for refractory epilepsy, including Lennox–Gastaut syndrome; potentially fatal aplastic anaemia and liver failure require specialist use and monitoring.

Felodipine

Felodipine is a dihydropyridine calcium-channel blocker used mainly for hypertension; arteriolar vasodilation can cause ankle oedema, flushing, headache, palpitations, or gingival enlargement.

Felon

Felon is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Felty Syndrome

Triad of rheumatoid arthritis, splenomegaly, and neutropenia (ANC <2000). Complication of long-standing, severe, seropositive RA. Increased infection risk. Treatment: DMARDs (methotrexate, TNF inhibitors), G-CSF for neutropenia, splenectomy in refractory cases.

Felty’S Syndrome

Felty syndrome is a rare complication of long-standing seropositive rheumatoid arthritis characterized by neutropenia and often an enlarged spleen. It increases infection risk and may require disease-modifying therapy, growth factors, antibiotics, or specialist treatment.

Female

Female describes the sex category generally associated with ova production and female reproductive anatomy, while recognizing biological variation and gender identity distinctions.

Female Athlete Triad

A syndrome involving low energy availability, menstrual dysfunction, and decreased bone mineral density in physically active females. It is related to inadequate nutrition, excessive exercise, or both, and increases the risk of stress fractures and other health problems.

Female Breast

The mammary gland and associated skin and connective tissue on the anterior chest; it contains lobules and ducts and varies with age, hormones, pregnancy, and lactation.

Female Circumcision

Female Circumcision is an anatomical, developmental, reproductive, nutritional, behavioral, or health-care concept used in medical assessment or care.

Female Condom

A female condom is a sheath placed in the vagina that provides a barrier against sperm and can reduce transmission of some sexually transmitted infections when used correctly.

Female Condoms

A flexible internal barrier placed in the vagina before sex that helps prevent pregnancy and reduces exposure to semen and some sexually transmitted infections.

Female Genital Mutilation

FGM: the partial or total removal of female external genitalia for non-medical reasons, a human rights violation practiced in parts of Africa, the Middle East, and Asia (types I–IV). Immediate complications: severe pain, hemorrhage, infection, urinary retention.

Female Genitalia

The external and internal reproductive organs of a female, including the vulva, vagina, cervix, uterus, fallopian tubes, and ovaries.

Female Gonad

An ovary, the female reproductive gland that produces oocytes and hormones such as estrogen and progesterone.

Female Infertility

Failure to achieve pregnancy after a defined period of regular unprotected intercourse, due to factors involving ovulation, the reproductive tract, ovarian

reserve, or other causes.

Alternate Names:

Infertility, Female

Female Orgasmic Disorder (Anorgasmia)

Persistent or recurrent delay in, infrequency of, or absence of orgasm that causes personal distress. It may be lifelong or acquired and can have medical, psychological, relationship, medication-related, or other causes.

Alternate Names:

Anorgasmia

Female Pattern Baldness

Progressive scalp hair thinning in a typically female distribution, influenced by genetics and androgens; evaluation considers iron deficiency, thyroid disease, medicines, and other causes.

Female Pelvis

The bony pelvis and associated soft tissues in a person with typical female pelvic anatomy; it is generally broader and has a wider pelvic outlet than the typical male pelvis, with substantial individual variation.

Female Phenotype

A female phenotype is the observable combination of anatomical, physiologic, and developmental traits associated with female sex, which can vary with genes and hormones.

Female Reproductive System

The female reproductive system includes the ovaries, fallopian tubes, uterus, cervix, vagina, vulva, and related hormonal pathways. It supports ovulation, menstruation, pregnancy, birth, and sexual function and is affected by developmental, endocrine, infectious, and structural disorders.

Female Sexual Dysfunction

Persistent sexual problems in a woman that cause distress, such as low desire, arousal difficulty, or pain.

Alternate Names:

Sexual Dysfunction, Female

Female Sexual Interest/Arousal Disorder

Persistent or recurrent reduction in sexual interest, thoughts, responsiveness, or arousal that causes personal distress. Causes may include medical conditions, medicines, mood, relationship factors, pain, or other psychological and social factors.

Female Urethral Opening

The external urethral meatus, the opening through which urine leaves the female urethra, located in the vulvar vestibule anterior to the vaginal opening.

Feminization

Development of physical or hormonal traits typically associated with female sexual development, occurring normally, therapeutically, or through endocrine disorders.

Femoral

Relating to the femur or thigh, including the femoral artery, vein, nerve, and neck of the femur.

Femoral Artery

Continues from external iliac through the femoral triangle and adductor canal to become the popliteal artery. Branches: superficial/deep circumflex femoral, deep femoral (profunda femoris), muscular. Palpable in the femoral triangle; most common site for arterial catheterization. Related to femoral vein medially and nerve laterally.

Femoral Hernia

A hernia in which abdominal contents pass through the femoral ring into the femoral canal, below the inguinal ligament and medial to the femoral vessels. It may become incarcerated or strangulated and often requires surgical assessment.

Femoral Hernia Repair

Surgery to return herniated tissue through the femoral canal and close or reinforce the defect; repair is often recommended because femoral hernias have a relatively high risk of strangulation.

Femoral Nerve

Largest lumbar plexus nerve (L2-L4), passing through psoas major and entering the thigh under the inguinal ligament lateral to the femoral artery. Innervates quadriceps, sartorius, pectineus; sensation to anterior thigh and medial leg (saphenous nerve). Used for knee surgery nerve block anesthesia.

Femoral Nerve Dysfunction

Impaired function of the femoral nerve, causing weakness of hip flexion or knee extension and altered sensation over the anterior thigh and medial leg; causes include diabetes, compression, trauma, and pelvic disease.

Femoral Neuropathy

Damage to the femoral nerve, causing weakness or sensory loss in the thigh and leg.

Femoral Pulse

Femoral Pulse is a muscle, nerve, vessel, reproductive structure, or other body part; its location and function determine its clinical relevance.

Femoral Shaft Fractures

Femoral shaft fractures: high energy (MVC, fall from height) or low energy (elderly, pathologic). Winquist-Hansen classification of comminution: I (none), II (butterfly <50% width), III (butterfly >50%), IV (segmental).

Femoral Triangle

Upper anterior thigh space bounded superiorly by the inguinal ligament, laterally by sartorius, and medially by adductor longus. Contents from lateral to medial: femoral nerve, artery, vein, and deep inguinal lymph nodes. The femoral artery is used for arterial catheterization. The femoral vein is accessed for central venous lines.

Femoral Vein

The major deep vein of the thigh, continuation of the popliteal vein (through the adductor hiatus), running with the femoral artery in the femoral sheath (medial to artery) through the femoral trian-

gle, becoming the external iliac vein at the inguinal ligament. Receives the great saphenous vein.

Femtogram

A femtogram is a unit of mass equal to one quadrillionth of a gram, or 10^{-15} grams.

Femtoliter

A femtoliter is a unit of volume equal to one quadrillionth of a liter, or 10^{-15} liters.

Femur

Longest, heaviest, strongest body bone. Proximal: head, neck, trochanters. Shaft: linea aspera. Distal: condyles, epicondyles. The neck connects head to shaft at approximately 125 degrees.

Femur Fracture

A break in the thigh bone, caused by major trauma or weakened bone; location and displacement determine blood loss, mobility, nerve and vessel risk, and treatment.

Femur Length

The length of the fetal femur (diaphysis), measured from the greater trochanter to the distal femoral metaphysis. Used for dating (14-26 weeks) and growth assessment. Normal growth: 2 mm per week. Short femur: can be constitutional (especially with short parents), associated with aneuploidy (trisomy 21, skeletal dysplasias), or IUGR.

Fenamiphos

An organophosphate pesticide used mainly against nematodes; it can cause poisoning by inhibiting acetylcholinesterase.

Fencer'S Pose

The posture produced by the asymmetric tonic neck reflex, with extension of the arm and leg on the side toward which the head is turned and flexion on the opposite side.

Fenclonine

An experimental compound that reduces serotonin

production by inhibiting tryptophan hydroxylase.

Fenfluramine

Fenfluramine is a serotonergic medicine used in some jurisdictions for selected severe epileptic encephalopathies; historical appetite-suppressant use was limited by valvular heart disease and pulmonary hypertension, so cardiac monitoring is required.

Fenitrothion

An organophosphate insecticide that can cause cholinergic poisoning by inhibiting acetylcholinesterase.

FeNO (Fractional Exhaled Nitric Oxide)

A breath test that estimates type 2, often eosinophilic, airway inflammation. The result is interpreted with symptoms, age, treatment, and other clinical findings.

Alternate Names:

Fractional Exhaled Nitric Oxide

Fenobucarb

A carbamate insecticide that can cause cholinergic poisoning if absorbed in a sufficient amount.

Fenofibrate

A fibric acid derivative (fibrate) activating PPAR-alpha, increasing HDL and reducing triglycerides, with modest LDL effects. Used for severe hypertriglyceridemia (pancreatitis risk), mixed dyslipidemia, and as an adjunct in residual hypertriglyceridemia.

Fenoldopam

A short-acting dopamine D1-receptor agonist used intravenously for severe hypertension in selected settings; it can cause hypotension, flushing, headache, and increased intraocular pressure.

Fenoprofen

Fenoprofen is a nonsteroidal anti-inflammatory drug used for pain and inflammatory arthritis; gastrointestinal bleeding, renal injury, fluid retention, and cardiovascular events are important risks.

Fenoprofen Calcium Overdose

Fenoprofen calcium overdose involves exposure or injury from fenoprofen calcium overdose; dose, route, timing, symptoms, and tissue involvement determine the urgency and treatment approach.

Fenoterol

A medicine or chemical compound called fenoterol. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Fenoxycarb

An insect-growth regulator that mimics juvenile hormone and disrupts development of immature insects.

Fenretinide

A synthetic retinoid studied for preventing or treating some cancers and other diseases.

Fentanyl Citrate

The citrate salt of fentanyl, a potent opioid analgesic used for severe pain and anesthesia; respiratory depression, sedation, dependence, and overdose are major risks.

Fentanyl Derivatives

Potent synthetic opioids related to fentanyl that may be used for analgesia or anesthesia. Examples include sufentanil, remifentanil, and alfentanil; their potency, duration, dosing, and risks differ, and they require careful monitoring because they can depress breathing.

Fenthion

An organophosphate insecticide that can cause cholinergic poisoning by inhibiting acetylcholinesterase.

Fermentation

A metabolic process in which microorganisms or cells convert organic substrates without using oxidative respiration, producing products such as acids, alcohols, or gases.

Ferredoxin

An iron–sulfur electron-transfer protein that participates in photosynthesis, steroid synthesis, and mitochondrial or bacterial redox reactions.

Ferritin

Intracellular iron storage protein reflecting total body iron stores. Low ferritin: iron deficiency anemia (<30 ng/mL, absolute; <100 can be consistent with iron deficiency in inflammation).

Ferritin Blood Test

A blood test measuring ferritin, a protein that stores iron; low levels strongly support iron deficiency, while high levels may reflect iron excess, inflammation, infection, liver disease, or malignancy.

Ferroptosis

A regulated form of cell death caused by iron-dependent lipid-peroxide accumulation and loss of antioxidant protection, distinct from apoptosis and necrosis.

Ferrous Sulfate

Ferrous sulfate is an oral iron salt used to treat or prevent iron-deficiency anaemia; nausea, constipation, dark stools, and accidental overdose toxicity can occur.

Fertile Period

Fertile Period is an anatomical, developmental, reproductive, nutritional, behavioral, or healthcare concept used in medical assessment or care.

Fertilisation

The union of a sperm and an egg (oocyte) to form a zygote, the first cell of a new individual.

Fertility

The biological capacity to conceive and produce offspring. Fertility depends on the proper functioning of the reproductive system in both males and females, including ovulation, sperm production, and hormonal regulation.

Fertility Domain

The reproductive dimension of health involving ability to conceive, reproductive function, fertility goals, infertility, and related medical or psychosocial care.

Fertility Drugs

Fertility Drugs is a medicine, drug, vitamin, or chemical product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent.

Fertility Preservation

Measures taken before gonadotoxic cancer therapy to preserve reproductive potential, including embryo or oocyte cryopreservation, sperm banking, and ovarian or testicular tissue cryopreservation.

Fertilization

Fusion of sperm and egg genetic material to form a zygote, usually in the fallopian tube, initiating embryonic development.

Ferumoxytol

An intravenous iron-carbohydrate complex used to treat iron-deficiency anemia in selected adults; hypersensitivity and hypotension require monitoring during infusion.

FESS

Functional endoscopic sinus surgery is a minimally invasive surgical technique that uses nasal endoscopes and specialized instruments to restore normal sinus drainage and ventilation by removing obstructive tissue and opening blocked sinus ostia, while preserving as much normal sinus mucosa and anatomy as possible.

Festinating Gait

A gait with progressively shortening, rapid steps and a forward-leaning posture, commonly associated with parkinsonism.

Fetal Acid-Base Status

Assessment of fetal oxygenation and acid-base balance, usually using umbilical cord blood gases at

birth or other intrapartum information. Interpretation depends on the complete gas panel, sampling site, timing, clinical condition, and laboratory reference ranges; marked acidemia may indicate impaired oxygenation.

Fetal Alcohol Spectrum Disorder

A broad spectrum of physical, behavioral, and cognitive impairments caused by prenatal alcohol exposure.

Alternate Names:

Fetal Alcohol Spectrum Disorders

Fetal Alcohol Syndrome

A collection of birth defects resulting from exposure of the fetus to alcohol during pregnancy, representing the most severe form of fetal alcohol spectrum disorder (FASD).

Fetal Attitude

The relationship of the fetal body parts to one another, especially the degree of flexion or extension of the head and limbs. The usual attitude is flexion, but deflexed, neutral, or extended attitudes can affect the presenting part and labor.

Fetal Bradyarrhythmia

An abnormally slow or irregular fetal heart rhythm, which may result from conduction block, ectopic beats, maternal or fetal disease, or medication exposure.

Fetal Bradycardia

A fetal heart-rate baseline below 110 beats per minute for at least 10 minutes. Causes include medicines, maternal conditions, fetal conduction disease, hypoxia, cord problems, or placental abruption; persistent or severe bradycardia requires urgent obstetric assessment.

Fetal Circulation

The circulation before birth in which the placenta supplies oxygen and nutrients and fetal shunts direct much of the blood away from the lungs.

Fetal Death

Death of a fetus before delivery; medical and legal definitions vary according to gestational age and local regulations.

Fetal Development

The growth and maturation of the fetus from the end of the embryonic period until birth, including development of organs, body systems, movement, and physiologic function.

Fetal Disease

A disease, structural abnormality, or developmental problem affecting a fetus before birth.

Fetal Distress

Abnormal fetal status during labor, indicated by abnormal fetal heart rate patterns (late or prolonged decelerations, minimal variability, absent accelerations). May indicate fetal hypoxia, cord compression, or placental insufficiency.

Fetal Echocardiography

A specialized ultrasound examination of the fetal heart used to assess cardiac structure, rhythm, and function, including possible congenital heart disease.

Fetal Growth Restriction

Failure of a fetus to reach its biologic growth potential, often associated with placental insufficiency. It is assessed using serial growth measurements, amniotic fluid, Doppler studies, and fetal surveillance rather than a single estimated-weight threshold alone.

Fetal Heart

The developing heart of a fetus, whose rate and rhythm can be assessed by ultrasound or electronic monitoring to evaluate fetal well-being.

Fetal Heart Rate

Normal fetal heart rate ranges from 110-160 beats per minute. Monitored via auscultation with a fetoscope, Doppler ultrasound, or continuous electronic fetal monitoring. Baseline FHR is determined over

a 10-minute window and is modulated by the autonomic nervous system.

Fetal Hemoglobin

The predominant hemoglobin during fetal life, composed of two alpha and two gamma chains and having higher oxygen affinity than adult hemoglobin.

Fetal Hydrops

Abnormal accumulation of fluid in at least two fetal compartments, such as the skin, chest, abdomen, or around the heart. Causes include fetal anemia, heart disease, infection, chromosome conditions, and immune incompatibility; it requires specialist obstetric evaluation.

Fetal Hypoxia

Inadequate oxygen available to the fetus before or during birth. It may result from placental problems, reduced maternal oxygenation, cord compression, or prolonged labor. Abnormal fetal heart-rate patterns can indicate risk and require prompt obstetric assessment.

Fetal Kick Counts (Fetal Movement Counting)

Observation and recording of fetal movements by a pregnant person. A noticeable reduction from the usual pattern should prompt timely obstetric advice.

Alternate Names:

Fetal Movement Counting

Fetal Lie

The relationship between the long axis of the fetus and that of the pregnant person. It may be longitudinal, transverse, or oblique. A persistent abnormal lie near delivery can affect the mode of birth.

Fetal Macrosomia

Excessive fetal size, often defined as estimated or birth weight of at least 4,000 or 4,500 g depending on the clinical context. Diabetes, excessive maternal weight gain, and prior macrosomia are risk factors; complications include shoulder dystocia, birth trauma, and cesarean delivery.

Fetal Malpresentation

A fetal presentation other than the usual vertex presentation, including breech, transverse, or oblique lie, which may affect labor and delivery planning.

Fetal Monitoring

Assessment of fetal heart rate and, sometimes, uterine contractions to evaluate fetal wellbeing during pregnancy or labor.

Fetal Monitoring, Electronic

Continuous or intermittent recording of fetal heart rate and uterine activity using external sensors or an internal electrode when indicated; patterns are interpreted with gestational age and labor context.

Fetal Presentation

The fetal part that enters the maternal pelvis first. Presentations include cephalic, breech, shoulder, face, brow, and compound forms; the presentation influences labor and delivery planning.

Fetal Pyelectasis

Dilation of the fetal renal pelvis seen on prenatal imaging; it may be transient or associated with urinary tract obstruction or aneuploidy and requires context-specific follow-up.

Fetal Scalp Electrode

A spiral wire electrode placed on the fetal scalp through the cervix to directly record the fetal heart rate. Provides a more accurate FHR signal than external Doppler, particularly in obese patients or when external monitoring is inadequate. Indications: poor-quality external tracing, need for internal monitoring.

Fetal Scalp pH Testing

Fetal scalp pH testing involves exposure or injury from fetal scalp pH testing; dose, route, timing, symptoms, and tissue involvement determine the urgency and treatment approach.

Fetal Scalp Stimulation

A bedside test during labor in which the fetal scalp

is gently stimulated during a vaginal examination. A resulting fetal heart-rate acceleration may be reassuring, but the result must be interpreted with the complete fetal monitoring pattern and clinical context.

Fetal Stage

The fetal stage begins after the embryonic period and continues until birth, characterized mainly by growth and maturation of established organs.

Fetal Tachycardia

A sustained fetal heart-rate baseline above 160 beats per minute for at least 10 minutes. Causes may include maternal fever, infection, medicines, fetal hypoxia, or fetal arrhythmia.

Fetal Tissue

Fetal tissue is tissue from a developing fetus and may be relevant to pregnancy care, pathology, research, transplantation, or genetic testing under applicable ethical and legal rules.

Fetal Ultrasound

Ultrasound imaging during pregnancy. First trimester (6-12 weeks): confirm pregnancy, gestational age (crown-rump length), number of fetuses, viability (heart activity), nuchal translucency (screening for aneuploidy at 11-13 weeks).

Fetal Viability

The potential for a fetus to survive outside the uterus with medical support. It depends on gestational age, fetal condition, available neonatal care, and other clinical factors; it is not a single fixed point.

Fetal Weight

Fetal weight is an estimate of a fetus's mass, usually from ultrasound measurements, used to assess growth and identify possible growth restriction or macrosomia.

Fetal-Maternal Erythrocyte Distribution

Blood Test

A test that estimates the amount of fetal red blood cells in maternal circulation, helping guide Rh immune globulin dosing after fetomaternal hemorrhage.

Fetishism

A recurrent sexual interest in a nonliving object or a specific non-genital body part; it is a disorder only when it causes clinically significant distress or impairment or involves harm or lack of consent.

Fetishistic Disorder

A paraphilic disorder characterized by recurrent, intense sexual arousal from either the use of nonliving objects (fetish) or a highly specific focus on nongenital body parts (partialism), lasting ≥ 6 months and causing distress or impairment or involving acting on these urges.

Fetomaternal Hemorrhage

Transplacental passage of fetal red blood cells into the maternal circulation. Occurs in small amounts during normal pregnancy but can be massive during trauma, placental abruption, or cesarean delivery.

Fetomaternal Transfusion

A medical procedure, treatment, device, or care topic related to fetomaternal transfusion; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Fetoscope

An instrument used to hear or assess the fetal heart-beat through the pregnant person's abdominal wall, especially later in pregnancy.

Fetus

An unborn offspring from the 9th week of gestation (after the embryonic period) until birth. The fetal period is characterized by rapid growth, maturation of organ systems, and increasing complexity of function.

FEV1/FVC Ratio

Fraction of air exhaled in first second relative to total. < 0.70 post-bronchodilator indicates obstruction. Normal or elevated in restrictive disease.

Fever

Fever is a regulated rise in body temperature caused by altered hypothalamic set point, commonly in response to infection or inflammation; age, duration, and associated signs determine concern.

Fever And Headache

Fever with headache may occur with viral illness, influenza, sinus disease, dehydration, meningitis, encephalitis, or other infection. Severe sudden headache, neck stiffness, confusion, rash, seizure, weakness, or reduced consciousness requires emergency assessment.

Fever Blister

Recurrent herpes simplex labialis: small, painful vesicles on the lips or around the mouth caused by HSV-1. The virus remains latent in trigeminal ganglia and reactivates with stress, illness, or sun exposure. Heals without scarring in 7-10 days.

Alternate Names:

Cold sore; herpes labialis

Fever Of Unknown Origin

Persistent or recurrent fever for which an appropriate initial evaluation has not established a diagnosis.

Fever, Acute, In Adults

A fever in an adult with recent onset, commonly caused by infection, inflammation, medication, heat illness, or other conditions. Severity, vital signs, immune status, source, and associated symptoms guide evaluation; confusion, breathing difficulty, stiff neck, shock, or severe localized pain requires urgent care.

Fever, Chronic

A prolonged or recurrent fever that remains unexplained after initial evaluation; fever of unknown origin is traditionally defined as a temperature of at

least 101 degrees Fahrenheit (38.3 degrees Celsius) on several occasions lasting more than three weeks without a diagnosis after appropriate assessment. Causes include infection, malignancy, inflammatory disease, and medications. duration, height, and patient factors. Common causes: infections (bacterial, viral), autoimmune disorders, malignancies, drug reactions. Management: antipyretics (acetaminophen, ibuprofen), treat underlying cause.

Fever, Shin Bone

The shin bone is the tibia, the larger weight-bearing bone of the lower leg; fever is a separate term meaning an elevated body temperature, so this dictionary label appears to combine two concepts.

Fever, Valley

Coccidioidomycosis: a fungal infection caused by *Coccidioides* species, endemic to arid regions of the southwestern US and parts of Mexico and Central/South America. Inhalation of spores causes respiratory illness ranging from asymptomatic to severe pneumonia. Dissemination can affect skin, bones, and meninges.

Alternate Names:

Valley fever; coccidioidomycosis

Fevers, Viral Hemorrhagic

Severe febrile illnesses caused by various RNA viruses (Ebola, Marburg, dengue, Lassa, Rift Valley fever) transmitted by arthropods or rodents. Characterized by fever, hemorrhage, and multi-organ failure. High mortality rates for some agents. Prevention focuses on vector control and infection prevention.

Alternate Names:

Viral hemorrhagic fevers

Fexofenadine

A second-generation (non-sedating) H1 antihistamine used for allergic rhinitis and chronic urticaria. Peripherally selective with minimal sedation and anticholinergic effects; no significant CNS penetration. Adverse effects: headache, dizziness, and dry mouth.

Fiber

Dietary fiber is nondigestible carbohydrate and plant material that reaches the colon; soluble and insoluble fiber affect stool bulk, bowel transit, glycaemic control, and blood lipids. cholesterol, blood glucose. Insoluble (whole grains, vegetables) adds bulk, prevents constipation. Recommended: 25-30 g/day.

Fiber Optic

A technology that transmits light through flexible glass or plastic fibers. It is used in medical endoscopes and other imaging or examination devices.

Fibrates

A class of lipid-lowering medicines that activate PPAR-alpha and reduce triglycerides while often increasing HDL cholesterol; adverse effects include liver, muscle, and gallbladder problems.

Fibre

A threadlike structure or material; in nutrition, dietary fiber is nondigestible plant carbohydrate that supports bowel function and can influence glucose and cholesterol.

Fibrillation

Rapid, irregular, and uncoordinated contraction of muscle fibers. Atrial fibrillation causes an irregular atrial rhythm; ventricular fibrillation is a cardiac arrest rhythm requiring immediate resuscitation.

Fibrin

A threadlike protein that forms the structural mesh of a blood clot.

Fibrin Degradation Products Blood Test

A blood test measuring fragments released when fibrin is broken down; increased levels may occur with widespread coagulation and fibrinolysis, including disseminated intravascular coagulation, but are nonspecific.

Fibrin Sealant

A biological adhesive containing fibrinogen and

thrombin that forms a fibrin clot when applied to tissue. It may help control bleeding or seal selected surgical surfaces.

Fibrinogen

A soluble plasma protein, also called coagulation factor I, that is converted to fibrin during blood clot formation. Its concentration may increase with inflammation and decrease with severe liver disease or consumption coagulopathy.

Alternate Names:

coagulation factor I, that is converted to fibrin during blood clot formation.

Fibrinogen Assay

A fibrinogen assay measures plasma fibrinogen concentration or function, commonly by the Clauss method; low results may occur in consumption, severe liver disease, or inherited deficiency, while inflammation can increase the level.

Fibrinogen Blood Test

A blood test measuring fibrinogen, a liver-produced protein converted to fibrin during clot formation; it helps evaluate bleeding, excessive clotting, liver disease, and disseminated intravascular coagulation.

Fibrinogen Decreased

Decreased fibrinogen is a low plasma fibrinogen level that can impair clot formation and cause bleeding; causes include disseminated intravascular coagulation, severe hepatic failure, massive transfusion, and congenital deficiency.

Fibrinoid Necrosis

A specialized pattern of vascular necrosis characterized by the deposition of immune complexes, fibrin, and plasma proteins within the walls of blood vessels, creating an amorphous, bright pink, smudgy eosinophilic appearance on hematoxylin and eosin staining.

Fibrinolysis

The enzymatic breakdown of fibrin within a blood clot, principally mediated by plasmin generated from plasminogen. It limits clot extension and

supports restoration of vascular patency; excessive fibrinolysis can cause bleeding, whereas impaired fibrinolysis can promote thrombosis.

Fibrinolysis - Primary Or Secondary

Breakdown of fibrin clots by plasmin; primary fibrinolysis occurs without preceding widespread coagulation activation, whereas secondary fibrinolysis follows clot formation and coagulation activation.

Fibrinolytic Agent

A fibrinolytic agent is a thrombolytic drug, such as alteplase or tenecteplase, that converts plasminogen to plasmin and dissolves fibrin clots; major bleeding, including intracranial haemorrhage, is the principal danger.

Fibrinolytic Therapy

Treatment with medications that dissolve blood clots by activating plasminogen to plasmin, which breaks down fibrin. Common agents include tissue plasminogen activator (tPA), streptokinase, and urokinase. Used for acute ischemic stroke, pulmonary embolism, and myocardial infarction. Risks include bleeding complications.

Alternate Names:

Thrombolytic therapy

Fibrinopeptide A Blood Test

A blood test measuring fibrinopeptide A released when thrombin converts fibrinogen to fibrin; it may indicate thrombin generation but is not routinely used alone for diagnosis.

Fibrinous Pericarditis

Inflammation of the pericardium characterized by deposition of fibrin on the pericardial surfaces, giving them a rough, shaggy appearance described as bread-and-butter pericarditis.

Fibroadenoma

The most common benign tumor of the female breast, a proliferation of stromal and epithelial elements presenting as a firm, rubbery, smooth, mobile, painless mass, most often in women aged fifteen to thirty. The mass slips easily under the fingers

(breast mouse), and ultrasonography shows a well-defined oval hypoechoic lesion.

Fibroadenoma Of The Breast

A common benign breast tumor composed of glandular and fibrous tissue, usually smooth, mobile, and painless, especially in adolescents and young adults.

Fibroblast

A connective-tissue cell that produces collagen and other extracellular-matrix components.

Fibrocartilage

Strong cartilage containing dense bundles of type I collagen, adapted to resist compression and tension. It forms intervertebral discs, the pubic symphysis, and menisci.

Fibrocystic Breast Changes

A benign condition characterized by lumpy, painful breast tissue, most common in women aged 20-50, driven by hormonal fluctuations during the menstrual cycle (estrogen and progesterone). Microscopic features include stromal fibrosis, cyst formation (macrocyts and microcyts), and adenosis (increased glandular tissue).

Fibrocystic Breast Condition

Fibrocystic breast change causes lumpiness, tenderness, or cysts that often vary with the menstrual cycle. It is usually benign, but a new persistent or changing mass, skin or nipple change, or bloody discharge needs clinical and imaging assessment.

Fibrocystic Breast Disease

Fibrocystic Breast Disease is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fibrocystic Breasts

Benign breast changes involving fibrosis and cyst formation, often producing lumpy or tender breasts that fluctuate with the menstrual cycle. They are

common and are not themselves a premalignant condition.

Fibrodysplasia Ossificans Progressiva

An extremely rare, catastrophically disabling autosomal dominant genetic disorder caused in over 95% of patients by a recurrent, identical heterozygous activating missense mutation (c.617G>A, p.Arg206His) in the *ACVR1* gene on chromosome 2q24.1, which encodes the activin A receptor type I/ALK2 (a bone morphogenetic protein [BMP] type I receptor). Characterized by congenital malformation of the great toes (bilateral hallux valgus and digital monophalangism) evident at birth, followed in early childhood by recurrent, painful inflammatory soft tissue swellings (flare-ups) that undergo progressive heterotopic endochondral ossification, irreversibly converting skeletal muscles, tendons, ligaments, and fascia into ribbons and plates of mature heterotopic bone, leading to complete ankylosis of the spine and peripheral joints (“stone man syndrome”).

Alternate Names:

FOP; Myositis Ossificans Progressiva; Stone Man Syndrome

Fibroepithelial Polyp Of The Vulva

A benign polypoid lesion composed of stellate stromal cells beneath squamous epithelium, often arising in the vulvovaginal region during reproductive years or pregnancy.

Fibrofolliculoma

A benign perifollicular skin tumor, often multiple on the face, that is characteristic of Birt-Hogg-Dubé syndrome when associated with other findings.

Fibroid

A benign smooth-muscle tumor, most often arising in the uterus.

Alternate Names:

Uterine leiomyoma

Fibroid Tumor

A benign smooth-muscle tumor of the uterus, also called a leiomyoma, which may cause heavy bleeding, pelvic pressure, pain, infertility, or no symptoms.

Fibroids

Fibroids is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fibroids, Cysts, And Polyps

Benign growths that can develop in the reproductive organs. Fibroids are smooth muscle tumors of the uterus; cysts are fluid-filled sacs that commonly form on the ovaries; and polyps are tissue overgrowths in the endometrium or cervix.

Fibroids, Uterine

Benign smooth muscle tumors of the uterus, also called leiomyomas. Common cause of abnormal uterine bleeding, pelvic pain, and bulk symptoms. May affect fertility. Treatment ranges from observation to medical management to surgical removal depending on symptoms and reproductive goals.

Alternate Names:

Uterine fibroids; leiomyomas

Fibrolipoma

A benign tumor composed of mature fat and abundant fibrous tissue, usually presenting as a slow-growing painless soft-tissue mass.

Fibroma

A benign cardiac tumour composed of fibroblasts and collagen, usually arising within the ventricular myocardium or interventricular septum in children. It may cause ventricular obstruction or clinically important arrhythmias; echocardiography and cardiac MRI help define its location and extent.

Fibroma Of Tendon Sheath

A benign, slow-growing fibroblastic tumor attached to a tendon sheath, most often affecting the fingers, hand, or wrist. It presents as a firm painless mass and may recur after excision.

Fibromatoses

A group of locally infiltrative fibroblastic proliferations that lack metastatic potential but may recur

and damage adjacent structures; superficial and deep types are distinguished clinically and pathologically.

Fibromatosis

A proliferation of fibroblasts and myofibroblasts that is usually nonmetastatic but can infiltrate locally and recur, as in desmoid-type fibromatosis.

Fibromuscular Dysplasia

A non-atherosclerotic, non-inflammatory disease of medium-sized arteries, often involving the renal or carotid arteries. Imaging may show alternating narrowing and dilation. Symptoms, vascular complications, and treatment depend on the arteries involved and the individual clinical situation.

Fibromyalgi

Fibromyalgi is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fibromyalgia

Fibromyalgia is a chronic pain-amplification disorder with widespread pain, fatigue, unrefreshing sleep, and cognitive symptoms without a single defining tissue lesion. months), fatigue, sleep disturbance, cognitive dysfunction (fibro fog), and somatic symptoms, affecting 2-4% of population (female:male 9:1).

Fibromyalgia Syndrome

A chronic disorder characterized by widespread musculoskeletal pain, fatigue, unrefreshing sleep, and cognitive symptoms. Diagnosis is clinical based on widespread pain index and symptom severity scale. Treatment includes exercise, cognitive behavioral therapy, and medications.

Alternate Names:

Fibromyalgia

Fibromyxosarcoma

A rare malignant soft-tissue tumor containing fibrous and myxoid tissue; diagnosis requires pathology and treatment is guided by location, grade, and

stage.

Fibronectin

An extracellular-matrix glycoprotein that supports cell adhesion, migration, wound healing, and tissue organization and circulates in plasma.

Fibroproliferation

Abnormal proliferation of fibroblasts and deposition of connective tissue that contributes to scarring and fibrosis, including in the lungs.

Fibrosarcoma

A malignant tumor of fibroblasts, a soft tissue sarcoma of adulthood or infancy, arising in deep soft tissues, bones, or paranasal sinuses.

FibroScan

Non-invasive transient elastography technique measuring liver stiffness to assess hepatic fibrosis. Values correlate with fibrosis stage with higher values indicating more advanced fibrosis. The technique avoids the need for liver biopsy in many patients. Results may be unreliable in obesity, ascites, and narrow intercostal spaces.

Fibrosing Alopecia

A group of primary cicatricial (scarring) alopecias in which chronic inflammation leads to permanent destruction of hair follicles and replacement by fibrous tract remnants. It includes conditions such as lichen planopilaris, frontal fibrosing alopecia, and central centrifugal cicatricial alopecia.

Fibrosis

The excessive deposition of extracellular matrix components, primarily collagen types I and III, in response to chronic tissue injury. It represents a pathological wound healing response that leads to organ scarring and dysfunction.

Fibrosis, Interstitial Pulmonary

Chronic progressive scarring of lung interstitium, leading to impaired gas exchange. Causes include connective tissue diseases, medications, radiation,

and idiopathic sources. Presents with dyspnea, dry cough, and restrictive physiology on pulmonary function tests.

Alternate Names:

Interstitial lung disease

Fibrosis, Pulmonary

Irreversible scarring of lung tissue with thickening of alveolar walls, reducing lung compliance and gas exchange. Idiopathic pulmonary fibrosis is the most common form. Presents with progressive dyspnea, dry cough, and characteristic honeycomb pattern on CT.

Alternate Names:

Pulmonary fibrosis

Fibrositis

Fibrositis is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fibrous Dysplasia

A benign skeletal disorder in which normal bone is replaced by fibro-osseous tissue, producing weakened or misshapen bone. It may affect one bone or multiple bones and can cause pain, deformity, pathological fracture, or nerve compression; imaging often shows a characteristic ground-glass appearance.

Fibrous Plaque

A raised arterial lesion containing fibrous tissue and lipid that can narrow the vessel.

Alternate Names:

Atherosclerotic plaque

Fibula

Slender lateral leg bone, not weight-bearing, serving for muscle attachment and forming the lateral malleolus. Head provides biceps femoris and lateral collateral ligament attachment; the common peroneal nerve wraps around its neck, vulnerable to injury. Lateral malleolus extends more distally and posteriorly than the medial malleolus.

Fick Principle

A fundamental physiological principle governing cardiovascular and pulmonary hemodynamics, stating that the rate of uptake or release of a substance by an organ is equal to the product of blood flow through that organ and the arteriovenous concentration difference of the substance across the organ. Applied during right heart catheterization as the gold standard method to calculate cardiac output (CO): $CO = VO_2 / (C_aO_2 - C_vO_2)$, where VO_2 represents whole-body oxygen consumption (measured directly by spirometric gas analysis or estimated from body surface area), and C_aO_2 and C_vO_2 represent arterial and mixed venous oxygen contents, respectively.

Alternate Names:

Fick Method; Fick Cardiac Output Determination

Ficusin

A naturally occurring plant compound studied in chemistry and pharmacology; it is not a standard treatment for a specific disease.

Fiducial Markers

fiducial markers is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

Field Fever

Field Fever is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Field Of View

The extent of anatomy or space captured in one image or measurement.

Fields Disease

An extremely rare, apparently congenital neuromuscular disorder reported in identical twins, characterized by progressive muscle degeneration and involuntary movements; its cause and natural history remain uncertain.

Fifth Disease

Erythema infectiosum caused by Parvovirus B19. Characterized by bright red cheeks (slapped cheek appearance) followed by a lacy, reticulated rash on the trunk and extremities. Mild febrile illness in children. Concern in pregnancy (hydrops fetalis risk) and immunocompromised patients (pure red cell aplasia). Diagnosis by serology.

Alternate Names:

Erythema Infectiosum (Fifth Disease)

FIGO Leiomyoma Classification

A universally adopted 9-category system established by the International Federation of Gynecology and Obstetrics to standardize the anatomical subtyping of uterine fibroids based on their transmural location and relation to the endometrium and serosa: Submucosal (Type 0: pedunculated intracavitary; Type 1: $< 50\%$ intramural; Type 2: $\geq 50\%$ intramural); Other/Intramural (Type 3: 100% intramural contact with endometrium; Type 4: intramural entirely; Type 5: subserosal $\geq 50\%$ intramural; Type 6: subserosal $< 50\%$ intramural; Type 7: pedunculated subserosal); and Hybrid/Cervical (Type 8).

Filamentous Fungus

A fungus that grows as thread-like structures called hyphae, forming a network known as mycelium.

Filaria Bancrofti

Filaria bancrofti is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Filaria Demarquay

filaria demarquay is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Filarial Elephantiasis

filarial elephantiasis is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Filarial Elephantiasis

Severe swelling and thickening of tissues caused by lymphatic obstruction from filarial infection.

Filariasis

A group of tissue-dwelling nematode infections transmitted by mosquitoes, blackflies, deerflies, or other vectors. Lymphatic filariasis is caused mainly by *Wuchereria bancrofti*, *Brugia malayi*, and *Brugia timori*; adult worms in lymphatic vessels can cause recurrent inflammation, lymphedema, hydrocele, and elephantiasis. Other filarial species cause skin, eye, or subcutaneous disease, so diagnosis and treatment depend on the species and anatomic site.

Filial

Relating to a son or daughter, or to the relationship between offspring and a parent; in genetics, a filial generation is a generation descended from a parental generation.

Filler

A material injected or placed beneath the skin or in tissue to restore volume, smooth lines, alter contours, or replace lost structure; effects and risks depend on the material and site.

Filler Excipient

filler excipient is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Filopodium

A slender, actin-rich projection from a cell surface that senses the environment and helps cells migrate, adhere, or establish neuronal connections.

Filoviridae

A family of enveloped RNA viruses that includes the genera Ebolavirus and Marburgvirus.

Filoviruses

A family of negative-sense RNA viruses that includes Ebola and Marburg viruses. These viruses

cause severe hemorrhagic fever with high mortality rates. The virus is transmitted through contact with infected body fluids. The incubation period is 2-21 days. Symptoms include fever, headache, myalgia, and hemorrhage.

Filter (Vascular)

A device placed in a large vein, usually the inferior vena cava, to trap clots and reduce the risk of pulmonary embolism in selected patients.

Alternate Names:

Vascular

Filterable Virus

An obsolete historical term for an infectious agent small enough to pass through filters that retain bacteria; it reflects the development of early virology rather than a modern virus classification.

Filtered Back Projection

An image-reconstruction method that mathematically back-projects measured data after applying a filter. It is fast but can be more sensitive to noise and artifacts than iterative methods.

Filtering Operations

Processes that separate particles, cells, molecules, or fluids by size or other properties using a filter, membrane, or computational rule.

Filtering Procedure

An operation that creates an alternate drainage pathway to lower pressure inside the eye, usually in glaucoma.

Filtration

Separation of particles or solutes from a fluid by passage through a porous material; kidney glomerular filtration removes water and small solutes from blood.

Filtration Fraction

The fraction of renal plasma flow that is filtered at the glomerulus, calculated as GFR divided by renal plasma flow (RPF). Normal GFR is approximately

125 mL/min and RPF is approximately 625 mL/min, yielding a filtration fraction of approximately 0.20 (20 percent).

Filum Terminale

Filum Terminale is a muscle, nerve, vessel, reproductive structure, or other body part; its location and function determine its clinical relevance.

Fimbria

Fimbria is a muscle, nerve, vessel, reproductive structure, or other body part; its location and function determine its clinical relevance.

Fimbriae

The finger-like projections at the distal end of each fallopian tube that sweep over the ovary during ovulation to capture the released egg and guide it into the fallopian tube. The fimbriae are lined with ciliated epithelium that creates a current to draw the egg into the tube.

Fimbriae Proteins

Bacterial surface proteins that form fimbriae or pili and mediate attachment to host cells, surfaces, or biofilms.

Fine Crackles

High-pitched, brief, discontinuous sounds heard at the end of inspiration, caused by opening of small airways. They are characteristic of ILD, pulmonary fibrosis, and heart failure. They are also called Velcro crackles due to their resemblance to the sound of Velcro being pulled apart.

Alternate Names:

Velcro crackles due to their resemblance to the sound of.

Fine Motor Control

The coordinated use of small muscles, especially in the hands and fingers, for precise tasks such as writing, buttoning, and manipulating objects.

Fine Motor Skills

The ability to use small muscles (hands/fingers) for

precise movements, developing with age: reaching (3-4 months), grasping (5-6 months), pincer grasp (9-12 months), self-feeding (12-18 months), building towers/scribbling (18-24 months), drawing shapes and using utensils (3-5 years), and handwriting.

Fine Needle Aspiration

A percutaneous sampling technique in which a 22 to 25-gauge needle, often ultrasound- or palpation-guided, aspirates cellular material from a palpable or imaging-detected lesion for cytologic examination, with minimal trauma and lower morbidity than core or open biopsy.

Fine Needle Aspiration Of The Thyroid

A procedure using a thin needle to remove thyroid cells for cytologic examination, usually guided by ultrasound to evaluate a nodule.

Finegoldia

A genus of anaerobic gram-positive bacteria that can cause skin, soft-tissue, bone, joint, or bloodstream infections.

Finegoldia Magna

An anaerobic gram-positive bacterium found on skin and mucosal surfaces that can cause wound and other opportunistic infections.

Finger

One of the digits of the hand, consisting of phalangeal bones, joints, tendons, nerves, blood vessels, and soft tissue that support grasping and fine movement.

Finger Dislocation

Displacement of the bones forming a finger joint, usually caused by a direct blow, fall, or forced bending. Pain, swelling, deformity, and loss of movement are typical. The joint should be assessed for fracture, tendon injury, and neurovascular compromise before reduction and splinting.

Finger Flexors

Muscles and tendons that bend the fingers at the

metacarpophalangeal and interphalangeal joints, primarily supplied by the median and ulnar nerves.

Finger Injury

Damage to a finger's bone, joint, tendon, ligament, nerve, vessel, nail, or skin caused by trauma and assessed for deformity, circulation, sensation, and function.

Finger Joint

A joint between bones of a finger, including the metacarpophalangeal and interphalangeal joints, permitting flexion, extension, and limited side-to-side movement.

Finger Pain

Pain in one or more fingers caused by injury, arthritis, tendon disease, nerve compression, infection, circulation problems, or inflammatory conditions.

Finger Stick

A small puncture of a fingertip used to obtain capillary blood, commonly for point-of-care glucose or other blood testing.

Fingernail

The hard keratin plate covering the dorsal end of a finger, produced by the nail matrix and protecting the fingertip.

Fingers That Change Color

Fingers that change color concerns fingers that change color, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Finkelstein Test

A wrist examination that stresses the tendons on the thumb side of the wrist. Pain near the radial styloid may support a diagnosis of de Quervain tenosynovitis but is not specific by itself.

Fire Ants

Stinging ants whose venom causes immediate burning pain and itchy sterile pustules; numerous stings

can produce systemic allergic or toxic reactions.

Firesetting Behavior

Deliberate setting of fires, ranging from isolated behavior to recurrent fire-setting associated with impulse-control, psychiatric, developmental, substance-use, or social problems.

Firmicutes

A large bacterial group that includes many low-GC gram-positive bacteria, although modern genetic classification has changed its boundaries.

First Aid

Immediate basic care given to a person who is injured or suddenly ill before definitive medical treatment is available. Priorities include scene safety, emergency activation, airway, breathing, circulation, and control of serious bleeding.

First Aid Kit

A collection of supplies for treating minor injuries and providing initial care until professional medical help is available.

First Stage Of Labor

The period from the onset of regular labor to complete cervical dilation. It includes a latent phase and an active phase, with progress varying widely among individuals. Assessment considers cervical change, contraction pattern, maternal and fetal condition, and the overall clinical course.

First Trimester

The period from conception to 12 weeks gestational age. Characterized by rapid embryonic organogenesis, rising hCG levels, and establishment of the placenta. Common symptoms include nausea, vomiting, fatigue, and breast tenderness. Dating ultrasound performed to confirm gestational age. Risk of miscarriage highest during this trimester.

First-Degree AV Block

A conduction delay in which every atrial impulse reaches the ventricles but with a prolonged PR

interval (>0.20 seconds). It is caused by delayed conduction through the AV node or His-Purkinje system. First-degree block is usually benign and asymptomatic.

First-Degree Burn

A superficial burn affecting only the epidermis: erythema, pain, and dryness without blistering (e.g., mild sunburn); heals in 3-7 days without scarring. Assessment: size (percent BSA—rule of nines), depth, and cause (thermal, chemical, electrical).

First-Degree Heart Block

Delay in conduction from the atria to the ventricles, shown on ECG by a prolonged but constant PR interval greater than 200 milliseconds. It is often asymptomatic, but the cause, medications, associated conduction disease, and progression risk should be assessed.

First-Episode Psychosis

The first clinically recognized episode of psychosis, regardless of eventual diagnosis. It requires urgent assessment for substance exposure, medication effects, mood symptoms, neurologic disease, systemic illness, safety risk, and functional decline.

First-Pass Effect

The metabolism of a drug by the liver and intestinal wall before it reaches the systemic circulation after oral administration.

First-Pass Metabolism

The metabolism of a drug by the liver before it reaches systemic circulation after oral administration. Drugs with high first-pass metabolism (e.g., morphine, nitroglycerin, lidocaine) have low oral bioavailability and may require alternative routes (sublingual, transdermal, IV).

Fish Oil

fish oil is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

Fish Poisoning

Fish Poisoning is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fish Tapeworm Infection

Intestinal infection with a *Diphyllbothrium* or related fish tapeworm acquired from raw or undercooked fish; it can cause abdominal symptoms and vitamin B12 deficiency.

Fish Venom

fish venom is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

Fish-Handler'S Disease

Fish-Handler's Disease is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fisher'S Syndrome

Fisher's Syndrome is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fishhook Removal

Fishhook removal is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

Fissure

A narrow crack, groove, or cleft in a body structure; an anal fissure is a painful tear in the lining of the anal canal.

Fissured Tongue

A usually harmless condition in which grooves or cracks develop on the surface of the tongue. Food and debris may collect in the fissures, causing irri-

tation or odor. Gentle brushing of the tongue and routine oral care help prevent symptoms.

Fistula

A fistula is an abnormal connection between two epithelialized surfaces, such as bowel and skin or two organs, caused by inflammation, infection, surgery, trauma, or congenital development. congenital development.

Fistula (Pathology)

An abnormal epithelial-lined connection between two body surfaces or organs that normally do not communicate. Fistulas may be congenital, such as tracheoesophageal fistula, or acquired, resulting from inflammation, infection, surgery, trauma, or malignancy.

Alternate Names:

Pathology

Fistula, Anal

An abnormal tunnel connecting the anal canal or rectum with the nearby skin, often developing after an anorectal abscess and causing drainage or recurrent infection.

Fistula, Arteriovenous

Alternate word order; see *Arteriovenous Fistula*.

Fistula-In-Ano

Abnormal epithelialized tract connecting the anal canal to the perianal skin, representing a common and distressing complication of Crohn disease and also occurring following perianal abscess drainage or from cryptoglandular infection.

Fit

Fit is an anatomical, developmental, reproductive, nutritional, behavioral, or healthcare concept used in medical assessment or care.

Fits (Seizures)

A common term for episodes caused by abnormal electrical activity in the brain, which may produce altered awareness, abnormal movements, sensory

symptoms, or loss of consciousness.

Alternate Names:

Seizures

Fitz-Hugh-Curtis Syndrome

Perihepatitis associated with pelvic inflammatory disease caused by ascension of *Neisseria gonorrhoeae* or *Chlamydia trachomatis* from the pelvis to the liver capsule along the right paracolic gutter. Presents with right upper quadrant pain, fever, and tender hepatomegaly often in young sexually active women.

Five-Year Survival Rate

The proportion of patients alive five years after diagnosis or treatment; a standard benchmark for comparing cancer outcomes.

Fixation

Stabilization of tissue or bone in a desired position, using methods such as sutures, wires, screws, plates, or external devices.

Fixation, Internal

Surgical stabilization of a fractured or unstable bone with implanted devices such as plates, screws, rods, or pins.

Fixative

fixative is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Fixed Joint

A joint with little or no movement, often because bones are joined by dense tissue.

Alternate Names:

Synarthrosis

Fixed Macrophage

A resident tissue macrophage that remains in a particular organ rather than circulating, where it removes debris and contributes to immune surveillance and repair.

Flaccid

Soft, relaxed, or lacking normal muscle tone. The term may describe a limb, muscle, bladder, or penis; sudden flaccid weakness can be a neurologic emergency.

Flagellin

The structural protein forming bacterial flagella and an activator of innate immunity through Toll-like receptor 5.

Flagellum

A long whip-like cellular or bacterial appendage that produces movement or helps a microorganism swim.

Flail Chest

A clinical condition caused by three or more consecutive ribs fractured in two or more places, creating a free-floating segment of chest wall. The segment moves paradoxically inward during inspiration and outward during expiration. It causes severe pain, impaired ventilation, and may require mechanical ventilation.

Flakka

A street name for synthetic cathinone stimulants, particularly alpha-PVP. Intoxication may cause extreme agitation, paranoia, hallucinations, seizures, dangerous hyperthermia, muscle breakdown, and cardiovascular instability. Severe agitation, altered consciousness, high temperature, or chest pain is a medical emergency.

Flanged Needle

A needle with a widened rim or flange that helps position, stabilize, or connect it during a procedure.

Flank

The side of the body between the lower ribs and the hip, overlying part of the abdomen and back; flank pain may arise from the kidney, muscles, spine, or other structures.

Flank Pain

Pain arising from the lateral back between the ribs and iliac crest, often reflecting disease of the kidney, ureter, musculoskeletal structures, or adjacent abdominal organs. Associated fever, haematuria, vomiting, urinary symptoms, trauma, or hypotension helps distinguish infection, obstruction, stones, injury, and other causes.

Flap Operation

Flap Operation is a muscle, nerve, vessel, reproductive structure, or other body part; its location and function determine its clinical relevance.

Flare

A temporary worsening or return of symptoms or inflammation in a disease that may otherwise be stable or controlled. Flares can have many triggers and their severity varies; sudden severe symptoms may need urgent assessment.

Alternate Names:

Exacerbation

Flare-Up

A sudden or gradual increase in symptoms or inflammatory activity of a chronic disease after a period of stability or lower activity.

Flashes

Perception of flickering light or lightning-like streaks from mechanoelectrical stimulation of the retina rather than an external source. The leading cause is posterior vitreous detachment, often with floaters; retinal tears and detachment, migraine aura, and optic neuritis also produce flashes.

Flashing

The perception of brief flashes or streaks of light without an external light source, often called photopsia; new flashes with floaters or visual-field loss require urgent eye assessment.

Flat Affect

Markedly reduced outward expression of emotion, such as minimal facial expression, gestures, or vo-

cal variation. It is an examination finding rather than a diagnosis and does not necessarily mean that the person lacks emotional experience; it may occur in schizophrenia, depression, neurologic disease, medication effects, or other conditions.

Flat Bones

Flat bones concerns flat bones, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Flat Feet

Reduction or absence of the medial longitudinal arch, causing the sole to approach or contact the ground during standing. Flexible flat feet are common and often asymptomatic; rigid or painful flat feet may result from structural deformity, tendon dysfunction, or arthritis.

Flatfoot

A reduction or collapse of the medial longitudinal arch of the foot, with increased contact of the sole with the ground. It may be flexible and asymptomatic or rigid and painful; causes include normal development, ligamentous laxity, tendon dysfunction, trauma, inflammatory disease, and structural deformity.

Flatulence

Passage of intestinal gas through the anus. It reflects swallowed air and bacterial fermentation of undigested carbohydrates and may be increased by dietary factors, constipation, malabsorption, altered gut motility, or functional gastrointestinal disorders; persistent symptoms require assessment for associated disease.

Flatus

Gas expelled from the gastrointestinal tract through the anus. Biochemically composed of greater than 99% odorless gases (N₂, H₂, CO₂, CH₄, and O₂), generated via aerophagia (swallowed air) and anaerobic bacterial fermentation of unabsorbed dietary carbohydrates (such as FODMAPs and resistant starches) in the colon. Odor is attributable to trace concentrations (< 1%) of volatile sulfur com-

pounds, predominantly hydrogen sulfide (H₂S) and methanethiol. In postoperative surgical monitoring, the spontaneous passage of flatus is the cardinal clinical marker denoting the resolution of postoperative paralytic ileus and return of coordinated gastrointestinal motility. Conversely, obstipation (the complete cessation of both flatus and stool) is a pathognomonic finding of complete mechanical bowel obstruction.

Alternate Names:

Intestinal gas

Flavin

flavin is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Flavin Adenine Dinucleotide

A flavin-derived redox coenzyme, usually bound tightly to enzymes as a prosthetic group. FAD accepts two hydrogen atoms to form FADH₂, which donates electrons to the respiratory chain through selected dehydrogenases.

Alternate Names:

Flavin Adenine Dinucleotide

Flaviviridae

A family of mainly enveloped, single-stranded RNA viruses that includes hepatitis C virus, dengue virus, yellow fever virus, and Zika virus.

Flavivirus

A genus of RNA viruses that includes dengue, yellow fever, West Nile, Japanese encephalitis, and Zika viruses.

Flaviviruses

A genus of RNA viruses in the Flaviviridae family, transmitted by mosquitoes or ticks. Includes dengue, Zika, yellow fever, and West Nile virus. Many cause significant morbidity and mortality worldwide. Prevention relies on vector control and vaccination where available.

Flavobacteriaceae

A family of mainly gram-negative bacteria found in soil, water, and other environments; some species cause opportunistic infections.

Flavobacterium

A genus of gram-negative environmental bacteria; a few species can cause opportunistic infections in humans or animals.

Flavodoxin

Flavodoxin is a small flavin-containing electron-transfer protein, usually containing FMN, that participates in redox reactions in some bacteria, algae, and other organisms.

Flavonifractor

A genus of anaerobic intestinal bacteria, including *Flavonifractor plautii*, whose effects on human health are still being studied.

Flavonoid

flavonoid is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Flavonoids

Plant polyphenols found in many fruits, vegetables, teas, and other foods.

Flavonol

flavonol is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Flavopiridol

An investigational cyclin-dependent kinase inhibitor studied as an anticancer medicine; it is not a routine standard treatment for most cancers.

Flavor Enhancer

A flavour enhancer is a food additive that intensifies existing taste, often savoury or umami flavour, with-

out serving mainly as a sweetener or preservative; sensitivity and exposure depend on the substance and dose.

Flavoxate

A urinary antispasmodic used for symptomatic relief of bladder spasm or urgency; it does not treat the underlying cause of infection or obstruction.

Flaxseed Extract

A preparation derived from flaxseed containing variable amounts of alpha-linolenic acid, lignans, and soluble fiber; effects and interactions depend on formulation and dose.

Flea

A small wingless blood-feeding insect that can irritate skin and transmit infections between animals or people.

Flea Bites

Small itchy or painful skin reactions caused by flea feeding, sometimes accompanied by papules, hypersensitivity, or secondary infection.

Flea Bites In Humans

Flea bites cause small itchy papules, often clustered around the ankles or lower legs, and may trigger allergic reactions. Fleas can transmit infections in some settings; control requires treating pets and the environment as well as symptoms.

Alternate Names:

Bites Flea (Flea Bites In Humans) Ctenocephalides FelFlea Bite (Flea Bites In Humans)

Fleas

Small wingless blood-feeding insects that can cause bites, allergic reactions, anemia in heavy infestations, and disease transmission.

Flecainide

A class IC sodium channel blocker that slows conduction velocity with little effect on refractoriness. Used for suppression of supraventricular arrhythmias (atrial fibrillation in patients without struc-

tural heart disease—'pill-in-the-pocket', paroxysmal SVT) and ventricular arrhythmias.

Flesh-Eating Bug

Flesh-Eating Bug is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fleshy Tab

A small projection of soft tissue, often a skin tag or mucosal appendage, whose cause and significance depend on its site and appearance.

Flex

To bend a joint and decrease the angle between its bones.

Alternate Names:

Flexion

Flexibility

The range through which a joint or group of joints can move, influenced by muscles, tendons, ligaments, joint structure, and pain.

Flexible Nasolaryngoscopy

Office examination of the nasal cavity, nasopharynx, pharynx, and larynx using a flexible fiberoptic or digital endoscope passed through the nose. It evaluates voice change, swallowing symptoms, nasal obstruction, lesions, vocal-fold movement, and airway anatomy.

Flexible Sigmoidoscopy

Endoscopic examination of the rectum and sigmoid colon (up to 60 cm). Indications: colorectal cancer screening (q5-10 years, combined with FIT), evaluation of rectal bleeding, chronic diarrhea, and surveillance of known distal colonic disease (ulcerative colitis).

Flexion

Movement that decreases the angle between two bones or bends a joint, generally in the sagittal plane.

Flexor

Flexor is a muscle, nerve, vessel, reproductive structure, or other body part; its location and function determine its clinical relevance.

Flexor Digitorum Profundus

Deep anterior forearm muscle with ulnar and humeroulnar heads, inserting on distal phalanges bases of digits 2-5. Medial half (digits 4-5) innervated by ulnar nerve; lateral half (digits 2-3) by anterior interosseous nerve (C8-T1). Flexes DIP, PIP, MCP joints, and wrist.

Flexor Digitorum Superficialis

Large anterior forearm muscle with humeroulnar, radial, and ulnar heads, inserting on middle phalanges of digits 2-5. Innervated by median nerve (C8-T1). Flexes PIP joints, MCP joints, and wrist. Important for median nerve function assessment. Tendons pass through carpal tunnel, susceptible to stenosing tenosynovitis (trigger finger).

Flexural

Relating to a skin fold or the inner surface of a joint, such as the antecubital, popliteal, axillary, groin, or inframammary fold.

Flibanserin

A centrally acting medicine used for acquired, generalized hypoactive sexual desire disorder in selected premenopausal women; it can cause hypotension, syncope, and sedation, especially with alcohol or interacting drugs.

Flight-Or-Fight Response

The coordinated stress response that prepares the body to confront or escape a perceived threat.

Alternate Names:

Fight-or-flight response; stress response

Floater

A spot, strand, or cobweb-like shape drifting across the field of vision, usually caused by opacities in the eye's vitreous; sudden numerous floaters may signal retinal disease.

Floaters

Mobile spots, threads, cobwebs, or rings in the visual field caused by vitreous opacities casting shadows on the retina. Most arise from posterior vitreous detachment, an age-related separation of the vitreous gel from the retina; hemorrhage, vitritis, and asteroid hyalosis are other causes.

Floating Kidney

Excessive downward movement of a kidney when standing, also called nephroptosis; it may be asymptomatic or cause positional pain, urinary symptoms, or rarely impaired drainage.

Floating Rib

One of the eleventh or twelfth pairs of ribs, attached posteriorly to the spine but lacking an attachment to the sternum through cartilage.

Floating Ribs

Ribs 11-12 with short costal cartilages terminating in abdominal wall musculature, not articulating with the sternum or other ribs. Most mobile and least protected, susceptible to fracture from direct trauma. Fractures may injure underlying kidneys, requiring hematuria and flank tenderness assessment in trauma.

Flocculation

The aggregation of suspended particles into larger loose clumps, used in laboratory separation, water treatment, and some biologic or pharmaceutical processes.

Floor Of The Mouth Cancer

Cancer developing in the tissues beneath the tongue, most often a squamous cell carcinoma. A persistent ulcer, lump, pain, bleeding, or difficulty swallowing needs examination.

Alternate Names:

Cancer, Floor Of The Mouth

Floppy Baby Syndrome

A descriptive term for infant hypotonia, characterized by reduced muscle tone and a limp posture;

causes range from central nervous-system disorders to neuromuscular and genetic diseases and require evaluation.

Floppy Iris Syndrome

Floppy Iris Syndrome is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Floppy Valve Syndrome

Mitral valve prolapse: a condition in which the mitral valve leaflets bulge back into the left atrium during systole. Often asymptomatic but may cause palpitations, chest pain, or mitral regurgitation. Diagnosis by echocardiography.

Alternate Names:

Mitral valve prolapse

Flora

The microorganisms normally or currently living in a body site or environment; normal flora can protect against pathogens but may cause infection if displaced or if defenses are impaired.

Florida Flu

Florida Flu is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Flossing

Cleaning between teeth with dental floss or another interdental device to remove plaque and food debris from areas a toothbrush may not reach.

Flotation

A laboratory separation method that uses differences in density to concentrate particles, such as parasite eggs in a stool sample.

Flow

A state of highly focused, effortless involvement in an activity, often with reduced awareness of time.

Flow Cytometry

A laboratory technique that measures physical and molecular characteristics of cells or particles as they pass through a laser beam. It is used for cell counting, immunophenotyping, diagnosis of some leukemias and lymphomas, and assessment of selected immune disorders.

Flow-Volume Loop

Graphical representation of airflow during forced breathing. Obstructive: scooped expiratory limb. Restrictive: narrowed loop with preserved shape. Variable extrathoracic obstruction: flattening of inspiratory limb.

Flowmeter

flowmeter is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

Floxacin

A medicine or chemical compound called floxacillin. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Floxuridine

A fluorinated pyrimidine antimetabolite that inhibits DNA synthesis and is used in selected regional or systemic chemotherapy protocols.

Flu

Influenza is an acute respiratory infection caused by influenza viruses, producing fever, cough, myalgia, headache, and fatigue with potential pulmonary or systemic complications. fever, cough, sore throat, headache, muscle aches, and fatigue. Complications may include pneumonia and worsening of underlying medical conditions.

Flu, Avian

Influenza A virus infection in birds, caused by H5N1, H7N9, and other subtypes. Primarily affects poultry but can occasionally infect humans through close contact with infected birds. High mortality rate in human cases. Pandemic potential if sustained

human-to-human transmission develops.

Alternate Names:

Avian influenza; bird flu

Flu, Bird

Avian influenza: viral infection of birds that can occasionally spread to humans. H5N1 and H7N9 are the most concerning subtypes for human health. Characterized by severe respiratory illness with high mortality. Prevention includes poultry vaccination and avoiding contact with infected birds.

Alternate Names:

Avian influenza; bird flu

Flu, Swine

Influenza A virus infection in pigs that can occasionally spread to humans. The 2009 H1N1 pandemic strain originated from swine influenza viruses. Symptoms resemble seasonal flu but can be severe in some individuals. Vaccination includes protection against swine flu strains.

Alternate Names:

H1N1 flu; swine influenza

Flucloxacillin

Flucloxacillin is a medicine, drug, vitamin, or chemical product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent.

Fluconazole

A medicine or chemical compound called fluconazole. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Flucytosine

An antifungal medicine converted within susceptible fungi to metabolites that inhibit nucleic-acid synthesis; it is used mainly with amphotericin for selected serious *Candida* or *Cryptococcus* infections.

Fludarabine

A purine-analogue chemotherapy medicine that inhibits DNA synthesis and is used for selected hematologic malignancies; prolonged immunosuppression

and infection risk are important.

Fludarabine Phosphate

A purine-analog chemotherapy medicine used mainly for selected blood cancers; it can suppress bone-marrow and immune function.

Fludeoxyglucose F-18

Radiotracer used in PET imaging, analog of glucose labeled with fluorine-18. Taken up by cells via glucose transporters and phosphorylated by hexokinase, trapped intracellularly. Uptake reflects metabolic activity. Used for oncology (tumor detection, staging, response assessment), neurology (epilepsy, dementia), cardiology (viability).

Fludrocortisone

A synthetic mineralocorticoid used to replace aldosterone activity in adrenal insufficiency and selected orthostatic disorders; hypertension, edema, hypokalemia, and fluid retention may occur.

Fluid Around The Heart

Pericardial effusion: abnormal accumulation of fluid in the pericardial space. Can be caused by infection, malignancy, autoimmune disease, trauma, or metabolic conditions. Small effusions may be asymptomatic; large or rapid accumulations can cause cardiac tamponade.

Alternate Names:

Pericardial effusion

Fluid Balance

The relationship between fluid intake and output, regulated by the kidneys, hormones, thirst, and other mechanisms. Imbalance may cause dehydration, fluid overload, or electrolyte disturbances.

Fluid Imbalance

An abnormal excess or deficiency of body water or electrolytes such as sodium, potassium, calcium, or bicarbonate. It may result from dehydration, kidney or heart disease, endocrine disorders, gastrointestinal losses, or inappropriate fluid administration.

Fluid Management

A medical procedure, treatment, device, or care topic related to fluid management; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Fluid Overload

Excess total body fluid due to impaired renal sodium/water excretion or excessive intake, leading to edema, weight gain, hypertension, and pulmonary congestion. Causes: heart failure, renal failure (acute/chronic), nephrotic syndrome, cirrhosis, iatrogenic (IV fluids), and hypoalbuminemia.

Fluid Therapy

The intravenous administration of fluids to restore or maintain hydration, electrolyte balance, and circulatory volume. Types include isotonic (normal saline, lactated Ringer's), hypotonic, and hypertonic solutions. Used for dehydration, shock, surgery, and electrolyte imbalances. Monitoring includes fluid balance, vital signs, and laboratory values.

Alternate Names:

Intravenous fluid therapy

Fluke

Fluke is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Flumazenil

A benzodiazepine-receptor antagonist that can reverse benzodiazepine sedation or respiratory depression in selected cases; it may precipitate seizures or withdrawal and is not appropriate for every mixed overdose.

Flunarizine

Flunarizine is a medicine, drug, vitamin, or chemical product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent.

Flunisolide

Flunisolide is a medicine, drug, vitamin, or chemical product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent.

Fluocinolone

Fluocinolone is a medicine, drug, vitamin, or chemical product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent.

Fluocinolone Acetonide

A topical corticosteroid used to reduce inflammation and itching in selected dermatologic disorders; prolonged or extensive use can cause skin atrophy and systemic steroid effects.

Fluocinonide

A potent topical corticosteroid used for inflammatory skin disease; application site, duration, and amount should be limited to reduce local and systemic adverse effects.

Fluocortolone

Fluocortolone is a medicine, drug, vitamin, or chemical product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent.

Fluorescein

fluorescein is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Fluorescein Angiography

An eye test in which fluorescein dye is injected into a vein and sequential photographs are taken of the retinal circulation. It helps identify leakage, blocked vessels, abnormal new vessels, and other retinal or choroidal abnormalities.

Fluorescein Eye Stain

An eye examination in which fluorescein dye high-

lights defects in the corneal or conjunctival surface under blue light, helping detect abrasions, ulcers, foreign-body injury, and some dry-eye changes.

Fluorescence

fluorescence is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Fluorescence In Situ Hybridization

A molecular cytogenetic technique using fluorescent DNA probes that hybridize to specific chromosomal regions. Faster than karyotype (24-48 hours, vs. 7-14 days).

Alternate Names:

Fluorescence In Situ Hybridization

Fluorescence In-Situ Hybridization

A targeted cytogenetic technique using fluorescent DNA probes to detect or localize specific chromosome sequences. It can identify selected aneuploidies, microdeletions, gene rearrangements, or amplifications but does not survey the entire genome.

Fluorescence Microscopy

fluorescence microscopy is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Fluorescence Polarization

fluorescence polarization is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Fluorescent Dye

A dye that absorbs light at one wavelength and emits light at a longer wavelength, allowing cells, tissues, or molecules to be detected.

Fluoridation

Fluoridation is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features,

investigation, and treatment depend on the patient and severity.

Fluoride

Mineral that strengthens tooth enamel and inhibits bacterial acid production. Sources: water fluoridation (0.7 ppm optimal), toothpaste, professional applications. Mechanism: incorporates into hydroxyapatite forming fluorapatite (more acid-resistant), promotes remineralization, inhibits bacterial enzymes.

Fluoride In Diet

A patient-care topic concerning fluoride in diet. It addresses the relevant purpose, risks, management, and follow-up.

Fluoride Overdose

Fluoride overdose involves exposure or injury from fluoride overdose; dose, route, timing, symptoms, and tissue involvement determine the urgency and treatment approach.

Fluoride Poisoning

Illness caused by excessive fluoride exposure, which can produce nausea, abdominal symptoms, low calcium, heart-rhythm problems, or skeletal effects.

Fluoride Varnish

A concentrated fluoride preparation applied to teeth by a healthcare professional to help prevent or arrest dental caries. The frequency of application depends on age and caries risk.

Fluorimetry

fluorimetry is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

Fluorine

fluorine is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Fluorine-18

PET radionuclide, half-life 110 minutes. Produced in cyclotron via O-18(p,n)F-18 reaction. Used in FDG and other tracers. Requires on-site or nearby cyclotron due to short half-life.

Fluorometholone

A corticosteroid ophthalmic medicine used for selected inflammatory eye conditions; prolonged use can raise intraocular pressure and increase infection or cataract risk.

Fluorophotometry

fluorophotometry is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

Fluoropyrimidine

A fluoropyrimidine is an antimetabolite resembling pyrimidine bases; drugs such as fluorouracil and capecitabine disrupt thymidylate and nucleic-acid synthesis in cancer cells.

Fluoroquinolone

A fluoroquinolone is a bactericidal antibiotic that inhibits bacterial DNA gyrase and topoisomerase IV; class risks include tendinopathy or tendon rupture, neuropathy, QT prolongation, dysglycaemia, and central-nervous-system effects.

Fluoroquinolones

Broad-spectrum bactericidal antibiotics that inhibit bacterial DNA gyrase and topoisomerase IV, enzymes essential for DNA replication, transcription, and repair. They are synthetic derivatives of nalidixic acid and include ciprofloxacin, levofloxacin, moxifloxacin, and others.

Fluoroscopy

A type of X-ray that shows moving pictures of the inside of the body. It helps doctors guide procedures and examine swallowing, blood vessels, joints, and the digestive or urinary tract. Contrast material may be used, and the test involves radiation.

Fluorosis

Enamel hypomineralization from excess fluoride during development. Mild: white spots. Severe: brown stains, pitting. Prevention: monitor fluoride intake in children.

Fluorouracil

Fluorouracil is a fluoropyrimidine antimetabolite that inhibits thymidylate synthase; topical treatment is used for selected actinic or superficial lesions and systemic treatment for cancers, with mucositis, diarrhoea, myelosuppression, and DPYD-related severe toxicity possible.

Fluorouracil Side Effect

Toxicity from the antimetabolite 5-fluorouracil causing mucositis, diarrhea, hand-foot syndrome, myelosuppression, and potential cardiotoxicity, requiring dose adjustment or discontinuation.

Fluoxetine

Fluoxetine is a selective serotonin-reuptake inhibitor used for depression, obsessive-compulsive disorder, panic disorder, bulimia nervosa, and premenstrual dysphoric disorder; its long half-life and serotonergic interactions are clinically important.

Fluoxymesterone

A synthetic androgen medicine used in selected hormone-related conditions; it can affect the liver, lipids, and reproductive function.

Flupentixol

Flupentixol is a medicine, drug, vitamin, or chemical product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent.

Fluphenazine

A medicine or chemical compound called fluphenazine. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Fluphenazine Hydrochloride

A medicine or chemical compound called fluphenazine hydrochloride. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Flurandrenolide

A topical corticosteroid used to reduce inflammation and itching in some skin disorders.

Flurazepam

A medicine or chemical compound called flurazepam. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Flurbiprofen

Flurbiprofen is an NSAID used for pain and inflammation and, in some formulations, ocular inflammation; gastrointestinal, renal, cardiovascular, and hypersensitivity adverse effects are possible.

Flush

A sudden reddening or warm sensation of the skin from increased blood flow, or the act of washing a body passage or intravenous line with fluid; context determines the meaning.

Flushable Reagent Stool Blood Test

Alternate index label; see *Fecal occult blood test*.

Flushing

Transient reddening and warmth of the skin caused by increased cutaneous blood flow. It may result from heat, emotion, exertion, fever, alcohol, endocrine or neuroendocrine disease, mast-cell activation, medication exposure, or autonomic dysfunction; associated diarrhoea, wheeze, hypotension, or palpitations may indicate systemic disease.

Flutamide

A nonsteroidal androgen-receptor antagonist used with androgen-deprivation therapy for prostate cancer; hepatotoxicity and other adverse effects require monitoring.

Flutter

A rapid, regular, repetitive movement or contraction; atrial flutter is a cardiac arrhythmia caused by a rapid organized atrial circuit.

Flutter Valve

A handheld device combining PEP therapy with oscillations during exhalation. The oscillations create shear forces that loosen mucus from airway walls, while the PEP keeps airways open. It is used for airway clearance in bronchiectasis, CF, and COPD.

Fluvastatin

A medicine or chemical compound called fluvastatin. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Fluvoxamine

A selective serotonin-reuptake inhibitor used mainly for obsessive-compulsive disorder and selected anxiety or depressive disorders; interactions and serotonin toxicity are important considerations.

Flux

Flux is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

FM

Fibromyalgia: a chronic disorder characterized by widespread pain, fatigue, and cognitive symptoms. Diagnosis is based on clinical criteria. Treatment includes exercise, cognitive behavioral therapy, and medications.

Alternate Names:

Fibromyalgia

fMRI

Functional magnetic resonance imaging (fMRI) uses magnetic resonance imaging to measure small changes in brain blood flow and oxygenation associated with brain activity. It can help map functions such as language and movement and guide planning for selected brain treatments. Unlike CT, it does

not use ionizing radiation.

FMS

Fibromyalgia syndrome: a chronic condition causing widespread pain, tenderness, fatigue, and sleep disturbances. Affects 2-4% of the population, more common in women. Treatment is multimodal including exercise, therapy, and medications.

Alternate Names:

Fibromyalgia

FNA

A percutaneous sampling technique in which a 22 to 25-gauge needle, often ultrasound- or palpation-guided, aspirates cellular material from a palpable or imaging-detected lesion for cytologic examination, with minimal trauma and lower morbidity than core or open biopsy. See Fine Needle Aspiration (FNA).

FND

Functional neurological disorder: a condition where neurological symptoms (weakness, movement abnormalities, seizures, sensory loss) occur without structural disease. Symptoms are real and disabling. Diagnosis requires positive clinical signs. Treatment includes physical therapy, psychotherapy, and education.

Alternate Names:

Conversion disorder; functional neurologic disorder

Foam Cell

A lipid-filled macrophage or other cell with a foamy appearance, commonly found in atherosclerotic plaques and some inflammatory or storage disorders.

Foam Cells

Cells filled with lipid droplets, usually macrophages that have taken up modified LDL cholesterol. They are an early feature of atherosclerotic plaque formation.

Focal

Limited to a specific site or region rather than distributed diffusely; imaging, pathology, seizures, and

neurologic deficits may be described as focal.

Focal Adhesion

A cell-matrix attachment complex linking integrins to the actin cytoskeleton and regulating adhesion, force sensing, migration, and signaling.

Focal Glomerulosclerosis

Scarring affecting some glomeruli or only parts of affected glomeruli, which can impair kidney filtration.

Focal Neurologic Deficits

Loss of a specific neurologic function, such as strength, sensation, language, vision, or coordination, caused by a localized brain, spinal-cord, or nerve lesion.

Focal Neuropathy

Damage to a single peripheral nerve or a small group of nerves.

Alternate Names:

Mononeuropathy

Focal Nodular Hyperplasia

Benign liver lesion with a characteristic central stellate scar visible on imaging. The lesion represents a hyperplastic response to a pre-existing vascular malformation rather than a true neoplasm. Associated with oral contraceptive use though it also occurs in men and children. No risk of hemorrhage or malignant transformation.

Focal Sclerosis

Localized hardening or scarring of tissue; in the kidney, focal segmental glomerulosclerosis is a pattern of scarring affecting some glomeruli and parts of affected glomeruli.

Focal Segmental Glomerulosclerosis

The most common cause of nephrotic syndrome in African American adults and Hispanic populations. Associated with HIV infection (HIV-associated nephropathy), heroin use, sickle cell disease, massive obesity, interferon therapy, and renal

hyperfiltration (solitary kidney).

Focal Segmental Glomerulosclerosis

Kidney disease in which scar tissue affects some portions of some glomeruli, potentially causing protein in urine and progressive kidney failure.

Focal Seizure

A seizure arising from networks limited to one cerebral hemisphere at onset. Awareness may be preserved or impaired, and motor, sensory, autonomic, cognitive, or emotional features depend on the involved region; a focal seizure may spread to become bilateral tonic-clonic.

Focal-Onset Seizure

A seizure that begins within networks limited to one cerebral hemisphere. Awareness may be preserved or impaired, and motor, sensory, autonomic, cognitive, or emotional features reflect the involved cortical region; it may evolve to bilateral tonic-clonic activity.

Focus Words

Calming words or phrases used to anchor attention during relaxation or stress-management exercises.

FODMAP Diet

Restriction of Fermentable Oligo-, Di-, Mono-saccharides And Polyols. Used for IBS management. Low FODMAP diet followed by gradual reintroduction.

FODMAPs

Fermentable oligosaccharides, disaccharides, monosaccharides, and polyols: short-chain carbohydrates that may be poorly absorbed and produce gas, bloating, pain, or diarrhea in susceptible people.

Foetal Acidosis

Abnormally low fetal blood pH from inadequate oxygenation or impaired gas exchange, assessed through fetal monitoring and, when available, fetal blood sampling.

Foetal Alcohol Syndrome

Foetal Alcohol Syndrome is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Foetus

Foetus is an anatomical, developmental, reproductive, nutritional, behavioral, or healthcare concept used in medical assessment or care.

Folate

Folate is vitamin B9, required for one-carbon transfer, DNA synthesis, and normal red-cell formation; deficiency causes megaloblastic anaemia and in pregnancy increases neural-tube-defect risk, while supplementation can mask vitamin-B12 deficiency.

Folate Antagonist

A folate antagonist blocks folate-dependent enzymes or transport and thereby impairs nucleotide synthesis; examples include methotrexate and trimethoprim, used as anticancer, immunosuppressive, or antimicrobial drugs.

Folate Deficiency

Folate (vitamin B9) deficiency causes megaloblastic anemia identical to B12 deficiency but without neurologic manifestations (except possible cognitive changes). Dietary sources: leafy greens, legumes, liver; daily requirement 400 mcg. Absorption in jejunum.

Folate Deficiency Anemia

Megaloblastic anemia caused by insufficient folate (vitamin B9), characterized by large, immature red blood cells. Causes include poor diet, malabsorption, alcoholism, and medications. Symptoms include fatigue, weakness, and glossitis. Treatment with folic acid supplementation.

Alternate Names:

Vitamin B9 deficiency anemia

Folate-Deficiency Anemia

A megaloblastic anemia caused by inadequate fo-

late, impaired absorption, increased need, or certain medicines; blood testing identifies the cause and folate replacement treats deficiency.

Foley Catheter

An indwelling urinary catheter held in the bladder by an inflatable balloon and connected to a drainage system.

Folic Acid

A synthetic form of folate, a B vitamin required for nucleotide synthesis and red-cell production; supplementation prevents neural-tube defects and treats deficiency.

Folic Acid - Test

A blood test measuring folate concentration, used to investigate macrocytic anemia and suspected folate deficiency; results are interpreted with vitamin B12 status, blood counts, diet, and clinical findings.

Folic Acid And Birth Defect Prevention

A patient-care topic concerning folic acid and birth defect prevention. It addresses the relevant purpose, risks, management, and follow-up.

Folic Acid In Diet

A patient-care topic concerning folic acid in diet. It addresses the relevant purpose, risks, management, and follow-up.

Folic Acid Supplementation

Use of folic acid before conception and during early pregnancy to reduce the risk of fetal neural-tube defects. The dose depends on individual risk and local clinical guidance; folate is also needed for DNA synthesis and red-cell production.

Folinic Acid

Folinic Acid is a medicine, drug, vitamin, or chemical product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent.

Follicle

A small sac or tissue structure, such as a hair follicle or ovarian follicle.

Follicle Stimulating Hormone

FSH: a gonadotropin secreted by the anterior pituitary, regulating gonadal function. In females: stimulates ovarian follicle growth and estradiol production; LH surge triggers ovulation. In males: stimulates Sertoli cells and spermatogenesis. Controlled by GnRH and feedback (estrogen, inhibin).

Follicle-Stimulating Hormone

A pituitary hormone that supports ovarian follicle development and sperm production.

Alternate Names:

FSH

Follicle-Stimulating Hormone

A pituitary hormone that supports ovarian follicle development and estrogen production in females and sperm production in males.

Follicle-Stimulating Hormone Blood Test

A blood test measuring follicle-stimulating hormone, which regulates ovarian follicle development and sperm production; it helps evaluate infertility, menstrual disorders, gonadal failure, and pituitary disease.

Follicular

Relating to or centered on a hair follicle; follicular lesions may appear as papules, pustules, keratotic plugs, or inflammation around hairs.

Follicular Cyst

The most common type of physiological functional ovarian cyst, arising when a dominant mature ovarian follicle fails to rupture and release an ovum during the ovulatory cycle, or when an immature follicle fails to undergo atresia. Characteristically unilocular, thin-walled, filled with clear estrogen-rich fluid, and typically resolving spontaneously within two to three menstrual cycles without surgical intervention.

Follicular Fluid

Follicular fluid is the fluid within an ovarian follicle surrounding the developing oocyte and containing hormones and signaling molecules.

Follicular Hyperkeratosis

Follicular hyperkeratosis is excess keratin blocking hair follicles and producing rough small bumps, commonly seen in keratosis pilaris or deficiency states.

Follicular Lymphoma

An indolent B-cell non-Hodgkin lymphoma with a follicular growth pattern. Many cases have changes involving BCL2, but classification depends on tissue and molecular findings. It commonly causes painless lymph-node enlargement and may involve bone marrow or other sites.

Follicular Thyroid Carcinoma

Second most common thyroid carcinoma accounting for approximately ten percent of cases. Distinguished from follicular adenoma by capsular or vascular invasion on histological examination which cannot be determined by fine-needle aspiration. Metastasizes hematogenously to bone, lung, and liver.

Follicular Unit

A natural hair-growth unit containing one or more follicles and associated structures.

Follicular Unit Transplantation

Hair-restoration surgery that transplants individual follicular units to thinning areas.

Alternate Names:

FUT

Folliculitis

Inflammation of a hair follicle, often caused by bacteria, yeast, friction, occlusion, or ingrown hairs, producing small itchy or tender bumps.

Alternate Names:

Barber's Itch

Follistatin

A medicine or chemical compound called follistatin.

Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Follow-Up Recommendations

Recommendations for further imaging or evaluation. Based on guidelines (Fleischner Society for lung nodules).

Fomentation

The application of warm, moist material to a body part, traditionally to soothe pain, relax muscles, or promote local blood flow.

Fomepizole

An alcohol dehydrogenase inhibitor used as an antidote for toxic alcohol exposure, particularly methanol and ethylene glycol. It prevents formation of toxic metabolites and is used with supportive care and hemodialysis when indicated.

Fomite

An inanimate object or surface capable of transmitting infectious agents (viruses, bacteria, fungi) between people (e.g., doorknobs, towels, medical equipment, toys, needles). Transmission occurs when contaminated fomites contact mucous membranes or skin, or are involved in procedures.

Fomites

fomites is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Fondaparinux

A medicine or chemical compound called fondaparinux. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Fondaparinux Sodium

A medicine or chemical compound called fondaparinux sodium. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Fontofos

An organophosphate insecticide that can cause cholinergic poisoning by inhibiting acetylcholinesterase.

Fonsecaea

fonsecaea is a fungal taxon or fungus-related term; clinical interpretation depends on the species, site, host immune status, and evidence of invasive or superficial infection.

Fontan Procedure

The definitive, third-stage palliative surgical operation for patients with complex congenital single-ventricle physiology (e.g., tricuspid atresia, hypoplastic left heart syndrome, double inlet left ventricle), typically performed between 2 and 4 years of age following a prior bidirectional Glenn shunt. Involves directing all systemic venous blood return from the inferior vena cava directly into the pulmonary artery branches without the interposition of a subpulmonary pumping ventricle, modernly executed via an extracardiac PTFE conduit (or lateral tunnel) with or without a temporary fenestration. Creates the completed “Fontan circulation,” wherein pulmonary blood flow is entirely passive, dependent on low pulmonary vascular resistance, preserved single-ventricle diastolic function, and elevated central venous pressure.

Alternate Names:

Fontan Operation; Fontan Circulation; Total Cavopulmonary Connection (TCPC)

Fontanel

A soft membranous gap between the bones of an infant's skull.

Fontanel (Fontanelle)

A soft membranous gap between the skull bones of an infant, allowing skull growth and molding during birth; a bulging or markedly sunken fontanel can signal illness.

Fontanelle

Soft membranous spaces between skull bones that allow brain growth and skull molding during delivery.

Anterior fontanelle diamond-shaped, closes by 12-18 months. Posterior fontanelle triangular, closes by 2-3 months. Bulging fontanelle suggests increased intracranial pressure; sunken fontanelle indicates dehydration.

Fontanelles - Bulging

A tense or outwardly bulging soft spot on an infant's skull when calm and upright, potentially indicating raised intracranial pressure or meningitis.

Fontanelles - Enlarged

Soft spots on an infant's skull that are larger than expected, associated with normal variation, prematurity, hypothyroidism, rickets, or increased intracranial pressure.

Fontanelles - Sunken

Depression of an infant's soft spot, commonly suggesting dehydration or reduced intracranial volume when assessed with the child calm and upright.

Food

Food is material eaten or drunk to provide energy, nutrients, hydration, and building components for the body.

Food Additives

Substances intentionally added to food for preservation, flavor, color, texture, or stability; reactions and safety depend on the additive and exposure.

Food Allergies

Immune reactions to particular food proteins that can cause symptoms ranging from hives to anaphylaxis.

Alternate Names:

Food allergy

Food Allergy

Immune-mediated reaction to food protein. IgE-mediated: anaphylaxis. Non-IgE: EoE, food protein-induced enterocolitis. Common allergens: milk, egg, peanut, tree nut, fish, shellfish, soy, wheat.

Alternate Names:

Allergy Food (Food Allergy)

Food Allergy, Egg

Immune-mediated hypersensitivity reaction to egg proteins, most common in children. Reactions range from mild urticaria to severe anaphylaxis. Diagnosis involves skin prick testing and specific IgE levels. Management includes strict avoidance and carrying epinephrine auto-injectors.

Alternate Names:

Egg allergy

Food Allergy, Milk

Hypersensitivity to milk proteins (casein, whey), the most common food allergy in infants and young children. Symptoms include eczema, gastrointestinal upset, and respiratory symptoms. Most children outgrow it by school age. Breastfeeding and hydrolyzed formulas are management options.

Alternate Names:

Milk allergy

Food Consumption

Food consumption is the amount and pattern of eating and drinking, influenced by appetite, culture, access, health, habits, and metabolic needs.

Food Hygiene

Food Hygiene is an anatomical, developmental, reproductive, nutritional, behavioral, or healthcare concept used in medical assessment or care.

Food Intolerance

Adverse reaction not immune-mediated. Lactose intolerance, gluten sensitivity (non-celiac), histamine intolerance, FODMAP sensitivity. Diagnosis: elimination diet, challenge.

Food Jags

A child's persistent preference for a very small number of foods or refusal of previously accepted foods, common in development but concerning when nutrition or growth suffers.

Food Labeling

Information on packaged food describing ingredients, allergens, serving size, nutrients, calories, and claims to support informed dietary choices.

Food Poisoning

Illness caused by consuming food contaminated with bacteria, viruses, parasites, or their toxins. Common pathogens include *Salmonella*, *Escherichia coli*, *Listeria*, and norovirus, with symptoms such as nausea, vomiting, diarrhea, abdominal cramps, and fever.

Food Poisoning (Foodborne Illness)

Illness caused by eating food or drinking water contaminated with infectious organisms, toxins, or harmful chemicals.

Food Poisoning Prevention

Food poisoning prevention involves exposure or injury from food poisoning prevention; dose, route, timing, symptoms, and tissue involvement determine the urgency and treatment approach.

Food Poisoning, *Campylobacter*

Foodborne infection caused by *Campylobacter* bacteria, usually producing diarrhea, abdominal cramps, fever, and sometimes bloody stool; severe or persistent illness may require medical care.

Food Safety

Food safety involves preventing contamination, improper storage, undercooking, and allergen exposure that can cause foodborne illness.

Food Supplement

Food Supplement is a medicine, drug, vitamin, or chemical product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent.

Food-Borne Disease

Illness caused by eating food or drinking water contaminated with infectious organisms, toxins, or harmful chemicals.

Food-Borne Illness

Illness caused by consuming food contaminated with bacteria, viruses, parasites, or toxins. Common pathogens include Salmonella, E. coli, Listeria, and Norovirus. Symptoms include nausea, vomiting, diarrhea, and fever. Prevention involves proper food handling and cooking.

Alternate Names:

Food poisoning; foodborne illness

Foodborne Disease

Illness caused by eating food or drinking water contaminated with infectious organisms, toxins, or harmful chemicals.

Foodborne Illness

Any illness resulting from the ingestion of contaminated food, encompassing infections and intoxications caused by pathogens, toxins, or chemical contaminants. It affects millions annually and poses particular risks to pregnant women, young children, older adults, and immunocompromised individuals.

Foot

The foot is the distal part of the lower limb below the ankle, formed by 26 bones, joints, muscles, tendons, and ligaments; its arches distribute load and support balance and walking.

Foot And Mouth Disease

Foot and Mouth Disease is a muscle, nerve, vessel, reproductive structure, or other body part; its location and function determine its clinical relevance.

Foot Drop

Weakness or paralysis of ankle dorsiflexion causing the forefoot to drag or the patient to lift the knee abnormally while walking. Common causes include common peroneal nerve injury, L5 radiculopathy, motor-neuron disease, and peripheral neuropathy.

Alternate Names:

Drop Foot

Foot Fracture

A break in one or more of the 26 bones in the

foot (tarsals, metatarsals, phalanges). Can result from trauma, stress, or underlying conditions like osteoporosis. Symptoms include pain, swelling, and inability to bear weight. Treatment ranges from immobilization to surgery.

Alternate Names:

Broken foot

Footling Breech

A variety of breech presentation in which one or both hips and knees are extended, so that one or both feet prolapse through the cervix below the fetal buttocks into the lower uterine segment or vagina. It carries the highest risk among all breech variations for umbilical cord prolapse and fetal entrapment, routinely mandating cesarean delivery.

Alternate Names:

Incomplete Breech; Footling Breech Presentation

Foot Pain

Pain in the foot caused by injury, overuse, arthritis, nerve disease, infection, or circulation problems. Persistent pain, inability to bear weight, numbness, discoloration, fever, or an open wound requires medical assessment.

Foot, Leg, And Ankle Swelling

Accumulation of fluid or tissue enlargement in the lower limb caused by venous disease, heart or kidney failure, medicines, injury, infection, or inflammation; sudden one-sided swelling needs urgent assessment.

Foramen

An opening or passage through a bone or other anatomical structure, usually for nerves or blood vessels.

Foramen Ovale

An opening between the right and left atria of the fetal heart that allows blood to bypass the lungs. It normally closes functionally after birth; persistence is called a patent foramen ovale.

Foraminotomy

A medical procedure, treatment, device, or care

topic related to foraminotomy; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Force Plates

Instruments that measure forces exerted by the feet on the ground during standing or movement, helping assess gait, balance, symmetry, and loading.

Forced Expiratory Volume

The volume of air forcibly exhaled in a specified time during a maximal expiratory effort. FEV1 is the volume exhaled in the first second; normally at least 70-80 percent of the forced vital capacity (FEV1/FVC ratio).

Forced Expiratory Volume

The volume of air forcefully exhaled during a specified time after a full breath in, measured by spirometry to assess airflow obstruction and lung function.

Forced Oscillation Technique

Similar to impulse oscillometry, applying small pressure oscillations at various frequencies during tidal breathing to measure respiratory resistance and reactance. It provides information about airway mechanics without requiring forced expiratory maneuvers.

Forced Vital Capacity

Total air exhaled after maximal inspiration. Reduced in both obstructive and restrictive disease. In restrictive disease, FVC reduced with preserved ratio.

Forceps

Grasping instrument. Tissue forceps: with teeth. Dressing forceps: without teeth.

Forceps (Obstetric)

A paired instrument used in selected operative vaginal deliveries to assist delivery of the fetal head.

Alternate Names:

Obstetric

Forceps (Surgical)

Handheld instruments used to grasp, hold, move, or manipulate tissue or medical materials during a procedure.

Alternate Names:

Surgical

Forceps (Vascular)

A surgical instrument used to grasp, hold, or manipulate tissue, vessels, or medical materials.

Alternate Names:

Vascular

Forceps Delivery

Assisted vaginal delivery using forceps (curved blades applied to the fetal head) to expedite delivery for maternal or fetal indications (prolonged second stage, fetal distress, maternal exhaustion, medical conditions limiting pushing).

Forceps-Assisted Delivery

Operative vaginal delivery using forceps (two curved blades applied to the fetal head). Types: outlet (forceps applied at the introitus, fetal scalp visible), low (station $\geq +2$, not at outlet), midpelvic (station $\geq +2$ but head above ischial spines), and rotational (forceps used to rotate from OP to OA).

Forcible Intercourse

Sexual intercourse imposed without freely given consent through force, threats, coercion, or inability to consent; it is a form of sexual violence requiring safety and medical support.

Fordyce'S Angiokeratomas

Benign vascular ectasias of the superficial dermal capillaries covered by an epidermal reaction, appearing as small, dark red to purple, asymptomatic papules on the scrotum, vulva, or oral mucosa. They are common, increase with age, and are clinically insignificant. They may bleed if traumatized.

Forearm

The portion of the upper limb between the elbow and wrist, containing the radius, ulna, muscles,

nerves, and blood vessels.

Forearm Circumference

The distance around the forearm at a specified location, measured for anthropometry, nutritional assessment, growth monitoring, or evaluation of swelling or muscle loss.

Forehead

The part of the face above the eyebrows and in front of the frontal bone, covered by skin and soft tissue and contributing to facial expression and protection of the frontal skull.

Forehead Lift

Cosmetic surgery that reduces forehead lines and raises drooping eyebrows.

Alternate Names:

Brow lift

Foreign Body

Any object lodged in body. Types: organic (wood, thorn), inorganic (metal, glass, plastic). Radiopaque vs. radiolucent. Removal: surgical, endoscopic, spontaneous passage.

Foreign Body Airway Obstruction

Partial or complete blockage of the nose, throat, or lower airway by an inhaled object or material; complete obstruction is a life-threatening choking emergency.

Foreign Body Aspiration

Inhalation of object into airway. Common in children (peanuts, coins, small toys). Signs: choking, coughing, stridor, wheezing, decreased breath sounds. Diagnosis: chest X-ray (may be negative), bronchoscopy.

Foreign Body In The Nose

An object lodged in a nasal passage, often in a child, causing unilateral blockage, discharge, bleeding, odor, or tissue injury and requiring safe removal.

Foreign Body Reaction

Inflammation and immune response to material that remains in tissue, such as a splinter, suture, implant, or other medical device. It may cause a lump, redness, drainage, pain, or scarring; treatment depends on the material and whether infection is present.

Foreign Object - Inhaled

Foreign object - inhaled involves exposure or injury from foreign object - inhaled; dose, route, timing, symptoms, and tissue involvement determine the urgency and treatment approach.

Foreign Object - Swallowed

Foreign object - swallowed involves exposure or injury from foreign object - swallowed; dose, route, timing, symptoms, and tissue involvement determine the urgency and treatment approach.

Foreign-Body Aspiration

Entry of an object into the larynx, trachea, or bronchi, most often in toddlers. Sudden cough, choking, unilateral wheeze, or focal air trapping may occur; complete airway obstruction is an immediate emergency and requires age-appropriate resuscitation.

Forelimb

A forelimb is an anterior limb of an animal, corresponding broadly to an arm or wing in humans and other vertebrates.

Forensic

Relating to the application of scientific or medical knowledge to questions of law, investigation, or court proceedings.

Forensic Anthropology

The application of physical-anthropology methods to legal investigations involving human remains, especially skeletal material. It can help establish whether remains are human, estimate biological characteristics, assess trauma, and support identification.

Forensic Entomology

The study of insects and other arthropods in legal investigations, principally to estimate the postmortem interval (PMI) and to link suspects to scenes.

Forensic Evidence

Physical, biological, documentary, or testimonial material gathered, preserved, and analyzed to establish facts in a legal investigation. Categories include biological evidence (blood, semen, hair), trace evidence (fibers, glass, gunshot residue), pattern evidence (fingerprints, toolmarks, bloodstain patterns), and digital evidence.

Forensic Examination

Structured medicolegal evaluation of a living or deceased person, scene, or evidence to document findings relevant to a legal matter. Components include sexual assault examination with evidence collection, child abuse assessment, injury documentation, driving-impairment evaluation, and autopsy.

Forensic Genetics

The use of genetic testing and DNA analysis to identify individuals, establish biological relationships, or investigate evidence in legal and criminal cases.

Forensic Odontology

The application of dental science to legal investigations. It may support human identification by comparing dental records, radiographs, and distinctive dental anatomy and may assist in the assessment of dental injuries.

Forensic Pathology

A branch of pathology that applies medical knowledge to legal questions, especially the cause and manner of death and the documentation of injuries. Forensic pathologists examine deaths that are sudden, unexpected, violent, or otherwise subject to legal investigation.

Forensic Psychiatry

The medical specialty at the interface of psychiatry and the law. Core activities: competency to stand trial, criminal responsibility/insanity defense

(mental state at time of offense), dangerousness/risk assessment, civil commitment, testamentary capacity, and personal injury claims.

Forensic Radiography

The use of imaging (X-ray, CT, MRI, ultrasound) in forensic and medico-legal investigation.

Forensic Toxicology

The analysis of drugs, poisons, and their metabolites in biological specimens (blood, urine, vitreous humor, hair, tissues) to determine their role in intoxication, poisoning, or death.

Forensic Toxicology Screen

Laboratory analysis of biological specimens for drugs, alcohols, poisons, and their metabolites. A screening result is presumptive until confirmed and quantified by a validated method such as mass spectrometry, with interpretation based on specimen type, timing, therapeutic use, and postmortem changes.

Foreskin

The retractable fold of skin covering the glans penis; it protects the glans and contains sensory nerve endings.

Foreskin (Prepuce)

A fold of skin covering and protecting the glans penis. It is normally retractable after separation from the glans, although the timing varies.

Alternate Names:

Prepuce

Foretinib

An investigational multikinase inhibitor targeting MET and other receptors, studied for selected advanced cancers and not broadly established as routine therapy.

Formaldehyde

Preservative, industrial chemical. Irritant, carcinogen (nasopharyngeal cancer). Sensitizer. Use in fume hood, PPE required.

Formalin

An aqueous solution of formaldehyde, commonly used to preserve biological tissue; it is toxic and irritating and must be handled with appropriate safety controls.

Formalin-Fixed Paraffin-Embedded Tissue

Tissue preserved in formalin, processed, and embedded in paraffin wax for sectioning and microscopic examination. FFPE blocks support histology, immunohistochemistry, and many molecular tests but may contain fixation-related nucleic-acid or antigen alterations.

Formate

formate is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Formed Elements Of Blood

The cellular components of blood: red blood cells, white blood cells, and platelets.

Formerly Churg-Strauss Syndrome

Eosinophilic granulomatosis with polyangiitis, an autoimmune vasculitis associated with asthma, eosinophilia, and inflammation of small and medium blood vessels.

Formetanate

formetanate is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Formication

A sensation that insects are crawling on or under the skin when none are present. It may occur with nerve disorders, menopause, substance withdrawal, medication effects, or psychiatric illness. Persistent or new symptoms should be medically evaluated.

Formoterol Fumarate

A medicine or chemical compound called formoterol fumarate. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Formothion

formothion is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Formparanate

formparanate is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Formula Feed

Prepared infant nutrition given by bottle, cup, or feeding tube when breast milk is unavailable, insufficient, or not selected; formula choice should match the infant's age and medical needs.

Formula Feeding

Alternative to breastfeeding using commercially prepared infant formula. Types include cow's milk-based, soy-based, hydrolyzed protein, and amino acid-based formulas. Iron-fortified formulas standard to prevent iron deficiency anemia. Preparation requires clean water and proper sterilization of bottles.

Formula, Infant

Commercially prepared milk-based, soy-based, hydrolyzed, or specialized nutrition for infants; safe preparation and age-appropriate feeding are essential.

Formulae

Plural of formula; in healthcare it may refer to mathematical equations, medication formulations, or prepared nutritional products.

Formulary

A list of medicines approved or preferred for use by a health system, insurer, or institution, often including prescribing restrictions and coverage information.

Fornix

The conjunctival fornix is the redundant, dome-shaped fold of conjunctiva where the palpebral conjunctiva transitions to the bulbar conjunctiva, forming a deep recess superiorly (superior fornix), inferiorly (inferior fornix), and medially and laterally (medial and lateral fornices).

Forrester Classification

A hemodynamic classification system developed by James Forrester to categorize patients with acute myocardial infarction and cardiogenic shock based on invasive parameters obtained via pulmonary artery catheterization: cardiac index (CI; cut-off 2.2 L/min/m²) and pulmonary capillary wedge pressure (PCWP; cut-off 18 mmHg). It divides patients into four clinical subsets: Subset I (warm and dry: normal CI, normal PCWP; lowest mortality); Subset II (warm and wet: normal CI, elevated PCWP; pulmonary congestion treated with diuretics/vasodilators); Subset III (cold and dry: low CI, normal PCWP; hypovolemic shock treated with volume expansion); and Subset IV (cold and wet: low CI, elevated PCWP; cardiogenic shock with highest mortality, requiring inotropes, vasopressors, or mechanical circulatory support).

Alternate Names:

Forrester Hemodynamic Subsets; Forrester Score

Forssman Antigen

A glycolipid antigen found in some animal tissues and microorganisms; antibodies against it are used mainly in immunology and laboratory research.

Fortification

Addition of nutrients to food. Examples: iodized salt, vitamin D milk, folic acid grains. Public health strategy for deficiency prevention.

Fortified Wine

Fortified Wine is a medicine, drug, vitamin, or chemical product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent.

Fosaprepitant Dimeglumine

An intravenous prodrug converted to aprepitant that blocks neurokinin-1 receptors and prevents chemotherapy-induced nausea and vomiting.

Fosbretabulin

An investigational anticancer medicine that damages the blood vessels supplying tumors.

Foscarnet Sodium

The sodium salt of foscarnet, an antiviral that directly inhibits viral DNA polymerase and is used for selected resistant cytomegalovirus or herpesvirus infections; kidney and electrolyte toxicity are important.

Fosfomycin

A medicine or chemical compound called fosfomycin. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Fosinopril

A medicine or chemical compound called fosinopril. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Fossa

A shallow depression or hollow in a bone or other body structure.

Fossula

Fossula is an anatomical, developmental, reproductive, nutritional, behavioral, or healthcare concept used in medical assessment or care.

Fossus

Fossus is an anatomical, developmental, reproductive, nutritional, behavioral, or healthcare concept used in medical assessment or care.

Fotemustine

A nitrosourea chemotherapy drug that crosses the blood–brain barrier and is used in some settings for malignant melanoma or brain tumors; marrow toxicity is important.

Found Dead

A circumstance in which a person is discovered deceased outside medical observation; forensic evaluation may establish identity, timing, cause, and manner of death.

Four-Dimensional Ultrasound

Three-dimensional ultrasound displayed as movement over time, producing a real-time 3D view. It is used in selected obstetric and other examinations when additional spatial information is useful.

Fourchette

Fourchette is an anatomical, developmental, reproductive, nutritional, behavioral, or healthcare concept used in medical assessment or care.

Fourier Analysis

fourier analysis is a diagnostic, research, imaging, or measurement term used to assess a condition or question; interpretation depends on the indication, method, and result.

Fournier Gangrene

A rapidly progressive necrotizing infection of the perineum, external genitalia, or perianal region. It causes severe pain, swelling, fever, systemic toxicity, and tissue necrosis and requires immediate surgical debridement and broad-spectrum antimicrobial treatment.

Fourth Disease

An older name for Dukes' or Filatov–Dukes disease, a rash illness attributed to toxin-producing *Staphylococcus aureus*; the historical label has been debated and is not commonly used in modern diagnosis.

Fourth Finger

The fourth finger is the ring finger, located between

the middle finger and little finger.

Fourth Stage Of Labor

The first one to two hours after delivery of the placenta, when the mother is observed for uterine contraction, bleeding, vital-sign changes, and early postpartum complications.

Fourth Venereal Disease

Fourth Venereal Disease is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fourth-Degree Tear

A severe perineal tear during childbirth that extends through the anal sphincter and into the rectal mucosa. It requires careful examination, repair, follow-up, and assessment for complications.

Fovea

A tiny depression in the center of the retina that provides the sharpest and most detailed visual acuity.

Fovea Centralis

Central macular pit (approximately 1.5 mm) with the highest cone density (approximately 200,000 per square millimeter) and no rods, providing the sharpest visual acuity and color vision. Avascular with overlying retinal layers displaced laterally for direct light access to cones.

Fowler Position

A semiupright position in which the head and upper body are elevated, usually about 45 to 60 degrees.

Foxglove Poisoning

Foxglove poisoning involves exposure or injury from foxglove poisoning; dose, route, timing, symptoms, and tissue involvement determine the urgency and treatment approach.

Fractional Excretion Of Sodium

The percentage of filtered sodium excreted in urine,

calculated from serum and urine sodium and creatinine. It may help distinguish prerenal physiology from tubular injury, although diuretics, CKD, sepsis, and other conditions limit interpretation.

Fractional Excretion Of Urea (FEUrea)

The percentage of filtered urea excreted in urine. It may be used as an adjunct when diuretics make FENa less interpretable, but it is also affected by catabolism, sepsis, gastrointestinal bleeding, and chronic kidney disease.

Alternate Names:

FEUrea

Fractional Flow Reserve

An invasive physiological measurement during coronary catheterization using a pressure wire to assess the hemodynamic significance of a coronary stenosis. $FFR = Pa/Pd$ (aortic pressure / distal coronary pressure) during maximal hyperemia (adenosine).

Fractional IPV

A reduced-dose schedule of inactivated polio vaccine used in the WHO and India Universal Immunization Schedule, where one-fifth of the standard intramuscular IPV dose (0.1 mL instead of 0.5 mL) is given by intradermal injection at each of two deltoid sites (total 0.2 mL per fractional dose), rather than the full 0.5 mL intramuscular dose.

Fracture

A break in the continuity of bone, classified by location, pattern (transverse, oblique, spiral, comminuted), displacement, and whether the fracture communicates with the external environment (open vs. closed). Fracture healing occurs through inflammatory, reparative, and remodeling phases.

Fracture Displacement

Loss of normal anatomic alignment between fracture fragments, described by translation, angulation, shortening, or rotation. The acceptable degree depends on the bone, joint involvement, patient age, and functional demands.

Fracture Fixation

Stabilization of a broken bone with casts, plates, screws, nails, wires, or external frames to restore alignment and permit healing or movement.

Fracture Liaison Service

A coordinated program that identifies patients with fragility fractures, evaluates bone health and secondary causes, initiates fracture prevention, and ensures follow-up to reduce recurrent fractures.

Fracture Of The Temporal Bone

A break in the thin bones forming the skull base and ear structures, potentially injuring the facial nerve, carotid artery, or middle ear and presenting with hearing loss, vertigo, or cerebrospinal fluid leak.

Fracture Prevention

Measures that reduce the risk of bone fracture, including assessment and treatment of osteoporosis, strength and balance exercise, fall prevention, and correction of relevant nutritional or medication-related risks.

Fracture, Arm

A break in any of the three arm bones: humerus (upper arm), radius, or ulna (forearm). Caused by trauma, falls, or sports injuries. Symptoms include pain, deformity, swelling, and loss of function. Treatment depends on fracture type and may require casting or surgical fixation.

Alternate Names:

Broken arm

Fracture, Growth Plate

A break through the physis (growth plate) in children and adolescents. Can affect future bone growth if not properly treated. Classified by Salter-Harris system. Requires prompt evaluation and appropriate management to prevent growth disturbances.

Alternate Names:

Growth plate fractures; physeal fractures

Fracture, Hip

A break in the proximal femur, common in elderly

patients with osteoporosis and in young patients after high-energy trauma. Types include femoral neck, intertrochanteric, and subtrochanteric fractures. Treatment usually requires surgical fixation or joint replacement.

Alternate Names:

Hip fracture

Fracture, Leg

A break in the tibia (shinbone), fibula, or both bones of the lower leg. Caused by direct trauma, sports injuries, or falls. Symptoms include pain, swelling, deformity, and inability to bear weight. Treatment depends on fracture pattern and stability.

Alternate Names:

Broken leg

Fracture, Stress

A partial or complete bone fracture caused by repetitive force or overuse, commonly affecting weight-bearing bones (metatarsals, tibia, femur). Athletes and military recruits are at increased risk. Presents with activity-related pain that worsens with continued activity.

Alternate Names:

Stress fractures; fatigue fractures

Fracture-Fixation Device

An implant such as a plate, screw, intramedullary nail, or external-fixation component used to stabilize a broken bone and maintain alignment during healing. Selection depends on fracture pattern, bone quality, and soft-tissue condition.

Fractured Clavicle In The Newborn

A break in a newborn's collarbone, most often related to difficult delivery; it may cause reduced arm movement and usually heals with supportive care.

Fractured Elbow

A break involving the distal humerus, radial head, olecranon, or another elbow structure that can impair motion and injure nearby nerves or vessels.

Fractured Ilium

A break in the broad upper portion of the pelvic bone, usually from substantial trauma or weakened bone and potentially associated with pelvic-organ or blood-vessel injury.

Fractured Nose

A break in the nasal bones or cartilage, usually caused by direct trauma. Symptoms include pain, swelling, epistaxis, and deformity. May be associated with septal hematoma requiring drainage. Treatment ranges from closed reduction to surgical repair.

Alternate Names:

Broken nose; nasal fracture

Fractured Rib

A break in one or more of the 12 pairs of ribs. Usually caused by trauma. Symptoms include sharp chest pain that worsens with breathing, coughing, or movement. May be associated with pneumothorax, hemothorax, or organ injury. Treatment is mainly supportive.

Alternate Names:

Broken ribs; rib fracture

Fragile X Syndrome

An inherited neurodevelopmental disorder caused by expansion of a CGG repeat in the FMR1 gene, leading to reduced gene expression. It may cause intellectual disability, characteristic physical features, and behavioral or autism-spectrum features.

FRAIL Scale

A brief frailty screen assessing Fatigue, Resistance, Ambulation, Illnesses, and Loss of weight. It identifies risk of frailty but is not a substitute for a comprehensive geriatric assessment.

Frailty

Clinical syndrome of decreased reserve and resilience to stressors. Components: unintentional weight loss, exhaustion, low physical activity, slow gait speed, weak grip strength. Identification: Fried phenotype, frailty index. Consequences: adverse outcomes (falls, hospitalization, mortality), polyphar-

macy, functional decline.

Framboesia

Yaws, a chronic treponemal infection caused by *Treponema pallidum pertenue* and transmitted mainly through skin contact in endemic tropical regions.

Frameshift Mutation

Insertion or deletion of nucleotides not in multiples of three, shifting reading frame. Usually produces nonfunctional protein. Examples: some cystic fibrosis mutations, Tay-Sachs disease.

Framycetin

An aminoglycoside antibiotic used topically in selected bacterial infections; systemic absorption and allergy can cause toxicity or sensitization.

Francisella

A genus of small gram-negative bacteria that includes *F. tularensis*, the cause of tularemia, a zoonotic infection acquired from animals, ticks, contaminated water, or aerosols.

Francisella Tularensis

A gram-negative coccobacillus that causes tularemia, a zoonotic infection transmitted by ticks, deer flies, or direct contact with infected animals. The organism can be acquired through the skin, respiratory tract, or gastrointestinal tract. Ulceroglandular tularemia presents with skin ulcer and regional lymphadenopathy.

Francisellaceae

A family of small gram-negative bacteria that includes *Francisella* species, some of which cause tularemia or related animal infections.

Frank Breech

The most common type of breech presentation, accounting for 65–70% of all breech gestations at term. The fetus lies longitudinally with both hips flexed against the abdomen and both knees extended with the feet positioned up near the shoulders and head, allowing the buttocks to act as the primary present-

ing part. It has the lowest risk of umbilical cord prolapse among breech positions and is the most suitable variant for external cephalic version or trial of vaginal breech delivery.

Alternate Names:

Extended Breech; Frank Breech Presentation

Frank-Starling Mechanism

The physiological principle stating that stroke volume increases as end-diastolic volume (preload) increases, up to an optimal point. Within physiological limits, greater ventricular stretch leads to stronger contraction due to increased calcium sensitivity of myofilaments and optimal overlap of actin and myosin.

Frasier Syndrome

A rare genetic disorder associated with abnormal sexual development, kidney disease, and increased risk of gonadal tumors.

Fraternal Twins

Twins formed when two separate eggs are fertilized by two separate sperm, producing genetically distinct siblings who may be the same or different sex.

FRAX Tool

A calculator that estimates a person's ten-year probability of major osteoporotic or hip fracture.

Alternate Names:

FRAX fracture-risk calculator

Freckle

A small, flat, light-brown or tan area of increased skin pigmentation, often becoming more apparent with ultraviolet exposure; a changing pigmented lesion should be assessed.

Freckles

Freckles are small flat areas of increased melanin that darken with ultraviolet exposure and often reflect genetic tendency. They are usually harmless, but a changing, bleeding, irregular, or distinctly different pigmented lesion should be examined.

Freckles (Ephelides)

Small, flat, light-brown macules caused by increased melanin production, usually becoming more noticeable with ultraviolet exposure.

Alternate Names:

Ephelides

Free Fragment

A piece of an intervertebral disk that has separated from the main disk.

Alternate Names:

Sequestered disk fragment

Free Radical

A molecule or atom containing an unpaired electron, making it chemically reactive. Excessive free-radical activity can contribute to oxidative injury.

Free Radical Injury

Free radicals are highly reactive molecules with unpaired electrons that can damage cellular components through oxidative stress. Reactive oxygen species include the superoxide anion, hydrogen peroxide, and the hydroxyl radical generated through the Fenton reaction.

Free T4 Test

A blood test measuring unbound thyroxine, the biologically available thyroid hormone; it is interpreted with thyroid-stimulating hormone to evaluate hyperthyroidism, hypothyroidism, and treatment response.

Free Thyroxine Index

A calculated estimate of circulating free thyroxine based on the total thyroxine concentration and a measure of thyroid-hormone binding.

Free Water Clearance

The rate at which the kidneys excrete water in excess of or less than the amount needed to produce urine isotonic to plasma. Positive clearance indicates excretion of dilute urine; negative clearance indicates retention of water through concentration of urine.

Freedman Test

A historical pregnancy test based on biological activity in animals; it has been replaced by accurate immunologic tests for human chorionic gonadotropin.

Freeze Drying

Lyophilization, a process that freezes a material and removes ice by sublimation under low pressure to preserve medicines, biologic samples, or foods.

Freeze Etching

A preparation method in which frozen material is fractured and the exposed surface is etched by sublimating ice before microscopic examination.

Freeze Substitution

A microscopy preparation method replacing ice in a frozen specimen with an organic solvent at low temperature before fixation and embedding.

Freezing

Exposure to very low temperature that can cause tissue freezing, frostbite, or dangerous loss of body heat; the term can also describe preservation by freezing.

Frei'S Test

A historical skin test for lymphogranuloma venereum using chlamydial antigen; it is no longer a routine diagnostic test.

Fremitus

A vibration felt or heard through body tissues, often used to assess transmitted voice sounds in the chest.

French Disease

A historical name for syphilis, a sexually transmitted infection caused by the bacterium *Treponema pallidum*.

Frenectomy

Surgical removal or repositioning of frenulum. Indications: diastema, gingival recession, tongue-tie, interference with denture.

Frenulum

Frenulum is a muscle, nerve, vessel, reproductive structure, or other body part; its location and function determine its clinical relevance.

Frenulum Breve

An abnormally short penile frenulum that may cause pain, tearing, or bleeding during erection or sexual activity. Treatment depends on symptoms and may include observation or a minor surgical procedure.

Frenum

Frenum is a muscle, nerve, vessel, reproductive structure, or other body part; its location and function determine its clinical relevance.

Frenum (Frenulum)

A fold of mucous membrane or skin that anchors or limits movement of a body part, such as the lingual frenulum beneath the tongue or the labial frenula.

Alternate Names:

Frenulum

Frequency

Increased daytime micturition, typically more than seven episodes per day, distinguished from polyuria (high urine volume) and nocturia (nighttime voiding). Common causes include urinary tract infection, benign prostatic hyperplasia, overactive bladder, and diabetes mellitus.

Frequency Of Urination

Urinating more often than usual, which may result from increased fluid intake, infection, pregnancy, diabetes, diuretics, bladder irritation, or other urinary disorders.

Frequency Range

The span from the lowest to highest sound frequencies amplified by a hearing aid.

Frequency Response

The amount of amplification a hearing aid provides across different sound frequencies.

Frequency, Urinary

The need to urinate more often than usual, sometimes with only small amounts passed; causes include infection, irritation, pregnancy, diuretics, and disorders of the bladder or prostate.

Frequent Bowel Movements

Passing stool more often than usual; causes include diet, infection, medicines, inflammation, malabsorption, or functional bowel disorders.

Frequent Or Urgent Urination

Increased need to urinate or sudden difficult-to-defer urges, caused by infection, bladder irritation, diabetes, medicines, pregnancy, obstruction, or overactive bladder.

Frequent Urination

The need to urinate more often than usual, which may result from increased fluid intake, urinary infection, diabetes, pregnancy, medicines, or bladder disorders.

Fresh Specimen

A newly collected biological sample examined promptly or preserved appropriately before degradation alters its cells, organisms, chemistry, or diagnostic features.

Fresolimumab

A medicine or chemical compound called fresolimumab. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Freund'S Adjuvant

A research adjuvant made from mineral oil; complete Freund's adjuvant also contains killed mycobacteria and is not used as a routine human vaccine additive.

Frey'S Syndrome

Aberrant regeneration of parasympathetic nerve fibers to sweat glands after injury to the auriculotemporal nerve, most commonly following parotid surgery or trauma. It results in gustatory sweat-

ing and facial flushing while eating. Diagnosis is confirmed by the starch-iodine test.

Friable

Easily crumbled, broken, or torn; tissue described as friable may bleed readily when touched.

Friction

Friction is an anatomical, developmental, reproductive, nutritional, behavioral, or healthcare concept used in medical assessment or care.

Friedman Curve

The classic labor curve described by Emanuel Friedman in the 1950s, plotting cervical dilatation against time. Defined the latent and active phases, with active phase beginning at 4 cm. The Friedman curve was the standard for labor management for decades.

Friedreich Ataxia

An inherited neurodegenerative disorder causing progressive gait and limb ataxia, sensory loss, weakness, and sometimes cardiomyopathy or diabetes.

Friedreich'S Ataxia

An inherited degenerative disorder causing progressive problems with coordination, sensation, and heart function.

Friedreichs Ataxia Syndrome

Friedreich ataxia is an inherited neurodegenerative disorder, usually autosomal recessive, caused by reduced frataxin and mitochondrial dysfunction. It causes progressive gait and limb ataxia, neuropathy, scoliosis, cardiomyopathy, and sometimes diabetes.

Friend Virus

A mouse retrovirus used in research that can cause erythroleukemia and help study blood-cell cancers.

Frigidity

Frigidity is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Frog Test

A historical pregnancy test in which urine was injected into a frog to look for an ovulation response; it has been replaced by laboratory and home pregnancy tests.

Frontal

Relating to the forehead or the frontal bone and frontal lobe of the brain.

Frontal Bone

Forms the forehead and superior orbits, with the squama frontalis, orbital plates, and nasal part. Contains frontal sinuses draining into the nasal cavity via the frontonasal duct. Articulates with parietal bones at the coronal suture. The metopic suture fuses by age six.

Frontal Bossing

Prominent forward bulging of the frontal bones and forehead, which may occur as a normal familial feature or with conditions such as rickets, hydrocephalus, or skeletal dysplasia.

Frontal Lobe

The largest lobe of the cerebral cortex, lying anterior to the central sulcus, comprising the primary motor cortex (precentral gyrus, Brodmann 4), premotor and supplementary motor areas, prefrontal cortex, and Broca's area (dominant hemisphere, expressive language).

Frontal Lobe Epilepsy

Seizures originating in the frontal lobe, characterized by motor symptoms, behavioral changes, or nocturnal events. Often occurs during sleep. Semiology depends on the specific frontal lobe region involved. May be refractory to medication.

Alternate Names:

Frontal lobe seizures

Frontal Lobe Seizures

Seizures beginning in the frontal lobes of the brain, often causing brief unusual movements, behaviors, sensations, or impaired awareness.

Alternate Names:
Epilepsy, Frontal Lobe

Frontal Sinus

The frontal sinuses are paired, air-filled cavities located within the frontal bone above the orbits and the root of the nose, separated by a bony septum that may be deviated to one side, and they are the last of the paranasal sinuses to develop, typically appearing around age seven and reaching full size by late adolescence.

Frontal Sinusitis

Inflammation or infection of the frontal sinuses, causing forehead pain or pressure, nasal congestion, and drainage. Severe headache, swelling around the eye, high fever, confusion, or neurologic symptoms may indicate a complication requiring urgent care.

Frontotemporal Dementia

Dementia affecting frontal and temporal lobes. Behavioral variant (personality changes) or language variant (aphasia). Younger onset (50-60).

Alternate Names:
Dementia, Frontotemporal

Frontotemporal Lobar Degeneration

A group of progressive disorders affecting the frontal and temporal brain lobes, causing changes in behavior, language, or executive function.

Frostbite

Frostbite is freezing injury to tissue, causing numbness, pallor, waxy skin, blistering, and possible tissue necrosis; rewarming and assessment are urgent. degree (superficial, numbness, erythema), second degree (blisters, clear fluid, pain), third degree (hemorrhagic blisters, necrosis, full-thickness skin loss), fourth degree (deep tissue necrosis, mummification, autoamputation).

Frotteuristic Disorder

A paraphilic disorder involving recurrent, intense sexual arousal from touching or rubbing against a nonconsenting person, lasting ≥ 6 months and causing distress or impairment or involving acting

on these urges. Typically occurs in crowded public places (subways, buses, concerts).

Frozen Section

An intraoperative pathology consultation in which a fresh tissue specimen is rapidly frozen, sectioned on a cryostat, and stained with hematoxylin and eosin within 10 to 20 minutes to guide immediate surgical decision-making. It is used to establish benign versus malignant, assess margins, and identify lymph node metastases.

Frozen Shoulder

Adhesive capsulitis: progressive shoulder pain and stiffness. Stages: freezing (pain), frozen (stiffness), thawing (recovery). Associated with diabetes, thyroid disease, immobilization. Treatment: physical therapy, corticosteroid injection, manipulation under anesthesia, arthroscopic capsular release.

Alternate Names:
Adhesive Capsulitis Of Shoulder (Frozen Shoulder)

Fructosamine

A measurement of glycated serum proteins, primarily albumin, that reflects average glycemia over approximately two to three weeks. It is useful when HbA1c is unreliable because of altered red-cell survival, but it is affected by changes in protein concentration and turnover.

Fructose

A simple sugar found naturally in fruit, honey, and some syrups.

Alternate Names:
Fruit sugar

Fructose Intolerance

Fructose Intolerance is a medicine, drug, vitamin, or chemical product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent.

Fructose Malabsorption

Poor absorption of fructose leading to GI symptoms. Fermentation by bacteria produces gas, osmotic

diarrhea. Low-fructose diet beneficial.

Fructose Metabolism

The enzymatic conversion of fructose primarily in the liver through fructokinase, aldolase B, and downstream glycolytic intermediates. Essential fructosuria is usually benign, whereas aldolase B deficiency causes hereditary fructose intolerance and hypoglycemia after fructose ingestion.

Fruity Breath

Fruity Breath is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Frustration

An emotional response to blocked goals or unmet needs, potentially producing irritability, anger, distress, avoidance, or behavioral change.

Fryns Syndrome

A rare usually autosomal-recessive congenital syndrome with diaphragmatic hernia, distinctive facial features, distal limb abnormalities, and variable brain, heart, kidney, or genital anomalies.

FSH

Follicle-stimulating hormone, a pituitary hormone involved in ovarian follicle development and sperm production.

Alternate Names:

Follicle-stimulating hormone

Ft.

Abbreviation for foot or feet, a unit of length equal to 12 inches or approximately 30.48 centimeters; in clinical notes, context should distinguish it from other abbreviations.

FTA-ABS Blood Test

A treponemal antibody blood test that detects antibodies to *Treponema pallidum*; it supports syphilis diagnosis but usually remains positive after treated infection and cannot determine disease activity

alone.

FTA-ABS Test

Fluorescent treponemal antibody absorption test, a blood test that detects antibodies against *Treponema pallidum* and supports evaluation of syphilis; antibodies may remain detectable after treatment.

Fuchs Dystrophy

A progressive corneal endothelial disorder in which endothelial cell loss impairs fluid regulation and causes corneal oedema. Early disease may cause morning blur and glare; advanced disease produces persistent oedema, bullae, pain, and reduced vision. Diagnosis is clinical and supported by slit-lamp examination and corneal imaging.

Fuchs Endothelial Corneal Dystrophy

A bilateral, progressive disorder in which corneal endothelial cells are lost and abnormal Descemet-membrane excrescences called guttae develop. Reduced endothelial fluid-pump function causes morning-predominant blurred vision, corneal edema, and, in advanced disease, painful epithelial bullae. It commonly becomes clinically significant in middle or older age, although early disease may be asymptomatic. Treatment ranges from monitoring and hypertonic measures to endothelial keratoplasty for visually disabling or painful disease.

Alternate Names:

Fuchs dystrophy

Fuchs' Dystrophy

A progressive disorder in which corneal endothelial cells deteriorate, causing corneal swelling and impaired vision.

Fucose

Fucose is a deoxy sugar found in cell-surface glycoproteins and glycolipids and involved in recognition, adhesion, and immune signaling.

Fucosidosis

A rare inherited metabolic disorder caused by deficiency of the enzyme alpha-L-fucosidase.

Fucosyltransferase

An enzyme that transfers fucose to glycans on proteins or lipids, affecting cell recognition, blood-group antigens, development, and host–pathogen interactions.

Fuel Oil Poisoning

Fuel oil poisoning involves exposure or injury from fuel oil poisoning; dose, route, timing, symptoms, and tissue involvement determine the urgency and treatment approach.

Fugue

Fugue is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fukuyama Congenital Muscular Dystrophy

An autosomal recessive congenital muscular dystrophy-dystroglycanopathy characterized by severe muscular dystrophy combined with structural brain and ocular malformations. Caused by an ancestral 3-kb retrotransposal insertion into the 3' untranslated region of the *FKTN* gene on chromosome 9q31, which encodes fukutin, an enzyme required for functional *O*-mannosyl glycosylation of α -dystroglycan; highly prevalent in the Japanese population. Manifests in the neonatal period with severe hypotonia, generalized muscle weakness, joint contractures, cobblestone (type II) lissencephaly with polymicrogyria, severe intellectual disability, microphthalmia, and epilepsy, typically progressing to loss of ambulation and childhood cardiomyopathy.

Alternate Names:

FCMD; Fukuyama Type Congenital Muscular Dystrophy

Fulguration

Destruction of tissue by applying electrical energy, commonly during a surgical procedure.

Full Agonist

A full agonist is a drug that binds to a receptor

and produces the maximum possible biological response that the receptor can generate, achieving 100 percent of the maximal effect. Full agonists have both high affinity for the receptor and high intrinsic activity, meaning they are very effective at activating the receptor once bound.

Full Blood Count

See *Complete Blood Count*.

Alternate Names:

FBC

Full Liquid Diet

A patient-care topic concerning full liquid diet. It addresses the relevant purpose, risks, management, and follow-up.

Full Sibling

A person who shares both biological parents with another person, relevant to pedigree analysis, genetic risk assessment, and tissue-donor matching.

Full-Thickness Skin Graft

A skin graft containing the entire epidermis and dermis, transferred to cover a wound or reconstruct a defect.

Fullerene

fullerene is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Fulminant

Fulminant is a disease, syndrome, symptom, or clinical finding; its causes, distinguishing features, investigation, and treatment depend on the patient and severity.

Fulminant Hepatitis

Rapid, severe loss of liver function caused by extensive hepatic injury, often accompanied by coagulopathy and hepatic encephalopathy. It is a medical emergency that may require intensive care and liver transplantation.

Fulminant Myocarditis

A rapidly progressive form of myocarditis causing severe ventricular dysfunction, cardiogenic shock, or life-threatening arrhythmias. It requires urgent intensive-care assessment and treatment of shock and arrhythmias; temporary mechanical circulatory support may be needed while myocardial function recovers or definitive therapy is arranged.

Fulvestrant

An estrogen-receptor antagonist and degrader given by intramuscular injection for selected hormone-receptor-positive advanced breast cancer.

Fumigation

Treatment of an enclosed area with a gas, vapor, or smoke to kill pests or microorganisms; people must follow safety procedures before re-entry.

Functional Asplenia

Markedly reduced or absent splenic function despite splenic tissue being present. It may result from repeated infarction in sickle cell disease or other disorders and increases the risk of severe bloodstream infection, especially from encapsulated bacteria.

Functional Assessment

Evaluation of ability to perform daily activities. Tools: Barthel Index, Lawton IADL Scale, Katz Index. Identifies needs for assistance, predicts outcomes, guides care planning.

Functional Capacity

The maximum level of physical, cognitive, communication, or self-care performance a person can safely achieve under specified conditions. It is assessed in relation to activities, participation, environment, and personal goals.

Functional Disorder

A condition in which symptoms or impaired function occur without a sufficient structural abnormality to explain them. Functional disorders are real and may involve altered nervous-system or physiological processing.

Functional Dyspepsia

Chronic epigastric pain or discomfort without identifiable structural cause. The Rome IV criteria include postprandial distress syndrome with early satiety and postprandial fullness, and epigastric pain syndrome with epigastric pain or burning unrelated to meals.

Alternate Names:

Nonulcer Dyspepsia Nonulcer Stomach Pain

Functional Electrical Stimulation

Application of electrical impulses to peripheral nerves or muscles to produce purposeful contraction during a functional task, such as foot clearance during gait or cycling after neurologic injury.

Functional Gastrointestinal Disorders

Digestive symptoms caused by altered gut function without an evident structural disease or infection.

Alternate Names:

Disorders of gut-brain interaction

Functional Hypothalamic Amenorrhea

A reversible form of secondary chronic anovulation and amenorrhea caused by suppression of the hypothalamic gonadotropin-releasing hormone (GnRH) pulse generator in the absence of an organic pituitary or intracranial lesion. Triggered by persistent negative energy balance, severe psychological stress, rigorous athletic training, or disordered eating, leading to hypoestrogenism, low luteinizing hormone and FSH levels, bone mineral density loss (osteopenia/osteoporosis), and subfertility.

Alternate Names:

Hypothalamic Amenorrhea; FHA

Functional Incontinence

Involuntary urine leakage because a person cannot reach or use the toilet in time despite recognizing the need to void.

