and stiffness in older adults and can occur with giant-cell arteritis.

Polymyositis

An autoimmune inflammatory muscle disease causing symmetric proximal muscle weakness.

Alternate Names:

PM (Polymyositis)

Polymyositis

Alternate index label for Polymyositis.

Polymyositis - Adult

Adult polymyositis is an uncommon immune-mediated inflammatory muscle disease causing progressive symmetric proximal weakness and elevated muscle enzymes, after exclusion of mimics.

Polymyxin

A group of antibiotics that disrupt bacterial cell membranes, used mainly for selected gram-negative infections.

Polymyxin B

An antibiotic active against selected gram-negative bacteria; kidney and nerve toxicity limit its use to difficult infections.

Polyneuritis

Inflammation or injury affecting multiple peripheral nerves, causing symmetric pain, numbness, weakness, or autonomic dysfunction; causes include immune disease, infection, toxins, and deficiency.

Polyneuritis, Acute Idiopathic

A clinical or therapeutic concept involving polyneuritis, acute idiopathic. Its features, uses, and clinical significance depend on the relevant medical context.

Polyneuropathy

A generalized disorder affecting multiple peripheral nerves, often causing symmetric numbness, tingling, burning pain, weakness, or impaired reflexes in the limbs.

Polynucleotide

A chain of nucleotides forming DNA, RNA, or a related laboratory molecule.

Polyoma Virus

A polyomavirus; some human polyomaviruses are widespread and cause serious disease mainly in immunocompromised people.

Polyomavirus Hominis 2

A human polyomavirus designation associated with a virus found in people; clinically important disease is uncommon and mainly associated with immune suppression.

Polyp

A growth projecting from a mucous membrane; it may be benign, precancerous, or rarely cancerous.

Polyp Biopsy

A polyp biopsy removes part or all of a polyp for microscopic examination to determine whether it is benign, precancerous, or cancerous.

Polyp Surveillance Colonoscopy

Interval-based endoscopic follow-up of patients with previously identified colorectal polyps. Intervals are determined by polyp number, size, and histological features. One to two small adenomas require surveillance at seven to ten years. Three to four adenomas at three to five years.

Polypeptide

A chain of amino acids linked by peptide bonds.

Polyphagia

Excessive, uncontrollable hunger or increased appetite. Classic cardinal symptom of uncontrolled Diabetes Mellitus (cellular starvation due to lack of insulin or insulin resistance), Hyperthyroidism (elevated basal metabolic rate), Prader-Willi Syndrome, and atypical depression.

Polypharmacy

Use of multiple medications by one patient, often defined numerically as five or more concurrent medicines. It increases the risk of interactions, adverse effects, prescribing cascades, nonadherence, and medication errors, although some multidrug regimens are clinically appropriate.

Polyphenol

A plant-derived compound containing multiple phenolic groups, including flavonoids and tannins, with

antioxidant and cell-signaling effects.

Polyploid

Having more than two complete sets of chromosomes in a cell or organism.

Polyposis

A condition in which numerous polyps develop, especially in the gastrointestinal tract.

Polypropylene

A synthetic plastic polymer used in medical supplies, sutures, meshes, and containers; implanted materials may rarely cause infection or foreign-body reactions.

Polyps Colon (Colon Polyps)

Alternate index label for Colon Polyps.

Polyps Rectal (Colon Polyps)

Alternate index label for Colon Polyps.

Polyps Uterus (Uterine Fibroids)

Alternate index label for Uterine Fibroids.

Polyps, Colon

Alternate index label; see *Colon polyps*.

Polyps, Endometrial

Alternate index label; see *Uterine polyps*.

Polyps, Nasal

Alternate index label; see *Nasal polyps*.

Polyps, Stomach

Alternate index label; see *Stomach polyps*.

Polyps, Uterine

Alternate index label; see *Uterine polyps*.

Polyradiculitis

Inflammation or other disease affecting several spinal nerve roots. It may cause weakness, numbness, pain, and reduced reflexes; causes include in-

fections, autoimmune disorders, and toxins.

Polyradiculopathy

Disease affecting multiple spinal nerve roots, producing pain, weakness, sensory loss, or reflex changes in a distribution determined by the involved roots.

Polysaccharide

A carbohydrate made of many linked simple sugar units. Examples include starch, glycogen, cellulose, and some bacterial capsules.

Polysome

A group of ribosomes translating the same messenger RNA molecule at the same time.

Polysomia

The presence of extra copies of one or more chromosomes or, in developmental terminology, multiple body structures.

Polysomnography

An overnight sleep study that records brain activity, eye movements, muscle activity, heart rhythm, airflow, breathing effort, and blood oxygen. It helps evaluate sleep apnea, movement disorders, parasomnias, and other sleep conditions.

Polysomnography (Sleep Study)

Overnight monitoring for sleep-disordered breathing. Parameters: EEG (sleep staging: N1, N2, N3, REM), EOG (eye movements), EMG (chin and leg movements), airflow (nasal pressure, thermistor), respiratory effort (chest/abdomen belts), snore microphone, body position, oximetry (SpO2), and ECG.

Alternate Names:

Sleep Study

Polysplenia

A congenital condition with multiple small spleens and variable abnormalities of organ arrangement, heart, blood vessels, or intestinal rotation.

Polystyrene

A synthetic plastic polymer used in containers and laboratory materials; burning it can release hazardous fumes.

Polytene Chromosome

An enlarged chromosome formed by repeated DNA replication without cell division, displaying visible bands and commonly used to study gene activity in insect tissues.

Polythelia

The presence of one or more additional nipples, usually along the embryonic milk line. It is often harmless, although accessory tissue can rarely have the same disorders as normal breast tissue.

Polythiazide

A thiazide diuretic formerly used to treat high blood pressure and fluid retention by increasing renal salt and water excretion.

Polyunsaturated Fat

Liquid at room temperature. Sources: fish, vegetable oils, nuts. Essential fatty acids.

Polyurethane

A family of synthetic polymers used in medical tubing, implants, dressings, and other products; tissue response depends on formulation and site.

Polyuria

Excessive urine production, commonly more than about 3 liters per day in an adult.

Pompe Disease

An autosomal recessive lysosomal storage and glycogen storage disorder (GSD Type II) caused by deficiency of acid alpha-glucosidase (acid maltase), leading to progressive accumulation of glycogen in lysosomes, particularly in cardiac and skeletal muscle. The infantile-onset form presents with massive cardiomegaly, severe hypotonia (“floppy baby”), respiratory failure, and death in early infancy without treatment; late-onset forms present as progressive

limb-girdle and diaphragm muscle weakness, treatable with recombinant enzyme replacement therapy.

Alternate Names:

Glycogen storage disease type II; Acid maltase deficiency; GSD II

Polyvalent

Effective against or involving multiple types, strains, antigens, or targets.

Polyvinyl

A family of polymers used in plastics and medical materials; properties vary according to attached chemical groups.

Pomalidomide

An immunomodulatory medicine used with other treatments for selected multiple myeloma and related blood cancers; it can cause severe birth defects and blood abnormalities.

Pompholyx

A form of dyshidrotic eczema causing intensely itchy small blisters on the hands or feet.

Pompholyx Eczema

Pompholyx, or dyshidrotic eczema, causes intensely itchy small blisters on the palms, sides of fingers, or soles and may leave painful peeling or cracks.

Pons

The middle part of the brainstem, containing pathways and nuclei involved in movement, sensation, breathing, and cranial-nerve function.

Pontiac Fever

A mild, self-limited flu-like illness caused by Legionella bacteria without the pneumonia typical of Legionnaires’ disease.

Pontine

Pertaining to or located within the pons, the middle division of the brainstem situated between the midbrain superiorly and the medulla oblongata inferiorly, and anterior to the fourth ventricle and cere-

bellum. Contains essential descending motor tracts (corticospinal and corticobulbar tracts), ascending sensory pathways (medial lemniscus, spinothalamic tract), the locus coeruleus, the pontine micturition center, and the cranial nerve nuclei for CN V (trigeminal), VI (abducens), VII (facial), and VIII (vestibulocochlear). Pathologies include acute pontine ischemic stroke (presenting with crossed hemiparesis or catastrophic locked-in syndrome), pontine hemorrhage (pinpoint reactive pupils, coma, quadriparesis, and hyperpyrexia), and osmotic demyelination syndrome (central pontine myelinolysis from overly rapid sodium correction in severe hyponatremia).

Poor Circulation

Reduced or abnormal blood flow, usually referring to arterial insufficiency or venous disease, causing coolness, color change, pain, swelling, ulcers, or delayed wound healing.

Poor Color Vision

Alternate index label; see *Color blindness*.

Popcorn Lung Bronchiolitis Obliterans

Bronchiolitis obliterans is irreversible scarring and narrowing of small airways that can follow toxic inhalation, infection, transplantation, or autoimmune disease. It causes persistent cough and breathlessness with obstructive lung testing; exposure avoidance and specialist care are important.

Popliteal

Pertaining to the popliteal fossa, the diamond-shaped anatomical depression located on the posterior aspect of the knee joint. Bounded by the biceps femoris laterally and semimembranosus/semitendinosus medially superiorly, and the heads of the gastrocnemius inferiorly. Transmits critical neurovascular structures from superficial to deep: the tibial nerve, common fibular nerve, popliteal vein, and popliteal artery (the deepest structure, palpated for peripheral pulses and prone to popliteal artery aneurysms and entrapment syndrome). The fossa is also the classic site for popliteal synovial cysts (Baker cysts) associated with intra-

articular knee osteoarthritis or meniscal tears.

Popliteal Aneurysm

Aneurysm of popliteal artery behind knee. Associated with AAA. Risk: thrombosis, embolism, compression. Treatment: surgical repair or endovascular stenting.

Popliteal Artery

Continues from femoral artery at the adductor hiatus, dividing into anterior/posterior tibial arteries at the lower popliteus border. Deepest popliteal fossa structure, related anteriorly to vein and tibial nerve. Palpable at the fossa's inferior margin.

Popliteal Vein

A deep vein behind the knee formed by the union of the anterior and posterior tibial veins. It continues as the femoral vein and can be affected by deep-vein thrombosis.

Popliteal Artery Aneurysm

An abnormal enlargement of the artery behind the knee that may cause limb ischemia, clotting, or embolization.

Popliteal Cyst

A fluid-filled swelling behind the knee, also called a Baker cyst, caused by communication between the joint and a bursa and often associated with arthritis, meniscal injury, or inflammation.

Popliteal Cyst (Baker Cyst)

Alternate index label for Baker Cyst.

Popliteal Fossa

Diamond-shaped space on the posterior knee, bounded by hamstrings superiorly and gastrocnemius heads inferiorly. Contains popliteal artery/vein, tibial nerve, and common peroneal nerve. The popliteal pulse is palpated at the inferior margin.

Population Attributable Fraction

The proportion of cases or disease burden in the

total population that would theoretically be prevented if the exposure were eliminated, assuming the exposure is causal and other conditions remain unchanged.

Population Attributable Risk

Proportion of disease in population attributable to exposure. $PAR = (\text{incidence total} - \text{incidence unexposed}) / \text{incidence total}$.

Population Density

The number of people living in a defined area, a demographic measure relevant to crowding, resource needs, environmental exposure, and spread of communicable disease.

Population Genetics

The study of how gene frequencies and genetic variation change within and between populations through inheritance, mutation, selection, migration, and genetic drift.

Population Group

A defined set of people sharing a characteristic such as age, location, exposure, ancestry, occupation, or health condition for epidemiologic or clinical analysis.

Population Health

The health outcomes of a defined group and the distribution of those outcomes, considered in relation to social conditions, environment, behavior, healthcare, and policy.

Porcelain Gallbladder

Calcification of the gallbladder wall visible on imaging representing chronic inflammatory condition associated with cholelithiasis and chronic cholecystitis. Historically considered a strong risk factor for gallbladder carcinoma, recent studies suggest the cancer risk may be lower than previously estimated.

Porcine

Porcine means derived from or relating to pigs; porcine tissues, enzymes, and biologic products may

be used in medicine after appropriate processing and screening.

Pore

A small opening in the skin or another surface, often associated with a gland or follicle.

Porencephaly

A cavity or cyst within the brain, usually caused by developmental abnormality or prenatal or acquired injury.

Porfimer Sodium

A photosensitizing medicine used with light therapy to destroy selected abnormal tissues, including some tumors; it causes prolonged light sensitivity.

Porfiromycin

Porfiromycin is an older investigational chemotherapy compound related to mitomycin and is not a routine modern treatment.

Porifera

The animal phylum containing sponges, aquatic organisms studied in biology and as sources of bioactive compounds.

Porin

A porin is a channel-forming protein in an outer membrane, especially of Gram-negative bacteria, allowing passage of selected small molecules.

Pork Tapeworm

Taenia solium, a tapeworm acquired from undercooked pork; its larvae can cause cysticercosis.

Porokeratosis

A group of keratinization disorders producing characteristic ridge-like borders called cornoid lamellae around annular scaly lesions, with some forms carrying a small skin-cancer risk.

Poroma

A poroma is a usually benign sweat-gland tumor presenting as a flesh-colored or reddish papule or

nodule, often on palms or soles.

Porphria

A misspelling of porphyria, a group of disorders involving abnormal heme synthesis.

Porphyria

A group of inherited or acquired disorders caused by defects in heme biosynthesis, producing neurologic, abdominal, or skin symptoms.

Porphyria Cutanea Tarda

The most common porphyria, caused by a deficiency of hepatic uroporphyrinogen decarboxylase (UROD), leading to accumulation of uroporphyrinogens. Triggered by hepatitis C virus (HCV), alcohol abuse, iron overload (hemochromatosis), and estrogen therapy.

Porphyrias

Metabolic disorders of heme synthesis causing cutaneous and neurological symptoms. Cutaneous porphyrias include porphyria cutanea tarda (blisters on sun-exposed skin, hypertrichosis, sclerodermoid changes), erythropoietic protoporphyria (immediate pain and burning on sun exposure without visible changes), and variegate porphyria.

Porphyrin

A ring-shaped compound involved in heme and other biological molecules; abnormal accumulation occurs in porphyrias.

Porphyrins Blood Test

A blood porphyrin test measures porphyrins or related compounds and helps evaluate suspected porphyria and disorders of haem production.

Porphyrins Urine Test

A urine porphyrin test measures porphyrins or their precursors and helps investigate suspected porphyria or abnormal haem metabolism.

Porphyromonas

A genus of anaerobic gram-negative bacteria found

especially in the mouth and associated with periodontal and other infections.

Porphyromonas Bennonis

An anaerobic oral bacterium rarely isolated from human specimens and occasionally associated with mixed infection.

Porphyromonas Catoniae

An anaerobic gram-negative bacterium found in the mouth and occasionally associated with periodontal or mixed infection.

Porphyromonas Endodontalis

An anaerobic oral bacterium associated with infected dental pulp and root-canal disease.

Porphyromonas Levii

A *Porphyromonas* species found mainly in animals and rarely associated with human infection.

Porphyromonas Somerae

An anaerobic gram-negative bacterium occasionally isolated from human wounds, abscesses, or other clinical specimens.

Port-Wine Stain

A permanent capillary malformation producing a flat pink, red, or purple skin patch.

Portacaval Shunting

Surgical or radiologic diversion of portal blood into the vena cava to reduce portal hypertension; it can worsen hepatic encephalopathy.

Portal Hypertension

Elevated pressure in the portal venous system defined as hepatic venous pressure gradient exceeding five millimeters of mercury with clinically significant portal hypertension occurring when the gradient exceeds ten.

Alternate Names:

PHT

Portal Hypertensive Gastropathy

Diffuse mucosal changes in the stomach due to portal hypertension causing chronic blood loss. Characterized by mosaic pattern and cherry red spots on endoscopy representing dilated mucosal vessels. Most common in patients with advanced cirrhosis and portal hypertension.

Portal System

Venous network draining the GI tract, spleen, and pancreas to the liver via the portal vein (formed by superior mesenteric and splenic vein union behind the pancreatic neck). Carries nutrient-rich deoxygenated blood for hepatic processing before systemic entry. Receives left gastric, right gastric, cystic, and paraumbilical veins.

Portal Vein

The vein carrying nutrient-rich blood from the gastrointestinal tract, spleen, pancreas, and gallbladder to the liver, formed behind the pancreatic neck by the union of the superior mesenteric and splenic veins. It enters the porta hepatis with the hepatic artery and bile duct.

Portal Vein Thrombosis

Partial or complete thrombosis of the portal vein or its branches. It may result from cirrhosis, malignancy, inflammation, thrombophilia, or abdominal surgery and can cause portal hypertension, intestinal ischemia, or variceal formation.

Portion Control

Managing serving sizes. Larger portions available today contribute to obesity. Using smaller plates, reading labels helpful.

Portion Of Cytosol

A region of the cell's aqueous internal fluid outside membrane-bound organelles, containing ions, metabolites, proteins, and enzymes that support cellular reactions.

Portion Size

The amount of food or drink served or eaten at one time, distinct from a standardized serving size

and important for estimating energy, carbohydrate, sodium, and nutrient intake.

Portopulmonary Syndrome

Development of pulmonary arterial hypertension in the setting of portal hypertension or liver disease. Results from increased cardiac output and splanchnic vasodilation leading to pulmonary vascular remodeling.

Position

The location or posture of a body part, organ, fetus, or patient.

Positional Asphyxia

Fatal or potentially fatal impairment of breathing caused by body position that restricts chest movement, airway patency, or venous return. Risk is increased by restraint, intoxication, obesity, and inability to reposition; findings are nonspecific and require scene and medical correlation.

Positioning Your Baby For Breastfeeding

Placing an infant's head, neck, and body in alignment with the breast so the mouth opens widely, the latch is deep, and feeding is comfortable and effective.

Positive

Positive means that a test, finding, result, or response is present or above a defined threshold; interpretation depends on the test and clinical setting.

Positive Airway Pressure Treatment

A medical procedure, treatment, device, or care topic related to positive airway pressure treatment; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Positive End-Expiratory Pressure

Pressure maintained at end-expiration to prevent alveolar collapse. Improves oxygenation by recruiting alveoli and increasing FRC. Balances oxygenation with hemodynamic effects.

Positive Feedback

A regulatory process in which an output amplifies the process that produced it, as in labor contractions.

Positive Finding

A positive finding is an observed symptom, examination sign, image, laboratory result, or test response that supports the presence of a specified condition or feature.

Positive Predictive Value

The probability that a person with a positive test result truly has the target condition. PPV depends on test specificity and sensitivity and on disease prevalence or pretest probability in the tested population.

Positive Predictive Value In Surveillance

The proportion of reported signals or alerts that represent true events meeting the surveillance case definition. It is influenced by the specificity of the signal and the underlying prevalence of the condition.

Positive Pressure Ventilation

Mechanical ventilation that delivers air/oxygen under positive pressure to support or replace spontaneous breathing. Noninvasive (NIV): CPAP (continuous) and BiPAP (two levels) via mask for obstructive sleep apnea, cardiogenic pulmonary edema, and hypercapnic COPD.

Positive Psychology

The study of well-being, strengths, resilience, and factors that help people thrive.

Positive Symptoms

Symptoms reflecting an excess or distortion of normal mental functions, such as hallucinations, delusions, disorganized speech, or grossly disorganized behavior. They are contrasted with negative symptoms, which reflect loss or reduction of function.

Positive-Strand RNA Virus

A positive-strand RNA virus has a genome that can function directly as messenger RNA in host cells, allowing translation soon after infection.

Positron

Anti-particle of electron. Emitted by PET radionuclides. Annihilation with electron produces two 511 keV photons.

Positron Camera

A positron camera detects paired gamma rays from positron annihilation and is used in positron-emission tomography to map tracer distribution.

Positron Emission Mammography

PET imaging of breast. Higher sensitivity than mammography for dense breasts. Limited availability.

Positron Emission Tomography

Functional imaging modality using positron-emitting radionuclides. Common isotope: fluorine-18 (110 min half-life). Detection: annihilation photons (511 keV) detected in coincidence. Tracers: FDG (metabolism), florbetapir (amyloid), flortaucipir (tau), PSMA (prostate cancer).

Positron Emission Tomography

Imaging that detects paired photons from a positron-emitting tracer to map metabolism or molecular activity.

Post Cibum

A medication instruction meaning that a medicine should be taken after meals. Clear instructions should spell this out to prevent confusion with other uses of the abbreviation P.C.

Alternate Names:

P.C.; After Meals

Post-Acute Rehabilitation

Time-limited interdisciplinary care after an acute illness, injury, or hospitalization to restore mobility, self-care, cognition, communication, and safe com-

munity function. Intensity and setting depend on medical stability and rehabilitation potential.

Post-Cardiac Arrest Management

Care after return of spontaneous circulation that supports breathing and circulation, identifies and treats the cause of the arrest, manages temperature and seizures when indicated, and assesses neurologic recovery over time.

Post-Cardiac Injury Syndrome

Alternate index label; see *Dressler syndrome*.

Post-Chemotherapy Cognitive Impairment

Alternate index label; see *Chemo brain*.

Post-Concussion Syndrome

Persistent symptoms after concussion: headache, dizziness, cognitive difficulties, sleep disturbance, mood changes. Management: symptom-directed, gradual return to activity.

Post-Concussional Syndrome

Persistent physical, cognitive, emotional, or sleep symptoms after a concussion or mild traumatic brain injury.

Post-Dural Puncture Headache

A positional headache occurring after accidental dural puncture during epidural placement or lumbar puncture, caused by cerebrospinal fluid leakage and intracranial hypotension. Symptoms include frontal or occipital headache worse when upright and relieved when supine, neck stiffness, tinnitus, photophobia, and nausea.

Post-Exposure Prophylaxis

The administration of antimicrobial agents after exposure to a pathogen to prevent infection. PEP is used for HIV, hepatitis B, hepatitis C, rabies, and other infections. The timing of PEP is critical, with early administration being most effective. Understanding PEP is essential for managing occupational exposures and outbreaks.

Post-Hepatic Jaundice (Obstructive Jaundice)

Jaundice caused by obstruction of bile flow after bilirubin has been processed by the liver, commonly from gallstones, strictures, or tumours.

Alternate Names:

Obstructive Jaundice

Post-Hoc

Performed or analyzed after an event; in statistics, a post-hoc analysis follows the planned primary analysis.

Post-Infectious Cough

A chronic cough persisting 3–8 weeks after a URI, caused by transient bronchial hyperresponsiveness and airway inflammation. It is self-limited and usually resolves without treatment. Inhaled corticosteroids, antitussives, and time are the mainstays of management.

Post-Mortem

Occurring after death or relating to examination of a body after death.

Post-Nasal Drip (Chronic Rhinitis)

Alternate index label for Chronic Rhinitis.

Post-Natal Depression

Depression beginning during pregnancy or after childbirth, with persistent low mood or loss of interest and possible effects on sleep, bonding, and daily functioning.

Post-Obstructive Pneumonia

Pneumonia occurring distal to a bronchial obstruction caused by tumor, foreign body, mucus plug, or stenosis. The obstruction prevents clearance of secretions, creating a favorable environment for infection. It does not resolve with antibiotics alone until the obstruction is relieved.

Post-Operative Atelectasis

Collapse of some alveoli after surgery, promoted by anesthesia, shallow breathing, pain, immobil-

ity, mucus retention, or underlying lung disease. Management addresses the cause and may include mobilization, effective analgesia, deep breathing, and treatment of complications.

Post-Orgasmic Illness Syndrome

A rare, disabling chronic neuroendocrine and immunologic disorder in men characterized by the rapid onset of severe, flu-like symptoms and cognitive dysfunction following ejaculation (whether through sexual intercourse, masturbation, or spontaneous nocturnal emissions). Symptoms appear within seconds to hours after ejaculation and persist for two to seven days, encompassing extreme physical exhaustion, muscle weakness, feverish sensations, sweating, rhinitis, conjunctival injection, severe headache, irritability, and profound brain fog. The exact pathophysiology remains under investigation, with evidence pointing toward an autoimmune type I or type IV allergic response to autologous seminal fluid, central neurochemical dysregulation, or transient autonomic instability.

Alternate Names:

POIS

Post-Partum Haemorrhage

Excessive bleeding after childbirth, most commonly caused by failure of the uterus to contract, retained placental tissue, genital-tract trauma, or clotting problems.

Post-Pneumonectomy Syndrome

A rare complication following pneumonectomy where the remaining lung herniates across the mediastinum, causing compression of airways and vessels. It presents with dyspnea, stridor, and recurrent infections. Treatment is surgical correction with mediastinal repositioning and prosthetic implant placement.

Post-Prandial

Occurring after, or pertaining to the period following, the consumption of a meal. In metabolic and endocrinologic evaluation, postprandial glycemic excursions (typically measured 2 hours post-meal) provide critical data regarding glucose tolerance,

insulin secretion, and diabetes control, with 2-hour postprandial glucose levels ≥ 200 mg/dL during an oral glucose tolerance test establishing a diagnosis of diabetes mellitus. Postprandial physiology also encompasses postprandial hypotension (a sudden drop in blood pressure caused by splanchnic blood pooling in autonomic failure) and postprandial angina in severe coronary artery disease.

Post-Splenectomy Complications

Post-splenectomy complications include infection by encapsulated bacteria, blood clots, bleeding, and changes in blood-cell counts; vaccination and follow-up reduce risk.

Post-Streptococcal Glomerulonephritis

Immune-mediated glomerulonephritis following infection with nephritogenic strains of group A streptococcus typically 1 to 3 weeks after pharyngitis or 3 to 6 weeks after skin infection. Subepithelial humps on electron microscopy representing immune complex deposits.

Post-Surgical Pain

Acute pain following operative procedures, caused by tissue incision, retraction, dissection, and inflammation, mediated by nociceptors sensitized by prostaglandins, bradykinin, and cytokines. Intensity varies by procedure (thoracotomy, joint replacement, and laparotomy produce more severe pain).

Post-Surgical Rehabilitation

Recovery program after surgery. Phases: acute (pain control, wound care), subacute (range of motion, strengthening), functional (return to activities). Protocols vary by procedure.

Post-Term Pregnancy

Pregnancy continuing beyond 42 weeks gestation (294 days from LMP). Risk factors include prior post-term pregnancy, nulliparity, and genetic factors. Complications include macrosomia, oligohydramnios, meconium aspiration, placental insufficiency, and stillbirth.

Post-Test Probability

The probability of disease after incorporating a test result with the pretest probability. It can be estimated using Bayes' theorem or by converting pretest odds to post-test odds with the appropriate likelihood ratio.

Post-Thrombotic Syndrome

Chronic pain, heaviness, edema, skin change, and sometimes ulceration developing after deep-vein thrombosis because of persistent venous obstruction and valvular damage. Compression, exercise, skin care, and selected interventions may reduce disability.

Post-Transfusion Purpura

A rare immune-mediated thrombocytopenic disorder occurring several days after transfusion of blood products, usually in previously sensitized individuals. It causes abrupt, severe thrombocytopenia with petechiae, mucosal bleeding, or more serious haemorrhage.

Post-Traumatic Headache

A headache that begins or persists after a head or neck injury.

Post-Traumatic Stress Disorder

A disorder that may develop after exposure to actual or threatened death, serious injury, or sexual violence, causing persistent re-experiencing, avoidance, negative mood or cognition, and heightened arousal.

Post-Vasectomy Pain Syndrome

A chronic, disabling complication of vasectomy characterized by persistent or intermittent, dull, aching, or sharp scrotal pain lasting for at least three months post-procedure, of sufficient severity to interfere with daily activities or sexual function. Affecting approximately 1–2% of vasectomized men, proposed etiologies include epididymal congestion and back-pressure behind the blocked vas, chronic inflammation, sperm granuloma formation, perineural fibrosis, or direct nerve entrapment in scar tissue (such as the ilioinguinal or genital branch of the

genitofemoral nerve). Conservative management includes scrotal support, anti-inflammatory medications, and pelvic floor physical therapy; refractory cases may require spermatic cord nerve blocks, microsurgical denervation of the spermatic cord, epididymectomy, or vasectomy reversal (vasovasostomy).

Alternate Names:

PVPS; Chronic Post-Vasectomy Pain

Post-Void Residual

The amount of urine remaining in the bladder after urination, measured by ultrasound or catheterization. A persistently high residual may indicate incomplete emptying, but its significance depends on the volume, timing, symptoms, and clinical context.

Post-Void Residual Volume

The amount of urine remaining in the bladder immediately after urination, measured by ultrasound or catheterization. An elevated residual suggests incomplete emptying but must be interpreted with timing, bladder volume, symptoms, and repeated measurements.

Postal Service

A postal service transports letters, packages, specimens, or medicines; healthcare shipping requires appropriate packaging, labeling, temperature control, and privacy.

Postanesthesia Care Unit

The postanesthesia care unit is a monitored recovery area where patients are observed during the immediate postoperative period. Admission assessment includes vital signs, level of consciousness, pain assessment, and surgical site evaluation.

Postcholecystectomy Syndrome

Persistence or recurrence of symptoms after cholecystectomy. Causes include retained common bile duct stones, sphincter of Oddi dysfunction, bile salt malabsorption, irritable bowel syndrome, and other gastrointestinal conditions. Evaluation includes liver function tests, MRCP, and endoscopic ultrasound.

Postconcussion Syndrome

Persistent physical, cognitive, or emotional symptoms after a concussion.

Posterior

Situated behind or toward the back of the body or a structure.

Posterior Chamber

The part of the eye between the iris and lens, containing aqueous humor.

Posterior Cruciate Ligament Injury

Tear of the PCL, less common than ACL injury. Mechanism: dashboard injury (tibia striking dashboard), hyperflexion, or fall on a flexed knee with foot plantarflexed. Presents with posterior knee pain, mild swelling, and posterior sag of the tibia. Positive posterior drawer test (most sensitive), posterior sag sign (Godfrey test).

Posterior Cruciate Ligament Tear

PCL tear: less common, usually from direct blow to tibia (dashboard injury). Symptoms: knee pain, swelling, instability. Diagnosis: posterior drawer test, MRI. Treatment: usually conservative, surgical if combined injuries.

Posterior Descending Artery

An artery running in the posterior interventricular groove and supplying the inferior ventricular walls and posterior interventricular septum. It usually arises from the right coronary artery in right-dominant circulation but may arise from the circumflex artery.

Posterior Drawer Test

PCL integrity test. Knee flexed 90 degrees, posterior tibial translation.

Posterior Fossa Tumor

A posterior fossa tumor is a growth in the part of the skull containing the cerebellum and brainstem and may obstruct fluid flow or affect coordination and vital functions.

Posterior Heel Bursitis

Inflammation of a bursa near the back of the heel, causing pain and swelling.

Alternate Names:

Retrocalcaneal bursitis

Posterior Keyhole Foraminotomy

A minimally invasive operation that enlarges a spinal nerve opening to relieve compression.

Posterior Myocardial Infarction

A heart attack involving the back wall of the heart.

Posterior Pituitary

The neural lobe of the pituitary that stores and releases vasopressin and oxytocin synthesized in the hypothalamus. Vasopressin regulates renal water retention and vascular tone; oxytocin contributes to uterine contraction and milk ejection.

Posterior Prolapse

Alternate index label; see *Posterior vaginal prolapse (rectocele)*.

Posterior Reversible Encephalopathy Syndrome

A neurotoxic state caused by failed cerebrovascular autoregulation, typically from acute hypertension, eclampsia, immunosuppressive drugs (tacrolimus, cyclosporine), or sepsis. Presents with headache, seizures, altered consciousness, and visual disturbances.

Posterior Rhinorrhea

Posterior rhinorrhea is mucus draining from the nose into the throat, commonly causing throat clearing or cough from allergy, infection, irritation, or sinus disease.

Posterior Subcapsular Cataract

A type of lens opacity located at the posterior aspect of the lens, just anterior to the posterior lens capsule, in the visual axis, and it is particularly visually disabling because of its central location.

Posterior Tibial Artery

Arises from the popliteal artery, courses deep in the posterior leg, palpable behind the medial malleolus. Divides into medial/lateral plantar arteries for the sole. Supplies posterior leg muscles. Important for peripheral vascular disease assessment. The pedal pulse behind the medial malleolus is a key clinical examination component.

Posterior Urethral Valves

The most common cause of lower urinary tract obstruction in male infants, caused by congenital mucosal folds (valves) in the posterior urethra (prostatic urethra) that obstruct urine outflow.

Posterior Uveitis

Inflammation affecting the retina, choroid, or both. It may cause floaters, blurred vision, visual-field defects, or eye pain and can result from infection, autoimmune disease, or other inflammatory conditions.

Posterior Vitreous Detachment

Separation of the posterior vitreous cortex from the retinal surface, commonly related to age-related vitreous liquefaction. New flashes or floaters require dilated retinal examination because an associated retinal tear or detachment may be present.

Posteroanterior

Posteroanterior means directed from back to front; a PA chest radiograph uses this projection to reduce magnification of the heart.

Postganglionic Fiber

An autonomic nerve fiber extending from a ganglion to its target organ after the synapse, carrying sympathetic or parasympathetic signals to smooth muscle, glands, or the heart.

Postherpetic Neuralgia

Persistent nerve pain in an area affected by shingles after the rash has healed.

Alternate Names:

Neuralgia, Postherpetic

Posthitis

Inflammation of the foreskin, causing redness, swelling, itching, pain, discharge, or difficulty retracting it; infection, irritation, diabetes, and poor hygiene are possible contributors.

Posthumous

Occurring, discovered, or published after a person's death. A posthumous diagnosis may be based on records, stored samples, or autopsy findings.

Postinflammatory Hyperpigmentation

Darkening of skin after inflammation or injury, caused by increased melanin production or its deposition in the epidermis or dermis.

Postmenopausal

Postmenopausal describes the period after menopause, when ovarian estrogen production and menstrual periods have permanently ceased.

Postmenopausal Osteoporosis

Bone loss caused by lower estrogen levels associated with menopause. Sometimes called type I osteoporosis.

Postmenopause

The period in a woman's life lasting from the end of perimenopause until the end of life.

Postmortem Artifact

Any structural, chemical, or physical change introduced into a body after death (e.g., embalming artifacts, insect activity, postmortem animal scavenging, resuscitation trauma) that mimics antemortem disease or trauma.

Postmortem Interval

Estimated elapsed time between actual death and the time of autopsy or body discovery, calculated utilizing algor mortis, livor mortis, rigor mortis, vitreous potassium levels, and insect succession patterns.

Postmortem Toxicology

Toxicologic analysis of specimens collected after death to identify drugs, alcohols, poisons, and metabolites. Results must account for therapeutic administration, redistribution, decomposition, specimen site, contamination, and tolerance before conclusions about causation are made.

Postmyocardial Infarction Syndrome

Alternate index label; see *Dressler syndrome*.

Postnatal

Pertaining to or occurring during the period immediately following birth, specifically referring to the infant (contrasted with postpartum, which specifically refers to the mother). The postnatal stage encompasses the crucial neonatal period (the first 28 days of life) and infancy, characterized by dramatic physiological adaptations including pulmonary vascular resistance drop, closure of fetal circulatory shunts (ductus arteriosus, foramen ovale), metabolic shifts, routine newborn screening for metabolic and genetic disorders, and neurodevelopmental milestone tracking.

Postnatal Care

A medical procedure, treatment, device, or care topic related to postnatal care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Postnatal Depression

A depressive episode occurring after childbirth, with persistent low mood, anhedonia, sleep or appetite disturbance, guilt, impaired bonding, or suicidal thoughts.

Postop

Postop is an abbreviation for postoperative, meaning relating to the period after a surgical procedure.

Postoperative

Postoperative means occurring or provided after surgery, including recovery, wound care, pain control, rehabilitation, and complication monitoring.

Postoperative Care

Structured post-surgical management encompassing pain control, fluid balance, wound care, early mobilization, and venous thromboembolism prophylaxis.

Postoperative Cognitive Dysfunction

A decline in cognitive abilities such as memory, attention, or executive function after surgery. It may be temporary or persistent and is more frequent in older adults and after major or complicated procedures. Assessment requires comparison with the person's baseline and consideration of delirium, medication effects, and other medical causes.

Postoperative Complications

Clavien-Dindo classification: Grade I (any deviation, no treatment), Grade II (pharmacologic), Grade III (surgical/endoscopic/radiologic intervention: IIIa no GA, IIIb GA), Grade IV (ICU: IVa single organ, IVb multi-organ), Grade V (death).

Postoperative Delirium

A common complication after major surgery, particularly in elderly patients. It is categorized as hyperactive (agitation, restlessness, hallucinations), hypoactive (lethargy, withdrawal, decreased responsiveness), or mixed. Hypoactive delirium is the most common and most missed form.

Postoperative Hemorrhage

Bleeding after surgery that may occur at the operative site or internally and can cause shock, anemia, or the need for urgent intervention.

Postoperative Ileus

Temporary impairment of gastrointestinal motility after surgery, most common after abdominal surgery. Pathophysiology: autonomic dysfunction (sympathetic overactivity), inflammatory mediators, opioids, and electrolyte abnormalities.

Postoperative Infection

An infection developing after surgery, involving the incision, an organ space, implanted material, or the bloodstream.

Postoperative Nausea And Vomiting

Nausea, retching, or vomiting occurring after surgery. Risk is influenced by factors such as previous motion sickness or postoperative nausea, anesthetic technique, opioid use, and patient characteristics. Prevention and treatment are tailored to the individual risk and procedure.

Postoperative Pain Management

Management of pain after surgery using a combination of medicines, regional techniques, physical measures, and rehabilitation. The plan is tailored to the procedure, pain severity, medical conditions, and risks of adverse effects.

Postoperative Period

The postoperative period is the time after an operation when recovery, pain control, wound care, mobility, nutrition, complications, and follow-up are monitored.

Postoperative Pulmonary Complication

Respiratory deterioration after surgery, including atelectasis, pneumonia, aspiration, respiratory failure, bronchospasm, and exacerbation of chronic lung disease. Risk reduction includes smoking cessation, lung-protective ventilation, analgesia, mobilization, and appropriate respiratory exercises.

Postpartum

Pertaining to or occurring during the time interval following childbirth, typically defined as the 6 to 12 weeks following delivery (the puerperium) during which maternal physiological, hormonal, and anatomical systems return toward their non-pregnant baseline. High-risk period for maternal complications including postpartum hemorrhage (PPH; predominantly caused by uterine atony, retained placenta, genital tract trauma, or coagulopathy), puerperal infections (endometritis, mastitis), postpartum preeclampsia, deep vein thrombosis, and psychiatric disorders ranging from transient postpartum blues to major postpartum depression and postpartum psychosis.

Alternate Names:

Postnatal

Postpartum Anxiety

Excessive, persistent, or distressing anxiety during pregnancy or after childbirth that interferes with sleep, daily function, bonding, or self-care. It may occur with panic, intrusive worries, or depression and deserves clinical assessment; thoughts of self-harm or harm to the baby require emergency help.

Postpartum Blues

A common, short-lived period of tearfulness, mood changes, irritability, or anxiety beginning soon after childbirth and usually improving within two weeks. Support, rest, and practical help are important; persistent, severe, psychotic, or suicidal symptoms require prompt assessment for a postpartum mental-health disorder.

Postpartum Cardiomyopathy (Peripartum Cardiomyopathy)

A dilated cardiomyopathy causing heart failure toward the end of pregnancy or during the months after delivery. Symptoms may include breathlessness, difficulty lying flat, swelling, fatigue, or chest discomfort and require prompt assessment.

Alternate Names:

Peripartum Cardiomyopathy

Postpartum Care

Clinical care during the weeks after childbirth that assesses bleeding, uterine involution, blood pressure, infection, wound healing, breastfeeding, mental health, contraception, and recovery.

Postpartum Contraception

Contraceptive counseling and care after childbirth, taking account of breastfeeding, venous-thromboembolism risk, medical conditions, fertility intentions, and the timing of method initiation.

Postpartum Depression

A depressive episode occurring during pregnancy or after childbirth, causing significant distress or impairment.

Alternate Names:

Depression, Postpartum PPD (Postpartum Depression)

Postpartum Depression

Alternate index label for Postpartum Depression.

Postpartum Endometritis

Infection of the decidua and endometrial cavity after delivery, occurring more often after cesarean birth. Fever, uterine tenderness, pelvic pain, and foul-smelling lochia are typical; treatment generally requires intravenous broad-spectrum antibiotics.

Postpartum Haemorrhage

Excessive bleeding after childbirth, commonly defined by blood loss of at least 1,000 mL or bleeding with hypovolemia after birth.

Postpartum Hemorrhage

Excessive bleeding after childbirth, usually caused by poor uterine contraction, retained placental tissue, genital-tract trauma, or a clotting disorder. It can cause shock and requires urgent obstetric assessment and treatment.

Postpartum Hemorrhage (Secondary)

Excessive bleeding occurring between 24 hours and 12 weeks postpartum. Causes: retained products of conception (most common), endometritis, subinvolution of the placental site, and coagulopathy. Presents with heavy or prolonged bleeding, cramping, and passing clots. Diagnosis: ultrasound (retained tissue, thickened endometrium).

Alternate Names:

Secondary

Postpartum Infection

Infections occurring after delivery, a leading cause of maternal morbidity. Types: endometritis (most common, especially after cesarean), wound infection (cesarean incision, episiotomy, perineal laceration), urinary tract infection, mastitis, septic pelvic thrombophlebitis, and pneumonia.

Postpartum Preeclampsia

New-onset hypertension with pre-eclampsia features after childbirth, sometimes occurring several days or weeks postpartum. Severe headache, visual symp-

toms, chest pain, shortness of breath, or seizures require urgent assessment.

Postpartum Psychosis

A rare but severe psychiatric emergency that can begin suddenly during the days or weeks after childbirth. Symptoms may include hallucinations, delusions, paranoia, severe confusion, mania, depression, disorganized behavior, or rapidly changing moods. It can worsen quickly and may threaten the safety of the mother or baby, so immediate medical assessment is required.

Alternate Names:

Postnatal Psychosis Puerperal Psychosis

Postpartum Thyroiditis

Autoimmune inflammation of the thyroid occurring during the first year after delivery. It may cause a temporary hyperthyroid phase followed by hypothyroidism, and symptoms and recovery vary; thyroid-function testing guides follow-up and treatment.

Postpartum Urinary Retention

Inability to empty the bladder adequately after childbirth, sometimes associated with epidural anesthesia, perineal trauma, swelling, or prolonged labor. Prompt assessment prevents bladder overdistension and injury.

Postprandial

Postprandial means occurring after a meal, especially the changes in glucose, insulin, digestion, and circulation after eating.

Postprandial Period

The postprandial period is the interval after eating when digestion and nutrient absorption occur and glucose, insulin, and other metabolic responses change.

Postrenal AKI

Acute kidney injury caused by obstruction of urine flow from the kidneys to the urethra. Causes include prostate enlargement, stones, tumors, fibrosis, and neurogenic bladder. The effect depends on the

location, duration, completeness, and whether one or both kidneys are affected.

Poststreptococcal Glomerulonephritis

Poststreptococcal glomerulonephritis is kidney inflammation occurring after certain streptococcal infections, causing blood or protein in urine, swelling, high blood pressure, and reduced kidney function.

Poststreptococcal Pustulosis

A sterile, non-follicular pustular eruption occurring as a rare sequela of streptococcal pharyngitis, presenting with scattered pustules on an erythematous base, typically on the trunk and extremities. It is thought to be an immune-mediated hypersensitivity reaction to streptococcal antigens.

Postsurgical Pain Treatment In Adults

Adult postsurgical pain treatment may combine acetaminophen, anti-inflammatory medicines, regional anesthesia, limited opioids, movement, and wound care according to the operation and patient risks.

Postsynaptic Membrane

The specialized receiving surface of a neuron or muscle cell at a synapse, containing receptors and signaling proteins that respond to neurotransmitter released by the presynaptic cell.

Postterm Pregnancy

Pregnancy that continues beyond 42 completed weeks of gestation. Risks and management depend on gestational dating, fetal condition, and maternal health.

Posttraumatic Stress Disorder

A psychiatric disorder that develops after exposure to a traumatic event (death, serious injury, sexual violence).

Alternate Names:

PTSD (Posttraumatic Stress Disorder)

Posttraumatic Stress Disorder

Alternate index label for Posttraumatic Stress Disorder.

Postural

Postural means relating to body position or posture, including symptoms or vital signs that change when a person sits, stands, or lies down.

Postural Drainage

Positioning a person so gravity assists drainage of secretions from selected parts of the lungs.

Postural Hypotension

A significant fall in blood pressure on standing, often causing dizziness or fainting.

Postural Orthostatic Tachycardia Syndrome

An autonomic disorder causing an excessive increase in heart rate after standing, with symptoms such as light-headedness, palpitations, fatigue, weakness, brain fog, nausea, or fainting. Diagnosis requires clinical assessment and exclusion of other causes of orthostatic symptoms.

Posture

The alignment and position of the body at rest or during activity.

Pot Marijuana (Marijuana)

Alternate index label for Marijuana.

Potassium

An essential intracellular electrolyte important for nerve conduction, muscle contraction, and cardiac rhythm.

Potassium (K)

The chemical symbol for potassium, a major intracellular electrolyte needed for nerve signaling, muscle contraction, and cardiac electrical activity.

Potassium Acetate

A potassium salt used to replace potassium or provide acetate in selected medical and laboratory applications; dosing requires monitoring of kidney function and serum potassium.

Potassium Binders

Sodium zirconium cyclosilicate and patiromer. Exchange potassium in GI tract for sodium or calcium. Treat chronic hyperkalemia allowing continued RAAS inhibitor use in CKD.

Potassium Carbonate Poisoning

Potassium carbonate poisoning involves toxic or environmental exposure to potassium carbonate poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Potassium Channel

A membrane protein that allows potassium ions to cross cells and helps control electrical excitability, heart rhythm, and hormone release.

Potassium Chloride

A chemical or physiological term involving potassium chloride. Its effects and clinical importance depend on its concentration, route of exposure, and patient context.

Potassium Citrate

A chemical or physiological term involving potassium citrate. Its effects and clinical importance depend on its concentration, route of exposure, and patient context.

Potassium Cyanide

A chemical or physiological term involving potassium cyanide. Its effects and clinical importance depend on its concentration, route of exposure, and patient context.

Potassium Deficiency

An abnormally low blood potassium level, which can cause weakness, cramps, constipation, abnormal heart rhythms, or paralysis.

Potassium Dichromate

A chemical or physiological term involving potassium dichromate. Its effects and clinical importance depend on its concentration, route of exposure, and patient context.

Potassium Hydroxide Poisoning

Potassium hydroxide poisoning involves toxic or environmental exposure to potassium hydroxide poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Potassium In Diet

Dietary potassium comes from fruits, vegetables, beans, dairy, and other foods; intake may need adjustment in kidney disease or with medicines that change potassium levels.

Potassium Iodide

Potassium iodide supplies iodide and is used in selected thyroid conditions, radiation emergencies, and some expectorant preparations; excess can disturb thyroid function.

Potassium Ion

The positively charged form of potassium, the principal intracellular cation that helps establish resting membrane potential, nerve transmission, muscle contraction, and cardiac rhythm.

Potassium Permanganate

An oxidizing antiseptic used in very dilute topical solutions; concentrated material can burn tissue.

Potassium Test

A potassium test measures potassium in blood, usually to assess heart, muscle, kidney, or medication-related electrolyte problems.

Potassium Urine Test

A urine potassium test measures potassium excretion and helps determine whether abnormal blood potassium is related to kidney losses or other causes.

Potassium-Sparing Diuretic

A diuretic that promotes sodium excretion while reducing potassium loss, such as spironolactone or amiloride.

Potassium-Sparing Diuretics

Potassium-sparing diuretics act on the distal

nephron to promote sodium excretion while minimizing potassium loss. They include epithelial sodium channel blockers such as amiloride and triamterene, and mineralocorticoid receptor antagonists such as spironolactone and eplerenone.

Potato Plant Poisoning - Green Tubers And Sprouts

Potato plant poisoning - green tubers and sprouts involves toxic or environmental exposure to potato plant poisoning - green tubers and sprouts; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Potbellies And Toddlers

A rounded abdomen in a toddler is often normal body shape or posture, but persistent distension with pain, vomiting, poor growth, constipation, or a mass needs medical assessment.

Potency

The amount of a drug required to produce a specified effect. A more potent drug produces that effect at a lower dose, but potency does not indicate the maximum effect.

Potential

Potential describes a capacity, possibility, or stored energy that may become clinically relevant depending on circumstances and additional findings.

Potential Acuity Meter

Potential acuity meter is a laboratory test, imaging method, instrument, score, or measurement used to characterize a specimen or clinical finding; interpretation depends on the method and clinical context.

Potentiometry

potentiometry is a laboratory test, imaging method, instrument, score, or measurement used to characterize a specimen or clinical finding; interpretation depends on the method and clinical context.

Potocki-Lupski Syndrome

A contiguous gene microduplication syndrome resulting from a reciprocal 3.7 Mb interstitial duplication of chromosome 17p11.2, encompassing the dosage-sensitive retinoic acid-induced 1 (*RAI1*) gene (the reciprocal duplication of the Smith-Magenis syndrome deletion locus). Manifests with neonatal hypotonia, failure to thrive with severe feeding difficulties, intellectual disability, verbal apraxia, high rates of autism spectrum disorder, hyperactive behaviors, and congenital cardiovascular malformations (most notably hypoplastic left heart syndrome, dilated aortic root, and ventricular septal defects).

Alternate Names:

PTLS; Duplication 17p11.2 Syndrome

Pott Disease

TB of the spine involving thoracic or lumbar vertebrae. Causes vertebral destruction, kyphosis (gibbus deformity), and paravertebral abscess. May cause spinal cord compression.

Pott'S Disease

Tuberculosis of the spine, causing vertebral destruction, back pain, deformity, or neurologic compromise.

Pott'S Fracture

An ankle fracture-dislocation involving the malleoli, historically defined variably.

Potter Syndrome

A sequence of anomalies resulting from severe oligohydramnios (low amniotic fluid volume), most commonly caused by bilateral renal agenesis, but also from autosomal recessive polycystic kidney disease, posterior urethral valves, or chronic amniotic fluid leak.

Pouch

A sac-like body structure or a surgically created reservoir. Examples include a cheek pouch, a pouch in the digestive tract, and an ileal pouch made from small intestine.

Pouch Of Douglas

The pouch of Douglas is the peritoneal recess between the uterus and rectum, also called the rectouterine pouch, where fluid may collect.

Poultice

A soft, moist substance applied to the body, historically to soothe or draw fluid from tissue.

Pound

A unit of weight or pressure; the exact meaning depends on context.

Poverty

Insufficient material resources to meet basic needs, a social determinant strongly affecting health and access to care.

Povidone

Povidone is a water-soluble polymer used in medicines, eye products, and other preparations; it is also part of povidone-iodine antiseptic.

Povidone-Iodine

Povidone-iodine is an iodine-containing antiseptic used on skin or tissue before selected procedures; it can irritate skin and affect the thyroid with extensive use.

Powassan Encephalitis

Inflammation of the brain caused by Powassan virus, a tick-borne flavivirus. It can cause fever, headache, vomiting, confusion, seizures, or weakness and may require hospitalization.

Powassan Virus Disease

Powassan virus disease is a rare tick-borne infection that can cause fever, headache, vomiting, confusion, seizures, meningitis, or encephalitis. Treatment is supportive, and prevention relies on avoiding ticks and removing them promptly.

Powder Diffraction

An analytical method that identifies crystalline substances by measuring how an X-ray or other beam

is diffracted by powdered material.

Power

The rate at which work is performed; in exercise, it combines force and movement speed.

Power Training

Exercise designed to improve the ability to produce force rapidly.

Alternate Names:

Explosive training

Pox

A disease producing vesicles, pustules, or pitted scars; the term is used in names such as smallpox and cowpox.

Poxviridae

A family of large DNA viruses that includes orthopoxviruses, molluscipoxvirus, and parapoxviruses; some cause significant human disease.

Poxviridae Infection

An infection caused by a poxvirus, ranging from localized skin lesions to severe systemic disease depending on the virus and host.

Poxvirus

A family of large DNA viruses that includes variola, vaccinia, mpox, and molluscum contagiosum viruses.

Ppar Alpha

PPAR-alpha is a nuclear receptor that regulates fatty-acid oxidation and lipid metabolism and is activated by fibrate medicines.

Ppar Delta

PPAR-delta is a nuclear receptor involved in fatty-acid use, energy balance, inflammation, and tissue differentiation.

PPD

PPD may mean purified protein derivative used in tuberculosis skin testing or post-partum depression;

context determines the intended meaning.

PPD Skin Test

A PPD skin test places a small amount of tuberculin under the skin to assess immune evidence of tuberculosis exposure; interpretation depends on risk and the size of the reaction.

PR Interval

The ECG interval from the start of atrial depolarization to the start of ventricular depolarization, reflecting atrioventricular conduction.

Pracinostat

Pracinostat is an investigational histone-deacetylase inhibitor studied in myeloid and other cancers by altering gene expression and cell survival.

Practitioner

A person qualified and authorized to practice a healthcare profession.

Prader-Labhart-Willi Syndrome

Alternate index label; see *Prader-Willi syndrome*.

Prader-Willi Syndrome

A genetic disorder caused by loss of function of genes on chromosome 15 (paternal deletion or maternal uniparental disomy). Features: neonatal hypotonia and failure to thrive, followed by hyperphagia and obesity in childhood. Intellectual disability, short stature, hypogonadism, and behavioral problems.

Alternate Names:

Prader-Labhart-Willi Syndrome

Pragmatic

Focused on what works in ordinary real-world conditions. A pragmatic clinical trial studies how an intervention performs in usual healthcare rather than under highly controlled conditions.

Pragmatic Trial

A pragmatic trial evaluates an intervention under usual real-world care conditions to estimate how well it works in routine practice.

Pralatrexate

Pralatrexate is an antifolate chemotherapy medicine used for relapsed or refractory peripheral T-cell lymphoma.

Pralidoxime

An oxime that can reactivate inhibited acetylcholinesterase when administered early after organophosphate poisoning, particularly for nicotinic weakness and respiratory-muscle dysfunction. It is used with atropine and supportive care according to exposure and local guidance.

Pramipexole

A dopamine agonist used mainly for Parkinson disease and restless legs syndrome.

Prandial

Prandial means relating to a meal, as in preprandial before eating or postprandial after eating.

Prasugrel

An antiplatelet P2Y₁₂ inhibitor used in selected patients with acute coronary syndrome undergoing PCI.

Pravastatin

A statin that lowers LDL cholesterol by inhibiting HMG-CoA reductase.

Pravastatin Sodium

Pravastatin sodium is a statin medicine that lowers LDL cholesterol and reduces cardiovascular risk.

Praziquantel

An anthelmintic used for schistosomiasis and several tapeworm and fluke infections.

Pre-Cancerous

Showing cellular changes that may progress to cancer but are not invasive cancer.

Pre-Eclampsia

New-onset hypertension after 20 weeks of pregnancy with proteinuria or other maternal organ or placen-

tal dysfunction.

Pre-Existing Diabetes And Pregnancy

Pre-existing type 1 or type 2 diabetes during pregnancy increases risks to parent and fetus, so glucose control, medicines, fetal growth, blood pressure, and eye and kidney health need coordinated care.

Pre-Hepatic Jaundice (Haemolytic Jaundice)

Jaundice caused by excessive breakdown of red blood cells before bilirubin reaches the liver, producing increased unconjugated bilirubin.

Alternate Names:

Haemolytic Jaundice

Pre-MiRNA

A pre-miRNA is an early hairpin-shaped microRNA transcript processed in the nucleus before becoming a mature regulator of gene expression.

Pre-Synaptic

Situated before a synapse, especially the nerve-terminal side that releases a neurotransmitter.

Prealbumin

Prealbumin, or transthyretin, is a liver-produced transport protein for thyroid hormone and retinol-binding protein; its level is influenced by inflammation and nutrition.

Prebiotics

Non-digestible fibers feeding beneficial gut bacteria. Sources: garlic, onions, leeks, asparagus, bananas, whole grains.

Prebiotics And Probiotics

Prebiotics are nondigestible food ingredients (fiber and oligosaccharides—inulin, fructooligosaccharides, galactooligosaccharides) that selectively stimulate the growth and activity of beneficial gut bacteria (*Bifidobacterium*, *Lactobacillus*), promoting host health.

Precancerous Condition

A precancerous condition contains abnormal changes that may progress to cancer but are not cancer themselves.

Precancerous Polyp

A precancerous polyp is a growth with cellular changes that can become cancerous over time if not removed or monitored appropriately.

Precaution

An action taken to reduce risk of harm, infection, or error.

Precipitate Labour

Unusually rapid labour, often defined as delivery within three hours of the onset of regular contractions.

Precipitating Factor

A precipitating factor is an event or exposure that triggers the onset or worsening of symptoms or disease in a susceptible person.

Preclinical

Before human clinical testing or relating to disease changes before symptoms become evident.

Preclinical Study

A preclinical study evaluates a medicine, device, or treatment in laboratory models or animals before testing in humans.

Precocious Puberty

Onset of secondary sexual characteristics earlier than the accepted normal age range.

Alternate Names:

Early Puberty Premature Puberty

Preconception Care

A medical procedure, treatment, device, or care topic related to preconception care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Preconception Counseling

Counseling provided to women of reproductive age before pregnancy to optimize outcomes.

Precordial Catch Syndrome

Brief, sharp, localized chest pain near the heart that worsens with breathing and usually occurs in otherwise healthy children or adolescents.

Precordium

The anterior anatomical region of the chest wall overlying the heart, pericardium, and great vessels, extending from the second to the sixth intercostal spaces and from the right sternal border to the left midclavicular line. A central focus of cardiovascular physical examination, evaluated systematically by inspection, palpation (for the apical impulse / point of maximal impulse [PMI], right ventricular heaves, and thrills), and auscultation of heart sounds (S_1 , S_2 , S_3 , S_4) and murmurs across the four standard valve auscultatory areas.

Precursor

A substance that can be converted into another biologically active substance.

Prediabetes

Blood glucose higher than normal but below the diagnostic threshold for diabetes, usually identified by A1C, fasting glucose, or an oral glucose-tolerance test; it increases future diabetes and cardiovascular risk.

Alternate Names:

Diabetes Pre (Prediabetes)

Prediabetes Syndrome

Blood glucose levels above normal but below the diabetes threshold, associated with increased future risk of type 2 diabetes and cardiovascular disease.

Predictive Test

A test that estimates whether a person or disease is likely to respond to a particular treatment.

Predispose

To predispose is to increase a person's susceptibility or likelihood of developing a disease or response when additional triggers occur.

Prednimustine

Prednimustine is a former antineoplastic drug combining a corticosteroid-related group with an alkylating component and causing immunosuppression and marrow toxicity.

Prednisolone

Prednisolone is a corticosteroid used to reduce inflammation and immune activity; prolonged or high-dose use can cause infection, bone loss, and other effects.

Prednisone

Prednisone is a corticosteroid used for inflammatory, allergic, and autoimmune conditions; it should often be tapered after prolonged use.

Preeclampsia

Preeclampsia is pregnancy-related hypertension with proteinuria or other maternal organ dysfunction after midpregnancy and can progress to seizures, stroke, liver injury, or placental complications. pressure 140/90 mmHg or higher) after 20 weeks gestation with proteinuria or other end-organ damage.

Alternate Names:

Pregnancy-Related Hypertension

Preeclampsia With Severe Features

Preeclampsia accompanied by severe hypertension or signs of significant organ involvement, such as low platelets, liver or kidney dysfunction, pulmonary edema, severe headache, or visual symptoms. It requires urgent obstetric evaluation and management.

Preexcitation Syndrome

Early activation of the ventricles through an accessory electrical pathway, which can cause tachycardia and is classically associated with Wolff-Parkinson-White syndrome.

Prefrontal

Relating to the anterior part of the frontal lobe involved in planning, judgment, working memory, and behavior.

Prefrontal Cortex

The prefrontal cortex is the front part of the frontal lobe involved in planning, judgment, working memory, impulse control, and social behavior.

Pregabalin

Pregabalin is used for certain nerve pain and seizures and may cause dizziness, sleepiness, swelling, or dependence.

Preganglionic Fiber

An autonomic nerve fiber that runs from the central nervous system to an autonomic ganglion, where it synapses with a postganglionic neuron.

Pregnancy

The physiological state in which a developing embryo or fetus grows within the female uterus, typically lasting approximately 40 weeks from the last menstrual period to childbirth.

Pregnancy - Health Risks

Health risks in pregnancy vary with medical conditions, medicines, infections, age, exposures, and obstetric history; prenatal assessment identifies preventable complications and needed monitoring.

Pregnancy - Identifying Fertile Days

Fertile days are the interval around ovulation when intercourse can lead to pregnancy; cycle timing, cervical mucus, basal temperature, and ovulation tests can provide estimates but are imperfect.

Pregnancy And Herpes

Genital herpes during pregnancy can affect delivery planning and rarely infect the newborn; antiviral treatment and examination of lesions near labor help reduce transmission risk.

Pregnancy And The Flu

Influenza during pregnancy can be more severe and affect the fetus; vaccination is recommended in pregnancy, and suspected illness should receive prompt clinical advice about antiviral treatment.

Pregnancy And Travel

Travel during pregnancy depends on gestational age, health, destination infections, transport, and access to care; prevention includes vaccines as appropriate, food and water safety, movement, and medical planning.

Pregnancy And Work

Work during pregnancy is usually possible but may require adjustments for heavy lifting, prolonged standing, heat, chemicals, radiation, infection, night work, or other occupational hazards.

Pregnancy Care

Pregnancy care includes regular maternal and fetal checkups, screening, nutrition and medicine review, vaccination, and advice about warning symptoms.

Pregnancy Complication

A maternal, fetal, placental, or labor-related problem that disrupts an otherwise expected pregnancy, such as preeclampsia, hemorrhage, diabetes, growth restriction, or preterm labor.

Pregnancy Ectopic (Ectopic Pregnancy)

Alternate index label for Ectopic Pregnancy.

Pregnancy High Blood Pressure (Pregnancy: Preeclampsia And Eclampsia)

Alternate index label for Pregnancy: Preeclampsia and Eclampsia.

Pregnancy Nutrition

Nutrition care during pregnancy that supports maternal health, placental and fetal growth, and appropriate gestational weight gain. Energy, protein, folate, iron, iodine, choline, vitamin D, and other requirements vary by stage and individual clinical

factors.

Pregnancy Of Unknown Location

A positive pregnancy test without a confirmed intrauterine or ectopic pregnancy on ultrasound. Serial human chorionic gonadotropin measurements and repeat imaging help determine whether the pregnancy is early, failing, or ectopic.

Pregnancy Outcome

Pregnancy outcome describes what happens to a pregnancy, such as live birth, miscarriage, stillbirth, preterm birth, or other maternal or fetal result.

Pregnancy Planning (Preparing For Pregnancy)

Alternate index label for Preparing for Pregnancy.

Pregnancy Status

Pregnancy status indicates whether a person is pregnant, not pregnant, or of unknown status and can affect medication, imaging, and treatment decisions.

Pregnancy Test

A test detecting human chorionic gonadotropin in urine or blood to identify pregnancy.

Pregnancy Trimester

A pregnancy trimester is one of three approximate stages of gestation used to organize fetal development, screening, risks, and clinical care.

Pregnancy Tubal (Ectopic Pregnancy)

Alternate index label for Ectopic Pregnancy.

Pregnancy-Induced Hypertension

New-onset hypertension during pregnancy without the proteinuria or organ dysfunction that defines preeclampsia. Diagnosis and treatment depend on repeated blood-pressure measurements, gestational age, symptoms, and evidence of maternal or fetal complications.

Pregnancy-Related Hypertension

Alternate index label; see *Preeclampsia*.

Pregnancy: Bleeding During The First Trimester

First-trimester bleeding may occur with implantation, cervical changes, miscarriage, ectopic pregnancy, or other causes. Assessment uses symptoms, examination, serial pregnancy hormone testing, and ultrasound; heavy bleeding, severe pain, faintness, or shoulder pain is urgent.

Pregnancy: Pain Relief Options For Birth

Labor pain relief may include breathing and movement, water, massage, nitrous oxide, intravenous medicines, epidural analgesia, or spinal anesthesia. Choice depends on labor stage, maternal and fetal status, contraindications, availability, and informed preference.

Pregnancy: Placenta Previa

Placenta previa occurs when the placenta lies over or near the cervical opening and can cause painless bright-red bleeding, especially later in pregnancy. Digital vaginal examination is avoided until location is known; recurrent bleeding requires obstetric planning and sometimes cesarean delivery.

Pregnancy: Preeclampsia And Eclampsia

Preeclampsia is new hypertension during pregnancy with proteinuria or organ dysfunction; eclampsia is the occurrence of seizures. Severe headache, visual symptoms, upper-abdominal pain, shortness of breath, or seizure requires emergency obstetric treatment.

Alternate Names:

Eclampsia Pregnancy (Pregnancy: Preeclampsia And Eclampsia) Pregnancy High Blood Pressure (Pregnancy: Preeclampsia And Eclampsia)

Pregnane

Pregnane is a 21-carbon steroid hydrocarbon that forms the structural backbone of progesterone and several corticosteroid and progestin compounds.

Pregnanolone

Pregnanolone is a neuroactive steroid metabolite that can modulate GABA-A receptors and influence neuronal excitability, mood, and sedation.

Pregnant

Pregnant means carrying a developing embryo or fetus in the uterus after conception; pregnancy status affects medicines, imaging, and clinical decisions.

Pregnant (Pregnancy Planning (Preparing For Pregnancy))

Alternate index label for Pregnancy Planning (Preparing for Pregnancy).

Pregnenolone

Pregnenolone is a steroid hormone precursor made from cholesterol that can be converted into progesterone, corticosteroids, and sex hormones.

Prehn Sign

A classical physical examination finding used in the emergency clinical evaluation of acute scrotal pain to aid in differentiating epididymitis from testicular torsion. The sign is considered positive when manual elevation and support of the affected scrotum and testis relieves or significantly reduces the patient's pain, typically supporting a diagnosis of acute epididymitis or epididymo-orchitis due to relief of gravitational suspension strain. Conversely, a negative Prehn sign (pain unchanged or worsened by elevation) is classically associated with testicular torsion; however, because the sign is neither completely sensitive nor specific, emergency color Doppler ultrasonography or immediate surgical scrotal exploration remains mandatory whenever testicular torsion cannot be definitively excluded.

Alternate Names:

Prehn's Sign

Prehypertension

Blood pressure above normal but below the former threshold for hypertension.

Alternate Names:

Elevated blood pressure

Preimplantation Genetic Testing

Genetic testing of cells from an embryo created through in-vitro fertilization before possible transfer to the uterus, used in selected situations to identify specific inherited disorders or chromosome-number

abnormalities.

Preleukaemia

An obsolete term formerly used for myelodysplastic syndromes or other states preceding leukemia.

Preload

The end-diastolic volume or pressure in the ventricles, representing the degree of ventricular stretch before contraction. Preload is determined by venous return and is estimated by the pulmonary capillary wedge pressure (PCWP) or left ventricular end-diastolic pressure (LVEDP).

Preload Reduction

Lowering the amount of blood returning to the heart to reduce cardiac workload.

Premalignant

Having cellular or tissue changes that may progress to invasive cancer.

Premature

Occurring earlier than expected or before the usual developmental or gestational time.

Premature (Early) Ejaculation

A persistent or recurrent pattern of ejaculation that occurs sooner than desired, with limited control and associated personal distress. Assessment considers the person's typical experience and sexual context.

Alternate Names:

Early

Premature Adrenarche

Early appearance of pubic or axillary hair, body odor, or mild acne from adrenal androgen production without true central puberty; evaluation excludes virilizing disorders.

Premature Atrial Contraction

A premature beat arising from an ectopic focus in the atria, producing an early P wave (often abnormal morphology) followed by a normal QRS; common and usually benign, increasing with age

and caffeine/stress. ECG: early abnormal P wave, normal PR and QRS, followed by a compensatory pause.

Premature Baby

An infant born before 37 completed weeks of pregnancy, with risks related to immature lungs, brain, feeding, temperature control, immunity, and other organ systems.

Premature Birth

Birth before 37 completed weeks of pregnancy; the earlier the birth, the greater the risks of respiratory, neurological, and developmental complications.

Premature Closure

Closure of a body opening, developmental structure, or growth plate earlier than expected, potentially causing obstruction, abnormal shape, or impaired growth depending on the site.

Premature Ejaculation

Ejaculation that occurs sooner than desired with poor control and causes persistent personal or relationship distress.

Premature Infant

An infant born before 37 completed weeks of gestation.

Premature Labor

Regular uterine contractions with cervical change before 37 completed weeks of pregnancy, which can lead to preterm birth and requires assessment of membranes, infection, and fetal well-being.

Premature Labour (Preterm Labour)

Labour that begins before 37 completed weeks of pregnancy and may result in preterm birth.

Alternate Names:

Preterm Labour

Premature Menopause

Loss of ovarian function and menstruation before age 40, now often termed primary ovarian insufficiency.

ciency.

Premature Menopause (Medical Procedural Causes)

Alternate index label for Medical Procedural Causes.

Premature Ovarian Failure

Premature ovarian failure is loss of normal ovarian function before age 40, causing irregular or absent periods, infertility, and low-estrogen symptoms; causes may be genetic, autoimmune, toxic, or unknown.

Premature Ovarian Insufficiency

Loss of ovarian function before age forty characterized by amenorrhea, hypergonadotropic hypogonadism, and estrogen deficiency. Causes include genetic disorders particularly Turner syndrome and fragile X premutations, autoimmune oophoritis, iatrogenic from chemotherapy or radiation, and idiopathic.

Premature Puberty

Alternate index label; see *Precocious puberty*.

Premature Rupture Of Membranes

PROM: spontaneous rupture of the amniotic membranes before the onset of labor; preterm PROM (PPROM) occurs before 37 weeks. Features: gush or leakage of fluid per vaginam; confirmed by sterile speculum (pooling, ferning, nitrazine pH test) or amniotic fluid biomarkers (IGFBP-1, PAMG-1).

Premature Thelarche

Isolated breast development in a young child without other signs of puberty, often transient but assessed for growth acceleration, estrogen exposure, or true precocious puberty.

Premature Ventricular Contraction

An early heartbeat that starts in a ventricle instead of following the heart's usual rhythm. It may feel like a skipped or extra beat and is often harmless, but frequent PVCs or symptoms such as fainting,

chest pain, or breathlessness need assessment.

Alternate Names:

PVC

Premature Ventricular Contractions

Ectopic beats originating from the ventricles, appearing as wide, bizarre QRS complexes that occur earlier than expected. PVCs are common in the general population and are usually benign. Frequent PVCs (>10% of total beats) may cause left ventricular dysfunction.

Alternate Names:

Extrasystole (Premature Ventricular Contractions)
PVC (Premature Ventricular Contractions)

Premature Ventricular Contractions

Alternate index label for Premature Ventricular Contractions.

Premature Ventricular Contractions (PVCs)

Early extra heartbeats originating in the heart's ventricles, often felt as fluttering, skipped beats, or pounding and frequently benign.

Alternate Names:

Extrasystole PVCs Ventricular Premature Contraction VPCs

Premenstrual

Occurring during the days before menstruation; the term commonly refers to cyclical symptoms such as mood change, breast tenderness, bloating, headache, or fatigue.

Premenstrual Breast Changes

Premenstrual breast changes include cyclic fullness, tenderness, swelling, or lumpiness caused by hormonal variation; a persistent one-sided mass, skin change, or bloody discharge needs evaluation.

Premenstrual Dysphoric Disorder

A severe, debilitating form of premenstrual syndrome characterized by marked mood symptoms (depression, anxiety, irritability, mood swings), physical symptoms (breast tenderness, bloating, fatigue),

and functional impairment that occur during the luteal phase and remit within days of menses onset.

Premenstrual Dysphoric Disorder

A severe cyclical mood disorder with affective and physical symptoms in the luteal phase that remit after menstruation.

Alternate Names:

PMDD (Premenstrual Dysphoric Disorder (PMDD))

Premenstrual Dysphoric Disorder

Alternate index label for Premenstrual Dysphoric Disorder.

Premenstrual Syndrome

A recurrent pattern of physical, emotional, and behavioral symptoms during the luteal phase of the menstrual cycle that resolve with menses. Affects up to 50% of reproductive-age women. Symptoms: irritability, mood swings, depression, anxiety, bloating, breast tenderness, fatigue, and appetite changes.

Premenstrual Syndrome

Recurring physical, emotional, or behavioral symptoms before menstruation that resolve around or after its onset.

Premie

Premie is an informal term for a premature infant, born before 37 completed weeks of gestation and at risk for complications related to immature organs.

Premolar (Bicuspid)

Any of the eight transitional permanent teeth situated between the anterior canines and the posterior molars in the human dental arch (two in each quadrant of the maxilla and mandible). Typically feature two distinct cusps (buccal and lingual) on their occlusal crowns and are unique to the permanent dentition, where they replace deciduous (primary) molars. Function mechanically to shear and crush food boluses before fine grinding by permanent molars; frequently extracted selectively in orthodontic treatment to resolve severe dental crowding.

Prenatal

Prenatal means occurring during pregnancy before birth, including care, testing, development, counseling, and treatment of the pregnant person or fetus.

Prenatal Care

Regular medical care during pregnancy to monitor maternal and fetal health. Includes history and physical exam, weight and blood pressure monitoring, urine testing, blood work, fundal height measurements, fetal heart rate auscultation, and ultrasound.

Prenatal Care In Your First Trimester

First-trimester prenatal care confirms pregnancy and dating, reviews health and medicines, offers screening, and addresses nutrition, folic acid, and warning symptoms.

Prenatal Care In Your Second Trimester

Second-trimester prenatal care monitors parent and fetus, offers anatomy and other screening, and discusses movement, nutrition, vaccinations, and warning symptoms.

Prenatal Care In Your Third Trimester

Third-trimester prenatal care monitors growth, blood pressure, fetal wellbeing, and birth planning and prepares for labor and postpartum care.

Prenatal Development

Prenatal development is growth and differentiation of the embryo and fetus from conception to birth, influenced by genes, nutrition, maternal health, and exposures.

Prenatal Diagnosis

Detection of genetic or structural disorders in fetus before birth. Methods: chorionic villus sampling (CVS, 10-13 weeks), amniocentesis (15-20 weeks), percutaneous umbilical blood sampling (PUBS, after 18 weeks). Non-invasive: NIPT (cell-free fetal DNA).

Prenatal Exposure

Contact of a fetus with a medicine, substance, infection, or environmental factor during pregnancy. Effects depend on the agent, dose, timing, and fetal susceptibility.

Prenatal Genetic Counseling

A consultation that reviews the risk of inherited or chromosomal conditions, available screening and diagnostic tests, possible results, and reproductive options before or during pregnancy.

Prenatal Testing

Screening and diagnostic tests performed during pregnancy to assess fetal health and development or identify genetic, chromosomal, and structural conditions. Tests may include ultrasound, maternal blood tests, cell-free DNA screening, chorionic-villous sampling, and amniocentesis.

Prenatal Vitamins

Multivitamin supplements formulated for pregnancy, containing folic acid (400-800 mcg), iron (27-60 mg), calcium (200-300 mg), vitamin D (400-600 IU), DHA (200 mg), and iodine (150-220 mcg). Started preconceptionally or at the first prenatal visit. Evidence supports NTD reduction from folic acid. Iron prevents maternal anemia.

Prenylation

Attachment of a lipid group to a protein, helping determine its membrane localization, signaling, stability, and interactions; abnormal prenylation contributes to some diseases and is a drug target.

Preop

Preop is an abbreviation for preoperative, meaning relating to preparation and assessment before surgery.

Preoperative Assessment

Preoperative assessment evaluates surgical risk and optimizes medical conditions before anesthesia. It includes medical history, physical examination, airway assessment, cardiovascular risk stratification (Revised Cardiac Risk Index), pulmonary function

assessment, and laboratory testing based on clinical indication.

Preoperative Care

A medical procedure, treatment, device, or care topic related to preoperative care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Preoperative Evaluation

Medical assessment before elective surgery to optimize outcomes and minimize perioperative risk.

Preoptic Area

The preoptic area is a hypothalamic region involved in temperature regulation, sleep, reproductive behavior, and hormone control.

Preparing Children For Pregnancy And A New Baby

Preparing a child for a new baby involves age-appropriate explanation, routine and attention planning, safe involvement, reassurance, and support for emotional or behavioral changes.

Preparing For Surgery When You Have Diabetes

A medical procedure, treatment, device, or care topic related to preparing for surgery when you have diabetes; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Prepubertal

Prepubertal means before the physical and hormonal changes of puberty have begun or progressed to reproductive maturity.

Prepuce

The fold of skin covering the glans penis or clitoris; penile prepuce is the foreskin.

Prerenal Azotemia

A rise in nitrogen-containing waste products caused by reduced effective blood flow to the kidneys without primary renal-tissue injury. Causes include

dehydration, hemorrhage, heart failure, sepsis, and hepatorenal syndrome; urine indices may support but do not by themselves establish the diagnosis.

Presbyacusis

Age-related progressive sensorineural hearing loss, usually affecting high frequencies.

Presbyacusis (Presbycusis)

Age-related, usually gradual sensorineural hearing loss, particularly affecting the ability to hear high-frequency sounds and understand speech in noise.

Alternate Names:

Presbycusis

Presbycusis

Bilateral, usually symmetric age-related sensorineural hearing loss, initially affecting high frequencies and speech discrimination in noise. Management includes hearing rehabilitation, hearing aids, communication strategies, and cochlear implantation in selected severe cases.

Presbyopia

Age-related loss of near focusing caused by reduced lens accommodation.

Preschooler Development

Preschooler development includes rapid gains in language, motor skills, thinking, self-care, play, and social-emotional regulation; milestones vary, but loss of skills warrants assessment.

Preschooler Test Or Procedure Preparation

Preparing a preschooler for a test or procedure uses simple explanations, play, comfort objects, and caregiver support while following any fasting or medicine instructions.

Prescription

A written or electronic instruction from an authorized prescriber for a medicine or treatment.

Prescription Medications

Pharmaceutical drugs that require authorization from a licensed healthcare provider before they can be dispensed to a patient. These medications are regulated because they carry risks that necessitate professional oversight, including potential side effects, drug interactions, and the need for precise dosing.

Presenile Dementia

An older term for dementia beginning before old age; modern diagnosis specifies the cause and syndrome.

Presenilin

Presenilin is a component of the gamma-secretase complex that processes membrane proteins; inherited variants can cause familial early-onset Alzheimer disease.

Presentation

The part of a fetus that is directed toward the birth canal, or the symptoms and signs with which a patient seeks care.

Preseptal Cellulitis

Preseptal cellulitis, also known as periorbital cellulitis, is an infection of the eyelid and periorbital tissues anterior to the orbital septum, without involvement of the orbital contents, and it is the most common orbital infection, particularly in children.

Alternate Names:

periorbital cellulitis, is an infection of the.

Preservation

Maintenance of tissue, cells, organs, or function by preventing deterioration.

Preservative

A substance added to prevent microbial growth or chemical deterioration of a product.

Pressor

Raising blood pressure, usually by constricting blood vessels or increasing cardiac output.

Pressoreceptor

A pressure-sensitive receptor, especially a baroreceptor in the carotid sinus or aortic arch, that detects arterial stretch and helps regulate heart rate and blood pressure.

Pressure

Force exerted over an area; clinically measured in units such as mmHg.

Pressure Atrophy

The gradual wasting of tissue resulting from sustained external compression that impairs blood supply and causes cellular shrinkage and eventual death. The mechanism involves compression of blood vessels, which reduces perfusion and causes ischemia of the dependent tissue.

Pressure Injury

Localized damage to the skin and/or underlying soft tissue caused by prolonged pressure, shear, or friction, most commonly over bony prominences.

Pressure Sore

A localized injury to skin and underlying tissue caused by prolonged pressure or shear, also called a pressure ulcer.

Pressure Support Ventilation

Spontaneous breathing mode with ventilator-provided pressure support above PEEP for each breath. Reduces work of breathing. Used for weaning from mechanical ventilation.

Pressure Ulcer

Localized damage to skin and underlying tissue caused by sustained pressure or pressure with shear, typically over a bony prominence. Staging includes non-blanchable erythema, partial-thickness loss, full-thickness loss, and full-thickness tissue loss with exposed or palpable deep structures; obscured wounds are unstageable.

Pressure Ulcer Prevention

Measures that reduce prolonged pressure and tissue

injury, including repositioning, support surfaces, skin inspection, moisture control, nutrition, and mobility.

Pressure Urticaria

A form of chronic inducible urticaria in which sustained pressure causes localized swelling, erythema, and pain, usually after a delay of several hours. Lesions may last 8 to 72 hours and commonly affect the hands, feet, buttocks, or areas compressed by clothing or sitting.

Pressure-Flow Study

Suite of diagnostic procedures designed to evaluate the physiological function of the lower urinary tract (bladder and urethral sphincter) during filling, storage, and emptying phases. See urodynamic testing.

Presynaptic Terminals

Presynaptic terminals are the ends of neurons that release neurotransmitters into synapses in response to electrical activity.

Presyncope

The sensation of imminent fainting (lightheadedness, weakness, visual blurring) without actual loss of consciousness, due to transient global cerebral hypoperfusion that resolves before LOC. Causes: orthostatic hypotension (volume depletion, autonomic failure, medications), vasovagal, cardiac (arrhythmias, aortic stenosis), and metabolic.

Preterm Birth

Birth before 37 completed weeks of gestation. It may follow spontaneous labor or rupture of the membranes, or may be medically indicated because of maternal or fetal complications.

Preterm Infant

An infant born before 37 completed weeks of gestation; classified by gestational age (late preterm 34-36, moderate 32-33, very preterm <32, extremely <28 weeks) and by birth weight. Causes: preterm labor, PPROM, preeclampsia, multiple pregnancy, infection, and iatrogenic.

Preterm Labor

Regular uterine contractions causing cervical change before 37 weeks gestation. Risk factors include prior preterm delivery, multiple gestation, infection, and cervical insufficiency. Diagnosis requires regular contractions with documented cervical change.

Preterm Premature Rupture Of Membranes

Rupture of the amniotic membranes before the onset of labor at <37 weeks gestation. Causes: infection (subclinical chorioamnionitis), cervical insufficiency, and prior PPROM. Presents with sudden gush or leakage of fluid per vagina.

Pretest Probability

The estimated probability that a patient has a disease before the result of a diagnostic test is known. It is based on prevalence, symptoms, examination findings, risk factors, and prior test results and should guide test selection and interpretation.

Pretibial Myxedema

Localized dermopathy occurring in approximately five percent of patients with Graves disease caused by glycosaminoglycan deposition in the dermis particularly over the pretibial area. Presents as non-pitting indurated plaques with a peau d'orange appearance.

Pretibial Myxoedema

Thickened, waxy swelling of the skin over the shins, most often associated with Graves disease.

Prevalence

The proportion of a population with a disease or characteristic at a specified time or period.

Preventing Falls

Fall prevention combines strength and balance activity, vision and medication review, safe footwear, adequate lighting, handrails, removal of hazards, and appropriate assistive devices.

Preventing Food Poisoning

Preventing food poisoning involves toxic or environmental exposure to preventing food poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Preventing Head Injuries In Children

Children's head injuries can be reduced with age-appropriate car seats, helmets, supervision, safe play areas, window and stair protection, and prevention of abusive shaking or impact.

Preventing Hepatitis A

Hepatitis A prevention relies on vaccination, hand-washing, safe food and water, sanitation, and post-exposure advice when close contact with an infected person occurs.

Preventing Hepatitis B Or C

Hepatitis B prevention includes vaccination and avoiding blood or sexual exposure; hepatitis C prevention centers on sterile injection equipment, screened blood, and testing and treatment of infection.

Preventing Pressure Injuries

Pressure-injury prevention uses regular repositioning, skin inspection, moisture control, nutrition, pressure-redistributing surfaces, and minimizing friction and shear in people with limited mobility.

Preventing Stroke

Stroke prevention includes controlling blood pressure, diabetes and cholesterol, avoiding tobacco, treating atrial fibrillation when indicated, exercising, and addressing other vascular risks.

Prevention

Measures intended to avoid disease, detect it early, limit complications, or reduce disability.

Preventive Dentistry

Practice of preventing dental disease. Methods: oral hygiene instruction, fluoride, sealants, diet counseling, regular check-ups.

Preventive Health Care

Preventive health care aims to prevent disease or detect it early through vaccination, screening, healthy behaviors, and routine medical care.

Preventive Medicine

The field concerned with preventing disease and promoting health in individuals and populations.

Prevertebral Air

Gas in the prevertebral soft tissues on lateral cervical spine radiograph, indicating a breach in the aerodigestive tract. It may result from esophageal perforation, tracheal injury, retropharyngeal abscess with gas-forming organisms, or trauma.

Priapism

A persistent, usually painful erection unrelated to sexual stimulation and lasting long enough to require urgent assessment.

Alternate Names:

Ischemic Priapism Low-Flow Priapism Nonischemic Priapism

Priapism (Penis Disorder)

Alternate index label for Penis Disorder.

Prick Test

A skin test in which small amounts of suspected allergens are introduced into the skin.

Alternate Names:

Skin-prick test

Prickle Cell

An obsolete or imprecise term sometimes used for a dendritic epidermal cell or for a sickle cell; the intended meaning requires context.

Prickly Heat

Miliaria, an itchy rash caused by blockage of sweat ducts.

Primary

First in time, origin, importance, or site; in disease classification it often means arising independently

rather than secondary to another cause.

Primary Adrenal Insufficiency

Alternate index label; see *Addison's disease*.

Primary Adrenal Insufficiency (Addison's Disease)

Destruction or dysfunction of the adrenal cortex causing deficiency of cortisol and aldosterone, presenting with fatigue, hyperpigmentation, weight loss, and salt craving. Lifelong hormone replacement is required.

Alternate Names:

Addison's disease

Primary Adrenal Lymphoma

A rare lymphoma arising primarily in the adrenal gland, most commonly diffuse large B-cell lymphoma. It often presents bilaterally and may cause adrenal insufficiency.

Primary Aldosteronism

Excess production of aldosterone by the adrenal glands, usually from an adrenal nodule or enlargement of both glands. It increases sodium retention and may cause hypertension, low potassium, or suppressed renin.

Primary Alveolar Hypoventilation

A rare disorder of inadequate automatic breathing, often related to PHOX2B or other autonomic-control abnormalities, causing elevated carbon dioxide especially during sleep.

Primary Amyloidosis

Primary amyloidosis, usually AL amyloidosis, results from abnormal plasma-cell proteins depositing as amyloid in organs such as the heart, kidneys, nerves, or gastrointestinal tract.

Primary And Secondary Hyperaldosteronism

Excess aldosterone production, from an adrenal source in primary disease or from increased renin stimulation in secondary disease, causing hyperten-

sion, sodium retention, and sometimes low potassium.

Primary Angioplasty

Angioplasty used as the initial treatment to reopen an artery during an acute heart attack.

Primary Biliary Cholangitis

A chronic autoimmune liver disease in which small intrahepatic bile ducts are progressively damaged. It can cause cholestasis, itching, fatigue, and eventually cirrhosis; antimitochondrial antibodies often support the diagnosis.

Primary Biliary Cirrhosis

Alternate index label; see *Primary biliary cholangitis*.

Primary Biliary Cirrhosis

Alternate index label for PBC.

Primary Biliary Cirrhosis

Alternate index label for Primary Biliary Cirrhosis.

Primary Biliary Cirrhosis Treatment

Alternate index label for PBC.

Primary Care

First-contact, continuing, comprehensive healthcare, including prevention and management of common conditions.

Primary Ciliary Dyskinesia

An inherited disorder of ciliary structure or function that impairs mucociliary clearance. It can cause chronic sinus and lung infections, bronchiectasis, infertility, and abnormal organ laterality.

Primary Cutaneous B-Cell Lymphoma

A B-cell lymphoma presenting primarily in the skin without evidence of extracutaneous disease at diagnosis; clinical behavior and treatment depend on the specific subtype.

Primary Endpoint

A primary endpoint is the main prespecified outcome used to judge the effect of an intervention in a clinical trial.

Primary Hyperaldosteronism

Excess autonomous production of aldosterone by the adrenal glands. It can cause hypertension, low potassium, metabolic alkalosis, and suppressed renin. Causes include an adrenal adenoma or bilateral adrenal hyperplasia.

Primary Hyperoxaluria

A group of autosomal recessive metabolic disorders characterized by overproduction of oxalate by the liver, leading to calcium oxalate deposition in the kidneys and other organs. Type 1 is caused by alanine-glyoxylate aminotransferase deficiency. It presents with recurrent nephrolithiasis, nephrocalcinosis, and progressive renal failure.

Primary Hyperparathyroidism

Autonomous overproduction of parathyroid hormone from one or more abnormal parathyroid glands causing hypercalcemia. Most commonly caused by a single parathyroid adenoma accounting for approximately eighty-five percent. Multigland hyperplasia accounts for approximately ten to fifteen percent and parathyroid carcinoma is rare.

Primary Hypersomnia

Excessive daytime sleepiness not better explained by insufficient sleep, another sleep disorder, substance, or medical condition; modern classification uses specific central-hypersomnolence diagnoses.

Primary Hypertension

High blood pressure without an identifiable single underlying cause.

Primary Hypertrophic Osteoarthropathy

A rare inherited syndrome characterized by digital clubbing, periostosis of long bones, and pachydermia, presenting with joint pain, skin thickening, and visible nail-bed enlargement.

Primary Hypoparathyroidism

Inadequate parathyroid hormone production causing low calcium and high phosphate, with possible tingling, cramps, tetany, seizures, cataracts, or chronic bone and dental effects.

Primary Hypothyroidism

Reduced thyroid-gland production of thyroxine and triiodothyronine, usually causing high TSH and symptoms such as fatigue, cold intolerance, constipation, dry skin, and slowed heart rate.

Primary Immune Response

The adaptive immune response to first exposure to an antigen, characterized by a slow onset (lag phase: days, during which antigen processing, clonal expansion, and differentiation occur), followed by rising antibody titers (predominantly IgM, then IgG), and generation of memory cells.

Primary Immunodeficiency

A group of genetically determined disorders of the immune system causing increased susceptibility to infection, autoimmunity, and malignancy.

Primary Immunodeficiency Disease

An inherited or genetic disorder of immune development or function that causes unusual, recurrent, severe, or persistent infections and sometimes autoimmunity.

Primary Immunodeficiency Disease PIDD

Primary immunodeficiency diseases are inherited disorders of immune development or function that cause unusual, severe, recurrent, or persistent infections and sometimes autoimmunity or inflammation. Evaluation may include blood counts, immunoglobulins, functional tests, and genetic testing.

Alternate Names:

Deficiency Primary Immunodeficiency (Primary Immunodeficiency Disease PIDD)

Primary Lactase Deficiency

Reduced lactase enzyme activity developing with age, causing lactose malabsorption and possible

bloating, abdominal pain, gas, or diarrhea after dairy consumption.

Primary Lateral Sclerosis

A rare neurodegenerative disorder confined to the upper motor neurons (corticospinal tract) of the motor cortex and brainstem. Presents with slowly progressive spasticity, hyperreflexia, Babinski sign, and pseudobulbar affect (emotional lability).

Primary Lymphoma Of The Brain

Primary central-nervous-system lymphoma is a lymphoma arising in the brain, spinal cord, eyes, or surrounding fluid without systemic disease at diagnosis.

Primary Metabolism

The essential biochemical processes by which cells produce energy, synthesize molecules, and maintain their functions.

Primary Microrna

A primary microRNA is the initial RNA transcript made from a microRNA gene before nuclear and cytoplasmic processing into mature microRNA.

Primary Myelofibrosis

A chronic myeloproliferative neoplasm characterized by bone marrow fibrosis (reticulin and/or collagen fibrosis), extramedullary hematopoiesis (primarily splenic and hepatic), and a leukoerythroblastic peripheral blood picture.

Primary Open-Angle Glaucoma

A chronic optic neuropathy with characteristic retinal ganglion-cell and optic-nerve loss, usually accompanied by progressive visual-field defects, despite an anatomically open anterior-chamber angle. Intraocular pressure is an important modifiable risk factor, and treatment lowers pressure to slow progression.

Primary Osteoporosis

Bone loss due to aging, menopause, or other normal physiological processes rather than another disease.

Primary Ovarian Insufficiency

Loss of normal ovarian activity before age 40, characterized by irregular or absent menses, reduced estrogen, and intermittently or persistently elevated gonadotropins. Causes include genetic, autoimmune, iatrogenic, toxic, infectious, and unknown factors.

Primary Polycythemia

Alternate index label; see *Polycythemia vera*.

Primary Prevention

Preventing cancer development. Strategies: smoking cessation, vaccination (HPV, hepatitis B), sun protection, healthy diet, exercise.

Primary Progressive Multiple Sclerosis

A clinical phenotype of multiple sclerosis accounting for approximately 10–15% of patients, characterized from onset by continuous, insidious neurologic decline without distinct relapses and remissions. Typically presents with progressive spastic paraparesis, gait ataxia, and neurodegenerative axonal loss on spinal cord magnetic resonance imaging, managed primarily with B-cell targeted therapies such as ocrelizumab.

Alternate Names:

PPMS; Primary-progressive MS

Primary Progressive Aphasia

A neurodegenerative disorder causing gradual worsening of language abilities, including speaking, naming, comprehension, reading, or writing.

Primary Sclerosing Cholangitis

Chronic cholestatic liver disease characterized by progressive fibrosis and strictures of intrahepatic and extrahepatic bile ducts. The disease has a strong association with inflammatory bowel disease, especially ulcerative colitis, occurring in a substantial proportion of patients.

Primary Sclerosing Cholangitis

Alternate index label for *PSC*.

Primary Sclerosing Cholangitis

Alternate index label for Primary Sclerosing Cholangitis.

Primary Tuberculosis

The first infection with *Mycobacterium tuberculosis*. It may produce a small pulmonary focus and regional lymph-node involvement; the infection may be contained as latent tuberculosis or progress to active disease.

Primary Tumor

The original tumor, or site where a cancer began, from which cancer cells may spread to form secondary or metastatic tumors. A cancer may be described as having an unknown primary when the original site cannot be identified.

Primidone

Primidone is an antiseizure medicine used for epilepsy and sometimes essential tremor; it can cause sleepiness, dizziness, and drug interactions.

Primigravida

A clinical obstetrical term denoting a female patient who is pregnant for the very first time, designated in clinical gravidity and parity notation as Gravidity 1 (G1). Primigravida patients exhibit distinct labor dynamics compared to multigravida women, characterized by a longer first stage of labor, slower cervical dilation, and an increased incidence of hypertensive disorders of pregnancy, notably preeclampsia, which develops with substantially higher frequency during a first gestation.

Primipara

A person who has given birth once after the stage of fetal viability.

Primitive

Relating to an early developmental stage or a basic, less differentiated form.

Primitive Node

The primitive node is an embryonic organizer at

the cranial end of the primitive streak that helps establish body axes and germ-layer formation.

Primitive Streak

The primitive streak is an embryonic structure through which cells migrate during gastrulation to form the three germ layers and establish body organization.

Primordial

Present at the earliest stage of development or existing in an original, basic form. Examples include primordial germ cells and primordial follicles.

Primordial Prevention

Preventing the emergence of disease risk factors by addressing social, economic, behavioural, and environmental conditions early. Examples: promoting healthy diets and physical activity in children, reducing tobacco exposure, and creating safe environments for exercise.

Prinomastat

Prinomastat is an investigational matrix-metalloproteinase inhibitor studied for blocking enzymes involved in tumor invasion and tissue remodeling.

Prion

An abnormally folded infectious protein that can cause progressive neurodegenerative disease.

Prion Disease

A neurodegenerative disease caused by abnormal folding and propagation of prion protein. These disorders are rare and usually progressive and fatal, although their course varies by the specific disease.

Prism

A transparent optical device that bends light; prisms may correct or measure ocular alignment.

Privacy

Privacy is a person's right and expectation that personal information, communications, and bodily

matters are protected from unauthorized access or disclosure.

Privacy Breach

A privacy breach is unauthorized access, use, disclosure, loss, or exposure of personal or health information.

Private Mutation

A genetic variant confined to a family, individual, tumor, or small population rather than commonly seen in the general population; its significance requires genetic and clinical interpretation.

PRK

Photorefractive keratectomy, commonly known as PRK, is a refractive surgical procedure that corrects myopia, hyperopia, and astigmatism by reshaping the corneal stroma using an excimer laser after mechanical removal of the corneal epithelium, without creating a corneal flap.

Pro Re Nata

A medication or treatment instruction meaning that it should be used only when a specified symptom or clinical circumstance occurs, within clearly prescribed dose and frequency limits.

Alternate Names:

P.R.N.; As Needed

Prob Problem

An incomplete or nonstandard label; its intended clinical meaning cannot be determined without source context.

Probability

Probability is a numerical expression of how likely an event is, ranging from impossible to certain and used in diagnosis, risk assessment, and research.

Probable Cause

A legally recognized reasonable basis for believing that a person committed an offense or that evidence of an offense will be found.

Probe

A slender, flexible or rigid handheld surgical, dental, or diagnostic instrument with a blunt, rounded tip, designed for exploring anatomical cavities, sinus tracts, fistulas, or deep wounds without creating false passages. Prominent clinical variants include periodontal probes (calibrated in millimeters to measure periodontal pocket depths and epithelial attachment loss), lacrimal probes (used to dilate and confirm patency of obstructed nasolacrimal ducts), and surgical fistula probes (used during anal fistulotomy to trace fistulous tracts between the anal canal and perianal skin).

Probenecid

A uricosuric medicine used to prevent gout attacks in selected patients and to alter renal excretion of some drugs.

Probiotic

Live microorganisms administered in adequate amounts to confer a health benefit by modulating the microbiome and immune responses.

Probiotics

Probiotics are live microorganisms that may provide a health benefit when consumed in adequate amounts, although effects are strain-specific and vary by condition.

Problem

A symptom, sign, diagnosis, or issue requiring assessment or management.

Problems Sleeping During Pregnancy

Sleep problems during pregnancy may result from discomfort, reflux, urination, anxiety, hormonal change, or sleep apnea; safe sleep habits and clinician-guided treatment are important.

Probocis

A misspelling of proboscis, a projecting snout or appendage.

Proboscis

An elongated nose, snout, or tubular feeding structure in an animal. In human description, it may refer to an unusually prominent or elongated nose.

Probucol

Probucol is a lipid-lowering drug that reduces cholesterol but may prolong the QT interval and is not widely used in current practice.

PROC

PROC is the gene symbol for protein C, an anticoagulant protein that limits clot formation; inherited deficiency increases thrombosis risk.

Procainamide

An antiarrhythmic medicine used for selected cardiac rhythm disorders.

Procaine

An ester local anesthetic, now used mainly in limited or historical settings.

Procalcitonin

A biomarker that may rise during some bacterial infections and systemic inflammation. It can support assessment of infection and antibiotic decisions, but it cannot by itself diagnose or exclude bacterial infection or determine sepsis severity.

Procarbazine

An alkylating-like chemotherapy medicine used in selected lymphomas and brain tumors.

Procarbazine Hydrochloride

Procarbazine hydrochloride is the hydrochloride salt formulation of the antineoplastic drug procarbazine.

Procedural Memory

Memory for how to perform learned skills, such as riding a bicycle, typing, or playing an instrument. It usually works without consciously recalling each step and differs from memory for facts or events.

Procedural Sedation

Administration of sedative and analgesic medicines to facilitate a painful or anxiety-provoking procedure while preserving spontaneous ventilation and protective reflexes to the intended depth. Continuous monitoring and immediate rescue capability are required.

Procedure

A planned medical or surgical action performed for diagnosis, treatment, prevention, or palliation.

Procentriole

A procentriole is an immature centriole that duplicates beside a parent centriole and later matures to organize microtubules.

Procerus Muscle

A small facial muscle over the bridge of the nose that draws the medial eyebrows downward and produces horizontal wrinkles between the eyebrows.

Process

A process is an ordered series of biological, physical, chemical, or operational changes that produces a result.

Processing Bodies

Processing bodies are cytoplasmic RNA-protein granules where messenger RNAs may be stored, decapped, degraded, or regulated.

Processor

A processor is a device or biological system that performs a defined sequence of operations; in computing it executes instructions, while in medicine the meaning is context-dependent.

Prochlorperazine

A phenothiazine medicine used as an antiemetic and antipsychotic.

Prochlorperazine Overdose

Prochlorperazine overdose involves toxic or environmental exposure to prochlorperazine overdose; dose,

route, timing, symptoms, and organ involvement determine urgency and treatment.

Procidentia

Complete eversion and severe uterine prolapse (Stage IV pelvic organ prolapse) in which the entire uterus, cervix, and surrounding anterior and posterior vaginal walls have descended completely beyond the introitus and outside the vulva. Typically accompanied by secondary decubitus ulceration, urinary tract obstruction, hydronephrosis, and recurrent cystitis due to kinking of the ureters.

Alternate Names:

Complete Uterovaginal Prolapse; Third-Degree Uterine Prolapse

Proclivity

Proclivity is a tendency or predisposition toward a particular behavior, response, disease, or outcome.

Procollagen

An immature precursor of collagen that is modified and cleaved outside cells to form mature collagen fibers.

Proctalgia

Pain originating within or referred to the rectum or anal canal. Categorized etiologically into organic conditions (such as acute anal fissures, thrombosed external hemorrhoids, perianal abscesses, proctitis, or rectal foreign bodies) and functional anorectal pain disorders. Among functional syndromes, proctalgia fugax presents as severe, sudden-onset, episodic cramping rectal spasms lasting from seconds to minutes, typically occurring at night and resolving spontaneously, whereas levator ani syndrome features chronic, vague aching or pressure in the rectum exacerbated by prolonged sitting.

Proctitis

Inflammation of the rectal mucosal lining (*rectum*), extending up to 15 cm from the anal verge. Presents clinically with tenesmus (a painful, persistent urge to defecate), rectal bleeding (hematochezia), passage of mucus or pus, and pelvic discomfort. Etiologies include inflammatory bowel disease (ulcerative

proctitis as the most distal manifestation of ulcerative colitis), sexually transmitted infections (STIs; *Neisseria gonorrhoeae*, *Chlamydia trachomatis* [including lymphogranuloma venereum], *Treponema pallidum*, and herpes simplex virus [HSV]), radiation proctitis (acute or chronic sequela of pelvic radiotherapy for prostate, cervical, or rectal cancer), and diversion proctitis following fecal diversion. Diagnosed by flexible sigmoidoscopy with mucosal biopsy and rectal swabs.

Alternate Names:

Rectal Inflammation

Proctoclysis

Administration of fluid into the rectum, an obsolete method of fluid or medicine delivery.

Proctocolitis

Inflammation of the rectum and the adjacent portion of the colon.

Proctology

The medical specialty concerned with diseases of the anus and rectum.

Proctoscope

An instrument used to inspect the anal canal and rectum.

Proctoscopy

Examination of the anal canal and rectum with a proctoscope.

Proctostomy

Surgical creation of an opening from the rectum to the skin.

Procurement

Process of recovering organs and tissues from donors for transplantation.

Prodromal

Describing early, nonspecific signs or symptoms that occur before the characteristic clinical features of a disease become apparent.

Prodrome

An early symptom or group of symptoms preceding a disease or major clinical event.

Prodrug

A prodrug is a pharmacologically inactive compound that is converted to an active drug through metabolic processes within the body. Prodrugs are designed to overcome limitations of the parent drug including poor bioavailability, rapid metabolism, lack of tissue selectivity, or unacceptable side effects.

Product Liability

Legal responsibility for injury or damage caused by a defective or unsafe product.

Product Recall

Removal or correction of a medicine, device, food, or other product because it may be defective, contaminated, mislabeled, or unsafe for use.

Productive Cough

A cough that successfully mobilizes and expectorates respiratory secretions, mucus, or purulent exudate (sputum) from the tracheobronchial tree. Distinguished from a dry (non-productive) irritative cough. Clinically evaluated by sputum color, consistency, volume, and odor: clear or white mucoid sputum suggests viral bronchitis or chronic obstructive pulmonary disease; yellow or green purulent sputum reflects neutrophil myeloperoxidase activity in acute bacterial bronchitis or pneumonia; foul-smelling sputum indicates anaerobic pulmonary abscess or bronchiectasis; and rust-colored sputum is classic for *Streptococcus pneumoniae* lobar pneumonia.

Proestrus

Proestrus is the phase of the reproductive cycle before estrus, characterized by follicular development and rising estrogen in many mammals.

Professional

Relating to a trained occupation or to the conduct expected of a qualified practitioner.

Profunda

A deep artery or vessel, commonly referring to the profunda femoris artery.

Profunda Miliaria (Heat Rash)

Alternate index label for Heat Rash.

Progenitor

A cell that has partially differentiated and can give rise to one or more mature cell types.

Progeny

The biological offspring, descendants, or successive generational cellular/organismal progeny derived from a parent or ancestral lineage. In clinical genetics and pedigree analysis, progeny are evaluated to trace Mendelian and non-Mendelian inheritance patterns, penetrance, variable expressivity, and carrier states across familial generations. In cellular biology and immunology, clonal progeny refers to identical daughter cells arising from the mitotic proliferation of a single committed parent cell, such as antigen-stimulated B or T lymphocyte clonal expansion.

Progeria

A rare genetic disorder causing features of accelerated aging beginning in childhood.

Progestational

Relating to progesterone-like effects or to preparation of the uterus for pregnancy.

Progesterone

A steroid hormone produced mainly by the corpus luteum and placenta that supports the endometrium and pregnancy.

Progesterone Test

A blood test that measures the level of progesterone, a hormone involved in ovulation and pregnancy. It may help assess ovulation, infertility, abnormal uterine bleeding, fertility treatment, or certain pregnancy problems. Results depend on the timing of the menstrual cycle and whether the person is

pregnant.

Alternate Names:

Serum Progesterone Progesterone Blood Test

Progesterone Antagonist

A progesterone antagonist blocks progesterone receptors and may be used for selected reproductive, gynecologic, or other medical purposes.

Progesterone Supplementation

Administration of progesterone to prevent preterm birth in high-risk women. Natural progesterone (17-alpha hydroxyprogesterone caproate) shown to reduce preterm birth rate in women with prior spontaneous preterm delivery. Also beneficial for short cervix detected on screening. Typically started in the second trimester.

Progestin

A progestin is a synthetic progesterone-like hormone used in contraception, hormone therapy, and treatment of selected gynecologic conditions.

Progestogen

A natural or synthetic hormone with effects like progesterone. Progestogens help regulate the menstrual cycle and pregnancy and are used in some contraceptives and hormone treatments.

Proglottid

One segment of a tapeworm. Each mature segment contains reproductive organs and may release eggs in stool.

Prognathism

Forward projection of the upper or lower jaw relative to the facial skeleton, affecting bite, appearance, chewing, speech, and sometimes airway function.

Prognosis

The expected course and outcome of a disease or condition.

Prognostic Factor

A prognostic factor is a clinical, pathologic, or bio-

logic feature associated with the likely course, outcome, or survival of a disease.

Prognostic Test

A test that provides information about the likely course or outcome of a disease.

Program

A planned set of activities or services, such as a screening or rehabilitation program.

Program Development

Program development is the planned design, testing, implementation, and evaluation of a service, intervention, or software system.

Programmed Instruction

A structured teaching method that presents small units of information with questions and immediate feedback, allowing learners to progress through material step by step.

Progression

Worsening or advancement of a disease, such as increasing tumor size, new lesions, or spread to another site.

Progression-Free Survival

The length of time from a defined starting point, such as diagnosis or treatment, until cancer progression or death from any cause, whichever occurs first.

Progressive

Increasing or worsening over time, or advancing in a specified direction.

Progressive Disease

Worsening of cancer during or after treatment, defined per RECIST as growth of target lesions, appearance of new lesions, or unequivocal progression of non-target lesions.

Progressive Lenticular Degeneration

Wilson disease, an inherited copper-accumulation

disorder affecting the liver, brain, and eyes.

Progressive Multifocal Leukoencephalopathy

Progressive multifocal leukoencephalopathy is a potentially fatal demyelinating brain infection caused by JC virus reactivation during significant immune suppression.

Progressive Muscular Atrophy

A motor-neuron disorder predominantly affecting lower motor neurons and causing progressive muscle wasting and weakness.

Progressive Supranuclear Palsy

A neurodegenerative tauopathy characterized by the accumulation of tau protein in the basal ganglia, brainstem, and cerebral cortex, belonging to the family of Parkinson plus syndromes.

Alternate Names:

Steele-Richardson-Olszewski Syndrome Supranuclear Palsy

Proinflammatory

Proinflammatory describes a substance, cell, or response that promotes inflammation through mediators such as cytokines, chemokines, or lipid signals.

Proinsulin

Proinsulin is the precursor molecule that pancreatic beta cells process into insulin and C-peptide.

Projectile Vomiting

Forceful vomiting expelled with unusual intensity, which may occur with gastric outlet obstruction, raised intracranial pressure, infection, migraine, or other causes; severity and associated signs guide evaluation.

Projection

The act of extending, displaying, or estimating something; in imaging, a view produced by directing rays through a body.

Prokaryote

A prokaryote is a cell or organism without a membrane-bound nucleus, including bacteria and archaea.

Prokinetic

A medicine that promotes gastrointestinal motility and movement of contents through the digestive tract; use depends on the underlying disorder and safety profile.

Prolactin

A pituitary hormone that stimulates breast development and milk production and influences reproductive function.

Prolactin Blood Test

A prolactin blood test measures the hormone prolactin and helps evaluate abnormal milk production, menstrual or fertility problems, and some pituitary disorders.

Prolactin Physiology

Prolactin is the only pituitary hormone primarily under tonic inhibitory control by the hypothalamus through dopamine acting on D2 receptors. Prolactin stimulates lactation suppresses GnRH and is important for reproductive function. Physiological elevations occur during pregnancy lactation breast stimulation sleep and stress.

Prolactin Receptor

A cell-surface receptor activated by prolactin to regulate mammary development, milk production, reproduction, immune effects, and other tissue responses.

Prolactinoma

A usually benign pituitary adenoma that secretes excess prolactin.

Alternate Names:

Pituitary Tumor (Prolactinoma)

Prolactinoma Treatment

Treatment may include a dopamine agonist, surgery,

radiation, or observation, depending on tumor size, symptoms, hormone levels, treatment response, and patient preferences. Dopamine agonists often lower prolactin levels and reduce tumor size.

Prolapse

Downward displacement or protrusion of an organ or tissue from its normal position, often through a supporting structure or body opening.

Prolapse Of Orbital Fat

Herniation of intraorbital fat through a dehiscence in the orbital septum, most commonly presenting as a painless, soft, reducible mass in the upper eyelid or lower eyelid. It is often age-related and may be confused with a lipoma or dermoid cyst.

Prolapse Of The Uterus (Uterine Prolapse)

Descent of the uterus into the vaginal canal due to weakening of pelvic floor supports, most commonly the uterosacral and cardinal ligaments.

Alternate Names:

Uterine Prolapse

Prolapse, Mitral Valve

Alternate index label; see *Mitral valve prolapse*.

Prolapsed Bladder

Alternate index label; see *Anterior vaginal prolapse (cystocele)*.

Prolapsed Cord

A prolapsed umbilical cord descends beside or ahead of the fetus after membrane rupture, risking cord compression and reduced fetal oxygen; it is an obstetric emergency.

Prolapsed Disk

A spinal disk that bulges or ruptures and may compress a nearby nerve; also called a herniated disk.

Alternate Names:

a herniated disk.

Prolapsed Uterus

Alternate index label; see *Uterine prolapse*.

Proliferating Trichilemmal Tumor

A usually low-grade follicular tumor arising from a trichilemmal cyst, most often on the scalp; large or recurrent lesions may show locally aggressive or malignant behavior.

Proliferation

Rapid increase in the number of cells or organisms.

Proliferative

Characterized by increased cell multiplication or new tissue growth. The meaning depends on context: some proliferative changes are normal or healing, while others are precancerous or cancerous.

Proliferative Diabetic Retinopathy

The advanced stage of diabetic retinopathy, characterized by the growth of new, fragile blood vessels (neovascularization) on the retinal surface, optic disc, or iris in response to severe retinal ischemia and the release of vascular endothelial growth factor.

Proliferative Fasciitis

A benign, reactive fibroblastic proliferation resembling nodular fasciitis but containing distinctive ganglion-like cells; it usually grows quickly and resolves or stabilizes after local treatment.

Proliferative Myositis

A benign reactive proliferation within skeletal muscle that may present as a rapidly enlarging mass and mimic sarcoma. Imaging and biopsy are used to establish the diagnosis.

Proliferative Retinopathy

Advanced retinal disease in which abnormal new blood vessels grow and may bleed or impair vision.

Prolindac

Prolindac is an investigational prodrug designed to release an active anticancer agent within tumors.

Proline

A protein-forming amino acid with a cyclic side chain.

Prolonged Deceleration

A fetal heart rate deceleration lasting ≥ 2 minutes but <10 minutes. If the deceleration persists ≥ 10 minutes, it is a baseline change. Causes: maternal hypotension (epidural-induced aortocaval compression), uterine hyperstimulation, umbilical cord prolapse, placental abruption, and maternal seizure.

Prolonged Second Stage

Second stage of labor exceeding the time limits: nulliparas — 3 hours with regional anesthesia (2 hours without); multiparas — 2 hours with regional (1 hour without). Management: reassess position, contractions, and fetal status. For inadequate contractions: oxytocin augmentation. For malposition (OP, OT): manual rotation.

Prolymphocyte Count

The number or proportion of prolymphocytes, immature-appearing lymphoid cells, in blood or marrow; an increased count may occur in selected lymphoid leukemias and requires morphology and immunophenotyping.

Prolymphocytic Leukemia

Prolymphocytic leukemia is a rare aggressive leukemia with large abnormal lymphocytes in the blood, bone marrow, spleen, or lymph nodes.

Promazine

A first-generation phenothiazine antipsychotic with sedative properties; it is now used infrequently in many settings and availability varies by country. It can cause drowsiness, orthostatic hypotension, anticholinergic effects, extrapyramidal symptoms, and other serious antipsychotic adverse effects.

Promecarb

Promecarb is a carbamate insecticide that inhibits acetylcholinesterase and can cause cholinergic poisoning after substantial exposure.

Promegapoietin

Promegapoietin is an investigational hematopoietic growth-factor molecule designed to stimulate production of blood cells or platelets.

Prometaphase

Prometaphase is the stage of mitosis after nuclear-envelope breakdown when spindle microtubules attach to chromosome kinetochores.

Promethazine

Promethazine is an antihistamine used for allergy symptoms, nausea, motion sickness, and sometimes sedation; it can cause marked sleepiness and breathing problems in young children.

Promethazine Overdose

Promethazine overdose involves toxic or environmental exposure to promethazine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Prominent Iris Collarette

A visible thickening or ridge of the iris at the junction of the pupillary and ciliary zones, representing the site where the embryonic pupillary membrane was attached. It is typically a normal anatomical variant but can be a clinical sign in conditions such as Axenfeld-Rieger syndrome or iridocorneal endothelial syndrome.

Promonocyte Count

The number or proportion of promonocytes, immature monocyte precursors, in blood or marrow; increased cells may support evaluation of acute or chronic myeloid leukemia.

Promontory

A projecting anatomical prominence, such as the sacral or cochlear promontory.

Promoter

DNA sequence upstream of gene where RNA polymerase and transcription factors bind to initiate transcription. Core promoter: TATA box, tran-

scription start site. Regulatory elements: enhancers, silencers.

Promoters

DNA regions that initiate transcription of a gene when bound by regulatory proteins.

Promyelocytes

Promyelocytes are immature myeloid blood-cell precursors that develop from myeloblasts and mature into myelocytes; abnormal accumulation occurs in some leukemias.

Pronation

Rotation of the forearm so the palm faces posteriorly or downward, or a related foot movement.

Pronator

A muscle that turns a limb or part of it into a pronated position.

Prone

Prone means lying face downward with the front of the body against a surface; positioning affects breathing, pressure injury, and procedures.

Prone Position

A position in which the patient lies face down, commonly providing access to the back, spine, buttocks, or posterior legs.

Prone Positioning

Turning supine patients to prone for > 12 hours daily in severe ARDS. Improves oxygenation by recruiting dorsal lung segments. Reduces mortality when $\text{PaO}_2/\text{FiO}_2 < 150$.

Pronephric

Pronephric refers to the earliest embryonic kidney system, which is temporary and helps organize development of later renal structures.

Pronephros

The earliest embryonic kidney structure, which is nonfunctional in humans and largely regresses.

Prontosil

An early sulfonamide antibacterial drug, historically important in antimicrobial therapy.

Propafenone

A class IC antiarrhythmic with sodium channel blockade and weak beta-blocking activity. Used for paroxysmal atrial fibrillation (in patients without structural heart disease, including 'pill-in-the-pocket'), supraventricular tachycardias, and ventricular arrhythmias.

Propane

Propane is a flammable hydrocarbon gas used as fuel; inhalation or displacement of oxygen can cause suffocation, and liquid contact can cause cold burns.

Propane Poisoning

Propane poisoning involves toxic or environmental exposure to propane poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Propanol

Propanol is an alcohol solvent with two structural isomers; ingestion or substantial exposure can depress the nervous system and irritate tissues.

Propanolol

A nonselective beta-adrenergic blocker used for hypertension, arrhythmias, angina, tremor, migraine prevention, and other indications.

Propantheline

An antimuscarinic medicine formerly used for gastrointestinal spasm or excessive sweating.

Propellant

A propellant is a gas or volatile substance that expels a product from a container or delivers medicine in an inhaler.

Properdin

Properdin is a positive regulator of the alternative complement pathway that stabilizes complement

convertase and supports innate immune defense.

Properdin Deficiency

X-linked recessive (CFP gene). Properdin stabilizes alternative pathway C3 convertase. Recurrent Neisseria infections (meningococcemia, gonococcemia). Low AH50, normal CH50, low properdin. Treatment: meningococcal vaccination (ACWY + B), prophylactic penicillin, IVIG for severe infections.

Propetamphos

Propetamphos is an organophosphate insecticide that can inhibit acetylcholinesterase and cause cholinergic toxicity after exposure.

Prophage

A prophage is bacteriophage genetic material integrated into a bacterial chromosome or maintained in a dormant state inside a bacterium.

Prophase

Prophase is the early stage of cell division when chromosomes condense, the spindle begins forming, and the nucleolus disappears.

Prophenofos

Prophenofos is an organophosphate pesticide whose toxicity results mainly from acetylcholinesterase inhibition and excess cholinergic activity.

Prophylactic

Prophylactic means intended to prevent disease, infection, injury, or another unwanted outcome before it occurs.

Prophylactic Mastectomy

Prophylactic mastectomy removes one or both breasts to greatly reduce cancer risk in selected people at very high genetic or clinical risk.

Prophylaxis

Treatment or preventive measures intended to reduce the risk of disease or infection.

Propiolactone

Propiolactone is a reactive chemical formerly used as a disinfectant or sterilant; it is corrosive and potentially carcinogenic.

Propionates

Salts or esters of propionic acid used in food preservation, metabolism, and some medicines; clinical effects depend on the specific compound and exposure.

Propionibacteriaceae

A family of gram-positive, often anaerobic bacteria that includes Cutibacterium and related genera found on skin and in other environments.

Propionibacterium

A former bacterial genus name now largely replaced by Cutibacterium; its members are common skin organisms and can cause acne or device-related infection.

Propionibacterium Acnes

The former name for Cutibacterium acnes, a skin bacterium associated with acne and occasional implant or bloodstream infection.

Propionic Acidemia

An autosomal recessive inborn error of branched-chain amino acid and odd-chain fatty acid metabolism caused by deficiency of the biotin-dependent mitochondrial enzyme propionyl-CoA carboxylase, composed of alpha and beta subunits encoded by *PCCA* and *PCCB*. Prevents conversion of propionyl-CoA to methylmalonyl-CoA, causing accumulation of propionic acid, 3-hydroxypropionate, and methylcitrate. Manifests in the neonatal period with life-threatening ketoacidosis, lethargy, vomiting, hyperammonemia, pancytopenia, and metabolic stroke of the basal ganglia, predisposing to long-term intellectual disability and dilated cardiomyopathy.

Alternate Names:

Propionic Aciduria (PA); Propionyl-CoA Carboxylase Deficiency

Propofol

A short-acting intravenous anesthetic used for induction and maintenance of anesthesia and procedural sedation.

Propofol Infusion Syndrome

Rare but fatal complication of prolonged high-dose propofol infusion. Features: metabolic acidosis, rhabdomyolysis, cardiac failure, hyperlipidemia. Risk: critical illness, children, high doses ($>4\text{--}5\text{ mg/kg/hr}$), prolonged infusion (>48 hours). Prevention: limit dose and duration.

Propoxur

Propoxur is a carbamate insecticide that inhibits acetylcholinesterase and may cause sweating, salivation, vomiting, breathing difficulty, or weakness after exposure.

Propoxycaine

A local anesthetic formerly used in some topical or dental preparations; toxicity can affect the nervous system and heart.

Propoxyphene

Propoxyphene is a former opioid analgesic withdrawn in many countries because of overdose toxicity, respiratory depression, and dangerous cardiac arrhythmias.

Propranolol

A nonselective beta blocker used for cardiovascular conditions, tremor, migraine prevention, and other indications.

Proprioception

Awareness of body position and movement from receptors in muscles, tendons, joints, and skin.

Proprioceptor

A sensory receptor that detects position, movement, or muscle stretch.

Proptosis (Exophthalmos)

Abnormal anterior protrusion, forward displace-

ment, or bulging of one or both eyeballs (globes) from the bony orbital cavity. Exophthalmos is traditionally used when proptosis is caused by endocrine ophthalmopathy, specifically Graves disease (thyroid eye disease), in which autoantibodies directed against the TSH receptor stimulate orbital fibroblasts and adipocytes to produce glycosaminoglycans, causing severe retro-orbital edema, extraocular muscle enlargement, and bilateral proptosis. Unilateral proptosis mandates urgent imaging (CT/MRI of the orbit) to rule out orbital cellulitis, retrobulbar hematoma, cavernous sinus thrombosis, orbital pseudotumor, or primary orbital neoplasms. Quantified clinically using a Hertel exophthalmometer.

Propulsion

The act of driving or moving something forward; in Parkinson disease, propulsion may be impaired.

Propyl Alcohol

Propyl alcohols are flammable solvents; ingestion or substantial exposure can irritate tissues and depress the central nervous system, with toxicity depending on the isomer and dose.

Propylene Glycol

Propylene glycol is a solvent and humectant used in medicines, foods, and cosmetics; large exposures can cause metabolic or kidney problems.

Propylthiouracil

An antithyroid medicine that inhibits thyroid hormone synthesis and peripheral conversion of T4 to T3.

Propylthiouracil

Propylthiouracil is an antithyroid drug that reduces thyroid-hormone synthesis and conversion of T4 to T3; liver injury and fetal risks require careful use.

Prosencephalon

The prosencephalon is the embryonic forebrain, which develops into the telencephalon and diencephalon and their associated brain structures.

Prosopagnosia

Inability to recognize familiar faces despite otherwise adequate vision.

Prosoplasia

Development of a new or more specialized cellular function or phenotype within a tissue. The term describes progressive differentiation toward an advanced functional state rather than loss of differentiation or disordered maturation. It may be used in developmental biology and pathology to characterize cellular specialization in response to genetic, environmental, or tissue-specific signals. Interpretation depends on the tissue, developmental stage, molecular pathways, and whether the change is physiologic, adaptive, or associated with disease.

Prosoposchisis

A rare congenital facial cleft or fissure caused by abnormal fusion of facial processes during embryonic development, potentially affecting the nose, mouth, eyes, and feeding or breathing.

Prostacyclin Analogs

Medications that mimic prostacyclin (PGI₂), causing vasodilation and inhibiting platelet aggregation in the pulmonary vasculature. They include epoprostenol (continuous IV), treprostinil (subcutaneous, IV, inhaled, oral), and iloprost (inhaled). They are used for severe PAH.

Prostaglandin

A locally acting lipid mediator derived from arachidonic acid that influences pain, inflammation, fever, vascular tone, platelet function, gastric protection, kidney function, and uterine contraction.

Prostaglandin Analogs

A class of topical medications used in the treatment of open-angle glaucoma and ocular hypertension that lower intraocular pressure by increasing the uveoscleral outflow of aqueous humor, reducing intraocular pressure by approximately twenty-five to thirty-five percent.

Prostaglandin Degradation

Enzymatic inactivation and removal of prostaglandins, which limits the duration and intensity of their local effects on vessels, inflammation, smooth muscle, kidneys, stomach, and reproductive tissues.

Prostaglandin E₂

A prostaglandin that mediates inflammation, pain, fever, vasodilation, gastric protection, cervical ripening, and uterine contraction and is used in selected obstetric and cardiovascular treatments.

Prostaglandin F₂-Alpha

A prostaglandin that promotes smooth-muscle contraction and luteolysis; analogues are used in glaucoma, postpartum hemorrhage, labor-related care, and veterinary medicine.

Prostaglandin Receptor

A membrane receptor that binds a specific prostaglandin and activates intracellular signaling controlling vascular tone, inflammation, pain, smooth muscle, platelet activity, or reproduction.

Prostaglandins

Locally acting lipid mediators involved in pain, inflammation, vascular tone, gastric protection, and reproductive physiology.

Prostaglandins E

The E series of prostaglandins, lipid mediators that influence inflammation, vascular tone, gastric protection, kidney blood flow, cervical ripening, and uterine contraction.

Prostaglandins F

The F series of prostaglandins, lipid mediators involved in smooth-muscle contraction, luteal function, vascular responses, inflammation, and labor-related uterine activity.

Prostate

A gland below the bladder surrounding the proximal urethra that contributes fluid to semen.

Prostate Adenocarcinoma

The most common non-cutaneous malignancy in men and the second leading cause of cancer death in men after lung cancer. The disease typically arises in the peripheral zone of the prostate and is hormone-dependent, requiring androgens for growth.

Prostate Biopsy

Sampling of prostate tissue, commonly by transperineal or transrectal needle technique, for histologic diagnosis of prostate cancer. Targeted and systematic cores may be combined, with attention to infection prevention, bleeding, urinary retention, and sepsis risk.

Prostate Brachytherapy

A medical procedure, treatment, device, or care topic related to prostate brachytherapy; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Prostate Cancer

Cancer that forms in the prostate gland. It may grow slowly or behave aggressively and may cause no symptoms early on. Risk increases with age, family history, inherited gene changes, and certain racial or ethnic backgrounds. Prostate-specific antigen testing and sometimes a digital rectal examination may help evaluate risk, but diagnosis requires a prostate biopsy. Tumor grade and stage help guide treatment.

Alternate Names:

Cancer, Prostate Prostatic Carcinoma (Prostate Cancer)

Prostate Cancer Screening

Prostate cancer screening may use a PSA blood test with or without a digital rectal examination after discussing possible benefits, false positives, and harms.

Prostate Cancer Staging

Assessment of how far prostate cancer has spread using tumor features, PSA, grade, imaging, and whether disease is confined to the prostate or metastatic.

Prostate Cancer Treatment

A medical procedure, treatment, device, or care topic related to prostate cancer treatment; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Prostate Carcinoma

Prostate carcinoma is cancer arising from the prostate gland and may grow slowly or behave aggressively.

Prostate Disease

Any disorder affecting the prostate, including benign enlargement, infection, inflammation, or cancer.

Prostate Enlargement

An increase in prostate size, most often benign prostatic hyperplasia, which can obstruct urine flow and cause lower urinary-tract symptoms.

Prostate Gland

The prostate, a gland below the bladder that surrounds the urethra and contributes secretions to semen.

Prostate Gland Enlargement

Alternate index label; see *Benign prostatic hyperplasia*.

Prostate Infection

Infection or inflammation of the prostate, usually causing pelvic or urinary symptoms and sometimes fever or bloodstream infection.

Prostate Inflammation (Prostatitis (Inflammation Of The Prostate Gland))

Alternate index label for Prostatitis (Inflammation of the Prostate Gland).

Prostate Neoplasm

A prostate neoplasm is an abnormal growth in the prostate that may be benign, such as benign enlargement, or malignant.

Prostate Resection - Minimally Invasive

Minimally invasive prostate resection removes obstructing prostate tissue through the urethra or small access points to improve urine flow.

Prostate-Specific Antigen

A serine protease produced mainly by prostate epithelial cells and secreted into seminal fluid. PSA can be measured in blood, where levels may rise with benign enlargement, inflammation, infection, or prostate cancer. Interpretation depends on age, prostate size, medicines, symptoms, and changes over time.

Prostate-Specific Antigen

A kallikrein-related serine protease (human kallikrein-3 [hK3]) produced primarily by prostate glandular epithelial cells, functioning physiologically to liquefy seminal coagulum. Measured in serum as a biomarker for prostate cancer screening, risk stratification, and post-treatment recurrence monitoring. Elevated serum PSA (> 4.0 ng/mL) is organ-specific but not cancer-specific, also rising in benign prostatic hyperplasia, acute prostatitis, urinary retention, and recent instrumentation or ejaculation.

Prostate-Specific Antigen Blood Test

A PSA blood test measures prostate-specific antigen; an elevated result may reflect enlargement, inflammation, infection, or cancer and is not diagnostic by itself.

Prostatectomy

Surgical removal of part or all of the prostate.

Prostatic Carcinoma (Prostate Cancer)

Alternate index label for Prostate Cancer.

Prostatic Fluid

Prostatic fluid is a mildly alkaline secretion that forms part of semen and contains substances supporting sperm function and survival.

Prostatic Obstruction

Blockage of urine flow caused by enlargement, inflammation, scarring, stones, or a tumor of the prostate or nearby structures.

Prostatic Urethral Stent

A small device placed in the prostatic urethra to help maintain urine flow when the prostate obstructs it.

Prostatism

Lower urinary-tract symptoms caused by bladder-outlet obstruction or dysfunction, often associated with prostate enlargement.

Prostatitis

Inflammation or infection of the prostate, causing pelvic pain, urinary symptoms, or systemic illness.

Prostatitis (Inflammation Of The Prostate Gland)

Alternate index label for Inflammation of the Prostate Gland.

Prostatitis - Bacterial

Bacterial prostatitis is infection and inflammation of the prostate, causing pelvic or urinary pain, fever, urinary symptoms, or recurrent infection.

Prostatitis - Nonbacterial

Nonbacterial prostatitis refers to persistent pelvic or urinary symptoms without proven bacterial infection and is often managed with several approaches.

Prostatodynia

Prostatodynia is an older term for pelvic or prostate-region pain without proven bacterial infection, now often considered within chronic pelvic pain syndrome.

Prosthesis

An artificial device replacing or supporting a missing body part or function.

Prosthetic

Pertaining to, designed for, or functioning as a prosthesis—an artificial, biocompatible device fabricated to substitute for, augment, or replace a missing, amputated, or defective body part, joint, or organ. Encompasses extremity prostheses (e.g., transtibial, transfemoral, and myoelectric bionic limbs), orthopedic joint arthroplasties (total hip and total knee replacements), cardiovascular prostheses (mechanical and bioprosthetic prosthetic heart valves, endovascular stent grafts), and dental/maxillofacial prostheses. A major clinical challenge is managing prosthetic complications, including wear, aseptic mechanical loosening, and prosthetic joint or valve infections (frequently driven by biofilm-forming staphylococci).

Prosthetic Graft

A prosthetic graft is an artificial tube or patch used to replace or bypass a damaged blood vessel or other tubular structure; infection and thrombosis are important risks.

Prosthetic Heart Valve

An artificial valve replacing or supplementing a diseased cardiac valve; mechanical valves require anticoagulation, while tissue valves have different durability and anticoagulation considerations.

Prosthetic Limb

Artificial replacement for missing limb. Types: above/below knee, above/below elbow. Components: socket, suspension, joint, pylon, terminal device. Materials: carbon fiber, silicone, metal. Rehabilitation: gait training, strength, ADL.

Prosthetic Training

Training for amputees: stump care, donning/doffing, gait training, balance, stair negotiation, community ambulation.

Prosthetics

Artificial replacement of missing body part. Elderly use: lower limb (transtibial, transfemoral), upper limb. Considerations: mobility level, cognition, vision, comorbidities, support system. Rehabilitation:

physical therapy, strength training, balance.

Prosthodontics

Dental specialty concerned with replacement of missing teeth and restoration of oral function. Types: fixed (crowns, bridges, implants), removable (partial dentures, complete dentures), maxillofacial prosthetics (ocular, nasal, auricular). Goals: aesthetics, function, phonetics, preservation of remaining structures.

Prostrate

Lying flat or face downward; not to be confused with prostate.

Protamine

A strongly basic protein used to reverse the anticoagulant effect of heparin.

Protanopia

Protanopia is complete absence of red-cone function, causing a form of red-green color-vision deficiency and altered perception of red and related colors.

Protean

Highly variable in form, appearance, or behavior; in medicine it may describe a disease with changing or diverse manifestations.

Proteaphagy

Selective autophagic degradation of proteasomes, helping cells regulate protein-degradation capacity during stress or nutrient changes.

Protease

An enzyme that breaks down proteins by cleaving peptide bonds.

Protease Inhibitors

A class of antiviral drugs that block viral proteases, enzymes essential for processing viral polyproteins into functional components needed for viral assembly and maturation.

Proteasome

A large protein complex that breaks down proteins tagged with ubiquitin, helping regulate cell-cycle proteins, signaling, and damaged proteins.

Proteasome Binding

Attachment of a molecule to a proteasome or its regulatory particle, which can alter protein degradation or proteasome activity.

Protecting Yourself From Cancer Scams

Protection from cancer scams includes checking claims with qualified clinicians, avoiding guaranteed cures, reviewing evidence, and being cautious about costly unproven treatments.

Protective

Serving to prevent or reduce injury, infection, or other harm.

Protective Agent

A clinical or therapeutic concept involving protective agent. Its features, uses, and clinical significance depend on the relevant medical context.

Protective Factor

Attribute decreasing probability of disease. Examples: exercise (cardiovascular disease), vaccination (infectious disease).

Protegrin

A small antimicrobial peptide, usually derived from pig immune cells, that can disrupt microbial membranes.

Protein

A molecule made of amino acids that performs structural, enzymatic, transport, signaling, or immune functions.

Protein Acetylation

Addition of an acetyl group to a protein, often changing its activity, localization, stability, or interactions; histone acetylation is a major regulator of gene expression.

Protein Binding

The reversible association of drug molecules with plasma proteins, primarily albumin for acidic drugs and alpha-1 acid glycoprotein for basic drugs. Only unbound or free drug is pharmacologically active and available for distribution to tissues, metabolism by the liver, and excretion by the kidneys.

Protein Biosynthesis

Production of proteins by transcription of DNA into RNA followed by ribosomal translation of messenger RNA into an amino-acid chain.

Protein C

Natural anticoagulant. Inactivates factors Va and VIIIa. Warfarin can cause skin necrosis in deficiency.

Protein C Blood Test

A protein C blood test measures a natural anticoagulant and may help evaluate unexplained or recurrent blood clots or suspected inherited deficiency.

Protein C Deficiency

An inherited (autosomal dominant) thrombophilia causing increased VTE risk. Protein C is a vitamin K-dependent natural anticoagulant that inactivates factors Va and VIIIa and stimulates fibrinolysis. Heterozygous: 6-10 fold increased VTE risk.

Protein Deficiency

Inadequate protein intake, digestion, absorption, or use, causing loss of muscle, impaired immunity and wound healing, edema, or growth failure when severe or prolonged.

Protein Denaturation

Loss of a protein's normal three-dimensional structure from heat, chemicals, pH, or mechanical stress, often impairing its biological function without breaking its peptide backbone.

Protein Dephosphorylation

Removal of a phosphate group from a protein by a phosphatase, often reversing or modifying signaling, enzyme activity, localization, or cell-cycle control.

Protein Electrophoresis

A laboratory test that separates proteins in serum or urine according to their electrical properties, helping detect abnormal protein patterns.

Protein Electrophoresis - Serum

Serum protein electrophoresis separates blood proteins into patterns and helps evaluate abnormal antibodies, myeloma, inflammation, and some liver or kidney disorders.

Protein Engineering

Design or modification of proteins through genetic, biochemical, or computational methods to alter activity, stability, specificity, expression, or therapeutic usefulness.

Protein Expression

The process by which genetic information produces a protein, including transcription, RNA processing, translation, folding, modification, and cellular localization.

Protein Folding

The process by which a newly made protein changes from a chain of amino acids into its functional three-dimensional shape. The amino acid sequence provides the main instructions for folding, while the cellular environment and molecular chaperones may help the protein fold correctly. Incorrect folding can cause protein aggregation and contribute to disease.

Protein Glycosylation

Enzymatic attachment of carbohydrate chains to proteins, affecting folding, stability, trafficking, recognition, and function; inherited glycosylation defects can cause multisystem disease.

Protein Import

Transport of a protein into an organelle or across a cellular membrane using targeting signals, receptors, translocons, and energy-dependent folding or assembly mechanisms.

Protein In Diet

Dietary protein supplies amino acids needed for muscle, enzymes, hormones, immunity, and tissue repair; requirements vary with age, health, and kidney function.

Protein In Urine (Proteinuria)

An abnormal amount of protein in the urine, which may be temporary or indicate kidney disease, diabetes, high blood pressure, infection, or another condition.

Protein Isoform

One of several related protein forms produced from different genes, alternative splicing, or post-translational processing, with potentially different locations or functions.

Protein Kinase

An enzyme that transfers phosphate from ATP to a protein, changing its activity or interactions and regulating signaling, metabolism, growth, differentiation, and cell division.

Protein Malnutrition

Protein malnutrition refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

Protein Metabolism

The synthesis, folding, modification, breakdown, and recycling of proteins and amino acids in cells and tissues.

Protein Methylation

Addition of methyl groups to selected amino-acid residues, regulating protein activity, chromatin, signaling, and gene expression.

Protein Overexpression

Production of an abnormally large amount of a protein, caused by gene amplification, transcriptional activation, altered degradation, or other mechanisms and potentially driving disease or serving as a biomarker.

Protein Phosphorylation

Addition of phosphate to a protein by a kinase, a reversible switch that regulates enzyme activity, signaling pathways, gene expression, transport, and cell division.

Protein Prenylation

Attachment of a hydrophobic isoprenoid group to a protein, helping target it to membranes and enabling signaling or trafficking functions.

Protein Purification

Separation of a desired protein from cells or a mixture using properties such as charge, size, solubility, affinity, or binding, while preserving its structure and activity.

Protein Refolding

Return of a denatured or newly synthesized protein to its functional three-dimensional structure, sometimes requiring chaperones or controlled laboratory conditions.

Protein S

Vitamin K-dependent plasma glycoprotein that acts as a cofactor for activated protein C in the inactivation of factors Va and VIIIa. Deficiency or dysfunction increases the risk of venous thromboembolism.

Protein S Blood Test

A protein S blood test measures a natural anticoagulant and may help evaluate suspected inherited or acquired tendency to form blood clots.

Protein S Deficiency

An inherited (autosomal dominant) thrombophilia. Protein S is a vitamin K-dependent natural anticoagulant that acts as a cofactor for activated protein C in inactivating factors Va and VIIIa. Heterozygous: 2-10 fold increased VTE risk. Homozygous: rare, purpura fulminans.

Protein Secretion

Transport of a protein out of a cell or into a specialized compartment, commonly through

the endoplasmic-reticulum and Golgi pathway or through regulated vesicle release.

Protein Sequence

The ordered chain of amino acids in a protein, which encodes information about folding, domains, binding sites, processing, and biological function.

Protein Splicing

Removal of an internal protein segment called an intein with ligation of the surrounding exteins, producing a mature functional protein.

Protein Subunit

One polypeptide component of a multi-subunit protein complex, whose interactions with other subunits create the complex's final structure and function.

Protein Synthesis

Translation of mRNA code into polypeptide chain. Initiation: ribosome assembly at start codon (AUG). Elongation: aminoacyl-tRNAs bring amino acids; peptide bonds form in peptidyl transferase center; ribosome translocates. Termination: stop codon (UAA, UAG, UGA) recognized by release factors.

Protein Translocation

Movement of a newly synthesized or mature protein across a membrane or to a different cellular compartment, directed by targeting signals and transport machinery.

Protein Transport

Cellular movement of proteins between compartments, across membranes, or outside the cell, ensuring that each protein reaches its functional location.

Protein Unfolding

Loss of a protein's native three-dimensional structure, caused by heat, chemicals, mutations, or cellular stress, which can impair function or promote aggregation.

Protein-Energy Malnutrition

Severe deficiency of protein and calories. Types:

marasmus (chronic, wasting), kwashiorkor (acute, edema, fatty liver), marasmic-kwashiorkor. Risk: famine, poverty, alcoholism, malignancy, malabsorption. Treatment: gradual refeeding, monitor refeeding syndrome.

Protein-Losing Enteropathy

Excessive loss of plasma proteins through the gastrointestinal tract, causing low albumin, swelling, diarrhea, or nutritional deficiency.

Proteinaceous Plug

A blockage made primarily of protein-rich material, mucus, cellular debris, or secretions that can obstruct an airway, duct, catheter, or other passage.

Proteinuria

Abnormally high protein excretion in urine, often indicating kidney disease but also occurring transiently.

Proteobacteria

A large bacterial group containing many gram-negative organisms, including *Escherichia*, *Salmonella*, *Pseudomonas*, and *Vibrio*.

Proteogenomics

Integration of genomic, transcriptomic, and proteomic data to identify proteins, discover coding variants, characterize tumors or microbes, and connect DNA changes with protein function.

Proteoglycan

A molecule made of a core protein with attached glycosaminoglycan chains, providing structure and signaling functions in connective tissue and cartilage.

Proteolipid Protein

Proteolipid protein refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

Proteolipids

Proteins tightly associated with lipid molecules or

lipid membranes, important in myelin, mitochondrial membranes, ion transport, and other membrane structures.

Proteolysis

Breakdown of proteins into smaller peptides or amino acids.

Proteolytic

Pertaining to, promoting, or characterized by proteolysis—the hydrolytic cleavage of peptide bonds linking amino acids in peptides and proteins. Mediated by specialized enzymes known as proteases, peptidases, or proteinases. Essential for digestive enzyme activation (e.g., gastric pepsin, pancreatic trypsin, chymotrypsin), blood coagulation cascades (thrombin cleavage of fibrinogen to fibrin), the complement cascade, apoptotic cell death (caspases), and intracellular protein recycling via the ubiquitin-proteasome system. Pharmacologically targeted by protease inhibitors in HIV therapy (e.g., darunavir), hepatitis C therapy, and multiple myeloma treatment (e.g., bortezomib).

Proteome

The complete set of proteins produced by a cell, tissue, organism, or biological condition at a particular time.

Proteomic Profile

A proteomic profile is a pattern of proteins measured in a biological sample to study disease, treatment response, or biological processes.

Proteomics

The large-scale study of proteins, including their abundance, structure, modifications, interactions, and functions.

Proteus

A genus of gram-negative bacteria that can cause urinary and wound infections.

Proteus Hauseri

A gram-negative bacterium in the *Proteus* group

that is rarely isolated from human clinical specimens.

Proteus Mirabilis

A gram-negative bacterium that commonly causes urinary-tract infection and can produce urease-related kidney or bladder stones.

Proteus Penneri

A gram-negative *Proteus* species that can rarely cause urinary, wound, bloodstream, or other opportunistic infections.

Proteus Syndrome

A rare mosaic overgrowth disorder, usually caused by AKT1 variants, producing asymmetric enlargement of bones, skin, or other tissues and an increased risk of tumors.

Proteus Vulgaris

A gram-negative bacterium that can cause urinary, wound, bloodstream, and other infections and often produces urease.

Prothionamide

A thioamide antimycobacterial drug used as part of selected multidrug regimens for drug-resistant tuberculosis; gastrointestinal, hepatic, neurologic, and thyroid adverse effects require monitoring.

Prothrombin

A vitamin-K-dependent plasma protein converted to thrombin during blood coagulation.

Prothrombin Deficiency

Prothrombin deficiency is a rare bleeding disorder caused by insufficient or abnormal clotting factor II, leading to prolonged bleeding of variable severity.

Prothrombin Time

A blood test assessing the extrinsic and common coagulation pathways, commonly reported as INR.

Prothrombin Time

A blood test measuring the time required for clot

formation through the extrinsic and common coagulation pathways; it is commonly reported as the INR.

Alternate Names:

PT

Protista

Protista is a historical grouping for diverse mostly single-celled eukaryotes, including organisms formerly called protozoa and some algae.

Proto-Oncogene

A normal gene that regulates cell growth, division, differentiation, or survival and can become an oncogene after activating mutation, amplification, translocation, or overexpression.

Protocol

A predefined plan specifying procedures for a clinical study, examination, or treatment.

Protocol Agent

A protocol agent is a substance or intervention specified by a study or treatment protocol to produce a defined experimental or clinical effect.

Proton Pump Inhibitors

Proton pump inhibitors suppress gastric acid secretion and treat reflux, ulcers, and other acid-related disorders; prolonged or inappropriate use should be periodically reviewed.

Proton Therapy

Radiation using protons instead of photons. Bragg peak allows precise dose delivery. Used for pediatric tumors, skull base tumors.

Protozoa

Single-celled eukaryotic organisms, some of which cause human disease.

Protractile

Capable of being extended, protruded, or pushed forward from an anatomical resting position. In human anatomy, refers to structures capable of active

protrusion, such as the human tongue (protracted by bilateral contraction of the genioglossus muscle, innervated by the hypoglossal nerve [CN XII], whose integrity is clinically assessed by asking the patient to stick out their tongue) and the mandible (protracted primarily by the lateral pterygoid muscles).

Protractor

An instrument or muscle that moves a structure forward or outward.

Protrusion

A part that projects outward or a disc or tissue displaced beyond its normal boundary.

Protuberance

A protuberance is a structure or area that projects outward from a surface, such as a normal bone prominence, swelling, or mass.

Provisional Diagnosis

A working diagnosis made before all information is available and subject to revision.

Provisional Tic Disorder

A disorder with motor or vocal tics lasting less than one year, beginning in childhood and not better explained by another condition.

Provocation

An action or stimulus that triggers a symptom, response, or test finding.

Proximal

Closer to the point of attachment or to the center of the body than another structure.

Proximal Humerus Fractures

Proximal humerus fractures: Neer classification (4 parts: articular surface, greater tuberosity, lesser tuberosity, shaft; displaced >1 cm or angulated >45 degrees = part). 1-part (nondisplaced): sling, early motion. 2-part: surgical neck (ORIF plate, IM nail) or greater tuberosity (if displaced >5mm or rotator cuff involvement).

Proximal Neuropathy Diabetic (Diabetic Neuropathy)

Alternate index label for Diabetic Neuropathy.

Proximal Radioulnar Joint

Pivot synovial joint between radial head circumference and ulnar radial notch, held by the annular ligament. Allows pronation/supination with approximately 150 degrees range. Parallel bones in supination; radius crosses ulna in pronation. Significant in radial head fractures, Monteggia fracture-dislocations, and nursemaid's elbow.

Proximal Renal Tubular Acidosis

Proximal renal tubular acidosis occurs when the kidney cannot reclaim enough bicarbonate, causing excess acid in the blood and often low potassium.

Proximal Tubule

Segment of the nephron extending from Bowman capsule to the loop of Henle with a convoluted proximal straight tubule and convoluted proximal tubule. Responsible for reabsorbing approximately sixty-five percent of filtered sodium, water, bicarbonate, glucose, amino acids, and phosphate through an extensive brush border.

Proximal Tubule Reabsorption

The proximal convoluted tubule reabsorbs approximately 65 percent of filtered sodium, water, glucose, amino acids, bicarbonate, and phosphate.

Proximate Cause

The legally sufficient cause that directly contributes to an injury or outcome.

Prune Belly Syndrome

A congenital syndrome comprising the triad: deficient abdominal wall musculature (wrinkled, prune-like appearance), bilateral cryptorchidism (undescended testes), and urinary tract anomalies (dilated ureters, dilated and trabeculated bladder, and posterior urethral valves or urethral atresia). Almost exclusively affects boys.

Prurigo

A group of intensely itchy skin disorders with papules or nodules caused by inflammation and scratching.

Pruritic

Itchy or causing an urge to scratch; pruritus can result from skin inflammation, allergy, infection, systemic disease, medications, or neuropathic mechanisms.

Pruritic Eruption

An itchy skin eruption that may result from allergic, inflammatory, infectious, drug-related, or autoimmune disease; diagnosis depends on its morphology, distribution, timing, and associated findings.

Pruritis Ani

Alternate index label; see *Anal itching*.

Pruritus

Itching, an unpleasant skin sensation that creates the desire to scratch.

Pruritus (Itch)

Alternate index label for Itch.

Pruritus Ani

Persistent itching around the anus with multiple potential causes including hemorrhoids, fissures, infections such as pinworms and candidiasis, dermatologic conditions including psoriasis and lichen sclerosus, and idiopathic causes.

Pruritus In CKD

Severe itching in dialysis patients from uremic toxin accumulation, elevated calcium-phosphorus product, and secondary hyperparathyroidism. Difficult to treat. Include phosphate binders, dialysis optimization, gabapentin, and UV phototherapy.

Prussian Blue

A blue pigment used in laboratory staining and as an antidote for selected radioactive cesium or thallium poisoning.

PSA

Prostate-specific antigen, a protein measured in blood to help evaluate prostate conditions.

Alternate Names:

Prostate-specific antigen

PSA Velocity

The rate at which PSA concentration changes over time.

Psalterium

The body of the fornix in the brain, also called the hippocampal commissure; historically, a book of psalms.

Psammoma

A tumor or lesion containing concentrically laminated calcified bodies called psammoma bodies.

Psychiatry

A misspelling of psychiatry, the medical specialty concerned with mental disorders.

Pseudarthrosis

Failure of a fracture to unite, producing a false joint or persistent abnormal mobility.

Pseudoaneurysm

A contained arterial wall disruption in which blood communicates with the arterial lumen but is held by surrounding tissue rather than all layers of the arterial wall. It may follow catheterization, trauma, surgery, infection, or grafting and can rupture or embolize.

Pseudoangiomatous Stromal Hyperplasia

A benign breast stromal proliferation forming slit-like spaces within dense collagen that may mimic vascular channels. It can be incidental or present as a palpable or imaging-detected mass.

Pseudobulbar Affect

Involuntary episodes of laughing or crying disproportionate to mood, usually due to neurologic disease.

Alternate Names:

Pseudoclubbing

Broadening and flattening of the nail tips without the complete loss of the angle between the nail and nail fold that characterizes true clubbing. It is seen in conditions such as hyperparathyroidism, rheumatoid arthritis, and psoriasis.

Pseudocyesis

A false belief or physical state resembling pregnancy without a fetus.

Pseudodementia

Cognitive symptoms caused by depression or another potentially reversible condition rather than primary neurodegeneration.

Pseudoephedrine

A sympathomimetic (alpha-1 agonist, some beta effects) oral decongestant used for nasal congestion in colds and sinusitis. Increases nasal mucosal vasoconstriction.

Pseudogout

Calcium pyrophosphate deposition disease: deposition of calcium pyrophosphate dihydrate crystals in joints, causing acute arthritis resembling gout (pseudogout) or chronic osteoarthritis-like disease.

Alternate Names:

Arthritis Pseudogout (Pseudogout)

Pseudogout Flare

Acute crystal-induced arthritis caused by calcium pyrophosphate dihydrate deposition, often affecting the knee or wrist. Identification of positively birefringent rhomboid crystals in synovial fluid supports the diagnosis.

Pseudohypertrophic Muscular Dystrophy

An older name for Duchenne or related muscular dystrophy with enlarged-appearing muscles caused by fat and connective tissue.

Pseudohypoparathyroidism

A group of disorders in which target tissues resist parathyroid hormone, causing low calcium, high phosphate, and elevated PTH, sometimes with characteristic skeletal features or hormone resistance.

Pseudomelanosis Duodeni

Benign condition characterized by dark pigment deposits in the duodenal mucosa, visible as slate-gray or black patches on endoscopy, caused by accumulation of iron-containing pigment in macrophages within the lamina propria.

Pseudomembranous Colitis

Colonic inflammation caused by *C. difficile* infection showing yellow-white plaques on colonoscopy. The plaques consist of fibrin, inflammatory cells, and necrotic epithelial debris overlying mucosal ulceration. Presents with profuse watery diarrhea and abdominal pain.

Alternate Names:

C. Difficile Colitis Colitis, Pseudomembranous

Pseudomonas

A genus of gram-negative bacteria, including *Pseudomonas aeruginosa*, that can cause opportunistic infections.

Pseudomonas Aeruginosa

A gram-negative bacterium that can cause pneumonia, bloodstream, urinary, wound, and ear infections, especially in hospitalized or immunocompromised people; it often has antibiotic resistance.

Pseudomonas Aeruginosa Infection

Infection caused by *Pseudomonas aeruginosa*, an opportunistic gram-negative bacterium that can affect the lungs, wounds, urinary tract, blood, or other sites.

Pseudomonas Aeruginosa Resistance

Pseudomonas aeruginosa has intrinsic and acquired resistance mechanisms making it inherently resistant to many antibiotics. Intrinsic resistance includes low outer membrane permeability, efflux pumps, and

chromosomal beta-lactamase.

Pseudomyxoma Peritonei

Accumulation of mucinous ascites and mucin-producing tumor nodules in the peritoneal cavity, usually from a ruptured low-grade appendiceal or ovarian mucinous neoplasm; treated with cytoreductive surgery and hyperthermic intraperitoneal chemotherapy.

Pseudoneurosis

An obsolete term for symptoms resembling neurosis but caused by an underlying physical disorder.

Pseudophakia

The presence of an artificial intraocular lens after removal of the natural lens, usually during cataract surgery.

Pseudorabies

Aujeszky disease, a herpesvirus infection of animals; humans are rare accidental hosts.

Pseudothrombocytosis Due To Red Cell Fragments

Falsely elevated platelet count on automated hematology analyzers caused by fragmentation of red blood cells (schistocytes) being counted as platelets. Seen in microangiopathic hemolytic anemias such as TTP, HUS, DIC, and mechanical heart valves. Manual peripheral blood smear review confirms true platelet count.

Pseudotumor Cerebri

An older term for idiopathic intracranial hypertension, in which raised pressure around the brain causes headache, transient visual obscurations, pulsatile tinnitus, and possible papilledema without a mass lesion.

Pseudoxanthoma Elasticum

An inherited connective-tissue disorder with mineralization and fragmentation of elastic fibers, affecting skin, eyes, and blood vessels.

Alternate Names:

PXE (Pseudoxanthoma Elasticum)

Pseudoxanthoma Elasticum

Alternate index label for Pseudoxanthoma Elasticum.

Psittacosis

A zoonotic infection caused by *Chlamydia psittaci*, usually acquired from infected birds.

PSMA

Prostate-specific membrane antigen. Target for PET imaging and therapy in prostate cancer.

Psoas

A major hip-flexor muscle running from the lumbar spine to the femur.

Psoas Abscess

A collection of pus in or around the psoas muscle, caused by infection spreading through the blood or from nearby tissues. It may cause back or hip pain, fever, difficulty walking, or few symptoms and usually requires imaging and targeted treatment.

Psoriasis

A chronic immune-mediated skin disease producing sharply demarcated, often scaly plaques.

Psoriasis Of The Scalp (Scalp Psoriasis)

Alternate index label for Scalp Psoriasis.

Psoriatic Arthritis

An inflammatory arthritis associated with psoriasis of the skin or nails. It may affect the spine, peripheral joints, digits, or tendon insertions, and diagnosis uses the clinical pattern together with appropriate laboratory and imaging findings.

Alternate Names:

Arthritis Psoriatic (Psoriatic Arthritis)

PSP

PSP commonly means progressive supranuclear palsy, a neurodegenerative disorder causing early postural instability, vertical gaze impairment, rigid-

ity, and cognitive change.

Psychasthenia

An obsolete term for obsessive doubts, compulsive thoughts, or an inability to direct attention.

Psychedelic

Producing altered perception, mood, and cognition, as with certain hallucinogenic substances.

Psychiatric

Relating to the assessment, diagnosis, treatment, or prevention of disorders of mood, thought, perception, behavior, or emotional functioning.

Psychiatrist

Physician specializing in diagnosis and treatment of mental disorders; involved in pre-transplant psychological evaluation and post-transplant mental health management.

Psychiatry

The medical specialty concerned with mental health and the diagnosis and treatment of mental disorders.

Psychic

Relating to the mind or mental processes; claims of supernatural perception are not medical findings.

Psycho-Oncology

The clinical and research field addressing psychological, social, behavioral, and communication needs of people with cancer and their families across diagnosis, treatment, survivorship, and end of life.

Psychoacoustics

The study of how people perceive and interpret sound, including loudness, pitch, masking, localization, speech, and hearing thresholds.

Psychoactive

Affecting mood, thought, perception, behavior, or other mental processes.

Psychoactive Substance

A substance that alters mood, perception, cognition, behavior, or consciousness.

Psychoanalysis

A historical psychological theory and treatment approach emphasizing unconscious processes and conflicts.

Psychobiology

The study of interactions between biological processes and behavior or mental states, including brain circuits, hormones, genes, immune signals, and environmental effects.

Psychodermatology

Psychodermatology addresses the mind-skin connection. Stress exacerbates psoriasis, eczema, acne, and urticaria. Psychiatric disorders (depression, anxiety, body dysmorphic disorder) are associated with skin conditions.

Psychodidae

A family of small hairy flies that includes sand flies; some species transmit pathogens such as *Leishmania* and therefore have public-health importance.

Psychodrama

A therapeutic method using guided dramatic enactment to explore emotions, relationships, and behavior.

Psychodynamic Therapy

A form of depth psychology that explores how unconscious processes, early life experiences, and internal conflicts influence current thoughts, feelings, and behaviors. It involves exploration of transference and countertransference, defense mechanisms, and the therapeutic relationship as a vehicle for change.

Psychogenic

Caused or strongly influenced by psychological factors such as stress, trauma, or emotional conflict. The symptoms are real and not deliberately produced, and physical causes should still be consid-

ered.

Psychogenic Erectile Dysfunction

Erectile difficulty primarily related to psychological factors rather than a structural disease.

Psychogenic Non-Epileptic Seizures

Seizure-like episodes that are not caused by abnormal electrical activity in the brain. They are a form of conversion disorder with attacks or seizures. Events may include shaking, stiffening, unresponsiveness, and other movements.

Psycholinguistics

The study of how the brain and mind produce, understand, acquire, and remember language, including speech, reading, grammar, and meaning.

Psychological

Relating to mental processes, emotions, behavior, or their effects on health.

Psychological Adjustment

The process of adapting thoughts, emotions, and behavior to stress, illness, disability, loss, developmental change, or other life circumstances.

Psychological Dependence

A pattern in which a person feels a strong emotional or mental need for a substance or behavior, often with craving, preoccupation, or distress when it is unavailable.

Psychological Support

Counseling, therapy for patients with chronic illness, disability, pain. Address depression, anxiety, adjustment difficulties, coping strategies.

Psychological Transfer

The redirection of feelings, expectations, or relationship patterns from earlier experiences onto another person, especially the therapist in psychotherapy; interpretation requires clinical context.

Psychologist, Clinical

A licensed mental-health professional who assesses and treats psychological, emotional, behavioral, and cognitive problems using psychotherapy and other evidence-based interventions within local scope of practice.

Psychology

The scientific study of behavior, emotion, learning, and mental processes. Psychological care may include assessment, counseling, and behavioral therapies.

Alternate Names:

Mental Health (Psychology)

Psychometrics

The measurement of psychological characteristics using standardized tests and statistical methods.

Psychomotor

Relating to the interaction of mental processes and physical movement.

Psychomotor Agitation

Restless, excessive, or purposeless movement associated with inner tension, anxiety, mania, delirium, depression, substance effects, or medication reactions.

Psychomotor Disorder

A disorder affecting the speed, initiation, coordination, or expression of movement and mental activity.

Psychomotor Performance

The ability to coordinate mental processing with physical movement, assessed through tasks involving speed, precision, reaction time, balance, or sequencing.

Psychoneuroimmunology

The study of interactions among psychological processes, the nervous system, endocrine signals, and immune function in health and disease.

Psychoneurosis

An obsolete term for a nonpsychotic emotional disorder, historically including anxiety and phobic conditions.

Psychopathic

Relating to severe, persistent antisocial personality traits; the term is often used imprecisely.

Psychopathology

The study or description of abnormal mental states and behavior.

Psychopharmacology

The study of how drugs affect behavior, mood, cognition, and other mental processes.

Psychophysics

The quantitative study of relationships between physical stimuli and subjective sensory experience, such as thresholds, discrimination, and perceived intensity.

Psychophysiology

The study of links between psychological processes and measurable bodily functions such as heart rate, skin conductance, muscle activity, and brain signals.

Psychosexual

Relating to the interaction of psychological factors with sexual development, feelings, behavior, or functioning.

Psychosexual Development

Development of sexual identity, interest, relationships, and behavior across the lifespan as influenced by biology, cognition, attachment, culture, and experience.

Psychosis

A state involving impaired reality testing, such as delusions, hallucinations, or disorganized thought.

Psychosis ICU (ICU Psychosis)

Alternate index label for ICU Psychosis.

Psychosocial Rehabilitation

Support for mental illness recovery: skills training, supported employment, peer support.

Psychosocial Support

Cancer affects mental health. Depression, anxiety common. Support groups, counseling beneficial.

Psychosomatic

Relating to physical symptoms influenced by psychological processes or stress.

Psychosurgery

Surgery intended to alter brain circuits for severe, treatment-resistant psychiatric illness; it is rarely used and highly specialized.

Psychotherapy

Structured psychological treatment using therapeutic communication and evidence-based techniques.

Psychotic

Pertaining to, exhibiting, or characterized by psychosis—a profound psychiatric or neuropsychiatric syndrome defined by a gross loss of reality testing, accompanied by severe cognitive, behavioral, and perceptual impairments. Core clinical features include delusions (fixed, false idiosyncratic beliefs unshakeable by contradictory evidence), hallucinations (sensory perceptions in the absence of external stimuli, most commonly auditory in primary psychiatric illness), disorganized thinking and speech (loosening of associations, word salad), and grossly disorganized or catatonic behavior. Seen in primary psychotic disorders (schizophrenia, schizoaffective disorder), mood disorders with psychotic features (bipolar I manic episodes, severe major depression), substance-induced states, and secondary medical conditions (delirium, autoimmune encephalitis).

Psychotic Disorder

A mental disorder involving loss of contact with reality, such as delusions, hallucinations, disorganized thinking, or markedly disorganized behavior.

Psychotic Disorder Brief (Brief Psychotic Disorder)

Alternate index label for Brief Psychotic Disorder.

Psychotic Disorders

Psychotic disorders involve impaired reality testing, such as hallucinations, delusions, disorganized thought, or marked behavioral change. Causes include schizophrenia-spectrum illness, mood disorders, substances, medicines, neurologic disease, and medical illness; new psychosis requires prompt assessment and safety planning.

Psychrobacter

A genus of cold-tolerant gram-negative bacteria found in marine and other environments that rarely cause opportunistic infection.

Psychrobacter Immobilis

A cold-tolerant environmental bacterium rarely associated with human infection, including occasional bloodstream or wound infection.

PTCA

Percutaneous transluminal coronary angioplasty, a procedure that opens a narrowed coronary artery.

Alternate Names:

Percutaneous coronary intervention

PTCL

Alternate index label; see *Peripheral T-cell lymphoma*.

PTE

Alternate name; see *Pulmonary Thromboendarterectomy*.

Pteridine

A nitrogen-containing bicyclic chemical structure found in folates, pigments, and other biologically active compounds.

Pterygium

A wing-shaped growth of conjunctival tissue extending onto the cornea, usually related to ultraviolet

exposure.

PTH-Related Peptide

A peptide that activates the parathyroid-hormone receptor and can cause humoral hypercalcemia of malignancy. It increases bone resorption and renal calcium retention while reducing phosphate reabsorption.

Pthirus Pubis

The pubic louse, a parasitic insect that infests the pubic hair and occasionally other coarse body hair, causing pediculosis pubis. Transmission is primarily through sexual contact. It causes intense pruritus and may transmit *Borrelia recurrentis* causing relapsing fever. Diagnosis is by visual identification of the louse or nits.

Ptilosis

Abnormal growth, loss, or condition of hair or feathers; the exact meaning depends on context.

PTLD

Post-transplant lymphoproliferative disorder; a spectrum of lymphoid proliferations ranging from benign hyperplasia to lymphoma, occurring in immunosuppressed transplant recipients.

Ptosiss

Drooping of an eyelid or another body structure. Eyelid ptosis may result from muscle, nerve, tendon, aging, injury, or a neurologic disorder.

Ptosiss - Infants And Children

Ptosiss in an infant or child is drooping of the upper eyelid, which may obstruct vision or cause amblyopia and can reflect congenital, muscular, nerve, or other disease.

PTSD

Post-traumatic stress disorder, a condition involving persistent trauma-related memories, avoidance, negative mood or cognition, and heightened arousal after a severe traumatic event.

Ptyalin

An older name for salivary amylase, the enzyme that begins starch digestion in the mouth.

Ptyalism (Sialorrhoea)

Excessive salivation or drooling beyond normal physiological volumes (hyper-salivation). Can result from true salivary gland hypersecretion (induced by cholinergic medications, organophosphate poisoning, heavy metal toxicity, or gastroesophageal reflux [the "water brash" reflex]) or, far more commonly, from impaired swallowing (dysphagia) or oral neuromuscular incompetence with normal salivary production. Clinically prominent in advanced neurodegenerative disorders (Parkinson disease, amyotrophic lateral sclerosis [ALS], cerebral palsy) and acute pseudobulbar palsy; managed conservatively with oral motor therapy or pharmacologically with anticholinergic agents (glycopyrrolate, transdermal scopolamine) and intraglandular botulinum toxin injections.

Pubertal Failure

Failure to begin or progress through expected puberty because of hypothalamic, pituitary, gonadal, chromosomal, chronic-disease, nutritional, or other causes.

Puberty

The developmental period in which hormonal changes produce sexual maturation and reproductive capability.

Puberty In Boys

Puberty in boys is the hormone-driven development of testes, penis, body hair, voice, muscle, and fertility, usually progressing through predictable physical stages.

Puberty In Girls

Puberty in girls is the hormone-driven development of breasts, body hair, growth, menstrual cycles, and reproductive maturity, usually progressing through predictable stages.

Pubes

The anatomical anterior, lower hypogastric region

overlying the pubic bone (os pubis) and symphysis pubis, also referring to the coarse secondary sexual hair (pubic hair) that develops in this region during adrenarche and puberty under the influence of adrenal and gonadal androgens. Evaluated clinically in pediatric endocrinology using the standardized sexual maturity rating of Tanner stages (Stages 1 through 5).

Pubic

Relating to the pubis or the region over the front of the pelvis.

Pubic Lice

Pubic lice are parasitic insects infesting coarse body hair, causing intense itching and visible nits; treatment and assessment of close or sexual contacts are needed.

Pubic Lice (Crabs)

Infestation of coarse body hair by lice, usually causing intense itching and requiring treatment and contact precautions.

Alternate Names:

Crabs

Pubis

The front part of the pelvic bone, meeting its opposite side at the pubic symphysis.

Public Assistance

Government or community support providing eligible people with food, housing, income, healthcare, disability, or other essential services.

Public Exposure

Radiation exposure to public from nuclear medicine patients. Guidelines for discharge after therapy. I-131 therapy: radiation safety instructions for 3-7 days.

Public Health

The science and practice of protecting and improving the health of communities through education, policy-making, and research for disease and injury

prevention.

Public Health Emergency

Event threatening public health. Examples: pandemic, bioterrorism, natural disaster. Declaration enables special powers.

Public Health Research Bias

Systematic error in a population-health study, including selection bias, information bias, and confounding.

Publication

A formally distributed written, electronic, or multimedia work that communicates research, evidence, education, policy, or other information.

Puborectalis Muscle

A pelvic-floor muscle sling around the rectum that helps maintain continence.

Pudendal

Relating to the external genitalia, anus, or perineum. The pudendal nerve carries sensation from these areas and helps control several muscles involved in continence and sexual function.

Pudendal Arteries

Arteries supplying blood to the external genital and perineal region.

Pudendal Block

A local anesthetic block of the pudendal nerve (S2-S4) used for perineal anesthesia during the second stage of labor, outlet forceps delivery, or perineal repair. Technique: transvaginal approach — a needle guide is placed on the ischial spine, and the needle is advanced through the sacrospinous ligament.

Pudendal Nerve

The nerve carrying sensation and motor signals to much of the perineum and pelvic floor.

Puerperal

Relating to the period after childbirth, usually the

first six weeks.

Puerperal Disorder

A physical or mental health disorder occurring during the postpartum period, including infection, bleeding, hypertension, depression, or psychosis.

Puerperal Fever

Fever and infection occurring after childbirth, often from uterine or genital-tract infection.

Puerperal Infection

An infection after childbirth, commonly involving the uterus, surgical wound, urinary tract, breast, or bloodstream, often causing fever, pain, or foul discharge.

Puerperal Psychosis

A rare psychiatric emergency beginning soon after childbirth, characterized by rapidly changing mood, confusion, delusions, hallucinations, or disorganized behavior.

Puerperal Sepsis

A life-threatening systemic infection of the female reproductive and genital tract occurring between rupture of membranes or onset of labor and the 42nd day postpartum. Defined by the World Health Organization as pelvic pain, abnormal vaginal discharge, foul odor, and delayed uterine involution accompanied by fever ($\geq 38.5^{\circ}\text{C}$) and systemic inflammatory signs. It remains one of the primary worldwide causes of preventable maternal death, requiring emergency broad-spectrum parenteral antibiotics, supportive resuscitation, and search for retained tissue or pelvic abscesses.

Alternate Names:

Postpartum Sepsis; Puerperal Septicemia

Puerperium

The approximately six-week period after childbirth during which the reproductive organs return toward their nonpregnant state.

Puffy Eyes

Alternate index label; see *Bags under eyes*.

Pugilistic Stance

The characteristic body position adopted by fire victims—flexed arms, elbows bent, fists clenched, knees flexed—resulting from heat-induced contraction (denaturation) of muscles (mainly flexors) and tendons, not from conscious movement. It occurs with thermal injury and can be present regardless of cause (even if death preceded fire).

Pugilistica Dementia (Dementia)

Alternate index label for Dementia.

Pulex

A taxonomic genus of fleas belonging to the family Pulicidae, including *Pulex irritans* (the human flea) and related species. While not restricted exclusively to humans (also parasitizing swine, dogs, and rodents), *Pulex* fleas cause pruritic, erythematous papular urticaria (grouped "breakfast, lunch, and dinner" flea bites). Historically and epidemiologically significant as secondary vectors in the transmission of zoonotic pathogens, including *Yersinia pestis* (the etiologic agent of bubonic plague) and *Rickettsia typhi* (endemic/murine typhus), when sharing habitats with infected rodent reservoirs.

Pulex Irritans

The human flea, which can cause bites and occasionally transmit infections.

Pulled Hamstring (Hamstring Injury)

Alternate index label for Hamstring Injury.

Pulling A Patient Up In Bed

A safe repositioning technique using adequate staff, friction-reducing equipment, and coordinated movement to move a patient toward the head of the bed while preventing falls, shear, and staff injury.

Pulmonary

Pertaining to, situated within, or affecting the lungs (*pulmones*) or the respiratory gas exchange system.

Clinically central to thoracic medicine and cardiology, encompassing pulmonary circulation (low-pressure vascular circuit from the right ventricle through the pulmonary arterial tree to alveolar capillary networks and pulmonary veins into the left atrium), pulmonary function testing (spirometry, lung volumes, and diffusing capacity for carbon monoxide [D_LCO]), and major disease entities such as pulmonary hypertension, pulmonary embolism, pulmonary edema, chronic obstructive pulmonary disease, and pulmonary fibrosis.

Pulmonary Actinomycosis

Pulmonary actinomycosis is a chronic bacterial infection of the lungs caused by *Actinomyces* and may form mass-like lesions or spread across tissue planes.

Pulmonary Alveolar Hemorrhage

Bleeding into the alveolar spaces from disruption of the alveolar-capillary membrane. Causes include vasculitis (GPA, MPA, Goodpasture), connective tissue disease, medications, and coagulopathy. It presents with hemoptysis, falling hemoglobin, diffuse bilateral infiltrates, and serially bloody returns on BAL.

Pulmonary Alveolar Microlithiasis

A rare genetic disease caused by SLC34A2 mutations, leading to accumulation of calcium phosphate microliths within the alveoli. HRCT shows diffuse bilateral calcified nodules with a "sandstorm" appearance. It is usually diagnosed in the third to fourth decade.

Pulmonary Alveolar Proteinosis

A rare disease characterized by accumulation of surfactant-like material within the alveoli due to impaired clearance by alveolar macrophages. Most cases are autoimmune (anti-GM-CSF antibodies). Presents with progressive dyspnea and cough. HRCT shows bilateral ground-glass opacities with "crazy paving" pattern.

Pulmonary Angiography

Contrast imaging of the pulmonary arteries, usually by catheter. It can diagnose pulmonary vascular ab-

normalities but is now used less often for pulmonary embolism because CT pulmonary angiography is less invasive.

Pulmonary Arterial Hypertension

A precapillary pulmonary hypertension syndrome caused by increased pulmonary vascular resistance from pulmonary arteriolar disease. It may be idiopathic, heritable, drug-associated, or associated with conditions such as connective-tissue disease, congenital heart disease, portal hypertension, or HIV.

Pulmonary Arteries

The paired arteries that carry deoxygenated blood from the right ventricle to the lungs for gas exchange.

Alternate Names:

pulmonary artery

Pulmonary Arteriovenous Fistula

An abnormal direct connection between a pulmonary artery and vein that bypasses the capillary bed. It can cause hypoxemia, cyanosis, dyspnea, paradoxical emboli, or brain abscess.

Pulmonary Arteriovenous Malformation

An abnormal direct communication between a pulmonary artery and vein, causing a right-to-left shunt. It may be idiopathic or associated with hereditary hemorrhagic telangiectasia (Osler-Weber-Rendu syndrome). It can cause hypoxemia, paradoxical emboli (stroke, brain abscess), and hemoptysis.

Pulmonary Artery

The artery carrying deoxygenated blood from the right ventricle to the lungs.

Pulmonary Artery Catheter

A catheter inserted through the right heart into the pulmonary artery to measure hemodynamic parameters (PA pressure, PAWP, cardiac output). Used for diagnosis and management of pulmonary hypertension, heart failure, and critical illness.

