The fleshy mound at the base of the thumb, formed by muscles that move the thumb. Damage to the supplying nerve or muscles can weaken thumb opposition and make grasping difficult.

Theophylline

A medicine that can relax airway muscles and improve breathing in selected lung diseases. Its safe and harmful doses are close together, so blood levels, medicine interactions, heart rhythm, and side effects need monitoring.

Theophylline Toxicity

Toxicity causing persistent nausea and vomiting, tremor, agitation, tachycardia, hypokalemia, hyperglycemia, seizures, or life-threatening atrial or ventricular dysrhythmias. Measure serial serum levels and electrolytes; benzodiazepines treat seizures, repeated activated charcoal may reduce absorption, and hemodialysis is considered for severe poisoning.

Theranostic Pair

Two related medical substances designed to find and treat the same target in the body. One helps show where the target is on an image; the other delivers treatment to cells carrying that target.

Theranostics

A medical approach that uses one targeted substance to find abnormal cells and a related substance to treat them. In some cancers, the treatment substance carries radiation directly to cells with the target.

Therapeutic Abortion

Induced ending of a pregnancy for a medical reason, such as a serious risk to the pregnant person's health or a condition affecting the fetus. The term is also called medically indicated abortion.

Therapeutic Alliance

The working relationship between a patient and a therapist. It includes trust, agreement about treatment goals, and cooperation on the steps of therapy, and can influence how well treatment works.

Therapeutic Drug Monitoring

Measuring the concentration of selected medicines in blood to guide dosing and reduce harm. Samples must be taken at the right time for the medicine and interpreted with the dose, symptoms, and clinical context; not every medicine requires monitoring.

Alternate Names:
TDM; Serum Drug Level Monitoring

Therapeutic Equivalence

Two medicine products are therapeutically equivalent when they contain the same active ingredient, have the same strength and dosage form, meet quality standards, and are expected to have the same clinical effect when used as directed.

Therapeutic Exercise

Planned physical activity used to improve strength, flexibility, balance, movement, endurance, or daily function and to reduce pain or disability. A clinician selects and gradually adjusts exercises according to the person's condition, abilities, symptoms, and goals.

Therapeutic Hypothermia

Deliberate, closely monitored lowering of body temperature, used in selected clinical situations such as temperature control after cardiac arrest and in newborns with hypoxic-ischemic encephalopathy. The target and duration depend on the condition; cooling can cause shivering, abnormal heart rhythms, or electrolyte changes.

Therapeutic Index

A measure of how close a medicine's effective dose is to a dose that causes harm. With a narrow index, small changes in dose or blood concentration can cause toxicity or loss of effect.

Therapeutics

The part of medicine concerned with treating disease and improving health. It includes medicines, procedures, surgery, rehabilitation, and other treatments used to prevent, control, or cure illness.

Therapeutic Window

The range of medicine exposure that is high enough to work but low enough to avoid unacceptable harm. Medicines with a narrow window can cause toxicity or treatment failure after small changes in dose or blood level.

Therapy

Treatment intended to prevent, relieve, or cure disease or to improve function and quality of life.

Thermal Injury

Tissue damage caused by heat, including burns and scalds. Severity depends on temperature, contact time, depth, body area, and involvement of the airway or other structures.

Alternate Names:
Heat Injury; Thermal Trauma

Thermal Therapy

Treatment using heat or cold to influence pain, swelling, muscle tension, or tissue temperature. Effects and safety depend on the condition and method used.

Thermogenesis

The production of heat by the body. It comes mainly from normal metabolism, muscle activity such as shivering, digestion, and specialized fat tissue that releases stored energy as heat.

Thermography

Recording the pattern of heat released from the body surface with a special camera. It may show temperature differences, but these are not specific to one disease.

Thermoluminescent Dosimeter

A small radiation-monitoring device that records accumulated exposure. When the device is heated, its detector releases light in proportion to the radiation it absorbed, allowing the exposure to be measured.

Thermometer Scales

Numbering systems used to report temperature, such as Celsius, Fahrenheit, and Kelvin. Temperatures can be converted between scales using defined formulas.

Thermoneutral Zone

The range of surrounding temperatures in which the body can maintain its normal temperature without shivering or sweating. The range varies with clothing, activity, age, health, and humidity.

Thermoplasty

A procedure for selected adults with severe asthma that uses controlled heat delivered through a bronchoscope to reduce extra muscle in the airway walls. It may reduce severe attacks but does not cure asthma and has procedural risks.

Thermoreceptor

A nerve ending that senses warmth or cold in the skin and other tissues. Signals travel through the spinal cord to the brain, helping a person recognize temperature and helping the body control heat through sweating, shivering, and changes in skin blood flow. Damage to these nerves can reduce temperature sensation and increase the risk of burns or cold injury.

Thermoregulation

The body's control of internal temperature by balancing heat production and heat loss. It uses sweating, shivering, changes in skin blood flow, behavior, and brain signals to keep temperature within a safe range.

Thiabendazole

An antiparasitic medicine used for selected worm infections and, historically, some fungal infections. It can cause nausea, dizziness, liver problems, or nervous-system effects and is now used less often because alternatives are available.

Thiamin

Alternate name; see *Thiamine*.

Thiamine

Vitamin B1, a water-soluble vitamin required for carbohydrate metabolism and nerve function. Severe deficiency can cause beriberi or Wernicke encephalopathy.

Alternate Names:
Vitamin B1; Aneurin

Thiamine Deficiency

A lack of vitamin B1, needed for normal nerve, heart, and energy metabolism. Causes include poor intake or absorption, heavy alcohol use, and increased requirements. Deficiency can cause beriberi, with nerve or heart problems, or Wernicke encephalopathy with confusion, abnormal eye movements, and poor coordination.

Thiazide Diuretics

Water tablets that make the kidneys remove more salt and water in urine. They are used mainly for high blood pressure and some fluid-retention disorders and can lower sodium or potassium levels.

Thiazide Overdose

Taking too much of a thiazide diuretic can cause dehydration, low blood pressure, abnormal sodium or potassium levels, confusion, or abnormal heart rhythms.

Thiazides

Water tablets that make the kidneys remove more salt and water in urine. They are used mainly for high blood pressure and some fluid-retention disorders and can lower sodium or potassium levels.

Thiazolidinedione Drugs

A group of diabetes medicines that make body tissues more sensitive to insulin by activating a protein called PPAR-gamma. Pioglitazone is the main example; possible effects include weight gain, swelling, bone fractures, and worsening heart failure.

Thiazolidinediones

A group of diabetes medicines that make the body more sensitive to insulin, helping lower blood glucose. They can cause weight gain and swelling and may worsen heart failure or increase fracture risk.

Thigh

The part of the lower limb between the hip and knee. It contains the femur, large muscles, major blood vessels, and nerves that help move and support the leg.

Thimerosal

A preservative containing ethylmercury that is used in some multidose vaccines and medical products. Ethylmercury leaves the body faster than methylmercury; its safety depends on the product, amount, and applicable regulations.

ThinPrep Pap Test

A cervical screening test in which cells collected from the cervix are placed in a liquid vial and examined for precancerous changes, cancer, or sometimes HPV-related abnormalities.

Alternate Names:
Liquid-Based Pap Test; Liquid-Based Cytology

Thiopental Sodium

A very short-acting anesthetic given through a vein to start general anesthesia or, in selected critical situations, reduce brain activity and pressure. It can dangerously slow breathing, lower blood pressure, or cause allergic reactions.

Thiopentone Sodium

A very short-acting anesthetic medicine given into a vein to start general anesthesia in selected settings. It can suppress breathing, lower blood pressure, and cause allergic reactions, so close monitoring is required.

Thioridazine

An older antipsychotic medicine used only in selected situations because it can cause severe sleepiness, movement problems, and dangerous changes in heart rhythm, especially at high doses or with interacting medicines.

Thioridazine Overdose

Poisoning from taking too much thioridazine, an antipsychotic medicine. It can cause severe sleepiness, low blood pressure, seizures, and dangerous heart rhythms.

Thiotepa

A chemotherapy medicine that damages DNA and stops cells from multiplying. It is used for selected

cancers and sometimes before a stem-cell transplant; side effects may include low blood counts, infection, nausea, mouth sores, and organ injury.

Third-Degree Atrioventricular Block

A serious heart-rhythm problem in which signals from the upper chambers do not reach the lower chambers. The chambers beat independently, often causing a very slow pulse, fainting, or heart failure. A pacemaker is often used.

Alternate Names:
Complete Heart Block; Complete AV Block

Third-Degree AV Block

A severe heart-rhythm problem in which electrical signals from the upper heart chambers do not reach the lower chambers. The chambers beat independently, often causing a very slow pulse, dizziness, fainting, or collapse.

Third-Degree Burn

A full-thickness burn that destroys the epidermis and dermis and may extend into subcutaneous tissue. The skin may appear white, brown, or charred and sensation may be reduced. Assessment includes burn depth, extent, inhalation injury, and associated trauma; deep or extensive burns require specialist treatment and may need grafting.

Third-Degree Perineal Tear

A severe tear during vaginal birth that extends from the vaginal opening into the muscles controlling the anus. It is repaired after birth; pain, infection, difficulty controlling stool, or a fistula can result.

Alternate Names:
Third-Degree Obstetric Tear; OASIS

Third Heart Sound

A low-pitched extra heart sound heard in early diastole during rapid ventricular filling, shortly after the second heart sound. It can be a normal finding in children and younger adults; in older adults, it is generally associated with ventricular dysfunction or volume overload.

Third Stage Of Labor

The part of childbirth between the baby's birth and delivery of the placenta. The placenta normally separates and is delivered within minutes; heavy bleeding or a placenta that does not deliver may occur with complications.

Third Trimester

The period of pregnancy from 28 weeks until birth. The fetus grows rapidly and continues developing its lungs, brain, and other organs. Prenatal visits monitor blood pressure, growth, movement, and symptoms; tests and screening are scheduled according to local guidance and individual risk.

Thirst

The conscious desire to drink, regulated mainly by body-fluid concentration and circulating blood volume. Excessive thirst may occur with dehydration, diabetes, medicines, kidney problems, or other conditions.

Thomas Test

A physical examination manoeuvre used to assess for hip flexion contractures and tightness of the iliopsoas muscle. With the patient supine, one hip is fully flexed to flatten the lumbar lordosis; if the contralateral extended thigh lifts off the examination table, a fixed flexion deformity of that hip is present.

Thompson Test

A physical examination test (Simmonds-Thompson test) used to evaluate the integrity of the Achilles tendon; with the patient prone and feet hanging off the examination table, the examiner firmly squeezes the middle third of the calf musculature; absence of involuntary plantarflexion of the foot indicates a complete rupture of the Achilles tendon.

Alternate Names:
Simmonds Test; Calf Squeeze Test

Thomsen Disease

An inherited muscle disorder causing stiffness because muscles relax slowly after they contract. Symptoms often begin in childhood, affect the

hands, legs, eyelids, or jaw, and improve after repeated movement. Strength and life expectancy are usually preserved, although stiffness can interfere with activity.

Alternate Names:
Autosomal Dominant Myotonia Congenita; Myotonia Congenita (Thomsen Type)

Thoracentesis

A medical procedure in which a thin needle or catheter is gently inserted through the back of the chest wall into the pleural space (the narrow gap between the lungs and the inner chest wall) to withdraw accumulated excess fluid (a pleural effusion). Thoracentesis is performed for two key reasons: diagnostic (collecting a small sample of fluid for laboratory analysis to find the underlying cause, such as pneumonia, heart failure, kidney disease, tuberculosis, or cancer) and therapeutic (removing a large volume of trapped fluid, typically 1 to 1.5 liters, to relieve pressure on a collapsed lung and rapidly ease shortness of breath and chest tightness). Often guided by real-time ultrasound to identify the safest insertion spot, the procedure is carried out under local anesthesia while the patient sits upright, carrying low risks when properly monitored.

Alternate Names:
Pleural Tap; Pleurocentesis; Pleural Fluid Aspiration; Thoracocentesis

Thoracic

Thoracic means relating to the chest, the thoracic spine, or structures within the thorax such as the heart and lungs.

Thoracic Aortic Aneurysm

A weakened, widened area of the aorta within the chest. It may cause no symptoms, but can cause chest or back pain or press on nearby structures; dissection or rupture can cause sudden severe pain, collapse, and life-threatening bleeding. Risk is increased by hypertension, inherited disorders, a bicuspid valve, or smoking.

Thoracic Cage

The bony and cartilaginous framework formed by the thoracic vertebrae, ribs, costal cartilages, and sternum. It protects thoracic organs and assists respiratory movements.

Thoracic Cavity

The space inside the chest, enclosed by the ribs and breathing muscles. It contains the lungs, heart, esophagus, trachea, major blood vessels, and other structures protected by the chest wall.

Thoracic Duct

The body's largest lymph vessel. It collects excess fluid and immune cells from most of the body and returns them to the bloodstream near the neck; injury can cause lymph fluid to leak into the chest.

Thoracic Ectopia Cordis

A congenital defect in which part or all of the heart lies outside the chest through an opening in the front chest wall, often involving a cleft or absent portion of the sternum. The heart may be exposed or partly covered by tissue, and other heart or midline abnormalities may also be present.

Thoracic Endometriosis

Endometriosis involving the chest, usually around the lung. Symptoms such as chest pain, breathlessness, or coughing may recur around menstruation and can rarely result in air or blood around the lung.

Thoracic Inlet

The upper opening of the chest, surrounded by the first thoracic vertebra, first ribs, and upper sternum. Major nerves, blood vessels, the airway, and the food pipe pass through it.

Thoracic Outlet

The lower opening of the chest, bordered by the lower ribs and diaphragm. It allows structures such as the aorta, food pipe, and large veins to pass between the chest and abdomen.

Thoracic Outlet Syndrome

Pressure on nerves or blood vessels as they pass

from the neck into the arm. It may cause neck, shoulder, or arm pain, tingling, weakness, swelling, color change, or a cold hand. Treatment depends on the cause and may include physical therapy or surgery.

Alternate Names:
TOS; Neurovascular Compression of Thoracic Outlet

Thoracic Skeleton

The bony and cartilaginous framework of the chest, made up of the thoracic vertebrae, ribs, sternum, and costal cartilages.

Thoracic Spine

The middle part of the spine made up of the 12 thoracic vertebrae. It supports the ribs and protects the spinal cord in the chest region.

Thoracic Myelopathy

Spinal-cord dysfunction caused by damage or pressure in the mid-back region. Causes include spinal narrowing, a disc problem, a tumor, or injury. It can lead to leg stiffness or weakness, numbness, poor balance, difficulty walking, or bladder and bowel changes.

Thoracic Spondylosis

Age-related wear of the discs, joints, and bones in the middle part of the spine. It may cause stiffness or aching in the mid-back, but imaging changes often cause no symptoms. Bone spurs or disc changes can sometimes narrow space around the spinal cord or nerves.

Thoracic Spine CT Scan

Computed tomography of the thoracic spine used to evaluate vertebral fractures, alignment, bone lesions, spinal canal narrowing, and other bony abnormalities.

Thoracic Spine X-Ray

Plain radiographic imaging of the thoracic spine used to assess vertebral alignment, fractures, curvature, degenerative change, and selected bone lesions.

Thoracic Surgeon

A surgeon who performs operations on organs and structures in the chest, such as the lungs, esophagus, mediastinum, and sometimes the heart.

Thoracic Surgery

The surgical specialty concerned with operations on organs and structures in the chest, including the lungs, esophagus, mediastinum, and chest wall. Cardiac surgery may be a separate or integrated specialty, depending on the health system.

Thoracic Vertebrae

The twelve vertebrae of the chest region, each articulating with ribs and protecting the thoracic spinal cord while supporting the trunk and rib cage.

Thoracolumbar Spine Trauma

Injury to the middle or lower back. Doctors assess the bones, supporting ligaments, spinal cord, and nerves to determine whether the spine is stable and whether treatment needs a brace, monitoring, or surgery.

Thoracoscopy

A minimally invasive procedure using a camera inserted through the chest wall to examine or treat the pleura, lungs, or mediastinum.

Thoracotomy

A surgical incision into the chest wall to access the thoracic cavity (pleural space, lungs, heart, great vessels, esophagus, diaphragm, mediastinum).

Thorax

The thorax is the chest region between the neck and abdomen, enclosed by ribs and containing the heart, lungs, major vessels, and mediastinal structures.

Thought Blocking

An abrupt interruption in the train of thought before it is completed, as if the thought was removed or pushed out of the patient's mind. The patient may pause mid-sentence, appear confused, and report that the thought was "taken out" or "blocked." It

is a formal thought disorder seen in schizophrenia.

Thought Disorder

A disruption in the organization, logical flow, or content of thinking, commonly manifesting as loose associations, neologisms, or tangentiality; see *Thought Disorders*.

Thought Disorders

Disturbances in the organization or content of thought. Formal thought disorder disrupts the flow or coherence of speech, as in derailment or incoherence; delusions are fixed false beliefs and are disturbances in thought content. These findings can occur in psychotic or mood disorders, neurologic disease, or substance effects.

Threadworm

In British and international terminology, the common parasitic pinworm (*Enterobius vermicularis*); in North American parasitology, it may also denote the intestinal nematode *Strongyloides stercoralis*. Transmitted through fecal-oral ingestion of infective eggs or cutaneous filariform larval penetration, female worms deposit eggs perianally to trigger intense nocturnal pruritus ani, excoriation, and restless sleep. Diagnosis is confirmed via the perianal cellophane tape test; treatment entails anthelmintics (pyrantel pamoate, albendazole, or mebendazole) with household contact coverage.

Alternate Names:
Threadworms; Pinworm; Enterobiasis

Threadworm Infection

An intestinal parasitic infection caused by Enterobius vermicularis, also called pinworm. Infection spreads when eggs are swallowed, often after contact with contaminated hands, bedding, food, or surfaces.

Threadworms

Plural form; see *Threadworm*.

Threatened Miscarriage

Vaginal bleeding during early pregnancy with a closed cervix and no passage of pregnancy tissue; the pregnancy may remain viable. Evaluation commonly includes clinical assessment, serial human chorionic gonadotropin testing when indicated, and ultrasound.

Alternate Names:
Threatened Abortion; Early Pregnancy Bleeding

Three-Day Measles

Alternate name; see *Rubella*.

Three-Dimensional Ultrasound

Ultrasound that combines many sound-wave measurements to create a three-dimensional image. It is used in obstetrics, gynecology, and other settings to show anatomy from several angles.

Three Swab Test

A diagnostic bedside test used to investigate continuous urine leakage from the vagina after pelvic surgery or childbirth. Three cotton swabs are placed inside the vagina and a colored dye (such as methylene blue) is put into the bladder; blue staining on the upper swabs indicates a bladder fistula (vesicovaginal fistula), whereas unstained urine indicates a leak from the ureter (ureterovaginal fistula).

Alternate Names:
Moir three-swab test; Three-swab test; Vaginal swab dye test.

Threonine

An essential amino acid used to build proteins and other body molecules. The body cannot make enough of it, so it must come from food.

Threshold

The lowest amount of a stimulus or measurement needed to produce a detectable response or effect.

Thrill

A palpable vibration over the chest or a blood vessel caused by turbulent blood flow.

Throat

The passage behind the mouth and nose that connects them with the voice box and esophagus. It

carries air toward the lungs and food toward the stomach and contains the tonsils and other protective tissues.

Throat Cancer

Cancer arising in the pharynx or nearby structures of the throat. Persistent hoarseness, difficulty or pain with swallowing, a neck lump, unexplained weight loss, or persistent sore throat requires medical evaluation, especially in people who use tobacco or alcohol.

Throat Or Larynx Cancer

Throat or larynx cancer is malignant growth in the pharynx or voice box and may cause persistent hoarseness, swallowing difficulty, pain, or a neck lump.

Throat Swab Culture

Culture of a throat specimen to detect bacterial pathogens, especially group A Streptococcus, when evaluating pharyngitis.

Alternate Names:
Throat Culture; Pharyngeal Swab Culture

Throbbing

A pulsating or beating quality of pain or another sensation. It can occur with migraine, inflammation, injury, infection, or increased awareness of a pulse.

Throckmorton Sign

A radiographic observation (John Thomas sign) in which the shadow of the male penis on an AP pelvis radiograph points toward the side of a unilateral hip or pelvic fracture.

Alternate Names:
John Thomas Sign; Penile Orientation Sign

Thrombectomy

A procedure to remove a blood clot from a blood vessel and restore blood flow. A catheter may remove the clot from a blocked brain artery during some ischemic strokes; surgery is used in selected other situations.

Thrombin

A blood-clotting substance that changes fibrinogen into fibrin, the protein threads that form a clot, and also activates platelets. The body makes thrombin after a blood vessel is injured; too much or too little clotting can cause disease.

Thrombin Time

A coagulation assay measuring the time required for plasma to form a fibrin clot after the addition of exogenous bovine or human thrombin, evaluating the final common pathway conversion of fibrinogen to fibrin, prolonged by heparin, dabigatran, hypofibrinogenemia, or dysfibrinogenemia.

Alternate Names:
TT; Thrombin Clotting Time

Thromboangiitis Obliterans

An inflammatory disease of small and medium blood vessels, strongly associated with tobacco use. It can cause pain, color changes, ulcers, or gangrene in the hands or feet. Complete tobacco cessation is essential; further treatment depends on ischemia, tissue loss, and other complications.

Alternate Names:
Buerger's Disease; Presenile Gangrene

Thrombocyte

Alternate name; see *Platelet*.

Alternate Names:
Thrombocytes; Platelet; Platelets

Thrombocytes

Plural form; see *Platelet*.

Thrombocythemia

Alternate name; see *Essential Thrombocythemia*.

Thrombocytopathy

A problem with how platelets work, even when the platelet count is normal or nearly normal. It may cause easy bruising, nosebleeds, heavy menstrual bleeding, or prolonged bleeding after an injury or procedure.

Thrombocytopenia

A low number of platelets, the blood cells that help stop bleeding. It may result from reduced production, increased destruction, trapping in an enlarged spleen, or dilution and can cause bruising, bleeding, or no symptoms.

Alternate Names:
Low Platelet Count

Thrombocytopenia in Pregnancy

A low platelet count during pregnancy or after delivery caused by gestational thrombocytopenia, immune thrombocytopenia, hypertensive disease, HELLP syndrome, infection, medicines, or another disorder. The cause and trend guide bleeding risk, treatment, anesthesia planning, and fetal evaluation.

Thrombocytopenic

Characterized by too few circulating platelets. It may cause easy bruising, nosebleeds, heavy menstrual bleeding, or other bleeding, although some people have no symptoms.

Thrombocytosis

A higher-than-normal number of platelets in the blood. It may be a temporary response to infection, inflammation, bleeding, or iron deficiency, or result from a bone-marrow disorder. It can increase bleeding or clotting risk depending on the cause.

Thromboelastography

A blood test that shows how quickly a clot forms, how strong it becomes, and how it dissolves. It can help guide blood-product treatment during severe bleeding, major surgery, or critical illness.

Thromboembolism

Obstruction of a blood vessel by a clot that formed elsewhere and traveled through the circulation.

Thromboembolism in Pregnancy

A blood clot in a vein or artery that may travel to the lungs or another organ during pregnancy or postpartum. Pregnancy increases venous thromboembolism risk; one-sided swelling, chest pain, sudden breathlessness, coughing blood, or collapse can indicate a clot.

Thrombolysis

The dissolution of a blood clot using a medicine such as a fibrinolytic agent. It is used only in selected conditions because it can cause serious bleeding.

Thrombolysis For PE

Emergency treatment using a clot-dissolving medicine for a life-threatening lung clot causing low blood pressure or shock. It can restore blood flow quickly but carries a serious risk of bleeding.

Thrombolysis For Stroke

Emergency treatment for selected strokes caused by a blood clot. A clot-dissolving medicine is given through a vein within a limited time after symptoms begin, after brain imaging excludes bleeding; serious bleeding is a possible complication.

Thrombolytic Agents

Medicines that dissolve an established blood clot by activating the body's clot-breaking system. They are reserved for selected emergencies because they can cause serious bleeding, including bleeding in the brain.

Alternate Names:
Thrombolytics; Clot-Dissolving Medicines

Thrombolytic Therapy

Treatment with a medicine that breaks down a blood clot and may restore blood flow in selected emergencies such as certain strokes, heart attacks, or lung clots. The main danger is serious bleeding, including bleeding in the brain.

Thrombophilia

A tendency for blood to form clots too easily. It may be inherited or develop with cancer, pregnancy, some medicines, inflammation, or other conditions and can increase the risk of clots in veins.

Thrombophilias in Pregnancy

Inherited or acquired tendencies toward abnormal blood clotting that can increase maternal venous thromboembolism risk and may be associated with placental complications. Testing and anticoagulation decisions depend on personal and family history, the specific thrombophilia, and pregnancy risk.

Thrombophilia Testing

Blood tests that look for inherited or acquired reasons a person may form blood clots too easily. Testing is considered selectively after a clot or with a strong family history because results may not change treatment.

Thrombophlebitis

Inflammation of a vein associated with a blood clot. Superficial thrombophlebitis may cause a tender, warm, red, firm cord along a vein just beneath the skin. Thrombosis in a deep vein can break away and cause a life-threatening pulmonary embolism; sudden limb swelling, chest pain, or breathlessness can indicate this complication.

Thrombopoiesis

The process by which the bone marrow makes platelets. Platelets develop from large marrow cells and enter the bloodstream, where they help stop bleeding.

Thrombosed Intracranial Aneurysm

A widened brain artery containing a blood clot. The clot may partly block the aneurysm but can also press on nearby brain structures, causing headache, vision or nerve problems, or seizures.

Thrombosis

Formation of a blood clot inside a blood vessel or the heart. The clot can block blood flow and damage tissue, causing problems such as deep-vein thrombosis, stroke, heart attack, or loss of blood supply to a limb.

Thrombosis Of The Inferior Vena Cava

A blood clot in the large vein that returns blood from the legs and abdomen to the heart. It may cause swelling in both legs or abdominal pain and can extend from a deep-vein clot.

Thrombotic Microangiopathy

A group of disorders in which tiny clots form in small blood vessels, damaging red blood cells and lowering the platelet count. The clots can injure the kidneys, brain, heart, or other organs. Causes include immune disorders, infections, medicines, pregnancy, and severe illness; urgent specialist treatment is often needed.

Thrombotic Thrombocytopenic Purpura

A rare, life-threatening blood disorder characterized by the formation of microscopic blood clots throughout the body's small blood vessels. It is most often caused by a deficiency or malfunction of an enzyme called ADAMTS13, which normally prevents blood-clotting proteins from clumping excessively. As tiny clots consume platelets and obstruct tiny blood vessels, they cut off blood supply to vital organs—such as the brain and kidneys—and shred passing red blood cells, leading to severe anemia, bleeding or purplish bruises on the skin, neurological symptoms, and kidney injury.

Alternate Names:
TTP; Moschcowitz Disease; ADAMTS13 Deficiency

Thrombotic Thrombocytopenic Purpura Pentad

The classic five findings once used to describe thrombotic thrombocytopenic purpura (TTP): hemolytic anemia, low platelet count, neurologic changes, kidney problems, and fever. Many people with TTP do not have all five findings, so their absence does not rule out TTP.

Alternate Names:
TTP Clinical Pentad; Moschcowitz Pentad

Thrombotic Vasculopathy

Damage to blood vessels caused by clots forming within them. It can reduce blood flow and injure skin or organs and may occur with autoimmune disease, severe infection, cancer, or disorders that cause widespread clotting.

Thromboxane

A chemical made mainly by activated platelets that makes platelets stick together and narrows blood vessels. These actions help stop bleeding but can also contribute to harmful clot formation.

Thrombus

A blood clot that forms inside a blood vessel or the heart and remains attached where it formed. It may partly or completely block blood flow, or break loose and travel elsewhere as an embolus.

Thrombus Organization

The gradual healing of a blood clot as it is replaced by scar tissue and sometimes channels that allow blood to pass through again. This process can make an old clot firm and attached to the vessel wall.

Thrush

Alternate name; see *Oral Candidiasis*.

Thrush in Children

Thrush is Candida overgrowth in the mouth, producing white plaques, soreness, or feeding difficulty; Candida can also affect skin folds or diaper areas. Persistent, recurrent, severe, or immune-associated infection needs pediatric evaluation and appropriate antifungal treatment.

Thrush In Newborns

Oral Candida infection in an infant, causing white plaques on the tongue or mouth lining that may interfere with feeding and can be passed between infant and breastfeeding parent.

Thumb Arthritis

Degeneration or inflammation of a thumb joint, especially the joint at the base of the thumb, causing pain, stiffness, and reduced grip.

Alternate Names:
Basal Joint Arthritis; CMC Joint Arthritis

Thumb Carpometacarpal Arthritis

Arthritis of the carpometacarpal joint at the base of the thumb, often due to osteoarthritis. It can cause pain with pinching or gripping, stiffness, and reduced hand function.

Thumb CMC Arthritis

Arthritis of the joint at the base of the thumb, where the thumb meets the wrist. It causes pain with gripping or pinching, stiffness, swelling, and reduced hand strength; advanced disease may change the joint's shape.

Thumb-Sucking

A common childhood habit of sucking the thumb; persistent habit can affect dental and facial development.

Thymic Carcinoma

A malignant epithelial tumor of the thymus that is generally more aggressive and biologically distinct from thymoma. It may invade nearby structures or spread to other sites.

Thymic Hyperplasia

Thymic hyperplasia is enlargement of the thymus from increased lymphoid tissue or rebound growth and may be incidental. It can be associated with autoimmune disease, infection, endocrine conditions, or stress; imaging and clinical context distinguish it from a mass.

Thymic Neoplasm

An abnormal growth arising in the thymus. It may be a thymoma, thymic carcinoma, or another tumor; diagnosis depends on examination of tissue.

Thymine

Thymine is one of the four main bases in DNA. It pairs with adenine through hydrogen bonds and helps store genetic information.

Thymocyte

An immature T lymphocyte developing in the thymus, where it undergoes selection before becoming a mature T cell.

Thymoma

A tumor arising from the thymus, an immune-system organ behind the breastbone. It may cause chest pressure or no symptoms and is associated with conditions such as myasthenia gravis; behavior depends on whether it grows beyond the thymus.

Alternate Names:
Thymic Epithelial Tumor; Thymic Neoplasm

Thymus

An immune-system organ behind the breastbone where immature T cells mature and learn not to attack the body's own tissues. It is most active in childhood and becomes smaller after puberty.

Thymus Gland

An immune-system organ behind the breastbone where immature T lymphocytes learn to recognize harmful foreign material without attacking the body's own tissues. It is most active during childhood and gradually becomes smaller after puberty.

Thyrocalcitonin

Another name for calcitonin, a hormone made by thyroid C cells that lowers blood calcium mainly by reducing bone resorption.

Thyroglobulin Surveillance

Blood testing for thyroglobulin after treatment of some thyroid cancers. A rising or unexpectedly detectable level may suggest remaining or returning thyroid tissue, but results must be interpreted with the treatment history and antibody testing.

Thyroglossal Duct Cyst

A usually harmless, fluid-filled lump in the middle of the neck. It forms when a small channel used by the thyroid gland before birth does not fully disappear. The lump often moves when a person swallows or sticks out the tongue, and can become painful if infected.

Thyroid

An endocrine gland in the front of the neck that produces thyroid hormones, which regulate metabolism, growth, and development.

Thyroid Cancer

Cancer that develops in the tissues of the thyroid gland, the butterfly-shaped endocrine gland at the base of the neck that produces hormones regulating metabolism. Most thyroid cancers are slow-growing and highly treatable, often appearing as a painless lump or nodule in the neck, though larger tumors can cause a sensation of neck tightness, hoarseness, difficulty swallowing, or throat discomfort.

Alternate Names:
Thyroid Carcinoma; Malignant Thyroid Neoplasm

Thyroid Cancer Staging

The process of determining how far thyroid cancer has grown or spread. Doctors consider the tumor's size, nearby lymph nodes, distant spread, cancer type, age, and other features to guide treatment and estimate outlook.

Thyroid Cartilage

The largest cartilage of the larynx, formed by two plates that meet in front and create the laryngeal prominence. It protects the vocal folds and provides attachment for muscles and ligaments.

Thyroid Diseases

Conditions affecting the thyroid gland, including underactivity, overactivity, inflammation, enlargement, nodules, and cancer. They may change energy, weight, temperature tolerance, heart rate, bowel habits, mood, or neck appearance and are assessed with examination and blood tests.

Thyroid Disorders

Conditions affecting the thyroid gland, which makes hormones that regulate energy use, temperature, heart rate, growth, and development. Disorders may cause an underactive or overactive gland, inflammation, enlargement, nodules, or cancer.

Thyroid Drugs

Medicines that treat thyroid disorders. Thyroid hormone replacement, usually levothyroxine, treats an underactive thyroid; antithyroid medicines such

as methimazole or propylthiouracil reduce hormone production in an overactive thyroid. The choice and monitoring depend on the condition and patient factors.

Alternate Names:
Thyroid Medicines; Thyroid Medication

Thyroidectomy

Surgery to remove part or all of the thyroid gland. It may treat thyroid cancer, an overactive thyroid, or a large goiter; possible complications include bleeding, voice-nerve injury, and low calcium.

Thyroid Eye Disease

Alternate name; see *Dysthyroid Eye Disease*.

Thyroid Fine-Needle Aspiration

A procedure that uses a thin needle, usually guided by ultrasound, to remove cells from a thyroid lump. A laboratory examines the cells to help determine whether the lump is benign or needs further treatment.

Thyroid Follicular Carcinoma

A cancer arising from thyroid follicle cells and the second most common differentiated thyroid cancer. It tends to spread through blood vessels to the lungs or bones; diagnosis requires showing invasion of the capsule or blood vessels.

Thyroid Function Test

Singular variant; see *Thyroid Function Tests*.

Thyroid Function Tests

Blood tests, mainly thyroid-stimulating hormone and free T4, used to assess how well the thyroid is working. Results help identify an underactive or overactive thyroid but must be interpreted with symptoms and medicines.

Thyroid Gland

A butterfly-shaped gland at the front of the neck. It makes hormones that help control energy use, temperature, heart rate, growth, and development.

Thyroid Gland Enlargement

Alternate name; see *Goiter*.

Thyroid Gland Removal

Surgery to remove part or all of the thyroid gland for cancer, overactivity, a large goiter, or a suspicious nodule. Possible effects include bleeding, voice changes from nerve injury, low calcium, and the need for lifelong thyroid hormone.

Thyroid Hormone

A tyrosine-based, iodinated endocrine hormone synthesized and secreted by the follicular cells of the thyroid gland, primarily consisting of thyroxine (T_4, prohormone) and triiodothyronine (T_3, the biologically active form). Regulated by the hypothalamic-pituitary-thyroid axis via thyrotropin-releasing hormone (TRH) and thyroid-stimulating hormone (TSH), thyroid hormones bind nuclear thyroid hormone receptors (α and β) to stimulate basal metabolic rate, oxygen consumption, thermogenesis, lipolysis, protein turnover, and neurodevelopmental maturation in infants.

Alternate Names:
Thyroid Hormones; Thyroxine and Triiodothyronine

Thyroid Hormone Resistance

A rare disorder in which body tissues respond incompletely to thyroid hormones, usually because of an inherited change affecting a thyroid-hormone receptor. Blood levels of thyroid hormones are often high while TSH is not fully suppressed, and symptoms vary between people.

Thyroid Hormones

Plural form; see *Thyroid Hormone*.

Thyroid Hormone Toxicity

Clinical toxicity caused by excessive thyroid hormone activity, often from excessive replacement or other exogenous exposure. Symptoms may include palpitations, tremor, anxiety, heat intolerance, diarrhea, weight loss, arrhythmia, or severe thyrotoxicosis.

Thyroiditis

Inflammation or injury of the thyroid gland, caused by immune disease, infection, or some medicines. Some types release stored thyroid hormone and can first make hormone levels too high, then too low. Hashimoto disease often causes a lasting shortage of thyroid hormone. Some types cause neck pain and fever; others do not.

Thyroiditis Classification

Thyroid inflammation is classified by its cause and pattern. Hashimoto disease is usually long-term and autoimmune; subacute thyroiditis is often painful and follows an infection; other forms may occur after childbirth, medicines, or injury.

Thyroid Lymphoma

A lymphoma arising in the thyroid, often in the setting of chronic autoimmune thyroiditis. It may present as a rapidly enlarging neck mass with swallowing or breathing difficulty; ultrasound, tissue biopsy, and staging distinguish it from thyroid carcinoma.

Thyroid Nodule

A discrete lesion within the thyroid parenchyma that is palpably or radiologically distinct from the surrounding thyroid tissue. Affecting up to 50–60% of the general adult population on high-resolution ultrasonography, the overwhelming majority ($> 90 - -95\%$) are benign (hyperplastic colloid nodules, thyroid cysts, or follicular adenomas). Initial diagnostic evaluation requires serum TSH (suppressed TSH prompting radionuclide scintigraphy to detect autonomous hyperfunctioning "hot" nodules) and high-resolution neck ultrasound utilizing the ACR TI-RADS system to assess suspicious features (hypoechogenicity, microcalcifications, taller-than-wide shape, irregular margins). Fine-needle aspiration (FNA) biopsy with Bethesda System cytopathology is performed for high-risk nodules to identify thyroid malignancy.

Alternate Names:
Thyroid Nodules

Thyroid Nodule Evaluation

Assessment of a lump in the thyroid using examination, thyroid blood tests, and ultrasound. Ultrasound features help estimate cancer risk and decide whether repeat imaging or a needle sample is needed.

Thyroid Nodules

Plural form; see *Thyroid Nodule*.

Thyroid Papillary Carcinoma

The most common type of thyroid cancer, arising from cells that make thyroid hormone. It often grows slowly and can spread to nearby lymph nodes; outlook depends on its size, spread, and other tumor features.

Thyroid Peroxidase Antibody

An immune protein directed against thyroid peroxidase, an enzyme needed to make thyroid hormones. A high level supports autoimmune thyroid disease, especially Hashimoto disease, but does not by itself show how well the thyroid is working.

Thyroid Peroxidase Test

A blood test measuring antibodies against thyroid peroxidase, an enzyme needed to make thyroid hormones. Elevated levels support autoimmune thyroid disease but do not by themselves show how well the thyroid is working.

Thyroid Preparation Overdose

Taking too much thyroid hormone medicine can cause a fast or irregular heartbeat, shaking, sweating, anxiety, vomiting, fever, or, in severe cases, heart failure or a dangerous thyroid crisis.

Thyroid Scan

A nuclear-medicine test that shows how actively the thyroid or a thyroid lump takes up a small radioactive tracer. An overactive lump is rarely cancerous; a less-active lump has reduced tracer uptake but is not necessarily malignant.

Thyroid Scintigraphy

Another name for a thyroid scan. It uses a small

radioactive tracer to show thyroid activity, lumps, or thyroid tissue in an unusual location; results are interpreted with blood tests and ultrasound.

Thyroid Stimulating Hormone

A hormone released by the pituitary gland that stimulates the thyroid to make thyroid hormones. Blood TSH is commonly used with free thyroxine (T4) to assess thyroid function; results can be misleading in some pituitary disorders or during severe illness.

Alternate Names:
TSH; Thyrotropin

Thyroid-Stimulating Hormone

Alternate name; see *Thyroid Stimulating Hormone*.

Thyroid-Stimulating Hormone Test

A blood test measuring TSH, the pituitary hormone that regulates thyroid hormone production, used as the primary screen for thyroid dysfunction; see *Thyroid-Stimulating Hormone*.

Thyroid Storm

An acute, life-threatening decompensation in a person with thyrotoxicosis, causing severe dysfunction in multiple organ systems. Findings may include fever, a very fast or irregular heartbeat, agitation or confusion, vomiting or diarrhea, and heart failure. It may be precipitated by infection, surgery, trauma, or another acute illness.

Thyroid Storm Diagnostic Criteria

Standardized quantitative clinical scoring criteria (Burch-Wartofsky Point Scale) assessing the likelihood of decompensated, life-threatening thyrotoxicosis based on the severity of thermoregulatory dysfunction, central nervous system effects, cardiovascular tachycardia/arrhythmias, congestive heart failure, and gastrointestinal-hepatic impairment.

Alternate Names:
Burch-Wartofsky Score

Thyroid Storm Following Thyroidectomy

Acute, life-threatening decompensation from thyroid hormone excess after thyroid surgery, usually in a person with inadequately controlled thyrotoxicosis. Fever, marked tachycardia, agitation or delirium, heart failure, vomiting, and shock may occur.

Thyroid Surgery

Operations that remove part or all of the thyroid gland. They may be performed for selected cancers, enlarging or compressive nodules, goiter, hyperthyroidism, or diagnostic uncertainty; the procedure depends on the disease and its extent.

Thyroid Ultrasound

An imaging test using sound waves to examine the thyroid, thyroid lumps, cysts, and nearby lymph nodes. It can identify features that need monitoring or a needle sample but cannot by itself confirm cancer.

Thyrotoxic Myopathy

Muscle weakness caused by an overactive thyroid, usually affecting the hips, thighs, shoulders, and upper arms. Weakness may occur without pain and can improve when thyroid hormone levels return to normal; severe cases can affect swallowing or breathing.

Alternate Names:
Hyperthyroid Myopathy

Thyrotoxicosis

Too much thyroid hormone in the body, whatever the cause. Unlike hyperthyroidism, it can also result from an inflamed thyroid releasing stored hormone or from taking too much thyroid hormone medicine. It may cause weight loss, a fast heartbeat, shaking, sweating, anxiety, diarrhea, or feeling too hot; severe cases can cause serious illness.

Thyrotoxic Periodic Paralysis

Repeated brief attacks of severe muscle weakness caused by an overactive thyroid, often with low blood potassium. Episodes commonly affect the hips and shoulders and may follow rest after exercise or a high-carbohydrate meal.

Thyrotroph Adenoma

A usually noncancerous pituitary tumor arising from

cells that make thyroid-stimulating hormone. It may produce too much hormone, causing an overactive thyroid, headaches, or vision problems if it presses on nearby structures.

Thyrotrophin-Releasing Hormone

A hormone made in the hypothalamus, a part of the brain, that tells the pituitary gland to release thyroid-stimulating hormone and prolactin. It helps link brain signals with thyroid activity and some reproductive functions.

Thyrotrophin-Stimulating Hormone

Another name for thyroid-stimulating hormone, a pituitary hormone that tells the thyroid gland to make and release thyroid hormones. Blood levels help assess whether the thyroid is underactive or overactive.

Thyrotropin

Thyroid-stimulating hormone, a pituitary hormone that stimulates thyroid growth and thyroid-hormone production.

Alternate Names:
Thyroid-Stimulating Hormone; TSH

Thyrotropin Alfa

A recombinant form of thyroid-stimulating hormone used to stimulate residual thyroid tissue or differentiated thyroid cancer cells during selected diagnostic or treatment protocols.

Thyroxine

The thyroid hormone T4, which contains four iodine atoms. The thyroid releases it into the blood, and much of it is converted to the more active hormone triiodothyronine (T3).

Alternate Names:
T4; Tetraiodothyronine

Thyroxine-Binding Globulin

A blood protein that carries most thyroid hormones through the bloodstream. Changes in its amount can alter measured total hormone levels without necessarily changing the amount of active, unbound hormone.

TIA

Alternate name; see *Transient Ischemic Attack*.

Tibia

The larger, weight-bearing bone of the lower leg, extending from the knee to the ankle. It forms part of both joints and is commonly called the shinbone.

Tibial Artery

An artery of the lower leg, chiefly the anterior and posterior tibial arteries, supplying the leg, ankle, and foot and contributing to pedal pulses.

Tibialcrural Artery

Nonstandard, ambiguous term; see *Tibial Artery*.

Tibial Fracture

A break in the tibia, the major weight-bearing bone of the lower leg, often caused by high-energy trauma, twisting injury, or repetitive stress.

Tibialis Anterior Muscle

A muscle along the front of the shin that lifts the front of the foot and helps turn it inward. Weakness can cause foot drop and make walking difficult.

Tibialis Posterior Muscle

A deep muscle behind the shin that points the foot downward, turns it inward, and helps support the foot's arch. Damage or weakness may contribute to pain or a gradually flattened foot.

Tibial Nerve

A large nerve running from the back of the knee down the back of the leg and behind the inner ankle. It controls several leg and foot muscles and carries sensation from parts of the foot.

Tibial Shaft Fractures

Breaks in the middle portion of the shinbone, often caused by a high-energy injury but sometimes by a twist or lower-force event. Pain, swelling, deformity, or inability to bear weight are common. Treatment

depends on alignment, skin and muscle damage, and whether the fracture is open.

Tibia Vara

Tibia vara is inward angulation of the upper shinbone causing bowing of the leg, classically associated with Blount disease or other growth disorders.

Tibiofibular Joint

A joint between the tibia and fibula bones of the lower leg. The upper joint allows small movements, while the lower connection helps stabilize the ankle.

Tic

A sudden, rapid, recurrent, non-rhythmic, and stereotyped motor movement or vocalization preceded by an internal premonitory urge that is temporarily relieved following execution of the action. Motor tics encompass simple tics (eye blinking, shoulder shrugging, neck jerking) and complex tics (facial gesturing, touching objects, echopraxia); vocal tics range from simple throat-clearing, grunting, and sniffing to complex echolalia, palilalia, and coprolalia. Tics can be voluntarily suppressed for limited durations and characteristically fluctuate in severity, frequency, and anatomic distribution over time.

Alternate Names:
Tics; Tic Disorder

Ticarcillin

A penicillin antibiotic with activity against many gram-negative bacteria, including Pseudomonas; it is usually given with clavulanate and can cause allergy or electrolyte disturbances.

Tic Disorder

A neurologic condition causing repeated, sudden movements or sounds that are difficult to control, such as blinking, shrugging, throat clearing, or grunting. Tics may be briefly suppressed, often worsen with stress, and vary in severity.

Tic Douloureux

A chronic pain condition characterized by recurrent, sudden, severe, electric shock-like pain in the distribution of the trigeminal nerve (typically V2/V3). See *Trigeminal Neuralgia*.

Tick

A small, blood-feeding ectoparasitic arachnid belonging to the order Ixodida, classified into hard ticks (family Ixodidae, characterized by a dorsal scutum) and soft ticks (family Argasidae). Ticks serve as prominent vectors of human pathogens worldwide, transmitting bacterial infections (Lyme disease [*Borrelia burgdorferi*], Rocky Mountain spotted fever [*Rickettsia rickettsii*], anaplasmosis, ehrlichiosis, tularemia), protozoal infections (babesiosis), and viral encephalitides (tick-borne encephalitis, Colorado tick fever), as well as inducing alpha-gal red meat allergy and neurotoxin-mediated tick paralysis.

Alternate Names:
Ticks; Ixodid Tick

Tick Bite

A skin puncture created when a parasitic tick inserts its barbed hypostome into host dermis to feed on blood. Transmission of tick-borne pathogens requires varying durations of attachment (e.g., typically $> 24 - -36$ hours of attachment for *Borrelia burgdorferi* transmission in Lyme disease). Management entails prompt mechanical removal with fine-tipped tweezers grasping the mouthparts closest to the skin, examination of the bite site for expanding annular rashes (erythema migrans) or local eschars, and post-exposure antibiotic prophylaxis (e.g., single-dose doxycycline for high-risk deer tick bites in endemic Lyme zones).

Alternate Names:
Tick Bites

Tick Bites

Plural form; see *Tick Bite*.

Tick-borne Diseases

Tick-borne diseases are infections or other illnesses transmitted by ticks, including Lyme disease, babesiosis, ehrlichiosis, and some viral diseases. Removing ticks promptly can reduce risk.

Tick-Borne Encephalitis

A viral infection transmitted mainly by ticks that can cause fever, meningitis, encephalitis, or lasting neurological complications.

Tickborne Relapsing Fever

An infection caused by certain *Borrelia* bacteria and spread by soft ticks. It causes repeated episodes of fever, headache, muscle aches, and joint pain separated by periods of feeling better.

Tick Paralysis

Rapidly worsening weakness caused by poison released by an attached tick. Weakness often starts in the legs and moves upward; breathing can become difficult, but symptoms usually improve after prompt tick removal.

Tick Removal

The process of detaching a tick from the skin. Prompt, careful removal reduces the duration of attachment, which can affect the risk of some tick-borne infections.

Ticks

Plural form; see *Tick*.

Tick Typhus

A rickettsial infection transmitted by ticks, usually causing fever, headache, rash, and sometimes severe systemic illness.

Ticlopidine

An antiplatelet medicine that reduces the blood's ability to form clots. It was used to prevent stroke or heart-related clots in selected people but is now less common because it can cause serious blood-count and bleeding problems.

Tics

Plural form; see *Tic*.

Tidal Volume

The amount of air breathed in or out with one normal breath. It varies with body size, activity, illness, and breathing support and can be measured during lung-function testing.

Tidy Wound

A clean, sharply cut wound with little contamination, crushing, or dead tissue and clearly defined healthy edges. After examination and cleaning, it may often be closed immediately, depending on its depth, location, and age.

Tietze's Syndrome

Alternate spelling; see *Tietze Syndrome*.

Tietze Syndrome

A related but distinct chest-wall disorder causing painful, visible swelling at one or a few upper costochondral or sternocostal joints. It should not be treated as simply another name for costochondritis.

Tigecycline

An antibiotic used in selected serious infections when other treatments are unsuitable. It stops bacteria making proteins and commonly causes nausea and vomiting; it is not appropriate for every type of infection.

Tight Junction

A seal between neighboring lining cells that controls what can pass between them. It helps keep separate the cell surfaces facing the body cavity and the underlying tissue.

Tilorone

Tilorone is a synthetic antiviral and immune-modulating compound used or studied in some countries; evidence and indications vary by setting.

Tilted Disc Syndrome

A congenital appearance in which the optic disc is angled or rotated, often with an unusual shape of nearby retina and blood vessels. Vision may be normal, but some people have visual-field changes or other eye conditions.

Tilt Table Test

A supervised test for unexplained fainting. A person lies secured on a table that is tilted upright while blood pressure, heart rate, and symptoms are recorded to look for fainting caused by abnormal blood-pressure or heart-rate responses.

Tilt Table Testing

A supervised test in which a patient is moved from a lying to an upright or head-up tilt position while blood pressure, heart rate, and symptoms are monitored. It may help evaluate reflex syncope, orthostatic hypotension, or selected autonomic disorders when the diagnosis remains uncertain; it does not replace assessment for cardiac or neurologic causes.

Timed Up-And-Go Test

A functional mobility test measuring the time required to stand from a chair, walk a short distance, turn, return, and sit. Prolonged performance suggests impaired mobility and increased fall risk but must be interpreted with gait, vision, cognition, and environment.

Time In Range

The percentage of continuous glucose-monitoring readings within a specified glucose range, often 70–180 mg/dL for many nonpregnant adults with diabetes. The range and target percentage are individualized and interpreted with time below and above range.

Time Of Death

The actual or estimated time when a person died. After death, investigators may use body temperature, stiffening, settling of blood, decomposition, insect activity, and chemical changes to estimate it, but the estimate has limits.

Time-Of-Flight PET

A PET scanning method that uses the arrival times of detected radiation to better locate where it came from. This can improve image quality and help show disease more clearly.

Timing Of Breastfeeding

The timing and frequency of breastfeeds, usually guided by early hunger cues and effective milk transfer rather than a rigid clock schedule, with special considerations for newborns and preterm infants.

TIMI Risk Score

A clinical score estimating short-term risk in people with unstable angina or a non-ST-elevation heart attack. It uses age, risk factors, known artery disease, recent symptoms, ECG changes, and heart-injury blood tests to help guide treatment; it supports but does not replace clinical judgment.

Alternate Names:
TIMI Score; TIMI Risk Score for UA/NSTEMI; TIMI Score for STEMI

Timolol

Timolol is a non-selective beta blocker used in glaucoma eye drops and for selected cardiovascular conditions; topical ocular use can still cause bradycardia, hypotension, bronchospasm, or fatigue.

Timolol Maleate

The maleate salt of timolol, a beta blocker used in glaucoma and selected cardiovascular conditions.

Timothy Syndrome

A rare inherited disorder affecting the heart and several body systems. It can cause a dangerously prolonged heart rhythm, heart defects, webbed fingers or toes, and developmental or immune problems.

Tinea

A fungal infection of the skin, hair, or nails caused by fungi that feed on a protein called keratin. Common forms include ringworm, athlete's foot, and jock itch.

Tinea Barbae

A fungal infection of the beard or moustache area. It can cause an itchy, scaly rash, inflamed hair follicles, pus-filled spots, or painful lumps and may spread from infected animals or people.

Tinea Capitis

A fungal infection of the scalp and hair, most common in children. It may cause scaling, itching, broken or falling hair, swollen tender areas, or pus-filled sores and usually needs prescription treatment.

Tinea Corporis

A fungal infection of the body skin, often causing an itchy, scaly, ring-shaped rash with a clearer center. It spreads through contact with infected people, animals, or contaminated objects.

Tinea Cruris

Alternate name; see *Jock Itch*.

Tinea Faciei

A fungal infection of the face that can cause a red, scaly, ring-shaped or uneven rash. It may resemble eczema or rosacea and can spread from infected people, animals, or another infected body area.

Tinea Favosa

A long-lasting fungal infection of the scalp or skin that causes yellow, cup-shaped crusts around hair follicles. It can lead to scarring and permanent hair loss if untreated and is now uncommon in many regions.

Tinea Imbricata

A long-lasting fungal skin infection found mainly in parts of the Pacific and Southeast Asia. It causes overlapping, scaly rings that form a distinctive woodgrain pattern on the body.

Tinea Incognito

A fungal skin infection whose appearance has been changed by using a steroid cream or other immune-suppressing treatment. It may become less scaly but more widespread or unusual, so testing may be needed before targeted treatment.

Tinea Infection

A fungal infection affecting skin, hair, or nails. It may cause a ring-shaped scaly rash, peeling or cracking between the toes, an itchy groin rash, scalp scaling, or thickened discolored nails.

Alternate Names:
Ringworm Infection; Dermatophyte Mycosis

Tinea Manuum

A dermatophyte fungal infection of one or both hands. It may cause dry scaling, redness, itching, thickened skin, or blisters and often occurs with fungal infection of the feet or nails.

Tinea Nigra

A usually harmless fungal infection causing a painless brown or black patch, most often on the palm or sole. It may resemble a mole or skin cancer and can be confirmed with a skin examination or sample.

Tinea Pedis

A fungal infection of the feet, also called athlete's foot. It may cause itching, peeling or cracking between the toes, dry scaling on the soles, blisters, or sores and can spread to the nails.

Tinea Unguium

A fungal infection of the nail plate, also called onychomycosis, causing thickening, discoloration, brittleness, or separation of the nail.

Tinea Versicolor

Alternate name; see *Pityriasis Versicolor*.

Tinel Sign

Tingling or an electric sensation felt along a nerve when the nerve is gently tapped. It may suggest nerve irritation or recovery after injury, but it is not diagnostic by itself.

Tinidazole

Tinidazole is a nitroimidazole antimicrobial effective against anaerobic bacteria and protozoa such as Giardia and Trichomonas; metallic taste, gastrointestinal effects, neuropathy, and an alcohol interaction may occur.

Tinnitus

Hearing or sensing sound, such as ringing, buzzing,

or hissing, when no outside sound is present. It may occur with hearing loss, loud-noise exposure, ear problems, some medicines, or other conditions.

Alternate Names:
Ringing in Ears; Tinnitus Aurium

Tinzaparin

A low-molecular-weight heparin anticoagulant used for prevention or treatment of venous thromboembolism; bleeding and heparin-induced thrombocytopenia are important risks.

Tinzaparin Sodium

The sodium salt of tinzaparin, a low-molecular-weight heparin used to prevent or treat venous blood clots; bleeding and heparin-induced thrombocytopenia are important risks.

Tiopronin

A thiol-containing medicine used in selected cases of cystinuria to increase urinary cystine solubility; rash, proteinuria, and blood abnormalities may occur.

Tiotropium Bromide

A long-acting inhaled medicine that relaxes airway muscles and keeps the airways open. It is used regularly to control COPD and sometimes asthma; it does not provide immediate relief during a sudden attack.

Tip Lesion Variant FSGS

A distinct histological and clinical subtype of focal segmental glomerulosclerosis (FSGS) characterized by the presence of at least one segmental lesion involving the tubular pole (origin of the proximal tubule) of the glomerular tuft, characterized by foam cells, podocyte hypertrophy, and endocapillary cellularity. Clinically associated with abrupt-onset full nephrotic syndrome, well-preserved baseline renal function, and favorable response to systemic corticosteroid therapy.

Alternate Names:
Glomerular Tip Lesion FSGS; Tip Variant FSGS

TIPS

A procedure that creates a channel inside the liver between veins carrying blood into and out of it. The channel lowers high pressure in the portal vein and may treat repeated variceal bleeding or difficult-to-control abdominal fluid.

TI-RADS

An ultrasound scoring system for thyroid lumps. It uses features such as the lump's composition, shape, edges, and calcifications to estimate cancer risk and help decide whether follow-up or needle sampling is needed.

Tirbanibulin

A topical medicine used in short courses to treat actinic keratoses on the face or scalp; local redness, scaling, or irritation may occur.

Tired

Feeling a lack of energy or physical or mental stamina, which may result from sleep loss, exertion, infection, anemia, endocrine disease, medication, depression, or other illness.

Tiredness

Fatigue or reduced energy and endurance that can be physical, mental, or both; persistent unexplained fatigue warrants assessment for sleep, mood, systemic, medication, and metabolic causes.

Tirofiban

An intravenous medicine that temporarily prevents platelets from sticking together. It is used in selected urgent heart conditions or coronary procedures to reduce clotting, but can cause serious bleeding and requires close monitoring.

Tissue

A group of cells and the supporting material around them that work together for a particular function. Examples include muscle, nerve, bone, connective, and lining tissues.

Tissue Adhesions

Bands of fibrous scar tissue that abnormally connect surfaces or organs, often after surgery, inflammation, infection, or bleeding and potentially causing pain, infertility, or obstruction.

Tissue Banks

Facilities that recover, screen, process, preserve, store, and distribute donated human tissue for transplantation, research, or reconstructive treatment under safety and traceability standards.

Tissue Biopsy

The surgical or needle excision of a tissue specimen from a living organism for microscopic examination by a pathologist; see *Biopsy*.

Tissue Congestion

Accumulation of blood or fluid within tissue because of impaired venous drainage, inflammation, obstruction, or increased vascular flow, producing swelling, redness, or impaired function.

Tissue Distribution

The movement of a medicine or other substance from the bloodstream into body tissues and organs. How much reaches each tissue depends on blood flow, binding, body composition, and the substance's properties.

Tissue Elastance

How strongly a tissue or organ resists being stretched. In the lungs and chest wall, high elastance means more pressure is needed to expand them, which can make breathing harder.

Tissue Engineering

The use of cells, supportive materials called scaffolds, and biologically active substances to create or repair tissues that restore, maintain, or improve body function.

Tissue Expander

A temporary balloon placed beneath the skin and gradually filled with fluid to stretch the skin. The extra skin can later be used for breast, scalp, burn, or other reconstruction.

Tissue Expansion

Gradual stretching of skin or soft tissue with an implanted or external expander so additional tissue can be created for reconstruction; it usually requires staged treatment and monitoring for infection, pain, or device problems.

Tissue Kallikrein

An enzyme made in several tissues that releases chemical messengers affecting local blood flow, blood-vessel leakiness, pain, and inflammation.

Tissue Membrane

A thin layer of tissue that covers a surface, surrounds an organ, or separates spaces in the body. Its structure and function depend on the type of tissue forming it.

Tissue Plasminogen Activator

A natural blood protein that starts the process of breaking down clots. Manufactured forms are used in selected emergencies, such as some strokes, heart attacks, and lung clots, but can cause serious bleeding.

Tissue Plasminogen Activator-Associated Angioedema

Sudden swelling of the face, lips, tongue, or throat after treatment with a clot-dissolving medicine. Throat swelling can block breathing.

Tissue Transglutaminase

An enzyme found throughout the body. In celiac disease, the immune system may make antibodies against it, so a blood test for these antibodies is commonly used during evaluation.

Tissue Typing

Testing tissue antigens, especially HLA, to assess compatibility for transplantation.

Titanium

A strong, lightweight, corrosion-resistant metal used in implants, prostheses, dental devices, and surgical instruments. Bone can form a stable connection with some titanium implant surfaces.

Titer

A laboratory measure showing how much antibody or another detectable substance is present in a sample. It is often reported as the greatest dilution that still produces a measurable reaction; meaning depends on the test and timing.

Titration

Gradually changing a medicine dose to find the amount that gives the desired effect with acceptable side effects, or measuring a substance by reacting it with a solution of known strength.

Titre

A measure of antibody or another substance's concentration, determined by repeatedly diluting a sample until detection stops. Titres can help assess infection, immunity, or response, but interpretation depends on the test and timing.

Titubation

A regular, trembling or nodding movement of the head or body. It can occur when the part of the brain that helps control balance and coordination is diseased.

Tizanidine

A medicine that reduces nerve signals causing muscle tightness and spasms. It is used for selected painful spasms or spasticity but can cause sleepiness, dizziness, low blood pressure, dry mouth, and liver problems.

Alternate Names:
Zanaflex; Central Alpha-2 Agonist Muscle Relaxant

T-Lymphocyte

A white blood cell that matures in the thymus and directs cell-based immune responses. Different T cells kill infected cells, coordinate immunity, remember previous threats, or reduce excessive immune activity.

Tmax

The time after a dose when a medicine reaches its highest measured concentration in blood or plasma.

TMD

Alternate name; see *TMJ Disorder*.

TMJ Disorder

A group of musculoskeletal and neuromuscular conditions characterized by pain and dysfunction affecting the temporomandibular joint (TMJ), the muscles of mastication (masseter, temporalis, medial and lateral pterygoids), and associated cranial structures. Classified etiologically into masticatory myofascial pain, internal disc derangements (disc displacement with reduction [causing joint clicking/popping] or without reduction [causing "closed lock" jaw limitation]), and degenerative joint disease (osteoarthritis). Features include preauricular pain exacerbated by chewing or jaw motion, restricted mandibular range of motion, and joint crepitus; management utilizes conservative modalities (occlusal splints, NSAIDs, physical therapy, jaw rest) and arthrocentesis or surgery for refractory articular pathology.

Alternate Names:
TMJ Disorders; Temporomandibular Joint Disorder; TMD

TMJ Disorders

Plural form; see *TMJ Disorder*.

TNBC

Alternate name; see *Triple-Negative Breast Cancer*.

TNF Alpha

A chemical messenger made by immune cells that promotes inflammation. It helps fight infection but excessive or prolonged activity can contribute to autoimmune disease, fever, tissue damage, and some cancers.

TNM Classification

A cancer-staging system in which T describes the size or local extent of the primary tumor, N describes involvement of regional lymph nodes, and M describes distant metastasis. The combined findings estimate disease extent, guide treatment, compare outcomes, and inform prognosis; criteria vary by cancer type and staging edition.

TNM Classification Of Cancer Stages

Alternate name; see *TNM Classification*.

TNM Staging

Alternate name; see *TNM Classification*.

Tobacco

A plant product containing nicotine and many toxic combustion or processing chemicals. Its use causes dependence and increases the risk of cancer, cardiovascular disease, and lung disease.

Tobacco Use

Tobacco use exposes the body to nicotine and toxic combustion or aerosol chemicals, causing addiction and increased risks of cancer, vascular disease, and lung disease.

Tobramycin

An aminoglycoside antibiotic used for selected serious bacterial infections, including some Gram-negative infections. It can damage the kidneys or hearing and is used with dosing and laboratory monitoring when appropriate.

Tocolysis

Use of medicine to slow contractions for a short time when preterm birth may occur. The delay may allow treatment to help the baby's lungs mature or transfer to a hospital with newborn specialists; it does not usually prevent birth permanently.

Tocolytic Agents

Tocolytic agents suppress uterine contractions temporarily to delay preterm birth, often allowing time for corticosteroids or transfer to specialist care.

Tocolytics

Medicines that temporarily slow contractions before term. They may provide time for corticosteroids, magnesium when indicated, or transfer to specialist care, but their use depends on pregnancy duration, the cause of labor, and risks to the pregnant person or fetus.

Tocolytic Therapy

Medicines used for a short time to slow contractions during threatened preterm birth. The delay may allow time for treatments that improve newborn outcomes or for transfer to a hospital with appropriate neonatal care; they do not usually stop preterm birth permanently.

Tocopherol

A form of vitamin E, a fat-soluble vitamin that helps protect cell membranes. Deficiency is uncommon but may cause nerve problems, muscle weakness, or abnormal red blood cells; excessive supplements can also be harmful.

Toddler Feeding Patterns and Diet

Nutritional and feeding guidance for young children from 6 months to 2 years of age, transitioning from pureed foods to family meals with diverse nutrient-rich textures, iron-rich foods, and healthy mealtime routines.

Alternate Names:
Toddler Nutrition; Weaning and Complementary Feeding; Child Diet 6-24 Months

Toddler's Fracture

A small spiral crack in the lower shinbone of a young child, usually after a minor twist. The child may suddenly limp or refuse to walk, even though there is little swelling or deformity. The first X-ray may look normal; a repeat X-ray after about two weeks may show healing. Treatment commonly uses a supportive boot or cast, based on examination and imaging.

Alternate Names:
Cast-Tibia Fracture; Childhood Spiral Tibial Fracture

Toddler Test Or Procedure Preparation

Preparing a toddler for a test or procedure uses simple explanations, play, distraction, comfort objects, caregiver support, and any required fasting or medicine instructions.

Todd Paralysis

Alternate name; see *Todd Paresis*.

Todd Paresis

A transient, focal neurological deficit (most commonly hemiparesis, monoparesis, hemihypesthesia, or aphasia) that follows a focal motor or secondarily generalized epileptic seizure. Symptoms typically resolve spontaneously within minutes to 36 hours; it is hypothesized to arise from localized neuronal metabolic exhaustion, transient lactic acidosis, or sustained Todd post-ictal inhibition.

Alternate Names:
Todd Paralysis; Post-Ictal Paresis

Toe-Brachial Index

The ratio between blood pressure measured at a toe and in the arm. It helps assess circulation in the legs, especially when stiff ankle arteries make ankle-pressure testing unreliable.

Toe Joint

Any joint connecting the bones of a toe. Toe joints include the metatarsophalangeal and interphalangeal joints; they permit toe movement and may be affected by arthritis, gout, injury, or deformity.

Toenail

A toenail is the hard keratin plate covering the end of a toe and protecting its underlying tissue; injury, fungus, and ingrowth can cause disease.

Toenail Fungus

Alternate name; see *Nail Fungus*.

Toe Pressure

The blood pressure measured in a toe, useful for assessing circulation in the foot. It can remain reliable when ankle arteries are too stiff to compress, as may occur with diabetes or kidney disease.

Toes

The five digits at the end of each foot. The big toe has two bones and helps with balance and push-off; the other toes usually have three bones each. Injury, arthritis, tight shoes, or nerve and muscle problems can cause pain or deformity.

Togaviridae

A family of viruses that includes some mosquito-borne viruses, such as chikungunya and eastern equine encephalitis virus, which can cause fever, rash, joint pain, or brain inflammation.

Togaviridae Infections

Infections caused by viruses in the Togaviridae family. Symptoms vary by virus and may include fever, rash, joint pain, or encephalitis.

Tokophobia

Tokophobia is an intense fear of pregnancy or childbirth that can cause substantial distress or avoidance. Support may include psychological therapy, birth planning, and specialist maternity care.

Tolazamide

An older sulfonylurea diabetes medicine that increases insulin release; hypoglycemia and weight gain can occur, especially in older adults or people with kidney disease.

Tolcapone

A medicine used with levodopa for selected people with Parkinson disease to prolong levodopa's effect. It can cause diarrhea, involuntary movements, confusion, and potentially fatal liver injury, so liver monitoring is required.

Tolerable Upper Intake Level

The highest average daily intake of a nutrient unlikely to cause harm in almost all healthy people. It includes food, drinks, and supplements and is not a recommended amount to consume.

Alternate Names:

UL

Tolerance

A reduced response to a medicine after repeated use, sometimes leading to a need for a different dose to achieve the same effect. It can develop at different rates; tachyphylaxis refers to a rapid decrease in response.

Toll-Like Receptor

A major class of evolutionarily conserved pattern recognition receptors (PRRs) expressed on the surface and endosomal membranes of sentinel innate immune cells (macrophages, dendritic cells, mast cells) and epithelial barriers. TLRs recognize structural pathogen-associated molecular patterns (PAMPs, e.g., TLR4 recognizing gram-negative lipopolysaccharide, TLR2 recognizing peptidoglycan, TLR3 recognizing viral dsRNA, and TLR9 recognizing unmethylated CpG DNA) as well as damage-associated molecular patterns (DAMPs). Downstream signaling through MyD88 or TRIF activates nuclear factor-kappa B (NF-κB) and interferon regulatory factors (IRFs), triggering inflammatory cytokine synthesis and costimulatory molecule expression for adaptive immunity.

Alternate Names:
Toll-Like Receptors; TLR; TLRs

Toll-Like Receptors

Plural form; see *Toll-Like Receptor*.

Tolmetin

A nonsteroidal anti-inflammatory drug used for pain and arthritis; gastrointestinal bleeding, kidney injury, and cardiovascular events are important risks.

Tolmetin Overdose

Taking too much tolmetin, a nonsteroidal anti-inflammatory medicine, can cause stomach bleeding, vomiting, kidney injury, drowsiness, seizures, or other serious effects.

Tolnaftate

A topical antifungal medicine used for some dermatophyte infections such as athlete's foot and ringworm; it is not effective for every type of fungal infection.

Tolosa-Hunt Syndrome

A rare neuro-ophthalmic disorder characterized by severe, unremitting, painful unilateral periorbital/retro-orbital pain accompanied by ipsilateral ophthalmoplegia (palsies of cranial nerves III, IV, and VI) and sensory loss in the V1 distribution, caused by idiopathic granulomatous inflammation within the cavernous sinus or superior orbital fissure, exquisitely responsive to systemic corticosteroid therapy.

Alternate Names:
Painful Ophthalmoplegia; Cavernous Sinus Granulomatous Syndrome

Tolterodine Tartrate

Tolterodine tartrate is an antimuscarinic medicine used for overactive bladder and urinary urgency; dry mouth, constipation, and urinary retention can occur.

Toluene

Toluene is a volatile solvent that can irritate tissues and, with substantial inhalation or ingestion, injure the nervous system, liver, kidneys, or heart.

Toluene And Xylene Poisoning

Poisoning from solvents containing toluene or xylene, often through swallowing or inhalation. It can cause dizziness, confusion, abnormal heart rhythms, breathing problems, or organ injury.

Toluene Toxicity

Solvent poisoning from inhalation or ingestion that can cause CNS depression, arrhythmias, renal tubular acidosis, hypokalemia, weakness, and altered mental status. Check electrolytes, acid-base status, renal function, and ECG; remove the exposure and provide supportive care while correcting life-threatening potassium or acid-base abnormalities.

Tolvaptan

A vasopressin V2-receptor antagonist used in selected patients with hyponatremia or autosomal

dominant polycystic kidney disease; thirst, rapid sodium correction, and liver injury require attention.

Tomogram

A tomogram is an image of a selected cross-sectional layer of the body or another object, produced by tomography such as CT or MRI.

Tomography

Imaging that produces cross-sectional views, or slices, through the body. Computed tomography uses X-rays, while other forms use ultrasound, magnetic fields, or radioactive tracers.

Tomosynthesis

An imaging test that takes several low-dose X-ray pictures from different angles and combines them into thin layers. It is commonly used to examine breast tissue in three dimensions.

Tomotherapy

Tomotherapy combines CT imaging with rotating, precisely shaped radiation beams to deliver radiation treatment while adjusting for the target and nearby tissues.

Tongue

A muscular organ in the mouth that helps move food, form speech sounds, swallow, and detect taste. Swelling, sores, weakness, numbness, or restricted movement may result from injury, infection, inflammation, nerve disease, or cancer.

Tongue Biopsy

A tongue biopsy removes a small tissue sample from a tongue lesion for microscopic examination of infection, inflammation, precancer, or cancer.

Tongue Carcinoma

Tongue carcinoma is cancer of the tongue, usually squamous-cell cancer, and may cause a persistent sore, lump, pain, or difficulty speaking or swallowing.

Tongue Disease

Any disorder affecting the tongue, such as infection, inflammation, injury, nerve disease, nutritional deficiency, or cancer. Symptoms may include pain, sores, swelling, altered taste, or difficulty speaking or swallowing.

Tongue Neoplasm

An abnormal growth in the tongue that may be noncancerous, precancerous, or cancerous. A persistent lump, ulcer, pain, bleeding, numbness, or difficulty speaking or swallowing needs examination and may require biopsy.

Tongue Problems

Changes in the tongue, such as pain, swelling, sores, color change, numbness, or difficulty moving or tasting. Causes include injury, infection, inflammation, nutritional deficiency, and other disease.

Tongue-Tie

A congenital condition characterized by an abnormally short, thick, or tight lingual frenulum that tethers the bottom of the tongue tip to the floor of the mouth, restricting tongue mobility. In infants, it can cause latching difficulty and painful breastfeeding; in older children, it may affect speech articulation, eating, or dental hygiene. Severe restriction may be treated with a simple surgical release (frenotomy).

Alternate Names:
Ankyloglossia; Lingual Frenulum Tethering; Short Lingual Frenulum; Tongue Tie

Tonic-Clonic Seizure

A seizure causing loss of awareness, first with stiffening of the body and then with repeated jerking movements. Sleepiness, confusion, headache, or muscle soreness commonly follows.

Tonicity

The effect of a solution's effective osmotic concentration on the movement of water across a cell membrane. A hypotonic solution tends to make cells swell, a hypertonic solution tends to make them shrink, and an isotonic solution causes little net

change in cell volume.

Tonic Neck Reflex

A normal early-infant reflex, sometimes called the fencing posture. When the infant's head turns to one side, the arm on that side straightens and the opposite arm bends. It usually fades by about six months; marked asymmetry may suggest a neurologic problem.

Alternate Names:
Asymmetric Tonic Neck Reflex; ATNR; Fencing Reflex

Tonic Pupil

A pupil that reacts poorly to light but constricts slowly when focusing on something nearby. It often results from injury to nerves controlling the pupil and may occur with other eye or neurologic findings.

Tonic Pupil Syndrome

A pupil that is enlarged or irregular and reacts poorly to light but constricts slowly with near focus, usually because of damage to postganglionic parasympathetic nerves. New pupil asymmetry with headache, drooping eyelid, or neurologic symptoms can indicate a serious neurologic cause.

Tonics

Preparations traditionally claimed to improve strength, energy, appetite, or general health. Their ingredients, safety, and evidence vary widely, and some may interact with medicines or contain harmful amounts of active substances.

Tonic Seizures

Seizures causing sustained stiffening of muscles, usually for seconds to minutes. They may affect one area or the whole body, cause falls or breathing difficulty, and require individualized seizure evaluation.

Tonometer

An instrument that measures pressure inside the eye. Eye-pressure readings help detect glaucoma or monitor treatment, but they must be interpreted with the optic nerve, visual field, cornea, and other findings.

Tonometry

Measurement of pressure inside the eye, usually to assess for glaucoma or monitor its treatment. Methods include applanation, noncontact air-puff, rebound, and electronic devices; results must be interpreted with corneal thickness and the clinical context.

Tonsil

A small mass of immune tissue at the back of the throat. Tonsils help detect germs entering through the mouth and nose but can become enlarged or infected, causing sore throat, difficulty swallowing, or breathing problems.

Alternate Names:
Palatine Tonsil; Tonsilla

Tonsillar Cancer

Cancer arising in a tonsil, most often from the surface lining cells. It may cause a persistent sore throat, pain felt in the ear, trouble swallowing, a tonsil that is larger on one side, or a lump in the neck.

Tonsillar Neoplasm

A tonsillar neoplasm is an abnormal growth in a tonsil that may be benign or malignant and can cause a persistent sore throat, swallowing difficulty, or neck swelling.

Tonsillectomy

Surgery to remove the tonsils for selected recurrent infections, obstructive sleep apnea, or other tonsil disease. Postoperative pain and bleeding can occur; hemorrhage may develop shortly after surgery or during healing and can require urgent treatment.

Tonsillitis

Inflammation or infection of the tonsils, usually caused by a virus and sometimes by group A streptococcal bacteria. It can cause sore throat, fever, swollen neck glands, painful swallowing, and white patches.

Tonsil Stones

Small, hard lumps formed when food particles, mucus, dead cells, and bacteria become trapped and calcify in the folds of the tonsils. They are often harmless but may cause bad breath, throat irritation, a feeling that something is stuck in the throat, recurrent inflammation, or visible white or yellow deposits.

Tonus

The normal resting tension or partial contraction of a muscle or tissue. Abnormally low or high tone can occur with nerve, muscle, brain, spinal-cord, or developmental disorders.

Tooth

A hard mineralized structure anchored in the jaw, used for biting, tearing, chewing, and grinding food.

Tooth Abrasion

Loss of tooth substance caused by external mechanical friction, such as aggressive brushing, abrasive products, or habits, producing grooves, notches, or sensitivity.

Tooth Abscess

A tooth abscess is a localized collection of pus from bacterial infection of the tooth or surrounding tissues, causing pain, swelling, and possible spreading infection.

Toothache

Pain arising from a tooth or nearby gum, ligament, bone, or other supporting tissue. Common causes include decay, infection, cracks, trauma, and gum disease.

Toothaches

Alternate name; see *Toothache*.

Tooth Anatomy

A tooth has a hard outer covering called enamel, a supporting layer called dentin, and a living center called the pulp that contains nerves and blood vessels. The root anchors it in the jaw through surrounding tissues.

Tooth Ankylosis

Fusion of a tooth root to alveolar bone through loss of the periodontal ligament, preventing normal eruption and making the tooth appear infraoccluded as neighboring teeth grow.

Tooth Attrition

Wear of tooth surfaces caused by tooth-to-tooth contact, commonly from chewing, bruxism, or malocclusion, producing flattened cusps and possible sensitivity.

Tooth Avulsion

Complete displacement of a tooth from its socket, usually caused by an injury. The tooth, socket, periodontal ligament, and surrounding tissues may all be damaged; permanent teeth are more commonly affected.

Tooth Brushing

Tooth brushing removes plaque and food from teeth and gums. Brushing twice daily with fluoride toothpaste helps prevent tooth decay and gum disease.

Tooth Calcification

Deposition of mineral that forms and hardens enamel, dentin, cementum, and other tooth structures during development; abnormal timing or amount can affect tooth strength and appearance.

Tooth Component

Tooth components include enamel, dentin, cementum, pulp, and supporting tissues, each contributing to tooth strength, sensation, nutrition, and attachment.

Tooth Crowding

Tooth crowding occurs when teeth lack enough space to align normally, often from tooth size, jaw size, eruption pattern, or retained primary teeth.

Tooth Crown

The tooth crown is the visible portion above the

gum, covered mainly by hard enamel and containing underlying dentin and pulp.

Tooth Decay

Alternate name; see *Dental Caries*.

Tooth Discoloration

A change in a tooth's color. Causes include stains, tooth decay, injury, too much fluoride while teeth are forming, some medicines, or problems with the hard outer layer of the tooth. Treatment depends on the cause.

Tooth Disease

Any disorder affecting a tooth, including decay, infection, cracks, developmental defects, or wear. It may cause pain, sensitivity, discoloration, swelling, or difficulty chewing.

Tooth Enamel

Tooth enamel is the highly mineralized outer covering of the crown that protects dentin and pulp from wear, acid, and bacteria.

Tooth Erosion

Tooth erosion is the chemical loss of tooth enamel caused by acids, not by bacteria. Acidic foods, drinks, reflux, and repeated vomiting can contribute to it.

Tooth Eruption

The process by which a developing tooth moves through the gum into the mouth. Baby teeth usually appear from about 6 months to 3 years, and permanent teeth from about 6 years onward; timing varies among individuals.

Tooth Extraction

Removal of a tooth from its socket because of severe decay, infection, periodontal disease, fracture, impaction, orthodontic planning, or another clinical indication.

Tooth Fracture

A crack or break in a tooth caused by injury, biting hard material, decay, grinding, or weakened enamel. It may expose the inner nerve, causing pain, sensitivity, infection, or loss of the tooth.

Tooth Infection

Infection of the tooth, its pulp, or surrounding tissues, commonly caused by untreated decay, cracks, or gum disease. It may cause toothache, sensitivity, swelling, fever, or drainage. Facial swelling, difficulty swallowing or breathing, or spreading infection can indicate deep tissue involvement or airway risk.

Tooth Loss

Tooth loss is absence of a tooth due to decay, gum disease, trauma, developmental absence, or extraction and can affect chewing, speech, and oral health.

Tooth Luxation

Injury that loosens or moves a tooth without completely knocking it out. The tooth may be pushed inward, outward, or sideways, with risk of damage to its blood supply, root, or surrounding tissues.

Toothpaste Overdose

Swallowing too much toothpaste can cause stomach upset, vomiting, or diarrhea. Large amounts of fluoride toothpaste can cause serious salt and calcium disturbances, especially in children.

Tooth Replantation

Replacement of an accidentally displaced or avulsed tooth into its socket, followed by stabilization and dental follow-up.

Tooth Resorption

Breakdown of part of a tooth, usually starting inside the tooth or on its root. It may follow injury, infection, orthodontic treatment, or occur without a known cause and can weaken or destroy the tooth.

Tooth Root

The tooth root anchors a tooth in its socket and contains dentin, cementum, pulp, nerves, and blood vessels beneath the gum.

Tooth Sensibility Testing

Dental tests using cold, heat, electricity, or touch to see whether a tooth's nerve responds. The results do not directly measure blood flow inside the tooth and must be combined with examination and dental imaging.

Tooth Sensitivity

Brief, sharp tooth pain triggered by cold, heat, sweet or sour foods, brushing, or touch. It often happens when the inner layer of a tooth is exposed because the outer layer is worn or the gums have pulled back. Tooth decay or cracks can also cause it.

Tophaceous Gout

Advanced, long-lasting gout in which firm lumps of uric-acid crystals build up in and around joints. These lumps, called tophi, may develop on the toes, fingers, ears, or elbows and damage nearby tissue.

Tophus

A firm lump made of uric-acid crystals that collects in or around a joint or in soft tissue after long-standing gout. Tophi can cause pain, inflammation, skin breakdown, deformity, and damage to bone or cartilage.

Topical

Applied directly to skin or a moist lining, usually to act at the treatment site with limited whole-body exposure.

Topical Antibiotics

Antibiotics applied to the skin to treat selected superficial bacterial infections. The choice and duration depend on the organism, site, extent of infection, resistance patterns, and local guidance. Unnecessary or prolonged use can cause irritation and antimicrobial resistance.

Topical Antifungals

Medicines applied to the skin to treat fungal infections such as athlete's foot, ringworm, or jock itch. The product must match the fungus and body site; irritation or treatment failure can occur.

Topical Calcineurin Inhibitors

Non-steroid creams or ointments that reduce immune inflammation in eczema, especially on the face, eyelids, or skin folds. Burning or itching may occur briefly after application.

Topical Corticosteroid Potency

The strength of a steroid cream, ointment, lotion, or gel used on the skin. Mild products are used for sensitive areas or children, while stronger products may be needed briefly for thick or severe inflammation. Choice depends on the diagnosis, body site, age, duration, and risk of skin thinning or other effects.

Topical Retinoids

Vitamin-A-related medicines applied to the skin for acne and some sun-related skin changes. They help prevent blocked pores and increase skin-cell turnover but may cause dryness, irritation, and increased sun sensitivity; pregnancy precautions vary by product.

Topiramate

An antiseizure medicine also used to prevent migraine. It may cause tingling, slowed thinking, weight loss, kidney stones, or acid imbalance and can harm a developing fetus; abrupt discontinuation can trigger seizures in people with epilepsy.

Topographic Spinal Cord Anatomy

The organization of the spinal cord into segments, gray matter, white-matter tracts, roots, enlargements, and vascular territories. This anatomy explains patterns of motor, sensory, reflex, and autonomic loss after cord injury or disease.

Topoisomerase

An enzyme that temporarily cuts and rejoins DNA to control its twisting during replication, transcription, and chromosome separation.

Topoisomerase Ii

An enzyme that cuts both DNA strands, passes another DNA segment through the break, and rejoins the strands; it is targeted by some anticancer drugs.

Topoisomerase Inhibitors

Drugs that interfere with DNA topoisomerases; some are antibiotics and others are anticancer medicines, with toxicity depending on the drug and target enzyme.

Topotecan

A topoisomerase-I inhibitor used for selected ovarian, small-cell lung, and cervical cancers; bone-marrow suppression is a major toxicity.

Topotecan Hydrochloride

A salt form of topotecan, a chemotherapy medicine that interferes with DNA copying. It treats selected cancers but can cause dangerously low blood counts, infection, bleeding, diarrhea, nausea, or fatigue.

TORCH Panel

A group of blood tests used when pregnancy or newborn findings suggest infection acquired before birth. TORCH traditionally refers to Toxoplasma, other infections, rubella, cytomegalovirus, and herpes; individual tests and antibody results need careful clinical interpretation.

TORCH Screen

Testing for selected congenital infections—classically Toxoplasma, Other infections, Rubella, Cytomegalovirus, and Herpes—when fetal or newborn findings suggest an in-utero infection; broad panels require careful interpretation.

TORCH Syndrome

A group of congenital infections caused by Toxoplasma, Other infections, Rubella, Cytomegalovirus, and Herpes simplex, which may cause growth restriction, rash, jaundice, eye disease, hearing loss, brain abnormalities, or other newborn problems.

Toremifene

A selective estrogen-receptor modulator used for metastatic breast cancer in postmenopausal women; hot flashes and, rarely, dangerous QT prolongation may occur.

Torn ACL

A torn anterior cruciate ligament is a knee injury commonly caused by sudden pivoting, landing, or contact, producing a pop, swelling, instability, and difficulty changing direction. Rehabilitation, bracing, or reconstruction is selected according to activity, associated injury, and goals.

Torn Meniscus

A torn meniscus is a split in the knee's shock-absorbing cartilage caused by twisting or degeneration. Pain, swelling, catching, or locking may occur; physical therapy or arthroscopic treatment depends on tear pattern, symptoms, age, and associated disease.

Alternate Names:
Meniscal Tear; Torn Semilunar Cartilage

Torn Rotator Cuff

A partial or complete tear of one or more rotator-cuff tendons, causing shoulder pain, weakness, night symptoms, or difficulty lifting or rotating the arm.

Torpor

A state of greatly reduced activity, alertness, or responsiveness. In a patient, marked or new torpor may signal a serious illness, medicine effect, or metabolic problem.

Torsade De Pointes

A dangerous, fast heart rhythm in which the lower chambers beat in a twisting pattern. It is often linked with a prolonged electrical recovery time, abnormal body salts, certain medicines, or inherited heart conditions and can cause collapse or cardiac arrest.

Torsades De Pointes

A dangerous, fast heart rhythm arising from the lower chambers and often associated with a prolonged QT interval. It may cause dizziness, fainting, or cardiac arrest; reversible causes include certain medicines and abnormal body salts.

Torsemide

A water tablet that helps the kidneys remove salt and water. It treats swelling caused by heart, kidney, or liver disease but can cause dehydration, low blood pressure, or abnormal body-salt levels.

Torsion

Twisting of a body structure around its supporting axis, which may reduce or stop blood flow. Torsion of the testicle, ovary, or bowel can cause tissue death if blood flow remains blocked.

Torsion Dystonia

A movement disorder in which repeated or sustained muscle contractions twist part of the body into abnormal postures. It may affect one area or many areas and can be inherited or develop after illness, injury, or medicine exposure.

Torsion of Appendix Testis

Twisting of a small embryonic remnant attached to the upper part of a testicle, usually in a child. It can cause localized scrotal pain and tenderness; testicular torsion is an important separate diagnosis.

Torsion of Testicular Appendage

Alternate name; see *Torsion of Appendix Testis*.

Torsion Of The Appendix Testis

Alternate name; see *Torsion of Appendix Testis*.

Torticollis

A condition in which the neck muscles pull the head into a tilted or rotated position. It may be present from birth or result from pain, injury, muscle spasm, nerve disease, or another condition.

Torulaspora

A genus of yeasts used in food and fermentation; human infection is rare and usually opportunistic.

Torus Fracture

A stable incomplete break in a child's bone caused by compression, often in the wrist after a fall. The bone bulges rather than breaking all the way through; it usually heals well with a splint or cast and follow-up as advised.

Alternate Names:
Buckle Fracture; Metaphyseal Buckle Fracture

Torus Mandibularis

A harmless, usually painless bony lump on the tongue side of the lower jaw, commonly near the premolar teeth. It usually needs no treatment unless it is repeatedly injured or interferes with dentures.

Torus Palatinus

A harmless, usually painless bony lump along the middle of the roof of the mouth. It grows slowly and usually needs no treatment unless it becomes irritated or interferes with eating or dentures.

Total Abdominal Colectomy

Surgery to remove the entire colon through an abdominal incision or keyhole approach. The small intestine may be joined to the rectum or brought through the abdominal wall as an ileostomy, depending on the disease and safety.

Total Anomalous Pulmonary Venous Connection

Alternate name; see *Total Anomalous Pulmonary Venous Return*.

Total Anomalous Pulmonary Venous Return

A birth defect in which the veins returning oxygen-rich blood from the lungs connect to the wrong side of the heart. Babies may have blue skin, rapid breathing, poor feeding, or heart failure. Severe obstruction is an emergency, and surgery is needed to reroute the veins.

Total Artificial Heart

A mechanical device that replaces the pumping function of both ventricles and is used in selected patients with severe biventricular heart failure, usually as a bridge to transplantation. It requires specialized center-based management and carries risks including bleeding, infection, thrombosis, and device malfunction.

Total-Body Skin Examination

A systematic examination of the skin, scalp, nails, and visible mucous membranes from head to toe to look for new, changing, or suspicious lesions. It may include dermoscopy and is especially useful for people at increased risk of skin cancer.

Total Body Surface Area

The percentage of the skin affected by a burn or another widespread process. Clinicians estimate it using the person's palm or body-area charts to judge severity and guide treatment.

Total Breech Extraction

A delivery procedure in which a clinician brings out a breech baby by the feet. It is mainly used for a second twin in selected circumstances, not routinely for a single full-term breech baby because of injury risks.

Total Cholesterol

Total cholesterol is the combined cholesterol carried in major blood lipoproteins; cardiovascular risk is assessed with HDL, LDL, triglycerides, and other factors.

Total Daily Energy Expenditure

The total energy the body uses in one day, including energy needed at rest, digestion, movement, and physical activity. It varies with body size, age, muscle mass, health, and activity level.

Total Haemolytic Complement Test

A blood test that measures whether a group of immune proteins can work together to destroy cells. An abnormal result may suggest immune deficiency, autoimmune disease, infection, inflammation, or a laboratory problem.

Total Hip Arthroplasty

Surgery that replaces a damaged hip joint with artificial parts. It is used for severe arthritis, fractures, or other joint damage when pain and loss of movement continue despite other treatment.

Total Hysterectomy

Removal of the uterus and cervix. The fallopian tubes and ovaries are not necessarily removed and should be specified separately, such as salpingectomy or oophorectomy.

Total Intravenous Anesthesia

General anesthesia given entirely through medicines injected into a vein rather than inhaled gases. It produces controlled unconsciousness during surgery, while trained anesthesia staff continuously monitor breathing, blood pressure, and other vital functions.

Total Iron Binding Capacity

A blood-test estimate of how much iron the protein transferrin can carry. It is interpreted with blood iron, ferritin, blood counts, and other findings to assess iron deficiency, inflammation, or iron overload; it does not measure stored iron directly.

Total Iron-Binding Capacity

A clinical laboratory blood test measuring the maximum concentration of iron that can be bound by circulating serum transferrin molecules, elevated in iron deficiency anemia and decreased in anemia of chronic disease, hemochromatosis, and malnutrition.

Alternate Names:
TIBC

Total Knee Arthroplasty

Surgery that replaces damaged surfaces of the knee with artificial parts to relieve severe pain and improve movement. It may be recommended for advanced arthritis or major joint damage after other measures are inadequate; rehabilitation and monitoring help restore function and detect complications.

Total Knee Replacement

Surgery that replaces damaged surfaces of the knee with artificial parts to relieve severe pain and improve function. Recovery includes exercises and gradual activity; infection, blood clots, stiffness, loosening, persistent pain, or repeat surgery may occur.

Alternate Names:

Total Knee Arthroplasty

Total Laryngectomy

Total laryngectomy removes the entire voice box and creates a permanent opening in the neck for breathing, usually to treat advanced laryngeal cancer.

Total Lesion Glycolysis

A PET-scan measurement combining the amount of active tumor tissue with how much radioactive sugar-like tracer it absorbs. It estimates the tumor's overall activity and may help monitor treatment, but does not determine outlook alone.

Total Lung Capacity

The greatest amount of air the lungs can hold after a full breath in. Lung-volume testing measures it; the amount may be too high when lungs are overinflated or too low when the lungs or chest cannot expand normally.