Functional Independence Measure

FIM: standardized assessment of disability. Scores 18 (total assistance) to 7 (independent). 18 items: self-care, sphincter control, transfers, locomotion,

communication, social cognition.

Functional MRI

An MRI method that estimates brain activity by detecting task-related changes in blood oxygenation and blood flow. It is used in research and in selected preoperative assessments.

Functional Murmur

A heart murmur caused by increased blood flow without a structural abnormality of the heart or valves.

Functional Neurologic Disorder

A condition in which changes in nervous-system function cause symptoms that are not explained by structural damage.

Functional Neurologic Disorder/Conversion Disorder

Neurologic symptoms such as weakness, abnormal movement, seizures, or sensory changes that are not explained by structural neurologic disease.

Alternate Names:

Conversion Disorder

Functional Neurological Disorder

Neurologic symptoms such as weakness, abnormal movements, sensory loss, or seizures that are incompatible with recognized patterns of structural neurologic disease and arise from altered nervous-system function. Diagnosis is based on positive clinical signs, not merely on normal investigations.

Functional Neurological Symptom Disorder

A condition in which neurological symptoms such as weakness, abnormal movement, sensory loss, or episodes resembling seizures are incompatible with recognized neurological disease patterns and cause significant distress or impairment.

Functional Neurological Symptom Disorder (Conversion Disorder)

A condition in which patients present with neurolog-

ical symptoms (weakness, paralysis, non-epileptic seizures, sensory loss, gait abnormalities, dystonia, speech difficulties) that cannot be explained by structural neurological disease. The symptoms are not intentionally produced (unlike malingering or factitious disorder).

Alternate Names:

Conversion Disorder

Functional Residual Capacity

The volume of air remaining in the lungs at the end of a normal expiration, equal to the sum of expiratory reserve volume plus residual volume (approximately 2.2-3 L in adults). FRC represents the lung volume at which the outward recoil of the chest wall balances the inward recoil of the lungs, the resting equilibrium position.

Functional Screening

A brief assessment of a person's ability to perform daily activities, move safely, communicate, and manage basic self-care.

Functional Status

Ability to perform activities of daily living (ADLs) and instrumental ADLs (IADLs). ADLs: bathing, dressing, toileting, transferring, continence, feeding. IADLs: shopping, cooking, managing medications, finances, transportation, housekeeping. Decline indicates need for assistance.

Functional Urinary Incontinence

Urinary incontinence due to physical or cognitive impairment preventing toilet access.

Fundal Height

The distance from the symphysis pubis to the top of the uterus measured in centimeters. Used to estimate gestational age and fetal growth. Generally correlates with weeks of gestation between 20-36 weeks (e.g., 24 cm at 24 weeks). Discrepancies may suggest fetal growth restriction, macrosomia, polyhydramnios, or multiple gestation.

Fundoplication

Surgery that wraps the upper stomach around the

lower esophagus to reduce gastroesophageal reflux.

Fundoscopy

Examination of the interior back of the eye, including the retina, optic disc, macula, and blood vessels, using an ophthalmoscope or retinal camera.

Fundus

The rounded or farthest part of a hollow organ; examples include the upper stomach and the posterior interior surface of the eye.

Fundus Oculi

The interior posterior surface of the eye visible through the pupil, including the retina, optic disc, macula, and retinal blood vessels.

Fundus Photography

The documentation of the appearance of the retina, optic nerve, and retinal vasculature using a specialized camera that illuminates and photographs the posterior segment of the eye, providing a permanent, objective record of retinal findings that can be used for comparison over time, patient education, and telemedicine consultations.

Fundus Uteri

The rounded upper portion of the uterus above the openings of the fallopian tubes.

Fundus, Retinal

The inside back surface of the eye seen during ophthalmoscopy, including the retina, optic disc, macula, and retinal blood vessels.

Fungal

Relating to fungi or caused by a fungus; fungal infections may affect the skin, nails, mucous membranes, lungs, or other organs.

Fungal Arthritis

Infection and inflammation of a joint caused by a fungus, usually after surgery, trauma, injection, bloodstream spread, or in a person with impaired immunity. It often develops gradually with persistent

pain, swelling, and reduced movement. Joint-fluid culture and tissue testing guide prolonged antifungal and sometimes surgical treatment.

Fungal Endophthalmitis

Fungal infection of the interior of the eye, often associated with bloodstream infection, surgery, trauma, or immunosuppression and capable of causing severe visual loss.

Fungal Infection

An infection caused by a fungus. It may be superficial, affecting the skin, nails, or mucous membranes, or invasive, affecting the lungs, bloodstream, or other organs. The presentation and risk depend on the organism and the person's immune status.

Fungal Infection (Tinea/Dermatophytosis)

Superficial fungal infections of skin, hair, or nails caused by dermatophytes (*Trichophyton*, *Microsporum*, *Epidermophyton*). Tinea corporis (ringworm): annular scaling plaque with central clearing. Tinea pedis (athlete's foot): interdigital scaling, maceration. Tinea cruris (jock itch): groin rash sparing scrotum.

Alternate Names:

Tinea/Dermatophytosis

Fungal Infection, Nail

Onychomycosis: a fungal infection of the fingernails or toenails, causing discoloration, thickening, and brittleness. Most commonly caused by dermatophytes. Risk factors include age, diabetes, peripheral vascular disease, and immunosuppression. Treatment includes topical or oral antifungals.

Alternate Names:

Onychomycosis; nail fungus

Fungal Nail Infection

Infection of a fingernail or toenail by dermatophytes or other fungi, causing thickening, discoloration, brittleness, separation from the nail bed, or subungual debris.

Fungal Nails

A fungal infection of the nail, usually caused by dermatophytes, producing thickened, discolored, brittle, or crumbly nails. The infection may spread to surrounding skin and recur. Diagnosis may require microscopy or culture, and treatment depends on the organism, number of nails, severity, and the person's medical history.

Alternate Names:

Onychomycosis (Fungal Nails)

Fungal Pathogenesis

The mechanisms by which fungi cause disease. Fungal pathogenesis involves adhesion, invasion, and evasion of host defences. Adhesins mediate attachment to host cells. Invasive hyphae penetrate tissues. Capsules and melanin protect against immune responses.

Fungal Resistance Mechanisms

Mechanisms by which fungi develop resistance to antifungal agents. Azole resistance occurs through up-regulation of efflux pumps (CDR1, CDR2, MDR1), mutations in the target enzyme ERG11, and over-expression of ERG11. Echinocandin resistance is primarily due to mutations in the FKS1 and FKS2 genes encoding beta-(1,3)-D-glucan synthase.

Fungal Skin Infections

Skin infections caused by dermatophytes or yeasts, including ringworm (tinea), athlete's foot, and candidiasis. These infections thrive in warm, moist environments and present with red, itchy, scaly, or ring-shaped lesions. Treatment typically involves topical or oral antifungal medications and measures to keep the skin clean and dry.

Fungal Vaccines

Vaccines designed to prevent fungal infections; most remain experimental, and routine human use is limited.

Fungating

Describing a mass or lesion that grows outward with an irregular, ulcerated, necrotic, or malodorous surface, commonly in advanced malignancy or severe

chronic wounds.

Fungemia

The presence of viable fungi in the bloodstream. *Candida* species are the most common cause in hospitalized patients; fungemia requires prompt evaluation for a source, metastatic infection, and appropriate antifungal treatment.

Fungi

Organisms such as yeasts, molds, and mushrooms whose cells usually have chitin-containing walls; some cause human infection.

Fungicide

Fungicide is a medicine, drug, vitamin, or chemical product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent.

Fungoid

Resembling a fungus or mushroom in appearance; in medicine it may describe a mushroom-like lesion or growth.

Fungus

A eukaryotic microorganism with a chitin cell wall and ergosterol-containing membrane, classified as yeasts, moulds, or dimorphic fungi. Reproducing by spores, fungi cause superficial, mucosal, subcutaneous, and systemic infections, especially in immunocompromised hosts.

Funiculus

Funiculus is a muscle, nerve, vessel, reproductive structure, or other body part; its location and function determine its clinical relevance.

Funisitis

Inflammation of the umbilical cord, usually associated with infection or an inflammatory response.

Funnel Chest

Pectus excavatum: a congenital chest wall deformity characterized by depression of the sternum

and adjacent costal cartilages. Severity ranges from mild to severe. May cause cardiac or pulmonary compression in severe cases. Surgical correction is an option for symptomatic or severe deformity.

Alternate Names:

Pectus excavatum

Funnel-Web Spider Bite

Funnel-web spider bite involves exposure or injury from funnel-web spider bite; dose, route, timing, symptoms, and tissue involvement determine the urgency and treatment approach.

Furan

furan is a chemical, toxicology, laboratory, or environmental term; significance depends on the substance, concentration, route, duration, and exposure circumstances.

Furazolidone

A nitrofuran antimicrobial formerly used for selected bacterial or protozoal infections; availability is restricted in many settings because of adverse effects and interactions.

Furniture Polish Poisoning

Furniture polish poisoning involves exposure or injury from furniture polish poisoning; dose, route, timing, symptoms, and tissue involvement determine the urgency and treatment approach.

Furocoumarin

A plant compound that can increase sensitivity to ultraviolet light and cause skin reactions when combined with sunlight.

Fursultiamin

A fat-soluble derivative of thiamine, or vitamin B1, used in some countries as a vitamin preparation.

Furuncle

A painful, pus-filled infection of a hair follicle, usually caused by *Staphylococcus aureus*. It may form an erythematous nodule with a central necrotic core or progress to a skin abscess. Treatment depends

on size, location, recurrence, and systemic illness and may include drainage or antimicrobial therapy.

Furuncle And Carbuncle

Furuncle (boil) is a deep infection of the hair follicle caused by *Staphylococcus aureus*, presenting as a painful, erythematous nodule that may drain pus. Carbuncle is a cluster of interconnected furuncles causing a larger, more deeply invasive infection.

Furuncular Myiasis

A cutaneous infestation caused by larvae of certain fly species (such as *Dermatobia hominis* or *Cuterebra*) that develop within boil-like furuncular lesions in the skin, presenting with a painful, erythematous nodule with a central punctum through which the larva breathes.

Furunculosis

Recurrent or multiple furuncles, which are deep infections of hair follicles and surrounding tissue, usually caused by *Staphylococcus aureus*. Lesions are painful, erythematous, and purulent and may occur with colonization, close-contact transmission, skin disease, diabetes, immune dysfunction, or other risk factors.

Fusariosis

An opportunistic invasive fungal infection caused by *Fusarium* species, affecting predominantly immunocompromised patients, particularly those with prolonged neutropenia or hematological malignancies. It causes disseminated infection with skin lesions, bloodstream infection, and involvement of multiple organs.

Fusarium

fusarium is a fungal taxon or fungus-related term; clinical interpretation depends on the species, site, host immune status, and evidence of invasive or superficial infection.

Fusarium Chlamydosporum

fusarium chlamydosporum is a fungal taxon or fungus-related term; clinical interpretation depends on the species, site, host immune status, and evi-

dence of invasive or superficial infection.

Fusarium Incarnatum

fusarium incarnatum is a fungal taxon or fungus-related term; clinical interpretation depends on the species, site, host immune status, and evidence of invasive or superficial infection.

Fusarium Infection

An opportunistic infection caused by *Fusarium* species, environmental molds that can produce keratitis, onychomycosis, or invasive disease. Invasive infection occurs mainly in people with severe neutropenia, hematologic malignancy, transplantation, or other major immunosuppression. Skin lesions, sinus or lung disease, and bloodstream infection may occur, with dissemination to multiple organs in severe cases. Diagnosis requires culture or histopathology with species-level evaluation when possible; treatment requires urgent specialist antifungal management and correction of immunosuppression when feasible.

Fusarium Solani

fusarium solani is a fungal taxon or fungus-related term; clinical interpretation depends on the species, site, host immune status, and evidence of invasive or superficial infection.

Fused Placenta

A placenta in which normally separate lobes or placental regions are joined, sometimes affecting how the placenta is examined after delivery.

Fused Teeth

Alternate index label for dental fusion.

Fusidic Acid

An antibiotic that inhibits bacterial elongation factor G and is used mainly for selected staphylococcal infections; resistance and formulation vary by region.

Fusiform

Shaped like a spindle, wider in the middle and tapering toward both ends; the term can describe a swelling, muscle, cell, or blood-vessel abnormality.

Fusion

In dentistry, developmental union of two separate tooth germs, producing a joined or enlarged tooth and often a reduced apparent tooth count. Fusion with a supernumerary tooth may preserve the normal tooth count. It should be distinguished from gemination, which results from attempted division of a single tooth germ.

Alternate Names:

Dental fusion Tooth fusion

Fusion Gene

A hybrid gene formed when parts of two separate genes join through chromosomal rearrangement or other mechanism, sometimes producing an oncogenic fusion protein.

Fusion Of The Ear Bones

Alternate descriptive label; see *Ossicular fusion*.

Fusion Protein

A protein encoded by a fusion gene or engineered by joining domains from different proteins, potentially changing signaling, localization, or therapeutic activity.

Fusobacterium

A genus of anaerobic gram-negative bacteria found especially in the mouth and intestine; some species cause abscesses and invasive infection.

Fusobacterium Infection

An infection caused by *Fusobacterium* bacteria, which may involve the mouth, throat, lungs, abdomen, skin, or bloodstream.

Fusobacterium Mortiferum

A *Fusobacterium* species that can rarely be involved in anaerobic infections, including infections of wounds or the bloodstream.

Fusobacterium Naviforme

A *Fusobacterium* species rarely identified in human specimens and occasionally associated with anaerobic infection.

Fusobacterium Necrogenes

A *Fusobacterium* species that may be found in mixed anaerobic infections and is uncommon in human disease.

Fusobacterium Necrophorum

A *Fusobacterium* species that can cause severe throat infection and Lemierre syndrome, in which infection spreads to the neck veins.

Fusobacterium Nucleatum

A common oral bacterium associated with periodontal disease and, occasionally, bloodstream or other invasive infections.

Fusobacterium Russii

A species of anaerobic *Fusobacterium* bacteria that has been rarely associated with human infection. Identification requires laboratory testing, and treatment depends on the infection site and susceptibility.

Fusobacterium Varium

A *Fusobacterium* species that can occasionally be isolated from mixed anaerobic infections.

Fusospirochetal Gingivitis

A severe form of gingival inflammation, traditionally associated with fusobacteria and spirochetes, causing painful swollen or bleeding gums, ulceration, and foul breath; it is also called acute necrotizing ulcerative gingivitis.

Fibular Artery

Also called the peroneal artery; a branch of the posterior tibial artery that supplies the lateral and posterior compartments of the leg and contributes to blood flow around the ankle.

Fahr's Syndrome

A rare condition with abnormal calcium deposits in

the basal ganglia and sometimes other brain regions, accompanied by movement, cognitive, psychiatric, or seizure symptoms. Secondary causes such as disorders of parathyroid function must be excluded.

Fallen Bladder

A common term for cystocele, in which the bladder bulges into the front wall of the vagina because pelvic-support tissues have weakened. It may cause pressure, urinary leakage, difficulty emptying, or no symptoms.

Fatty Liver of Pregnancy (AFLP)

Acute fatty liver of pregnancy, a rare serious complication usually occurring late in pregnancy. Liver dysfunction and fat accumulation may cause nausea, abdominal pain, jaundice, low blood sugar, clotting problems, kidney injury, or liver failure and require urgent obstetric care.

Fecal Transplant

A procedure that places processed stool from a screened donor into a patient's intestine to restore gut microbes. It is mainly used for selected recurrent or severe *Clostridioides difficile* infection and requires careful donor screening.

Femoral Anteversion

An inward twisting of the femur that makes the knees and feet turn inward, often noticed in childhood. It commonly improves as a child grows; persistent severe symptoms or functional problems need orthopedic assessment.

Ferrofluid

A liquid containing tiny magnetic particles that responds to a magnetic field. It is mainly used in engineering and research; medical applications are experimental and depend on biocompatibility and safety testing.

Fertility Treatment

Medical or procedural care intended to help achieve pregnancy. Options may include ovulation medicines, surgery, intrauterine insemination, or in vitro fertilization, depending on the cause, age,

health, and reproductive goals.

Fetal Alcohol Spectrum Disorders (FASD)

A group of lifelong conditions caused by alcohol exposure before birth. Effects may include growth problems, characteristic facial features, learning or attention difficulties, and problems with behavior or coordination; no amount of alcohol in pregnancy is known to be safe.

Fetor Hepaticus

A distinctive musty or sweet breath odor associated with severe liver dysfunction, caused partly by volatile substances that bypass or are not adequately cleared by the liver. It requires evaluation for underlying liver disease.

Fish Odour Syndrome

Trimethylaminuria, a rare metabolic disorder in which trimethylamine accumulates and causes a fish-like odor in sweat, breath, or urine. Symptoms may worsen with certain foods, and support includes medical evaluation, diet advice, and attention to psychosocial effects.

Focal Segmental Glomerular Sclerosis

A kidney disorder in which scar tissue affects some glomeruli and only parts of affected glomeruli. It can cause proteinuria, swelling, high blood pressure, and declining kidney function; causes may be primary or secondary to other conditions.

FODMAP

Fermentable short-chain carbohydrates that are poorly absorbed in the small intestine and may trigger gas, bloating, pain, or diarrhea in susceptible people. A supervised low-FODMAP trial may help some people with irritable bowel syndrome, followed by structured reintroduction.

Folliculitis Decalvans

A rare inflammatory scalp disorder causing recurrent pustules, crusting, hair loss, and scarring. Treatment aims to reduce inflammation and infection and should be guided by a dermatologist.

Food Addiction

A nonformal term describing loss of control, cravings, or compulsive eating of highly rewarding foods. It is not a universally recognized diagnosis; assessment should consider binge-eating disorder, mood, stress, medications, and other causes.

Food Contamination

The presence of harmful microorganisms, chemicals, allergens, foreign materials, or toxins in food. Contamination can occur during production, processing, storage, preparation, or serving and may cause foodborne illness.

Forensics

The application of scientific methods to legal questions, including identification, toxicology, injury analysis, and interpretation of biological or physical evidence. Forensic findings require validated methods and careful documentation.

Formoline

A branded weight-management product containing a fiber or chitosan-based ingredient intended to bind some dietary fat. Evidence and formulations vary; it is not a substitute for evidence-based weight care and may affect absorption of medicines or nutrients.

Fowler's Syndrome

A rare disorder of persistent urinary retention in young women, often associated with abnormal relaxation of the urethral sphincter. Evaluation excludes obstruction and neurologic causes; specialist urologic care may include bladder drainage and neuromodulation.

Fox-Fordyce Disease

A rare chronic skin disorder caused by blockage and inflammation of apocrine sweat glands. It produces intensely itchy small bumps, usually in the underarms, pubic area, or around the nipples.

Frontal Lobe Disorder

A condition affecting the frontal lobes of the brain, which help control planning, judgment, movement, speech, attention, and behavior. Causes include

stroke, trauma, tumor, dementia, infection, and other neurologic disease.

Frontalis Suspension

An operation that connects the upper eyelid to the forehead muscle with a sling to help lift a drooping eyelid. It is often used when the eyelid-lifting muscle is weak, especially in children with congenital ptosis.

G

G Spot

A proposed area of sexually sensitive tissue on the front wall of the vagina.

Alternate Names:

Grafenberg spot

G-Protein Coupled Receptors

Proteins on the surface of cells that receive signals from hormones, medicines, and other substances. They pass these signals into the cell and help control processes such as heart rate, mood, vision, and inflammation.

G-Quadruplexes

Four-stranded nucleic-acid structures formed by guanine-rich DNA or RNA sequences; they influence gene regulation and genome stability and are studied as possible therapeutic targets.

G6PD Deficiency

An inherited condition in which red blood cells are more easily damaged by oxidative stress. Certain medicines, infections, or fava beans can trigger their breakdown, causing anemia, jaundice, or dark urine.

Gaba Receptor

A protein that responds to GABA, a chemical messenger that usually slows activity in the brain. GABA receptors help regulate sleep, anxiety, muscle activity, and seizures.

Gabapentin

An anticonvulsant also used for neuropathic pain and selected other pain syndromes; dizziness, sedation, and dose adjustment in kidney disease are

important considerations.

GAD

Generalized Anxiety Disorder: a condition characterized by excessive, difficult-to-control anxiety and worry about multiple events or activities occurring more days than not for at least six months. Associated symptoms include restlessness, fatigue, difficulty concentrating, irritability, muscle tension, and sleep disturbance.

Alternate Names:

Generalized Anxiety Disorder

Gadoleic Acid

A 20-carbon monounsaturated fatty acid found in some plant and marine oils and incorporated into dietary and cellular lipids.

Gadolinium

Gadolinium is a lanthanide metal used in chelated form as a contrast agent for MRI; severe reactions are uncommon, but tissue retention and nephrogenic systemic fibrosis matter in advanced kidney disease.

Gadolinium-Based Contrast Agent

A substance injected for some MRI scans to make organs, blood vessels, or abnormal areas easier to see. The choice and dose depend on kidney function, pregnancy, and prior reactions.

Gadolinium-Induced Nephrogenic Systemic Fibrosis

A rare, serious condition that can occur mainly in people with severe kidney disease after some gadolinium MRI contrast exposure. It causes hardening

and thickening of the skin and may affect internal organs.

Gadopentetate Dimeglumine

Gadopentetate dimeglumine is a gadolinium-based extracellular MRI contrast agent that shortens T1 relaxation and increases lesion conspicuity; renal function and prior contrast reactions should be considered.

Gaffkya Homari

gaffkya homari is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

Gag Gene

The retroviral gene encoding structural proteins that form the viral core, matrix, and capsid and help assemble new virus particles.

Gag Protein

A retroviral structural polyprotein processed into matrix, capsid, nucleocapsid, and related components required for virion assembly.

Gag Reflex (Pharyngeal Reflex)

A protective reflex in which stimulation of the back of the throat produces contraction of the pharyngeal muscles and may trigger retching. It helps protect the airway from foreign material.

Alternate Names:

Pharyngeal Reflex

Gagging

A protective retching response triggered by stimulation of the pharynx, posterior tongue, or nearby structures. It may occur during swallowing, examination, aspiration, reflux, infection, or emotional distress; persistent gagging with dysphagia, vomiting, respiratory symptoms, or weight loss requires assessment.

Gain

The amount by which a hearing aid increases sound

intensity, measured in decibels.

Gain-Of-Function Mutation

A genetic change that makes a gene or its protein more active, gives it a new function, or causes it to work in the wrong place or at the wrong time.

Gait

The pattern or style of walking. Gait is a complex motor function involving coordination of the central and peripheral nervous systems, muscles, and joints. Gait assessment evaluates stance, stride length, cadence, arm swing, truncal stability, and turning.

Gait Abnormality

A deviation from normal walking caused by musculoskeletal, neurological, vestibular, visual, cardiovascular, or systemic disease. Assessment considers speed, base, symmetry, balance, stride, turning, assistive-device use, and associated weakness, sensory loss, pain, or cognitive impairment.

Gait Apraxia

Difficulty initiating or correctly executing walking despite adequate strength, often associated with frontal-lobe, vascular, degenerative, or hydrocephalus-related disease.

Gait Assessment

An examination of how a person walks. It can provide clues about problems with strength, sensation, balance, coordination, joints, or thinking.

Gait Ataxia

An unsteady, poorly coordinated gait caused by dysfunction of the cerebellum, sensory pathways, vestibular system, or other neurologic structures.

Gait Cycle

The sequence of leg and foot movements from one heel strike to the next heel strike of the same foot.

Gait Disturbance

An abnormality of walking that may involve speed,

balance, coordination, strength, or the pattern of movement. Causes include neurologic, musculoskeletal, vestibular, and systemic disorders.

Gait Speed

Walking velocity measured over a standardized distance. It is a simple marker of mobility, frailty, disability, and mortality risk and can track functional change over time.

Gait Training

Teaching or retraining walking pattern. Techniques: parallel bars, walker, cane, stair training. Addresses abnormalities: limping, antalgic gait, hemiplegic gait, parkinsonian gait. Goals: safety, efficiency, independence.

Gaits

Gaits is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Galactans

Polysaccharides made mainly of linked galactose units. They occur in plant and microbial cell walls and are a type of complex carbohydrate.

Galactocele

A milk-filled retention cyst of the breast, occurring during lactation or after weaning. Results from obstruction of a milk duct. Presents as a painless, fluctuant breast mass. Diagnosis by ultrasound showing a well-defined, hypoechoic or anechoic mass. Treatment includes aspiration.

Galactocerebrosidase Deficiency

An inherited lack of an enzyme needed to maintain the protective covering around nerve cells. Severe deficiency causes Krabbe disease, which damages the nervous system.

Alternate Names:

Galactocerebrosidase deficiency; galactosylceramidase deficiency.

Galactagogue

A medicine, herb, or other substance intended to increase breast-milk production. Evidence and safety vary, so feeding technique, milk removal, medical causes, and possible drug effects should be assessed before use.

Galactolipids

Lipids containing galactose, important in plant membranes and nervous-system myelin and involved in membrane structure and recognition.

Galactorrhea

Milk-like nipple discharge unrelated to breastfeeding or the period after childbirth. It may result from increased prolactin, medicines, pregnancy, endocrine disease, breast stimulation, or other conditions and requires assessment when persistent or unexplained.

Galactorrhoea

The spontaneous flow of milk from the breast not associated with childbirth or breastfeeding. Galactorrhoea can be unilateral or bilateral and is caused by hyperprolactinaemia (elevated prolactin).

Galactosaemia

A rare inherited condition in which the body cannot properly break down galactose, a sugar found in milk. It can cause feeding problems, jaundice, liver injury, cataracts, serious infection, or developmental problems in infants.

Galactose

A simple sugar, commonly present in lactose, that is metabolized through the Leloir pathway; inherited galactosemia can make exposure dangerous in infancy.

Galactose Metabolism

The way the body breaks down galactose, a sugar found in milk, so it can be used for energy. Problems with this process cause galactosemia.

Galactose-1-Phosphate Uridyltransferase

Blood Test

A blood test measuring galactose-1-phosphate uridylyltransferase activity, used to screen for or diagnose classic galactosemia, an inherited disorder of galactose metabolism.

Galactosemia

Galactosemia is an inherited inability to metabolize galactose, causing neonatal feeding problems, jaundice, liver injury, infection risk, and developmental complications without dietary treatment. galactose-1-phosphate uridylyltransferase deficiency. Untreated classic disease can cause jaundice, liver dysfunction, vomiting, cataracts, sepsis, and neurodevelopmental impairment after milk feeding.

Galactosialidosis

A rare lysosomal-storage disorder caused by deficiency of protective protein/cathepsin A, leading to accumulation of oligosaccharides and variable neurologic, skeletal, renal, and eye findings.

Galactoside

A galactoside is a compound in which galactose is linked to another molecule, such as a sugar, lipid, or protein.

Galactosyltransferase

Galactosyltransferase is an enzyme that transfers galactose to another molecule during the production of glycoconjugates.

Galanin

A neuropeptide distributed in the brain and peripheral nervous system that influences pain, appetite, mood, hormone release, and gastrointestinal function.

Galant Reflex

A primitive reflex present from birth to 4 months, elicited by stroking the skin along the side of the infant's back. The infant curves toward the stimulated side. Assessed by running a finger from the lateral back toward the hip while the infant is in ventral suspension. Absence may indicate neurologic abnormality.

Galeazzi Sign

A physical examination finding used to screen for unilateral developmental dysplasia of the hip or femoral shortening in infants. With the infant lying supine, hips and knees flexed to 90 degrees, and feet placed flat together on the examination table, an unequal knee height indicates a positive sign, caused by the posterior displacement or dislocation of the femoral head on the affected side.

Alternate Names:

Allis Sign; Galeazzi Test

Galiximab

A medicine or chemical compound called galiximab. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Gall Bladder Disease

A disorder of the gallbladder, including stones, inflammation, infection, polyps, dyskinesia, or cancer, often causing right-upper-abdominal pain or nausea.

Gall-Bladder

A small, pear-shaped sac beneath the liver that stores bile, a fluid that helps digest fat.

Gall-Bladder, Diseases Of

Conditions affecting the gallbladder, including gallstones, inflammation, infection, polyps, and cancer. Symptoms and treatment depend on the specific disorder.

Gallamine Triethiodide

An older muscle-paralyzing medicine that blocks nerve signals to muscles and was used during anesthesia. It is not commonly used today.

Gallavardin Phenomenon

The dissociation of the murmur of aortic stenosis into two components: a musical quality heard at the apex and a harsh, rough quality heard at the right upper sternal border. This occurs because high-frequency components are transmitted to the apex while low-frequency components are heard at the base.

Gallbladder

A small, pear-shaped sac under the liver that stores and concentrates bile before releasing it into the small intestine to aid fat digestion.

Gallbladder Absence

Congenital absence or surgical removal of the gallbladder; without a gallbladder, bile flows directly from the liver into the intestine.

Gallbladder Cancer

A malignant tumor arising in the gallbladder, often associated with chronic inflammation or gallstones. It may be discovered incidentally or present with abdominal pain, jaundice, or other biliary symptoms.

Alternate Names:

Cancer, Gallbladder

Gallbladder Carcinoma

A malignant tumour arising from the gallbladder, most often an adenocarcinoma. It may be discovered incidentally after cholecystectomy or present with right-upper-quadrant pain, jaundice, weight loss, or biliary obstruction; staging determines surgical and systemic treatment.

Gallbladder Duplication

A rare congenital anomaly in which two gallbladder structures develop, with either separate or shared ducts. It may be incidental or associated with gallstones, inflammation, or bile-duct injury risk during surgery; preoperative imaging helps define the anatomy.

Gallbladder Infection

Inflammation or infection of the gallbladder, often associated with blockage of bile flow.

Gallbladder Inflammation

Cholecystitis: inflammation of the gallbladder, most commonly caused by gallstones blocking the cystic duct. Presents with right upper quadrant pain, fever, nausea, and vomiting. Acute cholecystitis may require antibiotics and cholecystectomy.

Alternate Names:

Cholecystitis

Gallbladder Mucocele

Another name for hydrops of the gallbladder: distension caused by cystic-duct obstruction and accumulation of mucus or watery secretions, commonly from an impacted gallstone.

Gallbladder Necrosis

Death of gallbladder tissue, usually from severe inflammation or loss of blood supply, and a potential precursor to perforation and sepsis requiring urgent care.

Gallbladder Pain (Gall Bladder Pain)

Biliary colic: pain caused by gallstones temporarily blocking the cystic duct. Characterized by severe, steady right upper quadrant pain lasting 30 minutes to several hours, often after fatty meals. May be accompanied by nausea and vomiting.

Alternate Names:

Biliary colic; gallstone pain Pain Gallbladder (Gallbladder Pain (Gall Bladder Pain))

Gallbladder Perforation

A hole in the gallbladder wall that can release bile or infected contents into the abdomen, causing peritonitis, abscess, or sepsis.

Gallbladder Radionuclide Scan

A nuclear medicine study using a radiotracer to assess bile flow through the liver, gallbladder, and bile ducts, particularly for suspected acute cholecystitis or obstruction.

Alternate Names:

Laparoscopic cholecystectomy discharge

Alternate Names:

Open cholecystectomy discharge

Gallbladder Volvulus

Axial torsion of the gallbladder around its mesentery and cystic duct, most commonly affecting elderly women, leading to acute gallbladder ischemia. Presents with sudden onset severe right upper quadrant pain, nausea, vomiting, and signs of peritoneal

irritation.

Gallic Acid

A plant-derived phenolic acid found in tea, fruit, and other foods and studied for antioxidant, antimicrobial, and experimental anticancer effects.

Gallium

Gallium is a metallic element used in some radio-tracers and medical imaging and in semiconductor technology; its clinical interpretation depends on the isotope, compound, and distribution.

Gallium Nitrate

A gallium-containing compound formerly used in selected oncology settings and studied for antimicrobial or bone effects; use is limited by toxicity and clinical indication.

Gallium Scan

A nuclear medicine scan that uses a small amount of radioactive gallium to look for some infections, areas of inflammation, or tumors. Other scans are now often preferred.

Gallium-68

A radioactive positron-emitting isotope used to make PET imaging tracers. It has a physical half-life of about 68 minutes and decays to stable zinc-68. When linked to compounds such as DOTATATE or PSMA-targeting gozetotide, it helps locate somatostatin-receptor-positive neuroendocrine tumors or PSMA-positive prostate-cancer lesions; it is diagnostic, while separate therapeutic radionuclides may be used for treatment.

Gallop Rhythm

An extra heart sound producing a three- or four-beat cadence, usually from an S3 or S4; it can reflect altered ventricular filling or cardiac disease.

Gallstone

A solid concretion formed from bile components within the gallbladder or biliary tract, usually composed mainly of cholesterol, pigment, or a mixture.

It may be asymptomatic or obstruct the cystic or common bile duct, causing biliary colic, cholecystitis, pancreatitis, cholangitis, or jaundice.

Gallstone Ileus

A bowel blockage caused by a large gallstone that has passed from the gallbladder into the intestine. It can cause severe abdominal pain, vomiting, and swelling and usually needs urgent treatment.

Gallstone Pancreatitis

Acute pancreatitis caused by a gallstone transiently obstructing the ampulla, where the bile duct and pancreatic duct empty into the duodenum. It typically causes sudden persistent upper-abdominal pain with raised pancreatic enzymes; severity assessment and evaluation for retained common-bile-duct stones are required.

Gallstones

Gallstones are solid deposits in the gallbladder that may be asymptomatic or obstruct bile flow, causing biliary colic, cholecystitis, pancreatitis, or jaundice. obstruct the biliary tract, producing biliary pain, inflammation, jaundice, or pancreatitis.

Alternate Names:

Cholelithiasis (Gallstones)

Gallstones (Cholelithiasis)

Solid deposits that form in the gallbladder, usually from cholesterol or bile pigments. They may cause no symptoms or obstruct the biliary tract, producing biliary pain, inflammation, jaundice, or pancreatitis.

Alternate Names:

Cholelithiasis

Alternate Names:

Biliary colic discharge; cholelithiasis discharge

Galvanism

The application of a direct electric current for therapeutic or diagnostic purposes. Named after Luigi Galvani (1737-1798). Historical uses: galvanic stimulation of muscles, iontophoresis (introduction of ionised drugs through skin), electroconvulsive therapy (modified).

Galvanocautery

Galvanocautery uses heat produced by an electric current to destroy tissue or control bleeding.

Gambling Disorder

A persistent pattern of gambling with impaired control, increasing priority given to gambling, and continuation despite negative consequences. It must cause significant impairment or distress; the term includes the former labels gambling addiction, compulsive gambling, and pathological gambling.

Alternate Names:

Gambling Addiction; Compulsive Gambling; Gambling, Compulsive; Pathological Gambling

Gamete

A mature reproductive cell, such as a sperm or ovum, containing one set of chromosomes and combining with another gamete at fertilization.

Gamete Intrafallopian Transfer

An assisted-reproduction procedure in which eggs and sperm are placed into a fallopian tube so fertilization can occur in the body; it is now used less often than in-vitro fertilization.

Gametogenesis

Formation and maturation of sperm or eggs through meiosis and cellular differentiation in the testes or ovaries.

Gamma Camera

A machine used for nuclear medicine scans. It detects radiation from a small amount of injected radioactive medicine and creates pictures of organs or body functions.

Gamma Globulin

The fraction of blood plasma containing most immunoglobulins, or antibodies.

Gamma Hydroxybutyrate

A central-nervous-system depressant that can cause sedation, confusion, respiratory depression, coma, or death in overdose; it is also a drug of misuse.

Gamma Knife

Gamma Knife is a focused radiation treatment that uses many precisely aimed beams to treat selected brain tumors and other brain lesions without an open operation.

Gamma Rays

Gamma rays are high-energy electromagnetic radiation produced by radioactive decay or other nuclear processes; they can damage cells and are used in some cancer treatments.

Gamma Synuclein

A neuronal and peripheral-tissue protein in the synuclein family that has been investigated in neurodegeneration and cancer; its clinical role remains context-dependent.

Gamma-Aminobutyric Acid

A chemical messenger that usually slows activity in the brain and spinal cord. It helps regulate sleep, anxiety, muscle activity, and seizure risk by acting through GABA-A and GABA-B receptors.

Alternate Names:

GABA

Gamma-Benzene Hexachloride

An insecticide also known as lindane that can cause neurotoxicity and seizures with excessive exposure; medical use is restricted because safer treatments are available.

Gamma-Chemokines

Chemokines that attract or activate immune cells through chemokine receptors and help coordinate inflammation and immune surveillance.

Gamma-Globulin

A fraction of plasma proteins containing antibodies (immunoglobulins). Historically the term referred to a group of serum proteins with the slowest electrophoretic mobility (gamma region on serum protein electrophoresis). Currently synonymous with immunoglobulin preparations used for passive immunisation and immunotherapy.

Gamma-Glutamyl Transferase Blood Test

A blood test measuring gamma-glutamyl transferase, an enzyme associated with the liver and bile ducts; it helps evaluate cholestatic liver disease and support interpretation of an elevated alkaline phosphatase.

Gamma-Interferon

Interferon-gamma, a cytokine produced mainly by activated T lymphocytes and natural killer cells that activates macrophages and promotes cell-mediated immunity.

Gamma-Ray Therapy

Gamma-Ray Therapy is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

Gammacoronavirus

gammacoronavirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Gammaherpesvirina

gammaherpesvirina is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Gammaretrovirus

gammaretrovirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Ganciclovir

Ganciclovir is a guanosine analogue antiviral that inhibits viral DNA polymerase after phosphorylation and is used mainly against cytomegalovirus; neutropenia, thrombocytopenia, renal toxicity, and teratogenicity are important risks.

Ganglia

Ganglia are clusters of nerve-cell bodies outside the brain and spinal cord that help relay and organize nerve signals.

Ganglioglioma

A usually slow-growing brain or spinal-cord tumor made of nerve cells and supporting glial cells.

Ganglion

A collection of neuronal cell bodies located outside the central nervous system.

Alternate Names:

Bible Cyst (Ganglion)

Ganglion Cell

A neuron whose cell body lies in a peripheral or retinal ganglion; retinal ganglion cells transmit visual signals through the optic nerve.

Ganglion Cyst

A benign, fluid-filled cyst arising near a joint or tendon sheath, most often at the wrist or hand. It may be painless or cause pressure, discomfort, or limitation of movement.

Alternate Names:

Cyst, Ganglion

Ganglionectomy

Ganglionectomy is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Ganglioneuroblastoma

A neuroblastic tumor composed of mature ganglion cells and immature neuroblastic elements. Most often arises in the adrenal or paraspinal region and may present with an abdominal mass, pain, hypertension, or systemic symptoms. Intermediate between ganglioneuroma and neuroblastoma.

Ganglioneuroma

A ganglioneuroma is a usually benign tumor arising from nerve tissue of the autonomic nervous system.

Ganglioneuromatosis

Ganglioneuromatosis is a condition in which ganglion cells and related nerve tissue grow diffusely or in multiple areas.

Ganglionic Blockers

Ganglionic Blockers is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Ganglioside

A ganglioside is a fat-containing molecule in cell membranes, especially nerve-cell membranes, that helps with cell signaling and recognition.

Gangliosidosis

Gangliosidosis is a group of inherited lysosomal storage disorders in which gangliosides accumulate in cells, often damaging the nervous system.

Gangrene

Gangrene is tissue death caused by loss of blood supply, infection, or both; it can progress to systemic toxicity and requires urgent assessment of circulation and infection. bowel, and represents a form of coagulative necrosis. Dry gangrene occurs in tissues with gradual arterial occlusion, where the dead tissue becomes dry, shrunken, and dark brown or black.

Gap Junction

gap junction is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Gardner Syndrome

An inherited APC-related polyposis syndrome with numerous colorectal adenomas and extraintestinal findings such as osteomas, dental abnormalities, and desmoid tumors.

Gardnerella

Gardnerella is a group of bacteria commonly found in the genital tract; overgrowth, especially of *G.*

vaginalis, may contribute to bacterial vaginosis.

Gardnerella Vaginalis

Gardnerella vaginalis is a bacterium associated with bacterial vaginosis, an imbalance of vaginal bacteria that can cause discharge and odor.

Gargalesthesia

The sensation of tickling. A complex sensory experience mediated by light tactile stimulation of sensitive skin areas (axillae, soles, flanks, ribcage). Involves both spinal reflexes (goosebumps, withdrawal) and emotional processing in the anterior cingulate cortex and somatosensory cortex.

Gargatism

A clinical disorder or finding related to gargatism; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Gargle

The act of rinsing the mouth and throat with a liquid, holding it at the back of the throat while exhaling to create a bubbling action. Used for relief of sore throat or as a delivery method for antiseptics, anaesthetics, and anti-inflammatory agents.

Gargoylism

A clinical disorder or finding related to gargoylism; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Garlic

Garlic is an edible plant used as food and sometimes as a supplement; concentrated products may interact with medicines, including blood thinners.

Garré'S Osteomyelitis

A clinical disorder or finding related to garré's osteomyelitis; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Gartner Duct

A persistent remnant of the mesonephric duct in

the female genital tract that can form a vaginal or broad-ligament cyst.

Gartner Duct Cyst

A benign cyst arising from remnants of the mesonephric (Wolffian) duct along the lateral wall of the vagina or uterus. They are typically asymptomatic and discovered incidentally on pelvic examination or imaging. Most require no treatment unless symptomatic, in which case surgical excision is performed.

Gas

Gas is a state of matter without a fixed shape or volume; in the body, gas may refer to air or other gases in tissues, blood, or the digestive tract.

Alternate Names:

Strep Throat (GAS)

Gas And Gas Pains

Gas-related fullness, bloating, or abdominal discomfort caused by swallowed or intestinal gas.

Gas Chromatography

Gas chromatography is a laboratory method that separates and identifies substances that can be vaporized.

Gas Chromatography

An analytical method that vaporizes and separates volatile compounds in a gas stream, allowing their identification or measurement, often with mass spectrometry.

Gas Exchange

The movement of oxygen and carbon dioxide between air and blood in the lungs and between blood and tissues, essential for cellular respiration.

Gas Gangrene

A life-threatening infection in which bacteria produce toxins and gas within damaged tissue, causing rapid muscle destruction. It is commonly associated with *Clostridium* species and requires urgent surgical assessment, source control, and antimicrobial

treatment.

Gas Poisoning

An infectious process or toxic exposure involving gas poisoning; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Gas Scavenger

A gas scavenger is a substance or device that removes unwanted gases from a fluid, container, or medical breathing system.

Gas Transport

Movement of oxygen from the lungs to tissues and carbon dioxide from tissues to the lungs through the blood.

Gas – Flatulence

Flatulence: the passage of gas from the digestive system through the rectum, commonly known as passing gas or farting. Normal physiological process caused by swallowed air and bacterial fermentation of undigested carbohydrates in the colon. Excessive gas may cause bloating, cramps, or social embarrassment.

Alternate Names:

Flatulence; passing gas

Gaskin Maneuver (All-Fours Position)

A maneuver for shoulder dystocia resolution: the mother is rolled onto her hands and knees (all-fours position). Gravity and the change in pelvic dimensions (increased anteroposterior diameter of the pelvic outlet) may dislodge the impacted shoulder. The posterior arm may also be delivered more easily.

Alternate Names:

All-Fours Position

Gasoline Poisoning

Toxic exposure to gasoline (petrol) through ingestion, inhalation, or skin contact. Symptoms include nausea, vomiting, headache, dizziness, and central nervous system depression. Severe cases may cause chemical pneumonitis, seizures, or cardiac arrhythmia.

mias. Requires immediate medical attention.

Alternate Names:

Petrol poisoning

Gasserian Ganglion

Gasserian Ganglion is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gastralgia

Pain localized to the epigastric region of the abdomen or anatomical stomach (gastric pain / gastrodynia). The clinical differential diagnosis is guided by onset, relationship to food intake, and associated red-flag symptoms: burning postprandial epigastric discomfort relieved by antacids suggests peptic ulcer disease (gastric vs. duodenal ulcer) or gastroesophageal reflux; sudden, severe epigastric pain radiating to the back suggests acute pancreatitis; postprandial fullness and bloating without structural disease defines functional dyspepsia; and persistent epigastric pain accompanied by anorexia, early satiety, and unintentional weight loss requires upper gastrointestinal endoscopy to exclude gastric adenocarcinoma.

Gastrectomy

Surgical removal of all or part of the stomach. Indications: gastric cancer (most common), severe peptic ulcer disease, gastric lymphoma, gastrointestinal stromal tumor, perforation, bleeding. Types include total, partial, and laparoscopic gastrectomy.

Gastric Acid

Hydrochloric acid secreted by gastric parietal cells, producing an intragastric pH of 1-3. Secretion is stimulated by histamine (H₂ receptors), gastrin (CCK-B/gastrin receptors), and acetylcholine (M₃ muscarinic receptors), and inhibited by somatostatin, prostaglandins, and luminal acid (negative feedback).

Gastric Adenocarcinoma

The most common malignant epithelial tumor of the stomach, arising from gastric mucosa and associated

with factors such as *Helicobacter pylori* infection, chronic atrophic gastritis, intestinal metaplasia, and hereditary syndromes.

Gastric Analysis

Gastric analysis examines stomach contents, including their volume, acidity, and sometimes enzyme or hormone levels, to help evaluate selected gastric disorders.

Gastric Antral Vascular Ectasia

An uncommon cause of upper gastrointestinal bleeding and iron-deficiency anemia, characterized endoscopically by parallel longitudinal columns of dilated, tortuous mucosal vessels converging on the pylorus (classically termed “watermelon stomach”) or diffuse punctate lesions. Strongly associated with cirrhosis with portal hypertension and autoimmune connective-tissue diseases, particularly systemic sclerosis.

Alternate Names:

GAVE; Watermelon stomach

Gastric Balloon

A temporary endoscopically placed balloon that occupies space in the stomach to support weight loss; complications include nausea, vomiting, obstruction, and perforation.

Gastric Bezoar

Accumulation of indigestible material in the stomach. Phytobezoars consist of vegetable fiber, trichobezoars of hair, and pharmacobezoars of medications. Associated with gastroparesis, prior surgery, and impaired gastric motility. Diagnosed by endoscopy.

Gastric Bypass

Roux-en-Y gastric bypass creating a small proximal pouch drained by a Roux limb, combining restrictive and mildly malabsorptive mechanisms. Indicated for BMI over 40, or over 35 with obesity-related comorbidity. Mean excess weight loss approaches 60-70 percent.

Gastric Bypass Surgery

Bariatric surgical procedure that creates a small stomach pouch and reroutes the small intestine, combining restrictive and malabsorptive mechanisms. Indicated for severe obesity (BMI ≥ 40 or ≥ 35 with comorbidities). Results in significant weight loss and improvement in obesity-related conditions.

Alternate Names:

Roux-en-Y gastric bypass; bariatric surgery

Alternate Names:

Bariatric surgery discharge

Gastric Cancer

A malignant tumor arising from the stomach lining or other stomach tissue.

Gastric Carcinoid Tumor

Neuroendocrine tumor arising from enterochromaffin-like cells in the gastric fundus. Type I gastric carcinoids are associated with autoimmune atrophic gastritis and hypergastrinemia, are typically small and multifocal, and carry a good prognosis.

Gastric Culture

Laboratory test to identify bacteria in the stomach, most commonly used to detect *Helicobacter pylori* infection. Specimens are obtained via endoscopic biopsy. Results guide antibiotic treatment for *H. pylori* eradication.

Alternate Names:

H. pylori culture

Gastric Dysplasia

Abnormal precancerous-appearing growth of gastric lining cells, graded by pathology and associated with increased risk of gastric adenocarcinoma.

Gastric Emptying

The movement of stomach contents into the duodenum through coordinated muscular contractions and pyloric regulation. Delayed emptying is called gastroparesis.

Gastric Emptying Study

Nuclear medicine diagnostic test measuring the rate of gastric emptying. The protocol involves ingestion of a radiolabeled meal followed by serial gamma camera images obtained at one, two, and four hours. Gastric emptying is considered delayed if more than ten percent of the meal remains at four hours.

Gastric Emptying, Delayed

Gastroparesis: delayed gastric emptying without mechanical obstruction, causing early satiety, nausea, vomiting, bloating, and poor glucose control. Common causes include diabetes, post-surgical changes, and idiopathic causes. Diagnosed by gastric emptying scintigraphy.

Alternate Names:

Gastroparesis

Gastric Emptying, Rapid

Dumping Syndrome: rapid gastric emptying where food moves too quickly from the stomach into the small intestine, causing nausea, vomiting, cramping, diarrhea, dizziness, and sweating after eating. Common after gastric surgery. Managed with dietary modifications.

Alternate Names:

Dumping Syndrome

Gastric Fistula

An abnormal connection involving the stomach and another organ or the skin, which may cause leakage, infection, malnutrition, or drainage.

Gastric Flu

An informal name, usually for viral gastroenteritis—an infection of the stomach and intestines that causes nausea, vomiting, diarrhea, and abdominal cramps. It is not caused by influenza and can lead to dehydration.

Gastric Fundus

gastric fundus is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Gastric Hemorrhage

Bleeding from the stomach caused by ulcer, erosive gastritis, varices, tumor, vascular lesion, or other injury, potentially producing hematemesis or melena.

Gastric Juice

The acidic digestive secretion of the stomach containing hydrochloric acid, pepsinogen, mucus, intrinsic factor, water, and electrolytes.

Gastric Lavage

Gastric lavage is the flushing of the stomach through a tube, a rarely used procedure that may be considered in selected poisonings or to remove stomach contents.

Gastric Leiomyosarcoma

A neoplastic process affecting gastric leiomyosarcoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Gastric Lymphoma

Malignant proliferation of lymphoid tissue in the stomach most commonly mucosa-associated lymphoid tissue lymphoma. Strongly associated with *H. pylori* infection. Early disease may regress completely with *H. pylori* eradication therapy alone.

Gastric Malignancy

Any malignant neoplasm originating in the anatomical stomach, predominantly gastric adenocarcinoma (> 90% of cases), with gastric lymphoma (extranodal marginal zone B-cell lymphoma / MALToma, diffuse large B-cell lymphoma) and gastrointestinal stromal tumors (GIST, harboring activating mutations in KIT or PDGFRA) comprising the remainder. Gastric adenocarcinoma is categorized by the Lauren classification into intestinal type (gland-forming, linked to chronic *Helicobacter pylori* gastritis, smoking, and dietary nitrates) and diffuse type (infiltrative, containing signet ring cells, often driven by loss-of-function *CDH1* mutations, causing linitis plastica / "leather-bottle stomach"). Diagnosed via esophagogastroduodenoscopy with tissue biopsy; staged with CT and endoscopic ultrasound.

Gastric Mucosa

gastric mucosa is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Gastric Necrosis

Death of stomach tissue from ischemia, caustic injury, severe distension, infection, or other insult, with risk of perforation and systemic illness.

Gastric Obstruction

Impaired passage of stomach contents caused by narrowing or blockage at the stomach or gastric outlet, producing vomiting, pain, distension, and dehydration.

Gastric Outlet Obstruction

Blockage of gastric outflow at the pylorus or duodenum. Causes include peptic ulcer scarring, gastric cancer, and pyloric stenosis in infants. Presents with projectile vomiting, dehydration, and metabolic alkalosis. Diagnosis is by upper endoscopy and CT scan.

Gastric Pneumatosis

Presence of gas within the gastric wall, also called gastric emphysema, which may be benign (gastric emphysema) or life-threatening (emphysematous gastritis). Benign forms result from barotrauma, chronic obstructive pulmonary disease, or mechanical causes.

Alternate Names:

gastric emphysema, which may be.

Gastric Polyps

Protruding lesions of the gastric mucosa classified by histological type. Fundic gland polyps are the most common type associated with long-term proton pump inhibitor use and familial adenomatous polyposis. Hyperplastic polyps are associated with chronic gastritis and *H. pylori* infection and carry a small risk of dysplasia.

Gastric Stenosis

Abnormal narrowing of the stomach or gastric outlet,

from congenital disease, ulcer scarring, inflammation, tumor, or hypertrophy, that impedes emptying.

Gastric Suction

Nasogastric tube placement for removal of gastric contents, used for decompression in bowel obstruction, preparation for surgery, or treatment of gastric dilatation. Also called nasogastric aspiration or gastric lavage.

Alternate Names:

Nasogastric aspiration; gastric lavage

Gastric Surgery

Gastric cancer: D2 lymphadenectomy standard (stations 1-12a, 12b). Gastrectomy types: total, distal subtotal (Billroth I gastroduodenostomy, Billroth II gastrojejunostomy, Roux-en-Y), proximal, pylorus-preserving. Reconstruction: Roux-en-Y preferred (prevents bile reflux).

Gastric Tissue Biopsy And Culture

Endoscopic sampling of gastric mucosa for histology and, when indicated, culture or other testing. It may evaluate gastritis, *Helicobacter pylori* infection, unusual infection, dysplasia, or gastric neoplasia.

Alternate Names:

Endoscopic gastric biopsy

Gastric Ulcer

Peptic ulcer in the gastric mucosa associated with *H. pylori*, NSAIDs, and smoking. Pain is typically worsened by food. There is a higher risk of malignancy than duodenal ulcers. Diagnosis is by upper endoscopy with biopsy to exclude malignancy.

Gastric Varices

Enlarged veins in the stomach wall caused by portal hypertension, usually related to liver disease or obstruction of the splenic or portal venous circulation. Rupture can cause life-threatening gastrointestinal bleeding.

Gastric Volvulus

Rotation of the stomach along its axis causing obstruction. It may present with Borchardt triad of

epigastric pain, retching, and inability to pass a nasogastric tube. It is a surgical emergency requiring decompression and gastropexy. Organoaxial volvulus is the most common type where the stomach rotates along its longitudinal axis.

Gastrin

A peptide hormone produced by G cells in the gastric antrum and duodenum. Secreted in response to: (1) gastric distension, (2) amino acids and peptides (especially from protein-rich meals), (3) vagal stimulation (via gastrin-releasing peptide, GRP), (4) hypercalcaemia.

Gastrin Blood Test

Laboratory measurement of gastrin levels in the blood, used to evaluate suspected Zollinger-Ellison syndrome (gastrinoma), atrophic gastritis, or other causes of gastric acid hypersecretion. Levels are affected by proton pump inhibitors and fasting state.

Alternate Names:

Serum gastrin level

Gastrin Secretion

Gastrin is a peptide hormone produced by G-cells in the gastric antrum and duodenum, stimulating hydrochloric acid secretion by parietal cells, pepsinogen secretion by chief cells, and growth of the gastric mucosa.

Gastrinoma

A tumor that makes too much gastrin, a hormone that causes the stomach to produce acid. It usually starts in the pancreas or duodenum and may cause Zollinger-Ellison syndrome, repeated peptic ulcers, diarrhea, and acid reflux. Some cases are linked to MEN1 and may spread to the liver or nearby lymph nodes.

Gastritis

Gastritis is inflammation of the stomach lining. Common causes include *H. pylori* infection, certain medicines such as NSAIDs, alcohol, autoimmune disease, and severe physical illness.

Gastrocnemius

The large superficial muscle of the posterior calf, forming the bulk of the calf contour. Origin: medial and lateral femoral condyles. Insertion: calcaneus via the Achilles tendon. Nerve: tibial nerve (S1-S2). Action: plantar flexion of the ankle (standing, walking, running, jumping); also flexes the knee.

Gastrocnemius Muscle

Most superficial posterior leg muscle forming the calf prominence, with medial/lateral femoral condyle heads merging with soleus to form the Achilles tendon on the calcaneus. Innervated by tibial nerve (S1-S2). Plantarflexes ankle and flexes knee (two-joint muscle). Active in walking/running/jumping.

Gastroduodenal Crohn Disease

Involvement of the stomach and duodenum by Crohn disease occurring in approximately five percent of patients with Crohn. Gastric Crohn typically involves the antrum and pylorus and can cause gastric outlet obstruction from edema, fibrosis, or stricture. Duodenal Crohn presents with epigastric pain, nausea, vomiting, and weight loss.

Gastroduodenostomy

Surgical creation of an opening between the stomach and duodenum.

Gastroenteritis

Inflammation of the stomach and intestinal mucosa, most commonly caused by viral infections (norovirus, rotavirus, adenovirus), bacterial pathogens (*E. coli*, *Salmonella*, *Campylobacter*), or parasites. Presents with diarrhea, vomiting, abdominal cramps, and dehydration. Self-limited in most cases.

Gastroenteritis (Stomach Flu)

Viral gastroenteritis: inflammation of the stomach and intestines caused by viruses such as norovirus, rotavirus, or adenovirus. Presents with diarrhea, vomiting, abdominal cramps, and dehydration. Usually self-limited.

Alternate Names:

Stomach flu; viral gastroenteritis

Gastroenteritis Bacterial

Bacterial gastroenteritis is inflammation of the stomach or intestines caused by bacteria, often producing diarrhea, abdominal cramps, fever, and sometimes vomiting.

Gastroenteritis, Viral

Viral gastroenteritis (stomach flu): inflammation of the stomach and intestines caused by viruses such as norovirus, rotavirus, or adenovirus. Presents with diarrhea, vomiting, abdominal cramps, and dehydration. Usually self-limited.

Alternate Names:

Viral gastroenteritis; stomach flu

Gastroenterologist

A physician specializing in disorders of the digestive tract, liver, gallbladder, and pancreas.

Gastroenterology

The medical specialty focused on the diagnosis and management of diseases of the gastrointestinal tract (esophagus, stomach, small intestine, colon, rectum, pancreas, gallbladder, bile ducts, liver). Subspecialties: hepatology (liver), pancreatology, inflammatory bowel disease, gastrointestinal oncology, neurogastroenterology.

Gastroenterostomy

Surgical creation of an opening between the stomach and a segment of the small intestine, usually the jejunum, to bypass or replace a blocked or diseased gastric outlet.

Gastroepiploic Artery

The gastroepiploic arteries run along the greater curve of the stomach and supply blood to the stomach and nearby omentum.

Gastroesophageal

Relating to the stomach and esophagus, such as the gastroesophageal junction or gastroesophageal reflux.

Gastroesophageal Junction

Adenocarcinoma

A gland-forming cancer arising where the esophagus meets the stomach. Symptoms may include difficulty swallowing, reflux, weight loss, anemia, or bleeding. Diagnosis requires endoscopy and biopsy; treatment depends on stage and may include surgery, chemotherapy, radiation, immunotherapy, or targeted therapy.

Gastroesophageal Reflux

Backward flow of gastric contents into the oesophagus, caused by transient or persistent relaxation of the lower oesophageal sphincter or other mechanical factors.

Alternate Names:

GERD discharge

Gastroesophageal Reflux Disease

Chronic condition where stomach contents repeatedly flow back into the esophagus, causing symptoms such as heartburn, regurgitation, chest pain, and esophageal damage. Managed with lifestyle changes, medications, and possibly surgery.

Alternate Names:

GERD; acid reflux disease

Gastroesophageal Reflux Disease - Children

GERD in pediatric patients: chronic reflux of stomach contents into the esophagus causing symptoms such as regurgitation, vomiting, feeding difficulties, irritability, and poor weight gain. May require positional management, dietary changes, and acid-suppressing medications.

Alternate Names:

Pediatric GERD; infant reflux

Gastroesophageal Reflux In Infants

Gastroesophageal reflux in infants concerns gastroesophageal reflux in infants, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Gastrogastric Intussusception

Rare form of intussusception where one segment of

the stomach telescopes into an adjacent gastric segment, typically associated with a lead point such as a gastric polyp, leiomyoma, or carcinoma. Presents with abdominal pain, nausea, vomiting, and occasionally upper gastrointestinal bleeding.

Gastrografin Study

X-ray imaging using water-soluble contrast. Used when barium contraindicated (perforation risk). Less detailed than barium.

Gastrointestinal

Pertaining collectively to the stomach and intestines, or to the entire gastrointestinal tract (alimentary canal) extending from the oral cavity to the anus, along with its accessory digestive glands (liver, gallbladder, pancreas). The GI tract carries out ingestion, mechanical and chemical digestion, peristaltic propulsion, mucosal nutrient absorption, and waste elimination. The tract wall exhibits a conserved four-layer architecture: mucosa (epithelium, lamina propria, muscularis mucosae), submucosa (housing the Meissner submucosal nerve plexus), muscularis externa (inner circular and outer longitudinal smooth muscle sandwiching the Auerbach myenteric plexus), and outer serosa/adventitia.

Alternate Names:

GI

Gastrointestinal Agents

Gastrointestinal agents are medicines or other substances used to treat digestive symptoms or disorders, such as nausea, diarrhea, constipation, or excess stomach acid.

Gastrointestinal Amyloidosis

Deposition of misfolded amyloid fibrils in the gastrointestinal tract, either as part of systemic amyloidosis (AL, AA, or ATTR types) or rarely as primary localized disease.

Gastrointestinal Bleeding

Bleeding anywhere in the digestive tract. It may be acute or chronic and may come from the upper digestive tract, small intestine, or lower digestive tract. It can cause vomiting blood, black stools, or

red blood in the stool.

Gastrointestinal Bleeding Scan

Detection of GI bleeding using Tc-99m labeled RBCs. Sensitive for active bleeding (>0.1 mL/min). Localizes bleeding site. Alternative: tagged RBC scan, CT angiography.

Gastrointestinal Decontamination

Methods: activated charcoal, gastric lavage (rare), whole bowel irrigation (sorbitol, PEG). Timing critical for charcoal (1-2 hours post-ingestion).

Gastrointestinal Disorder

A gastrointestinal disorder is a disease or problem affecting the digestive tract, which may cause symptoms such as pain, nausea, vomiting, diarrhea, constipation, or bleeding.

Gastrointestinal Fistula

An abnormal epithelial-lined connection between the gastrointestinal tract and another organ, body surface, or adjacent bowel segment; it can cause leakage, infection, malnutrition, and fluid or electrolyte loss.

Gastrointestinal Gas

Gastrointestinal gas is air or other gas in the stomach or intestines; excess gas may cause belching, bloating, abdominal discomfort, or passing gas.

Gastrointestinal Hemorrhage

Gastrointestinal hemorrhage is bleeding anywhere in the digestive tract, which may appear as vomiting blood, black stools, or red blood in the stool.

Gastrointestinal Hormone

A gastrointestinal hormone is a chemical messenger made by digestive-tract cells that helps regulate digestion, movement of the gut, appetite, or blood sugar.

Gastrointestinal Neoplasm

A gastrointestinal neoplasm is an abnormal growth arising in the digestive tract; it may be benign or

cancerous.

Gastrointestinal Obstruction

Partial or complete blockage of the passage of intestinal contents through the gastrointestinal tract. It may be mechanical or functional and can cause colicky pain, vomiting, distention, constipation, obstipation, dehydration, bowel ischaemia, perforation, or sepsis.

Gastrointestinal Pain

Pain arising from the digestive tract or related organs. Causes include indigestion, infection, ulcer disease, inflammation, obstruction, gallstones, and disorders of the liver or pancreas. Severe, persistent, or worsening pain requires medical assessment.

Gastrointestinal Perforation

A full-thickness defect in the gastrointestinal wall allowing luminal contents to enter the peritoneal or adjacent space. It can cause peritonitis, sepsis, and shock and usually requires urgent imaging, antimicrobial therapy, resuscitation, and source control.

Gastrointestinal Stromal Tumor

A mesenchymal tumor arising from specialized cells in the gastrointestinal wall, most often in the stomach or small intestine. Many tumors contain activating changes in KIT or PDGFRA; their malignant potential varies.

Gastrointestinal Stromal Tumor

A tumor arising from specialized cells in the digestive tract, most often in the stomach or small intestine.

Gastrointestinal System

The gastrointestinal system is the group of organs that digests food, absorbs nutrients and water, and removes solid waste.

Gastrointestinal Tract

The continuous digestive passage from the mouth through the esophagus, stomach, intestines, rectum, and anus.

Gastrointestinal Villi

Finger-like projections of the small-intestinal mucosa that greatly increase absorptive surface area. Each villus contains blood capillaries and a central lacteal for transport of absorbed nutrients and lipids.

Gastrojejunostomy

Surgical creation of an opening between the stomach and jejunum.

Gastromalacia

Gastromalacia is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gastroparesis

Gastroparesis is delayed stomach emptying without mechanical obstruction, causing early satiety, nausea, vomiting, bloating, and poor glucose or nutritional control. mellitus, post-surgical changes, or idiopathic causes. Presents with nausea, vomiting of undigested food, early satiety, bloating, and abdominal pain. Diagnosed by gastric emptying scintigraphy showing more than ten percent retention at four hours.

Alternate Names:

Delayed Gastric Emptying Delayed Gastric Emptying (Gastroparesis)

Diabetic Gastroparesis

A complication of diabetes in which damage to the stomach's nerves slows the movement of food from the stomach into the small intestine. It may cause early fullness, nausea, vomiting, bloating, abdominal pain, and difficult-to-control blood sugar levels.

Gastropathy

Gastropathy is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gastroplasty

Gastroplasty is an anatomical structure or physiologic function; its location, mechanism, and associ-

ated findings determine its clinical significance.

Gastroschisis

Gastroschisis is a congenital full-thickness defect of the abdominal wall, usually beside the umbilicus, through which bowel or other viscera herniate without a protective sac. which bowel herniates without a covering membrane. Not associated with chromosomal abnormalities. Presents at birth with exposed bowel loops that may be edematous, thickened, and discolored from amniotic fluid exposure.

Gastroschisis Repair

Surgical repair of gastroschisis, a congenital abdominal wall defect where intestines protrude through an opening near the umbilicus. Surgery involves returning the bowel to the abdomen and closing the defect. May require staged closure with silo placement.

Alternate Names:

Abdominal wall defect repair

Gastroscope

A gastroscope is a thin, flexible viewing tube used to examine the inside of the esophagus, stomach, and first part of the small intestine.

Gastroscopy

Endoscopic examination of the esophagus, stomach, and duodenum, allowing direct visualization, biopsy, and selected treatments.

Gastrospenic Fistulization

Abnormal communication between the stomach and spleen, most commonly arising from gastric ulcer erosion into the splenic hilum or as a complication of splenic abscess. Presents with abdominal pain, gastrointestinal hemorrhage, and sepsis.

Gastrostomy

Surgical creation of an opening (stoma) through the abdominal wall into the stomach for enteral feeding or decompression.

Gastrostomy Feeding Tube - Bolus

Technique for administering formula or nutrition directly into the stomach through a gastrostomy tube using a syringe. Includes hand-washing, flushing the tube, administering formula in small boluses, and flushing after feeding. Provides supplemental or complete nutrition.

Alternate Names:

G-tube bolus feeding

Gastrostomy Feeding Tube - Pump - Child

Technique for continuous or intermittent tube feeding in pediatric patients using an enteral feeding pump. Provides controlled delivery of formula through a gastrostomy tube, allowing for adjustable rates and volume. Includes equipment setup, monitoring, and troubleshooting.

Alternate Names:

Pediatric G-tube pump feeding

Gastrostomy Tube

Tube through abdominal wall into stomach for feeding. Percutaneous endoscopic gastrostomy. Indications: prolonged enteral feeding, dysphagia, neurological disorders. Complications: infection, leakage, granulation tissue, burial bumper.

Gastrula

An early embryo stage formed after gastrulation, when cell layers reorganize into ectoderm, mesoderm, and endoderm that give rise to body tissues.

Gastrulation

A crucial early phase in embryonic development where the single-layered blastula reorganizes into a multi-layered structure with three germ layers.

Gated Blood Pool Scan

A radionuclide cardiac study, also called radionuclide ventriculography or MUGA, that uses ECG-gated images of labeled blood to measure ventricular ejection fraction and assess ventricular wall motion. It is used selectively when quantitative ventricular function is needed.

Gatifloxacin

Gatifloxacin is a fluoroquinolone antibiotic that inhibits bacterial DNA gyrase and topoisomerase IV; systemic use is restricted in many settings because of dysglycaemia and other class toxicities, while ophthalmic use remains available in some regions.

Gaucher Disease

An inherited lysosomal storage disorder caused by deficient glucocerebrosidase, leading to lipid accumulation in cells and possible enlargement of the spleen and liver, anemia, bone disease, or neurologic disease.

Alternate Names:

Splnomegaly Gaucher (Gaucher Disease)

Gaucher'S Disease

Another name for Gaucher disease, an inherited lysosomal storage disorder caused by deficient glucocerebrosidase.

Gaultheria Oil

Gaultheria Oil is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

Gauss

A unit of magnetic flux density equal to 10^{-4} tesla, used in physics, imaging, and descriptions of magnetic fields.

Gauze

A woven or nonwoven material used to clean, dress, pack, or absorb fluid from a wound. It may be sterile or nonsterile and comes in several forms.

Gavage

Feeding through a tube passed into the stomach (nasogastric, orogastric, or gastrostomy tube). Used when oral feeding is impossible or inadequate. In neonates: gavage feeding is used for premature infants unable to coordinate suck-swallow-breathe.

GBM

Glioblastoma: the most aggressive primary brain tumor, classified as WHO grade IV astrocytoma. Characterized by rapid growth, necrosis, and microvascular proliferation. Presents with headaches, seizures, focal neurological deficits, and cognitive changes. Treatment includes surgery, radiation, and chemotherapy.

Alternate Names:

Glioblastoma multiforme

Gefitinib

An oral epidermal growth factor receptor tyrosine-kinase inhibitor used for selected advanced non-small-cell lung cancers with activating EGFR mutations.

Geiger Counter

A Geiger counter is an instrument that detects and measures ionizing radiation.

Gel

A semisolid pharmaceutical formulation in which a liquid (usually water) is immobilized within a three-dimensional network of a gelling agent (e.g., carbomer, cellulose, alginate).

Gel Electrophoresis

Gel electrophoresis separates DNA, RNA, or proteins by moving them through a gel in an electric field, usually according to size and charge.

Gelatin

Gelatin is a protein made from collagen and used in foods, medicines, capsules, and some medical materials.

Geldanamycin Analogue

A medicine or chemical compound called geldanamycin analogue. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Gelfoam

An absorbable hemostatic agent made from purified

porcine gelatin. Used in surgical settings to control bleeding where conventional hemostasis is difficult (liver, bone, neurosurgery). Mechanism: provides a physical matrix that promotes platelet aggregation and clot formation. Absorbed within 4-6 weeks.

Gelineau Syndrome

Another name for narcolepsy, a sleep disorder characterized by excessive daytime sleepiness and, in many patients, cataplexy, sleep paralysis, or vivid hallucinations around sleep.

Gelsenium

Gelsenium is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

Gelsolin

Gelsolin is a protein that regulates actin filaments and helps control the shape and movement of cells.

Gemcitabine

Gemcitabine is a pyrimidine antimetabolite that inhibits DNA synthesis after intracellular activation and is used for several solid tumors; myelosuppression, flu-like symptoms, rash, and pulmonary or hepatic toxicity may occur.

Gemcitabine Hydrochloride

The hydrochloride salt of gemcitabine, a nucleoside-analogue antimetabolite that inhibits DNA synthesis and is used in several solid tumors.

Gemella

Gemella is a group of bacteria that normally may inhabit the mouth and upper airway but can rarely cause serious infections, including bloodstream infection.

Gemella Bergeri

Gemella bergeri is a bacterium occasionally recovered from humans; its clinical importance depends on the specimen and evidence of true infection.

Gemella Haemolysans

Gemella haemolysans is a bacterium found mainly in the mouth and upper airway that can rarely cause invasive infection, including endocarditis.

Gemella Morbillorum

Gemella morbillorum is a bacterium that may live in the mouth and can rarely cause infections such as endocarditis or abscesses.

Gemella Sanguinis

Gemella sanguinis is a bacterium associated with the mouth that can rarely enter the bloodstream and cause invasive infection.

Gemfibrozil

A fibrate (PPAR-alpha agonist) used primarily for severe hypertriglyceridemia (reducing pancreatitis risk) and mixed hyperlipidemia. Raises HDL and lowers triglycerides markedly; modest LDL lowering.

Gemifloxacin

A medicine or chemical compound called gemifloxacin. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Gemination

Attempted division of single tooth bud. Results in large tooth with bifid crown, normal tooth count.

Gemistocytic Astrocytoma

A former histologic variant of diffuse astrocytoma composed partly of gemistocytic astrocytes. The term is now used mainly descriptively because integrated molecular classification determines the modern tumor diagnosis and grade.

Gemtuzumab Ozogamicin

A medicine or chemical compound called gemtuzumab ozogamicin. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Gender

A social and personal construct involving roles, identity, expression, and expectations associated with sex; it is distinct from biological sex and sexual orientation.

Gender Dysphoria

Psychological distress resulting from incongruence between one's experienced gender and assigned gender at birth. Persists for ≥ 6 months and causes significant impairment. Onset in childhood (may resolve) or adolescence/adulthood (persistent).

Gender Identity

A person's internal sense of being a woman, man, both, neither, or another gender, which may or may not correspond to sex assigned at birth.

Gender Identity Disorder

Gender Dysphoria: psychological distress resulting from incongruence between one's experienced gender and assigned gender at birth. Persists for ≥ 6 months and causes significant impairment. Onset in childhood (may resolve) or adolescence/adulthood (persistent).

Alternate Names:

Gender Dysphoria

Gene

Basic unit of heredity, segment of DNA encoding a functional product (protein or RNA). Structure: promoter, coding sequence (exons), introns, terminator. Genes are located at specific positions (loci) on chromosomes.

Gene Amplification

An increase in the number of copies of a gene or genomic region, which can raise gene expression and drive some inherited conditions or cancers.

Gene Conversion

A nonreciprocal transfer of sequence information from one DNA region to a homologous region, potentially changing an allele during recombination or repair.

Gene Deletion

Loss of part or all of a gene from DNA, potentially abolishing its product or altering dosage and causing disease when clinically significant.

Gene Dosage

The number of functional copies of a gene and the amount of product they produce, influenced by deletions, duplications, chromosome number, and regulation.

Gene Duplication

An extra copy of a gene created by replication or rearrangement, which may have no effect, alter dosage, or provide material for new gene function.

Gene Expression

Process by which information from a gene is used to synthesize functional product (protein or RNA). Steps: transcription, RNA processing, translation, post-translational modification. Regulated at multiple levels.

Gene Frequency

The proportion of a particular allele among all copies of a gene in a population.

Gene Fusion

A hybrid gene formed when segments of two separate genes join, sometimes producing an abnormal protein that drives cancer or other disease.

Gene Library

A collection of cloned DNA fragments representing genomic DNA, complementary DNA, or selected sequences for laboratory screening and analysis.

Gene Modification

An intentional or naturally occurring alteration of DNA sequence or gene regulation that changes cellular function or inherited traits.

Gene Mutation

A permanent change in the DNA sequence of a gene, which may be harmless, beneficial, or pathogenic

depending on its effect and inheritance.

Gene Panel

A laboratory test that sequences a selected group of genes associated with a clinical phenotype. Panels can provide efficient, focused analysis but may miss variants outside the selected genes or changes poorly detected by the platform.

Gene Rearrangement

Reorganization of DNA segments within or between chromosomes that can alter gene structure, expression, immune-receptor diversity, or cancer biology.

Gene Silencing

Suppression of gene expression through DNA methylation, chromatin changes, RNA interference, or other mechanisms.

Gene Targeting

A molecular method that changes a chosen genomic locus through homologous recombination or engineered editing to study or alter gene function.

Gene Therapy

Treatment by introducing, removing, or changing genetic material. Approaches: gene addition (functional copy), gene silencing (siRNA, antisense), gene editing (CRISPR-Cas9). Examples: Luxturna (RPE65 mutation), Zolgensma (SMN1 in spinal muscular atrophy).

Gene Transfer

Movement of genetic material into a cell or organism, naturally or through laboratory vectors, potentially changing gene expression or correcting a defect.

Gene-Environment Interaction

A gene-environment interaction occurs when an environmental exposure changes disease risk differently according to a person's genotype, so inherited susceptibility and exposure jointly influence phenotype.

Gene-Modified

Describing cells or organisms whose genetic material

has been deliberately altered using recombinant DNA or genome-editing methods.

General Anesthesia

A controlled, reversible state of unconsciousness, analgesia, amnesia, and muscle relaxation induced by pharmacologic agents, enabling surgical procedures without patient awareness or pain.

General Anesthetic

An agent producing reversible loss of consciousness, amnesia, analgesia, and muscle relaxation sufficient for surgery.

General Paresis

Neurosyphilis: a chronic meningoencephalitis caused by *Treponema pallidum* infection, presenting with progressive cognitive decline, personality changes, psychiatric symptoms, and neurological deficits. Diagnosis is by CSF analysis and serology. Treatment with IV penicillin.

Alternate Names:

General paresis of the insane; neurosyphilis

Generalised

Widespread or involving multiple regions of the body rather than being confined to a single localized site.

Generalized

Distributed widely or involving most or all of a body region, system, or population rather than being confined to one focus.

Generalized Anxiety Disorder

Characterized by excessive, difficult-to-control anxiety and worry about multiple events or activities occurring more days than not for at least six months. Associated symptoms include restlessness, being easily fatigued, difficulty concentrating, irritability, muscle tension, and sleep disturbance.

Alternate Names:

GAD self-management

Generalized Anxiety Disorder In

Children

Excessive, difficult-to-control worry in children about multiple topics (school performance, health, family safety) occurring more days than not for at least 6 months. Associated with restlessness, fatigue, difficulty concentrating, irritability, muscle tension, and sleep disturbance. Treatment includes cognitive behavioral therapy and possibly medication.

Alternate Names:

Pediatric GAD

Generalized Granuloma Annulare

A widespread variant of granuloma annulare presenting with numerous small, flesh-coloured to erythematous papules distributed over the trunk and extremities, lacking the classic annular arrangement of localized disease. It is often associated with diabetes mellitus and may be more persistent than localized forms.

Generalized Lipodystrophy

A disorder with near-total loss of adipose tissue, severe insulin resistance, diabetes, high triglycerides, fatty liver, and abnormal fat deposition in other tissues.

Generalized Seizure

A seizure arising from or rapidly involving both cerebral hemispheres, commonly producing impaired awareness, bilateral motor activity, or brief absence episodes.

Generalized Tonic-Clonic Seizure

A generalized tonic-clonic seizure (formerly grand mal seizure) is a seizure involving bilateral tonic stiffening followed by rhythmic clonic jerking of the extremities, with loss of consciousness.

Generalized-Onset Seizure

A seizure that begins in bilaterally distributed networks and rapidly engages both cerebral hemispheres. Generalized absence, myoclonic, tonic, clonic, atonic, and tonic-clonic seizures are recognized clinical types.

Generator

System for producing short-lived radionuclide from longer-lived parent. Tc-99m from Mo-99. Elution with saline. Quality control: Mo-99 breakthrough, Al-3+ breakthrough, sterility.

Generic

Describing a medicine by its active ingredient rather than a brand name; an approved generic drug must meet applicable standards for quality and therapeutic equivalence to its reference product.

Genes

Basic units of heredity composed of DNA sequences that encode functional products (proteins or RNA). Located at specific positions (loci) on chromosomes. Genes determine traits and can carry mutations that cause disease.

Genesis

Origin, formation, or development, as in the genesis of a disease or organ.

Genetic Anticipation

Earlier onset or increasing severity of a hereditary disorder in successive generations, often caused by expansion of unstable repeated DNA sequences.

Genetic Carrier

A person with one pathogenic variant for a recessive disorder who is usually unaffected but can transmit the variant to children.

Genetic Code

The set of rules by which the nucleotide sequence of messenger RNA is read in groups of three bases (codons) to specify amino acids or stop signals during protein synthesis. The standard code is nearly universal and is redundant because several codons can specify the same amino acid.

Genetic Counseling

Process of helping individuals understand and adapt to genetic aspects of disease. Includes risk assessment, education, psychosocial support, informed

decision-making.

Genetic Counselling

Genetic Counselling is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

Genetic Counselor

A health professional who evaluates inherited cancer risk, arranges and interprets genetic testing, and provides counseling to patients and families, including cascade testing of relatives.

Genetic Disease

A disorder caused in whole or in part by changes in genetic material; it may be inherited, arise anew, or result from chromosome or mitochondrial abnormalities.

Genetic Disorder

A disease caused wholly or partly by a pathogenic change in DNA, chromosome structure or number, or gene regulation.

Genetic Drift

Random changes in allele frequencies from one generation to the next, especially in small populations, independent of natural selection.

Genetic Engineering

Deliberate alteration, insertion, deletion, or transfer of genetic material using molecular biology techniques.

Genetic Heterogeneity

The occurrence of similar or related phenotypes caused by different genetic mechanisms. Locus heterogeneity refers to variants in different genes causing the same phenotype; allelic heterogeneity refers to different variants in the same gene.

Genetic Linkage

The tendency of nearby genes or DNA markers on the same chromosome to be inherited together

because crossing over is less likely between them.

Genetic Marker

A detectable DNA variation or feature used to track inheritance, identify a chromosome region, assess disease risk, or distinguish samples.

Genetic Polymorphism

A common DNA variation with at least two alleles in a population, which may influence traits, drug response, or disease susceptibility.

Genetic Profile

A set of genetic variants or DNA markers describing an individual, tumor, organism, or sample for diagnosis, risk assessment, identification, or research.

Genetic Recombination

Exchange or rearrangement of DNA segments that creates new allele combinations during meiosis, repair, immune-cell development, or laboratory manipulation.

Genetic Screening

Testing of asymptomatic individuals for genetic disorders. Newborn screening: metabolic disorders, hemoglobinopathies. Carrier screening: before pregnancy or during pregnancy. Prenatal screening: non-invasive prenatal testing (NIPT), maternal serum screening.

Genetic Sonogram

A targeted ultrasound performed at 18-22 weeks that combines standard anatomic survey with specific soft markers for aneuploidy.

Genetic Susceptibility

Inherited tendency to develop a disease or respond to an exposure, which usually modifies risk rather than determining outcome alone.

Genetic Technique

A laboratory method used to detect, amplify, sequence, edit, compare, or otherwise analyze DNA, RNA, chromosomes, or gene expression.

Genetic Testing

Analysis of DNA for disease risk or diagnosis. Examples: BRCA testing, carrier screening.

Genetic Testing (Sequencing)

Analysis of the order of DNA bases to identify variants associated with genetic disorders. The method is selected according to the gene, variant, and clinical question.

Alternate Names:
Sequencing

Genetic Testing And Your Cancer Risk

Genetic testing and your cancer risk involves toxic or environmental exposure to genetic testing and your cancer risk; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Genetic Transcription

Synthesis of an RNA copy from a DNA template by RNA polymerase, initiating expression of a gene.

Genetic Variant Of Uncertain Significance

A DNA variant for which available evidence is insufficient to classify it as benign or pathogenic. It should not generally be used alone to make predictive or treatment decisions and may be reclassified as evidence evolves.

Genetically Modified Organisms - GMOs

Genetically modified organisms - GMOs concerns genetically modified organisms - gmos, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Genetics

Genetics is the study of genes, heredity, genetic variation, and how DNA and gene regulation influence traits, disease risk, diagnosis, and treatment response.

Geniculate Body

geniculate body is a tissue, cell, or body structure whose location and function help explain its role in

normal physiology and disease.

Genistein

A plant compound found mainly in soy that can weakly interact with estrogen receptors and other cell-signaling pathways. It is studied for possible effects on bone, menopause, and cancer, but supplements are not a substitute for proven treatment.

Genital

Relating to the reproductive organs or external sexual structures. Genital symptoms may involve skin, mucosa, nerves, glands, or the urinary and reproductive systems.

Genital Edema

Swelling of genital tissues from fluid accumulation caused by infection, inflammation, allergy, trauma, venous or lymphatic obstruction, or systemic disease.

Genital Herpes

Herpes simplex virus infection of the genital region (HSV-2 most commonly; HSV-1 increasingly), transmitted sexually, causing painful grouped vesicles/ulcers, urethritis, dysuria, and lymphadenopathy; primary infection may cause fever and systemic symptoms. Recurrent episodes are shorter and milder.

Genital Herpes (Genital Herpes In Women Overview)

Herpes simplex virus infection of the female genitalia, causing painful blisters or ulcers. May be asymptomatic. Antiviral treatment reduces symptoms and transmission. Pregnancy requires obstetric planning due to risk of neonatal infection.

Alternate Names:

Genital herpes in women

Genital Injury

Trauma to the genital or anogenital tissues caused by sexual contact, assault, childbirth, accident, or disease. Examination should document location, morphology, healing stage, pain, bleeding, and associated injuries without assuming mechanism from

appearance alone.

Genital Sores - Female

Ulcers, blisters, or lesions on the female genitalia (vulva, vagina, cervix). Causes include sexually transmitted infections (herpes, syphilis, chancroid), dermatological conditions, trauma, or malignancy. Requires medical evaluation for diagnosis and treatment.

Alternate Names:

Female genital ulcers

Genital Sores - Male

Ulcers, blisters, or lesions on the male genitalia (penis, scrotum, perianal area). Causes include sexually transmitted infections (herpes, syphilis, chancroid), dermatological conditions, trauma, or malignancy. Requires medical evaluation for diagnosis and treatment.

Alternate Names:

Male genital ulcers

Genital System

genital system is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Genital Warts (Condylomata Acuminata)

Warts of the genital or anal region caused most often by low-risk types of human papillomavirus. They spread through direct skin-to-skin sexual contact and may be visible or asymptomatic.

Alternate Names:

Condylomata Acuminata

Genitalia

The external and internal reproductive organs. The term includes the vulva and vagina, or the penis, scrotum, and associated structures, together with the gonads and reproductive ducts when used broadly; anatomy varies with sex, age, and developmental stage.

Genitals

The external and internal reproductive organs. Fe-

male genitals: external (vulva — mons pubis, labia majora, labia minora, clitoris, vaginal opening, Bartholin glands) and internal (vagina, cervix, uterus, fallopian tubes, ovaries).

Genito-Pelvic Pain/Penetration Disorder

A sexual dysfunction characterized by persistent or recurrent difficulties with vaginal penetration, marked vulvovaginal or pelvic pain during intercourse, fear or anxiety about penetration, and/or tensing of the pelvic floor muscles, lasting ≥ 6 months and causing marked distress.

Genito-Urinary Medicine

A medicine or chemical compound called genitourinary medicine. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Genitourinary

Relating to the urinary system and the reproductive organs, which share developmental and anatomical relationships.

Genitourinary Neoplasm

A neoplastic process affecting genitourinary neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Genitourinary Tract

The combined urinary and reproductive organs and their associated ducts.

Genodermatoses

Genetic skin disorders. Inherited ichthyoses (lamellar, X-linked, congenital ichthyosiform erythroderma). Epidermolysis bullosa (simplex, junctional, dystrophic). Neurocutaneous syndromes (neurofibromatosis, tuberous sclerosis, Sturge-Weber). Ectodermal dysplasias (hypohidrotic, hypotrichosis, nail dystrophy).

Genome

The complete genetic material of an organism, including its genes and noncoding DNA.

Genomic Imprinting

Parent-of-origin-specific gene expression. Only one allele (maternal or paternal) is expressed. Examples: Prader-Willi (paternal deletion 15q11-q13), Angelman (maternal deletion 15q11-q13).

Genomic Instability

An increased tendency for genetic alterations to accumulate, contributing to cancer development and progression.

Genomic Library

A genomic library is a collection of cloned DNA fragments that together represent the genetic material of an organism.

Genomics

Genomics is the study of an organism complete genetic material, including its sequence, variation, and function.

Genotoxicity

The ability of a substance or physical agent to damage genetic material. Genotoxicity may cause mutations or chromosome damage, but a positive test does not by itself establish that an agent causes cancer in humans.

Genotype

Genetic makeup of an individual, the specific alleles present at one or more loci. Determines phenotype along with environmental factors.

Genotype Determination

Genotype determination is the use of laboratory testing to identify an individual's genetic variants or alleles at one or more locations.

Genotype-Phenotype Correlation

The relationship between a person's genetic makeup and the observable features, severity, age of onset, or clinical course of a condition; correlations may be incomplete because other genetic and environmental factors contribute.

Gentamicin

Gentamicin is an aminoglycoside antibiotic that binds the bacterial 30S ribosomal subunit and causes misreading of mRNA; nephrotoxicity and ototoxicity require dosing and level monitoring.

Gentamicin Sulfate

The sulfate salt of gentamicin, an aminoglycoside antibiotic that inhibits bacterial protein synthesis; nephrotoxicity and ototoxicity require careful dosing and monitoring.

Gentian

A plant of the *Gentiana* genus whose roots or other parts have been used in herbal preparations, traditionally as a bitter digestive; clinical evidence and product quality vary.

Gentian Violet

A purple antiseptic and dye with antifungal and antibacterial activity, used in selected topical applications but capable of irritating tissue and staining skin.

Genu

The knee or a knee-shaped part of an anatomical structure; the term also describes a bend, such as the genu of the corpus callosum.

Genu Recurvatum

Hyperextension of the knee beyond the usual straight position, caused by laxity, deformity, muscle imbalance, neurologic disease, or injury.

Genu Valgum (Knock-Knee)

An alignment abnormality in which the knees angle inward and may touch while the ankles remain apart. It may be developmental or caused by bone, joint, or metabolic disease.

Alternate Names:

Knock-Knee

Genu Varum

Outward bowing of the legs, commonly called bowlegs. It is often normal in young children and

improves with growth, but persistent, worsening, unequal, painful, or severe bowing may result from rickets, growth-plate disease, or another condition.

Alternate Names:

bowlegs.

Genus Dermatophilus

genus dermatophilus is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

Genus Dickeya

genus dickeya is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

Genus Leminorella

genus leminorella is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

Genus Saimiri

genus saimiri is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

Geographic Atrophy

The advanced form of dry age-related macular degeneration, characterized by well-demarcated, progressively enlarging areas of complete loss of the retinal pigment epithelium, choriocapillaris, and overlying photoreceptors in the macula, resulting in irreversible central vision loss.

Geographic Tongue

Benign inflammatory condition of the tongue characterized by irregular red patches with white or yellow borders, alternating with areas of depapillation. Often asymptomatic and of unknown cause. May cause burning or irritation with certain foods.

Alternate Names:

Benign migratory glossitis Benign Migratory Glossitis

Geophagia

Persistent eating of soil or other nonfood substances; it may cause poisoning, infection, intestinal obstruction, or iron-deficiency anemia.

Geophagy

The deliberate ingestion of soil or clay; it may cause lead or parasite exposure, gastrointestinal obstruction, or iron-deficiency anemia and can occur with pica.

Geotrichum

Geotrichum is a genus of fungi that may colonize humans and can rarely cause superficial or invasive infection, especially in people with weakened immunity.

Geotrichum Klebahnii

Geotrichum klebahnii is a species of fungus; recovery from a clinical specimen requires correlation with the site and evidence of infection.

Geriatric Assessment

Comprehensive multidimensional evaluation of elderly person. Domains: medical, functional, cognitive, psychological, social, environmental, pharmacological. Performed by interdisciplinary team. Guides care planning, identifies problems, predicts outcomes.

Geriatric Care Manager

A professional who helps coordinate health and support services for an older adult.

Alternate Names:

Aging-life care manager

Geriatric Dentistry

Dental care for elderly. Management of age-related changes, polypharmacy effects, xerostomia, root caries, periodontal disease, oral cancer screening.

Geriatric Depression Scale

A screening questionnaire designed to detect depressive symptoms in older adults while minimizing emphasis on somatic symptoms that may overlap

with medical illness. A positive screen requires clinical diagnostic assessment.

Geriatric Medical Ethics

Ethical principles applied to care of older adults, including autonomy, capacity, beneficence, non-maleficence, and justice.

Geriatric Nursing

Nursing care focused on the health, function, medication safety, cognition, mobility, and goals of older adults.

Geriatric Nutrition

Nutrition care addressing the effects of aging, chronic disease, medications, frailty, oral and swallowing problems, sensory changes, and social factors on intake and nutritional status. Goals include preserving function, muscle mass, hydration, and quality of life.

Geriatric Rehabilitation

Rehabilitation designed to improve function, mobility, independence, and safety in older adults after illness, injury, or functional decline.

Geriatric Syndrome

Multifactorial condition common in elderly, not attributable to single disease. Examples: falls, incontinence, frailty, delirium, immobility, pressure ulcers. Require comprehensive assessment and multidisciplinary management.

Geriatrician

A physician specializing in the health care of older adults, including complex illness, multiple conditions, medications, function, and goals of care.

Geriatrics

The medical specialty concerned with the health, function, and care of older adults.

Germ

An informal term for a microorganism that can cause infection, such as a bacterium, virus, fungus,

or parasite. Not every microorganism is harmful.

Germ Cell

A reproductive cell or precursor that gives rise to sperm or eggs and carries genetic material to the next generation.

Germ Cell Tumor

A tumor arising from germ cells (precursors of sperm and eggs), including seminoma, dysgerminoma, teratoma, yolk sac tumor, embryonal carcinoma, and choriocarcinoma. Occurs in the testis, ovary, and extragonadal sites (mediastinum, retroperitoneum, pineal); many are highly curable with platinum-based chemotherapy.

Germ Cell Tumors

Tumors arising from cells that normally develop into eggs or sperm, occurring in the gonads or other parts of the body.

Germ Layer

germ layer is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

Germ Theory Of Disease

The scientific principle that specific microorganisms cause specific infectious diseases; established in the late 19th century by Koch (postulates—organism present in all cases, isolated in pure culture, reproduces disease when inoculated, re-isolated) and promoted by Pasteur and Lister.

German Measles

Rubella: a contagious viral infection caused by rubella virus, characterized by fever, lymph-node enlargement, and a fine rash. Infection during pregnancy can harm the fetus, causing congenital rubella syndrome with cardiac, auditory, and developmental defects.

Alternate Names:

Rubella

German Measles (Rubella)

A contagious viral infection caused by rubella virus, characterized by fever, lymph-node enlargement, and a fine rash. Infection during pregnancy can harm the fetus.

Alternate Names:

Rubella

Germanium

germanium is a microorganism or biological taxon; its clinical importance depends on the species, specimen, host, and evidence of infection or colonization.

Germinoma

A germ-cell tumor most commonly arising in the pineal or suprasellar region, highly sensitive to radiation and chemotherapy. Ovarian (dysgerminoma) and testicular (seminoma) counterparts exist.

Germline Mutation

A genetic variant present in the egg or sperm and therefore present in essentially every cell of the individual. Pathogenic germline variants may confer inherited cancer susceptibility and can have implications for relatives and treatment.

Germline Testing

Genetic testing performed to identify inherited or potentially heritable variants, usually from blood or saliva. Results may affect the patient, biological relatives, cancer surveillance, reproductive planning, and genetic counseling.

Germline Variant

A DNA variant present in the cells that give rise to eggs or sperm and therefore potentially transmissible to offspring. It may also be present in most cells of the individual, unlike a variant restricted to a somatic tissue.

Gerontologist

A specialist who studies aging and its biological, psychological, social, or economic effects.

Gerontology

The multidisciplinary study of aging and the biological, psychological, social, and environmental factors that influence it.

Gesell Developmental Schedules

Standardized developmental assessment schedules that describe expected motor, language, adaptive, and social milestones in children; they support screening but do not by themselves diagnose a disorder.

Gestalt Psychology

A clinical condition or finding involving gestalt psychology. Its defining features, causes, evaluation, and management depend on the clinical context.

Gestation

The period of development of a fetus from fertilization to birth. Human gestation averages 280 days (40 weeks) from the first day of the last menstrual period (LMP) or 266 days (38 weeks) from conception.

Gestation Period

The time from conception to birth or, clinically, from the last menstrual period to delivery; human pregnancy is usually about 40 weeks from the last menstrual period.

Gestational Age

The age of pregnancy measured in weeks from the first day of the last menstrual period. Also called menstrual age. Typically 2 weeks longer than fertilization age. Calculated using LMP or first-trimester ultrasound. Used to estimate due date (40 weeks from LMP).

Alternate Names:

menstrual age.

Gestational Diabetes

Glucose intolerance first diagnosed during pregnancy. It may increase the risk of excessive fetal growth, birth complications, neonatal hypoglycemia, and hypertensive pregnancy disorders.

Alternate Names:

Diabetes, Gestational Diabetes During Pregnancy (Gestational Diabetes)

Gestational Diabetes Diet

Dietary management of gestational diabetes, focusing on controlled carbohydrate intake, balanced meals, regular meal timing, and appropriate portions to maintain blood glucose levels within target ranges. May require consultation with a dietitian.

Alternate Names:

GDM diet

Gestational Diabetes Mellitus

Glucose intolerance first recognized during pregnancy affecting approximately six to nine percent of pregnancies. Results from insulin resistance induced by placental hormones including human placental lactogen, cortisol, and progesterone combined with insufficient beta cell compensation.

Gestational Hypertension

New-onset hypertension after 20 weeks of pregnancy without proteinuria or other features of preeclampsia. It requires monitoring for progression and assessment of maternal and fetal well-being.

Gestational Pyelonephritis

A kidney infection occurring during pregnancy, usually causing fever, flank pain, nausea, or urinary symptoms. It can lead to sepsis, preterm labor, or respiratory complications and requires prompt clinical assessment.

Alternate Names:

Pyelonephritis in pregnancy; pregnancy-associated kidney infection.

Gestational Sac

The first sonographic sign of an intrauterine pregnancy, visible on transvaginal ultrasound at approximately 4.5-5 weeks gestational age. A fluid-filled structure within the decidua, surrounded by the chorionic ring. Mean sac diameter (MSD) correlates with gestational age.

Gestational Trophoblastic Disease

A spectrum of conditions arising from abnormal trophoblast proliferation, including complete and partial hydatidiform moles and gestational choriocarcinoma. Complete mole has 46,XX karyotype (all paternal origin); partial mole is triploid (69 chromosomes). Presents with elevated hCG, uterus large for dates, and vaginal bleeding.

Gestational Trophoblastic Neoplasia

Persistent or malignant trophoblastic disease after a pregnancy event, identified by abnormal or rising beta-hCG, metastases, or histologic criteria. It includes invasive mole and choriocarcinoma and is highly responsive to risk-adapted chemotherapy.

Getting A Prescription Filled

The process of obtaining prescribed medications from a pharmacy, including presenting the prescription, insurance verification, payment, and receiving medication counseling. May involve prior authorization for certain medications.

Alternate Names:

Prescription fulfillment

Getting Support When Your Child Has Cancer

Resources and strategies for families coping with a child's cancer diagnosis, including emotional support, financial assistance, respite care, support groups, and connecting with other families facing similar challenges.

Alternate Names:

Pediatric cancer family support

Getting Your Home Ready - Knee Or Hip Surgery

Pre-surgical home preparation for knee or hip replacement, including removing tripping hazards, installing grab bars, arranging furniture for mobility, and preparing a recovery area on the main floor.

Alternate Names:

Pre-surgical home preparation

Getting Yourself Healthy Before Surgery

Pre-operative optimization strategies including smoking cessation, nutritional improvement, blood glucose control, medication management, and exercise to reduce surgical risks and improve recovery outcomes.

Alternate Names:

Pre-operative optimization

Gettler Test

Historical quantitative chemical test for drowning, comparing chloride concentration in blood harvested from the left and right heart ventricles.

GFR

Glomerular filtration rate, an estimate of how efficiently the kidneys filter blood.

Alternate Names:

Glomerular filtration rate

Ghrelin

A hormone produced mainly in the stomach that influences appetite, energy balance, and growth-hormone release.

Gianotti-Crosti Syndrome

A childhood skin condition characterized by a papular or papulovesicular rash on the face, buttocks, and extremities, often following viral infections (EBV, hepatitis B, CMV). Self-limited, lasting 2-8 weeks. Also called papular acrodermatitis of childhood.

Alternate Names:

Papular acrodermatitis of childhood

Giant Cell Arterit (Giant Cell Arteritis (GCA Or Temporal Arteritis))

Large-vessel vasculitis affecting adults >50, involving cranial branches of the carotid arteries. Presents with new-onset headache, scalp tenderness, jaw claudication, and visual disturbances. Risk of vision loss without treatment.

Alternate Names:

Giant cell arteritis; temporal arteritis

Giant Cell Arteritis

A large-vessel vasculitis of adults >50 (peak 70-80) affecting cranial branches of carotid arteries, with risk of permanent vision loss from anterior ischemic optic neuropathy. Clinical: new-onset headache (temporal), scalp tenderness, jaw claudication, visual disturbances (amaurosis fugax, diplopia), polymyalgia rheumatica symptoms.

Giant Cell Arteritis (GCA Or Temporal Arteritis)

Inflammation of large and medium-sized arteries, predominantly affecting the temporal and ophthalmic arteries. Characterized by headache, visual symptoms, jaw claudication, and elevated ESR. Diagnosis by temporal artery biopsy. Treatment with high-dose corticosteroids.

Alternate Names:

Temporal arteritis; Horton disease

Giant Cell Arteritis Emergency

Suspected giant cell arteritis with visual symptoms, jaw or tongue claudication, or neurologic ischemia requires immediate glucocorticoid treatment to reduce risk of irreversible visual loss while diagnostic evaluation proceeds.

Giant Cell Tumor

A usually benign but locally aggressive bone tumor containing numerous giant cells.

Giant Cell Tumor Of Bone

A locally aggressive osteoclast-rich bone tumor, usually arising near the end of a long bone in skeletally mature adults. It may cause pain, swelling, cortical destruction, and occasional pulmonary metastases.

Giant Cell Tumor Of Soft Tissue

A usually low-grade soft-tissue neoplasm containing numerous osteoclast-like giant cells, most often arising in the extremities of adults and generally having a favorable outcome after excision.

Giant Cell Tumor Of Tendon Sheath

A common benign localized tenosynovial tumor,

usually presenting as a slow-growing firm nodule on a finger or hand; recurrence can occur after excision.

Giant Cells

Large cells formed by fusion of macrophages or abnormal cellular growth, seen in granulomatous inflammation, foreign-body reactions, and some tumors.

Giant Congenital Nevus

A large pigmented skin lesion present at birth, typically exceeding 20 cm in diameter. Composed of melanocytes and may involve dermis, subcutaneous tissue, and underlying structures. Risk of melanoma transformation. May require surgical excision or monitoring.

Alternate Names:

Giant pigmented nevus; garment nevus

Giant Coronary Aneurysm

An unusually large dilation of a coronary artery, with risk of thrombosis, rupture, or impaired coronary blood flow.

Giant Hypertrophic Gastritis

Severe enlargement and thickening of the stomach's mucosal folds, classically associated with Ménétrier disease, which can cause protein loss, abdominal symptoms, and increased gastric-cancer risk.

Giant Lymph Node Hyperplasia

Castleman Disease: a rare lymphoproliferative disorder characterized by non-cancerous overgrowth of lymph node tissue. May be unicentric (localized) or multicentric (systemic symptoms). Associated with HHV-8 and IL-6 overproduction. Treatment depends on subtype.

Alternate Names:

Castleman Disease

Giant Platelet Syndrome

A disorder characterized by unusually large platelets, often with a low platelet count and impaired clotting; inherited examples include Bernard-Soulier syndrome and MYH9-related disease.

Giant Platelet Syndrome (Bernard-Soulier Disease)

An inherited platelet disorder caused by deficiency of glycoprotein Ib/IX/V complex, resulting in large platelets and impaired platelet adhesion. Presents with mucocutaneous bleeding, thrombocytopenia, and giant platelets on blood smear.

Alternate Names:

Bernard-Soulier syndrome

Giant Right Atrium

Marked dilatation of the right atrium, most commonly caused by chronic severe tricuspid regurgitation, Ebstein anomaly, or long-standing atrial fibrillation with right heart failure. The enlarged atrium may cause compression of adjacent structures, arrhythmias, and thrombus formation. Diagnosis is by echocardiography or cardiac imaging.

Giardia

giardia is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Giardia Infection

Intestinal infection caused by the protozoan *Giardia duodenalis*, usually acquired from contaminated water, food, or person-to-person spread. It commonly causes foul-smelling diarrhea, bloating, abdominal cramps, and malabsorption.

Giardia Infection (Giardiasis)

An intestinal infection caused by *Giardia* parasites, commonly producing diarrhea, cramps, bloating, gas, and malabsorption.

Giardia Lamblia

A protozoan parasite that causes giardiasis, a diarrhoeal illness transmitted through the fecal-oral route. The organism has a trophozoite and cyst stage. Infection occurs through ingestion of cysts in contaminated water. Symptoms include foul-smelling diarrhea, abdominal cramps, and bloating.

Alternate Names:

Cyst Eyelid (*Giardia Lamblia*)

Giardiasis

Infection with *Giardia lamblia* (*G. intestinalis*), a protozoan parasite causing diarrheal illness. Transmission via contaminated water (fecal-oral). Presents with foul-smelling, greasy diarrhea, bloating, abdominal cramps, weight loss, and steatorrhea. Diagnosis: stool antigen testing or microscopy.

Gibraltar Fever

A clinical disorder or finding related to gibraltar fever; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Giemsa Stain

A Romanowsky-type stain of methylene blue and eosin dyes used to visualise blood cells and microorganisms in smears and tissue sections. In microbiology it stains *Plasmodium*, *Babesia*, *Trypanosoma*, *Leishmania*, *Borrelia*, and intracellular cytomegalovirus inclusions, supporting rapid diagnosis of blood-borne parasitic and other infections.

Gigabecquerel

A gigabecquerel is a unit of radioactivity equal to one billion nuclear disintegrations per second.

Gigantism

Excessive growth hormone hypersecretion that begins before epiphyseal plate closure in childhood, before the onset of puberty. Results in excessive linear growth and tall stature. Usually caused by a pituitary adenoma. Treatment includes surgery, radiation, and medical therapy.

Gigli Saw

A flexible wire saw used to cut bone, especially during selected orthopedic or amputation procedures.

Gilbert Syndrome

A common, benign autosomal recessive hereditary hyperbilirubinemia caused by a promoter mutation in the *UGT1A1* gene leading to reduced activity (30% of normal) of UDP-glucuronosyltransferase.

Gilbert'S Syndrome

A clinical disorder or finding related to gilbert's syndrome; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Gilles De La Tourette Syndrome

A clinical disorder or finding related to gilles de la tourette syndrome; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Gimatecan

An investigational camptothecin-derived topoisomerase-I inhibitor studied as an anti-cancer agent; availability and clinical use depend on regulatory approval and trial evidence.

Gingiva

The oral tissue surrounding and protecting the roots of the teeth.

Alternate Names:

Gums; gum tissue

Gingiva Disease

A disorder of the gums, including plaque-induced gingivitis, periodontitis, infection, immune disease, recession, or tumor.

Gingival Hemorrhage

Bleeding from gum tissue, commonly due to inflammation and plaque but also caused by trauma, periodontal disease, medicines, or bleeding disorders.

Gingival Hyperplasia

An abnormal enlargement or overgrowth of gingival tissue around the teeth that can impair cleaning, cause bleeding, and increase periodontal risk. Causes include plaque-related inflammation and medicines such as phenytoin, cyclosporine, and some calcium-channel blockers; hereditary and systemic conditions can also contribute.

Gingival Infections

An infectious process or toxic exposure involving gingival infections; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Gingival Margin

gingival margin is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Gingival Melanoma

A rare and aggressive mucosal melanoma arising from melanocytes in the gingival mucosa, presenting as a pigmented or amelanotic nodule or ulcer on the gums. Mucosal melanomas of the head and neck carry a poor prognosis compared to cutaneous melanoma, often presenting at an advanced stage.

Gingival Neoplasm

A neoplastic process affecting gingival neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Gingival Overgrowth

Gingival overgrowth is an abnormal increase in gum tissue, which may be caused by medicines, inflammation, or systemic disease.

Gingival Pocket

gingival pocket is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Gingival Recession

Apical displacement of the gingival margin from the cemento-enamel junction, exposing the root surface. Causes include periodontal inflammation, traumatic toothbrushing, thin periodontal tissue, tooth position, and iatrogenic factors; it may produce sensitivity and root-caries risk.

Gingivectomy

Surgical removal of gingival tissue. Indications: gingival hyperplasia, cosmetic recontouring, access to

caries.

Gingivitis

Inflammation of the gingiva characterized by redness, swelling, and bleeding with brushing or probing, usually due to dental plaque. It is generally reversible with effective oral hygiene and professional cleaning; it can precede periodontitis, but does not inevitably progress to it.

Alternate Names:

Periodontal Disease, Gingivitis

Gingivitis Contagious (Is Gingivitis Contagious)

Gingivitis itself is not directly contagious, but the bacteria that cause it (particularly *Porphyromonas gingivalis*) can be transmitted through saliva. Poor oral hygiene is the primary risk factor. Prevention focuses on personal oral care.

Alternate Names:

Gingivitis transmission

Gingivoplasty

Surgical reshaping or contouring of the gums to improve their form, remove diseased tissue, or make cleaning easier. It may be combined with gingivectomy or other periodontal treatment.

Gingivostomatitis

Common viral infection of the mouth and gums, most often caused by primary herpes simplex virus infection but also associated with other infections, trauma, or systemic disease. It may cause painful ulcers, swollen bleeding gums, fever, and difficulty eating or drinking.

Ginkgo Biloba

An herbal product derived from *Ginkgo biloba* leaves and marketed for cognitive or circulatory benefits; evidence is variable and it may increase bleeding risk or interact with medicines.

Ginseng

A group of plants whose roots are used in traditional medicine and dietary supplements; products vary

in composition and may interact with medicines or affect blood glucose and clotting.

Ginseng Preparation

ginseng preparation is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

Girdle Pain

Girdle Pain is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gitelman Syndrome

Inherited autosomal recessive disorder of the distal convoluted tubule caused by mutations in the NCC sodium-chloride cotransporter gene. Milder than Bartter syndrome typically presenting in adolescence or adulthood.

Githism

A clinical disorder or finding related to githism; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Give Your Heart A Workout

Cardiovascular exercise recommendations and guidelines for improving heart health through regular physical activity, including aerobic exercises, intensity targets, duration, and frequency to strengthen the heart and improve circulation.

Alternate Names:

Cardiovascular exercise; heart-healthy exercise

Giving An IM (Intramuscular) Injection

Technique for administering medication into muscle tissue using a needle and syringe. Common sites include deltoid, vastus lateralis, and ventrogluteal muscles. Proper technique includes site selection, needle insertion at 90 degrees, aspiration, and slow injection.

Alternate Names:

Intramuscular injection technique

Giving An Insulin Injection

Technique for administering insulin subcutaneously using a syringe or insulin pen. Includes site selection (abdomen, thigh, upper arm), rotation of injection sites, proper needle insertion, and blood glucose monitoring.

Alternate Names:

Insulin administration technique

Gizzard

gizzard is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Glabella

The smooth area of the forehead between the eyebrows and above the bridge of the nose.

Gland

An organ or group of cells that produces and releases substances. Endocrine glands release hormones into blood, while exocrine glands release substances through ducts or onto a surface.

Glanders

A biomedical term referring to glanders; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Glands Swollen Lymph (Swollen Lymph Nodes)

Lymphadenopathy: enlargement of lymph nodes, usually in response to infection, inflammation, or malignancy. Common locations include neck, armpits, and groin. Most cases are benign and self-limited. Persistent or unexplained enlargement requires evaluation.

Alternate Names:

Lymphadenopathy; swollen lymph nodes

Glands Swollen Nodes (Swollen Lymph Nodes)

Enlarged lymph nodes: palpable increase in lymph node size, typically >1 cm, caused by immune activation, infection, autoimmune disease, or malignancy.

Usually tender and mobile in benign causes. Fixed or hard nodes raise concern for malignancy.

Alternate Names:

Lymphadenopathy; enlarged lymph nodes

Glandular Fever

Glandular Fever is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Glandular Fever (Infectious Mononucleosis)

An acute illness usually caused by Epstein–Barr virus, characterized by fever, sore throat, swollen lymph nodes, and fatigue.

Alternate Names:

Infectious Mononucleosis

Glandular Stomach

glandular stomach is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Glans Penis

The expanded, sensitive distal end of the penis containing the external urethral opening and covered by the foreskin when present.

Glanzmann Thrombasthenia

An inherited platelet function disorder caused by deficiency or dysfunction of platelet glycoprotein IIb/IIIa, producing mucocutaneous bleeding despite a normal platelet count.

Glasgow Coma Scale

A standardized assessment of consciousness based on eye opening, verbal response, and motor response, with a total score from 3 to 15. It supports serial neurologic assessment but should be recorded with the individual component scores and confounders.

Glass Eye

A glass eye is an ocular prosthesis made to replace the appearance of an eye that is missing or severely damaged.

Glass Ionomer

Restorative material releasing fluoride. Bonds to tooth structure. Used for pediatric dentistry, cervical lesions, bases.

Glasses

Optical devices containing corrective lenses positioned in a frame in front of the eyes to compensate for refractive errors or provide protection.

Glassy Cell Carcinoma

A rare poorly differentiated adenosquamous carcinoma of the cervix with distinctive glassy cytoplasm, prominent nucleoli, and aggressive clinical behavior.

Glaucoma

Glaucoma is progressive optic-nerve damage often associated with elevated or dysregulated intraocular pressure, leading to irreversible visual-field loss if untreated. ganglion cells and their axons, resulting in characteristic optic nerve head changes and visual field loss, with elevated intraocular pressure being the most important modifiable risk factor.

Glaucoma Drainage Implant

A surgically implanted tube-and-plate device that diverts aqueous humor from the anterior chamber to a subconjunctival reservoir, lowering intraocular pressure in selected glaucomas.

Glaze Poisoning

Toxic exposure to ceramic or pottery glaze, which may contain lead, cadmium, or other heavy metals. Symptoms depend on the metal involved and may include abdominal pain, neurological symptoms, and organ damage. Requires medical evaluation and chelation therapy in severe cases.

Alternate Names:

Ceramic glaze poisoning

Gleason Grading System

A histological grading system for prostate cancer based on glandular pattern differentiation. Score ranges from 2-10, with higher grades indicating more aggressive cancer. Used to guide treatment

decisions and predict prognosis.

Alternate Names:

Gleason score; Gleason grade

Gleason Score

A grading system that estimates the aggressiveness of prostate cancer from its microscopic appearance.

Alternate Names:

Gleason grade group

Gleason Tumor Grade

A histopathologic grade of prostate adenocarcinoma based on the architectural pattern of the tumor glands; it contributes to the Gleason score and Grade Group.

Glenn Procedure

An intermediate, second-stage palliative surgical operation for children with functional single-ventricle congenital heart disease, performed between 4 and 6 months of age to transition the infant toward single-ventricle staging. Modernly performed as the Bidirectional Glenn shunt: involves dividing the superior vena cava from the right atrium and anastomosing its cardiac end-to-side to the undivided right pulmonary artery. Directs passive venous blood from the head and upper extremities directly into both the right and left pulmonary capillary beds for oxygenation, unloading the single ventricle from systemic-to-pulmonary volume overload while preserving pulmonary arterial architecture prior to the completion Fontan operation.

Alternate Names:

Bidirectional Glenn (BDG) Procedure; Bidirectional Cavopulmonary Anastomosis

Glenohumeral Joint

Ball-and-socket synovial joint between humeral head and glenoid cavity. Most mobile body joint allowing flexion, extension, abduction, adduction, medial/lateral rotation, circumduction. Mobility trades for stability, making it the most commonly dislocated joint. Stabilized by glenoid labrum, glenohumeral ligaments, and rotator cuff.

Glenoid

The shallow socket of the scapula that forms the shoulder joint with the humeral head.

Alternate Names:

Glenoid cavity

Glenoid Cavity

Shallow pear-shaped depression on the lateral scapular angle articulating with the humeral head. The glenoid labrum deepens the socket by approximately 50 percent. Due to its shallowness, the glenohumeral joint is the most commonly dislocated joint.

Gliadin

A group of wheat storage proteins that, together with glutenin, form gluten; gliadin peptides trigger the immune response in celiac disease.

Glial Cell

A non-neuronal cell that supports, nourishes, insulates, and regulates neurons; examples include astrocytes, oligodendrocytes, microglia, and Schwann cells.

Glial Cells

Glial Cells is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Glibenclamide

Glibenclamide is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

Gliclazide

Gliclazide is a sulfonylurea for type 2 diabetes that stimulates pancreatic beta-cell insulin release; hypoglycaemia, weight gain, and dose accumulation in organ impairment are important considerations.

GLIM Criteria

A consensus framework for diagnosing malnutrition using at least one phenotypic criterion, such as weight loss, low body-mass index, or reduced muscle

mass, and at least one etiologic criterion, such as reduced intake or assimilation or disease-related inflammation. Severity is graded using phenotypic thresholds.

Glimepiride

Glimepiride is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

Glioblastoma

Grade IV astrocytoma, the most common and aggressive primary malignant brain tumor in adults. Arises de novo (primary GBM, IDH-wildtype) or from low-grade astrocytoma (secondary, IDH-mutant—better prognosis).

Glioblastoma Multiforme

A neoplastic process affecting glioblastoma multiforme; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Gliocladium

A biomedical term referring to gliocladium; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Glioma

A tumor arising from glial cells (astrocytes, oligodendrocytes, ependymal cells) in the brain or spinal cord. Includes astrocytomas, oligodendrogliomas, and ependymomas; behavior ranges from low-grade to highly aggressive (glioblastoma).

Gliomatosis Cerebri

A diffuse infiltrative growth pattern of glioma involving multiple brain regions, rather than a separate tumor type in current classifications; it may cause progressive cognitive, motor, or seizure-related symptoms.

Gliosarcoma

A neoplastic process affecting gliosarcoma; diagnosis establishes the tumor type, extent, biologic behavior,

and appropriate management.

Glios

A reactive increase in glial cells after injury, infection, ischemia, or other damage to the central nervous system.

Glipizide

Glipizide is a short-acting sulfonylurea that lowers blood glucose by stimulating insulin secretion from functioning pancreatic beta cells; hypoglycaemia is the principal adverse effect.

Glisson'S Capsule

Thin fibrous connective tissue envelope surrounding the liver, sending septa inward dividing it into lobules. Richly innervated by phrenic and intercostal nerve pain fibers, sensitive to distension and inflammation. Covered by visceral peritoneum except at the bare area.

Global Aphasia

A severe language disorder caused by extensive damage to the dominant cerebral hemisphere, impairing speech production, comprehension, reading, and writing.

Global Developmental Delay

A significant performance delay (defined as performance scores at least two standard deviations below the age-appropriate mean on standardized developmental testing) across two or more developmental domains: gross or fine motor skills, speech and language, cognitive function, social and personal interaction, and activities of daily living. The diagnosis is reserved for children younger than five years of age whose developmental levels cannot be reliably assessed with formal intellectual testing.

Alternate Names:

GDD (Global Developmental Delay); Generalized Developmental Delay

Global Health

Health issues transcending national boundaries. Examples: pandemics, health disparities, climate change.

Global Longitudinal Strain

An advanced quantitative echocardiographic parameter derived from two-dimensional speckle-tracking imaging that measures the percentage of myocardial shortening in the longitudinal plane from the base to the apex of the left ventricle during systole. Expressed as a negative percentage (normal value typically more negative than -18 to -20 percent), it is significantly more sensitive than conventional left ventricular ejection fraction for detecting early, subclinical myocardial contractile impairment, particularly in cancer chemotherapy-induced cardiotoxicity (e.g., anthracyclines, trastuzumab), amyloidosis, aortic stenosis, and hypertrophic cardiomyopathy.

Alternate Names:

GLS; 2D Speckle-Tracking GLS; Left Ventricular Longitudinal Strain

Globicatella

Globicatella is a rare group of bacteria that can cause opportunistic infections, particularly in people with serious underlying illness.

Globicatella Sanguinis

A biomedical term referring to globicatella sanguinis; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Globin

A family of heme-binding proteins involved in oxygen transport and storage. Structure: globin fold (8 alpha-helices arranged in a globular structure), binds one heme molecule (iron-protoporphyrin IX) per subunit.

Globozoospermia

A rare sperm disorder in which sperm heads are round and lack a normal acrosome, causing impaired fertilization and male infertility.

Globule Unit

A small rounded particle or droplet used as a descriptive or measurement unit in laboratory, pharmaceutical, or biologic contexts; exact meaning depends on the source.

Globulin

A group of serum proteins (globular proteins) that are less soluble in water but soluble in dilute salt solutions. On serum protein electrophoresis, globulins migrate in the alpha-1, alpha-2, beta, and gamma regions. Alpha-1 globulins: alpha-1-antitrypsin, alpha-fetoprotein.

Globus

A persistent or intermittent sensation of a lump or tightness in the throat without a true obstructing mass, often called globus pharyngeus.

Globus Hystericus

A sensation of a lump or tightness in the throat without a structural obstruction, now called globus sensation; reflux, muscle tension, and anxiety may contribute.

Globus Pallidus

The globus pallidus is a group of deep brain structures involved in regulating movement as part of the basal ganglia.

Globus Sensation

The persistent or intermittent sensation of a lump or foreign body in the throat without an anatomic lesion or dysphagia, also termed globus pharyngeus, typically noticed between meals. There is no impedance to swallowing and no weight loss; the feeling worsens with stress, anxiety, or laryngopharyngeal reflux.

Glomangiomyoma

A benign glomus tumor showing both vascular and smooth-muscle differentiation, usually presenting as a small painful subcutaneous nodule.

Glomangiosarcoma

A rare malignant glomus tumor showing cytologic atypia, infiltrative growth, or other malignant features; complete excision and specialist evaluation are required.

Glomerular Capsule

The cup-shaped structure surrounding a kidney glomerulus that receives filtered fluid.

Glomerular Filtrate

Fluid filtered from blood into the kidney tubules at the glomerulus.

Glomerular Filtration

Glomerular filtration is the process by which the kidney filters water and small dissolved substances from blood into the kidney tubules to form the starting fluid for urine.

Glomerular Filtration Rate

Volume of plasma filtered by the glomeruli per unit time normally ninety to one hundred twenty milliliters per minute per one point seven three square meters body surface area. Estimated by the CKD-EPI equation using serum creatinine, age, sex, and race.

Glomerular Filtration Rate

The glomerular filtration rate is an estimate of how much blood the kidneys filter each minute and is a key measure of kidney function.

Glomeruli

Microscopic capillary networks in the kidneys where blood filtration begins.

Alternate Names:

Renal glomeruli

Glomerulomegaly

Abnormal enlargement of kidney glomeruli, seen with diabetes, obesity-related hyperfiltration, congenital syndromes, or other causes of glomerular stress.

Glomerulonephritis

Glomerulonephritis is inflammatory injury of the kidney glomeruli, producing hematuria, proteinuria, edema, hypertension, and variable decline in filtration.

nephrotic syndrome) and histopathology (e.g., IgA

nephropathy, post-streptococcal, membranoproliferative, crescentic). Presents with hematuria, proteinuria, hypertension, and reduced GFR.

Alternate Names:

GN

Glomerulonephritis Acute

Sudden inflammation of the kidney glomeruli that can cause blood or protein in urine, edema, hypertension, and reduced kidney function.

Glomerulopathy

Any disease affecting the renal glomeruli, the capillary structures responsible for blood filtration. It may produce albuminuria or proteinuria, haematuria, reduced filtration, oedema, hypertension, or kidney failure and may be primary or secondary to systemic, metabolic, infectious, or immune disease.

Glomerulosclerosis

Scarring of the glomeruli, the kidney structures that filter blood.

Glomerulus

The tuft of capillaries in the renal corpuscle (Bowman's capsule) where blood is filtered to form urine.

Glomus Jugulare Tumor

A paraganglioma arising from the jugular bulb in the temporal bone. Benign but locally aggressive. Presents with pulsatile tinnitus, hearing loss, and cranial nerve palsies. Treatment includes surgery, radiation, and embolization.

Alternate Names:

Jugular paraganglioma

Glomus Tumor

A rare benign neoplasm arising from glomus bodies (thermoregulatory shunts), presenting as a small, blue-red, exquisitely tender subungual or digital nodule. The classic triad is severe pain, point tenderness, and cold sensitivity. Diagnosis is clinical with positive Love pin test and Hildreth sign (tumor disappears with ischemia).

Glomus Tympanicum

A benign vascular tumor arising from the glomus bodies on the promontory of the middle ear, presenting with pulsatile tinnitus, hearing loss, and a reddish mass behind the tympanic membrane.

Glomus Tympanicum Tumor

A paraganglioma arising from the glomus bodies on the promontory of the middle ear. Benign tumor causing pulsatile tinnitus and conductive hearing loss. Diagnosis by otoscopy and imaging. Treatment includes surgery or observation.

Alternate Names:

Middle ear paraganglioma

Glossal

Pertaining to the tongue (extitglossa), the muscular organ in the oral cavity essential for mastication, deglutition, taste sensation (gustation), and speech articulation. Composed of eight paired skeletal muscles: four intrinsic muscles (superior longitudinal, inferior longitudinal, transverse, vertical) that alter tongue shape, and four extrinsic muscles (genioglossus, hyoglossus, styloglossus, palatoglossus) that alter position, all innervated by the hypoglossal nerve (CN XII), except the palatoglossus (CN X). Somatosensory innervation involves CN V3 (anterior two-thirds) and CN IX (posterior third); taste involves CN VII (chorda tympani, anterior two-thirds) and CN IX (posterior third). Clinical conditions include glossitis, atrophic tongue (vitamin B₁₂/iron deficiency), and lingual motor weakness.

Glossalgia

Pain or burning of the tongue, with causes including trauma, infection, nutritional deficiency, neuropathy, medication, or burning-mouth syndrome.

Glossectomy

Surgical removal of all or part of the tongue, performed for malignancies (most common), severe trauma, or macroglossia. Procedures range from partial glossectomy to total glossectomy. Speech and swallowing rehabilitation are often required.

Glossinidae

The family of flies belonging to the genus *Glossina*, commonly known as tsetse flies. These insects are vectors of trypanosomes that cause African trypanosomiasis (sleeping sickness) in humans and nagana in animals.

Alternate Names:

Tsetse flies

Glossitis

Inflammation of the tongue, which can cause pain, swelling, and changes in tongue appearance. Causes include nutritional deficiencies (iron, B12, folate), infections (bacterial, viral, fungal), allergic reactions, and autoimmune conditions. Treatment depends on the underlying cause.

Glossodynia

Burning Mouth Syndrome: a chronic pain condition characterized by a burning sensation in the mouth, often affecting the tongue, lips, and palate, without visible abnormalities. May be associated with dry mouth, altered taste, or tingling. Diagnosis is clinical after excluding other causes.

Alternate Names:

Burning Mouth Syndrome

Glossopharyngeal Nerve

glossopharyngeal nerve is a nerve pathway or nerve-related structure that carries signals between the nervous system and its target; symptoms depend on the site of involvement.

Glossopharyngeal Neuralgia

Recurrent, brief attacks of severe stabbing or electric-shock-like pain in the throat, tonsillar region, base of the tongue, or ear, caused by irritation of the glossopharyngeal nerve. Swallowing, coughing, or talking may trigger attacks.

Glossoptosis

Backward displacement of the tongue that can narrow the upper airway, particularly in infants with craniofacial disorders.

Glottis

The opening between the vocal folds (true vocal cords) in the larynx, through which air passes during respiration and phonation. Boundaries: anterior (anterior commissure, attachment of vocal folds to thyroid cartilage), posterior (arytenoid cartilages and posterior commissure).

Gloves

Hand coverings used to protect the wearer, the patient, or both from contamination, chemicals, or injury. Medical gloves may be examination or surgical gloves and may be sterile or nonsterile.

Glucagon-Like Peptide-1 Receptor Agonists (GLP-1 Receptor Agonists)

A class of medicines that activate the glucagon-like peptide-1 receptor. They increase glucose-dependent insulin release, reduce inappropriate glucagon release, slow gastric emptying, and increase fullness. They are used for selected people with type 2 diabetes or chronic weight management. Examples include semaglutide, liraglutide, and dulaglutide.

Alternate Names:

GLP-1 Agonists; GLP-1 receptor agonists; GLP-1 Receptor Agonist; incretin mimetics

GLS

Alternate name; see *Global Longitudinal Strain*.

Glu

Commonly an abbreviation for glucose in laboratory or clinical notes; in biochemical notation, Glu can also denote the amino acid glutamic acid, so context matters.

Glucagon

A peptide hormone produced by the alpha cells of the pancreatic islets (Langerhans).

Glucagon Blood Test

Laboratory measurement of glucagon levels in the blood, used to evaluate suspected glucagonoma, hypoglycemia, or other pancreatic endocrine disorders.

Levels are affected by fasting, meals, and medications.

Alternate Names:

Serum glucagon level

Glucagon Signaling

Glucagon binds GPCR, activates adenylate cyclase, increases cAMP, activates PKA. Promotes glycogenolysis, gluconeogenesis.

Glucagonoma

A rare pancreatic neuroendocrine tumor that secretes excess glucagon, causing diabetes mellitus (mild, new onset), dermatitis (necrolytic migratory erythema, characteristic painful, erythematous, blistering rash on groin, perineum, extremities), diarrhea, and deep vein thrombosis.

Glucan

A glucan is a polysaccharide made of linked glucose units; different glucans occur in foods, fungi, plants, and bacteria.

Glucarpidase

An enzyme that rapidly breaks down methotrexate in the bloodstream and is used for toxic methotrexate concentrations when renal clearance is inadequate.

Glucocerebrosidase Deficiency

Gaucher Disease: an inherited lysosomal storage disorder caused by deficient glucocerebrosidase, leading to lipid accumulation in cells and possible enlargement of the spleen and liver, anemia, bone disease, or neurologic disease.

Alternate Names:

Gaucher Disease

Glucocorticoid

A corticosteroid hormone or medicine that regulates inflammation, immunity, metabolism, and stress responses; prolonged treatment has systemic adverse effects.

Glucocorticoid Replacement Therapy

Replacement of cortisol deficiency in adrenal insufficiency using hydrocortisone in divided doses. Typical regimen is ten to fifteen milligrams in the morning and five to ten milligrams in the early afternoon mimicking the physiological cortisol diurnal rhythm.

Glucocorticoid-Induced Osteoporosis

Bone loss and increased fracture risk caused or accelerated by prolonged or high-dose glucocorticoid treatment; risk depends on dose, duration, baseline bone health, and other factors.

Glucocorticoid-Sparing Therapy

Use of a non-glucocorticoid treatment strategy to control inflammation while reducing cumulative corticosteroid exposure. It aims to limit osteoporosis, infection, diabetes, hypertension, adrenal suppression, and other glucocorticoid complications.

Glucocorticoids

A class of steroid hormones produced by the zona fasciculata of the adrenal cortex, regulated by the hypothalamic-pituitary-adrenal (HPA) axis.

Glucometer

A handheld device that measures blood glucose, usually from a small capillary-blood sample obtained by finger prick.

Gluconacetobacter Liquefaciens

An acetic-acid bacterium found mainly in environmental and plant-associated settings; it is not a common human pathogen.

Gluconates

Gluconates are salts or esters of gluconic acid, used in some medicines and supplements such as calcium gluconate.

Gluconeogenesis

Metabolic pathway generating glucose from non-carbohydrate precursors (lactate, glycerol, gluconic amino acids). Occurs primarily in liver (90%)

and kidney (10%).

Glucosamine

A naturally occurring compound used in cartilage formation and sometimes taken as a supplement for joint symptoms.

Glucose

A monosaccharide (C₆H₁₂O₆) that is the primary energy source for cells. Types: D-glucose (dextrose, naturally occurring enantiomer) and L-glucose (synthetic). Routes of entry: dietary carbohydrates (digested to glucose), gluconeogenesis (synthesis from non-carbohydrate precursors), glycogenolysis (breakdown of stored glycogen).

Glucose Challenge Test

A screening test for gestational diabetes mellitus, commonly using a nonfasting 50-g glucose drink followed by a one-hour plasma-glucose measurement. An abnormal screening result is followed by a diagnostic oral glucose tolerance test; the threshold depends on the protocol used.

Alternate Names:

GCT; one-hour glucose challenge test; 50-g glucose screening test.

Glucose Intolerance

Impaired handling of glucose resulting in blood-glucose concentrations above normal but below the diagnostic threshold for diabetes in a defined testing context. It often reflects insulin resistance or inadequate insulin secretion and is associated with increased risk of type 2 diabetes and cardiovascular disease.

Glucose Management Indicator

Derived metric from continuous glucose monitoring that estimates the hemoglobin A1c equivalent based on mean sensor glucose values. Formula converts mean glucose to an A1c-equivalent value allowing comparison between CGM data and traditional A1c.

Glucose Screening Tests During Pregnancy

Laboratory tests to detect gestational diabetes mel-

litus, including the oral glucose tolerance test and glucose challenge test. Usually performed between 24-28 weeks of gestation. Abnormal results require further evaluation and management.

Alternate Names:

Gestational diabetes screening

Glucose Sensor

Continuous glucose monitor for diabetes. Subcutaneous sensor measures interstitial glucose. Transmitter sends data to receiver/phone. Examples: Dexcom, Freestyle Libre, Medtronic. Reduces hypoglycemia, improves A1c.