Pulmonary Artery Pulsatility Index

A novel, validated hemodynamic metric calculated during right heart catheterization to assess right ventricular pulsatile function and quantify the severity of right ventricular dysfunction. Defined as the ratio of pulmonary artery pulse pressure to right atrial pressure: $PAPi = (PASP - PADP)/RAP$, where PASP is pulmonary artery systolic pressure, PADP is pulmonary artery diastolic pressure, and RAP is mean right atrial pressure. A low PAPi (< 1.0 – 1.85) indicates impaired right ventricular systolic performance and strongly predicts the development of acute right ventricular failure and mortality following left ventricular assist device placement or acute inferior right ventricular myocardial infarction.

Alternate Names:

PAPi; PAP Index

Pulmonary Aspergilloma

A pulmonary aspergilloma is a ball of *Aspergillus* fungus and debris growing in a pre-existing lung cavity, sometimes causing coughing of blood.

Pulmonary Atresia

A congenital heart defect where the pulmonary valve is completely absent (atretic), obstructing right ventricular outflow. Two main types: pulmonary atresia with intact ventricular septum (PA-IVS) and pulmonary atresia with ventricular septal defect (PA-VSD, also called tetralogy of Fallot with pulmonary atresia).

Alternate Names:

tetralogy of Fallot with pulmonary atresia).

Pulmonary Blastoma

A rare malignant lung tumor composed of primitive epithelial and mesenchymal tissue, usually treated with specialist oncology care.

Pulmonary Capillary Wedge Pressure

An indirect estimate of left-atrial pressure obtained by briefly occluding a small pulmonary-artery branch with a balloon-tipped catheter. It reflects left-sided filling pressure when measured correctly and interpreted in the appropriate clinical and ventilatory context.

Pulmonary Circuit

The circulation in which blood travels from the right ventricle to the lungs for gas exchange and returns to the left atrium.

Pulmonary Circulation

The blood-flow circuit from the right ventricle through the pulmonary arteries and lung capillaries to the left atrium, where blood releases carbon dioxide and gains oxygen.

Pulmonary Compliance

The ease with which the lungs expand, calculated as change in lung volume divided by change in pressure; low compliance means stiff lungs.

Pulmonary Contusion

Bruising of the lung parenchyma from blunt chest trauma, causing hemorrhage and edema without lung laceration. It impairs gas exchange and can progress to ARDS. It is often associated with rib fractures and flail chest. Treatment is supportive with lung-protective ventilation.

Pulmonary Edema

A buildup of fluid in the lungs that can make breathing difficult. It is often caused by heart failure but may also result from kidney problems, lung injury, medicines, or high altitude. Sudden severe breathing difficulty is an emergency.

Alternate Names:

Edema, Pulmonary Edema Pulmonary (Pulmonary Edema)

Pulmonary Embolism

Blockage of a pulmonary artery, usually by a clot that traveled from a deep vein.

Alternate Names:

Blood Clot In The Lung (Pulmonary Embolism)
Embolism Pulmonary (Pulmonary Embolism)

Pulmonary Embolism Treatment

Anticoagulation: DOACs preferred (rivaroxaban, apixaban) or LMWH bridging to warfarin. Duration: 3 months for provoked (reversible risk factor),

indefinite for unprovoked or recurrent. Massive PE: systemic thrombolysis (alteplase 100 mg IV over 2 hours) or surgical catheter-directed embolectomy.

Pulmonary Embolus

A blockage of a pulmonary artery, usually by a blood clot that traveled from a deep vein, causing sudden breathlessness, chest pain, low oxygen, or collapse.

Pulmonary Emphysema

A chronic lung disease in which damage to the air sacs reduces the lungs' ability to exchange gases.

Pulmonary FibrosisIdiopathic (Idiopathic Pulmonary Fibrosis)

Alternate index label for Idiopathic Pulmonary Fibrosis.

Pulmonary Fibrosis

Scarring replacing normal alveolar architecture. Causes: IPF, connective tissue disease, asbestos, radiation, drugs (bleomycin, methotrexate). Features: progressive dyspnea, dry cough, digital clubbing.

Pulmonary Fistula

An abnormal passage connecting the lung or airways with another structure, such as the pleural space, skin, or esophagus.

Pulmonary Function Tests

Pulmonary-function testing may include spirometry, lung-volume measurement, and diffusing-capacity testing. Spirometry measures FVC (forced vital capacity), FEV1 (forced expiratory volume in one second), and the FEV1/FVC ratio. A low ratio supports an obstructive pattern; interpretation should use age-, sex-, height-, and population-appropriate reference equations and the lower limit of normal, although some guidelines use a fixed ratio such as less than 0.70 for selected COPD assessments. A low FVC with a preserved or high ratio may suggest restriction, but restriction requires confirmation by a reduced total lung capacity. Test quality, patient effort, and repeatability are essential.

Pulmonary Hemorrhage

Bleeding into the airways or lung tissue, which may cause coughing blood, low oxygen, anemia, or respiratory failure.

Pulmonary Hemosiderosis

Accumulation of iron-containing pigment in the lungs, usually after repeated bleeding into the air spaces. It may cause cough, coughing blood, anemia, shortness of breath, or diffuse lung changes and can result from immune-mediated or other disorders.

Pulmonary Hypertension

Elevated mean pulmonary artery pressure (>20 mmHg at rest) due to various etiologies. WHO Group 1: pulmonary arterial hypertension (idiopathic, heritable, drug-induced). Group 2: left heart disease. Group 3: lung disease. Group 4: chronic thromboembolic.

Alternate Names:

PH (Pulmonary Hypertension)

Pulmonary Hypertension

Alternate index label for Pulmonary Hypertension.

Pulmonary Hypertension - At Home

Home care for pulmonary hypertension includes taking prescribed medicines, monitoring symptoms, conserving energy, following oxygen advice, and seeking urgent help for severe breathlessness or chest pain.

Pulmonary Hypertension Classification

WHO Classification: Group 1 (PAH: idiopathic, heritable, drug-induced, connective tissue disease-associated). Group 2 (left heart disease: systolic/diastolic dysfunction, valvular). Group 3 (lung disease/hypoxia: COPD, ILD, sleep apnea). Group 4 (chronic thromboembolic). Group 5 (multifactorial: sarcoidosis, hematologic disorders).

Pulmonary Infarction

Lung necrosis from PE when bronchial supply is compromised. Causes pleuritic pain, hemoptysis, and wedge-shaped opacity. Most PE do not cause

infarction due to dual blood supply.

Pulmonary Infection

An infection of the lungs or lower respiratory tract caused by bacteria, viruses, fungi, or other organisms.

Pulmonary Langerhans Cell Histiocytosis

A rare smoking-related interstitial and cystic lung disease occurring predominantly in young adult smokers (aged 20 to 40 years). Driven by the clonal proliferation and accumulation of CD1a- and Langerin-positive dendritic Langerhans cells within peribronchial interstitial tissues, it forms cellular stellate granulomatous nodules that progressively cavitate and evolve into bizarre, bilobed, or cloverleaf-shaped thin-walled cysts distributed symmetrically across the mid-to-upper lung fields, with relative sparing of the lung bases and costophrenic angles. Smoking cessation is the cornerstone of therapy and often leads to stabilization or radiographic regression.

Alternate Names:

PLCH; Histiocytosis X of the Lung; Pulmonary Eosinophilic Granuloma

Pulmonary Lobes

The anatomical divisions of the lungs separated by interlobar fissures. The right lung has superior, middle, and inferior lobes; the left lung has superior and inferior lobes and a lingula.

Pulmonary Mass

A space-occupying lesion in or near the lung, which may represent infection, inflammation, benign growth, or cancer and requires appropriate imaging assessment.

Pulmonary Nocardiosis

A lung infection caused by *Nocardia* bacteria, usually affecting people with weakened immunity and sometimes spreading to the brain or skin.

Pulmonary Nodule

A rounded opacity in the lung, usually smaller than 3 cm, caused by scar, infection, inflammation, or tu-

mor and assessed according to size and risk factors.

Pulmonary Oedema

Accumulation of fluid in lung tissue or alveoli, causing breathlessness and impaired gas exchange.

Pulmonary Reactance

The elastic and inertial opposition to airflow and lung movement, measured during respiratory mechanics testing.

Pulmonary Rehabilitation

A supervised, multidisciplinary program combining exercise training, education, behavioral support, and self-management for chronic respiratory disease. It improves exercise capacity, dyspnea, functional status, and quality of life.

Pulmonary Sequestration

A congenital malformation of non-functioning lung tissue that lacks normal communication with the tracheobronchial tree and receives its blood supply from a systemic artery (usually the descending aorta). Intralobar sequestration is within the normal pleural investment; extralobar is outside.

Pulmonary Stenosis

Narrowing of the pulmonary valve or outflow tract, obstructing blood flow from the right ventricle.

Pulmonary Surfactant

A phospholipid-protein mixture produced by type II alveolar pneumocytes that reduces surface tension at the air-liquid interface within alveoli. The primary component is dipalmitoylphosphatidylcholine (DPPC, lecithin), which forms a monolayer that reduces surface tension to near zero during expiration.

Pulmonary Thromboendarterectomy

A complex, definitive surgical operation that provides a potentially curative treatment for operable chronic thromboembolic pulmonary hypertension. Performed through a median sternotomy with cardiopulmonary bypass and periods of deep hypothermic circulatory arrest (DHCA, at 18 to 20 degrees

Celsius), the surgeon establishes a meticulous dissection plane between the media and intima of the main, lobar, and segmental pulmonary arteries to extract organized, endothelialized, fibrotic chronic thromboembolic casts, thereby dramatically reducing pulmonary vascular resistance, reversing right ventricular strain, and curing pulmonary hypertension.

Alternate Names:

PTE; Pulmonary Endarterectomy; PEA (Pulmonary Endarterectomy)

Pulmonary Trunk

The large vessel leaving the right ventricle that divides into the right and left pulmonary arteries.

Pulmonary Tuberculosis

Tuberculosis infection involving the lungs, caused by *Mycobacterium tuberculosis*.

Pulmonary Valve

Semilunar valve between right ventricle and pulmonary trunk with three cusps. Most superiorly located cardiac valve with thinner cusps than the aortic valve. Pulmonic stenosis is a congenital defect causing right ventricular hypertrophy. Less commonly affected by endocarditis than mitral/aortic valves.

Pulmonary Valve Regurgitation

Incompetence or backflow of blood from the pulmonary artery across the pulmonary valve into the right ventricle during diastole. Most commonly caused by pulmonary arterial hypertension, infective endocarditis, or as a late sequela following surgical repair of congenital heart defects such as tetralogy of Fallot, potentially leading to progressive right ventricular dilation and dysfunction.

Alternate Names:

Pulmonic regurgitation; Pulmonary valve insufficiency

Pulmonary Valve Insufficiency

Leakage of blood backward through the pulmonary valve into the right ventricle during diastole.

Pulmonary Vascular Resistance

The resistance to blood flow through the pulmonary circulation, calculated approximately as the transpulmonary pressure gradient divided by cardiac output. Elevated resistance contributes to pulmonary hypertension and right-ventricular afterload.

Pulmonary Vasodilator Therapy

Medications that reduce pulmonary vascular resistance and pulmonary artery pressure. Used for WHO Group 1 PAH. Includes endothelin receptor antagonists (bosentan), PDE-5 inhibitors (sildenafil), prostacyclin analogs (epoprostenol), and soluble guanylate cyclase stimulators (riociguat).

Pulmonary Vein

The four veins (two from each lung) returning oxygenated blood from the lungs to the left atrium, a unique exception in the venous system (carrying oxygenated blood). Superior and inferior pulmonary veins enter the left atrium posteriorly.

Pulmonary Vein Isolation

An invasive electrophysiological catheter ablation procedure that serves as the cornerstone treatment for symptomatic, drug-refractory paroxysmal and persistent atrial fibrillation. Using fluoroscopic and 3D electroanatomical mapping guidance, circumferential transmural ablation lines are delivered around the antra of the four pulmonary veins using point-by-point radiofrequency energy, cryoballoon ablation, or pulsed-field ablation, electrically isolating ectopic pulmonary vein triggers from the left atrial myocardium and achieving entrance and exit block.

Alternate Names:

PVI; Antral Pulmonary Vein Isolation; AFib Catheter Ablation

Pulmonary Veins

Veins carrying oxygen-rich blood from the lungs to the left atrium.

Pulmonary Veno-Occlusive Disease

A rare progressive disease in which small pulmonary veins and venules become narrowed or blocked, caus-

ing pulmonary hypertension and possible pulmonary edema with vasodilator treatment.

Pulmonary Ventilation

The movement of air into and out of the lungs.

Pulmonary Ventilation/Perfusion Scan

A ventilation-perfusion scan compares air flow and blood flow in the lungs and is commonly used to evaluate suspected pulmonary embolism.

Pulmonary Wedge Pressure

The pressure measured by a balloon-tipped pulmonary artery catheter when the balloon is inflated, occluding a branch of the pulmonary artery. It approximates left atrial pressure. Normal is 6–12 mmHg. Elevated in left heart failure (PCWP > 18 mmHg). Low in hypovolemia.

Pulmonary-Artery Dissection

Rare but life-threatening tear in the pulmonary artery wall, most commonly associated with pulmonary hypertension, Marfan syndrome, or prior pulmonary artery catheterization. Presents with acute chest pain, dyspnea, and hemodynamic collapse. Diagnosis by CT angiography or echocardiography; management requires emergent surgical repair.

Pulmonic Valve Stenosis

Pulmonic valve stenosis is narrowing of the valve between the right ventricle and pulmonary artery, creating outflow obstruction and sometimes right-heart strain.

Pulmonologist

A pulmonologist is a physician specializing in diseases of the lungs and breathing system, including asthma, COPD, infections, and sleep-related breathing disorders.

Pulp

The soft vascular and nervous tissue inside a tooth or, in plants, soft internal tissue.

Pulp Canal

The pulp canal is the passage within a tooth root containing dental pulp, nerves, and blood vessels; infection may require root-canal treatment.

Pulp Disease

A disorder of the soft tissue inside a tooth, including inflammation, infection, loss of blood supply, or necrosis.

Pulp Stone

Calcified mass in pulp chamber or root canal. May be free, attached, or embedded. Incidental finding.

Pulpectomy

Complete removal of pulp from primary tooth. Followed by resorbable filling material.

Pulpitis

Inflammation of the dental pulp, usually caused by caries, trauma, cracks, or restorative treatment. Reversible pulpitis causes brief pain provoked by cold or sweet stimuli; irreversible pulpitis causes spontaneous or lingering pain and may progress to pulp necrosis, requiring endodontic treatment or extraction.

Pulposus

Relating to the nucleus pulposus, the gelatinous central portion of an intervertebral disk.

Pulpotomy

Removal of coronal pulp in primary tooth with reversible inflammation. Maintains radicular pulp vitality.

Pulse

The rhythmic expansion of an artery produced by each heartbeat.

Pulse - Bounding

A bounding pulse feels unusually strong or full and can occur with fever, anemia, hyperthyroidism, exercise, anxiety, aortic regurgitation, or high-output states.

Pulse Examination

Assessment of arterial pulses for rate, rhythm, strength, and symmetry to help evaluate circulation.

Pulse Irregular

An irregular pulse has uneven timing or varying beats and may reflect premature beats, atrial fibrillation, other arrhythmias, or measurement variation.

Pulse Oximeter

A noninvasive device that estimates peripheral oxygen saturation using light absorption. Readings can be affected by poor perfusion, motion, skin or nail characteristics, device limitations, and the clinical setting.

Pulse Oximetry

A noninvasive method for estimating peripheral oxygen saturation by measuring red and infrared light absorption through a pulsatile vascular bed. It is widely used for monitoring, but values must be interpreted with symptoms, perfusion, device limitations, and the individual's clinical targets.

Pulse Pressure

The systolic blood pressure minus the diastolic blood pressure. A widened or narrowed value may provide clues about circulation but must be interpreted with the full blood-pressure reading and clinical context.

Pulse Radiolysis

Pulse radiolysis is a research technique using short radiation pulses to create and study transient chemical species and reaction kinetics.

Pulse Rate

Pulse rate is the number of palpable arterial beats per minute and usually approximates heart rate, although some arrhythmias produce a pulse deficit.

Pulseless Disease

Takayasu arteritis, a large-vessel vasculitis that can reduce pulses in affected arteries.

Pulseless Electrical Activity

A cardiac arrest rhythm organized electrical activity without a detectable pulse. PEA has many reversible causes (5 H's and 5 T's): hypovolemia, hypoxia, hydrogen ion (acidosis), hypo/hyperkalemia, hypothermia; tension pneumothorax, tamponade (cardiac), toxins, thrombosis (pulmonary), thrombosis (coronary).

Pulsus

A Latin term for pulse, used in names describing abnormal pulse patterns.

Pulsus Paradoxus

A decrease in systolic blood pressure greater than 10 mmHg during inspiration, normally less than 10 mmHg. Exaggerated in cardiac tamponade (due to ventricular interdependence in the confined pericardial space), severe asthma, COPD exacerbation, and constrictive pericarditis.

Pulvinar

The pulvinar is the largest posterior nucleus of the thalamus and participates in visual attention, sensory integration, and connections with the cortex.

Pumice

A porous volcanic stone used as an abrasive; excessive dust inhalation can irritate the lungs.

Pump Failure

Severe weakening of the heart's pumping ability, causing inadequate blood flow to organs.

Alternate Names:

Cardiogenic pump failure

Pump-Oxygenator

A clinical or therapeutic concept involving pump-oxygenator. Its features, uses, and clinical significance depend on the relevant medical context.

Puna

A high-altitude region or, in some sources, a term related to altitude sickness; precise meaning depends on context.

Punch Biopsy

A circular, usually full-thickness skin specimen obtained with a punch instrument. It is useful for inflammatory, infectious, melanocytic, and other cutaneous lesions; small wounds may be closed with a suture.

Punch-Drunk

An obsolete term for chronic traumatic encephalopathy associated with repeated head injury, especially in boxing.

Punctate

Composed of or marked by small spots or points.

Punctate Hemorrhages (Tardieu Spots)

Small, pinpoint sub-ecchymotic hemorrhages (petechiae) resulting from the rupture of small capillaries under conditions of intense mechanical venous engorgement and asphyxia.

Alternate Names:

Tardieu Spots

Punctate Palmoplantar Keratoderma

A hereditary keratoderma characterised by multiple, small, firm, circumscribed keratotic papules and plaques scattered across the palms and soles, often with an autosomal dominant inheritance pattern. It may present in adolescence or adulthood and can be associated with malignant transformation in rare cases.

Puncture

A wound or procedure made by a pointed object or needle.

Puncture Biopsy

Alternate index label for needle biopsy: removal of cells or tissue through a percutaneous puncture for microscopic, molecular, or microbiologic examination; imaging may guide the target and route.

Puncture Wound

A wound produced when a pointed object penetrates the skin and underlying tissue, creating a small

surface opening with potentially deep tissue damage and infection risk.

Pungent

Having a strong, sharp smell or taste; pungent substances may irritate mucous membranes.

Punicic Acid

A conjugated polyunsaturated fatty acid found mainly in pomegranate seed oil and studied for lipid and inflammatory effects; clinical supplement benefits remain uncertain.

Punicin

A rare or historical term whose precise medical meaning is source-dependent and should be verified.

Punishment

Punishment is a consequence intended to reduce a behavior; in healthcare, coercive or harmful punishment is inappropriate and behavior support should prioritize safety and dignity.

Pupil

The central opening in the iris through which light enters the eye.

Pupil - White

A white pupil, or leukocoria, may result from reflection, cataract, retinal disease, infection, or retinoblastoma and requires prompt eye assessment, especially in a child.

Pupillary

Pertaining to the pupil, the central aperture of the iris that regulates the quantity of light entering the posterior segment of the eye. Modulated antagonistically by autonomic innervation: parasympathetic fibers traveling via the oculomotor nerve (CN III) constrict the pupil via the sphincter pupillae muscle (miosis), whereas sympathetic fibers originating from the superior cervical ganglion dilate the pupil via the dilator pupillae muscle (mydriasis). Examination of pupillary size, shape, and reactivity (light reflex and accommodation reflex) is critical

in neuro-ophthalmology and emergency medicine to assess optic nerve function, brainstem integrity, uncal herniation (fixed dilated "blown" pupil), and Horner syndrome.

Pure Red Cell Aplasia

A rare hematologic syndrome characterized by profound normocytic normochromic anemia, severe reticulocytopenia, and an isolated, selective absence of mature erythroid precursors in an otherwise normal bone marrow. May be congenital (Diamond-Blackfan anemia) or acquired (associated with thymoma, persistent parvovirus B19 infection, autoimmune disease, or medications).

Alternate Names:

PRCA; Pure red-cell aplasia

Pure Tone Audiometry

The standard behavioral test used to measure hearing sensitivity across the frequency range important for speech perception, typically from 250 to 8000 Hertz, by determining the lowest intensity level at which a pure tone can be detected approximately fifty percent of the time (the hearing threshold).

Pure-Tone Audiometry

A hearing test that measures the softest tones a person can hear at selected frequencies through air and bone conduction. The results are plotted on an audiogram and help distinguish conductive from sensorineural hearing loss.

Alternate Names:

Pure-tone threshold audiometry; pure-tone hearing test.

Purgative

A strong, fast-acting cathartic pharmacologic agent or substance that induces complete, vigorous evacuation and emptying of the bowels. Distinguished from gentle stool softeners or mild laxatives by its rapid onset and watery bowel purging effect. Clinically utilized in gastroenterology for bowel preparation prior to colonoscopy, barium enema, or colorectal surgery (e.g., high-volume polyethylene glycol [PEG] solutions, magnesium citrate, or sodium phosphate purgatives), and historically used in acute

poisoning management (though now largely abandoned due to electrolyte derangements, dehydration, and lack of proven efficacy).

Purge

To empty the bowel, stomach, or body of a substance; the term may also mean forceful vomiting or diarrhea.

Purging

Deliberate behaviors intended to compensate for eating, such as self-induced vomiting or misuse of laxatives, diuretics, or excessive exercise.

Purging Disorder

Recurrent purging behavior to influence weight or shape in the absence of binge eating. Self-induced vomiting, misuse of laxatives, diuretics, or other medications. It is classified under Other Specified Feeding or Eating Disorder (OSFED). It can lead to electrolyte imbalances, dental erosion, Russell's sign, and esophageal tears.

Purine

A nitrogen-containing compound forming part of nucleotides; its breakdown produces uric acid.

Purine Nucleosides

Nucleosides containing adenine or guanine bases, such as adenosine and guanosine, involved in energy transfer and genetic material.

Purine Nucleotides

Nucleotides containing purine bases, including ATP, GTP, and their metabolic precursors and products.

Purines

Nitrogenous bases containing a double-ring structure (a six-membered ring fused to a five-membered imidazole ring), which serve as essential components of nucleotides in DNA and RNA. The primary purines are adenine (A) and guanine (G).

Purinoceptor

A purinoceptor is a cell-surface receptor activated by

extracellular purines such as ATP, ADP, or adenosine and involved in signaling, inflammation, and vascular control.

Purkinje Cell

A large inhibitory neuron in the cerebellar cortex whose axons provide the sole output of the cerebellar cortex and regulate coordination, balance, and motor learning.

Purkinje Fibers

The terminal branches of the cardiac conduction system, distributed throughout the ventricular myocardium. They conduct impulses rapidly (up to 4 m/s) to ensure coordinated ventricular contraction from apex to base. Purkinje fibers have an intrinsic firing rate of 20-40 beats per minute.

Purkinje Fibres

Specialized cardiac conduction fibers that rapidly distribute impulses through the ventricular myocardium.

Puromycin

Puromycin is an antibiotic research compound that stops protein production in cells; it is not used as a routine human medicine.

Purpura

Purple or red nonblanching skin or mucosal discoloration caused by bleeding into tissue.

Purpura Fulminans

A rapidly progressive, life-threatening condition characterised by extensive, confluent, non-blanching purpuric skin necrosis with haemorrhagic bullae, resulting from acute intravascular thrombosis and disseminated intravascular coagulation.

Purulent

Consisting of, containing, producing, or resembling pus (*pus*)—a viscous inflammatory exudate composed of dead and dying neutrophils, liquefactive necrotic cellular debris, protein-rich serous fluid, and viable or non-viable microorganisms. A cardi-

nal hallmark of acute suppurative pyogenic infections, typically driven by bacterial pathogens such as *Staphylococcus aureus*, *Streptococcus pyogenes*, and *Pseudomonas aeruginosa*. Clinical identification of purulent drainage indicates active infection requiring diagnostic Gram stain/culture, possible surgical incision and drainage (I&D), and targeted antimicrobial therapy.

Purulent Pericarditis

Bacterial infection of the pericardial space, most commonly caused by *S. aureus*, *S. pneumoniae*, or gram-negative organisms. Often occurs as a complication of pneumonia, endocarditis, chest surgery, or immunosuppression. Presents with fever, pleuritic chest pain, and rapidly accumulating effusion with tamponade physiology.

Pus

A thick fluid containing dead cells, bacteria, inflammatory cells, and tissue debris.

Push Enteroscopy

Endoscopic technique using a longer endoscope to visualize and intervene in the proximal small bowel beyond the reach of standard upper endoscopy. Unlike capsule endoscopy, push enteroscopy allows direct visualization with the ability to obtain biopsies and perform hemostasis.

Pustule

A primary dermatologic lesion characterized by a small (< 1 cm), circumscribed, superficial, elevated collection of cloudy or turbid purulent fluid (pus) located within the epidermis or a hair follicle. Can be infectious or sterile: infectious pustules are seen in bacterial folliculitis, impetigo, and acne vulgaris (where *Cutibacterium acnes* colonizes occluded pilosebaceous units); non-infectious, sterile pustules characterize autoimmune or inflammatory dermatoses such as pustular psoriasis, acute generalized exanthematous pustulosis (AGEP, a severe cutaneous adverse drug reaction), and subcorneal pustular dermatosis.

Pustules

Pustules are small raised skin lesions filled with pus, occurring in acne, folliculitis, infections, inflammatory disorders, or drug reactions.

Pustulosis

A skin disorder characterized by sterile or infectious pustules, which may be localized or widespread and associated with inflammation, fever, psoriasis, drug reactions, or infection.

Putamen

The putamen is a basal-ganglia structure involved in movement selection, motor learning, and habit-related behavior.

Putrefaction

Decomposition of tissues after death by bacterial and enzymatic processes.

Putrescine

A foul-smelling diamine produced during breakdown of proteins in decaying tissue.

Putrid Throat

Putrid throat refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

PUVA

PUVA combines a psoralen medicine with ultraviolet-A exposure to treat selected skin diseases; eye protection and cancer-risk precautions are required.

PVC

A PVC, or premature ventricular contraction, is an early heartbeat arising in a ventricle; occasional PVCs are common, while frequent or symptomatic beats need evaluation.

PVD

Alternate index label; see *Peripheral artery disease*.

PVI

Alternate name; see *Pulmonary Vein Isolation*.

PVPS

Alternate index label; see *Post-vasectomy pain syndrome*.

Pyarthrosis

Infection of a joint with pus in the joint space, usually bacterial septic arthritis, causing acute pain, swelling, restricted movement, fever, and risk of cartilage destruction.

Pycnodysostosis

A rare autosomal-recessive bone dysplasia caused by CTSK deficiency, producing short stature, dense but fragile bones, acro-osteolysis, delayed closure of cranial sutures, and dental abnormalities.

Pyelitis

Inflammation of the renal pelvis, usually due to infection.

Pyelo

Pyelo is an informal shortening usually referring to pyelonephritis, an infection of the kidney and renal pelvis that can cause fever and flank pain.

Pyelogram

An imaging record of the renal pelvis and ureters after contrast administration.

Pyelography

Imaging of the renal pelvis and ureters using contrast.

Pyelolithotomy

Surgical removal of a stone from the renal pelvis.

Pyelonephritis

Infection and inflammation of the kidney and renal pelvis, usually caused by ascending bacteria.

Pyelotomy

An incision into the renal pelvis, usually made to remove an obstruction or kidney stone.

Pylephlebitis

Septic thrombophlebitis of the portal vein or its tributaries, most commonly arising from intra-abdominal infections such as appendicitis, diverticulitis, cholangitis, or hepatic abscess. Presents with high fever, rigors, right upper quadrant pain, jaundice, and sepsis.

Pyloric Antrum

The pyloric antrum is the lower stomach region that grinds food and regulates its passage toward the pyloric canal and duodenum.

Pyloric Sphincter

A muscular valve regulating passage of stomach contents into the duodenum.

Alternate Names:

Pylorus

Pyloric Stenosis

Narrowing of the pyloric outlet, classically causing projectile vomiting in infants or gastric-outlet symptoms in adults.

Alternate Names:

Stenosis, Pyloric

Pyloric Stenosis In Infants

Infantile pyloric stenosis is narrowing of the stomach outlet that causes forceful, non-bilious vomiting in young infants and usually requires surgical treatment.

Pyloroplasty

Surgical widening of the pylorus to improve gastric emptying.

Pylorus

The distal part of the stomach leading into the duodenum.

Pyoderma

A bacterial skin infection producing pus, crusts, erosions, or ulcers.

Pyoderma Gangrenosum

A neutrophilic inflammatory skin disorder that causes painful ulcers with undermined, violaceous borders. It may be associated with inflammatory bowel disease, arthritis, blood disorders, or other systemic conditions, and trauma can worsen the lesions.

Pyogenesis

The biological process of pus formation (suppuration). Initiated when pyogenic bacteria or inflammatory tissue insults trigger intense local chemotaxis and recruitment of polymorphonuclear neutrophils via chemokines (e.g., IL-8) and complement activation products (C5a). As recruited neutrophils engulf pathogens, they release reactive oxygen species and lysosomal enzymes (including myeloperoxidase and elastase), resulting in liquefactive necrosis of surrounding parenchyma, neutrophil apoptosis, and accumulation of viscous, proteinaceous purulent exudate within an enclosed cavity (abscess) or discharging across a mucosal or cutaneous surface.

Pyogenic

Producing pus or associated with a pus-forming infection. Pyogenic infections commonly cause redness, warmth, swelling, pain, and a collection of pus, although the cause and treatment vary.

Pyogenic Granuloma

A benign vascular proliferation presenting as a rapidly growing, friable, red papule or nodule that bleeds easily. It commonly occurs on fingers, face, and lips, and may be triggered by trauma or pregnancy (epulis gravidarum). Diagnosis is clinical.

Pyogenic Liver Abscess

A pyogenic liver abscess is a pus-filled infection in the liver, usually from biliary, abdominal, or bloodstream spread, causing fever, pain, and possible sepsis.

Pyometra

The abnormal accumulation of pus within the uterine cavity, resulting from infection of the endometrium combined with impaired cervical drainage (cervical stenosis). Most commonly encountered in elderly, postmenopausal women due to atrophic cervical canal stenosis, or secondary to cervical or endometrial malignancy occluding the internal os. Clinically presents with foul-smelling purulent vaginal discharge, lower abdominal pain, uterine tenderness, and fever, though some patients remain asymptomatic until acute spontaneous uterine rupture occurs, causing life-threatening purulent peritonitis. Managed by urgent cervical dilation, purulent drainage, endometrial curettage/biopsy to exclude occult malignancy, and broad-spectrum intravenous antibiotics.

Pyonephrosis

Pus in renal collecting system. Urological emergency. Requires drainage (stent or nephrostomy) and antibiotics.

Pyosalpinx

Accumulation of pus within a fallopian tube, usually due to pelvic infection.

Pyostomatitis Vegetans

A rare, chronic, inflammatory oral mucosal condition characterized by multiple, soft, yellowish, vegetative pustules on an erythematous base, predominantly affecting the buccal mucosa and gingiva. It is strongly associated with inflammatory bowel disease, particularly ulcerative colitis, and may precede gastrointestinal symptoms.

Pyramid

A pyramid-shaped structure; in neuroanatomy, the medullary pyramids contain corticospinal fibers.

Pyramidal Cell

A triangular-shaped excitatory neuron with a prominent apical dendrite, found especially in the cerebral cortex and hippocampus and involved in long-range brain signaling.

Pyramidal Tract

The pyramidal tract is a major motor pathway from the cerebral cortex to the brainstem and spinal cord that controls voluntary movement.

Pyramidal Tracts

Descending motor pathways from the cerebral cortex to the brainstem and spinal cord.

Pyramidon

An obsolete analgesic and antipyretic medicine, also called aminopyrine.

Pyrazinamide

An antituberculous medicine used in combination therapy, especially during the initial phase.

Pyrazines

Pyrazines are aromatic nitrogen-containing chemical compounds found in foods, flavors, medicines, and industrial materials; effects depend on the specific compound and exposure.

Pyrazole

Pyrazole is a five-membered chemical ring used as a building block in medicines and other compounds; it is not one specific therapeutic drug.

Pyrazoles

Pyrazoles are a family of chemical compounds containing a pyrazole ring, including some medicines and pesticides.

Pyrene

Pyrene is a four-ring polycyclic aromatic hydrocarbon produced by incomplete combustion and used as an environmental marker of complex combustion mixtures.

Pyrenochaeta

A genus of soil-associated fungi that can rarely cause subcutaneous or opportunistic human infection.

Pyrethrins

Natural insecticides derived from chrysanthemum

flowers; exposure can irritate skin and airways.

Pyrethrum

The dried flower heads of certain *Chrysanthemum* species, used as a natural source of pyrethrins, insecticidal compounds that affect insect sodium channels. Pyrethrum and pyrethrins differ from synthetic pyrethroids; exposure may irritate the skin or airways and can cause toxicity with substantial exposure.

Pyrexia (Fever)

An elevation of core body temperature above the normal circadian range (typically defined clinically as a core temperature $\geq 38.0^{\circ}\text{C}$ [$\geq 100.4^{\circ}\text{F}$]). A coordinated, cytokine-mediated physiological response driven by pyrogenic cytokines (interleukin-1 [IL-1], interleukin-6 [IL-6], and tumor necrosis factor- α [TNF- α]) acting on the organum vasculosum of the lamina terminalis in the preoptic area of the anterior hypothalamus to stimulate prostaglandin E₂ (PGE₂) synthesis. PGE₂ elevates the hypothalamic thermoregulatory set-point, triggering systemic heat conservation (peripheral vasoconstriction) and heat production (shivering thermogenesis). Distinguished from hyperthermia, where body temperature rises uncontrollably above the set-point due to failed thermoregulation (e.g., heat stroke, malignant hyperthermia).

Pyridine

A nitrogen-containing aromatic ring found in many medicines, vitamins, and biologically active compounds.

Pyridostigmine

An acetylcholinesterase inhibitor used mainly for myasthenia gravis and selected neuromuscular disorders.

Pyridostigmine Bromide

Pyridostigmine bromide increases communication between nerves and muscles and is used mainly for myasthenia gravis; it may cause abdominal cramps, diarrhea, or excess secretions.

Pyridoxal Phosphate

The active coenzyme form of vitamin B6, required for amino-acid metabolism, neurotransmitter synthesis, and heme production.

Pyridoxine

A form of vitamin B6 involved in metabolism and nervous-system function.

Alternate Names:

Vitamin B6

Pyridoxine (Vitamin B6)

A vitamin converted to pyridoxal phosphate, a coenzyme for transamination, decarboxylation, and other amino-acid reactions. Deficiency can cause neuropathy, dermatitis, seizures, and sideroblastic anemia; excessive supplementation can also cause neuropathy.

Alternate Names:

Vitamin B6

Pyrimethamine

An antiparasitic medicine that inhibits folate metabolism and is used for selected protozoal infections.

Pyrimidine

A six-membered nitrogen-containing ring that forms the bases cytosine, thymine, and uracil in nucleic acids.

Pyrimidine Analog

A medicine or chemical resembling a pyrimidine nucleotide that can interfere with DNA or RNA synthesis, often for cancer or antiviral treatment.

Pyrimidine Dimer

A DNA lesion formed when adjacent pyrimidine bases bond abnormally after ultraviolet exposure, potentially causing mutations if unrepaired.

Pyrimidine Nucleosides

Nucleosides containing cytosine, thymine, or uracil bases linked to a sugar, serving as components or precursors of DNA and RNA.

Pyrimidine Nucleotides

Nucleotides containing pyrimidine bases, including cytidine, uridine, thymidine, and their phosphorylated forms.

Pyrimidines

Nitrogenous bases containing a single six-membered heterocyclic ring, serving as structural building blocks for nucleic acids. The primary pyrimidines are cytosine (C), thymine (T, present in DNA), and uracil (U, present in RNA).

Pyrogen

A pyrogen is a substance that induces fever, commonly through immune signaling; bacterial endotoxin is an important example in contaminated medicines or fluids.

Pyroglyphidae

Pyroglyphidae is a mite family that includes house-dust mites whose allergens can trigger allergic rhinitis, asthma, or atopic dermatitis.

Pyronine

Pyronine is a red fluorescent dye used in histology and research to stain RNA and certain cellular components.

Pyrophosphatase

An enzyme that hydrolyzes inorganic pyrophosphate and helps drive many biosynthetic reactions forward.

Pyropoikilocytosis

A severe inherited red-cell membrane disorder combining marked poikilocytosis, small irregular erythrocytes, thermal instability, and hemolytic anemia.

Pyroptosis

A programmed inflammatory form of cell death involving gasdermin pores, cell swelling, membrane rupture, and release of cytokines, commonly triggered by intracellular infection or inflammasome activation.

Pyrosequencing

pyrosequencing is a laboratory test, imaging method, instrument, score, or measurement used to characterize a specimen or clinical finding; interpretation depends on the method and clinical context.

Pyrosis

Heartburn, a burning discomfort behind the breastbone caused commonly by reflux of gastric contents.

Pyroxamide

Pyroxamide is an investigational histone-deacetylase inhibitor studied for anticancer effects through altered gene expression and cell growth.

Pyrroles

A group of five-membered nitrogen-containing ring compounds found in heme, bile pigments, medicines, and other biologically active molecules.

Pyrrolidonecarboxylic Acid

A cyclic amino-acid derivative, also called pyroglutamic acid, found in proteins and metabolic pathways; abnormal accumulation may occur in selected metabolic or medication-related conditions.

Pyrrolnitrin

Pyrrolnitrin is an antimicrobial compound produced by some bacteria and studied for antifungal activity and biological control.

Pyruvate

The three-carbon alpha-keto acid produced at the end of glycolysis from phosphoenolpyruvate by pyruvate kinase.

Pyruvate Decarboxylase

Pyruvate decarboxylase is an enzyme that converts pyruvate to acetaldehyde and carbon dioxide during fermentation in some organisms.

Pyruvate Dehydrogenase

Converts pyruvate to acetyl-CoA. Regulated by phosphorylation (inactivated by PDH kinase). Requires thiamine, lipoate, CoA, FAD, NAD+.

Pyruvate Kinase

Pyruvate kinase catalyzes the final ATP-producing step of glycolysis; inherited deficiency causes hemolytic anemia because red cells cannot generate enough energy.

Pyruvate Kinase Blood Test

A pyruvate kinase blood test measures the enzyme in red blood cells and may help evaluate pyruvate kinase deficiency, an inherited cause of hemolytic anemia.

Pyruvate Kinase Deficiency

An inherited red-cell glycolytic defect causing chronic hemolytic anemia of variable severity. Manifestations include jaundice, splenomegaly, gallstones, fatigue, and complications of iron overload.

Pyuria

Presence of white blood cells or pus in urine, often indicating urinary-tract inflammation or infection.

Alternate Names:

Artificial pacemaker

PYY

PYY, or peptide YY, is a gut hormone released after eating that reduces appetite and slows gastrointestinal motility.

Q

Q Arm Of A Chromosome

The long arm of a chromosome, designated q in cytogenetic notation. It contains genes and regulatory regions, and deletions, duplications, or rearrangements of the q arm can cause genetic disease.

Q Fever

A zoonotic disease caused by *Coxiella burnetii*, an obligate intracellular Gram-negative bacterium. Q fever is transmitted to humans primarily by inhalation of contaminated aerosols from infected livestock (cattle, sheep, goats) and their products (placenta, birth fluids, urine, feces, milk). Incubation: 2–3 weeks.

Q Wave

The negative deflection that follows the P wave in some electrocardiographic leads, representing initial ventricular depolarization.

Q-T Interval

The ECG interval from the start of ventricular depolarization to the end of repolarization; it is corrected for heart rate when assessing arrhythmia risk.

QALY

Quality-adjusted life year, a measure combining the length of life with a value assigned to health-related quality of life during that time.

Qigong

Qigong is a traditional mind–body practice combining controlled movement, breathing, and attention; it may support relaxation or function, but evidence and safety vary and it should not replace indicated

medical care.

QRS Complex

The deflection representing ventricular depolarization, consisting of a Q wave (initial downward deflection), R wave (upward deflection), and S wave (downward deflection after R). Normal duration is 0.06–0.10 seconds (1.5–2.5 small boxes). Widened QRS (>0.12 s) indicates bundle branch block, ventricular rhythm, or hyperkalemia.

QT Interval

The time from the onset of the QRS complex to the end of the T wave, representing total ventricular depolarization and repolarization. Normal QT is 0.35–0.44 seconds. The corrected QT (QTc) adjusts for heart rate using Bazett's formula: $QTc = QT / \text{square root of RR interval}$.

QT Prolongation

An electrocardiographic finding characterized by prolongation of the QT interval, representing the time from ventricular depolarization to repolarization, which predisposes to the potentially fatal arrhythmia torsades de pointes. The corrected QT interval should be less than 440 milliseconds in men and 460 milliseconds in women.

Quad Screen (Maternal Serum Screening)

Second-trimester prenatal screening (15–22 weeks) for fetal aneuploidy and neural tube defects. Measures 4 markers: AFP (alpha-fetoprotein: elevated in NTD, low in Down syndrome), hCG (elevated in Down syndrome), uE3 (unconjugated estriol: low in Down syndrome), and inhibin A (elevated in Down

syndrome).

Alternate Names:

Maternal Serum Screening

Quadrant

One of four sections of the abdomen used for clinical description. RUQ: liver, gallbladder, duodenum, right kidney. LUQ: stomach, spleen, left kidney, pancreas tail. RLQ: appendix, cecum, right ovary. LLQ: sigmoid colon, left ovary.

Quadrantanopia

Loss of vision in one quarter of the visual field, usually caused by a lesion affecting specific portions of the optic pathways.

Quadrantectomy

Surgical removal of one quadrant of an organ, most commonly a breast-conserving operation removing a breast tumour with a surrounding margin of tissue. The exact procedure and need for additional treatment depend on pathology and clinical staging.

Quadriceps

The four muscles on the front of the thigh that extend the knee; the rectus femoris also assists hip flexion. The quadriceps tendon connects them to the patella and contributes to the extensor mechanism.

Quadriceps Femoris

The four-headed muscle group on the anterior thigh consisting of rectus femoris and the three vasti. It extends the knee; rectus femoris also flexes the hip, and the group contributes to standing, walking, and shock absorption.

Quadriceps Femoris Muscle

Four-muscle anterior thigh group: rectus femoris, vastus lateralis, vastus medialis, vastus intermedius, all inserting on the tibial tuberosity via the patellar ligament. Innervated by femoral nerve (L2-L4). Primary knee extensor for walking, running, rising from seated. VMO is important for patellar tracking.

Quadriceps Injury

Damage to the quadriceps muscle or tendon caused by sudden force, overuse, or direct trauma. It may cause front-of-thigh pain, bruising, weakness, or difficulty extending the knee. Severe pain, a palpable defect, or inability to bear weight requires assessment for a significant tear or tendon rupture.

Quadriceps Tendinitis

Overuse-related inflammation or degeneration of the quadriceps tendon, causing pain above the kneecap that worsens with jumping, running, or resisted knee extension.

Quadriceps Tendon Rupture

A tear of the tendon connecting the quadriceps muscle to the patella, causing pain, swelling, and inability to actively extend the knee.

Quadriceps Tendon Ruptures

A tear of the tendon connecting the quadriceps muscle to the patella, causing weakness or inability to extend the knee. Complete tears often require surgical repair; treatment depends on the extent of injury and the person's functional needs.

Quadripareisis

Weakness affecting all four limbs, usually resulting from cervical spinal-cord disease, brain injury, neuromuscular disease, or another disorder of the central or peripheral nervous system.

Quadriplegia

Paralysis of all four limbs and trunk, resulting from a spinal cord lesion at the cervical level or a bilateral brainstem lesion. Common causes include traumatic spinal cord injury, stroke, multiple sclerosis, spinal cord tumors, and demyelinating disease.

Quadruple Screen Test

The quadruple screen measures maternal blood markers to estimate risk of selected fetal chromosomal or neural-tube conditions; it is a screening test, not a diagnosis.

Quadruplet Pregnancy

A pregnancy involving four fetuses. It carries increased risks of preterm birth, fetal growth restriction, hypertensive and metabolic complications, and maternal morbidity and therefore requires specialized multidisciplinary antenatal care.

Quadruplets

Four offspring born from the same pregnancy or four infants born in a multiple birth.

Quality

In healthcare, quality is the degree to which care is safe, effective, timely, equitable, efficient, and centered on patient needs, measured against defined standards or outcomes.

Quality Assurance

Planned activities used to verify that healthcare services meet defined standards of safety, quality, and performance.

Quality Control

Daily, weekly, monthly tests ensure system performance. Uniformity, energy, sensitivity, spatial resolution, count rate performance.

Quality Control (Laboratory)

Procedures using control materials, calibration, equipment checks, and documented review to ensure that a laboratory method remains accurate and precise during routine testing.

Alternate Names:

Laboratory

Quality Improvement

Systematic efforts to improve healthcare. Methods: PDSA cycles, Lean, Six Sigma. Outcomes: safety, effectiveness, patient-centeredness.

Quality Of Life

A person's perceived physical, psychological, social, and functional well-being.

Quality-Adjusted Life Year

A health-economic measure combining length of life with health-related quality of life on a scale where 1 represents full health and 0 represents death. It is used to compare cost-effectiveness across interventions.

Quantification

Measurement of radiotracer uptake or clearance. SUV, clearance rates (renal), ejection fraction (cardiac). Essential for treatment monitoring.

Quantitative Bence-Jones Protein Test

A quantitative Bence-Jones protein test measures free monoclonal light chains in urine, supporting evaluation and monitoring of plasma-cell disorders such as multiple myeloma.

Quantitative Computed Tomography

CT-based imaging that measures bone mineral density as well as showing bone structure.

Quantitative Digital Radiography

Digital X-ray imaging that uses measured pixel data for assessment of anatomy, density, or change over time.

Quantitative Immunoglobulins

Quantitative immunoglobulin testing measures classes of antibodies in blood and helps evaluate immune deficiency, chronic inflammation, monoclonal gammopathy, or abnormal immune activation.

Quantitative Nephelometry Test

Quantitative nephelometry estimates specific proteins by measuring light scattered by immune complexes, supporting assessment of immunoglobulins, complement, and other serum proteins.

Quantitative PET

The measurement or estimation of radiotracer concentration and tissue kinetics from PET data, using measures such as standardized uptake value or compartmental modeling.

Quantum Dot

A quantum dot is a nanoscale semiconductor particle whose size-dependent electronic properties produce characteristic light emission; medical research uses include imaging probes, biosensors, and targeted delivery systems.

Quaque

Quaque is Latin for every or each and appears in historical prescription abbreviations; modern instructions should use plain language.

Quaque Die

Quaque die means every day or once daily; clear modern medication directions should spell this out.

Quarantine

Separation or restriction of movement of people who have been exposed to an infectious disease while monitoring whether they become ill. It differs from isolation of people who are already infected.

Quartan Fever

A fever pattern in which fever attacks recur approximately every 72 hours, classically associated with infection by *Plasmodium malariae*.

Quasidominant

Describing an inheritance pattern in which a recessive trait appears in successive generations because affected individuals reproduce with carriers or because of a high disease frequency. It can resemble dominant inheritance in a pedigree.

Quassins

Bitter triterpenoid compounds found in *Quassia* species and responsible for much of the plant's bitter taste; they have been studied experimentally for insecticidal and biological effects but have no established routine therapeutic use.

Quater In Die

Quater in die means four times a day; explicit timing is preferable to this Latin abbreviation.

Queckenstedt'S Test

A historical test in which jugular-vein compression was used during lumbar puncture to assess cerebrospinal-fluid pressure transmission; it is rarely used today.

Quercetin

A flavonoid polyphenol found in many fruits, vegetables, and teas; it is marketed in supplements and studied for antioxidant and anti-inflammatory effects, but clinical benefits vary and interactions with medicines are possible.

Questionnaire

A questionnaire is a structured set of written or electronic questions used to collect information about symptoms, exposures, behaviors, function, quality of life, or patient-reported outcomes; validity depends on its design and population.

Quetiapine Fumarate

The fumarate salt of quetiapine, an atypical antipsychotic used for schizophrenia, bipolar disorder, and selected adjunctive treatment of major depressive disorder. Sedation, metabolic effects, orthostatic hypotension, and movement-related adverse effects require monitoring.

Quick Relievers

Fast-acting medicines that relax airway muscle and rapidly ease bronchoconstriction.

Alternate Names:

Rescue medicines

Quickening

The first perception of fetal movement by the mother, typically felt between 16-20 weeks in multiparous women and 18-22 weeks in nulliparous women. Described initially as a subtle fluttering sensation that becomes stronger and more regular as pregnancy progresses.

Quiescence

A temporary state of cellular or physiologic inactivity or reduced activity. Some cells, including certain

stem cells and latent infectious agents, may remain quiescent and later become active.

Quiescent

Inactive or dormant state of disease. Example: quiescent ulcerative colitis (no symptoms but histologic inflammation may persist).

Quiet Sleep

Non-REM sleep, during which brain and body activity generally slow.

Alternate Names:

Non-REM sleep

Quinalphos

An organophosphate insecticide that inhibits acetylcholinesterase. Exposure can cause a cholinergic toxidrome with sweating, salivation, vomiting, muscle fasciculations, weakness, seizures, and respiratory failure and requires urgent toxicology care.

Quinapril

Quinapril is an angiotensin-converting-enzyme inhibitor used for hypertension and heart failure; cough, hyperkalemia, renal-function changes, angioedema, and fetal toxicity are important risks.

Quinazoline

A bicyclic nitrogen-containing heterocyclic chemical scaffold used in medicinal chemistry. Quinazoline derivatives include compounds with kinase-inhibitory and other pharmacologic activities.

Quincke'S Disease (Angioneurotic Oedema)

Sudden swelling of deeper layers of the skin or mucosa, commonly affecting the lips, face, tongue, throat, or bowel; airway involvement is an emergency.

Alternate Names:

Angioneurotic Oedema

Quincke'S Pulse

Visible capillary pulsation in the nail bed or skin, often associated with a wide pulse pressure and

severe aortic regurgitation.

Quincke'S Sign

A sign of severe aortic regurgitation in which alternating flushing and blanching of the nail bed or skin can be seen with each heartbeat.

Quinghaosu

Another name for artemisinin, an antimalarial compound derived from *Artemisia annua* and used in combination therapies.

Quinidine

A class IA antiarrhythmic medicine that blocks cardiac sodium channels and prolongs repolarization. It is used selectively because it can cause QT prolongation, torsades de pointes, thrombocytopenia, and other adverse effects.

Quinine

An alkaloid derived from cinchona bark, with antimalarial, antipyretic, and skeletal muscle relaxant properties. Quinine is a blood schizonticide with activity against all *Plasmodium* species, but resistance has emerged in *P. falciparum*.

Quinolinic Acid

Quinolinic acid is a neuroactive intermediate in the kynurenine pathway and an agonist at NMDA receptors; excessive accumulation may contribute to excitotoxic neuronal injury and occurs in some inflammatory or neurologic conditions.

Quinolone

A class of synthetic antibacterial drugs that inhibit bacterial DNA gyrase or topoisomerase IV. Examples include ciprofloxacin and levofloxacin.

Quinolones

A class of synthetic antibiotics that inhibit bacterial DNA gyrase or topoisomerase IV.

Quinone Metabolism

Quinone metabolism is the enzymatic reduction and oxidation of quinones, helping cells process

these compounds but sometimes generating reactive oxygen that can damage tissues.

Quinones

Oxidized aromatic compounds involved in electron-transfer reactions and redox chemistry. Some quinones have biological or pharmacologic roles, while others can generate reactive oxygen species or cause toxicity.

Quinsy

A peritonsillar abscess: a collection of pus between the tonsillar capsule and the superior pharyngeal constrictor muscle, usually developing as a complication of tonsillar infection.

Quintuplets

Five offspring born from the same pregnancy or five infants born in a multiple birth.

Alternate Names:

QCT

Quinuclidines

A group of bicyclic tertiary amines containing the quinuclidine ring system, found in some natural products and medicines. Their effects depend on the attached chemical groups and receptor targets.

Quinupristin-Dalfopristin

A streptogramin antibiotic combination that inhibits bacterial protein synthesis. It is used intravenously for selected serious gram-positive infections, including some resistant *Enterococcus faecium* infections, when appropriate alternatives are unavailable.

Quipazine

An experimental serotonergic compound used mainly in pharmacologic and neurobehavioral research. It is not an established routine clinical treatment.

Quit Smoking (Smoking And Quitting Smoking)

Alternate index label for Smoking and Quitting

Smoking.

Quorum Sensing

Cell-density-dependent bacterial communication system in which bacteria produce and detect small signaling molecules (autoinducers—acyl-homoserine lactones in gram-negative, autoinducing peptides in gram-positive, AI-2 inter-species) to coordinate population-wide behaviors.

Quotidian Fever

A fever pattern in which fever attacks occur approximately every 24 hours; it may occur in malaria and several other infections.

R

R-Factor

The ratio of a bacterium's minimum inhibitory concentration to the susceptibility breakpoint for an antibiotic; it is used in antimicrobial susceptibility interpretation, not as a diagnosis.

Rabeprazole

Rabeprazole is a proton-pump inhibitor that irreversibly suppresses gastric $H^+/K^+-ATPase$; it treats reflux and peptic-ulcer disease and supports *Helicobacter pylori* eradication.

Rabies

Rabies is a nearly always fatal viral encephalitis transmitted through saliva, usually by an animal bite, but prompt wound care and post-exposure prophylaxis can prevent disease. infected animals. After inoculation, the virus travels to the CNS via peripheral nerves. Symptoms include hydrophobia, aerophobia, and progressive neurological deterioration. Diagnosis is made by direct fluorescent antibody testing of brain tissue.

Rabies Vaccination

Immunization used before or after exposure to reduce the risk of rabies. Post-exposure management also includes wound care and, when indicated, rabies immunoglobulin.

Rabies Virus

The virus that causes rabies, a usually fatal viral infection of the central nervous system transmitted most often through the saliva of an infected animal.

Race

Race is a social classification that can influence lived experience and health through genetics in limited contexts, discrimination, environment, and access to care; it is not a precise proxy for biology.

Raclopride

Raclopride is a research radioligand that binds dopamine D2 receptors and is used in brain-imaging studies of dopamine signaling.

Radial

Radial means relating to the radius bone or the thumb side of the forearm, hand, or a structure arranged like radii from a center.

Radial Artery

The smaller terminal branch of the brachial artery, arising at the cubital fossa, running laterally along the radius to the wrist (palpable at the anatomical snuffbox) and hand. Supplies the lateral forearm and the thumb side of the hand; forms the deep palmar arch.

Radial Vein

Deep veins accompanying the radial artery that drain the lateral forearm and join the ulnar veins to form the brachial veins.

Radial Artery Thrombosis

Formation of a thrombus in the radial artery, often at the site of arterial catheterization or in the setting of a hypercoagulable state or vasculitis. May cause hand ischemia with pain, pallor, and decreased pulse. Treatment includes anticoagulation and surgical in-

tervention for limb-threatening ischemia.

Radial Club Hand

A congenital longitudinal deficiency of the radial ray, ranging from thumb hypoplasia to complete absence of the radius. The hand is radially deviated due to the absent radial support, with the carpus displaced proximally and radially.

Radial Head Subluxation

A common pediatric elbow injury (popularly known as nursemaid's elbow or pulled elbow) occurring primarily in toddlers and children aged 1 to 4 years. Caused by sudden axial traction on an extended, pronated forearm (such as when lifting or pulling a child by the hand), which allows the flexible annular ligament to slip over the head of the radius and become entrapped in the radiohumeral joint. The child typically holds the arm adducted and pronated, refusing to bend or use the extremity; reduction is achieved by gentle hyperpronation or supination-flexion maneuvers with immediate symptom relief.

Alternate Names:

Nursemaid's Elbow (Radial Head Subluxation); Pulled Elbow; Annular Ligament Displacement

Radial Nerve

From posterior cord (C5-T1), the plexus's largest branch. In the arm runs in the radial groove with the profunda brachii artery, innervating triceps and anconeus. At the elbow divides into superficial (sensory to dorsal hand) and deep (posterior interosseous) branches. Deep branch innervates forearm/hand extensors.

Radial Nerve Dysfunction

Impaired function of the radial nerve causing weakness of wrist or finger extension and sensory changes over part of the posterior arm or hand; causes include compression, trauma, and systemic neuropathy.

Radial Nerve Palsy

Dysfunction of the radial nerve causing weakness of wrist and finger extension, often producing wrist drop, with sensory loss over part of the back of the

hand in some cases.

Radial Tunnel Syndrome

Compression of the radial nerve near the elbow, causing arm pain, tingling, or weakness.

Radiation

Energy transmitted as particles or electromagnetic waves, including X-rays and gamma rays.

Radiation Biology

The study of how ionizing or nonionizing radiation affects cells, tissues, organisms, and populations.

Radiation Contamination

Unwanted radioactive material on a person, surface, object, or body site. Contamination may be removable or fixed and requires containment, monitoring, decontamination, and documentation according to radiation-safety procedures.

Radiation Dosage

The amount of radiation given during an imaging test or radiation treatment. The dose is planned to obtain the needed benefit while limiting unnecessary exposure.

Radiation Dose

The amount of ionizing radiation absorbed or received by a person or tissue. Dose varies with the examination, equipment, protocol, and patient size; imaging should be justified and optimized to obtain the needed information with the lowest reasonable exposure.

Radiation Emergency

An event involving actual or suspected harmful radiation exposure or contamination that requires urgent protective and medical measures.

Radiation Enteritis

Inflammation and injury of the small or large intestine caused by therapeutic ionizing radiation. It may be acute with diarrhea, cramping, and nausea or delayed with strictures, malabsorption, bleeding,

fistula, or obstruction.

Radiation Exposure

Contact with radiation from a medical test, treatment, workplace, or other source. The possible effects depend on the type, amount, and duration of exposure.

Radiation Fibrosis

Permanent scarring and stiffening of tissue caused by radiation injury, which may develop months or years after treatment. It can affect the skin, lungs, bowel, or other organs and may cause pain, reduced function, or shortness of breath.

Radiation Field

The area of the body targeted by a radiation treatment or exposed to a radiation beam.

Radiation Leukemia

Radiation leukemia is leukemia that develops after significant exposure to ionizing radiation; it is a late treatment- or exposure-related complication.

Radiation Monitoring

Measurement of radiation levels or individual exposure using devices such as personal dosimeters and area monitors.

Radiation Necrosis

Irreversible tissue injury caused by ionizing radiation, often developing months or years after treatment. In the brain it may produce edema, seizures, headache, or focal deficits and can resemble recurrent tumour on imaging.

Radiation Oncologist

A physician who plans and oversees radiation treatment for cancer and selected noncancerous conditions.

Radiation Oncology

A medical specialty that uses ionizing radiation to treat cancer. Treatment may aim to destroy or control tumors, prevent cancer from returning, or

relieve symptoms.

Radiation Physics

The study and application of physical principles governing radiation production, detection, imaging, therapy, and protection.

Radiation Pneumonitis

An inflammatory lung injury occurring weeks to months after thoracic radiation. It may cause dry cough, fever, dyspnea, and hypoxemia within the irradiated field and can progress to radiation fibrosis.

Radiation Poisoning

Illness caused by substantial exposure to ionizing radiation, potentially producing skin injury, bone-marrow suppression, gastrointestinal symptoms, or organ failure.

Radiation Pregnancy Screening

Assessment of pregnancy status before procedures involving ionizing radiation or radioactive materials when pregnancy is possible. The decision to proceed requires clinical justification, risk optimization, and consideration of gestational age and fetal dose.

Radiation Proctitis

Inflammation and injury of the rectum after pelvic radiation therapy, causing rectal pain, urgency, diarrhea, mucus, or bleeding.

Radiation Protection

The practice of keeping radiation exposure as low as reasonably achievable while obtaining the required diagnostic or therapeutic result. It relies on justification, optimization, time reduction, distance, shielding, and appropriate contamination control.

Radiation Recall

An inflammatory reaction that occurs in previously irradiated skin or mucosa after administration of certain chemotherapeutic agents, particularly antimetabolites and anthracyclines. It manifests as erythema, desquamation, or mucositis in the previously irradiated field, mimicking acute radiation

dermatitis.

Radiation Safety

Principles: time, distance, shielding. ALARA (As Low As Reasonably Achievable). Radioactive materials handled in designated areas. Waste disposal per regulations. Pregnancy screening for women of childbearing age.

Radiation Sickness

Acute radiation syndrome caused by high-dose whole-body or substantial partial-body exposure to ionizing radiation. It may produce nausea, vomiting, marrow failure, infection, bleeding, gastrointestinal injury, neurovascular collapse, and death depending on dose.

Radiation Therapy

Use of ionizing radiation to kill cancer cells. Types: external beam, brachytherapy, stereotactic. Mechanisms: DNA damage, cell death. Side effects: fatigue, skin reactions, site-specific effects.

Radiation Therapy - Skin Care

A medical procedure, treatment, device, or care topic related to radiation therapy - skin care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Radiation Tolerance

The amount of radiation that a tissue or organ can receive before injury becomes likely. It varies with the tissue, dose, treatment schedule, and previous radiation.

Radiation-Induced Angiosarcoma

A rare, aggressive soft tissue sarcoma arising in previously irradiated tissue, typically with a long latency period. It carries a poor prognosis due to local recurrence and metastatic potential.

Radiation-Recall Dermatitis

An inflammatory skin reaction that occurs in a previously irradiated area after exposure to a triggering substance, often months or years later. The area

may become red, swollen, painful, or blistered and requires clinical evaluation.

Radical Cystoprostatectomy

Radical cystoprostatectomy removes the urinary bladder, prostate, and nearby structures, usually to treat invasive bladder cancer in men.

Radical Hysterectomy

An operation that removes the uterus and cervix together with surrounding parametrial tissues and the upper vagina, usually with pelvic lymph-node assessment or removal. It is used mainly for selected invasive cervical cancers and is more extensive than a simple or total hysterectomy.

Radical Lymphadenectomy

Radical lymphadenectomy is extensive surgical removal of lymph nodes and surrounding tissue to assess or treat cancer spread.

Radical Mastectomy

Radical mastectomy removes the breast, chest muscles, and many underarm lymph nodes; it is now rarely used because less extensive cancer surgery is often effective.

Radical Nephrectomy

Radical nephrectomy removes an entire kidney and sometimes nearby tissues, usually to treat a kidney tumor.

Radical Prostatectomy

Surgery that removes the entire prostate, usually with nearby seminal vesicles.

Radicular Cyst

An inflammatory odontogenic cyst arising at the apex of a nonvital tooth, usually from chronic pulpal infection and apical periodontitis.

Radiculitis

Inflammation or irritation of a spinal nerve root, causing radiating pain, paresthesia, sensory loss, weakness, or reflex change in a dermatomal or my-

otomal distribution. Causes include infection, inflammatory disease, disc pathology, and compression.

Radiculopathy

Dysfunction of a spinal nerve root, usually from disc herniation, narrowing, or inflammation. It may cause shooting pain, tingling, numbness, weakness, or altered reflexes along the affected nerve pathway.

Radio-Opaque

Blocking X-rays and appearing relatively white on a radiograph; radiopaque is the modern spelling.

Radioactive Iodine

Used for thyroid imaging and treatment. I-131 emits beta particles (therapy) and gamma rays (imaging). Half-life: 8 days. Used for hyperthyroidism (Graves, toxic nodules) and thyroid cancer ablation. I-123 for diagnostics (shorter half-life, pure gamma).

Radioactive Iodine Ablation

Treatment of differentiated thyroid carcinoma using iodine-131 to destroy residual thyroid tissue after total thyroidectomy. Indications include intermediate and high-risk disease for remnant ablation and treatment of residual or recurrent disease. Patients must be hypothyroid or receive recombinant TSH to maximize iodine uptake.

Radioactive Iodine Uptake

A test measuring the percentage of administered radioactive iodine taken up by the thyroid over time, used to evaluate hyperthyroidism and selected thyroid disorders.

Radioactive Iodine Uptake Test

A nuclear medicine test that measures how much radioactive iodine the thyroid gland absorbs. It helps evaluate hyperthyroidism and some thyroid disorders.

Radioactive Isotopes

Unstable forms of elements that emit radiation and are used in nuclear imaging, treatment, or research.

Radioactivity

Spontaneous decay of unstable atomic nuclei with emission of particles or electromagnetic radiation.

Radioallergosorbent Test

A blood test used to detect allergen-specific IgE antibodies.

Radiobiology

Study of radiation effects on biological systems. DNA damage, cell death, repair mechanisms.

Radiocarpal Joint

The wrist joint between the distal radius and articular disc proximally and the scaphoid, lunate, and triquetrum distally. It permits flexion, extension, radial deviation, ulnar deviation, and circumduction.

Radiochemical Purity

The fraction of total radioactivity present in the intended chemical form of a radiopharmaceutical. Impurities may alter biodistribution, reduce target uptake, and increase radiation dose to nontarget tissues.

Radiochemistry

The chemistry of radioactive substances and compounds. In medicine it includes making and labeling radiopharmaceuticals, studying radioactive decay, separating products, and checking radiochemical purity and safety.

Radiocontrast

A substance administered during imaging to make selected tissues, vessels, or body spaces more visible.

Radiodermatitis

Radiodermatitis is skin injury caused by ionizing radiation, ranging from redness and hair loss to chronic ulceration, fibrosis, or cancer risk.

Radioembolisation

Alternate index label; see *Radioembolization*.

Radioembolization

Intra-arterial delivery of radioactive microspheres (yttrium-90) to liver tumors through the hepatic artery, used for hepatocellular carcinoma and liver metastases.

Radiofrequency

Electromagnetic energy used in some diagnostic and therapeutic medical procedures.

Alternate Names:

RF energy

Radiofrequency Ablation

A procedure that uses high-frequency electrical energy to heat and destroy selected tissue, often under imaging guidance.

Radiofrequency Ablation For Chronic Pain

A procedure that applies radiofrequency energy to selected sensory nerves or other targets to interrupt pain signaling for a limited period in carefully selected chronic pain conditions.

Radiograph

A permanent visual diagnostic projection image produced by passing a collimated beam of ionizing X-radiation (X-rays) through an anatomical region onto a digital detector or photographic emulsion plate. Different biological tissues attenuate X-ray photons proportionally to their physical density and effective atomic number: dense cortical bone absorbs high amounts of radiation, appearing radiopaque (white), whereas aerated lung tissue absorbs minimal radiation, appearing radiolucent (black), with soft tissues, fluids, and fat presenting intermediate shades of gray. Serves as the foundational, rapid, first-line imaging modality in emergency trauma evaluation, chest pathology, and skeletal traumatology.

Alternate Names:

X-ray

Radiographer

A trained professional who performs diagnostic imaging examinations or delivers radiotherapy, de-

pending on specialty and jurisdiction.

Radiography

Production of images using X-rays or other ionizing radiation.

Radioimmunoassay

Sensitive immunoassay using radiolabeled antigens or antibodies. Competitive binding principle. Used for hormone measurement (thyroid, reproductive), tumor markers, drug levels. Largely replaced by non-radioactive methods (ELISA) but still used for some assays.

Radioimmunodetection

Detection of a substance using an antibody linked to a radioactive tracer, allowing localization or measurement with imaging or laboratory methods.

Radioimmunoguided Surgery

Radioimmunoguided surgery uses a radiolabeled antibody or tracer to help surgeons locate tumor tissue during an operation.

Radioimmunotherapy

Radioimmunotherapy attaches a radioactive substance to an antibody so radiation is delivered preferentially to cells carrying a specific target, often cancer cells.

Radioiodine Therapy

A medical procedure, treatment, device, or care topic related to radioiodine therapy; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Radioisotope

An unstable isotope that emits radiation as it decays; radioisotopes are used in imaging, treatment, research, and industrial applications.

Radioisotope (Radionuclide)

An unstable isotope that emits radiation as it decays; radioisotopes are used in medical imaging, diagnosis, and selected treatments.

Alternate Names:

Radionuclide

Radiologic Health

Radiologic health concerns protection from unnecessary ionizing radiation while preserving the diagnostic or therapeutic benefit of medical imaging.

Radiologic Response

The change in the size, number, or characteristics of lesions on imaging after treatment, assessed using defined criteria such as response, stability, or progression.

Radiologic Technologist

A trained health professional who performs selected medical-imaging examinations and helps protect patients from unnecessary radiation exposure.

Radiologic-Pathologic Correlation

Integration of imaging findings with gross and microscopic pathology to explain lesion location, extent, tissue composition, and sampling adequacy. It is important for discordant biopsy and imaging results.

Radiologist

A physician trained to interpret medical images and, in some specialties, perform image-guided procedures.

Radiology

The medical specialty using imaging to diagnose disease and guide procedures.

Radiology Report

Document describing imaging findings and interpretation. Structure: indication, technique, findings, impression. Clear, concise language essential. Critical findings require immediate communication.

Radiology-Patient Identification

Verification of the correct patient, examination, body site, indication, pregnancy status when relevant, allergies, renal function, and prior imaging before image acquisition or intervention. It is a core

diagnostic and procedural safety step.

Radiolucent

Describing a material that allows relatively greater passage of X-rays and therefore appears darker on a radiograph or CT image. Air is highly radiolucent; some stones, foreign bodies, and lesions may also be radiolucent.

Radiometry

Measurement of electromagnetic radiation, including its intensity, energy, or spectral distribution, for imaging, treatment, or laboratory purposes.

Radiomimetic

Radiomimetic describes a chemical or treatment that produces cellular or DNA damage resembling the effects of ionizing radiation.

Radionuclide

A radioactive isotope used as a tracer or therapeutic agent.

Radionuclide Angiography

A nuclear-medicine test that uses a radioactive tracer to show blood flow through the heart or blood vessels.

Radionuclide Cisternogram

A nuclear medicine study tracking a radiotracer in cerebrospinal fluid to evaluate CSF circulation and selected suspected leaks or hydrocephalus; it is now rarely used.

Radionuclide Cystogram

A nuclear medicine examination that tracks radio-labeled urine to detect vesicoureteral reflux or evaluate bladder emptying.

Radionuclide Generator

A device that produces a short-lived radioactive substance from a longer-lived parent substance for use in nuclear-medicine tests or treatment.

Radionuclide Heart Scan

A nuclear medicine study that uses a radioactive tracer to evaluate myocardial blood flow, heart muscle viability, or ventricular function.

Radionuclide Imaging

Imaging that uses a small amount of radioactive material to show the structure or function of organs and tissues.

Radionuclide Imaging Or Scan

Imaging that detects radiation from a tracer administered to the patient.

Alternate Names:

Nuclear scan; scintigraphy

Radionuclide Therapy

Internal radiation therapy using radiopharmaceuticals. Examples: I-131 (thyroid), Lu-177 DOTATATE (neuroendocrine tumors), Lu-177 PSMA (prostate cancer), Ra-223 (bone metastases), Y-90 microspheres (liver cancer).

Radionuclides

Radioactive atoms used as tracers in nuclear medicine imaging or treatment.

Radionuclidic Purity

The fraction of radioactivity arising from the intended radionuclide rather than contaminating radionuclides. It is important because contaminants may change radiation type, energy, half-life, dosimetry, and patient risk.

Radiopaque

Describing a material that attenuates X-rays strongly and therefore appears relatively white on a radiograph or CT image. Bone, metal, and some contrast agents are radiopaque.

Radiopharmaceutical

Radioactive compound used for diagnostic or therapeutic purposes. Components: radionuclide + targeting molecule. Selectivity determines biodistribution and image quality.

Radiopharmaceutical Extravasation

Inadvertent leakage of a radiopharmaceutical from the injection vessel into surrounding tissue. It can reduce diagnostic accuracy and, with therapeutic agents, cause local radiation injury; the event requires documentation and dose assessment.

Radiopharmaceutical Labeling Kit

A prepared set of reagents used to attach a radionuclide, commonly technetium-99m, to a compound for diagnostic imaging.

Radiopharmaceutical Quality Control

Testing performed to verify identity, radionuclidic purity, radiochemical purity, pH, sterility, endotoxin limits, and other release specifications before clinical administration. Requirements depend on the preparation and jurisdiction.

Radiopharmacy

Preparation and dispensing of radiopharmaceuticals. Good manufacturing practice required. Sterility, pyrogen testing, quality control.

Radioprotective Agent

A radioprotective agent reduces tissue injury from ionizing radiation by limiting DNA damage, scavenging radicals, or supporting repair.

Radiosensitization

Increased susceptibility of cells or tissues to injury from ionizing radiation.

Radiosurgery

Radiosurgery delivers highly focused radiation to a small target, usually in the brain or body, without making a conventional surgical incision.

Radiotherapy

Treatment using ionizing radiation to destroy or control abnormal cells, especially cancer.

Radiotherapy Bolus

A radiotherapy bolus is a material placed on the skin to bring the radiation dose closer to the surface

during selected treatments.

Radiotherapy Dosage

Radiotherapy dosage is the amount of ionizing radiation prescribed for a treatment target, usually divided into carefully planned fractions.

Radiotracer

A compound containing a radioactive nuclide that follows a biologic pathway and permits in-vivo imaging or measurement. Its distribution reflects the target physiology, receptor, enzyme, transporter, or tissue process.

Radium

A radioactive chemical element; radium exposure can cause radiation injury and cancer.

Radium-223

Alpha emitter, half-life 11.4 days. Used for bone metastases from prostate cancer. Mimics calcium, targets bone turnover sites.

Radius

Lateral forearm bone in the anatomical position. Proximal end: head, neck, radial tuberosity. Shaft. Distal end: styloid process, articular surfaces. The radial head articulates with the capitulum and ulnar notch, allowing pronation/supination.

Radius Fracture

A break in the radius, one of the two bones of the forearm, often occurring near the wrist after a fall onto an outstretched hand.

Radon

A naturally occurring radioactive gas that can accumulate indoors and increase lung-cancer risk when inhaled over time.

Raffinose

Raffinose is a plant oligosaccharide that humans digest poorly and that can be fermented by gut bacteria, causing gas in some people.

Ragged Red Fibers

A hallmark histopathologic finding in skeletal muscle tissue characteristic of mitochondrial myopathies (including MELAS, MERRF, Kearns-Sayre syndrome, and CPEO), visualized using modified Gömöri trichrome staining. Reflects the massive, compensatory subsarcolemmal and intermyofibrillar proliferation and accumulation of abnormal, structurally disordered mitochondria in response to defective oxidative phosphorylation, producing a distinct, irregularly contoured, bright reddish-purple rim and speckled granular appearance beneath the sarcolemma.

Alternate Names:

RRF; Ragged-Red Muscle Fibers

Rahnella

Rahnella is a genus of environmental gram-negative bacteria that rarely causes opportunistic human infection.

Rahnella Aquatilis

Rahnella aquatilis is an environmental water-associated bacterium that can rarely cause bloodstream or other opportunistic infection.

Raised Hemidiaphragm

A raised hemidiaphragm is elevation of one side of the diaphragm, caused by abdominal pressure, lung volume loss, phrenic-nerve dysfunction, or diaphragmatic disease.

Rale

A rale, or crackle, is an abnormal discontinuous breath sound produced by fluid, collapsed airways, or opening of small airways during breathing.

Rale (Rhonchus)

An abnormal sound heard through a stethoscope during breathing, caused by air moving through fluid, mucus, narrowed airways, or abnormal lung tissue.

Alternate Names:

Rhonchus

Raloxifene

A selective estrogen-receptor modulator used mainly to reduce fracture risk in selected postmenopausal people.

Raloxifene Hydrochloride

Raloxifene hydrochloride is a selective estrogen-receptor modulator used to prevent or treat osteoporosis and reduce breast-cancer risk in selected postmenopausal women.

Ralstonia

Ralstonia is a group of environmental bacteria that can contaminate fluids or medicines and rarely cause opportunistic infection.

Ralstonia Mannitolilytica

Ralstonia mannitolilytica is an environmental bacterium associated with occasional healthcare-associated bloodstream or respiratory infections.

Ralstonia Pickettii

Ralstonia pickettii is an environmental bacterium that can contaminate water or medical products and rarely cause infection in vulnerable patients.

Raltegravir Potassium

Raltegravir potassium is an HIV integrase inhibitor used with other antiretroviral medicines to suppress HIV replication.

Raltitrexed

Raltitrexed is an antimetabolite chemotherapy medicine used for selected colorectal cancers.

Ramipril

Ramipril is an angiotensin-converting-enzyme inhibitor used for hypertension, heart failure, and cardiovascular risk reduction; cough, hyperkalaemia, renal-function changes, angioedema, and fetal toxicity are important risks.

Rampant Caries

Widespread severe caries affecting multiple surfaces. Associated with sugary drinks, xerostomia, bulimia.

Ramsay Hunt Syndrome

Reactivation of varicella-zoster virus in the geniculate ganglion causing ipsilateral facial paralysis, severe ear pain, and vesicular eruption in or around the ear or oral cavity. Hearing loss and vertigo may occur; prompt treatment is important.

Ramucirumab

A monoclonal antibody that blocks vascular endothelial growth factor receptor 2 and is used in selected advanced cancers, including gastric, colorectal, lung, and liver cancers.

Ramus

A ramus is a branch-like extension of a bone, nerve, artery, or other structure, such as the mandibular ramus.

Random

Random means determined by chance rather than a predictable pattern; randomization in research helps balance known and unknown confounding factors.

Random Allocation

Assignment of participants to study groups by chance to reduce selection bias and balance known and unknown factors.

Randomised Controlled Trial

A study in which participants are assigned by chance to interventions or controls and outcomes are compared.

Randomization Validation

Checking that participants were assigned to study groups by chance as planned and that the assignment process was recorded correctly.

Randomized Controlled Trial

An experimental study in which participants are assigned by chance to different interventions or a control condition and followed for specified outcomes.

Range Of Motion

ROM: joint movement capacity. Goniometer measurement. Restrictions from contracture, pain, swelling.

Ranibizumab

An intravitreal monoclonal antibody fragment that inhibits vascular endothelial growth factor and treats neovascular macular degeneration, diabetic macular edema, retinal vein occlusion, and related retinal disease.

Ranitidine

An H₂-receptor antagonist formerly used to reduce gastric acid; availability has been withdrawn or restricted in many countries because of impurity concerns.

Ranolazine

Ranolazine is an antianginal drug that inhibits the late sodium current in cardiac cells and reduces chronic angina without substantially lowering heart rate or blood pressure; QT prolongation and drug interactions require caution.

Ranpirnase

An investigational ribonuclease-derived anticancer medicine studied for its ability to degrade RNA inside tumor cells.

Ranson Criteria

Clinical scoring system for acute pancreatitis severity incorporating eleven parameters at two time points. Admission parameters include age, white blood cell count, glucose, LDH, and AST. Forty-eight hour parameters include hematocrit drop, BUN increase, calcium, oxygen tension, base deficit, and fluid sequestration.

RANTES

RANTES, now called CCL5, is a chemokine that attracts immune cells and participates in inflammation, antiviral defense, and immune signaling.

Ranula

A mucocele (mucus extravasation cyst) of the sublingual salivary gland, presenting as a blue-translucent, fluctuant swelling in the floor of the mouth, typically lateral to the lingual frenulum. A ranula results from trauma or obstruction of a sublingual gland duct, causing mucus accumulation in the sublingual space.

Raoultella

Raoultella is a genus of gram-negative bacteria that can cause opportunistic urinary, respiratory, wound, or bloodstream infections.

Raoultella Planticola

A gram-negative environmental bacterium that can rarely cause urinary, bloodstream, respiratory, or other opportunistic infections.

Raoultella Terrigena

A gram-negative environmental bacterium that rarely causes opportunistic human infection.

Rape

Nonconsensual sexual penetration or sexual violence; it is a serious crime and a medical, safeguarding, and trauma-care concern.

Rape (Sexual Assault)

Alternate index label for Sexual Assault.

Raphe

A seam-like line or ridge where structures join, such as the median raphe or raphe nuclei of the brainstem.

Raphe Nuclei

The raphe nuclei are brainstem groups of neurons that produce serotonin and influence mood, pain, sleep, arousal, and autonomic functions.

Rapid Eye Movement Sleep

A sleep stage marked by rapid eye movements, vivid dreaming, and high brain activity.

Alternate Names:

REM sleep

Rapid Eye Movement Sleep Behavior Disorder

Alternate index label; see *REM sleep behavior disorder*.

Rapid Gastric Emptying

Abnormally rapid movement of food from the stomach into the small intestine, sometimes called dumping syndrome.

Rapid Heartbeat

Alternate index label; see *Tachycardia*.

Rapid Plasma Reagin Test

Rapid plasma reagin test is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

Rapid Sequence Induction

An intubation technique designed to minimize aspiration risk in patients with full stomach.

Rapid Shallow Breathing

Rapid shallow breathing is an increased breathing rate with small tidal volumes and may signal lung disease, pain, metabolic illness, fatigue, or respiratory failure.

Rapid Strep Test

A test performed on a throat swab to detect Group A Streptococcus. It provides a rapid result, but a negative result may require confirmatory testing depending on the patient's age, symptoms, and local guidance.

Rapid-Sequence Intubation

A planned emergency airway technique using a sedative-hypnotic and a neuromuscular blocker in rapid succession to facilitate tracheal intubation while minimizing aspiration risk. Preparation includes preoxygenation, backup airway plans, hemodynamic assessment, and confirmation of tube posi-

tion.

Rapidly Progressive Glomerulonephritis

A syndrome of rapidly worsening kidney function accompanied by glomerular inflammation, often with crescent formation on biopsy. Causes include anti-glomerular-basement-membrane disease, immune-complex disease, and pauci-immune vasculitis. It requires urgent evaluation and treatment.

Rare Disease

A condition affecting relatively few people in a defined population; many rare diseases are genetic, require specialized diagnosis, and may have limited evidence or treatment options.

Rarefaction

Reduction in density or pressure, as in the low-pressure phase of a sound wave.

Ras Peptide

A small protein fragment related to Ras proteins, which help control cell growth and division. Changes in Ras signaling can contribute to cancer.

Rasburicase

A recombinant urate-oxidase enzyme that converts uric acid to the more soluble allantoin. It is used in selected patients at risk of or experiencing tumorlysis-related hyperuricemia. It can cause serious hypersensitivity or hemolysis in people with glucose-6-phosphate dehydrogenase deficiency and requires appropriate screening and monitoring.

Rash

A general term for any visible skin eruption, change in skin color, texture, or appearance.

Alternate Names:

Allergy Rash (Rash)

Rash - Child Under 2 Years

A rash in a child under 2 can result from infection, allergy, heat, irritation, or inflammation; breathing difficulty, lethargy, fever, blistering, or rapid spread needs urgent care.

Rash Heat (Heat Rash)

Alternate index label for Heat Rash.

Rash, Poison Ivy

Alternate index label; see *Poison ivy rash*.

Rashes

Alternate index label; see *Rash*.

Rasp

A roughened surgical instrument used to file, shape, or smooth bone or other hard tissue.

RAST

An older name for a blood test that measures IgE antibodies directed against specific allergens. Modern laboratories usually use newer specific-IgE immunoassays; results show sensitization and must be interpreted with symptoms and exposure history.

Alternate Names:

Radioallergosorbent test

Rastelli Procedure

A definitive surgical repair for congenital heart anomalies characterized by ventricular septal defect, systemic ventricular-arterial alignment, and severe subpulmonary or pulmonary stenosis, most commonly D-transposition of the great arteries with VSD and LVOT obstruction, double outlet right ventricle, or truncus arteriosus. Involves constructing a wide intracardiac patch baffle that tunnels oxygenated left ventricular blood across the VSD to the posteriorly situated aorta, while an extracardiac valved conduit (homograft or bioprosthetic tube graft) is placed from an incision in the free wall of the anterior right ventricle to the pulmonary artery confluence, bypassing the obstructed natural outflow tract.

Alternate Names:

Rastelli Operation; Rastelli Repair

Rat Bite Fever

A systemic bacterial infection caused by *Streptobacillus moniliformis* or *Spirillum minus*, transmitted through rat bites or contact with rat-

contaminated food or water. It presents with relapsing fever, rash, polyarthritides, and lymphadenopathy. The characteristic rash is petechial or maculopapular on the extremities.

Rat-Bite Fever

Alternate index label; see *Rat Bite Fever*. exposure to infected rodents. Fever, migratory arthralgia, vomiting, and a maculopapular or petechial rash may occur.

Ratio

A ratio compares two quantities by division, such as a measurement of risk, concentration, or body proportions.

Rationalization

A psychological defense in which a person creates plausible explanations for behavior or feelings while avoiding the underlying motive or conflict.

RATS

Alternate name; see *Robotic-Assisted Thoracoscopic Surgery*.

Rauscher Virus

A mouse leukemia retrovirus used in research to study viral oncogenesis and blood-cell cancers.

Rauwolfia Alkaloid

Rauwolfia alkaloids are plant-derived compounds that deplete or reduce sympathetic neurotransmission and were historically used for hypertension.

Ravuconazole

Ravuconazole is a triazole antifungal medicine studied and used in some settings for invasive fungal infections.

Raw Egg

Raw eggs may contain *Salmonella* and are safest when properly refrigerated, handled hygienically, and cooked unless pasteurized products are used.

Raynaud Phenomenon

Exaggerated vasospastic response of digital arteries to cold or stress, causing well-demarcated color changes (white-blue-red) in fingers or toes. Primary Raynaud: idiopathic, symmetric, no tissue damage, normal capillaries.

Raynaud Syndrome

A vasospastic disorder causing episodic digital color changes (white -> blue -> red) triggered by cold or stress, due to exaggerated vasoconstriction of digital arteries. Primary Raynaud: benign, symmetric, in young women, no underlying disease.

Raynaud'S Disease

Primary episodic vasospasm of fingers or toes triggered by cold or stress, causing color changes and numbness.

Raynaud'S Phenomenon

Episodic constriction of small arteries in the fingers or toes, causing color changes, numbness, or pain after cold exposure or emotional stress.

Alternate Names:

Raynauds Phenomenon (Raynaud's Phenomenon)
Raynauds Syndrome (Raynaud's Phenomenon)

Raynauds Phenomenon (Raynaud'S Phenomenon)

Alternate index label for Raynaud's Phenomenon.

Raynauds Syndrome (Raynaud'S Phenomenon)

Alternate index label for Raynaud's Phenomenon.

Raynaud'S Syndrome

Episodic narrowing of small blood vessels in fingers or toes triggered by cold or stress.

Razor Bumps

Inflamed bumps caused by hairs curling back into the skin after shaving or other hair removal. They are more common with coarse or curly hair and may cause itching, pain, dark marks, or scarring; avoiding very close shaving and using proper shaving

technique can reduce recurrence.

Alternate Names:

Raynaud phenomenon

Razoxane

Razoxane is a topoisomerase-II inhibitor related to dexrazoxane and studied or used historically for selected anticancer or cardioprotective purposes.

RâLe

An older term for an abnormal crackling or bubbling respiratory sound, now generally described as a crackle.

RBC Count

A measurement of the number of red blood cells in a volume of blood, interpreted with hemoglobin, hematocrit, and red-cell indices to evaluate anemia or erythrocytosis.

RBC Indices

Calculated or measured red-cell characteristics, including mean corpuscular volume, mean corpuscular hemoglobin, mean corpuscular hemoglobin concentration, and red-cell distribution width.

RBC Nuclear Scan

A nuclear medicine scan using labeled red blood cells to localize active gastrointestinal bleeding or, in selected studies, evaluate cardiac blood-pool function.

RBC Urine Test

A urine examination detecting or counting red blood cells, used to evaluate hematuria from urinary-tract infection, stones, glomerular disease, tumors, trauma, or other causes.

RCT

Randomized controlled trial, a study comparing randomly assigned intervention and control groups.

Alternate Names:

Randomized controlled trial

RDA

Recommended dietary allowance, the daily nutrient intake sufficient for nearly all healthy people in a defined group.

Alternate Names:

Recommended dietary allowance

Reabsorption

The transport of a substance from a body cavity or tubular fluid back into tissue or the bloodstream, such as renal tubular recovery of water and filtered solutes.

Reaction

A response to a stimulus, event, medicine, treatment, or interaction; clinical meaning depends on the type and severity of the response.

Reactivation Tuberculosis

Reactivation of latent infection, typically years later. Characteristically affects apical and posterior upper lobe segments. Features include chronic cough, hemoptysis, night sweats, weight loss, and cavitation.

Reactive Arthritis

An inflammatory arthritis that develops after certain genitourinary or gastrointestinal infections. It may involve the joints, eyes, skin, or urinary tract; not every person has all of these features.

Alternate Names:

Arthritis Reactive (Reactive Arthritis) Arthritis Re-
iters (Reactive Arthritis)

Reactive Attachment Disorder

A pattern of inhibited, emotionally withdrawn behavior toward adult caregivers. The child rarely or minimally seeks comfort when distressed and rarely or minimally responds to comfort when distressed. The child shows a pattern of persistently irritable and sad mood that is not limited to interactions with caregivers.

Reactive Attachment Disorder Of Infancy

Or Early Childhood

A childhood disorder characterized by markedly disturbed and developmentally inappropriate attachment behavior associated with severe insufficient caregiving, including limited comfort-seeking or response to caregivers.

Reactive Hypoglycemia

Reactive hypoglycemia is low blood glucose occurring after eating, often several hours later, with shakiness, sweating, hunger, or weakness and requiring evaluation of causes.

Reactive Oxygen Species

Highly reactive oxygen-containing molecules, such as superoxide and hydrogen peroxide, formed during normal metabolism and inflammation. Excessive amounts can damage cells, proteins, and DNA.

Reactive Perforating Collagenosis

A perforating dermatosis in which dermal collagen is extruded through the epidermis, presenting as discrete, dome-shaped papules with a central keratotic plug, most commonly on the extensor extremities.

Read Codes

A clinical coding system historically used to represent diagnoses, findings, and procedures in electronic health records.

Reading Disability, Specific

Alternate index label; see *Dyslexia*.

Reagent

A reagent is a chemical or biological substance used to cause or detect a reaction in laboratory testing, research, or manufacturing.

Reality Testing

The ability to recognize what is real and distinguish it from thoughts, beliefs, or perceptions that are not based on reality.

Rebeccamycin

Rebeccamycin is an investigational antitumor com-

pound that inhibits DNA-related enzymes; it is not a routine clinical medicine.

Rebound Effect

Worsening or return of symptoms after stopping or reducing a treatment that had been suppressing them.

Rebound Headache

Alternate index label; see *Medication overuse headaches*.

Rebound Insomnia

Return or worsening of insomnia after stopping a sleep medicine.

Recalcitrant

Resistant to treatment, control, healing, or change; the term often describes a persistent disease or infection.

Receive

To receive means to be given or take in a treatment, substance, signal, transplant, specimen, or other intervention or material.

Receiver Operating Characteristic

ROC curve: plot of sensitivity vs. 1-specificity. Area under curve measures test accuracy.

Recent Memory

Recent memory is the ability to recall information or events from the near past and can be impaired by aging, delirium, brain disease, depression, or medicines.

response. Types: (1) Cell surface: ion channel (nicotinic AChR), G-protein coupled (GPCR: adrenergic, muscarinic, opioid), enzyme-linked (RTK: insulin receptor, cytokine receptors).

Receptor Binding

receptor binding is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute

to disease.

Receptor Desensitization

A rapid decrease in the response of a receptor to continuous or repeated agonist stimulation, occurring within minutes to hours.

Receptor Downregulation

A decrease in the number or sensitivity of receptors in response to chronic receptor stimulation by agonists. When receptors are chronically activated, the cells compensate by internalizing and degrading receptors, reducing receptor density on the cell surface, and decreasing receptor responsiveness.

Receptor Tyrosine Kinases

Single-pass transmembrane receptors with intrinsic tyrosine kinase activity in their intracellular domain. Ligand binding (e.g., insulin, EGF, PDGF, FGF) induces receptor dimerization and autophosphorylation of tyrosine residues.

Receptor Upregulation

An increase in the number or sensitivity of receptors in response to chronic receptor blockade or decreased neurotransmitter activity. When receptors are chronically blocked by antagonists, the cells compensate by synthesizing more receptors to maintain homeostatic signaling, leading to increased sensitivity to agonists.

Receptors

Cell proteins or structures that bind specific signaling molecules and trigger a response.

Recession Of Medial Rectus Muscle

Recession of Medial Rectus Muscle refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

Recessive

Allele whose phenotype is masked in heterozygotes. Autosomal recessive disorders: cystic fibrosis, sickle cell anemia, Tay-Sachs disease. Requires two copies

for expression.

RECIST

Response Evaluation Criteria in Solid Tumors, standardized imaging-based criteria that categorize response to anticancer therapy as complete response, partial response, stable disease, or progressive disease.

Recognizing Medical Emergencies

Recognizing a medical emergency includes identifying severe breathing difficulty, chest pain, stroke signs, major bleeding, seizure, collapse, poisoning, or altered consciousness and calling emergency services.

Recognizing Teen Depression

Recognizing depression in adolescents involves looking for persistent low mood or irritability, loss of interest, sleep or appetite changes, poor concentration, hopelessness, or self-harm thoughts.

Recombinant

Produced by combining genetic material from different sources or by using engineered DNA in a cell or organism.

Recombinant DNA

DNA molecule formed by combining genetic material from different sources. Basis of biotechnology. Used to produce insulin, growth hormone, vaccines, gene therapy vectors.

Recombinant DNA Technology

Laboratory techniques that join DNA from different sources to produce a desired genetic construct or product.

Recombinant Protein

recombinant protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Recombinant Tissue Plasminogen Activator

A laboratory-made form of tissue plasminogen activator that helps convert plasminogen to plasmin and dissolve blood clots. It is used in selected emergencies, such as some ischemic strokes, heart attacks, or pulmonary emboli, when benefits outweigh bleeding risk.

Alternate Names:

Recombinant tPA

Recombinase

An enzyme that rearranges or exchanges DNA segments, supporting genetic recombination, repair, or programmed immune-gene assembly.

Recombinational Repair

A medical procedure, treatment, device, or care topic related to recombinational repair; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Recommended Daily Allowance

The Recommended Dietary Allowance is the average daily nutrient intake sufficient for nearly all healthy people in a specified age and sex group.

Recommended Dietary Allowance

The average daily intake expected to meet the nutrient needs of nearly all healthy people in a defined group.

Alternate Names:

RDA

Reconstructive (Plastic) Surgery

Surgery that restores form or function after congenital difference, injury, disease, or removal of tissue.

Record

A health record is a documented account of a person's history, findings, tests, diagnoses, treatments, decisions, and outcomes.

Recovered Memory Syndrome

A controversial and nonstandard label for memories

recalled after an alleged period of amnesia; recovered memories require careful, non-leading assessment.

Stroke Rehabilitation

Rehabilitation after a stroke helps improve movement, speech, swallowing, thinking, mood, and daily activities while reducing complications and preventing another stroke.

Recovery Position

A side-lying position used for an unconscious but normally breathing person to help keep the airway open and reduce aspiration risk.

Recreation Therapy

Recreation therapy uses adapted games, arts, exercise, and leisure activities to support physical, emotional, cognitive, or social functioning.

Recrudescence

Recurrence of symptoms or infection after apparent improvement, often from persistence of the original organism or disease process.

Rectal

Rectal means relating to the rectum, the final section of the large intestine before the anal canal.

Rectal (Adjective)

Rectal means relating to the rectum, the final part of the large intestine before the anal canal.

Rectal Biopsy

Removal of a small sample of rectal tissue for microscopic examination, used to evaluate Hirschsprung disease, inflammation, infection, neoplasia, or other rectal disorders.

Rectal Bleeding

Passage of bright-red or dark blood from the rectum, caused by hemorrhoids, fissures, polyps, inflammatory bowel disease, diverticular disease, or cancer. Persistent, heavy, or unexplained bleeding requires evaluation.

Alternate Names:

Blood In The Stool (Rectal Bleeding)

Rectal Bleeding (Blood In The Stool (Rectal Bleeding))

Alternate index label for Blood in the Stool (Rectal Bleeding).

Rectal Cancer

Cancer that develops in the tissues of the rectum.

Alternate Names:

Cancer, Rectal

Rectal Carcinoma

Rectal carcinoma is cancer arising in the rectum and may cause bleeding, altered bowel habits, pain, or anemia.

Rectal Culture

Laboratory culture of a rectal specimen to detect selected bacterial pathogens or colonization, depending on the clinical indication.

Rectal Disease

A disorder affecting the rectum, including inflammation, infection, bleeding, obstruction, prolapse, functional disease, or neoplasm.

Rectal Fistula

A rectal fistula is an abnormal tract connecting the rectum with skin or another organ, often causing drainage, infection, or passage of stool through an abnormal route.

Rectal Hemorrhage

Bleeding from the rectum, which may result from hemorrhoids, fissure, inflammation, ischemia, polyps, cancer, trauma, or other gastrointestinal disease.

Rectal Inflammation

Alternate index label; see *Proctitis*.

Rectal Itching

Alternate index label; see *Anal itching*.

Rectal Mucositis

Rectal mucositis is inflammation and injury of the rectal lining, often after radiation, chemotherapy, infection, inflammatory disease, or trauma.

Rectal Necrosis

Rectal necrosis is death of rectal tissue from inadequate blood flow, severe inflammation, infection, pressure, or another destructive process.

Rectal Neoplasm

A rectal neoplasm is an abnormal growth in the rectum that may be benign, precancerous, or malignant.

Rectal Obstruction

Impaired passage through the rectum caused by fecal impaction, stricture, tumor, foreign body, inflammation, or functional outlet disorder.

Rectal Perforation

A tear or hole through the rectal wall that can release bowel contents and cause peritonitis, sepsis, or severe bleeding.

Rectal Polyposis

Rectal polyposis is the presence of multiple polyps in the rectum, which may be sporadic or part of an inherited syndrome and can increase cancer risk.

Rectal Prolapse

Protrusion of rectal tissue through the anal opening. Complete prolapse involves all layers of the rectal wall and presents as a concentric cylindrical mass with visible mucosal folds. Partial prolapse involves only the mucosa. Associated with chronic straining, pelvic floor dysfunction, and neurological conditions.

Rectal Prolapse Repair

A surgical or procedural treatment that restores a prolapsed rectum to its normal position and secures or removes affected tissue according to the prolapse and patient factors.

Rectal Route

The rectal route administers a medicine or fluid through the anus into the rectum, where it may act locally or be absorbed systemically.

Rectal Stenosis

Abnormal narrowing of the rectal lumen caused by inflammation, scarring, surgery, radiation, ischemia, trauma, or neoplasm.

Rectal Tenesmus

Rectal tenesmus is a persistent or urgent feeling of needing to pass stool despite an empty or nearly empty rectum, caused by inflammation, infection, mass, or motility disorder.

Rectal Ulcer

Alternate index label; see *Solitary rectal ulcer syndrome*.

Rectocele

A weakening of the vaginal wall that allows the rectum to bulge into the vagina.

Rectosigmoid Neoplasm

A rectosigmoid neoplasm is an abnormal growth where the sigmoid colon joins the rectum and may be benign or malignant.

Rectouterine Pouch

The rectouterine pouch, or pouch of Douglas, is the peritoneal recess between the uterus and rectum where fluid or disease may collect.

Rectovaginal Fistula

Abnormal connection between the rectum and vagina causing passage of stool or gas through the vagina. Causes include obstetric injury particularly third and fourth degree perineal tears, Crohn disease, radiation therapy, and surgical complications. Presents with vaginal discharge of stool, flatus, or recurrent vaginal infections.

Rectum

The final straight section of the large intestine, ap-

proximately 12-15 cm long, extending from the sigmoid colon to the anal canal. The rectum stores feces before defecation.

Rectus Abdominis

The rectus abdominis is a paired abdominal muscle that flexes the trunk, stabilizes the pelvis, and helps compress abdominal contents.

Rectus Abdominis Muscle

Long flat vertical anterior abdominal wall muscle from pubic symphysis to xiphoid process/costal cartilages 5-7, divided by tendinous intersections ("six-pack"). Innervated by T7-T12. Flexes trunk, compresses abdomen, increases intra-abdominal pressure. Diastasis recti common in pregnancy/obesity.

Rectus Abdominis Sheath

A fibrous aponeurotic envelope formed by the abdominal wall muscles and surrounding the rectus abdominis muscle. It contains the superior and inferior epigastric vessels and related nerves.

Recur

To recur means to return or happen again, as symptoms, disease, infection, or a tumor after a period of improvement or treatment.

Recurrence

Return of cancer after treatment. Can be local, regional, or distant.

Recurrence Risk

The probability that a genetic condition will occur again in a future pregnancy or relative, estimated from the inheritance pattern, parental testing, penetrance, and observed or presumed pathogenic variant.

Recurrence-Free Survival

In clinical oncology trials and longitudinal post-treatment monitoring, the duration of time elapsed from the completion of primary curative-intent treatment (such as complete surgical resection with or without adjuvant systemic or radiation therapy) un-

til the first documented clinical, radiographic, or biochemical recurrence of the primary malignancy, or death from any cause. Frequently utilized as a primary or key secondary efficacy endpoint in adjuvant clinical trials for resected solid tumors (e.g., breast cancer, melanoma, colorectal carcinoma), serving as an objective measure of definitive cure or sustained disease suppression.

Recurrent

Happening again after improving or stopping. A recurrent disease may return after remission, such as recurrent urinary infection or recurrent herpes.

Recurrent Breast Cancer

Breast cancer that returns after a period in which it was undetectable.

Recurrent Caries

Caries under or around restoration. Due to microleakage, marginal breakdown.

Recurrent Disease

Return of a disease after a period of improvement, remission, or apparent absence, either at the original site or elsewhere.

Recurrent Fractures

Repeated bone fractures, suggesting persistent trauma, osteoporosis, bone fragility, metabolic disease, tumor, or an inherited skeletal disorder.

Recurrent Laryngeal Nerve

A branch of the vagus nerve supplying most intrinsic muscles of the larynx; injury can cause hoarseness.

Recurrent Oral Ulcers

Alternate index label; see *Canker sore*.

Recurrent Pregnancy Loss

A distinct reproductive pathology defined by major international obstetric societies as the consecutive loss of two or more clinical pregnancies prior to 20 to 24 weeks of gestation. Affecting 1–2% of couples, standard clinical evaluation encompasses parental

peripheral blood karyotyping, anatomic evaluation of the uterine cavity (for congenital septa, submucosal fibroids, or Asherman syndrome), screening for antiphospholipid antibody syndrome, assessment of parental endocrine factors (thyroid dysfunction, hyperprolactinemia, diabetes), and thrombophilia screening.

Alternate Names:

Recurrent Miscarriage; Habitual Abortion; RPL

Recurrent Prostate Cancer

Alternate index label; see *Prostate cancer recurrence*.

Red Birthmarks

Red birthmarks are vascular skin marks present at or soon after birth, ranging from harmless capillary marks to lesions requiring monitoring or specialist treatment.

Red Blood Cell

A blood cell that carries oxygen from the lungs to the body's tissues. It contains hemoglobin, has a flattened, indented shape, and lacks a nucleus, which helps it bend through small blood vessels. Red blood cells also carry some carbon dioxide back to the lungs and help keep the blood's acid level balanced. They are made mainly in the bone marrow and normally live for about 120 days.

Red Blood Cell Labeling

Nuclear medicine technique labeling RBCs with Tc-99m. Used for GI bleeding detection, cardiac blood pool imaging.

Red Eye

Redness of the white part of the eye caused by irritation, dryness, allergy, infection, injury, inflammation, or increased surface blood flow.

Red Flag

A symptom, sign, or test result suggesting a potentially serious condition that requires urgent assessment or escalation of care. Red flags are context-specific and should not be used as a substitute for clinical judgment.

Red Infarction

Red infarction, also known as hemorrhagic infarction, occurs in tissues with dual blood supply, loose tissue architecture, or venous obstruction, allowing blood to accumulate in the necrotic area and produce a dark red appearance.

Alternate Names:

hemorrhagic infarction, occurs in tissues with dual blood.

Red Nucleus

The red nucleus is a midbrain structure involved in motor coordination and connections with the cerebellum and spinal cord.

Reducing Agents

Reducing agents donate electrons in chemical reactions and can alter oxidation state; they are used in laboratory chemistry, biology, and manufacturing.

Reductase Deficiency

A disorder or laboratory finding caused by inadequate activity of a reductase enzyme, impairing a specific metabolic or hormone pathway.

Reduction

Restoration of a displaced fracture or joint to better alignment, or decrease in amount, size, or activity.

Reduction Division

Meiosis, a cell division that reduces chromosome number by half to form gametes.

Reduction Mammoplasty

Surgery that removes breast tissue, fat, and excess skin to reduce breast size and relieve symptoms such as neck, shoulder, or back discomfort; it may also reshape the breasts.

Redundant Mitral Valve

Excess leaflet tissue of the mitral valve, most commonly the posterior leaflet, which may prolapse into the left atrium during systole. Often associated with myxomatous degeneration and mitral valve prolapse. May be asymptomatic or cause mild mitral regurgi-

tation detected incidentally on echocardiography.

Reduviidae

A family of insects including assassin bugs; some species transmit pathogens such as the parasite causing Chagas disease.

Reed-Sternberg Cells

Large abnormal cells derived from B lymphocytes and characteristic of classic Hodgkin lymphoma.

Reemerging Disease

Previously controlled disease increasing. Examples: tuberculosis, measles, drug-resistant infections.

Reexpansion Pulmonary Edema

Noncardiogenic pulmonary edema developing rapidly after rapid reexpansion of a collapsed lung, typically following chest tube drainage of a large or long-standing pneumothorax.

Refeeding Syndrome

Life-threatening fluid and electrolyte shifts when nutrition restarted in malnourished patient. Hypophosphatemia, hypokalemia, hypomagnesemia, fluid overload, cardiac failure. Prevention: start low (25-30 kcal/kg), advance slowly, supplement electrolytes, monitor closely.

Reference Interval

The range of laboratory results expected in a defined reference population, usually encompassing the central 95 percent of values. A result outside the interval is not by itself diagnostic and must be interpreted with clinical context, biologic variation, and the laboratory's method-specific range.

Referral

A request for assessment or treatment by another healthcare professional or service.

Referred Pain

An unpleasant sensory and emotional experience associated with actual or potential tissue damage, serving as a protective alerting system but becoming

maladaptive when chronic (lasting >3 months). See pain.

Reflex

A reflex is a rapid, involuntary response to a stimulus mediated through a neural or physiologic pathway.

Reflex Action

An involuntary, rapid response to a stimulus mediated through a reflex arc.

Reflex Anoxic Seizure

A brief seizure-like episode caused by transient cerebral hypoperfusion after a sudden painful or emotional stimulus, usually with pallor, bradycardia, and rapid recovery.

Reflex Arc

The neural pathway that mediates a reflex action, bypassing conscious brain processing for rapid, automatic responses. A reflex arc consists of five components: (1) Receptor—sensory nerve ending detecting a stimulus (e.g., pain, stretch).

Reflex Epilepsy

Reflex epilepsy is epilepsy in which specific stimuli such as flashing light, sound, reading, or touch reliably trigger seizures.

Reflexes

Automatic, rapid responses to stimuli mediated through neural pathways called reflex arcs.

Reflux

Gastroesophageal reflux in infants: effortless regurgitation of gastric contents, very common (physiologic 'spitting up') and usually benign, resolving by 12 months with maturation of the lower esophageal sphincter.

Reflux Nephropathy

Renal scarring and chronic kidney damage caused by vesicoureteral reflux, recurrent urinary infection, or both. It may lead to hypertension, proteinuria,

impaired growth, and chronic kidney disease.

Reflux, Bile

Alternate index label; see *Bile reflux*.

Reflux, Vesicoureteral

Alternate index label; see *Vesicoureteral reflux*.

Refraction

The bending of light as it passes through the cornea, aqueous humour, lens, and vitreous humour. In an eye examination, refraction determines the optical power needed to focus a clear image on the retina; refractive power is measured in dioptres.

Refractive Error

A refractive error occurs when the eye does not focus light correctly on the retina, causing nearsightedness, farsightedness, astigmatism, or presbyopia.

Refractive Errors And Astigmatism

Refractive errors are vision disorders caused by the eye's inability to properly focus light onto the retina, resulting in blurred vision.

Refractive Surgery

Surgical procedures that reshape the cornea or alter the eye to correct refractive errors and reduce dependence on eyeglasses or contact lenses. Laser techniques include LASIK (corneal flap with excimer ablation), photorefractive keratectomy (surface ablation), and small-incision lenticule extraction (SMILE).

Refractometer

A refractometer measures how much light bends through a substance and is used for fluid concentration, optical properties, or eye refraction.

Refractometry

Measurement of the eye's refractive power to determine the optical correction needed for myopia, hyperopia, astigmatism, or presbyopia.

Refractory

Resistant to a treatment or not responding adequately to it. The term may refer to cancer or other diseases.

Refractory Anemia

Refractory anemia is an older term for anemia that persists despite usual treatment and may refer to a myelodysplastic syndrome or another underlying disorder.

Refractory Cancer

Refractory cancer is cancer that does not respond adequately to a treatment or begins progressing during treatment.

Refractory Disease

Disease that does not respond adequately to appropriate standard treatment or that progresses despite therapy.

Refractory Period

The period after an action potential during which a cell cannot (absolute refractory period) or can only partially (relative refractory period) generate a new action potential.

Refrigerant Poisoning

Refrigerant poisoning involves toxic or environmental exposure to refrigerant poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Refsum Disease

An autosomal-recessive peroxisomal disorder of phytanic-acid metabolism. It causes retinitis pigmentosa, anosmia, peripheral neuropathy, ataxia, hearing loss, ichthyosis, and shortened metacarpals or metatarsals with variable onset.

Regadenoson Pharmacological Stress

Selective A2A adenosine receptor agonist used as a pharmacological vasodilator for nuclear myocardial perfusion imaging. Single IV bolus injection produces coronary vasodilation with fewer side effects

than adenosine (less bronchospasm, AV block). Contraindicated in severe asthma or COPD requiring oxygen.

Regeneration

The growth or replacement of damaged or lost cells, tissues, or body parts.

Regimen

A planned schedule of medicines, treatments, diet, or other healthcare measures.

Regional

Relating to a particular body area, geographic area, or localized distribution rather than the whole body.

Regional Anaesthesia

Loss of sensation in a larger body region produced by blocking nerves or a nerve plexus while consciousness is usually preserved.

Regional Anesthesia

Regional anesthesia involves the administration of local anesthetic agents to specific nerves or nerve plexuses to provide surgical anesthesia and postoperative analgesia for a defined body region.

Regional Chemotherapy

Regional chemotherapy delivers anticancer medicine directly to a body region or organ to increase local exposure while limiting whole-body exposure.

Regional Enteritis

An older name for Crohn disease, a chronic inflammatory bowel disease that can affect any part of the digestive tract.

Regional Ileitis

An older name for Crohn disease affecting mainly the terminal ileum. It causes long-term inflammation that may lead to abdominal pain, diarrhea, weight loss, narrowing, fistulas, or nutritional problems.

Registrar

A doctor in postgraduate specialist training or a medical records professional, depending on context and country.

Regulation Of Health Professions

Legal and professional systems governing training, registration, scope, conduct, and accountability of healthcare workers.

Regulatory Approval

Authorization by a competent regulatory authority for a medicine, device, or procedure to be marketed or used for specified purposes after review of evidence.

Regulatory Authority

A regulatory authority is a government or official body that sets and enforces standards for medicines, devices, facilities, professionals, or public health.

Regulatory Gene

A gene that controls the activity of other genes or helps regulate cell growth, development, or body functions.

Regulatory T Cells

Tregs (CD4+ CD25+ FOXP3+): essential for peripheral tolerance. Thymic (tTreg) vs peripheral (pTreg) origin. FOXP3: master transcription factor; mutations cause IPEX.

Regurgitation

The backward flow of blood through a heart valve that fails to close properly (valvular incompetence or insufficiency).

Regurgitation, Aortic Valve

Alternate index label; see *Aortic valve regurgitation*.

Regurgitation, Mitral Valve

Alternate index label; see *Mitral valve regurgitation*.

Rehab

A structured rehabilitation program that helps re-

store function, independence, participation, or quality of life after illness or injury.

Rehabilitation

A coordinated process that helps a person restore or adapt physical, cognitive, psychological, and social function after illness, injury, surgery, or disability.

Rehabilitation Clinic

A specialized outpatient healthcare facility staffed by a multidisciplinary clinical team (physiatrists, physical therapists, occupational therapists, speech-language pathologists, and prosthetists/orthotists) dedicated to restoring, optimizing, or maintaining physical, cognitive, and functional independence in individuals recovering from injury, surgery, or chronic disabling disorders. Rehabilitation programs focus on gait retraining, neuromuscular re-education, stroke recovery, cardiac and pulmonary rehabilitation, musculoskeletal injury recovery, and chronic pain management, guided by objective functional metrics (e.g., the Functional Independence Measure [FIM] or 6-minute walk test).

Rehabilitation Engineering

Technology development for disability: prosthetics, orthotics, assistive devices, environmental control.

Rehabilitation Motivation

Patient factors that influence participation in rehabilitation, including intrinsic and extrinsic motivation and engagement with therapeutic goals.

Rehabilitation Potential

The expected capacity to improve function, independence, participation, or quality of life through rehabilitation. It depends on diagnosis, prognosis, cognition, motivation, comorbidity, social support, and environmental resources.

Rehabilitation Unit

A specialized, acute or subacute hospital-based inpatient medical ward designed to provide intensive, coordinated interdisciplinary rehabilitative care to patients recovering from catastrophic neurological, orthopedic, or medical illness (such as acute stroke,

traumatic brain injury, spinal cord injury, major polytrauma, or complex joint arthroplasty). Patients typically undergo at least 3 hours of intensive therapy per day across multiple modalities, supported by 24-hour medical and rehabilitation nursing supervision focused on functional restoration, preventing immobility complications, and safe community reintegration.

Rehydration

Replacement of water and electrolytes lost through dehydration, commonly using oral fluids or intravenous treatment when necessary.

Reifenstein Syndrome

An inherited disorder of androgen action, usually involving partial androgen insensitivity in an individual with a 46,XY chromosome pattern.

Reiki

Reiki is a complementary practice involving light touch or hands near the body; evidence for treating disease is limited and it should not replace effective medical care.

Reinfection

A new episode of infection by the same or a related pathogen after the original infection has resolved. Reinfection is distinct from relapse, in which the original infection persists or returns from an incompletely eradicated focus.

Reinnervation

Restoration of nerve supply to a muscle or tissue after nerve repair, regeneration, or collateral nerve growth.

Reiter'S Syndrome

An older name for reactive arthritis, an inflammatory arthritis occurring after certain infections.

Rejection

An immune response in which the body attacks transplanted tissue or an organ.

Alternate Names:

Transplant rejection

Relapse

Return or worsening of a disease after a period of improvement or remission. The term is used for cancer and many noncancerous disorders.

Relapse-Free Survival

The time from completion of treatment to recurrence of the cancer or death from any cause.

Relapsing Fever

An acute febrile illness caused by *Borrelia* species, characterized by recurrent episodes of fever separated by afebrile intervals.

Relapsing Polychondritis

A systemic autoimmune disorder causing inflammation and destruction of cartilage throughout the body. Airway involvement can cause tracheal and bronchial stenosis. Other features include auricular chondritis, nasal chondritis, ocular inflammation, and arthritis. Treatment is corticosteroids and immunosuppressants.

Relapsing-Remitting Multiple Sclerosis

The most prevalent clinical phenotype of multiple sclerosis, accounting for roughly 85% of initial presentations. Characterized by clearly defined acute inflammatory neurological relapses (attacks or flares) followed by periods of complete or partial recovery (remission) without noticeable clinical disease progression during the intervening remission phases.

Alternate Names:

RRMS; Relapsing-remitting MS

Relate Marriage Guidance

Counseling or relationship support provided by Relate or similar services; it is not a medical diagnosis.

Relative Afferent Pupillary Defect

An asymmetric reduction in the direct pupillary light response caused by unequal afferent input from the retina or optic nerve. It is detected with the

swinging-flashlight test and is also called a Marcus Gunn pupil.

Alternate Names:

a Marcus Gunn pupil.

Relative Biological Effectiveness

Ratio of dose of reference radiation to dose of test radiation for same effect. Alpha particles: RBE 10-20.

Relative Risk

Ratio of disease risk in exposed vs. unexposed. $RR = (a/(a+b)) / (c/(c+d))$. $RR > 1$: increased risk. $RR < 1$: protective.

Relaxation

A reduction in muscle tension, physiologic arousal, or psychological stress; techniques may include breathing, biofeedback, or progressive muscle relaxation.

Relaxation Response

Physiological changes produced by relaxation practices that counter the stress response.

Relaxation Techniques For Stress

Relaxation techniques for stress include slow breathing, progressive muscle relaxation, meditation, guided imagery, and other methods that reduce physical arousal.

Relaxation Therapy

Techniques such as breathing, muscle relaxation, or imagery used to reduce stress, arousal, or symptom burden.

Relaxin

Relaxin is a reproductive hormone that helps remodel connective tissue and may contribute to cervical, pelvic, and vascular changes during pregnancy.

Religion

A system of spiritual beliefs and practices that may influence health decisions, coping, diet, treatment preferences, and end-of-life care.

REM

Rapid eye movement, a sleep stage associated with vivid dreams and intense brain activity.

Alternate Names:

Rapid eye movement sleep

REM Behavior Disorder

A sleep disorder in which a person acts out dreams during REM sleep.

Alternate Names:

REM sleep behavior disorder

REM Rebound

Increased REM sleep after REM deprivation or withdrawal of a REM-suppressing medicine.

REM Sleep

Rapid-eye-movement sleep, a stage associated with vivid dreaming, active brain activity, and skeletal-muscle atonia.

REM Sleep Behavior Disorder

A sleep disorder in which the normal muscle paralysis of REM sleep is reduced or absent, allowing a person to move or vocalize while dreaming.

Alternate Names:

Rapid Eye Movement Sleep Behavior Disorder

Remedy

A treatment or measure intended to relieve a symptom or illness; safety and effectiveness depend on the specific remedy and condition.

Remifentanil

An ultra-short-acting synthetic opioid analgesic metabolized by non-specific plasma and tissue esterases, producing context-sensitive half-time of approximately 3 to 10 minutes regardless of infusion duration. This makes it ideal for total intravenous anesthesia (TIVA) combined with propofol, and for procedures requiring rapid emergence.

Remission

Decrease or disappearance of cancer signs. Complete remission: no detectable disease. Partial re-

mission: significant reduction but not complete.

Remittent Fever

Fever that varies during the day but does not return to normal temperature.

Remitting Seronegative Symmetrical Synovitis With Pitting Edema

RS3PE: an acute-onset, symmetric polyarthritis (usually in elderly) with pitting edema of the hands/feet, negative rheumatoid factor and anti-CCP, and marked response to low-dose corticosteroids.

Remodeling

Bone adaptation to implant stress. Wolff's law: bone remodels along lines of stress.

Removal Technique

A medical procedure, treatment, device, or care topic related to removal technique; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Renal

Renal means relating to the kidneys, which filter blood, regulate fluid and electrolytes, produce hormones, and excrete urine.

Renal Abscess

A localized collection of pus within or around the kidney, usually caused by infection. Diagnosis and treatment may require imaging, antibiotics, and drainage.

Renal Adenoma

A renal adenoma is a usually benign kidney tumor, often discovered incidentally; its size, imaging features, and growth determine whether follow-up is needed.

Renal Agenesis

Congenital absence of one (unilateral, 1 in 1,000) or both (bilateral, 1 in 4,000) kidneys. Unilateral renal agenesis: usually asymptomatic, discovered

incidentally — the solitary kidney undergoes compensatory hypertrophy. The contralateral kidney may have VUR, UPJ obstruction, or ectopia.

Renal And Urological Diseases

Renal and urological diseases affect the kidneys, urinary tract, bladder, urethra, or male reproductive urinary organs.

Renal Anemia

Anemia associated with chronic kidney disease, caused by reduced erythropoietin production and other factors such as iron deficiency, inflammation, and shortened red-cell survival. Evaluation and treatment are individualized; iron replacement and erythropoiesis-stimulating therapy may be considered when appropriate.

Renal Arteriography

Renal arteriography uses contrast X-rays to visualize kidney arteries and may identify narrowing, bleeding, aneurysm, or vascular anatomy during an intervention.

Renal Artery

A paired branch of the abdominal aorta supplying a kidney. It divides into segmental, interlobar, arcuate, and interlobular arteries within the renal parenchyma.

Renal Artery Aneurysm

A focal enlargement of a renal artery, often asymptomatic but capable of causing hypertension, thromboembolism, or rupture. Management depends on size, symptoms, anatomy, pregnancy, and growth, and may involve surveillance, endovascular treatment, or surgery.

Renal Artery Disease

Alternate index label; see *Renal artery stenosis*.

Renal Artery Doppler

Ultrasound assessing renal artery stenosis. Screening for renovascular hypertension.

Renal Artery Embolism

Acute occlusion of renal artery from cardiac emboli typically from atrial fibrillation or mural thrombus. Presents with acute flank pain and hematuria. CT angiography shows filling defect. Treat with anticoagulation and possibly thrombolysis or embolectomy if caught early.

Renal Artery Stenosis

Narrowing of renal artery causing renovascular hypertension. Atherosclerotic most common in elderly at ostium. Fibromuscular dysplasia in young women causing mid-distal stenosis with string-of-beads appearance. Flash pulmonary edema and declining function on ACE inhibitors indicate intervention.

Alternate Names:

Renal Artery Disease Renal Vascular Disease

Renal Biopsy

Alternate index label; see *Kidney biopsy*. It is used selectively for unexplained acute kidney injury, nephrotic syndrome, glomerular hematuria, or transplant dysfunction; bleeding is the main complication.

Renal Calculi

Renal calculi are kidney stones formed from crystallized minerals in urine and may cause colicky flank pain, blood in urine, obstruction, or infection.

Renal Calculi (Kidney Stones)

Crystalline mineral deposits that form in the kidneys or urinary tract. They may cause severe colicky pain, blood in the urine, urinary obstruction, or infection.

Alternate Names:

Kidney Stones

Renal Cancer

Alternate index label; see *Kidney cancer*.

Renal Carcinoma

Renal carcinoma is cancer arising from kidney tissue, most commonly renal cell carcinoma.

Renal Cell Carcinoma

A malignant tumor arising from renal tubular epithelium, most commonly clear-cell carcinoma.

Renal Changes In Pregnancy

Pregnancy increases renal blood flow and glomerular filtration. These changes lower usual serum creatinine values and may increase urinary loss of glucose and amino acids.

Renal Circulation

Blood flow through the kidneys, which supports filtration, oxygen delivery, hormone production, and regulation of fluid and electrolytes.

Renal Clearance

The volume of plasma completely cleared of a substance by the kidneys per unit time, measured in mL/min. Clearance of any substance X is calculated as: $CX = (Ux \times V)/Px$, where Ux is urine concentration, V is urine flow rate, and Px is plasma concentration.

Renal Colic

Severe, paroxysmal flank pain caused by ureteral obstruction, typically by a kidney stone, with radiation to the groin; often the worst pain experienced.

Renal Corpuscle

The filtration unit at the beginning of a nephron, consisting of the glomerulus enclosed by Bowman capsule.

Renal Cortex

Outer kidney portion between capsule and medulla. Granular tissue with glomeruli, convoluted tubules, and cortical collecting ducts. Extends between pyramids as renal columns. Receives approximately 90 percent of renal blood flow; primary filtration site.

Renal Cryptococcosis

Infection of the kidney by *Cryptococcus* species, usually as part of disseminated cryptococcosis in an immunocompromised person.

Renal Cyst

A renal cyst is a fluid-filled sac in or on the kidney, commonly benign but sometimes complex or associated with inherited cystic disease.

Renal Dialysis

Alternate term for dialysis: kidney replacement therapy using hemodialysis or peritoneal dialysis to remove excess fluid and dissolved waste products when kidney function is inadequate.

Renal Diet

Restricted protein, sodium, potassium, phosphorus for kidney disease. Individualized based on stage. Dialysis increases protein requirement.

Renal Diseases

Disorders affecting kidney tissue or function, including glomerular, tubular, vascular, infectious, obstructive, and neoplastic disease.

Renal Dose Adjustment

Modification of a medication dose, dosing interval, or both to account for reduced kidney clearance. The adjustment should use an appropriate estimate of renal function, drug-specific pharmacokinetics, treatment indication, and therapeutic monitoring when available.

Renal Failure

Decline in kidney function leading to accumulation of waste products (azotemia) and electrolyte abnormalities. Acute kidney injury (AKI): rapid decline over hours to days, potentially reversible. Chronic kidney disease (CKD): progressive decline over months to years.

Renal Failure (Kidney Failure)

Alternate index label for Kidney Failure.

Renal Function

The kidneys' ability to filter blood, remove waste, regulate fluids and electrolytes, maintain acid-base balance, and produce or activate hormones.

Renal Glomerulus

A renal glomerulus is a tuft of capillaries within a nephron that filters blood to begin urine formation.

Renal Hamartoma

A renal hamartoma is a benign disorganized overgrowth of mature tissues in the kidney, sometimes used to describe an angiomyolipoma-like lesion.

Renal Hypertension

High blood pressure caused by kidney disease or narrowing of the renal arteries.

Renal Hypertrophy

Renal hypertrophy is enlargement of kidney tissue, often compensating for loss or reduced function of the other kidney but sometimes caused by disease.

Renal Hypoperfusion

Reduced blood flow to the kidneys, causing decreased glomerular filtration and potentially acute kidney injury. Causes include dehydration, blood loss, shock, heart failure, renal artery disease, and severe hypotension. Management requires treating the cause and restoring adequate circulation while avoiding further kidney injury.

Renal Infarction

Renal infarction results from occlusion of the renal artery or its branches, causing coagulative necrosis of the renal parenchyma. The kidney has end-arterial supply with limited collateral circulation, making it susceptible to ischemic injury even from small vessel occlusion.

Renal Insufficiency

Renal insufficiency is reduced kidney function that impairs waste removal, fluid and electrolyte balance, acid handling, or hormone production.

Renal Leukemia Infiltration

Kidney involvement by chronic lymphocytic leukemia or other hematological malignancies causing bilateral renomegaly and renal dysfunction. Leukemic cells infiltrate the interstitium and per-

itubular capillaries. May cause AKI from compression of tubules and vessels or chronic kidney disease.

Renal Lithiasis

Alternate index label; see *Kidney stones*.

Renal Mass

Abnormality in kidney detected on imaging. Solid masses may be renal cell carcinoma. Cystic masses classified by Bosniak system.

Renal Medulla

The inner part of the kidney containing the renal pyramids, loops of Henle, vasa recta, and collecting ducts. Its structure and blood supply help establish the concentration gradient used to concentrate urine.

Renal Necrosis

Renal necrosis is death of kidney tissue caused by severe ischemia, toxins, infection, obstruction, or other injury and can cause acute kidney failure.

Renal Oncocytoma

A renal oncocytoma is a usually benign kidney tumor arising from oncocytic cells; imaging may not always distinguish it reliably from renal cancer.

Renal Osteodystrophy

Bone disease in CKD including osteitis fibrosa, osteomalacia, adynamic bone disease, and osteoporosis. Results from calcium-phosphate imbalance, secondary hyperparathyroidism, and vitamin D deficiency. Manage with phosphate binders, vitamin D analogues, and parathyroidectomy for refractory hyperparathyroidism.

Renal Papillary Necrosis

Renal papillary necrosis is death of the kidney papillae from ischemia, infection, obstruction, diabetes, sickle-cell disease, or analgesic injury and may cause blood or obstruction.

Renal Parenchyma

Renal parenchyma is the functional kidney tissue

containing nephrons and supporting structures that filter blood and produce urine.

Renal Pelvis

The funnel-shaped expansion of the ureter within the kidney, formed by the union of major calyces. It collects urine from the renal papillae and directs it into the ureter.

Renal Pelvis Or Ureter Cancer

Cancer of the renal pelvis or ureter usually arises from urothelial cells lining the urinary tract and may cause blood in the urine.

Renal Perfusion Scintiscan

A nuclear medicine study using a radiotracer to evaluate renal blood flow and relative perfusion of the kidneys.

Renal Pyramids

Cone-shaped structures in the renal medulla that contain tubules and collecting ducts and drain urine toward the renal papillae.

Renal Reabsorption

Movement of water and useful solutes from kidney tubules back into the blood, helping regulate urine composition and body chemistry.

Renal Replacement Therapy

Treatment that substitutes for inadequate kidney excretory and regulatory function. Modalities include intermittent hemodialysis, continuous kidney replacement therapy, peritoneal dialysis, and kidney transplantation.

Renal Replacement Therapy Indications

Urgent indications for dialysis include refractory hyperkalemia, severe metabolic acidosis, toxin exposure by a dialyzable agent, refractory fluid overload or pulmonary edema, and symptomatic uremia. The decision incorporates the patient's trajectory and overall goals of care.

Renal Sarcoma

Renal sarcoma is a rare malignant tumor arising from connective or supporting tissues of the kidney.

Renal Scan

Nuclear medicine imaging using Tc-99m compounds. Evaluates renal function, obstruction, blood flow. MAG3 for function, DTPA for GFR.

Renal Scintigraphy

Renal imaging using Tc-99m compounds. MAG3 (tubular secretion) for functional assessment, DTPA (glomerular filtration) for GFR measurement. Used for obstruction, function, transplant monitoring, renin-mediated hypertension.

Renal Stone

A renal stone is a solid crystal aggregate formed in the kidney that can pass through the urinary tract or obstruct urine flow.

Renal Transplant (Renal Transplantation)

Surgical placement of a functioning donor kidney into a person with advanced kidney failure. It can restore kidney function but requires suitability assessment and long-term immunosuppression.

Alternate Names:

Renal Transplantation

Renal Trauma

Kidney injury from trauma. CT staging guides management. Grades I-V based on injury severity.

Renal Tubular Acidosis

Group of disorders with normal anion gap metabolic acidosis from impaired renal acid excretion or bicarbonate reabsorption. Type 1 distal with impaired H⁺ secretion and urine pH greater than 5.5. Type 2 proximal with impaired bicarbonate reabsorption. Type 4 hyperkalemic from aldosterone deficiency or resistance.

Renal Tubule

The nephron segment that modifies filtrate by reab-

sorbing and secreting water and solutes.

Renal Tubule Acidosis

renal tubule acidosis is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Renal Ultrasound

Noninvasive imaging used to assess kidney size, structure, blood flow, and urinary obstruction. It is particularly useful when obstruction, cystic disease, or structural abnormality is suspected and is often used in the evaluation of acute or chronic kidney disease.

Renal Vascular Disease

Alternate index label; see *Renal artery stenosis*.

Renal Vein

A paired vein draining each kidney into the inferior vena cava. The left renal vein is longer and crosses anterior to the aorta, receiving the left gonadal and suprarenal veins.

Renal Vein Thrombosis

Renal vein thrombosis is a clot in a kidney vein that can cause flank pain, blood or protein in urine, kidney dysfunction, swelling, or pulmonary embolism.

Renal Venogram

Contrast imaging of the renal veins used selectively to evaluate venous anatomy, thrombosis, obstruction, or vascular abnormalities.

Renaut Body

A Renaut body is a specialized cluster of cells in the peripheral nerve endoneurium, associated with pressure sensitivity and sometimes nerve pathology.

Renin

An enzyme released mainly by juxtaglomerular kidney cells that initiates the renin-angiotensin-aldosterone system.

Renin Blood Test

A blood test measuring renin concentration or activity, interpreted with aldosterone, posture, sodium status, medications, and blood pressure to evaluate hypertension or mineralocorticoid disorders.

Renin-Angiotensin System

A hormone and enzyme system that regulates blood pressure, fluid balance, and vascular tone. Renin initiates formation of angiotensin II, which promotes vasoconstriction and aldosterone release; excessive activation contributes to hypertension and heart failure.

Renin-Angiotensin-Aldosterone System

A hormonal system in which renin initiates formation of angiotensin II, promoting vasoconstriction and aldosterone secretion. Aldosterone increases distal sodium reabsorption and potassium and hydrogen-ion secretion; RAAS dysregulation contributes to hypertension, heart failure, and CKD progression.

Renin-Angiotensin-Aldosterone System Physiology

The RAAS regulates blood pressure and fluid electrolyte balance. Renin released from juxtaglomerular cells cleaves angiotensinogen to angiotensin I. Angiotensin converting enzyme converts angiotensin I to angiotensin II which causes vasoconstriction and stimulates aldosterone secretion from the adrenal cortex.

Rennin

An older spelling that may refer to renin or to rennet enzyme; in humans, renin regulates blood pressure and fluid balance.

Renography

Nuclear medicine imaging of kidneys. Evaluates function, obstruction, blood flow.

Renovascular Hypertension

Hypertension due to renal artery stenosis. Diagnosis: Doppler ultrasound, CTA, MRA, renography. Treatment: angioplasty, stenting, surgery.

Renshaw Cell

A nerve cell in the spinal cord that helps limit and regulate the activity of motor neurons.

Reoviridae

A family of nonenveloped, segmented double-stranded RNA viruses that infect humans, animals, plants, or insects.

Reoviridae Infection

An infection caused by a reovirus; illness varies by virus and host and is often mild or asymptomatic in humans.

Rep

Rep is an abbreviation whose meaning depends on context, including repetition in exercise or representative in a professional role.

Repair Of Webbed Fingers Or Toes

A medical procedure, treatment, device, or care topic related to repair of webbed fingers or toes; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Repeat Surgery

Repeat surgery is a second or subsequent operation on the same or related area to treat persistent disease, recurrence, complications, or failure of prior treatment.

Reperfusion

Restoration of blood flow to tissue after an interruption.

Reperfusion Injury

Tissue damage following restoration of blood flow after ischemia. Mechanisms: oxidative stress, calcium overload, inflammation. Examples: myocardial reperfusion injury, stroke reperfusion injury. Mitigation: antioxidants, reperfusion protocols.

Reperfusion Therapy

Treatment that restores circulation to tissue deprived of blood, such as clot-dissolving treatment

or angioplasty.

Repetitive Motion Disorders (RMDs)

Alternate index label for RMDs.

Repetitive Motion Disorders (RMDs)

Alternate index label for Repetitive Motion Disorders (RMDs).

Repetitive Nerve Stimulation

A specialized neurophysiological electrodiagnostic study used to assess neuromuscular junction transmission by delivering supramaximal electrical stimuli to a motor nerve at standardized rates (low frequency: 2–3 Hz; high frequency: 20–50 Hz) while recording compound muscle action potentials (CMAPs) from an innervated muscle. A progressive decremental response > 10% in CMAP amplitude during low-frequency stimulation indicates postsynaptic transmission failure characteristic of myasthenia gravis, whereas a low baseline CMAP with marked incremental facilitation (> 100%) during high-frequency stimulation or following brief maximal isometric exercise indicates presynaptic impairment characteristic of Lambert-Eaton myasthenic syndrome.

Alternate Names:

RNS; Repetitive Stimulation Test

Repetitive Strain Injury

Pain or dysfunction caused by repeated forceful movements, sustained positions, or overuse of muscles, tendons, nerves, or other tissues.

Repetitive Strain Injury

Pain or dysfunction associated with repeated movements or sustained posture, commonly affecting tendons, nerves, and muscles.

Replantation Of An Avulsed Tooth

Replacement of an avulsed permanent tooth into its socket after trauma, followed by flexible stabilization and endodontic and periodontal follow-up when indicated. Prognosis depends strongly on extraoral dry time, storage conditions, root maturity, and contamination.

Replantation Of Digits

Microsurgical replacement of a completely amputated finger or toe, reconnecting bone, tendons, nerves, arteries, and veins when feasible.

Replication Initiation

The point and process at which copying of DNA or another genetic molecule begins.

Replicon

A unit of genetic material that can replicate from one origin, such as a chromosome segment, plasmid, or viral genome.

Repolarization

The return of the membrane potential toward the resting value after depolarization. In neurons and skeletal/cardiac muscle, repolarization is primarily caused by the efflux of potassium through voltage-gated potassium channels and inactivation of sodium channels.

Reportable Diseases

Reportable diseases are illnesses that must be notified to public-health authorities under applicable laws to support surveillance and outbreak control.

Reporter Gene

A gene added or used in research to produce an easily measured signal, such as light or color, showing whether another gene or treatment is active.

Reporting Standards

Standards for structured reporting. ACR guidelines, BI-RADS, LI-RADS, PI-RADS.

Repressed Memory Therapy

A controversial approach aimed at recovering allegedly repressed memories; suggestive techniques can create false memories and require caution.

Repression

Reduction or suppression of gene expression, cell activity, behavior, or a physiologic process.

Reproduction

The biological process by which organisms produce offspring through sexual or asexual mechanisms.

Reproduction Spores

Formation of spores for reproduction, dispersal, survival, or transmission by fungi, plants, algae, and some microorganisms.

Reproductive Behavior

Reproductive behavior includes behaviors involved in courtship, mating, pair bonding, pregnancy, parenting, or sexual response and is influenced by biology and environment.

Reproductive Cells

Cells used for reproduction, mainly sperm in males and eggs in females. Each normally carries half the usual number of chromosomes.

Reproductive History

Reproductive history records pregnancies, births, miscarriages, abortions, menstrual function, fertility, contraception, and related conditions relevant to health assessment.

Reproductive Organs

The organs involved in reproduction. Female: ovaries (produce eggs and hormones), fallopian tubes (transport eggs, site of fertilization), uterus (nurtures the developing fetus), cervix (lower part of uterus, dilates during labor), vagina (passage for sperm and baby), and vulva (external genitalia).

Reproductive Organs, Female

Female reproductive organs include the ovaries, fallopian tubes, uterus, cervix, vagina, and external genitalia, which support hormones, ovulation, menstruation, pregnancy, and birth.

Reproductive Process

A reproductive process is a biological event involved in gamete production, fertilization, implantation, pregnancy, birth, or development of offspring.

Reproductive System

The organs and tissues responsible for producing gametes, reproductive hormones, conception, and in some bodies pregnancy and birth.

Reproductive Technique

A reproductive technique is a medical or laboratory method used to assist conception, preserve fertility, diagnose reproductive disease, or manage pregnancy.

Reproductive Toxicity

Effects on reproduction: infertility, teratogenesis, fetal toxicity, developmental toxicity. Testing required for pharmaceuticals.

Reproductive Years

The period of a woman's life during which she is capable of conceiving, typically from menarche (first menstrual period, average age 12-13) to menopause (final menstrual period, average age 51).

Reprogram

To reprogram a cell means to alter its gene-expression state so it acquires a different developmental potential or function.

Reptiles

Cold-blooded vertebrate animals such as snakes, lizards, turtles, and crocodilians; some can transmit infections or cause bites.

Research

A systematic investigation designed to answer a question or generate reliable knowledge. Medical research may study causes, diagnosis, prevention, treatment, or outcomes and should follow ethical and scientific standards.

Research Activity

Research activity is systematic work that generates or evaluates evidence through observation, experimentation, analysis, or synthesis.

Research Design

Research design is the planned structure of a study,

including its question, participants, interventions, measurements, comparisons, and analysis.

Research Ethics

Principles that protect the rights, safety, welfare, privacy, and informed participation of people or animals involved in research.

Research Fraud And Misconduct

Fabrication, falsification, plagiarism, or other serious breaches of standards in planning, conducting, reporting, or reviewing research.

Research Personnel

Research personnel are people who design, conduct, coordinate, monitor, analyze, or support a research study according to its protocol and ethical requirements.

Research Study

A research study is a planned investigation that collects and analyzes data to answer a scientific or clinical question.

Research, Controlled

Controlled research compares an intervention or exposure with a specified control condition to estimate effects while reducing alternative explanations.

Resectable

Describing a tumor or lesion that can be removed completely by surgery with acceptable risk and an appropriate margin, based on its extent and relationship to vital structures.

Resection

Surgical removal of part or all of an organ, tissue, or lesion.

Alternate Names:

Resection, Intestinal

Resection, Intestinal

Alternate index label; see *Resection* and *Small bowel resection*.

Resectoscope

An endoscopic surgical instrument with a viewing system and working loop used to remove or cauterize tissue, especially during prostate or bladder procedures.

Reserpine

Reserpine depletes neuronal catecholamines and serotonin by inhibiting vesicular monoamine transport; it was formerly used for hypertension and psychosis but is now rarely used because of depression, parkinsonism, and hypotension.

Reserve Volume

The additional amount of air that can be inhaled or exhaled beyond a normal tidal breath.

Reservoir

A human, animal, or environmental habitat in which an infectious agent normally lives, multiplies, and persists. A reservoir may serve as the source from which the agent is transmitted to a susceptible host.

Reservoir Of Infection

A reservoir of infection is a person, animal, environment, or material in which an infectious organism normally lives and from which transmission can occur.

Resident

A resident is a physician or other trainee receiving supervised specialty education after initial professional qualification; the term can also mean a person living in a place.

Residential Mobility

Residential mobility is movement between homes or communities and can affect continuity of care, social support, exposure, and health access.

Residual

Residual means remaining after a process, treatment, measurement, or event, such as residual urine, disease, risk, or volume.

Residual Limb

The portion of a limb remaining after amputation. Care includes edema control, skin inspection, shaping, strengthening, desensitization, contracture prevention, and prosthetic preparation.

Residual Limb Pain

Pain in the remaining portion of a limb after amputation.

Alternate Names:

Stump Pain

Residual Neoplasm

A residual neoplasm is tumor tissue that remains after treatment intended to remove or destroy the original tumor.

Residual Risk

Residual risk is the chance of harm that remains after preventive measures, treatment, screening, or controls have been applied.

Residual Tumor

A residual tumor is cancer or other tumor tissue that remains after surgery, radiation, chemotherapy, or another treatment.

Residual Volume

The amount of air remaining in the lungs after maximal forced expiration.

Resin

A sticky plant or synthetic substance used in medicines, dental materials, adhesives, coatings, and other products.

Resiquimod

An investigational immune-response modifier that activates toll-like receptors 7 and 8 and has been studied for infections, cancer, and skin disease.

Resistance

The ability of a microorganism to withstand a medicine that previously inhibited or killed it.

Alternate Names:

Drug resistance

Resistance Training

Exercise in which muscles contract against external resistance to improve strength, power, or endurance.

Resistant Hypertension

High blood pressure that remains above goal despite appropriate treatment with multiple medicines.

Alternate Names:

Treatment-resistant hypertension

Resistant Starch

Starch that resists digestion in the small intestine and is fermented by gut bacteria in the colon.

Resistin

A signaling protein associated with adipose tissue and inflammation; its human clinical significance remains under study.

Resolution

The ability of an imaging system to distinguish separate structures, or the improvement or disappearance of a disease or symptom.

Resonance

Amplification or characteristic vibration produced when a system is driven at a suitable frequency; used in sound and MRI contexts.

Resorcinol

A phenolic compound used in selected topical dermatologic preparations; concentrated exposure can irritate or poison.

Resorption

The removal and absorption of tissue, especially the breakdown of bone by osteoclasts.

Resorption Atelectasis

Atelectasis caused by complete obstruction of an airway, leading to absorption of trapped air by the pulmonary capillaries. Common causes include mucus plugging, foreign body, tumor, and post-surgical

shallow breathing. The affected area appears as increased density on CXR with volume loss.

Respiration

The processes of breathing, gas exchange, and cellular energy production involving oxygen and carbon dioxide.

Respiratory

Respiratory means relating to breathing, the airways, lungs, gas exchange, or the organs and muscles that move air.

Respiratory Acidosis

Acid-base disturbance due to accumulation of CO₂ from hypoventilation, lowering pH (acidemia). Causes: respiratory depression (opioids, sedatives, CNS disease), airway obstruction, neuromuscular weakness (GBS, myasthenia), chest wall restriction, severe COPD/asthma, and ventilation-perfusion mismatch.

Respiratory Alkalosis

Acid-base disturbance from excessive elimination of CO₂ by hyperventilation, raising pH (alkalemia). Causes: anxiety/hyperventilation, hypoxia, pulmonary embolism, sepsis, fever, pain, salicylate toxicity, liver failure, pregnancy, high altitude. Compensation: renal bicarbonate excretion (days).

Respiratory Arrest

Cessation of effective breathing, requiring immediate assessment and resuscitation.

Respiratory Burst

A respiratory burst is rapid production of reactive oxygen species by activated phagocytes to help destroy engulfed microorganisms.

Respiratory Changes In Pregnancy

The growing uterus elevates the diaphragm, while hormonal changes increase ventilatory drive. Tidal volume and minute ventilation generally increase, while functional residual capacity decreases.

Respiratory Depression

Breathing that is abnormally slow or shallow, causing inadequate ventilation and possible carbon-dioxide retention or low oxygen. Medicines, brain disorders, and metabolic illness can cause it.

Respiratory Disorder

A disease affecting the airways, lungs, pleura, respiratory muscles, or control of breathing and causing impaired ventilation, oxygenation, or gas exchange.

Respiratory Distress

Difficulty breathing due to various causes. Assessment: work of breathing (retractions, nasal flaring, tripod position), oxygen saturation, breath sounds. Causes: asthma, COPD, pneumonia, pulmonary embolism, pneumothorax, anaphylaxis, heart failure.

Respiratory Distress Syndrome

Severe respiratory failure with diffuse lung injury; in adults it is ARDS, while neonatal RDS is surfactant deficiency.

Respiratory Distress Syndrome

A life-threatening acute neonatal respiratory disorder affecting premature infants (primarily < 32 weeks gestation), caused by developmental deficiency of pulmonary surfactant produced by type II alveolar pneumocytes. Surfactant deficiency increases alveolar surface tension, leading to widespread microatelectasis, ventilation-perfusion mismatch, intrapulmonary shunting, and severe hypoxemia. Chest radiography classically reveals diffuse reticulogranular "ground-glass" opacities with prominent air bronchograms. Managed with maternal antenatal corticosteroids for prevention, early nasal CPAP, and exogenous intratracheal surfactant replacement.

Respiratory Drive

The neural output that stimulates respiratory muscles and determines ventilation. It is generated by brainstem networks and modified by chemoreceptor input, mechanoreceptors, wakefulness, metabolic state, medications, and behavioral control.

Respiratory Failure

Inadequate gas exchange resulting in hypoxemia ($\text{PaO}_2 < 60 \text{ mmHg}$), hypercapnia ($\text{PaCO}_2 > 50 \text{ mmHg}$), or both. Type 1 (hypoxemic): V/Q mismatch, shunt, diffusion impairment. Type 2 (hypercapnic): hypoventilation from neuromuscular disease, COPD exacerbation, or opioid overdose.

Respiratory Gating

A radiation-treatment technique that monitors a patient's breathing and delivers the radiation beam during a selected part of the breathing cycle, or pauses it when the target moves outside a predefined window. It helps account for motion in tumors of the chest or upper abdomen and may reduce radiation exposure to nearby healthy tissue.

Respiratory Health

The proper functioning of the lungs and airways, enabling efficient gas exchange and oxygen delivery to the body. Maintaining respiratory health involves avoiding tobacco smoke, minimizing exposure to air pollutants and occupational hazards, and receiving vaccinations against respiratory infections like influenza and pneumococcal disease.

Respiratory Infection

An infection of the upper or lower respiratory tract caused by viruses, bacteria, fungi, or other organisms.

Respiratory Infections

Illnesses caused by pathogens including viruses, bacteria, and fungi that affect the airways and lungs.

Respiratory Insufficiency

Respiratory insufficiency is inadequate gas exchange or ventilatory function causing low oxygen, high carbon dioxide, or both; causes include lung, airway, neuromuscular, and central respiratory disorders.

Respiratory Muscle

A muscle used for breathing, especially the diaphragm and muscles between the ribs. These muscles expand and contract the chest to move air into and out of the lungs.

Respiratory Neoplasm

A respiratory neoplasm is an abnormal growth in the airways or lungs and may be benign or malignant.

Respiratory Paralysis

Respiratory paralysis is failure of the muscles needed for breathing because of nerve, muscle, brainstem, toxin, or spinal-cord dysfunction and is an emergency.

Respiratory Physiology

The study of pulmonary function encompassing ventilation (movement of air), gas exchange (diffusion of O₂ and CO₂ across the alveolar-capillary membrane), transport of gases in blood, and regulation of breathing.

Respiratory Protection

Measures and equipment used to reduce inhalation of harmful dusts, fumes, gases, aerosols, or infectious particles.

Respiratory Quotient

The ratio of carbon dioxide production to oxygen consumption for a particular substrate or metabolic state. It differs from the respiratory exchange ratio measured at the mouth and is used in metabolic and ventilatory physiology.

Respiratory Rate

The number of breaths taken per minute. The expected rate varies with age, activity, temperature, illness, and other factors.

Respiratory Rehabilitation

A program of exercise, education, breathing techniques, and self-management that improves function and quality of life in people with chronic respiratory disease.

Respiratory Syncytial Virus

A respiratory virus that commonly causes bronchiolitis and pneumonia in infants and young children. Infection is usually mild in adults but may be severe in infants, older adults, and people with chronic

heart or lung disease.

Alternate Names:

RSV (Respiratory Syncytial Virus)

Respiratory Syncytial Virus

A respiratory virus that commonly causes bronchiolitis and pneumonia in infants and can cause significant disease in older adults.

Respiratory System

The airways, lungs, respiratory muscles, and related structures that move air and exchange oxygen and carbon dioxide.

Respiratory Therapy

Respiratory therapy includes treatments and breathing support that improve ventilation, oxygenation, airway clearance, or lung function.

Respiratory Tract Infections

Infections affecting any part of the respiratory tract, classified by anatomical location into upper respiratory tract infections (URTIs) and lower respiratory tract infections (LRTIs).

Respiratory Transport

Respiratory transport is movement of oxygen and carbon dioxide between lungs, blood, and tissues, largely through hemoglobin and dissolved gas.

Respiratory Viruses

Viruses that cause respiratory tract infections. Major respiratory viruses include influenza, respiratory syncytial virus (RSV), parainfluenza virus, adenovirus, and human metapneumovirus. SARS-CoV-2 causes COVID-19. Symptoms range from mild upper respiratory illness to severe pneumonia.

Respiratory Viruses And Face Masks

Face masks can reduce spread of respiratory viruses by blocking droplets and some aerosols, especially in crowded or healthcare settings; fit and local guidance matter.

Respirologist

Physician specializing in diseases of the respiratory system, including lung transplantation evaluation and management.

Respirovirus

A genus of paramyxoviruses that includes human parainfluenza viruses, which can cause croup and other respiratory infections.

Respite Care

A medical procedure, treatment, device, or care topic related to respite care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Response Assessment

Evaluation of treatment response. RECIST criteria for solid tumors. PET response criteria for lymphoma.

Response Evaluation Criteria

Standardized rules for judging whether a disease, especially a tumor, has responded to treatment, remained stable, or progressed. RECIST mainly uses tumor measurements on imaging; other systems may use metabolic or blood-based findings.

Responsible Drinking

Responsible drinking means limiting alcohol according to health guidance, avoiding driving or hazardous activities after drinking, and avoiding alcohol when it is unsafe or contraindicated.

Rest

Rest is reduced physical or mental activity used to recover, though excessive inactivity can impair strength and function in some conditions.

Restenosis

Re-narrowing of a blood vessel after it has been opened by angioplasty or another procedure.

Resting Energy Expenditure

The calories the body uses at rest to maintain es-

sential functions.

Alternate Names:

Resting metabolic rate

Resting Membrane Potential

The steady electrical potential difference across the cell membrane of an unstimulated cell, typically -70 mV in neurons, -80 to -90 mV in skeletal and cardiac muscle, and -50 to -60 mV in smooth muscle.

Resting Phase

The resting phase is a period of relative inactivity, such as G0 in the cell cycle or a physiologic interval between active events.

Restless Anal Syndrome

An uncommon term describing uncomfortable anal sensations and an urge to move or relieve the area, analogous to restless legs symptoms.

Restless Leg Syndrome

Restless legs syndrome causes an urge to move the legs with uncomfortable sensations that worsen at rest and in the evening and improve temporarily with movement. Iron deficiency, kidney disease, medicines, pregnancy, and genetics may contribute.

Alternate Names:

Legs Restless (Restless Leg Syndrome) Syndrome
Restless Legs (Restless Leg Syndrome)

Restless Legs

Restless-legs syndrome causes an urge to move the legs with uncomfortable sensations, beginning or worsening at rest and in the evening and improving temporarily with movement; iron deficiency and medicines may contribute.

Restless Legs Syndrome

An urge to move the legs with uncomfortable sensations, worse at rest and in the evening or night.

Restlessness

Restlessness is an uncomfortable need to move or inability to remain still, caused by anxiety, akathisia, restless-legs syndrome, pain, stimulants, withdrawal,

or medical illness.

Restorative Dentistry

Specialty of restoring damaged teeth. Procedures: fillings, inlays, onlays, crowns, bridges, implants. Goals: function, aesthetics, durability.

Restraint

Device or medication limiting movement. Physical restraints: vests, wrist restraints, lap traps. Chemical restraints: antipsychotics, benzodiazepines for behavior control. Should be last resort, time-limited, with monitoring. Alternatives: addressing underlying causes, environmental modification.

Restraint-Related Harm

Physical or psychological injury associated with using a device, medication, or environmental restriction to limit a person's movement. Older adults are at risk of falls, pressure injury, delirium, aspiration, and functional decline; the least restrictive alternatives should be prioritized.

Restriction Enzyme

A bacterial enzyme that cuts DNA at specific nucleotide sequences and is used in molecular biology.

Restriction Mapping

A laboratory method that uses restriction enzymes to cut DNA and infer the locations of specific recognition sites.

Restrictive Cardiomyopathy

A cardiomyopathy characterized by impaired ventricular relaxation and filling due to stiff, noncompliant myocardium, with preserved systolic function and normal or reduced ventricular volumes. Causes include amyloidosis, sarcoidosis, hemochromatosis, endomyocardial fibrosis, and radiation.

Resuscitation

Emergency care used to restore or support breathing and circulation, including airway support, chest compressions, defibrillation, medicines, and treatment of the cause.

Alternate Names:

CPR; revival

Resveratrol

A plant polyphenol found in grapes and some berries; it is studied in nutrition and aging research, but supplement benefits remain uncertain.

Retained Placenta

Failure of the placenta to deliver after birth within the interval expected for safe management. It may result from failure of separation, abnormal placental attachment, or trapping behind a closed cervix and can cause severe bleeding.

Retained Products Of Conception

Fragments of placental or fetal tissue retained in the uterus after delivery, miscarriage, or abortion. Causes: incomplete placental separation, succenturiate lobe, and placenta accreta. Presents: persistent or heavy bleeding, pain, and fever in the postpartum period.

Retainer

A dental appliance worn after orthodontic treatment to help keep teeth in their corrected positions.

Retardation

An outdated or context-dependent term for slowing or delay; modern clinical language should specify the affected function and cause.

Retching

Repeated involuntary effort to vomit without necessarily producing stomach contents.

Retention Of Urine

Inability to empty the bladder completely or at all despite urine production.

Retention Time

The time required for a compound to pass through a chromatographic system from injection to detection. In analytical toxicology, comparison with validated standards helps identify compounds, but retention

time alone is not definitive identification.

Reticular

Net-like or arranged in a network pattern, describing the appearance or distribution of a skin lesion, rash, or vascular pattern.

Reticular Activating System

A network involving the brainstem reticular formation and related structures that helps regulate wakefulness, alertness, attention, and sleep-wake transitions.

Reticular Dermis

The deeper layer of the dermis containing dense connective tissue, collagen, elastin, blood vessels, nerves, glands, and hair follicles.

Reticular Formation

A network of interconnected nuclei in the brainstem (midbrain, pons, medulla) that regulates arousal, consciousness, sleep-wake transitions, and alertness (ascending reticular activating system), as well as muscle tone, posture, cardiovascular and respiratory control (vasomotor and respiratory centers), pain modulation, and attention.

Reticulin

A network-forming type of collagen that supports bone marrow, liver, lymph nodes, and other organs.

Reticulo-Endothelial System

An older term for the mononuclear phagocyte system, including macrophages in blood, tissues, liver, spleen, and lymph nodes.

Reticulocyte

An immature red blood cell that still contains residual ribosomal RNA; its proportion or absolute count reflects marrow red-cell production.

Reticulocyte Count

The number or percentage of immature red blood cells in blood. It reflects recent bone-marrow red-cell production and helps assess anemia, especially

when interpreted with the hemoglobin and clinical context.

Reticulocytes

Immature red blood cells recently released from bone marrow; their proportion helps assess red-cell production.

Reticulocytopenia

An abnormally low reticulocyte count indicating reduced effective red-cell production, which may occur with marrow failure, nutrient deficiency, inflammation, or kidney disease.

Reticulocytosis

Reticulocytosis is an increased number of immature red blood cells in blood, usually indicating stimulated marrow production after blood loss or hemolysis.

Reticuloendothelial System

An older term for the mononuclear phagocyte system, including macrophages and related cells that remove particles and aged cells.

Reticulophagy

Selective autophagic degradation of endoplasmic reticulum, helping maintain cellular quality control.

Reticulosarcoma

Reticulosarcoma is an obsolete term historically used for certain lymphoid or reticular-cell cancers; modern diagnosis uses current lymphoma or sarcoma classifications.

Reticulum

A network-like structure; in anatomy or cell biology it may refer to a tissue network, endoplasmic reticulum, or ruminant stomach compartment.

Retina

The light-sensitive neural tissue lining the back of the eye that converts light into nerve signals.

Retina Disorder

A disease affecting the retina, including vascular, degenerative, inflammatory, infectious, traumatic, inherited, or neoplastic conditions that can impair vision.

Retina Hemorrhage

Bleeding within or beneath the retina caused by vascular disease, diabetes, hypertension, trauma, retinal vein occlusion, inflammation, or other disorders.

Retina, Disorders Of

Diseases affecting the retina, including vascular, degenerative, inflammatory, infectious, inherited, and neoplastic conditions.

Retinal Artery Occlusion

Blockage of a retinal artery causing sudden, usually painless loss of vision. It requires urgent ophthalmic and vascular evaluation because it may indicate a systemic embolic or vascular disorder.

Retinal Cone

A retinal cone is a light-sensitive photoreceptor specialized for color and detailed vision in brighter conditions.

Retinal Damage

Injury or disease affecting the retina, potentially causing blurred vision, field loss, flashes, floaters, or permanent visual impairment.

Retinal Degeneration

Gradual damage or loss of retinal cells, which can cause reduced vision, blind spots, or loss of the visual field.

Retinal Detachment

An eye emergency in which the light-sensitive neurosensory retina separates from the underlying retinal pigment epithelium. The main types are rhegmatogenous detachment caused by a retinal tear, tractional detachment caused by scar tissue pulling on the retina, and exudative detachment caused by

fluid collecting beneath it without a tear. Sudden new floaters, flashes of light, a curtain or shadow in the field of vision, or reduced vision require urgent eye assessment because untreated detachment can cause permanent vision loss.

Retinal Detachment Repair

Surgical or pneumatic treatment to close retinal breaks and reattach the retina. Techniques include vitrectomy, scleral buckling, and pneumatic retinopexy, selected according to the type and location of detachment.

Retinal Diseases

Disorders that damage the retina, the light-sensitive tissue at the back of the eye.

Retinal Dysplasia

Retinal dysplasia is abnormal development and organization of the retina, which can impair vision and occur with congenital, genetic, or prenatal disorders.

Retinal Dystrophy

Retinal dystrophy is progressive degeneration of retinal cells, often inherited, causing night blindness, visual-field loss, and eventual reduced vision.

Retinal Fold

A retinal fold is a crease or ridge in the retina caused by traction, developmental abnormality, detachment, swelling, or another ocular process.

Retinal Ganglion

A retinal ganglion cell that receives signals from retinal neurons and sends visual information through its axon in the optic nerve.

Retinal Hemorrhages

Bleeding within the retina, a hallmark finding in abusive head trauma (shaken baby syndrome). Found on dilated fundoscopic examination, often bilateral and multi-layered. Also seen in severe accidental trauma, bleeding disorders, and increased intracranial pressure.

Retinal Ischemia

Inadequate blood flow to the retina, often caused by a retinal artery occlusion or severe vascular disease. It may cause sudden, painless visual loss and requires emergency ophthalmic and vascular assessment; treatment depends on the cause and time of presentation.

Retinal Layers

The retina consists of ten distinct layers that process visual information through a complex neural circuit.

Retinal Macula

The macula is the central region of the retina responsible for detailed straight-ahead vision, reading, and color discrimination.

Retinal Neoplasm

A retinal neoplasm is an abnormal growth arising in or near the retina, such as retinoblastoma or a metastatic tumor.

Retinal Perforation

A full-thickness hole or tear involving the retina, which can allow fluid under the retina and lead to retinal detachment.

Retinal Pigment

Retinal pigment refers to melanin-containing pigment in the retinal pigment epithelium, which supports photoreceptors and absorbs excess light.

Retinal Prosthesis

Experimental device for blindness. Argus II system: camera to processor to electrode array stimulates retina. Indications: retinitis pigmentosa. Provides light perception, pattern recognition.

Retinal Tear

A full-thickness break in the neurosensory retina, often caused by vitreoretinal traction. It can permit fluid to enter the subretinal space and progress to rhegmatogenous retinal detachment; symptomatic tears are generally treated urgently with laser photocoagulation or cryotherapy.

Retinal Vasculitis

Retinal vasculitis is inflammation of retinal blood vessels, which can cause hemorrhage, leakage, ischemia, vision loss, and systemic inflammatory disease.

Retinal Vein Occlusion

Obstruction of a retinal vein producing retinal hemorrhages, edema, and variable visual loss. Branch and central forms may cause macular edema, retinal ischemia, and neovascular complications.

Retinaldehyde

An aldehyde form of vitamin A involved in the visual cycle and in conversion to retinal pigments or retinoic acid.

Retinitis

Inflammation or infection of the retina, the light-sensitive tissue at the back of the eye. It may cause blurred vision, floaters, flashes, or loss of sight and needs prompt eye assessment.

Retinitis Pigmentosa

A group of inherited retinal disorders in which rod and cone photoreceptors gradually degenerate. Symptoms may include night blindness, narrowing of the visual field, and progressive loss of vision.

Retinoblastoma

A malignant retinal tumor occurring mainly in young children, associated with RB1 gene abnormalities.

Alternate Names:

Cancer, Retinoblastoma

Retinoblastoma Protein

retinoblastoma protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Retinoic Acid

An active metabolite of vitamin A that regulates

gene expression and cell differentiation; it is used in selected dermatologic and cancer treatments.

Retinoid

A vitamin-A-related compound used in some skin treatments and other medical applications.

Retinoids

Vitamin-A-related compounds used in selected dermatologic, ophthalmic, and oncologic treatments.

Retinol

Vitamin A alcohol, important for vision, epithelial health, and immune function.

Retinol (Vitamin A)

A fat-soluble vitamin required for vision, epithelial health, immune function, and normal growth; deficiency may cause night blindness and xerophthalmia.

Alternate Names:

Vitamin A

Retinopathy

Disease or damage of the retina, often due to diabetes, hypertension, prematurity, vascular disease, or inherited disorders.

Retinopathy Of Prematurity

Abnormal vascularization of the retina in premature infants, a leading cause of childhood blindness. Affects infants less than 32 weeks gestation and less than 1500 grams. Stages range from mild (avascular retina) to severe (retinal detachment). Screening began at 31-33 weeks corrected gestational age or 4 weeks chronological age.

Retinopathy, Diabetic

Alternate index label; see *Diabetic retinopathy*.

Retinoschisis

Splitting of the retinal layers, producing a separation between inner and outer retinal tissue. It may be degenerative and peripheral or inherited and juvenile, and can cause visual-field loss, reduced acuity,

or complications resembling retinal detachment.

Retinoscope

An instrument that shines light into the eye to help determine refractive error.

Retirement

Retirement is withdrawal from regular employment or a career; changes in income, activity, social contact, and health coverage can affect wellbeing.

Retortamonas Intestinalis

A usually harmless intestinal protozoan that may be found in stool, especially where sanitation is poor. Its presence does not always cause illness.

Retract (Vascular)

To pull a vessel or tissue away from an operative field using a surgical retractor.

Alternate Names:

Vascular

Retractile Testis

A testis that moves between the scrotum and groin because of a strong reflex but can be gently brought into the scrotum. It should be monitored because it may later become undescended.

Retraction (Self-Retaining)

Holding tissue away from an operative field with a retractor that remains in position without continuous manual support.

Alternate Names:

Self-Retaining

Retractor

An instrument or muscle that pulls a structure backward or holds tissue aside during examination or surgery.

Retractor (Abdominal)

A surgical instrument used to hold back the abdominal wall or organs to improve access and visibility during an operation.

Alternate Names:

Abdominal

Retractor (Hand)

A handheld surgical instrument used to hold tissue or an organ away from the operative field.

Alternate Names:

Hand

Retractor (Surgical)

An instrument used to separate or hold tissues aside during a surgical procedure.

Alternate Names:

Surgical

Retreatment

Retreatment is giving a therapy again after incomplete response, recurrence, treatment interruption, or later progression.

Retrieval

Process of organ or tissue recovery from a donor for transplantation; also called procurement.

Retrobulbar Hemorrhage

Bleeding behind the eyeball within the orbit, often after trauma or surgery, that can rapidly increase orbital pressure and threaten vision.

Retrobulbar Neuritis

Inflammation or demyelination of the optic nerve behind the eyeball, causing painful visual loss and often associated with multiple sclerosis.

Retroesophageal

Retroesophageal means located behind the esophagus, such as a mass, lymph node, vessel, or collection in the posterior mediastinum.

Retrognathia

Retrognathia is backward positioning of the lower jaw relative to the upper jaw and may affect facial structure, bite, airway, or sleep breathing.

Retrograde

Moving backward or against the normal direction,

such as retrograde amnesia or retrograde blood flow.

Retrograde Amnesia

Loss of memory for events that occurred before an injury, illness, or other triggering event, with variable preservation of more remote memories.

Retrograde Cystography

Retrograde cystography uses contrast placed through the urethra to outline the bladder and detect leaks, injury, or structural abnormalities.

Retrograde Degeneration

Damage or breakdown of a nerve cell or nerve fiber that spreads backward toward the cell body after the nerve is injured.

Retrograde Ejaculation

Semen enters bladder instead of exiting urethra. Causes: diabetes, surgery, medications. Dry orgasm. Treatment: medications, sperm retrieval for fertility.

Retrograde Intrarenal Surgery

RIRS is a minimally invasive procedure using a flexible scope passed through the urinary tract to inspect and fragment or remove kidney stones.

Retromingent

Retromingent describes urination directed backward, a term historically applied to unusual urinary stream direction or anatomy.

Retroperitoneal Fibrosis

Chronic fibroinflammatory tissue formation in the retroperitoneum, often encasing the ureters and great vessels. It can cause hydronephrosis, flank pain, reduced kidney function, hypertension, or lower-limb edema and may be idiopathic, immune-mediated, drug-related, or secondary to malignancy.

Retroperitoneal Hemorrhage

Bleeding into the retroperitoneal space, which may result from aortic rupture, anticoagulation therapy, retroperitoneal hematoma following femoral catheterization, trauma, or retroperitoneal neo-

plasms. Presents with flank pain, abdominal distension, hypotension, and anemia.

Retroperitoneal Inflammation

Retroperitoneal inflammation is inflammatory disease in the space behind the peritoneum, caused by infection, pancreatitis, urinary disease, trauma, medicines, or fibrosis.

Retroperitoneal Neoplasm

A retroperitoneal neoplasm is an abnormal growth in the tissue space behind the abdominal lining and may be benign or malignant.

Retroperitoneal Space

The retroperitoneal space is the area behind the peritoneal lining containing the kidneys, adrenal glands, pancreas, parts of the bowel, vessels, nerves, and lymphatics.

Retroperitoneum

The anatomical space posterior to the peritoneum. It contains the kidneys, adrenal glands, ureters, aorta, and inferior vena cava, as well as portions of the duodenum, pancreas, and colon. Some organs are secondarily retroperitoneal after development. It is divided into anterior pararenal, perirenal, and posterior pararenal spaces.

Retropharyngeal Abscess

A collection of pus behind the pharynx, potentially obstructing the airway or spreading into the chest.

Retrospective Studies

Retrospective studies examine existing records or past exposures and outcomes; they are efficient but vulnerable to missing data, bias, and confounding.

Retrospective Study

A study that examines past records or exposures to investigate disease causes or outcomes.

Retrospectoscope

A historical instrument or method for examining past events or records; the term is not a standard

current clinical procedure.

Retrosternal Thyroid Surgery

A medical procedure, treatment, device, or care topic related to retrosternal thyroid surgery; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Retrotracheal

Retrotracheal means located behind the trachea, such as a mass, lymph node, vessel, or collection in the posterior mediastinum.

Retrotransposition

Movement of a genetic element to a new genomic location through an RNA intermediate and reverse transcription.

Retroversion

Backward tilting or turning of an organ, especially a uterus tilted toward the spine.

Retroversion Of The Uterus

A uterine position in which the uterus tilts backward toward the spine; it is often a normal variant but can be associated with pain or endometriosis.

Retroviral Vector

A retroviral vector is a modified virus used to deliver genetic material into cells, especially in research and some gene therapies.

Retroviridae

A family of RNA viruses that use reverse transcriptase to make a DNA copy that integrates into the host genome; HIV is a member.

Retroviridae Infection

An infection caused by a retrovirus, which may persist through genomic integration and cause immune, neurologic, or malignant disease.

Retrovirus

An RNA virus that uses reverse transcriptase to make DNA from its RNA genome, including HIV.

Rett Syndrome

An X-linked dominant neurodevelopmental disorder affecting almost exclusively females, caused by mutations in the MECP2 gene.

Return Of Spontaneous Circulation

Restoration of sustained cardiac mechanical activity after cardiac arrest, evidenced by a palpable pulse or measurable blood pressure and signs of circulation. Post-arrest care addresses oxygenation, ventilation, blood pressure, temperature, neurologic injury, and the cause of arrest.

Reuptake

Reuptake is transport of a released neurotransmitter or other molecule back into the cell that released it or into nearby cells, limiting its signal.

Revalidation

Formal reassessment that a healthcare professional remains fit, competent, and up to date to practice.

Revascularisation

Restoration of blood flow to an organ or limb by a procedure such as angioplasty, stenting, or surgical bypass.

Revascularization

Restoration of blood flow to an area through bypass surgery, angioplasty, or another procedure.

Revascularization Surgery

Revascularization surgery restores blood flow around a blocked or narrowed vessel, such as in coronary artery bypass or limb bypass surgery.

Reverberation Artifact

Ultrasound artifact from multiple reflections. Reduced by changing angle, using tissue harmonic imaging.

Reversal Learning

Reversal learning is the ability to change a learned response when the previously rewarded or correct choice is no longer so.

Reverse Total Shoulder Replacement

A medical procedure, treatment, device, or care topic related to reverse total shoulder replacement; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Reverse Transcriptase

An enzyme that synthesizes DNA using RNA as a template.

Reverse Transcriptase Inhibitor

An antiviral medicine that blocks reverse transcriptase, used in combination treatment for HIV or selected infections.

Reverse Transcription

Synthesis of DNA from an RNA template by the enzyme reverse transcriptase.

Reverse Trendelenburg Position

A supine position in which the head and upper body are elevated above the feet.

Reversible Cell Injury

Cellular dysfunction caused by a harmful stimulus that can resolve when the stimulus is removed. Common changes include cellular swelling, fatty change, membrane blebbing, and reduced oxidative phosphorylation without irreversible membrane or nuclear destruction.

Revision Arthroplasty

Surgical replacement, exchange, or repair of a failed or painful joint prosthesis. Indications include infection, aseptic loosening, instability, periprosthetic fracture, wear, and recurrent dislocation.

Reye Johnson Syndrome (Reye Syndrome)

Alternate index label for Reye Syndrome.

Reye Syndrome

A rare acute encephalopathy with hepatic dysfunction, classically occurring in children recovering from a viral illness. It causes persistent vomiting, altered

mental status, cerebral edema, and elevated liver enzymes without primary inflammatory liver failure.

Alternate Names:

Reye Johnson Syndrome (Reye Syndrome)

Reye'S Syndrome

A rare, potentially fatal illness causing acute brain dysfunction and liver injury, associated particularly with viral illness and aspirin exposure in children.

Reynolds Pentad

Extension of the Charcot triad to include hypotension and altered mental status representing suppurative cholangitis, a severe life-threatening form of ascending cholangitis. Patients present with high fever, rigors, right upper quadrant pain, jaundice, hypotension, and confusion.

Rezafungin

A long-acting echinocandin antifungal medicine that inhibits fungal cell-wall synthesis. It is used for selected invasive candidiasis infections; its long duration permits an intermittent dosing schedule under specialist supervision.

Rgs Proteins

rgs proteins is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Rh Factor

The Rh blood-group antigen system, especially the D antigen.

Rh Incompatibility

An immune reaction that can occur when an Rh-negative pregnant person carries an Rh-positive fetus and forms antibodies against fetal red blood cells. Anti-D immune globulin can prevent sensitization.

Rh Isoimmunization

Maternal alloantibody production against fetal Rh D-positive red blood cells in an Rh D-negative mother, occurring when fetal RBCs enter the ma-

ternal circulation (fetomaternal hemorrhage).

Rhabdoid Tumor

A highly aggressive malignant tumor of infancy, occurring in the kidney (malignant rhabdoid tumor) or brain (atypical teratoid/rhabdoid tumor), characterized by loss of the SMARCB1 (INI1) gene.

Rhabdomyolysis

Rhabdomyolysis is rapid breakdown of skeletal muscle that releases myoglobin, potassium, and other intracellular contents into the bloodstream. Causes include crush injury, extreme exertion, seizures, heat illness, medicines, and metabolic disease. It may cause muscle pain, weakness, dark urine, hyperkalemia, acute kidney injury, arrhythmias, or compartment syndrome. Markedly elevated creatine kinase supports the diagnosis and requires prompt medical assessment.

Rhabdomyolysis And AKI

Severe muscle breakdown releases myoglobin and other intracellular contents, potentially causing acute kidney injury, electrolyte abnormalities, and cardiac arrhythmias. Findings may include muscle pain, weakness, dark urine, and elevated creatine kinase; treatment requires urgent assessment and cause-directed fluid and supportive therapy.

Rhabdomyoma

A benign cardiac tumour composed of striated muscle cells, occurring predominantly in infants and children and strongly associated with tuberous sclerosis. It commonly involves the ventricular myocardium and may regress spontaneously, although large or multiple tumours can cause obstruction or arrhythmias.