Total Pancreatectomy

Total pancreatectomy removes the entire pancreas and causes permanent loss of insulin and digestive-enzyme production, requiring lifelong replacement treatment.

Total Parenteral Nutrition

Nutrition given through a vein when the digestive system cannot absorb enough food. The solution can provide water, sugar, protein, fat, vitamins, and minerals, but requires monitoring for infection, blood-sugar changes, and liver or electrolyte problems.

Total Proctocolectomy And Ileal-Anal Pouch

Total proctocolectomy with an ileal-anal pouch removes the colon and rectum and creates a pouch from the ileum that is connected to the anus.

Total Proctocolectomy With Ileostomy

Total proctocolectomy with ileostomy removes the colon and rectum and diverts the end of the small intestine through an abdominal stoma.

Total Protein

The combined amount of albumin and other proteins in the blood. A blood test may help assess nutrition, liver or kidney disease, inflammation, or abnormal antibody production.

Total Protein Test

A blood test measuring the combined concentration of albumin and globulins to evaluate nutritional status, liver disease, and kidney function; see *Total Protein*.

Total Sleep Time

The total amount of time spent asleep during a defined sleep period or sleep study, excluding periods of wakefulness.

Total Thyroidectomy

The complete surgical resection of both lobes and the isthmus of the thyroid gland, indicated for aggressive thyroid malignancies, compressive multinodular goiters, or medically refractory Graves disease, carrying specific risks of recurrent laryngeal nerve injury and permanent hypoparathyroidism.

Touch

The sensory perception of contact, pressure, texture, vibration, or movement across the skin. Signals travel through sensory nerves to the spinal cord and brain.

Tourette Disorder

Alternate name; see *Tourette Syndrome*.

Tourette's

Alternate name; see *Tourette Syndrome*.

Tourette's Syndrome

Alternate name; see *Tourette Syndrome*.

Tourette Syndrome

A neurodevelopmental disorder defined by at least two motor tics and one or more vocal tics, which

need not occur together. Tics begin before age 18 and recur for at least one year, without a tic-free interval longer than three months; they are not due to a substance or another medical condition. Tics often wax and wane and change over time.

Alternate Names:
Tourette Disorder; Tourette's Disorder; Gilles de la Tourette Syndrome

Tourniquet

A band or pneumatic device placed around a limb to temporarily occlude or greatly reduce arterial blood flow. Emergency tourniquets are designed for control of severe limb bleeding, while pneumatic surgical tourniquets create a relatively bloodless operative field. Prolonged inflation can cause nerve, muscle, or skin injury.

Tourniquet Test

A bedside test that looks for small skin spots after brief pressure from a blood-pressure cuff. It may show increased capillary fragility or low platelets, but it is not specific and cannot diagnose dengue or another disease by itself.

Alternate Names:
Rumpel-Leede Test; Hess Test; Capillary Fragility Test

Towel Clamp

A surgical clamp with sharp points used to secure drapes or hold materials in place during an operation. Its points can puncture skin or damage underlying tissue.

Townes Syndrome

A rare inherited birth disorder that commonly causes blockage or absence of the anal opening and unusual thumbs. Kidney, heart, hearing, foot, or genital abnormalities may also occur. The specific problems vary, so treatment is planned around each child's findings.

Toxaphene

A persistent organochlorine insecticide mixture that can accumulate in soil, water, and body fat. Significant exposure may overstimulate the nervous system and cause tremors, seizures, liver injury, or other toxic effects.

Toxbase

A clinical poison-information service that helps healthcare professionals assess chemical or medicine exposures. It provides evidence-based advice about expected symptoms, necessary tests, treatment, observation, and urgency for particular substances.

Toxic

Poisonous or capable of harming living cells, tissues, organs, or the whole body. Toxicity depends on the substance, dose, route, duration, and individual susceptibility.

Toxic Adenoma

A benign thyroid nodule that produces thyroid hormone independently of normal pituitary control. It can cause thyrotoxicosis and appears as a functioning nodule on thyroid scintigraphy.

Alternate Names:
Toxic Thyroid Adenoma; Autonomous Thyroid Nodule; Hot Thyroid Nodule

Toxic Anterior Segment Syndrome

A sterile, noninfectious inflammatory reaction in the anterior eye after surgery, caused by toxic substances or contaminants introduced during the procedure. Severe corneal edema, anterior chamber inflammation, and elevated pressure may occur.

Toxic Dose

The amount of a substance that causes harmful effects. It varies with the substance, route, duration of exposure, age, health, and individual susceptibility.

Toxic Effect

Harmful change caused by a chemical, medicine, poison, radiation, or other exposure. The effect may involve one or more organs and depends on the dose, route, duration, metabolism, and individual susceptibility.

Toxic Encephalopathy

Brain dysfunction caused by a poison, chemical, or medicine. It may cause confusion, unusual behavior, memory or movement problems, seizures, or reduced alertness; effects depend on the exposure and its duration.

Toxic Epidermal Necrolysis

The most extensive form of the Stevens-Johnson syndrome/toxic epidermal necrolysis spectrum, usually triggered by a medicine. It causes widespread painful skin blistering and detachment with mucosal erosions; epidermal detachment involves more than 30% of body-surface area. Detachment of 10–30% is classified as SJS/TEN overlap.

Alternate Names:
TEN

Toxicity

The ability of a substance, treatment, or exposure to cause harmful effects in a living organism. Severity depends on the dose, route, duration, metabolism, target organs, and individual susceptibility; effects may be temporary or permanent.

Toxicity Grade

A standardized rating of how severe a harmful effect is, often used for adverse effects of medicines or cancer treatment. Grades generally range from mild to life-threatening and help guide monitoring and management.

Toxic Megacolon

A dangerous, rapid widening of the large intestine during severe inflammation or infection. It can cause a swollen, painful belly, fever, a fast heartbeat, or dehydration. The bowel may tear, causing severe infection or shock, so urgent hospital treatment is needed.

Toxic Metabolic Encephalopathy

Temporary or lasting brain dysfunction caused by a poison, medicine, organ failure, infection, or abnormal body chemistry. It may cause confusion, unusual sleepiness, agitation, seizures, or coma; severity depends on the cause and duration.

Toxic Neuropathy

Peripheral-nerve dysfunction caused by a toxic exposure, medicine, metabolic toxin, or substance-use-related injury. Symptoms may include burning pain, numbness, tingling, weakness, or impaired balance.

Toxic Nodular Goiter

An enlarged thyroid containing one or more nodules that make too much thyroid hormone. It can cause weight loss, sweating, shaking, fast or irregular heartbeat, anxiety, or heat intolerance and is assessed with blood tests and imaging.

Toxicodendron Dermatitis

An itchy, often blistering rash caused by skin contact with urushiol, an oil in poison ivy, poison oak, or poison sumac. The rash may appear in streaks where the plant brushed the skin.

Alternate Names:
Urushiol Dermatitis; Rhus Dermatitis; Poison Ivy Rash

Toxicodendron Poisoning

Urushiol-induced allergic contact dermatitis from poison ivy, poison oak, or poison sumac. An intensely itchy, often linear, blistering rash appears after a delay; urushiol can remain on clothing, tools, or animal fur and cause further skin exposure.

Toxicodendron Species

A group of plants that includes poison ivy, poison oak, and poison sumac. Their oil, urushiol, can cause an itchy allergic skin rash after contact.

Alternate Names:
Toxicodendron Plants; Urushiol-Containing Plants; Poison Ivy Oak Sumac Species; Poison Ivy; Poison Oak; Poison Sumac

Toxicokinetic Description

An account of how a harmful substance enters the body, is absorbed, distributed, changed by metabolism, and eliminated. These processes determine the concentration and duration of exposure at target organs.

Toxicology

The study of poisons and harmful effects of chemicals, medicines, and other substances. It includes how exposure happens, how the body is affected, how poisoning is recognized, how it can be prevented, and how it is treated.

Toxicology Screen

A test of urine, blood, or another sample for medicines, drugs, alcohol, or poisons. Results depend on symptoms, timing, and prescribed medicines and may not identify every substance.

Toxicology Specimen Preservation

Collection, labeling, storage, and transport of biological specimens to preserve analytes and prevent contamination or degradation. Appropriate specimens may include peripheral blood, urine, vitreous humor, bile, liver, hair, or gastric contents depending on the suspected exposure and timing.

Toxic Shock Syndrome

A rare, rapidly progressing, and life-threatening condition caused by bacterial toxins, most commonly produced by *Staphylococcus aureus* or group A *Streptococcus* bacteria. These bacterial toxins act as superantigens, triggering an overwhelming immune response that releases massive amounts of inflammatory chemicals into the bloodstream. It classically causes a sudden high fever, dangerously low blood pressure (shock), a widespread sunburn-like skin rash that later peels, confusion, and rapid failure of multiple organ systems.

Alternate Names:
TSS; Staphylococcal Toxic Shock; Streptococcal Toxic Shock Syndrome

Toxic Synovitis

Alternate name; see *Transient Synovitis*.

Toxidrome

A recognizable group of symptoms and examination findings suggesting poisoning by a particular type of substance. Examples include opioid, stimulant, sedative, and cholinergic patterns; the pattern helps guide urgent treatment but does not identify the exact poison by itself.

Toxin

A poisonous substance made by a living organism, such as a bacterium, plant, animal, or fungus. Toxins can damage specific tissues or disrupt nerve, muscle, or cellular functions.

Alternate Names:
Biological Poison

Toxocara

A group of roundworms that live in dogs and cats. People can become infected by swallowing eggs from contaminated soil or food. The young worms can move through the body and sometimes affect organs or eyes, though many infections cause no symptoms.

Toxocara Canis

A dog roundworm whose eggs can infect people. Larvae migrate through tissues and may cause toxocariasis, with fever, cough, enlarged liver, eye inflammation, or rarely nervous-system involvement.

Toxocara Cati

A cat roundworm whose eggs can infect people. The larvae may migrate through organs and cause toxocariasis, including fever, cough, enlarged liver, eye inflammation, or rarely neurologic disease.

Toxocariasis

Infection caused by dog or cat roundworm larvae after a person swallows eggs from contaminated soil, food, or hands. The larvae can migrate through the body and cause fever, cough, enlarged liver, eye inflammation, or rarely brain disease.

Toxoid

A bacterial toxin that has been chemically or otherwise inactivated so it cannot cause its usual harm but can still stimulate protective immunity. Toxoids are used in vaccines against diseases such as tetanus and diphtheria.

Toxoid Vaccines

Vaccines made from bacterial toxins that have been

detoxified so they cannot cause their usual harm but can train the immune system to neutralize the toxin. Examples protect against tetanus and diphtheria.

Toxoplasma

A genus of intracellular parasites; Toxoplasma gondii is the species that infects people. Infection is often mild, but it can seriously affect a fetus or people with weakened immunity, especially the brain and eyes.

Toxoplasma Blood Test

A blood test detecting antibodies or genetic material related to Toxoplasma gondii infection, interpreted with symptoms, immune status, pregnancy, and timing of exposure.

Toxoplasma Chorioretinitis

Alternate name; see *Ocular Toxoplasmosis*.

Toxoplasma Gondii

A parasite that causes toxoplasmosis. Cats are its main host and can spread infective forms in their stool; people may also acquire it from undercooked meat, contaminated soil, or contaminated food and water.

Toxoplasma Meningoencephalitis

Inflammation of the brain, and sometimes its coverings, caused by *Toxoplasma gondii*. It occurs mainly in people with severely weakened immune systems and may cause headache, confusion, weakness, seizures, or coma.

Toxoplasmosis

An infection caused by the parasite *Toxoplasma gondii*. People may acquire it from undercooked contaminated meat or shellfish, contaminated soil or food, or cat feces. Most healthy people have no symptoms or mild flu-like illness; infection can seriously affect the eyes or brain in people with weakened immunity and can pass to the fetus after infection during pregnancy. Transmission through an infected organ or blood transfusion is uncommon.

Alternate Names:
Toxoplasma Gondii Infection

Toxoplasmosis Pathology

Tissue injury caused by Toxoplasma gondii, often showing necrotizing inflammation, tachyzoites, tissue cysts containing bradyzoites, and variable lymphohistiocytic or mixed inflammatory infiltrates.

TP53

Essential tumor suppressor gene encoding p53; germline mutations lead to Li-Fraumeni syndrome and multiple early-onset cancers. See *Li-Fraumeni Syndrome*.

TPA

Tissue plasminogen activator, a natural clot-dissolving protein or a laboratory-made medicine based on it. In selected emergencies it helps break down clots, but it can cause serious bleeding.

Alternate Names:
Tissue Plasminogen Activator; Fibrinolytic Enzyme

TPMT Polymorphism

An inherited difference in the thiopurine methyltransferase enzyme, which breaks down some immune-suppressing medicines. Low enzyme activity can cause dangerously low blood counts unless dosing is reduced or another treatment is chosen.

TPN

TPN, or total parenteral nutrition, supplies nutrients intravenously when the gastrointestinal tract cannot be used adequately.

Trabectedin

A chemotherapy medicine that attaches to DNA and disrupts cancer-cell growth and repair. It is used for selected advanced soft-tissue sarcomas and ovarian cancers and can cause low blood counts, liver injury, nausea, or muscle damage.

Trabecula

A small beam, strut, or partition of tissue, especially within spongy bone. Trabeculae form a supportive internal network that helps bones bear forces while keeping them relatively light.

Trabecular Bone

Light, honeycomb-like bone found inside many bones and near their ends and joints. It supports the body, contains bone marrow, and changes quickly when weight, hormones, medicines, or diseases such as osteoporosis affect bone strength.

Alternate Names:
Spongy Bone; Cancellous Bone

Trabecular Meshwork

A sieve-like tissue near the front of the eye through which the clear fluid called aqueous humor drains. If the drainage pathway becomes blocked, pressure inside the eye may rise and damage the optic nerve in glaucoma.

Trabeculectomy

Glaucoma filtration surgery in which a guarded opening in the sclera allows aqueous humor to drain from the anterior chamber into a filtering bleb beneath the conjunctiva, lowering intraocular pressure.

Trabeculoplasty

Laser treatment of the trabecular meshwork that improves aqueous-humor outflow and lowers intraocular pressure, mainly in open-angle glaucoma.

Alternate Names:
Laser Trabeculoplasty

Trace Elements

Minerals needed in very small amounts for normal enzyme function, blood formation, thyroid activity, and other body processes.

Trace Mineral

A mineral needed in very small amounts for health. Examples include iron, zinc, copper, iodine, and selenium; too little or too much can impair blood formation, thyroid function, immunity, growth, or other body processes.

Tracer

A detectable substance used to follow a biological, chemical, or physical process. Medical tracers can show blood flow, organ function, metabolism, or disease location through imaging or laboratory testing.

Trachea

The windpipe connecting the larynx to the right and left main bronchi. Cartilage rings help keep it open so air can move to and from the lungs.

Tracheal Agenesis With Bronchoesophageal Fistula

A very rare birth defect in which the windpipe is absent or severely underdeveloped and an abnormal passage connects the breathing system with the food pipe. Newborns have extreme breathing difficulty and need immediate specialist care.

Tracheal Foreign Body

An object stuck in the windpipe. It can cause choking, noisy breathing, severe breathing difficulty, or complete blockage and is an emergency requiring immediate removal by trained clinicians.

Tracheal Rupture

A tear in the windpipe caused by severe injury, surgery, a medical instrument, or pressure inside the airway. It can let air leak into the chest and cause breathing difficulty, infection, or life-threatening complications.

Tracheal Stenosis

Narrowing of the windpipe, often after prolonged breathing-tube use, tracheostomy, injury, or inflammation. It may cause worsening breathlessness, noisy breathing, or wheezing and can require airway procedures or surgery.

Tracheal Tug

A downward, rhythmic traction or pulling sensation on the cricoid cartilage and trachea synchronized with cardiac systole, felt by placing the examiner's fingers under the cricoid cartilage while the patient extends the neck. It is a physical sign of an aneurysm of the aortic arch downwardly displacing the left main bronchus.

Alternate Names:
Oliver Sign; Cardarelli Sign

Tracheitis

Inflammation or infection of the windpipe. Mild cases may occur with a viral illness, but bacterial infection can rapidly block a child's airway and cause high fever, a harsh cough, noisy breathing, and severe illness.

Trachelectomy

Trachelectomy is surgical removal of the cervix, sometimes with nearby tissue, used in selected cervical cancers or other conditions.

Tracheobronchial Injury

A tear or other damage to the windpipe or a major airway, usually caused by severe chest injury or a medical procedure. It can cause air to leak into tissues around the lungs, breathing difficulty, or a persistent air leak from a chest tube.

Tracheobronchomalacia

Weakness of the windpipe or larger airways that allows them to collapse during breathing. It may cause noisy breathing, chronic cough, repeated infections, or difficulty clearing mucus and may be present from birth or develop later.

Tracheobronchomegaly

Unusual widening of the windpipe and the main airways, usually because their supporting tissue is weak. It can cause a weak cough, breathlessness, repeated chest infections, and difficulty clearing mucus.

Tracheoesophageal Fistula

An abnormal opening between the windpipe and food pipe, usually present from birth. It can let milk enter the lungs, causing coughing, choking, blue coloring, repeated chest infections, or poor growth, and usually needs surgery.

Tracheoesophageal Fistula And Esophageal Atresia Repair

Surgery in a newborn to close an abnormal connection between the windpipe and food pipe and join separated parts of the food pipe when possible. The operation is urgent; breathing problems, leakage, narrowing, reflux, and feeding difficulties may persist.

Tracheomalacia

Weakness of the windpipe wall that allows it to narrow or collapse during breathing out. It may cause noisy breathing, cough, breathlessness, repeated infections, or difficulty clearing mucus and may be present from birth or develop later.

Tracheostomy

A surgically created opening in the front of the neck into the windpipe, usually kept open with a tube. It provides an airway, can bypass an upper-airway blockage, and may allow suctioning or long-term breathing support. It may be temporary or permanent and requires regular care to keep the airway clear.

Alternate Names:
Trach; Surgical Stoma of the Trachea; Tracheostomy Stoma

Tracheostomy Care

Care of a breathing tube and neck opening, including cleaning the skin and tube, suctioning mucus when needed, checking airflow, and keeping emergency equipment nearby. Blockage, bleeding, infection, or accidental tube displacement can obstruct breathing or cause serious injury.

Tracheostomy Tube

A tube inserted through a tracheostomy opening to maintain access to the airway and permit breathing, suction, or mechanical ventilation.

Tracheotomy

A surgical procedure in which an incision (cut) is made through the skin of the neck into the windpipe (trachea) to create a direct airway. It is performed in planned or emergency situations to overcome acute upper-airway obstruction (from foreign bodies, severe infections, or head and neck trauma) or to facilitate prolonged breathing machine support. While "tracheotomy" refers to the surgical act of making the incision into the trachea, the resulting opening and airway passage created by the opera-

tion is called a tracheostomy.

Alternate Names:
Tracheal Incision; Surgical Airway Procedure

Trachoma

A chronic eye infection caused by certain types of *Chlamydia trachomatis*. It spreads through contact with infected eye or nose discharge, contaminated items, or, in some areas, flies. Repeated infections can scar the inside of the eyelid, turn the eyelid inward, and cause the eyelashes to rub against the eye. This can scar the cornea and lead to permanent visual impairment or blindness.

Trachyonychia

Rough, thin, ridged nails with many tiny pits, sometimes called twenty-nail dystrophy when most or all nails are affected. It may occur on its own or with psoriasis, alopecia areata, eczema, or lichen planus.

Traction

A controlled pulling force used to align or immobilize a fracture, reduce a dislocation, or relieve pressure on tissues. It may be applied manually, with weights, or through a medical device.

Traction Alopecia

Hair loss caused by repeated pulling on the hair, often from tight braids, ponytails, extensions, or head coverings. Early hair loss may improve when the pulling stops, but long-term tension can permanently scar hair follicles.

Tractional Retinal Detachment

Separation of the light-sensing retina from the back of the eye when bands of scar tissue pull it away. It commonly occurs in advanced diabetic eye disease and can cause vision loss.

Tractotomy

Surgery that cuts a selected nerve pathway in the brain or spinal cord, usually to reduce severe pain or another difficult neurologic symptom. It can cause permanent changes in sensation or movement.

Traditional Medicine

Health practices, remedies, and healing systems developed within cultural traditions. Products and practices vary in evidence, safety, and possible interactions with other treatments.

Tra Gene

A gene involved in sex determination and sexual differentiation in some organisms, especially insects; its function and sequence vary by species.

Trained Immunity

A lasting change in the body's first-line immune response after an earlier infection or exposure. The later response may be stronger or altered, although this process does not provide the same specific protection as ordinary immune memory.

Train-Of-Four Monitoring

A test used during anesthesia that gives four brief electrical signals to a nerve and measures the muscle responses. It shows how much a muscle-relaxing medicine remains active and whether muscle strength has recovered.

Trajectory

The path a projectile follows in flight and, in wound ballistics, the course it traverses through tissue from entrance to exit or rest. Internal trajectory is reconstructed from entrance and exit defects, the organ track, recovered fragments, and clothing damage; angles disclose shooter position and victim posture.

TRALI

A rare, life-threatening lung reaction that develops during or within several hours after a blood transfusion. It causes sudden breathing difficulty and low blood oxygen from fluid leaking into the lungs, without being caused by excess fluid in the circulation.

Tram-Track Appearance

A double-line pattern seen under a microscope in some kidney biopsies. It reflects thickening or splitting of the kidney's filtering membranes and can occur in certain types of glomerulonephritis.

Trance

An altered state of awareness with unusual attention, responsiveness, or sense of surroundings. It may occur during hypnosis, seizures, intoxication, sleep-related events, or psychological states.

Tranexamic Acid

A medicine that helps control bleeding by preventing the body from breaking down blood clots too quickly. It is used for selected heavy bleeding, including some surgical, injury-related, menstrual, and postpartum bleeding.

Transabdominal Cerclage

Placement of a strong band around the upper cervix through abdominal surgery, usually before pregnancy or early in pregnancy, to reduce the risk of premature opening in severe cervical weakness. It requires cesarean birth and carries surgical, bleeding, infection, and pregnancy risks.

Alternate Names:
TAC; Cervico-Isthmic Cerclage

Transabdominal Pelvic Ultrasound

A non-invasive diagnostic ultrasound examination of the pelvic organs (uterus, endometrium, ovaries, fallopian tubes, and urinary bladder) performed transabdominally through a full acoustic bladder window.

Alternate Names:
Transabdominal Pelvic Sonography; TA Pelvic Ultrasound; Transabdominal Pelvic Scan

Transabdominal Scan

An ultrasound scan performed by moving the probe over the abdomen. It can examine pelvic organs and, during pregnancy, assess the baby's growth and anatomy, the placenta, and the amount of fluid around the baby.

Transaminitis

Higher-than-normal levels of liver-related enzymes in the blood. This may indicate liver-cell injury, but the result does not identify the cause; medicines, infection, alcohol, fatty liver, and muscle injury can contribute.

Transarterial Chemoembolization

A treatment in which a catheter delivers chemotherapy and blocks blood flow to a liver tumor. It can slow or shrink selected tumors that cannot be removed surgically, but may cause pain, fever, liver injury, or other complications.

Transbronchial Biopsy

Removal of a small lung-tissue sample using a camera passed through the airways. It can investigate infection, inflammation, cancer, or rejection after transplant; bleeding and a collapsed lung are possible complications.

Transcatheter Aortic Valve Replacement

A procedure in which a collapsible replacement valve is delivered by catheter, usually through an artery in the groin, and expanded within the diseased aortic valve without removing it. It treats selected cases of severe aortic stenosis and, with a dedicated device, severe native aortic regurgitation; it can also replace a failing tissue valve. Complications include bleeding, stroke, blood-vessel injury, heart-rhythm problems, or leakage around the new valve.

Alternate Names:
TAVR; TAVI; Transcatheter Aortic Valve Implantation

Transcatheter Edge-To-Edge Repair

A catheter procedure that joins parts of the mitral-valve leaflets to reduce leakage. It may help selected people with severe symptoms who are not good candidates for open surgery; bleeding, infection, stroke, valve narrowing, residual leakage, or device problems are possible.

Alternate Names:
TEER

Transcatheter Intervention

A minimally invasive procedure performed through a catheter inserted into a blood vessel or body passage, including angioplasty, stent placement, valve procedures, and selected structural-heart interventions.

Transcatheter Pulmonary Valve

Replacement of a diseased pulmonary valve with a prosthetic valve delivered through a catheter. It is used in selected congenital or previously operated right-ventricular outflow tracts.

Transcervical Foley Catheter For Cervical Ripening

A soft balloon catheter placed through the cervix and inflated to help soften and open the cervix before labor induction. It is a mechanical method and may cause cramping, bleeding, infection, or accidental rupture of the membranes.

Transcervical Resection Of Endometrium

A camera-guided procedure through the cervix that removes or destroys the uterine lining to reduce heavy menstrual bleeding. It is not suitable for people who want to become pregnant later.

Transcranial Doppler

An ultrasound test that measures blood-flow speed in arteries inside the skull. It can help detect narrowed vessels, spasm after brain bleeding, or increased stroke risk in selected conditions.

Transcranial Doppler Scanning

An ultrasound test measuring blood-flow speed and direction in major arteries inside the skull. It can help assess narrowing, blockage, vasospasm, emboli, or circulation after certain brain injuries.

Alternate Names:
Transcranial Doppler; TCD

Transcranial Doppler Ultrasound

An ultrasound test that measures blood-flow speed and direction in major arteries inside the skull. It can help assess stroke risk, vessel narrowing, bleeding-related spasm, and blood flow changes.

Transcranial Magnetic Stimulation

A noninvasive treatment or brain-function test that uses magnetic pulses near the scalp to induce electrical activity in selected brain regions. Repetitive stimulation is used for some depression and other conditions; effects and risks depend on the protocol and person's health.

Transcription

The process by which a cell copies information from DNA into RNA. The RNA copy can direct protein production or help control cell activity.

Transcription Factor

A protein that attaches to DNA and increases or decreases the copying of selected genes into RNA. Transcription factors help control cell growth, development, specialization, and responses to hormones or injury.

Transcutaneous Electrical Nerve Stimulation

TENS: low-voltage electrical pulses delivered through electrodes on the skin to reduce pain for some people. It does not treat every cause of pain, and its effect varies by condition.

Alternate Names:
TENS

Transdermal

Delivering a medicine through the skin, usually with a patch or gel, so it enters the bloodstream gradually. The medicine, dose, skin condition, heat, and application site affect how much is absorbed.

Transesophageal Echocardiography

An ultrasound scan of the heart made with a probe passed into the esophagus. It gives close views of the heart, valves, and nearby blood vessels.

Trans Fat

An unsaturated fat containing at least one trans-configured double bond. Industrial trans fats, formerly common in partially hydrogenated oils, can raise LDL cholesterol, lower HDL cholesterol, and increase cardiovascular risk; small amounts also occur naturally in some meat and dairy foods.

Trans Fatty Acid

An unsaturated fat with at least one trans-shaped

double bond. Industrial trans fats can raise heart-disease risk; small amounts also occur naturally in some meat and dairy foods.

Alternate Names:
Trans Fat

Transferase

An enzyme that moves a chemical group from one molecule to another. Transferases help cells make and break down substances, and some transferase levels in blood help identify tissue injury or disease.

Transference

Feelings or expectations that a patient developed in an earlier important relationship and now directs toward a therapist or another healthcare professional. Discussing this pattern can help explain relationship difficulties during therapy.

Transferrin

A blood protein made mainly by the liver that carries iron to tissues. Its level and the amount of iron it carries help assess iron deficiency, inflammation, and iron overload when interpreted with other blood tests.

Transferrin Saturation

The percentage of transferrin's iron-binding sites occupied by iron. It is calculated from iron and total iron-binding capacity and helps evaluate iron deficiency and iron overload.

Alternate Names:
TSAT

Transferrin Saturation Test

A calculated percentage reflecting the proportion of transferrin iron-binding sites occupied by circulating iron; see *Transferrin Saturation* and *Iron Studies*.

Transfer Training

Teaching a person how to move safely between places, such as from a bed to a chair or toilet. Training may include correct body position, assistance from another person, a transfer board, or lifting equipment.

Transforming Growth Factor-Beta

A multifunctional cytokine superfamily that orchestrates wound healing, extracellular matrix synthesis, collagen deposition, tissue fibrosis, cell cycle arrest, and immunosuppression by inhibiting epithelial and lymphocyte proliferation while stimulating myofibroblasts.

Alternate Names:
TGF-beta

Transfusion

Delivery of donated blood or blood components into a person's bloodstream. It can replace lost red cells, platelets, or clotting factors but carries risks including reactions, infection, fluid overload, and lung injury.

Transfusion Of Neonate

Administration of a blood product to a newborn for clinically significant anemia, bleeding, or another specific indication. The decision, product characteristics, volume, and rate depend on the infant's symptoms, laboratory results, gestational age, and local transfusion protocol.

Transfusion Reaction

A harmful response to donated blood or blood components. It may cause fever, chills, rash, breathing difficulty, pain, low blood pressure, or destruction of red cells; severe reactions can cause shock or organ injury.

Transfusion-Related Acute Lung Injury

A serious lung reaction that causes sudden breathing difficulty and low blood oxygen during or within six hours after a blood transfusion. It results from fluid leaking into the lungs and is not caused by heart failure or fluid overload; antibodies may contribute in some cases.

Alternate Names:
TRALI

Transient

Lasting for a limited time rather than persisting. In clinical descriptions, the duration depends on the condition and context.

Transient Acantholytic Dermatosis

A recurrent itchy papular rash caused by temporary loss of cohesion between skin cells. It often affects the trunk of older adults and may be triggered by heat, sweating, sunlight, medicines, or illness.

Alternate Names:
Grover Disease

Transient Acantholytic Dermatosis (Grover Disease)

Alternate name; see *Transient Acantholytic Dermatosis*.

Transient Familial Hyperbilirubinemia

An inherited tendency for bilirubin, a yellow waste product, to rise temporarily in the blood and cause episodes of jaundice. It usually reflects slower processing by the liver without major liver injury and may worsen during illness, fasting, or stress.

Transient Global Amnesia

A sudden temporary inability to form new memories, often with repeated questions and uncertainty about recent events. The person remains awake and knows who they are; symptoms usually resolve within 24 hours. Stroke and seizure can cause similar symptoms.

Alternate Names:
TGA; Acute Amnestic Syndrome

Transient Hypogammaglobulinemia Of Infancy

A temporary delay in an infant's production of antibodies, the proteins that help fight infection. Some infants have repeated ear, sinus, or chest infections, but antibody levels usually improve as the immune system matures.

Alternate Names:
THI; Transient Infantile Hypogammaglobulinemia

Transient Ischaemic Attack

Alternate spelling; see *Transient Ischemic Attack*.

Transient Ischaemic Attacks Or Episodes

Alternate wording; see *Transient Ischemic Attack*.

Transient Ischemic Attack

A brief episode of stroke-like symptoms caused by reduced blood flow to the brain, spinal cord, or retina, without acute tissue injury. Symptoms often clear, but a TIA is a warning sign of increased stroke risk.

Alternate Names:
TIA

Transient Ischemic Attack (TIA)

Alternate name; see *Transient Ischemic Attack*.

Transient Neonatal Pustular Melanosis

A harmless newborn eruption in which superficial pustules rupture and leave small pigmented macules with a collarette of scale. It is more common in infants with darker skin and usually resolves without treatment.

Transient Pain

Pain that is brief and resolves rather than continuing or recurring persistently. Severe, recurrent, or associated symptoms may indicate an underlying condition.

Transient Synovitis

A temporary inflammation of the hip joint, usually in children and sometimes following a viral illness. It causes hip, groin, thigh, or knee pain and a limp; fever and severe illness are uncommon, so septic arthritis is an important alternative diagnosis.

Alternate Names:
Irritable Hip; Transient Synovitis of the Hip

Transient Tachypnea Of The Newborn

Temporary rapid breathing after birth, usually caused by delayed clearance of fetal lung fluid. It is more common after caesarean birth and typically improves within one to three days with supportive care.

Transillumination

Transillumination shines light through a body part or structure to reveal fluid, cavities, or other differences in tissue density.

Transitional Care

Coordinated healthcare when a person moves between settings or levels of care, such as from hospital to home or from children's to adult services. It includes sharing information, arranging medicines and follow-up, and preventing avoidable complications.

Transitional Epithelium

A stretchable protective lining in the kidneys' drainage areas, ureters, bladder, and part of the urethra. It allows these organs to expand as urine collects without allowing urine to leak into surrounding tissue.

Alternate Names:
Urothelium; Transitional Urothelial Lining

Transjugular Intrahepatic Portosystemic Shunt

A channel created through the liver between veins that bring blood to it and veins that carry blood away. It lowers high pressure caused by advanced liver disease and can reduce repeated bleeding or severe abdominal fluid buildup; confusion and shunt blockage are possible.

Alternate Names:
TIPS; Transjugular Portosystemic Shunt

Translation

The cellular process of making a protein from instructions carried by messenger RNA. A ribosome reads the message in order, while transfer molecules bring the matching amino acids. The process starts, builds the chain, and stops at a signal; the finished chain folds into a working protein.

Translation Initiation

The first stage of protein synthesis, when a ribosome recognizes messenger RNA, selects the start codon, and assembles the initiator transfer RNA and ribosomal subunits.

Translocation

Movement from one place to another. In genetics, it means that a piece of one chromosome moves to another chromosome or location, which can alter genes and sometimes cause cancer or inherited disease.

Transmembrane Transport

Movement of salts, nutrients, medicines, or other substances across a cell's outer membrane. Channels and carrier proteins may allow passage directly, while pumps use energy to move substances against a concentration difference.

Transmission

Passage of an infection, signal, genetic trait, force, or substance from one source to another; in infectious disease, route, dose, and host susceptibility determine risk.

Transmural Infarction

A heart attack that damages the full thickness of part of the heart muscle because blood flow has been blocked for a prolonged period. It can weaken the heart and cause dangerous complications.

Transplacental

Passing from the pregnant person's blood across the placenta to the fetus, or in the opposite direction. Antibodies, medicines, chemicals, and some infections can cross the placenta, with effects that depend on the substance and timing.

Transplant

Transfer of cells, tissue, or an organ from one site or person to another to replace damaged tissue or restore function. Donor matching, rejection prevention, infection risk, and long-term follow-up depend on the type of transplant.

Transplantation

Transfer of an organ, tissue, or cells from a donor to a recipient to replace or restore failing function. Care includes donor matching, surgery, prevention of rejection, infection monitoring, and long-term follow-up.

Alternate Names:
Organ Transplant

Transplantation Conditioning

Treatment given before some stem-cell transplants to suppress the recipient's bone marrow and immune

system and make room for donated cells. It may use chemotherapy, radiation, or both and can cause infection, bleeding, infertility, or organ injury.

Transplant Immunology

The study of how the immune system reacts to donated organs, tissues, or cells. Blood-group and tissue matching, antibody testing, and immunosuppressive medicines help reduce rejection, but they also increase infection risk and require regular monitoring of the transplant and medicine effects.

Transplant Rejection

An immune response in which the recipient's immune system recognizes a transplanted organ or tissue (graft) as foreign and injures it. Rejection may be antibody-mediated, T-cell-mediated, or both, and is classified as hyperacute, acute, or chronic. It differs from graft-versus-host disease, in which donor immune cells attack the recipient.

Transplant Surgery

The surgical specialty that retrieves donor organs and performs operations to transplant organs or tissues into recipients. It includes organ-specific procedures and surgical care related to the transplanted organ, in coordination with other medical specialties.

Transport

Movement of a substance, cell, signal, or person from one place to another. In healthcare, the term may describe movement through the body, across a cell membrane, or safe transfer between care settings.

Transport Protein

A protein that carries a substance through body fluids or across a cell boundary. It helps control how nutrients, medicines, salts, and waste products are absorbed, distributed, and used.

Transport Vesicle

A transport vesicle is a membrane-bound carrier that moves proteins, lipids, or other cargo between cellular compartments.

Transposition Of Great Vessels

Alternate name; see *Transposition Of The Great Arteries*.

Transposition Of The Great Arteries

A heart defect present at birth in which the two main arteries are connected to the wrong lower chambers. Blood returning to the body may not receive oxygen; newborns develop severe cyanosis without a pathway for blood to mix.

Alternate Names:
Complete TGA; D-TGA; Transposition of Great Vessels

Transposition of the Great Vessels

Alternate name; see *Transposition Of The Great Arteries*.

Alternate Names:
TGA; D-Transposition of the Great Arteries; d-TGA

Transposons

Movable pieces of genetic material that can shift between locations in a cell's DNA. In bacteria, they may carry antibiotic-resistance genes and help resistance spread between bacteria.

Transrectal Ultrasonography

Ultrasound imaging of the prostate and nearby structures using a probe placed in the rectum. It can guide biopsies and assess size or abnormalities, but may cause discomfort, bleeding, or infection.

Alternate Names:
TRUS

Transsphenoidal Hypophysectomy

A minimally invasive skull-base neurosurgical procedure performed to remove pituitary gland tumors (pituitary adenomas) or craniopharyngiomas located at the base of the brain. Instead of cutting open the skull or leaving visible facial scars, the surgical team passes high-definition endoscopes and microinstruments directly through the patient's nostrils, across the nasal cavity, and through the sphenoid sinus bone into the sella turcica—the bony saddle

cradling the pituitary gland. By operating from below, neurosurgeons and otolaryngologists can decompress the optic chiasm to restore threatened vision, normalize excessive hormone production (such as in Cushing disease or acromegaly), and remove tumors with faster recovery times, minimal brain retraction, and reduced complication rates compared to traditional open craniotomies.

Alternate Names:
Endoscopic Transsphenoidal Pituitary Resection

Transthoracic Echocardiogram

A non-invasive point-of-care or formal diagnostic ultrasound procedure utilizing a transducer placed on the anterior chest wall to evaluate cardiac chamber dimensions, ventricular systolic and diastolic function, valvular morphology, and hemodynamics via Doppler imaging.

Alternate Names:
TTE

Transthoracic Echocardiography

An ultrasound scan of the heart made with a probe placed on the chest. It shows the heart chambers, valves, pumping movement, and blood flow.

Transthyretin Amyloidosis

A disease in which abnormal transthyretin protein builds up in organs, especially the heart or nerves. It may be inherited or develop with age without an inherited gene change.

Alternate Names:
ATTR Amyloidosis; Amyloid Transthyretin Disease

Transthyretin Familial Amyloid Polyneuropathy

An inherited transthyretin amyloidosis in which abnormal protein deposits damage peripheral and autonomic nerves. It may cause progressive numbness, pain, weakness, blood-pressure or heart-rate changes, gastrointestinal symptoms, and sometimes heart disease.

Transthyretin p.Val50Met Amyloidosis

Hereditary transthyretin amyloidosis caused by the p.Val50Met variant in the TTR gene. It often causes progressive peripheral and autonomic neuropathy and may also affect the heart; older literature calls the variant Val30Met.

Alternate Names:
Transthyretin Methionine-30 Amyloidosis (Type I); TTR p.Val50Met Amyloidosis

Transtracheal

Transtracheal means passing through or relating to the trachea, such as a catheter, oxygen delivery route, or diagnostic procedure.

Transtympanic

Transtympanic means passing through the tympanic membrane, such as medicine delivered into the middle ear or a procedure crossing the eardrum.

Transudate

A thin fluid with little protein that leaks from blood vessels because of pressure or blood-protein changes rather than inflammation. It may collect around organs, such as the lungs, heart, or abdomen.

Transudation

Movement of relatively watery, low-protein fluid out of blood vessels when pressure or blood-protein levels change. This process can cause some types of swelling or fluid collection around organs.

Transudative Pleural Effusion

A buildup of relatively thin fluid around a lung caused by changes in blood pressure or protein balance, most often heart failure. Treatment focuses on the underlying condition and drainage may be needed if breathing is affected.

Transurethral

Performed through the urethra, the tube that carries urine out of the body. Instruments passed through it can examine the urinary tract, remove tissue, treat blockage, or place a device.

Transurethral Incision Of The Prostate

An operation making small cuts in the prostate through an instrument passed in the urethra. It can

improve urine flow in selected people with prostate enlargement while preserving most prostate tissue.

Alternate Names:
TUIP

Transurethral Microwave Thermotherapy

A treatment for some people with an enlarged prostate in which a catheter uses microwave heat to shrink or destroy prostate tissue blocking urine flow. It is less commonly used now and can cause pain, bleeding, infection, or temporary urinary problems.

Alternate Names:
TUMT

Transurethral Needle Ablation

A treatment using needles passed through the urethra to deliver radiofrequency heat into enlarged prostate tissue. The heat destroys selected tissue and may improve urine flow, but relief develops gradually and complications can occur.

Alternate Names:
TUNA

Transurethral Resection

Removal of tissue through an instrument passed along the urethra, commonly for prostate or bladder disease.

Transurethral Resection of Bladder Tumor

A procedure in which a urologist passes a camera and small cutting tool through the urethra to remove a visible bladder tumor and collect tissue for testing. The results show the type and depth of the cancer and guide further treatment. Some early tumors are treated during the same procedure, but follow-up treatment may still be needed.

Alternate Names:
TURBT; Transurethral Bladder Tumor Resection; Bladder Tumor Resection

Transurethral Resection Of The Prostate

An endoscopic operation that removes obstructing prostate tissue to improve urine flow in selected people with benign prostatic enlargement. Alternatives and indications depend on symptoms, prostate size, complications, and patient preference.

Alternate Names:
TURP; Transurethral Prostate Resection

Transvaginal

Performed through the vagina, commonly describing an ultrasound examination or a procedure involving the uterus, cervix, ovaries, or other pelvic structures.

Transvaginal Ultrasound

Transvaginal ultrasound uses a covered probe in the vagina to produce images of the uterus, ovaries, cervix, pregnancy, or nearby pelvic structures.

Transverse

Running across or perpendicular to the long axis or midline.

Transverse Colon

The section of the large intestine that crosses the upper abdomen from the right side to the left. It absorbs water and moves partly digested food toward the descending colon.

Transverse Lie

A position in which the baby lies sideways across the uterus rather than head-down or bottom-down. A shoulder or arm may be closest to the birth canal; if the position persists near labor, vaginal birth is usually not possible.

Transverse Myelitis

Inflammation across part of the spinal cord that can develop over hours or days and cause weakness, numbness, pain, or problems controlling the bladder or bowel. Delayed treatment can increase the risk of lasting disability.

Transverse Plane

An imaginary horizontal slice that divides the body or an organ into upper and lower parts. Medical scans often use this view to show structures at a particular level.

Transverse Vaginal Septum

A congenital band of tissue crossing the vagina and partly or completely blocking it. A complete blockage can cause absent periods and monthly pelvic pain after puberty; imaging confirms the condition, and surgery may create an open vaginal passage.

Transversus Abdominis Muscle

The deepest broad muscle of the abdominal wall. It tightens the abdomen, supports the spine, and helps with coughing, breathing out, lifting, and other movements that increase pressure inside the abdomen.

Transvestic Disorder

A mental-health diagnosis involving repeated sexual arousal from cross-dressing that causes significant distress, interferes with life, causes harm, or involves another person without consent. Cross-dressing alone is not a disorder and is different from gender identity.

Tranylcypromine

An antidepressant that increases certain brain chemicals by blocking their breakdown. It can interact dangerously with many medicines and foods high in tyramine, so careful prescribing and a medicine-free waiting period before or after some treatments are required.

Trapezium Bone

A small wrist bone at the base of the thumb. It forms the thumb's highly mobile joint with the hand and can be affected by fractures or arthritis that causes pain during gripping and pinching.

Trapezius Muscle

A large triangular muscle across the upper back and neck. It helps lift, lower, and draw the shoulder blades backward and supports movement and stability of the neck and shoulders.

Trapezoid

A small wedge-shaped wrist bone between the trapezium and capitate. It joins mainly with the index-finger metacarpal and helps stabilize the thumb-side of the wrist; fractures are uncommon.

Trapezoid Bone

A small distal-row carpal bone between the trapezium and capitate that articulates mainly with the index metacarpal and helps stabilize the radial side of the hand.

Trapped Lung

A condition in which a lung cannot fully expand because a fibrous layer or another restriction prevents normal movement. It may follow long-standing pleural inflammation, infection, bleeding, or cancer and can cause persistent pleural fluid or breathlessness.

TRAP Sequence

A rare complication of an identical-twin pregnancy in which one twin has a severely malformed heart or no heart and receives blood from the other twin through shared placental vessels. The healthy twin may develop heart strain and needs specialist monitoring.

Trastuzumab

Trastuzumab is a monoclonal antibody targeting HER2 used for HER2-positive breast, gastric, and other cancers; infusion reactions and potentially reversible cardiomyopathy require cardiac monitoring.

Trauma

Physical injury caused by an outside force, or the mental response to a deeply distressing event. Physical trauma may damage organs, bones, or blood vessels; psychological trauma can affect emotions, sleep, and daily life.

Trauma- And Stressor-Related Disorders

A group of mental disorders involving exposure to a traumatic or stressful event or condition and subsequent emotional, behavioral, or physiologic symptoms. Examples include acute stress disorder, posttraumatic stress disorder, adjustment disorder, reactive attachment disorder, and disinhibited social engagement disorder.

Trauma Center

A hospital organized to provide rapid, coordinated care for seriously injured people. Trauma centers differ in available specialists, equipment, surgery, intensive care, and ability to treat complex injuries.

Trauma Surgery

The surgical specialty concerned with evaluation and operative or nonoperative treatment of acute injuries, especially severe or multiple injuries. It often involves coordinated care with emergency medicine, anesthesiology, radiology, and other surgical specialties.

Traumatic Amputation

Loss of a body part caused by an injury. It can cause life-threatening bleeding, shock, infection, and lasting disability; emergency care controls bleeding, treats damaged tissue, preserves the separated part when possible, and begins rehabilitation and psychological support.

Traumatic Bladder and Urethral Injury

Damage to the bladder or urethra caused by an accident, surgery, or penetrating injury. Blood in the urine, inability to urinate, pelvic pain, or shock may occur.

Traumatic Bleb

A fragile, fluid-filled area that forms after glaucoma drainage surgery and is damaged by an injury. It may leak or become infected and can cause dangerously low eye pressure or vision problems.

Traumatic Brain Injury

Traumatic Brain Injury (TBI) is a change in brain function or damage to the brain caused by an external force. It may result from a bump, blow, or jolt to the head or body, a fall, blast, or an object penetrating the skull. Effects range from brief confusion or headache to memory problems, seizures, loss of consciousness, permanent disability, or death. Later swelling, bleeding, low oxygen, or other complications can cause additional brain damage.

Alternate Names:
TBI

Traumatic Brain Injury (Concussion)

Concussion is a mild form of traumatic brain injury; see *Concussion*.

Traumatic Cataract

Clouding of the eye's natural lens caused by an injury, such as a blunt blow, penetrating wound, or chemical or electrical injury. It may appear soon after the injury or develop weeks, months, or years later, sometimes alongside other damage to the eye.

Traumatic Events And Children

Traumatic events can affect children's safety, behavior, sleep, learning, and emotions; supportive caregivers, stable routines, and professional assessment help identify persistent trauma responses.

Traumatic Grief

Alternate name; see *Complicated Grief*.

Traumatic Hemorrhagic Shock

Shock caused by severe blood loss after an injury. Reduced circulating blood volume limits oxygen delivery to organs and may cause fast heartbeat, pale or clammy skin, confusion, low blood pressure, and organ failure.

Traumatic Injury

Damage to the body caused by an external force, such as a fall, collision, blow, cut, burn, or penetrating object. Injury may affect skin, bones, organs, blood vessels, nerves, or the brain.

Traumatic Shock

A life-threatening failure of blood flow after serious injury, often because of major bleeding, but sometimes because of heart damage or another cause. It can cause pale clammy skin, confusion, rapid breathing, and collapse and requires immediate treatment.

Traumatology

The medical field concerned with physical injuries and their consequences. It includes emergency assessment, control of bleeding, repair of damaged tissues, prevention of complications, surgery, and

rehabilitation.

Traveler's Diarrhea

Diarrhea during or shortly after travel, usually caused by contaminated food or water and commonly by bacteria, viruses, or parasites. Blood, high fever, severe dehydration, or persistent symptoms can indicate invasive infection or significant fluid loss.

Travelers' Diarrhea

Alternate spelling; see *Traveler's Diarrhea*.

Travel Sickness

Nausea, dizziness, sweating, or vomiting caused by conflicting signals from the eyes and balance organs during travel or other motion. Symptoms may improve with visual fixation, fresh air, gradual exposure, or preventive medicines; persistent symptoms can have other causes.

Travel Vaccinations

Travel vaccinations are vaccines recommended or required for protection against infections encountered in particular countries or regions. Recommendations depend on the destination, activities, health conditions, and previous vaccinations.

Travoprost

Travoprost is a prostaglandin analogue eye drop that increases uveoscleral outflow and lowers intraocular pressure in glaucoma or ocular hypertension; iris pigmentation and eyelash changes may occur.

Trazodone

A prescription medicine used mainly for depression and sometimes for sleep problems. It can cause drowsiness, dizziness, low blood pressure, falls, and rare prolonged painful erection; dangerous reactions are more likely with certain medicines or substances.

Trazodone Overdose

Poisoning from taking too much trazodone. It can cause severe sleepiness, vomiting, low blood pressure, seizures, abnormal heart rhythms, or a prolonged painful erection.

Trb Gene

A gene involved in biological processes that vary by species; its precise identity and function must be interpreted from the organism and gene nomenclature used.

Trd Gene

The gene encoding the delta chain of the T-cell receptor in humans, contributing to gamma-delta T-cell antigen recognition.

Treacher Collins-Franceschetti Syndrome 1

A craniofacial developmental disorder, usually caused by a variant affecting TCOF1, that may cause underdeveloped cheekbones and jaw, malformed ears, hearing loss, cleft palate, and airway or feeding problems.

Treacher Collins Syndrome

An inherited condition affecting development of the face and skull. It may cause small cheekbones and jaw, downward-slanting eyes, malformed ears, and hearing loss; breathing or feeding may also be difficult. Intelligence is usually normal. Care may include airway support, hearing treatment, and reconstructive surgery.

Treacle

A thick sugar syrup with little current medical use. Older medical writing sometimes used the word for a sweetened mixture or supposed antidote; it is not a modern treatment or diagnosis.

Treatment-Resistant Depression

Depression that does not improve adequately after appropriate trials of standard treatments. It requires reassessment of diagnosis, adherence, comorbidity, and treatment options.

Treatment-Resistant Schizophrenia

Schizophrenia that continues to cause important symptoms or disability despite adequate trials of

at least two appropriate antipsychotic medicines. Apparent resistance can also reflect an incorrect diagnosis, inconsistent medicine use, substance effects, or medical illness.

Treat-To-Target Strategy

A treatment approach in which care is checked and adjusted regularly toward a clear goal, such as no disease activity, controlled blood pressure, or a safe blood-glucose range. The goal and changes are agreed with the patient and based on ongoing monitoring.

Trematoda

A class of parasitic flatworms called flukes; human infections include schistosomiasis and liver or lung fluke disease.

Tremelimumab

A monoclonal antibody that blocks CTLA-4 and enhances T-cell activity; it is used with durvalumab for selected unresectable hepatocellular carcinoma and other cancers, with immune-related adverse effects possible.

Tremor

An involuntary, rhythmic shaking of a body part. It may occur at rest, while holding a position, or during movement and can result from medicines, caffeine, anxiety, essential tremor, Parkinson disease, or other neurologic or metabolic conditions.

Trench Fever

A louse-borne infection caused by Bartonella quintana, causing recurring fever, headache, weakness, and bone pain.

Trench Foot

An injury caused by keeping feet cold and wet for a long time. It can cause numbness, swelling, pain, skin color changes, blisters, infection, and tissue death without gradual warming and medical care.

Trench Mouth

Trench mouth is acute necrotizing ulcerative gingivitis causing painful bleeding gums, foul breath, and ulceration, often associated with plaque, smoking, stress, or poor nutrition.

Trendelenberg Position

Alternate spelling; see *Trendelenburg Position*.

Trendelenburg

Trendelenburg position places the body supine with the feet higher than the head; its use is procedure-specific and may affect breathing, pressure, and circulation.

Trendelenburg Gait

An abnormal gait pattern characterized by a downward pelvic drop toward the unsupported side during the swing phase, or a lateral trunk lurch over the weight-bearing side to compensate for hip abductor weakness. It occurs due to weakness or paralysis of the gluteus medius and minimus muscles or superior gluteal nerve lesion.

Trendelenburg Position

A position lying on the back with the head and upper body lower than the feet. It is used for selected procedures but can worsen breathing, pressure in the head, or blood pressure in some patients.

Trendelenburg Sign

A physical clinical sign indicating weakness or paralysis of the hip abductor muscles (gluteus medius and minimus) innervated by the superior gluteal nerve; when the patient stands on one leg (the affected stance side), the unsupported pelvis tilts downward toward the opposite non-weight-bearing swing side.

Alternate Names:
Trendelenburg Hip Abductor Sign; Positive Trendelenburg Test

Trendelenburg Test

A clinical test used to evaluate the integrity and strength of the hip abductor mechanism (gluteus medius and minimus). The patient stands on one leg; a drop of the pelvis on the contralateral unsupported side indicates abductor weakness or hip instability on the stance side.

Treosulfan

An alkylating chemotherapy drug used in conditioning before allogeneic hematopoietic stem-cell transplantation; infection, mucositis, infertility, and organ toxicities may occur.

Trephine

A circular cutting instrument used to remove a disk of tissue or bone, such as during a bone-marrow biopsy or corneal procedure.

Treponema

A group of spiral-shaped bacteria, including Treponema pallidum, which causes syphilis. Different species can live in people or the environment, and identifying the species helps determine whether disease and treatment are present.

Treponemal Infections

Infections caused by spiral-shaped Treponema bacteria. They include syphilis and related diseases and may affect the skin, nerves, heart, eyes, or other organs; diagnosis usually combines clinical findings with blood or lesion tests.

Treponema Pallidum

The spiral-shaped bacterium that causes syphilis. It spreads mainly through contact with an infectious sore during sex and can cross the placenta to an unborn baby. Untreated infection can later affect the skin, nerves, eyes, heart, or brain.

Treponema Pallidum Infection

Infection with the bacterium Treponema pallidum, which causes syphilis and can affect the skin, nervous system, cardiovascular system, and other organs.

Trepopnea

Breathlessness that occurs or becomes worse when lying on one side but not the other. It can result from disease affecting one lung, fluid around a lung, or pressure from a nearby mass.

Tretinoin

A vitamin-A-related medicine applied to the skin for acne and sun-related skin changes, or taken by mouth for a type of acute leukemia. Skin irritation is common; oral treatment can cause serious fluid buildup, fever, and breathing problems.

TRG Gene

A gene encoding the gamma chain of the T-cell receptor, contributing to gamma-delta T-cell development and antigen recognition.

Triage

Assessment and sorting of patients by how urgently they need medical care. In emergency care, it identifies those who need immediate treatment and those who can safely wait. During a mass-casualty event, triage also helps allocate limited staff and supplies.

Trial Of Labor After Cesarean

An attempt to give birth vaginally after a previous cesarean delivery. Whether it is appropriate depends on the prior uterine incision, obstetric history, current pregnancy, facility resources, and the person's preferences. Counseling includes the possibility of successful VBAC, repeat cesarean delivery, and uterine rupture.

Triamcinolone

A corticosteroid medicine used on skin, by injection, or in other forms to reduce inflammation and itching.

Triamcinolone Acetonide

A synthetic corticosteroid used topically, by injection, or in other preparations to reduce inflammation; prolonged or extensive use can cause local and systemic steroid effects.

Triamterene

A water tablet that helps the kidneys remove salt and water while conserving potassium. It is used for high blood pressure or swelling, but can cause dangerously high potassium, kidney problems, or kidney stones.

Triangle of Doom

A laparoscopic anatomical region in the pelvis bounded by the vas deferens medially, the spermatic (testicular) vessels laterally, and the peritoneal reflection inferiorly. It contains the external iliac artery and vein and deep circumflex iliac vein, which are vulnerable to injury during inguinal hernia repair.

Alternate Names:
Laparoscopic Vascular Danger Triangle; Inguinal Triangle of Doom

Triangle of Pain

A laparoscopic anatomical region in the groin bounded by the spermatic vessels medially, the iliopubic tract superolaterally, and the peritoneal reflection inferiorly. It contains the femoral branch of the genitofemoral nerve, lateral femoral cutaneous nerve, and femoral nerve; injury can cause chronic groin pain or numbness.

Alternate Names:
Laparoscopic Neural Danger Triangle; Inguinal Triangle of Pain

Triazenes

A group of chemical compounds that includes some chemotherapy medicines. Their effects and risks depend on the specific drug; possible problems include nausea, low blood counts, infection, and damage to other organs.

Triaziquone

An older alkylating anticancer drug that cross-links DNA; its clinical use is limited by toxicity and availability.

Triazolam

Triazolam is a short-acting benzodiazepine hypnotic for short-term insomnia; amnesia, falls, dependence, respiratory depression, and dangerous interactions with opioids or other sedatives can occur.

Triazole

A five-membered nitrogen-containing chemical ring found in several antifungal medicines and other drugs; clinical effects depend on the specific compound.

Triazophos

An organophosphate insecticide that blocks acetylcholinesterase, allowing nerve signals to remain active. Significant exposure can cause sweating, vomiting, diarrhea, small pupils, breathing difficulty, weakness, seizures, or life-threatening poisoning.

Triceps

A muscle with three heads, especially the triceps brachii at the back of the upper arm. It straightens the elbow and helps stabilize the shoulder; injury or nerve problems can weaken pushing and lifting.

Triceps Brachii Muscle

The large muscle at the back of the upper arm. It straightens the elbow and helps move and stabilize the shoulder; injury or nerve damage can weaken pushing and lifting.

Triceps Reflex

A monosynaptic deep tendon stretch reflex elicited by tapping the triceps brachii tendon immediately superior to the olecranon process with a reflex hammer, stretching muscle spindles and provoking reflex forearm extension mediated through the radial nerve (evaluating spinal cord segments C7 and C8).

Alternate Names:
Triceps Tendon Reflex; C7 Reflex

Trichiasis

Inward misdirection of eyelashes so they rub against the eye.

Trichilemmal Carcinoma

A rare malignant follicular tumor showing outer-root-sheath differentiation, usually occurring on sun-damaged skin of older adults as a papule or nodule; complete excision is generally required.

Trichilemmal Cyst (Pilar Cyst)

A usually benign keratin-filled cyst arising from the outer root sheath of a hair follicle, most often on the scalp. It is typically a firm, mobile lump and may become inflamed, rupture, or rarely develop a proliferating pilar tumor.

Trichilemmoma

A usually harmless tumor arising from a hair follicle, most often appearing as a small skin-colored bump on the face. Multiple growths can be associated with an inherited condition called Cowden syndrome.

Trichinellosis

Trichinellosis is an infection caused by Trichinella worms, usually after eating undercooked infected meat. It may cause diarrhea followed by fever, muscle pain, and swelling around the eyes.

Trichiniasis

An infection caused by Trichinella larvae, acquired from undercooked meat.

Trichinosis

Infection with *Trichinella* worms, usually acquired by eating undercooked infected pork or wild game. It may cause diarrhea, fever, muscle pain, and swelling around the eyes.

Trichobezoar

A mass of swallowed hair in the digestive tract, usually the stomach, which may cause pain, vomiting, or blockage.

Trichoblastoma

A rare benign follicular tumor of the scalp or face, usually presenting as a solitary dermal or subcutaneous nodule; it can resemble basal-cell carcinoma and is diagnosed histologically.

Trichoepithelioma

A rare benign follicular adnexal tumor that usually presents as a skin-coloured papule or nodule on the face or scalp; it can resemble basal-cell carcinoma and may require histopathologic confirmation.

Trichomonas

A flagellated protozoan, Trichomonas vaginalis, that infects the urogenital tract and causes trichomoniasis. It is transmitted mainly through sexual contact and may cause discharge, irritation, or no symptoms.

Trichomonas Vaginalis

A flagellated protozoan that causes trichomoniasis, a sexually transmitted infection.

Trichomoniasis

A sexually transmitted infection caused by the parasite *Trichomonas vaginalis*. It may cause vaginal discharge, itching, or irritation, but many people have no symptoms. It can affect the vagina, urethra, or other genital tissues.

Trichophyton

A group of fungi that grow in keratin and cause ringworm infections of skin, hair, or nails. They spread through contact with infected people, animals, or objects and are treated with antifungal medicines.

Trichorrhexis Nodosa

A hair-shaft defect in which weakened points split into brush-like ends, caused by inherited disease, trauma, chemicals, heat, or nutritional or metabolic disorders.

Trichoscopy

Dermoscopic examination of the scalp and hair using magnification and special lighting. It reveals hair-shaft, follicular, and scalp patterns that help assess hair loss and distinguish scarring from nonscarring disorders.

Trichostasis Spinulosa

A follicular disorder in which many fine vellus hairs become retained in a dilated follicle, producing dark, rough, spiny papules often on the back, chest, or face. It is benign and may improve with topical keratolytics, retinoids, or hair-removal methods.

Trichothiodystrophy Syndrome

A group of inherited disorders characterized by brittle sulfur-deficient hair with a distinctive banded appearance, often accompanied by photosensitivity, ichthyosis, developmental delay, short stature, or recurrent infection.

Trichotillomania

An obsessive-compulsive and related disorder involving recurrent pulling out of one's hair, resulting in hair loss, with repeated attempts to decrease or stop. The behavior causes clinically significant distress or impairment and is not better explained by a skin or other medical condition or another mental disorder. Hair may be pulled from the scalp, eyebrows, eyelashes, or other body sites.

Trichotillomania (Hair-Pulling Disorder)

Alternate name; see *Trichotillomania*.

Trichuriasis

Intestinal infection caused by the whipworm *Trichuris trichiura*, usually acquired by swallowing eggs from contaminated soil or food. Heavy infection can cause abdominal pain, diarrhea, anemia, or rectal prolapse.

Tricuspid Annular Plane Systolic Excursion

A measurement made during an echocardiogram that shows how far part of the tricuspid valve moves as the right ventricle contracts. A low value may indicate reduced right-heart pumping and is interpreted with the complete scan and clinical findings.

Alternate Names:
TAPSE; Tricuspid Annular Excursion; RV Longitudinal Systolic Function

Tricuspid Atresia

A congenital absence or complete closure of the tricuspid valve, blocking normal flow from the right atrium to the right ventricle. Survival depends on an atrial communication and usually a ventricular septal defect or patent ductus to allow blood to reach the lungs; newborns typically have cyanosis and undergo staged surgical treatment.

Tricuspid Incompetence

Incomplete closure of the tricuspid heart valve, allowing blood to leak backward into the right upper chamber. Severe leakage can cause swelling, liver congestion, irregular heartbeat, fatigue, and breathlessness.

Tricuspid Regurgitation

Backward flow through the tricuspid valve from the right ventricle to the right atrium during systole. It may result from primary valve disease or annular enlargement caused by right-ventricular or right-atrial dilation, pulmonary hypertension, or left-sided heart disease; severe regurgitation can cause fatigue, edema, ascites, liver congestion, or right-sided heart failure.

Tricuspid Stenosis

Narrowing of the tricuspid valve opening that restricts blood flow from the right upper chamber (right atrium) to the right lower chamber (right ventricle). It is most often caused by rheumatic fever and often occurs alongside mitral valve disease. The restriction increases pressure in the veins returning blood to the heart, leading to swollen neck veins, leg swelling, an enlarged liver, and fatigue.

Alternate Names:
Tricuspid Valve Stenosis; TS

Tricuspid Valve

The heart valve between the right upper and right lower chambers. It opens to let blood move forward and closes to prevent backflow; leakage or narrowing can strain the heart.

Tricuspid Valve Disease

Alternate name; see *Tricuspid Regurgitation* and *Tricuspid stenosis*.

Tricyclic Antidepressant Drugs

A group of older antidepressants that increase certain chemical signals in the brain. They can also cause dry mouth, constipation, sleepiness, dangerous heart rhythms, and serious poisoning in overdose.

Tricyclic Antidepressants

Antidepressants that block reuptake of serotonin and norepinephrine, with additional anticholinergic, antihistaminic, and alpha-adrenergic blocking effects. Examples include amitriptyline, nortriptyline, imipramine, and desipramine. They are effective for depression, neuropathic pain, and migraine prophy-

laxis.

Alternate Names:
Tricyclics; First-Generation Antidepressants

Tricyclic Antidepressant Toxicity

Rapid anticholinergic and sodium-channel toxicity causing dry skin, mydriasis, delirium, seizures, hypotension, QRS widening, ventricular dysrhythmias, and coma. Obtain an ECG early; airway support, intravenous sodium bicarbonate for QRS widening or ventricular toxicity, and benzodiazepines for seizures are key interventions.

Trifluoperazine

A phenothiazine antipsychotic used for selected psychotic disorders. It can cause drowsiness, movement disorders, and other serious adverse effects.

Trigeminal Nerve

The fifth cranial nerve, carrying sensation from the face and controlling muscles used for chewing.

Trigeminal Neuralgia

A chronic pain disorder causing sudden, repeated bursts of severe electric-shock-like, stabbing, or burning pain on one side of the face along one or more branches of the trigeminal nerve, the fifth cranial nerve. Attacks usually last from a fraction of a second to about two minutes and may occur in clusters, with pain-free periods between them. Light touch, brushing the teeth, eating, drinking, speaking, or a breeze may trigger an attack. The usual cause is pressure on the nerve near the brainstem, but multiple sclerosis, a tumor, or another nerve disorder can sometimes be responsible.

Alternate Names:
Tic Douloureux; Fothergill Disease

Trigeminal Trophic Syndrome

A rare facial ulcer syndrome caused by injury to the trigeminal nerve or its central sensory pathways. Reduced or absent sensation together with abnormal sensations, such as itching or tingling, can lead to repeated rubbing or scratching and a persistent or recurrent ulcer, most often on the side of the nose. Causes include nerve procedures, stroke, and shingles affecting the trigeminal nerve.

Trigger

A trigger is an event, exposure, stimulus, or condition that initiates or worsens a symptom, disease episode, behavior, or physiologic response.

Trigger Finger

A condition in which a finger tendon catches as it moves through a tight covering. It can cause pain, clicking, stiffness, or locking and may improve with rest, injections, splinting, or surgery.

Alternate Names:
Stenosing Tenosynovitis; Snapping Digit

Trigger Finger Release

A procedure that opens the tight tunnel around a finger tendon so the finger can move more freely. It may be offered when rest, a splint, or an injection has not helped. Movement often improves, but recovery and results vary and infection, nerve injury, pain, or continued symptoms can occur.

Alternate Names:
A1 Pulley Release; Trigger Thumb Release; Stenosing Tenosynovitis Surgery; Percutaneous Trigger Finger Release

Trigger Thumb

A condition in which the thumb tendon catches as it moves through a tight covering. It may cause pain, clicking, stiffness, or locking and can often be treated with rest, splinting, an injection, or surgery.

Triglyceride

An ester derived from glycerol and three fatty acid molecules, representing the principal dietary lipid and primary storage form of metabolic energy in human adipose tissue. Circulating in plasma packaged within triglyceride-rich lipoproteins (chylomicrons from intestinal absorption and very low-density lipoproteins [VLDL] from hepatic synthesis), triglycerides are hydrolyzed by endothelial lipoprotein lipase (LPL) to release free fatty acids for peripheral muscle oxidation or adipocyte re-esterification. Fasting hypertriglyceridemia ($>$ 150 mg/dL) is an independent marker of atherogenic

cardiovascular risk, and severe hypertriglyceridemia ($> 500 - -1,000$ mg/dL) markedly increases the risk of acute pancreatitis.

Alternate Names:
Triglycerides; Triacylglycerol; TG

Triglyceride Level

A triglyceride level measures a type of fat in the blood; persistently high levels can increase cardiovascular risk and, when very high, cause pancreatitis.

Triglycerides

Plural form; see *Triglyceride*.

Triglyceride Test

A blood test measuring circulating triglycerides, the primary form of stored body fat, used to evaluate cardiovascular risk and metabolic health; see *Triglyceride* and *Lipid Profile*.

Trigone

A triangular area, especially the smooth region at the base of the urinary bladder between the ureter openings and urine outlet. It helps direct urine flow and can be affected by inflammation or tumors.

Triiodothyronine

The thyroid hormone T3, which contains three iodine atoms and has stronger biological activity than T4. It helps regulate metabolism, heart rate, temperature, and growth.

Trimester

One of the three roughly equal periods of pregnancy. Each lasts about three months, or 13 to 14 weeks.

Trimethoprim

An antibiotic that blocks bacterial folate production and is often combined with sulfamethoxazole. It treats selected infections but can cause rash, blood-cell changes, high potassium, kidney effects, or medicine interactions.

Trimethoprim-Sulfamethoxazole

An antibiotic combination that blocks bacteria from making folate, which they need to grow. It treats selected urinary, lung, skin, and other infections but can cause allergy, blood-count changes, high potassium, or kidney problems.

Trimethylaminuria

A metabolic disorder in which impaired oxidation of trimethylamine causes a characteristic fish-like body odor in sweat, urine, and breath. It may be inherited or acquired and can cause substantial psychosocial distress despite limited physical illness.

Trimipramine

A sedating tricyclic antidepressant used for depression in some countries. Its anticholinergic and cardiovascular effects can cause dry mouth, constipation, blurred vision, drowsiness, orthostatic hypotension, or dangerous toxicity in overdose; interactions and suicide risk require clinical monitoring.

Trinitrin

Another name for glyceryl trinitrate or nitroglycerin, a nitrate vasodilator.

Trinitrophenol

Picric acid, a corrosive and potentially explosive chemical once used in medicine, laboratories, and industry.

Trinucleotide Repeat

A short DNA sequence of three building blocks repeated many times. Extra copies can interfere with genes and cause inherited disorders such as Huntington disease, fragile X syndrome, myotonic dystrophy, or Friedreich ataxia.

Trip

A trip is a journey or an accidental stumble; in drug-related language it can also mean an episode of altered perception after a hallucinogen.

Tripe Palms

Diffuse, velvety, thickened hyperkeratosis of the palmar skin with a cerebriform, corrugated appearance resembling the lining of a cow's stomach (tripe),

which is strongly associated with underlying malignancy, most commonly gastric adenocarcinoma. It may occur alone or in conjunction with acanthosis nigricans.

Triple-Negative Breast Cancer

A subtype of invasive breast cancer whose tumor cells test negative for estrogen receptor (ER) and progesterone receptor (PR) and lack HER2 overexpression. These three biomarker results distinguish it from hormone receptor-positive and HER2-positive breast cancers.

Triplets

Three offspring born from the same pregnancy or three infants born in a multiple birth.

Triple X Syndrome

A sex-chromosome variation in which a female has an extra X chromosome. Many affected people have typical sexual development and fertility, while some have tall stature, speech or learning difficulties, coordination problems, or anxiety; severity varies widely.

Alternate Names:
Trisomy X; 47,XXX Syndrome

Triploidy Syndrome

A chromosome condition in which cells have three complete sets of chromosomes instead of two. It usually causes severe growth restriction and multiple birth defects and often prevents long-term survival; rare mosaic forms may be less severe.

Triptan

A class of prescription medications specifically designed to relieve acute migraine headaches and cluster headaches. They work by mimicking serotonin, a chemical messenger in the brain, which causes swollen blood vessels around the brain to constrict and blocks pain-signaling pathways in the nervous system. While effective at relieving throbbing pain, nausea, and light sensitivity during an active migraine attack, they are not intended to prevent future headaches.

Alternate Names:
Triptans; 5-HT1B/1D Agonist

Triptans

Plural form; see *Triptan*.

Triquetrum

One of the small bones on the little-finger side of the wrist. It helps stabilize the wrist and can be injured by a fall or direct blow, causing pain and swelling.

Trismus

Difficulty opening the mouth because the jaw muscles are tight or painful. Causes include dental infection, injury, medicines, muscle disorders, and tetanus; severe or rapidly worsening restriction can interfere with eating or breathing.

Trisodium Phosphate Poisoning

Poisoning from swallowing or contacting trisodium phosphate, a strong alkaline cleaner. It can burn the mouth, throat, eyes, and skin and may cause vomiting or breathing problems.

Trisomy

A chromosome condition in which cells have an extra copy of a whole chromosome or chromosome segment, giving three copies instead of the usual two. It may affect all cells or only some cells (mosaicism); effects depend on the chromosome or segment involved and may include developmental differences, birth defects, or pregnancy loss.

Trisomy 13

Patau syndrome, a chromosomal disorder caused by an extra chromosome 13 and associated with severe developmental, brain, facial, heart, kidney, and limb abnormalities.

Alternate Names:
D Trisomy Syndrome; Patau Syndrome

Trisomy 13 Syndrome

Alternate name; see *Patau Syndrome*.

Trisomy 18

Edwards syndrome, a chromosomal disorder caused by an extra chromosome 18 and associated with growth restriction, characteristic craniofacial and limb findings, heart disease, and severe developmental impairment.

Trisomy 18 Syndrome

Alternate name; see *Edwards Syndrome*.

Trisomy 21

Down syndrome, a genetic condition caused by an extra copy of chromosome 21. It may affect learning, growth, muscle tone, the heart, hearing, vision, or other organs; the features and level of support needed vary widely.

Trisomy 21 Syndrome

Alternate name; see *Down Syndrome*.

Trisomy X

Alternate name; see *Triple X Syndrome*.

Trocar

A pointed instrument placed inside a hollow tube to enter a body cavity or tissue. It is used in minimally invasive procedures to create an opening for cameras, instruments, or drainage tubes.

Trochanter

A bony projection on the thigh bone, especially the larger outer or smaller inner projection. Muscles and tendons attach there, and irritation around the greater trochanter can cause outer-hip pain.

Trochanteric Bursitis

Alternate name; see *Greater Trochanteric Pain Syndrome*.

Troche

A troche is a small medicated lozenge that dissolves slowly in the mouth or throat for local or systemic drug delivery.

Trochlear Nerve

Cranial nerve IV, which supplies the superior oblique eye muscle. Injury can cause vertical or tilted double vision, often worse when looking down or inward.

Trochlear Nerve Palsy

A cranial neuropathy involving the fourth cranial nerve (CN IV), causing paralysis of the superior oblique muscle, presenting with vertical and torsional diplopia (characteristically worse on downgaze and reading), an upward and inward hypertropia of the affected eye, and a compensatory head tilt toward the opposite contralateral shoulder (Bielschowsky head tilt test).

Alternate Names:
Fourth Nerve Palsy; CN IV Palsy

Tropheryma Whipplei Infection

Systemic bacterial infection caused by *Tropheryma whipplei*, primarily affecting the small intestine, joints, and nervous system. See *Whipple Disease*.

Trophic

Relating to the nutrition, growth, development, or maintenance of tissue. Trophic changes may occur when nerve supply or blood flow is impaired.

Trophoblast

The outer cell layer of an early embryo that attaches to the uterus and helps form the placenta. It supports implantation, exchanges nutrients, and produces hormones needed to maintain early pregnancy.

Trophoderm

The outer layer of cells in a very early embryo before it attaches to the uterus. It helps the embryo implant and develops into tissues that form much of the placenta.

Trophozoite

The active stage of a single-celled parasite. In this stage it feeds, grows, and often multiplies; it differs from the more resistant form that some parasites

use to survive outside the body.

Tropical Disease

Any disease or infectious illness that occurs solely, or is predominantly prevalent, in tropical and subtropical regions where warm, humid climates support abundant insect and arachnid vectors and intermediate hosts. Encompassing malaria, leishmaniasis, schistosomiasis, lymphatic filariasis, Chagas disease, dengue fever, and yellow fever, many are designated neglected tropical diseases (NTDs) closely linked to sanitation, poverty, and vector ecology.

Alternate Names:
Tropical Diseases; Neglected Tropical Diseases

Tropical Diseases

Plural form; see *Tropical Disease*.

Tropical Ear

Infection and inflammation of the external ear canal often precipitated by warm, humid environments or water exposure. See *Otitis Externa*.

Tropical Medicine

The medical specialty concerned with diseases common in tropical and subtropical regions and illnesses related to travel. It includes infections, parasites, insect-borne diseases, environmental hazards, prevention, diagnosis, and treatment.

Tropical Sprue

A disorder causing long-lasting diarrhea and poor absorption of nutrients, reported mainly in tropical and subtropical areas. It can lead to weight loss and deficiencies of folate, iron, and vitamin B12. Testing helps exclude infection and other causes; treatment usually includes antibiotics and replacement of missing nutrients.

Tropical Ulcer

A chronic ulcer occurring in tropical regions, often associated with infection, trauma, or poor wound healing.

Troponin

A protein released into the blood when heart muscle is injured. A raised level can support a heart-attack diagnosis, but it may also result from other heart, lung, kidney, or severe systemic illnesses.

Troponin I

An inhibitory subunit of the troponin regulatory complex of cardiac striated muscle; cardiac troponin I (cTnI) possesses an amino acid sequence unique to myocardium, serving as an exquisitely sensitive and specific clinical blood biomarker for acute myocardial injury and infarction.

Alternate Names:
cTnI; Cardiac Troponin I

Troponin Test

A troponin test measures heart-muscle proteins in the blood and helps assess possible heart injury, especially during suspected heart attack.

Trouble Swallowing

Difficulty moving food or liquid from the mouth to the stomach. It may cause coughing, choking, pain, or a feeling that food is stuck in the throat or chest.

Trousseau Sign

A carpopedal spasm that may occur when blood flow to the arm is briefly reduced with a blood-pressure cuff. It can suggest increased neuromuscular excitability, often from low blood calcium, but is not specific.

Trousseau Sign Of Latent Tetany

Alternate name; see *Trousseau Sign*.

Alternate Names:
Trousseau Sign; Carpopedal Spasm Sign

Trousseau Sign of Malignancy

Spontaneous, migratory superficial thrombophlebitis characterized by recurrent tender, erythematous venous cords appearing sequentially in different superficial veins of the extremities and trunk, strongly associated with underlying visceral mucinous adenocarcinomas, particularly of the

pancreas.

Alternate Names:
Trousseau Syndrome; Migratory Thrombophlebitis

Trousseau Syndrome

Repeated or shifting blood clots in veins associated with active cancer, especially some cancers of the pancreas, stomach, or lung. The cancer can make the blood clot too easily; it differs from the hand spasm called Trousseau sign.

Trp

Trp is the standard abbreviation for tryptophan, an essential amino acid used in protein synthesis and serotonin and niacin pathways.

True Ribs

The first seven pairs of ribs, each attached directly to the breastbone by its own flexible cartilage. They protect the heart and lungs and move with the chest during breathing.

Truncation

A shortened or incomplete form caused by removal of part of a sequence, structure, chromosome, protein, or process; the effect depends on what was lost and where.

Truncus Arteriosus

A birth defect in which one large blood vessel leaves the heart instead of separate vessels for the body and lungs. A large hole between the lower chambers usually allows oxygen-poor and oxygen-rich blood to mix, causing blue skin and heart failure. Early surgery is usually required.

Trunk

The central part of the body excluding the head and limbs, or a major nerve or vessel trunk.

Trypanosoma

A genus of protozoan parasites causing African and American trypanosomiasis.

Trypanosoma Brucei

A protozoan parasite transmitted by tsetse flies that causes African trypanosomiasis, or sleeping sickness. The human-infecting subspecies differ in geographic distribution and typical disease course; infection can progress from fever and lymph-node enlargement to neurologic involvement.

Trypanosoma cruzi

Parasitic protozoan transmitted by triatomine bugs that causes Chagas disease (American trypanosomiasis). See *Chagas Disease*.

Trypanosomiasis

Disease caused by Trypanosoma parasites, including African sleeping sickness and Chagas disease. Infected insects spread them, and illness may affect blood, lymph nodes, the nervous system, heart, or digestive organs.

Trypsin

A digestive enzyme made by the pancreas and activated in the small intestine. It breaks proteins in food into smaller parts and activates other pancreatic digestive enzymes.

Trypsin And Chymotrypsin In Stool

Stool trypsin and chymotrypsin testing measures digestive enzymes and may help assess pancreatic enzyme production, although other tests are often preferred.

Trypsinogen Test

A trypsinogen test measures a pancreatic enzyme precursor and may help evaluate pancreatic function or newborn screening for cystic fibrosis.

Tryptophan

An amino acid the body cannot make and must obtain from food. It is used to make proteins and can be changed into serotonin, melatonin, and niacin, which help regulate mood, sleep, and other body functions.

Tsetse Fly

A blood-feeding fly found in parts of sub-Saharan Africa. Its bite can spread Trypanosoma parasites, which cause African sleeping sickness; infection may cause fever, headaches, behavior changes, sleep disturbance, and serious nervous-system disease.

TSH

Thyroid-stimulating hormone, made by the pituitary gland to tell the thyroid to produce its hormones. A blood TSH measurement is commonly the first test for many thyroid problems.

TSH-Receptor Antibody

An antibody that attaches to the thyroid's control receptor. Some antibodies overstimulate the thyroid and cause Graves disease, while others block its activity; testing can help diagnose thyroid disease and assess pregnancy-related risk.

TSH Test

A TSH test measures thyroid-stimulating hormone in the blood and is a common initial test of thyroid function.

TSI Test

A blood test that detects antibodies which overstimulate the thyroid. It can support the diagnosis or monitoring of Graves disease and may help assess risk to a fetus during pregnancy.

Tsutsugamushi Fever

Scrub typhus, a mite-borne infection caused by Orientia tsutsugamushi. It may cause fever, headache, rash, an eschar, and organ complications and is treated with an appropriate antibiotic.

Tubal Ectopic Pregnancy

A pregnancy implanted in a fallopian tube rather than inside the uterus. It may cause pelvic pain or vaginal bleeding, though early symptoms may be absent. It cannot develop normally to birth; as it grows, it can rupture the tube and cause severe internal bleeding.

Alternate Names:

Tubal Pregnancy

Tubal Factor Infertility

Infertility caused by blocked, scarred, or otherwise damaged fallopian tubes. The damage can stop sperm and egg from meeting or keep a fertilized egg from moving toward the uterus, and can raise the risk of ectopic pregnancy. Causes include pelvic infection, endometriosis, surgery, or a condition present from birth.

Tubal Ligation

A permanent birth-control procedure that closes, cuts, or removes the fallopian tubes so sperm and egg cannot normally meet. It does not protect against sexually transmitted infections, and pregnancy after the procedure, though uncommon, can be ectopic.

Tubal Ligation Reversal

Microsurgical reconnection of previously divided or blocked fallopian-tube segments to restore a possible path for sperm and egg; success depends on remaining tube length, age, scarring, and original method.

Tubal Pregnancy

Potentially life-threatening pregnancy complication where a fertilized ovum implants inside a fallopian tube instead of the uterus. See *Tubal Ectopic Pregnancy*.

Tubercle

A small rounded projection or nodule; it may refer to bone anatomy or a tuberculous lesion.

Tuberculide

A skin eruption caused by an immune reaction to tuberculosis elsewhere in the body. The skin lesions usually contain no bacteria and may improve when the underlying tuberculosis is treated.

Tuberculin

Protein material from Mycobacterium tuberculosis used in a skin test for immune sensitization. A

positive result suggests exposure or vaccination but does not by itself prove active tuberculosis or show when exposure occurred.

Tuberculin Skin Test

A small amount of tuberculosis protein is injected into the skin. The raised, firm area is measured 2 to 3 days later; the result depends on its size and the person's risk factors and does not by itself distinguish latent from active tuberculosis.

Tuberculin Test

A skin test that checks whether the immune system has reacted to tuberculosis proteins. A positive result suggests infection or previous vaccination and does not by itself prove active disease.

Tuberculoid Leprosy

A form of leprosy in which the immune system keeps the number of bacteria low. It usually causes a few pale or reddish skin patches with reduced feeling and can injure nearby nerves, causing weakness or numbness.

Tuberculosis

A contagious bacterial infection caused by *Mycobacterium tuberculosis* that primarily affects the lungs, though it can spread to other parts of the body such as the kidneys, spine, or brain. It spreads through the air when an infected person coughs, sneezes, or speaks. Many infected individuals develop a latent form with no symptoms, but if the immune system weakens, the bacteria can become active, causing a chronic cough (often with blood), fever, drenching night sweats, chest pain, and severe unexplained weight loss.

Alternate Names:
TB; Consumption; Phthisis

Tuberculosis In Children

Tuberculosis infection in a child, usually acquired by breathing air containing the bacteria from an infectious person. It may be silent or cause cough, fever, poor growth, night sweats, or swollen lymph nodes; testing and treatment depend on exposure and findings.

Tuberculosis Interferon-Gamma Release Assay

A blood test (IGRA) that measures cellular immune reactivity to *Mycobacterium tuberculosis* antigens; see *Interferon-Gamma Release Assay*.

Tuberculosis (TB)

See *Tuberculosis*.

Tuberculous Meningitis

A life-threatening infection of the coverings of the brain caused by tuberculosis bacteria. It may cause persistent headache, fever, vomiting, neck stiffness, confusion, seizures, or weakness.

Tuberculous Mastitis

A rare form of tuberculosis infection in breast tissue. It may cause a lump, pain, skin changes, or an abscess and can resemble breast cancer or other breast infections. The diagnosis is confirmed by finding tuberculosis bacteria or their effects in breast fluid or tissue.

Tuberculous Pleural Effusion

See *Pleural Tuberculosis*.

Tuberose Sclerosis

Historical or variant name for tuberous sclerosis complex, a genetic disorder causing benign tumors in multiple organs, including the brain, skin, kidneys, heart, lungs, or eyes.

Tuberous Sclerosis

A rare genetic disorder, also called tuberous sclerosis complex, that causes growths in the brain and other organs, including the skin, kidneys, heart, and lungs. It may cause seizures, developmental or behavioral problems, and skin changes; the severity varies widely.

Tuberous Sclerosis-1

A form of tuberous sclerosis complex associated with pathogenic variants in the *TSC1* gene. Features may include seizures, developmental or behavioral differences, skin findings, and benign tumors in

several organs.

Tuberous Sclerosis Complex

An autosomal dominant genetic disorder, usually caused by a pathogenic variant in *TSC1* or *TSC2*, that produces benign tumors and other abnormalities in multiple organs. Common features include cortical brain lesions, seizures, facial angiofibromas or pale skin macules, renal angiomyolipomas, and cardiac rhabdomyomas; expression varies widely.

Tubes

Hollow structures that carry air, fluid, food, or medical instruments. Examples include breathing tubes, fallopian tubes, drainage tubes, and blood vessels; the specific structure depends on context.

Tubography

Contrast imaging of the fallopian tubes, usually as part of hysterosalpingography, to see whether they are open. It may help assess infertility but can cause temporary cramping, bleeding, infection, or rarely injury.

Tubo-Ovarian Abscess

A pocket of pus involving a fallopian tube and ovary, usually caused by a pelvic infection. It can cause pelvic pain, fever, and severe illness and may need antibiotics, drainage, or surgery.

Tubular Adenoma

A benign glandular polyp, most often in the colon, that can develop dysplastic changes and is considered a precursor lesion for some colorectal cancers.

Tubular Maximum

The maximum transport rate across the renal tubular epithelium for a filtered solute (such as glucose, phosphate, or amino acids), representing the point of carrier protein saturation beyond which any additional filtered load spills directly into the urine.

Alternate Names:
Tm; Transport Maximum

Tubular Reabsorption

The process by which kidney tubules return useful water and dissolved substances from filtered fluid to the blood. This prevents the loss of most water, salt, glucose, and other substances in urine.

Tubular Secretion

The movement of selected medicines, waste products, and extra ions from the blood into kidney tubules. This helps the kidneys remove substances from the body and regulate fluid and salt balance.

Tubule

A small tube in the body. In the kidney, tubules change filtered fluid by taking useful water and substances back into the blood and leaving waste to form urine; other tubules carry fluids in different organs.

Tubuloglomerular Feedback

A kidney control system that adjusts blood flow and filtration according to how much salt reaches part of a kidney tubule. It helps keep filtration and fluid balance reasonably stable.

Tubulointerstitial Diseases of the Kidney

Disorders that primarily injure renal tubules and the surrounding interstitial tissue rather than the glomeruli. They may cause impaired urine concentration, electrolyte or acid-base abnormalities, sterile pyuria, mild proteinuria, and acute or chronic loss of kidney function.

Tubulointerstitial Nephritis

A pattern of renal parenchymal inflammation predominantly centered on the renal interstitial compartment and tubules rather than the glomeruli, classically triggered by allergic adverse reactions to medications (beta-lactams, NSAIDs, PPIs), autoimmune diseases, or direct infections.

Alternate Names:
TIN; Interstitial Nephritis

Tubulointerstitial Nephropathy

Kidney damage involving the small tubes that pro-

cess urine and the tissue around them. Medicines, infections, toxins, autoimmune disease, and inherited conditions can cause it and may reduce kidney function.

Tularaemia

A zoonotic infection caused by Francisella tularensis, acquired from animals, ticks, contaminated water, or aerosols.

Tularemia

Tularemia is infection with Francisella tularensis acquired from ticks, animals, contaminated water, or aerosols and causing ulcer-glandular, pulmonary, or other disease.

Alternate Names:
Deerfly Fever; Rabbit Fever; Francisella Tularensis Infection

Tularemia Blood Test

A tularemia blood test looks for antibodies or other evidence of infection with Francisella tularensis; antibodies may not appear early in illness.

Tulle Gras

A paraffin-impregnated gauze dressing used to cover wounds and burns.

Tullio Phenomenon

Dizziness, eye movements, or balance problems triggered by loud sounds. It can occur with inner-ear conditions such as superior semicircular canal dehiscence or a perilymphatic fistula, but testing is needed to find the cause.

Alternate Names:
Sound-Induced Vertigo; Acoustic Vestibular Phenomenon

Tumescence

Swelling or enlargement caused by increased blood flow, fluid, or tissue growth. The term commonly describes erection but can also refer to temporary or abnormal enlargement in other body tissues.

Tumor

An abnormal mass formed by cells growing more than they should or surviving when they should not. A tumor may be noncancerous and remain localized, or cancerous and invade nearby tissue or spread.

Tumor Board

A meeting in which doctors from different specialties review a person's cancer diagnosis and test results together. They discuss the possible treatment options and coordinate a care plan.

Tumor Burden

The total amount of cancer in the body, estimated from the number, size, and spread of tumor deposits. It can help doctors assess disease extent and treatment response but does not alone determine a person's outlook.

Tumor Differentiation

How closely tumor cells resemble the normal cells from which they arose. Well-differentiated tumors look and behave more like normal tissue, while poorly differentiated tumors often behave more aggressively.

Tumor Embolism

A blockage caused when cancer cells or a piece of a tumor travels through the bloodstream and lodges in another vessel, most often in the lungs. It can impair blood flow and may cause breathing or other organ problems.

Tumor Grade

A description of how abnormal cancer cells look under a microscope compared with normal cells. Lower-grade tumors often grow more slowly, while higher-grade tumors may grow or spread more quickly; grade is different from cancer stage.

Tumor Grading

The process of examining cancer cells under a microscope and assigning a grade according to how different they look from normal cells. Lower-grade tumors often grow more slowly, while higher-grade tumors may behave more aggressively; grade is dif-

ferent from stage.

Tumor Heterogeneity

Differences between cancer cells in the same tumor or between the original tumor and its spread. These differences can affect how quickly cancer grows and why some cells respond to treatment while others resist it.

Tumor-Infiltrating Lymphocyte Therapy

A cellular cancer treatment using immune cells removed from a tumor, selected or expanded in the laboratory, and returned to the person to attack cancer cells. It is used for selected advanced cancers and requires specialized treatment because serious immune and treatment-related complications can occur.

Tumor Lysis Syndrome

A metabolic complication of rapid tumor-cell breakdown, which may occur spontaneously or after cancer treatment. Released cell contents cause characteristic abnormalities, including high blood potassium, phosphate, and uric acid and low calcium. These changes can lead to acute kidney injury, abnormal heart rhythms, seizures, or other organ complications.

Tumor Marker

A substance found in blood, urine, tissue, or another body fluid that may be produced by cancer or by the body's response to it. Tumor markers can help monitor treatment or recurrence and sometimes guide diagnosis, but most are not specific enough to prove cancer alone.

Tumor Mutational Burden

The number of gene changes found in a sample of cancer. A high number may help predict response to some immunotherapy, but the result depends on the test, cancer type, and other tumor features.

Tumor Necrosis Factor

An immune-system messenger that promotes inflammation, fever, and activation of other immune cells. Helpful during infection, it can also contribute to autoimmune disease, tissue damage, and wasting when produced excessively.

Tumor Necrosis Factor Receptor-Associated Periodic Syndrome

A rare inherited autoinflammatory disorder caused by variants in the TNFRSF1A gene, producing recurrent prolonged fever, muscle pain, abdominal pain, rash, and inflammation.

Alternate Names:
TRAPS

Tumor Staging

The process of determining how large a cancer is and whether it has spread to nearby lymph nodes or distant organs. The results help guide treatment and estimate outlook.