Glucose Tolerance Test

Testing for diabetes mellitus and gestational diabetes. 75g OGTT (oral glucose tolerance test): measure plasma glucose at 0, 60, and 120 minutes. Diagnostic: fasting $\geq$ 126 mg/dL, 2-hour $\geq$ 200 mg/dL. Gestational diabetes screening: 50g glucose challenge test (GCT) at 24-28 weeks; if >140 mg/dL at 1 hour, proceed to 100g 3-hour OGTT.

Alternate Names:

Oral glucose tolerance test (OGTT); gestational diabetes glucose tolerance test.

Glucose Tolerance Test - Non-Pregnant

Laboratory test measuring blood glucose levels after oral glucose administration to evaluate glucose metabolism and diagnose diabetes or prediabetes. Involves fasting, blood glucose measurement, ingestion of glucose solution, and serial blood draws over 2-3 hours.

Alternate Names:

OGTT; oral glucose tolerance test

Glucose Transport

glucose transport is a nutrition or dietary term; appropriate use depends on age, health status, allergies, intake, and medical treatment.

Glucose Transporter

A membrane protein that moves glucose across a cell membrane; transporter defects or altered regulation can affect glucose metabolism.

Glucose Urine Test

Laboratory test to detect glucose in the urine (glycosuria). Normally absent; presence indicates blood glucose exceeding renal threshold, suggesting diabetes mellitus or renal tubular dysfunction. May be detected by dipstick or laboratory analysis.

Alternate Names:

Urinary glucose; glycosuria test

Glucose-6-Phosphatase

Enzyme converting glucose-6-phosphate to glucose. Located in liver and kidney. Deficiency causes Von Gierke disease.

Glucose-6-Phosphate Dehydrogenase Deficiency

Glucose-6-phosphate dehydrogenase deficiency is an inherited red-cell enzyme disorder in which oxidative stress can trigger hemolytic anemia after selected infections, foods, or medicines. episodes of hemolytic anemia triggered by oxidative stress from infections, certain drugs including primaquine and sulfonamides, and fava beans. G6PD is essential for generating NADPH to protect red blood cells from oxidative damage.

Glucose-6-Phosphate Dehydrogenase Test

Laboratory test to measure G6PD enzyme activity in red blood cells, used to diagnose G6PD deficiency. Important before prescribing certain medications (primaquine, dapsone) that can cause hemolytic anemia in deficient individuals.

Alternate Names:

G6PD assay

Glucosinolate

A sulfur- and nitrogen-containing plant compound found especially in cruciferous vegetables; its breakdown products influence flavor and are being studied for possible biologic effects.

Glucosuria

The presence of glucose in urine, most commonly from blood glucose exceeding the renal reabsorption threshold, diabetes, pregnancy, or a proximal tubular reabsorption defect.

Glucosylceramidase

Glucosylceramidase is a lysosomal enzyme that hydrolyses glucosylceramide; inherited deficiency causes Gaucher disease with lipid-laden macrophages in organs such as spleen, liver, bone marrow, and bone.

Glucuronate

The anion or salt of glucuronic acid, a sugar-acid component of connective-tissue substances and a molecule used in hepatic conjugation reactions.

Glucuronic Acid

A sugar acid used by the liver to conjugate bilirubin, drugs, hormones, and toxins, increasing their water solubility for excretion.

Glucuronide

A compound formed when glucuronic acid is conjugated to a drug, hormone, bilirubin, or other molecule, usually increasing water solubility and facilitating excretion.

Glucuronyl Transferase

UDP-glucuronosyltransferase: a liver enzyme involved in phase II drug metabolism, catalyzing glucuronidation of bilirubin, drugs, and toxins to make them water-soluble for excretion. Deficiency causes Gilbert syndrome or Crigler-Najjar syndrome.

Alternate Names:

UDP-glucuronosyltransferase; UGT

Glue (Vascular)

A vascular embolization material used to occlude selected vessels under image guidance.

Alternate Names:

Vascular

Glue Ear

Glue ear is persistent fluid behind the eardrum without the acute signs of a middle-ear infection and may cause reduced hearing.

Glue Ear (Secretory Otitis Media)

Persistent fluid in the middle ear without acute

infection, often causing conductive hearing loss and a feeling of blockage. It is common in children.

Alternate Names:

Secretory Otitis Media

Glutamate

The principal excitatory neurotransmitter in the central nervous system. Synthesized from glutamine or alpha-ketoglutarate and acting on ionotropic receptors (AMPA, kainate, NMDA) for fast synaptic transmission and metabotropic receptors (mGluR1-8) for modulation.

Glutamate Decarboxylase

Glutamate decarboxylase is an enzyme that converts glutamate into the neurotransmitter GABA; antibodies against it are associated with some autoimmune disorders.

Glutamate Receptor

A neuronal receptor activated by glutamate, the major excitatory neurotransmitter, including NMDA, AMPA, kainate, and metabotropic receptor classes.

Glutamic Acid

An amino acid that acts as a metabolic intermediate and neurotransmitter precursor; its charged form, glutamate, mediates most fast excitatory signaling in the brain.

Glutamic Acid Decarboxylase

An enzyme that converts glutamate to GABA; antibodies to it can occur in type 1 diabetes.

Alternate Names:

GAD

Glutamine

Glutamine is an amino acid used in protein production and nitrogen transport and serves as an energy source for some cells.

Glutaral

Glutaral is a chemical disinfectant and tissue fixative that can irritate the skin, eyes, and airways.

Glutaric Acidemia Type 1

An autosomal recessive cerebral organic aciduria caused by deficiency of glutaryl-CoA dehydrogenase (*GCDH*), a key mitochondrial flavoprotein enzyme in lysine, hydroxylysine, and tryptophan catabolism. Leads to accumulation of glutaric acid and 3-hydroxyglutaric acid in tissues and urine. Classically presents with macrocephaly at birth followed by an acute, irreversible striatal encephalopathic crisis typically triggered by a routine febrile infant illness between 6 and 18 months of age, resulting in bilateral striatal necrosis and severe dystonia. Brain MRI shows frontotemporal atrophy and pathognomonic enlarged sylvian fissures (“bat-wing” appearance) accompanied by subdural hematomas.

Alternate Names:

Glutaric Aciduria Type 1 (GA-1); Glutaryl-CoA Dehydrogenase Deficiency

Glutaric Aciduria

A clinical disorder or finding related to glutaric aciduria; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Glutathione

A small antioxidant molecule made from glutamate, cysteine, and glycine. Reduced glutathione helps control oxidative stress and helps the liver neutralize reactive chemicals, including NAPQI produced from acetaminophen. In acetaminophen overdose, N-acetylcysteine helps restore glutathione and is an urgent medical treatment; glutathione supplements are not a substitute.

Glutathione Disulfide

Glutathione disulfide is the oxidized form of glutathione, produced when glutathione helps neutralize oxidants in cells.

Glutathione Transferase

Glutathione transferase is an enzyme family that attaches glutathione to certain chemicals, helping detoxify them and process medicines.

Gluteal

Relating to the buttock or the gluteal muscles, which extend and rotate the hip and help stabilize the pelvis.

Gluteal Injury

Damage to the muscles, tendons, nerves, or soft tissues of the buttock caused by trauma, overuse, injection, or falls. Pain, bruising, weakness, or difficulty walking may occur. Severe swelling, numbness, inability to bear weight, or bowel or bladder changes requires urgent evaluation.

Gluteal Muscle

gluteal muscle is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Gluten

A complex of storage proteins (prolamins and glutelins) found in wheat (gliadin), barley (hordein), and rye (secalin). Gluten provides elasticity to dough. In susceptible individuals, gluten triggers an autoimmune response (celiac disease) or non-autoimmune sensitivity (non-celiac gluten sensitivity, NCGS).

Gluten Enteropathy

A clinical disorder or finding related to gluten enteropathy; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Alternate Names:

Celiac Disease (Gluten Enteropathy)

Gluten Sensitivity (Nonceliac Gluten Sensitivity (Intolerance))

Adverse symptoms triggered by gluten ingestion in individuals without celiac disease or wheat allergy. Symptoms include bloating, abdominal pain, diarrhea, and fatigue. Diagnosis is by exclusion. Management involves gluten avoidance.

Alternate Names:

Nonceliac gluten sensitivity; NCGS

Gluten-Free Diet

Eliminates gluten (wheat, barley, rye). Essential for celiac disease, non-celiac gluten sensitivity. Risk of nutrient deficiency if not supplemented. May be unnecessarily restrictive for others.

Gluten-Sensitive Enteropathy

Celiac Disease: an autoimmune disorder triggered by gluten ingestion in genetically susceptible individuals, causing damage to the small intestinal mucosa. Presents with diarrhea, bloating, weight loss, and malabsorption. Diagnosis by serology and intestinal biopsy.

Alternate Names:

Celiac Disease; celiac sprue

Gluten-Sensitive Enteropathy (Celiac Disease)

An immune-mediated disorder in which ingestion of gluten damages the lining of the small intestine in genetically susceptible people. It may cause diarrhea, malabsorption, anemia, or other systemic effects.

Alternate Names:

Celiac Disease

Gluteus

Gluteus is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gluteus Maximus Muscle

Largest, most superficial gluteal muscle forming the buttock bulk, from posterior iliac gluteal line, sacrum, coccyx, and sacrotuberous ligament to the iliotibial tract and gluteal tuberosity. Innervated by inferior gluteal nerve (L5-S2). Primary hip extensor and lateral rotator.

Gluteus Medius Muscle

Thick fan-shaped muscle between maximus and minimus, from external ilium to the greater trochanter. Innervated by superior gluteal nerve (L4-S1). Primary hip abductor essential for pelvic stability during single-leg stance. Superior gluteal nerve injury causes Trendelenburg sign with contralateral pelvic

drop.

Gluteus Minimus Muscle

The smallest and deepest gluteal muscle, extending from the outer ilium to the greater trochanter. It abducts and medially rotates the hip and helps stabilize the pelvis during walking.

Glyburide

An oral sulfonylurea that stimulates pancreatic insulin release for type 2 diabetes; prolonged or severe hypoglycemia is an important risk.

Glycaemia

The concentration of glucose in the blood, normally maintained within a narrow range (fasting: 3.9-5.5 mmol/L or 70-100 mg/dL) through the coordinated action of insulin (lowers glucose) and counter-regulatory hormones (glucagon, cortisol, catecholamines, growth hormone).

Glycated Hemoglobin (A1C)

Glycated hemoglobin reflecting average blood glucose concentration over the preceding two to three months corresponding to the red blood cell lifespan. Formed by non-enzymatic glycation of hemoglobin at the N-terminal valine of the beta chain. The percent of glycated hemoglobin is directly proportional to mean glucose levels.

Alternate Names:

A1C A1C test Hemoglobin A1C HbA1C

Glycemic Control

Management of blood glucose to individualized targets that reduce symptoms and long-term complications while avoiding hypoglycemia. Goals and monitoring methods depend on age, health, treatment, pregnancy, and patient circumstances.

Glycemic Index

Ranking of carbohydrates by effect on blood glucose. High GI foods spike glucose. Low GI foods provide sustained energy. Useful for diabetes management.

Glycemic Index And Diabetes

The glycemic index ranks carbohydrate-containing foods by their effect on blood glucose levels. Low GI foods (≤ 55) cause gradual glucose rise; high GI foods (≥ 70) cause rapid spikes. Important for diabetes management and dietary planning.

Alternate Names:

GI; glycemic index

Glycemic Load

A measure that combines a food's glycemic index with the amount of available carbohydrate in a serving to estimate its effect on blood glucose.

Glyceraldehyde

Glyceraldehyde is a three-carbon sugar and an intermediate in carbohydrate metabolism.

Glyceride

A glyceride is a compound formed when glycerol is linked to one or more fatty acids, including many dietary fats.

Glycerin

A colorless, odorless, sweet-tasting trihydroxy alcohol (glycerol) with humectant, osmotic, and solvent properties.

Glycerol

Glycerol is a three-carbon alcohol found in fats and used as a solvent, humectant, and osmotic medicine in selected settings.

Glycerol (Glycerine)

A triol compound ($\text{CH}_2\text{OH}-\text{CHOH}-\text{CH}_2\text{OH}$), a colourless, odourless, viscous liquid with a sweet taste.

Alternate Names:

Glycerine

Glycerol Kinase

Glycerol kinase is an enzyme that adds phosphate to glycerol, allowing it to enter pathways for energy production and fat metabolism.

Glycerophosphates

Glycerophosphates are compounds containing glycerol and phosphate that participate in cell membranes and metabolism.

Glycerophospholipids

The major membrane phospholipids built from glycerol, fatty acids, phosphate, and a polar head group, including phosphatidylcholine and phosphatidylethanolamine.

Glyceryl Trinitrate

Glyceryl Trinitrate is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

Glycerylphosphorylcholine

Glycerylphosphorylcholine is a choline-containing phospholipid metabolite found in cell membranes and body fluids.

Glycine

Glycine is a small amino acid used to make proteins and heme and also acts as an inhibitory neurotransmitter in the nervous system.

Glycine Receptor

A ligand-gated chloride channel activated by glycine that mediates inhibitory neurotransmission, especially in the spinal cord and brainstem.

Glycocalyx

The glycocalyx is a sugar-rich layer on the surface of many cells that helps with protection, adhesion, and cell recognition.

Glycogen

A branched polysaccharide composed of glucose units linked by alpha-1,4 glycosidic bonds (linear) and alpha-1,6 bonds (branching points, every 8-10 residues). Glycogen serves as the main storage form of glucose in animals.

Glycogen Storage Disease

A group of inherited metabolic disorders caused by defects in glycogen synthesis, breakdown, or regulation, resulting in abnormal glycogen accumulation in tissues. Major types: Type I (von Gierke, G6PC deficiency) — fasting hypoglycemia, lactic acidosis, hepatomegaly, hyperuricemia, and hypertriglyceridemia.

Glycogen Storage Diseases

A clinical disorder or finding related to glycogen storage diseases; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Glycogenesis

The synthesis of glycogen from glucose, primarily in liver and skeletal muscle. Glucose-1-phosphate is converted to UDP-glucose, and glycogen synthase and the branching enzyme extend and branch the polymer; insulin promotes the pathway.

Glycogenolysis

Breakdown of glycogen to glucose-1-phosphate (converted to glucose-6-phosphate). Liver glycogenolysis maintains blood glucose during fasting; muscle glycogenolysis provides energy for contraction. Regulated by hormonal signals (glucagon, epinephrine) and allosteric effectors (AMP activates phosphorylase).

Glycohemoglobin

Hemoglobin with glucose chemically attached to it; glycated hemoglobin A1c reflects average blood glucose over roughly the preceding two to three months.

Glycolates

Glycolates are salts or esters of glycolic acid and may occur as metabolic products or in chemical and medical preparations.

Glycolipid

A lipid containing a carbohydrate group that contributes to cell membranes, recognition, signaling, and myelin structure.

Glycolysis

Metabolic pathway breaking down glucose (6C) to pyruvate (3C), generating 2 ATP (net) and 2 NADH. Occurs in cytoplasm. Ten enzymatic steps: investment phase (uses 2 ATP) and payoff phase (produces 4 ATP, 2 NADH). Key regulatory enzymes: hexokinase, phosphofructokinase-1 (PFK-1, rate-limiting), pyruvate kinase.

Glycomics

Glycomics is the study of all or many of the sugar chains attached to proteins, lipids, and cells in a biological system.

Glycopeptide

glycopeptide is a defined chemical or biologic substance involved in glycopeptide and studied in physiology, pharmacology, laboratory medicine, or treatment.

Glycophorin

Glycophorin is a glycoprotein in the red-cell membrane that contributes to the cell surface and carries blood-group-related markers.

Glycoprotein

A protein with covalently attached carbohydrate chains, important in receptors, antibodies, enzymes, mucus, cell adhesion, and extracellular matrix.

Glycopyrrolate

Glycopyrrolate is an anticholinergic medicine used to reduce secretions and, in some inhaled forms, to help control chronic obstructive lung disease; it may cause dry mouth, constipation, or urinary retention.

Glycosaminoglycan

A long, unbranched carbohydrate chain found in the extracellular matrix and connective tissues. Abnormal breakdown or accumulation of GAGs occurs in mucopolysaccharidoses.

Alternate Names:

Glycosaminoglycan

Glycosaminoglycans

Glycosaminoglycans are long chains of sugars found in connective tissue and involved in its structure, hydration, and signaling.

Glycoside

A glycoside is a compound in which a sugar is linked to a nonsugar molecule; some glycosides are medicines or biologically active substances.

Glycosphingolipid

A membrane lipid containing ceramide and one or more sugars, involved in cell recognition, signaling, and nervous-system structure.

Glycosuria

The presence of glucose in the urine. Normally, the renal tubules reabsorb filtered glucose via sodium-glucose co-transporters (SGLT2 in proximal tubule). Glycosuria occurs when blood glucose exceeds the renal threshold (approximately 10 mmol/L or 180 mg/dL), overwhelming reabsorptive capacity.

Glycosylated Hemoglobin

Hemoglobin with glucose attached, reflecting average blood glucose over roughly two to three months.

Alternate Names:

Hemoglobin A1c; HbA1c

Glycosylation

Glycosylation is the attachment of sugar chains to proteins or lipids, a process that affects their function, stability, and location.

Glycosylphosphatidylinositol

Glycosylphosphatidylinositol is a lipid-based anchor that attaches certain proteins to the outer surface of a cell membrane.

Glycosyltransferase

Glycosyltransferase is an enzyme that transfers a sugar to a protein, lipid, or other molecule during glycan synthesis.

Glycyrrhetic Acid

An active metabolite of licorice glycosides that inhibits 11-beta-hydroxysteroid dehydrogenase; excess exposure can cause hypertension, low potassium, and fluid retention.

Glycyrrhizic Acid

The major saponin in licorice root that is converted to glycyrrhetic acid and can produce mineralocorticoid-like toxicity when consumed excessively.

Glyoxal

A reactive dialdehyde formed in metabolism and food processing that can modify proteins and DNA and contribute to advanced glycation products.

Glyoxysome

A specialized type of peroxisome in plant cells that converts stored fatty acids into sugars during seed germination; it has no direct human organ equivalent.

Glyphosate

A broad-spectrum herbicide that inhibits plant EPSP synthase; concentrated exposure can irritate tissues and cause systemic poisoning, especially after ingestion.

Glyphosine

A chemical compound used experimentally or in agriculture; its medical significance depends on the specific formulation and exposure context.

Gm (Gram)

An abbreviation for gram, a metric unit of mass equal to one-thousandth of a kilogram.

GN

Alternate index label; see *Glomerulonephritis*.

Gnathic

Gnathic is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gnathion

Gnathion is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gnathitis

Gnathitis is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gnathoplasty

Gnathoplasty is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gnathostoma

gnathostoma is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Gnathostoma Spinigerum

gnathostoma spinigerum is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Gnathostomiasis

A parasitic infection caused by *Gnathostoma* larvae acquired from undercooked freshwater fish or other hosts, producing migratory skin swellings or deeper neurologic or ocular disease.

Gnawing Pain

A biomedical term referring to gnawing pain; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

GNE Myopathy

An autosomal recessive adult-onset distal myopathy caused by biallelic mutations in the *GNE* gene on chromosome 9p13.3, which encodes the bifunctional rate-limiting enzyme in sialic acid biosynthesis, UDP-*N*-acetylglucosamine 2-epimerase/*N*-

acetylmannosamine kinase. Typically manifests in the third decade of life with slowly progressive bilateral foot drop due to selective weakness of the tibialis anterior muscle, followed by distal lower and upper extremity involvement, but with pathognomonic, striking, and permanent sparing of the quadriceps femoris muscles even in late, wheelchair-dependent stages. Muscle biopsy shows rimmed vacuoles and filamentous inclusions under electron microscopy without inflammatory infiltrates.

Alternate Names:

Nonaka Myopathy; Distal Myopathy with Rimmed Vacuoles (DMRV); Hereditary Inclusion Body Myopathy (HIBM)

GnRH

Gonadotropin-releasing hormone, which stimulates pituitary release of LH and FSH.

Alternate Names:

Gonadotropin-releasing hormone

GnRH Agonist

Gonadotropin-releasing hormone agonists are a class of medications that initially stimulate (flare effect, 1-3 weeks) and then suppress pituitary gonadotropin (LH and FSH) secretion through receptor down-regulation, leading to profound suppression of sex steroid production (testosterone in men, estradiol in women).

GnRH Antagonist

A class of medications that competitively block GnRH receptors on pituitary gonadotrophs, producing immediate, reversible suppression of LH and FSH secretion without the initial flare effect seen with GnRH agonists.

GnRH Antagonists

Medicines that block GnRH signaling and reduce pituitary release of reproductive hormones.

Goal Attainment Scaling

An individualized outcome method in which patient-specific goals are defined with graded levels of expected attainment and scored after intervention. It captures meaningful changes that standardized

measures may miss.

Goal Setting

SMART goals: Specific, Measurable, Achievable, Relevant, Time-bound. Patient-centered goals improve adherence.

Goals-Of-Care Discussion

A clinical conversation that aligns treatment recommendations with a patient's values, priorities, prognosis, acceptable burdens, and preferred outcomes. It may include decisions about hospitalization, resuscitation, artificial nutrition, and comfort-focused care.

Goblet Cell

A mucus-secreting epithelial cell, abundant in the respiratory and intestinal tracts, that protects surfaces with a mucin-rich layer.

Goblet Cell Adenocarcinoma

A distinctive appendiceal adenocarcinoma composed of goblet-like mucinous cells, formerly called goblet cell carcinoid. It can spread within the peritoneum or to the ovaries and is managed according to grade, stage, and dissemination.

Goblet Cells

Specialized epithelial cells that secrete mucus, especially in the intestine and airways.

Goiter

Enlargement of the thyroid gland, which can be diffuse or nodular. Causes: iodine deficiency (most common worldwide), Hashimoto thyroiditis, Graves disease, multinodular goiter, and thyroid cancer. May be associated with normal, hyperthyroid, or hypothyroid function.

Alternate Names:

Thyroid Gland Enlargement

Goitre

A clinical disorder or finding related to goitre; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Goitrogenic Foods

Foods or food components that can interfere with thyroid hormone production or iodine use under some conditions; risk depends on intake, preparation, iodine status, and thyroid health.

Gold

A metal used in selected dental restorations, implants, laboratory applications, and historical medicinal preparations; exposure can cause contact allergy or toxicity depending on the compound and dose.

Gold Alloy

Noble metal alloy for dental restorations. Excellent biocompatibility, durability, marginal adaptation. Expensive.

Gold Alloys

Metal mixtures containing gold and other elements, used in selected dental restorations or medical devices; properties and biocompatibility depend on composition.

Gold Therapy

Gold Therapy is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

Golden Hour

The golden hour is the early period after a serious injury or medical emergency when rapid assessment and treatment may improve the chance of survival and recovery.

Goldenhar Syndrome

A variant of hemifacial microsomia characterized by the triad: epibulbar dermoids (benign conjunctival tumors), preauricular skin tags or sinuses, and vertebral anomalies (hemivertebrae, fused vertebrae, scoliosis). Also involves facial asymmetry, microtia, conductive hearing loss, and macrostomia.

Goldmann Tonometry

A slit-lamp examination that estimates intraocular

pressure by measuring the force needed to flatten a defined area of the cornea.

Golfer Elbow

Medial epicondylitis, a tendinopathy of the common flexor/pronator tendon at the medial epicondyle. Less common than tennis elbow. Caused by repetitive wrist flexion and forearm pronation. Presents with medial elbow pain worsened by wrist flexion and gripping. Tenderness over the medial epicondyle.

Golfer's Elbow

Painful inflammation or degeneration of tendons on the inner side of the elbow.

Golfer's Elbow (Medial Epicondylitis)

Overuse injury involving tendons on the inside of the elbow, causing pain and tenderness with gripping or wrist movement.

Alternate Names:

Medial Epicondylitis

Golgi Apparatus

Membrane-bound organelle (Golgi complex) consisting of flattened cisternae (cis, medial, trans) that modifies, sorts, and packages proteins and lipids from the ER for secretion or delivery to other organelles.

Golgi Cisternae

Flattened membrane-bound sacs that form the Golgi apparatus and modify, sort, and package proteins and lipids for transport within or outside the cell.

Golgi Tendon Organ

A mechanoreceptor located at the junction between a skeletal muscle and its tendon, innervated by Ib afferent fibers. The Golgi tendon organ detects tension generated by muscle contraction or passive stretch.

Gomori's Stain

Gomori's stain is a group of laboratory stains used to highlight structures such as connective tissue, car-

bohydrates, fungi, or muscle components in tissue samples.

Gonad

A testis or ovary, an organ that produces reproductive cells and sex hormones.

Gonad Disorder

A disease affecting testes or ovaries and causing abnormal reproductive-cell production, hormone secretion, development, fertility, or sexual function.

Gonadal Agenesis

Congenital absence or severe underdevelopment of a gonad, resulting in impaired sex-hormone production and infertility or differences in sexual development.

Gonadal Dysgenesis

Incomplete or abnormal development of the ovaries or testes, often resulting from chromosomal abnormalities, gene variants, or disordered sex development. It may cause atypical genital development, delayed or absent puberty, infertility, and abnormal gonadal hormone production.

Gonadal Vein

A vein draining a testis or ovary. The right gonadal vein usually drains directly into the inferior vena cava, while the left usually drains into the left renal vein.

Gonadoblastoma

A rare tumor of an abnormal or developmentally disordered gonad that may contain germ cells and sex-cord cells.

Gonadorelin

Synthetic gonadotropin-releasing hormone that stimulates pituitary release of luteinizing hormone and follicle-stimulating hormone when given intermittently.

Gonadotrophin

Gonadotrophin is an anatomical structure or physi-

ologic function; its location, mechanism, and associated findings determine its clinical significance.

Gonadotrophin-Releasing Factors

Gonadotrophin-Releasing Factors is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gonadotrophin-Releasing Hormone (GnRH)

Gonadotrophin-Releasing Hormone (GnRH) is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gonadotrophins

Hormones that stimulate the gonads. The anterior pituitary secretes follicle-stimulating hormone (FSH) and luteinising hormone (LH), both glycoprotein hormones sharing a common alpha subunit (identical to TSH and hCG alpha) with a unique beta subunit.

Gonadotrophs

Anterior-pituitary cells that secrete luteinizing hormone and follicle-stimulating hormone in response to gonadotropin-releasing hormone.

Gonadotropin

A hormone, chiefly luteinizing hormone or follicle-stimulating hormone, that acts on the ovaries or testes to regulate gamete production and sex-hormone secretion.

Gonadotropin-Releasing Hormone

A hypothalamic hormone that controls pituitary secretion of FSH and LH.

Alternate Names:

GnRH

Gonadotropins

Hormones that act on the gonads. In humans, the pituitary gonadotropins are follicle-stimulating hormone and luteinizing hormone, which regulate ga-

mete production and sex-hormone secretion.

Gonads

The primary reproductive organs: testes in males and ovaries in females. Functions: (1) gamete production (spermatogenesis in testes, oogenesis in ovaries); (2) sex steroid hormone secretion (testosterone from testicular Leydig cells; estrogen and progesterone from ovarian follicular cells and corpus luteum).

Gondoic Acid

A 20-carbon monounsaturated fatty acid found in some seed oils and incorporated into dietary and tissue lipids.

Goniometer

An instrument used to measure the angle or range of motion of a joint.

Gonioscopy

An ophthalmological examination technique that allows direct visualization of the anterior chamber angle, the anatomical region where the cornea and iris meet and where the trabecular meshwork is located, and it is essential for distinguishing between open-angle and angle-closure forms of glaucoma.

Gonococcal

A clinical disorder or finding related to gonococcus; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Gonococcal Arthritis

A disseminated infection of joints caused by *Neisseria gonorrhoeae*, often with fever, migratory joint or tendon pain, skin pustules, and tenosynovitis. It requires prompt antimicrobial treatment and evaluation for concomitant sexually transmitted infection.

Gonococcal Pharyngitis

Infection of the throat by *Neisseria gonorrhoeae*, usually acquired through sexual contact. It may cause sore throat or no symptoms.

Gonococcal Urethritis

Inflammation of the urethra caused by infection with *Neisseria gonorrhoeae*.

Gonococcus

A clinical disorder or finding related to gonococcus; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Gonorrhea

Gonorrhea is a sexually transmitted infection caused by *Neisseria gonorrhoeae*, producing urethritis, cervicitis, pelvic inflammatory disease, rectal or pharyngeal infection, and neonatal disease. gonorrhoeae. Epidemiology: second most common bacterial STI (after Chlamydia), highest incidence in 15-24 year olds.

Gonorrhoea

A clinical disorder or finding related to gonorrhoea; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Good Samaritan

A person who voluntarily helps someone in an emergency, especially by providing immediate aid before professional responders arrive.

Good Samaritan Law

A law that may protect a person who provides reasonable emergency assistance from certain civil claims, subject to jurisdiction-specific conditions and exceptions such as gross negligence.

Goodpasture Syndrome

Anti-GBM disease affecting both kidneys and lungs. Pulmonary hemorrhage with hemoptysis and crescentic GN. Linear IgG deposits on renal biopsy. Emergent plasmapheresis, cyclophosphamide, and steroids. Early treatment essential to prevent irreversible renal and pulmonary damage.

Goodpasture's Syndrome

A clinical disorder or finding related to goodpasture's syndrome; evaluation identifies the underlying

ing mechanism, affected site, severity, and relevant complications.

Goose Bump

A small raised area around a hair follicle caused by contraction of tiny arrector pili muscles, commonly in response to cold, fear, or strong emotion.

Goose-Skin

Goose skin is the temporary raising of hair follicles, usually caused by cold, fear, or strong emotion.

Gooseflesh

Another term for goose bumps, the temporary raised appearance of skin caused by piloerection.

Gordonia Aichiensis

A biomedical term referring to *gordonia aichiensis*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Gordonia Bacterium

A *Gordonia* bacterium is an environmental bacterium that rarely causes opportunistic infection, especially in people with weakened immunity or indwelling devices.

Gordonia Bronchialis

A biomedical term referring to *gordonia bronchialis*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Gordonia Rubripertincta

A biomedical term referring to *gordonia rubripertincta*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Gordonia Sputi

A biomedical term referring to *gordonia sputi*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Gordonia Terrae

A biomedical term referring to *gordonia terrae*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Gorlin'S Syndrome

A clinical disorder or finding related to gorlin's syndrome; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Gornall'S Test

Gornall's test is a color-based laboratory method used to measure the amount of protein in a sample.

Goserelin

A gonadotropin-releasing hormone agonist that initially stimulates and then suppresses pituitary gonadotropins; it is used in hormone-sensitive prostate or breast cancer and selected gynecologic conditions.

Gossypium

A clinical condition or finding involving gossypium. Its defining features, causes, evaluation, and management depend on the clinical context.

Gossypol

A polyphenolic compound from cottonseed that can be toxic and has been investigated as an antifertility agent; it is not a standard treatment.

Gott'S Shunt

Gott's shunt is a historical surgical connection used to reroute blood around a blocked section of a major artery.

Gotttron Papules

A characteristic skin finding of dermatomyositis, consisting of erythematous to violaceous lichenoid papules located over the dorsal aspects of the interphalangeal (PIP/DIP) and metacarpophalangeal (MCP) joints. May undergo necrosis or ulceration.

Gougerot-Carteaud Syndrome

A clinical disorder or finding related to gougerot-carteaud syndrome; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Gout

An inflammatory arthritis caused by deposition of monosodium urate crystals in and around joints, usually due to hyperuricemia. Attacks cause sudden severe pain, swelling, warmth, and redness—often in the first metatarsophalangeal joint; chronic disease can produce tophi and kidney stones. Treatment of an acute attack may include an NSAID, colchicine, or a corticosteroid; urate-lowering therapy helps prevent recurrent attacks.

Alternate Names:

Gouty arthritis; Gout (Gouty Arthritis); crystal arthropathy

Gout Flare

An acute inflammatory response to monosodium urate crystal deposition in or around a joint. It commonly causes abrupt severe pain, swelling, warmth, and erythema, often involving the first metatarsophalangeal joint; aspiration can confirm crystals and exclude infection.

Gout Nodulosis

The formation of tophi—large, firm, subcutaneous nodules composed of monosodium urate crystals—resulting from chronic, poorly controlled hyperuricemia. Tophi most commonly occur at the ears, fingers, toes, olecranon bursae, and Achilles tendon, and may ulcerate and discharge chalky white material.

Gout Suppressants

Medicines that lower uric-acid production or increase its excretion to prevent recurrent gout attacks and urate crystal deposition.

Gower Syndrome (Situational Syncope)

A form of reflex syncope, also called vasovagal or vasodepressor syncope, in which a trigger causes a fall in blood pressure and sometimes heart rate,

briefly reducing brain perfusion.

Gowers Sign

A maneuver in which a person uses the hands to push up from the floor or thighs because of proximal muscle weakness, classically seen in muscular dystrophy.

Graafian Follicle

A mature ovarian follicle that contains an egg ready for ovulation.

GRACE Score

A validated multivariable risk assessment model developed from the Global Registry of Acute Coronary Events used to predict in-hospital and 6-month all-cause mortality and recurrent myocardial infarction across the full spectrum of acute coronary syndromes (STEMI, NSTEMI, and unstable angina). It incorporates eight independent clinical prognostic factors: age, heart rate, systolic blood pressure, serum creatinine, Killip classification of heart failure, presence of cardiac arrest at presentation, ST-segment deviation on ECG, and elevated cardiac biomarkers (troponins). High-risk scores (GRACE > 140) guide rapid, early invasive coronary angiography within 24 hours.

Alternate Names:

Global Registry of Acute Coronary Events Score; GRACE Risk Model

Gracilibacillus

Gracilibacillus is a group of environmental bacteria; recovery from a clinical sample must be interpreted with the specimen source and evidence of infection.

Grade

Degree of cellular differentiation. Grade 1: well-differentiated. Grade 2: moderately differentiated. Grade 3: poorly differentiated. Grade 4: undifferentiated.

Grade IV Astrocytoma

Glioblastoma: the most malignant primary brain tumor, characterized by rapid growth, necrosis, and microvascular proliferation. Presents with

headaches, seizures, focal neurological deficits, and cognitive changes. Treatment includes surgery, radiation, and chemotherapy.

Alternate Names:

Glioblastoma

Graded Potentials

Local changes in membrane potential that vary in magnitude proportional to stimulus strength, unlike all-or-none action potentials. They include receptor potentials (in sensory receptors), postsynaptic potentials (EPSPs and IPSPs at synapses), and pacemaker potentials (in cardiac/specialized cells).

Graefe'S Sign

A delayed downward movement of the upper eyelid during downward gaze, classically associated with thyroid eye disease but not specific to it.

Graft

Tissue or a synthetic material transferred to another site to replace, repair, reinforce, or bypass a damaged body structure.

Graft (Periodontal)

Tissue used to cover exposed root or augment gingiva. Connective tissue graft (gold standard), free gingival graft, allograft, xenograft.

Alternate Names:

Periodontal

Graft Versus Host

Graft-versus-host disease occurs when immunocompetent donor T cells in an allogeneic transplant attack recipient tissues, especially skin, liver, and gastrointestinal tract; it may be acute or chronic.

Graft Versus Host Disease

A condition occurring after allogeneic stem cell or bone marrow transplantation where donor immune cells attack the recipient's tissues. Can be acute (within 100 days) or chronic (after 100 days). Affects skin, liver, and gastrointestinal tract.

Alternate Names:

GVHD

Graft Versus Host Disease

A condition occurring after allogeneic stem cell or bone marrow transplantation where donor immune cells attack the recipient's tissues. Can be acute (within 100 days) or chronic (after 100 days). Affects skin, liver, and gastrointestinal tract. Prevention includes immunosuppressive prophylaxis.

Alternate Names:

Graft Versus Host Disease

Graft-Versus-Host Disease

An immune-mediated complication of allogeneic hematopoietic transplantation in which donor-derived immunocompetent T cells attack recipient tissues. Acute or chronic GVHD commonly affects skin, liver, and gastrointestinal tract and requires prevention and immunosuppressive treatment.

Graft-Versus-Host Reaction

An immune reaction in which transplanted donor immune cells attack the recipient's tissues.

Grafting

The surgical transfer of tissue or a synthetic substitute to repair, replace, or support a body structure. An autograft comes from the same person, whereas an allograft comes from another person of the same species.

Gram

A metric unit of mass equal to one-thousandth of a kilogram.

Alternate Names:

g

Gram (G)

A unit of mass equal to one-thousandth of a kilogram; medication doses and laboratory measurements are often expressed in grams or smaller metric units.

Gram (Measure)

A metric unit of mass equal to one-thousandth of a kilogram or approximately 15.4 grains.

Gram Calorie (Calorie)

A small calorie is the energy needed to raise 1 gram of water by 1 degree Celsius; the dietary Calorie, written with a capital C, is a kilocalorie equal to 1,000 small calories.

Gram Negative Bacilli

Rod-shaped gram-negative bacteria appearing pink on Gram stain owing to a thin peptidoglycan layer and lipopolysaccharide outer membrane.

Gram Positive Cocci

Spherical gram-positive bacteria staining purple owing to a thick peptidoglycan layer and absent outer membrane. Clinically important genera include *Staphylococcus*, *Streptococcus*, and *Enterococcus*, identifiable by arrangement (clusters, chains, pairs) and hemolysis, and causing skin, pharyngeal, respiratory, and bloodstream infections.

Gram Stain

A laboratory staining method that classifies bacteria as Gram-positive or Gram-negative according to cell-wall properties and helps identify organisms in clinical specimens before or alongside culture. on cell wall structure. The procedure involves crystal violet staining, iodine mordant, alcohol decolorisation, and safranin counterstain.

Gram Stain Of Skin Lesion

Microscopic examination of a skin lesion specimen stained with Gram stain to identify bacteria. Useful for diagnosing bacterial skin infections and guiding antibiotic therapy. Results available within hours.

Alternate Names:

Gram stain culture

Gram Stain Of Tissue Biopsy

Microscopic examination of tissue biopsy specimen stained with Gram stain to identify bacteria. Used to diagnose tissue infections and guide antimicrobial therapy. May be performed alongside culture and histopathology.

Alternate Names:

Tissue Gram stain

Alternate Names:

Urethral Gram stain

Gram'S Stain

Gram's stain is a laboratory method that classifies bacteria by how their cell walls retain the stain, helping guide identification and initial antibiotic choices.

Gram-Negative

Describing bacteria with a thin peptidoglycan cell wall and an outer membrane containing lipopolysaccharide; they stain pink or red with the Gram stain.

Gram-Negative Bacteria

Bacteria that do not retain crystal violet during Gram staining and therefore appear pink or red. They have a thin peptidoglycan layer and an outer membrane that may contain lipopolysaccharide. Examples include *Escherichia coli*, *Klebsiella*, *Pseudomonas*, and *Neisseria*.

Gram-Negative Meningitis

Meningitis caused by gram-negative bacteria, including *Escherichia coli*, *Klebsiella*, and *Neisseria* species. It can progress rapidly to sepsis, neurologic injury, and death and requires urgent cerebrospinal fluid evaluation and antimicrobial treatment.

Gram-Positive

Describing bacteria with a thick peptidoglycan cell wall that retains crystal violet during Gram staining and therefore appears purple.

Gram-Positive Bacteria

Bacteria that retain crystal violet in the Gram stain (appear purple/blue), characterized by a thick peptidoglycan cell wall and no outer membrane.

Gram-Positive Rods

Gram-positive rods are rod-shaped bacteria that retain the purple part of the Gram stain; some are harmless colonizers, while others cause infection.

Gramicidin

Gramicidin is a topical antibiotic that forms channels in bacterial membranes; it is not generally used systemically because it can be toxic.

Grand Mal

A type of generalised seizure characterized by bilateral synchronous epileptic activity involving the entire brain. Formerly called grand mal, now classified as bilateral tonic-clonic seizure according to the ILAE 2017 classification.

Grand Multipara

A person who has given birth five or more times beyond the gestational threshold used to count parity; definitions can vary by obstetric system.

Grand Rounds

An educational medical conference in which clinicians present a case, diagnosis, management, or clinical topic to a professional audience.

Granisetron

Granisetron is a selective 5-HT₃-receptor antagonist used to prevent chemotherapy-, radiotherapy-, or surgery-related nausea and vomiting; headache, constipation, and QT prolongation can occur.

Granisetron Hydrochloride

A medicine or chemical compound called granisetron hydrochloride. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Granular Casts

Degenerated cellular debris within tubular lumen appearing as coarse or fine-grained structures. Coarse casts represent more acute process, fine casts indicate chronic degenerative process. Common in acute tubular necrosis reflecting tubular epithelial cell damage. Also seen in chronic kidney disease, nephrotic syndrome, and hypertension.

Granular Cell Tumor Of The Breast

An uncommon tumor showing Schwann-cell differ-

entiation that can occur in the breast and mimic carcinoma clinically or on imaging. Histologic examination distinguishes it from malignancy; most are benign.

Granular Leukocyte

A granulocyte, a white blood cell containing cytoplasmic granules; the main types are neutrophils, eosinophils, and basophils.

Granulation

The formation of new vascular connective tissue during wound healing, producing moist red or pink granulation tissue made of capillaries, fibroblasts, and extracellular matrix.

Granulation Tissue

granulation tissue is a biological, genetic, biochemical, or chemical term used in medicine; its significance depends on its structure, function, concentration, pathway, or clinical context.

Granulicatella

Granulicatella is a group of bacteria that may live in the mouth and can rarely cause bloodstream infection or endocarditis.

Granulicatella Adiacens

A biomedical term referring to granulicatella adiacens; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Granulicatella Elegans

A biomedical term referring to granulicatella elegans; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Granulocyte

A granulocyte is a white blood cell containing cytoplasmic granules; neutrophils, eosinophils, and basophils are granulocytes involved in innate immunity, inflammation, and host defense. on light microscopy. Granulocytes are produced in the bone

marrow (myelopoiesis, 3-4 days maturation) and are part of the innate immune system.

Granulocyte Count

A granulocyte count measures the number of neutrophils, eosinophils, and basophils in the blood and helps assess infection, inflammation, and bone-marrow function.

Granulocytic Sarcoma

A neoplastic process affecting granulocytic sarcoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Granulocytopenia

An abnormally low number of granulocytes, especially neutrophils, which can increase susceptibility to bacterial and fungal infection.

Granuloma

A distinctive pattern of chronic inflammation characterized by the aggregation of modified macrophages (epithelioid histiocytes), often with multinucleated giant cells (Langhans or foreign-body type), surrounded by lymphocytes. Granulomas form when macrophages cannot eliminate a persistent antigen or pathogen.

Granuloma Annulare

A benign, noninfectious inflammatory skin condition that causes raised red, pink, or skin-colored bumps arranged in rings, often with clearer skin in the center. It commonly affects the hands, feet, or elbows and may cause little or no discomfort. Widespread disease may be associated with diabetes or thyroid disease, but the cause is often unknown.

Granuloma Inguinale

A chronic sexually transmitted infection that causes ulcerative lesions of the genital region.

Granulomatosis

A disorder characterized by formation of granulomas, which are organized collections of immune cells caused by chronic inflammation.

Granulomatosis With Polyangiitis

GPA (formerly Wegener granulomatosis): an ANCA-associated small-vessel necrotizing vasculitis affecting the upper and lower respiratory tract and kidneys.

Alternate Names:

Wegeners Granulomatosis (Granulomatosis With Polyangiitis)

Granulomatosis With Polyangiitis

A systemic vasculitis affecting small to medium vessels, characterized by necrotizing granulomatous inflammation of the respiratory tract and glomerulonephritis. Presents with sinusitis, pulmonary nodules, and renal involvement. Associated with c-ANCA/PR3 antibodies.

Alternate Names:

Granulomatosis with polyangiitis; Wegener granulomatosis

Granulomatous Amebic Encephalitis

A rare, usually fatal central nervous system infection caused by free-living amoebae such as *Acanthamoeba* species, typically affecting immunocompromised individuals. It presents with a subacute to chronic meningoencephalitis and forms granulomatous lesions in the brain.

Granulomatous Colitis

Inflammation of the colon in which granulomas are found on tissue examination, often associated with Crohn disease but also possible with infections or other inflammatory conditions.

Granulomatous Inflammation

A distinctive pattern of chronic inflammation characterized by organized collections of activated macrophages that have undergone morphological transformation into epithelioid cells, often surrounded by a rim of lymphocytes and occasionally fibroblasts.

Granulomatous Mastitis

A chronic inflammatory breast disease characterized by noncaseating granulomas after other causes, especially infection and sarcoidosis, have been ex-

cluded. It may present as a painful mass, abscesses, or draining sinuses.

Granulosa Cell

A granulosa cell is a cell surrounding an ovarian egg that supports its development and produces hormones such as estrogen and inhibin.

Granulosa Cell Tumor

An estrogen-secreting ovarian sex cord-stromal tumor that can cause precocious puberty, endometrial hyperplasia, or carcinoma. Generally low-grade with a tendency to late recurrence.

Granzyme

A protease released by cytotoxic T lymphocytes and natural killer cells that enters target cells through perforin-associated pores and promotes programmed cell death.

Grasp Reflex

Grasp Reflex is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Grass Allergy

Hypersensitivity reaction to grass pollen, causing allergic rhinitis (hay fever) with symptoms including sneezing, nasal congestion, itchy eyes, and throat irritation. Seasonal, typically spring through fall. Treatment includes antihistamines, nasal corticosteroids, and allergen avoidance.

Alternate Names:

Hay fever; seasonal allergic rhinitis

Grass And Weed Killer Poisoning

Toxic exposure to herbicides containing glyphosate, 2,4-D, or other chemicals. Symptoms range from mild skin and eye irritation to severe gastrointestinal, respiratory, and neurological effects depending on the product and exposure route. Requires immediate medical attention.

Alternate Names:

Herbicide poisoning; pesticide poisoning

Graves Disease

An autoimmune disease in which antibodies stimulate the thyroid gland to make too much thyroid hormone, causing hyperthyroidism. It is the most common cause of hyperthyroidism and may cause an enlarged thyroid (goiter) and eye problems.

Gravida

The number of times a person has been pregnant, regardless of pregnancy outcome; the current pregnancy is included in the count.

Gravidity

Gravidity is the number of times a person has been pregnant, including the current pregnancy and pregnancies that did not result in a live birth.

Gravitropism

Gravitropism is the growth of a plant in response to gravity, such as roots growing downward and shoots growing upward.

Gray (Gy)

The SI unit of absorbed radiation dose, equal to one joule of ionizing radiation energy deposited per kilogram of matter. It describes physical energy absorption and differs from the sievert, which incorporates biologic weighting.

Alternate Names:

Gy

Gray Baby Syndrome

A serious form of chloramphenicol toxicity in newborns, caused by immature drug metabolism and characterized by abdominal distension, vomiting, cyanosis or gray skin color, cardiovascular collapse, and potentially death.

Gray Matter

Regions of the brain and spinal cord composed primarily of nerve cell bodies, dendrites, and synapses, responsible for processing information.

Gray'S Anatomy

A major illustrated human-anatomy reference book,

first published in 1858 by Henry Gray and Henry Vandyke Carter and subsequently revised in many editions.

Greater Curvature

Convex lateral stomach border from gastroesophageal junction to pylorus, approximately four times longer than the lesser curvature. Attachment site for the greater omentum. Blood supply from short gastric and left gastroepiploic vessels. Common site for gastric ulcers and cancer.

Greater Omentum

A fold of fatty peritoneal tissue that hangs from the stomach and partly covers the abdominal organs.

Greater Trochanter

Large quadrilateral lateral proximal femoral prominence. Insertion for gluteus medius/minimus and piriformis. Palpable landmark and site of trochanteric bursa. Intertrochanteric fractures between trochanters are extracapsular with lower avascular necrosis risk because periosteal blood supply is preserved.

Greater Trochanteric Pain Syndrome

Pain over the lateral hip centered on the greater trochanter, commonly caused by tendinopathy or bursitis of the gluteal tendons. Presents with lateral hip pain worse with walking, climbing stairs, or lying on the affected side. Treatment includes physical therapy and activity modification.

Alternate Names:

Trochanteric bursitis; gluteal tendinopathy

Greater Vestibular Glands

Paired glands near the vaginal opening that secrete mucus into the vestibule, contributing to lubrication. They are also called Bartholin glands.

Alternate Names:

Bartholin glands; greater vestibular glands

Green Blindness

A clinical disorder or finding related to green blindness; evaluation identifies the underlying mechanism,

affected site, severity, and relevant complications.

Green Nail Syndrome

Green discoloration of one or more nails, usually caused by colonization or infection with *Pseudomonas aeruginosa*, often in an onycholytic or chronically moist nail.

Green Sickness

A clinical disorder or finding related to green sickness; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Green Stool

Stool with a green color that may result from diet, food coloring, rapid intestinal transit, medicines, or infection.

Greenstick Fracture

An incomplete fracture in which a young bone bends and cracks rather than breaking all the way through.

Grey Ankle Phenomenon

A gray or dusky discoloration around the ankle associated with chronic venous insufficiency and hemosiderin deposition; it should be interpreted with other signs of venous disease.

Grey Matter

Grey Matter is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Grey Turner's Sign

Bluish or violaceous ecchymosis of the flanks caused by retroperitoneal bleeding tracking through the abdominal wall. It is classically associated with severe haemorrhagic pancreatitis but may occur with other retroperitoneal haemorrhage.

Grid Implant

A flexible electrode array placed on or near the brain or another tissue surface to record electrical activity or deliver stimulation.

Grief

The natural emotional response to loss, particularly the death of a loved one, but also following other significant losses such as divorce, job loss, or declining health. It encompasses a range of feelings including sadness, anger, guilt, and numbness, often occurring in waves rather than linear stages.

Grief (Loss, Grief, And Bereavement)

The natural emotional response to loss, encompassing the process of coping with the death of a loved one or other significant losses. Includes grief (emotional response), loss (the event), and bereavement (the period of mourning). May involve physical, emotional, social, and spiritual dimensions.

Alternate Names:

Bereavement; mourning

Grifulvin

Grifulvin is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

Grimontia Hollisae

A biomedical term referring to *grimontia hollisae*; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Grip Strength

The force generated when the hand closes around an object, commonly measured with a dynamometer to assess hand function, muscle strength, nutrition, or rehabilitation progress.

Gripping

Cramping or spasmodic abdominal pain, often caused by contractions or obstruction of a hollow organ.

Grippe

An older name for influenza, a viral respiratory illness that commonly causes fever, cough, body aches, and fatigue.

Griscelli Syndrome

Three types: Type 1 (MYO5A mutation): primary neurologic impairment, no immunodeficiency; Type 2 (RAB27A mutation): immunodeficiency + partial albinism, HLH risk; Type 3 (MLPH mutation): only partial albinism. Type 2: silvery hair, large melanosomes in melanocytes, defective cytotoxic granule release -> HLH.

Griseofulvin

Griseofulvin is an oral antifungal that deposits in newly formed keratin and disrupts dermatophyte mitosis, treating infections of skin, hair, and nails; treatment is prolonged and hepatic or drug-interaction risks apply.

Groin

The region where the lower abdomen meets the upper thigh, containing the inguinal canal and related muscles, vessels, nerves, and lymph nodes.

Groin Lump

A palpable mass in the inguinal region, which may represent lymphadenopathy, hernia, cyst, tumor, or other pathology. Requires medical evaluation to determine the cause and appropriate treatment.

Alternate Names:

Inguinal mass

Groin Pain

Pain in the inguinal region, which may originate from musculoskeletal, genitourinary, gastrointestinal, or vascular causes. Common causes include muscle strain, hernia, lymphadenopathy, and hip pathology. Requires clinical evaluation for diagnosis.

Alternate Names:

Inguinal pain

Groin Pain (Male)

Pain in the groin or adjacent lower abdomen, hip, or testicle in a male; causes include muscle strain, hernia, infection, urinary stones, or referred pain.

Groove

Groove is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gross Examination

The macroscopic, naked-eye inspection of a specimen in the pathology laboratory, performed before microscopic sectioning and the essential first step in pathologic diagnosis of resected tissues and organs.

Gross Hematuria

Visible blood in the urine, appearing pink, red, or brown. Causes include urinary tract infections, kidney stones, bladder or kidney cancer, trauma, and glomerular disease. Requires medical evaluation to determine the underlying cause.

Alternate Names:

Visible hematuria

Gross Motor Control

The ability to use large muscle groups for coordinated movements such as walking, running, jumping, and maintaining posture. Develops progressively from infancy through childhood and is assessed as part of developmental milestones.

Alternate Names:

Large motor skills

Gross Motor Skills

The ability to use large muscle groups for movement and posture, developing in a predictable sequence in infancy/childhood: head control (3 months), sitting (6 months), crawling (9 months), standing (10-12 months), walking (12-18 months), running/jumping (2-3 years), hopping and balance (3-5 years).

Gross Virus

gross virus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission, tissue tropism, and ability to cause disease.

Ground Itch

A clinical disorder or finding related to ground itch;

evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Ground Substance

ground substance is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Ground-Glass Opacity

A hazy area on a chest CT scan in which underlying lung vessels remain partly visible. It is a radiologic finding, not a diagnosis, and may result from infection, inflammation, fluid, bleeding, scarring, or sometimes a tumor; its meaning depends on the pattern and clinical context.

Group A Strep

Group A Streptococcus (*Streptococcus pyogenes*), a gram-positive coccus in chains, beta-hemolytic. Infections: pharyngitis/tonsillitis, impetigo, erysipelas, cellulitis, scarlet fever, necrotizing fasciitis, streptococcal toxic shock syndrome, pneumonia, and puerperal sepsis.

Group A Streptococcus

Streptococcus pyogenes, a bacterium that can cause pharyngitis, skin infections, invasive disease, and immune-mediated complications.

Group B Strep

Group B Streptococcus (GBS, *Streptococcus agalactiae*): a gram-positive coccus colonizing the GI and genitourinary tract in 10-30 percent of women; major cause of neonatal sepsis and meningitis.

Group B Strep

Group B Streptococcus: bacteria that can colonize the gastrointestinal and genital tracts, potentially causing serious infections in newborns during delivery. Routine screening in pregnancy guides intrapartum antibiotic prophylaxis.

Alternate Names:

Group B Streptococcus; GBS colonization

Group B Strep Disease

Illness caused by group B Streptococcus bacteria, which can cause serious infections in newborns and infections in pregnant people or adults with medical risks.

Group B Streptococcal Disease

Infection caused by group B Streptococcus bacteria, which can be serious in newborns and vulnerable adults.

Group B Streptococcal Infection In Pregnancy

Maternal colonization or infection with Streptococcus agalactiae, which can be transmitted to the newborn during labor and cause serious early-onset infection. Screening and intrapartum management reduce neonatal risk.

Group B Streptococcal Septicemia Of The Newborn

Serious bloodstream infection caused by Group B Streptococcus in neonates, typically acquired during birth. Presents with fever, lethargy, poor feeding, and respiratory distress. Requires prompt antibiotic treatment and supportive care.

Alternate Names:

Neonatal GBS sepsis

Group B Streptococcus

A gram-positive bacterium (Streptococcus agalactiae) colonizing the genitourinary and gastrointestinal tracts. Asymptomatic vaginal colonization occurs in 20-30% of pregnant women. Screening is performed at 36-37 weeks gestation via rectovaginal swab culture.

Group B Streptococcus - Pregnancy

Colonization with Group B Streptococcus during pregnancy, which can cause neonatal sepsis, pneumonia, and meningitis during delivery. Routine screening at 36-37 weeks gestation identifies colonized women who receive intrapartum antibiotic prophylaxis.

Alternate Names:

GBS screening; intrapartum GBS prophylaxis

Group Practice

A clinical condition or finding involving group practice. Its defining features, causes, evaluation, and management depend on the clinical context.

Group Therapy

A form of psychotherapy where a small group of individuals with similar issues meet to discuss, interact, and develop coping strategies under the guidance of a trained therapist. Used for depression, anxiety, substance use disorders, grief, and chronic illness. Benefits include peer support and shared experiences.

Grover Disease

A transient or recurrent acantholytic dermatosis causing itchy red papules or papulovesicles, usually on the trunk of middle-aged or older adults; heat, sweating, and occlusion may aggravate it.

Growing Pains

Recurrent, bilateral leg pain in children ages 3-12, typically occurring in the late afternoon or evening and resolving by morning. Pain is deep, aching in the calves, shins, and thighs (not joints). No limping, fever, swelling, or functional impairment.

Growth

The process of increasing in physical size and development, including physical, cognitive, and emotional maturation. In medicine, growth is monitored using growth charts and anthropometric measurements to assess health and development in children.

Growth Chart

A graphical representation of growth (weight, height/length, head circumference, BMI) plotted against age, standardized by population (WHO growth standards 0-5 years; CDC growth charts 2-20 years; percentiles/z-scores).

Growth Cone

growth cone is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Growth Disorder

A clinical disorder or finding related to growth disorder; evaluation identifies the underlying mechanism, affected site, severity, and relevant complications.

Growth Factor

Proteins that stimulate cell growth, proliferation, differentiation, and survival. Major families: EGF (epidermal growth factor), FGF (fibroblast growth factor), PDGF (platelet-derived), VEGF (vascular endothelial), TGF-beta (transforming), NGF (nerve), IGF (insulin-like), HGF (hepatocyte).

Growth Failure

Abnormally slow physical growth or inadequate weight gain compared with expected development.

Growth Hormone

A hormone released by the anterior pituitary that promotes growth partly through insulin-like growth factor 1 and also affects protein, fat, and carbohydrate metabolism.

Growth Hormone Deficiency

Insufficient secretion of growth hormone from the anterior pituitary, causing short stature in children and metabolic effects in adults. In children: delayed growth, short stature, delayed bone age, and increased fat mass. In adults: decreased muscle mass, increased fat mass, reduced bone density, fatigue, and dyslipidemia.

Growth Hormone Deficiency - Children

Insufficient growth hormone production in children, resulting in short stature, delayed bone age, and reduced growth velocity. Causes include congenital anomalies, tumors, radiation, or idiopathic. Diagnosis involves GH stimulation tests. Treatment with recombinant GH.

Alternate Names:

Pediatric GH deficiency

Growth Hormone Physiology

Growth hormone is secreted in a pulsatile pattern by pituitary somatotroph cells regulated by hypothalamic

amic GHRH which stimulates release and somatostatin which inhibits release. GH acts directly on tissues and indirectly through IGF-1 produced primarily by the liver.

Growth Hormone Stimulation Test

Laboratory tests to evaluate growth hormone secretion by stimulating the pituitary gland with insulin, arginine, glucagon, or clonidine. Used to diagnose GH deficiency when random GH levels are inconclusive. Peak GH <10 ng/mL suggests deficiency.

Alternate Names:

GH stimulation test

Growth Hormone Suppression Test

Laboratory test to evaluate excessive growth hormone secretion, typically using oral glucose tolerance. In normal individuals, glucose suppresses GH to <1 ng/mL. Failure to suppress suggests acromegaly or gigantism.

Alternate Names:

GH suppression test; oral glucose tolerance test for acromegaly

Growth Hormone Test

Laboratory measurement of growth hormone levels in the blood, used to evaluate GH deficiency or excess. Random GH levels have limited utility; stimulation or suppression tests are more informative.

Alternate Names:

GH level; serum growth hormone

Growth Medium

A nutrient preparation supporting microbial multiplication in vitro, supplying carbon, nitrogen, minerals, and growth factors in liquid or solid form.

Growth Plate Fractures

Injuries involving the cartilage growth plates at the ends of growing children's bones, with possible effects on future bone growth.

Growth Retardation

Abnormally slow physical growth or failure to reach

expected height or weight for age and developmental stage. Causes include inadequate nutrition, chronic systemic disease, endocrine or genetic disorders, malabsorption, psychosocial deprivation, and constitutional variation; assessment uses growth charts and clinical context.

Growth Scan

An ultrasound examination used to assess fetal size, growth pattern, amniotic fluid, and sometimes blood flow. Measurements are compared with gestational-age standards to identify possible growth restriction or excessive growth.

Gtp Binding

GTP binding is the attachment of guanosine triphosphate to a protein, often switching that protein into an active state for cell signaling.

Gtt.

An abbreviation from the Latin *guttae*, meaning drops; because abbreviations can be misread, prescriptions should state liquid doses clearly.

Guaifenesin

An expectorant used to loosen respiratory mucus and make coughing more productive. It provides symptomatic relief in some respiratory illnesses; dosing depends on the formulation and patient.

Guanazole

A medicine or chemical compound called guanazole. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Guanethidine

Guanethidine is a medicine or pharmacologic product; its indication, dose, interactions, contraindications, and adverse effects depend on the specific agent and patient.

Guanfacine

Guanfacine is a centrally acting alpha-2A adrenergic agonist used for hypertension and, in extended-release form, ADHD; sedation, hypotension, brady-

cardia, and rebound hypertension after abrupt withdrawal are important risks.

Guanine

Guanine is a purine nitrogenous base in DNA and RNA; it pairs with cytosine and is present in nucleotides such as GMP and GTP that support energy transfer and signaling.

Guanosine

A purine nucleoside composed of guanine linked to ribose and used as a building block of RNA and guanine nucleotides.

Guanosine Diphosphate

A guanine nucleotide containing two phosphate groups that participates in cellular energy transfer and G-protein signaling.

Guanosine Monophosphate

A guanine nucleotide containing one phosphate group and serving as a component of RNA and a precursor of other guanine nucleotides.

Guanosine Triphosphate

A guanine nucleotide that provides energy and acts as a molecular switch in protein synthesis, cytoskeletal regulation, and G-protein signaling.

Guanosinetriphosphatase

An enzyme that hydrolyzes guanosine triphosphate to guanosine diphosphate and phosphate, regulating signaling and other cellular processes.

Guanylate Cyclase

Guanylate cyclase is an enzyme that converts GTP to cyclic GMP, a second messenger involved in nitric-oxide signaling, smooth-muscle relaxation, phototransduction, and intestinal fluid secretion.

Guardianship

A legal arrangement in which an appointed person makes decisions for someone unable to make them independently.

Alternate Names:

Legal guardianship

Guevedoces

A term used in the Dominican Republic for individuals with 46,XY differences in sex development caused by 5-alpha-reductase type 2 deficiency; they may have female-appearing or ambiguous external genitalia at birth and increased virilization at puberty.

Guide Device

A guide device is a tool used to direct, position, or stabilize another medical instrument during a procedure.

Guided Imagery

Guided imagery is a relaxation technique that uses imagined sights, sounds, or other sensations to promote calm and sometimes help manage pain or stress.

Guided Tissue Regeneration

Periodontal procedure using barrier membrane to promote regeneration of bone, cementum, periodontal ligament.

Guillain-Barre Syndrome

An acute, immune-mediated polyneuropathy typically presenting with ascending paralysis following an antecedent infection (*Campylobacter jejuni*, CMV, EBV, Zika). Variants: acute inflammatory demyelinating polyneuropathy (AIDP, most common in North America), acute motor axonal neuropathy (AMAN, more common in Asia).

Alternate Names:

AIDP

Guinea Worm

A parasitic infection caused by *Dracunculus medienensis*, acquired by drinking water containing infected copepods and characterized by emergence of a long worm through the skin.

Gullet

The esophagus, the tube carrying food from the

throat to the stomach.

Alternate Names:

Esophagus

Gum

Gum is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gum Biopsy

Histological examination of gingival tissue obtained by biopsy, used to diagnose gingival diseases, infections, or malignancies. May involve excisional or incisional biopsy techniques.

Alternate Names:

Gingival biopsy

Gum Disease

Inflammation or infection affecting the gums and supporting tissues of the teeth.

Alternate Names:

Periodontal disease Periodontitis (Gum Disease)

Gum Disease, Gingivitis

Gingivitis: inflammation of the gingiva (gums) without loss of supporting bone. Characterized by red, swollen, bleeding gums. Commonly caused by plaque accumulation. Reversible with good oral hygiene and professional cleaning.

Alternate Names:

Gingivitis

Gum Disease, Periodontitis

Periodontitis: progressive inflammation and destruction of the supporting structures of the teeth, including the periodontal ligament and alveolar bone. Results from untreated gingivitis. Can lead to tooth loss. Requires professional treatment including scaling and root planing.

Alternate Names:

Periodontitis

Gum Problems

Gum problems include inflammation, bleeding, recession, ulcers, infection, trauma, and growths.

Causes include plaque, tobacco, dry mouth, medicines, nutritional or immune disease, and poorly fitting appliances; persistent lesions or bleeding need dental assessment.

Gumma

A soft, non-cancerous granulomatous lesion occurring in tertiary syphilis, characterized by central necrosis surrounded by inflammatory cells. Can affect any organ but commonly occurs in skin, bone, and liver. Treatment with antibiotics.

Alternate Names:

Syphilitic gumma

Gummata

Gummata is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gummy Smile

Excessive gingival display when smiling. Caused by hypermobile lip, vertical maxillary excess, altered passive eruption. Treatment: surgery, Botox, orthodontics.

Gums

The firm pink tissue, also called gingiva, surrounding and supporting the teeth. Healthy gums usually do not bleed with gentle brushing; swelling or bleeding can indicate gum disease.

Alternate Names:

Gingiva

Gums - Swollen

Gingival swelling: enlargement of the gum tissue, which may be caused by inflammation (gingivitis, periodontitis), infection, medications (phenytoin, cyclosporine), systemic diseases, or allergic reactions. May cause pain, bleeding, and difficulty eating.

Alternate Names:

Swollen gums; gingival enlargement

Gunning'S Splint

Gunning's splint is a historical dental device used to stabilize broken jaws and keep the teeth aligned

while the bones heal.

Gunshot Wound

An injury produced by a projectile discharged from a firearm; forensic classification by range and direction. Entrance wound: rounded/ovoid defect with an abraded ring and often a zone of soot (close range) or stippling/tattooing (intermediate range); contact wounds show muzzle imprint.

Alternate Names:

Ballistic trauma aftercare

Gustation

The physiological chemosensory special sense of taste perception, mediated by specialized taste receptor cells organized within taste buds located predominantly on the fungiform, foliate, and circumvallate papillae of the dorsal tongue, as well as the soft palate, pharynx, and epiglottis. Discriminates five primary taste modalities: sweet, umami (savory), and bitter (transduced via G-protein-coupled receptors and second messenger cascades involving gustducin), and salty and sour (transduced via direct ion flux through epithelial sodium channels [ENaC] and proton-permeable OTO1 channels). Chemosensory signals travel to the solitary tract nucleus in the medulla via cranial nerves VII (facial), IX (glossopharyngeal), and X (vagus), projecting to the thalamus and primary gustatory cortex in the anterior insula and frontal operculum.

Gustatory

Gustatory is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gustatory Sweating

Sweating triggered by eating or thinking about food, usually over the cheek or temple after injury or surgery involving the parotid region; it is also called Frey syndrome.

Gut

Gut is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gut Epithelium

gut epithelium is a tissue, cell, or body structure whose location and function help explain its role in normal physiology and disease.

Gut Microbiome

The complex community of trillions of microorganisms, including bacteria, viruses, and fungi, residing in the gastrointestinal tract. The gut microbiome plays a crucial role in digestion, immune function, vitamin synthesis, and protection against pathogens.

Guthrie Test

Guthrie test is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

Guttae

Guttae is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Guttate Psoriasis

An acute eruption of numerous small, scaly, drop-like psoriatic papules and plaques, often following streptococcal pharyngitis in children or young adults. Diagnosis is clinical; the eruption may resolve spontaneously or evolve into chronic plaque psoriasis.

Guttural

Guttural is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gynaecologist

A medical doctor who specializes in the health of the female reproductive system (vagina, cervix, uterus, fallopian tubes, ovaries) and breasts.

Gynaecology

Gynaecology is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gynaecomastia

The benign enlargement of breast tissue in males. Pathophysiology: an imbalance between estrogen (stimulates breast tissue growth) and androgen (suppresses) activity, resulting in increased estrogen-to-testosterone ratio.

Gynatresia

Congenital or acquired obstruction or absence of an opening in the female genital tract, potentially causing retained menstrual blood and outflow obstruction.

Gynecic

Gynecic is an anatomical structure or physiologic function; its location, mechanism, and associated findings determine its clinical significance.

Gynecoid Pelvis

A commonly described pelvic shape with a rounded inlet, relatively broad dimensions, and a spacious outlet; it is associated with typical female pelvic anatomy but individual variation is substantial.

Gynecological Examination

A gynecological examination assesses the female reproductive organs and may include inspection, a pelvic examination, and screening tests when appropriate.

Gynecologist

A gynecologist is a physician who provides care for the female reproductive system, including preventive care, diagnosis, and treatment.

Gynecology

The medical specialty concerned with the health of the female reproductive system (uterus, ovaries, fallopian tubes, cervix, vagina, and vulva).

Gynecomastia

Enlargement of breast tissue in males, often bilateral, occurring physiologically in neonates, during puberty (40-60% of boys), and in aging men. Pathologic causes include Klinefelter syndrome, testicular

tumors, medications (spironolactone, cannabis), and liver disease. Persistent or asymmetric gynecomastia warrants evaluation.

Alternate Names:

Man Boobs (Gynecomastia)

Gyrate Atrophy

An inherited retinal disorder causing progressive loss of peripheral vision and night vision.

Gyrus

A ridge or convolution on the surface of the cerebral cortex, separated by sulci (grooves). The folded structure triples the surface area of the brain (approximately 2500 cm²) while fitting within the cranial vault.

Gardasil

A brand of vaccine that protects against infection with selected human papillomavirus (HPV) types. It helps prevent HPV-related cancers and genital warts and does not treat an existing HPV infection.

Gastrointestinal Cancer

Cancer arising in the digestive tract or related organs, including the esophagus, stomach, intestine, rectum, liver, pancreas, and biliary tract. Symptoms and treatment depend on the organ, tumor type, and stage.

Gastrointestinal Disease

Any disorder affecting the digestive tract or related organs. Examples include reflux, ulcers, inflammatory bowel disease, infection, malabsorption, liver disease, and cancer.

Gastrointestinal Health

The normal structure and function of the digestive system, including digestion, absorption, bowel movement, and a balanced relationship with gut microorganisms. Symptoms such as bleeding, persistent pain, vomiting, or unexplained weight loss need medical assessment.

Gastrointestinal Stromal Tumor (GIST)

A tumor arising from specialized cells in the wall of the gastrointestinal tract, most often the stomach or small intestine. Many have activating changes in *KIT* or *PDGFRA*; treatment may include surgery or targeted medicines.

Genital Mycoplasmas

Mycoplasma species that can colonize or infect the genital or urinary tract, including *Mycoplasma genitalium*. Infection may cause urethritis, cervicitis, pelvic inflammatory disease, or few symptoms and requires appropriate laboratory testing and treatment.

Genital Wart

A wart in the genital or anal area caused by certain types of human papillomavirus. Warts may be flat or raised and can recur; treatment removes visible lesions but may not eliminate the virus immediately.

GLP-1 Agonists

Medicines that mimic glucagon-like peptide-1, increasing glucose-dependent insulin release, reducing glucagon, slowing stomach emptying, and often reducing appetite. They are used for selected diabetes or weight-management indications and may cause gastrointestinal effects.

Glucagon-like Peptide-1

A hormone released mainly by the intestine after eating. It helps regulate blood glucose by enhancing glucose-dependent insulin secretion, reducing glucagon release, slowing stomach emptying, and influencing appetite.

Glucose Test

A laboratory or point-of-care test that measures glucose in blood or another sample. It is used to screen for, diagnose, or monitor diabetes and low or high blood sugar; interpretation depends on timing, fasting status, and clinical context.

Glycation

A nonenzymatic chemical reaction in which sugars attach to proteins, lipids, or nucleic acids. It

contributes to advanced glycation end-products and tissue injury, especially during prolonged high blood glucose.

Glycemia

The concentration of glucose in the blood. It is controlled by insulin, glucagon, the liver, food intake, activity, illness, and other hormones; abnormal glycemia means hypoglycemia or hyperglycemia.

Gonadotropin Hormone

A hormone that acts on the ovaries or testes. The pituitary gonadotropins follicle-stimulating hormone and luteinizing hormone regulate reproductive development, ovulation, sperm production, and sex-hormone production.

Granular Parakeratosis

A rare skin condition causing brown or reddish, sometimes itchy patches or papules, often in skin folds such as the armpits. It reflects abnormal keratinization and may be difficult to distinguish from other rashes.

Graves' Disease

An autoimmune disorder in which antibodies stimulate the thyroid, causing hyperthyroidism. Symptoms may include weight loss, heat intolerance, tremor, palpitations, anxiety, and sometimes eye disease or skin changes.

Guarana

A plant whose seeds contain caffeine and other stimulants. It is used in energy products and supplements; excessive intake may cause anxiety, insomnia, rapid heartbeat, high blood pressure, or interactions with medicines.

Guillain-Barré Syndrome

An uncommon immune-mediated disorder in which peripheral nerves are attacked, usually causing rapidly progressive weakness and reduced reflexes. It can impair breathing or swallowing and requires urgent medical assessment and monitoring.

Gulf War Syndrome

A term used for a group of persistent symptoms reported by some Gulf War veterans, such as fatigue, pain, cognitive difficulties, gastrointestinal symptoms, and respiratory problems. It is also called Gulf War illness or chronic multisymptom illness; causes are complex and treatment focuses on individual symptoms and function.

Gut-Brain Axis

The two-way communication network linking the digestive tract, gut microorganisms, immune system, hormones, and brain through neural, chemical, and immune signals. It can influence digestion, appetite, stress responses, and mood, but many proposed treatments remain under study.

H

21-Hydroxylase Deficiency

An inherited condition in which the adrenal glands cannot make enough of certain hormones. It can cause salt loss, low blood pressure, and excess male-type hormones, and is the most common cause of congenital adrenal hyperplasia.

H And E Staining

H and E Staining is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

H And H

Abbreviation for hemoglobin and hematocrit, two blood measurements commonly used to assess red-blood-cell levels and anemia.

H And P

Abbreviation for history and physical examination, the clinical history and examination performed to assess a patient.

HER2-Positive Breast Cancer

A distinct molecular subtype of breast cancer defined by overexpression of the human epidermal growth factor receptor 2 (HER2/neu) protein or amplification of the *ERBB2* gene, occurring in approximately 15–20% of invasive breast carcinomas. Historically aggressive, but highly responsive to HER2-targeted therapies such as trastuzumab and pertuzumab.

H Influenzae Meningitis

A serious infection of the coverings of the brain

and spinal cord caused by *Haemophilus influenzae* bacteria. It may cause fever, headache, stiff neck, confusion, seizures, or brain injury, especially in unvaccinated children.

H1N1 Flu (Swine Flu)

Influenza caused by the H1N1 virus strain, spread through respiratory droplets and capable of causing ordinary or severe flu illness.

Alternate Names:

Influenza, H1N1 Influenza, Swine Flu

H1N1 Influenza

Influenza A infection caused by an H1N1 virus strain. It usually produces fever, cough, sore throat, myalgia, and fatigue but can cause viral pneumonia and severe respiratory failure in high-risk patients.

H1N1 Influenza (Swine Flu)

H1N1 influenza is a strain of influenza A virus that causes an acute respiratory illness with fever, cough, myalgia, and variable pulmonary complications.

H2 Blockers

Medicines that reduce stomach acid. They are used for heartburn, indigestion, stomach ulcers, and some conditions that cause too much acid.

H2 Receptor Antagonists Overdose

H2 receptor antagonists overdose involves toxic or environmental exposure to h2 receptor antagonists overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Habenula

A small brain structure involved in processing reward, unpleasant experiences, stress, and motivation.

Habit

A repeated behavior or pattern of action that may be ordinary, helpful, or harmful; in clinical assessment, its frequency, control, and effect on functioning determine whether it is a concern.

Habituation

Habituation is a developmental, immunologic, reproductive, behavioral, environmental, or healthcare concept used in medicine or biomedical research.

Habitus

A person's general body build, physical appearance, or constitutional type as observed clinically.

Hache'S Sign

Hache's sign is a clinical sign historically described in assessment of certain vascular disorders; its value depends on the examination findings and clinical setting.

Haem

The iron-containing part of hemoglobin that allows red blood cells to carry oxygen.

Haemangioma

A usually harmless growth made of extra blood vessels. It is common in babies and may appear as a red or purple mark or lump.

Haemarthrosis

Bleeding into a joint, causing swelling, pain, and reduced movement. It may follow an injury or occur with hemophilia, blood-thinning medicines, surgery, or certain joint disorders.

Haematemesis

Haematemesis is vomiting blood, usually from bleeding in the esophagus, stomach, or first part of the small intestine.

Haematin

Haematin is an oxidized form of haem produced when hemoglobin is broken down.

Haematinics

Haematinics are nutrients or medicines, such as iron, vitamin B12, and folate, needed to make healthy red blood cells.

Haematite

Haematite is an iron-containing mineral; it is not a blood disorder, although its name derives from its blood-red appearance in powdered form.

Haematocele

A haematocele is a collection of blood within a body cavity or tissue, such as the scrotum after injury or surgery.

Haematocolpos

Haematocolpos is accumulation of menstrual blood in the vagina, usually because the vaginal outlet is blocked.

Haematocrit

The percentage of blood made up of red blood cells. The expected range varies with age, sex, pregnancy, altitude, and the laboratory.

Haematogenous

Spread through the bloodstream, as when an infection or cancer moves from one body area to another.

Haematologist

A medical doctor who specializes in the diagnosis, treatment, and prevention of diseases of the blood and blood-forming organs.

Haematoma

A localised collection of blood outside blood vessels, usually clotted, within an organ or tissue. Haematomas form when trauma or disease causes a blood vessel to rupture.

Haematometra

Haematometra is accumulation of menstrual blood in the uterus, usually because the cervical or vaginal outflow tract is blocked.

Haematomyelia

Haematomyelia is bleeding into the spinal cord, which can cause weakness, sensory loss, or paralysis.

Haematopericardium

Haematopericardium is blood within the sac around the heart and may cause cardiac tamponade if it compresses the heart.

Haematopoiesis

Haematopoiesis is the production of blood cells, mainly in the bone marrow.

Haematoporphyria

Haematoporphyria is an older term related to disorders of porphyrin metabolism that can cause photosensitivity and other symptoms.

Haematosalpinx

Haematosalpinx is blood collected in a fallopian tube, often related to ectopic pregnancy, endometriosis, or pelvic injury.

Haematuria

Blood in the urine. It may be visible or found only with a urine test and can have many causes, including infection, stones, medicines, or kidney disease.

Haemochromatosis

Haemochromatosis is a disorder in which the body absorbs and stores too much iron, potentially damaging the liver, heart, pancreas, and joints.

Haemodialysis

A treatment for severe kidney failure in which a machine filters waste and extra fluid from the blood.

Haemoflagellate

A haemoflagellate is a flagellated parasite that lives

in blood or tissues, such as the organisms that cause sleeping sickness and Chagas disease.

Haemoglobin

Haemoglobin is the iron-containing protein in red blood cells that carries oxygen from the lungs and helps transport carbon dioxide back to the lungs.

Haemoglobinopathy

A haemoglobinopathy is an inherited disorder affecting the structure or production of hemoglobin, such as sickle-cell disease or thalassemia.

Haemoglobinuria

Haemoglobinuria is hemoglobin in the urine, often caused by destruction of red blood cells within the bloodstream.

Haemoglobinuria (Hemoglobinuria)

The presence of free hemoglobin in the urine, often causing red or dark-brown discoloration. It may result from intravascular hemolysis or other blood disorders.

Alternate Names:

Hemoglobinuria

Haemolysis

The breakdown of red blood cells, which releases hemoglobin into the blood. It can happen normally as old cells are removed or too quickly because of disease.

Haemolytic Anaemia

Haemolytic anaemia is anemia caused by red blood cells being destroyed faster than the bone marrow can replace them.

Haemolytic Disease Of The Newborn

Destruction of a newborn's red blood cells by maternal antibodies that crossed the placenta, causing anemia and jaundice.

Haemoperitoneum

Haemoperitoneum is bleeding into the abdominal cavity, commonly from injury, a ruptured ectopic

pregnancy, or a bleeding organ.

Haemophilia

An inherited bleeding disorder in which the blood does not clot properly. Hemophilia A is caused by low factor VIII, and hemophilia B by low factor IX. It can cause prolonged bleeding or bleeding into joints and muscles.

Haemophilus

Haemophilus is a genus of bacteria that can colonize the respiratory tract and can cause illnesses such as ear infection, pneumonia, or meningitis.

Haemophilus Aegyptius

Haemophilus aegyptius is a bacterium associated with conjunctivitis and, rarely, severe bloodstream infection.

Haemophilus Haemolyticus

Haemophilus haemolyticus commonly colonizes the upper airway and can occasionally cause respiratory or invasive infection.

Haemophilus Infections

Haemophilus infections are bacterial infections that may affect the ears, sinuses, lungs, bloodstream, or meninges; risk varies by species and vaccination status.

Haemophilus Influenzae

A type of bacteria that can cause ear infections, pneumonia, meningitis, and other infections. Type b, or Hib, can cause severe disease in children, but vaccination greatly reduces this risk.

Haemophilus Paragallinarum

Haemophilus paragallinarum is a bacterium that causes infectious coryza, a respiratory disease of chickens; it is not a usual human pathogen.

Haemophilus Parainfluenzae

A small gram-negative bacterium that normally colonizes the upper respiratory tract but can rarely cause respiratory, bloodstream, or other opportunis-

tic infections.

Haemophilus Somnus

Haemophilus somnus, now commonly called Histophilus somni, is a bacterium that causes respiratory and other infections mainly in cattle.

Haemoptysis

Coughing up blood or blood-stained sputum from the lower respiratory tract.

Haemorrhage

British spelling of Hemorrhage; see Hemorrhage.

Haemorrhagic Disease Of The Newborn (Vitamin K Deficiency Bleeding)

Bleeding in a newborn or young infant caused by inadequate vitamin K-dependent clotting activity. It may occur early, classically, or late and can involve the brain or gastrointestinal tract.

Alternate Names:

Vitamin K Deficiency Bleeding

Haemorrhagic Fever

Haemorrhagic fever is a severe infection or illness that can damage blood vessels and cause bleeding, shock, and organ failure.

Haemorrhagic Fever With Renal Syndrome

Haemorrhagic fever with renal syndrome is a hantavirus infection that can cause fever, bleeding, low blood pressure, and sudden kidney dysfunction.

Haemorrhagic Stroke

A haemorrhagic stroke occurs when a blood vessel in or around the brain ruptures and causes bleeding that injures brain tissue.

Haemorrhoids

Enlarged symptomatic vascular cushions of the anal canal that may cause painless bright-red rectal bleeding, prolapse, itching, or discomfort.

Haemosiderin

Haemosiderin is an iron-storage pigment formed when iron accumulates in cells, often after repeated bleeding or excess iron.

Haemosiderosis

Haemosiderosis is excess deposition of iron-containing haemosiderin in tissues, which may follow transfusions, bleeding, or increased iron absorption.

Haemostasis

Haemostasis is the normal process that stops bleeding through blood-vessel constriction, platelet plugs, and clot formation.

Haemostat

A haemostat is a substance, device, or instrument used to control bleeding.

Haemothorax

Haemothorax is blood in the space between the lung and chest wall, usually caused by injury or a medical procedure.

Haff Disease

A clinical disorder related to haff disease; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hafnia

A genus of gram-negative intestinal bacteria; *Hafnia alvei* is the species most often identified in human specimens.

Hafnia Alvei

A gram-negative bacterium found in the intestine and environment that rarely causes opportunistic infection.

Hageman Factor

Hageman factor, also called factor XII, is a blood-clotting protein that helps initiate the contact pathway of coagulation.

Hailey-Hailey Disease

An inherited acantholytic disorder caused by pathogenic variants in *ATP2C1*, producing recurrent erosions and fragile vesicles in flexures such as the neck, axillae, and groins.

Hair

Keratinized filaments produced by follicles in the skin. Hair protects the scalp, contributes to temperature regulation and sensation, and grows through anagen, catagen, and telogen phases.

Hair Bleach Poisoning

Hair bleach poisoning involves toxic or environmental exposure to hair bleach poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Hair Bulb

The enlarged base of a hair follicle where the hair shaft is produced.

Hair Cells

Special cells in the inner ear that change sound vibrations and head movement into nerve signals for hearing and balance.

Hair Disease

A disorder affecting hair growth, the hair shaft, or the scalp; causes include genetics, inflammation, infection, medicines, and nutritional problems.

Hair Dye

Hair dye is a cosmetic product used to change hair color; some ingredients can cause skin irritation or allergic contact dermatitis.

Hair Dye Poisoning

Hair dye poisoning involves toxic or environmental exposure to hair dye poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Hair Follicle

A small tube in the skin that produces a hair. Each

follicle has a growth phase, a brief transition phase, and a resting phase.

Hair Loss

Loss or thinning of hair on the scalp or body. It may be temporary or permanent, patchy or widespread, and caused by genetics, illness, medicines, autoimmune disease, infection, or scarring of the scalp.

Alternate Names:

Alopecia (Hair Loss)

Hair Loss (Alopecia)

The partial or complete loss of hair from areas where it normally grows, most commonly the scalp. Causes include genetic predisposition (androgenetic alopecia), autoimmune conditions (alopecia areata), hormonal changes, medications, stress, and nutritional deficiencies.

Alternate Names:

Alopecia

Hair Loss Classification

Hair loss (alopecia) is classified as scarring (cicatricial) or non-scarring. Non-scarring alopecias are potentially reversible: androgenetic alopecia (male and female pattern), alopecia areata, telogen effluvium, anagen effluvium, and tinea capitis.

Hair Shaft

The portion of a hair that projects above the skin surface.

Hair Spray Poisoning

Hair spray poisoning involves toxic or environmental exposure to hair spray poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Hair Straightener Poisoning

Hair straightener poisoning involves toxic or environmental exposure to hair straightener poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Hair Tonic Poisoning

Hair tonic poisoning involves toxic or environmental exposure to hair tonic poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Hair Transplant

A procedure that moves hair follicles, usually from a donor area of the scalp, to areas affected by permanent hair loss; results depend on diagnosis, donor supply, technique, and postoperative care.

Hair, Lanugal

Lanugo: the fine, soft, usually unpigmented hair covering a fetus and sometimes present on a premature newborn; it is normally shed before or shortly after birth.

Hair-Ball

A hair-ball, or trichobezoar, is a mass of swallowed hair in the stomach or intestine, usually associated with repeated hair eating.

Hairless

Hairless means lacking hair; localized or generalized hair loss may result from genetics, autoimmune disease, medicines, or other conditions.

Hairy Cell Leukaemia

Hairy cell leukaemia is a rare slow-growing blood cancer in which abnormal B lymphocytes accumulate in the bone marrow, spleen, and blood.

Hairy Cell Leukemia

A rare, indolent B-cell chronic lymphoproliferative disorder characterized by the accumulation of mature B lymphocytes with characteristic cytoplasmic projections ("hairy cells") in the bone marrow, peripheral blood, and spleen.

Alternate Names:

Cancer, Hairy Cell Leukemia Leukemia, Hairy Cell

Hairy Tongue

A usually harmless overgrowth and discoloration of the tongue's papillae, often appearing black,

brown, or white. It may be associated with smoking, poor oral hygiene, dry mouth, or antibiotics; gentle tongue cleaning and removal of contributing factors usually help.

Hajdu-Cheney Syndrome

A clinical disorder related to hajdu-cheney syndrome; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Halcinonide

A potent topical corticosteroid used to reduce inflammation and itching in steroid-responsive dermatitis and other inflammatory skin disorders; prolonged or extensive use can cause skin atrophy and systemic effects.

Haldane Effect

The way oxygen binding to hemoglobin in the lungs helps release carbon dioxide for exhalation. Hemoglobin without oxygen carries more carbon dioxide in the body's tissues.

Half-Life

The time it takes for the amount of a medicine in the body, or its blood level, to decrease by half. It helps determine how often a medicine should be taken and how long it remains in the body.

Half-Life (Physical)

The time it takes for half of a radioactive substance to lose its radioactivity. It helps determine the timing of scans and the amount of radiation exposure.

Alternate Names:

Physical

Half-Life (T_{1/2})

The time required for plasma drug concentration to decrease by 50%. It determines dosing frequency and time to steady state (4-5 half-lives). Drugs with long half-lives (e.g., amiodarone: 40-55 days, warfarin: 40 hours) can be given once daily but take longer to reach steady state and to be eliminated.

Alternate Names:

t_{1/2}

Halitosis

An unpleasant odour of the breath that may be socially distressing. The most common cause (85-90%) is poor oral hygiene—accumulation of bacteria on the tongue, dental plaque, periodontitis, and gingivitis.

Hallermann'S Syndrome

A rare congenital disorder characterized by distinctive craniofacial development, sparse hair, dental abnormalities, and sometimes eye or skeletal findings; it is also called Hallermann–Streiff syndrome.

Hallervorden-Spatz Disease

A clinical disorder related to hallervorden-spatz disease; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hallucination

A perception in the absence of an external stimulus, experienced as real and occurring in objective space.

Hallucinations

Hallucinations are perceptions without an external sensory stimulus and can arise from psychiatric illness, neurologic disease, delirium, substances, medications, sensory loss, or sleep transitions.

Hallucinogen

A psychoactive substance that can alter perception, thought, and mood and may produce hallucinations; effects and toxicity vary by substance, dose, co-ingestants, and mental state.

Hallux

The first and most medial digit of the human foot (the great toe or big toe), designated digit 1. Unlike digits 2 through 5 (which contain three phalanges), the hallux contains only two phalanges (proximal and distal) articulated by a single interphalangeal joint, and articulates with the first metatarsal at the first metatarsophalangeal joint, flanked by two plantar sesamoid bones. Crucial for biomechanical stability and propulsion during the push-off phase of the gait cycle, bearing up to twice the body weight. High-yield clinical pathology includes hallux valgus

(bunion deformity), hallux rigidus (osteoarthritis of the first MTP joint), turf toe (sprain of the plantar capsuloligamentous complex), and podagra (acute gouty arthritis classic to the first MTP joint).

Hallux Rigidus

Stiffness and painful loss of motion at the joint where the big toe meets the foot.

Hallux Valgus

Lateral deviation of the great toe (hallux) with medial prominence of the first metatarsal head (bunion). More common in women, associated with narrow-toed shoes, high heels, and genetic predisposition. Presents with pain over the medial eminence, difficulty with shoe wear, and progressive deformity.

Hallux Valgus (Bunion)

A progressive deformity of the first metatarsophalangeal joint, characterized by lateral deviation of the great toe (hallux valgus) and medial deviation of the first metatarsal head (metatarsus primus varus), resulting in a bony prominence on the medial side of the forefoot (the bunion).

Alternate Names:

Bunion

Hallux Varus

Abnormal medial deviation of the great toe, often following surgery, trauma, neuromuscular imbalance, or congenital deformity; it can cause shoe difficulty and pressure-related pain.

Halo Nevus

A benign melanocytic nevus surrounded by a rim of depigmentation (Sutton nevus), caused by an immune-mediated T-cell response directed against melanocytes in the nevus. It is most common on the trunk of children and young adults and typically resolves by central depigmentation, leaving a white macule.

Halobacillus

A genus of salt-tolerant, spore-forming bacteria found mainly in saline environments and rarely associated with human disease.

Halobacteriaceae

A family of salt-loving archaea found in very salty environments; they are not usual causes of human infection.

Halofenate

An investigational lipid-lowering drug related to fenofibrate that was studied for effects on triglycerides and cholesterol but is not a routine current treatment.

Halofuginone Hydrobromide

The hydrobromide salt of halofuginone, a compound with antiparasitic and antifibrotic activity that has been studied experimentally; clinical use depends on the specific approved indication.

Halogen

An element in group 17 of the periodic table, including fluorine, chlorine, bromine, iodine, and astatine; halogens and their compounds have medical, biologic, and toxicologic importance.

Halogenation

A chemical reaction that adds a halogen such as chlorine, bromine, or iodine to a molecule; in biology it can alter drug activity, metabolism, or biomolecular function.

Haloperidol

Haloperidol is a first-generation antipsychotic that blocks dopamine D2 receptors and is used for psychosis, agitation, delirium, and tics; extrapyramidal reactions, tardive dyskinesia, hyperprolactinaemia, and QT prolongation are important risks.

Halothane

A volatile inhaled anesthetic formerly used to induce or maintain general anesthesia; it can cause hypotension, arrhythmias, and rare severe immune-mediated liver injury.

Hamamelis

A botanical preparation from witch hazel used topically as an astringent for minor skin or mucosal

irritation; evidence and product composition vary.

Hamartoma

A benign growth composed of a disorganized mixture of tissue elements normally present at that site, e.g., pulmonary hamartoma, Peutz-Jeghers polyps, and PTEN-related (Cowden) lesions.

Hamartomatous Polyposis

A condition in which multiple hamartomatous gastrointestinal polyps develop from disorganized but benign tissue overgrowth, sometimes as part of an inherited cancer-predisposition syndrome.

Hamate

Wedge-shaped distal row carpal bone on the ulnar side with the hook of the hamate. The hook forms Guyon's canal medial border and serves as flexor retinaculum attachment. Articulates with 4th/5th metacarpals. Hook fractures associated with racquet sports and ulnar nerve compression.

Hamate Bone

The hamate is a wedge-shaped wrist bone on the little-finger side that has a hook serving as an attachment and passage point for tendons and nerves.

Hamman'S Sign

A crunching or crackling sound heard on auscultation synchronized with the heartbeat, caused by air in the mediastinum (pneumomediastinum). It is a rare but specific finding. It is also described as a mediastinal crunch heard in spontaneous pneumomediastinum.

Hammer

The common name for the malleus, one of the three small bones of the middle ear.

Hammer Toe

A deformity of the second, third, or fourth toe characterized by flexion at the PIP joint and extension at the MTP and DIP joints. Caused by muscle imbalance (intrinsic foot muscle weakness) and narrow-toed shoes. Presents with pain over the

dorsal PIP joint (corn/callus) and the tip of the toe. Flexible hammer toe: correctable passively.

Hammer Toe Repair

Surgery to correct a fixed or painful flexion deformity of a lesser toe, using soft-tissue release, tendon balancing, bone correction, or temporary fixation as indicated.

Hammertoe

A deformity in which a toe bends downward at its middle joint, giving it a claw-like appearance. It may cause pain, stiffness, corns, or calluses, especially when wearing shoes.

Hampton Hump

Wedge-shaped opacification with its base abutting the pleura on chest radiography, representing pulmonary infarction secondary to Pulmonary Embolism. See Pulmonary Embolism (PE).

Hampton'S Hump

Wedge-shaped, pleural-based opacity on CXR representing pulmonary infarction distal to PE.

Hamstring

One of three muscles forming the posterior compartment of the thigh: semitendinosus, semimembranosus, and biceps femoris (long and short heads). Common origin: ischial tuberosity (except short head of biceps femoris which originates from the linea aspera of the femur).

Hamstring Injury

A strain or tear of one or more muscles or tendons at the back of the thigh.

Alternate Names:

Pulled Hamstring (Hamstring Injury)

Hamstring Muscles

Three posterior thigh muscles: biceps femoris (long/short heads), semitendinosus, semimembranosus, mostly from the ischial tuberosity (short head of biceps from linea aspera). Long head/semimembranosus/semitendinosus innervated

by tibial sciatic nerve; short head by common peroneal division. Flex knee, extend hip.

Hand

The part of the upper limb beyond the wrist, containing the palm, fingers, bones, joints, muscles, nerves, and blood vessels used for grasping and sensation.

Hand Deformity

An abnormal shape, alignment, or loss of motion of the hand or fingers caused by congenital difference, trauma, arthritis, nerve dysfunction, tendon disease, or other conditions.

Hand Foot And Mouth Disease

A common viral illness (mostly children <10 years) caused by coxsackievirus A16 (and enterovirus 71), transmitted by fecal-oral/respiratory.

Hand Hygiene

The most effective measure for preventing healthcare-associated infections. Hand hygiene includes handwashing with soap and water and hand rubbing with alcohol-based rubs. Alcohol-based rubs are preferred for routine hand hygiene as they are faster and more effective than soap and water.

Hand Lotion Poisoning

Hand lotion poisoning involves toxic or environmental exposure to hand lotion poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Hand Microsurgery

Specialized hand surgery performed with magnification and fine instruments to repair or reconstruct small blood vessels, nerves, and other delicate tissues. It may be used for complex injuries, replantation, and restoration of blood flow to a threatened digit or hand.

Hand Or Foot Spasms

Hand or foot spasms are involuntary muscle contractions that may result from electrolyte abnormalities,

nerve disorders, overuse, or reduced blood flow.

Hand Prolapse

Prolapse of a fetal hand or arm alongside or below the presenting part. May occur spontaneously or after manual rotation. The prolapsed arm may be mistaken for a cord or foot. Management: if the hand is above the presenting part (compound presentation), it may be gently pushed back during contractions.

Hand X-Ray

Radiographic imaging of the hand used to evaluate fractures, dislocations, arthritis, infection, tumors, bone age, and other abnormalities of the bones and joints.

Hand, Foot, And Mouth Disease

A contagious viral illness, usually in children, causing fever and vesicles or ulcers on the hands, feet, and mouth. Enteroviruses are common causes.

Hand-Arm Vibration Syndrome

An occupational disorder from prolonged exposure to vibrating tools, causing numbness, tingling, reduced grip, and episodic whitening of the fingers from vascular spasm.

Hand-Foot-And-Mouth Disease

A contagious viral illness causing sores in the mouth and a rash on the hands and feet, usually in children.

Hand-Foot-And-Mouth Syndrome

A usually mild, contagious viral illness, commonly caused by enteroviruses, producing fever, mouth sores, and small spots or blisters on the hands and feet. It mainly affects young children but can occur in adults. Hydration, pain relief, and hygiene are important; severe dehydration, neurologic symptoms, or persistent fever requires care.

Hand-Foot-Mouth Disease

A common enteroviral infection, usually in young children, causing fever, painful oral ulcers, and a vesicular rash on the hands, feet, and sometimes

buttocks. It is highly contagious and usually self-limited.

Hand-Schüller-Christian Disease

Hand-Schüller-Christian disease is an older name for a multisystem form of Langerhans cell histiocytosis, often involving bone, skin, and the pituitary gland.

Handling Sharps And Needles

Handling sharps and needles means using, passing, disposing of, and storing sharp medical instruments safely to prevent needlestick injuries and infection transmission.

Handwashing

Handwashing is cleaning the hands with soap and water or an alcohol-based product to remove germs and reduce transmission of infection.

Hang-Nail

A small torn flap of skin beside a fingernail or toenail, often caused by dryness or trauma and vulnerable to local infection if torn or contaminated.

Hanging And Strangulation Signs

Medico-legal findings resulting from mechanical constriction of the neck structures. Hanging: neck constriction by a ligature tightened by the weight of the victim's body. Ligature mark: pale, hard, parchment-like groove running obliquely upward toward the knot, usually situated above the thyroid cartilage.

Hangover

A group of symptoms after alcohol use, such as headache, nausea, thirst, fatigue, dizziness, and sensitivity to light; symptoms reflect effects of alcohol and its metabolites, dehydration, sleep disruption, and inflammation.

Hangover Treatment

Supportive care for alcohol-related next-day symptoms such as headache, nausea, thirst, fatigue, and poor concentration; hydration, rest, and time help, while more alcohol or unsafe medication combina-

tions can worsen harm.

Hannaella Luteola

A yeast species that is usually environmental but can rarely cause opportunistic infection, especially in people with weakened immunity.

Hansen Disease

A long-lasting bacterial infection that mainly affects the skin and nerves. It can cause pale or reddish skin patches, loss of feeling, weakness, and eye problems. It spreads mainly through prolonged close contact with an untreated person. Antibiotic treatment can cure it and help prevent lasting disability.

Alternate Names:

Leprosy; Hansen's Disease; Hansen's Disease (Leprosy)

Hanseniaspora

A genus of yeasts found on fruits and in fermented foods; some species are used in fermentation and rarely cause infection.

Hanseniaspora Uvarum

A yeast commonly associated with fruit and wine fermentation; human infection is rare.

Hanseniaspora Valbyensis

A yeast found in fruit and fermented products; it is rarely reported as an opportunistic human pathogen.

Hantavirus

Hantavirus infection is acquired from exposure to infected rodent excreta and can cause hemorrhagic fever with renal syndrome or severe cardiopulmonary syndrome. to humans primarily through inhalation of aerosolized rodent excreta (urine, feces, saliva).

Hantavirus Infection

A zoonotic viral infection acquired mainly through inhalation of contaminated rodent excreta. It may cause hemorrhagic fever with renal syndrome or hantavirus pulmonary syndrome, which can progress

rapidly to respiratory failure.

Hantavirus Pulmonary Syndrome

A severe respiratory illness caused by hantaviruses, usually acquired by inhaling aerosolized particles from infected rodent urine, droppings, or nesting material. Fever, muscle aches, headache, and gastrointestinal symptoms may rapidly progress to cough, pulmonary edema, and respiratory failure. Immediate hospital care is essential.

Alternate Names:

Sin Nombre Virus Infection

Haploid

Haploid is a developmental, immunologic, reproductive, behavioral, environmental, or healthcare concept used in medicine or biomedical research.

Haploidentical Donor

A donor who shares one human leukocyte antigen haplotype with the recipient, commonly used for selected hematopoietic stem-cell or organ transplantation when a fully matched donor is unavailable.

Haploidy

The state of having one complete set of chromosomes, as in human gametes; haploid cells contain 23 chromosomes.

Haploinsufficiency

A genetic state in which one functional copy of a gene does not produce enough gene product for normal function, so loss or inactivation of the other copy can cause disease.

Haplotype

Set of alleles inherited together on same chromosome. Used in linkage analysis, population genetics, disease association studies.

Hapten

A hapten is a small molecule that is not immunogenic by itself but can trigger an immune response after binding to a larger carrier protein, as in some drug allergies.

Haptoglobin

An alpha-2 globulin that binds free hemoglobin, preventing oxidative damage and renal excretion. Low/undetectable: acute hemolysis (intravascular and extravascular), liver disease (decreased production), and hereditary deficiency. Elevated: acute phase reaction (inflammation, infection, malignancy).

Haptoglobin Analyses

Laboratory tests measuring haptoglobin, a plasma protein that binds free hemoglobin; low values can support evaluation of intravascular hemolysis but are also affected by liver disease and inflammation.

Haptoglobin Blood Test

A blood test measuring haptoglobin, a protein that binds free hemoglobin; low levels may support intravascular hemolysis but can also reflect liver disease or inflammation.

Haptoglobin Decreased

A low blood haptoglobin result, commonly caused by intravascular red-cell destruction, reduced hepatic production, or severe liver disease; it is interpreted with hemoglobin, bilirubin, reticulocytes, and a blood smear.

Hard Palate

The bony, mucosa-covered front portion of the roof of the mouth that separates the oral and nasal cavities and provides a surface for chewing and speech.

Harderian Gland

A gland associated with the eye in many vertebrates that produces lipid-rich secretions; it is not a normal distinct gland in the same form in humans.

Hardness

A measurable resistance to deformation, used in medicine and materials science; in clinical contexts it may describe tissue induration, a hard mass, or hard stool depending on the setting.

Hardware Removal - Extremity

Surgical removal of plates, screws, rods, or other orthopedic hardware from an arm or leg when it causes pain, infection, prominence, nonunion-related problems, or other selected complications.

Harlequin Color Change

A transient, benign skin color change in newborns where one half of the body becomes flushed while the other half remains pale, due to asymmetric vasomotor tone. It occurs in up to 10 percent of healthy neonates, typically when the infant is placed on their side.

Harlequin Foetus

A severe congenital ichthyosis, now called harlequin ichthyosis, characterized at birth by thick armor-like plates of keratin separated by deep fissures.

Harm Reduction

Evidence-based strategies that decrease health, social, and legal harms associated with substance use without requiring immediate abstinence. Examples include naloxone access, sterile injecting equipment, drug-checking where available, safer-use education, and linkage to treatment.

Harm Reduction Therapy

Treatment that aims to reduce health and social harms from addictive behavior, even when abstinence is not immediate.

Alternate Names:

Harm reduction

Harmless Murmur

An innocent or physiologic heart murmur produced by normal blood flow without structural heart disease; it is diagnosed only after appropriate clinical assessment.

Harringtonines

A group of plant-derived polyol esters and related alkaloid compounds investigated for anticancer activity; their pharmacology and toxicity depend on the individual compound.

Harris-Imvoden Equation

The Harris-Imvoden equation is a clinical calculation used to estimate a physiologic or nutritional measure; its result is an approximation and must be interpreted with the patient's clinical context.

Harrison's Sulcus

Harrison's sulcus is a horizontal groove along the lower chest wall caused by inward pulling of the ribs, classically in long-standing childhood breathing difficulty.

Hartmann Procedure

Surgical resection of the rectosigmoid colon with creation of an end colostomy and rectal stump. Used for emergency resection of complicated diverticulitis with peritonitis and colorectal cancer with obstruction or perforation. The procedure avoids primary anastomosis in a contaminated field.

Hartnup Disease

An autosomal-recessive disorder of neutral-amino-acid transport, especially in the intestine and renal tubules. Defective tryptophan handling can cause pellagra-like photosensitive dermatitis, cerebellar ataxia, and neuropsychiatric symptoms, often intermittently.

Hartnup Disorder

An inherited disorder of neutral amino-acid transport that can cause pellagra-like skin changes, neurologic symptoms, or no symptoms.

HAS-BLED Score

A validated clinical scoring system used to quantify the one-year risk of major bleeding in patients with atrial fibrillation receiving oral anticoagulation (vitamin K antagonists or direct oral anticoagulants). Points are assigned for Hypertension (systolic BP > 160 mmHg, 1), Abnormal renal or liver function (1 or 2), Stroke history (1), Bleeding history or predisposition (1), Labile international normalized ratio (1), Elderly age > 65 years (1), and Drugs or alcohol excess (1 or 2). A score of ≥ 3 indicates high bleeding risk and prompts closer clinical monitoring and aggressive correction of modifiable bleeding risk.

factors rather than withholding anticoagulation.

Alternate Names:

HAS-BLED; Anticoagulation Bleeding Risk Score

Hashimoto Disease

An autoimmune disorder in which antibodies and lymphocytes progressively damage the thyroid, commonly causing hypothyroidism, goiter, fatigue, cold intolerance, constipation, and weight change.

Hashimoto Thyroiditis

An autoimmune disorder in which immune-mediated inflammation gradually damages the thyroid gland and may cause hypothyroidism. The gland may be enlarged or atrophic, and thyroid autoantibodies are often present.

Hashimoto's Disease

An autoimmune disorder in which the immune system attacks the thyroid, often leading to hypothyroidism.

Alternate Names:

Chronic Lymphocytic Thyroiditis Thyroiditis, Chronic Lymphocytic

Hashimoto's Thyroiditis

A chronic autoimmune inflammation of the thyroid that commonly causes progressive hypothyroidism and may produce a firm, enlarged thyroid gland.

Hashish

Hashish is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

Hashitoxicosis

A temporary period of excess thyroid hormone caused by release of stored hormone during Hashimoto thyroiditis.

Hassall's Corpuscles

Hassall's corpuscles are rounded structures in the thymus made of specialized epithelial cells and involved in the development of immune tolerance.

Haustra

Pouch-like sacculations of the colon produced by the arrangement of the circular and longitudinal smooth muscle layers.

Haverhill Fever

A clinical disorder related to haverhill fever; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hay Fever

Allergic rhinitis caused by inhaled allergens such as pollen, mold, dust mites, or animal dander. It can cause sneezing, itchy or watery eyes, congestion, and a runny nose.

Alternate Names:

Allergic rhinitis Rhinitis, Allergic Seasonal Allergy Seasonal Allergies (Hay Fever)

Hay Fever (Allergic Rhinitis)

Inflammation of the nasal lining caused by an allergic response to airborne substances, including pollens, dust mites, animal dander, or mold. It causes sneezing, congestion, nasal itching, and watery discharge.

Alternate Names:

Allergic Rhinitis

Hazardous Materials

Substances that can cause injury, poisoning, fire, radiation exposure, or environmental harm; safe handling requires labeling, protective equipment, exposure control, and emergency procedures.

Hazardous Substance

Hazardous Substance is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

Hb (Hemoglobin)

Hemoglobin, the iron-containing protein in red blood cells that carries oxygen and contributes to carbon-dioxide transport and blood's acid-base buffering.

HbA1C

Hemoglobin with glucose attached; its measurement estimates average blood glucose over the previous two to three months.

Alternate Names:

Glycosylated hemoglobin; hemoglobin A1c

HbA1C (Glycated Hemoglobin)

Hemoglobin containing glucose-derived adducts formed by nonenzymatic glycation. It reflects average glycemic exposure over approximately two to three months, with interpretation affected by altered red-cell survival and some hemoglobin variants.

Alternate Names:

Glycated Hemoglobin

HCG

Human chorionic gonadotropin is a hormone produced mainly during pregnancy; its measurement is used in pregnancy testing and evaluation of selected tumors.

HCG Blood Test - Qualitative

A blood test that detects whether human chorionic gonadotropin is present, most commonly to identify pregnancy.

HCG Blood Test - Quantitative

A blood test measuring the concentration of human chorionic gonadotropin, used to confirm and monitor pregnancy and to evaluate selected gestational or germ-cell tumors.

HCG In Urine

A urine test detecting human chorionic gonadotropin, commonly used as a pregnancy test; accuracy depends on timing, urine concentration, and test performance.

Hct (Hematocrit)

The percentage of blood volume occupied by red blood cells, measured as part of a complete blood count.

HCV PCR

A polymerase chain reaction test that detects or measures hepatitis C virus RNA in blood, helping identify active infection and monitor treatment response.

HDL

High-density lipoprotein, a class of particles that transports cholesterol and other lipids in the blood. HDL concentration is one component of cardiovascular risk assessment; it should not be interpreted as a protective or harmful measure by itself.

HDL Cholesterol

Cholesterol carried in high-density lipoprotein particles; HDL participates in transporting cholesterol from tissues toward the liver, but its concentration alone does not determine cardiovascular risk.

HDL Test

A blood test measuring high-density lipoprotein cholesterol, which is used with the rest of the lipid profile to assess cardiovascular risk.

HDR Syndrome

A genetic disorder characterized by hypoparathyroidism, sensorineural deafness, and renal dysplasia or other kidney abnormalities, usually caused by a pathogenic variant in *GATA3*.

Head

The body region containing the brain, eyes, ears, nose, mouth, skull, and face, connected to the trunk by the neck and supplied by major cranial nerves and vessels.

Head And Face Reconstruction

Reconstructive surgery to restore the form or function of the skull, face, or associated soft tissues after trauma, cancer treatment, congenital difference, or other disease.

Head And Neck Cancer

Cancers arising in the oral cavity, pharynx, larynx, sinonasal tract, and salivary glands, most commonly

squamous cell carcinoma. Risk factors include tobacco, alcohol, and HPV (oropharyngeal). Treatment involves surgery, radiation, and chemotherapy, often combined to preserve function.

Head And Neck Oncologic Surgery

Surgical treatment of cancers of the oral cavity, throat, larynx, nose, sinuses, salivary glands, or neck lymph nodes. Procedures may remove the tumor, treat involved lymph nodes, and reconstruct affected tissues while preserving breathing, swallowing, speech, and appearance when possible.

Alternate Names:

Head And Neck Onco Surgery

Head Circumference

Measured at the largest circumference above the ears and eyebrows, reflecting brain growth. Plotted on growth charts to detect microcephaly (below 3rd percentile) or macrocephaly (above 98th percentile). Rapid increase may indicate hydrocephalus or intracranial hemorrhage; failure to grow may indicate microcephaly or brain atrophy.

Head CT Scan

Computed tomography of the head using x-rays and computer reconstruction to evaluate the brain, skull, bleeding, stroke, tumors, trauma, and other abnormalities.

Head Injury

Trauma to scalp, skull, or brain. Scalp lacerations: bleed profusely, require suturing. Skull fracture: basilar (Battle sign, raccoon eyes) or depressed (surgical emergency). Concussion: transient neurological dysfunction, manage with rest, gradual return to activity.

Alternate Names:

Brain Injury (Head Injury)

Head Injury - First Aid

Initial care after a head injury includes protecting the neck, controlling external bleeding gently, monitoring breathing and alertness, and seeking urgent help for loss of consciousness, repeated vomiting, seizure, confusion, or worsening headache.

Head Movement

Motion of the head produced mainly by the cervical spine and neck muscles, including flexion, extension, rotation, and side bending; pain or restricted movement may indicate injury or disease.

Head MRI

Magnetic resonance imaging of the head using a magnetic field and radio waves to produce detailed images of the brain, cranial nerves, blood vessels, and surrounding structures.

Head-Lice

Head lice are small insects that live on the scalp and cause itching; they spread mainly through close head-to-head contact.

Headache

Headache is pain in the head or upper neck; onset, pattern, associated neurologic findings, fever, trauma, and systemic symptoms distinguish primary from secondary causes. tension-type, cluster, and trigeminal autonomic cephalalgias) or secondary (attributed to an underlying structural, infectious, vascular, or metabolic cause).

Headache And Migraine

Headaches are pain in the head or upper neck region, classified as primary (tension-type, migraine, cluster) or secondary to underlying conditions. Migraines are a neurological disorder characterized by recurrent episodes of moderate to severe throbbing pain, often accompanied by nausea, photophobia, and aura.

Headaches - Danger Signs

Headache danger signs include sudden severe onset, new neurologic symptoms, fever with neck stiffness, confusion, head injury, or a new headache during pregnancy; urgent assessment may be needed.

Healing

Healing is a developmental, immunologic, reproductive, behavioral, environmental, or healthcare concept used in medicine or biomedical research.

Health Behavior

An action or pattern of action that affects health, such as eating, physical activity, tobacco use, alcohol use, sexual practices, or taking medicines.

Health Behavior Change

Modification of behaviors that affect health, such as tobacco use, diet, physical activity, and adherence to treatment.

Health Behavior Motivation

Factors that influence initiation and maintenance of health-related behaviors, including adherence, physical activity, and smoking cessation.

Health Care

The prevention, diagnosis, treatment, and ongoing support provided to maintain or improve health, delivered by professionals, institutions, public-health systems, and informal caregivers.

Health Care Agents

A patient-care topic concerning health care agents. It addresses the relevant purpose, risks, management, and follow-up.

Health Care Facility

A place where health services are delivered, such as a clinic, hospital, laboratory, nursing facility, or rehabilitation center; its services and level of care determine appropriate referrals.

Health Care Personnel

Professionals and support workers involved in patient care, including clinicians, nurses, therapists, technicians, aides, and public-health staff.

Health Care Proxy

A legal appointment authorizing another person to make healthcare decisions when a patient cannot make them.

Health Disparities

Differences in health outcomes or access to care among groups, often associated with social, eco-

nomic, environmental, geographic, or structural factors.

Health Disparity

Difference in health outcomes between populations. Examples: racial disparities, socioeconomic disparities, geographic disparities.

Health Education

The process of giving people understandable information and skills to prevent illness, recognize symptoms, use treatment safely, and make informed health decisions.

Health Equity

The fair opportunity for all people to attain their highest possible level of health, without avoidable differences caused by social or economic disadvantage.

Health For All

A public-health goal emphasizing that all people should have access to needed health services and conditions that support health, without financial hardship.

Health Inequity

A systematic, avoidable, and unjust difference in health or access to health resources between social groups. It differs from health variation that is not preventable or not linked to unfair social conditions.

Health Information Technology

Use of technology for health information. Examples: electronic health records, telemedicine, mobile health, decision support.

Health Literacy

Ability to obtain, process, understand health information. Examples: reading labels, following instructions, communicating with providers.

Health Maintenance Organization

Health Maintenance Organization is a developmental, immunologic, reproductive, behavioral, environ-

mental, or healthcare concept used in medicine or biomedical research.

Health Promotion

Activities maintaining/improving health in elderly. Components: vaccination, screening, exercise, nutrition, cognitive stimulation, social engagement, fall prevention. Tailored to individual capacity and preferences.

Health Risk

The likelihood that a behavior, exposure, condition, or other factor will cause harm to health, considered together with the severity and timing of possible harm.

Health Risks Of Alcohol Use

Alcohol use can increase the risk of liver disease, several cancers, high blood pressure, injuries, dependence, and problems affecting mental health and relationships.

Health Risks Of Obesity

Obesity increases the risk of type 2 diabetes, hypertension, cardiovascular disease, sleep apnea, fatty liver disease, osteoarthritis, some cancers, and pregnancy complications.

Health Services Research

Research that evaluates how healthcare is organized, financed, delivered, accessed, and experienced, including quality, safety, outcomes, cost, and inequity.

Health Surveillance

The ongoing collection and analysis of health data to identify patterns, monitor disease, and guide public-health action.

Health Survey

A structured set of questions used to collect information about health, symptoms, behaviors, healthcare use, or population needs.

Health Visitor

Health Visitor is a developmental, immunologic,

reproductive, behavioral, environmental, or healthcare concept used in medicine or biomedical research.

Health Workforce

The people and organizations that provide, support, manage, or study health services, including clinicians, public-health workers, and support staff.

Health-Related QoL

A person's perceived physical, psychological, and social well-being as affected by health and illness.

Healthcare Associated Infection

An infection developing as a consequence of healthcare delivery, typically beyond 48 hours after admission or within 30 days of a procedure.

Healthcare Provider

A healthcare professional or organization that provides medical care, such as a physician, nurse, therapist, or clinic.

Healthcare Proxy

A person designated to make healthcare decisions for someone who cannot make or communicate those decisions. The appointment may be recorded in an advance directive or other legal document.

Healthcare-Associated Pneumonia

HCAP concept retired (2016 IDSA/ATS); risk factors for MDR now assessed individually. Risk factors for MDR pathogens (prior antibiotics, structural lung disease, frequent hospitalization) should be assessed individually rather than using the HCAP category.

Healthy Aging

The process of developing and maintaining the functional ability that supports well-being in older age.

Healthy Eating For Diabetes

A dietary approach designed to maintain stable blood glucose levels in individuals with diabetes mellitus. It emphasizes carbohydrate consistency,

high fiber intake, lean proteins, and healthy fats while minimizing refined sugars and simple carbohydrates.

Healthy Years

Years of life lived in good health, without substantial disease, disability, or loss of function.

Healthy Years Lost

Years of life lost due to premature death or disability. DALYs combine YLL and YLD.

Hearing

The sensory perception of sound produced when vibrations stimulate the cochlea and auditory nerve and are interpreted by the brain; hearing loss may be conductive, sensorineural, or mixed.

Hearing Aid

Amplification device for hearing loss. Types: behind-the-ear, in-the-ear, receiver-in-canal (RIC). Components: microphone, amplifier, speaker, battery. Fitting: audiogram-based. Adjustments: volume, programs.

Hearing Aids And Devices

Electronic devices worn in or behind the ear that amplify sound for individuals with hearing loss. Modern hearing aids include digital signal processing, directional microphones, and connectivity to smartphones and other audio sources.

Hearing Disorder

A condition that reduces or distorts hearing through disease of the outer or middle ear, cochlea, auditory nerve, or central pathways; audiometry and examination help distinguish conductive from sensorineural loss.

Hearing Impairment

Partial or complete reduction in the ability to detect or understand sound. It may be conductive, sensorineural, or mixed and can result from congenital disorders, infection, noise, ototoxic injury, trauma, ageing, or disease of the ear or auditory pathways.

Hearing Loss

Reduced ability to hear, classified as conductive (outer/middle ear pathology: cerumen impaction, otitis media, otosclerosis, tympanic membrane perforation), sensorineural (inner ear or auditory nerve: presbycusis, noise exposure, ototoxic drugs, Meniere disease, acoustic neuroma), or mixed.

Alternate Names:

Noise-Related Hearing Loss

Hearing Loss - Infants

Hearing loss in infants is reduced ability to hear that may be present at birth or develop later; screening and early intervention support language development.

Hearing Loss And Music

Hearing loss and music concerns reduced ability to hear musical pitch, loudness, or timbre; hearing protection and individualized amplification may help.

Hearing Loss: Sudden Deafness

A rapid sensorineural hearing loss, usually developing over hours to a few days, that may affect one or both ears. It is an otologic emergency; urgent hearing testing and evaluation are needed because early treatment may improve recovery.

Hearing Screening

Newborn hearing screening (universal): otoacoustic emissions and/or automated auditory brainstem response (AABR) before discharge; referral for comprehensive audiology if failed.

Hearing Test

An audiologic assessment that measures hearing thresholds and speech perception across frequencies to identify conductive, sensorineural, or mixed hearing loss.

Heart

A four-chambered muscular pump (two atria, two ventricles) located in the mediastinum, responsible for circulating blood throughout the body.

Heart And Vascular Services

Heart and vascular services include prevention, diagnosis, and treatment of diseases affecting the heart and blood vessels.

Heart Aneurysm

A localized bulging or outpouching of a weakened heart wall, often after myocardial infarction or from cardiomyopathy, that can impair contraction or form clots and arrhythmias.

Heart Arrhythmia

An abnormal heart rate or rhythm caused by altered electrical activity in the heart; it may be too fast, too slow, or irregular.

Alternate Names:

Dysrhythmias

Heart Attack

Acute myocardial injury caused most often by blockage of a coronary artery, usually from rupture of an atherosclerotic plaque and thrombosis. It may cause chest pressure, shortness of breath, sweating, nausea, or atypical symptoms and requires emergency treatment.

Alternate Names:

Myocardial Infarction (Heart Attack)

Heart Attack (Myocardial Infarction)

The death of heart muscle tissue due to sudden blockage of a coronary artery, typically by a blood clot. It presents with chest pain or pressure, shortness of breath, nausea, and diaphoresis, though symptoms may be atypical in women and diabetics.

Alternate Names:

Myocardial Infarction

Heart Attack First Aid

Heart attack first aid means calling emergency services immediately, helping the person rest, and following dispatcher instructions; aspirin may be appropriate for some adults who can safely take it.

Heart Attack Prevention

Heart-attack prevention targets blood pressure,

atherogenic cholesterol, diabetes, tobacco exposure, diet, physical activity, weight, sleep, and adherence to prescribed medicines. Risk-based preventive treatment is more effective than relying on one supplement or symptom.

Heart Block

A delay or interruption in the conduction of cardiac impulses from the atria to the ventricles through the atrioventricular (AV) node and His-Purkinje system. Classification: first-degree AV block: PR interval >200 ms, each atrial impulse conducts to the ventricles, typically asymptomatic.

Heart Bypass Surgery

Coronary artery bypass grafting creates new routes around blocked coronary arteries using graft vessels to improve myocardial blood flow and relieve ischemic symptoms or reduce selected risks.

Heart Bypass Surgery - Minimally Invasive

Coronary bypass performed through smaller chest incisions or with limited access rather than a full sternotomy; suitability depends on coronary anatomy, surgeon expertise, and patient factors.

Heart Catheterization

A procedure in which a catheter is passed through a blood vessel into the heart to measure pressures, assess coronary arteries, inject contrast, obtain samples, or perform treatment.

Heart Contraction

The coordinated systolic shortening of cardiac muscle that ejects blood from the ventricles into the pulmonary artery and aorta; electrical activation and calcium handling control it.

Heart CT Scan

Computed tomography of the heart and nearby structures, sometimes with ECG synchronization or contrast, used to evaluate coronary arteries, cardiac anatomy, calcium, or selected masses.

Heart Disease

A broad term encompassing various conditions affecting the heart and blood vessels, most commonly coronary artery disease, heart failure, arrhythmias, and valvular heart disease. Atherosclerosis, the buildup of plaque in the arteries, is the underlying cause of most cardiovascular events.

Heart Disease And Depression

Depression can occur with heart disease and may worsen quality of life, treatment adherence, and recovery; both conditions should be assessed and treated.

Heart Disease And Intimacy

Heart disease or its treatment may affect sexual activity, desire, and confidence; individualized medical advice can help address symptoms and safety.

Heart Disease And Women

Heart disease in women may involve different risk factors, symptoms, and timing than in men; chest pressure, shortness of breath, nausea, fatigue, or jaw or back pain can be important symptoms.

Heart Failure

A condition in which the heart cannot pump or fill with enough blood to meet the body's needs. It does not mean that the heart has stopped. In systolic heart failure, the heart does not squeeze strongly enough; in diastolic heart failure, the heart is stiff and does not relax or fill properly. Symptoms may include shortness of breath, tiredness, reduced ability to exercise, and swelling caused by fluid buildup.

Heart Failure In Children

Heart failure in children is inability of the heart to meet body demands, caused by congenital defects, cardiomyopathy, rhythm disease, infection, or other illness.

Heart Failure In Children - Home Care

Home care for a child with heart failure includes following the prescribed medicines and nutrition plan, monitoring breathing, feeding, activity, swelling,

and weight when advised, attending cardiology follow-up, and keeping recommended vaccines and illness plans current. Fluid or salt limits should be individualized. Worsening breathlessness, blue or gray color, fainting, marked lethargy, poor feeding, rapidly increasing swelling, or reduced urine requires urgent medical assessment.

Heart Failure Stages

The ACC/AHA framework describes Stage A as people at risk for heart failure without symptoms or current structural heart disease; Stage B, or pre-heart failure, as structural heart disease, abnormal cardiac function, or relevant biomarker evidence without symptoms; Stage C as current or previous symptoms or signs of heart failure with underlying cardiac disease; and Stage D as advanced heart failure with persistent symptoms that may require specialized therapies. Stages describe disease progression and are distinct from NYHA symptom classes.

Heart Failure With Preserved Ejection Fraction

A clinical syndrome of heart failure with a relatively preserved left-ventricular ejection fraction, often associated with impaired relaxation, increased ventricular stiffness, or elevated filling pressures. Diagnosis requires compatible symptoms or signs and objective evidence of cardiac dysfunction or elevated filling pressures; a preserved ejection fraction alone is not diagnostic.

Heart Failure With Mildly Reduced Ejection Fraction

A clinical syndrome of heart failure with mildly reduced left-ventricular ejection fraction, often defined by applicable guidelines as an ejection fraction of about 41–49%. Diagnosis requires compatible symptoms or signs and evidence of cardiac dysfunction or elevated filling pressures; the ejection-fraction range and treatment recommendations may vary by guideline.

Heart Failure With Reduced Ejection

Fraction

A clinical syndrome of heart failure with reduced left-ventricular systolic function, commonly associated with ischemic heart disease, cardiomyopathy, hypertension, or valvular disease. The ejection-fraction threshold is defined by the applicable guideline and must be interpreted with symptoms, signs, imaging, and other evidence of heart failure.

Heart Health

The state of cardiovascular well-being, characterized by efficient pumping function, clear arteries, normal blood pressure, and regular heart rhythm. Maintaining heart health involves a heart-healthy diet, regular aerobic and resistance exercise, weight management, stress reduction, and avoidance of tobacco.

Heart Injury

Damage to heart muscle or surrounding cardiac structures caused by trauma, ischemia, inflammation, toxins, or procedures; symptoms and tests depend on the injured tissue and severity.

Heart MRI

Magnetic resonance imaging of the heart that evaluates cardiac structure, function, tissue characteristics, blood flow, and selected congenital, ischemic, inflammatory, or infiltrative disorders.

Heart Murmur

An audible extra sound produced by turbulent blood flow within the heart or great vessels, heard on auscultation.

Alternate Names:

Murmur Congenital (Heart Murmur) Murmur Heart (Heart Murmur)

Heart Murmurs

Heart murmurs are extra or unusual sounds caused by turbulent blood flow through the heart or nearby vessels; some are harmless and others reflect heart disease.

Heart Muscle

The myocardium, the specialized cardiac muscle that contracts rhythmically to pump blood through the heart and circulation.

Heart Neoplasm

A neoplastic process affecting heart neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Heart Pacemaker

A heart pacemaker is a device that sends electrical impulses to maintain an appropriate heartbeat when the heart's natural rhythm is too slow or unreliable.

Heart Palpitations

An awareness of the heartbeat as pounding, racing, fluttering, or irregular. Palpitations may occur with normal rhythm or arrhythmia and can be triggered by stress, exertion, fever, stimulants, endocrine disease, or structural heart disease.

Alternate Names:

Skipped Heartbeats

Heart PET Scan

Positron-emission tomography of the heart using a radiotracer to assess myocardial perfusion, metabolism, viability, inflammation, or selected cardiac masses.

Heart Rate

The number of cardiac contractions (heartbeats) per minute. Normal resting heart rate (sinus rhythm): 60-100 bpm in adults; higher in children (70-120 at age 1-2 years, 80-130 in neonates).

Heart Rhythm

The rate and pattern of cardiac electrical activation and contraction, normally initiated by the sinoatrial node; abnormal rhythms include bradycardia, tachycardia, atrial fibrillation, and ventricular arrhythmias.

Heart Rhythm Disorders

Arrhythmias, in which the heart beats too fast, too

slowly, or irregularly because of abnormal electrical impulse formation or conduction.

Alternate Names:

Abnormal Heart Rhythms (Heart Rhythm Disorders)

Heart Septum

The muscular or membranous wall separating the right and left sides of the heart, including the atrial and ventricular septa; defects can permit abnormal blood flow between chambers.

Heart Sounds

Audible sounds produced by the heart during the cardiac cycle, normally heard as two sounds (lub-dub). S1 (lub) is caused by closure of the mitral and tricuspid valves at the beginning of systole. S2 (dub) is caused by closure of the aortic and pulmonary valves at the end of systole. Additional sounds (S3, S4) may indicate pathology.

Heart Surgery

Surgical procedures performed on the heart or great vessels to treat structural or functional cardiac conditions. Common operations include coronary artery bypass grafting (CABG), valve repair or replacement, and repair of congenital heart defects.

Heart Tamponade

Life-threatening compression of the heart by fluid, blood, or gas in the pericardial space, restricting filling and causing hypotension, raised venous pressure, tachycardia, and shock.

Heart Test, EPS

An electrophysiology study of the heart, using catheters to record and stimulate cardiac electrical activity and evaluate arrhythmias, conduction disorders, or unexplained fainting.

Heart Transplant

Replacement of a failing heart with a donor heart, followed by lifelong immunosuppression and surveillance for rejection, infection, coronary allograft disease, kidney injury, and medication complications.

Heart Transplantation

Surgical replacement of a failing heart with a donor heart, usually for selected patients with advanced heart failure who meet specialist criteria.

Heart Valve

A flap-like structure that directs one-way blood flow through the heart. The four valves are the tricuspid, pulmonary, mitral, and aortic valves.

Heart Valve Disease

Structural or functional abnormality of one or more cardiac valves causing stenosis, regurgitation, or both. Common causes include degeneration, congenital malformation, rheumatic disease, and infective endocarditis.

Heart Valve Disorder

Abnormal narrowing, leakage, or structural deformation of a cardiac valve that can impair forward blood flow or enlarge the heart and cause murmur, breathlessness, fatigue, or edema.

Heart Valve Disorders

Disorders affecting any of the four heart valves, including stenosis (narrowing) and regurgitation (leaking), which impair blood flow through the heart. Causes include congenital malformations, age-related degeneration, rheumatic fever, and endocarditis.

Heart Valve Prosthesis

Replacement heart valve. Types: mechanical (titanium, carbon, durable, requires lifelong anticoagulation), bioprosthetic (cow/pig tissue, no anticoagulation, degenerates). Mechanical: more durable, higher thrombotic risk. Bioprosthetic: better quality of life, reoperation risk.

Heart Valve Surgery

Repair or replacement of a diseased cardiac valve to correct severe narrowing or leakage and improve blood flow; choice of repair, mechanical valve, or tissue valve depends on anatomy and patient factors.

Heart Ventricle

One of the two lower heart chambers that pumps blood to the lungs or systemic circulation; the right ventricle pumps to the pulmonary artery and the left to the aorta.

Heart Ventricles

The two lower chambers of the heart. The right ventricle pumps blood to the lungs, and the left ventricle pumps blood to the body.

Heart-Healthy Eating

A dietary approach emphasizing foods that support cardiovascular function and reduce the risk of heart disease. Key principles include limiting saturated fats, trans fats, sodium, and added sugars while prioritizing fruits, vegetables, whole grains, lean proteins, and healthy fats like those from olive oil and fatty fish.

Heart-Lung Machine

A heart-lung machine temporarily circulates and oxygenates blood during some heart or major blood-vessel operations while the heart is stopped.

Heart-Lung Machine (Cardiopulmonary Bypass Machine)

A device that temporarily takes over the pumping and gas-exchange functions of the heart and lungs during selected cardiac operations.

Alternate Names:

Cardiopulmonary Bypass Machine

Heartburn

Heartburn is a burning retrosternal sensation caused by reflux of gastric contents; frequent or complicated symptoms may indicate gastroesophageal reflux disease. the throat and is often associated with regurgitation of sour or bitter-tasting fluid into the mouth. Despite its name, heartburn is a symptom of gastro-oesophageal reflux disease (GORD), not a cardiac symptom.