Rhabdomyosarcoma

Rhabdomyosarcoma is a malignant tumor showing skeletal-muscle differentiation, occurring most often in children but also in adults.

Rhabdoviridae

A family of bullet-shaped, negative-sense RNA viruses that includes rabies virus and related animal

or plant viruses.

Rhabdoviruses

A family of bullet-shaped RNA viruses including rabies virus and vesicular stomatitis virus.

Rhamnose

Rhamnose is a deoxy sugar found in plants and bacterial cell walls and used in biochemical and microbiologic research.

Rhegmatogenous Retinal Detachment

The most common type of retinal detachment, caused by a full-thickness break or tear in the retina that allows liquefied vitreous humor to enter the subretinal space, separating the neurosensory retina from the underlying retinal pigment epithelium.

Rhesus (Rh) Factor

A system of antigens on the surface of red blood cells, especially the D antigen. A person is Rh-positive when the D antigen is present and Rh-negative when it is absent. Rh incompatibility can affect pregnancy and transfusion safety.

Alternate Names:

Rh

Rhesus Factor

The Rh blood-group antigen, especially the D antigen, whose presence or absence is important in transfusion and pregnancy.

Rhesus Incompatibility

Rhesus incompatibility occurs when an RhD-negative pregnant person forms antibodies against RhD-positive fetal red cells, risking haemolytic disease in a later or affected pregnancy; anti-D immunoglobulin prevents sensitization.

Rhesus System

The Rh blood-group system, a group of inherited red-cell antigens including D, C, c, E, and e. RhD status is commonly reported as positive or negative and is important in transfusion compatibility and prevention of hemolytic disease of the fetus and

newborn.

Rheumatic Chorea

Rheumatic chorea is involuntary, irregular movement caused by an autoimmune reaction after group A streptococcal infection and is a manifestation of acute rheumatic fever.

Rheumatic Disease

A broad group of disorders affecting joints, muscles, bones, connective tissue, or immune function, including arthritis and lupus.

Rheumatic Fever

An inflammatory complication of untreated or inadequately treated group A streptococcal throat infection, affecting joints, heart, skin, or brain.

Rheumatic Heart Disease

Valvular damage resulting from acute rheumatic fever, an autoimmune response to Group A streptococcal pharyngitis. Most commonly affects the mitral valve (stenosis/regurgitation), followed by aortic. Prevention through prompt treatment of streptococcal pharyngitis.

Rheumatism

Pain, stiffness, or discomfort in joints and surrounding soft tissues.

Rheumatoid Arthritis

A chronic autoimmune inflammatory arthritis causing synovitis, pain, stiffness, deformity, and possible systemic disease.

Alternate Names:

RA

Rheumatoid Arthritis Cause Gastrointestinal Issues

Rheumatoid arthritis can affect the gastrointestinal system indirectly through inflammation, associated autoimmune disease, reduced mobility, or medicines such as nonsteroidal anti-inflammatory drugs. Abdominal pain, bleeding, persistent diarrhea, or weight loss needs evaluation rather than

attribution to arthritis alone.

Rheumatoid Arthritis Inflammation Of The Brain

Direct brain inflammation is uncommon in rheumatoid arthritis, but vasculitis, medication effects, infection, stroke risk, or another autoimmune process can cause neurologic symptoms. New confusion, seizure, weakness, severe headache, or vision change requires urgent assessment.

Rheumatoid Factor

An autoantibody, usually of the IgM class, directed against part of IgG. It may support a diagnosis of rheumatoid arthritis but can also occur in other autoimmune diseases, infections, and healthy people.

Rheumatoid Factor

An autoantibody, usually directed against the Fc portion of immunoglobulin G, found in many people with rheumatoid arthritis but also in other autoimmune, infectious, and healthy states.

Rheumatoid Lung Disease

Lung involvement associated with rheumatoid arthritis, including interstitial lung disease, pleural disease, nodules, or airway abnormalities.

Rheumatoid Nodule

A rheumatoid nodule is a firm inflammatory lump under the skin or near a joint in rheumatoid arthritis, often over pressure points.

Rheumatoid Pneumoconiosis

Rheumatoid pneumoconiosis is lung disease involving rheumatoid arthritis and dust-related lung nodules, historically called Caplan syndrome.

Rheumatoid Synovitis

Chronic autoimmune inflammation of synovial tissue in rheumatoid arthritis, producing pain, swelling, pannus formation, cartilage damage, and progressive joint destruction.

Rheumatologist

A physician specializing in inflammatory and autoimmune diseases of joints and connective tissue.

Rheumatology

The medical specialty concerned with inflammatory, autoimmune, and musculoskeletal disorders.

Rhinencephalon

The part of the brain concerned chiefly with the sense of smell and related limbic functions.

Rhinitis

Inflammation of the nasal lining causing congestion, discharge, sneezing, or itching.

Rhinitis, Allergic

Alternate index label; see *Hay fever*.

Rhinitis, Nonallergic

Alternate index label; see *Nonallergic rhinitis*.

Rhinitis, Vasomotor

Alternate index label; see *Nonallergic rhinitis*.

Rhinocephaly

Rhinocephaly is a rare congenital facial-development abnormality with a proboscis-like structure and severe forebrain malformation.

Rhinophyma

Progressive thickening and enlargement of the nose, usually associated with advanced rosacea.

Rhinoplasty

Surgery to reshape or reconstruct the nose for functional or cosmetic reasons.

Rhinorrhea

Excessive watery or mucoid discharge from the nose, commonly caused by infection, allergy, irritants, or changes in temperature.

Rhinorrhoea

Discharge of watery or mucoid fluid from the nose.

Rhinoscopy

Examination of the nasal cavity and nasopharynx using an instrument or endoscope to assess the mucosa, septum, turbinates, masses, bleeding, or obstruction.

Rhinovirus

A genus of non-enveloped, positive-sense RNA viruses in the Picornaviridae family. Rhinoviruses are a common cause of the common cold and spread mainly through respiratory secretions and contaminated hands or surfaces.

Rhinovirus A

A species group of rhinoviruses that commonly causes the common cold and can worsen asthma or trigger wheezing.

Rhinovirus C

A rhinovirus group associated with common-cold symptoms and, in some children, more severe wheezing or lower-respiratory illness.

Rhinoviruses

A group of viruses that commonly cause the common cold and can worsen asthma.

Rhizobiaceae

A family of soil bacteria that form symbiotic nitrogen-fixing relationships with plants; human infection is rare.

Rhizobium

A genus of soil bacteria that forms nitrogen-fixing root nodules on legumes and is not a usual human pathogen.

Rhizomucor

A genus of molds that can cause mucormycosis, especially in people with diabetes, neutropenia, or severe immune suppression.

Rhizomucor Pusillus

A mold that can cause invasive mucormycosis involving the lungs, sinuses, skin, or other organs in severely immunocompromised people.

Rhizopus

A genus of molds that includes important causes of mucormycosis, a rapidly invasive infection of sinuses, lungs, skin, or other tissues.

Rhizopus Oryzae

A mold, also called *Rhizopus arrhizus*, that is a common cause of invasive mucormycosis.

Rhizotomy

Surgical or radiofrequency interruption of selected nerve roots to reduce pain, spasticity, or abnormal reflexes.

Rhizoxin

Rhizoxin is a microtubule-disrupting compound produced by some fungi and studied as an experimental cytotoxic or anticancer agent.

Rhodium

A chemical element used in industrial and dental materials; its compounds can irritate tissues and may cause allergic reactions.

Rhodobacteraceae

A family of photosynthetic or metabolically diverse bacteria found in aquatic and soil environments; human disease is uncommon.

Rhodococcus

A genus of gram-positive bacteria that includes *Rhodococcus equi*, an opportunistic pathogen causing pneumonia mainly in immunocompromised people.

Rhodococcus Equi

A gram-positive bacterium that can cause cavitary pneumonia and disseminated infection, especially in people with advanced immune suppression.

Rhodopseudomonas

A genus of photosynthetic or metabolically versatile environmental bacteria rarely associated with human infection.

Rhodopsin

A light-sensitive protein in rod cells of the retina that enables vision in dim light.

Rhodospirillaceae

A family of metabolically diverse bacteria found in soil and water; some species carry out photosynthesis or nitrogen fixation.

Rhodospirillales

An order of diverse bacteria that includes Rhodospirillaceae and related environmental organisms.

Rhodospirillum

A genus of spiral-shaped aquatic bacteria capable of photosynthesis or nitrogen fixation; human infection is rare.

Rhodotorula Glutinis

A pigmented yeast found in the environment that can rarely cause bloodstream or catheter-related infection.

RhoGAM

Rh immune globulin containing anti-D antibodies, used to prevent Rh isoimmunization in Rh-negative mothers. Administered intramuscularly at 28 weeks gestation and within 72 hours after delivery of an Rh-positive infant. Also given after amniocentesis, chorionic villus sampling, miscarriage, ectopic pregnancy, or abdominal trauma.

Rhombencephalon

The rhombencephalon is the embryonic hindbrain, which develops into the pons, medulla, cerebellum, and related structures.

Rhonchi

Low-pitched continuous respiratory sounds caused by airflow through narrowed or mucus-filled large

airways.

Rhubarb Leaves Poisoning

Rhubarb leaves poisoning involves toxic or environmental exposure to rhubarb leaves poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Rhythm Method

A fertility-awareness method that estimates fertile days from menstrual-cycle timing to avoid or achieve pregnancy.

Rhytidectomy

Cosmetic surgery that removes excess facial skin and tightens supporting tissues.

Alternate Names:

Facelift

Rib

One of 12 paired, curved bones forming the thoracic cage, protecting the heart, lungs, and great vessels. True ribs (1–7) attach directly to the sternum via costal cartilage. False ribs (8–10) attach indirectly to the sternum via the costal cartilage of rib 7. Floating ribs (11–12) have no anterior attachment.

Alternate Names:

Ribs

Rib Cage

The rib cage consists of ribs, sternum, thoracic vertebrae, muscles, and connective tissues that protect chest organs and assist breathing.

Rib Fracture

A break in one or more ribs, usually causing localized chest pain worsened by breathing, coughing, or movement and sometimes associated with injury to underlying organs.

Ribavirin

An antiviral medicine used in selected viral infections, usually in combination and under specialist supervision.

Ribcage Pain

Ribcage pain may arise from muscles, ribs, joints, lungs, heart, or other organs; sudden severe pain or breathing difficulty requires urgent assessment.

Riboflavin

Vitamin B2, a precursor of FAD and FMN needed for cellular energy metabolism.

Riboflavin (Vitamin B2)

A water-soluble vitamin that forms the coenzymes FAD and FMN. These cofactors participate in oxidation-reduction reactions, including electron transfer, fatty-acid oxidation, and energy metabolism.

Alternate Names:

Vitamin B2

Riboflavin Assay

A laboratory test that measures riboflavin, or vitamin B2, in blood or other samples to assess vitamin status.

Riboflavin Deficiency

Deficiency of vitamin B2, which can cause inflammation or fissuring of the mouth and lips, sore throat, dermatitis, anemia, and other mucosal or systemic findings.

Ribonuclease

An enzyme that breaks down RNA into smaller fragments or nucleotides.

Ribonuclease H

An enzyme that degrades the RNA strand of an RNA-DNA hybrid, important in DNA replication and reverse transcription.

Ribonuclease Iii

An enzyme that cuts double-stranded RNA and helps process regulatory small RNAs.

Ribonucleic Acid

RNA, a nucleic acid involved in genetic information transfer, protein synthesis, regulation, and some

catalytic functions.

Ribonucleic Acid

RNA is a nucleic acid that carries genetic instructions, helps make proteins, and regulates cell activity; some viruses use RNA as their genetic material.

Ribonucleoprotein

ribonucleoprotein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Ribonucleoprotein

A complex made of RNA and one or more proteins, involved in RNA processing, transport, translation, or regulation.

Ribonucleoside

A molecule made of ribose sugar linked to a nitrogenous base, such as adenosine, guanosine, cytidine, or uridine.

Ribonucleotide Reductase

Ribonucleotide reductase converts ribonucleotides to deoxyribonucleotides needed for DNA synthesis and repair.

Ribonucleotides

Nucleotides containing ribose sugar and RNA bases, serving as RNA building blocks and cellular energy or signaling molecules.

Ribophagy

Ribophagy is selective autophagic degradation of ribosomes, allowing cells to recycle ribosomal components when nutrients or growth conditions change.

Ribose

A five-carbon sugar found in RNA, ATP, and many other biologically important molecules.

Ribosomal Protein

ribosomal protein is a protein or protein-related

molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Ribosomal RNA

RNA component of ribosomes, catalyzing peptide bond formation (peptidyl transferase activity). Eukaryotic ribosome: 60S (28S, 5.8S, 5S rRNAs + proteins) + 40S (18S rRNA + proteins) = 80S. Prokaryotic: 50S (23S, 5S rRNAs) + 30S (16S rRNA) = 70S. rRNA genes are highly conserved, used in phylogenetics.

Ribosome

A cellular structure that translates messenger RNA into protein.

Ribosome Subunit

One of the RNA-protein components of a ribosome; the small and large subunits join to translate messenger RNA into protein.

Ribostamycin

Ribostamycin is an aminoglycoside antibiotic used mainly in research or selected settings; it can cause kidney and hearing toxicity.

Ribozyme

A catalytic ribonucleic acid molecule capable of facilitating, speeding up, or executing specific biochemical reactions in the absence of protein enzymes, functioning analogously to proteinaceous biocatalysts. Discovered by Thomas Cech and Sidney Altman, ribozymes operate through complex RNA tertiary folding that coordinates catalytic metal divalent cations (Mg^{2+}). Naturally occurring examples include the large ribosomal subunit (where 28S/23S ribosomal RNA acts as a peptidyl transferase synthesizing peptide bonds during protein translation), self-splicing group I and II introns, and small self-cleaving ribozymes (hammerhead and hairpin ribozymes); engineered ribozymes are investigated in molecular medicine and gene therapy to target and degrade disease-specific pathogenic messenger RNAs.

Richter's Syndrome

Transformation of chronic lymphocytic leukemia or small lymphocytic lymphoma into an aggressive lymphoma, most often diffuse large B-cell lymphoma.

Ricin

Ricin is a highly toxic plant protein that blocks protein synthesis; ingestion, inhalation, or injection can cause severe organ injury and death.

Rickets

Defective mineralization of growing bone, usually due to vitamin D, calcium, or phosphate deficiency.

Alternate Names:

Osteomalacia (Rickets)

Rickettsia

A group of small intracellular bacteria transmitted mainly by arthropods and causing diseases such as typhus and spotted fevers.

Rickettsia Felis

Rickettsia felis is a flea-associated bacterium that can cause a spotted-fever-like illness in humans.

Rickettsia Infections

Rickettsial infections are illnesses caused by intracellular bacteria spread mainly by ticks, fleas, lice, or mites and often causing fever and rash.

Rickettsia Japonica

Rickettsia japonica is a tick-borne bacterium associated with Japanese spotted fever.

Rickettsia Prowazekii

Rickettsia prowazekii causes epidemic typhus and is transmitted mainly by body lice.

Rickettsia Rickettsii

Rickettsia rickettsii causes Rocky Mountain spotted fever and is transmitted by infected ticks.

Rickettsia Typhi

Rickettsia typhi causes murine typhus and is transmitted mainly by fleas.

Rickettsiaceae

Rickettsiaceae is a family of small intracellular bacteria that includes *Rickettsia* and related tick-, flea-, louse-, or mite-borne pathogens.

Rickettsialpox

Rickettsialpox is a mite-borne infection caused by *Rickettsia akari*, producing an inoculation eschar followed by fever and a vesicular rash.

Ridaforolimus

Ridaforolimus is an investigational mTOR inhibitor studied for anticancer effects by reducing growth and proliferation signaling.

Ridge Preservation

Socket grafting after extraction to maintain bone volume. Reduces ridge resorption.

Ridged Nail

A ridged nail has longitudinal or transverse grooves in its surface, which may result from aging, trauma, inflammation, nutritional problems, or systemic disease.

Riedel's Thyroiditis

Riedel's thyroiditis is rare fibrosing inflammation that makes the thyroid hard and can extend into nearby tissues, causing compression or hypothyroidism.

Rieger Syndrome

A genetic disorder affecting development of the eyes, teeth, and sometimes the umbilicus or other organs; it is often related to PITX2 or FOXC1 variants.

Rifabutin

A rifamycin antibiotic used mainly for selected mycobacterial infections and tuberculosis regimens; it has important drug interactions and can discolor body fluids.

Rifampicin

A rifamycin antibiotic used in tuberculosis and selected other bacterial infections, usually in combi-

nation to prevent resistance.

Rifampin

Rifampin is a rifamycin antibiotic that inhibits bacterial DNA-dependent RNA polymerase and is a key component of tuberculosis treatment; it causes orange body fluids and has many drug interactions and hepatotoxicity risk.

Rifamycin

Rifamycin is an antibiotic that inhibits bacterial RNA polymerase; related rifamycin medicines are used for tuberculosis and other infections.

Rifaximin

Rifaximin is a minimally absorbed rifamycin antibiotic used for selected intestinal infections, prevention of recurrent hepatic encephalopathy, and some diarrhoeal syndromes; indication and resistance patterns guide use.

Rift Valley Fever

A mosquito-borne viral disease affecting animals and humans, usually causing fever but sometimes severe eye, brain, or hemorrhagic disease.

Right Atrium

Receives deoxygenated blood from superior vena cava, inferior vena cava, and coronary sinus. Smooth posterior part (sinus venosus) and rough anterior auricle with pectinate muscles. The fossa ovalis is the fetal foramen ovale remnant. The SA node pacemaker is near the superior vena cava opening.

Right Bundle Branch

A continuation of the bundle of His that travels along the right side of the interventricular septum to the right ventricle. It supplies the right ventricular myocardium and Purkinje fibers. Right bundle branch block (RBBB) occurs when this branch is damaged, causing delayed right ventricular activation.

Right Coronary Artery

Arises from the right aortic sinus and travels in the

right atrioventricular groove. It supplies the right atrium, right ventricle, SA node (60% of individuals), AV node (85% of individuals), and the inferior wall of the left ventricle.

Right Coronary Artery Occlusion

Blockage of the right coronary artery, reducing blood flow to areas of the heart it supplies and potentially causing myocardial infarction or rhythm disturbances.

Right Heart Failure

A syndrome in which the right ventricle cannot adequately deliver blood to the pulmonary circulation, usually causing elevated systemic venous pressure and congestion. It may occur with left-sided heart failure or independently. Causes include pulmonary hypertension, right-ventricular infarction, pulmonary embolism, cardiomyopathy, and constrictive pericarditis. Signs may include elevated jugular venous pressure, peripheral edema, hepatomegaly, ascites, and weight gain.

Right Heart Ventricular Angiography

Right-heart ventricular angiography uses injected contrast and X-ray imaging to show the right ventricle and its blood flow during selected cardiac evaluations.

Right Hypochondriac Region

One of nine abdominal regions in the upper right abdomen, bounded medially by the right midclavicular line and superiorly by the right costal margin. Contains the cecum, appendix, ascending colon, and inferior right liver lobe. Pain here may indicate appendicitis (McBurney's point), cecal pathology, or hepatic disease.

Right Iliac Region

Lower right abdomen containing the cecum, appendix, and terminal ileum. McBurney's point (junction of lateral and middle thirds from umbilicus to ASIS) is critical for appendicitis diagnosis. Also significant for evaluating inguinal and femoral hernias, and the right ureter's course.

Right Lymphatic Duct

Short lymphatic vessel (approximately 1.5 cm) draining lymph from the right upper quadrant: right arm, right side of the head and neck, and right thorax. Formed by the junction of right jugular, subclavian, and bronchomediastinal trunks, emptying into the right venous angle (junction of right internal jugular and subclavian veins).

Right Sixth Cranial Nerve Palsy

Weakness or paralysis of the right abducens nerve (CN VI), causing inability to abduct the right eye and resulting in horizontal diplopia worse at distance and on right gaze.

Right Ureterovesical Calculus

A stone lodged at the junction of the right ureter and bladder, causing flank pain, hematuria, and urinary urgency or frequency. May require endoscopic or lithotripsy intervention.

Right Ventricle

Receives deoxygenated blood from the right atrium through the tricuspid valve, pumping into the pulmonary trunk via the pulmonary valve. Thinner walls (3-5 mm) than the left ventricle due to low pulmonary resistance.

Righting Reflex

The righting reflex is an automatic response that restores head and body orientation when balance or position changes.

Rigid And Flexible Sigmoidoscopy

A sigmoidoscopy examines the rectum and lower colon with a flexible or rigid instrument. It can evaluate bleeding, pain, altered bowel habits, inflammation, polyps, or tumors; preparation, reach, comfort, and biopsy capability differ by technique.

Rigidity

Abnormally increased resistance to passive movement, classically seen in Parkinson disease or meningeal irritation.

Rigor

Marked stiffness or rigidity; rigor mortis is post-mortem muscle stiffening, while rigor may also mean a severe chill.

Rigor Mortis

Post-mortem stiffening of body muscles resulting from loss of ATP synthesis following death. Without ATP, actin and myosin filaments remain permanently cross-linked in a rigid state.

Rigosertib Sodium

Rigosertib sodium is an investigational anticancer agent studied for effects on cell-cycle regulation and survival signaling.

Rilotumumab

An investigational monoclonal antibody targeting hepatocyte growth factor, studied as an anticancer treatment.

Rilpivirine

Rilpivirine is a nonnucleoside reverse-transcriptase inhibitor used with other medicines to treat HIV infection.

Riluzole

A medicine used to modestly slow disease progression in amyotrophic lateral sclerosis and to treat selected forms of spinal muscular atrophy.

Rimantadine

An antiviral medicine formerly used against some influenza A strains; resistance and limited effectiveness have greatly reduced its role.

Rimmed Vacuoles

A pathognomonic histopathological feature of muscle biopsies in sporadic Inclusion Body Myositis (sIBM) and GNE myopathy (Nonaka myopathy), visualized on hematoxylin and eosin (H&E) and modified Gömöri trichrome staining. Consists of small, autophagic cytoplasmic or subsarcolemmal vacuoles that are lined and bordered by dense, basophilic or reddish granular material and membranous de-

bris; electron microscopy reveals tubulofilamentous inclusions measuring 15–18 nm in diameter, and immunohistochemistry demonstrates pathological accumulation of amyloid- β , hyperphosphorylated tau, ubiquitin, and p62 aggregates.

Alternate Names:

Autophagic Rimmed Vacuoles

Ring Block

Local anesthetic injected around the base of a finger or toe to numb the entire digit.

Ring Chromosome

A chromosome whose two ends have joined to form a ring, often with loss or disruption of genetic material. It may cause developmental or other health problems, depending on the chromosome and changes involved.

Ring Schatzki (Schatzki Ring)

Alternate index label for Schatzki Ring.

Ring Vaccination

A public-health strategy in which close contacts and contacts of contacts around an identified case are vaccinated to create a protective ring and limit transmission.

Ringling In The Ear

Alternate index label; see *Tinnitus*.

Ringling In The Ears

Perception of ringing, buzzing, hissing, or other sound without an external source, medically called tinnitus. It may be associated with hearing loss, loud-noise exposure, earwax, ear infection, medicines, or jaw disorders. Sudden hearing loss, one-sided symptoms, or pulsatile ringing requires medical evaluation.

Alternate Names:

Tinnitus (Ringling In The Ears)

Ringling In The Ears (Tinnitus (Ringling In The Ears))

Alternate index label for Tinnitus (Ringling in the

Ears).

Ringworm

A contagious superficial fungal infection of skin, hair, or nails; it is not caused by a worm.

Alternate Names:

Scalp And Body (Ringworm)

Ringworm (Tinea)

Ringworm is a superficial dermatophyte fungal infection of skin, scalp, or nails that produces scaly annular lesions or hair loss; treatment depends on the site and may require topical or oral antifungals.

Ringworm Of The Body

A contagious fungal infection causing an itchy, ring-shaped rash on the skin.

Ringworm Of The Foot

Alternate index label; see *Athlete's foot*.

Ringworm Of The Scalp

A fungal infection of the scalp and hair that can cause scaling, broken hairs, and hair loss.

Rinne Test

The Rinne test is a screening test that compares air conduction and bone conduction hearing using a vibrating tuning fork (typically 512 Hz) to help differentiate between conductive and sensorineural hearing loss.

Rinnes Test

Rinne's test compares air and bone conduction with a tuning fork to help assess conductive hearing loss.

RIPE Therapy

Standard 4-drug regimen for active TB: Rifampin, Isoniazid, Pyrazinamide, Ethambutol. Intensive phase 2 months, continuation phase 4 months (total 6 months). Pyridoxine prevents isoniazid-induced neuropathy.

Rippling Muscle Disease

A rare, benign myopathy characterized by

mechanically-induced muscle contractions that spread across the muscle as a visible wave (rippling), typically triggered by stretch, percussion, or movement.

Risedronate Sodium

The sodium salt of risedronate, a bisphosphonate used to prevent or treat osteoporosis and other disorders of excessive bone resorption.

Risk

Risk is the probability of an unwanted event or outcome, considered together with its severity and the circumstances that influence it.

Risk Adjustment

Risk adjustment accounts for differences in baseline patient characteristics so outcomes or payments can be compared more fairly across groups.

Risk Factor

A characteristic, exposure, or behavior associated with increased probability of disease or another outcome.

Risk Management

Identification, assessment, reduction, and monitoring of hazards that could cause harm.

Risk Register

A documented list of identified risks, their likelihood, impact, controls, owners, and review status.

Risk-Taking

Risk-taking is behavior involving deliberate or inadvertent exposure to possible harm, influenced by perception, reward, development, mental health, and circumstances.

Risks Of Hip And Knee Replacement

A medical procedure, treatment, device, or care topic related to risks of hip and knee replacement; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Risks Of Tobacco

Tobacco use increases risks of cancer, heart and blood-vessel disease, stroke, lung disease, pregnancy complications, addiction, and harm from second-hand smoke.

Risks Of Underage Drinking

Alcohol use by minors can impair brain development, judgment, learning, safety, and mental health and increases risks of injury, dependence, and unsafe sexual or substance-related behavior.

Risky Drinking

Alcohol use that increases the likelihood of health, safety, or social consequences.

Alternate Names:

Hazardous drinking

Risperidone

Risperidone is an atypical antipsychotic that blocks dopamine and serotonin receptors and treats schizophrenia, bipolar disorder, and selected severe behavioral symptoms; hyperprolactinaemia, metabolic effects, movement disorders, and sedation may occur.

Ristocetin

Ristocetin is an antibiotic used in laboratory testing of platelet aggregation and von Willebrand factor, not as a routine modern treatment.

Ristocetin-Induced Platelet Aggregation

A platelet-function assay that evaluates platelet agglutination in the presence of ristocetin, which depends on von Willebrand factor and platelet glycoprotein Ib.

Risus Sardonicus

A fixed, sardonic facial spasm classically associated with tetanus or strychnine poisoning.

Ritodrine

A beta-2 agonist formerly used as a tocolytic to delay premature labor; it has limited current use because of maternal adverse effects.

Ritonavir

Ritonavir is an HIV protease inhibitor mainly used at low doses to boost levels of other antiviral medicines by slowing their breakdown.

Ritual

A ritual is a repeated, structured behavior or ceremony; repetitive rituals may also occur as compulsions in obsessive-compulsive disorder.

Rituximab

Rituximab is a monoclonal antibody against CD20 that depletes B cells and is used for B-cell malignancies and selected autoimmune diseases; infusion reactions, infections, hepatitis-B reactivation, and rare PML are important risks.

Rivaroxaban

Rivaroxaban is an oral direct factor Xa inhibitor used to prevent or treat venous thromboembolism and reduce stroke risk in selected atrial fibrillation; bleeding and renal-function-dependent dosing are important considerations.

Rivastigmine

A cholinesterase inhibitor used for mild-to-moderate Alzheimer disease and Parkinson disease dementia.

River Blindness

Onchocerciasis, a parasitic infection caused by *Onchocerca volvulus* and transmitted by blackflies. It can cause severe itching, skin disease, and visual impairment.

RLS

Restless legs syndrome, an urge to move the legs with uncomfortable sensations, especially at night.

Alternate Names:

Restless legs syndrome

RMDs (Repetitive Motion Disorders (RMDs))

Alternate index label for Repetitive Motion Disorders (RMDs).

RNA

Ribonucleic acid, a nucleic acid involved in gene expression and regulation.

RNA Binding

The attachment of a protein or other molecule to RNA, affecting RNA stability, transport, folding, processing, or translation.

RNA Biosynthesis

The cellular production of RNA from a DNA template or, for some viruses, from an RNA template.

RNA Degradation

Enzymatic breakdown of RNA, which controls RNA lifespan, removes damaged transcripts, and recycles nucleotides.

RNA Folding

The process by which an RNA strand forms secondary and three-dimensional structures that influence its function.

RNA Helicase

An enzyme that uses energy to unwind or remodel RNA structures or RNA-protein complexes.

RNA Interference

A gene-silencing process in which small RNAs guide proteins to degrade or block specific messenger RNA molecules.

RNA Splicing

Removal of introns and joining of exons from a precursor RNA to produce mature messenger RNA or other functional RNA.

RNA Transport

Movement of RNA within a cell or between cells, often mediated by transport proteins and required for translation or signaling.

RNA Virus

A virus whose genetic material is RNA; its replication often involves an RNA-dependent polymerase

and may have a high mutation rate.

RNase P

An RNA-protein enzyme complex that processes precursor transfer RNA by removing its extra 5-prime sequence.

Road Rage

Alternate index label; see *Intermittent explosive disorder*.

Remote Surgery

Surgery performed when the surgeon is physically separated from the patient and controls robotic instruments through a telecommunications system. It may also include remote surgical assistance or guidance, with a qualified local team available to manage the patient and respond to emergencies.

Alternate Names:

Telesurgery Telepresence Surgery

Robinow Syndrome

A rare inherited skeletal-development disorder with distinctive facial features, short stature, vertebral or rib abnormalities, and genital differences.

Robot-Assisted Rehabilitation

Robotic devices for repetitive task training. Upper extremity, lower extremity, gait training. Objective measurement, high repetition.

Robotic Hysterectomy

Hysterectomy performed through minimally invasive abdominal access using a surgeon-controlled robotic platform. The extent of uterine, cervical, tubal, and ovarian removal depends on the indication and operative plan.

Robotic Surgery

A surgical technique in which a surgeon controls a computer-assisted system that moves a camera and small instruments. It is usually performed through small incisions and may allow precise movements, but the system does not operate independently.

Alternate Names:

Robotic-Assisted Thoracoscopic Surgery

An advanced minimally invasive thoracic surgical platform that uses a multi-arm robotic console system to perform complex pulmonary and mediastinal operations. The surgeon controls wristed instruments offering 7 degrees of freedom, tremor filtration, and stereoscopic three-dimensional high-definition visualization, which facilitates precise mediastinal and hilar lymph node dissection, segmentectomies, and sleeve resections through small intercostal port incisions without rib spreading.

Alternate Names:

RATS; Robotic Thoracic Surgery; Robotic Lobectomy

Robust

Robust means strong, resilient, or relatively insensitive to variation; in research, a robust result remains stable under reasonable analytic changes.

Rod

A rod is a long cylindrical structure; in the retina, a rod photoreceptor supports dim-light and peripheral vision.

Rod Photoreceptor

rod photoreceptor is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Rodent Ulcer

An older name for basal cell carcinoma, a common locally invasive skin cancer.

Rods

Retinal photoreceptor cells that provide vision in dim light and contribute to peripheral vision but do not detect color.

Roentgenology

Roentgenology is the historical term for the use and

study of X-rays in medical diagnosis and imaging.

Rofecoxib

Rofecoxib is a selective COX-2 anti-inflammatory drug withdrawn in many countries because of increased cardiovascular risk.

Romberg Sign

Loss of balance when standing with the feet together and the eyes closed, suggesting impaired proprioception or vestibular function.

Romberg Test

The Romberg test is a clinical neurological test used to assess the integrity of the dorsal column-medial lemniscus pathway (proprioception) and the cerebellum in maintaining balance. The test is performed by asking the patient to stand with feet together and eyes open, and then to close the eyes.

Romberg's Sign

Increased unsteadiness when a person stands with the feet together and closes the eyes, suggesting impaired proprioception or vestibular function.

Rombergism

Unsteadiness or falling when standing with feet together and eyes closed, indicating impaired proprioception or vestibular function.

Romidepsin

A histone deacetylase inhibitor used for selected T-cell lymphomas; it can cause cytopenias, infection risk, and ECG-related effects.

Romiplostim

A thrombopoietin-receptor agonist that stimulates platelet production and is used mainly for chronic immune thrombocytopenia.

Rongeur

A strong, jawed surgical instrument used to bite and remove small pieces of bone or other hard tissue.

Ronnel

Ronnel is an organophosphate insecticide that can inhibit acetylcholinesterase and cause cholinergic toxicity after exposure.

Root (Dental Root)

The anatomical portion of a human tooth situated apical to the cemento-enamel junction, embedded and anchored firmly into the bony alveolar socket of the maxilla or mandible by the fibrous periodontal ligament. Composed internally of dentin enclosing the root canal space (which contains the neurovascular dental pulp) and covered externally by a specialized calcified avascular layer of cementum. Teeth possess one root (incisors, canines), two roots (mandibular molars), or three roots (maxillary molars), each terminating at the apical foramen where neurovascular bundles enter the pulp; susceptible to root resorption, radicular cysts, periapical abscesses, and vertical root fractures.

Root Canal

The channel inside a tooth root containing the pulp and its nerves and blood vessels.

Root Canal Therapy

Dental treatment in which infected or inflamed pulp is removed from a tooth, the canal is cleaned and sealed, and the tooth is restored.

Root Caries

Caries on exposed root surfaces. Common in elderly with recession. Fluoride effective.

Root Filling

Dental treatment in which the cleaned root canal is sealed to prevent reinfection.

Root Fracture

Vertical or horizontal fracture of root. Prognosis depends on location and direction. Vertical root fractures typically require extraction.

Rooting Reflex

A primitive reflex present from birth to 3-4 months,

triggered by stroking the infant's cheek or corner of the mouth. The infant turns toward the stimulus and opens the mouth, searching for the nipple. Facilitates breastfeeding. Absence may indicate neurologic impairment. Disappears as voluntary feeding develops.

Ropinirole

A non-ergot dopamine agonist (D2/D3) used for Parkinson disease and restless legs syndrome. Adverse effects: nausea, dizziness, somnolence (sudden sleep attacks), orthostatic hypotension, impulse control disorders (gambling, hypersexuality), hallucinations, and leg edema. Extended-release for once-daily Parkinson dosing.

Ropivacaine

A long-acting local anesthetic used for regional nerve blocks and epidural anesthesia; excessive blood levels can cause neurologic or cardiac toxicity.

Ropivacaine Hydrochloride

The hydrochloride salt of ropivacaine, a long-acting local anesthetic used for regional and epidural anesthesia.

Rorschach Test

A projective psychological test using inkblots; its diagnostic validity is limited and interpretation requires specialist training.

Rosacea

A chronic inflammatory facial skin disorder causing flushing, persistent redness, visible vessels, papules, pustules, or ocular symptoms.

Rose Bengal

Rose bengal is a dye used in eye-surface testing and laboratory or diagnostic procedures; it highlights damaged or poorly protected conjunctival cells.

Roseola

Roseola infantum is a common viral illness, usually caused by human herpesvirus 6, with several days of high fever followed by a pink trunk rash as the

fever resolves; febrile seizures may occur.

Alternate Names:

Sixth Disease (Roseola)

Roseola Infantum

A common childhood viral illness, usually caused by human herpesvirus 6, with high fever followed by a trunk rash as fever resolves.

Roseolovirus

A genus of herpesviruses that includes human herpesvirus 6 and 7, commonly associated with roseola and sometimes serious disease after reactivation.

Roseomonas

A genus of pink-pigmented gram-negative bacteria that can rarely cause opportunistic bloodstream or device-related infection.

Roseomonas Gilardii

A pink-pigmented gram-negative bacterium that can rarely cause bloodstream, wound, or other opportunistic infection.

Roseomonas Mucosa

A pink-pigmented environmental bacterium occasionally associated with opportunistic infection, including bloodstream infection.

Rosiglitazone

Rosiglitazone is a PPAR-gamma agonist that improves insulin sensitivity in type 2 diabetes; weight gain, oedema, heart-failure worsening, fractures, and cardiovascular risk require careful patient selection.

Rosiglitazone Maleate

The maleate salt of rosiglitazone, a thiazolidinedione that improves insulin sensitivity in type 2 diabetes but may cause weight gain, edema, fractures, and heart-failure worsening.

Ross Procedure

A complex cardiac surgical autograft operation used to treat severe aortic valve disease, particularly in

infants, children, and young adults. The patient's diseased native aortic valve is excised and replaced with their own native pulmonary valve (pulmonary autograft), and a cryopreserved human pulmonary homograft is implanted to reconstruct the right ventricular outflow tract. The living autograft retains capacity for somatic growth, demonstrates superior hemodynamics, and carries low thrombogenicity, completely avoiding the need for lifelong anticoagulation.

Alternate Names:

Pulmonary Autograft Procedure; Ross Operation

Ross River Virus

A mosquito-borne alphavirus that causes Ross River fever, with fever, rash, and often prolonged joint pain or swelling.

Rostaporfin

Rostaporfin is an investigational photosensitizing compound studied for photodynamic treatment of cancer or other abnormal tissue.

Rostral

Positioned toward the snout or front of the head; in the brain, it means toward the forehead.

Rosuvastatin Calcium

Rosuvastatin calcium is a statin medicine that lowers LDL cholesterol and reduces the risk of cardiovascular events.

Rotation

Movement around an axis; in anatomy it describes turning a body part inward, outward, or around its longitudinal axis.

Rotator Cuff

The group of four shoulder muscles and tendons that stabilize the glenohumeral joint and rotate the arm.

Alternate Names:

Tendinitis Rotator Cuff (Rotator Cuff)

Rotator Cuff Arthropathy

Glenohumeral joint degeneration associated with chronic, irreparable rotator-cuff deficiency. Superior migration of the humeral head, altered joint mechanics, pain, and loss of elevation may lead to consideration of reverse shoulder arthroplasty.

Rotator Cuff Exercises

Rotator cuff exercises strengthen and stretch shoulder muscles and are selected according to the injury, pain, range of motion, and rehabilitation plan.

Rotator Cuff Injury

Damage to one or more tendons or muscles that stabilize and move the shoulder.

Rotator Cuff Problems

Rotator cuff problems include tendinopathy, bursitis, and tears that cause shoulder pain, weakness, painful motion, and difficulty with overhead activity.

Rotator Cuff Repair

A medical procedure, treatment, device, or care topic related to rotator cuff repair; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Rotator Cuff Tear

A partial or complete tear of one or more tendons stabilizing the shoulder, causing pain, weakness, and difficulty raising or rotating the arm.

Rotavirus

A double-stranded RNA virus that is the leading cause of severe gastroenteritis in children worldwide. The virus has a segmented genome and infects enterocytes of the small intestine. Rotavirus causes profuse watery diarrhea, vomiting, and dehydration. Diagnosis is made by antigen detection in stool.

Rotavirus

Rotavirus is a highly contagious virus causing vomiting and watery diarrhea, especially in infants and young children; vaccination substantially reduces severe disease.

Rotavirus Antigen Test

A rotavirus antigen test detects rotavirus proteins in stool and can help diagnose viral gastroenteritis, especially in infants and young children.

Rotavirus Infection

A highly contagious viral gastroenteritis causing vomiting and watery diarrhea, especially in infants and young children; vaccination prevents most severe disease.

Rotaviruses

Viruses that cause acute gastroenteritis, especially severe diarrhea and dehydration in young children.

Rotenone

Rotenone is a naturally occurring pesticide that inhibits mitochondrial complex I and can be toxic to people and animals after exposure.

Roth Spots

Retinal hemorrhages with pale centers, seen on fundoscopic examination in infective endocarditis. They are a minor criterion in the Duke criteria. Roth spots are caused by immune complex-mediated vasculitis of retinal vessels.

Roth's Spots

Small retinal haemorrhages with pale centres, associated with conditions such as infective endocarditis, severe anaemia, leukaemia, and diabetes.

Rothia Dentocariosa

A gram-positive bacterium found in the mouth that can rarely cause dental, bloodstream, heart-valve, or other opportunistic infections.

Rothia Mucilaginosa

A gram-positive bacterium that colonizes the mouth and can rarely cause bloodstream or device-related infection.

Rothmund-Thomson Syndrome

A genetically heterogeneous disorder characterized by poikiloderma beginning in infancy, short

stature, sparse hair, skeletal abnormalities, juvenile cataracts in some forms, and increased risk of osteosarcoma or other cancers.

Rotifera

A phylum of microscopic aquatic animals called rotifers; they are mainly studied in biology and are not typical human pathogens.

Rotterdam Criteria

The internationally accepted 2003 consensus diagnostic criteria for Polycystic Ovary Syndrome. Diagnosis requires the presence of at least two of the following three features, provided other etiologies (such as congenital adrenal hyperplasia, hyperprolactinemia, and thyroid disorders) are excluded: (1) oligo- or anovulation; (2) clinical and/or biochemical signs of hyperandrogenism; and (3) polycystic ovarian morphology on ultrasound (≥ 20 follicles per ovary measuring 2–9 mm, or an ovarian volume > 10 mL).

Roughage

Dietary fiber, especially the indigestible plant material that adds bulk to stool and supports normal bowel function.

Rouleau

A stack or column of red blood cells, commonly seen in blood with increased plasma proteins.

Rouleaux

Stacking of red blood cells like coins, often caused by increased plasma proteins.

Round

Round means circular or approximately spherical; in anatomy or pathology it describes shape and must be interpreted with the structure being described.

Round Back

Alternate index label; see *Kyphosis*.

Round Ligament

A round ligament is a cord-like supporting structure,

including the uterine ligaments that pass toward the groin and help maintain uterine position.

Round Ligament Pain

Sharp or aching pain in the lower abdomen or groin caused by stretching of the round ligaments as the uterus enlarges during pregnancy. Persistent, severe, or bleeding-associated pain requires medical evaluation.

Round Pneumonia

Pneumonia appearing as a round opacity on CXR rather than typical consolidation. More common in children and elderly. May mimic lung mass.

Roundworm

Ascariasis: infection by *Ascaris lumbricoides*, the most common human soil-transmitted helminth, acquired by ingesting eggs from contaminated food/soil.

Roundworms

Nematode worms, some of which infect humans and cause intestinal or tissue disease.

Rous Sarcoma

A malignant connective-tissue tumor caused by Rous sarcoma virus in chickens; the historical term is important in cancer biology rather than routine human diagnosis.

Route Of Administration

The path by which a drug enters the body, influencing absorption, onset, bioavailability, and first-pass metabolism. Enteral routes: oral, sublingual, buccal, rectal. Parenteral: intravenous (100 percent bioavailability, immediate onset), intramuscular, subcutaneous, intradermal.

Rovsing Sign

Physical exam sign of acute appendicitis: palpation of the left lower quadrant elicits pain in the right lower quadrant due to displacement of gas stretching the inflamed appendix. See Appendicitis.

Roxithromycin

Roxithromycin is a macrolide antibiotic used in some countries for selected susceptible bacterial infections.

RPR Test

The RPR test is a blood screening test for syphilis that detects antibodies associated with tissue injury; reactive results require confirmatory testing.

RSI

Repetitive strain injury, a group of pain and dysfunction syndromes associated with repeated movement or sustained posture.

RSV

Respiratory syncytial virus, a common respiratory virus that can cause bronchiolitis and pneumonia.

RSV Antibody Test

An RSV antibody test detects antibodies to respiratory syncytial virus and may help assess past exposure or immune response, but is not usually the main test for acute infection.

RT-PCR

RT-PCR converts RNA to complementary DNA and amplifies target sequences, allowing detection or measurement of RNA viruses, genes, and transcripts.

Ruba Miliaria (Heat Rash)

Alternate index label for Heat Rash.

Rubber

Rubber is an elastic material used in gloves, devices, and equipment; natural-rubber latex can cause irritant or allergic reactions.

Rubber Cement Poisoning

Rubber cement poisoning involves toxic or environmental exposure to rubber cement poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Rubber Dams

Sheets used in dentistry to isolate teeth from saliva and the rest of the mouth during procedures.

Rubella

A contagious viral infection causing mild fever and rash but potentially severe congenital abnormalities when acquired during pregnancy.

Alternate Names:

Measles, German Three-Day Measles

Rubella Virus

A togavirus that causes rubella (German measles), a mild febrile illness with rash. The virus is transmitted by respiratory droplets. Rubella is most dangerous during pregnancy, causing congenital rubella syndrome (CRS) with deafness, cataracts, and cardiac defects. Diagnosis involves serology. Treatment is supportive.

Rubeola

Measles, a highly contagious viral illness caused by measles virus and characterized by fever, cough, conjunctivitis, and a widespread maculopapular rash.

Alternate Names:

Measles (Rubeola)

Rubeola (Measles (Rubeola))

Alternate index label for Measles (Rubeola).

Rubeosis Iridis

Rubeosis iridis is abnormal growth of new blood vessels on the iris, usually from retinal ischemia such as diabetes or vein occlusion, and may cause neovascular glaucoma.

Rubidium

A chemical element whose radioactive isotopes can be used in medical imaging; nonmedical rubidium compounds can affect potassium-related physiology.

Rubin Maneuver

An internal rotational maneuver for shoulder dystocia: the operator inserts a hand and applies pressure to the posterior aspect of the anterior fetal shoulder,

rotating it toward the fetal chest (adducting the shoulders). This reduces the bisacromial diameter and disimpacts the anterior shoulder from the pubic symphysis.

Rubinstein-Taybi Syndrome

A genetic developmental disorder associated with characteristic facial features, short stature, broad thumbs and toes, and intellectual disability. It is commonly caused by pathogenic variants in CREBBP or EP300.

Rubitecan

An investigational oral topoisomerase-I inhibitor studied for cancer treatment.

Rubivirus

A genus of viruses that includes rubella virus, which causes rubella and congenital rubella syndrome.

Rubredoxins

Small iron-containing proteins that transfer electrons in certain microorganisms and organelles.

Rubricyte Count

A rubricyte count measures rubricytes, an older term for immature red blood cells, and may help assess red-cell production in the bone marrow.

Rubulavirus

A genus of paramyxoviruses that includes mumps virus and related animal viruses.

Rule Of Nines

A method for estimating the percentage of body-surface area affected by burns.

Rule Out

Rule out means evaluate a possibility and determine whether it is present; it does not mean the condition has already been excluded.

Rumen

The rumen is the largest compartment of a ruminant animal's stomach where microbes ferment plant ma-

terial before digestion continues.

Rumination

Repeated regurgitation and rechewing of food after eating, without the usual vomiting process; persistent symptoms can cause weight loss and dental damage.

Rumination Disorder

Recurrent effortless regurgitation of recently ingested food, followed by rechewing, reswallowing, or spitting, without the retching typical of vomiting. It can cause weight loss, malnutrition, and dental complications.

Ruminococcus

A genus of anaerobic intestinal bacteria involved in digestion of complex carbohydrates and plant fiber.

Ruminococcus Gnavus

An intestinal bacterium involved in mucin and carbohydrate metabolism and studied in relation to gut inflammation.

Runner'S Knee

Alternate index label; see *Patellofemoral pain syndrome*.

Runny Nose

Runny nose refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

Rupture

A tear or complete break in an organ, vessel, muscle, or other tissue.

Ruptured Abdominal Aortic Aneurysm

A tear through an abdominal aortic aneurysm causing internal bleeding, shock, and usually sudden abdominal or back pain. It requires emergency repair.

Ruptured Disk

A spinal disk whose outer layer has torn, allowing

inner material to bulge outward.

Alternate Names:

Herniated disk; slipped disk

Ruptured Eardrum

A ruptured eardrum is a tear in the tympanic membrane caused by infection, pressure, trauma, or foreign objects and may cause pain, drainage, hearing loss, or dizziness.

Ruptured Eardrum (Perforated Eardrum)

A hole or tear in the eardrum that may cause pain, drainage, hearing loss, or ringing and can result from infection, injury, or pressure changes.

Alternate Names:

Eardrum, Ruptured Perforated Eardrum

Ruptured Perforated Eardrum

A perforated eardrum is a tear in the tympanic membrane from infection, pressure change, trauma, or an inserted object. Pain, drainage, hearing loss, or ringing may occur; keeping the ear dry and avoiding unprescribed drops helps while healing or repair is assessed.

Rural Health

Rural health concerns health outcomes and care access in rural communities, where distance, workforce shortages, transport, resources, and social conditions may affect services.

Russell-Silver Syndrome

A congenital growth disorder involving prenatal and postnatal growth restriction, relative macrocephaly, triangular face, body asymmetry, and feeding difficulty. It is often associated with abnormalities of genomic imprinting on chromosomes 7 or 11.

Russell-Siver Syndrome

Likely a misspelling of Russell-Silver syndrome, a growth disorder characterized by poor fetal and postnatal growth, feeding difficulty, relative macrocephaly, and characteristic body asymmetry or facial features.

Ruthenium

A chemical element used in industry and research; some ruthenium compounds are studied as experimental anticancer agents.

Rutin

A flavonoid glycoside found in plants and foods; it is sold in supplements, but clinical benefits are not firmly established.

Rx

Prescription or treatment. Symbol derives from Latin "requirere" (to take). Also used as abbreviation for remedy. Rx symbol: Rx or %x;.

Ryanodine

A plant alkaloid that binds ryanodine receptors and alters calcium release from muscle-cell sarcoplasmic reticulum; it is mainly used in research.

Ryle'S Tube

A nasogastric tube used to drain stomach contents or deliver fluids, nutrition, or medicines.

Alternate Names:

RAST

S

16S Ribosomal RNA Sequencing

Molecular identification of bacteria and archaea using conserved and variable regions of the 16S ribosomal RNA gene. It is useful for difficult-to-culture organisms but may not distinguish closely related species or provide susceptibility data.

S Phase

S phase is the part of the cell cycle during which DNA is replicated so each daughter cell can receive a complete genome.

S-Adenosylmethionine

SAMe, a methyl-group donor involved in neurotransmitter, phospholipid, DNA, and other biochemical reactions and studied as a supplement for selected mood, liver, or pain conditions.

S3 Gallop Pathology

A third heart sound produced during rapid ventricular filling. In some adults it may indicate volume overload or ventricular dysfunction, although it can be physiologic in children, young adults, and pregnancy. Its significance depends on the complete clinical assessment.

S4 Gallop Pathology

A fourth heart sound indicates atrial contraction against a stiff ventricle (decreased compliance). Associated with left ventricular hypertrophy from hypertension, aortic stenosis, and hypertrophic cardiomyopathy. S4 is best heard at the apex with the bell, and is accentuated by exertion, expiration, and isorhythmic AV dissociation.

SA Node

The sinoatrial node is the heart's normal pacemaker, generating electrical impulses that initiate each sinus heartbeat.

SAA

SAA commonly means serum amyloid A, an acute-phase protein that rises with inflammation and can contribute to secondary amyloidosis when persistently elevated.

Sabarubicin

Sabarubicin is an investigational anthracycline-like antineoplastic drug studied for cytotoxic effects against cancer cells.

Sabin Vaccine

The oral polio vaccine containing live attenuated poliovirus strains.

Saccade

A saccade is a rapid, conjugate eye movement that shifts gaze from one target to another.

Saccharomyces

A genus of yeasts, including *S. cerevisiae*; some species are used industrially and can rarely cause opportunistic infection.

Saccharomyces Cerevisiae

Saccharomyces cerevisiae is a budding yeast used in baking, brewing, biotechnology, and some probiotic products; it can rarely cause invasive fungemia or other infection in vulnerable patients.

Saccular Aneurysm

A rounded pouch protruding from one side of an artery because of focal wall weakness, with rupture and clot formation risks determined by location, size, and growth.

Sachet Poisoning

Illness caused by swallowing, inhaling, or getting the contents of a sachet on the skin or in the eyes. Effects depend on the substance and amount; some sachets contain medicines or dangerous chemicals.

Sacral

Sacral means relating to the sacrum, the triangular bone at the base of the spine that connects with the pelvis.

Sacral Dimple

A small indentation in the skin over the lower spine that is present at birth.

Alternate Names:

Pilonidal Dimple

Sacral Fistula

A sacral fistula is an abnormal tract near the sacrum that may connect skin with deeper tissue and can reflect congenital disease, infection, or pilonidal disease.

Sacral Nerve Stimulation

Neuromodulation for urinary/fecal incontinence, constipation. Sacral nerve root (S3) stimulation. Implantable pulse generator + electrode. Indications: refractory urge incontinence, fecal incontinence, non-obstructive urinary retention.

Sacral Nerve Stimulator

An implanted device that delivers electrical stimulation to sacral nerves to alter bladder, bowel, or pelvic-floor function in selected patients.

Sacral Nerves

The spinal nerves arising from the sacral spinal cord and supplying the pelvis, pelvic floor, bladder, bowel, and lower limbs.

Sacral Region

The lower back and posterior pelvic region overlying the sacrum, a fused triangular bone that connects the lumbar spine with the pelvis.

Sacral Vertebra

One of the fused vertebrae forming the sacrum, which supports the spine, joins the pelvic bones, and transmits trunk weight to the lower limbs.

Sacral Vertebrae

Five vertebrae fused to form the sacrum. They transmit body weight from the vertebral column to the pelvic girdle and contain anterior and posterior sacral foramina for spinal nerves.

Sacral Vertebrae (S1-S5)

The five sacral vertebrae that fuse to form the sacrum, connect the spine to the pelvis, and provide foramina for sacral nerve roots.

Sacrococcygeal

Sacrococcygeal means relating to the sacrum and coccyx at the lower end of the vertebral column.

Sacrococcygeal Teratoma

A congenital tumor arising at the base of the spine and containing tissues from multiple germ layers; large fetal lesions can cause high-output heart failure or hydrops.

Sacrocolpopexy

An open, laparoscopic, or robotically assisted reconstructive surgical procedure considered the gold standard for durable correction of apical vaginal vault or uterine prolapse. Involves suspending the vaginal apex or cervix to the anterior longitudinal ligament of the sacral promontory (S_1) using a synthetic non-absorbable polypropylene Y-mesh graft, restoring anatomical vaginal axis and length while preserving coital function.

Sacroileitis

A misspelling or variant of sacroiliitis, inflammation of a sacroiliac joint.

Sacroiliac Joint

The synovial joint between the sacrum and the ilium (auricular surfaces), forming the connection between the axial skeleton and the pelvis. The sacroiliac joint is reinforced by strong ligaments (anterior, interosseous, and posterior sacroiliac ligaments, sacrotuberous and sacrospinous ligaments).

Sacroiliac Joint Dysfunction (Sacroiliac Joint Pain)

Alternate index label for Sacroiliac Joint Pain.

Sacroiliac Joint Dysfunction (SI Joint Pain)

Pain or abnormal movement from the joint between the lower spine and pelvis. It may cause pain in the lower back, buttock, or thigh and can follow injury, pregnancy, arthritis, or changes in walking.

Sacroiliac Joint Pain

Sacroiliac-joint pain arises near the junction of the lower spine and pelvis and may follow injury, pregnancy, arthritis, leg-length or gait changes, or inflammation. Pain can radiate to the buttock or thigh; examination distinguishes it from hip or spine disease.

Alternate Names:

Sacroiliac Joint Dysfunction (Sacroiliac Joint Pain)

Sacroiliitis

Inflammation of one or both sacroiliac joints, causing pain in the lower back, buttock, or posterior thigh that may worsen with prolonged rest. Causes include axial spondyloarthritis, psoriatic or enteropathic arthritis, infection, trauma, and degenerative disease.

Sacrospinous Ligament Fixation

A transvaginal surgical procedure designed to correct apical vaginal vault prolapse or uterine prolapse by securing the vaginal apex or posterior cervical remnant to the unilateral or bilateral sacrospinous ligament and coccygeus muscle complex. Offers an entirely vaginal approach avoiding abdominal incisions or peritoneal entry, while carrying low morbidity and rapid postoperative recovery.

Alternate Names:

Sacrospinous Colpopexy; Sacrospinous Suspension

Sacrum

Large triangular bone from 5 fused sacral vertebrae between the hip bones. Articulates with L5 superiorly and coccyx inferiorly. The sacral promontory is an obstetric landmark. Contains 4 pairs of sacral foramina. Forms the posterior pelvic wall.

SAD

Seasonal affective disorder, a recurring mood disorder linked to seasonal changes and reduced daylight.

Alternate Names:

Seasonal Affective Disorder (SAD)

Sad Mood

Sad mood is a feeling of unhappiness or low mood that may be a normal response or a symptom of depression, grief, illness, or another condition.

Saddle Pulmonary Embolism

A massive, life-threatening form of pulmonary embolism in which a large, non-fragmented thromboembolus lodges directly across the bifurcation of the main pulmonary artery trunk, extending into and partially or completely obstructing both the right and left pulmonary arteries. It precipitates sudden, severe elevation of right ventricular afterload, acute cor pulmonale, right ventricular dilatation and failure, cardiogenic shock, and cardiovascular arrest; emergency treatment requires rapid systemic thrombolysis, catheter-directed thrombectomy, or surgical pulmonary embolectomy.

Alternate Names:

Saddle Embolus; Bifurcation Pulmonary Embolism

Sadism

Sexual arousal or gratification from inflicting pain, humiliation, or suffering; clinical significance depends on distress, impairment, or nonconsent.

Safe Driving For Teens

Safe driving for teens means reducing crash risk by using seat belts, avoiding alcohol, cannabis, and

distracted driving, following speed limits, and using graduated licensing rules.

Safe Eating During Cancer Treatment

Food-safety measures for people receiving cancer treatment, including careful hand hygiene, avoiding unsafe or undercooked foods, preventing cross-contamination, and following individualized advice when immunity is low.

Safe Period

A fertility-awareness term for days believed to have a lower chance of conception; cycle variation makes it unreliable as sole contraception.

Safe Sex

Sexual practices that reduce the risk of sexually transmitted infections and unintended pregnancy, including condoms or other barriers, testing, vaccination, and informed consent.

Safety

Safety is protection from preventable harm and includes identifying hazards, reducing risk, using equipment correctly, and responding promptly to danger.

Safety Of Drugs

The assessment and management of medicine benefits, risks, interactions, contraindications, monitoring, and safe use.

Safety Plan

A collaboratively written, practical plan for responding to escalating suicidal thoughts or emotional crisis. It identifies warning signs, internal coping strategies, supportive contacts, professional resources, and methods to restrict access to lethal means.

Safety Study

A safety study evaluates whether a medicine, device, procedure, or treatment causes harmful effects and identifies risks before or during clinical use.

Safflower Oil

Safflower oil is a vegetable oil rich in unsaturated fatty acids, used as food or in products; its health effect depends on amount and dietary substitution.

Safingol

An investigational sphingolipid-analog drug that inhibits protein kinase C and has been studied in cancer treatment, usually in combination with other agents.

Safrole

Safrole is a natural aromatic compound found in some plants and oils; high or prolonged exposure is toxic and has carcinogenic concern.

Sagittal

Sagittal means oriented from front to back and dividing the body or a structure into right and left portions.

Sagittal Plane

A vertical plane that divides the body or an organ into right and left sides.

Sagopilone

An investigational epothilone-like anticancer drug that disrupts microtubules and has been studied for treatment of advanced solid tumors.

Salaam Attacks

Brief repeated flexor spasms or head drops in infants, historically associated with infantile spasms.

Salabrasion

A dermabrasion method using salt or an abrasive salt preparation to remove superficial skin layers; it carries risks of pain, infection, pigment change, and scarring.

Salads And Nutrients

Salads can provide fiber, vitamins, minerals, and beneficial plant compounds, but nutritional value depends on ingredients, portions, dressings, and overall dietary pattern.

Salbutamol (Albuterol)

A selective beta-2 adrenergic agonist bronchodilator used for acute relief and prevention of bronchospasm in asthma and COPD. Relaxes airway smooth muscle; short-acting (SABA), onset 5-15 minutes, duration 4-6 hours via inhaler or nebulizer. Adverse effects: tremor, tachycardia, palpitations, hypokalemia, and headache.

Alternate Names:

Albuterol

Salicylate

A group of compounds that includes aspirin and has analgesic, antipyretic, and anti-inflammatory effects.

Salicylate Toxicity

Poisoning caused by excessive aspirin or another salicylate, potentially producing vomiting, ringing in the ears, fever, abnormal breathing, confusion, and acid-base disturbances.

Salicylic Acid

A keratolytic and anti-inflammatory compound used topically for acne, psoriasis, warts, and other hyperkeratotic disorders.

Salient

Salient means prominent or especially relevant; a salient clinical finding is one that stands out and may influence diagnosis or management.

Saline

A sterile water solution containing sodium chloride, commonly used for fluids, irrigation, or drug delivery.

Alternate Names:

Normal saline

Saline Infusion Sonohysterography

Ultrasound evaluation of uterus using saline contrast. Evaluates intrauterine pathology.

Saline Nasal Washes

Rinsing the nasal passages with sterile, distilled, or

appropriately treated saline to loosen mucus and reduce nasal irritants; unsafe water can cause serious infection.

Saliva

Secretion of salivary glands (1-1.5 L/day). Functions: lubrication, digestion (amylase), buffering, antimicrobial, remineralization. Xerostomia (dry mouth) increases caries risk. Causes: medications, Sjogren syndrome, radiation, dehydration.

Salivary Duct Stones

Calcified deposits obstructing a salivary duct, most often the submandibular duct, causing recurrent painful swelling of a gland during meals and sometimes infection.

Salivary Gland

Any exocrine gland that secretes saliva into the oral cavity. The major paired glands are the parotid, submandibular, and sublingual glands; numerous minor glands occur throughout the oral mucosa.

Salivary Gland Biopsy

Removal of salivary-gland tissue or a needle sample for microscopic examination of suspected autoimmune disease, inflammation, infection, or neoplasm.

Salivary Gland Cancer

A rare malignancy most often arising in the parotid gland. Histologic types include mucoepidermoid carcinoma, adenoid cystic carcinoma, and acinic cell carcinoma; facial nerve preservation is a key surgical consideration.

Salivary Gland Infection

Infection of a salivary gland, usually bacterial and often involving the parotid or submandibular gland. Painful swelling, fever, dry mouth, and purulent drainage from the duct may occur.

Salivary Gland Infections

Infections of a salivary gland or its duct, commonly bacterial or viral, causing painful swelling, tenderness, fever, dry mouth, or purulent drainage.

Salivary Gland Neoplasm

A salivary gland neoplasm is an abnormal growth in a salivary gland that may be benign or malignant.

Salivary Gland Scintigraphy

Salivary gland function assessment using Tc-99m pertechnetate. Used for Sjogren syndrome, obstruction, radiation sialadenitis.

Salivary Gland Tumors

Tumors arising in the salivary glands. Many are benign, especially in the parotid gland; pleomorphic adenoma is a common benign type. Malignant types include mucoepidermoid, adenoid cystic, and acinic cell carcinoma.

Alternate Names:

Tumor, Salivary Gland

Salivary Glands

Exocrine glands that produce saliva, including the parotid, submandibular, and sublingual glands.

Salivation

Production and release of saliva by the salivary glands. Saliva moistens food, begins digestion, protects teeth, and helps swallowing; excessive or reduced salivation can have many causes.

Salk Vaccine

The inactivated poliovirus vaccine, given by injection to protect against poliomyelitis. It contains killed virus and cannot cause polio; it differs from the older oral live-attenuated vaccine.

Salmon Patches

Flat pink or red capillary birthmarks, commonly on the eyelids, forehead, or nape; many fade during infancy.

Salmonella

A genus of Gram-negative, facultatively anaerobic, rod-shaped bacteria in the Enterobacteriaceae family. It includes non-typhoidal strains that cause gastroenteritis and typhoidal strains that can cause enteric fever.

Salmonella Arizonae

A Salmonella serotype associated with reptiles and other animals that can cause gastroenteritis or invasive infection, especially in people with weakened immunity.

Salmonella Choleraesuis

A Salmonella serotype adapted to pigs that can cause severe, invasive infection in humans, including bloodstream infection and pneumonia.

Salmonella Enterica

The main Salmonella species causing human disease, including gastroenteritis, enteric fever, and invasive bloodstream infection.

Salmonella Enterocolitis

Salmonella enterocolitis is intestinal infection causing diarrhea, fever, abdominal cramps, and sometimes bacteremia after contaminated food, water, or animal exposure.

Salmonella Food Poisoning (Salmonellosis)

Alternate index label for Salmonellosis.

Salmonella Gallinarum

A host-adapted Salmonella bacterium that causes fowl typhoid in chickens and other poultry; it is not a usual cause of human disease.

Salmonella Infection

An intestinal infection caused by Salmonella bacteria, usually acquired through contaminated food or water.

Salmonella Infections

Infections caused by Salmonella bacteria, ranging from gastroenteritis to enteric fever or invasive bloodstream disease.

Salmonella Pullorum

A host-adapted Salmonella bacterium that causes pullorum disease in young poultry; it is not a usual cause of human disease.

Salmonella Typhi

The bacterium that causes typhoid fever, usually acquired through contaminated food or water and capable of spreading through the bloodstream.

Salmonella Typhimurium

A common Salmonella serotype that usually causes foodborne gastroenteritis but can cause invasive disease in vulnerable people.

Salmonella Typhisuis

A Salmonella serotype mainly associated with swine; human infection is uncommon but may cause enteric or invasive disease.

Salmonella Vaccines

Vaccines used mainly to prevent typhoid fever, including typhoid conjugate, Vi polysaccharide, and oral live-attenuated vaccines; routine vaccination does not prevent all Salmonella gastroenteritis.

Salmonellosis

Infection with Salmonella bacteria (non-typhoidal), typically acquired from contaminated food (eggs, poultry, meat). Presents with acute gastroenteritis: diarrhea, fever, and abdominal cramps within 6-72 hours of ingestion. Self-limited in immunocompetent patients. Bacteremia can occur, especially in immunocompromised.

Alternate Names:

Salmonella Food Poisoning (Salmonellosis)

Salpingectomy

Surgical removal of a fallopian tube. It may be used to treat a tubal ectopic pregnancy, hydrosalpinx, or other tubal disease. The approach and whether the tube is removed depend on the clinical condition, fertility plans, and the state of the opposite tube.

Salpingitis

Inflammation of the fallopian tubes, most commonly caused by ascending infection from the lower genital tract. Salpingitis is a component of pelvic inflammatory disease and is often bilateral.

Salpingitis Isthmica Nodosa

A pathological condition characterized by nodular muscular hypertrophy and benign diverticular herniation of the fallopian tube epithelium into the hypertrophied muscularis layer of the isthmus segment. Strongly linked to chronic pelvic inflammation and unrecognized subclinical salpingitis, it causes luminal narrowing and architectural distortion that drastically increases the risk of tubal ectopic pregnancy and tubal-factor infertility.

Alternate Names:

SIN

Salpingo-Oophorectomy

Surgical removal of one or both fallopian tubes and ovaries. Bilateral salpingo-oophorectomy treats and stages ovarian cancer and is used as risk-reducing surgery in BRCA mutation carriers.

Salpingo-OöPhorectomy

Surgical removal of a fallopian tube and ovary, also called salpingo-oophorectomy.

Salpingography

Contrast imaging of the fallopian tubes, usually performed as part of hysterosalpingography to assess whether the tubes are open and to examine the uterine cavity.

Salpingostomy (Salpingotomy)

A fertility-preserving surgical procedure for tubal ectopic pregnancy: a linear incision on the antimesenteric border of the fallopian tube to remove the ectopic gestation, leaving the tube in situ. Indications: unruptured ectopic, desire for future fertility, contralateral tubal damage or absence.

Alternate Names:

Salpingotomy

Salt

An ionic chemical compound; dietary sodium chloride is essential in small amounts but excess intake can increase blood pressure.

Salt Gland

A specialized gland in some marine animals and birds that excretes concentrated salt to maintain fluid and electrolyte balance; humans do not possess a comparable salt gland.

Saltatory Conduction

The rapid propagation of action potentials along myelinated nerve fibers, where the action potential appears to "jump" from one Node of Ranvier to the next. Myelin (produced by Schwann cells in the PNS and oligodendrocytes in the CNS) insulates the axon, preventing ion flow across the internodal membrane.

Salter-Harris Fracture

A fracture involving the growth plate of a child or adolescent. Types I through V describe progressively different patterns and risks to bone growth.

Salvage Therapy

Treatment given for cancer that has not responded to, or has returned after, an earlier course of treatment.

Sample Fixation

Preservation of a tissue or cell sample with a chemical or physical method, such as formalin fixation, to prevent decay and maintain microscopic structure for processing and staining.

Sample Size

Sample size is the number of observations or participants in a study or test and affects precision, statistical power, and generalizability.

Sandfly Fever

An acute viral illness transmitted by phlebotomine sandflies, causing fever, headache, muscle pain, and sometimes rash.

Sandhoff Disease

An autosomal-recessive lysosomal storage disorder caused by deficiency of beta-hexosaminidase A and B, leading to accumulation of GM2 ganglioside. It

causes progressive neurodegeneration, developmental regression, seizures, hypotonia, and sometimes organ enlargement.

Sandpaper Tooth

Rough enamel surface retains plaque. May indicate early demineralization or fluorosis.

Sanfilippo Syndrome

A clinically severe autosomal recessive lysosomal storage disease (Mucopolysaccharidosis Type III [MPS III]) caused by deficiency of any of four enzymes involved in the degradation of the glycosaminoglycan heparan sulfate: heparan *N*-sulfatase (type IIIA, *SGSH*), α -*N*-acetylglucosaminidase (type IIIB, *NAGLU*), acetyl-CoA: α -glucosaminide acetyltransferase (type IIIC, *HGSNAT*), or *N*-acetylglucosamine-6-sulfatase (type IIID, *GNS*). Distinctive among mucopolysaccharidoses for presenting with profound, devastating neurocognitive degeneration, extreme behavioral disturbances (hyperactivity, impulsivity, aggression), sleep-wake cycle inversion, and progressive loss of motor skills, with remarkably mild somatic and skeletal features.

Alternate Names:

Mucopolysaccharidosis Type III (MPS III)

Sanguine

Sanguine means blood-related or blood-red; in older usage it can also describe a temperament or complexion.

Sanguineous

Containing, consisting of, derived from, or resembling blood (*sanguis*). In surgical care and wound management, used specifically to characterize fresh, gross bloody wound drainage or bodily exudates, distinguished from serous drainage (clear, thin, yellowish watery fluid), serosanguineous drainage (thin, pale pink-to-red watery fluid containing red blood cells and serum), and purulent drainage (thick, cloudy, pus-filled fluid). Copious or rapidly expanding sanguineous wound drainage postoperatively raises urgent suspicion of active surgical site hemorrhage or disrupted vascular ligation.

Sanitation

Public-health measures that safely manage human waste, water, food, hygiene, and environmental contamination to prevent infection and disease transmission.

Sano Shunt

A surgical modification of the first-stage Norwood reconstruction for hypoplastic left heart syndrome, wherein pulmonary blood flow is provided by an anterior right ventricle-to-pulmonary artery non-valved polytetrafluoroethylene conduit, rather than a modified Blalock-Taussig (systemic-to-pulmonary) shunt. Because flow through the RV-PA conduit occurs predominantly during ventricular systole, the Sano shunt preserves systemic diastolic arterial blood pressure and eliminates the continuous diastolic coronary run-off (coronary steal) associated with systemic-to-pulmonary shunts, improving early post-operative coronary perfusion stability.

Alternate Names:

RV-PA Conduit; Norwood-Sano Modification

Saphenous

Relating to the superficial veins of the lower limb, especially the great or small saphenous vein.

Saphenous Vein

A superficial vein of the lower limb that drains the foot and leg. The great and small saphenous veins are clinically important in venous disease and may be used as graft material in selected vascular or cardiac bypass procedures.

Great Saphenous Vein

The longest superficial vein of the lower limb, ascending from the medial foot to drain into the femoral vein at the saphenofemoral junction.

Small Saphenous Vein

A superficial vein ascending along the posterior calf that usually drains into the popliteal vein.

SAPHO Syndrome

A rare inflammatory disorder involving synovitis,

acne, pustulosis, hyperostosis, and osteitis. It commonly affects the anterior chest wall, spine, or jaw and may resemble infection or malignancy. Diagnosis is clinical and treatment may include anti-inflammatory or specialist immunomodulatory therapy.

Sapovirus

A virus that can cause vomiting and watery diarrhea, especially in children. It spreads through contaminated food, water, surfaces, or close contact.

Sapphism

Sapphism is an historical term for sexual or romantic relationships between women; respectful modern language generally uses lesbian or same-sex relationships.

Sapporo Virus

An older name for sapovirus, a virus that can cause vomiting and watery diarrhea.

Saprophyte

An organism that obtains nutrients from dead organic material; some saprophytic organisms can become opportunistic pathogens.

Sapropterin

A synthetic form of tetrahydrobiopterin used for some people with phenylketonuria and certain tetrahydrobiopterin deficiencies; response and diet requirements vary.

Saquinavir

An HIV protease inhibitor used with other antiretroviral medicines; drug interactions, gastrointestinal effects, and cardiovascular concerns limit its use.

Saquinavir Mesylate

The mesylate salt of saquinavir, an HIV protease inhibitor used with other antiretroviral medicines.

Saracatinib

An investigational oral kinase inhibitor that blocks Src-family and related signaling pathways and has

been studied in cancer and other diseases.

Saralasin

Saralasin is an investigational angiotensin-receptor antagonist formerly used to study renin-angiotensin physiology and blood-pressure regulation.

Sarcocystis

A genus of protozoan parasites that cycle between animal hosts and can cause intestinal or muscular sarcocystosis in people.

Sarcocystis Hominis

A protozoan parasite acquired by eating undercooked beef; people may develop intestinal symptoms, while cattle serve as an intermediate host.

Sarcocystis Suihominis

A protozoan parasite acquired by eating undercooked pork that can cause intestinal sarcocystosis; pigs serve as an intermediate host.

Sarcocystosis

Parasitic infection by *Sarcocystis* species, acquired from undercooked meat or contaminated food and sometimes causing muscle pain, fever, diarrhea, or no symptoms.

Sarcoglycan Complex

A group of proteins in the muscle-cell membrane that supports muscle fibers; inherited defects can cause limb-girdle muscular dystrophy and cardiomyopathy.

Sarcoglycanopathy

A subgroup of four distinct autosomal recessive limb-girdle muscular dystrophies (LGMD R3 through R6, historically LGMD 2C, 2D, 2E, and 2F) caused by biallelic loss-of-function mutations in the genes encoding components of the transmembrane sarcoglycan subcomplex: γ -sarcoglycan (*SGCG*), α -sarcoglycan (*SGCA*), β -sarcoglycan (*SGCB*), and δ -sarcoglycan (*SGCD*). Loss of any single sarcoglycan subunit destabilizes the entire tetrameric complex and disrupts the linkage between dystrophin and

α -dystroglycan, presenting with a severe childhood Duchenne-like phenotype featuring early pelvic-girdle weakness, calf pseudohypertrophy, Gowers sign, high serum creatine kinase ($> 20\text{--}50\times$), and progressive cardiomyopathy.

Alternate Names:

Sarcoglycan-Deficient Limb-Girdle Muscular Dystrophy; LGMD R3-R6

Sarcoidosis

Sarcoidosis is multisystem granulomatous inflammation, commonly affecting lungs and lymph nodes but also skin, eyes, heart, nerves, and other organs. It commonly affects the lungs and lymph nodes but may involve the skin, eyes, heart, nervous system, or other organs.

Alternate Names:

Arthritis Sarcoid (Sarcoidosis)

Sarcoidosis Skin Manifestations

Cutaneous sarcoidosis affects 25 percent of patients with systemic sarcoidosis.

Sarcolemma

The specialized cell membrane surrounding a muscle fiber. It conducts electrical signals and helps maintain the muscle cell's structure and chemical balance.

Sarcoma

A malignant tumor arising from connective or supporting tissues, including bone, cartilage, fat, muscle, and blood vessels. Examples include osteosarcoma, liposarcoma, and rhabdomyosarcoma.

Sarcoma, Bone Cancer

Alternate index label; see *Bone cancer*.

Sarcoma, Soft Tissue

Alternate index label; see *Soft tissue sarcoma*.

Sarcomere

The basic contractile unit of skeletal and cardiac muscle, extending from one Z line to the next and containing actin and myosin filaments.

Sarcopenia

Age-related loss of muscle mass and function. Prevalence increases with age. Risk factors: reduced protein intake, decreased physical activity, chronic disease. Assessment: grip strength, gait speed, muscle mass measurement. Treatment: protein supplementation, resistance exercise, vitamin D, hormonal therapy if deficient.

Sarcopenic Obesity

The coexistence of excess adiposity with reduced skeletal-muscle mass, strength, or physical performance. It increases risks of disability, falls, metabolic disease, and poor surgical outcomes and requires assessment beyond body-mass index alone.

Sarcoplasm

The cytoplasm of a muscle cell, containing structures such as mitochondria, glycogen, myoglobin, and the contractile apparatus.

Sarcoplasmic Reticulum

A specialized calcium-storage network in muscle cells that releases calcium to trigger contraction and takes it back up for relaxation.

Sarcoptes

The mite genus containing *Sarcoptes scabiei*, the cause of scabies.

Sarcoptes Scabiei

A mite that causes scabies, a contagious skin infestation transmitted by prolonged skin-to-skin contact. The female mite burrows into the stratum corneum, laying eggs along the burrow, which appears as a greyish, serpiginous line. The life cycle from egg to adult takes approximately 10-14 days.

Sarcoptic Mange (Scabies)

Alternate index label for Scabies.

Sarcosine

Sarcosine is a naturally occurring amino-acid derivative involved in one-carbon metabolism and studied in neurologic and psychiatric research.

Sarcosinemia

An uncommon metabolic finding with elevated sarcosine in blood or urine, usually due to altered glycine metabolism and often without major clinical symptoms.

Sardomozide

Sardomozide is an investigational compound studied for anticancer activity through effects on cellular growth and survival.

Sargramostim

A recombinant granulocyte-macrophage colony-stimulating factor used to promote white-cell recovery after selected cancer treatments or transplantation; bone pain and fever may occur.

Sarnat Staging

A standardized clinical grading scale developed by Harvey and Margaret Sarnat used to assess the severity of neonatal hypoxic-ischemic encephalopathy within the first 24 to 72 hours of life. It stratifies encephalopathy into three clinical stages: Stage 1 (mild: hyperalertness, normal or increased muscle tone, uninhibited Moro reflex, dilated pupils, absence of seizures); Stage 2 (moderate: lethargy, hypotonia, suppressed primitive reflexes, miosis, frequent seizures); and Stage 3 (severe: stupor or coma, flaccidity, absent brainstem and primitive reflexes, refractory seizures, decerebrate posturing). Stage 2 and Stage 3 are clinical indicators for initiating therapeutic hypothermia in term and late-preterm infants.

Alternate Names:

Sarnat and Sarnat Grading; Sarnat Score; HIE Staging

SARS

Severe acute respiratory syndrome, a viral respiratory illness caused by SARS-CoV.

SARS Virus

The coronavirus that causes severe acute respiratory syndrome, a serious respiratory infection that can spread through respiratory droplets and close contact.

SARS-CoV-2

A coronavirus belonging to the Coronaviridae family that causes COVID-19. SARS-CoV-2 has a positive-sense single-stranded RNA genome and a spike glycoprotein that mediates attachment to ACE2 receptors. The virus replicates in the cytoplasm using its own RNA-dependent RNA polymerase.

Sassafras Oil Overdose

Poisoning from swallowing or otherwise being exposed to too much sassafras oil. It may cause nausea, vomiting, seizures, breathing problems, liver injury, or other serious effects and requires urgent medical advice.

Satellite DNA

Highly repetitive DNA sequences found mainly near centromeres and other chromosome regions; they help organize chromosome structure and can vary between individuals.

Satellite Virus

A virus-like infectious agent that can multiply only when another helper virus is present.

Satiation

The feeling of fullness that terminates a meal, produced by gastrointestinal stretch, nutrients, hormones, and brain signals regulating food intake.

Satiety

Feeling of fullness after eating. Affected by meal composition, volume, fiber, protein. Satiety hormones: CCK, PYY, GLP-1.

Satiety - Early

Feeling full sooner than expected while eating, sometimes after only a small amount of food. It may result from stomach or digestive disease and should be assessed if persistent or associated with weight loss.

Satisfaction

A person's evaluation of how well an experience, service, treatment, or outcome met expectations; in

healthcare it is one quality measure but does not replace clinical outcomes or safety.

Satisficer

A person who chooses an option that meets acceptable criteria without seeking the absolute best option.

Satraplatin

An investigational oral platinum-based anticancer drug that forms DNA cross-links; it has been studied mainly in advanced prostate and other cancers.

Saturated Fat

A dietary fat whose fatty-acid chains contain no carbon-carbon double bonds. It is found in foods such as fatty meat, butter, full-fat dairy, coconut oil, and palm oil; replacing some saturated fat with unsaturated fat can help lower LDL cholesterol and cardiovascular risk.

Saturated Phytosterol

A hydrogenated plant sterol with a saturated side chain; it is a dietary lipid studied for effects on cholesterol absorption and metabolism.

Saturation

Occupancy of available binding, metabolic, transport, or elimination capacity such that further increases in concentration or dose produce a nonlinear response. Saturable metabolism can cause disproportionate rises in plasma concentration and toxicity.

Sausage Digit

Diffuse swelling of an entire finger or toe, often seen with inflammatory arthritis.

Alternate Names:

Dactylitis

Saxitoxin

A powerful poison made by some marine algae that can build up in shellfish. Eating contaminated seafood may cause tingling, weakness, trouble breathing, or paralysis.

SBBO

Alternate index label; see *Small intestinal bacterial overgrowth*.

Scab

A crust of dried blood, serum, pus, or tissue fluid over a healing skin injury.

Scabies

Scabies is infestation by *Sarcoptes scabiei* mites, causing intense nighttime itching and a characteristic rash or burrows, with spread through close contact. mite *Sarcoptes scabiei* var. *hominis*. The hallmark symptom is severe, generalized pruritus that characteristically worsens at night, driven by a hypersensitivity reaction to the mite's proteins, eggs, and feces.

Alternate Names:

Sarcoptic Mange (Scabies)

SCAD

Alternate index label; see *Spontaneous coronary artery dissection*.

Scaffold

Three-dimensional structure for tissue engineering. Porous, biodegradable. Cells populate scaffold.

Scaffold Seeding

Placing living cells onto or into a three-dimensional biomaterial scaffold to begin tissue growth in tissue engineering or regenerative medicine.

Scalded Mouth Syndrome

Alternate index label; see *Burning mouth syndrome*.

Scalded Skin Syndrome

Alternate index label; see *Scalded-Skin Syndrome*.

Scalded-Skin Syndrome

Staphylococcal scalded-skin syndrome, a toxin-mediated superficial epidermal separation causing tender erythema and peeling, especially in children.

Scalds

A specific category of thermal burn injury caused by exposure to hot liquids (e.g., boiling water, hot oil, hot beverages) or pressurized steam. The most common mechanism of burn injury in infants and young children (often through accidental spills or tap water immersion) and vulnerable elderly adults. Assessed clinically by depth (superficial partial-thickness with blistering, or deep partial-thickness/full-thickness with epidermal loss) and total body surface area using the Wallace Rule of Nines or Lund-Browder charts; immersion scalds exhibiting sharp water-line demarcation and sparing of flexural creases warrant evaluation for intentional non-accidental trauma.

Scale

Visible flakes or plates of stratum corneum shed from the skin surface, commonly caused by abnormal keratinization, inflammation, infection, or dryness.

Scales

Scales are flakes or plates of shed skin on the surface, occurring with dryness, eczema, psoriasis, fungal infection, or other dermatologic conditions.

Scaling

Scaling is flaking or shedding of the outer skin layer and may occur with dryness, eczema, psoriasis, fungal infection, or other skin disease.

Scaling And Root Planing

Nonsurgical periodontal instrumentation that removes supra- and subgingival deposits and smooths contaminated root surfaces. It reduces inflammation and pocket depth in appropriate patients but does not regenerate lost periodontal attachment by itself.

Scalp

The skin and underlying tissues covering the skull. It contains hair follicles, glands, blood vessels, nerves, and connective tissue and can be affected by injury, infection, or skin disease.

Scalp And Body (Ringworm)

Alternate index label for Ringworm.

Scalp Psoriasis

Psoriasis affecting the scalp, causing sharply demarcated red plaques covered by silvery scale that may extend beyond the hairline. It can itch, crack, or bleed and is not contagious. Treatment may include medicated shampoos, topical corticosteroids, vitamin-D analogues, or systemic therapy for extensive disease.

Alternate Names:

Psoriasis Of The Scalp (Scalp Psoriasis)

Scalpel

Surgical knife with interchangeable blades. Blade numbers indicate size and shape. #10: common for incisions. #11: puncture. #15: precise work.

Scalpel Handle

The reusable handle that holds a detachable scalpel blade. Different handle and blade sizes are chosen for the type and precision of the incision.

Scan

Scan is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

Scan Gallium

A nuclear-medicine scan using radiolabeled gallium to identify areas of inflammation, infection, or some tumors; uptake is interpreted with anatomy and clinical context.

Scanning

Systematic examination of a body region or specimen using imaging, microscopy, or another detection method to locate, characterize, or monitor abnormalities.

Scanning Electron Microscopy

Microscopy that scans a focused electron beam across a specimen surface to produce a high-resolution image of its three-dimensional topography

and composition.

Scanning Speech

A slow, irregularly paced speech pattern with abnormal emphasis, classically associated with cerebellar or multiple-sclerosis disease.

Scanning Techniques

Imaging or measurement methods that systematically examine a body region, organ, or sample.

Scaphoid

Largest proximal carpal row bone on the radial wrist side. Most commonly fractured carpal bone from falls on an outstretched hand. Unique distal blood supply makes waist fractures prone to proximal fragment avascular necrosis. Anatomical snuffbox tenderness is characteristic.

Scaphoid Abdomen

A scaphoid abdomen is an unusually hollowed abdominal contour, classically seen with severe diaphragmatic hernia in a newborn but also possible with marked wasting.

Scaphoid Bone

The largest proximal-row carpal bone on the thumb side of the wrist; its waist is vulnerable to fracture and avascular necrosis because of its blood supply.

Scaphoid Fractures

Scaphoid fractures: most common carpal fracture (young males, FOOSH). Classification: Herbert: A (incomplete), B (complete: B1 distal waist, B2 proximal waist, B3 proximal pole, B4 distal tubercle, B5 transverse). Vascularity: retrograde from distal radius -> proximal pole at risk for AVN.

Scaphycephaly

Scaphycephaly is a long, narrow skull shape caused by premature fusion of the sagittal suture and may require evaluation for craniosynostosis.

Scapula

Flat triangular bone on the posterior thorax between

ribs 2-7. Key features: acromion, coracoid process, glenoid cavity, spine, supraspinous/infraspinous fossae. Stabilized by 17 muscles and serves as rotator cuff attachment. Has 3 borders, 3 angles, and 2 surfaces. Fractures are uncommon, usually from high-energy trauma.

Scapulothoracic Joint

The functional gliding connection between the scapula and the back of the chest wall.

Scar

Fibrous tissue formed during healing after injury, inflammation, or surgery.

Scar Excessive (Keloid)

Alternate index label for Keloid.

Scar Management

Measures used to reduce symptoms and abnormal scar formation. Options include silicone products, pressure therapy, massage, corticosteroid injections, or other specialist treatments, depending on the scar and its cause.

Scar Revision

A procedure that improves the appearance, contour, flexibility, or symptoms of a scar through excision, rearrangement, grafting, laser, injection, or other selected techniques.

Scarification

Intentional scratching, cutting, or abrasion of skin, historically used in some inoculation or cultural practices and medically used in limited procedures; it can cause infection and scarring.

Scarlatina

Scarlet fever, an illness caused by toxin-producing group A Streptococcus and characterized by sore throat, fever, and a fine rough-textured rash.

Alternate Names:

Scarlet Fever (Scarlatina)

Scarlatina (Scarlet Fever (Scarlatina))

Alternate index label for Scarlet Fever (Scarlatina).

Scarlet Fever

A toxin-mediated illness caused by Group A Streptococcus producing erythrogenic toxin. Presents with fever, pharyngitis, and a characteristic diffuse, erythematous, sandpaper-textured rash that blanches with pressure. Circumoral pallor, Pastia lines (linear petechiae in skin folds), and strawberry tongue are classic findings.

Scarlet Fever (Scarlatina)

Alternate index label for Scarlatina.

Scarring Alopecia

Permanent hair loss caused by destruction and fibrosis of the hair follicle. Causes include lichen planopilaris, discoid lupus, central centrifugal cicatricial alopecia, folliculitis decalvans, and severe infection; early diagnosis and biopsy can prevent progression.

Scars

A scar is fibrous tissue formed during healing after injury, surgery, inflammation, or burns. Scars may be flat, depressed, raised, or contractured and can itch, hurt, restrict movement, or affect appearance; treatment depends on maturity and type.

Scatter Correction

A method in medical imaging, especially nuclear medicine, that estimates and removes the effect of photons scattered away from their original path, improving the accuracy of the image or measured activity.

Scatter Events

Photons deflected from original path. Corrected by energy windowing and scatter correction algorithms.

Scavenger Receptor

A cell-surface or intracellular receptor that binds and removes modified lipids, debris, microbes, or dying cells and contributes to innate immunity and

atherosclerosis.

Scavenging System

The anesthesia gas scavenging system collects and removes waste anesthetic gases from the operating room environment to protect staff from chronic exposure. Active scavenging uses negative pressure from vacuum source; passive scavenging vents to exhaust through gravity.

Scedosporium

A genus of environmental molds that can cause difficult-to-treat lung, sinus, skin, bone, or disseminated infections, especially in immunocompromised people.

Scedosporium Apiospermum

A mold that can cause localized or disseminated infection, including mycetoma, pneumonia, sinusitis, and brain abscesses; treatment often requires specialist antifungal care.

Scedosporium Prolifican

An environmental mold, now commonly classified as *Lomentospora prolificans*, that causes severe disseminated infection and is often resistant to antifungal drugs.

Schaalia Radingae

A normally slow-growing anaerobic bacterium of the human mouth and skin that can rarely cause abscesses or other invasive infections.

Schaalia Turicensis

A filamentous anaerobic bacterium that may be part of normal flora but can cause actinomycosis-like abscesses and other opportunistic infections.

Schatzki Ring

Thin circumferential mucosal ring located at the squamocolumnar junction of the distal esophagus at the superior margin of a hiatal hernia. The ring is composed of mucosa and submucosa. May be asymptomatic or cause episodic dysphagia particularly to solid food and acute food bolus impaction.

Alternate Names:

Ring Schatzki (Schatzki Ring) Strictures Esophagus (Schatzki Ring)

Schedule I

A United States controlled-substance category for drugs with high misuse potential and no accepted medical use under federal law.

Schedule II

A United States controlled-substance category for drugs with accepted medical uses but high misuse potential.

Schedule III

A United States controlled-substance category for drugs with lower misuse potential than Schedule II drugs.

Schedule IV

A United States controlled-substance category for drugs with accepted medical uses and lower misuse potential than Schedule III drugs.

Schedule V

A United States controlled-substance category for drugs with the lowest level of misuse potential among the federal schedules.

Scheduled Notification

A planned alert or message delivered at a specified time to remind a person about an appointment, medicine, monitoring task, or health-related action.

Scheuermann Disease

A juvenile osteochondrosis of the spine in which vertebral end plates develop irregularities and anterior wedging during skeletal growth. It commonly produces a rigid thoracic kyphosis, although the thoracolumbar or lumbar spine may also be involved. Symptoms can include back pain, fatigue, limited spinal motion, and postural deformity that becomes more apparent during adolescence. Diagnosis is based on clinical examination and characteristic radiographs; management depends on deformity

severity, skeletal maturity, pain, and progression.

Scheuermann'S Disease

A juvenile spinal growth disorder causing wedging of vertebral bodies and structural kyphosis.

Schiff Base

A chemical compound formed when a primary amine reacts with an aldehyde or ketone; Schiff bases occur in biochemistry and drug chemistry.

Schiller Test

A cervical examination using iodine solution; glycogen-rich normal squamous epithelium stains dark, while iodine-negative areas require clinical correlation and sometimes biopsy.

Schilling Test

A historical test of vitamin B12 absorption, formerly used to investigate pernicious anaemia and intestinal malabsorption. It has largely been replaced by serum vitamin B12, methylmalonic acid, homocysteine, and intrinsic-factor antibody testing.

Schirmer Test

A test in which standardized filter paper strips measure tear production over a set time, commonly used to evaluate aqueous-deficient dry eye.

Schistocyte Count

Measurement of fragmented red blood cells on a blood smear, supporting evaluation of microangiopathic hemolysis, mechanical valve damage, disseminated intravascular coagulation, or severe burns.

Schistocytes

Fragmented, helmet-shaped, or triangular red blood cells produced by mechanical shearing as erythrocytes pass through obstructed or fibrin-laden microvessels.

Schistomicide

A therapeutic anti-parasitic pharmacological agent specifically formulated to kill or eradicate parasitic blood flukes (trematodes) of the genus *Schistosoma*

(most notably *S. mansoni*, *S. haematobium*, and *S. japonicum*), which cause schistosomiasis (bilharzia). The primary schistomicide of choice worldwide is praziquantel, which acts by increasing schistosome cell membrane permeability to calcium ions, causing rapid muscular contraction, paralysis, tegumental damage, and exposure of parasite antigens to host immune attack.

Schistosoma

A genus of parasitic blood flukes that cause schistosomiasis when larval forms from contaminated freshwater penetrate human skin.

Schistosoma Haematobium

A parasitic blood fluke that can cause urinary schistosomiasis, including hematuria and chronic injury of the urinary tract.

Schistosoma Intercalatum

A parasitic blood fluke that causes intestinal schistosomiasis, mainly in parts of Central and West Africa, after freshwater exposure.

Schistosomiasis

A parasitic disease caused by *Schistosoma* blood flukes acquired through freshwater exposure, potentially causing intestinal or urinary inflammation, bleeding, liver disease, or chronic organ damage.

Alternate Names:

bilharzia, caused by blood flukes of the genus. Bilharzia (Schistosomiasis)

Schizencephaly

A rare brain malformation characterized by a full-thickness, gray matter-lined cleft extending from the pial surface to the lateral ventricle. Caused by early focal neuronal migration abnormalities, often associated with prenatal vascular disruption or COL4A1 mutations. Closed-lip (Type I): the cleft walls are apposed.

Schizoaffective Disorder

A disorder characterized by an uninterrupted period of illness during which there is a major mood episode concurrent with criterion A of schizophre-

nia (delusions, hallucinations, disorganized speech, grossly disorganized or catatonic behavior, or negative symptoms).

Schizogony

A form of asexual reproduction in which one protozoan cell divides into many daughter cells.

Schizoid Personality Disorder

A pattern of detachment from social relationships with a restricted range of emotional expression.

Alternate Names:

Personality Disorder, Schizoid

Schizophrenia

Schizophrenia is a chronic psychotic disorder involving delusions, hallucinations, disorganized thought or behavior, negative symptoms, and impaired functioning. delusions, disorganized thinking) and negative symptoms (avolition, alogia, anhedonia, blunted affect), with cognitive impairment and functional decline. Diagnosis: at least two core symptoms for ≥ 1 month with continuous signs for ≥ 6 months.

Schizophrenia, Adolescent

Alternate index label; see *Childhood schizophrenia*.

Schizophrenia, Childhood

Alternate index label; see *Childhood schizophrenia*.

Schizophrenia, Juvenile

Alternate index label; see *Childhood schizophrenia*.

Schizotypal Personality Disorder

A pattern of social and interpersonal deficits marked by acute discomfort with and reduced capacity for close relationships, cognitive or perceptual distortions, and eccentricities of behavior.

Alternate Names:

Personality Disorder, Schizotypal

Schlemm'S Canal

A circular channel that drains aqueous humor from the eye.

Alternate Names:

Canal of Schlemm

Schnitzler Syndrome

A rare autoinflammatory syndrome characterized by chronic urticarial rash, intermittent fever, bone pain, arthralgia or arthritis, and elevated inflammatory markers, usually with a monoclonal IgM protein and less commonly IgG.

School Age Test Or Procedure Preparation

Preparing a school-age child for a test or procedure includes age-appropriate explanations, comfort measures, caregiver support, and following any fasting or medicine instructions.

School Sores (Impetigo)

Alternate index label for Impetigo.

School-Age Children Development

School-age development includes advances in growth, coordination, language, learning, independence, social relationships, and emotional regulation, with broad normal variation.

School-Based Rehabilitation

Therapy and other support services provided in a school setting to help a child participate in education and daily school activities.

Schwann Cell

A peripheral glial cell that forms myelin or supports axons.

Schwann Cells

Glial cells of the peripheral nervous system that form myelin around many axons and support the repair and maintenance of peripheral nerves.

Schwannoma

A benign peripheral nerve sheath tumor arising from Schwann cells. It presents as a solitary, slow-growing, painless nodule along a peripheral nerve course. It can be moved laterally but not longitudinally along the nerve. Vestibular schwannoma

(acoustic neuroma) arises from CN VIII. Diagnosis is by MRI.

Alternate Names:

Neurilemmoma

Schwannomatosis

A disorder in which multiple schwannomas, tumors of nerve-sheath cells, develop.

Alternate Names:

Neurinomatosis

SCI

Alternate index label; see *Spinal cord injury*.

Sciatic Nerve

Body's largest nerve (L4-S3), formed from the lumbosacral plexus, exiting via the greater sciatic foramen below the piriformis. Descends in the posterior thigh, dividing into tibial and common peroneal nerves at the popliteal fossa. Innervates hamstrings and provides lower leg/foot motor/sensory innervation via its branches.

Sciatic Neuritis (Sciatica)

Alternate index label for Sciatica.

Sciatica

Sciatica is radiating leg pain or sensory symptoms along a lumbosacral nerve-root distribution, commonly from disk herniation or spinal narrowing, through the buttock and down the posterior thigh to the foot. Most commonly caused by lumbar disc herniation compressing the nerve root (L4-L5 or L5-S1). Other causes: spinal stenosis, spondylolisthesis, piriformis syndrome, and epidural abscess.

Alternate Names:

Sciatic Neuritis (Sciatica)

Sciatica: Causes, Treatment, And Symptoms

Sciatica is radiating pain, tingling, numbness, or weakness along the sciatic-nerve distribution, commonly from lumbar disc herniation or spinal narrowing. Most cases improve with conservative care, but saddle numbness, bowel or bladder dysfunction,

or progressive weakness is urgent.

Scimitar Syndrome

A congenital cardiopulmonary anomaly involving partial or total anomalous pulmonary venous return from the right lung to the inferior vena cava, often with right-lung hypoplasia and dextroposition of the heart. It may cause recurrent respiratory infection, pulmonary hypertension, or heart failure.

Scintigraphy

Nuclear medicine imaging in which a radiotracer is administered and its distribution is recorded to evaluate the structure or function of an organ.

Scintillation

The emission of light by a material after it absorbs ionizing radiation. Scintillation detectors use this light to measure radiation.

Scintillation Crystal

Sodium iodide doped with thallium (NaI:Tl) crystal converts gamma rays to light photons. Coupled to photomultiplier tubes.

Scintillations

Perceived flashes or zigzag lines, often occurring during a migraine aura.

Scirrhus

A hard, fibrous form of carcinoma, historically used especially for breast or gastric cancer.

Scissors

Instruments with two blades used to cut tissue, sutures, dressings, or other material. Surgical types vary in length, blade shape, and sharpness; examples include Mayo and Metzenbaum scissors.

Scissors (Surgical)

Cutting instruments used to divide tissue, sutures, dressings, or other materials during medical procedures.

Alternate Names:

Surgical

Scissors (Vascular)

A surgical instrument with two blades used to cut tissue, sutures, dressings, or other materials during vascular procedures.

Alternate Names:

Vascular

Sclera

The sclera is the tough white outer coat of the eye that protects the globe and provides attachment for eye muscles.

Scleral Buckling

A retinal-detachment repair procedure in which a silicone band or buckle is placed around the outside of the eye to support the retinal break and reduce traction.

Scleredema Diabeticorum

Scleredema diabeticorum is thickening and hardening of the skin on the upper back and neck, usually associated with long-standing diabetes and obesity.

Scleritis

Scleritis is painful inflammation of the sclera, often associated with autoimmune disease and capable of threatening vision.

Alternate Names:

Inflammation Sclera (Scleritis)

Scleroderma

Scleroderma is a group of autoimmune diseases that cause the skin to become thick and hard. In systemic sclerosis, it can also affect blood vessels and internal organs such as the esophagus, lungs, kidneys, and heart.

Alternate Names:

Arthritis Scleroderma (Scleroderma) Sclerosis, Systemic

Scleroma

Scleroma is chronic granulomatous infection, usually of the upper airway, caused by *Klebsiella rhinoscleromatis* and potentially producing scarring and obstruction.

Scleromyxedema

A rare, chronic, progressive mucinosis characterised by generalised papular and sclerodermoid thickening of the skin with firm, waxy papules in a "peau d'orange" pattern, most prominently on the face, neck, and hands.

Sclerosing Cholangitis

Sclerosing cholangitis is inflammation and scarring that narrows bile ducts, causing cholestasis and sometimes cirrhosis; primary and secondary causes require different evaluation.

Sclerosing Mesenteritis

A rare inflammatory and fibrotic disorder affecting the mesentery, the tissue supporting the intestines.

Sclerosing Peritonitis

Thickening and scarring of the peritoneum that can restrict movement of the intestines.

Sclerosing Sialadenitis

A chronic fibrosing inflammation of the salivary glands characterized by progressive glandular enlargement and firmness, sometimes associated with IgG4-related disease.

Sclerosis

Abnormal hardening or scarring of tissue, often from excess connective tissue, chronic inflammation, degeneration, or neurologic plaques; the affected organ determines the specific disease.

Sclerosis, Multiple

Alternate index label; see *Multiple sclerosis*.

Sclerosis, Systemic

Alternate index label; see *Scleroderma*.

Sclerosteosis

A rare inherited sclerosing bone dysplasia characterized by progressive thickening of the skull and long bones, tall stature or syndactyly in some forms, and possible cranial-nerve compression. Hearing loss, facial palsy, headache, and raised intracranial

pressure may occur.

Sclerotherapy

A treatment in which an irritating or closing agent is injected into a blood vessel or body cavity to make it scar and seal, commonly used for varicose veins and selected vascular lesions.

Scolecobasidium Terreum

An environmental dematiaceous fungus rarely reported as an opportunistic human pathogen; clinical significance depends on isolation from a compatible infection.

Scoliosis

Scoliosis is a three-dimensional sideways curvature and rotation of the spine, which may be idiopathic, congenital, neuromuscular, or degenerative.

Alternate Names:

Spinal Curvature

Scopolamine

Scopolamine is a muscarinic antagonist used mainly to prevent motion sickness and postoperative nausea; dry mouth, blurred vision, urinary retention, confusion, and other anticholinergic effects may occur.

Scopolamine Hydrobromide

The hydrobromide salt of scopolamine, an anticholinergic medicine used mainly to prevent motion sickness and postoperative nausea.

Scopoletin

A plant-derived coumarin compound studied for antioxidant, anti-inflammatory, and antimicrobial effects; clinical benefits in humans are not established.

Scopulariopsis

Scopulariopsis is a mold genus that rarely causes opportunistic infection, especially in people with immune suppression or implanted devices.

Scorbutic

Pertaining to, affected by, or characteristic of scurvy—the clinical syndrome resulting from severe nutritional ascorbic acid (vitamin C) deficiency. Vitamin C is an indispensable cofactor for prolyl and lysyl hydroxylase enzymes required for post-translational collagen triple-helix cross-linking. Scorbutic pathology is characterized by extreme capillary fragility, defective wound healing, and musculoskeletal deterioration; classic physical findings include corkscrew hairs with surrounding perifollicular petechiae, purpura, bleeding spongy gums (scorbutic gingivitis), subperiosteal hematomas, and painful hemarthroses.

Scorpion Fish Sting

A painful sting from a venomous scorpion fish, causing severe local pain, swelling, and sometimes whole-body symptoms. The wound needs urgent medical assessment because venom may remain in the spine.

Scorpion Sting

A venomous injury caused by a scorpion, producing local pain and sometimes systemic toxicity.

Alternate Names:

Stings, Scorpion

Scorpions

Venomous arachnids whose stings can cause local pain and, depending on the species, sweating, muscle spasms, breathing problems, or other serious symptoms.

Scotoma

A focal area of diminished or absent vision within an otherwise intact visual field, classified by location and morphology.

Scrape

A scrape is a superficial abrasion in which friction removes part of the skin surface; cleaning, protection, and monitoring for infection support healing.

Scrapie

Scrapie is a fatal prion disease of sheep and goats

causing progressive neurologic dysfunction; it is not considered a usual human infection.

Screen Time And Children

Time children spend using televisions, computers, phones, tablets, or game devices; excessive or poorly timed use can affect sleep, activity, learning, mood, and family routines.

Screening

Testing people without symptoms to identify a disease or an increased risk of disease. The appropriate test, age range, interval, and follow-up depend on the condition, individual risk, and current guidance; screening benefits must be balanced against harms.

Screening (Geriatric)

Detection of disease in asymptomatic elderly. Balance benefits vs. harms, life expectancy, preferences. Examples: bone density, abdominal aortic aneurysm, colorectal cancer (individualized), depression, falls.

Alternate Names:

Geriatric

Screening And Diagnosis For HIV

Testing for human immunodeficiency virus using an antigen-antibody assay or nucleic-acid test, followed by confirmatory testing and assessment of immune status when positive.

Screening Guidelines

Recommendations describing who should be screened for a disease, which test to use, and when to begin or repeat testing.

Screening Procedure

A test or examination offered to people without symptoms to detect disease or risk early enough for effective prevention or treatment; eligibility and intervals depend on evidence and risk.

Screening Program

An organized public-health service that systematically invites a defined population to undergo testing

for an asymptomatic condition, with quality-assured follow-up, diagnosis, treatment, and evaluation of benefits and harms.

Screening Study

A planned investigation of an asymptomatic population to identify early disease, precursor lesions, or risk factors using a validated test and follow-up pathway.

Screening Test

A test applied to people without symptoms or a known diagnosis to identify those at increased risk of a condition. A screening result usually requires a diagnostic or confirmatory evaluation before treatment is initiated.

Screws

Threaded devices used to hold bone fragments together or attach implants to bone.

Script

A script is a written set of instructions or a prescription; in healthcare, a prescription specifies the medicine, dose, route, timing, and duration.

Scrivener'S Palsy

An older term for task-specific hand dystonia or cramp occurring during writing.

Scrofula

Tuberculous infection of cervical lymph nodes, producing chronic neck swellings that may suppurate or form draining sinuses; nontuberculous mycobacteria can cause a similar presentation.

Scrofulous

Scrofulous is an old term for tuberculous infection of lymph nodes, especially in the neck, which can cause chronic swelling and draining sinuses.

Scrombotoxin Poisoning

A misspelled or nonstandard form referring to scombrotoxin poisoning, caused by histamine in improperly stored fish.

Scrotal Calcinosis

The deposition of calcium within the scrotal skin, presenting as multiple, firm, whitish, painless nodules on the scrotum, which may be solitary or numerous and may ulcerate. The exact aetiology is debated and may involve dystrophic calcification of pre-existing epidermal inclusion cysts, dermal cysts, or eccrine duct abnormalities.

Scrotal Infection

Infection of the scrotal skin or underlying structures, which may cause redness, swelling, warmth, pain, or drainage. Rapidly worsening pain, fever, discoloration, or severe swelling is an emergency because serious soft-tissue infection must be excluded.

Scrotal Masses

Abnormal lumps or swellings in the tissues of the scrotum.

Scrotal Pain

Pain in the scrotum caused by infection, trauma, hernia, fluid collections, varicocele, or testicular torsion. Sudden severe pain, nausea, a high-riding testis, or abnormal testicular position requires immediate assessment for torsion.

Scrotal Swelling

Enlargement of the scrotum caused by fluid, inflammation, infection, hernia, varicocele, hydrocele, tumor, trauma, or testicular torsion; sudden pain is an emergency.

Scrotal Ultrasound

Ultrasound imaging of the scrotum and testes used to evaluate pain, swelling, masses, torsion, infection, trauma, and blood flow.

Scrotum

The scrotum is the external skin-and-muscle sac containing the testes and epididymides; its muscles help regulate testicular temperature, and swelling or pain may indicate infection, torsion, hernia, or tumor. spermatic cords. The scrotal wall has multiple layers reflecting the abdominal wall layers.

Scrub In

To scrub in is to perform surgical hand antisepsis and put on sterile clothing and gloves before participating in a sterile procedure.

Scrub Up

To scrub up means to clean and antiseptically prepare the hands and forearms before a sterile procedure.

Scrubs

Scrubs are protective work garments commonly worn by healthcare staff; they reduce clothing contamination but do not replace hand hygiene or other precautions.

Scrum-Pox

A nonstandard or historical term whose intended clinical meaning is unclear and should be verified from its source.

Scurf

Fine flakes or scales shed from the skin, especially the scalp.

Scurvy

A disease caused by severe vitamin C deficiency. It can cause bleeding or swollen gums, easy bruising, small skin bleeds, poor wound healing, anemia, bone or joint pain, and fatigue.

Sea-Blue Histiocyte

A sea-blue histiocyte is a macrophage containing blue-green lipid or ceroid pigment on staining, seen in some storage, hematologic, or metabolic disorders.

Sea-Sickness

Motion sickness caused by conflicting signals from the inner ear, eyes, and body during travel on a boat or ship. It may cause nausea, vomiting, dizziness, sweating, headache, and pallor.

Seasonal Affective Disorder

A specifier of recurrent major depressive episodes

that occur at a specific time of year, most commonly winter (with remission in spring/summer). Symptoms: hypersomnia, hyperphagia with carbohydrate craving, weight gain, fatigue, and low energy.

Seasonal Affective Disorder

Alternate index label for SAD.

Seasonal Affective Disorder

Alternate index label for Seasonal Affective Disorder.

Seasonal Affective Disorder Syndrome

Seasonal affective disorder, a recurring mood disorder with episodes linked to a particular season.

Seasonal Allergies (Hay Fever)

Alternate index label for Hay Fever.

Seasonal Allergy

Alternate index label; see *Hay fever*.

Sebaceous Adenoma

A sebaceous adenoma is a usually benign tumor of sebaceous glands that can appear as a yellowish skin nodule and may be associated with Muir-Torre syndrome.

Sebaceous Carcinoma

An uncommon skin cancer arising from oil-producing sebaceous glands.

Sebaceous Cyst

A common but imprecise term for an epidermoid cyst, a keratin-filled cyst beneath the skin.

Sebaceous Epithelioma

A benign sebaceous neoplasm, often presenting as a yellowish papule or nodule. Multiple or unusual lesions may warrant assessment for a DNA mismatch-repair syndrome such as Muir-Torre syndrome.

Sebaceous Gland

A small gland in the skin that secretes sebum (oil) into hair follicles to lubricate and waterproof the

skin and hair.

Sebaceous Gland Carcinoma

Sebaceous gland carcinoma is an uncommon skin cancer arising from oil glands, often appearing as a firm yellowish eyelid or skin lump.

Sebaceous Glands

Skin glands that secrete sebum, usually into hair follicles.

Sebaceous Hyperplasia

A benign enlargement of sebaceous glands, presenting as small yellowish papules with central umbilication, usually on the face of adults.

Seborrhea

Seborrhea is excessive or altered oil production that contributes to greasy scale and inflammation, commonly in seborrheic dermatitis of the scalp, face, or chest. Gentle cleansing, medicated shampoos, and topical anti-inflammatory or antifungal treatment may help.

Seborrheic Dermatitis

A chronic inflammatory skin condition affecting sebum-rich areas: scalp, face (nasolabial folds, eyebrows), chest, and intertriginous areas. Presents with erythematous patches with greasy, yellowish scales. Dandruff is a mild form. More common and severe in Parkinson disease, HIV/AIDS, and Down syndrome.

Alternate Names:

Dermatitis, Seborrheic

Seborrheic Keratoses

Common, benign, epidermal skin tumors presenting as waxy, stuck-on, pigmented plaques with a rough, verrucous surface, typically appearing on the trunk and face of middle-aged and older adults. They are the most common benign skin neoplasm and are caused by keratinocyte proliferation.

Seborrheic Keratosis

A benign epidermal tumor appearing as stuck-on,

waxy, hyperpigmented plaques with a verrucous surface. They are extremely common in older adults and increase in number with age. Seborrheic keratoses are not premalignant.

Alternate Names:

Keratosis, Seborrheic

Seborrhoea

A chronic inflammatory skin condition affecting sebum-rich areas: scalp, face (nasolabial folds, eyebrows), chest, and intertriginous areas. See Seborrheic Dermatitis.

Seborrhoeic

Relating to increased or altered activity of sebaceous glands or to areas rich in these glands, such as the scalp, face, chest, and upper back.

Seborrhoeic Keratosis

A common benign, usually pigmented, raised skin growth with a waxy or stuck-on appearance.

Sebum

An oily secretion produced by sebaceous glands that lubricates and protects skin and hair.

Seckel Syndrome

A rare recessive primordial dwarfism syndrome featuring severe proportionate growth restriction, microcephaly, characteristic facial features, and developmental or intellectual impairment. Skeletal, hematological, and other congenital abnormalities may occur.

Secobarbital Overdose

Poisoning from taking too much secobarbital, a sedative medicine. It can cause extreme sleepiness, confusion, slowed breathing, coma, or death and requires emergency care.

Second Malignancy

New cancer after initial cancer treatment. Risk from radiation, chemotherapy.

Second Messenger Systems

Intracellular signaling molecules that relay extracellular signals (first messengers: hormones, neurotransmitters, growth factors) to cellular responses.

Second Messengers

Intracellular signaling molecules generated in response to extracellular signals (first messengers like hormones or neurotransmitters). cAMP (cyclic adenosine monophosphate): produced from ATP by adenylyl cyclase, activated by Gs-protein coupled receptors, activates protein kinase A (PKA); degraded by phosphodiesterase.

Second Opinion

An independent medical assessment by another qualified clinician to help confirm or clarify a diagnosis, prognosis, or treatment plan.

Second Stage Of Labor

From full cervical dilatation (10 cm) to delivery of the baby. The mother feels the urge to push as the presenting part descends. Pushing: closed-glottis (Valsalva) or open-glottis. Duration: up to 3 hours in nulliparas with regional anesthesia (2 hours without), and 2 hours in multiparas (1 hour without).

Second Trimester

The period from 13 to 27 weeks gestational age. Fetal growth accelerates, mother begins to feel quickening (fetal movement) between 16-20 weeks. Anatomy ultrasound at 18-22 weeks screens for structural anomalies. Maternal serum screening offered. Nausea typically resolves.

Second-Degree AV Block

Intermittent failure of AV conduction. Mobitz Type I (Wenckebach): progressive PR prolongation then dropped QRS; usually benign (AV nodal, narrow QRS). Mobitz Type II: constant PR interval with sudden dropped QRS; more serious (infranodal, wide QRS), risk of progression to complete heart block and Stokes-Adams attacks.

Second-Degree Burn

Partial-thickness burn involving the epidermis and dermis: superficial partial-thickness (blisters, moist, painful, pink) vs. deep partial-thickness (blanching, painful, may have thrombosed capillaries). Causes: thermal (scalds, flames), chemical, electrical.

Second-Hand Smoke

Smoke inhaled from burning tobacco products or exhaled by a person who is smoking. It contains toxic substances and increases health risks in exposed people.

Second-Look Surgery

Second-look surgery is a planned or follow-up operation performed to inspect healing, remove remaining disease, assess treatment response, or manage complications.

Secondary Adrenal Insufficiency

Adrenocortical hypofunction caused by deficient secretion of adrenocorticotrophic hormone from the anterior pituitary or corticotropin-releasing hormone from the hypothalamus. Most frequently caused by prolonged exogenous corticosteroid therapy followed by abrupt withdrawal; unlike primary adrenal insufficiency (Addison disease), mineralocorticoid secretion is preserved and hyperpigmentation is absent.

Secondary Amenorrhea

Absence of menstruation for at least three months in someone with previously regular cycles or six months with previously irregular cycles, caused by pregnancy, endocrine, ovarian, uterine, or systemic factors.

Secondary Attack Rate

The proportion of susceptible contacts who develop infection after exposure to a primary case within a defined period. It helps estimate transmissibility in households, schools, healthcare settings, and other close-contact groups.

Secondary Brain Cancer

Alternate index label; see *Brain metastases*.

Secondary Hyperparathyroidism

Compensatory PTH increase in CKD from decreased phosphate excretion, low calcitriol, and hypocalcemia. Leads to renal osteodystrophy and vascular calcification. Managed with dietary phosphorus restriction, phosphate binders, active vitamin D, and calcimimetics. Refractory cases may require parathyroidectomy.

Secondary Hypertension

High blood pressure caused by another medical condition or by a medication.

Secondary Hypothyroidism

Low thyroid hormone production caused by inadequate pituitary TSH stimulation, usually from pituitary or hypothalamic disease; TSH may be low, normal, or inappropriately mildly high.

Secondary Immune Response

The rapid, enhanced immune response on re-exposure to an antigen, mediated by memory B cells and memory T cells generated during the primary response. Features: shorter lag phase, higher and faster antibody titers (predominantly high-affinity IgG), and more effective cell-mediated responses.

Secondary Immunodeficiency

Reduced immune function caused by an acquired condition or exposure rather than a primary genetic disorder. Causes include HIV infection, cancer, malnutrition, medicines, and chronic disease; the manifestations depend on which immune functions are impaired.

Secondary Infections

Infections that develop during or after another disease, injury, or treatment because of tissue damage, altered defenses, or immunosuppression.

Secondary Metabolism

Biochemical pathways that produce specialized compounds not required for basic growth but important for defense, signaling, pigmentation, or interactions with the environment.

Secondary Osteoporosis

Bone loss caused by another illness, medication, or prolonged immobility.

Secondary Parkinsonism

Secondary parkinsonism is slowed movement, rigidity, tremor, or postural instability caused by another condition, medicine, toxin, vascular injury, or structural brain disease.

Secondary Prevention

Early detection and treatment. Examples: screening (mammography, colonoscopy, blood pressure), self-examination.

Secondary Sexual Characteristics

Physical changes of puberty that distinguish mature males and females but are not directly part of the reproductive organs.

Secondary Progressive Multiple Sclerosis

A phase of multiple sclerosis that evolves from relapsing-remitting multiple sclerosis over 10 to 20 years, characterized by progressive, irreversible accumulation of neurological disability and neurodegeneration with or without occasional superimposed relapses. Characterized radiologically by cerebral atrophy and chronic black holes on MRI rather than active gadolinium-enhancing inflammatory lesions.

Alternate Names:

SPMS; Secondary-progressive MS

Secondary Syphilis

The systemic dissemination stage of *Treponema pallidum* infection, occurring weeks to months after the primary chancre, characterised by a generalised maculopapular rash (including the palms and soles), mucous patches, condylomata lata, lymphadenopathy, and systemic symptoms such as fever and malaise.

Secondary Systemic Amyloidosis

Secondary systemic amyloidosis results when chronic inflammation or infection drives production of serum amyloid A, which deposits in organs such as the kidneys, liver, and spleen.

Secondary Tumor

A tumor formed when cancer cells spread from the original site to another part of the body.

Secretin

A peptide hormone produced by S-cells in the duodenal and jejunal mucosa in response to acidic chyme (pH less than 4.5) entering the duodenum from the stomach.

Secretin Stimulation Test

A dynamic test that administers secretin and measures pancreatic or gastrointestinal responses, used selectively to evaluate pancreatic exocrine function or gastrinoma.

Secretion

Active movement of a substance from cells into a body fluid, lumen, or external environment. In toxicokinetics, renal tubular or biliary secretion can contribute to elimination of a toxin or metabolite.

Secretory Diarrhea

Diarrhea caused by active secretion or reduced absorption of electrolytes and water by the intestine. It persists despite fasting and may result from infections, medications, bile-acid disorders, endocrine tumors, or inflammatory disease.

Section

A defined part or subdivision of an organ, document, study, or procedure; in anatomy and imaging, the term identifies a specific slice or region examined.

Section, Cesarean

Cesarean section, an operation delivering a baby through incisions in the abdomen and uterus when vaginal birth is unsafe, impossible, or not advisable.

Sed Rate

A blood test measuring how quickly red blood cells settle, used as a nonspecific marker of inflammation.

Alternate Names:

Erythrocyte sedimentation rate; ESR

Sedation

The use of medicines to make a person relaxed, drowsy, or less aware during a procedure while maintaining appropriate monitoring and breathing.

Sedation Dentistry

Pharmacological techniques for anxiety management: nitrous oxide (laughing gas), oral sedation, IV sedation, general anesthesia. Indications: dental phobia, special needs, prolonged procedures. Monitoring required for deeper sedation.

Sedation Levels

A continuum ranging from minimal sedation, in which normal responses to verbal commands are preserved, to moderate or deep sedation, in which responses and airway or breathing support may be reduced. The level can change and requires appropriate monitoring.

Sedative-Hypnotic

CNS depressants. Benzodiazepines, barbiturates, Z-drugs. Overdose: respiratory depression, coma. Treatment: supportive, flumazenil (benzodiazepines only), airway management.

Sedative-Hypnotic Toxicdrome

A poisoning pattern caused by central nervous system depressants, producing drowsiness, slurred speech, impaired coordination, reduced reflexes, respiratory depression, coma, or loss of airway protection.

Sedatives

Medicines or substances that reduce central nervous system activity and produce calmness or sleepiness.

Sedimentation Rate

The erythrocyte sedimentation rate, a nonspecific blood test that may increase with inflammation, infection, anemia, or other conditions.

Segmental Pressures

Blood pressure measurements at different leg levels. Localizes level of obstruction.

Segmentation

A pattern of intestinal motility involving localized, rhythmic contractions of circular muscle that segment the intestinal contents, mixing them with digestive secretions and increasing contact with the absorptive mucosal surface. Unlike peristalsis, segmentation does not propel contents distally.

Segmentectomy

An anatomical sublobar surgical resection of one or more individual bronchopulmonary segments of a lung lobe. The procedure involves individual dissection, division, and ligation of the segmental pulmonary artery, segmental pulmonary vein, and segmental bronchus, along with identification of the intersegmental parenchymal plane (often using systemic indocyanine green fluorescence) and radical hilar/mediastinal lymph node dissection. Landmark clinical trials (JCOG0802 and CALGB 140503) established segmentectomy as non-inferior to lobectomy in overall survival for peripheral non-small cell lung cancer ≤ 2 cm with ≥ 50 percent consolidation, while significantly preserving postoperative pulmonary reserve.

Alternate Names:

Sublobar Resection; Anatomical Segmentectomy; Pulmonary Segmentectomy

SEID

Alternate index label; see *Myalgic encephalomyelitis/chronic fatigue syndrome (ME/CFS)*.

Seizure

A transient occurrence of signs and/or symptoms due to abnormal, excessive, or synchronous neuronal activity in the brain. Provoked seizures have an identifiable acute cause (fever, electrolyte disturbance, drug toxicity, withdrawal). Unprovoked seizures occur without an acute trigger.

Seizure Disorder

Alternate index label; see *Epilepsy*.

Seizure Disorders

Conditions characterized by recurrent unprovoked seizures or an enduring predisposition to them, clas-

sified by seizure type and cause and treated according to epilepsy syndrome and risk.

Seizure Febrile (Febrile Seizures)

Alternate index label for Febrile Seizures.

Seizure Fever Induced (Febrile Seizures)

Alternate index label for Febrile Seizures.

Seizure, Absence

Alternate index label; see *Absence seizure*.

Seizure, Febrile

Alternate index label; see *Febrile seizure*.

Seizure, Grand Mal

Alternate index label; see *Tonic-clonic (grand mal) seizure*.

Seizure, Petit Mal

Alternate index label; see *Absence seizure*.

Seizure, Temporal Lobe

Alternate index label; see *Temporal lobe seizure*.

Seizures

Seizures are transient episodes of abnormal excessive brain electrical activity causing changes in awareness, movement, sensation, behavior, or autonomic function.

Selective Deficiency Of IgA

The most common primary antibody deficiency, characterized by very low or absent immunoglobulin A with normal or near-normal levels of other immunoglobulins; infections and autoimmune disease may occur.

Selective Estrogen Receptor Modulator

A class of medications that bind to estrogen receptors (ER-alpha and ER-beta) with tissue-specific agonist or antagonist activity, depending on the target tissue and differential co-regulator recruitment.

Selective Estrogen Receptor Modulators

Medicines that activate estrogen receptors in some tissues and block them in others.

Alternate Names:

SERMs

Selective IgA Deficiency

An immune disorder characterized by very low or absent immunoglobulin A levels.

Selective Antibody Deficiency With Normal Immunoglobulins

A primary antibody deficiency in which total immunoglobulin levels are normal but responses to specific vaccine antigens are inadequate, causing recurrent respiratory or other bacterial infections.

Selective Mutism

Consistent failure to speak in specific social situations where speaking is expected despite speaking in other situations. The disturbance interferes with educational or occupational achievement or social communication. Must last for at least one month and is not attributable to lack of knowledge of or comfort with the spoken language.

Selective Serotonin Reuptake Inhibitors

Antidepressants that increase serotonin signaling by reducing its reuptake into nerve cells.

Alternate Names:

SSRIs

Selective Serotonin-Reuptake Inhibitors (SSRIs)

Antidepressants that increase serotonin signaling by inhibiting its reuptake into nerve terminals.

Selegiline

A monoamine-oxidase-B inhibitor used in selected treatment of Parkinson disease and sometimes depression.

Selenium

Trace mineral, component of antioxidant enzymes. Deficiency: Keshan disease (cardiomyopathy),

Kashin-Beck disease (osteoarthropathy). Sources: Brazil nuts, seafood, meat.

Selenium In Diet

Selenium in diet provides a trace mineral needed for antioxidant enzymes, thyroid hormone metabolism, and reproduction. Excess supplements can cause toxicity, so intake should remain within recommended limits.

Selenium Sulphide

A topical antifungal and antiseborrheic medicine used for dandruff and seborrheic dermatitis.

Selenium-75

Calibration source. Half-life 119 days. Used for uniformity correction.

Self Catheterization - Female

Intermittent insertion and removal of a catheter through the female urethra to empty the bladder when normal urination is inadequate, reducing retention and protecting kidney function.

Self Catheterization - Male

Intermittent insertion and removal of a catheter through the male urethra to drain the bladder when neurologic, obstructive, or other conditions prevent adequate emptying.

Self Gratification Sexual (Masturbation)

Alternate index label for Masturbation.

Self Harming

Alternate index label; see *Self-injury/cutting*.

Self-Diagnosing Body Dysmorphic Disorder

Alternate index label for BDD.

Self-Efficacy

Patient belief in ability to manage condition. Influences adherence, outcomes.

Self-Experimentation

Research in which an investigator deliberately uses an intervention or procedure on themselves. It requires careful attention to consent, safety, and scientific validity.

Self-Harm

Intentional self-inflicted injury without suicidal intent, also termed non-suicidal self-injury; common methods include cutting, burning, and self-hitting. Prevalent in adolescents and in borderline personality disorder, depression, eating disorders, and trauma, serving affect regulation or self-punishment.

Self-Help Group

A peer group in which members support one another while changing a harmful behavior or coping with a problem.

Alternate Names:

Support group

Self-Injury/Cutting

Deliberate injury to one's own body, often used to cope with overwhelming emotions and requiring compassionate assessment of safety and mental health.

Alternate Names:

Self Harming

Self-Management

Actions a person takes to monitor and manage a health condition, including treatment use, symptom monitoring, and lifestyle measures.

Self-Poisoning

Intentional ingestion or exposure to a potentially harmful substance, often requiring urgent medical and mental-health assessment.

Self-Testing For COVID-19

Testing a sample collected at home, usually from the nose, to check for COVID-19 infection. A negative result does not always rule out infection, especially early in illness.

Sella Turcica

A saddle-shaped depression in the sphenoid bone containing the pituitary gland.

Semaglutide

Semaglutide is a glucagon-like peptide-1 receptor agonist used for selected patients with type 2 diabetes or chronic weight management. It slows gastric emptying and reduces appetite and glucose levels; nausea, gallbladder disease, pancreatitis risk, and contraindications require review.

Semen

The fluid ejaculated from the male reproductive tract, containing sperm (produced in the testes) suspended in seminal plasma (produced by the seminal vesicles, prostate, and bulbourethral glands). Semen provides nutrients (fructose, amino acids), protective agents (zinc, antioxidants), and a medium for sperm transport.

Semen Analysis

Laboratory assessment of ejaculate volume, sperm concentration, total count, motility, morphology, vitality, and other characteristics. It is a key initial test in male-factor infertility and should usually be repeated because results vary biologically.

Semen Blood (Blood In Semen)

Alternate index label for Blood In Semen.

Semen DNA Analysis

Semen DNA analysis evaluates sperm genetic material, often to investigate infertility, repeated pregnancy loss, or possible DNA damage.

Semi-Fowler Position

A semiupright position in which the head and upper body are elevated about 30 to 45 degrees.

Semicircular Canals

Three fluid-filled (endolymph) loops in each inner ear, oriented approximately orthogonally to detect angular (rotational) acceleration in three planes: horizontal (lateral), anterior (superior), and poste-

rior. Each has an ampulla with a crista containing hair cells embedded in a gelatinous cupula.

Semilunar Cartilages

The crescent-shaped fibrocartilages of the knee, more commonly called menisci.

Semilunar Valves

The aortic and pulmonary valves, which open during ventricular contraction and close during ventricular relaxation to prevent backflow into the ventricles.

Seminal Vesicle

One of a paired set of male accessory reproductive glands behind the urinary bladder. Its fructose-rich secretion contributes substantially to semen and joins the vas deferens through the ejaculatory duct.

Seminal Vesicles

Glands behind the bladder that produce much of the fluid in semen.

Seminiferous Tubules

Tightly coiled testicular tubules in which sperm are produced.

Seminoma

A malignant germ-cell tumor of the testis, usually sensitive to radiotherapy and chemotherapy.

Senescence

Biological changes and functional decline associated with aging. In cell biology, cellular senescence is a durable state of cell-cycle arrest in metabolically active cells; accumulation of senescent cells can contribute to tissue dysfunction and age-related disease.

Alternate Names:

Biological aging

Senile Dementia

An outdated term formerly used for dementia in older adults; current diagnosis specifies the cause.

Senile Lentigines

Flat, sharply defined brown or tan spots caused by chronic ultraviolet exposure, commonly appearing on sun-exposed skin with age.

Senility

An outdated, imprecise term for age-related decline; modern assessment identifies specific medical, cognitive, or functional causes.

Senna

A plant-derived stimulant laxative containing sennosides, used short term for constipation and sometimes to empty the bowel before a procedure. It increases intestinal activity and may cause abdominal cramps or diarrhea; prolonged or excessive use can cause dependence or fluid and electrolyte disturbances.

Sensate Focus Techniques

Structured touch exercises used in sex therapy to reduce performance pressure and improve intimacy.

Alternate Names:

Sensate focus

Sensation

Perception of stimuli such as touch, pain, temperature, sound, or position.

Sense

A sense is a capacity to detect and interpret stimuli such as touch, temperature, pain, sound, light, smell, taste, position, or internal body signals.

Sensitisation

The process by which repeated exposure increases an immune, neural, or behavioral response.

Sensitivity

The proportion of people with a condition who have a positive test result; it also means responsiveness to a stimulus.

Sensitivity Analysis

Sensitivity analysis tests how much a study's con-

clusion changes when assumptions, measurements, or input values are varied.

Sensitivity, Gluten (Nonceliac Gluten Sensitivity (Intolerance))

Alternate index label for Nonceliac Gluten Sensitivity (Intolerance).

Sensitized

State of having preformed antibodies against human leukocyte antigens; complicates transplant matching and increases rejection risk.

Sensorimotor Polyneuropathy

Sensorimotor polyneuropathy affects multiple peripheral nerves and causes combinations of numbness, pain, weakness, impaired reflexes, and distal muscle wasting.

Sensorineural Deafness

Sensorineural deafness is hearing loss from dysfunction of the inner ear, auditory nerve, or central pathways rather than blockage of sound conduction.

Sensorineural Hearing Loss

Hearing loss from pathology of the cochlea or auditory (eighth cranial) nerve, characterized on pure-tone audiometry by elevated bone conduction thresholds and no air-bone gap.

Sensorium

The state or level of consciousness and awareness of one's surroundings.

Sensory

Relating to sensation or to nerves and pathways that carry information such as touch, pain, temperature, position, hearing, or vision to the brain.

Sensory Cortex

Cerebral cortex that receives and interprets sensory information, especially the postcentral gyrus for body sensation.

Sensory Deprivation

Marked reduction of normal sensory input, which can affect mood, cognition, and perception.

Sensory Level

A sharply demarcated horizontal boundary below which sensation is altered on the trunk or limbs. A sensory level strongly suggests a spinal-cord lesion, although its localization requires correlation with motor, reflex, and autonomic findings.

Sensory Nerves

Nerves that transmit sensory information from peripheral receptors to the central nervous system. Sensory (afferent) neurons have their cell bodies in the dorsal root ganglia (spinal nerves) or cranial nerve ganglia (cranial nerves).

Sensory Neuron

A nerve cell that carries information from sensory receptors toward the central nervous system.

Sensory Processing Disorder

Difficulty detecting, interpreting, or responding to sensory input such as sound, touch, movement, light, or body position. It may affect behavior, learning, coordination, or daily activities and can occur with other neurodevelopmental conditions. Assessment and occupational-therapy strategies are individualized.

Sensory Receptors

Specialized cells or nerve endings that detect stimuli such as touch, temperature, pain, light, sound, or chemical changes.

Sentinel Event

Unexpected occurrence involving death or serious physical/psychological injury. Requires root cause analysis.

Sentinel Injury

A minor but potentially significant injury in a non-mobile infant, such as unexplained bruising, oral injury, or a fracture, that may precede more se-

vere abuse. It warrants careful history, complete examination, safeguarding assessment, and documentation.

Sentinel Lymph Node

First lymph node draining tumor site. Biopsy assesses nodal spread.

Sentinel Lymph Node Biopsy For Melanoma

Sentinel lymph-node biopsy identifies and removes the first draining lymph node or nodes from a melanoma site to detect microscopic spread. The result helps stage disease and guide further treatment; it does not remove all regional nodes routinely.

Sentinel Lymph-Node Biopsy

Surgical removal and pathologic examination of the first draining lymph node or nodes from a primary tumor. It is used for selected melanomas, breast cancers, and other tumors to assess regional metastatic risk and guide staging.

Sentinel Node Biopsy

Alternate index label for sentinel lymph-node biopsy: removal and examination of the first draining node or nodes to which a tumor is likely to spread, used to assess regional metastasis.

Sentinel Surveillance

Ongoing collection of health data from selected reporting sites, providers, or populations chosen to represent trends rather than enumerate every event. It can provide early warning and monitor changes in disease activity.

Separation Anxiety

Separation anxiety is developmentally excessive fear or distress when apart from an attachment figure, causing avoidance, physical complaints, sleep problems, or impairment. Treatment may include gradual exposure, family-based support, cognitive behavioral therapy, and selected medication.

Alternate Names:

Separation Anxiety Disorder

Developmentally inappropriate and excessive fear or anxiety concerning separation from attachment figures. The individual may have recurrent excessive distress when anticipating or experiencing separation from home or major attachment figures.

Separation Anxiety In Children

Developmentally excessive distress when separated from an attachment figure, with worry, refusal, physical symptoms, nightmares, or school avoidance that impairs daily life.

Separation Of The Iris

Disinsertion or dialysis of the iris root from its attachment at the ciliary body, typically caused by blunt ocular trauma. It appears as a peripheral iridodialysis visible on slit-lamp examination and may cause monocular double vision, glare, or secondary glaucoma if extensive.

Sepsis

Life-threatening organ dysfunction caused by a dysregulated response to infection.

Alternate Names:

Septicemia (Sepsis)

Sepsis Syndrome

The spectrum of the host's dysregulated response to infection: sepsis (infection + organ dysfunction, SOFA increase ≥ 2), septic shock (sepsis + hypotension requiring vasopressors with lactate > 2 mmol/L despite adequate fluid), and severe organ dysfunction/multi-organ failure.

Septal Defect

An abnormal opening between chambers of the heart or between other bodily compartments.

Septal Defect, Atrioventricular

Alternate index label; see *Atrioventricular canal defect*.

Septal Defect, Ventricular

Alternate index label; see *Ventricular septal defect*.

Septal Hematoma

Accumulation of blood between the perichondrium and the septal cartilage of the nose, typically following nasal trauma (nasal fracture). Presents with nasal obstruction, pain, and a bluish, boggy swelling of the nasal septum.

Septate Uterus

The most prevalent congenital uterine anomaly, accounting for approximately 55% of Müllerian malformations, resulting from failure of complete resorption of the midline longitudinal fibromuscular septum following fusion of the paired paramesonephric ducts. Characterized by a normal external convex uterine fundal contour with an internal septum dividing the cavity partially (incomplete) or completely down to the internal or external os (complete septate uterus), carrying the highest rates of spontaneous first- and second-trimester abortion, corrected via hysteroscopic metroplasty.

Alternate Names:

Uterine Septum

Septic

Relating to infection or contamination by pathogenic microorganisms; in "septic shock" it refers to life-threatening circulatory and metabolic dysfunction caused by an abnormal response to infection.

Septic Abortion

Any spontaneous or induced pregnancy loss complicated by ascending pelvic and intrauterine infection (endometritis, parametritis, or peritonitis). Characterized by fever, chills, tachycardia, malodorous purulent cervical discharge, marked uterine tenderness, and leukocytosis, with potential rapid progression to septic shock, pelvic thrombophlebitis, and disseminated intravascular coagulation. Management requires urgent high-dose intravenous broad-spectrum antibiotic therapy followed by expeditious surgical evacuation of the infected retained gestational tissue.

Alternate Names:

Septic Miscarriage; Infected Abortion

Septic Arthritis

Infection of a joint, usually bacterial, causing acute pain, swelling, restricted movement, and systemic illness.

Alternate Names:

Arthritis Infectious (Septic Arthritis)

Septic Embolism

Septic embolism occurs when infected material, typically thrombi containing bacteria, embolizes through the bloodstream to distant sites, causing metastatic infection. The most common source is infective endocarditis, where infected vegetations on heart valves break off and lodge in peripheral vessels.

Septic Pulmonary Infarction

Necrosis of lung tissue caused by infected emboli lodging in pulmonary arteries, often from right-sided infective endocarditis or infected venous thrombi. It may produce fever, pleuritic chest pain, cough, hemoptysis, and cavitating peripheral lung lesions.

Septic Shock

A life-threatening form of circulatory failure caused by sepsis, with persistent hypotension or tissue hypoperfusion despite fluid treatment.

Septicaemia

An older term for bloodstream infection, often used to describe bacteremia with systemic illness.

Septicemia

Septicemia is an older term for serious bloodstream infection; modern assessment distinguishes bacteremia from sepsis, which is life-threatening organ dysfunction caused by infection.

Septicemia (Sepsis)

Alternate index label for Sepsis.

Septo-Optic Dysplasia

A congenital disorder characterized by variable combinations of optic-nerve hypoplasia, midline brain abnormalities, and pituitary hormone deficiencies.

It may cause visual impairment, nystagmus, developmental differences, seizures, and growth or endocrine problems.

Septoplasty

Septoplasty is surgery to straighten or reshape the nasal septum to improve airflow or address structural obstruction.

Septum

A wall or partition separating two spaces or tissues.

Septum Deviated (Deviated Septum)

Alternate index label for Deviated Septum.

Septum, Heart

The wall separating the right and left chambers of the heart, consisting of atrial and ventricular portions and preventing normal mixing of oxygenated and deoxygenated blood.

Sequela

A lasting consequence or condition that remains after an earlier disease, injury, infection, or treatment has ended, such as paralysis after stroke or scarring after infection.

Sequelae

Persistent consequences or complications that remain after an illness or injury.

Sequential Therapy

Treatments given in sequence. Used when combination not suitable.

Sequester

To sequester means to isolate or set apart; in medicine, sequestered tissue or material is separated from its normal circulation or surroundings.

Sequestrum

A piece of dead bone or tissue separated from living tissue, commonly occurring in chronic osteomyelitis.

Ser

Ser is the standard abbreviation for serine, an amino acid incorporated into proteins and involved in metabolism and cell signaling.

Serendipity

Serendipity is an unexpected beneficial discovery; in research, it describes useful findings that arise while investigating another question.

Serine

Serine is a nonessential amino acid used in protein synthesis, one-carbon metabolism, membrane formation, and signaling.

Serious Diseases And Health Problems (Symptoms Of Serious Diseases And Health Problems)

Alternate index label for Symptoms of Serious Diseases and Health Problems.

SERMs

Selective estrogen receptor modulators that have estrogen-like effects in some tissues and blocking effects in others.

Alternate Names:

Selective estrogen receptor modulators

Seroconversion

Development of detectable antibodies in blood after infection, vaccination, or another immune stimulus.

Serodiagnostic

Relating to diagnosis by detecting antibodies or other markers in blood serum.

Serologic Test

A blood test that detects antibodies, antigens, or other immune markers to help diagnose infection, assess immunity, or monitor response to treatment.

Serology

The laboratory evaluation of serum for antibodies, antigens, or other immune markers. Results may indicate current infection, previous exposure, vacci-

nation, autoimmune reactivity, or passive antibody transfer and must be interpreted with timing and clinical context.

Serology For Brucellosis

Blood testing for antibodies to *Brucella* species, interpreted with exposure history and symptoms because cross-reactions and early false-negative results can occur.

Seroma

A pocket of clear fluid that develops near a surgical incision or injured tissue.

Seronegative Arthritis

Arthritis with negative rheumatoid factor and anti-CCP. Includes spondyloarthropathies, psoriatic arthritis, reactive arthritis.

Serosanguineous

Serosanguineous describes thin wound or body fluid containing both clear serum and a small amount of blood, often appearing pink or pale red.

Serositis

Inflammation of a serous membrane, such as the pleura, pericardium, or peritoneum, causing pain with breathing or movement and sometimes an inflammatory effusion.

Serotonin

A neurotransmitter involved in mood, sleep, appetite, and pain regulation.

Alternate Names:

5-hydroxytryptamine; 5-HT

Serotonin Blood Test

A blood test measuring serotonin, used selectively in evaluating suspected serotonin-producing neuroendocrine tumors; many medicines and specimen factors affect results.

Serotonin Syndrome

A potentially life-threatening condition caused by excessive serotonergic activity in the central and

peripheral nervous systems, typically resulting from drug interactions or overdose involving serotonergic medications.

Serotonin-Norepinephrine Reuptake Inhibitors

Antidepressants that block the reuptake of both serotonin and norepinephrine. They include venlafaxine, duloxetine, desvenlafaxine, and levomilnacipran. SNRIs are used for major depressive disorder, generalized anxiety disorder, diabetic neuropathy, fibromyalgia, and chronic pain.

Serotonin-Norepinephrine-Dopamine Reuptake Inhibitors

A class of antidepressants that inhibit reuptake of serotonin, norepinephrine, and dopamine. The primary agent is bupropion, which also acts as a norepinephrine-dopamine reuptake inhibitor. It is used for depression, smoking cessation, and as augmentation. It lacks sexual side effects and weight gain associated with SSRIs.

Serotype

A distinct variation of a microorganism or antigen defined by its immune reactivity.

Serous

Thin, watery, and usually clear; serous fluid resembles serum.

Serous Borderline Ovarian Tumor

An ovarian serous epithelial tumor with hierarchical papillae and cellular atypia but no destructive stromal invasion; extraovarian implants may occur.

Serous Cyst Adenomas Pancreas (Pancreatic Cysts)

Alternate index label for Pancreatic Cysts.

Serous Fluid Cytology

Cytologic examination of pleural, pericardial, or peritoneal fluid to assess for malignant cells, infection, and reactive inflammation. Cell-block preparation and ancillary tests may improve diagnostic

accuracy.

Serous Membranes

Smooth membranes lining closed body cavities and covering organs, such as pleura, pericardium, and peritoneum.

Serous Tubal Intraepithelial Carcinoma

A noninvasive high-grade serous lesion of the fallopian-tube fimbria, considered a precursor or early manifestation of many tubo-ovarian high-grade serous carcinomas.

Serpentine Supravenous Hyperpigmentation

A dermatological finding characterized by dark, wavy, serpiginous hyperpigmentation along the course of superficial veins, most commonly on the upper chest and neck. Associated with venous stasis, thrombophlebitis, and certain malignancies. The pigmentation results from hemosiderin deposition in the perivenous dermis.

Serrated Pathway

Alternative molecular pathway to colorectal carcinogenesis accounting for fifteen to thirty percent of cases. It involves serrated polyps as precursors including sessile serrated lesions with dysplasia. Molecular features include CpG island methylator phenotype, BRAF mutations, and microsatellite instability from MLH1 silencing.

Serrated Polyposis Syndrome

A disorder characterized by multiple serrated lesions or polyps in the colon and an increased risk of colorectal cancer, requiring colonoscopic surveillance and removal of significant lesions.

Serration

A row of small tooth-like projections or notches along an edge, used to describe anatomy, cells, instruments, or imaging appearances.

Serratus Anterior Muscle

Fan-shaped muscle from ribs 1-8/9 to the me-

dial scapular border. Innervated by long thoracic nerve (C5-C7). Protracts scapula, upwardly rotates glenoid for overhead elevation, stabilizes against thorax. Long thoracic nerve injury causes medial scapular winging, especially visible during wall push-ups. Commonly injured in breast surgery.

Sertoli-Cell Tumor

A sex-cord stromal tumor that may produce androgens or estrogens and can cause endocrine manifestations.

Sertoli-Leydig Cell Tumor

A rare ovarian tumor that may produce male hormones, causing increased facial hair, acne, a deeper voice, or irregular periods. Treatment depends on the tumor's stage and features.

Serum

The liquid portion of blood remaining after clotting, lacking fibrinogen and most clotting factors.

Serum Concentration

The concentration of a substance measured in the liquid component of clotted blood. Interpretation depends on sampling time, exposure history, distribution, metabolism, elimination, and the relationship between concentration and toxicity.

Serum Free Hemoglobin Test

A blood test measuring hemoglobin not contained within red cells, used to support evaluation of intravascular hemolysis, transfusion reactions, or mechanical red-cell destruction.

Serum Glutamic Oxaloacetic Transaminase

SGOT, now called AST, is an enzyme released by injured liver, heart, skeletal muscle, or other cells; its level must be interpreted with other findings.

Serum Glutamic Pyruvic Transaminase

SGPT, now called ALT, is an enzyme concentrated in liver cells and commonly measured as a marker of hepatocellular injury.

Serum Herpes Simplex Antibodies

Serum herpes simplex antibodies is a diagnostic or laboratory investigation; interpretation depends on the specimen, method, reference interval, timing, and clinical question.

Serum Iron Test

A blood test measuring circulating iron bound mainly to transferrin; it is interpreted with ferritin, transferrin saturation, and blood counts rather than used alone to diagnose iron deficiency.

Serum Osmolal Gap

The difference between measured serum osmolality and calculated osmolality. An increased gap suggests unmeasured osmoles, including toxic alcohols, but interpretation must consider timing, renal function, lactate, ketones, and laboratory variation.

Serum Phenylalanine Screening

A blood test measuring phenylalanine, used in newborn screening and follow-up of phenylketonuria or other disorders of phenylalanine metabolism.

Serum Progesterone

Serum progesterone is a diagnostic or laboratory investigation; interpretation depends on the specimen, method, reference interval, timing, and clinical question.

Serum Protein Electrophoresis

Separation of serum proteins by electrophoresis into 5 fractions: albumin, alpha-1, alpha-2, beta, and gamma. Monoclonal gammopathy: M-spike in gamma region (multiple myeloma, MGUS, Waldenstrom macroglobulinemia). Immunofixation: identifies heavy chain (IgG, IgA, IgM, IgD, IgE) and light chain (kappa, lambda) isotype.

Serum Sickness

A delayed immune reaction, usually occurring 1–3 weeks after exposure to certain medicines, anti-serum, or other injected proteins. It can cause fever, rash or hives, swollen painful joints, and sometimes swollen lymph nodes or organ problems.

Serum Therapy

Treatment using serum or serum-derived antibodies, historically including antitoxins and immunoglobulin preparations.

Serving Size

Serving size is the standardized amount used to describe the nutrients or calories in food and may differ from the amount a person actually eats.

Sesamoid Bones

Small bones embedded in tendons, such as the patella and bones beneath the big toe.

Sesamoiditis

Inflammation and pain around a small sesamoid bone, often beneath the big toe.

Sesquipedalian

Sesquipedalian means characterized by very long words; clear healthcare communication favors language that patients can understand.

Sessile

Attached by a broad base rather than a stalk, as in a sessile polyp.

Set

In exercise, a group of consecutive repetitions performed before a rest period. In medicine, “set” can also mean a prepared group of instruments, tests, or equipment.

Sever Disease

Calcaneal apophysitis in children/adolescents. Heel pain, worse with activity. Treatment: rest, heel cups, stretching.

Severe Acute Respiratory Syndrome

A serious contagious respiratory illness caused by the SARS coronavirus, with fever, dry cough, and breathing difficulty that may progress to pneumonia and respiratory failure. The term usually refers to the 2002–2004 SARS outbreak; SARS-CoV-2 causes COVID-19, a different disease.

Alternate Names:

Severe Acute Respiratory Syndrome (Severe Acute Respiratory Syndrome (SARS))

Severe Acute Respiratory Syndrome (Severe Acute Respiratory Syndrome)

Alternate index label for Severe Acute Respiratory Syndrome.

Severe Brain Injury, Coma

Alternate index label; see *Coma*.

Severe Combined Immunodeficiency

Severe combined immunodeficiency represents a group of genetic disorders characterized by profoundly defective T cell development and function, with variable B and NK cell involvement, resulting in severe susceptibility to life-threatening infections in infancy.

Severe Condition (Sever Condition)

Alternate index label for Sever Condition.

Sevoflurane

A volatile inhaled anesthetic with relatively low blood-gas solubility, permitting rapid changes in anesthetic depth and recovery. It can cause dose-dependent cardiovascular and respiratory depression and is a recognized trigger of malignant hyperthermia in susceptible patients.

Sex Change

A nontechnical term for gender transition or medical gender-affirming care; respectful, current terminology should be used.

Sex Chromosomes

The X and Y chromosomes, which contribute to sex development and carry many other genes.

Sex Education

Education about anatomy, relationships, consent, contraception, sexually transmitted infections, and sexual health.

Sex Headaches

Headaches brought on by sexual activity, including a gradually increasing ache or a sudden severe headache at orgasm. A first or thunderclap headache requires urgent assessment to exclude bleeding or other dangerous causes.

Sex Hormones

Hormones involved in reproductive development and function, including estrogens, progesterone, and androgens.

Sex Therapy

Structured psychological or behavioral therapy for sexual concerns or dysfunction.

Sex-Linked Dominant

Sex-linked dominant inheritance occurs when a disease-causing variant on a sex chromosome can produce the trait with one altered copy, with transmission patterns differing by sex.

Sex-Linked Inheritance

Inheritance of a trait caused by a gene on a sex chromosome, commonly the X chromosome.

Sex-Linked Recessive

Sex-linked recessive inheritance usually involves a variant on the X chromosome, affecting males more often while females may be carriers or variably affected.

Sexual (Sex) Problems In Men

Alternate index label for Sex) Problems in Me.

Sexual Abuse

Nonconsensual sexual contact, exploitation, or behavior; it is a safeguarding and health emergency when immediate danger or injury exists.

Compulsive Sexual Behavior Disorder

A persistent pattern of failure to control intense, repetitive sexual impulses or behaviors, resulting in marked distress or significant impairment and continuing despite adverse consequences. It is not de-

finied simply by a high sex drive or moral disapproval; assessment considers duration, control, distress or impairment, consent, and coexisting mental-health or substance-use conditions.

Alternate Names:

Sexual Addiction; Addiction Sexual (Sexual Addiction)

Sexual Assault

A broad legal category of any non-consensual sexual contact or penetration, encompassing rape, indecent assault, and drug-facilitated assault. Examination documents general and anogenital injuries, collects biological and trace samples, and screens for drug-facilitated assault by extended-window testing.

Alternate Names:

Rape (Sexual Assault)

Sexual Assault - Prevention

Sexual-assault prevention includes consent education, recognizing coercion, safer environments, bystander intervention, and access to confidential support; responsibility always lies with the person who commits the assault.

Sexual Deviation

An obsolete and stigmatizing term for atypical sexual interests; current assessment focuses on consent, distress, impairment, and harm.

Sexual Dysfunction

Persistent difficulty with sexual desire, arousal, orgasm, or pain that causes distress or impairment.

Sexual Dysfunction, Female

Alternate index label; see *Female sexual dysfunction*.

Sexual Health Overview

Sexual health includes physical, emotional, mental, and social well-being in relation to sexuality and relationships. It includes consent, contraception, sexually transmitted infection prevention and testing, fertility, sexual function, safety, and respectful communication.

Sexual Intercourse (Coitus)

The insertion of a penis into a partner's body for sexual pleasure, reproduction, or both. Most commonly vaginal intercourse (penile-vaginal penetration) but may also include anal intercourse. Sexual intercourse is a key component of human pair bonding and reproduction.

Alternate Names:

Coitus

Sexual Masochism Disorder

A paraphilic disorder characterized by recurrent, intense sexual arousal from the act of being humiliated, beaten, bound, or otherwise made to suffer, lasting ≥ 6 months and causing distress or impairment or involving acting on these urges.

Sexual Obsession

Alternate index label; see *Compulsive sexual behavior*.

Sexual Rehabilitation

Address sexual function after injury, illness. Counseling, devices, medications.

Sexual Sadism

Sexual sadism involves recurrent arousal from another person's suffering or humiliation; acts without consent are abuse, and safety-focused clinical care is required.

Sexual Sadism Disorder

A paraphilic disorder characterized by recurrent, intense sexual arousal from the physical or psychological suffering of another person, lasting ≥ 6 months and causing distress or impairment or involving acting on these urges with a nonconsenting person.

Sexual Violence

Sexual violence is any sexual act, attempt, contact, or coercion without freely given consent and can cause physical injury, infection, pregnancy, trauma, and long-term health effects.

Sexually Transmitted Disease Treatments

Alternate index label for STD) Treatment.

Sexually Transmitted Diseases

Infections transmitted primarily through sexual contact; also called sexually transmitted infections.

Alternate Names:

sexually transmitted infections.

Sexually Transmitted Diseases (STDs In Women)

Alternate index label for STDs In Women.

Sexually Transmitted Diseases (STDs In Women)

Alternate index label for Sexually Transmitted Diseases (STDs In Women).

Sexually Transmitted Diseases (STDs)

Infections transmitted mainly through sexual contact, including chlamydia, gonorrhea, syphilis, HIV, and HPV.

Alternate Names:

STDs

Sexually Transmitted Diseases And Pregnancy (STDs)

Alternate index label for STDs.

Sexually Transmitted Infection

STI: infection transmitted via sexual contact. Examples: syphilis, gonorrhea, chlamydia, HIV.

Sezary Disease

Alternate index label; see *Sezary syndrome*.

Sezary Syndrome

An uncommon form of cutaneous T-cell lymphoma involving widespread red skin and abnormal lymphocytes in the blood.

Alternate Names:

Sezary Disease

Sézary Syndrome

The leukemic variant of cutaneous T-cell lymphoma, characterized by erythroderma, lymphadenopathy, pruritus, and circulating atypical lymphocytes (Sézary cells).

Sgarbossa Criteria

A validated, standardized electrocardiographic diagnostic scoring system developed to identify acute myocardial infarction in the presence of baseline Left Bundle Branch Block or right ventricular paced rhythms, both of which normally cause secondary repolarization abnormalities that obscure ischemic ST changes. The original criteria award points for: (1) concordant ST-segment elevation ≥ 1 mm in leads with a positive QRS complex (5 points, highly specific); (2) concordant ST-segment depression ≥ 1 mm in leads V_1 , V_2 , or V_3 (3 points); and (3) excessively discordant ST-segment elevation ≥ 5 mm in leads with a negative QRS complex (2 points). The Smith-Modified Sgarbossa criteria replace the absolute 5 mm discordant rule with a proportional rule: ST elevation/S-wave depth ratio ≤ -0.25 (or $\geq 25\%$), greatly enhancing sensitivity for acute coronary occlusion.

Alternate Names:

Modified Sgarbossa Criteria; Smith-Modified Sgarbossa Rule

Shadowing Artifact

Ultrasound artifact from attenuating structures. Enhanced by harmonic imaging.

Shaken Baby Syndrome

A form of abusive head trauma caused by violent shaking, typically in infants under 1 year. The triad: subdural hemorrhage, retinal hemorrhages, and encephalopathy. May present with irritability, lethargy, vomiting, seizures, and apnea. CT shows subdural hematoma; MRI shows diffuse axonal injury.

Shaken Baby Syndrome (Abusive Head Trauma)

Alternate index label for Abusive Head Trauma.

Shaken Impact Syndrome

A term for abusive head trauma involving shaking with or without impact, especially in infants.

Shampoo - Swallowing

Accidental swallowing of a small amount of shampoo usually causes mouth or stomach irritation; larger or concentrated exposures may cause vomiting or breathing problems and warrant poison-control advice.

Shared Decision-Making

A collaborative process in which clinicians and patients combine best available evidence with patient values, preferences, goals, and circumstances to choose among reasonable options.

Shark Attack

A shark attack can cause severe lacerations, bleeding, tissue loss, drowning, and shock; emergency rescue, hemorrhage control, and trauma care are critical.

Sharp Force Trauma

Injury produced by an edged or pointed instrument that cuts or penetrates the skin, divided into incised wounds (longer than deep, clean margins) and stab wounds (deeper than wide). Wound length, depth, angle, hesitation marks, and defense injuries infer weapon type and manner.

Sharp Pains In Your Stomach During Pregnancy

Sharp abdominal pain in pregnancy may result from ligament stretching, gas, constipation, uterine contractions, urinary disease, ectopic pregnancy, placental complications, or other causes. Severe or persistent pain, bleeding, fever, faintness, vomiting, or reduced fetal movement needs urgent obstetric assessment.

Sharps Container

Puncture-resistant container for used needles and sharp instruments. Red, labeled biohazard.

Sharps Injury

A percutaneous or mucocutaneous injury caused by a needle or other sharp instrument that may expose a person to blood or body fluids. Immediate wound care, incident reporting, risk assessment, and pathogen-specific post-exposure management are required.

Shave Biopsy

Removal of a raised skin lesion by horizontal slicing with a scalpel at the level of the dermis; used for exophytic lesions such as seborrheic keratoses and superficial basal cell carcinomas.

Shaving Cream Poisoning

Shaving cream poisoning involves toxic or environmental exposure to shaving cream poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Sheehan Syndrome

Postpartum pituitary necrosis resulting from severe hemorrhage and hypotension during delivery. The pituitary gland is enlarged during pregnancy and particularly vulnerable to ischemic injury from blood loss. Presentation varies from fatigue and failure to lactate to panhypopituitarism. Growth hormone and prolactin deficiency occur first.

Sheehan Syndrome (Postpartum Pituitary Necrosis)

Ischemic necrosis of the anterior pituitary gland due to severe postpartum hemorrhage (PPH) and hypotension. The pituitary enlarges during pregnancy and is vulnerable to ischemia from hypotensive episodes.

Alternate Names:

Postpartum Pituitary Necrosis

Shellac Poisoning

Shellac poisoning involves toxic or environmental exposure to shellac poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Shellfish Allergy

An immune reaction to proteins in crustaceans or mollusks that can cause hives, digestive or respiratory symptoms, or anaphylaxis.

Shellfish Poisoning

Illness caused by toxins accumulated in shellfish, producing gastrointestinal, neurologic, or paralytic symptoms.

Shielding

Material placed between a person and a source of radiation to reduce exposure. The material depends on the radiation: lead or tungsten is used for many X-rays and gamma rays, while plastic or acrylic can be useful for beta radiation.

Shift Work Sleep Disorder

A circadian rhythm sleep-wake disorder caused by work schedules that overlap the usual sleep period, producing insomnia, excessive sleepiness, or both.

Shigella

A genus of bacteria causing shigellosis, an acute diarrheal illness that may include fever and bloody stools.

Shigellosis

Shigellosis is intestinal infection caused by Shigella bacteria, producing diarrhea that may be bloody, fever, cramps, and dehydration.

Shin Bone Fever

Shin bone fever refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

Shin Splints

Pain along the inner border of the shin, often referring to medial tibial stress syndrome from repetitive loading.

Alternate Names:

Medial Tibial Stress Syndrome

Shin Spot

A shin spot is a nonspecific mark or lesion on the lower leg; its significance depends on appearance, duration, symptoms, injury, and associated disease.

Shingles

Herpes zoster, reactivation of varicella-zoster virus in sensory nerves causing a painful unilateral vesicular rash.

Shingles (Herpes Zoster)

Alternate index label for Herpes Zoster.

Shingles And Pregnancy

Shingles is reactivation of varicella-zoster virus and usually causes a painful one-sided blistering rash. It is not the same as primary chickenpox exposure, but pregnancy requires prompt clinical advice about treatment, pain, and contact with people at risk.

Ship Fever

An historical term for epidemic typhus, a louse-borne infection caused by *Rickettsia prowazekii* and associated with crowding, fever, rash, and severe systemic illness.

Shirodkar Cerclage

A transvaginal cervical cerclage technique that involves dissection of the bladder and rectum to place the suture (Mersilene tape) as high as possible at the level of the internal os. Technically more difficult than McDonald cerclage with higher risk of hemorrhage and bladder injury.

Shivering

Involuntary, rhythmic skeletal muscle contraction generating heat in response to cold exposure or fever, a key thermoregulatory response under hypothalamic (preoptic area) control. Shivering can increase heat production 3-5 fold.

Shock

A life-threatening state of circulatory failure in which inadequate tissue perfusion and oxygen delivery cause cellular and organ dysfunction. Major

mechanisms are hypovolaemia, cardiac pump failure, distributive vasodilation, and obstruction to blood flow; features may include hypotension, tachycardia, altered mental status, cold or abnormal skin perfusion, and reduced urine output.

Shock Lung

An older term for acute respiratory distress syndrome (ARDS), a life-threatening form of lung inflammation in which fluid and injury make it difficult for oxygen to enter the blood.

Shock Therapy

An imprecise term that may refer to electroconvulsive therapy or outdated shock treatments; the specific intervention should be named.

Shock Wave Lithotripsy

Non-invasive procedure using extracorporeal shock waves to fragment renal and ureteral stones. The patient is positioned over a water cushion coupling the shock wave generator to the body. Shock waves are focused on the stone under fluoroscopic or ultrasound guidance.

Shock, Secondary

Circulatory failure occurring as a consequence of another condition, such as infection, trauma, bleeding, heart failure, allergy, or endocrine crisis, with inadequate tissue perfusion.

Shone Complex

A group of congenital left-sided obstructive heart lesions, classically including supravulvular mitral ring, parachute mitral valve, subaortic stenosis, and coarctation of the aorta. The combination and severity vary and may lead to heart failure or systemic outflow obstruction.

Short Arm Of A Chromosome

The p arm, or shorter arm, of a chromosome, named from the French *petit*; cytogenetic bands on this arm locate genes and chromosomal abnormalities.

Short Bones

Small, roughly cube-shaped bones that provide stability and limited movement. The wrist and ankle contain most of the body's short bones.

Short Bowel Syndrome

A condition in which the small intestine is shortened or damaged and cannot absorb enough nutrients from food. It most often occurs after surgery to remove part of the small intestine and may cause diarrhea, weight loss, and nutritional deficiencies.

Short QT Syndrome

A rare inherited primary cardiac channelopathy inherited in an autosomal dominant pattern, caused by gain-of-function mutations in potassium channels (*KCNH2*, *KCNQ1*, *KCNJ2*) that accelerate cardiac repolarization. Characterized on electrocardiogram by a corrected QT interval consistently under 330–340 ms and tall, peaked T waves, conferring a high risk of atrial fibrillation, polymorphic ventricular tachycardia, and sudden cardiac death in young, structurally normal hearts.

Alternate Names:

SQTS

Short Philtrum

A short philtrum is reduced distance between the nose and upper lip and may be an isolated feature or part of a genetic, developmental, or prenatal-exposure syndrome.

Short Stature

Height substantially below the expected range for age and sex, requiring assessment of growth pattern and cause.

Short-Sight

Myopia, a refractive error in which distant objects are focused in front of the retina.

Short-Term Memory

The temporary storage and use of information over seconds to minutes.

Alternate Names:

Working memory

Shortness Of Breath

An uncomfortable awareness of difficult or insufficient breathing. See Dyspnea.

Shotty

Shotty describes small, firm, discrete lymph nodes, often reactive after infection; persistent, enlarging, hard, or generalized nodes require evaluation.

Shoulder

The region and joint connecting the upper limb to the trunk.

Shoulder Arthroscopy

A minimally invasive procedure using a camera and instruments through small incisions to diagnose and treat selected disorders of the shoulder joint and surrounding tissues.

Shoulder Bursitis

Shoulder bursitis is inflammation of a fluid-filled sac around the shoulder, often associated with rotator-cuff disease or repetitive overhead activity. Pain with elevation and lying on the affected side is common; activity modification, therapy, medicines, injection, or treatment of the underlying cause may help.

Alternate Names:

Bursitis Shoulder (Shoulder Bursitis)

Shoulder CT Scan

Computed tomography of the shoulder used to evaluate fractures, bone alignment, arthritis, tumors, infection, and complex bony anatomy.

Shoulder Dislocation

Complete displacement of the upper arm bone from the shoulder socket, usually caused by a fall, collision, or forceful twisting. It causes severe pain, deformity, and inability to move the arm; urgent reduction and assessment for associated fractures or nerve and blood-vessel injury are required.

Shoulder Dystocia

An obstetric emergency where the fetal head delivers but the anterior shoulder is impacted behind the maternal symphysis pubis. Defined as head-to-body delivery time exceeding 60 seconds or need for ancillary maneuvers. Risk factors include macrosomia, diabetes, prior shoulder dystocia, and operative vaginal delivery.

Shoulder Impingement

Pain associated with movement of the shoulder, often involving the rotator-cuff tendons or subacromial tissues. Symptoms include pain with overhead activity and sometimes weakness; assessment and treatment are individualized and may include exercise-based rehabilitation.

Shoulder Instability

Excessive or recurrent movement of the shoulder joint caused by injury, laxity, or altered joint anatomy. Associated lesions may include a Bankart tear, Hill-Sachs lesion, or injury to the joint capsule or ligaments.

Shoulder MRI Scan

Magnetic resonance imaging of the shoulder used to evaluate rotator-cuff tendons, labrum, cartilage, ligaments, muscles, bone marrow, and joint fluid.

Shoulder Pain

Pain in or around the shoulder caused by injury, tendon or bursa disorders, arthritis, nerve disease, or referred pain. Sudden weakness, deformity, chest symptoms, fever, or pain after major trauma requires prompt evaluation.

Shoulder Replacement

A medical procedure, treatment, device, or care topic related to shoulder replacement; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Shulmans Syndrome (Eosinophilic Fasciitis)

Alternate index label for Eosinophilic Fasciitis.

Shunt

A passage that diverts blood, cerebrospinal fluid, urine, or another fluid from one channel to another.

Shunt (Vascular)

A surgically created or implanted pathway that redirects blood or another fluid from one vessel or body space to another.

Alternate Names:

Vascular

Shwachman Syndrome

An inherited multisystem disorder usually involving exocrine pancreatic insufficiency, bone-marrow dysfunction, and skeletal abnormalities. Children may have steatorrhea, poor growth, recurrent infections, neutropenia, anemia, or increased risk of myeloid malignancy.

Shy-Drager Syndrome

Alternate index label; see *Multiple system atrophy*.

SI Units

The International System of Units used for standardized measurements, including meter, kilogram, second, mole, and pascal.

SIADH

Syndrome of Inappropriate Antidiuretic Hormone secretion characterized by hyponatremia (dilutional) with inappropriately concentrated urine (>100 mOsm/kg) and elevated urine sodium (>40 mEq/L). Euvolemic hyponatremia.

Sialadenitis

Inflammation of salivary gland. Acute (bacterial) or chronic (recurrent). Treatment: antibiotics, hydration, gland massage, surgery if chronic.

Sialagogues

Substances or medicines that increase saliva production. They may help some people with dry mouth, but treatment also considers hydration, medicines, oral care, and the cause of reduced saliva.

Sialogram

An imaging study of a salivary gland and its ducts after contrast is introduced through the duct opening, used to assess obstruction, stones, strictures, or chronic inflammation.

Sialography

Contrast imaging of salivary ducts. Evaluates obstruction, stricture, tumors. Rarely performed now.

Sialolithiasis

Formation of a stone in a salivary gland or its duct, most often the submandibular gland. It may cause recurrent swelling and pain, especially during meals, and can lead to infection or obstruction.

Sialorrhea

Excessive salivation. Neurological causes, medications, dental causes. Treatment: hydration, glycopyrrolate, botulinum toxin, surgery.

Sialorrhoea

The excessive pooling and involuntary flow of saliva from the oral cavity (drooling). Most frequently arises not from hypersecretion of salivary glands, but from oral motor dysfunction, impaired swallowing mechanics (dysphagia), or abnormal head posture. Highly prevalent in pediatric patients with cerebral palsy and adult patients with neurodegenerative disorders, such as Parkinson disease, amyotrophic lateral sclerosis, and progressive supranuclear palsy. Chronic sialorrhoea precipitates perioral dermatitis, social isolation, and life-threatening aspiration pneumonia; management options include behavioral swallowing retraining, anticholinergic pharmacotherapy (glycopyrrolate), salivary gland botulinum toxin A injections, or surgical duct relocation.

Sialuria

A rare inherited disorder of sialic-acid metabolism caused by abnormal regulation of the GNE enzyme. Excess free sialic acid accumulates in cells and urine and may cause developmental delay, coarse facial features, hepatosplenomegaly, and variable intellectual disability.

Sibling

A person's brother or sister; family history from siblings can inform genetic and disease risk assessment.

SIBO

Alternate index label; see *Small intestinal bacterial overgrowth*.

Sicca Syndrome

Dry eyes and dry mouth due to decreased tear and saliva production. Primary: Sjogren syndrome. Secondary: associated with RA, SLE, scleroderma, graft-versus-host disease, hepatitis C, sarcoidosis, HIV, medications (anticholinergics, antidepressants). Diagnosis: Schirmer test (<5 mm/5 min), rose bengal staining, salivary gland biopsy.

Sick Building Syndrome

Sick building syndrome describes nonspecific symptoms such as headache, fatigue, eye or throat irritation, cough, dizziness, or nausea associated with time in a building and improving away from it. Ventilation, humidity, pollutants, mold, and other environmental factors should be assessed.

Sick Sinus Syndrome

Sinus node dysfunction causing a spectrum of arrhythmias: sinus bradycardia, sinus arrest, sinoatrial block, and tachycardia-bradycardia syndrome. Most common in elderly patients. Presents with syncope, fatigue, palpitations, and exercise intolerance. Diagnosis: ECG, Holter monitor (pauses >3 seconds).

Alternate Names:

Bradycardia-Tachycardia Syndrome

Sickle Cell

See *Sickle Cell Disease*.

Sickle Cell Anemia

A form of sickle cell disease, usually HbSS, in which red blood cells are easily destroyed and can block small blood vessels. It can cause chronic anemia, severe pain episodes, acute chest syndrome, stroke,

jaundice, and serious infections.

Sickle Cell Anemia (Sickle Cell)

See *Sickle Cell Anemia*.

Sickle Cell Crisis

An acute clinical complication of sickle cell disease, most commonly a vaso-occlusive episode producing ischemic pain. Other acute crises include acute chest syndrome, splenic or hepatic sequestration, and aplastic crisis; treatment depends on the specific complication and severity.

Sickle Cell Dactylitis

Painful swelling of the hands or feet caused by blockage of small blood vessels during a sickle-cell episode, especially in infants and young children. It may be an early sign of sickle-cell disease and requires appropriate clinical evaluation.

Sickle Cell Disease

An inherited group of blood disorders caused by abnormal hemoglobin. Red blood cells can become stiff, curved, and easily destroyed, causing anemia. They may also block small blood vessels, causing episodes of severe pain and damage to organs. Complications can include serious infections, stroke, and acute chest syndrome. Common types include HbSS, HbSC, and sickle beta-thalassemia.

Sickle Cell Test

A laboratory test detecting hemoglobin S or assessing sickling, used in screening and diagnosis of sickle-cell trait or sickle-cell disease; definitive testing identifies hemoglobin variants.

Sickle Cell Trait

An inherited carrier state in which a person has one hemoglobin S allele and one normal beta-globin allele, usually producing both hemoglobin A and hemoglobin S. Most people are asymptomatic, but complications can occur in severe physiologic conditions.

Sickle-Cell Anaemia

See *Sickle Cell Anemia*.

Sickness

A general term for illness or nausea; clinical assessment should identify the specific symptom or disease.

Sickness Motion (Motion Sickness (Sea Sickness, Car Sickness))

Alternate index label for Motion Sickness (Sea Sickness, Car Sickness).

Side Effect

An unintended pharmacological effect of a drug occurring at therapeutic doses, usually predictable from the drug's mechanism of action (a Type A reaction).

Side Effects

Side effects are unintended effects of a medicine or treatment, ranging from mild symptoms to serious toxicity; risk depends on the product, dose, and patient.

Side-Effects

Unintended effects of a medicine or treatment, which may be mild, serious, predictable, or idiosyncratic.

Sideroblastic Anemia

An anemia caused by defective heme synthesis, in which iron accumulates in the mitochondria of developing erythroblasts and forms ring sideroblasts in the bone marrow. Causes may be inherited or acquired, including myelodysplastic syndromes, alcohol, certain medicines, toxins, or vitamin B6 deficiency.

Siderosis

Accumulation of iron in tissues, or lung disease caused by inhalation of iron-containing dust.

SIDS

Sudden infant death syndrome, the sudden unexplained death of an infant younger than one year

after thorough investigation.

Sievert (Sv)

The SI unit used for equivalent and effective dose, incorporating radiation type and, for effective dose, tissue sensitivity. It is used to estimate stochastic radiation risk rather than simply physical energy deposition.

Alternate Names:

Sv

Sight

The ability to see, involving the eyes and visual nervous system.

Sigmoid

Sigmoid means S-shaped; the sigmoid colon is the curved section of large intestine between the descending colon and rectum.