Tumor Resection

The complete surgical removal or excision of a benign or malignant mass of tissue; see *Excision* and *Biopsy*.

Tumor Suppressor

A gene or protein that helps prevent abnormal cell growth by slowing cell division, repairing DNA damage, or removing damaged cells. Loss of this protection can contribute to cancer.

Tumor Suppressor Gene

A gene that helps prevent uncontrolled cell growth by slowing division, repairing DNA damage, or directing abnormal cells to die. If both copies or the gene's function are lost or disabled, cells may grow abnormally and cancer risk can increase.

Tumor-Suppressor Gene

A gene that helps prevent uncontrolled cell growth by slowing cell division, repairing damaged DNA, or removing abnormal cells. Loss of its protective function can increase the chance of cancer.

Tumour

An abnormal mass caused by uncontrolled or inappropriate cell growth; it may be noncancerous or

cancerous.

Tungiasis

A skin infestation caused by the sand flea Tunga penetrans, producing an itchy or painful lesion, usually on the feet.

Tunica Adventitia

The tough outer layer of a blood vessel. It contains supportive tissue, nerves, and small vessels and helps anchor the vessel to nearby structures.

Tunica Albuginea

A tough layer of connective tissue surrounding the testis. It helps protect the testicular tissue and sends inward partitions that divide it into lobules.

Tunica Media

The middle layer of a blood-vessel wall, made mainly of muscle and elastic tissue. It can tighten or relax to change vessel width and help control blood pressure and blood flow.

Tunica Vaginalis

A thin, slippery covering around most of the testis, formed from the abdominal lining during testicular descent. It allows the testis to move smoothly inside the scrotum.

Tunnel Vision

Loss of peripheral visual field leaving a narrowed central field, caused by glaucoma, retinal disease, optic-nerve or brain lesions, severe hypoxia, or other conditions.

Turbinates

Curved structures inside the nose that warm, moisten, and filter breathed air. They contain bone covered by soft tissue and can swell during allergies, infection, or irritation and make nasal breathing difficult.

Turbinate Hypertrophy

Enlargement or swelling of the nasal turbinates, the structures that warm and moisten inhaled air. It may be temporary or persistent, often with rhinitis or other nasal inflammation, and can narrow the nasal airway.

Alternate Names:
Hypertrophy of Nasal Turbinates; Turbinates Hypertrophy

Turbinate Surgery

An operation that reduces or reshapes swollen tissues along the side walls of the nose to improve airflow. It may help persistent nasal blockage when other treatment fails; bleeding, crusting, dryness, scarring, or ongoing obstruction are possible.

Turcot Syndrome

A rare inherited cancer-predisposition pattern involving colon polyps or colon cancer together with a brain tumor. It can result from mismatch-repair gene changes or the APC gene change seen in familial adenomatous polyposis, so genetic counseling and screening are important.

Alternate Names:
Brain Tumor-Polyposis Syndrome

Turf Toe

A sprain of the plantar capsuloligamentous structures at the base of the great toe, around the first metatarsophalangeal joint. It usually occurs when the toe is forced upward while the foot is fixed, stretching or tearing these tissues. Pain, swelling, and reduced push-off strength may occur; severity ranges from a mild sprain to complete tissue rupture.

Turgor

The firmness and springiness of body tissue caused partly by its fluid content. Skin that remains tented after being gently pinched may suggest dehydration, but this sign is not reliable by itself.

Turner Hypoplasia

A defect in the enamel of a permanent tooth caused by infection or injury involving the baby tooth above it. The affected tooth may have a discolored, rough, or weakened area.

Turner's Syndrome

Alternate spelling; see *Turner Syndrome*.

Turner Syndrome

A chromosome condition in which one X chromosome is missing or changed in some or all cells. The most common pattern is one X chromosome in each cell (45,X); mosaic forms have some cells with one X chromosome and others with two sex chromosomes. Features vary and may include short stature, ovaries that make few eggs or hormones, delayed puberty, reduced fertility, heart or kidney differences, hearing loss, or thyroid disease. Intelligence is usually typical, though some have specific learning difficulties.

Alternate Names:
45,X; Monosomy X; XO Syndrome; Ullrich-Turner Syndrome; Turner's Syndrome

Turner-Varny Syndrome

Alternate name; see *Turner Syndrome*.

Turning Patients Over In Bed

Repositioning a patient at planned intervals to protect skin, improve comfort and breathing, prevent pressure injuries and contractures, and reduce complications of immobility.

Turpentine Oil Poisoning

Poisoning from swallowing or inhaling turpentine oil. It can irritate or damage the lungs, stomach, and nervous system and may cause chemical pneumonia.

Tussis

Cough; a forceful reflex expiration that helps clear secretions, irritants, or foreign material from the airways.

TVS

TVS commonly means transvaginal sonography, an ultrasound examination using a probe in the vagina to assess pelvic organs and early pregnancy.

T Wave

The part of an ECG that shows the heart's lower chambers resetting electrically after each beat. Changes in its height or direction can occur with reduced blood flow, abnormal body salts, heart strain, or other conditions.

T-Wave Alternans

T-wave alternans is a beat-to-beat change in the size or shape of the heart's T wave and may indicate increased risk of dangerous ventricular rhythms.

Twin

One of two offspring produced simultaneously by the same pregnancy. Biologically classified as monozygotic (identical twins, arising from the cleavage of a single fertilized ovum sharing identical genetic material) or dizygotic (fraternal twins, resulting from the fertilization of two distinct ova by two separate spermatozoa). Placentation varies in monozygotic twins depending on timing of embryonic splitting (dichorionic-diamniotic, monochorionic-diamniotic, or monochorionic-monoamniotic); monochorionic twin gestations carry specific risks of twin-to-twin transfusion syndrome (TTTS) and twin anemia-polycythemia sequence (TAPS).

Alternate Names:
Twins; Twin Gestation

Twin Placenta

The number and arrangement of placentas and the sacs surrounding twins. Knowing whether twins share a placenta or a sac helps estimate risks and determines how closely the pregnancy is monitored.

Twin Pregnancy

A pregnancy involving two fetuses. Clinical risk depends on chorionicity and amnionicity, with increased risks including preterm birth, fetal growth problems, and hypertensive disorders.

Twins

Plural form; see *Twin*.

Twin-To-Twin Transfusion Syndrome

A serious complication of an identical-twin pregnancy in which shared placental blood vessels send too much blood to one twin and too little to the other. It can cause anemia and growth restriction

in one twin and heart strain or excess fluid in the other.

Twin Twin Transfusion Syndrome

Alternate name; see *Twin-To-Twin Transfusion Syndrome*.

Twin-Twin Transfusion Syndrome

A complication of an identical-twin pregnancy sharing one placenta, in which blood flows unevenly between the twins. One twin may receive too little blood and fluid, while the other receives too much, causing anemia, growth restriction, or heart strain.

Twitch

A brief involuntary muscle contraction or movement, which may be benign, medication-related, stress-related, or a sign of nerve, muscle, or brain disease.

Twitching

Repeated involuntary muscle contractions or fasciculations, commonly caused by fatigue, stimulants, electrolyte disturbance, nerve irritation, medicines, or neurologic disease.

Tympanic

Tympanic means relating to the eardrum or middle ear, or resembling a drum in shape or sound.

Tympanic Bulla

The tympanic bulla is a hollow or expanded bony chamber surrounding the middle ear, especially prominent in many mammals.

Tympanic Cavity

The air-filled chamber of the middle ear. It contains the eardrum and three tiny bones that transmit sound vibrations toward the inner ear, while a passage to the throat helps equalize air pressure.

Tympanic Hyperectasis

Abnormal bulging or stretching of the eardrum, usually related to long-lasting pressure changes in the middle ear. It may cause blocked-ear sensations or reduced hearing.

Tympanic Membrane

The thin eardrum separating the outer ear canal from the middle ear. Sound makes it vibrate, and those vibrations move the middle-ear bones; infection, injury, or pressure can tear it.

Tympanic Membrane Perforation

A tear or hole in the eardrum caused by infection, injury, pressure changes, or an object entering the ear. It may cause pain, drainage, or hearing loss.

Tympanites

Abdominal distension caused by excessive gas in the stomach or intestines, producing a drum-like sound on percussion and sometimes pain, belching, or altered bowel movements.

Tympanometer

An instrument that changes pressure in the ear canal and measures movement of the tympanic membrane and middle-ear system. It is used to perform tympanometry.

Tympanometry

An objective test that varies air pressure in the ear canal while measuring movement of the tympanic membrane and middle-ear pressure. It helps assess middle-ear fluid, eustachian-tube dysfunction, perforation, and ossicular or tympanic-membrane abnormalities.

Tympanoplasty

Surgical repair or reconstruction of the tympanic membrane and, when necessary, the middle-ear ossicles to close a perforation or improve hearing.

Tympanosclerosis

White, scar-like patches on the eardrum or in the middle ear, often left after repeated infections or inflammation. They usually cause no symptoms but can sometimes reduce hearing.

Alternate Names:
Myringosclerosis; Tympanic Membrane Calcification

Tympanostomy Tube Insertion

A procedure in which a small tube is placed through an incision in the eardrum to ventilate the middle ear and help prevent fluid from collecting behind it. It is used for selected cases of persistent middle-ear fluid or recurrent ear infections; the tube usually comes out on its own as the eardrum heals.

Alternate Names:
Ear Tube Insertion; Grommet Insertion; Myringotomy with Tube Insertion; Tympanostomy

Tympanostomy Tubes

Small tubes placed through the eardrum to let air into the middle ear and help fluid drain. They are used for repeated ear infections or persistent fluid causing hearing problems; drainage, blockage, scarring, or early tube loss can occur.

Tympanum

The middle-ear cavity or, in some contexts, the tympanic membrane.

Tympany

Tympany is a drumlike sound on percussion, often produced by gas in a hollow organ such as the stomach or intestine.

Tyndall Effect

The optical scattering of light by suspended inflammatory cells and proteinaceous exudate ('aqueous flare') in the anterior chamber of the eye viewed with a narrow slit-lamp biomicroscope beam against a dark background, serving as a cardinal physical sign of active anterior uveitis (iritis / iridocyclitis).

Alternate Names:
Aqueous Flare; Anterior Chamber Tyndall Phenomenon

Type 1 Diabetes

A chronic autoimmune disease in which the body's immune system mistakenly attacks and destroys the insulin-producing beta cells in the pancreas. Without insulin, the body cannot move sugar from the bloodstream into cells for energy, causing glucose to build up in the blood while cells starve. It typically develops in children, teens, or young adults and presents with increased thirst, frequent urination, constant hunger, rapid weight loss, and extreme fatigue, requiring lifelong daily insulin to survive.

Alternate Names:
T1D; Type 1 Diabetes Mellitus; Insulin-Dependent Diabetes; IDDM

Type 1 Diabetes In Children

Type 1 diabetes diagnosed during childhood, usually caused by immune destruction of insulin-producing pancreatic beta cells. It causes absolute insulin deficiency and requires insulin treatment. Diabetic ketoacidosis, a potentially life-threatening complication, may be the first sign of the disease.

Type 1 Diabetes Mellitus

Type 1 diabetes is an autoimmune disease in which the immune system attacks and destroys the insulin-producing beta cells of the pancreas, resulting in absolute insulin deficiency.

Type 2 Diabetes

A chronic metabolic disorder characterized by high levels of glucose (sugar) in the bloodstream. It occurs when the body's cells become resistant to insulin—the hormone produced by the pancreas that allows cells to absorb and use sugar for energy—and the pancreas gradually loses its ability to produce enough insulin to compensate. Over time, chronically elevated blood sugar levels can damage blood vessels and nerves throughout the body, increasing the risk of cardiovascular disease, kidney damage, vision loss, and nerve problems.

Alternate Names:
T2D; Type 2 Diabetes Mellitus; Non-Insulin-Dependent Diabetes; NIDDM

Type 2 Diabetes In Children

Type 2 diabetes beginning during childhood or adolescence, often involving insulin resistance and requiring lifestyle and medical management.

Type 2 Diabetes Meal Planning

Nutritional guidance focusing on consistent carbohydrate intake, portion control, dietary fiber, lean proteins, and healthy fats to maintain target blood

glucose and body weight.

Alternate Names:
Diabetic Meal Planning; Nutritional Therapy for Type 2 Diabetes; Diabetic Diet Plan

Type 2 Diabetes Medications

Alternate name; see *Oral Antidiabetic Agents*.

Type 2 Diabetes Mellitus

Alternate name; see *Type 2 Diabetes*.

Type 3B Diabetes

Type 3b diabetes is a form of diabetes caused by disease or removal of the pancreas, which can impair both insulin and digestive-enzyme production.

Type Ia Glycogen Storage Disease

Von Gierke disease, caused by glucose-6-phosphatase deficiency. It typically causes severe fasting hypoglycemia, lactic acidosis, hyperlipidemia, hyperuricemia, hepatomegaly, and impaired growth.

Type Ib Glycogen Storage Disease

A glycogen-storage disorder caused by impaired glucose-6-phosphate transport in the endoplasmic reticulum. It can cause fasting hypoglycemia, lactic acidosis, hepatomegaly, neutropenia, recurrent infections, and inflammatory bowel disease.

Type I Hypersensitivity

A rapid allergic reaction in which the immune system releases substances such as histamine after exposure to an allergen. It can cause hay fever, asthma symptoms, hives, food allergy, or life-threatening anaphylaxis.

Type II Hypersensitivity

An immune reaction in which antibodies attach to a person's cells or tissues and cause injury or destruction. It contributes to some blood-cell disorders, medicine reactions, and autoimmune diseases.

Type III GSD (Forbes-Cori)

An inherited glycogen-storage disorder caused by debranching-enzyme deficiency. It can cause fasting hypoglycemia, hepatomegaly, muscle weakness, elevated liver enzymes, and sometimes cardiomyopathy, with severity varying by subtype.

Type III Hypersensitivity

An immune reaction in which clusters of antibodies and foreign or abnormal proteins settle in tissues and trigger inflammation. It can damage the skin, joints, blood vessels, kidneys, or other organs.

Type III Hypersensitivity Reaction

Tissue injury caused when antigen-antibody clusters deposit in tissues and activate inflammation. This reaction can damage blood vessels, joints, kidneys, skin, or other organs, as in serum sickness or lupus.

Type II Muscle Fiber

A fast-contracting muscle fiber that can produce high force quickly but usually tires sooner than a type I fiber.

Type I Muscle Fiber

A slow-contracting muscle fiber that uses oxygen efficiently and can keep working for a long time. It is important for posture and endurance.

Type IV GSD (Andersen)

An inherited disorder caused by branching-enzyme deficiency, leading to abnormal glycogen accumulation. Progressive liver disease, cirrhosis, growth problems, muscle disease, or neuromuscular involvement may occur.

Type IV Hypersensitivity

A delayed immune reaction driven mainly by T cells rather than antibodies. It usually develops hours to days after exposure and can cause contact dermatitis, some medicine reactions, or inflammation in an organ.

Types Of Ileostomy

Types of ileostomy include end, loop, and continent procedures, which divert stool through an opening in the abdominal wall when the colon or rectum cannot be used normally.

Type V Glycogen Storage Disease

An inherited muscle disorder, also called McArdle disease, in which muscle cells cannot properly break down glycogen for energy. Exercise can cause muscle pain, cramps, and sometimes dark urine from muscle injury.

Type VI Glycogen Storage Disease

Hers disease, caused by hepatic glycogen-phosphorylase deficiency. It usually causes mild fasting hypoglycemia, hepatomegaly, growth delay, and elevated liver enzymes, with symptoms often improving with age.

Type VII Glycogen Storage Disease

Tarui disease, caused by phosphofructokinase deficiency in muscle and red blood cells. Exercise intolerance, muscle cramps, rhabdomyolysis, and hemolytic anemia may occur, sometimes with a second-wind phenomenon.

Typhlitis

A serious infection and inflammation of the first part of the large intestine, usually in someone with very low white-cell counts after cancer treatment. It can cause right-sided abdominal pain, fever, diarrhea, bowel damage, perforation, or sepsis.

Alternate Names:
Neutropenic Enterocolitis; Ileocecal Syndrome; Cecitis

Typhoid

Alternate name; see *Typhoid Fever*.

Typhoid Fever

A serious infection caused by *Salmonella enterica* serovar Typhi, usually spread through food or water contaminated with infected stool. It can cause a gradually worsening fever, headache, tiredness, and abdominal symptoms; some people develop a faint rash. Severe illness may cause intestinal bleeding or perforation. Blood culture is the main diagnostic test, and antibiotic choice depends on resistance patterns.

Alternate Names:
Enteric Fever; Salmonella Typhi Infection; Typhoid

Typhus

A group of bacterial infections spread mainly by lice, fleas, or mites. They can cause fever, headache, rash, and serious illness affecting several organs; the type and treatment depend on the bacteria and insect involved.

Typhus Fever

A group of bacterial infections spread by lice, fleas, or mites. They commonly cause sudden fever, severe headache, weakness, and sometimes rash or organ injury; the exact illness determines testing and antibiotic treatment.

Typical Antipsychotics

Older antipsychotic medicines used for conditions such as psychosis, mania, or severe agitation. They can reduce hallucinations and delusions but may cause stiffness, tremor, involuntary movements, sleepiness, or other serious effects.

Tyramine

A naturally occurring amine found in some aged or fermented foods. In people taking monoamine oxidase inhibitors, excessive tyramine can cause a dangerous rise in blood pressure.

Tyrosine

An amino acid used to build proteins and make thyroid hormones, melanin, and adrenaline-like chemicals. The body usually makes enough from phenylalanine, but inherited metabolic disorders can disrupt this pathway.

Alternate Names:
L-Tyrosine; 4-Hydroxyphenylalanine; Tyr

Tyrosine Kinase Inhibitors

A major class of targeted antineoplastic pharmacological agents that competitively inhibit the adenosine triphosphate-binding catalytic pocket of tyrosine kinase enzymes, blocking downstream oncogenic proliferative signaling cascades (e.g., imatinib for BCR-ABL, osimertinib for EGFR).

Alternate Names:
TKIs

Tyrosinemia

An inherited disorder in which the body cannot break down the amino acid tyrosine normally. Harmful substances can build up and damage the liver, kidneys, nerves, or eyes; severity depends on the type and treatment.

Tzanck Smear

A microscope test of cells scraped from a blister or sore. It may suggest a herpes infection or pemphigus, but it cannot reliably identify the cause and is often replaced by more specific laboratory tests.

U

UA (Urinalysis)

UA commonly means urinalysis, laboratory examination of urine for blood, protein, cells, glucose, infection, and other findings.

Ubiquitin-Proteasome System

A cell system that marks selected proteins with ubiquitin and breaks them down in the proteasome. It removes damaged or unneeded proteins and helps regulate cell processes.

Alternate Names:
UPS; Ubiquitin-Proteasome Pathway

UBT (Urea Breath Test)

UBT commonly means urea breath test, which detects active Helicobacter pylori infection by measuring labeled carbon dioxide after ingested urea.

UDP-Glucuronosyltransferase

A group of enzymes, found mainly in the liver, that helps the body process and remove bilirubin, medicines, hormones, and other substances. Inherited differences in these enzymes can cause some types of jaundice or change how medicines work.

UDP-Glucuronosyltransferase Deficiency

Reduced activity of a liver enzyme that prepares bilirubin for removal from the body. Inherited deficiency can cause intermittent mild jaundice or, in severe forms, dangerous bilirubin buildup.

UGIB

Abbreviation; see *Upper Gastrointestinal Bleeding*.

Uhl Anomaly

A rare heart defect present from birth in which much of the muscle of the right lower chamber is missing. The chamber may pump poorly, causing blue coloring, abnormal rhythms, or heart failure in infancy or childhood.

Uhthoff Phenomenon

Temporary worsening of old neurologic symptoms, especially vision problems, when a person with multiple sclerosis becomes overheated from exercise, fever, or a hot bath. Symptoms usually improve as the body cools.

Alternate Names:
Uhthoff Sign

Ulcer

An open sore caused by loss of the surface layers of skin or a mucous membrane, sometimes extending into deeper tissue. Causes include poor blood flow, pressure, infection, nerve damage, inflammation, injury, and cancer.

Ulceration

The formation of an open sore caused by loss of surface tissue, usually involving skin or a mucous membrane and sometimes extending into deeper tissue.

Ulcerative Colitis

A chronic inflammatory bowel disease that causes ongoing inflammation and tiny sores (ulcers) in the innermost lining of the large intestine (colon) and rectum. Unlike Crohn's disease, which can affect any part of the digestive tract and penetrate deep tissue

layers, ulcerative colitis is confined to the colon and rectum and affects only the surface mucosal lining. It typically causes recurrent bouts of bloody diarrhea, crampy abdominal pain, an urgent need to empty the bowels, and fatigue.

Alternate Names:
UC; Idiopathic Proctocolitis; Inflammatory Bowel Disease (Ulcerative Colitis)

Ulcerative Colitis Pathology

Chronic, usually continuous mucosal inflammation beginning in the rectum and extending proximally. Findings include crypt architectural distortion, cryptitis, crypt abscesses, mucosal ulceration, and inflammatory polyps in active or longstanding disease.

Ulcerative Colitis (UC)

Alternate name; see *Ulcerative Colitis*.

Ulcerative Keratitis

An open sore or defect in the cornea, the clear front surface of the eye. It may result from infection, injury, or inflammation and can cause pain, redness, light sensitivity, and blurred vision.

Ulcerative Proctitis

Inflammation and ulceration limited to the lining of the rectum, often causing rectal bleeding, urgency, tenesmus, mucus, and diarrhea.

Ulcer Healing Drugs

Medicines that help heal gastrointestinal ulcers, usually by reducing stomach acid or protecting the stomach lining. The choice depends on the ulcer's cause, such as *H. pylori* infection or use of nonsteroidal anti-inflammatory drugs.

Ulerythema

A historical term for redness and scarring associated with follicular disorders. It commonly refers to ulerythema ophryogenes, also called keratosis pilaris atrophicans faciei, which causes inflamed follicular bumps around the eyebrows and cheeks. Chronic inflammation can produce small scars and loss of eyebrow hair.

Ullrich Congenital Muscular Dystrophy

An inherited muscle disease caused by problems with collagen VI, a protein that supports muscle and connective tissue. It begins in infancy with weakness, low muscle tone, tight joints near the body, unusually loose joints in the hands and feet, and later breathing problems.

Alternate Names:
UCMD; Ullrich Scleroatonic Muscular Dystrophy

Ulna

The forearm bone on the side of the little finger. Its upper end forms most of the hinge of the elbow, and its lower end helps form the wrist. Together with the radius, it supports rotation of the forearm and movement of the hand.

Ulnar

Relating to the ulna or to the side of the forearm and hand nearest the little finger. Compression or injury of the ulnar nerve can cause tingling or numbness in the little finger and part of the ring finger.

Ulnar Artery

A major artery running along the little-finger side of the forearm and into the hand. It supplies blood to the forearm and hand and helps form the hand's arterial arches.

Ulnar Claw Hand

A hand posture caused by severe ulnar nerve injury, usually at the wrist. The ring and little fingers bend at their middle and end joints and straighten unusually at the knuckles because small hand muscles are weak or paralyzed.

Alternate Names:
Duchenne Sign; Duchenne Claw Hand

Ulnar Collateral Ligament

A strong ligament on the inner side of the elbow that helps stabilize the joint when the forearm is forced outward. Repeated throwing can stretch or tear it.

Alternate Names:

UCL of the Elbow; Medial Collateral Ligament of Elbow

Ulnar Deviation

Angling of the hand or fingers toward the ulna, the bone on the little-finger side of the forearm. Ulnar deviation of the fingers at the knuckles can occur in rheumatoid arthritis when joint and tendon support is damaged.

Alternate Names:
Ulnar Drift

Ulnar Drift

Alternate name; see *Ulnar Deviation*.

Ulnar Hypoplasia

Underdevelopment or partial absence of the ulna, the forearm bone on the little-finger side. Present from birth in most cases, it may shorten or bend the forearm, limit elbow or wrist movement, and occur with finger or other body differences.

Ulnar Nerve

A nerve running from the neck through the inner arm and behind the elbow to the hand. It controls some hand and forearm muscles and carries feeling from the little finger and part of the ring finger.

Ulnar Nerve Dysfunction

Alternate name; see *Ulnar Neuropathy*.

Ulnar Nerve Entrapment

Alternate name; see *Ulnar Neuropathy*.

Ulnar Neuropathy

Damage or pressure on the ulnar nerve, most often at the elbow or wrist. It can cause numbness or tingling in the little finger and part of the ring finger, weak grip, or difficulty spreading the fingers.

Alternate Names:
Ulnar Nerve Entrapment; Ulnar Nerve Dysfunction

Ulnar Neuropathy at Guyon Canal

Compression of the ulnar nerve as it passes through Guyon canal at the wrist. It can cause numbness in the little finger and part of the ring finger, weakness of small hand muscles, or both, depending on which nerve branches are affected.

Alternate Names:
Guyon Canal Syndrome; Handlebar Palsy; Ulnar Tunnel Syndrome

Ulnar Paradox

The apparently unexpected finding that damage to the ulnar nerve at the wrist can cause more clawing of the fingers than damage higher in the arm. The difference occurs because some finger-bending muscles remain active after a wrist injury.

Ulnar-Sided Wrist Pain

Alternate name; see *Ulnar Wrist Pain*.

Ulnar Tunnel Syndrome

Alternate name; see *Ulnar Neuropathy at Guyon Canal*.

Ulnar Vein

Veins on the little-finger side of the forearm that carry blood away from the forearm and hand. They join other deep veins near the elbow to continue toward the heart.

Ulnar Wrist Pain

Pain on the side of the wrist nearest the little finger, often involving the ulna or nearby tendons and ligaments.

Alternate Names:
Ulnar-Sided Wrist Pain

Ultrafiltration

A process in which pressure pushes water and small dissolved substances through a very fine filter while larger particles remain behind. The kidneys use it to begin forming urine, and dialysis uses it to remove excess fluid.

Ultra-processed food

Ultra-processed food is an industrially formulated product made mostly from refined ingredients and additives, often with little intact whole food. Fre-

quent high intake is associated with poorer health outcomes, although effects vary by the food and overall diet.

Ultrasonic Therapy

Treatment using high-frequency sound energy to heat, move, break up, or otherwise affect tissue. It is used in selected physical-therapy procedures and some operations; benefits and risks depend on the device, body site, and condition.

Ultrasonography

Alternate name; see *Ultrasound*.

Ultrasound

An imaging test that uses high-frequency sound waves to show organs, blood vessels, tissues, or a developing fetus without ionizing radiation. Different examinations can assess the abdomen, pelvis, kidneys, thyroid, heart, blood flow, or testicles.

Ultrasound Biomicroscopy

Very high-frequency ultrasound that creates detailed images of the front part of the eye, including the cornea, iris, lens, and drainage angle when an ordinary eye examination is not enough.

Ultrasound Contrast

Tiny gas-filled bubbles given into a vein to improve ultrasound images of blood flow and selected organs. They are usually cleared through the lungs but can rarely cause allergic or cardiopulmonary reactions.

Ultrasound-Guided Biopsy

A procedure in which ultrasound images guide a needle into an area of concern to collect cells or tissue for testing. It can be used for lumps or abnormal areas in organs such as the breast, thyroid, liver, or lymph nodes.

Ultrasound-Guided Breast Biopsy

A procedure that uses ultrasound images to guide a needle into a breast abnormality and collect tissue for examination. The needle may remove a small core or, with a vacuum-assisted device, a larger sample.

Alternate Names:
Sonographically Guided Breast Biopsy; Ultrasound Breast Biopsy

Ultrasound Scan

Alternate name; see *Ultrasound*.

Ultrasound Therapy

Use of sound waves at therapeutic intensity to heat or mechanically affect tissue. It is used in selected rehabilitation settings, but evidence and suitability vary by condition.

Ultrasound Transducer

The probe placed against the skin or inside a body opening during an ultrasound scan. It sends and receives sound waves to create images or guide a procedure; different probes are used for different body areas.

Ultraviolet Rays

Invisible electromagnetic radiation with wavelengths shorter than visible violet light. Excess exposure can cause sunburn, photoaging, eye injury, and skin cancers; controlled ultraviolet exposure has selected therapeutic uses.

Ultraviolet Therapy

Controlled exposure to ultraviolet light used for selected skin disorders such as psoriasis, eczema, and vitiligo; risks include burns, premature skin aging, and skin cancer.

Umbilical

Relating to the umbilicus or navel, including structures, lesions, discharge, or abnormalities located at or connected with it.

Umbilical Artery Catheter

A thin tube placed through an umbilical artery in a newborn and advanced into a large artery. It allows continuous blood-pressure monitoring and blood sampling; complications include infection, bleeding, and impaired blood flow to the legs or bowel.

Alternate Names:
UAC

Umbilical Artery Doppler

An ultrasound measurement of blood flow through the umbilical cord. It helps assess how well the placenta is supplying the fetus, especially when fetal growth is reduced or pregnancy complications affect placental function.

Umbilical Catheters

Umbilical catheters provide vascular access through a newborn's umbilical vessels for fluids, medicines, monitoring, or blood sampling while complications are monitored.

Umbilical Cord

The connection between a fetus and the placenta. It contains blood vessels that carry oxygen, nutrients, and waste between them and is protected by a soft, cushioning tissue.

Umbilical Cord Blood Gas

A test of blood taken from the umbilical cord after birth to assess the baby's oxygen supply and acid-base balance around delivery. Arterial and venous results provide different information and must be interpreted with the baby's condition, gestational age, and delivery circumstances.

Umbilical Cord Complications

Problems involving the umbilical cord, including prolapse, compression, knots, abnormal insertion, short or long cord, and vascular abnormalities. They may reduce fetal oxygenation or complicate delivery.

Umbilical Cord Compression

Mechanical obstruction of blood flow through the umbilical vessels caused by pressure from the fetal presenting part, uterine contractions, or cord entanglement, characteristically manifesting as variable decelerations on fetal heart rate monitoring.

Umbilical Cord Prolapse

The umbilical cord slips through the cervix ahead of or alongside the baby, usually after the waters break. The cord can be squeezed and reduce the baby's oxygen supply, making this an obstetric emergency.

Umbilical Granuloma

A small, moist, pink or red nodule of granulation tissue at a newborn's navel after the umbilical cord separates. Persistent discharge, inflammation, or infection may indicate another condition, such as an abnormal connection to the bladder or intestine.

Alternate Names:
Granuloma Umbilicale; Neonatal Umbilical Granuloma

Umbilical Hernia

A soft bulge caused when tissue pushes through the opening at the navel. Many infant hernias close as the child grows, while adult hernias may enlarge or become trapped and painful and sometimes need surgery.

Umbilical Region

The central part of the abdomen around the navel. Pain, swelling, a hernia, or a lump in this area may arise from the bowel, abdominal wall, blood vessels, or other organs.

Umbilical Vein

The umbilical vein carries oxygen- and nutrient-rich blood from the placenta to the fetus during pregnancy.

Umbilication

Formation of a central hollow or navel-like depression in a skin lesion or other body structure. It can occur in some infections, inflammatory lesions, tumors, or normal anatomical features and must be interpreted with the lesion's appearance.

Umbilicus

The navel, a scar on the front of the abdomen left after the umbilical cord separates at birth. It may be affected by a hernia, infection, discharge, or other skin changes.

Alternate Names:

Belly Button; Omphalos

Uncal Herniation

A life-threatening type of brain herniation in which pressure pushes part of the temporal lobe down against structures at the base of the brain. It can compress nerves and blood vessels, causing a large unreactive pupil, weakness, reduced consciousness, or brain injury.

Alternate Names:
Lateral Transtentorial Herniation; Uncinate Herniation

Uncal Transtentorial Herniation

Alternate name; see *Uncal Herniation*.

Unconjugated Hyperbilirubinemia

A higher-than-normal level of unconjugated (indirect) bilirubin in the blood. Causes include breakdown of red blood cells, reduced liver uptake, or difficulty converting bilirubin into a form that can be removed; in newborns, very high levels can harm the brain.

Unconscious

Not awake and not responsive to ordinary external stimuli. Unconsciousness may result from syncope, seizure, trauma, intoxication, metabolic disease, stroke, or other emergencies.

Unconsciousness

Loss of awareness and normal response to surroundings, ranging from brief fainting to prolonged coma. It can result from reduced brain blood flow, injury, seizures, low blood sugar, drugs, or serious illness.

Uncoupling Protein

A member of a family of proteins in the inner mitochondrial membrane that can reduce the coupling between energy production and ATP formation. UCP1, found in brown fat, dissipates this energy as heat; other family members have different or less fully understood roles.

Uncover Test

The uncover portion of an eye-alignment test in which an examiner watches the eyes as an occluder is removed. Movement of the previously covered eye as it resumes fixation indicates a latent deviation (phoria); movement of the other eye when the first is covered indicates manifest strabismus (tropia).

Underactive Thyroid

Alternate name; see *Hypothyroidism*.

Underventilation

Breathing that is too slow or shallow to remove enough carbon dioxide. It may also lower oxygen and can result from sedatives, weak breathing muscles, severe obesity, lung disease, or brain problems.

Underweight

Body weight below the expected range for a person's age and height. In adults, a body mass index below 18.5 is commonly classified as underweight; in children, growth charts and age-specific measures are used. Low weight may reflect body build, inadequate nutrition, illness, or unintentional weight loss.

Undescended Testicle

See *Cryptorchidism*.

Undescended Testicle Repair

An operation that moves a testicle into the scrotum and fixes it there. It is usually performed in childhood to support fertility, allow examination, and reduce risks related to twisting, injury, and cancer.

Undescended Testis

See *Cryptorchidism*.

Undifferentiated

Not showing the recognizable features of a specialized cell or tissue. An undifferentiated tumor has cells that look very unlike normal tissue, so its origin and behavior may be difficult to determine.

Undifferentiated Arthritis

Inflammatory arthritis with joint symptoms and signs that do not yet fit one specific named arthritis. The pattern may become clearer over time or remain an undifferentiated condition.

Undifferentiated Cancer

Cancer made of cells that look very unlike normal cells and do not clearly show the tissue where they began. Special laboratory tests and imaging may be needed to identify its type and guide treatment.

Undifferentiated Carcinoma

A high-grade carcinoma whose cells lack recognizable features of a specific tissue or tumor subtype; diagnosis and treatment require pathology, immunostaining, and staging.

Undifferentiated Connective Tissue Disease

An autoimmune connective-tissue disease with symptoms or laboratory findings suggesting systemic inflammation but not enough features for a specific diagnosis such as lupus or systemic sclerosis.

Undifferentiated Connective-Tissue Disease

Alternate name; see *Undifferentiated Connective Tissue Disease*.

Undifferentiated Pleomorphic Sarcoma

An uncommon, often fast-growing cancer of soft tissue or bone whose cells vary greatly in shape and do not resemble a specific normal tissue. Treatment depends on its site, size, and spread.

Alternate Names:
UPS; Malignant Fibrous Histiocytoma; MFH

Undifferentiated Pleomorphic Sarcoma Of The Breast

A rare high-grade breast sarcoma formerly called malignant fibrous histiocytoma. It is a diagnosis of exclusion after other specific sarcomas and metaplastic carcinoma have been ruled out histologically.

Undifferentiated Spondyloarthritis

Inflammatory arthritis with features of the spondyloarthritis group but insufficient or atypical findings for classification as ankylosing spondylitis, psoriatic arthritis, reactive arthritis, enteropathic arthritis, or another defined subtype. Symptoms may involve the spine, sacroiliac joints, peripheral joints, entheses, skin, eyes, or bowel.

Undulant Fever

An infection caused by *Brucella* bacteria, usually acquired from infected animals or unpasteurized dairy products. It can cause repeated or fluctuating fever, sweats, tiredness, joint pain, and serious organ complications.

Unerupted Tooth

A tooth that has not emerged into the oral cavity at the expected time. It may be normally developing, delayed, impacted, or prevented from erupting by obstruction or abnormal position.

Ungual

Relating to a fingernail or toenail. The term may describe a finding beneath, around, or within the nail, such as a bruise, fungal infection, wart, or pigmented lesion.

Unicameral Bone Cyst

A noncancerous, fluid-filled space in a bone, usually in the upper arm or thigh of a child or teenager. It may be found after a weakened bone breaks. A fallen-fragment sign on imaging can support the diagnosis, but it is not specific by itself.

Alternate Names:
Simple Bone Cyst; Solitary Bone Cyst

Unicornuate Uterus

A congenital condition in which only one side of the uterus develops fully, usually with one fallopian tube. Some people have no symptoms, but it can increase risks of infertility, pregnancy outside the uterus, miscarriage, or premature birth.

Unilateral

Affecting, occurring on, or involving one side of the body or one paired organ, such as unilateral weakness or unilateral eye disease.

Unilateral Gynecomastia

Enlargement of breast glandular tissue on one side in a male patient. It may be caused by hormonal changes, medicines, or an underlying disorder.

Unilateral Microphthalmos

A congenital condition in which one eye is abnormally small. It may be associated with other ocular malformations and can cause substantial visual impairment.

Unilateral Spatial Neglect

Reduced awareness of one side of the body or surrounding space, usually after a stroke or other brain injury. A person may fail to notice or respond to things on the side opposite the brain injury, even when basic vision and sensation are intact.

Alternate Names:
Hemispatial Neglect; Spatial Inattention

Uninodular Goiter

An enlarged thyroid containing one main lump, or nodule. Blood tests and ultrasound help assess thyroid function and cancer risk; nodules may be monitored or sampled according to their features.

Unintentional Weight Loss

Unintentional weight loss is reduction in body weight without planned dietary or activity change and may result from malignancy, endocrine disease, infection, gastrointestinal disease, medication, or mood disorder.

Uniparental Disomy

A chromosome difference in which both copies of a chromosome, or part of one, come from the same parent. It can cause disease by disrupting genes that depend on parental origin or by giving a child two copies of a harmful gene variant.

Universal Donor

A person with type O RhD-negative blood, whose red blood cells lack A, B, and RhD antigens. These red cells are often used for emergency transfusion when the recipient's blood type is not yet known, but they are not compatible with every possible red-cell antibody.

Alternate Names:
Type O Negative Donor; Universal Erythrocyte Donor

Universal Precautions

Older infection-control guidance for preventing exposure to bloodborne infections. It has been incorporated into broader Standard Precautions, which apply to all patients and include hand hygiene, protective equipment based on exposure risk, safe injections, and safe handling of equipment.

Universal Recipient

A person with type AB RhD-positive blood, whose red blood cells can generally receive red-cell transfusions of any ABO and RhD type. Other red-cell antigens can still affect compatibility, and this term does not apply to plasma transfusions.

Alternate Names:
Type AB Positive Recipient; Universal Red Cell Recipient; Universal RBC Recipient

Unloader Knee Brace

A knee brace designed to shift some load away from an affected compartment of the knee, often in osteoarthritis. It may be called a valgus or varus brace, depending on the direction of force.

Alternate Names:
Unloader Knee Braces; Unloader Knee Bracing; Offloader Knee Brace

Unopposed Estrogen

Estrogen exposure without enough progestogen to oppose its effect on the uterine lining. In a person with a uterus, prolonged exposure can cause endometrial overgrowth and increase the risk of endometrial cancer.

Unrecognized Myocardial Infarction

Heart attack that occurs with minimal or atypical symptoms and is discovered later on routine electrocardiography. See *Silent Heart Attack*.

Unresectable

Describing a tumor or lesion that cannot be completely removed safely by surgery because of its location, extent, invasion of vital structures, or the patient's operative risk.

Unresponsive Coma

Alternate name; see *Coma*.

Unsaturated Fat

A dietary fat whose fatty-acid chains contain one or more carbon-carbon double bonds. Monounsaturated and polyunsaturated fats are common in vegetable oils, nuts, seeds, and fish; replacing saturated fat with unsaturated fat generally supports healthier LDL cholesterol levels.

Unstable Angina

Chest pain caused by reduced blood flow to the heart that is new, worsening, lasts longer, or occurs at rest, without clear evidence of heart-muscle death. It is an emergency warning of possible heart attack.

Unsteadiness

Impaired balance or gait stability, which may result from vestibular disease, neurologic disorders, weakness, medication effects, visual impairment, or musculoskeletal problems.

Untidy Wound

An irregular or contaminated wound with crushing, devitalized tissue, tissue loss, foreign material, or associated injury to vessels, nerves, tendons, or bone. It has increased infection risk and may require exploration, irrigation, debridement, and delayed or staged closure.

Upper Airway Biopsy

Removal of tissue from the nasal cavity, pharynx, larynx, or related upper airway for microscopic evaluation of suspected infection, inflammation, infiltrative disease, or tumor.

Upper Airway Cough Syndrome

A possible cause of long-lasting cough associated with conditions of the nose or sinuses, such as allergies or chronic sinus inflammation. Nasal symptoms may occur, but the exact cause of the cough can be difficult to establish.

Alternate Names:
UACS

Upper Airway Obstruction

Narrowing or blockage of the breathing passage in the nose, throat, or voice box. It can cause noisy breathing, breathlessness, voice changes, or blue lips and can become life-threatening when severe or rapidly worsening.

Upper Airway Resistance Syndrome

An older term for sleep-disordered breathing in which increased effort to breathe through a narrowed upper airway causes repeated brief awakenings, often without meeting standard apnea or hypopnea thresholds. Current sleep classifications generally include this pattern within obstructive sleep apnea rather than treating it as a separate disorder.

Alternate Names:
UARS

Upper Arm

The portion of the upper limb between the shoulder and elbow, containing the humerus and muscles, nerves, and vessels that serve the arm.

Upper Endoscopy

A flexible camera examination of the food pipe, stomach, and first part of the small intestine. It can identify inflammation, ulcers, bleeding, narrowing, or tumors and can allow tissue samples or treatment.

Upper Esophageal Sphincter

A ring of muscle at the top of the esophagus that opens during swallowing and coordinates food passage.

Alternate Names:
UES

Upper Extremity

The anatomic region extending from the shoulder through the arm, forearm, wrist, and hand. Disorders may involve its bones, joints, muscles, nerves, vessels, or skin.

Upper Extremity Deep Vein Thrombosis

A thrombosis occurring in the deep venous system of the arm or thoracic inlet (axillary, subclavian, or brachiocephalic veins), categorized as primary (effort-induced venous thrombosis or Paget-Schroetter syndrome) or secondary (most commonly related to indwelling central venous catheters or pacemaker leads).

Alternate Names:
UEDVT

Upper Extremity Venous Doppler

An ultrasound examination of the arm and related veins that assesses compressibility and blood flow, commonly to evaluate suspected venous thrombosis.

Upper Gastrointestinal Bleeding

Bleeding from the esophagus, stomach, or first part of the small intestine. It may cause vomiting of red or coffee-ground blood, black stools, dizziness, weakness, or fainting. Common causes include ulcers, inflammation, tears, and enlarged veins; significant bleeding can be life-threatening.

Alternate Names:
UGIB; Upper GI Bleed; Upper GI Hemorrhage

Upper GI And Small Bowel Series

A fluoroscopic x-ray examination in which swallowed contrast outlines the esophagus, stomach, duodenum, and small intestine to evaluate structure and transit.

Upper GI Series

An X-ray examination of the food pipe, stomach, and first part of the small intestine after swallowing contrast material. It can show narrowing, blockage, ulcers, abnormal movement, or other structural problems.

Upper Leg

The portion of the lower limb between the hip and knee, containing the femur and the thigh muscles, nerves, and blood vessels.

Upper Limb Disorders

Conditions affecting the shoulder, arm, elbow, forearm, wrist, or hand, including musculoskeletal, nerve, vascular, and work-related disorders.

Upper Motor Neuron

A motor neuron with its cell body in the brain or brainstem that sends signals to lower motor neurons in the brainstem or spinal cord. Damage to these pathways can cause weakness, stiffness, exaggerated reflexes, or difficulty controlling movement.

Upper Motor Neuron Lesion

Damage to movement pathways in the brain or spinal cord. It can cause weakness, increased muscle tone, exaggerated reflexes, spasms, or an abnormal plantar reflex; findings depend on the site and extent of injury.

Alternate Names:
Pyramidal Tract Lesion

Upper Motor Neuron Syndrome

A group of findings caused by damage to movement pathways in the brain or spinal cord. It may cause weakness, stiffness, muscle spasms, exaggerated reflexes, or reduced control of movement.

Upper Respiratory Infection

Alternate name; see *Upper Respiratory Tract Infection*.

Upper Respiratory Tract Infection

An infection of the nose, sinuses, throat, or voice box, most often caused by a virus. Examples include the common cold, rhinitis, pharyngitis, tonsillitis, and sinusitis.

Alternate Names:

URTI; Upper Respiratory Infection; URI

Upper Tract Urothelial Carcinoma

Tumors arising from the urothelial lining of the upper urinary tract. Blood in the urine, flank pain, obstruction, or incidental imaging findings may occur; urine cytology, imaging, ureteroscopy, and tissue assessment guide diagnosis and treatment.

Upper-Tract Urothelial Carcinoma

Alternate name; see *Upper Tract Urothelial Carcinoma*.

Upright Labor Positions

Maternal positions during labor, such as walking, standing, squatting, kneeling, or sitting upright. They may improve comfort and mobility and can be used when safe and acceptable to the laboring person and clinical team.

Upward Gaze

Elevation of both eyes to direct the visual axis upward. It depends on coordinated activity of the extraocular muscles and their brainstem control pathways.

Urachal Abnormalities

Birth-related problems caused by incomplete closure of the urachus, the temporary fetal connection between the bladder and navel. They include a urachal cyst, sinus, or open connection and may cause infection, navel discharge, abdominal pain, or urine leakage.

Urachal Carcinoma

A rare cancer arising from a leftover connection between the bladder and the navel, usually near the top of the bladder. It may cause blood or mucus in the urine, pelvic pain, or urinary changes.

Urachal Cyst

A fluid-filled sac left from the temporary fetal connection between the bladder and navel. It may cause no symptoms, but infection can produce lower-abdominal pain, fever, navel discharge, or urinary symptoms.

Urachal Fistula

A persistent passage between the bladder and navel that results from incomplete closure of the urachus before birth. It can cause urine to leak from the navel.

Alternate Names:
Patent Urachus; Persistent Urachal Canal

Urachal Mucinous Cystic Tumor

A rare mucin-producing cystic tumor arising from urachal tissue between the bladder and navel. It includes lesions ranging from benign tumors and tumors of low malignant potential to invasive adenocarcinoma. Tissue examination distinguishes these categories and establishes whether invasion is present.

Urachus

An embryologic connection between the fetal bladder and umbilicus that normally becomes the median umbilical ligament after birth. Persistent urachal remnants can form cysts, sinuses, or other complications.

Uracil-DNA Glycosylase

A DNA repair enzyme that initiates the base excision repair (BER) pathway by specifically recognizing and hydrolyzing the N-glycosidic bond of mutagenic uracil residues formed by spontaneous deamination of cytosine in DNA, generating an abasic (AP) site for downstream repair.

Alternate Names:
UDG

Uraemia

Alternate spelling; see *Uremia*.

Uraemic Foetor

Alternate spelling; see *Uremic Fetor*.

Uraemic Syndrome

Alternate name; see *Uremia*.

Uranium

A naturally occurring radioactive heavy metal. Internal exposure can damage the kidneys, while inhaled or retained radioactive material can also expose tissues to ionizing radiation.

Urate

The ionized salt or anion of uric acid formed under physiologic pH conditions in human plasma and extracellular fluids. Generated as the end product of purine nucleotide metabolism via the hepatic enzyme xanthine oxidase, circulating urate is primarily eliminated via renal excretion (70%) and the gastrointestinal tract (30%). Elevated serum urate levels exceeding the physiologic solubility limit (> 6.8 mg/dL) cause hyperuricemia, precipitating the precipitation and deposition of needle-shaped, negatively birefringent monosodium urate (MSU) crystals in joints and periarticular soft tissues (gouty arthritis and tophi) or the renal collecting system (uric acid nephrolithiasis).

Alternate Names:
Urates; Monosodium Urate; Uric Acid Salt

Urate-Lowering Therapy

Long-term treatment that lowers urate in the blood, helping dissolve gout crystals and prevent further attacks and joint damage. The medicine is chosen according to kidney function, other illnesses, and treatment goals.

Urate Nephropathy

Kidney injury caused by uric acid or urate crystals collecting in the kidney's small tubes. It can occur when uric acid rises rapidly, such as during tumor lysis syndrome, and may reduce kidney function.

Alternate Names:
Acute Uric Acid Nephropathy; Crystal-Induced Urate Nephropathy

Urates

Plural form; see *Urate*.

Urea

The principal nitrogen-containing waste product of protein metabolism, formed in the liver and excreted mainly by the kidneys.

Urea Breath Test

A noninvasive test for active Helicobacter pylori infection: the person drinks labeled urea, and labeled carbon dioxide in exhaled breath indicates bacterial urease activity.

Urea Cycle

A series of chemical reactions in the liver that changes toxic ammonia, produced when the body breaks down protein, into urea. The kidneys then remove urea in urine.

Urea Cycle Disorder

An inherited problem in the liver's process for removing ammonia. Ammonia can build up in the blood and cause vomiting, poor feeding, sleepiness, confusion, seizures, or brain injury, especially during illness or fasting.

Urea Nitrogen Urine Test

A urine test measuring urea nitrogen excretion, interpreted with blood urea nitrogen, creatinine, diet, and urine volume to assess protein metabolism and renal handling.

Ureaplasma

A genus of very small bacteria without a cell wall that can colonize the genital or urinary tract and is sometimes associated with urethritis or pregnancy complications.

Ureaplasma urealyticum

A bacterium without a cell wall that can live in the genital or urinary tract. It is sometimes associated with urethritis, pregnancy complications, or infection in vulnerable newborns.

Uremia

A clinical syndrome caused by advanced kidney failure and accumulation of waste products and other biologically active substances. Symptoms may include nausea, itching, fatigue, confusion, bleeding, or pericarditis; laboratory values and symptoms

must be interpreted together.

Uremic Bleeding

A tendency to bleed in advanced kidney failure, mainly because platelets do not function normally. It may cause easy bruising, nosebleeds, or prolonged bleeding.

Uremic Encephalopathy

Brain dysfunction caused by severe kidney failure and the resulting buildup of waste products. It may cause confusion, extreme sleepiness, muscle twitching, seizures, or coma.

Uremic Fetor

A urine-like or ammonia-like odor on the breath in severe kidney failure, caused when oral bacteria break down urea in saliva.

Alternate Names:
Ammoniacal Breath; Uremic Breath Odor

Uremic Frost

Rare white, powdery crystals of urea that appear on the skin when severe untreated kidney failure causes very high waste levels in the blood. It indicates advanced kidney failure.

Uremic Pericarditis

Inflammation of the sac around the heart caused by severe kidney failure and buildup of waste products. It may cause sharp chest pain, a scratchy heart sound, or fluid around the heart; fluid can sometimes compress the heart and impair its pumping.

Uremic Platelet Dysfunction

Reduced ability of platelets to stick together and stop bleeding because of advanced kidney failure. It can cause easy bruising, nosebleeds, heavy menstrual bleeding, or bleeding from the stomach or bowel and may improve when the kidney failure is treated.

Uremic Pruritus

Persistent itching associated with chronic kidney disease (CKD), especially advanced disease. It is now commonly called CKD-associated pruritus (CKD-aP), since itching does not directly track with uremia. The cause is complex and may involve changes in the skin, nerves, immune system, and signaling pathways.

Alternate Names:
Chronic Kidney Disease-Associated Pruritus; CKD-Associated Pruritus; CKD-aP

Uremic Stomatitis

Inflammation of the mouth caused by severe kidney failure and buildup of waste products. It may cause a bad taste, mouth soreness, white patches, ulcers, or bleeding gums and tongue.

Ureter

One of two muscular tubes that carry urine from a kidney to the bladder. A stone or narrowing can block a ureter and cause severe side pain, swelling of the kidney, infection, or kidney damage.

Ureteral Calculi

Alternate name; see *Ureteral Stones*.

Ureteral Catheters

Thin tubes passed into a ureter to drain urine, inject contrast, measure pressure, or guide a procedure. Possible complications include infection, bleeding, a tear, movement of the tube, or blockage.

Ureteral Injury During Gynecologic Surgery

Damage to a ureter during pelvic surgery, including cutting, tying off, heat injury, loss of blood supply, or blockage. It may cause flank pain, urine leakage, kidney swelling, fever, or delayed kidney injury.

Ureteral Obstruction

Blockage of urine flow through a ureter, the tube from a kidney to the bladder. Stones, scar tissue, tumors, or pressure from nearby structures can cause it and may lead to kidney swelling, infection, or reduced kidney function.

Ureteral Orifice

One of the two openings where the ureters enter the bladder and release urine. The angled passage through the bladder wall helps reduce backward flow of urine toward the kidneys.

Ureteral Perforation

A tear or hole in the ureter, sometimes caused by a stone, trauma, surgery, or an endoscopic procedure. Urine may leak into surrounding tissues and cause pain, infection, or inflammation.

Ureteral Polyp

Usually a benign fibroepithelial growth arising from the ureter. It may cause hematuria, flank pain, or obstruction and must be distinguished from urothelial malignancy when evaluated.

Ureteral Reimplantation

Surgery that moves the lower end of a ureter to a new opening in the bladder. It may be used to correct urine flowing backward, blockage, injury, or an abnormal ureter entry.

Alternate Names:
Ureteroneocystostomy; Ureteral Neoimplantation

Ureteral Retrograde Brush Biopsy

A small brush passed through a thin camera into the ureter to collect cells from its lining. A laboratory examines the cells for cancer or other abnormal changes.

Ureteral Stenosis

Alternate name; see *Ureteral Stricture*.

Ureteral Stent

A thin tube placed inside the ureter to keep urine flowing from the kidney to the bladder when a stone, narrowing, tumor, or swelling blocks the passage. It can cause urinary urgency, discomfort, blood in the urine, infection, or mineral buildup and is usually temporary.

Ureteral Stones

Stones in a ureter, the tube carrying urine from a kidney to the bladder. They may cause wave-like side or groin pain, blood in the urine, nausea, blockage, or infection.

Ureteral Stricture

A scar-related narrowing of the ureter that can slow urine drainage and cause kidney swelling, side pain, infection, or reduced kidney function.

Ureter Duplex

A birth variation in which one kidney has two urine tubes instead of one. It may cause no problems but can lead to urine flowing backward, blockage, repeated infections, or poor drainage.

Ureter Fissus

A birth difference in which a ureter is divided lengthwise or partly duplicated. It may cause no symptoms, but abnormal urine flow can lead to urine reflux, blockage, repeated infection, or poor kidney drainage.

Ureteric Bud

An embryonic outgrowth of the mesonephric duct that branches within the metanephric mesenchyme. It forms the ureter, renal pelvis, calyces, and collecting ducts, which make up the kidney's collecting system. The surrounding metanephric mesenchyme forms the nephrons.

Alternate Names:
Metanephric Diverticulum

Ureteric Calculi

Alternate name; see *Ureteral Stones*.

Ureteric Colic

Severe, cramping pain caused by a stone moving through or blocking a ureter, the tube that carries urine from a kidney to the bladder. Pain often starts in the side or back and moves toward the lower abdomen or groin; blood in the urine, nausea, or vomiting may occur.

Alternate Names:
Ureteral Colic; Ureteral Calculus Pain

Ureteric Perforation

Alternate name; see *Ureteral Perforation*.

Ureteritis

Inflammation of the ureter, usually related to infection, obstruction, stone passage, instrumentation, or adjacent inflammatory disease. It may cause flank or abdominal pain, urinary symptoms, hematuria, and fever.

Ureter Obstruction

Alternate name; see *Ureteral Obstruction*.

Ureterocele

A balloon-like dilation of the lower ureter where it enters the bladder, usually congenital; it can obstruct urine flow and cause infection, hydronephrosis, reflux, stones, or impaired renal function.

Ureterolithiasis

Alternate name; see *Ureteral Stones*.

Ureteropelvic Junction Obstruction

A blockage where the kidney's urine-collecting area joins the ureter. It may be present from birth or develop later and can cause kidney swelling, side pain, infections, stones, or loss of kidney function.

Ureteroscope

A thin camera instrument passed through the urinary passage to examine the ureter and kidney. It can help remove stones, take tissue samples, or place a stent.

Ureteroscopes

Alternate name; see *Ureteroscope*.

Ureteroscopy

Ureteroscopy uses a small endoscope passed through the urinary tract to inspect, biopsy, or treat ureteral or kidney stones and other lesions.

Ureterostomy Procedure

Surgery that creates an opening from a ureter to the skin or another urinary conduit to divert urine when normal drainage to the bladder is impossible or must be bypassed.

Urethra

The tube that carries urine from the bladder out of the body. In people with male reproductive anatomy it also carries semen; the shorter urethra in people with female reproductive anatomy makes bladder infections more likely.

Urethra Disorder

A condition affecting the urethra, such as infection, inflammation, stricture, trauma, congenital abnormality, or tumor, that may cause pain, discharge, weak stream, or retention.

Urethral Cancer

Alternate name; see *Urethral Carcinoma*.

Urethral Carcinoma

A rare cancer arising from the urethra. It may cause bleeding, a lump, discharge, pain, or difficulty urinating.

Urethral Caruncle

A small, usually benign red growth at the opening of the urethra, most often seen after menopause. It may cause bleeding, tenderness, or pain during urination.

Alternate Names:
Benign Meatal Vascular Polyp

Urethral Catheter

A tube inserted through the urethra into the bladder to drain urine, obtain a specimen, instill medication, or monitor output. Urinary infection and urethral trauma are important risks.

Urethral Catheterization

The passage of a flexible catheter through the urethra into the urinary bladder; see *Urinary Catheterization*.

Urethral Discharge

Fluid or pus coming from the urethral opening.

It may result from urethritis, including a sexually transmitted infection, but can also follow irritation or injury.

Urethral Diverticulum

A pocket beside the urethra that connects with the urine tube, often developing after infection or blockage of nearby glands. It may cause burning urination, urine dribbling after voiding, repeated infections, pain during sex, or a vaginal-wall lump.

Urethral Fistula

An abnormal channel between the urethra and another epithelial surface, often the vagina or skin. It can cause continuous urine leakage, recurrent infection, and local irritation.

Urethral Hypermobility

Excessive movement of the urethra when abdominal pressure rises, contributing to urine leakage during coughing, lifting, or exercise.

Urethral Infection

Infection involving the urethra, commonly caused by bacteria, including sexually transmitted organisms. Symptoms may include burning urination, discharge, frequent urination, or pelvic discomfort.

Urethral Injury

Alternate name; see *Urethral Trauma*.

Urethral Meatus

The external opening of the urethra through which urine leaves the body. Its position may be abnormal in conditions such as hypospadias or epispadias.

Urethral Obstruction

Partial or complete blockage of urine leaving the bladder, often from stricture, stone, prostate disease, tumor, or a congenital valve. Acute retention can damage the bladder or kidneys.

Urethral Pressure Profile

A test using a small catheter to measure pressure along the urethra and assess how well it closes. It may help investigate certain types of urine leakage or difficulty emptying the bladder.

Urethral Prolapse

Protrusion of the inner lining of the urethra through its opening. It may appear as a red ring of tissue and can cause bleeding, pain, or difficulty urinating; it occurs most often in young children and after menopause.

Alternate Names:
Urethral Mucosal Prolapse; Meatal Eversion

Urethral Sling

A strip of synthetic material or the person's own tissue placed beneath the urethra to support it and reduce urine leakage during coughing, lifting, or exercise. Possible complications include urgency, difficulty urinating, infection, or erosion.

Urethral Sphincter

Muscles around the urine tube that help keep urine from leaking and relax when a person urinates. Nerve or muscle damage can weaken control and cause leakage or difficulty emptying the bladder.

Urethral Stenosis

Alternate name; see *Urethral Stricture*.

Urethral Stent

A small tube placed inside the urethra to help keep a narrowed or blocked segment open and allow urine to pass. Migration, blockage, infection, pain, or tissue injury can occur.

Urethral Stricture

A narrowing of the urethra, the tube that carries urine out of the body, usually caused by scar tissue. The narrowing can slow or block urine flow and may cause a weak or spraying stream, straining, pain with urination, dribbling, or incomplete bladder emptying. It can lead to repeated urinary infections, urinary retention, and, if severe or prolonged, damage to the bladder or kidneys. Causes include injury, infection, surgery, radiation, or previous use of a catheter or other instrument; sometimes no cause is found.

Urethral Syndrome

An older term for urethral pain syndrome, a pattern of recurrent pain felt in the urethra, usually during urination and sometimes with daytime frequency or nighttime urination, when no infection or other obvious local cause is found. The term is no longer recommended because it does not identify a specific cause.

Urethral Trauma

Injury to the urethra caused by a pelvic fracture, blunt or penetrating trauma, or medical instrumentation. It may cause bleeding at the urethral opening, difficulty passing urine, bruising, or leakage of urine into nearby tissues.

Urethritis

Inflammation of the urethra, often caused by infection, including sexually transmitted infections, but sometimes by irritation or injury. It can cause burning urination, itching, pelvic discomfort, or discharge.

Urethrocele

Prolapse of the urethra into the front wall of the vagina. It may cause a vaginal bulge, pelvic pressure, urine leakage, or difficulty emptying the bladder, but can also cause no symptoms.

Urethrography

An X-ray test in which contrast liquid outlines the urethra, the tube carrying urine out of the body. It can show narrowing, leaks, injury, abnormal connections, or birth differences.

Urethroplasty

Surgery that rebuilds or widens the urine tube, most often to treat a narrowing called a stricture. It may use nearby tissue or a graft and aims to improve urine flow.

Urethroscopy

Examination of the urethra with a thin camera passed through its opening. It can identify narrowing, injury, inflammation, stones, tumors, or other abnormalities and may allow treatment during the same procedure.

Urge Incontinence

Leakage of urine that happens with or just after a sudden, hard-to-delay need to urinate. It may occur with overactive bladder, infection, bladder irritation, nerve disease, or other conditions.

Alternate Names:
Urgency Urinary Incontinence

Urgency

A sudden, difficult-to-delay need to urinate. It may result from a urinary infection, bladder irritation, overactive bladder, a stone, nerve disease, prostate enlargement, or pelvic-floor problems.

Urge Urinary Incontinence

Alternate name; see *Urge Incontinence*.

Uric Acid

A waste product formed when the body breaks down purines. High blood levels can cause gout or kidney stones, although many people with high levels have no symptoms.

Uric Acid Nephrolithiasis

Formation or presence of kidney stones made mainly of uric acid. They form more readily when urine is persistently acidic and may not show on a plain X-ray, though they can be seen on CT.

Alternate Names:
Uric Acid Calculi

Uric Acid Nephropathy

Kidney injury caused when too much uric acid forms crystals in the kidney's small tubes. It can occur during rapid breakdown of cancer cells or severe uric-acid excess.

Uric Acid Stones

Stones composed mainly of uric acid that form in the kidney or elsewhere in the urinary tract. They form more readily in persistently acidic urine and may be associated with gout, high uric acid levels, or chronic diarrhea.

Uric Acid Urine Test

A urine test measuring uric acid excretion, used in evaluation of gout, kidney stones, uric-acid overproduction, and selected metabolic disorders.

Uricosuria

Excretion of uric acid in urine. The amount depends on uric-acid production, diet, kidney handling, and medicines. Excess urinary uric acid, called hyperuricosuria, can contribute to uric acid or calcium oxalate stones and may be assessed with a timed urine collection.

Uricosuric Drug

A medicine that increases renal excretion of uric acid, such as probenecid, used in selected patients with gout.

Uridine Triacetate

An oral prodrug that supplies uridine and is used as an emergency antidote for severe or life-threatening toxicity from fluorouracil or related fluoropyrimidines, under specialist direction.

Urinal

A portable container used to collect urine from someone who cannot easily reach a toilet. It is used in bed or beside a chair and can be designed for different body types.

Urinalysis

Laboratory examination of urine for its appearance, acidity, blood, cells, protein, sugar, ketones, bacteria, and other substances. It can provide clues to infection, kidney disease, bleeding, diabetes, dehydration, and other illness.

Urinary

Relating to urine or to the organs and processes involved in making, storing, and passing urine, including the kidneys, ureters, bladder, and urethra.

Urinary Anion Gap

A calculated value—urine sodium plus potassium minus chloride—used as an indirect estimate of urinary ammonium excretion. It can help assess the renal response to metabolic acidosis, but does not directly measure ammonium or identify the cause of the acidosis.

Alternate Names:
UAG

Urinary Bladder

A hollow muscular organ in the lower abdomen that stores urine until it is released through the urethra.

Urinary Bladder Disorder

A disease affecting bladder storage or emptying, including infection, overactivity, pain syndrome, stones, tumor, neurologic dysfunction, or outlet obstruction.

Urinary Bladder Squamous Cell Carcinoma Pathology

An invasive malignant squamous neoplasm of the bladder showing keratinization, intercellular bridges, or both. It may be associated with chronic irritation, infection, stones, or schistosomiasis and is assessed for depth of invasion.

Urinary Calculi

Hard deposits formed when substances in urine crystallize and aggregate in the kidneys, ureters, bladder, or urethra. Composition varies and may include calcium salts, uric acid, struvite, or cystine. Some pass without symptoms; others can cause renal colic, blood in urine, obstruction, infection, or kidney injury, depending on their size and location.

Urinary Casts

Small tube-shaped particles formed inside kidney tubules and passed in urine. Their appearance can provide clues about kidney inflammation, bleeding, infection, or damage.

Urinary Catheter

A sterile, flexible hollow tube constructed of latex, silicone, or polyurethane inserted percutaneously or through the urethra into the urinary bladder to facilitate urinary drainage, bladder decompres-

sion, urinary output monitoring, or instillation of therapeutic agents. Types include indwelling Foley catheters (retained via an inflated balloon), intermittent straight catheters, external condom catheters, and suprapubic catheters. Prolonged indwelling catheterization represents the principal risk factor for catheter-associated urinary tract infections (CAUTI), bladder spasms, and urethral strictures.

Alternate Names:
Urinary Catheters; Foley Catheter; Indwelling Catheter

Urinary Catheterization

Insertion of a tube into the bladder to drain urine, measure output, obtain a specimen, or deliver treatment; infection, trauma, and blockage are possible complications.

Urinary Catheters

Plural form; see *Urinary Catheter*.

Urinary Diversion

Surgical or catheter-based rerouting of urine when the normal passage from the kidneys to the urethra cannot be used, often to a stoma or bowel reservoir.

Urinary Fistula

An abnormal connection between part of the urinary tract and another organ or the skin, allowing urine to leak outside its normal pathway. Causes include surgery, childbirth injury, inflammation, and cancer.

Urinary Frequency

The need to urinate more often than usual, which may result from infection, bladder irritation, increased urine production, or other urinary disorders.

Urinary Hesitancy

Alternate name; see *Urinary Hesitation*.

Urinary Hesitation

A delay or difficulty starting urination after a person is ready to void. Causes include prostate enlargement, urethral narrowing, medicines, pain, nerve disorders, or weak bladder contraction. Hesitancy is a symptom rather than a diagnosis; accompanying stream changes or incomplete emptying help characterize it.

Urinary Incontinence

Unwanted leakage of urine. It may happen with coughing or exercise, a sudden strong urge, an overfull bladder, difficulty reaching the toilet, or nerve and muscle problems. More than one pattern may occur in the same person.

Alternate Names:
Loss of Bladder Control

Urinary Lithiasis

Alternate name; see *Urolithiasis*.

Urinary Retention

Inability to empty the bladder fully. It may be sudden and painful or develop gradually with a weak stream, frequent small amounts of urine, or leakage from an overfull bladder. Blockage, medicines, nerve problems, or weak bladder muscles can cause it.

Urinary Retraining

Scheduled toilet visits and bladder-control techniques used to reduce urgency, frequent urination, or leakage. It may include gradually extending the time between urination and practicing ways to delay an urge.

Urinary Stasis

Slowing or stopping of normal urine flow, which can promote urinary infection, stone formation, or obstruction-related kidney injury.

Urinary System

The kidneys, ureters, bladder, and urethra. Together they filter blood, make and transport urine, store and remove it, and help regulate fluid volume, electrolytes, acid-base balance, blood pressure, and hormone-related functions such as red-cell production.

Urinary Tract

The kidneys, ureters, bladder, and urethra. To-

gether these organs make urine, carry it to the bladder, store it, and remove it from the body.

Urinary Tract Disorder

Any disease of the kidneys, ureters, bladder, or urethra, including infection, stones, obstruction, congenital abnormalities, cancer, and functional or neurologic disorders.

Urinary Tract Imaging

Imaging tests used to examine the kidneys, ureters, bladder, and urethra. Methods include ultrasound, X-ray studies, computed tomography, magnetic resonance imaging, and nuclear scans, chosen according to the suspected problem.

Urinary Tract Infection

An infection affecting any part of the urinary system, most commonly involving the bladder (cystitis) or the kidneys (pyelonephritis). It usually occurs when bacteria from the digestive tract enter the urethra and travel upward into the urinary tract. A bladder infection classically causes a burning sensation during urination, frequent and urgent needs to urinate, cloudy or strong-smelling urine, and lower abdominal discomfort, while an infection that spreads to the kidneys can cause fever, chills, nausea, and severe back or side pain.

Alternate Names:
UTI; Cystitis; Pyelonephritis; Bladder Infection

Urinary Tract Infection In Adults

A urinary infection in an adult involving the bladder, urethra, kidneys, or another part of the urinary tract. Symptoms vary by site and may include painful urination, frequency, urgency, blood in the urine, fever, or flank pain.

Urinary Tract Infection In Children

A urinary infection in a child involving the bladder, kidneys, ureters, or urethra. Symptoms may include fever, painful or frequent urination, new wetting, abdominal or back pain, vomiting, or unusual irritability.

Alternate Names:
Pediatric UTI

Urinary Tract Infection In Pregnancy

A term covering asymptomatic bacteriuria and symptomatic infection of the urinary tract during pregnancy, including bladder or kidney infection. Kidney infection can cause serious maternal and fetal complications.

Urinary Tract Infections in Pregnancy

Alternate name; see *Urinary Tract Infection In Pregnancy*.

Urinary Tract Infection (UTI)

Alternate name; see *Urinary Tract Infection*.

Urinary Tract Neoplasm

A benign or malignant growth in the kidneys, ureters, bladder, or urethra; evaluation depends on its site, symptoms, tissue type, and extent of spread.

Urinary Tract Obstruction

A blockage that slows or stops urine flow anywhere from the kidneys to the urethral opening. It can cause urine to back up, kidney injury, or infection.

Urinary Tract Trauma

Injury to one or more parts of the urinary tract—the kidneys, ureters, bladder, or urethra—caused by a blow, crash, fall, or penetrating wound. It may cause blood in the urine, pain, difficulty urinating, urine leakage, or internal bleeding. The effects depend on which part is injured and how badly.

Urinary Urgency

A sudden, difficult-to-delay need to urinate. It may occur with urinary infection, bladder irritation, overactive bladder, stones, neurologic disease, or other conditions.

Urination

The process of releasing urine from the bladder through the urethra and out of the body.

Alternate Names:
Micturition; Voiding

Urination Disorder

Abnormal storage or emptying of urine causing frequency, urgency, dysuria, incontinence, hesitancy, weak stream, retention, or excessive or reduced urine output.

Urine

The liquid waste produced by the kidneys, containing water and dissolved substances eliminated from the blood.

Urine 24-Hour Volume

Twenty-four-hour urine volume is the total urine produced in a day and helps assess hydration, kidney function, endocrine disease, or abnormal urine production.

Urine Albumin-to-Creatinine Ratio

A urine test comparing albumin to creatinine concentration in a single sample to detect early kidney damage and microalbuminuria; see *Albumin-To-Creatinine Ratio*.

Urine Albuminuria

Alternate name; see *Albuminuria*.

Urine Alkalinization

Treatment that makes urine less acidic, usually with a carefully monitored medicine, to help remove certain poisons such as salicylate. It can disturb body salts or fluid balance and is used only for selected cases.

Urine Amylase Test

A urine test that measures the amount of amylase passed from the body. It may help assess pancreatitis, salivary-gland problems, or unusually high amylase levels in the blood.

Alternate Names:
Urine Amylase; Urinary Amylase Test; Amylase Urine Test

Urine Analysis

Alternate name; see *Urinalysis*.

Urine Bilirubin Test

A urine test that detects conjugated (water-soluble) bilirubin. A positive result can occur with liver or bile-duct disease; unconjugated bilirubin does not normally pass into urine.

Alternate Names:
Urine Bilirubin; Urinary Bilirubin Test

Urine Calcium Test

A diagnostic urinalysis quantifying urinary calcium excretion, typically measured in a 24-hour urine collection. It is utilized in the evaluation and metabolic workup of nephrolithiasis, hyperparathyroidism, osteomalacia, and idiopathic hypercalciuria.

Alternate Names:
Urinary Calcium; 24-Hour Urine Calcium; Urine Calcium Excretion

Urine Catecholamine Test

A urine test that measures catecholamines or their breakdown products. It may help assess certain hormone-producing tumors, such as pheochromocytoma or paraganglioma; tests of metanephrines are commonly preferred for these tumors.

Alternate Names:
24-Hour Urine Catecholamines; Urinary Catecholamines; Fractionated Urinary Catecholamines

Urine Chemistry

Measurement of chemical constituents in urine, such as glucose, protein, electrolytes, ketones, blood, and pH, to evaluate kidney function and systemic disease.

Urine Chloride Test

A test that measures chloride in urine. The result can help evaluate fluid and electrolyte disorders, including some causes of metabolic alkalosis, but must be interpreted with the clinical context and other laboratory results.

Alternate Names:
Urinary Chloride; Urine Chloride Excretion; Spot Urine Chloride

Urine Concentration Test

A test of the kidney's ability to concentrate urine, assessed by urine osmolality or specific gravity after controlled fluid conditions when appropriate.

Urine Conductivity

Urine conductivity measures how readily urine carries electrical current and reflects its dissolved electrolyte and solute concentration.

Urine Culture

A laboratory test that grows microorganisms from a urine specimen to identify urinary-tract infection and guide antimicrobial selection. Results may report the organism, quantity of growth, and antimicrobial susceptibility. Contamination can produce misleading growth, and bacteria may be present without causing symptoms.

Urine Cytology

Microscopic examination of cells shed into urine, mainly used to help detect high-grade urothelial carcinoma and some other abnormalities. A negative result does not exclude all urinary-tract cancers.

Urine Dipstick

A strip placed in urine that changes color to screen for findings such as blood, protein, sugar, ketones, and signs of infection. Results are preliminary and can be affected by urine concentration, medicines, and contamination.

Urine Drainage Bag

A bag connected to a urinary catheter or diversion to collect urine.

Urine Electrolytes Test

A test measuring electrolytes, such as sodium, potassium, and chloride, in urine. Results can help assess kidney handling of electrolytes and contribute to evaluation of fluid, electrolyte, and acid-base disorders.

Alternate Names:
Urinary Electrolytes; Spot Urine Electrolytes; 24-Hour Urine Electrolytes

Urine Formation

The process by which the kidneys make urine: they filter blood, return needed water and substances to the body, and add selected wastes and extra ions to the fluid that leaves as urine.

Urine HCG Test

A urine test that detects human chorionic gonadotropin (hCG), a hormone usually produced during pregnancy. Testing too early or using diluted urine can give a false-negative result; a positive result usually indicates pregnancy but does not show its location or viability.

Alternate Names:
Urine hCG Test

Urine Hemoglobin

Free hemoglobin in urine, usually from breakdown of red blood cells within the circulation. A urine dipstick detects heme and can also be positive from intact red blood cells or myoglobin, so microscopy and other findings help distinguish these causes.

Urine Immunoelectrophoresis

A laboratory test that separates urine proteins and uses antibodies to identify specific proteins, including monoclonal immunoglobulins or light chains.

Alternate Names:
Urine IEP; Urinary Protein Immunoelectrophoresis

Urine Immunofixation

A laboratory test that uses electrophoresis and antibodies to identify specific proteins in urine, especially monoclonal immunoglobulins or light chains.

Alternate Names:
Urine IFE; Urinary Immunofixation Electrophoresis; Bence Jones Protein IFE

Urine Osmolality

A measure of how concentrated urine is. It reflects the kidneys' ability to conserve or remove water and varies with fluid intake, medicines, kidney function, and blood chemistry.

Urine pH

A measurement of urine acidity or alkalinity. It varies with diet, metabolism, medicines, infection, and kidney function and can influence the formation of some urinary stones.

Urine PH Test

Alternate name; see *Urine pH*.

Urine Protein Dipstick Test

A screening test using a reagent strip to detect mainly albumin in urine; positive results may reflect persistent protein loss or temporary changes such as fever or exercise.

Urine Protein Electrophoresis Test

A laboratory test that separates urine proteins by electrical charge and size to help detect abnormal proteins, including monoclonal light chains associated with plasma-cell disorders.

Urine Protein Test

A urine test that detects or quantifies protein in the urine, an early indicator of kidney disease; see *Urine Protein Dipstick Test*.

Urine Retention

Alternate name; see *Urinary Retention*.

Urine Sediment

The cells, crystals, casts, and other particles seen under a microscope after urine is concentrated. Their appearance can provide clues to bleeding, infection, stones, or kidney inflammation.

Urine Sodium

The amount of sodium in urine. It can help assess fluid balance and kidney handling of salt, but results are strongly affected by diet, medicines, hydration, and the timing of the sample.

Urine Specific Gravity Test

A test comparing the density of urine with the density of water. It gives a rough estimate of how concentrated the urine is and can help assess hydration and the kidneys' ability to conserve water.

Urine Toxicology

Laboratory analysis of urine for medicines, drugs, or their metabolites. Results require interpretation because detection does not always establish impairment or the timing of exposure.

Urinoma

A collection of urine that has leaked into tissues around the kidney or urinary tract, usually because of an injury, blockage, or medical procedure. It may cause pain, swelling, infection, or pressure on nearby structures; treatment may involve drainage or repair.

Alternate Names:
Urine Pseudocyst

Urinometer

An instrument that measures how dense urine is compared with water. The result gives an estimate of urine concentration and may help assess hydration or the kidney's ability to conserve water.

URI (Upper Respiratory Infection)

Abbreviation; see *Upper Respiratory Tract Infection*.

Urobilinogen

A colourless product formed in the intestine from bilirubin and partly reabsorbed and excreted in urine; abnormal levels may provide clues to liver disease or haemolysis.

Urodynamics

A group of tests that measures how the bladder stores urine, how pressure changes as it fills, and how the urethra and bladder release urine. It helps investigate leakage, urgency, weak stream, or difficulty emptying when simpler tests are inconclusive.

Urodynamic Testing

Alternate name; see *Urodynamics*.

Uroflow

A test that measures how quickly and steadily urine leaves the body during urination. The result can suggest blockage, weak bladder muscles, or other emptying problems, but it is interpreted with symptoms and sometimes additional tests.

Uroflowmetry

A noninvasive test that measures the rate and pattern of urine flow during urination. Results can suggest blockage or weak bladder contraction but are interpreted with symptoms and other findings.

Urogenital

Relating to the urinary and reproductive systems or structures involving both. The term may describe organs, infections, cancers, birth conditions, injuries, symptoms, tests, or treatments affecting these closely connected body systems.

Urogenital Fistula

An abnormal connection between the urinary and genital tracts, such as a vesicovaginal or ureterovaginal fistula. It commonly causes continuous urinary leakage and may result from childbirth injury, surgery, radiation, or cancer.

Urogenital Sinus

A birth-related abnormality in which the urethra and vagina join into a common channel before reaching the outside of the body. It may occur with differences in the external genitalia, urinary tract, or reproductive organs.

Urogenital System

The related urinary and reproductive organs and their associated ducts, vessels, and supporting tissues. The systems share developmental origins and anatomic relationships.

Urogenital Tract

The combined urinary and reproductive organs and passages. These include kidneys, urine tubes, bladder, urethra, reproductive organs, and connected structures that develop partly from related tissues before birth.

Urography

Imaging of the urinary tract, traditionally using X-rays after contrast dye is given. It can show the kidneys, urine tubes, bladder, narrowing, stones, leaks, blockage, or other structural problems.

Urokinase

A plasminogen activator produced by the body and also used as a thrombolytic medicine to help dissolve blood clots.

Urolithiasis

The formation or presence of hard mineral deposits (calculi or stones) anywhere within the urinary system, including the kidneys, ureters, or bladder. Stones develop when urine contains high levels of dissolved minerals—such as calcium, oxalate, or uric acid—and too little liquid, allowing crystals to stick together and grow. While small stones may pass out of the body unnoticed in urine, larger stones moving into the narrow ureter can cause sudden, excruciating flank pain that radiates to the lower abdomen and groin, along with blood in the urine, nausea, and painful urination.

Alternate Names:
Nephrolithiasis; Kidney Stones; Renal Calculi; Urinary Calculi

Urologic Diagnostic Yield

The proportion of tests or procedures in urology that produce a diagnostic result.

Urologist

A doctor who specializes in the urinary system and, in many practices, the male reproductive system. Urologists diagnose and treat kidney stones, infections, urine leakage, prostate problems, cancers, infertility, and conditions requiring procedures or surgery.

Urology

The medical and surgical specialty concerned with the urinary tract in all sexes and the male reproductive system. It includes diseases of the kidneys, ureters, bladder, urethra, prostate, and testes, as well as urinary stones, cancers, and disorders of

urination.

Uropathy

Disease or damage affecting the kidneys or urinary tract. Blockage, infection, stones, urine flowing backward, medicines, and other conditions can cause it and may reduce kidney function.

Urosepsis

Sepsis caused by infection in the urinary tract, often involving the kidneys. It is life-threatening organ dysfunction caused by a dysregulated response to infection and may progress to septic shock.

Urostomy

A surgically created opening that diverts urine from the urinary tract through the abdominal wall into an external pouch or appliance. It may be formed with a segment of intestine after bladder removal or when normal urinary drainage is not possible.

Urostomy Leak

Escape of urine beneath or around a urostomy appliance or from a surgical connection. Persistent leakage can irritate the skin and may signal poor appliance fit, obstruction, infection, or a surgical complication.

Urostomy Procedure

Surgery that diverts urine through a stoma into an external pouch or conduit, commonly after bladder removal or when the lower urinary tract cannot safely transport urine.

Urostomy Prolapse

Protrusion of a segment of bowel used as a urostomy stoma beyond its usual level. It may cause bleeding, swelling, appliance problems, or impaired urine drainage; severe prolapse can impair blood flow to the bowel segment.

Urostomy Stenosis

Narrowing of a urinary stoma or conduit that impedes drainage, causing reduced urine output, leakage, infection, or kidney-pressure changes and sometimes requiring revision.

Urothelial Carcinoma

A cancer arising from the stretchable lining of the urinary tract, most often the bladder but also the kidney's drainage area, ureters, or urethra. Blood in the urine is common, and treatment depends on location, depth, grade, and spread.

Urothelium

A specialized stretchable lining of the renal pelvis, ureters, bladder, and part of the urethra. It forms a protective barrier between urine and underlying tissues and allows the bladder to expand.

Urotrauma

Injury to the urinary or genital organs, including the kidneys, ureters, bladder, urethra, or external genitalia. It may result from blunt force, penetrating wounds, fractures, surgery, or medical instruments.

Ursodeoxycholic Acid

A hydrophilic bile acid used for primary biliary cholangitis and selected cholestatic liver diseases; it may also dissolve certain small cholesterol gallstones when bile flow is preserved.

Urticaria

Commonly known as hives, a common skin reaction characterized by the sudden appearance of itchy, raised, red or skin-colored welts (wheals). It occurs when specialized immune cells in the skin (mast cells) release histamine and other inflammatory chemicals, causing tiny blood vessels to widen and leak fluid into the surrounding tissue. Hives can be triggered by allergic reactions to foods, medications, insect stings, viral infections, physical pressure, or stress, and individual welts typically appear, shift, and fade within 24 hours without leaving scars.

Alternate Names:
Hives; Nettle Rash; Wheals

Urticaria And Angioedema

The simultaneous occurrence of urticaria, with transient itchy wheals, and angioedema, with deeper swelling of the skin or mucosa. The combination

commonly reflects histamine-mediated inflammation, although the two findings can also occur separately.

Urticarial Vasculitis

Inflammation of small blood vessels in the skin that causes hive-like patches, with individual lesions usually lasting more than 24 hours. Unlike common hives, the patches may burn or hurt and can leave bruise-like discoloration or dark marks as they fade. The disease may affect only the skin; some people, especially those with low blood levels of complement proteins, also develop joint, kidney, lung, or other organ problems.

Urticaria Multiforme

A short-lived form of acute urticaria in children, also called acute annular urticaria. It causes annular or polycyclic itchy wheals, often with swelling of the hands, feet, or face. Individual wheals are transient, unlike the fixed target lesions of erythema multiforme.

Urticaria Pigmentosa

An older name for maculopapular cutaneous mastocytosis, a condition in which mast cells collect in the skin and form tan or brown spots or bumps that may swell and itch when rubbed. Some people also have symptoms from mast-cell chemicals released elsewhere in the body.

Usher Syndrome

An inherited condition causing hearing loss together with gradually worsening vision from retinal disease. The age and severity vary by type; some forms also affect balance.

Ustekinumab

A biologic medicine that blocks immune signals involved in inflammation. It is used for psoriasis, psoriatic arthritis, Crohn disease, ulcerative colitis, and other approved conditions; infections and allergic reactions are important risks.

Usual Ductal Hyperplasia

A benign increase in the number of cells lining the breast ducts. The cells look close to normal, unlike the abnormal cells in atypical ductal hyperplasia; it is associated with a slight increase in breast cancer risk.

Usual Interstitial Pneumonia

A pattern of permanent scarring in the lungs, often seen in idiopathic pulmonary fibrosis. Scarring is usually greatest near the outer and lower parts of the lungs and can form small spaces called honeycombing. It causes increasing breathlessness and cough and is assessed with lung tests and CT imaging.

Usual Interstitial Pneumonia Pathology

A patchy, temporally heterogeneous interstitial fibrosing pattern with subpleural or paraseptal fibrosis, fibroblastic foci, architectural distortion, and honeycomb change. It is a characteristic pattern of idiopathic pulmonary fibrosis but can occur in other conditions.

Ut Dict.

An abbreviation of the Latin phrase “ut dictum,” meaning “as stated” or “as directed.” In medical notes it refers the reader to information already given or to an instruction previously specified.

Uterine Adnexae

The structures beside and connected to the uterus, mainly the fallopian tubes, ovaries, and supporting tissues. Problems in these structures can cause pelvic pain, abnormal bleeding, infertility, or an ectopic pregnancy.

Uterine Adhesions

Alternate name; see *Intrauterine Adhesions*.

Uterine Arteriovenous Malformation

A rare abnormal set of blood vessels in the uterus, with direct connections between arteries and veins. It may be present from birth; similar abnormal connections that develop after pregnancy or uterine procedures are also sometimes called acquired malformations, though terminology varies. These lesions can cause severe vaginal bleeding.

Uterine Artery Aneurysm

A rare bulge or abnormal widening in the wall of an artery that supplies the uterus. A true aneurysm involves the artery wall, while a pseudoaneurysm is a leak contained by nearby tissue, often after childbirth or a procedure. Rupture can cause severe internal or vaginal bleeding.

Uterine Artery Embolization

A minimally invasive procedure in which particles or another material are delivered through a catheter to block selected blood flow in the uterine arteries. It is used mainly to shrink fibroids and can also control severe bleeding after childbirth; possible effects include pain, infection, and changes in fertility or pregnancy outcomes.

Uterine Atony

Failure of the uterus to contract effectively after childbirth, which can cause heavy postpartum bleeding. It is the most common cause of postpartum hemorrhage.

Alternate Names:
Postpartum Uterine Atony

Uterine Atrophy

A reduction in the overall size or thickness of the uterus, which may involve its lining, muscular wall, or both. It can occur when estrogen levels fall, including after menopause, or after some treatments. Endometrial atrophy refers specifically to thinning of the uterine lining.

Uterine Balloon Tamponade

A treatment for severe bleeding after childbirth when medicines do not control bleeding. A soft balloon is placed inside the uterus and filled with sterile fluid to press against the uterine wall and slow or stop blood loss while other treatment is arranged.

Uterine Bleeding

Bleeding from the uterus outside the expected menstrual pattern or in an abnormal amount. Causes include pregnancy complications, fibroids, polyps, hormonal changes, medicines, infection, and cancer; heavy or postmenopausal bleeding can have an underlying medical cause.

Uterine Cancer

Cancer arising in the uterus, most commonly from the endometrium. It may cause abnormal vaginal bleeding, bleeding after menopause, pelvic pain, or unusual discharge.

Uterine Carcinosarcoma

An uncommon, aggressive cancer of the uterus with cells that look like both gland-lining cancer cells and connective-tissue cancer cells. It may cause vaginal bleeding, pelvic pain, or an enlarging mass, but some cases cause no early symptoms. Diagnosis is made by examining a tissue sample.

Uterine Cavity

The hollow space inside the uterus, lined by the endometrium. A fertilized egg normally implants in this lining, which thickens during the menstrual cycle and supports pregnancy; polyps, fibroids, scar tissue, or abnormal shape may affect it.

Uterine Compression Suture

A stitch placed around the uterus to press its walls together and control severe bleeding after childbirth when the uterus does not contract well. The B-Lynch suture is one example; other compression-suture techniques are also used.

Alternate Names:
Uterine Bracing Suture

Uterine Contraction

Tightening of the uterine muscle. Contractions occur during menstruation and labor and may also occur at other times, including as irregular practice contractions in pregnancy. Their timing, strength, and pattern vary with the cause.

Uterine Diseases

Conditions affecting the womb, including fibroids, adenomyosis, endometriosis, infection, unusual bleeding, prolapse, and cancer. Symptoms may include pain, heavy periods, infertility, pressure, discharge, or bleeding after menopause.

Uterine Fibroid

A non-cancerous (benign) growth of smooth muscle and fibrous connective tissue that develops in the muscular wall of the uterus (womb). Very common in women during their reproductive years, fibroids vary in size from undetectable tiny seedlings to large bulky masses that can enlarge and distort the shape of the uterus. While many cause no symptoms, larger or strategically located fibroids can cause heavy or prolonged menstrual bleeding, pelvic pressure or aching, frequent urination, and difficulty conceiving.

Alternate Names:
Uterine Fibroids; Uterine Leiomyoma; Uterine Leiomyomas; Myoma; Fibromyoma

Uterine Fibroid Embolization

Alternate name; see *Uterine Artery Embolization*.

Uterine Fibroids

Plural form; see *Uterine Fibroid*.

Uterine Fibroids (Leiomyomas)

Alternate name; see *Uterine Fibroid*.

Uterine Fistula

A uterine fistula is an abnormal passage connecting the uterus with another organ or the skin, often after surgery, childbirth injury, infection, or cancer.

Uterine Fornix

One of the shallow spaces at the top of the vagina surrounding the cervix. A clinician can examine these spaces during a pelvic examination, and selected procedures may use them as an access route.

Uterine Gland

A small gland in the lining of the uterus that produces fluid and helps support the early embryo. Its activity changes during the menstrual cycle and pregnancy.

Uterine Growths

Abnormal masses in or on the uterus, most commonly benign fibroids or endometrial polyps and less commonly cancer. They may cause heavy or irregular bleeding, pelvic pressure, pain, or fertility problems, but some cause no symptoms. Adenomyosis is a different condition in which tissue like the uterine lining grows into the muscular wall; it is not a uterine growth.

Uterine Hemorrhage

Heavy or abnormal bleeding from the uterus, occurring during pregnancy, after childbirth, or at other times. Causes include pregnancy complications, fibroids, hormonal disorders, and malignancy; severe bleeding with dizziness or weakness is an emergency.

Uterine Hematometra

Alternate name; see *Hematometra*.

Uterine Inversion

A rare, life-threatening complication of childbirth in which the uterus turns partly or completely inside out and may protrude into or beyond the vagina. It can cause severe bleeding, shock, and intense pain. Treatment restores the uterus and controls blood loss.

Uterine Infertility Factors

Structural or functional conditions of the uterus that may reduce the chance of an embryo attaching to the uterine lining or of carrying a pregnancy. Examples include fibroids that distort the uterine space, endometrial polyps, scar bands, differences in uterine shape present from birth, and disorders of the lining. These factors do not always cause infertility.

Uterine Leiomyoma

Alternate name; see *Uterine Fibroid*.

Uterine Leiomyomas

Plural form; see *Uterine Fibroid*.

Uterine Leiomyosarcoma

A rare malignant tumor of uterine smooth muscle that may cause abnormal bleeding, pelvic pain, or an enlarging mass; diagnosis is based on tissue

examination and staging.

Uterine Monitoring

Recording how often and how long the uterus contracts during labor. Contraction strength may be estimated by touch or measured with a pressure sensor inside the uterus; monitoring helps assess labor patterns and the response to labor medicines.

Uterine Myomectomy

Surgical removal of uterine fibroids while preserving the uterus; it may be performed through hysteroscopy, laparoscopy, or open surgery depending on fibroid size and location.

Uterine Obstruction

Blockage that prevents normal passage through the uterus or cervix, which may cause menstrual outflow obstruction, infertility, pregnancy complications, or retained blood or tissue.