Heat

Thermal energy that raises tissue or body tempera-

ture; excessive heat exposure can cause heat cramps, heat exhaustion, heatstroke, or thermal injury.

Heat Cramps

Painful, involuntary muscle spasms occurring during or after strenuous activity in heat, often related to fluid and electrolyte loss. Resting in a cool place and replacing fluids and electrolytes may help. Confusion, fainting, or ongoing symptoms may signal heat illness requiring urgent medical attention.

Alternate Names:

Cramps Heat (Heat Cramps)

Heat Emergencies

Heat emergencies range from heat cramps and exhaustion to heat stroke, in which dangerous core-temperature elevation causes central nervous system dysfunction and organ injury.

Heat Exhaustion

A heat-related illness caused by excessive loss of water and salt, producing weakness, dizziness, nausea, headache, sweating, and sometimes fainting without severe central nervous system dysfunction.

Alternate Names:

Exhaustion Heat (Heat Exhaustion)

Heat Intolerance

An abnormal inability to tolerate warm environments or increased body heat, often causing excessive sweating, flushing, fatigue, or dizziness. Common causes include hyperthyroidism, menopause, fever, medications, autonomic disorders, and dehydration.

Heat Pack

A device that applies warmth to the body surface to relieve some muscle pain or stiffness. Excessive heat or prolonged contact can cause burns.

Heat Prostration

An older term for severe heat exhaustion, marked by weakness, fatigue, dizziness, headache, nausea, and sweating after heat exposure; confusion or loss of consciousness suggests heat stroke.

Heat Rash

An itchy or prickly rash caused by blocked sweat ducts during hot, humid conditions. Small red bumps or clear vesicles often appear in skin folds or areas covered by clothing. Cooling, keeping the skin dry, and avoiding occlusive products usually help; infection or persistent symptoms warrants assessment.

Alternate Names:

Profunda Miliaria (Heat Rash) Rash Heat (Heat Rash) Ruba Miliaria (Heat Rash)

Heat Rash (Pictures)

Miliaria, an itchy or prickly rash caused by blocked sweat ducts and trapped sweat, usually in hot humid conditions.

Heat Shock Protein

A stress-response protein that helps other proteins fold, avoid aggregation, and recover after heat, oxidative, infectious, or other cellular stress; some also influence immunity and cancer biology.

Heat Stroke

A life-threatening heat-related illness with markedly elevated body temperature and altered mental status. It requires immediate cooling and emergency medical treatment.

Alternate Names:

Stroke Heat (Heat Stroke)

Heatstroke

A life-threatening rise in body temperature caused by failure of the body's heat regulation.

Heavy Menstrual Bleeding

Menstrual bleeding that is unusually heavy or prolonged and interferes with daily activities.

Alternate Names:

Excessive Menstrual Bleeding

Heavy Metal Poisoning

Lead, mercury, arsenic, cadmium, thallium. Chelation therapy, supportive care, prevention. Sources: paint, water pipes, fish, occupational exposure.

Hebefrenia

An outdated term for a disorganized form of schizophrenia, now generally classified under schizophrenia-spectrum disorders with prominent disorganization.

Heberden Node

A firm bony enlargement of the distal interphalangeal joint, usually caused by hand osteoarthritis. It may be tender during progression and can produce deformity, reduced fine-motor function, or restricted finger movement.

Heberden Nodes

Bony enlargements at the end joints of fingers, commonly associated with osteoarthritis.

Alternate Names:

Heberden's nodes

Heberden'S Node

A hard, bony enlargement of the distal interphalangeal joint caused by osteoarthritis, usually affecting the fingers and sometimes producing pain, stiffness, or reduced dexterity.

Heberden'S Nodes

Firm bony enlargements of the distal interphalangeal finger joints, usually caused by osteoarthritis.

Hecht'S Pneumonia

A rare, often fatal giant-cell pneumonia associated with measles, especially in immunocompromised children, characterized by multinucleated giant cells in the lung alveoli.

Hectocotylyzation

A reproductive process in some cephalopods in which a modified arm transfers sperm to the female.

Hedgehog Proteins

A family of secreted developmental signaling proteins, including Sonic hedgehog, that regulate embryonic patterning, tissue differentiation, and se-

lected stem-cell and cancer pathways.

Heel

The heel is the back and underside of the foot, formed mainly by the calcaneus and a cushioning fat pad.

Heel Pain

Pain beneath or around the heel, commonly caused by plantar fasciitis, Achilles tendinopathy, bursitis, stress fracture, nerve compression, or inflammatory arthritis. Persistent pain, swelling, inability to bear weight, or trauma requires assessment.

Alternate Names:

Plantar Heel Pain

Heel Spur

A bony growth arising from the heel bone, often associated with plantar-fascia strain. The spur itself may cause no symptoms; heel pain is more often related to surrounding soft-tissue inflammation.

Hegar'S Dilators

Hegar's dilators are graduated metal instruments used to gently widen the cervix or other body openings during selected procedures.

Hegar'S Sign

Hegar's sign is softening and compressibility of the lower uterus, traditionally described as an early sign of pregnancy.

Height

The vertical distance from the base of a person to the top of the head, measured for growth assessment, nutritional evaluation, drug dosing, and calculation of body-mass index.

Heimlich Maneuver On Self

A self-administered abdominal-thrust technique sometimes used for severe choking when a person cannot breathe, speak, or cough effectively; emergency services should be activated immediately.

Heimlich Manoeuvre

An emergency procedure for relieving upper airway obstruction caused by a foreign body (choking). The maneuver is performed on a conscious, choking adult who cannot speak, cough effectively, or breathe.

Heine-Medin Disease

A clinical disorder related to heine-medin disease; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Heinz Bodies

Clumps of denatured hemoglobin inside red blood cells caused by oxidative injury. They may occur in glucose-6-phosphate dehydrogenase deficiency after exposure to oxidizing substances and are identified with special stains.

Hejama

An Arabic term for cupping, a traditional practice in which suction is applied to the skin; wet cupping also involves superficial skin incisions and carries bleeding and infection risks.

Hela Cell

A continuously dividing human cell line derived from cervical cancer cells of Henrietta Lacks and widely used in biomedical research, virology, and drug testing.

Helcococcus

A genus of gram-positive cocci that can rarely cause opportunistic skin, wound, bone, or bloodstream infections.

Helcococcus Kunzii

A gram-positive coccus usually found on skin that can rarely cause opportunistic infection.

Helcococcus Pyogenes

A rarely encountered gram-positive coccus that may be associated with opportunistic human infection.

Helcococcus Sueciensis

A rarely encountered gram-positive coccus isolated

from human clinical specimens and occasionally associated with infection.

Helicase

An enzyme that uses energy from nucleoside triphosphates to separate paired nucleic-acid strands during DNA replication, repair, recombination, or RNA processing.

Helicobacter

A genus of spiral-shaped bacteria that colonize the stomach or intestine; some species cause ulcers, gastritis, or other disease.

Helicobacter Cinaedi

A *Helicobacter* species that can cause bloodstream, skin, bone, joint, or other invasive infections, especially in people with weakened immunity.

Helicobacter Felis

A gastric *Helicobacter* species found mainly in cats and dogs that can rarely infect humans.

Helicobacter Fennelliae

An intestinal *Helicobacter* species that can rarely cause bacteremia or other opportunistic infection.

Helicobacter Mustelae

A gastric *Helicobacter* species associated mainly with ferrets and studied as a cause of gastritis in animal models.

Helicobacter Pylori

A gram-negative, spiral-shaped bacterium adapted to colonize the stomach. It can cause chronic gastritis, peptic ulcer disease, and increase the risk of gastric cancer and gastric MALT lymphoma.

Helicobacter Pylori Infection

Infection of the stomach by *H. pylori*, a spiral-shaped bacterium associated with chronic gastritis, peptic ulcer disease, gastric adenocarcinoma, and gastric MALT lymphoma. It is diagnosed with noninvasive or endoscopic testing and treated with combination eradication therapy.

Helicobacter Rappini

A name used for a group of gastric *Helicobacter* organisms found mainly in animals and rarely reported in human specimens.

Helicobacteraceae

A family of spiral-shaped bacteria that includes *Helicobacter* and related genera, many of which inhabit the digestive tract.

Heliotherapy

Heliotherapy is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

Helium

A chemically inert gas used in respiratory mixtures, cryogenics, imaging, and laboratory applications; inhalation can displace oxygen and cause hypoxia despite its lack of direct toxicity.

Helix

The helix is the curved outer rim of the external ear.

Heller Myotomy

A surgical procedure that cuts the muscles of the lower esophageal sphincter to relieve obstruction in achalasia, usually performed laparoscopically and often combined with an antireflux procedure.

Heller'S Operation

A surgical procedure that cuts the lower esophageal muscle to relieve achalasia, usually with an antireflux procedure.

HELLP Syndrome

A serious pregnancy-associated disorder characterized by hemolysis, elevated liver enzymes, and low platelet count. It may occur with or without classic hypertension or proteinuria and requires urgent assessment.

Helminth

A parasitic worm, including roundworms, tapeworms, and flukes, that may live in or on a host.

Helminthiasis

Infection or infestation caused by parasitic worms such as roundworms, tapeworms, or flukes.

Helminths

Parasitic worms that cause disease in humans. The major groups are nematodes (roundworms), cestodes (tapeworms), and trematodes (flukes). Helminths have complex life cycles often involving intermediate hosts. Infection occurs through ingestion of eggs or larvae, penetration of skin, or insect vectors.

Help Prevent Hospital Errors

Actions that reduce hospital errors include confirming identity, checking medicines, communicating clearly, asking questions, and reporting changes or concerns promptly.

Helper T Cell

A type of CD4-positive T lymphocyte that coordinates immune responses by releasing cytokines and activating other immune cells.

Helper T Cells

CD4-positive immune cells that coordinate responses by activating other immune cells.

Alternate Names:

CD4 T cells

Helper Virus

A virus that supplies functions needed for another virus or defective viral genome to replicate.

HELPER Mnemonic

A mnemonic for the sequential management of shoulder dystocia: H — Help (call for additional personnel, anesthesia, and pediatrics). E — Evaluate for episiotomy (generous episiotomy to provide more room). L — Legs (McRoberts maneuver: hyperflex maternal legs onto the abdomen).

Helping A Loved One With A Drinking Problem

Support for someone with alcohol use disorder includes calm nonjudgmental communication, boundaries, encouragement toward medical treatment, attention to withdrawal risk, and emergency action for overdose or dangerous withdrawal.

Helping Your Teen With Depression

Support for an adolescent with depression includes listening without judgment, arranging professional assessment, supporting treatment and routines, reducing access to lethal means, and acting urgently for self-harm risk.

Hemagglutination Test

A test in which antibodies or other agents cause red blood cells to clump; the reaction can help detect antibodies, antigens, or selected infectious agents.

Hemagglutinin

A surface glycoprotein, especially on influenza viruses, that binds sialic-acid receptors and helps the virus attach to and enter host cells; it is a major target of protective antibodies.

Hemangioblastoma

A benign, well-circumscribed vascular tumor of the central nervous system, most commonly the cerebellum, often cystic with a mural nodule. Associated with von Hippel-Lindau disease; treated by surgical resection.

Hemangioendothelioma

A vascular neoplasm arising from endothelial cells with malignant potential between benign hemangioma and high-grade angiosarcoma; behavior depends on subtype and site.

Hemangioma

A benign tumor of blood vessel endothelial cells, common in infants. Most involute spontaneously; treatment includes laser therapy or surgery for problematic lesions.

Alternate Names:

Infantile Hemangioma Strawberry Hemangioma

Hemangiopericytoma

A rare tumor formerly defined by branching “staghorn” vessels and perivascular cells; many lesions classified this way are now recognized as solitary fibrous tumors.

Hemangiosarcoma

A malignant tumor of vascular endothelial cells, an aggressive sarcoma that may arise in the skin, liver, or bone.

Hemarthrosis

The accumulation of blood within a synovial joint cavity, most commonly involving the knee. Major etiologies include trauma (acute anterior cruciate ligament [ACL] rupture, patellar dislocation, intra-articular osteochondral fractures) and coagulopathies, classically representing the hallmark manifestation of severe congenital hemophilia A (factor VIII deficiency) or hemophilia B (factor IX deficiency). Presents with rapid, tense joint swelling, severe pain, warmth, and restricted range of motion developing within hours of injury. Evaluated via diagnostic arthrocentesis yielding gross bloody synovial fluid; in chronic hemophilia, recurrent hemarthroses induce synovial hemosiderin deposition, chronic inflammatory synovitis, and progressive cartilage destruction known as hemophilic arthropathy.

Hematemesis

Vomiting of blood, indicating upper gastrointestinal bleeding proximal to the ligament of Treitz. Blood may be bright red (acute, brisk bleeding) or resemble coffee grounds (altered blood that has been in contact with gastric acid).

Hematocele

An abnormal accumulation of blood within the potential space between the visceral and parietal layers of the tunica vaginalis surrounding the testis. Typically caused by blunt or penetrating scrotal trauma, testicular rupture, recent scrotal surgery, testicular biopsy, or underlying testicular neoplasm. Clinically

presents as an acute or enlarging, heavy, firm scrotal mass that does not transilluminate on light examination. Prompt scrotal ultrasonography with color Doppler is essential to assess testicular parenchymal integrity and blood flow; large or traumatic hematoceles often warrant surgical exploration, evacuation of clot, and testicular repair to prevent testicular necrosis, infection, or chronic fibrosis.

Alternate Names:

Scrotal Hematocele; Hematocele of the Tunica Vaginalis

Hematochezia

The passage of bright red or maroon blood per rectum, usually indicating active lower gastrointestinal (LGI) bleeding distal to the ligament of Treitz (e.g., diverticulosis, arteriovenous malformations/angiodysplasia, colorectal polyps/cancer, inflammatory bowel disease, hemorrhoids).

Hematocolpos

Accumulation of menstrual blood in the vagina, usually because an imperforate hymen or another obstructing anomaly prevents outflow; it may cause cyclic pelvic pain and a bulging vaginal membrane.

Hematocrit

The proportion of blood volume occupied by packed red blood cells, expressed as a percentage. One of the most commonly ordered laboratory tests in clinical medicine.

Hematogenous

Spread through the bloodstream, as when infection, tumor cells, or embolic material travels from one body site to another.

Hematologic Agents

Medicines or biologic therapies that act on blood cells, coagulation, marrow, or immune pathways, including agents used for anemia, thrombosis, leukemia, and lymphoma.

Hematologic Changes In Pregnancy

Plasma volume increases 40-50% while red cell mass increases 20-30%, resulting in physiologic anemia

(Hb 10-11 g/dL). Leukocytosis (WBC up to 15,000-16,000/ μ L, predominantly neutrophils) is normal.

Hematologic Malignancy

Alternate index label; see *Blood Cancer* and relevant leukemia, lymphoma, or myeloma entries.

Hematologic Response

A measurable improvement or change in blood counts or marrow findings after treatment, such as recovery of neutrophils, platelets, or hemoglobin or reduction of malignant cells.

Hematological Disease

A disorder of blood cells, bone marrow, lymphatic tissue, or coagulation, including anemia, leukemia, lymphoma, bleeding disorders, and clotting disorders.

Hematologist

A physician who diagnoses and treats disorders of blood, bone marrow, lymph nodes, clotting, and hematologic cancers.

Hematology

The branch of medicine concerned with the study, diagnosis, treatment, and prevention of disorders of the blood and blood-forming organs (bone marrow, lymph nodes, spleen).

Hematology-Oncology

The medical specialty concerned with blood disorders and cancers, including anemia, leukemia, lymphoma, myeloma, and clotting disorders.

Hematoma

A localized collection of blood outside blood vessels, usually caused by injury or a bleeding disorder.

Hematometra

A pathological distension and accumulation of blood within the uterine cavity resulting from structural obstruction of the lower outflow tract, such as congenital cervical agenesis, transverse vaginal septum, imperforate hymen, or acquired cervical stenosis fol-

lowing surgical conization, loop excision, or pelvic radiation. Clinically manifests with severe amenorrhea or cryptomenorrhea, cyclic lower midline abdominal/pelvic pain, and an enlarged, tender, globular uterus on bimanual examination.

Hematometrocolpos

Accumulation of blood in the uterine cavity and vagina due to outflow obstruction such as an imperforate hymen or transverse vaginal septum, presenting with cyclic pelvic pain and primary amenorrhea in adolescents.

Hematomyelia

Hemorrhage occurring directly within the parenchyma of the spinal cord, most often localized centrally within the gray matter. Primarily caused by acute mechanical spinal cord trauma (such as fracture-dislocations or severe hyperflexion/hyperextension injuries), followed by rupture of spinal vascular malformations (arteriovenous malformations [AVMs], cavernous angiomas), bleeding diatheses, or therapeutic anticoagulation. Manifests acutely with sudden, severe back or neck pain followed by rapid-onset flaccid paraparesis or quadriparesis, sensory loss below the lesion level, loss of deep tendon reflexes (spinal shock), and bowel/bladder dysfunction; urgently diagnosed via emergent spinal MRI showing intramedullary hematoma with surrounding edema.

Hematophobia

An excessive or persistent fear of blood, blood-related sights, or medical procedures involving blood that causes distress or avoidance; some people have a vasovagal fainting response.

Hematopoiesis

The production and maturation of blood cells from multipotent hematopoietic stem cells, principally in the bone marrow after birth. It generates erythrocytes, leukocytes, and platelets through regulated progenitor-cell differentiation.

Hematopoietic Growth Factor

A cytokine or medicine that stimulates production,

maturation, or survival of blood-forming cells in bone marrow, such as erythropoietin or granulocyte colony-stimulating factor.

Hematopoietic Neoplasm

A neoplastic process affecting hematopoietic neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Hematopoietic Stem Cell Transplantation

Infusion of hematopoietic stem cells after a conditioning regimen to restore marrow function or replace diseased hematopoiesis. Autologous HSCT uses the patient's own cells; allogeneic HSCT uses cells from a donor and carries risks including graft-versus-host disease and graft failure.

Hematopoietic System

The bone marrow and related organs and cells that produce, mature, circulate, and remove blood cells, including red cells, white cells, and platelets.

Hematoporphyrin Derivative

A porphyrin-based photosensitizer that accumulates in some tumors and can be activated by light in photodynamic treatment; it may also cause prolonged photosensitivity.

Hematosalpinx

Accumulation of blood within a fallopian tube, often caused by ectopic pregnancy, endometriosis, pelvic surgery, or obstruction, and potentially producing pelvic pain or infertility.

Hematosis

The exchange of oxygen and carbon dioxide between alveolar air and pulmonary capillary blood, resulting in oxygenation of the blood.

Hemospermia

Blood in the semen, often temporary and associated with infection, inflammation, trauma, or a recent urologic procedure. Persistent or recurrent bleeding, pain, fever, urinary symptoms, or bleeding in an older adult requires medical evaluation.

Hematoxylin

A dye used in histology, usually with eosin, to stain cell nuclei blue-purple and help show tissue structure.

Hematuria

Presence of red blood cells in the urine, categorized as microscopic (>3 RBCs per high-power field on urine microscopy) or gross (macroscopic, visible color change from pink to dark red). Microscopic hematuria is often asymptomatic and detected on routine urinalysis.

Heme

Heme is an iron-containing porphyrin group that binds oxygen in haemoglobin and myoglobin and forms the functional centre of several enzymes; abnormal heme metabolism contributes to porphyrias and jaundice.

Hemeralopia

Hemeralopia is reduced vision in bright light, sometimes associated with retinal disorders or abnormal cone function.

Hemerythrin

An oxygen-binding protein found in some marine invertebrates; it is not the principal oxygen-carrying protein in humans but is relevant to comparative physiology.

Hemianopia

Loss of vision in half the visual field of one or both eyes. Homonymous hemianopia affects the same side in both eyes and localizes to a contralateral lesion posterior to the optic chiasm, most often stroke or tumor.

Hemianopsia

Loss of vision in half of the visual field of one or both eyes, usually from a lesion of the optic tract, radiations, or occipital cortex; sudden onset may indicate stroke.

Hemiballism

A movement disorder causing sudden, large-amplitude, flinging movements on one side of the body, usually from a lesion involving the subthalamic region.

Hemiballismus

Hemiballismus is involuntary, rapid, flinging movement of one side of the body, usually caused by a lesion of the opposite subthalamic region.

Hemicolectomy

Surgical removal of the right or left portion of the colon, sometimes with nearby lymph nodes and reconnection of the bowel.

Hemidesmosome

A specialized junction that anchors basal epithelial cells to the underlying basement membrane by linking intracellular keratin filaments with extracellular matrix proteins.

Hemidiaphragm

One of the two muscular halves of the diaphragm separating the chest from the abdomen and assisting breathing.

Hemifacial Atrophy

Progressive wasting of skin, subcutaneous tissue, muscle, and sometimes bone on one side of the face, also called Parry–Romberg syndrome.

Hemifacial Microsomia

A congenital craniofacial disorder involving asymmetric hypoplasia of the structures derived from the first and second branchial arches, most commonly affecting the mandible, ear, and soft tissues on one side. Also known as craniofacial microsomia or Goldenhar syndrome when epibulbar dermoids and vertebral anomalies are present.

Alternate Names:

craniofacial microsomia or.

Hemifacial Spasm

Involuntary, unilateral, intermittent twitching of the

facial muscles innervated by the facial nerve (CN VII). Typically begins around the eye (orbicularis oculi) and spreads to the lower face.

Hemihypertrophy

Unequal overgrowth of one side or region of the body, producing asymmetry of limbs, trunk, or face; some childhood cases carry increased risk of embryonal tumors.

Hemilaryngectomy

Hemilaryngectomy is surgery to remove part of the larynx, usually to treat a selected laryngeal cancer while preserving as much speech and swallowing function as possible.

Hemimandibulectomy

Hemimandibulectomy is surgery to remove one side of the lower jaw, usually for a tumor or severe bone disease, sometimes followed by reconstruction.

Hemimegalencephaly

A rare developmental brain malformation in which one cerebral hemisphere is abnormally enlarged and dysplastic, often causing infantile seizures, developmental impairment, and contralateral neurologic signs.

Hemimelia

A congenital limb-reduction defect in which part or all of a limb segment is absent, such as fibular or radial hemimelia.

Hemiparesis

Weakness affecting one side of the body, less severe than hemiplegia (paralysis). It results from a lesion of the corticospinal tract anywhere from the motor cortex to the spinal cord, most commonly from stroke, but also from tumors, trauma, or demyelination. The pattern of weakness helps localize the lesion.

Hemipelvectomy

Hemipelvectomy is major surgery that removes part or all of one side of the pelvis, with or without

removal of the leg, usually for extensive cancer or severe trauma.

Hemiplegia

Paralysis of one side of the body (the face, arm, and leg on the same side), caused by damage to the corticospinal tract (pyramidal tract) at any level from the cerebral cortex to the spinal cord.

Hemispatial Neglect

Hemispatial neglect is reduced awareness of one side of the body or space, usually after injury to the opposite cerebral hemisphere.

Hemispherectomy

Hemispherectomy is surgery that removes or disconnects much of one cerebral hemisphere to treat severe, otherwise uncontrolled epilepsy in selected patients.

Hemisternebra

A congenital or developmental partial segment of the sternum, caused by incomplete formation or fusion of sternal elements and sometimes associated with chest-wall anomalies.

Hemithorax

One side of the thorax, including the lung, pleural space, ribs, and other structures on that side of the chest.

Hemivertebrae

Congenital vertebrae formed from only part of the normal vertebral body, producing wedge-shaped bone and potentially causing congenital scoliosis or spinal-cord abnormalities.

Hemizygous

Having only one copy of a gene or chromosome region rather than the usual pair, as occurs for many X-linked genes in people with one X chromosome.

Hemochromatosis

Hemochromatosis is excessive iron accumulation that can injure the liver, pancreas, heart, joints,

skin, and endocrine organs; inherited and acquired forms exist. progressive iron deposition in parenchymal organs. Hereditary hemochromatosis is most commonly caused by homozygous C282Y mutations in the HFE gene affecting approximately one in two hundred individuals of Northern European descent.

Hemochromatosis Cardiomyopathy

Iron overload cardiomyopathy from hereditary (HFE gene mutations, most common) or secondary causes. Iron deposition in the myocardium causes restrictive then dilated cardiomyopathy. Diagnosis: elevated transferrin saturation (>45%), ferritin, and genetic testing. Cardiac MRI T2* <20 ms indicates myocardial iron overload.

Hemocyanin

A copper-containing oxygen-transport protein in many mollusks and arthropods; unlike human hemoglobin, it circulates dissolved in their hemolymph.

Hemocytometer

A ruled counting chamber used with a microscope to determine the concentration of cells or other particles in a measured volume of fluid.

Hemodialysis

Extracorporeal blood purification in which blood passes through a dialyzer containing a semipermeable membrane to remove selected solutes and excess fluid. Conventional outpatient treatment is often scheduled about three times weekly for several hours, but frequency and duration vary with the clinical situation and modality. Vascular access is required; an arteriovenous fistula is generally preferred when feasible. Adequacy is assessed with measures such as Kt/V or urea reduction ratio, together with clinical status. Complications can include hypotension, access infection, thrombosis, and dialyzer reactions.

Hemodialysis Access - Self Care

Daily care of an arteriovenous fistula, graft, or catheter preserves blood flow and prevents infection; check for a thrill, avoid compression, and report redness, drainage, swelling, or loss of flow.

Hemodialysis Access Procedures

Procedures that create, maintain, repair, or revise vascular access for hemodialysis, including fistula or graft creation, catheter placement, angioplasty, thrombectomy, and treatment of stenosis or infection.

Hemodialysis Clearance

The volume of plasma from which hemodialysis removes a solute per unit time; it depends on blood and dialysate flow, membrane properties, treatment time, and the substance's distribution.

Hemodialysis Solution

The dialysate fluid circulated across a semipermeable membrane during hemodialysis to remove waste and help correct electrolyte, acid-base, and fluid abnormalities.

Hemodynamics

Study of blood flow dynamics within the cardiovascular system; includes assessment of blood pressure, cardiac output, and vascular resistance. Its significance is established from its characteristic features, causes, and clinical context.

Hemofiltration

An extracorporeal process that removes plasma water and dissolved solutes by convection across a semipermeable membrane, with replacement fluid used to maintain volume. It is used in continuous and intermittent kidney-replacement modalities.

Hemoglobin

Hemoglobin is the iron-containing protein in red blood cells that carries oxygen and carbon dioxide; its concentration and structure help evaluate anemia and hemoglobin disorders. heme groups that bind oxygen. Each heme contains iron (Fe^{2+}) that reversibly binds O_2 . Cooperative binding produces sigmoidal oxygen dissociation curve. P_{50} (pO_2 at 50% saturation) 27 mmHg.

Hemoglobin A

Haemoglobin A is the predominant adult haemoglobin, composed of two alpha and

two beta chains ($\alpha_2\beta_2$), and transports oxygen in normal red blood cells.

Hemoglobin A1C Variability

Factors that can make hemoglobin A1c less reliable include altered red-cell survival, hemoglobin variants, anemia, pregnancy, kidney disease, transfusion, and some treatments. An alternative measure of glucose may be needed when A1c does not reflect recent glycemia.

Hemoglobin C

A beta-globin variant caused by a hemoglobin gene mutation; homozygosity can cause mild hemolytic anemia and splenomegaly, while inheritance with hemoglobin S causes a clinically significant sickling disorder.

Hemoglobin C Disease

An inherited hemoglobinopathy caused by a beta-globin variant that produces hemoglobin C. It may cause mild hemolytic anemia, jaundice, splenomegaly, or, when combined with hemoglobin S, clinically significant sickling disease.

Hemoglobin Electrophoresis

Separation of hemoglobin variants by electrophoresis or HPLC. Normal adult: HbA (95-98%), HbA2 (2-3%), HbF (<1%). Sick cell disease (HbSS): HbS only, no HbA. Sick cell trait (HbAS): HbA > HbS. Thalassemia: elevated HbA2 or HbF.

Hemoglobin H

A beta-chain tetramer formed in alpha-thalassemia, which is unstable and causes chronic hemolytic anemia of variable severity.

Hemoglobin Increased

An increased hemoglobin concentration, which may reflect dehydration, chronic hypoxemia, erythrocytosis, or a myeloproliferative neoplasm and must be interpreted with hematocrit and clinical context.

Hemoglobin M

A group of abnormal hemoglobins that stabilize

iron in the ferric state and can cause congenital methemoglobinemia and cyanosis.

Hemoglobin Normal Values

Reference ranges for blood hemoglobin concentration, which vary with age, sex, pregnancy, altitude, laboratory method, and other factors; results should be interpreted using the reporting laboratory's range.

Hemoglobin S

Haemoglobin S is a beta-globin variant caused by the HbS mutation; when deoxygenated it can polymerize, producing sickling, haemolysis, and vaso-occlusion in sickle-cell disease.

Hemoglobin SC Disease

A major symptomatic sickling hemoglobinopathy resulting from compound heterozygosity for the hemoglobin S ($\beta^6 \text{Glu} \rightarrow \text{Val}$) and hemoglobin C ($\beta^6 \text{Glu} \rightarrow \text{Lys}$) mutations. Patients produce roughly equal amounts of HbS and HbC without normal adult hemoglobin A. Although hemolytic anemia and painful vaso-occlusive crises are generally milder than in homozygous sickle cell anemia (HbSS), patients carry a markedly higher risk of proliferative retinopathy, avascular necrosis of the femoral head, and thromboembolic events.

Alternate Names:

HbSC; HbSC disease; Sickle-hemoglobin C disease

Hemoglobin Trait

The inherited presence of a hemoglobin variant in a heterozygous state, usually causing no symptoms but potentially affecting screening results or reproductive risk.

Hemoglobinopathies: Thalassemias

Thalassemias are inherited disorders of globin chain synthesis imbalance: alpha-thalassemia (HBA1/HBA2 deletions) and beta-thalassemia (HBB mutations).

Hemoglobinopathy

A group of inherited disorders of hemoglobin structure or synthesis. Major types include sickle-cell

disease and thalassemia; manifestations range from asymptomatic microcytosis to haemolytic anaemia, vaso-occlusion, and organ injury.

Hemoglobinuria

Haemoglobinuria is free haemoglobin in urine, usually from intravascular haemolysis; urine may be dipstick-positive for blood with few or no red cells, and causes include transfusion reactions, malaria, and paroxysmal nocturnal haemoglobinuria.

Hemoglobinuria Test

A laboratory test evaluating urine for hemoglobin or related findings, used to investigate intravascular hemolysis, hemoglobinuria, transfusion reactions, or other causes of dark urine.

Hemolymph

The circulating fluid of arthropods and many other invertebrates, serving functions analogous to blood and lymph; it is not the normal circulatory fluid of humans.

Hemolysin

A toxin or antibody that damages red-cell membranes and causes hemolysis.

Hemolysis

The premature destruction of red blood cells, releasing hemoglobin into the plasma. Extravascular hemolysis (most common): RBCs are destroyed by macrophages in the spleen and liver — causes unconjugated hyperbilirubinemia, increased LDH, and decreased haptoglobin.

Hemolytic

Relating to hemolysis, the premature destruction of red blood cells, which can release hemoglobin and produce anemia or jaundice.

Hemolytic Anemia

Anemia due to accelerated destruction of red blood cells (RBCs), classified as intrinsic (RBC defect) or extrinsic (external factors). Intrinsic: hereditary spherocytosis, G6PD deficiency, sickle cell disease,

thalassemia.

Hemolytic Anemia Caused By Chemicals And Toxins

Anemia caused by accelerated destruction of red blood cells after exposure to a chemical or toxin; evaluation identifies hemolysis and removes or treats the responsible exposure.

Hemolytic Anemias: Autoimmune

Autoimmune hemolytic anemia occurs when antibodies or complement cause premature destruction of red blood cells. Warm-antibody and cold-antibody forms differ in their triggers, laboratory findings, and sites of red-cell destruction.

Hemolytic Anemias: Hereditary

Hereditary spherocytosis: cytoskeletal protein defects (ankyrin, band 3, protein 4.2, alpha/beta spectrin) -> spherical RBCs, splenic trapping, hemolysis. AD (75%) or AR. Clinical: anemia, jaundice, splenomegaly, gallstones.

Hemolytic Crisis

A sudden increase in red-cell destruction causing worsening anemia, jaundice, dark urine, pain, or other manifestations of hemolysis.

Hemolytic Disease Of The Newborn

A condition in which maternal antibodies destroy fetal/neonatal red blood cells (RBCs), causing hemolytic anemia, hyperbilirubinaemia, and in severe cases hydrops fetalis.

Hemolytic Index

A laboratory-quality indicator estimating hemolysis in a blood specimen; substantial in-vitro hemolysis can interfere with measurement of several analytes.

Hemolytic Jaundice

Jaundice resulting from excessive hemolysis (breakdown of red blood cells) causing overproduction of unconjugated bilirubin that exceeds the liver's capacity for conjugation and excretion. See Jaundice for complete overview.

Hemolytic Jaundice, Congenital

Jaundice present from or caused by an inherited condition that increases red-blood-cell destruction, producing excess unconjugated bilirubin; examples include hereditary spherocytosis and some enzymatic defects.

Hemolytic Transfusion Reaction

An immune or nonimmune complication in which transfused red blood cells are destroyed, potentially causing fever, pain, hemoglobinuria, kidney injury, shock, or disseminated intravascular coagulation.

Hemolytic Uremic Syndrome

A thrombotic microangiopathy characterized by red-cell destruction, low platelets, and acute kidney injury. It may follow Shiga-toxin-producing gastrointestinal infection or result from complement dysregulation and other causes.

Hemolytic-Uremic Syndrome

A potentially life-threatening disorder characterized by microangiopathic hemolytic anemia, thrombocytopenia, and acute kidney injury. It often follows Shiga-toxin-producing bacterial gastroenteritis but may also result from complement dysregulation or other triggers.

Hemoperfusion

Blood passed through adsorbent column (charcoal, resin) to remove toxins. Used for drug overdoses with high protein binding, large volume of distribution.

Hemopericardium

Accumulation of blood in the pericardial sac around the heart. If pressure rises and prevents the heart from filling, cardiac tamponade can occur and requires emergency treatment.

Hemoperitoneum

Blood collecting inside the abdominal cavity, usually from trauma, a ruptured blood vessel or organ, surgery, or a ruptured ectopic pregnancy. It can cause abdominal pain, distention, dizziness, or shock and may require emergency imaging and surgery or

another procedure.

Hemopexin

A plasma glycoprotein that binds free heme and transports it to the liver, helping limit oxidative injury during hemolysis.

Hemophagocytic Lymphohistiocytosis

HLH is a rare, life-threatening syndrome in which immune cells become excessively activated and release large amounts of inflammatory signals, causing tissue injury and possible organ failure. It may be inherited because of defects in immune-cell killing or acquired after infections such as Epstein–Barr virus, cancer (especially lymphoma), autoimmune disease, or immune deficiency. Typical findings include persistent fever, enlarged spleen, low blood-cell counts, very high ferritin, abnormal liver tests, high triglycerides, low fibrinogen, clotting problems, or neurologic symptoms. Diagnosis uses the clinical picture and laboratory findings; hemophagocytosis in tissue may support the diagnosis but is not required. HLH needs urgent specialist treatment directed at controlling inflammation and treating the trigger; some inherited or relapsing cases require stem-cell transplantation.

Hemophagocytosis Of Sick Cells

Activation of macrophages that engulf erythrocytes, leukocytes, and platelets within the bone marrow, occurring as a complication of sickle cell disease during severe hemolytic crises or infection.

Hemophilia

Hemophilia is an inherited coagulation-factor deficiency, usually factor VIII or IX, causing prolonged bleeding into joints, muscles, and tissues after injury or spontaneously. VIII, IX, or another coagulation component. It causes prolonged bleeding, particularly into joints and muscles, after injury or procedures.

Alternate Names:

A Hemophilia (Hemophilia) B Hemophilia (Hemophilia)

Hemophilia A

An X-linked recessive deficiency of coagulation factor VIII, causing prolonged bleeding into joints, muscles, and soft tissues. Severity correlates with factor VIII activity levels.

Hemophilia B

An X-linked recessive deficiency of coagulation factor IX (Christmas disease), causing prolonged bleeding similar to hemophilia A. Severity correlates with factor IX activity levels.

Hemophilus

An older spelling or variant of *Haemophilus*, a group of small gram-negative bacteria that includes respiratory and genital pathogens.

Hemophilus Ducreyi

A gram-negative bacterium that causes chancroid, a sexually transmitted infection with painful genital ulcers and tender lymph nodes.

Hemophobia

An excessive or persistent fear of blood, also called hematophobia, that causes significant distress, avoidance, or sometimes a vasovagal faint.

Hemopoietic Stem Cell

A blood-forming stem cell found mainly in the bone marrow. It can make copies of itself and develop into red blood cells, white blood cells, or platelets.

Alternate Names:

Hematopoietic Stem Cell

Hemopoietic Tissue

Tissue that produces blood cells, chiefly bone marrow, containing stem cells and supporting cells that generate erythrocytes, leukocytes, and platelets.

Hemoprotein

A protein containing a heme group with an iron atom, such as hemoglobin, myoglobin, cytochromes, and many oxidoreductive enzymes.

Hemoptysis

Expectoration of blood from the lower respiratory tract. Must be differentiated from hematemesis and epistaxis. Causes: bronchitis, pneumonia, TB, bronchiectasis, lung cancer, PE.

Hemorrhage

Abnormal escape of blood from a damaged blood vessel or, less commonly, from the heart. It may be external or internal, acute or chronic, and range from minor bleeding to life-threatening blood loss causing anemia, shock, or organ compression; the cause and site determine management.

Hemorrhagic

Pertaining to or characterized by hemorrhage (extravasation of blood from vessels). Used in contexts such as hemorrhagic stroke, hemorrhagic shock, and hemorrhagic fever.

Hemorrhagic Anemia

A decrease in total circulating red blood cell mass, hemoglobin concentration, and oxygen-carrying capacity resulting directly from acute or chronic hemorrhage. Acute hemorrhagic anemia (from major trauma, ruptured aortic aneurysm, ectopic pregnancy, or massive gastrointestinal bleeding) presents with hypovolemia, postural hypotension, tachycardia, and potentially hemorrhagic shock; immediately following acute blood loss, hemoglobin and hematocrit appear deceptively normal until extravascular fluid shifts or IV resuscitation causes hemodilution. Chronic hemorrhagic anemia (from occult gastrointestinal bleeding, heavy menstrual bleeding, or angiodysplasia) presents indolently with fatigue, pallor, and exertional dyspnea, classically resulting in secondary iron deficiency anemia with microcytic, hypochromic red blood cell indices.

Hemorrhagic Disorder

A condition that causes abnormal bleeding because of platelet number or function, clotting-factor deficiency, excessive fibrinolysis, or blood-vessel fragility.

Hemorrhagic Shock

Circulatory failure caused by severe blood loss. It may produce rapid pulse, low blood pressure, cool skin, reduced urine output, confusion, or collapse. Treatment requires urgent control of bleeding, restoration of circulating volume, blood products when indicated, and correction of associated injuries or clotting abnormalities.

Hemorrhagic Stroke

A neurological deficit caused by rupture of a cerebral blood vessel, accounting for 13% of all strokes but 40% of stroke mortality. Intracerebral hemorrhage: hypertensive (basal ganglia, thalamus, pons, cerebellum), amyloid angiopathy (lobar, elderly), vascular malformations, anticoagulation. Subarachnoid hemorrhage: aneurysm rupture.

Hemorrhoid

Pathologically engorged, dilated vascular cushions composed of submucosal arteriovenous plexuses and connective tissue located within the lower rectum and anal canal. Categorized anatomically by their position relative to the dentate (pectinate) line: internal hemorrhoids originate above the dentate line (covered by insensitive columnar/transitional epithelium, innervated by visceral nerves, typically presenting with painless bright red rectal bleeding during defecation or prolapse, graded from I to IV based on degree of protrusion), whereas external hemorrhoids originate below the dentate line (covered by sensitive squamous epithelium, innervated by somatic pudendal nerves, causing severe, acute localized anal pain upon thrombosis). Managed conservatively with dietary fiber, hydration, sitz baths, rubber band ligation, or surgical hemorrhoidectomy.

Hemorrhoid Surgery

An operation to remove or reduce symptomatic internal or external hemorrhoids when bleeding, prolapse, thrombosis, or pain persists despite appropriate conservative treatment.

Hemorrhoidal Hemorrhage

Rectal bleeding from enlarged or injured hemorrhoidal vessels, usually bright red and associated

with defecation; heavy, persistent, painful, or unexplained bleeding requires evaluation for other causes.

Hemorrhoidectomy

Surgical excision of symptomatic hemorrhoids. Indications: Grade III-IV internal hemorrhoids (prolapsed, irreducible), external hemorrhoids with uncontrolled bleeding or recurrent thrombosis, mixed hemorrhoids.

Hemorrhoids

Enlarged vascular cushions of the anal canal that may cause painless rectal bleeding, prolapse, itching, or discomfort; they may be internal or external.

Hemorrhoids (Piles)

Vascular cushions in the anal canal composed of arteriovenous anastomoses (normal structures present from birth), which become symptomatic when they bleed, prolapse, or thrombose.

Alternate Names:

Piles Piles (Hemorrhoids (Piles))

Hemosiderin

A golden-brown, granular, iron-containing pigment derived from the degradation of hemoglobin and stored within macrophages as an insoluble complex. It forms when red blood cells are phagocytosed and degraded, typically in conditions of hemorrhage, hemolysis, or excessive red blood cell destruction.

Hemosiderosis

Excess deposition of hemosiderin, an iron-storage pigment, in tissues. It may follow repeated bleeding or transfusions and can affect organs such as the lungs or liver.

Hemosiderotic Synovitis

Synovial inflammation with hemosiderin deposition caused by recurrent bleeding into a joint, commonly associated with hemophilia, anticoagulation, trauma, or a vascular synovial lesion.

Hemospermia

The presence of blood in semen, usually caused by

inflammation or infection of the genitourinary tract and often self-limited, but persistent or recurrent cases require evaluation.

Hemostasis

The coordinated physiological process that stops bleeding after vascular injury through vessel constriction, platelet adhesion and aggregation, coagulation-factor activation, fibrin formation, clot stabilization, and regulated fibrinolysis. Failure can cause bleeding or thrombosis.

Hemostasis And Coagulation

Hemostasis is the coordinated response that limits bleeding through vessel constriction, platelet adhesion and aggregation, coagulation-factor activation, fibrin formation, clot retraction, and later fibrinolysis; imbalance can cause bleeding or thrombosis.

Hemostasis Valve

A valve or sealing device used with an intravascular catheter or sheath to limit blood loss while allowing passage of wires or instruments.

Hemostat

A clamp used to compress a blood vessel or tissue and control bleeding.

Hemostat (Perineal)

A clamp used during procedures to compress a blood vessel or hold tissue and control bleeding.

Alternate Names:

Perineal

Hemostat (Surgical)

A clamping surgical instrument used to control bleeding by compressing a blood vessel or tissue.

Alternate Names:

Surgical

Hemostat (Vascular)

A surgical clamp used to temporarily occlude a blood vessel and control bleeding.

Alternate Names:

Vascular

Hemostatic Agent

A haemostatic agent promotes control of bleeding by supporting clot formation, providing a physical barrier, or inhibiting fibrinolysis; examples include topical agents, tranexamic acid, and factor replacement.

Hemothorax

Accumulation of blood in the pleural space, most commonly from trauma. Presents with decreased breath sounds, dullness to percussion. Diagnosis: chest X-ray, ultrasound, CT. Treatment: tube thoracostomy, blood transfusion, surgery if ongoing bleeding.

Hemovac Drain

A closed-suction surgical drain with a compressible reservoir used to remove blood or other fluid from a wound or operative site.

Hempa

A historical or context-dependent biomedical abbreviation or term; its meaning must be confirmed from the source because it does not identify one universally accepted diagnosis or treatment.

Henipavirus

A genus of paramyxoviruses that includes Nipah and Hendra viruses, which can cause severe encephalitis and respiratory disease.

Henoch-Schonlein Purpura

IgA vasculitis: palpable purpura on buttocks/legs, abdominal pain, arthralgia, renal involvement (IgA nephropathy), most common in children. Self-limited in most cases; corticosteroids for severe GI/renal involvement.

Alternate Names:

Spring Fever (Henoch-Schonlein Purpura)

Henoch-SchöNlein Purpura

An older name for IgA vasculitis, an inflammation of small blood vessels that can cause palpable purpura, usually on the lower limbs and buttocks, with joint pain, abdominal symptoms, and kidney in-

volvement.

HEPA Filter

A high-efficiency particulate air filter that removes a large proportion of airborne particles.

Alternate Names:

High-efficiency particulate air filter

Hepadnaviridae

A family of small DNA viruses that includes hepatitis B virus and related viruses infecting mammals and birds.

Hepar

Latin for liver; it is used in medical terminology and in names of substances or preparations relating to the liver.

Heparan Sulfate

A sulfated glycosaminoglycan in cell surfaces and extracellular matrix that binds growth factors, regulates signaling, and contributes to filtration-barrier and connective-tissue structure.

Heparin

An anticoagulant medicine that reduces blood clotting by enhancing antithrombin activity. It may be given by injection to prevent or treat blood clots.

Heparin Binding

A medicine or chemical compound called heparin binding. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Heparin Lyase

A medicine or chemical compound called heparin lyase. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Heparin-Induced Thrombocytopenia

An immune-mediated adverse drug reaction caused by IgG antibodies against platelet factor 4 (PF4)-heparin complexes, leading to platelet activation, thrombocytopenia, and a prothrombotic state. HIT

typically occurs 5-14 days after heparin exposure (unfractionated heparin > low molecular weight heparin).

Hepatectomy

Surgical removal of part or all of the liver for primary or metastatic tumors, requiring an adequate future liver remnant; portal vein embolization can hypertrophy the remnant before resection.

Hepatic

Pertaining to the liver; hepatic function includes metabolism, detoxification, bile production, and protein synthesis. Its significance is established from its characteristic features, causes, and clinical context.

Hepatic Artery

The artery that supplies oxygenated blood to the liver, arising from the celiac circulation and dividing into right and left branches within the porta hepatis.

Hepatic Biopsy

Alternate index label; see *Liver biopsy*. It may evaluate inflammation, fibrosis, fatty liver disease, infection, infiltrative disease, or a mass when noninvasive tests are insufficient.

Hepatic Coma

A clinical disorder related to hepatic coma; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hepatic Cyst

Fluid-filled cavity in the liver most commonly congenital and asymptomatic. Simple hepatic cysts are lined by biliary epithelium and contain clear fluid. May cause pain or compressive symptoms if large or complicated by hemorrhage, infection, or rupture. Simple cysts require no treatment.

Hepatic Dose Adjustment

Modification of medication selection or dosing because impaired liver function may reduce metabolism, transport, protein synthesis, or biliary

excretion. Standardized liver tests do not always predict drug clearance, so drug-specific guidance is required.

Hepatic Duct

The duct formed by the union of the right and left liver ducts, carrying bile from the liver toward the common bile duct and intestine.

Hepatic Encephalopathy

Neuropsychiatric syndrome occurring in advanced liver disease resulting from accumulation of neurotoxic substances, particularly ammonia. Ammonia crosses the blood-brain barrier and is metabolized by astrocytes into glutamine causing osmotic swelling and impaired neurotransmission.

Hepatic Fissure

A hepatic fissure is a groove or cleft on the liver surface that separates anatomical regions and provides passage for vessels, ducts, or ligaments.

Hepatic Flexure

The bend where the ascending colon becomes the transverse colon near the liver.

Hepatic Hemangioma

Most common benign liver tumor composed of dilated blood-filled vascular spaces lined by endothelial cells. Usually asymptomatic and found incidentally on imaging. Most are small and require no treatment.

Hepatic Hydrothorax

Large pleural effusion occurring in patients with cirrhosis and portal hypertension in the absence of primary cardiac or pulmonary disease. Most commonly right-sided resulting from transit of ascitic fluid through small defects in the diaphragm into the pleural space driven by the pressure gradient between the abdomen and thorax.

Hepatic Ischemia

Liver injury caused by inadequate hepatic blood flow or oxygen delivery, often during shock, severe

hypoxemia, cardiac failure, or hepatic vascular occlusion. It can produce a rapid, marked rise in aminotransferases and may progress to acute liver failure.

Hepatic Jaundice (Hepatocellular Jaundice)

Jaundice caused by impaired processing or excretion of bilirubin by damaged liver cells.

Alternate Names:

Hepatocellular Jaundice

Hepatic Lamina

The hepatic lamina is an embryologic or microscopic layer involved in formation and organization of liver tissue and bile ducts.

Hepatic Necrosis

Death of liver cells caused by severe ischemia, toxins, viral infection, autoimmune injury, or other insults; extensive necrosis can produce acute liver failure.

Hepatic Portal System

The venous network draining blood from the gastrointestinal tract, spleen, and pancreas to the liver before it reaches the systemic circulation. Formed by the union of the superior mesenteric and splenic veins behind the pancreatic neck; receives inferior mesenteric, left gastric, and other tributaries.

Hepatic Steatosis

Excess accumulation of fat in liver cells, commonly called fatty liver; causes include metabolic disease, alcohol, medicines, and other conditions, and inflammation or fibrosis may develop in some people.

Hepatic Surgery

Surgical treatment of liver disease, including partial liver resection, transplantation, and procedures for tumors or biliary disorders. The operation depends on the diagnosis, tumor extent, liver function, and overall health.

Hepatic Synthetic Dysfunction

Impaired hepatic production of proteins and other

molecules, including albumin and coagulation factors. It may cause hypoalbuminemia, edema, prolonged prothrombin time, and increased INR, although INR can also be altered by vitamin K deficiency, anticoagulants, and other conditions.

Hepatic Trauma

Liver injury from trauma. CT staging guides management. Grades I-V based on injury severity.

Hepatic Vein

Veins draining the liver into the inferior vena cava. The right, middle, and left hepatic veins emerge from the posterior surface of the liver at the bare area and drain into the IVC just below the diaphragm. They carry deoxygenated blood leaving the liver (after the hepatic portal system delivers blood for processing).

Hepatic Vein Obstruction (Budd-Chiari)

Obstruction of hepatic venous outflow, usually from thrombosis or compression, causing abdominal pain, hepatomegaly, ascites, and potentially liver failure.

Hepatitis

Hepatitis is inflammation of the liver caused by viruses, alcohol, medications, toxins, metabolic disease, or autoimmunity and may be acute or chronic.

Hepatitis (Viral Hepatitis)

Inflammation of the liver caused by hepatotropic viruses. Hepatitis A: fecal-oral, acute self-limited, no chronic carrier state; vaccine-preventable. Hepatitis B (HBV): blood/sexual/perinatal transmission; acute and chronic infection; leading cause of cirrhosis and HCC.

Alternate Names:

Viral Hepatitis

Hepatitis A

Hepatitis A is an acute liver infection caused by hepatitis A virus, spread mainly by the fecal-oral route through close contact or contaminated food and drink. The incubation period is about 15–50 days. It may cause fever, fatigue, nausea, abdominal discomfort, and jaundice, although young children

may have few or no symptoms. Most people recover completely; it does not cause chronic infection, but rarely causes acute liver failure. Vaccination provides effective prevention.

Hepatitis A - Children

Hepatitis A in children is acute liver infection spread mainly by fecal contamination and usually resolves, though dehydration or severe liver injury can occur.

Hepatitis A Virus

Picornavirus transmitted through the fecal-oral route most commonly via contaminated food or water. The incubation period is fifteen to fifty days. Clinical presentation ranges from asymptomatic infection in young children to symptomatic acute hepatitis with jaundice, fatigue, nausea, elevated transaminases, dark urine, and pale stools.

Hepatitis A, B, C, D, E

Five viruses that can cause viral hepatitis. They differ in transmission, risk of chronic infection, prevention, and treatment.

Hepatitis B

Hepatitis B is a liver infection caused by hepatitis B virus, spread through infected blood and certain body fluids, including semen and vaginal fluids, and from an infected parent to a newborn during childbirth. It may cause acute illness or chronic infection; chronic infection is more likely when acquired during infancy or childhood and can lead to cirrhosis, liver failure, or hepatocellular carcinoma. Vaccination is the main method of prevention.

Hepatitis B - Children

Hepatitis B in children is infection with hepatitis B virus, which may be acute or chronic and can cause liver inflammation, cirrhosis, or cancer.

Hepatitis B Virus

Hepadnavirus transmitted through percutaneous exposure, sexual contact, and perinatally causing acute and potentially chronic hepatitis. The virus has a partially double-stranded circular DNA genome.

Hepatitis C

Hepatitis C is a liver infection caused by hepatitis C virus, spread mainly through exposure to infected blood, especially through shared injection equipment; transmission during childbirth or sexual contact is less common. Acute infection is often asymptomatic, and more than half of infected people develop chronic infection. Untreated chronic infection can cause liver fibrosis, cirrhosis, liver failure, or hepatocellular carcinoma. Direct-acting antiviral medicines cure more than 95% of cases, but no vaccine is available.

Hepatitis C - Children

Hepatitis C in children is infection with hepatitis C virus, often acquired around birth or through blood exposure and now frequently curable with direct-acting antivirals.

Hepatitis C Virus

Flavivirus transmitted primarily through percutaneous exposure with injection drug use being the most common route. Approximately seventy to eighty percent of acute infections progress to chronic hepatitis C, the leading cause of cirrhosis, hepatocellular carcinoma, and liver transplantation in many Western countries.

Hepatitis D

Liver inflammation caused by hepatitis D virus, which occurs only with hepatitis B infection.

Hepatitis D (Delta Agent)

Hepatitis caused by hepatitis D virus, which requires hepatitis B virus for replication; coinfection or superinfection can produce severe acute or chronic liver disease.

Hepatitis D Virus

Defective RNA virus requiring co-infection with hepatitis B to replicate, using hepatitis B surface antigen for its envelope. Hepatitis D causes more severe liver disease than hepatitis B alone with accelerated progression to cirrhosis and higher risk of hepatocellular carcinoma.

Hepatitis E

Liver inflammation caused by hepatitis E virus, usually transmitted through contaminated food or water.

Hepatitis E Virus

A non-enveloped RNA virus transmitted mainly by the fecal-oral route, often through contaminated water or food. It causes acute hepatitis and, in some people, chronic infection or severe disease. Clinical presentation may resemble hepatitis A, with jaundice and elevated transaminases.

Hepatitis F

A historical or proposed label for an additional hepatitis virus; no distinct, confirmed human hepatitis F virus is currently recognized as an established cause of hepatitis.

Hepatitis G

A clinical disorder related to hepatitis g; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hepatitis G Virus

A name formerly used for GB virus C, an RNA virus found in blood; its role in causing clinically important hepatitis remains uncertain.

Hepatitis Serology

Panel of serologic markers for hepatitis A, B, C, and E. HAV: anti-HAV IgM (acute), anti-HAV IgG (past infection/vaccination). HBV: HBsAg (active infection), anti-HBs (immunity/vaccination), anti-HBc IgM (acute), anti-HBc IgG (past), HBeAg (high replication), anti-HBe (low replication). HBV DNA: quantifies viral load.

Hepatitis Virus

A virus that can inflame the liver; hepatitis viruses include A, B, C, D, and E, which differ in transmission, chronicity, and prevention.

Hepatitis Virus Panel

A group of blood tests detecting antigens or antibodies

associated with hepatitis A, B, C, and sometimes other hepatitis viruses to determine infection, immunity, or prior exposure.

Hepatitis Viruses

Hepatitis A: fecal-oral, acute self-limited, vaccine (inactivated). Hepatitis B: blood/sexual/perinatal. Acute: HBsAg, IgM anti-HBc. Chronic: HBsAg >6 months, HBV DNA, HBeAg. Treatment: entecavir, tenofovir (TAF/TDF) - suppress DNA, prevent cirrhosis/HCC.

Hepatobiliary

Relating to the liver, gallbladder, and bile ducts. Hepatobiliary disease can affect bile flow, digestion, or liver function.

Hepatobiliary Scintigraphy

Liver/gallbladder imaging using Tc-99m mebrofenin or disofenin. Assess biliary patency, gallbladder function, bile leak, acute cholecystitis (non-visualization of gallbladder).

Hepatobiliary System

The connected liver, gallbladder, and bile ducts that produce, store, transport, and secrete bile and process many nutrients, drugs, and toxins.

Hepatoblastoma

A malignant embryonal liver tumor occurring almost exclusively in infants and young children, associated with elevated AFP and prematurity.

Hepatocellular Adenoma

A benign liver-cell tumor, seen more often in women using estrogen-containing medicines and in some metabolic disorders, that can bleed or rarely undergo malignant transformation.

Hepatocellular Carcinoma

Primary liver cancer arising from hepatocytes. Risk factors: cirrhosis, chronic hepatitis B/C, alcohol, and metabolic dysfunction-associated steatotic liver disease. Surveillance with ultrasound and AFP; treatment includes resection, transplantation, abla-

tion, TACE, and systemic therapy.

Hepatocellular Jaundice

Jaundice caused by dysfunction of hepatocytes, impairing the liver's ability to take up, conjugate, or excrete bilirubin. See Jaundice for complete overview. Causes: viral hepatitis (A, B, C, D, E), alcoholic hepatitis, drug-induced liver injury (paracetamol, isoniazid), cirrhosis, autoimmune hepatitis, Wilson disease, haemochromatosis.

Hepatocerebral Degeneration

Hepatocerebral degeneration is a brain disorder associated with chronic liver disease or abnormal manganese accumulation and may cause movement, speech, or cognitive problems.

Hepatocyte

The principal functional cell of the liver, responsible for metabolism, detoxification, bile production, plasma-protein synthesis, and many other hepatic functions.

Hepatodiaphragmatic Nodule

A nodule located at the interface of the liver and diaphragm; it may represent an accessory liver tissue, benign lesion, inflammatory focus, or metastatic deposit, so imaging and context matter.

Hepatojugular Reflux

Sustained pressure applied over the liver for 15-30 seconds causes a sustained rise in JVP of more than 3 cm above baseline. It indicates right heart failure or fluid overload, reflecting the inability of the right ventricle to accommodate increased venous return.

Hepatolenticular Degeneration

Wilson disease, an inherited ATP7B disorder causing copper accumulation in the liver, brain, cornea, and other tissues, with hepatic, neurologic, psychiatric, or Kayser-Fleischer-ring findings.

Hepatologist

Physician specializing in disorders of the liver, biliary system, and pancreas.

Hepatology

The medical specialty concerned with the liver, gallbladder, bile ducts, and related diseases.

Hepatoma

A tumor arising from liver cells, usually referring to hepatocellular carcinoma, the most common primary malignant liver tumor.

Hepatomegaly

Enlarged liver detected on imaging. Causes: fatty liver, hepatitis, congestion, infiltration, malignancy.

Hepatopulmonary Syndrome

Triad of liver disease, intrapulmonary vascular dilatation, and impaired oxygenation causing hypoxemia. Presents with platypnea which is dyspnea worsening in the upright position and orthodeoxia which is oxygen desaturation in the upright position.

Hepatorenal Syndrome

A form of acute or chronic kidney dysfunction associated with advanced liver disease and portal hypertension, without another sufficient cause of renal failure. It reflects altered circulation and renal blood flow and requires prompt assessment and treatment of both the liver disease and kidney dysfunction.

Hepatosplenomegaly

Enlargement of both the liver and spleen. It may result from infection, portal hypertension, storage disease, malignancy, haemolysis, or systemic inflammatory and infiltrative disorders; evaluation depends on associated symptoms and laboratory and imaging findings.

Hepatotoxicity

Liver injury caused by a drug, toxin, chemical, or other exposure. Acetaminophen is an important cause of acute liver failure in some regions. Evaluation may include liver tests, clotting studies, medication review, and clinical assessment.

Hepatovirus

A genus of picornaviruses that includes hepatitis A

virus, which usually causes an acute fecal-oral liver infection.

Hepcidin

A liver-produced peptide hormone that controls systemic iron balance by binding ferroportin and reducing intestinal iron absorption and iron release from macrophages.

Heptachlor

Heptachlor is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

HER2

Human epidermal growth factor receptor 2, also called ERBB2, a cell-surface receptor whose increased expression or gene amplification drives some cancers and may guide targeted treatment.

HER2-Positive

A cancer whose cells have increased expression or amplification of human epidermal growth factor receptor 2 (HER2). Some HER2-targeted medicines may be used according to the cancer type and clinical context.

Herbal Remedies And Supplements For Weight Loss

Plant-based weight-loss products have variable evidence, uncertain composition, and potential stimulant, liver, cardiovascular, or drug-interaction risks; they should not replace evidence-based obesity treatment.

Herbal Supplement

A concentrated plant-derived product marketed for health or symptom relief; composition and evidence vary, and contamination, drug interactions, liver injury, and pregnancy risks must be considered.

Herbaspirillum

A genus of gram-negative bacteria found in soil and plants; human infection is rare but can occur

opportunistically.

Herbaspirillum Huttiense

A species of *Herbaspirillum* rarely isolated from human specimens and occasionally associated with opportunistic infection.

Herbicide

A chemical used to kill or control unwanted plants; exposure can irritate skin, eyes, lungs, or the gastrointestinal tract, with toxicity determined by the specific compound and dose.

Herd Immunity

Resistance of population to invasion by infectious agent when sufficient proportion immune. Threshold varies by disease (measles 95%, polio 80%).

Hereditary

Transmitted through genetic material from a parent or arising from an inherited variant; a hereditary trait may be dominant, recessive, X-linked, mitochondrial, or multifactorial.

Hereditary Amyloidosis

A group of inherited disorders in which mutations cause misfolded proteins to form amyloid deposits in organs such as the nerves, heart, kidneys, or gastrointestinal tract.

Hereditary Angioedema

Recurrent episodes of nonpitting swelling of the skin, gastrointestinal tract, or upper airway caused most often by deficiency or dysfunction of C1 inhibitor. Attacks can cause abdominal pain, vomiting, airway obstruction, or life-threatening laryngeal edema without typical urticaria.

Hereditary Cancer

Cancer occurring because a person inherited a disease-causing genetic variant that raises cancer risk. Genetic counseling and appropriate risk-based screening may be recommended.

Hereditary Coproporphyrria

An inherited hepatic porphyria, usually caused by reduced coproporphyrinogen oxidase activity, that can cause episodic neurovisceral attacks and, in some people, photosensitive skin symptoms.

Hereditary Diffuse Gastric Cancer

An autosomal dominant cancer susceptibility syndrome caused by heterozygous germline inactivating mutations or deletions in the *CDH1* gene on chromosome 16q22.1, which encodes the cell adhesion glycoprotein E-cadherin. Confers a lifetime cumulative risk of 70% in men and 56% in women for developing diffuse, signet-ring cell adenocarcinoma of the stomach, which infiltrates submucosally without forming an exophytic mass (linitis plastica) and is frequently undetected on surveillance endoscopy. Women carry an additional 40–50% lifetime risk of invasive lobular breast carcinoma. Asymptomatic pathogenic variant carriers are strongly recommended to undergo prophylactic total gastrectomy.

Alternate Names:

HDGC; CDH1-Related Gastric Cancer Syndrome

Hereditary Elliptocytosis

An inherited red-cell membrane disorder in which erythrocytes are elliptical on the blood smear; most people are asymptomatic, but hemolytic anemia can occur in severe forms.

Hereditary Fructose Intolerance

An autosomal-recessive disorder caused by aldolase B deficiency, leading to accumulation of fructose metabolites and hypoglycemia, vomiting, abdominal symptoms, or liver injury after fructose or sucrose ingestion.

Hereditary Hemorrhagic Telangiectasia

An autosomal dominant vascular disorder (also called Osler-Weber-Rendu syndrome) characterized by telangiectasias on skin and mucous membranes, pulmonary AVMs, hepatic AVMs, and cerebral AVMs. Pulmonary AVMs can cause hypoxemia and paradoxical emboli. Treatment is embolization of pulmonary AVMs.

Alternate Names:

Osler-Weber-Rendu syndrome).

Hereditary Hemorrhagic Telangiectasia (Osler-Weber-Rendu Disease)

An autosomal dominant vascular dysplasia characterized by malformed blood vessels lacking smooth muscle layers. Mutations in *ENG* (endoglin) or *ACVRL1* (ALK1) genes.

Alternate Names:

Osler-Weber-Rendu Disease

Hereditary Hyperbilirubinemia

An inherited disorder of bilirubin production, conjugation, or excretion that causes persistent or intermittent jaundice, such as Gilbert, Crigler–Najjar, Dubin–Johnson, or Rotor syndrome.

Hereditary Leiomyomatosis And Renal Cell Cancer

An autosomal dominant tumor predisposition syndrome caused by heterozygous germline mutations in the fumarate hydratase (*FH*) gene, a Krebs cycle tumor suppressor. Clinically characterized by multiple painful cutaneous piloleiomyomas (smooth muscle tumors of the arrector pili muscles), multiple large and early-onset uterine leiomyomas that typically present in the second or third decade of life and necessitate early myomectomy or hysterectomy, and an aggressive, solitary, early-metastasizing subtype of type 2 papillary renal cell carcinoma that can arise even in early adulthood.

Alternate Names:

HLRCC; Reed Syndrome

Hereditary Ovalocytosis

An inherited red-cell membrane disorder in which many erythrocytes are oval or elliptical; it is often mild but can cause hemolytic anemia in some individuals.

Hereditary Paraganglioma-Pheochromocytoma Syndrome

An autosomal dominant familial neuroendocrine tumor syndrome caused by germline mutations in succinate dehydrogenase subunit genes, including

SDHD (maternally imprinted), *SDHB*, *SDHC*, and *SDHA*. Predisposes to the development of extra-adrenal sympathetic and parasympathetic paragangliomas (including carotid body, jugulotympanic, vagal, and retroperitoneal tumors) and adrenal pheochromocytomas. Mutations in *SDHB* are particularly notorious for conferring a high rate of malignancy (up to 30–50%) and early metastatic dissemination, as well as predisposing to renal cell carcinoma and gastrointestinal stromal tumors.

Alternate Names:

Hereditary Pheochromocytoma-Paraganglioma; SDH-Related Paraganglioma

Hereditary Spherocytic Anemia

An inherited red-cell membrane disorder, usually hereditary spherocytosis, in which fragile spherical erythrocytes are destroyed prematurely, causing hemolytic anemia, jaundice, and splenomegaly.

Hereditary Spherocytosis

The most common inherited hemolytic anemia in Northern Europeans (autosomal dominant 75%, recessive 25%). Caused by defects in RBC membrane proteins (spectrin, ankyrin, band 3, protein 4.2), leading to loss of membrane surface area, reduced deformability, and premature destruction in the spleen.

Hereditary Urea Cycle Abnormality

An inherited defect in ammonia disposal that can cause neonatal or episodic hyperammonemia, vomiting, lethargy, seizures, coma, and neurologic injury; acute decompensation requires urgent metabolic treatment.

Heredity

The transmission of genetic characteristics from parents to offspring through genes and chromosomes.

Heredo-Ataxia

A clinical disorder related to heredo-ataxia; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Heredopolyneuritis

A clinical disorder related to heredopolyneuritis; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hering-Breuer Reflex

The Hering-Breuer reflex helps limit overinflation of the lungs by reducing inspiration when lung stretch receptors are strongly activated.

Hermanski-Pudlak Syndrome

A group of inherited disorders involving abnormal lysosome-related organelles, typically causing oculocutaneous albinism, platelet-storage-pool deficiency with bleeding, and sometimes lung or bowel disease.

Hermansky-Pudlak Syndrome

Autosomal recessive (10+ genes: HPS1-10, BLOC/AP-3 complexes). Oculocutaneous albinism, bleeding disorder (absent dense bodies in platelets -> prolonged bleeding time), pulmonary fibrosis (HPS-1, HPS-4), granulomatous colitis, neutropenia. Diagnosis: electron microscopy of platelets (absent dense bodies), genetic testing.

Hernia

A hernia is protrusion of tissue through a weakness or opening in the surrounding muscle or connective tissue and may become incarcerated or strangulated. cavity that normally contains it. Most hernias occur in the abdominal wall.

Hernia Mesh

Synthetic or biologic material for hernia repair. Polypropylene most common. Complications: infection, recurrence, chronic pain, mesh migration.

Hernia Repair (Herniorrhaphy)

Surgical repair of a hernia (inguinal, femoral, umbilical, incisional, hiatal). Inguinal hernia repair: open (Lichtenstein tension-free mesh, Shouldice, Bassini) or laparoscopic (TEP: totally extraperitoneal, TAPP: transabdominal preperitoneal). Mesh reinforcement reduces recurrence (1-3% for mesh vs. 5-15% for primary tissue repair).

Alternate Names:

Herniorrhaphy

Herniated Disc

Protrusion of the nucleus pulposus through a tear in the annulus fibrosus of the intervertebral disc, causing compression or inflammation of adjacent nerve roots. Most common at L4-L5 and L5-S1 (lumbar) and C5-C6, C6-C7 (cervical). Lumbar: sciatica (radiating leg pain), paresthesias, sensory loss, and motor weakness (foot drop).

Herniated Disk

A herniated disk occurs when spinal disk material extends through a fissure and may compress a nerve root, producing back pain, radiating pain, numbness, or weakness. Intervertebral disc, most commonly occurring in the lumbar spine (L4-L5 and L5-S1 account for 95 percent of lumbar herniations) and cervical spine (C5-C6 and C6-C7), potentially compressing spinal nerves.

Herniation

Protrusion of an organ, tissue, or structure through an abnormal opening or weak area, as in a herniated disk or abdominal-wall hernia.

Herniorrhaphy

The surgical operation to repair a hernia defect by anatomical reconstruction, suture approximation, and reinforcement of the weakened abdominal wall or groin musculature. Distinct from herniotomy (simple excision of the hernia sac) and classic non-mesh suture repairs (such as the Bassini, Shouldice, or McVay techniques, which close tissues under tension), modern hernia surgery predominantly utilizes tension-free mesh hernioplasty (e.g., the Lichtenstein open repair or minimally invasive laparoscopic/robotic approaches including transabdominal preperitoneal [TAPP] and totally extraperitoneal [TEP] repairs). Indicated to relieve symptoms and to prevent acute surgical emergencies such as hernia incarceration and ischemic strangulation.

Heroin

Heroin is a highly addictive opioid converted to

morphine in the body; overdose causes respiratory depression, coma, and death, while repeated use causes dependence and withdrawal.

Heroin Dependence

Legacy, drug-specific label; see *Opioid Use Disorder*.

Heroin Overdose

Heroin overdose involves toxic or environmental exposure to heroin overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Herpangina

A common childhood viral illness caused by Coxsackievirus A (enterovirus), presenting with fever, sore throat, and small vesicles or ulcers on the soft palate and posterior pharynx. It is most common in children and spreads through respiratory and fecal-oral secretions.

Herpes

Infection caused by a herpesvirus. The term commonly refers to herpes simplex infection, which causes oral or genital lesions, but other herpesviruses cause distinct diseases.

Herpes - Oral

Oral herpes is usually caused by herpes simplex virus type 1 and produces recurrent grouped blisters or ulcers around the lips or mouth, with asymptomatic viral shedding.

Herpes Encephalitis

Inflammation of the brain caused by herpes simplex virus infection.

Herpes Gestationis

An autoimmune blistering skin disease of pregnancy mediated by anti-basement membrane zone antibodies, presenting with pruritic urticarial plaques and vesicles, typically in the second or third trimester.

Herpes Labialis

Recurrent blisters or erosions on or around the lips

caused most often by herpes simplex virus type 1; tingling is commonly followed by clustered vesicles that crust and heal.

Herpes Simplex

Infection with herpes simplex virus type 1 or type 2, commonly causing recurrent oral or genital vesicles and ulcers.

Herpes Simplex (Cold Sores / Genital Herpes)

A viral infection caused by herpes simplex virus type 1 (HSV-1, typically orofacial, though increasingly anogenital) and type 2 (HSV-2, predominantly anogenital). HSV is a double-stranded DNA virus of the Herpesviridae family with latency in sensory ganglia and periodic reactivation.

Alternate Names:

Cold Sores / Genital Herpes

Herpes Simplex Encephalitis

The most common cause of sporadic fatal encephalitis, caused by herpes simplex virus type 1 (HSV-1) in over ninety percent of cases. The virus typically infects the temporal lobes, orbitofrontal cortex, and insular cortex, causing hemorrhagic necrosis.

Herpes Simplex Skin Infection

Infection of skin or mucosa by herpes simplex virus, producing grouped vesicles or erosions on an erythematous base. Recurrent disease commonly affects the oral or genital region; widespread infection in patients with eczema is eczema herpeticum and requires urgent medical assessment.

Herpes Simplex Type 1

HSV-1, a DNA virus commonly causing oral or perioral blisters; it can also cause genital infection and remains latent with possible recurrence.

Herpes Simplex Virus

A double-stranded DNA virus belonging to the Herpesviridae family that causes oral and genital herpes. HSV has two serotypes: HSV-1, which typically causes oral herpes, and HSV-2, which typically causes genital herpes. The virus establishes latent

infections in sensory ganglia and can reactivate periodically.

Herpes Simplex Virus Infection

Infection with herpes simplex virus type 1 or type 2, commonly causing recurrent oral, genital, skin, eye, or central nervous system disease.

Herpes Vegetans

A rare, chronic, verrucous or vegetative form of herpes simplex virus infection occurring in immunocompromised patients, particularly those with HIV/AIDS. It presents as exophytic, proliferative, ulcerative plaques on the genital or perianal skin, often refractory to standard antiviral therapy.

Herpes Viral Culture Of Lesion

A laboratory culture of fluid or tissue from a lesion to detect herpes simplex virus or varicella-zoster virus; molecular testing is generally more sensitive and is often preferred.

Herpes Zoster

A painful, usually one-sided blistering rash caused by reactivation of latent varicella-zoster virus in a sensory nerve ganglion. It typically follows a band-like distribution and may cause persistent nerve pain after the rash resolves.

Alternate Names:

Shingles (Herpes Zoster)

Herpes Zoster (Shingles)

A painful, vesicular rash caused by reactivation of latent varicella-zoster virus (VZV, human herpesvirus 3) in the dorsal root ganglia.

Alternate Names:

Shingles

Herpes Zoster Ophthalmicus

Reactivation of varicella-zoster virus latency in the trigeminal ganglion, with viral spread along the ophthalmic division (V1) causing painful vesicular skin eruption on the forehead, eyelid, and nose, with potential ocular involvement including keratitis, uveitis, and secondary glaucoma.

Herpesviridae

A family of DNA viruses that establish lifelong latent infection; human members include herpes simplex, varicella-zoster, cytomegalovirus, and Epstein-Barr virus.

Herpesviridae Infection

An infection caused by a herpesvirus; symptoms range from localized lesions to serious disease in newborns or people with weakened immunity.

Herpesvirus Saimiri

A herpesvirus that naturally infects squirrel monkeys and can cause lymphoid tumors in some other primates used in research.

Herpetic Glossitis

Inflammation of the tongue caused by herpes simplex virus infection, presenting with painful vesicles and ulceration on the tongue surface, often recurring in immunocompromised patients.

Herpetic Stomatitis

Inflammation and ulceration of the mouth caused by herpes simplex virus, most commonly primary HSV-1 infection, with painful vesicles or ulcers and sometimes fever or gingivitis.

Herpetic Whitlow

A painful viral infection of the finger caused by the herpes simplex virus (typically HSV-1), characterized by swelling, redness, and painful vesicular lesions on the finger.

Herpetiform

Resembling herpes lesions, typically describing grouped vesicles or an arrangement of lesions; the term does not by itself establish herpesvirus infection.

Hertz

The SI unit of frequency, equal to one cycle per second.

Herxheimer Reaction

A clinical disorder related to herxheimer reaction; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hesitation Wounds

Multiple superficial, tentative parallel incised cuts surrounding a deeper primary fatal cut wound, classically observed in suicides involving sharp instruments (wrists, neck).

Hesperidin

A flavanone glycoside found mainly in citrus fruits and studied for antioxidant, vascular, and anti-inflammatory effects; clinical benefits and supplement dosing are not established by the term alone.

Hesselbach Triangle

A weak area of the anterior abdominal wall bounded by the lateral border of the rectus abdominis, the inferior epigastric vessels, and the inguinal ligament; direct inguinal hernias pass through it.

Heterochromatin

A densely packed form of chromatin that is relatively transcriptionally inactive and enriched in repetitive DNA, commonly located near centromeres and telomeres.

Heterochromia

A difference in iris color between the eyes or within one iris, which may be congenital or acquired from disease, trauma, medication, or inflammation.

Heterocyclic Amine

A nitrogen-containing chemical compound formed mainly when meat or fish is cooked at high temperatures; several heterocyclic amines are mutagens and potential dietary carcinogens.

Heteroduplex Analysis

A molecular method that compares paired DNA strands containing a sequence mismatch, allowing some mutations or genetic variants to be detected by altered migration or enzyme sensitivity.

Heterogeneity

Variation in composition, structure, or behavior within a tissue, sample, lesion, or population; in tumors, heterogeneity can affect biopsy interpretation and treatment response.

Heterogeneous Echotexture

A mixed ultrasound appearance with regions of differing echogenicity, suggesting nonuniform tissue composition from inflammation, fibrosis, fat, hemorrhage, tumor, or other structural change.

Heterologous

Heterologous is a developmental, immunologic, reproductive, behavioral, environmental, or health-care concept used in medicine or biomedical research.

Heterophil Antibody

A heterophil antibody reacts with antigens from unrelated animal species; testing for these antibodies can help diagnose some infections, including infectious mononucleosis.

Heterophile Antibody

A heterophile antibody is an antibody that reacts with antigens from unrelated species and can interfere with some laboratory immunoassays.

Heterophyes Heterophyes

A small intestinal fluke acquired by eating raw or undercooked fish; it can cause abdominal symptoms and occasionally tissue complications.

Heteroplasia

Heteroplasia is a developmental, immunologic, reproductive, behavioral, environmental, or healthcare concept used in medicine or biomedical research.

Heteroplasmy

The presence of more than one mitochondrial DNA sequence in a cell or person, usually because mutant and normal mitochondrial genomes coexist.

Heterosexual

Heterosexual is a developmental, immunologic, reproductive, behavioral, environmental, or health-care concept used in medicine or biomedical research.

Heterotaxy Syndrome

A congenital disorder in which internal organs are arranged abnormally and may have associated heart defects.

Heterotopic

Located in an abnormal or unusual place; a heterotopic pregnancy is simultaneous implantation outside the uterus and, usually, inside the uterus.

Heterotopic Breast Tissue Of The Vulva

Ectopic mammary-like tissue in the vulva that may undergo benign, hormonal, inflammatory, or malignant changes similar to breast tissue; diagnosis is histologic.

Heterotopic Pregnancy

Simultaneous intrauterine and ectopic pregnancy. Rare in spontaneous conception (1:30,000) but more common with ART (1:100-1:500). Risk factors: ovulation induction, IVF with multiple embryo transfer. The presence of an intrauterine pregnancy does not exclude an ectopic pregnancy.

Heterotransplant

Heterotransplant is a developmental, immunologic, reproductive, behavioral, environmental, or health-care concept used in medicine or biomedical research.

Heterozygote

A heterozygote has two different alleles at a genetic locus, one inherited from each parent; phenotype depends on dominance, the variant's effect, and the surrounding genetic and environmental context.

Heterozygous

Having two different alleles of a particular gene at a genetic locus. The observable effect depends on

the gene and the relationship between the alleles.

Hexachlorobenzene

A persistent organochlorine compound that can cause porphyria, liver injury, neurologic effects, and other toxicity after significant exposure.

Hexachlorophane

Hexachlorophane is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

Hexachlorophene

A topical antiseptic phenolic compound whose excessive or prolonged use can cause neurotoxicity and skin injury; many uses are restricted.

Hexadactyly

The presence of six fingers or six toes on a hand or foot, also called polydactyly.

Hexadecadienoic Acid

A long-chain fatty acid containing 16 carbon atoms and two double bonds, occurring in lipid metabolism and studied as a biochemical or signaling molecule.

Hexadecatetraenoic Acid

A 16-carbon polyunsaturated fatty acid containing four double bonds, present in lipid pathways and investigated for effects on membranes and signaling.

Hexadecatrienoic Acid

A 16-carbon fatty acid with three double bonds, found in lipid metabolism and plant or animal tissues depending on its isomer.

Hexamethonium

Hexamethonium is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

Hexamethonium Compounds

Hexamethonium compounds are ganglion-blocking

drugs that were formerly used to lower blood pressure but are now rarely used because of extensive side effects.

Hexamine

Hexamine is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

Hexane

Hexane is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

Hexanoic Acid

A six-carbon saturated fatty acid, also called caproic acid, found in some fats and odors and used in chemical synthesis; concentrated exposure irritates skin and mucosa.

Hexestrol

A synthetic nonsteroidal estrogen formerly used therapeutically; it is no longer routinely used because of adverse effects and carcinogenic concerns.

Hexoestrol

Hexoestrol is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

Hexokinase

Phosphorylates glucose to glucose-6-phosphate. Low K_m , inhibited by product. Glucokinase (liver) has high K_m , not inhibited.

Hexose

A six-carbon monosaccharide, such as glucose, fructose, or galactose, that serves as an energy substrate or metabolic intermediate.

Hexylresorcinol

A phenolic antiseptic and local anesthetic used in

some throat lozenges and topical products; excessive use or allergy can cause adverse effects.

Hg

The chemical symbol for mercury; in measurements such as mmHg, it refers to millimeters of mercury, a unit of pressure.

Hiatal

Relating to a hiatus, an opening or passage in an anatomical structure; a hiatal hernia occurs when abdominal tissue passes through the diaphragm's esophageal hiatus.

Hiatal Hernia

Protrusion of part of the stomach through the esophageal opening in the diaphragm into the chest. It may be sliding or paraesophageal and can be associated with reflux or other symptoms.

Hiatal Hernia Overview

A hiatal hernia occurs when part of the stomach moves through the diaphragm into the chest. It may cause reflux, chest or upper-abdominal discomfort, swallowing problems, or no symptoms; treatment ranges from lifestyle and acid control to surgery.

Hiatus

An opening, gap, or passage in an anatomical structure, such as the esophageal hiatus in the diaphragm.

Hiatus Hernia

Another term for hiatal hernia: protrusion of part of the stomach through the esophageal hiatus of the diaphragm into the chest. It may be sliding or paraesophageal.

Hib

Haemophilus influenzae type b, an encapsulated bacterium that can cause meningitis, epiglottitis, pneumonia, septic arthritis, cellulitis, or sepsis. Routine conjugate vaccination substantially reduces invasive Hib disease.

Hibernation

A prolonged state of markedly reduced metabolism, body temperature, heart rate, and activity used by some animals to survive cold or food scarcity; medically, the term may describe induced metabolic suppression.

Hibernation, Artificial

An experimental state of reduced body temperature and metabolism induced for medical or research purposes; it is not routine human care.

Hibernoma

A rare benign tumor of brown fat, usually a slow-growing painless soft-tissue mass that may feel warm because of its high metabolic and vascular activity.

Hiccough

Another term for hiccup, a sudden involuntary contraction of the diaphragm followed by rapid closure of the vocal cords that produces a characteristic sound.

Hiccough (Hiccup)

An involuntary, repetitive, spasmodic contraction of the diaphragm followed by sudden closure of the glottis, producing the characteristic 'hic' sound. Hiccups are caused by irritation or stimulation of the phrenic nerve (C3-C5, innervates the diaphragm) or the vagus nerve (CN X).

Alternate Names:

Hiccup

Hiccup

An involuntary, repeated contraction of the diaphragm followed by sudden closure of the glottis, producing the characteristic sound; persistent hiccups may signal irritation, metabolic disease, or neurologic illness.

Hiccups

Involuntary, spasmodic contractions of the diaphragm followed by sudden closure of the glottis, producing a characteristic sound. Persistent or intractable hiccups may reflect irritation of the di-

aphragm or phrenic and vagal pathways, metabolic disease, medication exposure, or central nervous system disease.

Hiccups (Singultus)

Involuntary, spasmodic contractions of the diaphragm and intercostal muscles followed by sudden glottic closure, producing the characteristic "hic" sound. The reflex arc involves the phrenic nerve (C3-C5), vagus nerve, and brainstem centers.

Alternate Names:

Singultus

Hidradenitis

Hidradenitis suppurativa is a chronic inflammatory follicular occlusion disease affecting apocrine gland-bearing areas (axillae, groin, inframammary). It presents with recurrent painful nodules, abscesses, sinus tracts, and scarring.

Hidradenitis Suppurativa

A chronic inflammatory skin disorder involving recurrent painful nodules, abscesses, draining tunnels, and scars, usually in skin folds such as the axillae, groin, buttocks, or breasts. Severity varies and is influenced by genetic, hormonal, and environmental factors.

Hidradenocarcinoma

A rare malignant sweat-gland tumor that may arise de novo or from a hidradenoma, presenting as a firm nodule and capable of local recurrence and metastasis.

Hidradenoma

A usually benign adnexal neoplasm showing differentiation toward sweat-gland epithelium and presenting as a solitary dermal or subcutaneous nodule. It is commonly slow growing and may be flesh colored, erythematous, cystic, or ulcerated, which can make clinical distinction from other skin tumors difficult. Histology typically demonstrates a well-circumscribed proliferation with polygonal or clear cells, ductal structures, and variable cystic change. Excision is generally diagnostic and therapeutic; atypia, infiltrative growth, recurrence, or metastasis

raises concern for hidradenocarcinoma or another malignant adnexal tumor.

Hidradenoma Papilliferum

A benign papillary tumor of apocrine or mammary-like glands, usually presenting as a solitary flesh-colored or red nodule in the vulvar or anogenital region.

Hidrocystoma

A benign cyst of a sweat gland near the eyelid or skin, appearing as a small translucent or bluish papule that may enlarge with heat or sweating.

Hidrosis

Sweating or perspiration; abnormal hidrosis may mean excessive sweating, reduced sweating, or sweating in an unusual pattern.

High Altitude

Elevation high enough that reduced atmospheric pressure lowers available oxygen, commonly beginning around 2,500 meters and increasing the risk of altitude illness.

High Altitude Illness

A clinical disorder related to high altitude illness; diagnosis and treatment depend on its cause, characteristic findings, and severity.

High Arch

An abnormally elevated medial longitudinal arch of the foot, also called pes cavus. It may be idiopathic or associated with neuromuscular disease and can cause overload of the heel and forefoot, calluses, pain, instability, or difficulty fitting footwear.

Alternate Names:

pes cavus.

High Blood Cholesterol Levels

Excess circulating cholesterol, especially LDL cholesterol, promotes atherosclerotic plaque and increases risk of coronary disease and stroke; assessment includes overall cardiovascular risk and treatment response.

High Blood Pressure

Blood pressure that stays above the healthy range, also called hypertension. It often has no symptoms but can damage the heart, brain, kidneys, and eyes over time.

Alternate Names:

Hypertension

High Blood Pressure And Eye Disease

Long-standing high blood pressure can damage retinal blood vessels and the optic nerve, causing hypertensive retinopathy or vision loss.

High Blood Pressure Hypertension

Hypertension is persistently elevated arterial pressure that increases the risk of stroke, heart disease, kidney disease, eye damage, and dementia. Diagnosis uses repeated accurate measurements, and management combines lifestyle measures with medicines when indicated.

High Blood Pressure In Adults - Hypertension

Persistent elevation of arterial blood pressure in an adult, diagnosed using properly measured readings over time and associated with increased cardiovascular, cerebrovascular, and kidney risk.

High Blood Pressure In Children - Hypertension

Blood pressure in a child or adolescent that is persistently above the age-, sex-, and height-specific reference range; evaluation considers secondary causes and target-organ effects.

High Blood Pressure In Infants - Hypertension

Infant hypertension is elevated blood pressure in a baby and may result from kidney, vascular, heart, lung, endocrine, medication, or intensive-care conditions.

High Blood Pressure Medications

Medicines used to lower arterial blood pressure, including diuretics, ACE inhibitors, ARBs, calcium-

channel blockers, beta blockers, and other agents selected according to comorbidities and risk.

High Blood Protein

An abnormally increased concentration of proteins in the blood, which may result from dehydration, inflammation, infection, or a plasma-cell disorder.

High Blood Sugar

Hyperglycemia, an abnormally elevated concentration of glucose in the blood; persistent hyperglycemia is commonly associated with diabetes but can have other causes.

High Cholesterol - Children

Elevated cholesterol in a child may reflect inherited familial hypercholesterolemia, diet, obesity, endocrine disease, or medication; confirmation and family assessment guide lifestyle and specialist treatment.

High Hemoglobin Count

A hemoglobin level above the expected range, which may reflect dehydration, chronic low oxygen, smoking, medication effects, or a blood disorder.

High Output Failure

High-output heart failure, in which cardiac output is elevated or normal but inadequate for the body's unusually high metabolic or circulatory demand. Causes include severe anemia, thyrotoxicosis, beriberi, and large arteriovenous fistulas; treatment targets the cause and may include heart-failure therapy.

High Potassium (Hyperkalemia)

An abnormally high potassium level in the blood that can affect muscle and heart function and may result from kidney disease, medicines, tissue injury, or other conditions.

High Potassium Level

Hyperkalemia is an elevated blood potassium concentration that can cause dangerous cardiac conduction abnormalities; confirmation, medication review,

kidney assessment, ECG, and urgent treatment depend on level and symptoms.

High Protein Diet

An eating pattern providing more protein than a person's usual or estimated requirement; suitability depends on nutritional needs, kidney and liver function, and the overall diet.

High Red Blood Cell Count

An increased number or concentration of red blood cells in the blood, which may thicken the blood and result from dehydration, low oxygen, smoking, medications, or a bone marrow disorder.

Alternate Names:

Polycythemia (High Red Blood Cell Count)

High Uric Acid Level

An increased concentration of uric acid in the blood, which may contribute to gout or kidney stones and can result from reduced kidney clearance, diet, medicines, or metabolic disease.

High White Blood Cell Count

An increased number of white blood cells, often associated with infection, inflammation, stress, medicines, or a blood or bone marrow disorder.

High White Blood Cell Count In Pregnancy

A mild rise in white blood cells can be normal during pregnancy, labor, or stress. Marked or persistent elevation with fever, pain, urinary or respiratory symptoms, or abnormal differential counts may indicate infection, inflammation, medication effect, or another disorder.

High-Altitude Pulmonary Edema

A potentially fatal accumulation of fluid in the lungs after rapid ascent to high altitude, characterized by breathlessness, cough, reduced exercise tolerance, and sometimes frothy sputum. Immediate descent and oxygen are essential.

High-Density Lipoprotein

A lipoprotein that transports cholesterol in the blood and is commonly called HDL.

Alternate Names:

HDL.

High-Density Lipoprotein

A lipoprotein that transports cholesterol and other fats in the blood. HDL level is one part of cardiovascular risk assessment and should not be interpreted alone.

High-Dependency Unit

A ward or area within a hospital that provides a level of care between a general ward and an intensive care unit, for patients who require intensive observation or treatment but not mechanical ventilation.

High-Fiber Foods

Foods rich in soluble or insoluble dietary fiber, including legumes, whole grains, vegetables, fruit, nuts, and seeds, support bowel regularity and may improve cholesterol and glucose control when increased with adequate fluid.

High-Flow Nasal Cannula

A device delivering heated and humidified oxygen at flow rates up to 60 L/min through a nasal cannula. It provides a modest amount of PEEP, reduces dead space ventilation, and improves patient comfort compared to non-invasive ventilation. It is used for acute hypoxemic respiratory failure and post-extubation support.

High-Fructose Corn Syrup

A liquid sweetener containing varying proportions of glucose and fructose, used in many processed foods and drinks. Like other added sugars, high intake increases total energy exposure and is associated with dental caries and cardiometabolic risk; it is not inherently unique in effect compared with equivalent added sugars.

High-Grade Endometrial Stromal

Sarcoma

An aggressive malignant uterine stromal tumor with high-grade cytology and characteristic molecular alterations in some cases; it may invade the myometrium, vessels, or distant sites.

High-Grade Serous Ovarian Carcinoma

A high-grade tubo-ovarian epithelial carcinoma characterized by marked nuclear atypia and nearly universal abnormality of the TP53 pathway; many arise from the fimbrial fallopian tube.

High-Grade Surface Osteosarcoma

A high-grade osteogenic sarcoma arising on the surface of bone, including periosteal or parosteal regions, with aggressive local and metastatic potential.

High-Intensity Focused Ultrasound

A treatment that concentrates ultrasound energy to heat and destroy a targeted area of tissue. Its uses depend on the device, disease, and clinical setting.

High-Level Disinfection

Disinfection that inactivates all microorganisms except high numbers of bacterial spores. It is commonly used for heat-sensitive semicritical equipment such as some flexible endoscopes after meticulous cleaning.

High-Pitched Cry

An unusually shrill infant cry that can occur with pain, neurologic dysfunction, drug withdrawal, or serious illness and warrants assessment when persistent or accompanied by abnormal behavior or feeding.

Highly Pathogenic Avian Influenza

Highly pathogenic influenza A infection in birds that can cause severe disease and mortality in poultry; selected strains can rarely infect humans after animal exposure.

High-Resolution Computed Tomography

An advanced computed tomography technique optimized for imaging the lung parenchyma by utilizing

thin slice collimation (0.625 to 1.5 mm), high-spatial-frequency reconstruction algorithms, and optional inspiratory, expiratory, and prone acquisitions. It allows exquisite visualization of the secondary pulmonary lobule and is the gold-standard non-invasive diagnostic modality for diffuse parenchymal lung diseases, interstitial lung diseases (differentiating usual interstitial pneumonia from nonspecific interstitial pneumonia), bronchiectasis, and small airway disease.

Alternate Names:

HRCT; HRCT Chest; High-Resolution Chest CT

High-Sensitivity Cardiac Troponin

An analytically refined immunoassay that quantifies circulating cardiac troponin I (hs-cTnI) or T (hs-cTnT) at concentrations down to single-digit nanograms per liter, with an analytical coefficient of variation ≤ 10 percent at the 99th percentile upper reference limit of a healthy population. It enables early detection of subclinical myocardial injury and forms the core of validated European and American rapid diagnostic pathways (0/1-hour and 0/2-hour algorithms) to rapidly rule out or confirm acute myocardial infarction in emergency departments.

Alternate Names:

hs-cTn; High-Sensitivity Troponin; hs-Troponin

Hilar

Relating to a hilum, the gateway where vessels, nerves, ducts, or bronchi enter or leave an organ, especially the lung or kidney.

Hilar Cholangiocarcinoma

A cancer of the bile ducts where the ducts leave the liver.

Hill's Sign

Hill's sign is an older physical finding described in some cases of aortic regurgitation; it is not sufficient by itself to diagnose the condition.

Hill-Sachs Lesion

Impaction fracture of posterolateral humeral head from anterior shoulder dislocation. Associated with

Bankart lesion.

Hilum

A depression or opening where blood vessels, nerves, ducts, or other structures enter or leave an organ.

Hilus

The hilus is an indentation or entry point on an organ where vessels, nerves, ducts, or airways enter or leave.

Hind

Hind means toward the back or rear of an organism or structure, especially in comparative anatomy.

Hindbrain

The hindbrain is the lower part of the developing brain, giving rise to the medulla, pons, and cerebellum and helping control vital functions and coordination.

Hindgut

The hindgut is the embryonic part of the digestive tract that forms much of the distal colon, rectum, and upper anal canal.

Hip

The joint and surrounding region where the thigh bone meets the pelvis, allowing movement and bearing body weight.

Hip Arthroscopy

A minimally invasive procedure that uses a camera and instruments inserted through small incisions to diagnose and treat selected disorders inside or around the hip joint.

Hip Bursitis

Hip bursitis is inflammation of a bursa near the hip, commonly causing pain over the outer hip that worsens with lying on that side, stairs, or prolonged walking. Activity changes, physical therapy, medicines, or injection may help after other causes are considered.

Alternate Names:

Trochanteric Bursitis (Hip Bursitis)

Hip Circumference

The measurement around the widest part of the hips or buttocks, used in anthropometry and sometimes combined with waist circumference to assess body-fat distribution.

Hip Dislocation

Loss of normal congruence between the femoral head and acetabulum. It is usually traumatic in adults and may damage the sciatic nerve or femoral-head blood supply; congenital or developmental dislocation occurs in developmental dysplasia of the hip.

Hip Disorders

The hip joints are ball-and-socket joints connecting the femur to the pelvis, providing stability and a wide range of motion for walking, running, and weight-bearing activities. Common hip conditions include osteoarthritis, fractures, bursitis, and labral tears.

Hip Dysplasia

Developmental dysplasia of the hip: abnormal development of the acetabulum/femoral head causing instability, subluxation, or dislocation. Risk factors: female, breech presentation, family history, firstborn, and tight swaddling.

Alternate Names:

CHD DDH

Hip Fracture

Fracture of proximal femur, usually femoral neck or intertrochanteric region. Mechanism: low-energy fall in osteoporotic bone. Symptoms: pain, inability to bear weight, shortened/externally rotated leg. Diagnosis: X-ray, MRI if X-ray negative. Treatment: surgical fixation (internal fixation, arthroplasty).

Alternate Names:

Broken Hip

Hip Fracture Surgery

An operation to stabilize or replace a fractured proxi-

mal femur, using internal fixation, hemiarthroplasty, or total hip arthroplasty according to fracture pattern and patient factors.

Hip Injury

Damage involving the hip joint, surrounding muscles, tendons, ligaments, or bones; causes range from strain and bursitis to fracture and dislocation, with inability to bear weight requiring prompt assessment.

Hip Joint

Multiaxial ball-and-socket synovial joint between femoral head and acetabulum. Designed for stability and mobility, bearing entire upper body weight. Acetabular labrum deepens the socket; strong ligaments (iliofemoral, pubofemoral, ischiofemoral) reinforce it. Ligamentum teres contains the femoral head artery.

Hip Joint Injection

Injection of local anesthetic, corticosteroid, or another prescribed agent into or around the hip joint for diagnosis or temporary relief of pain and inflammation.

Hip Joint Replacement

Arthroplasty replaces damaged parts of the hip with prosthetic components to relieve pain and improve mobility, commonly for advanced osteoarthritis, fracture, or other destructive joint disease.

Hip Labral Tear

A tear in the ring of cartilage that surrounds the hip socket.

Hip Pain

Pain in or around the hip caused by joint disease, tendon or muscle injury, bursitis, fracture, nerve problems, or pain referred from the back.

Hip Prosthesis

Total hip replacement components: femoral stem (metal), head (metal/ceramic), acetabular cup (polyethylene/metal/ceramic). Fixation: cemented

(older patients), cementless (younger, porous coating for bone ingrowth). Materials: cobalt-chrome, titanium, ceramics.

Hip Replacement

A surgical procedure in which the diseased hip joint is replaced with a prosthetic implant (arthroplasty). Total hip replacement (THR) replaces both the femoral head and the acetabulum.

Hip-Fracture Rehabilitation

Multidisciplinary postoperative management aimed at restoring mobility, preventing complications, and returning the older person to the highest feasible level of independence. It includes early mobilization, pain control, osteoporosis treatment, delirium prevention, nutrition, and discharge planning.

HIPAA

The United States Health Insurance Portability and Accountability Act, including federal rules governing protected health information, privacy, security, and certain electronic health-care transactions.

Hippocampus

Curved medial temporal lobe structure, part of the limbic system, critical for new declarative memory formation (episodic and spatial) and short-to-long-term memory conversion. Has dentate gyrus, hippocampus proper (CA1-CA4), subiculum, and entorhinal cortex. One of few adult neurogenesis sites (dentate gyrus).

Hippocrates

An ancient Greek physician traditionally regarded as a major founder of Western clinical medicine; the Hippocratic corpus emphasizes observation, prognosis, and professional conduct.

Hippocratic Oath

A traditional promise that doctors make to practice medicine ethically, help patients, protect their privacy, and avoid harm. Modern versions differ by country and institution.

Hippocratic Succussion

Hippocratic succussion is an old examination method in which the body is shaken to detect a splashing sound from fluid and air in a body cavity.

Hippotherapy

Therapeutic horseback riding for neurological, musculoskeletal conditions. Improves balance, posture, coordination.

Hippus

Hippus is rhythmic, involuntary widening and narrowing of the pupil, which may occur normally or with neurologic or eye disease.

Hirayama Disease

A benign, non-progressive cervical myelopathy predominantly affecting adolescent males (ages 15–25), caused by dynamic displacement of the lower cervical posterior dural sac forward against the spinal cord during neck flexion, resulting in chronic microcirculatory ischemia of the anterior horns (C7–T1). Clinically characterized by insidious, slowly progressive, asymmetrical or unilateral weakness and muscular atrophy restricted to the distal upper limb, selectively involving the intrinsic hand muscles, thenar and hypothenar eminences, and the medial forearm flexors and extensors while characteristically sparing the brachioradialis (giving rise to a distinctive “oblique amyotrophy” appearance). Typically arrests spontaneously within 3 to 5 years; diagnosed by dynamic flexion MRI of the cervical spine.

Alternate Names:

Monomelic Amyotrophy; Juvenile Asymmetric Segmental Spinal Muscular Atrophy

Hirschsprung Disease

Congenital condition characterized by the absence of enteric ganglion cells in a segment of the distal colon, resulting from failure of neural crest cell migration during embryonic development.

Alternate Names:

Congenital Megacolon (Hirschsprung Disease)

Hirschsprung's Disease

A congenital disorder characterized by the absence of parasympathetic ganglion cells (aganglionosis) in the distal colon, resulting in failure of relaxation and functional obstruction. Incidence: 1 in 5,000 live births, male predominance (4:1).

Hirsutism

Excess terminal hair growth in women in a male-pattern distribution (face—upper lip, chin, sideburns; chest, back, lower abdomen, inner thighs). Hirsutism affects 5–10% of women of reproductive age. Pathophysiology: increased androgen production or increased end-organ sensitivity.

Alternate Names:

Excess Facial Hair In Women

Hirudin

A potent anticoagulant peptide originally identified in medicinal leech saliva that directly inhibits thrombin and prevents conversion of fibrinogen to fibrin.

Hirudins

A family of thrombin-inhibiting anticoagulant peptides, including natural and recombinant agents, used or studied to prevent or treat clotting in selected clinical situations.

Hirudo Medicinalis

The medicinal leech, used in selected medical procedures to relieve venous congestion after reconstructive surgery.

His

Usually referring to the bundle of His, the atrioventricular conduction bundle that carries electrical impulses from the AV node into the right and left bundle branches.

His Bundle Electrophysiology

An invasive electrophysiologic recording of electrical activity in the atrioventricular His bundle, used to assess conduction-system disease and localize atrioventricular block.

His Disease

Trench fever, a louse-borne infection caused by *Bartonella quintana*, classically producing recurrent or five-day fever, headache, and severe shin or leg pain.

Histamine

A biogenic amine (imidazolylethylamine) synthesised from L-histidine by histidine decarboxylase, stored in basophils, mast cells, and platelets, and released during allergic and inflammatory responses.

Histamine Degradation

The enzymatic breakdown of histamine, mainly through diamine oxidase and histamine N-methyltransferase, limiting its effects in the gut, airway, skin, and nervous system.

Histamine Receptor

A cell-surface receptor activated by histamine; H1, H2, H3, and H4 receptors mediate different effects involving allergy, gastric acid, neurotransmission, and immune-cell activity.

Histamine Release

Discharge of histamine from mast cells or basophils during allergic, immune, or nonimmune activation, causing effects such as itching, vasodilation, swelling, mucus production, and bronchoconstriction.

Histidine

Histidine is an amino acid used in protein synthesis and a precursor of histamine; it is essential during growth and can be metabolized to urocanic acid and other products.

Histidine Decarboxylase

A medicine or chemical compound called histidine decarboxylase. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Histidinemia

An inherited metabolic disorder caused by reduced histidase activity, leading to elevated histidine in blood and urine; many affected people have few or

no clinically important symptoms.

Histiocyte

A tissue-resident immune cell of the mononuclear phagocyte system, generally derived from monocytes and capable of engulfing foreign material and presenting antigen.

Histiocytic Sarcoma

A neoplastic process affecting histiocytic sarcoma; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Histiocytoma

A tumor or tumor-like proliferation of histiocytes; the term may refer to a benign fibrous skin lesion or, less commonly, a malignant histiocytic neoplasm depending on classification.

Histiocytosis

A group of disorders characterized by abnormal proliferation of histiocytes (tissue macrophages/dendritic cells), including Langerhans cell histiocytosis, Erdheim-Chester disease, and hemophagocytic lymphohistiocytosis.

Histochemical

Histochemical means using chemical stains or reactions in tissue sections to identify particular substances or cell components.

Histocompatibility

Degree of immunological similarity between donor and recipient tissues; determined primarily by HLA antigen matching, critical for transplant success. Its significance is established from its characteristic features, causes, and clinical context.

Histocompatibility Antigen Test

A test identifying human leukocyte antigen types, which influence tissue compatibility for transplantation and are relevant to some immune-mediated and genetic associations.

Histocompatibility Testing

Laboratory typing of HLA and other immune markers to assess donor–recipient compatibility before transplantation and to investigate selected immune or transfusion-related questions.

Histogenesis

The developmental process by which unspecialized cells differentiate and organize into mature tissues with characteristic structures and functions.

Histological Techniques

Laboratory methods for preparing, staining, sectioning, and examining tissue under a microscope to reveal cellular architecture, deposits, organisms, or disease-related changes.

Histology

The microscopic study of the structure of tissues and cells. Histology involves preparing thin tissue sections (3-10 micrometres) by fixation (formalin, paraffin embedding), sectioning (microtome), staining (haematoxylin and eosin, H&E), and examination under a light or electron microscope.

Histology Cassette

A labeled perforated container that holds a tissue specimen during processing, allowing fixation, dehydration, paraffin infiltration, and later embedding for microscopic sectioning.

Histone

A histone is a basic DNA-binding protein around which DNA winds to form nucleosomes; histone modifications regulate chromatin accessibility and gene expression.

Histone Acetylation

Addition of acetyl groups to histone proteins that usually loosens DNA packaging and can increase access of transcriptional machinery to genes.

Histone Acetyltransferase

An enzyme that transfers acetyl groups to histone proteins, generally promoting a more open chro-

matin state and regulating gene transcription.

Histone Deacetylases

Enzymes that remove acetyl groups from histones and other proteins, influencing chromatin structure, gene expression, cell differentiation, and disease biology.

Histone Deacetylation

Removal of acetyl groups from histones, often tightening chromatin and reducing transcription; histone deacetylases are targets of some anticancer drugs.

Histone Modification

A chemical change to histone proteins, such as acetylation, methylation, phosphorylation, or ubiquitination, that alters chromatin structure and gene expression.

Histopathologic Grade

A microscopic estimate of how abnormal and aggressive tumor cells appear compared with their tissue of origin; grade contributes to prognosis and treatment planning alongside stage.

Histopathology

The laboratory-based diagnosis of disease through microscopic examination of tissue sections from biopsy, excision, or autopsy, built on fixation, paraffin embedding, sectioning, and hematoxylin and eosin staining.

Histophilus

A genus of gram-negative bacteria, including *Histophilus somni*, that can cause respiratory or systemic disease mainly in cattle.

Histoplasma

A genus of fungi that includes *Histoplasma capsulatum*, which can cause histoplasmosis after inhalation of environmental spores.

Histoplasma Capsulatum

A fungus found in soil contaminated with bird or bat droppings that can cause histoplasmosis when

its spores are inhaled.

Histoplasma Complement Fixation

A blood test that detects complement-fixing antibodies to *Histoplasma* and can support evaluation of histoplasmosis, although sensitivity, timing, cross-reactions, and immune status affect interpretation.

Histoplasma Skin Test

An older delayed-hypersensitivity skin test using *Histoplasma* antigen; it indicates prior exposure but does not reliably distinguish active infection and is rarely used.

Histoplasmosis

A fungal infection caused by *Histoplasma capsulatum*, acquired by inhaling spores found in nitrogen-rich soil enriched with bat or bird guano, most commonly in the Ohio and Mississippi River valleys of the United States, Central and South America, and parts of Africa and Asia.

Histoplasmosis - Acute (Primary) Pulmonary

A lung infection caused by recently inhaled *Histoplasma* spores; it may cause fever, cough, chest discomfort, and fatigue, or no symptoms.

History, Developmental

A record of a child's developmental milestones and abilities, including motor, language, cognitive, social, and adaptive skills, used to identify possible delays or regression.

History, Social

Information about a person's living situation, relationships, occupation, education, tobacco or substance use, diet, safety, and other social factors relevant to health and care.

Histrionic Personality Disorder

A long-term pattern of intense emotional expression, strong need for attention, and behavior that may seem dramatic, suggestible, or uncomfortable when not the focus. Diagnosis requires a persistent pat-

tern that causes significant problems and is made by a qualified mental-health professional.

HIV

Human immunodeficiency virus: a retrovirus causing progressive CD4+ T-cell depletion and AIDS if untreated. Transmitted via sexual contact, blood/blood products, mother-to-child.

Hiv Antibodies

Antibodies produced after exposure to HIV and detected by screening or confirmatory tests; results are interpreted with antigen testing, nucleic-acid testing, timing, and clinical context.

HIV Infection

Infection with human immunodeficiency virus, which progressively damages immune function if untreated. Antiretroviral therapy suppresses viral replication and reduces transmission and complications.

Hiv Seropositivity

The presence of detectable antibodies or other serologic evidence of HIV infection; a reactive screening result requires the recommended confirmatory testing algorithm.

HIV Test

Screening and confirmatory testing for HIV. Fourth-generation HIV antigen/antibody combo test (p24 antigen + HIV-1/2 antibodies): window period 2-4 weeks. Positive screening requires confirmatory HIV-1/2 antibody differentiation assay. Rapid point-of-care tests (fingerstick, oral swab): results in 20 minutes.

HIV Transmission And Prevention

The spread of HIV through infected blood, semen, vaginal fluids, rectal fluids, or breast milk, prevented by testing, treatment that suppresses viral load, condoms, sterile equipment, and pre- or post-exposure prophylaxis.

HIV/AIDS

HIV-1/2: retrovirus, CD4+ T cell depletion. Transmission: sexual, blood, perinatal, breast milk. Acute retroviral syndrome: fever, lymphadenopathy, pharyngitis, rash, high viral load. Clinical latency: CD4 decline over years. AIDS: CD4 <200 or AIDS-defining illness (PJP, toxo, CMV, MAC, crypto, KS, lymphoma, TB).

HIV/AIDS Immunopathogenesis

HIV-1 infects CD4+ T cells, macrophages, dendritic cells via gp120 binding to CD4 + CCR5 (R5-tropic, early) or CXCR4 (X4-tropic, late). Reverse transcription -> integration -> transcription/translation -> budding. Acute retroviral syndrome (2-4 weeks): fever, lymphadenopathy, pharyngitis, rash, high viral load.

HIV/AIDS In Pregnant Women And Infants

HIV care in pregnancy and infancy uses maternal antiretroviral therapy, viral-load monitoring, delivery and feeding planning, infant prophylaxis, and early infant diagnostic testing to reduce vertical transmission.

HIV/AIDS Nutrition

Malnutrition due to increased need requirement, malabsorption, side effects. Supplementation, opportunistic infection management.

Hives

Hives, or urticaria, are transient raised itchy wheals caused by dermal edema, commonly from allergy, infection, medications, physical triggers, or spontaneous mast-cell activation. or chronic and can result from infection, foods, medications, physical triggers, or autoimmune mechanisms; swelling of the airway is an emergency.

Alternate Names:

Angioedema (Hives)

Hives (Urticaria)

A common skin condition characterized by transient, well-circumscribed, intensely pruritic wheals that blanch with pressure and resolve within 24 hours

without scarring, caused by mast-cell mediator release in the dermis. Acute urticaria lasts less than 6 weeks; chronic urticaria recurs for 6 weeks or longer and is often spontaneous.

Alternate Names:

Urticaria

Hives And Angioedema

Hives are raised itchy welts; angioedema is deeper swelling of the skin or mucous membranes, often caused by allergy, medicines, or other immune reactions.

HLA

Human leukocyte antigen, a cell-surface protein system involved in immune recognition and tissue compatibility.

Alternate Names:

Human leukocyte antigen

Hla Antigen

A cell-surface human leukocyte antigen encoded by the major histocompatibility complex that presents peptides to T cells and influences transplant compatibility and immune disease risk.

HLA System

The HLA system is a group of cell-surface proteins that present antigens to immune cells and influence transplant matching and autoimmune risk.

HLA-B27

A class I human-leukocyte-antigen molecule associated with several spondyloarthropathies, including ankylosing spondylitis and reactive arthritis. A positive result supports but does not establish a diagnosis.

HLA-B27 Antigen

A cell-surface immune marker associated with increased risk of ankylosing spondylitis and related spondyloarthritis, reactive arthritis, and uveitis; a positive result is not diagnostic by itself.

HMG-CoA Reductase

The main rate-limiting enzyme in the liver's cholesterol-production pathway. Statins lower cholesterol partly by inhibiting this enzyme.

Hmgb Proteins

High-mobility group box proteins that bind and bend DNA in the nucleus and can act as inflammatory danger signals when released from damaged or activated cells.

Hmgn Proteins

High-mobility-group nucleosome-binding proteins that regulate chromatin accessibility and influence transcription, DNA repair, and cell differentiation.

Hoarding Disorder

Persistent difficulty discarding or parting with possessions, regardless of their actual value. The individual perceives a need to save items and experiences distress at the thought of discarding them. This results in accumulation of possessions that congest and clutter active living areas.

Hoarseness

A change in vocal quality due to abnormal vibration of the vocal folds, resulting in altered pitch; a subset of dysphonia rather than a diagnosis. Common causes include acute viral laryngitis, voice overuse, smoking, reflux, and vocal cord lesions (nodules, polyps, papillomas, laryngeal carcinoma).

Hodgkin Lymphoma

A B-cell lymphoma characterized by the presence of Reed-Sternberg cells (large, binucleate or multinucleate cells with owl-eye nucleoli) in a background of reactive inflammatory cells.

Hodgkin Lymphoma (Hodgkin Disease)

A cancer of the lymphatic system characterized by abnormal lymphocytes and often presenting with painless lymph-node enlargement, fever, sweats, or weight loss.

Alternate Names:

Cancer, Hodgkin Lymphoma Lymphoma, Hodgkin

Hodgkin Lymphoma In Children

A malignant lymphoma arising from lymphoid tissue in children, characterized by Hodgkin and Reed-Sternberg cells and treated according to subtype, stage, and risk.

Hodgkin'S And Non-Hodgkin'S Lymphoma Comparison

Hodgkin lymphoma is defined by characteristic Reed-Sternberg cells and commonly spreads in an orderly pattern, while non-Hodgkin lymphomas comprise many B-cell, T-cell, and other lymphoid cancers. Biopsy, immunophenotyping, and staging determine treatment and prognosis.

Hodgkin'S Disease

A cancer of the lymphatic system characterized by abnormal lymphocytes, including Reed-Sternberg cells.

Hodgkin'S Lymphoma

A B-cell lymphoma characterized by the presence of Reed-Sternberg cells (large, binucleate or multinucleate cells with owl-eye nucleoli) in a background of reactive inflammatory cells. See Hodgkin Lymphoma.

Hoffmann Syndrome

A rare adult manifestation of severe, chronic, untreated hypothyroid myopathy characterized by the clinical triad of proximal skeletal muscle weakness, painful muscle stiffness and cramping, and pseudohypertrophy of skeletal muscles, most conspicuously involving the gastrocnemius, deltoid, and forearm musculature, accompanied by marked delay in the relaxation phase of deep tendon reflexes ("hung-up" reflexes) and significantly elevated serum creatine kinase levels ($> 10\text{--}50\times$ normal). All symptoms, muscular pseudohypertrophy, and enzymatic elevations resolve completely following thyroid hormone replacement therapy with levothyroxine.

Alternate Names:

Hypothyroid Myopathy with Pseudohypertrophy (Adult Form)

Hofmann'S Syndrome

A clinical disorder related to hofmann's syndrome; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Holdemania

A genus of anaerobic bacteria found mainly in the intestinal microbiome and rarely associated with human infection.

Holdemania Filiformis

An anaerobic intestinal bacterium that is rarely isolated from human clinical specimens.

Holistic Medicine

An approach that considers physical, psychological, social, behavioral, and sometimes spiritual factors in health and illness. It may support patient-centered care, but individual therapies should be assessed for evidence, safety, and compatibility with effective conventional treatment.

Holmium

Holmium is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

Holmium Laser Enucleation Of The Prostate

A modern, minimally invasive transurethral endoscopic surgical procedure for the definitive treatment of bladder outlet obstruction secondary to benign prostatic hyperplasia. Utilizing a high-powered holmium:YAG laser fiber, the surgeon dissects and enucleates intact entire transition-zone adenomatous lobes along the surgical capsule of the prostate into the bladder lumen, followed by endoscopic mechanical morcellation and tissue evacuation for histopathologic evaluation. HoLEP provides size-independent adenoma clearance comparable to open prostatectomy with reduced intraoperative blood loss, minimal risk of transurethral resection syndrome, shorter catheterization times, and durable relief of lower urinary tract symptoms.

Alternate Names:

HoLEP; Holmium Laser Prostate Enucleation

Holocaine

Holocaine is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

Holography

A method of recording and reconstructing the wavefront of light to produce a three-dimensional image; medical applications include experimental imaging, microscopy, and visualization.

Holoprosencephaly

A structural brain malformation resulting from incomplete or failed division of the forebrain (prosencephalon) into the cerebral hemispheres during the fifth week of gestation.

Holorachischisis

A severe neural-tube defect in which the spinal cord and vertebral canal fail to close along an extensive length of the spine, usually causing major neurologic impairment.

Holosystolic Murmur Differential

Pansystolic (holosystolic) murmurs are plateau-shaped and extend from S1 to S2.

Holt-Oram Syndrome

An autosomal dominant disorder caused by TBX5 gene mutations, characterized by congenital heart disease and upper limb malformations. Cardiac anomalies: atrial septal defect (most common), VSD, and conduction abnormalities (heart block, atrial fibrillation).

Holter Electrocardiography

Continuous ambulatory ECG recording, usually for 24 hours or longer, used to detect intermittent arrhythmias, correlate symptoms with rhythm, and assess heart-rate patterns.

Holter Monitor

Continuous ECG recording for 24-48 hours to detect arrhythmias, quantify burden (atrial fibrillation, PVCs, PACs), and correlate symptoms with rhythm. Patient diary logs symptoms. Indications: palpitations, syncope, presyncope, and assessment of arrhythmia control. Reveals paroxysmal arrhythmias not captured on standard 12-lead ECG.

Holter Monitor (24H)

A portable ambulatory electrocardiographic recorder that continuously monitors heart rhythm, usually for 24 hours or longer, to detect intermittent arrhythmias and correlate them with symptoms.

Holter Monitoring

Portable, continuous electrocardiographic recording over an extended period, commonly 24 hours or longer, to detect intermittent rhythm abnormalities and correlate them with symptoms.

Homans Sign

Calf pain elicited by forced ankle dorsiflexion, historically associated with deep-vein thrombosis but insufficiently accurate for diagnosis and not recommended as a standalone test.

Homeobox Gene

A gene containing a homeobox sequence that encodes a DNA-binding homeodomain and helps control embryonic patterning, organ development, and cell identity.

Homeodomain Proteins

Transcription factors containing a homeodomain that bind regulatory DNA sequences and direct developmental patterning and cell differentiation.

Homeopathy

An alternative-health system that uses highly diluted preparations selected according to “like cures like”; reliable evidence has not shown homeopathic products to treat serious disease beyond placebo effects.

Homeostasis

The maintenance of stable internal conditions despite external changes. Key regulated variables: temperature, pH, glucose, electrolytes, blood pressure, fluid balance. Mechanisms: negative feedback loops (most common), positive feedback (rare, e.g., labor, blood clotting).

Homeostasis, Psychological

Homeostasis, Psychological is a developmental, immunologic, reproductive, behavioral, environmental, or healthcare concept used in medicine or biomedical research.

Homeotherm

An organism that maintains a relatively stable internal body temperature despite changes in environmental temperature, largely through physiological regulation.

Homicide

The killing of one person by another, classified legally according to intent and circumstances; medical assessment may address injury patterns, cause of death, toxicology, and safeguarding.

Homo Sapiens

The scientific name for modern humans, the species to which all living people belong.

Homocysteine

An amino acid formed during methionine metabolism. Persistently elevated blood levels may occur with genetic, nutritional, renal, or other disorders.

Homocystinuria

An autosomal recessive metabolic disorder caused by deficiency of cystathionine beta-synthase (CBS), leading to accumulation of homocysteine and methionine.

Homograft

Homograft is a developmental, immunologic, reproductive, behavioral, environmental, or healthcare

concept used in medicine or biomedical research.

Homologous

Homologous is a developmental, immunologic, reproductive, behavioral, environmental, or healthcare concept used in medicine or biomedical research.

Homologous Recombination

A DNA-repair and genetic-exchange process that uses a matching or nearly matching sequence as a template to repair breaks or reshuffle genetic material.

Homologous Transplantation

Transplantation of cells, tissue, or an organ between genetically different people of the same species, requiring attention to compatibility, rejection, infection, and immunosuppression.

Homosexual

Describing a person who experiences enduring romantic or sexual attraction to people of the same sex; sexual orientation is not a mental disorder.

Homosexuality

Sexual or romantic attraction to people of the same sex or gender; it is not a mental disorder or pathology.

Homovanillic Acid

A breakdown product of dopamine found in cerebrospinal fluid, blood, and urine; levels may reflect dopamine metabolism but are interpreted cautiously because many factors affect them.

Homozygote

An individual or cell carrying two identical alleles at a particular gene locus, whether the alleles are normal, pathogenic, or another variant.

Homozygous

Having two identical alleles of a particular gene (AA or aa). Can be homozygous dominant or homozygous recessive.

Honey-Bee Stings

Honey-Bee Stings is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

Hong Kong Flu

The 1968 influenza pandemic caused primarily by influenza A(H3N2), which emerged through antigenic shift and spread globally. The term is historical; current H3N2 infections are managed according to contemporary influenza surveillance, prevention, and treatment guidance.

Honolulu Fever

A clinical disorder related to honolulu fever; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hoof Wall

The hard keratinized outer covering of a hoof that bears weight and protects the deeper tissues; disease or cracking can impair movement and cause pain in hoofed animals.

Hookworm

Intestinal nematode infection by *Ancylostoma duodenale* or *Necator americanus*, acquired by skin penetration of filariform larvae (walking barefoot on contaminated soil).

Hookworm Infection

Intestinal infection caused by hookworms acquired when larvae in contaminated soil penetrate the skin or are ingested. Chronic infection can cause abdominal symptoms, iron-deficiency anemia, protein loss, and impaired growth in children.

Hookworm Infestation

Intestinal infection by hookworm nematodes, which attach to the intestinal wall and may cause iron-deficiency anemia, abdominal symptoms, or poor growth.

Hordeolum

A tender, localized infection or inflammation of an eyelid gland, commonly called a sty, producing a painful red lump near the eyelid margin.

Hordeolum (Stye)

A tender, localized infection or inflammation of an eyelid gland that produces a small red lump near the eyelid margin.

Alternate Names:

Stye

Horizontal Gene Transfer

The transfer of genetic material between bacteria through mechanisms other than parent-to-offspring transmission. The three mechanisms are transformation (uptake of free DNA), transduction (transfer via bacteriophages), and conjugation (direct cell-to-cell transfer).

Hormonal Effects In Newborns

Transient newborn findings caused by maternal hormones or normal neonatal endocrine transitions, such as breast enlargement or vaginal bleeding; persistent or severe findings require evaluation.

Hormone

Chemical messenger secreted by endocrine glands into blood, acting on distant target organs with specific receptors. Classes: peptides/proteins (insulin, GH), steroids (cortisol, estrogen), amines (thyroid hormone, catecholamines). Mechanisms: cell surface receptors (GPCRs, RTKs) or intracellular receptors (nuclear receptors).

Hormone Levels

Measurements of hormones in blood, urine, or other specimens used to evaluate endocrine function; interpretation depends on the specific hormone, timing, age, sex, medications, and clinical context.

Hormone Receptor

A protein that binds a specific hormone and converts the signal into cellular responses, either at the cell surface or inside the cell nucleus.

Hormone Replacement Therapy

HRT (menopause hormone therapy): estrogen $\pm$ progestin to relieve menopausal symptoms (vasomotor, vaginal atrophy, sleep, mood) and prevent osteoporosis. Regimens: estrogen-only (post-hysterectomy) or combined (with progestin for endometrial protection in uterus-intact women); routes: oral, transdermal, vaginal.

Hormone Replacement Therapy

Pharmacologic administration of exogenous hormones to supplement deficient endogenous levels. Most commonly refers to menopausal hormone therapy utilizing estrogens (with a progestogen in women with an intact uterus to prevent endometrial hyperplasia and adenocarcinoma) to manage moderate-to-severe vasomotor symptoms (hot flashes, night sweats) and genitourinary syndrome of menopause, as well as to prevent postmenopausal osteoporosis. Also encompasses hormone replacement in primary hypogonadism, hypopituitarism, hypothyroidism, and adrenal insufficiency.

Hormone Therapy

Treatment blocking hormone effects in hormone-sensitive cancers. Examples: tamoxifen (breast cancer), leuprolide (prostate cancer), aromatase inhibitors.

Hormone Therapy For Breast Cancer

Treatment that blocks or lowers estrogen or progesterone signaling in hormone-receptor-positive breast cancer.

Hormone Therapy For Prostate Cancer

Treatment that lowers androgen production or blocks androgen action to slow growth of hormone-sensitive prostate cancer.

Hormone-Receptor Positive

A cancer whose cells express receptors for hormones such as estrogen or progesterone. Hormone-blocking treatment may be useful for selected cancers with these receptors.

Hormone-Sensitive Lipase

Breaks down triglycerides in adipose tissue. Activated by glucagon, epinephrine via cAMP.

Hormones

Chemical messengers released by glands or tissues that regulate processes throughout the body.

Horn

A horn is a pointed, hard growth of keratinized tissue, usually on the skin or as a normal anatomical projection such as a uterine or spinal horn.

Horner Syndrome

A clinical triad caused by disruption of the sympathetic pathway to the eye and face, resulting in ipsilateral miosis (constricted pupil), ptosis (drooping of the upper eyelid due to paralysis of the superior tarsal muscle), and anhidrosis (loss of sweating on the affected side of the face).

Alternate Names:

Oculosympathetic Palsy

Horner'S Syndrome

A group of findings caused by disruption of sympathetic nerves, including a drooping eyelid, a small pupil, and reduced sweating on one side of the face.

Hornet Stings

Hornet stings inject venom and usually cause local pain and swelling; multiple stings or allergy can cause a serious systemic reaction.

Horripilation

Piloerection, or the temporary raising of hair and development of gooseflesh due to cold, fear, emotion, or autonomic stimulation.

Horror Autotoxicus

A historical immunology concept describing the supposed inability of the immune system to attack the body's own tissues; autoimmune disease showed that this idea was not universally correct.

Horseradish Peroxidase

An enzyme widely used as a laboratory reporter because it catalyzes color-producing or light-producing reactions when supplied with an appropriate substrate.

Horseshoe Kidney

The most common renal fusion anomaly (1 in 400-500), where the lower poles of both kidneys are fused across the midline by an isthmus of renal parenchyma or fibrous tissue.

Hospice

Palliative care for terminal illness with prognosis <6 months. Focus on comfort, quality of life, support for patient and family. Provided at home, hospice facility, or hospital. Interdisciplinary team: physician, nurse, social worker, chaplain, volunteer.

Hospice Care

Team-based care for a person nearing the end of life that prioritizes comfort, symptom control, communication, and family support rather than disease-directed cure.

Hospice Rehabilitation

Rehabilitation provided during hospice care to maximize comfort, dignity, and participation rather than to restore function at all costs. It may include positioning, pain relief, safe transfers, equipment, and caregiver education.

Hospital

A healthcare facility that provides inpatient and often emergency, surgical, diagnostic, and specialist care.

Hospital Medicine

The medical specialty focused on comprehensive care of hospitalized patients, including diagnosis, treatment, coordination across teams, transitions of care, and prevention of inpatient complications.

Hospital-Acquired Infection

Infection acquired during hospitalization. Also:

healthcare-associated infection. Examples: CLABSI, CAUTI, surgical site infection.

Hospital-Acquired Infections

Infections that develop during or after hospitalisation. Major types include central line-associated bloodstream infections, catheter-associated urinary tract infections, ventilator-associated pneumonia, and surgical site infections. Risk factors include invasive devices, prolonged hospitalisation, and antimicrobial use.

Hospital-Acquired Pneumonia

Pneumonia developing > 48 hours after hospital admission. Common pathogens include *Pseudomonas* and MRSA. Empiric treatment covers resistant organisms.

Hospitalism

Hospitalism is a developmental, immunologic, reproductive, behavioral, environmental, or healthcare concept used in medicine or biomedical research.

Hospitalization

Admission to a hospital for monitoring, diagnosis, treatment, surgery, rehabilitation, or intensive support that cannot safely be delivered in an outpatient setting.

Hospitalization (Geriatric)

Inpatient stay for elderly patients. High risk for adverse outcomes: delirium, functional decline, institutionalization. Precautions: fall prevention, early mobilization, medication reconciliation, delirium prevention, nutrition support. Geriatrician consultation beneficial.

Alternate Names:

Geriatric

Hospitals As Health Educators

Hospitals educate patients, families, staff, and communities about prevention, treatment, medicines, recovery, and when to seek care.

Host

A person or other living organism that can be infected by a virus or other pathogen under natural conditions. The host may be a human, animal, or plant. In medical contexts, the host is the patient in whom an infection or disease develops.

Host Cell

A cell in which an infectious agent, parasite, or symbiont lives, replicates, or uses cellular machinery; the host-cell response influences disease and clearance.

Host Response

The body's reaction to an infection, foreign material, transplanted tissue, or other stimulus. It may include inflammation, immune defense, healing, scar formation, rejection, or tolerance.

Hostility

An attitude or behavior marked by antagonism, anger, distrust, or intent to oppose another person; persistent severe hostility may occur with psychiatric, neurologic, substance-related, or situational problems.

Hot Flash

A sudden episode of heat, flushing, sweating, and sometimes palpitations, commonly occurring during menopause.

Alternate Names:

Hot flush

Hot Flashes

Vasomotor symptoms: sudden sensations of intense heat, sweating, flushing, and palpitations, most commonly from estrogen withdrawal around menopause; also in hypogonadism, chemotherapy-induced ovarian failure, and some medications (SERMs, GnRH agonists). Mechanism: hypothalamic thermoregulatory dysfunction.

Alternate Names:

Menopause Hot Flashes (Hot Flashes)

Hot Flushes

Sudden episodes of heat, often with sweating, flushing, palpitations, or chills. They are common during the menopausal transition but may also result from medicines, endocrine disease, infection, or malignancy; persistent or atypical episodes warrant evaluation.

Hot Tub Folliculitis

A temporary bacterial infection of hair follicles, commonly caused by *Pseudomonas aeruginosa* after exposure to contaminated hot tubs or pools, producing itchy follicular papules or pustules.

Hounsfield Unit

A CT attenuation value that expresses tissue density relative to water, conventionally assigning air about -1000 HU, water 0 HU, and dense bone positive values.

Hounsfield Units

CT number scale referencing water (0 HU) and air (-1000 HU). Fat: -50 to -100 HU. Water: 0 HU. Soft tissue: +20 to +50 HU. Bone: +400 to +3000 HU.

Hour

A unit of time equal to 60 minutes, commonly used in medicine to describe symptom duration, dosing intervals, monitoring periods, and treatment timing.

Hour-Glass Contraction

An abnormal constriction ring dividing the uterus into upper and lower portions, historically described during obstructed or difficult labor. It can interfere with delivery and requires urgent obstetric assessment when suspected.

House Officer

A physician receiving postgraduate clinical training in a hospital, such as an intern, resident, or fellow; usage varies by country and institution.

House Staff

The physicians and other trainees who provide patient care within a hospital under the supervision

of attending clinicians, commonly including interns, residents, and fellows.

House Surgeon

A hospital-based physician, historically a junior surgical trainee or resident responsible for inpatient surgical care; usage varies by institution.

Household Glue Poisoning

Household glue poisoning involves toxic or environmental exposure to household glue poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Housemaid's Knee

A common name for prepatellar bursitis, inflammation and fluid accumulation in the bursa over the kneecap, often caused by prolonged kneeling, trauma, infection, or inflammatory disease. Painful swelling, redness, warmth, or fever requires assessment for septic bursitis.

Howell-Jolly Bodies

Basophilic nuclear remnants (clusters of DNA) normally removed from circulating red blood cells by splenic macrophages (pitting). Presence on peripheral blood smear indicates functional asplenia or anatomical splenectomy (e.g., trauma, sickle cell auto-splenectomy). Also seen in severe megaloblastic anemia.