Sigmoid Colon

S-shaped segment from descending colon to rectum in the left iliac fossa, approximately 40-50 cm, with complete mesentery (intraperitoneal, mobile). Most common diverticular disease site from narrow lumen and high pressure. Common volvulus site, particularly in elderly/institutionalized patients. Second most common colorectal cancer site.

Sigmoid Volvulus

Axial twisting of the sigmoid colon around its mesentery, the most common cause of colonic volvulus, typically occurring in elderly, institutionalized, or neuropsychiatric patients with chronic constipation and a redundant sigmoid. Presents with acute large bowel obstruction, abdominal distension, and absent bowel sounds.

Sigmoidoscopy

Endoscopic examination of the rectum and lower colon using a flexible or rigid sigmoidoscope. It can identify inflammation, bleeding, polyps, or tumors and may allow biopsy or treatment.

Sign

Objective evidence of disease. Examples: rash, murmur, edema. Observed by examiner.

Sign Language

Sign language is a complete visual language using hand shape, movement, position, facial expression, and body movement rather than spoken sound.

Signal Peptide

signal peptide is a defined chemical or biologic substance involved in signal peptide and studied in physiology, pharmacology, laboratory medicine, or treatment.

Signal Transduction

The process by which an extracellular signal (hormone, neurotransmitter, growth factor, drug) binding to a cell-surface or intracellular receptor is converted into a specific intracellular response.

Signal-To-Noise Ratio

Ratio of true counts to statistical noise. Improved by longer acquisition, higher activity.

Signature

A signature is a person's identifying mark or electronic confirmation of approval, consent, authorship, or verification.

Signature Strengths

Personal character strengths that a person values and naturally uses.

Signet Ring Cell Carcinoma

A poorly differentiated adenocarcinoma in which intracellular mucin displaces the nucleus to the periphery, most often of the stomach or colon; associated with an aggressive course and diffuse growth pattern.

Signs Of An Asthma Attack

An asthma attack may cause worsening wheeze, cough, chest tightness, breathlessness, rapid breathing, difficulty speaking, or reduced peak flow; severe

symptoms need emergency care.

Sildenafil Citrate

The citrate salt of sildenafil, a phosphodiesterase-5 inhibitor used for erectile dysfunction and pulmonary arterial hypertension.

Silent Heart Attack

A myocardial infarction without recognized pain or typical warning symptoms.

Alternate Names:

Unrecognized myocardial infarction

Silent Ischemia

Inadequate blood flow to heart muscle without noticeable symptoms.

Alternate Names:

Asymptomatic ischemia

Silent Mutation

A DNA sequence change that does not alter the encoded amino acid, usually because of genetic-code redundancy, although it can sometimes affect splicing, RNA stability, or translation.

Silent Sinus Syndrome

Silent sinus syndrome is painless inward collapse of the maxillary sinus and floor of the orbit, often causing facial asymmetry, enophthalmos, or a sunken eye. Imaging confirms the diagnosis, and endoscopic treatment restores sinus ventilation when indicated.

Silent Thyroiditis

Silent thyroiditis is painless autoimmune inflammation of the thyroid that may briefly release excess hormone before causing temporary hypothyroidism and eventual recovery.

Silicate

A salt or ester containing silicon and oxygen, found in minerals and industrial materials; inhalation of some silicate dusts can irritate the lungs or contribute to pneumoconiosis.

Silicon Dioxide

Silicon dioxide is a mineral found in dust and industrial materials; inhalation of crystalline forms can cause silicosis and increase lung-cancer risk.

Silicone

A family of synthetic silicon-containing polymers used in medical devices, implants, sealants, and consumer products; medical risks depend on the product and exposure.

Silicone Elastomer

A flexible, rubber-like silicone material used in implants, tubing, dressings, and other devices; complications may include infection, leakage, allergy, or device failure.

Silicone Implants

Medical implants containing silicone gel or elastomer used for breast reconstruction or augmentation; complications may include rupture, capsular contracture, infection, malposition, or need for revision.

Silicone Mastitis

A granulomatous inflammatory reaction to silicone released from a breast implant or injected silicone. It may cause nodules, pain, lymphadenopathy, or imaging findings that mimic malignancy.

Silicone Oil Hyperoleon

Emulsification of silicone oil tamponade used in vitreoretinal surgery, where the oil breaks into tiny droplets that migrate into the anterior chamber or trabecular meshwork. It can cause elevated intraocular pressure, band keratopathy, and chronic inflammation requiring oil removal and anterior chamber washout.

Silicones

Synthetic polymers used in medical devices, implants, dressings, and other products; adverse effects depend on formulation and site.

Silicosis

A fibrotic lung disease caused by inhalation of respirable crystalline silica dust.

Silk

Silk is a protein fiber used in textiles and some medical sutures or biomaterials; reactions and tissue response depend on the product and processing.

Silk Road Disease (Behcet's Syndrome)

Alternate index label for Behcet's Syndrome.

Siltuximab

A monoclonal antibody that binds interleukin-6 and is used to treat adults with multicentric Castleman disease who are negative for HIV and human herpesvirus 8.

Silver

A metal used in some dressings, creams, and medical devices for antimicrobial activity; excessive exposure can cause permanent blue-gray skin discoloration called argyria.

Silver Bullet

An informal expression for a simple, seemingly definitive solution; it is not a specific medical treatment or diagnosis.

Silver Diamine Fluoride

Liquid that arrests caries and stains cavity black. Used in young children, special needs patients.

Silver Nitrate

A caustic antiseptic used topically to cauterize tissue, control minor bleeding, or treat some wounds; it can burn healthy skin and permanently stain tissue.

Silver Poisoning

Silver poisoning, or argyria, follows excessive silver exposure and can cause permanent blue-gray skin discoloration and, rarely, organ or neurologic effects.

Silver Sulfadiazine

A topical antimicrobial cream formerly used widely

for burns; it may delay healing in some wounds and is not appropriate for everyone, including some newborns and people with sulfonamide allergy.

Silver-Russell Syndrome

A growth disorder usually present from birth, marked by poor growth before and after birth, a small or asymmetrical body, and characteristic facial features. Most cases are linked to changes in gene activity rather than a change in the gene itself.

Silymarin

A mixture of flavonolignans from milk thistle marketed as a dietary supplement; evidence for treating liver disease is limited and product quality varies.

Simeprevir

An older hepatitis C virus NS3/4A protease inhibitor formerly used with other antivirals; it is no longer a usual first-line treatment because better direct-acting regimens are available.

Simethicone

Simethicone is a non-absorbed antifoaming agent that coalesces gas bubbles in the gastrointestinal tract and is used for symptomatic relief of bloating; it does not treat the underlying cause of pain.

Simian Crease

A simian crease is a single transverse crease across the palm, which may be a normal variant or occur with some chromosomal or developmental conditions.

Simian Virus 40

A polyomavirus first identified in monkeys. It has been studied in cancer research, but a clear role in causing human cancer has not been established.

Simmonds Disease

An uncommon form of hypopituitarism caused by inadequate pituitary hormone production, often resulting in fatigue, weight loss, low blood pressure, and impaired endocrine function.

Simmonds' Disease

An older term for hypopituitarism, especially pituitary failure causing wasting and endocrine deficiency.

Simple Febrile Seizure

A common, benign febrile seizure occurring in children between 6 months and 5 years of age during an acute febrile illness (temperature usually exceeding 38 degrees Celsius) without central nervous system infection, electrolyte imbalance, or history of prior afebrile seizures. Characterized by a primary generalized (non-focal) tonic-clonic convulsion lasting less than 15 minutes that does not recur within a 24-hour period or during the same illness. It carries an excellent prognosis with no elevated risk of subsequent neurocognitive deficit or chronic epilepsy compared with the general population.

Alternate Names:

Benign Febrile Seizure; Typical Febrile Seizure

Simple Goiter

A simple goiter is noncancerous enlargement of the thyroid without obvious thyroid-hormone excess or deficiency, caused by iodine imbalance, stimulation, or other factors.

Simple Mastectomy

Simple mastectomy removes the breast tissue and nipple while leaving most chest muscles and usually the underarm lymph nodes.

Simple Prostatectomy

Surgical removal of the enlarged central portion of the prostate to relieve bladder-outlet obstruction from benign prostatic hyperplasia; it does not remove the entire prostate.

Simple Pulmonary Eosinophilia

A biomedical term referring to simple pulmonary eosinophilia; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Simple, Heart-Smart Substitutions

Easy food changes that may support heart health, such as choosing unsaturated oils instead of butter, whole grains instead of refined grains, and less processed or salty food.

Simplexvirus

A genus of herpesviruses that includes herpes simplex virus types 1 and 2, which cause cold sores, genital herpes, and other infections.

Simuliidae

The family of black flies; bites can cause itchy skin reactions, and some species transmit *Onchocerca volvulus*, the parasite that causes river blindness.

Simultanagnosia

Simultanagnosia is inability to perceive more than one object or the overall visual scene at a time, usually from dysfunction of visual-association regions.

Simvastatin

A statin medicine that lowers LDL cholesterol by inhibiting HMG-CoA reductase.

Sin Nombre Virus Infection

Alternate index label; see *Hantavirus pulmonary syndrome*.

Sincalide

A synthetic form of cholecystokinin used during gallbladder imaging to stimulate contraction and measure bile flow; it may cause abdominal pain, nausea, or flushing.

Sindbis Virus

A mosquito-borne virus that can cause fever, rash, and joint pain. It occurs mainly in parts of Africa, Europe, Asia, and Australia.

Sinding-Larsen-Johansson Syndrome

Traction apophysitis of inferior patellar pole in adolescents. Similar to Osgood-Schlatter but at knee. Treatment: rest, activity modification.

Sinecatechins

A topical green-tea catechin ointment used for external genital and perianal warts caused by human papillomavirus; it can cause local irritation and should not be used internally.

Singer'S Nodule

A vocal-fold nodule caused by chronic voice overuse, producing persistent hoarseness.

Single Nucleotide Polymorphism

Single base pair variation occurring in >1% of population. Most common genetic variation. Used in GWAS, forensics, pharmacogenetics.

Single Palmar Crease

A single transverse palmar crease is one crease crossing the palm instead of the usual two; it can be a normal variant or a feature of genetic syndromes.

Single Photon Emission Computed Tomography

Nuclear medicine imaging using gamma-emitting isotopes (technetium-99m most common). Rotating gamma camera acquires images. Applications: myocardial perfusion, bone scans, thyroid imaging, renal scans, brain perfusion. Lower resolution than PET but more widely available and cost-effective.

Single Ventricle

A group of congenital heart defects where one functional ventricle supports both the systemic and pulmonary circulations. Includes tricuspid atresia, mitral atresia, double inlet left ventricle, hypoplastic left heart syndrome, and unbalanced AV canal.

Single-Dose Toxicity

Harm caused by one exposure to a substance or medicine, assessed according to dose, route, timing, and the exposed person's characteristics.

Single-Fiber Electromyography

The most sensitive diagnostic clinical electrophysiological examination for detecting disorders of the neuromuscular junction. Utilizes a specialized fine-

needle electrode with an ultra-small recording surface to record simultaneous action potentials from two individual muscle fibers belonging to the same motor unit. Measures the microscopic variability in neuromuscular transmission time between the two fibers, termed "jitter"; increased jitter and impulse blocking are the electrophysiological hallmarks of impaired neuromuscular safety margins, providing diagnostic confirmation in ocular and mild generalized myasthenia gravis when repetitive nerve stimulation is normal.

Alternate Names:

SFEMG; Single-Fiber EMG

Single-Photon Absorptiometry

An older technique using gamma rays to measure bone density, usually in an arm or peripheral bone.

Alternate Names:

SPA

Single-Photon Emission Computed Tomography

A nuclear medicine imaging technique that detects gamma rays from an injected radiotracer to create cross-sectional images of organ function and blood flow.

Singlet Oxygen

A highly reactive form of oxygen involved in oxidative reactions, immune defenses, photodynamic therapy, and tissue injury from oxidative stress.

Sinoatrial Node

The heart's natural pacemaker in the right atrium that normally initiates each heartbeat.

Alternate Names:

Pacemaker, natural

Sinuatrial Node

The sinoatrial node, a group of specialized cells in the right atrium that normally initiates the heartbeat and sets the cardiac rhythm.

Sinus

A cavity, channel, or tract; in clinical use it com-

monly refers to a paranasal sinus or an abnormal draining tract.

Sinus Arrhythmia

Sinus arrhythmia is normal variation in sinus-heart rate, commonly speeding during inhalation and slowing during exhalation, especially in young people.

Sinus Bradycardia

Sinus bradycardia is a sinus rhythm slower than the expected rate; it can be normal during sleep or athletic conditioning but may also reflect drugs or disease.

Sinus CT Scan

Computed tomography of the paranasal sinuses used to evaluate chronic or complicated sinusitis, anatomic obstruction, trauma, inflammatory disease, or tumors.

Sinus Headache

Pain attributed to a sinus headache is often migraine, but sinus inflammation can cause facial pressure, congestion, reduced smell, and pain that worsens with bending. Fever, purulent discharge, persistent symptoms, or eye or neurologic signs guide evaluation.

Sinus Histiocytosis

Expansion of lymph-node sinuses by histiocytes, often a reactive response to drainage of inflammation, infection, tumor, or tissue breakdown; interpretation depends on associated findings.

Sinus Lift

Procedure to increase bone height in posterior maxilla. Subperiosteal or transalveolar approach. Graft material placed.

Sinus MRI Scan

Magnetic resonance imaging of the paranasal sinuses and surrounding soft tissues used to evaluate tumors, invasive infection, orbital or intracranial extension, and selected inflammatory disease.

Sinus Node

The heart's natural pacemaker, located in the right atrium.

Alternate Names:

Sinoatrial node

Sinus Pain

Pressure or pain around the forehead, cheeks, nose, or eyes caused by sinus inflammation, infection, migraine, or other conditions. Severe headache, eye swelling, vision change, high fever, or neurologic symptoms requires urgent assessment.

Sinus Rhomboidalis

A diamond-shaped depression in the floor of the fourth ventricle of the brain.

Sinus Rhythm

The normal heart rhythm generated by electrical impulses from the sinoatrial node.

Sinus Tachycardia

A heart rhythm originating in the sinoatrial node with a faster-than-normal rate, often due to exercise, fever, pain, anemia, or stress.

Sinus X-Ray

Plain radiographic imaging of the paranasal sinuses; it has limited sensitivity and is often replaced by CT when detailed evaluation is needed.

Sinuses

Air-filled cavities within the skull bones lined by respiratory mucosa, connected to the nasal cavity via ostia.

Sinusitis

Inflammation of the paranasal sinuses, usually causing facial pressure, nasal obstruction, discharge, or reduced smell.

Sinusitis And Sinus Problems

Inflammation or infection of the paranasal sinuses that may cause nasal congestion, discharge, facial pressure, headache, or reduced smell. Symptoms

may also arise from other nasal or facial conditions and require assessment when persistent or severe.

Sinusitis, Acute

Alternate index label; see *Acute sinusitis*.

Sinusitis, Chronic

Alternate index label; see *Chronic sinusitis*.

Sinusoid

A small, highly permeable blood vessel, especially in the liver, spleen, and bone marrow.

Sinusoidal Fetal Heart Rate Pattern

A rare, ominous FHR pattern characterized by a smooth, sine-wave-like undulation with a fixed frequency (2-5 cycles/minute) and absent variability. Strongly associated with severe fetal anemia (Rh isoimmunization, fetomaternal hemorrhage, parvovirus B19), fetal hypoxia, and fetal acidosis.

Siplizumab

An investigational monoclonal antibody targeting CD2 on T cells and natural-killer cells; it has been studied for immune-mediated disease and cancer.

Sipuleucel-T

An autologous cellular immunotherapy used for certain asymptomatic or minimally symptomatic metastatic castration-resistant prostate cancers.

Sirenomelia

A rare congenital malformation in which the lower limbs are partially or completely fused. It is usually associated with severe abnormalities of the genitourinary, gastrointestinal, vascular, and spinal systems and is often fatal in the neonatal period.

Sirolimus

Sirolimus is an mTOR inhibitor used for immunosuppression after transplantation and selected vascular or lymphatic disorders; mouth ulcers, hyperlipidaemia, cytopenias, infection, impaired wound healing, and pneumonitis can occur.

Sisomicin

An aminoglycoside antibiotic related to gentamicin that has activity against some aerobic gram-negative bacteria; use is limited by kidney and hearing toxicity.

Sister Mary Joseph Nodule

A metastatic tumor deposit in or around the umbilicus, usually from an intra-abdominal or pelvic malignancy.

Sister Mary Joseph'S Nodule

A firm, hard nodule in the umbilicus resulting from metastatic malignancy, most commonly from intra-abdominal or pelvic cancers including gastric, ovarian, and colorectal carcinoma. It indicates advanced, disseminated disease with a poor prognosis. Diagnosis is by fine needle aspiration biopsy.

Sitagliptin Phosphate

Sitagliptin phosphate is a DPP-4 inhibitor that prolongs incretin activity and improves glucose-dependent insulin secretion in type 2 diabetes; dose adjustment in kidney disease and rare pancreatitis or severe joint pain are important considerations.

Site-Directed Mutagenesis

A laboratory method that introduces a planned nucleotide change at a selected DNA site to study gene function, protein structure, regulation, or disease variants.

Sitosterolemia

An autosomal-recessive disorder of plant-sterol transport caused by ABCG5 or ABCG8 variants. It can produce premature atherosclerosis, xanthomas, hemolytic anemia, macrothrombocytopenia, and elevated plasma plant sterols.

Sitosterols

Sitosterols are plant sterols that resemble cholesterol and reduce intestinal cholesterol absorption; rare inherited storage disorders cause excessive accumulation.

Sitting Position

An upright or semiupright position in which the patient's torso is elevated and the hips and knees are flexed; it is used for selected shoulder and neurosurgical procedures.

Situational Syncope

A reflex faint triggered by a specific situation such as coughing, urination, defecation, swallowing, laughter, or prolonged standing, caused by transient reduced cerebral perfusion.

Situs Ambiguus

Situs ambiguus is abnormal, inconsistent arrangement of internal organs along the left-right body axis and is often associated with congenital heart and splenic abnormalities.

Situs Inversus

A congenital condition in which the thoracic and abdominal organs are reversed or mirrored from their normal positions. Complete situs inversus (situs inversus totalis) involves all organs.

Situs Inversus Totalis

A congenital condition in which the major visceral organs are mirrored from their normal positions, with the liver on the left, heart on the right, and other viscera similarly reversed.

Sitz Bath

Immersion of the perineal and anal region in warm or prescribed water for symptom relief in conditions such as hemorrhoids, anal fissures, or postpartum discomfort.

Six Fingers Or Toes

Six fingers or toes is polydactyly, a congenital extra-digit difference that may occur alone or as part of a genetic syndrome.

Six-Minute Walk Test

A standardized submaximal functional exercise test used to measure the distance a patient can walk quickly on a flat, hard, straight 30-meter indoor

corridor in a period of 6 minutes (6-minute walk distance, 6MWD). It evaluates global functional exercise capacity and integrating responses of the pulmonary, cardiovascular, and neuromuscular systems; it is widely utilized to assess disease severity, monitor exertional oxygen desaturation, guide supplemental oxygen prescription, and evaluate therapeutic responsiveness in chronic obstructive pulmonary disease, idiopathic pulmonary fibrosis, and pulmonary arterial hypertension.

Alternate Names:

6MWT; Six-Minute Walk; 6-Minute Walk Test

Sixth Disease (Roseola)

Alternate index label for Roseola.

Size Perception

The sensory judgment of an object's dimensions, influenced by visual context, distance, depth cues, touch, and brain processing; neurologic or visual disease can distort it.

Sizofiran

Sizofiran is an investigational beta-glucan immunomodulator studied as an adjunct to cancer treatment.

Sjogren Syndrome

Primary Sjogren syndrome (pSS) is a chronic autoimmune exocrinopathy characterized by lymphocytic infiltration of lacrimal and salivary glands causing dry eyes (keratoconjunctivitis sicca) and dry mouth (xerostomia), with female predominance (9:1) and peak onset 40-60. Secondary SS occurs with RA, SLE, SSc.

Sjogren'S Syndrome

An autoimmune disease that commonly causes dry eyes and dry mouth by damaging tear- and saliva-producing glands.

Alternate Names:

Arthritis Sjogrens Syndrome (Sjogren's Syndrome)

Sjogren-Larsson Syndrome

An inherited disorder causing dry, scaly skin, muscle

stiffness, and problems with movement or development. It results from changes in a gene involved in breaking down certain fats.

Sjögren Syndrome

A systemic autoimmune disease characterized by lymphocytic destruction and dysfunction of lacrimal and salivary glands, producing dry eyes and dry mouth. It may involve multiple organs and increases the risk of salivary-gland lymphoma.

Sjögren's Disease

Alternate index label; see *Sjögren's Syndrome*.

Sjögren's Syndrome

An autoimmune disease causing dry eyes and mouth and sometimes systemic glandular, lung, kidney, nerve, or joint involvement.

Alternate Names:

Sjögren's Disease

SJS

Alternate index label; see *Stevens-Johnson syndrome*.

Skeletal Development

Skeletal development is formation, growth, remodeling, and maturation of bones and cartilage from embryonic life through adulthood.

Skeletal Dysplasia

A skeletal dysplasia is an inherited disorder of bone or cartilage growth causing disproportionate short stature, abnormal limbs, spine disease, or other skeletal features.

Skeletal Limb Abnormalities

Skeletal limb abnormalities are differences in the formation, length, alignment, or structure of an arm or leg caused by genetic, developmental, vascular, injury, or other factors.

Skeletal Muscle

Striated muscle attached to bones and generally under voluntary control.

Skeletal Muscle Tissue

Voluntary striated muscle attached to bones or other structures, composed of contractile fibers that generate movement, posture, heat, and joint stability.

Skeletal Muscles

Muscles attached to bones by tendons that produce movement, maintain posture, and generate heat. They are usually under voluntary control but also support automatic actions such as breathing.

Skeletal Myocytes

Skeletal myocytes are striated muscle cells responsible for voluntary movement, posture, heat production, and stabilization of joints.

Skeletal Survey

A series of radiographs obtained when child abuse is suspected. Includes AP and lateral views of the skull, chest (including oblique views), abdomen, spine, and bilateral upper and lower extremities. Identifies fractures of varying ages, which is highly suggestive of non-accidental trauma.

Skeletal System

The skeletal system consists of bones, cartilage, joints, and supporting ligaments that provide structure, protect organs, enable movement, and store minerals.

Skeleton

The framework of bones and cartilage supporting the body and protecting organs.

Skeleton, Bones Of The

The body's framework of bones and cartilage, providing support, protection, leverage for movement, mineral storage, and marrow-based blood-cell production.

Skeletonization

Final stage of postmortem decomposition where soft tissues, organs, and skin have completely decayed or been scavenged, leaving only clean osseous skeletal remains.

Skene Gland Cyst

A benign retention cyst formed in the anterior vaginal vestibule adjacent to the external urethral meatus, resulting from ductal obstruction and mucus accumulation within the paired paraurethral Skene glands. Usually asymptomatic when small, but can cause dysuria, urinary stream deviation, dyspareunia, or progress to an acute infected paraurethral abscess requiring marsupialization or excision.

Skilled Nursing Facility

Inpatient facility providing skilled nursing and therapy. For recovery after hospitalization.

Skilled Nursing Or Rehabilitation Facilities

Facilities that provide 24-hour nursing care, rehabilitation, medication management, and assistance with daily activities after illness, injury, surgery, or functional decline.

Skin

The body's outer covering, consisting mainly of epidermis and dermis with appendages such as hair and glands.

Skin Lesion

An abnormal area of skin that may result from infection, inflammation, injury, allergy, or a benign or malignant growth.

Skin - Clammy

Skin that feels cool, damp, or unusually sweaty. It may occur with heat, anxiety, pain, low blood sugar, shock, or other illness.

Skin Abscess

A painful, swollen pocket of pus under the skin, usually caused by a bacterial infection. It may need drainage and antibiotics.

Skin Absorption

Movement of a substance through the skin into underlying tissues or the bloodstream. Absorption depends on the substance, skin condition, contact

time, and exposed area.

Skin Aging

Skin aging has intrinsic (chronological) and extrinsic (photoaging) components. Photoaging causes wrinkle formation, telangiectasias, lentigines, leather-like texture, and actinic keratoses. Intrinsic aging causes thinning, wrinkling, and delayed wound healing. Prevention includes sun protection (broad-spectrum SPF 30 or greater daily).

Skin Aging And Appearance

Skin aging is a complex biological process influenced by both intrinsic factors, such as genetics and natural aging, and extrinsic factors, particularly ultraviolet radiation exposure.

Skin Allergies And Contact Dermatitis

Inflammatory skin reactions triggered by exposure to allergens or irritants that come into direct contact with the skin.

Skin Allergy Testing

Skin allergy testing includes prick testing (immediate hypersensitivity, IgE-mediated) and intradermal testing (more sensitive, used for drug and venom allergy). Prick testing introduces allergen extract into the epidermis; wheal and flare reaction at 15 minutes indicates sensitization. Intradermal testing injects dilute allergen into the dermis.

Skin Anatomy Picture Definition Function

Skin consists of epidermis, dermis, and subcutaneous tissue with appendages such as hair, nails, glands, nerves, vessels, and immune cells. It forms a barrier, regulates temperature, senses the environment, prevents fluid loss, and participates in immunity and vitamin D production.

Skin And Aging

Skin aging involves intrinsic and extrinsic changes. Intrinsic aging causes thinning, wrinkling, and fragility. Extrinsic (photo)aging causes wrinkles, telangiectasias, lentigines, and actinic keratoses. Collagen loss, elastin degradation, and decreased

cell turnover contribute to aging skin.

Skin And Environment

Environmental factors significantly affect skin health. Pollution causes oxidative stress, inflammation, and accelerated aging. Particulate matter penetrates skin, generating free radicals. Blue light from screens causes hyperpigmentation, particularly in darker skin tones. Indoor heating and air conditioning cause dryness.

Skin And Hair Changes During Pregnancy

Pregnancy can alter pigmentation, hair growth or shedding, acne, stretch marks, and vascular features through hormonal and circulatory changes; concerning lesions need assessment.

Skin Appendages

Skin structures include hair follicles, sebaceous glands, eccrine sweat glands, and apocrine sweat glands. Hair follicles cycle through anagen (growth), catagen (transition), and telogen (resting) phases. Sebaceous glands produce sebum, an oily substance lubricating skin and hair.

Skin Barrier Function

The skin barrier prevents water loss and protects against environmental insults. The stratum corneum acts as a physical barrier, while the acid mantle (pH 4 to 6) provides chemical defense. Lipids (ceramides, cholesterol, free fatty acids) in the intercellular space form a waterproof barrier.

Skin Biopsy Methods

Skin biopsy methods vary by lesion characteristics. Punch biopsy (2 to 6 mm circular blade) provides full-thickness specimen for most diagnoses. Shave biopsy (razor or scalpel) removes superficial lesions; deep shave (saucerization) includes subcutaneous fat for suspected melanoma.

Skin Biopsy Techniques

Skin biopsy is selected according to the suspected diagnosis and lesion depth. Punch biopsy samples full-thickness skin; shave biopsy samples superficial

lesions; excisional biopsy removes an entire small lesion; and incisional biopsy samples part of a large lesion.

Skin Blushing/Flushing

Temporary reddening or warming of the skin caused by widening of small blood vessels. It may result from heat, emotion, exercise, fever, medicines, or hormone changes.

Skin Cancer

Most common cancer. Types: basal cell, squamous cell, melanoma. Prevention: sun protection. Early detection critical.

Alternate Names:

Cancer, Skin

Skin Cancer Epidemiology

Skin cancers are common and include basal-cell carcinoma, squamous-cell carcinoma, and melanoma. Incidence and mortality vary by tumor type, geography, skin phenotype, ultraviolet exposure, immune status, and access to diagnosis and treatment.

Skin Cancer Overview

Skin cancer includes basal-cell carcinoma, squamous-cell carcinoma, melanoma, and less common tumors. Ultraviolet exposure, immune suppression, genetic susceptibility, and certain lesions increase risk; a changing, bleeding, nonhealing, or unusual lesion needs examination.

Alternate Names:

Melanoma (Skin Cancer Overview)

Skin Cancer Prevention

Prevention focuses on reducing ultraviolet exposure through shade, protective clothing, hats, sunglasses, and appropriately used broad-spectrum sunscreen. Avoiding tanning beds also reduces ultraviolet exposure.

Skin Cancer Screening

Skin cancer screening uses the ABCDE criteria for melanoma, the ugly duckling sign, and total body skin examination. Dermoscopy (dermatoscopy)

magnifies skin lesions revealing structures invisible to the naked eye, improving diagnostic accuracy. Skin self-examination teaches patients to monitor moles for changes.

Skin Cancer Staging

Skin cancer staging guides treatment and prognosis. Melanoma: Breslow thickness (most important prognostic factor), ulceration, mitotic rate, sentinel lymph node status (AJCC 8th edition).

Skin Cancer Surgery

Skin cancer surgical techniques maximize cure while minimizing morbidity. Wide local excision with appropriate margins (BCC: 4 mm, SCC: 4 to 6 mm, melanoma: based on Breslow thickness). Mohs micrographic surgery provides 99 percent cure rate for BCC and 97 percent for SCC with tissue preservation.

Skin Cancer, Melanoma

Alternate index label; see *Melanoma*.

Skin Carcinoma

Skin carcinoma is cancer arising from skin cells, most commonly basal-cell or squamous-cell carcinoma.

Skin Care

Measures that protect and maintain the skin, including gentle cleansing, moisturization, sun protection, wound care, avoidance of irritants, and treatment of identified disease.

Skin Care And Incontinence

Skin protection for people with urine or stool leakage, including gentle cleansing, thorough drying, absorbent products, barrier creams, regular changing, and treatment of the underlying cause.

Skin Color

Skin color refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

Skin Erosion

A shallow loss of the epidermis that leaves a moist or crusted surface but does not extend deeply into the dermis, often caused by friction, scratching, blister rupture, or inflammation.

Skin Examination

Systematic inspection and palpation of the skin, hair, nails, and mucous membranes to assess color, lesions, texture, distribution, vascular signs, infection, and cancer warning features.

Skin Findings In Newborns

Common skin changes in newborns, such as milia, newborn rash, peeling, birthmarks, or bluish hands and feet. Most are harmless, but fever, blisters, widespread redness, or a sick appearance needs prompt assessment.

Skin Flaps

Skin flaps transfer tissue with its blood supply. Rotation flaps rotate adjacent tissue into defect. Advancement flaps slide tissue forward. Transposition flaps move tissue across intervening skin. Random pattern flaps rely on dermal plexus; axial pattern flaps have named vascular pedicle.

Skin Graft

Transfer of skin from a donor site to a recipient site to cover a wound. Split-thickness skin graft (STSG): epidermis + partial dermis (0.008-0.018 inches), harvested with dermatome, donor site heals spontaneously (2-3 weeks). Full-thickness skin graft (FTSG): epidermis + full dermis, donor site requires closure, better cosmetic outcome.

Skin Graft, Pedicle

Skin graft, pedicle refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

Skin Immune System

The skin immune system (SALT: skin-associated lymphoid tissue) provides immunological surveillance. Langerhans cells (dendritic cells in epidermis) capture antigens and present them to T cells.

Dermal dendritic cells, mast cells, and resident T cells form an innate and adaptive immune network.

Skin Induration

Abnormal hardening or firmness of skin or underlying tissue caused by fibrosis, inflammation, edema, infiltrative disease, infection, or tumor.

Skin Infection

Infection of the skin or underlying soft tissue, commonly caused by bacteria, fungi, or viruses. Redness, warmth, swelling, pain, drainage, or fever may occur; rapidly spreading redness, severe pain, blisters, or systemic illness requires prompt medical assessment.

Skin Integrity

Localized damage to the skin and/or underlying soft tissue caused by prolonged pressure, shear, or friction, most commonly over bony prominences. See pressure injury.

Skin Irritation

Inflammation or discomfort caused by direct contact with an irritant, often producing redness, burning, itching, dryness, or scaling.

Skin Lesion Aspiration

Removal of fluid or cells from a skin lump with a needle for testing or drainage.

Skin Lesion Biopsy

Removal of part or all of a skin lesion for microscopic examination to diagnose infection, inflammatory disease, benign tumor, or skin cancer.

Skin Lesion KOH Exam

Microscopic examination of skin scrapings treated with potassium hydroxide to detect fungal hyphae or yeast in suspected superficial fungal infection.

Skin Lesion Of Blastomycosis

A blastomycosis skin lesion results from dissemination of *Blastomyces* fungal infection and may appear as verrucous or ulcerated lesions with raised borders.

Skin Lesion Removal

A medical procedure, treatment, device, or care topic related to skin lesion removal; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Skin Lumps

Skin lumps are localized bumps or masses caused by cysts, lipomas, inflamed follicles, infections, benign tumors, or less commonly cancer; persistence or change warrants assessment.

Skin Mastocytoma

A localized collection of mast cells in the skin, usually a yellow-brown or reddish plaque or nodule in a child that may swell, itch, or redden when rubbed.

Skin Microbiome

The skin microbiome is the community of microorganisms (bacteria, fungi, viruses) residing on the skin. *Staphylococcus aureus* colonization is increased in atopic dermatitis and psoriasis. *Cutibacterium acnes* plays a role in acne. Diversity is decreased in diseased skin.

Skin Necrosis

Death of skin tissue from ischemia, infection, pressure, toxins, trauma, vasculitis, or severe inflammation, producing discoloration, blisters, ulcers, or black eschar.

Skin Neoplasm

A skin neoplasm is an abnormal growth in the skin that may be benign, precancerous, or malignant.

Skin Nodules

Firm, raised lumps in or under the skin. They may result from inflammation, infection, injury, cysts, or benign or malignant growths.

Skin Of Color

Skin of color (Fitzpatrick IV to VI) has unique dermatologic considerations. It is more prone to hyperpigmentation disorders (post-inflammatory hyperpigmentation, melasma, acanthosis nigricans) and

keloid formation. It is less prone to skin cancer but presents with more advanced disease when it occurs.

Skin Or Nail Culture

Laboratory culture of skin, hair, or nail material to identify bacteria or fungi when infection is suspected; results require clinical correlation.

Skin Pigmentation

Determined by melanin produced by melanocytes in the stratum basale. Eumelanin (brown-black) and pheomelanin (red-yellow) are the two types. Melanin production is stimulated by UV radiation through melanocyte-stimulating hormone (MSH). Fitzpatrick skin type classification (I to VI) describes pigmentation and sun response.

Skin Resurfacing

Procedures that improve skin texture or pigmentation by removing or remodeling superficial skin layers.

Skin Sagging Treatment - Underarms

Treatment for loose skin beneath the upper arms. Options may include exercise, weight management, energy-based procedures, or surgery, depending on the amount of loose skin and the person's goals.

Skin Self-Exam

A skin self-exam is a regular check of the skin for new or changing moles, sores, lumps, or patches that may need medical assessment.

Skin Tag

A skin tag is a benign soft growth of connective tissue, commonly in body folds and associated with friction, age, pregnancy, obesity, or insulin resistance. Removal may be performed for irritation or appearance, but a changing or atypical lesion should be diagnosed first.

Alternate Names:

Acrochordon (Skin Tag)

Skin Tags

Benign fibroepithelial polyps occurring in intert-

triginous areas (neck, axillae, groin, under breasts). They are associated with obesity, insulin resistance, and pregnancy. Skin tags are asymptomatic but may become irritated or bleed. Treatment includes snipping, cryotherapy, electrocautery, and shave excision.

Skin Test

Alternate index label for diagnostic or immunologic skin tests, including prick, patch, and tuberculin testing.

Skin Turgor

The skin's ability to return to its normal position after being gently pinched. Reduced turgor may occur with dehydration, although it is less reliable in older adults.

Skin Writing

Alternate index label; see *Dermatographia* (*Dermatographism*).

Skin, Diseases Of

Conditions affecting skin, hair, nails, glands, or subcutaneous tissue, including infection, inflammation, neoplasia, and genetic disorders.

Skin, Itchy

Alternate index label; see *Itchy skin* (*pruritus*).

Skin-Grafting

Transfer of skin from a donor site to cover a wound or tissue defect.

Skipped Heartbeats

Alternate index label; see *Heart palpitations*.

Skull

The bony framework of the head, protecting the brain and supporting the face.

Skull Fracture

A break in one or more skull bones caused by trauma, potentially associated with intracranial bleeding, cerebrospinal-fluid leakage, or brain injury. linear,

depressed, basilar, or comminuted, with potential for intracranial injury and cerebrospinal fluid leak.

Skull X-Ray

A skull X-ray uses low-dose radiation to show skull bones and may help assess selected fractures, foreign bodies, or bone abnormalities.

Slanted Ear

Slanted ear refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

SLAP Lesion

Superior labrum anterior to posterior tear. Associated with overhead activities, trauma. Treatment: rest, physical therapy, surgical repair if symptomatic.

SLAP Tears

Tears of the superior glenoid labrum extending from anterior to posterior, sometimes involving the biceps tendon attachment. They may cause pain, clicking, or instability, especially with overhead activity.

Slapped Cheek Disease

Alternate index label; see *Parvovirus infection*.

Slapped Cheek Syndrome

Erythema infectiosum, a parvovirus B19 infection causing a slapped-cheek rash and sometimes joint or hematologic complications.

SLE

Systemic lupus erythematosus, a chronic autoimmune disease that can affect skin, joints, kidneys, blood, nervous system, and other organs.

Sleep

A recurring state of reduced awareness and responsiveness with characteristic brain and body physiology.

Alternate Names:

Disorders Sleep (Sleep)

Sleep (Geriatric)

Sleep patterns and sleep problems in older adults, including insomnia, sleep apnea, circadian changes, and medication-related disturbances.

Alternate Names:

Geriatric

Sleep And Sleep Disorders In Children And Teens

Children and teens need age-appropriate sleep, and disorders may involve insomnia, circadian delay, sleep apnea, parasomnias, restless legs, or insufficient opportunity. Snoring, pauses in breathing, unusual daytime sleepiness, mood change, or poor school performance warrants evaluation.

Alternate Names:

Sleep Apnea

Repeated pauses or reductions in breathing during sleep. It may be obstructive, central, or mixed and can disturb sleep and oxygenation.

Sleep Apnea (Dental)

Oral appliance for obstructive sleep apnea. Mandibular advancement device. Indications: mild to moderate OSA, CPAP intolerance.

Alternate Names:

Dental

Sleep Apnea (Obstructive Sleep Apnea - OSA)

A sleep disorder characterized by repeated episodes of partial or complete upper airway obstruction during sleep (obstructive sleep apnea—OSA, most common) or cessation of respiratory drive (central sleep apnea—CSA), causing intermittent hypoxia, hypercapnia, and sleep fragmentation.

Alternate Names:

Obstructive Sleep Apnea - OSA

Sleep Apnea, Central

Alternate index label; see *Central sleep apnea*.

Sleep Apnea, Obstructive

Alternate index label; see *Obstructive sleep apnea*.

Sleep Apnoea

Repeated pauses or reductions in breathing during sleep, most commonly because of upper-airway obstruction or less commonly inadequate respiratory drive.

Sleep Apnoeas

Repeated pauses or reductions in breathing during sleep, caused by airway obstruction, impaired respiratory drive, or both.

Sleep Architecture

The pattern and organization of sleep stages across a sleep period.

Sleep Bruxism

Repeated grinding or clenching of the teeth during sleep, which may cause tooth wear, jaw pain, or headaches.

Sleep Debt

The accumulated difference between the amount of sleep a person needs and the amount obtained over time; it may impair alertness, mood, cognition, and performance.

Sleep Diary

A daily record of sleep and wake times, awakenings, naps, medicines, caffeine, and related factors used to assess sleep patterns and treatment response.

Sleep Disorder Periodic Limb Movement (Periodic Limb Movement Disorder)

Alternate index label for Periodic Limb Movement Disorder.

Sleep Disorders

Conditions affecting quality, timing, and amount of sleep; includes insomnia, sleep apnea, narcolepsy, restless legs syndrome, and parasomnias.

Sleep Disorders In Older Adults

Sleep problems in later life, including insomnia, sleep apnea, restless legs, and circadian changes; medication effects, pain, depression, and medical illness should be assessed.

Sleep Efficiency

The percentage of time spent asleep while in bed, calculated as total sleep time divided by time in bed and multiplied by 100.

Sleep Fragmentation

Repeated brief awakenings or arousals that interrupt otherwise continuous sleep and may reduce restorative sleep.

Sleep Hygiene

A set of behavioral and environmental practices designed to promote consistent, uninterrupted, and restorative sleep. Key elements include maintaining a regular sleep schedule, creating a cool, dark, and quiet sleep environment, avoiding caffeine and electronic screens before bedtime, and engaging in relaxing pre-sleep routines.

Sleep Medications And Supplements

Pharmacological agents used to treat insomnia and other sleep disorders when behavioral interventions alone are insufficient.

Sleep Onset Latency

The time required to fall asleep after attempting to sleep; prolonged latency may occur with insomnia, anxiety, circadian misalignment, stimulants, or another sleep disorder.

Sleep Paralysis

Temporary inability to move or speak when falling asleep or waking, while awareness is partly or fully preserved. Episodes usually last seconds to minutes and may include frightening hallucinations. Recurrent episodes can be associated with sleep deprivation, irregular sleep, narcolepsy, or other sleep disorders.

Sleep Related Breathing Disorders

Sleep-related breathing disorders cause abnormal ventilation or oxygenation during sleep, including obstructive and central sleep apnea and sleep-related hypoventilation. Snoring, witnessed pauses, gasping, morning headache, or daytime sleepiness may prompt sleep testing and treatment.

Alternate Names:

Breathing Disorders Sleep Related (Sleep Related Breathing Disorders)

Sleep Spindles

Brief bursts of rhythmic brain activity during stage 2 non-REM sleep.

Sleep Studies (Polysomnography)

Sleep tests, most commonly polysomnography, are diagnostic studies used to evaluate sleep architecture and identify sleep disorders. Polysomnography records brain waves, eye movements, heart rate, breathing patterns, blood oxygen levels, and limb movements throughout the night in a controlled laboratory setting.

Alternate Names:

Polysomnography

Sleep, Disorders Of

Conditions that alter sleep quantity, timing, quality, breathing, movement, or behavior.

Sleep-Related Hypoventilation

Inadequate ventilation during sleep causing elevated carbon dioxide, oxygen desaturation, or both. Causes include obesity, neuromuscular disease, chest-wall disorders, chronic lung disease, medications, and central respiratory-control abnormalities.

Sleep-Related Hypoxemia

Abnormally low blood oxygen during sleep that may occur with sleep-disordered breathing, lung disease, neuromuscular weakness, hypoventilation, or other medical conditions.

Sleepiness, Daytime

Alternate index label; see *Narcolepsy*.

Sleeping Sickness

African trypanosomiasis, a tsetse-fly-borne infection caused by *Trypanosoma brucei* that can progress to neurologic disease.

Sleeplessness

Alternate index label; see *Insomnia*.

Sleepwalking

Recurrent walking or other complex behavior during sleep, usually with little memory afterward. It is more common in children and may be triggered by sleep deprivation, stress, fever, medicines, or other sleep disorders; injury prevention is important.

Sleepwalking And Children

Sleepwalking in children is usually benign and often resolves with age; regular sleep, hazard prevention, and evaluation of frequent, violent, injurious, or atypical episodes are important.

Sleeve Gastrectomy

Removal of major stomach, leaving sleeve. Restrictive procedure. Lower malabsorption risk than bypass. Effective weight loss.

Sleeve Lobectomy

A complex, parenchyma-sparing thoracic surgical procedure for centrally located bronchial tumors (such as non-small cell lung cancer or bronchial carcinoid) invading the main stem bronchus. The affected lung lobe is resected together with a circumferential cuff or sleeve of the adjacent main or intermediate bronchus, followed by an end-to-end bronchial anastomosis reconstructive procedure between the remaining distal bronchial tree and the main stem bronchus, thereby achieving complete oncologic resection while sparing the patient a complete pneumonectomy and preserving long-term pulmonary function.

Alternate Names:

Bronchial Sleeve Resection; Sleeve Resection of the

Lung

Sliding Filament

The mechanism of muscle contraction in which actin filaments slide past myosin filaments, shortening the sarcomere without changing filament lengths. Myosin cross-bridges bind actin, undergo a power stroke using ATP hydrolysis, detach, and reattach to new actin sites in a cyclic manner.

Sliding Hiatal Hernia

A sliding hiatal hernia occurs when the stomach and gastroesophageal junction move upward through the diaphragm, often contributing to reflux.

Sling

A supportive device or surgically placed strip used to support an injured limb or urinary structures.

Slipped Capital Femoral Epiphysis

Displacement of the femoral head relative to the femoral neck through the growth plate (physis) in adolescents. Most common hip disorder in adolescents (10-16 years). Risk factors: obesity, male sex, African American, and endocrine disorders (hypothyroidism, growth hormone deficiency).

Slipped Disk

A spinal disk that bulges or herniates through a tear in its outer layer.

Alternate Names:

Herniated disk

Slipped Vertebra

Forward displacement of one vertebra relative to the one below it.

Alternate Names:

Spondylolisthesis

Slipping Rib Syndrome

Pain caused by excessive movement of the lower ribs, usually from loosened cartilage. The pain may be sharp and can sometimes be reproduced by pressing or moving the rib.

Slit Lamp

An instrument using magnification and a narrow beam of light to examine the eye.

Alternate Names:

Biomicroscope

Slit Lamp Biomicroscopy

A fundamental ophthalmological examination technique that uses a high-intensity, adjustable slit beam of light combined with a binocular microscope to provide a magnified, stereoscopic view of the anterior segment and, with the use of auxiliary lenses, the posterior segment of the eye.

Slit-Lamp Biomicroscope

An instrument that provides a magnified, illuminated view of the eye, especially the cornea, anterior chamber, iris, lens, and conjunctiva.

Slit-Lamp Exam

A focused eye examination using a microscope and narrow beam of light to inspect the eyelids, conjunctiva, cornea, anterior chamber, iris, lens, and selected posterior structures.

SLL

Alternate index label; see *Small lymphocytic lymphoma*.

Slough

Dead or detached tissue separating from a wound, ulcer, or inflamed surface.

Slow Heart Rate - Bradycardia

A heart rate slower than expected, often below 60 beats per minute in an adult. It may be normal in some people but can cause dizziness, fainting, tiredness, or shortness of breath when it reduces blood flow.

Slow Heartbeat

Alternate index label; see *Bradycardia*.

Slow-Twitch Fiber

A muscle fiber adapted for sustained, aerobic activ-

ity and fatigue resistance.

Alternate Names:

Type I muscle fiber

Slow-Wave Sleep

Deep non-REM sleep characterized by slow brain waves and reduced responsiveness.

Alternate Names:

Deep sleep

Small Airway Disease

Disease affecting airways with diameter < 2 mm (bronchioles). It is the earliest site of damage in COPD and is often subclinical until advanced. It is characterized by narrowing, mucus plugging, and inflammation of small airways. PFTs may show air trapping (increased RV/TLC) before FEV1 decline.

Small Bowel Adenocarcinoma

A malignant gland-forming epithelial tumor of the small intestine. It is uncommon and may cause occult bleeding, obstruction, abdominal pain, or weight loss; risk is increased in selected inherited and inflammatory disorders.

Small Bowel Bacterial Overgrowth

Excessive or abnormal bacterial colonization of the small intestine, now often termed intestinal methanogen or bacterial overgrowth, which can cause bloating, diarrhea, malabsorption, and nutrient deficiency.

Small Bowel Follow-Through

Extended upper GI series tracking barium through small bowel.

Small Bowel Obstruction

Partial or complete blockage of the small intestine. Common causes include adhesions, hernias, tumors, and inflammatory narrowing. Symptoms may include abdominal pain, vomiting, distension, and inability to pass stool or gas.

Small Bowel Prolapse

Alternate index label; see *Small bowel prolapse (enterocele)*.

Small Bowel Resection

Surgical removal of a diseased segment of the small intestine followed by reconnection or stoma formation when needed.

Small Bowel Series

X-ray imaging of small intestine using barium. Evaluates Crohn disease, tumors, obstructions.

Small Bowel Tissue Smear/Biopsy

Microscopic or histologic examination of a small-intestinal tissue sample to evaluate malabsorption, celiac disease, inflammation, infection, or neoplasm.

Small Calorie (Calorie)

A small calorie is a unit of heat energy; food labels usually use a kilocalorie, written Calorie with a capital C, equal to 1,000 small calories.

Small Cell Carcinoma

A high-grade neuroendocrine carcinoma, most often of the lung, strongly associated with smoking. Highly responsive initially to chemotherapy and radiation but prone to rapid recurrence and early brain metastases.

Small Cell Carcinoma Of The Ovary, Hypercalcemic Type

A rare, highly aggressive ovarian tumor in young patients, often associated with alterations in SMARCA4 and sometimes presenting with hypercalcemia.

Small Cell Lung Cancer

Aggressive lung cancer, strongly associated with smoking. Early metastasis, responds to chemotherapy.

Small Eye

Small eye refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

Small Fiber Neuropathy

Damage to small sensory and autonomic nerve fibers, often causing burning pain, tingling, altered temperature or pain sensation, abnormal sweating, or gastrointestinal and cardiovascular symptoms. Diabetes, autoimmune disease, vitamin deficiency, toxins, and inherited disorders may contribute; evaluation seeks an underlying cause.

Small For Gestational Age

Birth weight or size below the expected range for gestational age, caused by constitutional small size, placental insufficiency, infection, genetic disease, or maternal factors.

Small Intestinal Bacterial Overgrowth

An abnormal increase or change in bacteria within the small intestine, often causing bloating, abdominal pain, nausea, diarrhea, fullness, weight loss, or nutrient deficiency. Causes include impaired intestinal movement, structural problems, surgery, and some systemic diseases; persistent symptoms require medical evaluation.

Small Intestinal Bacterial Overgrowth

Alternate index label for SIBO.

Small Intestinal Bacterial Overgrowth (Small Intestinal Bacterial Overgrowth)

Alternate index label for Small Intestinal Bacterial Overgrowth.

Small Intestinal Ischemia And Infarction

Inadequate blood supply to the small intestine that can progress to irreversible tissue death, perforation, sepsis, and shock.

Small Intestine

Longest GI segment (approximately 6 meters) from pylorus to ileocecal valve. Primary nutrient digestion and absorption site. Three segments: duodenum (25 cm, chyme/bile/pancreatic enzymes), jejunum (2.5 m, prominent folds/villi for absorption), ileum (3.5 m, Peyer's patches for immunity).

Small Intestine Aspirate And Culture

Collection and culture of fluid aspirated from the small intestine to evaluate suspected bacterial overgrowth or selected infections; the procedure is invasive and results require clinical correlation.

Small Intestine Prolapse

Alternate index label; see *Small bowel prolapse (enterocele)*.

Small Round Blue Cell Tumor

Small round blue cell tumor refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Small Vessel Disease

Disease affecting small blood vessels, which can impair blood flow and contribute to brain, heart, kidney, or other organ problems.

Alternate Names:

Coronary Microvascular Disease

Small-Bowel Transplantation

Surgical replacement of a diseased or nonfunctioning small intestine with donor bowel.

Small-Bowel Volvulus

Twisting of the small intestine around its mesentery, causing mechanical obstruction and potentially compromising mesenteric blood flow. It may be primary (idiopathic, more common in developing countries) or secondary to adhesions, malrotation, hernias, or intraluminal tumors.

Small-Cell Carcinoma

An aggressive neuroendocrine cancer, most commonly arising in the lung.

Smallpox

A severe contagious disease caused by variola virus; it has been eradicated globally.

SMART

A goal-setting framework emphasizing specific, mea-

surable, achievable, realistic, and time-bound goals.

Alternate Names:

SMART goals

Smashed Fingers

A smashed finger may injure skin, nail, bone, tendon, or nerve; deformity, severe pain, numbness, impaired movement, or blood under the nail may require urgent evaluation.

Smear Of Duodenal Fluid Aspirate

A smear of duodenal fluid aspirate examines fluid from the first part of the small intestine for selected parasites or other microscopic findings.

Smegma

A collection of shed cells, oils, and moisture around the genital folds, which may promote irritation if hygiene is poor.

Smell

The sense of detecting airborne chemicals through olfactory receptors.

Smell - Impaired

Reduced or absent ability to detect odors, called hyposmia or anosmia, caused by nasal obstruction, viral injury, head trauma, neurodegeneration, medications, or other disease.

SMILE

Small incision lenticule extraction, commonly known as SMILE, is a minimally invasive refractive surgical procedure that corrects myopia and myopic astigmatism by creating and removing a thin, disc-shaped piece of corneal stroma called a lenticule through a small incision, without creating a corneal flap.

Smile Design

Planning smile based on facial features, gum display, tooth proportions. Digital smile design software available.

Smith-Lemli-Opitz Syndrome

An autosomal recessive disorder of cholesterol

metabolism caused by mutations in DHCR7, encoding 7-dehydrocholesterol reductase, the final enzyme in the cholesterol biosynthetic pathway.

Smith-Magenis Syndrome

A genetic neurodevelopmental disorder, usually involving deletion of 17p11.2 or an RAI1 variant. It causes developmental delay, intellectual disability, distinctive facial features, sleep disturbance, behavioral dysregulation, and variable congenital abnormalities.

Smoke Evacuator

A device that captures and filters airborne surgical plume generated by electrosurgery, laser use, or ultrasonic energy. Evacuation reduces exposure to particulate matter, toxic gases, and potentially infectious biologic material.

Smoke Inhalation

Injury from breathing smoke, hot gases, or combustion products, potentially causing airway burns, poisoning, and lung injury.

Smoke Inhalation Injury

Pulmonary injury caused by inhalation of toxic products of combustion.

Smoke Secondhand (Secondhand Smoke)

Alternate index label for Secondhand Smoke.

Smokeless Tobacco

Smokeless tobacco delivers nicotine and causes dependence, oral lesions, gum recession, tooth loss, cardiovascular risk, and cancers of the mouth, throat, and pancreas. Quitting reduces harm, and counseling plus approved medicines improve cessation success.

Alternate Names:

Tobacco Chewing (Smokeless Tobacco)

Smokers Keratosis (Leukoplakia)

Alternate index label for Leukoplakia.

Smokers Lung (Smoker'S Lung:

Pathology Photo Essay)

Alternate index label for Smoker's Lung: Pathology Photo Essay.

Smoking

Inhalation of smoke from burning tobacco or other substances, associated with addiction, cancer, cardiovascular disease, and lung disease.

Smoking And Asthma

Smoking irritates and inflames airways, worsens asthma control, increases attacks, and reduces treatment response; stopping smoking and avoiding secondhand smoke improve outcomes.

Smoking And COPD

Smoking is the major preventable cause of COPD and accelerates lung-function loss; quitting reduces progression and exacerbations even after COPD is established.

Smoking And Surgery

A medical procedure, treatment, device, or care topic related to smoking and surgery; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Smoking Cessation

The process of stopping tobacco or nicotine use. It may involve counseling, behavioral support, medicines, or nicotine replacement.

Smoking Cessation Medications

Medicines that reduce nicotine withdrawal and cravings, including nicotine replacement, bupropion, and varenicline, used with behavioral support and individualized for health risks and preferences.

Smoldering Multiple Myeloma

An asymptomatic plasma-cell disorder with increased clonal plasma cells or monoclonal protein but no myeloma-defining organ damage; it requires risk-based monitoring for progression to active multiple myeloma.

Alternate Names:

Voluntary muscles

Smooth Muscle

Involuntary muscle in the walls of hollow organs, blood vessels, and airways.

Smothering

Mechanical obstruction of the external nose and mouth that prevents effective ventilation. It may be caused by a covering, compression, or an obstructing soft material; findings are often nonspecific and must be interpreted with the scene, history, and complete examination.

Snacking When You Have Diabetes

Planning snacks for diabetes by considering hunger, glucose pattern, activity, carbohydrate amount, medicine timing, and hypoglycemia risk rather than relying on unrestricted grazing.

Snacks And Sweetened Drinks - Children

Frequent sugary snacks and drinks increase children's risk of tooth decay and excess weight; water, nutritious foods, portions, and regular meals are healthier defaults.

Snacks For Adults

Healthy adult snacks emphasize nutrient-dense foods such as fruit, vegetables, legumes, nuts, yogurt, or whole grains while limiting excess sugar, salt, and highly processed calories.

Snake Bite

Snake bites can cause puncture wounds, tissue injury, bleeding, paralysis, or venom-related effects on clotting, nerves, muscles, kidneys, or the heart. Call emergency services, keep the person still, and do not cut, suck, ice, or tourniquet the wound.

Alternate Names:

Bite Snake (Snake Bite)

Snake Bites

Snake bites involves toxic or environmental exposure to snake bites; dose, route, timing, symptoms, and organ involvement determine urgency and treat-

ment.

Snake-Bite

A wound from a snake that may cause local injury, envenomation, infection, or systemic toxicity.

Snapping Finger

Trigger finger, painful catching or locking of a finger caused by stenosing inflammation around a flexor tendon.

Snapping Hip Syndrome

Hip pain/clicking from tendon snapping over bony prominence. Internal (iliopsoas), external (IT band), intra-articular (labral tear). Treatment: physical therapy, injection, surgery if refractory.

Sneddon Syndrome

A non-inflammatory thrombotic vasculopathy characterized by livedo racemosa and recurrent ischemic cerebrovascular events. Headache, hypertension, cognitive impairment, and cardiac-valve abnormalities may occur; evaluation addresses vascular risk and autoimmune or thrombophilic causes.

Sneezing

A forceful reflex expulsion of air through the nose and mouth, often triggered by nasal irritation.

Snellen Chart

A chart of letters or symbols used to measure visual acuity at a specified distance.

Snoring

Noisy breathing during sleep caused by vibration of narrowed upper-airway tissues.

Snoring - Adults

Noisy breathing during sleep caused by vibration of relaxed tissues in the nose, mouth, or throat; loud habitual snoring with witnessed pauses or daytime sleepiness may indicate obstructive sleep apnea.

Snoring And Sleep Apnea

Snoring is the sound produced by vibrating soft tis-

sues in the upper airway during sleep, often resulting from partial airway obstruction. Sleep apnea is a more serious condition characterized by repeated episodes of complete or partial airway collapse during sleep, leading to intermittent hypoxia, frequent arousal, and fragmented sleep.

Snort

A snort is a forceful nasal or respiratory sound; it may occur with congestion, sleep-disordered breathing, irritation, or inhalation of a substance.

Snot

Snot is an informal term for nasal mucus, which traps particles and helps protect the respiratory lining; its appearance changes with infection, allergy, and irritation.

Snow Blindness

Photokeratitis, painful temporary corneal injury from intense ultraviolet exposure, often reflected by snow or ice.

SNRIs

Serotonin-norepinephrine reuptake inhibitors are a class of antidepressant drugs that inhibit the reuptake of both serotonin and norepinephrine from the synaptic cleft, increasing both serotonergic and noradrenergic neurotransmission. Common SNRIs include venlafaxine, duloxetine, desvenlafaxine, and levomilnacipran.

Snuff

Snuff is finely ground tobacco inhaled through the nose or placed in the mouth and can cause nicotine dependence, oral disease, and cardiovascular harm.

Snuffles

A runny or congested nose; in newborns, persistent snuffles can be a sign of congenital syphilis.

Social And Psychological Causes Of Alcoholism

Alcohol-use disorder reflects interactions among genetics, brain reward pathways, stress, trauma, men-

tal illness, social environment, and alcohol availability—not a moral failure. Treatment may include withdrawal care, counseling, peer support, and medicines that reduce drinking or relapse.

Social Anxiety Disorder

Marked fear or anxiety about one or more social situations in which the individual may be scrutinized by others. The individual fears acting in a way or showing anxiety symptoms that will be negatively evaluated.

Social Anxiety Disorder (Social Phobia)

Intense fear and avoidance of social or performance situations because of concern about embarrassment, judgment, or scrutiny.

Alternate Names:

Phobia, Social

Social Isolation

Limited contact or interaction with other people. Persistent isolation may adversely affect mental and physical health.

Social Medicine

The study and practice of how social conditions affect health and healthcare.

Social Worker

Healthcare professional providing psychosocial support, resource coordination, and counseling for patients and families throughout the transplant process.

Sociophobia

An older term for social anxiety disorder, involving excessive fear of scrutiny, embarrassment, humiliation, or negative evaluation in social or performance situations.

Sodium

The main extracellular cation, essential for fluid balance, nerve function, and muscle activity.

Sodium Aurothiomalate

An injectable gold compound formerly used to treat rheumatoid arthritis and now rarely used.

Sodium Bicarbonate Therapy

Alkalinizing agent for metabolic acidosis in CKD. Target serum bicarbonate greater than 22 mEq/L. Slows CKD progression and improves muscle wasting. Dose titrated to serum levels.

Sodium Bisulfate Poisoning

Sodium bisulfate poisoning involves toxic or environmental exposure to sodium bisulfate poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Sodium Blood Test

A blood test measuring serum sodium, a major extracellular electrolyte involved in water balance and nerve and muscle function; results are interpreted with fluid status and other electrolytes.

Sodium Carbonate Poisoning

Sodium carbonate poisoning involves toxic or environmental exposure to sodium carbonate poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Sodium Chloride

The salt sodium chloride; sterile solutions are used for fluid replacement, irrigation, and drug dilution.

Sodium Cromoglycate

A mast-cell stabilizer used in selected allergy and asthma treatments; also called cromolyn.

Sodium Diatrizoate

An iodinated contrast medium used historically for radiographic imaging.

Sodium Hydroxide Poisoning

Sodium hydroxide poisoning involves toxic or environmental exposure to sodium hydroxide poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Sodium Hypochlorite

A chlorine-containing disinfectant and bleach; concentrated exposure can cause corrosive injury.

Sodium Hypochlorite Poisoning

Sodium hypochlorite poisoning involves toxic or environmental exposure to sodium hypochlorite poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Sodium In Diet

Dietary sodium helps regulate fluid balance and nerve and muscle function, but excess intake can raise blood pressure; processed foods are a major source and intake should follow individual health advice.

Sodium Low Levels In The Blood (Hyponatremia)

Alternate index label for Hyponatremia.

Sodium Polystyrene Sulfonate

Potassium-binding resin for hyperkalemia. Risk: colonic necrosis, especially with sorbitol.

Sodium Urine Test

A urine test measuring sodium excretion, used with blood tests and clinical findings to assess volume status, kidney handling of sodium, and causes of hyponatremia or hypertension.

Sodium Valproate

An anticonvulsant and mood stabilizer; it carries important pregnancy and reproductive risks and requires specialist prescribing.

Sodomy

A legal or historical term for certain sexual acts; it is not a medical diagnosis and should be replaced by precise, nonjudgmental language.

Soft Markers For Aneuploidy

Sonographic findings in the second trimester that are common in normal fetuses but have a statistically higher prevalence in aneuploid fetuses (especially

trisomy 21).

Soft Tissue Augmentation

Restoration or enhancement of volume and contour in skin or underlying soft tissue using fillers, fat transfer, implants, or other reconstructive techniques.

Soft Tissue Injury

Damage to muscles, tendons, ligaments, fascia, skin, or other non-bony tissues, often caused by trauma or overuse.

Soft Tissue Rheumatism

Pain conditions affecting muscles, tendons, ligaments, bursae. Examples: frozen shoulder, lateral epicondylitis, rotator cuff tendinopathy. Treatment: rest, physiotherapy, injections, surgery if refractory.

Soft Tissue Sarcoma

A group of malignant tumors arising in muscle, fat, fibrous tissue, blood vessels, or other connective tissues. Treatment depends on the subtype, location, stage, and relationship to nearby structures.

Alternate Names:

Cancer, Soft Tissue Sarcoma Sarcoma, Soft Tissue

Soft Tissue Tumors

Lipoma: most common benign soft tissue tumor, subcutaneous, encapsulated. Liposarcoma: most common malignant STS in adults, deep, subtypes (well-differentiated/dedifferentiated, myxoid/round cell, pleomorphic). Synovial sarcoma: t(X;18), SS18-SSX, young adults, deep extremity, "triple sign" on MRI.

Soft-Tissue Calcinosis

The deposition of insoluble calcium phosphate salts in soft tissues such as skin, subcutaneous tissue, muscles, and tendons, which may be metastatic (due to hypercalcaemia or hyperphosphataemia), dystrophic (in damaged or devitalised tissue), or idiopathic.

Soil Contamination

Environmental toxicology. Heavy metals, pesticides, industrial waste. Remediation: excavation, bioremediation, containment.

Solar Keratosis

Alternate index label; see *Actinic keratosis*.

Solar Keratosis (Actinic Keratosis)

Alternate index label for Actinic Keratosis.

Solar Lentigines

Alternate index label; see *Age spots (liver spots)*.

Solar Plexus

A network of autonomic nerves in the upper abdomen, centered around the celiac plexus.

Solar Urticaria

A rare form of inducible urticaria triggered by ultraviolet or visible light, producing pruritic erythema and wheals within minutes on exposed skin. Symptoms usually improve after removal from the light source. Diagnosis may involve phototesting.

Solder Poisoning

Solder poisoning involves toxic or environmental exposure to solder poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Sole Sweating Excessive (Hyperhidrosis)

Alternate index label for Hyperhidrosis.

Soleus Muscle

Broad flat deep posterior leg muscle from posterior tibia, fibula, and tendinous arch to the calcaneus via the Achilles tendon. Innervated by tibial nerve (S1-S2). Powerful ankle plantarflexor, the primary anti-gravity muscle for upright posture. One-joint muscle.

Solitary Fibrous Tumor

A solitary fibrous tumor is a usually slow-growing growth of connective tissue that can arise in the

pleura, meninges, or other sites and may rarely behave aggressively.

Solitary Pulmonary Nodule

Single, well-circumscribed lesion < 3 cm surrounded by normal lung. Differential includes granuloma, hamartoma, and carcinoma. PET-CT and tissue sampling help determine etiology.

Solution

A homogeneous mixture in which one or more substances are dissolved in a solvent; medical solutions include saline and antiseptics.

Solvent Abuse (Misuse)

Harmful inhalation or ingestion of volatile solvents, which can cause neurologic, cardiac, liver, kidney, or respiratory injury.

Solvent Exposure

Contact with organic solvents by inhalation, ingestion, or skin absorption. Acute exposure may cause irritation or central nervous system effects; repeated exposure may damage organs.

Somatic

Relating to the body, especially the body wall and musculoskeletal system, or to physical symptoms.

Somatic Mutation

A genetic change acquired by a body cell during life rather than inherited from a parent. It is passed to descendants of that cell and may contribute to cancer, but it usually is not passed to children.

Somatic Symptom Disorder

Characterized by one or more somatic symptoms that are distressing or result in significant disruption of daily life, accompanied by excessive thoughts, feelings, or behaviors related to the somatic symptoms.

Somatic Variant

A DNA variant acquired after conception in a non-germline cell lineage. It is not usually transmitted

to offspring and may produce mosaic disease or contribute to cancer when it affects growth-control pathways.

Somatization

The experience or expression of psychological distress through physical symptoms such as pain, fatigue, or stomach problems. The symptoms are real and not intentional; assessment should consider both physical and psychological causes.

Somatoform Diseases

An obsolete term for disorders with prominent physical symptoms or health concerns associated with psychological distress.

Somatostatin

A hormone that inhibits secretion of growth hormone, insulin, glucagon, and several gastrointestinal hormones.

Somatostatin Analog

A class of synthetic peptides that mimic the actions of native somatostatin, a hormone that inhibits the secretion of growth hormone, thyroid-stimulating hormone, insulin, glucagon, gastrin, and other GI hormones.

Somatostatinoma

Rare pancreatic or duodenal tumor producing somatostatin causing diabetes, gallstones, steatorrhea, and hypochlorhydria from suppression of insulin, gallbladder contraction, pancreatic enzymes, and gastric acid respectively. Diagnosed by elevated somatostatin levels. Treatment is surgical resection for localized disease.

Somatotropic Pituitary Adenoma

A benign neoplasm of the anterior pituitary arising from growth hormone-secreting cells, causing acromegaly in adults and gigantism in children if occurring before epiphyseal closure.

Somatotropin

Growth hormone, a pituitary hormone that pro-

motes growth and influences protein, fat, and carbohydrate metabolism.

Somatotype

A descriptive body-build classification; it is not a disease diagnosis.

Somnambulism

Sleepwalking, a parasomnia involving complex behavior during incomplete arousal from sleep.

Somniloquy (Sleep-Talking)

A parasomnia characterized by talking or producing vocalizations during sleep without conscious awareness. Occurs across all stages of non-rapid eye movement and rapid eye movement sleep, ranging from incomprehensible mumbling to fluent, emotionally charged discourse. While typically a benign, self-limiting developmental phenomenon in children with normal polysomnography, in adults it can occur in conjunction with other parasomnias, such as sleepwalking (somnambulism), sleep terrors, obstructive sleep apnea, or REM sleep behavior disorder (RBD, a prospective marker of neurodegenerative synucleinopathies).

Alternate Names:

Sleep talking

Somnolence

Abnormal sleepiness or a tendency to fall asleep during wakeful periods, caused by insufficient sleep, medicines, sleep disorders, metabolic disease, or neurologic illness.

Somnolent

Somnolent means unusually sleepy or drowsy, which may result from sleep deprivation, medicines, intoxication, metabolic illness, or neurologic disease.

Sonographer

A healthcare professional trained to perform ultrasound scans (sonography).

Soporifics

Medicines or substances that cause sleepiness or

promote sleep. They may impair alertness, coordination, and breathing, especially when combined with alcohol or other sedatives.

Sorbitol

A sugar alcohol used as a sweetener and, in larger amounts, as an osmotic laxative.

Sore

Painful or tender; a sore may also mean an open skin or mucosal lesion.

Sore Throat

Pain or irritation in the throat, commonly caused by viral infection but sometimes by streptococcal infection or other disease.

Sore Throat (Pharyngitis)

Alternate index label for Pharyngitis.

Sores Canker (Canker Sores)

Alternate index label for Canker Sores.

Sotalol

A medicine with beta-blocking and class III antiarrhythmic effects, used for selected cardiac rhythm disorders.

Sotos Syndrome

An autosomal dominant overgrowth syndrome caused in over 90% of cases by haploinsufficiency, point mutations, or microdeletions of the nuclear receptor-binding SET domain-containing protein 1 (*NSD1*) gene on chromosome 5q35. Classically defined by the cardinal triad of: (1) distinctive facial appearance (macrodolichocephaly, prominent forehead with frontotemporal hair thinning, downslanting palpebral fissures, long narrow face, pointed chin); (2) childhood overgrowth with height and head circumference ≥ 2 standard deviations above the mean; and (3) intellectual disability with developmental delay.

Alternate Names:

Cerebral Gigantism; NSD1-Related Overgrowth Syndrome

Sound

Mechanical energy transmitted as waves and perceived by hearing; clinical sound assessment includes speech and respiratory or cardiac sounds.

Source Control

A procedure or intervention that eliminates, drains, debrides, or otherwise controls an anatomic focus of infection or contamination. Examples include drainage of an abscess, removal of infected tissue or device, and repair of a perforation.

Soy

Soy is a legume providing protein and isoflavones; it is nutritious for many people but can cause allergy and may interact with some medicines or thyroid treatment timing.

Soy Protein Intolerance

Adverse gastrointestinal reaction to soy proteins, most often seen in infants and young children. It may cause vomiting, diarrhoea, abdominal pain, blood or mucus in the stool, feeding difficulty, or poor growth.

Soya

Soybean and products made from it; soy is a food source and can cause allergy in susceptible people.

Space Medicine

The medical specialty concerned with human health and performance in aviation and space environments.

Spacer

A chamber used with a metered-dose inhaler to improve delivery of medicine to the lungs.

Alternate Names:

Valved holding chamber

Spanish Fly

A historical name for cantharidin-containing blister beetles; ingestion is poisonous and it is not a safe aphrodisiac.

Spasm

An involuntary, often painful contraction of a muscle or group of muscles.

Spasmodic Dysphonia

Spasmodic dysphonia is a focal laryngeal dystonia causing involuntary voice-box spasms and strained, breathy, or interrupted speech.

Spasmodic Torticollis

Cervical dystonia causing involuntary contractions and abnormal twisting or posture of the neck.

Spasmus Nutans

An uncommon early-childhood syndrome of rapid shimmering eye movements, head nodding, and torticollis that usually resolves but requires evaluation to exclude neurologic or ocular disease.

Spastic

Characterized by increased muscle tone and velocity-dependent resistance to stretch.

Spastic Colon (Irritable Bowel Syndrome)

Alternate index label for Irritable Bowel Syndrome.

Spasticity

Velocity-dependent increase in muscle tone caused by an upper motor-neuron lesion, producing stiffness, spasms, abnormal reflexes, and restricted movement.

Spasticity Management

Assessment and treatment of abnormal muscle stiffness and spasms. Measures may include stretching, therapy, positioning, medicines, injections, or surgery.

Spatial Resolution

Ability to distinguish small objects. PET: 4-6 mm. SPECT: 8-12 mm.

Spatula

A flat instrument used to spread, mix, examine, or transfer material.

Special Care Baby Unit

A ward within a hospital that provides specialist care for newborn babies who need additional support but not intensive care.

Special Stain

A histochemical stain that highlights a particular tissue component, organism, or deposited substance not adequately demonstrated by routine hematoxylin and eosin. Examples include periodic acid-Schiff, Ziehl-Neelsen, Congo red, and Gomori methenamine silver stains.

Specific Absorbed Fraction

The fraction of radiation energy emitted by a source region that is absorbed in a specified target organ or tissue. It is used in internal dosimetry to estimate radiation dose.

Specific Activity

Radioactivity per unit mass of compound. High specific activity essential for receptor targeting (low receptor density).

Specific Gravity

Ratio of urine density to water density reflecting solute concentration. Normal 1.005 to 1.030. Less precise than osmolality but faster to measure. Elevated in dehydration, glycosuria, proteinuria, and contrast. Decreased in diabetes insipidus and fluid overload.

Specific Learning Disorder

A neurodevelopmental disorder causing persistent difficulty acquiring or using academic skills in reading, writing, or mathematics. The difficulties interfere with functioning and are not better explained by another condition or inadequate instruction.

Specific Phobia

A disorder involving marked, persistent fear or anxiety about a particular object or situation. The fear is excessive relative to the actual danger, leads to avoidance or intense distress, and interferes with daily functioning.

Specific Reading Disability

Alternate index label; see *Dyslexia*.

Specificity

The proportion of people without a condition who have a negative test result.

Specimen Adequacy

The degree to which a collected clinical specimen is sufficient in quantity, correctly identified, properly transported, and representative of the site being tested. Inadequacy can cause invalid, misleading, or falsely negative results.

Specimen Container

Container for collecting specimens. Types: urine cup, stool container, sputum cup, biohazard bag.

Specimen Cup

A sterile or non-sterile, wide-mouthed medical container fabricated from medical-grade polypropylene or polystyrene, equipped with a leak-proof screw cap or tamper-evident seal, used for the collection, transport, and containment of biological fluid and tissue specimens (most commonly midstream clean-catch urine, sputum, stool, or intraoperative biopsy specimens). Calibrated with volumetric volume markings and patient identification labeling surfaces to ensure chain-of-custody and prevent contamination during automated microbiological, cytological, or chemical laboratory analysis.

Specimen Transport Medium

A formulated medium that preserves the viability and diagnostic characteristics of microorganisms during transport from the collection site to the laboratory. The required medium, temperature, container, and transport time depend on the specimen and suspected pathogen.

SPECT Scan (Single Photon Emission CT)

Nuclear medicine imaging using gamma-emitting radioisotopes (Tc-99m, Tl-201, I-123) with a rotating gamma camera to create 3D images.

Alternate Names:

Single Photon Emission CT

Spectral Analysis

Energy discrimination to reject scatter. Energy window typically 20% centered on photopeak.

Speculum

An instrument used to gently separate or hold open the walls of a body passage so that the area can be visualized, examined, sampled, or treated. Common types include vaginal, nasal, ear, and rectal specula; design and size depend on the body site and intended procedure.

Speculum, Ear

A small cone-shaped tip fitted to an otoscope to direct light into the external ear canal and permit examination of the canal and tympanic membrane. Disposable and reusable types are available in different sizes.

Speech

Phonation and articulation. Teeth, tongue, lips, palate involved. Dental prostheses may affect speech initially.

Speech Audiometry

Hearing testing that measures detection or recognition of speech at different loudness levels. It commonly includes speech reception threshold and word-recognition testing, complementing pure-tone audiometry.

Alternate Names:

Speech testing; speech audiometric testing.

Speech Delay

A delay in language development compared to peers: by 12 months—no single words; 18 months—<10-20 words/no word combinations by 24 months; or regression.

Speech Discrimination

Speech discrimination testing, also known as word recognition scoring, measures the ability to under-

stand speech at a comfortable listening level, and it is an important component of the audiometric evaluation that provides information about cochlear and neural function beyond what pure tone audiometry alone can reveal.

Alternate Names:

word recognition scoring, measures the.

Speech Disorders

Conditions affecting production, fluency, voice, articulation, or motor control of speech.

Speech Impairment In Adults

Difficulty producing or understanding speech caused by aphasia, dysarthria, apraxia, hearing loss, neurologic disease, structural problems, or cognitive disorder; sudden onset requires stroke assessment.

Speech Therapy

Assessment and treatment of communication, speech, voice, language, and swallowing disorders.

Speech-Language Pathologist

A clinician who evaluates and treats disorders of speech, language, voice, communication, cognition, and swallowing across childhood, adulthood, and older age.

Speech-Language Pathology Assessment

An evaluation of speech, language, voice, communication, swallowing, and sometimes related cognitive skills. It combines interview, clinical observation, and standardized or functional tests to guide therapy.

Speed

Speed is an informal term for methamphetamine, a stimulant that can cause dependence, cardiovascular toxicity, psychosis, overheating, and other serious harms.

Sperm

Mature male reproductive cells that can fertilize an egg. Semen contains sperm plus fluids from the reproductive glands; sperm are produced in the

testes.

Spermarche

The onset of sperm production and the first ejaculation, marking an important stage of male puberty.

Spermatic

Relating to sperm or the structures that produce, transport, or support sperm.

Spermatic Cord

A cord-like structure containing the vas deferens, testicular vessels, nerves, and lymphatics.

Spermatocele

Benign, painless, fluid-filled cystic retention cavity arising from the epididymis (usually the head/caput), containing avascular fluid and non-viable spermatozoa. Etiology: obstruction of an efferent ductule of the epididymis.

Alternate Names:

Cyst, Spermatic

Spermatogenesis

Production and maturation of sperm in the seminiferous tubules.

Spermatogonium

A germ cell in the testis that divides and develops into primary spermatocytes.

Spermatorrhea

Involuntary leakage or discharge of semen, sometimes occurring during sleep or without orgasm. Occasional nocturnal emissions can be normal; persistent discharge, pain, blood, or urinary symptoms needs assessment.

Spermatorrhoea

An obsolete term for involuntary or excessive semen discharge.

Spermatozoa

Mature male reproductive cells, also called sperm. Each normally carries half the usual chromosome

number and has a head, middle section, and tail that helps it move toward an egg.

Spermatozoon

The singular form of spermatozoa: one mature male reproductive cell capable of carrying genetic material to an egg.

Spermicide

A substance that immobilizes or destroys sperm and is used as a contraceptive.

Sphenoid

Relating to the sphenoid bone at the base of the skull.

Sphenoid Bone

Butterfly-shaped bone at the skull base, with body (sphenoid sinuses), greater/lesser wings, and pterygoid processes. The sella turcica houses the pituitary gland.

Sphenoid Sinusitis

Inflammation or infection of the sphenoid sinus, which lies deep behind the nasal cavity. It may cause deep headache, facial pain, or visual symptoms and can rarely spread to nearby nerves or the brain; persistent or severe symptoms require medical assessment.

Sphenoidal Sinus

A paired air-filled sinus within the sphenoid bone at the base of the skull. It lies near important nerves and blood vessels, so inflammation or surgery in this area requires careful assessment.

Spherocytes

Small, dark, sphere-shaped red blood cells lacking central pallor. Formed when RBC membrane is lost without loss of volume, reducing the surface area-to-volume ratio.

Spherocytosis (Spherocytosis (Hereditary, HS))

Alternate index label for Spherocytosis (Hereditary,

HS).

Spherocytosis (Hereditary, HS)

Alternate index label for Hereditary, HS.

Sphincter

A ring-shaped muscle that regulates an opening by contracting and relaxing.

Sphincter Of Oddi

A muscular valve controlling the flow of bile and pancreatic secretions into the duodenum.

Sphygmograph

An instrument or sensor that records the arterial pulse waveform. Modern devices use pressure or optical sensors to analyze pulse timing and shape.

Sphygmomanometer

An instrument used to measure arterial blood pressure, typically consisting of an inflatable cuff and a pressure-measuring system. Manual devices use Korotkoff sounds, while automated devices generally use oscillometric sensing. Correct cuff size and technique are essential for reliable measurements.

Spider Angioma

A spider angioma is a central red blood vessel with radiating fine vessels that blanches with pressure and may occur normally or with liver or hormonal disease.

Spider Bite

A cutaneous envenomation resulting from the bite of a spider, ranging from minor local reactions to severe systemic envenomation. The brown recluse spider may cause loxoscelism with necrotic skin lesions, while the black widow spider may cause latrodectism with muscle cramps, hypertension, and autonomic dysfunction.

Spider Bites (Black Widow And Brown Recluse)

Alternate index label for Black Widow and Brown Recluse.

Spina Bifida

A birth defect in which the backbone and spinal cord do not form completely. It can be mild or severe and may cause weakness, loss of feeling, or problems controlling the bladder or bowel.

Spina Bifida Meningocele

A form of spina bifida where the meninges (but not neural tissue) herniate through a vertebral defect, forming a CSF-filled sac. The spinal cord remains in its normal position and is not involved. Presents as a visible, fluid-filled, translucent sac on the back, typically without neurologic deficits.

Spina Bifida Myelomeningocele

The most severe form of spina bifida, where both the meninges and neural tissue (spinal cord and nerve roots) herniate through a vertebral defect. Presents as a visible, flat or sac-like lesion on the back with neurologic deficits below the level of the lesion (paralysis, sensory loss, bowel/bladder dysfunction).

Spina Bifida Occulta

A usually mild form of spina bifida in which the vertebral arch does not fully close without herniation of the spinal cord or meninges. It is often asymptomatic but may be associated with a skin dimple, hair tuft, or other finding over the lower spine.

Spinal Anaesthesia

Injection of local anesthetic into cerebrospinal fluid in the lumbar spine to produce regional numbness.

Spinal Analgesia

Intrathecal administration of a local anesthetic and/or opioid primarily to provide analgesia, often with limited motor block. Intrathecal opioids can extend postoperative pain relief but may cause pruritus, urinary retention, respiratory depression, and other opioid effects.

Spinal And Bulbar Muscular Atrophy

An adult-onset, X-linked recessive neurodegenerative motor neuron disorder caused by an expanded

CAG trinucleotide repeat (> 38 repeats) encoding an elongated polyglutamine tract in exon 1 of the androgen receptor (*AR*) gene on chromosome Xq12. Characterized by selective degeneration of lower motor neurons in the anterior horns of the spinal cord and bulbar motor nuclei, presenting after age 30 with progressive muscle weakness, proximal limb atrophy, perioral and lingual fasciculations, dysarthria, and dysphagia, accompanied by systemic androgen insensitivity manifest as gynecomastia, testicular atrophy, and oligospermia.

Alternate Names:

Kennedy Disease; SBMA

Spinal And Epidural Anesthesia

Spinal and epidural anesthesia deliver local anesthetic near spinal nerves to numb the lower body; spinal is a single injection, while epidural uses a catheter for adjustable dosing.

Spinal Anesthesia

Injection of local anesthetic into the lumbar subarachnoid space to produce temporary sensory, motor, and sympathetic blockade below the level of injection. Complications include hypotension, bradycardia, urinary retention, post-dural puncture headache, high or total spinal block, infection, and bleeding.

Spinal Anesthesia For Cesarean Delivery

A neuraxial anesthetic technique used for elective and many emergency cesarean deliveries. A small dose of local anesthetic (hyperbaric bupivacaine 12-15 mg) with opioid (fentanyl 15-25 mcg, morphine 0.15-0.25 mg) is injected into the subarachnoid space. Produces rapid surgical anesthesia (T4 sensory level for cesarean).

Spinal Angiography

X-ray imaging of blood vessels supplying the spinal cord after contrast is injected. It is used to locate vascular malformations, fistulas, aneurysms, or sources of bleeding and may guide treatment.

Spinal Artery

An artery supplying the spinal cord and its cover-

ings, including the anterior spinal artery and paired posterior spinal arteries; blockage can cause characteristic neurologic deficits.

Spinal Block

A spinal block is injection of local anesthetic into cerebrospinal fluid in the lower back, producing temporary numbness and weakness for surgery or pain control.

Spinal Canal

The spinal canal is the bony passage through the vertebral column containing the spinal cord, its coverings, nerve roots, and blood vessels.

Spinal Cavity

The posterior body cavity formed by the vertebral column that contains and protects the spinal cord.

Spinal Column

The vertebral column, consisting of vertebrae, discs, ligaments, and joints that support and protect the spinal cord.

Spinal Cord

The cylindrical nervous tissue within the vertebral canal that carries signals between brain and body and mediates reflexes.

Spinal Cord Abscess

A spinal cord or epidural abscess is a collection of infection near the spinal cord that can compress neural tissue and cause pain, fever, weakness, paralysis, or bladder problems.

Spinal Cord Compression

Oncologic emergency. Back pain, weakness, sensory loss, bowel/bladder dysfunction. MRI diagnostic. Treatment: steroids, radiation, surgery.

Spinal Cord Disease

A disorder affecting the spinal cord, including compression, inflammation, vascular injury, infection, tumor, degeneration, or trauma, and potentially causing weakness, sensory loss, or autonomic dys-

function.

Spinal Cord Injury

Spinal cord injury: ASIA impairment scale (A-E). Complete (ASIA A) vs incomplete.

Alternate Names:
SCI

Spinal Cord Injury: Treatments And Rehabilitation

Spinal-cord injury can cause temporary or permanent weakness, sensory loss, autonomic dysfunction, and bowel or bladder problems. Acute care protects the spine and treats complications; rehabilitation addresses mobility, skin, breathing, function, equipment, sexuality, and community participation.

Spinal Cord Neoplasms

Spinal cord neoplasms are abnormal growths in or around the spinal cord that can cause pain, weakness, sensory changes, or bladder problems.

Spinal Cord Stimulation

An implanted treatment that delivers electrical impulses to the epidural space to alter pain signaling, used for selected chronic neuropathic or ischemic pain after careful assessment.

Spinal Cord Trauma

Spinal cord trauma is injury to the cord from force such as fracture, dislocation, or penetrating damage, potentially causing weakness, sensory loss, autonomic dysfunction, or paralysis.

Spinal Curvature

Alternate index label; see *Scoliosis*.

Spinal Disease

A disorder of the vertebrae, discs, spinal cord, nerve roots, or supporting tissues.

Spinal Dysraphism

A group of congenital malformations resulting from incomplete closure of the neural tube during embryonic development, affecting the spinal cord and

overlying vertebral structures. Includes open defects (myelomeningocele) and closed defects (spina bifida occulta, lipomyelomeningocele, dermal sinus).

Spinal Epidural Abscess

A collection of pus in the spinal epidural space, usually caused by haematogenous or contiguous infection. It may present with severe local back pain, fever, spinal tenderness, radicular pain, neurological deficit, or sphincter disturbance, although the classic triad is often incomplete.

Spinal Fluid Leak

Alternate index label; see *CSF leak (Cerebrospinal fluid leak)*.

Spinal Fracture

A fracture of one or more vertebrae caused by trauma, osteoporosis, tumor, or other bone-weakening disease.

Spinal Fusion

Surgical union of two or more vertebrae using bone graft or bone graft substitutes with instrumentation (rods, screws, cages). Approaches: posterior (posterolateral fusion, transforaminal lumbar interbody fusion TLIF), anterior (anterior lumbar interbody fusion ALIF), and lateral (extreme lateral interbody fusion XLIF).

Spinal Ganglion

A cluster of sensory neuron cell bodies, especially a dorsal-root ganglion, carrying signals from skin, muscles, and joints toward the spinal cord.

Spinal Injury

A clinical condition involving spinal Injury; its causes, manifestations, severity, and complications guide diagnosis and management.

Spinal Muscular Atrophy

An inherited disorder causing progressive loss of motor neurons and muscle weakness, often beginning in infancy or childhood but sometimes appearing in adulthood. Severity varies; breathing, swallowing,

and mobility may be affected. Early diagnosis allows genetic counseling and disease-modifying care.

Spinal Neoplasms

Spinal neoplasms are tumors arising in the spinal cord, its coverings, vertebrae, or nearby tissues.

Spinal Nerve

A mixed nerve formed by the union of dorsal and ventral roots as it exits the vertebral canal. There are 31 pairs, carrying sensory, motor, and autonomic fibers to and from the spinal cord.

Spinal Precautions

Immobilization of spine in trauma patients to prevent neurological injury. Indications: mechanism (fall >3 feet, MVC, gunshot), altered mental status, focal neurological deficit, midline spinal tenderness. Technique: cervical collar, backboard, log roll. Clearance: NEXUS criteria or Canadian C-spine rule.

Spinal Shock

A state of transient physiological areflexia and flaccid paralysis occurring immediately after acute spinal cord injury, below the level of the lesion.

Spinal Stenosis

Narrowing of the spinal canal causing compression of the spinal cord or nerve roots. Lumbar stenosis (most common): neurogenic claudication (leg pain/weakness with walking, relieved by sitting/leaning forward), often bilateral.

Alternate Names:

Stenosis, Spinal

Spinal Tap

Alternate index label; see *Lumbar puncture*.

Spinal Tumor

A spinal tumor is an abnormal growth in or near the spine that may be benign or malignant and may compress nerves or the spinal cord.

Spindle Pole

A spindle pole is one end of the mitotic spindle from which microtubules extend to separate duplicated chromosomes during cell division.

Spindle Pole Body

The spindle pole body is the microtubule-organizing structure in fungi that functions like a centrosome during nuclear division.

Spindle-Cell Sarcoma

A group of sarcomas characterized by elongated, spindle-shaped malignant cells. It includes entities like leiomyosarcoma, fibrosarcoma, and malignant peripheral nerve sheath tumor, with variable behavior.

Spine

The vertebral column, consisting of stacked vertebrae that support the body and protect the spinal cord.

Spine And Spinal Cord, Diseases And Injuries Of

Disorders or trauma affecting vertebrae, discs, ligaments, spinal cord, or nerve roots.

Spine Disorders

The spine, or vertebral column, is a complex bony and soft-tissue structure that provides axial support, protects the spinal cord, and enables flexible movement of the trunk. It consists of 33 vertebrae divided into cervical, thoracic, lumbar, sacral, and coccygeal regions, separated by intervertebral discs that act as shock absorbers.

Spine Injury

A clinical condition or finding involving spine injury. Its features, causes, evaluation, and management depend on the clinical context.

Spinocerebellar Ataxia

Spinocerebellar ataxias are inherited neurodegenerative disorders causing progressive incoordination, gait problems, dysarthria, abnormal eye movements,

and sometimes other neurologic signs.

Spinocerebellar Ataxias

A group of autosomal dominant neurodegenerative disorders characterized by progressive cerebellar ataxia, often with additional neurological features. Over forty different SCA types have been identified, with SCA1, SCA2, SCA3 (Machado-Joseph disease, the most common worldwide), SCA6, and SCA7 being the most prevalent.

Spinous Process

The posterior bony projection of a vertebra to which muscles and ligaments attach.

Spiradenocarcinoma

A rare malignant sweat-gland tumor that may arise in a long-standing spiradenoma, presenting as a rapidly enlarging, painful, or ulcerated nodule.

Spiradenoma

A usually benign painful sweat-gland tumor presenting as a dermal nodule; multiple spiradenomas may occur in Brooke-Spiegler syndrome.

Spiral Colon

A spiral arrangement of the proximal colon described in some animals, especially ruminants, that increases transit length and absorptive surface; it is not a normal human colonic segment.

Spiral Organ

The organ of Corti, a sensory structure in the cochlea containing hair cells that convert sound vibrations into nerve signals.

Spiramycin

A macrolide antibiotic used in selected infections, including some prenatal toxoplasmosis protocols.

Spirillum

A spiral-shaped bacterium; Spirillum minus can cause rat-bite fever.

Spirillum Minus

Spirillum minus is a spiral Gram-negative bacterium that causes rat-bite fever, characterized by fever, rash, and migratory joint pain after rodent exposure; culture is difficult and diagnosis may be clinical or molecular.

Spirit

A volatile liquid preparation or alcohol; the meaning depends on the medical, pharmaceutical, or general context.

Spiritual Pain

Distress involving meaning, purpose, beliefs, identity, or connection, often addressed in palliative and supportive care.

Spiritual Support

Support that helps a person address meaning, values, faith, hope, or existential distress during illness; it may be provided by chaplains, spiritual leaders, clinicians, or trusted people.

Spirochaetaceae

A family of spiral-shaped bacteria that includes medically important spirochetes such as *Borrelia*, *Treponema*, and *Leptospira*.

Spirochaetales Infection

Infection caused by spiral-shaped bacteria in the order Spirochaetales, including syphilis, Lyme disease, relapsing fever, and leptospirosis.

Spirochaete

A slender spiral-shaped bacterium, including *Treponema*, *Borrelia*, and *Leptospira*.

Spirochete

A thin, coiled gram-negative bacterium with internal periplasmic flagella conferring corkscrew motility, requiring darkfield or special stains. Pathogenic genera include *Treponema* (syphilis), *Borrelia* (Lyme disease, relapsing fever), and *Leptospira* (leptospirosis), diagnosed mainly by serology and darkfield microscopy.

Spirogram

A graphical record of air volumes and flow during pulmonary function testing.

Spirometer

An instrument that measures airflow and the volume of air moved during specified breathing maneuvers, especially forced expiration. It does not by itself measure all lung volumes; residual volume and total lung capacity require additional pulmonary-function testing.

Spirometry

A pulmonary-function test that measures airflow and exhaled volume during standardized breathing maneuvers. Key measurements include forced vital capacity, forced expiratory volume in one second (FEV1), and the FEV1/FVC ratio. Results can support the assessment of obstructive ventilatory impairment and may suggest restriction when FVC is reduced with a preserved ratio, but suspected restriction should be confirmed with lung-volume measurement. Interpretation requires appropriate reference equations, patient effort, acceptability, and repeatability; bronchodilator response may provide additional information when indicated.

Spiroinolactone

An aldosterone antagonist and potassium-sparing diuretic used for heart failure, hypertension, hyperaldosteronism, and other indications.

Spit

Spit is saliva expelled from the mouth; increased saliva or repeated spitting may reflect oral irritation, nausea, reflux, swallowing difficulty, or behavior.

Spitting

Spitting is forceful expulsion of saliva or other material from the mouth; new excessive spitting may reflect oral disease, reflux, nausea, swallowing difficulty, or behavior.

Spitz Nevus

A benign melanocytic nevus, often a pink or pigmented papule in children or young adults, that

may resemble melanoma clinically or histologically.

Splanchnic

Relating to the internal organs, especially abdominal organs and their blood vessels or nerves.

Splanchnic Nerve

A visceral autonomic nerve carrying sympathetic or parasympathetic fibers from the thorax or abdomen to prevertebral ganglia and internal organs.

Spleen

A lymphoid organ in the upper-left abdomen. Its red pulp filters blood and removes aged or abnormal blood cells; its white pulp supports immune responses. It also stores platelets and helps clear blood-borne microorganisms.

Spleen Development

Spleen development is the embryonic formation and postnatal maturation of the organ that filters blood, supports immune responses, and removes aged blood cells.

Spleen Disorder

A disease affecting the spleen, such as enlargement, infection, infarction, rupture, inflammation, cyst, or tumor, with possible effects on blood cells and immunity.

Spleen Enlarged (Enlarged Spleen)

Alternate index label for Enlarged Spleen.

Spleen Hemangioma

A spleen hemangioma is a usually benign blood-vessel tumor of the spleen, often incidental but occasionally associated with enlargement, anemia, or rupture risk.

Spleen Hilum

Concave medial surface where the tortuous splenic artery (celiac trunk branch) enters and splenic vein exits, with lymphatics and nerves. Artery divides into 5 segmental branches at the hilum (basis for partial splenectomy). Splenic vein joins the superior

mesenteric vein forming the portal vein.

Spleen Removal

A medical procedure, treatment, device, or care topic related to spleen removal; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Spleen, Diseases Of

Disorders affecting splenic structure or function, including splenomegaly, infarction, infection, cysts, abscess, rupture, vascular disease, and hematologic or infiltrative disorders.

Splenectomy

Surgical removal of the spleen, performed for selected traumatic, hematologic, malignant, vascular, or other disorders. It increases the risk of severe infection with encapsulated bacteria and requires preventive planning.

Splenic Abscess

A localized collection of pus in the spleen, usually from bloodstream infection, trauma, infarction, or spread from nearby disease and potentially causing fever, left-upper-quadrant pain, and sepsis.

Splenic Cyst

A fluid-filled lesion within the spleen, classified as true cysts with an epithelial lining, including congenital, epidermoid, and dermoid cysts, or pseudocysts without a lining, typically resulting from trauma, infection, or pancreatitis. Most are asymptomatic and discovered incidentally on imaging.

Splenic Flexure

The bend of the colon where the transverse colon becomes the descending colon, near the spleen.

Splenic Flexure Syndrome

Left-upper-abdominal pain caused by gas trapped at the bend between the transverse and descending colon.

Splenic Infarction

Ischemic necrosis of splenic tissue caused by obstruction of splenic arterial or venous blood flow. Causes include embolism, thrombosis, hematologic disease, hypercoagulability, infection, trauma, or vasculitis; it often causes sudden left-upper-quadrant pain and is evaluated with imaging.

Splenic Infection

An infectious process or toxic exposure involving splenic infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Splenic Neoplasm

A splenic neoplasm is an abnormal growth in the spleen that may be benign, malignant, or spread from another cancer.

Splenic Rupture

A tear of the spleen, usually after blunt abdominal trauma but sometimes spontaneous in an enlarged or diseased spleen. It can cause life-threatening internal bleeding; diagnosis and treatment depend on hemodynamic stability and imaging, with urgent surgery or embolization sometimes required.

Splenomegaly

Abnormal enlargement of the spleen, usually secondary to infection, liver or portal-venous disease, hemolysis, hematologic malignancy, storage disease, or inflammation. It may cause left-upper-quadrant fullness or pain and increases rupture risk.

Splenomegaly Gaucher (Gaucher Disease)

Alternate index label for Gaucher Disease.

Splice-Site Variant

A variant affecting the sequences required for accurate removal of introns and joining of exons during RNA processing. It may cause abnormal transcripts, exon skipping, intron retention, or reduced functional protein.

Spliceosome

The spliceosome is a nuclear RNA-protein complex that removes introns from pre-messenger RNA and joins exons to form mature RNA.

Splint

Immobilizes injured body part. Types: aluminum, plastic, canvas, pneumatic.

Splint (Dental)

Fixation of mobile teeth or fractured tooth. Wire and composite, orthodontic bracket splint.

Alternate Names:

Dental

Splinter Haemorrhages

Small linear bleeding beneath a nail, caused by trauma, endocarditis, vasculitis, or other conditions.

Splinter Hemorrhages

Linear hemorrhages under the nail bed, oriented longitudinally. In infective endocarditis, they are caused by septic microemboli to the nail bed capillaries. They are a minor Duke criterion. Splinter hemorrhages can also result from trauma, psoriasis, and systemic vasculitis.

Splinter Removal

A medical procedure, treatment, device, or care topic related to splinter removal; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Splints

Devices that support, immobilize, align, or protect an injured or diseased body part.

Split Brain

A state after surgical or pathological disruption of the corpus callosum in which information transfer between cerebral hemispheres is reduced, producing characteristic disconnection findings.

Split-Thickness Skin Graft

A graft containing the epidermis and part of the der-

mis, used to cover wounds or burns and allowing the donor site to heal from remaining skin structures.

Splitting

A psychological defense pattern in which a person or situation is viewed as entirely good or entirely bad, with difficulty integrating positive and negative qualities. It can occur in several mental-health conditions and is not diagnostic by itself.

Spondee

A two-syllable test word with equal emphasis on both syllables, used in speech audiometry.

Spondylarthritis

A family of inflammatory rheumatic diseases affecting the spine, sacroiliac joints, entheses, peripheral joints, skin, eyes, or bowel, including ankylosing spondylitis and psoriatic arthritis.

Spondylitis

Inflammation of one or more vertebrae or the spine.

Spondyloarthritis

Group of inflammatory arthritis associated with HLA-B27. Includes ankylosing spondylitis, psoriatic arthritis, reactive arthritis, enteropathic arthritis. Features: axial involvement, enthesitis, dactylitis.

Spondylolisthesis

Forward or backward displacement of one vertebra relative to another.

Spondylolysis

A stress fracture or defect in the pars interarticularis of a vertebral arch, most often in the lower lumbar spine.

Spondylosis

Degenerative changes of the spine involving vertebrae, discs, and facet joints.

Spondylosis, Cervical

Alternate index label; see *Cervical spondylosis*.

Sponge

A sponge is a porous material used to absorb fluid, clean or dress wounds, or deliver a product; retained surgical sponges are a preventable complication.

Sponge (Vascular)

A sterile absorbent material used during vascular procedures to control minor bleeding or protect tissue.

Alternate Names:

Vascular

Spongiform Encephalopathy

A fatal or progressive neurodegenerative disorder with sponge-like brain changes, including prion diseases.

Spongy Bone

Porous trabecular bone found inside many bones, especially near joints.

Alternate Names:

Cancellous bone; trabecular bone

Spontaneous Abortion

Pregnancy loss before fetal viability that occurs without intentional intervention, commonly caused by chromosomal abnormalities but also by uterine, endocrine, immune, infectious, or other factors.

Spontaneous Abortion (Miscarriage)

Unintentional loss of a pregnancy before fetal viability. Causes include chromosomal abnormalities, uterine or cervical problems, infection, and maternal medical conditions.

Alternate Names:

Miscarriage

Spontaneous Bacterial Peritonitis

An infection of ascitic fluid without an identifiable abdominal source, usually occurring in people with cirrhosis and ascites. It may cause fever, abdominal pain, tenderness, or worsening illness. Diagnosis is made by testing ascitic fluid, usually showing at least 250 neutrophils per mm³.

Spontaneous Coronary Artery Dissection

A non-atherosclerotic, non-traumatic separation of the coronary arterial wall layers, creating a false lumen that compresses the true lumen and causes acute myocardial infarction or sudden death. Predominantly affects young to middle-aged women without traditional cardiovascular risk factors, strongly associated with fibromuscular dysplasia, pregnancy, and hormonal or emotional triggers; conservative management is generally preferred over stenting when hemodynamically stable.

Alternate Names:
SCAD

Spontaneous Breathing Trial

A period of unsupported breathing to assess a patient's readiness for extubation. The patient breathes through a T-piece or with minimal pressure support for 30–120 minutes. Successful SBT predicts successful extubation.

Spontaneous Coronary Artery Dissection

A non-traumatic, non-iatrogenic separation within the wall of a coronary artery, usually caused by an intramural hematoma or an intimal tear. It can obstruct coronary blood flow and cause acute coronary syndrome, especially in younger or peripartum women; diagnosis and management require specialist cardiovascular assessment.

Alternate Names:
SCAD

Spontaneous Perforation

Unexpected rupture of a hollow organ without a clear external injury, allowing contents to escape and potentially causing peritonitis, mediastinitis, sepsis, or hemorrhage.

Spontaneous Pneumothorax

Pneumothorax without trauma. Primary in healthy individuals; secondary with underlying lung disease. Treatment depends on size.

Sporadic

Occurring irregularly or as an isolated case rather than in a predictable pattern or family cluster.

Spore

A resistant reproductive or survival structure produced by fungi, bacteria, or some plants.

Spores

Resistant reproductive or survival structures made by some fungi, bacteria, and plants; inhaled fungal spores can cause allergy or infection, while bacterial spores can persist in the environment.

Sporothrix

A genus of environmental fungi that can cause sporotrichosis, usually after inoculation through the skin and sometimes through inhalation or dissemination.

Sporothrix Schenckii

A group of fungi that causes sporotrichosis, a typically nodular skin and lymphatic infection acquired from plants, soil, or animal scratches.

Sporotrichosis

Sporotrichosis is a fungal infection caused by *Sporothrix* species, often introduced through plant matter and producing nodules along lymphatic channels.

Sporozoa

An older group name for spore-forming protozoan parasites, including *Plasmodium*.

Sporozoites

Motile infective forms of certain protozoa, such as the *Plasmodium* forms injected by mosquitoes.

Sports Cream Overdose

Sports cream overdose involves toxic or environmental exposure to sports cream overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Sports Physical

A preparticipation health evaluation that reviews medical history, symptoms, medications, family risks, and examination findings to identify condi-

tions needing evaluation before sports.

Sports Rehabilitation

Rehabilitation that restores safe movement and performance after a sports-related injury.

Spots Before The Eyes

Visual floaters, flashes, or scotomata perceived in the visual field; sudden onset requires urgent assessment.

Spots In Front Of The Eyes

Floaters or visual spots caused by shadows from vitreous opacities, inflammation, bleeding, retinal tears, migraine, or other eye or neurologic conditions; sudden flashes or a curtain-like loss are urgent.

Spotted Fever

A group of tick-borne rickettsial illnesses causing fever, headache, and often a spotted rash.

Spousal Abuse

Spousal abuse is physical, sexual, emotional, financial, or coercive harm by an intimate partner; immediate safety planning and confidential support may be needed.

Spouse

A spouse is a person's legally or socially recognized partner; involving a spouse in healthcare requires the patient's consent unless law provides otherwise.

Sprain

An injury to a ligament (connective tissue connecting bone to bone) caused by excessive stretching or tearing. Grading: Grade I (mild stretching, microscopic tears), Grade II (partial tear with laxity), Grade III (complete tear with instability).

Sprain Neck (Whiplash)

Alternate index label for Whiplash.

Sprained Ankle

An ankle sprain is stretching or tearing of ligaments, usually after rolling the ankle inward. Pain, swelling,

bruising, and instability occur; protection, relative rest, compression, elevation, and progressive rehabilitation help, while inability to bear weight may require imaging.

Alternate Names:

Strains (Sprained Ankle)

Sprains

Injuries involving stretching or tearing of ligaments around a joint.

Spray Drying

Spray drying converts a liquid mixture into a dry powder by atomizing it into a heated gas stream, often used in pharmaceutical and food manufacturing.

Sprengel Deformity

A congenital elevation of the scapula due to failure of the scapula to descend from its embryonic cervical position to its normal thoracic position during weeks 9-12 of gestation. The scapula is higher, smaller, and rotated inferiorly compared to the normal side. Range of motion is limited, especially in shoulder abduction.

Spring Fever (Henoch-Schonlein Purpura)

Alternate index label for Henoch-Schonlein Purpura.

Sprue

A malabsorption syndrome, especially tropical sprue or celiac disease in older terminology.

Sprue, Nontropical

Nontropical sprue is an older term for celiac disease, an immune reaction to gluten that damages the small-intestinal lining and impairs absorption.

Spumavirus

A genus of retroviruses that can infect humans and other animals. Human infection is usually mild or causes no symptoms.

Spur Heel (Heel Spurs)

Alternate index label for Heel Spurs.

Spur-Cell Hemolytic Anemia

A severe hemolytic anemia seen in advanced liver disease where acanthocytosis develops due to altered membrane cholesterol, causing premature red cell destruction in the spleen.

Sputum

Mucus or other material coughed up from the lower respiratory tract.

Sputum Culture

Laboratory culture of expectorated or aspirated respiratory secretions to identify bacterial, fungal, or mycobacterial pathogens; specimen quality is essential.

Sputum Direct Fluorescent Antibody Test

A sputum DFA test uses fluorescent antibodies to detect selected respiratory pathogens in mucus coughed from the lungs.

Sputum Fungal Smear

Microscopic examination of sputum for fungal elements, used with culture, antigen, molecular testing, and clinical findings when pulmonary fungal infection is suspected.

Sputum Gram Stain

A Gram-stained microscopic examination of sputum to assess specimen quality and visualize bacteria or inflammatory cells before or alongside culture.

Sputum Stain For Mycobacteria

Microscopic staining of sputum for acid-fast bacilli, used in evaluation of suspected tuberculosis or non-tuberculous mycobacterial disease; a negative smear does not exclude infection.

Squalamine Lactate

An investigational aminosterol compound studied for antimicrobial, antiangiogenic, and neurologic

effects; established routine clinical uses are limited.

Squalene

A lipid precursor in cholesterol and steroid synthesis found in human tissues and some plant oils; it is also used in certain vaccine adjuvant formulations.

Squamous Cell

A thin, flattened, polygonal epithelial cell with an expanded surface area, resembling flat paving stones or scales. Forms the protective cellular architecture of simple squamous epithelium (specialized for passive filtration and gas diffusion in pulmonary alveoli, vascular endothelium, and mesothelium) and stratified squamous epithelium (specialized for resistance against mechanical abrasion, chemical friction, and microbial invasion in the epidermis, oral cavity, esophagus, anal canal, and cervix). Neoplastic transformation of these cells gives rise to squamous cell carcinoma, a major malignant tumor of the skin, head and neck, lungs, esophagus, and cervix.

Squamous Cell Carcinoma

Cutaneous squamous cell carcinoma is a malignant keratinocyte tumor commonly arising on chronically sun-exposed skin or in areas of chronic inflammation or immunosuppression. It may present as a scaly, indurated, hyperkeratotic papule, plaque, or ulcer.

Squamous Cell Carcinoma Of The Lung

A major histologic subtype of non-small cell lung cancer that arises from the bronchial respiratory epithelium following squamous metaplasia and dysplasia, strongly correlated with cigarette smoking. Typically presents as a central, cavitating hilar mass with bronchial obstruction, and histopathologically demonstrates keratinization, intercellular bridges, and squamous pearls.

Squamous Cell Carcinoma Of The Skin

A skin cancer arising from squamous cells, often appearing as a scaly, crusted, wart-like, or ulcerated growth.

Alternate Names:

Cancer, Squamous Cell

Squamous Cell Skin Cancer

Squamous cell skin cancer is a malignant keratinocyte tumor often arising on sun-exposed skin and capable of local invasion or metastasis, especially when high risk.

Squamous Cells

Flat epithelial cells with scale-like appearance that line surfaces such as skin, mouth, cervix, and esophagus; abnormal numbers or forms can reflect irritation, infection, dysplasia, or cancer.

Squamous Intraepithelial Lesion Cervical (Cervical Dysplasia)

Alternate index label for Cervical Dysplasia.

Square Foot

A square foot is a unit of area equal to a square measuring one foot on each side, used to describe surfaces, rooms, wounds, or treatment areas.

Square Inch

A square inch is a unit of area equal to a square measuring one inch on each side, used for small surfaces or wound measurements.

Square Metres

Square metres are units of area equal to the surface of a one-metre square, used in clinical, environmental, and dosage calculations.

Squill

A plant-derived cardiac glycoside source historically used as an expectorant or cardiac medicine; toxicity limits use.

Squint

Strabismus, misalignment of the eyes so they do not point in the same direction.

Sscp Analysis

Single-strand conformation polymorphism analysis, a laboratory method that detects some DNA sequence variants by differences in the migration of single-stranded fragments through a gel.

SSRI

An SSRI is a selective serotonin-reuptake inhibitor antidepressant used for depression and several anxiety-related disorders; effects and withdrawal symptoms require monitoring.

SSRIs

Selective serotonin reuptake inhibitors, a group of medicines that increase serotonin signaling in the brain. They are used for depression and several anxiety-related disorders; effects and side effects develop over time, not immediately.

St John'S Wort

A herbal preparation from *Hypericum perforatum* used for mood symptoms but capable of serious drug interactions.

ST Segment

The isoelectric period between ventricular depolarization and repolarization (T wave). It corresponds to the plateau phase of ventricular action potentials. ST segment elevation (>1 mm in limb leads or >2 mm in precordial leads) suggests acute myocardial infarction, pericarditis, or early repolarization.

St Vitus'S Dance

An older name for Sydenham chorea, involuntary movements following group A streptococcal infection.

ST-Segment Elevation

Elevation of the ECG ST segment above the isoelectric baseline, reflecting abnormal ventricular repolarization. It may indicate acute coronary occlusion but can also occur in pericarditis, early repolarization, ventricular aneurysm, or other conditions; interpretation requires clinical context and serial testing.

St. Anthony'S Fire

St. Anthony's fire is an historical name for ergot poisoning or, in some usage, erysipelas; modern diagnosis should identify the specific disease.

St. John'S Wort

Herbal supplement. CYP3A4 inducer, reduces efficacy of many drugs (oral contraceptives, warfarin, antiretrovirals).

Stab Wound

A penetrating sharp-force injury in which wound track depth exceeds skin defect length, produced by a pointed or sharp-edged implement. The skin defect approximates blade width only when perpendicular to Langer's lines, and a single-edged blade produces one sharp and one blunt end.

Stable Angina

Predictable exertional chest pain caused by temporary inadequate coronary blood flow.

Alternate Names:

Chronic stable angina

Stable Coronary Artery Disease

Coronary artery narrowing causing a consistent, predictable pattern of angina.

Alternate Names:

Stable ischemic heart disease

Stable Disease

An oncology response category in which a cancer has neither shrunk enough to meet criteria for partial response nor grown enough to meet criteria for progressive disease. It describes change over a specified assessment interval and does not mean that the cancer is cured or inactive.

Stabs

Brief, sharp, stabbing pains or injuries; the exact cause depends on site and context.

Stage 4 Prostate Cancer

Alternate index label; see *Metastatic (stage 4) prostate cancer*.

Stage I

A cancer stage that generally indicates limited disease, although the exact definition and prognosis depend on the cancer type and staging system.

Stage II

A cancer stage whose meaning depends on the cancer type and may indicate a larger primary tumor or limited local spread without distant metastasis.

Stage III

A cancer stage that often indicates more extensive local or regional disease, with the precise criteria depending on the cancer type.

Stage IV

A cancer stage that generally indicates spread to distant organs or sites. Prognosis and treatment vary by cancer type and individual factors.

Stages Of Change

A model describing gradual phases people pass through while changing behavior.

Alternate Names:

Transtheoretical model

Stages Of Labor

Four stages describing the progression from uterine contractions to delivery of the placenta. First stage: onset of regular contractions to full cervical dilatation (10 cm). Second stage: full dilatation to delivery of the baby. Third stage: delivery of the baby to delivery of the placenta.

Staghorn Calculi

Large branching kidney stones that fill part or all of the renal collecting system.

Staghorn Calculus

A branching kidney stone that fills part or all of the renal pelvis and calyces, often associated with infection.

Staging

Assessment of the extent of cancer, including the size of the primary tumor, lymph-node involvement, and distant metastases.

Staining

A laboratory technique applying dyes to microbial

smears or tissue sections to visualise microorganisms and reveal structural characteristics. Major methods include Gram, acid-fast, Giemsa, and fluorescent stains, providing rapid presumptive identification from clinical specimens and guiding initial empiric therapy.

Stainless Steel

A corrosion-resistant alloy containing iron and chromium, used for instruments, implants, orthodontic appliances, and some dental crowns. Its suitability depends on the grade, strength, and tissue exposure.

Stammering

Stuttering, a speech-fluency disorder involving repetitions, prolongations, or blocks.

Standard Deviation

A statistical measure of the spread of observations around their mean.

Standard Eye Exam

A comprehensive eye examination assessing visual acuity, refraction, pupils, eye movements, external structures, anterior eye, intraocular pressure, and ocular fundus as indicated.

Standard Of Care

The conduct, skill, diligence, and judgment a reasonably prudent practitioner of the same specialty would exercise under similar circumstances; the benchmark for medical negligence. It is established through guidelines, peer practice, and expert testimony rather than fixed statute.

Standard Precautions

Precautions for all patient care. Examples: hand hygiene, PPE, safe injection, respiratory hygiene.

Standardized Extract

An herbal extract adjusted to contain a specified amount of a selected constituent.

Standardized Uptake Value

Quantitative PET measure: tissue activity divided by injected dose per body weight. Normalizes for body size, injection dose. SUVmax: maximum pixel value in lesion. SUVmean: average lesion uptake. Background: blood pool, liver.

Stannosis

A usually mild form of pneumoconiosis caused by long-term inhalation of tin oxide dust. It may produce visible lung changes on imaging, often without major breathing impairment.

Stanozolol

A synthetic anabolic androgenic steroid with limited medical use and potential liver, lipid, and cardiovascular toxicity.

Stapedectomy

Surgical removal or replacement of the stapes, usually to treat otosclerosis and conductive hearing loss.

Stapedius

A small middle-ear muscle that helps limit movement of the stapes and may protect the inner ear from loud sounds.

Stapes

The smallest auditory ossicle, transmitting vibrations from the incus to the inner ear.

Staph Infection

Infections caused by *Staphylococcus aureus* (and coagulase-negative staphylococci), a gram-positive coccus in clusters.

Alternate Names:

Staphylococcus Infection (Staph Infection)

Staph Infections In The Hospital

Hospital staph infections are infections caused by *Staphylococcus* bacteria acquired or treated in healthcare settings and may be difficult to treat because of antibiotic resistance.

Staphylococcal Infection

An infection caused by *Staphylococcus aureus* or another *Staphylococcus* species. It may affect the skin, bone, joints, lungs, heart valves, blood, or other tissues. Diagnosis and antimicrobial treatment depend on the site, severity, and susceptibility of the organism.

Staphylococcal Meningitis

Staphylococcal meningitis is infection and inflammation of the meninges caused by *Staphylococcus* bacteria, often after surgery, trauma, bloodstream infection, or an invasive device.

Staphylococcal Pneumonia

Severe pneumonia from *S. aureus*, often post-influenza. May cause necrotizing pneumonia, lung abscess, and empyema.

Staphylococcal Scalded Skin

A toxin-mediated *Staphylococcus aureus* infection causing superficial separation and tenderness of the outer skin, usually in infants or young children. Widespread redness and fragile blisters may rupture to leave painful, moist areas resembling a scald burn and require prompt medical assessment.

Staphylococcal Scalded Skin Syndrome

A toxin-mediated skin disorder caused by *Staphylococcus aureus*, usually affecting infants or young children and producing widespread superficial blistering and peeling of the skin.

Staphylococcus

A genus of gram-positive cocci that includes *S. aureus* and common skin colonizers and pathogens.

Staphylococcus Aureus

A gram-positive, catalase-positive, coagulase-positive coccus that causes a wide range of infections including skin infections, pneumonia, endocarditis, and osteomyelitis. *S. aureus* produces numerous virulence factors including toxins, enzymes, and surface proteins. MRSA strains carry the *mecA* gene encoding PBP2a.

Staphylococcus Infection (Staph Infection)

Alternate index label for Staph Infection.

Staple (Vascular)

A small metal or polymer device used to close tissue or connect vascular structures.

Alternate Names:

Vascular

Stapling

Closing or joining tissue with metal or absorbable surgical staples. Staples may be used for skin, blood vessels, or parts of the digestive tract and must be selected and removed or absorbed appropriately.

Starch

A plant polysaccharide digested to glucose and an important dietary carbohydrate.

Starch Poisoning

Starch poisoning involves toxic or environmental exposure to starch poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Stargardt Disease

The most common inherited macular dystrophy, usually autosomal recessive and caused by *ABCA4* gene mutations. Presents in childhood or adolescence with progressive central vision loss, retinal flecks, and bull's-eye maculopathy; no curative treatment exists.

Starling Forces

Starling forces describe the balance of hydrostatic and oncotic pressures that govern fluid movement across capillary walls, determining the distribution of fluid between the intravascular and extravascular compartments.

Starvation

Severe prolonged deficiency of food or energy intake causing wasting, metabolic adaptation, and organ dysfunction.

Stasis

Slowing or stopping of normal flow, such as blood, lymph, or intestinal contents.

Stasis Dermatitis

Inflammation of the lower-leg skin caused by chronic venous hypertension and edema. It may cause itching, redness, scaling, brown discoloration, weeping, or ulcers around the ankles. Management focuses on treating venous disease, compression when safe, skin care, and evaluation for infection or arterial insufficiency.

Stasis Dermatitis And Ulcers

Stasis dermatitis and ulcers result from chronic venous hypertension in the lower legs, causing swelling, brown skin change, inflammation, itching, and slow-healing wounds.

Stasis Ulcer

A stasis ulcer is a chronic lower-leg wound caused by venous hypertension and poor return of blood, commonly near the ankle and associated with edema and skin changes.

STAT

A medical instruction meaning immediately or with urgent priority.

Statin

An inhibitor of HMG-CoA reductase that lowers hepatic cholesterol synthesis and increases hepatic LDL-receptor expression. Statins reduce atherosclerotic cardiovascular events; adverse effects include muscle symptoms, rare severe myopathy, and liver-enzyme abnormalities.

Statin-Induced Myopathy

The spectrum of toxic, non-autoimmune adverse muscle reactions caused by 3-hydroxy-3-methylglutaryl-coenzyme A (HMG-CoA) reductase inhibitors (statins). Encompasses common statin-associated myalgias (muscle aching, stiffness, or weakness without serum creatine kinase elevation, affecting up to 5–10% of patients), statin-induced toxic myopathy (proximal muscle weakness with

CK elevation 10 to 50 times the upper limit of normal), and rare acute rhabdomyolysis, all of which resolve completely within weeks to months following drug discontinuation, distinguishing them from autoantibody-mediated anti-HMGCR necrotizing myopathy.

Alternate Names:

Statin-Associated Muscle Symptoms (SAMS);
Statin Myotoxicity

Statins

A class of medicines that inhibit hepatic HMG-CoA reductase, lower low-density lipoprotein (LDL) cholesterol, and reduce the risk of heart attack and ischemic stroke in appropriate patients. Examples include atorvastatin, rosuvastatin, simvastatin, and pravastatin; muscle symptoms, drug interactions, and rare serious muscle injury require clinical consideration.

Alternate Names:

HMG-CoA reductase inhibitors

Statins In Diabetes

Use of HMG-CoA reductase inhibitors to reduce atherosclerotic cardiovascular risk in people with diabetes. The decision, intensity, and treatment target are individualized according to age, cardiovascular risk, kidney function, and other clinical factors.

Station

The relationship of the fetal presenting part to the level of the ischial spines, measured in centimeters.

Status Asthmaticus

A severe asthma exacerbation that fails to respond adequately to initial treatment and may cause respiratory failure.

Status Epilepticus

A prolonged seizure or recurrent seizures without recovery between them, requiring emergency treatment.

Status Migrainosus

A severe migraine attack that persists for more than 72 hours and may require urgent medical treatment, especially when dehydration, vomiting, or medication overuse is present.

Stay Active And Exercise When You Have Arthritis

Regular low-impact activity and strengthening can reduce stiffness and maintain function in arthritis when adjusted to pain, joint stability, and medical advice.

Stay Away From Asthma Triggers

Avoiding asthma triggers such as smoke, allergens, infections, fumes, and cold air can reduce symptoms and attacks, alongside prescribed controller and reliever treatment.

STDs

Alternate index label; see *Sexually transmitted diseases (STDs)*.

Steady State

The condition where the rate of drug administration equals the rate of elimination, resulting in constant average plasma concentrations with repeated dosing. During regular dosing at fixed intervals, steady state is achieved after approximately 4 to 5 half-lives, regardless of the dosing frequency or dose size.

Steal Syndrome

Ischemia of distal extremity due to blood flow diversion to bypass graft or AV fistula. Most common: upper extremity after AV fistula creation. Symptoms: hand pain, pallor, numbness, weakness. Treatment: banding, ligation, revision.

Steam Iron Cleaner Poisoning

Steam iron cleaner poisoning involves toxic or environmental exposure to steam iron cleaner poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Steatoma

A fatty or sebaceous mass; the term may refer to a lipoma or, in the ear, a cholesteatoma depending on context.

Steatorrhea

The passage of excess fat in the stool, causing greasy, pale, foul-smelling, floating stools—a hallmark of fat malabsorption.

Steatorrhea

Excess fat in stools, causing pale, bulky, greasy, foul-smelling stools and suggesting fat malabsorption.

Steele-Richardson-Olszewski Syndrome

Alternate index label; see *Progressive supranuclear palsy*.

Stein-Leventhal Syndrome

Alternate index label; see *Polyendocrine metabolic ovarian syndrome*.

Stem Cell

A cell that can make more stem cells and develop into one or more specialized cell types. Some stem cells produce blood cells; others help form or repair different tissues.

Stem Cell Donation

The collection of healthy blood-forming stem cells from a donor for transplantation into another person. Cells may be collected from the bloodstream by apheresis after medication increases their number in the blood, or directly from bone marrow under anesthesia. Donor and recipient compatibility, especially human leukocyte antigen matching, helps improve transplant success.

Stem Cell Transplantation

Hematopoietic stem cell transplantation replaces diseased or ablated bone marrow with healthy donor or autologous stem cells.

STEMI

ST-elevation myocardial infarction: transmural my-

ocardial necrosis from acute total occlusion of a coronary artery, an emergency requiring immediate reperfusion. ECG: ST-segment elevation in contiguous leads (or new LBBB); troponin elevated.

Stenosing Tenosynovitis

Alternate index label; see *Trigger finger*.

Stenosis

Abnormal narrowing of a passage, vessel, valve, or opening.

Stenosis Lumbar (Lumbar Stenosis)

Alternate index label for Lumbar Stenosis.

Stenosis Of The Left Anterior Descending Artery

Narrowing of the left anterior descending coronary artery, which can reduce blood flow to the front of the heart and cause ischemia.

Stenosis Spinal (Lumbar Stenosis)

Alternate index label for Lumbar Stenosis.

Stenosis, Aortic Valve

Alternate index label; see *Aortic valve stenosis*.

Stenosis, Mitral Valve

Alternate index label; see *Mitral valve stenosis*.

Stenosis, Pulmonary Valve

Alternate index label; see *Pulmonary valve stenosis*.

Stenosis, Pyloric

Alternate index label; see *Pyloric stenosis*.

Stenosis, Spinal

Alternate index label; see *Spinal stenosis*.

Stenotic

Stenotic means narrowed, as in a stenotic heart valve, blood vessel, airway, intestine, or other passage.

Stenotrophomonas Maltophilia Resistance

Resistance in *Stenotrophomonas maltophilia* results from intrinsic and acquired mechanisms that limit the activity of several antibiotics. Treatment should be guided by the site of infection, susceptibility testing, illness severity, and specialist advice.

Stent

A tube or scaffold placed inside a vessel or other passage to keep it open.

Stent (Vascular)

A small mesh or tube placed inside a narrowed or blocked vessel to help keep it open.

Alternate Names:

Vascular

Stent Balloon (Vascular)

A balloon catheter used to expand a stent against the wall of a blood vessel.

Alternate Names:

Vascular

Stent Graft

A fabric-covered stent placed inside a blood vessel to reinforce the vessel wall or exclude an aneurysm from blood flow.

Stent Placement

Image-guided deployment of stent. Vascular, biliary, ureteral, esophageal. Maintains patency.

Stent Restenosis

Re-narrowing of a blood vessel within or adjacent to a previously placed stent, usually caused by tissue growth, recurrent atherosclerosis, or thrombosis.

Stent-Graft (Vascular)

A fabric-covered vascular stent used to reinforce a vessel or exclude an aneurysm or leak.

Alternate Names:

Vascular

Stenting

Placement of mesh tube to keep vessel open. Drug-eluting stents reduce restenosis.

Stepping Reflex

A primitive reflex present from birth to 2 months, elicited by holding the infant upright with feet touching a flat surface. The infant makes stepping-like movements as if walking. Disappears by 2 months as voluntary motor control develops. Reappears around 9-10 months as voluntary walking emerges.

Steps To Take Before You Get Pregnant

Preconception care includes reviewing health conditions and medicines, folic acid, vaccinations, dental and genetic considerations, substance avoidance, and planning prenatal care.

Stereognosis

The ability to identify an object by touch without looking, requiring intact cortical sensory function.

Stereotactic

Stereotactic describes a technique using three-dimensional coordinates to target a precise location in the brain or another body structure.

Stereotactic Biopsy

Image-guided biopsy using three-dimensional coordinates to target a lesion that may be difficult to localize by direct palpation. It is used in the breast and, with specialized systems, the brain, lung, and other organs.

Stereotactic Body Radiation Therapy

A highly precise form of external radiation delivering high-dose ablative treatment in few fractions, used for early-stage lung cancer and selected liver, pancreatic, spinal, and kidney tumors.

SRT

Stereotactic radiotherapy is a highly precise form of external radiation therapy that uses three-dimensional imaging and careful patient positioning to deliver focused radiation to a small target.

Fractionated SRT is commonly given in two to five treatments, rather than a single session.

Stereotactic Radiosurgery

Single high-dose radiation to small target. Used for brain metastases, AVMs, acoustic neuroma.

Stereotactic Radiosurgery - CyberKnife

CyberKnife is a robotic system that delivers many precisely aimed radiation beams to a tumor or other target without an open operation.

Stereotactic Radiosurgery - Gamma Knife

Gamma Knife is a focused radiation system that delivers multiple precisely aimed beams, mainly to selected brain tumors and vascular or other brain lesions.

Stereotaxis

A technique using a three-dimensional coordinate system to target deep structures, especially in brain procedures.

Stereotypic Movement Disorder

A clinical condition involving stereotypic Movement Disorder; its causes, manifestations, severity, and complications guide diagnosis and management.

Sterile Field

A designated area maintained free of viable microorganisms during an invasive procedure. Only sterile equipment and materials may contact the field or the sterile portions of instruments.

Sterile Site

A body site or specimen type expected to contain no viable microorganisms in health, such as blood, cerebrospinal fluid, synovial fluid, or tissue from a closed space. Recovery of a pathogen from a sterile site is generally clinically significant, subject to contamination assessment.

Sterile Technique

Methods used to prevent introduction of microor-

ganisms into a sterile field, wound, tissue, device, or body site through hand hygiene, barriers, aseptic handling, and appropriate preparation.

Sterilisation

Destruction or removal of all forms of microbial life, or permanent contraception depending on context.

Sterility

Inability to reproduce, or complete absence of viable microorganisms from an object or preparation.

Sterilization

A process eliminating all microbial life including spores, achieving a sterility assurance level of at least 10^{-6} .

Sternal Exploration Or Closure

Surgical reopening or repair of the breastbone after median sternotomy, performed to treat infection, bleeding, instability, dehiscence, or other postoperative chest complications.

Sternoclavicular Joint

A saddle-type synovial joint between the clavicle and manubrium of the sternum. It is the only bony connection between the upper limb and axial skeleton and permits movement of the shoulder girdle.

Sternocleidomastoid Muscle

Strap-like anterior neck muscle from manubrium and medial clavicle to the mastoid process. Innervated by CN XI and C2-C3. Divides neck into anterior/posterior triangles. Unilaterally: laterally flexes to opposite side, rotates face to same side. Bilaterally: flexes neck, assists forced inspiration.

Sternotomy

Surgical division of the sternum, usually along the midline, to provide access to the heart or mediastinal structures.

Sternum

The breastbone forming the front of the central chest wall.

Sternutation

Sneezing, a reflex forceful expulsion of air through the nose and mouth triggered by irritation of nasal or upper-airway sensory receptors.

Steroid Myopathy

A toxic, non-inflammatory myopathy caused by prolonged administration of exogenous corticosteroids or by endogenous hypercortisolemia (Cushing syndrome). Characterized by the insidious, symmetrical development of painless proximal muscle weakness and atrophy, predominantly affecting the lower extremities, pelvic girdle, and quadriceps femoris, making rising from a chair or climbing stairs difficult. Serum creatine kinase and electromyography are characteristically normal; muscle biopsy demonstrates selective, non-necrotic atrophy of type II (fast-twitch glycolytic) muscle fibers without inflammatory infiltrates, reversing following corticosteroid dose reduction.

Alternate Names:

Corticosteroid-Induced Myopathy; Glucocorticoid Myopathy

Steroids

Hormone-like medicines or compounds with a four-ring chemical structure; corticosteroids are used to reduce inflammation.

Alternate Names:

Corticosteroids

Stertor

A low-pitched snoring or rattling breathing sound caused by upper-airway obstruction.

Stethoscope

An instrument for listening to sounds from the heart, lungs, blood vessels, and other body structures.

Stevens-Johnson Syndrome

A rare severe mucocutaneous reaction, usually to medicines or infection, with epidermal detachment and involvement of multiple mucosal surfaces.

Alternate Names:

SJS

STI

An STI is a sexually transmitted infection spread through sexual contact, including infections caused by bacteria, viruses, parasites, or fungi.

Stickler Syndrome

An autosomal dominant connective tissue disorder caused by mutations in collagen genes (COL2A1 most common, also COL11A1, COL11A2, COL9A1).

Stiff Baby Syndrome

A clinical condition involving stiff Baby Syndrome; its causes, manifestations, severity, and complications guide diagnosis and management.

Stiff-Person Syndrome

A rare, disabling autoimmune neurological and neuromuscular disorder characterized by progressive, fluctuating muscular rigidity and stiffness of axial, thoracic, and proximal limb muscles, with superimposed agonizing, violent episodic muscle spasms triggered by sudden auditory, tactile, or emotional stimuli. Pathophysiologically driven by autoimmune impairment of GABAergic neurotransmission, with > 80% of patients harboring high-titer autoantibodies against glutamic acid decarboxylase 65 (*GAD65*) in serum and cerebrospinal fluid (or less commonly anti-amphiphysin in paraneoplastic cases). Results in fixed lumbar hyperlordosis, an impaired “tin-man” gait, and frequent falls, responsive to GABA-enhancing therapies and immunomodulation.

Alternate Names:

SPS; Stiff-Man Syndrome; Moersch-Woltman Syndrome

Stiffness

Difficulty or discomfort with movement, often due to joint, muscle, neurologic, or inflammatory disease.

Stigma

A mark, characteristic, or social discrediting label; in medicine it may refer to a sign or to harmful social attitudes.

Stilboestrol

An older name for diethylstilbestrol, a synthetic estrogen no longer used routinely because of serious risks.

Stilet

A slender pointed instrument used to guide, clear, or stiffen a cannula or tube.

Still Disease

An inflammatory disease that can affect the whole body. In children it is called systemic juvenile idiopathic arthritis; in adults it is called adult-onset Still disease. It can cause fever, joint pain or swelling, and a rash.

Alternate Names:

Still's Disease; Arthritis Still (Still's Disease)

Stillbirth

The birth of a baby showing no signs of life after the locally defined gestational or birth-weight threshold.

Still's Murmur

The most common innocent (functional) heart murmur of childhood, typically identified between 2 and 7 years of age. Characterized on auscultation as a short, low-pitched, musical, vibratory, or twanging-string midsystolic ejection murmur heard loudest at the lower left sternal border or mid-precordium without radiation to the axilla or back. The murmur intensifies in high-output states (fever, exercise, anemia) and when lying supine, and softens or disappears when standing or during Valsalva maneuver; it is associated with a completely normal heart and disappears spontaneously by adolescence.

Alternate Names:

Innocent Vibratory Murmur; Normal Pediatric Murmur; Twanging-String Murmur

Stimulant

A substance that increases activity of the central nervous system or other body systems.

Stimulant Use Disorder

A problematic pattern of stimulant use (cocaine,

amphetamines, methamphetamine, MDMA) leading to significant impairment. Stimulants increase dopamine and norepinephrine activity. Withdrawal is characterized by fatigue, depression, increased appetite, hypersomnia, psychomotor retardation, and vivid unpleasant dreams.

Stimulants

Stimulants increase activity in the central nervous system or sympathetic system and may improve alertness but can cause insomnia, anxiety, dependence, or cardiovascular effects.

Stimulus

A stimulus is a physical, chemical, sensory, or social change that evokes a response from a cell, tissue, organism, or person.

Stingray

Stingray involves toxic or environmental exposure to stingray; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Stings

Injuries caused by venom injected through an insect, animal, or plant structure.

Stings, Bee

Alternate index label; see *Bee sting*.

Stings, Jellyfish

Alternate index label; see *Jellyfish stings*.

Stings, Scorpion

Alternate index label; see *Scorpion sting*.

Stippling (Tattooing)

Patterned dermal abrasions and punctate hemorrhages surrounding a firearm entrance wound, caused by unburned and partially burned gunpowder grains striking the skin at close range (15–75 cm).

Alternate Names:

Tattooing

Stitch

A suture used to close tissue, or a sharp transient pain, often in the side during exercise.

Stochastic Effects

Random radiation effects with no threshold. Cancer, genetic effects. Probability increases with dose.

Stoddard Solvent Poisoning

Stoddard solvent poisoning involves toxic or environmental exposure to stoddard solvent poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Stokes-Adams Syndrome

Transient loss of consciousness caused by an intermittent cardiac arrhythmia, usually profound bradycardia or heart block.

Stoma

A natural opening or a surgically created opening connecting an organ to the skin or another organ.

Stoma Complications

Problems involving an opening made from the intestine or urinary tract to the skin. They include skin irritation, bleeding, retraction, prolapse, narrowing, blockage, high output, infection, and a parastomal hernia; sudden severe pain, color change, or no output needs urgent care.

Stomach

A muscular digestive organ between the oesophagus and small intestine that stores and begins digestion of food.

Stomach Cancer

Malignant cancer arising in the stomach, most often an adenocarcinoma. Risk factors include *Helicobacter pylori* infection, smoking, certain dietary exposures, chronic gastric inflammation, and inherited syndromes. Symptoms, stage, and tumor type guide treatment.

Alternate Names:

Cancer, Gastric Cancer, Stomach

Stomach Cramps

Intermittent gripping or spasmodic upper-abdominal pain caused by gas, infection, indigestion, ulcer disease, gallbladder or pancreatic disease, obstruction, or other causes.

Stomach Fat (Belly Fat, Abdominal Fat)

Adipose tissue stored beneath the skin or around abdominal organs; excess visceral fat is metabolically active and associated with insulin resistance, fatty liver, and cardiovascular risk.

Stomach Flu

Alternate index label; see *Viral gastroenteritis (stomach flu)*.

Stomach Paralysis

Stomach paralysis, or gastroparesis, is delayed emptying of stomach contents without obstruction, causing early fullness, nausea, vomiting, and bloating.

Stomach Tube

A tube passed through the mouth or nose into the stomach for drainage, feeding, sampling, or treatment.

Stomach Ulcer

An open sore in the lining of the stomach, commonly associated with *Helicobacter pylori* infection or medicines such as NSAIDs.

Stomach Ulcer (Peptic Ulcer)

Alternate index label for Peptic Ulcer.

Stomach Washout

Gastric lavage, irrigation and suction of stomach contents in selected poisoning or other emergencies.

Stomach, Diseases Of

Disorders affecting the stomach, including gastritis, ulcers, motility disorders, obstruction, and tumors.

Stomatitis

Inflammation, soreness, redness, or ulcers of the lining of the mouth. Causes include infection, irri-

tation, nutritional deficiency, medicines, and cancer treatment; severe pain, dehydration, fever, or inability to eat or drink needs medical care.

Stomatodynia

Alternate index label; see *Burning mouth syndrome*.

Stone

A hard concretion formed in a body organ or duct, commonly from mineral salts.

Stonefish Sting

Stonefish sting involves toxic or environmental exposure to stonefish sting; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Stool

Fecal material expelled from the bowel, composed of water, undigested residue, bacteria, cells, mucus, and bile pigments; color, form, frequency, and blood can provide clinical clues.

Stool C Difficile Toxin

Stool C difficile toxin is a diagnostic or laboratory investigation; interpretation depends on the specimen, method, reference interval, timing, and clinical question.

Stool Examination

Laboratory analysis of a stool sample for blood, infection, parasites, inflammation, malabsorption, or other digestive abnormalities.

Alternate Names:

Stool test

Stool Gram Stain

Microscopic examination of a stool specimen after Gram staining; it may provide limited information about bacterial flora or inflammatory cells but is not a general test for infectious diarrhea.

Stool Guaiac Test

A chemical fecal occult blood test that detects the peroxidase activity of heme in stool. Dietary factors,

medicines, and specimen collection can affect results. It is a screening or detection test rather than a diagnosis; a positive result requires clinical follow-up and usually evaluation for a gastrointestinal source.

Stool Holding

Alternate index label; see *Encopresis*.

Stool Occult Blood Test

Alternate index label; see *Fecal occult blood test*.

Stool Ova And Parasites Exam

Microscopic examination of stool for parasite eggs, cysts, larvae, or other forms, sometimes requiring multiple specimens to improve detection.

Stools

Feces, the solid waste expelled from the digestive tract.

Stools - Foul Smelling

Strongly odorous feces that may result from diet, infection, bleeding, malabsorption, altered gut bacteria, or rapid transit; persistent change with weight loss or diarrhea warrants review.

Stools - Pale Or Clay-Colored

Light-colored stool caused by reduced bile pigment reaching the intestine, potentially indicating bile-duct obstruction, gallbladder disease, liver disease, or certain transient conditions.

Stools – Floating

Feces that remain on the water surface, often from trapped gas or diet but sometimes from excess fat in malabsorption; persistent greasy, pale, foul-smelling stool needs evaluation.

Stop Smoking Support Programs

Counseling, quit plans, telephone or digital coaching, and medicines such as nicotine replacement, varenicline, or bupropion used to help people stop tobacco use.

STOPP/START

Screening Tool of Older Person's Prescriptions and Potential Older Person's Prescriptions (START). Identifies inappropriate prescribing.

Storage Diseases

A group of inherited metabolic disorders characterized by accumulation of substrates within cells due to specific enzyme deficiencies. Lysosomal storage diseases result from defects in lysosomal hydrolytic enzymes, leading to accumulation of undigested macromolecules within lysosomes.

Storing Your Medicines

Medicines should be stored in their labeled containers at the specified temperature, protected from moisture and children, and checked for expiry or disposal instructions.

Stork Bite

A stork bite is a common harmless pink birthmark, usually a nevus simplex on the forehead, eyelids, nose, or neck, that often fades during childhood.

Strabismus

Misalignment of the eyes, causing them to point in different directions.

Strain

An injury from overstretching or tearing a muscle or tendon, or a force applied to tissue.

Strain Imaging

Echocardiographic or magnetic-resonance imaging that measures deformation of the myocardium during contraction and relaxation. It can detect abnormalities in myocardial function that may not be apparent from ejection fraction alone.

Strain Neck (Whiplash)

Alternate index label for Whiplash.

Strains

A strain is overstretching or tearing of a muscle or tendon, causing pain, tenderness, swelling, weakness,

or reduced function after force or overuse.

Strains (Sprained Ankle)

Alternate index label for Sprained Ankle.

Stranguary

An obsolete term for painful, difficult, or frequent urination.

Strangulated Hernia

A hernia in which the blood supply to the trapped tissue is cut off, causing ischaemia and possible tissue death; it is a surgical emergency.

Strangulation

Compression of a body structure, especially the neck or a hernia, that compromises blood flow or airway.

Strapping

Application of adhesive tape or bandage to support, protect, or restrict movement of a body part.

Strategies For Getting Through Labor

Practical approaches for coping with labor, including breathing, movement, position changes, support people, relaxation, analgesia, and communication with the maternity team.

Stratum Corneum

The outermost layer of the epidermis, composed mainly of dead keratinized cells.

Strawberry Hemangioma

Alternate index label; see *Hemangioma*.

Strength

The ability of a muscle or muscle group to exert force.

Strength Testing

Manual muscle testing, dynamometry, isokinetic testing. Quantifies weakness, tracks progress.

Strength Training

Exercise using resistance to increase muscle strength and capacity.

Alternate Names:

Resistance training; weight training

Strep Throat

A bacterial infection of the throat and tonsils caused by group A Streptococcus, also called Streptococcus pyogenes. It commonly causes a sudden sore throat, pain when swallowing, fever, and swollen or red tonsils, sometimes with white patches.

Strep Throat

Alternate index label for GAS.

Streptococcal Cellulitis With Lymphangitis

Streptococcal infection of the skin and subcutaneous tissue with inflammation of the draining lymphatic vessels.

Streptococcal Infection

Infections caused by Streptococcus pyogenes (Group A Strep, GAS). Common presentations: pharyngitis (strep throat), scarlet fever (pharyngitis with erythematous rash), impetigo, cellulitis, and necrotizing fasciitis.

Streptococcal Infections

Streptococcal bacteria can cause throat infection, scarlet fever, skin infection, pneumonia, invasive bloodstream disease, and post-infectious complications. Diagnosis and antibiotic choice depend on site and testing; severe pain, rapid spread, sepsis signs, or breathing difficulty is urgent.

Streptococcal Pharyngitis

Sore throat caused by infection with group A Streptococcus, often accompanied by fever and swollen cervical lymph nodes.

Streptococcal Pharyngitis (Strep Throat)

Alternate index label for Strep Throat.

Streptococcal Screen

A streptococcal screen looks for group A Streptococcus, usually from a throat swab, to help diagnose strep throat.

Streptococcus

A genus of gram-positive cocci causing infections such as pharyngitis, pneumonia, cellulitis, and endocarditis.

Streptococcus Agalactiae

A gram-positive, beta-hemolytic streptococcus (Group B Streptococcus) that is a leading cause of neonatal sepsis, meningitis, and pneumonia. The organism colonises the gastrointestinal and genital tracts. Transmission occurs during birth. Risk factors include prematurity, prolonged rupture of membranes, and maternal colonisation.

Streptococcus Pneumoniae

A gram-positive, encapsulated diplococcus that causes pneumonia, otitis media, sinusitis, meningitis, and sepsis.

Streptococcus Pneumoniae (Pneumococcus)

A gram-positive bacterium that can cause pneumonia, meningitis, sinusitis, otitis media, and blood-stream infection; vaccines reduce disease risk.

Streptococcus Pyogenes

A gram-positive, beta-hemolytic streptococcus (Group A Streptococcus) that causes pharyngitis, skin infections, and post-infectious complications including rheumatic fever and glomerulonephritis. The organism produces streptolysins, erythrogenic toxin, and streptokinase.

Streptokinase

A thrombolytic protein that activates plasminogen and dissolves clots; use is limited by bleeding risk and alternatives.

Streptomycin

An aminoglycoside antibiotic used in selected tuber-

culosis and other infections.

Stress

A physiological or psychological response to perceived demands or threat.

Stress And Your Heart

Psychological stress can increase heart rate and blood pressure and may worsen cardiovascular risk through sleep and behavior changes; chest pain or severe symptoms require urgent assessment.

Stress Cardiomyopathy

A temporary weakening of the heart muscle, often following intense emotional or physical stress, with symptoms that can resemble acute coronary syndrome.

Stress Echocardiography

Echocardiography during exercise or pharmacological stress. Detects coronary artery disease by identifying wall motion abnormalities.

Stress Fracture

A bone injury caused by repetitive submaximal loading that exceeds the rate of remodeling and repair. It often presents with gradually increasing, localized activity-related pain and may progress to a complete fracture if loading continues.

Stress Fractures

Small cracks in bone caused by repetitive loading that exceeds remodeling capacity.

Stress Incontinence

Involuntary leakage of urine during activities that increase intra-abdominal pressure, such as coughing, sneezing, lifting, or exercise.

Stress Injuries

Tissue injuries caused by repeated loading or overuse without sufficient recovery. Examples include stress fractures, tendinopathy, and muscle strain.

Stress Response

Physiological changes that prepare the body to respond to a perceived threat.

Alternate Names:

Fight-or-flight response

Stress Shielding

Reduction in physiologic loading of adjacent bone caused by an implant that carries a disproportionate share of mechanical force. Chronic stress shielding may lead to bone resorption and compromise fixation.

Stress Tests

Diagnostic tests that assess organ function under controlled physical, pharmacologic, or physiologic stress, commonly evaluating the heart for inducible ischemia or abnormal rhythm.

Stress Ulcer Prophylaxis

Prevention of stress-related mucosal disease in critically ill patients. Risk factors: mechanical ventilation >48 hours, coagulopathy, trauma, burns, sepsis. Agents: H2 blockers, proton pump inhibitors. Duration: while risk factors present.

Stress Urinary Incontinence

Involuntary leakage of urine, significantly affecting psychological, social, and physical well-being. See urinary incontinence.

Stressors

Events, conditions, or circumstances that trigger a stress response.

Stretch Marks

Linear bands of atrophic skin, also called striae, caused by stretching and hormonal or corticosteroid effects; they commonly occur during pregnancy, growth, weight change, or steroid exposure.

Stretch Reflex

A monosynaptic spinal reflex in which stretching a muscle (e.g., a tap on the patellar tendon) excites muscle spindles, generating an afferent signal (Ia

fibers) that directly excites the alpha motor neurons of the same muscle, causing contraction and resistance to stretch.

Stria

A line, streak, or band in tissue, such as a stretch mark.

Alternate Names:

Striae

Striae

Linear bands or streaks in skin, commonly stretch marks caused by dermal connective-tissue change.

Striae Atrophicae

Linear bands of thin, wrinkled skin caused by stretching and disruption of dermal connective tissue; commonly called stretch marks.

Alternate Names:

stretch marks.

Striae Gravidarum

Stretch marks that develop during pregnancy, commonly on the abdomen, breasts, thighs, or buttocks. They may begin as red or purple lines and gradually fade to lighter bands.

Stricture (Stenosis)

An abnormal, pathological localized narrowing, constriction, or stenosis of a hollow, tubular anatomical conduit, duct, or lumen. Typically initiated by chronic mucosal inflammation, mechanical trauma, ischemia, surgical anastomosis, or caustic injury, leading to circumferential fibroblastic proliferation and collagenous scarring. Prominent clinical forms include urethral strictures (secondary to catheter trauma or gonococcal urethritis), esophageal strictures (caused by chronic GERD with reflux peptic injury, radiation, or lye ingestion), biliary strictures, and benign or malignant intestinal strictures (common in fibrostenosing Crohn disease).

Strictures Esophagus (Schatzki Ring)

Alternate index label for Schatzki Ring.

Stridor

A harsh, high-pitched breathing sound caused by upper-airway narrowing.

String Test For Intestinal Parasites

A string test collects a sample from the upper digestive tract on a swallowed capsule and string to look for selected intestinal parasites.

Stripping Of Membranes (Membrane Sweep)

A procedure performed during a cervical exam where the examiner inserts a finger through the internal os and sweeps the membranes circumferentially, separating them from the lower uterine segment. Releases endogenous prostaglandins, promoting cervical ripening and potentially initiating labor.

Alternate Names:

Membrane Sweep

Stroke

A sudden neurologic deficit caused by interrupted blood flow to the brain or bleeding within or around it.

Stroke Heat (Heat Stroke)

Alternate index label for Heat Stroke.

Stroke Index

Stroke index is a laboratory test, imaging method, instrument, score, or measurement used to characterize a specimen or clinical finding; interpretation depends on the method and clinical context.

Stroke Risk Factors

Stroke risk factors include high blood pressure, smoking, diabetes, high cholesterol, atrial fibrillation, prior stroke, and certain blood or vascular disorders.

Alternate Names:

Stroke Volume

The volume of blood ejected by the left ventricle

with each heartbeat, normally 60-100 mL. It is determined by three factors: preload, afterload, and myocardial contractility. Stroke volume equals end-diastolic volume minus end-systolic volume. Reduced stroke volume occurs in heart failure, hypovolemia, and cardiogenic shock.

Stroma

The supporting connective tissue of an organ, surrounding its functional cells.

Strongyloides Stercoralis

A soil-transmitted nematode that can infect the human intestine and cause strongyloidiasis.

Strongyloidiasis

A parasitic infection caused by *Strongyloides stercoralis*, which can become life-threatening in immunosuppression.

Structured Reporting

Reporting that uses a standard format, headings, and required fields to organize findings. It can improve completeness, consistency, and communication in imaging, pathology, and other clinical reports, but does not replace professional judgment.

Struma Ovarii

A specialized mature ovarian teratoma composed predominantly of thyroid tissue; it may be hormonally active or develop malignant thyroid-type transformation.

Struvite Stones

Infection stones composed of magnesium ammonium phosphate. Form in alkaline urine with urease-producing organisms including *Proteus* and *Klebsiella*. Staghorn calculi fill renal pelvis almost exclusively from *Proteus*. Treatment requires complete stone removal with antibiotics and urinary acidification. High recurrence if infection persists.

Strychnine

A poisonous alkaloid causing painful generalized muscle spasms and convulsions with preserved con-

sciousness.

Student'S Elbow

Olecranon bursitis, an inflammation of the bursa over the point of the elbow, often related to repeated pressure or trauma.

Study Population

The defined group of people included in a research study, selected according to eligibility criteria and used to estimate effects, associations, or outcomes.

Stuffy Nose

Stuffy nose refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

Stuffy Or Runny Nose - Children

A stuffy or runny nose in a child is usually caused by a viral infection or allergy; breathing difficulty, dehydration, prolonged fever, or symptoms in an infant need prompt assessment.

Stuffy Or Runny Nose – Adult

A stuffy or runny nose in an adult commonly results from viral infection, allergy, irritants, or sinus disease; persistent, severe, bloody, or one-sided symptoms need review.

Stump Pain

Alternate index label; see *Residual limb pain*.

Stupor

A state of markedly reduced responsiveness from which a person can be aroused only with vigorous stimulation.

Sturge-Weber Syndrome

A neurocutaneous syndrome (phakomatosis) characterized by a facial capillary malformation (port-wine stain) in the V1 distribution of the trigeminal nerve (forehead and upper eyelid) and ipsilateral leptomeningeal angiomas (venous malformations of the pia mater). Caused by a somatic activating mutation in GNAQ.

Stuttering

A speech-fluency disorder involving repetitions, prolongations, blocks, or struggle during speech.

Sty (Stye)

Alternate index label for Stye.

Stye

A tender localized infection or inflammation of an eyelid gland, also called a hordeolum.

Alternate Names:

Sty (Stye)

Stye (Sty (Stye))

Alternate index label for Sty (Stye).

Styptics

Agents that help stop minor bleeding by promoting local vasoconstriction, coagulation, or tissue contraction.

Subacute

Between acute and chronic in onset, duration, or severity.

Subacute Bacterial Endocarditis

A slowly progressive infection of the endocardium or heart valves, usually caused by less-virulent bacteria and often involving previously abnormal valves.

Subacute Combined Degeneration

Damage to parts of the spinal cord, usually from vitamin B12 deficiency. It can cause numbness, weakness, poor balance, and difficulty walking.

Subacute Combined Degeneration Of The Cord

Spinal-cord degeneration caused mainly by vitamin B12 deficiency, affecting posterior and lateral columns.

Subacute Rehabilitation

Less intensive than acute rehab. For patients needing continued therapy but not as intensive. Skilled nursing facility setting.

Subacute Sclerosing Panencephalitis

A rare progressive brain disease occurring years after measles infection, caused by persistent defective measles virus.

Subacute Thyroiditis

Inflammatory condition of the thyroid most likely viral in etiology presenting with painful tender thyroid enlargement, fever, and malaise. Associated with elevated erythrocyte sedimentation rate and C-reactive protein.

Subaortic Stenosis

Narrowing of the left-ventricular outflow tract just below the aortic valve, often caused by a fibrous ridge or tunnel and producing a pressure gradient, murmur, and possible aortic-valve injury.

Subarachnoid

Situated beneath the arachnoid membrane surrounding the brain and spinal cord.

Subarachnoid Haemorrhage

Bleeding into the space around the brain containing cerebrospinal fluid, often causing sudden severe headache.

Subarachnoid Hemorrhage

Bleeding into the subarachnoid space, the area between the arachnoid membrane and the pia mater surrounding the brain, most commonly caused by rupture of a cerebral (berry) aneurysm.

Subarachnoid Space

The space between the arachnoid and pia mater containing cerebrospinal fluid.

Subareolar Abscess

A pus-filled infection beneath the areola, often associated with periductal inflammation and smoking, causing a painful lump, redness, drainage, or recurrent fistula.

Subchorionic Hemorrhage

Bleeding between the chorion and the uterine wall

caused by partial separation of the gestational sac membranes. It may produce vaginal bleeding in early or mid-pregnancy and is assessed according to bleeding, gestational age, and ultrasound findings.

Subclavian

Relating to the vessels or structures beneath the clavicle.

Subclavian Artery

The artery supplying the upper limb, arising on the right from the brachiocephalic trunk and on the left directly from the aortic arch, passing over the first rib and becoming the axillary artery. Branches: vertebral, internal thoracic, thyrocervical trunk, costocervical trunk.

Subclavian Steal Syndrome

A constellation of neurological and vascular symptoms resulting from severe stenosis or occlusion of the proximal subclavian artery (prior to the vertebral artery origin). During ipsilateral upper-extremity exertion, blood flow reverses down the ipsilateral vertebral artery to supply the arm, "stealing" blood from the vertebrobasilar cerebral circulation and causing vertigo, syncope, visual disturbances, and arm claudication.

Subclavian Vein

The continuation of the axillary vein beyond the lateral border of the first rib. It joins the internal jugular vein behind the sternoclavicular joint to form the brachiocephalic vein.

Subclavian Vein Thrombosis

Formation of a blood clot in the subclavian vein, often associated with central venous catheterization, thoracic outlet syndrome, or Paget-Schroetter syndrome (effort-related thrombosis in young, active individuals). Presents with arm swelling, pain, and cyanosis.

Subclinical

Present without obvious symptoms or signs, often detectable only by testing.

Subclinical Disease

A clinical condition involving subclinical Disease; its causes, manifestations, severity, and complications guide diagnosis and management.

Subclinical Hypothyroidism

A condition with an elevated thyroid-stimulating hormone level and normal circulating free thyroid-hormone levels, often without symptoms or with only mild nonspecific symptoms.

Subclinical Infection

An infection that produces no noticeable symptoms or signs but may still be detectable by testing and may sometimes be transmissible.

Subconjunctival Hemorrhage

Bleeding beneath the conjunctiva that appears as a sharply demarcated red patch on the white of the eye; it is usually harmless but recurrent cases or trauma require assessment.

Subconjunctival Hemorrhage (Broken Blood Vessel In Eye)

A small blood vessel broken beneath the clear surface of the eye, causing a sharply demarcated red patch that usually resolves without treatment.

Alternate Names:

Broken Blood Vessel In Eye

Subconscious

Mental processes outside immediate awareness; it is a psychological term rather than a specific diagnosis.

Subcorneal Pustular Dermatoses

A chronic relapsing skin disorder characterized by superficial sterile pustules beneath the stratum corneum, often on the trunk and flexural areas. It may be associated with IgA or other monoclonal gammopathies and can resemble pustular psoriasis.

Subcu

Subcu is an abbreviation for subcutaneous, meaning beneath the skin; clear clinical instructions should spell out the route.

Subculture

The transfer of microorganisms from one culture to fresh culture medium, used to maintain pure cultures, isolate colonies, increase viability, prepare standardized inocula, and perform identification/susceptibility testing. On solid media, subculture aims to obtain isolated single colonies from a mixed or stock culture.

Subcutaneous

Subcutaneous means beneath the skin; injections by this route deliver medicine into the fatty tissue between skin and muscle.

Subcutaneous Injections

Administration of a medicine into the fatty tissue beneath the skin, commonly used for insulin, anticoagulants, and selected biologic medicines.

Subcutaneous Emphysema

Air in the subcutaneous tissues, often from pneumothorax, pneumomediastinum, or chest trauma. It causes a characteristic crepitus on palpation. It is usually benign and resolves when the underlying air leak is treated. Severe cases may cause skin necrosis and compartment syndrome.

Subcutaneous Implantable Cardioverter-Defibrillator

A medical procedure, treatment, device, or care topic related to subcutaneous implantable cardioverter-defibrillator; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Subcutaneous Layer

The layer of tissue beneath the dermis, composed mainly of fat and connective tissue. It insulates the body, stores energy, and contains larger vessels and nerves.

Subcutaneous Tissue

Subcutaneous tissue (hypodermis, superficial fascia) lies beneath the dermis and connects skin to underlying structures. It contains adipose tissue (fat), blood vessels, nerves, and the superficial muscu-

lar aponeurotic system (SMAS). Subcutaneous fat provides insulation, cushioning, and energy storage.

Subdural

Situated, occurring, or located in the anatomical space between the inner surface of the dura mater and the outer surface of the arachnoid mater. Clinically famous for subdural hematoma, an intracranial hemorrhage resulting from tearing of bridging cortical veins as they cross the subdural space into dural venous sinuses, typically precipitated by head trauma or brain atrophy in elderly patients and chronic alcoholics; subdural empyema (a purulent intracranial collection secondary to contiguous sinusitis or otitis media requiring emergent surgical evacuation); and subdural hygroma.

Subdural Effusion

Accumulation of usually clear fluid in the subdural space, often after trauma, surgery, infection, or cerebrospinal-fluid disturbance and sometimes causing headache or pressure effects.

Subdural Haematoma

Accumulation of blood between the dura mater and arachnoid membrane, usually caused by tearing of bridging veins after head injury and sometimes developing gradually.

Subdural Hematoma

A collection of blood between the dura mater and the arachnoid mater, caused by tearing of bridging veins that traverse the subdural space.

Subdural Hemorrhage

Accumulation of blood between the dura mater and arachnoid membrane, usually caused by tearing of bridging veins after head trauma. Acute hemorrhage may produce rapid neurological deterioration, whereas chronic hemorrhage can develop gradually, particularly in older adults or patients with cerebral atrophy. Clinical features include headache, confusion, drowsiness, focal neurological deficits, seizures, or loss of consciousness. Diagnosis is established with neuroimaging, usually computed tomography, and treatment ranges from observation to surgical

evacuation according to size, symptoms, and mass effect.

Subendocardial Myocytes

Heart-muscle cells in the inner layer of the myocardium, which are especially vulnerable to reduced blood flow.

Subependymal Giant Cell Astrocytoma

A usually low-grade astrocytic tumor arising near the foramen of Monro, strongly associated with tuberous sclerosis complex. It may obstruct cerebrospinal-fluid flow and cause hydrocephalus.

Subependymoma

A rare, usually benign slow-growing ependymal tumor, commonly arising in the ventricular system of adults. Symptoms result from obstruction of cerebrospinal-fluid pathways or incidental detection.

Subfertility

Alternate index label; see *Infertility*.

Subgaleal Hemorrhage

A potentially life-threatening accumulation of blood in the space beneath the scalp's epicranial aponeurosis. It can expand rapidly in a newborn, particularly after vacuum-assisted delivery, and requires urgent recognition and treatment.

Subinvolution

Failure of an organ, especially the uterus after childbirth, to return toward its normal size.

Subjacent

Subjacent means lying directly beneath or below another structure.

Subjective

Based on a person's own experience or report rather than directly observable measurement.

Sublimation

A psychological defense process in which unacceptable impulses are redirected into socially acceptable

activity; in chemistry it is solid-to-gas transition.

Sublingual

Sublingual means beneath the tongue; medicines given this way can be absorbed through oral mucosa and may bypass much first-pass liver metabolism.

Sublingual Epidermoid Cyst

A benign cyst lined by stratified squamous epithelium beneath the tongue mucosa, presenting as a slow-growing midline swelling that may require surgical excision if symptomatic.

Sublingual Gland

One of the paired major salivary glands, located beneath the tongue. It produces mainly mucous saliva that enters the mouth through several small ducts and helps lubricate the oral cavity.

Subluxation

Partial dislocation of a joint, with some contact between articular surfaces remaining.

Submandibular Gland

One of the three paired major salivary glands, located in the submandibular triangle beneath the mandible. Mixed gland (predominantly serous) secreting saliva via Wharton's duct opening at the sublingual caruncle (floor of mouth). Saliva contains amylase, mucins, lysozyme, IgA.

Submucosa

A layer of connective tissue beneath the mucosa. It may contain blood vessels, nerves, lymphatic vessels, and glands and helps anchor and support the mucosal lining, especially in hollow organs.

Subphrenic Abscess

A collection of pus beneath the diaphragm, usually after abdominal infection or surgery.

Subq

Subq is an abbreviation for subcutaneous, referring to tissue beneath the skin and the route used for some injections.

Subscapular Artery

An artery arising from the axillary artery that supplies the scapular region and adjacent muscles.

Substance

A substance is a material with defined or variable chemical composition; medical effects depend on identity, dose, route, duration, and host factors.

Substance Abuse

Legacy, nonspecific label; see *Substance Use Disorder*.

Substance Abuse Disorder

Legacy label; see *Substance Use Disorder*.

Substance Abuse Psychiatry

The subspecialty focused on the evaluation and treatment of substance use disorders and co-occurring psychiatric conditions. Dual diagnosis patients require integrated treatment addressing both disorders simultaneously.

Substance Dependence

A state in which repeated substance use produces physiologic adaptation, so that reducing or stopping the substance may cause withdrawal. It is distinct from, but may occur with, substance-use disorder.

Substance Intoxication

A reversible substance-specific syndrome caused by recent use that produces clinically significant behavioral or physiologic changes. Diagnosis requires assessing timing, dose or exposure, expected pharmacology, co-ingestants, and medical complications.

Substance Use

The consumption of alcohol, drugs, or other chemical substances, which can lead to health, social, and psychological issues if used excessively.

Substance Use - Amphetamines

Amphetamine use can cause dependence, insomnia, anxiety, psychosis, high blood pressure, arrhythmias, overheating, and overdose; urgent symptoms require

emergency care.

Substance Use - Cocaine

Use of cocaine, a stimulant that can cause dependence, agitation, seizures, heart attack, stroke, dangerous overheating, and severe psychiatric or cardiovascular complications.

Substance Use - Inhalants

Inhalant misuse involves breathing fumes or gases from household or industrial products and can cause sudden cardiac arrest, brain injury, organ damage, dependence, or death.

Substance Use - LSD

LSD is a potent hallucinogen that alters perception, mood, and thought and can cause panic, accidents, persistent perceptual symptoms, or psychosis in susceptible people.

Substance Use - Marijuana

Marijuana or cannabis can impair attention, memory, coordination, and driving and may cause dependence, anxiety, psychosis, or respiratory harm when smoked.

Substance Use - Phencyclidine

Phencyclidine is a dissociative drug that can cause agitation, hallucinations, loss of coordination, high blood pressure, seizures, dangerous behavior, or coma.

Substance Use - Prescription Drugs

Use of prescription medicines in a way not directed by a clinician, including taking someone else's medicine, taking extra doses, or using them for intoxication; dependence, overdose, and interactions may result.

Substance Use Disorder

A problematic pattern of substance use leading to clinically significant impairment or distress, manifested by at least two of eleven criteria within a twelve-month period.

Substance Use In Pregnancy

Use of alcohol, tobacco, cannabis, opioids, cocaine, or other substances during pregnancy. Effects depend on the substance, dose, timing, and other factors and may include maternal complications, impaired fetal growth, preterm birth, or neonatal withdrawal. Evaluation and treatment should be individualized.

Substance Withdrawal

A substance-specific syndrome occurring after reduction or cessation of heavy or prolonged use. Withdrawal can range from discomfort to life-threatening complications such as seizures, delirium tremens, severe autonomic instability, or respiratory depression depending on the substance.

Substernal Goiter

Extension of thyroid tissue into the mediastinum, typically arising from the thyroid gland in the neck and growing downward through the thoracic inlet. It may cause compressive symptoms including dyspnea, dysphagia, and superior vena cava syndrome. Most are multinodular goiters. Diagnosis is by CT or MRI.

Substrate

A substance on which an enzyme acts or a material used by a biochemical pathway.

Subungual Exostosis

A benign osteocartilaginous outgrowth arising beneath the nail, usually of a toe or finger. It causes a painful firm subungual mass and nail deformity and is treated by excision when symptomatic.

Succenturiat Lobe

An accessory lobe of the placenta, connected to the main placenta by blood vessels that traverse the membranes. If undetected after delivery, the succenturiat lobe may be retained in the uterus, causing postpartum hemorrhage or infection. Diagnosis: careful inspection of the placenta and membranes after delivery.

Succenturiate Placenta

A succenturiate placenta has one or more accessory lobes separate from the main placenta, which can increase risk of retained tissue or fetal-vessel injury.

Succinate Dehydrogenase

Complex II of electron transport chain. Also TCA cycle enzyme. Produces FADH₂.

Succinylcholine

A depolarizing neuromuscular-blocking drug that produces rapid, brief skeletal-muscle paralysis by activating nicotinic acetylcholine receptors at the neuromuscular junction. It can cause hyperkalemia, bradycardia, myalgia, masseter spasm, prolonged apnea in pseudocholinesterase deficiency, and malignant hyperthermia.

Succumb

To succumb means to die from or be overcome by a disease, injury, exposure, or other serious process.

Succussion

A shaking movement or splash-like sound produced by fluid and gas in a cavity, historically assessed over the chest or abdomen.

Sucking Blister

A blister or worn area of skin in a newborn, usually on a hand, finger, forearm, or lip, caused by repeated sucking before or during feeding. It is usually harmless and heals on its own.

Sucking Reflex

A primitive reflex present from birth, elicited by placing an object in the infant's mouth. The infant rhythmically sucks on the object. Coordinated sucking and swallowing typically develop by 34-36 weeks gestational age. Premature infants may lack coordinated suck-swallow, requiring gavage feeding.

Sucrose

Common table sugar, a disaccharide of glucose and fructose.

Sucrose Lysis Test

A historical screening test for paroxysmal nocturnal haemoglobinuria in which patient red blood cells are exposed to serum in a low-ionic-strength sucrose solution, allowing complement-mediated lysis to be detected.

Suction

Removal of fluid, secretions, or material using negative pressure.

Suction (Vascular)

A suction device used during a vascular procedure to remove blood or other fluid from the operative field.

Alternate Names:

Vascular

Suction Device

Creates negative pressure for fluid removal. Components: canister, tubing, suction catheter. Used for airway clearance, surgical field, wound drainage.

Suction Tip

The end attachment of a suction device used to remove blood, fluid, secretions, or debris. Common types include the Yankauer tip for oropharyngeal suction and surgical suction tips such as the Frink tip.

Sudden Cardiac Arrest

An abrupt loss of effective heart activity, causing unresponsiveness and absent or abnormal breathing; it is a medical emergency.

Alternate Names:

Cardiac Arrest, Sudden

Sudden Cardiac Death

Unexpected death from a cardiac cause, usually occurring rapidly after symptom onset or without witnessed symptoms. Causes include coronary disease, cardiomyopathy, inherited arrhythmia syndromes, and bradyarrhythmia; prevention depends on the underlying risk.

Alternate Names:

Arrest Cardiac (Sudden Cardiac Death) Death Sudden Cardiac (Sudden Cardiac Death)

Sudden Infant Death Syndrome

SIDS: the sudden, unexplained death of an infant <1 year (peak 2-4 months) that remains unexplained after a thorough investigation (autopsy, scene examination, and review of clinical history). Risk factors: prone sleep, bed-sharing, soft bedding, overheating, maternal smoking, prematurity/low birth weight, and co-sleeping.

Sudden Infant Death Syndrome

The unexplained sudden death of an apparently healthy infant, usually during sleep and before one year of age.

Alternate Names:

Crib Death

Sudden Sensorineural Hearing Loss

Rapid sensorineural hearing loss, conventionally at least 30 dB over three contiguous frequencies within 72 hours. It requires urgent audiologic and otologic assessment because early treatment may improve recovery in selected patients.

Sudden Unexpected Death In Infancy

Unexpected death of an infant, requiring investigation to determine whether it is explained or unexplained.

Sudden Unexpected Infant Death

The sudden and unexpected death of an infant younger than 1 year, whether or not the cause is known before investigation. Sudden infant death syndrome is the unexplained subtype after complete scene, history, and autopsy evaluation.

Sudek'S Atrophy

An older name for complex regional pain syndrome with pain, swelling, autonomic change, and regional bone loss.

Sudorifics (Diaphoretics)

Pharmacological agents, substances, or thermal

modalities that stimulate, induce, or accelerate the secretion of sweat by eccrine sweat glands. Physiologically mediated by postganglionic sympathetic fibers that release acetylcholine onto muscarinic cholinergic receptors (M_3) of sweat glands. Direct or indirect muscarinic agonists (such as pilocarpine, bethanechol, or acetylcholinesterase inhibitors) exert strong sudorific actions and are utilized diagnostically in cystic fibrosis sweat chloride testing (pilocarpine iontophoresis) or therapeutically to alleviate severe xerostomia in Sjögren syndrome.

Suffocation

Inability to breathe adequately because of airway obstruction, oxygen deprivation, compression, or another cause.

Sugammadex

A selective relaxant binding agent that reverses aminosteroid neuromuscular blockers (rocuronium and vecuronium) by encapsulating them in a cyclodextrin molecule, forming a 1:1 complex that is renally excreted. Onset of action is within 2 to 3 minutes.

Sugar-Water Hemolysis Test

An older laboratory test assessing red-cell resistance to hypotonic sugar solution, historically used in evaluating paroxysmal nocturnal hemoglobinuria and now largely replaced by flow-cytometric testing.

Suicidal Ideation

Thoughts about killing oneself, ranging from passive (wish to be dead, wishes to fall asleep and not wake) to active (thoughts of killing oneself with varying degrees of intent, plan, and means). The C-SSRS grades severity from 1 (wish to be dead) to 5 (active suicidal ideation with specific plan and intent).

Suicide

Death caused by intentional self-inflicted action; suicidal thoughts and behavior require urgent, compassionate assessment.

Suicide And Suicidal Behavior

Thoughts, plans, attempts, or acts intended to cause

one's own death; any current intent, plan, access to means, or inability to stay safe requires immediate emergency support.

Suicide Risk Assessment

A clinical evaluation of suicidal thoughts, intent, plan, access to means, past attempts, self-harm, psychiatric and medical illness, substance use, protective factors, and immediate safety. It informs but does not replace ongoing clinical judgment and safety planning.

Sulcus

A groove or furrow on an organ or surface, especially the brain or heart.

Sulfa Drugs

A class of bacteriostatic antibiotics that competitively inhibit dihydropteroate synthase, an enzyme essential for folic acid synthesis in bacteria. See sulfonamides.

Sulfamethoxazole

A sulfonamide antibiotic used commonly with trimethoprim in selected infections.

Sulfasalazine

An anti-inflammatory medicine used for inflammatory bowel disease and rheumatoid or other inflammatory arthritis.

Sulfatide

A sulfated glycolipid found particularly in myelin and nervous tissue.

Sulfinpyrazone

An older uricosuric medicine that increases urinary excretion of uric acid. It was used historically for gout but is uncommon now and may interact with other medicines or increase bleeding risk.

Sulfite Sensitivity

Sulfite sensitivity is an adverse reaction to sulfite preservatives, sometimes causing wheeze, flushing, headache, or other symptoms, especially in people

with asthma.