Uterine Perforation

A hole through the wall of the uterus, most often caused by an instrument used during a procedure such as hysteroscopy or removal of uterine tissue. It can cause internal bleeding or injury to nearby organs and may need repair.

Uterine Polyp

A growth from the lining of the uterus that sticks into its inner space. Most are not cancer. They may cause irregular or heavy bleeding, bleeding after menopause, or difficulty becoming pregnant, but often cause no symptoms. Some contain precancerous or cancer cells.

Alternate Names:
Uterine Polyps; Endometrial Polyp; Endometrial Polyps; Intrauterine Polyp; Intrauterine Polyps

Uterine Polyps

Alternate name; see *Uterine Polyp*.

Uterine Prolapse

Descent of the uterus toward or through the vaginal opening because pelvic-floor muscles and supporting tissues have weakened. It may cause pelvic pressure, a bulge, backache, urinary or bowel problems, or discomfort during sex; childbirth and aging increase risk.

Alternate Names:
Descensus Uteri; Uterine Herniation

Uterine Pyometra

Alternate name; see *Pyometra*.

Uterine Rupture

A full-thickness tear of the uterine wall that occurs in late pregnancy before labor or during labor. It most often involves a prior uterine surgical scar, especially after cesarean delivery or myomectomy, but can occur in an unscarred uterus. It may cause severe maternal hemorrhage and compromise fetal oxygen supply. Unlike scar dehiscence, complete rupture extends through the outer uterine layer.

Uterine Rupture in Pregnancy

Alternate name; see *Uterine Rupture*.

Uterine Sarcoma

Uterine sarcoma is a rare malignant tumor arising from uterine muscle, connective tissue, or related cells and may cause bleeding, pain, or an enlarging mass.

Uterine Septum

Alternate name; see *Septate Uterus*.

Uterine Tachysystole

More than five uterine contractions in 10 minutes, averaged over a 30-minute period during labor. The pattern is assessed together with the fetal heart rate because frequent contractions can be associated with fetal heart-rate changes.

Uterine Tube

A paired muscular tube that carries an egg from the ovary toward the uterus and is the usual site of fertilization.

Alternate Names:
Fallopian Tube; Oviduct

Uterine Tumors

Abnormal growths in or on the uterus. They include noncancerous fibroids and polyps as well as rare cancers; assessment depends on symptoms, imaging, and sometimes tissue testing.

Utero-Ovarian Ligament

A band of tissue connecting each ovary to the uterus. It helps hold the ovary in position within the pelvis and lies near the fallopian tube and other pelvic supporting tissues.

Alternate Names:
Ovarian Ligament; Proper Ovarian Ligament

Uteroplacental Insufficiency

Reduced blood flow or function of the placenta that limits the supply of oxygen and nutrients to the fetus. It may contribute to poor fetal growth or signs of fetal distress; causes include maternal health conditions and problems with placental development.

Alternate Names:
Placental Insufficiency

Uterosacral Ligament

One of two strong bands of tissue supporting the uterus and top of the vagina by attaching them toward the sacrum at the back of the pelvis. Weakness can contribute to pelvic-organ prolapse; endometriosis can also affect or cause pain in this area.

Uterus

A hollow muscular organ in the pelvis between the bladder and rectum. Its inner lining thickens to prepare for pregnancy and is shed during menstruation. A fertilized egg normally implants in this lining, and a fetus develops in the uterus during pregnancy.

Common name: Womb

Uterus Didelphys

A congenital condition in which two separate uteruses develop, often with two cervixes and a dividing wall in the vagina. Many people can become pregnant, but miscarriage, premature birth, abnormal fetal position, or other pregnancy complications are more common.

Alternate Names:
Double Uterus; Didelphic Uterus

Uterus Disorder

A condition affecting the uterus, including fibroids, adenomyosis, endometriosis, infection, abnormal bleeding, congenital anomalies, prolapse, and cancer.

Uterus Neoplasm

A benign or malignant growth arising in the uterus, including fibroids, endometrial cancer, and sarcomas; diagnosis depends on examination, imaging, and tissue sampling.

UTI

Alternate name; see *Urinary Tract Infection*.

Utricle

A small balance organ in the inner ear that senses head position and movement in a straight line, such as forward, backward, or side-to-side motion.

Uvea

The middle layer of the eye, made up of the iris, ciliary body, and choroid. It controls the amount of light entering the eye, helps focus vision, and supplies blood to eye tissues.

Uveal Disease

A disorder of the iris, ciliary body, or choroid, including uveitis, tumors, vascular disease, and inflammation that may cause eye pain, photophobia, floaters, or visual loss.

Uveal Hypopigmentation

Reduced pigmentation in one or more parts of the uvea—the iris, ciliary body, or choroid. It may be sectoral or diffuse and can occur in inherited pigment disorders, including Waardenburg syndrome; effects on vision depend on the structures and extent involved.

Uveal Melanoma

The most common primary cancer inside the adult

eye. It begins in pigment-producing cells of the iris, ciliary body, or choroid and may cause visual changes or be found during an eye examination; it can spread to other organs.

Uveal Neoplasm

A tumor arising in the uveal tract of the eye—the iris, ciliary body, or choroid; malignant melanoma may threaten vision and spread to distant organs.

Uveitic Glaucoma

Glaucoma that develops in a person with uveitis, inflammation inside the eye. Inflammation, scarring, or steroid treatment can raise eye pressure and damage the optic nerve.

Alternate Names:
Inflammatory Glaucoma

Uveitis

Inflammation of the uvea, the middle layer of the eye that provides most of the blood supply to the retina and consists of the iris, ciliary body, and choroid. It can be caused by eye trauma, infections, or underlying autoimmune disorders that trigger inflammation throughout the body. Depending on which part of the eye is inflamed, uveitis can cause eye redness, deep aching pain, extreme sensitivity to light (photophobia), blurred vision, and dark floating spots (floaters), and can lead to permanent vision loss if not addressed.

Alternate Names:
Intraocular Inflammation; Iritis; Iridocyclitis; Choroiditis

Uveoparotid Fever

A form of sarcoidosis causing fever, swelling of both parotid glands near the ears, and inflammation in the front of the eyes. It may also cause facial-nerve weakness; treatment depends on the organs affected and severity.

UV Light

Ultraviolet radiation, an invisible part of sunlight or artificial light that can affect the skin and eyes and may cause sunburn, aging, or skin cancer.

Uvula

A small, soft flap hanging from the back of the roof of the mouth. It helps with swallowing and speech; swelling can cause gagging, pain, snoring, or difficulty breathing.

Uvulitis

Inflammation and swelling of the uvula, the small tissue hanging at the back of the throat. Infection, allergy, injury, dehydration, or irritation may cause it; severe swelling or breathing difficulty can threaten the airway.

Uvulopalatopharyngoplasty

An operation that removes or reshapes parts of the soft palate, the hanging uvula, and the throat to widen the breathing passage. It may help selected people with obstructive sleep apnea, but can cause pain, swallowing changes, bleeding, or recurrence.

U Wave

A small wave that may appear after the T wave on an electrocardiogram. A prominent U wave can occur with low potassium, a slow heart rate, or some medicines and is not specific to one cause.

V

Vaccination

Giving a vaccine to train the immune system to recognize a specific infection. Vaccination lowers the risk of illness, severe complications, and sometimes transmission; the recommended schedule depends on age, health, and local guidance.

Vaccination Schedule

A time-based plan for administering vaccines according to age, previous doses, medical conditions, exposure risks, and public-health guidance. Schedules vary by country and are updated as recommendations change.

Vaccinations/Immunizations During Pregnancy

Vaccines given during pregnancy are selected according to safety, disease risk, season, exposure, and local recommendations. Inactivated vaccines such as influenza and Tdap are commonly used when indicated, while some live vaccines are deferred until after pregnancy.

Vaccine

A biological preparation that elicits an active, protective, and pathogen-specific adaptive immune response to prevent, mitigate, or treat infectious diseases or malignant neoplasms. Formulations include live-attenuated microorganisms (e.g., MMR, varicella), inactivated whole pathogens (e.g., inactivated polio, hepatitis A), subunit and recombinant protein platforms (e.g., hepatitis B, HPV), toxoids (e.g., tetanus, diphtheria), polysaccharide-protein conjugates (e.g., pneumococcal conjugate), and messenger RNA (mRNA) encapsulated in lipid nanoparticles (e.g., SARS-CoV-2 mRNA vaccines). Vaccination induces antigen-specific humoral neutralizing antibody production by plasma cells and cell-mediated immunity with generation of long-lived memory B and T lymphocytes.

Alternate Names:
Vaccines; Immunization Agent

Vaccine Allergy

An immune reaction to a vaccine or one of its ingredients. It may cause hives, swelling, breathing difficulty, or, rarely, anaphylaxis. Soreness and redness at the injection site are common vaccine reactions, but are not usually allergies.

Vaccine-Associated Paralytic Poliomyelitis

A rare form of paralytic poliomyelitis associated with exposure to live, weakened poliovirus in oral polio vaccine. It can occur in a vaccine recipient or close contact when the vaccine strain regains neurovirulence. It is distinct from paralysis caused by circulating vaccine-derived poliovirus.

Alternate Names:
VAPP

Vaccines

Plural form; see *Vaccine*.

Vaccines and Immunizations

Vaccines train the immune system to recognize specific pathogens or toxins and reduce the risk of infection, severe disease, complications, and transmission.

Vaccinia

A virus used to make smallpox vaccines. Rare accidental infection can cause a sore at the contact site or more widespread illness, especially in people with weakened immunity.

Vaccinia Virus

Vaccinia virus is a poxvirus used to make smallpox vaccines and studied in some experimental cancer treatments; accidental infection is uncommon but possible.

VACTERL Association

The co-occurrence of congenital abnormalities in at least three of six areas: vertebrae, anus, heart, trachea and esophagus, kidneys, and limbs. The name comes from these features (vertebral defects, anal atresia, cardiac defects, tracheoesophageal fistula, renal anomalies, and limb abnormalities). It is identified from the pattern of abnormalities after evaluation for other diagnoses; there is no single confirmatory test.

Vacuum-Assisted Delivery

A vaginal birth assisted by a suction cup placed on the baby's scalp when labor is not progressing or the baby needs to be born promptly. It is used only when the cervix is fully open and the baby's position and head size are suitable. Possible complications include scalp injury, bleeding, or tears.

Vacuum Curettage

A procedure that removes tissue from the uterus using suction, commonly for uterine evacuation or endometrial sampling. Risks include bleeding, infection, retained tissue, and rarely uterine injury.

Vacuum Delivery

Assisted vaginal birth using a suction cup placed on the baby's scalp. It may be used when labor is not progressing or the baby needs to be born promptly and can cause scalp injury, bleeding, or tears.

Vacuum Erection Devices

Devices with a cylinder and pump that draw blood into the penis to produce an erection. A flexible ring may hold the erection during sex; bruising, numbness, or discomfort can occur, especially if the ring is left on too long.

Alternate Names:
Vacuum Erection Pump; Penis Pump

Vacuum Extractor

A cup-shaped device applied to the fetal scalp to assist vaginal delivery when specific maternal or fetal indications are present.

Vagabond's Disease

Older term for skin thickening (lichenification) and darkening caused by chronic body-louse infestation and repeated scratching. Changes often affect clothing-covered areas, including the waist, groin, thighs, and armpits. The term describes a skin manifestation of pediculosis corporis, not the infestation itself.

Alternate Names:
Parasitic Melanoderma

Vagal Maneuver

A physical action that affects the vagus nerve and can slow the heart's electrical activity. Examples include bearing down and, in clinical settings, certain pressure or cold-stimulation methods. These maneuvers may help assess or stop some fast heart rhythms.

Alternate Names:
Vagal Stimulation Technique; Parasympathetic Provocative Maneuver

Vagal Nerve Stimulation

Alternate name; see *Vagus Nerve Stimulation*.

Alternate Names:
VNS

Vagal Paraganglioma

A usually slow-growing tumor arising from nerve-related cells near the vagus nerve in the neck. It may cause a neck mass, hoarseness, swallowing difficulty, or nerve symptoms and can be identified with imaging and specialist assessment.

Vagina

A muscular, elastic canal connecting the cervix to the vaginal opening. It allows menstrual blood to leave the body, receives a penis or other objects during vaginal sex, and serves as the birth canal.

Vagina Carcinoma

Alternate name; see *Vaginal Cancer*.

Vaginal Agenesis

A congenital condition in which the vagina is absent or underdeveloped. It often occurs with underdevelopment or absence of the uterus, as in Mayer-Rokitansky-Küster-Hauser syndrome. Renal, skeletal, or hearing differences may also occur, particularly in associated syndromes.

Vaginal Abscess

A pocket of pus in the vaginal wall or nearby tissue, usually caused by infection. It may cause a painful lump, swelling, fever, or discharge.

Vaginal Adhesions

Bands of scar tissue that make parts of the vaginal walls stick together. They may follow injury, surgery, radiation, or inflammation and can narrow the vaginal canal or cause pain.

Vaginal Adenosis

A patch of gland-like cells in the vaginal lining, where the lining is usually made of flat cells. It is often harmless and may occur after exposure to DES before birth; rarely, it is linked to clear-cell cancer of the vagina.

Vaginal Atresia

A birth condition in which part of the vaginal canal does not form an open passage, leaving a blocked segment. Menstrual blood may collect behind a complete blockage, causing absent periods and monthly pelvic pain.

Vaginal Atrophy

Thinning and reduced moisture of vaginal tissues, usually related to lower estrogen after menopause or other hormone changes. It can cause dryness, burning, itching, pain during sex, or urinary symptoms. The broader term genitourinary syndrome of menopause also includes vulvar and urinary symptoms.

Alternate Names:
Atrophic Vaginitis; Vulvovaginal Atrophy

Vaginal Bleeding

Unexpected, unusually heavy, or prolonged bleeding from the vagina, including bleeding between periods, after sexual intercourse, during pregnancy, or after menopause. Causes include hormonal changes, infection, pregnancy-related conditions, structural lesions, medications, and cancer.

Vaginal Bleeding Between Periods

Bleeding between menstrual periods may result from contraception, infection, pregnancy, polyps, fibroids, hormonal changes, or cancer. Persistent or heavy bleeding can have a serious cause.

Vaginal Bleeding During Early Pregnancy

Bleeding from the vagina during the first part of pregnancy can result from cervical changes, miscarriage, ectopic pregnancy, infection, or other conditions. A small amount may occur without a serious cause, but bleeding with heavy loss, severe or one-sided pain, shoulder pain, dizziness, or fainting can indicate a serious problem.

Vaginal Bleeding During Late Pregnancy

Bleeding from the vagina later in pregnancy may be caused by placenta previa, placental separation, labor, cervical disease, or other complications. Significant bleeding can be a serious pregnancy complication.

Vaginal Bleeding In Early Pregnancy

Alternate name; see *Vaginal Bleeding During Early Pregnancy*.

Vaginal Bleeding In Late Pregnancy

Alternate name; see *Vaginal Bleeding During Late Pregnancy*.

Vaginal Bleeding In Pregnancy

Bleeding from the vagina during pregnancy. Causes vary with the stage of pregnancy and include cervical changes, miscarriage, ectopic pregnancy, placental disorders, labor, and other conditions; see *Vaginal Bleeding During Early Pregnancy* and *Vaginal Bleeding During Late Pregnancy*.

Vaginal Cancer

A rare malignancy originating in the tissues of the vagina, most commonly squamous cell carcinoma arising from the surface epithelial lining, and less frequently adenocarcinoma or melanoma. It may manifest as abnormal vaginal bleeding (especially postmenopausal or postcoital), watery discharge, pelvic pain, or a palpable vaginal mass.

Alternate Names:
Vaginal Carcinoma; Malignant Vaginal Neoplasm

Vaginal Candidiasis

Alternate name; see *Vulvovaginal Candidiasis*.

Vaginal Cuff

The upper end of the vagina that is closed with stitches after the uterus is removed during a hysterectomy.

Vaginal Cuff Dehiscence

An opening of the stitched upper end of the vagina after hysterectomy. It may cause pelvic pain, bleeding, discharge, or tissue bulging through the opening.

Vaginal Cysts

Fluid-filled or tissue-lined sacs in the vaginal wall. Most are harmless and cause no symptoms, but some cause a lump, pressure, pain, or problems with intercourse. Types include inclusion cysts and Gartner duct cysts.

Vaginal Inclusion Cyst

A small sac in the vaginal wall containing trapped surface-lining cells and material. It may form after childbirth, surgery, or another injury and is usually harmless unless it becomes large, painful, or infected.

Vaginal Dilator

A smooth device used to gently stretch or keep open the vaginal canal when it has become narrow or short because of scarring, surgery, radiation, or a difference present from birth.

Vaginal Discharge

Vaginal discharge may be normal or may indicate infection, inflammation, hormonal change, or another condition. Normal discharge is usually clear to whitish and odourless and varies with the menstrual cycle, pregnancy, sexual arousal, and some contraceptives.

Vaginal Dryness

Reduced vaginal lubrication, commonly associated with menopause, breastfeeding, hormonal changes, medications, or irritation. It may cause discomfort, itching, painful intercourse, or minor bleeding.

Vaginal Endometriosis

Endometriosis affecting the vaginal wall, where tissue like the lining of the uterus grows outside the uterus. It may cause pain during sex, a tender lump, or bleeding that worsens around menstrual periods.

Vaginal Dysplasia

Alternate name; see *Vaginal Intraepithelial Neoplasia*.

Vaginal Fistula

An abnormal passage between the vagina and another organ, commonly the bladder or rectum. It may cause continuous urine or stool leakage, infection, skin irritation, and emotional distress.

Vaginal Foreign Body

An object retained in the vagina, most often a tampon or other inserted material. It may cause discharge, odor, bleeding, pain, or infection.

Vaginal Granulation Tissue

Soft, red healing tissue that grows at a vaginal

wound, often at the top of the vagina after hysterectomy. It may cause spotting or discharge while the area heals.

Vaginal Herpes

Herpes simplex infection affecting the vagina or nearby genital tissue; see *Genital Herpes*.

Vaginal Human Papillomavirus Infection

Human papillomavirus infection affecting the vaginal lining; see *Human Papillomavirus Infection*.

Vaginal Fornix

One of the recesses surrounding the cervix where the vagina meets the cervix. The posterior fornix is adjacent to the peritoneal cul-de-sac and is relevant in pelvic examination and some procedures.

Vaginal Fusion And Duplication

Birth-related differences in which the vaginal canal is partly joined, divided, or duplicated. They may occur with abnormalities of the uterus, cervix, urinary tract, or external genitalia and may cause obstruction, pain, menstrual problems, or difficulty with intercourse.

Vaginal Health

Vaginal health includes normal vaginal tissues, fluids, microorganisms, and comfort. Persistent odor, itching, pain, bleeding, or unusual discharge can indicate infection or another condition.

Vaginal Hematoma

A collection of blood within the vaginal wall or surrounding tissues, usually caused by childbirth, trauma, or surgery and potentially producing severe pain, swelling, or blood loss.

Vaginal Hemorrhage

Heavy or severe bleeding that exits through the vagina. The blood may come from the vagina, cervix, uterus, or a pregnancy-related source; the term describes the bleeding and does not identify its cause. It may occur with childbirth, pregnancy complications, or injury and can cause major blood loss.

Vaginal Hypoplasia

Vaginal hypoplasia is underdevelopment of the vagina, usually present from birth. It may occur with other reproductive or urinary-tract differences and can affect menstruation, sexual function, or fertility.

Vaginal Hysterectomy

Surgical removal of the uterus through the vagina. It may be used for selected benign uterine conditions and usually avoids an abdominal incision, although suitability depends on anatomy and disease.

Vaginal Inflammation

Alternate name; see *Vaginitis*.

Vaginal Intercourse

Sexual activity involving insertion into the vagina, commonly of a penis or sex toy. Pregnancy can result when sperm enter the vagina.

Vaginal Intraepithelial Neoplasia

Abnormal squamous cells confined to the vaginal lining, often associated with persistent human papillomavirus infection. Low-grade changes often regress; high-grade changes (VaIN 2 or 3) are precancerous and may progress to vaginal cancer. It is not invasive cancer.

Vaginal Intraepithelial Cysts

An imprecise name sometimes used for small cysts in the vaginal lining; see *Vaginal Inclusion Cyst*.

Alternate Names:
VaIN; Vaginal Dysplasia

Vaginal Introitus

The entrance to the vagina. It is part of the external genital area and may be examined when assessing pain, infection, injury, scarring, or pelvic-floor problems.

Vaginal Itching

Itching or irritation in or around the vagina, often

involving the vulva. Causes include candidiasis, some sexually transmitted infections, dermatitis, hormonal changes, and other conditions; bacterial vaginosis more often causes odor or discharge than itching.

Vaginal Laceration

A tear in the vaginal tissue, often caused by childbirth, sexual activity, trauma, or a medical procedure. It may cause pain, swelling, or bleeding.

Vaginal Leiomyoma

A rare, usually noncancerous growth of smooth muscle in the vaginal wall. It may cause a lump, pressure, pain, or problems with urination or intercourse.

Vaginal Lubrication

Natural moisture made by the vaginal tissues and nearby glands. It usually increases with sexual arousal and may decrease with hormonal changes, some medicines, illness, or irritation.

Vaginal Membrane

A thin fold of tissue associated with the vagina. The term may refer to the hymen at the vaginal opening or to an abnormal membrane that blocks the vaginal canal.

Vaginal Microbiome

The community of microorganisms living in the vagina. Many healthy vaginal microbiomes are dominated by Lactobacillus species, which help maintain an acidic environment; changes in the community can be associated with bacterial vaginosis and other conditions.

Vaginal Melanoma

A very rare cancer that begins in pigment-producing cells in the vaginal lining. It may cause bleeding, discharge, or a lump and can be dark or have little color.

Vaginal Mucosa

The moist inner lining of the vagina. It contains folds that allow the vaginal canal to stretch and helps protect the tissue.

Vaginal Odor

An unusual or unpleasant odor from vaginal discharge that may result from bacterial vaginosis, infection, retained material, hormonal changes, or other conditions.

Vaginal Opening

The external entrance to the vagina. It is part of the vulvar vestibule and may be affected by infection, inflammation, trauma, scarring, or congenital variation.

Vaginal Pessary

A removable device placed in the vagina to support the vaginal walls or nearby pelvic organs, usually for pelvic-organ prolapse or some forms of urine leakage.

Vaginal pH

A measure of how acidic the vagina is. The vaginal environment is normally mildly acidic, and the pH can change with hormones, semen, blood, medicines, or infection.

Vaginal Prolapse

Downward bulging of a vaginal wall because the tissues supporting the vagina have weakened. The bulge may involve the bladder, rectum, or the top of the vagina after hysterectomy.

Vaginal Rugae

Soft folds in the inner lining of the vagina that allow it to stretch and return toward its usual shape.

Vaginal Seeding

Placing vaginal fluid on a baby born by cesarean section in an attempt to expose the baby to the parent's vaginal microorganisms. Clear health benefits have not been established, and harmful infections may be transmitted.

Vaginal Septum

A wall of tissue that divides or crosses the vaginal canal and is usually present from birth. It may cause pain, trouble inserting tampons, or blocked menstrual flow; see *Longitudinal Vaginal Septum* and *Transverse Vaginal Septum*.

Vaginal Sarcoma

A very rare cancer arising from muscle or other supporting tissue in the vaginal wall. Its symptoms may include bleeding, discharge, pain, or a lump; the type is identified by examining a tissue sample.

Vaginal Speculum

An instrument inserted into the vagina and gently opened to separate the vaginal walls and visualize the vagina and cervix. It may be used for pelvic examination, cervical cytology such as a Pap test, swab collection, assessment of bleeding or discharge, and selected procedures. Size and design are chosen according to anatomy, comfort, and the clinical purpose.

Vaginal Stenosis

Narrowing or shortening of the vaginal canal, which may result from surgery, radiation, scarring, inflammation, trauma, or congenital development. It can cause pain, difficult examination, or difficulty with penetration.

Vaginal Swab

A sample of fluid or cells collected from the vagina for laboratory testing, often to look for infection or other changes.

Vaginal Trauma

Injury to the vaginal tissues caused by childbirth, sexual activity, foreign objects, procedures, or blunt or penetrating trauma. It may cause bleeding, pain, swelling, or urinary symptoms; severe bleeding or deep injury can be serious.

Vaginal Ultrasound Probe

A specialized endocavitary ultrasound transducer used through the vagina to produce images of the uterus, cervix, ovaries, nearby pelvic structures, or an early pregnancy. It sends and receives sound waves and does not use ionizing radiation.

Alternate Names:
Endovaginal Transducer Transvaginal Ultrasound Transducer

Vaginal Vault Prolapse

Descent of the top of the vagina into or through the vaginal opening, usually after removal of the uterus. It may cause pelvic pressure, a bulge, backache, or difficulty emptying the bladder or bowel.

Alternate Names:
Post-Hysterectomy Vault Prolapse

Vaginal Vestibule

The space of the vulva between the labia minora that contains the external openings of the urethra and vagina and the ducts of the greater and lesser vestibular glands.

Vaginal Wall

The layers of muscle, connective tissue, and moist lining that form the walls of the vaginal canal.

Vaginal Ulceration

One or more open sores in the vaginal lining. Causes include infection, inflammation, injury, and cancer; the appearance alone does not identify the cause.

Vaginal Yeast Infection

Alternate name; see *Vulvovaginal Candidiasis*.

Vagina Neoplasm

An abnormal growth in the vagina that may be benign, precancerous, or cancerous. It can cause bleeding, discharge, pain, or a lump, although early growths may cause no symptoms.

Vaginectomy

Surgical removal of part or all of the vagina, usually to treat selected cancers or severe disease; effects may include changes in sexual function, fertility, urination, and bowel function.

Vaginismus

Alternate name; see *Genito-Pelvic Pain/Penetration Disorder*.

Vaginitis

Inflammation or irritation of the vagina that may cause discharge, itching, burning, odor, pain, or discomfort with urination or sex. Causes include infections, hormones, chemicals, allergies, and tissue dryness.

Vaginoplasty

Vaginoplasty is surgery to create, repair, or reshape the vagina. It may be performed for congenital differences, injury, cancer treatment, pelvic-floor problems, or gender-affirming care.

Vaginospasm

Alternate name; see *Genito-Pelvic Pain/Penetration Disorder*.

Vagotomy

Surgery that cuts selected branches of the vagus nerve to reduce signals that stimulate stomach acid and movement. It was once used for difficult stomach ulcers but is now uncommon because medicines and less invasive treatments are available.

Vagus Nerve

The tenth cranial nerve, carrying signals between the brain and the heart, lungs, throat, voice box, and digestive tract. It helps regulate heart rate, breathing, swallowing, voice, and digestion.

Vagus Nerve Stimulation

A treatment that sends regular, mild electrical pulses to the vagus nerve through an implanted device in the chest or, in some settings, a handheld device. It is used for selected epilepsy, treatment-resistant depression, and other conditions; benefits may take time and side effects can include voice change, cough, or throat discomfort.

Valacyclovir

An antiviral medicine that the body changes into acyclovir to stop herpes viruses from multiplying. It treats cold sores, genital herpes, and shingles; accumulation in kidney disease can cause nervous-system effects.

Valganciclovir

An antiviral medicine used mainly to prevent or treat cytomegalovirus infection after transplantation. The body changes it into ganciclovir, which blocks viral multiplication; it can lower blood counts, injure the kidneys, affect fertility, and harm a fetus.

Valgus

A limb or joint position in which the part farther from the body's center is angled outward. Examples include knock-knees and hallux valgus (bunion deformity).

Valgus Stress Test

A clinical examination that applies a valgus force to a joint to assess its medial ligaments. It is used most often to assess the medial collateral ligament of the knee and the ulnar collateral ligament of the elbow; pain or increased joint opening may indicate injury.

Valinemia

A rare inherited condition in which the body cannot process the amino acid valine normally. High valine levels may cause feeding problems, low muscle tone, developmental delay, or other nervous-system symptoms.

Valley Fever

The common name for coccidioidomycosis, a fungal infection caused by Coccidioides species and acquired by inhaling airborne spores from soil. It usually causes a mild respiratory illness but can disseminate to skin, bone, joints, or meninges, especially in people at higher risk.

Valproate

A term for valproic acid and related medicines, including sodium valproate and divalproex sodium. These medicines treat some seizure disorders and mood disorders; adverse effects include liver or pan-

creatic injury, blood-cell changes, weight gain, and serious fetal developmental harm.

Valproate Toxicity

Harm from an overdose or other excessive exposure to valproate. It may cause sleepiness, vomiting, low blood pressure, slowed breathing, or coma; high ammonia, liver injury, and metabolic abnormalities may also occur.

Valproic Acid

A medicine used for certain seizures, bipolar disorder, and migraine prevention. It can cause liver injury, pancreatitis, birth defects, and developmental harm during pregnancy.

Valproic Acid Toxicity

Alternate name; see *Valproate Toxicity*.

Valrubicin

A chemotherapy medicine placed directly into the bladder for selected bladder cancers that have not responded adequately to other treatment. It can cause bladder irritation, blood in the urine, infection, and, rarely, effects throughout the body.

Valsalva

Alternate name; see *Valsalva Maneuver*.

Valsalva Maneuver

Forceful expiration against a closed airway, often performed by bearing down. It changes pressure in the chest and affects heart rate and blood pressure; the maneuver is used in selected examinations and procedures.

Valsalva Retinopathy

Bleeding in front of the retina, usually near the center of vision, after a sudden rise in pressure from actions such as coughing, vomiting, or straining. The amount and location of bleeding can affect vision.

Valsalva's Manoeuvre

Alternate spelling; see *Valsalva Maneuver*.

Valsartan

Valsartan is an angiotensin-II receptor blocker used for hypertension, heart failure, and selected cardiovascular indications; hyperkalaemia, renal-function changes, hypotension, and fetal toxicity are important risks.

Valve Repair Surgery

Reconstructive surgery performed to preserve and repair a native heart valve rather than replacing it with a prosthesis; see *Heart Valve Surgery* and *Mitral-Valve Repair*.

Valves

Structures that permit fluid or blood to move predominantly in one direction and prevent backward flow; cardiac valves and venous valves are important examples.

Valvotomy

Surgical or catheter-based division of narrowed valve tissue to improve blood flow, most often performed for selected stenotic heart valves.

Valvulae Conniventes

Permanent circular folds of the small intestine's mucosa and submucosa, most prominent in the jejunum. They increase the surface area available for absorption and remain visible when the intestine stretches.

Alternate Names:
Plicae Circulares; Kerckring Folds

Valvular Disease

Alternate term; see *Heart Valve Disease*.

Valvular Endocarditis

Alternate name; see *Endocarditis*.

Valvular Heart Disease

A broad spectrum of structural and functional disorders affecting one or more of the four cardiac valves (aortic, mitral, tricuspid, pulmonic), classified hemodynamically as valvular stenosis (narrowing and outflow obstruction) or valvular regurgitation

(insufficiency and backward flow).

Alternate Names:
VHD

Valvular Insufficiency

Incomplete closure of a heart valve, allowing blood to leak backward when the heart contracts or relaxes. It can affect the mitral, aortic, tricuspid, or pulmonary valve and may eventually strain the heart.

Valvuloplasty

A procedure used to widen or repair a narrowed or abnormal heart valve, by balloon catheter or open surgery depending on the valve and condition.

Valvulotomy

A procedure that cuts open a narrowed heart valve to improve blood flow. It may be performed with a catheter or surgery; the valve can leak afterward and narrowing may recur.

Vancomycin

An antibiotic used for selected serious bacterial infections and, by mouth, for certain infections of the large intestine. Adverse effects include infusion reactions, kidney injury, hearing problems, and low blood counts.

Vancomycin Infusion Reaction

A rate-related reaction during intravenous vancomycin administration, usually causing flushing, warmth, itching, or redness of the face, neck, and upper body. It is generally not an allergic reaction.

Alternate Names:
Vancomycin Flushing Reaction

Vancomycin-Resistant Enterococcus

Enterococcus bacteria that are resistant to vancomycin, usually because of altered cell-wall precursors. VRE can cause healthcare-associated urinary, bloodstream, wound, or other infections; resistance patterns affect which antibiotics are effective.

Van der Woude Syndrome

An inherited condition, usually with autosomal dominant inheritance, that commonly causes small pits in the lower lip and cleft lip with or without cleft palate, or cleft palate alone. Most cases are associated with pathogenic variants in *IRF6*; a smaller number are linked to *GRHL3*.

Alternate Names:
VWS; Lip-Pit Syndrome

Vandetanib

A targeted cancer medicine used for selected medullary thyroid cancers. It blocks signals that help cancer cells grow and blood vessels form; adverse effects include diarrhea, high blood pressure, skin changes, and dangerous heart-rhythm changes.

Vaping

Vaping uses an electronic device to heat a liquid and produce an aerosol for inhalation. Aerosols may contain nicotine and other substances that can harm the lungs and cause dependence.

Vaporiser

A device that converts a liquid medicine or volatile substance into a vapor for inhalation or controlled delivery, such as in anesthesia.

Variable Decelerations

Brief drops in a baby's heart rate that vary in timing and shape, often caused by pressure on the umbilical cord during labor. Occasional drops may be harmless, while frequent or prolonged drops can indicate reduced fetal oxygenation.

Variant Angina Pectoris

Chest pain caused by temporary spasm of a coronary artery, often occurring at rest or at night. Episodes can cause temporary myocardial ischemia and may trigger dangerous arrhythmias or myocardial infarction.

Alternate Names:
Prinzmetal Angina; Vasospastic Angina

Variant CJD

A rare prion disease linked to eating food contaminated with the agent that causes bovine spongiform encephalopathy in cattle. It differs from classic Creutzfeldt-Jakob disease in its typical age, early symptoms, and tissue findings.

Variant Classification

The process of estimating whether a genetic change is harmless, uncertain, or likely to cause disease. Specialists use laboratory evidence, family history, population data, and the person's clinical findings.

Varibaculum Cambriense

A bacterial species in the genus Varibaculum reported from human clinical specimens. Its significance depends on the specimen, clinical findings, and antimicrobial susceptibility pattern.

Variceal Band Ligation

A procedure using a flexible camera to place small bands around enlarged veins in the food pipe. The bands stop blood flow through the veins and are used to control or prevent bleeding.

Alternate Names:
Endoscopic Variceal Ligation; EVL

Variceal Hemorrhage

Severe bleeding from enlarged, fragile veins in the esophagus or stomach, usually caused by high pressure in the liver's blood vessels. It can cause vomiting blood, black stools, shock, and death.

Alternate Names:
Variceal Bleeding

Varicella

An acute, highly contagious primary infection with varicella-zoster virus that causes fever and a generalized itchy, fluid-filled rash. It is usually mild in children but can cause pneumonia or encephalitis, especially in adults, pregnant people, infants, and people with weakened immunity.

Alternate Names:
Chickenpox

Varicella-Zoster Virus

The virus that causes chickenpox and shingles. After chickenpox, it can remain inactive in nerve tissue and reactivate years later as a painful, blistering rash called shingles.

Varicellovirus

Varicellovirus is a genus of herpesviruses that includes varicella-zoster virus, the cause of chickenpox and shingles.

Varices

Abnormally enlarged, twisted veins. Varices in the esophagus or stomach are often caused by portal hypertension; varicose veins in the legs are usually related to impaired vein-valve function.

Varicocele

Enlarged veins in the bundle that drains blood from a testicle, usually on the left side of the scrotum. It may feel like a soft, tangled mass and can cause a dull ache, reduced growth of the affected testicle, or lower sperm production. Many varicoceles cause no symptoms or fertility problems.

Varicocele Embolization

A procedure that uses a thin tube to place coils or another material in enlarged scrotal veins. This blocks abnormal backward blood flow and reduces pressure in the veins.

Varicose Ulcer

An open sore near the ankle caused by long-term poor drainage through the leg veins. It may be surrounded by swelling, varicose veins, or skin discoloration and can heal slowly or recur.

Varicose Vein

An enlarged, swollen, and twisting vein that lies just beneath the surface of the skin, most frequently occurring in the legs and feet. It develops when the tiny one-way valves inside veins weaken or fail, allowing blood to flow backward and pool rather than flowing efficiently toward the heart. Over time, the pooled blood stretches the vein walls, causing visible blue or dark purple bulging veins that can

cause aching, heaviness, swelling, and throbbing in the legs.

Alternate Names:
Varicose Veins; Varicosis; Varicosities

Varicose Veins

Plural form; see *Varicose Vein*.

Varicose Veins and Venous Insufficiency

Enlarged superficial veins and inadequate return of blood from the legs because venous valves or the vein wall do not work effectively. Aching, heaviness, swelling, skin discoloration, dermatitis, and ulcers may occur.

Varicose Veins (Spider Veins)

Related terms, not synonyms: varicose veins are enlarged, often bulging veins; spider veins are smaller dilated vessels near the skin. See *Varicose Vein* and *Spider Veins*.

Variegate Porphyria

An inherited disorder of heme production that can cause attacks of abdominal pain, vomiting, nerve symptoms, confusion, or dark urine and can also cause fragile, blistering skin after sunlight exposure.

Variola

A highly contagious and deadly disease caused by variola virus, eradicated globally by 1980 through vaccination. See *Smallpox*.

Varix

An abnormally dilated, tortuous vein; multiple varices commonly occur in portal hypertension or chronic venous disease.

Varus

A limb or joint deformity in which the part farther from the body bends inward, toward the body's center line. Examples include bowlegs and some inward-turning foot deformities.

Varus Stress Test

A clinical examination that applies a varus force to a joint to assess its lateral ligaments. It is used most often to assess the lateral collateral ligament of the knee and the lateral ligament complex of the elbow; pain or increased joint opening may indicate injury.

Vas

A duct or vessel; in reproductive anatomy, the vas deferens transports sperm from the epididymis toward the ejaculatory duct.

Vasa Deferentia

Alternate name; see *Vas Deferens*.

Vasa Efferentia

Small ducts that carry sperm from the rete testis to the epididymis, where sperm mature. They also reabsorb fluid from the testicular ducts.

Vasa Previa

An obstetric condition in which unprotected fetal blood vessels run within the membranes over or close to the internal cervical opening, commonly because of velamentous umbilical cord insertion or vessels connecting separate placental lobes. The vessels may rupture when the membranes break or labor begins, causing rapid fetal hemorrhage. Unlike placenta previa, the vessels rather than placental tissue lie over or near the opening.

Vasa Recta

Long, hairpin-shaped blood vessels in the inner part of the kidney. They run beside the loops of Henle and help the kidneys concentrate urine.

Vasa Vasorum

Small blood vessels in the walls of large arteries and veins. They supply oxygen and nutrients to the outer parts of these vessel walls.

Vascular

Relating to blood vessels or, sometimes, lymphatic vessels. Vascular conditions include narrowed or blocked arteries, aneurysms, blood clots, abnormal vessel connections, and problems with veins; the

term may also describe tests, surgery, or medicines involving these vessels.

Vascular Access

A route into a blood vessel for medicines, fluids, blood tests, monitoring, or dialysis. It may be a short-term catheter, a surgically joined artery and vein, or a synthetic graft, depending on the purpose and expected duration.

Vascular Access For Hemodialysis

A route that allows blood to leave the body and return during dialysis. It may be a joined artery and vein, a synthetic graft, or a large vein catheter; each has different risks of infection, clotting, and failure.

Vascular Balloon Catheter

An inflatable balloon mounted at the distal tip of a flexible vascular catheter used to dilate stenotic or occluded blood vessels during angioplasty, deliver and expand endovascular stents, or temporarily occlude vascular flow.

Alternate Names:
Angioplasty Balloon; Vascular Balloon Dilator; Balloon Catheter

Vascular Bed

The network of blood vessels supplying a particular organ or tissue. Its vessels widen or narrow to adjust blood flow according to the tissue's needs.

Vascular Bypass

Surgery that uses a vein or artificial tube to carry blood around a blocked part of an artery and restore blood flow.

Alternate Names:
Surgical Bypass; Bypass Grafting; Arterial Bypass Graft

Vascular Claudication

Alternate name; see *Claudication*.

Vascular Clip

A small device placed during a procedure to close or control a blood vessel. It may stop bleeding, prevent blood flow to a selected area, or secure a vessel permanently.

Alternate Names:
Hemostatic Clip; Surgical Vessel Clip; Ligation Clip

Vascular Compliance

The change in a blood vessel's volume in response to a change in pressure. More compliant vessels expand more for a given pressure increase.

Vascular Complications

Problems involving blood vessels after disease, injury, or a procedure, such as bleeding, hematoma, thrombosis, embolism, vessel injury, or reduced blood flow to a limb. Symptoms and urgency depend on the vessel and tissue affected.

Vascular Dementia

A decline in thinking and daily function caused by cerebrovascular injury or disease. It can follow a stroke or develop as small-vessel damage accumulates. Multi-infarct dementia is one subtype of vascular dementia, not an equivalent term.

Alternate Names:
VaD

Vascular Disease

A disorder of arteries, veins, or lymphatic vessels. Examples include atherosclerosis, aneurysms, peripheral artery disease, venous thrombosis, varicose veins, and vasculitis.

Vascular Ehlers-Danlos Syndrome

A rare inherited connective-tissue disorder that makes arteries and hollow organs unusually fragile. Features can include thin translucent skin, easy bruising, and a risk of spontaneous blood-vessel or bowel rupture.

Alternate Names:
vEDS; Ehlers-Danlos Syndrome Type IV

Vascular Embolic Particles

Small materials placed in a blood vessel during a procedure to block blood flow. They may be used

to control bleeding or reduce blood flow to a tumor, fibroid, or other abnormal area.

Alternate Names:
Vascular Embolization Particle

Vascular Embolization

Intentional blockage of a blood vessel with material delivered through a catheter. It may stop bleeding, reduce blood flow to a tumor, or close an aneurysm or abnormal vessel connection.

Alternate Names:
Catheter Embolization; Therapeutic Embolization

Vascular Embolization Coil

A catheter-delivered wire device used to block selected blood vessels, often to treat aneurysms or bleeding.

Alternate Names:
Endovascular Coil

Vascular Embolization Plug

A device delivered through a catheter to block a selected blood vessel during image-guided embolization, for example to control bleeding or close an abnormal vessel.

Alternate Names:
Vascular Occlusion Plug; Embolization Plug

Vascular Endothelial Growth Factor

A protein that helps new blood vessels form and makes blood vessels more leaky. Some medicines block it to treat certain eye diseases and cancers.

Alternate Names:
VEGF; Vascular Permeability Factor

Vascular Endothelial Growth Factor Inhibitor

A medicine that blocks vascular endothelial growth factor, a protein that helps blood vessels grow. These medicines are used for some cancers and eye diseases involving abnormal new blood vessels.

Alternate Names:
Anti-VEGF Agent

Vascular Endothelial Growth Factor Inhibitors

Alternate name; see *Vascular Endothelial Growth Factor Inhibitor*.

Vascular Forceps

Surgical forceps designed to grasp blood vessels or related tissue during vascular procedures. Their jaws are shaped to limit crushing or tearing of delicate vessels.

Alternate Names:
Vascular Surgical Forceps

Vascular Graft

A tube used to replace or bypass a damaged or blocked blood vessel. It may be made from a person's vein or from a synthetic material; possible problems include infection, bleeding, narrowing, or a clot blocking the graft.

Vascular Graft Patency

The continued openness and useful blood flow through a blood-vessel graft or bypass. A clot, narrowing, infection, or scar growth can block it, so examination and sometimes ultrasound are used for monitoring.

Vascular Hemostat

A surgical clamp used to temporarily occlude a blood vessel and control bleeding.

Alternate Names:
Vascular Clamp; Atraumatic Hemostasis Forceps

Vascular Imaging

Tests that show blood vessels and sometimes measure blood flow. Ultrasound, CT, MRI, or catheter-based imaging can find narrowing, blockage, aneurysm, dissection, clot, bleeding, or abnormal vessels; the safest test depends on the body area, urgency, kidney function, and contrast risks.

Vascularity

The amount and arrangement of blood vessels supplying a tissue or growth. A highly vascular area may heal or bleed differently and may look different on imaging; blood supply can also affect some

treatments.

Vascular Laser Therapy

A treatment that uses laser energy to close or change selected blood vessels. The laser may be applied through the skin or through a thin tube.

Alternate Names:
Vascular Laser Treatment

Vascular Ligation

Surgical tying, clipping, or sealing of a blood vessel to stop bleeding or redirect blood flow. It may be used during surgery or to treat selected abnormal vessels.

Alternate Names:
Vessel Clipping

Vascular Malformation

A blood-vessel or lymph-vessel structure that developed abnormally before birth. It may cause a skin mark, swelling, pain, bleeding, or pressure on nearby organs; effects depend on its type and location.

Vascular Needle Holder

A surgical instrument used to hold and guide fine suture needles during repair of blood vessels. It permits precise stitches while minimizing crushing or tearing of delicate vessel walls.

Alternate Names:
Vascular Suturing Needle Holder

Vascular Neurology

The neurology subspecialty focused on cerebrovascular disorders, including ischemic stroke, brain hemorrhage, and transient ischemic attack. It addresses the neurologic effects of impaired or abnormal blood flow to the brain and the vascular causes of stroke and related conditions.

Vascular Pain

Pain caused by impaired blood flow, often appearing in a limb with exertion as claudication or, in more severe disease, at rest.

Vascular Patch Graft

A piece of biological or synthetic material sewn onto a blood vessel to widen or repair it.

Alternate Names:
Angioplasty Patch

Vascular Retraction

To pull a vessel or tissue away from an operative field using a surgical retractor.

Alternate Names:
Vessel Retraction; Surgical Vessel Exposure

Vascular Ring

A birth defect in which blood vessels around the heart form a ring that can press on the windpipe or food pipe. It may cause noisy breathing, cough, repeated chest infections, swallowing difficulty, or feeding problems. Some people need no treatment; symptomatic rings may require surgery.

Vascular Scissors

A surgical instrument with two blades used to cut tissue, sutures, dressings, or other materials during vascular procedures.

Alternate Names:
Vascular Surgical Scissors

Vascular Shunt

A surgically created or implanted pathway that redirects blood or another fluid from one vessel or body space to another.

Alternate Names:
Bypass Shunt

Vascular Sponge

A sterile absorbent material used during blood-vessel procedures to absorb blood, apply pressure, or protect delicate tissue.

Alternate Names:
Vascular Laparotomy Sponge

Vascular Staple

A small metal or polymer device used to close tissue or join selected blood-vessel structures. It provides rapid closure but can cause narrowing, bleeding,

thrombosis, or tissue injury if unsuitable or misplaced.

Alternate Names:
Vascular Surgical Staple; Vessel Closure Device

Vascular Stent

A small mesh or tube placed inside a narrowed or blocked vessel to help keep it open.

Alternate Names:
Endovascular Stent

Vascular Stent Balloon

A balloon on a catheter used to expand a vascular stent against the vessel wall and restore an open channel. Inflation can cause vessel injury, bleeding, clotting, or rarely rupture.

Alternate Names:
Stent-Expansion Balloon

Vascular Stent-Graft

A fabric-covered metal frame placed inside a blood vessel to reinforce a weak wall or seal an aneurysm, tear, or leak. Follow-up imaging checks for movement, blockage, or leakage around the graft.

Alternate Names:
Endovascular Graft; Aortic Stent-Graft

Vascular Suction

A suction device used during a vascular procedure to remove blood or other fluid from the operative field.

Alternate Names:
Vascular Suction Cannula; Frazier Suction

Vascular Surgery

Operations that repair, widen, replace, or reroute blood vessels to restore circulation or prevent bleeding. Procedures may treat aneurysms, blocked arteries, blood-vessel injuries, or problems with veins and dialysis access.

Vascular System

The network of arteries, veins, and capillaries that carries blood throughout the body. It delivers oxygen, nutrients, and hormones to tissues and carries carbon dioxide and other waste products away. Disease may narrow, weaken, block, or inflame these vessels.

Vascular Thrombectomy

Removal of a blood clot from a blood vessel using surgery or a catheter-based procedure. The aim is to restore blood flow and protect tissue from damage when a clot blocks an important artery or vein.

Alternate Names:
Clot Extraction

Vascular Tissue Adhesive

A liquid material delivered through a catheter to block selected blood vessels during image-guided embolization. It may be used to control bleeding, close an abnormal vessel, or reduce blood flow to a tumor.

Alternate Names:
Cyanoacrylate Embolization Glue; Endovascular Embolic Adhesive

Vascular Tone

The usual degree of tightening in the muscle within blood-vessel walls. It helps control vessel width, blood flow, and blood pressure.

Vascular Trauma

Injury to an artery or vein from blunt or penetrating trauma, a crush injury, or a medical procedure. It can cause bleeding, a clot, or reduced blood flow to tissues supplied by the vessel.

Vascular Ulcer

A persistent open wound caused or maintained by poor blood flow, high pressure in the veins, loss of protective feeling, or another blood-vessel problem. It usually affects the legs or feet and may heal slowly or become infected.

Vasculitic Neuropathy

Nerve damage caused by inflammation of the small blood vessels that supply nerves. It often causes painful, uneven numbness or weakness and may affect several limbs as the vessel inflammation con-

tinues.

Vasculitis

A diverse group of autoimmune conditions characterized by inflammation of the blood vessel walls. When blood vessels become inflamed, their walls can thicken, weaken, narrow, or develop scars, restricting normal blood circulation to downstream tissues and organs. Depending on which organs and blood vessels are affected, vasculitis can cause symptoms ranging from fever, fatigue, and weight loss to skin rashes, nerve weakness, kidney dysfunction, and lung problems.

Alternate Names:
Angiitis; Blood Vessel Inflammation; Systemic Vasculitis

Vas Deferens

A muscular tube that carries sperm from the epididymis toward the ejaculatory duct during ejaculation.

Vasectomy

A permanent contraceptive procedure in which the vas deferens are divided or occluded to prevent sperm from entering the ejaculate. It does not immediately provide sterility and does not protect against sexually transmitted infections.

Vasectomy Reversal

Surgery to restore sperm flow after vasectomy by reconnecting the cut ends of the vas deferens or connecting it to the epididymis. These operations are called vasovasostomy and vasoepididymostomy; pregnancy is not guaranteed.

Vasoactive Intestinal Peptide Test

A blood test measuring a hormone that affects the intestine and blood vessels. It is used mainly when a rare hormone-producing tumor is suspected in someone with severe watery diarrhea, dehydration, or abnormal body salts.

Vasoconstriction

Narrowing of blood vessels caused by contraction of vascular smooth muscle, which can raise blood pressure or reduce blood flow to affected tissues.

Vasoconstrictor

A substance that narrows blood vessels by making their muscle walls contract. This can raise blood pressure and reduce local blood flow; vasoconstrictor medicines are used in selected emergencies and with local anesthetics.

Vasoconstrictors

Alternate name; see *Vasoconstrictor*.

Vasodepressor Syncope

Fainting caused mainly by sudden widening of blood vessels and a fall in blood pressure. It often occurs as part of a vasovagal reaction and may be preceded by nausea, sweating, warmth, or lightheadedness.

Vasodilatation

Alternate spelling; see *Vasodilation*.

Vasodilation

Widening of blood vessels when their muscular walls relax. It can increase blood flow and lower blood pressure and occurs with exercise, heat, medicines, and inflammation.

Vasodilator

A substance that relaxes blood-vessel walls and makes the vessels wider. It can lower blood pressure or improve blood flow and is used for selected heart, blood-pressure, or circulation problems; excessive widening may cause headache, flushing, dizziness, or fainting.

Vasodilators

Alternate name; see *Vasodilator*.

Vasodilatory Shock

Shock caused by widespread widening of blood vessels and loss of vascular tone, leading to dangerously low blood pressure and inadequate blood flow to organs. It can occur in severe infection, anaphylaxis, or some neurologic injuries.

Vasomotor

Relating to control of blood-vessel width by nerves, hormones, and local chemicals. Vasomotor changes narrow or widen vessels and help regulate blood pressure, body temperature, tissue blood flow, and skin color.

Vasomotor Center

A group of nerve cells in the lower brain that helps control the widening and narrowing of blood vessels and helps maintain blood pressure.

Vasomotor Centre

Alternate spelling; see *Vasomotor Center*.

Vasomotor Nerves

Autonomic nerves controlling blood-vessel widening and narrowing by changing smooth-muscle activity, helping regulate blood pressure and temperature.

Vasomotor Rhinitis

Common subtype term; see *Nonallergic Rhinitis*.

Vaso-Occlusive Crisis

An episode in sickle cell disease in which sickled red blood cells obstruct small blood vessels, reducing blood flow and causing acute pain and sometimes tissue injury.

Alternate Names:
Sickle Cell Pain Crisis; VOC

Vasopressin

A hormone made in the hypothalamus and released from the posterior pituitary. It increases water reabsorption in the kidneys and can constrict blood vessels.

Alternate Names:
Arginine Vasopressin; AVP

Vasopressin Receptor

A cell sensor that responds to the hormone vasopressin. Different types help the kidneys retain water and help blood vessels narrow, influencing body-fluid balance and blood pressure.

Vasopressin Receptor Antagonists

Medicines that block vasopressin receptors and increase water excretion by the kidneys. Some are used for selected cases of low blood sodium or fluid overload.

Alternate Names:
Vaptans

Vasopressor

A medicine or body signal that raises blood pressure, mainly by narrowing blood vessels and sometimes by strengthening the heartbeat. Vasopressor medicines are used in conditions such as shock; their effects on blood flow vary by agent and dose.

Vasopressors

Alternate name; see *Vasopressor*.

Vasopressors In Anesthesia

Alternate name; see *Vasopressor*.

Vasospasm

Sudden narrowing of a blood vessel caused by contraction of its muscular wall. It can temporarily reduce blood flow and cause chest pain, headache, stroke-like symptoms, or tissue injury, depending on the vessel affected.

Vasospastic Angina

Form of chest pain caused by sudden temporary spasm of coronary arteries, typically occurring at rest. See *Variant Angina Pectoris*.

Vasovagal Attack

Alternate name; see *Vasovagal Reaction*.

Vasovagal Reaction

A reflex response that can lower heart rate, blood pressure, or both. It may cause fainting (vasovagal syncope) and can be triggered by pain, fear, heat, or prolonged standing.

Vasovagal Syncope

Temporary loss of consciousness caused by a reflex drop in heart rate, blood pressure, or both, reducing

blood flow to the brain. It may be triggered by pain, fear, heat, or prolonged standing and is often preceded by nausea, sweating, or lightheadedness.

Alternate Names:
Neurocardiogenic Syncope; Vasovagal Fainting

Vater-Pacini Corpuscles

Encapsulated sensory receptors found in deep skin and other connective tissues. They respond especially to vibration and changes in pressure.

Alternate Names:
Pacinian Corpuscles; Lamellar Corpuscles

VATS

Alternate name; see *Video-Assisted Thoracoscopic Surgery*.

Vaughan Williams Classification

A system that groups medicines used for abnormal heart rhythms according to their main effect on the heart's electrical activity. It helps describe treatment but does not replace patient-specific prescribing.

VCJD

Alternate name; see *Variant CJD*.

VDRL Test

A blood or spinal-fluid test that looks for an immune reaction associated with syphilis. A reactive result needs a more specific confirmatory test and may help monitor response to treatment.

Vector

1. In infection control, a living organism, such as a mosquito or tick, that carries a disease-causing germ to a person or animal. The germ may develop or multiply inside the vector, or be carried without doing so. 2. In genetics, a molecule or modified virus used to carry genetic material into a cell.

Vector-Borne Disease

An infection spread by a living carrier such as a mosquito, tick, flea, or sandfly. Examples include malaria, dengue, Lyme disease, and some forms of viral encephalitis; prevention focuses on avoiding bites and controlling the carrier.

Vector Control

Measures that reduce insects or other animals that spread infection. Examples include removing standing water, using insecticides, treating breeding areas, improving buildings, wearing protective clothing, and using repellents or bed nets.

Vegetarian

Vegetarian describes a diet that avoids meat and may include dairy products, eggs, or both. Nutritional needs can usually be met with varied foods, but iron, vitamin B12, protein, and other nutrients may need attention.

Vegetation

A mass that can form on a heart valve during infective endocarditis. It may contain bacteria, blood-clotting material, and immune cells and can damage the valve or break off and travel to other organs.

Vein

A blood vessel that carries blood toward the heart. Most veins carry oxygen-poor blood, but veins from the lungs and placenta carry oxygen-rich blood. Veins often contain valves that help prevent backward flow.

Vein-Graft Aneurysms

An abnormal widening of a vein used to bypass a blocked heart artery. It may contain a clot, block blood flow, press on nearby structures, or rupture.

Vein of Galen Malformation

A rare birth defect in which abnormal connections let blood flow directly from arteries into an enlarged vein-like space in the brain that forms from a fetal blood vessel. It can strain the heart in newborns; infants and older children may develop an enlarged head, fluid buildup around the brain, seizures, or developmental problems.

Alternate Names:
VGM; Vein of Galen Aneurysmal Malformation

VeIP Regimen

A cancer-treatment combination of vinblastine, ifosfamide, and cisplatin, used mainly for selected germ-cell tumors. Adverse effects include low blood counts and injury to the kidneys, nerves, or bladder.

Velamentous Cord Insertion

An abnormal attachment in which the umbilical blood vessels travel through the membranes before reaching the placenta without the usual protective tissue. The vessels can be compressed or torn, increasing risks of poor fetal growth, bleeding, and vasa previa.

Alternate Names:
Velamentous Insertion of the Umbilical Cord

Velocardiofacial Syndrome

Alternate name; see *DiGeorge Syndrome*.

Velopharyngeal Insufficiency

A structural or functional anatomical failure of the soft palate (velum) and posterior pharyngeal wall to achieve complete closure during speech and deglutition, resulting in hypernasal speech resonance, nasal air emission, and nasal regurgitation of fluids.

Alternate Names:
VPI; Velopharyngeal Incompetence

Vemurafenib

A targeted cancer medicine for tumors with a specific BRAF V600 gene change, including some melanomas. It can cause joint pain, sun sensitivity, abnormal heart rhythm, new skin cancers, or treatment resistance.

Vena Cava

Either of the two largest veins returning blood to the right side of the heart. The superior vena cava drains the upper body, and the inferior vena cava drains the abdomen, pelvis, and legs.

Alternate Names:
Venae Cavae; Superior and Inferior Vena Cava

Vena Cava Filter

A device placed in the inferior vena cava to catch some blood clots traveling from the legs toward the lungs. It does not prevent clots from forming in the legs and is used in selected circumstances, such as when anticoagulants cannot be given.

Alternate Names:
IVC Filter; Inferior Vena Cava Filter

Venepuncture

Inserting a needle into a vein to collect blood or place intravenous access. It may cause brief pain, bruising, bleeding, infection, or fainting, and clean technique reduces complications.

Venereal Disease Research Laboratory Test

Alternate name; see *VDRL Test*.

Venereology

The medical specialty concerned with sexually transmitted infections and their effects. In many health systems, this work is part of sexual-health medicine, dermatology, or infectious-disease practice.

Venesection

The controlled removal of blood from a vein, used diagnostically or therapeutically, for example in selected cases of hemochromatosis or polycythemia.

Venipuncture

Puncture of a vein with a needle to obtain blood, administer fluids or medicines, or establish intravenous access. Complications include bruising, infection, bleeding, and, rarely, nerve or artery injury.

Venogram

Contrast imaging of veins used to detect thrombosis, obstruction, abnormal anatomy, or selected venous flow disorders.

Venography

Imaging of veins, usually after contrast material is administered, to assess venous anatomy, obstruction, thrombosis, or malformation.

Venom

A poisonous substance delivered by an animal through a bite, sting, or similar structure. Its effects vary by species and may include pain, swelling, nerve problems, bleeding, or dangerous changes in breathing or blood pressure.

Venomous Bite

A bite that injects venom from an animal such as a snake, spider, or arthropod. Effects range from local pain and swelling to bleeding, paralysis, or systemic toxicity.

Veno-Occlusive Disease

Alternate name; see *Hepatic Sinusoidal Obstruction Syndrome*.

Venous

Relating to veins, which usually carry blood back toward the heart. Vein problems include blood clots, varicose veins, poor return of blood, and ulcers; pulmonary veins are an exception because they carry oxygen-rich blood from the lungs to the heart.

Venous Air Embolism

Obstruction of the venous circulation by intravascular gas, usually after procedures, trauma, or pressure changes. It can impair pulmonary or cardiac function and, if gas reaches the arterial circulation, cause neurologic or systemic ischemia.

Venous Aneurysm

A localized abnormal dilatation of a vein. It may be asymptomatic or present as a soft mass, pain, thrombosis, embolism, or bleeding depending on its location and size.

Venous Blood Gas

A test measuring acidity, carbon dioxide, and bicarbonate in blood taken from a vein. It helps assess acid-base balance and carbon dioxide levels, but does not measure oxygenation as reliably as an arterial blood gas.

Alternate Names:
VBG

Venous Capacitance

The ability of veins to expand and hold changing amounts of blood with relatively small changes in pressure. The systemic veins serve as the body's main blood reservoir.

Venous Diseases

Conditions affecting veins, including blood clots, varicose veins, poor return of blood, inflammation, ulcers, injuries, and birth-related malformations. They may cause pain, swelling, skin changes, bleeding, or dangerous clots traveling to the lungs.

Venous Hum

A harmless continuous humming sound heard over the neck veins, most often in healthy children. It changes or disappears with body position or gentle pressure on the vein, helping distinguish it from heart murmurs that need further evaluation.

Alternate Names:
Cervical Venous Hum; Innocent Venous Hum

Venous Insufficiency

Impaired return of blood through the veins, usually in the legs, because valves allow backward flow, veins are blocked, or the calf-muscle pump is ineffective. Blood may pool and cause aching, heaviness, swelling, varicose veins, itching, darkened or hardened skin, stasis dermatitis, and difficult-to-heal ulcers near the ankle.

Venous Leak

A term for difficulty maintaining an erection attributed to excessive blood outflow from the penis. The proposed mechanism is one possible cause of erectile dysfunction and is not established by symptoms alone.

Alternate Names:
Veno-Occlusive Dysfunction; Cavernous Venous Leakage

Venous Pressure

The pressure of blood inside the veins. It depends on blood volume, vein width, gravity, and how well the right side of the heart pumps; abnormally high pressure can cause swelling, enlarged veins, or fluid

buildup.

Venous Return

The flow of blood through the veins back to the heart. It is helped by vein valves, muscle movement, breathing, and pressure changes in the chest.

Venous Stasis Dermatitis

Inflammation of the skin of the lower legs caused by chronic swelling and pooling of blood and fluid, usually from chronic venous insufficiency. It may cause itching, redness, scaling, skin darkening, thickening, or ulcers; treatment addresses the swelling and protects the skin.

Venous Stasis Ulcer

Alternate name; see *Venous Ulcer*.

Venous Thromboembolism

A medical condition that encompasses the formation of abnormal blood clots within the deep veins of the body. It most commonly starts as a deep vein thrombosis (DVT), where a blood clot develops in the deep veins of the leg, thigh, or pelvis, causing swelling, warmth, and pain. If a portion of this clot breaks loose and travels through the bloodstream to the lungs, it causes a pulmonary embolism (PE), a life-threatening emergency that blocks blood flow to lung tissue.

Alternate Names:
VTE; Deep Vein Thrombosis and Pulmonary Embolism

Venous Thromboembolism In Pregnancy

A blood clot in a deep vein or lungs during pregnancy or after birth. Pregnancy increases clot risk, and symptoms such as one-sided leg swelling, chest pain, sudden breathlessness, or coughing blood can indicate a serious clot.

Venous Thromboembolism Prophylaxis

Measures used to prevent dangerous vein clots, especially around surgery or hospitalization. They may include walking early, compression devices or stockings, and blood-thinning medicine when bleeding risk is acceptable.

Venous Thrombosis

The formation of a blood clot (thrombus) within a vein, most commonly in the deep veins of the lower extremities (deep vein thrombosis, DVT).

Venous Ulcer

A slow-healing sore caused by poor blood return through the leg veins, usually near the ankle. It may occur with leg swelling, varicose veins, or skin discoloration. Arterial circulation affects the safety of compression therapy.

Ventilation

Movement of air into and out of the lungs. Alveolar ventilation removes carbon dioxide; oxygen uptake into blood is called oxygenation.

Ventilation-Perfusion Mismatch

A mismatch between air reaching parts of the lungs and blood reaching those same parts. It can lower blood oxygen and occur with pneumonia, COPD, asthma, heart failure, or a lung clot.

Ventilation-Perfusion Ratio

The relationship between air reaching the lungs and blood reaching the lung tissues. Good matching allows efficient oxygen exchange; poor matching can cause low blood oxygen.

Ventilation-Perfusion Scan

A nuclear-medicine scan that compares air movement in the lungs with blood flow through them. Areas with blood flow blocked but preserved air movement may suggest a pulmonary embolism. The test uses a breathed tracer and an injected tracer and is interpreted with symptoms and other findings.

Ventilator

A machine that supports or replaces spontaneous breathing by delivering air, oxygen, or an air-oxygen mixture under positive pressure. Noninvasive ventilators deliver support through a mask, while invasive ventilators connect through an endotracheal or tracheostomy tube. Ventilators can provide different patterns and levels of pressure or volume according

to the device and clinical purpose.

Alternate Names:
Mechanical Ventilator Breathing Machine

Ventilator-Associated Pneumonia

Pneumonia that develops at least 48 hours after a person begins invasive mechanical ventilation. It may cause fever, worsening oxygen levels, increased airway secretions, or new lung changes on imaging.

Ventilator-Induced Lung Injury

Lung damage caused or worsened by mechanical ventilation, often through excessive stretch, pressure, or repeated opening and closing of lung units.

Ventouse

A vacuum extractor placed on the baby's scalp to assist a vaginal birth when delivery needs help. It is used only when specific safety conditions are met and can cause temporary scalp swelling or bruising.

Ventral

Relating to the belly or front side of the body; synonym for anterior in human anatomy.

Ventral Body Cavity

The body cavity toward the front. It includes the thoracic cavity and the abdominopelvic cavity, which contain many of the body's major organs.

Ventral Hernia

Protrusion of tissue through a weakness in the front abdominal wall, including incisional and umbilical hernias. It may cause a bulge or pain; a trapped hernia can lose its blood supply.

Ventral Root

The front root of a spinal nerve. It carries movement and other outgoing signals from the spinal cord.

Ventricle

One of the two lower chambers of the heart that pump blood out of it. The right ventricle sends blood to the lungs to receive oxygen; the left ventricle sends oxygen-rich blood to the rest of the body.

Ventricular

Relating to a ventricle. In the heart, it concerns one of the lower pumping chambers; in the brain, it concerns the fluid-filled spaces that contain cerebrospinal fluid. The organ gives the term its specific meaning.

Ventricular Aneurysm

A weakened, scarred area of a heart ventricle that bulges outward, most often after a heart attack. It can impair pumping and increase the risk of heart failure, abnormal rhythms, or a clot inside the heart.

Ventricular Arrhythmia

An abnormal heart rhythm arising from the ventricles. It may cause palpitations, dizziness, fainting, chest discomfort, or sudden cardiac arrest.

Ventricular Arrhythmias

Alternate name; see *Ventricular Arrhythmia*.

Ventricular Assist Device

A mechanical pump that helps a weakened heart move blood. It may support the left side, right side, or both and can be temporary or long-term, but bleeding, infection, stroke, and clots are important risks.

Ventricular Bigeminy

A heart-rhythm pattern in which each normal beat is followed by a premature beat from a ventricle. It may be seen on an electrocardiogram and can occur with or without heart disease.

Ventricular Fibrillation

A chaotic, disorganized, and life-threatening heart rhythm in which the lower heart chambers (the ventricles) quiver erratically instead of pumping blood. Because the heart cannot pump blood to the brain and vital organs, the pulse instantly disappears, causing sudden collapse, loss of consciousness within seconds, and cardiac arrest. It is a critical medical emergency requiring immediate cardiopulmonary

resuscitation (CPR) and electric defibrillation to restore a normal heartbeat.

Alternate Names:
V-Fib; VF

Ventricular Hypertrophy

Thickening of the wall of one of the heart's lower chambers. It may develop from long-term high blood pressure, valve disease, inherited heart muscle disease, or intense training and can lead to stiffness, abnormal rhythms, or heart failure.

Ventricular Myocardium

The heart muscle forming the walls of the ventricles. Its contraction pumps blood to the lungs and the rest of the body.

Ventricular Non-Compaction

An imaging phenotype with prominent left-ventricular trabeculations and deep recesses. It may occur with cardiomyopathy or as an isolated finding, so the appearance alone does not establish heart disease. *Left ventricular hypertrabeculation* is the preferred descriptive term; "non-compaction cardiomyopathy" is an older label.

Alternate Names:
LVNC; Left Ventricular Hypertrabeculation

Ventricular Premature Contraction

Alternate name; see *Premature Ventricular Contraction*.

Ventricular Remodeling

Changes in the size, shape, or muscle of a heart ventricle after injury or long-term strain. These changes can affect how well the heart fills and pumps.

Alternate Names:
Post-Infarction Remodeling

Ventricular Rupture

A tear in a wall of one of the heart's lower chambers, often after a heart attack. It can cause life-threatening bleeding around the heart.

Ventricular Septal Defect

An opening in the wall between the heart's lower chambers, usually present from birth. Blood often flows from the left ventricle to the right, increasing blood flow to the lungs. Small defects may close spontaneously; a large shunt can cause heart failure and, over time, pulmonary vascular disease.

Ventricular Septal Defect (VSD)

Alternate name; see *Ventricular Septal Defect*.

Alternate Names:
VSD

Ventricular Tachycardia

A rapid, abnormal heart rhythm originating from the heart's lower pumping chambers (the ventricles) rather than the natural pacemaker in the upper chambers. Beating at an abnormally fast rate (typically over 100 beats per minute), the ventricles do not have enough time between beats to fill properly with blood, drastically reducing the amount of blood pumped throughout the body. It can cause palpitations, lightheadedness, chest pain, and fainting, and can progress into a life-threatening cardiac arrest.

Alternate Names:
VT; V-Tach

Ventriculoatrial

Relating to a connection between a ventricle and an atrium. In brain surgery, a ventriculoatrial shunt is a tube that drains extra fluid from a brain cavity into the right upper chamber of the heart.

Ventriculoatrial Shunt

A surgically implanted cerebrospinal-fluid diversion system that drains fluid from a brain ventricle through a valve and catheter tunneled under the skin into a vein, with the distal catheter positioned in the right atrium. It treats hydrocephalus by returning excess fluid to the bloodstream and may be used when peritoneal drainage is unsuitable. Potential complications include blockage or infection and, because the catheter lies in the venous circulation, thrombosis or embolism.

Alternate Names:

VA Shunt; Ventriculo-Atrial Shunt

Ventriculography

Imaging of a heart ventricle, usually during cardiac catheterization after contrast dye is injected into the chamber. It shows chamber shape and movement and can help assess pumping function.

Ventriculoperitoneal Shunt

A surgically implanted catheter-and-valve system that diverts cerebrospinal fluid from a brain ventricle through tubing tunneled beneath the skin into the peritoneal cavity, where the fluid is absorbed. It is commonly used to treat hydrocephalus by reducing excess fluid and pressure in the ventricles. The valve regulates flow and may be fixed-pressure or programmable. Complications include blockage, infection, overdrainage or underdrainage, and problems at the abdominal catheter tip; malfunction can allow fluid to build up again or drain too rapidly.

Alternate Names:
VP Shunt

Ventriculoperitoneal Shunt Placement

The surgical implantation of a flexible drainage catheter and one-way valve connecting the cerebral ventricles to the peritoneal cavity to relieve hydrocephalus; see *Ventriculoperitoneal Shunt*.

Ventrosuspension

Surgical fixation of a displaced or prolapsed uterus to the anterior abdominal wall or nearby supporting tissues.

Venturi Mask

An oxygen mask that mixes oxygen with room air through calibrated openings to deliver a controlled oxygen concentration.

Alternate Names:
Air-Entrainment Mask; Venturi Oxygen Mask

Venturi Principle

The principle that a fluid's speed increases and its pressure decreases as it passes through a narrowed section of a tube. In medicine, this effect helps draw air into some oxygen masks and fluids into some suction devices.

Alternate Names:
Venturi Effect; Bernoulli-Venturi Principle; Air-Entrainment Principle

Venule

A small blood vessel that collects blood from capillaries and carries it into larger veins. Venules also allow white blood cells and fluid to leave the bloodstream during inflammation.

Venules

Alternate name; see *Venule*.

Verapamil

A non-dihydropyridine calcium-channel blocker used for selected hypertension, angina, and supraventricular tachyarrhythmias; it can cause bradycardia and constipation.

Verapamil Toxicity

Harm from an overdose or excessive exposure to verapamil, which can cause low blood pressure, a slow heart rate, abnormal heart rhythms, and impaired heart pumping.

Vermicides

Medicines or chemicals that kill parasitic worms. The correct treatment depends on the worm, the body site affected, the person's age, and other health conditions.

Vernal Keratoconjunctivitis

A recurrent allergic inflammation of the conjunctiva, usually beginning in childhood. It causes intense itching, tearing, light sensitivity, and stringy mucus; severe disease can involve the cornea and impair vision.

Alternate Names:
VKC; Spring Catarrh; Vernal Catarrh; Vernal Conjunctivitis

Verner-Morrison Syndrome

Alternate name; see *VIPoma*.

Vernix

A white, greasy protective coating on the skin of a fetus or newborn, composed mainly of water, lipids, and shed skin cells.

Vernix Caseosa

Alternate name; see *Vernix*.

Verruca

A common, non-cancerous skin growth (wart) caused by localized infection of the top layer of skin with human papillomavirus (HPV). The virus causes rapid multiplication of skin cells, creating a rough, raised bump that may develop tiny dark dots (thrombosed capillaries). Warts can develop on any area of the skin, commonly appearing on the hands and fingers (common warts) or on the soles of the feet (plantar warts), where pressure from walking can make them painful.

Alternate Names:
Verrucas; Verrucae; Wart; Warts

Verruca Plana

Small, smooth, relatively flat warts caused by HPV, often occurring in groups on the face, hands, or legs.

Alternate Names:
Flat Warts; Juvenile Warts

Verrucas

Plural form; see *Verruca*.

Verruca Vulgaris

A common, benign skin wart caused by human papillomavirus. It is a raised growth with a rough surface and may have tiny dark dots from clotted capillaries.

Alternate Names:
Common Wart; Viral Verruca

Verruciform Xanthoma

A rare, noncancerous growth usually found in the mouth or genital area. It may look like a wart, so examination and sometimes a tissue sample are needed to distinguish it from cancer.

Verrucose

Alternate spelling; see *Verrucous*.

Verrucous

Having a rough, thickened, irregular, or wart-like surface. The appearance can occur in benign growths, infections, chronic inflammation, or some cancers.

Verrucous Carcinoma

A low-grade, well-differentiated variant of squamous cell carcinoma with a warty, exophytic appearance. It is locally invasive but rarely metastasizes, commonly affecting the oral cavity, skin, or genitalia.

Verrucous Secondary Syphilis

A rare wart-like form of secondary syphilis with thickened, papillomatous skin or mucosal lesions, often in moist or anogenital areas. It is caused by systemic infection with *Treponema pallidum* and may resemble genital warts or other verrucous growths.

Version

A change in the position or presentation of a body structure. In pregnancy, fetal version is a procedure or movement that changes the baby's position, often to place the head downward before birth.

Vertebra

One of the bones forming the spinal column. Each vertebra helps support the body, allows movement, provides attachment for muscles, and surrounds and protects the spinal cord.

Vertebrae

Vertebrae are the bones of the spinal column that protect the spinal cord, support the body, allow movement, and provide attachment for muscles and ligaments.

Vertebral Artery

One of two arteries that travel through the neck and join to supply the brainstem, cerebellum, and back of the brain. Narrowing or blockage can cause dizziness, imbalance, or stroke.

Vertebral Artery Dissection

A tear in the inner lining of a vertebral artery that lets blood enter the vessel wall, forming an intramural hematoma and possibly narrowing the artery or creating a pseudoaneurysm. It may occur spontaneously or after neck injury and can cause sudden neck or occipital headache, dizziness, imbalance, or a posterior-circulation transient ischemic attack or stroke.

Alternate Names:
VAD; Spontaneous Vertebral Artery Dissection

Vertebral Canal

The passage formed by the stacked spinal bones that surrounds and protects the spinal cord. Narrowing, bleeding, tumors, fractures, or disc disease inside it can compress nerves and cause weakness or pain.

Vertebral Column

The chain of bones running from the neck to the pelvis. It supports the head and trunk, protects the spinal cord, allows bending and twisting, and provides attachment for muscles and ribs.

Vertebral Compression Fracture

Collapse or cracking of one of the bones in the spine, often from osteoporosis, injury, or cancer. It may cause sudden or gradual back pain, loss of height, or a rounded back and can sometimes press on nerves.

Vertebral Hemangioma

A common, benign, primary vascular malformation of the vertebral body characterized histopathologically by a proliferation of thin-walled, blood-filled capillary and cavernous vessels interspersed within the bony trabeculae of the spine. Most frequently situated in the thoracic and lumbar spine, the vast majority are asymptomatic and discovered incidentally on spine imaging, displaying a characteristic vertical striation ("corduroy cloth" or "jail bar" pattern) on lateral plain radiographs and a classic "polka-dot" appearance on axial CT. Rare aggressive or expanding hemangiomas can cause cortical erosion, pathologic compression fracture, or extraosseous epidural expansion resulting in spinal cord compression or radiculopathy; treatment for symptomatic lesions includes endovascular embolization, percutaneous vertebroplasty, or surgical decompression.

Alternate Names:
Spinal Hemangioma

Vertebral Osteomyelitis

An infection of one or more bones in the spine, usually caused by bacteria that reach the bone through the blood or during a procedure. It can cause persistent, localized back pain and may spread to nearby discs or tissues. See also *Discitis*.

Vertebral Tumor

A growth arising in or near a spinal bone. It may be benign or cancerous, start in the spine or spread there, and cause pain, fracture, nerve compression, weakness, or paralysis.

Vertebral Venous Plexus

Network of valveless veins in the vertebral canal that connects the deep pelvic and thoracic veins to the cranial venous system. See *Batson Venous Plexus*.

Vertebrobasilar Circulatory Disorders

Conditions that reduce blood flow through the vertebral or basilar arteries supplying the brainstem, cerebellum, and posterior brain; symptoms may include vertigo, double vision, imbalance, weakness, or stroke.

Vertebrobasilar Insufficiency

Reduced blood flow through arteries supplying the back of the brain. It may cause dizziness, double vision, imbalance, weakness, trouble speaking, or stroke-like symptoms and can be serious when sudden.

Vertebrobasilar Insuffiency

Misspelling; see *Vertebrobasilar Insufficiency*.

Vertebroplasty

A procedure in which medical cement is injected into a collapsed spinal bone to help stabilize it and

sometimes reduce pain. It is used selectively because cement leakage, infection, nerve injury, or other complications can occur.

Vertical

Oriented from superior to inferior or perpendicular to a horizontal plane. In medicine, it may describe position, transmission from parent to child, or a body-oriented imaging or movement axis.

Vertical Talus

A stiff flatfoot present from birth in which one of the ankle bones points downward and the middle of the foot is bent upward. It may occur alone or with other conditions and can impair standing and walking.

Vertical Transmission

Passage of an infection or genetic condition from parent to child during pregnancy, delivery, or breastfeeding.

Vertigo

A false feeling that you or your surroundings are moving, spinning, tilting, or shifting when they are not. It is a symptom rather than a disease and often comes from the inner ear, but brain and other conditions can also cause it.

Vertigo-Associated Disorders

Vertigo-associated disorders cause an illusion of movement from vestibular, neurologic, visual, medication-related, or systemic dysfunction and may be accompanied by imbalance, nausea, or hearing symptoms.

Alternate Names:
Vestibular Disorders; Peripheral Vestibulopathy; Labyrinthine Disorders

Very Long-Chain Acyl-CoA Dehydrogenase Deficiency

A rare inherited disorder in which cells cannot use certain long-chain fats for energy, especially during fasting or illness. Infants may develop low blood sugar, heart disease, or liver problems; older children or adults may have exercise-triggered muscle breakdown and dark urine.

Alternate Names:
VLCAD Deficiency; VLCADD

Very-Low-Density Lipoprotein

A particle made by the liver that carries mainly triglycerides through the blood. High levels can contribute to fatty deposits in artery walls and increase cardiovascular risk, although the result is interpreted with the full lipid profile.

Alternate Names:
VLDL

Vesical

Relating to the urinary bladder. For example, vesical inflammation affects the bladder lining, a vesical tumor is a bladder growth, and the vesical neck is the bladder outlet leading toward the urethra.

Vesicant

A substance that causes blistering and tissue injury on contact. In oncology, vesicant drugs can cause severe extravasation injury if they escape from a vein into surrounding tissue.

Vesicants

Alternate name; see *Vesicant*.

Vesicle

A small, circumscribed, raised skin lesion containing clear, serous, or sometimes bloody fluid, usually less than 1 cm in diameter. A vesicle is a small blister; causes include viral infection, contact irritation, eczema, burns, friction, and immune-mediated skin disease.

Vesicoureteral Reflux

Backward flow of urine from the bladder toward the kidneys because the valve where a ureter enters the bladder does not work normally. It can cause repeated kidney infections and scarring, especially in children.

Alternate Names:
VUR; Urinary Reflux

Vesico-Ureteric Reflux

Backward flow of urine from the bladder into one or both ureters and sometimes the kidneys, increasing the risk of recurrent urinary infection and renal scarring.

Vesicovaginal and Ureterovaginal Fistula

Abnormal connections between the urinary tract and vagina: a vesicovaginal fistula connects bladder to vagina, while a ureterovaginal fistula connects ureter to vagina. Both commonly cause continuous urine leakage and require imaging and reconstructive urologic or gynecologic care.

Vesicovaginal Fistula

An abnormal connection between the bladder and vagina that causes continuous or frequent leakage of urine through the vagina. It may follow childbirth injury, pelvic surgery, radiation, or advanced infection and usually requires specialist repair.

Vesicular

Describing or containing small, fluid-filled blisters. A vesicular rash may occur with viral infection, allergy, eczema, burns, or other conditions; its appearance alone does not establish the cause.

Vesicular Breathing

The normal soft, gentle breath sound heard over most outer lung areas with a stethoscope. Changes in loudness or quality may suggest fluid, collapse, blockage, infection, or other lung disease.

Vesicular Palmoplantar Eczema

An itchy eczema affecting the palms or soles with small, deep-seated fluid-filled vesicles, followed by peeling, scaling, or fissures. Triggers include sweating, irritants, allergy, stress, and fungal infection elsewhere; persistent disease may need specialist treatment.

Vesiculobullous Dermatoses

A group of skin diseases that cause small or large fluid-filled blisters. Causes include infection, allergy, autoimmune disease, inherited conditions, medicines, and injury; examination and sometimes a biopsy identify the cause.

Vessel

A vessel is a tube carrying blood, lymph, air, urine, bile, or another fluid through the body, depending on context.

Vestibular

Relating to the vestibular system of the inner ear and brain, which detects head motion and position and helps maintain balance and gaze stability.

Vestibular Disorder

A problem affecting the inner-ear balance organs or the brain pathways that process balance signals. It may cause dizziness, vertigo, unsteadiness, nausea, abnormal eye movements, or difficulty walking. Causes include inner-ear disease, infection, head injury, medicines, migraine, reduced blood flow, or disorders of the brain or nerves.

Alternate Names:
Vestibular Balance Disorder

Vestibular Migraine

Repeated attacks of dizziness or vertigo related to migraine, with or without headache. Episodes may include sensitivity to movement, light, sound, or visual patterns; symptoms overlap with other inner-ear and neurologic disorders.

Vestibular Neuritis

A sudden problem affecting the nerve that carries balance signals from the inner ear to the brain. It can cause severe spinning dizziness, nausea, and unsteadiness for days. Hearing is usually not affected.

Vestibular Papillomatosis

A harmless normal variation in which several soft, small, finger-like bumps occur on the inner vulvar folds. It can resemble genital warts but is not caused by an infection.

Vestibular Rehabilitation

Exercise-based therapy that improves balance, gaze stability, and adaptation in people with vestibular

disorders or dizziness.

Vestibular Schwannoma

A usually noncancerous, slow-growing growth on the nerve that carries balance signals from the inner ear to the brain. It may cause hearing loss in one ear, ringing, or unsteadiness. Also called an acoustic neuroma.

Vestibular System

The inner-ear sensors and connected brain pathways that detect head movement and position and help maintain balance, posture, and steady vision. Problems can cause vertigo, unsteadiness, nausea, or blurred vision during movement.

Vestibule

A balance area of the inner ear between the cochlea and semicircular canals. It contains sensors that detect head position and straight-line movement and send this information to the brain.

Vestibulocochlear Nerve

The eighth cranial nerve, carrying information for hearing and balance from the inner ear to the brain.

Vestibulodynia

Pain localized to the vulvar vestibule, the area around the vaginal opening. It is often triggered by touch or penetration and is commonly described as localized, provoked vulvodynia.

Alternate Names:
Provoked Vestibulodynia; Vulvar Vestibulitis Syndrome; PVD

Vestibulo-Ocular Reflex

An automatic response that moves the eyes opposite to head movement so vision stays steady while a person turns or walks. Problems with it can cause blurred vision, dizziness, or imbalance.

Vestigial

Describing a structure or feature that has become greatly reduced through evolution and has little or no apparent original function.

VEXAS Syndrome

A serious inflammatory illness that begins in adulthood because of a gene change acquired in blood-forming cells. It can cause persistent fever, painful joints, skin rashes, inflamed blood vessels or cartilage, anemia, and other blood abnormalities.

V-Fib

Alternate name; see *Ventricular Fibrillation*.

VHF

Group of severe viral illnesses that affect multiple organ systems and can cause severe vascular damage and bleeding. See *Viral Hemorrhagic Fevers*.

Viable

Capable of surviving or developing under suitable conditions. In clinical contexts it may describe a viable pregnancy, tissue, organism, cell, or treatment option.

Vibration Problem

Symptoms or injury caused by repeated exposure to vibrating tools or equipment, which may affect nerves, blood vessels, muscles, and joints in the hands or arms.

Vibrator

A device that produces mechanical vibration and may be used for sexual stimulation, therapeutic massage, or selected rehabilitation purposes.

Vibrio

A genus of motile, facultatively anaerobic, comma-shaped (curved) gram-negative bacilli that naturally inhabit marine, estuarine, and coastal aquatic environments. Notable human pathogenic species include *Vibrio cholerae* (serogroups O1 and O139 producing cholera toxin, a potent ADP-ribosylating enterotoxin that causes massive secretory diarrhea, profound dehydration, and rapid hypovolemic shock in cholera), *Vibrio vulnificus* (acquired via raw seafood consumption or wound exposure to seawater, causing fulminant septicemia and life-threatening necrotizing fasciitis), and *Vibrio parahaemolyticus* (a leading cause of self-limited acute seafood-

associated gastroenteritis).

Alternate Names:
Vibrios

Vibrio Cholerae

A bacterium that causes cholera, a severe diarrheal illness spread mainly through contaminated water or food. It can cause sudden, large-volume watery diarrhea, dehydration, shock, and death without rapid fluid replacement.

Vibrio Infection

Illness caused by pathogenic *Vibrio* bacteria, usually acquired by eating raw or undercooked seafood or when a wound contacts coastal or brackish water. It commonly causes watery diarrhea, abdominal cramps, nausea, or vomiting; some species cause wound infection or bloodstream infection, which can be severe, particularly in people with liver disease. Cholera caused by toxigenic *V. cholerae* O1 or O139 is classified separately.

Alternate Names:
Vibriosis

Vibrio Parahaemolyticus Infection

A foodborne intestinal infection caused by a salt-tolerant bacterium, often linked to raw or undercooked seafood. It commonly causes watery diarrhea, abdominal cramps, nausea, vomiting, and sometimes fever.

Alternate Names:
Vibrio Parahaemolyticus Gastroenteritis; Halophilic Vibrio Infection

Vibrios

Plural form; see *Vibrio*.

Vibrio vulnificus Infection

Infection caused by a saltwater-associated bacterium that can produce rapidly progressive wound infection, sepsis, or severe gastroenteritis. Risk is higher with liver disease, iron overload, or immune suppression; raw oysters and seawater exposure are important sources.

Vibrio Vulnificus Infections

Alternate name; see *Vibrio vulnificus Infection*.

Video-Assisted Thoracoscopic Surgery

Surgery inside the chest performed through small incisions using a camera and long instruments. It is used for procedures such as lung or pleural biopsy and lung resection; complications can include bleeding, air leakage, or infection.

Alternate Names:
VATS; Video Thoracoscopy; Thoracoscopic Surgery

Videofluoroscopic Swallow Study

A moving X-ray test that records swallowing after small amounts of food or liquid containing contrast are taken. It shows whether food enters the airway, where swallowing is delayed, and which textures or techniques may be safer.

Video Laryngoscope

An airway device with a small camera that shows the entrance to the windpipe on a screen. It helps clinicians place a breathing tube, especially when a direct view is difficult, but does not remove the risks of the procedure.

Video Laryngoscopy

A technique for viewing the entrance to the windpipe with a camera on a blade connected to a screen. It can help clinicians place a breathing tube when a direct view is difficult.

Videostroboscopy

A voice examination that uses a camera and flashing light to create a slow-motion view of the vocal cords as they vibrate. It helps investigate hoarseness, voice strain, and vocal-cord injury.

Vildagliptin

An oral dipeptidyl-peptidase-4 inhibitor used in some countries for type 2 diabetes, alone or with other medicines. It improves glucose-dependent insulin secretion; uncommon adverse effects include liver injury and pancreatitis.

Villi

Tiny finger-like projections lining the small intestine that greatly increase the area available to absorb nutrients. Similar projections in the placenta help exchange substances between the pregnant person and fetus.

Villous Adenoma

A type of precancerous polyp in the large intestine with finger-like projections. Villous features, especially in a large polyp or one with high-grade dysplasia, are associated with increased risk of colorectal cancer.

Alternate Names:
Villous Colonic Polyp; Papillary Adenoma

Villous Atrophy

Flattening or loss of the tiny projections lining the small intestine. This reduces nutrient absorption and may occur in celiac disease, some infections, immune disorders, or other intestinal conditions.

Villus

A small finger-like projection, especially one of the intestinal mucosa that increases absorptive surface area; chorionic villi mediate exchange between placenta and fetus.

Villus Atrophy

Alternate name; see *Villous Atrophy*.

Vinca Alkaloids

Cancer medicines including vincristine and vinblastine that disrupt microtubules, structures needed for cell division. They can treat several cancers but may cause nerve damage, low blood counts, constipation, or other toxicity.

Vincent Angina

Alternate name; see *Acute Necrotizing Ulcerative Gingivitis*.

Vincent Disease

Alternate name; see *Acute Necrotizing Ulcerative Gingivitis*.

Vincent Infection

Alternate name; see *Acute Necrotizing Ulcerative Gingivitis*.

Vincent's Angina

Alternate name; see *Acute Necrotizing Ulcerative Gingivitis*.

Vincent Stomatitis

Alternate name; see *Acute Necrotizing Ulcerative Gingivitis*.

Vinorelbine

A chemotherapy medicine that interferes with cell division. It is used for selected lung and breast cancers and can cause low blood counts, infection, constipation, nerve symptoms, nausea, or irritation if it leaks outside a vein.

Viomycin

An older aminoglycoside antibiotic related to capreomycin that was used against tuberculosis and other mycobacterial infections; kidney and hearing toxicity limit its use.

VIPoma

A rare neuroendocrine tumor, usually in the pancreas, that produces excess vasoactive intestinal peptide (VIP). It causes persistent watery diarrhea and can lead to low potassium and dehydration.

Alternate Names:
Vasoactive Intestinal Peptide Tumor; Verner-Morrison Neoplasm; WDHA Syndrome; Pancreatic Cholera

VIPoma Syndrome

Alternate name; see *VIPoma*.

Viraemia

Alternate spelling; see *Viremia*.

Viral

Caused by or relating to a virus. Viruses enter living cells to multiply and can cause illnesses ranging from mild colds to serious brain, lung, liver, or

bleeding diseases; testing and treatment depend on the specific virus.

Viral Antibody

An immune protein that recognizes a virus. A test for viral antibodies may show past infection, vaccination, or an immune response; its meaning depends on the virus, test, and timing.

Viral Arthritis

Joint inflammation caused by or associated with a viral infection. It may cause sudden pain, swelling, and stiffness in several joints and often improves as the infection resolves, although some viruses can cause prolonged symptoms.

Viral Assembly

The stage of viral reproduction when newly made viral genetic material and proteins are put together to form complete new virus particles.

Viral Attachment

The first step of infection, when proteins on a virus bind to matching molecules on a host cell. This binding helps determine which species, tissues, or cell types the virus can infect.

Viral Carcinogenesis

Cancer development caused or promoted by a viral infection. Some viruses alter cell growth directly, weaken immune protection, or cause long-lasting inflammation; examples include human papillomavirus, hepatitis B and C viruses, and Epstein-Barr virus.