HPA

The hypothalamic-pituitary-adrenal axis, a hormone system central to the stress response.

Alternate Names:

Hypothalamic-pituitary-adrenal axis

HPLC

High-performance liquid chromatography, a laboratory method that pushes a liquid sample through a special column to separate, identify, and measure its components. It is used for medicines, metabolites, chemicals, and purity testing, including some radiopharmaceuticals.

HPV

Human papillomavirus is a group of DNA viruses that infect skin and mucous membranes. Some types cause warts, whereas persistent infection with high-risk types can cause precancerous lesions and cancers of the cervix, anus, penis, vulva, vagina, or oropharynx.

HPV Test

A test that detects high-risk human papillomavirus genetic material or related markers in cervical samples to screen for cervical cancer risk or evaluate abnormal cervical cytology.

HPylori

A shorthand name for *Helicobacter pylori*, a bacterium that colonizes the stomach and can cause gastritis, peptic ulcer disease, and increased gastric-cancer risk. Confirmed infection is treated with an appropriate combination eradication regimen and follow-up testing.

HRCT

Alternate name; see *High-Resolution Computed Tomography*.

HRT

Hormone replacement therapy uses estrogen, with a progestogen when needed, to treat selected menopausal symptoms caused by declining ovarian hormone production. It can relieve vasomotor and genitourinary symptoms and help prevent bone loss, but benefits and risks depend on the person's age, medical history, regimen, and duration of use.

Hs-cTn

Alternate name; see *High-Sensitivity Cardiac Troponin*.

Ht

Common abbreviation for hematocrit, the percentage of blood volume occupied by red blood cells; in other contexts it may mean height.

Huber Needle

Huber Needle is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

Human Calcitonin

A peptide hormone produced by thyroid parafollicular cells that can lower blood calcium by inhibiting osteoclast activity; synthetic calcitonin is used selectively for bone and calcium disorders.

Human Chorionic Gonadotropin

A glycoprotein hormone produced by trophoblast cells after implantation. Detectable in serum 8-11 days post-conception and in urine 12-14 days. Levels double approximately every 48-72 hours in early pregnancy, peaking at 8-11 weeks then plateauing.

Human Chorionic Gonadotropin

A hormone produced mainly by placental tissue and measured in urine or blood to help detect and monitor pregnancy. Concentrations normally rise early in pregnancy, but the rate and interpretation vary; results must be considered with timing and clinical findings.

Alternate Names:

Human Chorionic Gonadotropin

Human Chromosome Count

Most human body cells contain 46 chromosomes arranged in 23 pairs, including one pair of sex chromosomes; mature egg and sperm cells normally contain 23.

Human Embryo

The developing human organism from fertilization through approximately the eighth week, during which the major body plan and organ systems are established.

Human Gastrin

A peptide hormone produced mainly by gastric G cells that stimulates gastric acid secretion and supports growth of the gastric mucosa after food enters

the stomach.

Human Genome

The complete DNA sequence and genetic content of a human, organized into nuclear chromosomes and mitochondrial DNA; variants influence traits, disease risk, and treatment response.

Human Herpesvirus 6

A herpesvirus that commonly infects children and can cause roseola; it may reactivate and cause serious disease in people with weakened immunity.

Human Herpesvirus 8

A herpesvirus associated with Kaposi sarcoma, primary effusion lymphoma, and multicentric Castleman disease, especially in people with weakened immunity.

Human Immunodeficiency Virus

A retrovirus belonging to the Lentivirus genus that causes acquired immunodeficiency syndrome (AIDS). HIV has two species: HIV-1 and HIV-2. The virus targets CD4+ T cells, macrophages, and dendritic cells. HIV has a complex genome encoding structural proteins, enzymes (reverse transcriptase, integrase, protease), and regulatory proteins.

Human Immunodeficiency Virus

A retrovirus (family Retroviridae, genus Lentivirus) that causes acquired immunodeficiency syndrome by infecting and destroying CD4+ T lymphocytes (helper T cells). Two types: HIV-1 (pandemic, most common worldwide) and HIV-2 (less virulent, West Africa).

Alternate Names:

Human Immunodeficiency Virus

Human Leukocyte Antigen

A protein on cell surfaces that helps the immune system distinguish self from foreign material.

Alternate Names:

HLA

Human Leukocyte Antigen

A group of cell-surface proteins encoded by genes in the major histocompatibility complex. HLA molecules present antigens to T cells and are important in immune responses and tissue matching for transplantation.

Alternate Names:

HLA

Human Metapneumovirus

A respiratory virus that can cause cough, fever, bronchiolitis, or pneumonia, especially in infants, older adults, and people with chronic disease.

Human Metapneumovirus

A medicine or chemical compound called human metapneumovirus (hmpv). Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Human Microbiome

The collection of microorganisms that live on and in the human body. The microbiome includes bacteria, viruses, fungi, and archaea. The gut microbiome is the most studied and plays a role in digestion, immune function, and disease.

Human Nociceptin

A neuropeptide that binds the nociceptin/orphanin FQ receptor and modulates pain, stress, reward, autonomic function, and other brain and spinal-cord processes.

Human Papillomavirus

The most common STI, with over 100 types. High-risk types (16, 18) cause cervical, oropharyngeal, anal, and genital cancers. Low-risk types (6, 11) cause genital warts. Prevention: HPV vaccine (Gardasil 9) protects against 9 HPV types. Screening: Pap smear and HPV testing for cervical cancer prevention.

Human Placental Lactogen

A peptide hormone produced by the placenta that contributes to mammary-gland development and

shifts maternal metabolism toward increased lipolysis and reduced insulin sensitivity during pregnancy. It supports nutrient availability for the fetus and contributes to physiologic gestational insulin resistance.

Humectant

A substance that attracts and retains water, commonly used to hydrate skin.

Humeral Epicondyle

A bony prominence at the distal humerus that provides attachment for forearm muscles and ligaments; the medial and lateral epicondyles are located on opposite sides of the elbow.

Humeral Fracture

A break in the upper-arm bone, involving the proximal, shaft, or distal humerus; pain, swelling, deformity, and possible nerve or blood-vessel injury guide urgent assessment and treatment.

Humeroradial Joint

Between capitulum and radial head, allowing flexion-extension and contributing to pronation-supination via radial head rotation. Radial collateral ligament provides lateral stability. Capitulum has articular cartilage only anteriorly.

Humeroulnar Joint

Uniaxial hinge between trochlea and trochlear notch of the ulna, allowing only flexion/extension (0 to approximately 145 degrees). Ulnar collateral ligament is the primary valgus restraint. Trochlear notch provides inherent bony stability, making it the most congruent elbow joint.

Humerus

Single upper arm bone, the longest of the upper limb. Proximal end: head, anatomical/surgical necks, tubercles. Shaft: deltoid tuberosity, radial groove, epicondyles. Distal end: trochlea, capitulum, olecranon fossa. The surgical neck is the common fracture site potentially injuring the axillary nerve.

Humidifier

A device that adds moisture to air; medical humidifiers require appropriate cleaning and water handling because contaminated equipment can disperse infectious or inflammatory material.

Humidifier Fever

A flu-like illness caused by inhalation of microorganisms or biologic contaminants from a contaminated humidifier or ventilation system, often involving fever, chills, cough, and malaise.

Humidifiers And Health

Humidifiers may ease dryness when used correctly, but dirty devices can spread microbes and excess humidity can promote mold; regular cleaning and moderate humidity are important.

Humidity

The amount of water vapor in air, influencing heat loss, respiratory comfort, skin hydration, and survival or transmission of some microorganisms.

Humor

In anatomy, a fluid of the body, especially the aqueous or vitreous humor of the eye; in ordinary language, it means a sense of amusement or comedy.

Humoral Immunity

The component of adaptive immunity mediated by antibodies produced by B lymphocytes (plasma cells) that neutralize extracellular pathogens and toxins. Humoral responses defend against bacteria, viruses outside cells, and parasites.

Humoralism

The historical medical theory that health depended on balance among four bodily fluids, or humors: blood, phlegm, yellow bile, and black bile.

Humorism

Another name for the ancient theory of humoral balance, which attributed disease to excess or deficiency of blood, phlegm, yellow bile, or black bile.

Hump On Upper Back (Dorsocervical Fat Pad)

A visible accumulation of fat at the back of the neck and upper shoulders, associated with obesity, corticosteroid excess, some medicines, or lipodystrophy; it differs from spinal kyphosis.

Hunchback

A nontechnical term usually referring to pronounced kyphosis, an excessive forward curvature of the upper spine. Causes include osteoporosis, vertebral compression fractures, Scheuermann disease, degenerative change, and congenital disorders; evaluation depends on age, progression, pain, and neurologic findings.

Hunger

Physiological drive to eat. Regulated by ghrelin, blood glucose, stomach distension. Psychological factors also influence.

Hungry Bone Syndrome

Severe hypocalcemia occurring after parathyroidectomy particularly in patients with severe preoperative hyperparathyroidism and high bone turnover. Rapid bone remineralization after removal of excess PTH sequesters calcium and phosphorus from the serum causing symptomatic hypocalcemia.

Hunter Syndrome

Mucopolysaccharidosis type II (MPS II), an X-linked recessive lysosomal storage disorder caused by iduronate-2-sulfatase deficiency (IDS gene mutations). Accumulation of dermatan sulfate and heparan sulfate (same as Hurler).

Hunter'S Syndrome

A clinical disorder related to hunter's syndrome; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Huntington'S Disease

An inherited, progressive neurodegenerative disease caused by an expanded CAG repeat in the HTT (huntingtin) gene on chromosome 4p16.3. It usually begins in adulthood and affects movement, thinking,

mood, and behavior; involuntary movements called chorea are common. Symptoms may include cognitive decline and psychiatric changes. Earlier onset can occur in successive generations, especially with paternal transmission. Because it is autosomal dominant, a person with the disease has a 50% chance of passing the altered gene to each child. There is no cure, but treatment can address symptoms and support function.

Alternate Names:

Huntington Disease Huntington's Chorea Chorea, Huntington's Huntington's Disease (Chorea) Chorea

Hurler Syndrome

Mucopolysaccharidosis type I (MPS I), the severe form, an autosomal recessive lysosomal storage disorder caused by alpha-L-iduronidase deficiency (IDUA gene mutations). Accumulation of dermatan sulfate and heparan sulfate leads to progressive multisystem involvement.

Hurthle Cell

A thyroid follicular cell with abundant granular mitochondria-rich cytoplasm, seen in Hashimoto thyroiditis and Hürthle-cell neoplasms.

Hurthle Cell Cancer

A rare thyroid cancer arising from Hurthle cells, with behavior ranging from indolent to aggressive.

Alternate Names:

Cancer, Hurthle Cell Oxyphil Cell Carcinoma

Hutchinson'S Teeth

Hutchinson's teeth are permanently notched, widely spaced upper front teeth classically associated with congenital syphilis.

HüRthle Cell Tumour

A clinical disorder related to hürthle cell tumour; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hyaline

A glassy, translucent material or appearance, commonly describing proteinaceous deposits or homo-

geneous extracellular material seen microscopically in tissues.

Hyaline Cartilage

The most common type of cartilage, containing fine type II collagen fibers in a firm, glassy matrix. It supports airways, covers articular surfaces, and forms much of the fetal skeleton and growth plates.

Hyaline Casts

Transparent colorless cylindrical structures composed primarily of Tamm-Horsfall protein secreted by the thick ascending limb. Most common type of urine cast. Normal in concentrated urine and after exercise. Increased in dehydration, prerenal states, and volume depletion.

Hyaline Membrane

A layer of protein-rich material lining damaged alveoli, classically seen in respiratory distress syndrome. It impairs gas exchange.

Hyaline Membrane Disease

An older name for neonatal respiratory distress syndrome, caused mainly by surfactant deficiency in premature infants. See Respiratory Distress Syndrome.

Hyalitis

Inflammation of the vitreous body of the eye, usually associated with intraocular infection, autoimmune inflammation, trauma, or another ocular disorder. It may cause floaters, blurred vision, or visual loss and requires ophthalmic assessment.

Hyaloid Canal

A narrow channel through the vitreous body of the eye that marks the former path of the hyaloid artery from the optic disc toward the lens during fetal development.

Hyaluronic Acid

A naturally occurring carbohydrate polymer that binds water in connective tissue, skin, joints, and the eye.

Alternate Names:

Hyaluronan

Hyaluronidase

Hyaluronidase is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

Hyaluronoglucosaminidase

An enzyme that degrades hyaluronan and related glycosaminoglycans; hyaluronidase preparations can increase tissue permeability and assist dispersion of injected fluids or medicines.

Hybridoma

A cell line formed by fusing an antibody-producing B lymphocyte with an immortal myeloma cell, allowing continuous production of a monoclonal antibody.

Hycanthone

An older antiparasitic drug formerly used against schistosomiasis; its use was abandoned or restricted because of serious toxicity, including liver injury and carcinogenic concern.

Hydatid Cyst

A cyst caused by the larval stage of *Echinococcus granulosus*, a tapeworm transmitted from dogs to humans through ingestion of contaminated food. The liver is the most commonly affected organ, followed by the lungs. Cysts grow slowly and may become symptomatic from mass effect or rupture, causing anaphylaxis.

Hydatid Disease

Cystic echinococcosis caused by the larval stage of *Echinococcus granulosus* and related species. Humans acquire infection by ingesting eggs shed in dog feces; hydatid cysts develop most often in the liver or lungs and may remain silent or cause pain, obstruction, infection, rupture, or allergic reaction. Diagnosis relies on characteristic imaging with supportive serology, and treatment must be individualized by specialists because unsafe puncture or rupture can cause anaphylaxis and secondary spread.

Hydatidiform Mole

A form of gestational trophoblastic disease in which abnormal trophoblastic tissue grows in the uterus. A complete mole has no viable fetus; a partial mole may contain abnormal fetal tissue. Both require follow-up because persistent disease can occur.

Hydralazine

Hydralazine is a direct arteriolar vasodilator used for selected hypertension, including severe hypertension in pregnancy; reflex tachycardia, fluid retention, headache, and drug-induced lupus are recognized adverse effects.

Hydramnios

Excess amniotic fluid during pregnancy, also called polyhydramnios, caused by fetal swallowing impairment, maternal diabetes, multiple gestation, fetal anomalies, infection, or sometimes no identifiable cause.

Hydranencephaly

A rare congenital condition where the cerebral hemispheres are nearly completely absent, replaced by thin-walled, fluid-filled sacs, while the brainstem, basal ganglia, and cerebellum are relatively preserved. Caused by bilateral internal carotid artery occlusion in utero (vascular insult, infection, or twin-twin transfusion).

Hydrarthrosis

Abnormal accumulation of clear synovial fluid within a joint, producing swelling and restricted movement; causes include osteoarthritis, inflammatory arthritis, trauma, and infection.

Hydration

The body's water balance and the process of replacing water and electrolytes lost through urine, stool, sweat, breathing, vomiting, or bleeding.

Hydrazine

A highly reactive chemical used in fuels and industry that can cause irritant, neurologic, hepatic, and systemic toxicity after significant exposure.

Hydrazine Sulfate

A hydrazine-containing chemical once promoted experimentally for cancer-related symptoms; evidence of benefit is inadequate and toxicity can include liver injury, neuropathy, and seizures.

Hydrazines

A family of nitrogen-containing chemical compounds used in industry, agriculture, and pharmaceuticals; some are irritants, toxic, mutagenic, or hepatotoxic.

Hydrazones

Chemical compounds formed by reaction of hydrazine derivatives with aldehydes or ketones, important in medicinal chemistry, analytical chemistry, and some drug structures.

Hydroa Vacciniforme

A rare photodermatosis causing recurrent vesicles or papules on sun-exposed skin that heal with variciform scars; some cases are associated with Epstein-Barr virus.

Hydrocarbon

An organic compound composed only of carbon and hydrogen; ingestion or inhalation of petroleum hydrocarbons can cause chemical pneumonitis and systemic toxicity.

Hydrocarbon Pneumonia

Lung inflammation caused by inhaling or aspirating petroleum products or other hydrocarbons, which can produce cough, breathing difficulty, and chemical pneumonitis.

Hydrocele

A collection of serous fluid within the tunica vaginalis surrounding the testis. Congenital hydrocele results from patent processus vaginalis; acquired hydrocele may follow infection, trauma, or tumor. Transilluminates on examination. Ultrasound confirms fluid collection.

Hydrocele Repair

Surgery to close or remove the fluid-containing sac

around a testicle when a hydrocele is persistent, large, painful, associated with a hernia, or obscures examination.

Hydrocephalus

Accumulation of cerebrospinal fluid within the ventricular system, leading to increased intracranial pressure. Communicating hydrocephalus: impaired CSF absorption (subarachnoid hemorrhage, meningitis, leptomeningeal carcinomatosis).

Hydrocephalus Acquired

Acquired hydrocephalus is abnormal accumulation of cerebrospinal fluid after birth due to obstruction, impaired absorption, or rarely excess production; raised intracranial pressure may cause headache, vomiting, gait or cognitive change, and visual symptoms.

Hydrocephalus Ex-Vacuo

Enlargement of the brain's ventricles secondary to loss or shrinkage of surrounding brain tissue, rather than primarily from obstructed cerebrospinal-fluid flow.

Hydrocephaly

Hydrocephalus: abnormal accumulation or circulation of cerebrospinal fluid that enlarges the ventricles and may increase pressure on the brain.

Hydrochloric Acid

The acid in gastric juice that helps digest food and kill microorganisms.

Hydrochloric Acid Poisoning

Hydrochloric acid poisoning involves toxic or environmental exposure to hydrochloric acid poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Hydrochlorothiazide

Hydrochlorothiazide is a thiazide diuretic that inhibits sodium-chloride reabsorption in the distal convoluted tubule and treats hypertension and mild oedema; hypokalaemia, hyponatraemia, hyperuri-

caemia, and photosensitivity may occur.

Hydrocodone

An opioid analgesic used for moderate to severe pain and, in some formulations, cough; it can cause respiratory depression, sedation, constipation, tolerance, dependence, and overdose.

Hydrocodone And Acetaminophen Overdose

Hydrocodone and acetaminophen overdose involves toxic or environmental exposure to hydrocodone and acetaminophen overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Hydrocodone Bitartrate

The bitartrate salt of hydrocodone, an opioid analgesic that can cause sedation, constipation, respiratory depression, tolerance, dependence, and overdose.

Hydrocodone/Oxycodone Overdose

Hydrocodone/oxycodone overdose involves toxic or environmental exposure to hydrocodone/oxycodone overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Hydrocolpos

Distension of the vagina with fluid due to obstruction of the vaginal outlet, often from an imperforate hymen or transverse septum, presenting as a pelvic mass in neonates or adolescents.

Hydrocortisone

Hydrocortisone is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

Hydrocyanic Acid Poisoning

Hydrocyanic Acid Poisoning is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

Hydroflumethiazide

A medicine or chemical compound called hydroflumethiazide. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Hydrofluoric Acid Exposure

Contact with hydrofluoric acid, which can cause deep tissue injury and systemic fluoride toxicity, including dangerous low calcium and cardiac arrhythmias.

Hydrofluoric Acid Poisoning

Hydrofluoric acid poisoning involves toxic or environmental exposure to hydrofluoric acid poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Hydrogen Bond

Weak electrostatic interaction between a hydrogen atom covalently bonded to an electronegative atom (N, O, F) and another electronegative atom. Critical for protein structure (alpha helix, beta sheet), DNA double helix (base pairing), enzyme-substrate binding, and water properties (high boiling point, solvent properties).

Hydrogen Breath Test

Non-invasive test for carbohydrate malabsorption (lactose, fructose) and small intestinal bacterial overgrowth (SIBO). Patient ingests a substrate (lactose, glucose, or lactulose). Breath hydrogen is measured at baseline and 15-30 minutes for 2-3 hours. Rise in H_2 >20 ppm from baseline: positive (bacterial fermentation).

Hydrogen Cyanide

A rapidly acting cellular toxin that inhibits cytochrome oxidase and prevents oxidative phosphorylation; significant exposure can cause severe lactic acidosis, seizures, cardiovascular collapse, and death.

Hydrogen Peroxide

An oxidizing chemical used in some antiseptic and industrial products; ingestion or concentrated ex-

posure can injure tissue and release gas, causing embolic or respiratory complications.

Hydrogen Peroxide Poisoning

Hydrogen peroxide poisoning involves toxic or environmental exposure to hydrogen peroxide poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Hydrogen Sulfide

A toxic, flammable gas with a rotten-egg odor at low concentrations that inhibits cellular respiration and can rapidly cause respiratory failure, neurologic effects, or death.

Hydrogen-Ion Concentration

The concentration of hydrogen ions in a solution, expressed through pH and central to acid-base physiology, enzyme activity, and interpretation of blood-gas results.

Hydrogenation

A chemical process that adds hydrogen to a compound; in foods it can convert liquid oils into more solid fats.

Hydromorphone

Hydromorphone is a potent opioid analgesic for severe pain; sedation, constipation, respiratory depression, tolerance, and dependence are important risks, especially with alcohol or other sedatives.

Hydromorphone Overdose

Hydromorphone overdose involves toxic or environmental exposure to hydromorphone overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Hydromyelia

Abnormal widening of the central canal of the spinal cord, which may be congenital or associated with obstruction of cerebrospinal-fluid flow and neurologic symptoms.

Hydronephrosis

Dilation of renal collecting system proximal to obstruction. Causes include stones, strictures, malignancy, and BPH. Graded on ultrasound from mild to severe. Prolonged obstruction leads to cortical thinning and renal failure. Bilateral more clinically significant.

Hydronephrosis Of One Kidney

Dilation of one kidney's renal pelvis and calyces caused by impaired urine drainage, often from a stone, stricture, reflux, or obstruction of the ureter or ureteropelvic junction.

Hydrophobia

Painful spasms or fear triggered by attempts to drink, classically occurring in advanced rabies because of inflammation of the brain and nerves involved in swallowing.

Hydropneumothorax

The simultaneous presence of both fluid and air in the pleural space, causing respiratory distress and dullness to percussion with absent breath sounds, typically requiring chest tube drainage.

Hydrops

Abnormal accumulation of fluid in tissues or body cavities. The term may refer to generalized fetal edema, a localized collection, or organ-specific fluid distension; the cause depends on the clinical setting.

Hydrops Fetalis

Abnormal accumulation of fluid in two or more fetal compartments, including pleural effusion, pericardial effusion, ascites, and subcutaneous edema. Causes include Rh isoimmunization, chromosomal abnormalities, cardiac defects, infections (parvovirus B19), and twin-to-twin transfusion syndrome.

Hydrops Of The Gallbladder

Distension of the gallbladder by clear mucus or watery fluid, usually caused by prolonged obstruction of the cystic duct by a gallstone. It may cause right-upper-quadrant pain and can progress to in-

flammation or infection.

Hydrosalpinx

Dilatation of a fallopian tube caused by accumulation of clear fluid, usually after inflammation, infection, endometriosis, or previous pelvic surgery. It may affect fertility.

Hydrotherapy

Exercise in water using buoyancy, resistance, warmth. Benefits: reduced weight-bearing, improved circulation, pain relief, increased range of motion. Used for arthritis, spinal cord injury, amputation, neurological conditions.

Hydrothorax

An abnormal collection of clear fluid in the pleural space around a lung.

Hydroureter

Abnormal enlargement of a ureter caused by impaired urine drainage.

Hydroxamic Acid

An organic functional group containing hydroxylamine attached to a carbonyl, found in chelators and some medicines, including histone-deacetylase inhibitors.

Hydroxocobalamin

A cobalt-containing form of vitamin B12 used as an antidote for cyanide poisoning. It binds cyanide to form cyanocobalamin, which is excreted in urine; it can cause red discoloration of skin and body fluids and interfere with some laboratory tests.

Hydroxyapatite

A calcium-phosphate mineral forming much of the hardness of bones and teeth.

Hydroxychloroquine

Hydroxychloroquine is an antimalarial and immunomodulatory drug used for malaria prevention or treatment and selected autoimmune diseases; cumulative retinal toxicity requires ophthalmic moni-

toring.

Hydroxycholesterols

A medicine or chemical compound called hydroxycholesterols. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Hydroxylation

An enzymatic or chemical reaction that adds a hydroxyl group to a molecule, often altering the activity, solubility, metabolism, or excretion of a drug or biomolecule.

Hydroxyproline

An amino acid formed mainly by post-translational modification of collagen; its measurement has been used as an indicator of collagen turnover but is not a routine diagnostic test.

Hydroxyprolinemia

A rare inherited metabolic finding caused by impaired hydroxyproline breakdown, leading to elevated hydroxyproline in blood or urine and usually little clinical illness.

Hydroxysteroid

A steroid hormone or steroid-related compound containing a hydroxyl group; hydroxysteroids include intermediates and products of adrenal and gonadal steroid metabolism.

Hydroxyurea

Hydroxyurea inhibits ribonucleotide reductase and reduces DNA synthesis; it is used for myeloproliferative disorders and to increase fetal haemoglobin in sickle-cell disease, with myelosuppression and other toxicities requiring monitoring.

Hydroxyzine

Hydroxyzine is a sedating H1-antihistamine used for itching, anxiety, and preoperative sedation; drowsiness, anticholinergic effects, and QT prolongation can occur.

Hydroxyzine Overdose

Hydroxyzine overdose involves toxic or environmental exposure to hydroxyzine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Hydrozoa

Hydrozoa is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Hygiene

Practices that reduce exposure to pathogens and support health, including hand hygiene, oral care, skin care, food safety, and appropriate environmental cleanliness.

Hygiene Hypothesis

The theory that limited early-life microbial exposure may increase susceptibility to allergies and immune disorders.

Hygroma

Hygroma is a developmental, immunologic, reproductive, behavioral, environmental, or healthcare concept used in medicine or biomedical research.

Hymen

A thin fold of mucous membrane that partially covers the external opening of the vagina. The hymen is a remnant of fetal development, with no known physiological function in postnatal life.

Hymenectomy

Hymenectomy is a procedure to remove or open part of the hymen, usually to treat an obstructed hymenal opening or another symptomatic abnormality.

Hymenolepiasis

Intestinal infection with dwarf tapeworms, especially *Hymenolepis nana*, acquired by ingesting eggs; it may cause abdominal symptoms, diarrhea, or be asymptomatic.

Hymenolepis Diminuta

hymenolepis diminuta is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Hymenolepis Nana

hymenolepis nana is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Hymenoptera

An insect order that includes bees, wasps, hornets, and ants; stings or bites can cause pain, allergy, or life-threatening anaphylaxis.

Hyoid Bone

U-shaped bone in the anterior neck at C3, unique for not directly articulating with any other bone. Suspended by muscles and the stylohyoid ligament. Provides attachment for suprahyoid (digastric, stylohyoid, mylohyoid, geniohyoid) and infrahyoid (sternohyoid, sternothyroid, thyrohyoid, omohyoid) muscles.

Hyoscine

Hyoscine is a medicine, chemical, treatment, device, or exposure; its indication, mechanism, dose, toxicity, and precautions depend on the specific product or circumstance.

Hyoscyamine

An antimuscarinic medicine that reduces smooth-muscle spasm and secretions; it may be used for selected gastrointestinal or urinary symptoms and can cause dry mouth, blurred vision, urinary retention, or confusion.

Hyper-IgM Syndromes

A group of disorders characterized by normal or elevated IgM with low IgG, IgA, and IgE, due to defective class switch recombination (CSR) and somatic hypermutation (SHM).

Hyper-IgM Syndrome

See *Hyper-IgM Syndromes*.

Hyperactivity

Excessive or developmentally inappropriate motor activity, restlessness, or difficulty remaining still; persistent impairment may occur in ADHD, mania, substance effects, or other conditions.

Hyperacusis

Reduced tolerance to ordinary environmental sounds, which may be perceived as excessively loud, painful, or distressing. It can occur with hearing disorders, migraine, head injury, neurologic conditions, or without an identifiable cause.

Hyperadrenocorticism

Excess production or exposure to adrenal glucocorticoids, especially cortisol; in humans it causes Cushing syndrome, which may result from adrenal, pituitary, ectopic, or medication-related causes.

Hyperaemia

A clinical disorder related to hyperaemia; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hyperaesthesia

A clinical disorder related to hyperaesthesia; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hyperaldosteronism

Hyperaldosteronism, also known as Conn syndrome when caused by an adrenal adenoma, is characterized by excessive aldosterone production causing hypertension, hypokalemia, and metabolic alkalosis.

Alternate Names:

Conn syndrome when caused by an adrenal adenoma, is.

Hyperaldosteronism Complications

Beyond hypertension and hypokalemia, primary hyperaldosteronism causes target organ damage in-

cluding left ventricular hypertrophy, fibrosis, stroke, coronary artery disease, atrial fibrillation, and chronic kidney disease. These complications occur at higher rates than in essential hypertension of similar severity.

Hyperalgesia

Feeling more pain than expected from something that normally hurts. It can happen with inflammation, nerve injury, changes in nervous-system pain processing, or opioid use; it differs from allodynia, which is pain from a normally painless touch.

Hyperammonemia

An abnormally elevated concentration of ammonia in the blood. It may result from an inherited urea-cycle or organic-acid disorder, severe liver dysfunction, or other acquired causes and can produce encephalopathy, cerebral oedema, seizures, and coma.

Hyperamylasemia

An elevated blood amylase concentration caused by pancreatic or salivary-gland disease, reduced clearance, macroamylasemia, or other conditions; it is not diagnostic of pancreatitis by itself.

Hyperargininemia

An inherited urea-cycle disorder caused by arginase deficiency, leading to high arginine and progressive spasticity, developmental impairment, seizures, or liver-related findings.

Hyperbaric

Having a pressure greater than the surrounding atmospheric pressure; hyperbaric oxygen therapy delivers oxygen at increased pressure for selected medical indications.

Hyperbaric Chamber

A pressurized chamber in which a person breathes oxygen or another gas at pressure above sea level, used for conditions such as decompression sickness, air embolism, and selected wounds.

Hyperbaric Oxygen Therapy

Administration of 100% oxygen at increased atmospheric pressure. Indications: carbon monoxide poisoning, decompression sickness, gas gangrene, necrotizing soft tissue infections, delayed radiation injury, crush injury, compromised grafts. Mechanism: increases dissolved oxygen, vasoconstriction, antimicrobial effect.

Hyperbilirubinaemia

Hyperbilirubinaemia is an abnormally high level of bilirubin in the blood, which can cause jaundice and may result from increased breakdown of red cells, liver disease, or blocked bile flow.

Hyperbilirubinemia

An abnormally high concentration of bilirubin in blood that may cause jaundice; causes include hemolysis, impaired liver processing, hepatocellular injury, and bile-duct obstruction.

Hypercalcaemia

A clinical disorder related to hypercalcaemia; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypercalcemia

Elevated serum calcium level (total calcium >10.5 mg/dL or ionized calcium >5.3 mg/dL). mnemonic MALIGNANT: Myeloma, Metastases, Metabolic bone disease, Hyperparathyroidism, Adrenal insufficiency, Paget disease, Immobilization, Thiazide diuretics, Addison disease, Neonatal, Tumor-derived PTHrP.

Alternate Names:

Calcium Elevated (Hypercalcemia)

Hypercalcemia Of Malignancy

Elevated serum calcium caused by cancer, a common paraneoplastic and oncologic emergency. Mechanisms: PTHrP secretion (most common—squamous cell lung, breast, renal, ovarian), osteolytic metastases (breast, myeloma), 1,25-dihydroxyvitamin D (lymphoma), and ectopic PTH (rare).

Hypercalciuria

Excessive urinary calcium excretion, which can promote calcium kidney stones and, in some settings, bone mineral loss; evaluation considers diet, medications, kidney function, and endocrine causes.

Hypercapnia

An abnormally elevated arterial partial pressure of carbon dioxide, usually caused by alveolar hypoventilation. It may produce headache, somnolence, confusion, asterixis, respiratory acidosis, and, when severe or rapidly developing, coma.

Hypercementosis

Excessive deposition of cementum around a tooth root, producing a bulbous root contour that can complicate extraction but is often asymptomatic.

Hypercholesterolaemia

A clinical disorder related to hypercholesterolaemia; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypercholesterolemia

Elevated serum total cholesterol and LDL cholesterol levels, a major modifiable risk factor for atherosclerotic cardiovascular disease. It may be primary, due to familial hypercholesterolemia from LDL receptor mutations, or secondary to diet, obesity, hypothyroidism, or nephrotic syndrome.

Hypercoagulable State

Condition increasing thrombosis risk. Inherited: Factor V Leiden, prothrombin mutation, protein C/S deficiency, antithrombin deficiency. Acquired: cancer, pregnancy, oral contraceptives, antiphospholipid syndrome, myeloproliferative disorders.

Hypercyanotic Tetralogy

A complex congenital heart defect with four features: ventricular septal defect, overriding aorta, right ventricular outflow tract obstruction (pulmonary stenosis), and right ventricular hypertrophy. It causes right-to-left shunting and cyanosis. Treatment is surgical repair, typically in infancy.

Hyperelastic Skin

Skin that stretches farther than usual and recoils abnormally; generalized hyperextensibility may occur in connective-tissue disorders such as Ehlers-Danlos syndromes.

Hyperemesis

Excessive or persistent vomiting that may cause dehydration, electrolyte abnormalities, and nutritional deficiency.

Hyperemesis Gravidarum

Severe, persistent nausea and vomiting during pregnancy resulting in weight loss greater than 5%, dehydration, electrolyte imbalances, and ketosis. Occurs in 0.3-2% of pregnancies, typically presenting in the first trimester. Differentiated from normal morning sickness by severity and metabolic derangement.

Hyperemia

Increased blood flow to a tissue, causing redness and warmth; it may be an active physiologic response to exercise or inflammation or a reactive response after temporary ischemia.

Hyperemia Grade

A graded clinical or endoscopic estimate of tissue redness and vascular congestion, used to describe the severity of inflammation or mucosal irritation.

Hyperesthesia

Increased sensitivity to sensory stimulation—touch (tactile), pain (hyperalgesia), or other stimuli—so that normally non-painful or mildly painful stimuli produce exaggerated discomfort.

Hyperextension

Movement that extends a joint beyond its usual neutral or anatomical range, potentially stretching or tearing ligaments, capsules, muscles, or nerves.

Hyperfibrinogenemia

An abnormally high blood fibrinogen concentration, commonly reflecting inflammation, infection, pregnancy, obesity, or estrogen exposure and contribut-

ing to a prothrombotic state.

Hyperflexion

Excessive bending of a joint beyond its normal range, which can injure ligaments, discs, muscles, or other supporting structures.

Hypergammaglobulinemia

An excess of gamma globulins, usually immunoglobulins, in blood caused by polyclonal immune activation or a monoclonal plasma-cell or B-cell disorder.

Hyperglycaemia

A clinical disorder related to hyperglycaemia; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hyperglycemia

Blood glucose above the expected range for the testing conditions. Acute hyperglycemia can cause osmotic diuresis, dehydration, and electrolyte disturbances. Chronic hyperglycemia leads to microvascular (retinopathy, nephropathy, neuropathy) and macrovascular complications.

Hyperglycemia - Infants

An abnormally high blood glucose concentration in an infant, which may result from prematurity, stress, infection, medications, excessive glucose delivery, or endocrine or metabolic disease.

Hyperglycinemia

An abnormally high glycine concentration in blood, most notably in nonketotic hyperglycinemia, a disorder of glycine cleavage that can cause neonatal hypotonia, seizures, and developmental impairment.

Hypergonadotropic Hypogonadism

Primary testicular failure with elevated LH/FSH. Causes: Klinefelter syndrome, cryptorchidism, orchitis, chemotherapy, radiation.

Hypergraphia

Excessive, compulsive, or unusually prolonged writing or drawing, sometimes associated with temporal-

lobe epilepsy, mania, or other neurologic or psychiatric conditions.

Hyperhidrosis

Excessive sweating beyond what is needed for thermoregulation. palms, soles, axillae, and face without underlying cause. Secondary generalized hyperhidrosis is caused by medications, endocrine disorders, infections, or malignancies.

Alternate Names:

Palm Sweating Excessive (Hyperhidrosis) Sweating, Abnormally Excessive Sole Sweating Excessive (Hyperhidrosis)

Hyperhomocysteinemia

An elevated blood homocysteine concentration associated with genetic enzyme defects, folate or vitamin B12 deficiency, kidney disease, medicines, and increased vascular or pregnancy-related risk in selected settings.

Hypericum Perforatum

St. John's wort, a plant used in some complementary products for depressive symptoms; it can cause drug interactions by inducing hepatic enzymes and transporters and should not be combined casually with medicines.

Hyperimmunization

Hyperimmunization is an unusually strong or repeated immune exposure, sometimes referring to an over-vaccinated state or production of high-titer antibodies.

Hyperimmunoglobulin D Syndrome

A hereditary autoinflammatory disorder, usually caused by mevalonate kinase deficiency, characterized by recurrent fever, enlarged lymph nodes, abdominal symptoms, rash, and joint or muscle pain; it is also called HIDS or MKD.

Hyperimmunoglobulin E Syndrome

A rare primary immunodeficiency characterized by very high IgE, eczema, recurrent skin and lung infections, and sometimes skeletal or dental abnormalities.

Hyper-IgE Syndrome

See *Hyperimmunoglobulin E Syndrome*.

Hyperinsulinemia

An abnormally high insulin level in the blood, often caused by insulin resistance, excess insulin medicine, or rarely an insulin-producing tumor. It may occur with normal or low glucose and requires interpretation with glucose results.

Hyperinsulinism

Excessive insulin secretion or action causing recurrent or persistent hypoglycemia; causes include congenital disorders, tumors, medications, and critical illness.

Hyperkalaemia

British spelling of Hyperkalemia; see Hyperkalemia.

Hyperkalemia

Serum potassium >5.0 mEq/L. ECG changes: peaked T waves, widened QRS, sine wave. Causes: renal failure, medications (ACE inhibitors, potassium-sparing diuretics), tissue breakdown, acidosis.

Hyperkalemic Periodic Paralysis

An inherited skeletal-muscle channelopathy causing episodic weakness or paralysis, often triggered by rest after exercise or potassium exposure, with attacks associated with elevated or rapidly changing serum potassium.

Hyperkeratosis

Thickening of the outer keratin layer of skin or mucosa, producing callus, scale, or rough plaques in response to friction, inflammation, infection, inherited disorders, or other causes.

Hyperkinesia

Excessive or involuntary movement, such as chorea, dystonia, tics, or tremor, resulting from abnormal activity in motor-control circuits or from drugs and other diseases.

Hyperlipasaemia

An abnormally high blood lipase concentration, often associated with pancreatic inflammation but also seen with kidney failure, gastrointestinal disease, medications, and other conditions.

Hyperlipidaemia

A clinical disorder related to hyperlipidaemia; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hyperlipidemia

Elevated levels of lipids in the blood—total cholesterol, LDL, triglycerides, and/or reduced HDL—a major modifiable risk factor for atherosclerosis and cardiovascular disease. Primary (genetic: familial hypercholesterolemia) or secondary (hypothyroidism, diabetes, nephrotic syndrome, obesity, alcohol).

Hyperlipoproteinemia

An excess of one or more lipoproteins in blood, producing high cholesterol or triglycerides and increasing risk of atherosclerosis, pancreatitis, or inherited lipid disease.

Hyperlordosis

Exaggerated inward curvature of the lumbar spine, often producing a swayback appearance and sometimes associated with pain, muscular imbalance, obesity, pregnancy, or structural spinal disease.

Hyperlordotic Posture

An exaggerated inward curvature of the lumbar spine, often producing increased anterior pelvic tilt and a prominent lower-back arch.

Hyperlysinemia

An inherited metabolic abnormality with elevated lysine in blood caused by altered lysine degradation; many people have few symptoms, but some have developmental or neurologic findings.

Hypermagnesemia

An abnormally high concentration of magnesium

in the blood, often related to kidney failure or excessive magnesium intake; severe cases can cause weakness, low blood pressure, depressed reflexes, or arrhythmias.

Hypermetropia

A clinical disorder related to hypermetropia; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypermobile Ehlers-Danlos Syndrome

A heritable connective-tissue disorder characterized mainly by generalized joint hypermobility, instability, chronic musculoskeletal pain, and other variable features involving skin, autonomic function, or digestion. Diagnosis is clinical and requires assessment for other connective-tissue disorders and related conditions.

Hypermobile Joints

A clinical disorder related to hypermobile joints; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypermobility Syndrome

Excessive joint movement associated with pain, instability, fatigue, or other symptoms; evaluation distinguishes generalized joint hypermobility from a defined hypermobility spectrum disorder or hypermobile Ehlers-Danlos syndrome.

Hypermotility

A clinical disorder related to hypermotility; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypernatraemia

A clinical disorder related to hypernatraemia; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypernatremia

A serum sodium concentration above the reference range, usually reflecting too little free water relative to body sodium or, less often, excess sodium. Causes

include impaired water intake, diabetes insipidus, osmotic diuresis, gastrointestinal losses, and sodium administration.

Hypernatremia Result

A high blood sodium result, usually reflecting too little free water relative to body sodium; severity and rate of onset determine neurologic risk and the urgency and speed of correction.

Hyperopia

A refractive error in which light focuses behind the retina when the eye is relaxed. See Farsightedness.

Hyperornithinemia

An elevated blood ornithine concentration caused by defects in ornithine metabolism or transport, including disorders that can produce retinal degeneration or neurologic disease.

Hyperosmolar

Having a higher concentration of osmotically active particles than a reference fluid; increased plasma osmolality draws water out of cells and can impair neurologic function.

Hyperosmolar Hyperglycemic State

Hyperglycemic emergency characterized by severe hyperglycemia greater than 600 milligrams per deciliter, hyperosmolality greater than 320 milliosmoles per kilogram, and profound dehydration without significant ketosis.

Hyperosmolar Non-Ketotic Coma

A clinical disorder related to hyperosmolar non-ketotic coma; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hyperostosis

Abnormal excessive formation or thickening of bone, which may be localized or widespread and may occur in skeletal dysplasias, inflammation, endocrine disease, or medication effects.

Hyperoxaluria

Excess oxalate production or absorption leading to high urinary oxalate, calcium oxalate stones, nephrocalcinosis, and in severe inherited forms progressive kidney injury.

Hyperoxia

Exposure to an abnormally high oxygen concentration or tissue oxygen level, which can cause oxygen toxicity, absorption atelectasis, retinal injury in premature infants, or lung injury depending on dose and duration.

Hyperparakeratosis

Excessive retention of nuclei in the outer keratin layer of skin or mucosa, producing thickened scale and commonly reflecting inflammation, irritation, or a keratinization disorder.

Hyperparathyroidism

Excessive secretion of parathyroid hormone leading to hypercalcemia. Classified as primary (parathyroid adenoma or hyperplasia), secondary (chronic kidney disease, vitamin D deficiency), or tertiary (autonomous PTH secretion after prolonged secondary hyperparathyroidism).

Hyperpathia

A clinical disorder related to hyperpathia; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hyperphagia

An abnormally increased, voracious appetite and pathological compulsion to consume excessive quantities of food (polyphagia), resulting in caloric intake far exceeding physiological requirements. Primarily mediated by dysregulation of hypothalamic satiety circuits: damage to the ventromedial hypothalamus (the satiety center) from craniopharyngiomas, trauma, or radiation causes intractable hyperphagia and rapid-onset hypothalamic obesity. Also classic for genetic obesity syndromes—most notably Prader-Willi syndrome (caused by loss of paternal expression on chromosome 15q11–q13, leading to lack of satiety and severe early-childhood hyperphagia)—as well as monogenic leptin/leptin-receptor deficiencies, uncontrolled diabetes mellitus, and atypical depression.

Hyperphosphatemia

A phosphate concentration above the laboratory reference range, often caused by impaired renal excretion, hypoparathyroidism, tumor lysis, rhabdomyolysis, or excess intake. Consequences may include secondary hyperparathyroidism, vascular/metastatic calcification, and when combined with hypocalcemia, tetany.

Hyperpigmentation

Darkening of the skin caused by increased melanin production, deposition of pigment in the dermis, or accumulation of other pigments.

Hyperpituitarism

Excess production of one or more pituitary hormones, most often from a pituitary adenoma, causing disorders such as acromegaly, Cushing disease, hyperprolactinemia, or precocious puberty.

Hyperplasia

An increase in the number of cells in a tissue or organ, resulting in enlargement while cellular architecture may remain relatively preserved. It may be physiologic, such as hormonal endometrial proliferation, or pathologic, such as benign prostatic hyperplasia or endocrine gland hyperplasia. Hyperplasia differs from hypertrophy, which is enlargement caused primarily by increased cell size rather than increased cell number. The clinical significance depends on the cause, distribution, degree of proliferation, cellular atypia, and whether the process can regress after the stimulus is removed.

Hyperplastic Polyp

A usually benign overgrowth of mucosal cells, often found in the colon or rectum.

Hyperpnea

Breathing that is deeper than normal and may also be faster, increasing overall ventilation.

Hyperpnoea

A clinical disorder related to hyperpnoea; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hyperpolarization

A change in membrane potential to a more negative value, moving it further from threshold and making the cell less excitable. Occurs when potassium leaves the cell (opening of voltage-gated potassium channels, as in the afterhyperpolarization after an action potential) or when chloride enters (GABA-A receptor activation).

Hyperprolactinaemia

An abnormally elevated concentration of prolactin in the blood. Causes include medicines, pregnancy, hypothyroidism, pituitary tumors, and other disorders.

Hyperprolactinemia

Elevated serum prolactin levels most commonly caused by prolactin-secreting pituitary adenomas termed prolactinomas. Other causes include medications particularly antipsychotics and metoclopramide, hypothyroidism, stalk effect from non-functioning pituitary adenomas, renal failure, and chest wall lesions.

Hyperproteinemia

An abnormally high total blood-protein concentration, usually from dehydration, chronic inflammation, or a monoclonal immunoglobulin disorder.

Hyperpyrexia

An extreme elevation of body temperature, generally above 41.5 °C, that can result from severe infection, heatstroke, malignant hyperthermia, drug toxicity, or other life-threatening conditions.

Hyperreactio Luteinalis

Bilateral ovarian enlargement with multiple theca-lutein cysts caused by an exaggerated response to human chorionic gonadotropin, usually during pregnancy or with trophoblastic disease.

Hyperreflexia

Exaggerated or overactive deep-tendon (stretch) reflexes. It is a neurologic sign, not a diagnosis, and often reflects impaired descending upper-motor-neuron control; it may occur with spasticity, clonus, or an extensor plantar response. Distribution and associated findings help distinguish central nervous-system disease from systemic or toxic causes.

Hypersensitivity

An exaggerated or inappropriate immune response to an antigen, ranging from a mild reaction to anaphylaxis.

Hypersensitivity Pneumonitis

An immune-mediated lung disease from environmental antigen inhalation (molds, bird proteins). Acute, subacute, and chronic forms exist. HRCT shows ground-glass opacities, air trapping, and centrilobular nodules. Chronic HP progresses to fibrosis.

Hypersensitivity Reactions

Inappropriate or excessive immune responses causing tissue damage or disease.

Hypersensitivity Type I

Type I hypersensitivity, also known as immediate hypersensitivity or allergic reactions, is mediated by IgE antibodies and mast cells, producing symptoms within minutes of allergen re-exposure.

Alternate Names:

immediate hypersensitivity or allergic reactions,.

Hypersensitivity Type II

Type II hypersensitivity, also known as cytotoxic hypersensitivity, is mediated by IgG or IgM antibodies directed against antigens on cell surfaces or the extracellular matrix, causing tissue damage through complement activation, antibody-dependent cellular cytotoxicity, and phagocytosis.

Alternate Names:

cytotoxic hypersensitivity, is mediated by IgG.

Hypersensitivity Type III

Type III hypersensitivity is caused by deposition

of antigen-antibody immune complexes in tissues and blood vessel walls, activating complement and recruiting neutrophils that release destructive enzymes and reactive oxygen species.

Hypersensitivity Type IV

Type IV hypersensitivity, also known as delayed-type hypersensitivity, is mediated by T lymphocytes rather than antibodies and takes 48 to 72 hours to develop after antigen exposure.

Alternate Names:

delayed-type hypersensitivity, is mediated by T.

Hypersensitivity Vasculitis

A clinical disorder related to hypersensitivity vasculitis; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypersomnia

Being very sleepy during the day or sleeping much longer than usual even after enough sleep. It can be caused by sleep disorders, medicines, depression, substance use, or other illness; it is different from feeling tired without wanting to sleep.

Hypersplenism

Cytopenia caused by splenomegaly-related sequestration and increased destruction of circulating blood cells. It may affect red cells, white cells, platelets, or all three, with compensatory bone-marrow activity and an underlying liver, blood, infectious, or infiltrative disorder often present.

Hypertelorism

Increased distance between the orbits (the bony eye sockets), measured as an increased interorbital distance on imaging.

Hypertension

Persistently elevated arterial blood pressure. The diagnostic threshold depends on the guideline and the measurement method; diagnosis generally requires properly obtained readings on more than one occasion or other appropriate confirmation. It increases the risk of cardiovascular, cerebrovascular, and kidney disease.

Hypertension (High Blood Pressure)

Persistently elevated blood pressure, defined as systolic BP >130 mmHg or diastolic BP >80 mmHg (ACC/AHA guidelines). See Hypertension.

Alternate Names:

High Blood Pressure

Hypertension In Anesthesia

Hypertension during anesthesia causes increased bleeding, myocardial ischemia, and stroke risk. Common causes include light anesthesia, pain, hypercarbia, hypoxia, bladder distension, shivering, and drug withdrawal (beta-blockers, clonidine).

Hypertensive

Having blood pressure that is persistently above the accepted range for the clinical context.

Hypertensive Cerebellar Hemorrhage

Bleeding into the cerebellum caused by rupture of a vessel damaged by high blood pressure.

Hypertensive Crisis

Severe elevation in blood pressure (SBP >180 or DBP >120) requiring urgent medical attention. Two types: hypertensive emergency (with end-organ damage) and hypertensive urgency (no acute end-organ damage). Hypertensive urgency: can be managed with oral antihypertensives (captopril, clonidine, labetalol) and careful outpatient follow-up.

Hypertensive Emergency

Severe hypertension (SBP >180 or DBP >120) with acute target organ damage. Organs involved: brain (hypertensive encephalopathy, stroke), heart (acute coronary syndrome, acute pulmonary edema, aortic dissection), kidneys (acute kidney injury), and eyes (papilledema).

Hypertensive Encephalopathy

A clinical disorder related to hypertensive encephalopathy; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypertensive Heart Disease

Left ventricular hypertrophy and diastolic/systolic dysfunction resulting from chronic hypertension. LVH is an independent cardiovascular risk factor and precursor to heart failure. Diagnosis by ECG (voltage criteria) or echocardiography (wall thickness >1.1 cm). Treatment of hypertension can regress LVH.

Hypertensive Intracerebral Hemorrhage

Bleeding into brain tissue caused by rupture of a blood vessel associated with hypertension.

Hypertensive Nephropathy

Kidney damage caused by chronic hypertension, leading to nephrosclerosis (arteriolar hyalinosis and glomerulosclerosis). Presents with slowly progressive proteinuria (usually subnephrotic), hypertension, and gradual decline in kidney function. More common in African American patients. Diagnosis of exclusion.

Hypertensive Nephrosclerosis

Kidney damage from chronic hypertension. Benign form with hyaline arteriolosclerosis. Malignant form with hyperplastic arteriolosclerosis and onion-skinning. Second leading cause of ESRD after diabetes. Tight BP control with ACE inhibitors or ARBs essential to slow progression.

Hypertensive Retinopathy

Retinal changes caused by chronic or acute hypertension. Grading (Keith-Wagener-Barker): Grade I: generalized arteriolar narrowing; Grade II: arteriovenous nicking; Grade III: cotton-wool spots, flame hemorrhages, hard exudates; Grade IV: papilledema (malignant hypertension).

Hypertensive Urgency

A severe elevation in systemic blood pressure (typically systolic ≥ 180 mmHg or diastolic ≥ 120 mmHg) occurring in the absence of progressive acute target-organ damage (such as encephalopathy, myocardial infarction, aortic dissection, or acute pulmonary edema). Managed with oral antihypertensive medications over 24–48 hours rather than intravenous

infusions.

Hyperthermia

Hyperthermia is an abnormally high body temperature caused by excessive heat production or impaired heat loss, without a change in the hypothalamic temperature set point. Causes include heat exposure, exertion, medicines, endocrine disorders, infection-related illness, and impaired sweating. Severe hyperthermia can cause confusion, seizures, organ injury, or death and requires urgent treatment.

Hyperthermia For Treating Cancer

A clinical disorder related to hyperthermia for treating cancer; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hyperthermia In Anesthesia

Perioperative hyperthermia (temperature greater than 38 degrees Celsius) has multiple causes. Malignant hyperthermia (discussed separately) is the most urgent. Sepsis, thyroid storm, serotonin syndrome, neuroleptic malignant syndrome, and central fever are other causes.

Hyperthermic Intraperitoneal Chemotherapy

Heated chemotherapy circulated through the peritoneal cavity during surgery, following cytoreductive surgery, for peritoneal carcinomatosis from appendiceal, colorectal, and ovarian cancers and peritoneal mesothelioma.

Hyperthyroidism

Excessive thyroid hormone production causing thyrotoxicosis (elevated serum T4 and T3 concentrations). Causes include Graves disease (most common), toxic multinodular goiter, and toxic adenoma. Symptoms include weight loss, tremor, heat intolerance, palpitations, and anxiety.

Alternate Names:

Overactive Thyroid (Hyperthyroidism)

Hyperthyroidism (Thyrotoxicosis)

A state in which excess thyroid hormone effect causes symptoms such as heat intolerance, sweat-

ing, tremor, weight loss, or rapid heartbeat. It may result from increased thyroid production or other causes of thyrotoxicosis.

Alternate Names:

Thyrotoxicosis

Hyperthyroxinemia

An abnormally high concentration of circulating thyroxine, caused by hyperthyroidism, thyroiditis, medication, binding-protein changes, or assay interference; symptoms and TSH clarify the cause.

Hypertonia

Abnormally increased muscle tone or resistance to passive movement, occurring with upper motor-neuron disease, dystonia, cerebral palsy, spinal injury, or other neurologic disorders.

Hypertonic Saline

Intravenous saline with a sodium concentration greater than plasma, commonly 3% sodium chloride. It is used selectively for severe symptomatic hyponatremia or other urgent indications, with careful monitoring to avoid overly rapid correction and osmotic demyelination.

Hypertonic Saline Inhalation

Nebulized 3–7% sodium chloride solution that draws water into the airway surface liquid by osmosis, improving mucociliary clearance. It is used in CF and bronchiectasis. It may cause bronchospasm and should be preceded by a bronchodilator. It reduces exacerbations in CF.

Hypertonic Solution

A solution with greater effective osmotic concentration than the fluid with which it is compared, causing water to move out of cells across a semipermeable membrane.

Hypertrichosis

Excessive hair growth in androgen-independent areas, affecting both sexes, either congenital or acquired. Generalized: genetic syndromes, medications (minoxidil, cyclosporine, phenytoin, glucocorticoids), malnutrition, porphyria, hypothyroidism,

and malignancy (paraneoplastic).

Hypertriglyceridemia

Elevated serum triglyceride levels, classified as mild at 150 to 499 mg per dL, moderate at 500 to 999, and severe above 1000. Severe hypertriglyceridemia increases the risk of acute pancreatitis. Causes include obesity, diabetes, alcohol use, and genetic disorders of lipoprotein metabolism.

Hypertrophic

Relating to hypertrophy, an enlargement of cells or tissue that increases the size of an organ or structure.

Hypertrophic Cardiomyopathy

A disease in which the heart muscle, especially the left ventricle, becomes abnormally thick and stiff. It may obstruct blood flow, impair filling, cause chest pain or breathlessness, and increase the risk of arrhythmia and sudden death.

Alternate Names:

Cardiomyopathy, Hypertrophic

Hypertrophic Cardiomyopathy Genetics

HCM is caused by mutations in genes encoding sarcomeric proteins, most commonly beta-myosin heavy chain (MYH7) and myosin-binding protein C (MYBPC3). Inheritance is autosomal dominant with variable penetrance. Genetic testing identifies causative mutations in 40–60% of cases.

Hypertrophic Cardiomyopathy Treatment

Management may include medicines to relieve symptoms, treatment of arrhythmias or obstruction, an implantable defibrillator for selected patients, and surgery or ablation when indicated. Treatment is guided by symptoms, anatomy, risk, and specialist assessment.

Hypertrophic Gastritis

Thickening of the gastric mucosal folds caused by glandular overgrowth or inflammation, as in Ménétrier disease; protein loss, pain, nausea, and increased cancer risk may occur.

Hypertrophic Myocardiopathy

Abnormal thickening of the heart muscle, usually the left ventricle, that can impair relaxation, obstruct outflow, cause arrhythmias, and increase sudden-death risk; it is often inherited.

Hypertrophic Pyloric Stenosis

Hypertrophy and hyperplasia of the pyloric muscle causing gastric outlet obstruction, typically in young infants. Progressive nonbilious projectile vomiting, hunger after vomiting, dehydration, and hypochloremic hypokalemic metabolic alkalosis may occur.

Hypertrophic Scar

A raised, thick scar that stays within the boundaries of the original wound. It forms when the body makes too much scar tissue during healing, often after burns, surgery, or injury. Unlike a keloid, it does not grow beyond the wound edges and may become flatter over time.

Hypertrophy

Enlargement of a tissue or organ caused primarily by an increase in the size of its constituent cells. It may be physiologic, as in skeletal-muscle adaptation, or pathologic, as in pressure-induced left ventricular hypertrophy. Hypertrophy can preserve function initially but may eventually cause stiffness, impaired relaxation, oxygen-demand mismatch, or mechanical compression. Evaluation considers the affected organ, underlying stimulus, functional consequences, and whether enlargement is accompanied by fibrosis, hyperplasia, or cellular injury.

Hypertropia

Vertical misalignment of the eyes in which one eye deviates upward relative to the other, causing double vision, eye strain, or abnormal head posture.

Hyperuricemia

An abnormally high concentration of uric acid in the blood, which may be asymptomatic or contribute to gout and uric-acid kidney stones.

Hyperventilating

A clinical disorder related to hyperventilating; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hyperventilation

Excessive alveolar ventilation that reduces arterial carbon dioxide (PaCO₂) below 35 mmHg, causing respiratory alkalosis. Symptoms include lightheadedness, tingling, chest tightness, and carpopedal spasm. It may result from anxiety, pain, metabolic acidosis, or pulmonary embolism.

Hyperventilation Syndrome

Recurrent or persistent overbreathing that exceeds metabolic requirements, usually producing reduced arterial carbon dioxide and respiratory alkalosis in the absence of primary pulmonary disease. Symptoms may include breathlessness, chest tightness, dizziness, palpitations, paraesthesia, and carpopedal spasm.

Hypervigilance

A state of excessive alertness to possible threat, often accompanied by scanning, startle, irritability, and sleep difficulty in anxiety, trauma-related disorders, stimulant use, or medical illness.

Hypervitaminosis A

A clinical disorder related to hypervitaminosis a; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypervitaminosis D

A clinical disorder related to hypervitaminosis d; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypervolaemia

A clinical disorder related to hypervolaemia; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypervolemia

Excess circulating blood or extracellular fluid vol-

ume, producing edema, weight gain, breathlessness, elevated venous pressure, or hypertension in settings such as heart, kidney, or liver failure.

Hypha

A branching tubular filament that forms the basic structural unit of most molds and many fungi; networks of hyphae form a mycelium and may invade tissue in fungal disease.

Hyphema

Blood in the anterior chamber of the eye, typically resulting from blunt ocular trauma that tears the blood vessels of the iris or ciliary body. It presents as a layered collection of red blood cells in the lower portion of the anterior chamber and can cause elevated intraocular pressure and corneal blood staining.

Hypnagogic

Occurring during the transition from wakefulness to sleep. Hypnagogic sensations or hallucinations can be benign, but frequent or distressing episodes may occur with narcolepsy, sleep deprivation, medicines, or other sleep and neurologic disorders.

Hypnagogic Hallucinations

Vivid sensory experiences occurring while a person is falling asleep.

Hypnic Headache

A rare primary headache that repeatedly awakens a person during sleep, usually in later life and often at a similar time each night.

Hypnogram

A chart showing the timing and stages of sleep during a recording.

Alternate Names:

Sleep-stage diagram

Hypnosis

A state of focused attention, reduced peripheral awareness, and heightened suggestibility, resembling a trance-like state but distinct from sleep. Hyp-

nosis is induced by a procedure (hypnotic induction) involving focused concentration, relaxation, and guided imagery.

Hypnotherapy

Hypnotherapy uses focused attention and guided suggestion as an adjunct to care for selected problems such as pain, anxiety, or unwanted habits.

Hypnotic

A medication that induces, maintains, or improves sleep, used for insomnia.

Hypoactive Sexual Desire Disorder

A sexual dysfunction characterized by persistently or recurrently deficient or absent sexual thoughts, fantasies, and desire for sexual activity, causing marked distress or interpersonal difficulty. In DSM-5, HSDD in women is merged with female sexual arousal disorder into female sexual interest/arousal disorder.

Hypoadrenalism

Insufficient adrenal-cortex hormone production, especially cortisol and sometimes aldosterone; primary disease can cause fatigue, weight loss, low blood pressure, hyperpigmentation, and adrenal crisis.

Hypoalbuminemia

An abnormally low blood albumin concentration caused by reduced production, inflammation, kidney or gastrointestinal loss, or severe malnutrition; it can contribute to edema and alter drug binding.

Hypoalphalipoproteinemias

Disorders with low HDL-related apolipoprotein levels, which may impair reverse cholesterol transport and increase cardiovascular risk depending on the cause and overall lipid profile.

Hypoblast

The inner cell layer of the early embryonic disc that contributes to the yolk-sac lining and helps establish the embryonic body axes during gastrulation.

Hypocalcaemia

British spelling of Hypocalcemia; see Hypocalcemia.

Hypocalcemia

Serum calcium less than 8.5 milligrams per deciliter or ionized calcium less than 4.5 milligrams per deciliter. Causes include hypoparathyroidism, vitamin D deficiency, hypomagnesemia, hyperphosphatemia, and critical illness.

Hypocalcemia, Hypophosphatemia, And Hyperkalemia

The classic electrolyte triad of acute hypoparathyroidism, most commonly occurring after thyroid or parathyroid surgery from inadvertent removal or devascularization of the parathyroid glands. Hypocalcemia causes tetany, paresthesias, and Chvostek and Trousseau signs.

Hypocapnia

An abnormally low arterial carbon-dioxide tension, usually from excessive ventilation due to anxiety, pain, hypoxia, lung disease, pregnancy, or mechanical ventilation.

Hypochlorite

A clinical disorder related to hypochlorite; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypocholesterolemia

An unusually low blood cholesterol concentration caused by malnutrition, malabsorption, hyperthyroidism, chronic illness, liver disease, or inherited lipid disorders.

Hypochondriasis

A clinical disorder related to hypochondriasis; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypochondroplasia

An autosomal dominant skeletal dysplasia caused by heterozygous gain-of-function mutations in the fibroblast growth factor receptor 3 (*FGFR3*)

gene on chromosome 4p16.3, most frequently the p.Asn540Lys missense substitution. Represents a milder allelic variant of achondroplasia, characterized by disproportionate short stature, rhizomelic micromelia (shortening of proximal limbs), broad hands, lumbar lordosis, and limited elbow extension, but typically features a normal craniofacial appearance and normal head circumference without the prominent frontal bossing or midface retrusion characteristic of classic achondroplasia.

Alternate Names:

HCH

Hypochromia

Reduced hemoglobin color in red blood cells, seen as increased central pallor on a blood smear and commonly associated with iron deficiency or thalassemia.

Hypochromic Anaemia

Hypochromic anaemia is anemia in which red blood cells contain too little hemoglobin and appear unusually pale, commonly because of iron deficiency or thalassemia.

Hypochromic Anemia

Anemia in which red cells contain too little hemoglobin and appear pale, most often because of iron deficiency, thalassemia, chronic disease, or sideroblastic disorders.

Hypocitraturia

Low urinary citrate excretion, which reduces inhibition of calcium-crystal formation and increases risk of calcium kidney stones; potassium citrate may be used when clinically appropriate.

Hypocupremia

An abnormally low copper concentration in blood or tissues, caused by inadequate intake, malabsorption, excess zinc, or inherited disorders, and potentially producing anemia, neutropenia, or neurologic disease.

Hypodermic Needle

A hollow needle designed to inject medicines or

withdraw fluid through the skin, with gauge and length selected according to the substance, route, body site, and patient.

Hypodermis

Subcutaneous tissue/superficial fascia, the deepest skin layer with loose connective tissue and adipose tissue. Attaches skin to underlying muscles/bones via fibrous septa. Provides thermal insulation, energy storage (fat), mechanical cushioning, and contains blood vessels, lymphatics, and nerves.

Hypodontia

Congenital absence of one or more teeth. Common: third molars, maxillary lateral incisors, second premolars.

Hypoesthesia

Reduced sensitivity to touch, temperature, pain, or other sensations. It may result from nerve compression, neuropathy, spinal disease, stroke, injury, or other neurologic conditions; sudden or spreading numbness requires prompt assessment.

Hypogalactia

Insufficient breast-milk production for an infant's needs, caused by ineffective milk removal, hormonal or breast disorders, medications, illness, or other feeding difficulties.

Hypogammaglobulinemia

A reduction in circulating immunoglobulins that predisposes to recurrent infections, especially with encapsulated bacteria; it may be inherited or acquired.

Hypogastric Region

Central inferior region below the umbilical region, containing the urinary bladder, sigmoid colon, rectum, and in females the uterus and ovaries. Assessed for bladder distension, uterine enlargement, and pelvic masses. Suprapubic pain may indicate cystitis, calculi, or pelvic pathology.

Hypoglossal Nerve

Cranial nerve XII, which supplies the muscles that move the tongue; a lesion causes tongue weakness, wasting, and deviation toward the affected side on protrusion.

Hypoglossal Nerve Injury

Damage to the twelfth cranial nerve (CN XII), which innervates the ipsilateral intrinsic and extrinsic tongue muscles. Causes include skull base fractures, surgical trauma, tumors, or infection.

Hypoglossal Nerve Palsy

Weakness or paralysis of the hypoglossal nerve (CN XII), leading to ipsilateral tongue weakness, atrophy, and fasciculations. Causes include tumors at the skull base or in the hypoglossal canal, surgical injury, or central lesions. Unilateral palsy causes the tongue to deviate toward the affected side on protrusion.

Hypoglycaemia

A clinical disorder related to hypoglycaemia; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypoglycemia

An abnormally low blood-glucose concentration that may cause sweating, tremor, palpitations, hunger, confusion, seizures, or loss of consciousness. Causes include glucose-lowering medicines, missed meals, alcohol, and critical illness. Treatment depends on the person's ability to swallow and the cause; severe or recurrent episodes require urgent assessment.

Hypoglycemia In Diabetes

Blood glucose less than 70 milligrams per deciliter in patients with diabetes. Classification by level: level one less than 70, level two less than 54 which is clinically significant hypoglycemia, and level three severe hypoglycemia requiring assistance.

Hypoglycemia Unawareness

Loss of the warning symptoms of hypoglycemia including tremor, sweating, and palpitations occurring in patients with recurrent hypoglycemia particularly type one diabetes. Results from attenuated counter-

regulatory hormone responses particularly impaired glucagon and epinephrine responses.

Hypoglycemic

Relating to an abnormally low blood glucose level, or describing a medicine that lowers blood glucose.

Hypogonadism

Reduced or absent function of the gonads, leading to inadequate production of sex hormones (testosterone in males, estrogen in females) and impaired gamete production. Male hypogonadism: low testosterone causing decreased libido, erectile dysfunction, infertility, reduced muscle mass, and osteoporosis. Female: estrogen deficiency causing amenorrhea, hot flashes, and osteoporosis.

Hypogonadism In Men

Testosterone deficiency resulting from inadequate testicular function classified as primary testicular failure or secondary hypothalamic-pituitary dysfunction. Primary causes include Klinefelter syndrome, cryptorchidism, orchitis, trauma, and chemotherapy.

Hypogonadism In Women

Testosterone deficiency in women causing decreased libido, fatigue, depressed mood, and reduced sense of well-being. Causes include oophorectomy, premature ovarian insufficiency, adrenal insufficiency, hypopituitarism, and medications.

Hypogonadotropic Hypogonadism

Secondary testicular failure with low/normal LH/FSH. Causes: Kallmann syndrome, pituitary tumors, obesity, medications, systemic illness.

Hypohidrosis

Reduced or absent sweating, leading to heat intolerance and risk of hyperthermia. Causes include autonomic neuropathy (diabetes, Parkinson disease), skin diseases (scleroderma, burns), medications (anticholinergics), and genetic disorders (hypohidrotic ectodermal dysplasia).

Hypokalaemia

British spelling of Hypokalemia; see Hypokalemia.

Hypokalemia

Serum potassium less than 3.5 mEq/L. Causes include gastrointestinal losses from vomiting and diarrhea, renal losses from diuretics, RTA, and hyperaldosteronism, intracellular shift from alkalosis and insulin, and inadequate intake.

Hypokalemic Periodic Paralysis

A clinical disorder related to hypokalemic periodic paralysis; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypokinesia

Reduced amplitude or amount of voluntary movement, commonly seen in Parkinson disease and other basal-ganglia disorders; it may appear as a short-stepped gait, reduced facial expression, or small handwriting.

Hypolipidemic Agents

Medicines that lower cholesterol or triglycerides, including statins, ezetimibe, fibrates, bile-acid sequestrants, niacin, and selected injectable therapies.

Hypolipoproteinemia

An abnormally low concentration of one or more blood lipoproteins, caused by inherited disorders, malabsorption, malnutrition, liver disease, or other systemic illness.

Hypomagnesaemia

A clinical disorder related to hypomagnesaemia; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypomagnesemia

Serum magnesium less than 1.7 milligrams per deciliter. Causes include gastrointestinal losses from diarrhea, renal losses from diuretics and alcohol, malnutrition, and medications including proton pump inhibitors.

Hypomania

Distinct period of abnormally elevated, expansive, or irritable mood with increased energy lasting at least four consecutive days, observable by others but without marked functional impairment, hospitalisation, or psychotic features.

Hypomanic Episode

A distinct period of abnormally elevated, expansive, or irritable mood with increased energy lasting at least four consecutive days. The episode is not severe enough to cause marked impairment in functioning or necessitate hospitalization, and there are no psychotic features. The change in functioning is observable by others.

Hypomelanosis Of Ito

A clinical disorder related to hypomelanosis of ito; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypomethylation

Reduced addition of methyl groups to DNA or other molecules, which can alter gene expression, genomic stability, imprinting, and cancer biology.

Hypomnesia

Reduced ability to remember or recall information, which may occur with aging, neurologic disease, psychiatric conditions, medications, or other causes.

Hyponatraemia

A clinical disorder related to hyponatraemia; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hyponatremia

Serum sodium less than 135 mEq/L. Most common electrolyte disorder in hospitalized patients. Causes are classified by volume status: hypovolemic from GI losses and diuretics, euvolemic from SIADH and hypothyroidism, and hypervolemic from heart failure, cirrhosis, and nephrotic syndrome.

Alternate Names:

Sodium Low Levels In The Blood (Hyponatremia)

Hypoparathyroidism

Reduced or absent parathyroid hormone secretion, resulting in hypocalcemia and hyperphosphatemia. Most commonly occurs after thyroid or parathyroid surgery from inadvertent removal of parathyroid glands. Autoimmune hypoparathyroidism may occur alone or as part of autoimmune polyendocrine syndrome type one.

Hypoparathyroidism Management

Management aims to correct low calcium and inadequate parathyroid-hormone activity while avoiding complications. It may include calcium and active vitamin D, monitoring of calcium and kidney function, and treatment of the underlying cause; specialist guidance is often required.

Hypopharyngeal Neoplasm

A neoplastic process affecting hypopharyngeal neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Hypopharynx

The lower part of the pharynx behind and beside the larynx, extending from the oropharynx to the esophagus. It directs food toward the esophagus during swallowing.

Hypophosphataemia

A clinical disorder related to hypophosphataemia; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypophosphatasia

A rare inherited disorder of bone and tooth mineralization caused by deficient tissue-nonspecific alkaline phosphatase.

Hypophosphatemia

A serum phosphate concentration below the laboratory reference range, typically caused by increased renal phosphate excretion, intracellular shifting, or renal phosphate wasting. Severe deficiency can cause muscle weakness, respiratory failure, hemolysis, impaired myocardial function, and neurologic dysfunction.

Hypophosphatemic Ricket

Rickets caused by low phosphate availability, often from renal phosphate wasting, leading to defective mineralization, bowed legs, bone pain, growth impairment, and dental abnormalities.

Hypophysectomy

Hypophysectomy is surgical removal of all or part of the pituitary gland, usually to treat a pituitary tumor or another serious pituitary disorder.

Hypophysis

A clinical disorder related to hypophysis; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypophysis (Pituitary Gland)

An endocrine gland at the base of the brain that regulates growth, thyroid and adrenal function, reproduction, lactation, and water balance through its hormones.

Alternate Names:

Pituitary Gland

Hypophysitis

Inflammation of the pituitary gland that can cause headache, visual symptoms, and deficiency or excess of pituitary hormones; it may be autoimmune, related to pregnancy, or triggered by immune-checkpoint therapy.

Hypopigmentation

Reduced skin pigmentation producing paler areas than the surrounding skin, caused by decreased melanin, reduced melanocyte function or number, inflammation, injury, infection, or inherited disorders.

Hypopituitarism

Deficiency of one or more pituitary hormones due to disorders of the pituitary gland or hypothalamus. Causes include craniopharyngiomas, pituitary surgery or radiation, traumatic brain injury, or infiltrative diseases. Growth hormone deficiency is typically the first hormone lost followed by go-

nadotropins then TSH and ACTH.

Alternate Names:

Pituitary Insufficiency

Hypoplasia

Incomplete or underdevelopment of a tissue, organ, or body structure, resulting in reduced size or functional capacity. It may be congenital, developmental, genetic, or acquired and ranges from a mild anatomical variant to severe organ dysfunction. Assessment considers the timing of onset, associated malformations, tissue function, and whether the process is isolated or syndromic.

Hypoplastic Left Heart Syndrome

A severe congenital heart defect where the left heart structures (mitral valve, left ventricle, aortic valve, ascending aorta) are underdeveloped and unable to support systemic circulation. The right ventricle pumps blood to both the pulmonary and systemic circulations via a patent ductus arteriosus.

Hypoploidy

A chromosome number below the normal diploid complement, caused by loss of one or more chromosomes; in tumor cytogenetics it may have prognostic significance.

Hypopnea

Abnormally shallow or reduced breathing, especially when it occurs repeatedly during sleep.

Hypoproteinaemia

Hypoproteinaemia is an abnormally low level of proteins in the blood, which may result from malnutrition, liver disease, kidney protein loss, or intestinal loss.

Hypoproteinemia

An abnormally low concentration of proteins in the blood, often involving low albumin levels.

Hypopyon

A layering of inflammatory cells (purulent exudate/leukocytes) in the anterior chamber of the eye,

forming a visible white-to-yellow fluid level in the lower portion of the cornea. Caused by severe anterior uveitis (HLA-B27 spondyloarthropathies, Behçet disease), infectious keratitis (bacterial/fungal corneal ulcers), or endophthalmitis.

Hyposmia

Decreased sensitivity to odors in which olfaction is reduced but not absent, distinct from anosmia and parosmia, and the most common olfactory complaint.

Hypospadias

A congenital anomaly in which the urethral meatus opens on the ventral surface of the penis (or in females, below the normal location) rather than at the tip of the glans. It is frequently associated with a curved penis or an incomplete foreskin, and severity depends on the location of the opening and associated abnormalities.

Hypospadias Repair

Surgery reconstructs the urethral opening and, when needed, straightens the penis in a child born with hypospadias; timing and technique depend on anatomy and surgeon assessment.

Hypotension

Abnormally low blood pressure, generally systolic <90 mmHg or mean arterial pressure <65 mmHg. Causes include hypovolemia, cardiac failure, sepsis, anaphylaxis, and medications. Orthostatic hypotension is a drop upon standing. Severe hypotension (shock) requires urgent fluid resuscitation and vasopressors.

Hypotension In Anesthesia

Abnormally low blood pressure occurring during anesthesia. The clinically important threshold depends on the patient, baseline pressure, duration, and surgical context.

Hypotensive

Having or causing abnormally low blood pressure; symptoms may include dizziness, fainting, weakness, confusion, or shock depending on the cause and

severity.

Hypothalamic Dysfunction

Abnormal function of the hypothalamus, which regulates endocrine, autonomic, temperature, appetite, thirst, sleep, and reproductive functions; causes include tumors, trauma, inflammation, and genetic disease.

Hypothalamic Hamartoma

A congenital, noncancerous mass of disorganized hypothalamic tissue that can cause gelastic seizures, precocious puberty, behavioral symptoms, or cognitive decline.

Hypothalamic Hormone

A releasing or inhibiting hormone produced by the hypothalamus that regulates pituitary secretion, including signals controlling thyroid, adrenal, reproductive, growth, and lactation axes.

Hypothalamic Neoplasm

A neoplastic process affecting hypothalamic neoplasm; diagnosis establishes the tumor type, extent, biologic behavior, and appropriate management.

Hypothalamic Tumor

A clinical disorder related to hypothalamic tumor; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypothalamic-Pituitary-Adrenal Axis

A network linking the hypothalamus, pituitary gland, and adrenal glands to regulate stress hormones and other functions.

Alternate Names:

HPA axis

Hypothalamic-Pituitary-Adrenal Axis (HPA Axis)

An endocrine regulatory pathway in which hypothalamic corticotropin-releasing hormone stimulates pituitary ACTH secretion, which stimulates adrenal cortisol production. Cortisol exerts negative feedback and coordinates metabolic, immune, and stress

responses.

Alternate Names:

HPA Axis

Hypothalamic-Pituitary-Adrenal Axis Physiology

The hypothalamus releases CRH in a diurnal rhythm peaking in the early morning stimulating pituitary corticotrophs to secrete ACTH which stimulates the adrenal cortex to produce cortisol. Cortisol exerts negative feedback on both the hypothalamus and pituitary suppressing CRH and ACTH release.

Hypothalamic-Pituitary-Gonadal Axis Physiology

The hypothalamus releases GnRH in a pulsatile fashion stimulating pituitary gonadotrophs to secrete LH and FSH. In males LH stimulates Leydig cells to produce testosterone while FSH stimulates Sertoli cells to support spermatogenesis.

Hypothalamic-Pituitary-Thyroid Axis Physiology

The hypothalamus secretes TRH stimulating pituitary thyrotrophs to release TSH which stimulates the thyroid gland to produce T4 and T3. T3 the more biologically active form is produced by peripheral conversion of T4 by deiodinase enzymes.

Hypothalamus

A small region of the brain at the base of the third ventricle, bounded by the optic chiasm, mammillary bodies, and infundibulum. It weighs approximately 4 grams and is the master homeostasis regulator. Controls autonomic and endocrine systems (via the pituitary through the hypophyseal portal system), temperature, hunger, thirst, sleep-wake cycles, and emotion.

Hypothermia

A core body temperature below 35 degrees Celsius, classified as mild (32 to 35), moderate (28 to 32), or severe (<28). J-wave (Osborn wave) on ECG. Management: passive rewarming (mild), active external rewarming (moderate), active internal rewarming (severe).

Alternate Names:

Cold Exposure Low Body Temperature

Hypothermia In Anesthesia

Hypothermia (core temperature less than 36 degrees Celsius) occurs in 50 to 80 percent of surgical patients due to anesthetic-induced thermoregulatory dysfunction and heat redistribution. Initial phase (first 30 to 60 minutes) involves core-to-peripheral heat redistribution causing 0.5 to 1.5 degree Celsius drop.

Hypothesis

A clinical disorder related to hypothesis; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hypothyroidism

Insufficient thyroid hormone production causing decreased metabolic rate. Most common endocrine disorder, affecting up to 5 percent in the general population and up to 20 percent in women over 60 years.

Hypotonia

Decreased muscle tone presenting as a floppy or poorly supported posture. It may result from muscle, peripheral nerve, neuromuscular-junction, spinal-cord, brain, genetic, or metabolic disorders and requires evaluation when persistent or associated with weakness or developmental delay.

Hypotonic Solution

A solution with lower effective osmotic concentration than the fluid with which it is compared, causing water to move into cells across a semipermeable membrane.

Hypotrichosis

Abnormally sparse or absent hair caused by inherited follicle disorders, autoimmune disease, endocrine or nutritional problems, medications, or scarring alopecia.

Hypotrophy

Reduction in the volume or development of a tissue or organ without complete absence of the structure. It may reflect inadequate growth, reduced trophic stimulation, chronic underuse, nutritional deficiency, vascular insufficiency, or a systemic disorder. Hypotrophy is distinguished from aplasia, in which development fails almost completely, and from atrophy, which usually describes acquired wasting after prior development. Clinical significance depends on the affected tissue, age of onset, degree of functional impairment, and whether the cause is congenital, neurologic, vascular, or metabolic.

Hypotropia

Vertical eye misalignment in which one eye deviates downward relative to the other, potentially causing diplopia, abnormal head posture, or suppression of vision.

Hypoventilation

Reduced alveolar ventilation leading to elevated carbon dioxide levels in the blood, potentially causing respiratory acidosis and hypoxemia.

Hypovolaemia

Hypovolaemia is an abnormally low volume of circulating blood or body fluid, commonly caused by bleeding, dehydration, or major fluid loss.

Hypovolemia

Hypovolemia is reduced effective circulating blood volume, usually from bleeding, fluid loss, or inadequate intake; it can cause tachycardia, hypotension, poor perfusion, kidney injury, and hypovolaemic shock.

Hypovolemic Shock

Circulatory failure caused by insufficient circulating blood or fluid volume, leading to reduced tissue perfusion. Causes include hemorrhage, severe dehydration, and fluid loss.

Hypoxaemia

Hypoxaemia is an abnormally low level of oxygen in the arterial blood.

Hypoxanthine

A naturally occurring purine base and intermediate in purine metabolism that is converted to xanthine by xanthine oxidase and can be salvaged to form inosine monophosphate.

Hypoxemia

Abnormally low oxygen concentration in arterial blood. Causes include hypoventilation, ventilation-perfusion mismatch, shunting, impaired diffusion, and low inspired oxygen.

Hypoxia

Inadequate oxygen availability at the tissue level. It may result from low arterial oxygen, anemia, reduced blood flow, or impaired cellular oxygen use.

Hypoxia And Hypoxemia

Hypoxemia is low oxygen in arterial blood, while hypoxia is inadequate oxygen at the tissue level. Causes include lung disease, airway obstruction, heart disease, anemia, shock, or high altitude; severe breathlessness, cyanosis, confusion, or collapse is urgent.

Hypoxic Cell Injury

Cellular injury caused by inadequate oxygen availability, reducing oxidative phosphorylation and ATP production. Causes include ischemia, hypoxemia, anemia, and impaired oxygen utilization; severity and duration determine reversibility.

Hypoxic Pulmonary Vasoconstriction

The unique response of pulmonary arterioles to low alveolar oxygen tension (PO_2 less than approximately 60 mmHg), causing vasoconstriction.

Hypoxic-Ischemic Brain Injury

Brain injury caused by inadequate oxygen delivery or cerebral blood flow. It may follow cardiac arrest, asphyxia, shock, respiratory failure, or severe hypoglycemia and can produce coma, seizures, cognitive impairment, or death.

Hypsarrhythmia

A pathognomonic, high-amplitude, chaotic, and disorganized interictal electroencephalographic pattern characterized by continuous, high-voltage slow waves interspersed with multi-focal spikes and sharp waves without consistent rhythmicity or hemispheric synchronization. It is the hallmark diagnostic finding of infantile spasms (West syndrome) and represents severe diffuse cerebral cortical dysfunction; treatment consists of adrenocorticotrophic hormone, high-dose oral corticosteroids, or vigabatrin.

Alternate Names:

Hypsarrhythmic Pattern; Chaotic Interictal EEG

Hysterectomy

Surgical removal of the uterus. The cervix, fallopian tubes, and ovaries may or may not also be removed, depending on the procedure and clinical indication. Hysterectomy permanently ends menstruation and the ability to carry a pregnancy, but it does not cause immediate menopause when functioning ovaries remain. Indications include cancer, fibroids, severe bleeding, adenomyosis, endometriosis, chronic pelvic pain, and uterine prolapse.

Hysterectomy And Surgical Menopause

Hysterectomy removes the uterus and ends menstruation and the ability to carry a pregnancy. Surgical menopause occurs when both ovaries are removed or ovarian function otherwise stops abruptly; hysterectomy alone does not necessarily cause menopause if the ovaries remain.

Hysteria

A clinical disorder related to hysteria; diagnosis and treatment depend on its cause, characteristic findings, and severity.

Hysterosalpingo-Contrast-Sonography

An ultrasound-based technique for evaluating the uterine cavity and fallopian tube patency. Sterile saline or contrast medium is injected through the cervix while transvaginal ultrasound is performed.

Hysterosalpingo-Contrast-Sonography

(HyCoSy)

An ultrasound test using fluid or foam contrast to assess the uterine cavity and whether the fallopian tubes are open. It is often used during fertility evaluation without X-ray radiation. hysterosalpingography.

Alternate Names:

HyCoSy

Hysterosalpingogram

An X-ray procedure used to evaluate the uterine cavity and fallopian tube patency. A radiopaque contrast medium is injected through the cervix, and serial X-ray images are taken as the contrast fills the uterine cavity and spills from the fallopian tubes.

Hysterosalpingogram

An X-ray study in which contrast material is placed through the cervix to outline the uterine cavity and fallopian tubes, commonly to assess uterine structure and tubal patency during infertility evaluation.

Hysterosalpingography

An X-ray imaging procedure in which radiopaque contrast is injected through a cervical cannula. Used for infertility evaluation: assesses tubal patency (normal: contrast spills freely into peritoneal cavity), uterine cavity shape (fibroids, polyps, synechiae, Mullerian anomalies), and proximal/distal tubal occlusion.

Hysteroscope

A thin camera-equipped instrument passed through the cervix to inspect the uterine cavity and, when designed for operative use, remove polyps, treat bleeding, or perform other procedures.

Hysteroscopic Metroplasty

A minimally invasive transcervical surgical procedure in which a congenital uterine septum (septate uterus) is divided or resected under direct hysteroscopic visualization using cold endoscopic scissors, electrosurgical needle/knife, or laser. Restores normal anatomical contours to the endometrial cavity, significantly reducing spontaneous pregnancy loss and improving live birth rates in women with recur-

rent pregnancy loss.

Hysteroscopic Myomectomy

An operative transcervical endoscopic procedure performed to excise intracavitary and submucosal uterine leiomyomas (FIGO Types 0, 1, and selected Type 2 fibroids) using a resectoscope loop with radiofrequency energy or a mechanical hysteroscopic tissue morcellator. Relieves abnormal uterine bleeding, prevents myoma-related recurrent pregnancy loss, and enhances fertility while preserving the uterus and avoiding abdominal incisions.

Hysteroscopy

A procedure that passes a small camera through the cervix to inspect the inside of the uterus and, when needed, obtain tissue or treat conditions such as polyps, fibroids, or intrauterine adhesions.

Hysterotomy

A surgical incision into the uterus, performed in selected obstetric or gynecologic procedures.

H1N2

A subtype of influenza A virus that can infect humans and pigs. Human infections are uncommon and usually cause an influenza-like respiratory illness; surveillance and testing help distinguish it from other influenza viruses.

H5N1

A subtype of avian influenza A virus that mainly infects birds but can occasionally infect mammals and humans after close contact with infected animals or contaminated environments. Human illness can be severe and requires public-health evaluation.

Haemophilia A

Hemophilia A, an inherited bleeding disorder caused by deficiency or dysfunction of clotting factor VIII. It can cause prolonged bleeding, easy bruising, and bleeding into joints or muscles; treatment replaces or stimulates factor VIII activity.

Hair Removal

Removal of unwanted hair by shaving, trimming, waxing, depilatory products, electrolysis, or laser treatment. Possible problems include irritation, burns, ingrown hairs, pigment changes, and infection.

Hand Pain

Pain or discomfort in the hand, fingers, or wrist caused by injury, arthritis, nerve compression, tendon problems, infection, or other conditions. Sudden severe pain, deformity, numbness, or loss of circulation needs prompt assessment.

Harlequin Ichthyosis

A rare severe inherited skin disorder in which newborns have thick plates of skin separated by deep cracks. It can impair temperature control, movement, feeding, breathing, and protection from infection and requires intensive neonatal care.

Head Lice

Infestation of the scalp by the parasitic insect *Pediculus humanus capitis*. It causes itching and visible nits or lice and spreads mainly through close head-to-head contact; treatment requires an effective product and careful follow-up.

Head Trauma

An injury to the scalp, skull, brain, or other tissues of the head. Concussion, bleeding, skull fracture, and brain injury can result; worsening headache, repeated vomiting, seizure, confusion, weakness, or loss of consciousness requires emergency care.

Health Anxiety Disorder

Excessive worry about having or developing a serious illness, often despite reassurance or limited medical findings. It can cause repeated checking or health-care visits and is treated with supportive care and evidence-based psychological therapy.

Health Checkup

A preventive visit that reviews symptoms, medical history, medicines, lifestyle, vaccinations, examination findings, and age- or risk-appropriate screening.

The content should be individualized rather than based on unnecessary tests.

Health Coaching

A collaborative process that helps a person set realistic health goals, identify barriers, build habits, and use available resources. It supports self-management but does not replace diagnosis or treatment by a qualified clinician.

Healthcare

Services and practices used to promote health, prevent disease, diagnose illness, provide treatment, and support rehabilitation or comfort. Healthcare may be delivered in homes, clinics, hospitals, pharmacies, and community settings.

Healthy Lifestyle

A pattern of behaviors that supports physical and mental health, including nutritious eating, regular activity, adequate sleep, avoiding tobacco, limiting harmful alcohol use, preventive care, and supportive relationships.

Heart Defect

An abnormality of the heart or major blood vessels. It may be present from birth or develop later and can affect blood flow, heart rhythm, valve function, or pumping ability.

Heartland Virus

A tick-borne virus associated with fever, fatigue, headache, muscle aches, diarrhea, and low white-cell or platelet counts. It can resemble ehrlichiosis and may be severe, especially in older or medically vulnerable people.

Heat Stress

The strain placed on the body when it cannot adequately lose heat, often during hot or humid conditions, exertion, or inadequate hydration. It can progress from heat cramps or exhaustion to life-threatening heat stroke.

Heimlich Maneuver

A common name for abdominal thrusts used to help a responsive person with severe choking. First-aid steps differ for adults, children, infants, and pregnant people; emergency services should be called for serious airway obstruction.

Hematidrosis

A very rare condition in which blood-tinged fluid appears through apparently intact skin or other surfaces, sometimes during extreme stress. The diagnosis requires careful examination to exclude injury, skin disease, bleeding disorders, or contamination.

Hendra Virus

A rare zoonotic virus carried by fruit bats that can infect horses and occasionally humans through close contact with infected horses. Human disease may cause severe respiratory or neurologic illness and requires public-health management.

Henna

A plant dye used on skin, hair, and textiles. Natural henna is usually orange-brown; so-called black henna may contain para-phenylenediamine, which can cause severe allergic skin reactions and permanent scarring.

Hereditary Persistence of Fetal Hemoglobin

An inherited condition in which production of fetal hemoglobin continues into adulthood. It is usually harmless and may lessen the severity of some beta-globin disorders such as sickle-cell disease.

Hereditary Spastic Paraplegia

A group of inherited neurologic disorders causing progressive stiffness and weakness of the legs because of corticospinal-tract degeneration. Some forms also affect speech, vision, sensation, coordination, or other organs.

Hermaphroditism

An outdated and potentially stigmatizing term historically used for differences in sex development. Modern clinical language generally uses intersex or

a specific difference of sex development, based on the person's anatomy, chromosomes, hormones, and lived identity.

High Cholesterol

An increased amount of cholesterol or other lipids in the blood, especially low-density lipoprotein cholesterol. It often causes no symptoms but can contribute to atherosclerosis and cardiovascular disease; treatment depends on overall risk.

Hip Impingement

Abnormal contact between parts of the hip joint during movement, often due to cam or pincer morphology. It may cause groin pain, stiffness, and reduced motion and can contribute to labral or cartilage damage.

Hitchhiker's Thumb

A descriptive term for an unusually flexible thumb that can bend backward at the distal joint. It is usually a harmless inherited variation unless associated with pain, instability, or a broader connective-tissue disorder.

Hoarding

Persistent difficulty discarding or giving up possessions because of perceived need or distress, leading to clutter that impairs living spaces or functioning. Hoarding disorder is a mental-health condition that can be treated with specialized therapy and support.

Human Papillomavirus (HPV)

A large family of viruses spread mainly through intimate skin-to-skin or sexual contact. Some types cause warts and others can cause cancers; vaccination and recommended screening reduce the risk of serious disease.

Hydrogel

A water-rich three-dimensional material that can hold and release substances. Hydrogels are used in wound dressings, contact lenses, drug delivery, tissue engineering, and research, with safety depending on composition and use.

Hypermobility

Greater-than-usual movement of one or more joints. It may be a harmless trait, but when associated with pain, instability, dislocations, fatigue, or other features it may be part of a hypermobility spectrum disorder.

Hypochondria

An older term for excessive fear of illness. Current clinical language generally uses illness anxiety disorder or health anxiety, depending on whether prominent physical symptoms are present.

Hypoxic Ischemic Encephalopathy

Brain dysfunction caused by insufficient oxygen and blood flow, usually around birth in newborns but also after cardiac arrest or severe respiratory failure. It can cause seizures, altered consciousness, and long-term neurologic disability.

I

Iatrogenic

An illness or condition caused by medical examination or treatment. Examples: hospital-acquired infections, drug side effects, surgical complications, radiation-induced damage. Prevention: proper technique, informed consent, monitoring, reporting systems.

Iatrogenic Disease

A disease or injury caused unintentionally by a medical examination, treatment, medication, procedure, or other healthcare intervention.

Iatrogenic Injury

An injury caused unintentionally by a medical examination, treatment, procedure, or medicine.

Ibandronic Acid

ibandronic acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

IBD

Inflammatory bowel disease, including Crohn's disease and ulcerative colitis, causing chronic intestinal inflammation.

Alternate Names:

Inflammatory bowel disease

Ibogaine

Ibogaine is a psychoactive plant alkaloid studied for addiction treatment but associated with dangerous cardiac arrhythmias, seizures, and death.

Ibritumomab Tiuxetan

A medicine or chemical compound called ibritumomab tiuxetan. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

IBS

Alternate index label; see *Irritable bowel syndrome*.

IBS-D Irritable Bowel Syndrome With Diarrhea

IBS with diarrhea causes recurrent abdominal pain associated with loose stools without structural disease explaining the symptoms. Management may include diet changes, soluble fiber, gut-directed medicines, behavioral therapy, and evaluation for alarm features or alternative diagnoses.

Alternate Names:

Diarrhea IBS (IBS-D Irritable Bowel Syndrome With Diarrhea)

Ibuprofen

A medicine that reduces pain, fever, and inflammation. It can irritate or bleed the stomach, harm the kidneys, cause fluid retention, or increase heart risks in some people.

Ibuprofen Dosing For Children

Children's ibuprofen dosing is based mainly on weight, age, product concentration, and medical advice; the label dose should not be exceeded and it should be avoided in dehydration or certain kidney conditions.

Ibuprofen Overdose

Toxic exposure to more ibuprofen than recommended, which can cause nausea, vomiting, abdominal pain, gastrointestinal bleeding, kidney injury, metabolic acidosis, drowsiness, seizures, or coma.

ICD

Implantable cardioverter-defibrillator, a device that detects dangerous heart rhythms and delivers a corrective shock.

Alternate Names:

Implantable cardioverter defibrillator

ICD Shock Therapy

Treatment delivered by an implanted defibrillator to stop dangerous heart rhythms. The device may use painless pacing or an electrical shock, depending on the rhythm.

ICD-O Neoplasm Morphology Classification

A coding system used by cancer registries and pathology services to record what type of tumor is present and whether it is benign or cancerous. It does not replace the diagnosis, location, or stage of the cancer.

Ice Pack

A device that applies cold to a body area to help relieve pain or swelling. It should be wrapped to protect the skin and used for limited periods.

Ice Pick Headache

A sudden, severe, stabbing headache that usually lasts only seconds.

Alternate Names:

Primary stabbing headache

ICF Framework

A World Health Organization framework for describing how a health condition affects the body, daily activities, participation in life, and the person's environment.

Ichthyosis

A group of conditions that cause very dry, rough, scaly skin. Some forms are inherited and may be present from birth; others are linked to allergies or another illness.

Ichthyosis Vulgaris

A common inherited disorder of skin keratinization characterized by dry, scaling skin, especially on the extensor limbs. Symptoms often improve with age and with regular emollient and keratolytic skin care.

Icteric

Describing yellow discoloration of the skin, sclerae, or other tissues caused by increased bilirubin, commonly called jaundiced.

Icteric Index

The icteric index is a laboratory estimate of serum yellow discoloration related mainly to bilirubin and can signal jaundice or interfere with testing.

Icterus

Yellow discoloration of the skin or eyes caused by excess bilirubin; also called jaundice.

Alternate Names:

jaundice.

Ictus

A sudden neurological event, such as a stroke or seizure.

ICU Psychosis

A colloquial term for delirium occurring in an intensive-care setting, with acute changes in attention, awareness, and cognition. Causes include severe illness, infection, medicines, sleep disruption, pain, and metabolic abnormalities. It requires prompt evaluation and treatment of reversible causes, with supportive measures to orient and calm the patient.

Alternate Names:

Psychosis ICU (ICU Psychosis)

Idaiovirus

Likely a misspelling of *Idaeovirus*, a genus of plant-infecting RNA viruses that includes viruses associated with raspberry and privet; it is not a recognized human pathogen.

Idarubicin

Idarubicin is an anthracycline chemotherapy drug that intercalates DNA and inhibits topoisomerase II, used mainly in acute myeloid leukaemia; myelosuppression and cumulative cardiotoxicity are important risks.

IDC

Alternate index label; see *Invasive ductal carcinoma*.

Idea Of Reference

A belief that ordinary events, comments, or media messages have a special personal meaning, often seen in psychotic or mood disorders when held with strong conviction.

Ideas Of Reference

The false belief that unrelated events, objects, or people have a particular and unusual significance specifically for the patient. For example, believing that TV newscasters are sending personal messages or that strangers are conspiring against them.

Ideation

The formation or content of thoughts, especially thoughts related to a particular behavior or symptom. Clinical examples include suicidal ideation and homicidal ideation, which require assessment of intent, plan, means, and immediate safety.

Identical Twins

Identical Twins is an immunologic, genetic, infectious, developmental, or cellular concept used to explain disease mechanisms, diagnosis, or treatment.

Ideopathic

A misspelling of idiopathic, meaning that no specific cause has been identified.

Idiopathic

Having no identified cause after appropriate evaluation. “Idiopathic” does not mean imaginary or untreatable; it means the cause is currently unknown.

Idiopathic Facial Paralysis (Facial Nerve Problems)

Alternate index label for Facial Nerve Problems.

Idiopathic Hypercalciuria

Excess calcium in the urine without an identified cause. It can increase the risk of kidney stones and, less often, bone loss.

Idiopathic Hypersomnia

A sleep disorder that causes extreme daytime sleepiness, long or unrefreshing sleep, and difficulty waking up, even when a person has enough time to sleep. Other causes must be ruled out.

Idiopathic Interstitial Pneumonias

A group of interstitial lung diseases with no identified cause, characterized by varying degrees of lung inflammation and fibrosis; diagnosis requires clinical, radiologic, and sometimes pathologic assessment.

Idiopathic Intracranial Hypertension

Increased pressure around the brain without a tumor or other clear cause. It can cause headaches, a pulsing sound in the ears, and vision problems and may damage sight if untreated.

Idiopathic Myelofibrosis

Alternate index label; see *Myelofibrosis*.

Idiopathic Pulmonary Fibrosis

A long-term lung disease of unknown cause in which scar tissue gradually builds up in the lungs. It causes increasing shortness of breath and a dry cough and requires specialist care.

Idiopathic Pulmonary Fibrosis

Alternate index label for IPF.

Idiopathic Thrombocytopenic Purpura

Alternate index label; see *Immune thrombocytopenia*.

Idiopathic Thrombocytopenic Purpura

Alternate index label for ITP.

Idiopathic Thrombocytopenic Purpura

Alternate index label for Idiopathic Thrombocytopenic Purpura.

Idiopathic Toe Walking

Alternate index label; see *Toe walking in children*.

Idiosyncrasy

An unusual individual reaction to a medicine or exposure that is not explained by the usual pharmacologic effect.

Idiosyncratic Reaction

An unusual and unexpected reaction to a medicine that is not explained by its usual effects and may occur even at a normal dose.

Idiotypic

Idiotypic is an immunologic, genetic, infectious, developmental, or cellular concept used to explain disease mechanisms, diagnosis, or treatment.

Idioventricular Rhythm

A slow heart rhythm that starts in the lower chambers of the heart instead of the normal pacemaker. It may occur when the usual electrical signal is blocked or when the heart is severely ill.

Idoxuridine

Idoxuridine is a thymidine analogue antiviral formerly used mainly topically for herpes simplex keratitis; it inhibits viral DNA synthesis but can irritate or damage the corneal epithelium.

Ifosfamide

Ifosfamide is an alkylating chemotherapy drug that forms DNA cross-links and is used for selected sarcomas and other cancers; haemorrhagic cystitis,

encephalopathy, infertility, and myelosuppression require monitoring and mesna protection.

iFR

Alternate name; see *Instantaneous Wave-Free Ratio*.

Ig

Abbreviation for immunoglobulin, an antibody protein produced by B cells and plasma cells; major classes include IgG, IgA, IgM, IgE, and IgD.

IgA

A type of antibody found mainly in body fluids and linings, including saliva, tears, breast milk, and the digestive and breathing passages. It helps protect these surfaces from infection.

IgA Nephropathy

A kidney disease in which IgA antibodies build up in the kidney's filtering units. It can cause blood or protein in the urine, high blood pressure, and sometimes kidney failure.

IgA Nephropathy (Berger Disease)

A kidney disease caused by deposits of immunoglobulin A in the kidney filters, potentially leading to blood in urine, protein loss, high blood pressure, or kidney failure.

Alternate Names:

Berger's Disease

IgA Vasculitis

An illness in which inflammation damages small blood vessels, often causing a raised purple rash, joint pain, stomach pain, and kidney problems. It is most common in children and may follow an infection.

IgA Vasculitis (Henoch-Schonlein Purpura)

The most common systemic vasculitis in children (peak age 2-8 years), characterized by IgA1-containing immune complex deposition in small vessels. Often preceded by an upper respiratory tract infection (e.g., group A *Streptococcus*).

Alternate Names:

Henoch-Schonlein Purpura

IgD

Immunoglobulin D, a membrane-bound antibody expressed on the surface of mature naive B cells (with IgM) serving as a B-cell receptor. Serum IgD is present in trace amounts and its secreted function is unclear. Its role in B-cell activation and signaling is an area of research.

IgE

A type of antibody involved in allergies and defense against some parasites. When it reacts to an allergen, it can trigger symptoms such as sneezing, hives, asthma, or anaphylaxis.

IgG

The most common type of antibody in the blood. It helps neutralize germs and toxins, supports immune protection after infection or vaccination, and can cross the placenta to protect a developing baby.

IgG And Complement Deposition At The Dermis-Epidermis Junction

An immunofluorescence finding that may occur in the lupus band test, in which immune complexes containing immunoglobulin and complement deposit along the dermoepidermal junction. The pattern and clinical context are needed for interpretation.

IgG4-Related Disease

A fibro-inflammatory disorder that can produce tumefactive lesions and organ enlargement in multiple sites. Histology may show IgG4-positive plasma cells, storiform fibrosis, and obliterative phlebitis; diagnosis requires clinicopathologic correlation because no single test is sufficient.

IgG4-Related Disease Arteritis

A form of IgG4-related disease affecting large and medium-sized arteries, characterized by transmural inflammation with abundant IgG4-positive plasma cells, storiform fibrosis, and obliterative phlebitis. It may involve the aorta and its branches, causing stenosis or aneurysm formation.

IgG4-Related Ophthalmic Disease

An immune-mediated fibroinflammatory disorder that can affect the lacrimal glands, orbit, eyelids, or extraocular muscles. It may cause swelling, mass lesions, double vision, or visual symptoms and can occur with IgG4-related disease in other organs.

Igh Gene

igh gene is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

IgM

Immunoglobulin M, the largest antibody (pentamer), produced during the primary immune response (first antibody to appear). Functions: potent complement activation (classical pathway) and agglutination; expressed as a membrane-bound B-cell receptor on naive B cells.

IIH

Alternate index label; see *Pseudotumor cerebri (idiopathic intracranial hypertension)*.

Ikappab Kinase

A group of enzymes that helps turn on genes involved in inflammation and immune responses.

Ileal Atresia

A condition present at birth in which part of the ileum, the last section of the small intestine, is closed or missing. It causes bowel blockage in a newborn, with a swollen abdomen, green vomiting, and failure to pass the first stool.

Ileal Conduit

A surgically created passage that diverts urine through a segment of ileum to an opening in the abdominal wall.

Ileal Fistula

An abnormal connection involving the ileum and another organ, bowel segment, or skin surface, which may cause intestinal contents to leak and lead to infection, malnutrition, or fluid loss.

Ileal Hemorrhage

Bleeding from the ileum, the distal portion of the small intestine, caused by ulceration, inflammation, vascular lesions, tumors, trauma, or other disease.

Ileal Neoplasm

An ileal neoplasm is an abnormal growth in the ileum, the last part of the small intestine; it may be benign or cancerous.

Ileal Obstruction

Partial or complete blockage of the ileum, the final portion of the small intestine. Causes include adhesions, hernia, inflammatory bowel disease, tumors, and twisting of the bowel. Symptoms may include cramping pain, vomiting, abdominal distension, and inability to pass stool or gas.

Ileal Pouch-Anal Anastomosis

An operation that removes the colon and rectum and creates a pouch from the end of the small intestine. The pouch is connected to the anus so bowel movements can continue through the usual route.

Ileal Stenosis

Narrowing of the ileum that may impair passage of intestinal contents and result from Crohn disease, inflammation, scarring, ischemia, tumor, or surgery.

Ileal Ulcer

An ileal ulcer is a break in the lining of the ileum caused by inflammation, infection, medicines, ischemia, trauma, or another intestinal disorder.

Ileitis

Inflammation of the ileum, the distal segment of the small intestine. Causes include Crohn disease, infection, ischemia, medication-related injury, and other inflammatory disorders; symptoms may include right-lower-quadrant pain, diarrhea, fever, or bleeding.

Ileitis (Crohn'S Disease)

Alternate index label for Crohn's Disease.

Ileitis, Crohn

Crohn disease involving the ileum, the final part of the small intestine, causing chronic or relapsing inflammation that may produce abdominal pain, diarrhea, weight loss, strictures, or fistulas.

Ileocaecal

Ileocaecal means relating to the junction between the ileum and the caecum, where the small intestine joins the large intestine.

Ileocecal Valve

A sphincter-like fold at the junction of the terminal ileum and caecum. It regulates passage of intestinal contents into the colon and helps limit reflux of colonic contents into the small intestine.

Ileocolitis, Crohn

Crohn disease affecting both the ileum and colon, causing patchy chronic inflammation that may lead to abdominal pain, diarrhea, weight loss, strictures, fistulas, or perianal disease.

Ileostomy

An operation that brings the end of the small intestine through an opening in the abdomen so stool can drain into an external pouch. The output is often liquid, so fluids and skin care are important. after proctocolectomy for ulcerative colitis or familial adenomatous polyposis, or to protect a distal anastomosis. Output is liquid and enzyme-rich, requiring careful fluid and skin management.

Ileostomy And Your Child

Care for a child with an ileostomy includes protecting the skin, measuring output, maintaining hydration, and watching for blockage, leakage, dehydration, or infection.

Ileum

The final and longest part of the small intestine. It absorbs vitamin B12, bile salts, and remaining nutrients before food passes into the large intestine.

Ileus

Failure of coordinated intestinal propulsion without a mechanical blockage, usually from postoperative bowel inhibition, inflammation, metabolic disturbance, or medication effect. It causes distension, nausea, vomiting, and reduced passage of flatus or stool.

Iliac

Relating to the ilium or the iliac region, including the iliac bones and iliac blood vessels.

Iliac Artery

An artery that supplies blood to the pelvis and lower limb.

Iliac Crest

The iliac crest is the curved upper border of the ilium and a landmark and attachment site for abdominal, back, and pelvic muscles.

Iliac Vein

An iliac vein drains blood from the pelvis and lower limb toward the inferior vena cava; thrombosis can cause swelling and pulmonary embolism.

Common Iliac Vein

A vein formed by the union of the internal and external iliac veins. The right and left common iliac veins unite to form the inferior vena cava.

External Iliac Vein

A continuation of the femoral vein above the inguinal ligament that joins the internal iliac vein to form the common iliac vein.

Internal Iliac Vein

A vein draining the pelvic organs, pelvic wall, and gluteal region that joins the external iliac vein to form the common iliac vein.

Iliopsoas Muscles

The psoas major and iliacus muscles, which work together to flex the hip.

Alternate Names:

Iliopsoas

Iliotibial Band

A strong band of tissue running along the outer side of the thigh from the hip to the knee. It helps stabilize the hip and knee during movement.

Iliotibial Band Syndrome

Pain on the outer side of the knee caused by irritation of the iliotibial band, especially during repeated activities such as running or cycling.

Alternate Names:

ITBS (Iliotibial Band Syndrome)

Iliotibial Band Syndrome

Alternate index label for Iliotibial Band Syndrome.

Ilium

Largest hip bone forming the superior portion. Body contributes to acetabulum; wing has a concave iliac fossa. Iliac crest runs ASIS to PSIS, a palpable landmark for lumbar puncture level. Sacroiliac joint articulates with sacrum. Gluteal muscles originate from its external surface; iliacus fills its fossa.

Illness Anxiety Disorder

Preoccupation with having or acquiring a serious illness, with minimal or no somatic symptoms present. The individual has a high level of anxiety about health, performs excessive health-related behaviors, and experiences maladaptive avoidance. Symptoms persist for at least six months. The individual is not delusional and insight may vary.

Illusion

A misperception or misinterpretation of a real external stimulus, such as mistaking a shadow for a person. Illusions may occur with visual impairment, delirium, seizures, intoxication, or severe psychiatric illness and differ from hallucinations, which occur without an external stimulus.

Iloprost

A prostacyclin analogue that causes vasodilation and inhibits platelet aggregation; inhaled or in-

fused formulations are used for selected forms of pulmonary hypertension and severe peripheral ischemia.

Image View

An image view is a particular angle or projection used when producing a medical image, such as a radiograph.

Image-Guided Ablation

Destruction of abnormal tissue using an energy source such as heat, cold, or chemicals while imaging guides placement and monitors the procedure.

Image-Guided Biopsy

Removal of a tissue sample while ultrasound, CT, MRI, mammography, or fluoroscopy guides the needle or instrument to the target and helps avoid critical structures.

Image-Guided Drainage

Placement of a catheter or needle under imaging guidance to evacuate fluid, pus, blood, or bile from a pathologic collection. Indications include abscess, biloma, urinoma, pleural collection, and symptomatic cysts.

Image-Guided Therapy

A minimally invasive procedure performed with imaging to guide instruments or treatment to a target tissue.

IGRT

Image-guided radiation therapy uses medical imaging, such as CT, MRI, ultrasound, or X-ray, to position the patient and target radiation accurately before or during treatment. It helps deliver radiation to a tumor while reducing exposure to nearby healthy tissue.

Imaging

The production of pictures of internal body structures using methods such as radiography, ultrasound, computed tomography, magnetic resonance imaging, or nuclear medicine.

Imaging And Radiology

Imaging and radiology use methods such as X-ray, ultrasound, CT, and MRI to create pictures that help diagnose or guide treatment of disease.

Imaging Technique

An imaging technique is a method for producing pictures of body structures or processes, such as ultrasound, CT, MRI, or nuclear imaging.

Imaging-Guided Biopsy

Alternate index label; see *Image-guided biopsy*. Appropriate specimen handling, bleeding-risk assessment, informed consent, and post-procedure monitoring remain essential.

Imatinib Mesylate

The mesylate salt of imatinib, a tyrosine-kinase inhibitor used to treat BCR-ABL-positive chronic myeloid leukemia, gastrointestinal stromal tumors with KIT alterations, and other selected cancers.

Imerslund-Gräsbeck Syndrome

An inherited disorder of selective vitamin B12 malabsorption caused by defects in cubilin or amnionless, often producing megaloblastic anemia and low B12 levels despite adequate intake.

Imidazoles

A group of antifungal medicines, including clotrimazole, miconazole, and ketoconazole, used to treat fungal infections of the skin, mouth, or other body areas.

Imide

An imide is a chemical compound containing nitrogen bonded to two carbonyl groups and may have pharmaceutical, metabolic, or industrial significance.

Imines

Imines are compounds containing a carbon-nitrogen double bond and occur in chemical synthesis, metabolism, and drug chemistry.

Imino Acid

imino acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Iminoacetic Acid Scan

A nuclear medicine scan that uses a small amount of radioactive medicine to show how bile moves through the liver, gallbladder, and bile ducts. It is also called a HIDA scan.

Imipenem

A strong antibiotic, usually given with cilastatin, used for serious bacterial infections. It can cause allergic reactions, stomach problems, seizures, or antibiotic resistance.

Imipramine

A medicine used for depression and some bladder problems. It can cause dry mouth, constipation, dizziness, abnormal heart rhythms, and dangerous effects in overdose.

Imipramine Overdose

Toxic ingestion of imipramine, a tricyclic antidepressant, which can cause anticholinergic effects, seizures, hypotension, ventricular arrhythmias, coma, and life-threatening cardiac toxicity.

Imiquimod

Imiquimod is a topical immune-response modifier that activates Toll-like receptor 7 and induces cytokines; it treats selected actinic keratoses, superficial basal-cell carcinomas, and external genital warts, often causing local inflammation.

Immature

Immature means not fully developed or differentiated, such as an immature cell, organ, tissue, or developmental stage.

Immature Ovarian Teratoma

A malignant germ-cell tumor containing immature embryonal tissues, usually diagnosed in adolescents or young adults and graded by the amount of im-

mature neuroepithelium.

Immaturity

Incomplete physical, neurologic, emotional, or developmental maturity relative to the expected stage of life.

Immediate Hypersensitivity

A rapid, typically immunoglobulin-E-mediated hypersensitivity reaction in which allergen cross-linking of mast-cell or basophil receptors releases inflammatory mediators. It can cause urticaria, bronchospasm, gastrointestinal symptoms, or anaphylaxis.

Immersion Foot (Trench Foot)

A painful cold injury caused by prolonged exposure of the feet to cold, wet conditions without freezing, leading to numbness, swelling, and skin changes.

Alternate Names:

Trench Foot

Immobilization

Restriction of movement of a body part or the whole patient, using rest, splints, casts, braces, traction, or other methods. It may protect an injury but can cause stiffness, pressure injury, muscle loss, venous thromboembolism, and other complications if prolonged.

Immobilize

To restrict movement of a body part, often with a splint or cast, to support healing.

Alternate Names:

Immobilization

Immune

Having an immune response that recognizes and helps protect against a particular antigen, infection, or toxin; immunity may be innate or acquired.

Immune And Infectious Diseases

A medical field encompassing disorders of the immune system and illnesses caused by pathogenic microorganisms. Immune system disorders include

autoimmune diseases (e.g., lupus, rheumatoid arthritis), immunodeficiencies, and hypersensitivity reactions.

Immune Checkpoint

An inhibitory or stimulatory receptor-ligand pathway that regulates lymphocyte activation and limits tissue injury. Therapeutic blockade of inhibitory checkpoints such as CTLA-4 or PD-1 can enhance antitumor immunity but may cause immune-related adverse effects.

Immune Complex

A soluble or tissue-associated aggregate formed by antigen bound to antibody. Persistent or inadequately cleared immune complexes may activate complement and deposit in tissues, producing type III hypersensitivity and vasculitic or renal injury.

Immune Evasion

The ability of a pathogen, tumor, or other abnormal cell to avoid recognition or destruction by the immune system.

Immune Hemolytic Anemia

Anemia caused by immune-mediated destruction of red blood cells, either by autoantibodies or antibodies directed against foreign red-cell antigens. It may cause fatigue, jaundice, dark urine, splenomegaly, and laboratory evidence of hemolysis.

Immuno-hemolysis

Destruction of red blood cells by an immune reaction involving antibodies, complement, or both. It may occur in autoimmune hemolytic anemia, incompatible transfusion reactions, or other antibody-mediated disorders.

Immune Response

The coordinated reaction of the immune system to foreign substances (antigens), pathogens, or abnormal cells. The innate immune response acts rapidly and non-specifically (physical barriers, phagocytes, complement, NK cells, inflammation).

Immune Status

Immune status describes the functional state of a person's immune defenses, including immunocompetence, prior infection or vaccination, immunosuppression, and susceptibility to infection.

Immune System

Complex network of cells, tissues, and organs that defends the body against pathogens; includes innate and adaptive immunity. Its significance is established from its characteristic features, causes, and clinical context.

Immune Thrombocytopenia

An autoimmune disorder characterized by isolated thrombocytopenia (platelet count $<100 \times 10^9/L$) due to autoantibody-mediated platelet destruction and impaired platelet production. Primary ITP (no identifiable cause) vs secondary (SLE, CLL, HIV, HCV, drugs).

Immune Thrombocytopenic Purpura

An autoimmune bleeding disorder characterized by isolated thrombocytopenia (platelet count $<100,000/L$), usually with otherwise preserved white blood cell and hemoglobin levels. Caused by autoantibodies (primarily IgG) directed against platelet surface glycoproteins (IIb/IIIa or Ib/IX), leading to splenic macrophage phagocytosis of platelets.

Immune Thrombocytopenic Purpura (Idiopathic Thrombocytopenic Purpura)

Alternate index label for Idiopathic Thrombocytopenic Purpura.

Immune Thrombocytopenic Purpura

Immune thrombocytopenic purpura is immune-mediated platelet destruction causing isolated thrombocytopenia with bruising, petechiae, mucosal bleeding, or no symptoms.

Immune Tolerance

The state of unresponsiveness of the immune system to self-antigens and to specific foreign antigens, preventing autoimmunity while preserving responses to pathogens. Central tolerance: deletion of self-

reactive lymphocytes in the thymus (T cells) and bone marrow (B cells).

Immune-Mediated Necrotizing Myopathy

A subacute severe proximal myopathy with very high CK (often >10,000), minimal inflammation on biopsy, necrotic fibers. Two major autoantibodies: anti-HMGCR (3-hydroxy-3-methylglutaryl-CoA reductase, statin-associated or spontaneous) and anti-SRP (signal recognition particle).

Immune-Related Adverse Event

An inflammatory or autoimmune toxicity caused by immune checkpoint blockade or another immune-activating cancer treatment. It may affect skin, bowel, liver, endocrine organs, lungs, heart, kidneys, or nervous system and often requires treatment-specific immunosuppression.

Immunity

The ability of the body to recognize and resist infectious agents or other foreign substances through innate or adaptive defenses.

Immunization

The process of inducing protection against an infection, usually through vaccination. Recommended vaccines and schedules depend on age, previous doses, pregnancy, immune status, medical conditions, travel, exposure risk, and current public-health guidance.

Immunizations For People With Diabetes

Vaccination is especially important in diabetes because infections may be more severe; recommendations depend on age, health status, vaccines received, and local guidance.

Immunoassay

An immunoassay is a laboratory test that uses antibodies to detect or measure a substance such as a hormone, drug, antigen, or antibody.

Immunoblast Count

An immunoblast count measures activated lympho-

cytes, usually in a tissue or blood sample, and may help evaluate immune responses or lymphoid disease.

Immunoblotting

Immunoblotting, or Western blotting, separates proteins by electrophoresis and detects a target with specific antibodies; band pattern and intensity are interpreted with controls and clinical context.

Immunochemistry

The study or laboratory measurement of biological molecules using specific antigen-antibody reactions, including immunoassays and immunostaining.

Immunocompetence

Immunocompetence is the capacity of the immune system to recognize antigens and mount an effective, appropriately regulated response; deficiency increases infection risk and may impair vaccine responses.

Immunocompetent

Having an immune system capable of mounting an appropriate response to common infectious or foreign antigens.

Immunocompromised

Having weakened or impaired immune defenses because of disease, medication, cancer treatment, transplantation, or another cause, increasing susceptibility to some infections and complications.

Immunocompromised Host

A person whose immune defenses are impaired by congenital disease, infection, malignancy, immunosuppressive treatment, organ failure, or another condition. Such patients have increased susceptibility to opportunistic infection, severe disease, and atypical presentations.

Immunoconjugate

A therapeutic or diagnostic molecule in which an antibody or other targeting protein is chemically linked to a drug, toxin, enzyme, or imaging agent.

Immunocytochemistry

A laboratory method using labeled antibodies to identify specific proteins or antigens within cells or tissue sections.

Immunodeficiency

Impaired development or function of one or more components of the immune system, resulting in increased susceptibility to infection, malignancy, or autoimmunity. It may be primary and genetic or secondary to disease, medication, malnutrition, or another acquired cause.

Immunodeficiency And Infections

Immunocompromised individuals are at increased risk for opportunistic infections. Primary immunodeficiencies are genetic disorders affecting immune function. Secondary immunodeficiencies include HIV/AIDS, organ transplantation, chemotherapy, and corticosteroid use.

Immunodeficiency Diseases

Disorders in which one or more components of the immune system are absent, deficient, or dysfunctional. They may be inherited or acquired and can cause recurrent, severe, unusual, or persistent infections, autoimmune disease, and increased malignancy risk.

Immunodeficiency Disorders

Disorders caused by impaired development or function of the immune system, leading to increased susceptibility to infections and sometimes autoimmunity or malignancy. See *Immunodeficiency Diseases*.

Immuno-electrophoresis

A laboratory method that separates proteins by electrophoresis and identifies them with specific antibodies, often to study immunoglobulins.

Immuno-electrophoresis - Urine

A laboratory technique that separates and identifies urinary proteins with specific antibodies, used to investigate abnormal immunoglobulin excretion and monoclonal light chains.

Immuno-electrophoresis – Blood

A laboratory technique that separates blood proteins by electrophoresis and identifies them with specific antibodies, used historically to evaluate abnormal immunoglobulins and monoclonal proteins.

Immunofixation - Urine

A urine test that uses electrophoresis and antibodies to identify and type monoclonal immunoglobulins or light chains, including Bence Jones proteins.

Immunofixation Blood Test

A blood test that identifies and types monoclonal immunoglobulins, helping evaluate monoclonal gammopathy, multiple myeloma, and related plasma-cell disorders.

Immunofluorescence

A technique using fluorescently labeled antibodies to detect specific antigens in tissues, cells, or microorganisms; visualized by fluorescence microscopy.

Immunofluorescence Technique

An immunofluorescence technique uses fluorescently labelled antibodies to locate specific proteins, organisms, or immune deposits in a sample.

Immunogenetics

immunogenetics is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

Immunogenicity

The ability of an antigen, vaccine, or other substance to provoke an immune response, including antibody or cellular responses.

Immunoglobulin

An antibody protein produced by immune cells to recognize and help neutralize foreign substances.

Immunoglobulin (Antibody)

Y-shaped glycoprotein produced by plasma cells that specifically binds antigens. Composed of two

identical heavy chains and two identical light chains linked by disulfide bonds. Variable regions (Fab) bind antigen; constant region (Fc) mediates effector functions (complement activation, Fc receptor binding).

Alternate Names:

Antibody

Immunoglobulin A

An antibody found mainly in mucosal secretions, including saliva, tears, and intestinal fluid.

Immunoglobulin D

immunoglobulin d concerns immunoglobulin d, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Immunoglobulin E

An antibody class that plays a central role in many immediate allergic reactions.

Alternate Names:

IgE

Immunoglobulin G

The most abundant antibody in blood, providing long-lasting protection against many infections.

Immunoglobulin Idiotyp

immunoglobulin idiotype concerns immunoglobulin idiotype, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Immunoglobulin Isotype

immunoglobulin isotype concerns immunoglobulin isotype, a biologic or physiologic concept used in research, laboratory medicine, and the explanation of disease.

Immunoglobulin M

The first major antibody produced during an initial immune response.

Immunoglobulin Replacement Therapy

Indications: primary antibody deficiencies (XLA,

CVID, hyper-IgM, specific antibody deficiency), secondary hypogammaglobulinemia (CLL, myeloma, post-rituximab, post-transplant) with recurrent infections.

Immunohistochemistry

A technique that uses labeled antibodies to detect specific antigens in tissue sections. It supports tumor classification, identification of lineage, assessment of predictive biomarkers, and detection of infectious or immune-mediated processes.

Immunologic Adjuvant

A substance added to an antigen or vaccine to strengthen or shape the immune response.

Immunologic Factor

A substance, cell, gene, or process that contributes to immune-system function or regulation.

Immunologic Memory

The capacity of the adaptive immune system to respond more rapidly and strongly after re-exposure to an antigen because of long-lived memory lymphocytes.

Immunologic Skin Test

An immunologic skin test places a small amount of an antigen or allergen in or on the skin to assess immune reactivity, such as allergy or tuberculosis exposure.

Immunologic Surveillance

The immune system's recognition and removal of abnormal, infected, or damaged cells.

Immunologic Technique

A laboratory or clinical method that uses antibodies, antigens, or immune reactions to detect or measure a substance.

Immunologic Test

An immunologic test examines immune cells, antibodies, antigens, or immune-related proteins to help evaluate infection, allergy, autoimmune disease, or

immune deficiency.

Immunological Memory

The ability of the adaptive immune system to mount a faster, larger, and more effective response upon re-exposure to an antigen, conferred by long-lived memory B cells and memory T cells generated during the primary response.

Immunological Synapse

The organized contact interface between a T lymphocyte or other immune cell and its target or antigen-presenting cell, where receptor and signaling molecules coordinate immune activation.

Immunological Tolerance

The reduced or absent immune response to a specific antigen, including the normal lack of attack on the body's own tissues.

Immunologically Privileged Site

A body site where immune responses are limited to reduce risk of tissue damage.

Immunology

The medical and biological study of the immune system, immune responses, and immune disorders.

Immunology

Antigen-presenting cell, an immune cell that processes antigens and displays peptide fragments on major histocompatibility complex molecules to activate T cells.

Immunomodulation

Modification of immune activity to enhance, suppress, or redirect an immune response. Immunomodulatory medicines are used in cancer, autoimmune disease, transplantation, and infection but may increase susceptibility to infection or other adverse effects.

Immunomodulators In Dermatology

Topical immunomodulators treat inflammatory skin diseases without corticosteroid side effects. Pime-

crolium 1 percent cream and tacrolimus 0.03 and 0.1 percent ointments are calcineurin inhibitors used for atopic dermatitis, facial eczema, and intertriginous areas. They are steroid-sparing agents.

Immunophenotyping

Identification and characterization of cells according to their surface, cytoplasmic, or nuclear antigens, usually by flow cytometry or immunohistochemistry. It is used to classify leukemias, lymphomas, immune-cell subsets, and some immunodeficiency disorders.

Immunoprecipitation

A laboratory technique that uses an antibody to bind and isolate a specific antigen or protein from a mixture. It is used in research and some validated diagnostic or analytical methods.

Immunoprotein

immunoprotein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Immunoradiometric Assay

An immunoradiometric assay uses radiolabelled antibodies to measure a specific substance in a sample.

Immunoregulation

Control of the strength, duration, and target of immune responses, including activation, suppression, and tolerance. Abnormal immunoregulation contributes to autoimmunity, allergy, immunodeficiency, and chronic inflammation.

Immunosenescence

Age-related changes in innate and adaptive immunity that alter infection susceptibility, vaccine responses, inflammation, and cancer surveillance. It is influenced by chronic disease, nutrition, medications, and functional status.

Immunosuppression

Reduction of immune-system activity, caused by

disease or intentionally induced with medications or other treatment.

Immunosuppression In Transplant

Medications to prevent rejection. Induction with thymoglobulin or basiliximab. Maintenance with tacrolimus, mycophenolate, and prednisone. Monitor drug levels and renal function. Calcineurin inhibitor nephrotoxicity is major concern requiring dose optimization.

Immunosuppression Screening

Pre-treatment evaluation for latent or active infection, vaccination status, malignancy risk, and organ dysfunction before immunosuppressive therapy. Testing commonly includes tuberculosis, hepatitis B and C, HIV, blood counts, liver and kidney function, and pregnancy when relevant.

Immunosuppressive

Agent or therapy that suppresses immune system activity; used to prevent organ transplant rejection and treat autoimmune diseases. Its significance is established from its characteristic features, causes, and clinical context.

Immunotherapy

Treatment using immune system to fight cancer. Types: checkpoint inhibitors (PD-1, PD-L1, CTLA-4), CAR T-cell therapy, cytokines, cancer vaccines. Examples: pembrolizumab, nivolumab, ipilimumab, axicabtagene ciloleucel.

Immunotherapy And Biologic Treatments

Advanced therapies that harness or modify the immune system to treat diseases, particularly cancer, autoimmune disorders, and inflammatory conditions. Biologics are large-molecule drugs derived from living organisms that target specific immune pathways, such as TNF inhibitors, monoclonal antibodies, and checkpoint inhibitors.

Immunotherapy For Cancer

Cancer treatment that stimulates, restores, redirects, or supplies immune activity to recognize and attack malignant cells, including immune-checkpoint

inhibitors, cellular therapies, and antibodies.

Immunotherapy In Dermatology

Cancer immunotherapy uses medicines that alter immune activity against skin cancers. Checkpoint inhibitors target pathways such as PD-1, PD-L1, or CTLA-4. Their use depends on the tumor type, stage, prior treatment, and the patient's health.

Immunotoxicity

Immune system damage from chemicals. Effects: immunosuppression, hypersensitivity, autoimmunity. Examples: benzene, chemotherapy, biologics.

Immunotoxin

A targeted toxin made by linking a toxic protein or drug to an antibody or binding molecule that directs it toward selected cells.

Immunoturbidimetry

A laboratory method that measures cloudiness produced when antibodies react with a target antigen, allowing estimation of the target's concentration.

Imp Dehydrogenase

IMP dehydrogenase converts inosine monophosphate to xanthosine monophosphate in guanine-nucleotide synthesis and is a target of some immunosuppressive drugs.

Impact

The forceful contact or collision of one object or body part with another, or the effect a disease, treatment, or event has on health; context determines the meaning.

Impacted

Firmly wedged or unable to move from its normal position, as with an impacted tooth.

Impacted Fracture

A fracture in which one broken bone fragment is driven firmly into another, often producing relative stability but sometimes causing shortening or deformity.

Impacted Tooth

Tooth unable to erupt into functional position. Most common: mandibular third molars, maxillary canines. May cause pathology: cyst, root resorption, caries. Treatment: monitoring or extraction.

Impacted Wisdom Teeth

Wisdom teeth that cannot emerge normally because they are blocked by bone, gum, or another tooth.

Alternate Names:

Wisdom Teeth, Impacted

Impaction

Obstruction caused by material that is firmly lodged, such as hardened stool in the bowel.

Impaired Fasting Glucose

Blood glucose above the normal range after fasting but below the diagnostic threshold for diabetes.

Impaired Glucose Tolerance

Blood glucose above the normal range after a glucose challenge but below the diagnostic threshold for diabetes.

Impedance

Impedance is the opposition to the flow of an alternating electrical current; in medicine it can help assess tissue properties or body fluids.

Impedance Hearing Testing

A group of tests, including tympanometry, that measure the movement of the eardrum and middle-ear function.

Impedance Plethysmography

A noninvasive method that detects changes in limb electrical impedance caused by changes in blood volume. It has been used to assess venous blood flow and suspected deep-vein thrombosis, although duplex ultrasonography is generally preferred for current diagnostic evaluation.

Impella Device

Percutaneous microaxial left ventricular assist de-

vice that actively pumps blood from the LV into the aorta, reducing LV workload and increasing cardiac output. Types: Impella 2.5 (up to 2.5 L/min), Impella CP (up to 3.7 L/min), Impella 5.0 (up to 5 L/min, surgically placed).

Imperforate Anus

A congenital anomaly where the anus is completely absent or fails to open at the perineum. Classified as low (distal to the levator ani complex) or high (proximal to the levator ani). Often associated with other anomalies including vertebral, anal, cardiac, tracheoesophageal, renal, and limb defects.