Sulfonamide

A class of antibiotics (sulfamethoxazole, sulfadiazine, sulfasalazine) that inhibit bacterial dihydropteroate synthase, blocking folate synthesis—bacteriostatic. Often combined with trimethoprim (co-trimoxazole: TMP-SMX). Used for UTIs, PCP (pneumocystis pneumonia), toxoplasmosis, Nocardia, and MRSA.

Sulfonamides

Sulfonamides are drugs containing a sulfonamide group, including antibacterial agents that inhibit bacterial folate synthesis; allergic reactions, severe skin reactions, cytopenias, renal effects, and crystalluria are possible.

Sulfonylurea

A sulfonylurea is an oral diabetes medicine that closes pancreatic beta-cell ATP-sensitive potassium channels and stimulates insulin release; hypoglycaemia and weight gain are the main class risks.

Sulfonylureas

Oral antidiabetic agents that stimulate insulin secretion from pancreatic beta cells by blocking ATP-sensitive potassium channels on the beta cell membrane. This causes membrane depolarization, opening of voltage-gated calcium channels, calcium influx, and exocytosis of insulin-containing granules.

Sulfur Colloid Scan

Nuclear medicine imaging using Tc-99m sulfur colloid. Evaluates liver, spleen, bone marrow, lymph nodes.

Sulfuric Acid Poisoning

Sulfuric acid poisoning involves toxic or environmental exposure to sulfuric acid poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Sulindac Overdose

Sulindac overdose involves toxic or environmental exposure to sulindac overdose; dose, route, timing,

symptoms, and organ involvement determine urgency and treatment.

Sulphonamides

A class of antimicrobial agents containing the sulfonamide group (SO₂NH₂). Sulphonamides were the first effective systemic antibacterial agents (Prontosil, 1935—Gerhard Domagk). Mechanism: competitive inhibition of dihydropteroate synthase, blocking folate synthesis (para-aminobenzoic acid analogue)—bacteriostatic.

Sulphonylureas

Oral medicines that stimulate pancreatic insulin release to lower blood glucose in type 2 diabetes.

Sumatriptan

A serotonin 5-HT_{1B}/1D agonist used for acute migraine and cluster headache attacks.

Summer Diarrhoea

An older term for seasonal diarrheal illness, often referring to infectious diarrhea in children.

Sun Poisoning

Alternate index label; see *Polymorphous light eruption*.

Sun Protection

Sun protection reduces ultraviolet exposure through shade, protective clothing, and broad-spectrum sunscreen and helps prevent sunburn, premature skin aging, and skin cancer.

Sun Protection (Photoprotection)

Sun protection involves measures taken to reduce exposure to ultraviolet radiation from the sun, which is the primary environmental risk factor for skin cancer and photoaging.

Alternate Names:

Photoprotection

Sun-Sensitive Drugs (Photosensitivity To Drugs)

Alternate index label for Photosensitivity to Drugs.

Sun-Sensitive Drugs (Sun-Sensitive Drugs (Photosensitivity To Drugs))

Alternate index label for Sun-Sensitive Drugs (Photosensitivity to Drugs).

Sunburn

An acute inflammatory injury of the skin caused by excessive ultraviolet radiation, resulting in redness, pain, warmth, and sometimes blistering or peeling.

Sundowning

Late-day or evening worsening of confusion, agitation, wandering, or behavioral symptoms in some people with dementia or delirium, influenced by fatigue, light, routines, and unmet needs.

Sunflower Syndrome

A clinical condition involving sunflower Syndrome; its causes, manifestations, severity, and complications guide diagnosis and management.

Sunken Chest

Alternate index label; see *Pectus excavatum*.

Sunstroke

A life-threatening form of heat illness in which body temperature rises dangerously high and the nervous system is impaired.

Superantigen

A protein that bypasses antigen processing and non-specifically activates large T-cell populations by binding MHC class II and the T-cell receptor V region, triggering massive cytokine release. Staphylococcal TSST-1 and enterotoxins, and streptococcal pyrogenic exotoxins, cause toxic shock and scarlet fever.

Superaspirin

Superaspirin is an informal term for selective COX-2 inhibitors or other anti-inflammatory drugs developed to reduce gastrointestinal effects; cardiovascular risks remain relevant.

Superbug

A superbug is an informal term for a microorganism resistant to multiple antimicrobial drugs, making infection harder to treat and prevent from spreading.

Superficial

In anatomical directional nomenclature, situated near, closer to, or positioned on the surface of the body or relative to the external boundary of an organ (the opposite of deep). Used across clinical specialties to describe anatomical planes (superficial fascia, superficial femoral artery, superficial venous system like the great saphenous vein), burn depths (superficial first-degree burns confined entirely to the epidermis, such as mild sunburn), and surgical wound infections (superficial incisional surgical site infection involving only skin and subcutaneous tissue).

Superficial Fascia

A layer of loose connective tissue beneath the dermis, also called subcutaneous tissue or the hypodermis.

Alternate Names:
subcutaneous tissue.

Superficial Spreading Melanoma

The most common cutaneous melanoma subtype, characterized initially by radial growth across the epidermis and an irregularly pigmented patch or plaque before invasion develops.

Superficial Thrombophlebitis

Superficial thrombophlebitis is inflammation and clotting in a vein near the skin, causing a tender red cord; extension into deep veins must be assessed.

Superimposed Preeclampsia

Preeclampsia developing in a person who already has chronic hypertension. It may present with new or worsening proteinuria, thrombocytopenia, abnormal liver or kidney tests, neurologic symptoms, or other features of maternal organ dysfunction.

Superinfection

A new infection that develops during or after treat-

ment of a previous infection, often involving an antimicrobial-resistant organism or an organism not susceptible to the original therapy, such as *Clostridioides difficile* after antibiotic exposure.

Superior

In standard anatomical directional terminology, positioned above, higher, or oriented toward the head or cephalic pole of the body relative to a reference structure (the opposite of inferior; synonymous with cranial or cephalic). For example, the cervical spine is superior to the thoracic spine, and the superior vena cava returns systemic deoxygenated blood from anatomical regions superior to the respiratory diaphragm (head, neck, upper limbs, and thorax) to the right atrium of the heart.

Superior Mesenteric Artery

Second major abdominal aortic branch at L1, the midgut artery. Supplies distal duodenum through proximal two-thirds of transverse colon. Branches: inferior pancreaticoduodenal, jejunal, ileal, ileocolic, right colic, middle colic. Arises anterior to the pancreatic uncinate process, crosses the third duodenal part.

Superior Mesenteric Artery Syndrome

Compression of the duodenum between the aorta and the superior mesenteric artery, causing proximal duodenal obstruction. Presents with postprandial nausea, vomiting, and epigastric pain, often after significant weight loss that narrows the SMA-aortic angle. Treatment includes nutritional rehabilitation and surgical duodenal mobilization.

Superior Semicircular Canal Dehiscence

A defect or marked thinning of the bony covering of the superior semicircular canal that can produce sound- or pressure-induced vertigo, autophony, and conductive-appearing hearing findings. Diagnosis combines characteristic symptoms, physiologic testing, and high-resolution temporal-bone CT.

Superior Vena Cava

Formed by brachiocephalic vein junction at the first right costal cartilage, returning upper body deoxy-

generated blood to the right atrium. Approximately 7 cm, valveless. Related to right lung/pleura, right phrenic nerve, and azygos vein.

Superior Vena Cava Syndrome

Obstruction of SVC by tumor. Facial swelling, dyspnea, dilated neck veins. Emergency: radiation, stenting.

Alternate Names:

SVCS (Superior Vena Cava Syndrome)

Superior Vena Cava Syndrome

Alternate index label for Superior Vena Cava Syndrome.

Superior Vena Caval Obstruction

Compression or thrombosis of the superior vena cava impairing venous return from the head, neck, and upper extremities. Most commonly caused by malignancy (lung cancer, lymphoma) or indwelling central venous devices. Presents with facial swelling, plethora, distended neck veins, and upper extremity edema.

Supernumerary Nipples

Supernumerary nipples are extra nipples along the embryonic milk line, usually harmless but occasionally associated with underlying breast or urinary-tract developmental anomalies.

Supernumerary Rib

An extra rib beyond the typical twelve pairs, most commonly a cervical rib above the first thoracic rib, which may compress the brachial plexus or subclavian vessel causing thoracic outlet syndrome.

Supernumerary Teeth

Extra teeth beyond normal complement. Most common: mesiodens between maxillary centrals. May cause impaction or malocclusion.

Supervised Exercise Therapy

A structured, monitored exercise program used to improve walking ability and reduce claudication symptoms in people with peripheral artery disease.

The exercise plan is adjusted to the person's symptoms and functional capacity.

Supination

Rotation of the forearm so the palm faces upward or forward, or a related foot movement.

Supine

An anatomical body posture in which an individual lies horizontally on their back with the face, chest, and palms facing upward toward the ceiling (the opposite of prone). Standard positioning for resting physical examination (cardiovascular, abdominal, and neurological exams), routine surgical procedures under general endotracheal anesthesia, and non-contrast and contrast CT and MRI imaging acquisitions. Prolonged supine immobility poses significant risks of occipital and sacral pressure injury, supine hypotensive syndrome in late pregnancy (aortocaval compression), and positional obstructive sleep apnea.

Supine Hypotensive Syndrome

Compression of the inferior vena cava by the gravid uterus when the pregnant woman lies flat on her back after 20 weeks gestation. Results in decreased venous return, reduced cardiac output, and maternal hypotension, dizziness, pallor, and syncope.

Supine Position

A position in which the patient lies on the back with the face upward; it is the most commonly used surgical position.

Supplemental Oxygen Therapy

Administration of oxygen at a concentration above that of room air to treat or prevent clinically important hypoxemia. Delivery method and oxygen target depend on the illness, baseline oxygenation, risk of carbon-dioxide retention, and monitoring results; excessive oxygen can also cause harm.

Supplementation

Use of a vitamin, mineral, protein, fiber, or other nutrient preparation to correct a deficiency or meet a clinically identified increased requirement. The

indication, dose, interactions, product quality, and risk of toxicity should be assessed before use.

Supportive Care

Treatment that maintains essential body functions, relieves symptoms, prevents complications, and supports recovery while the underlying cause is treated.

Suppository

A solid preparation inserted into the rectum, vagina, or urethra where it dissolves or melts.

Suppression

Reduction or inhibition of a function, response, symptom, or process.

Suppuration

The biological process of forming, producing, discharging, or exuding pus (*pus*). Triggered by acute pyogenic bacterial invasion (most frequently by *Staphylococcus aureus*, *Streptococcus pyogenes*, or *Pseudomonas aeruginosa*), which attracts massive numbers of polymorphonuclear neutrophils that phagocytose microbes, release lytic enzymes, and undergo apoptosis. The resulting liquefactive necrosis of native parenchymal tissue produces a viscous, protein-rich exudate that either organizes into a localized, walled-off abscess cavity or discharges through sinus tracts and mucosal surfaces.

Supracondylar Humerus Fracture

The most common type of pediatric elbow fracture, accounting for nearly 60 percent of all elbow injuries in children aged 5 to 10 years, typically sustained from a fall onto an outstretched hand with the elbow in extension (extension-type fracture). Classified using the Gartland system (Type I non-displaced, Type II displaced with intact posterior cortex, Type III completely displaced, Type IV multidirectionally unstable). Carries a high potential for severe neurovascular complications, notably injury to the anterior interosseous nerve, radial nerve, or brachial artery, and can lead to compartment syndrome of the forearm and Volkmann ischemic contracture if neglected.

Alternate Names:

Gartland Supracondylar Fracture; Pediatric Elbow Fracture

Supraglottic Airway Device

An airway device positioned above the glottis to maintain oxygenation and ventilation without passing through the vocal cords. It is used for selected anesthetized or unconscious patients and is not a definitive substitute for a cuffed tracheal tube when aspiration protection is required.

Supranuclear Ophthalmoplegia

Weakness or loss of control of eye movements caused by damage to brain pathways above the eye-movement nerves. It may make it difficult to look in certain directions.

Supranuclear Palsy

Alternate index label; see *Progressive supranuclear palsy*.

Suprapubic

Situated, located, or performed in the lower anterior abdominal wall immediately superior to the pubic bones and pubic symphysis. Clinically significant for suprapubic palpation and percussion to assess acute urinary retention with bladder distension; suprapubic aspiration (percutaneous needle puncture of the distended bladder under sterile conditions to obtain non-contaminated urine in infants); and suprapubic catheterization (surgical insertion of a percutaneous cystostomy tube directly into the bladder when urethral catheterization is contraindicated or technically impossible, such as in severe urethral strictures or urethral trauma).

Suprapubic Catheter Care

A medical procedure, treatment, device, or care topic related to suprapubic catheter care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Suprarenal Glands (Adrenal Glands)

The paired, triangular endocrine glands perched retroperitoneally atop the superior pole of each kidney, enveloped by renal (Gerota) fascia. Anatom-

ically and functionally partitioned into two embryologically distinct zones: the outer adrenal cortex (mesodermal origin, divided into the zona glomerulosa producing mineralocorticoids like aldosterone, zona fasciculata producing glucocorticoids like cortisol, and zona reticularis producing adrenal androgens like DHEA) and the inner adrenal medulla (ectodermal neural crest origin, containing chromaffin cells that synthesize and secrete catecholamines, primarily epinephrine and norepinephrine). Pathologies include primary adrenal insufficiency (Addison disease), hypercortisolemia (Cushing syndrome), primary aldosteronism (Conn syndrome), and pheochromocytoma.

Suprascapular Nerve

A branch of the brachial plexus that supplies the supraspinatus and infraspinatus muscles.

Supraventricular Tachycardia

A rapid heart rhythm arising above the ventricles, often beginning and ending abruptly.

Alternate Names:

SVT

Supraventricular Tachycardia Paroxysmal (Paroxysmal Supraventricular Tachycardia)

Alternate index label for Paroxysmal Supraventricular Tachycardia.

Suramin

An antiparasitic medicine used mainly for selected African trypanosomiasis.

Surfactant

A substance that lowers surface tension; pulmonary surfactant prevents alveolar collapse.

Surgeon

A physician trained to perform operations and invasive procedures, and to evaluate and care for patients before and after surgery.

Surgery

Treatment in which a clinician operates on tissues or organs to diagnose, remove, repair, replace, or improve a body structure. Risks and recovery depend on the procedure and the patient's health.

Surgery For Pancreatic Cancer

A medical procedure, treatment, device, or care topic related to surgery for pancreatic cancer; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Surgery For Pilonidal Cyst

A medical procedure, treatment, device, or care topic related to surgery for pilonidal cyst; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Surgical Drain

A device placed to remove blood, pus, bile, urine, lymph, or other fluid from a surgical site or body cavity. Indications, output characteristics, duration, and removal criteria should be documented because drains can also cause infection, bleeding, or tissue injury.

Surgical Drill

A powered instrument used to cut, shape, or bore bone during surgery.

Surgical Excision

A medical procedure, treatment, device, or care topic related to surgical excision; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Surgical Fixation

Stabilization of a bone, joint, or other structure with devices such as plates, screws, rods, wires, or external frames.

Surgical Hemostasis

Control of bleeding during an operation using pressure, ligation, sutures, clips, electrosurgery, topical agents, vessel sealing, or other techniques. Effective

hemostasis requires identification of the bleeding source and correction of coagulopathy when present.

Surgical Instruments

Instruments for surgery. Categories: cutting (scalpel, scissors), grasping (forceps, clamps), retraction, hemostasis (hemostat, electrocautery).

Surgical Margin

The edge of tissue removed during an excision or resection, assessed microscopically for residual disease. A negative margin has no tumor at the examined edge; a positive margin indicates tumor extends to the inked or designated margin.

Surgical Repair

An operation that restores or reconstructs damaged tissue, an organ, or an anatomic function.

Surgical Risk Stratification

Estimation of the likelihood of perioperative complications using patient factors, urgency, procedure risk, functional capacity, and disease-specific assessment. It informs optimization, monitoring level, shared decisions, and postoperative planning but cannot eliminate uncertainty.

Surgical Safety Checklist

A structured checklist used at defined points before anesthesia, before incision, and before leaving the operating room to verify patient identity, procedure, site, consent, equipment, specimens, and team communication.

Surgical Site Infection

Infection involving the incision, organ, or operative space within the surveillance period after surgery. It may be superficial incisional, deep incisional, or organ-space and requires appropriate culture, antimicrobial therapy, drainage, debridement, or reoperation when indicated.

Surgical Stapler

A device that places metal or absorbable staples to close skin, tissue, or a hollow organ.

Surgical Time-Out

A deliberate team pause immediately before incision to verify patient identity, procedure, site, consent, allergies, antibiotics, imaging, implants, equipment, and anticipated critical events. It is a core surgical-safety intervention.

Surgical Wound Care - Closed

Care of an incision whose edges are closed with sutures, staples, adhesive, or strips, including keeping it clean and dry as instructed and watching for infection or separation.

Surgical Wound Care - Open

Care of a surgical wound left partly or completely open to drain or heal gradually, usually with dressings and scheduled assessment for infection, bleeding, and healthy tissue growth.

Surgical Wound Classification

Categorization of an operative wound as clean, clean-contaminated, contaminated, or dirty/infected according to the degree of microbial exposure and existing infection. The class helps estimate surgical-site infection risk and guide prophylaxis.

Surgical Wound Infection - Treatment

Management of infection in or around a surgical wound, including assessment of depth and severity, drainage or debridement when needed, wound care, and targeted antimicrobial therapy when indicated.

Surrogacy

Surrogacy is an arrangement in which a person carries a pregnancy for intended parent or parents; medical, legal, ethical, and psychosocial requirements vary by jurisdiction.

Surrogate

A substitute or proxy; in medicine, a surrogate endpoint is an intermediate measure used in place of a clinical outcome.

Surrogate Decision-Maker

A person authorized to make healthcare decisions for

someone who lacks decision-making capacity, guided by the person's known values and preferences.

Surveillance

Systematic collection, analysis, interpretation of health data. Types: passive (reporting), active (proactive case finding), sentinel (selected sites).

Surveillance Imaging

Repeat imaging to detect recurrence. Protocol varies by cancer type, stage, treatment.

Survival Rate

Percentage of patients surviving for specified time after diagnosis. 5-year survival commonly used.

Survivorship

Care for cancer survivors. Addresses late effects, surveillance, quality of life.

Survivorship Care Plan

Document summarizing treatment, follow-up, late effects. Provided to cancer survivors.

Susac Syndrome

An autoimmune microangiopathy affecting the brain, retina, and inner ear. The characteristic triad is encephalopathy, branch retinal-artery occlusions, and sensorineural hearing loss, though all features may not be present initially.

Susceptibility

The likelihood of being affected by a disease, exposure, drug, or microorganism.

Susceptibility Testing

Laboratory tests determining the sensitivity of a bacterial isolate to antimicrobials to guide therapy. Methods: disk diffusion (Kirby-Bauer—zone sizes), broth dilution (MIC—minimum inhibitory concentration, MBC—minimum bactericidal concentration), E-test (gradient strips), and automated systems (VITEK).

Suspected Cause

A condition or factor believed to explain a disease or symptom but not yet confirmed.

Suspension

A pharmaceutical formulation in which fine solid drug particles are dispersed (not dissolved) in a liquid vehicle, often with suspending agents and stabilizers. Suspensions are used when a drug is poorly soluble, for oral (antibiotic suspensions, antacids), topical, ophthalmic, and parenteral (depot) administration.

Suture

A stitch or material used to close or join tissue.

Suture (Perineal)

A thread or strand of material used to approximate tissues (bring wound edges together) and hold them in place until healing occurs. See Suture.

Alternate Names:

Perineal

Suture Anchor

A small implant that secures a tendon, ligament, or other soft tissue to bone. It may be made from metal, polymer, or bioabsorbable material and can fail through pullout, breakage, migration, or inflammatory reaction.

Sutures - Ridged

Ridged cranial sutures are raised skull seams in an infant and may reflect normal molding or premature suture fusion, which requires assessment for craniosynostosis.

Sutures - Separated

Separated cranial sutures in an infant can reflect normal growth or increased intracranial pressure, hydrocephalus, prematurity, or other illness and require clinical assessment.

SUV

Standardized uptake value, a semiquantitative measure of radiotracer concentration used mainly in

PET imaging.

SVC Obstruction

Obstruction of the superior vena cava that impairs venous drainage from the head, neck, upper limbs, and upper chest, causing facial or arm swelling, venous distension, cough, or breathing difficulty.

SVC Syndrome

Obstruction of the superior vena cava causing facial swelling, plethora, and distended neck veins. Commonly from lung cancer (SCLC, squamous) and lymphoma. Oncologic emergency.

SVT

Alternate index label; see *Supraventricular tachycardia*.

Swab

A sterile absorbent applicator or the specimen collected with it from a body surface or cavity.

Swallow Study

X-ray imaging of swallowing using barium. Evaluates dysphagia, aspiration, structural abnormalities.

Swallowing

Difficulty swallowing, classified as oropharyngeal (difficulty initiating a swallow, choking, coughing, nasal regurgitation) or esophageal (sensation of food sticking retrosternally). See dysphagia.

Alternate Names:

Difficulty Swallowing (Swallowing)

Swallowing Assessment

Clinical and, when indicated, instrumental evaluation of oral, pharyngeal, and esophageal swallowing to identify dysphagia, aspiration, and appropriate food or liquid consistency. Videofluoroscopic or endoscopic studies may be required when bedside assessment is insufficient.

Swallowing Chalk

Ingestion of chalk, which is usually low in toxicity in small amounts but can cause choking, constipa-

tion, or gastrointestinal upset; repeated eating may indicate pica.

Swallowing Difficulty

Dysphagia, or impaired movement of food or liquid from the mouth to the stomach, caused by oropharyngeal, esophageal, neuromuscular, structural, or functional disorders.

Swallowing Problems

Difficulty moving food, liquid, or saliva safely from the mouth to the stomach; dysphagia can cause choking, aspiration, weight loss, or dehydration and may need evaluation.

Swallowing Soap

Ingestion of soap, which commonly causes mouth or stomach irritation, nausea, or diarrhea; concentrated or large exposures can injure tissue or affect breathing.

Swallowing Sunscreen

Ingestion of sunscreen, usually causing mild gastrointestinal upset but potentially causing choking or aspiration depending on amount and product; breathing difficulty or persistent vomiting requires urgent help.

Swallowing Syncope

Fainting triggered by swallowing, usually through an abnormal reflex that slows the heart or lowers blood pressure; recurrent episodes require evaluation for rhythm and structural heart disease.

Swallowing Therapy

Assessment and treatment to improve the safety and efficiency of swallowing and reduce aspiration risk.

Swan-Ganz - Right Heart Catheterization

Insertion of a pulmonary-artery catheter through the right heart to measure central venous, pulmonary-artery, and wedge pressures and cardiac output in selected critically ill patients.

Swan-Ganz Catheter

A pulmonary-artery catheter used to measure pressures and cardiac output in selected critically ill patients.

Sweat

Fluid secreted by sweat glands, helping regulate body temperature.

Sweat Chloride Test

A test that measures chloride concentration in sweat after pilocarpine stimulation. It is an important diagnostic test for cystic fibrosis, but results must be interpreted with the clinical findings and, when needed, genetic or other testing. Some illnesses and technical factors can produce misleading results.

Sweat Electrolytes Test

A sweat electrolytes test measures salts, especially chloride, in sweat and is commonly used to help diagnose cystic fibrosis.

Sweat Gland

A skin gland that produces sweat, which contributes mainly to temperature regulation and skin surface function.

Sweat Gland Tumor

A biomedical term referring to sweat gland tumor; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Sweat Glands

Eccrine and apocrine glands that produce sweat or related secretions.

Sweating

Production of sweat by eccrine and apocrine glands for heat regulation and other responses; excessive, absent, or asymmetric sweating can indicate medication, autonomic, endocrine, or neurologic disease.

Sweating And Body Odor

Excess perspiration or noticeable odor produced

when skin bacteria break down sweat; it may be influenced by hygiene, diet, medicines, hormones, or disease.

Alternate Names:

Body Odor And Sweating

Sweating, Abnormally Excessive

Alternate index label; see *Hyperhidrosis*.

Sweating, Gustatory

Sweating triggered by eating or smelling food, usually over the cheek or temple after parotid-nerve injury or surgery and known as Frey syndrome.

Sweet Syndrome

An inflammatory skin disorder characterized by sudden fever and tender red or violaceous plaques or nodules containing many neutrophils. It may be associated with infection, medicines, inflammatory disease, or cancer.

Sweet'S Syndrome

Acute febrile neutrophilic dermatosis, characterized by fever, neutrophilia, and painful, erythematous plaques or nodules on the skin, histologically showing dense neutrophilic infiltration of the dermis. It may be idiopathic, drug-induced, or associated with malignancy, particularly hematological cancers.

Sweetened Beverages

Sweetened beverages contain added sugars and can increase calorie intake, dental caries, obesity, and diabetes risk when consumed frequently.

Sweeteners - Sugar Substitutes

Sugar substitutes provide sweetness with little or no sugar; types differ in energy, digestion, after-taste, and effects on glucose and gastrointestinal symptoms.

Sweeteners - Sugars

Sugars are simple carbohydrates that provide energy but can raise blood glucose and contribute to dental decay or excess calories when consumed in excess.

Swelling

Abnormal enlargement caused by fluid accumulation, inflammation, bleeding, infection, tumor, or tissue injury; location, onset, pain, and associated symptoms identify the likely cause.

Swimmer'S Ear

An infection or inflammation of the ear canal, often after water remains in the ear. It can cause ear pain, itching, redness, drainage, and pain when the outer ear is touched.

Alternate Names:

Ear Infection, Outer Ear Outer Ear Infection

Swimmer'S Itch

An itchy rash caused by an allergic reaction to microscopic parasites released by infected snails in freshwater or saltwater.

Alternate Names:

Cercarial Dermatitis Dermatitis, Cercarial

Swimmers Ear (Otitis Externa)

Alternate index label for Otitis Externa.

Swimming Pool Cleaner Poisoning

Swimming pool cleaner poisoning involves toxic or environmental exposure to swimming pool cleaner poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Swimming Pool Granuloma

Swimming-pool granuloma is a skin infection caused by *Mycobacterium marinum* after exposure to contaminated water, producing persistent nodules along lymphatic channels.

Swine Flu

An informal term for infection with an influenza A virus that normally circulates in pigs or has swine-origin genes. In people, the term often refers to the 2009 H1N1 pandemic virus or to a swine-origin variant infection. Symptoms may resemble seasonal flu, including fever, cough, sore throat, headache, and muscle aches; the term does not refer to one single virus.

Swollen Ankles And Swollen Feet

Enlargement of the ankles or feet caused by injury, venous insufficiency, lymphatic disease, medication, pregnancy, or systemic fluid retention from heart, kidney, or liver disease. Sudden one-sided swelling with pain, redness, warmth, or breathlessness may indicate thrombosis or infection and requires urgent assessment.

Alternate Names:

Ankle Swollen (Swollen Ankles And Swollen Feet)

Swollen Lymph Nodes

Swollen lymph nodes are enlarged immune glands, commonly from infection but sometimes from inflammation, medication, or cancer; persistent, hard, or generalized nodes need evaluation.

Alternate Names:

Lymph Nodes, Swollen Lymph Swollen Glands (Swollen Lymph Nodes) Lymph Swollen Nodes (Swollen Lymph Nodes)

Swollen Tongue

Swollen tongue refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

Sycosis Barbae

Chronic folliculitis of the beard area, usually caused by bacterial infection and ingrown hairs.

Sydenham Chorea

A delayed neurologic complication of group A streptococcal infection causing involuntary jerky movements, hypotonia, emotional lability, and coordination problems, usually in children.

Sydenham'S Chorea

A post-streptococcal autoimmune movement disorder causing involuntary, irregular movements and emotional or behavioral change.

Symblepharon

Adhesion of the palpebral conjunctiva (inner eyelid) to the bulbar conjunctiva or cornea, most commonly resulting from chemical burns, Stevens-Johnson syn-

drome, ocular cicatricial pemphigoid, or repeated surgical intervention. It restricts eye movement and may require surgical lysis with amniotic membrane or mucous membrane grafting.

Symbol (F)

A symbol that commonly means female, force, or Fahrenheit in medical records; the intended meaning depends on the surrounding context.

Symbol (R)

R is a symbol whose meaning depends on context, including right side, radius, resistance, or a statistical correlation coefficient.

Symbolism

The use of an image, object, or action to represent an idea or feeling; in clinical settings, symbolic meaning may be relevant to communication, culture, or psychotherapy.

Sympathectomy

Surgical interruption or destruction of sympathetic nerves to reduce abnormal vasoconstriction, sweating, or pain in selected conditions.

Sympathetic

Relating to the sympathetic division of the autonomic nervous system or to shared feeling, depending on context.

Sympathetic Ganglion

A cluster of sympathetic autonomic neuron cell bodies, located in paravertebral or prevertebral chains, that relays signals controlling vessels, sweat glands, viscera, and other targets.

Sympathetic Nervous System

The autonomic division that prepares the body for activity or stress by increasing heart rate and altering vascular, airway, and digestive function.

Sympatholytic

An agent that blocks the sympathetic nervous system, used to treat hypertension, sympathetic over-

activity, and catecholamine excess. Classes: beta-blockers (propranolol, metoprolol), alpha-blockers (prazosin, doxazosin, phenoxybenzamine), centrally acting agents (clonidine, methyldopa), and neuron blockers (reserpine, guanethidine).

Sympathomimetic Drugs

Medicines that mimic sympathetic nervous-system activity, often by stimulating alpha or beta adrenergic receptors.

Sympathomimetic Toxicidrome

A poisoning pattern caused by excessive adrenergic stimulation, producing agitation, sweating, dilated pupils, rapid heart rate, high blood pressure, elevated temperature, tremor, or seizures.

Symphysis

A joint in which bones are united by fibrocartilage, such as the pubic symphysis.

Symphysis-Fundal Height

A standardized clinical measurement performed during routine antenatal care, measured in centimeters using a non-elastic tape from the top of the maternal pubic symphysis to the uppermost border of the uterine fundus. Between 24 and 36 weeks of gestation, the fundal height in centimeters typically corresponds closely (± 2 to 3 cm) to gestational age in weeks. A discrepancy prompts diagnostic obstetric ultrasonography to evaluate for intrauterine growth restriction, oligohydramnios, multiple gestation, fetal macrosomia, or polyhydramnios.

Alternate Names:

Fundal Height Measurement; SFH

Symphysis Pubis

The fibrocartilaginous joint connecting the left and right pubic bones at the front of the pelvis.

Symptom

A subjective experience reported by a patient, such as pain, nausea, or breathlessness.

Symptomatic

Having symptoms caused by a disease or condition; symptomatic treatment relieves those symptoms without necessarily treating the underlying cause.

Symptomatic Treatment

Symptomatic treatment is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

Synapse

A junction where a neuron communicates with another neuron, muscle, or gland.

Synapse Assembly

The developmental process by which neurons form organized connections with other neurons or target cells, using cell-adhesion molecules and signaling proteins.

Synapsins

A family of neuronal proteins that help organize synaptic vesicles and regulate the release of neurotransmitters.

Synaptic Cleft

The very small gap between a presynaptic neuron and its target cell across which neurotransmitters travel.

Synaptic Membrane

The specialized membrane at a neuronal junction, including the neurotransmitter-releasing presynaptic membrane and receptor-containing postsynaptic membrane.

Synaptic Plasticity

Activity-dependent change in the strength or structure of synaptic transmission. Long-term potentiation and long-term depression are important cellular mechanisms underlying learning, memory, adaptation, and some forms of chronic pain.

Synaptic Transmission

The fundamental process by which neurons communicate with each other through specialized junctions called synapses.

Synaptic Vesicle

A small membrane-bound sac in a nerve ending that stores neurotransmitters and releases them into the synaptic cleft when the neuron is activated.

Synaptonemal Complex

A protein structure that pairs homologous chromosomes during meiosis and supports genetic recombination.

Synaptophysin

A protein in synaptic vesicle membranes and a commonly used marker of neuronal and neuroendocrine tissue in laboratory testing.

Synaptosome

A sealed nerve-terminal structure produced when brain tissue is mechanically disrupted; it is used to study neurotransmitter release and synaptic function.

Synaptotagmin

A calcium-sensing protein on synaptic vesicles that helps trigger rapid neurotransmitter release.

Synarthrosis

A joint with little or no movement, such as a skull suture or tooth anchored in its socket, in which bones are joined by fibrous tissue or cartilage.

Syncephalastrum

A genus of environmental molds in the order Mucorales; it rarely causes opportunistic mucormycosis, usually in people with major immune or metabolic risk factors.

Synchrotron

A synchrotron is a particle accelerator that produces intense beams of charged particles or radiation used in research, imaging, and materials analysis.

Syncope

A sudden, brief loss of consciousness and postural tone caused by temporary global cerebral hypoperfusion, followed by spontaneous, usually complete recovery. Common mechanisms are reflex syncope, orthostatic hypotension, and cardiac disease; prolonged confusion or seizure-like features require evaluation for another cause.

Syncope (Fainting)

A transient loss of consciousness and postural tone caused by temporary global cerebral hypoperfusion, followed by spontaneous recovery. Reflex, orthostatic, and cardiac causes are common; prolonged confusion suggests a different diagnosis. See Fainting.

Alternate Names:

Fainting

Syncope, Coughing

A brief faint caused by coughing, which raises chest pressure, reduces venous return and cardiac output, and transiently lowers cerebral blood flow.

Syndactyly

Congenital fusion or webbing of adjacent fingers or toes.

Syndecan

A family of cell-surface proteoglycans that bind growth factors and extracellular-matrix proteins and help regulate cell adhesion, signaling, and tissue repair.

Syndemic

A syndemic is the interaction of two or more diseases with social or environmental conditions that together worsen health outcomes.

Syndesmophyte

A thin, bony growth that forms along the edges of the vertebrae, often in ankylosing spondylitis, and may bridge adjacent vertebrae.

Syndrome

A recognizable pattern of symptoms, signs, or findings that occur together.

Syndrome Asperger (Asperger Syndrome)

Alternate index label for Asperger Syndrome.

Syndrome Cauda Equina (Cauda Equina Syndrome)

Alternate index label for Cauda Equina Syndrome.

Syndrome Compartment (Compartment Syndrome)

Alternate index label for Compartment Syndrome.

Syndrome Cyclic Vomiting (Cyclic Vomiting Syndrome)

Alternate index label for Cyclic Vomiting Syndrome.

Syndrome Loeys-Dietz (Loeys-Dietz Syndrome)

Alternate index label for Loeys-Dietz Syndrome.

Syndrome Of Inappropriate ADH Secretion

Excessive antidiuretic hormone activity causing eu-volemic hyponatremia with inappropriately concentrated urine and elevated urinary sodium.

Syndrome Of Inappropriate Antidiuretic Hormone

Excessive release or effect of antidiuretic hormone causing impaired free-water excretion, low serum sodium, and inappropriately concentrated urine in the absence of an appropriate physiologic stimulus.

Syndrome Of Inappropriate Antidiuretic Hormone Secretion

A clinical condition involving syndrome Of Inappropriate Antidiuretic Hormone Secretion; its causes, manifestations, severity, and complications guide diagnosis and management.

Syndrome Of Inappropriate Antidiuretic

Hormone Secretion

Excessive vasopressin activity causing impaired free-water excretion, euvolemichyponatremia, and inappropriately concentrated urine after exclusion of other causes. Treatment depends on severity and cause and may include fluid restriction or carefully monitored hypertonic saline for severe symptomatic cases.

Alternate Names:

Syndrome of Inappropriate Antidiuretic Hormone Secretion

Syndrome Pfeiffer (Pfeiffer Syndrome)

Alternate index label for Pfeiffer Syndrome.

Syndrome Restless Legs (Restless Leg Syndrome)

Alternate index label for Restless Leg Syndrome.

Syndrome Surveillance

The public health monitoring of pre-diagnostic clinical indicators (symptoms, syndromes—fever, rash, GI illness, influenza-like illness) in real time to detect outbreaks, bioterrorism, or emerging infections earlier than laboratory confirmation.

Syndrome X

Alternate index label; see *Metabolic syndrome*.

Syndrome, Nervous Colon

A clinical condition involving syndrome, Nervous Colon; its causes, manifestations, severity, and complications guide diagnosis and management.

Syndrome, Post-Polio

A clinical condition involving syndrome, Post-Polio; its causes, manifestations, severity, and complications guide diagnosis and management.

Syndrome, TAR

A clinical condition involving syndrome, TAR; its causes, manifestations, severity, and complications guide diagnosis and management.

Syndromic Surveillance

Monitoring of symptoms, clinical encounters, laboratory requests, or other near-real-time signals before definitive diagnoses are available. It supports early detection of outbreaks and public-health threats but may have lower specificity.

Synechia

An abnormal adhesion between adjacent tissues, especially between parts of the iris or between the iris and the lens or cornea.

Synechiae

Abnormal adhesions between tissues, especially within the eye, uterus, or nasal cavity.

Synergist

A muscle, drug, or factor that works together with another to produce or enhance an effect.

Synesthesia

Synesthesia is a stable perceptual phenomenon in which stimulation of one sensory pathway automatically produces an experience in another, such as seeing colors with sounds.

Synesthete

A synesthete is a person who experiences synesthesia, in which stimulation of one sense or cognitive pathway automatically evokes another perception.

Syngeneic

Genetically identical or nearly identical within the same species, as in tissues or cells exchanged between identical twins or inbred laboratory animals.

Synostosis

Fusion of two bones by bone tissue, congenital or acquired.

Synovectomy

Surgical removal of part or all of an inflamed synovial membrane.

Synovial Biopsy

A synovial biopsy removes a small sample of the joint lining to investigate infection, inflammatory arthritis, crystal disease, or an unusual joint lesion.

Synovial Bursa

A synovial bursa is a small fluid-filled sac that reduces friction between moving tissues near joints, such as tendons, skin, muscles, and bone.

Synovial Chondromatosis

A benign, metaplastic condition characterized by the formation of multiple cartilaginous loose bodies within joint synovium, bursae, or tendon sheaths. It presents with joint pain, swelling, locking, and restricted range of motion, most commonly affecting the knee, hip, and elbow.

Synovial Cyst

A synovial cyst is a fluid-filled sac arising from or near a joint or tendon sheath, sometimes compressing nearby nerves and causing pain or weakness.

Synovial Fluid

A viscous fluid within a synovial joint that lubricates articular surfaces and helps nourish cartilage.

Synovial Fluid Analysis

Laboratory examination of aspirated joint fluid for appearance, viscosity, leukocyte count and differential, crystals under polarized light, Gram stain, and culture. It helps distinguish noninflammatory, inflammatory, crystal-associated, and septic arthritis.

Synovial Joint

A freely movable joint in which the articulating bones are separated by a fluid-filled joint cavity enclosed by a capsule.

Synovial Membrane

The lining of a synovial joint that produces lubricating synovial fluid.

Synovial Reaction To Implanted

Prostheses

Inflammation and tissue response around an orthopedic implant caused by wear particles, loosening, corrosion, infection, or hypersensitivity. Evaluation distinguishes aseptic failure from periprosthetic infection.

Synovial Sarcoma

A soft tissue sarcoma typically arising near joints of the extremities in young adults, characterized by the t(X;18) chromosomal translocation.

Synoviocytes

Synoviocytes are cells lining the joint synovium that produce lubricating fluid and inflammatory mediators and help maintain or damage joint tissue.

Synovitis

Inflammation of a synovial membrane, causing swelling, pain, and restricted movement.

Synovium

The synovial membrane and its associated tissue lining a joint or tendon sheath.

Synovography

Imaging of a joint after contrast is injected into its cavity. It can show the joint lining, capsule, tears, or abnormal connections, although MRI and ultrasound are often used instead.

Syntax

Syntax is the arrangement of words, symbols, or genetic sequence elements according to rules that determine meaning and valid structure.

Synthesis

Synthesis is the biological or chemical production of a complex molecule or structure from simpler components, such as protein synthesis from amino acids or DNA synthesis from nucleotides.

Synthesis Module

Automated system for radiopharmaceutical preparation. PET tracer synthesis: FDG, Florbetapir.

Quality control: radiochemical purity, pH, sterility.

Synthetic

Produced by chemical or laboratory processes rather than directly obtained in its natural form.

Synthetic Androgen

A synthetic androgen is a manufactured compound that activates androgen receptors and may mimic testosterone; therapeutic and anabolic use can suppress gonadal function and cause acne, mood effects, infertility, liver injury, or cardiovascular harm.

Syphilis

A sexually transmitted infection caused by *Treponema pallidum*, progressing through primary, secondary, latent, and sometimes tertiary stages.

Syphilis In Women Overview

Syphilis is a sexually transmitted infection caused by *Treponema pallidum* and progresses through stages that may include painless sores, rash, neurologic or cardiovascular disease, or no symptoms. Penicillin treatment cures infection and is essential in pregnancy to prevent congenital disease.

Alternate Names:

STD (Syphilis In Women Overview)

Syphilis In Women Overview

Alternate index label for Syphilis in Women Overview.

Syphilis Serology (RPR/VDRL)

Nontreponemal blood tests used to screen for and monitor syphilis. Reactive results require interpretation with clinical findings and, usually, a treponemal confirmatory test.

Alternate Names:

Syphilis Serology

Syphilitic Alopecia

Non-scarring hair loss occurring as a manifestation of secondary syphilis, presenting with diffuse thinning or patchy, moth-eaten alopecia of the scalp, eyebrows, or beard. It is thought to result from

direct spirochaetal invasion of hair follicles during the spirochaetaemic phase.

Syphilitic Aseptic Meningitis

Syphilitic aseptic meningitis is inflammation of the meninges caused by *Treponema pallidum*, producing headache, neck stiffness, cranial-nerve symptoms, or other neurologic findings.

Syphilitic Gumma

A destructive, granulomatous lesion occurring in tertiary syphilis, characterized by a center of necrotic tissue surrounded by plasma cells, lymphocytes, and fibroblasts. Gummas may affect any organ, most commonly the skin, bones, liver, and central nervous system. They present as painless, firm nodules that may ulcerate.

Syringe

A device with a barrel and plunger used to withdraw or inject fluids.

Syringe Drivers

Small battery-powered pumps that deliver medicines continuously or at programmed intervals through a syringe.

Syringocystadenoma Papilliferum

A benign adnexal tumor with apocrine or eccrine differentiation, often presenting as a papule or plaque on the scalp or face and sometimes arising within a nevus sebaceus.

Syringoma

A syringoma is a benign tumor of sweat-duct cells, usually appearing as small skin-colored or yellowish papules around the eyelids or elsewhere.

Syringomyelia

A fluid-filled cavity within the spinal cord that can cause pain, sensory loss, weakness, or autonomic dysfunction.

Syrinx

A syrinx is a fluid-filled cavity within the spinal cord,

typically containing cerebrospinal fluid or a similar fluid, that develops as a result of abnormal CSF flow dynamics within the spinal cord. Syringomyelia: a syrinx in the central spinal cord. Hydromyelia: dilation of the central canal.

Syrup

A syrup is a viscous liquid preparation, often sweetened, used as a medicine vehicle or oral dosage form; concentration and ingredients determine safe dosing.

Systematic Review

Comprehensive summary of research on specific question. Uses explicit methods to minimize bias. Cochrane reviews example.

Systemic

Affecting the whole body or relating to an entire system rather than a localized site.

Systemic Antifungals

Antifungal medicines taken orally or given intravenously for infections that are extensive, invasive, refractory, or unsuitable for topical treatment. Choice and duration depend on the organism, site, severity, drug interactions, organ function, and local resistance patterns.

Systemic Chemotherapy

Systemic chemotherapy uses medicines that travel through the bloodstream to kill or slow cancer cells throughout the body.

Systemic Circuit

The circulation that carries oxygenated blood from the left ventricle through the body and returns deoxygenated blood to the right atrium.

Systemic Disease

A clinical condition or finding involving systemic disease. Its features, causes, evaluation, and management depend on the clinical context.

Systemic Effects

Whole-body effects of toxins. Cardiac, neurological,

renal, hepatic, hematological.

Systemic Exertional Intolerance Disease

Alternate index label; see *Myalgic encephalomyelitis/chronic fatigue syndrome (ME/CFS)*.

Systemic Inflammatory Response Syndrome

A systemic inflammatory response that may occur with infection, trauma, burns, pancreatitis, surgery, or other insults. It can involve abnormal temperature, heart rate, respiratory rate, or white-cell count. Modern sepsis assessment uses broader clinical criteria rather than SIRS alone.

Systemic Juvenile Idiopathic Arthritis

A subtype of juvenile idiopathic arthritis with prominent systemic inflammation—daily spiking fevers, evanescent salmon-pink rash, arthritis, lymphadenopathy, hepatosplenomegaly, and elevated inflammatory markers (ferritin).

Systemic Lupus

Systemic lupus erythematosus is an autoimmune disease that can affect skin, joints, kidneys, blood, nervous system, lungs, and heart. Symptoms fluctuate, and treatment is tailored to organ involvement with sun protection, monitoring, and immunomodulatory medicines.

Alternate Names:

Arthritis SLE (Systemic Lupus) Lupus (Systemic Lupus) SLE (Systemic Lupus)

Systemic Lupus

Alternate index label for Systemic Lupus.

Systemic Lupus Erythematosus

Multisystem autoimmune disease, more common in women. Features: malar rash, photosensitivity, oral ulcers, arthritis, serositis, renal disorder, neurologic disorder, hematologic disorder, immunologic disorder. Diagnosis: ANA positive plus clinical/immunologic criteria.

Systemic Lupus Erythematosus

A chronic, multisystem autoimmune inflammatory disorder characterized by loss of immune tolerance to nuclear autoantigens, polyclonal B-cell hyperactivity, and tissue deposition of pathogenic immune complexes. Predominantly affects women of child-bearing age (9:1 female-to-male ratio). Clinical hallmarks include the classic malar rash, photosensitivity, discoid lesions, inflammatory polyarthritis, serositis, lupus nephritis (monitored by proteinuria and anti-dsDNA titers), cytopenias, and neuropsychiatric lupus. Serologically diagnosed by high-sensitivity antinuclear antibodies followed by disease-specific anti-double-stranded DNA (anti-dsDNA) and anti-Smith (anti-Sm) antibodies; managed with hydroxychloroquine as baseline therapy, glucocorticoids for flares, and immunosuppressants (mycophenolate mofetil, cyclophosphamide, belimumab).

Systemic Mastocytosis

A disorder in which excessive mast cells accumulate in one or more organs and release inflammatory chemicals.

Systemic Scleroderma

Systemic sclerosis, an autoimmune connective-tissue disease causing vascular dysfunction and fibrosis of skin and internal organs, commonly affecting the esophagus, lungs, kidneys, and heart.

Systemic Sclerosis

Systemic sclerosis, also known as scleroderma, is a chronic autoimmune disease characterized by progressive fibrosis of the skin and internal organs, vasculopathy, and immune dysfunction.

Alternate Names:

scleroderma, is a chronic autoimmune disease.

Systemic Therapy

Treatment that reaches the whole body, including chemotherapy, endocrine therapy, targeted therapy, and immunotherapy, as opposed to local therapies such as surgery and radiation.

Systemic Vascular Resistance

The resistance to blood flow offered by the systemic circulation, determined mainly by arteriolar tone. It is calculated from the pressure gradient across the systemic circulation and cardiac output and is a major determinant of arterial pressure.

Supracervical Hysterectomy

Hysterectomy in which the uterine body is removed while the cervix is left in place; it is also called subtotal or partial hysterectomy. The fallopian tubes and ovaries may be managed separately.

Systemic Venous

Systemic venous refers to veins returning deoxygenated blood from the body to the right side of the heart, excluding the pulmonary circulation.

Sustained Virologic Response

The absence of detectable hepatitis C virus RNA in the blood 12 or more weeks after completing antiviral treatment, indicating virologic cure. Reinfection remains possible.

Systole

The phase of the cardiac cycle during which a chamber contracts and ejects blood.

Systolic

Systolic means relating to contraction of the heart, especially the pressure in arteries when the ventricles eject blood.

Systolic Anterior Motion

An abnormal hemodynamic and anatomical motion of the mitral valve apparatus during ventricular systole, wherein the anterior mitral valve leaflet (or both anterior and posterior leaflets) is pulled and swept anteriorly into the left ventricular outflow tract toward the hypertrophied interventricular septum. Driven by hydrodynamic drag forces and the Venturi suction effect generated by high-velocity blood flow through a narrowed LVOT, it causes dynamic subaortic obstruction and concomitant eccentric, posteriorly directed mitral regurgitation; a defining pathophysiological hallmark of hyper-

trophic obstructive cardiomyopathy.

Alternate Names:

SAM; SAM of the Mitral Valve

Systolic Murmurs

Murmurs occurring between S1 and S2. Ejection systolic murmurs (crescendo-decrescendo) are caused by flow across semilunar valves (aortic stenosis, pulmonary stenosis) or increased flow across normal valves.

Systolic Pressure

The maximum arterial pressure during ventricular contraction, recorded as the upper number of a blood-pressure reading.

Alternate Names:

Seasonal affective disorder

Sz

Sz is an informal abbreviation for seizure; clinical documentation should identify the seizure type and relevant features clearly.

T

T Cell

Abbreviation for T lymphocyte, a type of white blood cell that is produced in the bone marrow and is part of the body's immune system.

T Wave

The electrocardiographic deflection representing ventricular repolarization. Its shape and direction vary by lead and clinical context. Abnormal T waves may occur with ischemia, electrolyte disorders, ventricular strain, or other conditions.

T-Cell Count

A laboratory measurement of T lymphocytes in blood, often including CD4 cells, used to assess immune function and monitor conditions such as HIV infection or immunosuppression.

T-Cell Lymphoma

A lymphoma arising from T lymphocytes, with multiple biologically distinct subtypes.

T-Cell Lymphomas

Lymphomas arising from mature or immature T lymphocytes. They include several biologically distinct diseases that may involve lymph nodes, skin, blood, or other organs; behavior and treatment depend on the subtype.

T-Cell Receptor

A clonally distributed receptor on T lymphocytes that recognizes a peptide antigen presented by a major histocompatibility complex molecule. TCR signaling requires accessory and co-stimulatory signals for effective T-cell activation.

T-Cells (T-Lymphocytes)

A type of lymphocyte that matures in the thymus and is the central effector of cell-mediated immunity. T-cells express the T-cell receptor (TCR) on their surface, which recognises peptide antigens presented by major histocompatibility complex (MHC) molecules on antigen-presenting cells.

Alternate Names:

T-Lymphocytes

T-Lymphocyte

A lymphocyte that matures in the thymus and mediates cellular immune responses.

T-Wave Alternans

T-wave alternans is a beat-to-beat change in the size or shape of the heart's T wave and may indicate increased risk of dangerous ventricular rhythms.

T3

Triiodothyronine, the most biologically active thyroid hormone, produced by deiodination of T4 in peripheral tissues (liver, kidney) and secreted by the thyroid. Regulates metabolism (BMR), protein/carbohydrate/lipid metabolism, growth, and development.

T3 Test

A blood test measuring triiodothyronine, used with thyroid-stimulating hormone and thyroxine to evaluate thyroid function, particularly suspected hyperthyroidism.

T3RU Test

An older test estimating the proportion of thyroid-

hormone-binding sites occupied in serum; it is used indirectly to assess thyroid-hormone binding and has largely been replaced by free-thyroxine measurements.

T4

Thyroxine, the main hormone secreted by the thyroid gland (thyroxine, 80-90 percent of secretion), converted to the active T3 in tissues. Bound largely to thyroxine-binding globulin (TBG); free T4 is the active unbound fraction. Regulates metabolism, growth, and development.

TAB Vaccine

An older combined vaccine against typhoid and paratyphoid A and B.

Tabes

An older term for tabes dorsalis, a late neurologic complication of untreated syphilis.

Tabes Dorsalis

A late manifestation of untreated syphilis in which degeneration of dorsal spinal-cord columns and roots causes sensory ataxia, lightning pains, loss of position sense, areflexia, and bladder or sexual dysfunction.

Tablet

A solid dosage form of compressed drug plus excipients (binders, fillers, disintegrants, lubricants, coatings). Types: immediate-release, enteric-coated (resistant to gastric acid), sustained/controlled-release, sublingual, buccal, effervescent, chewable, and orally disintegrating.

Tablet Splitting

Dividing a tablet to take a smaller dose; only tablets designed for splitting should be divided, because extended-release, enteric-coated, and some specialized tablets may not work safely when split.

TAC Regimen

A chemotherapy combination of docetaxel, doxorubicin, and cyclophosphamide, used for selected

breast cancers; it can cause infection risk, nausea, hair loss, heart effects, and other toxicities.

Tacalcitol

A vitamin-D analogue used topically for psoriasis and selected disorders of keratinization.

Tacedinaline

Tacedinaline is an investigational histone-deacetylase inhibitor studied for effects on gene expression and cancer-cell growth.

Tache Noire

Tache noire is a black eschar at the site of a tick bite, classically associated with Mediterranean spotted fever and related rickettsial infections.

Tachyarrhythmia

An abnormally fast heart rhythm, which may arise from the atria, ventricles, or the heart's conduction system. Symptoms can include palpitations, dizziness, chest discomfort, shortness of breath, or fainting; fainting or severe symptoms require urgent assessment.

Tachycardia

A faster-than-expected heart rate that may be a normal response or a sign of disease. See Fast Heart Rate.

Alternate Names:

Rapid Heartbeat

Tachycardia Paroxysmal Atrial (Paroxysmal Supraventricular Tachycardia)

Alternate index label for Paroxysmal Supraventricular Tachycardia.

Tachycardia Paroxysmal Supraventricular (Paroxysmal Supraventricular Tachycardia)

Alternate index label for Paroxysmal Supraventricular Tachycardia.

Tachycardia-Induced Cardiomyopathy

Weakening and dilation of the heart muscle caused by a persistent or frequently recurring rapid heart rhythm, often improving when the arrhythmia is controlled.

Tachykinin

A family of signaling peptides, including substance P, that influence pain, inflammation, smooth-muscle activity, and nerve communication.

Tachyphrenia

Tachyphrenia is rapid flow of thoughts or accelerated mental activity, often described in association with mania, stimulants, or other psychiatric states.

Tachyphylaxis

A rapid, acute decrease in response to a drug after repeated administration over a short period, distinct from tolerance which develops more gradually. Tachyphylaxis results from rapid depletion of neurotransmitter stores, receptor desensitization, or receptor downregulation.

Tachypnea

Abnormally rapid respiratory rate (adult >20 breaths/min). Physiologic (exercise, anxiety) or pathologic: hypoxia, fever, sepsis, metabolic acidosis (Kussmaul), pulmonary embolism, pneumonia, heart failure, pain, and compensation for metabolic derangement.

Tachypnoea

Abnormally rapid breathing, defined as a respiratory rate >20 breaths per minute in adults (age-dependent: >60 in neonates, >40 in 1–12 months, >30 in 1–5 years, >20 in >5 years). Tachypnoea is a non-specific sign of respiratory or metabolic distress.

Tachysystole (Uterine Hyperstimulation)

More than 5 contractions in 10 minutes averaged over 30 minutes, or contractions lasting ≥ 2 minutes. Tachysystole with fetal heart rate changes (late decelerations, prolonged deceleration, loss of variability) is more concerning. Causes: oxytocin

(most common), prostaglandins (misoprostol > dinoprostone), and cocaine.

Alternate Names:

Uterine Hyperstimulation

TACO

Transfusion-Associated Circulatory Overload, a complication of blood transfusion due to volume overload causing pulmonary edema. Risk factors: pre-existing cardiac or renal disease, extremes of age, large transfusion volume, rapid infusion rate.

Tacrine

An older acetylcholinesterase inhibitor formerly used for Alzheimer disease; liver toxicity and frequent dosing limited its use.

Tacrolimus

An immunosuppressant that inhibits calcineurin; used systemically after transplantation and topically for eczema.

Tactile

Pertaining to, perceived by, or relating to the sense of touch (*tactus*). Mediated by specialized cutaneous mechanoreceptors embedded within the dermis and epidermis: Meissner corpuscles (low-frequency vibration, light dynamic touch), Merkel discs (static pressure, fine tactile edge and form discrimination), Pacinian corpuscles (high-frequency vibration), and Ruffini endings (skin stretch). Sensory tactile signals ascend via large myelinated $A\beta$ primary afferents through the dorsal column-medial lemniscal pathway to the contralateral primary somatosensory cortex. Assessed clinically using two-point discrimination tests, monofilament testing in diabetic peripheral neuropathy, and tactile fremitus during thoracic lung examination.

Tactile Agnosia

Tactile agnosia is inability to recognize a familiar object by touch despite intact primary sensation, usually from parietal-cortex dysfunction.

Tactile Fremitus

Vibrations transmitted through the lung to the chest

wall, felt during palpation. It is increased in consolidation (pneumonia) due to better sound transmission through solid tissue. It is decreased in pleural effusion, pneumothorax, and atelectasis due to impaired transmission.

Tactile Sense

The ability to perceive touch, pressure, vibration, texture, and related mechanical stimuli through receptors in the skin and deeper tissues.

Tadalafil

Tadalafil is a phosphodiesterase-5 inhibitor used for erectile dysfunction, benign prostatic hyperplasia, and pulmonary hypertension; headache, flushing, hypotension, priapism, and dangerous nitrate interactions are important risks.

Taenia

A genus of tapeworms, including *T. solium* and *T. saginata*.

Taenia Saginata

Taenia saginata is the beef tapeworm acquired from undercooked infected beef; intestinal infection may cause abdominal symptoms or passage of motile segments but does not usually cause human cysticercosis.

Taenia Solium

Taenia solium is the pork tapeworm; eating undercooked pork causes intestinal taeniasis, while ingesting eggs can cause cysticercosis, including potentially serious neurocysticercosis.

Taeniasis

Intestinal infection caused by adult *Taenia* tapeworms, usually acquired by eating undercooked beef or pork containing larval cysts. It may cause abdominal symptoms or passage of worm segments; swallowing *Taenia solium* eggs causes cysticercosis in tissues, which is a different infection.

Taeniasis (Tapeworm Infection)

Intestinal infection caused by adult *Taenia* tape-

worms, usually acquired by eating undercooked meat containing larval cysts. *Taenia solium* and *Taenia saginata* are important species; *Taenia solium* eggs can also cause cysticercosis in tissues.

Alternate Names:

Tapeworm Infection

Tail

A tapering appendage extending from the end of an animal's body. In human anatomy, the term may refer to a tail-like congenital structure or the embryologic caudal end; evaluation depends on the specific finding.

Tailbone Trauma

A biomedical term referring to tailbone trauma; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Taint

A taint is contamination or an undesirable influence; in medicine or laboratory work it may refer to contamination that affects a specimen, product, or result.

Takayasu Arteritis

A chronic granulomatous vasculitis primarily affecting the aorta and its major branches, most commonly diagnosed in women under 50 years of age, particularly in Asian populations.

Takayasu Disease

A large-vessel vasculitis that primarily affects the aorta and its major branches. It may cause limb claudication, weak or unequal pulses, blood-pressure differences, bruits, fever, fatigue, or arterial narrowing and aneurysms. Imaging and inflammatory assessment guide immunosuppressive and vascular treatment.

Takayasu's Arteritis

A chronic granulomatous vasculitis of the aorta and its major branches, predominantly affecting young women of Asian descent. Causes arterial stenosis, occlusion, or aneurysm formation. Presents

with limb claudication, absent pulses, bruit, hypertension, and constitutional symptoms. Treatment: corticosteroids and immunosuppressives.

Takotsubo Cardiomyopathy

Transient left ventricular apical ballooning resembling a Japanese octopus trap (takotsubo), typically triggered by emotional or physical stress. ECG may show ST elevation mimicking STEMI. Coronary angiography shows no obstructive disease. Most patients recover normal ventricular function within weeks.

Talabostat

Talabostat is an investigational inhibitor of fibroblast activation protein and related enzymes studied for immune and anticancer effects.

Talactoferrin Alfa

Talactoferrin alfa is a recombinant lactoferrin-related immunomodulatory protein studied as a treatment or adjunct in cancer and infectious disease.

Talaporfin Sodium

Talaporfin sodium is a photosensitizer used or studied in photodynamic therapy, where light activation produces local cytotoxic effects.

Talc

A soft mineral; inhalation of talc dust can cause talcosis, and contaminated injected talc can injure vessels and lungs.

Talcosis

Pneumoconiosis from talc dust inhalation or IV injection of crushed oral medications. Causes upper lobe nodular fibrosis. HRCT may show “galaxy sign” of calcified nodules.

Talcum Powder Poisoning

Harmful effects from swallowing or inhaling talcum powder. Swallowing usually causes mild stomach upset, but inhaling it can injure the lungs and make breathing difficult.

Talipes

A congenital or acquired deformity of the foot and ankle, including clubfoot.

Talipes Calcaneovalgus

A foot deformity in which the heel is turned outward and the ankle is dorsiflexed so the foot points upward; flexible newborn cases often improve, while rigid cases need evaluation.

Talipes Equinovarus

Clubfoot, a congenital deformity combining ankle equinus, hindfoot varus, forefoot adduction, and cavus; early serial casting and bracing are standard initial treatment.

Tall Stature

Tall stature means height substantially above the expected range for age and sex and may be familial, endocrine, genetic, or associated with another condition.

Talotrexin

Talotrexin is an investigational antifolate antineoplastic drug designed to inhibit folate-dependent cellular metabolism.

Talus

Second largest tarsal bone articulating with tibia/fibula proximally at the ankle. Approximately 60 percent of its surface is articular cartilage with no muscular attachments. Transmits entire body weight to the calcaneus. Talar neck fractures may disrupt blood supply causing avascular necrosis in up to 50 percent.

Tamoxifen (Nolvadex)

A medicine, biologic, or pharmacologic term related to tamoxifen (nolvadex); its mechanism, indication, interactions, and adverse effects depend on the specific agent.

Tamoxifen Citrate

The citrate salt of tamoxifen, a selective estrogen-receptor modulator used to treat or prevent some

breast cancers; blood clots and endometrial cancer are important uncommon risks.

Tampon

A material inserted into the vagina to absorb menstrual blood; prolonged use can rarely lead to toxic shock syndrome.

Tamponade

Compression of an organ or vessel by accumulated fluid, blood, or gas; cardiac tamponade impairs cardiac filling.

Tamsulosin Hydrochloride

The hydrochloride salt of tamsulosin, an alpha-1 blocker that relaxes prostate and bladder-neck muscle to improve urinary symptoms from benign prostatic enlargement.

Tandutinib

An investigational tyrosine-kinase inhibitor studied mainly for myeloproliferative disorders and cancer.

Tanespimycin

An investigational derivative of 17-AAG that inhibits heat-shock protein 90 and has been studied as an anticancer drug.

Tangier Disease

An autosomal-recessive disorder of HDL metabolism caused by ABCA1 dysfunction. It produces very low HDL cholesterol, enlarged yellow-orange tonsils, hepatosplenomegaly, peripheral neuropathy, thrombocytopenia, and premature atherosclerosis in some patients.

Tanner Staging

A scale for assessing sexual maturity during puberty. Stage 1: prepubertal. Stage 2: breast buds (girls), testicular enlargement (boys). Stage 3: breast enlargement, pubic hair. Stage 4: areolar development, more pubic hair.

Tannic Acid

A plant-derived polyphenol with astringent and

protein-binding properties, used in some industrial or historical preparations; concentrated ingestion can irritate the gastrointestinal tract and affect absorption.

Tanomastat

Tanomastat is an investigational matrix-metalloproteinase inhibitor studied for reducing tumor invasion and tissue remodeling.

Tantalum

A corrosion-resistant metal used in some surgical implants and medical devices; exposure risk depends on the form, dose, and route.

Tantulum

A misspelling of tantalum, a metal used in selected implants and medical devices.

Tap, Joint (Aspiration)

Tap, joint (aspiration) refers to an anatomical structure, biological substance, or physiologic concept used in describing the human body and its function.

Tapentadol

Tapentadol is a centrally acting analgesic with mu-opioid agonist and norepinephrine-reuptake-inhibitory effects, used for moderate-to-severe pain; respiratory depression, dependence, seizures, and serotonin or sedative interactions are possible.

Tapeworm

A parasitic flatworm with a segmented body that may live in the intestine or form larval cysts in tissues. People acquire different species by eating infected meat or fish or by ingesting eggs from contaminated sources. Symptoms and complications depend on the species and site.

Tapeworm Infection

Infection caused by parasitic tapeworms. Taenia species may live as adult worms in the intestine, while some tapeworm larvae can form cysts in tissues.

Tapeworm Infection - Beef Or Pork

Intestinal infection with *Taenia saginata* or *Taenia solium* acquired from undercooked beef or pork; *T. solium* eggs can also cause cysticercosis in tissues.

Tapeworm Infection - Hymenolepis

Intestinal infection with *Hymenolepis nana* or *H. diminuta*, acquired by ingesting eggs or infected arthropods and causing variable gastrointestinal symptoms.

Tapotement

A massage technique using rhythmic tapping, patting, or percussion. It should be avoided over injured areas or in people at risk of bleeding unless a trained clinician recommends it.

Tapping

Repeated light striking or percussion used in examination, therapy, or testing.

TAPSE

Alternate name; see *Tricuspid Annular Plane Systolic Excursion*.

TAPVR

Alternate index label; see *Total anomalous pulmonary venous return*.

Taq Polymerase

A heat-stable DNA-copying enzyme from *Thermus aquaticus*, widely used in polymerase chain reaction testing and research.

Tar Remover Poisoning

Poisoning from swallowing, inhaling, or skin contact with tar-removing chemicals. Effects vary by product and may include irritation, dizziness, vomiting, or breathing problems; contact poison-control services promptly.

Tarantism

Tarantism is a historical term for a dancing or behavioral syndrome once attributed to spider bite and now understood as a cultural or neurologic

phenomenon rather than a specific disease.

Tarantula Spider Bite

A bite from a tarantula that usually causes local pain, redness, and swelling. Some species also release irritating hairs that can affect the skin or eyes.

Tardive Dyskinesia

Involuntary, repetitive, purposeless movements caused by prolonged use of antipsychotic medications, typically developing after months to years of exposure. Movements include choreoathetoid movements of the tongue, face, and extremities (lip smacking, tongue protrusion, grimacing, choreiform movements of limbs).

Tarenflurbil

Tarenflurbil is an investigational derivative of flurbiprofen studied for effects on amyloid processing and Alzheimer disease.

Target Cell

A cell specifically affected by or responding to a hormone, drug, toxin, antigen, or other signal; target cells may also describe abnormal erythrocytes.

Target Organ

An organ particularly affected by a disease, hormone, toxin, drug, or other exposure.

Target Population

The defined group of people for whom a medical intervention, screening program, or research study is intended. It is characterized by criteria such as age, diagnosis, risk, or other relevant features.

Target Tissue

A tissue containing receptors or other molecular targets on which a hormone, drug, toxin, or signaling molecule acts.

Target-Controlled Infusion

A computerized infusion pump system that maintains a predetermined drug concentration in plasma or effect site using pharmacokinetic modeling. TCI

systems use three-compartment pharmacokinetic models to calculate infusion rates that achieve and maintain target concentration.

Targeted Radiation Therapy

Radiation treatment aimed closely at a tumor or other abnormal area to damage it while limiting exposure to nearby healthy tissue.

Targeted Temperature Management

Controlled therapeutic hypothermia for comatose survivors of cardiac arrest. Target: 32-36 degrees C for 24-72 hours followed by gradual rewarming. Mechanism: reduces metabolic demand, limits reperfusion injury, and reduces free radical generation. TTM2 trial showed 33 degrees C was not superior to 36 degrees C.

Targeted Therapies For Cancer

Cancer medicines designed to act on specific features of cancer cells or their surroundings. They may be more selective than traditional chemotherapy, but can still cause important side effects.

Targeted Therapy

Drugs targeting specific molecular abnormalities in cancer. Examples: imatinib (BCR-ABL), trastuzumab (HER2), rituximab (CD20), tyrosine kinase inhibitors. Requires molecular testing.

Tariquidar

Tariquidar is an investigational inhibitor of the P-glycoprotein drug transporter studied to reverse multidrug resistance and alter medicine distribution.

Tarlov Cyst

A cerebrospinal-fluid-filled perineural cyst, usually located near the dorsal root ganglia in the sacral spine. Many are incidental, but larger or symptomatic cysts can cause sacral pain, radiculopathy, sensory change, bowel or bladder dysfunction, or sexual dysfunction.

Tars

A viscous black material derived from organic mat-

ter; tobacco tar contains harmful chemicals.

Tarsal

Relating to the tarsus or ankle and hindfoot bones.

Tarsal Bones

The seven bones of the hindfoot and midfoot that connect the ankle to the metatarsals and form the arches and load-bearing framework of the foot.

Alternate Names:

Tarsals

Tarsal Coalition

An abnormal connection between two bones in the rear or middle foot, usually present from birth. It can cause a stiff, painful flatfoot, recurrent ankle sprains, and limited foot motion, often becoming more noticeable during adolescence.

Tarsal Joints

The articulations among the tarsal bones and between the tarsals and metatarsals, providing stability and controlled movement for walking and adapting the foot to surfaces.

Tarsal Tunnel Syndrome

Tibial nerve compression at ankle. Symptoms: burning pain, tingling in foot sole. Tinel sign at ankle. Treatment: orthotics, corticosteroid injection, surgical decompression.

Tarsorrhaphy

A procedure that partially or completely closes the eyelids to protect the cornea or reduce exposure in conditions such as severe dry eye or facial nerve palsy.

Tarsus

The group of seven bones forming the hindfoot and midfoot.

Tartar

A hard deposit of mineralized dental plaque, also called calculus.

Tarui Disease

An autosomal recessive metabolic myopathy (Glycogen Storage Disease Type VII [GSD VII]) caused by deficiency of the muscle isoform of phosphofructokinase (*PFKM*), the key rate-limiting enzyme of glycolysis catalyzing the conversion of fructose-6-phosphate to fructose-1,6-bisphosphate. Impairs energy generation from both muscle glycogen and blood-borne glucose. Characterized clinically by exercise-induced muscle fatigue, weakness, painful cramping, and rhabdomyolysis, exacerbated by high-carbohydrate meals (which paradoxically lower exercise tolerance by suppressing fatty acid oxidation), accompanied by compensated non-spherocytic hemolytic anemia and hyperuricemia.

Alternate Names:

Glycogen Storage Disease Type VII (GSD VII); Muscle Phosphofructokinase Deficiency

Tassinari Syndrome

An older name associated with epileptic encephalopathy featuring frequent abnormal electrical activity during sleep, seizures, and possible effects on learning or development. The term is now usually described more specifically as electrical status epilepticus in sleep.

Taste

The sensation produced by the interaction of chemical substances with taste receptor cells (TRCs) on the tongue, palate, pharynx, epiglottis, and upper esophagus. Taste is one of the five primary senses (gustation).

Taste - Impaired

Impaired taste is reduced, distorted, or absent ability to taste and may result from infection, medicines, oral disease, nerve injury, or changes in smell.

Taste Bud

A taste bud is a cluster of specialized sensory cells in papillae of the tongue and some oral tissues that detects sweet, sour, salty, bitter, and umami stimuli and transmits signals through cranial nerves.

Taste Disorder

Abnormal reduction, loss, distortion, or unpleasant alteration of taste, caused by infection, medications, oral disease, nerve injury, neurologic disease, or other factors.

Tattooing

Insertion of pigment into the skin; complications include infection, allergy, scarring, and difficulty interpreting lesions.

Tattoos & Permanent Makeup

Tattoos and permanent makeup place pigment into the skin; risks include infection, allergy, scarring, blood-borne disease, and difficulty removing or changing the result.

Tau PET

Tracers: Flortaucipir, MK-6240. Detect tau tangles in neurodegenerative diseases.

Taurodontism

Enlarged pulp chamber, short roots. Molars most affected. Associated with genetic conditions.

Taussig-Bing Anomaly

A rare, complex cyanotic congenital heart malformation categorized as a form of double outlet right ventricle, characterized anatomically by both great arteries arising predominantly or entirely from the right ventricle, with the aorta positioned side-by-side or anterior to the pulmonary artery, accompanied by a committed, subpulmonic ventricular septal defect. Hemodynamically resembles D-transposition of the great arteries with a large VSD, wherein oxygenated pulmonary venous blood preferentially streams from the left ventricle across the subpulmonic VSD directly into the pulmonary artery, and systemic venous blood enters the right ventricle and aorta, resulting in severe early cyanosis, pulmonary arterial hypertension, and congestive heart failure, corrected surgically in infancy by an arterial switch operation and VSD closure.

Alternate Names:

Taussig-Bing Syndrome; DORV with Subpulmonic VSD

TAVR

Alternate name; see *Transcatheter Aortic Valve Replacement*.

Taxanes

A class of chemotherapy medicines, including paclitaxel and docetaxel, that stabilize microtubules.

Taxis

Directed movement toward or away from a stimulus; in surgery it may also mean orderly repositioning.

Tay-Sachs Disease

An inherited autosomal-recessive lysosomal storage disease caused by disease-causing variants in both copies of the HEXA gene. Reduced beta-hexosaminidase A activity causes GM2 ganglioside to accumulate in nerve cells. The infantile form causes developmental regression, exaggerated startle, weakness, seizures, and often a cherry-red spot on the retina, with severe progression and death usually in early childhood. Juvenile and adult forms can begin later and progress more slowly, with variable movement, coordination, speech, or psychiatric problems. Carrier frequency is higher in some populations, including Ashkenazi Jewish, French Canadian, and Cajun communities, but the disease can occur in any ancestry. There is currently no curative treatment; supportive care, genetic counseling, and appropriate carrier or diagnostic testing are important.

Tazarotene

A topical retinoid used for acne, psoriasis, and photorejuvenation.

TB

Alternate index label; see *Tuberculosis*.

TB Test

A tuberculosis test looks for infection with *Mycobacterium tuberculosis* using a skin test, blood test, or examination of respiratory specimens.

TBG Blood Test

A blood test measuring thyroxine-binding globulin, the principal thyroid-hormone transport protein; it helps interpret abnormal total thyroid-hormone levels when binding-protein changes are suspected.

TBI

Alternate index label; see *Traumatic brain injury*.

TCA Cycle

The tricarboxylic acid (Krebs) cycle occurs in the mitochondrial matrix, completing the oxidation of acetyl-CoA (from carbohydrates, fats, and proteins) to CO₂ while generating reducing equivalents (NADH, FADH₂) for the electron transport chain.

TCAs (Tricyclic Antidepressants)

Antidepressants that block reuptake of serotonin and norepinephrine, with additional anticholinergic, antihistaminic, and alpha-adrenergic blocking effects. Examples include amitriptyline, nortriptyline, imipramine, and desipramine. They are effective for depression, neuropathic pain, and migraine prophylaxis.

Alternate Names:

Tricyclic Antidepressants

Td

Td is a vaccine protecting against tetanus and diphtheria, generally used as a booster in adolescents and adults according to local schedules.

Td Immunization

Vaccination against tetanus and reduced-dose diphtheria, used for routine boosters, catch-up immunization, and wound-related protection according to age and vaccination history.

Tdap Vaccination In Pregnancy

Administration of tetanus, diphtheria, and acellular pertussis (Tdap) vaccine during each pregnancy, optimally at 27-36 weeks. The goal: boost maternal antibodies to protect the newborn from pertussis (whooping cough) before the infant can be vaccinated at 2 months.

Tear

A split or rupture in tissue, such as a muscle, tendon, ligament, meniscus, skin, or organ, caused by trauma, overuse, degeneration, or pressure.

Tearing

Excessive production or inadequate drainage of tears, commonly caused by irritation, allergy, dry-eye reflex tearing, infection, eyelid malposition, or lacrimal-duct obstruction.

Tears

Fluid secreted by the lacrimal glands that lubricates, nourishes, and protects the ocular surface.

Tears, Decreased Production

Alternate index label; see *Dry eyes*.

Technetium-99

A radioactive isotope related to technetium-99m; technetium isotopes are used in nuclear medicine and radioactive decay studies.

Technetium-99M

Most widely used radionuclide in nuclear medicine. Half-life: 6 hours. Emits 140 keV gamma rays. Produced from molybdenum-99/technetium-99m generator. Used with various ligands: MDP (bone), sestamibi (myocardium), DTPA (renal), nanocolloid (lymphatic), HMPAO (brain perfusion).

Technique

The method, equipment, and protocol used to perform a medical examination, procedure, or imaging study.

Tedizolid Pharmacokinetics

The study of how tedizolid is absorbed, distributed, metabolized, and eliminated. Tedizolid is available orally and intravenously and has pharmacokinetic properties that support once-daily treatment; its clinical use depends on the infection and patient factors.

TEE

TEE, or transesophageal echocardiography, uses an ultrasound probe in the esophagus to obtain detailed images of heart valves, chambers, clots, and nearby vessels.

Teen Depression

A depressive disorder in an adolescent that causes persistent low mood or loss of interest and impairs daily functioning.

Alternate Names:

Depression, Teen

Teenage Pregnancy

Pregnancy in adolescents (usually 10-19 years), associated with higher maternal and fetal risks: preterm birth, low birth weight, preeclampsia, anemia, and increased neonatal mortality; also socioeconomic and educational consequences. Causes: unprotected intercourse, lack of contraception/education, poverty, and peer/family factors.

Teenagers And Drugs

Drug use during adolescence can affect brain development, school and relationships, safety, and mental health; early, nonjudgmental screening and support can reduce harm.

Teenagers And Sleep

Teenagers commonly need about eight to ten hours of sleep, but schedules, screens, caffeine, mood, school demands, and sleep disorders can reduce sleep quality.

TEER

Alternate name; see *Transcatheter Edge-to-Edge Repair*.

Teeth

Hard, mineralized structures in the mouth used for cutting, tearing, and grinding food.

Teeth Grinding

Alternate index label; see *Teeth grinding (bruxism)*.

Teeth Grinding (Bruxism)

Alternate index label for Bruxism.

Teeth, Disorders Of

Conditions affecting teeth, including caries, developmental defects, infection, trauma, malocclusion, and tumors.

Teeth-Grinding

Bruxism, repetitive clenching or grinding of teeth, often during sleep and capable of causing tooth wear and jaw pain.

Teething

Teething is eruption of an infant's primary teeth through the gums and may cause gum discomfort, drooling, and chewing; high fever or severe illness suggests another cause.

Teichopsia

A visual disturbance involving shimmering or fortification spectra, commonly occurring as a migraine aura.

Teicoplanin

A glycopeptide antibiotic used for selected serious gram-positive infections.

Telangiectasia

A visible, permanently dilated small blood vessel near the skin or mucosal surface, occurring alone or with conditions such as rosacea, liver disease, or inherited vascular syndromes.

Telangiectasis

Dilation of small superficial blood vessels, producing visible red or purple lines or patches.

Tele Radiology (Teleradiology)

The medical practice and technology of transmitting digital radiological patient images (such as plain radiographs, CT scans, MRIs, and ultrasonograms) across telecommunication networks from the site of acquisition to off-site, remote radiologists for the purposes of primary interpretation, emer-

gency triage, or secondary expert subspecialty consultation. Utilizes standardized Picture Archiving and Communication Systems and Digital Imaging and Communications in Medicine data transmission protocols with secure encryption compliant with healthcare privacy regulations. Essential for providing continuous 24/7 overnight emergency coverage to community hospitals and rural trauma centers.

Tele-Rehabilitation

Remote rehabilitation via technology. Video consultations, remote monitoring, home exercise programs. Increases access, especially rural.

Telehealth

Delivery of healthcare through secure electronic communication or remote monitoring, including video visits, telephone care, messaging, and transmission of clinical data.

Telemedicine

Delivery of medical care at a distance using information and communication technology. It may include video or telephone consultations, secure messages, remote diagnosis, treatment, and review of clinical information.

Telogen Effluvium

A common, non-scarring form of diffuse hair shedding that occurs when more hairs than usual enter the resting (telogen) phase. Shedding often begins 2–4 months after illness, fever, surgery, childbirth, major stress, rapid weight loss, nutritional deficiency, or certain medicines. It is usually temporary, with regrowth after the trigger is corrected, although recovery may take several months.

Telomere

Protective DNA sequence at chromosome ends. Shortens with cell division. Associated with aging.

Temazepam

A benzodiazepine hypnotic used short term for insomnia; sedation, dependence, and respiratory depression are risks.

Temperature

A measurement of body heat. The result varies with the measurement site, time, activity, age, and illness.

Temperature (Body Temperature)

The balance between heat production (metabolism, muscle activity) and heat loss (radiation, conduction, convection, evaporation). Normal core body temperature: 36.5–37.5°C (97.7–99.5°F), regulated by the hypothalamus (preoptic anterior hypothalamus—thermoregulatory center).

Alternate Names:

Body Temperature

Temperature Measurement

Measurement of body or environmental temperature using a thermometer or sensor at a specified site, interpreted with method, age, timing, and clinical context.

Temperature Scales

Systems for expressing temperature, including Celsius, Fahrenheit, and Kelvin.

Temple

The region of the skull at the side of the head between the forehead and ear.

Temple Syndrome

A genomic-imprinting disorder involving chromosome 14q32 that causes prenatal and postnatal growth restriction, hypotonia, developmental delay, feeding difficulty, short stature, and abnormal pubertal development.

Temporal

Relating to time or to the side of the skull and temporal lobe.

Temporal Arteritis

A vasculitic disorder affecting medium and large arteries, particularly the temporal artery, predominantly occurring in adults over 50 years of age.

Temporal Artery

An artery on the side of the scalp, especially the superficial temporal artery.

Temporal Bones

Paired bones forming the cranial floor and lateral wall, with squamous, petrous, mastoid, tympanic, and styloid parts. Contain the external auditory canal, middle and inner ear, and foramina: carotid canal (internal carotid), jugular foramen (CN IX-XI, IJV), and foramen lacerum.

Temporal Lobe

One of the four major lobes of the cerebral hemisphere, located beneath the lateral fissure (Sylvian fissure) on the lateral surface of the brain, extending medially to the parahippocampal gyrus. The temporal lobe is involved in auditory processing, language comprehension, memory, and emotion.

Temporal Lobe Epilepsy

The most common form of focal (partial) epilepsy, arising from the medial temporal lobe structures (hippocampus, amygdala, parahippocampal gyrus).

Temporal Lobe Seizure

A seizure that begins in the temporal lobe of the brain and may cause altered awareness, unusual sensations, or repetitive movements.

Alternate Names:

Seizure, Temporal Lobe

Temporary Loss Of Consciousness

Temporary loss of consciousness is a brief episode of unresponsiveness with loss of postural tone, commonly from syncope but sometimes from seizure or another disorder.

Temporomandibular Disorders

Alternate index label; see *TMJ disorders*.

Temporomandibular Joint

Synovial ginglymoarthrodial joint between mandibular condyle and temporal bone's mandibular fossa, separated by an articular disc. Only bilateral body

joint, allowing hinge and sliding movements. Disc divides into superior/inferior compartments. Temporomandibular disorders cause pain, clicking, limited movement, common with bruxism.

Temporomandibular Joint Disorder

Pain and dysfunction of TMJ and masticatory muscles. Symptoms: jaw pain, clicking, limited opening, headache, ear pain. Etiology: multifactorial (bruxism, stress, trauma, occlusion). Treatment: conservative (reassurance, self-care, splint, NSAIDs), physical therapy, rare surgery.

Temporomandibular Joint Replacement

Total joint replacement for severe TMJ pathology. Indications: ankylosis, severe degenerative disease, failed previous surgery.

Temporomandibular Joint Syndrome

Pain or dysfunction involving the jaw joint and chewing muscles, often causing jaw pain, clicking, restricted opening, headache, or tooth-related symptoms. Causes include clenching, trauma, arthritis, and stress-related muscle tension. Persistent locking, severe pain, or inability to eat requires dental or medical evaluation.

Temporomandibular Joint Syndrome

Alternate index label for TMJ.

Temporomandibular Joint Syndrome

Alternate index label for Temporomandibular Joint Syndrome.

TEN

Alternate index label; see *Toxic epidermal necrolysis*.

Tenascin

A family of extracellular-matrix proteins involved in cell adhesion, tissue development, wound healing, and tumor biology.

Tender

Painful or sensitive when touched or pressed, a

finding that may indicate inflammation, infection, trauma, ischemia, or another underlying process.

Tenderness

Pain or discomfort produced by pressing a body part.

Tendinitis

Tendinitis is painful inflammation or degeneration of a tendon, often from repetitive loading, causing localized tenderness and pain with movement.

Tendinitis Rotator Cuff (Rotator Cuff)

Alternate index label for Rotator Cuff.

Tendinitis, Achilles

Alternate index label; see *Achilles tendinitis*.

Tendinitis, Patellar

Alternate index label; see *Patellar tendinitis*.

Tendinopathy

A disorder involving tendon pain and impaired tendon structure, usually related to overuse or degeneration.

Tendon

Dense regular connective tissue connecting muscle to bone, composed primarily of type I collagen fibers arranged in parallel bundles. Transmits muscle force to bone to produce movement. Poor vascularity (slower healing). Enclosed in tendon sheath (synovial) at friction points.

Tendon Injury

Damage to a tendon ranging from microscopic overuse injury to partial or complete rupture, causing localized pain, weakness, swelling, or loss of function.

Tendon Repair

A medical procedure, treatment, device, or care topic related to tendon repair; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Tendon Sheath

A thin lubricated covering around some tendons that reduces friction as the tendon moves; inflammation is called tenosynovitis.

Tendon Transfer

Surgical relocation of a functioning tendon to restore movement or balance when the original muscle-tendon unit is absent, paralyzed, or irreparable. Successful transfer requires an adequate donor, appropriate excursion, and a stable recipient joint.

Tendonitis

Tendinopathy: inflammation or degeneration of a tendon from overuse, repetitive strain, or trauma, causing localized pain, swelling, and tenderness with activity. Common sites: rotator cuff (supraspinatus), lateral elbow (tennis elbow), medial elbow (golfer's elbow), Achilles, patellar (jumper's knee), biceps, and De Quervain.

Tenecteplase

A modified tissue plasminogen activator (TNK-tPA) thrombolytic with longer half-life, higher fibrin specificity, and resistance to PAI-1. Used for acute ischemic stroke and STEMI. Given as a single IV bolus (weight-based), simplifying administration. Adverse effects: hemorrhage (intracranial—major concern), allergic reactions.

Tenericutes

A former bacterial group characterized by organisms that lack a typical cell wall, including *Mycoplasma* and related bacteria.

Tenesmus

A distressing sensation of needing to empty the bowel or bladder despite little output, commonly caused by rectal inflammation, infection, tumor, constipation, or urinary irritation.

Tenia

Tenia is an older or variant spelling related to *Taenia*, a genus of tapeworms that can infect humans or animals.

Teniposide

Teniposide is a podophyllotoxin-derived antineoplastic drug that inhibits topoisomerase II and is used in selected leukemia or lymphoma regimens.

Tennis Elbow

Lateral epicondylitis, a tendinopathy of the common extensor tendon at the lateral epicondyle (extensor carpi radialis brevis). Caused by repetitive wrist extension and overuse, not limited to tennis. Presents with lateral elbow pain worsened by wrist extension and grip. Tenderness over the lateral epicondyle.

Alternate Names:

Epicondylitis, Lateral Lateral Elbow Tendinopathy
Lateral Epicondylitis Lateral Epicondylitis

Tennis Elbow (Lateral Epicondylitis)

Alternate index label for Lateral Epicondylitis.

Tennis Elbow Surgery

A medical procedure, treatment, device, or care topic related to tennis elbow surgery; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Tenodesis

Surgical fixation of a tendon to bone or another tendon to restore function, stabilize a joint, or treat tendon imbalance.

Tenofovir

Tenofovir is a nucleotide reverse-transcriptase inhibitor used with other medicines for HIV and as treatment or prevention for hepatitis B; renal and bone toxicity and formulation-specific monitoring are important.

Tenosynovitis

Tenosynovitis is inflammation of the sheath surrounding a tendon, producing pain, swelling, and restricted gliding, commonly in the hand or wrist.

Tenosynovitis, De Quervain'S

Alternate index label; see *De Quervain tenosynovitis*.

Tenotomy

The surgical cutting, division, or transection of a tendon, performed through open, percutaneous, or endoscopic approaches. Utilized in orthopedic, pediatric, and ophthalmic surgery to relieve severe muscle contractures, eliminate pathological spastic deforming forces, or rebalance joint kinematics. Classic applications include percutaneous Achilles tenotomy (a key step in the Ponseti method for correcting congenital talipes equinovarus / clubfoot), extraocular muscle tenotomy (to adjust alignment in strabismus surgery), and release of contracted flexor tendons in cerebral palsy or stroke spasticity.

Tenovaginitis

Inflammation of a tendon and its surrounding sheath, also called tenosynovitis.

Tensile Strength

The ability of a tissue or material to resist being pulled apart; it is important in wound healing and the integrity of sutures, tendons, and other connective tissues.

Tensilon Test

An older pharmacologic test using edrophonium to look for brief improvement in muscle weakness in suspected myasthenia gravis; it is rarely used because safer tests are available.

Tension

A pulling force or state of being stretched; in medicine it may describe tissue tension, blood-vessel wall tension, muscle tightness, or psychological strain depending on context.

Tension Headache

The most common headache type, characterized by bilateral, pressing/tightening head pain of mild-moderate intensity (like a band around the head), lasting 30 min to days, without nausea or vomiting; photophobia or phonophobia may be present but not both.

Tension Pneumothorax

Life-threatening pneumothorax with mediastinal

shift. Emergency needle decompression (2nd intercostal space, midclavicular line) followed by chest tube. Signs: respiratory distress, hypotension, tracheal deviation, distended neck veins, unilateral absent breath sounds.

Tension-Type Headache

A usually bilateral, pressing or tightening headache of mild-to-moderate intensity without prominent nausea, often associated with stress, muscle tenderness, or poor sleep.

Tentorium

A fold of dura mater separating the cerebellum from the occipital lobes.

Tenuazonic Acid

A mycotoxin produced by some fungi that contaminates certain plants and foods and can inhibit protein synthesis; toxicity depends on exposure and the producing organism.

Teprotumumab

A monoclonal antibody targeting the insulin-like growth factor 1 receptor and used to treat thyroid eye disease in selected patients.

Ter In Die

Ter in die means three times a day; explicit plain-language timing is safer than relying on Latin abbreviations.

Terameprocol

Terameprocol is an investigational anticancer compound that affects transcription factors and cell-survival pathways.

Teratocarcinoma

A teratocarcinoma is a malignant germ-cell tumor containing tissues from more than one embryonic layer, often arising in the testis or ovary.

Teratogen

Substance causing birth defects. Examples: thalidomide, isotretinoin, alcohol, warfarin, valproate, ACE

inhibitors. Prenatal exposure critical.

Teratogenesis

The production of congenital abnormalities by genetic, environmental, infectious, nutritional, or drug-related influences.

Teratogenic

Capable of causing congenital malformations, growth impairment, functional deficits, or pregnancy loss when an embryo or fetus is exposed during a vulnerable developmental period.

Teratogenic Drugs

Medicines that can cause birth defects, pregnancy loss, or impaired fetal development; risk depends on the drug, dose, timing, and pregnancy.

Teratogenicity

The ability of a drug, chemical, or infectious agent to cause birth defects or developmental abnormalities when exposure occurs during pregnancy. The risk of teratogenic effects depends on the timing of exposure, with the embryonic period from 3 to 8 weeks after fertilization being the most critical for organogenesis.

Teratoma

A type of germ cell tumor composed of tissues derived from two or three germ layers (ectoderm, endoderm, mesoderm), reflecting pluripotent differentiation.

Teratozoospermia

Teratozoospermia is a high proportion of abnormally shaped sperm and may contribute to reduced fertility, though semen results must be interpreted as a whole.

Terazosin Hydrochloride

The hydrochloride salt of terazosin, an alpha-1 blocker used for urinary symptoms from benign prostatic enlargement and sometimes for hypertension; dizziness and first-dose fainting can occur.

Terbinafine

An allylamine antifungal agent that inhibits squalene epoxidase, an early enzyme in the ergosterol biosynthesis pathway, causing accumulation of squalene and depletion of ergosterol in the fungal cell membrane. The accumulation of squalene is fungicidal, while ergosterol depletion disrupts membrane function.

Terbufos

Terbufos is a highly toxic organophosphate pesticide that inhibits acetylcholinesterase and can cause severe cholinergic poisoning.

Terbutaline

A beta-2 agonist used as a bronchodilator; it has limited and specialist use as a tocolytic.

Terfenadine

An older antihistamine withdrawn or restricted in many places because interactions and excessive blood levels can cause dangerous heart-rhythm abnormalities.

Teriparatide For Osteoporosis

Recombinant human parathyroid hormone fragments one through thirty-four that stimulate osteoblast-mediated bone formation. Indicated for severe osteoporosis with fractures or very low T-scores and for patients who have failed or are intolerant to bisphosphonates. Daily subcutaneous injection for up to two years.

Terlipressin

Terlipressin is a vasopressin analogue that constricts splanchnic vessels and is used in selected cases of variceal bleeding or hepatorenal syndrome.

Term

The end of pregnancy at 37 completed weeks of gestation; births before this are classified as preterm.

Term Birth

Term birth occurs at or after 37 completed weeks of pregnancy; early term, full term, and late or post-

term categories describe more specific gestational ranges.

Terminal Care

Care focused on comfort, symptom relief, dignity, and support for a person with an advanced illness who is approaching the end of life.

Terminal Delirium

Delirium occurring near the end of life, often caused by advanced organ failure, medication effects, metabolic disturbance, infection, or reduced cerebral perfusion. Management prioritizes comfort, reversible contributors when consistent with goals, and support for the patient and family.

Terminal Ileitis

Inflammation of the distal ileum, commonly associated with Crohn disease but also caused by infection, ischemia, medication, or other inflammatory conditions and producing pain, diarrhea, or bleeding.

Terminal Illness

An advanced disease that is expected to lead to death, although the timing and response to available treatment may vary.

Terminal Insomnia

Waking too early and being unable to return to sleep, a pattern that can occur in depression, circadian-rhythm disorders, aging, or other insomnia conditions.

Terms Medical Abbreviations (Common Medical Abbreviations And Terms)

Alternate index label for Common Medical Abbreviations and Terms.

Terpene

A terpene is a hydrocarbon built from isoprene units and found in plant oils, fragrances, medicines, and other natural products.

Terry'S Nails

A nail change in which most of the nail plate appears

white with a narrow pink or brown distal band; it may be associated with liver disease, heart failure, diabetes, or ageing.

Tertian Fever

A fever pattern recurring approximately every 48 hours, classically associated with *Plasmodium vivax* or *P. falciparum* malaria.

Tertiary Hyperparathyroidism

Autonomous overproduction of parathyroid hormone after long-standing secondary hyperparathyroidism, usually in chronic kidney disease, causing high calcium and high PTH.

Tertiary Prevention

Reducing complications from established disease. Examples: rehabilitation, chronic disease management, palliative care.

Tertiary Protein

The three-dimensional folding of a single protein chain, created by interactions among amino-acid side chains and determining the protein's functional shape.

Tesetaxel

Tesetaxel is an investigational oral taxane that disrupts microtubules and has been studied as an anti-cancer treatment.

Test Meal

A standardized meal given before measuring a physiologic response, such as gastric acid or glucose handling.

Test Strips

Reagents for diagnostic testing. Types: urine dipstick, blood glucose, ketone.

Test-Tube

A laboratory glass or plastic vessel used to contain, mix, or test small samples.

Test-Tube Baby

A lay term for a baby conceived through in-vitro fertilization.

Testes

The paired male gonads that produce sperm and testosterone and are located in the scrotum.

Testicle

One of the male reproductive glands in the scrotum. It produces sperm and testosterone; sudden severe testicular pain is an emergency because it may indicate torsion.

Testicle Lump

A localized mass or enlargement in or around a testis caused by cyst, infection, inflammation, torsion, trauma, or tumor; a new intratesticular mass requires prompt evaluation.

Testicle Pain

Pain in one or both testes or the surrounding structures, with urgent causes including torsion, infection, trauma, and incarcerated hernia.

Testicle, Diseases Of

Disorders of the testis, including torsion, infection, trauma, tumors, vascular disease, and developmental abnormalities.

Testicle, Retractable

Alternate index label; see *Retractable testicle*.

Testicle, Undescended

Alternate index label; see *Undescended testicle*.

Testicles

The paired male reproductive glands in the scrotum that produce sperm and testosterone; pain, enlargement, a new lump, or sudden change requires examination.

Testicular Atrophy

Shrinkage and loss of functional tissue in a testicle caused by undescended testis, infection, torsion,

trauma, varicocele, hormones, aging, or other injury.

Testicular Biopsy

Removal of a small sample of testicular tissue for microscopic examination, used selectively to evaluate infertility, atypical lesions, or suspected testicular disease.

Testicular Cancer

Most common solid malignancy in young men 15-35 years. Types: germ cell tumors (seminoma, non-seminoma), sex cord-stromal tumors. Presentation: painless testicular mass, heaviness, ache. Diagnosis: scrotal ultrasound, tumor markers (AFP, beta-hCG, LDH).

Alternate Names:

Cancer, Testicular

Testicular Disorders

Conditions affecting the testes or surrounding structures, including torsion, infection, inflammation, trauma, tumors, and hormonal disorders. Symptoms may include pain, swelling, a mass, infertility, or changes in sexual development and require appropriate evaluation.

Alternate Names:

Infection Testicle (Testicular Disorders) Pain Scrotum (Testicular Disorders) Torsion Testicle (Testicular Disorders) Tumor Testicle (Testicular Disorders)

Testicular Gonadoblastoma

A rare mixed germ-cell and sex-cord tumor arising in a dysgenetic or undescended gonad, often associated with Y-chromosome material and risk of another germ-cell tumor.

Testicular Hydrocele

A collection of clear fluid around a testicle within the tunica vaginalis, causing painless scrotal enlargement that transilluminates; it may be congenital, reactive, or secondary to disease.

Testicular Mass

A lump or enlargement within or around a testicle caused by tumor, infection, inflammation, cyst,

hematoma, or torsion; a solid intratesticular mass requires urgent ultrasound and specialist assessment.

Testicular Microlithiasis

Multiple tiny calcifications within the testicular tissue seen on ultrasound. The finding alone does not establish cancer, and follow-up depends on other risk factors and clinical findings.

Testicular Self-Exam

A testicular self-exam is a gentle check for new lumps, swelling, heaviness, or changes in size or shape; a new abnormality should be medically assessed.

Testicular Torsion

Surgical emergency caused by twisting of the spermatic cord around its longitudinal axis, cutting off venous return and leading to arterial occlusion, ischemia, and infarction of the testicle.

Alternate Names:

Torsion, Testicular

Testicular Torsion Emergency

Rotation of the spermatic cord that compromises testicular blood flow, causing sudden unilateral scrotal pain, nausea, a high-riding testis, and an abnormal cremasteric reflex. Immediate surgical exploration and detorsion are required; imaging must not delay treatment when suspicion is high.

Testicular Torsion Repair

Urgent surgery to untwist a spermatic cord and restore testicular blood flow, followed by fixation of the affected and usually opposite testis to prevent recurrence.

Testis

The male reproductive gland that produces spermatozoa in seminiferous tubules and secretes testosterone from interstitial Leydig cells. It is normally located in the scrotum.

Testis (Testicle)

The male gonad, a paired ovoid organ (4–5 cm ×

2–3 cm, weight 15–20 g) located in the scrotum, responsible for sperm production (spermatogenesis) and testosterone secretion. Each testis is covered by the tunica vaginalis (peritoneal remnant) and tunica albuginea (dense fibrous capsule).

Alternate Names:

Testicle

Testis Disorder

A condition affecting a testicle, including torsion, infection, tumor, trauma, infertility-related damage, hormonal dysfunction, or abnormal development.

Testis Neoplasm

A tumor arising in testicular tissue, most commonly a germ-cell tumor in younger adults; painless enlargement, heaviness, or a solid mass requires prompt ultrasound and evaluation.

Testolactone

An aromatase inhibitor formerly used to reduce estrogen production in selected endocrine conditions; current use is limited by availability and newer alternatives.

Testosterone

A steroid sex hormone produced mainly by the testes and, in smaller amounts, by the ovaries and adrenal glands. It supports reproductive development, muscle and bone maintenance, red-blood-cell production, libido, and other physiologic functions; levels vary with age, sex, time of day, illness, and medicines.

Testosterone Deficiency

Alternate index label; see *Male hypogonadism*.

Testosterone Low (Low Testosterone (Low T))

Alternate index label for Low Testosterone (Low T).

Testosterone Propionate

A short-acting injectable testosterone ester used in selected hormone-replacement or androgen-

deficiency settings; risks include erythrocytosis, infertility, acne, mood effects, and prostate-related monitoring needs.

Tests And Visits Before Surgery

Preoperative tests and visits review health conditions, medicines, anesthesia risk, needed laboratory or imaging tests, and instructions for the operation.

Tests For H Pylori

Tests for *Helicobacter pylori* infection, including urea breath testing, stool antigen testing, biopsy-based testing, or selected blood tests; choice depends on treatment and clinical context.

Tet Spell

An acute, paroxysmal, life-threatening hypercyanotic episode occurring in infants and young children with unrepaired Tetralogy of Fallot. Triggered by crying, defecation, feeding, pain, or exertion, which causes catecholamine release and infundibular spasm of the right ventricular outflow tract, resulting in a dramatic increase in right-to-left intracardiac shunting through the ventricular septal defect, hypoxemia, metabolic acidosis, and profound cyanosis. Emergency management includes calming the child, placing the patient in a knee-to-chest position (which increases systemic vascular resistance and reduces right-to-left shunting), administering supplemental oxygen, intravenous fluids, and morphine or beta-blockers (propranolol).

Alternate Names:

Hypercyanotic Spell; Paroxysmal Dyspneic Attack; Blue Spell

Tetanus

Tetanus is toxin-mediated neurologic disease caused by *Clostridium tetani* entering a wound, producing painful muscle rigidity, spasms, autonomic instability, and respiratory failure. introduced through wounds. Characterized by generalized rigidity and painful muscle spasms (trismus/lockjaw, risus sardonicus, opisthotonos). Autonomic instability can occur in severe cases. Diagnosis: clinical.

Alternate Names:

Lockjaw

Tetanus Toxin

An infectious process or toxic exposure involving tetanus toxin; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Tetany

A clinical syndrome of neuromuscular hyperexcitability caused by hypocalcaemia (most common—total calcium <2.1 mmol/L, ionised calcium <1.1 mmol/L), but also caused by hypomagnesaemia, hypokalaemia, and alkalosis (respiratory or metabolic).

Tethered Cord Syndrome

A congenital or acquired condition where the spinal cord is abnormally attached (tethered) to surrounding tissues, restricting its normal upward movement within the spinal canal. Caused by a thickened filum terminale, lipomeningomyelocele, diastematomyelia, or previous myelomeningocele repair.

Tetrabenazine

A vesicular monoamine transporter 2 inhibitor used for selected hyperkinetic movement disorders.

Tetracaine

Tetracaine is a potent ester local anaesthetic used topically or for spinal anaesthesia; excessive dose can cause seizures, cardiovascular toxicity, and methemoglobinaemia.

Tetrachloroethylene

Tetrachloroethylene, or perchloroethylene, is an industrial solvent used in dry cleaning; substantial exposure can affect the nervous system, liver, and kidneys.

Tetrachlorvinphos

Tetrachlorvinphos is an organophosphate insecticide that can inhibit acetylcholinesterase and cause cholinergic toxicity after exposure.

Tetracycline

A medicine, biologic, or pharmacologic term related

to tetracycline; its mechanism, indication, interactions, and adverse effects depend on the specific agent.

Tetracycline Stain

Intrinsic discoloration from tetracycline antibiotics during tooth development. Gray or brown bands. Treatment: bleaching, veneers, crowns.

Tetracyclines

A class of bacteriostatic antibiotics that bind reversibly to the 30S ribosomal subunit and block the attachment of aminoacyl-tRNA to the acceptor site, inhibiting protein synthesis. They include tetracycline, doxycycline, and minocycline.

Tetrahydrozoline Poisoning

Poisoning from swallowing eye drops or nasal drops containing tetrahydrozoline. It can cause extreme sleepiness, slow heart rate, low blood pressure, and breathing problems, especially in children.

Tetralogy Of Fallot

Tetralogy of Fallot is a congenital heart defect combining ventricular septal defect, right-ventricular outflow obstruction, overriding aorta, and right-ventricular hypertrophy.

Tetralogy Of Fallot

A congenital heart defect comprising ventricular septal defect, right-ventricular outflow obstruction, overriding aorta, and right-ventricular hypertrophy.

Tetraplegia

Paralysis or severe weakness of all four limbs, usually from cervical spinal-cord disease or injury.

Tetraplegia (Quadriplegia)

Paralysis or severe weakness affecting all four limbs and usually the trunk, commonly caused by cervical spinal-cord injury or disease.

Alternate Names:

Quadriplegia

TGA

Alternate index label; see *Transient global amnesia*.

Th1/Th2/Th17/Tfh/Treg Balance

CD4+ T helper subsets defined by master transcription factors and signature cytokines: Th1 (Tbet, IFN-gamma, IL-12, STAT4): intracellular pathogens, autoimmunity (RA, MS, type 1 diabetes). Th2 (GATA3, IL-4/5/13, IL-4/STAT6): helminths, allergy, asthma.

Thalamus

Bilateral ovoid gray matter structure forming the third ventricle's lateral walls, the brain's relay station for nearly all sensory (except olfaction), motor, and limbic information to the cortex. Numerous nuclei: VPL (spinothalamic, dorsal column), VPM (trigeminal), LGN (visual), MGN (auditory), VL/VA (motor).

Thalassaemia

The British spelling of thalassemia, inherited reduced production of alpha- or beta-globin chains causing anemia.

Thalassemia

A group of inherited hemoglobin disorders caused by reduced or absent synthesis of one or more globin chains, leading to microcytic hypochromic anemia.

Alternate Names:

Cooley's Anemia Mediterranean Anemia

Thalassemia Major

Beta-thalassemia, an autosomal recessive hemoglobin disorder with absent or minimal beta-globin chain production. Presents in infancy with severe anemia, failure to thrive, hepatosplenomegaly, and skeletal deformities. Diagnosis by hemoglobin electrophoresis showing absent HbA and elevated HbF and HbA2.

Beta-Thalassemia Trait

The heterozygous carrier state for a beta-globin gene variant. It is usually asymptomatic or causes mild microcytosis with mild or no anemia; hemoglobin

electrophoresis often shows increased HbA2. It is also called beta-thalassemia minor.

Alternate Names:

Beta Thalassemia Trait Beta-Thalassemia Minor
Thalassemia Minor

Thalidomide

An immunomodulatory medicine used for selected cancers and inflammatory disorders; it is strongly teratogenic.

Thallium

Thallium is a toxic heavy metal that can cause gastrointestinal illness followed by painful peripheral neuropathy, hair loss, skin changes, kidney or liver injury, seizures, and cardiovascular or neurologic toxicity. Suspected exposure requires immediate poison-control or emergency guidance.

Alternate Names:

Poisoning Thallium (Thallium)

Thallium Scan

Nuclear medicine imaging using Tl-201. Myocardial perfusion, tumor detection. Largely replaced by Tc-99m agents.

Thallium-201

SPECT radionuclide, half-life 73 hours. Used for myocardial perfusion imaging. Mechanism: K⁺ analog, taken up by Na⁺/K⁺ ATPase.

Thanatology

The scientific study of death, dying, postmortem changes, and the psychological, social, and ethical aspects of bereavement. In forensic medicine, it also examines the circumstances and evidence surrounding death.

Thanatophoric Dysplasia

A severe skeletal dysplasia, usually caused by an FGFR3 variant, with markedly shortened limbs, narrow thorax, macrocephaly, and characteristic skull and vertebral abnormalities. The severe thoracic restriction commonly causes neonatal respiratory failure.

Theca

A connective-tissue sheath, especially the theca surrounding an ovarian follicle.

Theca Lutein Cyst

A benign, functional ovarian cyst characteristically occurring bilaterally and filled with clear straw-colored fluid, resulting from hyperstimulation and marked luteinization of thecal cells driven by abnormally high circulating levels of human chorionic gonadotropin (β -hCG). Strongly associated with gestational trophoblastic disease (hydatidiform mole and choriocarcinoma), multiple gestations, and clomiphene or gonadotropin therapy, typically resolving spontaneously once β -hCG levels normalize.

Thecoma

A usually benign ovarian sex-cord stromal tumor composed of theca-like cells, often producing estrogen and presenting with abnormal uterine bleeding or an incidental adnexal mass.

Thelarche

The onset of breast development, usually the first visible sign of female puberty. It commonly begins between ages 8 and 13, with substantial normal variation.

Thenar Eminence

The fleshy muscular prominence at the base of the thumb.

Theophylline

A methylxanthine bronchodilator with a narrow therapeutic index and substantial interaction and toxicity risk.

Theranostic Pair

Combined therapy and diagnostics using matched radiopharmaceutical pairs. See theranostics.

Theranostics

Combined therapy and diagnostics using matched radiopharmaceutical pairs. Diagnostic isotope (e.g., Ga-68) identifies target, therapeutic isotope (e.g.,

Lu-177) delivers treatment. Examples: Ga-68/Lu-177 DOTATATE (neuroendocrine tumors), PSMA theranostics (prostate cancer).

Therapeutic Abortion

Intentional termination of a pregnancy because of medical, fetal, or other legally recognized indications, according to applicable law and clinical guidance.

Therapeutic Alliance

The collaborative, trusting relationship between therapist and patient that is foundational to effective psychotherapy. It includes agreement on goals, tasks, and the bond between therapist and patient. It is the strongest predictor of psychotherapy outcome across all therapeutic modalities.

Therapeutic Cloning

Creating a genetically matched embryonic stem-cell line for research or potential tissue replacement; it is distinct from reproductive cloning and remains ethically and technically limited.

Therapeutic Exercise

Exercise prescribed to improve function, reduce pain, prevent disability. Types: stretching, strengthening, aerobic, balance, functional. Progression: low to high intensity.

Therapeutic Hypothermia

Controlled cooling of the body temperature used in psychiatric practice for severe catatonia and neuroleptic malignant syndrome. In NMS, cooling is a key treatment alongside discontinuation of the offending agent and dantrolene administration.

Therapeutic Index

The therapeutic index is a quantitative measure of the relative safety of a drug, defined as the ratio of the dose that produces toxicity in 50 percent of the population to the dose that produces the desired therapeutic effect in 50 percent of the population.

Therapeutic Window

The range of plasma drug concentrations between the minimum effective concentration (producing a therapeutic effect) and the minimum toxic concentration (producing toxicity), in which efficacy is achieved with acceptable toxicity.

Therapeutics

The branch of medicine concerned with the treatment of disease, encompassing all interventions used to prevent, manage, or cure illness.

Therapy

Treatment intended to prevent, relieve, or cure disease or to improve function and quality of life.

Therapy Monitoring

Repeated clinical assessment, laboratory testing, or imaging used to evaluate response, adverse effects, and ongoing need for treatment.

Thermal Injury

Tissue damage caused by heat, flame, hot liquid, steam, or cold. Burn severity depends on depth, total body surface area, location, inhalation injury, associated trauma, and patient factors; assessment should include airway and circulatory complications.

Thermal Injury (Burns)

Tissue damage caused by heat. Initial care includes stopping the exposure, removing loose constricting material, cooling briefly with clean water, covering the injury, and assessing depth and extent. Larger or deeper burns require specialized evaluation, fluid management, pain control, wound care, and tetanus assessment.

Alternate Names:

Burns

Thermal Therapy

Treatment using heat or cold to influence pain, swelling, muscle tension, or tissue temperature. Effects and safety depend on the condition and method used.

Thermogenesis

Heat production from food digestion, muscle activity, brown fat. Diet-induced thermogenesis 10% of TDEE.

Thermography

Imaging or recording of heat patterns from the body surface.

Thermoluminescent Dosimeter

A radiation-monitoring device that measures accumulated exposure by light released from an irradiated crystal when heated.

Thermometer

Device measuring body temperature. Types: mercury (phased out), digital, tympanic, temporal artery, infrared. Normal oral: 36.5-37.5°C.

Thermometer Scales

Temperature measurement systems such as Celsius, Fahrenheit, and Kelvin.

Thermoneutral Zone

The range of ambient temperatures over which body temperature is maintained by basal metabolic heat production alone, without additional thermoregulatory responses such as shivering or sweating. In humans the zone is approximately 27-32 degrees C for a resting nude adult. Within the zone, vasomotor tone adjusts heat loss.

Thermoplasty

A bronchoscopic procedure that uses radiofrequency energy to ablate smooth muscle in the airways, reducing bronchospasm. It is approved for severe, persistent asthma in adults not controlled with ICS/LABA. It reduces exacerbations and emergency department visits but does not improve lung function.

Thermoreceptor

A specialized free sensory nerve ending or receptive ending that detects physiological variations in local temperature and thermal gradients, classified into

cool/cold receptors and warm/heat receptors. Cold receptors are primarily mediated by transient receptor potential channels such as TRPM8 (activated at 10–25°C and by menthol) transmitting via thinly myelinated A δ fibers, whereas warm receptors are mediated by channels such as TRPV1 (activated by temperatures > 43°C and capsaicin) transmitting via unmyelinated C fibers. Afferent signals ascend through the spinothalamic tract to the preoptic area of the hypothalamus to regulate systemic autonomic thermoregulation (sweating, shivering, cutaneous vasodilation, and vasoconstriction).

Thermoregulation

The physiological maintenance of core body temperature near the set point (37 degrees C) via a balance of heat production and heat loss, controlled by the preoptic area of the hypothalamus.

Thermostat

A thermostat regulates temperature by sensing heat and controlling a heating or cooling system; accurate environmental temperature can matter for patients, specimens, and medicines.

Thiabendazole

An anthelmintic used for selected worm infections and, historically, some fungal infections.

Thiamin

Vitamin B1, a water-soluble vitamin required for carbohydrate metabolism and neural function; severe deficiency can cause beriberi or Wernicke encephalopathy.

Thiamine

Vitamin B1, a water-soluble vitamin required for carbohydrate metabolism and nerve function. Severe deficiency can cause beriberi or Wernicke encephalopathy.

Thiamine (Vitamin B1)

A water-soluble vitamin whose active coenzyme form, thiamine pyrophosphate, is required by pyruvate dehydrogenase, alpha-ketoglutarate dehydrogenase, transketolase, and branched-chain ketoacid

dehydrogenase. Deficiency causes beriberi and Wernicke encephalopathy.

Alternate Names:

Vitamin B1

Thiazide Diuretics

Thiazide diuretics act on the distal convoluted tubule by inhibiting the sodium-chloride cotransporter, reducing sodium and chloride reabsorption and producing natriuresis and diuresis. They are less potent than loop diuretics but have a longer duration of action, typically 6 to 12 hours.

Thiazide Overdose

Taking too much of a thiazide diuretic can cause dehydration, low blood pressure, abnormal sodium or potassium levels, confusion, or abnormal heart rhythms.

Thiazides

Diuretics that inhibit sodium-chloride reabsorption in the distal convoluted tubule.

Thiazolidinedione Drugs

A group of diabetes medicines that make body tissues more sensitive to insulin by activating a protein called PPAR-gamma. Pioglitazone is the main example; possible effects include weight gain, swelling, bone fractures, and worsening heart failure.

Thiazolidinediones

Insulin sensitizers activating peroxisome proliferator-activated receptors primarily in adipose tissue and skeletal muscle. Agents include pioglitazone and rosiglitazone. Mechanisms include enhanced insulin-mediated glucose uptake, altered adipokine secretion, and reduced hepatic glucose output.

Thigh

The part of the lower limb between the hip and knee.

ThinPrep Pap Test

A cervical cancer screening test in which cells collected from the cervix are placed in a liquid preser-

vative and examined for abnormal changes.

Alternate Names:

Thin Prep Pap Screen

Thiopental Sodium

An ultra-short-acting barbiturate, used for induction of general anesthesia (IV, onset 30–60 seconds, duration 5–10 minutes) and as a third-line agent for raised intracranial pressure (cerebroprotective effect: reduces cerebral metabolism, cerebral blood flow, and intracranial pressure).

Thiopentone Sodium

A short-acting barbiturate anesthetic used for induction in selected settings.

Thioridazine

An older phenothiazine antipsychotic with important cardiac and neurologic toxicity.

Thioridazine Overdose

Poisoning from taking too much thioridazine, an antipsychotic medicine. It can cause severe sleepiness, low blood pressure, seizures, and dangerous heart rhythms.

Thiotepa

An alkylating chemotherapy medicine used in selected cancers and conditioning regimens.

Third Stage Of Labor

From delivery of the baby to delivery of the placenta. The placenta separates from the uterine wall and is expelled spontaneously or with gentle cord traction. Normal duration: 5-30 minutes.

Third Trimester

The period from 28 weeks to delivery. Rapid fetal weight gain occurs, lungs mature with surfactant production. Fetal movements become regular and countable. Braxton Hicks contractions begin. Group B Streptococcus screening at 36 weeks.

Third-Degree AV Block

Complete heart block with no conduction between

atria and ventricles. Atria and ventricles beat independently (AV dissociation). Ventricular escape rhythm: junctional (40-60, narrow QRS) or ventricular (20-40, wide QRS).

Third-Degree Burn

A full-thickness burn that destroys the epidermis and dermis and may extend into subcutaneous tissue. The skin may appear white, brown, or charred and sensation may be reduced. Assessment includes burn depth, extent, inhalation injury, and associated trauma; deep or extensive burns require specialist treatment and may need grafting.

Third-Degree Perineal Tear

A severe perineal laceration sustained during vaginal birth that involves the perineal muscles and extends into the anal sphincter complex, classified under Obstetric Anal Sphincter Injuries. Subdivided internationally into 3a (<50% thickness of the external anal sphincter torn), 3b ($\geq 50\%$ thickness of the external anal sphincter torn), and 3c (both external and internal anal sphincters torn). It requires prompt identification, layered surgical repair in an operating room under adequate regional anesthesia, and proactive postpartum management with laxatives, pelvic floor therapy, and antibiotics to prevent anal incontinence and rectovaginal fistula.

Alternate Names:

Third-Degree Tear; Obstetric Anal Sphincter Tear

Thirst

The conscious desire to drink, regulated largely by osmolality and circulating volume.

Thirst - Absent

Reduced or absent desire to drink despite a potential need for fluids, which can occur with hypothalamic disease, aging, altered consciousness, medications, or severe illness.

Thirst - Excessive

Polydipsia, an abnormally strong or persistent desire to drink, commonly associated with dehydration, diabetes mellitus, diabetes insipidus, medicines, or psychiatric conditions.

Thomsen Disease

The classic autosomal dominant form of myotonia congenita caused by heterozygous mutations in the *CLCN1* gene on chromosome 7q35, which encodes the skeletal muscle voltage-gated chloride channel ClC-1. Characterized by delayed muscle relaxation following voluntary contraction (myotonia) with childhood onset, commonly affecting the hands, legs, eyelids, and jaw. A defining clinical feature is the “warm-up phenomenon,” wherein muscle stiffness significantly diminishes with repeated, consecutive muscle contractions; patients develop diffuse, athletic muscular hypertrophy and action/percussion myotonia, typically experiencing a benign, non-progressive course with normal life expectancy.

Alternate Names:

Autosomal Dominant Myotonia Congenita; Myotonia Congenita (Thomsen Type)

Thoracentesis

Insertion of a needle or catheter into the pleural space to remove fluid for diagnosis or to relieve respiratory symptoms caused by a pleural effusion.

Thoracic

Thoracic means relating to the chest, the thoracic spine, or structures within the thorax such as the heart and lungs.

Thoracic Aortic Aneurysm

Aneurysm of thoracic aorta. Associated with hypertension, Marfan syndrome, bicuspid aortic valve.

Thoracic Cage

The bony and cartilaginous framework formed by the thoracic vertebrae, ribs, costal cartilages, and sternum. It protects thoracic organs and assists respiratory movements.

Thoracic Cavity

The chest cavity, enclosed by the ribs and chest muscles, containing the lungs, heart, esophagus, and trachea.

Thoracic Duct

Body's largest lymphatic vessel, approximately 40 cm long, draining lymph from the entire body below the diaphragm and left side above it (approximately 75 percent of total lymph).

Thoracic Endometriosis

Endometrial tissue within the thoracic cavity causing catamenial pneumothorax, hemothorax, or lung nodules, recurring cyclically with menstruation and often requiring hormonal suppression.

Thoracic Outlet Syndrome

Compression of neurovascular bundle at thoracic outlet. Types: neurogenic (most common), venous, arterial. Symptoms: neck/shoulder/arm pain, paresthesia, weakness, vascular symptoms. Diagnosis: clinical, imaging, nerve conduction. Treatment: physical therapy, surgical decompression.

Alternate Names:

TOS (Thoracic Outlet Syndrome)

Thoracic Outlet Syndrome

Alternate index label for Thoracic Outlet Syndrome.

Thoracic Spine CT Scan

Computed tomography of the thoracic spine used to evaluate vertebral fractures, alignment, bone lesions, spinal canal narrowing, and other bony abnormalities.

Thoracic Spine X-Ray

Plain radiographic imaging of the thoracic spine used to assess vertebral alignment, fractures, curvature, degenerative change, and selected bone lesions.

Thoracic Surgeon

Surgeon specializing in operations on the chest, including lungs, heart, esophagus, and mediastinum.

Thoracic Vertebrae

Have costal facets on bodies and transverse processes for rib articulation. Heart-shaped bodies, long downward spinous processes, coronally-oriented facets allowing rotation and lateral flexion but lim-

iting flexion/extension. Small circular vertebral foramen.

Thoracic Vertebrae (T1-T12)

The twelve vertebrae of the chest region, each articulating with ribs and protecting the thoracic spinal cord while supporting the trunk and rib cage.

Thoracolumbar Spine Trauma

Injury to the thoracic or lumbar spine. Assessment includes fracture morphology, posterior ligamentous complex integrity, and neurologic status. Classification systems such as AO Spine and TLICS help guide management, which depends on stability and the clinical context.

Thoracoscopy

A minimally invasive procedure using a camera inserted through the chest wall to examine or treat the pleura, lungs, or mediastinum.

Thoracotomy

A surgical incision into the chest wall to access the thoracic cavity (pleural space, lungs, heart, great vessels, esophagus, diaphragm, mediastinum).

Thorax

The thorax is the chest region between the neck and abdomen, enclosed by ribs and containing the heart, lungs, major vessels, and mediastinal structures.

Thought Blocking

An abrupt interruption in the train of thought before it is completed, as if the thought was removed or pushed out of the patient's mind. The patient may pause mid-sentence, appear confused, and report that the thought was "taken out" or "blocked." It is a formal thought disorder seen in schizophrenia.

Thought Disorders

Disturbances of the form, flow, or content of thinking, occurring in psychosis and other conditions.

Threadworm

An intestinal infection or the worm *Enterobius ver-*

micularis, also called pinworm.

Threadworm (Enterobiasis)

An intestinal parasitic infection caused by *Enterobius vermicularis*, also called pinworm. Infection spreads when eggs are swallowed, often after contact with contaminated hands, bedding, food, or surfaces.

Alternate Names:

Enterobiasis

Threadworms (Pinworms)

Small intestinal worms, *Enterobius vermicularis*, whose females lay eggs around the anus and commonly cause nocturnal itching.

Alternate Names:

Pinworms

Threatened Miscarriage

Vaginal bleeding during early pregnancy with a closed cervix and no passage of pregnancy tissue; the pregnancy may remain viable. Evaluation commonly includes clinical assessment, serial human chorionic gonadotropin testing when indicated, and ultrasound.

Alternate Names:

Threatened abortion.

Three-Day Measles

Alternate index label; see *Rubella*.

Three-Dimensional Ultrasound

Ultrasound that combines many sound-wave measurements to create a three-dimensional image. It is used in obstetrics, gynecology, and other settings to show anatomy from several angles.

Threonine

An essential amino acid used to build proteins and other body molecules. The body cannot make enough of it, so it must come from food.

Threshold

The minimum stimulus or level required to produce a detectable response or effect.

Thrill

A palpable vibration over the chest or a blood vessel caused by turbulent blood flow.

Throat

The pharynx and adjacent structures behind the mouth and nose.

Throat Cancer

Cancer arising in the pharynx or nearby structures of the throat. Persistent hoarseness, difficulty or pain with swallowing, a neck lump, unexplained weight loss, or persistent sore throat requires medical evaluation, especially in people who use tobacco or alcohol.

Alternate Names:

Cancer, Throat

Throat Cancer (Larynx Cancer)

Alternate index label for Larynx Cancer.

Throat Or Larynx Cancer

Throat or larynx cancer is malignant growth in the pharynx or voice box and may cause persistent hoarseness, swallowing difficulty, pain, or a neck lump.

Throat Swab Culture

Culture of a throat specimen to detect bacterial pathogens, especially group A *Streptococcus*, when evaluating pharyngitis.

Alternate Names:

Throat Culture

Throbbing

A pulsating or beating quality of pain or sensation.

Thrombectomy

A surgical or interventional radiology procedure to remove a blood clot (thrombus) from a blood vessel, restoring blood flow. Types: (1) Endovascular thrombectomy (mechanical thrombectomy)—for acute ischemic stroke due to large vessel occlusion (LVO—internal carotid artery, middle cerebral artery M1 segment).

Thrombectomy (Vascular)

Removal of a blood clot from a blood vessel, using an open surgical or catheter-based procedure.

Alternate Names:

Vascular

Thrombin

A coagulation enzyme that converts fibrinogen to fibrin and activates platelets.

Thromboangiitis Obliterans

Buerger disease, an inflammatory tobacco-associated disease of small and medium arteries and veins.

Thromboangiitis Obliterans (Buerger Disease)

An inflammatory disease of small and medium blood vessels, strongly associated with tobacco use. It can cause pain, color changes, ulcers, or gangrene in the hands or feet. Complete tobacco cessation is essential; further treatment depends on ischemia, tissue loss, and other complications.

Alternate Names:

Buerger Disease

Thrombocytopenia

A misspelling of thrombocytopenia, an abnormally low platelet count.

Thrombocyte (Platelet)

A small (2–4 μm), anucleate, discoid cellular fragment shed from the cytoplasm of mature polyploid megakaryocytes in the bone marrow under the regulation of thrombopoietin. Normal circulating platelet counts range from 150,000 to 450,000/ μL , with a circulating lifespan of 7 to 10 days. Essential for primary hemostasis: upon vascular endothelial disruption, platelets adhere to exposed subendothelial collagen via von Willebrand factor (vWF) and glycoprotein Ib/IX receptors, undergo activation and shape change to release granule contents (ADP, thromboxane A_2), and aggregate via fibrinogen cross-linking of activated glycoprotein IIb/IIIa receptors to form a primary hemostatic plug. Quantitative or qualitative defects lead to

thrombocytopenia or platelet dysfunction, presenting with mucocutaneous bleeding, petechiae, and purpura.

Thrombocytes

Small, anucleate, disc-shaped cell fragments (2–4 μm diameter) derived from megakaryocytes in the bone marrow, circulating at $150\text{--}400 \times 10^9/\text{L}$. See Platelets (Thrombocytes).

Thrombocytopathy

A disorder of platelet function that impairs primary hemostasis despite a normal or near-normal platelet count. It may be inherited or acquired and can cause mucocutaneous bleeding, easy bruising, prolonged bleeding after procedures, or menorrhagia.

Thrombocytopenia

Thrombocytopenia is a low platelet count caused by reduced production, increased destruction or consumption, sequestration, or dilution and may increase bleeding risk.

Alternate Names:

Low Platelet Count

Thrombocytopenia (Low Platelet Count)

Alternate index label for Low Platelet Count.

Thrombocytopenic

Characterized by too few circulating platelets. It may cause easy bruising, nosebleeds, heavy menstrual bleeding, or other bleeding, although some people have no symptoms.

Thrombocytosis

An elevated platelet count ($>450,000/\mu\text{L}$). Reactive (secondary): infection, inflammation, iron deficiency, malignancy, post-splenectomy, hemorrhage, exercise—usually mild, no thrombotic risk.

Thromboelastography

A viscoelastic whole-blood assay that measures the initiation, formation, strength, and breakdown of a clot. It provides a functional overview of coagulation and fibrinolysis and may guide targeted

blood-component therapy in major bleeding.

Thromboembolism

Obstruction of a blood vessel by a clot that formed elsewhere and traveled through the circulation.

Thrombolysis

The dissolution of a blood clot using a medicine such as a fibrinolytic agent. It is used only in selected conditions because it can cause serious bleeding.

Thrombolysis For PE

Systemic thrombolytics (alteplase) for massive PE with hemodynamic instability. Rapid clot dissolution but significant bleeding risk.

Thrombolysis For Stroke

Thrombolysis with intravenous alteplase (tPA) is the primary acute treatment for ischemic stroke when administered within the time window of symptom onset. Alteplase is a recombinant tissue plasminogen activator that converts plasminogen to plasmin, which degrades fibrin in the thrombus, restoring blood flow to the ischemic brain.

Thrombolytic Agents

Medicines that activate fibrinolysis and dissolve an established blood clot; they are used selectively for time-critical conditions because they can cause serious bleeding.

Thrombolytic Therapy

A medical procedure, treatment, device, or care topic related to thrombolytic therapy; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Thrombophilia

A tendency to develop venous thromboembolism due to inherited or acquired hypercoagulable states. Inherited: factor V Leiden, prothrombin G20210A mutation, antithrombin deficiency, protein C deficiency, protein S deficiency.

Thrombophilia Testing

Thrombophilia testing evaluates for inherited and acquired hypercoagulable states in patients with venous thromboembolism, recurrent pregnancy loss, or strong family history of VTE.

Thrombophlebitis

Thrombophlebitis is inflammation of a vein associated with a blood clot and may be superficial or involve deep veins with risk of pulmonary embolism.

Thrombopoiesis

The production of platelets from megakaryocytes in the bone marrow. It is regulated principally by thrombopoietin and involves megakaryocyte maturation, proplatelet formation, and release of circulating platelets.

Thrombosed Intracranial Aneurysm

An intracranial arterial aneurysm that has undergone partial or complete thrombosis of its lumen, which may reduce rupture risk but can cause mass effect on adjacent brain structures. Presents with headache, cranial nerve palsies, or seizures depending on location. Diagnosis: CT, MRI, or conventional angiography.

Thrombosis

The formation of a blood clot within the cardiovascular system during life, potentially obstructing blood flow and causing tissue ischemia or infarction. Arterial thrombi typically form on ruptured atherosclerotic plaques, are composed primarily of platelets and fibrin, and appear pale and grossly attached to the vessel wall.

Thrombosis Of The Inferior Vena Cava

Formation of a blood clot within the inferior vena cava, which may occur in the setting of IVC filters, malignancy, hypercoagulable states, or extension from iliofemoral deep vein thrombosis. May cause bilateral lower extremity edema, abdominal pain, and hepatic or renal dysfunction. Requires anticoagulation and possible thrombectomy.

Thrombotic Microangiopathy

Endothelial damage with platelet-rich microthrombi causing MAHA with schistocytes, thrombocytopenia, and organ ischemia. TTP from ADAMTS13 deficiency treated with plasmapheresis. HUS from Shiga toxin managed supportively. Atypical HUS from complement dysregulation responds to eculizumab.

Thrombotic Thrombocytopenic Purpura

A life-threatening thrombotic microangiopathy usually caused by acquired or inherited deficiency of ADAMTS13, the enzyme that cleaves large von Willebrand factor multimers. It causes platelet consumption, red-cell fragmentation, and possible organ ischemia.

Thrombotic Thrombocytopenic Purpura

A life-threatening hematologic emergency and thrombotic microangiopathy caused by severe deficiency (< 10% activity) of the metalloprotease ADAMTS13, most often mediated by acquired autoantibodies. Loss of ADAMTS13 impairs cleavage of ultra-large von Willebrand factor (vWF) multimers, promoting widespread platelet-rich microvascular thrombosis in arterioles and capillaries. Clinically characterized by the classic pentad (seen completely in < 10% of patients): microangiopathic hemolytic anemia (MAHA with schistocytes on blood smear), severe consumptive thrombocytopenia, fluctuating neurologic deficits, renal impairment, and fever. Mandates immediate emergency therapeutic plasma exchange with corticosteroids and the anti-vWF nanobody caplacizumab; platelet transfusions are strictly contraindicated.

Thrombotic Vasculopathy

A spectrum of disorders characterized by thrombus formation within blood vessels of various sizes, often associated with antiphospholipid syndrome, disseminated intravascular coagulation, thrombotic thrombocytopenic purpura, or malignancy.

Thromboxane

A lipid mediator produced by platelets that promotes platelet aggregation and vasoconstriction.

Thrombus

A blood clot that forms within a blood vessel or heart and remains attached at its site of formation, potentially obstructing blood flow or embolizing.

Thrombus Organization

The process by which a thrombus is gradually replaced by granulation tissue and eventually fibrous scar tissue. The process begins when inflammatory cells, particularly macrophages, infiltrate the thrombus and begin digesting the fibrin and dead cells through fibrinolysis.

Thrush

A Candida infection, usually of the mouth or throat, causing creamy white plaques, soreness, altered taste, or discomfort with eating or swallowing. Vaginal candidiasis is a separate condition. Risk increases with antibiotics, inhaled corticosteroids, diabetes, or immune suppression.

Alternate Names:

Oral Thrush

Thrush - Children And Adults

Oral candidiasis caused by Candida overgrowth, producing removable white plaques, soreness, redness, altered taste, or cracks at the mouth corners; risk rises with antibiotics, inhaled steroids, diabetes, or immune suppression.

Thrush And Other Yeast Infections In Children

Thrush is Candida overgrowth in the mouth, producing white plaques, soreness, or feeding difficulty; Candida can also affect skin folds or diaper areas. Persistent, recurrent, severe, or immune-associated infection needs pediatric evaluation and appropriate antifungal treatment.

Thrush In Newborns

Oral Candida infection in an infant, causing white plaques on the tongue or mouth lining that may interfere with feeding and can be passed between infant and breastfeeding parent.

Thrush, Oral

Alternate index label; see *Oral thrush*.

Thumb Arthritis

Degeneration or inflammation of a thumb joint, especially the joint at the base of the thumb, causing pain, stiffness, and reduced grip.

Alternate Names:

Basal Joint Arthritis

Thumb CMC Arthritis

Thumb carpometacarpal arthritis: Eaton-Littler classification: I (normal), II (slight narrowing, osteophytes <2mm), III (narrowing, osteophytes >2mm, subluxation), IV (pantrapezial arthritis). Clinical: base of thumb pain, pinch weakness, thenar wasting, squaring (subluxation).

Thumb-Sucking

A common childhood habit of sucking the thumb; persistent habit can affect dental and facial development.

Thymic Hyperplasia

Thymic hyperplasia is enlargement of the thymus from increased lymphoid tissue or rebound growth and may be incidental. It can be associated with autoimmune disease, infection, endocrine conditions, or stress; imaging and clinical context distinguish it from a mass.

Thymocyte

An immature T lymphocyte developing in the thymus, where it undergoes selection before becoming a mature T cell.

Thymoma

A tumor of thymic epithelial cells, associated with myasthenia gravis, pure red cell aplasia, and hypogammaglobulinemia. Malignant behavior is determined by capsular invasion and stage.

Alternate Names:

Neoplasm Thymomic (Thymoma)

Thymus

Primary lymphoid organ in the anterior mediastinum, largest in childhood, involutes with age. Site of T-cell maturation (thymopoiesis): thymocytes undergo positive and negative selection to produce self-tolerant, MHC-restricted T cells. Epithelial cells produce thymic hormones (thymosin, thymopoietin).

Thymus Gland

A lymphoid organ in the chest where T lymphocytes mature.

Thyrocalcitonin

Another name for calcitonin, a hormone made by thyroid C cells that lowers blood calcium mainly by reducing bone resorption.

Thyroglobulin Surveillance

Thyroglobulin produced only by thyroid follicular cells serves as a tumor marker after total thyroidectomy for differentiated thyroid carcinoma. In patients who have undergone complete thyroidectomy and radioactive iodine ablation thyroglobulin should be undetectable.

Thyroglossal Duct Cyst

Congenital midline neck mass resulting from persistence of the thyroglossal duct the embryological tract of thyroid descent. Most common congenital neck mass presenting in childhood. Located at or near the hyoid bone and moves with swallowing and tongue protrusion. Diagnosis is by ultrasound demonstrating a cystic midline neck mass.

Thyroid

An endocrine gland in the front of the neck that produces thyroid hormones, which regulate metabolism, growth, and development.

Thyroid Cancer

A malignant tumor of the thyroid. Major types include papillary, follicular, medullary, and anaplastic carcinoma, which differ in behavior and treatment.

Alternate Names:

Thyroid Cancer - Medullary Carcinoma

Medullary thyroid carcinoma is cancer of thyroid C cells that produce calcitonin and may be inherited as part of a multiple endocrine neoplasia syndrome.

Thyroid Cancer - Papillary Carcinoma

Papillary thyroid carcinoma is the most common thyroid cancer and usually grows slowly, although it can spread to nearby lymph nodes.

Thyroid Cancer Staging

American Joint Committee on Cancer TNM staging for differentiated thyroid carcinoma incorporates tumor size, extent of invasion, lymph node metastases, and distant metastases. Age is a critical prognostic factor with patients under fifty having more favorable outcomes. Stage I is any tumor without metastases in patients under fifty.

Thyroid Cartilage

The largest cartilage of the larynx, formed by two plates that meet in front and create the laryngeal prominence. It protects the vocal folds and provides attachment for muscles and ligaments.

Thyroid Disorders

Conditions affecting the thyroid gland, a butterfly-shaped endocrine organ in the neck that produces hormones regulating metabolism, growth, and development.

Thyroid Eye Disease

Autoimmune inflammatory disorder of the orbital tissues associated with Graves disease characterized by expansion of extraocular muscles and orbital fat. Pathogenesis involves orbital fibroblasts expressing the TSH receptor targeted by the same thyroid-stimulating immunoglobulins affecting the thyroid.

Thyroid Fine-Needle Aspiration

Image-guided sampling of thyroid-nodule cells for cytologic classification. Results are commonly reported using the Bethesda system and guide surveil-

lance, molecular testing, surgery, or other management.

Thyroid Follicular Carcinoma

approximately 10 to 15 percent of thyroid cancers and is the second most common differentiated thyroid malignancy. Unlike papillary carcinoma, follicular carcinoma typically spreads hematogenously to distant sites including bone, lung, and liver, rather than to regional lymph nodes.

Thyroid Function Tests

Laboratory assessment of the hypothalamic-pituitary-thyroid axis. TSH is the most sensitive screening test with elevated levels indicating primary hypothyroidism and suppressed levels indicating hyperthyroidism. Free T4 measures the biologically active unbound thyroxine.

Thyroid Gland

An endocrine gland located in the anterior neck, consisting of two lobes (right and left) connected by an isthmus, lying anterior to the trachea between the cricoid cartilage and the suprasternal notch.

Thyroid Gland Enlargement

Alternate index label; see *Goiter*.

Thyroid Gland Removal

A medical procedure, treatment, device, or care topic related to thyroid gland removal; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Thyroid Gland, Diseases Of

Disorders of the thyroid, including hypothyroidism, hyperthyroidism, inflammation, nodules, and cancer.

Thyroid Hormone

T3 and T4. Increase basal metabolic rate. Required for normal development.

Thyroid Hormones

Thyroxine (T4) and triiodothyronine (T3), hor-

mones that regulate metabolic rate, growth, brain development, heat production, and cardiovascular and gastrointestinal activity.

Thyroid Nodule

A discrete lump within the thyroid gland that may be solid, cystic, benign, or malignant. Most are benign, but evaluation uses clinical assessment, thyroid testing, ultrasound, and biopsy when indicated.

Thyroid Nodule Evaluation

Systematic approach to evaluation of thyroid nodules detected by physical examination or imaging. Thyroid ultrasound characterizes nodule features including size, composition, echogenicity, margins, calcifications, and shape. TI-RADS classification stratifies malignancy risk and guides biopsy decisions.

Thyroid Nodules

A thyroid nodule is a discrete growth within the thyroid and is often benign. Ultrasound, thyroid-function testing, and selected needle biopsy assess cancer risk; rapid growth, hoarseness, swallowing difficulty, or breathing problems needs prompt review.

Alternate Names:

Nodule Thyroid (Thyroid Nodules)

Thyroid Papillary Carcinoma

The most common differentiated thyroid cancer, arising from thyroid follicular cells. It often grows slowly and has a favorable prognosis, although outcome depends on tumor features, spread, age, and response to treatment.

Thyroid Peroxidase Antibody

An autoantibody against thyroid peroxidase, an enzyme required for thyroid-hormone synthesis. It supports autoimmune thyroid disease, especially Hashimoto thyroiditis, but may be present in some euthyroid individuals.

Thyroid Peroxidase Test

Thyroid peroxidase test is a medical test, procedure, treatment, or clinical measure used in patient care;

its purpose and interpretation depend on the clinical question.

Thyroid Preparation Overdose

Taking too much thyroid hormone medicine can cause a fast or irregular heartbeat, shaking, sweating, anxiety, vomiting, fever, or, in severe cases, heart failure or a dangerous thyroid crisis.

Thyroid Scan

Nuclear medicine imaging using I-123 or Tc-99m. Evaluates thyroid function and nodules. Hot nodules rarely malignant. Cold nodules require further evaluation.

Thyroid Scintigraphy

Thyroid imaging using I-123, I-131, or Tc-99m pertechnetate. Assesses function, nodules, ectopic tissue. Hot nodules (functioning) rarely malignant; cold nodules require ultrasound/FNA.

Thyroid Stimulating Hormone

TSH (thyrotropin): the anterior pituitary hormone that stimulates the thyroid to produce and release T4 and T3, controlled by TRH (hypothalamus) and negative feedback from thyroid hormones.

Thyroid Storm

Life-threatening exacerbation of thyrotoxicosis presenting with hyperpyrexia, tachycardia, heart failure, altered mental status, and multi-organ dysfunction. Precipitated by infection, surgery, trauma, or iodine load in patients with untreated hyperthyroidism. Mortality rates range from twenty to thirty percent.

Thyroid Surgery

Operations that remove part or all of the thyroid gland. They may be performed for selected cancers, enlarging or compressive nodules, goiter, hyperthyroidism, or diagnostic uncertainty; the procedure depends on the disease and its extent.

Thyroid Ultrasound

High-frequency sonographic imaging used to eval-

uate thyroid size, nodules, cysts, cervical lymph nodes, and structural features associated with malignancy. Suspicious nodules may require ultrasound-guided fine-needle aspiration.

Thyroid, Overactive

Alternate index label; see *Hyperthyroidism (overactive thyroid)*.

Thyroid-Stimulating Hormone

A pituitary hormone that stimulates the thyroid to produce thyroid hormones.

Alternate Names:

TSH

Thyroidectomy

Surgical removal of part or all of the thyroid gland.

Thyroiditis

Inflammation of the thyroid gland with various etiologies. Hashimoto thyroiditis: autoimmune, most common cause of hypothyroidism in iodine-sufficient areas. Subacute (De Quervain) thyroiditis: post-viral, presents with painful thyroid and transient hyperthyroidism followed by hypothyroidism.

Thyroiditis Classification

Inflammatory conditions of the thyroid classified by clinical presentation and etiology. Hashimoto thyroiditis is chronic autoimmune with hypothyroidism. Graves disease is autoimmune with hyperthyroidism. Subacute thyroiditis is painful and likely viral.

Thyroiditis, Chronic Lymphocytic

Alternate index label; see *Hashimoto's disease*.

Thyrotoxic Myopathy

A neuromuscular complication of severe, uncontrolled hyperthyroidism, occurring in up to 60–80% of patients with thyrotoxicosis. Characterized by insidious, progressive, painless proximal muscle weakness and striking muscle wasting, predominantly involving the shoulder and pelvic girdles, accompanied by muscle fatigue and hyperreflexia. Serum creatine kinase levels are typically normal or mildly reduced;

muscle biopsy shows non-specific type II fiber atrophy with normal sarcolemma, and all symptoms resolve rapidly within weeks of medical restoration of the euthyroid state.

Alternate Names:

Hyperthyroid Myopathy

Thyrotoxic Periodic Paralysis

Recurrent episodes of transient flaccid weakness associated with thyrotoxicosis, usually accompanied by hypokalemia caused by intracellular potassium shift. Attacks often affect the proximal limbs and are triggered by rest after exercise or carbohydrate-rich meals.

Thyrotoxicosis

The clinical state caused by excessive circulating thyroid hormone, regardless of source.

Thyrotroph Adenoma

A thyrotroph adenoma is a pituitary tumor arising from thyroid-stimulating-hormone-producing cells and may cause excess TSH and abnormal thyroid function.

Thyrotrophin-Releasing Hormone

A hypothalamic hormone that stimulates pituitary release of TSH and prolactin.

Thyrotrophin-Stimulating Hormone

Thyroid-stimulating hormone, a pituitary hormone that stimulates thyroid hormone production.

Thyrotropin

Thyroid-stimulating hormone, a pituitary hormone that stimulates thyroid growth and thyroid-hormone production; it is also called TSH.

Thyrotropin Alfa

A recombinant form of thyroid-stimulating hormone used to stimulate residual thyroid tissue or differentiated thyroid cancer cells during selected diagnostic or treatment protocols.

Thyroxine

The thyroid hormone T₄, which contains four iodine atoms. The thyroid releases it into the blood, and much of it is converted to the more active hormone triiodothyronine (T₃).

Alternate Names:

T₄

Thyroxine-Binding Globulin

The principal transport protein for thyroid hormones in the blood, binding most circulating thyroxine and triiodothyronine.

TI-RADS

The Thyroid Imaging Reporting and Data System is an ultrasound-based system that assigns a risk category to thyroid nodules using features such as composition, echogenicity, shape, margins, and calcification. It helps guide follow-up and biopsy decisions.

TIA

A transient ischemic attack, a temporary episode of neurological dysfunction from reduced brain blood flow.

Alternate Names:

Transient ischemic attack; mini-stroke

Tiazofurin

Tiazofurin is an investigational nucleoside analogue that interferes with NAD synthesis and has been studied as an antineoplastic agent.

Tibia

The tibia is the larger medial bone of the lower leg, extending from the knee to the ankle; it bears much of the body's weight and forms parts of both joints. Proximal: tibial plateau (medial/lateral condyles) and tibial tuberosity (patellar ligament insertion). Shaft: sharp subcutaneous anterior border. Distal: medial malleolus articulating with the talus at the ankle.

Tibia Vara

Tibia vara is inward angulation of the upper shin-

bone causing bowing of the leg, classically associated with Blount disease or other growth disorders.

Tibial Artery

An artery of the lower leg, chiefly the anterior and posterior tibial arteries, supplying the leg, ankle, and foot and contributing to pedal pulses.

Tibial Fracture

A break in the tibia, the major weight-bearing bone of the lower leg, often caused by high-energy trauma, twisting injury, or repetitive stress.

Tibial Nerve

Sciatic division (L₄-S₃) continuing from posterior thigh through the popliteal fossa into the deep posterior leg, innervating gastrocnemius, soleus, tibialis posterior, flexor digitorum longus, and flexor hallucis longus. Passes behind the medial malleolus as the tarsal tunnel, dividing into medial/lateral plantar nerves for the foot.

Tibial Shaft Fractures

Tibial shaft fractures: most common long bone fracture. AO/OTA: 42-A (simple), 42-B (wedge), 42-C (complex). Soft tissue critical: Gustilo for open.

Tibialcrural Artery

A lower-leg arterial vessel or branching region supplying the ankle and foot, usually discussed in relation to tibial and fibular arterial anatomy.

Tibialis Anterior Muscle

Superficial anterior leg muscle from lateral tibial condyle and shaft to medial cuneiform and first metatarsal base. Innervated by deep peroneal nerve (L₄-L₅). Primary dorsiflexor for foot clearance during gait swing phase; inverts foot. Weakness causes foot drop with steppage gait.

Tibialis Cranialis

The animal-anatomy term corresponding broadly to the tibialis anterior muscle, which dorsiflexes the ankle and helps invert the foot.

Tibialis Posterior Muscle

Deepest posterior leg muscle from posterior tibia, fibula, and interosseous membrane to navicular tuberosity, medial cuneiform, and sustentaculum tali. Innervated by tibial nerve (L4-L5). Plantarflexes and inverts foot; primary dynamic medial longitudinal arch stabilizer.

Tic

A sudden, rapid, recurrent, nonrhythmic movement or sound that a person may feel an urge to make. Tics can be motor or vocal and may worsen with stress.

Tic Disorder

A neurologic disorder characterized by recurrent, sudden, rapid, nonrhythmic motor movements or vocalizations that may be temporarily suppressible.

Tic Douloureux

A chronic pain condition characterized by recurrent, sudden, severe, electric shock-like pain in the distribution of the trigeminal nerve (typically V2/V3). See Trigeminal Neuralgia.

Tic Douloureux (Trigeminal Neuralgia)

Alternate index label for Trigeminal Neuralgia.

Ticarcillin

A penicillin antibiotic with activity against many gram-negative bacteria, including *Pseudomonas*; it is usually given with clavulanate and can cause allergy or electrolyte disturbances.

Tick

A small blood-feeding arachnid that can attach to people or animals and transmit infections such as Lyme disease, rickettsial diseases, and babesiosis.

Tick Bite

A bite from a tick, which may cause local irritation and can sometimes spread infections such as Lyme disease, ehrlichiosis, or Rocky Mountain spotted fever. Remove the tick promptly and watch for fever or a spreading rash.

Tick Paralysis

Acute, progressive flaccid paralysis caused by neurotoxin released by an attached tick. Weakness usually begins in the legs and ascends; respiratory failure can occur and symptoms improve after prompt tick removal.

Tick Removal

A medical procedure, treatment, device, or care topic related to tick removal; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Tick Typhus

A rickettsial infection transmitted by ticks, usually causing fever, headache, rash, and sometimes severe systemic illness.

Tick-Borne Encephalitis

A viral infection transmitted mainly by ticks that can cause fever, meningitis, encephalitis, or lasting neurological complications.

Tickborne Relapsing Fever

A vector-borne illness caused by *Borrelia hermsii* and related species, transmitted by *Ornithodoros* ticks. It presents with recurrent episodes of fever, headache, myalgia, and arthralgia, separated by afebrile intervals. The relapsing pattern results from antigenic variation of the spirochete's surface lipoproteins.

Ticks

Small arachnids that attach to skin and may transmit infections or cause tick paralysis.

Alternate Names:

Ticks Bite (Ticks)

Ticks Bite (Ticks)

Alternate index label for Ticks.

Ticlopidine

An antiplatelet medicine that reduces platelet aggregation and clot formation.

Tics

Sudden, rapid, recurrent, nonrhythmic stereotyped movements (motor tics) or vocalizations (vocal tics) that are usually brief and suppressible. Transient tics (most common in childhood) vs. chronic tic disorder; Tourette syndrome: multiple motor + at least one vocal tic for >1 year beginning before age 18.

Tidal Volume

The volume of air inspired or expired during each normal breath, approximately 500 mL (6-8 mL/kg) in a resting adult. Tidal volume is measured by spirometry. Minute ventilation = tidal volume x respiratory rate (6 L/min). Only a portion reaches the alveoli (alveolar ventilation) after subtracting dead space (150 mL).

Tidy Wound

A clean, sharply incised wound with minimal contamination, crushing, or tissue devitalization and clearly defined viable edges. After appropriate assessment and cleaning, it may often be closed primarily.

Tietze Syndrome (Costochondritis And Tietze Syndrome)

Alternate index label for Costochondritis and Tietze Syndrome.

Tigecycline

Tigecycline is a glycylcycline antibiotic that binds the bacterial 30S ribosomal subunit and inhibits protein synthesis; it treats selected complicated infections but commonly causes nausea and has a warning for increased mortality in some severe infections.

Tight Junction

A cell-to-cell junction that seals the space between epithelial cells and controls paracellular movement while helping maintain distinct apical and basal cell surfaces.

Tilorone

Tilorone is a synthetic antiviral and immune-

modulating compound used or studied in some countries; evidence and indications vary by setting.

Tilt Table Test

Evaluation of unexplained syncope by reproducing orthostatic stress. Patient is strapped to a motorized table tilted from supine to 60-80 degrees for 20-45 minutes. Positive: reproduction of symptoms with hypotension and/or bradycardia (vasovagal syncope, delayed orthostatic hypotension).

Tilt Table Testing

A supervised test in which a patient is moved from a lying to an upright or head-up tilt position while blood pressure, heart rate, and symptoms are monitored. It may help evaluate reflex syncope, orthostatic hypotension, or selected autonomic disorders when the diagnosis remains uncertain; it does not replace assessment for cardiac or neurologic causes.

Tilted Disc Syndrome

A congenital appearance in which the optic disc is angled or rotated, often with an unusual shape of nearby retina and blood vessels. Vision may be normal, but some people have visual-field changes or other eye conditions.

Time In Range

Percentage of time that continuous glucose monitoring readings remain within the target glucose range of seventy to one hundred eighty milligrams per deciliter for most adults with diabetes. General target is greater than seventy percent corresponding to approximately seventeen hours per day.

Time Of Death

The moment or estimated time at which biological death occurred, a key medicolegal question. Estimated from postmortem changes: body cooling (algor mortis), rigor mortis, lividity (livor mortis), decomposition/putrefaction, insect colonization, and chemical changes (vitreous potassium, vitreous glucose, body temperature).

Time-Of-Flight PET

A PET acquisition and reconstruction technique

that uses the measured arrival-time difference of coincident annihilation photons to improve localization of the annihilation event. It can improve signal-to-noise performance, especially in larger patients.

Timed Up-And-Go Test

A functional mobility test measuring the time required to stand from a chair, walk a short distance, turn, return, and sit. Prolonged performance suggests impaired mobility and increased fall risk but must be interpreted with gait, vision, cognition, and environment.

TIMI Risk Score

A clinical prognostic scoring system developed by the Thrombolysis in Myocardial Infarction study group to risk-stratify patients presenting with acute coronary syndromes. For unstable angina and NSTEMI, the score assigns one point each to seven variables: age ≥ 65 years, ≥ 3 CAD risk factors, known CAD with stenosis ≥ 50 percent, aspirin use in past 7 days, severe angina (≥ 2 episodes in 24h), ST-segment deviation ≥ 0.5 mm, and elevated cardiac biomarkers; higher scores predict significantly elevated 14-day risks of all-cause mortality, new or recurrent myocardial infarction, or severe recurrent ischemia requiring urgent revascularization.

Alternate Names:

TIMI Score; TIMI Risk Score for UA/NSTEMI; TIMI Score for STEMI

Timing Of Breastfeeding

The timing and frequency of breastfeeds, usually guided by early hunger cues and effective milk transfer rather than a rigid clock schedule, with special considerations for newborns and preterm infants.

Timolol

Timolol is a non-selective beta blocker used in glaucoma eye drops and for selected cardiovascular conditions; topical ocular use can still cause bradycardia, hypotension, bronchospasm, or fatigue.

Timolol Maleate

The maleate salt of timolol, a beta blocker used in

glaucoma and selected cardiovascular conditions.

Timothy Syndrome

A rare multisystem disorder caused by pathogenic variants in CACNA1C, characterized by marked QT prolongation and congenital heart disease with syndactyly. Developmental, neurological, immune, and facial features may also occur.

Tincture

Alcohol extract of plant or chemical substance. Common concentration: 10-40% alcohol. Examples: tincture of iodine (antiseptic), tincture of benzoin (skin protector). Also used for liquid medications.

Tinea

Dermatophytosis: superficial fungal infection of keratinized tissue (skin, hair, nails) by dermatophytes (Trichophyton, Microsporum, Epidermophyton).

Tinea (Dermatophytosis)

Superficial fungal infection by dermatophytes. Tinea corporis (ringworm): annular, scaly, erythematous plaque with central clearing. Tinea pedis (athlete's foot): interdigital scaling, maceration, and fissuring. Tinea cruris (jock itch): erythematous, pruritic rash in groin with raised border.

Alternate Names:

Dermatophytosis

Tinea Barbae

Dermatophyte infection of the beard and mustache area, presenting with erythematous, scaly, follicular papulopustules or deep inflammatory nodules, often acquired from contact with infected animals or through grooming. It may be inflammatory (kerion-like) or superficial, and differential diagnosis includes bacterial folliculitis and acne.

Tinea Capitis

A dermatophyte infection of the scalp and hair shafts, most common in children. It may cause scaling, alopecia, broken hairs, black dots, or an inflammatory kerion.

Tinea Circinata

An older term for tinea corporis (ringworm) of the body, presenting as annular, erythematous, scaly plaques with active, raised borders and central clearing. It is caused by dermatophyte fungi and may be acquired through direct contact with infected humans, animals, or fomites.

Tinea Corporis

A dermatophyte infection of glabrous skin, presenting as annular, erythematous, scaly plaques with raised, active borders and central clearing. It is contagious through direct contact with infected persons, animals, or contaminated objects. Diagnosis is by KOH preparation showing branching septate hyphae.

Tinea Cruris

Alternate index label; see *Jock itch*.

Tinea Faciei

Dermatophyte infection of the facial skin, often presenting with erythematous, scaly, annular or ill-defined plaques that may mimic eczema or rosacea, leading to frequent misdiagnosis. It is commonly caused by *Trichophyton* or *Microsporum* species and may be acquired from pets, other humans, or self-inoculation from other body sites.

Tinea Favosa

A chronic dermatophyte infection of the scalp or skin, usually caused by *Trichophyton schoenleinii*, producing yellow cup-shaped crusts and possible scarring alopecia.

Tinea Imbricata

A chronic dermatophyte infection caused by *Trichophyton concentricum*, endemic in the South Pacific and Southeast Asia, characterised by widespread, concentric, overlapping, polycyclic scaly rings producing a "wood-grain" pattern on the trunk and limbs.

Tinea Incognito

A dermatophyte infection whose clinical appearance has been altered by inappropriate topical corticosteroid or immunosuppressive treatment.

It may become less scaly and more extensive or atypical; fungal testing is often needed before directed therapy.

Tinea Nigra

A superficial fungal infection of the stratum corneum caused by *Hortaea werneckii*, presenting as a painless, brown to black, non-scaly macule or patch, most commonly on the palms or soles. It is acquired in tropical and subtropical regions and is often confused with acral melanoma.

Tinea Pedis

A dermatophyte infection of the feet presenting in interdigital, moccasin, vesicobullous, or ulcerative patterns. It may coexist with tinea unguium. Diagnosis is clinical or mycologic when uncertain; treatment uses topical antifungals for limited disease and oral therapy for extensive, refractory, or nail-associated infection.

Tinea Pedis (Athlete's Foot)

Alternate index label for Athlete's Foot.

Tinea Unguium

A fungal infection of the nail plate, also called onychomycosis, causing thickening, discoloration, brittleness, or separation of the nail.

Tinea Versicolor

A superficial fungal infection caused by *Malassezia* species, presenting as hypo- or hyperpigmented macules with fine scale on the trunk and proximal extremities. It is more noticeable after sun exposure due to unaffected tanning of surrounding skin.

Alternate Names:

Pityriasis Versicolor

Tinel Sign

Tapping over nerve produces tingling in distribution. Indicates nerve irritation/regeneration. Used for carpal tunnel, cubital tunnel, tarsal tunnel.

Tinidazole

Tinidazole is a nitroimidazole antimicrobial effective against anaerobic bacteria and protozoa such as *Giardia* and *Trichomonas*; metallic taste, gastrointestinal effects, neuropathy, and an alcohol interaction may occur.

Tinnitus

Tinnitus is perception of sound without an external source, often related to hearing loss, noise exposure, ear disease, medications, vascular causes, or neurologic factors.

Alternate Names:

Ringing In The Ear

Tinnitus (Ringing In The Ears)

Alternate index label for Ringing in the Ears.

Tinzaparin

A low-molecular-weight heparin anticoagulant used for prevention or treatment of venous thromboembolism; bleeding and heparin-induced thrombocytopenia are important risks.

Tinzaparin Sodium

The sodium salt of tinzaparin, a low-molecular-weight heparin used to prevent or treat venous blood clots; bleeding and heparin-induced thrombocytopenia are important risks.

Tiopronin

A thiol-containing medicine used in selected cases of cystinuria to increase urinary cystine solubility; rash, proteinuria, and blood abnormalities may occur.

Tiotropium Bromide

A long-acting muscarinic antagonist bronchodilator used for maintenance therapy in COPD. Once-daily dosing provides sustained bronchodilation. It reduces exacerbations and improves lung function. It is often combined with a LABA for additive bronchodilation.

Tipifarnib

An investigational farnesyl-transferase inhibitor

studied for cancers and certain blood disorders.

TIPS

TIPS, or transjugular intrahepatic portosystemic shunt, connects portal and hepatic veins to reduce portal hypertension, often for variceal bleeding or refractory ascites.

Tirapazamine

Tirapazamine is an investigational prodrug activated in low-oxygen tissue and studied to target hypoxic tumor cells.

Tirbanibulin

A topical medicine used in short courses to treat actinic keratoses on the face or scalp; local redness, scaling, or irritation may occur.

Tired

Feeling a lack of energy or physical or mental stamina, which may result from sleep loss, exertion, infection, anemia, endocrine disease, medication, depression, or other illness.

Tiredness

Fatigue or reduced energy and endurance that can be physical, mental, or both; persistent unexplained fatigue warrants assessment for sleep, mood, systemic, medication, and metabolic causes.

Tiredness (Fatigue)

A subjective lack of energy or exhaustion that may result from inadequate sleep, illness, psychological stress, anaemia, or many other causes.

Alternate Names:

Fatigue

Tirofiban

An intravenous glycoprotein IIb/IIIa platelet inhibitor used in selected acute coronary syndromes or coronary interventions to reduce platelet aggregation.

Tissierella

A genus of anaerobic bacteria found in the environ-

ment and sometimes isolated from polymicrobial human infections.

Tissierella Praeacuta

An anaerobic bacterium rarely associated with human infection; significance depends on recovery from a compatible sterile-site infection rather than colonization.

Tissue

A group of similar cells and their surrounding materials that work together to perform a specific function.

Tissue Adhesions

Bands of fibrous scar tissue that abnormally connect surfaces or organs, often after surgery, inflammation, infection, or bleeding and potentially causing pain, infertility, or obstruction.

Tissue Banks

Facilities that recover, screen, process, preserve, store, and distribute donated human tissue for transplantation, research, or reconstructive treatment under safety and traceability standards.

Tissue Congestion

Accumulation of blood or fluid within tissue because of impaired venous drainage, inflammation, obstruction, or increased vascular flow, producing swelling, redness, or impaired function.

Tissue Culture

Growth of cells or tissue outside the body in a controlled nutrient medium for research, diagnosis, vaccine production, regenerative medicine, or drug testing.

Tissue Distribution

Reversible movement of a chemical from blood into tissues and organs. Distribution is influenced by perfusion, lipid solubility, protein binding, tissue affinity, barriers, body composition, and time after exposure.

Tissue Elastance

The change in pressure required to produce a given change in tissue or organ volume, the inverse of compliance and important in lung and chest-wall mechanics.

Tissue Engineering

The use of cells, supportive materials called scaffolds, and biologically active substances to create or repair tissues that restore, maintain, or improve body function.

Tissue Expander

Balloon implanted under skin/muscle, gradually filled with saline to expand tissue. Used for breast reconstruction, scalp reconstruction, burn coverage. Removed after expansion, replaced with permanent implant or flap.

Tissue Expansion

Gradual stretching of skin or soft tissue with an implanted or external expander so additional tissue can be created for reconstruction; it usually requires staged treatment and monitoring for infection, pain, or device problems.

Tissue Fixation

Preservation of tissue morphology and molecular components by chemical or physical methods before processing. Neutral buffered formalin is commonly used for routine histopathology, while fixation choice affects antigen detection, nucleic-acid testing, and tissue architecture.

Tissue Kallikrein

A serine protease that cleaves kininogen to release kinins such as bradykinin, influencing local blood flow, vascular permeability, pain, and inflammation.

Tissue Membrane

A thin sheet or boundary of tissue that separates compartments, covers surfaces, or surrounds structures, with composition and function varying by epithelial, connective, muscle, or biologic membrane type.

Tissue Plasminogen Activator

An enzyme that converts plasminogen to plasmin, helping dissolve fibrin in blood clots. Recombinant forms are used as thrombolytic medicines in selected emergencies.

Tissue Plasminogen Activator

An enzyme or recombinant medicine that converts plasminogen to plasmin and dissolves clots.

Tissue Plasminogen Activator-Associated Angioedema

Angioedema occurring as a complication of tissue plasminogen activator therapy for acute ischemic stroke or myocardial infarction, affecting approximately 1 to 5 percent of patients. It typically involves the face, tongue, and upper airway and may be life-threatening.

Tissue Processor

A laboratory instrument that moves tissue through fixation, dehydration, clearing, and paraffin infiltration before embedding and microscopic sectioning.

Tissue Scaffold

A natural or engineered three-dimensional framework that supports cell attachment, growth, organization, and tissue repair in regenerative medicine.

Tissue Transglutaminase (tTG)

An enzyme that cross-links proteins and serves as the principal autoantigen in celiac disease; IgA antibodies against tissue transglutaminase are commonly used in celiac disease evaluation.

Tissue Typing

Testing tissue antigens, especially HLA, to assess compatibility for transplantation.

Tissues Of The Body

Groups of similar cells and extracellular material performing a common function: epithelial, connective, muscle, and nervous tissue.

Titanium

A strong, lightweight, corrosion-resistant metal used in implants, prostheses, dental devices, and surgical instruments. Bone can form a stable connection with some titanium implant surfaces.

Titer

The concentration or dilution level at which a measurable antibody, antigen, or other activity remains detectable in a specimen. expressed as the highest dilution that still produces a detectable reaction (e.g., 1:128).

Titration

Gradual adjustment of a medicine dose or measurement of a substance using a reagent of known concentration.

Titre

The concentration or level of an antibody or other substance measured by serial dilution.

Titubation

A rhythmic nodding or tremulous movement, especially of the head or trunk, often associated with cerebellar disease.

Tizanidine

A centrally acting alpha-2 agonist used to reduce painful muscle spasm and spasticity.

Thin-Layer Chromatography

A laboratory method that separates substances on a thin layer of silica, alumina, or another material as a solvent moves across it. It can help identify compounds, compare samples, or measure radiochemical purity.

Alternate Names:

TLC

Tmax

The time after a dose when a medicine reaches its highest measured concentration in blood or plasma.

TMD

Alternate index label; see *TMJ disorders*.

TMJ Disorders

Temporomandibular joint disorders affect the jaw joints or chewing muscles and may cause jaw pain, clicking, stiffness, headaches, or limited movement.

Alternate Names:

Temporomandibular Disorders Temporomandibular Joint Disorders TMD

TNBC

Alternate index label; see *Triple-negative breast cancer*.

TNF Alpha

Tumor necrosis factor alpha is a potent pro-inflammatory cytokine produced primarily by activated macrophages, as well as by T cells, NK cells, mast cells, and endothelial cells. TNF-alpha exists as a 26-kilodalton transmembrane protein that is cleaved by the metalloprotease TACE to release a soluble 17-kilodalton active form.

TNM Classification

A cancer-staging system describing primary tumor size or extent, regional nodes, and distant metastasis.

TNM Staging

A cancer-staging system describing the primary tumor, regional lymph nodes, and distant metastases to estimate disease extent and prognosis.

Tobacco

The plant and its products containing nicotine and many toxic chemicals; use causes addiction and major disease risk.

Tobacco Chewing (Smokeless Tobacco)

Alternate index label for Smokeless Tobacco.

Tobacco Use

Tobacco use exposes the body to nicotine and toxic combustion or aerosol chemicals, causing addiction

and increased risks of cancer, vascular disease, and lung disease.

Tobramycin

An aminoglycoside antibiotic used for selected bacterial infections, including some gram-negative infections.

Tocolysis

The use of medication to delay preterm birth for a limited time, often to allow corticosteroid treatment or transfer to a facility with appropriate neonatal care. The drug, gestational-age range, and contraindications depend on local guidance and the clinical situation.

Tocolytic Agents

Tocolytic agents suppress uterine contractions temporarily to delay preterm birth, often allowing time for corticosteroids or transfer to specialist care.

Tocolytic Therapy

Medications used to inhibit uterine contractions temporarily to prolong pregnancy, allowing time for corticosteroid administration and transport to a tertiary care center. Indications: preterm labor with intact membranes, 24-34 weeks.

Tocolytics

Medications used to suppress preterm labor (contractions before 37 weeks gestation), to delay delivery for corticosteroid administration (fetal lung maturity) and in utero transport to a tertiary care center.

Tocopherol

A form of vitamin E, a fat-soluble antioxidant involved in protecting cell membranes; deficiency is uncommon but can cause neurologic or hematologic abnormalities.

Tocotrienols

Vitamin E compounds with unsaturated side chains found in some plant oils and grains; proposed cardiovascular and metabolic benefits remain under

study.

Toddler

A toddler is a young child, usually about one to three years old, developing rapidly in movement, language, behavior, feeding, and independence.

Toddler Test Or Procedure Preparation

Preparing a toddler for a test or procedure uses simple explanations, play, distraction, comfort objects, caregiver support, and any required fasting or medicine instructions.

Toddler'S Fracture

A subtle, non-displaced spiral or oblique hairline fracture of the distal third of the tibial shaft in ambulatory young children between 9 months and 3 years of age, typically occurring after a low-energy rotational or twisting injury (such as stumbling, catching the foot in a crib slat, or going down a slide on a parent's lap). Characterized by sudden refusal to bear weight or limp without outward signs of severe trauma, erythema, or deformity. Initial radiographs may appear normal or show an faint hairline fracture line, with subperiosteal bone formation and callus becoming visible on follow-up radiographs after 10 to 14 days.

Alternate Names:

Cast-Tibia Fracture; Childhood Spiral Tibial Fracture

Toe Broken (Broken Toe)

Alternate index label for Broken Toe.

Toe Joint

Any joint connecting the bones of a toe. Toe joints include the metatarsophalangeal and interphalangeal joints; they permit toe movement and may be affected by arthritis, gout, injury, or deformity.

Alternate Names:

toe articulation.

Toe Pressure

Pressure in toe digits. Useful when ankle pressures non-compressible (diabetes, renal disease).

Toe-Brachial Index

The ratio of systolic toe pressure to brachial systolic pressure. It can support diagnosis of peripheral arterial disease when ankle arteries are noncompressible because of medial arterial calcification.

Toenail

A toenail is the hard keratin plate covering the end of a toe and protecting its underlying tissue; injury, fungus, and ingrowth can cause disease.

Toenail Fungus

Alternate index label; see *Nail fungus*.

Toes (Digits Of The Foot)

The five terminal articulated digits of the human foot (digits I through V), consisting of the medial hallux (great toe) and four lateral lesser toes. The hallux contains two robust phalanges and two constant plantar sesamoid bones beneath the first metatarsal head, functioning as a critical biomechanical fulcrum during the push-off phase of normal bipedal gait. Lesser toes contain three phalanges each (proximal, middle, distal); prone to structural deformities including hallux valgus (bunions), hammer toes, claw toes, and mallet toes resulting from neuromuscular imbalances, poorly fitting footwear, or inflammatory arthritis.

Togaviridae

A family of viruses that includes some mosquito-borne viruses, such as chikungunya and eastern equine encephalitis virus, which can cause fever, rash, joint pain, or brain inflammation.

Togaviridae Infections

Infections caused by viruses in the Togaviridae family. Symptoms vary by virus and may include fever, rash, joint pain, or encephalitis.

Toilet

A fixture or place used for urination and defecation; in healthcare, toilet access and toileting assistance are important parts of continence and fall prevention.

Toilet Bowl Cleaners And Deodorizers Poisoning

Poisoning from swallowing or contacting toilet cleaners or deodorizers. Acidic or alkaline products can burn the mouth, throat, eyes, and skin; mixing cleaners may release dangerous gases.

Tolazamide

An older sulfonylurea diabetes medicine that increases insulin release; hypoglycemia and weight gain can occur, especially in older adults or people with kidney disease.

Tolazomide

An older sulfonylurea medicine used to lower blood glucose in type 2 diabetes.

Tolbutamide

An older first-generation sulfonylurea used for type 2 diabetes.

Tolcapone

A catechol-O-methyltransferase inhibitor used with levodopa for Parkinson disease; potentially fatal liver injury limits use and requires monitoring.

Tolerable Upper Intake Level

The highest usual daily nutrient intake unlikely to cause harm in nearly all healthy people.

Alternate Names:

UL

Tolerance

Reduced response to a drug or exposure after repeated use, requiring greater exposure for the same effect.

Toll-Like Receptor

A class of single-pass membrane-spanning pattern recognition receptors (PRRs) expressed on innate immune cells (macrophages, dendritic cells). Recognize evolutionary conserved microbial structures (PAMPs).

Toll-Like Receptors

Innate-immune receptors that detect characteristic microbial or tissue-danger signals.

Alternate Names:

TLRs

Tolmetin

A nonsteroidal anti-inflammatory drug used for pain and arthritis; gastrointestinal bleeding, kidney injury, and cardiovascular events are important risks.

Tolmetin Overdose

Taking too much tolmetin, a nonsteroidal anti-inflammatory medicine, can cause stomach bleeding, vomiting, kidney injury, drowsiness, seizures, or other serious effects.

Tolnaftate

A topical antifungal medicine used for some dermatophyte infections such as athlete's foot and ringworm; it is not effective for every type of fungal infection.

Tolonium Chloride

Tolonium chloride, or toluidine blue, is a dye used in laboratory and selected clinical procedures to highlight cells or tissue changes.

Tolterodine Tartrate

Tolterodine tartrate is an antimuscarinic medicine used for overactive bladder and urinary urgency; dry mouth, constipation, and urinary retention can occur.

Toluene

Toluene is a volatile solvent that can irritate tissues and, with substantial inhalation or ingestion, injure the nervous system, liver, kidneys, or heart.

Toluene And Xylene Poisoning

Poisoning from solvents containing toluene or xylene, often through swallowing or inhalation. It can cause dizziness, confusion, abnormal heart rhythms, breathing problems, or organ injury.

Tolvaptan

A vasopressin V2-receptor antagonist used in selected patients with hyponatremia or autosomal dominant polycystic kidney disease; thirst, rapid sodium correction, and liver injury require attention.

Tomogram

A tomogram is an image of a selected cross-sectional layer of the body or another object, produced by tomography such as CT or MRI.

Tomography

Imaging that produces cross-sectional views, or slices, through the body. Computed tomography uses X-rays, while other forms use ultrasound, magnetic fields, or radioactive tracers.

Tomosynthesis

An imaging technique that acquires multiple low-dose X-ray projections and reconstructs thin section images, commonly used for three-dimensional breast imaging.

Tomotherapy

Tomotherapy combines CT imaging with rotating, precisely shaped radiation beams to deliver radiation treatment while adjusting for the target and nearby tissues.