Viral Conjunctivitis

Inflammation of the conjunctiva caused by a virus, often producing red, watery, irritated eyes and sometimes discharge. It is usually contagious and can spread through contact with infected secretions or contaminated hands and surfaces.

Viral Culture

Growth of a virus in susceptible cell cultures to identify an infectious agent. It can be useful for selected viruses, but molecular and antigen-based tests are often faster or more sensitive; the appropriate method depends on the suspected infection and specimen.

Viral Encephalitis

Inflammation of the brain caused by a virus. It may cause fever, headache, confusion, behavior change, seizures, weakness, or reduced consciousness. Severe cases can be life-threatening.

Viral Entry

The process by which a virus gets inside a host cell and releases its genetic material so the cell can make more virus.

Viral Exanthem

A widespread rash caused by a viral infection. It may occur with fever, tiredness, sore throat, cough, diarrhea, or other symptoms; the rash pattern and overall illness help determine the cause.

Viral Gastroenteritis

Infection of the stomach and intestines by a virus, usually causing diarrhea, vomiting, or both. “Stomach flu” is a colloquial term and does not mean influenza.

Viral Haemorrhagic Fever

Alternate spelling; see *Viral Hemorrhagic Fevers*.

Viral Hemorrhagic Fevers

A group of illnesses caused by several virus families that can affect multiple organs and disrupt blood-vessel function and clotting. Some cause bleeding, shock, or organ failure; routes of spread and transmission risk vary by virus.

Alternate Names:
VHF; Viral Hemorrhagic Disease

Viral Hepatitis

Liver inflammation caused by hepatitis viruses A, B, C, D, or E. The viruses differ in how they spread and whether they can cause long-term infection; hepatitis D occurs only in people with hepatitis B.

Alternate Names:

Viral Hepatitis Types

The five main hepatitis viruses—A, B, C, D, and E. They differ in how they spread, whether infection can become long-term, and the liver complications they can cause.

Viral Immune Evasion

Ways viruses avoid or weaken the body's immune defenses, allowing them to survive, multiply, or return after infection. These methods can make infections harder to clear and vaccines or treatments less effective.

Viral Infection

An illness caused by a virus entering body cells and making copies of itself. Viruses can damage cells directly or cause inflammation as the immune system responds. Viral infections range from mild illnesses such as colds and cold sores to serious diseases such as influenza, COVID-19, hepatitis, and HIV. Some viruses remain inactive in the body and can become active again later, such as the chickenpox virus causing shingles.

Alternate Names:
Viral Infections; Viral Disease; Viral Illness

Viral Infections and Pregnancy

Viral infections during pregnancy may affect maternal illness, fetal development, placenta, or newborn health. Evaluation considers the virus, gestational age, symptoms, immunity, exposure, testing, treatment, vaccination, and measures to reduce perinatal transmission.

Viral Infections of the Mouth

Infections of oral skin or mucosa caused by viruses such as herpes simplex, varicella-zoster, enteroviruses, HPV, or EBV. They may cause blisters, ulcers, warts, sore throat, or systemic symptoms, and treatment depends on the virus and host risk.

Viral Latency

A state in which a virus remains in host cells with limited or no production of new virus particles. Some latent viruses can reactivate; triggers vary by virus and may include weakened immune defenses.

Viral Latency Mechanisms

Alternate name; see *Viral Latency*.

Viral Load

The amount of virus or viral genetic material in a body fluid or tissue, measured by a laboratory assay; trends can help assess disease activity or response to antiviral treatment.

Viral Meningitis

Infection and inflammation of the coverings of the brain and spinal cord caused by a virus. It may cause fever, headache, neck stiffness, vomiting, light sensitivity, or confusion. Bacterial meningitis can cause similar symptoms and is more dangerous.

Viral Myocarditis

Inflammation of the heart muscle caused by a viral infection or by the immune response after an infection. It may cause tiredness, chest discomfort, palpitations, heart failure, shock, or dangerous abnormal heart rhythms.

Viral Pathogenesis

The ways a virus enters the body, infects and spreads through cells, and causes illness. Damage may come directly from infected cells or from the immune system's response to the infection.

Viral Pericarditis

Inflammation of the sac around the heart caused by a viral infection. It often follows a respiratory or stomach illness and may cause sharp chest pain that changes with breathing or position.

Viral Pharyngitis

Inflammation of the throat caused by a virus. It may cause sore throat, cough, runny nose, or conjunctivitis; the specific symptoms vary with the virus.

Alternate Names:

Viral Sore Throat; Acute Viral Pharyngotonsillitis; Viral Upper Respiratory Pharyngitis

Viral Pneumonia

Infection and inflammation of lung tissue caused by a virus, producing cough, fever, chills, breathlessness, chest discomfort, fatigue, and variable impairment of oxygenation. Severe disease can cause respiratory failure or secondary bacterial infection.

Viral Release

The stage when newly made viruses leave an infected cell and spread to other cells. Some leave by pushing through the cell membrane, while others are released when the infected cell breaks apart.

Viral Replication

The process by which a virus uses an infected cell to copy its genetic material and make viral proteins. The exact steps differ among viruses, but the result is production of new virus particles.

Viral Replication Cycle

Alternate name; see *Viral Replication*.

Viral Respiratory Infection

An infection of the nose, throat, or lower respiratory tract caused by a respiratory virus. Symptoms may include cough, runny nose, sore throat, fever, fatigue, or breathing difficulty; the specific virus and severity determine the clinical presentation.

Viral Rhinitis

Inflammation of the nasal lining caused by a respiratory virus, often as part of the common cold. It can cause a runny or blocked nose, sneezing, sore throat, and reduced sense of smell.

Alternate Names:
Acute Viral Rhinitis; Acute Coryza

Viral Structure

The parts of a virus: genetic material made of DNA or RNA inside a protective protein coat. Some viruses also have an outer fatty covering taken from the infected cell's membrane.

Viral Uncoating

The step after a virus enters a cell when its protective outer coat comes apart and releases the genetic material. The cell can then be directed to make new viral components.

Virchow Node

An enlarged lymph node above the left collarbone that may indicate cancer spread from the chest or abdomen through lymphatic drainage. It is classically associated with stomach cancer but can occur with other cancers.

Alternate Names:
Troisier Node

Virchow-Robin Spaces

Small fluid-filled spaces around blood vessels as they pass through the brain. They are a normal part of the spaces that surround and support these vessels.

Alternate Names:
Perivascular Spaces

Virchow's Triad

Alternate name; see *Virchow Triad*.

Virchow Triad

Three factors that increase the chance of a blood clot forming: injury to the inside of a blood vessel, slow blood flow, and blood that clots too easily.

Alternate Names:
Virchow's Triad; Thrombosis Pathophysiological Triad

Viremia

The presence of a virus in the bloodstream. It may be brief or persistent and can allow infection to spread to other organs. Laboratory tests may detect the virus itself or its genetic material.

Viridans Streptococci

Viridans streptococci are a group of bacteria commonly found in the mouth that can cause dental infections and, after entering the blood, infect heart valves.

Virilisation

The development of male secondary sexual characteristics in females, resulting from excessive androgen production or exposure.

Virilism

Development of masculinizing features in a female, usually from excess androgen exposure or production, such as hirsutism, deep voice, acne, and menstrual disturbance.

Virilism Foetal

Prenatal or neonatal masculinization of a genetically female fetus or infant due to excess androgen exposure. Causes include congenital adrenal hyperplasia, maternal androgen-producing disease, or placental and fetal steroidogenic disorders.

Virilization

Virilization is development of typically male secondary sexual features, such as hirsutism, deep voice, acne, increased muscle mass, or clitoromegaly, from androgen excess or androgen exposure.

Virilize

To virilize is to develop or cause typically male physical changes from androgen excess or treatment, including facial hair, voice deepening, acne, muscle change, or genital enlargement.

Virology

The study of viruses, including their structure, reproduction, spread, effects on the body, diagnosis, treatment, and prevention.

Virotherapy

Treatment that uses a virus, often modified, to attack cancer cells or deliver a useful gene into cells. It is an evolving field; the possible benefits, risks, and availability depend on the specific therapy and disease.

Virtual Colonoscopy

Virtual colonoscopy is CT colonography, which uses bowel preparation and gas or carbon-dioxide insufflation to create images of the colon; it can detect polyps and masses but cannot remove lesions or biopsy them.

Virulence

How severely a microorganism can cause disease or tissue damage. It depends on the organism's harmful properties and on the person's immune defenses and other health factors.

Virulence Factor

A feature of a microorganism that helps it survive in the body, avoid immune defenses, attach to cells, damage tissue, or cause disease. Examples include toxins, protective coatings, and enzymes.

Virulent

Capable of causing severe disease or extensive harm. Virulence describes the harmfulness of a microorganism and is different from infectivity, which describes how easily it spreads or establishes infection.

Virus

An infectious agent made of genetic material inside a protective protein coat, sometimes with an outer membrane. It can reproduce only inside living cells and may cause illness by damaging cells or triggering inflammation.

Virus Activation

Virus activation is the switch from a dormant or inactive viral state to production of new viral components and particles.

Virus Assembly

Alternate name; see *Viral Assembly*.

Virus Diseases

Illnesses caused by viruses. They range from mild infections of one area, such as a cold, to severe diseases affecting the lungs, liver, brain, blood, or several organs; prevention and treatment depend on the virus.

Viruses

Alternate name; see *Virus*.

Virus Integration

Virus integration is insertion of viral genetic material into the DNA of a host cell, a process used by some viruses and important in certain cancers.

Virus Protein

A virus protein is a protein made from viral genetic instructions that helps form the virus, enter cells, replicate, or evade immunity.

Virus Receptor

A virus receptor is a molecule on a host cell that a virus binds to in order to attach to and enter the cell.

Virus Replication

Alternate name; see *Viral Replication*.

Virus Uncoating

Virus uncoating is removal of the virus's protective outer layer after entry into a host cell, releasing its genetic material for replication.

Viscera

The internal organs of the body, particularly those within the thoracic and abdominal cavities. The thoracic viscera include the heart, lungs, esophagus, trachea, and thymus.

Visceral

Relating to the internal organs, especially those within the thorax or abdomen, rather than the body wall or limbs.

Visceral Afferents

Sensory nerve fibers that carry information from internal organs to the spinal cord and brain. They convey signals related to stretch, chemical changes, inflammation, and internal pain and help regulate autonomic and reflex responses.

Visceral Larva Migrans

A syndrome caused by migration of animal nematode larvae through human tissues, most often from Toxocara species. It may produce fever, eosinophilia, liver lesions, or ocular and neurologic disease.

Visceral Leishmaniasis

A serious parasitic infection caused by Leishmania species and spread by sand flies. It affects internal organs, especially the spleen, liver, and bone marrow, and can cause prolonged fever, weight loss, anemia, and enlargement of the liver and spleen.

Alternate Names:
Kala-Azar; Black Fever; Dumdum Fever; Systemic Leishmaniasis

Visceral Pain

Pain arising from internal organs, often felt as pressure, cramping, aching, or poorly localized discomfort rather than sharp surface pain. It may result from stretching, inflammation, reduced blood flow, obstruction, or injury of an organ.

Viscerogenic

Originating in the internal organs; the term may describe pain or reflexes that arise from them.

Visceromegaly

Abnormal enlargement of one or more internal organs, such as the liver, spleen, or kidneys. It is a physical finding with causes that include infection, congestion, storage disease, inflammation, and cancer.

Viscerotropic

Primarily affecting or tending to target the internal organs (viscera), as a disease or infectious agent.

Viscus

An internal organ, especially one in the chest or abdomen. The plural is viscera; examples include the heart, lungs, liver, stomach, and intestines.

Vision

The sense that detects light and enables the brain

to form and interpret images, including shape, color, movement, and spatial relationships. It depends on the eyes, optic nerves, and visual pathways in the brain.

Alternate Names:
Eyesight; Sight; Visual Perception

Vision And Hearing

Two major senses used to understand and communicate with the world. Problems may develop separately or together because of aging, illness, injury, medicines, or inherited conditions and can affect learning, safety, communication, and daily activities.

Vision Impairment

Alternate name; see *Visual Impairment*.

Vision Loss

A decrease in the ability to see that cannot be fully corrected with eyeglasses, contact lenses, or medical treatment. It ranges from partial impairment to complete blindness and can result from conditions such as macular degeneration, glaucoma, diabetic retinopathy, cataracts, and traumatic injury.

Vision Problems

Changes in visual acuity, field, color, or clarity caused by refractive error, eye disease, neurologic disease, or systemic illness. Sudden vision loss can result from serious retinal, optic-nerve, or neurologic disease.

Vision Receptors

Light-sensing cells in the retina, mainly rods and cones, that convert light into nerve signals. Rods support dim-light vision, while cones provide color and sharp detail in brighter conditions.

Vision Screening

Brief checks used to find possible eye or vision problems before symptoms are obvious. Newborn checks may detect cataracts or other serious disorders; screening in young children looks for poor vision, misaligned eyes, or risks for reduced vision and leads to a full eye examination when needed.

Vision Test

An examination that measures visual acuity, fields, color, alignment, or eye structures to detect refractive error, retinal disease, optic-nerve dysfunction, glaucoma, or other causes of visual impairment.

Visual Acuity

How clearly a person can see fine details, usually measured by reading letters or symbols at a set distance. It can be reduced by focusing problems, eye disease, or disorders affecting the visual nerves or brain.

Visual Acuity Test

A test measuring the smallest standardized detail a person can resolve at a specified distance, usually reported as a fraction or decimal.

Visual Agnosia

Inability to recognize familiar objects, faces, or symbols by sight even though the eyes may see adequately. It usually results from damage to brain areas that interpret vision, such as after a stroke or head injury.

Visual Evoked Potential

A test that records the brain's electrical response to flashes or changing visual patterns. It helps assess the nerve pathways that carry visual signals from the eyes to the brain.

Alternate Names:
VEP; Visual Evoked Response (VER)

Visual Field

The entire spatial area and perimeter within which visual stimuli are perceived when the eye and head remain fixed in a stationary forward gaze. Measured clinically and perimetrically (automated Humphrey visual field perimetry or Goldmann kinetic perimetry), the normal monocular visual field extends approximately 60 degrees superiorly, 70 degrees inferiorly, 60 degrees nasally, and 100 degrees temporally. Characteristic visual field defects localize neuro-ophthalmic pathology: altitudinal defects in anterior ischemic optic neuropathy; bitemporal hemianopia in optic chiasm lesions (pituitary adenoma);

homonymous hemianopia in contralateral retrochiasmal optic tract or optic radiation/occipital cortex lesions; and peripheral concentric constrictions (tunnel vision) in advanced open-angle glaucoma or retinitis pigmentosa.

Alternate Names:
Visual Fields

Visual Field Defect

Loss or change in part of the area a person can see while looking straight ahead. It may result from disease of the retina, optic nerve, or brain, and the pattern can help identify where the problem is.

Visual Field Perimetry

A test that maps how well a person sees in different parts of the visual field while looking at a fixed point. It can detect and monitor missing areas caused by eye-nerve, retinal, or brain disease.

Visual Fields

Plural form; see *Visual Field*.

Visual Field Test

A test that measures central and side vision and maps areas that are missing or less sensitive.

Visual Impairment

Reduced vision that cannot be fully corrected by ordinary glasses or contact lenses. Causes include refractive error, cataract, glaucoma, retinal disease, optic-nerve injury, and disorders of the brain or nervous system.

Visualized Laser-Assisted Prostatectomy

A procedure that uses a laser, guided by a camera, to remove or vaporize prostate tissue blocking urine flow. It is used for some people with an enlarged prostate and may cause bleeding, infection, scar narrowing, or temporary urinary and sexual problems.

Alternate Names:
VLAP

Visual Neglect

A brain disorder in which a person fails to notice or respond to things on one side, even though the eyes may work normally. It often follows a stroke affecting the right side of the brain and causes neglect of the left side.

Alternate Names:
Hemispatial Neglect; Spatial Inattention

Vital

Essential for life or relating to vital physiologic functions. Vital signs commonly include temperature, pulse, respiratory rate, blood pressure, and oxygen saturation.

Vital Capacity

The greatest amount of air a person can breathe out after filling the lungs as fully as possible. It is measured during lung-function testing and may be reduced by lung disease, weak breathing muscles, or restriction of chest movement.

Vitalography

Regional or educational term for spirometry; see *Spirometry*.

Vital Signs

Basic measurements of physiologic status, commonly including temperature, pulse, respiratory rate, blood pressure, and oxygen saturation. Values vary with age, activity, illness, and measurement conditions; trends and clinical context are important.

Vitamin A

A fat-soluble nutrient needed for vision, immune function, growth, and healthy tissues. Retinol is a major form; deficiency can impair vision, while excess preformed vitamin A can injure the liver and developing fetus.

Vitamin A Blood Test

A blood test measuring circulating retinol, used to assess suspected vitamin A deficiency or toxicity in appropriate clinical settings.

Vitamin A Deficiency

A nutritional disorder resulting from inadequate intake or absorption of vitamin A (retinol), causing dry eyes (xerophthalmia), night blindness, dry skin, and weakened immunity. Severe deficiency leads to corneal ulceration and is the leading cause of preventable childhood blindness worldwide; clinical eye stages are categorized using the WHO xerophthalmia classification.

Alternate Names:
Hypovitaminosis A; Retinol Deficiency; Vitamin A Lack

Vitamin A: Retinal

Retinal (retinaldehyde) is a form of vitamin A made from retinol. In the eye, it binds to opsin proteins to form light-sensitive pigments in rod and cone cells.

Vitamin A Toxicity

Harm caused by taking too much vitamin A or related medicines. It may cause nausea, vomiting, headache, dry skin, hair loss, liver injury, high calcium levels, and serious fetal abnormalities during pregnancy.

Vitamin B

Vitamin B refers to a group of water-soluble vitamins that support energy metabolism, blood-cell formation, nerve function, and other processes. The group includes several distinct vitamins, not one single substance.

Vitamin B1

Thiamine, a water-soluble vitamin that acts as a cofactor in carbohydrate and amino-acid metabolism and supports nerve function. Severe deficiency can cause beriberi or Wernicke encephalopathy.

Alternate Names:
Thiamine; Aneurin

Vitamin B12

A vitamin needed for red blood cell formation, DNA production, and normal nerve function. Deficiency can cause anemia, numbness, balance problems, or cognitive changes.

Alternate Names:
Cobalamin

Vitamin B12: Cobalamin

Alternate name; see *Vitamin B12*.

Vitamin B12 Deficiency

Too little vitamin B12, which can cause large abnormal red cells, tiredness, numbness, balance problems, or nerve damage. Causes include poor intake, poor absorption, autoimmune disease, stomach surgery, and medicines.

Vitamin B12 Deficiency Anemia

Anemia caused by too little vitamin B12 or poor absorption of it. It can cause tiredness, pale skin, a sore tongue, numbness, balance problems, and permanent nerve damage if untreated for a long time.

Alternate Names:
Vitamin B12 Deficiency Anaemia

Vitamin B12 Deficiency In Older Adults

Deficiency caused by inadequate intake, malabsorption, autoimmune intrinsic-factor deficiency, gastric surgery, or medications. It may cause megaloblastic anemia, neuropathy, cognitive changes, gait impairment, and glossitis; neurologic injury can occur without anemia.

Vitamin B12 Level

The amount of vitamin B12 measured in blood; results are interpreted with symptoms and related tests because serum levels may not fully reflect tissue deficiency.

Vitamin B12 Test

A blood test measuring circulating cobalamin to detect deficiency, which can cause megaloblastic anemia and peripheral neuropathy; see *Vitamin B12*.

Vitamin B1: Thiamine

Alternate name; see *Vitamin B1*.

Vitamin B2

Riboflavin, a water-soluble vitamin that helps cells produce energy and supports healthy skin, eyes, and the lining of the mouth. Deficiency can cause cracks at the mouth corners, a sore tongue, skin changes, or anemia.

Alternate Names:
Riboflavin; Lactoflavin

Vitamin B2 Riboflavin

Alternate name; see *Riboflavin*.

Vitamin B3

Niacin, a water-soluble vitamin that helps cells use food for energy and supports normal skin and nervous-system function. Severe deficiency causes pellagra, which can include diarrhea, skin inflammation, and neurologic problems.

Alternate Names:
Niacin

Vitamin B5

A water-soluble vitamin needed to help the body use fats, carbohydrates, and proteins and make hormones and other substances. It is found in many foods, so deficiency is rare; very large supplement doses may cause stomach upset.

Alternate Names:
Pantothenate; Calcium Pantothenate

Vitamin B6

A group of related compounds needed for amino-acid metabolism, red-cell production, and nerve function. Pyridoxine is one form; excess supplemental vitamin B6 can cause sensory nerve damage.

Vitamin B6: Pyridoxine

Alternate name; see *Vitamin B6*.

Vitamin B7

A vitamin that helps the body use fats, carbohydrates, and proteins. Deficiency is uncommon but may cause hair loss, skin rash, or neurologic symptoms; large doses can interfere with some laboratory tests.

Alternate Names:
Vitamin H; Coenzyme R

Vitamin B9

A vitamin needed for DNA production and healthy red blood cells. Deficiency can cause large-cell anemia and, during pregnancy, is associated with a higher risk of neural-tube defects. Folate is the natural form; folic acid is a commonly used synthetic form.

Alternate Names:
Folic Acid; Pteroylglutamic Acid

Vitamin B Complex

A group of eight water-soluble vitamins: thiamine (B1), riboflavin (B2), niacin (B3), pantothenic acid (B5), vitamin B6, biotin (B7), folate (B9), and vitamin B12. They support processes such as energy metabolism, blood-cell formation, and nerve function. Each has distinct roles and deficiency effects.

Alternate Names:
B Vitamins; Vitamin B Group

Vitamin C

A water-soluble vitamin needed for collagen formation, wound healing, immune function, antioxidant activity, and absorption of iron from plant foods. Severe deficiency causes scurvy, with bleeding gums, bruising, poor wound healing, and weakness.

Alternate Names:
Ascorbic Acid

Vitamin C Deficiency

Too little vitamin C, usually after prolonged low intake. Severe deficiency causes scurvy, with bleeding gums, easy bruising, poor wound healing, joint pain, and weakness.

Vitamin D

Vitamin D supports calcium and phosphate balance, bone mineralization, muscle function, and immune processes; deficiency causes rickets in children and osteomalacia or bone loss in adults.

Vitamin D3

Cholecalciferol, a form of vitamin D made in skin and found in some foods and supplements. It helps the body absorb calcium and maintain healthy bones.

Vitamin D: Calcitriol

Alternate name; see *Calcitriol*. Calcitriol is the active hormone form of vitamin D, not another name for vitamin D as a whole.

Vitamin D Deficiency

Too little vitamin D for the body's needs. It can result from low intake or sunlight, poor absorption, or liver or kidney disease and may weaken bones, cause muscle weakness, or lead to rickets in children.

Vitamin Deficiency Anemia

Anemia caused by a shortage of vitamins needed to make red blood cells, most commonly vitamin B12 or folate. The blood-cell changes and other effects depend on the vitamin; vitamin B12 deficiency can also damage nerves, sometimes even without anemia.

Vitamin D Test

A blood test measuring 25-hydroxyvitamin D to evaluate bone health, calcium regulation, and nutritional status; see *Vitamin D*.

Vitamin E

A group of fat-soluble compounds, including tocopherols and tocotrienols, with antioxidant activity. Alpha-tocopherol is the main form maintained in the human body. High-dose supplements can increase bleeding risk and interact with medicines.

Vitamin E Deficiency

Deficiency of a fat-soluble antioxidant vitamin, usually caused by fat-malabsorption disorders or rare inherited conditions. Severe deficiency can cause peripheral neuropathy, ataxia, muscle weakness, retinal dysfunction, or hemolytic anemia.

Vitamin E: Tocopherol

Tocopherols are one group of compounds with vitamin E activity; see *Vitamin E*.

Vitamin K

A fat-soluble vitamin needed to activate several blood-clotting proteins and support bone metabolism. Phylloquinone, the main dietary form, is found in leafy green vegetables and some vegetable oils. Deficiency can cause abnormal bleeding.

Vitamin K Deficiency

Too little vitamin K for normal production of clotting factors, causing an increased bleeding tendency. It can result from poor intake, malabsorption, liver disease, or certain medicines; newborns receive vitamin K prophylaxis.

Vitamin K Deficiency Bleeding

Bleeding in a newborn or young infant caused by inadequate vitamin K-dependent clotting activity. It may occur early, classically, or late and can involve the brain or gastrointestinal tract.

Alternate Names:
VKDB

Vitamin K: Phylloquinone

Phylloquinone is the main dietary form of vitamin K; see *Vitamin K*.

Vitamin K Prophylaxis

Giving vitamin K to a newborn soon after birth to prevent bleeding caused by vitamin K deficiency.

Vitamins

Organic nutrients needed in small amounts for normal metabolism, growth, and tissue maintenance; some are water-soluble and others fat-soluble, and both deficiency and excess can cause disease.

Vitamin Toxicity

Harm caused by excessive vitamin intake, most often involving fat-soluble vitamins that can accumulate in the body. Excess vitamin A can injure the liver and developing fetus; excess vitamin D can raise

blood calcium; and high-dose vitamin E can increase bleeding risk.

Vitiligo

A chronic autoimmune skin condition in which the immune system mistakenly attacks and destroys melanocytes, the cells responsible for producing skin pigment (melanin). As these pigment-producing cells are lost, smooth, chalky-white patches develop on various areas of the skin, hair, and mucous membranes. It can affect any part of the body, most frequently appearing symmetrically on the face, hands, wrists, and around body openings, and does not cause physical pain or skin shedding.

Alternate Names:
Leukoderma; Autoimmune Depigmentation

Vitrectomy

Eye surgery that removes some or all of the vitreous, the clear gel that fills the middle of the eye. Small instruments are inserted through the wall of the eye to remove cloudy gel, blood, scar tissue, or a foreign object and to repair problems of the retina. It may be used for retinal detachment, diabetic eye disease, macular hole, macular pucker, severe eye injury, or serious eye infection. The removed gel may be replaced with a salt solution, air or gas, or silicone oil.

Vitreoretinal Surgery

The surgical subspecialty concerned with disorders of the retina and vitreous, the clear gel filling the back of the eye. Procedures include vitrectomy, retinal detachment repair, and surgery for macular holes or complications of diabetic eye disease. It may also involve laser or other techniques to treat retinal and vitreous disorders.

Alternate Names:
Vitreo-Retinal Surgery; Retinal Surgery

Vitreous

Relating to the transparent gel filling most of the space between the lens and retina, or describing a glass-like appearance. Vitreous disorders can cause floaters, hemorrhage, detachment, or retinal traction.

Vitreous Body

The transparent gel filling the large space between the lens and retina. It helps maintain the shape of the eye and transmits light; age-related liquefaction can cause floaters or contribute to retinal traction.

Alternate Names:
Corpus Vitreum

Vitreous Detachment

Separation of the vitreous gel from the retina, usually related to aging and often causing new floaters or flashes. Sudden symptoms can occur with a retinal tear or detachment.

Alternate Names:
Posterior Vitreous Detachment; PVD

Vitreous Hemorrhage

Bleeding into the vitreous cavity that causes sudden painless floaters, cobwebs, haze, or loss of vision. Common causes include proliferative diabetic retinopathy, retinal tear or detachment, trauma, and posterior vitreous separation.

Vitreous Humor

Alternate name; see *Vitreous Body*.

VKORC1 Polymorphism

An inherited variation in the vitamin K epoxide reductase complex subunit 1 gene that can alter sensitivity to warfarin. Genotype may contribute to dose selection, but clinical factors, interacting medicines, diet, and INR monitoring remain important.

VLDL Test

A blood test that measures or estimates very-low-density lipoprotein, a particle carrying triglycerides. The result may help assess cardiovascular risk but is interpreted with the full cholesterol and triglyceride profile.

VO2 Max

The greatest amount of oxygen the body can use during intense exercise. It is a measure of aerobic fitness and is influenced by the heart, lungs, blood,

muscles, age, health, and training.

Alternate Names:
Maximal Oxygen Consumption; Maximal Aerobic Capacity

Vocal Cord Disorders

Disorders affecting the vocal folds or their nerves, including nodules, polyps, cysts, inflammation, paralysis, and spasmodic dysphonia. They may cause hoarseness, voice loss, throat discomfort, noisy breathing, or difficulty swallowing.

Vocal Cord Dysfunction

Older name; see *Inducible Laryngeal Obstruction*.

Vocal-Cord Dysfunction

Older name; see *Inducible Laryngeal Obstruction*.

Vocal Cord Nodules

Small, noncancerous thickened areas on the vocal folds inside the voice box, often caused by repeated voice strain. They can cause hoarseness, a tired voice, or a rough or breathy sound.

Vocal Cord Paralysis

One or both folds in the voice box cannot move normally, often because of nerve damage. It may cause hoarseness, a weak cough, choking, or trouble keeping food and drink out of the windpipe.

Alternate Names:
Vocal Fold Paralysis

Vocal Cord Paresis

Weakness or partial paralysis of one or both vocal cords, often from injury to the nerves that control them. It can cause a weak or breathy voice, voice fatigue, coughing during eating, or aspiration.

Vocal Cord Polyp

A usually noncancerous growth on a vocal fold inside the voice box, sometimes after heavy or sudden voice use. It can cause lasting hoarseness, a rough voice, or a tired voice.

Vocal Cord Polyps

Alternate name; see *Vocal Cord Polyp*.

Vocal Cords

Alternate name; see *Vocal Folds*.

Vocal-Fold Nodules

Alternate name; see *Vocal Cord Nodules*.

Vocal Fold Paralysis

Alternate name; see *Vocal Cord Paralysis*.

Vocal-Fold Polyps

Alternate name for vocal cord polyps, usually noncancerous growths on the vocal folds that can cause persistent hoarseness or voice fatigue.

Vocal Folds

Two folds inside the voice box that vibrate as air passes between them to make sound. They also close during swallowing to protect the lungs from food and liquid.

Vocal Hemorrhage

Vocal hemorrhage is bleeding into a vocal fold, often after sudden or forceful voice use. It can cause abrupt hoarseness.

Vocal Nodules

Benign thickened areas on the vocal folds, usually caused by repeated voice strain. They can cause hoarseness, a rough or breathy voice, vocal fatigue, and loss of vocal range.

Vocal Resonance

The sound of a person's voice heard through the chest with a stethoscope while they speak. Changes in the sound can provide clues to pneumonia, fluid around the lung, a collapsed lung, or other lung disease.

VOD/SOS

Chemotherapy-induced toxic injury to hepatic sinusoidal endothelial cells, leading to liver tenderness, jaundice, and fluid accumulation. See *Sinusoidal*

Obstruction Syndrome.

Vogt-Koyanagi-Harada Disease

A rare autoimmune disease affecting both eyes and other organs. It causes inflammation inside the eyes, often with fluid beneath the retina, and may also affect hearing, the meninges, and skin or hair pigment.

Alternate Names:
VKH Syndrome; Uveomeningoencephalitic Syndrome

Vogt-Koyanagi-Harada Syndrome

Alternate name; see *Vogt-Koyanagi-Harada Disease*.

Vohwinkel Syndrome

A rare inherited palmoplantar keratoderma causing thick skin on the palms and soles, constricting bands around fingers or toes, and sometimes hearing loss or other features. Severe constriction can threaten circulation and requires specialist care.

Voice

Sound produced by vibration of the vocal folds as air passes through the larynx, then shaped by the throat, mouth, and nose for speech.

Voice And Speech

The products of complex coordinated activity of the respiratory, laryngeal, and articulatory systems. Communication produced by coordinated breathing, voice-box vibration, and movements of the mouth, tongue, and other speech structures.

Voice Box

The larynx, an organ in the neck containing the vocal folds and forming part of the airway. It produces voice and helps protect the lower respiratory tract during swallowing.

Voice Disorders

Conditions affecting voice quality, pitch, loudness, or ease of speaking because of problems involving the vocal folds, airway, nerves, or voice use.

Void

To empty the urinary bladder by urinating; in other medical contexts, void may mean an empty space or absence of a substance.

Voiding Cystourethrogram

An X-ray test that fills the bladder with contrast through a catheter and records the bladder and urethra while the person urinates. It can show urine flowing backward toward the kidneys, blockage, leakage, or structural problems, especially in children with selected urinary infections.

Volar

Relating to the palm of the hand or sole of the foot, especially the surface opposite the dorsum.

Volatile Anesthetics

Inhaled medicines used to produce and maintain unconsciousness during some operations. They can lower blood pressure and breathing and rarely cause a dangerous rise in body temperature in susceptible people.

Alternate Names:
Inhalational Anesthetics; Inhalation General Anesthetics

Volkmann Contracture

A permanent, severe ischemic contracture of the forearm flexor musculature leading to a claw-like hand deformity, resulting from untreated acute compartment syndrome of the forearm following supracondylar humeral fractures, crush injuries, or tight casting.

Alternate Names:
Volkmann's Ischemic Contracture; Ischemic Myodystrophy

Alternate Names:
Volkmann contracture; Volkmann's ischaemic contracture; Volkmann claw deformity.

Volume Of Distribution

A calculated measure of how widely a medicine appears to spread through the body compared with the amount left in the blood. It helps guide dosing

but does not represent a real space inside the body.

Volume Overload

Excess sodium and water in the body, which can cause swelling in tissues or fluid in the lungs. Causes include heart, kidney, or liver disease and excessive fluid administration.

Voluntary

Under conscious control or performed by choice, such as voluntary movement. Voluntary action is distinguished from reflex, autonomic, or involuntary activity.

Voluntary Psychiatric Admission

Admission to a hospital or psychiatric facility with the person's agreement for assessment, treatment, or safety support. Legal rules about consent, leaving, capacity, and conversion to involuntary status vary by jurisdiction.

Volutrauma

Lung injury caused by overstretching the lungs, usually when a breathing machine delivers breaths that are too large. Careful ventilator settings can reduce this risk.

Volvulus

Twisting of a loop of intestine that blocks passage through the bowel and may cut off its blood supply. It can cause severe pain, vomiting, swelling, and tissue death and can be life-threatening.

Vomit

To eject stomach or upper gastrointestinal contents through the mouth; the expelled material may also be called vomitus. Persistent vomiting can cause dehydration and electrolyte abnormalities.

Vomiting

Forceful emptying of stomach contents through the mouth. It may result from infection, digestive disease, medicines, pregnancy, migraine, brain disorders, or poisoning. Repeated vomiting can cause dehydration, disturbed body salts, or inhalation of vomit.

Vomiting Blood

The passage of blood or coffee-ground material in vomit, usually indicating bleeding in the upper digestive tract. It can be a serious symptom.

Vomitus

Material expelled from the stomach or upper gastrointestinal tract during vomiting. Its color and contents can provide clues but do not by themselves establish a diagnosis.

Von Economo Encephalitis

A historical epidemic form of encephalitis lethargica associated with excessive sleepiness, eye-movement problems, and later parkinsonism. It is distinct from African sleeping sickness, which is caused by a parasite.

Alternate Names:
Encephalitis Lethargica; Sleeping Sickness (Von Economo Type)

Von Gierke Disease

Glycogen storage disease type I, an inherited deficiency of glucose-6-phosphatase or its transport system that causes fasting hypoglycemia, lactic acidosis, enlarged liver, and excess uric acid or lipids.

Von Graefe Sign

A delay of the upper eyelid as the eyes look downward, leaving a strip of white visible above the iris. It can occur with an overactive thyroid and related eye disease.

Alternate Names:
Lid Lag Sign; Von Graefe's Lid Lag

Von Hippel-Lindau Disease

An inherited condition, usually caused by a change in the *VHL* gene, that increases the risk of tumors and cysts in the brain, spinal cord, eyes, kidneys, adrenal glands, and pancreas. These growths can affect vision, blood pressure, or kidney function.

Von Hippel-Lindau Syndrome

Von Hippel-Lindau syndrome is an inherited disorder caused by changes in the VHL gene. It increases the risk of tumors and cysts in organs such as the brain, retina, kidneys, pancreas, and adrenal glands.

Von Meyenburg Complex

A benign congenital biliary ductal plate malformation (biliary microhamartoma) consisting of small, non-progressive clusters of dilated, cystic bile ducts embedded in a dense collagenous stroma, usually discovered incidentally on liver imaging or biopsy.

Alternate Names:
Biliary Microhamartoma; Ductal Plate Malformation

Von Recklinghausen Disease

Von Recklinghausen disease is another name for neurofibromatosis type 1, an inherited condition causing multiple café-au-lait spots, neurofibromas, and increased risk of certain nerve, bone, eye, and other problems.

Von Recklinghausen'S Disease

Alternate name; see *Neurofibromatosis Type 1*.

Von Recklinghausen'S Neurofibromatosis

Alternate name; see *Neurofibromatosis Type 1*.

Von Recklinghausen'S Phakomatosis

Alternate name; see *Neurofibromatosis Type 1*.

Von Rosen Splint

A malleable, lightweight orthopedic abduction splint applied in neonates with developmental dysplasia of the hip (DDH) to maintain the femoral head securely centered within the acetabulum in flexion and abduction.

Alternate Names:
Von Rosen Frame; DDH Abduction Splint

Von Willebrand Disease

The most common inherited bleeding disorder, caused by a deficiency or malfunction of von Willebrand factor, an essential blood protein that helps platelets stick together to form clots and protects other vital clotting proteins in the blood. People with this condition have difficulty stopping bleeding after an injury, surgery, or dental work, and commonly experience frequent or prolonged nosebleeds, easy bruising, and heavy menstrual bleeding.

Alternate Names:
vWD; Von Willebrand's Disease; Pseudohemophilia

Voriconazole

A triazole antifungal medicine used for selected serious fungal infections. It blocks ergosterol production in fungal cell membranes; adverse effects can include visual changes, liver injury, drug interactions, and skin sensitivity.

VOR Reflex

A reflex that moves the eyes opposite to head movement so vision stays steady while the head turns. Problems with this reflex can cause blurred or bouncing vision, dizziness, or imbalance.

Voyeurism

A recurrent sexual interest in observing an unsuspecting person who is naked, disrobing, or engaging in sexual activity. The interest alone is not a mental disorder; voyeuristic disorder is the diagnostic term when required criteria are met.

Voyeuristic Disorder

A paraphilic disorder involving intense, recurrent sexual arousal from observing an unsuspecting person who is naked, disrobing, or engaging in sexual activity. Diagnostic criteria include acting on the urges with a nonconsenting person or experiencing significant distress or impairment; the pattern lasts at least six months and the person diagnosed is at least 18 years old.

VPCs (Ventricular Premature Contractions)

Alternate name; see *Premature Ventricular Contraction*.

VRE Infection

An infection caused by vancomycin-resistant entero-

cocci, bacteria that commonly live in the intestine but can cause urinary-tract, wound, bloodstream, heart-valve, or other infections. Treatment depends on the infection site and susceptibility testing because usual antibiotics may not work.

VRE (Vancomycin-Resistant Enterococci)

Enterococcus bacteria that are no longer killed by vancomycin, an antibiotic. They may colonize the intestine without causing illness or cause urinary, wound, bloodstream, or other infections.

VSD

Alternate name; see *Ventricular Septal Defect*.

Vulnerary

A substance traditionally believed to help heal wounds. Such products may lack good evidence and can cause allergy or contamination.

Vulva

The external female genital structures, including the mons pubis, labia, clitoris, and vestibule. It protects the openings of the urinary and reproductive tracts and contains specialized sensory and glandular tissue.

Alternate Names:
Female External Genitalia; Pudendum

Vulval Intraepithelial Neoplasia

Alternate spelling; see *Vulvar Intraepithelial Neoplasia*.

Vulvar

Relating to the vulva, the external female genital structures including the labia, clitoris, vestibule, and associated glands.

Vulvar Cancer

Cancer arising in the external female genitalia. It may appear as a persistent lump, ulcer, wart-like lesion, itching, pain, or bleeding.

Vulvar Carcinoma

Alternate name; see *Vulvar Cancer*.

Vulvar Inclusion Cysts

Small sacs under the skin of the vulva that contain tissue trapped from the surface lining. They may develop after childbirth tears, surgery, or other injury, or occur without an obvious cause. Most cause no symptoms, but they may become swollen, painful, infected, or uncomfortable during sexual activity. Symptomatic cysts may need removal.

Vulvar Intraepithelial Neoplasia

Abnormal cells limited to the surface layer of the vulva. The risk of progression to invasive cancer varies by subtype and is higher for differentiated vulvar intraepithelial neoplasia than for usual-type disease. It may cause itching, burning, sores, growths, or color change, but can also cause no symptoms.

Vulvar Melanoma

A rare melanoma arising in the vulva, the external female genital area. It may appear as a dark, light, or variably colored lump or patch, or as a sore that itches, hurts, or bleeds. A biopsy is needed to diagnose it.

Vulvar Squamous Cell Carcinoma

The most common invasive vulvar malignancy, arising through HPV-related or HPV-independent pathways. It usually presents as a persistent mass, ulcer, plaque, or wart-like lesion; biopsy establishes the diagnosis.

Vulvectomy

Surgical removal of part or all of the vulva, performed for selected cancers, precancerous lesions, or severe persistent disease.

Vulvitis

Inflammation or irritation of the external female genital area. It can cause itching, burning, redness, swelling, soreness, or discharge and may result from infection, allergy, skin disease, hormones, or friction.

Vulvodynia

Persistent or recurring pain in the vulva without an identifiable cause or specific disorder. The pain may be localized or widespread, triggered by touch

or pressure, or occur without touch; it is often described as burning, rawness, or soreness.

Alternate Names:
Chronic Vulvar Pain

Vulvovaginal Candidiasis

Inflammation of the vulva and vagina caused by symptomatic overgrowth of Candida yeasts, usually *C. albicans*; Candida may also be present without causing symptoms. It commonly causes itching, soreness, redness or swelling, external burning with urination, pain during sex, and sometimes thick white discharge, but these symptoms are not specific. It is not usually sexually transmitted; recurrent disease generally means three or more symptomatic episodes in less than a year.

Vulvovaginitis

Inflammation or infection of the vulva and vagina. It may cause itching, burning, pain with urination or sex, or unusual discharge. Causes include yeast, some bacteria or parasites, low estrogen, allergies, and irritating products.

Alternate Names:
Vaginitis and Vulvitis; Vulvovaginal Inflammation

W

Waardenburg Syndrome

A group of inherited neural-crest disorders characterized by congenital sensorineural hearing loss and variable pigmentary changes of the iris, hair, and skin, including heterochromia and a white forelock. Depending on the type, features may include dystopia canthorum, limb abnormalities, or Hirschsprung disease; inheritance may be dominant or recessive.

Waddell Signs

A group of examination responses sometimes seen during assessment of low back pain, including tenderness, simulated pain tests, and findings that do not follow typical anatomy. They are not a test for malingering and do not by themselves show that pain is psychological.

WAGR Syndrome

A genetic condition, usually caused by deletion of part of chromosome 11, associated with Wilms tumor, aniridia, genitourinary differences, and developmental delay. The findings and tumor risk vary among affected children.

Waist Circumference

The distance around the abdomen measured with a tape at a specified anatomical level. In the World Health Organization protocol, the tape is placed midway between the lowest palpable rib and the top of the hip bone (iliac crest). The measurement estimates abdominal fat and cardiometabolic risk; interpretation uses cutoffs that vary by sex and population.

Waist-Hip Ratio

A measurement comparing waist size with hip size. It provides an estimate of where body fat is stored and may add information about diabetes and cardiovascular risk, but it does not diagnose disease by itself.

Wait List

A list of candidates registered to receive an organ transplant. Placement and allocation priority are determined by the applicable transplant system and may consider medical urgency, expected benefit, blood or tissue compatibility, organ size, waiting time, and other policy-based factors; it is not necessarily a simple first-come, first-served queue.

Alternate Names:
Waiting List; Transplant Waiting List; Transplant Waitlist

Wakefulness

The state of being conscious and able to respond to the surroundings. Sleep, medicines, illness, brain injury, and metabolic problems can change the level of wakefulness.

Waldenstrom Macroglobulinemia

A rare, slow-growing type of blood cancer (a form of non-Hodgkin lymphoma) in which abnormal white blood cells multiply in the bone marrow. These cancerous cells produce excessive amounts of a large antibody protein called immunoglobulin M (IgM). The buildup of this bulky protein can thicken the blood (hyperviscosity), causing impaired circulation that leads to nosebleeds, blurred vision, headaches, fatigue, and numbness in the extremities.

Alternate Names:
Lymphoplasmacytic Lymphoma with IgM Paraproteinemia; Waldenström Macroglobulinemia

Waldenstrom's Macroglobulinemia

Alternate name; see *Waldenstrom Macroglobulinemia*.

Waldenström's Macroglobulinemia

Alternate spelling; see *Waldenstrom Macroglobulinemia*.

Waldeyer Ring

An annular anatomical arrangement of lymphoid tissue surrounding the opening of the pharynx and nasal cavity, consisting of the pharyngeal tonsils (adenoids), tubal tonsils, palatine tonsils, and lingual tonsils. It functions as the first line of immune defense against ingested or inhaled pathogens.

Alternate Names:
Waldeyer Lymphatic Ring; Pharyngeal Lymphoid Ring

Walker-Warburg Syndrome

A rare inherited disorder causing severe muscle weakness together with major abnormalities of the brain and eyes from birth. Babies may have low muscle tone, seizures, poor feeding, enlarged fluid spaces in the brain, and abnormal eye development; the condition is usually life-threatening in infancy.

Alternate Names:
WWS; HARD +/- E Syndrome

Walking Abnormalities

Walking abnormalities include changes in speed, balance, stride, posture, or coordination caused by pain, weakness, sensory loss, joint disease, or neurologic illness.

Walking Pneumonia

An informal term for a usually mild pneumonia that does not prevent a person from carrying on many daily activities. It is often associated with *Mycoplasma pneumoniae*, but the term does not identify a specific cause.

Walking Speed

The rate at which a person walks, often measured over a defined distance. It can provide information about mobility and function, but no single speed determines disability in every person.

Wallenberg Syndrome

A neurological condition caused by infarction of the lateral medulla oblongata, most commonly resulting from occlusion of the posterior inferior cerebellar artery (PICA) or vertebral artery. Manifestations include ipsilateral facial sensory loss, Horner syndrome, ataxia, dysphagia, hoarseness, and contralateral loss of pain and temperature sensation in the trunk and limbs.

Alternate Names:
Lateral Medullary Syndrome; PICA Syndrome; Posterior Inferior Cerebellar Artery Syndrome

Wallerian Degeneration

Breakdown of the part of an axon beyond a nerve injury after it loses contact with the nerve cell. In peripheral nerves, this process clears damaged axon and myelin and can support later regrowth; regeneration in the central nervous system is much more limited.

Walleyed

An older, informal term for outward turning of one or both eyes, medically called exotropia.

Wall Stress

The force acting on a heart chamber's wall, influenced by pressure inside the chamber, its size, and wall thickness. Increased wall stress makes the heart work harder and can contribute to remodeling or failure.

Wandering Rash Tongue

A common name for geographic tongue, a benign inflammatory condition in which smooth red patches with pale borders move across the tongue. It is not contagious and may cause sensitivity to spicy or acidic foods.

Wandering Spleen

A spleen that can move unusually because its supporting bands are loose or missing. It may cause no symptoms or lead to abdominal pain, enlargement, twisting, loss of blood supply, or sudden severe illness.

Warburg Effect

The tendency of many cancer cells to take up glucose and convert much of it to lactate even when oxygen is available. This pattern can occur alongside mitochondrial energy production and supports the cells' growth and metabolism.

Warfarin

An anticoagulant that reduces production of vitamin-K-dependent clotting proteins. It prevents and treats blood clots but can cause major or fatal bleeding. Its effect is measured with the international normalized ratio (INR), because diet, illness, and many medicines can alter INR and bleeding risk.

Warfarin and Superwarfarin Toxicity

Harm from excessive exposure to warfarin or a long-acting related rodenticide. It can prevent blood from clotting normally and cause bleeding, sometimes after a delay.

Warfarin-Induced Skin Necrosis

A rare complication in which small blood clots block vessels in the skin, causing painful red or purple areas that may progress to tissue death. It usually begins within days of starting warfarin and is associated with an imbalance in clotting proteins, including protein C.

Warfarin Syndrome

A pattern of fetal abnormalities caused by warfarin exposure during pregnancy, including nasal and skeletal abnormalities, eye or neurologic defects, and fetal or neonatal bleeding.

Warm and Cold Autoantibodies

Antibodies that bind to a person's red blood cells most effectively at warmer or colder temperatures. They can interfere with laboratory testing and, in some cases, cause red-cell destruction and anemia.

Warm Autoimmune Hemolytic Anemia

A disorder in which warm-reactive antibodies cause red blood cells to be destroyed prematurely, mainly in the spleen. It can cause anemia, jaundice, dark urine, shortness of breath, or a fast heartbeat.

Alternate Names:
wAIHA; Warm Antibody Hemolytic Anemia

Warm Ischemia

Lack of blood and oxygen reaching tissue while it remains at body temperature. It can quickly cause cell damage and is important during some injuries, operations, and organ transplantation.

Wart

A usually harmless rough skin growth caused by human papillomavirus. Warts may spread by contact and often disappear over time. Common types include common, plantar, and flat warts; appearance and symptoms vary by site.

Alternate Names:
Verruca

Warthin Tumor

A usually harmless tumor of a salivary gland, most often the parotid near the ear. It is strongly associated with tobacco use and may occur on both sides; evaluation distinguishes it from other growths.

Alternate Names:
Warthin's Tumor; Papillary Cystadenoma Lymphomatosum; Adenolymphoma

Wart Remover Poisoning

Toxic exposure to a wart-removal product, often involving salicylic acid or another keratolytic. Severity depends on the substance, amount, route, symptoms, and duration of exposure.

Warts and Plantar Warts

Alternate name; see *Wart* and *Plantar Wart*.

Warty Dyskeratoma

A usually harmless skin growth, often on the head or neck, with a small central dip filled with keratin. It can resemble skin cancer, and biopsy findings distinguish the conditions.

Wasting

Abnormal loss of body weight, muscle, or other tissue, often associated with chronic disease, inadequate nutrition, inflammation, or cancer. Severe wasting may impair strength, immunity, and recovery.

Watchful Waiting

Planned observation without immediate active treatment, with clinical review and treatment if symptoms develop or the condition progresses. It may be used for selected cancers and other slowly progressive conditions.

Water Birth

Delivery of a baby while the birthing person is immersed in water. This differs from water immersion during the first stage of labor; evidence about the benefits and risks of underwater delivery remains limited.

Alternate Names:
Aquatic Delivery

Water Blister

A blister containing clear fluid, usually caused by friction, pressure, a burn, or a skin disorder.

Waterborne Bacterial Disease

An infection acquired from water contaminated with bacteria, such as cholera, typhoid fever, or leptospirosis; prevention depends on safe water, sanitation, and food hygiene.

Water-Borne Disease

An illness acquired through water contaminated with infectious organisms or harmful chemicals. Examples include cholera, typhoid fever, and hepatitis A.

Water Brash

A sudden increase of watery saliva in the mouth, often associated with gastroesophageal reflux. It may occur with heartburn or a sour taste.

Water Channel

A membrane protein, usually an aquaporin, that allows water to cross a cell membrane. Aquaporins help the kidneys and other tissues regulate water movement.

Water Consumption

Intake of water and other fluids. Fluid requirements vary with body size, diet, activity, climate, pregnancy, illness, and kidney or heart function; excessive intake can cause hyponatremia.

Water-Deprivation Test

A supervised test that restricts water intake while urine concentration and blood sodium or osmolality are measured over time. It helps distinguish causes of excessive dilute urine. The restriction phase usually lasts hours and can extend overnight; dehydration and high blood sodium are potential complications.

Water Hammer Pulse

A bounding pulse that rises forcefully and then collapses rapidly. It may occur with aortic valve leakage or other causes of a wide pulse pressure.

Alternate Names:
Water-Hammer Pulse; Corrigan Pulse; Collapsing Pulse

Water-Hammer Pulse

Alternate spelling; see *Water Hammer Pulse*.

Alternate Names:
Corrigan's Pulse; Collapsing Pulse

Waterhouse-Friderichsen Syndrome

Waterhouse-Friderichsen syndrome is adrenal hemorrhage and acute adrenal failure associated with overwhelming sepsis, classically meningococcal infection, causing shock and coagulopathy.

Water Intoxication

A dangerous fall in blood sodium caused by drinking or retaining more water than the body can remove. Severe cases can cause brain swelling, headache, confusion, seizures, coma, or death.

Water On The Brain

A nontechnical term usually referring to hydrocephalus, an abnormal accumulation or impaired circulation of cerebrospinal fluid that enlarges the ventricles and may increase intracranial pressure.

Water On The Knee

Alternate name; see *Knee Effusion*.

Water Retention

Excess accumulation of fluid in the body's tissues or cavities, commonly causing swelling and sometimes resulting from heart, kidney, liver, venous, hormonal, or medication-related disorders.

Watershed Infarction

Tissue death in a border zone between the areas supplied by two major arteries, most often in the brain. It commonly follows a substantial fall in blood flow or blood pressure; less commonly, it affects the bowel.

Alternate Names:
Border-Zone Infarction

Water-Soluble Vitamin

A vitamin that dissolves in water. The group includes vitamin C and the B vitamins; most are stored in limited amounts, although the body can store vitamin B12 for years.

Waterston Shunt

A historical palliative connection between the ascending aorta and right pulmonary artery that increased blood flow to the lungs in some infants with cyanotic congenital heart disease. It has largely been replaced by other shunt procedures.

Alternate Names:
Waterston-Cooley Anastomosis; Ascending Aorta to Right Pulmonary Artery Shunt

Watery Eyes

Excessive tearing caused by irritation, allergy, infection, reflex tearing from dry eye, or blockage of the tear-drainage system.

Wax

A water-resistant substance produced by ceruminous glands in the ear canal; earwax protects the canal and usually clears naturally.

Wax Poisoning

Toxic exposure to a wax product, usually causing little harm after a small accidental ingestion but potentially causing choking, aspiration, irritation, or toxicity when mixed with other chemicals.

Waxy Casts

Large, smooth, pale tube-shaped particles seen under a microscope in urine. They form in damaged kidney tubules and can suggest severe or long-standing kidney disease, especially when other urine or blood tests are abnormal.

WBC Count

A measurement of the number of white blood cells in a volume of blood, used with the differential count to evaluate infection, inflammation, immune disorders, marrow disease, or treatment effects.

WBS

Abbreviation for Williams-Beuren syndrome, a genetic disorder associated with characteristic facial features, developmental differences, cardiovascular disease, and sometimes high blood calcium.

Weakness

Reduced ability to generate force, which may be generalized or limited to one body region. Causes include disorders of muscle, nerve, neuromuscular junction, brain, or spinal cord, as well as metabolic illness, infection, medication effects, and deconditioning.

Weaning

Gradual reduction and eventual discontinuation of

breastfeeding, bottle-feeding, or a medicine or other treatment, according to the relevant clinical context.

Wear Debris

Tiny particles produced when an artificial joint or other implant wears down. The particles can trigger inflammation, damage nearby bone, loosen the implant, and eventually cause it to fail.

Weaver's Bottom

Older name for ischial bursitis, inflammation of the bursa over the sitting bone that can cause buttock pain, especially with sitting.

Weaver Syndrome

A rare genetic condition causing rapid growth before and after birth, a large head, distinctive facial features, low muscle tone, and delayed development or learning. Bone age may be advanced. Most cases involve a change in the *EZH2* gene.

Webbed Fingers

Partial or complete joining of adjacent fingers by skin or soft tissue, known as syndactyly; it may be congenital or acquired.

Webbed Neck

Extra folds of skin extending from the sides of the neck toward the shoulders. They may be present from birth and can occur with conditions such as Turner syndrome or Noonan syndrome.

Webbing Of The Fingers Or Toes

Partial or complete joining of adjacent fingers or toes by skin or other tissue. It is called syndactyly and may be congenital or acquired.

Weber

Alternate name; see *Weber Test*.

Weber-Christian Disease

An older term for recurrent inflammation of the fat beneath the skin (panniculitis), causing tender nodules and sometimes fever or other systemic symptoms. The term is now used inconsistently; see *Panniculitis*.

Weber Syndrome

A brainstem stroke syndrome caused by occlusion of paramedian branches of the posterior cerebral artery affecting the anterior midbrain. It is characterized by ipsilateral oculomotor (cranial nerve III) palsy and contralateral spastic hemiparesis of the upper and lower extremities.

Alternate Names:
Superior Alternating Hemiplegia; Ventral Midbrain Syndrome

Weber Test

A quick hearing test using a vibrating tuning fork placed on the middle of the forehead or skull. The examiner asks which ear hears the sound louder; the result helps distinguish blockage-related hearing loss from inner-ear or nerve-related loss.

Wedge Excision

Surgical removal of a triangular or wedge-shaped portion of tissue; commonly performed for breast biopsies, cervical lesions, and skin tumors.

Wedge Resection

Surgery that removes a small wedge-shaped piece of tissue, commonly from the lung or breast, to diagnose or treat a localized lesion. It removes less tissue than removal of an entire lobe.

Weever Fish

A venomous marine fish whose dorsal spines can cause a painful sting, local swelling, and occasionally systemic symptoms.

Wegener Granulomatosis

Historical eponym; see *Granulomatosis With Polyangiitis*.

Alternate Names:
Granulomatosis with Polyangiitis; GPA

Wegener's Granulomatosis

Historical eponym; see *Granulomatosis With Polyangiitis*.

Weight-Bearing As Tolerated

An instruction allowing a person to put as much weight on an injured or operated leg as they can tolerate. An assistive device may be used for support.

Alternate Names:
WBAT

Weight Gain

Increase in body weight; may be intentional (muscle building, pregnancy) or unintentional (fluid retention, endocrine disorders, medication effects).

Weight Gain In Pregnancy

Increase in maternal body weight during pregnancy. The expected amount varies with pre-pregnancy body mass index and the number of fetuses.

Weight Gain – Unintentional

Increase in body weight without a planned change in diet or activity. Causes include fluid retention, medicines, endocrine disease, reduced activity, or changes in eating.

Weight Loss

A decrease in body weight that may be intentional or unintentional. Unintentional loss can result from illness, inadequate nutrition, or medication effects.

Weight Loss Medications

Medicines used to reduce body weight in people with obesity, often alongside nutrition and activity changes. They include several drug classes with different mechanisms and adverse effects.

Weight-Loss Medicines

Alternate name; see *Weight Loss Medications*.

Weight Loss Surgery

Weight-loss surgery, or bariatric surgery, changes the stomach or digestive tract to treat severe obesity and related conditions. Long-term effects can include altered nutrient absorption and risk of vitamin or mineral deficiencies.

Weight Management

Long-term approaches to body weight that may involve nutrition, physical activity, behavior change, medicines, or bariatric procedures. It considers health, function, metabolic risk, and weight-related outcomes.

Weight-Reducing Diets

Dietary plans intended to create a sustained energy deficit and reduce excess body weight, ideally individualized with attention to nutrition, health conditions, and long-term adherence.

Weil Disease

The severe form of leptospirosis, involving liver and kidney failure and sometimes bleeding or meningitis.

Weil-Felix Reaction

An older agglutination blood test for some rickettsial infections. It detects antibodies that cross-react with *Proteus vulgaris* OX19 or OX2 antigens or the *Proteus mirabilis* OXK antigen. Its accuracy is limited, and more specific tests are generally used.

Weil-Felix Test

Alternate name; see *Weil-Felix Reaction*.

Alternate Names:
Weil-Felix Agglutination Reaction; Proteus Agglutination Test

Weill-Marchesani Syndrome

A rare inherited connective-tissue disorder that often causes short stature, short fingers and toes, stiff joints, and unusually small, round eye lenses. The lens changes can cause severe nearsightedness or glaucoma. Changes in several genes, including *ADAMTS10*, *ADAMTS17*, *LTBP2*, or *FBN1*, can cause the condition.

Alternate Names:
WMS; Spherophakia-Brachymorphia Syndrome

Weil's Disease

Alternate name; see *Weil Disease*.

Weir-Mitchell Disease

Older name for erythromelalgia, a condition causing episodes of burning pain, redness, and warmth, usually in the hands or feet.

Wellens Syndrome

A specific pattern on an electrocardiogram, often seen after chest pain subsides, associated with critical narrowing of the proximal left anterior descending coronary artery. It signals a high risk of anterior myocardial infarction; exercise stress can precipitate infarction.

Alternate Names:
Wellens Pattern; LAD Coronary T-Wave Syndrome; Wellens Sign

Wells Score

A clinical prediction rule used to estimate the likelihood of deep vein thrombosis (DVT) or pulmonary embolism (PE). Separate versions are used for DVT and PE. The score helps determine whether further testing, such as a D-dimer blood test or imaging, is needed; it does not diagnose or rule out a clot by itself.

Alternate Names:
Wells Criteria; Wells Clinical Score

Wells Score For Pulmonary Embolism

Alternate name; see *Wells Score*.

Wells Syndrome

Eosinophilic cellulitis, an uncommon inflammatory skin disorder causing itchy or burning red plaques, swelling, blisters, or a cellulitis-like eruption without typical bacterial infection. Blood eosinophilia and a skin biopsy may support the diagnosis, and recurrences are possible.

Wells Syndrome (Eosinophilic Cellulitis)

Alternate name; see *Wells Syndrome*.

Welt

A raised, often itchy area of skin caused by localized swelling, commonly seen in hives or after an insect bite. A welt may fade within hours; duration and associated symptoms vary with the cause.

Wen

An informal, imprecise name for a cyst beneath the skin, commonly an epidermoid or pilar cyst. It is not a specific diagnosis.

Wenckebach Block

Second-degree atrioventricular heart block characterized by progressive PR interval prolongation until an atrial beat fails to conduct. See *Mobitz Type I Block*.

Wenckebach Phenomenon

A heart-rhythm pattern in which the PR interval lengthens with each beat until one atrial impulse is not conducted to the ventricles. It may occur without heart disease or with an underlying disorder.

Alternate Names:
Second-Degree AV Block Type 1; Mobitz I Block

Wens

Alternate name; see *Wen*.

Werdnig-Hoffmann Disease

The most severe early form of inherited spinal muscular atrophy, also called type 1 spinal muscular atrophy. It usually begins before 6 months of age and causes very weak muscles, poor head control, reduced reflexes, a weak cry, feeding difficulty, and breathing problems. Babies generally cannot sit without support. Disease-modifying treatments can improve survival and motor function.

Alternate Names:
Spinal Muscular Atrophy Type 1 (SMA 1); Severe Infantile Spinal Muscular Atrophy

Werlhof Disease

An older name for immune thrombocytopenia (immune thrombocytopenic purpura), in which immune destruction of platelets can cause bruising, petechiae, nosebleeds, heavy menstrual bleeding, or other bleeding.

Wermer's Syndrome

Alternate name; see *Multiple Endocrine Neoplasia Type 1*.

Wermer Syndrome

Alternate name; see *Multiple Endocrine Neoplasia Type 1*.

Werner's Syndrome

Alternate name; see *Werner Syndrome*.

Werner Syndrome

A rare inherited condition that causes signs of aging earlier than usual, often after puberty. Features may include short stature, early cataracts, thin or tight skin, gray hair, diabetes, weak bones, and increased cancer risk.

Wernicke Aphasia

A language disorder that often causes fluent speech that is difficult to understand, with impaired understanding and repetition of words. It commonly follows damage to language areas in the dominant side of the brain, usually the left hemisphere.

Alternate Names:
Receptive Aphasia; Sensory Aphasia

Wernicke Area

A language network, usually in the dominant hemisphere, involved in understanding spoken and written language. Damage to this network can impair comprehension and produce fluent but difficult-to-understand speech.

Wernicke Encephalopathy

An acute, life-threatening neurological emergency caused by a severe deficiency of thiamine (vitamin B_1), an essential nutrient needed for brain energy metabolism. It most commonly occurs in individuals with severe chronic alcohol use disorder, though it can also result from severe malnutrition, persistent vomiting during pregnancy, or bariatric surgery. The condition classically produces a triad of symptoms: acute mental confusion or apathy, loss of muscle coordination and balance when walking (ataxia), and involuntary eye movements or eye muscle paralysis.

Alternate Names:
Wernicke Disease; Acute Thiamine Deficiency Encephalopathy

Wernicke-Korsakoff Encephalopathy

Alternate name; see *Wernicke-Korsakoff Syndrome*.

Wernicke-Korsakoff Syndrome

A brain disorder caused by severe vitamin B1 deficiency. It may begin with confusion and poor coordination and leave lasting memory problems, difficulty learning, and confabulation, in which a person unintentionally fills memory gaps with inaccurate accounts. Alcohol misuse, poor nutrition, and prolonged vomiting are common causes.

Wernicke'S Area

Alternate spelling; see *Wernicke Area*.

Alternate Names:
Wernicke's Speech Area; Sensory Speech Area

Wernicke's Encephalopathy

Alternate name; see *Wernicke Encephalopathy*.

Westergren Method

The reference laboratory procedure used to determine the erythrocyte sedimentation rate (ESR). Anticoagulated whole blood is placed in an upright, calibrated Westergren tube for one hour, measuring the distance in millimeters that red blood cells settle under gravity to assess systemic inflammation.

Alternate Names:
Westergren ESR; Westergren Sedimentation Technique

Westermark Sign

An area of unusually reduced blood-vessel markings on a chest X-ray, sometimes seen beyond a clot in a lung artery. It may suggest pulmonary embolism but is not reliable enough to diagnose it alone.

Western Blot

A laboratory test that separates proteins and uses

antibodies to find a specific protein. It can help study infections, immune reactions, or genetic and research problems, depending on the test.

Alternate Names:
Protein Immunoblot

Westley Croup Score

A clinical score used to estimate how severely croup is obstructing a child's airway. It considers noisy breathing, chest retractions, air movement, bluish coloring, and alertness; higher scores indicate more severe airway obstruction.

Alternate Names:
Westley Clinical Scoring System for Croup; Croup Severity Score

West Nile Encephalitis

Inflammation of the brain caused by neuroinvasive West Nile virus, transmitted mainly by mosquitoes. It may cause fever, headache, confusion, tremor, weakness, seizures, or coma.

West Nile Fever

A febrile illness caused by West Nile virus, usually transmitted by mosquitoes. Most infections cause no symptoms or a flu-like illness; a small proportion causes neuroinvasive disease such as meningitis, encephalitis, or acute flaccid paralysis.

West Nile Neuroinvasive Disease

A serious form of West Nile virus infection that affects the brain, its coverings, or nerve cells controlling movement. It may cause meningitis, encephalitis, weakness, or acute flaccid paralysis.

Alternate Names:
WNND

West Nile Virus

A mosquito-borne flavivirus that can cause asymptomatic infection, a febrile illness, or neuroinvasive disease such as meningitis, encephalitis, or acute flaccid paralysis. Risk of severe disease is higher in older adults and people with certain medical conditions.

West Nile Virus Infection

West Nile virus infection is a mosquito-borne illness ranging from fever and body aches to neuroinvasive meningitis, encephalitis, weakness, or paralysis.

West Syndrome

An infantile-onset epilepsy characterized by clusters of epileptic spasms, usually with a characteristic electroencephalogram pattern called hypsarrhythmia. Development may slow or regress; causes include brain injury, genetic conditions, and metabolic disease.

Alternate Names:
Infantile Epileptic Spasms Syndrome

Wet Age-Related Macular Degeneration

Alternate name; see *Wet Macular Degeneration*.

Wet AMD

Alternate name; see *Wet Macular Degeneration*.

Wet Beriberi

The predominantly cardiovascular form of severe thiamine deficiency. It can cause a fast heartbeat, enlarged or weakened heart, fluid retention, swelling, and high-output heart failure.

Wet Dream

Involuntary ejaculation during sleep, usually occurring in adolescence or adulthood and generally a normal physiological event.

Wet Gangrene

Tissue death with bacterial infection and swelling, producing moist, discolored, rapidly spreading necrosis. It can spread quickly and lead to sepsis.

Wet Macular Degeneration

The neovascular form of age-related macular degeneration in which abnormal blood vessels grow beneath or within the retina and leak fluid or blood, causing rapid central-vision loss.

Alternate Names:
Neovascular AMD; Exudative Age-Related Macular Degeneration; Wet AMD

Wet-to-Dry Dressing

A wound dressing in which moist gauze is allowed to dry and then removed to pull away attached tissue and debris. This is a nonselective form of mechanical debridement that can also remove healthy tissue and cause pain, so its use is limited.

Alternate Names:
Wet-to-Dry Debridement; Mechanical Gauze Dressing

Wharton Duct

The primary excretory duct of the submandibular salivary gland, approximately 5 cm in length, that courses anteromedially along the floor of the mouth to empty through the sublingual caruncle at the base of the lingual frenulum; the most frequent anatomical site of salivary sialolithiasis.

Alternate Names:
Submandibular Duct

Wharton Jelly

The soft, jelly-like tissue surrounding the blood vessels in the umbilical cord. It cushions the vessels and helps prevent them from being squeezed or bent during pregnancy and labor.

Wharton's Jelly

Alternate spelling; see *Wharton Jelly*.

Wheal

A temporary, raised, often itchy area of skin caused by swelling in the skin. It commonly occurs with hives, an allergic reaction, or an insect bite and may move or disappear within hours.

Wheal And Flare

A temporary raised, swollen area of skin surrounded by redness. It is usually caused by release of histamine during hives, an allergy, or another immediate skin reaction.

Wheat Allergy

An immune reaction to proteins in wheat that may cause hives, stomach symptoms, vomiting, or breathing problems. It is distinct from celiac disease and non-celiac gluten sensitivity.

Alternate Names:
Wheat Hypersensitivity

Wheelchairs

Wheeled mobility devices that support a seated person and allow movement by manual propulsion or powered controls.

Wheeled Stretcher

Mobile patient transport device with wheels; used in hospitals and emergency services for moving patients who cannot walk.

Wheeze

A high-pitched whistling sound caused by narrowed airways. It often occurs with asthma, infection, allergy, or chronic lung disease; sudden wheezing after choking or with severe breathlessness can indicate acute airway obstruction.

Wheezing

A musical or whistling sound caused by narrowed lower airways, usually louder when breathing out. It may result from asthma, infection, chronic lung disease, allergy, airway swelling, mucus, or an inhaled object.

Whiplash

A neck injury caused by the head moving suddenly backward and forward, often in a vehicle crash but also after a fall or sports injury. Pain, stiffness, headache, dizziness, or arm tingling may appear immediately or later. Weakness, numbness, or difficulty walking can indicate nerve or spinal-cord injury; severe pain can accompany fracture.

Alternate Names:
Cervical Acceleration-Deceleration Injury; CAD Injury

Whiplash Injury

Alternate name; see *Whiplash*.

Whipple Disease

A rare, chronic bacterial infection caused by *Tro-*

pheryma whipplei that primarily affects the digestive system, though it can involve any organ in the body. The bacteria damage the mucosal lining of the small intestine, impairing its ability to absorb nutrients and leading to severe diarrhea, abdominal cramps, and progressive weight loss. It often presents years earlier with migratory joint pain and arthritis, and can spread to the heart, eyes, and central nervous system.

Alternate Names:
Intestinal Lipodystrophy; Tropheryma Whipplei Infection

Whipple Procedure

A major operation that removes the head of the pancreas and nearby parts of the small intestine, bile duct, and gallbladder, then reconnects the digestive tract. It is used for selected cancers and other serious diseases in this area.

Whipple's Disease

Alternate name; see *Whipple Disease*.

Alternate Names:
Tropheryma Whipplei Infection; Whipple Disease

Whipple Triad

Three findings supporting that symptoms are caused by low blood sugar: typical symptoms occur, blood sugar is low at that time, and symptoms improve after blood sugar is raised.

Whipple Triad for Insulinoma

Alternate name; see *Whipple Triad*.

Whipple Triad of Hypoglycemia

Alternate name; see *Whipple Triad*.

Alternate Names:
Whipple Hypoglycemic Triad

Whipworm

A parasitic roundworm of the genus Trichuris, usually Trichuris trichiura in humans. Infection occurs by ingesting embryonated eggs and may cause abdominal pain, diarrhea, anemia, or rectal prolapse when severe.

Whipworm Infection

Intestinal infection caused by the soil-transmitted helminth Trichuris trichiura (whipworm), endemic in tropical and subtropical regions with poor sanitation. Humans acquire infection by ingesting embryonated eggs from contaminated soil, food, or water.

Alternate Names:
Trichuris Trichiura Infection; Whipworm Infection

Whirlpool Bath

Hydrotherapy device providing agitated water for therapeutic bathing; used in wound care, physical therapy, and rehabilitation.

Whispered Pectoriloquy

An examination finding in which whispered words sound unusually clear through a stethoscope over the lung. It may suggest that air-filled lung has become solid, as in pneumonia, but it is not diagnostic alone.

White Blood Cell

A cell of the immune system that helps protect the body from infections, foreign substances, and abnormal cells. White blood cells are made mainly in the bone marrow and include neutrophils, lymphocytes, monocytes, eosinophils, and basophils. Their number or function may change with infection, inflammation, immune disorders, or bone-marrow disease.

White Blood Cell Count

A blood test measuring the number of white blood cells. A high or low result can occur with infection, inflammation, medicines, immune disorders, or bone-marrow disease; the differential count describes the proportions of different white-cell types.

White Blood Cell Labeling

A scan method in which a person's white blood cells are removed, marked with a small amount of radioactive material, and returned to the body. The cells may collect at areas of infection or inflammation, which can then be seen on images.

White Cell

Alternate name; see *White Blood Cell*.

White Cell Count

Alternate name; see *White Blood Cell Count*.

White Clot Syndrome

A severe arterial or venous thrombotic complication associated with heparin-induced thrombocytopenia (HIT). It is characterized by platelet-dense, fibrin-rich arterial thrombi (white thrombi) that can lead to limb ischemia, stroke, or myocardial infarction.

Alternate Names:
HIT-Associated Thrombosis; Heparin-Associated White Thrombus Syndrome

White Coat Hypertension

Blood pressure that is repeatedly high in a medical setting but normal outside it on home or ambulatory monitoring.

Alternate Names:
Isolated Clinic Hypertension

White-Coat Hypertension

Alternate spelling; see *White Coat Hypertension*.

Alternate Names:
White-Coat Syndrome

White Finger

Episodic pallor or whitening of the fingers caused by vasospasm, commonly associated with Raynaud phenomenon or hand-arm vibration syndrome.

Whiteheads

Alternate name; see *Closed Comedo*.

White Infarction

Tissue death caused by loss of blood flow in a solid organ such as the heart, kidney, or spleen. The damaged area looks pale because little blood can reach it through alternate vessels.

Alternate Names:
Anemic Infarction; Pale Infarction

White Matter

Tissue in the brain and spinal cord made mainly of nerve fibers covered by a protective substance called myelin. It carries signals between different brain areas and between the brain and spinal cord.

White Matter Hyperintensities

Areas in the brain's white matter that appear brighter than surrounding tissue on certain MRI sequences. They are common with aging and small-vessel disease but can have other causes, so their meaning depends on the pattern and clinical context.

Alternate Names:
WMHs; Leukoaraiosis

White Matter Of The Brain

Alternate name; see *White Matter*.

White (Milky) Urine

Alternate name; see *Milky Urine*.

White Nails

Alternate name; see *Leukonychia*.

White Of The Eye

The sclera, the tough, opaque outer coat of the eye surrounding the cornea and helping maintain the shape of the globe.

White Spot Disease

Older name for *lichen sclerosus*, a chronic inflammatory skin condition.

White Tongue

A white coating or patches on the tongue caused by debris, dry mouth, irritation, infection, inflammation, or other oral conditions.

White Urine

Alternate name; see *Milky Urine*.

Whitlow

An infection of the fingertip or tissues around a finger or toenail, often involving the nail fold. It

is usually bacterial or caused by herpes simplex virus; grouped blisters suggest herpetic whitlow, whereas pus and a localized abscess suggest bacterial infection.

WHO Classification of Vitamin A Deficiency

A standardized clinical grading system established by the World Health Organization (WHO) to stage eye damage (xerophthalmia) caused by vitamin A deficiency:

- **XN**: Night blindness (inability to see in dim light or darkness).
- **X1A**: Conjunctival xerosis (dryness and lack of shine on the white of the eye).
- **X1B**: Bitot's spots (foamy, silvery-white patches on the white of the eye).
- **X2**: Corneal xerosis (hazy, dry surface on the clear front of the eye).
- **X3A**: Corneal ulceration or keratomalacia involving less than one-third of the cornea.
- **X3B**: Corneal ulceration or keratomalacia involving one-third or more of the cornea, which can cause severe, lasting vision loss.
- **XS**: Corneal scars (permanent scarring left by healed ulcers).
- **XF**: Xerophthalmic fundus (small pale spots on the back of the eye/retina).

Alternate Names:
WHO Xerophthalmia Classification; Vitamin A Deficiency Eye Grading; WHO Vitamin A Staging

Whole-Body Irradiation

Radiation treatment directed at the entire body, most often given before a stem-cell transplant to suppress the immune system and make room for donated cells. It can affect the bone marrow, fertility, and other organs.

Whole-Body Magnetic Resonance Imaging

An MRI examination that produces images of much or all of the body without using X-rays. It is used in selected cases to look for widespread disease, tumors, or problems affecting several body areas.

Whole-Body Scan

An imaging examination that surveys much or all of the body, using a technique such as PET/CT, CT, MRI, or a nuclear medicine scan. It may be used for selected cancer staging, infection localization, or evaluation of systemic disease; the coverage and usefulness depend on the test and clinical question.

Whole Bowel Irrigation

A gastrointestinal decontamination technique in acute clinical toxicology in which large volumes of an isosmotic polyethylene glycol electrolyte solution are administered orally or via nasogastric tube until the rectal effluent is clear, indicated for toxic ingestions of sustained-release medications, enteric-coated tablets, iron, or illicit drug packets ("body packers").

Alternate Names:
WBI

Whole-Bowel Irrigation

Alternate spelling; see *Whole Bowel Irrigation*.

Whole-Brain Radiation Therapy

Radiation treatment directed at the entire brain, used in selected people with multiple brain metastases or cancer cells around the brain. It may also be used to reduce brain-spread risk in selected cancers; side effects depend on dose and treatment plan.

Whole Breast Radiation Therapy

Whole breast radiation therapy treats remaining breast tissue after breast-conserving surgery to reduce local recurrence risk, with planned dosing and monitoring for skin and tissue effects.

Whole Exome Sequencing

A genetic test that reads most protein-coding sections of a person's DNA. It can identify changes causing some inherited disorders but may miss changes outside coding regions, structural changes, or causes not yet understood; uncertain or incidental findings can complicate interpretation.

Whole Genome Sequencing

Laboratory analysis of nearly all of a person's nuclear DNA, including coding and noncoding regions, and sometimes mitochondrial DNA. It can identify many types of genetic variants but may produce uncertain or incidental findings and does not detect every cause of disease.

Whole-Genome Sequencing

Alternate spelling; see *Whole Genome Sequencing*.

Whooping Cough

A highly contagious respiratory infection caused by *Bordetella pertussis*. It causes prolonged bouts of rapid coughing that may be followed by a whooping sound or vomiting; infants may have pauses in breathing without the typical whoop. Also called pertussis.

Whooping-Cough

Alternate name; see *Whooping Cough*.

Whooping Cough (Pertussis)

Alternate name; see *Whooping Cough*.

Whorled Pattern

A characteristic histological or clinical swirling, spiraling architectural configuration. In pathology, it describes swirling arrangements of spindle cells seen in meningiomas, fibromas, or leiomyomas; in dermatology, it describes patterns along the lines of Blaschko.

Alternate Names:
Whorled Architecture; Storiform-Whorled Pattern

WHS

Abbreviation for Wolf-Hirschhorn syndrome, a rare chromosome 4 deletion disorder that may cause poor growth, distinctive facial features, developmental disability, seizures, and congenital abnormalities.

Wickham Striae

Fine, lacy white reticular lines and arborizing patterns seen on the surface of papules and mucosal plaques in lichen planus, classically observed on the buccal mucosa.

Widal Reaction

An older blood test for antibodies associated with typhoid or paratyphoid fever. It is not very reliable because results may reflect past infection or vaccination, so culture or molecular testing is usually preferred.

Widal Test

Alternate name; see *Widal Reaction*.

Widely Spaced Teeth

Teeth separated by unusually large gaps, also called diastema when the gap is localized. Causes include normal development, missing teeth, tooth-size differences, habits, or jaw and gum conditions.

Widened Mediastinum

An increased width of the central chest area on an imaging study, especially a chest X-ray. It can result from positioning or technique, but may also reflect bleeding, aortic disease, a mass, or other conditions.

Alternate Names:
Mediastinal Widening; Mediastinal Enlargement

Widened Pulse Pressure

An unusually large difference between systolic and diastolic blood pressure. It may occur with aging, aortic valve leakage, thyroid disease, fever, or other conditions; interpretation depends on age and clinical context.

Wide Splitting of S2

An abnormal prolongation of the interval between the aortic (A2) and pulmonic (P2) components of the second heart sound that varies physiologically with respiration but remains distinctly separated in expiration. It occurs due to delayed right ventricular emptying (such as right bundle branch block or pulmonary stenosis) or early aortic valve closure.

Wilkie Syndrome

Vascular compression of the third (horizontal) segment of the duodenum between the abdominal aorta

and the overlying superior mesenteric artery (SMA). It leads to partial or complete duodenal obstruction, characterized by postprandial abdominal pain, early satiety, nausea, and vomiting.

Alternate Names:
Superior Mesenteric Artery Syndrome; SMA Syndrome; Arteriomesenteric Duodenal Compression

Williams-Beuren Syndrome

Alternate name; see *Williams Syndrome*.

Williams Syndrome

A genetic condition caused by loss of a small section of chromosome 7, including a gene important for elastic tissues. It may cause characteristic facial features, heart-vessel narrowing, high blood calcium, developmental differences, learning difficulties, and connective-tissue problems. Regular heart, calcium, hearing, and developmental checks are important.

Willis-Ekbom Disease

Another name for restless legs syndrome, a neurologic sleep-related movement disorder causing an urge to move the legs and uncomfortable sensations that worsen at rest and at night.

Wilms Tumor

A rare type of kidney cancer that primarily affects young children, most commonly diagnosed between the ages of 2 and 5. It arises from immature kidney cells that fail to develop into mature tissue before birth, eventually forming a large mass within one or, rarely, both kidneys. The most common early sign is a painless, firm swelling or lump in the child's abdomen, which may be accompanied by blood in the urine, fever, abdominal discomfort, or elevated blood pressure.

Alternate Names:
Nephroblastoma; Embryonal Nephroma

Wilm's Tumour

Common misspelling; see *Wilms Tumor*.

Wilson Disease

A rare inherited genetic disorder in which the body cannot properly eliminate excess copper, causing toxic levels of copper to accumulate in vital organs. While copper is an essential dietary trace mineral, individuals with this condition cannot excrete it into bile, so copper gradually builds up in the liver, brain, eyes, and kidneys. Symptoms typically begin in childhood or early adulthood and include liver damage (hepatitis or cirrhosis), neurological problems (tremors, clumsiness, speech difficulties), psychiatric changes, and characteristic copper-colored rings around the outer edge of the eye's cornea (Kayser-Fleischer rings).

Alternate Names:
Hepatolenticular Degeneration; Copper Storage Disease

Wilson's Disease

Alternate name; see *Wilson Disease*.

Winchester Syndrome

A very rare inherited skeletal dysplasia with progressive osteolysis, short stature, joint contractures, and characteristic facial or skin findings.

Windkessel Effect

The hemodynamic property of large elastic arteries, particularly the aorta, which expand during ventricular systole to store a portion of stroke volume and recoil during diastole. This elastic recoil sustains downstream blood flow and maintains organ perfusion throughout diastole.

Alternate Names:
Windkessel Function; Arterial Elastic Reservoir Effect

Windowing

Adjusting the brightness and contrast of a CT image so particular tissues, such as bone, lung, or soft tissue, are easier to see.

Windpipe

The tube carrying air from the voice box to the two main airways leading to the lungs. It is supported by firm rings that help keep it open.

Winged Scapula

An abnormal musculoskeletal prominence of the medial border and inferior angle of the scapula protruding posteriorly from the thoracic cage, most commonly caused by traction injury, surgical damage, or neuropathy of the long thoracic nerve of Bell paralyzing the serratus anterior muscle.

Alternate Names:
Scapula Alata

Winterbottom Sign

Prominent enlargement of the posterior cervical lymph nodes that serves as a classic clinical physical sign of early-stage African trypanosomiasis (sleeping sickness), caused by Trypanosoma brucei.

Alternate Names:
Winterbottom's Sign

Winter Formula

A formula for estimating the expected $PaCO_2$ in metabolic acidosis: $1.5 \times [HCO_3^-] + 8 \pm 2$ mm Hg. A measured value above the expected range suggests concurrent respiratory acidosis; a value below it suggests concurrent respiratory alkalosis.

Alternate Names:
Winter's Compensation Formula; Acid-Base Compensation Equation

Winter Itch

Type of eczema caused by dry, flaky skin that commonly flares during cold, low-humidity winter weather. See *Asteatotic Eczema*.

Winter's Formula

Alternate name; see *Winter Formula*.

Alternate Names:
Winter Formula; Metabolic Acidosis Compensation Formula

Winter Vomiting Disease

An acute gastroenteritis, usually caused by norovirus, characterized by sudden vomiting, diarrhea, and abdominal cramps.

Wireless Motility Capsule

A swallowed capsule that records pressure, acidity, temperature, and movement as it travels through the digestive tract. The measurements estimate how long food takes to pass through the stomach and intestines and may help investigate unexplained constipation, diarrhea, nausea, or bloating.

Wirsung Duct

The main excretory duct of the pancreas, extending from the tail through the body and head of the gland, joining the common bile duct at the hepatopancreatic ampulla of Vater to empty digestive enzymes into the second part of the duodenum at the major duodenal papilla.

Alternate Names:
Main Pancreatic Duct

Wisdom Teeth

Plural form; see *Wisdom Tooth*.

Wisdom Tooth

The third molar in each dental quadrant (four in total: upper and lower left and right), representing the last teeth to erupt in the permanent human dentition, typically between ages 17 and 25. Due to evolutionary reduction in human jaw size, wisdom teeth frequently undergo partial or complete impaction (mesioangular, horizontal, vertical, or distoangular). Pathological sequelae of impacted wisdom teeth include acute or chronic pericoronitis (inflammation and infection of the operculum overlying the partially erupted crown), odontogenic abscesses, root resorption or dental caries on the distal aspect of the adjacent second molar, and the development of dentigerous cysts or odontogenic tumors (e.g., ameloblastoma). Prophylactic or therapeutic surgical odontectomy (extraction) is commonly indicated, carefully planned with panoramic radiography or cone-beam CT to assess spatial proximity to the inferior alveolar nerve and maxillary sinus.

Alternate Names:
Dens Serotinus; Third Molar

Wisdom Tooth Problems

Problems involving third molars, including impaction, infection, gum inflammation, decay, cysts, or damage to nearby teeth. Findings can include pain, swelling, fever, difficulty opening the mouth, or trouble swallowing.

Wisdom Tooth Removal

Dental extraction of one or more third molars, commonly performed when they are impacted, repeatedly infected, decayed, or damaging adjacent teeth. Risks include pain, infection, bleeding, dry socket, and temporary or rarely persistent nerve symptoms.

Wiskott-Aldrich Syndrome

A rare inherited immune disorder that mainly affects boys and causes eczema, repeated infections, and a low number of unusually small platelets. It can also cause bleeding, autoimmune disease, and increased cancer risk.

Wiskott-Aldrich Syndrome Protein

A protein, encoded by the *WAS* gene, that helps immune and blood cells organize their internal support structure and interact with other cells. Changes in the gene can cause Wiskott-Aldrich syndrome or related platelet disorders.

Alternate Names:
WASP

Witch's Milk

A temporary milky breast discharge in a newborn caused by exposure to maternal hormones before birth. It usually resolves as those hormones decline.

Withdrawal

Physical or psychological symptoms that occur when a person who has developed dependence reduces or stops using a medicine or psychoactive substance. Symptoms vary by substance and may include anxiety, agitation, sweating, tremor, nausea, pain, insomnia, cravings, or seizures; withdrawal from alcohol or sedatives can be life-threatening.

Alternate Names:
Abstinence Syndrome; Substance Withdrawal Syndrome

Withdrawal Reflex

An automatic response in which a painful stimulus makes a limb pull away from danger. The opposite limb may straighten to help maintain balance.

Withdrawal Symptoms

Physical or psychological symptoms that occur when a person stops or reduces a substance or medicine after the body has adapted to it. The symptoms depend on the substance, duration of use, and the person's health.

Withdrawal Syndrome

A predictable set of signs and symptoms that occur when a drug is discontinued or the dose is reduced after chronic use, reflecting the physiological rebound from drug adaptation.

Withdrawal Syndromes

Alternate name; see *Withdrawal Syndrome*.

With-the-rule Astigmatism

A type of astigmatism in which the eye's steepest curve is close to vertical. This uneven shape makes light focus unevenly on the retina and can blur or distort vision. It is the opposite of against-the-rule astigmatism.

Wolff-Chaikoff Effect

A temporary reduction in thyroid hormone production that can occur after a large increase in iodine exposure. The thyroid often adapts after several days and hormone production resumes; the response varies by person and condition.

Alternate Names:
Wolff-Chaikoff Block; Iodide Organification Inhibition

Wolffian Ducts

Temporary tubes in the developing embryo that form parts of the male reproductive system, including the sperm-transport ducts. They usually shrink during typical female development, although small remnants may remain.

Wolff-Parkinson-White Syndrome

A congenital heart condition characterized by the presence of an extra, abnormal electrical pathway connecting the upper and lower chambers of the heart. This extra electrical pathway acts like an electrical short-circuit, allowing electrical signals to bypass the heart's natural gatekeeper (the atrioventricular node) and reach the ventricles prematurely. This can trigger sudden episodes of dangerously fast heartbeats (paroxysmal tachycardia), causing palpitations, dizziness, shortness of breath, and fainting.

Alternate Names:
WPW Syndrome; Ventricular Pre-Excitation Syndrome

Wolff-Parkinson-White Tachycardia

Alternate name; see *Wolff-Parkinson-White Syndrome*.

Wolf Hirschhorn Syndrome

Alternate spelling; see *Wolf-Hirschhorn Syndrome*.

Wolf-Hirschhorn Syndrome

A rare genetic disorder caused by loss of part of chromosome 4. It can cause poor growth, a small head, distinctive facial features, developmental and intellectual disability, seizures, and heart or other organ abnormalities.

Alternate Names:
4p- Syndrome; 4p Deletion Syndrome

Wolfram Syndrome

A rare inherited disorder that commonly causes diabetes mellitus and progressive loss of vision from optic-nerve damage. It may also cause excessive thirst and urination, hearing loss, bladder problems, balance difficulty, or other nervous-system problems.

Wolf Syndrome

Alternate name; see *Wolf-Hirschhorn Syndrome*.

Wolinella

Genus of anaerobic, Gram-negative bacteria found in the oral cavity and gastrointestinal tract; associated with periodontal disease.

Wolman Disease

The severe infantile form of lysosomal acid lipase deficiency, an inherited disorder that causes cholesteryl esters and triglycerides to build up in organs. It can cause vomiting, diarrhea, poor growth, an enlarged liver and spleen, and adrenal-gland calcification; without treatment it is often fatal in infancy.

Wolman's Disease

Alternate name; see *Wolman Disease*.

Womb

Common name for the uterus; the muscular organ where a fetus develops during pregnancy.

Alternate Names:
Uterus; Metra; Hystera

Womb Growths

Alternate name; see *Uterine Fibroids*.

Women Health

Alternate name; see *Women's Health*.

Women's Health

An area of health care addressing physical, mental, and reproductive health needs across the lifespan. It includes conditions that affect women uniquely, more often, or differently, and encompasses prevention, diagnosis, and treatment across medical specialties. It extends beyond obstetric and gynecologic care.

Alternate Names:
Female Health Care

Wood Lamp Examination

Examination of the skin in a dark room with ultraviolet A light. Fluorescence or color changes can help identify selected skin conditions, but findings are interpreted with the clinical examination.

Woods Corkscrew Maneuver

An emergency procedure used when a baby's shoulders become stuck during birth. A trained clinician rotates the baby's shoulders to help release them and complete delivery.

Wood's Light

Alternate name; see *Wood Lamp Examination*.

Wood Spirit

An old name for methanol, a toxic alcohol whose ingestion can cause metabolic acidosis, blindness, and death.

Woods Screw Maneuver

Alternate name; see *Woods Corkscrew Maneuver*.

Wood-Unit

A clinical unit of vascular resistance calculated by dividing the pressure gradient across a vascular bed (in mmHg) by cardiac output (in L/min). One Wood unit equals approximately 80 $\text{dyn}\cdot\text{s}/\text{cm}^5$, commonly used in evaluating pulmonary hypertension.

Alternate Names:
Wood Resistance Unit; Hybrid Resistance Unit (HRU)

Woody Tongue

A rare long-lasting infection, usually caused by *Actinomyces*, that makes the tongue and nearby tissues hard and swollen. It can interfere with eating, speaking, or breathing.