Imperforate Anus Repair

A medical procedure involving imperforate anus repair. Indications, risks, preparation, and follow-up depend on the patient and the specific procedure.

Imperforate Hymen

A congenital obstruction of the vaginal opening by an intact hymen without a normal central opening. After puberty it may cause absent menstruation, cyclic pelvic pain, urinary retention, or a pelvic mass from retained menstrual blood.

Imperforate Vagina

Imperforate vagina is a rare congenital absence or obstruction of the vaginal canal, often associated with genital outflow obstruction, cyclical pelvic pain, haematocolpos, and urinary or reproductive complications.

Impetigo

Impetigo is a superficial contagious bacterial skin infection producing fragile blisters or honey-colored crusts, commonly caused by *Staphylococcus aureus* or *Streptococcus pyogenes*, affecting children.

Alternate Names:

School Sores (Impetigo)

Impingement Syndrome

Pain and restricted movement caused when a tendon or other soft tissue is compressed between bones, commonly in the shoulder during elevation of the arm.

Implant

A medical device, tissue, or material placed inside the body to replace, support, monitor, or deliver treatment.

Implant (Dental)

A biocompatible fixture placed in the jawbone to support a dental prosthesis. It may be used for one missing tooth or to support a partial or complete denture; complications include infection, bone loss, and mechanical failure.

Alternate Names:

Dental

Implant Failure

Loss of an implant's intended structural, biologic, or functional performance. Causes include infection, fracture, loosening, wear, malposition, thrombosis, material degradation, and patient or tissue factors.

Implant Sterilization

Validated processing that removes or inactivates all viable microorganisms, including bacterial spores, from an implant. Methods include moist heat, ethylene oxide, radiation, and low-temperature plasma according to material and device requirements.

Implant-Associated Infection

Infection involving an implanted medical device or the tissue surrounding it. Microbial adherence and biofilm formation can impair antimicrobial penetration and often require device-directed therapy, source control, or removal.

Implant-Supported Prosthesis

A fixed or removable dental prosthesis that is supported or retained by one or more dental implants.

Implantable Cardioverter Defibrillator

An implanted device that detects dangerous ventricular rhythms and treats them with antitachycardia pacing or an electrical shock.

Implantable Cardioverter-Defibrillator

An implanted device that monitors heart rhythm

and delivers electrical therapy (antitachycardia pacing or defibrillation) for life-threatening ventricular arrhythmias.

Implantable Defibrillator

A surgically implanted device that detects dangerous ventricular arrhythmias and delivers pacing or an electrical shock to restore an effective rhythm.

Implantable Loop Recorder

Subcutaneous device providing continuous ECG monitoring for up to 3 years. Used for evaluation of unexplained syncope, recurrent palpitations, cryptogenic stroke, and occult atrial fibrillation detection. Small size (coin-sized), inserted under local anesthesia in the chest.

Implantable Port

A subcutaneously placed vascular-access device consisting of a reservoir connected to a catheter, used for repeated administration of medication, fluids, blood products, or parenteral nutrition. It requires sterile access and may be complicated by infection, thrombosis, occlusion, or mechanical failure.

Implantation

The embedding of the blastocyst into the endometrium, occurring approximately 6-10 days after ovulation. The blastocyst hatches from the zona pellucida, and the trophoblast invades the decidua. Implantation triggers hCG production, which maintains the corpus luteum. Failure of implantation is a common cause of early pregnancy loss.

Implantation Procedure

A medical procedure involving implantation procedure. Indications, risks, preparation, and follow-up depend on the patient and the specific procedure.

Implants Endometrial (Endometriosis)

Alternate index label for Endometriosis.

Importance Weight

An importance weight is a statistical weight used to adjust observations so a sample better represents a

target population or distribution.

Impotence (Erectile Dysfunction [ED])

The persistent inability to attain or maintain a penile erection of sufficient rigidity for satisfactory sexual intercourse. Pathophysiologically categorized into vasculogenic (arteriogenic insufficiency from atherosclerosis, veno-occlusive dysfunction), neurogenic (diabetic autonomic neuropathy, radical prostatectomy, spinal cord injury), endocrinologic (hypogonadism, hyperprolactinemia), drug-induced (antihypertensives, SSRIs, antiandrogens), and psychogenic etiologies. Often serves as an early harbinger of occult systemic coronary artery disease due to endothelial dysfunction in smaller penile arteries; evaluated with fasting glucose/HbA1c, lipid panels, and morning serum testosterone, and treated first-line with oral phosphodiesterase-5 (PDE5) inhibitors (e.g., sildenafil, tadalafil).

Alternate Names:

Erectile dysfunction

Impotence (Erectile Dysfunction (ED, Impotence))

Alternate index label for Erectile Dysfunction (ED, Impotence).

Impression

The concise conclusion of a medical or radiology report, summarizing the most important findings, likely meaning, and recommendations for next steps.

Imprinting

A pattern of gene expression determined by whether a gene copy was inherited from the mother or father.

Impulse

An impulse is a brief signal or force; in physiology it commonly refers to an electrical signal travelling along a nerve or through the heart.

Impulse Oscillometry

A pulmonary function testing technique that measures respiratory impedance by applying small pressure oscillations during tidal breathing. It assesses large airway resistance (R5), small airway resistance

(R5-R20), and reactance.

Impulsive Behavior

Impulsive behavior is action with limited forethought or inhibition despite possible harm and may occur with psychiatric, neurologic, substance-related, or developmental conditions.

Impulsivity

A tendency to act quickly without adequate consideration of consequences or difficulty delaying a response; it can occur in ADHD, mania, substance use, and other conditions.

In

In clinical measurements, an abbreviation for inch or inches; the same letters may have other meanings in different contexts.

In Situ

Confined to the exact site of anatomical origin without invasion into adjacent tissue planes or across anatomical barriers. In surgical pathology and oncology, carcinoma in situ (CIS; e.g., ductal carcinoma in situ [DCIS] of the breast, high-grade squamous intraepithelial lesion [HSIL] of the cervix) denotes a malignant epithelial proliferation that has not breached the basement membrane (basal lamina); because lymphovascular structures reside exclusively in the underlying stroma, lesions strictly in situ possess zero potential for regional lymphatic or distant hematogenous metastasis.

Alternate Names:

In place

In Situ Carcinoma

Abnormal malignant cells confined to the tissue layer in which they arose and not yet invading through the basement membrane.

In Situ Hybridization

A laboratory method that uses labeled nucleic-acid probes to detect specific DNA or RNA sequences within cells or tissue. It can identify gene copy changes, translocations, viral material, or tissue-specific gene expression.

In Vitro

In vitro means performed outside a living organism, such as in a test tube, culture dish, or laboratory system.

In Vitro Fertilisation

An assisted reproductive technology in which eggs are retrieved from the ovaries, fertilized with sperm in a laboratory, and resulting embryos are transferred to the uterus.

In Vitro Fertilization

A fertility treatment in which an egg and sperm are combined in a laboratory and a resulting embryo is transferred to the uterus.

In Vitro Fertilization

In vitro fertilization fertilizes retrieved eggs in a laboratory and transfers resulting embryos to the uterus, forming part of assisted reproductive treatment.

Intracytoplasmic Sperm Injection

A fertility treatment in which a single sperm is injected directly into an egg in a laboratory to help achieve fertilisation. It is also called ICSI.

In Vivo

In vivo means occurring or being studied within a living organism.

In-Vivo

In-vivo means occurring or being studied within a living organism.

Inactivated Vaccines

Vaccines made from microorganisms that have been killed and cannot reproduce.

Inactivator

Inactivator is an immunologic, genetic, infectious, developmental, or cellular concept used to explain disease mechanisms, diagnosis, or treatment.

Inalimarev

Inalimarev is an investigational antiviral agent studied for activity against selected viral infections.

Inamrinone

Inamrinone is an intravenous medicine that increases heart contraction and widens blood vessels; it was used short term in severe heart failure but can cause low blood pressure and abnormal rhythms.

Inanition

Severe physical depletion caused by inadequate food or nutrient intake, often accompanied by weight loss, weakness, dehydration, and metabolic disturbance. Causes may include starvation, malabsorption, chronic disease, or inability to eat.

Inborn Error Of Metabolism

An inherited disorder caused by a defect in a metabolic pathway, often resulting in accumulation of harmful substances or deficiency of essential products.

Inborn Errors Of Metabolism

Inherited disorders caused by defects in enzymes, transporters, or other metabolic proteins, leading to abnormal buildup or deficiency of substances.

Inbreed

To reproduce between genetically related individuals; inbreeding can increase the chance that recessive inherited disorders will occur.

Inbreeding

Inbreeding is an immunologic, genetic, infectious, developmental, or cellular concept used to explain disease mechanisms, diagnosis, or treatment.

Inbreeding, Coefficient Of

The probability that the two copies of a gene at a locus in an individual are identical by descent from a common ancestor; it is used in population and medical genetics.

Incarcerated Hernia

A hernia whose protruded tissue cannot be returned to the abdominal cavity. It may progress to strangulation and requires urgent clinical assessment.

Incentive Spirometry

A breathing device that provides visual feedback while a person inhales slowly and deeply. It may be used with coughing, mobilization, and other measures to encourage lung expansion after illness or surgery; it is a lung-expansion exercise and is not the same as diagnostic spirometry.

Incest

Incest is an immunologic, genetic, infectious, developmental, or cellular concept used to explain disease mechanisms, diagnosis, or treatment.

Incidence

Incidence is the number of new cases of a disease or event arising in a population during a specified period.

Incidental Finding

An unexpected observation discovered during an examination performed for another reason. Its importance depends on the finding and the clinical context.

Incidentaloma

Incidental imaging finding of uncertain significance. May require further evaluation.

Incised Wound

Clean-cut wound produced by a sharp-edged instrument (scalpel, knife, glass) that is longer on the skin surface than it is deep, featuring clean edges without tissue bridging or marginal abrasion.

Incision

A deliberate surgical cut made into the skin or other tissue.

Incisional Biopsy

Surgical removal of only part of a lesion for diagnosis,

generally used when the lesion is too large or located where complete removal would be inappropriate as an initial procedure.

Incisional Hernia

A hernia through a weakness in a previous surgical incision. It may appear as a bulge that becomes more prominent with standing or straining. Risk factors include wound infection, obesity, smoking, poor nutrition, chronic cough, and repeated surgery.

Incisor

One of the front teeth, adapted mainly for cutting or biting food.

Incisors

Incisors are the flat front teeth used mainly for biting and cutting food.

Inclusion Body

A circumscribed mass of foreign, metabolic, or abnormal material within a cell's cytoplasm or nucleus. Inclusion bodies may contain aggregated or misfolded proteins, viral components, glycogen, lipids, or other substances, and their appearance and location can help identify cellular injury or disease.

Inclusion Body Myositis

A slowly progressive inflammatory and degenerative muscle disease, usually causing asymmetric weakness of the finger flexors and quadriceps. Muscle biopsy may show endomysial inflammation and rimmed vacuoles. Response to immunotherapy is often limited.

Inclusion Conjunctivitis

Conjunctivitis caused by *Chlamydia trachomatis*, usually presenting with persistent mucopurulent discharge, follicular inflammation, and sometimes genital infection. Neonatal disease requires prompt evaluation and systemic treatment to prevent complications and transmission.

Inclusion-Cell (I-Cell) Disease

A rare inherited lysosomal-storage disorder caused

by impaired tagging and trafficking of lysosomal enzymes, leading to their secretion outside cells. It causes severe developmental delay, skeletal abnormalities, coarse facial features, and progressive multisystem disease. Management is supportive and coordinated by specialists.

Alternate Names:

I-Cell

Incompetence

Failure of a structure to close or function adequately; examples include valvular incompetence of the heart and cervical incompetence during pregnancy.

Incompetent Cervix

Early painless opening of the cervix during pregnancy, which may lead to pregnancy loss or premature birth.

Incomplete Miscarriage

Partial expulsion of products of conception, with some pregnancy tissue remaining in the uterus.

Incomplete Ossification

Failure of bone or cartilage to mineralize or develop fully. It may be part of normal development or result from genetic, metabolic, nutritional, or skeletal disorders and is interpreted with age, imaging, and laboratory findings.

Incontinence

The involuntary loss of control over urination (urinary incontinence) or defecation (fecal incontinence).

Incontinence (Fecal)

Involuntary fecal leakage. Causes: diarrhea, constipation with overflow, sphincter damage, neurological disease, medications. Assessment: history, examination, anorectal manometry. Treatment: bowel regimen, sphincter exercises, biofeedback, surgery if indicated.

Alternate Names:

Fecal

Incontinence (Urinary)

Involuntary urine leakage. Types: stress (cough/sneeze), urge (overactive bladder), overflow (retention), functional (immobility/cognition), mixed. Assessment: history, bladder diary, urinalysis, post-void residual.

Alternate Names:

Urinary

Incontinence, Bowel

Alternate index label; see *Fecal incontinence*.

Incontinence, Fecal

Alternate index label; see *Fecal incontinence*.

Incontinence, Urinary

Alternate index label; see *Urinary incontinence*.

Incontinentia Pigmenti

An X-linked dominant disorder affecting skin, teeth, eyes, and the nervous system, caused by pathogenic variants in IKBKG. Skin lesions evolve through vesicular, verrucous, hyperpigmented, and atrophic stages and may be associated with retinal disease or seizures.

Incoordination

Lack of coordination between muscles or body movements; the term is often used in older medical language.

Incoordination

Impaired ability to perform smooth, accurate, coordinated movements, often called ataxia. Causes include cerebellar disease, sensory loss, vestibular disorders, intoxication, medicines, and other neurologic conditions.

Incoordination (Ataxia)

Impaired coordination of voluntary movement, often caused by disease affecting the cerebellum or other parts of the nervous system.

Alternate Names:

Ataxia

Increased Head Circumference

Increased head circumference means head size above the expected range for age and sex and may reflect familial size, hydrocephalus, swelling, or a genetic condition.

Increased Intracranial Pressure

Abnormally elevated pressure within the skull caused by brain swelling, hemorrhage, mass lesion, impaired cerebrospinal-fluid circulation, or venous obstruction. It can cause headache, vomiting, visual disturbance, reduced consciousness, and brain herniation.

Increased Libido

Increased libido is heightened sexual desire that may be normal or associated with hormones, medicines, mood elevation, neurologic disease, or substance use.

Increased Osteoid

Increased osteoid is excess unmineralized bone matrix, seen when bone formation outpaces mineralization as in osteomalacia or some metabolic disorders.

Increased Vascular Permeability

A fundamental feature of acute inflammation that allows plasma proteins, fluid, and leukocytes to exit the vascular space and enter the extravascular tissue.

Increment

An increase or stepwise change in an amount, measurement, dose, or treatment intensity.

Incretins

Incretins are gut hormones, mainly GLP-1 and GIP, released after meals that enhance glucose-dependent insulin secretion; GLP-1 also suppresses glucagon, slows gastric emptying, and reduces appetite.

Incubation

Incubation is the time between exposure to an infectious agent and the appearance of symptoms.

Incubation Period

The time between when a person is exposed to an infection and when symptoms appear.

Incubator

A controlled-environment chamber culturing microorganisms, cells, or tissues at defined temperature, humidity, and atmospheric composition.

Incus

The incus, commonly known as the anvil, is the middle ossicle of the three bones in the middle ear, articulating with the malleus at the incudomalleolar joint and with the stapes at the incudostapedial joint.

Incyclinide

Incyclinide is an investigational tetracycline-derived matrix-metalloproteinase inhibitor studied for anti-inflammatory or anticancer effects.

Indapamide

Indapamide is a thiazide-like diuretic used mainly for hypertension; it promotes renal sodium excretion and may cause hyponatraemia, hypokalaemia, dehydration, hyperuricaemia, or photosensitivity.

Indel Mutation

indel mutation is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

Independence

The ability to perform activities and make decisions without assistance, although a person may still use devices, adaptations, or occasional support.

Indeterminate

Indeterminate means not definitively classified or interpreted because available findings are insufficient, conflicting, or nonspecific.

India Immunization Schedule

The Universal Immunization Schedule of the Gov-

ernment of India, providing free vaccines to all children, adolescents, and pregnant women through the public health system.

Indican

Indican is a compound formed from tryptophan metabolism and excreted in urine; abnormal levels may occur with intestinal bacterial overgrowth or metabolic disease.

Indicate

To show, suggest, or point to a finding or conclusion; an indication is a clinical reason for using a test, treatment, or procedure.

Indication

A clinical condition, symptom, or question that provides the reason for performing a test, procedure, or treatment.

Indigestion

Common term for dyspepsia, discomfort or burning in the upper abdomen that may include early fullness, bloating, belching, or nausea. Persistent symptoms, bleeding, weight loss, vomiting, anemia, or difficulty swallowing require medical evaluation.

Indigo Carmine

Indigo carmine is a blue dye used in selected medical procedures to visualize urinary or other fluid flow and in laboratory staining.

Indinavir

A medicine or chemical compound called indinavir. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Indirect Antiglobulin Test

A test that detects free, clinically significant antibodies in a patient's serum or plasma by incubating it with reagent erythrocytes. It is used for antibody screening, compatibility testing, and prenatal red-cell antibody evaluation.

Indirect Calorimetry

Measurement of oxygen consumption and carbon-dioxide production to estimate resting energy expenditure. It is the preferred method for determining energy needs when prediction equations are unreliable, particularly in critically ill or metabolically complex patients.

Indirect Veneer

Ceramic restoration fabricated in lab. Porcelain or composite. Aesthetic enhancement.

Indium

Indium is a metal used in industry and medical radioisotopes; exposure effects depend on the compound, dose, and route.

Indium-111

SPECT radionuclide, half-life 2.8 days. Used in WBC labeling, octreotide scanning. Emits gamma rays at 171 and 245 keV.

Indium-111 Scan

Nuclear medicine imaging using In-111. Used for WBC labeling, octreotide scanning.

Indium-Labelled WBC Scan

A nuclear medicine study in which a patient's white blood cells are labeled with indium-111 and reinjected to localize selected sites of inflammation or infection.

Indocyanine Green

Indocyanine green is a fluorescent dye injected intravenously to assess liver function, blood flow, and retinal or choroidal circulation.

Indole

A nitrogen-containing chemical ring found in tryptophan and many biologically active compounds.

Indole-3-Carbinol

A compound formed from glucosinolates in cruciferous vegetables and studied for effects on estrogen metabolism and cancer biology.

Indolent

Slow to develop, progress, or cause symptoms; it often describes a relatively slow-growing disease or tumor.

Indoles

A group of compounds containing an indole ring, including substances involved in biological signaling, metabolism, and medicines.

Indometacin

Indometacin is a nonsteroidal anti-inflammatory medicine used for pain and inflammation; it can cause stomach bleeding, kidney problems, and cardiovascular complications.

Indomethacin

Indomethacin is a potent NSAID used for inflammatory pain and selected acute conditions such as gout; gastrointestinal ulceration or bleeding, renal injury, cardiovascular events, and headache are important adverse effects.

Indomethacin Overdose

Toxic exposure to excessive indomethacin, which can cause nausea, vomiting, stomach bleeding, kidney injury, seizures, or other serious effects.

Indoor Allergens

Substances inside buildings that can trigger allergic or asthma symptoms, including dust mites, mold, cockroach particles, and animal dander. Exposure may cause rhinitis, conjunctivitis, wheezing, or eczema. Reduction of exposure and appropriate allergy or asthma treatment depend on the identified trigger.

Indoximod

Indoximod is an investigational immunotherapy that modulates tryptophan metabolism and has been studied in combination cancer treatment.

Induced Abortion

Deliberate termination of a pregnancy using medicines or a procedure. Safe care depends on

gestational age, patient preference, accurate information, legal context, trained providers, and assessment for complications such as heavy bleeding or infection.

Induced Hyperthermia

Induced hyperthermia is deliberate elevation of body or tissue temperature for a therapeutic purpose, with careful monitoring to prevent heat injury.

Induced Labor

Medical initiation of uterine contractions before labor begins naturally to achieve delivery when continuing pregnancy may pose greater risk.

Induced Sputum Analysis

A method of assessing airway inflammation by examining sputum produced after inhaled saline stimulation. The types and proportions of inflammatory cells may support assessment of asthma, infection, COPD, or bronchiectasis.

Inducing Labor

The process of starting labor artificially with medicines, membrane rupture, or other obstetric methods.

Induction

Initiation of a physiologic or therapeutic process, such as induction of labor, anesthesia, remission, or immune tolerance. The method, indication, benefits, and risks depend on the clinical context.

Induction Of Labor

The artificial initiation of uterine contractions before the onset of spontaneous labor.

Induction Therapy

Intensive initial treatment aimed at achieving remission, especially in acute leukemias.

Indurated

Abnormally firm or hardened when palpated, usually because of inflammation, edema, fibrosis, infiltration, or a tumor within the skin or underlying

tissue.

Induration

Abnormal hardening of tissue, often detected by palpation and caused by inflammation, infection, edema, fibrosis, or a mass.

Industrial Bronchitis

Industrial bronchitis is chronic airway irritation and inflammation related to workplace dusts, fumes, or chemicals, causing cough, phlegm, and breathing limitation.

Industrial Disease

A disease caused or worsened by workplace exposures or conditions, such as chemicals, dust, noise, radiation, infection, or repetitive strain.

Industrial Health

The branch of occupational health concerned with preventing and managing illness and injury related to industrial work, workplace exposures, and working conditions.

Indwelling Catheter

A catheter left in place for ongoing drainage, infusion, monitoring, or access; urinary indwelling catheters require appropriate indications and care because they increase infection and trauma risk.

Indwelling Catheter Care

A patient-care topic concerning indwelling catheter care. It addresses the relevant purpose, risks, management, and follow-up.

Indwelling Pleural Catheter

A small-bore, flexible silicone tube with a polyester cuff and a one-way valve mechanism (such as the PleurX catheter) placed percutaneously into the pleural space and tunneled subcutaneously through the chest wall. It allows safe, intermittent outpatient drainage of recurrent symptomatic pleural effusions (most commonly malignant pleural effusion or trapped lung) by the patient or a caregiver, relieving dyspnea without requiring repeated tho-

racentesis or prolonged hospital stays, and often inducing spontaneous pleurodesis.

Alternate Names:

IPC; Tunneled Pleural Catheter; PleurX Catheter

Inertia

Resistance to a change in motion; in obstetrics, uterine inertia means weak or ineffective contractions that slow labor.

Infant

An infant is a child in the first year of life, a period of rapid growth and changing feeding, immune, neurologic, and developmental needs.

Infant - Newborn Development

The early growth of a newborn's body, brain, senses, movement, feeding, communication, and social responses during the first weeks and months.

Infant Botulism

A neuromuscular illness caused by intestinal colonization with *Clostridium botulinum* and production of botulinum neurotoxin in infants. It causes constipation, poor feeding, weak cry, hypotonia, facial weakness, and descending paralysis.

Infant Feeding

Provision of breast milk, appropriately prepared formula, or both to meet an infant's energy, protein, fluid, and micronutrient requirements. Feeding recommendations depend on age, growth, medical conditions, developmental readiness, and safe preparation practices.

Infant Formula

Infant formula is manufactured nutrition designed to provide adequate nutrients when breast milk is unavailable, insufficient, or not chosen; preparation and storage must be safe.

Infant Formulas

Commercial preparations designed to provide nutrition for infants when breast milk is unavailable, insufficient, or not chosen.

Infant Gynecomastia

Infant gynecomastia is temporary breast enlargement in a newborn or young infant caused by maternal or neonatal hormones and usually resolves spontaneously.

Infant Harlequin Syndrome

A transient, benign cutaneous vascular phenomenon in neonates characterized by asymmetric flushing of one half of the body with sharp midline demarcation, caused by transient asymmetric sympathetic tone. The affected side is red and warm while the contralateral side is pale.

Infant Incubators

Enclosed devices that provide controlled warmth, humidity, and monitoring for premature or ill newborns.

Infant Jaundice

Yellowing of a newborn's skin or eyes caused by excess bilirubin in the blood.

Infant Leukemia

Infant leukemia is leukemia diagnosed during infancy, in which abnormal blood-forming cells multiply and interfere with normal blood-cell production.

Infant Mortality

The death of an infant before the first birthday; the infant mortality rate is usually expressed per 1,000 live births.

Infant Nutrition

Nutritional support for infants through breast milk, appropriately prepared formula, and developmentally suitable complementary foods. Requirements change with age, growth, illness, prematurity, and feeding ability; unsafe preparation can cause infection or malnutrition.

Infant Of A Substance-Using Mother

A newborn exposed to alcohol or other substances during pregnancy who may need assessment for withdrawal, toxicity, feeding problems, or developmental

effects.

Infant Of Diabetic Mother

A newborn born to a mother with diabetes who may be at increased risk of large size, low blood sugar, breathing problems, jaundice, or congenital abnormalities.

Infant Reflex

An infant reflex is an automatic response present during early development, such as rooting, sucking, grasping, or startle, whose timing and symmetry help assess neurologic function.

Infant Reflexes

Automatic newborn responses such as rooting, sucking, Moro, grasp, and stepping that help assess neurologic development.

Infant Reflux

Backflow of stomach contents into an infant's esophagus, often causing spitting up.

Infant Sleep Position

Placing an infant on the back for every sleep is recommended to reduce the risk of sleep-related death. Infants should sleep on a firm, separate surface without pillows, loose bedding, bumpers, or stuffed toys.

Infant Test Procedure Preparation

Infant test procedure preparation includes age-appropriate instructions, feeding or fasting guidance, comfort measures, and safety steps before a test.

Infant, Post-Term

An infant born at or after 42 weeks of gestation, beyond the usual term-pregnancy period; risks depend on placental function, fetal condition, and circumstances of delivery.

Infanticide

The killing of a child, in law typically defined as the killing of a newborn or infant (usually within the

first year, or specifically within 24 hours of birth in some jurisdictions) by its mother while mentally disturbed by the effects of childbirth or lactation.

Infantile Colic

A behavioral syndrome in healthy infants characterized by episodes of excessive, inconsolable crying for >3 hours per day, >3 days per week, for >3 weeks (Wessel criteria). Onset typically at 2-3 weeks, peaks at 6-8 weeks, and resolves by 3-4 months of age.

Infantile Fibrosarcoma

Infantile fibrosarcoma is a rare soft-tissue cancer that usually develops in infants or young children and requires specialist treatment.

Infantile Hemangioma

Alternate index label; see *Hemangioma*.

Infantile Hepatic Hemangiomas

Benign vascular tumors of the liver occurring in infants, typically presenting within the first six months of life with hepatomegaly, high-output cardiac failure, consumptive hypothyroidism, or cutaneous hemangiomas. Large tumors may cause abdominal compartment syndrome and thrombocytopenia from Kasabach-Merritt phenomenon.

Infantile Paralysis (Polio)

Paralytic poliomyelitis caused by poliovirus infection involving motor neurons, which can produce acute flaccid paralysis and respiratory failure; vaccination prevents most cases.

Infantile Spasm

Infantile spasms are brief epileptic seizures in infancy, often in clusters with flexion or extension movements, and require urgent diagnosis and treatment to protect development.

Infantile Spasms

A severe seizure disorder of infancy characterized by brief, sudden flexion or extension spasms, often occurring in clusters and associated with developmental impairment.

Infarct

An area of dead tissue caused by inadequate blood supply.

Infarction

Tissue death caused by inadequate blood flow and oxygen, usually because a vessel is blocked. Examples include heart attack, brain infarction, and intestinal infarction. infarction.

Infection

Measures to prevent healthcare-associated infections: hand hygiene, personal protective equipment (PPE), isolation precautions (contact, droplet, airborne), sterilization, disinfection. See infection control.

Infection (Geriatric)

Infectious diseases in elderly often present atypically: fever may be absent, confusion may be sole symptom. Common infections: UTI, pneumonia, skin/soft tissue, bloodstream. Prevention: vaccination, hand hygiene, aspiration precautions. Treatment: earlier presentation, broader differential, drug interactions, renal dosing.

Alternate Names:

Geriatric

Infection Control

Measures to prevent healthcare-associated infections: hand hygiene, personal protective equipment (PPE), isolation precautions (contact, droplet, airborne), sterilization, disinfection. Multidrug-resistant organisms: MRSA, VRE, *C. difficile*, carbapenem-resistant Enterobacteriaceae.

Infection Cryptococcus (Cryptococcosis)

Alternate index label for Cryptococcosis.

Infection Cyclospora (Cyclospora Infection (Cyclosporiasis))

Alternate index label for Cyclospora Infection (Cyclosporiasis).

Infection Enterovirus (Enterovirus

(Non-Polio Enterovirus Infection))

Alternate index label for Enterovirus (Non-Polio Enterovirus Infection).

Infection HPV (HPV Infection Human Papillomavirus)

Alternate index label for HPV Infection Human Papillomavirus.

Infection Human Papillomavirus (HPV Infection Human Papillomavirus)

Alternate index label for HPV Infection Human Papillomavirus.

Infection Imaging

WBC scanning, gallium scanning, FDG PET. Detection of occult infection.

Infection Listeria (Listeria)

Alternate index label for Listeria.

Infection Non-Polio Enterovirus (Enterovirus (Non-Polio Enterovirus Infection))

Alternate index label for Enterovirus (Non-Polio Enterovirus Infection).

Infection Pinworms (Pinworm Infection)

Alternate index label for Pinworm Infection.

Infection Prevention

Measures that reduce the risk of infection, including hand hygiene, personal protective equipment, environmental cleaning, sterilization, disinfection, vaccination, and appropriate isolation precautions.

Infection Testicle (Testicular Disorders)

Alternate index label for Testicular Disorders.

Infection, Hospital-Acquired

An infection acquired during or as a result of health-care that was not present or incubating at the time of admission; it may be caused by bacteria, viruses, fungi, or other organisms.

Infection, Urinary Tract

Infection of part of the urinary system, commonly the bladder or urethra and sometimes the kidneys, usually caused by bacteria and producing symptoms such as burning urination, urgency, or flank pain.

Infections In Pregnancy

Listeriosis: *Listeria monocytogenes* (deli meats, soft cheese), meningoen­cephalitis, fetal loss, neonatal sepsis. Ampicillin + gentamicin. GBS: vaginal colonization 20-30 percent of pregnant women; universal screening at 35-37 weeks; intrapartum prophylaxis (penicillin G) for GBS-positive women to prevent early-onset neonatal disease.

Infectious Arteritis

Inflammation and damage of an artery caused by infection, which can weaken the vessel, reduce blood flow, or produce aneurysm.

Infectious Arthritis

Inflammation of a joint caused by infection, usually bacterial and sometimes viral or fungal. Acute pain, swelling, warmth, fever, and restricted movement require urgent evaluation because joint damage can develop quickly.

Infectious Conjunctivitis

Inflammation of the conjunctiva caused by a virus, bacterium, or less commonly another infectious organism, often causing redness and discharge.

Infectious Disease

Illness caused by a pathogen such as a bacterium, virus, fungus, or parasite. Infection may spread between people, from animals or the environment, or from organisms normally living in the body.

Infectious Dose

The number of viable organisms required to establish infection in a host under specified conditions. The dose depends on the pathogen, route of exposure, host defenses, and organism viability.

Infectious Encephalitis

Inflammation of the brain caused by an infectious organism, most often a virus.

Infectious Encephalomyelitis

Infection-related inflammation of the brain and spinal cord that may cause fever, headache, confusion, weakness, seizures, or other neurologic signs.

Infectious Enterocolitis

Infection-related inflammation of the small intestine and colon, commonly causing diarrhea, abdominal pain, fever, or vomiting.

Infectious Esophagitis

Inflammation of the esophagus caused by an infectious organism, most often *Candida*, herpes simplex virus, or cytomegalovirus in immunocompromised patients. It commonly causes painful swallowing, difficulty swallowing, and retrosternal pain.

Infectious Hepatitis

Alternate index label; see *Viral hepatitis*.

Infectious Mediastinitis

Infection and inflammation of the tissues in the middle of the chest, often after esophageal injury, surgery, or spread from a nearby infection.

Infectious Meningitis

Infection and inflammation of the membranes surrounding the brain and spinal cord. Bacterial meningitis is a medical emergency; headache, fever, neck stiffness, vomiting, confusion, or a new rash requires immediate medical attention.

Infectious Mononucleosis

A viral illness, usually caused by Epstein-Barr virus, characterized by fatigue, sore throat, and swollen lymph nodes.

Alternate Names:

Mono (Infectious Mononucleosis)

Infectious Myringitis

Inflammation and infection of the tympanic mem-

brane, often associated with viral or bacterial respiratory infection. It can cause severe ear pain, fever, hearing reduction, and small fluid-filled blisters on the eardrum.

Infective Cervicitis

Infective cervicitis is inflammation of the cervix caused by organisms such as chlamydia, gonorrhea, trichomonas, or herpes, producing discharge, bleeding, or pelvic discomfort.

Infective Cystitis

Infective cystitis is bacterial or other microbial inflammation of the bladder, causing urinary frequency, urgency, burning, and sometimes blood or fever.

Infective Endocarditis

Infection of the endocardial surface of the heart, most commonly affecting the heart valves. It is diagnosed using the Duke criteria, which include major criteria (positive blood cultures, echocardiographic evidence of vegetations) and minor criteria (predisposing heart condition, fever, vascular phenomena, immunologic phenomena).

Infective Phlebitis

Infective phlebitis is infection and inflammation of a vein, often around an intravenous catheter, causing pain, redness, swelling, and possible bloodstream infection.

Infective Vaginitis

Infective vaginitis is infection or inflammation of the vagina caused by yeast, bacteria, parasites, or viruses and may cause discharge, itching, odor, or pain.

Inferior

In standard anatomical directional terminology, situated below, downward, or directed toward the feet or caudal extremity of the body relative to another anatomical landmark (the opposite of superior). For example, the diaphragm lies inferior to the thoracic lungs and heart, and the inferior vena cava drains venous blood from structures located inferior to the

anatomical respiratory diaphragm.

Inferior Alveolar Nerve Block

A regional anesthetic injection near the mandibular foramen to anesthetize the inferior alveolar nerve before it enters the mandibular canal. It usually anesthetizes mandibular teeth on that side; the lingual nerve is often anesthetized incidentally.

Inferior Colliculus

The inferior colliculus is a midbrain auditory relay that integrates sound information and helps orient reflexively to auditory stimuli.

Inferior Hemifield Loss

Loss of vision in the lower half of the visual field in one or both eyes, which localises to lesions of the superior retina or superior optic radiations passing through the parietal lobe. Causes include superior retinal detachment, branch retinal artery occlusion, and parietal lobe stroke.

Inferior Mesenteric Artery

Third major abdominal aortic branch at L3, the hindgut artery. Supplies distal transverse colon through rectum. Branches: left colic, sigmoid, superior rectal. The marginal artery of Drummond provides SMA-IMA collateral circulation. Occlusion may cause ischemic colitis at the splenic flexure watershed (Griffiths' point).

Inferior Myocardial Infarction

A heart attack affecting the lower or inferior portion of the heart muscle.

Inferior Vena Cava

Body's largest vein, formed by common iliac vein union at L5, returning lower body deoxygenated blood to the right atrium. Ascends right of the aorta, pierces the diaphragm at T8, enters the pericardium. Receives hepatic, renal, gonadal, and lumbar veins. IVC thrombosis/compression causes bilateral lower extremity edema and DVT.

Inferolateral

Located below and toward the side of a reference structure.

Infertility

Infertility is failure to achieve pregnancy after a defined period of regular unprotected intercourse, reflecting factors involving ovulation, sperm, reproductive anatomy, age, or unexplained causes. to conceive or carry a pregnancy. Causes may involve ovulation, reproductive anatomy, sperm, age-related fertility, medical conditions, or unexplained factors.

Alternate Names:

Subfertility

Infertility, Female

Alternate index label; see *Female infertility*.

Infertility, Male

Alternate index label; see *Male infertility*.

Infestation

The presence or invasion of parasitic organisms, such as lice, mites, or worms, on or in the body.

Infiltrate

Patchy lung opacity detected on imaging. Non-specific, may represent infection, edema, hemorrhage, inflammation.

Infiltrating Cancer

Cancer that has grown beyond its site of origin into surrounding tissue.

Alternate Names:

Invasive cancer

Infiltrating Ductal Carcinoma

Alternate index label; see *Invasive ductal carcinoma*.

Infiltration

Entry or accumulation of cells, fluid, or another substance within tissue. In clinical care, intravenous infiltration means leakage of nonvesicant fluid into surrounding tissue; extravasation of an irritant or vesicant can cause serious injury.

Inflamed Gallbladder

Alternate index label; see *Cholecystitis*.

Inflamed Pancreas

Alternate index label; see *Pancreatitis*.

Inflamed Pericardium

Alternate index label; see *Pericarditis*.

Inflammaging

Persistent, low-grade, age-associated inflammatory activity linked to cellular senescence, immune dysregulation, chronic infection, tissue injury, and comorbidity. It contributes to frailty, atherosclerosis, sarcopenia, and neurodegenerative disease.

Inflammasomes

Multiprotein complexes activating caspase-1 → cleavage of pro-IL-1β/pro-IL-18 → mature IL-1β/IL-18 + pyroptosis (gasdermin D pores). Canonical: NLRP3 (crystals, ATP, K⁺ efflux, ROS, lysosomal rupture), NLRC4 (flagellin, T3SS), AIM2 (cytosolic DNA), Pyrin (RhoA inactivation).

Inflammation

The body's protective response to injury or infection. Cardinal signs: redness (rubor), heat (calor), swelling (tumor), pain (dolor), loss of function (functio laesa). Mediators: histamine, prostaglandins, cytokines, complement. Acute: neutrophil-predominant. Chronic: lymphocyte/macrophage-predominant.

Inflammation (Dietary)

Chronic low-grade inflammation linked to diet. Western diet pro-inflammatory (saturated fat, sugar, refined grains). Mediterranean diet anti-inflammatory.

Alternate Names:

Dietary

Inflammation Imaging

FDG PET sensitive for inflammatory processes. Differentiate infection from malignancy challenging.

Inflammation Of The Heart Valve (Endocarditis)

Alternate index label for Endocarditis.

Inflammation Sclera (Scleritis)

Alternate index label for Scleritis.

Inflammation Vaginal (Vaginitis Overview)

Alternate index label for Vaginitis Overview.

Inflammatory Back Pain

A pattern of chronic back pain characterized by insidious onset, improvement with exercise, lack of improvement with rest, nocturnal pain, and prolonged morning stiffness. It suggests axial spondyloarthritis but is not diagnostic without supportive clinical, laboratory, and imaging findings.

Inflammatory Bowel Disease

A group of chronic conditions that cause inflammation in the digestive tract, mainly Crohn disease and ulcerative colitis. Symptoms may come and go and can include abdominal pain, diarrhea, rectal bleeding, and weight loss. The exact cause is unknown, but genes, the immune system, the environment, and gut bacteria may all play a role.

Inflammatory Bowel Disease Diet

Crohn disease, ulcerative colitis. Nutritional support during flares. Exclusive enteral nutrition for Crohn induction. Individual triggers vary.

Inflammatory Bowel Disease: Intestinal Problems

Inflammatory bowel disease, including Crohn disease and ulcerative colitis, causes chronic immune-mediated intestinal inflammation with diarrhea, pain, bleeding, weight loss, and extraintestinal effects. Treatment aims for sustained remission and prevention of structural and nutritional complications.

Alternate Names:

IBD (Inflammatory Bowel Disease: Intestinal Problems)

Inflammatory Bowel Disease: Intestinal Problems

Alternate index label for Inflammatory Bowel Disease: Intestinal Problems.

Inflammatory Breast Cancer

A rare, rapidly progressing breast cancer that causes redness, swelling, and skin thickening.

Alternate Names:

Breast Cancer, Inflammatory Cancer, Inflammatory Breast

Inflammatory Myopathies

A group of autoimmune disorders characterized by chronic muscle inflammation and progressive proximal muscle weakness. The three main types are dermatomyositis, polymyositis, and inclusion body myositis.

Inflammatory Response

The coordinated vascular and immune reaction to infection, tissue injury, or other danger signals, producing mediator release, leukocyte recruitment, and changes in blood flow and permeability.

Infliximab

A medicine or chemical compound called infliximab. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Influenza

A contagious respiratory illness caused by influenza A or B viruses, characterized by sudden onset of fever, myalgia, headache, malaise, nonproductive cough, sore throat, and nasal congestion. Seasonal epidemics occur annually. Complications: pneumonia (primary viral or secondary bacterial), exacerbation of underlying conditions.

Influenza (Flu)

A contagious respiratory infection caused by influenza viruses, commonly producing fever, cough, body aches, fatigue, and respiratory symptoms.

Influenza A Virus

An influenza virus with segmented RNA that infects people and animals and can cause seasonal epidemics or, after major genetic changes, pandemics.

Influenza Test

A test for influenza A or B using a respiratory specimen. Rapid antigen tests provide quick results but may miss infection. Molecular tests are generally more sensitive and may identify or subtype influenza viruses; results must be interpreted with symptoms, timing, and local laboratory methods.

Influenza Vaccination In Pregnancy

Annual inactivated influenza vaccine recommended for all pregnant women. Pregnancy increases the risk of severe influenza (pneumonia, ICU admission, death) due to changes in immune function and cardiopulmonary physiology.

Influenza Virus

A segmented, negative-sense RNA virus belonging to the Orthomyxoviridae family. Influenza causes seasonal epidemics and occasional pandemics of respiratory illness. The virus has two surface glycoproteins: hemagglutinin (HA), which mediates attachment, and neuraminidase (NA), which facilitates release.

Influenza, Avian

Alternate index label; see *Bird flu (avian influenza)*.

Influenza, H1N1

Alternate index label; see *H1N1 flu (swine flu)*.

Influenza, Swine Flu

Alternate index label; see *H1N1 flu (swine flu)*.

Influenzavirus A

The virus genus containing influenza A viruses, which are classified into subtypes by their hemagglutinin and neuraminidase proteins.

Influenzavirus B

The virus genus containing influenza B viruses,

which mainly infect humans and cause seasonal respiratory illness.

Informatics

Informatics applies information science, data, computing, and human factors to organize and improve healthcare, biology, research, or another field.

Informative

Informative means providing useful information or evidence that improves understanding, decision-making, diagnosis, or evaluation.

Informed Consent

A patient's voluntary agreement to a proposed intervention after receiving understandable information about its purpose, benefits, risks, alternatives, and the option of declining, with decision-making capacity or appropriate authorization.

Informed Consent (Geriatric)

Process of obtaining voluntary authorization from elderly patient with decision-making capacity. Capacity assessment: understanding, appreciation, reasoning, communication of choice. Impaired capacity may require surrogate decision-maker.

Alternate Names:

Geriatric

Informed Consent - Adults

Informed consent requires an adult patient to receive understandable information about a proposed intervention, benefits, risks, alternatives, and refusal before deciding voluntarily.

Infrared Rays

Infrared rays are electromagnetic radiation with wavelengths longer than visible red light; excessive exposure can heat tissue and cause burns.

Infrared Spectrometry

Infrared spectrometry identifies or measures substances by how they absorb infrared light.

Infrarenal Aorta

The infrarenal aorta is the portion of the abdominal aorta below the renal arteries and above its division into the iliac arteries.

Infratentorial Neoplasm

An infratentorial neoplasm is an abnormal growth in the posterior fossa, the part of the skull containing the cerebellum and brainstem.

Infrequent

Infrequent means occurring less often than usual or expected, such as infrequent bowel movements, symptoms, or events.

Infundibulopelvic Ligament

A prominent peritoneal fold extending from the tubal pole of each ovary to the lateral pelvic sidewall. Serves as the vital anatomical conduit transmitting the ovarian artery, ovarian venous plexus, lymphatic channels, and autonomic nerve fibers to and from the ovary; represents the critical vascular pedicle isolated, doubly ligated, and divided during oophorectomy, with surgical care required to avoid injuring the underlying ureter crossing into the pelvis.

Alternate Names:

Suspensory Ligament of the Ovary; IP Ligament

Infuse

To introduce a fluid, medicine, or other substance gradually into the body, commonly through an intravenous line; it can also mean to soak a substance in a liquid.

Infusion

Slow administration of a fluid or medicine into a vein or tissue.

Alternate Names:

Intravenous infusion

Infusion Pump

Device controlling IV fluid delivery rate. Types: syringe pump, volumetric pump, elastomer. Precision: mL/hour. Alarms: occlusion, air embolism,

completion.

Ingestion

The act of taking a substance into the digestive tract by swallowing. Ingestion of a toxic substance can cause poisoning.

Ingredient

An ingredient is a substance included in a medicine, food, cosmetic, or other preparation, whether active or inactive.

Ingrown Hair

A hair that curls back into the skin or grows sideways, causing an inflamed bump.

Ingrown Nail

An ingrown nail occurs when the nail edge grows into surrounding skin, causing pain, redness, swelling, and sometimes infection or granulation tissue.

Ingrown Toenail

Ingrown toenail (onychocryptosis) occurs when the nail edge grows into the surrounding skin, causing pain, redness, and swelling. It is common in adolescents and adults, exacerbated by improper nail trimming, tight shoes, and trauma. Treatment includes partial nail avulsion with matrixectomy (phenol application) for recurrent cases.

Alternate Names:

Onychocryptosis (Ingrown Toenail)

Inguinal

Relating to the groin, the region where the lower abdomen meets the upper thigh.

Inguinal Canal

An oblique passage (4 cm) through the anterior abdominal wall, from the deep (internal) inguinal ring to the superficial (external) inguinal ring, transmitting the spermatic cord in males and round ligament in females, plus ilioinguinal and genital branch of genitofemoral nerves.

Inguinal Hernia

Protrusion of abdominal contents through the inguinal canal. Indirect (lateral to inferior epigastric vessels, through deep inguinal ring): congenital, patent processus vaginalis; most common overall (60-70%), male predominance.

Inguinal Hernia Repair

A medical procedure involving inguinal hernia repair. Indications, risks, preparation, and follow-up depend on the patient and the specific procedure.

Inguinal Orchiectomy

Inguinal orchiectomy is removal of a testicle through an incision in the groin, commonly used when treating suspected testicular cancer.

Inguinal Region

Area at the thigh-trunk junction traversed by the inguinal ligament (ASIS to pubic tubercle). Clinically significant for inguinal hernias: indirect (through deep inguinal ring, most common) and direct (through Hesselbach's triangle).

Inhalant

A substance breathed into the lungs as a gas, vapor, aerosol, or smoke; inhalants may be medicines, workplace substances, or abused chemicals.

Inhalation

Drawing air, medicine, particles, or vapors into the lungs. Inhalation is a route for respiratory medicines and anesthetics, while accidental inhalation of food, vomit, smoke, or toxic substances can cause airway obstruction or lung injury.

Inhalation Injury

Thermal or chemical injury to the airway or lungs caused by smoke, heated gases, or toxic combustion products. It can produce upper-airway edema, bronchospasm, impaired mucociliary clearance, and carbon-monoxide or cyanide toxicity and may worsen after the initial burn.

Inhalational Anesthesia

Anesthetic maintenance or induction using volatile liquids or gases delivered through the respiratory tract. Depth is influenced by inspired concentration, alveolar ventilation, uptake, distribution, and the agent's blood-gas solubility.

Inhaled Corticosteroids

Anti-inflammatory medications delivered directly to the airways, reducing airway inflammation, mucus production, and bronchial hyperresponsiveness. Examples include fluticasone, budesonide, beclomethasone, and mometasone. They are the cornerstone of asthma maintenance therapy. Side effects include oral candidiasis and dysphonia.

Inhaled Nitric Oxide

A selective pulmonary vasodilator used in acute settings (acute respiratory failure, right heart failure, post-cardiac surgery). It reduces pulmonary vascular resistance and improves oxygenation by dilating well-ventilated pulmonary vessels (improving V/Q matching). It has a short half-life and requires continuous delivery.

Inhaler

Device for administering aerosolized medication. Types: MDI (metered-dose), DPI (dry powder).

Inherited Disease

A disease caused wholly or partly by genetic changes passed from parents or arising in a reproductive cell or early embryo.

Inhibin

A glycoprotein hormone produced mainly by the gonads that suppresses pituitary follicle-stimulating hormone secretion and contributes to regulation of reproductive function.

Inhibition

Inhibition is a reduction or suppression of an activity, such as nerve signalling, enzyme action, muscle contraction, or cell growth.

Inhibitory Neurochemical

A chemical messenger that decreases the activity of nerve cells or muscles. Gamma-aminobutyric acid and glycine are important inhibitory neurotransmitters in the nervous system.

Alternate Names:

Inhibitory neurotransmitter

Inhibitory Synapse

A connection between nerve cells that reduces the chance that the receiving cell will generate an electrical signal.

Iniiencephaly

A rare, usually lethal neural-tube defect characterized by occipital bone defect, severe retroflexion of the head, and marked shortening or distortion of the cervical and thoracic spine. It is often identified prenatally and may occur with other congenital anomalies.

Iniparib

An investigational anticancer drug studied for effects on DNA repair and tumor-cell survival; it is not a standard treatment for most cancers.

Initial Insomnia

Initial insomnia is difficulty falling asleep at the beginning of the sleep period, often related to stress, habits, medicines, mood, or another sleep disorder.

Injectable Fillers

Materials injected beneath or into skin to restore volume or soften wrinkles.

Alternate Names:

Dermal fillers

Injection

Introduction of a medication, fluid, or other substance into the body with a needle or other injection device.

Injury

Damage to the body's tissues or function caused by trauma, force, heat, chemicals, radiation, or another

harmful exposure.

Injury - Kidney And Ureter

Damage to the kidney or ureter from trauma, obstruction, surgery, infection, or other causes; severe injury can impair urine flow or kidney function.

Injury Classification (Abrasion, Laceration, Contusion, Incised Wounds)

Forensic categorization of mechanical wounds. Abrasion: superficial friction injury affecting only the epidermis (e.g., scrape, graze, pattern abrasion).

Alternate Names:

Abrasion, Laceration, Contusion, Incised Wounds

Injury Dating

Estimation of the age of an injury using clinical appearance, histopathology, imaging, and the history of symptoms. Exact dating is often uncertain, particularly for bruises and soft-tissue injuries, and findings should be reported with appropriate limitations.

Injury Site

The body location where an injury occurred or where its effects are being evaluated.

Ink Poisoning

Illness after swallowing or significant exposure to ink; most small pen-ink exposures cause little toxicity, but symptoms depend on the product and amount.

Ink Remover Poisoning

Poisoning caused by chemicals used to remove ink, which may irritate the skin, eyes, lungs, or digestive tract and may cause systemic toxicity.

Innate Immune Evasion

Mechanisms by which pathogens evade the innate immune system. Strategies include capsules that prevent phagocytosis, biofilms that protect against immune cells, and intracellular survival within macrophages. Some bacteria produce enzymes that degrade complement components. Others modify their surface molecules to avoid recognition.

Innate Immunity

First line of defense against pathogens, present from birth. Rapid (minutes to hours), germline-encoded, lacks immunological memory.

Innate Lymphoid Cells

ILCs: lymphoid lineage, no rearranged antigen receptors, mirror Th subsets. ILC1 (T-bet, IFN-gamma): intracellular pathogens, IBD. ILC2 (GATA3, IL-5/13): helminths, allergy, asthma, tissue repair. ILC3 (ROR-gammat, IL-17/22): extracellular bacteria/fungi, lymphoid organogenesis.

Inner Ear

The deepest part of the ear, consisting of the cochlea and the labyrinth.

Inner Ear Infection

Inner-ear inflammation can affect hearing and balance, producing vertigo, nausea, tinnitus, or hearing loss. Causes include viral infection, bacterial disease, autoimmune inflammation, or other disorders; sudden hearing loss, severe imbalance, or neurologic signs requires urgent assessment.

Innervation

The nerve supply to an organ, muscle, or area of the body, including the functional control provided by those nerves.

Innominate

Innominate means unnamed; in anatomy it may refer to structures such as the innominate artery or innominate bone, depending on context.

INOCA

Ischemia with non-obstructive coronary arteries: objective myocardial ischemia or ischemic symptoms in a patient whose coronary arteries do not have an obstructive epicardial stenosis. Mechanisms include coronary microvascular dysfunction and vasospastic angina; evaluation should identify the mechanism so treatment can be tailored.

Inoculation

The introduction of microorganisms or clinical material into a culture medium, host, or sterile site to initiate growth, infection, or immune response.

Inoperable

Not suitable for surgical treatment, often because surgery cannot safely remove or correct the condition.

Inorganic

Inorganic is an immunologic, genetic, infectious, developmental, or cellular concept used to explain disease mechanisms, diagnosis, or treatment.

Inorganic Chemical

inorganic chemical is a biochemical reaction, pathway, or chemical process in which molecules are transformed; its rate and effects depend on substrates, enzymes, and cellular conditions.

Inosculation

The joining and establishment of a connection between blood vessels or vascularized tissues, important in wound healing, grafts, flaps, and transplantation.

Inosine

A nucleoside made of hypoxanthine linked to ribose that participates in purine metabolism and cellular energy pathways.

Inosine Monophosphate

A nucleotide containing inosine and one phosphate group; it is an intermediate in purine metabolism and a precursor of other nucleotides.

Inosine Pranobex

A medicine combination marketed in some countries as an immunomodulator or antiviral; evidence and approved uses vary by jurisdiction.

Inositol

A sugar-like compound involved in cell membranes and signaling; some forms are studied or used for

selected metabolic, reproductive, or mental-health conditions.

Inositol Phosphates

Phosphorylated forms of inositol that act in cell signaling, calcium regulation, and other intracellular processes.

Inotropes In Anesthesia

Inotropes increase myocardial contractility. Dobutamine is a beta-1 and beta-2 agonist increasing cardiac output with minimal effect on heart rate. Dose: 2 to 20 mcg/kg/min infusion. Milrinone is a phosphodiesterase-3 inhibitor increasing contractility and causing vasodilation.

Inotropic

Affecting the force of cardiac muscle contraction; a positive inotropic drug increases contractility, while a negative inotropic effect decreases it.

Inpatient

An inpatient is a person admitted to a healthcare facility for monitoring, diagnosis, treatment, surgery, or care requiring an overnight or formal stay.

Inpatient Rehabilitation

Intensive inpatient rehabilitation (3+ hours therapy/day) for acute conditions: stroke, spinal cord injury, traumatic brain injury, major trauma. See acute rehabilitation.

Inquilinus

A genus of gram-negative bacteria associated mainly with water and industrial environments; human infection is rare.

Inquilinus Limosus

A species of Inquilinus bacteria rarely isolated from human clinical specimens and occasionally associated with opportunistic infection.

INR

International normalized ratio: a standardized measure of the prothrombin time, calculated as

(patient PT/mean normal PT)^{ISI}, to ensure consistent monitoring of vitamin K antagonist (warfarin) therapy across laboratories. Target INR: 2-3 for most indications (AF, VTE); 2.5-3.5 for mechanical heart valves.

Insect Bite

A cutaneous reaction resulting from the injection of salivary contents from an insect during feeding, causing a localized or systemic hypersensitivity response. Common presentations include a pruritic papule or wheal with surrounding erythema. Severe reactions may include anaphylaxis, particularly with Hymenoptera stings.

Insect Bites

Skin injuries caused by an insect feeding or injecting saliva or venom, producing local inflammation and sometimes allergic, infectious, or systemic reactions.

Insect Bites And Stings

Insect bites and stings can cause local pain, itching, swelling, allergic reactions, infection, or toxin effects; breathing difficulty or widespread symptoms is an emergency.

Insect Sting Allergies

Immune reactions to venom from insects such as bees, wasps, hornets, and fire ants. Reactions may be local or systemic; generalized hives, breathing difficulty, dizziness, vomiting, or throat swelling may indicate anaphylaxis and require emergency treatment.

Alternate Names:

Allergy Insect (Insect Sting Allergies)

Insect Virus

A virus that infects insects or other arthropods; some are studied for ecology or biological pest control rather than human disease.

Insecta

insecta is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Insecticide

A chemical or biological agent used to kill or control insects. Exposure can cause skin, eye, respiratory, neurologic, or cholinergic toxicity depending on the product; prevention and treatment require identifying the active ingredient.

Insecticide Poisoning

Toxic effects caused by exposure to an insect-killing chemical; symptoms vary by agent and may include gastrointestinal, neurologic, respiratory, or cholinergic manifestations.

Insemination

Introduction of sperm into the female reproductive tract, either through intercourse or an assisted-reproduction procedure such as intrauterine insemination. Indications, success rates, infection screening, and risks depend on the method and patient factors.

Insertion

Movement of a muscle attachment toward its fixed attachment, or placement of one structure into another.

Insidious

Developing slowly and subtly, often without obvious early symptoms. An insidious disease may be advanced before it is recognized.

Insinuate

To introduce or insert gradually into a space, or to suggest something indirectly; in anatomy, a structure may insinuate between or around other structures.

Insomnia

Insomnia is persistent difficulty initiating or maintaining sleep, or early awakening, with daytime impairment despite adequate opportunity and circumstances for sleep. too early despite adequate opportunity for sleep, with resulting daytime impairment. It may be acute or chronic and is often triggered by stress, anxiety, depression, or poor sleep habits.

Alternate Names:

Sleeplessness

Insomnia Disorder

Difficulty initiating or maintaining sleep, or early-morning awakening with inability to return to sleep, at least three nights per week for at least three months. The individual experiences clinically significant distress or impairment in functioning.

Inspection

Systematic visual examination of the body or a specimen for abnormalities such as color change, swelling, deformity, lesions, movement, or discharge. the patient's overall appearance, posture, body habitus, gait, skin color, nutritional status, respiratory effort, and specific anatomical regions. Requires adequate lighting and proper patient exposure.

Inspiration (Inhalation)

The active physiological phase of the respiratory ventilatory cycle during which ambient air is drawn into the lungs through the tracheobronchial tree. Initiated by contraction of the diaphragm (innervated by phrenic nerves C3–C5), which flattens downward, along with external intercostal muscle contraction, expanding thoracic cavity dimensions. This generates negative intrapleural and intrapulmonary (subatmospheric) pressure relative to atmospheric pressure, overcoming airway resistance and lung elastic recoil to inflate the pulmonary alveoli until alveolar pressure equilibrates with atmospheric pressure.

Inspiratory Capacity

Inspiratory capacity is the maximum volume inhaled after a normal exhalation and equals tidal volume plus inspiratory reserve volume.

Inspiratory Crackles

Fine, discontinuous sounds heard during inspiration, caused by the sudden opening of collapsed airways. They are a hallmark of interstitial lung disease (bibasilar, Velcro-like crackles) and pulmonary fibrosis. They are also heard in pneumonia, atelectasis, and heart failure.

Inspiratory Time

Inspiratory time is the duration of inhalation during a breath or mechanical-ventilation cycle.

Instantaneous Wave-Free Ratio

A resting invasive physiological index of coronary artery stenosis severity measured during catheterization using a specialized intracoronary pressure wire. Unlike fractional flow reserve, which requires maximal pharmacological hyperemia induced by adenosine, iFR calculates the ratio of distal coronary pressure to aortic pressure (P_d/P_a) specifically during a designated wave-free period in diastole when intracoronary microvascular resistance is naturally minimal and constant. Large randomized trials (DEFINE-FLAIR and iFR-SWEDEHEART) confirmed that an iFR threshold of ≤ 0.89 is non-inferior to FFR (≤ 0.80) for guiding revascularization.

Alternate Names:

iFR; Wave-Free Ratio; Resting Coronary Physiology

Instillation

Instillation is the gradual introduction of a liquid medicine or solution into a body cavity, organ, or tissue.

Instrument

A tool or device used for examination, measurement, diagnosis, surgery, treatment, or laboratory work.

Instrument Sterilization

A validated process that destroys all forms of microbial life, including bacterial spores, on or within a medical instrument. Common methods include steam under pressure, ethylene oxide, hydrogen-peroxide plasma, and dry heat, selected according to device material and design.

Instrumental Activities Of Daily Living

More complex activities required for independent community living, including medication management, shopping, cooking, finances, communication, transportation, and household tasks.

Instrumental ADL

A complex activity needed for independent community living, such as shopping, cooking, managing medicines or finances, and using transportation.

Insufficient Cervix

Painless cervical shortening and dilation during the second trimester, also called cervical insufficiency. It can cause recurrent mid-trimester pregnancy loss or spontaneous preterm birth without regular uterine contractions.

Alternate Names:
cervical insufficiency.

Insula

The insula is a cerebral cortical region involved in sensation, taste, emotion, interoception, pain, and integration of internal and external information.

Insulin

A pancreatic hormone that helps cells take up glucose and lowers blood glucose.

Insulin And Syringes - Storage And Safety

A patient-care topic concerning insulin and syringes - storage and safety. It addresses the relevant purpose, risks, management, and follow-up.

Insulin Antagonist

A hormone, medicine, or other factor that opposes insulin's effects and can raise blood glucose.

Insulin Aspart

A rapid-acting insulin analog (modified amino acid sequence) with onset 10-20 minutes, peak 1-3 hours, duration 3-5 hours. Used to cover prandial glucose (injected at or just after meals) in type 1 and type 2 diabetes; also used in continuous subcutaneous insulin infusion (pump) and IV in acute settings.

Insulin Autoantibodies

Autoantibodies directed against insulin or other pancreatic beta-cell antigens, including GAD, IA-2, and ZnT8 antibodies. Their presence supports

autoimmune type 1 diabetes but a negative panel does not exclude it.

Insulin C-Peptide Test

A blood or urine test measuring C-peptide released in equal amounts with endogenous insulin; it helps distinguish native insulin production from injected insulin and evaluate hypoglycemia or diabetes classification.

Insulin Coma

A state of severe hypoglycemia and unconsciousness caused by excessive insulin; it is a medical emergency and is not a current routine treatment.

Insulin Detemir

A long-acting insulin analogue used to provide basal insulin replacement in diabetes mellitus; dosing is individualized and hypoglycemia is the principal serious adverse effect.

Insulin Glargine

A long-acting basal insulin analog with a flat, peakless profile providing near-24-hour coverage, administered once daily (or twice in some patients). Formed by modification of human insulin producing slow, steady absorption from the injection depot. Used for type 1 and type 2 diabetes (basal component).

Insulin Injection Technique

Insulin is injected into subcutaneous tissue using the prescribed device, dose, and site. Common sites include the abdomen, thighs, buttocks, and upper arms; rotating sites helps reduce lipohypertrophy and variable absorption. Technique should be individualized to the person and device.

Insulin Isophane

Intermediate-acting human insulin, also called neutral protamine Hagedorn insulin, used for basal glucose control in diabetes mellitus.

Insulin Lipohypertrophy

Thickened fatty tissue at repeated insulin-injection

sites. Injecting into these areas can make insulin absorption unpredictable.

Insulin Lispro

A rapid-acting insulin analogue used around meals or for correction of high blood glucose in diabetes mellitus.

Insulin Pen Devices

Pre-filled or reusable insulin pen devices providing convenient and accurate insulin delivery. Benefits include portability precision dosing discrete injection and reduced needle phobia.

Insulin Preparations

Hormone synthesized by pancreatic beta cells that regulates glucose homeostasis by promoting glucose uptake in skeletal muscle and adipose tissue, suppressing hepatic glucose production, and inhibiting lipolysis.

Insulin Pump Therapy

Continuous subcutaneous insulin infusion delivering rapid-acting insulin analog through a catheter placed subcutaneously typically in the abdomen. Provides basal insulin at programmed rates and bolus doses at mealtimes.

Insulin Pumps

Insulin pumps deliver rapid-acting insulin continuously and through programmed meal or correction doses, allowing flexible management of diabetes while requiring monitoring and device safety.

Insulin Receptor

A transmembrane receptor tyrosine kinase that binds insulin and initiates signaling controlling glucose uptake, metabolism, growth, and anabolic processes.

Insulin Resistance

Diminished biological response to physiological insulin concentrations resulting in impaired glucose disposal in peripheral tissues and failure to suppress hepatic glucose production. Pathophysiological hall-

mark of type two diabetes and metabolic syndrome.

Alternate Names:

IR (Insulin Resistance)

Insulin Resistance

Alternate index label for Insulin Resistance.

Insulin Resistance Syndrome

Alternate index label; see *Metabolic syndrome*.

Insulin Resistance Syndromes

Rare inherited severe insulin resistance syndromes include Donohue syndrome also known as leprechaunism, Rabson-Mendenhall syndrome, and type A insulin resistance syndrome caused by mutations in the insulin receptor gene. Donohue syndrome is the most severe with death in infancy.

Insulin Secretion

Release of insulin from pancreatic beta cells in response primarily to increased plasma glucose, with amplification by incretin hormones and nutrients. Insulin promotes glucose uptake, glycogen synthesis, lipogenesis, and protein synthesis while suppressing hepatic glucose production.

Insulin Shock

Severe hypoglycemia, historically associated with excessive insulin and characterized by confusion, seizures, loss of consciousness, or other neurologic dysfunction.

Insulin Signaling

The cellular process initiated when insulin binds its receptor and activates pathways that regulate glucose uptake, glycogen formation, protein synthesis, and fat metabolism.

Insulin-Dependent Diabetes

Type 1 diabetes, in which the pancreas produces little or no insulin and replacement insulin is required.

Alternate Names:

Type 1 diabetes

Insulin-Induced Lipohypertrophy

A common complication of subcutaneous insulin therapy characterized by localized accumulation of adipose tissue at injection sites, caused by the lipogenic effect of insulin on subcutaneous fat. It presents as firm, rubbery, non-tender subcutaneous nodules that can cause unpredictable insulin absorption and glycemic variability.

Insulin-Like Growth Factor

IGF-1 promotes growth. Produced in liver in response to GH.

Insulinase

An enzyme that breaks down insulin, helping regulate how long insulin remains active.

Insulinoma

An insulinoma is a usually benign pancreatic beta-cell neuroendocrine tumour that secretes excessive insulin, causing recurrent fasting or exertional hypoglycaemia relieved by glucose.

Integrase

Integrase is an enzyme that inserts viral DNA into a host genome, a process targeted by integrase inhibitors used in HIV treatment.

Integrative Medicine

Patient-centered care that combines evidence-based conventional treatment with appropriate complementary approaches, emphasizing whole-person health, prevention, lifestyle, and shared decision-making.

Integrative Rehabilitation

Combination of conventional and complementary therapies: acupuncture, massage, yoga, meditation.

Integrin

A cell-surface receptor that links cells to the extracellular matrix and helps control adhesion, movement, signaling, and immune-cell activity.

Integrin Binding

The attachment of a molecule or cell to an integrin receptor, which can influence adhesion, migration, signaling, or clot formation.

Integron

A genetic element containing an integrase and an attachment site that can capture and express gene cassettes; integrons commonly contribute to bacterial antimicrobial resistance.

Integrons

Genetic elements that capture and express gene cassettes through site-specific recombination. Integrons contain an integrase gene and a recombination site for gene cassette insertion. They are important vehicles for the spread of antibiotic resistance genes, particularly in gram-negative bacteria.

Integumentary System

The body system comprising the skin and its appendages: hair, nails, sweat glands, and sebaceous glands. It forms a protective barrier, limits fluid loss, contributes to thermoregulation and sensation, supports immune defence, and participates in vitamin D synthesis.

Intein

An intein is a protein segment that excises itself from a precursor protein while joining the surrounding extein sequences.

Intellectual Disability

Neurodevelopmental disorder with onset in the developmental period, characterised by deficits in intellectual and adaptive functioning across conceptual, social, and practical domains. DSM-5 grades severity by adaptive functioning: mild, moderate, severe, profound.

Intelligence

Intelligence is the capacity to learn, reason, solve problems, understand information, and adapt; tests measure selected abilities rather than a person's entire worth or potential.

Intelligence Test

An intelligence test uses standardized tasks to estimate cognitive abilities such as reasoning, memory, language, and problem-solving.

Intense Pulsed Light

Broadband light treatment used for selected cosmetic skin conditions and hair reduction.

Alternate Names:

IPL

Intensity

The degree of effort or physiological demand during physical activity.

Intensity-Modulated Radiation Therapy

A computer-optimized form of three-dimensional radiation therapy that shapes and modulates the radiation dose to conform tightly to the target while sparing adjacent normal tissue.

Intensive Care

A patient-care topic concerning intensive care. It addresses the relevant purpose, risks, management, and follow-up.

Intensive Care Rehabilitation

Early rehabilitation in ICU setting. Early mobilization, positioning, passive range of motion. Improves outcomes, reduces complications.

Intensive Care Unit

A specialist hospital unit providing continuous monitoring and life support for critically ill patients. In obstetrics, women may require ICU admission for: severe pre-eclampsia or eclampsia, massive postpartum hemorrhage, amniotic fluid embolism, sepsis, cardiac disease in pregnancy, or complications of anesthesia.

Intention Tremor

A tremor that becomes more pronounced during a purposeful movement toward a target. It commonly suggests cerebellar or cerebellar-pathway dysfunction, although medicines, toxins, and other neuro-

logic disorders can contribute.

Interatrial Septum

The wall separating the right and left atria. It contains the fossa ovalis, a remnant of the foramen ovale from fetal circulation. The interatrial septum has a thinner area where transseptal puncture can be performed during cardiac catheterization.

Intercalated Disc

An intercalated disc is a specialized junction connecting cardiac muscle cells and transmitting electrical and mechanical force through the heart.

Intercalating Agent

An intercalating agent inserts between DNA base pairs and can disrupt replication or transcription; some are laboratory reagents or anticancer drugs.

Intercellular

Intercellular means located between cells or occurring in the space between cells.

Intercostal

Intercostal means located between the ribs, especially the muscles, nerves, and blood vessels in those spaces.

Intercostal Muscles

Muscles between the ribs that help expand and compress the chest during breathing and also assist movement of the trunk.

Intercostal Retraction

Inward movement of the skin and soft tissues between the ribs during inspiration, indicating increased work of breathing. It is common in infants and children with respiratory distress and may accompany airway obstruction, bronchiolitis, pneumonia, asthma, or other pulmonary disease.

Intercostal Retractions

Inward pulling of the skin and soft tissues between the ribs during inspiration, indicating increased work of breathing and potentially significant res-

piratory distress.

Intercurrent Disease

An illness or complication that develops during the course of another disease or treatment and may affect its management or outcome.

Interdental Brush

Small brush for cleaning between teeth. Used where spaces exist.

Interdigital Neuroma

Alternate index label; see *Morton neuroma*.

Interference

A factor that alters the accuracy or interpretation of a laboratory test, measurement, or drug effect.

Interferometry

A measurement method that uses interference between waves to determine distance, motion, thickness, optical properties, or other physical quantities.

Interferon

Interferons are cytokines that induce antiviral defenses, alter immune-cell activity, and regulate cell growth; type I, II, and III interferons have different receptors and clinical uses.

Interferon Inducer

A substance that stimulates cells to produce interferons, proteins involved in antiviral and immune responses.

Interferon Signaling

Type I IFN (IFN-alpha/beta): all nucleated cells produce; receptor IFNAR (ubiquitous); JAK1/TYK2 -> STAT1/2/IRF9 (ISGF3) -> ISGs (hundreds: antiviral, antiproliferative, immunomodulatory). Type II IFN (IFN-gamma): T/NK cells; receptor IFNGR; JAK1/JAK2 -> STAT1 -> GAS elements. Type III IFN (IFN-lambda): mucosal epithelium; receptor IFNLR.

Interferon-Alpha

A type I interferon cytokine with antiviral, antiproliferative, and immune-modulating effects; recombinant forms have been used for selected viral infections and cancers.

Interferon-Beta

A type I interferon cytokine used mainly as an immunomodulatory treatment for relapsing forms of multiple sclerosis.

Interferon-Gamma Release Assay

Blood tests measuring IFN-gamma release in response to M. tuberculosis antigens (ESAT-6, CFP-10). More specific than PPD and unaffected by BCG. Cannot distinguish latent from active TB.

Interferon-Gamma Release Assay

Blood test for Mycobacterium tuberculosis infection (latent or active). T-SPOT.TB(ELISPOT) or QuantiFERON-TB Gold Plus. Measures IFN-gamma released by T cells after exposure to MTB-specific antigens (ESAT-6, CFP-10, TB7.7).

Alternate Names:

Interferon-Gamma Release Assay

Interferonopathies

A group of rare disorders caused by abnormal activation of type I interferon pathways. They can produce inflammation, neurologic disease, skin lesions, blood-vessel injury, or lung disease, often beginning in childhood.

Interferons

Signaling proteins that help coordinate immune responses, especially against viral infections.

Interleukin

A family of cytokines (interleukins) produced mainly by leukocytes that regulate immune cell growth, differentiation, activation, and communication. Examples: IL-1 and IL-6 (inflammation, fever), IL-2 (T-cell growth), IL-4/IL-13 (Th2, IgE), IL-5 (eosinophils), IL-10 (anti-inflammatory), IL-12 (Th1), IL-17 (Th17, autoimmunity), IL-23.

Interleukin 1

A group of proinflammatory cytokines, especially IL-1 alpha and IL-1 beta, that promote fever, leukocyte activation, and inflammatory responses.

Interleukin 13

A cytokine produced by type 2 helper T cells and other immune cells that contributes to allergic inflammation, mucus production, and tissue fibrosis.

Interleukin 2

Interleukin-2 is a T-cell growth factor that promotes proliferation and survival of activated T cells and natural-killer cells; high-dose therapy can cause capillary-leak syndrome and systemic toxicity.

Interleukin 7

A cytokine important for development, survival, and homeostasis of T lymphocytes and some B-cell precursors.

Interleukin-6

A cytokine involved in immune regulation and inflammation that stimulates production of acute-phase proteins by the liver.

Interleukins

Cytokines that carry signals between immune cells and regulate inflammation.

Alternate Names:

ILs

Interlocutory

Interlocutory means provisional or occurring during an ongoing process, such as an interim clinical, legal, or research decision.

INTERMACS Profile

A standardized, internationally recognized 7-tier clinical staging classification established by the Interagency Registry for Mechanically Assisted Circulatory Support to stratify the severity of illness and hemodynamic compromise in patients with advanced, end-stage (Stage D) heart failure. Classifies patients from Profile 1 (“crash and burn”: critical

cardiogenic shock with persistent severe hypoperfusion despite escalating inotropic support) through Profile 2 (progressive decline on inotropes), Profile 3 (inotrope-dependent stability), Profile 4 (recurrent frequent hospitalizations), Profile 5 (housebound/exertion intolerant), Profile 6 (exertion limited), to Profile 7 (advanced NYHA Class III), guiding clinical urgency, patient selection, and timing for mechanical circulatory support implantation or emergency heart transplantation.

Alternate Names:

INTERMACS Staging; INTERMACS Scale

Intermediate

Intermediate means between two stages, positions, or levels, such as an intermediate metabolite, cell, or developmental phase.

Intermediate Cuneiform

Smallest cuneiform, centrally located between medial and lateral cuneiforms. Articulates with navicular, medial/lateral cuneiforms, and second metatarsal. Forms the transverse arch apex. Relatively fixed, contributing to midfoot stability. Injuries are typically associated with high-energy midfoot trauma.

Intermediate Filament

An intermediate filament is a strong cytoskeletal fiber that supports cell shape, mechanical stability, and tissue integrity.

Intermediate Uveitis

Inflammation primarily affecting the vitreous body, peripheral retina, and ciliary body, with the classic presentation being pars planitis, which is characterized by the presence of snowbanking (a white, inflammatory exudate on the inferior pars plana) and snowballs (vitreous inflammatory aggregates).

Intermediate-Density Lipoprotein

A lipoprotein remnant formed as very-low-density lipoprotein is metabolized toward LDL.

Alternate Names:

IDL

Intermittent Auscultation

Periodic assessment of the fetal heart rate with a fetoscope or Doppler device during labor rather than continuous electronic monitoring. The frequency of assessment depends on the stage of labor, risk factors, and local clinical protocol.

Intermittent Claudication

Reproducible muscle discomfort, usually in the calf, thigh, or buttock, induced by walking and relieved by rest, caused by exertional arterial insufficiency. It is distinguished from rest pain and nonvascular musculoskeletal pain by history and vascular testing.

Intermittent Explosive Disorder

A disorder characterized by recurrent, impulsive, problematic outbursts of verbal or physical aggression that are grossly disproportionate to the provocation. The outbursts are not premeditated and cause marked distress or functional impairment. Age >6 years.

Alternate Names:

Road Rage

Intermittent Fasting

Cycling between fasting and eating periods. Methods: alternate-day fasting, 5:2 diet, time-restricted eating. Potential benefits: weight loss, metabolic health. Evidence emerging.

Intermittent Fever

A fever that rises and falls with periods when temperature returns to normal or near normal.

Intern

A physician in the early stage of postgraduate medical training, traditionally the first year after medical school; the exact training structure varies by country.

Internal

Internal means located within the body, an organ, a structure, or a system rather than on its outer surface.

Internal Bleeding

Internal bleeding is blood loss into a body cavity, tissue, or organ rather than through an obvious external wound. Trauma, ulcers, aneurysm, pregnancy complications, medicines, and tumors can cause it; faintness, shock, abdominal swelling, black stool, or vomiting blood is an emergency.

Internal Capsule

A compact band of white-matter nerve fibres in the brain carrying important motor and sensory pathways between the cerebral cortex and lower centres.

Internal Environment

The fluid and physiologic conditions inside the body that cells require, including temperature, pH, oxygen, electrolytes, and nutrients.

Internal Fixation

Surgical stabilization of a fracture or unstable bone using implanted hardware such as plates, screws, rods, wires, or pins.

Internal Fixator

An internal fixator is a surgically implanted plate, screw, rod, nail, or frame used to stabilize a fracture or correct skeletal alignment.

Internal Hernia

Herniation of bowel through a mesenteric defect common after Roux-en-Y gastric bypass creating a defect at the jejunojejunostomy. May cause intermittent or acute small bowel obstruction. Presents with episodic abdominal pain, nausea, and vomiting.

Internal Iliac Artery

Smaller common iliac terminal branch (hypogastric), supplying the pelvis, perineum, gluteal region, and medial thigh. Posterior division: iliolumbar, lateral sacral, superior gluteal. Anterior division: inferior gluteal, internal pudendal, obturator, vesical, uterine, vaginal, middle rectal arteries.

Internal Jugular Vein

Descends in the carotid sheath with the internal carotid artery and vagus nerve, draining brain, face, and neck. Begins at the jugular foramen as a sigmoid sinus continuation, joining the subclavian vein to form the brachiocephalic vein. Contains backflow-preventing valves. Used for central venous catheterization.

Internal Oblique Muscle

Middle flat abdominal layer deep to external oblique, from thoracolumbar fascia, iliac crest, and lateral inguinal ligament to lower ribs, linea alba, and pubic crest. Innervated by T7-T12 and L1. Ipsilateral rotation (opposite of external oblique). Contributes to inguinal canal and abdominal wall integrity.

Internal Podalic Version

A maneuver where the operator inserts a hand into the uterus, grasps one or both fetal feet, and converts a transverse lie or cephalic presentation to a breech, then delivers by total breech extraction. Indication: delivery of the second twin (transverse lie) or severe fetal distress in the second stage. Rare in modern obstetrics.

Internal Resorption

Loss of dentin from pulp cavity inward. Pink spot may be visible. Treatment: root canal therapy.

International Normalized Ratio

The INR, a standardized calculation from the prothrombin time used to assess blood clotting and guide treatment with vitamin K antagonists such as warfarin.

International Unit

A unit expressing the biological activity or potency of a substance, such as a vitamin, hormone, enzyme, or vaccine, rather than its mass. The actual mass corresponding to one unit varies by substance and standard.

International Unit

A standardized internationally accepted unit of measurement for quantifying the biological activity, po-

tency, or pharmacological effect of a substance (such as fat-soluble vitamins, insulin, heparin, and vaccines), established by the World Health Organization. Unlike metric mass units (milligrams or micrograms), the exact mass equivalent of one IU varies depending on the specific biological substance and reference preparation.

Interneuron

An interneuron connects neurons within the central nervous system and helps integrate, inhibit, or coordinate neural signals.

Interneurons

Neurons within the central nervous system that connect other neurons and help process or coordinate neural signals.

Internist

An internist is a physician specializing in adult internal medicine, including diagnosis and management of complex medical conditions.

Internuclear Ophthalmoplegia

A conjugate horizontal gaze disorder caused by a lesion of the medial longitudinal fasciculus (MLF), a heavily myelinated fiber tract that connects the abducens nucleus (CN VI) on one side to the oculomotor nucleus (CN III) on the contralateral side, coordinating horizontal gaze.

Interosseous

Interosseous means located between bones, such as the membrane or muscles between the forearm or lower-leg bones.

Interpersonal Psychotherapy

A time-limited, evidence-based psychotherapy for depression that focuses on the interpersonal context of mood symptoms. It identifies four problem areas: grief, role disputes, role transitions, and interpersonal deficits. IPT helps patients improve interpersonal functioning and social support.

Interphase

Interphase is the portion of the cell cycle between divisions, including growth, DNA replication, and preparation for mitosis or meiosis.

Interphase Cell

interphase cell refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Interproximal Caries

Dental caries occurring on the contact surfaces between adjacent teeth. It may be difficult to detect clinically and is commonly assessed with bitewing radiographs when imaging is indicated.

Intersexual

Intersexual is an immunologic, genetic, infectious, developmental, or cellular concept used to explain disease mechanisms, diagnosis, or treatment.

Interstitial

Relating to the spaces between cells or tissues, such as interstitial fluid or interstitial lung disease.

Interstitial (Cornual) Pregnancy

An ectopic pregnancy implanted in the part of the fallopian tube that passes through the muscular wall of the uterus. It can enlarge before rupture and cause severe internal bleeding.

Alternate Names:

Cornual

Interstitial Cystitis

Chronic bladder pain syndrome. Symptoms: suprapubic pain, frequency, urgency. Diagnosis: exclusion, cystoscopy with hydrodistension. Treatment: lifestyle modification, medications, bladder instillations, surgery.

Alternate Names:

Bladder Inflammation Cystitis, Interstitial IC (Interstitial Cystitis) Painful Bladder Syndrome

Interstitial Cystitis

A chronic bladder pain syndrome with urinary urgency, frequency, or pain without an identifiable infection or other cause sufficient to explain the symptoms.

Interstitial Fluid

Interstitial fluid is the fluid surrounding tissue cells, formed from blood plasma and returned to circulation through lymphatic vessels.

Interstitial Granulomatous Dermatitis

A rare inflammatory dermatosis with interstitial or palisading histiocytes around collagen, often presenting with symmetric erythematous or violaceous plaques and associated systemic disease or medication exposure.

Interstitial Keratitis

Inflammation of the corneal stroma without primary involvement of the corneal surface. It may follow infection, autoimmune disease, or trauma and can cause pain, photophobia, redness, and reduced vision.

Interstitial Lung Disease

A heterogeneous group of disorders with inflammation and fibrosis of lung parenchyma, causing restrictive physiology (reduced FVC and TLC with normal or elevated FEV1/FVC ratio).

Alternate Names:

Diffuse Parenchymal Lung Diseases Interstitial Lung Diseases Lung Disease, Interstitial

Interstitial Lung Disease (Interstitial Pneumonia)

Alternate index label for Interstitial Pneumonia.

Interstitial Nephritis

Inflammation of the renal interstitium and tubules, which can be acute or chronic. Acute interstitial nephritis is most commonly caused by medications, particularly NSAIDs, antibiotics including penicillins and cephalosporins, and proton pump inhibitors.

Interstitial Pneumonia

Inflammation centered on the interstitium. Caused by Mycoplasma, Chlamydophila, Legionella, and viruses. Presents with dry cough and diffuse crackles.

Alternate Names:

Interstitial Lung Disease (Interstitial Pneumonia)

Interstitium

The supporting tissue between and around the lung air sacs, capillaries, and small airways; inflammation or fibrosis of this tissue can impair lung expansion and gas exchange.

Intertrigo

Intertrigo is inflammation in opposing skin folds caused by moisture, heat, friction, and maceration; Candida or bacterial infection may complicate the tender erythematous rash.

Alternate Names:

Allergy Diaper (Intertrigo)

Interval

An interval is the time, distance, or range between two points or events, such as a dosing or follow-up interval.

Intervening Sequence

A nucleotide sequence within a gene transcript that lies between coding sequences; in many genes it is an intron removed during RNA processing.

Intervention

An action intended to prevent, diagnose, treat, or change a health condition or outcome, such as a medicine, procedure, counseling, or public-health measure.

Intervention Study

A study in which researchers assign or provide an intervention and compare its outcomes with a control.

Alternate Names:

Clinical trial

Interventional

Relating to a procedure or active treatment used to diagnose or manage disease, often through minimally invasive access rather than open surgery.

Interventional Cardiology

A subspecialty using catheter-based procedures to diagnose and treat coronary, structural, and selected vascular heart conditions, including angioplasty, stenting, and transcatheter valve procedures.

Interventional Procedure

A medical procedure involving interventional procedure. Indications, risks, preparation, and follow-up depend on the patient and the specific procedure.

Interventional Procedures

Image-guided treatments: angioplasty, stenting, embolization, ablation, biopsy, drain placement. Advantages: minimally invasive, faster recovery, lower complication rates.

Interventional Radiologist

A physician trained to perform minimally invasive diagnostic and therapeutic procedures using medical imaging for guidance.

Interventional Radiology

Image-guided minimally invasive procedures. Examples: angioplasty, stenting, embolization, biopsy, ablation, drain placement. Reduces need for open surgery.

Interventional Radiology

A specialty using imaging guidance to perform minimally invasive diagnostic and therapeutic procedures, such as biopsies, drainages, embolization, and vascular treatments.

Interventricular Septum

The thick muscular wall separating the left and right ventricles. It has two portions: the muscular (inferior, thicker) and membranous (superior, thinner) portions. The septum contains parts of the cardiac conduction system, including the bundle of His.

Intervertebral Disc

A fibrocartilaginous cushion between adjacent vertebral bodies, composed of a gelatinous nucleus pulposus surrounded by a tough annulus fibrosus. It absorbs shock and permits limited movement of the vertebral column.

Intervertebral Disk

A fibrocartilaginous cushion between spinal vertebrae that absorbs shock and permits movement.

Alternate Names:

Intervertebral disc

Intervertebral Foramen

An opening between adjacent vertebrae through which a spinal nerve exits.

Alternate Names:

Neural foramen

Intestinal Absorption

Intestinal absorption is the movement of digested nutrients, water, and electrolytes from the intestine into the blood or lymph.

Intestinal Atresia

A congenital obstruction of the small intestine (jejunum or ileum) caused by an intrauterine vascular accident (mesenteric ischemia) leading to aseptic necrosis and resorption of a segment of bowel. In contrast to duodenal atresia, it is not associated with Down syndrome.

Intestinal Cancer

Intestinal cancer is a malignant growth arising in the small or large intestine; symptoms and treatment depend on its location and stage.

Intestinal Duplication

Intestinal duplication is a congenital extra segment or cyst of bowel that may cause obstruction, bleeding, pain, or infection.

Intestinal Fistula

An intestinal fistula is an abnormal passage connecting the intestine to another organ or the skin, often

after inflammation, surgery, or injury.

Intestinal Ganglioneuromatosis

Benign proliferation of ganglion cells and nerve fibers in the gastrointestinal tract wall. May be diffuse involving the entire gastrointestinal tract or localized as ganglioneuromas. Associated with multiple endocrine neoplasia type 2B where intestinal ganglioneuromatosis may precede the development of medullary thyroid carcinoma.

Intestinal Gas

Gas in the digestive tract that may cause belching, bloating, abdominal discomfort, or flatulence.

Intestinal Gas (Belching, Bloating, Flatulence)

Alternate index label for Belching, Bloating, Flatulence.

Intestinal Gas (Intestinal Gas (Belching, Bloating, Flatulence))

Alternate index label for Intestinal Gas (Belching, Bloating, Flatulence).

Intestinal Ischemia

Inadequate blood flow to the intestines, which can damage intestinal tissue.

Alternate Names:

Ischemia, Intestinal

Intestinal Leiomyoma

A usually benign smooth-muscle tumor arising in the wall of the intestine; symptoms depend on size and location and may include bleeding, obstruction, or abdominal pain.

Intestinal Lipodystrophy

Alternate index label; see *Whipple's disease*.

Intestinal Lipomatosis

Benign overgrowth of adipose tissue within the intestinal wall, most commonly affecting the ileum and colon. Often asymptomatic and discovered incidentally, but large lipomas can cause intussusception,

gastrointestinal bleeding, or bowel obstruction.

Intestinal Lymphoma

Malignant proliferation of lymphoid cells arising in the small or large intestine. Important types include enteropathy-associated T-cell lymphoma, monomorphic epitheliotropic intestinal T-cell lymphoma, and diffuse large B-cell lymphoma.

Intestinal Malrotation

Congenital failure of normal midgut rotation and fixation, predisposing to a narrow mesenteric base, volvulus, and duodenal obstruction. Infants may present with bilious vomiting, abdominal distension, or bowel ischemia; sudden symptoms require emergency assessment.

Intestinal Metaplasia

Replacement of the normal lining of an intestinal or gastric region by intestinal-type epithelium, usually in response to chronic injury or inflammation and sometimes associated with increased cancer risk.

Intestinal Mucosa

The intestinal mucosa is the inner lining of the intestine, where digestion, nutrient absorption, mucus production, and immune defence occur.

Intestinal Obstruction

A mechanical or functional blockage that prevents normal passage of intestinal contents. Causes include adhesions, hernias, tumors, inflammation, volvulus, and disorders of intestinal motility.

Intestinal Obstruction And Ileus

Impaired passage of intestinal contents caused by a mechanical blockage or by reduced bowel motility without a physical blockage; symptoms commonly include abdominal pain, distension, vomiting, and inability to pass stool or gas.

Intestinal Obstruction Repair

Surgery or another intervention to relieve an intestinal blockage, remove a diseased segment when necessary, and restore bowel continuity or create a

stoma when required.

Intestinal Parasite

A protozoan or worm that lives in the gastrointestinal tract and may cause diarrhea, abdominal pain, anemia, malnutrition, or no symptoms.

Intestinal Perforation

Full-thickness breach in the bowel wall allowing luminal contents to enter the peritoneal cavity. Causes include diverticulitis, appendicitis, peptic ulcer disease, and trauma. Presents with acute abdomen, peritonitis, and free air on imaging.

Intestinal Polyp

An intestinal polyp is a growth projecting from the lining of the intestine; some types can become cancerous.

Intestinal Polyposis

Intestinal polyposis is the presence of numerous polyps in the intestine, sometimes as part of an inherited cancer-predisposition syndrome.

Intestinal Pseudo-Obstruction

Acute or chronic dilation of the bowel without mechanical obstruction due to neuromuscular dysfunction. Acute colonic pseudo-obstruction also called Ogilvie syndrome occurs in hospitalized or post-surgical patients.

Alternate Names:

Ogilvie syndrome.

Intestinal Villi

Intestinal villi are tiny finger-like projections of the small-intestinal lining that increase surface area for nutrient absorption.

Intestine

The part of the digestive tract extending from the stomach to the anus, consisting of the small intestine and large intestine.

Intestine Disorder

An intestine disorder is a disease affecting the small

or large intestine, such as infection, inflammation, obstruction, or cancer.

Intestine Neoplasm

An intestine neoplasm is an abnormal growth in the small or large intestine; it may be benign or malignant.

Intestine Obstruction

Intestinal obstruction is partial or complete blockage of the passage of intestinal contents, causing pain, swelling, vomiting, and failure to pass stool or gas.

Intestine, Diseases Of

Diseases of the intestine include infections, inflammatory disorders, malabsorption, obstruction, polyps, and cancer.

Intimal Dissection

A tear in the inner lining of an artery that allows blood to enter and split the vessel wall, creating a false lumen. Aortic or other arterial dissection can compromise blood flow and is a medical emergency.

Intimal Hyperplasia

Proliferation and migration of vascular smooth-muscle cells with extracellular-matrix deposition within the intima after vascular injury or graft placement. It can produce restenosis at anastomoses, stents, dialysis access, or bypass grafts.

Intimate Partner Violence In Pregnancy

Physical, sexual, or psychological abuse by a current or former partner during pregnancy. It can harm the pregnant person and fetus and is associated with complications such as injury, preterm birth, and placental abruption.

Intolerance

An adverse response to a substance that does not involve the immune mechanism of an allergy.

Alternate Names:

Nonallergic sensitivity Nonceliac Gluten Sensitivity (Intolerance)

Intolerance, Gluten (Nonceliac Gluten Sensitivity (Intolerance))

Alternate index label for Nonceliac Gluten Sensitivity (Intolerance).

Intoplicine

Intoplicine is an investigational topoisomerase inhibitor studied for anticancer effects by disrupting DNA structure and replication.

Intoxication

A state of physical or mental impairment caused by recent exposure to a substance, such as alcohol, a medicine, or another drug.

Intra-Abdominal Abscess

Localized collection of pus within the abdomen commonly in the pelvis, between bowel loops, or beneath the diaphragm. Results from intra-abdominal infection or surgery. Presents with fever, abdominal pain, and leukocytosis. Diagnosed by CT with contrast showing rim-enhancing fluid collection.

Intra-Abdominal Hypertension

Sustained elevation of intra-abdominal pressure above twelve millimeters of mercury measured through the urinary bladder. Graded as grade one twelve to fifteen, grade two sixteen to twenty, grade three twenty-one to twenty-five, and grade four greater than twenty-five millimeters of mercury.

Intra-Aortic Balloon Pump

Mechanical circulatory support. Inflatable catheter in descending aorta. Inflates during diastole (increases coronary perfusion), deflates during systole (reduces afterload). Indications: cardiogenic shock, unstable angina, high-risk PCI. Complications: limb ischemia, bleeding, infection.

Intra-Arterial

Intra-arterial means within an artery, including a catheter, injection, infusion, or measurement performed directly in an arterial vessel.

Intraabdominal Cancer

A broad term for malignancies arising within the abdominal cavity, including cancers of the colon, stomach, pancreas, liver, ovaries, and peritoneum. Presentation varies widely depending on the specific organ involved.

Intraabdominal Hemorrhage

Bleeding inside the abdominal cavity, which may follow trauma, surgery, organ rupture, pregnancy complications, or internal disease.

Intraabdominal Hernia

Herniation of abdominal viscera through a congenital or acquired defect or abnormal mesenteric aperture within the peritoneal cavity, distinct from ventral or inguinal hernias. Types include paraduodenal, foramen of Winslow, transmesocolic, and transomental hernias.

Intraabdominal Infection

An infection within the abdominal cavity, such as peritonitis or an abscess, often requiring antibiotics and sometimes drainage or surgery.

Intraaortic Balloon Pump

A temporary circulatory-support device with a balloon in the descending aorta that inflates and deflates in coordination with the cardiac cycle.

Intraarticular

Intraarticular means within a joint, such as an injection, fracture, loose body, or inflammatory process inside the joint space.

Intrabronchial

Intrabronchial means within a bronchus, one of the air passages branching from the trachea into the lungs.

Intracardiac Electrophysiology Study

An invasive test using electrode catheters inside the heart to record electrical activity and provoke or map arrhythmias, helping guide diagnosis and treatment.

Intracartilaginous

Intracartilaginous means located within cartilage, such as a lesion, injection, or developmental structure.

Intracavernosal Injection

A second-line treatment for erectile dysfunction involving the direct self-injection of vasoactive medications into the corpus cavernosum of the penis using a fine-gauge needle. The injected agents (commonly alprostadil [prostaglandin E1] as monotherapy, or combinations with papaverine and phentolamine known as Bimix or Trimix) stimulate smooth-muscle relaxation and arterial dilation within the cavernosal sinusoids to induce an erection independent of sexual stimulation. It is effective in organic, vasculogenic, and neurogenic erectile dysfunction (such as following radical prostatectomy); potential complications include localized pain, hematoma, cavernosal fibrosis, and prolonged erection or ischemic priapism requiring urgent intervention.

Alternate Names:

ICI; Penile Injection Therapy; Intracavernous Injection

Intracavitary

Intracavitary means within a body cavity, such as a treatment, device, fluid, or lesion located in the thorax, abdomen, uterus, or another cavity.

Intracavity Radiotherapy

Intracavity radiotherapy places a radiation source inside a body cavity near a tumor, commonly to treat selected cancers of the cervix, uterus, or vagina.

Intracellular

Pertaining to, positioned inside, or occurring within the bounding plasma membrane of a biological cell. The intracellular fluid compartment comprises approximately two-thirds of total body water in adults, characterized electrochemically by high concentrations of potassium (K^+), magnesium (Mg^{2+}), and organic phosphate/protein polyanions, and low concentrations of sodium (Na^+) and chloride (Cl^-), maintained continuously across the plasma membrane by ATP-dependent Na^+/K^+ -ATPase pump

activity.

Intracellular Fluid

The fluid contained within cells, comprising approximately two thirds of total body water in a typical adult. Its major solutes include potassium, magnesium, phosphate, and intracellular proteins, and its composition is maintained by selective membrane transport.

Intracellular Membrane

intracellular membrane refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Intracellular Pathogens

Microorganisms that survive and replicate within host cells. Intracellular bacteria include *Mycobacterium*, *Listeria*, and *Chlamydia*. Viruses are obligate intracellular pathogens. Intracellular survival protects pathogens from antibiotics and immune responses.

Intracellular Transport

intracellular transport refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Intracerebral

Intracerebral means within the brain tissue, as in an intracerebral hemorrhage, injection, electrode, or lesion.

Intracerebral Hemorrhage

Bleeding directly into the brain parenchyma, accounting for approximately ten to fifteen percent of all strokes and carrying a high mortality rate of approximately forty percent at thirty days.

Intracisternal

Intracisternal means within a cistern, especially a cerebrospinal-fluid space at the base of the brain.

Intracoronaral

Intracoronaral means within the crown of a tooth or within a coronary structure, with the exact meaning determined by context.

Intracoronary

Intracoronary means within a coronary artery or the coronary circulation, such as a catheter, stent, imaging study, or medicine delivery.

Intracranial

Situated or occurring within the bony cranium (skull cavity). The rigid, non-distensible cranial vault contains three physiological volume components: brain parenchyma ($\approx 80\%$), cerebrospinal fluid (CSF; $\approx 10\%$), and intracranial blood ($\approx 10\%$). Governed by the Monro-Kellie doctrine, an increase in any one intracranial volume component (e.g., from cerebral edema, intracranial hemorrhage, or brain tumor) must be compensated by a reciprocal reduction in CSF or venous blood; when compensatory capacity is exhausted, intracranial pressure rises steeply (> 20 mmHg), risking cerebral hypoperfusion, ischemic brain injury, and fatal brain herniation syndromes.

Intracranial Aneurysm

A weakened, bulging area in a blood vessel within the skull.

Intracranial Hemorrhage

Bleeding within the cranial cavity. Epidural hematoma: arterial bleeding (middle meningeal artery), typically from temporal bone fracture; lucid interval then rapid deterioration. Subdural hematoma: venous bleeding from bridging veins; acute (<72 h), subacute, or chronic (elderly, alcoholics).

Intracranial Pressure

The pressure within the cranial vault generated by brain tissue, cerebrospinal fluid, and intracranial blood. Sustained elevation can reduce cerebral perfusion and cause headache, vomiting, altered consciousness, pupillary abnormalities, and brain herniation.

Intracranial Pressure Monitoring

Continuous or intermittent measurement of pressure inside the skull, usually in critically ill patients with severe brain injury, hemorrhage, hydrocephalus, or other risk of intracranial hypertension.

Intracranial Venous Malformations

Abnormal collections or connections of veins within the skull that may bleed or affect nearby brain tissue.

Intractable

Difficult to control, relieve, or cure despite appropriate treatment, as in intractable pain or seizures.

Intradermal

Located within the dermis, the layer of skin beneath the epidermis; an intradermal injection places medication or test material into that layer.

Intraductal Carcinoma

Alternate index label; see *Ductal carcinoma in situ*.

Intraductal Papillary Mucinous Neoplasm Pancreas (Pancreatic Cysts)

Alternate index label for Pancreatic Cysts.

Intraductal Papilloma

A benign papillary tumor arising within a breast duct, often presenting with spontaneous unilateral bloody or clear nipple discharge. It may be solitary near the nipple or multiple in the peripheral breast.

Intraduodenal

Intraduodenal means within the duodenum, the first part of the small intestine beyond the stomach.

Intraepidermal

Intraepidermal means within the epidermis, the outermost layer of skin.

Intraepithelial

Located within or occurring among the cells of an epithelial layer.

Intraesophageal

Intraesophageal means within the esophagus, such as a probe, pressure sensor, lesion, or medication delivery.

Intrahepatic

Situated, occurring, or originating within the anatomical parenchyma or capsule of the liver. Clinically relevant in hepatobiliary disease, including intrahepatic cholestasis (impaired bile formation or secretion by hepatocytes or small intrahepatic cholangioles, as in primary biliary cholangitis), intrahepatic bile duct dilatation on ultrasound (differentiating intrahepatic biliary obstruction from extrahepatic choledocholithiasis), and primary intrahepatic malignancies (hepatocellular carcinoma and intrahepatic cholangiocarcinoma).

Intrahepatic Cholestasis

Impaired bile flow within the liver, causing bile acids to accumulate in the blood.

Intrahepatic Cholestasis Of Pregnancy

A pregnancy-associated liver disorder characterized mainly by itching without a primary rash and increased bile acids in the blood. It may increase fetal risk and requires clinical evaluation and monitoring.

Intralesional

Delivered directly into a lesion, such as an injection of corticosteroid into a keloid or a medicine into a skin, joint, or tumor lesion. The drug, dose, sterility, and lesion type determine safety.

Intralymphatic

Intralymphatic means within a lymphatic vessel or channel, such as a medicine, tumor spread, infection, or imaging contrast.

Intramedullary

Intramedullary means within the medulla of an organ or the central canal of a bone, especially an implant placed inside a long bone.

Intramedullary Nail

A metal implant inserted into the medullary canal of a long bone to align and stabilize a fracture. It shares load along the bone axis and is commonly used for femoral and tibial shaft fractures.

Intramural Hematoma

Collection of blood within the wall of the gastrointestinal tract most commonly the duodenum. Caused by trauma, anticoagulation, or coagulopathy. Presents with abdominal pain, vomiting, and sometimes obstructive symptoms. Diagnosis is by CT showing circumferential wall thickening with high-attenuation hematoma.

Intramural Plaque

An intramural plaque is an atherosclerotic deposit within an artery wall that can narrow the lumen or destabilize and cause thrombosis.

Intramuscular

A route of drug administration in which the drug is injected into skeletal muscle (deltoid, vastus lateralis, gluteus maximus).

Intramuscular

Pertaining to the interior of a skeletal muscle, or describing a parenteral route of medication administration injected deep into muscular tissue (commonly the deltoid, vastus lateralis, or ventrogluteal muscles). Provides more rapid systemic vascular absorption than subcutaneous injection owing to greater muscle vascularity, suitable for vaccines, depot antipsychotics, and medications unsuited for oral or IV administration.

Intramuscular Injection

A medical procedure involving intramuscular injection. Indications, risks, preparation, and follow-up depend on the patient and the specific procedure.

Intramuscular Myxoma

An intramuscular myxoma is a rare benign tumor of gelatinous myxoid tissue located within skeletal muscle.

Intraocular

Situated, occurring, or administered within the eyeball (globe). The intraocular compartment is divided into the anterior segment (anterior and posterior chambers filled with clear aqueous humor) and the posterior segment (vitreous chamber filled with gelatinous vitreous humor). Maintained at a normal intraocular pressure (IOP; 10–21 mmHg) by a delicate balance between aqueous humor secretion by the ciliary body epithelium and outflow through the trabecular meshwork; chronically elevated intraocular pressure is the primary modifiable risk factor for glaucomatous optic neuropathy and irreversible visual field loss.

Intraocular Infection

An infection inside the eye, such as endophthalmitis, that can rapidly threaten vision and requires urgent ophthalmic treatment.

Intraocular Lens

Artificial lens replacing natural lens after cataract extraction. Types: monofocal (distance vision), multifocal/bifocal (near and distance), toric (astigmatism), extended depth of focus. Implantation via small incision, folds for insertion. Complications: posterior capsule opacification, dysphotopsia, infection, retinal detachment.

Intraocular Lens Dislocation

Postoperative displacement of an implanted artificial intraocular lens from its intended position within the capsular bag or ciliary sulcus into the vitreous cavity or anterior chamber. It is most commonly caused by progressive zonular dehiscence and may require surgical repositioning or exchange.

Intraocular Lymphoma

Intraocular lymphoma is lymphoma involving the eye, often affecting the vitreous or retina and sometimes occurring with lymphoma in the brain or elsewhere.

Intraocular Pressure

The pressure generated by aqueous humor within the eye, normally maintained by a balance between

aqueous production and outflow. Abnormal IOP is an important risk factor for glaucomatous optic neuropathy, but glaucoma can occur at statistically normal pressures.

Intraocular Pressure

The pressure of fluid within the eye, usually measured to assess risk for or management of glaucoma and other eye disorders.

Intraocular Tumor

Any neoplasm arising within the eye, with uveal melanoma being the most common primary malignancy in adults and retinoblastoma the most common in children. Diagnosis requires dilated fundus examination, ultrasound, and MRI; treatment depends on tumour type, size, and location.

Intraoperative

Occurring during a surgical operation, including monitoring, findings, complications, or treatment decisions made during the procedure.

Intraoperative Blood Transfusion

Intraoperative blood transfusion replaces lost blood volume and maintains oxygen-carrying capacity during major surgery. Indications include hemoglobin less than 7 g/dL in stable patients, less than 8 g/dL in cardiac disease, or active hemorrhage with hemodynamic instability.

Intraoperative Neuromonitoring

Intraoperative neuromonitoring uses electrophysiological techniques to monitor neural pathway integrity during surgery. Somatosensory evoked potentials (SSEP) monitor sensory pathways. Motor evoked potentials (MEP) monitor motor pathways. Electromyography (EMG) monitors cranial nerves and spinal roots.

Intraoral

Located inside the mouth or performed through the mouth, such as an intraoral examination, scan, injection, or surgical procedure.

Intraosseous Access

Placement of a vascular-access needle into the medullary cavity of a suitable bone to permit rapid infusion of fluids, blood products, and medications when intravenous access is delayed or impossible. It is a temporary emergency route and can cause extravasation, infection, or compartment injury.

Intraosseous Infusion

Administration of fluids, blood products, or medications through an intraosseous access device. Infusion should be monitored for resistance, swelling, pain, and extravasation and replaced with definitive vascular access as soon as practical.

Intrapartum

The period during labor and childbirth, from the onset of regular uterine contractions leading to cervical dilation until delivery of the baby and placenta.

Intrapartum Fever

Fever during labor, which may result from infection, epidural analgesia, dehydration, or other causes and requires maternal and fetal assessment.

Intrapartum Stillbirth

Intrapartum stillbirth is fetal death occurring during labor after a live fetus was documented before labor, requiring obstetric investigation and support.

Intrapericardial

Located inside the pericardial sac, the thin membrane surrounding the heart. An intrapericardial mass or fluid collection may affect how the heart fills or beats.

Intraperitoneal

Intraperitoneal means within the peritoneal cavity or administered into it, including selected medicines, dialysis fluid, or procedures.

Intraperitonealroute

The intraperitoneal route delivers a medicine or fluid into the peritoneal cavity, commonly for peritoneal dialysis or selected treatments.

Intraprostatic

Intraprostatic means within the prostate gland, such as a lesion, injection, infection, or procedure.

Intrapulmonary

Located within the lung or occurring inside the pulmonary tissue or blood vessels.

Intrapulmonary Shunt

Perfusion of alveoli without ventilation ($V/Q = 0$). Blood passes through the pulmonary circulation without gas exchange, mixing with oxygenated blood and causing hypoxemia. It is seen in ARDS, pneumonia, and atelectasis. It is refractory to supplemental oxygen.

Intrasynovial

Intrasynovial means within the synovial lining or fluid-filled space of a joint or tendon sheath.

Intratendinous

Intratendinous means within a tendon, such as a tear, deposit, injection, or degenerative change.

Intratesticular

Located within testicular tissue. An intratesticular mass may be benign or malignant and is usually evaluated with physical examination and scrotal ultrasound, interpreted in the clinical context.

Intrathecal

Intrathecal means within the fluid-filled space surrounding the brain and spinal cord; medicines may be given there by lumbar puncture.

Intrathecal Chemotherapy

Administration of chemotherapy directly into the cerebrospinal fluid via lumbar puncture or an Ommaya reservoir, used for leptomeningeal metastasis and central nervous system prophylaxis in leukemias and lymphomas.

Intrathoracic

Intrathoracic means within the chest cavity, including the lungs, heart, mediastinum, vessels, and tho-

racic lymph nodes.

Intrathoracic Localized Obstruction

A focal blockage within the thoracic cavity affecting the airways, esophagus, or great vessels, leading to localized symptoms depending on the structure involved. Causes include endobronchial tumors, foreign bodies, esophageal strictures, or vascular anomalies. Diagnosis is by imaging and endoscopy.

Intratracheal

Intratracheal means within the trachea, such as a tube, medicine, foreign body, lesion, or route of administration.

Intratympanic

Intratympanic means delivered through the eardrum into the middle ear, often for selected inner-ear disorders or local treatment.

Intrauterine

Intrauterine means within the uterus, including a pregnancy, device, medicine, lesion, or procedure.

Intrauterine Contraceptive Device

An intrauterine contraceptive device is a small device placed in the uterus to prevent pregnancy; copper and hormone-releasing types are available.

Intrauterine Contraceptive Device

A small device placed in the uterus to prevent pregnancy; copper IUDs release copper, while hormonal IUDs release a progestin, and both are highly effective reversible contraception.

Intrauterine Device

IUD: a long-acting reversible contraceptive device placed in the uterus. Types: copper IUD (ParaGard—hormone-free, up to 10-12 years, also emergency contraception) and levonorgestrel-releasing IUS (Mirena/Skyla—progestin, up to 3-8 years, reduces bleeding).

Intrauterine System

A small T-shaped contraceptive device placed in-

side the uterus that slowly releases a progestogen hormone to prevent pregnancy. It is also called IUS.

Intrauterine Devices

Small devices placed in the uterus to prevent pregnancy; copper and hormonal IUDs are highly effective long-acting reversible contraceptives.

Intrauterine Fetal Demise / Stillbirth

Death of a fetus before complete delivery. The gestational-age definition varies by jurisdiction. Causes may include placental disease, umbilical-cord complications, infection, genetic abnormalities, maternal disease, or unexplained factors.

Intrauterine Growth Restriction

IUGR: a fetus with estimated weight below the 10th percentile (or growth velocity decline), usually with placental insufficiency or maternal/fetal factors.

Intrauterine Pressure Catheter

A fluid-filled catheter inserted into the uterine cavity alongside the fetus to measure the intensity and frequency of contractions in mm Hg (Montevideo units, MVU).

Intrauterine Transfusion

Ultrasonically guided intravascular or intraperitoneal transfusion of fetal red blood cells to treat severe fetal anemia, most commonly from Rh isoimmunization. Performed through the umbilical vein using a 22-25 gauge needle. Packed red blood cells, CMV-negative and crossmatched, are transfused slowly.

Intravascular

Intravascular means within a blood vessel, including a catheter, clot, injection, or process occurring in the circulation.

Intravascular Catheter Infections

CLABSI: central line-associated bloodstream infection. Diagnosis: quantitative blood cultures (catheter vs peripheral >5:1), differential time to positivity (>2h), catheter tip culture (>15 CFU).

Catheter-related BSIs: coagulase-negative staphylococci (most common), *S. aureus*, enterococci, gram-negatives, *Candida*.

Intravascular Filter

A device placed in a large vein to trap venous clots and reduce pulmonary embolism risk in selected patients who cannot receive or have not responded adequately to anticoagulation.

Intravascular Hemolysis

Destruction of red blood cells within the bloodstream, releasing hemoglobin into plasma; causes include immune hemolysis, mechanical trauma, infections, toxins, and transfusion reactions.

Intravascular Lymphoma

A rare aggressive B-cell non-Hodgkin lymphoma characterized by proliferation of neoplastic lymphocytes within the lumina of small blood vessels, predominantly affecting the skin and central nervous system. Presents with livedo reticularis, skin nodules, neurological deficits, and fever of unknown origin.

Intravascular Ultrasound

Catheter-based imaging using a miniature ultrasound probe inside coronary arteries to visualize vessel wall layers, plaque composition, and stent deployment. Provides more detailed information than angiography alone, including vessel remodeling, plaque burden, and true vessel diameter.

Intravenous

Administered into a vein, allowing a medicine or fluid to enter the bloodstream directly.

Intravenous

Into or within a vein; intravenous medicines, fluids, or blood products are delivered directly into the bloodstream.

Intravenous Anesthesia

Anesthetic induction or maintenance using drugs delivered into a vein. It permits rapid titration

but requires attention to dose, context-sensitive recovery, cardiovascular and respiratory effects, and the availability of a secure airway.

Intravenous Catheters

Flexible devices inserted into a vein to deliver fluids, medicines, blood products, nutrition, or contrast, or to obtain blood samples; complications include infection, thrombosis, infiltration, and extravasation.

Intravenous Immunoglobulin

A purified preparation of pooled antibodies given through a vein (IVIg) for selected immune deficiencies, autoimmune diseases, inflammatory disorders, and some neurologic conditions.

Intravenous Leiomyomatosis

Extension of benign uterine smooth-muscle tumor into venous channels, sometimes reaching the inferior vena cava or right heart. Imaging is important because extensive disease can cause serious cardiovascular complications.

Intravenous Lipid Emulsion Therapy

Administration of a lipid emulsion as a rescue treatment for selected severe lipophilic drug toxicities, especially local-anesthetic systemic toxicity. It may act as a lipid sink and through metabolic and cardiovascular effects and requires critical-care monitoring.

Intravenous Pyelogram

An x-ray examination of the urinary tract after intravenous iodinated contrast, historically used to visualize the kidneys, ureters, and bladder; CT urography or ultrasound often replaces it. of iodinated contrast material. The contrast is filtered by the glomeruli and excreted through the collecting system, allowing sequential imaging of the renal parenchyma, calyces, renal pelvis, ureters, and bladder.

Intravenous Pyelography

An X-ray examination of the urinary tract after intravenous contrast administration; it is now often replaced by CT urography or ultrasound.

Intravenous Sedation

Administration of sedative medicines through a vein to reduce anxiety, discomfort, or awareness during a procedure while maintaining appropriate monitoring and readiness to support breathing.

Intraventricular Hemorrhage

Bleeding into the germinal matrix and ventricular system, primarily in premature infants less than 32 weeks gestation. Graded I-IV by severity on cranial ultrasound. Grade I (germinal matrix only) and Grade II (intraventricular without dilation) have good prognosis.

Intraventricular Hemorrhage Of The Newborn

Intraventricular hemorrhage in a newborn is bleeding into the brain's ventricular system, most often in premature infants, and can cause hydrocephalus or neurologic injury.

Intravital Microscopy

Intravital microscopy uses a microscope to observe cells or tissues in a living organism, usually in research.

Intravitreal Injection

An ophthalmological procedure in which medication is injected directly into the vitreous cavity of the eye through the pars plana, a safe entry zone located approximately 3.5 to 4 millimeters posterior to the limbus, to deliver therapeutic agents directly to the retina and vitreous for the treatment of various retinal diseases.

Intrinsic

Belonging naturally to a structure or process and arising from within it, rather than being externally imposed.

Intrinsic Factor

A protein secreted by stomach parietal cells that is required for vitamin B12 absorption in the terminal ileum.

Intrinsic Renal AKI

Acute kidney injury caused by damage to renal tissue. Causes include acute tubular injury, acute interstitial nephritis, glomerulonephritis, and vascular disorders. Laboratory findings vary with the cause and should not be interpreted in isolation.

Intrinsic Sphincter Deficiency

Weakness of the urinary sphincter that causes stress urinary incontinence.

Alternate Names:

ISD

Introitus

An entrance or opening, especially the entrance to the vagina.

Intron

A non-coding segment of a gene that is transcribed into RNA but spliced out before the messenger RNA is translated into a protein.

Intrusive Thought

An unwanted, distressing thought, image, or impulse that enters awareness repeatedly; it does not necessarily reflect intent or desire.

Intubate

To place a tube into a body passage, especially an endotracheal tube through the mouth or nose into the trachea to maintain an airway or support ventilation.

Intubation

Placement of a tube into the airway or another body passage to maintain it or deliver treatment.

Intussusception

Condition in which a segment of intestine telescopes into the adjacent distal segment causing bowel obstruction and compromise of the mesenteric blood supply. It is the most common cause of intestinal obstruction in infants and children between six months and three years of age.

Intussusception – Children

Intussusception occurs when one segment of intestine telescopes into another, causing intermittent pain, vomiting, obstruction, and possible bowel ischemia in children.

Inulin

Inulin is a plant fructan used as a dietary fiber and in tests of glomerular filtration because it is freely filtered and minimally handled by the kidney.

Inuresis

A rare or obsolete spelling related to enuresis, meaning involuntary urination, especially during sleep.

Inutero

A variant or misspelling of in utero, meaning within the uterus before birth.

Invasive

Able to enter and spread through tissues; the term may describe an infection, tumor, procedure, or disease that penetrates nearby structures.

Invasive Candidiasis

A serious *Candida* infection that enters the bloodstream or deep organs, most often in people who are critically ill or immunocompromised. It may cause persistent fever or organ dysfunction and requires prompt medical diagnosis and treatment.

Invasive Ductal Carcinoma

The most common type of breast cancer, characterized by malignant cells that have broken through the duct wall and invaded surrounding breast tissue. It can metastasize via lymphatic or hematogenous spread.

Invasive Lobular Carcinoma

A breast cancer characterized by discohesive cells infiltrating in single-file lines. More frequently bilateral and multifocal than ductal carcinoma and harder to detect on imaging; usually hormone receptor positive.

Invasive Mole

A hydatidiform mole that invades the uterine myometrium or vascular spaces; it is a form of gestational trophoblastic neoplasia and may persist or metastasize.

Invasive Procedure

A medical procedure involving invasive procedure. Indications, risks, preparation, and follow-up depend on the patient and the specific procedure.

Inverse Agonist

A type of drug that binds to a cell receptor and actively produces the opposite biological effect of an agonist, effectively turning down the receptor's baseline activity.

Inversion

Chromosomal segment reversed end-to-end. Paracentric: does not include centromere. Pericentric: includes centromere. Usually benign unless breakpoint disrupts gene.

Invert

To turn upside down, reverse, or turn inward; in anatomy, inversion can describe movement of the sole of the foot toward the midline.

Invert Sugar

A mixture of glucose and fructose produced by splitting sucrose, used as a sweetener in foods and medicines. It has nutritional effects similar to other added sugars and contributes to total carbohydrate and energy intake.

Invertase

An enzyme that splits sucrose, table sugar, into glucose and fructose. It is produced by some plants, fungi, and microorganisms and is also used in food processing.

Invertebrata

Invertebrata is a broad nonformal grouping of animals without a vertebral column, including worms, mollusks, arthropods, and many other groups.

Invertebrate

An animal without a vertebral column, including insects, worms, mollusks, and many other groups.

Invertebrate Hormones

Chemical signals that regulate growth, development, reproduction, molting, or metabolism in invertebrate animals.

Inverted Papilloma

A usually benign but locally destructive tumor arising most often in the nasal cavity or sinuses; it can recur and rarely become cancerous.

Investigational

Being studied in clinical research and not yet established as safe and effective for a particular use. Investigational medicines and devices require appropriate oversight, informed consent, and clear communication of uncertainty.

Inveterate

Long-standing or deeply established, often referring to a persistent habit, condition, or behavior.

Involucrum

An involucrum is a sheath of new bone that forms around dead bone, classically in chronic osteomyelitis.

Involuntary

Occurring without conscious control or deliberate choice, such as a reflex, autonomic function, or involuntary muscle movement.

Involuntary Movement

A movement that occurs without conscious control, such as a tremor, tic, chorea, dystonia, or myoclonus.

Involuntary Muscle

Muscle that contracts without conscious control, including smooth muscle in internal organs and cardiac muscle in the heart.

Involuntary Psychiatric Treatment

Assessment, hospitalization, or treatment without the patient's consent under applicable law when serious mental disorder creates a substantial risk of harm or severe inability to meet basic needs. The least restrictive alternative, due process, and ongoing reassessment are required.

Involute

To shrink, return toward a former size, or undergo involution; in anatomy, an involute structure may be tightly coiled or rolled inward.

Involution

The process by which the uterus returns to its prepregnancy size after delivery. The uterus weighs approximately 1000 grams immediately postpartum and returns to approximately 60 grams by 6 weeks. Fundal height decreases approximately 1 cm per day.

Iodamoeba Butschlii

Iodamoeba butschlii is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Iodide

The negatively charged form of iodine, used by the thyroid to make hormones and present in medicines, supplements, and contrast compounds.

Iodide-Associated Sialadenitis

Inflammation and swelling of the salivary glands caused by excessive iodide intake, typically from medications such as amiodarone or iodine-containing contrast, resolving with dose reduction.

Iodides

Salts containing iodine, sometimes used in carefully selected thyroid disorders.

Iodinated Contrast Media

Contrast agents containing iodine used primarily for radiography, CT, angiography, and some fluoro-

scopic procedures. Important risks include immediate hypersensitivity-like reactions, extravasation, thyroid effects, and kidney injury in susceptible patients.

Iodine

Required for thyroid hormones. Deficiency: goiter, hypothyroidism, cretinism. Prevention: iodized salt, seafood. Excess can cause thyroid dysfunction.

Iodine Deficiency

Inadequate iodine intake or availability, which can impair thyroid-hormone production and cause goiter, hypothyroidism, or developmental problems in a fetus or child.

Iodine Poisoning

Iodine poisoning follows excessive iodine exposure and can irritate the gastrointestinal tract, disrupt thyroid function, and cause systemic toxicity depending on dose and formulation.

Iodine-123

Pure gamma emitter, half-life 13 hours. Used for thyroid imaging. No beta emission, lower radiation dose than I-131.

Iodine-131

A radioactive iodine isotope used in selected diagnostic and therapeutic procedures, especially for thyroid disease.

Iodipamide

An iodinated contrast medium formerly used for imaging the biliary system and urinary tract; it can cause allergic or kidney-related reactions.

Iodoacetamide

A chemical reagent that irreversibly modifies sulfhydryl groups, especially cysteine residues, and is used in biochemical research.

Iododerma

A papulopustular or acneiform skin eruption caused by iodine excess, presenting on the face and exten-

sor surfaces, resolving with iodine restriction and symptomatic treatment.

Iodoform

A yellow iodine-containing compound formerly used as an antiseptic and in some wound or dental preparations. It can irritate tissue and cause toxicity if absorbed or swallowed and is now used only in selected contexts.

Iohexol

A nonionic, water-soluble iodinated contrast medium used for CT, angiography, and other imaging studies.

Ion

An atom or molecule carrying a positive or negative electric charge. Physiologically important ions include sodium, potassium, calcium, chloride, and bicarbonate, whose concentrations influence nerves, muscles, fluid balance, and acid-base status.

Ion Transport

Movement of charged particles across a cell membrane through channels, carriers, or pumps. It maintains membrane potentials, nerve signaling, muscle contraction, fluid balance, and epithelial transport.

Ionic Strength

A measure of the total concentration and charge of ions in a solution. It affects protein interactions, membrane behavior, chemical equilibria, and the performance of some laboratory assays and medicines.

Ionization

The formation of charged particles by gaining or losing electrons or protons. A medicine's degree of ionization affects its solubility, membrane passage, absorption, distribution, and urinary excretion.

Ionizing Radiation

Radiation with enough energy to remove electrons from atoms and create ions, including X-rays, gamma rays, and certain particulate emissions. It

can cause deterministic tissue effects at sufficient doses and stochastic cancer risk at lower doses.

Ionomycin

A medicine or chemical compound called ionomycin. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Ionophore

A molecule that transports ions across a lipid membrane. Ionophores have research, antimicrobial, and veterinary uses; some can disrupt human cellular ion balance and are toxic.

Ions

Electrically charged atoms or molecules, including the electrolytes that regulate nerve conduction, muscle function, hydration, and acid-base balance. Abnormal ion concentrations can cause weakness, seizures, arrhythmias, or altered consciousness.

Iontophoresis

Use of a mild electrical current to drive an ionized medicine through the skin or alter sweat-gland activity. It is used in selected dermatologic and rehabilitation settings; skin irritation and burns can occur.

Iopamidol

A nonionic iodinated contrast medium used in CT, angiography, and other radiologic examinations.

Iothalamate Clearance

Iothalamate clearance estimates glomerular filtration by measuring how quickly injected iothalamate is cleared from blood or urine.

Iothalamate Meglumine

Iothalamate meglumine is an iodinated contrast agent formerly used in radiographic imaging and associated with dose- and kidney-related risks.

Iothalamic Acid

An older water-soluble, iodinated contrast agent formerly used for radiographic imaging. It has largely

been replaced by newer agents; prior contrast reactions, kidney function, and thyroid disease remain clinically relevant when reviewing exposure history.

Ioxaglic Acid

An older iodinated contrast medium used for radiographic imaging, including selected angiographic and urinary-tract studies. It has largely been superseded by newer agents, but its history is relevant when assessing prior contrast reactions.

IPC

Alternate name; see *Indwelling Pleural Catheter*.

Ipecac

Emetic no longer recommended for routine poisoning management. Risk of aspiration, delays charcoal administration.

Ipilimumab

A medicine or chemical compound called ipilimumab. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

IPMN Pancreas (Pancreatic Cysts)

Alternate index label for Pancreatic Cysts.

Ipratropium

Ipratropium is an inhaled short-acting muscarinic antagonist that reduces vagally mediated bronchoconstriction and nasal secretion; it is used in COPD and acute asthma with bronchodilators.

Ipratropium Bromide

An inhaled anticholinergic (antimuscarinic) bronchodilator that blocks acetylcholine at airway smooth muscle muscarinic receptors. It reduces bronchospasm and mucus secretion. It is used in COPD and acute asthma exacerbations. It is less effective than beta-2 agonists in asthma but more effective in COPD.

Iproniazid

Iproniazid is an older monoamine oxidase inhibitor

antidepressant that is no longer commonly used because of serious liver toxicity and drug interactions.

Ipsilateral

Pertaining to, situated on, or affecting the same side of the body relative to a given point of reference or pathological lesion (the opposite of contralateral). In clinical neurology, unilateral cerebellar hemisphere lesions produce ipsilateral limb ataxia, dysmetria, and intention tremor, and a disruption of the cervical sympathetic chain causes ipsilateral Horner syndrome (ptosis, miosis, and anhidrosis on the same side as the lesion).

IQ Testing

IQ testing uses standardized tasks to estimate intellectual functioning; results should be interpreted with education, language, development, and clinical context.

Iratumumab

A medicine or chemical compound called iratumumab. Its uses, effects, interactions, and risks depend on the specific substance and clinical indication.

Irbesartan

Irbesartan is an angiotensin-II receptor blocker used for hypertension and diabetic kidney disease; it can cause hyperkalaemia, hypotension, and renal-function changes and is contraindicated in pregnancy.

Iridium

Iridium is a dense metal whose radioactive isotopes, especially iridium-192, are used in industrial testing and some medical brachytherapy.

Iridocyclitis

Inflammation involving the iris and ciliary body, a form of anterior uveitis. It may cause eye pain, photophobia, redness, blurred vision, and cells or flare in the anterior chamber and may be associated with autoimmune disease, infection, trauma, or other causes.

Iridotomy

A procedure that creates a small opening in the iris to allow aqueous humor to pass between the posterior and anterior chambers. Laser peripheral iridotomy is used to treat or prevent selected forms of angle-closure glaucoma.

Irinotecan

A chemotherapy medicine that inhibits topoisomerase I and is used for colorectal and several other cancers.

Irinotecan Hydrochloride

The hydrochloride salt form of irinotecan, a topoisomerase I inhibitor used in cancer treatment.

Iris

The colored, muscular ring between the cornea and lens that controls the size of the pupil and therefore the amount of light entering the eye. Its muscles constrict the pupil in bright light and enlarge it in dim light.

Iris Atrophy

Thinning or loss of iris tissue resulting from trauma, chronic inflammation, ischaemia, or neurodegenerative disease, leading to a translucent or patched iris appearance. It may be sectoral or diffuse and can be associated with decreased pupillary response, photophobia, or secondary glaucoma.

Iris Cyst

An iris cyst is a fluid-filled lesion on or within the iris, usually benign but sometimes affecting vision, pressure, or the appearance of the eye.

Iris Disease

A disorder of the colored part of the eye, including inflammation, injury, infection, developmental abnormalities, or tumors.

Iris Melanoma

Iris melanoma is a malignant tumor of pigment cells in the iris and may appear as a growing pigmented lesion, pupil distortion, or glaucoma.

Iris Neoplasm

An iris neoplasm is an abnormal growth arising in the colored part of the eye; it may be benign or malignant and can affect vision or eye pressure.

Iritis

Inflammation of the iris, the most common form of anterior uveitis. Presents with acute onset eye pain, photophobia, blurred vision, and redness (ciliary flush). Signs: cells and flare in the anterior chamber, keratic precipitates (KP), synechiae (adhesions between iris and lens).

Irofulven

Irofulven is an investigational anticancer compound derived from illudin that damages DNA and has been studied in solid tumors.

Iron

Essential for hemoglobin, myoglobin, and electron transport. Heme iron from animal foods is generally more bioavailable than non-heme iron from plant foods. Deficiency is the most common nutritional deficiency worldwide and may result from blood loss, increased requirements, poor intake, or malabsorption.

Iron Deficiency

The most common nutritional deficiency worldwide, resulting from inadequate iron intake, impaired absorption, or chronic blood loss, leading to reduced hemoglobin synthesis and microcytic hypochromic anemia. Clinical features include fatigue, pallor, koilonychia, pica, and angular cheilitis.

Iron Deficiency Anemia

Anemia caused by insufficient iron for hemoglobin production. It is often microcytic and hypochromic; treatment requires identifying the cause and replacing iron when appropriate.

Iron Overdose

Iron overdose can cause gastrointestinal injury, metabolic acidosis, shock, liver failure, and multiorgan toxicity, particularly after a large ingestion by a child.

Iron Overload

Excess iron stored in the body, which can damage the liver, heart, pancreas, joints, or endocrine organs.

Alternate Names:

Overload Iron (Iron Overload)

Iron-Deficiency Anaemia

Anaemia caused by insufficient iron for haemoglobin production, commonly due to blood loss, inadequate intake, or impaired absorption.

Iron-Deficiency Anaemia In Adolescents

Iron-deficiency anaemia during adolescence, commonly related to rapid growth, inadequate dietary iron, or menstrual blood loss. Assessment should identify the cause and guide dietary advice and clinical treatment.

Iron-Deficiency Anemia

Anemia caused by insufficient iron for normal hemoglobin production. It may cause fatigue, weakness, shortness of breath, paleness, headache, or unusual cravings such as ice; the cause of iron loss or inadequate intake should be identified.

Irradiated Foods

Irradiated foods are exposed to controlled ionizing radiation to reduce pathogens, insects, or spoilage; the process does not make food radioactive.

Irradiation

Exposure to or treatment with radiation; irradiation may be used diagnostically or therapeutically, or may cause tissue injury depending on dose and type.

Irregular

Not following a regular pattern, rhythm, shape, timing, or expected sequence.

Irregular Menstruation

Menstrual bleeding that is unusually early, late, frequent, infrequent, prolonged, heavy, or unpredictable for the person's age and reproductive context. Causes include pregnancy, ovulatory disorders,

endocrine disease, medicines, structural lesions, and perimenopause.

Irregular Respiration

An abnormal breathing pattern in rate, depth, rhythm, or pauses. It may occur with sleep disorders, metabolic disturbance, lung disease, drug effects, or neurologic injury and may require urgent assessment if accompanied by cyanosis or reduced consciousness.

Irregular Sleep-Wake Syndrome

A circadian rhythm sleep-wake disorder with multiple irregular periods of sleep and wakefulness across the 24-hour day rather than one consolidated nighttime sleep period. It is associated with neurological disease, dementia, aging, and reduced exposure to environmental time cues.

Irreversible Cell Injury

Cell damage beyond the point of recovery, resulting in death by necrosis, apoptosis, or another regulated cell-death pathway. Key features include inability to reverse mitochondrial dysfunction and severe membrane or nuclear damage.

Irrigate

To wash or flush a body part, wound, cavity, or medical device with a fluid to remove debris, contaminants, or secretions.

Irrigation

Flushing a wound, body cavity, or organ with fluid to remove blood, debris, microorganisms, or unwanted material.

Irrigation Solution

A sterile or appropriately prepared liquid used to wash a wound, body cavity, organ, or surgical field. The solution must be suitable for the tissue because contamination, pressure injury, electrolyte shifts, or chemical irritation can cause harm.

Irritable Bowel Syndrome

A disorder of gut-brain interaction that causes re-

peated abdominal pain and changes in bowel habits, such as diarrhea, constipation, or both. No visible structural damage is usually found in the digestive tract.