Tongue

A muscular organ involved in taste, speech, chewing, and swallowing.

Tongue Biopsy

A tongue biopsy removes a small tissue sample from a tongue lesion for microscopic examination of infection, inflammation, precancer, or cancer.

Tongue Carcinoma

Tongue carcinoma is cancer of the tongue, usually squamous-cell cancer, and may cause a persistent sore, lump, pain, or difficulty speaking or swallowing.

Tongue Disease

A clinical condition or finding involving tongue disease. Its features, causes, evaluation, and management depend on the clinical context.

Tongue Neoplasm

A tongue neoplasm is an abnormal growth in the tongue that may be benign, precancerous, or malignant.

Tongue Problems

Changes in the tongue, such as pain, swelling, sores, color change, numbness, or difficulty moving or tasting. Causes include injury, infection, inflammation, nutritional deficiency, and other disease.

Tongue Tie

A short or tight band of tissue under the tongue that limits tongue movement. It may interfere with breastfeeding, speech, or eating in some people.

Tongue, Disorders Of

Conditions affecting the tongue, including infection, inflammation, trauma, tumors, and developmental abnormalities.

Tongue-Tie (Ankyloglossia)

Restricted movement of the tongue caused by an unusually short or tight lingual frenulum, sometimes affecting feeding, speech, or oral hygiene.

Alternate Names:

Ankyloglossia

Tonic Neck Reflex

A primitive reflex present from birth to 6 months, also called fencer's pose. When the head is turned to one side, the arm on that side extends while the opposite arm flexes. Present in both directions. Asymmetry may indicate neurologic injury. Disappears as voluntary head control develops.

Alternate Names:

fencer's pose.

Tonic Pupil

A tonic pupil is a pupil with poor light response but

a slow constriction to near focus, often caused by injury to postganglionic parasympathetic fibers.

Tonic Seizures

Seizures that cause sustained stiffening of muscles, usually lasting seconds to minutes.

Tonic-Clonic Seizure

A generalized seizure with a tonic stiffening phase followed by rhythmic clonic jerking, impaired consciousness, and a postictal state.

Tonics

Preparations traditionally claimed to invigorate or strengthen; their contents and evidence vary.

Tonometer

An instrument used to measure intraocular pressure, an important part of glaucoma assessment.

Tonometry

Measurement of pressure inside the eye, usually to assess for glaucoma or monitor its treatment. Methods include applanation, noncontact air-puff, rebound, and electronic devices; results must be interpreted with corneal thickness and the clinical context.

Tonsil

A mass of lymphoid tissue at the entrance to the pharynx.

Alternate Names:

Tonsils

Tonsil Inflammation (Adenoids And Tonsils)

Alternate index label for Adenoids and Tonsils.

Tonsil Stones

Small, hard lumps formed when food particles, mucus, dead cells, and bacteria become trapped and calcify in the folds of the tonsils. They are often harmless but may cause bad breath, throat irritation, or a feeling that something is stuck in the throat. Good oral hygiene and gargling may help;

recurrent symptoms, bleeding, or one-sided tonsil enlargement requires examination.

Tonsillar Cancer

A malignancy arising from the palatine tonsils, most commonly squamous cell carcinoma associated with HPV infection. It often presents with throat pain, otalgia, and cervical lymphadenopathy.

Tonsillar Neoplasm

A tonsillar neoplasm is an abnormal growth in a tonsil that may be benign or malignant and can cause a persistent sore throat, swallowing difficulty, or neck swelling.

Tonsillectomy

Surgical removal of the palatine tonsils, performed for selected recurrent infection, obstructive sleep-disordered breathing, or other tonsillar disease. apnea, or other selected conditions after assessment of potential benefits and risks.

Tonsillitis

Inflammation or infection of the tonsils, commonly viral or streptococcal.

Tonus

The normal resting partial contraction of a muscle or the baseline tension of a tissue.

Tooth

A mineralized structure in the jaw used for cutting, tearing, and grinding food.

Tooth - Abnormal Colors

Abnormal tooth color can result from plaque, decay, trauma, fluorosis, medicines, enamel defects, or staining, and the cause determines treatment.

Tooth - Abnormal Shape

Abnormal tooth shape may result from developmental defects, genetic conditions, trauma, wear, or tumors and can affect function, appearance, and eruption.

Tooth Abrasion

Loss of tooth substance caused by external mechanical friction, such as aggressive brushing, abrasive products, or habits, producing grooves, notches, or sensitivity.

Tooth Abscess

A tooth abscess is a localized collection of pus from bacterial infection of the tooth or surrounding tissues, causing pain, swelling, and possible spreading infection.

Tooth Anatomy

Tooth anatomy includes enamel, dentin, pulp, cementum, root, crown, periodontal ligament, and supporting bone and gums.

Tooth Ankylosis

Fusion of a tooth root to alveolar bone through loss of the periodontal ligament, preventing normal eruption and making the tooth appear infraoccluded as neighboring teeth grow.

Tooth Attrition

Wear of tooth surfaces caused by tooth-to-tooth contact, commonly from chewing, bruxism, or malocclusion, producing flattened cusps and possible sensitivity.

Tooth Calcification

Deposition of mineral that forms and hardens enamel, dentin, cementum, and other tooth structures during development; abnormal timing or amount can affect tooth strength and appearance.

Tooth Component

Tooth components include enamel, dentin, cementum, pulp, and supporting tissues, each contributing to tooth strength, sensation, nutrition, and attachment.

Tooth Crowding

Tooth crowding occurs when teeth lack enough space to align normally, often from tooth size, jaw size, eruption pattern, or retained primary teeth.

Tooth Crown

The tooth crown is the visible portion above the gum, covered mainly by hard enamel and containing underlying dentin and pulp.

Tooth Decay

Destruction of tooth structure caused by acids produced by bacteria.

Alternate Names:

Dental caries; cavities

Tooth Decay - Early Childhood

Early-childhood tooth decay is bacterial acid destruction of primary teeth, promoted by frequent sugars, poor brushing, enamel defects, and prolonged bottle or nursing exposure.

Tooth Discoloration

Change in tooth color caused by surface stains, dental decay, trauma, medications, fluorosis, aging, or changes within enamel or dentin.

Tooth Disease

A clinical condition or finding involving tooth disease. Its features, causes, evaluation, and management depend on the clinical context.

Tooth Enamel

Tooth enamel is the highly mineralized outer covering of the crown that protects dentin and pulp from wear, acid, and bacteria.

Tooth Eruption

Process by which tooth moves from intraosseous position to functional occlusion. Primary (deciduous) dentition: 20 teeth, eruption 6-30 months. Permanent dentition: 32 teeth (including third molars), eruption 6-21 years. Delayed eruption may indicate systemic conditions, local obstruction, or normal variant.

Tooth Extraction

Removal of a tooth from its socket because of severe decay, infection, periodontal disease, fracture, impaction, orthodontic planning, or another clinical

indication.

Tooth Formation - Delayed Or Absent

Delayed or absent tooth formation means teeth develop or erupt later than expected or fail to form, due to local, genetic, endocrine, nutritional, or systemic causes.

Tooth Fracture

A clinical condition or finding involving tooth fracture. Its features, causes, evaluation, and management depend on the clinical context.

Tooth Infection

Infection of the tooth, its pulp, or surrounding tissues, commonly caused by untreated decay, cracks, or gum disease. It may cause toothache, sensitivity, swelling, fever, or drainage. Facial swelling, difficulty swallowing or breathing, or spreading infection requires emergency assessment.

Tooth Loss

Tooth loss is absence of a tooth due to decay, gum disease, trauma, developmental absence, or extraction and can affect chewing, speech, and oral health.

Tooth Luxation

Traumatic displacement of a tooth without complete avulsion. Concussion and subluxation involve periodontal injury with little or no displacement, whereas extrusive, lateral, and intrusive luxation involve increasingly marked displacement and require prompt dental evaluation.

Tooth Replantation

Replacement of an accidentally displaced or avulsed tooth into its socket, followed by stabilization and dental follow-up.

Tooth Resorption

Loss of dental hard tissue caused by odontoclast activity, occurring internally or on the root surface and associated with trauma, infection, orthodontics, or idiopathic disease.

Tooth Root

The tooth root anchors a tooth in its socket and contains dentin, cementum, pulp, nerves, and blood vessels beneath the gum.

Tooth Sensibility Testing

Clinical testing of a tooth's response to thermal, electric, or dentin stimulation. It assesses neural response rather than directly measuring pulp blood flow, so results must be interpreted with history, examination, and imaging.

Tooth Sensitivity

Pain in response to thermal, sweet, acidic, or tactile stimulus. Caused by dentin exposure (recession, erosion, abrasion, abfraction). Management: desensitizing toothpaste, fluoride varnish, restorative coverage, gum graft for recession.

Tooth, Supernumerary

An extra tooth beyond the normal number, which may cause crowding or impaction.

Toothache

Pain arising from a tooth or its supporting tissues.

Toothache Overview

Toothache usually reflects decay, pulp inflammation, fracture, gum disease, abscess, trauma, or referred pain. Dental treatment is needed to correct the cause; facial swelling, fever, difficulty swallowing, or breathing difficulty requires urgent care.

Alternate Names:

Pain Tooth (Toothache Overview)

Toothaches

Toothache is pain arising from decay, pulp inflammation, abscess, gum disease, trauma, cracking, or referred facial pain and requires dental assessment if persistent.

Toothpaste Overdose

Swallowing too much toothpaste can cause stomach upset, vomiting, or diarrhea. Large amounts of fluoride toothpaste can cause serious salt and calcium

disturbances, especially in children.

Tophaceous Gout

Chronic tophaceous gout represents advanced gout with deposition of large, visible tophi consisting of monosodium urate crystals surrounded by granulomatous inflammation. Tophi typically develop after years of inadequately treated gout and occur on the ears, fingers, toes, and olecranon bursa.

Tophus

A deposit of monosodium urate crystals in gout, often around joints or in soft tissues.

Topical

Applied directly to a body surface, usually the skin or a mucous membrane.

Topical Antibiotics

Antibiotics applied to the skin to treat selected superficial bacterial infections. The choice and duration depend on the organism, site, extent of infection, resistance patterns, and local guidance. Unnecessary or prolonged use can cause irritation and antimicrobial resistance.

Topical Antifungals

Topical antifungals treat superficial fungal infections. Allylamines (terbinafine, naftifine) inhibit squalene epoxidase, fungicidal. Azoles (clotrimazole, miconazole, ketoconazole, econazole) inhibit ergosterol synthesis, fungistatic. Ciclopirox has broad-spectrum activity. Tolnaftate is effective against dermatophytes.

Topical Calcineurin Inhibitors

Non-steroidal anti-inflammatory agents used for atopic dermatitis and facial eczema. They inhibit T-cell activation by blocking calcineurin, preventing cytokine production. Advantages over corticosteroids: no skin atrophy, safe for face and intertriginous areas. Side effects include transient burning and itching at application site.

Topical Corticosteroid Potency

Topical corticosteroids are classified into seven potency groups. Group 1 (ultra-high): clobetasol propionate 0.05 percent. Group 2 (high): betamethasone dipropionate 0.05 percent. Group 3 to 4 (medium): triamcinolone acetonide 0.1 percent. Group 5 to 6 (low): hydrocortisone 1 percent.

Topical Retinoids

Vitamin A derivatives used for acne, photoaging, and hyperpigmentation. Tretinoin (all-trans retinoic acid) is the most studied. Adapalene is more stable and less irritating. Tazarotene is the most potent. Mechanism: normalizes follicular keratinization, increases cell turnover, and stimulates collagen production.

Topiramate

Topiramate is an antiseizure medicine also used to prevent migraine; cognitive slowing, paresthesias, weight loss, kidney stones, metabolic acidosis, and fetal oral-cleft risk are important considerations.

Topoisomerase

An enzyme that temporarily cuts and rejoins DNA to control its twisting during replication, transcription, and chromosome separation.

Topoisomerase II

An enzyme that cuts both DNA strands, passes another DNA segment through the break, and rejoins the strands; it is targeted by some anticancer drugs.

Topoisomerase Inhibitors

Drugs that interfere with DNA topoisomerases; some are antibiotics and others are anticancer medicines, with toxicity depending on the drug and target enzyme.

Topotecan

A topoisomerase-I inhibitor used for selected ovarian, small-cell lung, and cervical cancers; bone-marrow suppression is a major toxicity.

Topotecan Hydrochloride

The hydrochloride salt of topotecan, a topoisomerase-I inhibitor used for selected cancers.

TORCH Panel

Serologic screening for congenital infections: Toxoplasma, Rubella, CMV, Herpes simplex (and others: syphilis, parvovirus B19, VZV, Zika). IgM: indicates recent/active infection (maternal or fetal). IgG: past infection or passive immunity. Paired maternal and neonatal testing.

TORCH Screen

Testing for selected congenital infections—classically Toxoplasma, Other infections, Rubella, Cytomegalovirus, and Herpes—when fetal or newborn findings suggest an in-utero infection; broad panels require careful interpretation.

Toremifene

A selective estrogen-receptor modulator used for metastatic breast cancer in postmenopausal women; hot flashes and, rarely, dangerous QT prolongation may occur.

Torn ACL

A torn anterior cruciate ligament is a knee injury commonly caused by sudden pivoting, landing, or contact, producing a pop, swelling, instability, and difficulty changing direction. Rehabilitation, bracing, or reconstruction is selected according to activity, associated injury, and goals.

Torn Meniscus

A torn meniscus is a split in the knee's shock-absorbing cartilage caused by twisting or degeneration. Pain, swelling, catching, or locking may occur; physical therapy or arthroscopic treatment depends on tear pattern, symptoms, age, and associated disease.

Alternate Names:

Meniscus Tear

Torpor

A state of greatly reduced activity, alertness, or responsiveness. In a patient, marked or new torpor may signal a serious illness, medicine effect, or metabolic problem.

Torsade De Pointes

Torsade de pointes is a potentially fatal polymorphic ventricular tachycardia associated with prolonged QT, electrolyte disturbance, medicines, or inherited channel disorders.

Torsades De Pointes

A specific form of polymorphic ventricular tachycardia with QRS complexes that twist around the baseline, occurring in the setting of QT prolongation. It may degenerate to ventricular fibrillation.

Torsemide

Torsemide is a loop diuretic that inhibits sodium-potassium-chloride reabsorption in the thick ascending limb and treats oedema from heart, kidney, or liver disease; dehydration and electrolyte loss may occur.

Torsion

Twisting of a structure around its axis, potentially cutting off blood supply.

Torsion Dystonia

A movement disorder causing sustained or repetitive muscle contractions that twist the body or limbs into abnormal postures; it may be inherited, acquired, focal, or generalized.

Torsion Of The Appendix Testis

Acute twisting and infarction of the appendix testis (hydatid of Morgagni), a small embryonic remnant of the paramesonephric (Müllerian) duct attached to the upper pole of the testis. It represents the single most common cause of acute scrotum in pre-pubertal boys, peaking between ages 7 and 12 years. Patients present with sudden, localized upper-pole scrotal tenderness with a normal-sized, non-tender lower testis and an intact cremasteric reflex. In early stages, a pathognomonic hard, blue-tinged nodule

visible through the thin scrotal skin (the “blue dot sign”) may be present. Scrotal color Doppler ultrasonography confirms normal testicular perfusion and visualizes an avascular, enlarged, hyperechoic nodule adjacent to the testis. It is benign and self-limiting, managed conservatively with rest, scrotal elevation, and nonsteroidal anti-inflammatory drugs.

Alternate Names:

Hydatid of Morgagni Torsion; Appendix Testis Torsion

Torsion Testicle (Testicular Disorders)

Alternate index label for Testicular Disorders.

Torsion, Testicular

Alternate index label; see *Testicular torsion*.

Torticollis

Abnormal contraction or posture of the neck causing the head to tilt or rotate.

Torticollis (Wryneck)

A condition in which the head is tilted to one side (ear toward the shoulder) and rotated to the opposite side (chin toward opposite shoulder), due to contraction or shortening of the sternocleidomastoid muscle.

Alternate Names:

Wryneck

Torticollis, Spasmodic

Alternate index label; see *Cervical dystonia*.

Torulaspora

A genus of yeasts used in food and fermentation; human infection is rare and usually opportunistic.

Torulaspora Delbrueckii

A yeast used in wine and food fermentation; it rarely causes infection in people with major immune compromise.

Torus Fracture

An incomplete, stable compression fracture of pe-

diatric bone (also known as a buckle fracture), representing the most frequent skeletal injury in childhood. Characterized by compaction and outward bulging of the porous, trabecular metaphyseal cortex (most commonly in the distal radius) in response to an axial compressive load on a fall onto an outstretched hand, with an intact periosteum and without disruption of the opposite cortex. It carries an excellent prognosis, heals rapidly, and is typically treated conservatively with a removable wrist splint or short-arm cast for 3 to 4 weeks.

Alternate Names:

Buckle Fracture; Metaphyseal Buckle Fracture; Torus Fracture of Radius

Torus Mandibularis

A bony outgrowth arising from the lingual surface of the mandible, typically bilateral and located in the premolar region above the mylohyoid ridge. It is a common, asymptomatic developmental anomaly, more prevalent in women and certain ethnic populations.

Torus Palatinus

A bony exostosis arising from the midline of the hard palate, typically presenting as a slow-growing, asymptomatic, hard, bony protuberance discovered incidentally. It is more common in women and certain ethnic groups.

Tositumomab

A monoclonal antibody formerly used with radioactive iodine-131 for some relapsed or refractory B-cell non-Hodgkin lymphomas; it is no longer routinely available in many settings.

Total Abdominal Colectomy

Surgical removal of the entire colon through an abdominal approach, with restoration of intestinal continuity or creation of an ileostomy as clinically appropriate.

Total Anomalous Pulmonary Venous Connection

Alternate index label; see *Total anomalous pulmonary venous return*.

Total Anomalous Pulmonary Venous Return

A congenital heart defect in which the pulmonary veins drain into the systemic venous circulation instead of the left atrium. The clinical effects depend on the anatomic type, the degree of obstruction, and associated defects; affected newborns require specialist cardiac evaluation.

Total Artificial Heart

A mechanical device that replaces the pumping function of both ventricles and is used in selected patients with severe biventricular heart failure, usually as a bridge to transplantation. It requires specialized center-based management and carries risks including bleeding, infection, thrombosis, and device malfunction.

Total Body Surface Area

The percentage of body surface involved by a burn or other extensive skin process. It is estimated using methods such as the rule of nines, Lund-Browder chart, or the patient's palm and is used to guide burn severity assessment and resuscitation.

Total Breech Extraction

A maneuver where the operator grasps the fetal feet and delivers the entire baby in breech presentation. The most common indication is delivery of the second twin (malpresentation). Contraindicated for term singleton breech due to high risk of head entrapment, nuchal arms, and birth trauma.

Total Cholesterol

Total cholesterol is the combined cholesterol carried in major blood lipoproteins; cardiovascular risk is assessed with HDL, LDL, triglycerides, and other factors.

Total Daily Energy Expenditure

Total calories burned in 24 hours: BMR + thermic effect of food + physical activity. Estimation guides dietary recommendations. Activity factor multiplies BMR.

Total Haemolytic Complement Test

A functional assay of the classical complement pathway, commonly reported as CH50.

Total Hysterectomy

Removal of the uterus and cervix. The fallopian tubes and ovaries are not necessarily removed and should be specified separately, such as salpingectomy or oophorectomy.

Total Hip Arthroplasty

Replacement of the hip joint with prosthetic components. Acetabular component: metal shell + polyethylene liner. Femoral component: metal stem + femoral head (cobalt-chrome or ceramic). Fixation: cemented (PMMA, for elderly, osteoporotic bone), cementless (porous-coated, for younger patients, biologic fixation), and hybrid.

Total Hip Joint Replacement - Revision

A medical procedure, treatment, device, or care topic related to total hip joint replacement - revision; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Total Intravenous Anesthesia

Total intravenous anesthesia uses intravenous agents exclusively for induction and maintenance of anesthesia, avoiding volatile inhalation agents. The most common TIVA regimen combines propofol infusion (50 to 200 mcg/kg/min) with remifentanyl infusion (0.1 to 0.5 mcg/kg/min).

Total Iron Binding Capacity

TIBC: a measure of the maximum iron-binding capacity of transferrin in serum, reflecting total iron-transport capacity. Calculated from transferrin or measured directly.

Total Knee Arthroplasty

Replacement of the knee joint with prosthetic components. Femoral component (cobalt-chrome), tibial component (titanium tray + polyethylene insert), and patellar component (polyethylene, optional). Fixation: cement (PMMA) most common in older adults; cementless in younger.

Total Knee Joint Replacement - Revision

A medical procedure, treatment, device, or care topic related to total knee joint replacement - revision; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Total Knee Replacement

A medical procedure, treatment, device, or care topic related to total knee replacement; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Total Laryngectomy

Total laryngectomy removes the entire voice box and creates a permanent opening in the neck for breathing, usually to treat advanced laryngeal cancer.

Total Lesion Glycolysis

Product of metabolic tumor volume and mean SUV. Prognostic marker.

Total Lung Capacity

The total volume of air in the lungs after maximal inspiration. It is measured by lung-volume testing, such as body plethysmography, and may be increased in hyperinflation or decreased in restrictive lung disease.

Total Pancreatectomy

Total pancreatectomy removes the entire pancreas and causes permanent loss of insulin and digestive-enzyme production, requiring lifelong replacement treatment.

Total Parenteral Nutrition

Intravenous administration of nutrients sufficient to meet essentially all nutritional requirements when the gastrointestinal tract cannot be used adequately.

Total Parenteral Nutrition - Infants

Intravenous nutrition for infants who cannot receive enough nutrients through the gastrointestinal tract; it requires careful monitoring of glucose, electrolytes, liver function, infection, and catheter complications.

Total Proctocolectomy And Ileal-Anal Pouch

Total proctocolectomy with an ileal-anal pouch removes the colon and rectum and creates a pouch from the ileum that is connected to the anus.

Total Proctocolectomy With Ileostomy

Total proctocolectomy with ileostomy removes the colon and rectum and diverts the end of the small intestine through an abdominal stoma.

Total Protein

The combined amount of albumin and other proteins in the blood. A blood test may help assess nutrition, liver or kidney disease, inflammation, or abnormal antibody production.

Total Sleep Time

The total amount of time spent asleep during a defined sleep period or sleep study, excluding periods of wakefulness.

Touch

The sensory perception of contact, pressure, texture, or vibration.

Tourette Disorder

A neurodevelopmental disorder characterized by multiple motor tics and one or more vocal tics lasting >1 year, with onset before age 18. Motor tics: eye blinking, head jerking, shoulder shrugging, facial grimacing. Vocal tics: throat clearing, sniffing, grunting, barking, coprolalia (obscene words, occurs in <10%).

Tourette Syndrome

A neurodevelopmental disorder characterized by multiple motor tics and at least one vocal tic occurring over at least one year. Tics are sudden, rapid, recurrent, stereotyped movements or vocalizations. They are often preceded by premonitory urges. Tics typically worsen in adolescence and may improve in adulthood.

Alternate Names:

Tourette's

Tourette'S

Alternate index label; see *Tourette syndrome*.

Tourette'S Syndrome

A neurodevelopmental disorder involving multiple motor tics and at least one vocal tic persisting for more than one year.

Tourniquet

A device or band used to compress a limb and temporarily reduce blood flow.

Towel Clamp

A clamp used to secure surgical drapes or hold them in position.

Townes Syndrome

A congenital disorder caused by pathogenic variants in *SALL1*, classically involving anal atresia and characteristic thumb abnormalities. Renal, cardiac, hearing, foot, and genital anomalies are common and variable.

Toxaemia

An older term for toxins in the blood or systemic illness; in pregnancy it was historically used for pre-eclampsia.

Toxaphene

An infectious process or toxic exposure involving toxaphene; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Toxbase

A clinical toxicology information service used to support assessment and management of poisoning.

Toxic

Poisonous or capable of causing injury to living tissue.

Toxic Dose

Dose causing toxicity. Varies by substance, individual, route, duration.

Toxic Effect

An infectious process or toxic exposure involving toxic effect; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Toxic Encephalopathy

Brain dysfunction caused by exposure to a toxic substance or medicine. Symptoms may include confusion, altered behavior, seizures, or reduced consciousness.

Toxic Epidermal Necrolysis

A severe, potentially fatal mucocutaneous reaction, usually to a medication, causing extensive epidermal necrosis and skin detachment. It is on the severe end of the Stevens–Johnson syndrome and toxic epidermal necrolysis spectrum and requires urgent specialist care.

Alternate Names:

TEN

Toxic Epidermal Necrolysis

Toxic epidermal necrolysis is a life-threatening severe skin reaction, usually to a medicine, causing widespread epidermal death and skin detachment with mucosal injury.

Toxic Megacolon

Acute life-threatening dilation of the colon associated with systemic toxicity, representing one of the most serious complications of inflammatory bowel disease, particularly ulcerative colitis. It can also occur in infectious colitis caused by *Clostridioides difficile* and cytomegalovirus.

Toxic Metabolic Encephalopathy

Diffuse brain dysfunction caused by systemic metabolic or toxic disturbances, producing confusion, altered alertness, agitation, seizures, or coma.

Toxic Nodular Goiter

An enlarged thyroid with nodules that produce excessive thyroid hormone.

Toxic Shock Syndrome

A severe toxin-mediated illness, usually caused by *Staphylococcus aureus* or *Streptococcus pyogenes*, with fever, rash, hypotension, and organ dysfunction.

Toxic Shock Syndrome

Alternate index label for TSS.

Toxic Shock Syndrome

Alternate index label for Toxic Shock Syndrome.

Toxic Synovitis

Temporary inflammation of the lining of the hip joint, usually in a child after a viral illness. It can cause hip pain and limping and must be distinguished from a serious joint infection.

Toxicity

Toxicity refers to harmful exposure to the named substance or condition; severity depends on dose, route, timing, symptoms, and patient factors, and urgent professional assessment may be required.

Toxicity Grade

An infectious process or toxic exposure involving toxicity grade; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Toxicity Test

toxicity test refers to harmful exposure to the named substance or condition; severity depends on dose, route, timing, symptoms, and patient factors, and urgent professional assessment may be required.

Toxicogenomics

An infectious process or toxic exposure involving toxicogenomics; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Toxicokinetic Description

An infectious process or toxic exposure involving toxicokinetic description; diagnosis considers the

cause, route of exposure, affected tissues, severity, and host response.

Toxicokinetics

The study of absorption, distribution, metabolism, and excretion of a toxic substance and its relationship to concentration over time. Toxicokinetics helps estimate exposure, timing, accumulation, and expected duration of toxicity.

Toxicology

The study of poisons, toxic exposures, their effects, prevention, and treatment.

Toxicology Screen

A test of urine, blood, or another sample for medicines, drugs, alcohol, or poisons. Results must be interpreted with the person's symptoms, timing, and prescribed medicines.

Toxicology Specimen Preservation

Collection, labeling, storage, and transport of biological specimens to preserve analytes and prevent contamination or degradation. Appropriate specimens may include peripheral blood, urine, vitreous humor, bile, liver, hair, or gastric contents depending on the suspected exposure and timing.

Toxidrome

A recognizable pattern of signs and symptoms produced by a class of toxins. Important patterns include opioid, sympathomimetic, anticholinergic, cholinergic, sedative-hypnotic, and serotonin toxidromes; treatment combines supportive care, targeted antidotes when available, and decontamination decisions.

Toxin

A poisonous substance made by a living organism, such as a bacterium, plant, animal, or fungus. Toxins can damage specific tissues or disrupt nerve, muscle, or cellular functions.

Alternate Names:

Biological poison

Toxin Ciguatera (Ciguatera Poisoning)

Alternate index label for Ciguatera Poisoning.

Toxins

Poisonous substances produced by living organisms, including bacteria, fungi, plants, and animals. They can injure cells or disrupt organ function; the term is usually distinguished from toxicants, which are harmful substances of nonbiological origin.

Toxocara

An infectious process or toxic exposure involving toxocara; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Toxocara Canis

An infectious process or toxic exposure involving toxocara canis; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Toxocara Cati

An infectious process or toxic exposure involving toxocara cati; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Toxocariasis

A zoonotic infection caused by Toxocara larvae, potentially affecting viscera or the eye.

Toxoid

A toxin rendered non-toxic but still antigenic, used in vaccines such as tetanus and diphtheria toxoids.

Toxoid Vaccines

Vaccines that protect against harmful bacterial toxins. These vaccines contain toxins that have been detoxified and rendered inactive.

Toxoplasma

An infectious process or toxic exposure involving toxoplasma; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Toxoplasma Blood Test

A blood test detecting antibodies or genetic material related to Toxoplasma gondii infection, interpreted with symptoms, immune status, pregnancy, and timing of exposure.

Toxoplasma Gondii

An obligate intracellular protozoan parasite that causes toxoplasmosis. The definitive host is the cat (family Felidae), which sheds environmentally resistant oocysts in feces.

Toxoplasmosis

Infection by Toxoplasma gondii, usually mild but potentially severe in pregnancy or immunosuppression.

Alternate Names:

Chorioretinitis Toxoplasma (Toxoplasmosis) Meningoencephalitis Toxoplasma (Toxoplasmosis)

Toxoplasmosis (Toxo)

Infection with Toxoplasma gondii, often mild in healthy people but potentially severe in pregnancy or in people with weakened immunity.

TPA

Tissue plasminogen activator, a natural clot-dissolving protein or a laboratory-made medicine based on it. In selected emergencies it helps break down clots, but it can cause serious bleeding.

Alternate Names:

Tissue plasminogen activator

TPMT Polymorphism

Thiopurine S-methyltransferase is an enzyme that metabolizes thiopurine drugs including azathioprine, 6-mercaptopurine, and thioguanine, which are used in the treatment of leukemia, inflammatory bowel disease, and autoimmune conditions.

TPN

TPN, or total parenteral nutrition, supplies nutrients intravenously when the gastrointestinal tract cannot be used adequately.

Tra Gene

A gene involved in sex determination and sexual differentiation in some organisms, especially insects; its function and sequence vary by species.

Trabectedin

Trabectedin is an antineoplastic drug that binds DNA and alters transcription and repair, used for selected advanced soft-tissue sarcomas and ovarian cancer.

Trabecula

A small beam, strut, or partition of tissue, especially in cancellous bone.

Trabecular Bone

Porous, lattice-like bone tissue found inside bones and near many joints.

Alternate Names:

Spongy bone; cancellous bone

Trabecular Meshwork

A porous tissue in the eye through which aqueous humor drains.

Trabeculectomy

A conventional glaucoma filtration surgery that creates a new drainage pathway for aqueous humor by removing a small piece of the trabecular meshwork and creating a partial-thickness scleral flap under which aqueous humor filters from the anterior chamber into the subconjunctival space, forming a filtering bleb.

Trabeculoplasty

Laser treatment that improves aqueous-humor drainage through the trabecular meshwork.

Trabulsiella

A genus of gram-negative bacteria related to *Enterobacter* that is rarely associated with opportunistic human infection.

Trabulsiella Guamensis

A gram-negative bacterium rarely isolated from hu-

man clinical specimens; disease significance depends on a compatible infection rather than colonization.

Trace Elements

Minerals required in very small amounts, including iron, zinc, copper, iodine, and selenium.

Trace Mineral

A mineral required by the body in very small amounts.

Tracer

A labeled substance used to follow a biological, chemical, or physical process.

Tracer Principle

Administered in amounts too small to produce pharmacological effect. Dose optimized for imaging, not therapeutic.

Trachea

The windpipe connecting the larynx with the main bronchi.

Tracheal Agenesis With Bronchoesophageal Fistula

Congenital malformation characterized by absent or severely hypoplastic trachea with an abnormal communication between the bronchus and esophagus, a rare and typically fatal condition presenting in neonates with respiratory distress, cyanosis, and inability to intubate.

Tracheal Foreign Body

A foreign object lodged in the trachea, causing severe respiratory distress, stridor, and complete airway obstruction. It is a medical emergency requiring immediate bronchoscopic removal. In complete obstruction, emergency cricothyrotomy may be needed.

Tracheal Rupture

Tracheal rupture is a tear in the windpipe caused by trauma, instrumentation, surgery, or pressure and can produce air leakage, breathing difficulty, and

life-threatening complications.

Tracheal Stenosis

Narrowing of the trachea, often a complication of prolonged endotracheal intubation or tracheostomy. It presents with progressive dyspnea, stridor, and wheezing that may be mistaken for asthma. Diagnosis is by bronchoscopy or CT. Treatment is balloon dilation, stenting, or surgical resection.

Tracheitis

Inflammation or infection of the mucous membranes of the trachea. While mild tracheitis frequently accompanies viral upper respiratory tract infections (tracheobronchitis), acute bacterial tracheitis (bacterial croup / pseudomembranous croup) is a life-threatening pediatric airway emergency. Typically caused by secondary bacterial superinfection (*Staphylococcus aureus*, *Streptococcus pneumoniae*, *Haemophilus influenzae*) following a viral prodrome, presenting with high fever, toxic appearance, barking cough, and severe inspiratory and expiratory stridor refractory to racemic epinephrine. Mandates urgent airway visualization and stabilization via endotracheal intubation, deep tracheal suctioning of thick mucopurulent pseudomembranes, and broad-spectrum intravenous antibiotic therapy.

Trachelectomy

Trachelectomy is surgical removal of the cervix, sometimes with nearby tissue, used in selected cervical cancers or other conditions.

Tracheobronchomalacia

Abnormal softening of the trachea and/or bronchi causing excessive airway collapse during breathing. It may be congenital or acquired. Symptoms include chronic cough, recurrent infections, and expiratory airflow obstruction. Diagnosis is by dynamic CT or bronchoscopy. Treatment includes CPAP, stenting, or surgical reconstruction.

Tracheobronchomegaly

Abnormal enlargement of the trachea and main bronchi, usually associated with connective-tissue weakness. It may cause recurrent lower-respiratory

infection, bronchiectasis, ineffective cough, dyspnea, and difficulty clearing airway secretions.

Tracheoesophageal Fistula

An abnormal connection between the trachea and esophagus, often associated with esophageal atresia. Presents with recurrent aspiration, coughing with feedings, and cyanosis during meals. The H-type fistula may present later in infancy with chronic aspiration and failure to thrive. Diagnosis by esophagram or bronchoscopy.

Tracheoesophageal Fistula And Esophageal Atresia Repair

A medical procedure, treatment, device, or care topic related to tracheoesophageal fistula and esophageal atresia repair; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Tracheomalacia

Softening of the tracheal cartilage causing excessive collapse of the trachea during expiration. It may be congenital or acquired (prolonged intubation, relapsing polychondritis). Symptoms include expiratory stridor and difficulty clearing secretions. Diagnosis is by dynamic CT or bronchoscopy.

Tracheomalacia - Acquired

Acquired tracheomalacia is weakening of the tracheal wall after injury, inflammation, compression, or prolonged ventilation, causing airway collapse and breathing symptoms.

Tracheomalacia - Congenital

Congenital tracheomalacia is weakness of the infant tracheal cartilage causing dynamic airway collapse, noisy breathing, cough, or recurrent respiratory symptoms.

Tracheostomy

A surgically created opening through the neck into the trachea, usually with insertion of a tube.

Tracheostomy Care

A medical procedure, treatment, device, or care topic related to tracheostomy care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Tracheostomy Tube

A tube inserted through a tracheostomy opening to maintain access to the airway and permit breathing, suction, or mechanical ventilation.

Tracheostomy Tube - Eating

Eating and drinking with a tracheostomy tube requires swallowing assessment and individualized precautions because aspiration risk depends on airway protection, secretions, and the underlying illness.

Tracheostomy Tube - Speaking

Speech with a tracheostomy tube may be supported by cuff deflation, a speaking valve, or other methods when airflow and airway protection are adequate; specialist assessment is required.

Tracheotomy

An operation that creates an opening through the neck into the trachea. The opening is called a tracheostomy.

Trachoma

A chronic eye infection caused by *Chlamydia trachomatis* that can scar the conjunctiva and cornea.

Trachyonychia

Rough, thin, ridged nails with many tiny pits, sometimes called twenty-nail dystrophy when most or all nails are affected. It may occur on its own or with psoriasis, alopecia areata, eczema, or lichen planus.

Traction

A pulling force used to align, immobilize, or relieve pressure on tissue or a fracture.

Tractional Retinal Detachment

Separation of the neurosensory retina caused by contraction of fibrovascular membranes, commonly

associated with proliferative diabetic retinopathy.

Tractotomy

Surgical interruption of a nerve tract, usually to reduce severe pain or other neurologic symptoms.

Train-Of-Four Monitoring

Train-of-four monitoring assesses neuromuscular blockade by delivering four supramaximal electrical stimuli at 2 Hz to a peripheral nerve, commonly the ulnar nerve at the wrist. The ratio of the fourth twitch height to the first twitch height estimates recovery from non-depolarizing blockade.

Trained Immunity

Innate immune memory: epigenetic/metabolic reprogramming of monocytes/macrophages/NK cells after initial stimulus (BCG, beta-glucan, *Candida*, oxidized LDL) -> enhanced response to secondary challenge (heterologous protection).

Training

Structured practice intended to develop knowledge, skills, physical capacity, or safe performance of a task. Medical training combines instruction, supervised practice, and assessment.

Trait

A trait is a measurable characteristic of an organism influenced by genes, environment, development, or their interaction.

Trajectory

The path a projectile follows in flight and, in wound ballistics, the course it traverses through tissue from entrance to exit or rest. Internal trajectory is reconstructed from entrance and exit defects, the organ track, recovered fragments, and clothing damage; angles disclose shooter position and victim posture.

TRALI

Transfusion-Related Acute Lung Injury, a life-threatening complication of blood transfusion characterized by acute hypoxemia and bilateral pulmonary edema within 6 hours of transfusion, with-

out evidence of volume overload.

Tram-Track Appearance

Histological finding on silver stain of MPGN representing GBM duplication. Results from mesangial cell interposition into capillary wall with new basement membrane formation. Creates double-contour pattern on Jones methenamine silver stain.

Trance

An altered state of awareness; clinical interpretation depends on cause and context.

Tranexamic Acid

An antifibrinolytic medicine that reduces bleeding by inhibiting plasminogen activation.

Trans Fat

An unsaturated fat containing at least one trans-configured double bond. Industrial trans fats, formerly common in partially hydrogenated oils, can raise LDL cholesterol, lower HDL cholesterol, and increase cardiovascular risk; small amounts also occur naturally in some meat and dairy foods.

Trans Fatty Acid

An unsaturated fatty acid with trans configuration, often formed during industrial oil processing.

Alternate Names:

Trans fat

Transabdominal Cerclage

A surgical procedure in which a permanent, non-absorbable synthetic band or braided suture is placed around the uterine cervico-isthmic junction via laparotomy or laparoscopy. Indicated in high-risk pregnant or pre-conceptional women with severe cervical insufficiency in whom standard transvaginal cerclage (McDonald or Shirodkar) is technically impossible or has repeatedly failed due to congenital cervical hypoplasia, cervical amputation, or extensive prior trachelectomy.

Alternate Names:

TAC; Cervico-Isthmic Cerclage

Transabdominal Scan

An ultrasound scan performed with the transducer placed on the maternal abdomen. A full bladder improves visualization of pelvic structures. Used in early pregnancy to confirm viability and gestational age, and throughout pregnancy to assess fetal growth, anatomy, amniotic fluid volume, and placental location.

Transaminase, Serum Glutamic Pyruvic

SGPT, now called ALT, is a liver-associated enzyme measured in blood and often elevated when liver cells are injured.

Transaminitis

Elevation of blood levels of aminotransferase enzymes, usually alanine aminotransferase and aspartate aminotransferase, indicating possible liver-cell injury but not identifying its cause.

Transarterial Chemoembolization

A procedure in which chemotherapy and embolizing particles are infused selectively into tumor-feeding hepatic arteries, combining regional chemotherapy with ischemic tumor necrosis; used for unresectable hepatocellular carcinoma.

Transbronchial Biopsy

Bronchoscopic sampling of lung parenchyma through the bronchial wall. It may evaluate interstitial or granulomatous disease, infection, transplant rejection, or peripheral lesions; complications include bleeding and pneumothorax.

Transcatheter Aortic Valve Replacement

A minimally invasive catheter-based cardiac intervention in which a collapsible bioprosthetic aortic valve (balloon-expandable or self-expanding) is delivered percutaneously (most commonly via the transfemoral artery, or via transaxillary, carotid, or transapical routes) and deployed within the diseased native calcified aortic valve under fluoroscopic guidance. Established as the standard of care for severe, symptomatic aortic stenosis across patients at high, intermediate, and low surgical risk, it avoids median sternotomy, cardiopulmonary bypass, and

cardiac arrest, resulting in reduced recovery times and mortality comparable or superior to surgical aortic valve replacement.

Alternate Names:

TAVR; TAVI; Transcatheter Aortic Valve Implantation

Transcatheter Edge-To-Edge Repair

A minimally invasive percutaneous catheter-based intervention for patients with severe symptomatic mitral regurgitation who are at high or prohibitive surgical risk, or who have secondary (functional) mitral regurgitation despite guideline-directed medical therapy. Under real-time transesophageal echocardiographic guidance via transfemoral transseptal access, a mechanical implant (such as the MitraClip or PASCAL device) is navigated into the left atrium and deployed to grasp and approximate the middle scallops of the anterior and posterior mitral valve leaflets (Alfieri stitch equivalent), creating a permanent double-orifice mitral valve that significantly reduces regurgitant volume.

Alternate Names:

TEER; MitraClip Procedure; Percutaneous Mitral Valve Repair

Transcervical Foley Catheter For Cervical Ripening

A mechanical method for cervical ripening: a Foley catheter (16-30 Fr) is inserted through the cervix, the balloon is inflated with 30-60 mL of saline, and traction is applied (or the catheter is taped to the thigh with gentle tension). The balloon applies direct pressure to the internal os, stimulating endogenous prostaglandin release.

Transcervical Resection Of Endometrium

An endoscopic procedure that removes or ablates the endometrium to reduce heavy menstrual bleeding.

Transcranial Doppler

Ultrasound measuring blood flow velocity in cerebral arteries. Used for vasospasm detection, stroke risk assessment.

Transcranial Doppler Scanning

Ultrasound measurement of blood flow through major arteries at the base of the brain.

Alternate Names:

Transcranial Doppler; TCD

Transcranial Doppler Ultrasound

Transcranial Doppler ultrasound measures blood-flow speed and direction in major arteries inside the skull.

Transcription

Synthesis of RNA from DNA template by RNA polymerase. Eukaryotic: RNA Pol II transcribes mRNA, rRNA, snRNA; RNA Pol I transcribes rRNA; RNA Pol III transcribes tRNA, 5S rRNA. Steps: initiation (promoter recognition, transcription factors), elongation (5' to 3'), termination. Promoter elements: TATA box, CAAT box, GC box.

Transcription Factor

Protein binding to specific DNA sequences, regulating transcription. Activators enhance transcription; repressors inhibit. Examples: p53, NF-kB, steroid hormone receptors.

Transcutaneous Electrical Nerve Stimulation

Low-voltage electrical stimulation delivered through skin electrodes to reduce pain.

Alternate Names:

TENS

Transcutaneous Electrical Nerve Stimulation

Electrical stimulation delivered through skin electrodes to modulate pain.

Transdermal

A route of drug administration delivering drug through intact skin into the systemic circulation via a patch or gel, bypassing first-pass metabolism and providing steady plasma concentrations over hours to days. Examples: nitroglycerin, fentanyl, nicotine, estrogen, clonidine, rotigotine.

Transfer Training

Teaching safe transfer techniques: bed to chair, chair to toilet, floor to standing. Use of transfer boards, lift equipment.

Transferrase

An enzyme that transfers a functional group from one molecule to another.

Transference

A psychoanalytic concept in which feelings, attitudes, and expectations originally directed toward a significant figure from childhood are unconsciously redirected onto the therapist. In psychodynamic therapy, transference is a therapeutic tool for understanding the patient's relational patterns and resolving conflicts.

Transferrin

An iron transport protein synthesized by the liver, carrying iron in plasma (2 iron-binding sites). In iron deficiency: transferrin is elevated with low ferritin, giving high TIBC and low transferrin saturation; in iron overload/inflammation/chronic disease: transferrin is low (acute phase).

Transferrin Saturation

The percentage of transferrin iron-binding sites occupied by iron.

Alternate Names:

TSAT

Transfusion

Administration of donated blood or blood components into a person's circulation.

Transfusion Of Neonate

Administration of a blood product to a newborn for clinically significant anemia, bleeding, or another specific indication. The decision, product characteristics, volume, and rate depend on the infant's symptoms, laboratory results, gestational age, and local transfusion protocol.

Transfusion Reaction

An adverse reaction to transfusion of blood products. Acute hemolytic transfusion reaction: ABO incompatibility, immediate fever/chills, hypotension, back pain, DIC, renal failure; management: STOP transfusion, maintain BP/urine output, supportive care.

Transient Familial Hyperbilirubinemia

Transient familial hyperbilirubinemia is inherited temporary elevation of bilirubin, often from reduced conjugation, causing episodic jaundice without major liver injury.

Transient Global Amnesia

A temporary episode of sudden inability to form new memories, with repetitive questioning, that usually resolves within 24 hours.

Transient Hypogammaglobulinemia Of Infancy

A temporary delay in normal immunoglobulin production during infancy, causing low antibody levels and increased susceptibility to infections before immune function improves spontaneously.

Alternate Names:

TGA

Transient Ischaemic Attack

A brief episode of neurological dysfunction caused by temporary focal brain, spinal-cord, or retinal ischaemia without persistent tissue infarction.

Alternate Names:

TIA

Transient Ischaemic Attacks Or Episodes

Brief focal neurologic episodes caused by temporary ischemia without persistent infarction.

Transient Ischemic Attack

A transient ischemic attack is a temporary episode of neurological dysfunction caused by focal brain, spinal cord, or retinal ischemia without acute infarction.

Transient Ischemic Attack (TIA, Mini-Stroke)

Alternate index label for TIA, Mini-Stroke.

Transient Ischemic Attack (TIA, Mini-Stroke)

Alternate index label for Transient Ischemic Attack (TIA, Mini-Stroke).

Transient Pain

Pain that is brief and resolves rather than persisting.

Transient Synovitis

A benign, self-limited inflammation of the synovial lining of the hip joint, representing the most common cause of acute hip pain and limping in children aged 3 to 8 years. Typically follows a viral upper respiratory tract infection by 1 to 2 weeks and presents with acute or insidious groin, thigh, or knee pain, antalgic limp, and mild restriction of hip abduction and internal rotation, with normal or slightly elevated inflammatory markers. It must be carefully distinguished from septic arthritis of the hip using the Kocher criteria (fever, non-weight-bearing, ESR >40 mm/hr, WBC >12,000/uL); treatment is supportive with rest and oral nonsteroidal anti-inflammatory drugs (NSAIDs).

Alternate Names:

Toxic Synovitis; Irritable Hip; Transient Synovitis of the Hip

Transient Tachypnea - Newborn

Temporary rapid breathing in a newborn caused by delayed clearance of fetal lung fluid, usually beginning soon after birth and improving within one to three days with supportive care.

Transient Tachypnea Of The Newborn

Temporary rapid breathing after birth, usually caused by delayed clearance of fetal lung fluid. It is more common after caesarean birth and typically improves within one to three days with supportive care.

Transillumination

Transillumination shines light through a body part or structure to reveal fluid, cavities, or other differences in tissue density.

Transition To Adulthood

Support for youth with disabilities transitioning to adult services.

Transitional Care

Coordinated care provided when a person moves between healthcare settings or levels of care, such as from hospital to home.

Transitional Epithelium

Specialized stretchable epithelium lining the renal pelvis, ureters, bladder, and proximal urethra, allowing urinary organs to expand while maintaining a protective barrier.

Alternate Names:

Transjugular Intrahepatic Portosystemic Shunt

Transjugular Intrahepatic Portosystemic Shunt

A radiologically created channel between a portal vein branch and a hepatic vein that lowers portal pressure, used for complications such as variceal bleeding or refractory ascites; encephalopathy and shunt dysfunction can occur.

Translational Medicine

An interdisciplinary field that turns findings from laboratory, clinical, and community research into better methods of disease prevention, diagnosis, treatment, and public health. It connects research findings with patient care and community health.

Alternate Names:

Translational Medicines

Translation

Decoding of mRNA sequence into polypeptide chain by ribosomes. Occurs in cytoplasm. tRNAs carry specific amino acids and recognize codons via anticodons. Steps: initiation, elongation, termination. Energy: GTP hydrolysis.

Translation Initiation

The first stage of protein synthesis, when a ribosome recognizes messenger RNA, selects the start codon, and assembles the initiator transfer RNA and ribosomal subunits.

Translocation

Movement of a chromosome segment, cell, organ, or substance to a different position.

Transmembrane Transport

Movement of ions, nutrients, drugs, or other molecules across a cell membrane through channels, carriers, pumps, or vesicles, sometimes requiring energy.

Transmission

Passage of an infection, signal, genetic trait, force, or substance from one source to another; in infectious disease, route, dose, and host susceptibility determine risk.

Transmural Infarction

A heart attack involving the full thickness of part of the heart wall.

Transplacental

Passing from the pregnant person's blood across the placenta to the fetus, or in the opposite direction. Antibodies, medicines, chemicals, and some infections can cross the placenta, with effects that depend on the substance and timing.

Transplant

A medical procedure, treatment, device, or care topic related to transplant; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Transplant Immunology

Hyperacute rejection: preformed anti-donor antibodies -> immediate graft failure (minutes-hours); prevented by crossmatch.

Transplant Rejection

Immune-mediated destruction of a transplanted organ or tissue, classified by timing and mechanism. Hyperacute: preformed donor-specific antibodies, minutes to hours post-transplant, immediate graft thrombosis, irreversible; prevention by cross-matching.

Transplant Services

A medical procedure, treatment, device, or care topic related to transplant services; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Transplant Surgery

Transplant surgery involves replacing a failing organ with a healthy donor organ. Kidney transplant: living donors (laparoscopic nephrectomy, left kidney preferred) or deceased donors (standard criteria, expanded criteria, DCD).

Transplantation

Transfer of an organ, tissue, or cells from a donor to a recipient.

Alternate Names:

Transplant

Transplantation Conditioning

A medical procedure, treatment, device, or care topic related to transplantation conditioning; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Transplantation Genetics

A medical procedure, treatment, device, or care topic related to transplantation genetics; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Transplantation Immunology

A medical procedure, treatment, device, or care topic related to transplantation immunology; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Transport

Regulations for shipping radioactive materials.
Package types: excepted, A, B.

Transport Protein

A membrane or soluble protein that carries a molecule or ion across a membrane or through body fluids, often determining absorption, distribution, and cellular concentration.

Transport Vesicle

A transport vesicle is a membrane-bound carrier that moves proteins, lipids, or other cargo between cellular compartments.

Transposition Of Great Vessels

Alternate index label; see *Transposition of the great arteries*.

Transposition Of The Great Arteries

A congenital heart defect in which the aorta arises from the right ventricle and the pulmonary artery from the left ventricle. This creates parallel circulations, so survival after birth depends on adequate mixing through an associated opening or ductus until definitive treatment is provided.

Alternate Names:

Transposition Of Great Vessels

Transposons

Mobile genetic elements that can move between different locations within the bacterial genome or between the chromosome and plasmids. Transposons carry genes including antibiotic resistance genes and can facilitate the spread of resistance.

Transrectal Ultrasonography

Ultrasound imaging of the prostate or nearby structures using a rectal probe.

Alternate Names:

TRUS

Transtracheal

Transtracheal means passing through or relating to the trachea, such as a catheter, oxygen delivery

route, or diagnostic procedure.

Transthyretin Amyloidosis

A progressive, infiltrative systemic amyloidosis caused by the dissociation and misfolding of tetrameric transthyretin into amyloid fibrils that deposit in the myocardium and peripheral nervous system. Occurs in two forms: hereditary (variant ATTR, caused by pathogenic *TTR* mutations such as Val122Ile or Val30Met) and wild-type (senile systemic amyloidosis, predominantly causing restrictive cardiomyopathy in elderly men). Diagnosed by technetium-99m pyrophosphate scintigraphy or tissue biopsy and treated with TTR tetramer stabilizers (such as tafamidis) or TTR-gene-silencing agents.

Alternate Names:

ATTR amyloidosis; ATTR-CM; Transthyretin-related amyloidosis

Transtympanic

Transtympanic means passing through the tympanic membrane, such as medicine delivered into the middle ear or a procedure crossing the eardrum.

Transudate

A transudate is a type of edema fluid with low protein content and few cells, resulting from imbalances in hydrostatic and oncotic pressures across capillary walls rather than from inflammation or increased vascular permeability.

Transudation

Passage of low-protein fluid through a membrane because of pressure or osmotic imbalance.

Transudative Pleural Effusion

From systemic factors altering hydrostatic/oncotic pressures. Most commonly from heart failure. Low protein, low LDH. Treatment addresses the underlying cause.

Transurethral Incision Of The Prostate

An operation using small prostate incisions to relieve obstruction of urine flow.

Alternate Names:

TUIP

Transurethral Microwave Thermotherapy

Heat treatment using microwaves to destroy prostate tissue obstructing urine flow.

Alternate Names:

TUMT

Transurethral Needle Ablation

Treatment using radiofrequency heat delivered by needles to destroy obstructing prostate tissue.

Alternate Names:

TUNA

Transurethral

Performed through the urethra, usually using an instrument to examine, treat, or remove tissue from the urinary tract.

Transurethral Resection

Removal of tissue through an instrument passed along the urethra, commonly for prostate or bladder disease.

Transurethral Resection Of The Prostate

An endoscopic operation that removes obstructing prostate tissue to improve urine flow in selected people with benign prostatic enlargement. Alternatives and indications depend on symptoms, prostate size, complications, and patient preference.

Transvaginal

Performed through the vagina, commonly describing an ultrasound examination or a procedure involving the uterus, cervix, ovaries, or other pelvic structures.

Transvaginal Ultrasound

Transvaginal ultrasound uses a covered probe in the vagina to produce images of the uterus, ovaries, cervix, pregnancy, or nearby pelvic structures.

Transverse

Running across or perpendicular to the long axis or midline.

Transverse Colon

Longest, most mobile colonic segment from hepatic to splenic flexure, approximately 45 cm, with complete mesentery (transverse mesocolon). Crosses anterior to duodenum, pancreas, and major vessels. Splenic flexure is the highest colon point and common gas trapping site. Most common diverticular disease site along with the sigmoid.

Transverse Lie

A fetal lie where the long axis of the fetus is perpendicular to the long axis of the mother. The presenting part is a shoulder or arm. Occurs in approximately 1% of term pregnancies. Risk of cord prolapse and obstructed labor. Cesarean delivery required as vaginal delivery is not possible.

Transverse Myelitis

An inflammatory disorder of the spinal cord causing acute or subacute motor, sensory, and autonomic dysfunction.

Transverse Plane

A horizontal plane that divides the body or an organ into upper (superior) and lower (inferior) portions.

Transverse Vaginal Septum

A congenital obstructive anomaly caused by incomplete canalization and failure of fusion between the caudal end of the paired Müllerian ducts and the cranial evagination of the urogenital sinus. Creates a horizontal partition across the vagina (most commonly at the junction of the upper and middle thirds), which when complete causes primary amenorrhea, cyclic pelvic pain, cryptomenorrhea, hematocolpos, and hematometra upon menarche, treated by surgical septum resection.

Transversus Abdominis Muscle

Deepest flat abdominal muscle with horizontal fibers, from inguinal ligament, iliac crest, thoracolumbar fascia, and inner lower six costal cartilages. Innervated by T7-T12 and L1. Compresses abdomen without trunk movement, providing core stability and increased intra-abdominal pressure during coughing, lifting, Valsalva.

Transvestic Disorder

A paraphilic disorder involving recurrent sexual arousal from cross-dressing that causes marked distress, impairment, or harm, or is acted on without consent. It is distinct from gender dysphoria, which concerns gender identity rather than sexual arousal.

Tranylcypromine

A monoamine oxidase inhibitor antidepressant requiring careful interaction and dietary management.

TRAP Sequence

Twin Reversed Arterial Perfusion sequence, a complication of monochorionic twin gestations where one twin (the pump twin) perfuses the other (the acardiac twin) via arterioarterial anastomoses.

Trapezium (Multangulum Majus)

A carpal bone of the wrist situated on the radial (lateral) aspect of the distal carpal row. Articulates proximally with the scaphoid, medially with the trapezoid, and distally with the first and second metacarpals. Most notably forms the classic saddle-shaped first carpometacarpal joint with the base of the first metacarpal, conferring unique multidirectional mobility and opposition to the thumb. Because of high mechanical joint loading forces during gripping and pinching, the trapeziometacarpal articulation is the most common site of disabling degenerative osteoarthritis in the human hand (basal thumb arthritis / rhizarthrosis), frequently managed with splinting, corticosteroid injections, or surgical trapeziectomy.

Trapezius Muscle

Large triangular muscle from occipital bone and C7-T12 spinous processes to clavicle, acromion, and scapular spine. Innervated by CN XI and C3-C4. Upper fibers elevate scapula, middle fibers retract, lower fibers depress. Essential for shoulder stability and scapulothoracic motion.

Trapezoid

Smallest distal row carpal bone between trapezium and capitate, articulating with the second metacarpal. Wedge shape provides stability for the

firmly fixed second metacarpal. Fractures rare (less than 1 percent of carpal fractures). Contributes to the radial column wrist stability.

Trapezoid Bone

A small distal-row carpal bone between the trapezium and capitate that articulates mainly with the index metacarpal and helps stabilize the radial side of the hand.

Trastuzumab

Trastuzumab is a monoclonal antibody targeting HER2 used for HER2-positive breast, gastric, and other cancers; infusion reactions and potentially reversible cardiomyopathy require cardiac monitoring.

Trauma

Physical injury caused by external force, or the psychological response to a distressing event.

Trauma (Vascular)

Injury to a blood vessel caused by blunt force, penetrating injury, fracture, medical procedures, or other mechanisms.

Alternate Names:

Vascular

Trauma Center

Hospital designated to provide comprehensive care for injured patients. Levels: Level I (complete care, research, prevention), Level II (similar but limited resources), Level III (stabilization, transfer), Level IV (advanced trauma life support, transfer). Transfer criteria: need for higher level of care, specific injuries.

Trauma Surgery

Trauma surgery encompasses the acute care of injured patients, guided by ATLS principles: Airway maintenance with cervical spine protection, Breathing and ventilation, Circulation with hemorrhage control, Disability/neurologic assessment, and Exposure/environmental control.

Traumatic Amputation

Traumatic amputation is loss of a body part from injury and requires hemorrhage control, preservation of the amputated part when possible, urgent surgery, rehabilitation, and psychological support.

Traumatic Bleb

A filtering bleb formed after glaucoma filtration surgery (trabeculectomy) that develops complications from trauma, or a thin-walled, elevated bleb that leaks or is at risk of rupture. Traumatic bleb failure or overfiltering can lead to hypotony, choroidal detachment, and endophthalmitis risk.

Traumatic Brain Injury

Disruption of brain function caused by an external mechanical force. Severity: mild (GCS 13-15, concussion), moderate (GCS 9-12), severe (GCS 3-8). Primary injury: direct damage at moment of impact (contusion, diffuse axonal injury, intracranial hemorrhage).

Alternate Names:

TBI

Traumatic Events And Children

Traumatic events can affect children's safety, behavior, sleep, learning, and emotions; supportive caregivers, stable routines, and professional assessment help identify persistent trauma responses.

Traumatic Grief

Alternate index label; see *Complicated grief*.

Traumatic Injury

A clinical condition or finding involving traumatic injury. Its features, causes, evaluation, and management depend on the clinical context.

Traumatic Injury Of The Bladder And Urethra

Damage to the bladder or urethra caused by an accident, surgery, or penetrating injury. Blood in the urine, inability to urinate, pelvic pain, or shock requires urgent evaluation.

Traumatic Shock

A life-threatening state in which severe injury causes inadequate blood flow and oxygen delivery to tissues.

Traumatic Spondylolisthesis Of The Axis (Hangman'S Fracture)

A bilateral fracture of the pars interarticularis of the C2 vertebra (axis), typically caused by hyperextension of the head. Classically associated with judicial hanging but also occurs in motor vehicle accidents and falls. May present with neck pain, torticollis, or neurological deficits if the spinal cord is compressed.

Alternate Names:

hangman's fracture

Traumatology

The study and treatment of physical injury and its consequences.

Traumeel S

Traumeel S is a multi-ingredient complementary product marketed for pain and inflammation; evidence, formulation, and safety depend on the product and it should not replace needed care.

Travel Sickness (Motion Sickness / Kinetosis)

A common physiological neurosensory mismatch syndrome provoked by unfamiliar real or perceived passive motion during vehicular, sea, or air travel. Pathophysiologically driven by the sensory conflict theory, where vestibular inputs from the semicircular canals and otolith organs conflict directly with visual cues and proprioceptive inputs regarding body position in space. Triggers central autonomic activation in the vestibular nuclei and chemoreceptor trigger zone, manifesting with pallor, cold diaphoresis, gastric awareness, malaise, nausea, and vomiting. Prevented and managed by visual fixation on the horizon, ginger, antihistamines with anticholinergic properties (dimenhydrinate, meclizine), or transdermal scopolamine patches.

Travelers' Diarrhea

Acute diarrhea occurring during or shortly after travel, usually caused by contaminated food or water and commonly involving bacterial, viral, or parasitic infection.

Travoprost

Travoprost is a prostaglandin analogue eye drop that increases uveoscleral outflow and lowers intraocular pressure in glaucoma or ocular hypertension; iris pigmentation and eyelash changes may occur.

Trazodone

Trazodone is a serotonin antagonist and reuptake inhibitor used for depression and sometimes insomnia; sedation, orthostatic hypotension, serotonin syndrome, and rare priapism are important adverse effects.

Trazodone Overdose

Poisoning from taking too much trazodone. It can cause severe sleepiness, vomiting, low blood pressure, seizures, abnormal heart rhythms, or a prolonged painful erection.

Trb Gene

A gene involved in biological processes that vary by species; its precise identity and function must be interpreted from the organism and gene nomenclature used.

Trd Gene

The gene encoding the delta chain of the T-cell receptor in humans, contributing to gamma-delta T-cell antigen recognition.

Treacher Collins Syndrome

An autosomal dominant craniofacial disorder caused by mutations in TCOF1 (most common), POLR1C, or POLR1D genes, encoding ribosomal RNA transcription factors.

Treacle

Treacle is a thick sugar syrup; in older medical usage, related terms referred to antidotes or mixtures, so

context matters.

Treat-To-Target Strategy

A management approach in which treatment is adjusted at regular intervals toward a predefined goal such as remission or low disease activity. It requires validated disease-activity measures, shared decisions, monitoring, and timely escalation or modification.

Treatment

Medical intervention for disease. Includes pharmacological, surgical, lifestyle, supportive.

Treatment Epoch

A treatment epoch is a defined period in a clinical study or treatment plan during which a particular therapy or treatment phase is given.

Treatment-Resistant Depression

Depression that does not improve adequately after appropriate trials of standard treatments. It requires reassessment of diagnosis, adherence, comorbidity, and treatment options.

Trematoda

A class of parasitic flatworms called flukes; human infections include schistosomiasis and liver or lung fluke disease.

Trematosphaeria Grisea

An environmental dematiaceous fungus rarely associated with human infection; clinical importance depends on recovery from a compatible lesion or sterile site.

Tremelimumab

A monoclonal antibody that blocks CTLA-4 and enhances T-cell activity; it is used with durvalumab for selected unresectable hepatocellular carcinoma and other cancers, with immune-related adverse effects possible.

Tremor

An involuntary, rhythmic shaking of a body part.

It may occur at rest, while holding a position, or during movement and can result from medicines, caffeine, anxiety, essential tremor, Parkinson disease, or other neurologic or metabolic conditions.

Trench Fever

A louse-borne infection caused by *Bartonella quintana*, producing recurring fever and bone pain.

Trench Foot

Cold and wet injury to the feet causing numbness, swelling, pain, and tissue damage.

Trench Mouth

Trench mouth is acute necrotizing ulcerative gingivitis causing painful bleeding gums, foul breath, and ulceration, often associated with plaque, smoking, stress, or poor nutrition.

Trendelenberg Position

A position in which the patient lies supine with the feet higher than the head; clinical uses and risks depend on context.

Trendelenburg

Trendelenburg position places the body supine with the feet higher than the head; its use is procedure-specific and may affect breathing, pressure, and circulation.

Trendelenburg Position

A supine position in which the head and upper body are lower than the feet.

Treosulfan

An alkylating chemotherapy drug used in conditioning before allogeneic hematopoietic stem-cell transplantation; infection, mucositis, infertility, and organ toxicities may occur.

Trepanning

Drilling or cutting a circular opening in bone, especially the skull.

Trephine

A circular cutting instrument used to remove a disk of tissue or bone, such as during a bone-marrow biopsy or corneal procedure.

Trephining

Another term for trepanning, creating a circular opening in bone.

Trephining (Trepanation)

A surgical procedure in which a hole is drilled or scraped into the skull (cranium), exposing the dura mater. Historically, trephining dates back to Neolithic times (10,000 BCE) and was performed for ritual, therapeutic (releasing 'evil spirits'), and post-traumatic indications.

Alternate Names:

Trepanation

Treponema

A genus of spiral bacteria including *T. pallidum*, the cause of syphilis.

Treponema Pallidum

A spirochete that causes syphilis, a sexually transmitted infection. The organism is transmitted through sexual contact or transplacentally (congenital syphilis). Primary syphilis presents with a painless genital ulcer (chancre). Secondary syphilis presents with rash, mucous patches, and condylomata lata.

Treponema Pallidum Infection

Infection with the bacterium *Treponema pallidum*, which causes syphilis and can affect the skin, nervous system, cardiovascular system, and other organs.

Treponemal Infections

An infectious process or toxic exposure involving treponemal infections; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Trepopnea

Dyspnea that occurs in one lateral decubitus posi-

tion but not the other. It is typically worse when lying on the side of the affected lung. It may be caused by unilateral lung disease, pleural effusion, or mediastinal mass.

Tretinoin

Tretinoin is all-trans retinoic acid used topically for acne and photoaging and orally with arsenic or chemotherapy for acute promyelocytic leukaemia; skin irritation and systemic differentiation syndrome are important risks.

TRG Gene

A gene encoding the gamma chain of the T-cell receptor, contributing to gamma-delta T-cell development and antigen recognition.

Triiodothyronine

The thyroid hormone T3, which contains three iodine atoms and has stronger biological activity than T4. It helps regulate metabolism, heart rate, temperature, and growth.

Triage

Sorting patients by urgency and resource needs so those at greatest risk receive timely care.

Trial Indication

The disease, condition, symptom, or clinical purpose for which an investigational intervention is being studied in a clinical trial.

Trial Of Labor After Cesarean

An attempt to give birth vaginally after a previous cesarean delivery. Whether it is appropriate depends on the prior uterine incision, obstetric history, current pregnancy, facility resources, and the person's preferences. Counseling includes the possibility of successful VBAC, repeat cesarean delivery, and uterine rupture.

Trial Screening

The process of checking potential participants against a clinical trial's eligibility criteria, including medical history, examination, laboratory tests, and

informed consent.

Triamcinolone

A synthetic glucocorticoid used topically, by injection, or in other formulations for inflammation.

Triamcinolone Acetonide

A synthetic corticosteroid used topically, by injection, or in other preparations to reduce inflammation; prolonged or extensive use can cause local and systemic steroid effects.

Triamterene

Triamterene is a potassium-sparing diuretic that blocks epithelial sodium channels in the collecting duct and is used for hypertension or oedema; hyperkalaemia and kidney stones are important risks.

Triazenes

A group of chemical compounds that includes some anticancer agents; their effects and toxicity depend on the specific compound.

Triazine

A chemical ring structure found in some medicines, herbicides, and industrial compounds; health effects depend on the specific substance and exposure.

Triaziquone

An older alkylating anticancer drug that cross-links DNA; its clinical use is limited by toxicity and availability.

Triazolam

Triazolam is a short-acting benzodiazepine hypnotic for short-term insomnia; amnesia, falls, dependence, respiratory depression, and dangerous interactions with opioids or other sedatives can occur.

Triazole

A five-membered nitrogen-containing chemical ring found in several antifungal medicines and other drugs; clinical effects depend on the specific compound.

Triazophos

An organophosphate insecticide that can inhibit acetylcholinesterase and cause cholinergic poisoning after significant exposure.

Tributylin

A triglyceride that releases the short-chain fatty acid butyrate during digestion; it is studied experimentally for intestinal and metabolic effects.

Triceps

A three-headed muscle, especially the triceps brachii that extends the elbow.

Triceps Brachii Muscle

Three-headed posterior arm muscle. Long head from infraglenoid tubercle, lateral head from posterior humerus above radial groove, medial head below. All insert on the olecranon. Innervated by radial nerve (C7-C8). Primary elbow extensor; assists shoulder extension/adduction.

Trichiasis

Inward misdirection of eyelashes so they rub against the eye.

Trichilemmal Carcinoma

A rare malignant follicular tumor showing outer-root-sheath differentiation, usually occurring on sun-damaged skin of older adults as a papule or nodule; complete excision is generally required.

Trichilemmoma

A benign follicular tumor with outer-root-sheath differentiation, usually presenting as a small facial papule; multiple lesions may be associated with Cowden syndrome.

Trichiniasis

An infection caused by *Trichinella* larvae, acquired from undercooked meat.

Trichinosis

Infection with *Trichinella* worms, usually acquired by eating undercooked infected pork or wild game.

It may cause diarrhea, fever, muscle pain, and swelling around the eyes.

Trichobezoar

A gastrointestinal mass composed mainly of swallowed hair, usually located in the stomach.

Trichoblastoma

A rare benign follicular tumor of the scalp or face, usually presenting as a solitary dermal or subcutaneous nodule; it can resemble basal-cell carcinoma and is diagnosed histologically.

Trichoepithelioma

A rare benign follicular adnexal tumor that usually presents as a skin-coloured papule or nodule on the face or scalp; it can resemble basal-cell carcinoma and may require histopathologic confirmation.

Trichomonas

A flagellated protozoan, *Trichomonas vaginalis*, that infects the urogenital tract and causes trichomoniasis. It is transmitted mainly through sexual contact and may cause discharge, irritation, or no symptoms.

Trichomonas Vaginalis

A flagellated protozoan that causes trichomoniasis, a sexually transmitted infection.

Trichomoniasis

A sexually transmitted infection caused by the parasite *Trichomonas vaginalis*. It may cause genital irritation and discharge or no symptoms; testing and treatment of partners help prevent reinfection.

Trichophyton

A genus of dermatophyte fungi causing infections of skin, hair, and nails.

Trichorrhexis Nodosa

A hair-shaft defect in which weakened points split into brush-like ends, caused by inherited disease, trauma, chemicals, heat, or nutritional or metabolic disorders.

Trichothiodystrophy Syndrome

A group of inherited disorders characterized by brittle sulfur-deficient hair with a distinctive banded appearance, often accompanied by photosensitivity, ichthyosis, developmental delay, short stature, or recurrent infection.

Trichotillomania

Recurrent compulsive pulling out of one's hair, causing hair loss and distress or impairment.

Trichuriasis

Intestinal infection caused by the whipworm *Trichuris trichiura*, usually acquired by swallowing eggs from contaminated soil or food. Heavy infection can cause abdominal pain, diarrhea, anemia, or rectal prolapse.

Tricuspid Annular Plane Systolic Excursion

A quantitative echocardiographic measurement used as the primary, standard bedside index of right ventricular longitudinal systolic function. Obtained using M-mode echocardiography aligned along the lateral tricuspid annulus in the apical four-chamber view, it measures the maximum total systolic displacement of the tricuspid annulus toward the RV apex in millimeters. A TAPSE value of < 17 mm indicates right ventricular systolic dysfunction and carries strong prognostic significance in pulmonary hypertension, heart failure, and acute pulmonary embolism.

Alternate Names:

TAPSE; Tricuspid Annular Excursion; RV Longitudinal Systolic Function

Tricuspid Atresia

Absence of the tricuspid valve, resulting in no direct communication between the right atrium and right ventricle. Blood flow depends on an atrial septal defect and ventricular septal defect for mixing. Presents with cyanosis.

Tricuspid Incompetence

Failure of the tricuspid valve to close completely, causing regurgitation into the right atrium.

Tricuspid Regurgitation

Incomplete closure of the tricuspid valve allowing blood to flow backward from the right ventricle to the right atrium during systole. Causes include right ventricular dilation (from pulmonary hypertension or left heart failure), endocarditis, rheumatic disease, and carcinoid syndrome.

Tricuspid Stenosis

Narrowing of the tricuspid valve opening, obstructing flow from right atrium to right ventricle.

Tricuspid Valve

The right atrioventricular heart valve between the right atrium and right ventricle.

Tricyclic Antidepressant Drugs

Antidepressants that inhibit norepinephrine and serotonin reuptake and can cause anticholinergic, cardiac, and toxic effects.

Tricyclic Antidepressants

Older antidepressants that non-selectively inhibit the reuptake of serotonin and norepinephrine. They include amitriptyline, nortriptyline, imipramine, clomipramine, and desipramine.

Trifluoperazine

A phenothiazine antipsychotic used for selected psychotic disorders. It can cause drowsiness, movement disorders, and other serious effects, so treatment requires medical supervision.

Trigeminal Nerve

Cranial nerve V, carrying facial sensation and motor supply to muscles of mastication.

Trigeminal Neuralgia

Brief, severe, electric-shock-like facial pain in one or more trigeminal-nerve divisions.

Alternate Names:

Neuralgia, Trigeminal Tic Douloureux (Trigeminal Neuralgia)

Trigger

A trigger is an event, exposure, stimulus, or condition that initiates or worsens a symptom, disease episode, behavior, or physiologic response.

Trigger Finger

Stenosing tenosynovitis causing painful catching or locking of a finger during movement.

Alternate Names:

Stenosing Tenosynovitis Trigger Thumb (Trigger Finger)

Trigger Thumb

Stenosing tenosynovitis causing painful catching or locking of the thumb.

Trigger Thumb (Trigger Finger)

Alternate index label for Trigger Finger.

Triglyceride

A lipid composed of glycerol and three fatty acids, transported in blood and stored in adipose tissue.

Triglyceride Level

A triglyceride level measures a type of fat in the blood; persistently high levels can increase cardiovascular risk and, when very high, cause pancreatitis.

Triglycerides

Triglycerides are blood fats made of glycerol and three fatty acids; elevated levels contribute to cardiovascular risk and, when very high, pancreatitis risk.

Trigone

A triangular area, especially the smooth region at the base of the urinary bladder.

Trimester

One of the three approximately three-month periods of pregnancy.

Trimethoprim

An antibacterial medicine that inhibits bacterial folate metabolism, often combined with sulfamethox-

azole.

Trimethoprim-Sulfamethoxazole

A fixed-dose combination of trimethoprim and sulfamethoxazole that synergistically inhibits folate synthesis. TMP-SMX is indicated for urinary tract infections, *Pneumocystis jirovecii* pneumonia, and community-acquired pneumonia. The combination is bactericidal against many gram-positive and gram-negative organisms.

Trimethylaminuria

A metabolic disorder in which impaired oxidation of trimethylamine causes a characteristic fish-like body odor in sweat, urine, and breath. It may be inherited or acquired and can cause substantial psychosocial distress despite limited physical illness.

Trimipramine

A sedating tricyclic antidepressant used for depression in some countries. Its anticholinergic and cardiovascular effects can cause dry mouth, constipation, blurred vision, drowsiness, orthostatic hypotension, or dangerous toxicity in overdose; interactions and suicide risk require clinical monitoring.

Trinitrin

Another name for glyceryl trinitrate or nitroglycerin, a nitrate vasodilator.

Trinitrophenol

Picric acid, a corrosive and explosive chemical historically used in medicine and industry.

Trinucleotide Repeat

Expansion of three-nucleotide sequences causes diseases: Huntington, Fragile X (CGG), myotonic dystrophy (CTG), Friedreich ataxia (GAA). Anticipation common.

Trip

A trip is a journey or an accidental stumble; in drug-related language it can also mean an episode of altered perception after a hallucinogen.

Tripe Palms

Diffuse, velvety, thickened hyperkeratosis of the palmar skin with a cerebriform, corrugated appearance resembling the lining of a cow's stomach (tripe), which is strongly associated with underlying malignancy, most commonly gastric adenocarcinoma. It may occur alone or in conjunction with acanthosis nigricans.

Triple X Syndrome

A sex chromosome aneuploidy characterized by the presence of an additional X chromosome in females, resulting in a 47,XXX karyotype, arising from non-disjunction during maternal meiosis I or II. Phenotypically, affected females are typically tall with normal sexual development and preserved fertility; clinical features may include mild motor, speech, and language delays, auditory processing difficulties, increased prevalence of learning disabilities and anxiety, mild epicanthal folds, and clinodactyly.

Alternate Names:

Trisomy X; 47,XXX Syndrome

Triple-Negative Breast Cancer

Breast cancer lacking ER, PR, HER2. Aggressive, limited treatment options.

Triplets

Three offspring born from the same pregnancy or three infants born in a multiple birth.

Triploidy Syndrome

A chromosomal condition in which cells contain three complete haploid chromosome sets. It causes severe fetal growth restriction and multiple congenital anomalies and is usually incompatible with prolonged survival; partial or mosaic forms vary.

Triptan

A class of medications used for acute migraine treatment, acting as 5-HT_{1B}/1D receptor agonists. 5-HT_{1B} receptors are located on cranial blood vessels; activation causes vasoconstriction of dilated meningeal arteries.

Triptans (Triptan)

Triptans are serotonin-receptor agonists used to abort migraine attacks by constricting cranial vessels and reducing trigeminal signaling.

Triquetrum

Pyramidal proximal row carpal bone on the ulnar side, articulating with lunate, hamate, pisiform, and TFCC. Second most commonly fractured carpal bone. Contributes to proximal carpal row and ulnar wrist stability. Pisiform articulates with its volar surface.

Trismus

Restricted ability to open the mouth, commonly caused by tetanus, dental infection, or muscle spasm.

Trisodium Phosphate Poisoning

Poisoning from swallowing or contacting trisodium phosphate, a strong alkaline cleaner. It can burn the mouth, throat, eyes, and skin and may cause vomiting or breathing problems.

Trisomy

Presence of three copies of a chromosome instead of two. Trisomy 21 (Down syndrome): intellectual disability, characteristic facies, heart defects. Trisomy 18 (Edwards): severe intellectual disability, multiple anomalies. Trisomy 13 (Patau): severe intellectual disability, holoprosencephaly, cleft lip/palate.

Trisomy 13

Patau syndrome, a chromosomal disorder caused by an extra chromosome 13 and associated with severe developmental, brain, facial, heart, kidney, and limb abnormalities.

Trisomy 18

Edwards syndrome, a chromosomal disorder caused by an extra chromosome 18 and associated with growth restriction, characteristic craniofacial and limb findings, heart disease, and severe developmental impairment.

Trisomy 18 (Edwards Syndrome)

Alternate index label for Edwards Syndrome.

Trisomy 21

Down syndrome: the most common chromosomal disorder, caused by an extra chromosome 21 (trisomy 21; 95 percent meiotic nondisjunction, mosaicism, translocation).

Trisomy 21 (Down Syndrome Overview)

Alternate index label for Down Syndrome Overview.

Trisomy 21 Syndrome

Alternate index label; see *Down syndrome*.

Trisomy X

Alternate index label; see *Triple X syndrome*.

Trocar

A pointed instrument in a cannula used to enter a body cavity or tissue.

Trochanter

A bony prominence on the femur, especially the greater or lesser trochanter.

Trochanteric Bursitis (Hip Bursitis)

Alternate index label for Hip Bursitis.

Troche

A troche is a small medicated lozenge that dissolves slowly in the mouth or throat for local or systemic drug delivery.

Trochlear Nerve

Cranial nerve IV, supplying the superior oblique eye muscle.

Trophic

Relating to the nutrition, growth, development, or maintenance of tissue. Trophic changes may occur when nerve supply or blood flow is impaired.

Trophoblast

The outer layer of the early embryo that contributes to implantation and placenta formation.

Trophoderm

The outer cellular layer of a blastocyst that contributes to formation of the placenta.

Trophozoite

The active, feeding, and multiplying stage of a protozoan parasite.

Tropical Chronic Pancreatitis

A historically recognized form of chronic pancreatitis reported mainly in tropical and subtropical regions, often beginning at a younger age and associated with recurrent abdominal pain, pancreatic duct stones, and diabetes. Its causes are multifactorial and may include genetic susceptibility, nutritional factors, and environmental exposures; the term should not be applied solely because a patient lives in a tropical region.

Tropical Diseases

Diseases more common in tropical or subtropical regions, including malaria, dengue, and schistosomiasis.

Tropical Medicine

The specialty concerned with diseases prevalent in tropical and subtropical regions and travel-related illness.

Tropical Oil

Tropical oils are plant-derived oils from warm regions, such as coconut or palm oil; their nutritional effects depend on the specific oil and amount consumed.

Tropical Sprue

Chronic diarrhea and malabsorption syndrome of uncertain etiology occurring predominantly in tropical and subtropical regions. The condition is characterized by villous atrophy of the small intestinal mucosa leading to malabsorption of nutrients in-

cluding folate, iron, and vitamin B12.

Tropical Ulcer

A chronic ulcer occurring in tropical regions, often associated with infection, trauma, or poor wound healing.

Troponin

Cardiac-specific troponin I and T, the preferred biomarkers for myocardial injury. Highly sensitive and specific. Rise 2-4 hours after symptom onset, peak at 12-24 hours, remain elevated for 7-10 days. High-sensitivity troponin (hs-cTn) allows earlier detection (1-2 hours).

Troponin Test

A troponin test measures heart-muscle proteins in the blood and helps assess possible heart injury, especially during suspected heart attack.

Trouble Swallowing

Alternate index label; see *Dysphagia*.

Trousseau Sign Of Latent Tetany

A sensitive and specific clinical sign of hypocalcemia. Elicited by inflating a blood pressure cuff on the upper arm to a pressure greater than systemic systolic blood pressure for 3 minutes.

Trousseau Syndrome

Recurrent or migratory venous thrombosis associated with active malignancy, particularly mucin-producing adenocarcinoma. It reflects tumor-associated activation of coagulation and is distinct from Trousseau sign of latent tetany.

Trp

Trp is the standard abbreviation for tryptophan, an essential amino acid used in protein synthesis and serotonin and niacin pathways.

True Ribs

Ribs 1-7 articulating directly with the sternum via their own costal cartilages. Each has a head, neck, tubercle, and shaft. The first two are short and

strongly curved for neck/shoulder muscle attachment. Costal cartilages provide thoracic cage elasticity for respiratory expansion.

Truncation

A shortened or incomplete form caused by removal of part of a sequence, structure, chromosome, protein, or process; the effect depends on what was lost and where.

Truncus Arteriosus

A congenital heart defect where a single large vessel arises from both ventricles, receiving a mixed blood supply. Associated with a large ventricular septal defect and abnormal semilunar valve. Presents with cyanosis and heart failure early in life.

Trunk

The central part of the body excluding the head and limbs, or a major nerve or vessel trunk.

Truss

A supportive appliance used historically for a hernia; definitive management depends on the type and complications.

Trypanosoma

A genus of protozoan parasites causing African and American trypanosomiasis.

Trypanosoma Brucei

A protozoan parasite transmitted by tsetse flies that causes African trypanosomiasis, or sleeping sickness. The human-infecting subspecies differ in geographic distribution and typical disease course; infection can progress from fever and lymph-node enlargement to neurologic involvement.

Trypanosomiasis

Disease caused by Trypanosoma parasites, including African sleeping sickness and Chagas disease.

Trypanosomiasis, American

Alternate index label; see *Chagas disease*.

Trypsin

A pancreatic proteolytic enzyme secreted as trypsinogen and activated in the small intestine, where it helps digest dietary proteins and activates other pancreatic enzymes.

Trypsin And Chymotrypsin In Stool

Stool trypsin and chymotrypsin testing measures digestive enzymes and may help assess pancreatic enzyme production, although other tests are often preferred.

Trypsinogen Test

A trypsinogen test measures a pancreatic enzyme precursor and may help evaluate pancreatic function or newborn screening for cystic fibrosis.

Tryptophan

An essential amino acid and precursor of serotonin, melatonin, and niacin.

Tsetse Fly

A biting fly of the *Glossina* genus that transmits African trypanosomes.

TSH

Thyroid-stimulating hormone, a pituitary hormone that stimulates thyroid hormone production; its blood concentration is the main initial test for many thyroid disorders.

TSH Test

A TSH test measures thyroid-stimulating hormone in the blood and is a common initial test of thyroid function.

TSH-Receptor Antibody

An antibody that binds the thyrotropin receptor. Stimulating antibodies cause Graves disease, while blocking antibodies can cause hypothyroidism; measurement supports diagnosis and can help assess fetal or neonatal risk in pregnancy.

TSI Test

A TSI test detects thyroid-stimulating immunoglob-

ulins and can support diagnosis or monitoring of Graves disease.

Tsutsugamushi Fever

Scrub typhus, a mite-borne infection caused by *Orientia tsutsugamushi*.

Tubal Ligation

Surgical sterilization by occluding the fallopian tubes, preventing the ovum from reaching the uterus. Postpartum tubal ligation: after vaginal or cesarean delivery (Pomeroy technique, Parkland). Interval: laparoscopic (bands, clips, bipolar cautery) or mini-laparotomy (Hulka or Filshie clip).

Tubal Ligation Reversal

Microsurgical reconnection of previously divided or blocked fallopian-tube segments to restore a possible path for sperm and egg; success depends on remaining tube length, age, scarring, and original method.

Tubal Occlusion Procedure, Selective

Selective tubal occlusion blocks a fallopian tube to prevent sperm and egg from meeting and is a permanent contraceptive procedure.

Tubal Pregnancy

An ectopic pregnancy that implants in a fallopian tube instead of the uterus. It can rupture and cause internal bleeding; one-sided pain, vaginal bleeding, dizziness, or fainting needs urgent evaluation.

Tuber

A rounded swelling or growth, often an anatomical prominence or a plant storage organ; clinical meaning depends on the site and context.

Tubercle

A small rounded projection or nodule; it may refer to bone anatomy or a tuberculous lesion.

Tuberculide

A hypersensitivity skin eruption associated with underlying tuberculosis, usually without organisms

in the lesions.

Tuberculin

Protein material from *Mycobacterium tuberculosis* used in skin testing for immune sensitization.

Tuberculin Skin Test

Intradermal injection of purified protein derivative to test for *Mycobacterium tuberculosis* infection. Read at 48-72 hours measuring induration (not erythema). Positive: greater than 5 mm in HIV or close contacts; greater than 10 mm in high-risk groups; greater than 15 mm in low-risk populations.

Tuberculin Test

A skin test that assesses whether the immune system has reacted to tuberculosis proteins.

Tuberculoid Leprosy

The paucibacillary pole of the leprosy spectrum characterised by strong cell-mediated immunity to *Mycobacterium leprae*, resulting in well-formed granulomas and few or no organisms in tissue.

Tuberculosis

An infectious disease caused by *Mycobacterium tuberculosis*, most often affecting the lungs.

Alternate Names:

TB

Tuberculosis In Children

Infection with *Mycobacterium tuberculosis*, often from household contacts. Latent TB infection (LTBI) positive tuberculin skin test or interferon-gamma release assay with no symptoms or radiographic findings. Active TB presents with cough, fever, weight loss, and lymphadenopathy. Diagnosis by PPD, chest X-ray, and sputum culture.

Tuberculosis, MDR

Multidrug-resistant tuberculosis is TB caused by bacteria resistant to at least isoniazid and rifampin, requiring specialized prolonged treatment.

Tuberculous Meningitis

The most severe, life-threatening form of extrapulmonary tuberculosis, resulting from hematogenous dissemination of *Mycobacterium tuberculosis* and the rupture of subependymal Rich foci into the subarachnoid space. Causes thick gelatinous basilar exudate, cranial nerve palsies, communicating hydrocephalus, and cerebral vasculitis with stroke.

Tuberous Sclerosis

A rare genetic disorder, also called tuberous sclerosis complex, that causes growths in the brain and other organs, including the skin, kidneys, heart, and lungs. It may cause seizures, developmental or behavioral problems, and skin changes; the severity varies widely.

Tuberous Sclerosis Complex

An autosomal dominant genetic disorder caused by mutations in TSC1 (hamartin) or TSC2 (tuberin) genes, leading to mTOR pathway activation. Features: cortical tubers, subependymal nodules, cardiac rhabdomyomas, angiomyolipomas, facial angiofibromas, and seizures (often infantile spasms).

Tubes

Hollow structures that carry air, fluid, food, or instruments; the clinical meaning depends on the specific tubes being described.

Tubes Ear Problems (Eustachian Tube Problems)

Alternate index label for Eustachian Tube Problems.

Tubo-Ovarian Abscess

A complex infected mass involving the fallopian tube and ovary, usually arising as a complication of pelvic inflammatory disease. It may cause pelvic pain, fever, and sepsis and requires prompt antimicrobial and sometimes drainage treatment.

Tubocurarine

A historical muscle-paralyzing medicine derived from curare. It blocks nerve signals at skeletal-muscle junctions, including signals needed for breathing, but does not cause unconsciousness or re-

lieve pain; safer modern drugs have largely replaced it.

Tubography

Contrast imaging of the fallopian tubes, usually as part of hysterosalpingography, to see whether they are open. It may help assess infertility but can cause temporary cramping, bleeding, infection, or rarely injury.

Tubular Adenoma

A benign glandular polyp, most often in the colon, that can develop dysplastic changes and is considered a precursor lesion for some colorectal cancers.

Tubular Reabsorption

The process by which the renal tubules return filtered water and solutes from the tubular lumen to the blood, reclaiming 99 percent of the glomerular filtrate. Proximal tubule: reabsorbs 65 percent of sodium, most glucose, amino acids, water, bicarbonate, phosphate, and urate.

Tubular Secretion

The transport of substances from the peritubular capillary blood into the tubular lumen, a second mechanism (besides filtration) by which the kidney eliminates waste and regulates ions.

Tubule

A small tube or tubular structure, such as a renal tubule.

Tubuloglomerular Feedback

A feedback mechanism at the juxtaglomerular apparatus that adjusts GFR based on tubular fluid NaCl concentration. The macula densa cells (specialized tubular epithelial cells in the thick ascending limb) sense NaCl concentration via the NKCC2 cotransporter.

Tularaemia

A zoonotic infection caused by *Francisella tularensis*, acquired from animals, ticks, contaminated water, or aerosols.

Tularemia

Tularemia is infection with *Francisella tularensis* acquired from ticks, animals, contaminated water, or aerosols and causing ulcer-glandular, pulmonary, or other disease.

Tularemia Blood Test

A tularemia blood test looks for antibodies or other evidence of infection with *Francisella tularensis*; antibodies may not appear early in illness.

Tulle Gras

A paraffin-impregnated gauze dressing used to cover wounds and burns.

Tumescence

Swelling or enlargement caused by engorgement with blood, fluid, or tissue growth.

Tumor

A tumor is an abnormal mass of cells caused by excessive or uncontrolled growth; it may be benign or malignant.

Tumor Adrenal Gland (Pheochromocytoma)

Alternate index label for Pheochromocytoma.

Tumor Board

A multidisciplinary conference of oncologists, surgeons, radiologists, and pathologists who review individual cancer cases to coordinate diagnosis and treatment planning.

Tumor Brain Cancer (Brain Cancer)

Alternate index label for Brain Cancer.

Tumor Burden

The total amount of cancer in the body, estimated from the number, size, and extent of tumor deposits; higher burden is generally associated with worse prognosis.

Tumor Differentiation

The degree to which neoplastic cells morphologically

and functionally resemble their normal counterparts of origin.

Tumor Embolism

Tumor embolism occurs when malignant cells, tumor fragments, or tumor thrombi enter the venous circulation and travel to distant sites. The pulmonary vasculature is the most common site of embolization, as venous blood from most organs drains to the lungs through the pulmonary arteries.

Tumor Grade

A histologic measure of how much tumor cells resemble normal tissue; low-grade (well-differentiated) tumors behave less aggressively than high-grade (poorly differentiated) tumors. Grading is a prognostic, not staging, feature.

Tumor Grading

A description of a tumor based on how abnormal the cancer cells look under a microscope compared to normal cells; a lower grade indicates slower-growing cancer.

Tumor Heterogeneity

The presence of genetically, epigenetically, or phenotypically distinct subpopulations within the same tumor or between primary and metastatic sites. Heterogeneity can influence prognosis, sampling, treatment response, and resistance.

Tumor Lysis Syndrome

Metabolic emergency from rapid cell death. Hyperuricemia, hyperkalemia, hyperphosphatemia, hypocalcemia. Prevention: hydration, allopurinol, rasburicase.

Tumor Marker

Substance produced by cancer or body in response to cancer. Used for diagnosis, monitoring, prognosis. Examples: PSA (prostate), CA-125 (ovarian), CEA (colon), AFP (liver), CA 19-9 (pancreas).

Tumor Marker, CEA

CEA is a blood tumor marker used mainly to help

monitor some colorectal and other cancers; it is not specific enough to diagnose cancer alone.

Tumor Marker, NSE

NSE is a protein marker that may rise in some neuroendocrine tumors or nerve-cell injury but is not diagnostic by itself.

Tumor Microenvironment

Surrounding tissue influencing tumor growth. Includes immune cells, blood vessels, fibroblasts, signaling molecules.

Tumor Mutational Burden

The number of somatic mutations per unit of coding DNA in a tumor specimen. TMB may correlate with production of neoantigens and response to some immune checkpoint inhibitors, but interpretation requires a validated assay and disease-specific context.

Tumor Necrosis Factor

A proinflammatory cytokine (TNF-alpha) produced mainly by macrophages, acting on TNFR1/TNFR2 receptors. Functions: activation of endothelium and leukocytes, fever, cachexia, apoptosis, and coordination of inflammation and the acute-phase response.

Tumor Necrosis Factor Receptor-Associated Periodic Syndrome

A rare inherited autoinflammatory disorder caused by variants in the TNFRSF1A gene, producing recurrent prolonged fever, muscle pain, abdominal pain, rash, and inflammation; it is also called TRAPS.

Tumor Staging

A system of describing the size of a cancer and how far it has spread throughout the body from its original location (e.g., using the TNM system).

Tumor Suppressor

A gene or protein that helps limit cell growth, repair DNA damage, or promote removal of abnormal cells. Loss of its function can contribute to cancer.

Tumor Suppressor Gene

Gene that prevents uncontrolled cell growth. Examples: TP53, RB1, BRCA1, BRCA2, APC. Loss of function contributes to cancer.

Tumor Testicle (Testicular Disorders)

Alternate index label for Testicular Disorders.

Tumor, Salivary Gland

Alternate index label; see *Salivary gland tumors*.

Tumor, Spinal

Alternate index label; see *Spinal tumor and spinal mass*.

Tumor-Suppressor Gene

A gene whose normal product restrains cell proliferation, promotes DNA repair, induces apoptosis, or maintains genomic stability. Loss or inactivation of both functional copies is common in the development of many cancers, although mechanisms vary by gene.

Tumors Uterine (Uterine Fibroids)

Alternate index label for Uterine Fibroids.

Tumour

A mass produced by abnormal cell growth; it may be benign or malignant.

Tumour (Neoplasm)

An abnormal mass of tissue produced by uncontrolled or inappropriate cell growth; it may be benign or malignant.

Alternate Names:

Neoplasm

Tungiasis

A skin infestation caused by the sand flea *Tunga* penetrans, producing an itchy or painful lesion, usually on the feet.

Tunica Adventitia

The outer connective-tissue layer of a blood-vessel wall. It contains collagen and elastic fibers that

provide structural support, along with nerves and, in larger vessels, small vessels called vasa vasorum that supply the outer wall. It is relatively prominent in veins and helps anchor vessels to surrounding tissues.

Tunica Media

The middle layer of a blood-vessel wall, located between the tunica intima and tunica adventitia. It consists primarily of smooth muscle and elastic fibers; its contraction or relaxation changes vascular diameter, regulating blood pressure and tissue perfusion. It is thickest in arteries and thinner in veins.

Tunnel Vision

Loss of peripheral visual field leaving a narrowed central field, caused by glaucoma, retinal disease, optic-nerve or brain lesions, severe hypoxia, or other conditions.

Turbinate Surgery

A medical procedure, treatment, device, or care topic related to turbinate surgery; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Turbinates

Curved bony shelves on the lateral walls of the nasal cavity, covered by vascular mucosa. They increase surface area and help warm, humidify, and filter inhaled air.

Turbinates Hypertrophy

Chronic enlargement of the nasal turbinates, most commonly the inferior turbinates, resulting in nasal airway obstruction, which can be caused by chronic inflammation from allergic rhinitis, non-allergic rhinitis, chronic sinusitis, hormonal changes, or vasomotor dysfunction.

Turcot Syndrome

A clinical descriptor for the rare concurrent occurrence of primary colorectal polyposis or colorectal cancer and primary central nervous system neoplasms. Genetically classified into two distinct

molecular entities: Type 1 Turcot syndrome, associated with hereditary nonpolyposis colorectal cancer (Lynch syndrome) carrying germline DNA mismatch repair gene mutations (*MLH1*, *PMS2*, *MSH2*) and predisposing to high-grade glioblastoma multiforme; and Type 2 Turcot syndrome, associated with familial adenomatous polyposis caused by germline mutations in the *APC* gene and predisposing to cerebellar medulloblastomas.

Alternate Names:

Brain Tumor-Polyposis Syndrome

Turgor

The firmness of tissue produced by fluid pressure within cells; skin turgor can help assess dehydration.

Turmeric

Turmeric is a plant spice containing curcuminoids and used in foods and supplements; evidence varies by condition and interactions or liver injury are possible.

Turner Hypoplasia

Enamel defect on permanent tooth from infection of overlying primary tooth. Localized hypoplasia.

Turner Syndrome

A chromosomal condition, most commonly with a 45,X karyotype but also with mosaic or structurally abnormal X chromosomes. It typically causes short stature and gonadal dysgenesis with ovarian insufficiency; associated findings include webbed neck, broad chest, bicuspid aortic valve, coarctation of the aorta, renal anomalies, hearing problems, and autoimmune thyroid disease.

Turner'S Syndrome

A chromosomal condition, usually involving complete or partial monosomy X, that typically affects phenotypic females. Common features include short stature, ovarian insufficiency with delayed or absent puberty and infertility, webbed neck, broad chest, congenital heart defects such as bicuspid aortic valve or coarctation of the aorta, and increased risk of autoimmune thyroid disease.

Turning Patients Over In Bed

Repositioning a patient at planned intervals to protect skin, improve comfort and breathing, prevent pressure injuries and contractures, and reduce complications of immobility.

Turpentine Oil Poisoning

Poisoning from swallowing or inhaling turpentine oil. It can irritate or damage the lungs, stomach, and nervous system and may cause chemical pneumonia.

Tussis

Cough; a forceful reflex expiration that helps clear secretions, irritants, or foreign material from the airways.

TVS

TVS commonly means transvaginal sonography, an ultrasound examination using a probe in the vagina to assess pelvic organs and early pregnancy.

Twilight Sleep

Twilight sleep is an older term for a sedated, partly conscious state used during procedures; modern analgesia and anesthesia specify the medicines and monitoring used.

Twin

A twin is one of two offspring from the same pregnancy, either identical from one fertilized egg or fraternal from two eggs and two sperm.

Twin Placenta

Placental anatomy in a twin pregnancy, classified by chorionicity and amnionicity; these features determine risks such as twin-to-twin transfusion and guide antenatal monitoring.

Twin Pregnancy

A pregnancy involving two fetuses. Clinical risk depends on chorionicity and amnionicity, with increased risks including preterm birth, fetal growth problems, and hypertensive disorders.

Twin-To-Twin Transfusion Syndrome

A complication of monochorionic twin pregnancy in which shared placental vessels cause unequal blood flow between the twins.

Twin-Twin Transfusion Syndrome

A complication of monochorionic diamniotic twin pregnancies where placental vascular anastomoses (arteriovenous connections) cause unbalanced blood flow from one twin (the donor) to the other (the recipient). The donor twin becomes hypovolemic, anemic, and growth-restricted with oligohydramnios ("stuck twin").

Twins

Two offspring from the same pregnancy, either monozygotic or dizygotic.

Twitch

A brief involuntary muscle contraction or movement, which may be benign, medication-related, stress-related, or a sign of nerve, muscle, or brain disease.

Twitching

Repeated involuntary muscle contractions or fasciculations, commonly caused by fatigue, stimulants, electrolyte disturbance, nerve irritation, medicines, or neurologic disease.

Tympanic

Tympanic means relating to the eardrum or middle ear, or resembling a drum in shape or sound.

Tympanic Bulla

The tympanic bulla is a hollow or expanded bony chamber surrounding the middle ear, especially prominent in many mammals.

Tympanic Cavity

The air-filled space of the middle ear containing the malleus, incus, and stapes.

Tympanic Hyperectasis

Abnormal outward bulging or retraction of the tympanic membrane from chronic middle ear pressure

changes, potentially causing conductive hearing loss and requiring tympanostomy tube placement.

Tympanic Membrane

The eardrum, a thin membrane separating the external ear canal from the middle ear.

Tympanic Membrane Perforation

A tear or hole in the eardrum caused by infection, trauma, pressure changes, or instrumentation, potentially producing pain, drainage, or conductive hearing loss.

Tympanites

Abdominal swelling or discomfort caused by excessive gas in the stomach or intestines. Persistent, severe, or painful distension may signal obstruction or another illness.

Tympanometry

An objective test that varies air pressure in the ear canal while measuring movement of the tympanic membrane and middle-ear pressure. It helps assess middle-ear fluid, eustachian-tube dysfunction, perforation, and ossicular or tympanic-membrane abnormalities.

Tympanoplasty

Surgical repair or reconstruction of the tympanic membrane and, when necessary, the middle-ear ossicles to close a perforation or improve hearing.

Tympanosclerosis

Scarring and calcification of the tympanic membrane or middle-ear lining, often following recurrent infection or previous inflammation. It may be asymptomatic or cause conductive hearing loss when the ossicles are affected.

Alternate Names:

Tympanic-membrane sclerosis; myringosclerosis when limited to the tympanic membrane.

Tympanostomy Tubes

Small tubes inserted through the tympanic membrane to ventilate the middle ear and prevent fluid

accumulation. Indicated for recurrent acute otitis media (3 episodes in 6 months or 4 in 12 months) or persistent otitis media with effusion greater than 3 months with hearing loss. Performed as outpatient procedure under general anesthesia.

Tympanum

The middle-ear cavity or, in some contexts, the tympanic membrane.

Tympany

Tympany is a drumlike sound on percussion, often produced by gas in a hollow organ such as the stomach or intestine.

Type 1 Diabetes

Type 1 diabetes is autoimmune destruction of pancreatic beta cells causing absolute insulin deficiency, hyperglycemia, and risk of diabetic ketoacidosis without insulin replacement.

Alternate Names:

Diabetes, Type 1 Diabetes Type 1 (Type 1 Diabetes)

Type 1 Diabetes In Children

Type 1 diabetes diagnosed during childhood, causing high blood sugar and requiring insulin, monitoring, nutrition planning, and education.

Alternate Names:

Type 1 Diabetes Mellitus

Type 1 diabetes is an autoimmune disease in which the immune system attacks and destroys the insulin-producing beta cells of the pancreas, resulting in absolute insulin deficiency.

Type 2 Diabetes

Type 2 diabetes is chronic hyperglycemia caused by insulin resistance and progressive beta-cell dysfunction, with risks to the eyes, kidneys, nerves, heart, and blood vessels.

Alternate Names:

Diabetes, Type 2 Diabetes Type 2 (Type 2 Diabetes)

Type 2 Diabetes - Oral Medicines

Oral medicines for type 2 diabetes lower glucose through effects on insulin, liver glucose production, kidney reabsorption, or intestinal absorption; choice depends on health and treatment goals.

Type 2 Diabetes In Children

Type 2 diabetes beginning during childhood or adolescence, often involving insulin resistance and requiring lifestyle and medical management.

Alternate Names:

Type 2 Diabetes Mellitus

Type 2 diabetes is a chronic metabolic disorder characterized by insulin resistance and progressive pancreatic beta-cell dysfunction, leading to hyperglycemia.

Type 3B Diabetes

Type 3b diabetes is a form of diabetes caused by disease or removal of the pancreas, which can impair both insulin and digestive-enzyme production.

Type I Hypersensitivity

An immediate (anaphylactic) hypersensitivity reaction mediated by allergen-specific IgE bound to mast cells and basophils; re-exposure cross-links IgE, triggering degranulation and release of histamine and mediators within minutes. Manifestations: allergic rhinitis, asthma, urticaria, food allergy, and anaphylaxis.

Type II Hypersensitivity

An antibody-mediated (cytotoxic) hypersensitivity reaction in which IgG or IgM binds to cell-surface or matrix antigens, causing cell destruction by complement activation (MAC), opsonization/phagocytosis, or antibody-dependent cellular cytotoxicity.

Type III Hypersensitivity

An immune complex-mediated hypersensitivity reaction in which circulating antigen-antibody complexes deposit in tissues and vessels, activating complement and attracting neutrophils, causing inflam-

mation and tissue damage. Local forms: Arthus reaction, serum sickness.

Type III Hypersensitivity Reaction

Tissue injury caused by deposition of antigen-antibody complexes, activating complement and inflammation.

Type IV Hypersensitivity

A delayed-type hypersensitivity (cell-mediated) reaction mediated by sensitized T cells (not antibody), occurring 24-72 hours after antigen exposure.

Type V Glycogen Storage Disease

An inherited muscle disorder, also called McArdle disease, in which muscle cells cannot properly break down glycogen for energy. Exercise can cause muscle pain, cramps, and sometimes dark urine from muscle injury.

Types Of Health Care Providers

Health professionals and services that diagnose, treat, prevent, or support health needs, including physicians, nurses, pharmacists, therapists, dentists, mental-health professionals, and community services.

Types Of Ileostomy

Types of ileostomy include end, loop, and continent procedures, which divert stool through an opening in the abdominal wall when the colon or rectum cannot be used normally.

Typhlitis

Inflammation of the cecum in immunocompromised patients particularly those with neutropenia from chemotherapy. Also known as neutropenic enterocolitis. Presents with right lower quadrant pain, fever, and diarrhea. Diagnosis is by CT showing cecal wall thickening.

Alternate Names:
neutropenic enterocolitis.

Typhoid

A systemic infection caused by *Salmonella enterica*

serovar Typhi, usually acquired through contaminated food or water and characterized by prolonged fever and gastrointestinal or systemic symptoms.

Typhoid Fever

A systemic infection caused by *Salmonella* Typhi, transmitted through contaminated food or water.

Alternate Names:
Enteric Fever (Typhoid Fever)

Typhus

Typhus refers to several rickettsial infections transmitted by lice, fleas, or mites and characterized by fever, headache, rash, and variable systemic complications. arthropod vectors. Three main forms: (1) Epidemic (louse-borne) typhus—*Rickettsia prowazekii*, transmitted by the human body louse (*Pediculus humanus corporis*). Associated with overcrowding, poverty, cold climate, and refugees ('war typhus').

Typhus Fever

A group of infections caused by *Rickettsia* species and transmitted mainly by lice or fleas.

Typical Antipsychotics

Typical antipsychotics, also known as first-generation antipsychotics, primarily block dopamine D2 receptors in the mesolimbic pathway, reducing positive symptoms of schizophrenia including hallucinations, delusions, and disorganized thinking.

Alternate Names:
first-generation antipsychotics, primarily block.

Tyramine

A naturally occurring amine in aged or fermented foods that can interact dangerously with monoamine oxidase inhibitors.

Tyrosinase Peptide

A short protein fragment related to tyrosinase, the enzyme that helps make melanin, the pigment in skin, hair, and eyes. Such peptides are mainly used in research.

Tyrosine

An amino acid used to make proteins, thyroid hormones, melanin, and catecholamines.

Alternate Names:

Full term

Tyrosinemia

An inherited disorder of tyrosine metabolism that causes accumulation of tyrosine or its metabolites. Type I can cause severe liver and kidney disease and is associated with fumarylacetoacetate hydrolase deficiency.

Tzanck Smear

A microscopic examination of cells from the base of a skin blister or erosion, historically used to support diagnoses such as herpesvirus infection or pemphigus.

U

U Wave

A small deflection following the T wave, best seen in precordial leads V2-V3. U waves are thought to represent repolarization of the Purkinje fibers or papillary muscles. Prominent U waves are associated with hypokalemia, bradycardia, and certain drugs (digitalis, quinidine).

UA

UA commonly means urinalysis, laboratory examination of urine for blood, protein, cells, glucose, infection, and other findings.

Ubidecarenone

Coenzyme Q10, a lipid-soluble molecule involved in mitochondrial electron transport and cellular energy production; it is sold as a supplement and studied in selected cardiovascular and neuromuscular conditions.

Ubiquinone

A lipid-soluble electron carrier in the mitochondrial membrane. See Coenzyme Q.

Ubiquitin

A small regulatory protein that is covalently attached to other proteins to label them for degradation by the proteasome or to alter their cellular trafficking and signaling.

Ubiquitination

Ubiquitination is attachment of ubiquitin to a target protein through an E1–E2–E3 enzyme cascade, marking it for proteasomal degradation or altering its localization, activity, or signaling.

Ubiquitous

Present or found everywhere. In medical writing, the term is descriptive rather than a diagnosis and may refer to a substance, organism, or process that is widely distributed.

UBT

UBT commonly means urea breath test, which detects active *Helicobacter pylori* infection by measuring labeled carbon dioxide after ingested urea.

UDP-Glucuronosyltransferase

UDP-glucuronosyltransferase is an enzyme family that attaches glucuronic acid to bilirubin, medicines, hormones, and other compounds for elimination.

Uhl Anomaly

A rare congenital absence or severe deficiency of right-ventricular myocardium, leaving a thin-walled right ventricle. It may cause right-sided heart failure, arrhythmia, cyanosis, or sudden deterioration in infancy or childhood.

Ulcer

Full-thickness loss of epidermis extending into the dermis or deeper tissue, often healing with a scar. Causes include vascular disease, pressure, infection, neuropathy, inflammatory disease, trauma, and malignancy.

Ulcer (Vascular)

A persistent break in the skin caused or maintained by inadequate blood flow, venous hypertension, neuropathy, or related vascular disease.

Alternate Names:

Vascular

Ulcer Healing Drugs

Medicines used to promote healing of gastrointestinal ulcers, usually by suppressing acid secretion or protecting the mucosa; treatment also addresses causes such as *H. pylori* infection or NSAID use.

Ulcer, Aphthous

Alternate index label; see *Canker sore*.

Ulcer, Peptic

Alternate index label; see *Peptic ulcer*.

Ulcer, Rectal

Alternate index label; see *Solitary rectal ulcer syndrome*.

Ulceration

The formation of an open sore caused by loss of surface tissue, usually involving skin or a mucous membrane and sometimes extending into deeper tissue.

Ulcerative Colitis

A chronic inflammatory disease of the colon and rectum, usually causing continuous mucosal inflammation that begins in the rectum and extends proximally. Symptoms may include bloody diarrhea, urgency, abdominal pain, and extraintestinal manifestations.

Alternate Names:

Colitis, Ulcerative Colitis Ulcerative (Ulcerative Colitis)

Ulcerative Keratitis

An ulcerative infection or inflammatory defect of the cornea that can cause pain, redness, photophobia, and impaired vision and may threaten sight if untreated.

Ulcerative Proctitis

Inflammation and ulceration limited to the lining of the rectum, often causing rectal bleeding, urgency, tenesmus, mucus, and diarrhea.

Ullrich Congenital Muscular Dystrophy

A severe congenital muscular dystrophy belonging to the collagen VI deficiency spectrum, inherited in an autosomal recessive (or dominant de novo) pattern caused by mutations in *COL6A1*, *COL6A2*, or *COL6A3*. Characterized from birth or early infancy by profound generalized muscle weakness and hypotonia, accompanied by a pathognomonic combination of proximal joint contractures (involving the hips, knees, and elbows) and striking distal joint hyperlaxity (hyperextensibility of the fingers, wrists, and ankles), congenital torticollis, prominent calcaneal protrusion, and progressive early respiratory failure due to severe diaphragm weakness, often requiring nocturnal non-invasive ventilation before the second decade of life.

Alternate Names:

UCMD; Ullrich Scleroatonic Muscular Dystrophy

Ulna

Medial forearm bone, longer than the radius. Proximal end: trochlear notch, olecranon, coronoid process. Shaft. Distal end: head, styloid process. The trochlear notch articulates with the trochlea forming the primary elbow hinge.

Ulnar

Relating to the ulna bone of the forearm or the ulnar side (medial side) of the hand. Ulnar nerve compression causes paresthesia in medial one and a half fingers.

Ulnar Artery

The larger terminal branch of the brachial artery at the cubital fossa, running medially down the forearm to the wrist (palpable medial to the pisiform) and hand. Supplies the medial forearm and ulnar side of the hand; forms the superficial palmar arch. Provides the common interosseous artery.

Ulnar Vein

Deep veins accompanying the ulnar artery that drain the medial forearm and join the radial veins to form the brachial veins.

Ulnar Hypoplasia

Underdevelopment or partial absence of the ulna, usually presenting as a congenital forearm and hand anomaly. It may cause forearm shortening, radial deviation of the hand, limited elbow or wrist movement, and associated digital or systemic abnormalities.

Ulnar Nerve

From medial cord (C8-T1), passing behind the medial epicondyle (cubital tunnel), into the forearm innervating flexor carpi ulnaris and medial FDP half. In the hand innervates hypothenar muscles, interossei, medial two lumbricals, and adductor pollicis. Sensation to medial 1.5 digits.

Ulnar Nerve Dysfunction

Impairment of the ulnar nerve, commonly caused by compression at the elbow (cubital tunnel) or wrist (Guyon canal). Symptoms include numbness or tingling in the little and ring fingers, weakened grip, and hand-muscle wasting; severe lesions may produce an ulnar claw.

Ulnar Nerve Entrapment

Compression or irritation of the ulnar nerve, commonly at the elbow or wrist, causing numbness or tingling in the ring and little fingers and sometimes weakness of the hand.

Ulnar Paradox

The clinical observation that a lesion of the ulnar nerve at the wrist may cause more clawing of the fingers than a lesion higher in the forearm, because the ulnar-innervated finger flexors remain intact.

Ulnar Wrist Pain

Pain on the side of the wrist nearest the little finger, often involving the ulna or nearby tendons and ligaments.

Alternate Names:

Ulnar-Sided Wrist Pain

Ulnar-Sided Wrist Pain

Alternate index label; see *Ulnar wrist pain*.

Ulocladium

A genus of dematiaceous filamentous fungi found in soil and plant material. It is an uncommon opportunistic pathogen that can cause keratitis, sinusitis, or invasive infection in susceptible people.

Ultracentrifugation

Ultracentrifugation separates particles or macromolecules at very high centrifugal force according to size, shape, and density; it is used to study viruses, organelles, lipoproteins, and protein complexes.

Ultradian Rhythm

A biological rhythm that repeats more than once in 24 hours, such as pulsatile hormone secretion, sleep-stage cycling, or periodic changes in heart and breathing patterns.

Ultrafiltration

Pressure-driven movement of water and small solutes across a semipermeable membrane while retaining larger molecules or particles. It contributes to glomerular filtration and is used in dialysis and laboratory processing.

Ultralente Insulin

Ultralente insulin is a prolonged-acting zinc insulin suspension formerly used for basal insulin replacement; it has largely been replaced by newer long-acting analogues and can cause hypoglycaemia and dosing variability.

Ultrasonic Therapy

Use of high-frequency sound energy for therapeutic purposes such as selected physical-therapy applications or tissue ablation; benefits and risks depend on the device and treatment site.

Ultrasonography

Imaging that uses high-frequency sound waves to produce pictures of tissues and organs.

Ultrasound

Ultrasound uses high-frequency sound waves to create images of organs, vessels, tissues, or a devel-

oping fetus without ionizing radiation. quadrant (RUQ): gallbladder (gallstones, cholecystitis), liver (steatosis, cysts), kidneys, and pancreas. Pelvic: uterus, ovaries, adnexa. Renal: hydronephrosis, stones, cysts, tumors. Scrotal: testicular torsion, epididymitis, varicocele, hydrocele.

Ultrasound Biomicroscopy

High-frequency ultrasound imaging used to visualize the anterior segment of the eye, including the cornea, iris, ciliary body, lens, and angle when ordinary examination or imaging is insufficient.

Ultrasound Contrast

A substance administered during ultrasound to increase the visibility of blood flow or selected tissues.

Ultrasound Therapy

Use of sound waves at therapeutic intensity to heat or mechanically affect tissue. It is used in selected rehabilitation settings, but evidence and suitability vary by condition and it is not appropriate over every body area.

Ultrasound Transducer

A device that emits and receives high-frequency sound waves to generate diagnostic images or guide procedures. Linear, curvilinear, phased-array, and endocavitary transducers are selected according to depth and anatomic application.

Ultraviolet Microscopy

Microscopy that uses ultraviolet wavelengths to produce images or fluorescence from structures and substances that absorb or emit ultraviolet light. It has specialized laboratory and research applications.

Ultraviolet Rays

Invisible electromagnetic radiation with wavelengths shorter than visible violet light. Excess exposure can cause sunburn, photoaging, eye injury, and skin cancers; controlled ultraviolet exposure has selected therapeutic uses.

Ultraviolet Rays

Electromagnetic radiation beyond visible violet light. Excessive exposure can cause sunburn, photoaging, eye injury, and skin cancer.

Ultraviolet Therapy

Controlled exposure to ultraviolet light used for selected skin disorders such as psoriasis, eczema, and vitiligo; treatment requires eye and skin protection and monitoring for burns and long-term skin cancer risk.

Umbilical

Relating to the umbilicus or navel, including structures, lesions, discharge, or abnormalities located at or connected with it.

Umbilical Artery Doppler

Ultrasound assessment of blood flow in the umbilical arteries to evaluate placental resistance. Normal flow shows a pulsatility index decreasing throughout pregnancy with forward diastolic flow. Absent or reversed end-diastolic flow indicates severe placental dysfunction and is associated with increased perinatal morbidity and mortality.

Umbilical Catheters

Umbilical catheters provide vascular access through a newborn's umbilical vessels for fluids, medicines, monitoring, or blood sampling while complications are monitored.

Umbilical Cord

The connection between the fetus and the placenta, containing two umbilical arteries (carrying deoxygenated blood from the fetus to the placenta) and one umbilical vein (carrying oxygenated blood from the placenta to the fetus). The vessels are embedded in Wharton jelly, a mucopolysaccharide matrix that prevents compression.

Umbilical Cord Blood Gas

Analysis of arterial and venous cord blood collected after delivery. The umbilical artery best reflects fetal acid-base status, while the umbilical vein reflects placental blood. Results are interpreted using

gestational age, delivery circumstances, pH, carbon dioxide, and base deficit or excess.

Umbilical Cord Prolapse

Descent of the umbilical cord through the cervix alongside or past the presenting fetal part, occurring when the membranes rupture. Risk factors: malpresentation (transverse lie, breech), preterm/low birth weight, polyhydramnios, multiparity, and artificial ROM with high presenting part.

Umbilical Granuloma

The most common umbilical lesion in newborns and young infants, presenting as a soft, moist, vascular, beefy-red or pink pedunculated or sessile mass of excess granulation tissue at the base of the umbilicus after umbilical cord separation. It may produce persistent serous or serosanguineous discharge and mild local periumbilical skin irritation without signs of systemic infection or purulence (distinguishing it from omphalitis). Standard treatment is topical application of silver nitrate (with protection of surrounding skin) or topical salt application.

Alternate Names:

Granuloma Umbilicale; Neonatal Umbilical Granuloma

Umbilical Hernia

A hernia through the umbilical ring, common in infants (most umbilical hernias close spontaneously by age 4-5) and adults (risk factors: obesity, pregnancy, ascites, cirrhosis). Presents as a reducible bulge at the umbilicus, worse with increased intra-abdominal pressure. In adults: risk of incarceration and strangulation is higher.

Umbilical Region

Central region around the umbilicus containing small intestine, transverse colon, and great vessels. The umbilicus is a landmark for assessing ascites, caput medusae in portal hypertension, and umbilical hernias. Percussion and auscultation here are essential components of the abdominal examination.

Umbilical Vein

The umbilical vein carries oxygen- and nutrient-

rich blood from the placenta to the fetus during pregnancy.

Umbilication

Formation of a central depression or navel-like indentation in a lesion or structure.

Umbilicus

The navel, a scar on the anterior abdominal wall marking the former attachment of the umbilical cord. It can be affected by hernia, infection, discharge, or metastatic disease.

Umbilicus (Navel)

The scar on the anterior abdominal wall marking the site of attachment of the umbilical cord in fetal life, located at the level of the L3-L4 intervertebral disc, approximately midway between the xiphoid process and the pubic symphysis.

Alternate Names:

Navel

Uncertainty

Lack of complete certainty about a diagnosis, prognosis, measurement, or treatment effect. Clinical uncertainty is managed by combining available evidence with follow-up, additional testing, and shared decision-making.

Uncinate Fit

A nonstandard or unclear historical label in the source dictionary; its intended clinical meaning should be verified against the original reference.

Uncompetitive Inhibition

A type of enzyme inhibition where the inhibitor binds only to the enzyme-substrate complex at a site distinct from the active site, forming an inactive ESI complex. The inhibitor cannot bind to the free enzyme.

Unconscious

Not awake and not responsive to ordinary external stimuli. Unconsciousness may result from syncope, seizure, trauma, intoxication, metabolic dis-

ease, stroke, or other emergencies.

Unconsciousness

Loss of awareness and responsiveness, ranging from brief fainting to prolonged coma.

Unconsciousness, Temporary

A brief episode of loss of awareness and responsiveness, often caused by syncope but also possible with seizure, concussion, hypoglycemia, or other conditions requiring assessment.

Underventilation

Breathing that is too shallow or slow to remove enough carbon dioxide, causing hypercapnia and sometimes low oxygen; causes include sedatives, neuromuscular weakness, obesity hypoventilation, and lung disease.

Underweight

BMI < 18.5 kg/m². Associated with osteoporosis, infertility, anemia, weakened immunity, surgical complications. Causes: hypermetabolism, malabsorption, eating disorders, malignancy, chronic infection.

Undescended Testicle

A testicle that has not moved into the scrotum before birth.

Alternate Names:

Testicle, Undescended

Undescended Testicle Repair

Surgical relocation and fixation of a testis that has not descended into the scrotum, usually performed in childhood to preserve function and reduce complications.

Undescended Testis

Failure of one or both testes to descend into the scrotum. Some descend during early infancy, but persistent cryptorchidism can impair fertility and increase the risk of torsion, hernia, or testicular cancer.

Undescended Testis (Cryptorchidism)

Congenital failure of one or both testes to descend along the normal path into the scrotum. Persistent cases require evaluation because they may affect fertility and increase the risk of torsion, hernia, or testicular cancer.

Alternate Names:

Cryptorchidism

Undetermined

Not established or not able to be classified with the available clinical information. An undetermined result may require repeat assessment or additional testing.

Undifferentiated

Lacking recognizable specialized features. In pathology, an undifferentiated tumor has cells that cannot be assigned readily to a specific tissue of origin based on their appearance.

Undifferentiated Cancer

A cancer whose cells lack recognizable specialized features, making the tissue of origin or exact subtype difficult to identify; diagnosis requires pathology and staging.

Undifferentiated Carcinoma

A high-grade carcinoma whose cells lack recognizable features of a specific tissue or tumor subtype; diagnosis and treatment require pathology, immunostaining, and staging.

Undifferentiated Pleomorphic Sarcoma

An uncommon aggressive cancer of soft tissue or bone whose cells have no clearly identifiable line of differentiation.

Alternate Names:

Malignant Fibrous Histiocytoma

Undifferentiated Pleomorphic Sarcoma Of The Breast

A rare high-grade breast sarcoma formerly called malignant fibrous histiocytoma. It is a diagnosis of exclusion after other specific sarcomas and meta-

plastic carcinoma have been ruled out histologically.

Undulant Fever

A zoonotic infectious disease caused by gram-negative coccobacilli of the genus *Brucella*, transmitted to humans through contact with infected animals (cattle, goats, pigs, sheep) or consumption of unpasteurized dairy products. See Brucellosis.

Undulate

To move or have a wave-like contour. In a clinical description, it may refer to a palpable fluid wave, a wavy tissue margin, or a rhythmic motion.

Undulate Ribs

Ribs with a wavy or irregular contour, a descriptive anatomic finding that may reflect a developmental variation, deformity, prior injury, or underlying bone disease.

Unencoded Data

Health information that has not been converted into a defined coding system or standardized data format. It may require interpretation or data transformation before analysis or exchange.

Unequivocal

Clear and not open to more than one reasonable interpretation. An unequivocal clinical finding or test result provides strong evidence for the stated interpretation when considered in context.

Unerupted Tooth

A tooth that has not emerged into the oral cavity at the expected time. It may be normally developing, delayed, impacted, or prevented from erupting by obstruction or abnormal position.

Unevaluable

Unable to be assessed or interpreted reliably because of inadequate data, poor test quality, an unavailable endpoint, or another limiting circumstance.

Ungual

Pertaining to, situated near, or affecting the nail

(*unguis*) or the entire functional nail apparatus of a digit (comprising the hard keratinized nail plate, nail matrix, nail bed, hyponychium, eponychium, and lateral nail folds). Clinically utilized in dermatology and podiatry to describe anatomical landmarks (subungual space beneath the nail plate, periungual tissue surrounding the nail border) and pathological conditions, such as subungual hematoma (blood collection following crush injury), subungual melanoma (requiring biopsy of pigmented longitudinal melanonychia), and periungual verrucae (warts).

Unguentum

A semisolid, greasy preparation intended for application to the skin or, when formulated for that purpose, to mucous membranes or the eyes.

Unicornuate Uterus

A congenital uterine malformation resulting from the complete or near-complete failure of development of one Müllerian duct, producing an elongated, banana-shaped hemi-uterus that communicates with a single fallopian tube. Frequently accompanied by a contralateral rudimentary horn (which can be cavitory or non-cavitory, communicating or non-communicating); a non-communicating cavitory horn carries a severe risk of ectopic rudimentary horn pregnancy and rupture, necessitating elective laparoscopic resection.

Unilaminar Epithelium

An epithelium consisting of a single layer of cells. Its structure is adapted for functions such as diffusion, absorption, secretion, or filtration depending on the organ.

Unilateral

Affecting, occurring on, or involving one side of the body or one paired organ, such as unilateral weakness or unilateral eye disease.

Unilateral Gynecomastia

Enlargement of breast glandular tissue affecting one breast in a male patient; a new, firm, fixed, painful, or nipple-associated mass requires clinical

assessment.

Unilateral Microphthalmos

A congenital condition in which one eye is abnormally small. It may be associated with other ocular malformations and can cause substantial visual impairment.

Uninodular Goiter

A goiter containing one dominant thyroid nodule. Evaluation generally includes thyroid-function testing and imaging, with further assessment to determine whether the nodule is benign or malignant.

Uniparental Disomy

Inheritance of both copies of a chromosome or chromosome segment from one parent and none from the other. It can cause disease through abnormal genomic imprinting, homozygosity for a recessive variant, or chromosomal dosage effects.

Unipolar Neuron

A neuron with a single process extending from its cell body. True unipolar neurons occur in some invertebrates; many sensory neurons in humans are more accurately described as pseudounipolar.

Unit

A standardized quantity used to express measurement, dosage, concentration, or a healthcare service.

Unknown

Not known or not determined from the information currently available. In a medical record, an unknown value should be distinguished from a negative or normal result.

Unopposed Estrogen

Estrogen therapy given without a progestogen in a person with a uterus.

Unresectable

Describing a tumor or lesion that cannot be completely removed safely by surgery because of its location, extent, invasion of vital structures, or the

patient's operative risk.

Unresolved Losses

Significant losses that have not been fully acknowledged or emotionally processed.

Unresponsive Coma

A state of profound unresponsiveness in which the person cannot be awakened or follow commands.

Unsaturated Phytosterol

A plant sterol containing one or more carbon-carbon double bonds. Phytosterols can reduce intestinal cholesterol absorption, although clinical effects depend on intake, formulation, and patient context.

Unstable Angina

Myocardial ischemia at rest, new-onset severe angina, or a crescendo pattern (more frequent, longer, lower-threshold) without evidence of myocardial necrosis (normal troponin). Pathophysiology: acute plaque rupture with thrombosis causing transient severe coronary obstruction.

Unsteadiness

Impaired balance or gait stability, which may result from vestibular disease, neurologic disorders, weakness, medication effects, visual impairment, or musculoskeletal problems.

Untidy Wound

An irregular or contaminated wound with crushing, devitalized tissue, tissue loss, foreign material, or associated injury to vessels, nerves, tendons, or bone. It has increased infection risk and may require exploration, irrigation, debridement, and delayed or staged closure.

Untranslated Region

A part of an RNA molecule that is not translated into protein; the 5-prime and 3-prime untranslated regions regulate RNA stability, localization, and translation.

Unwell

A general description of feeling ill or having reduced health, without identifying a specific disease. Persistent or severe symptoms require assessment for an underlying cause.

Upamostat

An investigational small-molecule serine-protease inhibitor studied for inflammatory and infectious diseases. It is not an established routine treatment, and its clinical role depends on trial evidence and regulatory approval.

Upper Airway Biopsy

Removal of tissue from the nasal cavity, pharynx, larynx, or related upper airway for microscopic evaluation of suspected infection, inflammation, infiltrative disease, or tumor.

Upper Airway Obstruction

Narrowing of the airway above the carina, causing inspiratory stridor, dyspnea, and characteristic changes on flow-volume loops (flattening of the inspiratory limb). Causes include tumors, stenosis, goiter, and vocal cord dysfunction. It is a medical emergency when severe.

Upper Airway Resistance Syndrome

Increased effort to breathe through a narrowed upper airway, often causing sleep disruption and daytime sleepiness.

Alternate Names:

UARS

Upper Arm

The portion of the upper limb between the shoulder and elbow, containing the humerus and muscles, nerves, and vessels that serve the arm.

Upper Endoscopy

Upper endoscopy: flexible endoscopic examination of the esophagus, stomach, and duodenum. See Esophagogastroduodenoscopy (EGD).

Upper Esophageal Sphincter

A muscular valve at the top of the esophagus that opens during swallowing.

Alternate Names:

UES

Upper Extremity

The anatomic region extending from the shoulder through the arm, forearm, wrist, and hand. Disorders may involve its bones, joints, muscles, nerves, vessels, or skin.

Upper Extremity Venous Doppler

An ultrasound examination of the arm and related veins that assesses compressibility and blood flow, commonly to evaluate suspected venous thrombosis.

Upper Gastrointestinal Bleeding

Bleeding from esophagus, stomach, or duodenum. Causes: peptic ulcer, varices, Mallory-Weiss tear, gastritis. Presentation: hematemesis, melena, hematochezia. Management: ABCs, IV access, type and crossmatch, PPI infusion, endoscopy within 24 hours. Variceal bleeding: octreotide, antibiotics, band ligation.

Upper GI And Small Bowel Series

A fluoroscopic x-ray examination in which swallowed contrast outlines the esophagus, stomach, duodenum, and small intestine to evaluate structure and transit.

Upper GI Series

Fluoroscopic examination of the esophagus, stomach, and duodenum after oral barium contrast. Single-contrast: looks for gross abnormalities (obstruction, masses). Double-contrast (barium + gas): better mucosal detail for ulcers, erosions, and early malignancies.

Upper Leg

The portion of the lower limb between the hip and knee, containing the femur and the thigh muscles, nerves, and blood vessels.

Upper Limb Disorders

Conditions affecting the shoulder, arm, elbow, forearm, wrist, or hand, including musculoskeletal, nerve, vascular, and work-related disorders.

Upper Motor Neuron

A neuron in the brain or spinal cord that influences lower motor neurons controlling skeletal muscle. Damage can cause weakness, spasticity, increased reflexes, and pathologic reflexes.

Upper Motor Neuron Syndrome

A pattern caused by injury to corticospinal pathways above the anterior horn cell or cranial motor nucleus. Findings may include weakness with spasticity, hyperreflexia, clonus, and an extensor plantar response, although acute lesions can initially produce flaccidity.

Upper Respiratory Infection

An infection of the nose, sinuses, pharynx, or larynx, most often caused by a virus and producing symptoms such as congestion, sore throat, cough, or runny nose.

Upregulation

An increase in the activity, amount, or expression of a gene, receptor, enzyme, or signaling pathway in response to developmental, physiologic, or disease-related signals.

Upright Labor Positions

Maternal positions during labor, such as walking, standing, squatting, kneeling, or sitting upright. They may improve comfort and mobility and can be used when safe and acceptable to the laboring person and clinical team.

Uptake

Cellular accumulation of radiotracer. Depends on blood flow, membrane transport, metabolism, binding.

Urachal Carcinoma

A rare malignant epithelial tumor arising from remnants of the embryonic urachus, usually located at the bladder dome or along the urachal tract.

Most tumors are adenocarcinomas and may produce mucin, with local invasion and metastatic spread occurring in advanced disease. Clinical features can include hematuria, mucousuria, urinary symptoms, pelvic pain, or an incidental mass detected on imaging. Diagnosis requires cystoscopic and histopathologic evaluation with staging; treatment is based on resectability, local extension, and metastatic status.

Urachal Cyst

A cystic remnant of the embryonic urachus between the bladder and umbilicus. It may be asymptomatic or become infected, causing lower-abdominal pain, fever, umbilical discharge, or urinary symptoms.

Urachal Mucinous Cystic Tumor

A rare tumor arising from the urachal remnant between the bladder dome and umbilicus. It may be benign or malignant, with mucinous histology, and requires surgical excision.

Urachus

An embryologic connection between the fetal bladder and umbilicus that normally becomes the median umbilical ligament after birth. Persistent urachal remnants can form cysts, sinuses, or other complications.

Uracil

A pyrimidine nitrogenous base found principally in RNA. It pairs with adenine and is also a component of several metabolic intermediates and nucleotide medicines.

Uracil Mustard

An older nitrogen-mustard alkylating compound related to uracil and studied or used historically as an antineoplastic drug. Its clinical use is limited by toxicity and the availability of newer treatments.

Uracil Nucleotides

Nucleotides containing uracil, including UMP, UDP, and UTP. They participate in RNA synthesis, carbohydrate metabolism, and activation of sugars for

glycoconjugate production.

Uraemia

The clinical syndrome resulting from accumulation of urea and other nitrogenous waste products in the blood in advanced chronic kidney disease (CKD stage 4-5) and acute kidney injury.

Uraemic Syndrome

The collection of symptoms and biochemical abnormalities caused by severe accumulation of uraemic waste products in advanced kidney failure.

Uranium

A naturally occurring radioactive heavy metal. Internal exposure can damage the kidneys, while inhaled or retained radioactive material can also expose tissues to ionizing radiation.

Urate

The ionized form of uric acid, the end product of purine metabolism in humans. Excess serum urate can promote monosodium urate crystal deposition and gout.

Urate-Lowering Therapy

Long-term treatment that reduces serum urate to dissolve monosodium urate deposits and prevent gout flares and structural damage. Xanthine oxidase inhibitors and uricosuric medicines are selected according to renal function, comorbidity, and treatment goals.

Urates

Salts or ions of uric acid. Monosodium urate crystals can accumulate in joints in gout, and urate crystals may contribute to urinary stones.

Urea

The principal nitrogen-containing waste product of protein metabolism, formed in the liver and excreted mainly by the kidneys.

Urea Breath Test

A noninvasive test for active *Helicobacter pylori* in-

fection: the person drinks labeled urea, and labeled carbon dioxide in exhaled breath indicates bacterial urease activity.

Urea Cycle

A metabolic pathway occurring in both the mitochondria and cytoplasm of hepatocytes that converts toxic ammonia (NH₃), derived from amino acid catabolism, into nontoxic, water-soluble urea for excretion by the kidneys.

Urea Cycle Disorder

A group of inherited disorders caused by deficiency of an enzyme or transporter in the urea cycle, leading to impaired ammonia clearance. Ornithine transcarbamylase deficiency is an X-linked form; presentation and severity vary by the gene and residual enzyme activity.

Urea Nitrogen Urine Test

A urine test measuring urea nitrogen excretion, interpreted with blood urea nitrogen, creatinine, diet, and urine volume to assess protein metabolism and renal handling.

Ureaplasma

A genus of very small bacteria without a cell wall that can colonize the genital or urinary tract and is sometimes associated with urethritis or pregnancy complications.

Ureaplasma Urealyticum

A cell-wall-free bacterium that can colonize the genital or urinary tract and is sometimes associated with nongonococcal urethritis, pregnancy complications, or infection in vulnerable newborns.

Uremia

A clinical syndrome caused by advanced kidney failure and accumulation of waste products and other biologically active substances. Symptoms may include nausea, itching, fatigue, confusion, bleeding, or pericarditis; laboratory values and symptoms must be interpreted together.

Uremic Encephalopathy

Neurological syndrome in severe renal failure. Confusion, asterixis, seizures, coma. Results from uremic toxin accumulation. Diagnosis is clinical in context of advanced renal failure. Emergent dialysis indicated with rapid neurological improvement typically.

Uremic Frost

Urea crystallization on skin in severe untreated uremia. Rare finding indicating extremely advanced uremia. White crystalline deposits on skin. Indicates immediate need for dialysis. Extremely rare in developed countries due to early detection.

Uremic Pericarditis

Pericardial inflammation in advanced uremia. Pleuritic chest pain, friction rub, diffuse ST elevation. Indicates need for emergent dialysis. Does not respond to anti-inflammatory therapy. Complications include tamponade.

Uremic Platelet Dysfunction

Impaired platelet adhesion and aggregation in uremia causing bleeding tendency. Easy bruising, epistaxis, GI bleeding. Improves with dialysis and desmopressin. Cryoprecipitate provides temporary benefit before procedures.

Uremic Stomatitis

Oral mucosal inflammation occurring in advanced kidney failure, presenting as white plaques, ulceration, or bleeding of the gums and tongue due to accumulation of uremic toxins.

Ureter

The paired muscular tubes (25-30 cm) conveying urine from the renal pelvis to the urinary bladder, crossing the pelvic brim at the pelvic inlet. Three anatomical narrowings (pelviureteric junction, pelvic brim, vesicoureteric junction) are common sites of ureteric stone impaction.

Ureter Duplex

A congenital duplication of the ureter, complete or partial, draining one kidney. It may be asymp-

tomatic or associated with vesicoureteral reflux, ureterocele, obstruction, recurrent urinary infection, or impaired renal drainage.

Ureter Fissus

A congenital longitudinal splitting or duplication anomaly of the ureter. Its clinical importance depends on the anatomy and whether it causes reflux, obstruction, infection, or impaired drainage.

Ureter Obstruction

Blockage of urine flow from a kidney to the bladder, commonly caused by a stone, stricture, tumor, or external compression and potentially leading to hydronephrosis, infection, or kidney injury.

Ureteral Calculi

Stones that form in or pass through a ureter, the tube carrying urine from a kidney to the bladder.

Ureteral Catheters

Thin tubes passed into the ureter to drain urine, inject contrast, measure pressure, or guide procedures. Complications include infection, bleeding, perforation, migration, and obstruction.

Ureteral Obstruction

Blockage of urine flow causing proximal dilation and increased pressure. Acute causes renal colic with flank pain. Chronic leads to hydronephrosis and CKD. Emergent decompression with stent or nephrostomy for infected obstructed kidney. Diagnosis by CT or ultrasound showing hydronephrosis.

Alternate Names:

Blocked Ureter

Ureteral Perforation

A tear or hole in the ureter, sometimes caused by a stone, trauma, surgery, or an endoscopic procedure. Urine may leak into surrounding tissues, causing pain, infection, or inflammation; prompt imaging and urologic assessment are required.

Ureteral Polyp

Usually a benign fibroepithelial growth arising from

the ureter. It may cause hematuria, flank pain, or obstruction and must be distinguished from urothelial malignancy when evaluated.

Ureteral Retrograde Brush Biopsy

A brush passed through a ureteroscope to collect cells from the lining of the ureter or renal pelvis for cytologic evaluation of suspected urothelial cancer.

Ureteral Stenosis

Narrowing of the ureter caused by scar tissue, prior surgery, radiation, stones, inflammation, or congenital disease, impairing urine drainage and possibly causing hydronephrosis or recurrent infection.

Ureteral Stent

Double-J stent maintaining ureteral patency. Indications: obstruction (stone, stricture, malignancy), post-ureteroscopy. Materials: silicone, polyurethane. Sizes: 4.7-7 Fr, lengths 24-30 cm. Complications: irritation, hematuria, encrustation, migration.

Ureteral Stent (Double-J Stent)

A tube placed in the ureter from the renal pelvis to the bladder to maintain patency, with pigtail coils at both ends (hence double-J). Indications: ureteral obstruction (stones, stricture, malignancy), after ureteroscopy (prevent post-op obstruction), and as a pre-treatment for complex ureteral stones.

Alternate Names:

Double-J Stent

Ureteral Stricture

Narrowing of the ureter caused by fibrosis, surgery, instrumentation, radiation, infection, malignancy, or congenital disease. It can produce upstream hydronephrosis, pain, infection, and declining renal function.

Uretereroenterostomy

A urinary diversion procedure connecting a ureter to a segment of intestine; this spelling is a source variant of *ureteroenterostomy*.

Ureteric Perforation

A tear or hole in the ureter that can allow urine to leak into surrounding tissue, usually after instrumentation, surgery, trauma, or a stone; it needs prompt urologic assessment.

Ureteritis

Inflammation of the ureter, usually related to infection, obstruction, stone passage, instrumentation, or adjacent inflammatory disease. It may cause flank or abdominal pain, urinary symptoms, hematuria, and fever.

Ureterocele

A balloon-like dilation of the lower ureter where it enters the bladder, usually congenital; it can obstruct urine flow and cause infection, hydronephrosis, reflux, stones, or impaired renal function.

Ureterolithiasis

The presence of kidney stones (calculi) within the ureter, causing ureteral obstruction and renal colic. Stones form from calcium oxalate/phosphate (most), uric acid, struvite (infection), and cystine.

Ureteropelvic Junction Obstruction

Impaired drainage from the renal pelvis into the proximal ureter, caused by intrinsic narrowing, aberrant vessels, scarring, or functional peristaltic abnormality. It may cause hydronephrosis, flank pain, infection, stones, or loss of renal function.

Ureteroscope

A slender endoscope used to inspect and treat the ureter and, when advanced, the renal pelvis.

Ureteroscopes

Small endoscopes used to inspect the ureter and renal collecting system and to perform procedures such as stone removal, biopsy, or stent placement.

Ureteroscopy

Ureteroscopy uses a small endoscope passed through the urinary tract to inspect, biopsy, or treat ureteral or kidney stones and other lesions. the urethra, blad-

der, and into the ureter or renal collecting system. Used primarily for the diagnostic evaluation and therapeutic management of ureteral and renal calculi, ureteral strictures, and upper tract urothelial carcinoma (UTUC).

Ureterostomy Procedure

Surgery that creates an opening from a ureter to the skin or another urinary conduit to divert urine when normal drainage to the bladder is impossible or must be bypassed.

Urethan

An older name for ethyl carbamate, a chemical compound with carcinogenic potential in experimental and exposure settings. It is not a routine therapeutic medicine.

Urethra

The tube conveying urine from the bladder to the exterior. Male urethra (18-20 cm): prostatic, membranous, and spongy (penile) parts; carries urine and semen; longer and more tortuous than female. Female urethra (3-4 cm): short, straight, predisposing to ascending urinary tract infections.

Urethra Disorder

A condition affecting the urethra, such as infection, inflammation, stricture, trauma, congenital abnormality, or tumor, that may cause pain, discharge, weak stream, or retention.

Urethra, Diseases Of And Injury To

Disorders or trauma affecting the urethra, including infection, stricture, diverticulum, obstruction, and laceration.

Urethracele

A herniation or prolapse of the urethra into the anterior vaginal wall, often occurring together with a cystocele (bladder prolapse). Urethracele is caused by weakening of the pubocervical fascia, often from childbirth, aging, or increased intra-abdominal pressure.

Urethral Carcinoma

A rare cancer arising from the urethra that may cause bleeding, a lump, discharge, pain, or difficult urination; diagnosis requires examination, imaging, and biopsy.

Urethral Catheter

A tube inserted through the urethra into the bladder to drain urine, obtain a specimen, instill medication, or monitor output. Urinary infection and urethral trauma are important risks.

Urethral Diverticulum

A periurethral outpouching that communicates with the urethral lumen, usually arising from infected or obstructed periurethral glands. It may cause dysuria, post-void dribbling, recurrent urinary infection, dyspareunia, or a palpable anterior-vaginal-wall mass.

Urethral Fistula

An abnormal channel between the urethra and another epithelial surface, often the vagina or skin. It can cause continuous urine leakage, recurrent infection, and local irritation.

Urethral Hypermobility

Excessive movement of the urethra during increased abdominal pressure, contributing to stress incontinence.

Urethral Infection

Infection involving the urethra, commonly caused by bacteria, including sexually transmitted organisms. Symptoms may include burning urination, discharge, frequency, or pelvic discomfort; testing and appropriate treatment help prevent complications and transmission.

Urethral Meatus

External opening of urethra. Position abnormal in hypospadias, epispadias.

Urethral Meatus, Female

The external opening of the female urethra, located

in the vestibule anterior to the vaginal opening. Its position and appearance may be relevant in urinary symptoms, congenital variation, or examination.

Urethral Obstruction

Partial or complete blockage of urine leaving the bladder, often from stricture, stone, prostate disease, tumor, or a congenital valve; acute retention requires prompt treatment.

Urethral Pressure Profile

Measurement of urethral closure pressure along urethra. Used in incontinence evaluation.

Urethral Pressures

Measurements of pressure within or along the urethra used to assess urethral closure and urinary continence.

Urethral Sling

Synthetic or fascial tape supporting urethra for stress incontinence. Mid-urethral sling (TVT, TOT) standard. Minimally invasive. Complications: erosion, urgency, retention.

Urethral Sphincter

The muscular mechanism that helps maintain urinary continence by compressing the urethra. It includes smooth and striated muscle components controlled by autonomic and voluntary pathways.

Urethral Stenosis

Scar-related narrowing of the urethral channel that restricts urinary flow and can cause spraying, weak stream, recurrent infection, retention, or bladder damage.

Urethral Stricture

Narrowing of the urethra caused by scar tissue. It may produce a weak urinary stream, spraying, straining, incomplete emptying, infections, or urinary retention and can result from injury, instrumentation, infection, or inflammatory disease.

Urethral Syndrome

Urinary frequency, urgency, dysuria, or discomfort without a clear bacterial urinary-tract infection; causes may include irritation, pelvic-floor dysfunction, or inflammation.

Urethritis

Urethritis is inflammation of the urethra, commonly from sexually transmitted infection, causing dysuria, irritation, or discharge and requiring evaluation of partners and complications. (Chlamydia trachomatis, Neisseria gonorrhoeae) or non-infectious causes. Presents with dysuria, urethral discharge, and meatal itching. Diagnosis: urine nucleic acid amplification testing (NAAT).

Urethrocele

Prolapse or herniation of the urethra, usually into the anterior vaginal wall.

Urethrography

Contrast imaging of urethra. Evaluates urethral strictures, trauma, anomalies.

Urethroplasty

Surgical reconstruction or widening of the urethra, most commonly to treat a urethral stricture.

Urethroscopy

Endoscopic examination of the urethra using a urethroscope, sometimes combined with treatment of a stricture or other lesion.

Urge Urinary Incontinence

Involuntary leakage of urine, significantly affecting psychological, social, and physical well-being. See urinary incontinence.

Urgency

A sudden, compelling desire to urinate that is difficult to defer—a lower urinary tract symptom. Causes: overactive bladder (detrusor overactivity, often idiopathic), urinary tract infection (urgency + dysuria), bladder outlet obstruction (BPH), neurogenic bladder, interstitial cystitis, and pelvic floor

disorders.

URI

URI usually means upper respiratory infection, commonly a viral infection of the nose, throat, or upper airways causing congestion, cough, and sore throat.

Uric Acid

The end product of purine breakdown in humans, eliminated mainly in urine. Increased levels can contribute to gout or uric-acid kidney stones.

Uric Acid - Blood

Uric acid - blood is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Uric Acid Nephropathy

Acute kidney injury from uric acid crystal precipitation in tubules. Occurs in tumor lysis syndrome and severe hyperuricemia. Prevent with hydration and rasburicase. Alkalinization of urine may be harmful as uric acid precipitates at alkaline pH unlike other stone types.

Uric Acid Stones

Kidney stones composed primarily of uric acid. They form more readily in acidic urine and are associated with hyperuricemia, gout, high purine intake, or chronic diarrhea. Some can dissolve when urine is alkalinized.

Uric Acid Urine Test

A urine test measuring uric acid excretion, used in evaluation of gout, kidney stones, uric-acid overproduction, and selected metabolic disorders.

Uricosuric Drug

A medicine that increases renal excretion of uric acid, such as probenecid, used in selected patients with gout.

Uridine

A nucleoside composed of uracil linked to ribose. It is a building block of RNA and a precursor of

uridine nucleotides involved in carbohydrate and membrane metabolism.

Uridine Diphosphate

A nucleotide consisting of uridine and two phosphate groups. UDP participates in glycogen metabolism and transfers activated sugars during glycosylation reactions.

Uridine Monophosphate

A nucleotide consisting of uridine and one phosphate group. UMP is a component of RNA and an intermediate in pyrimidine-nucleotide metabolism.

Uridine Triacetate

An oral prodrug that supplies uridine and is used as an emergency antidote for severe or life-threatening toxicity from fluorouracil or related fluoropyrimidines, under specialist direction.

Uridine Triphosphate

A high-energy uridine nucleotide used in RNA synthesis and in the formation of activated sugar donors for glycogen and glycoprotein production.

Urinal

A specialized, portable, graduated medical receptacle made of molded medical-grade plastic, designed for bedbound, non-ambulatory, or mobility-impaired patients (particularly male patients) to void urine while remaining in bed or seated in a wheelchair without requiring full transfer to a commode or bathroom. Features an anatomically angled neck and wide opening to prevent spillage, volume graduation markings along the transparent plastic body for accurate fluid balance charting (intake and output [I&O] monitoring), and a fitted cap to control odors and reduce surface contamination.

Urinalysis

Urinalysis examines urine appearance, chemistry, and sediment for evidence of infection, kidney disease, bleeding, diabetes, dehydration, or other systemic conditions. (bacteria), protein, glucose, ketones, bilirubin, urobilinogen, blood, and hemoglobin.

Urinary

Relating to urine or to the organs and processes involved in producing and eliminating urine.

Urinary Bladder

A hollow, distensible muscular organ located in the pelvic cavity posterior to the pubic symphysis, serving as a reservoir for urine.

Urinary Bladder Disorder

A disease affecting bladder storage or emptying, including infection, overactivity, pain syndrome, stones, tumor, neurologic dysfunction, or outlet obstruction.

Urinary Bladder, Diseases Of

Disorders of the bladder, including infection, stones, tumors, neurogenic dysfunction, inflammation, obstruction, and impaired emptying.

Urinary Calculi

Stones formed from crystallized minerals in the urinary tract. They may cause colicky pain, hematuria, obstruction, infection, or kidney injury depending on their size and location.

Urinary Casts

Cylindrical structures formed in renal tubules and passed in urine; their type can help identify kidney disease, such as glomerular inflammation or tubular injury.

Urinary Catheter

A hollow, flexible tube inserted through the urethra into the bladder to drain urine; it may be used intermittently or left in place.

Urinary Catheterization

Insertion of a tube into the bladder to drain urine, measure output, obtain a specimen, or deliver treatment; infection, trauma, and blockage are possible complications.

Urinary Catheters

Urinary catheters drain the bladder when a person

cannot empty it normally or accurate urine measurement is needed, with risks including infection, trauma, blockage, and discomfort.

Urinary Diversion

Surgical or catheter-based rerouting of urine when the normal passage from the kidneys to the urethra cannot be used, often to a stoma or bowel reservoir.

Urinary Fistula

An abnormal connection between part of the urinary tract and another organ or the skin, allowing urine to leak outside its normal pathway. Causes include surgery, childbirth injury, inflammation, and cancer.

Urinary Frequency

The need to urinate more often than usual, which may result from infection, bladder irritation, increased urine production, or other urinary disorders.

Urinary Hesitation

Difficulty starting or maintaining urination, which may result from prostate enlargement, urethral narrowing, medications, nerve disorders, pain, or impaired bladder contraction.

Urinary Incontinence

Involuntary leakage of urine, significantly affecting psychological, social, and physical well-being.

Alternate Names:

Bladder Control, Loss Of Incontinence, Urinary Loss Of Bladder Control

Urinary Incontinence Products

Urinary-incontinence products such as pads, protective underwear, catheters, and mattress covers manage leakage but do not treat its underlying cause.

Urinary Lithiasis

The formation or presence of stones anywhere in the urinary tract, including the kidneys, ureters, bladder, or urethra.

Urinary Retention

Inability to completely empty the bladder, which can be acute (sudden, painful, inability to void) or chronic (gradual, often painless, with overflow incontinence). Causes: benign prostatic hyperplasia, urethral stricture, neurogenic bladder, medications (anticholinergics), and pelvic organ prolapse.

Urinary Retraining

Scheduled voiding and behavioral techniques used to improve bladder control and reduce urgency or incontinence.

Urinary Stasis

Slowing or stopping of normal urine flow, which can promote urinary infection, stone formation, or obstruction-related kidney injury.

Urinary System

The kidneys, ureters, bladder, and urethra, which produce, transport, store, and eliminate urine while regulating fluid, electrolytes, acid–base balance, and blood pressure.

Urinary Tract

The kidneys, ureters, bladder, and urethra, which produce, transport, store, and excrete urine.

Urinary Tract Disorder

Any disease of the kidneys, ureters, bladder, or urethra, including infection, stones, obstruction, congenital abnormalities, cancer, and functional or neurologic disorders.

Urinary Tract Infection

Infection of the urinary tract, classified as lower infection such as cystitis or urethritis, or upper infection such as pyelonephritis. Symptoms vary; dysuria, frequency, urgency, fever, flank pain, or nausea may occur. *Escherichia coli* is a common cause, but organisms vary by setting and patient factors.

Alternate Names:

Bladder Infection (Urinary Tract Infection)

Urinary Tract Infection In Pregnancy

A urinary infection or asymptomatic bacterial growth occurring during pregnancy. Pregnancy increases the risk of upper urinary infection, so screening and treatment follow pregnancy-specific clinical guidance.

Urinary Tract Neoplasm

A benign or malignant growth in the kidneys, ureters, bladder, or urethra; evaluation depends on its site, symptoms, tissue type, and extent of spread.

Urinary Urgency

A sudden, difficult-to-delay need to urinate. It may occur with urinary infection, bladder irritation, overactive bladder, stones, neurologic disease, or other conditions. Urgency with fever, flank pain, blood in the urine, or inability to urinate requires medical assessment.

Urination

The biological process of releasing urine from the bladder through the urethra out of the body; also known as micturition.

Alternate Names:

micturition.

Urination Disorder

Abnormal storage or emptying of urine causing frequency, urgency, dysuria, incontinence, hesitancy, weak stream, retention, or excessive or reduced urine output.

Urination, Difficulty

Trouble starting, maintaining, or emptying urine, often described as hesitancy, weak stream, straining, or incomplete emptying; causes include obstruction, infection, medicines, and nerve or muscle disorders.

Urine

The liquid waste produced by the kidneys, containing water and dissolved substances eliminated from the blood.

Urine 24-Hour Volume

Twenty-four-hour urine volume is the total urine produced in a day and helps assess hydration, kidney function, endocrine disease, or abnormal urine production.

Urine Albuminuria

Abnormal urinary loss of albumin resulting from increased glomerular permeability or impaired tubular reclamation. Persistent albuminuria is independently associated with CKD progression and cardiovascular risk, even when eGFR is preserved.

Urine Alkalinization

Deliberate increase of urine pH, usually with intravenous sodium bicarbonate, to enhance elimination of selected weak acids such as salicylate; it requires monitoring of pH, potassium, fluid status, and acid-base balance.

Urine Analysis

Laboratory examination of urine for cells, blood, proteins, glucose, microorganisms, and other substances.

Urine Chemistry

Measurement of chemical constituents in urine, such as glucose, protein, electrolytes, ketones, blood, and pH, to evaluate kidney function and systemic disease.

Urine Concentration Test

A test of the kidney's ability to concentrate urine, assessed by urine osmolality or specific gravity after controlled fluid conditions when appropriate.

Urine Conductivity

Urine conductivity measures how readily urine carries electrical current and reflects its dissolved electrolyte and solute concentration.

Urine Culture

A laboratory test that grows microorganisms from a urine specimen to identify urinary-tract infection and guide antimicrobial selection. Results may re-

port the organism, quantity of growth, and antimicrobial susceptibility. Proper collection is important because contamination can produce misleading growth; results must be interpreted with symptoms and urinalysis.

Urine Culture - Catheterized Specimen

A urine culture performed on a specimen collected through urinary catheterization, usually when a clean-catch sample cannot be obtained or when catheter-associated infection is being assessed. Collection technique and timing affect interpretation because colonization and contamination may cause bacterial growth without symptomatic infection.

Urine Cytology

Microscopic examination of cells shed into urine, mainly used to help detect high-grade urothelial carcinoma and some other abnormalities. A negative result does not exclude all urinary-tract cancers.

Urine Drainage Bags

Urine drainage bags collect urine from a catheter or urinary diversion and require correct positioning, emptying, hygiene, and monitoring for blockage or infection.

Urine Formation

The process by which the kidney produces urine through three steps: glomerular filtration (formation of 180 L/day ultrafiltrate), tubular reabsorption (return of 99 percent of water and most solutes), and tubular secretion (active addition of waste and ions).

Urine HCG (Pregnancy Test)

Rapid point-of-care test detecting human chorionic gonadotropin in urine. Sensitivity: detects as low as 25 mIU/mL. Positive as early as 12-14 days after conception (before missed period). Results in 3-5 minutes. False negative: dilute urine, very early pregnancy, ectopic pregnancy.

Alternate Names:

Pregnancy Test

Urine Hemoglobin

Hemoglobin detected in urine, which may reflect intravascular hemolysis or contamination with intact red blood cells. Interpretation requires comparison with urine microscopy and clinical findings.

Urine Osmolality

Concentration of urine relative to plasma normally 50 to 1200 mOsm/kg. High greater than 500 in prerenal states reflecting intact concentrating ability. Low less than 350 indicates impaired concentrating ability in diabetes insipidus, chronic kidney disease, and excessive fluid intake. More precise than specific gravity.

Urine PH

A measurement of urine acidity or alkalinity. It varies with diet, metabolism, medications, infection, and kidney function and can influence the formation of some urinary stones.

Urine PH Test

A test measuring urine acidity or alkalinity, useful in evaluating acid-base handling, urinary infection, kidney stones, and some metabolic conditions.

Urine Protein Dipstick Test

A screening test using a reagent strip to detect mainly albumin in urine; positive results require confirmation and quantitative assessment when clinically indicated.

Urine Protein Electrophoresis Test

A laboratory test that separates urine proteins by electrical charge and size to help detect abnormal proteins, including monoclonal light chains associated with plasma-cell disorders.

Urine Retention

Inability to empty the urinary bladder completely or at all. Acute retention can cause severe pain and requires prompt medical assessment.

Urine Sediment

Microscopic examination of centrifuged urine pro-

viding diagnostic information about renal pathology. Normal findings include few RBCs, WBCs, and hyaline casts.

Urine Sodium

Concentration of sodium in urine measured in mEq/L. Low less than 20 in prerenal states reflecting avid tubular reabsorption. High greater than 40 in intrinsic renal disease, diuretic use, and salt-wasting nephropathies. Should be interpreted in context of volume status, medications, and concurrent therapies.

Urine Specific Gravity Test

A test estimating urine density relative to water and reflecting solute concentration; results help assess hydration and renal concentrating ability.

Urine Toxicology

Laboratory analysis of urine for medicines, drugs, or their metabolites. Results require interpretation because detection does not always establish impairment or the timing of exposure.

Urinometer

A hydrometer used to measure the specific gravity of urine.

Urobilinogen

A colourless product formed in the intestine from bilirubin and partly reabsorbed and excreted in urine; abnormal levels may provide clues to liver disease or haemolysis.

Urocele

An uncommon term for a cystic dilation or protrusion involving a urinary-tract structure; the precise meaning depends on the anatomical context.

Urochordata

A subphylum of chordates, also called tunicates, whose members include sea squirts. They are primarily biological research organisms rather than human pathogens.

Urodynamic Testing

Suite of diagnostic procedures designed to evaluate the physiological function of the lower urinary tract (bladder and urethral sphincter) during filling, storage, and emptying phases.

Urodynamics

A set of tests that assess the function of the lower urinary tract (bladder and urethra).

Uroflow

Measurement of the rate and pattern of urine flow during voiding.

Uroflowmetry

A noninvasive test measuring the rate and pattern of urine flow during voiding to evaluate obstruction, weak detrusor function, or voiding dysfunction. and testing conditions; a low or abnormal flow may reflect obstruction, weak bladder contraction, or inadequate effort and requires clinical correlation.

Urogenital

Relating to the urinary and reproductive systems or to structures that involve both systems.

Urogenital Fistula

An abnormal connection between the urinary and genital tracts, such as a vesicovaginal or ureterovaginal fistula. It commonly causes continuous urinary leakage and requires specialist evaluation.

Urogenital System

The related urinary and reproductive organs and their associated ducts, vessels, and supporting tissues. The systems share developmental origins and anatomic relationships.

Urogenital Tract

The combined urinary and reproductive organs and passages, which develop from related embryologic structures.

Urography

Imaging of the urinary tract, traditionally us-

ing radiography after administration of a contrast medium.

Urokinase

A plasminogen activator produced by the body and also used as a thrombolytic medicine to help dissolve blood clots.

Urolithiasis

Formation of stones in the urinary tract, including the kidneys, ureters, bladder, or urethra. Stone composition varies by population and may include calcium oxalate, calcium phosphate, uric acid, struvite, or cystine.

Urologic Diagnostic Yield

The proportion of urologic diagnostic procedures or tests that provide a definitive and clinically useful result.

Urologist

A physician specializing in urinary-tract disorders and the male reproductive system.

Urology

Surgical and medical specialty concerned with the study, diagnosis, and management of diseases affecting the male and female urinary tract (kidneys, ureters, urinary bladder, urethra) and the male reproductive system (prostate, testes, epididymis, seminal vesicles, penis).

Urosepsis

Sepsis caused by infection of the urinary tract or urinary system, often associated with pyelonephritis, obstruction, catheterization, or an infected urinary calculus. The infection may progress from a localized urinary source to bacteremia, systemic inflammation, organ dysfunction, and septic shock. Clinical findings may include fever or hypothermia, flank pain, dysuria, hypotension, altered mental status, oliguria, or elevated lactate. Diagnosis combines clinical assessment with urine and blood cultures, laboratory testing, and imaging when obstruction or a complicated source is suspected.

Urostomy Leak

Escape of urine beneath or around a urostomy appliance or from a surgical connection. Persistent leakage can irritate the skin and may signal poor appliance fit, obstruction, infection, or a surgical complication.

Urostomy Procedure

Surgery that diverts urine through a stoma into an external pouch or conduit, commonly after bladder removal or when the lower urinary tract cannot safely transport urine.

Urostomy Prolapse

Protrusion of a segment of bowel used as a urostomy stoma beyond its usual level. It may cause bleeding, swelling, appliance problems, or impaired urine drainage and should be assessed clinically.

Urostomy Stenosis

Narrowing of a urinary stoma or conduit that impedes drainage, causing reduced urine output, leakage, infection, or kidney-pressure changes and sometimes requiring revision.

Urothelial Carcinoma

Urothelial carcinoma, previously called transitional cell carcinoma, is the most common malignancy of the urinary tract, arising from the urothelium that lines the renal pelvis, ureters, bladder, and proximal urethra.

Urothelium

The specialized transitional epithelium lining the renal pelvis, ureters, bladder, and part of the urethra.

Ursodeoxycholic Acid

A hydrophilic bile acid used for primary biliary cholangitis and selected cholestatic liver diseases; it may also dissolve certain small cholesterol gallstones when bile flow is preserved.

Urticaria

A skin reaction causing transient, itchy raised welts

that change location and usually resolve within 24 hours. It may occur with angioedema, which is deeper swelling often affecting the lips, eyelids, tongue, or extremities.

Urticaria Multiforme

A hypersensitivity reaction in children, often triggered by infections or medications, characterised by widespread, annular or polycyclic erythematous plaques with dusky, ecchymotic, or targetoid centres and pseudovesication, differing from true urticaria by the presence of dusky discolouration and prolonged lesion duration.

Urticaria Pigmentosa

A cutaneous form of mastocytosis in which excessive mast cells accumulate in the skin, producing tan or brown macules or papules that may swell and itch when rubbed. Flushing, abdominal symptoms, or systemic involvement can occur.

Urticarial Vasculitis

Inflammation of small blood vessels associated with hive-like lesions that often last longer than ordinary urticaria and may burn, bruise, or leave residual discoloration.

Usher Syndrome

An inherited disorder combining sensorineural hearing loss with retinitis pigmentosa, the most common cause of combined deaf-blindness. Three types are distinguished by severity and age of onset; management requires coordinated audiological, ophthalmological, and genetic care.

Ustekinumab

Ustekinumab is a monoclonal antibody blocking interleukin-12 and interleukin-23 signaling, used for psoriasis, psoriatic arthritis, inflammatory bowel disease, and other approved conditions; infection risk and hypersensitivity require monitoring.

Ustilago

A genus of smut fungi that infect plants, especially grasses and cereals. Human infection is rare and generally occurs as an opportunistic infection in

people with impaired immunity.

Usual Interstitial Pneumonia

The histopathological pattern in IPF with temporal heterogeneity, fibroblast foci, and honeycombing. HRCT shows basal-predominant, subpleural reticular opacities with traction bronchiectasis.

Ut Dict.

An abbreviation of the Latin phrase “ut dictum,” meaning “as stated” or “as directed.” In medical notes it refers the reader to information already given or to an instruction previously specified.

Uterine (Fallopian) Tubes

Paired muscular tubes extending from the uterus toward the ovaries. They transport the oocyte and are the usual site of fertilization; blockage can contribute to infertility or ectopic pregnancy.

Alternate Names:

fallopian tubes; uterine tubes

Uterine Adnexae

The uterine adnexa are structures beside the uterus, chiefly the fallopian tubes, ovaries, and supporting tissues.

Uterine Atony

Failure of the uterus to contract adequately after delivery, resulting in postpartum hemorrhage. The most common cause of PPH. Risk factors include prolonged labor, multiple gestation, macrosomia, oxytocin augmentation, and uterine fibroids. Diagnosis is clinical: boggy, soft uterus with excessive bleeding.

Uterine Balloon Tamponade

A minimally invasive technique for managing postpartum hemorrhage due to uterine atony when uterotonics fail. A balloon (Bakri Postpartum Balloon, 500-1000 mL capacity) is inserted transvaginally into the uterine cavity and inflated with saline until bleeding stops. The balloon provides mechanical compression against the uterine wall.

Uterine Bleeding

Uterine bleeding is bleeding from the uterus and may result from menstruation, pregnancy complications, fibroids, polyps, hormonal disorders, cancer, or medicines.

Uterine Cancer

Cancer arising in the uterus, most commonly from the endometrium. Abnormal vaginal bleeding, bleeding after menopause, pelvic pain, or unusual discharge requires evaluation; early diagnosis often permits effective treatment.

Uterine Cavity

The uterine cavity is the internal space of the uterus lined by endometrium and is where implantation and pregnancy occur.

Uterine Contraction

Tightening of the uterine muscle, occurring normally during menstruation and labor and sometimes abnormally with pain, pregnancy complications, or medication effects.

Uterine Fibroid (Leiomyoma)

A benign tumor arising from the smooth muscle of the uterus. Fibroids may be submucosal, intramural, or subserosal and may cause heavy menstrual bleeding, pelvic pressure, pain, urinary symptoms, or reproductive problems.

Alternate Names:

Leiomyoma

Uterine Fibroid Embolization

A minimally invasive procedure that blocks the arteries supplying uterine fibroids, causing them to shrink.

Uterine Fibroids

Benign tumors of uterine smooth muscle, also called leiomyomas. They may cause heavy menstrual bleeding, pelvic pressure, pain, infertility, or no symptoms.

Alternate Names:

leiomyomas. Polyps Uterus (Uterine Fibroids) Tu-

mors Uterine (Uterine Fibroids) Womb Growths (Uterine Fibroids)

Uterine Fistula

A uterine fistula is an abnormal passage connecting the uterus with another organ or the skin, often after surgery, childbirth injury, infection, or cancer.

Uterine Fornix

The uterine or vaginal fornix is a recess around the cervix where the upper vagina surrounds the projecting lower uterus.

Uterine Gland

A small gland in the lining of the uterus that produces fluid and helps support the early embryo. Its activity changes during the menstrual cycle and pregnancy.

Uterine Growths

Uterine growths may include fibroids, polyps, adenomyosis, or rarely cancer. They can cause heavy or irregular bleeding, pelvic pressure, pain, infertility, or no symptoms; examination and imaging determine the type and treatment.

Uterine Hemorrhage

Heavy or abnormal bleeding from the uterus, occurring during pregnancy, after childbirth, or at other times. Causes include pregnancy complications, fibroids, hormonal disorders, and malignancy; severe bleeding with dizziness or weakness is an emergency.

Uterine Inversion

A rare but life-threatening obstetric emergency where the uterus turns inside out, protruding through the cervix or vaginal introitus. Occurs in 1:2000-1:20,000 deliveries. Causes: fundal pressure, excessive cord traction (especially with fundal placenta), uterine atony, and fundal fibroids.

Uterine Leiomyosarcoma

A rare malignant tumor of uterine smooth muscle that may cause abnormal bleeding, pelvic pain, or an enlarging mass; diagnosis is based on tissue

examination and staging.

Uterine Monitoring

Assessment of uterine contractions and, in pregnancy, their frequency, duration, and strength to evaluate labor progress, induction response, or excessive uterine activity.

Uterine Myomectomy

Surgical removal of uterine fibroids while preserving the uterus; it may be performed through hysteroscopy, laparoscopy, or open surgery depending on fibroid size and location.

Uterine Obstruction

Blockage that prevents normal passage through the uterus or cervix, which may cause menstrual outflow obstruction, infertility, pregnancy complications, or retained blood or tissue.

Uterine Perforation

A full-thickness breach of the uterine wall, most commonly occurring during instrumentation such as dilation and curettage or hysteroscopy, potentially causing hemorrhage and requiring surgical repair.

Uterine Polyps

Growths arising from the inner lining of the uterus that may cause irregular bleeding, heavy periods, or fertility problems.

Alternate Names:

Polyps, Endometrial Polyps, Uterine

Uterine Prolapse

Descent of the uterus toward or through the vaginal opening because the supporting pelvic floor and ligaments have weakened. Risk factors include childbirth, aging, obesity, and conditions that increase chronic pressure in the abdomen.

Alternate Names:

Pelvic Support Problems, Uterine Prolapse Proapsed Uterus

Uterine Rupture

A full-thickness tear through the uterine wall, po-

tentially life-threatening to both mother and fetus. Risk factors include prior caesarean section (especially classical incision), oxytocin augmentation, and operative vaginal delivery. Presents with sudden abdominal pain, loss of fetal heart rate, and maternal hemorrhage.

Uterine Sarcoma

Uterine sarcoma is a rare malignant tumor arising from uterine muscle, connective tissue, or related cells and may cause bleeding, pain, or an enlarging mass.

Uterine Tachysystole

More than five uterine contractions in 10 minutes averaged over 30 minutes, whether or not accompanied by fetal heart-rate abnormalities. It can reduce uteroplacental perfusion, particularly when caused by oxytocin or prostaglandins.

Uterine Tube

A paired muscular tube that transports the oocyte from the ovary toward the uterus and is the usual site of fertilization.

Utero-Ovarian Ligament

A round, cord-like fibromuscular band extending from the lower, medial (uterine) pole of the ovary to the superolateral angle of the uterus (uterine cornu), immediately posterior and inferior to the insertion of the fallopian tube. Lies enclosed within the leaves of the broad ligament and anchors the ovary to the uterus without containing significant vascular structures.

Alternate Names:

Ovarian Ligament; Proper Ovarian Ligament

Uterosacral Ligament

Paired strong fibromuscular condensations of pelvic endopelvic fascia extending posterolaterally from the supravaginal cervix and upper vaginal fornices, curving around the rectum, to insert into the presacral fascia overlying the second to fourth sacral vertebrae (S_2 – S_4). Provides vital apical support to keep the cervix in its normal posterior position; represents an essential anatomical structure targeted

in surgical apical suspension for uterine prolapse, and a frequent site for painful deep infiltrating endometriosis nodules.

Uterus

Hollow muscular organ in the pelvis between the bladder and rectum, approximately 7.5 cm long in adult females, responsible for menstruation, implantation, and fetal development during pregnancy.

Common name: Womb

Uterus Didelphys

A congenital Müllerian anomaly resulting from the complete failure of fusion of the two paramesonephric ducts during early embryogenesis. Produces two completely separate, symmetrical uterine bodies (hemi-uteruses), each possessing its own cervix, and almost invariably accompanied by a longitudinal vaginal septum (double uterus and double vagina). Associated with an increased risk of preterm labor, malpresentation, and cesarean delivery, though fertile pregnancies can occur in either or both horns.

Alternate Names:

Double Uterus; Didelphic Uterus

Uterus Disorder

A condition affecting the uterus, including fibroids, adenomyosis, endometriosis, infection, abnormal bleeding, congenital anomalies, prolapse, and cancer.

Uterus Neoplasm

A benign or malignant growth arising in the uterus, including fibroids, endometrial cancer, and sarcomas; diagnosis depends on examination, imaging, and tissue sampling.

Uterus, Diseases Of

Disorders affecting the uterus, including fibroids, adenomyosis, endometriosis, infection, abnormal bleeding, prolapse, and cancer.

UTI

Infection of the urinary tract, classified as lower

(cystitis, urethritis) or upper (pyelonephritis). See Urinary Tract Infection.

Utricle

One of the otolith organs of the inner ear, detecting horizontal linear acceleration and head position relative to gravity.

UV Light

Ultraviolet radiation, an invisible part of sunlight or artificial light that can affect the skin and eyes and may cause sunburn, aging, or skin cancer.