Woolly Hair

Hair with unusually tight, fine curls. It may be an inherited trait occurring on its own or as part of a condition affecting other organs, such as Naxos or Carvajal syndrome.

Alternate Names:
Woolly Hair Syndrome; Hereditary Woolly Hair

Woolsorters' Disease

A form of inhaled anthrax acquired by breathing spores of *Bacillus anthracis*, historically associated with handling contaminated wool or animal products. It can cause severe respiratory illness, sepsis, and shock.

Alternate Names:
Inhalation Anthrax; Pulmonary Anthrax; Ragpicker's Disease

Word Blindness

Older term; see *Alexia*.

Word Deafness

An acquired inability to understand spoken words even though ordinary hearing is intact. It usually results from damage to brain areas that connect hearing with language, such as after a stroke or head injury.

Alternate Names:
Pure Word Deafness; Auditory Agnosia for Speech

Word Recognition Scoring

A hearing test measuring how accurately a person repeats or identifies spoken words at a comfortable volume. It helps assess how well the hearing system and brain understand speech.

Word Salad

Speech made of words or phrases that have little or no logical connection, making the person difficult to understand. It can occur with severe psychosis, mania, brain disease, or intoxication.

Working Memory

The ability to hold a small amount of information briefly and use it while completing a task, such as remembering instructions while following them. Attention, stress, sleep, illness, and brain conditions can affect it.

Wound

Damage to body tissue caused by trauma, surgery, pressure, heat, chemicals, or another cause. A wound may be open or closed and can vary in depth, contamination, bleeding, and injury to nearby nerves, vessels, or organs.

Wound Care

Assessment and treatment of a wound through cleansing, bleeding control, debridement when indicated, closure or dressing, pain control, and follow-up. It may also address infection, pressure, tetanus risk, and underlying conditions.

Wound Classification

A description of common injury types: an abrasion is a scrape, a laceration is a torn cut, a contusion is a bruise from blunt force, and an incised wound is a clean cut from a sharp object.

Wound Complication

A problem that develops during healing, such as infection, separation of wound edges, bleeding, fluid collection, tissue death, or excessive scarring. Findings can include increasing pain, redness, swelling, drainage, fever, or wound opening.

Wound Closure

The clinical approximation and securing of the edges of an open wound or surgical incision using sutures, surgical staples, skin adhesive, or adhesive strips; see *Suture*.

Wound Debridement

Removal of dead tissue, debris, or foreign material from a wound. It may be done with instruments, dressings, enzymes, or other methods to support wound assessment and healing.

Wound Dehiscence

Partial or complete reopening of a surgical wound after it has been closed. It may follow infection, poor blood supply, diabetes, increased pressure, or strain on the wound. Associated findings include drainage, fever, severe pain, or visible deeper tissue.

Wound Evisceration

Separation of a surgical wound with protrusion of internal organs or tissue through the opening. It is a surgical emergency because exposed tissue is vulnerable to injury, drying, and contamination.

Wound Healing

The body's process of stopping bleeding, controlling inflammation, replacing damaged tissue, covering the surface, and strengthening the repair. Blood supply, infection, nutrition, diabetes, medicines, smoking, wound depth, and movement can affect healing.

Wound Healing Phases

Wound healing has overlapping stages: stopping bleeding, inflammation, building new tissue and skin, and strengthening the repair. The timing and result depend on the wound, blood supply, infection, nutrition, and general health.

Wound Infection

Infection of a wound by microorganisms, causing findings such as increasing pain, redness, warmth, swelling, pus, fever, or delayed healing.

Wound Management

Assessment and treatment of acute or chronic wounds through cleansing, debridement when indicated, moisture and exudate control, infection management, pressure relief, nutrition, and correction of underlying disease.

Wounds

Alternate name; see *Wound*.

Wound VAC

A system that applies controlled negative pressure through a sealed wound dressing to remove fluid. It is used for selected wounds to support healing.

Wound Vacuum

Alternate name; see *Wound VAC*.

Alternate Names:
Negative Pressure Wound Therapy; NPWT; Vacuum-Assisted Closure; VAC

WPW Syndrome

Abbreviation for Wolff-Parkinson-White syndrome, a pre-excitation disorder in which an extra electrical pathway can cause episodes of supraventricular tachycardia. Manifestations include palpitations, fainting, chest pain, or, rarely, sudden cardiac arrest.

Wright Hyperabduction Test

Alternate name; see *Wright Test*.

Alternate Names:
Wright Test; Hyperabduction Maneuver

Wright Stain

A laboratory dye applied to a blood sample so different blood cells and abnormal cell changes can be seen and identified under a microscope.

Wright Test

A physical examination maneuver in which the arm is raised and rotated outward to see whether this reproduces symptoms or changes the pulse. It may be used when assessing thoracic outlet syndrome, but a pulse change alone does not establish the diagnosis.

Alternate Names:
Wright Maneuver; Hyperabduction Test

Wrinkle Test

A simple clinical bedside test to evaluate peripheral sympathetic autonomic nerve function in the digits. Denervated skin fails to develop normal physiological wrinkling when submerged in warm water for 10 to 30 minutes, indicating loss of sympathetic vasoconstrictor tone.

Alternate Names:
Digital Wrinkling Test; Water Immersion Wrinkle Test

Wrisberg Ganglion

A small cluster of nerve cells connected with the facial nerve. It helps relay taste signals from part of the tongue and sensory signals from nearby areas of the ear.

Wrist

The region connecting the hand to the forearm. It includes eight small carpal bones, joints, ligaments, tendons, nerves, and blood vessels and allows the hand to bend, straighten, and move from side to side.

Wrist Arthroscopy

A procedure using a small camera and instruments inserted through tiny wrist openings to examine or treat damaged cartilage, ligaments, joint lining, or other wrist problems.

Wrist Drop

Inability to lift the wrist and fingers, usually caused by injury or compression of the radial nerve. It may occur with weakness, numbness, or difficulty using the hand.

Wrist Fracture

A break in one or more bones near the wrist, most commonly the distal radius or ulna, usually caused by a fall, direct trauma, or weakened bone.

Wrist Injury

Damage to the bones, ligaments, tendons, nerves, or vessels of the wrist from a fall, twist, impact, or overuse. Injuries range from sprains to fractures, instability, or neurovascular damage.

Wrist Joint

The group of joints connecting the forearm to the hand. It allows the wrist to bend, straighten, and move from side to side; rotation of the forearm occurs mainly at the radioulnar joints.

Wrist Pain

Pain in or around the wrist, commonly caused by sprain, fracture, tendinitis, arthritis, or nerve compression such as carpal tunnel syndrome. Persistent pain may occur with deformity, numbness, or weakness.

Alternate Names:
Carpal Pain; Radiocarpal Joint Discomfort

Wrist Sprain

Stretching or tearing of one or more ligaments supporting the wrist, causing pain, swelling, bruising, and reduced movement after injury.

Writer's Cramp

A task-specific focal dystonia in which involuntary muscle contractions cause abnormal hand or arm positions while writing. Similar symptoms may occur during other skilled hand activities.

Wry-Neck

Torticollis, an abnormal tilt or rotation of the head

caused by involuntary contraction, shortening, or dysfunction of neck muscles.

Wt

A medical abbreviation commonly meaning weight; its meaning can vary with context because medical abbreviations may be ambiguous.

Wuchereria

A genus of filarial nematodes that includes Wuchereria bancrofti, a major cause of lymphatic filariasis. Infection is transmitted by mosquitoes and may cause lymphangitis, chronic lymphedema, hydrocele, and elephantiasis.

Wuchereria Bancrofti

A parasitic roundworm spread by mosquitoes and the main cause of lymphatic filariasis. Long-term infection can block lymph drainage and cause swelling of the limbs or genitals, sometimes becoming severe and permanent.

Wuhan Coronavirus

Informal early name; see *SARS-CoV-2*.

X

Xanthelasma

A harmless yellowish patch or bump caused by fat deposits in the skin of the eyelids, usually near the inner corners of the eyes. It can occur with high blood fats but may also occur when blood-fat levels are normal.

Alternate Names:
Xanthelasma Palpebrarum; Eyelid Xanthoma; Palpebral Xanthoma

Xanthine

A purine breakdown product and an intermediate in uric-acid production. The enzyme xanthine oxidoreductase converts it to uric acid; when this step is impaired, xanthine can build up and form urinary stones.

Xanthine Oxidase

An enzyme in purine breakdown that converts hypoxanthine to xanthine and xanthine to uric acid. Medicines that block it lower uric-acid production and are used to treat gout and some cases of high uric acid.

Xanthine Oxidase Inhibitors

Medicines such as allopurinol and febuxostat that lower uric-acid production by blocking xanthine oxidase. They are used to lower uric acid in gout and in some cases of high uric acid associated with cancer treatment.

Alternate Names:
XOIs

Xanthinuria

A rare inherited disorder in which reduced xanthine oxidoreductase activity impairs the conversion of hypoxanthine and xanthine to uric acid. Uric-acid levels in blood and urine are very low; excess xanthine can form kidney or urinary stones, though some people have no symptoms.

Xanthochromia

A pink, yellow, or amber discoloration of the fluid surrounding the brain and spinal cord (cerebrospinal fluid) observed after centrifugation. It occurs when red blood cells that have leaked into the spinal fluid break down over several hours into yellow-tinted pigments, such as bilirubin. Its presence is a crucial diagnostic indicator that helps doctors confirm a subarachnoid hemorrhage (bleeding around the brain) and distinguish it from accidental minor bleeding caused by the spinal tap needle itself.

Alternate Names:
CSF Xanthochromia; Cerebrospinal Fluid Xanthochromia

Xanthogranulomatous

Describing inflammation in which tissue contains many immune cells filled with fat. This pattern can occur in long-lasting infections and other inflammatory conditions.

Xanthogranulomatous Cholecystitis

A rare, long-lasting inflammation of the gallbladder that can thicken and damage its wall. It may spread to nearby tissues and can look like gallbladder cancer on scans.

Alternate Names:
XGC

Xanthogranulomatous Oophoritis

A rare, chronic inflammation of an ovary that can form a mass resembling ovarian cancer on imaging. Reported associations include infection and endometriosis; symptoms may include pelvic pain, fever, or abnormal bleeding.

Xanthogranulomatous Pyelonephritis

A chronic, destructive inflammation of the kidney, usually associated with urinary blockage, stones, and infection. It replaces normal kidney tissue with inflamed tissue and may form a mass that resembles a tumor.

Xanthoma

A skin condition characterized by the formation of yellowish, fatty growths or nodules beneath the skin, caused by the localized accumulation of lipid-laden immune cells (macrophages). Xanthomas often develop when blood levels of cholesterol or triglycerides are abnormally high, which can occur from inherited lipid disorders, poorly controlled diabetes, or liver disease. They commonly appear on or around the eyelids (xanthelasma), over the elbows, knees, buttocks, or along tendons such as the Achilles tendon.

Alternate Names:
Cutaneous Xanthoma; Lipid Granuloma

Xanthoma Disseminatum

A rare disorder in which many yellow, red-brown, or orange bumps develop on the skin, especially in body folds. The mouth, throat, or other organs may also be affected, and some people develop problems controlling water balance.

Alternate Names:
Montgomery Syndrome; Disseminate Xanthoma

Xanthoma Eruptivum

A sudden outbreak of many small yellow-orange bumps, usually on the buttocks, arms, legs, or shoulders. It is often linked to very high blood triglyceride levels.

Alternate Names:
Eruptive Xanthoma; Eruptive Xanthomatosis

Xanthoma Planum

Flat or slightly raised yellow patches caused by lipid-filled immune cells in the skin. They may occur in skin folds or over wider areas and can be associated with abnormal blood lipids or some blood disorders. Palmar crease xanthomas are a distinct pattern.

Alternate Names:
Plane Xanthoma

Xanthomas

See *Xanthoma*.

Xanthoma Striatum Palmare

Yellow or orange lines or patches in the creases of the palms caused by fat deposits in the skin. They are strongly associated with inherited blood-fat disorders, especially type III dysbetalipoproteinemia.

Alternate Names:
Palmar Crease Xanthoma; Planar Palmar Xanthoma

Xanthoma Tendinosum

Firm, usually painless fat deposits in tendons or ligaments, most often in the Achilles tendon or tendons of the hands. They are strongly linked to inherited high cholesterol.

Alternate Names:
Tendon Xanthoma; Tendinous Xanthoma

Xanthomatosis

A disorder in which fatty deposits called xanthomas develop in the skin, tendons, or organs. It may be linked to inherited or acquired problems with blood fats.

Xanthoma Tuberosum

Slowly enlarging, painless, firm, yellowish-red nodular lipid deposits occurring over extensor pressure areas, particularly the elbows, knees, heels, and buttocks. They are strongly associated with familial hypercholesterolemia and type III hyperlipoproteinemia.

Alternate Names:
Tuberous Xanthoma; Tuberous Xanthomatosis

Xanthopsia

A visual disturbance in which objects appear yellow or yellow-tinted. It can occur with retinal or optic-nerve disorders and with toxicity from some medicines, including digoxin.

Xanthosis

Yellow discoloration of skin or other tissues caused by carotene or another yellow substance. Unlike jaundice, it does not usually make the whites of the eyes yellow; causes include dietary pigments and some systemic conditions.

X Chromosome

One of the two human sex chromosomes. It carries genes involved in sex development and many other body functions. Most people have one or two X chromosomes, although chromosome patterns vary.

Xenobiotic

A chemical foreign to an organism, such as a medicine, pollutant, pesticide, or industrial compound. The body may change or remove it; the original chemical or its products can have biological effects.

Xenobiotic Metabolism

The body's chemical processing of foreign substances, including medicines, pollutants, and toxins. Enzymes, especially in the liver, may make them easier to eliminate, alter their activity, or produce harmful products.

Xenobiotic Resistance

The ability of a cell or organism to withstand a foreign chemical, medicine, or toxin. It may result from faster breakdown, removal from cells, or changes in the substance's target.

Alternate Names:
Xenobiotic Tolerance

Xenograft

Tissue, cells, or a biological material transplanted between different species, such as animal tissue used in a human. Rejection and infection are important risks, although some materials are used temporarily as tissue coverings or substitutes.

Xenon Anesthesia

General anesthesia produced by inhaled xenon, a noble gas that acts on brain signaling. The gas is eliminated mainly through the lungs; its clinical use is limited by cost and availability.

Xenotransplantation

Transplantation of living cells, tissues, or organs from one species to another, usually from a nonhuman animal into a person. The recipient's immune system may reject the graft, and animal infections may be transmitted. In regulatory definitions, the term also includes transplanting, implanting, or infusing human cells, tissues, or body fluids that contacted living nonhuman animal material outside the body.

Xerochilia

Persistent dryness and scaling of the lips, sometimes with superficial cracks. Causes include dry weather, repeated lip licking, mouth breathing, and medicines such as oral retinoids.

Alternate Names:
Dry Lips

Xeroderma

Alternate name; see *Dry Skin*.

Xeroderma Pigmentosum

A rare inherited genetic condition in which the body's cells cannot repair the DNA damage caused by ultraviolet (UV) light, such as sunlight. Even minimal sun exposure causes severe sunburns, blistering, and heavy freckling at an early age. Because damaged DNA accumulates without repair, individuals have an extremely high risk of developing multiple skin cancers, severe eye damage, and, in some cases, progressive neurological complications.

Alternate Names:
XP; DeSanctis-Cacchione Syndrome (in neurodegenerative subtypes)

Xeroderma Pigmentosum

Complementation Groups

Genetic subtypes of xeroderma pigmentosum, each associated with a different gene involved in nucleotide-excision repair or DNA damage tolerance. The subtype helps explain the molecular cause; all types increase sensitivity to ultraviolet radiation and the risk of skin cancer.

Alternate Names:
XP Complementation Groups; NER Defect Groups

Xerophthalmia

The spectrum of eye disease caused by vitamin A deficiency, ranging from night blindness and dryness of the conjunctiva or cornea to corneal ulceration and keratomalacia, the softening and destruction of corneal tissue. Advanced disease can scar the cornea and cause permanent vision loss.

Alternate Names:
Vitamin A Deficiency Eye Disease

Xerophthalmic Ulceration

Corneal ulceration caused by severe vitamin A deficiency, sometimes progressing to keratomalacia (softening and destruction of the cornea). In the WHO classification, stage X3A affects less than one-third of the cornea and X3B affects at least one-third; scarring and vision loss can result.

Alternate Names:
Vitamin A Corneal Ulcer

Xerosis

Alternate name; see *Dry Skin*.

Xerostomia

Alternate name; see *Dry Mouth*.

Xerotic Eczema

An itchy form of eczema caused by very dry skin, with scaling and fine cracks that may form a netlike pattern. It often affects the lower legs and is more common in cold, dry weather and in older adults.

Alternate Names:
Asteatotic Eczema; Eczema Craquele; Winter Itch

X-Inactivation

The process by which most genes on one X chromosome are switched off in each cell with more than one X chromosome. It balances X-linked gene activity; some genes escape inactivation, and the chromosome switched off can differ among cells.

Xiphisternal Joint

The joint between the lower part of the breastbone and the xiphoid process. It often becomes partly or fully hardened with age.

Alternate Names:
Xiphisternal Synchondrosis; Xiphisternal Articulation

Xiphoidalgia

Pain or tenderness over the xiphoid process, the small lower part of the breastbone. Pain may spread to the upper abdomen, chest, back, or shoulders and may worsen with touch, bending, lifting, or coughing.

Alternate Names:
Xiphoidodynia; Hypersensitive Xiphoid Syndrome; Xiphoid Syndrome

Xiphoidectomy

Surgery to remove the xiphoid process, the small lower part of the breastbone. It may be done for persistent pain in this area or to provide access during some chest or abdominal operations.

Xiphoid Process

The small pointed lower part of the breastbone. Its shape varies between people and it provides attachment for some muscles and ligaments.

XLA

Inherited immune deficiency where B-cell precursors fail to mature, leaving the body unable to produce antibodies against infections. See *X-Linked Agammaglobulinemia*.

X-Linked

Describing a gene or condition involving a gene on the X chromosome. Its inheritance and effects de-

pend on the gene and a person's sex-chromosome pattern. A father passes his X chromosome to children who inherit his X, not to children who inherit his Y.

X-Linked Adrenoleukodystrophy

An inherited disorder in which very-long-chain fatty acids build up and can damage the brain, spinal cord, peripheral nerves, or adrenal glands. Childhood cerebral disease may cause changes in behavior, learning, or movement; adrenal insufficiency and adult-onset nerve or spinal-cord disease also occur.

Alternate Names:
X-ALD

X-linked Adult Spinal Muscular Atrophy

An older name for X-linked spinal and bulbar muscular atrophy (Kennedy disease), an inherited androgen-receptor disorder. It usually begins in adulthood and causes slowly progressive muscle weakness, wasting, and twitching; swallowing difficulty, breast enlargement, and reduced fertility may occur.

X-Linked Agammaglobulinemia

A rare inherited immune disorder affecting males in which the body is unable to produce mature B cells, the specialized white blood cells responsible for making antibodies (immunoglobulins). While maternal antibodies protect the baby for the first several months of life, their decline leaves the child vulnerable to recurrent, severe bacterial infections—such as ear infections, pneumonia, sinusitis, and gastrointestinal infections.

Alternate Names:
XLA; Bruton Agammaglobulinemia; Congenital Agammaglobulinemia

X-Linked Chronic Granulomatous Disease

An inherited immune disorder, usually affecting boys, caused by a change in the *CYBB* gene. Certain white blood cells cannot kill some bacteria and fungi normally, leading to repeated serious infections and areas of ongoing inflammation.

Alternate Names:
X-Linked CGD; CYBB Deficiency; Cytochrome b-245 Beta Deficiency

X-Linked Dominant Inheritance

An inheritance pattern in which a variant in one copy of a gene on the X chromosome can cause a condition. An affected father passes the variant to all daughters and no sons; an affected mother has a 50% chance of passing it to each child.

X-Linked Emery-Dreifuss Muscular Dystrophy

An inherited muscle disorder, usually caused by a variant in the *EMD* gene, that causes joint contractures, slowly worsening muscle weakness, and heart-conduction problems.

Alternate Names:
EDMD1; Emerin Deficiency Muscular Dystrophy

X-Linked Hyper-IgM Syndrome

An inherited immune disorder, usually caused by a defect in CD40 ligand on T cells. This impairs B-cell antibody class switching, so IgM is present but other antibody types are low; recurrent infections may include opportunistic infections.

Alternate Names:
HIGM1; CD40L Deficiency; Hyper-IgM Syndrome Type 1

X-Linked Hypophosphatemia

An inherited disorder, usually caused by a variant in the *PHEX* gene, in which the kidneys lose too much phosphate. Low phosphate impairs bone mineralization, causing rickets in children or osteomalacia in adults, with bone pain, leg deformity, dental problems, or reduced height.

X-Linked Ichthyosis

An inherited skin disorder caused by deficient steroid sulfatase, usually due to a variant or deletion in the *STS* gene. It mainly affects males and causes widespread, dark, polygonal scales, often from infancy.

X-Linked Inheritance

Inheritance of a gene variant located on the X chromosome. The pattern and effects depend on the gene, the variant, and the person's sex-chromosome pattern. A father passes his X chromosome only to children who inherit his X, not to those who inherit his Y.

X-linked Intellectual Disability

Intellectual disability caused by a change in a gene on the X chromosome. Features vary widely and may include developmental delay, learning difficulty, behavior differences, seizures, or associated physical findings.

X-linked Juvenile Retinoschisis

An older name for X-linked retinoschisis, an inherited retinal disorder that usually begins in childhood.

X-Linked Lymphoproliferative Disease Type 1

An inherited immune disorder, usually affecting boys, in which the body can react severely to Epstein–Barr virus. It may cause severe glandular fever, very high inflammation, low antibody levels, or lymphoma.

Alternate Names:
XLP1; Duncan Disease; SAP Deficiency

X-Linked Lymphoproliferative Syndrome

A group of inherited immune disorders in which infection, especially with Epstein–Barr virus, can trigger an abnormal immune response, including severe inflammation, low blood-cell counts, or lymphoma. Type 1 is caused by *SH2D1A* variants; type 2 is caused by *XIAP* variants.

X-Linked Myotubular Myopathy

A rare inherited muscle disease, usually affecting boys, that causes severe weakness and low muscle tone from birth. Babies may have drooping eyelids, feeding difficulty, and dangerous weakness of the breathing muscles.

Alternate Names:
XLMTM; Myotubularin Deficiency

X-Linked Recessive Inheritance

A pattern in which a disease-causing variant on the X chromosome usually causes disease in people with one X chromosome. People with two X chromosomes may carry one variant copy and sometimes have symptoms. A father passes his X chromosome only to children who inherit his X, not to those who inherit his Y.

X-Linked Retinitis Pigmentosa

An inherited disorder in which the retina slowly loses its ability to sense light. It usually causes night blindness followed by narrowing of the field of vision and worsening sight.

Alternate Names:
XLRP; X-Linked Pigmentary Retinopathy

X-Linked Retinoschisis

An inherited retinal disorder, usually caused by a variant in the *RS1* gene, in which layers of the retina split apart. It usually begins in childhood and causes reduced central vision; bleeding into the eye or retinal detachment can occur.

X-Linked Severe Combined Immunodeficiency

A rare, life-threatening inherited genetic disorder of the immune system that occurs almost exclusively in males. A mutation on the X chromosome impairs the development of vital white blood cells—particularly T cells and natural killer (NK) cells—leaving the infant with virtually no immune defenses. Affected infants appear healthy at birth but quickly develop recurrent, severe, and persistent infections from common viruses, bacteria, and fungi, as well as chronic diarrhea and failure to gain weight.

Alternate Names:
X-SCID; Common Gamma Chain Deficiency SCID; Bubble Boy Disease

X-Linked Sideroblastic Anemia

An inherited anemia, usually caused by a variant in the *ALAS2* gene. Defective heme production causes iron to build up in developing red blood cells, often producing small, pale red cells.

Alternate Names:

XLSA; ALAS2 Deficiency

X-Linked Spinal and Bulbar Muscular Atrophy

An inherited muscle and nerve disorder that usually begins in adulthood and slowly causes weakness. It may also cause muscle twitching, trouble speaking or swallowing, breast enlargement, and reduced fertility.

Alternate Names:
Kennedy Disease; SBMA; Bulbo-Spinal Muscular Atrophy

XO Syndrome

Alternate name; see *Turner Syndrome*.

XP

Abbreviation for xeroderma pigmentosum, a rare DNA-repair disorder causing extreme sensitivity to ultraviolet light and a markedly increased risk of early skin and eye cancers.

X-Ray

An imaging test that uses a small amount of radiation to create a picture of structures inside the body. It is especially useful for bones, lungs, teeth, and some other tissues.

X-Ray Attenuation

The reduction in intensity of an X-ray beam as it passes through tissue, through absorption and scattering. Different tissues attenuate X-rays by different amounts, creating contrast in an image.

X-Ray Crystallography

A laboratory method that uses X-rays to work out the three-dimensional structure of molecules such as proteins. The molecule is made into a crystal, and the pattern produced by the X-rays is analyzed.

Alternate Names:
X-Ray Crystal Diffraction Analysis

X-Ray Shield

A barrier made of lead or another radiation-absorbing material that reduces exposure to scattered X-rays, especially for staff or the public outside the imaging room. Patient shields can obscure anatomy or interfere with automatic exposure controls, sometimes reducing image quality or increasing radiation dose.

X-Ray Therapy

Treatment that uses carefully aimed X-rays, usually from a machine outside the body, to damage cancer cells or relieve symptoms.

XX Male Syndrome

An older name for 46,XX testicular difference of sex development, in which a person with two X chromosomes develops typically male traits, often because the *SRY* gene has moved onto an X chromosome. Infertility is common.

XXX Syndrome

Alternate name; see *Triple X Syndrome*.

XXXX Syndrome

A rare sex-chromosome variation, also called tetrasomy X, in which a person has four X chromosomes (48,XXXX). Features vary and may include developmental or learning difficulties, differences in physical development, and ovarian dysfunction.

XXY Males

Older name; see *Klinefelter Syndrome*.

XXY Syndrome

Alternate name; see *Klinefelter Syndrome*.

Xylitol

A sugar alcohol used as a sweetener and in some oral-care products. Large amounts can cause abdominal discomfort and diarrhea.

Xylose

A simple sugar found in some plants. A form called D-xylose has been used in tests of how well the small intestine absorbs nutrients and is also used in laboratory studies.

Xylose Absorption Test

A test that measures D-xylose in the blood or urine after it is swallowed to assess absorption by the small intestine. A low result may indicate impaired intestinal absorption, although kidney function and other factors can affect the result.

Alternate Names:
D-Xylose Absorption Test; D-Xylose Tolerance Test

XYY Syndrome

A sex-chromosome variation in which a person has an extra Y chromosome (47,XYY). Many have no obvious physical features; some have tall stature or speech, learning, or developmental difficulties.

Y

YAG Capsulotomy

A laser procedure that makes an opening in the cloudy posterior capsule behind an artificial lens after cataract surgery. It treats posterior capsule opacification, which can blur vision or cause glare.

YAG Laser Capsulotomy

Alternate name; see *YAG Capsulotomy*.

YAG Laser Surgery

An eye procedure using a neodymium-doped yttrium-aluminum-garnet (Nd:YAG) laser to cut or alter tissue. Uses include opening a cloudy lens capsule after cataract surgery and making a peripheral opening in the iris for some forms of angle-closure glaucoma.

Yawn

An involuntary behavior consisting of a deep inhalation followed by a slower exhalation, often with stretching of the jaw and facial muscles. Yawning is common with fatigue but excessive or unusual yawning can occur with some medications or neurologic conditions.

Yawning

See *Yawn*.

Yaws

A chronic skin infection caused by *Treponema pallidum* subspecies *pertenue* and spread by direct contact with an infectious skin lesion. It can cause papillomas and ulcers, followed in some cases by damage to the skin, bone, or cartilage.

Yaws Papilloma

A raised, often painless, raspberry-like skin lesion of early yaws, caused by *Treponema pallidum* subspecies *pertenue*. It may become ulcerated and is also called a mother yaw or frambesioma.

Alternate Names:
Mother Yaw; Frambesioma; Primary Yaws Lesion

Y-Box-Binding Protein 1

A protein that binds DNA and RNA and helps regulate gene activity, RNA processing, and protein production.

Alternate Names:
YB-1; Y-Box Binding Protein; Y-Box Transcription Factor; Nuclease-Sensitive Element-Binding Protein 1

Y Chromosome

One of the two human sex chromosomes. It carries genes involved in testis development and other functions. A biological father passes it to a child who inherits his Y chromosome; sex-chromosome patterns and body development vary.

Y-Chromosome Microdeletion

A small missing section of the Y chromosome, often in an azoospermia-factor (AZF) region. It can impair sperm production, causing a very low sperm count or no sperm in the ejaculate.

Yeast

A type of fungus made of single cells. Some yeasts normally live on or in the body, while others can cause infections of the mouth, skin, vagina, lungs, blood, or other organs.

Yeast Infection

An infection caused by yeast, most often *Candida* species. It may affect the mouth, skin, genital tract, or bloodstream; symptoms depend on the site. Yeast may also be present without causing disease, so detection alone does not establish infection.

Yeast Infection In Women And Men

A lay term for symptomatic Candida infection of genital tissues. Vulvovaginal candidiasis can cause vulvar itching, soreness, and vaginal discharge; candidal balanitis causes redness, itching, or irritation of the glans penis. These conditions are not usually acquired through sexual intercourse and are not generally classified as sexually transmitted infections.

Yeast Infections

See *Yeast Infection*.

Yeast Present

A laboratory report showing yeast in a specimen. This may mean harmless colonization, contamination, or infection; the meaning depends on the symptoms, specimen, and type of yeast.

Yeast Vulvitis

Inflammation of the vulva associated with a Candida yeast infection. It may cause itching, burning, redness, swelling, and soreness; other conditions can cause similar symptoms.

Yellow Cartilage

A flexible type of cartilage containing many elastic fibers. It is found in the outer ear, the epiglottis, parts of the voice box, and the tube connecting the middle ear to the throat.

Alternate Names:
Elastic Cartilage; Cartilago Elastica

Yellow Fever

A serious viral hemorrhagic disease caused by the yellow fever virus, transmitted to humans through the bites of infected mosquitoes in tropical areas of Africa and South America. While many people experience mild illness or recover after initial symptoms of fever, chills, headache, back pain, and nausea, some progress to a severe toxic phase. This phase causes liver damage that produces jaundice (yellowing of the skin and eyes, giving the disease its name), bleeding from the mouth, nose, or stomach, and kidney failure.

Alternate Names:
Flavivirus Hemorrhagic Fever; Yellow Jack

Yellow Fever Vaccine

A live, weakened-virus vaccine that provides long-lasting protection after one dose for most people. Rare serious adverse events include vaccine-associated neurotropic disease (YEL-AND) and viscerotropic disease (YEL-AVD), in which the vaccine virus affects internal organs.

Alternate Names:
17D Vaccine

Yellow Fever Virus

A mosquito-borne flavivirus that causes yellow fever, which ranges from a mild febrile illness to severe disease with jaundice, bleeding, shock, or organ failure.

Yellowish Palms/Soles

Alternate name; see *Carotenemia*.

Yellow Ligament

A series of elastic bands connecting the back parts of neighboring bones in the spine. They help support the spine and surround the spinal canal.

Alternate Names:
Ligamentum Flavum; Flavum Ligament

Yellow Marrow

Bone marrow containing mostly fat instead of blood-forming cells. It is common in the hollow centers of adult long bones and can change back toward blood-forming marrow when the body needs more blood cells.

Alternate Names:
Fatty Bone Marrow; Medulla Ossium Flava

Yellow Nail Syndrome

A rare multisystem disorder classically defined by a triad of symptoms: slow-growing, thickened, yellow-to-green nails that lack cuticles and may separate from the nail bed; chronic respiratory problems, such as persistent cough, chronic bronchitis, or fluid accumulation around the lungs (pleural effusions); and swelling (lymphedema), typically affecting the legs, caused by impaired lymphatic fluid drainage.

Alternate Names:
Primary Lymphedema with Yellow Nails and Pleural Effusion

Yellow-Nail Syndrome

Alternate spelling; see
textitYellow Nail Syndrome.

Yellow Nail Syndrome Triad

The three main features of yellow nail syndrome: slow-growing yellow or thickened nails, swelling from lymph-fluid buildup, and long-term breathing or lung problems.

Alternate Names:
YNS Triad; Lymphedema-Pleural Effusion-Yellow Nails

Yellow Spot

The macula, a small yellowish area near the center of the retina. It contains the fovea, which provides the sharp central vision used for fine detail.

Alternate Names:
Macula Lutea; Anatomical Macula

Yellow Tongue

Yellow discoloration or coating of the tongue that may result from oral hygiene, smoking, dry mouth, diet, medicines, or an underlying illness.

Yergason Test

A shoulder examination performed with the elbow bent and the forearm turned palm-down. The person turns the palm up and rotates the arm outward against resistance; pain over the biceps tendon in the front of the shoulder may suggest biceps tendon disease, but the test alone cannot confirm a diagnosis.

Yersinia

A group of bacteria that can cause intestinal illness, swollen lymph nodes in the abdomen, or plague. Different species spread through contaminated food or water, infected animals, or fleas.

Yersinia Enterocolitica

A bacterium that causes an intestinal infection known as yersiniosis, most commonly contracted by consuming undercooked pork products, unpasteurized milk, or contaminated water. The bacteria infect the lining of the small intestine and surrounding lymph nodes, causing fever, watery or bloody diarrhea, and sharp abdominal pain that often localizes to the lower right side of the belly, frequently mimicking the symptoms of acute appendicitis.

Alternate Names:
Yersinia Enteritis; Yersiniosis Pathogen

Yersinia Enterocolitica Pseudoappendicitis

A Yersinia infection that causes pain in the lower right abdomen and swollen lymph nodes near the intestine, making it resemble appendicitis. It can also cause fever and diarrhea, often after contaminated food such as undercooked pork.

Alternate Names:
Yersinia Mesenteric Adenitis; Pseudoappendiceal Syndrome

Yersinia Infection

An intestinal infection caused mainly by *Yersinia enterocolitica* or *Y. pseudotuberculosis*. It can cause diarrhea, abdominal pain, fever, or vomiting; swollen lymph nodes in the abdomen may cause pain that resembles appendicitis. It is distinct from plague, which is caused by *Y. pestis*.

Yersinia Outer Proteins

Effector proteins made by disease-causing *Yersinia* bacteria and delivered into host cells by a type III secretion system. They disrupt cell signaling and immune defenses, helping the bacteria evade destruction.

Alternate Names:
Yops; Yersinia Effector Proteins; Yop Virulence Factors

Yersinia Pestis

A species of bacterium that causes plague, a severe and historically devastating zoonotic infectious disease. The bacteria naturally circulate among wild rodents and are most commonly transmitted to humans through the bites of infected rodent fleas, though they can also spread through contact with infected animal tissues or via airborne droplets. Depending on how the infection enters the body, it can cause swollen, painful lymph nodes (bubonic plague), spread through the bloodstream (septicemic plague), or infect the lungs (pneumonic plague), causing severe fever and rapid illness.

Alternate Names:
Plague Bacillus; Pasteurella Pestis

Yersinia Pestis Pneumonic Plague

Plague involving the lungs, caused by *Yersinia pestis*. It may follow inhalation of infectious respiratory droplets or spread from plague elsewhere in the body. It can cause fever, cough, chest pain, breathing difficulty, and rapidly worsening lung failure.

Alternate Names:
Pneumonic Plague

Yersinia Pseudotuberculosis

A bacterium usually acquired from contaminated food or water. It can cause fever, diarrhea, and pain from swollen lymph nodes in the abdomen, sometimes resembling appendicitis.

Yersinia Reactive Arthritis

Joint inflammation that develops after a Yersinia intestinal infection, usually one to four weeks later. It often affects a few joints, especially in the legs, without bacteria being present inside the joints.

Yersiniosis

See *Yersinia Infection*.

Yew Poisoning

Poisoning after ingesting yew leaves, seeds, or other toxic parts of the plant. Taxine alkaloids can cause vomiting, dizziness, seizures, dangerous heart rhythms, collapse, and death. The fleshy red covering of the seed is nontoxic, but the seed inside is poisonous, especially if chewed.

Y-Linked Gene

A gene located on the Y chromosome outside its pseudoautosomal regions. Examples include *SRY*, which is involved in testis development, and genes in the AZF regions, which contribute to sperm production. It is passed to children who inherit the Y chromosome from their biological father.

Alternate Names:
Holandric Gene; Y-Chromosomal Gene

Y-Linked Inheritance

Inheritance of a condition caused by a gene on the Y chromosome. A biological father passes the gene to children who inherit his Y chromosome, but not to children who inherit his X chromosome.

Y-Maze Test

A test used mainly in laboratory animals to study movement, exploration, and spatial working memory. The animal moves through three arms of a Y-shaped maze, and the pattern of movement is recorded.

Alternate Names:
Y-Maze Behavioral Paradigm

Yolk Sac

A temporary structure that supports an early embryo before the placenta is fully working. It helps form the first blood cells and part of the early intestine and can be seen on early pregnancy ultrasound.

Yolk Sac Carcinoma

Alternate name; see *Yolk Sac Tumor*.

Yolk Sac Tumor

A rare, fast-growing malignant germ cell tumor that originates from primitive reproductive cells, most

commonly developing in the testes of young boys or the ovaries of young girls, though it can occasionally arise in the tailbone, chest, or brain. The tumor cells resemble the structures of an early embryonic yolk sac and typically produce and secrete elevated amounts of alpha-fetoprotein (AFP) into the bloodstream, which serves as a valuable marker for diagnosis and monitoring.

Alternate Names:
Endodermal Sinus Tumor; Infantile Embryonal Carcinoma; Yolk Sac Germ Cell Tumor

Yolk-Sac Tumor

Alternate name; see *Yolk Sac Tumor*.

Yolk Sac Tumor Pathology

A malignant germ-cell tumor with variable reticular, microcystic, papillary, glandular, or solid patterns. Schiller-Duval bodies, hyaline globules, and alpha-fetoprotein expression may support the diagnosis.

Yolk Sac Tumor Schiller-Duval Bodies

A characteristic microscope finding in yolk sac tumors. It looks somewhat like a tiny kidney filter, with tumor cells arranged around a small blood vessel. The finding helps confirm the diagnosis when considered with other test results.

Alternate Names:
Schiller-Duval Bodies; Glomeruloid Endodermal Bodies

Yolk Stalk

The temporary connection between the yolk sac and the developing midgut. It normally disappears during early development; a persistent remnant can form a Meckel diverticulum, cyst, or fistula.

Young-Burgess Classification

A system that classifies pelvic-ring fractures by injury mechanism and pattern. Main groups are lateral compression, anteroposterior compression, vertical shear, and combined mechanisms.

Alternate Names:
Young-Burgess Pelvic Fracture Classification; Burgess Pelvic Injury Scale

Young-Onset Dementia

Dementia that begins before age 65. It may result from Alzheimer disease, frontotemporal lobar degeneration, vascular disease, or other causes.

Alternate Names:
Presenile Dementia (deprecated historical term)

Young Syndrome

A rare syndrome characterized by chronic sinus inflammation, bronchiectasis (permanent widening and damage of the airways), and obstructive azoospermia (absence of sperm in the ejaculate because sperm transport is blocked despite sperm production).

Alternate Names:
Sinopulmonary-Infertility Syndrome; Barry-Perkins-Young Syndrome

Y-Plate Osteosynthesis

Surgical repair of a complex broken bone using a metal plate shaped like the letter Y. The plate holds the bone pieces in place while they heal.

Alternate Names:
Y-Plate Fixation; Y-Shaped Contoured Bone Plate

Yttrium-90

A radioactive isotope that emits beta particles. It is used in selected treatments to deliver radiation to abnormal tissue, including some liver tumors and inflamed joints.

Yttrium-90 Microspheres

Tiny glass or resin beads containing radioactive yttrium-90. They are delivered through the hepatic artery to selected liver tumors, where they release radiation.

Alternate Names:
Y-90 Radioembolization Microspheres

Yttrium-90 Radioembolization

A treatment in which tiny beads containing radioactive yttrium-90 are delivered through the hepatic artery to release radiation inside liver tumors.

Alternate Names:
SIRT; Y-90 SIRT; Y-90 Transarterial Radioem-

bolization

Neodymium-Doped Yttrium-Aluminum-Garnet Laser

A laser that uses a neodymium-doped yttrium-aluminum-garnet crystal to produce a focused beam of light. In eye care, it is used to open a cloudy membrane after cataract surgery or make a small opening in the iris for some types of glaucoma.

Alternate Names:
Nd:YAG Laser; Neodymium-Doped YAG Laser

Yuzpe Regimen

An emergency-contraception method using combined estrogen and progestin pills. Compared with levonorgestrel or ulipristal pills, it is less effective and more often causes nausea and vomiting.

Y-V Plasty

A surgical technique in which a Y-shaped cut is closed as a V. This lengthens or widens nearby tissue and may help release a tight scar or other narrowing.

Alternate Names:
Y-V Advancement Flap; Y-V Lengthening Procedure

Z

Zafirlukast

A leukotriene-receptor antagonist used for long-term control and prevention of asthma symptoms. It is taken orally and is not a rescue treatment for an acute asthma attack; liver injury and drug interactions are important safety considerations.

Alternate Names:
Accolate

Zahn Lines

Alternating light and dark layers seen in a blood clot that formed while blood was flowing. The light layers contain platelets and fibrin, while the dark layers contain more red blood cells.

Alternate Names:
Lines of Zahn; Striae of Zahn

Zanamivir

An inhaled neuraminidase inhibitor used to treat or prevent influenza A and B. It can cause bronchospasm, including serious episodes, with particular concern in people with asthma or chronic obstructive pulmonary disease.

Alternate Names:
Relenza

ZAP-70 Deficiency

A rare, usually autosomal recessive immune disorder that disrupts T-cell signaling. CD8 T cells are absent or very low, while CD4 T cells are present but do not function normally; serious infections often begin in infancy.

Zavanelli Maneuver

An emergency procedure for severe shoulder dystocia that does not respond to other measures. The clinician gently returns the baby's head to the birth canal, followed by immediate cesarean delivery.

Alternate Names:
Cephalic Replacement Maneuver

Z-Disc

A dense protein structure at each end of a sarcomere, the repeating contractile unit of a muscle fiber. It anchors actin and titin filaments and forms the boundary between neighboring sarcomeres.

Alternate Names:
Z-Line; Z-Band; Zwischenscheibe

Zellweger Syndrome

A rare, severe inherited metabolic disorder caused by genetic mutations that prevent the normal formation and function of peroxisomes, tiny cellular structures necessary for breaking down specific fatty acids and producing essential brain lipids. Without functional peroxisomes, toxic very long-chain fatty acids accumulate in cells throughout the body. Present from birth, it causes profound muscle weakness (hypotonia), distinctive facial features, feeding difficulties, severe vision and hearing impairment, liver disease, and progressive neurological impairment.

Alternate Names:
Cerebrohepatorenal Syndrome; Generalized Peroxisomal Biogenesis Disorder

Zenker Degeneration

Severe damage and death of skeletal muscle fibers, formerly described in serious infections such as typhoid fever or widespread blood infection.

Alternate Names:
Zenker's Hyaline Necrosis; Waxy Muscle Degeneration

Zenker Diverticulum

An abnormal pouch or sac that forms in the back of the throat, just above the esophagus, where the muscular wall of the pharynx is naturally thinner. It develops when the muscle at the top of the esophagus fails to relax properly during swallowing, creating increased pressure that forces the inner throat lining to bulge outward. As food particles and liquids become trapped in the pouch, it causes difficulty swallowing (dysphagia), regurgitation of undigested food hours after eating, persistent bad breath, coughing, and a sensation of a lump in the throat.

Alternate Names:
Zenker's Diverticulum; Pharyngoesophageal Diverticulum; Hypopharyngeal Pulsion Diverticulum

Zenker Peroral Endoscopic Myotomy

An endoscopic procedure for Zenker diverticulum in which the cricopharyngeal muscle between the pouch and swallowing tube is divided through the mouth. This can improve passage of food; symptoms can return, and complications can include bleeding or perforation.

Alternate Names:
Z-POEM; Endoscopic Zenker Myotomy

Ziconotide

A non-opioid pain medicine that blocks N-type calcium channels in nerves. It is given by continuous infusion into the fluid around the spinal cord for selected cases of severe chronic pain and can cause serious neurologic or psychiatric effects.

Alternate Names:
Prialt

Zidovudine

A nucleoside reverse-transcriptase inhibitor used with other antiretroviral medicines to treat HIV infection. In selected settings, it is also given during labor and to exposed newborns to reduce perinatal transmission; adverse effects include anemia and low white-cell counts.

Alternate Names:
Azidothymidine; AZT; Retrovir

Ziehl-Neelsen Stain

A specialized laboratory staining technique used in microbiology to identify acid-fast bacteria, most notably *Mycobacterium tuberculosis*, the cause of tuberculosis. Because mycobacteria have a thick, waxy lipid layer in their cell walls that resists conventional Gram staining, this method uses a bright red dye (carbolfuchsin) heated to penetrate the waxy wall, followed by an acid-alcohol rinse. The bacteria retain the bright red color while the background tissue turns blue, making them visible under a microscope.

Alternate Names:
ZN Stain; Acid-Fast Bacilli Stain; AFB Stain

Zieve Syndrome

A short-lived complication of heavy alcohol use, characterized by hemolytic anemia, jaundice, and increased blood fats, often during acute alcohol-related liver injury.

Alternate Names:
Hemolytic Anemia with Hyperlipidemia and Jaundice

Zika

See *Zika Virus Infection*.

Alternate Names:
Zika Virus Disease; ZVD

Zika Fever

The usually mild febrile illness caused by Zika virus. It may include rash, red eyes, joint pain, muscle pain, headache, and fever; infection during pregnancy can harm the developing fetus.

Zika Virus

A virus spread mainly by infected *Aedes* mosquitoes and also through sexual contact and, less commonly, blood or pregnancy-related transmission. Infection is often mild or symptom-free but can injure a developing fetus.

Alternate Names:

ZIKV

Zika Virus Infection

A viral infection caused by the Zika virus, transmitted to humans primarily through the bites of infected *Aedes* mosquitoes, as well as through sexual contact or from a pregnant woman to her fetus. Most adults infected with the virus experience either no symptoms or a mild, temporary illness with fever, rash, joint pain, and red eyes (conjunctivitis). However, infection during pregnancy carries a serious risk of causing severe fetal brain abnormalities, particularly microcephaly (an abnormally small head and underdeveloped brain).

Alternate Names:
Zika Fever; Congenital Zika Syndrome Pathogen

Zileuton

A 5-lipoxygenase inhibitor used for long-term control of asthma by reducing leukotriene production. It does not relieve a sudden asthma attack and can cause liver injury or interact with other medicines.

Alternate Names:
Zyflo

Zinc

An essential mineral needed for many body reactions, normal growth, immunity, reproduction, and wound healing. Too little can cause deficiency; excessive supplements can cause stomach symptoms and copper deficiency.

Alternate Names:
Zn

Zinc Acetate

An oral zinc salt used to treat zinc deficiency and to reduce copper absorption in Wilson disease. In the intestine, it increases metallothionein, a protein that binds copper and limits its entry into the blood; it may cause stomach irritation.

Zinc Deficiency

Inadequate zinc status caused by low intake, impaired absorption, excessive losses, or increased requirements. Features vary with age and severity and may include impaired growth, dermatitis, alopecia, diarrhea, altered taste, delayed wound healing, and increased susceptibility to infection.

Alternate Names:
Zinc Depletion

Zinc Finger Motif

A small part of a protein held in shape by a zinc atom. It often helps the protein attach to DNA and control gene activity.

Zinc Oxide

An insoluble zinc compound used topically as a skin protectant and barrier, including in preparations for diaper dermatitis and minor irritation.

Alternate Names:
ZnO

Zinc Oxide Ointment

A topical preparation containing zinc oxide that forms a protective barrier over irritated or moist skin. It is commonly used for diaper dermatitis and minor skin irritation.

Zinc Poisoning

Illness caused by excessive zinc intake or exposure. Swallowing too much can cause nausea, vomiting, abdominal pain, and diarrhea; inhaling zinc-oxide fumes can cause metal-fume fever. Prolonged excess can interfere with copper absorption and cause anemia or neurologic problems.

Zinc Protoporphyrin

A form of protoporphyrin containing zinc, produced in developing red blood cells when iron is unavailable or lead interferes with heme production. Levels can rise in iron deficiency and lead exposure, but the test is not specific to either condition.

Alternate Names:
ZPP; Erythrocyte Zinc Protoporphyrin

Zinc Sulfate

An oral or parenteral zinc salt used to prevent or treat zinc deficiency when clinically indicated. Gastrointestinal upset is common with oral therapy, and prolonged excessive use can cause copper deficiency.

Zinc Toxicity

Alternate name; see *Zinc Poisoning*.

Zinner Syndrome

A rare congenital condition combining absence of one kidney, a cyst of the seminal vesicle on the same side, and blockage of the ejaculatory duct. It may cause pelvic pain, painful urination, or infertility after puberty.

Alternate Names:
Mesonephric Duct Malformation Syndrome; Seminal Vesicle Cyst with Renal Agenesis

Zirconia

A zirconium-oxide ceramic used in dentistry for crowns, bridges, implants, and other restorations. Its strength and tissue compatibility make it useful, although restoration design, surface treatment, and clinical indication affect performance.

Alternate Names:
Zirconium Dioxide

Zoledronic Acid

A potent intravenous bisphosphonate used for osteoporosis and certain cancer-related conditions, including hypercalcemia of malignancy and skeletal complications of bone metastases. Renal injury, hypocalcemia, acute-phase reactions, and rare osteonecrosis of the jaw are important risks.

Alternate Names:
Zoledronate; Zometa; Reclast

Zollinger-Ellison Secretin Stimulation Test

A blood test used when Zollinger–Ellison syndrome is suspected but fasting gastrin results are unclear. Secretin is given into a vein, and blood gastrin is measured before and after the injection; an abnormal rise supports the diagnosis.

Alternate Names:
Secretin Provocation Test; Secretin Gastrinoma Test

Zollinger-Ellison Syndrome

A rare digestive disorder caused by one or more tumors, called gastrinomas, that usually form in the pancreas or the upper small intestine (duodenum). These tumors produce abnormally large amounts of gastrin, a hormone that stimulates the stomach to secrete excessive gastric acid. The constant acid flood causes severe, recurrent peptic ulcers in the stomach and intestine, abdominal pain, chronic diarrhea, and heartburn that often resist standard acid-reducing treatments.

Alternate Names:
ZES; Gastrinoma Syndrome

Zolpidem

A sedative-hypnotic medicine used to treat insomnia. It can cause next-day impairment, complex sleep behaviors, dependence, and central-nervous-system depression, especially with other sedatives.

Alternate Names:
Ambien

Zona Fasciculata

The middle and largest layer of the adrenal cortex. It produces glucocorticoids, including cortisol.

Alternate Names:
Adrenal Zona Fasciculata; Fascicular Zone

Zona Glomerulosa

The outer layer of the adrenal cortex. It produces mineralocorticoids, mainly aldosterone, which helps regulate salt and water balance and blood pressure.

Alternate Names:
Adrenal Zona Glomerulosa; Glomerular Zone

Zona Pellucida

A protective layer of proteins surrounding an egg cell. It helps sperm attach to the egg and changes after fertilization to prevent more than one sperm from entering.

Alternate Names:
Oocyte Glycoprotein Coat; Pellucid Zone

Zona Reticularis

The inner layer of the adrenal cortex. It produces adrenal androgens, including dehydroepiandrosterone (DHEA).

Alternate Names:

Adrenal Zona Reticularis; Reticular Zone

Zonisamide

An antiseizure medicine used mainly for focal-onset seizures. It can cause sleepiness, thinking problems, kidney stones, reduced sweating with overheating, acid imbalance, severe rash, or other serious reactions.

Alternate Names:
Zonegran

Zonula Adherens

A belt-like connection between neighboring cells that helps hold them together by linking their actin networks. It is especially important in sheets of lining cells.

Alternate Names:
Intermediate Junction; Adherens Junction

Zonula Occludens

A tight connection between neighboring lining cells that helps prevent substances from passing freely between them.

Alternate Names:
Tight Junction

Zonule

Fine fibers that connect the ciliary body to the lens capsule and hold the lens in place. Changes in their tension help the lens adjust focus for near or distant vision.

Alternate Names:
Zonule of Zinn; Ciliary Zonule; Suspensory Ligament of Lens

Zoon Balanitis

A chronic benign inflammation of the glans penis, usually seen in uncircumcised men. It commonly appears as a sharply demarcated shiny orange-red or rust-colored patch; diagnosis is clinical, with biopsy used when the diagnosis is uncertain.

Alternate Names:
Plasma Cell Balanitis; Balanitis Circumscripta Plasmacellularis; Zoon's Balanitis; Zoon's Balanitis

Zoonosis

An infection that naturally spreads between animals with backbones and people. Examples include rabies, brucellosis, leptospirosis, toxoplasmosis, and some influenza infections; spread may involve bites, food, water, droplets, or direct contact.

Alternate Names:
Zoonotic Infection; Zoonotic Disease

Zoonotic Spillover

Transmission of an infectious agent from an animal host to a person, sometimes through an insect or other arthropod vector. Further spread between people may or may not follow.

Alternate Names:
Zoonotic Transmission Event; Cross-Species Spillover

Zoster

A painful, usually unilateral vesicular eruption caused by reactivation of latent varicella-zoster virus in a sensory nerve ganglion. It may be complicated by postherpetic neuralgia, ocular disease, or neurologic involvement.

Alternate Names:
Herpes Zoster; Shingles; Zona

Zoster Ophthalmicus

Shingles affecting the ophthalmic branch of the trigeminal nerve, which supplies the forehead, upper eyelid, and parts of the eye. It can cause a one-sided rash and inflammation that threatens vision.

Alternate Names:
Herpes Zoster Ophthalmicus; HZO

Zoster (Shingles)

Alternate name; see *Zoster*.

Z-Plasty

A reconstructive operation that rearranges nearby skin in a Z-shaped pattern. It can lengthen a tight scar, change the direction of a scar, and improve movement or appearance.

Z-Score (DXA)

A measure from dual-energy X-ray absorptiometry (DXA) showing how many standard deviations bone mineral density is above or below an age-, sex-, and ethnicity-matched reference mean. In children with short stature or growth delay, results may be adjusted for height. A score of -2.0 or lower is "below the expected range for age." In children, osteoporosis is indicated by a qualifying vertebral compression fracture without high-energy trauma or local disease, or by both a clinically significant fracture history and a BMD Z-score of -2.0 or lower. The score alone does not diagnose osteoporosis in premenopausal women or men younger than 50.

Alternate Names:
Age-Matched Bone Density Z-Score; DEXA Z-Score; Z-Score (DEXA)

Z-Score (Echocardiography)

The number of standard deviations a child's heart or blood-vessel measurement is above or below the expected value for body size, usually body surface area. It helps describe whether a structure is smaller or larger than expected.

Alternate Names:
Pediatric Echo Z-Score; Cardiovascular Z-Score

Z-Thumb Deformity

A thumb deformity in which the metacarpophalangeal joint is flexed and the interphalangeal joint is extended, creating a Z shape. It can occur in rheumatoid arthritis.

Alternate Names:
Boutonniere-Type Thumb Deformity

Z-Tracking Technique

An intramuscular injection method in which the skin is moved to one side before the injection and released afterward. The resulting angled path helps keep medicine in the muscle and limits leakage into tissue beneath the skin.

Alternate Names:
Z-Track Injection Method; Z-Track Technique

Zygapophyseal Joint

One of the small joints at the back of the spine that connects neighboring vertebrae. These facet joints guide spinal movement and can become painful with arthritis.

Alternate Names:
Facet Joint; Z-Joint; Spinal Articular Facet

Zygapophyseal Joint Arthropathy

Arthritis of the small facet joints at the back of the spine. It can cause local or nearby neck or back pain and stiffness.

Alternate Names:
Facet Joint Arthropathy; Spinal Facet Osteoarthritis

Zygomatic Arch

The bony arch at the side of the face, formed by the cheekbone and temporal bone. It provides attachment for the masseter muscle, and the temporalis tendon passes beneath it.

Alternate Names:
Cheekbone Arch

Zygomatic Bone

A paired facial bone that forms the prominence of the cheek and part of the lateral orbital wall and floor. It articulates with the frontal, sphenoid, temporal, and maxillary bones.

Alternate Names:
Cheekbone; Malar Bone

Zygomatic Fracture

A break in the cheekbone, usually caused by facial trauma. It may flatten the cheek, numb the skin below the eye, cause double vision, limit mouth opening, or extend into the eye socket.

Alternate Names:
Malar Fracture

Zygomaticomaxillary Complex Fracture

A break involving the cheekbone and its connections to the eye socket, upper jaw, and skull. It may flatten the cheek and cause double vision, numbness below the eye, or difficulty opening the mouth.

Alternate Names:
ZMC Fracture; Tetrapod Fracture; Tripod Fracture

of the Face

Zygomycosis

An outdated, broad term for fungal infections caused by fungi once grouped as zygomycetes. It has often been used imprecisely for mucormycosis, which is caused by fungi in the order Mucorales.

Zygote

The first cell formed when a sperm joins an egg. It contains genetic material from both parents, divides repeatedly, and develops into an embryo.

Alternate Names:
Fertilized Oocyte

Zymogen

An inactive form of an enzyme that becomes active, usually after a protein segment is removed. Examples include pepsinogen, trypsinogen, and some blood-clotting proteins.

Alternate Names:
Proenzyme; Inactive Enzyme Precursor

Zymogen Granule

A small storage sac inside certain gland cells, such as cells in the pancreas. It stores inactive digestive enzymes until the cell releases them.

Alternate Names:
Zymogenic Secretory Vesicle; Proenzyme Granule

Drugs and Related Medical Terms

Medicines and Related Clinical Terms

5-Alpha Reductase Inhibitor

A medicine that lowers production of dihydrotestosterone, a hormone that affects the prostate and hair follicles. It is used mainly for an enlarged prostate and selected types of hair loss.

Abortifacient

A medicine or substance used to end a pregnancy. Some block progesterone, others cause uterine contractions and cervical opening, and certain medicines stop rapidly dividing pregnancy tissue in selected ectopic pregnancies.

Abortion - Medication

Medication abortion uses prescribed medicines, commonly mifepristone followed by misoprostol or misoprostol alone, to end an early intrauterine pregnancy; confirmation of completion and assessment for ectopic pregnancy are important.

Abuse Steroid (Anabolic Steroid Abuse)

Alternate index label for Anabolic Steroid Abuse.

ACE Inhibitor

A medicine that blocks angiotensin-converting enzyme, reducing production of angiotensin II and breakdown of bradykinin. It is used for high blood pressure, heart failure, and selected kidney and cardiovascular conditions; possible effects include cough, high potassium, reduced kidney function, and angioedema.

Alternate Names:
Angiotensin-Converting Enzyme Inhibitor

Acitretin

An oral retinoid medicine used mainly for severe psoriasis and keratinization disorders. It helps normalize skin cell growth and shedding, but because it causes severe birth defects, it cannot be used during or near pregnancy.

Adenovirus Vaccine

A vaccine used primarily to prevent adenovirus types 4 and 7 among selected military personnel. It is an oral, live vaccine and is not part of routine vaccination for the general public. Vaccine use and eligibility depend on current public-health recommendations.

Adverse Drug Event

Harm related to the use of a medication, including harm caused by an adverse drug reaction, medication error, overdose, or inappropriate use.

Adverse Drug Reaction

An unwanted and harmful response to a medicine taken at a usual dose for prevention, testing, or treatment. It may result from the medicine's expected effects, an allergy, an interaction, or an unusual individual response.

Agent, Tocolytic

A medicine that reduces uterine contractions, used selectively to delay preterm birth long enough for corticosteroids, transfer, or other preparations to take effect.

Agonist-Antagonist

A medicine that activates some receptors while blocking others, or activates a receptor only partly. Its mixed action can produce a desired effect while limiting another effect; examples include some opioid medicines.

AIDS Vaccine

A vaccine designed to prevent HIV infection or reduce its effects; no generally effective licensed vaccine currently exists.

Alendronate

A bisphosphonate that reduces bone resorption and is used to treat or prevent osteoporosis and selected other disorders of excessive bone turnover.

Alternate Names:
Alendronic acid; oral bisphosphonate therapy.

Anabolic Steroid Abuse

Non-medical use of synthetic testosterone derivatives to increase muscle mass and athletic performance, which can cause hormonal imbalances, liver injury, elevated cardiovascular risk, mood disturbances, and physical dependence.

Alternate Names:
Abuse Steroid (Anabolic Steroid Abuse)

Analgesic

A medicine that relieves pain without necessarily causing loss of consciousness. Analgesics include nonopioid medicines, opioids, and other medicines chosen according to the type and severity of pain.

Analgesic Nephropathy

Chronic tubulointerstitial renal injury associated with prolonged or excessive use of analgesic medicines. It may cause impaired urinary concentration, sterile pyuria, haematuria, papillary necrosis, hypertension, and progressive chronic kidney disease.

Anesthetic

A medicine that causes loss of sensation, with or without loss of consciousness. Local and regional anesthetics block sensation in part of the body; general anesthetics produce unconsciousness.

Angiotensin Converting-Enzyme Inhibitor

See *ACE Inhibitor*.

Angiotensin Receptor Blocker

A medicine that blocks angiotensin II at the AT1 receptor, reducing vasoconstriction and aldosterone effects; it is used for hypertension, heart failure, and selected kidney disease.

Antibiotic

A medication that inhibits the growth of or destroys bacteria. Antibiotics target bacterial structures such as cell walls and bacterial ribosomes, and they are ineffective against viral infections such as the common cold or influenza.

Antibiotic-Associated Colitis

Inflammation of the colon associated with antibiotic use. *Clostridioides difficile* infection is an important cause, but antibiotic-associated colitis is not limited to pseudomembranous colitis.

Antibiotic-Associated Diarrhea

Loose or frequent stools that occur during or soon after antibiotic treatment.

Alternate Names:
Diarrhea, Antibiotic-Associated

Antibiotic Cycling

A strategy in which the preferred antibiotic for a particular clinical use is changed at planned intervals. It is intended to limit selection of resistant organisms, although its benefit depends on local conditions and implementation.

Antibiotic De-Escalation

The process of narrowing antimicrobial spectrum based on microbiological results and clinical response. De-escalation aims to reduce selective pressure for resistance while maintaining therapeutic efficacy.

Antibiotic Mixing

A strategy in which different antibiotics are assigned concurrently to different patients with the same indication. It is intended to reduce uniform selection pressure for resistance in a patient population.

Antibiotic Resistance

The ability of bacteria to survive or grow despite an antibiotic that would normally kill them or stop their growth. It can result from genetic changes and the spread of resistance genes; unnecessary or incorrect antibiotic use can accelerate it.

Alternate Names:
Resistance Antibiotic (Antibiotic Resistance)

Antibiotic Resistance Genes

Genes that help bacteria survive antibiotics. They may change the antibiotic's target, destroy or modify the medicine, or remove it from the cell. Bacteria can inherit these genes or acquire them from other bacteria.

Antibiotic Stewardship

Coordinated efforts to use antibiotics appropriately by selecting the right medicine, dose, route, and duration while reducing unnecessary treatment and resistance.

Anticholinergic Cognitive Burden Scale

A medication-review tool that estimates the total anticholinergic load of a patient's medicines. It supports risk assessment and deprescribing but does not replace individualized clinical judgment.

Anticoagulant

A medicine that slows the body's blood-clotting process. It helps prevent or treat clots in veins, lungs, heart, or arteries but can cause bruising or serious bleeding.

Alternate Names:
Anticoagulants; Blood Thinners

Anticoagulant Agent

See *Anticoagulant*.

Anticoagulant Monitoring

Laboratory assessment used to measure the effect or safety of an anticoagulant. The appropriate test depends on the drug and may include aPTT, anti-Xa activity, INR, or measurements of kidney function and blood counts.

Anticoagulant Rodenticides Poisoning

Toxic exposure to rodent poisons that inhibit vitamin K recycling in the body. This prevents the liver from synthesizing essential blood-clotting factors, leading to internal hemorrhage, bruising, and hematuria.

Anticonvulsant

A medicine used to prevent or control seizures. Some are also used for nerve pain, migraine prevention, or mood disorders; choice depends on the condition, other medicines, pregnancy, and side effects.

Alternate Names:
Antiseizure medicine

Anticonvulsant Mood Stabilizers

Antiepileptic drugs used as mood stabilizers in bipolar disorder. Valproate (divalproex) is effective for acute mania and rapid cycling. Carbamazepine is effective for acute mania but has numerous drug interactions via CYP3A4 induction. Lamotrigine is effective for bipolar depression prevention but not acute mania.

Antidepressant

A medicine used to treat depressive disorders and some other conditions involving mood, anxiety, pain, or sleep.

Antidiabetic Agent

See *Antidiabetic Drugs*.

Antidiarrheal

A medication that reduces the frequency, volume, or liquidity of bowel movements, typically by slowing intestinal muscle contractions or decreasing fluid secretion into the bowel.

Alternate Names:

Antidiarrheals; Antidiarrheal Medicines

Antidiarrheal Medicine Overdose

Poisoning caused by excessive intake of antidiarrheal medications, which can lead to severe constipation, paralytic ileus, central nervous system depression, and dangerous cardiac conduction disturbances.

Antiemetic

A medicine that prevents or reduces nausea and vomiting. The choice depends on the cause, such as infection, migraine, pregnancy, surgery, or cancer treatment, and some medicines can cause sleepiness or movement problems.

Alternate Names:
Antiemetics; Antiemetic Medicines

Antiestrogen

A drug that blocks estrogen effects or reduces estrogen production; it may be used in hormone-sensitive breast cancer or to alter reproductive hormone signaling.

Antifungal

A medicine that kills fungi or inhibits their growth. Antifungals include azoles, polyenes, echinocandins, and allylamines; the drug and route depend on the fungus and site of infection.

Alternate Names:
Antifungals; Antifungal Drugs

Antifungal Agent

See *Antifungal*.

Antifungal Drug Classes

Major classes of antifungal agents include polyenes (amphotericin B), azoles (fluconazole, voriconazole), echinocandins (caspofungin, micafungin), and allylamines (terbinafine). Polyenes bind to ergosterol in fungal cell membranes. Azoles inhibit ergosterol synthesis. Echinocandins inhibit cell wall synthesis.

Antifungal Medication

See *Antifungal*.

Antihistamine

A medicine that blocks histamine receptors. H1 antihistamines relieve symptoms such as sneezing, itching, and hives; older H1 antihistamines can also cause sleepiness, dry mouth, blurred vision, urinary retention, or confusion. H2 antihistamines reduce stomach acid.

Antihypertensive

A medicine used to lower blood pressure. Classes include ACE inhibitors, angiotensin-receptor blockers, calcium-channel blockers, thiazide-type diuretics, beta-blockers, and other agents. Selection depends on blood pressure, kidney function, cardiovascular disease, pregnancy, and other clinical factors.

Alternate Names:
Antihypertensives; Blood Pressure-Lowering Medicines

Antihypertensive Agent

See *Antihypertensive*.

Anti-Infective

A medicine or other agent used to prevent or treat an infection. The choice depends on whether the cause is a bacterium, virus, fungus, or parasite, as well as the infection site and the person's health.

Antimalarial

A drug used to prevent or treat malaria caused by Plasmodium parasites; selection depends on species, disease severity, resistance, and geographic exposure.

Antimicrobial Drug

A medicine used to treat infection by bacteria, viruses, fungi, or parasites; the drug is selected according to the organism, infection site, and patient factors.

Antimicrobial Drug Interactions

Alterations in the absorption, metabolism, or blood levels of an antimicrobial drug caused by concurrent exposure to other medications, food, or supplements, which can reduce therapeutic efficacy or increase

toxicity.

Antiparasitic

A medicine used to prevent or treat infection caused by parasites. The choice depends on the parasite, body site, disease severity, resistance patterns, pregnancy status, and other patient factors.

Alternate Names:
Antiparasitics; Antiparasitic Medicines; Antiparasitic Drugs

Antiparkinsonian

A medicine used to improve movement or other symptoms of Parkinson disease. Medicines may replace dopamine, imitate its effects, or alter other brain signals; benefits and adverse effects vary with the drug and the person.

Antiplatelet Agent

A medicine that makes blood platelets less likely to clump together. It lowers the risk of clots in arteries but can increase bruising and serious bleeding.

Alternate Names:
Antiplatelet medicine

Antiprotozoal Drug

A medicine used to prevent or treat disease caused by protozoa, including drugs directed against malaria, intestinal protozoa, or tissue parasites.

Antipruritic

A medicine or skin treatment that relieves itching. It may work by reducing inflammation, blocking allergy signals, numbing the skin, or changing nerve signals; treatment should also address the cause of the itching.

Antipsychotic

A medicine used to reduce hallucinations, delusions, severe agitation, or mania and to treat some mood disorders. Possible effects include sleepiness, movement problems, weight or blood-sugar changes, and rarely a dangerous fever-and-stiffness reaction.

Alternate Names:
Antipsychotics; Antipsychotic Medicines

Antipsychotic Agent

See *Antipsychotic*.

Antipsychotic-Induced Parkinsonism

A drug-induced movement disorder caused by dopamine receptor blockade in the basal ganglia, characterized by resting tremor, muscle rigidity, slowed voluntary movement, and postural instability.

Antispasmodic

A medicine that relaxes involuntary muscle and may reduce cramping in the intestine, bladder, or other organs. Some types can cause dry mouth, blurred vision, constipation, urinary retention, or confusion.

Alternate Names:
Antispasmodics

Antithyroid

See *Antithyroid Drug*.

Antithyroid Drug

A medicine that reduces thyroid hormone production, used to treat some forms of hyperthyroidism. Examples include methimazole and propylthiouracil. Radioactive iodine is a separate treatment, not an antithyroid drug.

Alternate Names:
Antithyroid Medicines; Antithyroid Drugs

Antiviral

A medicine that slows or stops viruses from multiplying. It works only against certain viruses and is chosen according to the infection, timing, resistance, and the patient's health.

Alternate Names:
Antivirals; Antiviral Medicines; Antiviral Drugs

Antiviral Drug Classes

Groups of antiviral medicines classified by the step of viral growth they block. Some stop copying of viral genetic material, some block viral proteins or entry into cells, and others prevent newly formed viruses from being released.

Anxiolytic

A medicine used to reduce anxiety. Different medicines work in different ways and have different risks; choice depends on the condition, urgency, other health problems, and patient factors. Psychotherapy is a separate, non-medicine treatment for anxiety.

Alternate Names:
Anxiolytics; Anti-Anxiety Medicines

ARB-Neprilysin Inhibitor

Sacubitril/valsartan combines an ARB with a neprilysin inhibitor, increasing natriuretic peptide levels while blocking the renin-angiotensin system. The PARADIGM-HF trial demonstrated superior reduction in cardiovascular death and heart failure hospitalization compared to enalapril.

Aromatase Inhibitor

A class of medications that inhibit aromatase, the enzyme that converts androgens (androstenedione, testosterone) to estrogens (estrone, estradiol) in peripheral tissues (adipose, breast, muscle, bone). Used primarily in hormone receptor-positive breast cancer in postmenopausal women.

Attenuated Vaccine

A vaccine made with a weakened microorganism that retains the ability to stimulate immunity.

Alternate Names:
Live attenuated vaccine

Bacterial Vaccine

A vaccine made from killed bacteria, weakened bacteria, purified bacterial parts, or bacterial toxins. It trains the immune system to prevent specific infections; protection and dosing depend on the vaccine and age group.

BCG Vaccine

A vaccine made from a weakened relative of the tuberculosis bacterium. It helps protect children from severe tuberculosis, especially meningitis, but protection against lung tuberculosis varies; use depends on local risk and policy.

Behavioral Medicine

An interdisciplinary field integrating behavioral science with medical practice to prevent, diagnose, and treat illness. It addresses psychological factors such as stress, coping, adherence, and health behaviors that influence disease outcomes.

Benzodiazepines

Medicines that strengthen the brain's main calming signal. They can reduce anxiety, stop some seizures, relax muscles, or cause sleepiness, but can also cause dependence, falls, confusion, and dangerously slow breathing, especially with opioids or alcohol.

Beta-Adrenergic Blocker

A drug that antagonizes beta-adrenergic receptors, reducing heart rate, myocardial contractility, and renin release. It is used in selected patients with hypertension, angina, arrhythmias, post-myocardial infarction disease, and heart failure; abrupt withdrawal may worsen ischemia.

Alternate Names:
Beta-Adrenergic Antagonist

Beta Agonists

Drugs that activate beta-adrenergic receptors, producing effects such as relaxation of airway smooth muscle or increased cardiac stimulation depending on receptor selectivity.

Alternate Names:
Beta-adrenergic agonists; beta-agonist drugs.

Beta Blocker

See *Beta Blockers*.

Beta-Blocker Overdose

Toxic exposure to excessive beta-adrenergic antagonist medication, resulting in profound suppression of heart rate, low blood pressure, cardiac conduction blocks, hypoglycemia, and potential cardiogenic shock.

Beta Blockers

Medicines that block some effects of adrenaline at beta receptors. They commonly slow the heart rate

and lower blood pressure and are used for several heart conditions and other problems. Some types can worsen asthma or mask warning signs of low blood sugar.

Beta-Lactamase Inhibitor Combinations

Combinations of beta-lactam antibiotics with beta-lactamase inhibitors that extend activity against beta-lactamase producing organisms. The major combinations include amoxicillin-clavulanate, ampicillin-sulbactam, piperacillin-tazobactam, cefoperazone-sulbactam, and ceftolozane-tazobactam.

C1 Esterase Inhibitor

A blood protein that regulates complement and contact-system activity. C1-inhibitor medicines replace or supplement this protein to prevent or treat attacks of hereditary angioedema.

Calcium Channel Blocker

A medicine that reduces calcium movement into heart and blood-vessel muscle cells. It may relax arteries, lower blood pressure, reduce chest pain, or slow some abnormal heart rhythms; ankle swelling, constipation, dizziness, or a slow heartbeat may occur.

Calcium Channel Blocker Overdose

Toxic exposure to excessive calcium channel blocking drugs, resulting in impaired cardiac pacemaker activity, profound arterial vasodilation, severe hypotension, bradycardia, and hyperglycemia.

Calcium Channel Blockers

Medicines that reduce the movement of calcium into heart and blood-vessel muscle cells. Dihydropyridines, such as amlodipine and nifedipine, mainly relax arteries and are used for high blood pressure and angina. Other calcium channel blockers, such as diltiazem and verapamil, also slow the heart rate and electrical conduction and may be used for certain abnormal heart rhythms.

Camptothecin Analogue

A cancer medicine related to camptothecin that blocks an enzyme cancer cells need to copy DNA. It can damage rapidly dividing cells and commonly causes low blood counts, diarrhea, nausea, or other gastrointestinal effects.

Cancer Vaccine

A vaccine designed either to prevent infections that can cause cancer or to help the immune system attack an existing cancer. Its use depends on the specific vaccine and cancer; it does not replace other cancer treatment when needed.

Cardiotonic Agent

A medication or chemical substance that strengthens the contraction of the heart muscle and improves cardiac output in conditions such as congestive heart failure and cardiogenic shock.

Carvedilol Phosphate

The phosphate formulation of carvedilol, a medicine that blocks beta and alpha-1 receptors. It lowers heart rate and blood pressure and is used for heart failure and hypertension; dizziness, slow heartbeat, and worsening fluid retention can occur.

Celecoxib

A selective COX-2 anti-inflammatory medicine used for pain and arthritis. It can cause stomach, kidney, blood-pressure, and heart problems and may increase cardiovascular risk, especially with long-term use or in people with existing risk factors.

Alternate Names:
Celebrex

Cholesterol - Drug Treatment

Medicines used to lower harmful blood cholesterol or triglycerides and reduce cardiovascular risk. Statins are used most often; other options may be added when needed, according to cholesterol levels, overall risk, other illnesses, and treatment tolerance.

Cholinesterase Inhibitor

A medicine that slows the breakdown of acetylcholine, a chemical used for nerve signalling. It can improve nerve communication in selected conditions but may cause nausea, diarrhoea, slow heartbeat,

sweating, or muscle cramps.

Cold/Cough Medicines in Children

Medicines marketed to relieve cold or cough symptoms in children, including antihistamines, decongestants, antitussives, and expectorants. Their safety and effectiveness vary by ingredient and age; some can cause serious adverse effects or accidental overdose in young children.

Conjugate Vaccine

A vaccine that joins a bacterial sugar to a carrier protein so the immune system makes a stronger, longer-lasting response. This design is especially useful in infants and young children.

Alternate Names:
Protein-conjugate vaccine; conjugated polysaccharide vaccine.

Conscious Sedation

A drug-induced depression of consciousness during which a patient remains able to respond purposefully to verbal commands and light tactile stimulation while maintaining spontaneous breathing and protective airway reflexes.

Alternate Names:
Moderate Sedation; Moderate Procedural Sedation

Controlled Substance

A medicine or chemical whose production, supply, possession, or use is restricted by law because it may cause dependence, misuse, overdose, or other serious harm. Rules differ between countries and substances.

Cox-1 Inhibitor

A medicine that blocks cyclooxygenase-1, an enzyme involved in protecting the stomach lining, maintaining kidney blood flow, and producing platelet thromboxane. Inhibition can increase the risk of gastrointestinal bleeding and kidney effects.

COX Inhibitor

A medicine that blocks cyclooxygenase-1, cyclooxygenase-2, or both, reducing production of prostaglandins involved in pain, fever, and inflammation. Nonsteroidal anti-inflammatory drugs are COX inhibitors; adverse effects can include gastrointestinal bleeding, kidney problems, and cardiovascular events.

Crack (Drug)

A smokable, rapidly acting form of cocaine; it can cause dependence, severe cardiovascular effects, seizures, stroke, psychiatric symptoms, and overdose.

Cutaneous Drug Eruptions

Adverse skin reactions triggered by systemic medications, ranging from mild widespread red rashes and hives to severe blistering reactions with epidermal detachment and mucous membrane involvement.

Cyclooxygenase Inhibitor

See *COX Inhibitor*.

Designer Steroid

A chemically modified anabolic-androgenic steroid created to produce performance-enhancing effects or evade detection; products may be unapproved, contaminated, and medically dangerous.

Diarrhea, Antibiotic-Associated

Alternate index label; see *Antibiotic-Associated Diarrhea*.

Digitalis

A group of heart medicines from foxglove plants, including digoxin. They can strengthen heart contraction and slow some heart rhythms but have a narrow safety range and may cause dangerous toxicity.

Diphtheria Vaccine

A vaccine containing diphtheria toxoid, a chemically inactivated toxin that stimulates antibodies against diphtheria toxin. It is usually given in combination vaccines with protection against tetanus and pertussis.

Disease-Modifying Antirheumatic Drug

A medicine used for inflammatory rheumatic diseases to reduce disease activity and help prevent lasting joint or organ damage, rather than only relieving symptoms. Different types are chosen according to the disease, severity, other conditions, and monitoring needs.

Alternate Names:
DMARD; DMARDs; Disease-Modifying Antirheumatic Drugs

Disulfiram

A medicine used as an adjunct for alcohol-use disorder that inhibits aldehyde dehydrogenase and can cause an unpleasant reaction if alcohol is consumed.

Diuretic

A medicine that helps the kidneys remove extra salt and water in urine. It can treat swelling, high blood pressure, heart failure, or selected kidney and liver conditions but may disturb salts or cause dehydration.

Alternate Names:
Diuretics; Water Pills

Doctor Of Osteopathic Medicine

A physician who has completed an accredited osteopathic medical degree and residency training and is licensed to diagnose, prevent, and treat disease.

Drug Administration Route

The pathway by which a medicine enters the body, such as oral, intravenous, intramuscular, inhaled, topical, or subcutaneous administration.

Drug Allergies

See *Drug Allergy*.

Drug Allergy

An immune-mediated hypersensitivity reaction to a medicine. It can range from a limited rash to anaphylaxis and is distinct from predictable side effects and nonimmune intolerance.

Drug Antagonism

An interaction where one drug blocks or decreases the effectiveness of another, such as when an antidote blocks a poison.

Drug Bioavailability

The fraction of an administered dose that reaches the systemic circulation unchanged. It depends on the route, absorption, and first-pass metabolism; intravenous administration has 100% bioavailability.

Drug Classification Systems

Systems that group medicines according to properties such as their chemical structure, mechanism of action, therapeutic use, or effects on the body.

Drug Clearance

The rate at which the body removes a medicine from the bloodstream, expressed as the volume of plasma cleared of the medicine per unit time. The liver and kidneys are major routes of clearance.

Drug Dependence

Physical adaptation to a drug such that reducing or stopping it can cause withdrawal symptoms. Dependence is distinct from addiction, which involves compulsive use despite harm; some medicines cause physical dependence without addiction.

Drug-Drug Interactions

See *Drug Interaction*.

Drug-Eluting Balloon (Vascular)

A vascular balloon catheter that delivers a medicine to the vessel wall during dilation, without leaving a permanent implant.

Alternate Names:
Vascular

Drug Emulsion

A liquid medicine in which droplets of one liquid are dispersed in another liquid that does not normally mix with it. Formulation ingredients help maintain the emulsion's stability.

Drug Eruption

A skin eruption caused by a medication, ranging from a mild morbilliform rash to severe reactions such as Stevens–Johnson syndrome or toxic epidermal necrolysis.

Alternate Names:
Drug Eruptions

Drug-Facilitated Sexual Assault

Non-consensual sexual contact occurring when an individual is incapacitated due to the intoxicating, sedative, or memory-impairing effects of alcohol, sedatives, or illicit substances.

Drug Hypersensitivity Reactions

Immune-mediated adverse reactions to medicines. They may be immediate or delayed and can range from a mild rash to severe systemic illness.

Drug Hypersensitivity Syndrome

A serious delayed reaction to a medicine, usually beginning two to eight weeks after it is started. It may cause fever, widespread rash, facial swelling, enlarged lymph nodes, abnormal blood cells, and injury to the liver, kidneys, lungs, or heart.

Drug-Induced Autoimmunity

An immune reaction caused by a medicine in which the body attacks its own tissues. It may resemble lupus, cause joint pain, fever, rash, or organ inflammation, and often improves after the responsible medicine is stopped under medical guidance.

Drug-Induced Diarrhea

Diarrhea caused by a medicine or drug interaction. Common causes include antibiotics, laxatives, metformin, and medicines that alter intestinal motility.

Drug-Induced Immune Hemolytic Anemia

An uncommon immune reaction triggered by certain medications where drug-dependent antibodies bind to red blood cells, causing premature erythrocyte destruction (hemolysis) and anemia.

Drug Induced Liver Disease

Liver tissue injury or inflammation caused by medications, herbal supplements, or toxic chemicals, manifesting as impaired bile flow (cholestasis), hepatitis, or acute liver failure.

Drug-Induced Low Blood Sugar

Low blood glucose caused by a medicine, most often insulin or an insulin secretagogue. Symptoms may include sweating, tremor, confusion, seizure, or loss of consciousness.

Drug-Induced Pulmonary Disease

Lung tissue damage or inflammatory injury resulting from medication exposure, presenting as interstitial pneumonitis, pulmonary fibrosis, fluid accumulation (pulmonary edema), or bronchospasm.

Drug-Induced Thrombocytopenia

A low platelet count caused by a medicine through immune destruction, reduced production, or other mechanisms, increasing bleeding risk.

Drug-Induced Tremor

Tremor caused or worsened by a medicine, stimulant, or toxin. Assessment considers timing, dose, other causes, and whether the medicine can be changed.

Drug Interaction

A change in a medicine's effect or concentration caused by another medicine, food, supplement, or disease.

Alternate Names:
Drug-Drug Interaction

Drug Metabolism

The enzymatic conversion of medicines into metabolites, mainly in the liver but also in the intestine, kidneys, lungs, and other tissues.

Drug Metabolism Pharmacogenomics

The study of how inherited genetic differences change the way a person breaks down medicines. This information can sometimes help clinicians choose a safer or more effective medicine or dose.

Drug Overdose

Harm caused by exposure to more medicine than the body can safely tolerate, including an excessive dose or an error in route or timing. Effects range from mild symptoms to seizures, organ damage, or respiratory failure.

Drug Packaging

The container, labeling, and protective materials used to preserve a medicine and support correct identification, storage, and use.

Drug, Prescription

See *Prescription Drug*.

Drug Resistance

The ability of microorganisms, cancer cells, or parasites to survive and proliferate despite exposure to drugs that were previously effective.

Drug, Sulfa

A sulfonamide drug; some are antibacterial medicines, while others are used as diuretics or for other indications, and sulfonamide reactions vary by drug and patient.

Drug Therapeutics

The use of medicines to prevent, diagnose, or treat disease while balancing expected benefit and potential harm.

Drug Tolerance

A reduced response to a medicine after repeated use, so the same dose produces less effect. Tolerance does not necessarily mean that a higher dose is needed or appropriate.

Drug Toxicity

Harmful effects caused by a medicine or its metabolites. Toxicity may result from excessive exposure, accumulation, interactions, or an unpredictable individual reaction.

Drug Use First Aid

Initial emergency supportive care provided to stabilize an individual experiencing acute substance toxicity, severe intoxication, or drug overdose until emergency medical personnel arrive.

Drug Vehicle

An inactive substance or carrier used to deliver an active drug ingredient in a formulation.

Drug Withdrawal

A clinically significant syndrome or return of symptoms caused by abrupt reduction or cessation of a drug after physiologic adaptation or dependence has developed. Tapering is required for some medications to reduce withdrawal and rebound effects.

DTaP Vaccine

A vaccine against diphtheria, tetanus, and pertussis (whooping cough), given mainly to infants and young children in a multi-dose series. It reduces severe illness, complications, and spread; schedules vary by country.

Eflornithine

A medicine that slows cell growth by blocking an enzyme needed to make certain cell components. A skin cream can reduce unwanted facial hair; an intravenous form has been used for selected African trypanosome infections.

Enzyme Inhibitor

A substance that slows or blocks an enzyme, a protein that helps chemical reactions occur in the body. Medicines use this action to change processes such as blood pressure, inflammation, infection, hormone production, or cancer-cell growth.

Estrogen Inhibitor

A medicine that reduces estrogen production or blocks estrogen's effects. It may treat selected hormone-sensitive cancers or other conditions; side effects can include hot flashes, bone loss, joint symptoms, or blood clots.

Etidronate

A bisphosphonate medicine that slows the break-

down and rebuilding of bone. It is used selectively for some disorders of abnormal bone remodeling; treatment depends on the condition and can affect the stomach, kidneys, or minerals.

Evidence-Based Medicine

The use of reliable research together with clinical expertise and the patient's values and circumstances to make healthcare decisions. It supports, but does not replace, discussion between patient and clinician.

Expectorant

A medicine intended to loosen or thin mucus so it is easier to cough up. Benefit varies with the cause of cough and the product; persistent breathlessness, fever, chest pain, or blood needs medical assessment.

Extensively Drug-Resistant TB

Tuberculosis caused by bacteria that meet the definition of multidrug- or rifampicin-resistant TB and are also resistant to any fluoroquinolone and at least one of the medicines bedaquiline or linezolid.

Fentanyl

A potent synthetic opioid analgesic used for severe pain and anesthesia. It can cause respiratory depression, sedation, constipation, nausea, tolerance, dependence, and fatal overdose, especially when combined with alcohol or other sedatives.

Fertility Agent

A medicine or biologic intervention intended to improve the chance of conception by inducing ovulation, supporting sperm production, or treating a reproductive mechanism.

Fidaxomicin

A narrow-spectrum oral macrocyclic antibiotic used to treat Clostridioides difficile infection. It has minimal systemic absorption and reduces disruption of normal intestinal flora compared with many alternatives, but recurrence can still occur.

Filgrastim

A recombinant granulocyte colony-stimulating factor that increases production and release of neutrophils from bone marrow. It is used to reduce or treat selected forms of chemotherapy-related neutropenia; bone pain and rare splenic complications can occur.

Finasteride

A medicine that lowers the conversion of testosterone to dihydrotestosterone. It can shrink an enlarged prostate and help some types of hair loss but may reduce libido, affect sexual function, or alter prostate-test results.

Fixed Drug Eruption

A medicine-related skin reaction that returns in the same place whenever the person takes the responsible medicine. It may appear as a sharply outlined red or dark patch, sometimes with a blister or sore, and can leave lasting discoloration.

Fluticasone

A corticosteroid available in inhaled, nasal, topical, and other formulations to reduce inflammation. Adverse effects depend on route and may include local irritation, oral candidiasis, skin thinning, adrenal suppression, or growth effects with prolonged exposure.

Food-Drug Interaction

A change in how a medicine works or is absorbed because of food, drink, nutrients, or supplements. Examples include grapefruit affecting some medicines, vitamin K changing warfarin's effect, and calcium reducing absorption of some antibiotics.

Forensic Medicine

Application of medical knowledge to legal questions, including injury interpretation, cause of death, toxicology, identification, sexual assault evaluation, and documentation.

Forensic Medicine (Legal Medicine)

Branch of medicine that applies medical, biological, and scientific knowledge to legal questions and the

administration of justice.

Alternate Names:
Legal Medicine

Foscarnet

An intravenous antiviral agent used for selected cytomegalovirus or herpesvirus infections, especially when resistance or intolerance limits other treatment. Important toxicities include kidney injury and disturbances of calcium, magnesium, potassium, or phosphate.

Furosemide

A diuretic that makes the kidneys remove more salt and water in urine. It treats swelling and some blood-pressure or heart conditions but may cause dehydration, abnormal body salts, kidney problems, or hearing damage.

Ganglionic Blocker

A medicine that interrupts nerve signals at switching points controlling automatic body functions. It can affect blood pressure, heart rate, digestion, sweating, vision, and bladder function, so these medicines are rarely used clinically.

Generic Drug

A medicine equivalent to a brand-name medicine in active ingredient, strength, dosage form, and intended use, usually sold under a nonproprietary name.

Alternate Names:
Generic medicine

Generic Medicine

A medicine with the same active ingredient, strength, form, route, and intended effect as an approved reference medicine. It may look different or have different inactive ingredients but must meet regulatory quality and performance requirements.

Generic Name, Drug

The official nonproprietary name of a medicine's active ingredient, used consistently across manufacturers and countries. It identifies the medicine itself rather than a company's brand name and helps prevent confusion when products have different trade names.

Genomic Medicine

Use of a person's genetic or genomic information to guide disease diagnosis, risk assessment, prevention, or treatment.

Geriatric Medicine

The medical specialty focused on the health, function, diseases, medications, and goals of older adults, often using comprehensive and coordinated care.

Growth Inhibitor

A medicine or biological substance that slows or stops cell growth. In cancer treatment, it may block cell division or a growth signal, but it can also affect healthy cells and cause side effects.

Haemophilus Vaccine

A vaccine that protects against serious disease caused by Haemophilus influenzae type b, including meningitis, pneumonia, and bloodstream infection. It is given mainly in infancy according to the recommended immunization schedule.

Hepatic Drug Metabolism

The liver changes medicines into forms that the body can use or remove. This may stop a medicine's effect, activate a medicine that works after conversion, or produce a harmful product; age, illness, genetics, and other medicines can alter the process.

Hepatitis B Vaccine

A recombinant vaccine that prevents hepatitis B infection, which can cause chronic liver disease, cirrhosis, and liver cancer. It is given in a series beginning at birth in many schedules; infants exposed at birth may also need hepatitis B immune globulin.

Hepatitis B Vaccine (Birth Dose)

A dose of hepatitis B vaccine administered shortly after birth to induce early active immunity and prevent transmission of the hepatitis B virus from

mother to infant during delivery.

Alternate Names:
Birth Dose

HER2 Inhibitor

A targeted cancer treatment that blocks signaling through human epidermal growth factor receptor 2 in cancers with HER2 overexpression or amplification.

High Blood Pressure - Medicine-Related

Hypertension caused or worsened by a medicine or substance, such as NSAIDs, steroids, decongestants, stimulants, oral contraceptives, or immunosuppressants; review and substitution may improve control.

Histamine-2 Receptor Antagonist

A medicine that reduces stomach-acid production by blocking histamine signals in the stomach. It may treat reflux, indigestion, or ulcers; headache, diarrhea, confusion, and medicine interactions can occur.

Hormone Inhibitor

A medicine or biologic that blocks hormone synthesis, release, receptor binding, or downstream signaling, used in selected endocrine disorders and hormone-sensitive cancers.

HPV Vaccine

A vaccine that prevents infection with human papillomavirus types that cause several cancers and genital warts. It is routinely offered in early adolescence, can start from age 9, and may require two or three doses depending on age and immune status; it does not treat existing HPV infection.

Hypoglycemic Agent

A medicine that lowers blood glucose, including insulin, insulin secretagogues, insulin sensitizers, incretin-based drugs, and sodium–glucose cotransporter inhibitors; choice depends on diabetes type and patient risks.