Alternate Names:

IBS

Irritable Bowel Syndrome

Alternate index label for IBS.

Irritable Bowel Syndrome

Alternate index label for Irritable Bowel Syndrome.

Irritable Bowel Syndrome Diet

An individualized eating plan used to reduce irritable bowel syndrome symptoms. A limited trial of a low-FODMAP diet may help some people and should be followed by structured food reintroduction.

Irritable Mood

A mood marked by increased sensitivity, impatience, anger, or a tendency to become upset easily.

Irritant Contact Dermatitis

Inflammation of the skin caused by direct chemical or physical injury rather than an immune-mediated allergy. It commonly produces redness, burning, scaling, fissures, or pain at the area of exposure.

Irritants

Substances that provoke inflammation or allergy-like symptoms without necessarily causing an immune allergy.

Irritation

A local unpleasant or inflammatory response to mechanical, chemical, thermal, infectious, or allergic stimuli. It may cause redness, itching, burning, pain, cough, or tearing depending on the tissue involved.

Isaacs Syndrome

A rare peripheral nerve hyperexcitability disorder causing continuous muscle-fibre activity, stiffness, cramps, fasciculations, myokymia, and delayed mus-

cle relaxation. It may be autoimmune, paraneoplastic, or associated with inherited or acquired peripheral-nerve disorders.

Isavuconazole

A triazole antifungal agent used in the treatment of invasive aspergillosis and mucormycosis. Isavuconazole inhibits fungal lanosterol 14-alpha demethylase, disrupting ergosterol synthesis and fungal cell membrane integrity.

Isazophos

Isazophos is an organophosphate pesticide that can inhibit acetylcholinesterase and cause cholinergic toxicity after exposure.

Ischaemia

Inadequate blood flow and oxygen delivery to a tissue, usually because of narrowed or blocked blood vessels, causing dysfunction or injury.

Ischaemic Heart Disease

Heart disease caused by reduced blood supply to the heart muscle, usually as a result of coronary artery disease; it may cause angina or myocardial infarction.

Ischemia

Reduced blood flow causing oxygen deprivation. Can lead to tissue damage or death.

Ischemia, Intestinal

Alternate index label; see *Intestinal ischemia*.

Ischemia-Reperfusion Injury

The paradoxical tissue damage that occurs when blood flow is restored to previously ischemic tissue, a phenomenon with major clinical significance in myocardial infarction treatment, stroke management, organ transplantation, and shock resuscitation.

Ischemic Bone Necrosis

Alternate index label; see *Avascular necrosis (osteonecrosis)*.

Ischemic Cardiomyopathy

Weakening of the heart muscle caused by coronary artery disease and previous or ongoing myocardial ischemia. Scarred or poorly perfused myocardium can reduce contractile function and increase the risk of heart failure and ventricular arrhythmias.

Ischemic Chest Pain (Angina Symptoms)

Alternate index label for Angina Symptoms.

Ischemic Colitis

Inflammation and injury of the colon caused by reduced blood flow. It often causes sudden abdominal pain, bloody diarrhea, or rectal bleeding and commonly affects areas such as the splenic flexure.

Alternate Names:

Colitis, Ischemic

Ischemic Fasciitis

A benign fibroblastic and myofibroblastic proliferation associated with pressure-related ischemic injury, usually arising in deep soft tissue over bony prominences in debilitated or immobile patients.

Ischemic Gangrene

Death of tissue due to prolonged severe arterial insufficiency, most commonly in the extremities. Presents as dry, black, mummified tissue with a clear line of demarcation from viable tissue. Requires revascularization when possible and surgical debridement or amputation of necrotic tissue.

Ischemic Heart Disease

Heart disease caused by inadequate blood flow through narrowed or blocked coronary arteries.

Alternate Names:

Coronary artery disease; coronary heart disease

Ischemic Preconditioning

A phenomenon in which brief, nonlethal episodes of ischemia make tissue more resistant to a later, prolonged ischemic insult. It is important in cardiovascular and research physiology, but clinical applications remain context-dependent.

Ischemic Priapism

Alternate index label; see *Priapism*.

Ischemic Stroke

A neurologic deficit caused by inadequate blood flow to part of the brain, usually from thrombotic or embolic arterial occlusion. Causes include atherosclerotic disease, cardiac embolism, and small-vessel disease.

Ischium

Inferior-posterior hip bone. Ischial tuberosity bears seated weight and serves as hamstring attachment. Ischial spine is a pudendal nerve block landmark and determines pelvic outlet level. Lesser sciatic notch lies between spine and tuberosity.

Ishak Score

ishak score is a laboratory test, imaging method, instrument, score, or measurement used to characterize a specimen or clinical finding; interpretation depends on the method and clinical context.

Islet Cell

islet cell refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Islet Cell Cancer

Alternate index label; see *Pancreatic neuroendocrine tumors*.

Islets Of Langerhans

Clusters of endocrine cells in the pancreas that produce hormones including insulin and glucagon.

Iso-Sulfan Blue

A blue dye used to map lymphatic drainage or identify sentinel lymph nodes during selected surgical procedures.

Isoaminile

Isoaminile is an older sympathomimetic appetite suppressant that is no longer widely used because

of cardiovascular and other adverse effects.

Isoantibodies

Antibodies made against antigens from another individual of the same species, such as antibodies involved in blood-group incompatibility.

Isoantigen

An antigen that differs between individuals of the same species and can trigger an immune response after exposure.

Isocarboxazid

Isocarboxazid is a monoamine oxidase inhibitor used for depression; it has important interactions with other medicines and tyramine-rich foods.

Isochromosomes

Abnormal chromosomes with two identical arms caused by division across the wrong axis of the centromere.

Isocitrate Dehydrogenase

A regulated enzyme of the citric acid cycle that converts isocitrate to alpha-ketoglutarate while producing NADH and releasing carbon dioxide. Mitochondrial isoforms are stimulated by ADP and calcium and inhibited by ATP and NADH. Mutations in IDH1 or IDH2 can produce the oncometabolite 2-hydroxyglutarate.

Isocyanate

A reactive chemical group found in some industrial products; exposure can irritate the airways and cause occupational asthma or skin reactions.

Isoelectric Point

The pH at which a molecule, especially a protein, has no net electrical charge.

Isoenzyme

Isoenzyme is an immunologic, genetic, infectious, developmental, or cellular concept used to explain disease mechanisms, diagnosis, or treatment.

Isoetharine

A bronchodilator related to beta-adrenergic agonists that was formerly used to relieve airway narrowing.

Isofenphos

An organophosphate insecticide that can cause cholinergic poisoning by inhibiting acetylcholinesterase.

Isoflavone

A plant compound, especially from soy, with weak estrogen-like activity that is studied in relation to bone, menopause, and cancer risk.

Isoflurane

Isoflurane is an inhaled anesthetic used to maintain general anesthesia; it can lower blood pressure and depress breathing.

Isoflurophate

Isoflurophate is a long-acting organophosphate cholinesterase inhibitor formerly used in eye treatments; it can cause prolonged cholinergic effects.

Isogeneic Graft

A transplant between genetically identical individuals, such as identical twins, so immune rejection risk is relatively low.

Isokinetic Exercise

Muscle contraction at constant speed throughout range of motion. Uses specialized equipment. Assesses and improves strength.

Isolate

To separate a person, organism, tissue, or substance from others; infection-control isolation separates people who may transmit a pathogen.

Isolate Compound

To separate a single chemical compound from a mixture for identification, testing, or research. In clinical laboratories, isolation and characterization may support toxicology, pharmacology, or natural-product analysis.

Isolated Systolic Hypertension

Elevated systolic blood pressure with normal diastolic pressure, commonly related to arterial stiffness in older adults and associated with increased cardiovascular risk.

Isolation

Separation of sick persons with contagious disease. Examples: tuberculosis isolation, airborne infection isolation rooms.

Isolation (Social)

Lack of social contacts and interactions. Common in elderly: bereavement, mobility limitation, sensory impairment, retirement. Consequences: depression, cognitive decline, functional impairment, mortality. Interventions: social programs, transportation, technology, volunteer visits.

Alternate Names:

Social

Isolation Precautions

Measures used with standard precautions to reduce transmission of infection. Additional precautions may be contact, droplet, or airborne, depending on the mode of spread.

Isoleucine

An essential branched-chain amino acid needed for protein synthesis, energy metabolism, and tissue repair.

Isomerase

An enzyme that rearranges atoms within a molecule to form an isomer. Isomerases participate in metabolism, and inherited defects in related pathways can cause metabolic disease.

Isometheptene

Isometheptene is a vasoconstrictor formerly used in some headache medicines; it may raise blood pressure and is unsuitable for some cardiovascular conditions.

Isometric

Describing muscle contraction that produces force without a meaningful change in muscle length or joint movement.

Isometropia

The condition in which both eyes have approximately equal refractive power, so neither eye has substantially more near-sightedness, far-sightedness, or astigmatism than the other.

Isoniazid

Isoniazid is a first-line antituberculous drug that inhibits mycolic-acid synthesis in *Mycobacterium tuberculosis*; hepatotoxicity and peripheral neuropathy are important risks, and pyridoxine is often given.

Isoniazid Toxicity

Hepatotoxicity, peripheral neuropathy, seizures. Treatment: pyridoxine (vitamin B6) supplementation, activated charcoal, seizure control.

Isoprenaline

Isoprenaline, also called isoproterenol, is a beta-adrenergic medicine that can increase heart rate and is used in selected emergency cardiac situations.

Isoprenylation

Addition of a lipid-derived isoprenyl group to a protein, often helping determine its membrane location and signaling activity. Abnormal isoprenylation contributes to some cancers and is a target of investigational therapies.

Isoproc carb

Isoproc carb is a carbamate insecticide that can cause cholinergic poisoning if swallowed or absorbed in a significant amount.

Isopropamide

Isopropamide is an anticholinergic medicine formerly used for gastrointestinal spasms; it may cause dry mouth, blurred vision, constipation, or urinary retention.

Isopropanol Alcohol Poisoning

Poisoning from isopropanol, often found in rubbing alcohol, causing intoxication, vomiting, abdominal pain, low blood pressure, and sometimes coma.

Isopropyl Alcohol

A volatile alcohol used as a disinfectant and solvent. Ingestion can cause rapid intoxication, vomiting, abdominal pain, hypotension, and coma; management is supportive and differs from treatment of methanol or ethylene-glycol poisoning.

Isoprostane

A compound formed when free radicals oxidize membrane lipids; it is used as a marker of oxidative stress.

Isoproterenol

Isoproterenol, also called isoprenaline, is a beta-adrenergic medicine that increases heart rate and contractility and is used in selected emergency settings.

Isoquinolines

A group of nitrogen-containing ring compounds that includes chemicals studied in pharmacology, natural products, and organic chemistry.

Isosorbide

Isosorbide is a nitrate medicine that relaxes blood vessels and is used mainly to prevent or relieve angina; headache and low blood pressure are common adverse effects.

Isosorbide Dinitrate

An organic nitrate (and prodrug) that releases nitric oxide, relaxing vascular smooth muscle—predominantly venous (preload reduction) with coronary dilation.

Isospora

Isospora is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Isospora Belli

Isospora belli is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Isosporiasis

Intestinal infection caused by the protozoan *Cystoisospora belli*. It typically causes watery diarrhea, abdominal cramps, nausea, fever, and weight loss and may be prolonged or severe in people with impaired cellular immunity.

Isothiocyanate

A reactive compound formed from glucosinolates in some plants, especially cruciferous vegetables, and studied for antimicrobial and cancer-related effects.

Isothiocyanates

A group of reactive plant compounds formed from glucosinolates, especially in cruciferous vegetables.

Isotonic

Describing muscle contraction in which muscle length changes to move a joint under a relatively constant external load.

Isotonic Exercise

Exercise in which muscles change length while producing force against a relatively constant load, as in lifting or lowering a weight.

Isotonic Solution

A solution with an effective osmotic concentration close to that of plasma, such as normal saline or balanced crystalloid. Isotonic fluids may expand extracellular volume, but choice and amount must be tailored because excess can cause fluid overload or electrolyte disturbance.

Isotope

One of two or more atoms of the same element with the same number of protons but different numbers of neutrons.

Isotretinoin

A systemic retinoid used for severe, recalcitrant nodular acne. It reduces sebum production, normalizes follicular keratinization, decreases *Propionibacterium acnes*, and has anti-inflammatory effects. Dose is 0.5 to 1 mg/kg/day for 15 to 20 weeks, targeting cumulative dose of 120 to 150 mg/kg.

Isovaleric Acidemia

An autosomal recessive inborn error of leucine catabolism caused by a deficiency of the mitochondrial enzyme isovaleryl-CoA dehydrogenase (*IVD*). Results in the pathological accumulation of isovaleryl-CoA and its derivatives, notably isovaleric acid, isovalerylglycine, and isovalerylcarnitine. Characterized by intermittent acute episodes of severe metabolic ketoacidosis, vomiting, lethargy, encephalopathy, cerebral edema, and a distinctive, pungent odor resembling “sweaty feet” or stale cheese, accompanied by hyperammonemia, pancytopenia, and hypocalcemia during acute decompensation.

Alternate Names:

IVA; Isovaleryl-CoA Dehydrogenase Deficiency

Isoxsuprine

Isoxsuprine is a vasodilating medicine formerly used for selected circulation disorders; it may cause dizziness, fast heartbeat, or low blood pressure.

Isozyme

One of several molecular forms of an enzyme that catalyze the same reaction but differ in structure, tissue distribution, or regulation.

Ispaghula Husk

Ispaghula husk, or psyllium, is a soluble fiber that absorbs water and helps regulate stool consistency; adequate fluid is important when using it.

Ispinesib

Ispinesib is an investigational kinesin-spindle protein inhibitor studied for anticancer effects by disrupting chromosome separation during cell division.

Isradipine

Isradipine is a calcium-channel blocker used to lower blood pressure; it may cause flushing, headache, ankle swelling, or dizziness.

ISUP Grade Group

The standardized five-tier pathological grading system established by the International Society of Urological Pathology and endorsed by the World Health Organization to stage prostate adenocarcinoma, addressing the clinical ambiguity of historical Gleason scoring. The system stratifies cancer prognosis into Grade Group 1 (Gleason score ≤ 6 , indolent with excellent prognosis), Grade Group 2 (Gleason score $3+4 = 7$, predominantly favorable prognosis), Grade Group 3 (Gleason score $4+3 = 7$, unfavorable prognosis with predominant pattern 4), Grade Group 4 (Gleason score 8, high risk), and Grade Group 5 (Gleason score 9–10, highest risk of systemic progression and mortality). It provides patients and clinicians with clearer risk stratification for active surveillance versus definitive local or systemic therapy.

Alternate Names:

Grade Group; ISUP Prostate Grading System; WHO/ISUP Grade Group

Itch

Itch, or pruritus, is an unpleasant skin sensation that provokes scratching and may arise from dermatitis, allergy, infection, medicines, kidney or liver disease, blood disorders, nerve disease, or systemic illness. Persistent generalized itch requires evaluation.

Alternate Names:

Pruritus (Itch)

Itching

Itching, or pruritus, is an unpleasant sensation that provokes scratching and may arise from skin disease, allergy, systemic illness, medications, neuropathy, or psychogenic factors. It can be acute or chronic and may arise from skin disease, systemic illness, medication, or neuropathic mechanisms.

Itching Anal (Anal Itching)

Alternate index label for Anal Itching.

Itching, Anal

Itching around the anus, commonly caused by irritant dermatitis, hemorrhoids, pinworms, infection, inflammatory skin disease, or hygiene-related irritation. Persistent, severe, bleeding, painful, or unexplained symptoms require examination.

Itchy Ear

An itching sensation of the external ear or ear canal, which may result from dermatitis, allergy, infection, dryness, or irritation from objects placed in the ear.

Iterative Reconstruction

Modern reconstruction method. OSEM (Ordered Subsets Expectation Maximization). Better quality, longer computation.

ITP

Alternate index label; see *Immune thrombocytopenia*.

Itraconazole

Itraconazole is a triazole antifungal that inhibits fungal ergosterol synthesis and treats several superficial and systemic mycoses; absorption, extensive drug interactions, liver injury, and negative inotropic effects require attention.

IUCD

An intrauterine contraceptive device, usually referring to an intrauterine device placed in the uterus to prevent pregnancy.

IV Fluids

Intravenous fluid therapy for volume resuscitation and maintenance. Crystalloids: normal saline (0.9% NaCl, increases chloride, risk of hyperchloremic metabolic acidosis), lactated Ringer (balanced, contains K⁺, Ca²⁺, lactate buffer, safer in large volumes), Plasma-Lyte (balanced, closest to plasma).

IV Treatment At Home

Intravenous treatment given outside a hospital, usually through a catheter with instructions for safe infusion, line care, monitoring, and follow-up.

Ivabradine

Ivabradine slows the heart rate by acting on the sinus node and is used for selected patients with chronic heart failure or stable angina.

IVC Filter

Device placed in inferior vena cava to prevent pulmonary embolism. Indications: DVT/PE with contraindication to anticoagulation, recurrent PE despite anticoagulation. Complications: filter thrombosis, migration, perforation, IVC occlusion.

Ivermectin

Ivermectin is an antiparasitic medicine used for infections such as strongyloidiasis, onchocerciasis, and scabies.

IVF

In vitro fertilization: the assisted reproductive technology in which oocytes are retrieved, fertilized by sperm outside the body (in vitro), and the resulting embryos transferred to the uterus. Indications: tubal factor, male factor (with ICSI), endometriosis, unexplained, ovulation disorders, genetic testing, and same-sex couples or individuals using donor sperm or eggs.

Ixabepilone

Ixabepilone is a chemotherapy medicine used for some advanced breast cancers; important risks include nerve damage, low blood counts, and allergic reactions.

Ixodes

Ixodes is an immunologic, genetic, infectious, developmental, or cellular concept used to explain disease mechanisms, diagnosis, or treatment.

Internal Carotid Artery

A branch of the common carotid artery that enters the skull and supplies the brain, eyes, and related structures. It contributes to the cerebral arterial circulation.

Idiopathic Anaphylaxis

Repeated anaphylaxis, a severe allergic reaction, for which no specific trigger is found after appropriate evaluation. It is still an emergency: use prescribed epinephrine and seek urgent medical care, while specialist assessment looks for hidden triggers or mast-cell disorders.

Idiopathic Guttate Hypomelanosis

Harmless, small, flat white spots caused by reduced skin pigment, usually on the shins or forearms of older adults. They are not contagious and usually do not need treatment.

Iliotibial Band Friction Syndrome

An overuse injury causing pain on the outside of the knee, and sometimes the hip, when the iliotibial band becomes irritated. It is common in runners and cyclists.

Immunoassays

Laboratory tests that use specific binding between antibodies and target substances to detect or measure them. Examples include ELISA, chemiluminescent tests, and some rapid tests; results must be interpreted with the clinical situation.

Immunomodulatory

Describing a treatment or substance that changes immune activity. It may stimulate, suppress, or otherwise regulate the immune response, depending on the medicine and condition.

Implants

Medical devices, materials, or tissues placed in the body to replace, support, monitor, or deliver treatment. Possible problems include infection, rejection, movement, breakage, or failure.

Impotence

An older term usually referring to erectile dysfunction: persistent difficulty getting or keeping an erection firm enough for sexual activity. Erectile dysfunction can have vascular, neurologic, hormonal, medication-related, or psychological causes.

In Vitro Fertilization (IVF)

An assisted-reproduction treatment in which eggs are collected, fertilized with sperm in a laboratory, and an embryo is transferred to the uterus. Risks include ovarian hyperstimulation, multiple pregnancy, ectopic pregnancy, and procedure-related complications.

Infantile Bradycardia

An unusually slow heart rate in an infant. It can occur normally during sleep, but may also signal low oxygen, infection, medicines, or a heart or conduction problem; symptoms and the infant's age determine the evaluation.

Infectious Diseases

Illnesses caused by bacteria, viruses, fungi, parasites, or prions. They may spread through contact, droplets or air, food or water, insects, blood, or sexual contact; prevention and treatment depend on the organism.

Infrared Therapy

Treatment using infrared radiation, usually to provide heat or light to tissues. It is used in some physiotherapy and skin treatments, but benefits vary and excessive exposure can cause burns or eye injury.

Ingrown Toenails

A condition in which the edge of a toenail grows into nearby skin, most often on the big toe. It causes pain, redness, and swelling; infection, diabetes, or severe symptoms require medical advice.

International Classification of Diseases

A World Health Organization system for coding diseases, injuries, and other health conditions. Versions such as ICD-10 and ICD-11 support clinical records, statistics, and billing; a code does not replace a clinical diagnosis.

Interrupted Aortic Arch

A rare congenital heart defect in which the aorta has a complete gap between its ascending and descending parts. Newborns can rapidly develop poor

circulation and heart failure, so it requires emergency stabilization and surgery.

Intrauterine Insemination

A fertility procedure in which prepared sperm is placed directly into the uterus around ovulation. It is used for selected infertility causes and generally requires at least one open fallopian tube; risks include cramps, infection, and multiple pregnancy.

Intravesical Therapy

Treatment delivered directly into the bladder through a catheter. It is used for conditions such as some bladder cancers or interstitial cystitis and may cause bladder irritation or, less commonly, effects elsewhere in the body.

Iodine Perfusion

The distribution of iodine-containing contrast through tissues or blood vessels, measured during imaging such as computed tomography or angiography. Contrast can rarely cause allergic reactions and may affect kidney or thyroid function.

Ion Channel

A protein pore in a cell membrane that allows selected electrically charged particles, such as sodium, potassium, calcium, or chloride, to cross. Ion channels are important for nerve signals, muscle contraction, and secretion.

Iridodonesis

Shaking or trembling of the iris when the eye moves, often because the lens is absent or its supporting fibers are weak. An eye examination can identify the cause and related lens or eye problems.

Iridoschisis

A rare splitting of the iris tissue into layers, usually in older adults. It may be associated with glaucoma or corneal problems and should be assessed by an eye specialist.

Ischemic Optic Neuropathy

Damage to the optic nerve caused by reduced blood

flow, often producing sudden, usually painless vision loss. It may be arteritic or non-arteritic; urgent assessment is especially important in older adults or when headache, jaw pain, or scalp tenderness occurs.

J

Jaccoud Arthropathy

A deforming but usually nonerosive arthropathy, classically associated with previous rheumatic fever or systemic lupus erythematosus, causing reducible ulnar deviation and other hand deformities.

Jaccoud'S Arthropathy

A deforming but usually non-damaging form of arthritis that can cause the fingers to drift toward the little-finger side. The deformity may improve when the hand is moved and is often linked to lupus or past rheumatic fever.

Jack-In-The-Pulpit Poisoning

Jack-in-the-pulpit poisoning follows ingestion of calcium oxalate crystals from the plant, causing intense burning and swelling of the mouth, throat, and gastrointestinal tract.

Jackknife Position

A prone position in which the operating table is flexed at the hips, raising the buttocks and lowering the head and legs.

Jacksonian Epilepsy

Jacksonian epilepsy is a focal motor seizure that spreads in an orderly pattern across adjacent body regions as abnormal activity propagates through the motor cortex.

Jacksonian Epilepsy (Focal Seizures)

A focal seizure that begins with twitching or stiffening in one body part and spreads in an orderly way to nearby body parts. Awareness may remain normal at first.

Alternate Names:

Focal Seizures

Jacksonian Seizure

A focal motor seizure that begins in one body part and may spread in an orderly pattern to adjacent body regions; awareness may remain intact at first.

Jadassohn'S Naevus

Jadassohn's naevus is a congenital hairless skin lesion, usually a sebaceous naevus, that may change during life and rarely develop secondary tumors.

JAK-STAT Pathway

A system cells use to respond to signals from hormones and immune chemicals. It helps control growth, blood-cell production, inflammation, and immune activity.

JAK2

A protein inside cells that passes signals from certain hormones and immune chemicals. Changes that keep JAK2 active can cause some blood cancers.

Jaktitation

Jaktitation is restless, repetitive, or jerky movement, especially during severe illness or delirium; it is a descriptive historical term rather than a specific diagnosis.

Jammed Finger

A finger injury caused by sudden force, often involving a sprain, joint dislocation, fracture, or tendon injury; persistent deformity, severe pain, or inability to move requires assessment.

Janeway Lesions

Small, usually painless red or purple spots on the palms or soles that can occur with infective endocarditis, an infection of the heart lining or valves. They result from infected particles blocking tiny blood vessels.

Janus Kinase

One of a family of proteins inside cells that pass signals from hormones and immune chemicals. Janus kinases help control inflammation, blood-cell production, and immune responses.

Janus Kinase Inhibitors

Medicines that block Janus kinase proteins and reduce certain immune signals. They are used for selected inflammatory and blood disorders, but can increase the risk of infections, blood clots, and other serious effects.

Japanese Encephalitis

A viral infection spread by mosquitoes that can inflame the brain. Most infections cause no symptoms, but severe illness can cause fever, confusion, seizures, movement problems, or lasting disability.

Jarisch-Herxheimer Reaction

A short-lived reaction that may occur soon after antibiotics are started for certain infections. It can cause fever, chills, headache, muscle aches, and temporarily worse symptoms.

Jaundice

Yellowing of the skin or eyes caused by too much bilirubin in the blood. It can result from breakdown of red blood cells, liver disease, or blockage of bile flow.

Jaundice (Icterus)

Yellow discoloration of the skin, sclerae, or mucous membranes caused by an increased bilirubin concentration in the blood.

Alternate Names:

Icterus

Jaundice And Breastfeeding

Jaundice associated with breastfeeding may reflect inadequate milk intake in the early days or persistent breast-milk jaundice after other serious causes have been excluded.

Jaundice Causes

Jaundice causes include hemolysis, inherited bilirubin disorders, hepatitis, medication or toxin injury, and obstruction of bile drainage; evaluation distinguishes unconjugated from conjugated hyperbilirubinemia.

Jaundice In Adults

Adult jaundice is yellowing of skin or eyes from elevated bilirubin due to red-cell breakdown, liver injury, impaired bile flow, or inherited metabolism. Dark urine, pale stool, abdominal pain, fever, confusion, or rapid onset requires prompt assessment.

Jaundice In Neonates

Yellowing of a newborn's skin or eyes from elevated bilirubin. It is often physiologic, but jaundice in the first 24 hours, rapidly increasing jaundice, poor feeding, lethargy, fever, pale stools, or dark urine requires urgent evaluation.

Jaundice In Newborns

Yellow discoloration of a newborn's skin or eyes caused by elevated bilirubin.

Jaw

The upper and lower bony structures of the mouth—the maxilla and mandible—which support the teeth and contribute to chewing, speech, facial shape, and the oral airway.

Jaw Fracture

A traumatic structural disruption or fracture involving either the mandible (lower jaw) or the maxilla (upper jaw). Mandibular fractures are far more common, frequently occurring at multiple sites simultaneously (e.g., parasymphysis and contralateral condylar neck) owing to the rigid ring-like architecture of the mandible; presents with post-traumatic malocclusion, step-off deformities, sublin-

gual hematoma (Coleman sign), and mental nerve paresthesia. Maxillary fractures typically follow severe blunt facial impact and are classified according to the Le Fort system (Types I, II, and III). Critical management priorities include immediate airway stabilization (especially with posterior tongue displacement in bilateral symphyseal fractures), reduction, and maxillomandibular fixation or open reduction internal fixation.

Jaw Jerk Reflex

A brief closing movement of the jaw when the chin is tapped with the mouth slightly open. An unusually strong response may suggest a problem in the brain's motor pathways.

Jaw Neoplasm

A neoplasm arising in the jawbone or adjacent oral and facial tissues. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

Jaw Pain

Pain in the jaw, jaw joint, or chewing muscles caused by temporomandibular disorders, dental disease, infection, injury, or less commonly heart or nerve disease. Pain with chest discomfort, sweating, breathlessness, or exertion requires urgent assessment; persistent pain or restricted jaw movement requires dental or medical review.

Jaw Tumors And Cysts

Abnormal growths or fluid-filled sacs that develop in the jawbone or nearby tissues.

Alternate Names:

Odontogenic Tumors And Cysts

Jeb Protocol

An experimental oncology treatment protocol; its exact medicines, schedule, indication, and safety profile depend on the study or institution using the name.

Jehovah'S Witness

A member of a Christian religious group whose beliefs may lead them to decline transfusions of whole

blood and certain blood components. Individual choices about blood products, procedures, and treatment vary, so clinicians should discuss the patient's informed preferences and document them carefully.

Jejunal Atresia

A condition present at birth in which part of the jejunum, a section of the small intestine, is closed or missing. It causes bowel blockage in a newborn, with green vomiting, a swollen abdomen, and failure to pass the first stool.

Jejunal Fistula

An abnormal connection involving the jejunum and another organ, skin, or body surface. It may cause intestinal contents to leak, infection, malnutrition, dehydration, or sepsis and requires assessment of its cause and output.

Jejunal Hemorrhage

Bleeding from the jejunum, the middle segment of the small intestine, which may cause maroon or black stool, anemia, abdominal pain, or shock depending on its rate and cause.

Jejunal Neoplasm

A neoplasm arising in the jejunum, the middle part of the small intestine. Diagnosis establishes the tumour type, extent, biological behaviour, and appropriate management.

Jejunal Stenosis

Narrowing of the jejunal lumen that can impede intestinal contents and cause cramping, vomiting, distension, malabsorption, or obstruction; causes include Crohn disease, adhesions, tumors, and ischemic injury.

Jejunal Ulcer

An ulcerated break in the lining of the jejunum, caused by inflammation, infection, ischemia, medicines, tumor, or anastomotic disease and potentially producing pain, bleeding, or perforation.

Jejunitis

Jejunitis is inflammation of the jejunum, which may result from infection, inflammatory bowel disease, ischemia, medication, or other intestinal disorders.

Jejunioleal Atresia

Congenital complete intrinsic occlusion of the lumen of the jejunum or ileum, resulting from an intrauterine mesenteric vascular disruption (ischemic accident, volvulus, intussusception, or internal herniation) during late gestation. Neonates present within the first 24 to 48 hours of life with bilious vomiting, progressive abdominal distension, and failure to pass meconium. Abdominal radiography classically demonstrates multiple dilated bowel loops with air-fluid levels and an absence of distal gas; definitive management is surgical bowel resection with primary enterostomy or end-to-end anastomosis.

Alternate Names:

Jejunal Atresia; Ileal Atresia; Small Bowel Atresia

Jejunostomy

A surgically created opening into the jejunum, often used for placement of a feeding tube when nutrition cannot safely be given through the stomach.

Jejunostomy Feeding Tube

A jejunostomy feeding tube delivers nutrition directly into the jejunum when oral or gastric feeding is unsafe or inadequate, with attention to formula, rate, position, and complications.

Jejunum

The middle part of the small intestine. It absorbs much of the nutrients from food before the remaining contents pass into the ileum.

Jellyfish Stings

Skin injury caused by contact with jellyfish tentacles, which release venom and may cause pain or systemic symptoms.

Alternate Names:

Stings, Jellyfish

Jendrassik'S Maneuver

Jendrassik's maneuver reinforces deep-tendon reflexes by having the patient interlock and pull the hands or tense another muscle group.

Jeotgalibacillus

Jeotgalibacillus is a genus of Gram-positive, usually halotolerant bacteria reported mainly from salt-rich or fermented environments; isolation from a clinical specimen must be distinguished from contamination or colonization.

Jerusalem Cherry Poisoning

Jerusalem cherry poisoning follows ingestion of *Solanum pseudocapsicum* berries, which contain toxic compounds that may cause gastrointestinal symptoms, confusion, weakness, or cardiac effects.

Jervell And Lange-Nielsen Syndrome

Jervell and Lange-Nielsen syndrome is an inherited disorder combining congenital profound sensorineural deafness with prolonged QT and risk of life-threatening ventricular arrhythmia.

Jet Lag

Temporary circadian rhythm disruption after rapid travel across time zones, causing sleep disturbance, fatigue, impaired concentration, and sometimes gastrointestinal symptoms.

Alternate Names:

Desynchronization (Jet Lag)

Jet Lag Prevention

Jet lag prevention uses timed light exposure, sleep adjustment, hydration, and carefully planned activity or melatonin strategies to shift the circadian rhythm across time zones.

Jewelry Cleaner Poisoning

Jewelry cleaner poisoning can injure the mouth, esophagus, stomach, lungs, or eyes depending on the product and exposure route; immediate poison-control guidance is appropriate.

Jimsonweed Poisoning

Jimsonweed poisoning causes anticholinergic toxicity, including dilated pupils, dry mouth, rapid heart rate, urinary retention, agitation, delirium, seizures, or coma.

Job Syndrome

A primary immunodeficiency, usually caused by pathogenic variants affecting STAT3, characterized by eczema, recurrent staphylococcal skin and lung infections, and markedly elevated immunoglobulin E. Skeletal, dental, and characteristic facial findings may also occur.

Jock Itch

A fungal infection of the groin and inner thighs, also called tinea cruris. It causes an itchy, scaly, ring-shaped or spreading rash, often worsened by warmth and moisture. Pain, fever, extensive involvement, or failure to improve with appropriate care requires clinical evaluation.

Alternate Names:

tinea cruris. Tinea Cruris

Jod-Basedow Phenomenon

The Jod-Basedow phenomenon is iodine-induced hyperthyroidism, usually in people with autonomous thyroid tissue exposed to excess iodine.

Johnny

A colloquial term for a hospital gown, usually a short gown that ties in the back; in some regional slang it can also mean a condom.

Johnsonella

Johnsonella is a genus of anaerobic bacteria found mainly in the mouth; recovery from a clinical specimen should be interpreted with the site and evidence of infection.

Johnsonella Ignava

An anaerobic bacterium associated mainly with the human mouth and occasionally isolated from mixed infections.

Joint

The place where two or more bones meet. Joints may be fixed, slightly movable, or freely movable, such as the knee, hip, or shoulder.

Joint Capsule

A joint capsule is the fibrous envelope surrounding a freely movable joint; its inner lining produces synovial fluid that lubricates the joint.

Joint Contracture

Persistent limitation of passive joint movement caused by shortening or fibrosis of muscle, tendon, capsule, ligament, fascia, skin, or other periarticular tissue. It may follow immobilization, neurological disease, trauma, inflammation, burns, or congenital disorders.

Joint Diseases

A broad category of pathological conditions affecting the structure and function of joints. Classification by etiology: (1) Degenerative: osteoarthritis (most common, non-inflammatory, affects load-bearing joints—knee, hip, spine).

Joint Effusion

Excess fluid within a joint space. Common sites: knee (most accessible), ankle, wrist, shoulder. Causes: trauma, infection, inflammatory arthritis, crystal arthropathy. Detected by ballottement or bulge sign.

Joint Fluid Culture

Joint fluid culture tests synovial fluid for bacterial, fungal, or other organisms when septic arthritis is suspected; results are interpreted with cell count, crystals, and clinical findings.

Joint Fluid Gram Stain

Joint fluid Gram stain applies differential staining to synovial fluid to look for bacteria, helping evaluate septic arthritis alongside culture and fluid analysis.

Joint Inflammation (Arthritis)

Alternate index label for Arthritis.

Joint Mice

Joint mice are loose bodies within a joint, consisting of cartilage, bone, or other tissue that can cause catching, locking, pain, or swelling.

Joint Pain

Discomfort arising from articular structures including cartilage, synovium, ligaments, and periarticular soft tissues due to inflammation, degeneration, injury, or infection.

Joint Pain, Monoarticular

Pain affecting one joint, caused by trauma, infection, crystal arthritis, osteoarthritis, or inflammatory arthritis. Acute monoarticular pain with swelling, warmth, fever, or inability to bear weight requires urgent assessment for septic arthritis.

Joint Pain, Polyarticular

Pain affecting multiple joints, caused by systemic inflammatory disease, infection, osteoarthritis, crystal disease, medication, or other conditions. The pattern, duration, swelling, and associated symptoms guide evaluation.

Joint Prosthesis

An artificial joint or implant designed to replace a damaged or diseased biological joint, restoring mobility and relieving chronic pain.

Joint Replacement

Surgical replacement of damaged joint surfaces with prosthetic components to reduce pain and improve function.

Joint Replacement (Arthroplasty)

A surgical procedure in which a damaged or arthritic joint surface is removed and replaced with a prosthetic implant, most commonly performed for the hip (total hip arthroplasty) and knee (total knee arthroplasty).

Alternate Names:

Arthroplasty

Joint Replacement Rehabilitation

Exercise, education, and functional training after joint replacement to restore safe movement and independence.

Joint Stiffness

Reduced ease or range of joint movement, often worse after rest. Causes include arthritis, injury, inflammation, prolonged immobility, or muscle and tendon disorders. Sudden swelling, redness, fever, severe pain, or inability to use the joint requires assessment.

Joint Swelling

Enlargement of a joint caused by excess synovial fluid, blood, inflammation, infection, trauma, or structural disease. It may be accompanied by pain, warmth, stiffness, or restricted movement and can indicate inflammatory or septic arthritis.

Joint X-Ray

A joint x-ray uses ionizing radiation to assess alignment, fractures, degenerative change, erosions, calcification, and selected soft-tissue or bone abnormalities.

Jondice

Jondice is a misspelling or variant form of jaundice, the yellow discoloration caused by elevated bilirubin in blood and tissues.

Joubert Syndrome

An autosomal recessive and X-linked primary developmental ciliopathy caused by pathogenic variants in over 35 genes involved in primary ciliary structure and function (including *AHI1*, *CC2D2A*, and *CEP290*). Neuropathologically and radiographically characterized by the pathognomonic “molar tooth sign” on axial brain MRI, resulting from cerebellar vermis hypoplasia, deepened interpeduncular fossa, and elongated, horizontally oriented superior cerebellar peduncles. Clinically manifests in infancy with episodic hyperpnea/apnea, profound hypotonia, oculomotor apraxia, cerebellar ataxia, and variable retinal dystrophy, cystic kidney disease, and polydactyly.

Alternate Names:

Joubert Syndrome and Related Disorders (JSRD)

Jugular

Jugular means relating to the neck, especially the jugular veins that drain blood from the head and brain to the heart.

Jugular Foramen

An opening at the base of the skull transmitting the internal jugular vein and cranial nerves IX, X, and XI. Lesions in this region can cause swallowing difficulty, hoarseness, shoulder weakness, hearing symptoms, or other neurologic deficits.

Jugular Vein

One of the major veins draining blood from the head, face, and neck. There are two pairs: internal jugular vein (IJV) and external jugular vein (EJV).

Jugular Venous Pressure

The visible height of blood in the neck veins. It helps clinicians estimate pressure in the right side of the heart and assess fluid buildup.

Alternate Names:

JVP

Jumper'S Knee

Alternate index label; see *Patellar tendinitis*.

Junctional Nevus

A usually benign mole formed by melanocytes at the junction between the epidermis and dermis; it is often flat and should be assessed if it changes in size, shape, color, or symptoms.

Junctional Rhythm

A cardiac rhythm arising from the atrioventricular junction rather than the sinoatrial node, usually with a narrow QRS complex and a slow or absent preceding atrial impulse.

Jungian Analysis

Jungian analysis is a psychotherapy approach based on Carl Jung's theories, using exploration of uncon-

scious processes, symbols, dreams, and personality development.

Juvenile Angiofibroma

Juvenile angiofibroma is a benign but highly vascular tumor arising near the nasal cavity in adolescent boys, causing progressive nasal obstruction and recurrent nosebleeds. predominantly in adolescent boys. It may cause recurrent nosebleeds, nasal obstruction, or facial swelling.

Juvenile Arthritis

A general term for inflammatory arthritis beginning in childhood. Persistent joint swelling, pain, stiffness, or limited movement may occur, and causes and subtypes vary.

Alternate Names:

Arthritis Juvenile (Juvenile Arthritis)

Juvenile Astrocytoma

An astrocytic glioma arising in a child or adolescent. Many are low-grade and may cause seizures, headache, visual symptoms, endocrine disturbance, or focal neurological deficits depending on location; diagnosis requires neuroimaging and tumour evaluation.

Juvenile Dermatomyositis

An inflammatory muscle disease of childhood characterized by proximal weakness and distinctive skin findings such as heliotrope rash and Gottron papules. It may also affect blood vessels, muscles, or other organs.

Juvenile Hypermobility Syndrome

Excessive joint movement in a child or adolescent associated with pain, instability, fatigue, or recurrent sprains, without another defined connective-tissue disorder. Assessment considers the pattern of hypermobility, skin and systemic features, and functional impact; management may include physiotherapy and joint protection.

Juvenile Idiopathic Arthritis

A group of inflammatory arthritis disorders that begin before age 16 and persist for at least six weeks

without another identified cause. Subtypes differ in the number of joints affected, systemic symptoms, associated eye disease, and laboratory findings.

Juvenile Idiopathic Arthritis

A group of inflammatory arthritides beginning before age 16 and lasting at least six weeks, sometimes affecting the eyes or growth.

Juvenile Myoclonic Epilepsy

A generalized epilepsy syndrome that typically begins in adolescence and causes myoclonic jerks, often after awakening, with possible generalized tonic-clonic or absence seizures.

Juvenile Osteoporosis

Reduced bone mass or impaired bone strength occurring during childhood or adolescence, increasing fracture risk. It may be primary or secondary to chronic disease, nutritional deficiency, endocrine disorder, immobility, or medication exposure.

Juvenile Polyposis Syndrome

An inherited disorder characterized by multiple hamartomatous polyps in the gastrointestinal tract and an increased risk of colorectal and other gastrointestinal cancers.

Juvenile Schizophrenia

Alternate index label; see *Childhood schizophrenia*.

Juvenile Xanthogranuloma

A rare, usually harmless skin disorder in infants and young children that causes one or more firm red, yellow, or brown bumps, often on the head or neck. The bumps usually go away on their own, but rarely the eyes or internal organs can also be affected.

Juxta-Articular

Positioned immediately adjacent to or in the immediate anatomical vicinity of a synovial joint. Clinically prominent in musculoskeletal radiology to describe periarticular bone and soft-tissue alterations: juxta-articular osteopenia (periarticular demineralization characteristic of early inflammatory rheumatoid

arthritis), juxta-articular erosions and subchondral cysts in advanced arthropathies, and juxta-articular tophi in chronic tophaceous gout.

Juxtaglomerular Apparatus

Specialized structure located at the vascular pole of the glomerulus where the distal tubule comes into contact with the afferent arteriole. Composed of macula densa cells in the tubular wall, juxtaglomerular cells in the afferent arteriolar wall that produce renin, and extraglomerular mesangial cells.

Juxtavesical

Positioned anatomically adjacent to or in the immediate proximity of the urinary bladder (exstivesica urinaria). Most frequently used in urology to describe the distal terminal segment of the ureter (the intramural or juxtavesical ureter) as it approaches the ureterovesical junction, a common site of impaction for migrating distal ureteral calculi causing acute renal colic, urinary frequency, and dysuria mimicking cystitis.

Jervell and Lange-Nielsen Syndrome

A rare autosomal-recessive long-QT syndrome, usually caused by biallelic variants in *KCNQ1* or *KCNE1*, characterized by congenital profound bilateral sensorineural hearing loss and marked QT prolongation. It can cause torsades de pointes, fainting, ventricular fibrillation, and sudden death; cardiology evaluation, genetic assessment, and treatment are important.

Junk DNA

An older, informal term for parts of DNA that do not code for proteins. Much of this DNA has regulatory or structural functions, so the term can be misleading; noncoding DNA does not necessarily mean useless DNA.

Juvenile Diabetes

An older term usually referring to type 1 diabetes, an autoimmune disease in which the pancreas makes little or no insulin. It often begins in childhood but can develop at any age and requires insulin replacement.

Juvenile Rheumatoid Arthritis

An older name for juvenile idiopathic arthritis, a group of inflammatory joint diseases beginning before age 16 and lasting at least six weeks. It can cause joint swelling, pain, stiffness, growth problems, or inflammation in the eyes and needs specialist care.

K

Kabuki Syndrome

A rare, genetically heterogeneous congenital malformation and intellectual disability syndrome caused by pathogenic heterozygous mutations in the histone methyltransferase gene *KMT2D* (type 1, autosomal dominant, 70%) or deletions/variants in the histone demethylase gene *KDM6A* (type 2, X-linked dominant, 5%). Clinically characterized by a distinctive facial appearance reminiscent of Japanese Kabuki actors (elongated palpebral fissures with eversion of the lateral third of the lower eyelid, arched eyebrows with sparse lateral thirds, broad depressed nasal tip, prominent ears), persistent fetal fingertip pads, skeletal and spinal abnormalities, short stature, and congenital heart defects.

Alternate Names:

Niikawa-Kuroki Syndrome

Kahlers Disease (Multiple Myeloma)

Alternate index label for Multiple Myeloma.

Kala-Azar

Visceral leishmaniasis, a potentially fatal parasitic infection affecting internal organs such as the spleen, liver, and bone marrow, usually transmitted by sandflies.

Kala-Azar (Visceral Leishmaniasis)

A serious parasitic infection caused by *Leishmania* species and transmitted by sandflies. It may cause prolonged fever, weight loss, enlargement of the spleen and liver, and suppression of blood-cell production.

Alternate Names:

Visceral Leishmaniasis

Kallmann Syndrome

An inherited condition that causes delayed or absent puberty and a reduced or absent sense of smell. It occurs when the brain does not send the hormone signals needed to start puberty.

Kallmann'S Syndrome

Inherited hypogonadotropic hypogonadism caused by deficient gonadotropin-releasing hormone, typically accompanied by reduced or absent sense of smell.

Kanamycin

An antibiotic used for selected serious bacterial infections. It can permanently damage hearing and harm the kidneys, so careful monitoring is needed.

Kangaroo Care (Skin-To-Skin Contact)

Holding a newborn directly against a caregiver's bare chest while monitoring the infant's condition. It supports thermal regulation, physiologic stability, bonding, and feeding, and is particularly useful for many preterm or low-birth-weight infants.

Alternate Names:

Skin-to-Skin Contact

Kant'S Disease

An uncommon historical eponym whose precise clinical meaning varies between sources; the original reference should be checked before using it clinically.

Kaolin

A clay mineral containing hydrated aluminium silicate, used as an adsorbent or protective substance; inhalation of kaolin dust can cause occupational

lung disease.

Kaposi Sarcoma

A cancer linked to human herpesvirus 8 that causes purple, red, or brown spots, plaques, or lumps on the skin or inside the body. It is more likely when the immune system is weakened.

Kaposi'S Sarcoma

A cancer of blood-vessel or lymphatic-vessel lining cells, often associated with human herpesvirus 8.

Kaposi'S Sarcoma

A vascular tumor associated with human herpesvirus 8. It may cause purple or reddish skin lesions and can involve internal organs, especially in people with impaired immunity.

Karnofsky Performance Status

A scale used to describe how well a person can perform daily activities and care for themselves. It helps clinicians assess overall function and ability to tolerate treatment, especially in cancer care.

Kartagener Syndrome

An inherited condition in which tiny hair-like structures that clear mucus do not work properly. It causes repeated sinus and lung infections and may place the internal organs in a reversed position.

Kartagener Triad

The combination of situs inversus, chronic sinusitis, and bronchiectasis caused by primary ciliary dyskinesia. The underlying ciliary defect impairs mucociliary clearance and embryonic left-right development.

Kartagener'S Syndrome

A form of primary ciliary dyskinesia characterized by chronic sinusitis, bronchiectasis, and situs inversus.

Karyocyte

A cell that contains a nucleus; the term is used especially when distinguishing nucleated cells from cells without nuclei.

Karyokinesis

Division of a cell's nucleus during cell division, producing two new nuclei with matching sets of chromosomes.

Karyomegaly

Karyomegaly is abnormal enlargement of a cell nucleus, often reflecting cellular injury, regeneration, infection, toxic exposure, or neoplasia; its significance depends on the tissue and accompanying microscopic changes.

Karyometry

Karyometry is the measurement of cell-nucleus size, shape, and related features, usually in tissue samples examined under a microscope.

Karyotype

An organized picture of a person's chromosomes, arranged in pairs. It can identify some chromosome changes and conditions.

Karyotype Result

A karyotype result reports the number and visible structure of a person's chromosomes and can identify some chromosome abnormalities.

Karyotyping

A test that examines the number and structure of chromosomes in cells to identify some genetic conditions.

Kasai Procedure

A pediatric surgical operation (hepatoportoenterostomy) performed for biliary atresia in infants, typically before 60 to 90 days of age to optimize outcomes. The atretic extrahepatic biliary tree is completely resected to the fibrous cone at the porta hepatis, and an end-to-side Roux-en-Y jejunal loop is anastomosed to the transected liver hilum to permit drainage of microscopic bile ducts. It restores bile flow, reduces cholestatic jaundice, and delays or eliminates the need for liver transplantation in responders.

Alternate Names:

Hepatoportoenterostomy; Kasai Operation; Por-toenterostomy

Kashin-Beck Disease

A long-term disease of the bones and joints that can cause pain, stiffness, deformity, and poor growth. It is linked to low selenium and environmental factors in some regions.

Katayama Fever (Acute Schistosomiasis)

An acute systemic reaction to schistosome infection, usually occurring weeks after exposure and causing fever, rash, cough, abdominal symptoms, and eosinophilia.

Alternate Names:

Acute Schistosomiasis

Katz Index

A scale that assesses independence in six basic activities of daily living: bathing, dressing, toileting, transferring, continence, and feeding.

Kawasaki Disease

An acute inflammatory disease of childhood that can affect the coronary arteries. It commonly causes persistent fever, rash, conjunctival redness, mouth or extremity changes, and swollen lymph nodes; diagnosis is clinical and incomplete forms occur.

Alternate Names:

Mucocutaneous Lymph Node Syndrome Mucocuta-neous Lymph Node Syndrome (Kawasaki Disease)

Kawasaki'S Disease

An acute, self-limited systemic vasculitis of child-hood, also known as mucocutaneous lymph node syndrome, primarily affecting medium-sized arteries with a predilection for the coronary arteries.

Alternate Names:

mucocutaneous.

Kayser-Fleischer Rings

Golden-brown or greenish rings around the colored part of the eye caused by copper buildup. They strongly suggest Wilson disease when other findings fit and are seen with a special eye examination.

Kearns-Sayre Syndrome

A rare inherited disorder affecting the mitochondria, the parts of cells that make energy. It usually begins in childhood or young adulthood and can cause drooping or limited eye movement, vision problems, heart-rhythm problems, and muscle weakness.

Keel Breast

A protruding breastbone and anterior chest-wall deformity, generally referring to pectus carinatum.

Keeping Your Medicines Organized

Medicine organization uses an accurate list, labeled containers, schedules, pillboxes when appropriate, refill planning, and review for duplication or inter-actions.

Kegel

A pelvic-floor muscle contraction exercise used to improve pelvic-floor strength and control of selected types of urinary or fecal incontinence.

Kegel Exercise

Repeated contraction and relaxation of the pelvic-floor muscles to improve their strength and coordi-nation.

Keller'S Operation

An excision arthroplasty of the first metatarsopha-langeal joint, historically used for hallux rigidus or painful bunion deformity.

Kelly Clamp

A hinged surgical clamp used to grasp tissue or compress blood vessels and control bleeding.

Keloid

An overgrowth of scar tissue extending beyond the original wound margins, caused by excessive col-lagen deposition during wound healing. Keloids are more common in darker skin types (Fitzpatrick IV to VI) and occur at sites of trauma, surgery, piercings, and burns. They are pruritic and painful.

Alternate Names:

Scar Excessive (Keloid)

Keloid Scar

A raised scar caused by excessive growth of scar tissue after skin injury.

Keloids

Keloids are raised scars that extend beyond the original wound because of excessive collagen deposition and may cause itching, pain, or cosmetic concern.

Keratan Sulfate

Keratan sulfate is a sulfated glycosaminoglycan found especially in cornea, cartilage, and brain; impaired breakdown causes accumulation in some mucopolysaccharidoses and can produce skeletal or ocular disease.

Keratan Sulphate

A sulfated glycosaminoglycan found especially in the cornea and cartilage; abnormal accumulation occurs in some mucopolysaccharidoses.

Keratotomy

Surgical removal or reshaping of part of the cornea, often to correct vision.

Keratin

A tough structural protein found in skin, hair, nails, and other epithelial tissues.

Keratinocyte

The predominant cell of the epidermis, producing keratin and contributing to the skin's barrier and immune functions.

Keratinocytes

The predominant cells of the epidermis that produce keratin and form the skin's protective barrier.

Keratitis

Inflammation or infection of the clear front surface of the eye. It can cause eye pain, redness, tearing, sensitivity to light, blurred vision, or a cloudy spot and needs prompt assessment.

Alternate Names:

Corneal Inflammation (Keratitis)

Keratoacanthoma

A low-grade or well-differentiated variant of squamous cell carcinoma originating from hair follicles. Characterized by rapid growth over 4-6 weeks into a dome-shaped, flesh-colored or erythematous nodular lesion with a central keratin-filled crater. Often resolves spontaneously over months via involution, leaving a depressed scar.

Keratoconjunctivitis

Keratoconjunctivitis is inflammation of both the cornea and conjunctiva, caused by infection, allergy, dryness, immune disease, or chemical injury.

Keratoconjunctivitis Sicca

Chronic dryness and inflammation of the cornea and conjunctiva, commonly called dry-eye syndrome. Symptoms include burning, grittiness, redness, fluctuating vision, and light sensitivity; causes include reduced tear production, excessive evaporation, medicines, and autoimmune disease.

Alternate Names:

dry-eye.

Keratoconjunctivitis Sicca (Dry Eyes)

Alternate index label for Dry Eyes.

Keratoconus

A condition in which the clear front surface of the eye becomes thin and bulges into a cone shape. It can cause blurred or distorted vision, glare, and sensitivity to light. Glasses, special contact lenses, or treatment to strengthen the cornea may help.

Keratocyte Count

A keratocyte count estimates the number or density of stromal cells in the cornea, usually by microscopy or imaging; it may help assess corneal injury, inflammation, degeneration, or response to surgery.

Keratoderma

A group of disorders characterised by excessive thickening of the skin of the palms and soles, which may be hereditary or acquired. Acquired forms can be diffuse, focal, or punctate and may be associated

with systemic diseases, malignancy, or medications.

Keratoderma Blennorrhagica

Thickened, scaly, sometimes pustular skin lesions, usually on the soles or palms, associated with reactive arthritis. Treatment focuses on the underlying infection or inflammation and the skin symptoms.

Keratoderma Blennorrhagicum

A keratoderma associated with reactive arthritis (formerly Reiter syndrome), characterised by waxy, yellowish, vesiculopustular papules and plaques on the palms and soles that may coalesce and extend to the extremities. It mimics pustular psoriasis histologically and clinically.

Keratoderma Blenorrhagicum

Alternate spelling of keratoderma blennorrhagicum, a cutaneous manifestation of reactive arthritis with waxy, crusty, vesiculopustular lesions on the palms and soles. It is a reactive phenomenon typically occurring in the context of genitourinary or gastrointestinal infection.

Keratoderma Blennorrhagicum

Thickened, scaly, or wart-like skin lesions, often on the palms and soles, associated with reactive arthritis and sometimes infection-triggered inflammation.

Keratolysis

Breakdown or loss of keratinized tissue, especially the superficial layer of the skin; it may occur in some infections and inflammatory skin disorders.

Keratolytics

Substances such as salicylic acid or urea that soften and remove excess keratin from thickened skin, corns, or warts.

Keratoma

A localized thickening or tumor-like growth of keratinized skin, such as a callus or corn; the exact type and need for evaluation depend on its appearance and behavior.

Keratomalacia

Softening and ulceration of the cornea caused most often by severe vitamin A deficiency, potentially leading to blindness.

Keratometer

An eye instrument that measures the curvature of the cornea, the clear front surface of the eye. The measurement helps assess astigmatism and fit rigid contact lenses.

Keratoplasty

Surgical transplantation or reshaping of corneal tissue. Penetrating keratoplasty replaces the full corneal thickness, whereas lamellar techniques replace selected layers and may reduce rejection and recovery time.

Keratoprosthesis

Artificial cornea for severe corneal blindness. Boston KPro most common. Indications: chemical burns, limbal stem cell deficiency.

Keratosis

Keratosis is a thickened or abnormal growth of keratinized skin and may be benign, inflammatory, infectious, or premalignant.

Keratosis Follicularis

Keratosis follicularis is excessive keratinization around hair follicles, producing rough follicular papules; it may refer to keratosis pilaris or, in some contexts, inherited follicular keratosis disorders.

Keratosis Obturans

Keratosis obturans is accumulation of shed keratin blocking the external ear canal, causing pain, hearing loss, and canal widening.

Keratosis Pilaris

A common, harmless skin condition that causes small, rough bumps around hair follicles, usually on the upper arms, thighs, buttocks, or face.

Alternate Names:

KP

Keratosis, Actinic

Alternate index label; see *Actinic keratosis*.

Keratosis, Seborrheic

Alternate index label; see *Seborrheic keratosis*.

Kerion

An inflamed, boggy, pus-forming mass caused by a fungal infection of hair-bearing skin, usually a severe form of tinea capitis.

Kernicterus

Brain damage caused by very high levels of bilirubin in a newborn. It can cause poor feeding, unusual sleepiness, a high-pitched cry, seizures, movement problems, or permanent disability.

Kernicterus (Nuclear Jaundice)

Brain injury caused by deposition of excessive unconjugated bilirubin in the basal ganglia and other brain regions, usually in a severely jaundiced newborn.

Kernig Sign

Pain or resistance when the knee is straightened while the hip is bent. It may suggest irritation of the coverings of the brain and spinal cord, such as with meningitis, but it is not diagnostic by itself.

Kernig'S Sign

Alternate index label; see *Kernig sign*.

Kerosene Poisoning

Kerosene poisoning involves toxic exposure to kerosene poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Kerstesia Gyiorum

A nonfermenting gram-negative bacterium found in environmental and clinical samples that can rarely cause opportunistic infection.

Keshan Disease

Heart disease caused by a lack of selenium, an ele-

ment that the body needs to function properly.

Ketamine

Ketamine is a dissociative anaesthetic and NMDA-receptor antagonist used for anaesthesia, procedural sedation, and selected treatment-resistant depression; emergence reactions, increased blood pressure, nausea, misuse, and respiratory complications are possible.

Ketamine Hydrochloride

Ketamine hydrochloride is a dissociative anesthetic used for anesthesia, procedural sedation, and selected pain or depression treatments; it can cause increased blood pressure, hallucinations, and impaired coordination.

Ketanserin

A selective serotonin 5-HT₂-receptor antagonist formerly used in some countries for hypertension and studied for vascular and platelet effects; availability and clinical use are limited and adverse effects may include dizziness and hypotension.

Keto Acid

An organic acid containing a ketone group, often formed during amino-acid metabolism and used in energy production or biosynthesis.

Ketoacidosis

A metabolic emergency in which excessive ketone production causes acidosis, most commonly in diabetic ketoacidosis.

Ketoconazole

Ketoconazole is an imidazole antifungal that inhibits fungal ergosterol synthesis; topical forms treat superficial mycoses, while oral use is restricted because of potentially severe liver injury, adrenal suppression, and drug interactions.

Ketogenesis

The production of ketone bodies from fatty acids, mainly in the liver during fasting, prolonged exercise, or inadequate insulin activity.

Ketogenic Diet

High fat, adequate protein, very low carbohydrate diet (<50g/day). Induces ketosis. Medical uses: epilepsy, obesity, metabolic syndrome. Risks: nutrient deficiency, kidney stones, dyslipidemia.

Ketone

A ketone is an organic compound containing a carbonyl group between two carbon atoms; medically important ketone bodies include acetoacetate, beta-hydroxybutyrate, and acetone, which rise during fasting or diabetic ketoacidosis.

Ketone Bodies

Water-soluble molecules produced mainly by the liver from fatty-acid-derived acetyl-CoA during fasting, starvation, prolonged exercise, or insulin deficiency. The principal ketone bodies are acetoacetate, beta-hydroxybutyrate, and acetone.

Ketones

Water-soluble substances produced mainly by the liver when the body breaks down fat for energy, such as during fasting, a low-carbohydrate state, or insufficient insulin. The main ketone bodies are beta-hydroxybutyrate, acetoacetate, and acetone. Small amounts can be normal, but high levels may cause ketoacidosis, especially in diabetes; ketones can be measured in blood or urine.

Ketones Blood Test

A blood test measuring ketone bodies, such as beta-hydroxybutyrate, used to assess ketosis and help diagnose or monitor diabetic ketoacidosis and other causes of ketone production.

Ketones Urine Test

A urine test detecting ketone bodies produced when the body metabolizes fat; it can support evaluation of diabetic ketoacidosis, starvation, vomiting, or other metabolic states but may lag behind blood ketone levels.

Ketonuria

Ketonuria is the presence of ketone bodies in urine, occurring with fasting, vomiting, low-carbohydrate

intake, pregnancy, or uncontrolled diabetes; marked ketonuria with hyperglycaemia may indicate diabetic ketoacidosis.

Ketonuria (Acetonuria)

The presence of ketone bodies in the urine, occurring in conditions such as diabetic ketoacidosis, prolonged fasting, or severe vomiting.

Alternate Names:

Acetonuria

Ketoprofen

A non-steroidal anti-inflammatory drug that inhibits cyclo-oxygenase and reduces pain, inflammation, and fever; gastrointestinal bleeding, kidney injury, cardiovascular events, and hypersensitivity are important risks.

Ketoprofen Overdose

Ketoprofen overdose involves toxic exposure to ketoprofen overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Ketorolac

A potent non-steroidal anti-inflammatory analgesic used for short-term management of moderate-to-severe acute pain; treatment duration is restricted because gastrointestinal bleeding, kidney injury, and impaired healing can occur.

Ketorolac Tromethamine

The tromethamine salt of ketorolac, a potent non-steroidal anti-inflammatory analgesic used short term for moderate-to-severe acute pain; it is contraindicated in several bleeding, renal, pregnancy, and perioperative situations.

Ketosis

Metabolic state with elevated ketone bodies. Physiological: fasting, ketogenic diet. Pathological: diabetic ketoacidosis. Distinguish from ketonemia vs ketonuria.

Ketotic Hypoglycemia

Ketotic hypoglycemia is low blood glucose with ketones after fasting or illness, often occurring in young children and usually improving with age.

Ketotifen

An antihistamine with mast-cell-stabilizing activity used in some countries for allergic disorders and, in ophthalmic form, allergic conjunctivitis; drowsiness, increased appetite, and irritation may occur.

Kidney

One of two bean-shaped organs that filter waste from the blood into urine. The kidneys also help control body water, salts, blood pressure, and the balance of acids in the blood.

Kidney And Urinary Health

Kidney and urinary health encompasses the function of the kidneys, ureters, bladder, and urethra in filtering waste, regulating fluid/electrolyte balance, and eliminating urine.

Kidney Biopsy

A procedure in which a small sample of kidney tissue is removed, usually with a needle guided by ultrasound, to identify kidney disease. Bleeding is the main risk.

Kidney Calculi

Solid mineral deposits that form in the kidneys; also called kidney stones.

Alternate Names:

kidney stones.

Kidney Cancer

A malignant tumor arising in the kidney. Renal cell carcinoma is the most common type in adults, but other types occur, especially in children.

Alternate Names:

Cancer, Kidney Renal Cancer

Kidney Cysts

Fluid-filled sacs in or on the kidneys that are often harmless but may occasionally cause pain, infection,

bleeding, or impaired kidney function.

Alternate Names:

Cyst, Kidney

Kidney Disease, Chronic

Alternate index label; see *Chronic kidney disease*.

Kidney Failure

A condition in which the kidneys can no longer remove enough waste or control fluid and body salts. It may develop suddenly or gradually and can require medicines, dialysis, or a transplant.

Alternate Names:

Renal Failure (Kidney Failure)

Kidney Failure, Chronic

Alternate index label; see *Chronic kidney disease*.

Kidney Function Tests

Blood and urine tests used to assess how well the kidneys filter waste and regulate fluid and electrolytes. Common measures include creatinine, estimated glomerular filtration rate, urine albumin, and urinalysis; results are interpreted with the clinical context.

Kidney Infection

An infection of one or both kidneys, usually caused by bacteria that spread from the urinary tract.

Kidney Neoplasm

A kidney neoplasm is an abnormal growth in the kidney that may be benign or cancerous; symptoms and treatment depend on its type, size, and spread.

Kidney Pain

Pain felt in the side or back below the ribs that may be caused by kidney stones, infection, obstruction, inflammation, or referred pain.

Alternate Names:

Pain Kidney (Kidney Pain)

Kidney Position

A modified lateral position in which the operating table is flexed at the waist to elevate the flank and

improve access to the kidney or retroperitoneum.

Kidney Removal

A medical procedure, treatment, device, or care topic related to kidney removal; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Kidney Stone

A hard mineral deposit formed from substances in urine that can obstruct the urinary tract and cause colicky flank or abdominal pain, blood in the urine, vomiting, or infection. Urgent assessment is needed when obstruction may be infected or pain is severe or persistent.

Alternate Names:

Kidney Stones Kidney Stones (Nephrolithiasis / Urolithiasis) Nephrolithiasis (Kidney Stones) Nephrolithiasis / Urolithiasis Renal Lithiasis

Kidney Transplant

Surgical placement of a healthy donor kidney into a person with kidney failure to restore renal function. Lifelong immunosuppressive treatment is generally required to reduce rejection risk.

Kidney Transplant Rejection

Immune-mediated injury to a transplanted kidney caused by recipient antibodies, T cells, or both. Hyperacute, acute, and chronic rejection differ in timing and pathology and require correlation of graft function, imaging, serology, and often biopsy.

Kidney Transplantation

Best treatment for ESRD with improved survival over dialysis. Living donor superior to deceased donor. Lifelong immunosuppression required. Rejection types include hyperacute, acute, and chronic. Complications include rejection, infection, vascular complications, and recurrent disease.

Kidney, Artificial

A dialysis device that removes metabolic waste and excess fluid from blood and helps correct electrolyte disturbances when renal function is inadequate.

Kidney, Diseases Of

Disorders affecting the kidneys or urinary collecting system that can impair filtration, urine formation, fluid balance, blood pressure, or electrolyte regulation.

Kienbock Disease

Kienbock disease (lunatomalacia): AVN of lunate. Lichtman classification: I (normal XR, MRI edema), II (lunate sclerosis), IIIA (lunate collapse, no scaphoid rotation), IIIB (lunate collapse, fixed scaphoid rotation, DISI), IV (perilunate arthritis). Etiology: negative ulnar variance, trauma, vascular variation.

Kieselguhr

Diatomaceous earth containing substantial silica; inhalation of its dust can produce occupational pneumoconiosis and other lung injury.

Kiesselbach Plexus

A network of small arteries on the front part of the nasal septum and a common source of nosebleeds.

Killer Cold Virus (Adenovirus Infection, Ad14)

Alternate index label for Adenovirus Infection, Ad14.

Killian's Triangle

An area of potential weakness in the pharyngeal wall between the thyropharyngeus and cricopharyngeus muscles, predisposing to Zenker diverticulum formation.

Killip Classification

A clinical classification system for assessing the severity of myocardial infarction based on physical examination findings. Class I: no heart failure signs. Class II: mild heart failure (crackles, S3 gallop, elevated JVD). Class III: pulmonary edema. Class IV: cardiogenic shock.

Kilocalorie

A unit of energy equal to 1,000 small calories; the

dietary Calorie, written with a capital C, is one kilocalorie.

Kilojoule

The SI unit of energy, equal to 1,000 joules; approximately 4.184 kilojoules equal one kilocalorie.

Kimmelstiel-Wilson Nodules

Characteristic round eosinophilic nodular mesangial expansions in diabetic nephropathy. Represent advanced mesangial matrix accumulation. Found in peripheral mesangium associated with diffuse mesangial expansion, GBM thickening, and arteriolar hyalinosis.

Kimmelstiel-Wilson Syndrome

Nodular glomerulosclerosis caused by long-standing diabetic kidney disease, with thickened glomerular structures, proteinuria, declining kidney function, and possible kidney failure.

Kimura Disease

A chronic inflammatory disorder characterized by painless subcutaneous masses, commonly in the head and neck, regional lymphadenopathy, eosinophilia, and elevated immunoglobulin E. It is distinct from angiolymphoid hyperplasia with eosinophilia and may involve the kidneys.

Kinase

An enzyme that transfers a phosphate group, usually from ATP, to another molecule; kinases regulate many cellular processes.

Kinesin

A motor protein that moves along microtubules and transports cellular cargo using energy from ATP.

Kinesio Taping

Application of an elastic adhesive tape to the skin to provide support or sensory input while allowing movement. Its clinical benefit varies by condition.

Kinesiology

The study of human movement and the forces that

produce or affect it, with applications in health care, rehabilitation, sport, and ergonomics.

Kinesis

A change in the rate or direction of an organism's movement in response to a stimulus, without movement toward or away from its source.

Kinesthesia

The sense of movement and position of the body's parts.

Kinesthesia

The sense of body movement and position produced by signals from muscles, tendons, joints, and skin.

Kinetic

Relating to movement or motion; in clinical usage it may describe movement-related phenomena such as a kinetic tremor.

Kinetic Modeling

Mathematical modeling of how a tracer or drug moves through and is exchanged among tissues or body compartments.

Kinetics

The study of how a process changes over time. In pharmacology, it includes the absorption, distribution, metabolism, and elimination of a drug.

Kinetochore

A protein structure assembled on a chromosome's centromere that attaches to spindle fibers during cell division.

Kinetoplast

A DNA-containing region of the mitochondrion in certain protozoa, including *Trypanosoma* and *Leishmania*.

Kinetosome

A kinetosome is a basal body that organizes the microtubules of a cilium or flagellum.

King-Copeland-Coons Syndrome

A rare historical eponym whose definition is not consistent across medical references; its source-specific meaning should be verified.

Kingella

Kingella is a genus of bacteria that can live in the mouth and can occasionally cause bloodstream, bone, joint, or heart-valve infections.

Kingella Denitrificans

Kingella denitrificans is a rare bacterium found mainly in the upper airway; it can occasionally cause invasive infection.

Kingella Kingae

Kingella kingae is a bacterium that can cause bone or joint infection, especially in young children, and can rarely cause endocarditis.

Kingella Oralis

Kingella oralis is a mouth-associated bacterium that rarely causes invasive infection, including bloodstream infection or endocarditis.

Kingella Potus

Kingella potus is a rare bacterium that has been associated with occasional human infections; clinical importance depends on the specimen and evidence of true infection.

Kinin

A short peptide, such as bradykinin, that widens blood vessels, increases vascular permeability, and contributes to pain and inflammation.

Kininogenase

An enzyme that releases kinins from kininogen proteins, contributing to regulation of blood flow, inflammation, and pain.

Kinins

A group of vasoactive peptides, chiefly bradykinin and kallidin, generated from kininogens during inflammation; they promote vasodilation, increased

vascular permeability, smooth-muscle effects, and pain.

Kinocilium

A specialized cilium, especially the prominent cilium of an inner-ear sensory hair cell, that helps establish directional sensitivity.

Kiss

A touch or caress with the lips; kissing can transmit some infections through saliva or close contact, depending on the pathogen.

Kissing Disease

Alternate index label; see *Mononucleosis*.

Kit Device

A medical procedure, device, or treatment involving kit device. Its purpose, risks, and follow-up depend on the specific intervention and patient.

Klatskin Tumor

A Klatskin tumor is a cancer arising at the junction where the right and left bile ducts meet near the liver.

Klebsiella

A genus of Gram-negative bacteria that can cause pneumonia, urinary-tract infection, bloodstream infection, and other healthcare-associated infections.

Klebsiella Oxytoca

Klebsiella oxytoca is a bacterium that can cause urinary, bloodstream, wound, and hospital-acquired infections and can sometimes cause antibiotic-associated hemorrhagic colitis.

Klebsiella Pneumonia

Severe, necrotizing pneumonia in alcoholic or debilitated patients. Upper lobe involvement with “bulging fissure sign” and “currant jelly” sputum.

Klebsiella Pneumoniae

Klebsiella pneumoniae is a bacterium that can cause pneumonia, urinary infection, bloodstream infection,

and liver abscess; some strains are highly antibiotic-resistant.

Klebsiella Rhinoscleromatis

A gram-negative bacillus causing chronic granulomatous infection of the nasal passages and upper airway, leading to rhinoscleroma with progressive nasal obstruction and tissue destruction.

Klebsiella Singaporensis

Klebsiella singaporensis is a rare environmental bacterium that has occasionally been recovered from human clinical specimens; its significance depends on the specimen and symptoms.

Klebsiella Variicola

Klebsiella variicola is a bacterium closely related to *K. pneumoniae* that can cause human infections, including bloodstream and urinary infections.

Kleptomania

A mental health disorder marked by repeated inability to resist urges to steal items that are not needed.

Alternate Names:

Compulsive Stealing Pathological Stealing

Klinefelter Syndrome

Most common sex chromosome aneuploidy in males with a karyotype of 47,XXY occurring in approximately one in six hundred live male births. Characterized by small firm testes, gynecomastia, tall stature with long extremities, and infertility from azoospermia.

Klinefelter's Syndrome

A chromosomal condition in which a male has one or more extra X chromosomes, often causing small testes and reduced fertility.

Klippel Trenaunay Weber Syndrome (Klippel-Trenaunay-Weber Syndrome)

Alternate index label for Klippel-Trenaunay-Weber Syndrome.

Klippel-Feil Syndrome

A congenital condition characterized by fusion of two or more cervical vertebrae, resulting from failure of normal segmentation of the cervical somites during weeks 3-8 of gestation. Classic triad: short neck, low posterior hairline, and limited cervical range of motion (present in <50% of cases).

Klippel-Trenaunay Syndrome

A congenital vascular disorder characterized by the triad: capillary malformations (port-wine stains), venous malformations (varicose veins, persistent embryonic veins), and soft tissue or bone hypertrophy of the affected limb (typically a lower extremity).

Klippel-Trenaunay-Weber Syndrome

An older, imprecise label for a congenital vascular and limb-overgrowth disorder; modern terminology distinguishes Klippel-Trenaunay syndrome from Parkes Weber syndrome, which includes arteriovenous malformations.

Klippel-Trenaunay-Weber Syndrome

A rare congenital overgrowth disorder involving capillary or venous malformations and enlargement of bone or soft tissue, usually affecting one limb. It may cause limb asymmetry, pain, bleeding, thrombosis, or lymphedema. Care is multidisciplinary and may include compression, vascular treatment, and orthopedic management.

Alternate Names:

Klippel Trenaunay Weber Syndrome (Klippel-Trenaunay-Weber Syndrome)

Klumpke Paralysis

Lower-trunk brachial-plexus injury affecting primarily the C8 and T1 nerve roots. It causes weakness or paralysis of the intrinsic hand muscles, sensory loss along the medial forearm and hand, and occasionally Horner syndrome when sympathetic fibres are involved.

Klumpke's Paralysis

Lower brachial-plexus palsy involving mainly the C8 and T1 nerve roots, causing hand weakness and sensory loss; Horner syndrome may accompany

severe cases.

Kluyvera

A genus of gram-negative bacteria in the Enterobacterales group; species can rarely cause opportunistic human infections.

Kluyvera Ascorbata

A gram-negative Kluyvera species found in the environment and occasionally associated with urinary, bloodstream, or other opportunistic infections.

Kluyvera Cryocrescens

A gram-negative environmental bacterium that rarely causes opportunistic human infection.

Kluyvera Georgiana

A rarely encountered gram-negative Kluyvera species that may be isolated from clinical specimens.

Kluyvera Intermedia

A gram-negative Kluyvera species occasionally isolated from human specimens and rarely associated with infection.

Kluyveromyces

A genus of yeasts used in fermentation and biotechnology; some species can rarely cause opportunistic infection.

Kluyveromyces Lactis

A yeast used in dairy and biotechnology applications, including production of enzymes and recombinant proteins.

Kluyveromyces Marxianus

A yeast used in fermentation and biotechnology; it can grow on lactose and other sugars and rarely causes infection.

Knee

The synovial joint between the femur, tibia, and patella, stabilized by the cruciate and collateral ligaments and menisci; it permits flexion and extension and bears body weight.

Knee Arthroscopy

Knee arthroscopy is a minimally invasive procedure in which a camera and small instruments are inserted into the knee to diagnose or treat selected joint problems.

Knee Braces - Unloading

A medical procedure, device, or treatment involving knee braces - unloading. Its purpose, risks, and follow-up depend on the specific intervention and patient.

Knee Bursitis

Knee bursitis is inflammation of a fluid-filled sac around the knee, causing localized swelling, tenderness, and pain with kneeling or movement. Repetitive pressure, trauma, arthritis, gout, or infection can contribute; fever or redness requires urgent review.

Alternate Names:

Bursitis Of The Knee

Knee CT Scan

Computed tomography of the knee using x-rays and computer reconstruction to evaluate fractures, bone alignment, arthritis, masses, infection, and other osseous or soft-tissue abnormalities.

Knee Disorders

The knee is a complex hinge-type synovial joint connecting the femur, tibia, and patella, stabilized by ligaments (ACL, PCL, MCL, LCL), menisci (medial and lateral), and surrounding muscles/tendons.

Knee Injury And Meniscus Tears

A meniscus tear is damage to the cartilage cushion between the thighbone and shinbone, often after twisting or with degeneration. Pain, swelling, catching, or locking may occur; treatment ranges from rehabilitation to surgery according to tear, symptoms, and stability.

Knee Joint

A synovial joint formed mainly by the femur, tibia, and patella. It permits flexion and extension with

limited rotation and is stabilized by ligaments, menisci, muscles, and the joint capsule.

Knee Joint Replacement

A medical procedure, treatment, device, or care topic related to knee joint replacement; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Knee Microfracture Surgery

A medical procedure, treatment, device, or care topic related to knee microfracture surgery; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Knee MRI Scan

Magnetic resonance imaging of the knee using a magnetic field and radio waves to evaluate cartilage, menisci, ligaments, tendons, bone marrow, muscles, and joint fluid.

Knee Pain

Pain felt in or around the knee, commonly caused by injury, osteoarthritis, bursitis, tendinitis, or inflammatory disease. Persistent swelling, instability, inability to bear weight, or fever requires medical assessment.

Alternate Names:

Pain, Knee Pain Knee Knee Pain: Symptom

Knee Prosthesis

An artificial joint component used to replace damaged surfaces of the knee, usually including femoral and tibial components and sometimes a patellar component.

Knee-Chest Position

A position in which the patient rests on the knees and chest, with the hips flexed; it may be used for spinal or anorectal procedures.

Knee-Jerk

The patellar tendon deep-tendon reflex, in which tapping the tendon produces extension of the knee, chiefly testing the L3-L4 spinal segments.

Kneecap

The largest sesamoid bone in the human body, embedded within the quadriceps tendon anterior to the knee joint. See Patella (Kneecap).

Kneecap Dislocation

A kneecap dislocation occurs when the patella moves out of its femoral groove, usually laterally, causing pain, deformity, swelling, and difficulty walking.

Kniest Dysplasia

A rare skeletal dysplasia caused most often by pathogenic variants in COL2A1. It produces disproportionate short stature, enlarged joints, progressive joint disease, distinctive facial features, and sometimes severe ocular, auditory, or respiratory complications.

Knife-Cut Ulcers From Crohn'S Disease

Deep, linear, serpiginous ulcerations of the intestinal mucosa in Crohn disease, resembling cuts made by a knife. These longitudinal ulcers with heaped-up margins are characteristic of Crohn disease and help distinguish it from ulcerative colitis on endoscopy. They may cause strictures, fistulae, and bleeding.

Knock Knees

Medial angulation of the knees causing the knees to touch while the ankles remain apart, also called genu valgum. It is common during childhood development but may be pathologic when severe, asymmetric, persistent, or associated with pain or growth disturbance.

Alternate Names:

genu valgum.

Knock-Knee

Genu valgum, a leg alignment in which the knees angle inward and may touch while the ankles remain apart.

Knoellia

A genus of gram-positive, aerobic bacteria found in the environment and rarely isolated from human clinical specimens.

Knotless Anchor

Suture anchor for soft tissue repair without tying knots. Used in orthopedic surgery.

Knuckle

A projecting finger joint, usually a metacarpophalangeal joint; it may be affected by trauma, inflammation, or arthritis.

Knuckle Pad

A knuckle pad is a firm thickening over a finger joint, usually benign and associated with friction, trauma, or fibromatosis.

Koch'S Bacillus

Mycobacterium tuberculosis, the bacterium that causes tuberculosis; the term is a historical eponym.

Koch'S Bacillus (*Mycobacterium Tuberculosis*)

The bacterium that causes tuberculosis, an infection most often affecting the lungs but capable of involving many organs.

Alternate Names:

Mycobacterium Tuberculosis

Koch'S Postulates

Historical criteria proposed to link a microorganism to a disease, including its presence in affected cases, isolation and culture, reproduction of disease, and re-isolation; molecular and modern infectious-disease methods have expanded beyond these criteria.

Kocher Clamp

A toothed surgical clamp used to hold firm tissue or clamp vessels.

Kocher-Debré-SéMéLaigne Syndrome

A rare pediatric syndrome of generalized skeletal muscle pseudohypertrophy occurring in infants and young children with severe, long-standing, untreated congenital hypothyroidism (cretinism). Characterized by generalized, prominent, diffuse muscle enlargement giving affected children a striking, athletic, or "Herculean" appearance, accompanied by

slow muscle contractions, proximal limb weakness, severe developmental delay, short stature, puffy coarse facial features, and myxedema. Like Hoffmann syndrome in adults, the apparent muscle hypertrophy and weakness resolve entirely upon prompt correction of the hypothyroid state with thyroid hormone replacement.

Alternate Names:

Cretinism with Muscular Hypertrophy; Infantile Hypothyroid Myopathy

Kocuria

A genus of gram-positive cocci commonly found on skin and in the environment that can rarely cause opportunistic infection.

Kocuria Rosea

A pink-pigmented gram-positive coccus usually found on skin or in the environment and rarely associated with opportunistic infection.

Kocuria Varians

A gram-positive coccus found on skin and in the environment that can rarely cause opportunistic infection.

Kodamaea Ohmeri

A yeast that can rarely cause bloodstream or other opportunistic infections, especially in people with weakened immunity.

Koebner Phenomenon

Development of lesions of a skin disease, classically psoriasis or vitiligo, at sites of injury or other trauma.

Koebnerisation

Development of lesions of an existing skin disease at sites of trauma or injury, classically seen in psoriasis, vitiligo, and lichen planus.

KOH Preparation

Microscopic examination of skin, hair, or nail scrapings treated with potassium hydroxide to dissolve keratin and reveal fungal hyphae or yeast. A neg-

ative preparation does not exclude infection when sampling is inadequate or prior treatment has been given.

Koilonychia

Spoon nails: nails with a concave (spoon-shaped) contour, most commonly associated with iron deficiency anemia; also seen in hemochromatosis, Plummer-Vinson syndrome, malnutrition, and trauma (nail dystrophy). The nail becomes thin, brittle, and turns up at the edges so a drop of water rests in the concavity.

Konno Procedure

A complex reconstructive cardiac surgical operation designed to treat severe, diffuse, tunnel-like subaortic left ventricular outflow tract obstruction, complex multi-level LVOT obstruction, or an excessively small/hypoplastic aortic annulus. Involves aortoventriculoplasty: a full-thickness longitudinal incision is made through the anterior aortic root and carried inferiorly across the aortic annulus deep into the muscular interventricular septum (avoiding the conduction bundle), followed by patch enlargement of the ventricular septum and outflow tract, and subsequent surgical aortic valve replacement with a prosthetic valve of appropriate adult caliber.

Alternate Names:

Konno-Rastan Procedure; Aortoventriculoplasty

Koplik Spots

A characteristic enanthem of measles. It consists of small, bluish-white spots on an erythematous bluish-white spots on an erythematous background located on the buccal mucosa opposite the lower molars ("grains of salt on a red background"). Appear 1-2 days prior to the onset of the maculopapular rash and disappear 1-2 days after rash onset.

Koplik'S Spots

Small white or bluish-gray spots on the inner cheek, often with a red base, that are characteristic of measles and may appear shortly before the skin rash.

Korotkoff Sounds

Sounds heard through a stethoscope over an artery as a blood-pressure cuff is deflated; their appearance and disappearance are used to estimate systolic and diastolic pressure.

Korsakoff Syndrome

A chronic amnesic disorder caused most often by severe thiamine deficiency associated with alcohol-use disorder. It causes impaired formation of new memories, loss of past memories, and sometimes confabulation.

Korsakoff'S Syndrome

A chronic amnesic disorder, commonly associated with severe thiamine deficiency and alcohol-use disorder, causing impaired new learning, memory loss, and sometimes confabulation.

Kounis Syndrome

An acute coronary syndrome caused by an allergic or hypersensitivity reaction, involving coronary vasospasm, plaque erosion or rupture, or stent thrombosis. It may occur with allergic symptoms and requires simultaneous assessment and treatment of the allergic reaction and myocardial ischemia.

KP

Alternate index label; see *Keratosis pilaris*.

Krabbe Disease

An autosomal-recessive lysosomal storage disorder caused by deficient galactocerebrosidase activity and accumulation of psychosine. Infantile disease causes irritability, stiffness, developmental regression, seizures, and progressive loss of neurological function; later-onset forms are variable.

Krabbe'S Disease

A rare inherited disorder in which loss of myelin progressively damages the nervous system.

KRAS Gene

KRAS encodes a small GTPase that relays signals from growth-factor receptors through the RAS-

RAF–MEK–ERK pathway; activating mutations drive cancers and can predict resistance to some targeted therapies.

Kraurosis

An older term for atrophic and sclerotic vulvar disease, often referring to lichen sclerosus and associated with itching, discomfort, and tissue fragility.

Krebs Cycle (Citric Acid Cycle)

A series of chemical reactions in mitochondria that oxidizes acetyl-CoA and generates energy-rich molecules used for cellular energy production.

Alternate Names:

Citric Acid Cycle

Krebs' Cycle

The Krebs cycle, or citric-acid cycle, is a mitochondrial pathway that oxidizes acetyl-CoA to carbon dioxide and generates NADH, FADH₂, and GTP for oxidative phosphorylation.

Kringles

Compact protein domains stabilized by disulfide bonds that mediate binding in proteins such as plasminogen and some growth factors.

Krukenberg Tumor

An ovarian tumor caused by metastatic cancer, commonly originating in the stomach or gastrointestinal tract.

Krukenberg's Tumor

A metastatic ovarian tumour composed commonly of signet-ring cells, most often arising from gastric or other gastrointestinal adenocarcinoma.

Krunkenberg Tumour

A misspelled variant of Krukenberg tumour, meaning a metastatic ovarian signet-ring-cell adenocarcinoma, usually originating in the stomach or another gastrointestinal site.

Kt/V

Dialysis adequacy measure representing the frac-

tional clearance of urea. K is dialyzer clearance, t is treatment time, V is volume of distribution of urea. Target Kt/V greater than 1.4 for thrice-weekly hemodialysis. Urea reduction ratio greater than 70% is alternative adequacy measure.

Kugelberg-Welander Disease

The mild, juvenile-onset form of 5q-related spinal muscular atrophy (Spinal Muscular Atrophy Type 3 [SMA 3]), inherited in an autosomal recessive pattern and caused by homozygous deletions or loss-of-function variants in the *SMN1* gene on chromosome 5q13, with disease severity modulated by the number of copies of the homologous *SMN2* backup gene (typically 3 to 4 copies). Manifests after 18 months of age with slowly progressive, symmetrical proximal muscle weakness and wasting, predominantly affecting the lower extremities and pelvic girdle, waddling gait, difficulty climbing stairs, fine postural tremor of the fingers, and preserved deep tendon reflexes initially, with most patients achieving independent ambulation and normal life expectancy.

Alternate Names:

Spinal Muscular Atrophy Type 3 (SMA 3); Juvenile Spinal Muscular Atrophy

Kulchitsky Cells (Enterochromaffin Cells)

Specialized neuroendocrine cells, especially in the gastrointestinal and respiratory tracts, that release signalling substances such as serotonin.

Alternate Names:

Enterochromaffin Cells

Kupffer's Cell

A Kupffer cell is a resident macrophage lining the liver sinusoids; it removes microbes, damaged blood cells, and particles from portal blood and contributes to hepatic inflammation and iron handling.

Kurthia

A genus of gram-positive, spore-forming bacteria found mainly in soil and food; human infection is rare.

Kuru

Kuru is a rare fatal prion disease historically asso-

ciated with ritual cannibalism, causing progressive ataxia, tremor, and neurologic decline.

Kussmaul Breathing

A deep, rapid breathing pattern seen in severe metabolic acidosis (diabetic ketoacidosis, lactic acidosis, uremia). It represents the body's attempt to compensate by blowing off CO₂. The increased respiratory rate and depth create the characteristic labored breathing.

Kussmaul Respiration

Deep, rapid breathing commonly associated with severe metabolic acidosis, especially diabetic ketoacidosis.

Kussmaul Sign

Paradoxical increase in jugular venous pressure with inspiration, normally the JVP decreases with inspiration. It indicates impaired right ventricular filling during inspiration. Seen in constrictive pericarditis, restrictive cardiomyopathy, severe right heart failure, cardiac tamponade, and massive pulmonary embolism.

Kwarshiorkor

A misspelling of kwashiorkor, a severe protein-energy malnutrition syndrome characterized by oedema, growth failure, muscle wasting, and often fatty liver.

Alternate Names:

Nuclear Jaundice

Kwashiorkor

Kwashiorkor is severe protein-energy malnutrition characterized by edema, growth failure, muscle wasting, skin or hair changes, and impaired immune function. deficiency relative to calorie intake (often occurring in children when weaned from breast milk to a high-carbohydrate starch diet).

Kynurenine

A metabolite formed during breakdown of tryptophan and a precursor of several neuroactive and immune-regulating compounds.

Kyphoplasty

A minimally invasive procedure that uses a balloon to create space in a collapsed vertebral body and then injects bone cement to stabilize a painful compression fracture.

Kyphoscoliosis

An abnormal curvature of the spine in both the coronal (scoliosis) and sagittal (kyphosis) planes. Severe forms cause restrictive lung disease by reducing chest wall compliance and lung volumes. It can lead to chronic respiratory failure and pulmonary hypertension.

Kyphosis

Kyphosis is excessive forward curvature of the thoracic spine, which may result from posture, vertebral compression, developmental conditions, degeneration, or inflammatory disease. angle on lateral spine x-ray (normal thoracic kyphosis is 20-40 degrees).

Alternate Names:

Round Back

Kytococcus

A genus of gram-positive cocci found on skin and in the environment that can rarely cause opportunistic infection.

Kaposi's Sarcoma

A vascular tumor associated with human herpesvirus 8, also called Kaposi sarcoma-associated herpesvirus. It may cause purple, red, or brown lesions of the skin or oral mucosa and can involve lymph nodes or internal organs; it is more likely or aggressive when immunity is weakened, such as with HIV infection or after organ transplantation.

Kennedy's Disease

A rare inherited motor-neuron disease, also called spinal and bulbar muscular atrophy, caused by an androgen-receptor gene change. It mainly affects men and causes slowly progressive muscle weakness, wasting, cramps, and sometimes swallowing or speech problems.

Keratocele

A severe thinning or ulceration of the cornea that allows the inner corneal layers to bulge outward. It is an eye emergency because it can lead to corneal perforation and permanent vision loss.

Kidney Cyst

A fluid-filled sac in or on the kidney. Simple cysts are common and usually harmless, while complex or multiple cysts may require imaging and follow-up to identify infection, bleeding, inherited disease, or cancer risk.

Kidney Disease

Any condition that damages the kidneys or reduces their ability to filter blood, balance fluids and minerals, control blood pressure, or make hormones. Causes include diabetes, high blood pressure, infection, inflammation, inherited disorders, and medicines.

Kleine-Levin Syndrome

A rare disorder causing repeated episodes of excessive sleep, often with confusion, reduced activity, and changes in behavior or appetite. Episodes last days to weeks and are separated by periods of more typical function.

Knee Arthroplasty

Surgery that replaces damaged parts of the knee joint with artificial components. It is usually performed for severe pain and loss of function from arthritis or major joint damage.

Knee Hyperextension

Bending the knee backward beyond its normal range. It can strain or tear ligaments and may cause pain, swelling, instability, or difficulty bearing weight.

Knee Replacement

An operation that replaces part or all of a damaged knee joint with an artificial joint to reduce pain and improve movement. Recovery includes wound care, exercises, and rehabilitation.

Kombucha

A fermented tea made with a culture of bacteria and yeast. It may contain sugar, acids, caffeine, and a small amount of alcohol; contaminated or excessive products can cause illness, especially in vulnerable people.

Koumpounophobia

An intense fear or strong distress related to buttons. It is a specific phobia when it causes significant anxiety or interferes with daily life, and it can be treated with psychological therapies such as exposure-based therapy.

Kytococcus Sedentarius

A skin-associated gram-positive coccus that produces enzymes linked to pitted keratolysis and can rarely cause invasive infection.

L

L-Dopa

A medicine that the brain converts into dopamine. It is usually combined with carbidopa or benserazide to treat Parkinson disease.

La Crosse Encephalitis

A mosquito-borne viral encephalitis caused by La Crosse virus, usually affecting children and causing fever, headache, seizures, or altered consciousness.

LAAO

Alternate name; see *Left Atrial Appendage Occlusion*.

Labetalol

A medicine that lowers blood pressure by slowing the heart and relaxing blood vessels. It is also used for severe high blood pressure during pregnancy and may cause a slow heartbeat, low blood pressure, or breathing problems in people with asthma.

Labia

The folds of skin surrounding the entrance to the vagina and urethra, consisting mainly of the labia majora and labia minora.

Labia Majora

The paired outer folds of skin of the vulva that help protect the urethral and vaginal openings and contain connective tissue, glands, and fat.

Labia Minora

The paired inner folds of tissue of the vulva, lying within the labia majora and surrounding the vestibule and its openings.

Labial Sounds

Speech sounds produced with one or both lips, such as /p/, /b/, and /m/; lip movement and coordination can be relevant in speech assessment.

Labiaplasty

Surgical reshaping or reduction of the labia, usually the labia minora, performed for functional symptoms, reconstruction, or selected cosmetic indications. Risks include pain, bleeding, infection, scarring, and altered sensation.

Labile

Easily or rapidly changing, as in labile blood pressure, blood glucose, or mood.

Labile Hypertension

Blood pressure that changes substantially over short periods. Stress, pain, medicines, illness, and measurement conditions can contribute, so repeated properly performed readings help confirm the pattern.

Lability

A tendency to change readily or unpredictably, such as emotional lability or labile blood pressure.

Labium

A lip-like anatomical structure; in obstetrics and gynecology, usually one of the labia of the vulva.

Labium Majus

One of the paired outer folds of the vulva containing skin, connective tissue, glands, vessels, and nerves and protecting the more internal genital structures.

Labium Minus

One of the paired inner folds of the vulva bordering the vestibule and helping protect the urethral and vaginal openings.

Labor

The process in which regular contractions open the cervix and lead to delivery of the baby and placenta. It includes the stages of cervical opening, birth of the baby, and delivery of the placenta.

Labor Complication

A maternal or fetal problem occurring during labor or delivery, such as abnormal labor progress, hemorrhage, infection, fetal distress, or malpresentation, requiring assessment and management based on the cause.

Labor Dystocia

Labor that is unusually slow or difficult because of weak contractions, the baby's position or size, or the shape of the mother's pelvis. Treatment depends on the cause and may include medicines or an operation.

Labor False (Braxton Hicks Contractions)

Alternate index label for Braxton Hicks Contractions.

Labor Pain

Pain caused by uterine contractions, cervical dilation, and stretching of pelvic tissues during labor; its intensity and management vary with labor stage and individual factors.

Laboratory

A facility or department where clinical specimens are examined using microbiologic, hematologic, chemical, molecular, or other diagnostic methods.

Laboratory Medicine

The medical specialty that uses laboratory tests on blood, tissue, and other specimens for diagnosis, screening, monitoring, and treatment.

Laboratory Procedure

A medical procedure, treatment, device, or care topic related to laboratory procedure; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Laboratory Test

An examination of a body fluid, tissue, or other specimen to obtain information for diagnosis, monitoring, screening, or treatment.

Labour

The process of childbirth, consisting of regular uterine contractions that cause progressive cervical effacement and dilation, leading to delivery of the baby and placenta.

Labra

Plural of labrum, referring to fibrocartilaginous rims that deepen certain joint sockets, such as the shoulder or hip labra.

Labradimil

An investigational pharmacologic compound; its mechanism, indication, safety, and clinical significance depend on the specific study or product context.

Labral Tear

A tear in the fibrocartilaginous rim of a joint socket, commonly the shoulder or hip, causing pain, clicking, instability, or reduced range of motion.

Labrum

A ring of tough, flexible tissue around the socket of a joint. It deepens and stabilizes the shoulder or hip socket.

Labyrinth

The inner ear. It contains the cochlea, which is responsible for hearing, as well as structures that are needed for balance.

Labyrinth Disorder

A disorder of the inner-ear balance structures that

may cause vertigo, nausea, or imbalance.

Labyrinthine Membrane

The membranous labyrinth of the inner ear, a fluid-filled system containing the cochlear duct and vestibular organs responsible for hearing and balance.

Labyrinthitis

Inflammation of the inner ear that can cause sudden spinning dizziness, imbalance, nausea, ringing in the ear, and sometimes hearing loss.

Labyrinthitis (Inner Ear Inflammation)

Alternate index label for Inner Ear Inflammation.

Lac Operon

A group of bacterial genes that are switched on or off to help the bacterium use lactose, a sugar found in milk.

Laceration

A wound caused by tearing of body tissue, typically caused by trauma from a sharp object (knife, glass, metal) or blunt force that splits the skin. Lacerations involve the skin and may extend into subcutaneous tissue, muscle, tendon, nerve, or blood vessels.

Laceration (Forensic)

Tear or disruption of tissue produced by blunt force trauma exceeding skin elasticity, featuring irregular bruised edges, tissue bridging (intact nerves, vessels across wound floor), and hair crushing.

Alternate Names:

Forensic

Laceration - Sutures Or Staples - At Home

Home care after sutures or staples includes keeping the wound clean and protected, following dressing instructions, avoiding strain, and watching for infection or wound separation.

Lacerations - Liquid Bandage

Liquid bandage is a film-forming adhesive applied over small, clean, shallow cuts to protect the wound; it should not be used on deep, infected, heavily bleeding, or gaping wounds.

Lachman Test

A knee examination in which the lower leg is gently pulled forward while the knee is slightly bent. Too much movement may suggest an injury to the anterior cruciate ligament.

Lachrymal

Relating to tears or the structures that produce and drain them; also spelled lacrimal.

Lacosamide

An antiseizure medicine used mainly for focal seizures. It may cause dizziness, double vision, poor coordination, or changes in the heart's electrical rhythm.

Lacquer Poisoning

Lacquer poisoning involves toxic or environmental exposure to lacquer poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Lacrimal

Relating to tears or the lacrimal glands and drainage passages.

Lacrimal Apparatus

The glands and passages that make, spread, and drain tears. It includes the tear gland, small openings near the inner eyelids, the tear sac, and the duct that drains tears into the nose.

Lacrimal Disease

A disorder of the tear-producing or tear-draining system, including dry eye, dacryocystitis, obstruction, inflammation, or abnormal tearing.

Lacrimal Duct

A drainage channel that carries tears from the

lacrimal sac into the nasal cavity. Blockage can cause watering of the eye, recurrent infection, swelling near the inner corner, or discharge.

Lacrimal Gland

The paired almond-shaped exocrine glands that secrete the aqueous layer of the tear film, located in the lacrimal fossa of the superior lateral orbit (orbital part) and the upper eyelid (palpebral part).

Lacrimal Gland Tumor

A benign or malignant growth arising in the tear-producing lacrimal gland, often causing swelling, pain, or displacement of the eye.

Lacrimation

Production and release of tears by the lacrimal glands; excessive tearing may result from irritation, allergy, infection, or blocked tear drainage.

Lactam

A type of chemical structure found in some medicines. Beta-lactam antibiotics, such as penicillins and cephalosporins, kill bacteria by weakening their cell walls.

Lactase

An enzyme that breaks down the milk sugar lactose in the small intestine.

Lactase Deficiency

Alternate index label; see *Lactose intolerance*.

Lactate

A product of cellular metabolism measured in blood. An increased level may occur with strenuous exercise, impaired oxygen delivery, infection, medicines, liver disease, or other conditions and must be interpreted clinically.

Lactate Dehydrogenase

An enzyme found in many body tissues. Its blood level may rise when cells are damaged, but the test does not identify the cause by itself.

Lactate Dehydrogenase Test

A blood test measuring lactate dehydrogenase, an enzyme released when cells are injured; increased activity is nonspecific and may occur with hemolysis, liver disease, muscle injury, infection, or malignancy.

Lactation

The physiological process of milk production and secretion from the mammary glands, occurring after childbirth (puerperium). See Lactation (Breastfeeding).

Lactation (Breastfeeding)

The production and release of breast milk after childbirth. Early milk, called colostrum, is followed by mature milk; hormones help make and release the milk.

Alternate Names:

Breastfeeding

Lactation Disorder

Abnormal milk production or milk transfer after childbirth, including low supply, oversupply, engorgement, mastitis, or impaired infant latch.

Lactation Mastitis

Alternate index label; see *Mastitis*.

Lactation Nutrition

Nutrition and hydration during breastfeeding sufficient to support maternal health and milk production. Requirements vary with maternal stores, dietary pattern, and the degree of breastfeeding; selected supplements may be required according to local guidance and clinical assessment.

Lactational Amenorrhea

The temporary absence of menstrual periods during breastfeeding because ovulation is suppressed. Breastfeeding prevents pregnancy reliably only when specific conditions are met, so other contraception may be needed.

Lacteals

Tiny lymphatic vessels inside intestinal villi that

absorb dietary fats and fat-soluble vitamins. They carry these absorbed lipids into the lymphatic system as chylomicrons.

Lactic Acid

An organic acid produced during normal metabolism, especially when pyruvate is converted to lactate. Blood lactate may rise for many reasons, including impaired oxygen delivery, strenuous exercise, or medicines.

Lactic Acid Test

A blood test measuring lactate, which accumulates when production exceeds clearance; it helps assess tissue hypoperfusion, sepsis, severe exercise, metabolic disease, or other causes of lactic acidosis.

Lactic Acidosis

Metabolic acidosis associated with increased lactate production or reduced lactate clearance. Causes include impaired tissue oxygen delivery, medicines, liver disease, seizures, and other disorders.

Lactobacillaceae

Lactobacillaceae is a family of bacteria that includes many lactic-acid-producing organisms found in food and normal human microbiota; most are harmless or beneficial.

Lactobacillus

A genus of bacteria that produces lactic acid and normally forms part of the healthy vaginal and intestinal microbiota; some species are used as probiotics.

Lactobacillus Acidophilus

A lactic-acid-producing bacterium found in some fermented foods and probiotic products; it normally inhabits parts of the human body but is rarely opportunistically invasive.

Lactobacillus Brevis

A lactic-acid-producing bacterium found in fermented foods and some body sites; it rarely causes opportunistic infection.

Lactobacillus Casei

A lactic-acid-producing bacterium found in fermented foods and the human intestine; it is used in some probiotic products and rarely causes infection.

Lactobacillus Fermentum

A lactic-acid-producing bacterium found in fermented foods and the human microbiome that can rarely cause opportunistic infection.

Lactobacillus Gallinarum

A lactic-acid-producing bacterial species found in animals and occasionally in human specimens; human infection is rare.

Lactobacillus Gasseri

A lactic-acid-producing bacterium found in the gastrointestinal and genital microbiota and used in some probiotic products.

Lactobacillus Jensenii

A lactic-acid-producing bacterium associated with the vaginal microbiota that may help maintain an acidic environment.

Lactobacillus Johnsonii

A lactic-acid-producing bacterium found mainly in the gastrointestinal tract and studied as a probiotic organism.

Lactobacillus Oris

A lactic-acid-producing bacterium found in the mouth and occasionally associated with opportunistic infection.

Lactobacillus Paracasei

A lactic-acid-producing bacterium found in fermented foods and the intestine and used in some probiotic preparations.

Lactobacillus Rhamnosus

A lactic-acid-producing bacterium used in some probiotic products; it is usually harmless but can rarely cause invasive infection.

Lactobacillus Salivarius

A lactic-acid-producing bacterium found in the mouth and intestine and studied for possible probiotic effects.

Lactobacillus Vaginalis

A lactic-acid-producing bacterium associated with the vaginal microbiota; it is usually a colonizer rather than a pathogen.

Lactococcus

A genus of lactic-acid-producing bacteria used in dairy fermentation; some species rarely cause opportunistic infection.

Lactococcus Garvieae

A lactic-acid-producing bacterium that mainly affects fish but can rarely cause infection in humans, including bloodstream or endocardial infection.

Lactococcus Lactis

A lactic-acid-producing bacterium widely used to make cheese and other fermented dairy foods; human infection is rare.

Lactoferrin

Lactoferrin is an iron-binding glycoprotein in milk and mucosal secretions that limits microbial iron access and contributes to innate immune defense.

Lactone

A cyclic ester formed when a hydroxy acid undergoes internal esterification; lactone structures occur in many natural products and medicines.

Lactose

The principal sugar in milk, composed of glucose and galactose. Lactase in the small intestine digests it.

Lactose Fermentation

The ability of bacteria to break down lactose and produce acid or gas. It is used in the laboratory to help identify different types of bacteria.

Lactose Intolerance

A condition in which the body cannot fully digest lactose, the sugar in milk and dairy products, because it does not make enough lactase. It may cause bloating, gas, abdominal pain, nausea, or diarrhea after consuming lactose.

Alternate Names:

Lactase Deficiency Milk Intolerance Milk Intolerance (Lactose Intolerance)

Lactose Tolerance Test

Non-invasive test for carbohydrate malabsorption (lactose, fructose) and small intestinal bacterial overgrowth (SIBO). See Hydrogen Breath Test.

Lactose Tolerance Tests

Tests that evaluate digestion and absorption of lactose by measuring blood glucose response after lactose ingestion or detecting hydrogen in exhaled breath; they may support evaluation of lactose malabsorption.

Lactulose

A medicine that softens stool by drawing water into the bowel. It is also used to lower harmful ammonia levels in some people with severe liver disease. Gas and diarrhea can occur.

Lacuna

A small space or cavity in tissue, such as a space containing an osteocyte in bone.

Lacunar Stroke

An ischemic stroke caused by blockage of a small artery deep within the brain.

Ladd Bands

Congenital, anomalous peritoneal fibrous bands running across the second and third portions of the duodenum from the abnormally placed cecum and ascending colon to the right posterior abdominal wall, associated with intestinal malrotation. They cause extrinsic duodenal compression, obstruction, and bilious emesis in infants; division of these bands is an integral step of the Ladd procedure.

Alternate Names:

Ladd's Peritoneal Bands; Ladd Fibrous Bands

Ladd Procedure

The classic emergency pediatric surgical operation for intestinal malrotation and midgut volvulus. The procedure consists of four sequential steps: counter-clockwise derotation of the midgut volvulus, surgical division of Ladd bands and relief of duodenal compression, widening of the narrow mesenteric base to prevent future volvulus, and incidental appendectomy (as the mobile cecum is relocated into the left lower quadrant).

Alternate Names:

Ladd Operation; Ladd's Procedure

Laennec's Cirrhosis

An older term for alcohol-associated cirrhosis, characterized by diffuse liver fibrosis and regenerative nodules.

Laetrile

A semisynthetic amygdalin-related compound promoted as an alternative cancer treatment; credible evidence has not established anticancer benefit, and cyanide poisoning is a serious risk.

Lafora Disease

A progressive autosomal-recessive myoclonic epilepsy caused by pathogenic variants affecting glycogen metabolism. It usually begins in adolescence with generalized seizures, visual symptoms, myoclonus, cognitive decline, and progressive neurological deterioration.

Lagophthalmos

Incomplete closure of the eyelids, which can expose and dry the cornea.

LAMB Syndrome

An older acronym for lentigines, atrial myxomas, mucocutaneous myxomas, and blue nevi, findings within the spectrum of Carney complex.

Lambda

The junction of the sagittal and lambdoid sutures of the skull; it is also a symbol used in medical notation.

Lambert-Eaton Myasthenic Syndrome

A rare condition in which the immune system interferes with nerve signals to muscles. It causes weakness, especially in the hips and shoulders, reduced reflexes, and sometimes dry mouth. It can be associated with small-cell lung cancer.

Lamellar

Arranged in, composed of, or characterized by thin plates, scales, or concentric parallel sheets (lamellae). In osteology, lamellar bone represents mature, mechanically strong, highly organized bone tissue composed of parallel or concentric collagen sheets with alternating fibril orientations, contrasting with disorganized immature woven bone. In histology, also describes lamellar granules (Odland bodies in keratinocytes of the stratum granulosum that discharge lipid barrier sheets) and lamellar corpuscles (Pacinian corpuscles, encapsulated mechanoreceptors sensitive to vibration and deep pressure).

Lamellar Body

A membrane-bound secretory organelle containing layered lipid material, especially in alveolar type II cells where it releases pulmonary surfactant.

Lamellar Bone

Mature bone made of organized layers of mineralized tissue. It forms most adult compact and spongy bone and provides strength while being continually remodeled.

Lamellar Ichthyosis

An inherited skin disorder present from birth that causes dry skin covered with large, dark, plate-like scales over much of the body, including the arms and legs. It may reduce sweating and cause overheating, and can affect the hair, nails, eyes, or palms and soles.

Lamellipodium

A broad, sheet-like extension at the edge of a moving cell that helps it spread and migrate across a surface.

Lamin

A structural protein forming part of the nuclear lamina, which supports the inner surface of the cell nucleus.

Lamina

A thin plate of bone forming part of a vertebral arch.

Lamina Propria

A layer of supporting tissue beneath the surface lining of organs. It contains small blood vessels, immune cells, and other structures.

Laminectomy

An operation that removes part of a spinal bone to make more room for the spinal cord or nerves. It may be used for spinal narrowing, a tumor, or selected disk problems.

Laminin

A large extracellular-matrix protein that helps cells attach to basement membranes and influences tissue development and repair.

Lamivudine

Lamivudine is a nucleoside reverse-transcriptase inhibitor used with other antiretrovirals for HIV and as an antiviral for chronic hepatitis B; resistance and rare lactic acidosis or hepatic complications require monitoring.

Lamotrigine

Lamotrigine is an antiseizure medicine that inhibits voltage-gated sodium channels and is also used for bipolar-maintenance treatment; rapid dose escalation increases the risk of serious rash including Stevens–Johnson syndrome.

Lancet

A small, sterile, usually single-use device with a

sharp point used to puncture the skin and obtain a capillary-blood sample. Lancets are commonly used for fingertip glucose testing and other point-of-care blood tests; used lancets must be discarded in an appropriate sharps container.

Alternate Names:

Blood lancet Fingerstick lancet

Landolt Ring

A visual-acuity test symbol shaped like a ring with a gap; the person identifies the gap's direction.

Landry Ascending Paralysis

An older name for Guillain–Barré syndrome, an acute immune-mediated polyradiculoneuropathy causing progressive weakness that often begins in the legs and ascends; respiratory failure can occur.

Landry'S Paralysis

An older name for the rapidly ascending paralysis of Guillain-Barré syndrome.

Langer Lines

Natural lines of skin tension that reflect the predominant orientation of collagen fibers in the dermis and may influence surgical scar direction.

Langerhans Cell Histiocytosis

A rare disorder in which abnormal immune cells build up in one or more organs, commonly the bones, skin, lungs, lymph nodes, or pituitary gland. Symptoms and treatment depend on which organs are affected.

Langerhans Cells

Immune cells in the epidermis that capture antigens and help initiate immune responses.

Langerhans' Cell

Langerhans' cell refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Langerhans-Cell Histiocytosis

A group of disorders characterized by clonal proliferation of Langerhans cells (antigen-presenting dendritic cells), which can infiltrate bone, skin, and central nervous system. CNS involvement may cause diabetes insipidus, hypothalamic-pituitary dysfunction, or cerebellar degeneration.

Language Barrier

Difficulty communicating because a patient and healthcare professional do not share a language or have limited proficiency in the language used for care.

Language Development

Language development is the progressive acquisition of understanding, sounds, words, grammar, and communication during childhood.

Language Disorder

A developmental or acquired impairment in understanding, producing, or using spoken, written, or signed language that affects communication and daily function.

Language Therapy

Treatment that improves understanding, expression, reading, writing, or other language skills after developmental or acquired impairment.

Laniquidar

Laniquidar is an investigational inhibitor of drug-efflux transporters studied to overcome multidrug resistance in cancer cells.

Lanolin

Lanolin is a waxy substance derived from sheep wool used as an emollient and in topical products; allergy or irritation can occur.

Lanolin Poisoning

Lanolin poisoning involves toxic or environmental exposure to lanolin poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Lanosterol

A sterol intermediate used by cells to synthesize cholesterol and other sterols.

Lansoprazole

A medicine that strongly reduces stomach acid. It is used for heartburn, ulcers, and some *H. pylori* infections; long-term use may affect mineral or vitamin levels and infection risk.

Lanthanum

A chemical element whose carbonate salt can bind dietary phosphate and lower phosphate absorption in people with advanced kidney disease.

Lanugo

Fine, soft hair that grows all over the body of a fetus and is typically shed before birth.

Laparotomy

A misspelling of laparotomy, an operation involving incision through the abdominal wall to enter the abdominal cavity.

Laparoscope

A slender instrument with a light and camera used to view the abdominal or pelvic cavity through a small incision during minimally invasive surgery.

Laparoscopic Cholecystectomy

Surgical removal of the gallbladder through small abdominal incisions using a laparoscope and instruments, commonly performed for symptomatic gallstones or gallbladder inflammation.

Laparoscopic Colectomy

Laparoscopic colectomy is removal of part or all of the colon through small incisions using a camera and specialized instruments.

Laparoscopic Gallbladder Removal

A medical procedure, treatment, device, or care topic related to laparoscopic gallbladder removal; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Laparoscopic Gastric Banding

A bariatric operation that places an adjustable band around the upper stomach to create a small pouch and restrict food passage; it is less commonly performed than other bariatric procedures.

Laparoscopic Hysterectomy

Removal of the uterus using laparoscopic instruments through small abdominal incisions. The cervix, fallopian tubes, and ovaries may or may not also be removed; the approach and extent depend on the indication, anatomy, and surgical plan.

Laparoscopy

A type of minimally invasive surgery in which a thin camera is placed through a small cut in the abdomen. Other small cuts may be used to insert surgical instruments.

Laparotomy

An operation that uses a larger cut in the abdomen to reach the abdominal or pelvic organs.

Lapatinib

Lapatinib is a targeted cancer medicine that blocks HER2 and epidermal-growth-factor receptors and is used for selected advanced breast cancers.

Lapatinib Ditosylate

Lapatinib ditosylate is the salt form of lapatinib, a targeted medicine used for selected HER2-positive breast cancers.

Large Airway Obstruction

A blockage in the windpipe or large breathing tubes. It can cause noisy breathing, shortness of breath, and difficulty clearing mucus and may be caused by narrowing, a tumor, or weakness of the airway wall.

Large Bowel Obstruction

Mechanical blockage of the colon most commonly caused by colorectal cancer, volvulus, or diverticular stricture. Clinical presentation includes progressive abdominal distension, constipation, and obstipation. The cecum is at highest risk of perforation with dis-

tal obstruction. Diagnosis is by CT scan identifying the site and cause.

Large Bowel Resection

Surgical removal of a segment of the colon or rectum, followed by reconnection of the bowel or creation of a stoma when necessary to treat cancer, obstruction, ischemia, inflammation, or other disease.

Large Colon

The large colon is the main portion of the large intestine that absorbs water, stores fecal material, and moves contents toward the rectum.

Large For Gestational Age

Birth weight or fetal size above the 90th percentile for gestational age. It is associated with maternal diabetes, excessive maternal weight gain, and genetic or constitutional factors and increases the risk of shoulder dystocia, birth trauma, and neonatal hypoglycemia.

Large For Gestational Age

A fetus or newborn whose estimated or measured weight is above the expected range for gestational age, commonly above the 90th percentile.

Large Intestine

The final part of the digestive tract, extending from the small intestine to the rectum. It absorbs water and helps form and move stool.

Large Solitary Luteinized Follicle Cyst Of Pregnancy

A benign ovarian cystic lesion with prominent luteinization, usually occurring during pregnancy and often discovered incidentally or as an adnexal mass.

Laromustine

Laromustine is an investigational alkylating antineoplastic agent studied for DNA damage and cancer-cell killing.

Laron Syndrome

An inherited disorder of growth-hormone signaling, usually caused by growth-hormone-receptor defects. It produces severe postnatal growth failure, characteristic facial features, and very low insulin-like growth factor 1 despite elevated circulating growth hormone.

Larotaxel

Larotaxel is an investigational taxane that disrupts microtubules and has been studied for anticancer activity.

Larva

An immature life stage of an animal that differs in form from the adult and later undergoes development or metamorphosis.

Larva Currens From Strongyloides

A rapidly moving, itchy skin eruption caused by larvae of *Strongyloides stercoralis*.

Larva Migrans

A condition caused by migrating larval parasites in human tissues, including cutaneous larva migrans in the skin and visceral larva migrans in internal organs.

Laryngeal

Relating to the larynx, the organ in the throat containing the vocal cords and helping protect the airway.

Laryngeal Cancer

Malignant tumor arising in the larynx, most commonly squamous cell carcinoma. Risk factors include tobacco, alcohol, and selected HPV-related disease; persistent hoarseness, dysphagia, odynophagia, stridor, or neck mass requires laryngoscopic evaluation and biopsy.

Laryngeal Candidiasis

Fungal infection of the larynx by *Candida* species, causing hoarseness, dysphagia, and throat pain, most commonly in immunocompromised patients

or those using inhaled corticosteroids.

Laryngeal Carcinoma

Laryngeal carcinoma is cancer arising in the voice box and may cause hoarseness, swallowing difficulty, pain, or breathing problems.

Laryngeal Cartilage

Laryngeal cartilage forms the structural framework of the voice box, maintains the airway, and supports vocal-fold movement.

Laryngeal Cleft

A laryngeal cleft is a congenital opening between the airway and esophagus that can allow aspiration and cause feeding or breathing problems.

Laryngeal Edema

Swelling of the tissues of the larynx that can narrow the upper airway and cause hoarseness, stridor, or respiratory distress. It may result from allergy, infection, trauma, or airway instrumentation.

Laryngeal Fistula

A laryngeal fistula is an abnormal passage connecting the larynx with nearby tissue or the digestive tract and may cause aspiration or infection.

Laryngeal Hemorrhage

Bleeding within or around the larynx, which may result from trauma, instrumentation, vocal strain, vascular lesions, infection, or tumor and can threaten the airway.

Laryngeal Masks

Laryngeal masks are supraglottic airway devices placed above the vocal cords to maintain ventilation during anesthesia or emergencies.

Laryngeal Mucositis

Laryngeal mucositis is inflammation and ulceration of the laryngeal lining, often after radiation, chemotherapy, infection, or irritation.

Laryngeal Nerve

laryngeal nerve refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Laryngeal Nerve Damage

Injury to the recurrent or superior laryngeal nerves causing hoarseness, vocal-cord weakness, swallowing difficulty, or airway compromise. Common causes include thyroid or neck surgery, malignancy, trauma, and compression along the nerve pathway.

Laryngeal Obstruction

Partial or complete blockage of the laryngeal airway caused by edema, foreign body, tumor, trauma, infection, vocal-cord dysfunction, or other structural disease.

Laryngeal Prosthesis

A device used to help restore speech after removal of the larynx, commonly through a one-way valve placed between the trachea and esophagus.

Laryngeal Stridor

A harsh, high-pitched noise caused by turbulent airflow through a narrowed upper airway, often most noticeable during inspiration.

Laryngeal Warts (Recurrent Respiratory Papillomatosis)

Benign papillomatous growths caused by HPV in the larynx or respiratory tract. They may cause hoarseness, stridor, or airway obstruction.

Alternate Names:

Recurrent Respiratory Papillomatosis

Laryngeal Web

A laryngeal web is a thin membrane across part of the airway, usually congenital or acquired after injury, causing hoarseness or airway narrowing.

Laryngectomy

A person who has undergone laryngectomy, surgical removal of all or part of the larynx; total laryn-

gectomy separates the airway from the mouth and nose.

Laryngectomy

Surgical removal of part or all of the larynx, performed for selected laryngeal cancers or severe structural disease; total laryngectomy separates the airway from the mouth and creates a permanent neck stoma. the larynx or hypopharynx and less often for severe trauma or refractory aspiration. Total laryngectomy requires a permanent tracheostomy, so the patient breathes through a neck stoma; partial laryngectomy preserves voice and swallowing.

Laryngectomy Tube

Tube maintaining airway after total laryngectomy. Types: silicone, metal. Indications: laryngeal cancer, trauma. Complications: obstruction, infection, granulation.

Laryngismus Stridulus

An older term for brief laryngeal spasm causing inspiratory stridor, historically associated with childhood spasmodic croup or tetany.

Laryngitis

Laryngitis is inflammation of the larynx causing hoarseness or voice loss, commonly from viral infection, vocal overuse, irritation, reflux, or less often structural disease. sore throat, dry cough, and a sensation of a lump in the throat (globus sensation), and it may be acute or chronic.

Laryngocele

Abnormal air-filled dilation of the laryngeal saccule that may be internal, external, or combined, presenting with hoarseness, neck swelling, or airway obstruction.

Laryngomalacia

Dynamic collapse of supraglottic laryngeal tissue during inspiration, causing congenital stridor in infants. Most cases improve with growth, but feeding difficulty, apnea, hypoxemia, or failure to thrive requires specialist assessment and possible intervention.

Laryngopharyngeal Reflux

Retrograde movement of gastric contents above the upper esophageal sphincter into the larynx and pharynx, producing chronic hoarseness, throat clearing, globus sensation, cough, excessive throat mucus, and laryngospasm, often without heartburn.

Laryngopharynx

The lower part of the pharynx that connects the throat with the larynx and esophagus.

Laryngoscope

Device for visualizing vocal cords during intubation. Blades: Mac (curved), Miller (straight).

Laryngoscopy

A medical procedure used to visualise the larynx (voice box) and adjacent structures of the throat. Types: (1) Indirect laryngoscopy: the simplest technique, using a laryngeal mirror angled at 120 degrees to reflect the laryngeal image, with a headlight or external light source.

Laryngoscopy And Nasolaryngoscopy

Endoscopic examination of the larynx and adjacent upper airway, using a rigid or flexible scope passed through the mouth or nose to assess voice, swallowing, airway, and structural abnormalities.

Laryngospasm

A protective reflex causing involuntary adduction of the vocal cords, producing partial or complete airway obstruction. It is common during light anesthesia, emergence, and in pediatric patients. Triggers include secretions, blood, airway manipulation, and suctioning.

Laryngostenosis

Narrowing of the voice box, or larynx, that can restrict breathing. Causes include scarring after intubation, injury, inflammation, tumors, and congenital narrowing; noisy breathing or breathlessness needs medical assessment.

Laryngotracheobronchitis (Croup)

Alternate index label for Croup.

Larynx

The larynx, commonly known as the voice box, is a complex organ located in the anterior neck between the pharynx and the trachea that serves three primary functions: phonation (voice production), protection of the lower airway from aspiration during swallowing, and regulation of airflow during respiration.

Larynx Cancer

Laryngeal cancer is a malignant tumor of the voice box and may cause persistent hoarseness, swallowing pain, neck mass, ear pain, cough, or breathing difficulty. Diagnosis requires examination and biopsy; treatment depends on site and stage.

Alternate Names:

Throat Cancer (Larynx Cancer)

Larynx Disease

Any disorder affecting the larynx, including inflammation, infection, structural lesions, vocal-cord dysfunction, neurologic disease, or cancer.

Larynx Muscle

larynx muscle refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Larynx Neoplasm

A larynx neoplasm is an abnormal growth in the voice box that may be benign or malignant.

Laser

A device that produces a concentrated beam of light used for diagnosis, treatment, or surgery.

Laser (Vascular)

A catheter-based laser system used to modify or remove selected vascular lesions or obstructive tissue.

Alternate Names:

Vascular

Laser Ablation

The use of focused laser energy to heat, destroy, or seal targeted tissue. The technique is used in selected vascular, ophthalmic, dermatologic, and other procedures.

Laser Assisted Uvula Palatoplasty

A procedure that reshapes or removes selected soft-palate and uvula tissue to reduce snoring.

Alternate Names:

LAUP

Laser Capture Microdissection

A laboratory method that uses a laser to isolate selected cells or tissue regions for microscopic, genetic, or molecular analysis.

Laser Dentistry

Use of lasers for various procedures: caries detection, soft tissue surgery, whitening, periodontal therapy.

Laser Fiber

Optical fiber for laser delivery in surgery. Used in lithotripsy, tumor ablation.

Laser Hair Removal

Hair reduction using laser energy absorbed by pigment in the hair follicle.

Laser Photocoagulation

A laser treatment that seals or destroys abnormal blood vessels, especially in the retina.

Laser Photocoagulation - Eye

A medical procedure, device, or treatment involving laser photocoagulation - eye. Its purpose, risks, and follow-up depend on the specific intervention and patient.

Laser Prostatectomy

A procedure that uses laser energy to remove or vaporize enlarged prostate tissue.

Laser Surgery

Laser surgery uses a focused beam of light to cut, re-

move, seal, or reshape tissue in selected procedures.

Laser Surgery For The Skin

A medical procedure, treatment, device, or care topic related to laser surgery for the skin; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Laser Therapy

Laser therapy uses controlled light energy to treat selected skin, eye, vascular, dental, or other medical conditions.

Laser Therapy For Cancer

A medical procedure, treatment, device, or care topic related to laser therapy for cancer; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Laser Trabeculoplasty

A minimally invasive laser procedure used in the treatment of open-angle glaucoma that lowers intraocular pressure by improving the outflow of aqueous humor through the trabecular meshwork.

Laser-Assisted In Situ Keratomileusis

A refractive surgical procedure that reshapes the cornea using an excimer laser to correct myopia, hyperopia, and astigmatism, thereby reducing dependence on glasses or contact lenses.

Alternate Names:

Laser-Assisted In Situ Keratomileusis

LASIK

LASIK, or laser-assisted in situ keratomileusis, is a refractive surgical procedure that corrects myopia, hyperopia, and astigmatism by reshaping the corneal stroma using an excimer laser, after creating a thin corneal flap with either a microkeratome (a mechanical blade) or a femtosecond laser.

LASIK Eye Surgery

A medical procedure, treatment, device, or care topic related to lasik eye surgery; indications, benefits, risks, and follow-up depend on the specific

intervention and patient.

Lassa Fever

An acute viral hemorrhagic illness caused by Lassa virus, an arenavirus, endemic in West Africa (Nigeria, Sierra Leone, Guinea, Liberia). Transmission: exposure to excreta (urine, feces) of the multimammate rat (*Mastomys natalensis*), the natural reservoir. Incubation: 6-21 days.

Lassa Virus

An arenavirus that causes Lassa fever, a potentially severe hemorrhagic illness acquired mainly through contact with infected rodent excreta or body fluids.

Lassitude

A state of marked fatigue, weakness, or lack of energy that may occur with systemic illness, anemia, endocrine disease, infection, medication effects, or psychological conditions.

Last Menstrual Period

The first day of the last normal menstrual period, used to estimate gestational age and the due date. Requires regular menstrual cycles and reliable recall. Limitations: irregular cycles, recent oral contraceptive use, early pregnancy bleeding mistaken for menses, and poor recall.

Latanoprost

Latanoprost is a prostaglandin F2-alpha analogue eye drop that increases uveoscleral outflow and lowers intraocular pressure in glaucoma or ocular hypertension; iris pigmentation and eyelash growth may occur.

Latarjet Procedure

Surgical procedure for shoulder instability using coracoid process transfer. Provides bony block to prevent recurrent dislocation.

Late Decelerations

A fetal heart rate pattern with a gradual decrease (onset to nadir >30 seconds) that starts at or after the peak of the contraction and returns to baseline

after the contraction ends. Associated with uteroplacental insufficiency (reduced oxygen transfer across the placenta).

Late Effects

Health problems occurring months to years after cancer treatment. Cardiac, pulmonary, endocrine, secondary cancers.

Late Endosome

A late endosome is a membrane-bound cell compartment that receives cargo from early endosomes and matures toward lysosomal degradation.

Late-Onset Hypogonadism

A clinical and biochemical syndrome occurring in aging men characterized by low circulating serum total or free testosterone levels accompanied by typical systemic symptoms of androgen deficiency. Common clinical features include decreased sexual desire (libido), reduced spontaneous morning erections, erectile dysfunction, decreased lean muscle mass and physical strength, increased visceral adiposity, osteopenia or osteoporosis, fatigue, and depressive mood changes. Diagnosis requires persistent symptoms confirmed by morning fasting total testosterone levels consistently below clinical thresholds on repeated measurements; management involves lifestyle modification, management of comorbidities (such as metabolic syndrome and sleep apnea), and consideration of testosterone replacement therapy with routine hematologic and prostate monitoring.

Alternate Names:

LOH; Age-Related Testosterone Deficiency; Testosterone Deficiency Syndrome

Late Gadolinium Enhancement

A specialized tissue characterization technique in cardiac magnetic resonance imaging performed 10 to 20 minutes after intravenous administration of an extracellular gadolinium-based contrast agent. Gadolinium washes out slowly from expanded extracellular spaces (fibrosis, collagen deposition, necrosis, or amyloid), appearing hyperintense (bright white) against nulled, dark normal myocardium.

The distribution pattern reliably differentiates ischemic myocardial infarction (subendocardial or transmural enhancement corresponding to a coronary vascular territory) from non-ischemic cardiomyopathies (mid-wall, subepicardial, or patchy enhancement seen in myocarditis, sarcoidosis, or hypertrophic cardiomyopathy).

Alternate Names:

LGE; Delayed Contrast Enhancement; Myocardial Scar Imaging

Late Preterm (34-36 Weeks)

Births occurring from 34 weeks 0 days through 36 weeks 6 days of gestation. These infants have greater risks than term infants of respiratory, temperature, glucose, jaundice, feeding, and readmission problems.

Alternate Names:

34-36 weeks

Latent

Present but inactive, hidden, or not currently producing symptoms, as in latent tuberculosis infection or a latent virus.

Latent Autoimmune Diabetes In Adults

A form of autoimmune diabetes with adult onset, characterized by the presence of pancreatic islet autoantibodies (particularly anti-GAD65) and a progressive, gradual loss of beta-cell function. Patients initially do not require insulin at diagnosis and are often misdiagnosed with type 2 diabetes, but eventually progress to absolute insulin dependence within months to years.

Alternate Names:

Type 1.5 diabetes; Late-onset autoimmune diabetes of adulthood

Latent Infection

Persistent infection in which an infectious agent remains in a host in a nonreplicating or intermittently replicating state without active clinical disease. Reactivation can occur when immune control is impaired, as in latent tuberculosis.

Latent Phase Of Labor

The early part of the first stage of labor, beginning with regular contractions and gradual cervical change before active labor. The transition to active labor is assessed clinically, and the duration varies widely between individuals.

Latent Syphilis

Latent syphilis is syphilis infection without current symptoms, identified by testing and classified by duration to guide treatment and follow-up.

Latent Tuberculosis

Infection with *Mycobacterium tuberculosis* in which the bacteria remain inactive and cause no symptoms but may later become active.

Latent Tuberculosis Infection

An immune response to *Mycobacterium tuberculosis* without clinical or microbiologic evidence of active disease. It is usually asymptomatic and not contagious, but it can reactivate; treatment decisions depend on age, immune status, exposure risk, test results, and drug interactions.

Lateral

Lateral means toward or situated on the side away from the body's midline; it contrasts with medial and is used to describe anatomical position, movement, or imaging findings. lateral to the little finger in anatomical position.

Lateral Canthotomy And Cantholysis

An emergency procedure that cuts the outer corner of the eyelids and releases the lateral canthal tendon to reduce orbital pressure in suspected orbital compartment syndrome and protect vision.

Lateral Collateral Ligament Injury

Tear of the LCL, less common than MCL injury but more significant. Mechanism: varus stress to the knee (direct blow to medial knee). Presents with lateral knee pain, swelling, and varus laxity. Part of the posterolateral corner (PLC) — when injured, causes significant rotational instability.

Lateral Cuneiform

Located between intermediate cuneiform and cuboid, articulating with navicular, intermediate cuneiform, cuboid, and third metatarsal. Contributes to the transverse arch and lateral foot column. Injuries typically from high-energy midfoot trauma.

Lateral Decubitus Position

A side-lying position in which the patient rests on the nonoperative side to provide access to the chest, hip, or flank.

Lateral Elbow Tendinopathy

Alternate index label; see *Tennis elbow*.