Unsaturated Fat

A dietary fat whose fatty-acid chains contain one or more carbon-carbon double bonds. Monounsaturated and polyunsaturated fats are common in vegetable oils, nuts, seeds, and fish; replacing saturated fat with unsaturated fat generally supports healthier LDL cholesterol levels.

Uvea

The uvea is the vascular middle layer of the eye, comprising the iris, ciliary body, and choroid; it regulates light entry, supports the lens, and supplies the outer retina. focus, and blood supply to the eye.

Uveal Disease

A disorder of the iris, ciliary body, or choroid, including uveitis, tumors, vascular disease, and inflammation that may cause eye pain, photophobia, floaters, or visual loss.

Uveal Melanoma

The most common primary intraocular malignancy in adults, arising from melanocytes within the uveal tract (choroid, ciliary body, or iris), presenting with visual symptoms, a pigmented intraocular mass, or incidental finding on examination.

Uveal Neoplasm

A tumor arising in the uveal tract of the eye—the iris, ciliary body, or choroid; malignant melanoma may threaten vision and spread to distant organs.

Uveitis

Inflammation of the uveal tract—the iris, ciliary body, and choroid—and sometimes nearby eye tissues. It may result from infection, autoimmune or other inflammatory disease, trauma, or an unknown cause. Symptoms can include eye pain, redness, light sensitivity, floaters, blurred vision, or reduced vision; prompt eye assessment is important because untreated inflammation can damage vision.

Alternate Names:

Chorioretinitis (Uveitis)

Uveoparotid Fever

A manifestation of sarcoidosis characterized by the triad of bilateral parotid gland enlargement, anterior uveitis, and fever, sometimes associated with facial nerve palsy. It reflects granulomatous inflammation and is treated with systemic corticosteroids and potentially disease-modifying agents.

Uvula

A small, fleshy flap of tissue that hangs from the back of the throat over the root of the tongue.

Uvulitis

Uvulitis is inflammation and swelling of the uvula from infection, trauma, allergy, dehydration, or irritation and may interfere with swallowing or airway protection. dehydration, or irritation. It may cause throat pain, difficulty swallowing, gagging, or a foreign-body sensation; marked swelling with breathing difficulty requires urgent assessment.

Uvulopalatopharyngoplasty

Surgery that removes or reshapes the uvula, tonsils, and soft-palate tissue to treat obstructive sleep apnea.

Alternate Names:

UPPP

Uvulopalatopharyngoplasty

A surgical procedure that removes or reshapes selected tissue of the soft palate, uvula, and pharynx to enlarge the upper airway. It may be used in selected patients with obstructive sleep apnea, but effectiveness and risks depend on airway anatomy

and other treatments.

V

V-Fib

Alternate index label; see *Ventricular fibrillation*.

Vaccination

Administration of a vaccine to stimulate immune response and provide protection against infectious disease. Types: live attenuated, inactivated, subunit, mRNA, viral vector. Schedule varies by country. Herd immunity achieved when sufficient proportion immune.

Vaccination Schedule

A time-based plan for administering vaccines according to age, previous doses, medical conditions, exposure risks, and public-health guidance. Schedules vary by country and are updated as recommendations change.

Vaccines

Biological preparations that stimulate active adaptive immunity against specific infectious agents or their toxins. They reduce the risk of infection, severe disease, complications, and transmission.

Vaccines - Immunizations

Vaccines train the immune system to recognize specific pathogens or toxins and reduce the risk of infection, severe disease, complications, and transmission.

Vaccinia

The orthopoxvirus used in the smallpox vaccine; infection is uncommon and may cause a localized or disseminated lesion, especially in people with impaired immunity.

Vaccinia Virus

Vaccinia virus is a poxvirus used to make smallpox vaccines and studied in some experimental cancer treatments; accidental infection is uncommon but possible.

VACTERL Association

A pattern of congenital abnormalities involving vertebral, anal, cardiac, tracheoesophageal, renal, and limb development. The diagnosis is considered when several component abnormalities occur together and other syndromes have been excluded.

Vacuole

A membrane-bound compartment within a cell containing fluid, solutes, or cellular material. Vacuoles have specialized roles in storage, transport, and degradation and may enlarge or accumulate material during disease.

Vacuum Curettage

A procedure that removes tissue from the uterus using suction, commonly for uterine evacuation or endometrial sampling. Risks include bleeding, infection, retained tissue, and rarely uterine injury.

Vacuum Delivery

Assisted vaginal delivery using a vacuum extractor (cup applied to the fetal scalp with negative pressure) to expedite delivery for prolonged second stage, fetal distress, or maternal indications.

Vacuum Erection Devices

Pumps that draw blood into the penis to produce an erection.

Alternate Names:

Vacuum erection pump

Vacuum Extractor

A cup-shaped device applied to the fetal scalp to assist vaginal delivery when specific maternal or fetal indications are present.

Vacuum-Assisted Delivery

Operative vaginal delivery using a vacuum extractor applied to the fetal scalp. Types: soft cup (Kiwi OmniCup, Mityvac, for outlet and low deliveries) and rigid cup (metal Kiwi, for posterior positions and midpelvic deliveries).

Vadimezan

An investigational vascular-disrupting and tumor-necrosis-factor-inducing compound studied as an anticancer agent. It is not an established routine treatment and has no general clinical indication.

Vagal Paraganglioma

A usually slow-growing tumor arising from paraganglion cells near the vagus nerve in the neck.

Vagina

A muscular, elastic canal connecting the cervix to the vaginal opening. It allows menstrual blood to leave the body, receives a penis or other objects during vaginal sex, and serves as the birth canal.

Vagina Carcinoma

A malignant neoplasm arising from the vaginal epithelium; it may present with abnormal bleeding, discharge, or a visible lesion and requires evaluation for local and regional spread.

Vagina Neoplasm

A tumor arising in the vagina; diagnosis determines whether it is benign or malignant, its tissue type, extent, and appropriate management.

Vaginal Agenesis

A condition in which the vagina is absent or incompletely developed.

Vaginal Atresia

Congenital absence or complete obstruction of the vaginal canal. It may cause absent menstrual flow, cyclic pelvic pain, or difficulty with sexual activity and requires specialist evaluation.

Vaginal Atrophy

Thinning, drying, and inflammation of vaginal tissues caused by reduced estrogen.

Vaginal Bleeding

Unexpected, unusually heavy, or prolonged bleeding from the vagina, including bleeding between periods, after sexual intercourse, during pregnancy, or after menopause. Causes include hormonal changes, infection, pregnancy-related conditions, structural lesions, medications, and cancer.

Postcoital Bleeding

Bleeding from the vagina after sexual intercourse. Causes include infection, dryness, injury, polyps, pregnancy-related conditions, or cancer.

Vaginal Bleeding Between Periods

Bleeding between menstrual periods may result from contraception, infection, pregnancy, polyps, fibroids, hormonal changes, or cancer and requires evaluation if persistent or heavy.

Vaginal Bleeding During Early Pregnancy

Bleeding from the vagina during the first part of pregnancy can result from cervical changes, miscarriage, ectopic pregnancy, infection, or other conditions; a small amount of bleeding may occur without a serious cause, but it should not be assumed to be implantation bleeding. Heavy bleeding, severe or one-sided pain, shoulder pain, dizziness, or fainting requires urgent assessment.

Vaginal Bleeding During Late Pregnancy

Bleeding from the vagina later in pregnancy may be caused by placenta previa, placental abruption, labor, cervical disease, or other complications. Any significant late-pregnancy bleeding requires immediate obstetric assessment.

Vaginal Bleeding In Early Pregnancy

Alternate index label; see *Vaginal Bleeding During Early Pregnancy*.

Vaginal Bleeding In Late Pregnancy

Alternate index label; see *Vaginal Bleeding During Late Pregnancy*.

Vaginal Bleeding In Pregnancy

Broad index label for bleeding during pregnancy; see *Vaginal Bleeding During Early Pregnancy* and *Vaginal Bleeding During Late Pregnancy*. Any bleeding during pregnancy should be assessed clinically, especially if heavy or accompanied by pain, dizziness, fainting, or reduced fetal movement.

Vaginal Cancer

A rare gynecologic malignancy, most commonly squamous cell carcinoma linked to human papillomavirus. Treatment depends on stage and includes surgery, radiation, and chemotherapy.

Alternate Names:

Cancer, Vagina

Vaginal Candidiasis

Alternate index label; see *Yeast infection (vaginal)*.

Vaginal Cysts

Vaginal cysts are fluid-filled or tissue-lined sacs in or beside the vaginal wall, commonly benign but sometimes causing pain, pressure, infection, or obstruction.

Vaginal Delivery (Spontaneous)

The spontaneous passage of the fetus through the birth canal without the use of operative instruments (vacuum or forceps). Typically occurs in the second stage of labor with maternal pushing.

Alternate Names:

Spontaneous

Vaginal Dryness

Reduced vaginal lubrication, commonly associated with menopause, breastfeeding, hormonal changes, medications, or irritation. It may cause discomfort,

itching, painful intercourse, or minor bleeding.

Vaginal Dryness And Atrophy (Genitourinary Syndrome Of Menopause)

Vaginal dryness and atrophy, collectively termed genitourinary syndrome of menopause, result from declining estrogen levels that cause thinning, drying, and loss of elasticity of the vaginal tissues. Symptoms include vaginal dryness, irritation, burning, dyspareunia, and urinary symptoms such as frequency and recurrent infections.

Alternate Names:

Genitourinary Syndrome of Menopause

Vaginal Fistula

An abnormal opening connecting the vagina to another organ, such as the bladder or rectum.

Vaginal Foreign Body

An object retained in the vagina, most often a tampon or other inserted material. It may cause discharge, odor, bleeding, pain, or infection and should be removed safely with examination when necessary.

Vaginal Fornix

One of the recesses surrounding the cervix where the vagina meets the cervix. The posterior fornix is adjacent to the peritoneal cul-de-sac and is relevant in pelvic examination and some procedures.

Vaginal Hematoma

A collection of blood within the vaginal wall or surrounding tissues, usually caused by childbirth, trauma, or surgery and potentially producing severe pain, swelling, or blood loss.

Vaginal Hemorrhage

Heavy or clinically significant bleeding from the vagina. Causes include childbirth, pregnancy complications, trauma, infection, structural disease, hormonal disorders, and gynecologic malignancy; severe or pregnancy-related bleeding requires urgent evaluation.

Vaginal Hysterectomy

Surgical removal of the uterus through the vagina. It may be used for selected benign uterine conditions and usually avoids an abdominal incision, although suitability depends on anatomy and disease.

Vaginal Intercourse

The insertion of the penis into the vagina for sexual pleasure or reproduction. The most common form of sexual intercourse. Vaginal intercourse can lead to pregnancy if sperm are deposited in the vagina.

Vaginal Intraepithelial Neoplasia

Precancerous abnormal growth of squamous cells in the vaginal epithelium, usually associated with human papillomavirus and graded according to the severity of dysplasia.

Vaginal Introitus

The entrance to the vaginal canal, located in the vestibule of the vulva. Its appearance and tenderness may be relevant in examinations for infection, trauma, pain, or pelvic-floor disorders.

Vaginal Itching

Itching or irritation of the vulva or vagina caused by candidiasis, bacterial vaginosis, sexually transmitted infections, dermatitis, hormonal changes, or other conditions. It may occur with discharge, odor, soreness, or burning; recurrent or unexplained symptoms require examination and appropriate testing rather than self-diagnosis.

Vaginal Membrane

A thin mucosal or connective-tissue fold associated with the vaginal canal; the term may refer to the hymen at the vaginal opening or to an abnormal obstructing membrane, so the intended anatomical meaning should be specified.

Vaginal Microbiome

The community of microorganisms living in the vagina, commonly dominated by *Lactobacillus* species that help maintain an acidic environment. Changes in this community may contribute to bacterial vaginosis, candidiasis, or other symptoms.

Vaginal Odor

An unusual or unpleasant odor from vaginal discharge that may result from bacterial vaginosis, infection, retained material, hormonal changes, or other conditions.

Vaginal Opening

The external entrance to the vagina. It is part of the vulvar vestibule and may be affected by infection, inflammation, trauma, scarring, or congenital variation.

Vaginal Prolapse, Posterior

Alternate index label; see *Posterior vaginal prolapse (rectocele)*.

Vaginal Speculum

An instrument inserted into the vagina and gently opened to separate the vaginal walls and visualize the vagina and cervix. It may be used for pelvic examination, cervical cytology such as a Pap test, swab collection, assessment of bleeding or discharge, and selected procedures. Size and design are chosen according to anatomy, comfort, and the clinical purpose.

Vaginal Stenosis

Narrowing or shortening of the vaginal canal, which may result from surgery, radiation, scarring, inflammation, trauma, or congenital development. It can cause pain, difficult examination, or difficulty with penetration.

Vaginal Trauma

Injury to the vaginal tissues caused by childbirth, sexual activity, foreign objects, procedures, or blunt or penetrating trauma. Bleeding, pain, swelling, or urinary symptoms require assessment; severe bleeding or suspected deep injury is urgent.

Vaginal Vault Prolapse

The descent of the apex (cuff or top) of the vagina into or beyond the vaginal introitus following a total hysterectomy, resulting from the detachment or weakening of the cardinal and uterosacral ligament complexes and levator ani muscles. Symptoms in-

clude a sensation of pelvic heaviness, a visible or protruding vaginal bulge, lower back ache, and obstructive voiding or defecatory dysfunction. Management options include pelvic floor muscle training, supportive pessaries, or surgical reconstructive procedures such as sacrocolpopexy or uterosacral/sacrospinous ligament fixation.

Alternate Names:

Post-Hysterectomy Vault Prolapse; Apical Prolapse

Vaginal Vestibule

The area of the vulva enclosed by the labia minora that contains the openings of the urethra and vagina and the ducts of several glands.

Vaginal Yeast Infection

A vaginal yeast infection is usually *Candida* overgrowth causing itching, burning, soreness, and thick discharge without the odor typical of many bacterial infections.

Vaginectomy

Surgical removal of part or all of the vagina, usually to treat selected cancers or severe disease; effects may include changes in sexual function, fertility, urination, and bowel function.

Vaginismus

Involuntary tightening of the muscles around the vaginal opening that can make penetration painful or impossible. It may be associated with pelvic-floor dysfunction, fear, prior pain, or other factors and is treatable with a tailored multidisciplinary approach.

Vaginitis

Inflammation of the vaginal mucosa, one of the most common gynecologic complaints.

Vaginospasm

Involuntary contraction of the pelvic-floor muscles surrounding the vagina, causing pain or difficulty with vaginal penetration. It may be associated with fear of pain, prior trauma, pelvic-floor dysfunction, infection, hormonal factors, or other genitopelvic pain conditions.

Vagotomy

Surgical cutting of selected vagus-nerve branches, historically used to reduce stomach acid secretion.

Vagus

Relating to the vagus nerve, the tenth cranial nerve, which carries parasympathetic, sensory, and motor fibers between the brainstem and thoracic and abdominal organs.

Vagus Nerve

The tenth cranial nerve, carrying parasympathetic, sensory, and motor fibres between the brainstem and the heart, lungs, gastrointestinal tract, pharynx, and larynx.

Vagus Nerve (Cranial Nerve X)

The tenth cranial nerve (CN X), the longest and most widely distributed cranial nerve in the body. It contains sensory, motor, and parasympathetic fibers, exiting the skull via the jugular foramen.

Alternate Names:

Cranial Nerve X

Vagus Nerve Stimulation

A neuromodulation treatment involving electrical stimulation of the left vagus nerve via an implanted device. It is FDA-approved for treatment-resistant depression and epilepsy. It requires surgical implantation and delivers intermittent stimulation. Improvement may take months to develop.

Valacyclovir

Valacyclovir is the oral prodrug of acyclovir that inhibits herpesvirus DNA polymerase after activation; it treats herpes simplex and shingles, with renal dosing and neurotoxicity risk in accumulation.

Valganciclovir

Valganciclovir is the oral prodrug of ganciclovir used mainly to treat or prevent cytomegalovirus infection after transplantation; myelosuppression, renal toxicity, infertility, and teratogenicity are important risks.

Valgus

A deformity in which the distal part of a limb deviates away from the body's midline; examples include hallux valgus and genu valgum.

Validity

The extent to which a test or measurement accurately assesses what it is intended to assess.

Valine

An essential branched-chain amino acid required for protein synthesis and metabolism.

Valinemia

A rare inherited disorder of branched-chain amino-acid metabolism causing elevated plasma valine. It may present with developmental delay, feeding difficulty, hypotonia, or neurological symptoms, although some individuals are minimally affected.

Valinomycin

A potassium-carrying ionophore produced by some bacteria and used mainly in laboratory research; it is not a routine human medicine and can be toxic to cells.

Valley Fever

The common name for coccidioidomycosis, a fungal infection caused by *Coccidioides* species and acquired by inhaling airborne spores from soil. It usually causes a mild respiratory illness but can disseminate to skin, bone, joints, or meninges, especially in people at higher risk.

Valproate (Sodium Valproate)

Valproate is a broad-spectrum antiseizure medicine used for several generalized and focal seizure disorders and for selected mood disorders. Choice requires consideration of age, pregnancy potential, liver disease, interactions, and other safety risks.

Alternate Names:

Sodium Valproate

Valproic Acid

valproic acid is a fatty acid or other lipid-related

molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Valrubicin

An anthracycline antineoplastic drug administered into the bladder for selected cases of carcinoma in situ that have not responded adequately to intravesical bacillus Calmette–Guérin. It can irritate the bladder and may cause systemic toxicity.

Valsalva

Forced expiration against a closed glottis, which raises intrathoracic pressure. The maneuver affects venous return and heart rate and is used in selected examinations and treatments, but may be unsafe in some conditions.

Valsalva Maneuver

Alternate index label; see *Valsalva's Manoeuvre* and *Valsalva*.

Valsalva'S Manoeuvre

Forced expiratory effort against a closed airway (glottis closed or mouth and nose pinched shut), typically performed by bearing down as if straining during a bowel movement. The manoeuvre has four phases: Phase I (onset of straining): increased intrathoracic pressure compresses the aorta, causing a transient rise in blood pressure.

Alternate Names:

Valsalva Maneuver

Valsartan

Valsartan is an angiotensin-II receptor blocker used for hypertension, heart failure, and selected cardiovascular indications; hyperkalaemia, renal-function changes, hypotension, and fetal toxicity are important risks.

Valves

Structures that permit fluid or blood to move predominantly in one direction and prevent backward flow; cardiac valves and venous valves are important examples.

Valvotomy

Surgical or catheter-based division of narrowed valve tissue to improve blood flow, most often performed for selected stenotic heart valves.

Valvular Disease

Disease affecting one or more heart valves, causing stenosis, regurgitation, or both and potentially leading to heart failure or arrhythmia.

Valvular Heart Disease

Valvular heart disease involves dysfunction of one or more heart valves, leading to stenosis, regurgitation, or a combination of both. The most common causes are degenerative calcification of aortic and mitral valves, rheumatic heart disease, infective endocarditis, and ischemic papillary muscle dysfunction.

Valvular Insufficiency

Incomplete closure of a heart valve allowing retrograde blood flow (regurgitation); affects mitral, aortic, tricuspid, or pulmonic valves.

Valvuloplasty

A procedure used to widen or repair a narrowed or abnormal heart valve, by balloon catheter or open surgery depending on the valve and condition.

Valvulotomy

Surgical incision of a stenosed heart valve to improve the opening through which blood flows.

Van Den Bergh Test

A historical test measuring the reaction of serum bilirubin with a diazo reagent to help distinguish conjugated from unconjugated hyperbilirubinemia.

Vancomycin

A glycopeptide antibiotic that inhibits Gram-positive bacterial cell-wall synthesis. It is given intravenously for serious resistant infections and orally for *C. difficile* colitis; infusion reactions, nephrotoxicity, and ototoxicity require caution.

Vancomycin-Resistant Enterococci -

Hospital

Vancomycin-resistant enterococci are enterococcal bacteria resistant to vancomycin and capable of causing healthcare-associated urinary, bloodstream, wound, or other infections.

Vancomycin-Resistant Enterococcus

Enterococcus bacteria that are resistant to vancomycin, usually because of altered cell-wall precursors. VRE can cause healthcare-associated urinary, bloodstream, wound, or other infections and may require susceptibility-guided treatment.

Vandetanib

Vandetanib is a tyrosine-kinase inhibitor targeting RET, VEGFR, and EGFR, used for selected medullary thyroid cancers; diarrhoea, hypertension, skin effects, and QT prolongation require monitoring.

Vaporiser

A device that converts a liquid medicine or volatile substance into a vapor for inhalation or controlled delivery, such as in anesthesia.

Variable Decelerations

Abrupt decreases in fetal heart rate that vary in timing, shape, and duration, commonly caused by umbilical-cord compression. Their significance depends on frequency, duration, associated baseline changes, variability, and the clinical setting.

Variance

A statistical measure of dispersion equal to the average squared deviation from the mean.

Variant Angina Pectoris

Chest pain caused by temporary coronary-artery spasm, often occurring at rest.

Alternate Names:

Prinzmetal angina; vasospastic angina

Variant CJD

Alternate index label; see *Creutzfeldt-Jakob disease*.

Variant Classification

The process of assigning a genetic variant to categories such as benign, likely benign, uncertain significance, likely pathogenic, or pathogenic using evidence from population data, laboratories, family studies, functional studies, and clinical correlation.

Varibaculum

A genus of bacteria in the family Lachnospiraceae, identified mainly in microbiologic and genomic research. Its clinical significance depends on the species and clinical specimen.

Varibaculum Cambriense

A bacterial species in the genus *Varibaculum* reported from human clinical specimens. Its role may be opportunistic and requires identification with the clinical context and susceptibility data.

Variceal Hemorrhage

Life-threatening complication of portal hypertension involving rupture of dilated esophageal or gastric varices. The risk is determined by variceal size, red color signs, liver disease severity, and portal hypertension degree.

Varicella

A primary infection with varicella-zoster virus that causes fever and a generalized itchy rash. See Chickenpox.

Alternate Names:

Chickenpox (*Varicella*)

Varicella (Chickenpox)

Alternate index label; see *Varicella*.

Varicella-Zoster Virus

A herpesvirus that causes chickenpox (*varicella*) and shingles (*herpes zoster*). VZV establishes latent infections in dorsal root ganglia and can reactivate decades later. Chickenpox is highly contagious and typically occurs in childhood. Reactivation as shingles causes painful dermatomal vesicular rash.

Varicellovirus

Varicellovirus is a genus of herpesviruses that includes varicella-zoster virus, the cause of chickenpox and shingles.

Varices

Abnormally dilated and tortuous veins, commonly occurring in the legs or in the oesophagus and stomach as a result of portal hypertension.

Varices, Esophageal

Alternate index label; see *Esophageal varices*.

Varicocele

A varicocele is enlargement of veins in the scrotum, often on the left, that may cause aching, testicular growth differences, infertility, or no symptoms. cord, resulting from incompetent or absent venous valves.

Varicose Ulcer

Impaired venous return from the lower extremities due to venous valve incompetence or obstruction. See chronic venous insufficiency.

Varicose Veins

Dilated, tortuous superficial veins, most commonly in the lower extremities. Caused by venous valve incompetence leading to venous reflux. Risk factors: family history, prolonged standing, obesity, pregnancy, and older age. Symptoms: leg heaviness, swelling, aching. Complications: skin changes, ulceration, thrombophlebitis.

Variegate Porphyria

An inherited hepatic porphyria caused by reduced protoporphyrinogen oxidase activity. It can cause acute neurovisceral attacks with abdominal pain and neuropathy and/or photosensitive blistering skin disease.

Variola

A highly contagious and deadly disease caused by variola virus, eradicated globally by 1980 through vaccination. See Smallpox.

Varix

An abnormally dilated, tortuous vein; multiple varices commonly occur in portal hypertension or chronic venous disease.

Varus

A deformity in which the distal part of a limb deviates toward the body's midline; examples include genu varum and talipes equinovarus.

Vas

A duct or vessel; in reproductive anatomy, the vas deferens transports sperm from the epididymis toward the ejaculatory duct.

Vas Deferens

Muscular duct (approximately 45 cm long) transporting sperm from the epididymal tail to the ejaculatory duct. It ascends through the spermatic cord, passes through the inguinal canal, enters the pelvis, crosses over the ureter, and joins the seminal vesicle duct to form the ejaculatory duct (in the prostate).

Vasa Deferentia

The paired muscular ducts that transport mature sperm from the epididymides toward the ejaculatory ducts during ejaculation.

Alternate Names:

vas deferens; ductus deferentes

Vasa Efferentia

Small ducts carrying sperm from the rete testis to the epididymal duct.

Vasa Previa

Fetal blood vessels traverse the membranes over or near the internal cervical os without protection from placental tissue or the umbilical cord. Rupture of membranes can cause rapid fetal exsanguination, so antenatal diagnosis and planned cesarean delivery are important.

Vascular

Pertaining to, composed of, containing, or relating to the blood vessels (arteries, arterioles, capillar-

ies, venules, and veins) or lymphatic channels of the circulatory system. Clinically central to every branch of medicine, encompassing vascular surgery (revascularization, endarterectomy, bypass grafting), vascular imaging (Doppler ultrasound, CT angiography, digital subtraction angiography), and vascular pathologies including systemic atherosclerosis, vasculitis, aneurysms, arteriovenous malformations, and peripheral vascular disease.

Vascular Access

A route into the bloodstream for treatment or monitoring. Hemodialysis access may be an arteriovenous fistula, arteriovenous graft, or central venous catheter; the choice depends on vascular anatomy, urgency, expected duration, and individual risks.

Vascular Access For Hemodialysis

A surgically created or catheter-based route that permits high-flow blood removal and return during hemodialysis. Arteriovenous fistulae are generally preferred when feasible, followed by grafts; central venous catheters have higher infection and thrombosis risks.

Vascular Bed

The network of blood vessels supplying a tissue or organ. Regional vascular beds regulate perfusion through vessel diameter, pressure, resistance, and local metabolic demands.

Vascular Claudication

Alternate index label; see *Claudication*.

Vascular Dementia

Cognitive impairment caused by cerebrovascular disease, such as strokes or chronic small-vessel injury. Symptoms may develop suddenly or gradually and can include problems with attention, executive function, memory, or walking. Management addresses the underlying vascular risks and functional needs.

Alternate Names:

Dementia, Vascular

Vascular Diagnostic Yield

The proportion of vascular diagnostic procedures or

tests that provide a clinically useful result.

Vascular Disease

Vascular disease affects arteries, veins, or lymphatic vessels and includes atherosclerosis, aneurysm, peripheral artery disease, venous thrombosis, varicose disease, and inflammatory disorders. Symptoms and treatment depend on the vessel and may involve risk-factor control, medicines, procedures, or surgery.

Vascular Ehlers-Danlos Syndrome

The most life-threatening subtype of Ehlers-Danlos syndrome (vEDS / Type IV EDS), inherited in an autosomal dominant manner caused by heterozygous pathogenic variants in the *COL3A1* gene on chromosome 2q32, which encodes pro-alpha-1 chains of type III procollagen. Produces severe structural fragility of vascular connective tissue and hollow internal organs. Classically features thin, translucent skin with prominent visible venous patterning, easy bruising, characteristic facial appearance (pinched nose, thin vermilion border, prominent eyes), and catastrophic vascular complications including spontaneous arterial dissection, aneurysm, or rupture, spontaneous intestinal perforation (typically sigmoid colon), and uterine rupture during pregnancy.

Alternate Names:

vEDS; Ehlers-Danlos Syndrome Type IV

Vascular Graft

Synthetic or biologic conduit for vascular reconstruction. PTFE, Dacron, saphenous vein.

Vascular Graft Patency

Continued openness and functional blood flow through a vascular graft or bypass. Patency is monitored clinically and with duplex or other imaging because thrombosis, stenosis, infection, intimal hyperplasia, and anastomotic problems can cause failure.

Vascular Imaging

Techniques for visualizing blood vessels: duplex ultrasound, CT angiography, MR angiography, con-

ventional angiography.

Vascular Malformation

Abnormal blood vessel development. Arteriovenous malformation, venous malformation, lymphatic malformation.

Vascular Ring

A congenital abnormality of the aortic arch or its branches that encircles and may compress the trachea, esophagus, or both. Symptoms include stridor, wheezing, recurrent respiratory infection, dysphagia, feeding difficulty, or respiratory distress.

Vascular Surgery

Surgery that repairs or reroutes blood vessels to improve circulation.

Vascular System

The network of arteries, veins, and capillaries that transports blood through the body.

Vascular Trauma

Injury to an artery or vein from blunt, penetrating, iatrogenic, or crush mechanisms. Assessment prioritizes hemorrhage control, distal perfusion, ischemia, expanding hematoma, bruit, thrill, and associated nerve or bone injury.

Vascularity

The amount and distribution of blood vessels supplying a tissue or lesion.

Vasculitis

Inflammation of blood vessels causing tissue ischemia and necrosis. Classification by vessel size. Large vessel: giant cell arteritis, Takayasu arteritis. Medium vessel: polyarteritis nodosa (PAN), Kawasaki disease.

Alternate Names:

Angiitis (Vasculitis)

Vasculitis (Systemic)

Inflammation of blood vessels that may involve large, medium, or small vessels and impair blood flow

or cause tissue injury. Examples include ANCA-associated vasculitis and IgA vasculitis.

Alternate Names:

Systemic

Vasculostatin

Vasculostatin is an experimental anti-angiogenic fragment related to angiostatin that has been studied for inhibition of new blood-vessel growth; it is not an established routine clinical medicine.

Vasectomy

A permanent contraceptive procedure in which the vas deferens are divided or occluded to prevent sperm from entering the ejaculate. It does not immediately provide sterility and does not protect against sexually transmitted infections.

Vasectomy Reversal

A microsurgical reconstructive operative procedure performed to re-establish patency of the male reproductive tract and restore fertility following a previous vasectomy. Operating under high-power optical magnification using 9-0 or 10-0 nylon sutures, the urological microsurgeon performs a two-layer end-to-end anastomosis reconnecting the severed vasal lumens (vasovasostomy). If intraoperative aspiration of fluid from the testicular vas end reveals absence of sperm and thick pasty fluid indicative of secondary epididymal obstruction from prolonged back-pressure, a microsurgical bypass connecting the abdominal vas lumen directly to an individual patent epididymal tubule (vasoepididymostomy) is performed instead. Patency rates exceed 85–95% depending on the interval since vasectomy and surgeon experience.

Alternate Names:

Vasovasostomy; Vasoepididymostomy

Vasoactive Intestinal Peptide Test

A blood test measuring vasoactive intestinal peptide, used mainly when a VIP-secreting neuroendocrine tumor is suspected in a patient with secretory diarrhea and electrolyte abnormalities.

Vasoconstriction

Source spelling variant of *vasoconstriction*, the narrowing of a blood vessel caused by contraction of its muscular wall.

Vasoconstriction

Narrowing of blood vessels caused by contraction of vascular smooth muscle, which can raise blood pressure or reduce blood flow to affected tissues.

Vasoconstrictor

A physiological mediator, autonomic nerve signal, or pharmacological agent that induces vasoconstriction—the narrowing of blood vessel lumens through the contraction of vascular smooth muscle cells within tunica media walls. Endogenous vasoconstrictors include endothelin-1, angiotensin II, vasopressin, and norepinephrine. Pharmacological vasoconstrictors (vasopressors, such as norepinephrine, epinephrine, phenylephrine, and vasopressin) act primarily via vascular α_1 -adrenergic or V_1 receptors, raising systemic vascular resistance and mean arterial pressure to restore tissue perfusion in distributive and septic shock, and are co-administered with local anesthetics to prolong anesthetic duration and limit surgical bleeding.

Vasoconstrictors

Substances or medicines that narrow blood vessels and usually increase vascular resistance and blood pressure.

Vasodepressor Syncope

Fainting caused predominantly by a sudden reduction in vascular tone and blood pressure, often as part of a vasovagal reflex. Warning symptoms may include nausea, sweating, warmth, and lightheadedness.

Vasodilatation

Widening of blood vessels caused by relaxation of vascular smooth muscle, increasing blood flow and potentially lowering blood pressure.

Vasodilation

The widening of blood vessels during inflammation,

resulting in increased blood flow to the affected area. This process is mediated primarily by histamine released from mast cell granules acting on H1 receptors, nitric oxide produced by endothelial nitric oxide synthase, and prostaglandins particularly PGE2.

Vasodilator

An endogenous biochemical signaling molecule or pharmacological agent that induces vasodilation—the relaxation and widening of the lumen of blood vessels, decreasing vascular resistance and systemic blood pressure while increasing regional blood flow. Endogenous vasodilators include endothelial nitric oxide, prostacyclin (PGI₂), adenosine, bradykinin, and histamine. Pharmacologic vasodilators are categorized by mechanism and vascular selectivity: arterial dilators (hydralazine, calcium channel blockers), venodilators (nitroglycerin, reducing cardiac preload and myocardial wall stress in acute coronary syndromes and heart failure), and mixed arterial-venous dilators (sodium nitroprusside, ACE inhibitors).

Vasodilators

Medicines or substances that relax vascular smooth muscle and widen blood vessels. They are used for conditions such as hypertension, angina, heart failure, or pulmonary hypertension depending on the agent.

Vasomotor

Relating to the control of blood-vessel diameter by nerves, hormones, and local chemical factors.

Vasomotor Centre

Brainstem networks, chiefly in the medulla, that regulate vascular tone and contribute to control of blood pressure.

Vasomotor Nerves

Autonomic nerves that alter blood-vessel diameter by causing vascular smooth-muscle contraction or relaxation.

Vasomotor Rhinitis

Nonallergic inflammation of the nasal lining causing

congestion, runny nose, or sneezing, often triggered by odors, temperature changes, or irritants.

Vasopressin

Antidiuretic hormone, also called arginine vasopressin, which promotes renal water reabsorption and can constrict blood vessels.

Vasopressin (Antidiuretic Hormone, ADH)

A hormone that increases water reabsorption in the kidney and can constrict blood vessels. It is released from the posterior pituitary.

Alternate Names:

Antidiuretic Hormone, ADH

Vasopressin Receptor

A protein on or inside a cell that responds to vasopressin. It helps control water balance, blood-vessel narrowing, and other body functions.

Vasopressor

An agent or physiological signal that raises blood pressure mainly by constricting blood vessels and sometimes by increasing cardiac activity.

Vasopressors In Anesthesia

Medicines that increase vascular tone or cardiac output to support blood pressure during anesthesia or critical illness. The choice and dose depend on the cause of hypotension, heart rate, cardiac function, and local protocol; monitoring is required.

Vasospasm

Sudden involuntary narrowing caused by contraction of a blood vessel.

Vasovagal Attack

A transient reflex episode caused by reduced sympathetic tone and increased vagal activity, producing hypotension and often bradycardia with fainting or near-fainting. Common triggers include prolonged standing, pain, fear, heat, dehydration, or emotional stress.

Vasovagal Reaction

A reflex that slows the heart and widens blood vessels, briefly lowering blood pressure and sometimes causing fainting; triggers include pain, fear, prolonged standing, heat, or blood exposure.

Vasovagal Syncope

Reflex syncope mediated by increased vagal tone and withdrawal of sympathetic activity, causing bradycardia and/or vasodilation resulting in transient cerebral hypoperfusion. Triggers: prolonged standing, heat, pain, emotional stress. Preceded by prodrome (lightheadedness, nausea, diaphoresis, visual tunneling).

Alternate Names:

Neurocardiogenic Syncope

Vatalanib

An investigational inhibitor of vascular endothelial growth factor receptors studied as an anticancer drug; it is not an established routine treatment.

VATS

Alternate name; see *Video-Assisted Thoracoscopic Surgery*.

Vaughan Williams Classification

The Vaughan Williams classification categorizes antiarrhythmic drugs into four classes based on their primary mechanism of action.

VCJD

Alternate index label; see *Creutzfeldt-Jakob disease*.

VDRL Test

A nontreponemal blood or cerebrospinal-fluid test for reagin antibodies used in syphilis screening and monitoring; reactive results require treponemal confirmation.

VEAL CHOP Mnemonic

A memory aid for interpreting fetal heart rate patterns. VEAL: Variable decelerations Cord compression, Early decelerations Head compression, Accelerations OK (fetal well-being), Late decelerations

Placental insufficiency.

Vector

A living carrier, commonly an arthropod, that transmits an infectious agent between hosts. Biological vectors support replication or development of the agent; mechanical vectors transfer it without such biologic change.

Vector Control

Reduction of vector populations. Examples: insecticides, larvicides, environmental modification, personal protection.

Vector-Borne Disease

Disease transmitted by vector (insect, tick). Examples: malaria, dengue, Lyme disease.

Vector-Borne Diseases

Diseases transmitted by arthropod vectors including mosquitoes, ticks, fleas, and sandflies. Major vector-borne diseases include malaria, dengue, Zika, chikungunya, Lyme disease, and leishmaniasis. Prevention through vector control, personal protection, and chemoprophylaxis is essential.

Veganism

A dietary or lifestyle pattern that excludes animal-derived foods; nutritional adequacy requires attention to nutrients such as vitamin B12, iron, calcium, iodine, and omega-3 fatty acids.

Vegetarianism

A dietary pattern that excludes meat, with inclusion or exclusion of eggs and dairy depending on the subtype; nutritional planning may be needed.

Vegetation

A vegetation is a mass composed of platelets, fibrin, and microorganisms that forms on a heart valve or endocardial surface in the setting of infective endocarditis. The vegetation typically attaches to the valve leaflet on the low-pressure side and may progressively destroy the underlying valve tissue, causing valvular regurgitation.

Vegetations

Abnormal masses, often composed of fibrin, platelets, and microorganisms, that form on heart valves in infective endocarditis; sterile vegetations can occur in other conditions.

Vehicle

A substance or medium that carries an active medicine, microorganism, or toxic agent; in pharmacology it may be the inactive base in which a drug is formulated.

Vein

A blood vessel that carries deoxygenated blood toward the heart (except pulmonary veins, which carry oxygenated blood). Veins have thinner walls and larger lumens than arteries, with less smooth muscle and elastic tissue.

Vein-Graft Aneurysms

Focal dilation of a venous bypass graft, most commonly a saphenous vein graft used in coronary artery bypass surgery. Rare but may cause graft thrombosis, distal embolization, compression of adjacent structures, or rupture. Diagnosis: coronary angiography or CT angiography. Treatment: re-intervention or medical management.

Veins

Blood vessels that return blood toward the heart. Most carry deoxygenated blood, while pulmonary and umbilical veins carry oxygenated blood.

Veins, Diseases Of

Disorders including thrombosis, varicose veins, chronic venous insufficiency, venous ulcers, inflammation, and congenital venous malformations.

VeIP Regimen

A combination chemotherapy regimen of vinblastine, ifosfamide, and cisplatin, used in selected germ-cell tumors and other oncology settings. Treatment requires specialist monitoring for marrow, kidney, nerve, and bladder toxicity.

Veisalgia

The medical term for a hangover: the cluster of headache, thirst, nausea, fatigue, poor concentration, and malaise that can follow alcohol use as blood alcohol falls.

Velafermin

A recombinant fibroblast-growth-factor analog studied to promote epithelial repair, including in ocular-surface and mucosal disease. It remains investigational in many settings.

Velamentous Cord Insertion

An abnormal structural variation of umbilical cord attachment in which the umbilical vessels separate and diverge prior to reaching the placental disc, coursing between the amnion and chorion across the fetal membranes unsupported by protective Wharton's jelly. It significantly increases the risk of vessel compression, thrombosis, fetal growth restriction, and vasa previa, wherein exposed fetal vessels cross or lie within 2 cm of the internal cervical os, risking catastrophic fetal exsanguination upon membrane rupture.

Alternate Names:

Velamentous Insertion of the Umbilical Cord

Veliparib

An investigational inhibitor of poly(ADP-ribose) polymerase studied in combination cancer treatment, particularly for tumors with impaired DNA repair. Its role depends on clinical-trial evidence and regulatory approval.

Velocardiofacial Syndrome

Alternate index label; see *DiGeorge syndrome (22q11.2 deletion syndrome)*.

Veltuzumab

An investigational monoclonal antibody directed against CD20 on B cells, studied for B-cell cancers and autoimmune disease.

Vemurafenib

Vemurafenib is a BRAF V600 kinase inhibitor used

for selected BRAF-mutated melanoma and other cancers; arthralgia, photosensitivity, QT prolongation, new skin tumors, and resistance are important concerns.

Vena Cava

The two largest systemic veins returning deoxygenated blood to the right atrium. Superior Vena Cava (SVC): formed by brachiocephalic veins, drains head, neck, upper limbs, thorax (no valves). Inferior Vena Cava (IVC): formed by common iliac veins at L5, drains abdomen, pelvis, lower limbs (receives hepatic, renal, gonadal, lumbar veins).

Venae Cavae

The superior and inferior venae cavae are the major veins returning systemic blood to the right atrium. The superior vena cava drains the head, neck, chest, and upper limbs; the inferior vena cava drains the abdomen, pelvis, and lower limbs.

Alternate Names:

venae cava; vena cava

Venepuncture

Puncture of a vein with a needle to obtain blood or establish intravenous access.

Venereal

Relating to sexual intercourse or to infection transmitted through sexual contact. The term is largely historical; sexually transmitted infection is the preferred modern expression.

Venereal Disease Research Laboratory Test

Venereal Disease Research Laboratory test is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

Venereal Diseases

Sexually transmitted infections are infections passed from one person to another through sexual contact, including vaginal, anal, and oral sex. See Sexually Transmitted Infections (STIs).

Venesection

The controlled removal of blood from a vein, used diagnostically or therapeutically, for example in selected cases of hemochromatosis or polycythemia.

Venesection (Phlebotomy)

The controlled removal of blood from a vein for therapeutic or diagnostic purposes.

Alternate Names:

Phlebotomy

Venin

A toxic secretion injected by an animal through a bite, sting, or other specialized apparatus. Its effects depend on the species, dose, route, and toxins involved.

Venipuncture

Puncture of a vein with a needle to obtain blood, administer fluids or medicines, or establish intravenous access. Bruising, infection, bleeding, and nerve or artery injury are uncommon complications.

Veno-Occlusive Disease

Obstruction of small veins, particularly in the liver after certain chemotherapy or hematopoietic stem-cell transplantation, causing painful hepatomegaly, fluid retention, jaundice, and weight gain.

Venogram

Contrast imaging of veins used to detect thrombosis, obstruction, abnormal anatomy, or selected venous flow disorders.

Venogram - Leg

Contrast imaging of the veins of a leg, used selectively to evaluate suspected deep-vein thrombosis or venous obstruction when noninvasive imaging is inadequate.

Venography

Imaging of veins, usually after contrast material is administered, to assess venous anatomy, obstruction, thrombosis, or malformation.

Venom

A biological poison produced by a microorganism, plant, or animal that damages host tissues at low concentrations. See toxin.

Venomous

Describing an animal that actively delivers toxins through a bite, sting, spine, or similar mechanism. This differs from poisonous, which generally refers to toxicity after ingestion or contact.

Venomous Bite

A bite that injects venom from an animal such as a snake, spider, or arthropod. Effects range from local pain and swelling to bleeding, paralysis, or systemic toxicity.

Venous

Pertaining to, situated within, originating from, or affecting the veins—the thin-walled, compliant capacitance blood vessels that transport deoxygenated blood and metabolic waste products from peripheral capillary beds back toward the right atrium of the heart (with the exception of pulmonary veins, which carry oxygenated blood to the left atrium). Governed by low luminal pressure and equipped with one-way intraluminal bicuspid valves in the extremities to prevent gravitational retrograde flow. Clinically critical in deep vein thrombosis, chronic venous insufficiency (CVI; with stasis dermatitis and venous ulcers), venous thromboembolism, and venous access procedures (peripheral cannulation, central venous catheters).

Venous Aneurysm

A localized abnormal dilatation of a vein. It may be asymptomatic or present as a soft mass, pain, thrombosis, embolism, or bleeding depending on its location and size.

Venous Hum

A benign, innocent vascular sound caused by turbulent blood flow in the internal jugular veins as blood drains rapidly into the superior vena cava. Common in healthy children aged 2 to 8 years, it is heard on auscultation as a continuous, soft, low-pitched

blowing or humming murmur over the supraclavicular and infraclavicular regions (more commonly on the right). It is loudest in the upright seated position during diastole, and uniquely diminishes or completely vanishes when the child lies supine, rotates the head, or when gentle digital compression is applied over the ipsilateral internal jugular vein.

Alternate Names:

Cervical Venous Hum; Innocent Venous Hum

Venous Insufficiency

Impaired venous return from the lower extremities due to venous valve incompetence or obstruction. See chronic venous insufficiency.

Venous Leak

Inadequate retention of blood in the penis during erection because blood escapes through veins.

Alternate Names:

Veno-occlusive dysfunction

Venous Pressure

The pressure within the venous circulation, influenced by blood volume, venous tone, and the function of the right side of the heart.

Venous Stasis Ulcer

A chronic leg wound caused by venous hypertension and chronic venous insufficiency. It often occurs near the ankle and may be accompanied by edema, varicose veins, skin darkening, and lipodermatosclerosis.

Venous Thromboembolism

Formation of a venous blood clot, usually deep-vein thrombosis, with or without embolization to the pulmonary arteries; pulmonary embolism is the major acute complication.

Venous Thromboembolism In Pregnancy

Pregnancy increases the risk of VTE (DVT and PE) by 5-10 fold due to a hypercoagulable state (increased fibrinogen, factors VII-XII, vWF, decreased protein S, and venous stasis from the gravid uterus).

Venous Thromboembolism Prophylaxis

Measures used to reduce perioperative deep-vein thrombosis and pulmonary embolism, including early mobilization, mechanical compression, and pharmacologic anticoagulation when bleeding risk permits.

Venous Thrombosis

The formation of a blood clot (thrombus) within a vein, most commonly in the deep veins of the lower extremities (deep vein thrombosis, DVT).

Venous Ulcer

A chronic wound caused by impaired venous drainage, usually occurring near the ankle in a limb with chronic venous insufficiency.

Ventilation

Movement of air into and out of the lungs; effective ventilation brings oxygen to the alveoli and removes carbon dioxide.

Ventilation, Artificial

Mechanical movement of air into and out of the lungs using a device when spontaneous breathing is inadequate or absent.

Ventilation-Perfusion Mismatch

Unequal matching of air reaching the alveoli and blood reaching the pulmonary capillaries. Low or high regional ratios can impair oxygen exchange and occur in conditions such as COPD, pneumonia, or pulmonary embolism.

Ventilation-Perfusion Ratio

The relationship between alveolar ventilation and pulmonary capillary perfusion. Regional mismatch is a major cause of impaired oxygenation; low V/Q produces venous admixture, while high V/Q reflects wasted ventilation.

Ventilation-Perfusion Scan

Lung imaging assessing ventilation and perfusion. Mismatch indicates pulmonary embolism. Alternative to CTPA in renal impairment or contrast

allergy.

Ventilation/Perfusion Scan

Pulmonary embolism diagnosis. Ventilation: inhaled Tc-99m DTPA aerosol. Perfusion: injected Tc-99m MAA. Mismatch (perfusion defect with preserved ventilation) suggests PE. High single-photon emission computed tomography (SPECT) sensitivity.

Ventilator

Mechanical device providing ventilatory support. Modes: assist-control, SIMV, CPAP, PRVC. Parameters: tidal volume, respiratory rate, FiO₂, PEEP.

Ventilator-Associated Pneumonia

Pneumonia developing after at least 48 hours of mechanical ventilation. Diagnosis is based on clinical findings and respiratory evaluation; cultures may help identify the organism but are not interpreted in isolation.

Ventilator-Induced Lung Injury

Lung injury caused or amplified by mechanical ventilation, including volutrauma, barotrauma, atelectrauma, and biotrauma. Lung-protective ventilation limits tidal volume and excessive airway pressures while maintaining appropriate oxygenation and carbon-dioxide targets.

Ventouse

A vacuum extractor used for selected assisted vaginal deliveries.

Ventral

Relating to the belly or front side of the body; synonym for anterior in human anatomy.

Ventral Hernia

Protrusion of abdominal tissue through a weakness in the front abdominal wall, including incisional and umbilical hernias. It may cause a bulge or pain and requires urgent assessment if incarceration or strangulation is suspected.

Ventricle

One of the two lower, thicker-walled chambers of the heart that pump blood out of the heart. The right ventricle pumps deoxygenated blood into the pulmonary artery (low-pressure system); the left ventricle pumps oxygenated blood into the aorta (high-pressure system, generating systemic blood pressure).

Ventricle (Brain)

The interconnected system of fluid-filled cavities within the brain producing and containing cerebrospinal fluid: two lateral ventricles (cerebrum), third ventricle (diencephalon), and fourth ventricle (pons/medulla, continuous with the central canal).

Alternate Names:

Brain

Ventricular

Relating to a ventricle, especially one of the heart or the brain. The meaning depends on the organ, such as ventricular tachycardia or a cerebral ventricular system.

Ventricular Arrhythmia

An abnormal heart rhythm arising from the ventricles. It may cause palpitations, dizziness, fainting, chest discomfort, or sudden cardiac arrest; fainting or severe symptoms require emergency care.

Ventricular Arrhythmias

Abnormal heart rhythms arising from the ventricles. They range from premature ventricular contractions to ventricular tachycardia and fibrillation, which can cause sudden cardiac arrest.

Ventricular Assist Device

A mechanical pump supporting circulation in advanced heart failure. Types include left-, right-, and biventricular devices. Uses may include temporary support, a bridge to transplantation, or long-term therapy; complications include bleeding, infection, stroke, and pump thrombosis.

Ventricular Fibrillation

Chaotic electrical activity in ventricles, causing no cardiac output. Immediate defibrillation is treatment. Causes: coronary artery disease, cardiomyopathy, electrolyte disturbances, drug toxicity. Post-resuscitation care: targeted temperature management, coronary angiography, ICU admission.

Alternate Names:

V-Fib

Ventricular Hypertrophy

Thickening of a heart-ventricle wall, usually from chronic pressure or volume overload, inherited cardiomyopathy, or athletic adaptation. It may cause diastolic dysfunction, arrhythmia, ischemia, or heart failure.

Ventricular Myocardium

The heart muscle forming the walls of the ventricles. Its contraction pumps blood to the lungs and the rest of the body.

Ventricular Premature Contraction

Alternate index label; see *Premature ventricular contractions (PVCs)*.

Ventricular Rupture

A tear in a ventricular wall, often a life-threatening complication of myocardial infarction.

Ventricular Septal Defect

An opening in the wall between the ventricles that can allow blood to flow from the left ventricle to the right. The effects depend on the size and location of the defect and may range from no symptoms to heart failure or pulmonary vascular disease.

Ventricular Tachycardia

A wide-complex tachycardia (QRS >0.12 s) originating from the ventricles, with a rate of 100-250 bpm. Monomorphic VT has uniform QRS complexes; polymorphic VT has varying QRS morphology. VT is life-threatening and may degenerate to ventricular fibrillation.

Ventriculoatrial

Relating to or connecting a ventricle of the brain or heart with an atrium; often describing a cerebrospinal-fluid shunt to the right atrium.

Ventriculography

Imaging ventricular function. Radionuclide ventriculography (MUGA scan) accurately measures ejection fraction. Cardiac MRI also accurate.

Ventriculoperitoneal Shunt

A surgically implanted system that drains cerebrospinal fluid from a brain ventricle into the abdominal cavity, where the fluid can be absorbed.

Ventrosuspension

Surgical fixation of a displaced or prolapsed uterus to the anterior abdominal wall or nearby supporting tissues.

Venturi Mask

A high-flow, fixed-performance oxygen delivery device designed to deliver a precise, constant, and reproducible fraction of inspired oxygen (FiO_2 ; typically ranging from 24% to 50%) irrespective of the patient's spontaneous respiratory rate, depth, or peak inspiratory flow demands. Operates on the Bernoulli principle of fluid dynamics and fluid entrainment: oxygen flows at high velocity through a narrow jet orifice, generating a localized low-pressure zone that draws in (entrains) a calibrated, fixed proportion of room air through color-coded, interchangeable base adapters. The clinical gold standard for acute oxygen therapy in patients with chronic obstructive pulmonary disease or chronic hypercapnic respiratory failure, where uncontrolled supplemental oxygen could blunt hypoxic respiratory drive and precipitate worsening respiratory acidosis.

Venule

A small vessel that drains blood from capillary beds into veins. Postcapillary venules are important sites for leukocyte migration and inflammatory fluid exchange.

Venules

Small blood vessels that collect blood from capillaries and join to form veins. Their walls also participate in inflammation by allowing white blood cells to leave the bloodstream.

Verapamil

A non-dihydropyridine calcium-channel blocker used for selected hypertension, angina, and supraventricular tachyarrhythmias; it can cause bradycardia and constipation.

Vermicides

Medicines or chemical agents that kill parasitic worms; the appropriate agent depends on the parasite and site of infection.

Vernal Keratoconjunctivitis

A recurrent allergic inflammation of the conjunctiva and cornea, usually affecting children or adolescents and causing itching, redness, and light sensitivity.

Vernix

A white, greasy protective coating on the skin of a fetus or newborn, composed mainly of water, lipids, and shed skin cells.

Vernix Caseosa

A white, greasy protective coating on the skin of a fetus or newborn, composed mainly of water, lipids, and shed skin cells.

Vero Cell

A laboratory cell line originally taken from monkey kidney tissue and used to grow viruses, make vaccines, and conduct biomedical research. It is not a normal human cell.

Verruca

A benign epidermal growth caused by infection with a human papillomavirus. Common warts, plantar warts, and flat warts are clinical types; treatment depends on site, symptoms, and immune status.

Verruciform Xanthoma

A rare benign lesion characterized by a verrucous epithelial surface with lipid-laden macrophages in the underlying connective tissue. It most often occurs in oral or genital mucosa and may resemble a wart or malignant lesion clinically.

Verrucose

Having a rough, thickened, wart-like, or finger-like surface. It is a descriptive term for a skin, mucosal, or other lesion and does not by itself identify whether the lesion is benign, infectious, or cancerous.

Verrucous

Having a rough, thickened, irregular, or wart-like surface. The appearance can occur in benign growths, infections, chronic inflammation, or some cancers.

Verrucous Carcinoma

A low-grade, well-differentiated variant of squamous cell carcinoma with a warty, exophytic appearance. It is locally invasive but rarely metastasizes, commonly affecting the oral cavity, skin, or genitalia.

Version

A term describing a change in the position or presentation of a body structure, especially the fetus during pregnancy; its meaning depends on the clinical context.

Vertebra

The individual bone of the vertebral column (33 vertebrae: 7 cervical, 12 thoracic, 5 lumbar, 5 sacral fused, 4 coccygeal). Parts: vertebral body, vertebral arch (pedicles, laminae), spinous and transverse processes, articular processes/facets, and vertebral foramen (spinal canal).

Vertebrae

Vertebrae are the bones of the spinal column that protect the spinal cord, support the body, allow movement, and provide attachment for muscles and ligaments.

Vertebral Artery

An artery ascending through the neck that supplies blood to the brainstem and posterior brain.

Vertebral Canal

The bony canal formed by the vertebrae that encloses and protects the spinal cord.

Vertebral Column

33 vertebrae: 7 cervical, 12 thoracic, 5 lumbar, 5 fused sacral, 4 fused coccygeal. Protects the spinal cord, supports the head/trunk, provides muscle/rib attachment. Each typical vertebra has a body, vertebral arch, and 7 processes. Intervertebral discs (nucleus pulposus/annulus fibrosus) provide cushioning.

Vertebral Compression Fracture

Collapse of a vertebral body, often caused by osteoporosis, trauma, or malignancy, producing back pain, loss of height, or progressive kyphosis.

Vertebral Hemangioma

Alternate index label; see *Spinal hemangioma*.

Vertebral Tumor

A tumor arising in or near a vertebra of the spinal column.

Vertebrobasilar Circulatory Disorders

Conditions that reduce blood flow through the vertebral or basilar arteries supplying the brainstem, cerebellum, and posterior brain; symptoms may include vertigo, double vision, imbalance, weakness, or stroke.

Vertebrobasilar Insufficiency

A condition of reduced blood flow through the vertebral arteries or basilar artery to the posterior circulation of the brain, including the brainstem, cerebellum, occipital lobes, and thalami.

Vertebrobasilar Insufficiency

Source spelling variant of *vertebrobasilar insufficiency*, reduced blood flow in the vertebral or basi-

lar circulation supplying the brainstem, cerebellum, and posterior brain.

Vertical

Oriented from superior to inferior or perpendicular to a horizontal plane. In medicine, it may describe position, transmission from parent to child, or a body-oriented imaging or movement axis.

Vertical Talus

A congenital rigid flatfoot deformity in which the talus is positioned vertically and the midfoot is dorsiflexed. It may be isolated or associated with neuromuscular or genetic syndromes and usually requires early orthopedic assessment and treatment.

Vertical Transmission

Passage of an infection or genetic condition from parent to child during pregnancy, delivery, or breastfeeding.

Vertigo

A false sensation of rotational or linear movement of the self or the environment, and it is a symptom rather than a disease, requiring differentiation from dizziness, disequilibrium, and presyncope.

Vertigo Overview

Vertigo is the false sensation of movement, often caused by inner-ear disorders such as benign positional vertigo, vestibular neuritis, or Ménière disease, but sometimes by migraine or brain disease. New neurologic deficits, severe headache, or inability to walk is urgent.

Vertigo-Associated Disorders

Vertigo-associated disorders cause an illusion of movement from vestibular, neurologic, visual, medication-related, or systemic dysfunction and may be accompanied by imbalance, nausea, or hearing symptoms.

Alternate Names:

VLCD

Very Long-Chain Acyl-CoA

Dehydrogenase Deficiency

An autosomal recessive inborn error of mitochondrial long-chain fatty acid β -oxidation caused by pathogenic variants in the *ACADVL* gene on chromosome 17p13.1. Impairs the initial dehydrogenation step for fatty acids 14 to 20 carbons in length. Clinically manifests during periods of prolonged fasting or metabolic stress; the severe infantile-onset form presents with life-threatening hypoketotic hypoglycemia, severe hypertrophic or dilated cardiomyopathy, pericardial effusion, ventricular arrhythmias, and acute hepatic failure, whereas the later-onset myopathic form presents with recurrent exercise-induced rhabdomyolysis and myoglobinuria.

Alternate Names:

VLCAD Deficiency; VLCADD

Very-Low-Density Lipoprotein

A lipoprotein made by the liver that carries mainly triglycerides to body tissues. As it loses triglycerides, it can form remnant particles and contribute to LDL production; elevated levels are associated with atherosclerotic cardiovascular risk.

Alternate Names:

VLDL

Vesical

Relating to bladder. Vesical carcinoma, vesical diverticulum, vesical neck.

Vesicant

A substance that causes blistering and tissue injury on contact. In oncology, vesicant drugs can cause severe extravasation injury if they escape from a vein into surrounding tissue.

Vesicants

Substances that cause blistering and tissue injury on contact; examples include certain chemotherapy agents and chemical-warfare agents.

Vesicle

A small (<1 cm) fluid-filled blister within the epidermis, containing clear fluid (serum) or, if infected, pus. Causes: viral (herpes simplex, herpes zoster,

varicella, hand-foot-mouth disease), dermatitis (contact, dyshidrotic eczema), autoimmune (pemphigus, bullous pemphigoid early), and friction burns.

Vesicles

Small, elevated, fluid-filled blisters on the skin or mucous membrane, generally less than 1 cm in diameter. Causes include viral infection, dermatitis, burns, and autoimmune blistering disease.

Vesico-Ureteric Reflux

Backward flow of urine from the bladder into one or both ureters and sometimes the kidneys, increasing the risk of recurrent urinary infection and renal scarring.

Vesicoureteral Reflux

Retrograde flow of urine from the bladder into the ureters and potentially the kidneys, most commonly due to incompetent ureterovesical valve. Predisposes to pyelonephritis and renal scarring. More common in children, presenting with recurrent febrile UTIs. Diagnosis: voiding cystourethrogram (VCUG). Grading I-V.

Alternate Names:

Reflux, Vesicoureteral

Vesicoureteric Reflux

Backward flow of urine from the bladder into one or both ureters and sometimes the kidneys, increasing the risk of urinary infection and renal scarring.

Vesicovaginal Fistula

An abnormal connection between the bladder and vagina that causes continuous or frequent leakage of urine through the vagina. It may follow childbirth injury, pelvic surgery, radiation, or advanced infection and usually requires specialist repair.

Vesicular

Characterized by or containing vesicles. The term commonly describes a vesicular rash or a vesicle-related structure in cell biology and pathology.

Vesicular Breathing

The normal soft, rustling breath sound heard over most peripheral lung fields during auscultation.

Vesiculobullous Dermatoses

A group of skin disorders characterized by vesicles or bullae caused by autoimmune, genetic, infectious, inflammatory, drug-related, or traumatic processes. Diagnosis depends on lesion morphology, distribution, biopsy, and immunofluorescence when indicated.

Vesiculovirus

Vesiculovirus is a genus of rhabdoviruses that mainly infect animals and can rarely cause a flu-like illness in humans.

Vessel

A vessel is a tube carrying blood, lymph, air, urine, bile, or another fluid through the body, depending on context.

Vestibular

Relating to the vestibular system of the inner ear and brain, which detects head motion and position and helps maintain balance and gaze stability.

Vestibular Migraine

Episodic vestibular symptoms associated with migraine biology, with or without simultaneous headache. Episodes may include vertigo, motion sensitivity, visual aura, or sound sensitivity; diagnosis is clinical after exclusion of other vestibular and neurologic causes.

Vestibular Neuritis

Acute vestibular dysfunction due to inflammation of the vestibular nerve, typically viral in origin. Presents with acute onset of vertigo, nausea, vomiting, and nystagmus lasting days. Hearing is normal (unlike labyrinthitis). Diagnosis: clinical, HINTS exam (Head Impulse, Nystagmus, Test of Skew) to differentiate from central causes.

Vestibular Papillomatosis

A normal anatomical variant of the female vulva characterised by multiple, soft, finger-like or filiform papules on the labia minora and vestibule, often mistaken for genital warts (condylomata acuminata).

Vestibular Rehabilitation

Exercise-based therapy that improves balance, gaze stability, and adaptation in people with vestibular disorders or dizziness.

Vestibular Schwannoma

A benign, slow-growing tumor of the vestibular portion of the eighth cranial nerve. See Acoustic Neuroma.

Vestibular System

Inner-ear and brain structures responsible for balance and spatial orientation.

Vestibule

Central bony labyrinth between cochlea and semi-circular canals, containing utricle (horizontal linear acceleration and head tilt detection) and saccule (vertical linear acceleration detection). Each has a macula with hair cells covered by gelatinous membrane embedded with otoconia (calcium carbonate crystals).

Vestibule, Vaginal

The space of the vulva between the labia minora that contains the external openings of the urethra and vagina and the ducts of the greater and lesser vestibular glands.

Vestibulo-Ocular Reflex

A reflex that moves the eyes opposite to head movement, stabilizing visual fixation during motion through signals from the vestibular system.

Vestibulocochlear Nerve

The eighth cranial nerve, carrying information for hearing and balance from the inner ear to the brain.

Vestibulodynia

A localized subtype of vulvodynia characterized by persistent, sharp, burning pain strictly confined to the vulvar vestibule, provoked by light touch, pressure, vaginal entry, or tampon insertion (allodynia). Diagnosis is confirmed clinically using the cotton-swab test (Q-tip palpation eliciting acute point tenderness across the vestibular glands, especially at 4 to 8 o'clock). Etiology is multifactorial, involving peripheral neuroproliferation, pelvic floor hypertonicity, and altered central pain processing; management comprises topical anesthetics, pelvic floor physical therapy, neuromodulators, and in refractory cases, vestibulectomy.

Alternate Names:

Provoked Vestibulodynia; Vulvar Vestibulitis Syndrome; PVD

Vestigial

Describing a structure or feature that has become greatly reduced through evolution and has little or no apparent original function.

VEXAS Syndrome

VEXAS (Vacuoles, E1 ubiquitin-activating enzyme, X-linked, Autoinflammatory, Somatic) syndrome is an adult-onset autoinflammatory disorder caused by somatic UBA1 mutations in hematopoietic stem cells, affecting men >50.

Viable

Capable of surviving or developing under suitable conditions. In clinical contexts it may describe a viable pregnancy, tissue, organism, cell, or treatment option.

Vibration Problem

Symptoms or injury caused by repeated exposure to vibrating tools or equipment, which may affect nerves, blood vessels, muscles, and joints in the hands or arms.

Vibrator

A device that produces mechanical vibration and may be used for sexual stimulation, therapeutic massage, or selected rehabilitation purposes.

Vibrio

A genus of curved, Gram-negative bacteria; species include *V. cholerae*, which causes cholera, and *V. vulnificus*, which can cause severe wound or bloodstream infection.

Vibrio Cholerae

A gram-negative, curved rod that causes cholera, a severe diarrhoeal illness. The organism produces cholera toxin, which causes profuse watery diarrhea (rice-water stools). Transmission occurs through contaminated water and food. The infectious dose varies depending on stomach acidity.

Vibrio Infection

Infection caused by *Vibrio* bacteria, acquired through contaminated seafood or exposure of wounds to warm seawater. It may cause watery diarrhea, wound infection, or rapidly progressive sepsis, especially in people with liver disease or impaired immunity. Severe wound pain, blistering, fever, or shock requires emergency treatment.

Alternate Names:
vibriosis.

Vibrio Vulnificus Infections

Infections caused by *Vibrio vulnificus*, a gram-negative bacterium found in warm seawater and raw seafood. It can cause wound infection, bloodstream infection, or gastroenteritis, with particularly severe disease in people with chronic liver disease or other risk factors.

Vibrios

Comma-shaped bacteria, usually Gram-negative, that include species capable of causing cholera and wound or gastrointestinal infections.

Video Laryngoscope

An airway device with a camera near the blade tip that displays the laryngeal view on a monitor. It may improve visualization during tracheal intubation, particularly when direct laryngoscopy is difficult, but does not eliminate aspiration or airway-trauma risk.

Video Laryngoscopy

Video laryngoscopy uses a camera-equipped blade to display an indirect view of the glottis on a screen.

Video-Assisted Thoracoscopic Surgery

A minimally invasive thoracic surgical technique that utilizes a specialized rigid fiberoptic camera (thoracoscope) and long endoscopic instruments inserted into the hemithorax through 1 to 3 small incisions (ports) without rib spreading. It has become the standard surgical approach for diagnostic lung and pleural biopsies, anatomic lobectomy, segmentectomy, wedge resection, pleurodesis, thymectomy, and decortication, resulting in significantly reduced postoperative pain, shorter chest tube duration, reduced morbidity, and faster functional recovery compared with open posterolateral thoracotomy.

Alternate Names:

VATS; Video Thoracoscopy; Thoracoscopic Surgery

Videofluoroscopic Swallow Study

Real-time X-ray imaging of swallowing. Detailed assessment of oropharyngeal phase.

Videostroboscopy

A diagnostic technique that uses synchronized stroboscopic light to create a slow-motion view of vocal-fold vibration. It assesses the mucosal wave, amplitude, symmetry, and glottic closure.

Vildagliptin

An oral dipeptidyl-peptidase-4 inhibitor used in some countries for type 2 diabetes, alone or with other medicines. It improves glucose-dependent insulin secretion; liver function and pancreatitis symptoms may require attention.

Villi

Finger-like projections that increase the absorptive surface of the small-intestinal lining; similar structures occur in the placenta and other tissues.

Villous Atrophy

Flattening and loss of the normal small-intestinal villi, reducing absorptive surface area and occurring

in conditions such as coeliac disease.

Villus

A small finger-like projection, especially one of the intestinal mucosa that increases absorptive surface area; chorionic villi mediate exchange between placenta and fetus.

Vinca Alkaloids

Anticancer medicines, including vincristine and vinblastine, that inhibit microtubule formation and cell division.

Vincent Angina

An acute necrotizing infection of the gums and oropharynx associated with fusobacteria and spirochetes. It causes painful ulceration, bleeding, foul breath, and gingival necrosis and requires dental or medical treatment.

Vincent Disease

Acute necrotizing ulcerative gingivitis associated with fusospirochetal bacteria, causing painful bleeding gums, ulceration, and foul breath.

Vincent Infection

Vincent infection is acute necrotizing ulcerative gingivitis caused by mixed oral bacteria, producing painful bleeding gums, ulcers, and foul breath.

Vincent Stomatitis

A painful necrotizing infection of the gums caused by mixed anaerobic bacteria, producing foul breath, bleeding, ulceration, and gray necrotic tissue; it is also called acute necrotizing ulcerative gingivitis.

Vincent's Angina

Acute necrotizing ulcerative gingivitis or tonsillitis associated with fusiform bacteria and spirochetes, causing painful ulcers, bleeding, and fetid breath.

Vinorelbine

A semisynthetic vinca-alkaloid chemotherapy medicine used primarily for selected lung and breast cancers; myelosuppression is a major adverse effect.

Viomycin

An older aminoglycoside antibiotic related to capreomycin that was used against tuberculosis and other mycobacterial infections; kidney and hearing toxicity limit its use.

Viraemia

The presence of viruses in the bloodstream, which may be transient or persistent and may permit spread to distant tissues.

Viral

Pertaining to, caused by, characteristic of, or resembling a virus—an obligate intracellular submicroscopic infectious agent possessing a DNA or RNA genome enclosed within a protective protein capsid, sometimes surrounded by a host-derived lipid envelope. Because viruses lack autonomous metabolic and translational machinery, they must hijack host cell biochemical systems to replicate, often triggering cellular apoptosis, cytopathic lysis, or oncogenic transformation (e.g., HPV, HBV, HCV, EBV). Manifestations range from self-limiting viral exanthems and upper respiratory tract infections to life-threatening viral hemorrhagic fevers, viral encephalitis, and pandemic respiratory diseases (e.g., influenza, COVID-19); diagnosed by reverse transcription-polymerase chain reaction, viral antigen detection, or serology, and managed with supportive care, vaccines, and targeted antiviral therapies.

Viral Antibody

An immunoglobulin produced after infection or vaccination that recognizes a viral antigen; viral-antibody tests help assess previous exposure, immune response, or selected active infections, depending on the assay and timing.

Viral Arthritis

Viral arthritis is joint inflammation caused by or associated with a viral infection and may be acute, symmetric, and self-limited or part of a broader illness.

Viral Assembly

The process of packaging newly synthesised viral genomes and proteins into complete virions. Assembly typically occurs in the nucleus or cytoplasm, depending on the virus type. The process involves self-assembly of capsid proteins around the viral genome.

Viral Attachment

The initial step in viral infection where viral surface proteins bind to specific receptors on host cells. Attachment determines viral tropism and host range. The viral attachment protein is called the ligand, and the host cell receptor is typically a protein or glycan.

Viral Carcinogenesis

Viral carcinogenesis is cancer development driven or promoted by viral infection through oncogenic proteins, altered cell signaling, immune suppression, or chronic inflammation; examples include HPV, EBV, HBV, HCV, and HTLV-1.

Viral Conjunctivitis

The most common form of infectious conjunctivitis, caused predominantly by adenoviruses (serotypes 3, 4, 7, 8, 19, and 37), and it is highly contagious, spreading through direct contact with infected ocular secretions or contaminated surfaces.

Viral Culture

Growth of a virus in susceptible cell cultures to identify an infectious agent. It can be useful for selected viruses, but molecular and antigen-based tests are often faster or more sensitive; the appropriate method depends on the suspected infection and specimen.

Viral Cytopathic Effects

Observable changes in host cells caused by viral infection. CPE include cell rounding, detachment, syncytia formation (fusion of infected cells), inclusion bodies, and cell lysis. CPE are used in viral diagnosis and can be observed by light microscopy.

Viral Encephalitis

Inflammation of the brain caused by a viral infection, resulting in dysfunction of neuronal tissue and surrounding inflammatory responses. Important causes include herpes simplex virus, varicella-zoster virus, enteroviruses, arboviruses, and other regionally prevalent pathogens. Clinical manifestations may include fever, headache, altered mental status, seizures, focal neurological deficits, or behavioral changes. Diagnosis requires urgent clinical assessment, cerebrospinal-fluid analysis, neuroimaging, and targeted microbiologic testing; treatment depends on the suspected virus and severity.

Viral Entry

The process by which viruses cross the host cell membrane to deliver their genome into the cytoplasm. Entry occurs through membrane fusion (enveloped viruses) or endocytosis (enveloped and non-enveloped viruses). For membrane fusion, viral fusion proteins mediate merger of the viral envelope with the host cell membrane.

Viral Exanthem

A widespread skin eruption caused by a viral infection, often accompanied by fever or other systemic symptoms.

Viral Gastroenteritis

Inflammation of the stomach or intestines caused by a virus. Common symptoms include watery diarrhea, vomiting, abdominal cramps, and fever. Diagnosis is usually clinical; stool testing is reserved for selected situations. Treatment focuses on fluid replacement and symptom control.

Viral Gastroenteritis (Stomach Flu)

Viral gastroenteritis is infection of the stomach and intestines causing vomiting, watery diarrhea, cramps, and fever, with dehydration as the main acute risk.

Alternate Names:

Stomach Flu

Viral Haemorrhagic Fever

A severe illness caused by certain viruses that may

produce fever, vascular injury, thrombocytopenia, and bleeding; severity and transmission vary by virus.

Viral Hemorrhagic Fevers

Severe viral infections that can cause fever, vascular injury, bleeding, shock, and organ failure.

Alternate Names:

Bunyaviruses

Viral Hepatitis

Inflammation of the liver caused by viral infections. The major hepatitis viruses include A, B, C, D, and E. Hepatitis A and E are transmitted through the fecal-oral route and cause acute, self-limited infections.

Alternate Names:

Infectious Hepatitis

Viral Immune Evasion

Mechanisms by which viruses evade host immune responses. Strategies include antigenic variation, inhibition of interferon signalling, downregulation of MHC molecules, and encoding viral homologues of cytokines. Understanding viral immune evasion is essential for developing effective vaccines and antiviral therapies.

Viral Infection

A viral infection occurs when a virus enters and replicates in host cells, causing symptoms that vary with the virus, tissue, immune response, and host.

Viral Infections

Illnesses caused by viruses, which are intracellular pathogens that hijack host cellular machinery to replicate. They range from self-limited conditions such as the common cold and gastroenteritis to serious diseases including influenza, hepatitis, HIV, and COVID-19.

Viral Latency

A state in which viral genomes persist in host cells without producing infectious particles. Latent viruses can reactivate under certain conditions

including immunosuppression. Herpesviruses establish latent infections in specific cell types (HSV in neurons, EBV in B cells, CMV in myeloid cells).

Viral Latency Mechanisms

The strategies by which viruses establish and maintain latent infections. Herpesviruses maintain their genomes as episomes in the nucleus. HIV integrates into the host genome as a provirus. Latent viruses express minimal proteins to avoid immune detection. Reactivation can be triggered by immunosuppression, stress, or other stimuli.

Viral Load

The amount of virus or viral genetic material in a body fluid or tissue, measured by a laboratory assay; trends can help assess disease activity or response to antiviral treatment.

Viral Load (HIV RNA)

The amount of HIV RNA in plasma, measured by a laboratory assay. It is used to assess viral replication and response to antiretroviral therapy. An undetectable result indicates that the amount is below the assay's reporting limit; testing intervals and treatment decisions follow current clinical guidance.

Alternate Names:

HIV RNA

Viral Meningitis

Inflammation of the meninges caused by viruses, usually Enteroviruses. Presents similarly to bacterial meningitis but generally less severe. CSF shows lymphocytic pleocytosis, normal glucose, and mildly elevated protein. Self-limited in most cases; supportive treatment.

Viral Pathogenesis

The mechanisms by which viruses cause disease. Pathogenesis involves attachment, entry, replication, and spread within the host. Viral damage can be direct (cytopathic effects) or indirect (immune-mediated). Direct effects include cell death, altered cell function, and cell transformation.

Viral Pneumonia

Infection and inflammation of lung tissue caused by a virus, producing cough, fever, chills, breathlessness, chest discomfort, fatigue, and variable impairment of oxygenation. Severe disease can cause respiratory failure or secondary bacterial infection.

Viral Release

The process by which newly assembled virions exit the host cell to infect other cells. Release occurs through budding (enveloped viruses) or cell lysis (non-enveloped viruses). Budding allows the virus to acquire an envelope from host cell membranes without killing the cell.

Viral Replication

The process of synthesising new viral genomes and proteins within host cells. The mechanism varies by virus type. DNA viruses typically replicate in the nucleus using host cell DNA polymerases (except poxviruses). RNA viruses typically replicate in the cytoplasm using viral RNA-dependent RNA polymerase.

Viral Replication Cycle

The series of steps by which viruses reproduce within host cells.

Viral Structure

The basic components of viral particles (virions). Viruses consist of a nucleic acid genome (DNA or RNA) surrounded by a protein coat called a capsid. Some viruses have an outer lipid envelope derived from host cell membranes. The capsid is composed of structural units called capsomeres.

Viral Uncoating

The process by which the viral capsid is disassembled to release the viral genome into the host cell cytoplasm. Uncoating occurs after entry and before replication. The mechanism varies by virus type and can involve pH-dependent conformational changes, proteolytic cleavage, or disassembly of capsid proteins.

Virchow's Triad

Virchow's triad describes three broad categories of factors that contribute to thrombosis: endothelial injury or dysfunction, stasis or turbulent blood flow, and hypercoagulability. Endothelial injury exposes subendothelial collagen and tissue factor, initiating platelet adhesion and the coagulation cascade.

Viremia

The presence of virus in the bloodstream. Viremia may be transient or persistent and can enable dissemination to target organs; it may be detected by culture, antigen testing, or nucleic-acid amplification.

Virginal Membrane

A historical term usually referring to the hymen, a variable rim or fold of mucosal tissue at the vaginal opening; its appearance cannot reliably establish sexual history.

Virginiamycin

A streptogramin antibiotic combination used mainly in veterinary medicine; it inhibits bacterial protein synthesis and is not routinely used to treat people.

Viridans Streptococci

Viridans streptococci are a group of bacteria commonly found in the mouth that can cause dental infections and, after entering the blood, infect heart valves.

Virilisation

The development of male secondary sexual characteristics in females, resulting from excessive androgen production or exposure.

Virilism

Development of masculinizing features in a female, usually from excess androgen exposure or production, such as hirsutism, deep voice, acne, and menstrual disturbance.

Virilism Foetal

Prenatal or neonatal masculinization of a genetically

female fetus or infant due to excess androgen exposure. Causes include congenital adrenal hyperplasia, maternal androgen-producing disease, or placental and fetal steroidogenic disorders.

Virilization

Virilization is development of typically male secondary sexual features, such as hirsutism, deep voice, acne, increased muscle mass, or clitoromegaly, from androgen excess or androgen exposure.

Virilize

To virilize is to develop or cause typically male physical changes from androgen excess or treatment, including facial hair, voice deepening, acne, muscle change, or genital enlargement.

Virology

The branch of microbiology concerned with viruses: structure, classification (DNA/RNA, enveloped/nonenveloped, Baltimore scheme), replication, pathogenesis, epidemiology, diagnosis, treatment, and prevention. Diagnostic methods: cell culture, antigen detection, nucleic acid amplification (PCR), and serology (IgM/IgG).

Virtual Colonoscopy

Virtual colonoscopy is CT colonography, which uses bowel preparation and gas or carbon-dioxide insufflation to create images of the colon; it can detect polyps and masses but cannot remove lesions or biopsy them.

Virulence

The relative capacity of a microorganism to cause disease or tissue injury in a host. It depends on microbial factors such as toxins, adhesins, invasiveness, and immune evasion, together with host susceptibility.

Virulence Factor

A microbial product or characteristic that helps an organism colonize, evade host defenses, injure tissue, or otherwise cause disease. Examples include adhesins, toxins, capsules, enzymes, and mechanisms that alter immune recognition.

Virulent

Highly harmful, severe, or capable of causing serious disease.

Virus

An infectious agent consisting of genetic material enclosed in a protein coat, sometimes with a lipid envelope, that replicates only inside living host cells. bleeding. Newborns have limited vitamin K stores, so the recommended route and dose are chosen according to local guidance and the infant's clinical circumstances.

Virus Activation

Virus activation is the switch from a dormant or inactive viral state to production of new viral components and particles.

Virus Assembly

Virus assembly is the stage of the viral life cycle when viral genetic material and proteins are packaged into new virus particles.

Virus Diseases

Viral diseases are illnesses caused by viruses, ranging from mild localized infections to severe diseases affecting multiple organs.

Virus Integration

Virus integration is insertion of viral genetic material into the DNA of a host cell, a process used by some viruses and important in certain cancers.

Virus Protein

A virus protein is a protein made from viral genetic instructions that helps form the virus, enter cells, replicate, or evade immunity.

Virus Receptor

A virus receptor is a molecule on a host cell that a virus binds to in order to attach to and enter the cell.

Virus Replication

Virus replication is the process by which a virus

copies its genetic material and makes proteins and new virus particles inside a host cell.

Virus Uncoating

Virus uncoating is removal of the virus's protective outer layer after entry into a host cell, releasing its genetic material for replication.

Viruses

Viruses are infectious particles containing DNA or RNA within a protein coat, sometimes with a lipid envelope; they replicate only inside host cells and cause disease through direct injury or immune responses.

Viscera

The internal organs of the body, particularly those within the thoracic and abdominal cavities. The thoracic viscera include the heart, lungs, esophagus, trachea, and thymus.

Visceral

Relating to the internal organs, especially those within the thorax or abdomen, rather than the body wall or limbs.

Visceral Larva Migrants

A syndrome caused by migration of animal nematode larvae through human tissues, most often from *Toxocara* species. It may produce fever, eosinophilia, liver lesions, or ocular and neurologic disease.

Visceromegaly

Abnormal enlargement of one or more internal organs, such as the liver, spleen, or kidneys. It is a physical finding with causes that include infection, congestion, storage disease, inflammation, and cancer.

Viscus

An internal organ, particularly an organ in the thoracic or abdominal cavity; the plural is viscera.

Vision

The sensory ability to perceive light and interpret

visual information processed by the eyes and brain, enabling recognition of shapes, colors, depth, and motion. Normal vision depends on the proper function of the cornea, lens, retina, and optic nerve, as well as intact neural pathways to the visual cortex.

Vision - Night Blindness

Difficulty seeing in dim light or adapting from bright to dark conditions, also called nyctalopia; causes include vitamin-A deficiency, retinal disease, cataract, and some inherited disorders.

Vision And Hearing

The two primary sensory modalities through which humans perceive and interact with their environment. Age-related declines in both senses are common, with presbyopia and cataracts affecting vision and presbycusis affecting hearing, often beginning as early as the fourth decade of life.

Vision Impairment

Reduced visual acuity or visual-field function that affects daily activities. Causes include refractive error, cataract, glaucoma, retinal disease, optic-nerve injury, and neurologic disease. Evaluation and treatment depend on the cause; rehabilitation and visual aids may improve function.

Vision Loss

A decrease in the ability to see that cannot be fully corrected with eyeglasses, contact lenses, or medical treatment. It ranges from partial impairment to complete blindness and can result from conditions such as macular degeneration, glaucoma, diabetic retinopathy, cataracts, and traumatic injury.

Vision Loss, Acute

Sudden reduction or loss of vision in one or both eyes caused by retinal vascular occlusion, retinal detachment, optic-nerve disease, stroke, acute glaucoma, inflammation, trauma, or other emergency. It requires immediate medical or ophthalmic assessment.

Vision Problems

Changes in visual acuity, field, color, or clarity

caused by refractive error, eye disease, neurologic disease, or systemic illness. Sudden vision loss is an emergency.

Vision Receptors

Photoreceptors in the retina, mainly rods and cones, that convert light into neural signals.

Vision Screening

Screening for visual problems in children: newborn—red reflex examination (cataract, retinoblastoma); 3-5 years—visual acuity, strabismus screening (cover test, photostereopsis), and amblyopia risk factors.

Vision Test

An examination that measures visual acuity, fields, color, alignment, or eye structures to detect refractive error, retinal disease, optic-nerve dysfunction, glaucoma, or other causes of visual impairment.

Vision, Blurred

Reduced sharpness or clarity of vision that may result from refractive error, dry eye, cataract, retinal or optic-nerve disease, neurologic disease, medication, or other causes. Sudden, painful, one-sided, or progressive blurring requires prompt evaluation.

Visual Acuity

The resolving power of the eye, defined as the ability to distinguish two points as distinct, and the most common clinical measure of visual function.

Visual Acuity Test

A test measuring the smallest standardized detail a person can resolve at a specified distance, usually reported as a fraction or decimal.

Visual Agnosia

Inability to recognize or identify visually presented objects, faces, or symbols despite adequate vision and attention. It results from dysfunction of higher-order visual association cortex and may follow stroke, trauma, neurodegenerative disease, or other brain injury.

Visual Field

The entire area that can be seen while the eyes remain fixed in one position. Visual-field loss may result from retinal, optic-nerve, or brain lesions and is assessed by perimetry.

Visual Field Defect

Loss or alteration of a portion of the normally perceived visual field caused by dysfunction of the retina, optic nerve, chiasm, optic tract, radiations, or visual cortex. The pattern can help localize the lesion.

Visual Field Perimetry

A systematic method of measuring the sensitivity of the retina across the entire visual field using standardized light stimuli, providing a quantitative map of visual function that can detect, characterize, and monitor visual field loss caused by diseases of the retina, optic nerve, and visual pathways.

Visual Fields

The total area that can be seen while the eyes are fixed in one position; defects may indicate retinal, optic-nerve, or brain disease.

Visual Impairment

Reduced vision that cannot be fully corrected by ordinary glasses or contact lenses. Causes include refractive error, cataract, glaucoma, retinal disease, optic-nerve injury, and neurologic disease; new or sudden loss of vision requires urgent assessment.

Visualized Laser-Assisted Prostatectomy

Laser prostate surgery performed with direct visualization to remove obstructing tissue.

Alternate Names:

VLAP

Vital

Essential for life or relating to vital physiologic functions. Vital signs commonly include temperature, pulse, respiratory rate, blood pressure, and oxygen saturation.

Vital Capacity

The largest volume of air that can be exhaled after a maximal inhalation, equal to inspiratory reserve volume plus tidal volume plus expiratory reserve volume.

Vital Signs

Basic measurements of physiologic status, commonly including temperature, pulse, respiratory rate, blood pressure, and oxygen saturation. Values vary with age, activity, illness, and measurement conditions; trends and clinical context are important.

Vitamin A

A fat-soluble vitamin needed for vision, immune function, skin and mucosal health, and growth; deficiency causes night blindness, while excess can injure the liver and developing fetus.

Vitamin A Blood Test

A blood test measuring circulating retinol, used to assess suspected vitamin A deficiency or toxicity in appropriate clinical settings.

Vitamin A Deficiency

A nutritional disorder resulting from inadequate intake or absorption of retinol, causing xerophthalmia, night blindness, follicular hyperkeratosis, and impaired immunity. Severe deficiency leads to corneal ulceration and blindness, and is a leading cause of preventable childhood blindness worldwide.

Vitamin A: Retinal

Vitamin A (retinol) is a fat-soluble vitamin essential for vision, immune function, cell differentiation, and reproduction. In the eye, retinol is oxidized to retinal (retinaldehyde), which binds to opsin in the photoreceptor outer segments forming rhodopsin (in rods) and photopsins (in cones).

Vitamin B Complex

A group of eight water-soluble vitamins that support energy metabolism, blood-cell production, nervous-system function, and other biochemical processes. The group includes vitamins B1 through B7 and

B9, as well as vitamin B12.

Vitamin B1

A vitamin or nutritional compound called vitamin b1. It supports specific physiological processes, and deficiency or excess can cause clinical disease.

Vitamin B1 (Thiamine)

Water-soluble vitamin, coenzyme in carbohydrate metabolism. Deficiency: beriberi (wet, dry), Wernicke-Korsakoff. Risk: alcoholism, bariatric surgery, dialysis. Treatment: supplementation.

Alternate Names:

Thiamine

Vitamin B12

A vitamin or nutritional compound called vitamin b12. It supports specific physiological processes, and deficiency or excess can cause clinical disease.

Vitamin B12 (Cobalamin)

Required for nerve function, red blood cell formation, DNA synthesis. Deficiency: megaloblastic anemia, neurological damage. Risk: vegans, elderly, pernicious anemia, metformin use, bariatric surgery. Requires intrinsic factor for absorption.

Alternate Names:

Cobalamin

Vitamin B12 Deficiency

Megaloblastic anemia, neurological symptoms. Pernicious anemia, vegan diet. Treated with B12 supplementation.

Vitamin B12 Deficiency Anemia

Vitamin B12 deficiency anemia is megaloblastic anemia from inadequate B12, impaired absorption, or medication effects and may cause irreversible neurologic injury if prolonged.

Vitamin B12 Deficiency In Older Adults

Deficiency caused by inadequate intake, malabsorption, autoimmune intrinsic-factor deficiency, gastric surgery, or medications. It may cause megaloblastic anemia, neuropathy, cognitive changes, gait impair-

ment, and glossitis; neurologic injury can occur without anemia.

Vitamin B12 Level

The amount of vitamin B12 measured in blood; results are interpreted with symptoms and related tests because serum levels may not fully reflect tissue deficiency.

Vitamin B12: Cobalamin

A water-soluble vitamin needed for red-blood-cell formation, DNA synthesis, and normal nerve function. Deficiency can cause megaloblastic anemia and neurologic abnormalities.

Vitamin B1: Thiamine

A water-soluble vitamin that acts as a cofactor in carbohydrate and amino-acid metabolism and supports nerve function. Severe deficiency can cause beriberi or Wernicke-Korsakoff syndrome.

Vitamin B2

A vitamin or nutritional compound called vitamin b2. It supports specific physiological processes, and deficiency or excess can cause clinical disease.

Vitamin B2 (Riboflavin)

Precursor for FAD and FMN. Deficiency: cheilosis, glossitis, seborrheic dermatitis. Common with B-complex deficiency.

Alternate Names:

Riboflavin

Vitamin B3 (Niacin)

Precursor for NAD⁺ and NADP⁺. Deficiency: pellagra (diarrhea, dermatitis, dementia). Sources: meat, fish, poultry, grains.

Alternate Names:

Niacin

Vitamin B3: Niacin

A water-soluble vitamin that forms the coenzymes NAD and NADP, which participate in many oxidation-reduction and energy-producing reactions. Severe deficiency causes pellagra.

Vitamin B5 (Pantothenic Acid)

Component of coenzyme A. Deficiency rare. Involved in fatty acid metabolism.

Alternate Names:

Pantothenic Acid

Vitamin B6

A vitamin or nutritional compound called vitamin b6. It supports specific physiological processes, and deficiency or excess can cause clinical disease.

Vitamin B6 (Pyridoxine)

Coenzyme in amino acid metabolism. Deficiency: seizures, anemia, dermatitis. Risk: isoniazid therapy, alcoholism.

Alternate Names:

Pyridoxine

Vitamin B6: Pyridoxine

Pyridoxine (pyridoxal phosphate, PLP, the active form) is a water-soluble B vitamin essential as a cofactor for over 100 enzymatic reactions, particularly in amino acid metabolism.

Vitamin B7 (Biotin)

Coenzyme for carboxylation reactions. Deficiency rare, may occur with raw egg consumption (avidin binds biotin).

Alternate Names:

Biotin

Vitamin B9 (Folate)

Essential for DNA synthesis, red blood cell formation. Deficiency: megaloblastic anemia, neural tube defects in pregnancy. Sources: leafy greens, legumes, fortified grains. Supplementation recommended before and during pregnancy.

Alternate Names:

Folate

Vitamin B9: Folate

Folate (folic acid, tetrahydrofolate/THF) is a water-soluble B vitamin essential for one-carbon transfer reactions in nucleotide synthesis (thymidylate synthesis for DNA, purine synthesis), amino acid

metabolism (methionine synthesis from homocysteine), and methylation reactions.

Vitamin C

A water-soluble vitamin needed for collagen formation, wound healing, antioxidant activity, and iron absorption; severe deficiency causes scurvy.

Vitamin C (Ascorbic Acid)

A water-soluble vitamin and a powerful antioxidant, essential for collagen synthesis (required for proline and lysine hydroxylation in collagen triple helix formation), carnitine synthesis, neurotransmitter synthesis (dopamine to norepinephrine), and iron absorption (reduces ferric to ferrous iron in the gut).

Alternate Names:

Ascorbic Acid

Vitamin D

Vitamin D supports calcium and phosphate balance, bone mineralization, muscle function, and immune processes; deficiency causes rickets in children and osteomalacia or bone loss in adults.

Vitamin D Deficiency

Inadequate vitamin-D status causing impaired calcium and phosphate homeostasis and, in severe cases, defective bone mineralization. It may result from low exposure or intake, malabsorption, liver or kidney disease, or altered metabolism.

Vitamin D3

A vitamin or nutritional compound called vitamin d3. It supports specific physiological processes, and deficiency or excess can cause clinical disease.

Vitamin D: Calcitriol

Vitamin D is a fat-soluble vitamin (actually a pro-hormone) essential for calcium and phosphorus homeostasis and bone health. Cholecalciferol (D3) is synthesized in the skin from 7-dehydrocholesterol by UVB radiation, or obtained from diet (ergocalciferol/D2 from plants, D3 from animal sources).

Vitamin Deficiency Anemia

Anemia caused by inadequate vitamin B-12, folate, or other nutrients needed for normal red blood cell production.

Vitamin E: Tocopherol

Vitamin E (alpha-tocopherol) is a fat-soluble vitamin and the body's primary lipid-soluble antioxidant, protecting polyunsaturated fatty acids in cell membranes from lipid peroxidation by free radicals (reactive oxygen species). It donates a hydrogen atom to lipid peroxy radicals, breaking the chain reaction of lipid peroxidation.

Vitamin K

A fat-soluble vitamin required to activate several blood-clotting proteins and support bone metabolism; deficiency can cause bleeding and is treated or prevented with replacement.

Vitamin K Deficiency

Coagulopathy, bleeding. Newborns receive prophylaxis. Antibiotics can cause deficiency.

Vitamin K Deficiency Bleeding Of The Newborn

Bleeding in an infant caused by inadequate vitamin K-dependent clotting factors; preventive vitamin K given at birth greatly reduces the risk.

Vitamin K Prophylaxis

Administration of vitamin K to a newborn soon after birth to prevent vitamin K deficiency

Vitamin K: Phylloquinone

Vitamin K is a fat-soluble vitamin essential for the post-translational gamma-carboxylation of glutamate residues to gamma-carboxyglutamate (Gla) in specific clotting factors (II, VII, IX, X, protein C, protein S) and anticoagulant proteins (protein C, protein S, protein Z).

Vitamins

Organic nutrients needed in small amounts for normal metabolism, growth, and tissue maintenance;

some are water-soluble and others fat-soluble, and both deficiency and excess can cause disease.

Vitrectomy

Surgical removal of the vitreous gel, typically via the pars plana approach, using a cutting probe under microscopic visualization. Indications include vitreous hemorrhage, complicated retinal detachment, macular holes, epiretinal membranes, intraocular foreign bodies, and endophthalmitis.

Vitreous

Relating to the transparent gel filling most of the space between the lens and retina, or describing a glass-like appearance. Vitreous disorders can cause floaters, hemorrhage, detachment, or retinal traction.

Vitreous Body

The transparent gel filling the large space between the lens and retina. It helps maintain the shape of the eye and transmits light; age-related liquefaction can cause floaters or contribute to retinal traction.

Alternate Names:

vitreous humor; vitreous

Vitreous Chemistry

Analysis of the fluid from the eye after death for substances such as electrolytes, glucose, urea, creatinine, and ethanol. It may support assessment of postmortem interval or metabolic disturbance but is not independently diagnostic of cause or time of death.

Vitreous Detachment

Separation of the vitreous gel from the retina, usually related to aging and often causing new floaters or flashes. Sudden symptoms require assessment for retinal tears or detachment.

Vitreous Hemorrhage

Bleeding into the vitreous cavity that causes sudden painless floaters, cobwebs, haze, or loss of vision. Common causes include proliferative diabetic retinopathy, retinal tear or detachment, trauma, and posterior vitreous separation.

Vitreous Humor

The clear gel that fills the space between the lens and retina. It helps maintain the shape of the eye and transmits light to the retina.

VLDL Test

A measurement or estimate of very-low-density lipoprotein cholesterol, which carries endogenous triglycerides and is considered an atherogenic lipoprotein.

VO2 Max

The maximum rate at which the body can use oxygen during intense exercise.

Alternate Names:

Maximal oxygen consumption

Vocal Cord Nodules

Benign, usually paired thickened areas of the vocal folds caused by repeated voice strain or overuse. They can cause hoarseness, vocal fatigue, and a rough or breathy voice.

Vocal Cord Paralysis

Immobility of one or both vocal cords due to disruption of the recurrent laryngeal nerve (RLN). Unilateral vocal cord paralysis: hoarseness, breathy voice, aspiration, and ineffective cough.

Alternate Names:

Vocal Fold Paralysis

Vocal Cord Paresis

Partial paralysis or weakness of one or both vocal cords due to impaired function of the recurrent laryngeal nerve (RLN) or the vagus nerve. Unilateral paresis is more common and presents with hoarseness, breathy dysphonia, vocal fatigue, and sometimes aspiration.

Vocal Cord Polyp

Vocal cord polyps are benign, unilateral, sessile or pedunculated lesions that arise from the vocal cord mucosa, typically as a result of a single traumatic vocal event such as shouting, screaming, or coughing, causing hemorrhage and edema in the superficial

lamina propria (Reinke space).

Vocal Fold Paralysis

Alternate index label; see *Vocal cord paralysis*.

Vocal Folds

Paired mucosal folds within the larynx that vibrate as air passes between them to produce sound. They also close to protect the airway and assist in raising intrathoracic pressure.

Vocal Resonance

The transmission of vocal sounds to the chest wall, assessed by having the patient speak while auscultating. It is increased in consolidation and decreased in pleural effusion or pneumothorax. It correlates with bronchophony and whispered pectoriloquy.

Vocal-Cord Dysfunction

Episodic inappropriate adduction of the vocal folds, especially during inspiration, causing throat tightness, noisy breathing, and apparent asthma-like attacks. Diagnosis is supported by laryngoscopy during symptoms; speech therapy and trigger management are central treatments.

Voice

Sound produced by vibration of the vocal folds as air passes through the larynx, then shaped by the throat, mouth, and nose for speech.

Voice And Speech

The products of complex coordinated activity of the respiratory, laryngeal, and articulatory systems.

Voice Box

The larynx, an organ in the neck containing the vocal folds and forming part of the airway. It produces voice and helps protect the lower respiratory tract during swallowing.

Voice Disorders

Conditions affecting voice quality, pitch, loudness, or ease of speaking because of problems involving the vocal folds, airway, nerves, or voice use.

Alternate Names:

Difficulty Speaking

Void

To empty the urinary bladder by urinating; in other medical contexts, void may mean an empty space or absence of a substance.

Voiding Cystourethrogram

Fluoroscopic imaging of the bladder and urethra during voiding, after filling the bladder with contrast via a catheter. Indications: evaluation of vesicoureteral reflux (VUR) in children with recurrent UTIs, posterior urethral valves in males, and post-surgical assessment of the bladder/urethra.

Volar

Relating to the palm of the hand or sole of the foot, especially the surface opposite the dorsum.

Volatile Anesthetics

Halogenated inhaled anesthetic agents, including sevoflurane, desflurane, and isoflurane, that reversibly depress central nervous system function. They provide dose-dependent hypnosis and immobility but may cause hypotension, respiratory depression, postoperative nausea, and malignant hyperthermia in susceptible individuals.

Volatile Oils

Plant oils containing compounds that evaporate readily at room temperature.

Alternate Names:

Essential oils

Volkmann Contracture

A permanent flexion deformity of the hand, wrist, and fingers caused by ischemic injury and fibrosis of forearm muscles. It most often follows untreated or inadequately treated compartment syndrome after fracture, crush injury, vascular compromise, or severe swelling. The degree of functional loss depends on the muscles and nerves affected and may include pain, weakness, sensory impairment, and restricted finger extension. Prevention requires urgent recognition of limb ischemia and compartment pressure;

established contractures require reconstructive assessment and may need surgical release or tendon procedures.

Volume Of Distribution

A theoretical pharmacokinetic parameter that relates the total amount of drug in the body to the plasma concentration, calculated as V_d equals amount of drug in the body divided by plasma concentration. It represents the apparent volume into which a drug distributes and is not a true anatomical volume.

Volume Overload

Excess total body sodium and water, causing peripheral or pulmonary oedema; common causes include heart failure, kidney failure, liver disease, and excessive intravenous fluid, and treatment depends on the cause and severity.

Voluntary

Under conscious control or performed by choice, such as voluntary movement. Voluntary action is distinguished from reflex, autonomic, or involuntary activity.

Volutrauma

Lung injury caused by excessive mechanical stretch, usually from an inappropriately large tidal volume during ventilation. Risk is reduced by lung-protective ventilation tailored to the patient's predicted body weight, lung mechanics, and clinical condition.

Volvulus

Twisting of a loop of intestine around its mesenteric attachment point causing luminal obstruction and compromise of the mesenteric blood supply which can rapidly progress to bowel ischemia.

Volvulus - Childhood

Twisting of a loop of intestine around its mesentery, causing obstruction and potentially loss of blood supply. In children it is often related to intestinal malrotation and is a surgical emergency when acute.

Vomit

To eject stomach or upper gastrointestinal contents through the mouth; the expelled material may also be called vomitus. Persistent vomiting can cause dehydration and electrolyte abnormalities.

Vomiting

Reflex expulsion of gastric contents. Causes: GI, neurological, metabolic, toxic, psychological. Treatment: antiemetics, identify cause, prevent aspiration.

Vomiting Blood

The passage of blood or coffee-ground material in vomit, usually indicating upper gastrointestinal bleeding. It is a potentially serious symptom requiring prompt medical evaluation.

Vomitus

Material expelled from the stomach or upper gastrointestinal tract during vomiting. Its color and contents can provide clues but do not by themselves establish a diagnosis.

Von Gierke Disease

Glycogen storage disease type I, an inherited deficiency of glucose-6-phosphatase or its transport system that causes fasting hypoglycemia, lactic acidosis, enlarged liver, and excess uric acid or lipids.

Von Hippel-Lindau Disease

Autosomal dominant syndrome caused by mutations in the VHL tumor suppressor gene on chromosome three predisposing to hemangioblastomas of the central nervous system and retina, clear cell renal cell carcinoma, pheochromocytoma, pancreatic cysts and neuroendocrine tumors, and endolymphatic sac tumors.

Von Recklinghausen'S Disease

Alternate index label; see *Neurofibromatosis type 1*.

Von Recklinghausen'S Neurofibromatosis

Alternate index label; see *Neurofibromatosis type 1*.

Von Recklinghausen'S Phakomatosis

Alternate index label; see *Neurofibromatosis type 1*.

Von Willebrand Disease

An inherited or acquired bleeding disorder caused by deficient or abnormal von Willebrand factor, which helps platelets adhere and carries factor VIII. It commonly causes nosebleeds, easy bruising, heavy menstrual bleeding, or prolonged bleeding after procedures.

VOR Reflex

The vestibulo-ocular reflex stabilizes gaze by moving the eyes opposite to head movement through inner-ear, brainstem, and eye-muscle pathways. Damage can cause oscillopsia, vertigo, imbalance, and abnormal head-impulse testing.

Voriconazole

A triazole antifungal agent used in the treatment of invasive aspergillosis, candidemia, and other serious fungal infections. Voriconazole inhibits the fungal cytochrome P450 enzyme lanosterol 14-alpha demethylase, preventing ergosterol synthesis and disrupting fungal cell membrane integrity.

Voyeurism

A paraphilic disorder involving recurrent intense sexual arousal from observing an unsuspecting person who is naked, disrobing, or engaging in sexual activity, when it causes distress, impairment, or involves nonconsenting behavior.

Voyeuristic Disorder

A paraphilic disorder involving recurrent, intense sexual arousal from observing an unsuspecting person who is naked, disrobing, or engaging in sexual activity. The individual has acted on these urges or they cause marked distress or interpersonal difficulty. Duration ≥ 6 months. Most common in males with onset in adolescence.

VPCs

Alternate index label; see *Premature ventricular contractions (PVCs)*.

VRE

Enterococcus bacteria that are resistant to vancomycin, often because of acquired changes in cell-wall precursors. VRE can cause urinary, blood-stream, wound, or other healthcare-associated infections. Treatment requires susceptibility-guided selection of an effective antimicrobial and source control when needed.

VSD

Ventricular septal defect, a hole in the wall separating the heart's ventricles.

Alternate Names:

Ventricular septal defect

Vulnerable

A substance traditionally believed to help heal wounds. Such products may lack good evidence and can cause allergy or contamination, so wound care should follow appropriate medical advice.

Vulva

The external female genital structures, including the mons pubis, labia, clitoris, and vestibule. It protects the openings of the urinary and reproductive tracts and contains specialized sensory and glandular tissue.

Alternate Names:

female external genitalia

Vulvar

Relating to the vulva, the external female genital structures including the labia, clitoris, vestibule, and associated glands.

Vulvar Carcinoma

An invasive malignant neoplasm of the external female genitalia, predominantly squamous cell carcinoma (90% of cases). Occurs in two distinct clinical pathways: a high-risk HPV-associated type in younger patients and an HPV-independent, differentiated VIN-related type associated with chronic inflammatory dermatoses (such as lichen sclerosus) in postmenopausal women.

Alternate Names:

Vulvar cancer; Carcinoma of the vulva

Vulvar Intraepithelial Neoplasia

A premalignant or potentially premalignant squamous lesion of the vulva. Most usual-type lesions are related to high-risk HPV, whereas differentiated lesions are commonly associated with lichen sclerosus and have a higher risk of invasive carcinoma.

Vulvar Melanoma

A malignant melanocytic neoplasm arising in vulvar skin or mucosa, most often affecting the labia in older adults. It may present as a pigmented or amelanotic mass, plaque, ulcer, bleeding lesion, or persistent area of altered pigmentation. Diagnosis requires biopsy with assessment of tumor thickness, ulceration, mitotic activity, and regional or distant spread. Management is based on stage and resectability and may involve local excision, evaluation of regional lymph nodes, and systemic treatment for advanced disease.

Vulvar Squamous Cell Carcinoma

The most common invasive vulvar malignancy, arising through HPV-related or HPV-independent pathways. It usually presents as a persistent mass, ulcer, plaque, or wart-like lesion and requires biopsy for diagnosis.

Vulvectomy

Surgical removal of part or all of the vulva, performed for selected cancers, precancerous lesions, or severe persistent disease.

Vulvitis

Inflammation of the vulva (external female genitalia), often presenting with pruritus, burning, irritation, erythema, edema, and discharge. Vulvitis is rarely isolated and is most commonly part of vulvovaginitis (inflammation of both vulva and vagina).

Vulvitis, Yeast

Inflammation of the vulva associated with vulvovaginal candidiasis, usually caused by *Candida* species. It may cause itching, burning, redness, swelling, and soreness and should be distinguished from other

causes of vulvar symptoms.

Vulvodynia

Vulvodynia is chronic vulvar pain without an identifiable specific cause, often described as burning or rawness and triggered by touch, pressure, or occurring spontaneously.

Alternate Names:

Chronic Vulvar Pain

Vulvovaginal Candidiasis

Symptomatic infection of the vulva and vagina, usually caused by *Candida albicans*. Pruritus, soreness, erythema, and thick discharge are common; diagnosis is clinical with microscopy or culture when recurrent, severe, atypical, or treatment-resistant.

W

Waardenburg Syndrome

A group of inherited disorders characterized by sensorineural hearing loss and pigmentary abnormalities of the eyes, hair, or skin. Dystopia canthorum, limb abnormalities, or intestinal aganglionosis may occur in particular genetic forms.

Wafer

Thin, flat disc used in pharmaceutical formulations for controlled drug delivery, particularly in intravitreal implants for retinal conditions.

WAGR Syndrome

A contiguous-gene deletion syndrome involving Wilms tumor predisposition, aniridia, genitourinary anomalies, and variable developmental delay. It usually involves chromosome 11p13 and requires tumor surveillance and multidisciplinary care.

Waist Circumference

A measure of abdominal adiposity taken at a standardized site. Larger measurements are associated with increased cardiometabolic risk, but clinically used thresholds vary by sex, ancestry, and guideline; it complements, rather than replaces, body-mass index and other assessment.

Waist-Hip Ratio

Anthropometric measure calculated by dividing waist circumference by hip circumference; used to assess central obesity and cardiovascular risk.

Wait List

Registry of patients awaiting organ transplantation, maintained by national transplant organizations,

prioritized by medical urgency and compatibility.

Wakefulness

State of being conscious and alert; regulated by the reticular activating system and neurotransmitters including orexin, histamine, and acetylcholine.

Waldenstrom Macroglobulinemia

A rare B-cell lymphoplasmacytic lymphoma characterized by bone marrow infiltration by lymphoplasmacytic cells and production of monoclonal IgM paraprotein. It accounts for less than 2 percent of hematologic malignancies and typically affects older adults (median age 63-65 years).

Alternate Names:

Lymphoplasmacytic Lymphoma

Waldenstrom's Macroglobulinemia

A lymphoplasmacytic cancer of the bone marrow that produces excess IgM and may cause anemia, enlarged lymph nodes, or hyperviscosity symptoms.

Waldenström's Macroglobulinemia

An indolent B-cell lymphoplasmacytic lymphoma characterized by the production of a monoclonal IgM paraprotein, causing hyperviscosity syndrome with visual disturbances, bleeding, and neurological symptoms. It typically affects elderly patients and involves the bone marrow, lymph nodes, spleen, and liver.

Walker-Warburg Syndrome

The most severe, lethal phenotype among the congenital muscular dystrophy-dystroglycanopathies, inherited in an autosomal recessive manner and

caused by mutations in genes essential for the *O*-mannosyl glycosylation of α -dystroglycan (most frequently *POMT1* and *POMT2*). Clinically characterized by a classic triad of: (1) severe congenital muscular dystrophy with marked hypotonia, generalized weakness, and massive creatine kinase elevation; (2) severe structural central nervous system malformations, including cobblestone (type II) lissencephaly, complete agenesis of the corpus callosum, hydrocephalus, and cerebellar hypoplasia; and (3) complex congenital ocular malformations, including microphthalmia, congenital cataracts, buphthalmos, and retinal detachment, typically culminating in death during infancy.

Alternate Names:

WWS; Muscle-Eye-Brain Disease (Severe Type); HARD +/- E Syndrome

Walking Abnormalities

Walking abnormalities include changes in speed, balance, stride, posture, or coordination caused by pain, weakness, sensory loss, joint disease, or neurologic illness.

Walking Speed

The rate at which a person walks, often measured over a defined distance. It can provide information about mobility and function, but no single speed determines disability in every person.

Wall Stress

Force exerted on a heart chamber wall by pressure inside the chamber.

Wallerian Degeneration

The breakdown of the portion of a nerve fiber separated from its cell body after nerve injury.

Walleye

Walleye is an informal term for strabismus, in which the eyes are misaligned and do not point at the same target.

Walleyed

Walleyed describes eyes that appear misaligned or divergent; clinically, the condition may be strabis-

mus and requires eye assessment when persistent.

Wandering Spleen

Abnormal mobility of the spleen caused by laxity or absence of its supporting ligaments. It may be asymptomatic or cause abdominal pain, splenic enlargement, torsion, infarction, or acute abdomen.

Ward'S Triangle

Radiological landmark formed by the intersection of the iliopectineal line, ilioischial line, and teardrop line on pelvic radiographs; used to assess acetabular coverage.

Warfarin

An anticoagulant that reduces blood clot formation by inhibiting vitamin-K-dependent clotting factors.

Warfarin Syndrome

A pattern of fetal abnormalities caused by warfarin exposure during pregnancy, including nasal and skeletal abnormalities, eye or neurologic defects, and fetal or neonatal bleeding.

Warm Autoimmune Hemolytic Anemia

The most common form of autoimmune hemolytic anemia (70–80% of cases), mediated by warm-reactive IgG autoantibodies that bind red blood cell surface antigens with maximal avidity at 37°C. Antibody-coated erythrocytes are selectively removed and phagocytosed by splenic macrophages (extravascular hemolysis), resulting in spherocytosis and a positive direct antiglobulin (Coombs) test.

Alternate Names:

wAIHA; Warm antibody autoimmune hemolytic anemia

Warm Ischemia

Tissue oxygen deprivation at body temperature due to interrupted blood supply; occurs during organ procurement for transplantation and causes more cellular damage than cold ischemia.

Wart

A benign skin growth caused by infection with hu-

man papillomavirus.

Alternate Names:

Verruca

Wart Remover Poisoning

Toxic exposure to a wart-removal product, often involving salicylic acid or another keratolytic. Severity depends on the substance, amount, route, symptoms, and duration of exposure.

Warthin Tumor

A benign salivary-gland neoplasm composed of oncocytic epithelial and lymphoid tissue, usually arising in the parotid gland. It is strongly associated with tobacco exposure, may be multifocal or bilateral, and is generally managed according to symptoms, diagnosis, and growth.

Warty Dyskeratoma

A benign follicular keratinizing tumor presenting as a solitary umbilicated papule or nodule, often on the head or neck. Histology shows a cup-shaped invagination filled with keratin and acantholytic dyskeratotic cells.

Washout Period

Interval between discontinuation of a drug or treatment and the start of a subsequent treatment phase; allows clearance of prior agents to avoid confounding effects in clinical studies.

Wasp Sting

A venomous insect sting that may cause localized pain, redness, and swelling; severe reactions can include anaphylaxis or, rarely, systemic envenomation.

Wassermann Reaction

A historical complement-fixation blood test for syphilis. It has largely been replaced by modern treponemal and nontreponemal serologic tests.

Wasting

Abnormal loss of body weight, muscle, or other tissue, often associated with chronic disease, inad-

equately nutrition, inflammation, or cancer. Severe wasting may impair strength, immunity, and recovery.

Watchful Waiting

Planned observation without immediate active treatment, with clinical review and treatment if symptoms develop or the condition progresses. It may be used for selected cancers and other slowly progressive conditions.

Water Birth (Underwater Delivery)

Delivery of a baby while the birthing person remains in a tub or pool of warm water. It may reduce perceived labor pain for some people, but evidence about delivery-related benefits and risks is limited. Eligibility, monitoring, and facility policies determine whether it is offered.

Alternate Names:

Underwater Delivery

Water Blister

A fluid-filled blister, usually containing clear serum, caused by friction, pressure, burns, or some skin disorders. The blister should be protected from further trauma and assessed if infected or widespread.

Water Brash

A sudden increase in salty saliva associated with acid reflux.

Water Channel

Aquaporin membrane proteins that facilitate rapid transcellular water transport; found in renal collecting ducts, red blood cells, and other tissues involved in fluid homeostasis.

Water Consumption

Intake of water and other fluids to replace normal losses and maintain hydration. Requirements vary with body size, diet, activity, climate, pregnancy, illness, and kidney or heart function; thirst and urine concentration can help guide intake, while excessive intake can cause dangerous hyponatremia.

Water Intoxication

A potentially life-threatening dilutional hyponatremia caused by excessive water intake or retention relative to the body's ability to excrete free water. Severe cases can cause headache, confusion, seizures, or coma.

Water On The Brain

A nontechnical term usually referring to hydrocephalus, an abnormal accumulation or impaired circulation of cerebrospinal fluid that enlarges the ventricles and may increase intracranial pressure.

Water On The Knee

Alternate index label; see *Swollen knee*.

Water Pollution

Contamination of water bodies with pathogens, chemicals, or heavy metals; associated with gastrointestinal illness, developmental disorders, and chronic disease.

Water Retention

Excess accumulation of fluid in the body's tissues or cavities, commonly causing swelling and sometimes resulting from heart, kidney, liver, venous, hormonal, or medication-related disorders.

Water Soluble Toxins

Toxic substances that dissolve readily in water. Their elimination depends on the substance, kidney function, metabolism, protein binding, and other properties; some may be removed by dialysis.

Water Supply

Infrastructure for delivering potable water to populations; public health measures include chlorination, filtration, and monitoring for contamination.

Water-Borne Disease

An illness acquired through water contaminated with infectious organisms or harmful chemicals. Examples include cholera, typhoid fever, and hepatitis A; prevention includes safe drinking water, sanitation, hand hygiene, and appropriate treatment of

contaminated water.

Water-Deprivation Test

A supervised dynamic test assessing the kidney's ability to concentrate urine when free-water intake is withheld, followed when appropriate by desmopressin. It helps distinguish central diabetes insipidus, nephrogenic diabetes insipidus, and primary polydipsia but requires careful monitoring for hyponatremia and dehydration.

Water-Hammer Pulse (Corrigan Pulse)

A pulse with a rapid upstroke and collapse, classically associated with significant aortic regurgitation and other states of increased pulse pressure.

Alternate Names:

Corrigan Pulse

Water-Soluble Vitamin

Vitamin class dissolving in water and not stored in significant amounts; includes B-complex vitamins and vitamin C, requiring regular dietary intake.

Waterborne Bacterial Disease

An infection acquired from water contaminated with bacteria, such as cholera, typhoid fever, or leptospirosis; prevention depends on safe water, sanitation, and food hygiene.

Waterhouse-Friderichsen Syndrome

Waterhouse-Friderichsen syndrome is adrenal hemorrhage and acute adrenal failure associated with overwhelming sepsis, classically meningococcal infection, causing shock and coagulopathy.

Watery Eyes

Excessive tearing caused by irritation, allergy, infection, dry-eye reflex tearing, or blockage of the tear-drainage system. Persistent unilateral tearing or pain requires ocular assessment.

Wax

A water-resistant substance produced by ceruminous glands in the ear canal; earwax protects the canal and usually clears naturally.

Wax Poisoning

Toxic exposure to a wax product, usually causing little harm after a small accidental ingestion but potentially causing choking, aspiration, irritation, or toxicity when mixed with other chemicals.

Waxy Casts

Broad refractile cylindrical structures with smooth appearance indicating severe chronic kidney disease. Form from degeneration of granular casts in dilated tubules. Broad diameter reflects formation in dilated collecting ducts. Relatively specific for advanced CKD with significant tubular atrophy.

WBC Count

A measurement of the number of white blood cells in a volume of blood, used with the differential count to evaluate infection, inflammation, immune disorders, marrow disease, or treatment effects.

Weakness

Reduced ability to generate force, which may be generalized or limited to one body region. Causes include disorders of muscle, nerve, neuromuscular junction, brain, or spinal cord, as well as metabolic illness, infection, medication effects, and deconditioning; sudden one-sided weakness or weakness with breathing, swallowing, or speech difficulty requires emergency assessment.

Weakness, Generalized

Reduced strength affecting multiple body regions, caused by systemic illness, metabolic or electrolyte disturbance, medication, infection, muscle disease, nerve disease, neuromuscular-junction disease, or brain or spinal-cord disease. Sudden or progressive weakness, especially with speech, facial, breathing, or walking difficulty, requires urgent assessment.

Weaning

Gradual reduction and eventual discontinuation of breastfeeding, bottle-feeding, or a medicine or other treatment, according to the relevant clinical context.

Wear Debris

Particles generated by mechanical abrasion or degra-

dation of implant materials. Macrophage-mediated inflammation around debris can produce osteolysis, implant loosening, and failure of an arthroplasty.

Weaver Syndrome

A congenital overgrowth and neurodevelopmental disorder associated with pathogenic variants in EZH2. It may cause prenatal overgrowth, advanced bone age, characteristic facial features, hypotonia, developmental delay, and variable intellectual disability.

Weaver'S Bottom

Inflammation of the ischial bursa over the sitting bone, causing pain in the buttock that may worsen with prolonged sitting. It is also called ischial bursitis.

Webbed Fingers

Partial or complete joining of adjacent fingers by skin or soft tissue, known as syndactyly; it may be congenital or acquired.

Webbed Neck

Lateral cervical skin folds extending from the mastoid process to the acromion; characteristic of Turner syndrome and Noonan syndrome.

Webbing Of The Fingers Or Toes

Partial or complete joining of adjacent fingers or toes by skin or other tissue. It is called syndactyly and may be congenital or acquired.

Weber

Unit of measurement for the frequency of bone conduction; used in audiology testing (Weber test) to lateralize hearing loss.

Weber Test

The Weber test is a screening test for lateralization of hearing that uses a vibrating tuning fork (typically 512 Hz) placed on the midline of the skull (vertex or forehead) to determine whether the sound is heard equally in both ears or louder in one ear, providing information about the type and side of

hearing loss.

Weber-Christian Disease

Weber-Christian disease is an older, nonspecific term historically used for relapsing fever and inflammation of subcutaneous fat, now often classified as panniculitis. Painful subcutaneous nodules and systemic symptoms require modern evaluation for infection, autoimmune disease, pancreatic disease, or other causes.

Alternate Names:

Panniculitis Idiopathic Nodular (Weber-Christian Disease)

Wedge Excision

Surgical removal of a triangular or wedge-shaped portion of tissue; commonly performed for breast biopsies, cervical lesions, and skin tumors.

Wedge Resection

Surgical removal of a wedge-shaped piece of tissue, typically lung or breast. Used for diagnosis or treatment of localized lesions. Less extensive than lobectomy.

Weeksella

Genus of Gram-negative bacteria in the family Neisseriaceae; occasionally isolated from clinical specimens.

Weeksella Virosa

Species of Gram-negative, oxidase-positive bacteria; opportunistic pathogen rarely associated with human infection.

Weever Fish

A venomous marine fish whose dorsal spines can cause a painful sting, local swelling, and occasionally systemic symptoms.

Wegener's Granulomatosis

Wegener's granulomatosis, now called granulomatosis with polyangiitis, is a systemic vasculitis characterized by necrotizing granulomatous inflammation of the upper and lower respiratory tracts and pauci-

immune necrotizing glomerulonephritis.

Wegeners Granulomatosis (Granulomatosis With Polyangiitis)

Alternate index label for Granulomatosis With Polyangiitis.

Weight Gain

Increase in body weight; may be intentional (muscle building, pregnancy) or unintentional (fluid retention, endocrine disorders, medication effects).

Weight Gain In Pregnancy

Recommended gestational weight gain according to the Institute of Medicine guidelines, based on prepregnancy BMI. Underweight (BMI <18.5): 28-40 lbs (12.5-18 kg). Normal weight (BMI 18.5-24.9): 25-35 lbs (11.5-16 kg). Overweight (BMI 25-29.9): 15-25 lbs (7-11.5 kg). Obese (BMI ≥ 30): 11-20 lbs (5-9 kg).

Weight Gain – Unintentional

Increase in body weight without a planned change in diet or activity, often caused by fluid retention, medicines, endocrine disease, reduced activity, or changes in eating; rapid swelling or breathlessness needs prompt assessment.

Weight Loss

A decrease in body weight that may be intentional or unintentional. Intentional loss is usually achieved through sustainable changes in eating, physical activity, and behavior; unintentional or rapid loss can indicate illness, inadequate nutrition, or medication effects and may require medical evaluation.

Alternate Names:

Obesity (Weight Loss)

Weight Loss - Unintentional

Unintentional weight loss is reduction in body weight without planned dietary or activity change and may result from malignancy, endocrine disease, infection, gastrointestinal disease, medication, or mood disorder.

Weight Loss And Management

Weight loss and management encompasses the ongoing process of achieving and maintaining a healthy body weight through sustainable lifestyle modifications.

Weight Loss Medications

Pharmacologic agents approved for the treatment of obesity when used in conjunction with lifestyle modifications.

Weight-Loss Medicines

Alternate index label; see *Weight Loss Medications*.

Weight-Reducing Diets

Dietary plans intended to create a sustained energy deficit and reduce excess body weight, ideally individualized with attention to nutrition, health conditions, and long-term adherence.

Weil'S Disease

A zoonotic bacterial infection caused by spirochaetes of the genus *Leptospira*, transmitted through contact with water or soil contaminated with the urine of infected animals (rodents, cattle, dogs). See *Leptospirosis*.

Weils Disease (Leptospirosis)

Alternate index label for *Leptospirosis*.

Wellens Syndrome

A pre-infarction electrocardiographic syndrome strongly indicative of critical, high-grade (> 85–90%) stenosis of the proximal left anterior descending coronary artery. Typically identified during pain-free intervals in patients presenting with unstable angina, characterized by: (1) deeply and symmetrically inverted T waves in leads V_2 and V_3 (Type B, 75% of cases); or (2) biphasic T waves in V_2 and V_3 with initial positivity and terminal negativity (Type A, 25% of cases); alongside normal or minimally elevated cardiac biomarkers, absence of pathological Q waves, and preservation of precordial R-wave progression. Carries an imminent risk of extensive anterior wall myocardial infarction or sudden death if urgent coronary angiography and

revascularization are delayed; exercise stress testing is strictly contraindicated.

Alternate Names:

Wellens Pattern; LAD Coronary T-Wave Syndrome; Wellens Sign

Wells Score For Pulmonary Embolism

A widely validated clinical prediction score used in acute and emergency settings to estimate the pretest probability of acute pulmonary embolism. It assigns specific weighted points to seven clinical variables: clinical signs and symptoms of deep vein thrombosis (3.0 points), PE considered most likely or equally likely diagnosis (3.0 points), heart rate > 100 bpm (1.5 points), immobilization or surgery in past 4 weeks (1.5 points), prior documented DVT or PE (1.5 points), hemoptysis (1.0 point), and active malignancy (1.0 point). Patients stratified as low probability (score < 2) or PE unlikely (score $\leq$ 4) are evaluated with high-sensitivity D-dimer, whereas those stratified as moderate/high probability or PE likely (score > 4) proceed directly to computed tomography pulmonary angiography.

Alternate Names:

Wells Criteria for PE; Wells Score (PE)

Welt

A raised, often itchy area of skin caused by localized swelling, commonly seen in hives or after an insect bite. A welt may fade within hours, but persistent or severe reactions need evaluation.

Wen (Epidermoid Cyst)

A common benign cyst beneath the skin that is lined by squamous epithelium and contains keratin debris.

Alternate Names:

Epidermoid Cyst

Wenckebach Phenomenon (Mobitz Type I AV Block)

Progressive prolongation of the PR interval followed by a nonconducted atrial impulse and a dropped QRS complex. It reflects intermittent impairment of atrioventricular conduction.

Alternate Names:

Mobitz Type I AV Block

Wens

Alternate index label; see *Wen (Epidermoid Cyst)*.

Werdnig-Hoffmann Disease

The most severe, infantile-onset form of 5q-related spinal muscular atrophy (Spinal Muscular Atrophy Type 1 [SMA 1]), inherited in an autosomal recessive manner caused by homozygous deletion or loss-of-function mutations in the *SMN1* gene on chromosome 5q13, with patients carrying only 1 or 2 copies of the backup *SMN2* gene. Manifests before 6 months of age with profound, generalized, flaccid hypotonia (“floppy infant syndrome”), symmetrical proximal muscle weakness, absent deep tendon reflexes, fasciculations of the tongue, paradoxical bell-shaped chest breathing due to intercostal muscle paralysis with diaphragm sparing, weak cry, and inability to ever sit unsupported, historically leading to respiratory failure and death within the first two years of life without disease-modifying therapies.

Alternate Names:

Spinal Muscular Atrophy Type 1 (SMA 1); Severe Infantile Spinal Muscular Atrophy

Wermer Syndrome

Alternate index label; see *Multiple endocrine neoplasia, type 1 (MEN 1)*.

Wermer’S Syndrome

Alternate index label; see *Multiple endocrine neoplasia, type 1 (MEN 1)*.

Werner Syndrome

An autosomal-recessive progeroid disorder caused most often by pathogenic variants in the *WRN* gene. It typically presents after puberty with premature ageing, short stature, bilateral cataracts, scleroderma-like skin changes, thin limbs, diabetes, osteoporosis, vascular disease, and increased risk of malignancy.

Werner’S Syndrome

An autosomal-recessive premature-aging disorder caused by *WRN* gene defects, characterized after

childhood by short stature, cataracts, scleroderma-like skin, diabetes, atherosclerosis, and increased cancer risk.

Wernicke Area

Region of the left dominant cerebral hemisphere (Brodmann area 22) involved in language comprehension; damage causes Wernicke aphasia with fluent but nonsensical speech.

Wernicke Encephalopathy

An acute neurologic disorder caused by thiamine deficiency, classically producing confusion, impaired coordination, and abnormal eye movements. It is a medical emergency requiring prompt thiamine treatment.

Wernicke’S Encephalopathy

An acute neurologic disorder caused by thiamine deficiency, classically involving confusion, eye-movement abnormalities, and gait or coordination impairment. It requires prompt thiamine treatment.

Wernicke-Korsakoff Syndrome

A neurologic disorder caused by thiamine deficiency, combining acute or previous Wernicke encephalopathy with persistent memory impairment and confabulation in some patients. Causes include alcohol-use disorder, malnutrition, and prolonged vomiting.

Wernicke’S Area

A brain region important for understanding spoken and written language.

Alternate Names:

Wernicke area

Wertheim’S Hysterectomy

Radical hysterectomy involving removal of the uterus, cervix, surrounding tissues, and commonly the upper vagina and pelvic lymph nodes, historically used for cervical cancer.

West Nile Encephalitis

Inflammation of the brain caused by neuroinvasive West Nile virus, transmitted mainly by mosquitoes.

It may cause fever, headache, confusion, tremor, weakness, seizures, or coma. There is no specific routine antiviral treatment; severe illness requires hospital-based supportive care.

West Nile Virus

A mosquito-borne flavivirus that can cause asymptomatic infection, a febrile illness, or neuroinvasive disease such as meningitis, encephalitis, or acute flaccid paralysis. Risk of severe disease is higher in older adults and people with certain medical conditions.

West Nile Virus Infection

West Nile virus infection is a mosquito-borne illness ranging from fever and body aches to neuroinvasive meningitis, encephalitis, weakness, or paralysis.

West Syndrome

An infantile epileptic encephalopathy characterized by epileptic spasms, hypsarrhythmia on electroencephalography, and developmental regression or arrest. Causes include structural brain disease, genetic disorders, metabolic disease, or acquired brain injury.

Westermark Sign

A focal area of decreased pulmonary vascularity distal to an occluded pulmonary artery segment on a chest radiograph. It may occur with pulmonary embolism but is neither sensitive nor specific.

Western Blotting

Laboratory technique for detecting specific proteins in tissue samples using gel electrophoresis, membrane transfer, and antibody-based detection; used in HIV diagnosis and research.

Westley Croup Score

A standardized, validated clinical scoring system used in emergency departments and pediatric inpatient units to assess the severity of airway obstruction and respiratory distress in children with croup (acute laryngotracheobronchitis). It grades five clinical parameters: inspiratory stridor (0–2), retractions (0–3), air entry (0–2), cyanosis (0–5),

and level of consciousness (0–5). A total score of 0–2 indicates mild croup, 3–5 moderate croup, and 6–11 severe croup (with scores ≥ 12 indicating impending respiratory failure), guiding the use of oral dexamethasone versus nebulized racemic epinephrine and hospital admission.

Alternate Names:

Westley Clinical Scoring System for Croup; Croup Severity Score

Wet Age-Related Macular Degeneration

Alternate index label; see *Wet macular degeneration*.

Wet AMD

Alternate index label; see *Wet macular degeneration*.

Wet Dream

Involuntary ejaculation during sleep, usually occurring in adolescence or adulthood and generally a normal physiological event.

Wet Dry Drowning (Drowning)

Alternate index label for Drowning.

Wet Gangrene

Tissue death complicated by bacterial infection and tissue swelling, producing moist, discolored, rapidly spreading necrosis. It requires urgent medical assessment.

Wet Macular Degeneration

The neovascular form of age-related macular degeneration in which abnormal blood vessels grow beneath or within the retina and leak fluid or blood, causing rapid central-vision loss.

Alternate Names:

Macular Degeneration, Wet Wet Age-Related Macular Degeneration Wet AMD

Wharton Jelly

A gelatinous substance (mucopolysaccharide matrix) surrounding the umbilical cord vessels, composed primarily of hyaluronic acid and chondroitin sulfate. It protects the umbilical vessels from compression and kinking during fetal movement and uterine con-

tractions.

Wharton'S Jelly

Gelatinous connective tissue within the umbilical cord that surrounds and supports the umbilical blood vessels and helps protect them from compression.

Wheal

Raised, itchy swelling of skin (urticaria/hives). Caused by mast cell degranulation and histamine release. Examples: insect bite, allergic reaction, dermatographism.

Wheal And Flare

A transient raised area of dermal edema (wheal) surrounded by localized redness (flare), typically produced by histamine release in urticaria or another immediate hypersensitivity reaction.

Wheat Allergy

An immune reaction to proteins in wheat that may cause skin, digestive, or breathing symptoms.

Wheeled Stretcher

Mobile patient transport device with wheels; used in hospitals and emergency services for moving patients who cannot walk.

Wheeze

A high-pitched whistling sound produced by narrowed airways during breathing.

Wheezing

Wheezing is a musical sound from narrowed lower airways, commonly caused by asthma, infection, chronic lung disease, allergy, or an inhaled foreign body. airflow through narrowed or compressed lower airways during expiration (and occasionally inspiration). Pathophysiology: bronchospasm, mucosal edema, airway inflammation, or intraluminal secretions.

Whiplash

A neck injury caused by sudden acceleration and

deceleration of the head, often after a rear-end vehicle collision but also after a fall, sports injury, or assault. Symptoms may appear immediately or over the next several hours or days and can include neck pain and stiffness, reduced movement, headache, shoulder or upper-back pain, dizziness, or tingling in the arms. Most cases improve over several weeks, but persistent or worsening symptoms should be assessed; weakness, numbness, difficulty walking, or severe pain after significant trauma requires urgent medical evaluation.

Alternate Names:

Pain Whiplash (Whiplash) Sprain Neck (Whiplash) Strain Neck (Whiplash)

Whiplash Injury

Alternate index label; see *Whiplash*.

Whipple Disease

A rare systemic bacterial infection caused by *Tropheryma whippelii*, affecting the small intestine and multiple organ systems. Presents with arthralgias (prodromal, years before GI symptoms), weight loss, chronic diarrhea, steatorrhea, and abdominal pain.

Whipple Procedure

Pancreaticoduodenectomy for cancers of the pancreatic head, distal bile duct, or ampulla. Involves removal of the pancreatic head, duodenum, distal bile duct, and gallbladder with three anastomoses: hepaticojejunostomy, pancreaticojejunostomy, and gastrojejunostomy. The pylorus-preserving variant maintains the entire stomach.

Whipple Triad

A clinical framework supporting the diagnosis of symptomatic hypoglycemia: symptoms consistent with hypoglycemia, a documented low blood-glucose concentration, and improvement after the glucose level is raised. It is used when evaluating possible hypoglycemia, including suspected insulinoma.

Whipple'S Disease

A rare bacterial infection that can impair intestinal absorption and affect multiple organs.

Alternate Names:

Intestinal Lipodystrophy Lipodystrophy, Intestinal

Whipworm

A parasitic roundworm of the genus *Trichuris*, usually *Trichuris trichiura* in humans. Infection occurs by ingesting embryonated eggs and may cause abdominal pain, diarrhea, anemia, or rectal prolapse when severe.

Whipworm (Trichuriasis)

Intestinal infection caused by the soil-transmitted helminth *Trichuris trichiura* (whipworm), endemic in tropical and subtropical regions with poor sanitation. Humans acquire infection by ingesting embryonated eggs from contaminated soil, food, or water.

Alternate Names:

Trichuriasis

Whipworm Infection

Intestinal infection with *Trichuris trichiura* acquired by ingesting eggs from contaminated soil or food; heavy infection can cause abdominal symptoms, anemia, or rectal prolapse.

Whirlpool Bath

Hydrotherapy device providing agitated water for therapeutic bathing; used in wound care, physical therapy, and rehabilitation.

Whispered Pectoriloquy

The ability to hear whispered words clearly through the stethoscope over consolidated lung tissue. It is a sign of pulmonary consolidation. Normally, whispered words are barely audible over the lung fields. It is one of the classic signs of pneumonia on physical examination.

White Blood Cell

A cell of the immune system that helps protect the body from infections, foreign substances, and abnormal cells. White blood cells are made mainly in the bone marrow and include neutrophils, lymphocytes, monocytes, eosinophils, and basophils. Their number or function may change with infection, inflammation, immune disorders, or bone-marrow

disease.

White Blood Cell Count

WBC count: the total number of leukocytes per unit volume (normal $4.0\text{--}11.0 \times 10^9/\text{L}$), part of the CBC with differential (neutrophils, lymphocytes, monocytes, eosinophils, basophils). Leukocytosis: infection (neutrophilia), inflammation, stress, steroids, leukemia (marked), corticosteroids.

White Blood Cell Labeling

Nuclear medicine technique labeling WBCs with Tc-99m. Used for infection localization.

White Cell

The cells of the immune system that defend the body against infection and foreign substances. Produced in the bone marrow from hematopoietic stem cells.

White Cell Count

A laboratory measurement of the number of white blood cells (leukocytes) in a given volume of blood, part of the complete blood count (CBC). Normal range: 4,000-11,000 cells/ μL ($4\text{--}11 \times 10^9/\text{L}$). Differential white cell count measures the proportion of each leukocyte type: neutrophils, lymphocytes, monocytes, eosinophils, basophils.

White Finger

Episodic pallor or whitening of the fingers caused by vasospasm, commonly associated with Raynaud phenomenon or hand-arm vibration syndrome.

White Infarction

White infarction, also known as anemic infarction, occurs in solid organs with end-arterial circulation where collateral blood supply is limited, resulting in pale, well-demarcated areas of coagulative necrosis.

Alternate Names:

anemic infarction, occurs in solid organs with.

White Leg (Phlegmasia Alba Dolens)

Painful, marked swelling and pallor of a limb caused by extensive deep venous thrombosis, usually involving major venous outflow. It requires urgent

assessment.

Alternate Names:

Phlegmasia Alba Dolens

White Matter

Regions of the brain and spinal cord composed primarily of myelinated nerve fibers, responsible for transmitting signals between brain regions.

White Matter Of The Brain

The brain tissue composed mainly of myelinated axons and supporting glial cells, connecting different brain regions and the brain with the spinal cord; disease or injury can impair cognition, sensation, coordination, or movement.

White Of The Eye

The sclera, the tough, opaque outer coat of the eye surrounding the cornea and helping maintain the shape of the globe.

White Spot Disease

Alternate index label; see *Lichen sclerosus*.

White Tongue

A white coating or patches on the tongue caused by debris, dry mouth, irritation, infection, inflammation, or other oral conditions.

White-Coat Hypertension

High blood pressure in a medical setting with normal readings outside it.

Alternate Names:

White-coat effect

Whiteheads

Whiteheads are closed comedones formed when oil and dead skin block a hair follicle, producing small pale or skin-colored acne bumps.

Vaginal Discharge

Vaginal discharge may be normal or may indicate infection, inflammation, hormonal change, or another condition. Normal discharge is usually clear to whitish and odourless, and varies with the men-

strual cycle (increased at ovulation, pre-menstrually, during pregnancy, sexual arousal, and with oral contraceptive use).

Whitlow

An infection or inflammation of the tissues around a finger or toenail, often involving the nail fold; it may be bacterial, fungal, or herpetic.

Whitlow (Paronychia)

Acute or chronic infection and inflammation of the tissues around a fingernail or toenail, usually caused by bacteria, fungi, or repeated moisture and trauma.

Alternate Names:

Paronychia

Whole Breast Radiation Therapy

Whole breast radiation therapy treats remaining breast tissue after breast-conserving surgery to reduce local recurrence risk, with planned dosing and monitoring for skin and tissue effects.

Whole Exome Sequencing

Sequencing the protein-coding regions of the genome, which make up a small fraction of total DNA. It can identify variants associated with disease but does not detect all genetic causes; its yield depends on the disorder, test quality, and interpretation.

Whole Genome Sequencing

Laboratory analysis of nearly all of a person's nuclear DNA, including coding and noncoding regions, and sometimes mitochondrial DNA. It can identify many types of genetic variants but may produce uncertain or incidental findings and does not detect every cause of disease; results require appropriate clinical interpretation.

Whole-Body Irradiation

Radiotherapy technique delivering radiation to the entire body; used as conditioning before bone marrow transplantation or for treatment of systemic hematologic malignancies.

Whole-Body Scan

An imaging examination that surveys much or all of the body, using a technique such as PET/CT, CT, MRI, or a nuclear medicine scan. It may be used for selected cancer staging, infection localization, or evaluation of systemic disease; the coverage and usefulness depend on the test and clinical question.

Whole-Bowel Irrigation

Gastrointestinal decontamination using large volumes of an iso-osmotic polyethylene-glycol solution to flush intestinal contents; it is reserved for selected ingestions and requires airway and clinical assessment.

Whole-Brain Radiation Therapy

Radiation directed at the entire brain, used for multiple brain metastases, leptomeningeal disease, and prophylactic cranial irradiation in small cell lung cancer and acute lymphoblastic leukemia.

Whole-Genome Sequencing

Sequencing of nearly the complete nuclear genome, including coding and noncoding regions, together with mitochondrial DNA when covered by the assay. It can detect a broad range of variants but generates substantial interpretation and incidental-finding challenges.

Whooping Cough

A highly contagious respiratory infection caused by *Bordetella pertussis*. It causes prolonged bouts of rapid coughing that may be followed by a whooping sound or vomiting; infants may have pauses in breathing without the typical whoop. Also called pertussis.

Whooping-Cough

Alternate index label; see *Whooping Cough*.

Wickerhamiella Pararugosa

Species of basidiomatus yeast; rarely isolated from clinical specimens, generally considered a contaminant.

Widal Reaction

An agglutination test historically used to detect antibodies associated with *Salmonella Typhi* and paratyphoid infection. Its diagnostic accuracy is limited, and results require clinical interpretation.

Widal Test

An agglutination test historically used to detect antibodies associated with typhoid and paratyphoid fever; its limited accuracy means results require clinical interpretation.

Widely Spaced Teeth

Teeth separated by unusually large gaps, also called diastema when the gap is localized. Causes include normal development, missing teeth, tooth-size differences, habits, or jaw and gum conditions.

Williams Syndrome

A microdeletion syndrome involving the elastin gene on chromosome 7q11.23. Features: elfin facies, supravalvular aortic stenosis, hypercalcemia, intellectual disability with strong verbal skills, and overly friendly personality. Often associated with connective tissue abnormalities.

Wilm'S Tumour

Source spelling variant of *Wilms tumor*, a malignant embryonal kidney tumor occurring mainly in young children.

Wilms Tumor

A malignant embryonal tumor of the kidney in children. It may present as an abdominal mass, pain, hematuria, or an incidental finding and may be associated with syndromes such as WAGR or Beckwith-Wiedemann syndrome. Treatment and prognosis depend on stage and tumor biology.

Alternate Names:

Cancer, Wilms' Tumor

Wilms' Tumor (Nephroblastoma)

An embryonal malignant tumor of the kidney that usually occurs in young children. It may be associated with congenital syndromes, and treatment and

prognosis depend on tumor stage, histology, and molecular features.

Alternate Names:

Nephroblastoma

Wilson Disease

Autosomal recessive copper metabolism disorder (ATP7B gene). Copper accumulation in liver, brain, cornea. Kayser-Fleischer rings, hepatopathy, movement disorder, psychiatric symptoms. Treatment: chelation (penicillamine, trientine), zinc, liver transplant.

Wilson'S Disease

An autosomal recessive disorder of copper metabolism caused by mutations in the ATP7B gene, leading to impaired biliary copper excretion and toxic copper accumulation in the liver, brain, cornea, and other organs.

Windowing

Adjusting CT image brightness and contrast to optimize visualization of specific tissues. Bone window: wide window width, high level. Soft tissue window: narrow width, mid level. Lung window: wide width, low level.

Windpipe

The windpipe, a 10-12 cm fibrocartilaginous tube from the larynx (C6) to the carina (T4/T5) where it bifurcates into main bronchi. See Trachea.

Wing Bone

A bone forming the skeletal framework of a bird or bat wing; it is not a standard human anatomical term, though the bones correspond broadly to the upper limb.

Winter Vomiting Disease

An acute gastroenteritis, usually caused by norovirus, characterized by sudden vomiting, diarrhea, and abdominal cramps.

Wireless Motility Capsule

Ingestible capsule that measures pH, pressure, and

temperature throughout the gastrointestinal tract. Provides regional transit times through the stomach, small bowel, and colon in a single test. The pH sensor identifies transition points between segments based on characteristic pH changes.

Wisdom Teeth

Wisdom teeth are the third molars that commonly emerge in late adolescence or adulthood. Impaction, infection, decay, cysts, gum disease, or crowding can cause pain and swelling; dental examination and imaging determine whether monitoring or removal is appropriate.

Wisdom Teeth, Impacted

Alternate index label; see *Impacted wisdom teeth*.

Wisdom Tooth (Third Molar)

The last molar in each dental quadrant, usually erupting in late adolescence or early adulthood. Impaction may cause pain, infection, or damage to adjacent teeth.

Alternate Names:

Third Molar

Wiskott-Aldrich Syndrome

X-linked recessive disorder (WAS gene mutation, encodes WASP protein, regulates actin polymerization in hematopoietic cells). Triad: microthrombocytopenia (small platelets, <70 fl), eczema, recurrent infections (encapsulated bacteria, viruses). Combined immunodeficiency with progressive T-cell lymphopenia.

Witch'S Milk

A temporary milky breast discharge in a newborn caused by maternal hormones crossing the placenta; it usually resolves without squeezing or treatment, which can otherwise cause infection.

Witch'S Milk (Neonatal Galactorrhea)

A temporary milk-like breast secretion in a newborn caused by exposure to maternal hormones. It usually resolves without treatment; the breasts should not be squeezed.

Alternate Names:
Neonatal Galactorrhea

Withdrawal

Physical or psychological symptoms that occur when a person who has developed dependence reduces or stops using a medicine or psychoactive substance. Symptoms vary by substance and may include anxiety, agitation, sweating, tremor, nausea, pain, insomnia, cravings, or seizures; some forms require urgent medical care.

Alternate Names:
Withdrawal syndrome

Withdrawal Reflex

A protective polysynaptic spinal reflex in which a painful stimulus causes flexion (withdrawal) of the stimulated limb, removing it from the source of injury, with reciprocal extension of the contralateral limb (crossed extensor reflex) to maintain posture.

Withdrawal Symptoms

Physical or psychological symptoms that occur when a person stops or reduces a substance or medicine after the body has adapted to it. The symptoms depend on the substance, duration of use, and the person's health.

Withdrawal Syndrome

A predictable set of signs and symptoms that occur when a drug is discontinued or the dose is reduced after chronic use, reflecting the physiological rebound from drug adaptation.

Wolf-Hirschhorn Syndrome

A severe contiguous gene deletion syndrome caused by a terminal or interstitial microdeletion of the short arm of chromosome 4 (4p16.3), involving the critical genes *WHSC1* and *LETM1*. Characterized by a pathognomonic facial appearance described as a "Greek warrior helmet" facies (prominent glabella, hypertelorism, broad beaked nose continuing directly from the forehead), severe prenatal and postnatal growth restriction, microcephaly, profound intellectual disability, structural congenital cardiac defects (atrial and ventricular septal defects), and

early-onset intractable epilepsy.

Alternate Names:
4p- Syndrome; 4p Deletion Syndrome

Wolff Parkinson White Syndrome (Wolff-Parkinson-White Syndrome)

Alternate index label for Wolff-Parkinson-White Syndrome.

Wolff-Parkinson-White Accessory Pathway-Related Tachycardia

Alternate index label; see *Wolff-Parkinson-White syndrome*.

Wolff-Parkinson-White Syndrome

A pre-excitation syndrome caused by an accessory pathway (bundle of Kent) connecting atria and ventricles, bypassing the AV node. ECG shows short PR interval (<0.12 s), delta wave (slurred upstroke of QRS), and widened QRS.

Alternate Names:
Wolff Parkinson White Syndrome (Wolff-Parkinson-White Syndrome)

Wolff-Parkinson-White Syndrome

Wolff-Parkinson-White syndrome is pre-excitation through an extra atrioventricular pathway that can cause episodes of supraventricular tachycardia and rarely dangerous ventricular rhythms.

Wolffian Ducts

Embryonic mesonephric ducts that form parts of the male reproductive tract, including the epididymal duct, vas deferens, and ejaculatory ducts; most regress in typical female development.

Wolfram Syndrome

Autosomal recessive disorder caused by mutations in the *WFS1* gene encoding wolframin. Classic triad of diabetes mellitus, optic atrophy, and diabetes insipidus. Additional features include sensorineural deafness, neurodegeneration, and psychiatric illness. Onset of diabetes typically in the first decade.

Wolinella

Genus of anaerobic, Gram-negative bacteria found in the oral cavity and gastrointestinal tract; associated with periodontal disease.

Wolinella Succinogenes

An anaerobic gram-negative bacterium found in the mouth and gastrointestinal tract of some animals; it is mainly of microbiologic interest and is rarely linked to human infection.

Wolman Disease

A rare autosomal-recessive lysosomal storage disorder caused by lysosomal acid lipase deficiency, leading to accumulation of cholesteryl esters and triglycerides, adrenal calcification, hepatosplenomegaly, diarrhea, and severe early-onset disease.

Wolman'S Disease

A severe lysosomal acid-lipase deficiency presenting in infancy with hepatosplenomegaly, adrenal calcification, malabsorption, vomiting, diarrhea, and failure to thrive. It is a severe form of lysosomal acid-lipase deficiency and can be fatal early without treatment.

Womb

Common name for the uterus; the muscular organ where a fetus develops during pregnancy.

Alternate Names:

Uterus

Womb Growths (Uterine Fibroids)

Alternate index label for Uterine Fibroids.

Breast Lumps

Alternate index label; see *Breast Lumps In Women*.

Women'S Health

Medical specialty focusing on conditions unique to or more prevalent in females, including reproductive health, pregnancy, menopause, and gender-specific disease patterns.

Alternate Names:

Womens Health (Women's Health)

Women'S Hospital

A hospital or service that focuses on health needs common in women, such as gynecologic care, pregnancy, childbirth, breast health, and menopause; services vary by institution.

Womens Health (Women'S Health)

Alternate index label for Women's Health.

Wood Lamp Examination

Inspection of skin under long-wave ultraviolet A light in a darkened room. It can accentuate pigimentary differences and produce characteristic fluorescence in selected infections, but findings are not independently diagnostic.

Wood Naphtha

A historical term for methanol-containing wood distillate; ingestion or inhalation can cause severe metabolic acidosis, visual loss, and death.

Wood Spirit

An old name for methanol, a toxic alcohol whose ingestion can cause metabolic acidosis, blindness, and death.

Wood'S Light

Long-wave ultraviolet-A light used in a darkened room to enhance certain skin-color changes and aid assessment of selected dermatological conditions.

Woods Corkscrew Maneuver

An internal rotation maneuver for shoulder dystocia where the operator inserts a hand and rotates the fetal shoulders 180 degrees by applying pressure to the posterior aspect of the anterior shoulder. This disimpacts the shoulder from behind the symphysis pubis. Can be repeated if the shoulder re-impacts in the new position.

Woods Screw Maneuver

A rotational maneuver used during shoulder dystocia to rotate the fetal shoulders and assist delivery.

Woody Tongue

A rare chronic infection, usually caused by *Actinomyces*, producing a hard, swollen tongue and surrounding tissue inflammation.

Wool-Sorter'S Disease (Anthrax)

An occupational form of inhalational anthrax caused by inhalation of spores of *Bacillus anthracis*, historically associated with handling contaminated wool or animal products.

Alternate Names:

Anthrax

Wool-Sorters' Disease

An occupational form of inhalational anthrax caused by inhaling spores of *Bacillus anthracis* while handling contaminated wool or animal products.

Word Blindness

An older term for alexia, an acquired inability to read or recognize written words despite adequate vision and previously developed language ability, usually caused by brain dysfunction or injury.

Word Blindness (Alexia)

An acquired neurological disorder in which a person loses or markedly impairs the ability to read despite adequate vision and previously acquired language skills.

Alternate Names:

Alexia

Word Deafness (Auditory Verbal Agnosia)

An acquired inability to understand spoken words despite adequate hearing, often caused by dysfunction of auditory-language pathways.

Alternate Names:

Auditory Verbal Agnosia

Word Recognition Scoring

An audiologic test measuring how accurately a person repeats or identifies spoken words at a comfortable listening level.

Word Salad

Severe disorganized speech consisting of a jumble of words and phrases that lack meaning or logical connection. It is a hallmark of formal thought disorder in schizophrenia and represents the most severe form of disorganized speech. It reflects profound disruption of language processing.

Working Memory

The short-term holding and manipulation of information during a task.

Worm Infestation (Helminthiasis)

Infection by parasitic worms, including nematodes, cestodes, and trematodes. Manifestations depend on the species and the organs involved.

Alternate Names:

Helminthiasis

Worms Pinworms (Pinworm Infection)

Alternate index label for Pinworm Infection.

Wortmannin

Fungal metabolite and potent inhibitor of phosphatidylinositol 3-kinase (PI3K); used extensively in cell biology research.

Wound

An injury in which tissue is damaged by trauma, surgery, pressure, heat, chemicals, or other causes. Wounds may be open or closed and vary in depth, contamination, and effect on nearby structures.

Wound Care

Assessment and treatment of a wound through cleansing, bleeding control, removal of dead or contaminated tissue when indicated, appropriate closure or dressing, pain control, and follow-up. Care also includes tetanus prevention, pressure relief, and treatment of infection or underlying conditions; antibiotics are reserved for selected contaminated wounds, bites, or infections.

Wound Complication

A problem that develops during healing, such as

infection, separation of wound edges, bleeding, fluid collection, tissue death, or excessive scarring. Increasing pain, redness, swelling, drainage, fever, or wound opening should be assessed promptly.

Wound Dehiscence

Separation of the layers of a surgical wound after closure, most commonly occurring within 3-14 days postoperatively.

Wound Evisceration

Separation of a surgical wound with protrusion of internal organs or tissue through the opening. It is a surgical emergency requiring protection of the exposed tissue and urgent medical evaluation.

Wound Healing

The coordinated repair of injured tissue through overlapping phases of hemostasis, inflammation, new tissue formation, epithelial coverage, and remodeling. Healing is influenced by blood supply, infection, nutrition, diabetes, medications, smoking, mechanical stress, and the depth and location of the wound.

Wound Healing Phases

Wound healing involves overlapping stages of hemostasis, inflammation, tissue formation, epithelial coverage, and remodeling. The duration and result depend on the wound, blood supply, infection, nutrition, and overall health.

Wound Infection

Infection of a wound by microorganisms, causing findings such as increasing pain, redness, warmth, swelling, pus, fever, or delayed healing.

Wound Management

Assessment and treatment of acute or chronic wounds through cleansing, debridement when indicated, moisture and exudate control, infection management, pressure relief, nutrition, and correction of underlying disease.

Wound VAC

Vacuum-assisted closure for wound healing. Foam dressing connected to vacuum pump. Removes exudate, reduces edema, promotes granulation. Used for complex wounds, surgical sites, pressure ulcers.

Wounds

Injuries in which tissue is damaged by trauma, surgery, pressure, heat, chemicals, or other causes; wounds may be open or closed and may require cleansing, closure, or debridement.

Wright Stain

A blood-cell stain used to identify and classify cells in a blood smear.

Wrinkle

Alternate index label; see *Wrinkles*.

Wrinkles

Wrinkles are skin folds or lines produced by aging, sun exposure, repeated facial movement, loss of elasticity, smoking, or other factors.

Alternate Names:

Wrinkle

Wrisberg Ganglion

A sensory ganglion associated with the intermediate nerve of the facial nerve.

Wrist

Complex joint connecting the hand to the forearm; composed of eight carpal bones, ligaments, and tendons allowing flexion, extension, abduction, and adduction.

Wrist Arthroscopy

Wrist arthroscopy uses a small camera and instruments through portals to diagnose or treat cartilage, ligament, synovial, or other wrist problems.

Wrist Drop

Inability to extend the wrist and fingers, usually caused by radial nerve dysfunction.

Wrist Fracture

A break in one or more bones near the wrist, most commonly the distal radius or ulna, usually caused by a fall, direct trauma, or weakened bone.

Wrist Injury

Damage to the bones, ligaments, tendons, nerves, or vessels of the wrist from a fall, twist, impact, or overuse; fracture, instability, severe swelling, or neurovascular symptoms require assessment.

Wrist Joint

Condylloid synovial joint between distal radius and articular disc proximally and scaphoid/lunate/triquetrum distally. Allows flexion, extension, radial/ulnar deviation, circumduction. The triangular fibrocartilage complex absorbs ulnar side load.

Wrist Pain

Pain in or around the wrist, commonly caused by sprain, fracture, tendinitis, arthritis, or nerve compression such as carpal tunnel syndrome. Persistent pain, deformity, numbness, or weakness requires assessment.

Alternate Names:

Pain, wrist

Alternate Names:

Pain, Wrist

Wrist Sprain

Stretching or tearing of one or more ligaments supporting the wrist, causing pain, swelling, bruising, and reduced movement after injury.

Writer'S Cramp

A task-specific focal dystonia causing involuntary muscle contractions and abnormal postures during writing or closely related fine-motor activities.

Written Documentation

Formal recording of patient information, clinical decisions, and treatment plans; essential for continuity of care and medicolegal purposes.

Alternate Names:

Torticollis

Wry-Neck

Torticollis, an abnormal tilt or rotation of the head caused by involuntary contraction, shortening, or dysfunction of neck muscles.

Wryneck (Torticollis)

Abnormal tilting or rotation of the head caused by involuntary contraction, shortening, or dysfunction of neck muscles. It may be congenital, acquired, painful, or neurological.

Wt

A medical abbreviation commonly meaning weight. Its meaning should be confirmed from the surrounding documentation because abbreviations can be ambiguous.

Wuchereria

A genus of filarial nematodes that includes *Wucheria bancrofti*, a major cause of lymphatic filariasis. Infection is transmitted by mosquitoes and may cause lymphangitis, chronic lymphedema, hydrocele, and elephantiasis.

Wuchereria Bancrofti

A filarial nematode transmitted by mosquitoes and the major cause of lymphatic filariasis, which can produce lymphoedema and elephantiasis.

Wuhan Coronavirus (2019-NCoV)

Alternate index label for 2019-nCoV.

X

X Chromosome

One of the two human sex chromosomes, carrying genes involved in sex development and many non-sex-specific biological functions. Individuals typically have one or two X chromosomes, and dosage is partly regulated by X-chromosome inactivation.

X, Factor

Factor X is a vitamin-K-dependent coagulation protein activated in the common pathway to generate thrombin and form fibrin.

X-Inactivation

Process inactivating one X chromosome in female mammals, forming Barr body. Occurs early in development, random in most tissues. Ensures dosage compensation.

X-Linked

Relating to a gene or condition associated with the X chromosome; inheritance patterns differ between individuals with one or two X chromosomes.

X-Linked Adrenoleukodystrophy

An inherited disorder of peroxisomal fatty-acid metabolism, usually affecting boys, that can cause progressive damage to the adrenal glands, nervous system, and myelin.

X-Linked Agammaglobulinemia

An inherited immunodeficiency, usually caused by a pathogenic variant in the BTK gene, that prevents normal B-cell maturation. It causes very low immunoglobulin levels and recurrent bacterial or enteroviral infections, usually beginning in infancy

or early childhood.

X-Linked Hypophosphatemia

An inherited disorder of phosphate regulation, commonly caused by excess fibroblast growth factor 23, leading to renal phosphate wasting, rickets or osteomalacia, bone pain, and growth abnormalities.

X-Linked Lymphoproliferative Syndrome

An inherited immune-regulation disorder, usually caused by pathogenic variants in SH2D1A or XIAP, that can cause severe or persistent Epstein–Barr virus infection, hemophagocytic lymphohistiocytosis, dysgammaglobulinemia, lymphoma, or inflammatory bowel disease.

X-Linked Ichthyosis

An inherited, usually X-linked recessive skin disorder caused by a variant or deletion affecting the STS gene and deficiency of steroid sulfatase. It usually affects males and causes widespread dry, dark, plate-like scales that often begin in infancy or early childhood.

X-Linked Inheritance

Transmission of a pathogenic variant on the X chromosome. Phenotypes differ by sex, X-inactivation, and variant mechanism; fathers do not transmit an X-linked variant to their sons.

X-Linked Myotubular Myopathy

The most severe, life-threatening form of centronuclear myopathy, inherited in an X-linked recessive manner and caused by loss-of-function mutations in the myotubularin (*MTM1*) gene on chromosome

Xq28, which encodes a dual-specificity lipid phosphatase regulating endosomal trafficking. Affects male infants who present at birth with profound, generalized hypotonia, severe muscle weakness, bilateral ptosis, external ophthalmoplegia, facial diplegia, and life-threatening respiratory failure requiring immediate mechanical ventilation. Muscle biopsy characteristically demonstrates small, rounded myofibers with centrally placed vesicular nuclei resembling fetal myotubes, surrounded by a clear halo devoid of myofibrils.

Alternate Names:

XLMTM; Myotubularin Deficiency

X-Linked Retinoschisis

An inherited vitreoretinal dystrophy caused by mutations in the RS1 gene, characterized by splitting of the retinal nerve fibre layer producing a spoke-wheel pattern of cystic spaces at the macula and peripheral retinal schisis.

X-Linked Severe Combined Immunodeficiency

A severe inherited immune disorder, usually caused by defects affecting the interleukin-2 receptor gamma chain, resulting in profound T-cell dysfunction and vulnerability to serious infections.

X-Ray

An X-ray is an imaging study that passes a small amount of ionizing radiation through the body to create a projection image. Differences in tissue density help show bones, lungs, teeth, and selected soft-tissue abnormalities.

X-Ray (Plain Radiography)

An imaging method that uses X-rays to create a two-dimensional projection of internal structures. It is used to assess bones, the chest, abdomen, teeth, and other selected body regions.

Alternate Names:

Plain Radiography

X-Ray (Radiography)

Projectional imaging using ionizing radiation. Dense structures (bone, contrast) appear white; air

appears black. Fast, inexpensive, widely available. Two-dimensional projection of three-dimensional structures. Mammography: specialized breast X-ray for screening.

Alternate Names:

Radiography

X-Ray - Skeleton

A skeletal X-ray series uses radiographs of selected bones and joints to evaluate fractures, alignment, bone density patterns, arthritis, infection, tumors, and developmental abnormalities.

X-Ray Attenuation

Reduction in the intensity of an X-ray beam as it passes through tissue or another material.

X-Ray Crystallography

Analytical technique using X-ray diffraction patterns to determine three-dimensional atomic structure of crystals and proteins.

X-Ray Shield

Protective material, usually lead or another radiation-attenuating substance, used to reduce exposure to scattered X-rays during imaging; shielding is applied according to the procedure and current radiation-safety guidance.

X-Ray Therapy

Use of ionizing radiation from X-ray sources for treatment of malignant and benign conditions; encompasses external beam radiotherapy.

X-Rays (Röntgen Rays)

Alternate index label; see *X-Ray*.

Alternate Names:

Röntgen Rays

Xanthelasma

Xanthelasma palpebrarum are soft, yellow, lipid-filled papules or plaques on the medial canthus of the eyelids (upper more commonly than lower), the most common form of cutaneous xanthoma. They are composed of foam cells (lipid-laden macrophages)

in the superficial dermis.

Xanthine

Purine base intermediate in uric acid metabolism; accumulated in xanthinuria due to xanthine oxidase deficiency.

Xanthine Dehydrogenase

Enzyme converting hypoxanthine to xanthine and xanthine to uric acid; deficiency causes xanthinuria type I.

Xanthine Oxidase

Molybdenum-containing enzyme catalyzing oxidation of hypoxanthine to xanthine and xanthine to uric acid; target of allopurinol in gout treatment.

Xanthogranulomatous

Describing inflammation in which tissues contain many lipid-filled immune cells called macrophages. It is seen in conditions such as xanthogranulomatous pyelonephritis.

Xanthogranulomatous Oophoritis

A rare chronic inflammatory lesion of the ovary with lipid-laden macrophages, plasma cells, and fibrosis, often associated with infection or endometriosis and capable of mimicking ovarian malignancy.

Xanthogranulomatous Pyelonephritis

A chronic destructive kidney infection in which renal tissue is replaced by lipid-laden macrophages. It is often associated with obstruction or stones and may require antibiotics, drainage, surgery, or nephrectomy depending on the extent of damage.

Xanthoma

A xanthoma is a yellowish deposit of lipid-laden macrophages in the skin, subcutaneous tissue, or tendons. It may occur with hyperlipidemia, diabetes, cholestatic liver disease, or an inherited lipid disorder and warrants assessment of the underlying cause. presenting as yellow-orange papules, nodules, or plaques.

Xanthomata

Alternate index label; see *Xanthoma*.

Xanthomatosis

A disorder in which fatty deposits called xanthomas develop in the skin, tendons, or organs. It may be associated with inherited or acquired lipid disorders and can signal increased cardiovascular or organ-specific risk requiring medical evaluation.

Xanthomonadaceae

Family of Gram-negative, aerobic, rod-shaped bacteria; includes plant pathogens and rare human opportunistic isolates.

Xanthomonas

Genus of Gram-negative, aerobic bacteria in family Xanthomonadaceae; primarily plant pathogens, occasionally isolated from clinical specimens.

Xanthopsia

A visual disturbance in which objects appear yellow or yellowish. It can occur with certain eye disorders, medication toxicity such as digoxin toxicity, or other neurologic or retinal conditions and warrants evaluation when new or persistent.

Xanthosis

Yellow discoloration of tissues caused by deposition of carotenoid pigments or other yellow material, distinguished from jaundice by the absence of yellowing in the sclerae.

Xenobiotic

Foreign chemical substance in body. Drugs, pollutants, pesticides, industrial chemicals. Metabolized by liver enzymes.

Xenobiotic Metabolism

Biotransformation of foreign chemical compounds (drugs, toxins, pollutants) primarily by hepatic cytochrome P450 enzymes; Phase I and Phase II reactions.

Xenograft

Tissue or a biological material transplanted between different species, often used as a temporary graft or tissue substitute.

Xenograft (Heterograft)

Alternate index label; see *Xenograft*.

Alternate Names:

Heterograft

Xenograft Procedure

Transplantation of tissue between different species; used experimentally and clinically (e.g., porcine heart valves, skin grafts).

Xenon

Noble gas (Xe) with anesthetic properties; used in research imaging and experimental anesthesia.

Xenophagy

Cellular process of degrading engulfed foreign material or pathogens via autophagy machinery.

Xenophobia

An intense or persistent fear of unfamiliar people, cultures, or situations; when clinically significant, it may be considered a specific phobia.

Xenotransplant

Transplantation of cells, tissues, or organs between different species, such as experimental or clinical use of animal-derived biological material.

Xenotransplantation

The transplantation of living cells, tissues, or organs between members of different species, most commonly from an animal donor to a human recipient. It is being investigated as a potential source of organs and tissues when human donor supply is insufficient, but substantial immunologic and infectious risks remain. Major concerns include hyperacute or delayed rejection, graft dysfunction, transmission of animal pathogens, and physiologic incompatibility. Clinical use or research requires rigorous immunologic screening, infection surveil-

lance, ethical oversight, and specialized monitoring of recipients.

Xeroderma

Abnormally dry skin that may cause scaling, roughness, itching, or cracking. It can result from environmental exposure, skin disease, age, or medicines.

Xeroderma Pigmentosum

A rare autosomal recessive disorder of nucleotide-excision DNA repair that causes extreme sun sensitivity and a greatly increased risk of skin and eye damage and cancers. It is caused by pathogenic variants in genes involved in DNA repair.

Xerophthalmia

Dryness of the conjunctiva and cornea, often caused by vitamin A deficiency. Severe disease can damage the cornea and impair vision.

Xerosis

Abnormally dry skin, common in elderly patients and winter months. It results from decreased sebaceous and sweat gland activity, impaired skin barrier function, and environmental factors. Treatment includes regular emollient application (cream or ointment rather than lotion), gentle cleansing, and humidification.

Xerostomia

The sensation of dry mouth caused by reduced or altered saliva production. It may result from medicines, dehydration, salivary-gland disease, radiation, or systemic illness and can impair speaking, swallowing, taste, and dental health.

Xerostomia (Dry Mouth)

Alternate index label; see *Xerostomia*.

Alternate Names:

Dry Mouth

Xipamide

Thiazide-like diuretic used for hypertension and edema; acts on the distal convoluted tubule.

Xiphisternal Plane

The horizontal anatomical plane at the junction of the body of the sternum and the xiphoid process, approximately corresponding to the T9 vertebral level.

Xiphoid Process

The small inferior projection of the sternum. Its shape varies, and it serves as an attachment site for muscles and ligaments.

XX

XX is the usual human sex-chromosome complement associated with female development, though sex development has biologic variation.

XX Male Syndrome

XX male syndrome, also called de la Chapelle syndrome, is a disorder of sex development in which a person with an XX karyotype develops a typically male phenotype, usually from translocation of the SRY gene; infertility is common.

XXX Syndrome

Alternate index label; see *Triple X syndrome* (trisomy X), a sex-chromosome variation in which a female has an additional X chromosome.

XXXX Syndrome

XXXX syndrome is a rare sex-chromosome variation in which a female has four X chromosomes; it may cause developmental or learning difficulties, distinctive physical features, and ovarian dysfunction, with severity varying widely.

Xylitol

A sugar alcohol used as a sweetener and in some oral-care products. Large human ingestions may cause gastrointestinal symptoms; it is highly toxic to dogs.

Xylitol Toxicity

Poisoning caused by excessive xylitol exposure. It can cause marked hypoglycemia in dogs and may cause gastrointestinal symptoms in people.

Xylose

Five-carbon monosaccharide used in diagnostic tests for intestinal absorption (D-xylose test) and bacterial metabolism studies.

XYY Syndrome

A sex-chromosome variation in which a male has an extra Y chromosome. Many affected individuals have few or no obvious symptoms, though some have tall stature, learning difficulties, or developmental differences.

Y

Y Chromosome

The sex chromosome that typically carries the SRY gene and other genes involved in testicular development and male sex differentiation. It is present in most individuals with a typical 46,XY karyotype and is transmitted through the paternal line.

Y-Linked Inheritance

Y-linked inheritance involves a gene on the Y chromosome and typically passes from an affected father to his sons, not daughters.

YAG Capsulotomy

A laser procedure that creates an opening in an opaque posterior lens capsule after cataract surgery. It can improve vision when posterior capsule opacification is causing visual symptoms.

YAG Laser Capsulotomy

Alternate index label; see *YAG Capsulotomy*.

YAG Laser Surgery

YAG laser surgery uses a yttrium-aluminum-garnet laser to cut, vaporize, or treat tissue, including posterior-capsule clouding after cataract surgery.

Yarrowia

A genus of yeast that can rarely cause opportunistic infection, particularly in people who are immunocompromised or have indwelling medical devices. Identification and treatment depend on species and susceptibility testing.

Yarrowia Lipolytica

A yeast species in the genus *Yarrowia* that is primar-

ily environmental but has rarely been reported as an opportunistic human pathogen, including bloodstream or device-associated infection.

Yawn

An involuntary behavior consisting of a deep inhalation followed by a slower exhalation, often with stretching of the jaw and facial muscles. Yawning is common with fatigue but excessive or unusual yawning can occur with some medications or neurologic conditions.

Yawning

Alternate index label; see *Yawn*.

Yawning - Excessive

Excessive yawning is unusually frequent or difficult-to-control yawning. It may accompany sleep deprivation, excessive daytime sleepiness, medication effects, vasovagal reactions, or less commonly neurologic or cardiopulmonary disease; persistent unexplained episodes merit clinical evaluation.

Yaws

Yaws is a chronic infection caused by *Treponema pallidum* subsp. *pertenue* and spread mainly through close skin contact. It can cause an initial papilloma or ulcer and later destructive lesions of skin, bone, and cartilage; antibiotics can cure the infection.

Yaws (Frambesia)

Alternate index label; see *Yaws*.

Alternate Names:

Frambesia

Yd.

An abbreviation for yard, a unit of length equal to 0.9144 meter. In clinical documentation, the unit should be written clearly to avoid confusion with other abbreviations.

Yeast

Yeasts are unicellular fungi that reproduce mainly by budding or, in some species, fission; medically important examples include *Candida*, *Cryptococcus*, and *Malassezia*, which may colonize humans or cause opportunistic infection.

Yeast Infection

A *Candida* infection that may affect the mouth, skin, vagina, penis, or other tissues. Symptoms depend on the site and may include itching, soreness, redness, white plaques, discharge, or rash. Diagnosis and treatment depend on the affected site, severity, and whether the finding represents colonization or true infection.

Yeast Infection (Vaginal)

Alternate index label; see *Vulvovaginal Candidiasis*.

Alternate Names:

Candidiasis, Vaginal Vaginal Candidiasis

Yeast Infection In Women And Men

Genital *Candida* infection may affect the vulva or vagina in women and the glans penis or foreskin in men. Symptoms can include itching, soreness, redness, discharge, or rash. Recurrent, severe, atypical, or treatment-resistant symptoms need confirmation and evaluation for contributing conditions.

Yeast Oral (Thrush)

Alternate index label; see *Oral Thrush*.

Yeast Present

A laboratory report indicating that yeast forms were detected in a specimen. The finding may represent colonization, contamination, or infection and must be interpreted with symptoms, specimen type, and organism identification.

Yellow Fever

Yellow fever is an acute mosquito-borne infection caused by yellow fever virus. Fever, headache, muscle aches, nausea, and vomiting may be followed by jaundice, bleeding, shock, and organ failure; vaccination is the main preventive measure.

Yellow Fever Virus

A flavivirus transmitted mainly by infected mosquitoes that can cause yellow fever, ranging from a mild febrile illness to jaundice, bleeding, shock, and organ failure.

Yellow Nail Syndrome

Alternate index label; see *Yellow-Nail Syndrome*. Nail changes may include thickening, excessive curvature, loss of the cuticle, and separation of the nail plate from the nail bed. Respiratory manifestations can include recurrent sinusitis, chronic cough, pleural effusions, or bronchiectasis, although the complete triad is not always present. Diagnosis is clinical and supported by characteristic nail findings and evaluation for lymphatic or pulmonary complications; management is directed at the affected systems.

Yellow Tongue

Yellow discoloration or coating of the tongue that may result from oral hygiene, smoking, dry mouth, diet, medicines, or an underlying illness.

Yellow-Nail Syndrome

A rare triad of yellow, thickened, slow-growing nails, lymphedema, and chronic respiratory disease including bronchiectasis and pleural effusions. The nail changes result from impaired lymphatic drainage affecting nail growth. It typically affects middle-aged adults.

Yergason Test

A shoulder examination maneuver used to assess the long head of the biceps tendon and transverse humeral ligament by resisted supination and external rotation.