Hypolipidemic Agent

A medicine that lowers fats in the blood, such as LDL cholesterol or triglycerides. It helps reduce cardiovascular risk when combined with appropriate diet, activity, and treatment of other risk factors.

Immunosuppressant

A medicine that reduces immune-system activity. It may be used to prevent organ transplant rejection or treat autoimmune and inflammatory diseases; effects and infection risks vary by medicine and dose.

Immunosuppressant Drug

A medicine that reduces immune-system activity, often to prevent transplant rejection or treat autoimmune disease.

Immunosuppressive Drug

A drug that suppresses immune responses, used for organ transplantation, graft-versus-host disease, and autoimmune/inflammatory diseases.

Inactivated Polio Vaccine

An injected vaccine made from killed polioviruses. It trains the immune system to prevent poliomyelitis and is used in routine childhood immunization programs; the schedule and use of other polio vaccines vary by country.

Influenza Vaccine

A seasonal vaccine that reduces the risk of influenza and its complications. It is updated as needed and is offered each year to most people from early infancy; some young children need two doses in their first vaccinated season, according to local recommendations.

Inotrope

A medication that alters the force or strength of myocardial contraction. Positive inotropes increase cardiac muscle contractility, enhancing blood circulation and blood pressure in acute heart failure or shock.

Intensive Care Medicine

The medical specialty dedicated to the continuous monitoring, life support, and advanced treatment of patients with acute, life-threatening organ dysfunction, critical trauma, or severe post-surgical complications.

Japanese Encephalitis Vaccine

A vaccine that protects against Japanese encephalitis, a mosquito-borne viral infection of the central nervous system. Vaccine type, schedule, and eligibility depend on age, destination or exposure risk, and local recommendations.

Laxative

See *Laxatives*.

Legal Medicine

The application of medical knowledge to legal questions, including forensic examination, injury assessment, death investigation, and issues of capacity or consent.

Liquid Medication Administration

The delivery of pharmaceutical agents formulated in liquid solution, suspension, or syrup form, particularly useful for pediatric patients and individuals who have difficulty swallowing solid tablets.

Local Anesthetic

A medicine that temporarily numbs a specific area without usually causing loss of consciousness. It blocks pain signals in nearby nerves and is used for procedures, dental work, wound repair, and some forms of regional pain relief.

Alternate Names:
Local Anesthetics

Luteinizing Hormone-Releasing Hormone Agonist

A medicine that first stimulates and then, with continued use, suppresses signals from the pituitary gland that control the ovaries or testes. It is used for selected cancers, endometriosis, fibroids, and puberty disorders.

Alternate Names:
GnRH agonist; LHRH agonist

Macrolide Antibiotic

An antibiotic of the macrolide class that binds the bacterial 50S ribosomal subunit and usually inhibits protein synthesis; activity and resistance vary by organism and drug.

Malaria Vaccine

A vaccine intended to reduce malaria caused by *Plasmodium* parasites, especially *P. falciparum*; the RTS,S/AS01 and R21/Matrix-M vaccines are used in recommended childhood immunization programs in some endemic settings, alongside other preventive measures.

MAO Inhibitor

A class of medications that block monoamine oxidase enzymes, preventing the breakdown of neurotransmitters such as serotonin, norepinephrine, and dopamine in the nervous system.

Measles-Rubella Vaccine

A combined live attenuated vaccine containing measles and rubella antigens without the mumps component, widely used in countries where mumps is not a significant public health burden, including India's Universal Immunization Schedule.

Measles Vaccine

Measles vaccine is a live attenuated vaccine that induces active immunity against measles virus. It is usually given as part of the measles–mumps–rubella (MMR) or measles–mumps–rubella–varicella (MMRV) vaccine.

Medication

A substance or biological product used to prevent, diagnose, treat, or control a disease or symptom. Medicines may be prescribed, bought without a prescription, applied to the body, inhaled, swallowed, or given by injection.

Medication Adherence

The extent to which a patient's medication-taking behavior corresponds with the agreed treatment plan. Adherence is influenced by understanding, adverse effects, cost, access, regimen complexity, beliefs, and cognitive or social factors.

Medication Adverse-Effect Profile

The clinically relevant pattern of predictable pharmacologic effects and harmful reactions associated with a medication. It includes common dose-related effects, serious rare events, organ-specific toxicity, interactions, and monitoring requirements.

Medication Cascade

A prescribing sequence in which an adverse drug effect is misinterpreted as a new medical condition and another drug is prescribed to treat it. Recognizing cascades is an important goal of medication reconciliation and deprescribing.

Medication Deprescribing

A planned, supervised process of reducing the dose or stopping a medicine when its current or future harms outweigh its benefits or when treatment goals change. Tapering may be required to prevent withdrawal or rebound disease.

Medication Error

A preventable event that may cause or lead to inappropriate medication use or patient harm while the medication is in the control of a healthcare professional, patient, or consumer. Errors can occur during prescribing, transcribing, dispensing, administration, or monitoring.

Medication Management

The systematic process of optimizing pharmacotherapy to achieve therapeutic goals while minimizing adverse effects, encompassing prescribing, dispensing, administration, monitoring, and deprescribing.

Medication Overuse Headaches

Frequent headaches caused or worsened by regular overuse of headache medicines.

Alternate Names:
Rebound Headache

Medication Reconciliation

A structured process of obtaining and comparing the most accurate medication list with current prescriptions at transitions of care. It identifies omissions, duplications, incorrect doses, interactions, and unintended changes.

Medication Review

A structured clinical evaluation of an individual's complete medication regimen to ensure that each medicine is clinically indicated, effective, safe, and free of adverse drug interactions.

Medication Safety

Practices that reduce medication errors and prevent avoidable harm during prescribing, dispensing, administration, and use.

Medication Side Effects

Unintended harmful responses to medications occurring at standard doses, ranging from mild (nausea, rash, dry mouth) to severe (anaphylaxis, Stevens-Johnson syndrome, QT prolongation, hepatotoxicity).

Meningococcal Vaccine

Conjugate vaccine (MenACWY) and serogroup B vaccine (MenB) given at 11-12 years with booster at 16 years. Protects against Neisseria meningitidis, causing meningitis and septicemia. MenACWY booster at 16 years covers the high-risk period for serogroup C and Y disease.

Mineralocorticoid Receptor Antagonist

A medicine that blocks aldosterone, a hormone that makes the body retain salt and water. It is used for selected heart failure, high blood pressure, and hormone disorders but can raise blood potassium and worsen kidney problems.

MMR Vaccine

A live attenuated vaccine against measles, mumps,

and rubella. It is given according to the immunization schedule and is generally avoided during pregnancy and in people with certain severe immune deficiencies.

Molecular Medicine

Molecular medicine applies molecular and cellular biology to understand, diagnose, prevent, and treat disease. It includes genomics, precision oncology, molecular biomarkers, targeted therapy, and other mechanism-based approaches.

Monoamine Oxidase Inhibitor

A medicine that blocks monoamine oxidase, an enzyme that breaks down certain brain chemicals. It can treat selected depression or neurologic disorders but has important interactions with other medicines and some foods.

MRNA Vaccine

A vaccine that gives cells temporary instructions to make a harmless piece of a germ. The immune system learns to recognize that piece and respond later; the messenger RNA does not enter the cell nucleus or change DNA.

Alternate Names:
MRNA Vaccines; Messenger RNA Vaccine; Messenger RNA Vaccines

Multi-Drug Resistance

Multidrug resistance is resistance of a microorganism, cancer, or other disease process to multiple drugs that would otherwise be active. Mechanisms include target changes, drug inactivation, reduced uptake, efflux, and altered repair or survival pathways.

Multidrug-Resistant Extensively Drug-Resistant TB

See *Multidrug-Resistant Tuberculosis* and *Extensively Drug-Resistant TB*.

Neuropathy Secondary To Drugs

Peripheral nerve damage caused by exposure to medications or chemical toxins, typically resulting in symmetrical numbness, tingling, burning pain, or muscle weakness in the hands and feet.

Nonsteroidal Anti-Inflammatory Drug

A medicine that inhibits cyclooxygenase enzymes and reduces prostaglandin production, producing analgesic, anti-inflammatory, and fever-reducing effects. NSAIDs can cause gastrointestinal, kidney, cardiovascular, or other adverse effects.

NSAIDs

See *Nonsteroidal Anti-Inflammatory Drug*.

Occupational Medicine

The medical specialty concerned with the effects of work on health, prevention of work-related illness and injury, and safe return to work.

Opioid Analgesics

Strong pain medicines that act on opioid receptors in the brain, spinal cord, and other tissues. They can relieve severe pain but may cause sleepiness, constipation, dependence, and dangerously slow breathing or overdose.

Opioid Antagonist

A medicine that blocks opioid receptors and can reverse opioid effects such as respiratory depression. Naloxone is a commonly used example.

Oral Hypoglycemic

A medicine taken by mouth to lower blood glucose. Oral glucose-lowering medicines act through different mechanisms and are used mainly to treat type 2 diabetes.

Oral Medicine

Specialty diagnosing oral mucosal diseases, dental causes of facial pain, oral manifestations of systemic disease.

Oral Polio Vaccine

A live attenuated poliovirus vaccine administered by mouth. Its formulation and use depend on the public-health program and circulating poliovirus strains; it has played an important role in polio

control.

Orphan Drug

A medicine designated for treating, preventing, or diagnosing a rare disease under a jurisdiction's orphan-drug rules. Criteria vary; in the United States, FDA designation generally applies to conditions affecting fewer than 200,000 people, with a cost-recovery exception.

Over-The-Counter Drug

See *Over-The-Counter (OTC) Drug*.

Over-The-Counter (OTC) Drug

A medicine sold without a prescription for uses and doses described on its label. "Over the counter" does not mean risk-free; incorrect use, interactions, or excessive doses can still cause serious harm.

P2Y12 Inhibitor

A class of antiplatelet medications that block ADP P2Y12 receptors on platelet surfaces, preventing platelet activation and aggregation to reduce the risk of arterial blood clots.

Palifermin

A laboratory-made form of a natural growth factor that helps mouth and throat lining cells repair themselves. It is used in selected people receiving intensive treatment before blood-forming stem-cell transplantation to reduce severe mouth sores.

Palonosetron

A long-acting anti-nausea medicine that blocks serotonin signals involved in vomiting. It is used to prevent nausea and vomiting from chemotherapy or surgery; headache, constipation, and rare heart-rhythm changes can occur.

Parasympatholytic

A medicine that blocks some signals of the parasympathetic nervous system. It may widen the airways, relax the bladder, reduce motion sickness, or speed a slow heartbeat, but can cause dry mouth, blurred vision, constipation, urinary retention, or confusion.

Parasympathomimetic

A medication or chemical that stimulates the parasympathetic nervous system, mimicking acetylcholine to slow heart rate, stimulate digestive secretions, and constrict the pupils.

Paroxetine

Paroxetine is a selective serotonin-reuptake inhibitor used for depression, anxiety disorders, obsessive-compulsive disorder, PTSD, and some other conditions; sexual dysfunction, withdrawal symptoms, serotonin syndrome, and pregnancy-related risks require consideration.

Pediatric Nuclear Medicine

A branch of medical imaging that uses small, weight-adjusted amounts of radioactive tracers to evaluate organ function, bone development, and disease processes in infants and children.

Pefloxacin

A fluoroquinolone antibiotic that blocks bacterial enzymes needed to copy and repair DNA. Its use is limited by resistance and potentially serious effects involving tendons, nerves, the heart, and the nervous system.

PEG

An abbreviation for polyethylene glycol, a polymer used as an osmotic laxative and to modify some medicines (PEGylation), or for percutaneous endoscopic gastrostomy, the procedure for placing a feeding tube through the abdominal wall into the stomach. It can also refer to the feeding tube placed by that procedure; spell out the intended meaning.

Pegaspargase

A long-acting enzyme medicine used in combination treatment for some acute lymphoblastic leukemias. It lowers asparagine needed by leukemia cells; allergic reactions, pancreatitis, liver injury, clotting problems, and bleeding are important risks.

Pegfilgrastim

A long-acting growth factor that stimulates the bone marrow to make neutrophils. It helps prevent

infection caused by chemotherapy-related low white-cell counts; bone pain and rare spleen rupture or serious inflammation can occur.

Penicillamine

A medicine that binds certain metals and can also reduce immune activity. It is used selectively for copper overload and some autoimmune or connective-tissue disorders; serious blood, kidney, skin, or allergic reactions can occur.

Pentavalent Vaccine

A combination vaccine that protects against five diseases. Components vary by product; a common childhood formulation contains diphtheria and tetanus toxoids, pertussis antigens, hepatitis B surface antigen, and a conjugate against *Haemophilus influenzae* type b.

Pentobarbital

A barbiturate medicine that depresses brain activity and can cause sedation or control seizures. It has a high risk of slowed breathing, coma, dependence, and fatal overdose, especially with alcohol or other sedatives.

Perioperative Antibiotic Prophylaxis

Administration of an appropriate antimicrobial within a defined interval before incision to reduce infection risk for selected procedures. Choice, timing, redosing, and discontinuation depend on procedure, organisms, patient factors, and local guidance.

Pertussis Vaccine

A vaccine containing selected antigens from Bordetella pertussis, given in combination vaccines to prevent whooping cough and reduce severe disease and transmission.

Pharmaceutical

Relating to medicines, including their development, preparation, manufacture, testing, storage, or use.

Pharmacodynamic Interaction

A drug interaction in which one drug changes the effect of another at its site of action without necessarily changing its concentration. Effects may be additive, synergistic, or antagonistic, such as combined respiratory depression or bleeding risk.

Pharmacokinetic Interaction

A drug interaction that changes absorption, distribution, metabolism, or excretion of another drug, thereby altering its concentration over time. Enzyme inhibition, enzyme induction, transporter effects, and altered gastric pH are common mechanisms.

Phosphodiesterase Inhibitor

A medicine that blocks enzymes which normally break down chemical signals inside cells. Different types relax airways or blood vessels, improve heart pumping, or treat erectile dysfunction; effects and risks depend on the specific type.

Pneumococcal Conjugate Vaccine

A vaccine that joins parts of the pneumococcus bacterium to a carrier protein so the immune system can build lasting protection. It helps prevent pneumonia, meningitis, bloodstream infection, and other disease; product and schedule depend on age and risk.

Pneumococcal Vaccine

A vaccine that protects against selected serotypes of *Streptococcus pneumoniae* (pneumococcus), which can cause pneumonia, meningitis, bloodstream infection, sinusitis, and otitis media. Available products include pneumococcal conjugate vaccines and pneumococcal polysaccharide vaccine; the product and schedule depend on age, previous doses, and medical risk.

Poliovirus Vaccine

A vaccine that trains the immune system to prevent poliovirus infection and paralysis. Inactivated injectable and live oral forms are used in different programs; the schedule and product depend on age, health, and local public-health guidance.

Prazosin

An alpha-1 blocker that relaxes blood vessels and may relax the bladder outlet. It is used for high blood pressure and, in selected patients, trauma-related nightmares or urinary symptoms; dizziness and fainting are most likely after starting or increasing the dose.

Pre-Medication

Medicine given before a procedure, treatment, or exposure to prevent a predictable problem such as pain, nausea, allergy, infection, or anxiety.

Prescription Drug

A medicine that can be dispensed only under an authorized prescriber's order, according to the laws and regulations of the relevant jurisdiction.

Procalcitonin-Guided Antibiotic Therapy

Use of blood procalcitonin measurements, together with examination and other tests, to help decide whether to start or stop antibiotics in selected infections. The result cannot by itself confirm bacterial infection or safely replace clinical judgment.

Prostaglandin Antagonist

A drug that blocks a prostaglandin receptor or pathway, reducing selected prostaglandin-mediated effects such as inflammation, pain, uterine contraction, or gastric secretion.

Protease Inhibitor

An antiviral medicine that blocks a virus enzyme needed to cut newly made proteins into working parts. In HIV treatment, it prevents formation of mature infectious virus and is used with other medicines.

Proton Pump Inhibitor

See *Proton Pump Inhibitors*.

Psychotropic Drug

A medicine that affects brain function and may change mood, thinking, behavior, sleep, or perception. The term includes antidepressants, antipsychotics, mood stabilizers, stimulants, and some medicines for anxiety or sleep.

Psychotropic Medication

See *Psychotropic Drug*.

Rabies Vaccine

A vaccine containing inactivated rabies virus used for preexposure protection or postexposure prophylaxis after a possible rabies exposure, together with wound care and immune globulin when indicated.

Rehabilitation Medicine

Alternate name; see *Physical Medicine and Rehabilitation*.

Alternate Names:
physiatry.

Renal Drug Excretion

Removal of medicines from the body by the kidneys into urine. Kidney disease can slow this process, allowing some medicines to build up and requiring dose changes or closer monitoring.

Renin Inhibitor

A blood-pressure medicine that blocks renin, an enzyme involved in narrowing blood vessels and retaining salt. It lowers blood pressure but can raise potassium, affect kidney function, and harm a developing fetus.

Resistance Antibiotic (Antibiotic Resistance)

Alternate index label for Antibiotic Resistance.

Rock (Drug)

A street term commonly used for crack cocaine, a smokeable form of cocaine. It produces intense, short-lived stimulation but can cause dependence, dangerous heart rhythms, heart attack, stroke, seizures, overheating, or severe agitation.

Scabicide

A medicine applied to the skin or taken by mouth to kill scabies mites. Treatment usually includes

all close household or sexual contacts and washing or isolating recently used clothing and bedding to prevent reinfection.

Selective Serotonin Reuptake Inhibitor

A medicine that increases serotonin signalling between nerve cells by slowing serotonin reuptake. It treats depression and several anxiety-related disorders; nausea, sexual difficulties, withdrawal symptoms, and rarely serotonin toxicity can occur.

SGLT2 Inhibitor

A medicine that makes the kidneys pass more glucose and salt into the urine. It lowers blood sugar and can protect the heart and kidneys in selected people, but may cause dehydration, genital infections, or rarely ketoacidosis.

Skeletal Muscle Relaxant

A medicine that reduces excessive contraction of skeletal muscles. It may relieve short-term muscle spasm or longer-term spasticity, but sleepiness, weakness, dizziness, and impaired breathing can occur with some drugs.

Sleep Drug

A medicine used to help a person fall asleep, stay asleep, or maintain a regular sleep pattern. Benefits and risks vary widely; drowsiness, falls, impaired thinking, dependence, and interactions with alcohol or sedatives are important concerns.

Steroid

A group of chemicals with a characteristic structure. In medicine, steroids include corticosteroids that reduce inflammation and natural or replacement hormones such as cortisol, estrogen, progesterone, and testosterone.

Steroid Abuse

Steroid misuse is non-prescribed or excessive use of corticosteroids or anabolic-androgenic steroids, which can cause endocrine suppression, psychiatric effects, infection, metabolic disease, liver injury, cardiovascular harm, or tissue damage.

Steroid Hormones

Lipid-soluble hormones derived from cholesterol, including cortisol, aldosterone, estrogen, progesterone, and testosterone.

Steroid Injections - Tendon, Bursa, Joint

Injection of a corticosteroid, often with local anesthetic, into or around a joint, bursa, or tendon sheath to reduce inflammation and pain; injections directly into tendons are generally avoided because of rupture risk.

Tamsulosin

Tamsulosin is a selective alpha-1A blocker that relaxes prostate and bladder-neck smooth muscle to improve urinary symptoms of benign prostatic hyperplasia; dizziness, postural hypotension, and ejaculatory dysfunction may occur.

TCAs

Tricyclic antidepressants are medicines that increase the effects of certain brain chemicals. They can treat depression, nerve pain, and some other conditions but may cause sleepiness, dry mouth, constipation, low blood pressure, abnormal heart rhythms, or overdose toxicity.

Tdap Vaccine

A booster vaccine against tetanus, diphtheria, and pertussis, used for adolescent and adult immunization. Schedules vary by country; in the United States it is recommended during each pregnancy, usually at 27–36 weeks, to transfer pertussis antibodies to the infant.

Terazosin

An alpha-blocking medicine that relaxes the prostate and blood vessels. It can improve urine flow in prostate enlargement and lower blood pressure, but dizziness or fainting may occur, especially after the first dose or dose increases.

Therapeutic Drug Levels

The range of medicine concentrations in blood associated with benefit while limiting toxicity for a particular drug. A measured level must be inter-

preted with the dose, timing, symptoms, kidney or liver function, and the person's response.

Thrombolytic

A medicine that helps dissolve a blood clot by changing plasminogen into plasmin, which breaks down fibrin. It may be used urgently for selected strokes, heart attacks, or other life-threatening clots when benefits outweigh bleeding risk.

Thrombolytic Drugs For Heart Attack

Intravenous clot-dissolving medications that activate plasminogen into plasmin to break down fibrin clots obstructing coronary arteries, restoring blood flow to the heart muscle during an acute myocardial infarction.

Transfusion Medicine

The medical specialty that selects, prepares, tests, and gives blood or blood components such as red cells, platelets, plasma, and cryoprecipitate. It includes matching, preventing transfusion reactions, and monitoring patients.

Travel Medicine

Medical care concerned with prevention and treatment of health problems related to travel.

Tricyclic Antidepressant Overdose

Acute poisoning from tricyclic antidepressant medications, leading to severe anticholinergic toxicity, altered mental status, seizures, hypotension, and life-threatening cardiac conduction delays.

Tumor Necrosis Factor Inhibitor

A biological medicine that blocks tumor-necrosis factor, an immune signal involved in inflammation. It treats selected arthritis, psoriasis, and bowel diseases but can increase serious infection risk, so screening and monitoring are important.

Tyrosine Kinase Inhibitor

A targeted medicine that blocks enzymes carrying growth signals inside cells. It can slow cancers driven by abnormal signaling, but side effects vary and may include diarrhea, skin changes, liver injury, high blood pressure, or heart problems.

Uricosuric Agent

A medicine that increases renal excretion of uric acid, lowering serum urate in selected patients with gout. Adequate kidney function and hydration are important, and urinary uric-acid stones may be a concern.

Urine Drug Screen

A preliminary urine test that looks for selected medicines or recreational drugs and their breakdown products. Results can be falsely positive or negative and may need confirmation with a more specific laboratory test.

Uterotonic

A medicine that makes the uterus contract. It is used under medical supervision to start or strengthen labor, prevent or treat heavy bleeding after birth, or complete selected pregnancy-related procedures; excessive contraction can harm the mother or fetus.

Vaccine Adjuvant

A substance added to some vaccines to enhance and prolong the immune response to the antigen. Examples include aluminum salts and newer adjuvant systems.

Vaccine Therapy

Treatment that uses a vaccine to stimulate an immune response against a disease. It may prevent infection or, in selected cancer treatments, help the immune system recognize abnormal cells; its benefits depend on the specific vaccine and condition.

Varicella Vaccine

A live attenuated vaccine that prevents or reduces the severity of chickenpox. The number and timing of doses depend on age, vaccination history, immune status, pregnancy, and local recommendations. It is generally avoided during pregnancy and in people with certain immune deficiencies.

Xanthine Oxidase Inhibitor

A medicine that lowers uric-acid production by blocking an enzyme involved in breaking down substances from cells and food. It is used mainly to prevent gout attacks and, in selected cases, complications from rapid cancer-cell breakdown.

Brand Medicines

Medical Word Elements

Word element	Meaning	Example of use in medical terms
Ab-	A medical prefix meaning away from, off, or separating from,	abduction (movement away from the midline) and ablation (removal or destruction of tissue)
Acou-	A combining form meaning hearing or sound,	acoustics and acoumeter
Acro-	Acro- is a medical word element meaning extremity, tip, or highest part,	acromegaly and acrocyanosis
Acu-	A word element meaning sharp or pointed,	acute and acupuncture
Ad-	A medical prefix meaning toward, to, or near,	adduction (movement toward the midline) and adrenal (near the kidney)
Aden-	A combining form meaning gland or glandular tissue,	adenitis and adenoma
Adeno-	A combining form referring to a gland or glandular tissue,	adenovirus, adenoid, and adenocarcinoma
Aer-, Aero-	A combining form meaning air or gas,	aerobic, aerosol, and aerophagia
Alb-	A prefix derived from the Latin albus, meaning white,	albino and albinism
Amyl-	A combining form referring to starch,	amylase
Amylo-	A combining form referring to starch-like material or amyloid protein,	amyloidosis and amyloidoma
An-	A prefix meaning without, lacking, or not,	anoxia, anesthesia, and anencephaly
Aniso-	A combining form meaning unequal or dissimilar,	anisocytosis and anisometropia
Antero-	A combining form meaning front or anterior,	anteroposterior and anterolateral
Anti-	A prefix meaning against or opposing,	antibiotic and anticoagulant
Arthro-	A combining form meaning joint,	arthritis and arthroscopy
Bi-	A prefix meaning two or twice,	bilateral and bicuspid
Bio-	A combining form meaning life or living organisms,	biochemistry and biopsy
Brachy-	A combining form meaning short,	brachycephaly and brachydactyly
Cephal-	A combining form meaning head,	cephalic and cephalalgia
Cholangi-	A combining form meaning bile duct,	cholangitis and cholangiography

Word element	Meaning	Example of use in medical terms
Circum-	A prefix meaning around,	circumoral and circumcision
Colpo-	A combining form meaning vagina,	colposcopy and colpotomy
Cranio-	A combining form meaning skull,	craniotomy and craniosynostosis
Cyto-	A combining form meaning cell,	cytology and cytotoxic
Dacryo-	A combining form meaning tear or tear duct,	dacryocystitis and dacryostenosis
Dactyl-, -dactyl	A combining form meaning finger or toe; -dactyl is a suffix,	polydactyly and brachydactyly
Dextro-	A combining form meaning right or toward the right,	dextrocardia and dextroposition
Di-	A prefix meaning two or twice,	diplopia and diplegia
Dia-	A prefix with meanings including through, across, or complete, depending on the word,	dialysis and diagnosis
Disto-	A combining form meaning distal or far from a point of attachment,	distobuccal
Dys-	A prefix meaning abnormal, difficult, painful, or impaired,	dysphagia (difficulty swallowing) and dysuria (painful urination)
Entero-	A combining form meaning intestine or bowel,	enteropathy and enteroscopy
Epi-	A prefix meaning on, upon, or above,	epidermis and epigastric
Extra-	A prefix meaning outside or beyond,	extraocular and extracellular
Gyne-	A combining form meaning woman or female,	gynecology
Hem-, Hema-, Hemat-, Hemato-, Hemo-	Word elements meaning blood; British spellings include haem-, haemato-, and haemo-,	hematology, hematoma, and hemoglobin
Hemi-	A prefix meaning half or one side,	hemiplegia and hemithorax
Hepat-	A combining form meaning liver,	hepatic and hepatocellular
Hepato-	A combining form meaning liver,	hepatobiliary and hepatomegaly
Hetero-	A prefix meaning different, other, or unequal,	heterozygous and heterogeneous
Histo-	A combining form meaning tissue,	histology and histopathology
Homo-	A prefix meaning same or alike,	homozygous and homologous
Hyper-	A prefix meaning excessive, above normal, or increased,	hyperglycemia and hypertension
Hypo-	A prefix meaning below, deficient, reduced, or less than normal,	hypoglycemia and hypothermia
Iatr-	A combining form meaning medical treatment or physician,	iatrogenic and iatrology
Infra-	A prefix meaning below or beneath,	infrapatellar and infraorbital
Intra-	A prefix meaning within or inside,	intraocular and intravenous
Iso-	A prefix meaning equal, same, or uniform,	isotonic and isometric
Juxta-	A prefix meaning next to, beside, or adjoining,	juxtaglomerular
Kerato-	A combining form relating to the cornea or to horny or keratinized tissue,	keratitis and keratosis

Word element	Meaning	Example of use in medical terms
Leuk-	A combining form meaning white, especially in terms relating to white blood cells,	leukocyte
Leuko-	A combining form meaning white,	leukoderma or leukopenia
Levo-	A prefix meaning left or turning to the left, especially in spatial or chemical descriptions,	levocardia and levorotatory
Lieno-	A combining form meaning relating to the spleen	lienorenal and lienectomy
Lipo-	A combining form meaning relating to fat or lipids	lipoma and lipoprotein
Litho-	A combining form meaning stone,	lithotripsy and nephrolithiasis
Macro-	A prefix meaning large or on a large scale,	macrocytic (involving large cells)
Mega-	A combining form meaning large or greatly enlarged,	megacolon and megakaryocyte
Melan-	A combining form meaning black or dark, especially referring to melanin,	melanoma and melanocyte
Mes-, Meso-	Combining forms meaning middle,	mesencephalon, mesoderm, and mesothelioma
Micro-	A combining form meaning small,	microscopy and microcephaly
Myc-, Myco-	Combining forms meaning fungus,	mycosis and mycology
Myel-	A combining form referring to bone marrow or the spinal cord,	myelitis and myelopathy
Myo-	A combining form meaning muscle,	myopathy and myocarditis
Naso-	A combining form meaning nose,	nasogastric and nasopharyngeal
Neo-	A prefix meaning new or recently formed,	neoplasm and neonatal
Nephro-	A combining form meaning kidney,	nephritis and nephrectomy
Oligo-	A prefix meaning few or scanty,	oliguria and oligospermia
Onco-	A combining form relating to tumors or cancer	oncology and oncogenesis
Onycho-	A combining form meaning nail,	onychomycosis and onycholysis
Ortho-	A word element meaning straight or upright; in orthopedics it refers to correcting deformities,	orthostatic and orthopedics
Osteo-	A combining form meaning bone,	osteomyelitis and osteoporosis
Ot-, Oto-	Combining forms meaning ear,	otitis, otalgia, and otoscope
Oxy-	A word element referring to oxygen or, in some terms, sharpness,	oxygen and oxyhemoglobin
Pachy-	A combining form meaning thick or thickness,	pachyonychia, pachyderma, and pachycephaly
Para-	A prefix with meanings including beside, near, beyond, or abnormal; the sense varies among established terms,	parathyroid, paranasal, and paraesthesia
Patho-	A combining form meaning disease,	pathology and pathogenesis
Peri-	A prefix meaning around or surrounding,	pericardium and periosteum
Phago-	A combining form meaning eating or swallowing,	phagocytosis and phagocyte
Phlebo-	A combining form meaning vein,	phlebitis, phlebectomy, and phlebography
Pneumo-	A combining form referring to air, gas, or the lungs,	pneumothorax and pneumonia
Poly-	A prefix meaning many or much,	polyuria and polyneuropathy

Word element	Meaning	Example of use in medical terms
Post-	A prefix meaning after,	postoperative, postpartum, and postprandial
Pre-	A prefix meaning before,	prenatal and preoperative
Pro-	A prefix meaning before, forward, or in favor of, depending on the word,	prognosis and prolactin
Pseudo-	A prefix meaning false or resembling but not truly,	pseudocyst and pseudarthrosis
Retro-	A prefix meaning backward or behind,	retroperitoneal and retrosternal
Salpingo-	A combining form meaning fallopian tube,	salpingitis and salpingectomy
Sarco-	A combining form meaning flesh,	sarcoma and sarcoidosis
Schizo-	A combining form meaning split or divided; in schizophrenia it does not mean "split personality,"	schizophrenia and schizoid
Scler-, Sclero-	Combining forms meaning hard,	sclerosis, scleritis, and scleroderma
Sub-	A prefix meaning under or below,	subcutaneous and subdural
Super-	A combining form meaning above, excessive, or superior	superinfection and supernumerary
Supra-	A combining form meaning above or beyond	suprarenal and suprapubic
Syn-	A combining form meaning together, with, or joined	syndactyly and synovitis
Teno-	A combining form relating to a tendon	tenosynovitis and tenodesis
Thermo-	A combining form relating to heat or temperature	thermoregulation and thermotherapy
Toco-, Toko-	Combining forms meaning childbirth or labor,	tocolysis and tokodynamometry
Tomo-	A combining form meaning slice or section,	tomography and tomographic
Trans-	A prefix meaning across, through, or from one side to another,	transdermal and transcatheter
Tricho-	A combining form meaning hair,	trichoscopy and trichotillomania
Tympano-	A combining form meaning eardrum,	tympanoplasty and tympanometry
Xanth-, Xantho-	Combining forms meaning yellow,	xanthoma, xanthelasma, and xanthopsia
Xeno-	A combining form meaning foreign or from another species,	xenograft and xenotransplantation
Xero-	Xero- is a medical word element meaning dry or dryness,	xeroderma, xerophthalmia, and xerostomia

Complete reference tables

These categorized tables reproduce the prefix reference structure from the Pressbooks resource cited below. Examples are retained as learning aids; the meaning of a word part can vary by term.

Prefix	Meaning	Example of use in medical terms
Common prefixes		
A-, An-	Without; lacking	Anemia
Andr/o-	Male	Androgen
Anti-	Against	Anticholinergic drugs
Auto-	Self	Autocrine
Bio-	Life	Biology
Chem/o-	Chemistry	Chemotherapy
Contra-	Against	Contraception
Cyt/o-	Cell	Cytokine
Dis-	Separation; taking apart	Dissection
Dys-	Difficult; abnormal	Dyspnea
Eu-	Good; well	Eupnea
Fibr/o-	Fiber	Fibrosis
Gluco-, Glyco-	Glucose; sugar	Glycogen
Gyn/o-, Gynec-	Female	Gynecology
Hydr/o-	Water	Hydrocephalus
Idio-	Self; one's own	Idiopathic
Lyso-, Lys-	Break down; destruction; dissolving	Lysosome
Mal-	Bad; abnormal	Malignant
Myc/o-	Fungus	Mycetoma
Necr/o-	Death	Necrosis
Neo-	New	Neonate
Oxy-	Sharp; acute; oxygen	Oxytocin
Pan-, Pant/o-	All or everywhere	Pancytopenia
Pharmaco-	Drug; medicine	Pharmacist
Re-	Again; backward	Rejuvenation
Somat/o-, Somatico-	Body; bodily	Somatic cell
Body-part prefixes		
Acous/o-	Hearing	Acoustic meatus
Aden/o-	Gland	Adenoid
Adip/o-	Fat	Adipocyte
Adren/o-	Gland	Adrenal cortex
Angi/o-	Blood vessel	Angioplasty
Arteri/o-	Artery	Arteriole
Arthr/o-	Joint	Arthroplasty
Bucc/o-	Cheek	Buccal cavity
Bronch/i-	Bronchus	Bronchioles
Burs/o-	Bursa	Bursa
Carcin/o-	Cancer	Basal cell carcinoma
Cardi/o-	Heart	Cardiology
Cephal/o-	Head	Cephalic flexure
Chol-	Bile	Cholesterol
Chondri-	Cartilage	Chondrosarcoma
Coron-	Heart	Coronary arteries
Cost-	Rib	Costal cartilage
Crani/o-	Brain	Cranium
Cutane-	Skin	Cutaneous
Cyst/o-, Cysti-	Bladder or sac	Cystoscopy
Derm-, Dermat/o-	Skin	Dermatologist
Duoden/o-	Duodenum	Duodenitis

Prefix	Meaning	Example of use in medical terms
Gastr-	Stomach	Gastrectomy
Gloss-	Tongue	Glossectomy
Hem-, Hema-, Hemat-, Hemo-, Hemat/o-	Blood	Hematopoiesis
Hepat/o-, Hepatico-	Liver	Hepatic portal system
Hist/o-, Histio-	Tissue	Histology
Hyster/o-	Uterus	Hysterectomy
Ileo-	Ileum	Ileostomy
Ischi/o-	Ischium	Ischial tuberosity
Kerat/o-	Cornea (eye or skin)	Keratin
Lacrim/o-	Tear	Lacrimal fluid
Lact/o-, Lacti-	Milk	Lactose
Laryng/o-	Larynx	Laryngitis
Lingu/o-	Tongue	Lingual tonsil
Lip/o-	Fat	Lipolysis
Lymph/o-	Lymph	Lymphocyte
Mamm-, Mast/o-	Breast	Mammary glands
Mening/o-	Meninges	Meningitis
Muscul/o-	Muscle	Musculoskeletal
My/o-	Muscle	Myocardium
Myel/o-	Spinal cord or bone marrow	Myelin
Nephr/o-	Kidney	Nephron
Neur/i-, Neur/o-	Nerve	Neuron
Oculo-	Eye	Oculomotor nerve
Onco-	Tumor; bulk; volume	Oncogene
Onych/o-	Fingernail; toenail	Onychodystrophy
Oo-	Egg; ovary	Oocyte
Oophor/o-	Ovary	Oophorectomy
Op-, Opt-	Vision	Optic nerve
Ophthalm/o-	Eye	Ophthalmic artery
Orchid/o-, Orchio-	Testis	Orchidectomy
Orth/o-	Straight; normal; correct	Orthostatic
Osseo-	Bony	Osseous tissue
Ossi-	Bone	Ossicles
Ost-, Oste/o-	Bone	Osteoporosis
Ot/o-	Ear	Otolaryngologist
Ovar/i-, Ovario-, Ovi-, Ovo-	Ovary	Ovarian follicle
Phalang-	Phalanx	Phalanges
Pharyng/o-	Pharynx; throat	Pharyngeal tonsil
Phleb/o-	Vein	Phlebotomist
Phren/i-, Phreno-, Phrenico-	Diaphragm	Phrenic nerve
Pleur-, Pleur/a-, Pleur/o-	Rib; pleura	Pleural cavity
Pneum/a-, Pneumat/o-	Air; lung	Pneumonia
Proct/o-	Anus; rectum	Proctoscopy
Prostat-	Prostate	Prostatectomy
Pseudo-	False	Pseudostratified

Prefix	Meaning	Example of use in medical terms
Psych/o-, Psyche-	Mind	Psychiatrist
Radio-	Radiation; radius	Radioisotopes
Ren/o-	Kidney	Renal cortex
Retin-	Retina	Retinitis pigmentosa
Rhin/o-	Nose	Rhinoscope
Salping/o-	Tube	Salpingo-oophorectomy
Sarco-	Muscular; flesh-like	Sarcomere
Schiz/o-	Split; cleft	Schizophrenia
Sclera-, Sclero-	Hardness	Sclerosis
Sigmoid/o-	Sigmoid colon	Sigmoidoscopy
Sperma-, Spermo-, Spermato-	Sperm	Spermatocyte
Splen/o-	Spleen	Splenomegaly
Sten/o-	Narrowed; blocked	Stenosis
Stern-	Sternum	Sternoclavicular joint
Stom/a-, Stomat/o-	Mouth	Stomatitis
Thorac/o-, Thoracico-	Chest	Thoracic cavity
Thromb/o-	Blood clot	Thrombolytic
Thyr/o-	Thyroid gland	Thyroiditis
Trache/o-	Trachea	Trachealis
Tympan/o-	Eardrum	Tympanic membrane
Ur/o-	Urine	Urologist
Vagin-	Vagina	Vaginal
Varic/o-	Duct; blood vessel	Varicose veins
Vasculo-	Blood vessel	Vasculitis
Ven/o-	Vein	Venae cavae
Vertbr-	Vertebra; spine	Vertebral column
Color prefixes		
Chlor/o-	Green	Chlorophyll
Chrom-, Chromato-	Color	Chromosome
Cyano-	Blue	Cyanosis
Erythr/o-	Red	Erythrocyte
Leuk/o-	White	Leukocyte
Melan/o-	Black	Melanin
Physical property and shape prefixes		
Cry/o-	Cold	Cryotherapy
Elect-	Electrical activity	Electrocardiogram
Kin/o-, Kine-, Kinesi/o-	Movement	Kinetic energy
Kyphy/o-	Humped	Kyphosis
Rhabd/o-	Rod-shaped; striated	Rhabdomyosarcoma
Phot/o-	Light	Photoreceptor
Reticul/o-	Net	Reticulocytes
Scoli/o-	Twisted	Scoliosis
Therm/o-	Heat	Thermotherapy
Direction and position prefixes		
Ab-, Abs-	Away from	Abductor
Ad-	Towards	Adductor
Ante-	Before; forward	Antenatal

Prefix	Meaning	Example of use in medical terms
Circum-	Around	Circumcision
Cycl-	Circle; cycle	Cyclic neutropenia
De-	Away from; ending	Dehydration
Dia-	Across; through	Diagnosis
Ect/o-, Exo-	Outer; outside	Exocrine gland
End/o-, Ent-, Enter/o-	Within; inner	Endocrine gland
Epi-	Upon; outside of	Epidermis
Ex-, Extra-	Beyond	Expiration
Infra-	Beneath; below	Infratemporal fossa
Inter-	Between	Interstitial fluid
Intra-	Within	Intracellular fluid
Meso-	Middle	Mesoderm
Meta-	Beyond; change	Metabolism
Para-	Alongside; abnormal	Parathyroid glands
Path/o-	Disease	Pathologist
Peri-	Around	Pericardium
Post-	Behind; after	Postpartum
Pre-	Before; in front	Precancerous
Retro-	Backward; behind	Retroperitoneum
Sub-	Under	Subcutaneous layer
Super-	Above	Superior
Supra-	Above; upon	Supraglottis
Sy-, Syl-, Sym-, Syn-, Sys-	Together	Syndrome
Trans-	Across; through	Transdermal
Quantity prefixes		
Bi-	Two	Biceps
Brady-	Slow	Bradycardia
Diplo-	Double	Diploid
Hemi-	Half	Hemihypertrophy
Hetero-	Other; different	Heterogeneous
Homo-	Same	Homozygous genotype
Hyper-	Above; beyond; excessive	Hypertension
Hypo-	Under; deficient	Hypotension
Iso-	Equal; like	Isointense
Macro-	Large; long; big	Macrophage
Mic-, Micro-	Small	Microglia
Mon-, Mono-	One	Monocyte
Olig/o-	Few; little	Oliguria
Poly-	Many; excessive	Polyuria
Quadri-	Four	Quadriceps
Semi-	Half	Semilunar valves
Tachy-	Fast	Tachycardia
Tetra-	Four	Tetralogy of Fallot
Tri-	Three	Triceps
Uni-	One	Unicellular

medicalterminology/chapter/prefixes-and-suffixes/

Medical Suffixes

Suffix	Meaning	Example of use in medical terms
-Stomy	A suffix meaning surgical creation of an opening,	colostomy or gastrostomy
-Tomy	A suffix meaning incision or cutting into	laparotomy or tracheotomy
Cidal	A suffix meaning killing or destroying,	bactericidal or fungicidal
Cide	A suffix meaning an agent or process that kills,	pesticide, bactericide, or homicide
Cyte	A suffix meaning cell,	erythrocyte or leukocyte
Cytosis	A suffix or term indicating a condition involving cells or, in some contexts, an increase in the number of a particular type of cell	leukocytosis or erythrocytosis
Dactyl-, -Dactyl	A combining form or suffix meaning finger or toe	polydactyly or brachydactyly
Ectomy	A suffix meaning surgical removal or excision,	appendectomy or mastectomy
Emia	A suffix meaning a condition of the blood or a substance present in the blood,	anemia or bacteremia
Iatrics	A suffix or word element referring to medical treatment or a medical specialty,	geriatrics and pediatrics
Iatry	A suffix meaning medical treatment or a medical specialty,	psychiatry and podiatry
Itis	A suffix meaning inflammation,	dermatitis, bronchitis, and arthritis
Kalemia	A suffix or term referring to the concentration of potassium in the blood,	hypokalemia or hyperkalemia
MAB	Abbreviation for monoclonal antibody; the suffix -mab in a generic drug name indicates a monoclonal antibody,	adalimumab or rituximab
Oma	-oma is a suffix commonly indicating a tumor or mass, although some words ending in -oma describe non-neoplastic conditions	lipoma or carcinoma
Pathy	A suffix meaning disease, disorder, or abnormality,	neuropathy, cardiomyopathy, and nephropathy
Plegia	-plegia is a suffix meaning paralysis,	paraplegia, hemiplegia, or quadriplegia

Complete reference tables

Suffix	Meaning	Example of use in medical terms
Common suffixes		
-ac	Pertaining to	Cardiac
-blast, -blasto, -blastic	Bud; germ	Myeloblast
-cyte, -cytic	Cell	Thrombocyte
-dynia	Pain; swelling	Thoracodynia
-eal, -ial	Pertaining to	Esophageal
-ectasis	Expansion; dilation	Atelectasis
-emia	Blood condition	Anemia
-ia	Condition	Hemophilia
-iasis	Condition; formation of	Psoriasis
-ism	Condition	Hypothyroidism
-ites, -itis	Inflammation	Arthritis
-ity	Pertaining to	Immunity
-ium	Structure or tissue	Epithelium
-lysis, -lytic	Breakdown; destruction; dissolving	Osteolytic
-malacia	Softening	Osteomalacia
-megaly	Enlargement	Acromegaly
-oid	Resembling	Arachnoid trabeculae
-oma	Tumor	Angiosarcoma
-osis	Condition; usually abnormal	Endometriosis
-ous	Pertaining to	Aqueous
-pathy	Disease	Lymphadenopathy
-penia	Deficiency; lack of	Thrombocytopenia
-phagia, -phagy	Eating; swallowing	Dysphagia
-phasia	Speech	Aphasia
-plasia, -plastic	Growth	Hyperplasia
-plegia	Paralysis	Hemiplegia
-pnea	Breathing	Sleep apnea
-poiesis	Production	Hemopoiesis
-ptosis	Falling; drooping	Apoptosis
-rrhage, -rrhagic	Bleeding	Hemorrhage
-rrhea	Flow or discharge	Diarrhea
-sclerosis	Hardening	Arteriosclerosis
-sis	Condition	Agranulocytosis
-stasis	Level; unchanging	Homeostasis
-trophy	Growth	Hypertrophy
-uria	In the urine	Anuria
Procedure suffixes		
-centesis	Surgical puncture to remove fluid	Thoracentesis
-desis	Surgical binding	Pleurodesis
-ectomy	Cut out; removal	Mastectomy
-gram	Record; picture	Electrocardiogram
-graph	Instrument used to create a record or picture	Electrocardiograph
-graphy	To record or take a picture	Echocardiography
-meter	Device used for measuring	Sphygmomanometer
-opsy	Visual examination	Biopsy

Suffix	Meaning	Example of use in medical terms
-ostomy	Opening	Colostomy
-otomy	Incision	Laparotomy
-pexy	Surgical fixation	Oophoropexy
-plasty	Surgical reconstruction	Vertebroplasty
-scope	For examining	Endoscope
-scopy	Examine	Endoscopy

Alternate Names

Primary term	Alternate names
ACE	angiotensin-converting enzyme
ACE Inhibitor	angiotensin-converting enzyme inhibitor
Acquired Immunodeficiency Syndrome	AIDS
Adenosine Triphosphate	ATP
AIDS	acquired immunodeficiency syndrome
Alcoholism	alcohol dependence: A chronic
Alimentary Canal	gastrointestinal
AMD	age-related macular degeneration
Angiotensin-Converting Enzyme	ACE
Angiotensin-Converting Enzyme Inhibitor	ACE
Amyloid Precursor Protein	APP
ARB	angiotensin II receptor blockers
ATP	adenosine triphosphate
AV Node	atrioventricular node
Balloon Dilation	Balloon dilatation
BMD	bone mineral density
BMI	body-mass index
BPH	benign prostatic hyperplasia
CABG	coronary artery bypass graft
CBC	complete blood count
	mdash
CCU	coronary care unit
Cerebral Hemorrhage	hemorrhagic stroke
CFS	chronic fatigue syndrome
CK	creatine kinase
COX-2 Inhibitors	cyclooxygenase-2 inhibitors
CPAP	continuous positive airway pressure
CPR	cardiopulmonary resuscitation
CRP	C-reactive protein
DNA	deoxyribonucleic acid
DNR	do-not-resuscitate order
DRI	dietary reference intake
EBCT	electron-beam computed tomography
ECG	electrocardiogram
ED	erectile dysfunction

Primary term	Alternate names
EEG	electroencephalogram
EKG	electrocardiogram
EMG	electromyography
	mdash
FSH	follicle-stimulating hormone
GERD	gastroesophageal reflux disease
GFR	glomerular filtration rate
Gingiva	gums: a form of oral tissue that covers the roots of teeth and surrounding bone
GnRH	gonadotropin-releasing hormone
HbA1C	hemoglobin A1c
HDL	high-density lipoprotein
HEPA Filter	high-efficiency particulate air
HIV	human immunodeficiency virus
HLA	human leukocyte antigen
HPA	hypothalamic-pituitary-adrenal axis
Human Immunodeficiency Virus	HIV
IBD	inflammatory bowel disease
ICD	implantable cardioverter defibrillator
IgE	immunoglobulin E
IU	international unit
LDL	low-density lipoprotein
LH	luteinizing hormone
LVAD	left-ventricular assist device
MAOIs	monoamine oxidase inhibitors
METs	metabolic equivalents
MHC Molecule	major histocompatibility complex molecule
Mitral Valve Prolapse	Barlow's Syndrome; Barlow Syndrome (Mitral Valve Prolapse)
MRI	magnetic resonance imaging–a scan that creates detailed pictures of internal organs
MUSE	medicated urethral system for erection
NK	natural killer cells
NMDA Receptor	N-methyl-D-aspartame receptor
NO	nitric oxide
NSAID	nonsteroidal anti-inflammatory drug
PAD	peripheral artery disease
PCOS	polycystic ovary syndrome
PDE5 Inhibitors	phosphodiesterase type 5 inhibitors
PET Scan	positron emission tomography
PSA	prostate-specific antigen
PTCA	percutaneous transluminal coronary angioplasty
PTSD	post-traumatic stress disorder
RAST	radioallergosorbent test
RCT	randomized controlled trial
RDA	recommended dietary allowance
REM	rapid eye movement
RLS	restless legs syndrome
SAD	seasonal affective disorder
SERMs	selective estrogen receptor modulators
SSRIs	selective serotonin reuptake inhibitors

Primary term	Alternate names
Steroids	corticosteroids
	mdash
T Cell	T lymphocyte
TDD	telecommunications device for the deaf
	mdash
TENS	transcutaneous electrical nerve stimulation
	mdash
TIA	transient ischemic attack
tPA	tissue plasminogen activator
TSH	thyroid-stimulating hormone
VLDL	very-low-density lipoprotein
VSD	ventricular septal defect
	mdash
ABO Blood Group System	ABO Blood Group; ABO Blood Groups; ABO Blood Types; ABO System
Absolute Neutrophil Count	ANC
Aarskog-Scott syndrome	Aarskog Syndrome
Banti Syndrome	Banti disease; Banti's syndrome
Barber itch	Barber's itch
Glycated Hemoglobin (A1C)	A1C; A1C test; Hemoglobin A1C; HbA1C

British and US Medical Terms

This table lists common differences between United States and British medical terminology. Some terms are used in both countries, and local hospitals may use additional variations.

United States term	British term
Acetaminophen	Paracetamol
Anemia	Anaemia
Anesthesia	Anaesthesia
Anesthetic	Anaesthetic
Apnea	Apnoea
Behavior	Behaviour
Cesarean section	Caesarean section
Celiac disease	Coeliac disease
Color	Colour
Diarrhea	Diarrhoea
Edema	Oedema
Epinephrine	Adrenaline
Esophagus	Oesophagus
Fetal	Foetal
Fetus	Foetus
Gynecology	Gynaecology
Hemoglobin	Haemoglobin
Hemolysis	Haemolysis
Hemorrhage	Haemorrhage
Labor	Labour
Leukocyte	Leucocyte
Maneuver	Manoeuvre
Orthopedics	Orthopaedics
Pediatric	Paediatric
Pediatrician	Paediatrician
Practice (verb)	Practise (verb)
Sulfur	Sulphur
Tumor	Tumour

Common vocabulary differences

United States term	British term
Pap test or Pap smear	Cervical smear test

United States term	**British term**
Emergency department (ED)	Accident and emergency department (A&E)
Emergency room (ER)	Accident and emergency department (A&E)
Family physician	General practitioner (GP)
Operating room (OR)	Operating theatre
Primary care physician (PCP)	General practitioner (GP)
Skilled nursing facility	Nursing home
Urgent care center	Walk-in centre or minor injuries unit, depending on the service

Common Medical Abbreviations

Abbreviation	Full form
ABG	Arterial blood gas
ACE	Angiotensin-converting enzyme
ACE inhibitor	Angiotensin-converting enzyme inhibitor
ACL	Anterior cruciate ligament
ACS	Acute coronary syndrome
ADHD	Attention-deficit/hyperactivity disorder
ADL	Activity of daily living
AED	Automated external defibrillator
AFib	Atrial fibrillation
AIDS	Acquired immunodeficiency syndrome
AKI	Acute kidney injury
ALP	Alkaline phosphatase
ALT	Alanine aminotransferase
AMI	Acute myocardial infarction
ALS	Amyotrophic lateral sclerosis; advanced life support, depending on context
ANC	Absolute neutrophil count
ANA	Antinuclear antibody
ANP	Atrial natriuretic peptide
APGAR	Appearance, pulse, grimace, activity, and respiration
ARDS	Acute respiratory distress syndrome
AST	Aspartate aminotransferase
ATN	Acute tubular necrosis
AV	Atrioventricular
AVM	Arteriovenous malformation
AVN	Atrioventricular node
BID	Twice a day; prescription shorthand that should be avoided when possible
BP	Blood pressure
BMI	Body mass index
BMR	Basal metabolic rate
BPH	Benign prostatic hyperplasia
BRCA	Breast cancer susceptibility gene; commonly referring to the BRCA1 or BRCA2 gene
BUN	Blood urea nitrogen
CABG	Coronary artery bypass graft
CA	Cancer antigen or calcium, depending on context
CA-125	Cancer antigen 125

Abbreviation	Full form
CAD	Coronary artery disease
CAT	Computed tomography; an older term for computerized axial tomography
CBC	Complete blood count
CBT	Cognitive behavioural therapy
CDC	Centers for Disease Control and Prevention
CEA	Carcinoembryonic antigen
CHF	Congestive heart failure
CHD	Congenital heart disease
CIN	Cervical intraepithelial neoplasia
CJD	Creutzfeldt–Jakob disease
CK	Creatine kinase
CMV	Cytomegalovirus
CNS	Central nervous system
COPD	Chronic obstructive pulmonary disease
CPAP	Continuous positive airway pressure
CPK	Creatine phosphokinase; an older name for creatine kinase
CPR	Cardiopulmonary resuscitation
CRF	Chronic renal failure; chronic kidney disease is preferred in current usage
CRP	C-reactive protein
CSF	Cerebrospinal fluid
CT	Computed tomography
CVS	Chorionic villus sampling
CVA	Cerebrovascular accident
CXR	Chest radiograph
D&C	Dilatation and curettage
DKA	Diabetic ketoacidosis
DJD	Degenerative joint disease
DM	Diabetes mellitus
DNA	Deoxyribonucleic acid
DTP	Diphtheria, tetanus, and pertussis
DVT	Deep-vein thrombosis
DX	Diagnosis
ECG	Electrocardiogram
EKG	Electrocardiogram
ECHO	Echocardiogram
EEG	Electroencephalogram
eGFR	Estimated glomerular filtration rate
EMG	Electromyography
ENT	Ear, nose, and throat
ERCP	Endoscopic retrograde cholangiopancreatography
ESR	Erythrocyte sedimentation rate
ESRD	End-stage renal disease
FBC	Full blood count
FEV1	Forced expiratory volume in the first second
FSH	Follicle-stimulating hormone
GABHS	Group A beta-haemolytic streptococcus
GERD	Gastroesophageal reflux disease
GFR	Glomerular filtration rate
GI	Gastrointestinal
GIST	Gastrointestinal stromal tumour
GU	Genitourinary
HbA1c	Glycated haemoglobin

Abbreviation	Full form
HDL	High-density lipoprotein
HAV	Hepatitis A virus
HBV	Hepatitis B virus
HCT	Hematocrit
HCV	Hepatitis C virus
HGB	Hemoglobin
HIV	Human immunodeficiency virus
HLA	Human leukocyte antigen
HPV	Human papillomavirus
HRT	Hormone replacement therapy
HTN	Hypertension
IBD	Inflammatory bowel disease
IBS	Irritable bowel syndrome
ICD	Implantable cardioverter-defibrillator
ICU	Intensive care unit
IDDM	Insulin-dependent diabetes mellitus; type 1 diabetes mellitus is preferred in current usage
IM	Intramuscular
IU	International unit
IUD	Intrauterine device
IV	Intravenous
IVP	Intravenous pyelography or intravenous pyelogram
LDL	Low-density lipoprotein
LH	Luteinizing hormone
LFT	Liver function test
MI	Myocardial infarction
MMR	Measles, mumps, and rubella
MRI	Magnetic resonance imaging
MRSA	Methicillin-resistant *Staphylococcus aureus*
MS	Multiple sclerosis; may have other meanings depending on context
NG	Nasogastric
NIDDM	Non-insulin-dependent diabetes mellitus; type 2 diabetes mellitus is preferred in current usage
NKDA	No known drug allergies
NSAID	Nonsteroidal anti-inflammatory drug
OCD	Obsessive-compulsive disorder
PAD	Peripheral arterial disease
PAP	Papanicolaou
PCOS	Polycystic ovary syndrome
PCR	Polymerase chain reaction
PE	Pulmonary embolism
PET	Positron emission tomography
PFT	Pulmonary function test
PID	Pelvic inflammatory disease
PMS	Premenstrual syndrome
PPD	Purified protein derivative
PRN	As needed (from the Latin *pro re nata*)
PSA	Prostate-specific antigen
PT	Prothrombin time
PTCA	Percutaneous transluminal coronary angioplasty
PTH	Parathyroid hormone
PTT	Partial thromboplastin time

Abbreviation	Full form
PUD	Peptic ulcer disease
PVC	Premature ventricular contraction
QID	Four times a day; prescription shorthand that should be avoided when possible
RA	Rheumatoid arthritis; may have other meanings depending on context
RAST	Radioallergosorbent test
RBC	Red blood cell
RCT	Randomized controlled trial
REM	Rapid eye movement
RLS	Restless legs syndrome
RNA	Ribonucleic acid
RSV	Respiratory syncytial virus
Rx	Prescription or treatment, depending on context
SaO2	Arterial oxygen saturation
SARS-CoV-2	Severe acute respiratory syndrome coronavirus 2
SIDS	Sudden infant death syndrome
SLE	Systemic lupus erythematosus
SOB	Shortness of breath
SSRI	Selective serotonin reuptake inhibitor
STD	Sexually transmitted disease; sexually transmitted infection is preferred in current usage
STI	Sexually transmitted infection
T3	Triiodothyronine
T4	Thyroxine; commonly referring to tetraiodothyronine
TAH	Total abdominal hysterectomy
TB	Tuberculosis
TIA	Transient ischemic attack
TIBC	Total iron-binding capacity
TID	Three times a day; prescription shorthand that should be avoided when possible
TMJ	Temporomandibular joint
TORCH	Toxoplasmosis, other infections, rubella, cytomegalovirus, and herpes simplex; a group of congenital-infection evaluations
TSH	Thyroid-stimulating hormone
TURP	Transurethral resection of the prostate
URI	Upper respiratory infection
UTI	Urinary tract infection
VSD	Ventricular septal defect
WBC	White blood cell
WDWN	Well-developed, well-nourished
WNL	Within normal limits; a finding is within the expected reference range or clinical appearance
WHO	World Health Organization
XRT	Radiotherapy

A.C. A prescription abbreviation meaning "before meals," from the Latin *ante cibum*.

ALA An abbreviation for alpha-linolenic acid, an essential omega-3 fatty acid, or aminolevulinic acid, a heme-pathway compound used topically in some photodynamic treatments; context determines the meaning.

AP An abbreviation commonly meaning anteroposterior, or directed from front to back; in some contexts it may have another medical expansion.

ATM An abbreviation that may mean the temporomandibular joint or ataxia-telangiectasia mutated, a protein kinase involved in DNA-damage repair; context determines the meaning.

BF Physician's shorthand for Black female; demographic abbreviations should be used cautiously and replaced with precise, patient-preferred language when possible.

BPD An abbreviation commonly meaning bronchopulmonary dysplasia, chronic lung disease after premature birth; it can also mean borderline personality disorder in psychiatric contexts.

CA A medical abbreviation that may mean cancer, carcinoma, or calcium; the intended meaning depends on the surrounding clinical context.

CKD Abbreviation for Chronic Kidney Disease: a long-term condition in which the kidneys gradually lose their ability to filter waste products, excess minerals, and fluids from the blood.

CLA An abbreviation that commonly means conjugated linoleic acid, a group of fatty-acid isomers; in other medical contexts it may have a different expansion.

CTG Abbreviation for cardiotocography; continuous electronic monitoring of fetal heart rate and uterine contractions during labour.

CVA An abbreviation for cerebrovascular accident, meaning a stroke caused by interruption of blood flow to the brain or bleeding within the brain. It may cause sudden neurologic deficits.

CVS An abbreviation that may mean cardiovascular system or chorionic-villus sampling, a prenatal diagnostic procedure; context determines the meaning.

DDAVP The abbreviation for desmopressin, a synthetic vasopressin-like medicine used for some bleeding disorders, central diabetes insipidus, and nighttime urination.

DES An abbreviation that may mean diethylstilbestrol, a synthetic estrogen, or drug-eluting stent; diethylstilbestrol exposure during pregnancy is associated with later reproductive and cancer risks.

DHHS The abbreviation for the U.S. Department of Health and Human Services.

DNR An abbreviation for do-not-resuscitate, indicating that cardiopulmonary resuscitation should not be attempted if breathing or heartbeat stops.

DNS An abbreviation that may mean deviated nasal septum or dextrose in normal saline; the intended expansion depends on the clinical context.

DPT An older abbreviation for the combined diphtheria, pertussis, and tetanus vaccine; current formulations include DTaP and Tdap.

DT An abbreviation that may mean delirium tremens or diphtheria–tetanus vaccine; the intended meaning depends on context.

DTC An abbreviation that may mean differentiated thyroid carcinoma or direct-to-consumer, such as direct-to-consumer genetic testing; the intended meaning depends on context.

DTP An older abbreviation for diphtheria, tetanus, and pertussis vaccine; current childhood formulations are generally called DTaP.

DV An abbreviation that may mean domestic violence, ductus venosus, or another context-specific term; the full expression should be specified.

DYS An abbreviation or word root related to dysplasia, dystonia, dyslexia, or another condition beginning with dys-; the intended meaning depends on context.

EC An abbreviation that may mean enteric-coated, emergency contraception, or endothelial cell; the intended meaning depends on context.

EFT An abbreviation whose medical meaning depends on context, such as endocrine-function testing or emotional freedom technique; the intended expansion should be specified.

ENT Abbreviation for ear, nose, and throat; it commonly refers to the otolaryngology specialty or an otolaryngologist.

EOS Commonly an abbreviation for eosinophils or an eosinophil count in laboratory reports; the intended meaning should be confirmed from the report's context.

EPA Abbreviation for eicosapentaenoic acid, an omega-3 polyunsaturated fatty acid found in oily fish and fish-oil supplements.

EPR Abbreviation for electrophrenic respiration, also called diaphragm pacing, in which electrical stimulation helps activate the diaphragm in selected patients with respiratory muscle paralysis.

EPT Abbreviation for estrogen/progestin therapy, treatment using both an estrogen and a progestin, commonly discussed in menopausal hormone therapy when the uterus is present.

ER Abbreviation for emergency room or emergency department, the hospital service that evaluates and treats urgent illness and injury.

FCC In medicine, an abbreviation for familial colorectal cancer; in other contexts it may have nonmedical meanings.

FFI Abbreviation for fatal familial insomnia, a rare inherited prion disease causing progressively severe insomnia, autonomic dysfunction, and neurologic decline.

FISH Abbreviation for fluorescence in situ hybridization, a test that uses fluorescent DNA probes to detect specific genes, chromosomes, or chromosomal rearrangements in cells.

FLAP Abbreviation for 5-lipoxygenase-activating protein, a protein encoded by *ALOX5AP* that helps produce leukotrienes involved in inflammation.

GALT Abbreviation for gut-associated lymphoid tissue, immune tissue in the gastrointestinal tract that samples intestinal contents and helps defend against pathogens.

GBV-C Abbreviation for GB virus C, also called human pegivirus, a blood-borne virus that can persist in people but is not established as a cause of chronic hepatitis.

GD In the RxList medical-dictionary context, abbreviation for Gaucher disease, an inherited lysosomal storage disorder caused by deficient glucocerebrosidase.

GI Abbreviation for gastrointestinal, relating to the digestive tract from the mouth through the anus and its associated organs.

GPO Abbreviation for group purchasing organization, an organization that combines buyers' purchasing power to negotiate prices and contracts for medicines, supplies, or services.

HAART Abbreviation for highly active antiretroviral therapy, an older term for combination antiretroviral treatment used to suppress HIV replication and preserve immune function.

HAPE Abbreviation for high-altitude pulmonary edema, a life-threatening accumulation of fluid in the lungs after rapid ascent; immediate descent and supplemental oxygen are urgent treatments.

HAV Abbreviation for hepatitis A virus, an RNA virus spread mainly by the fecal–oral route that causes acute hepatitis but usually does not cause chronic infection.

HBV Abbreviation for hepatitis B virus, a DNA virus transmitted through infected blood or body fluids that can cause acute or chronic hepatitis and cirrhosis or liver cancer.

HEPA Abbreviation for high-efficiency particulate air, describing a filter designed to remove a very high proportion of airborne particles of specified sizes from an air stream.

HGD Commonly an abbreviation for high-grade dysplasia, a marked abnormality of cell development that may be a precursor to invasive cancer but is not itself invasive cancer.

HNP Abbreviation for herniated nucleus pulposus, in which the inner material of an intervertebral disk protrudes through the outer ring and may compress a nerve root.

HPS Common medical abbreviations include hantavirus pulmonary syndrome, a severe respiratory illness, and Hermansky–Pudlak syndrome, an inherited disorder with oculocutaneous albinism and platelet-storage abnormalities; context determines the meaning.

HS Commonly an abbreviation for hereditary spherocytosis, an inherited hemolytic anemia; it can also mean half-strength, heart sounds, hamstrings, heparan sulfate, hernia sac, or house surgeon, so context is essential.

HSA Abbreviation that may mean a US health savings account or human serum albumin, the main plasma protein that helps maintain oncotic pressure; context determines the meaning.

ICU Abbreviation for intensive care unit, a hospital unit providing continuous monitoring and specialized support for critically ill patients.

ID A context-dependent abbreviation that may mean infectious disease, infectious diseases specialist, intellectual disability, or identification; the surrounding clinical text determines the meaning.

IFA Abbreviation for indirect fluorescent antibody, a laboratory method that detects antibodies or antigens using fluorescent labels, commonly in serologic testing.

IHS Abbreviation for the Indian Health Service, a US federal agency providing health services to American Indians and Alaska Native people and communities.

IPT Abbreviation for interpersonal therapy, a structured psychotherapy that focuses on relationships, grief, role transitions, and interpersonal difficulties.

IPV Abbreviation for inactivated polio vaccine, an injectable vaccine containing killed poliovirus and used to prevent poliomyelitis.

IQ Abbreviation for intelligence quotient, a standardized score from cognitive testing; it describes performance on specified tests and is not a complete measure of a person's abilities or worth.

ITC Abbreviation for in-the-canal, describing a hearing aid or other device positioned within the ear canal.

ITN Abbreviation for insecticide-treated bednet, a net treated with insecticide to reduce mosquito bites and malaria transmission.

IVC Commonly abbreviation for inferior vena cava, the large vein returning blood from the lower body to the heart; it can also mean intravenous cholangiogram, an X-ray study of the biliary system.

JIP Abbreviation for juvenile intestinal polyposis, an inherited condition in which children develop multiple hamartomatous polyps in the gastrointestinal tract and may have increased cancer risk.

KB In medical usage, an abbreviation for keratoderma blennorrhagicum or kilobase of DNA; lower-case *kb* is preferred for kilobase, so context is important.

KUB Abbreviation for kidney, ureter, and bladder, commonly referring to a plain abdominal X-ray used to assess urinary tract calculi, bowel gas patterns, or other abdominal findings.

L Abbreviation for liter, a metric unit of volume equal to 1,000 milliliters.

LAVH Abbreviation for laparoscopically assisted vaginal hysterectomy, removal of the uterus through the vagina with laparoscopic assistance.

LL Commonly an abbreviation for lower lid of the eye or lower limit; the intended meaning depends on the clinical context.

LLL Abbreviation for the left lower lobe of the lung.

LLQ Abbreviation for left lower quadrant, usually referring to the lower-left quarter of the abdomen.

LMP Abbreviation for last menstrual period, the first day of the most recent menstrual bleeding, used in estimating gestational age when the date is reliable.

LPA LPA abbreviates Little People of America and may also refer to the left pulmonary artery.

LUL Abbreviation for the left upper lobe of the lung.

LUQ Abbreviation for the left upper quadrant of the abdomen.

LVF Abbreviation for left ventricular failure, meaning failure of the left side of the heart; it may also mean left ventricular function, depending on context.

MAOI Abbreviation for monoamine oxidase inhibitor, a drug that inhibits monoamine oxidase and is used in selected treatment of depression and other disorders.

MAP Common abbreviation for *Mycobacterium avium* subspecies *paratuberculosis*, an organism of the *M. avium* complex; the abbreviation can have other meanings in different clinical contexts.

MCD An abbreviation with several medical meanings, including minimal change disease, mean corpuscular diameter, and medullary cystic disease; the intended meaning depends on context.

MCP Membrane cofactor protein, also called CD46, is a cell-surface protein that regulates complement activation and helps protect host cells from complement-mediated injury; the abbreviation can have other meanings in different contexts.

MDI An abbreviation that may mean metered-dose inhaler, multiple daily injections, or mental developmental index; the intended meaning depends on context.

MEDVAC Abbreviation for medical evacuation: the transport of ill or injured people to a medical facility or to a location providing a higher level of care.

MI Abbreviation for myocardial infarction, or heart attack: death of heart-muscle tissue caused by prolonged inadequate blood flow, usually from acute coronary artery blockage.

MM An abbreviation that may mean meningomyelocele, malignant melanoma, or multiple myeloma; in lowercase, *mm* commonly means millimeter. The intended meaning depends on context.

MP Abbreviation for mercaptopurine, a purine-antimetabolite drug, or for molecular pathology; the intended meaning depends on context.

MPS Abbreviation for mucopolysaccharidosis, a group of inherited lysosomal storage disorders caused by deficient breakdown of glycosaminoglycans.

MSG Abbreviation for monosodium glutamate, the sodium salt of glutamic acid used as a flavor enhancer and contributing umami taste.

MTX Abbreviation for methotrexate, a folate-antagonist drug used in selected cancers, autoimmune diseases, and other conditions.

MVP Abbreviation for mitral valve prolapse, in which one or both mitral-valve leaflets bow into the left atrium during ventricular systole; it is often mild but can sometimes cause mitral regurgitation or arrhythmias.

MYH MYH is a gene-family abbreviation involving myosin or DNA-repair proteins; the specific gene and variant determine the clinical meaning.

ND ND is a context-dependent abbreviation that may mean naturopathic doctor, neurodevelopmental, or another term; the full meaning should be specified.

NEP NEP is a context-dependent abbreviation that may mean neuroendocrine pancreatic tumor, nasoendotracheal procedure, or another clinical term.

NF NF is a context-dependent abbreviation, including neurofibromatosis, a group of genetic disorders causing nerve-sheath tumors and other features.

NG NG commonly means nasogastric, referring to a tube passed through the nose into the stomach, but the abbreviation has other uses.

NS NS is a context-dependent abbreviation, commonly normal saline, a sterile sodium-chloride solution, or not significant; the full term should be stated.

OB OB is an abbreviation commonly meaning obstetrics, the care of pregnancy, labor, birth, and the postpartum period, but it may have other meanings.

OBS OBS is a context-dependent abbreviation that may mean observation, obstetric service, or organic brain syndrome; the intended term should be written out.

OCG OCG is a context-dependent abbreviation that may refer to oral contraceptive guidance, oculocardiac testing, or another clinical term; the full term should be specified.

OMS An abbreviation for oral and maxillofacial surgery; the intended meaning depends on the clinical context.

PAP PAP is an abbreviation with context-dependent meanings, including Papanicolaou testing, pulmonary alveolar proteinosis, or prostatic acid phosphatase; the full term should be specified.

PAS PAS is an abbreviation that may mean periodic-acid–Schiff staining, para-aminosalicylic acid, or pulmonary-artery systolic pressure; context determines the meaning.

PAT PAT is a context-dependent abbreviation that may refer to paroxysmal atrial tachycardia, a rapid rhythm beginning in the atria, or another clinical term.

PCA PCA is a context-dependent abbreviation, commonly meaning patient-controlled analgesia, in which a patient activates prescribed doses from an infusion device.

PCT PCT is a context-dependent abbreviation that may mean procalcitonin, porphyria cutanea tarda, or patient-care technician; the full term should be specified.

PDR PDR commonly means Physicians' Desk Reference, a drug-information reference, but the abbreviation has other uses and should be interpreted in context.

PEP PEP is a context-dependent abbreviation, including post-exposure prophylaxis, a preventive medicine course after a possible infection exposure.

PHS PHS is an abbreviation whose meaning depends on context, including public health service or primary hyperhidrosis; the full term should be specified.

PI PI is a context-dependent abbreviation, including principal investigator, pulmonary insufficiency, or protease inhibitor; the intended meaning must be specified.

PLP PLP commonly means pyridoxal 5′-phosphate, the active coenzyme form of vitamin B6 required by many enzymes, but the abbreviation has other uses.

PMD PMD is a context-dependent abbreviation, including Pelizaeus–Merzbacher disease, a rare inherited disorder of central myelination, or a professional medical designation.

PON PON is a context-dependent abbreviation that may refer to postoperative nausea, paraoxonase, or another clinical term; the full meaning should be stated.

PTU PTU is the abbreviation for propylthiouracil, an antithyroid medicine used selectively because of liver toxicity and other safety considerations.

PV PV is a context-dependent abbreviation, including polycythemia vera, plasma volume, or peripheral vision; the full term should be specified.

PVB PVB is a context-dependent abbreviation that may mean paravertebral block, a regional anesthetic technique, or another medical term.

PX PX is a context-dependent abbreviation that may mean prognosis, patient, prescription, or a genetic marker; clinical documentation should spell out the intended term.

Q.2H A prescription abbreviation meaning "every 2 hours." Medication instructions should use clear wording because abbreviation misinterpretation can cause dosing errors.

Q.3H. A prescription abbreviation meaning "every 3 hours." Medication instructions should use clear wording because abbreviation misinterpretation can cause dosing errors.

Q.S. A prescription abbreviation from the Latin "quantum sufficiat," meaning "quantity sufficient" to make the required amount or concentration. The exact quantity must be specified by the formulation or prescription context.

R/O R/O is an abbreviation for rule out, indicating that a condition is being considered but has not been confirmed; clear documentation should state the actual diagnostic question.

RAD Acronym whose medical meaning depends on context, commonly radiation absorbed dose or right axis deviation on an ECG.

RBC RBC is the abbreviation for red blood cell, the cell that transports oxygen with hemoglobin and carries carbon dioxide back toward the lungs.

RF RF is a context-dependent abbreviation, including rheumatoid factor, radiofrequency, or risk factor; the complete term should be stated.

RLL RLL is the abbreviation for right lower lobe, usually referring to the lower lobe of the right lung.

RLQ RLQ is the abbreviation for right lower quadrant of the abdomen, containing structures including the appendix, cecum, and right adnexa.

RML RML is the abbreviation for right middle lobe, the middle lobe of the right lung.

RP RP is a context-dependent abbreviation, commonly retinitis pigmentosa, an inherited retinal degeneration causing night blindness and progressive visual-field loss.

RUQ RUQ is the abbreviation for right upper quadrant of the abdomen, containing the liver, gallbladder, duodenum, and portions of bowel and kidney.

SGOT SGOT is the former abbreviation for AST, an enzyme measured in blood that can rise with injury to liver, heart, muscle, or other tissues.

SGPT SGPT is the former abbreviation for ALT, a liver-associated enzyme that rises in many forms of hepatocellular injury.

SHP SHP is a context-dependent abbreviation that may refer to a healthcare professional, a gene or protein, or another clinical term; the full meaning should be specified.

SLV SLV is a context-dependent abbreviation that may mean single-lung ventilation, serum lithium value, or another term; the full meaning should be specified.

STD(S) Abbreviation for sexually transmitted disease(s), now often called sexually transmitted infections.

STS STS is a context-dependent abbreviation that may mean soft-tissue sarcoma, sodium thiosulfate, or another clinical term; the full term should be stated.

TMR TMR is a context-dependent abbreviation, including targeted muscle reinnervation, a surgical technique used to improve control of a prosthesis and reduce amputation pain.

TPA/TPA Abbreviation for tissue plasminogen activator.

TSD TSD is a context-dependent abbreviation that may mean total sleep deprivation, traumatic stress disorder, or another clinical term; the full term should be specified.

TSE TSE is a context-dependent abbreviation, including transmissible spongiform encephalopathy, the prion-disease group that includes Creutzfeldt-Jakob disease.

UL UL is a context-dependent abbreviation that may mean upper limit, ulnar or ulna-related, or another clinical term; the full meaning should be specified.

URG URG is a context-dependent abbreviation that may refer to urinary urgency or an urgent clinical priority; documentation should state the full term.

URTI Abbreviation for upper respiratory tract infection, commonly involving the nose, sinuses, pharynx, or larynx and often caused by viruses.

VD Abbreviation for venereal disease, an older term for a sexually transmitted infection.

WBS Abbreviation for Williams–Beuren syndrome, a genetic condition associated with characteristic facial features, developmental differences, and cardiovascular disease. In other clinical contexts, WBS may have a different meaning, so the full term should be specified.

Modern Terms

Old or obsolete term	Modern or preferred term
Acute renal failure	Acute kidney injury
Adult-onset diabetes mellitus	Type 2 diabetes mellitus
Ague	Malaria; a historical term for intermittent fever, usually associated with malaria
Apoplexy	Stroke or intracerebral haemorrhage, depending on the historical context
Arteriosclerosis obliterans	Peripheral arterial disease
Bright's disease	Glomerular kidney disease; the specific modern diagnosis should be stated when known
Chronic renal failure	Chronic kidney disease
Congestive heart failure	Heart failure
Consumption	Tuberculosis, especially pulmonary tuberculosis
Crippling arthritis	Disabling arthritis; describe the functional limitation specifically
Diabetic retinopathy, background	Mild or nonproliferative diabetic retinopathy, with severity stated
Dropsy	Oedema or fluid accumulation, with the affected site specified
Eclampsia toxemia	Preeclampsia or eclampsia, depending on the clinical condition
Essential hypertension	Primary hypertension
Fallopian tube	Uterine tube; fallopian tube remains an accepted anatomical term
Female hysteria	No single modern diagnosis; reassess using the presenting symptoms and an appropriate diagnosis
Gastric ulcer disease	Peptic ulcer disease, with the ulcer site specified
Heart attack	Myocardial infarction in formal medical usage
Herpes zoster	Shingles in common language; herpes zoster remains the preferred medical term
Hyperlipaemia	Hyperlipidaemia
Idiopathic thrombocytopenic purpura	Immune thrombocytopenia
Imbecile	Intellectual disability; the historical term is offensive and must not be used clinically
Insulin-dependent diabetes mellitus	Type 1 diabetes mellitus
Junkie's abscess	Injection-related abscess or skin and soft-tissue infection
Leprosy	Hansen disease; leprosy remains a recognized medical term, but person-first language is preferred

Old or obsolete term	Modern or preferred term
Manic depression	Bipolar disorder
Mongolism	Down syndrome; the historical term is unacceptable and must not be used
Multiple personality disorder	Dissociative identity disorder
Non-insulin-dependent diabetes mellitus	Type 2 diabetes mellitus
Old age dementia	Dementia or major neurocognitive disorder, with the cause specified when known
Palsy	Paralysis or the specific neurological disorder, depending on the context
Paralytic stroke	Stroke with paralysis; specify the neurological deficit and stroke type
Phthisis	Pulmonary tuberculosis; historically, progressive wasting disease
Senile dementia	Dementia or major neurocognitive disorder; age alone should not define the diagnosis
Senility	Cognitive impairment, dementia, or another specific diagnosis, after assessment
Spastic colon	Irritable bowel syndrome
Stomach flu	Acute gastroenteritis
Sunstroke	Heatstroke
Terminal illness	Advanced or life-limiting illness, with the diagnosis and prognosis specified
Toxemia of pregnancy	Preeclampsia or eclampsia
Venereal disease	Sexually transmitted infection
Wassermann reaction	A modern syphilis serologic test, such as a nontreponemal or treponemal test
Water on the brain	Hydrocephalus

Medical Specialties

Medical specialty	Principal area of practice
Allergy and Immunology	Allergic disease, asthma, immune deficiency, and immune-mediated disorders
Anesthesiology	Perioperative care, anesthesia, critical care, and pain medicine
Cardiology	Diseases of the heart and circulatory system
Cardiothoracic Surgery	Surgical treatment of diseases of the heart, lungs, and chest
Clinical Genetics	Diagnosis, counseling, and management of inherited and genomic disorders
Clinical Pharmacology	Effects, uses, interactions, and safe clinical use of medicines
Colon and Rectal Surgery	Surgical treatment of diseases of the colon, rectum, and anus
Critical Care Medicine	Assessment and treatment of life-threatening organ dysfunction
Dermatology	Diseases of the skin, hair, nails, and mucous membranes
Emergency Medicine	Immediate assessment and treatment of acute illness and injury
Endocrinology	Hormones, metabolism, diabetes, and endocrine glands
Family Medicine	Comprehensive continuing care for individuals and families of all ages
Forensic Medicine	Application of medical knowledge to legal and medicolegal questions
Gastroenterology	Diseases of the digestive tract, liver, gallbladder, and pancreas
General Practice	First-contact and continuing medical care across a broad range of conditions
General Surgery	Operative treatment of diseases involving multiple body systems
Geriatric Medicine	Health care of older adults, including multimorbidity and functional decline
Hematology	Blood cells, blood-forming organs, clotting, and blood disorders
Hepatology	Diseases of the liver and biliary system
Hospital Medicine	Comprehensive medical care of hospitalized adults
Infectious Disease Medicine	Diagnosis, treatment, and prevention of infections
Internal Medicine	Prevention, diagnosis, and treatment of adult medical disorders
Interventional Cardiology	Catheter-based diagnosis and treatment of cardiovascular disease
Interventional Radiology	Image-guided minimally invasive diagnosis and treatment
Medical Oncology	Systemic treatment and supportive care for cancer
Neonatology	Care of newborn infants, especially premature or critically ill infants
Nephrology	Diseases of the kidneys, fluid balance, electrolytes, and hypertension
Neurology	Diseases of the brain, spinal cord, peripheral nerves, and muscles

Medical specialty	Principal area of practice
Neurosurgery	Surgical treatment of disorders of the nervous system
Nuclear Medicine	Diagnosis and treatment using radioactive substances and molecular imaging
Obstetrics and Gynecology	Pregnancy, childbirth, and diseases of the female reproductive system
Occupational Medicine	Health, safety, and disease prevention in the workplace
Ophthalmology	Medical and surgical care of the eyes and visual system
Oral and Maxillofacial Surgery	Surgical treatment of diseases and injuries of the mouth, jaws, face, and neck
Orthopedic Surgery	Surgical and nonsurgical treatment of the musculoskeletal system
Otolaryngology–Head and Neck Surgery	Diseases and surgery of the ear, nose, throat, and head and neck
Pain Medicine	Assessment and treatment of acute, chronic, and cancer-related pain
Palliative Medicine	Relief of symptoms and support for people with serious or life-limiting illness
Pathology	Laboratory examination of tissues, cells, blood, and body fluids
Pediatric Surgery	Surgical care of infants, children, and adolescents
Pediatrics	Medical care of infants, children, and adolescents
Physical Medicine and Rehabilitation	Restoration of function and independence after illness or injury
Plastic and Reconstructive Surgery	Reconstruction, restoration, and alteration of body tissues
Preventive Medicine	Prevention of disease and promotion of health in individuals and populations
Psychiatry	Diagnosis and treatment of mental, emotional, and behavioral disorders
Public Health Medicine	Protection and improvement of population health
Pulmonary Medicine	Diseases of the lungs and respiratory system
Radiation Oncology	Use of ionizing radiation to treat cancer
Radiology	Diagnostic and image-guided evaluation of disease
Reproductive Endocrinology and Infertility	Hormonal and reproductive disorders and fertility care
Rheumatology	Autoimmune, inflammatory, and musculoskeletal disorders
Sleep Medicine	Sleep disorders and their effects on health
Sports Medicine	Prevention, diagnosis, treatment, and rehabilitation of activity-related conditions
Thoracic Surgery	Surgery of the chest, lungs, esophagus, and mediastinum
Transfusion Medicine	Collection, testing, processing, and clinical use of blood components
Trauma Surgery	Surgical management of serious and complex injuries
Urology	Diseases of the urinary tract and male reproductive system
Vascular Surgery	Surgical and endovascular treatment of blood-vessel disease

Human Organs

This reference maps individual organ headwords to related entries in the dictionary. Each headword is followed by a semicolon-separated list of related dictionary terms.

Adrenal Gland
Adrenal Gland; Addison's Disease; Cushing's Syndrome; Pheochromocytoma; Adrenaline.

Appendix
Appendix; Appendicitis; Appendectomy.

Bladder
Bladder; Cystitis; Urinary Retention; Bladder Cancer.

Brain
Brain; Brain Tumour; Stroke; Seizure; Meningitis; Cerebral Palsy; Parkinson's Disease.

Breast
Breast; Breast Cancer; Mastitis; Mammography.

Cervix
Cervix; Cervical Cancer; Cervicitis; Pap Smear.

Colon
Colon; Colitis; Constipation; Diarrhea; Colorectal Cancer; Colonoscopy.

Ear
Ear; Otitis Media; Tinnitus; Hearing Loss; Vertigo.

Esophagus
Esophagus; Dysphagia; Esophagitis; Achalasia; Gastroesophageal Reflux Disease.

Eye
Eye; Cataract; Glaucoma; Conjunctivitis; Retinal Detachment; Macular Degeneration.

Gallbladder
Gallbladder; Cholelithiasis; Cholecystitis; Bile Duct; Cholangiocarcinoma.

Heart
Heart; Heart Failure; Arrhythmia; Myocardial Infarction; Pericarditis; Congenital Heart Defect.

Kidney
Kidney; Acute Kidney Injury; Chronic Kidney Disease; Glomerulonephritis; Nephritis; Dialysis.

Liver
Liver; Hepatitis; Cirrhosis; Fatty Liver Disease; Jaundice; Portal Hypertension.

Lung
Lung; Asthma; COPD; Pneumonia; Bronchitis; Pulmonary Embolism; Pleural Effusion.

Mouth
Mouth; Dental Caries; Gingivitis; Periodontitis.

Nose
Nose; Sinusitis; Rhinitis; Nasal Polyps; Anosmia; Epistaxis.

Ovary
Ovary; Ovarian Cyst; Ovarian Cancer; Fallopian Tube; Ectopic Pregnancy.

Pancreas
Pancreas; Pancreatitis; Diabetes Mellitus; Pancreatic Cancer; Insulin.

Pituitary Gland
Pituitary Gland; Pituitary Tumor; Acromegaly; Diabetes Insipidus.

Prostate
Prostate; Benign Prostatic Hyperplasia; Prostatitis; Prostate Cancer.

Rectum
Rectum; Rectal Bleeding; Proctitis; Rectal Cancer.

Skin
Skin; Dermatitis; Eczema; Psoriasis; Cellulitis; Pressure Ulcer; Melanoma.

Small Intestine
Small Intestine; Enteritis; Celiac Disease; Malabsorption; Intestinal Obstruction.

Spinal Cord
Spinal Cord; Spinal Cord Injury; Myelitis; Spinal Stenosis; Paraplegia.

Spleen
Spleen; Splenomegaly; Splenectomy; Hypersplenism.

Stomach
Stomach; Gastritis; Peptic Ulcer Disease; Gastroesophageal Reflux Disease; Gastric Cancer.

Testis
Testis; Testicular Torsion; Testicular Cancer; Epididymis.

Thymus
Thymus; Thymoma.

Thyroid Gland
Thyroid Gland; Hyperthyroidism; Hypothyroidism; Goitre; Thyroid Cancer.

Ureter
Ureter; Ureteral Calculi; Ureteral Obstruction; Ureteritis; Ureteral Stricture.

Urethra
Urethra; Urethral Stricture; Urethritis; Urethral Obstruction.

Uterus
Uterus; Endometriosis; Fibroids; Uterine Cancer; Ectopic Pregnancy.

Vagina
Vagina; Vaginitis; Vaginal Discharge; Vaginal Cancer.

Common Diseases

Scope: This reference-oriented list organizes common human diseases by organ system and clinical domain. It is a curated, high-importance list rather than a prevalence ranking, and some diseases appear under more than one heading where they are clinically relevant to several systems. It is not an exhaustive index of every term in the dictionary. Entries named as syndromes are covered in the companion appendix, Common Syndromes; conditions conventionally classified as disorders are covered in Common Disorders; and clinical findings, lesions, congenital anomalies, and injuries are covered in their own companion appendices. Individual symptoms, signs, and laboratory findings are defined as dictionary entries rather than listed here.

Cardiovascular Diseases Hypertension; Coronary Artery Disease; Stable Angina; Unstable Angina; Myocardial Infarction; Atherosclerosis; Heart Failure; Right Heart Failure; Cardiogenic Shock; Atrial Fibrillation; Atrial Flutter; Supraventricular Tachycardia; Ventricular Tachycardia; Ventricular Fibrillation; Sinus Bradycardia; Heart Block; Cardiomyopathy; Dilated Cardiomyopathy; Hypertrophic Cardiomyopathy; Restrictive Cardiomyopathy; Myocarditis; Pericarditis; Cardiac Tamponade; Endocarditis; Rheumatic Heart Disease; Aortic Stenosis; Aortic Regurgitation; Mitral Stenosis; Mitral Regurgitation; Mitral Valve Prolapse; Tricuspid Valve Disease; Pulmonary Hypertension; Peripheral Artery Disease; Aortic Aneurysm; Aortic Dissection; Deep Vein Thrombosis; Chronic Venous Insufficiency; Varicose Veins; Thrombophlebitis; Raynaud Phenomenon; Congenital Heart Disease.

Respiratory Diseases Asthma; Acute Bronchitis; Chronic Bronchitis; Emphysema; COPD; Pneumonia; Aspiration Pneumonia; Bronchopneumonia; Tuberculosis; COVID-19; Influenza; Bronchiolitis; Bronchiectasis; Cystic Fibrosis; Interstitial Lung Disease; Idiopathic Pulmonary Fibrosis; Pneumoconiosis; Silicosis; Asbestosis; Hypersensitivity Pneumonitis; Sarcoidosis; Pulmonary Edema; Pulmonary Embolism; Pulmonary Hypertension; Respiratory Failure; Pleurisy; Empyema; Lung Abscess; Occupational Lung Disease.

Gastrointestinal Diseases Gastroesophageal Reflux Disease; Esophagitis; Barrett Esophagus; Achalasia; Esophageal Spasm; Gastritis; Peptic Ulcer Disease; Gastric Ulcer; Duodenal Ulcer; Gastroenteritis; Diarrheal Disease; Gastroparesis; Crohn Disease; Ulcerative Colitis; Inflammatory Bowel Disease; Celiac Disease; Lactose Intolerance; Food Intolerance; Intestinal Obstruction; Ileus; Intussusception; Volvulus; Diverticulosis; Diverticulitis; Appendicitis; Peritonitis; Hemorrhoids; Anal Fissure; Anal Fistula; Rectal Prolapse; Mesenteric Ischemia.

Liver, Gallbladder & Biliary Diseases Metabolic Dysfunction-Associated Steatotic Liver Disease (MASLD); Alcoholic Liver Disease; Hepatitis A; Hepatitis B; Hepatitis C; Hepatitis D; Hepatitis E; Autoimmune Hepatitis; Acute Liver Failure; Chronic Liver Disease; Cirrhosis; Portal Hypertension; Hepatic Encephalopathy; Hemochromatosis; Wilson Disease; Primary Biliary Cholangitis; Primary Sclerosing Cholangitis; Cholelithiasis; Cholecystitis; Cholangitis.

Pancreatic Diseases Acute Pancreatitis; Chronic Pancreatitis; Autoimmune Pancreatitis; Pancreatic Insufficiency; Pancreatic Cancer; Pancreatic Neuroendocrine Tumors.

Kidney & Urinary Diseases Acute Kidney Injury; Chronic Kidney Disease; End-Stage Kidney Disease; Glomerulonephritis; Diabetic Nephropathy; Hypertensive Nephropathy; Interstitial Nephritis; Pyelonephritis; Urinary

Tract Infection; Cystitis; Urethritis; Nephrolithiasis; Hydronephrosis; Polycystic Kidney Disease; Renal Tubular Acidosis; IgA Nephropathy; Minimal Change Disease; Focal Segmental Glomerulosclerosis; Membranous Nephropathy; Vesicoureteral Reflux.