Yersinia

Yersinia is a genus of Gram-negative bacteria that includes *Y. pestis*, *Y. enterocolitica*, and *Y. pseudotuberculosis*; human disease ranges from enterocolitis and pseudoappendicitis to plague.

Yersinia Aldovae

An environmental *Yersinia* species rarely isolated from humans; its significance depends on recovery from a compatible infection rather than colonization or contamination.

Yersinia Bercovieri

An uncommon environmental or enteric *Yersinia* species with limited evidence of human pathogenicity; clinical significance depends on the specimen and symptoms.

Yersinia Enterocolitica

A gram-negative coccobacillus of the family Enterobacteriaceae, a common cause of enterocolitis and mesenteric lymphadenitis, especially in children and young adults in temperate climates.

Yersinia Frederiksenii

An environmental *Yersinia* species occasionally recovered from food, water, or clinical specimens; confirmed human infection is uncommon.

Yersinia Infection

Infection caused by *Yersinia* bacteria, commonly producing diarrhea, abdominal pain, fever, or vomiting. Some cases mimic appendicitis; severe illness, dehydration, bloody diarrhea, or persistent symptoms requires medical assessment.

Yersinia Intermedia

An environmental *Yersinia* species that is uncommon in human disease; interpretation of an isolate depends on the site, symptoms, and evidence of invasive infection.

Yersinia Kristensenii

An uncommon *Yersinia* species found in environmental or animal sources and rarely associated with

human infection.

Yersinia Mollaretii

An uncommon *Yersinia* species mainly identified in environmental or animal samples; human pathogenicity is not well established.

Yersinia Pestis

A gram-negative rod that causes plague, a severe and potentially fatal infection; see *Plague*. The organism is transmitted by flea bites or direct contact with infected animals. Bubonic plague presents with painful lymphadenopathy (buboes). Pneumonic plague involves the lungs and is transmitted by respiratory droplets.

Yersinia Pseudotuberculosis

Yersinia pseudotuberculosis is a Gram-negative bacterium acquired mainly from contaminated food or water that causes enterocolitis, fever, and mesenteric lymphadenitis resembling appendicitis; systemic infection is uncommon.

Yersinia Rohdei

An uncommon *Yersinia* species associated mainly with environmental or animal sources and rarely reported in human clinical specimens.

Yersinia Ruckeri

A bacterium that causes enteric redmouth disease in fish; human infection is extremely rare and should be assessed in the context of a compatible exposure and specimen.

Yersiniosis

Infection caused by *Yersinia* bacteria, most often *Y. enterocolitica* or *Y. pseudotuberculosis*, producing diarrhea, abdominal pain, fever, or pseudoappendicitis.

Yew Poisoning

Yew poisoning follows ingestion of yew plant material, especially leaves or seeds containing taxine compounds. Toxicity can cause nausea, abdominal symptoms, dizziness, seizures, dangerous slowing

or disruption of the heart rhythm, cardiovascular collapse, and death.

Yips

Sudden involuntary movements or muscle spasms that interfere with a skilled task, often in athletes or musicians.

Yoga

A mind-body practice combining physical postures, breathing techniques, and meditation or relaxation. It may support flexibility, balance, stress reduction, and symptom management, but exercises should be adapted to individual health conditions.

Yoga For Health

Yoga for health combines physical postures, breathing exercises, and meditation or relaxation. It may improve flexibility, balance, strength, stress, and some chronic symptoms when adapted to the person; instructors should account for injuries, pregnancy, and medical limitations.

Yohimbine

An alpha-2 adrenergic antagonist derived from yohimbe-related compounds and studied for erectile dysfunction; evidence is limited and adverse effects may include anxiety, high blood pressure, palpitations, and seizures.

Yokenella

A genus of Gram-negative bacteria in the family Enterobacteriales. *Yokenella* species are uncommon human pathogens but can cause opportunistic infections, including wound or bloodstream infections.

Yokenella Regensburgi

A Gram-negative bacterium that rarely causes human infection, including wound, urinary, or bloodstream infection, usually in people with underlying illness or impaired immunity. Treatment is guided by culture and antimicrobial susceptibility results.

Yolk Sac

An extraembryonic structure that supports the early

embryo before the placenta is fully functional. It contributes to early blood-cell formation and development of the primitive gut and is assessed on early pregnancy ultrasound.

Yolk Sac Tumor

A malignant ovarian germ-cell tumor that often occurs in children or young adults and produces alpha-fetoprotein; it requires prompt treatment.

Yolk Stalk

The embryonic connection between the yolk sac and the developing midgut, also called the vitelline duct. Persistence of this structure can result in a Meckel diverticulum or other vitelline duct anomaly.

Yolk-Sac Tumor

Alternate index label; see *Yolk Sac Tumor*.

Your Cancer Care Team

A cancer care team is the group of oncology professionals who coordinate diagnosis, treatment, symptom control, rehabilitation, psychosocial support, and follow-up. It may include medical, surgical, and radiation oncologists, nurses, pharmacists, social workers, dietitians, and palliative-care specialists.

Ytterbium

A chemical element with the symbol Yb and atomic number 70. Its compounds have specialized industrial and research uses; medical relevance depends on the specific compound and exposure.

Yttrium

A chemical element with the symbol Y and atomic number 39. The radioactive isotope yttrium-90 is used in selected radiation treatments, including some targeted therapies and radiosynovectomy procedures.

Yttrium-90

A radioactive beta-emitting isotope with a physical half-life of about 64 hours, used in selected targeted radiation treatments such as liver radioembolization and some radiosynovectomy procedures.

Z

Z-Plasty

A reconstructive surgical technique that uses interconnected triangular skin flaps in a Z-shaped arrangement to lengthen a contracted scar and change its direction. It is used in selected scar contractures and other soft-tissue deformities.

ZAP-70 Deficiency

A rare combined immunodeficiency caused by impaired ZAP-70 signaling in T lymphocytes, leading to abnormal T-cell development or function and recurrent, sometimes severe infections.

Zafirlukast

A leukotriene-receptor antagonist used for long-term control and prevention of asthma symptoms. It is taken orally and is not a rescue treatment for an acute asthma attack; liver injury and drug interactions are important safety considerations.

Zalcitabine

A nucleoside reverse-transcriptase inhibitor formerly used in combination antiretroviral treatment for HIV infection. It is rarely used because of toxicity and the availability of safer alternatives; peripheral neuropathy and pancreatitis are important adverse effects.

Zanamivir

An inhaled neuraminidase inhibitor used to treat or prevent influenza A and B when started appropriately. It may cause bronchospasm and is used cautiously in people with underlying airway disease.

Alternate Names:

Relenza

Zavanelli Maneuver

A rare emergency maneuver for unresolved shoulder dystocia in which the fetal head is flexed and replaced into the birth canal before emergency cesarean delivery. It is performed only by an experienced obstetric team when other measures have failed.

Alternate Names:

cephalic replacement

Zebrafish

A small freshwater fish (*Danio rerio*) widely used as a laboratory model in developmental biology, genetics, toxicology, and disease research. Its embryos are transparent and develop rapidly, but findings may not translate directly to humans.

Alternate Names:

Danio rerio

Zellweger Syndrome

A severe inherited peroxisome-biogenesis disorder, usually caused by pathogenic variants in a PEX gene. It presents in infancy with hypotonia, seizures, feeding difficulty, liver dysfunction, distinctive facial features, and impaired brain development.

Alternate Names:

Zellweger spectrum disorder

Zenker Diverticulum

A pouch that forms where the throat meets the esophagus when the inner lining pushes through a weak spot in a swallowing muscle. It can cause difficulty swallowing, regurgitation of undigested food, bad breath, cough, and aspiration; a barium swallow is commonly used for diagnosis.

Alternate Names:
Zenker's diverticulum

Zibotentan

An investigational selective endothelin-A-receptor antagonist studied mainly in oncology. It is not an established routine treatment, and its clinical role depends on evidence from clinical trials and regulatory approval.

Ziconotide

A synthetic analog of omega-conotoxin used by continuous intrathecal infusion for severe chronic pain when other treatments are inadequate. It can cause dizziness, confusion, hallucinations, and other serious neurologic or psychiatric adverse effects.

Alternate Names:
Prialt

Zidovudine

A nucleoside reverse-transcriptase inhibitor used in selected antiretroviral regimens for HIV infection and to reduce perinatal HIV transmission. Bone-marrow suppression, anemia, neutropenia, myopathy, and mitochondrial toxicity are important adverse effects.

Alternate Names:
azidothymidine; AZT

Ziehl-Neelsen Stain

An acid-fast staining method that helps detect organisms with waxy cell walls, especially mycobacteria. Acid-fast organisms retain carbol fuchsin after acid-alcohol decolorization and appear red against a contrasting background.

Alternate Names:
acid-fast stain

Zieve Syndrome

A complication of acute alcohol-associated liver injury characterized by hemolytic anemia, transient hyperlipidemia, and jaundice. Treatment focuses on stopping alcohol use and managing the associated liver disease and complications.

Alternate Names:

Zieve's syndrome

Zika

An illness caused by Zika virus, usually producing no symptoms or a mild fever, rash, conjunctivitis, arthralgia, and myalgia. Infection during pregnancy can cause congenital Zika syndrome, and infection has also been associated with Guillain-Barré syndrome.

Alternate Names:
Zika virus disease

Zika Virus

A positive-sense RNA flavivirus transmitted mainly by infected *Aedes* mosquitoes and also by sexual contact and other less common routes. Infection is often asymptomatic or mild, but infection during pregnancy can injure the developing fetus.

Alternate Names:
ZIKV

Zileuton

A 5-lipoxygenase inhibitor used for prevention and chronic control of asthma. It does not relieve acute bronchospasm; liver-enzyme elevations and interactions with other medicines require monitoring.

Alternate Names:
Zyflo

Zinc

An essential trace mineral required for numerous enzymes, gene-regulatory proteins, immune functions, growth, reproduction, and wound healing. Excess supplementation can cause gastrointestinal symptoms and copper deficiency.

Alternate Names:
Zn

Zinc Acetate

An oral zinc salt used to treat zinc deficiency and, in specific formulations, to reduce intestinal copper absorption in Wilson disease. Dose and monitoring depend on the indication; nausea and gastrointestinal irritation may occur.

Zinc Deficiency

A state of inadequate available zinc caused by insufficient intake, malabsorption, excessive losses, or increased requirements. Manifestations may include impaired growth, dermatitis, alopecia, diarrhea, altered taste, delayed wound healing, and increased infection susceptibility.

Alternate Names:

zinc depletion

Zinc Ointment (Zinc Oxide)

A topical preparation containing zinc oxide that forms a protective barrier over irritated or moist skin. It is commonly used for diaper dermatitis and minor skin irritation.

Alternate Names:

zinc oxide ointment

Zinc Oxide

An insoluble zinc compound used topically as a skin protectant and barrier, including in preparations for diaper dermatitis and minor irritation. It can reduce contact with moisture and irritants but does not treat every cause of a rash.

Alternate Names:

ZnO

Zinc Sulfate

An oral or parenteral zinc salt used to prevent or treat zinc deficiency when clinically indicated. Gastrointestinal upset is common with oral therapy, and prolonged excessive use can cause copper deficiency.

Zinc Toxicity

Adverse effects caused by excessive zinc ingestion or exposure. Acute toxicity may cause nausea, vomiting, abdominal pain, and diarrhea; chronic excess can impair copper absorption and lead to anemia or neurologic and immune abnormalities.

Alternate Names:

zinc poisoning

Zingiber Officinale

The botanical species commonly known as ginger. Rhizome preparations are used as a flavoring and

may provide modest relief of nausea in some settings; gastrointestinal irritation and drug interactions, including effects on bleeding risk, are possible.

Alternate Names:

ginger

Zinostatin

An antitumor antibiotic, also called neocarzinostatin, that damages DNA. It has been used or studied in oncology in some countries and settings; availability, indications, and toxicity depend on the specific formulation and regulatory status.

Alternate Names:

neocarzinostatin

Zirconia

A zirconium-oxide ceramic used in dentistry for crowns, bridges, implants, and other restorations. Its strength and tissue compatibility make it useful, although restoration design, surface treatment, and clinical indication affect performance.

Alternate Names:

zirconium dioxide

Zirconium

A metallic element used in some medical and dental materials. Certain zirconium-containing compounds have specialized clinical uses, while exposure to some compounds can irritate tissues or produce systemic toxicity.

Alternate Names:

Zr

Zoledronic Acid

A potent intravenous bisphosphonate used for osteoporosis and certain cancer-related conditions, including hypercalcemia of malignancy and skeletal complications of bone metastases. Renal injury, hypocalcemia, acute-phase reactions, and rare osteonecrosis of the jaw are important risks.

Alternate Names:

zoledronate; Reclast; Zometa

Zollinger-Ellison Syndrome

A disorder caused by one or more gastrin-secreting

neuroendocrine tumors, called gastrinomas, that produce marked gastric acid hypersecretion. Excess acid commonly causes recurrent or multiple peptic ulcers, gastroesophageal reflux, abdominal pain, and secretory diarrhea. Gastrinomas may arise in the duodenum or pancreas and can occur as part of multiple endocrine neoplasia type 1. Diagnosis uses fasting serum gastrin with assessment of gastric acidity, followed by localization and staging of the tumor when appropriate.

Alternate Names:

ddC

Zolpidem

A nonbenzodiazepine sedative-hypnotic used for short-term treatment of insomnia. It can cause next-day impairment, complex sleep behaviors, dependence, and respiratory or central-nervous-system depression, especially with other sedatives.

Alternate Names:

Ambien

Zolpidem Tartrate

The tartrate salt of zolpidem, formulated as an oral sedative-hypnotic for insomnia. It carries the same risks as zolpidem, including next-day impairment, abnormal sleep behaviors, dependence, and additive sedation.

Zona Pellucida

A glycoprotein-rich extracellular layer surrounding the mammalian oocyte. It participates in sperm binding and the acrosome reaction and helps prevent polyspermy after fertilization.

Alternate Names:

oocyte zona pellucida

Zonisamide

An antiseizure medicine used for focal-onset seizures and, in some countries, other seizure indications. It can cause somnolence, cognitive effects, metabolic acidosis, kidney stones, oligohidrosis, and serious hypersensitivity reactions.

Alternate Names:

Zonegran

Zonula Adherens

A belt-like cell junction that links the actin cytoskeletons of adjacent epithelial cells. It contributes to cell adhesion and helps maintain epithelial structure and barrier organization.

Alternate Names:

adherens junction; zonula adherente

Zonule

Fibrous suspensory fibers connecting the ciliary body to the lens capsule. They transmit forces from the ciliary muscle and help alter lens curvature during accommodation.

Alternate Names:

zonular fibers; ciliary zonule

Alternate Names:

zonular fibers

Zoon Balanitis

A chronic benign inflammation of the glans penis, usually seen in uncircumcised men. It commonly appears as a sharply demarcated shiny orange-red or rust-colored patch; diagnosis is clinical, with biopsy used when the diagnosis is uncertain.

Alternate Names:

plasma cell balanitis; balanitis circumscripta plasmacellularis

Zoonosis

An infection naturally transmissible between vertebrate animals and humans. Examples include rabies, brucellosis, leptospirosis, psittacosis, toxoplasmosis, and some influenza infections.

Alternate Names:

zoonotic disease

Zoonotic Disease

An infectious disease that can be naturally transmitted between vertebrate animals and humans. Transmission may occur through direct contact, contaminated food or water, animal products, or arthropod vectors.

Alternate Names:

zoonosis

Zoster

A painful, usually unilateral vesicular eruption caused by reactivation of latent varicella-zoster virus in a sensory nerve ganglion. It may be complicated by postherpetic neuralgia, ocular disease, or neurologic involvement.

Alternate Names:

shingles; herpes zoster

Zygoma (Zygomatic Bone)

A paired facial bone that forms the prominence of the cheek and part of the lateral orbital wall and floor. It articulates with the frontal, sphenoid, temporal, and maxillary bones.

Alternate Names:

zygomatic bone; cheekbone

Zygomatic Fracture

A fracture of the zygomatic bone or zygomaticomaxillary complex, usually caused by facial trauma. It may cause facial flattening, infraorbital numbness, diplopia, trismus, or orbital injury.

Alternate Names:

zygomaticomaxillary complex fracture

Zygomatic Gland

In veterinary anatomy, the zygomatic gland is an orbital gland that contributes to the tear film, especially in dogs and cats; it is distinct from the human lacrimal gland and should be interpreted according to species-specific anatomy.

Zygomycosis

An older term for invasive fungal infection caused by organisms formerly grouped as zygomycetes, particularly mucormycetes. Mucormycosis can affect the sinuses, orbit, lungs, skin, or gastrointestinal tract, especially in people with diabetes or impaired immunity.

Alternate Names:

mucormycosis; phycomycosis

Zygote

The diploid cell formed when a sperm fertilizes an oocyte. It undergoes early cell divisions and devel-

ops into an embryo.

Alternate Names:

fertilized egg

Zymogen

An inactive enzyme precursor that is converted into an active enzyme, often by proteolytic cleavage. Examples include pepsinogen and trypsinogen.

Alternate Names:

proenzyme

Drugs

Generic Medicines and Medication Terms

5-Alpha Reductase Inhibitor

A medicine that blocks conversion of testosterone to dihydrotestosterone. It is used mainly to treat benign prostatic hyperplasia and androgen-related hair loss.

Abortifacient

A drug or substance that induces abortion by ending a pregnancy.

Abortion - Medication

Medication abortion uses prescribed medicines, commonly mifepristone followed by misoprostol or misoprostol alone, to end an early intrauterine pregnancy; confirmation of completion and assessment for ectopic pregnancy are important.

Abuse Steroid (Anabolic Steroid Abuse)

Alternate index label for Anabolic Steroid Abuse.

Accident And Emergency Medicine (A&E Medicine)

The medical specialty concerned with the immediate assessment, resuscitation, diagnosis, and initial treatment of acute illness and injury.

Alternate Names:

A&E Medicine

ACE Inhibitor

A drug that inhibits angiotensin-converting enzyme,

reducing formation of angiotensin II and degradation of bradykinin.

Acitretin

An oral retinoid used mainly for severe psoriasis and selected keratinization disorders. It is highly teratogenic and requires strict pregnancy precautions and monitoring for adverse effects.

Adenovirus Vaccine

A vaccine used primarily to prevent adenovirus types 4 and 7 among selected military personnel. It is an oral, live vaccine and is not part of routine vaccination for the general public. Vaccine use and eligibility depend on current public-health recommendations.

Adverse Drug Event

Harm related to the use of a medication, including harm caused by an adverse drug reaction, medication error, overdose, or inappropriate use.

Adverse Drug Reaction

An adverse drug reaction is any noxious or unintended response to a drug that occurs at doses used for prophylaxis, diagnosis, or therapy.

Agent, Tocolytic

A medicine that reduces uterine contractions, used selectively to delay preterm birth long enough for corticosteroids, transfer, or other preparations to take effect.

Agonist-Antagonist

A drug that has mixed pharmacological activity,

acting as an agonist at one receptor type and an antagonist at another, or as a partial agonist at a single receptor.

AIDS Vaccine

A vaccine designed to prevent HIV infection or reduce its effects; no generally effective licensed vaccine currently exists.

Alendronate

A bisphosphonate that reduces bone resorption and is used to treat or prevent osteoporosis and selected other disorders of excessive bone turnover.

Alternate Names:

Alendronic acid; oral bisphosphonate therapy.

Allopathic Medicine

A historical term commonly used for conventional, evidence-based medical practice; it is not a precise scientific classification and may be used differently by different groups.

Alternative Medicine

A nonconventional health practice used instead of standard medical treatment; evidence, safety, and interactions vary widely, and replacing effective care can be harmful.

Alternative Medicine - Pain Relief

A clinical topic concerning alternative Medicine - Pain Relief; assessment and management depend on the specific clinical question, findings, and patient context.

Anabolic Steroid Abuse

Anabolic-androgenic steroid misuse can cause infertility, testicular shrinkage, acne, mood changes, high blood pressure, adverse cholesterol changes, liver injury, and cardiovascular events. Stopping may produce withdrawal symptoms and is safest with medical support.

Alternate Names:

Abuse Steroid (Anabolic Steroid Abuse)

Analgesic

A drug that relieves pain without producing loss of consciousness.

Analgesic Nephropathy

Chronic tubulointerstitial renal injury associated with prolonged or excessive use of analgesic medicines. It may cause impaired urinary concentration, sterile pyuria, haematuria, papillary necrosis, hypertension, and progressive chronic kidney disease.

Analgesics

Medicines used to relieve pain. They include nonopioid analgesics, opioid analgesics, and adjuvant medicines used for selected pain conditions.

Alternate Names:

Painkillers

Anesthetic

A medicine or technique that causes loss of sensation, with or without loss of consciousness.

Angiogenesis Inhibitor

A treatment or substance that prevents or slows formation of new blood vessels.

Alternate Names:

Antiangiogenic agent

Angiotensin Converting-Enzyme Inhibitor

A class of antihypertensive medications that block the conversion of angiotensin I to angiotensin II by inhibiting the angiotensin-converting enzyme, thereby reducing vasoconstriction and aldosterone secretion. Used to treat hypertension, heart failure, and diabetic nephropathy.

Angiotensin Receptor Blocker

A medicine that blocks angiotensin II at the AT1 receptor, reducing vasoconstriction and aldosterone effects; it is used for hypertension, heart failure, and selected kidney disease.

Anti-Infective

A medicine or other agent used to prevent or treat infection caused by microorganisms, including bacteria, viruses, fungi, or parasites.

Anti-Inflammatory

A medicine or other treatment that reduces inflammation.

Antiarrhythmic

A drug used to treat or prevent abnormal cardiac rhythms. Drug classes act mainly on sodium channels, sympathetic stimulation, potassium channels, or calcium channels; selection depends on the rhythm and the patient's clinical condition.

Antibiotic

A substance that kills or slows the growth of bacteria.

Antibiotic Cycling

A strategy in which the preferred antibiotic for a particular clinical use is changed at planned intervals. It is intended to limit selection of resistant organisms, although its benefit depends on local conditions and implementation.

Antibiotic De-Escalation

The process of narrowing antimicrobial spectrum based on microbiological results and clinical response. De-escalation aims to reduce selective pressure for resistance while maintaining therapeutic efficacy.

Antibiotic Mixing

A strategy in which different antibiotics are assigned concurrently to different patients with the same indication. It is intended to reduce uniform selection pressure for resistance in a patient population.

Antibiotic Resistance

The ability of bacteria to survive or grow despite an antibiotic that would normally kill them or stop their growth. It can result from genetic changes and the spread of resistance genes; unnecessary or

incorrect antibiotic use can accelerate it.

Alternate Names:

Resistance Antibiotic (Antibiotic Resistance)

Antibiotic Resistance Genes

Genes that encode mechanisms conferring resistance to antibiotics. These genes can be located on chromosomes, plasmids, or transposons. Major resistance genes include *mecA* (methicillin resistance in *S. aureus*), *vanA/vanB* (vancomycin resistance in *Enterococcus*), and *blaKPC* (carbapenem resistance).

Antibiotic Stewardship

Coordinated efforts to use antibiotics appropriately by selecting the right medicine, dose, route, and duration while reducing unnecessary treatment and resistance.

Antibiotic-Associated Colitis

Alternate Mayo Clinic label; see *Pseudomembranous colitis*.

Antibiotic-Associated Diarrhea

Loose or frequent stools that occur during or soon after antibiotic treatment.

Alternate Names:

Diarrhea, Antibiotic-Associated

Anticholinergic Cognitive Burden Scale

A medication-review tool that estimates the total anticholinergic load of a patient's medicines. It supports risk assessment and deprescribing but does not replace individualized clinical judgment.

Anticoagulant

A medicine or substance that reduces the blood's ability to form clots.

Anticoagulant Agent

A drug that reduces blood clot formation by interfering with the coagulation cascade; examples include heparin, warfarin, and direct oral anticoagulants.

Anticoagulant Monitoring

Laboratory assessment used to measure the effect or safety of an anticoagulant. The appropriate test depends on the drug and may include aPTT, anti-Xa activity, INR, or measurements of kidney function and blood counts.

Anticoagulant Rodenticides Poisoning

Toxic effects caused by excessive exposure to Anticoagulant rodenticides poisoning. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Anticonvulsant

A medicine used to prevent or control seizures; some are also used for nerve pain or mood disorders.

Alternate Names:

Antiseizure medicine

Anticonvulsant Mood Stabilizers

Antiepileptic drugs used as mood stabilizers in bipolar disorder. Valproate (divalproex) is effective for acute mania and rapid cycling. Carbamazepine is effective for acute mania but has numerous drug interactions via CYP3A4 induction. Lamotrigine is effective for bipolar depression prevention but not acute mania.

Antidepressant

A medicine used to treat depressive disorders and some other conditions involving mood, anxiety, pain, or sleep.

Antidiabetic Agent

A medicine that lowers blood glucose or improves glucose regulation in diabetes, such as insulin, metformin, sulfonylureas, or GLP-1 receptor agonists.

Antidiarrheal

A drug that reduces the frequency or volume of diarrhea. Some antidiarrheals should be avoided when there is bloody diarrhea, high fever, suspected invasive infection, or ileus.

Antidiarrheal Medicine Overdose

Toxic effects caused by excessive exposure to Antidiarrheal medicine. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Antiemetic

A medication that prevents or treats nausea and vomiting.

Antiestrogen

A drug that blocks estrogen effects or reduces estrogen production; it may be used in hormone-sensitive breast cancer or to alter reproductive hormone signaling.

Antifungal

A drug used to treat fungal infections.

Antifungal Agent

A drug or chemical that kills fungi or inhibits their growth, used to treat fungal infections of the skin, mucosa, or internal organs.

Antifungal Drug Classes

Major classes of antifungal agents include polyenes (amphotericin B), azoles (fluconazole, voriconazole), echinocandins (caspofungin, micafungin), and allylamines (terbinafine). Polyenes bind to ergosterol in fungal cell membranes. Azoles inhibit ergosterol synthesis. Echinocandins inhibit cell wall synthesis.

Antifungal Medication

A medicine used to treat fungal infection; the choice and route depend on the organism and site, and examples include azoles, terbinafine, polyenes, and echinocandins.

Antihistamine

A drug that blocks histamine receptors. H1 antihistamines treat allergic rhinitis, urticaria, pruritus, and (older sedating agents) insomnia and motion sickness. First-generation (diphenhydramine, chlorpheniramine): CNS-penetrant—sedating, anti-

cholinergic (dry mouth, urinary retention, confusion in elderly).

Antihypertensive

A medicine used to lower blood pressure. Classes include ACE inhibitors, angiotensin-receptor blockers, calcium-channel blockers, thiazide-type diuretics, beta-blockers, and other agents. Selection depends on blood pressure, kidney function, cardiovascular disease, pregnancy, and other clinical factors.

Antihypertensive Agent

A medicine or treatment that lowers elevated blood pressure.

Alternate Names:

Blood-pressure medicine

Antimalarial

A drug used to prevent or treat malaria caused by Plasmodium parasites; selection depends on species, disease severity, resistance, and geographic exposure.

Antimicrobial Drug

A medicine used to treat infection by bacteria, viruses, fungi, or parasites; the drug is selected according to the organism, infection site, and patient factors.

Antimicrobial Drug Interactions

Interactions between antimicrobial agents and other medications. Fluoroquinolones chelate divalent cations. Macrolides inhibit CYP3A4. Rifampin is a potent enzyme inducer. Azole antifungals inhibit CYP3A4.

Antineoplastic

A medicine or other treatment that inhibits the growth or survival of abnormal cells, especially cancer cells.

Antiparasitic

A drug used to treat infections caused by parasites (protozoa and helminths). Antiprotozoals: metronidazole (Giardia, amebiasis, trichomoniasis),

tinidazole, chloroquine and artemisinin combinations (malaria), pyrimethamine (toxoplasmosis), pentamidine, and nifurtimox (Chagas).

Antiparkinsonian

A drug used to treat Parkinson disease and drug-induced parkinsonism.

Antiplatelet Agent

A medicine that reduces platelet clumping and lowers the risk of arterial clots.

Alternate Names:

Antiplatelet medicine

Antiprotozoal Drug

A medicine used to prevent or treat disease caused by protozoa, including drugs directed against malaria, intestinal protozoa, or tissue parasites.

Antipruritic

A medication that relieves itching (pruritus).

Antipsychotic

A drug used to treat psychotic disorders (schizophrenia, schizoaffective disorder, psychosis in bipolar/manic states and delirium). Typical (first-generation): haloperidol, chlorpromazine—D2 blockade, high EPS/tardive dyskinesia risk, hyperprolactinemia.

Antipsychotic Agent

A medicine used to treat psychosis and, in some cases, bipolar disorder or severe behavioral symptoms.

Alternate Names:

Antipsychotic

Antipsychotic-Induced Parkinsonism

Drug-induced bradykinesia, rigidity, tremor, or postural instability caused by dopamine-receptor blockade, usually from antipsychotic treatment. Management involves reviewing the medication, dose, alternatives, and symptomatic treatment when appropriate.

Antipyretic

A drug that reduces fever by lowering the hypothalamic set point, typically by inhibiting prostaglandin synthesis in the preoptic hypothalamus. Acetaminophen and NSAIDs (ibuprofen, aspirin) are the principal antipyretics.

Antispasmodic

A medication that reduces smooth muscle spasm, primarily in the gastrointestinal tract. Anticholinergic agents: hyoscyamine, dicyclomine, atropine — block muscarinic M3 receptors on GI smooth muscle, reducing contractions and peristalsis, used for irritable bowel syndrome and functional dyspepsia.

Alternate Names:

Antispasmodics

Antithyroid

A medicine or treatment that reduces thyroid-hormone production or activity. Examples include thioamides, radioactive iodine, and medicines that reduce the effects of thyroid hormone; the choice depends on the cause and clinical situation.

Antithyroid Drug

A medicine that reduces thyroid hormone production or release, used to treat hyperthyroidism; examples include methimazole, propylthiouracil, and radioactive iodine.

Antitussive

A medication that suppresses the cough reflex, used for dry, non-productive cough.

Antiviral

A class of drugs that inhibit viral replication, used to treat viral infections.

Antiviral Drug Classes

Major classes of antiviral agents include nucleoside analogues (acyclovir, tenofovir), protease inhibitors (ritonavir, atazanavir), reverse transcriptase inhibitors (efavirenz, sofosbuvir), and neuraminidase inhibitors (oseltamivir). Each class targets a specific step in the viral replication cycle.

Anxiolytic

A medicine or other treatment that reduces anxiety. Choice depends on the anxiety disorder, urgency, coexisting conditions, adverse effects, and patient preference; psychological therapies and, when appropriate, antidepressant medicines are commonly used for persistent anxiety.

ARB-Neprilysin Inhibitor

Sacubitril/valsartan combines an ARB with a neprilysin inhibitor, increasing natriuretic peptide levels while blocking the renin-angiotensin system. The PARADIGM-HF trial demonstrated superior reduction in cardiovascular death and heart failure hospitalization compared to enalapril.

Arimidex

A brand name for anastrozole, an aromatase inhibitor used mainly to treat hormone-receptor-positive breast cancer in selected patients.

Aromatase Inhibitor

A class of medications that inhibit aromatase, the enzyme that converts androgens (androstenedione, testosterone) to estrogens (estrone, estradiol) in peripheral tissues (adipose, breast, muscle, bone). Used primarily in hormone receptor-positive breast cancer in postmenopausal women.

Aspirin

Acetylsalicylic acid, a salicylate that relieves pain and fever, reduces inflammation, and irreversibly inhibits platelet aggregation; it can cause gastrointestinal bleeding and is generally avoided in children with viral illness.

Asthma OTC Medication (Asthma: Over The Counter Treatment)

Alternate index label for Asthma: Over The Counter Treatment.

Attenuated Vaccine

A vaccine made with a weakened microorganism that retains the ability to stimulate immunity.

Alternate Names:

Live attenuated vaccine

Bacterial Vaccine

Bacterial vaccine is a biological organism or infectious agent; its clinical importance depends on the species, host, site, exposure, and evidence of infection or colonization.

BCG Vaccine

A live attenuated vaccine derived from *Mycobacterium bovis* that helps prevent severe forms of tuberculosis, especially in children. Its use depends on national tuberculosis-risk policies.

Behavioral Medicine

An interdisciplinary field integrating behavioral science with medical practice to prevent, diagnose, and treat illness. It addresses psychological factors such as stress, coping, adherence, and health behaviors that influence disease outcomes.

Benzodiazepines

A class of drugs that enhance the effect of the inhibitory neurotransmitter gamma-aminobutyric acid at the GABA-A receptor, increasing the frequency of chloride channel opening and producing anxiolytic, sedative, anticonvulsant, and muscle relaxant effects.

Beta Agonists

Drugs that activate beta-adrenergic receptors, producing effects such as relaxation of airway smooth muscle or increased cardiac stimulation depending on receptor selectivity.

Alternate Names:

Beta-adrenergic agonists; beta-agonist drugs.

Beta Blocker

A drug that blocks beta-adrenergic receptors, lowering sympathetic effects such as heart rate and contractility; beta blockers are used for conditions including hypertension, angina, arrhythmias, and heart failure.

Beta Blockers

A class of medicines that block the effects of adrenaline and related hormones at beta receptors. They usually slow the heart rate, reduce the force of heart contraction, and lower blood pressure. Depending on the medicine, they may be used for high blood pressure, angina, abnormal heart rhythms, heart failure, migraine prevention, tremor, or some symptoms of anxiety.

Beta-Adrenergic Blocker

A drug that antagonizes beta-adrenergic receptors, reducing heart rate, myocardial contractility, and renin release. It is used in selected patients with hypertension, angina, arrhythmias, post-myocardial infarction disease, and heart failure; abrupt withdrawal may worsen ischemia.

Beta-Agonist

A drug that stimulates beta-adrenergic receptors; beta-2 agonists relax airway smooth muscle and are used as bronchodilators.

Beta-Blocker Overdose

Toxic exposure to a beta-adrenergic blocker that may cause slow heart rate, low blood pressure, low blood glucose, bronchospasm, seizures, or altered consciousness. It requires urgent poison-control and medical management.

Beta-Lactamase Inhibitor Combinations

Combinations of beta-lactam antibiotics with beta-lactamase inhibitors that extend activity against beta-lactamase producing organisms. The major combinations include amoxicillin-clavulanate, ampicillin-sulbactam, piperacillin-tazobactam, cefoperazone-sulbactam, and ceftolozane-tazobactam.

Botox

A brand name for botulinum toxin type A, used to reduce muscle activity in selected neurologic, ophthalmic, dermatologic, cosmetic, and other conditions.

C1 Esterase Inhibitor

A plasma protein that regulates the complement, kallikrein-kinin, and coagulation pathways. Deficiency or dysfunction can cause hereditary angioedema.

Calcium Channel Blocker

A drug that inhibits calcium entry through L-type calcium channels, relaxing vascular smooth muscle and, for some agents, slowing cardiac conduction and reducing contractility.

Calcium Channel Blocker Overdose

Toxic exposure to a calcium-channel blocker that may cause low blood pressure, slow heart rate, conduction abnormalities, high blood glucose, or shock. It requires urgent medical and poison-control management.

Calcium Channel Blockers

Medicines that reduce the movement of calcium into heart and blood-vessel muscle cells. Dihydropyridines, such as amlodipine and nifedipine, mainly relax arteries and are used for high blood pressure and angina. Other calcium channel blockers, such as diltiazem and verapamil, also slow the heart rate and electrical conduction and may be used for certain abnormal heart rhythms.

Camptothecin Analogue

A drug structurally related to camptothecin that inhibits topoisomerase I, disrupting DNA replication and causing cancer-cell death; toxicity commonly includes marrow or gastrointestinal effects.

Cancer Vaccine

A vaccine intended either to prevent cancer-causing infections or to stimulate an immune response against cancer cells. Preventive examples target oncogenic infections, while therapeutic vaccines are designed for selected established cancers.

Cardiotonic Agent

A drug or substance that increases the force or efficiency of cardiac contraction, used selectively in heart failure or shock because benefits must be

balanced against arrhythmia and other risks.

Carubicin

A medicine or investigational pharmacologic compound; its mechanism, indication, dosing, interactions, and adverse effects depend on the specific agent and patient.

Carvedilol Phosphate

A medicine or investigational pharmacologic compound; its mechanism, indication, dosing, interactions, and adverse effects depend on the specific agent and patient.

Carzelesin

A medicine or investigational pharmacologic compound; its mechanism, indication, dosing, interactions, and adverse effects depend on the specific agent and patient.

Caspase Inhibitor

A biological or biochemical term referring to caspase inhibitor. Its role depends on the relevant tissue, pathway, or clinical context.

Cebocephaly

A medicine or investigational pharmacologic compound; its mechanism, indication, dosing, interactions, and adverse effects depend on the specific agent and patient.

Celecoxib

A medicine or investigational pharmacologic compound; its mechanism, indication, dosing, interactions, and adverse effects depend on the specific agent and patient.

Checkpoint Inhibitor

A medicine that blocks an inhibitory immune-checkpoint pathway, helping selected immune cells recognize and attack tumor cells. Examples target PD-1, PD-L1, or CTLA-4.

Cholesterol - Drug Treatment

A medicine or chemical compound identified by

cholesterol - drug treatment. Its uses, effects, and risks depend on the specific substance and clinical context.

Cholinesterase Inhibitor

A class of medications that inhibit acetylcholinesterase, the enzyme that breaks down acetylcholine in the synaptic cleft, thereby increasing cholinergic neurotransmission in the central nervous system and peripheral tissues.

Cold And Cough Medicine For Infants And Children

Many nonprescription cold and cough medicines are unsafe or ineffective for young children and can cause sedation, agitation, abnormal heart rate, overdose, or breathing problems. Age-appropriate fluids, saline, humidification, and clinician-guided treatment are safer approaches.

Complementary Medicine

Health practices used together with conventional medical treatment, such as selected mind-body practices or acupuncture; it is distinct from alternative medicine, which replaces conventional care.

Conjugate Vaccine

A vaccine in which a poorly immunogenic polysaccharide antigen is linked to a carrier protein to improve the immune response, especially in infants and young children.

Alternate Names:

Protein-conjugate vaccine; conjugated polysaccharide vaccine.

Conscious Sedation

A drug-induced depression of consciousness in which patients respond purposefully to verbal or tactile stimulation, maintain a patent airway, and retain protective reflexes. Typical agents include midazolam, fentanyl, or low-dose propofol. Indications include endoscopic and minor surgical procedures.

Controlled Substance

A drug or chemical whose manufacture, possession, and use are regulated by government authorities

due to its potential for abuse, dependence, or harm.

COX Inhibitor

A class of drugs that inhibit cyclooxygenase enzymes (COX-1 and COX-2), which catalyze the conversion of arachidonic acid to prostaglandins and thromboxanes. COX-1 is constitutively expressed in most tissues, producing prostaglandins that protect the gastric mucosa, maintain renal blood flow, and support platelet aggregation.

Cox-1 Inhibitor

A drug that inhibits cyclooxygenase-1 and reduces production of prostaglandins and thromboxanes; inhibition can contribute to analgesia but also gastrointestinal, renal, and platelet effects.

Crack (Drug)

A smokable, rapidly acting form of cocaine; it can cause dependence, severe cardiovascular effects, seizures, stroke, psychiatric symptoms, and overdose.

Cutaneous Drug Eruptions

a spectrum of reactions. Exanthematous (maculopapular) is the most common, appearing 4 to 14 days after drug initiation. Urticarial appears within hours. Photoallergic occurs at sun-exposed sites. Lichenoid resembles lichen planus.

Cyclooxygenase Inhibitor

A medicine that reduces production of prostaglandins and may relieve pain and inflammation.

Cymbalta

A brand name for duloxetine, a serotonin-norepinephrine reuptake inhibitor used for depression, anxiety, and selected neuropathic or chronic pain conditions.

Designer Steroid

A chemically modified anabolic-androgenic steroid created to produce performance-enhancing effects or evade detection; products may be unapproved,

contaminated, and medically dangerous.

Diarrhea, Antibiotic-Associated

Alternate index label; see *Antibiotic-associated diarrhea*.

Dietary Steroid

A dietary steroid is a steroid compound consumed in food or supplements; sterols and hormones can affect metabolism or interact with medicines.

Digitalis

A group of cardiac glycosides, including digoxin, that can increase cardiac contraction and affect heart rhythm.

Diphtheria Vaccine

Toxoid vaccine containing formalin-inactivated diphtheria toxin, providing immunity against the exotoxin produced by *Corynebacterium diphtheriae* rather than the bacterium itself.

Disease-Modifying Antirheumatic Drug

A medication that reduces inflammatory disease activity and helps prevent structural damage or disability rather than providing only symptomatic relief. Conventional synthetic, biologic, and targeted synthetic DMARDs are used according to disease and patient factors.

Disulfiram

A medicine used as an adjunct for alcohol-use disorder that inhibits aldehyde dehydrogenase and can cause an unpleasant reaction if alcohol is consumed.

Diuretic

A drug that increases urine production, used for edema (heart failure, cirrhosis, renal disease), hypertension, and electrolyte disorders.

Doctor Of Osteopathic Medicine

A physician who has completed an accredited osteopathic medical degree and residency training and is licensed to diagnose, prevent, and treat disease.

Drug Abuse

A nonpreferred term for harmful or nonmedical use of a drug; current clinical language generally uses substance use, misuse, or substance use disorder according to the situation.

Drug Addiction (Substance Use Disorder)

A chronic disorder involving compulsive substance use despite harmful consequences, with impaired control, cravings, tolerance, or withdrawal.

Alternate Names:

Chemical Dependency Substance Abuse Disorder

Drug Administration Route

The pathway by which a medicine enters the body, such as oral, intravenous, intramuscular, inhaled, topical, or subcutaneous administration.

Drug Allergies

Drug allergies are immune-mediated reactions to a medicine, ranging from rash to anaphylaxis; they must be distinguished from predictable side effects and nonimmune intolerance.

Drug Allergy

An adverse immune-mediated reaction to a medication, representing a hypersensitivity response that is distinct from side effects, toxicities, and idiosyncratic reactions.

Drug Antagonism

An interaction where one drug blocks or decreases the effectiveness of another, such as when an antidote blocks a poison.

Drug Bioavailability

The fraction of an administered drug that reaches systemic circulation unchanged. Oral bioavailability is affected by first-pass metabolism, absorption, and drug formulation. IV administration has 100% bioavailability. Bioavailability influences drug dosing and route selection.

Drug Classification Systems

Systems that group medicines according to proper-

ties such as their chemical structure, mechanism of action, therapeutic use, or effects on the body.

Drug Clearance

The volume of plasma completely cleared of drug per unit time. Hepatic clearance depends on hepatic blood flow and enzyme activity; renal clearance depends on glomerular filtration, tubular secretion, and reabsorption. Total clearance determines maintenance dose.

Drug Dependence

A state of physiological or psychological adaptation to a drug, characterized by a withdrawal syndrome upon discontinuation or dose reduction. Physical dependence: the body has adapted to the presence of the drug, and abrupt cessation produces a predictable withdrawal syndrome specific to the drug class.

Drug Emulsion

A pharmaceutical preparation in which one liquid is dispersed as droplets within another immiscible liquid, often stabilized with an emulsifier.

Drug Eruption

A skin eruption caused by a medication, ranging from a mild morbilliform rash to severe reactions such as Stevens–Johnson syndrome or toxic epidermal necrolysis.

Drug Hypersensitivity Reactions

Immune-mediated adverse reactions to medicines. They may be immediate or delayed and can range from a mild rash to severe systemic illness.

Drug Hypersensitivity Syndrome

A severe delayed drug reaction occurring 2 to 8 weeks after drug initiation. It presents with fever, rash (morbilliform, facial edema, exfoliative dermatitis), lymphadenopathy, eosinophilia, and internal organ involvement (hepatitis most common, also nephritis, pneumonitis, myocarditis).

Drug Implants

Implantable dosage forms or devices that release a medicine over time; selection and monitoring depend on the product and clinical indication.

Drug Induced Liver Disease

Drug-induced liver injury occurs when a medicine, supplement, or toxin damages liver cells or bile flow. It may cause fatigue, nausea, itching, dark urine, jaundice, or no symptoms; identifying and stopping the responsible exposure under medical guidance is central to care.

Drug Interaction

A change in the effect or concentration of one medicine caused by another medicine, food, substance, or disease.

Drug Metabolism

The enzymatic conversion of medicines into metabolites, mainly in the liver but also in the intestine, kidneys, lungs, and other tissues.

Drug Metabolism Pharmacogenomics

Pharmacogenomics of drug metabolism examines how genetic variations affect individual responses to drugs, enabling personalized medicine approaches to prescribing.

Drug Overdose

Excessive ingestion of medication. Common: opioids, benzodiazepines, acetaminophen, salicylates, tricyclic antidepressants. Management: ABCs, activated charcoal, specific antidotes (naloxone, flumazenil, N-acetylcysteine), supportive care.

Drug Overdose Management

Management of poisoning begins with assessment and support of airway, breathing, circulation, and neurologic status. Decontamination, enhanced elimination, and specific antidotes are considered only when appropriate for the substance, timing, and patient.

Drug Packaging

The container, labeling, and protective materials used to preserve a medicine and support correct identification, storage, and use.

Drug Reaction With Eosinophilia And Systemic Symptoms

A severe hypersensitivity syndrome characterized by fever, rash, lymphadenopathy, and multiorgan involvement triggered by medications, requiring prompt drug cessation and systemic corticosteroids.

Drug Resistance

The ability of microorganisms, cancer cells, or parasites to survive and proliferate despite exposure to drugs that were previously effective.

Drug Therapeutics

The use of medicines to prevent, diagnose, or treat disease while balancing expected benefit and potential harm.

Drug Tolerance

A decreased pharmacological response to a drug after repeated administration, requiring dose escalation to achieve the same effect.

Drug Toxicity

Harmful effects caused by a medicine or its metabolites. Toxicity may result from excessive exposure, accumulation, interactions, or an unpredictable individual reaction.

Drug Use First Aid

Immediate care for suspected drug intoxication, including assessment of breathing and responsiveness, emergency activation, overdose-specific support, and naloxone when opioid toxicity is suspected.

Drug Vehicle

An inactive substance or carrier used to deliver an active drug ingredient in a formulation.

Drug Withdrawal

A clinically significant syndrome or return of symp-

toms caused by abrupt reduction or cessation of a drug after physiologic adaptation or dependence has developed. Tapering is required for some medications to reduce withdrawal and rebound effects.

Drug, Prescription

A medicine legally supplied under the order of an authorized prescriber, with its indication, dose, duration, interactions, and risks specified for the patient.

Drug, Sulfa

A sulfonamide drug; some are antibacterial medicines, while others are used as diuretics or for other indications, and sulfonamide reactions vary by drug and patient.

Drug-Drug Interactions

When one drug alters the pharmacokinetics or pharmacodynamics of another. Pharmacokinetic interactions affect absorption, distribution, metabolism, or excretion (e.g., CYP inhibitors increasing warfarin levels).

Drug-Eluting Balloon (Vascular)

A vascular balloon catheter that delivers a medicine to the vessel wall during dilation, without leaving a permanent implant.

Alternate Names:

Vascular

Drug-Eluting Stent

A vascular stent that slowly releases a medicine to reduce tissue growth and the risk of restenosis after angioplasty.

Drug-Eluting Stent (Vascular)

A vascular stent coated with medicine that is released gradually to reduce tissue growth and recurrent narrowing.

Alternate Names:

Vascular

Drug-Facilitated Sexual Assault

Sexual contact occurring when a person's capacity to

consent or resist is impaired by alcohol, medication, or another drug, whether administered covertly or knowingly consumed. Medical care includes urgent safety assessment, treatment of injuries, toxicology sampling when indicated, prophylaxis, and trauma-informed support.

Drug-Induced Autoimmunity

Drug-induced lupus (DIL): procainamide, hydralazine, isoniazid, minocycline, TNF inhibitors, anti-TNF; anti-histone antibodies, positive ANA, negative anti-dsDNA/anti-Sm; symptoms resolve after drug cessation.

Drug-Induced Diarrhea

Diarrhea caused by a medicine or drug interaction. Common causes include antibiotics, laxatives, metformin, and medicines that alter intestinal motility.

Drug-Induced Immune Hemolytic Anemia

An uncommon immune-mediated destruction of red blood cells triggered by a medication; evaluation includes blood tests and review of exposures, with specialist management.

Drug-Induced Liver Injury

Liver damage caused by a medicine, herbal product, or dietary supplement. It may produce abnormal liver tests, hepatitis, cholestasis, or liver failure; evaluation requires considering the exposure, timing, competing causes, and severity.

Drug-Induced Low Blood Sugar

Low blood glucose caused by a medicine, most often insulin or an insulin secretagogue. Symptoms may include sweating, tremor, confusion, seizure, or loss of consciousness.

Drug-Induced Lupus Erythematosus

A lupus-like autoimmune syndrome caused by certain medicines. Symptoms commonly include joint pain, muscle pain, and fever and usually improve after the causative medicine is stopped.

Drug-Induced Pulmonary Disease

A pharmacologic agent associated with drug-Induced Pulmonary Disease; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

Drug-Induced Thrombocytopenia

A low platelet count caused by a medicine through immune destruction, reduced production, or other mechanisms, increasing bleeding risk.

Drug-Induced Tremor

Tremor caused or worsened by a medicine, stimulant, or toxin. Assessment considers timing, dose, other causes, and whether the medicine can be changed.

DTaP Vaccine

Diphtheria, Tetanus, and acellular Pertussis vaccine given at 2, 4, 6, and 15-18 months, and 4-6 years. Protects against three serious bacterial diseases. Diphtheria causes respiratory and cardiac complications. Tetanus causes lockjaw and muscle rigidity. Pertussis causes whooping cough, most severe in young infants.

Effornithine

A medicine that inhibits ornithine decarboxylase; topical use reduces unwanted facial hair, while intravenous use has been used against selected trypanosome infections.

Elavil

A brand name formerly associated with amitriptyline, a tricyclic antidepressant used for depression and selected pain, migraine, or sleep-related indications.

Enzyme Inhibitor

A substance that reduces enzyme activity by binding the active site or another regulatory site, thereby altering a biochemical pathway or therapeutic target.

EpiPen

A brand of epinephrine auto-injector used for emer-

gency treatment of anaphylaxis.

Estrogen Inhibitor

Estrogen inhibitor is a medical term whose precise meaning depends on the clinical context, associated findings, and source definition.

Etidronate

A bisphosphonate used in selected conditions involving abnormal bone remodeling.

Evidence-Based Medicine

Integration of best research evidence with clinical expertise and patient values. Foundation for clinical guidelines.

Expectorant

A medicine intended to help loosen or mobilize respiratory mucus so it can be coughed up; benefit varies by cause and product.

Extensively Drug-Resistant TB

TB resistant to isoniazid, rifampin, fluoroquinolones, and at least one injectable agent. Very limited treatment options and poor outcomes.

Family Medicine

A medical specialty providing comprehensive continuing care for people of all ages, including prevention, acute illness, chronic disease, and coordination of referrals.

Fentanyl

A potent synthetic opioid analgesic used for severe pain and anesthesia. It can cause respiratory depression, sedation, constipation, nausea, tolerance, dependence, and fatal overdose, especially when combined with alcohol or other sedatives.

Fertility Agent

A medicine or biologic intervention intended to improve the chance of conception by inducing ovulation, supporting sperm production, or treating a reproductive mechanism.

Fidaxomicin

A narrow-spectrum oral macrocyclic antibiotic used to treat *Clostridioides difficile* infection. It has minimal systemic absorption and reduces disruption of normal intestinal flora compared with many alternatives, but recurrence can still occur.

Filgrastim

A recombinant granulocyte colony-stimulating factor that increases production and release of neutrophils from bone marrow. It is used to reduce or treat selected forms of chemotherapy-related neutropenia; bone pain and rare splenic complications can occur.

Finasteride

A 5-alpha-reductase inhibitor used for benign prostatic enlargement and some types of hair loss.

Fixed Drug Eruption

A recurrent drug reaction appearing at the same site with each exposure to the offending drug. It presents as well-demarcated, round to oval, erythematous to violaceous plaques that may blister. Common culprits include sulfonamides, tetracyclines, NSAIDs, and barbiturates.

Fluticasone

A corticosteroid available in inhaled, nasal, topical, and other formulations to reduce inflammation. Adverse effects depend on route and may include local irritation, oral candidiasis, skin thinning, adrenal suppression, or growth effects with prolonged exposure.

Food-Drug Interaction

An alteration in drug absorption, metabolism, distribution, or effect caused by a food, beverage, nutrient, or supplement. Examples include vitamin K affecting warfarin response, grapefruit affecting selected CYP3A4 substrates, and calcium impairing absorption of some medicines.

Forensic Medicine

Application of medical knowledge to legal questions, including injury interpretation, cause of death, tox-

cology, identification, sexual assault evaluation, and documentation.

Forensic Medicine (Legal Medicine)

Branch of medicine that applies medical, biological, and scientific knowledge to legal questions and the administration of justice.

Alternate Names:

Legal Medicine

Foscarnet

An intravenous antiviral agent used for selected cytomegalovirus or herpesvirus infections, especially when resistance or intolerance limits other treatment. Important toxicities include kidney injury and disturbances of calcium, magnesium, potassium, or phosphate.

Furosemide

A loop diuretic that inhibits sodium and chloride reabsorption in the thick ascending limb of the loop of Henle, increasing urine production. It treats edema and some cases of hypertension but can cause dehydration, low electrolytes, kidney injury, and ototoxicity.

Ganglionic Blocker

A class of drugs that block nicotinic acetylcholine receptors at autonomic ganglia (both sympathetic and parasympathetic), inhibiting neurotransmission in both divisions of the autonomic nervous system.

Generic Drug

A medicine equivalent to a brand-name medicine in active ingredient, strength, dosage form, and intended use, usually sold under a nonproprietary name.

Alternate Names:

Generic medicine

Generic Medicine

A medicine containing the same active ingredient, strength, dosage form, route, and intended clinical effect as an approved reference product. Regulatory requirements generally include demonstration of

pharmaceutical equivalence and bioequivalence.

Generic Name, Drug

A medicine, biologic, or pharmacologic term related to generic name, drug; its mechanism, indication, interactions, and adverse effects depend on the specific agent.

Genomic Medicine

Use of a person's genetic or genomic information to guide disease diagnosis, risk assessment, prevention, or treatment.

Geriatric Medicine

The medical specialty focused on the health, function, diseases, medications, and goals of older adults, often using comprehensive and coordinated care.

Growth Inhibitor

growth inhibitor is a medical or biological concept whose definition and clinical significance depend on its characteristic features, setting, associated findings, and clinical context.

Haemophilus Vaccine

haemophilus vaccine is a bacterial taxon; disease risk and clinical significance depend on the strain, specimen source, host factors, and evidence of infection rather than colonization.

Heparin

An anticoagulant that reduces formation and extension of blood clots.

Hepatic Drug Metabolism

The liver chemically modifies medicines through reactions such as oxidation, reduction, hydrolysis, and conjugation. These reactions can inactivate a drug, activate a prodrug, or produce an active or toxic metabolite, and are influenced by genetics, disease, age, and other medicines.

Hepatitis B Vaccine

Recombinant vaccine given at birth, 1-2 months, and 6-18 months. Protects against hepatitis B virus,

which can cause chronic liver disease, cirrhosis, and hepatocellular carcinoma. Also prevents perinatal transmission when given to infants of HBsAg-positive mothers within 12 hours of birth, plus hepatitis B immune globulin.

Hepatitis B Vaccine (Birth Dose)

The first dose of the hepatitis B vaccine is recommended within 24 hours of birth for all medically stable infants. Administered IM in the vastus lateralis. Prevents perinatal transmission of HBV. For infants born to HBsAg-positive mothers: HBIG (0.5 mL IM) is given within 12 hours of birth along with the vaccine.

Alternate Names:

Birth Dose

HER2 Inhibitor

A targeted cancer treatment that blocks signaling through human epidermal growth factor receptor 2 in cancers with HER2 overexpression or amplification.

High Blood Pressure - Medicine-Related

Hypertension caused or worsened by a medicine or substance, such as NSAIDs, steroids, decongestants, stimulants, oral contraceptives, or immunosuppressants; review and substitution may improve control.

Histamine-2 Receptor Antagonist

A drug that blocks histamine H2 receptors on gastric parietal cells, reducing gastric acid secretion. Agents: cimetidine, ranitidine, famotidine, nizatidine. Used for GERD, peptic ulcer disease, and dyspepsia—less potent than PPIs. Adverse effects: headache, diarrhea, confusion (elderly, cimetidine), and rare thrombocytopenia.

Hormone Inhibitor

A medicine or biologic that blocks hormone synthesis, release, receptor binding, or downstream signaling, used in selected endocrine disorders and hormone-sensitive cancers.

HPV Vaccine

Human Papillomavirus vaccine given at 11-12 years

(can start at 9), with series completion by 15 years. Two-dose series if started before 15; three-dose series if started at 15 or older. Protects against HPV types causing cervical cancer, oropharyngeal cancer, and genital warts. Gardasil 9 covers nine HPV types.

Hypoglycemic Agent

A medicine that lowers blood glucose, including insulin, insulin secretagogues, insulin sensitizers, incretin-based drugs, and sodium-glucose cotransporter inhibitors; choice depends on diabetes type and patient risks.

Hypolipidemic Agent

A medication that lowers blood lipids such as cholesterol or triglycerides.

Imitrex

A brand name for sumatriptan, a serotonin receptor agonist used for acute treatment of migraine and cluster headache in selected patients.

Immunosuppressant

A drug that reduces immune system activity, used to prevent organ transplant rejection and to treat autoimmune and inflammatory diseases.

Immunosuppressant Drug

A medicine that reduces immune-system activity, often to prevent transplant rejection or treat autoimmune disease.

Immunosuppressive Drug

A drug that suppresses immune responses, used for organ transplantation, graft-versus-host disease, and autoimmune/inflammatory diseases.

Inactivated Polio Vaccine

Salk vaccine, a formalin-inactivated preparation containing all three poliovirus serotypes (1, 2, and 3), administered by intramuscular injection. The only polio vaccine used in the United States since 2000, and the recommended vaccine for immunocompromised individuals and pregnant women worldwide.

Influenza Vaccine

Inactivated influenza vaccine given annually starting at 6 months of age. Two doses needed in the first season for children under 9. Live attenuated nasal spray vaccine (FluMist) available for children over 2. Updated annually to match circulating strains. Reduces influenza complications, hospitalizations, and deaths.

Inotrope

A drug that changes myocardial contractility; positive inotropes increase the force of contraction. Dobutamine and milrinone may be used short term under specialist monitoring for cardiogenic shock or selected cases of acute decompensated heart failure with low output. Dopamine, epinephrine, and norepinephrine are primarily vasopressors or emergency agents with additional inotropic effects, while digoxin is a separate cardiac glycoside used in selected chronic heart-failure or rate-control settings. These medicines can cause arrhythmias, ischemia, or other serious effects and are not routine long-term treatment for chronic heart failure.

Integrative Medicine For Cancer Treatment

A medicine or chemical compound called integrative medicine for cancer treatment. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Intensive Care Medicine

Specialty managing critically ill patients. Components: monitoring, ventilatory support, hemodynamic support, infection control, nutrition, sedation, pain management. Common conditions: sepsis, ARDS, traumatic brain injury, post-cardiac arrest, multiorgan failure.

Internal Medicine

The medical specialty focused on prevention, diagnosis, and nonsurgical treatment of diseases in adults, including complex multisystem illness.

Japanese Encephalitis Vaccine

A vaccine that protects against Japanese encephali-

tis, a mosquito-borne viral infection of the central nervous system. Vaccine type, schedule, and eligibility depend on age, destination or exposure risk, and local recommendations.

Laxative

A drug that promotes bowel evacuation, used for constipation and bowel preparation. Classes: bulk-forming (psyllium, methylcellulose), osmotic (polyethylene glycol, lactulose, magnesium salts), stimulant (senna, bisacodyl), stool softener (docusate), and lubricant (mineral oil). Choice depends on constipation type and patient factors.

Legal Medicine

The application of medical knowledge to legal questions, including forensic examination, injury assessment, death investigation, and issues of capacity or consent.

Lipitor

A brand name for atorvastatin, an HMG-CoA reductase inhibitor used to reduce low-density lipoprotein cholesterol and cardiovascular risk.

Liquid Medication Administration

A medicine or pharmacologic agent called liquid medication administration. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

Local Anesthetic

A medication that causes reversible loss of sensation in a specific, localized area of the body without affecting consciousness. Local anesthetics block voltage-gated sodium channels in nerve cell membranes, preventing action potential generation and propagation.

Luteinizing Hormone-Releasing Hormone Agonist

A medicine that initially stimulates and then suppresses reproductive-hormone production with continued use.

Alternate Names:

GnRH agonist; LHRH agonist

Macrolide Antibiotic

An antibiotic of the macrolide class that binds the bacterial 50S ribosomal subunit and usually inhibits protein synthesis; activity and resistance vary by organism and drug.

Malaria Vaccine

A vaccine intended to reduce malaria caused by *Plasmodium* parasites, especially *P. falciparum*; the RTS,S/AS01 and R21/Matrix-M vaccines are used in recommended childhood immunization programs in some endemic settings, alongside other preventive measures.

Manufactured Form

A drug, chemical, nutrient, or other product prepared by an industrial or laboratory process into a defined formulation, such as a tablet, capsule, solution, or injectable preparation.

MAO Inhibitor

A drug that inhibits monoamine oxidase, the enzyme that metabolizes monoamine neurotransmitters; some are used for depression or Parkinson disease and require attention to interactions and dietary precautions.

Me-Too Drug

A medicine, biologic, or pharmacologic term related to me-too drug; its mechanism, indication, interactions, and adverse effects depend on the specific agent.

Measles Vaccine

Measles vaccine is a live attenuated vaccine that induces active immunity against measles virus. It is usually given as part of the measles–mumps–rubella (MMR) or measles–mumps–rubella–varicella (MMRV) vaccine.

Measles-Rubella Vaccine

A combined live attenuated vaccine containing measles and rubella antigens without the mumps component, widely used in countries where mumps is not a significant public health burden, including India's Universal Immunization Schedule.

Medication

A medicine, biologic, or pharmacologic term related to medication; its mechanism, indication, interactions, and adverse effects depend on the specific agent.

Medication Adherence

The extent to which a patient's medication-taking behavior corresponds with the agreed treatment plan. Adherence is influenced by understanding, adverse effects, cost, access, regimen complexity, beliefs, and cognitive or social factors.

Medication Adverse-Effect Profile

The clinically relevant pattern of predictable pharmacologic effects and harmful reactions associated with a medication. It includes common dose-related effects, serious rare events, organ-specific toxicity, interactions, and monitoring requirements.

Medication Cascade

A prescribing sequence in which an adverse drug effect is misinterpreted as a new medical condition and another drug is prescribed to treat it. Recognizing cascades is an important goal of medication reconciliation and deprescribing.

Medication Deprescribing

A planned, supervised process of reducing the dose or stopping a medicine when its current or future harms outweigh its benefits or when treatment goals change. Tapering may be required to prevent withdrawal or rebound disease.

Medication Error

A preventable event that may cause or lead to inappropriate medication use or patient harm while the medication is in the control of a healthcare professional, patient, or consumer. Errors can occur during prescribing, transcribing, dispensing, administration, or monitoring.

Medication Management

The systematic process of optimizing pharmacotherapy to achieve therapeutic goals while minimizing adverse effects, encompassing prescribing, dispens-

ing, administration, monitoring, and deprescribing.

Medication Overuse Headaches

Frequent headaches caused or worsened by regular overuse of headache medicines.

Alternate Names:

Rebound Headache

Medication Reconciliation

A structured process of obtaining and comparing the most accurate medication list with current prescriptions at transitions of care. It identifies omissions, duplications, incorrect doses, interactions, and unintended changes.

Medication Review

Systematic examination of all medications for appropriateness. Components: indication, efficacy, safety, adherence, interactions. Tools: Beers Criteria, STOPP/START. Goals: deprescribing, optimizing therapy, reducing adverse effects.

Medication Safety

Practices that reduce medication errors and prevent avoidable harm during prescribing, dispensing, administration, and use.

Medication Side Effects

Unintended harmful responses to medications occurring at standard doses, ranging from mild (nausea, rash, dry mouth) to severe (anaphylaxis, Stevens-Johnson syndrome, QT prolongation, hepatotoxicity).

Medicine

A substance, preparation, or therapeutic practice used to prevent, diagnose, relieve, or treat disease.

Meningococcal Vaccine

Conjugate vaccine (MenACWY) and serogroup B vaccine (MenB) given at 11-12 years with booster at 16 years. Protects against *Neisseria meningitidis*, causing meningitis and septicemia. MenACWY booster at 16 years covers the high-risk period for serogroup C and Y disease.

Mineralocorticoid Receptor Antagonist

A drug that blocks aldosterone receptors, promoting natriuresis while limiting potassium loss and adverse cardiac remodeling. Spironolactone and eplerenone improve outcomes in selected heart-failure patients; hyperkalemia and renal dysfunction require monitoring.

MMR Vaccine

A live attenuated vaccine against measles, mumps, and rubella. It is given according to the immunization schedule and is generally avoided during pregnancy and in people with certain severe immune deficiencies.

Molecular Medicine

Molecular medicine applies molecular and cellular biology to understand, diagnose, prevent, and treat disease. It includes genomics, precision oncology, molecular biomarkers, targeted therapy, and other mechanism-based approaches.

Monoamine Oxidase Inhibitor

A medicine, biologic, or pharmacologic term related to monoamine oxidase inhibitor; its mechanism, indication, interactions, and adverse effects depend on the specific agent.

MRNA Vaccine

A vaccine delivering messenger RNA encoding a pathogen antigen that host cells translate into protein, triggering an immune response. Approved for COVID-19 (Pfizer-BioNTech, Moderna) and RSV; under study for influenza, cancer, and other infections.

Multi-Drug Resistance

Multidrug resistance is resistance of a microorganism, cancer, or other disease process to multiple drugs that would otherwise be active. Mechanisms include target changes, drug inactivation, reduced uptake, efflux, and altered repair or survival pathways.

Multidrug-Resistant Extensively

Drug-Resistant TB

Multidrug-resistant tuberculosis is resistant to key first-line drugs, while extensively drug-resistant TB has additional resistance that greatly limits options. Diagnosis requires molecular or culture testing, and treatment uses prolonged individualized combinations with public-health oversight.

Neuropathy Secondary To Drugs

Drug-induced neuropathy is peripheral nerve damage caused by a medicine or toxin, often producing numbness, burning pain, weakness, or altered reflexes; management may require dose reduction, withdrawal, and treatment of symptoms.

Nonsteroidal Anti-Inflammatory Drug

A medicine that inhibits cyclooxygenase enzymes and reduces prostaglandin production, producing analgesic, anti-inflammatory, and fever-reducing effects. NSAIDs can cause gastrointestinal, kidney, cardiovascular, or other adverse effects.

NSAIDs

Nonsteroidal anti-inflammatory drugs are a class of drugs that inhibit cyclooxygenase enzymes, COX-1 and COX-2, reducing the synthesis of prostaglandins and thromboxanes from arachidonic acid. They produce analgesic, anti-inflammatory, antipyretic, and antiplatelet effects.

Nuclear Medicine

A medical specialty that uses small amounts of radioactive substances (radiotracers) to diagnose, stage, and treat various diseases, including cancer and heart disease.

Nuclear Medicine Documentation

Record keeping for radioactive materials, including inventory, disposal, administered activity, and patient release.

Nuclear Medicine Reporting

Structured interpretation of nuclear medicine studies using standardized terminology and clinically relevant findings.

Nuclear Medicine Resolution

Ability of a PET or SPECT system to distinguish small details, limited by factors such as positron range, non-collinearity, and detector geometry.

Occupational Medicine

The medical specialty concerned with the effects of work on health, prevention of work-related illness and injury, and safe return to work.

Opioid Analgesics

A class of drugs that bind to opioid receptors in the central and peripheral nervous systems, producing analgesia and other effects.

Opioid Antagonist

A medicine that blocks opioid receptors and can reverse opioid effects such as respiratory depression. Naloxone is a commonly used example.

Opioids

A class of drugs that bind to opioid receptors in the central and peripheral nervous systems, producing analgesia and other effects. See Opioid Analgesics.

Oral Hypoglycemic

A class of drugs used to treat type 2 diabetes (with lifestyle).

Oral Medicine

Specialty diagnosing oral mucosal diseases, dental causes of facial pain, oral manifestations of systemic disease.

Oral Polio Vaccine

A live attenuated poliovirus vaccine administered by mouth. Its formulation and use depend on the public-health program and circulating poliovirus strains; it has played an important role in polio control.

Oriental Medicine (Traditional)

A biological or biochemical term involving oriental medicine (traditional). Its role depends on the relevant cells, molecules, and physiological process.

Orphan Drug

A pharmaceutical agent developed specifically to treat a rare medical condition (affecting fewer than 200,000 people in the United States, as defined by the Orphan Drug Act of 1983).

Over-The-Counter (OTC) Drug

A pharmacologic agent associated with over-The-Counter (OTC) Drug; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

Over-The-Counter Drug

A medication that can be purchased without a prescription, deemed safe and effective for self-medication when used according to label instructions. OTC drugs have established safety profiles, low toxicity, and clear dosing guidelines suitable for consumer use.

P2Y₁₂ Inhibitor

An antiplatelet drug that blocks the platelet P2Y₁₂ ADP receptor, reducing activation and aggregation. Clopidogrel, prasugrel, and ticagrelor are used in selected acute coronary syndrome and percutaneous coronary intervention settings, with bleeding and drug-specific contraindications considered.

Palifermin

A pharmacologic agent associated with palifermin; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

Palonosetron

A pharmacologic agent associated with palonosetron; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

Parasympatholytic

A drug that blocks muscarinic (cholinergic) receptors, inhibiting parasympathetic nervous system activity. Agents: atropine (bradycardia, organophosphate poisoning), ipratropium/tiotropium (COPD/asthma—bronchodilation), scopolamine

(motion sickness), oxybutynin/tolterodine (overactive bladder), and glycopyrrolate.

Parasympathomimetic

A drug that mimics or enhances parasympathetic (cholinergic) activity. Direct agonists: muscarinic (pilocarpine—glaucoma, dry mouth) and nicotinic agonists.

Paroxetine

Paroxetine is a selective serotonin-reuptake inhibitor used for depression, anxiety disorders, obsessive-compulsive disorder, PTSD, and some other conditions; sexual dysfunction, withdrawal symptoms, serotonin syndrome, and pregnancy-related risks require consideration.

Pediatric Nuclear Medicine

Special considerations for children: lower doses, sedation often needed, distraction techniques. Dose reduction: weight-based activity, optimized protocols.

Pefloxacin

A pharmacologic agent associated with pefloxacin; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

PEG

A pharmacologic agent associated with pEG; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

Pegargiminase

A pharmacologic agent associated with pegargiminase; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

Pegaspargase

A pharmacologic agent associated with pegaspargase; its mechanism, indications, interactions, contraindications, and adverse effects depend on the

specific product.

Pegfilgrastim

A pharmacologic agent associated with pegfilgrastim; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

Penicillamine

A chelating and immunomodulatory medicine used in selected copper overload and autoimmune disorders.

Pentavalent Vaccine

A WHO-prequalified five-in-one combination vaccine containing Diphtheria toxoid, Tetanus toxoid, whole-cell Pertussis antigen, Hepatitis B (HBsAg), and Haemophilus influenzae type b (Hib) conjugate, administered as a single intramuscular injection.

Pentobarbital

A barbiturate sedative and anticonvulsant with substantial respiratory-depression and overdose risk.

Pergolide

A pharmacologic agent associated with pergolide; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

Perioperative Antibiotic Prophylaxis

Administration of an appropriate antimicrobial within a defined interval before incision to reduce infection risk for selected procedures. Choice, timing, redosing, and discontinuation depend on procedure, organisms, patient factors, and local guidance.

Personalized Medicine

An approach that uses a person's biological, clinical, and sometimes genetic information to guide prevention, diagnosis, or treatment.

Pertussis Vaccine

A vaccine containing selected antigens from Bordetella pertussis, given in combination vaccines to

prevent whooping cough and reduce severe disease and transmission.

Pharmaceutical

Relating to medicines or the preparation and manufacture of medicines.

Pharmacodynamic Interaction

A drug interaction in which one drug changes the effect of another at its site of action without necessarily changing its concentration. Effects may be additive, synergistic, or antagonistic, such as combined respiratory depression or bleeding risk.

Pharmacokinetic Interaction

A drug interaction that changes absorption, distribution, metabolism, or excretion of another drug, thereby altering its concentration over time. Enzyme inhibition, enzyme induction, transporter effects, and altered gastric pH are common mechanisms.

Phosphodiesterase Inhibitor

A class of drugs that inhibit phosphodiesterase enzymes, which break down cyclic nucleotides (cAMP and cGMP), thereby increasing intracellular levels of these second messengers and potentiating their downstream effects.

Physical Medicine And Rehabilitation

A medical procedure, treatment, device, or care topic related to physical medicine and rehabilitation; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Pneumococcal Conjugate Vaccine

A vaccine that links pneumococcal polysaccharides to a carrier protein to produce protective immunity against selected Streptococcus pneumoniae serotypes. Product choice and schedule depend on age, vaccination history, medical risk, and local recommendations.

Pneumococcal Vaccine

A vaccine that protects against disease caused by

Streptococcus pneumoniae, including invasive infection, pneumonia, meningitis, and otitis media; product and schedule depend on age and risk.

Poliovirus Vaccine

poliovirus vaccine is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Prazosin

An alpha-1 blocker that relaxes blood vessels and smooth muscle.

Pre-Medication

Medicine given before a procedure, treatment, or exposure to prevent a predictable problem such as pain, nausea, allergy, infection, or anxiety.

Precision Medicine

Treatment tailored to individual tumor characteristics. Requires molecular profiling.

Prescription Drug

A medication whose dispensing or use is subject to prescription requirements under the applicable law. It requires professional oversight because of its risks, complexity, or need for monitoring; regulatory approval and prescribing rules vary by country and product.

Procalcitonin-Guided Antibiotic Therapy

The use of procalcitonin levels to guide initiation and discontinuation of antibiotics. Procalcitonin is a biomarker that rises in bacterial infections and falls with effective treatment. Elevated levels support the need for antibiotic therapy, while declining levels support discontinuation.

Prostaglandin Antagonist

A drug that blocks a prostaglandin receptor or pathway, reducing selected prostaglandin-mediated effects such as inflammation, pain, uterine contraction, or gastric secretion.

Protease Inhibitor

A class of antiretroviral drugs that block the viral protease enzyme responsible for cleaving polyprotein precursors into functional proteins during HIV replication, preventing the formation of mature, infectious virions. Used in combination antiretroviral therapy for HIV infection.

Proteasome Inhibitor

proteasome inhibitor is a medicine or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

Proton Pump Inhibitor

A class of medications that irreversibly inhibit the gastric H⁺/K⁺ ATPase (proton pump) in parietal cells, the final common pathway of gastric acid secretion, producing profound and sustained suppression of both basal and stimulated acid production.

Psychotropic Drug

psychotropic drug is a medicine or pharmacologic agent; its indication, dose, interactions, contraindications, and adverse effects depend on the specific product and patient.

Psychotropic Medication

A medicine, biologic, or pharmacologic term related to psychotropic medication; its mechanism, indication, interactions, and adverse effects depend on the specific agent.

Pulmonary Medicine

A biomedical term referring to pulmonary medicine; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Rabies Vaccine

A vaccine containing inactivated rabies virus used for preexposure protection or postexposure prophylaxis after a possible rabies exposure, together with wound care and immune globulin when indicated.

Rehabilitation Medicine

Physician specialty focusing on function, quality of life for patients with impairment, disability. Also called physiatry.

Alternate Names:
physiatry.

Renal Drug Excretion

The elimination of drugs by the kidney through glomerular filtration, active tubular secretion, and passive tubular reabsorption. Drugs eliminated renally (e.g., aminoglycosides, vancomycin, lithium, metformin) require dose adjustment in renal impairment.

Renin Inhibitor

A class of antihypertensive drugs that directly inhibit renin, the first and rate-limiting enzyme in the renin-angiotensin-aldosterone system. Renin catalyzes the conversion of angiotensinogen to angiotensin I, which is then converted to angiotensin II by ACE. Aliskiren is the only direct renin inhibitor available.

Resistance Antibiotic (Antibiotic Resistance)

Alternate index label for Antibiotic Resistance.

Rock (Drug)

A medicine, biologic, or pharmacologic term related to rock (drug); its mechanism, indication, interactions, and adverse effects depend on the specific agent.

Rohypnol

A brand name for flunitrazepam, a benzodiazepine not approved in some countries and associated with sedation, dependence, misuse, and serious interaction with other central-nervous-system depressants.

Rotavirus Vaccine

An oral live attenuated vaccine that protects infants and young children against severe rotavirus gastroenteritis. The product, schedule, and age limits depend on the immunization program; mild fever

or diarrhea may occur.

Scabicide

A medicine that kills scabies mites.

Sedative

A medication that reduces central nervous system activity, producing calming effects, drowsiness, and sleep at higher doses. Sedatives are used for anxiety, procedural sedation, insomnia, and as adjuncts in anesthesia.

Selective Serotonin Reuptake Inhibitor

A medicine, biologic, or pharmacologic term related to selective serotonin reuptake inhibitor; its mechanism, indication, interactions, and adverse effects depend on the specific agent.

SGLT2 Inhibitor

A drug that reduces sodium-glucose cotransport in the proximal renal tubule, increasing urinary glucose and sodium excretion.

Siddha Medicine

Siddha medicine is a traditional South Asian healing system using dietary, herbal, mineral, and other practices; products may have contamination, toxicity, or interaction risks.

Skeletal Muscle Relaxant

A medication that reduces muscle spasm, spasticity, and associated pain.

Sleep Drug

A medicine, biologic, or pharmacologic term related to sleep drug; its mechanism, indication, interactions, and adverse effects depend on the specific agent.

SMART Goals For Antibiotic Stewardship

Stewardship objectives that are specific, measurable, achievable, relevant, and time-limited. They define a clear antimicrobial-use or patient-outcome target and a way to monitor progress.

Sports Medicine

The field concerned with prevention, diagnosis, treatment, and rehabilitation of activity-related injury and performance problems.

Steroid

A compound with a characteristic four-ring structure, including corticosteroids and sex hormones.

Steroid Abuse

Steroid misuse is non-prescribed or excessive use of corticosteroids or anabolic-androgenic steroids, which can cause endocrine suppression, psychiatric effects, infection, metabolic disease, liver injury, cardiovascular harm, or tissue damage.

Steroid Hormones

Lipid-soluble hormones derived from cholesterol, including cortisol, aldosterone, estrogen, progesterone, and testosterone.

Steroid Injections - Tendon, Bursa, Joint

Injection of a corticosteroid, often with local anesthetic, into or around a joint, bursa, or tendon sheath to reduce inflammation and pain; injections directly into tendons are generally avoided because of rupture risk.

Tamoxifen

A selective estrogen-receptor modulator used mainly to treat or prevent selected breast cancers.

Tamsulosin

Tamsulosin is a selective alpha-1A blocker that relaxes prostate and bladder-neck smooth muscle to improve urinary symptoms of benign prostatic hyperplasia; dizziness, postural hypotension, and ejaculatory dysfunction may occur.

TCA's

Tricyclic antidepressants are a class of drugs that inhibit the reuptake of serotonin and norepinephrine, similar to SNRIs, but also block histamine H1 receptors, muscarinic acetylcholine receptors, and alpha-1 adrenergic receptors, producing numerous side ef-

fects.

Tdap Vaccine

Tetanus, Diphtheria, and acellular Pertussis booster given at 11-12 years and during each pregnancy (27-36 weeks gestation). Replaces one dose of Td. Important for pertussis protection, particularly for protecting newborns through maternal antibody transfer. Also given to adolescents and adults to maintain tetanus and diphtheria immunity.

Tenormin

A brand name for atenolol, a beta-adrenergic blocker used for selected cardiovascular conditions.

Terazosin

A medicine or pharmacologic agent called terazosin. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

Therapeutic Drug Levels

A medicine or pharmacologic agent called therapeutic drug levels. Its uses, contraindications, interactions, and adverse effects depend on the specific agent and patient.

Therapeutic Drug Monitoring

The clinical practice of measuring specific drug concentrations in blood or plasma to individualize drug dosing and ensure therapeutic effectiveness while minimizing toxicity. TDM is particularly important for drugs with narrow therapeutic indices, where small changes in concentration can lead to therapeutic failure or toxicity.

Thrombolytic

A drug that dissolves blood clots by activating plasminogen to plasmin, which degrades fibrin. Agents: alteplase (tPA), tenecteplase (TNK-tPA), reteplase, streptokinase, urokinase. Indications: acute ischemic stroke (within 4.5 hours), STEMI, massive pulmonary embolism, and acute limb ischemia.

Thrombolytic Drugs For Heart Attack

A pharmacologic agent associated with thrombolytic

Drugs For Heart Attack; its mechanism, indications, interactions, contraindications, and adverse effects depend on the specific product.

Tranquillisers

An older term for medicines that reduce anxiety or agitation, including benzodiazepines and some antipsychotics.

Transfusion Medicine

Blood components: PRBCs (leukoreduced, irradiated for at-risk), FFP (coagulation factors), platelets (apheresis pooled, leukoreduced), cryoprecipitate (fibrinogen, vWF, factor VIII, XIII). ABO/Rh compatibility.

Travel Medicine

Medical care concerned with prevention and treatment of health problems related to travel.

Tricyclic Antidepressant Overdose

Anticholinergic effects, cardiac toxicity (QRS prolongation, arrhythmias), seizures, hypotension. Treatment: sodium bicarbonate (QRS >100 ms), seizure control, supportive care.

Trimox

A brand name for amoxicillin, a penicillin-class antibiotic used for susceptible bacterial infections.

Tumor Necrosis Factor Inhibitor

TNF inhibitor (biologic): monoclonal antibodies/fusion proteins blocking TNF-alpha—infliximab, adalimumab (monoclonals), etanercept (soluble receptor), certolizumab, golimumab. Used in rheumatoid arthritis (after methotrexate failure), ankylosing spondylitis, psoriatic arthritis, psoriasis, IBD (Crohn, UC).

Tylenol

A brand name for acetaminophen, also called paracetamol, used to reduce pain and fever.

Tyrosine Kinase Inhibitor

A class of targeted cancer therapy drugs that in-

hibit tyrosine kinases, enzymes that phosphorylate tyrosine residues on proteins and activate signaling pathways involved in cell growth, proliferation, differentiation, and survival. Tyrosine kinase mutations or overexpression drive many cancers.

Uricosuric Agent

A medicine that increases renal excretion of uric acid, lowering serum urate in selected patients with gout. Adequate kidney function and hydration are important, and urinary uric-acid stones may be a concern.

Urine Drug Screen

Immunoassay-based screening for common drugs of abuse in urine. Detects: amphetamines, benzodiazepines, cocaine (benzoylecgonine), opiates (morphine, codeine, heroin), oxycodone, methadone, fentanyl, barbiturates, PCP, THC (cannabinoids), and alcohol. Pros: rapid (minutes at POC), inexpensive.

Uterotonic

A medication that stimulates uterine contraction, used for induction/augmentation of labor, prevention and treatment of postpartum hemorrhage, and medical termination of pregnancy.

Vaccine

A biological preparation that stimulates an immune response to a pathogen or its components. Vaccines are used mainly to prevent infection or reduce disease severity; a limited number are used in therapeutic settings.

Vaccine Adjuvant

A substance added to some vaccines to enhance and prolong the immune response to the antigen. Examples include aluminum salts and newer adjuvant systems.

Vaccine Development

The research and testing process used to create a vaccine, including antigen selection, laboratory studies, clinical trials, manufacturing, safety monitoring, and regulatory review.

Vaccine Immunology

The study of how vaccines stimulate innate and adaptive immune responses. Vaccine types include live attenuated, inactivated, subunit, conjugate, toxoid, viral-vector, and nucleic-acid vaccines; their immune responses, precautions, and schedules vary.

Vaccine Therapy

vaccine therapy is used in relation to vaccine therapy during assessment, diagnosis, treatment, monitoring, or patient support.

Varicella Vaccine

A live attenuated vaccine that prevents or reduces the severity of chickenpox. The number and timing of doses depend on age, vaccination history, immune status, pregnancy, and local recommendations. It is generally avoided during pregnancy and in people with certain immune deficiencies.

Wellcovorin

A brand name for leucovorin, the calcium folinate form of folinic acid, used in selected chemotherapy protocols and to reduce toxicity from certain folate antagonists.

Xanax

A brand name for alprazolam, a benzodiazepine used for selected anxiety and panic disorders; dependence, sedation, and respiratory depression are important risks.

Xanthine Oxidase Inhibitor

A class of medications that inhibit xanthine oxidase, the enzyme that catalyzes the final steps of purine metabolism: hypoxanthine to xanthine and xanthine to uric acid. By inhibiting this enzyme, XOIs reduce uric acid production and lower serum uric acid levels, used for management of chronic gout and tumor lysis syndrome.

Brand Medicines

Medical Prefix

Prefix	Meaning	Example of use in medical terms
Ab-	A medical prefix meaning away from, off, or separating from,	abduction (movement away from the midline) and ablation (removal or destruction of tissue)
Acou-	A medical combining form referring to hearing or sound,	acoustic nerve, audiology, and acoumeter
Acro-	Acro- is a medical word element meaning extremity, tip, or highest part,	acromegaly and acrocyanosis
Acu-	A combining form meaning sharp, pointed, or related to acuity; in medical terms it may refer to sharp sensation or vision,	acuity, acute, or acupuncture, depending on the word formed
Ad-	A medical prefix meaning toward, to, or near,	adduction (movement toward the midline) and adrenal (near the kidney)
Aden- Adeno-	A combining form meaning gland or glandular tissue, A combining form referring to a gland or glandular tissue,	adenitis and adenoma adenovirus, adenoid, and adenocarcinoma
Aer-, Aero-	A combining form meaning air or gas,	aerobic, aerosol, and aerophagia
Alb- Amyl-	A prefix derived from the Latin albus, meaning white, A combining form referring to starch or a starch-like substance,	albino and albinism amylase and amyloid
Amylo-	A combining form referring to starch-like material or amyloid protein deposits	amyloidosis and amyloidoma
An-	A prefix meaning without, lacking, or not,	anoxia, anesthesia, and anencephaly
Aniso-	A combining form meaning unequal or unequal in size, number, or degree	anisocytosis and anisometropia
Antero-	A combining form meaning anterior or toward the front	anteroposterior and anterolateral
Anti-	A prefix meaning against, opposed to, or preventing a specified process or condition	antibiotic and anticoagulant
Arthro- Bi-	A combining form meaning joint A prefix meaning two, twice, or involving two sides or components	arthritis and arthroscopy bilateral and bicuspid

Prefix	Meaning	Example of use in medical terms
Bio-	A combining form meaning life or living organisms	biochemistry and biopsy
Brachy-	A combining form meaning short or abnormally short	brachycephaly and brachydactyly
Cephal-	A combining form meaning head	cephalic and cephalalgia
Cholangi-	A combining form meaning bile duct or bile vessel	cholangitis and cholangiography
Circum-	A combining form meaning around or surrounding	circumcision and circumoral
Colpo-	A combining form meaning vagina	colposcopy and colpotomy
Cranio-	A combining form meaning skull or cranium	craniotomy and craniosynostosis
Cyto-	A combining form meaning cell	cytology and cytotoxic
Dacryo-	A combining form meaning tear or tear duct	dacryocystitis and dacryostenosis
Dactyl-, -Dactyl	A combining form or suffix meaning finger or toe	polydactyly and brachydactyly
Dextro-	A combining form meaning right, toward the right, or sometimes clockwise	dextrocardia and dextroposition
Di-	A combining form meaning two, twice, or double	diplopia and diplegia
Dia-	A combining form with meanings including through, across, apart, or complete, depending on the word	dialysis and diagnosis
Disto-	A combining form meaning distal, distant, or away from a point of attachment or origin	distal and distobuccal
Dys-	A prefix meaning abnormal, difficult, painful, or impaired,	dysphagia (difficulty swallowing) and dysuria (painful urination)
Entero-	A combining form meaning intestine or bowel,	enteropathy and enteroscopy
Epi-	A prefix meaning on, upon, over, or above,	epidermis and epigastric
Extra-	A clinical condition or finding involving extra-. Its defining features, causes, evaluation, and management depend on the clinical context	extraocular and extracellular
Gyne-	A combining form meaning woman or female,	gynecology
Haem- / Haema- / Haemato- / Haemo-	Prefixes derived from the Greek word haima (blood), used in medical terminology to denote blood-related conditions and procedures	hematology, hematoma, and hemoglobin
(Prefixes Relating To Blood)		
Hemi-	A prefix meaning half or one side,	hemiplegia and hemithorax
Hepat-	A combining form meaning liver,	hepatic and hepatocellular
Hepato-	A combining form meaning liver,	hepatobiliary and hepatomegaly
Hetero-	A prefix meaning different, other, or unequal,	heterozygous and heterogeneous
Histo-	A combining form meaning tissue,	histology and histopathology
Homo-	A prefix meaning same or alike,	homozygous and homologous
Hyper-	A prefix meaning excessive, above normal, or increased,	hyperglycemia and hypertension
Hypo-	A prefix meaning below, deficient, reduced, or less than normal,	hypoglycemia and hypothermia

Prefix	Meaning	Example of use in medical terms
Iatr-	A combining form meaning medical treatment or physician,	iatrogenic and iatrogeny
Infra-	A medical term referring to infra-. Its precise meaning and clinical importance depend on the context in which it is used	infrapatellar and infraorbital
Intra-	Intra- is an anatomical structure, tissue relationship, physiologic process, or body function; its location and mechanism explain its clinical significance	intraocular and intravenous
Iso-	A prefix meaning equal, same, or uniform,	isotonic and isometric
Juxta-	A prefix meaning next to, beside, or adjoining,	juxtaglomerular
Kerato-	A combining form relating to the cornea or to horny or keratinized tissue,	keratitis and keratosis
Leuk-	A combining form meaning white, especially in terms relating to white blood cells,	leukocyte
Leuko-	A combining form meaning white,	leukoderma or leukopenia
Levo-	A prefix meaning left or turning toward the left, often used in chemistry or to describe spatial orientation	levocardia and levodopa
Lieno-	A combining form meaning relating to the spleen	lienorenal and lienectomy
Lipo-	A combining form meaning relating to fat or lipids	lipoma and lipoprotein
Litho-	A combining form meaning stone,	lithotripsy and nephrolithiasis
Macro- (Prefix)	A prefix meaning large, abnormally large, or on a large scale,	macrocytic, meaning involving abnormally large cells
Medical Prefix	A prefix used in medical terminology to modify a word's meaning	hyper- (above or excessive), hypo- (below or deficient), macro- (large), and micro- (small)
Mega-	A combining form meaning large, great, or abnormally enlarged	megacolon and megakaryocyte
Mega- (Prefix)	A prefix derived from Greek meaning large, great, or abnormally enlarged,	megacolon, megacardia, and megaloccephaly
Melan- (Prefix)	A combining form meaning dark or black, derived from the Greek melas; it refers especially to melanin or dark pigmentation,	melanoma and melanocyte
Mes-	A combining form meaning middle	mesencephalon and mesoderm
Meso-	A combining form meaning middle	mesothelioma and mesocolon
Mi-	A combining form meaning small or relating to muscle, depending on the word in which it appears	micturition and miosis
Micro-	A combining form meaning small or millionth, depending on context	microscopy and microcephaly
Myc-	A combining form meaning fungus or pertaining to fungi, derived from the Greek mykes	mycosis and mycology
Myco-	The term Myco- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	mycosis and mycology
Myel-	A combining form relating to bone marrow or the spinal cord, depending on the word	myelitis and myelopathy

Prefix	Meaning	Example of use in medical terms
Myo- (Prefix)	A medical term referring to myo- (prefix). Its clinical meaning depends on the context in which it is used	myopathy and myocarditis
Naso-	The term Naso- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	nasogastric and nasopharyngeal
Neo- (Prefix)	Neo- is a prefix meaning new or recently formed	neoplasm and neonatal
Nephro-	The term Nephro- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	nephritis and nephrectomy
Oligo-	A combining form meaning few, scanty, or deficient	oliguria and oligospermia
Oligo- (Prefix)	Oligo- is a prefix meaning few, scanty, or small in number or amount	oliguria and oligospermia
Onco-	A combining form relating to tumors or cancer	oncology and oncogenesis
Onycho-	A combining form relating to the nail	onychomycosis and onycholysis
Onycho- (Prefix)	Onycho- is a prefix meaning relating to a nail or claw	onychomycosis and onycholysis
Ortho- (Prefix)	Ortho- is a prefix meaning straight, correct, upright, or related to orthopedic care depending on the term	orthopedics and orthostatic
Osteo- (Prefix)	Osteo- is a prefix meaning relating to bone	osteomyelitis and osteoporosis
Ot-	The term Ot- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	otitis and otalgia
Oto-	The term Oto- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	otology and otoscope
Oxy	Oxy- is a prefix relating to oxygen, sharpness, or acidity depending on the medical or chemical term	oxygen and oxyhemoglobin
Pachy- (Prefix)	A word-forming prefix meaning thick or thickness,	pachyonychia, pachyderma, and pachycephaly
Para	Para- is a prefix meaning beside, beyond, abnormal, or related to childbirth depending on the word; its exact meaning must be read in context	parathyroid and paranasal
Para-	A combining form meaning beside, beyond, abnormal, or closely related, depending on the word	paracentesis and paraesthesia
Para- (Prefix)	Para- is a medical prefix whose meaning varies by use, including beside, beyond, abnormal, or the number of births reaching a specified gestational age	parathyroid and parity in obstetric history
Patho-	The term Patho- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	pathology and pathogenesis
Peri-	The term Peri- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	pericardium and periosteum
Phago-	The term Phago- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	phagocytosis and phagocyte
Phlebo- (Prefix)	Phlebo- is a medical prefix meaning relating to a vein,	phlebitis, phlebectomy, or phlebography

Prefix	Meaning	Example of use in medical terms
Pneumo-	The term Pneumo- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	pneumothorax and pneumonia
Poly-	A combining form meaning many or much	polyuria and polyneuropathy
Post	Post- is a prefix meaning after,	post-operative, postpartum, or postprandial
Post-	A combining form meaning after or behind	postnatal and postprandial
Pre-	A combining form meaning before or in front of	prenatal and preoperative
Prefix	A prefix is a word element placed before a root to modify meaning; medical prefixes commonly indicate location, number, time, direction, or abnormality	hyper-, hypo-, peri-, and brady-
Prefixes, Medical	Word beginnings that modify medical terms by indicating location, number, time, speed, size, direction, deficiency, excess, or other meaning,	hyper-, hypo-, peri-, and brady-
Pro-	A combining form meaning before, forward, or in favor of	prolactin and prognosis
Pseudo-	A combining form meaning false or resembling but not truly	pseudocyst and pseudarthrosis
Retro-	A combining form meaning backward, behind, or posterior	retroperitoneal and retrosternal
Salpingo-	A combining form relating to a fallopian tube	salpingitis and salpingectomy
Sarco-	A combining form meaning flesh or soft tissue	sarcoma and sarcoidosis
Schizo-	A combining form relating to splitting or schizophrenia	schizophrenia and schizoid
Scler-	The term Scler- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	sclerosis and scleritis
Sclero-	The term Sclero- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	scleroderma and sclerotherapy
Sub-	A combining form meaning under, below, or less than normal	subcutaneous and subdural
Super-	A combining form meaning above, excessive, or superior	superinfection and supernumerary
Supra-	A combining form meaning above or beyond	suprarenal and suprapubic
Syn-	A combining form meaning together, with, or joined	syndactyly and synovitis
Teno-	A combining form relating to a tendon	tenosynovitis and tenodesis
Thermo-	A combining form relating to heat or temperature	thermoregulation and thermotherapy
Toc- (Prefix)	Toc- is a prefix used in some medical terms and often relates to childbirth or labor,	tocolysis; the complete word determines its meaning
Toco-	The term Toco- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	tocography and tocolysis
Toko- (Prefix)	Toko- is a prefix relating to childbirth or labor, derived from Greek terms for birth	tocolysis and tokodynamometry
Tom-	The term Tom- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	tomography and tomodensitometry

Prefix	Meaning	Example of use in medical terms
Tomo-	The term Tomo- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	tomography and tomographic
Trans- (Prefix)	The term Trans- (prefix) is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	transdermal and transcatheter
Trich- (Prefix)	The term Trich- (prefix) is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	trichiasis and trichology
Tricho-	A combining form relating to hair	trichoscopy and trichotillomania
Tricho- (Prefix)	The term Tricho- (prefix) is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	trichorrhexis and trichomycosis
Tympano-	The term Tympano- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	tympanoplasty and tympanometry
Xanth- (Prefix)	Xanth- is a medical word element meaning yellow or yellowish,	xanthoma, xanthelasma, and xanthopsia
Xen- (Prefix)	A medical word element meaning foreign, strange, or originating outside the usual organism or system,	xenograft (a tissue transplanted between different species)
Xeno- (Prefix)	Xeno- is a medical word element meaning foreign, strange, or from another species,	xenograft and xenotransplantation
Xero-	Xero- is a medical word element meaning dry or dryness,	xeroderma, xerophthalmia, and xerostomia

Complete reference tables

These categorized tables reproduce the prefix reference structure from the Pressbooks resource cited below. Examples are retained as learning aids; the meaning of a word part can vary by term.

Prefix	Meaning	Example of use in medical terms
Common prefixes		
A-, An-	Without; lacking	Anemia
Andr/o-	Male	Androgen
Anti-	Against	Anticholinergic drugs
Auto-	Self	Autocrine
Bio-	Life	Biology
Chem/o-	Chemistry	Chemotherapy
Contra-	Against	Contraception
Cyt/o-	Cell	Cytokine
Dis-	Separation; taking apart	Dissection
Dys-	Difficult; abnormal	Dyspnea
Eu-	Good; well	Eupnea
Fibr/o-	Fiber	Fibrosis
Gluco-, Glyco-	Glucose; sugar	Glycogen

Prefix	Meaning	Example of use in medical terms
Gyn/o-, Gynec-	Female	Gynecology
Hydr/o-	Water	Hydrocephalus
Idio-	Self; one's own	Idiopathic
Lyso-, Lys-	Break down; destruction; dissolving	Lysosome
Mal-	Bad; abnormal	Malignant
Myc/o-	Fungus	Mycetoma
Necr/o-	Death	Necrosis
Neo-	New	Neonate
Oxy-	Sharp; acute; oxygen	Oxytocin
Pan-, Pant/o-	All or everywhere	Pancytopenia
Pharmaco-	Drug; medicine	Pharmacist
Re-	Again; backward	Rejuvenation
Somat/o-, Somatico-	Body; bodily	Somatic cell
Body-part prefixes		
Acous/o-	Hearing	Acoustic meatus
Aden/o-	Gland	Adenoid
Adip/o-	Fat	Adipocyte
Adren/o-	Gland	Adrenal cortex
Angi/o-	Blood vessel	Angioplasty
Arteri/o-	Artery	Arteriole
Arthr/o-	Joint	Arthroplasty
Bucc/o-	Cheek	Buccal cavity
Bronch/i-	Bronchus	Bronchioles
Burs/o-	Bursa	Bursa
Carcin/o-	Cancer	Basal cell carcinoma
Cardi/o-	Heart	Cardiology
Cephal/o-	Head	Cephalic flexure
Chol-	Bile	Cholesterol
Chondri-	Cartilage	Chondrosarcoma
Coron-	Heart	Coronary arteries
Cost-	Rib	Costal cartilage
Crani/o-	Brain	Cranium
Cutane-	Skin	Cutaneous
Cyst/o-, Cysti-	Bladder or sac	Cystoscopy
Derm-, Dermat/o-	Skin	Dermatologist
Duoden/o-	Duodenum	Duodenitis
Gastr-	Stomach	Gastrectomy
Gloss-	Tongue	Glossectomy
Hem-, Hema-, Hemat-, Hemo-, Hemat/o-	Blood	Hematopoiesis
Hepat/o-, Hepatico-	Liver	Hepatic portal system
Hist/o-, Histio-	Tissue	Histology
Hyster/o-	Uterus	Hysterectomy
Ileo-	Ileum	Ileostomy
Ischi/o-	Ischium	Ischial tuberosity
Kerat/o-	Cornea (eye or skin)	Keratin
Lacrim/o-	Tear	Lacrimal fluid
Lact/o-, Lacti-	Milk	Lactose
Laryng/o-	Larynx	Laryngitis
Lingu/o-	Tongue	Lingual tonsil

Prefix	Meaning	Example of use in medical terms
Lip/o-	Fat	Lipolysis
Lymph/o-	Lymph	Lymphocyte
Mamm-, Mast/o-	Breast	Mammary glands
Mening/o-	Meninges	Meningitis
Muscul/o-	Muscle	Musculoskeletal
My/o-	Muscle	Myocardium
Myel/o-	Spinal cord or bone marrow	Myelin
Nephr/o-	Kidney	Nephron
Neur/i-, Neur/o-	Nerve	Neuron
Oculo-	Eye	Oculomotor nerve
Onco-	Tumor; bulk; volume	Oncogene
Onych/o-	Fingernail; toenail	Onychodystrophy
Oo-	Egg; ovary	Oocyte
Oophor/o-	Ovary	Oophorectomy
Op-, Opt-	Vision	Optic nerve
Ophthalm/o-	Eye	Ophthalmic artery
Orchid/o-, Orchio-	Testis	Orchidectomy
Orth/o-	Straight; normal; correct	Orthostatic
Osseo-	Bony	Osseous tissue
Ossi-	Bone	Ossicles
Ost-, Oste/o-	Bone	Osteoporosis
Ot/o-	Ear	Otolaryngologist
Ovar/i-, Ovario-, Ovi-, Ovo-	Ovary	Ovarian follicle
Phalang-	Phalanx	Phalanges
Pharyng/o-	Pharynx; throat	Pharyngeal tonsil
Phleb/o-	Vein	Phlebotomist
Phren/i-, Phreno-, Phrenico-	Diaphragm	Phrenic nerve
Pleur-, Pleur/a-, Pleur/o-	Rib; pleura	Pleural cavity
Pneum/a-, Pneumat/o-	Air; lung	Pneumonia
Proct/o-	Anus; rectum	Proctoscopy
Prostat-	Prostate	Prostatectomy
Pseudo-	False	Pseudostratified
Psych/o-, Psyche-	Mind	Psychiatrist
Radio-	Radiation; radius	Radioisotopes
Ren/o-	Kidney	Renal cortex
Retin-	Retina	Retinitis pigmentosa
Rhin/o-	Nose	Rhinoscope
Salping/o-	Tube	Salpingo-oophorectomy
Sarco-	Muscular; flesh-like	Sarcomere
Schiz/o-	Split; cleft	Schizophrenia
Sclera-, Sclero-	Hardness	Sclerosis
Sigmoid/o-	Sigmoid colon	Sigmoidoscopy
Sperma-, Sperm-, Spermato-	Sperm	Spermatocyte
Splen/o-	Spleen	Splenomegaly
Sten/o-	Narrowed; blocked	Stenosis
Stern-	Sternum	Sternoclavicular joint

Prefix	Meaning	Example of use in medical terms
Stom/a-, Stomat/o-	Mouth	Stomatitis
Thorac/o-, Thoracico-	Chest	Thoracic cavity
Thromb/o-	Blood clot	Thrombolytic
Thyr/o-	Thyroid gland	Thyroiditis
Trache/o-	Trachea	Trachealis
Tympan/o-	Eardrum	Tympanic membrane
Ur/o-	Urine	Urologist
Vagin-	Vagina	Vaginal
Varic/o-	Duct; blood vessel	Varicose veins
Vasculo-	Blood vessel	Vasculitis
Ven/o-	Vein	Venae cavae
Vertbr-	Vertebra; spine	Vertebral column
Color prefixes		
Chlor/o-	Green	Chlorophyll
Chrom-, Chromato-	Color	Chromosome
Cyano-	Blue	Cyanosis
Erythr/o-	Red	Erythrocyte
Leuk/o-	White	Leukocyte
Melan/o-	Black	Melanin
Physical property and shape prefixes		
Cry/o-	Cold	Cryotherapy
Elect-	Electrical activity	Electrocardiogram
Kin/o-, Kine-, Kinesi/o-	Movement	Kinetic energy
Kyphy/o-	Humped	Kyphosis
Rhabd/o-	Rod-shaped; striated	Rhabdomyosarcoma
Phot/o-	Light	Photoreceptor
Reticul/o-	Net	Reticulocytes
Scoli/o-	Twisted	Scoliosis
Therm/o-	Heat	Thermotherapy
Direction and position prefixes		
Ab-, Abs-	Away from	Abductor
Ad-	Towards	Adductor
Ante-	Before; forward	Antenatal
Circum-	Around	Circumcision
Cycl-	Circle; cycle	Cyclic neutropenia
De-	Away from; ending	Dehydration
Dia-	Across; through	Diagnosis
Ect/o-, Exo-	Outer; outside	Exocrine gland
End/o-, Ent-, Enter/o-	Within; inner	Endocrine gland
Epi-	Upon; outside of	Epidermis
Ex-, Extra-	Beyond	Expiration
Infra-	Beneath; below	Infratemporal fossa
Inter-	Between	Interstitial fluid
Intra-	Within	Intracellular fluid
Meso-	Middle	Mesoderm
Meta-	Beyond; change	Metabolism
Para-	Alongside; abnormal	Parathyroid glands

Prefix	Meaning	Example of use in medical terms
Path/o-	Disease	Pathologist
Peri-	Around	Pericardium
Post-	Behind; after	Postpartum
Pre-	Before; in front	Precancerous
Retro-	Backward; behind	Retroperitoneum
Sub-	Under	Subcutaneous layer
Super-	Above	Superior
Supra-	Above; upon	Supraglottis
Sy-, Syl-, Sym-, Syn-, Sys-	Together	Syndrome
Trans-	Across; through	Transdermal
Quantity prefixes		
Bi-	Two	Biceps
Brady-	Slow	Bradycardia
Diplo-	Double	Diploid
Hemi-	Half	Hemihypertrophy
Hetero-	Other; different	Heterogeneous
Homo-	Same	Homozygous genotype
Hyper-	Above; beyond; excessive	Hypertension
Hypo-	Under; deficient	Hypotension
Iso-	Equal; like	Isointense
Macro-	Large; long; big	Macrophage
Mic-, Micro-	Small	Microglia
Mon-, Mono-	One	Monocyte
Olig/o-	Few; little	Oliguria
Poly-	Many; excessive	Polyuria
Quadri-	Four	Quadriceps
Semi-	Half	Semilunar valves
Tachy-	Fast	Tachycardia
Tetra-	Four	Tetralogy of Fallot
Tri-	Three	Triceps
Uni-	One	Unicellular

Medical Suffixes

Suffix	Meaning	Example of use in medical terms
-Stomy	A suffix meaning surgical creation of an opening,	colostomy or gastrostomy
-Tomy	A suffix meaning incision or cutting into	laparotomy or tracheotomy
Cidal	A suffix meaning killing or destroying,	bactericidal or fungicidal
Cide	A suffix meaning an agent or process that kills,	pesticide, bactericide, or homicide
Cyte	A suffix meaning cell,	erythrocyte or leukocyte
Cytosis	A suffix or term indicating a condition involving cells or, in some contexts, an increase in the number of a particular type of cell	leukocytosis or erythrocytosis
Dactyl-, -Dactyl	A combining form or suffix meaning finger or toe	polydactyly or brachydactyly
Ectomy	A suffix meaning surgical removal or excision,	appendectomy or mastectomy
Emia	A suffix meaning a condition of the blood or a substance present in the blood,	anemia or bacteremia
Iatrics	A suffix or word element referring to medical treatment or a medical specialty,	geriatrics and pediatrics
Iatry	A suffix meaning medical treatment or a medical specialty,	psychiatry and podiatry
Itis	A suffix meaning inflammation,	dermatitis, bronchitis, and arthritis
Kalemia	A suffix or term referring to the concentration of potassium in the blood,	hypokalemia or hyperkalemia
MAB	Abbreviation for monoclonal antibody; the suffix -mab in a generic drug name indicates a monoclonal antibody,	adalimumab or rituximab
Oma	-oma is a suffix commonly indicating a tumor or mass, although some words ending in -oma describe non-neoplastic conditions	lipoma or carcinoma
Pathy	A suffix meaning disease, disorder, or abnormality,	neuropathy, cardiomyopathy, and nephropathy
Plegia	-plegia is a suffix meaning paralysis,	paraplegia, hemiplegia, or quadriplegia

Complete reference tables

Suffix	Meaning	Example of use in medical terms
Common suffixes		
-ac	Pertaining to	Cardiac
-blast, -blasto, -blastic	Bud; germ	Myeloblast
-cyte, -cytic	Cell	Thrombocyte
-dynia	Pain; swelling	Thoracodynia
-eal, -ial	Pertaining to	Esophageal
-ectasis	Expansion; dilation	Atelectasis
-emia	Blood condition	Anemia
-ia	Condition	Hemophilia
-iasis	Condition; formation of	Psoriasis
-ism	Condition	Hypothyroidism
-ites, -itis	Inflammation	Arthritis
-ity	Pertaining to	Immunity
-ium	Structure or tissue	Epithelium
-lysis, -lytic	Breakdown; destruction; dissolving	Osteolytic
-malacia	Softening	Osteomalacia
-megaly	Enlargement	Acromegaly
-oid	Resembling	Arachnoid trabeculae
-oma	Tumor	Angiosarcoma
-osis	Condition; usually abnormal	Endometriosis
-ous	Pertaining to	Aqueous
-pathy	Disease	Lymphadenopathy
-penia	Deficiency; lack of	Thrombocytopenia
-phagia, -phagy	Eating; swallowing	Dysphagia
-phasia	Speech	Aphasia
-plasia, -plastic	Growth	Hyperplasia
-plegia	Paralysis	Hemiplegia
-pnea	Breathing	Sleep apnea
-poiesis	Production	Hemopoiesis
-ptosis	Falling; drooping	Apoptosis
-rrhage, -rrhagic	Bleeding	Hemorrhage
-rrhea	Flow or discharge	Diarrhea
-sclerosis	Hardening	Arteriosclerosis
-sis	Condition	Agranulocytosis
-stasis	Level; unchanging	Homeostasis
-trophy	Growth	Hypertrophy
-uria	In the urine	Anuria
Procedure suffixes		
-centesis	Surgical puncture to remove fluid	Thoracentesis
-desis	Surgical binding	Pleurodesis
-ectomy	Cut out; removal	Mastectomy
-gram	Record; picture	Electrocardiogram
-graph	Instrument used to create a record or picture	Electrocardiograph
-graphy	To record or take a picture	Echocardiography
-meter	Device used for measuring	Sphygmomanometer
-opsy	Visual examination	Biopsy

Suffix	Meaning	Example of use in medical terms
-ostomy	Opening	Colostomy
-otomy	Incision	Laparotomy
-pexy	Surgical fixation	Oophoropexy
-plasty	Surgical reconstruction	Vertebroplasty
-scope	For examining	Endoscope
-scopy	Examine	Endoscopy

Alternate Names

Primary term	Alternate names
ACE	angiotensin-converting enzyme
ACE Inhibitor	angiotensin-converting enzyme inhibitor
Acquired Immunodeficiency Syndrome	AIDS
Adenosine Triphosphate	ATP
AIDS	acquired immunodeficiency syndrome
Alcoholism	alcohol dependence: A chronic
Alimentary Canal	gastrointestinal
AMD	age-related macular degeneration
Angiotensin-Converting Enzyme	ACE
Angiotensin-Converting Enzyme Inhibitor	ACE
Amyloid Precursor Protein	APP
ARB	angiotensin II receptor blockers
ATP	adenosine triphosphate
AV Node	atrioventricular node
Balloon Dilation	Balloon dilatation
BMD	bone mineral density
BMI	body-mass index
BPH	benign prostatic hyperplasia
CABG	coronary artery bypass graft
CBC	complete blood count
	mdash
CCU	coronary care unit
Cerebral Hemorrhage	hemorrhagic stroke
CFS	chronic fatigue syndrome
CK	creatine kinase
COX-2 Inhibitors	cyclooxygenase-2 inhibitors
CPAP	continuous positive airway pressure
CPR	cardiopulmonary resuscitation
CRP	C-reactive protein
DNA	deoxyribonucleic acid
DNR	do-not-resuscitate order
DRI	dietary reference intake
EBCT	electron-beam computed tomography
ECG	electrocardiogram
ED	erectile dysfunction

Primary term	Alternate names
EEG	electroencephalogram
EKG	electrocardiogram
EMG	electromyography
	mdash
FSH	follicle-stimulating hormone
GERD	gastroesophageal reflux disease
GFR	glomerular filtration rate
Gingiva	gums: a form of oral tissue that covers the roots of teeth and surrounding bone
GnRH	gonadotropin-releasing hormone
HbA1C	hemoglobin A1c
HDL	high-density lipoprotein
HEPA Filter	high-efficiency particulate air
HIV	human immunodeficiency virus
HLA	human leukocyte antigen
HPA	hypothalamic-pituitary-adrenal axis
Human Immunodeficiency Virus	HIV
IBD	inflammatory bowel disease
ICD	implantable cardioverter defibrillator
IgE	immunoglobulin E
IU	international unit
LDL	low-density lipoprotein
LH	luteinizing hormone
LVAD	left-ventricular assist device
MAOIs	monoamine oxidase inhibitors
METs	metabolic equivalents
MHC Molecule	major histocompatibility complex molecule
Mitral Valve Prolapse	Barlow's Syndrome; Barlow Syndrome (Mitral Valve Prolapse)
MRI	magnetic resonance imaging—a scan that creates detailed pictures of internal organs
MUSE	medicated urethral system for erection
NK	natural killer cells
NMDA Receptor	N-methyl-D-aspartame receptor
NO	nitric oxide
NSAID	nonsteroidal anti-inflammatory drug
PAD	peripheral artery disease
PCOS	polycystic ovary syndrome
PDE5 Inhibitors	phosphodiesterase type 5 inhibitors
PET Scan	positron emission tomography
PSA	prostate-specific antigen
PTCA	percutaneous transluminal coronary angioplasty
PTSD	post-traumatic stress disorder
RAST	radioallergosorbent test
RCT	randomized controlled trial
RDA	recommended dietary allowance
REM	rapid eye movement
RLS	restless legs syndrome
SAD	seasonal affective disorder
SERMs	selective estrogen receptor modulators
SSRIs	selective serotonin reuptake inhibitors

Primary term	Alternate names
Steroids	corticosteroids
T Cell	mdash T lymphocyte
TDD	telecommunications device for the deaf
TENS	mdash transcutaneous electrical nerve stimulation
TIA	mdash transient ischemic attack
tPA	tissue plasminogen activator
TSH	thyroid-stimulating hormone
VLDL	very-low-density lipoprotein
VSD	ventricular septal defect
ABO Blood Group System	mdash ABO Blood Group; ABO Blood Groups; ABO Blood Types; ABO System
Absolute Neutrophil Count	ANC
Aarskog-Scott syndrome	Aarskog Syndrome
Banti Syndrome	Banti disease; Banti's syndrome
Barber itch	Barber's itch
Glycated Hemoglobin (A1C)	A1C; A1C test; Hemoglobin A1C; HbA1C

Common Medical Abbreviations

Abbreviation	Full form
ABG	Arterial blood gas
ACE	Angiotensin-converting enzyme
ACE inhibitor	Angiotensin-converting enzyme inhibitor
ACL	Anterior cruciate ligament
ACS	Acute coronary syndrome
ADHD	Attention-deficit/hyperactivity disorder
ADL	Activity of daily living
AED	Automated external defibrillator
AFib	Atrial fibrillation
AIDS	Acquired immunodeficiency syndrome
AKI	Acute kidney injury
ALP	Alkaline phosphatase
ALT	Alanine aminotransferase
AMI	Acute myocardial infarction
ALS	Amyotrophic lateral sclerosis; advanced life support, depending on context
ANC	Absolute neutrophil count
ANA	Antinuclear antibody
ANP	Atrial natriuretic peptide
APGAR	Appearance, pulse, grimace, activity, and respiration
ARDS	Acute respiratory distress syndrome
AST	Aspartate aminotransferase
ATN	Acute tubular necrosis
AV	Atrioventricular
AVM	Arteriovenous malformation
AVN	Atrioventricular node
BID	Twice a day; prescription shorthand that should be avoided when possible
BP	Blood pressure
BMI	Body mass index
BMR	Basal metabolic rate
BPH	Benign prostatic hyperplasia
BRCA	Breast cancer susceptibility gene; commonly referring to the BRCA1 or BRCA2 gene
BUN	Blood urea nitrogen
CABG	Coronary artery bypass graft
CA	Cancer antigen or calcium, depending on context
CA-125	Cancer antigen 125

Abbreviation	Full form
CAD	Coronary artery disease
CAT	Computed tomography; an older term for computerized axial tomography
CBC	Complete blood count
CBT	Cognitive behavioural therapy
CDC	Centers for Disease Control and Prevention
CEA	Carcinoembryonic antigen
CHF	Congestive heart failure
CHD	Congenital heart disease
CIN	Cervical intraepithelial neoplasia
CJD	Creutzfeldt–Jakob disease
CK	Creatine kinase
CMV	Cytomegalovirus
CNS	Central nervous system
COPD	Chronic obstructive pulmonary disease
CPAP	Continuous positive airway pressure
CPK	Creatine phosphokinase; an older name for creatine kinase
CPR	Cardiopulmonary resuscitation
CRF	Chronic renal failure; chronic kidney disease is preferred in current usage
CRP	C-reactive protein
CSF	Cerebrospinal fluid
CT	Computed tomography
CVS	Chorionic villus sampling
CVA	Cerebrovascular accident
CXR	Chest radiograph
D&C	Dilatation and curettage
DKA	Diabetic ketoacidosis
DJD	Degenerative joint disease
DM	Diabetes mellitus
DNA	Deoxyribonucleic acid
DTP	Diphtheria, tetanus, and pertussis
DVT	Deep-vein thrombosis
DX	Diagnosis
ECG	Electrocardiogram
EKG	Electrocardiogram
ECHO	Echocardiogram
EEG	Electroencephalogram
eGFR	Estimated glomerular filtration rate
EMG	Electromyography
ENT	Ear, nose, and throat
ERCP	Endoscopic retrograde cholangiopancreatography
ESR	Erythrocyte sedimentation rate
ESRD	End-stage renal disease
FBC	Full blood count
FEV1	Forced expiratory volume in the first second
FSH	Follicle-stimulating hormone
GABHS	Group A beta-haemolytic streptococcus
GERD	Gastroesophageal reflux disease
GFR	Glomerular filtration rate
GI	Gastrointestinal
GIST	Gastrointestinal stromal tumour
GU	Genitourinary
HbA1c	Glycated haemoglobin

Abbreviation	Full form
HDL	High-density lipoprotein
HAV	Hepatitis A virus
HBV	Hepatitis B virus
HCT	Hematocrit
HCV	Hepatitis C virus
HGB	Hemoglobin
HIV	Human immunodeficiency virus
HLA	Human leukocyte antigen
HPV	Human papillomavirus
HRT	Hormone replacement therapy
HTN	Hypertension
IBD	Inflammatory bowel disease
IBS	Irritable bowel syndrome
ICD	Implantable cardioverter-defibrillator
ICU	Intensive care unit
IDDM	Insulin-dependent diabetes mellitus; type 1 diabetes mellitus is preferred in current usage
IM	Intramuscular
IU	International unit
IUD	Intrauterine device
IV	Intravenous
IVP	Intravenous pyelography or intravenous pyelogram
LDL	Low-density lipoprotein
LH	Luteinizing hormone
LFT	Liver function test
MI	Myocardial infarction
MMR	Measles, mumps, and rubella
MRI	Magnetic resonance imaging
MRSA	Methicillin-resistant <i>Staphylococcus aureus</i>
MS	Multiple sclerosis; may have other meanings depending on context
NG	Nasogastric
NIDDM	Non-insulin-dependent diabetes mellitus; type 2 diabetes mellitus is preferred in current usage
NKDA	No known drug allergies
NSAID	Nonsteroidal anti-inflammatory drug
OCD	Obsessive-compulsive disorder
PAD	Peripheral arterial disease
PAP	Papanicolaou
PCOS	Polycystic ovary syndrome
PCR	Polymerase chain reaction
PE	Pulmonary embolism
PET	Positron emission tomography
PFT	Pulmonary function test
PID	Pelvic inflammatory disease
PMS	Premenstrual syndrome
PPD	Purified protein derivative
PRN	As needed (from the Latin <i>pro re nata</i>)
PSA	Prostate-specific antigen
PT	Prothrombin time
PTCA	Percutaneous transluminal coronary angioplasty
PTH	Parathyroid hormone
PTT	Partial thromboplastin time

Abbreviation	Full form
PUD	Peptic ulcer disease
PVC	Premature ventricular contraction
QID	Four times a day; prescription shorthand that should be avoided when possible
RA	Rheumatoid arthritis; may have other meanings depending on context
RAST	Radioallergosorbent test
RBC	Red blood cell
RCT	Randomized controlled trial
REM	Rapid eye movement
RLS	Restless legs syndrome
RNA	Ribonucleic acid
RSV	Respiratory syncytial virus
Rx	Prescription or treatment, depending on context
SaO ₂	Arterial oxygen saturation
SARS-CoV-2	Severe acute respiratory syndrome coronavirus 2
SIDS	Sudden infant death syndrome
SLE	Systemic lupus erythematosus
SOB	Shortness of breath
SSRI	Selective serotonin reuptake inhibitor
STD	Sexually transmitted disease; sexually transmitted infection is preferred in current usage
STI	Sexually transmitted infection
T ₃	Triiodothyronine
T ₄	Thyroxine; commonly referring to tetraiodothyronine
TAH	Total abdominal hysterectomy
TB	Tuberculosis
TIA	Transient ischemic attack
TIBC	Total iron-binding capacity
TID	Three times a day; prescription shorthand that should be avoided when possible
TMJ	Temporomandibular joint
TORCH	Toxoplasmosis, other infections, rubella, cytomegalovirus, and herpes simplex; a group of congenital-infection evaluations
TSH	Thyroid-stimulating hormone
TURP	Transurethral resection of the prostate
URI	Upper respiratory infection
UTI	Urinary tract infection
VSD	Ventricular septal defect
WBC	White blood cell
WDWN	Well-developed, well-nourished
WNL	Within normal limits; a finding is within the expected reference range or clinical appearance
WHO	World Health Organization
XRT	Radiotherapy

A.C. A prescription abbreviation meaning “before meals,” from the Latin *ante cibum*.

ALA An abbreviation for alpha-linolenic acid, an essential omega-3 fatty acid, or aminolevulinic acid, a heme-pathway compound used topically in some photodynamic treatments; context determines the meaning.

AP An abbreviation commonly meaning anteroposterior, or directed from front to back; in some contexts it may have another medical expansion.

ATM An abbreviation that may mean the temporomandibular joint or ataxia-telangiectasia mutated, a protein kinase involved in DNA-damage repair; context determines the meaning.

-
- BF** Physician's shorthand for Black female; demographic abbreviations should be used cautiously and replaced with precise, patient-preferred language when possible.
- BPD** An abbreviation commonly meaning bronchopulmonary dysplasia, chronic lung disease after premature birth; it can also mean borderline personality disorder in psychiatric contexts.
- CA** A medical abbreviation that may mean cancer, carcinoma, or calcium; the intended meaning depends on the surrounding clinical context.
- CKD** Abbreviation for Chronic Kidney Disease: a progressive loss of kidney function over months to years, defined by a glomerular filtration rate (GFR) less than 60 mL/min/1.73m² or markers of kidney damage (albuminuria, haematuria, structural abnormalities) persisting for at least 3 months.
- CLA** An abbreviation that commonly means conjugated linoleic acid, a group of fatty-acid isomers; in other medical contexts it may have a different expansion.
- CTG** Abbreviation for cardiotocography; continuous electronic monitoring of fetal heart rate and uterine contractions during labour.
- CVA** An abbreviation for cerebrovascular accident, meaning a stroke caused by interruption of blood flow to the brain or bleeding within the brain. It may cause sudden neurologic deficits.
- CVS** An abbreviation that may mean cardiovascular system or chorionic-villus sampling, a prenatal diagnostic procedure; context determines the meaning.
- DDAVP** The abbreviation for desmopressin, a synthetic vasopressin-like medicine used for some bleeding disorders, central diabetes insipidus, and nighttime urination.
- DES** An abbreviation that may mean diethylstilbestrol, a synthetic estrogen, or drug-eluting stent; diethylstilbestrol exposure during pregnancy is associated with later reproductive and cancer risks.
- DHHS** The abbreviation for the U.S. Department of Health and Human Services.
- DNR** An abbreviation for do-not-resuscitate, indicating that cardiopulmonary resuscitation should not be attempted if breathing or heartbeat stops.
- DNS** An abbreviation that may mean deviated nasal septum or dextrose in normal saline; the intended expansion depends on the clinical context.
- DPT** An older abbreviation for the combined diphtheria, pertussis, and tetanus vaccine; current formulations include DTaP and Tdap.
- DT** An abbreviation that may mean delirium tremens or diphtheria–tetanus vaccine; the intended meaning depends on context.
- DTC** An abbreviation that may mean differentiated thyroid carcinoma or direct-to-consumer, such as direct-to-consumer genetic testing; the intended meaning depends on context.
- DTP** An older abbreviation for diphtheria, tetanus, and pertussis vaccine; current childhood formulations are generally called DTaP.
- DV** An abbreviation that may mean domestic violence, ductus venosus, or another context-specific term; the full expression should be specified.
- DYS** An abbreviation or word root related to dysplasia, dystonia, dyslexia, or another condition beginning with dys-; the intended meaning depends on context.
- EC** An abbreviation that may mean enteric-coated, emergency contraception, or endothelial cell; the intended meaning depends on context.
- EFT** An abbreviation whose medical meaning depends on context, such as endocrine-function testing or emotional freedom technique; the intended expansion should be specified.
- ENT** Abbreviation for ear, nose, and throat; it commonly refers to the otolaryngology specialty or an otolaryngologist.
-

EOS Commonly an abbreviation for eosinophils or an eosinophil count in laboratory reports; the intended meaning should be confirmed from the report's context.

EPA Abbreviation for eicosapentaenoic acid, an omega-3 polyunsaturated fatty acid found in oily fish and fish-oil supplements.

EPR Abbreviation for electrophrenic respiration, also called diaphragm pacing, in which electrical stimulation helps activate the diaphragm in selected patients with respiratory muscle paralysis.

EPT Abbreviation for estrogen/progestin therapy, treatment using both an estrogen and a progestin, commonly discussed in menopausal hormone therapy when the uterus is present.

ER Abbreviation for emergency room or emergency department, the hospital service that evaluates and treats urgent illness and injury.

FCC In medicine, an abbreviation for familial colorectal cancer; in other contexts it may have nonmedical meanings.

FFI Abbreviation for fatal familial insomnia, a rare inherited prion disease causing progressively severe insomnia, autonomic dysfunction, and neurologic decline.

FISH Abbreviation for fluorescence in situ hybridization, a test that uses fluorescent DNA probes to detect specific genes, chromosomes, or chromosomal rearrangements in cells.

FLAP Abbreviation for 5-lipoxygenase-activating protein, a protein encoded by *ALOX5AP* that helps produce leukotrienes involved in inflammation.

GALT Abbreviation for gut-associated lymphoid tissue, immune tissue in the gastrointestinal tract that samples intestinal contents and helps defend against pathogens.

GBV-C Abbreviation for GB virus C, also called human pegivirus, a blood-borne virus that can persist in people but is not established as a cause of chronic hepatitis.

GD In the RxList medical-dictionary context, abbreviation for Gaucher disease, an inherited lysosomal storage disorder caused by deficient glucocerebrosidase.

GI Abbreviation for gastrointestinal, relating to the digestive tract from the mouth through the anus and its associated organs.

GPO Abbreviation for group purchasing organization, an organization that combines buyers' purchasing power to negotiate prices and contracts for medicines, supplies, or services.

HAART Abbreviation for highly active antiretroviral therapy, an older term for combination antiretroviral treatment used to suppress HIV replication and preserve immune function.

HAPE Abbreviation for high-altitude pulmonary edema, a life-threatening accumulation of fluid in the lungs after rapid ascent; immediate descent and supplemental oxygen are urgent treatments.

HAV Abbreviation for hepatitis A virus, an RNA virus spread mainly by the fecal-oral route that causes acute hepatitis but usually does not cause chronic infection.

HBV Abbreviation for hepatitis B virus, a DNA virus transmitted through infected blood or body fluids that can cause acute or chronic hepatitis and cirrhosis or liver cancer.

HEPA Abbreviation for high-efficiency particulate air, describing a filter designed to remove a very high proportion of airborne particles of specified sizes from an air stream.

HGD Commonly an abbreviation for high-grade dysplasia, a marked abnormality of cell development that may be a precursor to invasive cancer but is not itself invasive cancer.

HNP Abbreviation for herniated nucleus pulposus, in which the inner material of an intervertebral disk protrudes through the outer ring and may compress a nerve root.

HPS Common medical abbreviations include hantavirus pulmonary syndrome, a severe respiratory illness, and Hermansky-Pudlak syndrome, an inherited disorder with oculocutaneous albinism and platelet-storage abnormalities; context determines the meaning.

-
- HS** Commonly an abbreviation for hereditary spherocytosis, an inherited hemolytic anemia; it can also mean half-strength, heart sounds, hamstrings, heparan sulfate, hernia sac, or house surgeon, so context is essential.
- HSA** Abbreviation that may mean a US health savings account or human serum albumin, the main plasma protein that helps maintain oncotic pressure; context determines the meaning.
- ICU** Abbreviation for intensive care unit, a hospital unit providing continuous monitoring and specialized support for critically ill patients.
- ID** A context-dependent abbreviation that may mean infectious disease, infectious diseases specialist, intellectual disability, or identification; the surrounding clinical text determines the meaning.
- IFA** Abbreviation for indirect fluorescent antibody, a laboratory method that detects antibodies or antigens using fluorescent labels, commonly in serologic testing.
- IHS** Abbreviation for the Indian Health Service, a US federal agency providing health services to American Indians and Alaska Native people and communities.
- IPT** Abbreviation for interpersonal therapy, a structured psychotherapy that focuses on relationships, grief, role transitions, and interpersonal difficulties.
- IPV** Abbreviation for inactivated polio vaccine, an injectable vaccine containing killed poliovirus and used to prevent poliomyelitis.
- IQ** Abbreviation for intelligence quotient, a standardized score from cognitive testing; it describes performance on specified tests and is not a complete measure of a person's abilities or worth.
- ITC** Abbreviation for in-the-canal, describing a hearing aid or other device positioned within the ear canal.
- ITN** Abbreviation for insecticide-treated bednet, a net treated with insecticide to reduce mosquito bites and malaria transmission.
- IVC** Commonly abbreviation for inferior vena cava, the large vein returning blood from the lower body to the heart; it can also mean intravenous cholangiogram, an X-ray study of the biliary system.
- JIP** Abbreviation for juvenile intestinal polyposis, an inherited condition in which children develop multiple hamartomatous polyps in the gastrointestinal tract and may have increased cancer risk.
- KB** In medical usage, an abbreviation for keratoderma blennorrhagicum or kilobase of DNA; lower-case *kb* is preferred for kilobase, so context is important.
- KUB** Abbreviation for kidney, ureter, and bladder, commonly referring to a plain abdominal X-ray used to assess urinary tract calculi, bowel gas patterns, or other abdominal findings.
- L** Abbreviation for liter, a metric unit of volume equal to 1,000 milliliters.
- LAVH** Abbreviation for laparoscopically assisted vaginal hysterectomy, removal of the uterus through the vagina with laparoscopic assistance.
- LL** Commonly an abbreviation for lower lid of the eye or lower limit; the intended meaning depends on the clinical context.
- LLL** Abbreviation for the left lower lobe of the lung.
- LLQ** Abbreviation for left lower quadrant, usually referring to the lower-left quarter of the abdomen.
- LMP** Abbreviation for last menstrual period, the first day of the most recent menstrual bleeding, used in estimating gestational age when the date is reliable.
- LPA** LPA abbreviates Little People of America and may also refer to the left pulmonary artery.
- LUL** Abbreviation for the left upper lobe of the lung.
- LUQ** Abbreviation for the left upper quadrant of the abdomen.
- LVF** Abbreviation for left ventricular failure, meaning failure of the left side of the heart; it may also mean left ventricular function, depending on context.
-

-
- MAOI** Abbreviation for monoamine oxidase inhibitor, a drug that inhibits monoamine oxidase and is used in selected treatment of depression and other disorders.
- MAP** Common abbreviation for *Mycobacterium avium* subspecies *paratuberculosis*, an organism of the *M. avium* complex; the abbreviation can have other meanings in different clinical contexts.
- MCD** An abbreviation with several medical meanings, including minimal change disease, mean corpuscular diameter, and medullary cystic disease; the intended meaning depends on context.
- MCP** Membrane cofactor protein, also called CD46, is a cell-surface protein that regulates complement activation and helps protect host cells from complement-mediated injury; the abbreviation can have other meanings in different contexts.
- MDI** An abbreviation that may mean metered-dose inhaler, multiple daily injections, or mental developmental index; the intended meaning depends on context.
- MEDVAC** Abbreviation for medical evacuation: the transport of ill or injured people to a medical facility or to a location providing a higher level of care.
- MI** Abbreviation for myocardial infarction, or heart attack: death of heart-muscle tissue caused by prolonged inadequate blood flow, usually from acute coronary artery blockage.
- MM** An abbreviation that may mean meningomyelocele, malignant melanoma, or multiple myeloma; in lowercase, *mm* commonly means millimeter. The intended meaning depends on context.
- MP** Abbreviation for mercaptopurine, a purine-antimetabolite drug, or for molecular pathology; the intended meaning depends on context.
- MPS** Abbreviation for mucopolysaccharidosis, a group of inherited lysosomal storage disorders caused by deficient breakdown of glycosaminoglycans.
- MSG** Abbreviation for monosodium glutamate, the sodium salt of glutamic acid used as a flavor enhancer and contributing umami taste.
- MTX** Abbreviation for methotrexate, a folate-antagonist drug used in selected cancers, autoimmune diseases, and other conditions.
- MVP** Abbreviation for mitral valve prolapse, in which one or both mitral-valve leaflets bow into the left atrium during ventricular systole; it is often mild but can sometimes cause mitral regurgitation or arrhythmias.
- MYH** MYH is a gene-family abbreviation involving myosin or DNA-repair proteins; the specific gene and variant determine the clinical meaning.
- ND** ND is a context-dependent abbreviation that may mean naturopathic doctor, neurodevelopmental, or another term; the full meaning should be specified.
- NEP** NEP is a context-dependent abbreviation that may mean neuroendocrine pancreatic tumor, nasoendotracheal procedure, or another clinical term.
- NF** NF is a context-dependent abbreviation, including neurofibromatosis, a group of genetic disorders causing nerve-sheath tumors and other features.
- NG** NG commonly means nasogastric, referring to a tube passed through the nose into the stomach, but the abbreviation has other uses.
- NS** NS is a context-dependent abbreviation, commonly normal saline, a sterile sodium-chloride solution, or not significant; the full term should be stated.
- OB** OB is an abbreviation commonly meaning obstetrics, the care of pregnancy, labor, birth, and the postpartum period, but it may have other meanings.
- OBS** OBS is a context-dependent abbreviation that may mean observation, obstetric service, or organic brain syndrome; the intended term should be written out.

-
- OCG** OCG is a context-dependent abbreviation that may refer to oral contraceptive guidance, oculocardiac testing, or another clinical term; the full term should be specified.
- OMS** An abbreviation for oral and maxillofacial surgery; the intended meaning depends on the clinical context.
- PAP** PAP is an abbreviation with context-dependent meanings, including Papanicolaou testing, pulmonary alveolar proteinosis, or prostatic acid phosphatase; the full term should be specified.
- PAS** PAS is an abbreviation that may mean periodic-acid–Schiff staining, para-aminosalicylic acid, or pulmonary-artery systolic pressure; context determines the meaning.
- PAT** PAT is a context-dependent abbreviation that may refer to paroxysmal atrial tachycardia, a rapid rhythm beginning in the atria, or another clinical term.
- PCA** PCA is a context-dependent abbreviation, commonly meaning patient-controlled analgesia, in which a patient activates prescribed doses from an infusion device.
- PCT** PCT is a context-dependent abbreviation that may mean procalcitonin, porphyria cutanea tarda, or patient-care technician; the full term should be specified.
- PDR** PDR commonly means Physicians’ Desk Reference, a drug-information reference, but the abbreviation has other uses and should be interpreted in context.
- PEP** PEP is a context-dependent abbreviation, including post-exposure prophylaxis, a preventive medicine course after a possible infection exposure.
- PHS** PHS is an abbreviation whose meaning depends on context, including public health service or primary hyperhidrosis; the full term should be specified.
- PI** PI is a context-dependent abbreviation, including principal investigator, pulmonary insufficiency, or protease inhibitor; the intended meaning must be specified.
- PLP** PLP commonly means pyridoxal 5′-phosphate, the active coenzyme form of vitamin B6 required by many enzymes, but the abbreviation has other uses.
- PMD** PMD is a context-dependent abbreviation, including Pelizaeus–Merzbacher disease, a rare inherited disorder of central myelination, or a professional medical designation.
- PON** PON is a context-dependent abbreviation that may refer to postoperative nausea, paraoxonase, or another clinical term; the full meaning should be stated.
- PTU** PTU is the abbreviation for propylthiouracil, an antithyroid medicine used selectively because of liver toxicity and other safety considerations.
- PV** PV is a context-dependent abbreviation, including polycythemia vera, plasma volume, or peripheral vision; the full term should be specified.
- PVB** PVB is a context-dependent abbreviation that may mean paravertebral block, a regional anesthetic technique, or another medical term.
- PX** PX is a context-dependent abbreviation that may mean prognosis, patient, prescription, or a genetic marker; clinical documentation should spell out the intended term.
- Q.2H** A prescription abbreviation meaning “every 2 hours.” Medication instructions should use clear wording because abbreviation misinterpretation can cause dosing errors.
- Q.3H.** A prescription abbreviation meaning “every 3 hours.” Medication instructions should use clear wording because abbreviation misinterpretation can cause dosing errors.
- Q.S.** A prescription abbreviation from the Latin “quantum sufficiat,” meaning “quantity sufficient” to make the required amount or concentration. The exact quantity must be specified by the formulation or prescription context.
- R/O** R/O is an abbreviation for rule out, indicating that a condition is being considered but has not been confirmed; clear documentation should state the actual diagnostic question.
-

RAD Acronym whose medical meaning depends on context, commonly radiation absorbed dose or right axis deviation on an ECG.

RBC RBC is the abbreviation for red blood cell, the cell that transports oxygen with hemoglobin and carries carbon dioxide back toward the lungs.

RF RF is a context-dependent abbreviation, including rheumatoid factor, radiofrequency, or risk factor; the complete term should be stated.

RLL RLL is the abbreviation for right lower lobe, usually referring to the lower lobe of the right lung.

RLQ RLQ is the abbreviation for right lower quadrant of the abdomen, containing structures including the appendix, cecum, and right adnexa.

RML RML is the abbreviation for right middle lobe, the middle lobe of the right lung.

RP RP is a context-dependent abbreviation, commonly retinitis pigmentosa, an inherited retinal degeneration causing night blindness and progressive visual-field loss.

RUQ RUQ is the abbreviation for right upper quadrant of the abdomen, containing the liver, gallbladder, duodenum, and portions of bowel and kidney.

SGOT SGOT is the former abbreviation for AST, an enzyme measured in blood that can rise with injury to liver, heart, muscle, or other tissues.

SGPT SGPT is the former abbreviation for ALT, a liver-associated enzyme that rises in many forms of hepatocellular injury.

SHP SHP is a context-dependent abbreviation that may refer to a healthcare professional, a gene or protein, or another clinical term; the full meaning should be specified.

SLV SLV is a context-dependent abbreviation that may mean single-lung ventilation, serum lithium value, or another term; the full meaning should be specified.

STD(S) Abbreviation for sexually transmitted disease(s), now often called sexually transmitted infections.

STS STS is a context-dependent abbreviation that may mean soft-tissue sarcoma, sodium thiosulfate, or another clinical term; the full term should be stated.

TMR TMR is a context-dependent abbreviation, including targeted muscle reinnervation, a surgical technique used to improve control of a prosthesis and reduce amputation pain.

TPA/TPA Abbreviation for tissue plasminogen activator.

TSD TSD is a context-dependent abbreviation that may mean total sleep deprivation, traumatic stress disorder, or another clinical term; the full term should be specified.

TSE TSE is a context-dependent abbreviation, including transmissible spongiform encephalopathy, the prion-disease group that includes Creutzfeldt-Jakob disease.

UL UL is a context-dependent abbreviation that may mean upper limit, ulnar or ulna-related, or another clinical term; the full meaning should be specified.

URG URG is a context-dependent abbreviation that may refer to urinary urgency or an urgent clinical priority; documentation should state the full term.

URTI Abbreviation for upper respiratory tract infection, commonly involving the nose, sinuses, pharynx, or larynx and often caused by viruses.

VD Abbreviation for venereal disease, an older term for a sexually transmitted infection.

WBS Abbreviation for Williams–Beuren syndrome, a genetic condition associated with characteristic facial features, developmental differences, and cardiovascular disease. In other clinical contexts, WBS may have a different meaning, so the full term should be specified.

Modern Terms

Old or obsolete term	Modern or preferred term
Acute renal failure	Acute kidney injury
Adult-onset diabetes mellitus	Type 2 diabetes mellitus
Ague	Malaria; a historical term for intermittent fever, usually associated with malaria
Apoplexy	Stroke or intracerebral haemorrhage, depending on the historical context
Arteriosclerosis obliterans	Peripheral arterial disease
Bright's disease	Glomerular kidney disease; the specific modern diagnosis should be stated when known
Chronic renal failure	Chronic kidney disease
Congestive heart failure	Heart failure
Consumption	Tuberculosis, especially pulmonary tuberculosis
Crippling arthritis	Disabling arthritis; describe the functional limitation specifically
Diabetic retinopathy, background	Mild or nonproliferative diabetic retinopathy, with severity stated
Dropsy	Oedema or fluid accumulation, with the affected site specified
Eclampsia toxemia	Preeclampsia or eclampsia, depending on the clinical condition
Essential hypertension	Primary hypertension
Fallopian tube	Uterine tube; fallopian tube remains an accepted anatomical term
Female hysteria	No single modern diagnosis; reassess using the presenting symptoms and an appropriate diagnosis
Gastric ulcer disease	Peptic ulcer disease, with the ulcer site specified
Heart attack	Myocardial infarction in formal medical usage
Herpes zoster	Shingles in common language; herpes zoster remains the preferred medical term
Hyperlipaemia	Hyperlipidaemia
Idiopathic thrombocytopenic purpura	Immune thrombocytopenia
Imbecile	Intellectual disability; the historical term is offensive and must not be used clinically
Insulin-dependent diabetes mellitus	Type 1 diabetes mellitus
Junkie's abscess	Injection-related abscess or skin and soft-tissue infection
Leprosy	Hansen disease; leprosy remains a recognized medical term, but person-first language is preferred

Old or obsolete term	Modern or preferred term
Manic depression	Bipolar disorder
Mongolism	Down syndrome; the historical term is unacceptable and must not be used
Multiple personality disorder	Dissociative identity disorder
Non-insulin-dependent diabetes mellitus	Type 2 diabetes mellitus
Old age dementia	Dementia or major neurocognitive disorder, with the cause specified when known
Palsy	Paralysis or the specific neurological disorder, depending on the context
Paralytic stroke	Stroke with paralysis; specify the neurological deficit and stroke type
Phthisis	Pulmonary tuberculosis; historically, progressive wasting disease
Senile dementia	Dementia or major neurocognitive disorder; age alone should not define the diagnosis
Senility	Cognitive impairment, dementia, or another specific diagnosis, after assessment
Spastic colon	Irritable bowel syndrome
Stomach flu	Acute gastroenteritis
Sunstroke	Heatstroke
Terminal illness	Advanced or life-limiting illness, with the diagnosis and prognosis specified
Toxemia of pregnancy	Preeclampsia or eclampsia
Venereal disease	Sexually transmitted infection
Wassermann reaction	A modern syphilis serologic test, such as a nontreponemal or treponemal test
Water on the brain	Hydrocephalus

Medical Specialties

Medical specialty	Principal area of practice
Allergy and Immunology	Allergic disease, asthma, immune deficiency, and immune-mediated disorders
Anesthesiology	Perioperative care, anesthesia, critical care, and pain medicine
Cardiology	Diseases of the heart and circulatory system
Cardiothoracic Surgery	Surgical treatment of diseases of the heart, lungs, and chest
Clinical Genetics	Diagnosis, counseling, and management of inherited and genomic disorders
Clinical Pharmacology	Effects, uses, interactions, and safe clinical use of medicines
Colon and Rectal Surgery	Surgical treatment of diseases of the colon, rectum, and anus
Critical Care Medicine	Assessment and treatment of life-threatening organ dysfunction
Dermatology	Diseases of the skin, hair, nails, and mucous membranes
Emergency Medicine	Immediate assessment and treatment of acute illness and injury
Endocrinology	Hormones, metabolism, diabetes, and endocrine glands
Family Medicine	Comprehensive continuing care for individuals and families of all ages
Forensic Medicine	Application of medical knowledge to legal and medicolegal questions
Gastroenterology	Diseases of the digestive tract, liver, gallbladder, and pancreas
General Practice	First-contact and continuing medical care across a broad range of conditions
General Surgery	Operative treatment of diseases involving multiple body systems
Geriatric Medicine	Health care of older adults, including multimorbidity and functional decline
Hematology	Blood cells, blood-forming organs, clotting, and blood disorders
Hepatology	Diseases of the liver and biliary system
Hospital Medicine	Comprehensive medical care of hospitalized adults
Infectious Disease Medicine	Diagnosis, treatment, and prevention of infections
Internal Medicine	Prevention, diagnosis, and treatment of adult medical disorders
Interventional Cardiology	Catheter-based diagnosis and treatment of cardiovascular disease
Interventional Radiology	Image-guided minimally invasive diagnosis and treatment
Medical Oncology	Systemic treatment and supportive care for cancer
Neonatology	Care of newborn infants, especially premature or critically ill infants
Nephrology	Diseases of the kidneys, fluid balance, electrolytes, and hypertension
Neurology	Diseases of the brain, spinal cord, peripheral nerves, and muscles

Medical specialty	Principal area of practice
Neurosurgery	Surgical treatment of disorders of the nervous system
Nuclear Medicine	Diagnosis and treatment using radioactive substances and molecular imaging
Obstetrics and Gynecology	Pregnancy, childbirth, and diseases of the female reproductive system
Occupational Medicine	Health, safety, and disease prevention in the workplace
Ophthalmology	Medical and surgical care of the eyes and visual system
Oral and Maxillofacial Surgery	Surgical treatment of diseases and injuries of the mouth, jaws, face, and neck
Orthopedic Surgery	Surgical and nonsurgical treatment of the musculoskeletal system
Otolaryngology–Head and Neck Surgery	Diseases and surgery of the ear, nose, throat, and head and neck
Pain Medicine	Assessment and treatment of acute, chronic, and cancer-related pain
Palliative Medicine	Relief of symptoms and support for people with serious or life-limiting illness
Pathology	Laboratory examination of tissues, cells, blood, and body fluids
Pediatric Surgery	Surgical care of infants, children, and adolescents
Pediatrics	Medical care of infants, children, and adolescents
Physical Medicine and Rehabilitation	Restoration of function and independence after illness or injury
Plastic and Reconstructive Surgery	Reconstruction, restoration, and alteration of body tissues
Preventive Medicine	Prevention of disease and promotion of health in individuals and populations
Psychiatry	Diagnosis and treatment of mental, emotional, and behavioral disorders
Public Health Medicine	Protection and improvement of population health
Pulmonary Medicine	Diseases of the lungs and respiratory system
Radiation Oncology	Use of ionizing radiation to treat cancer
Radiology	Diagnostic and image-guided evaluation of disease
Reproductive Endocrinology and Infertility	Hormonal and reproductive disorders and fertility care
Rheumatology	Autoimmune, inflammatory, and musculoskeletal disorders
Sleep Medicine	Sleep disorders and their effects on health
Sports Medicine	Prevention, diagnosis, treatment, and rehabilitation of activity-related conditions
Thoracic Surgery	Surgery of the chest, lungs, esophagus, and mediastinum
Transfusion Medicine	Collection, testing, processing, and clinical use of blood components
Trauma Surgery	Surgical management of serious and complex injuries
Urology	Diseases of the urinary tract and male reproductive system
Vascular Surgery	Surgical and endovascular treatment of blood-vessel disease

Lay Language Medical Terms

Lay term	Medical term	Lay-language explanation
Belly area	ABDOMEN/ABDOMINAL	The body cavity below the diaphragm containing the stomach, intestines, liver, and other organs.
Take in	ABSORB	To take up or take in a substance, such as fluid.
Too much acid in blood	ACIDOSIS	A condition in which the blood is more acidic than normal.
Sharpness or clarity	ACUITY	The clearness or keenness of a sense, especially vision.
Recent or sudden	ACUTE	New, recent, sudden, or requiring urgent attention.
Swollen glands	ADENOPATHY	Enlarged or swollen lymph nodes.
Helpful added treatment	ADJUVANT	Something that supports or assists the main treatment.
Added treatment	ADJUVANT TREATMENT	Treatment given in addition to the main or standard treatment.
Germ-killing drug	ANTIBIOTIC	A drug used to kill or control bacteria and some other germs.
Germ-killing treatment	ANTIMICROBIAL	A substance or treatment that acts against microorganisms such as bacteria, fungi, or parasites.
Antiviral drug	ANTIRETROVIRAL	A drug that slows or stops the growth of certain viruses.
Side effect	ADVERSE EFFECT	An unwanted or harmful response to a treatment or medicine.
Walking	AMBULATE/AMBULATION/ AMBULATORY	To walk, or to be able to walk.
Severe allergy	ANAPHYLAXIS	A serious, potentially life-threatening allergic reaction.
Low red-cell count	ANEMIA	A reduced number of red blood cells or a low red-cell blood count.
Numbing medicine	ANESTHETIC	A drug or agent that reduces or removes the feeling of pain, sometimes by causing sleep.
Heart pain	ANGINA	Chest pain caused by inadequate blood flow to the heart muscle.
Heart pain	ANGINA PECTORIS	Another medical term for chest pain caused by reduced blood flow to the heart.
Loss of appetite	ANOREXIA	Lack of appetite or, in some contexts, a disorder involving refusal to eat.

Lay term	Medical term	Lay-language explanation
Inner elbow area	ANTECUBITAL	Relating to the inner side of the elbow or forearm.
Protective protein	ANTIBODY	A protein made by the body in response to a foreign substance.
Seizure-prevention drug	ANTICONVULSANT	A medicine used to prevent or control seizures.
Cholesterol-lowering drug	ANTILIPEMIC	A drug that lowers fat or cholesterol levels in the blood.
Cough medicine	ANTITUSSIVE	A medicine used to reduce coughing.
Irregular heartbeat	ARRHYTHMIA	Any abnormal change in the normal heartbeat or rhythm.
Breathing material into the lungs	ASPIRATION	Entry of fluid, food, or other material into the lungs, often after vomiting.
Laboratory test	ASSAY	A laboratory test used to measure or identify something.
Check or evaluate	ASSESS	To examine, measure, evaluate, or look at something carefully.
Asthma	ASTHMA	A lung disease in which narrowed or tightened airways make breathing difficult.
Without symptoms	ASYMPTOMATIC	Having no noticeable symptoms.
Armpit	AXILLA	The armpit area.
Not cancerous	BENIGN	Not malignant and generally not cancerous.
Twice daily	BID	Prescription shorthand meaning twice a day.
Carried or stuck together	BINDING/BOUND	Carried by something, or made to stick or join together.
Drug availability	BIOAVAILABILITY	The amount or proportion of a drug that becomes available for the body to use.
Series of blood tests	BLOOD PROFILE	A group or panel of blood tests.
Large dose at once	BOLUS	A relatively large amount given all at one time.
Amount of mineral in bone	BONE MASS	The amount of calcium and other minerals in a given amount of bone.
Slow irregular heartbeats	BRADYARRHYTHMIAS	Slow heart rhythms that may also be irregular.
Slow heartbeat	BRADYCARDIA	A slower-than-usual heartbeat.
Narrowed airways	BRONCHOSPASM	Breathing difficulty caused by tightening of the airway muscles.
Cancer-causing	CARCINOGENIC	Capable of causing cancer.
Cancer type	CARCINOMA	A cancer that begins in lining or covering cells of the body.
Related to the heart	CARDIAC	Relating to the heart.
Resetting the heartbeat	CARDIOVERSION	Restoring a normal heart rhythm, often with a controlled electrical shock.
Tube	CATHETER	A thin tube used to give or remove fluids, or to perform certain medical procedures.
Epidural tube	CATHETER	A catheter placed near the spinal cord to deliver anesthesia during surgery.
Brain and spinal cord	CENTRAL NERVOUS SYSTEM (CNS)	The brain and spinal cord.
Brain injury	CEREBRAL TRAUMA	Damage to the brain caused by an injury.
Stopping	CESSATION	The act of stopping something.
Coronary heart disease	CHD	Disease of the blood vessels that supply the heart.
Cancer drug treatment	CHEMOTHERAPY	Treatment of disease, usually cancer, with chemical medicines.

Lay term	Medical term	Lay-language explanation
Long-lasting	CHRONIC	Continuing for a long time or ongoing.
Related to patient care	CLINICAL	Pertaining to medical care or the care of patients.
Human research study	CLINICAL TRIAL	A research study involving human participants.
Unconscious state	COMA	A prolonged state of unconsciousness in which a person cannot be awakened normally.
All disease gone	COMPLETE RESPONSE	Total disappearance of the detectable disease being treated.
Present from birth	CONGENITAL	Present before or at birth.
Pink, irritated eye	CONJUNCTIVITIS	Redness and irritation of the thin membrane covering the eye.
Treatment to keep improvement	CONSOLIDATION PHASE	A treatment phase intended to make a remission last, usually after initial treatment.
Comparison study	CONTROLLED TRIAL	A study comparing an experimental treatment with a standard or control treatment.
Research partnership	COOPERATIVE GROUP	An association of institutions that work together on clinical research.
Related to heart arteries	CORONARY	Relating to the heart or the blood vessels that supply it.
Computerized X-ray scan	CT SCAN (CAT)	A series of computer-processed X-ray images that show sections of the body.
Germ-growth test	CULTURE	A test that grows or detects organisms that may cause infection.
Added together	CUMULATIVE	Added up from the beginning.
Related to the skin	CUTANEOUS	Relating to the skin.
Stroke	CVA	A stroke, also called a cerebrovascular accident.
Related to the skin	DERMATOLOGIC	Pertaining to the skin.
Lower blood-pressure number	DIASTOLIC	Relating to the lower blood-pressure number, when the heart relaxes.
Farther away	DISTAL	Toward the end or away from the center of the body.
Water pill	DIURETIC	A drug that increases urination.
Sound-wave blood-flow test	DOPPLER	A device or test using sound waves to assess blood flow.
Masked study	DOUBLE BLIND	A study in which neither the participants nor investigators know which treatment is being given.
Improper function	DYSFUNCTION	A state in which something does not work normally.
Abnormal cells	DYSPLASIA	Abnormal changes in the size, shape, or organization of cells.
Heart sound-wave test	ECHOCARDIOGRAM	An ultrasound test that creates pictures of the heart.
Swelling from fluid	EDEMA	Excess fluid collecting in body tissues.
Brain-wave test	EEG	A recording of the brain's electrical activity.
Effectiveness	EFFICACY	How well a treatment works under specified conditions.
Heart electrical tracing	ELECTROCARDIOGRAM	A tracing of the heart's electrical activity, also called an ECG or EKG.
Mineral imbalance	ELECTROLYTE IMBALANCE	An abnormal level or balance of minerals in the blood.
Vomiting	EMESIS	The act of vomiting.

Lay term	Medical term	Lay-language explanation
Based on experience	EMPIRIC	Based on experience or likely cause rather than definitive test results.
Viewing inside the body	ENDOSCOPIC	Looking inside the body with a lighted tube or camera.
Through the intestines	ENTERAL	Given through or involving the digestive tract.
Outside the spinal cord	EPIDURAL	Located outside the spinal cord covering, or medicine given into that space.
Remove completely	ERADICATE	To get rid of a disease, infection, or other problem.
Examined	EVALUATED, ASSESSED	Examined or checked for a medical condition.
Fast ethics review	EXPEDITED REVIEW	A rapid research-protocol review allowed for certain lower-risk studies.
Outside the body	EXTERNAL	Located or occurring outside the body.
Leak out	EXTRAVASATE	To leak outside the intended area, such as from a blood vessel into nearby tissue.
U.S. drug agency	FDA	The U.S. Food and Drug Administration, which regulates medicines and medical products.
Scar-like	FIBROUS	Containing many fibers, often resembling scar tissue.
Irregular quivering	FIBRILLATION	Very rapid, uncoordinated activity of the heart or another muscle.
Being put fully to sleep	GENERAL ANESTHESIA	Use of medicines to cause unconsciousness and prevent pain during a procedure.
Related to pregnancy	GESTATIONAL	Pertaining to pregnancy.
Red-cell percentage	HEMATOCRIT	The proportion of blood made up of red blood cells.
Bruise or blood collection	HEMATOMA	A collection of blood under the skin or in a tissue, often appearing as a bruise.
Blood-flow measurement	HEMODYNAMIC MEASURING	Measuring blood flow and circulation.
Red-cell breakdown	HEMOLYSIS	Breakdown or destruction of red blood cells.
Heparin tube or port	HEPARIN LOCK	An intravenous access device kept open with a prescribed solution, sometimes containing heparin.
Liver tumor	HEPATOMA	A tumor of the liver, often referring to hepatocellular carcinoma.
Inherited disease	HERITABLE DISEASE	A disease that can be passed through genes to future children.
Tissue-disease examination	HISTOPATHOLOGIC	Relating to examination of tissues or cells for disease.
Portable heart monitor	HOLTER MONITOR	A portable device that records heartbeats, usually for a day or longer.
High blood calcium	HYPERCALCEMIA	An abnormally high calcium level in the blood.
High blood potassium	HYPERKALEMIA	An abnormally high potassium level in the blood.
High blood sodium	HYPERNATREMIA	An abnormally high sodium level in the blood.
High blood pressure	HYPERTENSION	Blood pressure that is higher than recommended.
Low blood calcium	HYPOCALCEMIA	An abnormally low calcium level in the blood.
Low blood potassium	HYPOKALEMIA	An abnormally low potassium level in the blood.
Low blood sodium	HYPONATREMIA	An abnormally low sodium level in the blood.
Low blood pressure	HYPOTENSION	Blood pressure that is lower than expected.
Low blood oxygen	HYPOXEMIA	A low level of oxygen in the blood.
Low tissue oxygen	HYPOXIA	Too little oxygen reaching body tissues.

Lay term	Medical term	Lay-language explanation
Removal of the uterus	HYSTERECTOMY	Surgical removal of the uterus; the ovaries and other structures may or may not also be removed.
Treatment-caused	IATROGENIC	Caused by medical treatment or a healthcare procedure.
Device research permission	IDE	Permission to study an unapproved medical device in people.
Cause unknown	IDIOPATHIC	Having no known cause.
Body protection	IMMUNITY	The body's defense against infection or other foreign substances.
Antibody protein	IMMUNOGLOBIN	A protein involved in making antibodies and immune defense; the standard spelling is immunoglobulin.
Immune-suppressing	IMMUNOSUPPRESSIVE	A drug or treatment that reduces the body's immune response.
Immune-based treatment	IMMUNOTHERAPY	Treatment that uses or changes the immune system, often against cancer or immune disease.
Abnormal function	IMPAIRED FUNCTION	Function that is reduced or not working normally.
Placed inside the body	IMPLANTED	Surgically or otherwise placed inside the body.
New-drug research permission	IND	Authorization to test an unapproved new drug in people.
Hardening	INDURATION	An area that has become unusually firm or hard.
Left in place	INDWELLING	Remaining in a particular location, such as a catheter.
Dead tissue from poor blood flow	INFARCT	Death of tissue caused by inadequate blood supply.
Disease that can spread	INFECTIOUS DISEASE	An illness caused by organisms that may spread between people or through other routes.
Swelling and irritation	INFLAMMATION	The body's response to injury or infection, often causing swelling, warmth, redness, or pain.
Slow delivery into the body	INFUSION	Slow delivery of a substance, usually through a vein or catheter.
Taking by mouth	INGESTION	Eating, drinking, or taking something into the body by mouth.
Antiviral immune protein	INTERFERON	A medicine or natural protein that helps the body act against viruses.
On and off	INTERMITTENT	Occurring repeatedly with pauses between episodes.
Inside the body	INTERNAL	Located or occurring within the body.
Inside	INTERIOR	Located on the inside.
Into a muscle	INTRAMUSCULAR	Given into a muscle.
Into the abdomen	INTRAPERITONEAL	Given into or located within the abdominal cavity.
Into spinal fluid	INTRATHECAL	Given into the fluid space around the spinal cord.
Into a vein	INTRAVENOUS (IV)	Given through a vein.
Into the bladder	INTRAVESICAL	Given into the bladder.
Place a breathing tube	INTUBATE	To place a tube into the airway.
Breaking the skin	INVASIVE PROCEDURE	A procedure that punctures, opens, or cuts the skin or enters the body.
Unapproved-drug study	INVESTIGATIONAL NEW DRUG (IND)	A new drug being studied before it has full approval for general use.

Lay term	Medical term	Lay-language explanation
Unproven treatment method	INVESTIGATIONAL METHOD	A treatment method still being studied and not established as standard care.
Reduced blood flow	ISCHEMIA	Too little blood and oxygen reaching a tissue, usually because blood flow is reduced.
Open abdominal surgery	LAPAROTOMY	Surgery using an incision in the abdominal wall to reach the organs inside.
Abnormal area	LESION	A wound, injury, or area of abnormal tissue.
Very tired or sleepy	LETHARGY	Sleepiness, tiredness, or reduced energy.
Low white-cell count	LEUKOPENIA	A lower-than-normal number of white blood cells.
Fat	LIPID	A fat or fat-like substance.
Amount of fat	LIPID CONTENT	The amount of fat in a substance, tissue, or blood sample.
Cholesterol and fat panel	LIPID PROFILE (PANEL)	Blood tests measuring fats and cholesterol.
Numbing a small area	LOCAL ANESTHESIA	Numbing medicine used to prevent pain in a limited area.
Limited to one area	LOCALIZED	Restricted to one area.
Inner space	LUMEN	The hollow space inside a tube or organ, such as a blood vessel.
Lymph-vessel X-ray	LYMPHANGIOGRAPHY	An X-ray study of lymph vessels or nodes after contrast dye is injected.
Immune white blood cell	LYMPHOCYTE	A type of white blood cell that helps protect against infection.
Lymph-node cancer	LYMPHOMA	A cancer of lymph nodes or related lymphatic tissue.
Feeling unwell	MALAISE	A vague feeling of illness or bodily discomfort.
Not working correctly	MALFUNCTION	A condition in which a device, organ, or system does not work properly.
Cancerous growth	MALIGNANCY	A cancer or other tumor capable of growing and spreading.
Brain tumor	MEDULLABLASTOMA	A type of tumor that begins in the brain.
Abnormal red-cell development	MEGALOBLASTOSIS	A change in blood-forming cells that produces unusually large, abnormal red-cell precursors.
Break down in the body	METABOLIZE	To chemically process or break down a substance in the body.
Cancer spread	METASTASIS	Spread of cancer cells from one body part to another.
Antibiotic medicine	METRONIDAZOLE	A medicine used for certain bacterial and parasitic infections.
Heart attack	MI	Myocardial infarction, or death of heart muscle from blocked blood flow.
Small or slight	MINIMAL	Very small or slight.
Reduce	MINIMIZE	To reduce something as much as possible.
Check or watch	MONITOR	To observe, measure, or keep track of something over time.
Ease of movement	MOBILITY	The ability to move easily.
Illness or complication	MORBIDITY	Illness, disability, or an unwanted result of disease or treatment.
Death rate or death	MORTALITY	Death, or the rate of death in a population.
Ability to move	MOTILITY	The ability of a body part, cell, or organism to move.
Magnetic body scan	MRI	Pictures of the inside of the body made with magnets and radio waves rather than X-rays.

Lay term	Medical term	Lay-language explanation
Moist body lining	MUCOSA, MUCOUS MEMBRANE	The moist lining of the digestive, respiratory, reproductive, and urinary passages.
Muscle aches	MYALGIA	Pain or aching in the muscles.
Related to heart muscle	MYOCARDIAL	Pertaining to the muscle of the heart.
Heart attack	MYOCARDIAL INFARCTION	Death of heart muscle caused by inadequate blood flow.
Nose-to-stomach tube	NASOGASTRIC TUBE	A tube passed through the nose into the stomach.
U.S. health institute	NCI	The National Cancer Institute.
Tissue death	NECROSIS	Death of cells or tissue.
Tumor	NEOPLASIA/NEOPLASM	An abnormal new growth that may be benign or malignant.
Nerve-tissue cancer	NEUROBLASTOMA	A cancer that develops from immature nerve tissue.
Related to the nervous system	NEUROLOGICAL	Pertaining to the brain, spinal cord, or nerves.
Low infection-fighting cells	NEUTROPENIA	A decrease in neutrophils, a major type of infection-fighting white blood cell.
U.S. health agency	NIH	The National Institutes of Health.
Not entering the body	NONINVASIVE	Not breaking, cutting, or entering the skin or body.
Hospital-acquired	NOSOCOMIAL	Acquired during a stay in a healthcare facility.
Blockage	OCCLUSION	Closing, blockage, or obstruction.
Cancer specialty	ONCOLOGY	The study and treatment of cancer and tumors.
Related to the eye	OPHTHALMIC	Pertaining to the eye.
Best choice	OPTIMAL	Best, most favorable, or most suitable.
By mouth	ORAL ADMINISTRATION	Giving a medicine through the mouth.
Related to bones	ORTHOPEDIC	Pertaining to bones, joints, muscles, or related structures.
Rare dense-bone disorder	OSTEOPETROSIS	A rare disorder in which bones become unusually dense but may be fragile.
Weak bones	OSTEOPOROSIS	A condition in which bones lose strength and become more likely to break.
Female sex glands	OVARIES	The organs that produce eggs and reproductive hormones.
Given by injection	PARENTERAL	Given by injection rather than through the digestive tract.
Open passage	PATENCY	The condition of being open and unobstructed.
How a disease develops	PATHOGENESIS	The process by which a disease or unhealthy condition develops.
Through the skin	PERCUTANEOUS	Done through or across the skin.
Away from the center	PERIPHERAL	At or toward the outer part rather than the center.
By mouth	PER OS (PO)	A prescription direction meaning by mouth.
How the body handles a drug	PHARMACOKINETICS	The study of how the body absorbs, distributes, changes, and removes a drug.
First drug-study phase	PHASE I	The first human study phase, usually focused on safety, effects, and dosing.
Early effectiveness study	PHASE II	A study phase examining safety and early evidence of benefit in people with a condition.
Large confirmation study	PHASE III	A larger study phase used to confirm safety and effectiveness and identify common side effects.

Lay term	Medical term	Lay-language explanation
After-approval study	PHASE IV	A study performed after approval to monitor safety or examine additional uses.
Vein irritation	PHLEBITIS	Irritation or inflammation of a vein.
Inactive treatment	PLACEBO	An inactive substance or treatment that looks like the real treatment.
Improvement from expectation	PLACEBO EFFECT	An improvement that occurs after an inactive treatment, often because of expectation or context.
Clotting blood particles	PLATELETS	Small blood components that help stop bleeding by forming clots.
Possible	POTENTIAL	Possible or capable of happening.
Make stronger	POTENTIATE	To increase or multiply the effect of a drug, treatment, or substance.
Effect booster	POTENTIATOR	An agent that helps another agent work more strongly.
Before birth	PRENATAL	Occurring before birth.
Preventive treatment	PROPHYLAXIS	A medicine or action used to prevent disease or infection.
As needed	PRN	Prescription shorthand meaning when needed.
Expected outlook	PROGNOSIS	The expected course and outcome of a disease.
Lying face down	PRONE	Lying on the stomach or front.
Study looking forward	PROSPECTIVE STUDY	A study that follows participants forward in time.
Artificial body part	PROSTHESIS	An artificial replacement for a body part.
Study plan	PROTOCOL	The written plan for a study or treatment.
Closer to the center	PROXIMAL	Closer to the center of the body or point of attachment.
Related to the lungs	PULMONARY	Pertaining to the lungs.
Every day	QD	Prescription shorthand meaning every day; clearer wording is preferred.
Four times daily	QID	Prescription shorthand meaning four times a day.
Radiation treatment	RADIATION THERAPY	Treatment using high-energy radiation to damage or destroy abnormal cells.
By chance	RANDOM	Selected or occurring by chance.
Chance assignment	RANDOMIZATION	Assigning participants to groups by chance.
Red blood cell	RBC	A red blood cell.
Genetically combined	RECOMBINANT	Made by combining genetic material from different sources.
Put back together	RECONSTITUTION	Restoring something by putting its parts back together or adding a liquid.
Happen again	RECUR	To happen again.
Not responding	REFRACTORY	Not responding adequately to treatment.
Regrowth or repair	REGENERATION	Growth again or replacement of lost or damaged tissue.
Treatment schedule	REGIMEN	The planned pattern, dose, and timing of treatment.
Return of disease	RELAPSE	Return of a disease after improvement or remission.
No detectable disease	REMISSION	Disappearance or reduction of evidence of disease; it may be partial or complete.
Related to kidneys	RENAL	Pertaining to the kidneys.
Can be repeated	REPLICABLE	Able to be repeated with similar results.

Lay term	Medical term	Lay-language explanation
Remove surgically	RESECT	To remove part or all of an organ or tissue by surgery.
Study looking back	RETROSPECTIVE STUDY	A study that examines past records or past events.
Connective-tissue cancer	SARCOMA	A cancer arising from connective, bone, muscle, fat, or related tissues.
Calming medicine	SEDATIVE	A medicine that calms or makes a person sleepy.
Testicular cancer	SEMINOMA	A type of cancer arising in the testicle.
In order	SEQUENTIALLY	Happening one after another in order.
Sleepiness	SOMNOLENCE	Unusual sleepiness or a tendency to fall asleep.
Air-measuring instrument	SPIROMETER	An instrument that measures the amount of air moved into and out of the lungs.
Extent of disease	STAGING	Assessment of how far a disease has progressed or spread.
Usual accepted treatment	STANDARD OF CARE	A treatment plan generally accepted by the medical community as appropriate.
Narrowing	STENOSIS	Narrowing of a passage, duct, or blood vessel.
Mouth inflammation	STOMATITIS	Sores or inflammation inside the mouth.
Group for comparison	STRATIFY	To arrange people or results into groups for analysis.
Barely responsive state	STUPOR	A greatly reduced level of alertness in which a person is difficult to awaken or respond to.
Under the collarbone	SUBCLAVIAN	Located beneath the collarbone.
Under the skin	SUBCUTANEOUS	Beneath the skin.
Lying on the back	SUPINE	Lying face up on the back.
Care focused on comfort	SUPPORTIVE CARE	General care that relieves symptoms and supports the person without directly curing the underlying disease.
Having symptoms	SYMPTOMATIC	Showing or having symptoms.
Group of related findings	SYNDROME	A condition identified by a characteristic group of symptoms and signs.
Upper blood-pressure number	SYSTOLIC	Relating to the upper blood-pressure number when the heart contracts.
Birth-defect-causing	TERATOGENIC	Capable of causing abnormalities in a developing fetus.
Male sex glands	TESTES/TESTICLES	The organs that produce sperm and male reproductive hormones.
Clot formation	THROMBOSIS	Formation of a blood clot inside a blood vessel or other location.
Blood clot	THROMBUS	A blood clot formed within a blood vessel or the heart.
Three times daily	TID	Prescription shorthand meaning three times a day.
Gradual dose adjustment	TITRATION	Gradually changing a dose or solution to reach a desired effect.
Immune white blood cells	T-LYMPHOCYTES	White blood cells that help coordinate or carry out immune responses.
On the surface	TOPICAL	Applied to the surface, usually the skin or a mucous membrane.
Surface numbing medicine	TOPICAL ANESTHETIC	A numbing medicine applied to a particular surface area.

Lay term	Medical term	Lay-language explanation
Harmful effects	TOXICITY	Harmful or unwanted effects caused by a drug, chemical, or treatment.
Through the skin	TRANSDERMAL	Delivered through the skin.
Temporarily	TRANSIENTLY	For a short time or temporarily.
Injury	TRAUMA	Physical injury or wound.
Walking exercise machine	TREADMILL	A moving walking surface used for exercise or heart testing.
Absorption into tissue	UPTAKE	Absorbing or taking in a substance by living tissue.
Heart-valve repair	VALVULOPLASTY	A procedure that repairs or widens a heart valve.
Enlarged veins	VARICES	Abnormally enlarged or twisted veins.
Blood-vessel spasm	VASOSPASM	Sudden narrowing of blood vessels.
Disease carrier	VECTOR	An organism or carrier that can transmit a disease-causing microorganism.
Blood draw	VENIPUNCTURE	Puncturing a vein with a needle to draw blood or give treatment.
Parent-to-child spread	VERTICAL TRANSMISSION	Spread of an infection from a parent to a child, often during pregnancy, birth, or breastfeeding.
White blood cell	WBC	A white blood cell involved in immune defense.

Source and adaptation: Terms and concepts were checked against the University of Iowa Human Subjects Office, “Medical Terms in Lay Language,” available at <https://hso.research.uiowa.edu/get-started/guides-and-standard-operating-procedures-sops/medical-terms-lay-language>. The explanations in this appendix are paraphrased for this dictionary and are not the only acceptable plain-language alternatives.

Bibliography and Sources

This is a selected bibliography of standard medical dictionaries and authoritative biomedical terminology resources used to guide terminology, spelling, synonyms, and general definitions in this dictionary. The source material is not mapped term-by-term, so this list should not be read as a claim that every entry was copied from every source. Clinical decisions should be based on current guidelines, specialist references, and primary literature.

BMA Illustrated Medical Dictionary

British Medical Association. *The British Medical Association Illustrated Medical Dictionary*. Dorling Kindersley; 2007. ISBN 978-1-4053-1997-3. Bibliographic record available from: <https://obnb.uk/p13578671-the-british-medical-association-illustrated-medical-dictionary>