Endocrine Diseases Type 1 Diabetes Mellitus; Type 2 Diabetes Mellitus; Gestational Diabetes; Diabetes Insipidus; Diabetic Ketoacidosis; Hyperosmolar Hyperglycemic State; Hypothyroidism; Hyperthyroidism; Hashimoto Thyroiditis; Graves Disease; Thyroiditis; Goiter; Addison Disease; Cushing Disease; Primary Aldosteronism; Hypoparathyroidism; Hyperparathyroidism; Pheochromocytoma; Pituitary Adenoma; Acromegaly; Gigantism; Growth Hormone Deficiency.

Metabolic Diseases Obesity; Gout; Dyslipidemia; Hypercholesterolemia; Hypertriglyceridemia; Porphyria; Amyloidosis.

Nutritional Diseases & Deficiencies Protein-Energy Malnutrition; Marasmus; Kwashiorkor; Iron Deficiency; Iron-Deficiency Anemia; Vitamin A Deficiency; Thiamine Deficiency; Beriberi; Riboflavin Deficiency; Niacin Deficiency; Pellagra; Folate Deficiency; Vitamin B12 Deficiency; Vitamin C Deficiency; Scurvy; Vitamin D Deficiency; Rickets; Osteomalacia; Vitamin K Deficiency; Iodine Deficiency; Zinc Deficiency; Copper Deficiency; Selenium Deficiency; Magnesium Deficiency.

Neurological Diseases Tension-Type Headache; Cluster Headache; Status Epilepticus; Stroke; Ischemic Stroke; Hemorrhagic Stroke; Transient Ischemic Attack; Cerebral Aneurysm; Parkinson Disease; Alzheimer Disease; Vascular Dementia; Frontotemporal Dementia; Lewy Body Dementia; Multiple Sclerosis; Amyotrophic Lateral Sclerosis; Huntington Disease; Diabetic Neuropathy; Myasthenia Gravis; Bell Palsy; Trigeminal Neuralgia; Radiculopathy; Meningitis; Encephalitis; Hydrocephalus; Cerebral Palsy.

Musculoskeletal Diseases Osteoarthritis; Osteoporosis; Osteomalacia; Rheumatoid Arthritis; Ankylosing Spondylitis; Psoriatic Arthritis; Reactive Arthritis; Septic Arthritis; Gout; Bursitis; Tendinitis; Tendinopathy; Frozen Shoulder; Tennis Elbow; Golfer's Elbow; Cervical Spondylosis; Lumbar Spondylosis; Spinal Stenosis; Herniated Disc; Scoliosis; Kyphosis; Spondylolisthesis; Fibromyalgia; Muscular Dystrophy; Myositis; Polymyositis; Dermatomyositis.

Rheumatologic & Autoimmune Diseases Rheumatoid Arthritis; Systemic Lupus Erythematosus; Polymyalgia Rheumatica; Giant Cell Arteritis; Polyarteritis Nodosa; Granulomatosis with Polyangiitis; Microscopic Polyangiitis; Behçet Disease; Inflammatory Myopathies; Ankylosing Spondylitis; Psoriatic Arthritis; Reactive Arthritis; Relapsing Polychondritis; Adult-Onset Still Disease.

Skin, Hair & Nail Diseases Acne Vulgaris; Rosacea; Atopic Dermatitis; Contact Dermatitis; Seborrheic Dermatitis; Psoriasis; Urticaria; Angioedema; Impetigo; Cellulitis; Erysipelas; Folliculitis; Boils; Carbuncle; Ringworm; Athlete's Foot; Jock Itch; Candidiasis; Scabies; Pediculosis; Wart; Molluscum Contagiosum; Herpes Simplex; Herpes Zoster; Hidradenitis Suppurativa; Pressure Ulcers; Onychomycosis.

Eye Diseases Amblyopia; Strabismus; Cataract; Open-Angle Glaucoma; Angle-Closure Glaucoma; Conjunctivitis; Keratitis; Corneal Ulcer; Dry Eye; Uveitis; Iritis; Retinal Detachment; Diabetic Retinopathy; Hypertensive Retinopathy; Macular Degeneration; Retinitis Pigmentosa; Central Retinal Artery Occlusion; Central Retinal Vein Occlusion; Optic Neuritis; Keratoconus; Blepharitis.

Ear & Hearing Diseases Otitis Externa; Acute Otitis Media; Chronic Otitis Media; Otitis Media with Effusion; Mastoiditis; Presbycusis; Meniere Disease; Labyrinthitis; Vestibular Neuritis; Benign Paroxysmal Positional Vertigo; Otosclerosis; Cholesteatoma; Acoustic Neuroma.

Nose, Sinus & Throat Diseases Allergic Rhinitis; Nonallergic Rhinitis; Acute Sinusitis; Chronic Sinusitis; Pharyngitis; Streptococcal Pharyngitis; Tonsillitis; Peritonsillar Abscess; Laryngitis; Epiglottitis; Vocal Cord Paralysis.

Oral & Dental Diseases Dental Caries; Pulpitis; Dental Abscess; Gingivitis; Periodontitis; Pericoronitis; Aphthous Ulcer; Oral Candidiasis; Leukoplakia; Oral Lichen Planus.

Blood Diseases Iron-Deficiency Anemia; Megaloblastic Anemia; Vitamin B12 Deficiency Anemia; Folate-Deficiency Anemia; Aplastic Anemia; Hemolytic Anemia; Sickle Cell Disease; Thalassemia; Hereditary Spherocytosis; Glucose-6-Phosphate Dehydrogenase Deficiency; Polycythemia Vera; Immune Thrombocytopenia; Agranulocytosis; Hemophilia A; Hemophilia B; Von Willebrand Disease; Disseminated Intravascular Coagulation (DIC); Thrombotic Thrombocytopenic Purpura (TTP).

Immune-System Diseases Primary Immunodeficiency; Severe Combined Immunodeficiency; Common Variable Immunodeficiency; Selective IgA Deficiency; AIDS (Acquired Immunodeficiency Syndrome); HIV/AIDS; Chronic Granulomatous Disease; Graft-Versus-Host Disease.

Infectious & Parasitic Diseases Common Cold; Influenza; COVID-19; Measles; Mumps; Rubella; Chickenpox; Shingles; Herpes Simplex; Infectious Mononucleosis; Cytomegalovirus Infection; Polio; Rabies; Dengue; Chikungunya; Zika; Hepatitis A; Hepatitis B; Hepatitis C; Hepatitis D; Hepatitis E; HIV; Syphilis; Gonorrhea; Chlamydia; Tuberculosis; Leprosy; Diphtheria; Pertussis; Tetanus; Typhoid Fever; Cholera; Plague; Bacterial Meningitis; Meningococcemia; Scarlet Fever; Salmonellosis; Shigellosis; Campylobacteriosis; Botulism; Brucellosis; Leptospirosis; Lyme Disease; Malaria; Amebiasis; Giardiasis; Toxoplasmosis; Leishmaniasis; Trichomoniasis; Ascariasis; Hookworm; Pinworm Infection; Schistosomiasis; Taeniasis; Echinococcosis; Candidiasis; Aspergillosis; Cryptococcosis; Histoplasmosis.

Female Reproductive & Gynecological Diseases Endometriosis; Adenomyosis; Uterine Fibroids; Ovarian Torsion; Pelvic Inflammatory Disease; Vaginitis; Bacterial Vaginosis; Vulvovaginal Candidiasis; Vulvodynia; Pelvic Organ Prolapse; Female Infertility; Premature Ovarian Insufficiency.

Male Reproductive & Urological Diseases Male Infertility; Benign Prostatic Hyperplasia; Prostatitis; Epididymitis; Orchitis; Testicular Torsion; Cryptorchidism; Phimosis; Paraphimosis; Peyronie Disease; Balanitis; Hypogonadism.

Pregnancy & Postpartum Diseases Hyperemesis Gravidarum; Gestational Diabetes; Gestational Hypertension; Preeclampsia; Eclampsia; Puerperal Infection; Postpartum Endometritis; Postpartum Depression; Mastitis.

Pediatric & Neonatal Diseases Respiratory Distress Syndrome; Neonatal Sepsis; Birth Asphyxia; Necrotizing Enterocolitis; Diaper Rash; Croup; Bronchiolitis; Cerebral Palsy; Congenital Hypothyroidism; Kawasaki Disease; Rheumatic Fever; Hand-Foot-and-Mouth Disease.

Genetic & Chromosomal Diseases Cystic Fibrosis; Sickle Cell Disease; Thalassemia; Huntington Disease; Duchenne Muscular Dystrophy; Becker Muscular Dystrophy; Neurofibromatosis; Tuberous Sclerosis; Tay-Sachs Disease; Gaucher Disease; Achondroplasia; Hemochromatosis; Wilson Disease.

Cancers & Other Neoplasms Breast Cancer; Lung Cancer; Colorectal Cancer; Prostate Cancer; Cervical Cancer; Ovarian Cancer; Endometrial Cancer; Vulvar Cancer; Vaginal Cancer; Testicular Cancer; Penile Cancer; Bladder Cancer; Kidney Cancer; Thyroid Cancer; Oral Cancer; Oropharyngeal Cancer; Laryngeal Cancer; Esophageal Cancer; Stomach Cancer; Liver Cancer; Gallbladder Cancer; Pancreatic Cancer; Small-Intestinal Cancer; Anal Cancer; Melanoma; Basal-Cell Carcinoma; Squamous-Cell Carcinoma; Osteosarcoma; Ewing Sarcoma; Soft-Tissue Sarcoma; Glioma; Glioblastoma; Meningioma; Leukemia; Hodgkin Lymphoma; Non-Hodgkin Lymphoma; Multiple Myeloma; Neuroblastoma; Retinoblastoma.

Multisystem & Systemic Diseases Fibromyalgia; Sarcoidosis; Amyloidosis; Sepsis; Septic Shock.

Common Disorders

Scope: This reference-oriented list organizes human conditions conventionally classified as clinical disorders by medical specialty and organ system. In medical nomenclature, disorders represent disruptions to regular bodily structure or function (frequently functional, metabolic, neurobehavioral, or regulatory disturbances), complementing the disease classifications in Common Diseases and clinical signs in Common Syndromes. Every entity listed corresponds to a defined medical concept in the dictionary.

Mental & Behavioral Disorders Generalized Anxiety Disorder; Panic Disorder; Social Anxiety Disorder; Agoraphobia; Specific Phobia; Major Depressive Disorder; Persistent Depressive Disorder; Bipolar Disorder; Cyclothymic Disorder; Obsessive-Compulsive Disorder; Post-Traumatic Stress Disorder; Acute Stress Disorder; Attention-Deficit/Hyperactivity Disorder; Autism Spectrum Disorder; Schizophrenia; Schizoaffective Disorder; Delusional Disorder; Brief Psychotic Disorder; Eating Disorders; Alcohol Use Disorder; Opioid Use Disorder; Substance Abuse; Dissociative Identity Disorder; Depersonalization.

Personality Disorders Borderline Personality Disorder; Antisocial Personality Disorder; Narcissistic Personality Disorder; Avoidant Personality Disorder; Dependent Personality Disorder; Obsessive-Compulsive Personality Disorder; Paranoid Personality Disorder; Schizoid Personality Disorder; Schizotypal Personality Disorder; Histrionic Personality Disorder.

Eating & Nutrition Disorders Anorexia Nervosa; Bulimia Nervosa; Binge-Eating Disorder; Avoidant/Restrictive Food Intake Disorder; Pica; Rumination.

Impulse-Control & Conduct Disorders Intermittent Explosive Disorder; Kleptomania; Pyromania; Oppositional Defiant Disorder; Conduct Disorder; Trichotillomania; Excoriation Disorder.

Somatic & Related Disorders Somatic Symptom Disorder; Illness Anxiety Disorder; Conversion Disorder; Factitious Disorder.

Sleep-Wake Disorders Insomnia; Hypersomnia; Narcolepsy; Obstructive Sleep Apnea; Central Sleep Apnea; Sleepwalking; Night Terrors; Nightmare Disorder; REM Sleep Behavior Disorder; Restless Legs Syndrome; Delayed Sleep Phase.

Neurological & Movement Disorders Migraine; Cluster Headache; Tension-Type Headache; Epilepsy; Seizure Disorder; Essential Tremor; Parkinson's Disease; Dystonia; Chorea; Myoclonus; Tic Disorder; Tourette Disorder; Ataxia; Stiff-Person Syndrome.

Neurodevelopmental & Learning Disorders Intellectual Disability; Language Disorder; Stuttering; Specific Learning Disorder; Dyslexia; Developmental Coordination Disorder; Fetal Alcohol Spectrum Disorder.

Autonomic Disorders Dysautonomia; Postural Orthostatic Tachycardia Syndrome; Orthostatic Hypotension; Neurocardiogenic Syncope; Multiple System Atrophy; Autonomic Neuropathy.

Cardiovascular & Hemodynamic Disorders Heart Arrhythmia; Atrioventricular Block; Bundle Branch Block; Microvascular Angina; Cardiac Syndrome X; Orthostatic Intolerance.

Respiratory & Ventilatory Disorders Chronic Obstructive Pulmonary Disorder; Hypoventilation; Obesity Hypoventilation Syndrome; Pulmonary Fibrosis; Upper Airway Resistance Syndrome; Hyperventilation.

Digestive & Functional GI Disorders Irritable Bowel Syndrome; Functional Dyspepsia; Functional Constipation; Functional Diarrhea; Cyclic Vomiting Syndrome; Rumination; Achalasia; Diffuse Esophageal Spasm; Pelvic Floor Dysfunction; Gastroparesis.

Endocrine & Metabolic Disorders Hypothyroidism; Hyperthyroidism; Euthyroid Sick Syndrome; Hypopituitarism; Hyperprolactinemia; Adrenal Insufficiency; Cushing Syndrome; Hypoparathyroidism; Hyperparathyroidism; Polycystic Ovary Syndrome; Precocious Puberty; Delayed Puberty; Metabolic Syndrome.

Lipid & Inborn Metabolic Disorders Dyslipidemia; Hypercholesterolemia; Hypertriglyceridemia; Familial Hypercholesterolemia; Galactosemia; Phenylketonuria; Maple Syrup Urine Disease; Glycogen Storage Disease; Lysosomal Storage Disorders; Porphyria.

Electrolyte & Acid–Base Disorders Hyponatremia; Hypernatremia; Hypokalemia; Hyperkalemia; Hypocalcemia; Hypercalcemia; Hypomagnesemia; Hypermagnesemia; Hypophosphatemia; Hyperphosphatemia; Metabolic Acidosis; Metabolic Alkalosis; Respiratory Acidosis; Respiratory Alkalosis.

Bone Mineral Density Disorders Osteopenia; Osteoporosis; Osteomalacia; Renal Osteodystrophy; Fibrous Dysplasia; Paget Disease of Bone.

Musculoskeletal & Soft-Tissue Disorders Temporomandibular Joint Disorders; Rotator Cuff Tear; Rotator Cuff Injury; Herniated Disc; Degenerative Disc Disease; Myofascial Pain Syndrome; Tendinitis; Tendinopathy; Carpal Tunnel Syndrome; Cubital Tunnel Syndrome; Hypermobility Syndrome.

Blood & Coagulation Disorders Hemophilia A; Hemophilia B; Von Willebrand Disease; Thrombophilia; Glanzmann Thrombasthenia; Immune Thrombocytopenic Purpura; Aplastic Anemia; Myelodysplastic Syndrome.

Immune, Allergic & Eosinophilic Disorders Autoimmune Disease; Primary Immunodeficiency; Anaphylaxis; Angioedema; Mastocytosis; Eosinophilic Esophagitis; Eosinophilic Gastroenteritis.

Sexual Disorders Male Hypoactive Sexual Desire Disorder; Erectile Dysfunction; Premature Ejaculation; Delayed Ejaculation; Female Sexual Dysfunction; Female Orgasmic Disorder; Vaginismus; Dyspareunia; Gender Dysphoria.

Menstrual & Reproductive Disorders Dysmenorrhea; Amenorrhea; Abnormal Uterine Bleeding; Menorrhagia; Premenstrual Syndrome; Premenstrual Dysphoric Disorder; Anovulation; Premature Ovarian Insufficiency; Androgen Insensitivity Syndrome.

Urinary & Micturition Disorders Overactive Bladder; Urinary Incontinence; Stress Incontinence; Neurogenic Bladder; Urinary Retention; Bladder Outlet Obstruction.

Vision & Ocular Motility Disorders Refractive Disorder; Myopia; Hyperopia; Astigmatism; Presbyopia; Amblyopia; Strabismus; Color Vision Deficiency; Nystagmus; Dry Eye.

Hearing, Balance & Auditory Disorders Conductive Hearing Loss; Sensorineural Hearing Loss; Tinnitus; Auditory Processing Disorder; Benign Paroxysmal Positional Vertigo; Meniere Disease.

Speech, Language & Voice Disorders Language Disorder; Speech Disorder; Stuttering; Dysarthria; Apraxia; Aphasia; Voice Disorders; Dysphonia; Vocal Cord Dysfunction.

Hair, Nail & Pigmentation Disorders Alopecia; Alopecia Areata; Androgenetic Alopecia; Telogen Effluvium; Cicatricial Alopecia; Melasma; Vitiligo; Albinism.

Connective Tissue & Fascial Disorders Ehlers-Danlos Syndrome; Marfan Syndrome; Loeys-Dietz Syndrome; Mixed Connective Tissue Disease; Dupuytren Contracture; Plantar Fasciitis.

Mental Health Terms

Scope: This appendix groups commonly used mental-health terms for quick reference. It is an index, not a diagnostic or treatment guide. Preferred modern terms are used where an older or informal term may be misleading.

Foundations and assessment Acute; Affect; Chronic; Cognition; Diagnosis; Disorder; Distress; Functional Impairment; Mental Disorder; Mental Health; Mental Illness; Mood; Risk Factor; Syndrome.

Brain and nervous-system structures Amygdala; Axon; Brain; Brain Stem; Cerebellum; Cerebrum; Dendrite; Frontal Lobe; Gray Matter; Hippocampus; Hypothalamus; Limbic System; Locus Coeruleus; Myelin; Neuron; Neurotransmission; Neurotransmitter; Occipital Lobe; Parietal Lobe; Postsynaptic Membrane; Presynaptic Terminals; Receptor; Serotonin; Synapse; Temporal Lobe; Thalamus.

Common psychological and behavioral symptoms Anhedonia; Anxiety; Avolition; Cognitive Symptoms; Compulsions; Delusion; Euphoria; Obsessions; Panic Attack; Psychomotor Agitation; Psychomotor Retardation; Psychosis; Self-Harm; Stress; Trauma.

Anxiety, trauma, and obsessive-compulsive disorders Anxiety Disorders; Generalized Anxiety Disorder; Panic Disorder; Specific Phobia; Social Anxiety Disorder (Social Phobia); Separation Anxiety Disorder; Post-Traumatic Stress Disorder; Obsessive-Compulsive Disorder; Trichotillomania.

Mood disorders Bipolar Disorder; Bipolar II Disorder; Cyclothymic Disorder; Depression; Major Depressive Disorder; Major Depressive Episode; Persistent Depressive Disorder; Postpartum Depression; Seasonal Affective Disorder.

Psychotic and personality disorders Antisocial Personality Disorder; Borderline Personality Disorder; Narcissistic Personality Disorder; Personality Disorders; Brief Psychotic Disorder; Schizoaffective Disorder; Schizophrenia.

Neurodevelopmental and related conditions Conduct Disorder; Neurodevelopmental Disorders; Intellectual Disability; Neurocognitive Disorder; Functional Neurologic Disorder.

Psychiatric and psychological treatments Antidepressants; Antipsychotic Medicine; Atypical Antipsychotics; Benzodiazepine; Cognitive Behavioral Therapy; Dialectical Behavior Therapy; Electroconvulsive Therapy; Psychotherapy; Systematic Desensitization; Transcranial Magnetic Stimulation.

Care settings and professionals Community Mental-Health Treatment; Hospitalization; Psychiatry; Psychiatrist; Clinical Psychologist; Social Worker; Voluntary Psychiatric Admission.

Investigations and brain imaging Computed Tomography (CT); Electroencephalography; Functional MRI; Positron Emission Tomography; Single-Photon Emission Computed Tomography.

Suicide and safety terminology Suicidality; Suicide; Suicide Attempt; Suicidal Ideation; Suicidal Intent; Suicidal Plan; Suicide Risk Assessment.

Related scientific concepts Evidence-Based Practice; Neurosciences; Tolerance; Withdrawal.

Common Syndromes

Scope: This reference-oriented list organizes clinically significant medical syndromes by organ system and medical specialty. In medical terminology, a syndrome represents a characteristic constellation of concurrent signs, symptoms, or anatomical features that consistently occur together and point toward a common pathophysiological mechanism or etiology.

Cardiovascular Syndromes Acute Coronary Syndrome; Acute Aortic Syndrome; Sick Sinus Syndrome; Wolff–Parkinson–White Syndrome; Long QT Syndrome; Short QT Syndrome; Brugada Syndrome; Takotsubo Syndrome (Stress Cardiomyopathy); Eisenmenger Syndrome; Postural Orthostatic Tachycardia Syndrome (POTS); Postpericardiotomy Syndrome; Dressler Syndrome; Cardiac Syndrome X; Cardiorenal Syndrome.

Respiratory Syndromes Acute Respiratory Distress Syndrome (ARDS); Infant Respiratory Distress Syndrome; Obesity Hypoventilation Syndrome; Upper Airway Resistance Syndrome; Hepatopulmonary Syndrome; Acute Chest Syndrome; Kartagener Syndrome.

Gastrointestinal Syndromes Irritable Bowel Syndrome (IBS); Malabsorption Syndrome; Short Bowel Syndrome; Dumping Syndrome; Cyclic Vomiting Syndrome; Rumination Syndrome; Mallory–Weiss Syndrome; Zollinger–Ellison Syndrome; Boerhaave Syndrome; Afferent Loop Syndrome; Cannabinoid Hyperemesis Syndrome; Superior Mesenteric Artery Syndrome; Ogilvie Syndrome.

Liver & Biliary Syndromes Hepatorenal Syndrome; Hepatopulmonary Syndrome; Budd–Chiari Syndrome; Gilbert Syndrome; Crigler–Najjar Syndrome; Dubin–Johnson Syndrome; Rotor Syndrome; Reye Syndrome; Mirizzi Syndrome.

Kidney & Urinary Syndromes Nephrotic Syndrome; Nephritic Syndrome; Hemolytic Uremic Syndrome (HUS); Alport Syndrome; Fanconi Syndrome; Goodpasture Syndrome; Hepatorenal Syndrome; Nutcracker Syndrome.

Endocrine Syndromes Cushing Syndrome; Metabolic Syndrome; Syndrome of Inappropriate Antidiuretic Hormone Secretion (SIADH); Polycystic Ovary Syndrome (PCOS); Carcinoid Syndrome; Empty Sella Syndrome; Androgen Insensitivity Syndrome; Sheehan Syndrome; Nelson Syndrome; Polyglandular Autoimmune Syndromes (PAPS Type 1 and 2); Insulin Resistance Syndrome.

Neurological Syndromes Guillain–Barré Syndrome; Miller Fisher Syndrome; Lambert–Eaton Myasthenic Syndrome (LEMS); Restless Legs Syndrome; Locked-In Syndrome; Post-Concussion Syndrome; Cauda Equina Syndrome; Conus Medullaris Syndrome; Anterior Cord Syndrome; Central Cord Syndrome; Central Pain Syndrome; Alien Hand Syndrome; CADASIL Syndrome; Foix–Alajouanine Syndrome; Horner Syndrome; Tourette Syndrome; Lennox–Gastaut Syndrome; West Syndrome; Wernicke–Korsakoff Syndrome; Brown-Séquard Syndrome; Wallenberg Syndrome (Lateral Medullary Syndrome); Isaacs Syndrome.

Pain & Neuromuscular Syndromes Carpal Tunnel Syndrome; Cubital Tunnel Syndrome; Complex Regional Pain Syndrome (CRPS); Myofascial Pain Syndrome; Piriformis Syndrome; Compartment Syndrome; Thoracic Outlet Syndrome; Burning Mouth Syndrome; Tarsal Tunnel Syndrome; Greater Trochanteric Pain Syndrome.

Psychiatric & Behavioral Syndromes Serotonin Syndrome; Neuroleptic Malignant Syndrome; Capgras Syndrome; Cotard Syndrome; Münchausen Syndrome (Factitious Disorder); Korsakoff Syndrome; Amotivational Syndrome; Ekbom Syndrome (Delusional Parasitosis); Ganser Syndrome.

Rheumatologic & Autoimmune Syndromes Sjögren Syndrome; Antiphospholipid Syndrome; CREST Syndrome; Felty Syndrome; Behçet Syndrome; SAPHO Syndrome; Reactive Arthritis (formerly Reiter Syndrome); Churg–Strauss Syndrome (EGPA); Caplan Syndrome.

Hematological Syndromes Myelodysplastic Syndromes; Antiphospholipid Syndrome; Evans Syndrome; Hyperviscosity Syndrome; Tumor Lysis Syndrome; Hemophagocytic Syndrome (HLH); Acute Chest Syndrome; Thrombotic Thrombocytopenic Purpura (TTP).

Immunological Syndromes Severe Combined Immunodeficiency Syndrome; Acquired Immunodeficiency Syndrome (AIDS); Alpha-Gal Syndrome; Antisynthetase Syndrome; Capillary Leak Syndrome; Hyper-IgE Syndrome (Job Syndrome); Autoimmune Lymphoproliferative Syndrome (ALPS); Cytokine Release Syndrome (CRS); Immune Reconstitution Inflammatory Syndrome; Wiskott–Aldrich Syndrome.

Infectious & Postinfectious Syndromes Toxic Shock Syndrome (TSS); Post-COVID-19 Condition; Post-Polio Syndrome; Congenital Rubella Syndrome; Congenital Zika Syndrome; Waterhouse–Friderichsen Syndrome; Lemierre Syndrome.

Genetic & Chromosomal Syndromes Down Syndrome; Turner Syndrome; Klinefelter Syndrome; Edwards Syndrome; Patau Syndrome; DiGeorge Syndrome (22q11.2 Deletion); Fragile X Syndrome; Williams Syndrome; Prader–Willi Syndrome; Angelman Syndrome; Noonan Syndrome; Rett Syndrome; Cri-du-Chat Syndrome; Beckwith–Wiedemann Syndrome; McCune–Albright Syndrome.

Connective Tissue Syndromes Ehlers–Danlos Syndromes; Marfan Syndrome; Loeys–Dietz Syndrome; Stickler Syndrome; Joint Hypermobility Syndrome.

Pediatric Syndromes Down Syndrome; Fetal Alcohol Syndrome; Sudden Infant Death Syndrome (SIDS); Reye Syndrome; DiGeorge Syndrome; Beckwith–Wiedemann Syndrome; Nephrotic Syndrome; Hand-Foot-and-Mouth Syndrome.

Obstetric Syndromes HELLP Syndrome; Antiphospholipid Syndrome; Twin-to-Twin Transfusion Syndrome (TTTS); Amniotic Band Syndrome; Fetal Alcohol Syndrome.

Gynecological Syndromes Polycystic Ovary Syndrome; Premenstrual Syndrome (PMS); Asherman Syndrome; Genitourinary Syndrome of Menopause; Mayer–Rokitansky–Küster–Hauser (MRKH) Syndrome.

Male Reproductive Syndromes Klinefelter Syndrome; Androgen Insensitivity Syndrome; Kallmann Syndrome; Post-Vasectomy Pain Syndrome.

Cancer-Predisposition & Paraneoplastic Syndromes Lynch Syndrome (HNPCC); Li–Fraumeni Syndrome; Von Hippel–Lindau Syndrome; Multiple Endocrine Neoplasia (MEN 1 and 2); Carcinoid Syndrome; Tumor Lysis Syndrome; Superior Vena Cava Syndrome; Paraneoplastic Neurological Syndromes; Cancer Cachexia Syndrome.

Metabolic & Nutritional Syndromes Metabolic Syndrome; Refeeding Syndrome; Wernicke–Korsakoff Syndrome; Milk-Alkali Syndrome; Hungry Bone Syndrome; Fanconi–Bickel Syndrome.

Toxicological Syndromes (Toxidromes) Serotonin Syndrome; Neuroleptic Malignant Syndrome; Anticholinergic Syndrome; Cholinergic Syndrome; Sympathomimetic Syndrome; Sedative-Hypnotic Syndrome; Opioid Withdrawal Syndrome; Alcohol Withdrawal Syndrome.

Critical Care Syndromes Systemic Inflammatory Response Syndrome (SIRS); Multiple Organ Dysfunction Syndrome (MODS); Acute Respiratory Distress Syndrome (ARDS); Abdominal Compartment Syndrome; Fat Embolism Syndrome.

Sleep Syndromes Obstructive Sleep Apnea Syndrome; Central Sleep Apnea Syndromes; Restless Legs Syndrome; Kleine–Levin Syndrome; Delayed Sleep Phase Syndrome.

Eye & Cranial Nerve Syndromes Horner Syndrome; Adie Syndrome; Brown Syndrome; Duane Retraction Syndrome; Charles Bonnet Syndrome; Dry Eye Syndrome; Tolosa–Hunt Syndrome.

ENT & Otolaryngologic Syndromes Ramsay Hunt Syndrome; Eagle Syndrome; Empty Nose Syndrome; Gradenigo Syndrome; Samter Triad (Aspirin-Exacerbated Respiratory Disease).

Dermatological Syndromes Stevens–Johnson Syndrome; Toxic Epidermal Necrolysis; Staphylococcal Scalded Skin Syndrome; Sweet Syndrome; Gorlin Syndrome; Peutz–Jeghers Syndrome; DRESS Syndrome (Drug Reaction with Eosinophilia and Systemic Symptoms).

Vascular Syndromes Raynaud Syndrome; Superior Vena Cava Syndrome; Thoracic Outlet Syndrome; Subclavian Steal Syndrome; Leriche Syndrome; May–Thurner Syndrome; Nutcracker Syndrome.

Multisystem Syndromes Chronic Fatigue Syndrome (ME/CFS); Postural Orthostatic Tachycardia Syndrome (POTS); Ehlers–Danlos Syndromes; Metabolic Syndrome; Antiphospholipid Syndrome; Behcet Syndrome.

Rare Diseases

Scope: This reference-oriented list organizes clinically significant rare diseases (orphan diseases) by organ system and clinical domain. A rare disease is typically defined as one affecting fewer than 1 in 2,000 individuals (EU criteria) or fewer than 200,000 people in the United States. It highlights high-importance benchmark conditions characterized by distinct genetic, metabolic, or autoimmune etiologies.

Genetic & Chromosomal Diseases Turner Syndrome; Klinefelter Syndrome; Fragile X Syndrome; Williams Syndrome; Prader–Willi Syndrome; Angelman Syndrome; Noonan Syndrome; 22q11.2 Deletion Syndrome; Cri-du-Chat Syndrome; Hutchinson–Gilford Progeria Syndrome; Cornelia de Lange Syndrome.

Neurological & Neurogenetic Diseases Huntington Disease; Amyotrophic Lateral Sclerosis (ALS); Spinal Muscular Atrophy (SMA); Friedreich Ataxia; Ataxia–Telangiectasia; Rett Syndrome; Batten Disease (Neuronal Ceroid Lipofuscinosis); Creutzfeldt–Jakob Disease; Fatal Familial Insomnia; Progressive Supranuclear Palsy; Multiple System Atrophy; Stiff-Person Syndrome.

Neuromuscular & Peripheral Nerve Diseases Duchenne Muscular Dystrophy; Becker Muscular Dystrophy; Facioscapulohumeral Muscular Dystrophy; Limb-Girdle Muscular Dystrophies; Congenital Muscular Dystrophies; Myasthenia Gravis; Charcot–Marie–Tooth Disease; Amyloid Polyneuropathy.

Inborn Errors of Metabolism & Storage Diseases Gaucher Disease; Fabry Disease; Pompe Disease; Tay–Sachs Disease; Niemann–Pick Disease; Krabbe Disease; Metachromatic Leukodystrophy; X-Linked Adrenoleukodystrophy; Alkaptonuria; Homocystinuria; Phenylketonuria; Maple Syrup Urine Disease; Von Gierke Disease (GSD I); Mucopolysaccharidoses (Hurler, Hunter, Sanfilippo Syndromes).

Blood & Bone Marrow Diseases Hemophilia A; Hemophilia B; Paroxysmal Nocturnal Hemoglobinuria (PNH); Fanconi Anemia; Diamond–Blackfan Anemia; Pure Red Cell Aplasia; Thrombotic Thrombocytopenic Purpura (TTP); Atypical Hemolytic Uremic Syndrome; Cryoglobulinemia; Castleman Disease.

Immune, Autoinflammatory & Histiocytic Diseases Severe Combined Immunodeficiency (SCID); Common Variable Immunodeficiency; Chronic Granulomatous Disease; Wiskott–Aldrich Syndrome; Familial Mediterranean Fever; Cryopyrin-Associated Periodic Syndromes (CAPS); Hemophagocytic Lymphohistiocytosis (HLH); Histiocytosis X (Langerhans Cell Histiocytosis).

Rheumatologic & Autoimmune Diseases Systemic Sclerosis (Scleroderma); Granulomatosis with Polyangiitis; Microscopic Polyangiitis; Polyarteritis Nodosa; Behçet Disease; Takayasu Arteritis; Eosinophilic Granulomatosis with Polyangiitis (Churg–Strauss); Relapsing Polychondritis; Adult-Onset Still Disease.

Connective Tissue & Dermatological Genetic Diseases Ehlers–Danlos Syndromes (Vascular and Classic Types); Marfan Syndrome; Loeys–Dietz Syndrome; Osteogenesis Imperfecta; Pseudoxanthoma Elasticum; Epidermolysis Bullosa; Ichthyosis; Xeroderma Pigmentosum; Pemphigus Vulgaris; Bullous Pemphigoid.

Endocrine Diseases Addison Disease; Congenital Adrenal Hyperplasia; Acromegaly; Cushing Disease (Pituitary-Dependent); Hypoparathyroidism; Multiple Endocrine Neoplasia (MEN 1 and 2); Pheochromocytoma; Autoimmune Polyglandular Syndromes.

Hepatic & Biliary Diseases Wilson Disease; Alpha-1 Antitrypsin Deficiency; Primary Biliary Cholangitis; Primary Sclerosing Cholangitis; Biliary Atresia; Progressive Familial Intrahepatic Cholestasis; Caroli Disease.

Renal & Urinary Diseases Alport Syndrome; Cystinosis; Primary Hyperoxaluria; Bartter Syndrome; Gitelman Syndrome; Polycystic Kidney Disease (Autosomal Recessive Type); Medullary Cystic Kidney Disease.

Pulmonary Diseases Idiopathic Pulmonary Fibrosis; Pulmonary Arterial Hypertension; Lymphangioleiomyomatosis (LAM); Pulmonary Alveolar Proteinosis; Primary Ciliary Dyskinesia.

Cardiovascular Diseases Brugada Syndrome; Long QT Syndrome; Short QT Syndrome; Arrhythmogenic Right Ventricular Cardiomyopathy; Fibromuscular Dysplasia; Takayasu Arteritis.

Gastrointestinal Diseases Hirschsprung Disease; Achalasia; Eosinophilic Esophagitis; Short Bowel Syndrome; Hereditary Pancreatitis; Microvillus Inclusion Disease.

Eye & Visual Pathway Diseases Retinitis Pigmentosa; Stargardt Disease; Leber Hereditary Optic Neuropathy; Leber Congenital Amaurosis; Retinoblastoma; Aniridia; Best Disease.

Bone, Skeletal & Cartilage Diseases Achondroplasia; Fibrodysplasia Ossificans Progressiva (FOP); Hypophosphatasia; Osteopetrosis (Marble Bone Disease); Cleidocranial Dysplasia; Thanatophoric Dysplasia.

Rare Infectious & Prion Diseases Creutzfeldt–Jakob Disease; Variant CJD; Kuru; Whipple Disease; Progressive Multifocal Leukoencephalopathy (PML); Ebola Virus Disease; Marburg Virus Disease; Lassa Fever.

Rare Cancers & Neoplasms Malignant Mesothelioma; Gastrointestinal Stromal Tumor (GIST); Neuroendocrine Tumors; Ewing Sarcoma; Osteosarcoma; Retinoblastoma; Uveal Melanoma; Adrenocortical Carcinoma; Thymoma; Merkel Cell Carcinoma; Kaposi Sarcoma; Burkitt Lymphoma.

Multisystem & Inflammatory Diseases Erdheim–Chester Disease; POEMS Syndrome; VEXAS Syndrome; IgG4-Related Disease; Systemic Amyloidosis; Castleman Disease.

Genetic Diseases

Scope: This reference-oriented list organizes human genetic diseases by mode of inheritance, cytogenetic classification, and molecular pathophysiological mechanism. Genetic diseases result from alterations in DNA sequences, ranging from single-nucleotide variants to gross chromosomal rearrangements and non-Mendelian mechanisms, providing a focused reference complementing Common Diseases and Rare Diseases.

Autosomal Dominant Diseases Huntington Disease; Marfan Syndrome; Neurofibromatosis Type 1 (von Recklinghausen Disease); Neurofibromatosis Type 2; Familial Hypercholesterolemia; Polycystic Kidney Disease (Autosomal Dominant, ADPKD); Achondroplasia; Tuberous Sclerosis Complex; Hereditary Spherocytosis; Von Hippel–Lindau Syndrome; Li–Fraumeni Syndrome; Multiple Endocrine Neoplasia (MEN 1 and 2); Myotonic Dystrophy (Type 1 and 2); Hereditary Non-Polyposis Colorectal Cancer (Lynch Syndrome); Familial Adenomatous Polyposis (FAP); Osteogenesis Imperfecta (Type I); Ehlers–Danlos Syndrome (Hypermobile and Classic Types).

Autosomal Recessive Diseases Cystic Fibrosis; Sickle-Cell Disease; Beta-Thalassemia; Alpha-Thalassemia; Phenylketonuria (PKU); Gaucher Disease; Tay–Sachs Disease; Niemann–Pick Disease; Wilson Disease; Hereditary Hemochromatosis; Alpha-1 Antitrypsin Deficiency; Spinal Muscular Atrophy (SMA); Friedreich Ataxia; Alkaptonuria; Homocystinuria; Maple Syrup Urine Disease; Congenital Adrenal Hyperplasia; Galactosemia; Glycogen Storage Diseases (von Gierke, Pompe, Cori); Ataxia–Telangiectasia; Fanconi Anemia; Xeroderma Pigmentosum; Bloom Syndrome; Ellis–van Creveld Syndrome; Kartagener Syndrome.

X-Linked Recessive Diseases Duchenne Muscular Dystrophy; Becker Muscular Dystrophy; Hemophilia A (Factor VIII Deficiency); Hemophilia B (Factor IX Deficiency); Glucose-6-Phosphate Dehydrogenase (G6PD) Deficiency; Red-Green Color Blindness; Fragile X Syndrome; Lesch–Nyhan Syndrome; Wiskott–Aldrich Syndrome; X-Linked Agammaglobulinemia (Bruton Tyrosine Kinase Deficiency); X-Linked Adrenoleukodystrophy; Hunter Syndrome (MPS II); Fabry Disease; Menkes Disease; Alport Syndrome (X-Linked Type); Chronic Granulomatous Disease (X-Linked Form).

X-Linked Dominant Diseases Rett Syndrome (MECP2 Mutation); Incontinentia Pigmenti; X-Linked Hypophosphatemic Rickets; Aicardi Syndrome; Focal Dermal Hypoplasia (Goltz Syndrome); Fragile X-Associated Tremor/Ataxia Syndrome (FXTAS).

Y-Linked (Holandric) Conditions Y-Chromosome Infertility (AZF Deletions); SRY Gene Deletions/Mutations; Swyer Syndrome (46,XY Gonadal Dysgenesis); Retinitis Pigmentosa (Y-Linked Form); Hypertrichosis Pinnae Auris.

Mitochondrial (Maternal) Genetic Diseases Leber Hereditary Optic Neuropathy (LHON); Mitochondrial Encephalomyopathy, Lactic Acidosis, and Stroke-Like Episodes (MELAS); Myoclonic Epilepsy with Ragged Red Fibers (MERRF); Neuropathy, Ataxia, and Retinitis Pigmentosa (NARP); Leigh Syndrome (Subacute Necrotizing Encephalomyelopathy); Kearns–Sayre Syndrome; Pearson Syndrome; Chronic Progressive External Ophthalmoplegia (CPEO).

Chromosomal Aneuploidies (Autosomal) Trisomy 21 (Down Syndrome); Trisomy 18 (Edwards Syndrome); Trisomy 13 (Patau Syndrome); Trisomy 8 (Warkany Syndrome 2); Trisomy 9 Mosaicism.

Sex Chromosome Aneuploidies 45,X (Turner Syndrome); 47,XXY (Klinefelter Syndrome); 47,XXX (Triple X Syndrome); 47,XYY (Jacob Syndrome); 48,XXYY Syndrome; 48,XXXY Syndrome; Tetrasomy X.

Microdeletion & Microduplication Syndromes 22q11.2 Deletion Syndrome (DiGeorge Syndrome, Velocardiofacial Syndrome); 5p Deletion Syndrome (Cri-du-Chat Syndrome); 4p Deletion Syndrome (Wolf–Hirschhorn Syndrome); 7q11.23 Deletion Syndrome (Williams Syndrome); 17p11.2 Deletion Syndrome (Smith–Magenis Syndrome); 17p11.2 Duplication Syndrome (Potocki–Lupski Syndrome); 1p36 Deletion Syndrome; 15q11–q13 Deletion; Rubinstein–Taybi Syndrome.

Genomic Imprinting Disorders Prader–Willi Syndrome (Maternal Imprinting / Paternal 15q11–q13 Loss); Angelman Syndrome (Paternal Imprinting / Maternal UBE3A Loss); Beckwith–Wiedemann Syndrome (11p15.5 Alteration); Silver–Russell Syndrome; Pseudohypoparathyroidism (Albright Hereditary Osteodystrophy); Uniparental Disomy Syndromes.

Trinucleotide Repeat Expansion Diseases Huntington Disease (CAG Repeat); Fragile X Syndrome (CGG Repeat); Myotonic Dystrophy Type 1 (CTG Repeat); Friedreich Ataxia (GAA Repeat); Spinocerebellar Ataxias (SCA Types 1, 2, 3, 6, 7); Dentatorubral-Pallidoluysian Atrophy (DRPLA); Spinal and Bulbar Muscular Atrophy (Kennedy Disease).

Lysosomal Storage Diseases Gaucher Disease (Glucocerebrosidase Deficiency); Tay–Sachs Disease (Hexosaminidase A Deficiency); Niemann–Pick Disease (Types A, B, C); Fabry Disease (Alpha-Galactosidase A Deficiency); Pompe Disease (Acid Alpha-Glucosidase Deficiency); Krabbe Disease; Metachromatic Leukodystrophy; Mucopolysaccharidoses (Hurler, Scheie, Hunter, Sanfilippo, Morquio, Maroteaux–Lamy, Sly Syndromes); Fucosidosis; Sialidosis.

Connective Tissue Genetic Disorders Marfan Syndrome (FBN1 Mutation); Ehlers–Danlos Syndromes; Loeys–Dietz Syndrome; Osteogenesis Imperfecta (Brittle Bone Disease); Cutis Laxa; Stickler Syndrome; Pseudoxanthoma Elasticum; Alport Syndrome.

Hereditary Cancer Predisposition Syndromes Hereditary Breast and Ovarian Cancer Syndrome (BRCA1, BRCA2); Lynch Syndrome (MLH1, MSH2, MSH6, PMS2); Familial Adenomatous Polyposis (APC Mutation); Li–Fraumeni Syndrome (TP53 Mutation); Multiple Endocrine Neoplasia Types 1, 2A, 2B; Von Hippel–Lindau Disease; Cowden Syndrome (PTEN Hamartoma Tumor Syndrome); Peutz–Jeghers Syndrome; Nevoid Basal Cell Carcinoma Syndrome (Gorlin Syndrome); Retinoblastoma (RB1 Mutation); Wilms Tumor Predisposition (WT1).

Inherited Diseases

Classification: The first groups show the most common inheritance pattern. The later clinical categories overlap, and several conditions have rare alternate patterns or genetically heterogeneous forms.

Autosomal Dominant Achondroplasia; Autosomal Dominant Polycystic Kidney Disease (ADPKD); Familial Adenomatous Polyposis; Familial Hypercholesterolemia; Hereditary Angioedema (most forms); Huntington Disease; Marfan Syndrome; Multiple Endocrine Neoplasia; Neurofibromatosis Type 1; Neurofibromatosis Type 2; Tuberous Sclerosis Complex; Von Hippel–Lindau Disease.

Autosomal Recessive Alpha-Thalassemia; Beta-Mannosidosis; Beta-Thalassemia; Congenital Adrenal Hyperplasia; Cystic Fibrosis; Familial Mediterranean Fever; Gaucher Disease; Hemochromatosis; Phenylketonuria (PKU); Sickle-Cell Disease; Spinal Muscular Atrophy; Tay–Sachs Disease; Wilson Disease.

X-Linked Becker Muscular Dystrophy; Duchenne Muscular Dystrophy; Fragile X Syndrome; Glucose-6-Phosphate Dehydrogenase (G6PD) Deficiency; Hemophilia A; Hemophilia B; X-Linked Agammaglobulinemia.

Variable or Genetically Heterogeneous Alport Syndrome (X-linked, autosomal dominant, or autosomal recessive); Charcot–Marie–Tooth Disease (multiple inheritance patterns); Hereditary Spherocytosis (usually autosomal dominant, sometimes autosomal recessive); Retinitis Pigmentosa (autosomal dominant, autosomal recessive, X-linked, or mitochondrial); Von Willebrand Disease (usually autosomal dominant, with some autosomal recessive forms).

Mitochondrial MELAS; MERRF; Leber Hereditary Optic Neuropathy (LHON).

Inherited Metabolic Disorders Maple Syrup Urine Disease; Galactosemia; Homocystinuria; Glycogen Storage Diseases; Lysosomal Storage Diseases; Urea-Cycle Disorders.

Inherited Neurological or Neuromuscular Disorders Charcot–Marie–Tooth Disease; Spinal Muscular Atrophy; Hereditary Spastic Paraplegia; Friedreich Ataxia.

Inherited Blood Disorders Sickle-Cell Disease; Alpha-Thalassemia; Beta-Thalassemia; Hereditary Spherocytosis; Hemophilia A; Hemophilia B; some forms of Von Willebrand Disease.

Inherited Connective-Tissue or Skeletal Disorders Osteogenesis Imperfecta; Ehlers–Danlos Syndromes; Marfan Syndrome; Achondroplasia.

Inherited Renal Disorders Alport Syndrome; Autosomal Dominant Polycystic Kidney Disease (ADPKD); Autosomal Recessive Polycystic Kidney Disease (ARPKD); Cystinuria.

Inherited Eye Disorders Retinitis Pigmentosa; Stargardt Disease; congenital color-vision deficiencies; some forms of congenital cataract.

Hereditary Cancer Syndromes Lynch Syndrome; Familial Adenomatous Polyposis; Hereditary Breast and Ovarian Cancer Syndrome; Multiple Endocrine Neoplasia (MEN) Syndromes; Li–Fraumeni Syndrome; Von Hippel–Lindau Disease.

Common Symptoms

Scope: For a medical dictionary or disease-reference project, symptoms are best organized by body system, because a flat alphabetical list quickly becomes difficult to use. Here is a broad list of common medical symptoms.

General / Systemic Fatigue; Weakness; Malaise; Fever; Chills; Night Sweats; Excessive Sweating; Hot Flashes; Flushing; Loss of Appetite; Increased Appetite; Unexplained Weight Loss; Unexplained Weight Gain; Excessive Thirst; Dehydration; Exercise Intolerance; Lethargy; Generalized Body Aches.

Pain Headache; Chest Pain; Pleuritic Chest Pain; Abdominal Pain; Cramping or Colicky Pain; Back Pain; Neck Pain; Joint Pain; Muscle Pain; Bone Pain; Pelvic Pain; Flank Pain; Facial Pain; Eye Pain; Earache; Sore Throat; Toothache; Painful Urination; Rectal Pain; Burning Pain; Radiating Pain; Throbbing Pain.

Neurological Dizziness; Vertigo; Fainting; Light-Headedness; Orthostatic Lightheadedness; Numbness; Tingling; Burning Sensation; Electric Shock Sensations; Tremor; Muscle Weakness; Paralysis; Seizures; Confusion; Memory Problems; Forgetfulness; Difficulty Concentrating; Brain Fog; Loss of Balance; Poor Coordination; Slurred Speech; Altered Consciousness; Aura.

Eye / Vision Blurred Vision; Double Vision; Loss of Vision; Reduced Visual Acuity; Night Blindness; Eye Redness; Watery Eyes; Dry Eyes; Gritty or Foreign-Body Sensation; Eye Strain; Itchy Eyes; Photophobia; Floaters; Flashes of Light; Halos Around Lights; Sensitivity to Glare.

Ear / Hearing Hearing Loss; Tinnitus; Ear Discharge; Ear Fullness; Ear Pain; Sensitivity to Sound; Popping or Clicking in Ears.

Nose / Sinus Runny Nose; Nasal Congestion; Sneezing; Nosebleed; Loss of Smell; Reduced Smell; Sinus Pressure; Postnasal Drip; Frequent Throat Clearing.

Mouth / Throat Dry Mouth; Mouth Ulcers; Bad Breath; Altered Taste; Loss of Taste; Bleeding Gums; Hoarseness; Sore Throat; Difficulty Swallowing; Painful Swallowing; Lump in Throat; Burning Mouth Sensation.

Respiratory Cough; Dry Cough; Productive Cough; Coughing up Blood; Shortness of Breath; Shortness of Breath on Exertion; Wheezing; Rapid Breathing; Noisy Breathing; Sputum Production; Chest Tightness; Air Hunger; Choking Sensation; Inability to Take a Deep Breath.

Cardiovascular Palpitations; Rapid Heartbeat; Slow Heartbeat; Irregular Heartbeat; Heart Fluttering; Chest Pressure; Chest Squeezing; Shortness of Breath on Exertion; Orthopnea; Paroxysmal Nocturnal Dyspnea; Fainting; Ankle or Leg Swelling; Cold Extremities; Intermittent Claudication; Cyanosis.

Gastrointestinal Nausea; Vomiting; Vomiting Blood; Heartburn; Acid Regurgitation; Indigestion; Bloating; Abdominal Distension; Abdominal Cramps; Excessive Gas; Belching; Difficulty Passing Gas; Diarrhea; Constipation; Straining at Stool; Tenesmus; Blood in Stool; Black or Tarry Stool; Mucus in Stool; Fecal Urgency; Fecal Incontinence; Early Satiety; Anal Itching.

Urinary Frequent Urination; Urinary Urgency; Painful Urination; Excessive Urination; Reduced Urination; Inability to Urinate; Urinary Hesitancy; Post-Void Dribbling; Nighttime Urination; Blood in Urine; Urinary Incontinence; Weak Urinary Stream; Bladder Spasms; Foamy Urine.

Musculoskeletal Joint Stiffness; Morning Stiffness; Joint Swelling; Reduced Range of Motion; Joint Clicking or Grating; Joint Instability or Giving Way; Muscle Cramps; Muscle Spasms; Muscle Stiffness; Muscle Twitches; Restless Legs Sensation; Limb Pain; Difficulty Walking; Limping.

Skin Itching; Rash; Redness; Dry Skin; Scaling or Flaking; Skin Discoloration; Bruising; Easy Bruisability; Swelling; Hives; Blisters; Skin Ulcers; Lumps; Excessive Sweating; Reduced Sweating; Hair Loss; Hair Shedding; Brittle Nails; Crawling Sensation on Skin; Skin Tenderness.

Endocrine / Metabolic Excessive Thirst; Excessive Hunger; Frequent Urination; Heat Intolerance; Cold Intolerance; Unexplained Weight Change; Excessive Sweating; Hot Flashes.

Sleep-Related Insomnia; Difficulty Falling Asleep; Difficulty Staying Asleep; Frequent Awakening; Early Morning Awakening; Non-Restorative Sleep; Excessive Daytime Sleepiness; Snoring; Gasping in Sleep; Restless Sleep; Nightmares; Sleepwalking.

Psychological / Behavioral Anxiety; Depressed Mood; Irritability; Agitation; Mood Changes; Loss of Interest or Pleasure; Poor Concentration; Racing Thoughts; Restlessness; Sleep Disturbance; Appetite Changes; Feeling Detached.

Reproductive / Gynecological Pelvic Pain; Painful Menstruation; Heavy Menstrual Bleeding; Irregular Menstruation; Missed Periods; Vaginal Discharge; Vaginal Bleeding; Bleeding Between Periods; Vaginal Itching; Painful Intercourse; Hot Flashes.

Male Reproductive Erectile Dysfunction; Reduced Libido; Testicular Pain; Testicular Swelling; Penile Discharge; Painful Ejaculation; Scrotal Heaviness.

Blood / Lymphatic Easy Bruising; Prolonged Bleeding; Pale Skin; Swollen Lymph Nodes; Recurrent Infections; Petechiae.

Allergic Itching; Sneezing; Watery Eyes; Nasal Congestion; Hives; Facial Swelling; Lip or Tongue Swelling; Wheezing; Shortness of Breath; Anaphylactic Reactions Sensation.

Clinical Note: For a comprehensive medical dictionary, it is essential to distinguish symptoms (subjective experiences reported by the patient, such as nausea or pain) from clinical signs (objectively observed physical findings detected on examination, such as jaundice, edema, or tachycardia). Mixing them is common in general health lists, but an authoritative reference maintains clear separation among Symptoms, Clinical Signs, Syndromes, and Diseases/Disorders categories.

Clinical Signs

Scope: A clinical sign is an objective abnormality that can be observed, measured, elicited, or detected by a clinician, unlike a symptom, which is experienced and reported by the patient. For a medical dictionary, the following system-based classification is useful.

General / Vital Signs Fever; Hypothermia; Tachycardia; Bradycardia; Tachypnea; Bradypnea; Hypertension; Hypotension; Orthostatic Hypotension; Pulsus Paradoxus; Wide Pulse Pressure; Narrow Pulse Pressure; Hypoxemia; Central Cyanosis; Peripheral Cyanosis; Altered Level of Consciousness; Cachexia; Pallor; Jaundice; Dehydration; Pitting Edema; Non-Pitting Edema; Generalized Lymphadenopathy; Clubbing.

Skin Signs Erythema; Pallor; Cyanosis; Jaundice; Petechiae; Purpura; Ecchymosis; Spider Angiomas; Palmar Erythema; Splinter Hemorrhages; Osler Nodes; Janeway Lesions; Rash; Urticaria; Vesicles; Bullae; Pustules; Papules; Nodules; Ulcers; Scaling; Excoriations; Lichenification; Skin Thickening; Hyperpigmentation; Hypopigmentation; Alopecia; Diaphoresis; Reduced Skin Turgor.

Head & Face Signs Facial Asymmetry; Facial Edema; Ptosis; Proptosis; Moon Facies; Mask-Like Facies; Temporal Wasting; Kayser-Fleischer Rings; Arcus Senilis; Xanthelasma; Subconjunctival Hemorrhage.

Eye Signs Conjunctival Pallor; Conjunctival Injection; Scleral Icterus; Anisocoria; Nystagmus; Strabismus; Ptosis; Proptosis; Papilledema; Absent Pupillary Reflex; Abnormal Red Reflex; Corneal Opacity; Roth Spots; Argyll Robertson Pupil.

Ear, Nose & Throat Signs Tympanic Membrane Erythema; Tympanic Membrane Perforation; Otorrhea; Nasal Polyps; Epistaxis; Tonsillar Enlargement; Tonsillar Exudate; Pharyngeal Erythema; Oral Ulcers; Oral Thrush; Strawberry Tongue; Coated Tongue; Koplik Spots; Gingival Hyperplasia; Peritonsillar Bulge; Deviated Uvula.

Neck Signs Cervical Lymphadenopathy; Goiter; Thyroid Nodule; Neck Stiffness; Elevated Jugular Venous Pressure; Carotid Bruit; Tracheal Deviation; Pemberton Sign.

Cardiovascular Signs Tachycardia; Bradycardia; Irregular Pulse; Weak Pulse; Bounding Pulse; Pulsus Alternans; Corrigan Pulse; Water-Hammer Pulse; Pulse Deficit; Displaced Apex Beat; Heart Murmur; Systolic Murmur; Diastolic Murmur; Gallop Rhythm; Third Heart Sound; Fourth Heart Sound; Pericardial Friction Rub; Cardiac Thrill; Ventricular Heave; Elevated Jugular Venous Pressure; Peripheral Edema; Delayed Capillary Refill.

Respiratory Signs Tachypnea; Bradypnea; Apnea; Cyanosis; Accessory-Muscle Use; Nasal Flaring; Chest Retractions; Barrel Chest; Pectus Excavatum; Pectus Carinatum; Asymmetric Chest Expansion; Subcutaneous Emphysema; Reduced Air Entry; Wheezing; Crackles; Rhonchi; Stridor; Bronchial Breath Sounds; Dullness to Percussion; Hyperresonance; Pleural Friction Rub.

Abdominal & Gastrointestinal Signs Abdominal Distension; Abdominal Tenderness; Guarding; Rigidity; Rebound Tenderness; Shifting Dullness; Fluid Wave; Caput Medusae; Palpable Abdominal Mass; Hepatomegaly; Splenomegaly; Ascites; Succussion Splash; Abnormal Bowel Sounds; Abdominal Bruit; Visible Peristalsis; Rectal Bleeding; Melena.

Neurological Signs Altered Consciousness; Disorientation; Abnormal Gait; Festinating Gait; Spastic Hemiplegic Gait; Ataxia; Tremor; Asterixis; Fasciculations; Muscle Wasting; Pronator Drift; Cogwheel Rigidity; Lead-Pipe Rigidity; Abnormal Muscle Tone; Hyperreflexia; Hyporeflexia; Areflexia; Pathological Reflexes; Clonus; Dysmetria; Dysdiadochokinesia; Sensory Deficit; Motor Weakness on Examination; Cranial Nerve Deficit; Nystagmus; Neck Rigidity.

Musculoskeletal Signs Joint Swelling; Joint Deformity; Joint Effusion; Restricted Range of Motion; Crepitus; Muscle Wasting; Muscle Spasm; Heberden Nodes; Bouchard Nodes; Swan-Neck Deformity; Boutonniere Deformity; Baker Cyst; Limb Deformity; Abnormal Posture; Scoliosis; Kyphosis; Lordosis; Abnormal Gait.

Renal & Urinary Signs Bladder Distension; Costovertebral-Angle Tenderness; Peripheral Edema; Hematuria on Testing; Proteinuria; Oliguria; Anuria.

Endocrine Signs Goiter; Exophthalmos; Tremor; Abnormal Hair Distribution; Hirsutism; Striae; Acanthosis Nigricans; Moon Facies; Buffalo Hump; Peripheral Edema.

Hematological Signs Pallor; Petechiae; Purpura; Ecchymoses; Generalized Lymphadenopathy; Splenomegaly; Hepatomegaly; Active Bleeding.

Peripheral Vascular Signs Peripheral Edema; Pitting Edema; Varicose Veins; Absent or Diminished Peripheral Pulses; Cool Extremities; Delayed Capillary Refill; Venous Ulcers; Arterial Ulcers; Peripheral Cyanosis.

Gynecological Signs Abnormal Vaginal Bleeding on Examination; Vaginal or Cervical Discharge; Cervical Lesions; Pelvic Mass; Uterine Enlargement; Adnexal Mass; Cervical-Motion Tenderness; Chandelier Sign.

Male Genital Signs Testicular Swelling; Testicular Mass; Scrotal Edema; Penile Discharge; Genital Ulceration; Phimosis; Hydrocele; Varicocele.

Pediatric & Neonatal Signs Poor Weight Gain on Growth Charts; Growth Retardation; Bulging Fontanelle; Sunken Fontanelle; Neonatal Jaundice; Central Cyanosis; Chest Retractions; Abnormal Primitive Reflexes; Gowers Sign.

Named Clinical Signs Babinski Sign; Murphy Sign; Kernig Sign; Brudzinski Sign; Rovsing Sign; Cullen Sign; Grey Turner Sign; Trousseau Sign; Chvostek Sign; Romberg Sign; Hoffmann Sign; Courvoisier Sign; Kussmaul Sign; Battle Sign; Nikolsky Sign; Auspitz Sign; Ortolani Sign; Barlow Sign; Trendelenburg Sign; McBurney Sign; Tinel Sign; Phalen Sign; Lhermitte Sign; Blumberg Sign; Kehr Sign; Hamman Sign; Homans Sign; Psoas Sign; Obturator Sign; Lachman Sign; Anterior Drawer Sign.

Clinical Note: A comprehensive medical reference can contain 500–1,000+ clinical signs, encompassing physical examination findings, named signs, dermatological signs, radiological signs, and laboratory markers.

Common Congenital Anomalies

Scope: A congenital anomaly is a structural abnormality present at birth, whether genetic, chromosomal, or environmental in origin. This list complements the appendices of Common Diseases, Common Disorders, and Common Syndromes.

Orofacial & Head Anomalies Cleft Lip; Cleft Palate.

Neural Tube & Brain Anomalies Spina Bifida; Anencephaly; Encephalocele; Hydrocephalus.

Thorax & Abdominal Wall Anomalies Congenital Diaphragmatic Hernia; Omphalocele; Gastroschisis.

Digestive System Anomalies Imperforate Anus; Hirschsprung Disease.

Urinary & Genital Anomalies Hypospadias; Epispadias.

Limb & Skeletal Anomalies Clubfoot; Developmental Dysplasia of the Hip; Polydactyly; Syndactyly.

Eye Anomalies Congenital Cataract.

Heart & Great-Vessel Anomalies Congenital Heart Defects; Ventricular Septal Defect; Atrial Septal Defect; Patent Ductus Arteriosus; Tetralogy of Fallot; Coarctation of the Aorta.

Common Findings, Lesions & Conditions

Scope: This companion list collects clinical findings, structural lesions, symptom patterns, and obstetric events that are not diseases in themselves but are frequently encountered in clinical work, imaging, and laboratory testing. It complements the appendices of Common Diseases, Common Disorders, and Common Syndromes.

Cardiovascular & Respiratory Findings Pericardial Effusion; Pleural Effusion; Pneumothorax; Hemothorax; Atelectasis.

Abdominal & Pancreatic Findings Esophageal Varices; Gallstones; Biliary Obstruction; Cholestasis; Pancreatic Pseudocyst; Pancreatic Cysts; Pancreatic Necrosis.

Renal & Urinary Findings Kidney Stones; Hydronephrosis.

Head, Neck & Airway Findings Thyroid Nodules; Nasal Polyps; Deviated Nasal Septum; Vocal-Cord Nodules; Earwax Impaction; Tympanic Membrane Perforation.

Oral & Dental Findings Tooth Erosion; Impacted Teeth; Malocclusion; Geographic Tongue.

Eye & Skin Findings Chalazion; Stye; Keloids; Ingrown Toenail.

Genital & Reproductive Findings Ovarian Cysts; Bartholin Cyst; Varicocele; Hydrocele; Spermatocele.

Pain & Symptom Conditions Low-Back Pain; Sciatica.

Metabolic Risk & Allergic States Prediabetes; Anaphylaxis.

Obstetric & Labor Events Ectopic Pregnancy; Miscarriage; Recurrent Pregnancy Loss; Placenta Previa; Placental Abruption; Placenta Accreta Spectrum; Premature Rupture of Membranes; Preterm Labor; Fetal Growth Restriction; Obstructed Labor; Postpartum Hemorrhage.

Common Injuries, Poisoning & Environmental Conditions

Scope: This companion list covers injuries (trauma), poisoning and envenomation, and adverse effects of environmental exposure and extremes. These are events or conditions rather than diseases; it complements the appendices of Common Diseases, Common Disorders, and Common Syndromes.

Bone, Joint & Muscle Injuries Fracture; Dislocation; Sprain; Strain.

Skin & Soft-Tissue Injuries Contusion; Laceration; Abrasion; Crush Injury.

Nervous-System Injuries Traumatic Brain Injury; Concussion; Spinal-Cord Injury.

Thermal & Electrical Injuries Burns; Electrical Injury; Hypothermia; Frostbite; Heat Exhaustion; Heatstroke.

Environmental Conditions Drowning; Dehydration; Altitude Sickness; Motion Sickness.

Poisoning & Envenomation Carbon Monoxide Poisoning; Lead Poisoning; Mercury Poisoning; Arsenic Poisoning; Pesticide Poisoning; Snakebite; Scorpion Sting.

Drug & Alcohol Overdose Drug Overdose; Alcohol Poisoning.

Conditions That May Be Asymptomatic

Scope: This reference list groups diseases, infections, and other conditions that may be present without noticeable symptoms, particularly during early, latent, or compensated stages. Being asymptomatic is a clinical state or mode of presentation rather than a separate category of disease, so every condition here also belongs under its usual organ-system or specialty heading, and "May be asymptomatic" is best treated as an attribute or tag in addition to that classification. Many of these conditions cause symptoms in some people and none in others, and some come to attention only through screening or when a complication appears. The list is a curated, high-importance reference rather than a prevalence ranking, and some conditions appear under more than one heading where they are clinically relevant to several systems. Individual symptoms, signs, and laboratory findings are defined as dictionary entries rather than listed here.

Important distinction: "Asymptomatic disease" is not a distinct disease; it describes how a disease presents. Hypertension is a cardiovascular disease that is often asymptomatic, chlamydia is an infection that is frequently asymptomatic, osteoporosis is a skeletal disease that is typically asymptomatic until a fracture, and open-angle glaucoma is an eye disease that is often asymptomatic in its early stages.

Cardiovascular Hypertension; Atherosclerosis; Coronary Artery Disease; Peripheral Artery Disease; Some Arrhythmias; Early Valvular Heart Disease

Metabolic & Endocrine Prediabetes; Early Type 2 Diabetes; Dyslipidemia; Subclinical Hypothyroidism; Subclinical Hyperthyroidism; Hyperuricemia

Kidney & Urinary Early Chronic Kidney Disease; Diabetic Kidney Disease; Mild Proteinuria; Microscopic Hematuria; Some Kidney Stones

Liver Metabolic Dysfunction-Associated Steatotic Liver Disease (MASLD); Chronic Hepatitis B; Chronic Hepatitis C; Early Cirrhosis; Hemochromatosis

Infectious HIV Infection During Clinical Latency; Hepatitis B; Hepatitis C; Chlamydia; Gonorrhea; HPV Infection; Latent Tuberculosis Infection; Some COVID-19 Infections

Cancer & Precancer Early Colorectal Cancer; Cervical Precancer; Early Cervical Cancer; Early Prostate Cancer; Early Kidney Cancer; Some Thyroid Cancers; Early Breast Cancer

Gynecological HPV Infection; Some Ovarian Cysts; Uterine Fibroids; Early Cervical Abnormalities; Some Sexually Transmitted Infections

Male Reproductive Early Prostate Cancer; Some Sexually Transmitted Infections; Varicocele; Some Cases of Benign Prostatic Enlargement

Blood Mild Anemia; Monoclonal Gammopathy of Undetermined Significance (MGUS); Early Chronic Leukemia; Mild Thrombocytopenia

Bone Osteoporosis; Osteopenia

Eye Open-Angle Glaucoma; Early Diabetic Retinopathy; Early Age-Related Macular Degeneration

Neurological & Vascular Silent Cerebral Infarction; Asymptomatic Carotid Stenosis; Some Unruptured Intracranial Aneurysms

Gastrointestinal Diverticulosis; Colon Polyps; Some Gallstones; Some Hiatal Hernias

Gallbladder Asymptomatic Gallstones ("Silent Gallstones"); Gallbladder Polyps

Genetic Hemochromatosis Before Organ Damage; Some Inherited Thrombophilias; Some Genetic Carrier States

Parasitic & Latent Infections Some Malaria Infections; Intestinal Parasitic Infections; Toxoplasmosis and Other Latent Infections

Lay Language Medical Terms

Lay term	Medical term	Lay-language explanation
Belly area	ABDOMEN/ABDOMINAL	The body cavity below the diaphragm containing the stomach, intestines, liver, and other organs.
Take in	ABSORB	To take up or take in a substance, such as fluid.
Too much acid in blood	ACIDOSIS	A condition in which the blood is more acidic than normal.
Sharpness or clarity	ACUITY	The clearness or keenness of a sense, especially vision.
Recent or sudden	ACUTE	New, recent, sudden, or requiring urgent attention.
Swollen glands	ADENOPATHY	Enlarged or swollen lymph nodes.
Helpful added treatment	ADJUVANT	Something that supports or assists the main treatment.
Added treatment	ADJUVANT TREATMENT	Treatment given in addition to the main or standard treatment.
Germ-killing drug	ANTIBIOTIC	A drug used to kill or control bacteria and some other germs.
Germ-killing treatment	ANTIMICROBIAL	A substance or treatment that acts against microorganisms such as bacteria, fungi, or parasites.
Antiviral drug	ANTIRETROVIRAL	A drug that slows or stops the growth of certain viruses.
Side effect	ADVERSE EFFECT	An unwanted or harmful response to a treatment or medicine.
Walking	AMBULATE/AMBULATION/ AMBULATORY	To walk, or to be able to walk.
Severe allergy	ANAPHYLAXIS	A serious, potentially life-threatening allergic reaction.
Low red-cell count	ANEMIA	A reduced number of red blood cells or a low red-cell blood count.
Numbing medicine	ANESTHETIC	A drug or agent that reduces or removes the feeling of pain, sometimes by causing sleep.
Heart pain	ANGINA	Chest pain caused by inadequate blood flow to the heart muscle.
Heart pain	ANGINA PECTORIS	Another medical term for chest pain caused by reduced blood flow to the heart.
Loss of appetite	ANOREXIA	Lack of appetite or, in some contexts, a disorder involving refusal to eat.

Lay term	Medical term	Lay-language explanation
Inner elbow area	ANTECUBITAL	Relating to the inner side of the elbow or forearm.
Protective protein	ANTIBODY	A protein made by the body in response to a foreign substance.
Seizure-prevention drug	ANTICONVULSANT	A medicine used to prevent or control seizures.
Cholesterol-lowering drug	ANTILIPEMIC	A drug that lowers fat or cholesterol levels in the blood.
Cough medicine	ANTITUSSIVE	A medicine used to reduce coughing.
Irregular heartbeat	ARRHYTHMIA	Any abnormal change in the normal heartbeat or rhythm.
Breathing material into the lungs	ASPIRATION	Entry of fluid, food, or other material into the lungs, often after vomiting.
Laboratory test	ASSAY	A laboratory test used to measure or identify something.
Check or evaluate	ASSESS	To examine, measure, evaluate, or look at something carefully.
Asthma	ASTHMA	A lung disease in which narrowed or tightened airways make breathing difficult.
Without symptoms	ASYMPTOMATIC	Having no noticeable symptoms.
Armpit	AXILLA	The armpit area.
Not cancerous	BENIGN	Not malignant and generally not cancerous.
Twice daily	BID	Prescription shorthand meaning twice a day.
Carried or stuck together	BINDING/BOUND	Carried by something, or made to stick or join together.
Drug availability	BIOAVAILABILITY	The amount or proportion of a drug that becomes available for the body to use.
Series of blood tests	BLOOD PROFILE	A group or panel of blood tests.
Large dose at once	BOLUS	A relatively large amount given all at one time.
Amount of mineral in bone	BONE MASS	The amount of calcium and other minerals in a given amount of bone.
Slow irregular heartbeats	BRADYARRHYTHMIAS	Slow heart rhythms that may also be irregular.
Slow heartbeat	BRADYCARDIA	A slower-than-usual heartbeat.
Narrowed airways	BRONCHOSPASM	Breathing difficulty caused by tightening of the airway muscles.
Cancer-causing	CARCINOGENIC	Capable of causing cancer.
Cancer type	CARCINOMA	A cancer that begins in lining or covering cells of the body.
Related to the heart	CARDIAC	Relating to the heart.
Resetting the heartbeat	CARDIOVERSION	Restoring a normal heart rhythm, often with a controlled electrical shock.
Tube	CATHETER	A thin tube used to give or remove fluids, or to perform certain medical procedures.
Epidural tube	CATHETER	A catheter placed near the spinal cord to deliver anesthesia during surgery.
Brain and spinal cord	CENTRAL NERVOUS SYSTEM (CNS)	The brain and spinal cord.
Brain injury	CEREBRAL TRAUMA	Damage to the brain caused by an injury.
Stopping	CESSATION	The act of stopping something.
Coronary heart disease	CHD	Disease of the blood vessels that supply the heart.
Cancer drug treatment	CHEMOTHERAPY	Treatment of disease, usually cancer, with chemical medicines.

Lay term	Medical term	Lay-language explanation
Long-lasting	CHRONIC	Continuing for a long time or ongoing.
Related to patient care	CLINICAL	Pertaining to medical care or the care of patients.
Human research study	CLINICAL TRIAL	A research study involving human participants.
Unconscious state	COMA	A prolonged state of unconsciousness in which a person cannot be awakened normally.
All disease gone	COMPLETE RESPONSE	Total disappearance of the detectable disease being treated.
Present from birth	CONGENITAL	Present before or at birth.
Pink, irritated eye	CONJUNCTIVITIS	Redness and irritation of the thin membrane covering the eye.
Treatment to keep improvement	CONSOLIDATION PHASE	A treatment phase intended to make a remission last, usually after initial treatment.
Comparison study	CONTROLLED TRIAL	A study comparing an experimental treatment with a standard or control treatment.
Research partnership	COOPERATIVE GROUP	An association of institutions that work together on clinical research.
Related to heart arteries	CORONARY	Relating to the heart or the blood vessels that supply it.
Computerized X-ray scan	CT SCAN (CAT)	A series of computer-processed X-ray images that show sections of the body.
Germ-growth test	CULTURE	A test that grows or detects organisms that may cause infection.
Added together	CUMULATIVE	Added up from the beginning.
Related to the skin	CUTANEOUS	Relating to the skin.
Stroke	CVA	A stroke, also called a cerebrovascular accident.
Related to the skin	DERMATOLOGIC	Pertaining to the skin.
Lower blood-pressure number	DIASTOLIC	Relating to the lower blood-pressure number, when the heart relaxes.
Farther away	DISTAL	Toward the end or away from the center of the body.
Water pill	DIURETIC	A drug that increases urination.
Sound-wave blood-flow test	DOPPLER	A device or test using sound waves to assess blood flow.
Masked study	DOUBLE BLIND	A study in which neither the participants nor investigators know which treatment is being given.
Improper function	DYSFUNCTION	A state in which something does not work normally.
Abnormal cells	DYSPLASIA	Abnormal changes in the size, shape, or organization of cells.
Heart sound-wave test	ECHOCARDIOGRAM	An ultrasound test that creates pictures of the heart.
Swelling from fluid	EDEMA	Excess fluid collecting in body tissues.
Brain-wave test	EEG	A recording of the brain's electrical activity.
Effectiveness	EFFICACY	How well a treatment works under specified conditions.
Heart electrical tracing	ELECTROCARDIOGRAM	A tracing of the heart's electrical activity, also called an ECG or EKG.
Mineral imbalance	ELECTROLYTE IMBALANCE	An abnormal level or balance of minerals in the blood.
Vomiting	EMESIS	The act of vomiting.

Lay term	Medical term	Lay-language explanation
Based on experience	EMPIRIC	Based on experience or likely cause rather than definitive test results.
Viewing inside the body	ENDOSCOPIC EXAMINATION	Looking inside the body with a lighted tube or camera.
Through the intestines	ENTERAL	Given through or involving the digestive tract.
Outside the spinal cord	EPIDURAL	Located outside the spinal cord covering, or medicine given into that space.
Remove completely	ERADICATE	To get rid of a disease, infection, or other problem.
Examined	EVALUATED, ASSESSED	Examined or checked for a medical condition.
Fast ethics review	EXPEDITED REVIEW	A rapid research-protocol review allowed for certain lower-risk studies.
Outside the body	EXTERNAL	Located or occurring outside the body.
Leak out	EXTRAVASATE	To leak outside the intended area, such as from a blood vessel into nearby tissue.
U.S. drug agency	FDA	The U.S. Food and Drug Administration, which regulates medicines and medical products.
Scar-like	FIBROUS	Containing many fibers, often resembling scar tissue.
Irregular quivering	FIBRILLATION	Very rapid, uncoordinated activity of the heart or another muscle.
Being put fully to sleep	GENERAL ANESTHESIA	Use of medicines to cause unconsciousness and prevent pain during a procedure.
Related to pregnancy	GESTATIONAL	Pertaining to pregnancy.
Red-cell percentage	HEMATOCRIT	The proportion of blood made up of red blood cells.
Bruise or blood collection	HEMATOMA	A collection of blood under the skin or in a tissue, often appearing as a bruise.
Blood-flow measurement	HEMODYNAMIC MEASURING	Measuring blood flow and circulation.
Red-cell breakdown	HEMOLYSIS	Breakdown or destruction of red blood cells.
Heparin tube or port	HEPARIN LOCK	An intravenous access device kept open with a prescribed solution, sometimes containing heparin.
Liver tumor	HEPATOMA	A tumor of the liver, often referring to hepatocellular carcinoma.
Inherited disease	HERITABLE DISEASE	A disease that can be passed through genes to future children.
Tissue-disease examination	HISTOPATHOLOGIC	Relating to examination of tissues or cells for disease.
Portable heart monitor	HOLTER MONITOR	A portable device that records heartbeats, usually for a day or longer.
High blood calcium	HYPERCALCEMIA	An abnormally high calcium level in the blood.
High blood potassium	HYPERKALEMIA	An abnormally high potassium level in the blood.
High blood sodium	HYPERNATREMIA	An abnormally high sodium level in the blood.
High blood pressure	HYPERTENSION	Blood pressure that is higher than recommended.
Low blood calcium	HYPOCALCEMIA	An abnormally low calcium level in the blood.
Low blood potassium	HYPOKALEMIA	An abnormally low potassium level in the blood.
Low blood sodium	HYPONATREMIA	An abnormally low sodium level in the blood.
Low blood pressure	HYPOTENSION	Blood pressure that is lower than expected.
Low blood oxygen	HYPOXEMIA	A low level of oxygen in the blood.
Low tissue oxygen	HYPOXIA	Too little oxygen reaching body tissues.

Lay term	Medical term	Lay-language explanation
Removal of the uterus	HYSTERECTOMY	Surgical removal of the uterus; the ovaries and other structures may or may not also be removed.
Treatment-caused	IATROGENIC	Caused by medical treatment or a healthcare procedure.
Device research permission	IDE	Permission to study an unapproved medical device in people.
Cause unknown	IDIOPATHIC	Having no known cause.
Body protection	IMMUNITY	The body's defense against infection or other foreign substances.
Antibody protein	IMMUNOGLOBIN	A protein involved in making antibodies and immune defense; the standard spelling is immunoglobulin.
Immune-suppressing	IMMUNOSUPPRESSIVE	A drug or treatment that reduces the body's immune response.
Immune-based treatment	IMMUNOTHERAPY	Treatment that uses or changes the immune system, often against cancer or immune disease.
Abnormal function	IMPAIRED FUNCTION	Function that is reduced or not working normally.
Placed inside the body	IMPLANTED	Surgically or otherwise placed inside the body.
New-drug research permission	IND	Authorization to test an unapproved new drug in people.
Hardening	INDURATION	An area that has become unusually firm or hard.
Left in place	INDWELLING	Remaining in a particular location, such as a catheter.
Dead tissue from poor blood flow	INFARCT	Death of tissue caused by inadequate blood supply.
Disease that can spread	INFECTIOUS DISEASE	An illness caused by organisms that may spread between people or through other routes.
Swelling and irritation	INFLAMMATION	The body's response to injury or infection, often causing swelling, warmth, redness, or pain.
Slow delivery into the body	INFUSION	Slow delivery of a substance, usually through a vein or catheter.
Taking by mouth	INGESTION	Eating, drinking, or taking something into the body by mouth.
Antiviral immune protein	INTERFERON	A medicine or natural protein that helps the body act against viruses.
On and off	INTERMITTENT	Occurring repeatedly with pauses between episodes.
Inside the body	INTERNAL	Located or occurring within the body.
Inside	INTERIOR	Located on the inside.
Into a muscle	INTRAMUSCULAR	Given into a muscle.
Into the abdomen	INTRAPERITONEAL	Given into or located within the abdominal cavity.
Into spinal fluid	INTRATHECAL	Given into the fluid space around the spinal cord.
Into a vein	INTRAVENOUS (IV)	Given through a vein.
Into the bladder	INTRAVESICAL	Given into the bladder.
Place a breathing tube	INTUBATE	To place a tube into the airway.
Breaking the skin	INVASIVE PROCEDURE	A procedure that punctures, opens, or cuts the skin or enters the body.
Unapproved-drug study	INVESTIGATIONAL NEW DRUG (IND)	A new drug being studied before it has full approval for general use.

Lay term	Medical term	Lay-language explanation
Unproven treatment method	INVESTIGATIONAL METHOD	A treatment method still being studied and not established as standard care.
Reduced blood flow	ISCHEMIA	Too little blood and oxygen reaching a tissue, usually because blood flow is reduced.
Open abdominal surgery	LAPAROTOMY	Surgery using an incision in the abdominal wall to reach the organs inside.
Abnormal area	LESION	A wound, injury, or area of abnormal tissue.
Very tired or sleepy	LETHARGY	Sleepiness, tiredness, or reduced energy.
Low white-cell count	LEUKOPENIA	A lower-than-normal number of white blood cells.
Fat	LIPID	A fat or fat-like substance.
Amount of fat	LIPID CONTENT	The amount of fat in a substance, tissue, or blood sample.
Cholesterol and fat panel	LIPID PROFILE (PANEL)	Blood tests measuring fats and cholesterol.
Numbing a small area	LOCAL ANESTHESIA	Numbing medicine used to prevent pain in a limited area.
Limited to one area	LOCALIZED	Restricted to one area.
Inner space	LUMEN	The hollow space inside a tube or organ, such as a blood vessel.
Lymph-vessel X-ray	LYMPHANGIOGRAPHY	An X-ray study of lymph vessels or nodes after contrast dye is injected.
Immune white blood cell	LYMPHOCYTE	A type of white blood cell that helps protect against infection.
Lymph-node cancer	LYMPHOMA	A cancer of lymph nodes or related lymphatic tissue.
Feeling unwell	MALAISE	A vague feeling of illness or bodily discomfort.
Not working correctly	MALFUNCTION	A condition in which a device, organ, or system does not work properly.
Cancerous growth	MALIGNANCY	A cancer or other tumor capable of growing and spreading.
Brain tumor	MEDULLABLASTOMA	A type of tumor that begins in the brain.
Abnormal red-cell development	MEGALOBLASTOSIS	A change in blood-forming cells that produces unusually large, abnormal red-cell precursors.
Break down in the body	METABOLIZE	To chemically process or break down a substance in the body.
Cancer spread	METASTASIS	Spread of cancer cells from one body part to another.
Antibiotic medicine	METRONIDAZOLE	A medicine used for certain bacterial and parasitic infections.
Heart attack	MI	Myocardial infarction, or death of heart muscle from blocked blood flow.
Small or slight	MINIMAL	Very small or slight.
Reduce	MINIMIZE	To reduce something as much as possible.
Check or watch	MONITOR	To observe, measure, or keep track of something over time.
Ease of movement	MOBILITY	The ability to move easily.
Illness or complication	MORBIDITY	Illness, disability, or an unwanted result of disease or treatment.
Death rate or death	MORTALITY	Death, or the rate of death in a population.
Ability to move	MOTILITY	The ability of a body part, cell, or organism to move.
Magnetic body scan	MRI	Pictures of the inside of the body made with magnets and radio waves rather than X-rays.

Lay term	Medical term	Lay-language explanation
Moist body lining	MUCOSA, MUCOUS MEMBRANE	The moist lining of the digestive, respiratory, reproductive, and urinary passages.
Muscle aches	MYALGIA	Pain or aching in the muscles.
Related to heart muscle	MYOCARDIAL	Pertaining to the muscle of the heart.
Heart attack	MYOCARDIAL INFARCTION	Death of heart muscle caused by inadequate blood flow.
Nose-to-stomach tube	NASOGASTRIC TUBE	A tube passed through the nose into the stomach.
U.S. health institute	NCI	The National Cancer Institute.
Tissue death	NECROSIS	Death of cells or tissue.
Tumor	NEOPLASIA/NEOPLASM	An abnormal new growth that may be benign or malignant.
Nerve-tissue cancer	NEUROBLASTOMA	A cancer that develops from immature nerve tissue.
Related to the nervous system	NEUROLOGICAL	Pertaining to the brain, spinal cord, or nerves.
Low infection-fighting cells	NEUTROPENIA	A decrease in neutrophils, a major type of infection-fighting white blood cell.
U.S. health agency	NIH	The National Institutes of Health.
Not entering the body	NONINVASIVE	Not breaking, cutting, or entering the skin or body.
Hospital-acquired	NOSOCOMIAL	Acquired during a stay in a healthcare facility.
Blockage	OCCLUSION	Closing, blockage, or obstruction.
Cancer specialty	ONCOLOGY	The study and treatment of cancer and tumors.
Related to the eye	OPHTHALMIC	Pertaining to the eye.
Best choice	OPTIMAL	Best, most favorable, or most suitable.
By mouth	ORAL ADMINISTRATION	Giving a medicine through the mouth.
Related to bones	ORTHOPEDIC	Pertaining to bones, joints, muscles, or related structures.
Rare dense-bone disorder	OSTEOPETROSIS	A rare disorder in which bones become unusually dense but may be fragile.
Weak bones	OSTEOPOROSIS	A condition in which bones lose strength and become more likely to break.
Female sex glands	OVARIES	The organs that produce eggs and reproductive hormones.
Given by injection	PARENTERAL	Given by injection rather than through the digestive tract.
Open passage	PATENCY	The condition of being open and unobstructed.
How a disease develops	PATHOGENESIS	The process by which a disease or unhealthy condition develops.
Through the skin	PERCUTANEOUS	Done through or across the skin.
Away from the center	PERIPHERAL	At or toward the outer part rather than the center.
By mouth	PER OS (PO)	A prescription direction meaning by mouth.
How the body handles a drug	PHARMACOKINETICS	The study of how the body absorbs, distributes, changes, and removes a drug.
First drug-study phase	PHASE I	The first human study phase, usually focused on safety, effects, and dosing.
Early effectiveness study	PHASE II	A study phase examining safety and early evidence of benefit in people with a condition.
Large confirmation study	PHASE III	A larger study phase used to confirm safety and effectiveness and identify common side effects.

Lay term	Medical term	Lay-language explanation
After-approval study	PHASE IV	A study performed after approval to monitor safety or examine additional uses.
Vein irritation	PHLEBITIS	Irritation or inflammation of a vein.
Inactive treatment	PLACEBO	An inactive substance or treatment that looks like the real treatment.
Improvement from expectation	PLACEBO EFFECT	An improvement that occurs after an inactive treatment, often because of expectation or context.
Clotting blood particles	PLATELETS	Small blood components that help stop bleeding by forming clots.
Possible	POTENTIAL	Possible or capable of happening.
Make stronger	POTENTIATE	To increase or multiply the effect of a drug, treatment, or substance.
Effect booster	POTENTIATOR	An agent that helps another agent work more strongly.
Before birth	PRENATAL	Occurring before birth.
Preventive treatment	PROPHYLAXIS	A medicine or action used to prevent disease or infection.
As needed	PRN	Prescription shorthand meaning when needed.
Expected outlook	PROGNOSIS	The expected course and outcome of a disease.
Lying face down	PRONE	Lying on the stomach or front.
Study looking forward	PROSPECTIVE STUDY	A study that follows participants forward in time.
Artificial body part	PROSTHESIS	An artificial replacement for a body part.
Study plan	PROTOCOL	The written plan for a study or treatment.
Closer to the center	PROXIMAL	Closer to the center of the body or point of attachment.
Related to the lungs	PULMONARY	Pertaining to the lungs.
Every day	QD	Prescription shorthand meaning every day; clearer wording is preferred.
Four times daily	QID	Prescription shorthand meaning four times a day.
Radiation treatment	RADIATION THERAPY	Treatment using high-energy radiation to damage or destroy abnormal cells.
By chance	RANDOM	Selected or occurring by chance.
Chance assignment	RANDOMIZATION	Assigning participants to groups by chance.
Red blood cell	RBC	A red blood cell.
Genetically combined	RECOMBINANT	Made by combining genetic material from different sources.
Put back together	RECONSTITUTION	Restoring something by putting its parts back together or adding a liquid.
Happen again	RECUR	To happen again.
Not responding	REFRACTORY	Not responding adequately to treatment.
Regrowth or repair	REGENERATION	Growth again or replacement of lost or damaged tissue.
Treatment schedule	REGIMEN	The planned pattern, dose, and timing of treatment.
Return of disease	RELAPSE	Return of a disease after improvement or remission.
No detectable disease	REMISSION	Disappearance or reduction of evidence of disease; it may be partial or complete.
Related to kidneys	RENAL	Pertaining to the kidneys.
Can be repeated	REPLICABLE	Able to be repeated with similar results.

Lay term	Medical term	Lay-language explanation
Remove surgically	RESECT	To remove part or all of an organ or tissue by surgery.
Study looking back	RETROSPECTIVE STUDY	A study that examines past records or past events.
Connective-tissue cancer	SARCOMA	A cancer arising from connective, bone, muscle, fat, or related tissues.
Calming medicine	SEDATIVE	A medicine that calms or makes a person sleepy.
Testicular cancer	SEMINOMA	A type of cancer arising in the testicle.
In order	SEQUENTIALLY	Happening one after another in order.
Sleepiness	SOMNOLENCE	Unusual sleepiness or a tendency to fall asleep.
Air-measuring instrument	SPIROMETER	An instrument that measures the amount of air moved into and out of the lungs.
Extent of disease	STAGING	Assessment of how far a disease has progressed or spread.
Usual accepted treatment	STANDARD OF CARE	A treatment plan generally accepted by the medical community as appropriate.
Narrowing	STENOSIS	Narrowing of a passage, duct, or blood vessel.
Mouth inflammation	STOMATITIS	Sores or inflammation inside the mouth.
Group for comparison	STRATIFY	To arrange people or results into groups for analysis.
Barely responsive state	STUPOR	A greatly reduced level of alertness in which a person is difficult to awaken or respond to.
Under the collarbone	SUBCLAVIAN	Located beneath the collarbone.
Under the skin	SUBCUTANEOUS	Beneath the skin.
Lying on the back	SUPINE	Lying face up on the back.
Care focused on comfort	SUPPORTIVE CARE	General care that relieves symptoms and supports the person without directly curing the underlying disease.
Having symptoms	SYMPTOMATIC	Showing or having symptoms.
Group of related findings	SYNDROME	A condition identified by a characteristic group of symptoms and signs.
Upper blood-pressure number	SYSTOLIC	Relating to the upper blood-pressure number when the heart contracts.
Birth-defect-causing	TERATOGENIC	Capable of causing abnormalities in a developing fetus.
Male sex glands	TESTES/TESTICLES	The organs that produce sperm and male reproductive hormones.
Clot formation	THROMBOSIS	Formation of a blood clot inside a blood vessel or other location.
Blood clot	THROMBUS	A blood clot formed within a blood vessel or the heart.
Three times daily	TID	Prescription shorthand meaning three times a day.
Gradual dose adjustment	TITRATION	Gradually changing a dose or solution to reach a desired effect.
Immune white blood cells	T-LYMPHOCYTES	White blood cells that help coordinate or carry out immune responses.
On the surface	TOPICAL	Applied to the surface, usually the skin or a mucous membrane.
Surface numbing medicine	TOPICAL ANESTHETIC	A numbing medicine applied to a particular surface area.

Lay term	Medical term	Lay-language explanation
Harmful effects	TOXICITY	Harmful or unwanted effects caused by a drug, chemical, or treatment.
Through the skin	TRANSDERMAL	Delivered through the skin.
Temporarily	TRANSIENTLY	For a short time or temporarily.
Injury	TRAUMA	Physical injury or wound.
Walking exercise machine	TREADMILL	A moving walking surface used for exercise or heart testing.
Absorption into tissue	UPTAKE	Absorbing or taking in a substance by living tissue.
Heart-valve repair	VALVULOPLASTY	A procedure that repairs or widens a heart valve.
Enlarged veins	VARICES	Abnormally enlarged or twisted veins.
Blood-vessel spasm	VASOSPASM	Sudden narrowing of blood vessels.
Disease carrier	VECTOR	An organism or carrier that can transmit a disease-causing microorganism.
Blood draw	VENIPUNCTURE	Puncturing a vein with a needle to draw blood or give treatment.
Parent-to-child spread	VERTICAL TRANSMISSION	Spread of an infection from a parent to a child, often during pregnancy, birth, or breastfeeding.
White blood cell	WBC	A white blood cell involved in immune defense.

Source and adaptation: Terms and concepts were checked against the University of Iowa Human Subjects Office, "Medical Terms in Lay Language," available at https://hso.research.uiowa.edu/get-started/guides-and-standard-operating-procedures-sops/medical-terms-lay-language. The explanations in this appendix are paraphrased for this dictionary and are not the only acceptable plain-language alternatives.