Lateral Epicondylitis

Alternate index label; see *Tennis elbow*.

Lateral Epicondylitis (Tennis Elbow (Lateral Epicondylitis))

Alternate index label for Tennis Elbow (Lateral Epicondylitis).

Lateral Epicondylosis

Alternate index label; see *Tennis elbow*.

Lateral Meniscus

The lateral meniscus is a crescent-shaped cartilage pad on the outer side of the knee that distributes load and stabilizes movement.

Lateral Rotation

Rotation of a limb away from the median plane of the body.

Lateral Sclerosis

Lateral sclerosis describes hardening or degeneration involving a lateral structure, often referring to spinal motor pathways in motor-neuron disease.

Lateral Traction

Lateral traction is a pulling force applied sideways to a body part to improve alignment, reduce a dislocation, or relieve pressure.

Lateral Ventricle

A lateral ventricle is one of the paired cerebrospinal-fluid-filled cavities within a cerebral hemisphere.

Lateral X-Ray

An X-ray image taken from the side, providing a lateral view of the body part being examined.

Latex Agglutination Test

A laboratory test in which latex particles coated with antigen or antibody visibly clump when the matching target is present; it can detect selected microbial antigens, antibodies, or proteins.

Latex Allergies - For Hospital Patients

Latex allergy can cause contact dermatitis, hives, wheeze, or anaphylaxis; hospitals reduce risk with latex-free supplies and clear documentation of the allergy.

Latex Allergy

An immune-mediated hypersensitivity reaction to natural rubber latex. Contact may cause dermatitis, urticaria, rhinitis, asthma, or anaphylaxis, especially in healthcare and occupational settings.

Alternate Names:

Allergy Latex (Latex Allergy)

Lathyrism

A neurologic disorder caused by prolonged or excessive ingestion of certain Lathyrus legumes, especially grass pea, characterized primarily by progressive spastic weakness of the legs.

Latissimus Dorsi

A broad back muscle that extends and internally rotates the arm and assists movements such as climbing.

Latissimus Dorsi Muscle

Broadest back muscle forming the posterior axillary wall, from T7-L5 spinous processes, thoracolumbar fascia, iliac crest, and lower ribs to the intertubercular groove floor. Innervated by thoracodorsal nerve (C6-C8). Adducts, medially rotates, extends

the arm powerfully in swimming/rowing/climbing. Common reconstructive surgery flap.

Lats

Informal name for the latissimus dorsi muscles, broad muscles of the back that help pull the arm downward and backward and rotate it inward.

Lauric Acid

lauric acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Lauroleic Acid

lauroleic acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Lavage

Washing or irrigating a body cavity, organ, or wound with fluid.

Lavage Fluid

lavage fluid is a diagnostic or laboratory investigation; interpretation depends on the specimen, method, reference interval, timing, and clinical question.

Lavender Oil

Lavender oil is an aromatic essential oil used in fragrances and complementary products; ingestion, skin reactions, and interactions are possible.

Lawton IADL Scale

Instrumental ADLs: phone use, shopping, food preparation, housekeeping, laundry, transportation, medication management, finance management.

Laxative Overdose

Laxative overdose involves toxic or environmental exposure to laxative overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Laxatives For Constipation

Laxatives treat constipation through fiber and water retention, stool softening, osmotic effects, or increased bowel contractions. Choice depends on cause, duration, age, medicines, kidney function, and obstruction risk; persistent bleeding, vomiting, or severe pain needs evaluation.

Alternate Names:

Constipation (Laxatives For Constipation)

Laying On Of Hands

A religious or spiritual practice in which a person places hands on another for blessing, prayer, or healing; it should not replace evidence-based medical evaluation or treatment.

Lazy Eye

Reduced vision caused by abnormal visual development during childhood, usually in one eye but sometimes in both. It may result from eye misalignment, unequal focusing, or an obstruction such as a cataract; the medical term is amblyopia.

Alternate Names:

amblyopia.

Lazy Eye (Amblyopia)

Reduced vision in one or both eyes caused by abnormal visual development during childhood, often related to misalignment, unequal focusing, or visual obstruction.

Lb.

Abbreviation for pound, a unit of mass equal to 16 ounces or approximately 0.454 kilograms; medication weights should use unambiguous units.

LCIS

Alternate index label; see *Lobular carcinoma in situ*.

LD50

Lethal dose for 50% of test population. Measure of acute toxicity. Lower LD50 = more toxic. Measured in mg/kg body weight. Ethical concerns limit animal testing.

LDH Isoenzyme Blood Test

A blood test separating lactate dehydrogenase isoenzymes to help suggest the tissue source of an elevated total LDH, although more specific tests are preferred for most conditions.

LDL

Low-density lipoprotein; the 'bad' cholesterol that transports cholesterol to peripheral tissues and is the principal driver of atherosclerosis. Elevated LDL is a major modifiable cardiovascular risk factor; guidelines target LDL levels based on global risk (statin intensity).

LDL Test

A blood test measuring low-density lipoprotein cholesterol, a major atherogenic lipoprotein used with the lipid profile to estimate cardiovascular risk and guide lipid-lowering treatment.

Lead

A toxic heavy metal that can harm the nervous system, blood-forming system, kidneys, cardiovascular system, and reproductive system. Exposure may occur through contaminated paint dust or soil, drinking water, workplaces, hobbies, imported products, or other sources; children and fetuses are especially vulnerable to neurodevelopmental effects.

Lead - Nutritional Considerations

Adequate iron, calcium, and vitamin C intake may help reduce lead absorption in people who are deficient, especially children, but nutrition does not remove lead from the body or replace exposure control. Suspected lead exposure requires evaluation of the source and appropriate blood lead testing.

Lead And Tap Water

Drinking water can become contaminated with lead when it contacts lead-containing service lines, plumbing, fixtures, or solder. Risk reduction may require testing, use of an appropriately certified filter, flushing or other interim measures, and repair or replacement of the source according to local public-health guidance; boiling water does not remove lead.

Lead Levels - Blood

A blood lead test measures the amount of lead in blood, usually reported in micrograms per deciliter (µg/dL). Results are interpreted with age, symptoms, exposure history, and testing method; an elevated capillary result may require confirmation with a venous sample. Management focuses on removing the exposure and arranging medical or public-health follow-up, with chelation reserved for selected cases.

Lead Poisoning

Toxic effects caused by lead exposure. Lead can affect the nervous system, cognition and behavior, child development, blood formation, gastrointestinal tract, kidneys, blood pressure, and reproductive health. Common sources include deteriorating lead paint and dust, contaminated soil or water, occupational or hobby exposure, and some imported products. Evaluation includes exposure assessment and blood lead testing, with venous confirmation when indicated. Treatment prioritizes removing the exposure and correcting nutritional deficiencies; specialist-directed chelation is used only for selected patients based on blood lead level, symptoms, age, and other clinical factors.

Lead-Time Bias

The appearance of improved survival after screening because diagnosis occurs earlier, even when the time of death is unchanged. It can make screening appear beneficial without reducing mortality.

Learn About Gluten-Free Diets

A gluten-free diet excludes wheat, barley, rye, and their derivatives and is essential for people with celiac disease; dietitian guidance helps prevent nutritional gaps.

Learn To Love Exercise

Building a regular exercise habit involves choosing enjoyable activities, starting gradually, setting realistic goals, and adjusting activity for health conditions.

Learn To Manage Stress

Stress management includes regular sleep, physical

activity, relaxation skills, social support, and professional help when stress causes persistent distress or impairment.

Learn To Manage Your Anger

Anger management uses techniques such as recognizing triggers, pausing before reacting, communicating clearly, and seeking counseling when anger becomes unsafe or disruptive.

Learned Insomnia

Persistent difficulty sleeping that is maintained by anxiety and conditioned behaviors associated with sleep.

Learning About Depression

Depression is a persistent disorder of mood and interest that can affect sleep, energy, thinking, appetite, and functioning; it is treatable with professional care.

Learning About Ventilators

A ventilator supports or replaces breathing by delivering controlled airflow and oxygen; understanding alarms, tubes, sedation, and weaning helps families participate in care.

Learning Difficulties

Persistent problems acquiring or using academic skills such as reading, writing, or mathematics, not explained solely by low intelligence or inadequate education.

Learning Disabilities

Persistent difficulties acquiring or using skills such as reading, writing, mathematics, language, attention, or coordination despite appropriate opportunity and instruction; assessment considers development, education, and other neurologic or sensory factors.

Learning Disorder

A neurodevelopmental disorder causing persistent difficulty acquiring or using academic skills such as reading, writing, or mathematics despite appropriate instruction.

Leber Congenital Amaurosis

The most severe inherited retinal dystrophy, presenting at birth or within the first few months of life with profound visual impairment, nystagmus, and pupillary light-near dissociation.

Leber Hereditary Optic Neuropathy

A maternally inherited mitochondrial genetic disorder caused by primary point mutations in the mitochondrial genome (mtDNA) encoding subunits of respiratory Complex I (NADH dehydrogenase), most commonly *m.11778G>A* (*MT-ND4*, 70%), *m.3460G>A* (*MT-ND1*), or *m.14484T>C* (*MT-ND6*). Classically presents in young adult males (male-to-female ratio 4:1) with rapid, painless, sequential bilateral central vision loss, profound central scotomas, impaired color vision, and telangiectatic microangiopathy around the optic disc, progressing to permanent bilateral optic atrophy.

Alternate Names:

LHON

Lecithin

A group of phospholipids found in cell membranes and foods; lecithin is also used as an emulsifier and studied in nutrition and medicine.

Leclercia

Leclercia is a genus of bacteria found in the environment and occasionally associated with opportunistic human infections.

Leclercia Adecarboxylata

Leclercia adecarboxylata is an uncommon bacterium that can cause opportunistic bloodstream, wound, urinary, or other infections.

Lectin

A protein or carbohydrate-binding molecule that recognizes specific sugar structures on cells or other molecules.

LED Photomodulation

Use of low-energy light-emitting diodes to influence skin cells and improve selected skin concerns.

Alternate Names:

LED light therapy

LED Therapy

LED therapy uses specific wavelengths of light for selected skin or wound-care applications; effectiveness depends on the condition and treatment protocol.

Leech

A blood-feeding annelid used in selected reconstructive procedures to relieve venous congestion; leech bites can cause bleeding and infection.

Leech Therapy

A medical procedure, treatment, device, or care topic related to leech therapy; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Leeche

An obsolete or variant spelling of leech, a segmented blood-feeding worm used in selected medical treatments.

Leflunomide

Leflunomide is a disease-modifying antirheumatic drug that inhibits dihydroorotate dehydrogenase and lymphocyte proliferation; it treats rheumatoid or psoriatic arthritis but can cause hepatotoxicity, cytopenias, hypertension, and fetal harm.

Left Anterior Descending Artery

A major branch of the left coronary artery that travels in the anterior interventricular groove and supplies the anterior left ventricle, much of the interventricular septum, and the apex. Its occlusion can cause extensive anterior myocardial infarction.

Left Anterior Descending Coronary Artery

A major coronary artery supplying the front wall and septum of the left ventricle.

Alternate Names:

LAD artery

Left Atrial Appendage Occlusion

A catheter-based percutaneous intervention used as a non-pharmacological alternative for stroke prevention in patients with non-valvular atrial fibrillation who have a high thromboembolic risk and contraindications to long-term oral anticoagulation. Under transesophageal echocardiographic and fluoroscopic guidance via transseptal puncture, a dedicated self-expanding nitinol occlusion device (such as the Watchman or Amulet device) is deployed into the orifice of the left atrial appendage, mechanically sealing the source of over 90 percent of cardiac thrombi in non-valvular atrial fibrillation.

Alternate Names:

LAAO; Left Atrial Appendage Closure; Watchman Procedure

Left Atrial Myxoma

A usually benign primary cardiac tumor, commonly arising from the interatrial septum in the left atrium. It may obstruct mitral inflow or cause embolic and constitutional symptoms such as fever, weight loss, or fatigue.

Left Atrium

Receives oxygenated blood from 4 pulmonary veins. Most posterior chamber forming the cardiac base on chest radiography. Smooth walls from absorbed pulmonary veins; small auricle with pectinate muscles. Mitral valve separates it from the left ventricle.

Left Bundle Branch

A continuation of the bundle of His that divides into anterior and posterior fascicles. The anterior fascicle supplies the anterior and superior left ventricular wall; the posterior fascicle supplies the inferior and posterior wall.

Left Circumflex Coronary Artery

A coronary artery that curves around the left side and back of the heart.

Alternate Names:

Circumflex artery

Left Heart Catheterization

A medical procedure, device, or treatment involving

left heart catheterization. Its purpose, risks, and follow-up depend on the specific intervention and patient.

Left Heart Ventricular Angiography

An imaging study that injects contrast into the left ventricle to assess ventricular contraction, wall motion, ejection fraction, and selected structural abnormalities.

Left Hemiparesis, Gaze Deviated To The Right

A clinical finding indicating a right hemisphere lesion, likely a right middle cerebral artery stroke. Gaze deviation toward the right suggests the lesion is in the right frontal eye field, which normally drives gaze to the contralateral (left) side; when damaged, the intact left frontal eye field drives gaze ipsilaterally (to the right).

Left Hypochondriac Region

Upper left abdomen lateral to the epigastric region, containing the spleen, stomach fundus, splenic flexure, and pancreatic tail. Important for evaluating splenomegaly, gastric pathology, and splenic infarction. The spleen is normally not palpable below the costal margin; enlargement into this region is a significant finding.

Left Iliac Region

Lower left abdomen containing the descending colon, sigmoid colon, and left ureter. Important for evaluating diverticulosis and diverticulitis, most commonly affecting the sigmoid colon here. Palpation may reveal masses from inflammatory bowel disease or colorectal cancer.

Left Main Coronary Artery

The short vessel arising from the left aortic sinus and dividing principally into the left anterior descending and circumflex arteries. Significant left-main disease jeopardizes a large proportion of left-ventricular myocardium.

Left Testicular Torsion

Acute rotation of the left testis on its spermatic

cord, obstructing blood flow and causing ischemia. It is a urological emergency presenting with sudden severe left scrotal pain, nausea, vomiting, and a high-riding, horizontally oriented testis with absent cremasteric reflex.

Left Ventricle

Thickest cardiac chamber (13-15 mm), pumping oxygenated blood into the aorta for systemic distribution. Generates approximately 120 mmHg systolic pressure. Receives blood through the mitral valve; ejects through the aortic valve.

Left Ventricular Hypertrophy

Thickening of the muscular wall of the heart's left ventricle.

Left Ventricular Noncompaction

A rare cardiomyopathy characterized by prominent myocardial trabeculations with deep intertrabecular recesses, thought to result from arrested myocardial compaction during embryogenesis. It may present with heart failure, arrhythmias, or thromboembolism.

Left-Handed

Having a preference for using the left hand for skilled activities; handedness is a normal form of human variation.

Left-Sided Superior Vena Cava

A congenital venous anomaly where the left superior vena cava drains into the coronary sinus instead of the right atrium via the right SVC. It is the most common thoracic venous anomaly, present in 0.3–0.5% of the general population. Usually asymptomatic but relevant during central venous catheterization or cardiac surgery.

Left-Ventricular Assist Device

An implanted mechanical pump that helps the left ventricle circulate blood.

Leg

The lower limb, often meaning the region between

the knee and ankle, although it may also refer broadly to the entire lower extremity.

Leg CT Scan

Computed tomography of the leg using x-rays and computer reconstruction to evaluate bones, joints, soft tissues, blood vessels, tumors, infection, and trauma.

Leg Fracture

Alternate index label; see *Broken leg*.

Leg Lengthening And Shortening

Orthopedic procedures that gradually increase or decrease the length of a bone to correct limb-length discrepancy or deformity, usually using specialized fixation devices.

Leg MRI Scan

Magnetic resonance imaging of the leg using a magnetic field and radio waves to evaluate muscles, tendons, ligaments, nerves, marrow, joints, and soft-tissue masses.

Leg Or Foot Amputation

A medical procedure, device, or treatment involving leg or foot amputation. Its purpose, risks, and follow-up depend on the specific intervention and patient.

Leg Or Foot Amputation - Dressing Change

A medical procedure, device, or treatment involving leg or foot amputation - dressing change. Its purpose, risks, and follow-up depend on the specific intervention and patient.

Leg Pain

Pain in the lower limb caused by muscle or tendon injury, joint disease, nerve problems, vascular disease, infection, or other conditions.

Leg Pain With Cramping

Painful tightening or spasms in a leg muscle; causes include exertion, dehydration, medicines, nerve or

muscle disorders, and reduced arterial blood flow causing intermittent claudication.

Leg Swelling

Enlargement or puffiness of one or both legs caused by fluid retention, venous disease, injury, infection, inflammation, or a blood clot.

Leg Ulcer

An open sore on the leg that fails to heal normally, often caused by poor venous circulation, arterial disease, diabetes, pressure, or inflammation. Pain, spreading redness, fever, or black tissue requires prompt assessment.

Legg-Calvé-Perthes Disease

Idiopathic avascular necrosis of the femoral head in children, typically ages 4-8 years. More common in boys (4:1) and Caucasian children. Presents with limping (antalgic gait), hip/knee pain, and limited hip range of motion (especially abduction and internal rotation). Etiology: temporary disruption of blood supply to the femoral head.

Legg-Calvé-Perthes Disease

A childhood disorder caused by temporary loss of blood supply to the femoral head, resulting in avascular necrosis and hip pain or limp.

Legg-Calvé-Perthes Disease (Perthes Disease)

A childhood disorder in which the blood supply to the femoral head is temporarily impaired, causing avascular necrosis, hip pain, stiffness, and possible deformity.

Alternate Names:

Perthes Disease

Legg-Calvé-Perthes Disease

Idiopathic avascular necrosis of the femoral head in children, typically between ages two and twelve, resulting from disrupted blood supply to the capital femoral epiphysis. It presents with insidious onset of hip pain, limp, and restricted range of motion.

Legionella

Legionella is a group of water-associated bacteria that can cause Legionnaires' disease, a severe pneumonia, or Pontiac fever, a milder illness.

Legionella Longbeachae

Legionella longbeachae is a Legionella species associated particularly with exposure to contaminated potting mix and capable of causing pneumonia.

Legionella Pneumonia

From Legionella pneumophila in water systems. Presents with high fever, diarrhea, confusion, and hyponatremia. Diagnosis by urinary antigen test. Treatment is fluoroquinolones or macrolides.

Legionella Pneumonia (Legionnaire Disease And Pontiac Fever)

Alternate index label for Legionnaire Disease and Pontiac Fever.

Legionella Pneumophila

A gram-negative rod that causes Legionnaires' disease, a severe pneumonia, and Pontiac fever, a milder illness. The organism is found in aquatic environments and is transmitted through inhalation of contaminated water droplets. Risk factors include age, smoking, and immunosuppression.

Legionellosis

An infection caused by Legionella bacteria, ranging from a mild flu-like illness to Legionnaires' disease with pneumonia.

Legionnaire Disease And Pontiac Fever

Legionnaires disease is a severe pneumonia caused by Legionella, while Pontiac fever is a milder flu-like illness from the same bacteria. Exposure to contaminated water systems is typical; pneumonia, confusion, low oxygen, or high fever requires urgent treatment.

Alternate Names:

Legionella Pneumonia (Legionnaire Disease And Pontiac Fever) Legionnaires Disease (Legionnaire Disease And Pontiac Fever)

Legionnaires Disease

A severe pneumonia caused by Legionella bacteria, usually acquired by inhaling contaminated water aerosols. It may also cause gastrointestinal symptoms, confusion, and low serum sodium.

Legionnaires Disease (Legionnaire Disease And Pontiac Fever)

Alternate index label for Legionnaire Disease and Pontiac Fever.

Legionnaires' Disease

A severe form of pneumonia caused by Legionella pneumophila, a Gram-negative aerobic bacillus that is found naturally in freshwater environments (lakes, streams) and artificially in water systems (air conditioning cooling towers, hot tubs, decorative fountains, plumbing systems, showers, humidifiers).

Legs Restless (Restless Leg Syndrome)

Alternate index label for Restless Leg Syndrome.

Leifsonia

A genus of gram-positive bacteria found mainly in soil and plants; human infection is rare.

Leifsonia Aquatica

A water-associated gram-positive bacterium rarely isolated from human specimens and only occasionally linked to opportunistic infection.

Leigh Disease

A progressive mitochondrial disorder of early life characterized by symmetric lesions of the brainstem and basal ganglia, developmental regression, movement abnormalities, and lactic acidosis.

Leiomyoma

Uterine fibroid: a benign smooth muscle tumor of the uterus (estrogen/progesterone-sensitive), the most common pelvic tumor in women. Locations: subserosal, intramural, submucosal (most symptomatic).

Leiomyoma (Fibroid)

A benign tumor of uterine smooth muscle that may cause heavy menstrual bleeding, pelvic pressure, pain, or no symptoms.

Alternate Names:

Fibroid

Leiomyomatosis

Leiomyomatosis is development of multiple benign smooth-muscle tumors or proliferations, which may affect the uterus, skin, lungs, or other sites.

Leiomyomatosis Peritonealis Disseminata

A rare benign condition with multiple smooth-muscle nodules scattered over the peritoneum, often associated with pregnancy or hormonal stimulation and sometimes mimicking peritoneal carcinomatosis.

Leiomyosarcoma

A malignant tumor of smooth muscle, most often arising in the uterus, retroperitoneum, or gastrointestinal tract.

Leiomyosarcoma Of The Vulva

A rare malignant smooth-muscle tumor of the vulva, usually presenting as a solitary enlarging mass. Histologic atypia, mitotic activity, necrosis, and invasion help determine malignant behavior.

Leishmania

leishmania is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Leishmania Chagasi

leishmania chagasi is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Leishmania Donovanii

A protozoan parasite that causes visceral leishmaniasis (kala-azar), transmitted by the bite of infected

female phlebotomine sandflies. The organism exists as flagellated promastigotes in the sandfly gut and as non-flagellated amastigotes within human macrophages.

Leishmania Infection

A parasitic infection caused by *Leishmania* protozoa and transmitted by infected sandflies; it can cause cutaneous, mucocutaneous, or visceral leishmaniasis.

Leishmania Major

leishmania major is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Leishmania Mexicana

leishmania mexicana is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Leishmania Tropica

leishmania tropica is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Leishmaniasis

Leishmaniasis is infection by *Leishmania* parasites transmitted by sandflies, producing cutaneous, mucosal, or visceral disease depending on species and host response. of infected female phlebotomine sandflies. Visceral leishmaniasis (kala-azar): caused by *L. donovani*/*L. infantum* – fever, hepatosplenomegaly, pancytopenia, weight loss, hypergammaglobulinaemia; fatal if untreated.

Lelliottia Amnigena

A gram-negative environmental bacterium in the Enterobacterales group that can rarely cause opportunistic human infection.

Lemaitre'S Sign

Pain or discomfort in the urethra or penis during digital rectal examination, traditionally associated with posterior urethral or prostatic inflammation.

Lemierre Syndrome

A potentially severe oropharyngeal infection complicated by septic thrombophlebitis of the internal jugular vein and frequently metastatic infection, classically caused by *Fusobacterium necrophorum*.

Leminorella Grimontii

A rare gram-negative bacterium that may be isolated from clinical specimens and can occasionally cause opportunistic infection.

Leminorella Richardii

A rare gram-negative bacterium occasionally recovered from human clinical specimens.

Lenalidomide

Lenalidomide is an immunomodulatory anticancer drug used for multiple myeloma and selected myelodysplastic or lymphoma disorders; myelosuppression, thrombosis, infection, and severe teratogenicity are important risks.

Length-Time Bias

The tendency of screening to preferentially detect slower-growing or less aggressive disease because it remains detectable for a longer preclinical period. It can exaggerate the apparent benefit of screening.

Lengthening Of Limb

A surgical or orthopedic process that gradually increases the length of a bone, often using controlled distraction after osteotomy.

Lennox-Gastaut Syndrome

A severe childhood-onset developmental and epileptic encephalopathy with multiple seizure types, characteristic slow spike-and-wave EEG patterns, cognitive impairment, and often treatment-resistant seizures.

Lenograstim

A recombinant granulocyte colony-stimulating factor that increases neutrophil production and is used to prevent or treat some forms of neutropenia.

Lens

Transparent biconvex avascular structure behind the iris/pupil, suspended by zonular fibers from the ciliary body. Provides approximately one-third of refractive power and allows accommodation (focusing on near objects by changing shape). Concentric lens fiber layers from surface epithelium, surrounded by a capsule.

Lens Coloboma

A lens coloboma is a congenital segmental defect or notch in the eye lens caused by incomplete development.

Lens Disease

A disorder of the eye lens, including cataract, dislocation, inflammation-related opacity, or developmental abnormality, that may impair focusing or vision.

Lens Dislocation

Displacement of the crystalline lens from its normal position because of trauma, zonular weakness, surgery, or connective-tissue disease; it can cause blurred vision, glaucoma, or inflammation.

Lens Prescription

OD in an eyeglass prescription means the right eye, from the Latin *oculus dexter*.

Lens Prescription

OS in an eyeglass prescription means the left eye, from the Latin *oculus sinister*.

Lens Subluxation

Partial displacement of the crystalline lens while some zonular attachments remain, potentially causing blurred or fluctuating vision, refractive change, or glaucoma.

Lensometer

An instrument used to measure the prescription and optical properties of eyeglass lenses.

Alternate Names:

Lensmeter; focimeter

Lente Insulin

Lente insulin is an intermediate-acting insulin preparation formerly used to control blood glucose; availability varies and it can cause low blood sugar.

Lentiform Nucleus

The lentiform nucleus is a basal-ganglia structure composed of the putamen and globus pallidus and involved in motor control.

Lentigines, Solar

Alternate index label; see *Age spots (liver spots)*.

Lentigo

A lentigo is a sharply defined flat brown skin spot caused by increased melanocytes or pigment and may be benign or, rarely, atypical.

Lentigo Maligna

A melanoma in situ that occurs on chronically sun-damaged skin, most commonly on the face of elderly individuals. It presents as a large, irregularly pigmented, slow-growing macule with variegated shades of brown and black. The radial growth phase may persist for years before invasion occurs.

Lentigo Maligna Melanoma

An invasive melanoma arising in a lentigo maligna on chronically sun-damaged skin, usually of the head or neck; it presents as an enlarging irregular pigmented patch or plaque.

Lentinan

Lentinan is a beta-glucan from shiitake mushrooms studied as an immune modulator and adjunctive cancer treatment.

LEOPARD Syndrome

A rare genetic disorder, usually related to

pathogenic variants in PTPN11 or associated genes, characterized by lentigines, electrocardiographic conduction abnormalities, ocular hypertelorism, pulmonary-valve stenosis, abnormal genitalia, growth retardation, and deafness.

Leopold Maneuvers

A systematic abdominal palpation technique used to determine fetal position and presentation. Four maneuvers: (1) fundal grip identifies fetal lie (head vs breech), (2) umbilical grip locates the fetal back, (3) Pawlik grip identifies the presenting part and its position, (4) pelvic grip confirms presentation and attitude.

Lepidoptera

The insect order containing butterflies and moths; contact with some caterpillars can cause skin, eye, or systemic reactions.

Lepirudin

Lepirudin is a direct thrombin inhibitor formerly used as an anticoagulant in heparin-induced thrombocytopenia; bleeding and kidney clearance are important considerations.

Lepromatous Leprosy

The disseminated, multibacillary pole of the leprosy spectrum characterised by poor cell-mediated immunity to *Mycobacterium leprae*, resulting in widespread skin nodules, plaques, and diffuse infiltration with thickening of the skin and facial features (leonine facies).

Lepromin Skin Test

A delayed skin-reaction test using killed *Mycobacterium leprae* antigens; it helps classify leprosy and assess cell-mediated immunity but does not diagnose active infection.

Leprosy (Hansen Disease)

A chronic granulomatous infection caused by the obligate intracellular acid-fast bacilli *Mycobacterium leprae* and *Mycobacterium lepromatosis*, primarily targeting the skin, cooler peripheral nerves, upper respiratory mucosa, and anterior eye. Classi-

fied by the Ridley-Jopling system based on host cell-mediated Th1 immunity, ranging from tuberculoid leprosy (paucibacillary, robust Th1 immunity with solitary anesthetic hypopigmented plaques and palpable thickened nerves) to lepromatous leprosy (multibacillary, defective Th1 immunity with extensive foamy histiocytes, diffuse skin nodules, leonine facies, saddle-nose collapse, and symmetric peripheral sensorimotor glove-and-stocking neuropathy). Characterized by hypopigmented anesthetic skin macules and peripheral nerve enlargement. Diagnosed by slit-skin smear or full-thickness skin biopsy with Fite-Faraco staining; treated with WHO multidrug therapy (rifampicin, dapsone, and clofazimine) to prevent permanent deformities and blindness.

Leptin

A hormone produced mainly by adipose tissue that signals stored-energy status to the brain and influences appetite and energy balance.

Leptin Receptor

leptin receptor is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Leptomeningeal

Relating to the pia mater and arachnoid mater, the two thin inner layers covering the brain and spinal cord; cancer or infection can spread in these layers.

Leptomeningeal Metastasis

Spread of cancer to the leptomeninges and cerebrospinal fluid (carcinomatous meningitis), causing multifocal neurologic deficits; managed with intrathecal chemotherapy and involved-field radiation.

Leptomeningeal Sarcoma

Leptomeningeal sarcoma is a rare malignant tumor involving the membranes and fluid spaces around the brain or spinal cord.

Leptomeninges

The arachnoid mater and pia mater, the two delicate inner membranes covering the brain and spinal cord.

Leptomeningitis

Inflammation or infection of the leptomeninges, the arachnoid and pia mater covering the brain and spinal cord.

Leptospira

A genus of spiral-shaped bacteria that includes the causes of leptospirosis, usually acquired through water or soil contaminated with infected animal urine.

Leptospiraceae

A family of spiral-shaped bacteria that includes *Leptospira* and related organisms, many of which are associated with animals or the environment.

Leptospirosis

Leptospirosis is zoonotic infection with *Leptospira* bacteria acquired from water or soil contaminated by animal urine, ranging from fever and myalgia to kidney and liver failure. transmitted through contact with water or soil contaminated with the urine of infected animals (rodents, cattle, dogs). Incubation period 5-14 days. Mild form: fever, headache, myalgia (especially calves), conjunctival suffusion.

Alternate Names:

Weils Disease (Leptospirosis)

Leptotrichia

A genus of anaerobic gram-negative bacteria found in the mouth and genital tract that can rarely cause invasive infection.

Leriche Syndrome

Aortoiliac occlusive disease causing reduced blood flow to the pelvis and lower limbs. The classic presentation includes buttock or thigh claudication, diminished femoral pulses, and erectile dysfunction, although symptoms vary with the extent of collateral circulation.

Leridistim

Leridistim is an investigational hematopoietic growth factor designed to stimulate production of neutrophils and other blood cells.

Lerisetron

Lerisetron is an investigational serotonin 5-HT₃ receptor antagonist studied to prevent nausea and vomiting.

Lesch-Nyhan Syndrome

An inherited disorder of purine metabolism caused by severe HPRT enzyme deficiency, leading to high uric acid, neurologic problems, and characteristic self-injurious behavior.

Lesion

A general term for any abnormal change in tissue structure due to disease or injury.

Lesion Identification

A diagnostic or laboratory method related to lesion identification. Results are interpreted with the method, reference range, and clinical findings.

Lesions On The Brain (Brain Lesions (Lesions On The Brain))

Alternate index label for Brain Lesions (Lesions on the Brain).

Less Than

Less than indicates a value below a stated amount or threshold, such as a laboratory reference limit, dose, age, or measurement.

Lesser Curvature

Concave medial stomach border from gastroesophageal junction to pylorus. Attachment site for the lesser omentum connecting to the liver, containing right/left gastric arteries. Most common gastric ulcer site. The angular incisure marks the body-antrum junction. Cancer here may cause early obstruction from the narrow lumen.

Lesser Trochanter

Small conical posteromedial proximal femoral prominence. Insertion for iliopsoas (primary hip flexor). Isolated fractures in adults may indicate pathologic fracture from metastatic disease; in adolescents may result from iliopsoas avulsion. Visible on lateral hip radiographs.

Lestaurtinib

An investigational kinase-inhibitor medicine studied for leukemia and other cancers.

Let-Down Reflex

Release of milk from the breast when oxytocin causes contraction of myoepithelial cells around mammary alveoli.

Lethal

Sufficient to cause death; fatal or destructive to biological life. In pharmacology and toxicology, quantified by parameters such as the median lethal dose (LD₅₀), the dose of a substance that proves fatal to 50% of an animal test population. In medical genetics, lethal mutations denote genetic variations that result in non-viability of the embryo, intrauterine fetal demise, or death in early neonatal life (e.g., homozygous achondroplasia, thanatophoric dysplasia).

Lethal Injection

A medical procedure, treatment, device, or care topic related to lethal injection; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Lethal-Means Counseling

A preventive intervention that reduces access to firearms, medications, toxic substances, or other methods of self-harm during periods of elevated risk. It is conducted collaboratively and is an important component of suicide prevention.

Lethargy

Lethargy is reduced energy, alertness, or responsiveness; it may result from sleep loss, infection, metabolic disease, medicines, depression, or neuro-

logic illness, and sudden marked lethargy requires urgent assessment.

Letrozole

Letrozole is an aromatase inhibitor that lowers oestrogen production and is used mainly for hormone-receptor-positive breast cancer and ovulation induction; hot flushes, arthralgia, bone loss, and fetal harm are important considerations.

Leu

The standard amino-acid abbreviation for leucine, an essential branched-chain amino acid used in protein synthesis.

Leucine

An essential branched-chain amino acid needed for protein synthesis, muscle metabolism, and regulation of cellular growth pathways.

Leucine Aminopeptidase - Urine

A biochemical laboratory test related to leucine aminopeptidase - urine. Results are interpreted with the specimen, method, reference range, and clinical findings.

Leucine Zipper

A protein-structure motif containing leucines at regular intervals that helps two protein chains bind together.

Leucocyte

Another spelling of leukocyte, meaning a white blood cell. Leukocytes help defend against infection and other threats; major groups include neutrophils, lymphocytes, monocytes, eosinophils, and basophils.

Leucocyte (White Blood Cell)

A blood cell involved in immune defense against infection, foreign substances, and abnormal cells.

Alternate Names:

White Blood Cell

Leucocytosis

An abnormally increased number of white blood

cells in the blood.

Leucoderma

Loss or marked reduction of skin pigmentation, often used as a descriptive term for depigmented patches.

Leucoderma (Vitiligo)

Loss of skin pigment producing sharply defined pale or white patches, usually because melanocytes have been destroyed or have stopped functioning.

Alternate Names:

Vitiligo

Leucomalacia

Softening of tissue caused by injury, classically white-matter injury in periventricular leukomalacia.

Leuconostoc

A biomedical term referring to leuconostoc; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Leuconostoc Citreum

A biomedical term referring to leuconostoc citreum; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Leuconostoc Lactis

A biomedical term referring to leuconostoc lactis; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Leuconostoc Mesenteroides

A biomedical term referring to leuconostoc mesenteroides; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Leuconostocaceae

Leuconostocaceae is a family of lactic-acid-producing bacteria found in plants, fermented foods, and occasionally clinical specimens.

Leucopenia

A decreased total white blood cell count below the normal reference range ($< 4.0 \times 10^9/\text{L}$). Leucopenia is often due to a decrease in neutrophils (neutropenia) or lymphocytes (lymphopenia).

Leucoplakia

A persistent white mucosal patch that cannot be scraped off and may require assessment for dysplasia or cancer risk.

Leucopoiesis

The production and maturation of white blood cells, mainly in the bone marrow. It is regulated by growth factors and increases or changes during infection, inflammation, and some blood disorders.

Leucorrhoea (Leukorrhoea)

A whitish vaginal discharge that may be physiological or may result from infection, inflammation, or another genital disorder.

Alternate Names:

Leukorrhoea

Leucovorin

Leucovorin is a folate medicine used to reduce the toxicity of methotrexate, enhance some chemotherapy regimens, and treat certain folate-related problems.

Leucovorin Calcium

Leucovorin calcium is the calcium salt of leucovorin, used as rescue therapy after methotrexate and in selected colorectal-cancer treatments.

Leukaemia

Cancer of blood-forming tissues in which abnormal leukocytes proliferate and disrupt normal marrow function.

Leukapheresis

A medical procedure, treatment, device, or care topic related to leukapheresis; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Leukemia

Leukemia is cancer of blood-forming cells that disrupts normal marrow production and may cause anemia, infection, bleeding, abnormal blood counts, and organ infiltration. Leukemias are classified by the cell lineage and by clinical course, including acute and chronic forms.

Alternate Names:

Blood Cancer (Leukemia) Leukemia, General

Leukemia Cutis

Infiltration of the skin by leukemic cells, presenting as papules, nodules, or plaques. It is more common in acute myeloid leukemia and indicates a poorer prognosis.

Leukemia Genetics

Genetic and chromosome changes help classify leukemia, estimate prognosis, and select treatment. Examples include BCR::ABL1 in chronic myeloid leukemia and some acute lymphoblastic leukemia, ETV6::RUNX1 or hyperdiploidy in some childhood ALL, and RUNX1::RUNX1T1, CBFB::MYH11, PML::RARA, or FLT3 changes in selected AML. Results must be interpreted by a hematology team because findings and treatment implications vary by disease and patient.

Leukemia, Acute Lymphocytic

Alternate index label; see *Acute lymphocytic leukemia*.

Leukemia, Acute Myelogenous

Alternate index label; see *Acute myelogenous leukemia*.

Leukemia, Chronic Lymphocytic

Alternate index label; see *Chronic lymphocytic leukemia*.

Leukemia, Chronic Myelogenous

Alternate index label; see *Chronic myelogenous leukemia*.

Leukemia, General

Alternate index label; see *Leukemia*.

Leukemia, Hairy Cell

Alternate index label; see *Hairy cell leukemia*.

Leukemic Infiltration Of The Gingiva

Gingival enlargement caused by infiltration of leukemic cells, most commonly in acute myeloid leukemia, particularly the monocytic subtype. The gingiva becomes swollen, erythematous, friable, and may bleed spontaneously. It results from leukemic cell proliferation within the gingival connective tissue.

Leukemoid Reaction

A marked reactive increase in the white-cell count, usually with prominent neutrophilia and immature granulocytes, caused by severe infection, inflammation, malignancy, or tissue injury. It resembles leukemia but is not a clonal hematologic malignancy.

Leukoaraiosis

Leukoaraiosis describes white-matter changes seen on brain imaging, commonly associated with small-vessel disease, aging, hypertension, and vascular risk.

Leukocyte

White blood cell; component of the immune system responsible for fighting infection and disease. Types include neutrophils, lymphocytes, monocytes, eosinophils, and basophils. Its significance is established from its characteristic features, causes, and clinical context.

Leukocyte Adhesion Deficiency

LAD-I (ITGB2 mutation, CD18 deficiency): absent CD11/CD18 integrins -> impaired neutrophil adhesion/transmigration -> delayed umbilical cord separation (>30 days), recurrent soft tissue infections without pus formation (leukocytosis >20,000), poor wound healing, periodontitis. Severe: death by age 2 without HSCT.

Leukocyte Alkaline Phosphatase

An enzyme activity measured in mature neutrophils using a cytochemical stain, historically reported as a leukocyte alkaline phosphatase (LAP) score. The score is typically low in chronic myeloid leukaemia and increased in many leukemoid reactions, infections, pregnancy, and other reactive states.

Leukocyte Differentiation

Leukocyte differentiation is the process by which immature white blood cells develop into specialized immune-cell types.

Leukocyte Disorder

A disorder involving the number, function, or development of white blood cells, including leukopenia, leukocytosis, immune deficiency, and malignant leukocyte proliferation.

Leukocyte Elastase

Leukocyte elastase is a proteolytic enzyme released mainly by neutrophils that can destroy microbes but also injure tissue during excessive inflammation.

Leukocyte Esterase Urine Test

A urine dipstick test detecting leukocyte esterase released by white blood cells; a positive result supports pyuria but does not by itself diagnose urinary tract infection.

Leukocyte Trafficking

Leukocyte trafficking is movement of white blood cells through blood and tissues, directed by adhesion molecules and chemical signals during immune surveillance or inflammation.

Leukocyte Transfusion

A medical procedure, treatment, device, or care topic related to leukocyte transfusion; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Leukocytes

White blood cells that help defend the body against infection and other threats.

Leukocytoclastic Vasculitis

A histopathologic pattern of small-vessel vasculitis characterized by neutrophilic debris, fibrinoid change, and vessel-wall inflammation. Clinically it often presents with palpable purpura; causes may be cutaneous-limited or associated with systemic disease.

Leukocytosis

An increased total white blood cell count above the normal reference range ($> 11 \times 10^9/\text{L}$ in adults).

Leukodystrophy

A group of inherited disorders affecting the formation or maintenance of central-nervous-system myelin, causing progressive neurologic impairment.

Leukoencephalopathy

Leukoencephalopathy is disease of the brain's white matter caused by inherited, infectious, toxic, vascular, metabolic, inflammatory, or other processes.

Leukonychia

White discoloration of the nails. True leukonychia: involves the nail matrix and moves distally with nail growth (punctate, striate/Mees lines from arsenic poisoning, or total).

Leukonychia Striata

Longitudinal white bands running along the nail plate, usually caused by changes in the nail matrix. They may be inherited or follow repeated minor trauma, skin disease, or some medicines; persistent or widespread changes should be medically assessed.

Leukonychia Totalis

Uniform white discoloration involving most or all of one or more nail plates. It is often inherited but can occasionally be associated with illness or medication; persistent changes affecting many nails should be evaluated with the medical history and other findings.

Leukopenia

An abnormally low white-blood-cell count, which

may increase susceptibility to infection depending on the cells affected and the severity of the reduction.

Leukoplakia

Leukoplakia is a persistent white patch on mucosa that cannot be scraped away and may reflect irritation, infection, or premalignant epithelial change requiring evaluation. and cannot be characterized clinically as any other definable lesion (WHO). Leukoplakia is a potentially malignant disorder of the oral cavity, with a risk of malignant transformation to squamous cell carcinoma of approximately 1-5% per year.

Alternate Names:

Smokers Keratosis (Leukoplakia)

Leukopoiesis

The production and development of white blood cells (leukocytes) from hematopoietic stem cells in the bone marrow, regulated by colony-stimulating factors and interleukins.

Leukorrhea

A whitish vaginal discharge that may be normal or may indicate infection or another disorder.

Leukostasis

A medical emergency in which very high numbers of abnormal leukocytes impair microvascular blood flow, potentially causing respiratory distress, neurologic symptoms, organ ischemia, or hemorrhage.

Leukotomy

A neurosurgical procedure involving the cutting of white matter fibers in the prefrontal cortex, also known as frontal lobotomy or prefrontal leukotomy. Developed by Egas Moniz (Nobel Prize 1949) and Walter Freeman.

Alternate Names:

frontal lobotomy or prefrontal leukotomy.

Leukotriene

A leukotriene is an inflammatory lipid mediator made from arachidonic acid that contributes to bronchoconstriction, mucus, vascular leak, and immune-

cell recruitment.

Leukotriene Blockers

Medicines that reduce leukotriene effects and help prevent asthma or allergy symptoms.

Alternate Names:

Leukotriene antagonists

Leukotriene Degradation

Leukotriene degradation is the breakdown and removal of leukotrienes, inflammatory lipid mediators involved in airway and immune responses.

Leukotriene Modifiers

Medicines that reduce asthma or allergy symptoms by blocking leukotriene production or action.

Leukotriene Receptor

leukotriene receptor is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Leukotrienes

Inflammatory signaling molecules that can narrow and swell airways during allergic reactions.

Leuprolide

Leuprolide is a gonadotropin-releasing hormone agonist used to suppress sex-hormone production in conditions such as prostate cancer, endometriosis, and fibroids.

Leuprolide Acetate

Leuprolide acetate is the salt form of leuprolide, used to suppress ovarian or testicular hormone production for selected medical conditions.

Levalbuterol

Levalbuterol is an inhaled short-acting beta-2 agonist that relaxes airway smooth muscle and relieves bronchospasm.

Levamisole

Levamisole is an antiparasitic and immune-modulating drug used selectively; serious low white-cell counts and vasculitic reactions can occur.

Levator Ani

The primary pelvic floor muscle complex supporting the pelvic organs, forming a hammock from the pubic symphysis to the coccyx. Composed of the pubococcygeus, puborectalis, and iliococcygeus muscles. Innervated by the pudendal nerve (S2-S4).

Levetiracetam

Levetiracetam is a broad-spectrum antiseizure medicine that binds synaptic vesicle protein SV2A; it treats focal and generalized seizures and may cause somnolence, dizziness, or behavioral and mood changes.

Levobunolol

Levobunolol is a beta-blocker eye drop used to lower pressure inside the eye in glaucoma or ocular hypertension.

Levocardia

Levocardia is a normal left-sided position of the heart; it may occur with normal organ arrangement or with other congenital laterality abnormalities.

Levocarnitine

Levocarnitine is the biologically active form of carnitine used to treat selected carnitine deficiencies and help transport fatty acids into mitochondria.

Levodopa

Levodopa is a dopamine precursor that crosses the blood-brain barrier and is converted to dopamine, usually with carbidopa or benserazide, to treat Parkinson disease; dyskinesias, hallucinations, nausea, and motor fluctuations can develop.

Levofloxacin

Levofloxacin is a fluoroquinolone antibiotic that inhibits bacterial DNA gyrase and topoisomerase IV; tendon injury, peripheral neuropathy, QT prolongation

gation, dysglycaemia, and central-nervous-system effects are important class risks.

Levoleucovorin

Levoleucovorin is the active isomer of leucovorin, used as methotrexate rescue and with selected chemotherapy regimens.

Levoleucovorin Calcium

Levoleucovorin calcium is the calcium salt of levoleucovorin, used to reduce methotrexate toxicity and support selected cancer treatments.

Levomepromazine

A phenothiazine medicine with antipsychotic, sedative, antiemetic, and analgesic properties, used in selected palliative-care and psychiatric settings.

Levonorgestrel

Levonorgestrel is a progestin used in contraceptive pills, hormonal intrauterine devices, and emergency contraception.

Levorphanol

Levorphanol is a potent opioid analgesic that can relieve severe pain but also cause sedation, dependence, and respiratory depression.

Levothyroxine

A synthetic form of thyroxine (T4) used as thyroid hormone replacement in hypothyroidism and in selected other thyroid conditions; dose is individualized and monitored with laboratory tests.

Levothyroxine Sodium

The sodium salt of synthetic thyroxine used to replace deficient thyroid hormone.

Alternate Names:

Levothyroxine

Levulose

An older name for fructose, a simple sugar found in fruit, honey, and many sweeteners.

Lewy Body

A Lewy body is an abnormal neuronal inclusion containing alpha-synuclein, characteristic of Parkinson disease and Lewy-body dementia.

Lewy Body Dementia

A progressive brain disorder caused by abnormal alpha-synuclein protein deposits called Lewy bodies. It causes dementia with changing attention or alertness, recurrent visual hallucinations, Parkinson-like movement problems, sleep disorders such as acting out dreams, and sometimes automatic body-function problems such as constipation or dizziness on standing. Some people are very sensitive to antipsychotic medicines, so treatment must be individualized.

Alternate Names:

Dementia, Lewy Body

Lewy Body Disease

A neurodegenerative disorder associated with abnormal neuronal alpha-synuclein aggregates. Dementia with Lewy bodies commonly features fluctuating cognition, recurrent visual hallucinations, REM sleep behavior disorder, and spontaneous parkinsonism; sensitivity to antipsychotics may occur.

Lexatumumab

Lexatumumab is an investigational monoclonal antibody that targets TRAIL receptor 2 and has been studied as an anticancer treatment.

Leydig Cell

Leydig cell refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Leydig Cell Testicular Tumor

A usually rare sex-cord stromal tumor arising from testosterone-producing Leydig cells in the testis; it may cause a testicular mass or hormone-related signs.

Leydig Cell Tumor

A testicular sex cord-stromal tumor that secretes testosterone or estrogen, causing precocious puberty or gynecomastia; most are benign and treated by orchidectomy.

Leydig Cells

Testicular interstitial cells that produce testosterone in response to luteinizing hormone.

Lfgren Syndrome

Acute sarcoidosis with bilateral hilar lymphadenopathy, erythema nodosum, and ankle polyarthralgia. It often resolves spontaneously and generally has a favorable prognosis, although follow-up is needed. Associated with HLA-DR3.

LGE

Alternate name; see *Late Gadolinium Enhancement*.

LH

Luteinizing hormone, a pituitary hormone involved in ovulation and testosterone production.

Alternate Names:

Luteinizing hormone

LH Response To GnRH Blood Test

A dynamic endocrine test measuring luteinizing hormone before and after administration of gonadotropin-releasing hormone to assess hypothalamic-pituitary-gonadal function and some pubertal disorders.

Libman-Sacks Endocarditis

A form of nonbacterial verrucous endocarditis characterized by sterile, small platelet-fibrin vegetations deposited on cardiac valve leaflets and mural endocardium. It is strongly associated with systemic lupus erythematosus and antiphospholipid syndrome, frequently involving the ventricular surfaces of the mitral and aortic valves.

Alternate Names:

Verrucous endocarditis; Nonbacterial verrucous endocarditis

Li-Fraumeni Syndrome

An inherited cancer-predisposition syndrome most often caused by a pathogenic TP53 variant. It confers high lifetime risks of sarcomas, breast cancer, brain tumors, adrenocortical carcinoma, leukemia, and other early-onset malignancies.

LI-RADS

Liver Imaging-Reporting and Data System. Standardizes reporting of liver imaging in patients with cirrhosis. Used for hepatocellular carcinoma diagnosis.

Liarozole

Liarozole is an investigational medicine that inhibits retinoic-acid metabolism and has been studied for disorders of keratinization and cancer.

Libido

Sexual desire or drive, influenced by biological, psychological, and social factors.

Libido And Sexual Performance

Libido (sexual desire) is modulated by a complex interplay of hormonal (testosterone, estrogen, prolactin), neurologic, psychological, and relational factors.

Lice

Pediculosis: infestation by blood-sucking lice—head lice (*Pediculus humanus capitis*, common in children, scalp), body lice (*Pediculus humanus corporis*, clothing/seams, associated with poor hygiene and epidemic typhus transmission), and pubic/crab lice (*Phthirus pubis*, sexually transmitted).

Lice Infestation

A biomedical term referring to lice infestation; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Lice Infestations

Pediculosis is infestation by head, body, or pubic lice. Head lice cause scalp pruritus and nits attached to

hair shafts; body lice live mainly in clothing; pubic lice affect coarse hair-bearing regions.

Lice, Body

Alternate index label; see *Body lice*.

Licensed Clinical Social Worker

A social worker licensed to provide clinical assessment and psychotherapy or other mental-health services within the scope of local law and training.

Lichen

A descriptive dermatological term referring to a flat-topped, firm, papular skin lesion resembling the lichen plant (a symbiotic organism of algae and fungi growing on rocks and trees). Lichenoid describes lesions that resemble lichen planus or lichenoid drug eruptions.

Lichen Planopilaris

A lymphocytic inflammatory scalp disorder that attacks hair follicles and can cause scarring alopecia, perifollicular scale, redness, and permanent hair loss.

Lichen Planus

A T-cell mediated inflammatory condition affecting skin, mucous membranes, nails, and hair. Classic presentation: the 6 Ps (pruritic, purple, polygonal, planar, papules, plaques), often with Wickham striae (white lacy network on surface). Oral lichen planus affects buccal mucosa and may be erosive.

Alternate Names:

Lichen Ruber Planus (Lichen Planus)

Lichen Planus, Oral

Alternate index label; see *Oral lichen planus*.

Lichen Ruber Planus (Lichen Planus)

Alternate index label for Lichen Planus.

Lichen Sclerosus

A chronic inflammatory skin disease most commonly affecting anogenital skin. It presents as ivory-white, atrophic plaques with wrinkled paper-like appearance. In women, it predominantly affects the vulva

and perianal region (figure-eight distribution). In men, it affects the glans penis and foreskin (balanitis xerotica obliterans).

Alternate Names:

White Spot Disease

Lichen Simplex Chronicus

A thickened, leathery plaque caused by chronic scratching and rubbing (itch-scratch cycle). It commonly affects the neck, ankles, lower legs, and genital area. It is a form of neurodermatitis associated with stress and anxiety.

Lichenification

Thickening and accentuation of skin markings caused by chronic scratching or rubbing.

Lichenified

Lichenified skin is thickened and leathery from chronic rubbing or scratching, commonly occurring in longstanding eczema or itch disorders.

Lichenoid Drug Eruption

A lichenoid inflammatory skin reaction caused by a medicine, often resembling lichen planus but with a broader distribution or different clinical and histologic features; improvement may follow withdrawal of the culprit drug.

Liddle Syndrome

Autosomal dominant condition caused by gain-of-function mutations in the ENaC sodium channel subunits leading to constitutive sodium reabsorption and potassium secretion in the collecting duct. Presents with severe hypertension, hypokalemia, and metabolic alkalosis occurring in childhood or young adulthood.

Liddle Syndrome Treatment

Liddle syndrome is an autosomal dominant cause of early-onset hypertension with hypokalemia and metabolic alkalosis caused by gain-of-function mutations in ENaC sodium channel subunits. Aldosterone levels are suppressed.

Lidocaine

Lidocaine is a local anaesthetic that blocks voltage-gated sodium channels and, intravenously, can treat selected ventricular arrhythmias; excessive exposure may cause seizures, hypotension, arrhythmia, or cardiac arrest.

Lieberkühn's Crypts

Tubular intestinal glands between the villi that contain absorptive, secretory, and stem cells.

Life Expectancy

The average number of additional years a person of a specified age is expected to live under current mortality conditions.

Lifestyle Disease

A noncommunicable disease influenced by behaviors and living conditions, such as tobacco use, diet, inactivity, or alcohol; genetics, environment, and access to care also contribute.

Lifetime Risk

The probability that a person will develop a specified disease or experience an outcome during the remainder of their life or over a defined lifetime period.

Lifting And Bending The Right Way

Safe lifting and bending use planning, a stable base, load close to the body, hip and knee movement, and assistance for heavy or awkward objects.

Ligament

A dense, fibrous connective tissue band that connects bone to bone, providing passive joint stability and guiding joint motion. Ligaments are composed predominantly of type I collagen fibers (parallel orientation, crimped pattern) and elastin fibers (10-20% in some ligaments), arranged in bundles.

Ligand

Any molecule that binds specifically to a biological receptor, macromolecule, or active site. In pharmacology and physiology, ligands include hormones,

neurotransmitters, drugs, and toxins that bind receptors to initiate (agonist), block (antagonist), or modulate signaling.

Ligase

A ligase is an enzyme that joins two molecules, often using energy from ATP or another high-energy compound.

Ligation

The surgical process of tying off a blood vessel or duct using a suture or clip to prevent bleeding or block fluid flow.

Ligation (Vascular)

Surgical tying, clipping, or sealing of a blood vessel to stop or redirect blood flow.

Alternate Names:

Vascular

Ligature

Any cord, wire, rope, fabric, or flexible object used to constrict the neck, bind limbs, suspend the body, or inflict injury. The resulting pale groove-shaped abrasion may be horizontal with petechiae in homicidal strangulation, or oblique and upward in hanging.

Light

Visible electromagnetic radiation; in medicine it is used for examination, phototherapy, imaging, and selected treatments.

Light Coagulation

Light coagulation uses intense focused light, usually a laser, to heat and seal tissue or blood vessels.

Light Cycle

A light cycle is the recurring pattern of light and darkness that helps regulate circadian rhythms and biological activity.

Light Microscope

light microscope is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results

must be interpreted with the method and reference range.

Light Microscopy

light microscopy is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results must be interpreted with the method and reference range.

Light Reflex

Constriction of the pupil in response to light, mediated by the retinal, optic, midbrain, and oculomotor pathways.

Light Scattering

light scattering is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results must be interpreted with the method and reference range.

Light Therapy

Treatment that uses selected wavelengths or intensity of light for conditions such as some skin disorders, seasonal depression, or neonatal jaundice.

Light'S Criteria

An effusion is exudative if any one is met: pleural protein/serum protein > 0.5 , pleural LDH/serum LDH > 0.6 , or pleural LDH $> 2/3$ upper limit of normal serum LDH.

Light-Near Dissociation

A pupillary abnormality in which the pupil does not constrict to light but does constrict during accommodation (near response). Classically seen in Argyll Robertson pupils (neurosyphilis) and also in midbrain lesions, diabetes mellitus, and optic nerve disease. Differentiates from tonic pupil (Adie pupil) by preserved near response.

Lightening

In late pregnancy, descent of the fetus into the pelvis before labor, which may reduce upper-abdominal

pressure but increase pelvic pressure and urinary frequency.

Lighter Fluid Poisoning

Lighter fluid poisoning involves toxic or environmental exposure to lighter fluid poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Lightheadedness

A feeling of near-fainting, floating, or unsteadiness without necessarily perceiving that the surroundings are spinning; causes include dehydration, low blood pressure, anemia, medications, and heart or neurologic conditions.

Lightning Pains

Brief, stabbing, electric-shock-like pains, classically occurring in tabes dorsalis or other nerve disorders.

Lignan

A lignan is a plant compound found in foods such as seeds and whole grains; some lignans can be converted by gut bacteria into hormone-like compounds.

Lignans

Plant compounds found in seeds, grains, fruits, and vegetables that have antioxidant activity.

Lignin

Lignin is a tough plant polymer that strengthens cell walls and contributes to dietary fiber.

Lignocaine

The international nonproprietary name for lidocaine, a local anesthetic and antiarrhythmic drug.

Lignoceric Acid

lignoceric acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Likelihood Ratio

A ratio that describes how much a test result

changes the odds of disease. The positive likelihood ratio is sensitivity divided by one minus specificity; the negative likelihood ratio is one minus sensitivity divided by specificity.

Lilliputian Hallucination

A visual hallucination of unusually small people, animals, or objects; it can occur with neurologic, psychiatric, toxic, infectious, or sensory conditions.

Lily Of The Valley Poisoning

Lily of the valley poisoning involves toxic or environmental exposure to lily of the valley poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Limb

A limb is an arm or leg and its associated bones, joints, muscles, nerves, vessels, and soft tissues.

Limb Bud

A limb bud is an embryonic outgrowth that develops into an arm or leg through coordinated signaling, growth, and tissue differentiation.

Limb Development

Limb development is embryonic formation and growth of the bones, joints, muscles, nerves, vessels, and skin of the arms and legs.

Limb Reduction Defects

Birth defects in which part or all of an arm or leg does not form normally. The missing or shortened part may involve a bone, joint, hand, foot, or the whole limb.

Limb Fracture

A break in a bone of an upper or lower limb, assessed according to location, displacement, open or closed status, joint involvement, and associated neurovascular injury.

Limb Girdle

A limb girdle is the skeletal connection of a limb to the trunk, such as the shoulder or pelvic girdle.

Limb Injury

Trauma affecting an arm or leg, including injury to bone, joint, muscle, tendon, ligament, nerve, blood vessel, or skin.

Limb Pain

Pain arising from an arm or leg, with causes including trauma, nerve disease, vascular insufficiency, infection, inflammation, and musculoskeletal disorders.

Limb Plethysmography

A noninvasive test measuring changes in limb volume or blood flow, used to evaluate arterial or venous obstruction and sometimes to assess vascular responses.

Limb Prosthesis

A limb prosthesis is an artificial device replacing part or all of an arm or leg to restore mobility, function, appearance, or independence.

Limb-Girdle Muscular Dystrophies

Limb-girdle muscular dystrophies are inherited muscle diseases causing progressive weakness predominantly around the hips and shoulders, with variable cardiac and respiratory involvement.

Limbic Encephalitis

Inflammation of the limbic system, often presenting subacutely with memory impairment, seizures, psychiatric or behavioral change, and sleep disturbance. It may be autoimmune, paraneoplastic, infectious, or of unknown cause.

Limbic Lobe

A curved group of cortical structures on the medial cerebral hemisphere involved in emotion, memory, and motivation.

Limbic System

A set of interconnected brain structures located in the medial temporal lobe and around the corpus callosum, involved in emotion, memory, motivation, behaviour, and autonomic regulation. The term was

coined by Paul Broca (1878, le grand lobe limbique) and expanded by Papez (1937, Papez circuit) and MacLean (1952, 'visceral brain').

Limbs

The arms and legs, including their bones, joints, muscles, nerves, and blood vessels.

Limbus

The border where the cornea meets the white outer coat of the eye.

Alternate Names:

Corneoscleral limbus

Limbus Corneae

The corneal limbus is the circular border where the transparent cornea meets the white sclera and conjunctiva, containing stem cells important for corneal repair.

Limited Range Of Motion

Limited range of motion is reduced ability to move a joint through its normal extent because of pain, stiffness, weakness, swelling, or structural change.

Linagliptin

Linagliptin is a DPP-4 inhibitor used with diet and exercise to improve blood glucose control in type 2 diabetes.

Lincomycin

Lincomycin is a lincosamide antibiotic used for selected serious bacterial infections; it can cause antibiotic-associated diarrhea and colitis.

Lindane

Lindane is an organochlorine insecticide formerly used for lice or scabies; neurotoxicity and environmental persistence limit its use.

Line, Central

A catheter whose tip lies in a large central vein, used to deliver medicines or fluids, monitor central venous pressure, draw blood, or provide specialized nutrition.

Line, Central Venous

A central venous catheter inserted into a large vein such as the internal jugular, subclavian, or femoral vein and advanced toward the superior or inferior vena cava.

Linea

A line or linear anatomical marking, often used in names such as linea alba or linea nigra.

Linea Aspera

Prominent longitudinal posterior femoral shaft ridge from converging muscle attachment lines. Insertion for adductor magnus, vastus medialis/lateralis, and short head of biceps femoris. Thickest femoral cortex, resisting bending forces. Diverges distally into supracondylar lines.

Linea Nigra

A dark brown or black vertical line appearing on the abdomen during pregnancy, extending from the pubic symphysis to the umbilicus or beyond. Caused by hormonal stimulation of melanocytes, resulting in hyperpigmentation. More prominent in darker-skinned women.

Linear

Arranged in a straight or nearly straight line, describing the shape or distribution of a skin lesion or eruption.

Linear Accelerator

A device that accelerates electrons to produce high-energy X-rays or electron beams for radiotherapy.

Linear Energy Transfer

Energy deposited per unit path length. High LET (alpha, neutrons) more biologically effective.

Linear Fracture

A narrow crack in a bone without significant displacement or fragmentation.

Linear IgA Bullous Dermatitis

An autoimmune blistering disease caused by linear

deposition of IgA at the basement membrane zone. It produces tense blisters, sometimes in annular or "string of pearls" patterns, and may be idiopathic or drug-induced.

Lined Canister

A medical procedure, device, or treatment involving lined canister. Its purpose, risks, and follow-up depend on the specific intervention and patient.

Linezolid

Linezolid is an oxazolidinone antibiotic that blocks formation of the bacterial 70S initiation complex and treats resistant Gram-positive infections; thrombocytopenia, neuropathy, lactic acidosis, and serotonin interactions require caution.

Lingua

The anatomical Latin term for the tongue, the versatile muscular organ situated on the floor of the oral cavity. Essential for mastication, oral bolus formation, deglutition, phonetic sound articulation, and gustatory taste sensation. Divided into an anterior two-thirds (oral body) and posterior third (pharyngeal base) by the V-shaped sulcus terminalis. Clinical derivatives include sublingual administration (rapid systemic absorption through the rich sublingual venous plexus, bypassing hepatic first-pass metabolism, as with sublingual nitroglycerin) and lingual tonsils (lymphoid tissue aggregations at the tongue base contributing to Waldeyer's ring).

Lingua Villosa Nigra

A benign condition characterized by elongation and dark pigmentation of the filiform papillae of the tongue, often associated with tobacco use, poor oral hygiene, or antimicrobial therapy.

Lingual

Relating to the tongue, including its muscles, nerves, blood supply, or surface.

Lingual Artery

A branch of the external carotid artery supplying the tongue, floor of mouth, and sublingual structures. It arises anterior to the hypoglossal nerve

and courses deep to the hyoglossus muscle. Lingual artery aneurysm or thrombosis is rare but can cause life-threatening hemorrhage or tongue ischemia.

Lingual Thyroid

A lingual thyroid is thyroid tissue at the base of the tongue caused by failure of normal thyroid descent and may obstruct swallowing or breathing or cause hypothyroidism.

Lingual Tonsil

The lingual tonsil is lymphoid tissue at the base of the tongue that contributes to immune surveillance of the throat.

Lingual Tonsils

Collections of lymphoid tissue at the base of the tongue.

Liniment

A medical procedure, device, or treatment involving liniment. Its purpose, risks, and follow-up depend on the specific intervention and patient.

Linitis Plastica

A diffuse infiltrative form of gastric carcinoma in which tumour cells spread through the stomach wall, producing marked thickening and rigidity with loss of normal distensibility. It may cause early satiety, weight loss, nausea, vomiting, or vague upper-abdominal symptoms.

Linkage

Co-inheritance of nearby genetic markers and disease gene. Measured by recombination fraction (θ). LOD score >3 indicates linkage.

Linkage Analysis

A genetic method that studies whether a disease trait and a genetic marker are inherited together, helping locate disease-associated regions in a family or population.

Linkage Disequilibrium

Linkage disequilibrium is the nonrandom associa-

tion of genetic variants at different locations in a population.

Linkage Map

A genetic map showing the relative positions of genes or markers based on recombination frequency, usually expressed in centimorgans rather than physical distance.

Linoleic Acid

linoleic acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Linolenic Acid

linolenic acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Linsitinib

Linsitinib is an investigational drug that blocks insulin-like growth factor receptors and has been studied in cancer.

Lintuzumab

Lintuzumab is an investigational monoclonal antibody targeting CD33 on myeloid cells, studied mainly for acute myeloid leukemia.

Liothyronine Sodium

A synthetic form of the thyroid hormone triiodothyronine used in selected thyroid disorders.

Lip

The lips are mobile folds of skin and mucosa containing muscle, blood vessels, and sensory nerves; they form the oral seal and assist speech, facial expression, feeding, and swallowing.

Lip Cancer

Cancer that develops in the tissues of the upper or lower lip.

Lip Disease

A disorder of the lips, such as infection, inflam-

mation, ulceration, trauma, pigmentation change, benign tumor, or malignancy.

Lip Infection

An infectious process or toxic exposure involving lip infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Lip Moisturizer Poisoning

Lip moisturizer poisoning involves toxic or environmental exposure to lip moisturizer poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Lip Neoplasm

A lip neoplasm is an abnormal growth in the lip that may be benign or malignant; persistent sores or lumps require assessment.

Lip Swelling

Enlargement of one or both lips caused by local injury, infection, inflammation, dental disease, medication, or angioedema. Sudden swelling of the lips with tongue or throat swelling, breathing difficulty, wheezing, faintness, or widespread hives may indicate a severe allergic reaction and requires emergency care.

Alternate Names:

Fats

Lipase

An enzyme that breaks down fats into smaller molecules. Blood lipase testing is commonly used when pancreatitis is suspected, although an abnormal result is not specific in every case.

Lipase Test

A lipase test measures a pancreatic digestive enzyme in blood and supports evaluation of acute pancreatitis and selected pancreatic or gastrointestinal disorders.

Lipedema

A chronic disorder of abnormal, usually symmetrical deposition of painful subcutaneous adipose tissue,

predominantly affecting the legs and sometimes the arms. The feet and hands are typically spared, and easy bruising, tenderness, and progressive functional limitation may occur.

Lipemia Retinalis

A creamy, pinkish-white discolouration of the retinal vessels caused by severely elevated serum triglycerides, typically exceeding 2,000 mg/dL. It is a sign of extreme hypertriglyceridaemia and indicates a risk for acute pancreatitis, requiring urgent lipid-lowering therapy and dietary management.

Lipemic Index

lipemic index is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results must be interpreted with the method and reference range.

Lipid

Diverse group of hydrophobic molecules including triglycerides (energy storage), phospholipids (membranes), cholesterol (membranes, steroid precursor), fat-soluble vitamins (A, D, E, K). Triglycerides: glycerol + 3 fatty acids. Fatty acids: saturated (no double bonds) vs. unsaturated (one or more double bonds).

Lipid Bilayer

lipid bilayer is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Lipid Binding

lipid binding is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Lipid Disorder

lipid disorder is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Lipid Droplet

lipid droplet is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Lipid Emulsion Therapy

The antidote for local anesthetic systemic toxicity. The mechanism involves the lipid sink theory (lipid phase sequesters lipophilic local anesthetics from neural and cardiac tissue) and metabolic theory (lipid provides fatty acid substrate to ischemic myocardium).

Lipid Metabolism

lipid metabolism is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Lipid Panel

Measurement of total cholesterol, LDL-C, HDL-C, and triglycerides. Fasting (9-12 hours) or non-fasting acceptable for screening. Desirable levels: total cholesterol <200 mg/dL, LDL <100 mg/dL (<70 for very high risk), HDL >40 (men) or >50 (women) mg/dL, triglycerides <150 mg/dL.

Lipid Peroxidation

lipid peroxidation is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Lipid Peroxide

lipid peroxide is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Lipid Profile

A blood test panel measuring lipids and lipoproteins, commonly including total cholesterol, LDL cholesterol, HDL cholesterol, and triglycerides.

Lipid Profile Test

A blood test usually measuring total cholesterol, LDL cholesterol, HDL cholesterol, and triglycerides

to assess atherosclerotic cardiovascular risk and monitor treatment.

Lipid Transport

lipid transport is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Lipidomics

lipidomics is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Lipidosis

A disorder involving abnormal accumulation or metabolism of lipids in tissues, often due to inherited enzyme defects.

Lipids

A group of mostly water-insoluble substances that includes fats, oils, fatty acids, phospholipids, and cholesterol. Lipids store energy, form cell membranes, help make hormones, and help the body absorb vitamins A, D, E, and K.

Lipoatrophy

Loss of subcutaneous adipose tissue at specific sites, most commonly caused by repeated subcutaneous injections of insulin or other medications, or associated with autoimmune conditions and HIV lipodystrophy.

Lipoblastoma

A usually benign tumor of immature adipose tissue occurring mainly in infants and young children; it may be localized or diffuse and can recur if incompletely removed.

Lipocaic

A historical term for a pancreatic substance once thought to regulate fat metabolism; it is not a current standard clinical diagnosis.

Lipochrome

A fat-soluble pigment, such as a carotenoid or

lipofuscin-related pigment, that can impart yellow coloration to tissues.

Lipocyte

A lipid-storing parenchymal cell of adipose tissue; synonymous with adipocyte. In hepatic physiology, the term lipocyte historically also designates the hepatic stellate cell of Ito, situated within the subendothelial space of Disse; these quiescent perisinusoidal cells store approximately 80% of the body's total vitamin A in cytoplasmic lipid droplets and, upon chronic hepatic injury or inflammation, transdifferentiate into proliferative, contractile, α -smooth muscle actin (α -SMA)-positive myofibroblasts that synthesize type I collagen, serving as the primary drivers of hepatic fibrosis and cirrhosis.

Lipodystrophy

Abnormal distribution or loss of body fat, which may be inherited or caused by medicines, metabolic disease, or repeated injections.

Lipodystrophy (Acquired Generalized And Inherited Lipodystrophy)

Alternate index label for Acquired Generalized and Inherited Lipodystrophy.

Lipodystrophy Syndromes

Rare conditions characterized by selective loss of adipose tissue leading to severe insulin resistance, diabetes, and hypertriglyceridemia. Congenital generalized lipodystrophy involves loss of all body fat from birth. Familial partial lipodystrophy involves loss of limb and truncal fat with fat accumulation in face and neck.

Lipodystrophy, Intestinal

Alternate index label; see *Whipple's disease*.

Lipofuscin

Lipofuscin is a yellow-brown, non-degradable pigment made of oxidized lipid and protein residues that accumulates in long-lived cells with ageing and in some degenerative diseases.

Lipogenesis

The synthesis of fatty acids and triglycerides from acetyl-CoA and other carbon sources. It occurs mainly in liver and adipose tissue when energy and carbohydrate are abundant and is stimulated by insulin.

Lipogranulomatosis

Lipogranulomatosis is inflammation caused by lipid accumulation and granuloma formation, which may occur in skin, soft tissue, or internal organs.

Lipohypertrophy

Localized thickening or accumulation of fatty tissue, commonly at repeated insulin-injection sites.

Lipoid Nephrosis

A historical term for minimal change disease, a glomerular disorder causing nephrotic syndrome through increased glomerular permeability to proteins. It is especially common in children and typically shows diffuse podocyte foot-process effacement on electron microscopy.

Lipoid Pneumonia

Lung inflammation caused by accumulation of lipid-laden macrophages in the alveoli. Exogenous lipoid pneumonia results from aspiration of mineral oil, petroleum jelly, or oil-based nose drops. Endogenous lipoid pneumonia occurs distal to bronchial obstruction. HRCT shows ground-glass opacities with low-attenuation areas (fat density).

Lipoidosis

Lipoidosis is a disorder involving abnormal accumulation of lipids in cells or tissues, often from inherited storage disease or another metabolic problem.

Lipolysis

Hydrolysis of stored triglycerides in adipocytes to release non-esterified fatty acids and glycerol. It is stimulated by catecholamines and fasting-related hormonal signals and inhibited by insulin.

Lipoma

The most common benign soft tissue tumor, composed of mature adipocytes. It presents as a soft, mobile, painless subcutaneous nodule, commonly on the trunk, neck, and proximal extremities. Lipomas grow slowly and may be multiple (familial multiple lipomatosis). Diagnosis is clinical; ultrasound or MRI for deep or atypical lesions.

Lipomatosis

A rare condition characterized by the diffuse, symmetric, non-encapsulated proliferation of mature adipose tissue, most commonly affecting the pelvis and lower extremities. Unlike simple lipomas, lipomatosis involves infiltration of fat into surrounding structures without encapsulation, making surgical excision difficult.

Lipomatous Neoplasm

A lipomatous neoplasm is a growth made partly or mainly of fat cells and may be benign, such as a lipoma, or malignant, such as a liposarcoma.

Lipophagy

Lipophagy is the cellular process of breaking down lipid droplets through autophagy to release fatty acids for energy or metabolism.

Lipophilicity

Lipophilicity is the tendency of a substance to dissolve in fats or oils rather than water, influencing drug absorption and distribution.

Lipopolysaccharide

Lipopolysaccharide is the outer-membrane endotoxin of Gram-negative bacteria, consisting of lipid A, core polysaccharide, and O antigen; circulating lipid A can trigger cytokine release, fever, shock, and disseminated inflammation.

Lipoprotein

Complex of lipids and proteins transporting hydrophobic lipids in aqueous blood. Classes: chylomicrons (dietary lipids), VLDL (endogenous triglycerides), LDL (cholesterol delivery), HDL (reverse cholesterol transport). ApoB-100 in LDL; apoA-1

in HDL. Elevated LDL cholesterol is a major risk factor for atherosclerosis.

Lipoprotein Analysis

A blood test measuring cholesterol, triglycerides, and lipoprotein fractions such as LDL and HDL.

Alternate Names:

Lipid panel; lipid profile

Lipoprotein Lipase

An enzyme on capillary walls that breaks down triglycerides in chylomicrons and very-low-density lipoproteins so tissues can use or store the fatty acids. Its activity is regulated by nutritional and hormonal signals.

Lipoprotein Metabolism

The production, transport, modification, and clearance of particles that carry lipids through the blood.

Lipoprotein(A)

An LDL-like lipoprotein whose elevated level is an inherited cardiovascular risk factor.

Alternate Names:

Lp(a)

Liposarcoma

A malignant tumor of fat cells, usually arising in the deep soft tissues of the thigh or retroperitoneum; well-differentiated, myxoid, and pleomorphic subtypes are recognized.

Liposarcoma Of The Breast

A rare malignant mesenchymal tumor with adipocytic differentiation arising in breast soft tissue. Diagnosis requires histopathologic and molecular evaluation, and treatment is generally wide excision with sarcoma-focused care.

Liposomal Amphotericin B

A liposomal formulation of amphotericin B used in the treatment of severe systemic fungal infections, with reduced nephrotoxicity compared to conventional amphotericin B. The liposomal formulation encapsulates amphotericin B within lipid vesicles,

which alters the drug's biodistribution and reduces renal tubular damage.

Liposome

A liposome is a tiny vesicle made of a lipid bilayer that can carry medicines or other substances into or around the body.

Liposuction

A surgical procedure that uses a cannula and suction to remove localized deposits of subcutaneous fat for body contouring. It is not a treatment for obesity or a substitute for diet and exercise. Risks may include bleeding, infection, contour irregularity, fluid accumulation or shifts, sensory changes, and anesthesia-related complications.

Alternate Names:

Lipoplasty

Lips

The paired movable folds surrounding the opening of the mouth, involved in speech, facial expression, eating, and oral sensation.

Lipschütz Bodies

An older term for nonspecific acute genital ulcers, often occurring in adolescents or young women after an infection.

Liquefaction

Conversion of a solid or semisolid material into a liquid, as in liquefactive necrosis.

Liquefactive Necrosis

Characterized by the complete enzymatic digestion of dead cells, resulting in a liquid, viscous mass that eventually liquefies and forms a cystic cavity.

Liquid Biopsy

A test of blood, urine, or another body fluid for cancer cells or DNA, RNA, and other material released by a tumor. It may help identify genetic changes, guide treatment, or monitor response and recurrence, but it does not always replace a tissue biopsy.

Liquid Chromatography

liquid chromatography is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results must be interpreted with the method and reference range.

Liquid Diet

A diet consisting partly or entirely of liquids; clear-liquid and full-liquid diets differ in allowed foods and may be prescribed temporarily for procedures, illness, or swallowing or digestive problems.

Liquid Incense

Liquid Incense involves toxic or environmental exposure to liquid incense; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Liquid Nitrogen

Liquid nitrogen is extremely cold nitrogen used to freeze tissue in cryotherapy; contact can cause frost-bite and its gas can displace oxygen.

Liquor

A liquid; in clinical usage it may refer to cerebrospinal fluid or a medicinal preparation, depending on context.

Liraglutide

Liraglutide is a GLP-1 receptor agonist used to improve glucose control in type 2 diabetes and, at some doses, support weight management.

Lisch Nodule

A Lisch nodule is a harmless pigmented hamartoma of the iris, commonly associated with neurofibromatosis type 1.

Lisch Nodules

Benign, dome-shaped melanocytic hamartomas on the iris, commonly seen in neurofibromatosis type 1. They usually do not affect vision and support the diagnosis when interpreted with other clinical findings.

Lisinopril

Lisinopril is an angiotensin-converting-enzyme inhibitor used for hypertension, heart failure, and kidney protection in some diabetes; cough, hyperkalemia, renal-function changes, angioedema, and fetal toxicity are important risks.

Lissencephaly

A severe brain malformation characterized by a smooth cerebral surface due to absent (agyria) or decreased (pachygyria) sulcation and gyration, caused by impaired neuronal migration during 12-16 weeks of gestation.

Listeria

Listeria is a genus of bacteria; *L. monocytogenes* can cause foodborne illness, bloodstream infection, and meningitis, especially in pregnancy, older adults, and people with weakened immunity.

Alternate Names:

Infection Listeria (Listeria)

Listeria Grayi

Listeria grayi is a rare Listeria species mainly found in the environment; its significance in a clinical specimen depends on evidence of true infection.

Listeria Infection

An infection caused by Listeria bacteria, often acquired from contaminated food.

Listeria Innocua

Listeria innocua is usually considered nonpathogenic but rare invasive infections have been reported, particularly in people with weakened immunity.

Listeria Ivanovii

Listeria ivanovii is mainly an animal pathogen that rarely infects humans.

Listeria Monocytogenes

A gram-positive, facultatively anaerobic rod that causes listeriosis, a foodborne infection. The organism is transmitted through contaminated food, particularly deli meats, soft cheeses, and ready-to-

eat foods. It can grow at refrigeration temperatures.

Listeria Seeligeri

Listeria seeligeri is an environmental *Listeria* species that rarely causes human infection.

Listeria Welshimeri

Listeria welshimeri is an environmental and food-associated species that is not a usual human pathogen.

Listeriosis

Listeriosis is infection with *Listeria monocytogenes*, causing febrile gastroenteritis or invasive disease such as meningitis, especially in pregnancy, newborns, older adults, and immunocompromised people. food (deli meats, soft cheeses, unpasteurized dairy, produce). Risk groups: pregnant women (fever, flu-like illness), neonates (sepsis, meningitis), immunocompromised, and elderly.

Listeriosis In Pregnancy

Infection with *Listeria monocytogenes*, a foodborne Gram-positive rod. Pregnant women are 10-20 times more susceptible than the general population. Ingestion of contaminated food (deli meats, soft cheeses, unpasteurized dairy, raw sprouts). Maternal symptoms: fever, myalgias, GI symptoms (nausea, diarrhea).

Liter

A metric unit of volume equal to 1,000 milliliters or 1 cubic decimeter.

Lithiasis

The formation or presence of stones (calculi) in an organ or duct. The term is often named for the site, such as nephrolithiasis in the kidney, ureterolithiasis in the ureter, or cholelithiasis in the gallbladder.

Lithium

Lithium is a mood stabilizer used mainly for bipolar disorder and selected augmentation treatment; its narrow therapeutic range requires monitoring for tremor, thyroid or renal dysfunction, dehydration,

drug interactions, and toxicity.

Lithium Carbonate

A mood-stabilizing medicine used mainly to treat bipolar disorder and reduce the risk of manic or depressive episodes; serum levels, kidney function, thyroid function, and drug interactions require monitoring.

Lithium Toxicity

A potentially life-threatening condition caused by lithium levels exceeding the therapeutic range (0.6–1.2 mEq/L). Mild toxicity (1.5–2.0 mEq/L): nausea, vomiting, diarrhea, coarse tremor, muscle weakness. Moderate toxicity (2.0–2.5 mEq/L): confusion, ataxia, blurred vision, dysarthria.

Lithotomy

A surgical procedure for removing a stone, or the position with the hips and knees flexed and legs supported.

Lithotomy Position

A supine position in which the hips and knees are flexed and the legs are raised and supported to provide access to the pelvis and perineum.

Lithotripsy

Lithotripsy breaks urinary stones into smaller fragments using externally delivered shock waves or an endoscopic energy source so they can pass or be removed. smaller pieces that can pass through the urinary tract. See Shock Wave Lithotripsy.

Lithotripsy Probe

A device that fragments a stone using mechanical, ultrasonic, laser, or shock-wave energy during a stone-removal procedure.

Lithotripter

A device that fragments urinary or other calculi using shock waves or endoscopic energy.

Lithotripter Probe

A probe used to break urinary or biliary stones into

smaller fragments for removal.

Litmus

A dye that changes color with acidity or alkalinity and is used as a simple pH indicator.

Little Area

The highly vascular region of the anterior nasal septum where several arteries meet and where most anterior nosebleeds originate.

Little'S Disease

A clinical condition or finding involving little's disease. Its features, causes, evaluation, and management depend on the clinical context.

Live Attenuated Vaccines

Vaccines containing weakened organisms that stimulate immunity without usually causing disease.

Alternate Names:

Live vaccines

Live Birth

A live birth is delivery of an infant showing signs of life such as breathing, heartbeat, or movement, regardless of gestational age.

Livedo Racemosa

A persistent, irregular, branching, broken-net pattern of skin discoloration caused by disturbance of small or medium blood vessels and associated with vasculopathy, autoimmune disease, or other systemic disorders.

Livedo Reticularis

A net-like, violaceous discoloration of the skin caused by altered blood flow in small cutaneous vessels. It may be temporary and cold-induced or associated with vascular, autoimmune, infectious, or clotting disorders.

Livedoid Vasculopathy

A chronic occlusive disorder of small dermal vessels causing painful purpuric lesions, ulcers, and porcelain-white stellate scars, usually on the lower

legs and ankles.

Liver

The largest internal organ, located in the right upper quadrant of the abdomen beneath the diaphragm.

Liver (Anatomy And Function)

Alternate index label for Anatomy and Function.

Liver Abscess

Focal collection of pus within the liver parenchyma. Pyogenic abscesses are most commonly from biliary tract infection or hematogenous spread from portal or systemic infection. Amoebic abscesses are caused by *Entamoeba histolytica* predominantly in tropical regions. Presents with fever, right upper quadrant pain, and hepatomegaly.

Liver Biopsy

Percutaneous, transjugular, or laparoscopic sampling of liver tissue for histologic evaluation when noninvasive tests do not answer the clinical question. It may stage fibrosis or characterize inflammation, fatty liver disease, infiltrative disease, or a mass; complications include pain and bleeding.

Liver Cancer

A malignant tumor arising in the liver. Hepatocellular carcinoma is the most common primary type in adults; risk factors include chronic liver disease, viral hepatitis, alcohol-related liver injury, and some toxins.

Alternate Names:

Cancer, Liver

Liver Cancer - Hepatocellular Carcinoma

Liver cancer - hepatocellular carcinoma refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Liver Circulation

Liver circulation is the flow of blood through the hepatic artery and portal vein into the liver and out through the hepatic veins.

Liver Cirrhosis

Advanced hepatic fibrosis with regenerative nodules surrounded by dense fibrous septa representing the end result of chronic liver injury. Common etiologies include chronic viral hepatitis, alcoholic liver disease, and nonalcoholic steatohepatitis.

Liver Damage

Liver damage is injury or loss of liver-cell function caused by infection, alcohol, medicines, toxins, fatty disease, autoimmune disease, or other processes.

Liver Disease

Any disorder that damages or impairs the structure or function of the liver.

Liver Disease Diet

An individualized eating plan for a person with liver disease. It may address adequate energy and protein, sodium or fluid intake, alcohol avoidance, and nutrient deficiencies according to the condition.

Liver Disorder

A clinical condition or finding involving liver disorder. Its features, causes, evaluation, and management depend on the clinical context.

Liver Dysfunction

Liver dysfunction is reduced ability of the liver to perform tasks such as processing nutrients, making proteins, clearing toxins, and producing bile.

Liver Enzymes

ALT, AST, ALP, GGT. Markers of liver injury. ALT more specific for liver.

Liver Failure

A life-threatening condition resulting from severe impairment of hepatic synthetic, metabolic, and detoxification functions.

Liver Failure, Acute

Alternate index label; see *Acute liver failure*.

Liver Fibrosis

Excessive formation of scar tissue in the liver after ongoing injury or inflammation.

Liver Fluke

A parasitic flatworm that infects the liver or bile ducts, including *Clonorchis*, *Opisthorchis*, and *Fasciola* species.

Liver Function (Liver (Anatomy And Function))

Alternate index label for Liver (Anatomy and Function).

Liver Function Tests

Blood tests used to assess liver injury, bile-flow abnormalities, and liver synthetic function. They commonly include aminotransferases, alkaline phosphatase, bilirubin, albumin, and clotting tests; results must be interpreted together with the clinical context.

Liver Function Tests (LFTs)

Blood tests assessing liver-cell injury, bile flow, and synthetic function, commonly including aminotransferases, alkaline phosphatase, bilirubin, albumin, and clotting measures.

Liver Health

Essential for metabolism, detoxification, protein synthesis, bile production, and immune function.

Liver Infection

An infectious process or toxic exposure involving liver infection; diagnosis considers the cause, route of exposure, affected tissues, severity, and host response.

Liver Lobule

The functional unit of the liver: a hexagonal structural unit centered on a central (hepatic) venule, with portal triads (portal vein, hepatic artery, bile ductule) at the corners.

Liver Mass

Abnormality in liver detected on imaging. Benign: hemangioma, focal nodular hyperplasia, adenoma. Malignant: hepatocellular carcinoma, metastasis, cholangiocarcinoma.

Liver Metastases

Liver metastases are cancer deposits that spread to the liver from another primary tumor and may cause no symptoms or produce pain, weight loss, or liver dysfunction.

Liver Neoplasm

A liver neoplasm is an abnormal growth in the liver that may be benign or malignant and may arise from liver cells, bile ducts, or metastasis from another cancer.

Liver Pain

A clinical condition or finding involving liver pain. Its features, causes, evaluation, and management depend on the clinical context.

Liver Regeneration

liver regeneration is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

Liver Scan

A nuclear medicine or imaging examination of the liver used to evaluate its size, shape, tissue distribution, focal lesions, blood flow, or selected functional abnormalities.

Liver Shunt

An abnormal or surgically created channel that diverts blood around the liver, such as a portosystemic shunt; it can reduce detoxification and contribute to hepatic encephalopathy.

Liver Spot

A common lay term for a solar lentigo, a flat brown skin patch caused by chronic ultraviolet exposure.

Liver Spots

Liver spots are flat brown areas of sun-related pigmentation, also called solar lentigines, and are not caused by liver disease.

Liver Transplant

Surgical replacement of a diseased liver with a healthy liver or part of a liver from a donor.

Liver Transplantation

Surgical replacement of a diseased liver with a healthy donor organ indicated for end-stage liver disease, acute liver failure, and select hepatocellular carcinomas within Milan criteria. Requires lifelong immunosuppression with calcineurin inhibitors, antimetabolites, and corticosteroids.

Liver, Diseases Of

Disorders of the liver, including hepatitis, fatty liver, cirrhosis, tumors, and biliary disease, that can impair metabolism and detoxification.

Liver, Enlarged

Alternate index label; see *Enlarged liver*.

Living Donor

Individual who donates an organ (kidney, liver segment, or other tissue) while alive for transplantation into a recipient.

Living Will

A type of advance directive that records a person's preferences for future medical treatment if the person cannot communicate or decide.

Living Will (Advance Directive)

A document stating a person's preferences for future medical treatment if they later lose the capacity to make or communicate decisions.

Alternate Names:

Advance Directive

Living Will (Advance Statements)

A legally binding written document that specifies a person's preferences for medical treatment if they

become unable to make decisions for themselves in the future (loss of capacity). Living wills are a type of advance directive (or advance decision/advance statement in the UK).

Alternate Names:

Advance Statements

Living With A Chronic Illness - Dealing With Feelings

Living with a chronic illness can bring grief, anxiety, anger, or low mood; support from healthcare professionals, counseling, and trusted people can help.

Living With A Chronic Illness - Reaching Out To Others

Reaching out to family, friends, support groups, or healthcare professionals can reduce isolation and help with practical and emotional effects of chronic illness.

Living With Endometriosis

Living with endometriosis may involve pain management, hormonal or surgical treatment, pacing activities, fertility counseling, and follow-up for changing symptoms.

Living With Hearing Loss

Living with hearing loss may include hearing aids or other devices, communication strategies, hearing protection, and treatment of an underlying cause when possible.

Living With Heart Disease And Angina

Living with heart disease and angina involves prescribed medicines, activity and risk-factor management, follow-up, and urgent care for new or worsening chest pain.

Living With Uterine Fibroids

Living with uterine fibroids may involve monitoring, medicines for bleeding or pain, procedures, or surgery depending on symptoms, size, location, and fertility plans.

Living With Vision Loss

Living with vision loss may involve treating its cause, low-vision rehabilitation, assistive devices, home safety changes, and support with daily activities.

Living With Your Ileostomy

Living with an ileostomy involves caring for the stoma and pouch, maintaining hydration and nutrition, and seeking help for blockage, severe skin problems, or unusual output.

Livor Mortis (Lividity)

Post-mortem purplish-red discoloration of dependent body parts resulting from gravitational settling of blood in uncompressed capillaries and small veins following cessation of circulation.

Alternate Names:

Lividity

Livor Mortis (Postmortem Lividity)

Purplish-red discoloration of dependent body parts following death, caused by gravitational pooling of blood in uncompressed capillaries and venules. Starts within 30 min–2 hours, becomes fixed after 6–12 hours.

Alternate Names:

Postmortem Lividity

Lizard Bite

A puncture or tissue injury caused by a lizard; care includes cleaning and assessing for infection, tetanus, venom exposure, and significant tissue damage according to the species and circumstances.

LLETZ

Large Loop Excision of the Transformation Zone, also called LEEP (Loop Electrosurgical Excision Procedure). A common outpatient procedure used to diagnose and treat cervical intraepithelial neoplasia (CIN).

Alternate Names:

LEEP (Loop Electrosurgical).

Lloyd-Davies Position

A modified lithotomy position in which the hips

and knees are flexed and the legs are supported, commonly for pelvic or colorectal surgery.

Loa Loa

The African eye worm, a filarial nematode transmitted by Chrysops deer flies, endemic to the rainforests of West and Central Africa. Adult worms migrate subcutaneously, causing Calabar swellings, and may cross the subconjunctiva of the eye, causing visible worm migration. Microfilariae are detected in daytime peripheral blood.

Loading Dose

A higher initial dose of a drug administered to rapidly achieve therapeutic plasma concentrations, followed by lower maintenance doses to sustain the steady state. The loading dose is calculated as: $\text{Loading dose} = (\text{Vd} \times \text{desired concentration}) / \text{bioavailability}$.

Lobaplatin

Lobaplatin is a platinum-based antineoplastic drug used in some countries and studied for its ability to damage cancer-cell DNA.

Lobar Hemorrhage

Bleeding into a lobe of the brain, beneath the cerebral cortex.

Lobar Pneumonia

Consolidation involving an entire lobe. Most commonly caused by *S. pneumoniae*. Classic progression: congestion, red hepatization, gray hepatization, resolution.

Lobe

A lobe is a distinct subdivision of an organ or structure, such as a lung, liver, brain, thyroid, or gland.

Lobectomy

Surgical removal of a lobe of an organ. Most commonly lung lobectomy (removal of one lobe of the lung, performed for lung cancer, bronchiectasis, abscess, or benign tumor) or temporal lobectomy (removal of the anterior temporal lobe for drug-

resistant temporal lobe epilepsy).

Lobeline

Lobeline is a plant alkaloid that affects nicotinic receptors and has been studied for respiratory, neurologic, and smoking-cessation effects.

Lobotomy

A historical brain operation that severed connections involving the frontal lobes.

Lobstein Disease

An older name for osteogenesis imperfecta, an inherited disorder of collagen or bone formation causing bone fragility, fractures, short stature, dentin abnormalities, or hearing loss.

Lobucavir

Lobucavir is an investigational antiviral medicine that has been studied mainly for herpesvirus infections.

Lobular Carcinoma

Lobular carcinoma is a cancer arising from cells of a breast lobule, the gland that produces milk; it may be invasive or confined to the lobule.

Lobular Carcinoma In Situ

Abnormal cells confined to the breast lobules that increase the risk of developing invasive breast cancer.

Lobule

A lobule is a small subdivision of an organ or tissue, such as a liver lobule, lung lobule, or breast lobule.

Lobules

Small subdivisions of an organ; in the breast, milk-producing glandular units.

Local

Local means limited to a particular site or region rather than involving the whole body.

Local Anaesthesia

Loss of sensation in a limited body area caused by a local anesthetic without loss of consciousness.

Local Anesthesia

The reversible abolition of sensation in a circumscribed area by infiltration or topical application of local anesthetic agents (lidocaine, bupivacaine) without loss of consciousness. Maximum safe dosing must be observed to avoid systemic toxicity. Epinephrine prolongs duration but is avoided in end-arterial territories.

Local Anesthetic Systemic Toxicity

A life-threatening complication caused by elevated plasma concentration of local anesthetic, most commonly from inadvertent intravascular injection or rapid absorption.

Local Anesthetic Toxicity

CNS toxicity: tinnitus, perioral numbness, seizures. Cardiovascular toxicity: arrhythmias, hypotension, cardiac arrest. Treatment: lipid emulsion therapy (Intralipid), seizure control, ACLS.

Local Invasion

Growth of a tumor into nearby tissues rather than only at its original site. It is a feature of malignant behavior and differs from distant metastasis.

Local Therapy

Local therapy treats a disease at or near the affected area rather than throughout the body, for example with a cream, injection, surgery, or focused radiation.

Local Treatment

Treatment directed at a specific body site or lesion rather than the whole body, such as a topical medicine, local injection, radiation field, or localized procedure.

Localised

Confined to a limited area or a small number of adjacent body sites rather than widespread.

Localization

Determining the anatomical site responsible for a symptom, sign, lesion, or physiological function.

Localized

Limited to a particular area or organ, without evidence of distant spread.

Alternate Names:

Localized disease

Localized Edema

Swelling confined to a particular body region because of fluid accumulation, commonly caused by venous or lymphatic obstruction, inflammation, trauma, allergy, or local infection.

Localized Scleroderma

An autoimmune skin disorder causing localized thickening and hardening of the skin, with or without involvement of deeper tissues; it differs from systemic sclerosis.

Lochia

Vaginal discharge following delivery that undergoes characteristic changes over the puerperium. Lochia rubra (days 1-4): red, bloody discharge containing blood, decidual tissue, and fetal membranes. Lochia serosa (days 5-10): pinkish-brown discharge with serous fluid, leukocytes, and organisms.

Locked In Syndrome (Locked-In Syndrome)

Alternate index label for Locked-in Syndrome.

Locked-In Syndrome

A neurological condition in which the patient is fully conscious and aware but cannot move or speak due to complete paralysis of all voluntary muscles except for vertical eye movements and blinking (total locked-in syndrome: loss of all eye movements).

Alternate Names:

Locked In Syndrome (Locked-In Syndrome)

Lockjaw

Alternate index label; see *Tetanus*.

Lockjaw (Tetanus)

A serious neurologic illness caused by tetanospasmin produced by *Clostridium tetani*. It causes painful muscle stiffness and spasms, often beginning in the jaw.

Alternate Names:

Tetanus

Locomotion

Movement of an organism or person from one place to another using coordinated muscles, bones, nerves, and balance systems.

Locomotive System

The musculoskeletal and nervous systems working together to produce posture, balance, and movement from place to place.

Locomotor Ataxia

An older term for tabes dorsalis, a neurologic complication of untreated syphilis causing sensory ataxia and lightning pains.

Locomotor Ataxia (Tabes Dorsalis)

A late manifestation of untreated tertiary syphilis (neurosyphilis) caused by infection with *Treponema pallidum*, involving progressive degeneration of the dorsal columns (fasciculus gracilis and cuneatus) and dorsal roots of the spinal cord.

Alternate Names:

Tabes Dorsalis

Locoregional

Affecting a defined local area and nearby tissues or lymph nodes, without necessarily involving the whole body.

Locus

Specific position of gene on chromosome. Designated by chromosome number, arm (p/q), band, subband. Example: 7q31.2 (CFTR gene).

Locus Coeruleus

A brainstem nucleus involved in alertness, attention, stress responses, and norepinephrine release.

Alternate Names:

Locus coeruleus

Locus Coeruleus

The locus coeruleus is a brainstem nucleus whose noradrenaline-producing neurons influence arousal, attention, stress, sleep, and pain.

Locus Minoris Resistentiae

Latin for a site of lesser resistance, meaning a body area considered more vulnerable to injury, infection, or disease because of local weakness or prior damage.

Lod Score

lod score is a diagnostic test, specimen, imaging method, score, instrument, or measurement used to answer a clinical or laboratory question; results must be interpreted with the method and reference range.

Loeys-Dietz Syndrome

Loeys-Dietz syndrome is an inherited connective-tissue disorder associated with arterial aneurysm or dissection, distinctive skeletal and craniofacial features, allergic disease, and variable organ involvement. Lifelong vascular imaging and coordinated specialist care are important.

Alternate Names:

Syndrome Loeys-Dietz (Loeys-Dietz Syndrome)

Loiasis

Loiasis is infection with the filarial worm *Loa loa*, transmitted by deerflies and sometimes causing transient eye-worm migration and localized swelling.

Loin

The region of the lower back between the ribs and pelvis, including the flank.

Lometrexol

Lometrexol is an investigational antifolate that inhibits glycinamide ribonucleotide transformylase and has been studied as an anticancer agent.

Lomotil Overdose

Lomotil overdose involves toxic or environmental exposure to lomotil overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Lomustine

Lomustine is an oral chemotherapy medicine used for selected brain tumors and other cancers; delayed low blood counts are an important risk.

Lonafarnib

Lonafarnib is a farnesyltransferase inhibitor used for selected progeroid syndromes and studied in other diseases.

Loneliness

Subjective feeling of isolation. Associated with depression, cognitive decline, mortality.

Long Arm Of A Chromosome

The longer segment of a chromosome, designated q, extending from the centromere toward the chromosome's end.

Long Bones

Long bones concerns long bones, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Long COVID

Long COVID is a condition of persistent or newly developing symptoms after SARS-CoV-2 infection, potentially involving fatigue, exertional intolerance, cognition, breathing, autonomic function, or multiple organs. several weeks and sometimes months or years. Common manifestations include fatigue, post-exertional malaise, cognitive difficulty, breathlessness, dysautonomia, and altered smell or taste.

Long QT Syndrome

A disorder of cardiac repolarization that prolongs the QT interval and increases the risk of torsades de pointes and sudden cardiac death. It may be inherited or acquired from medicines, electrolyte

abnormalities, or other conditions.

Long-Acting Beta-2 Agonists

Bronchodilators that provide sustained relaxation of airway smooth muscle for maintenance treatment of asthma or chronic obstructive pulmonary disease. In asthma, they are used with an inhaled corticosteroid rather than alone.

Long-Sightedness

Hyperopia, a refractive error in which distant objects may be clearer than near objects and accommodation is required for focusing.

Long-Term Care

Assistance with ADLs/IADLs for extended period. Settings: home, assisted living, nursing home. Funding: Medicaid, long-term care insurance, out-of-pocket. Planning essential for elderly and families.

Long-Term Care Facility

A residential or care setting providing ongoing assistance, nursing, rehabilitation, or personal care to people who cannot live independently or need sustained support.

Long-Term Complications Of Diabetes

Chronic complications of diabetes caused mainly by vascular and metabolic injury, including retinopathy, kidney disease, neuropathy, cardiovascular disease, and foot disease.

Long-Term Effect

A health effect that develops or persists after prolonged exposure, treatment, or disease. It may be beneficial, harmful, or uncertain.

Long-Term Memory

Information retained for a long period, from hours or days to a lifetime. It includes explicit memories of facts and events and implicit skills or habits.

Long-Term Potentiation

Long-term potentiation is a lasting increase in the strength of communication between nerve cells after

repeated stimulation and is important in learning and memory.

Long-Term Rehabilitation

Ongoing rehabilitation for chronic disease, lasting disability, or persistent injury. Goals include maintaining function, preventing complications, adapting activities, and supporting independence and quality of life.

Longevity

Longevity is length of life or survival and is influenced by biology, disease, behavior, environment, social conditions, and healthcare.

Longitudinal Section

A cut or image made along the long axis of an organ, limb, vessel, or other structure.

Longitudinal Studies

Longitudinal studies follow participants or measurements over time to examine change, incidence, exposures, outcomes, and temporal relationships.

Longitudinal Vaginal Septum

A congenital sagittal partition running lengthwise along the vagina, arising from incomplete fusion or failure of resorption of the fused paired Müllerian ducts during embryogenesis. Frequently associated with uterine anomalies such as uterus didelphys or septate uterus, it may be completely asymptomatic, cause obstructive hemivagina (in Herlyn-Werner-Wunderlich syndrome), or produce persistent dyspareunia and difficulty with tampon insertion, corrected surgically by longitudinal excision.

Lontucirev

Lontucirev is an investigational targeted anticancer antibody or drug studied for effects on tumor-associated targets.

Loop Diuretic

A diuretic that inhibits sodium and chloride reabsorption in the thick ascending loop of Henle, producing powerful natriuresis.

Loop Diuretics

A class of potent diuretics that act on the thick ascending limb of the loop of Henle by inhibiting the sodium-potassium-chloride cotransporter, blocking sodium and chloride reabsorption and producing a powerful natriuresis and diuresis. The prototypical loop diuretic is furosemide, with other agents including bumetanide and torsemide.

Loop Electrosurgical Excision Procedure

An outpatient gynecologic operative procedure that utilizes a thin, electrified wire loop powered by high-frequency alternating current to excise abnormal cervical tissue and the transformation zone under colposcopic guidance. Widely employed for both the diagnosis and definitive treatment of high-grade cervical intraepithelial neoplasia (CIN 2 and CIN 3) and persistent cervical dysplasia, providing an intact tissue specimen with surgical margins for histopathologic evaluation.

Alternate Names:

LEEP; Large Loop Excision of the Transformation Zone

Loop Of Henle

U-shaped tubular segment consisting of a thin descending limb, thin ascending limb, and thick ascending limb. The descending limb is permeable to water but not solutes, allowing water reabsorption into the hypertonic medullary interstitium.

Loose Bodies

Free fragments of cartilage, bone, or other tissue within a joint or body cavity that may cause pain, catching, or locking.

Loperamide

Loperamide is a peripherally acting opioid-receptor agonist that slows intestinal motility and reduces diarrhoea; it should be avoided in bloody or febrile diarrhoea and excessive doses can cause severe cardiac arrhythmias.

Loperamide Hydrochloride

Loperamide hydrochloride is an antidiarrheal medicine that slows movement through the intestine;

excessive doses can cause dangerous heart rhythms.

Lopinavir

Lopinavir is an HIV protease inhibitor used with ritonavir in antiretroviral treatment; drug interactions are common.

Loratadine

A second-generation (non-sedating) H1 antihistamine used for allergic rhinitis and chronic urticaria. Peripherally selective—minimal CNS penetration, minimal anticholinergic effects. Once daily; prodrug (desloratadine is active). Adverse effects: headache, dry mouth, and rare sedation. Available OTC.

Lorazepam

Lorazepam is a benzodiazepine used short term for severe anxiety, seizures, or sedation; it can cause drowsiness, dependence, and breathing suppression.

Lordosis

The normal inward curvature of the cervical and lumbar spine. Excessive lumbar lordosis (hyperlordosis): increased pelvic tilt, commonly due to hip flexor tightness, weak abdominals, or pregnancy. Presents with low back pain and forward protrusion of the abdomen and buttocks.

Lordosis - Lumbar

Lumbar lordosis is the inward curve of the lower spine; excessive or reduced curvature may be postural, structural, degenerative, or related to pain.

Lorenzo'S Oil

Lorenzo's oil is a mixture of fatty acids used experimentally to reduce very-long-chain fatty acids in adrenoleukodystrophy, with benefit depending on disease stage and context.

Losartan

Losartan is an angiotensin-receptor blocker used for high blood pressure, some kidney disease, and heart failure; it can raise potassium levels.

Losartan Potassium

Losartan potassium is the salt form of losartan, an angiotensin-receptor blocker used to lower blood pressure and protect selected patients with kidney or heart disease.

Losoxantrone

Losoxantrone is an investigational anthracenedione-like antineoplastic compound that interferes with DNA and cancer-cell growth.

Loss Of Appetite

Reduced desire to eat. It may result from illness, medicines, mood disorders, pain, or other causes.

Loss Of Bladder Control

Alternate index label; see *Urinary incontinence*.

Loss Of Brain Function - Liver Disease

Hepatic encephalopathy, a brain dysfunction caused by severe liver disease or portosystemic shunting and characterized by changes in attention, behavior, consciousness, or neuromuscular function.

Loss Of Heterozygosity

Loss of heterozygosity is loss of one of two different versions of a gene in a cell, a change that can contribute to cancer when a tumor-suppressor gene is affected.

Loss Of Sense Of Smell And Taste With COVID-19

COVID-19 can temporarily impair smell and taste through infection or inflammation of nasal and olfactory pathways. Most people improve, but persistent loss, distortion, poor nutrition, or neurologic symptoms warrants follow-up and smell-retraining advice.

Loss Of Smell (Anosmia)

Partial or complete inability to detect odors, commonly caused by nasal obstruction, infection, inflammation, head injury, neurologic disease, or certain medicines.

Loss-Of-Function Mutation

A genetic change that reduces or abolishes the normal activity or production of a gene product; its clinical effect depends on the gene, variant, and inheritance pattern.

Loss-Of-Function Variant

A genetic variant that reduces or abolishes the normal activity of the encoded gene product. Disease risk depends on the gene, inheritance pattern, residual function, and whether one or both copies are affected.

Loteprednol Etabonate

Loteprednol etabonate is a corticosteroid eye medicine used for eye inflammation; prolonged use can raise eye pressure and increase infection risk.

Lou Gehrig Disease

Amyotrophic lateral sclerosis, a progressive neurodegenerative disease affecting upper and lower motor neurons and causing weakness, muscle wasting, and eventual respiratory impairment.

Lou Gehrig'S Disease

Alternate index label; see *Amyotrophic lateral sclerosis*.

Louse

A biomedical term referring to louse; its classification, distinguishing features, and medical significance depend on the clinical or biologic context.

Lovastatin

Lovastatin is a statin medicine that lowers LDL cholesterol and reduces cardiovascular risk; muscle injury and liver effects are uncommon but important risks.

Low Back Pain

Pain or discomfort in the lower back, commonly caused by muscle or ligament strain, disc disease, arthritis, or spinal nerve irritation. Weakness, numbness, new bladder or bowel problems, fever, major trauma, or unexplained weight loss are warning

signs requiring prompt medical assessment.

Alternate Names:

Lumbago (Low Back Pain)

Low Back Pain - Acute

A clinical condition involving low Back Pain - Acute; its causes, manifestations, severity, and complications guide diagnosis and management.

Low Back Pain - Chronic

A clinical condition involving low Back Pain - Chronic; its causes, manifestations, severity, and complications guide diagnosis and management.

Low Birth Weight

Birth weight <2500 g, often due to prematurity and/or intrauterine growth restriction; further classified: very low (<1500 g), extremely low (<1000 g), and small for gestational age.

Low Blood Oxygen (Hypoxemia)

An abnormally low oxygen level in arterial blood, usually related to lung disease, impaired breathing, circulation problems, or reduced oxygen availability.

Low Blood Potassium

Low blood potassium, or hypokalemia, can cause weakness, cramps, constipation, abnormal heart rhythms, or paralysis and may result from losses, medicines, or hormonal disease.

Low Blood Pressure

Low blood pressure can cause dizziness, fainting, weakness, or shock and may result from dehydration, medicines, bleeding, infection, heart disease, or autonomic dysfunction.

Low Blood Pressure (Hypotension) Causes

Alternate index label for Hypotension) Cause.

Low Blood Sodium

Low blood sodium, or hyponatremia, reflects excess water relative to sodium and can cause headache, confusion, seizures, or coma when severe or rapidly

developing.

Low Blood Sugar

Low blood sugar, or hypoglycemia, occurs when circulating glucose is insufficient for normal brain and body function, causing sweating, tremor, confusion, seizures, or loss of consciousness.

Low Blood Sugar - Newborns

Low blood sugar in a newborn can cause jitteriness, poor feeding, lethargy, apnea, or seizures and is more likely with prematurity, growth problems, maternal diabetes, or illness.

Low Body Temperature

Alternate index label; see *Hypothermia*.

Low Calcium Level - Infants

Hypocalcemia in an infant, defined using age-appropriate values, which may cause jitteriness, poor feeding, lethargy, apnea, seizures, or cardiac rhythm abnormalities.

Low FODMAP Diet

Dietary intervention for irritable bowel syndrome that restricts fermentable oligosaccharides, disaccharides, monosaccharides, and polyols, which are short-chain carbohydrates poorly absorbed in the small intestine and rapidly fermented by colonic bacteria producing gas and drawing water into the intestinal lumen.

Low Grade

Low grade describes a lesion or disease with relatively less aggressive microscopic features or behavior, though prognosis depends on the specific condition.

Low Hemoglobin Count

A hemoglobin level below the expected range, often indicating anemia from blood loss, reduced production, nutritional deficiency, inflammation, or increased destruction of red blood cells.

Low Molecular Weight Heparin

A shorter heparin preparation that predominantly inhibits factor Xa through antithrombin and is used to prevent or treat thrombosis.

Low Nasal Bridge

A low nasal bridge is reduced height of the nasal root and may be a normal familial feature or part of a congenital, genetic, or developmental syndrome.

Low Neutrophil Count (Neutropenia)

Alternate index label for Neutropenia.

Low Platelet Count

Alternate index label; see *Thrombocytopenia*.

Low Potassium (Hypokalemia)

An abnormally low potassium level in the blood, which can cause weakness, cramps, abnormal heart rhythms, or paralysis and may result from losses, medicines, or hormonal disorders.

Low Sex Drive In Women

Persistently reduced sexual desire in a woman that causes personal distress.

Low Sperm Count

A semen condition in which the sperm concentration is below the expected reference range.

Low Testosterone

Alternate index label; see *Male hypogonadism*.

Low Testosterone (Hypogonadism)

Low testosterone (male hypogonadism) is a clinical syndrome of deficient testosterone production by the testes (primary) or inadequate stimulation by the pituitary/hypothalamus (secondary), defined as total testosterone <300 ng/dL on two morning measurements with consistent symptoms.

Alternate Names:

Hypogonadism

Low Testosterone (Low T)

Alternate index label for Low T.

Low Vision

Visual impairment that cannot be fully corrected with spectacles, contact lenses, medication, or surgery, impairing daily activities. Managed with low-vision aids (magnifiers, telescopes, adaptive devices), lighting, and occupational therapy.

Low White Blood Cell Count

A reduced number of white blood cells, which can increase susceptibility to infection and may result from medicines, infection, autoimmune disease, nutritional deficiency, or bone marrow disorders.

Low White Blood Cell Count And Cancer

Leukopenia or neutropenia occurring with cancer or its treatment, increasing susceptibility to infection and requiring assessment of the cell line affected and the cause.

Low-Calorie Diet

A diet that restricts energy intake to support weight loss or another therapeutic goal.

Alternate Names:

Calorie-restricted diet

Low-Density Lipoprotein

A lipoprotein that transports cholesterol and can contribute to artery-wall plaque when elevated.

Alternate Names:

LDL; bad cholesterol

Low-Density Lipoprotein

The primary circulating cholesterol-carrying lipoprotein in human plasma, generated by the catabolism of very-low-density lipoproteins via intermediate-density lipoproteins. Characterized by a core of cholesteryl esters and triglycerides surrounded by a phospholipid monolayer containing apolipoprotein B-100 (ApoB-100). Elevated circulating LDL particles penetrate the arterial intima, undergo oxidative modification, and are engulfed by macrophages to form foam cells, driving atherogenesis. Target of primary and secondary cardiovascular prevention using HMG-CoA reductase inhibitors (statins), ezetimibe, and PCSK9 inhibitors.

Low-Dose CT Scan

CT protocol using reduced radiation for lung cancer screening. Detects small nodules at earlier stages. False positives require follow-up per Fleischner guidelines.

Low-Fiber Diet

A low-fiber diet limits foods that leave substantial residue in the intestine and may be used temporarily for selected bowel conditions or before procedures.

Low-Flow Low-Gradient Aortic Stenosis

A challenging clinical and echocardiographic presentation of severe aortic stenosis defined by an indexed aortic valve area $\leq 1.0 \text{ cm}^2$ (or $\leq 0.6 \text{ cm}^2/\text{m}^2$) occurring despite a low mean transvalvular gradient ($< 40 \text{ mmHg}$) and a low stroke volume index ($\text{SVi} < 35 \text{ mL}/\text{m}^2$). Subdivided into: (1) classical low-flow, low-gradient aortic stenosis, in which left ventricular ejection fraction is reduced ($\text{LVEF} < 50\%$), requiring low-dose dobutamine stress echocardiography to differentiate true-severe aortic stenosis (valve area remains small with contractile reserve) from pseudo-severe aortic stenosis (valve area increases $> 1.0 \text{ cm}^2$ with increased flow); and (2) paradoxical low-flow, low-gradient aortic stenosis, in which LVEF is preserved ($\geq 50\%$), but a small, hypertrophied, non-compliant LV cavity generates low stroke volumes.

Alternate Names:

LF-LG Aortic Stenosis; Low-Gradient Severe Aortic Stenosis

Low-Flow Priapism

Alternate index label; see *Priapism*.

Low-Grade Appendiceal Mucinous Neoplasm

A mucin-producing appendiceal neoplasm with low-grade cytologic atypia that may dilate the appendix and rupture, disseminating mucin into the peritoneum as pseudomyxoma peritonei.

Low-Grade Central Osteosarcoma

A rare low-grade malignant osteogenic tumor arising within the medullary cavity of bone. It may

resemble fibrous dysplasia or a benign fibro-osseous lesion and requires complete oncologic excision.

Low-Grade Endometrial Stromal Sarcoma

A malignant uterine stromal tumor resembling proliferative-phase endometrial stroma, characterized by infiltrative myometrial or vascular growth and often driven by characteristic gene fusions.

Low-Phosphorus Diet

A dietary pattern limiting phosphorus intake for selected patients with chronic kidney disease or persistent hyperphosphatemia. It emphasizes avoidance of phosphate additives while maintaining adequate protein and overall nutritional status.

Low-Potassium Diet

A dietary pattern limiting potassium intake when clinically indicated, usually for hyperkalemia or advanced kidney disease. It must be individualized because unnecessary restriction can reduce diet quality and cause inadequate intake of fruits and vegetables.

Low-Residue Diet

A short-term diet limiting dietary fiber and foods that leave substantial undigested material in the bowel. It may be used in selected gastrointestinal conditions or around certain procedures but is not a universal treatment for inflammatory bowel disease.

Low-Salt Diet

A low-salt diet limits sodium intake and may help control blood pressure or fluid retention in conditions such as heart failure and kidney disease.

Low-Set Ear

An ear positioned lower on the side of the head than expected relative to facial landmarks; it may be an isolated variation or a feature of a genetic or developmental condition.

Low-Set Ears And Pinna Abnormalities

Low-set ears and pinna abnormalities concerns low-set ears and pinna abnormalities, a body structure, substance, or clinical concept whose meaning de-

pends on location, function, and patient context.

Lower Airway Obstruction

Narrowing of airways below the carina, causing expiratory wheezing and airflow obstruction on spirometry. Causes include asthma, COPD, bronchiectasis, and foreign body. It is characterized by scooped-out expiratory limb on flow-volume loops and reduced FEV1/FVC ratio.

Lower Esophageal Ring

Lower esophageal ring concerns lower esophageal ring, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Lower Esophageal Sphincter

A ring of muscle between the esophagus and stomach that helps prevent acid reflux.

Alternate Names:

LES

Lower Extremity

The lower extremity is the hip, thigh, knee, leg, ankle, and foot, including their bones, joints, muscles, nerves, vessels, and skin.

Lower Extremity Venous Doppler

An ultrasound examination of the leg veins that assesses compressibility and blood flow, commonly to evaluate suspected deep venous thrombosis.

Lower Leg

The part of the limb between the knee and ankle, containing the tibia, fibula, muscles, nerves, and blood vessels.

Lower Motor Neuron Syndrome

A pattern caused by injury to an anterior horn cell, motor cranial-nerve nucleus, nerve root, plexus, or peripheral motor nerve. It typically causes weakness, reduced tone and reflexes, muscle atrophy, and fasciculations in affected muscles.

Lower Segment Cesarean Section

A cesarean delivery performed through an incision in the lower uterine segment, usually through a low transverse uterine incision.

Lower Urinary Tract Symptoms

Urinary symptoms arising from the bladder, bladder outlet, or urethra, classified as storage symptoms, voiding symptoms, and post-micturition symptoms. Causes include benign prostatic obstruction, overactive bladder, infection, neurologic disease, stricture, and malignancy.

Lower-Calorie Choices For Alcoholic Drinks

Lower-calorie alcoholic choices contain less sugar or alcohol energy, but alcohol still carries health risks and moderation or avoidance may be medically advised.

Lozenges

Solid medicinal preparations that dissolve slowly in the mouth, usually to provide local treatment for the throat or oral cavity.

LSD

Lysergic acid diethylamide is a potent hallucinogen that can cause altered perception, visual hallucinations, autonomic effects, and unpredictable changes in mood and behavior.

Lubiprostone

Lubiprostone activates intestinal chloride channels and is used for selected forms of chronic constipation and irritable bowel syndrome with constipation.

Lubricant

A substance that reduces friction between surfaces; medical lubricants are used on skin, mucosa, instruments, or devices and should be selected for tissue compatibility and intended use.

Lucanthone

Lucanthone is an older antiparasitic and investigational antineoplastic compound with effects on

parasite or tumor-cell DNA metabolism.

Luciferase

Luciferase is an enzyme that produces light in a chemical reaction; it is widely used as a reporter in biological research.

Lucilia

A genus of blowflies; some species can cause wound myiasis, while sterile larvae have occasionally been used in maggot debridement.

Ludwig Angina

A rapidly spreading cellulitis of the floor of the mouth and submandibular spaces, usually arising from an infected lower molar. Tongue elevation, dysphagia, drooling, and airway obstruction can develop rapidly and require emergency management.

Ludwig'S Angina

A rapidly progressive, life-threatening cellulitis of the submandibular, sublingual, and submental spaces, typically originating from an odontogenic infection of the lower second or third molars.

Lues

An older name for syphilis, an infection caused by the bacterium *Treponema pallidum*.

Luetic

Pertaining to, caused by, or characteristic of syphilis (lues venerea), the chronic multistage sexually transmitted and congenital systemic infection caused by the spirochete bacterium *Treponema pallidum*. Denotes syphilis-related manifestations across clinical stages: primary luetic chancre (painless, indurated genital ulcer), secondary luetic exanthem (diffuse copper-colored maculopapular rash on palms and soles, condylomata lata), tertiary luetic aortitis (obliterative endarteritis of aortic vasa vasorum causing ascending aortic aneurysm), and tertiary neurosyphilis, including tabes dorsalis (luetic posterior column spinal cord degeneration causing sensory ataxia and Argyll Robertson pupils).

Lugano Classification

The consensus staging and treatment response evaluation criteria for pediatric and adult non-Hodgkin lymphoma and Hodgkin lymphoma, adapted from the historical Ann Arbor staging system. Incorporates 18F-fluorodeoxyglucose positron emission tomography combined with computed tomography (FDG-PET/CT) as the primary imaging standard for FDG-avid lymphomas. Staged from Stage I (single lymph node region or localized extralymphatic site) to Stage IV (diffuse or disseminated involvement of one or more extralymphatic organs), utilizing the 5-point Deauville score to assess metabolic response during interim and end-of-treatment evaluations.

Lugol's Iodine

An aqueous solution of iodine and potassium iodide used as an antiseptic, in selected thyroid treatments, and in some laboratory procedures.

Lugol's Solution

Lugol's solution is a mixture of iodine and potassium iodide used in selected laboratory, diagnostic, and medical applications; it can irritate tissue and affect thyroid function.

Lumbago

A non-specific term for low back pain, typically referring to acute or chronic pain in the lumbar region (between the lower ribs and the gluteal folds). Lumbago is a symptom, not a diagnosis.

Lumbago (Low Back Pain)

Alternate index label for Low Back Pain.

Lumbar

Relating to the lower back, especially the region or five vertebrae between the thoracic spine and sacrum.

Lumbar Disc Herniation

Protrusion or extrusion of lumbar disc material through the annulus fibrosus, which may irritate or compress a nerve root and cause back or leg pain. Symptoms, examination findings, and imaging

determine its significance and treatment.

Lumbar Lordosis Lower Spine

Lumbar lordosis is the normal inward curve of the lower spine; excessive or reduced curvature may be associated with posture, muscle imbalance, hip disease, vertebral deformity, or pain. Examination and imaging are guided by symptoms rather than appearance alone.

Lumbar MRI Scan

Magnetic resonance imaging of the lumbar spine used to evaluate vertebrae, discs, spinal canal, nerve roots, marrow, and soft tissues in conditions such as radiculopathy or spinal stenosis.

Lumbar Plexus

The lumbar plexus is a network of nerves from the upper lumbar spinal roots that supplies the lower abdomen, pelvis, and parts of the thigh and leg.

Lumbar Puncture

A sterile procedure in which a needle is inserted, usually between the L3–L4 or L4–L5 vertebrae below the conus medullaris, to enter the lumbar subarachnoid space. It can measure opening pressure, collect cerebrospinal fluid for cell count, protein, glucose, microbiology, cytology, or other tests, or deliver selected intrathecal medicines. Indications include suspected meningitis or encephalitis, subarachnoid hemorrhage, inflammatory or demyelinating disease, malignancy, and planned intrathecal therapy. Before the procedure, clinicians assess for features suggesting a mass lesion, obstructive hydrocephalus, or another risk of brain herniation, as well as bleeding risk, anticoagulant use, thrombocytopenia, and infection at the puncture site; neuroimaging is obtained before puncture when clinically indicated. Possible complications include post-dural-puncture headache, back pain, bleeding, infection, persistent CSF leak, and, rarely, neurologic deterioration.

Alternate Names:

LP Spinal Tap

Lumbar Radiculopathy

A condition caused by compression, irritation, or

inflammation of a spinal nerve root in the lumbar spine, resulting in pain radiating into the lower extremity along the distribution of the affected nerve root (sciatica). The most commonly affected nerve roots are L4, L5, and S1.

Lumbar Region

The lumbar region is the lower part of the back between the ribs and pelvis, containing the five lumbar vertebrae.

Lumbar Spine

The inferior mobile segment of the human vertebral column, typically composed of five robust vertebrae (L1 through L5) situated between the thoracic spine and the sacrum. Anatomically characterized by a secondary lordotic curvature, broad kidney-shaped vertebral bodies, and short, sturdy spinous and transverse processes designed to bear heavy axial compression loads. Houses the conus medullaris (terminating at the L1–L2 interspace) and the cauda equina nerve roots bathed in CSF within the lumbar thecal sac. Common pathologies include lumbar intervertebral disc herniation with radiculopathy (sciatica), lumbar spinal canal stenosis with neurogenic claudication, spondylolysis, and degenerative spondylolisthesis.

Alternate Names:

Lumbar region

Lumbar Spine CT Scan

Computed tomography of the lumbar spine that provides detailed images of vertebral bone and alignment and is particularly useful for detecting fractures or other bony abnormalities.

Lumbar Stenosis

Narrowing of the spinal canal or nerve openings in the lower back.

Alternate Names:

Stenosis Lumbar (Lumbar Stenosis) Stenosis Spinal (Lumbar Stenosis)

Lumbar Vertebrae

Largest and strongest mobile vertebrae for weight-bearing. Large kidney-shaped bodies, short hatchet-

shaped spinous processes, sagittally-oriented facets allowing primarily flexion/extension. Lordotic curvature. Most common disc herniation site, particularly L4-L5 and L5-S1 causing sciatica.

Lumbar Vertebrae (L1-L5)

The five lumbar vertebrae in the lower back, numbered L1 through L5, between the thoracic spine and sacrum and bearing much of the body's load.

Lumbosacral Region

The lumbosacral region is the junction between the lower lumbar spine and the sacrum at the back of the pelvis.

Lumbosacral Spine CT

Computed tomography of the lower spine and sacrum using x-rays and computer reconstruction to evaluate fractures, bone lesions, alignment, and selected causes of nerve compression.

Lumbosacral Spine X-Ray

Plain radiographic imaging of the lumbar spine and sacrum used to evaluate alignment, fractures, degenerative changes, deformity, and some bone lesions.

Lumbricals

Small hand or foot muscles arising from tendons of the flexor digitorum profundus or flexor digitorum longus and assisting flexion-extension coordination.

Lumen

The inner space of a hollow organ, vessel, or tube.

Luminescence

Luminescence is emission of light from a substance through a process other than high-temperature incandescence, such as fluorescence or chemiluminescence.

Luminescence Type

Luminescence type identifies the mechanism by which a material emits light, such as fluorescence, phosphorescence, bioluminescence, or chemiluminescence.

Luminescent

Emitting visible light without being incandescent, as in some diagnostic markers or biological phenomena.

Lump In The Abdomen

An abdominal lump may be a hernia, enlarged organ, cyst, stool, inflammation, or tumor; pain, vomiting, fever, growth, or a pulsatile mass requires prompt assessment.

Lumpectomy

Breast-conserving surgery excising a malignant lesion with a margin of normal tissue, combined with whole-breast radiation to yield survival equivalent to mastectomy for early-stage cancer. An acceptable margin is no ink on tumor for invasive cancer and 2 mm for ductal carcinoma in situ.

Lumpy Jaw

A chronic granulomatous infection of the jaw, usually cervicofacial actinomycosis, causing swelling and sinus formation.

Lunar Caustic

An old name for silver nitrate, a caustic agent formerly used to cauterize tissue and treat some lesions.

Lunate

Crescent-shaped proximal row carpal bone between scaphoid and triquetrum. Most commonly dislocated carpal bone from falls on extended wrists. Dislocation may compress the median nerve causing acute carpal tunnel syndrome. Vulnerable to avascular necrosis (Kienbock disease) from its precarious blood supply.

Lung

The paired, cone-shaped respiratory organs located in the thoracic cavity, responsible for gas exchange (oxygen uptake, carbon dioxide elimination). Each lung is divided into lobes: the right lung has three (superior, middle, inferior), the left lung has two (superior, inferior) with a cardiac notch accommodating the heart.

Lung Abscess

Localized necrosis with cavitation containing purulent material. Causes include aspiration and anaerobic bacteria. CXR shows thick-walled cavity with air-fluid level.

Lung Anatomy (Lungs Design And Purpose)

Alternate index label for Lungs Design And Purpose.

Lung Cancer

Leading cancer death worldwide. Types: small cell, non-small cell. Risk factors: smoking, radon, asbestos.

Alternate Names:

Cancer, Lung Cancer In Lung (Lung Cancer)

Lung Cancer - Small Cell

Lung cancer - small cell refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Lung Collapse

Alternate index label; see *Atelectasis*; see also *Pneumothorax*.

Lung Compliance

The change in lung volume produced by a given change in transpulmonary pressure. Reduced compliance increases the work of breathing, whereas excessive compliance may occur when elastic recoil is lost, as in emphysema.

Lung Cyst

A lung cyst is a round air- or fluid-containing space in lung tissue, caused by developmental disease, infection, emphysema, inflammation, or another disorder.

Lung Development

Lung development is embryonic and postnatal formation and maturation of airways, alveoli, blood vessels, and gas-exchange capacity.

Lung Diffusion Testing

Pulmonary-function testing that measures transfer of gas, usually carbon monoxide, from the air sacs into pulmonary capillary blood and helps assess emphysema, interstitial lung disease, or pulmonary vascular disease.

Lung Disease

Lung disease encompasses disorders affecting the airways, parenchyma, pleura, pulmonary vasculature, and chest wall.

Lung Disease, Interstitial

Alternate index label; see *Interstitial lung disease*.

Lung Fibroma

A lung fibroma is a usually benign fibrous tumor in or around lung tissue, often found incidentally and assessed by imaging or biopsy when needed.

Lung Fluke

A parasitic trematode, especially *Paragonimus* species, whose infection can cause chronic cough, hemoptysis, and pulmonary lesions.

Lung Function Tests

Physiologic tests that measure aspects of breathing, including airflow, lung volumes, and gas transfer, to assess respiratory function.

Lung Gallium Scan

A nuclear medicine study using gallium-67 to identify areas of inflammation or infection in the lungs and other tissues; it has largely been replaced by more specific imaging.

Lung Herniation

Protrusion of lung tissue through a defect in the chest wall, most commonly occurring after thoracic trauma, thoracotomy, or in association with rib fractures and chronic obstructive pulmonary disease. Presents with a reducible chest wall mass that increases with coughing or straining and may cause pain and respiratory compromise.

Lung Injury

Damage to lung tissue or the pulmonary circulation caused by trauma, infection, inhaled substances, inflammation, aspiration, oxygen toxicity, or other disease.

Lung Lavage

Lung lavage is washing or flushing of the airways or lungs with fluid, used in selected conditions such as pulmonary alveolar proteinosis or sampling.

Lung Metastases

Lung metastases are cancer deposits that have spread to the lungs from another primary tumor and may cause cough, breathlessness, chest pain, or no symptoms.

Lung Needle Biopsy

CT- or ultrasound-guided percutaneous sampling of a lung or pleural lesion to evaluate selected masses, infection, or diffuse disease. Pneumothorax and pulmonary hemorrhage are important complications.

Lung Neoplasm

A lung neoplasm is an abnormal growth in the lung that may be benign or malignant; evaluation commonly uses imaging and tissue sampling.

Lung Nodule

A rounded, usually well-defined opacity in the lung measuring up to 3 cm on imaging. It may be benign, infectious, inflammatory, or an early manifestation of lung cancer and often requires follow-up assessment.

Lung PET Scan

Positron-emission tomography, often combined with computed tomography, using a radiotracer to assess metabolic activity in lung nodules, cancer, infection, or inflammation.

Lung Plethysmography

A pulmonary-function test performed in a sealed chamber to measure lung volumes, including trapped gas and functional residual capacity, and

airway resistance.

Lung Problems And Volcanic Smog

Volcanic smog contains gases and fine particles that irritate eyes and airways and can worsen asthma or lung disease; limiting exposure and following public-health advice reduce harm.

Lung Protective Ventilation

A ventilation strategy using low tidal volumes (6 mL/kg ideal body weight), plateau pressure < 30 cmH₂O, appropriate PEEP, and permissive hypercapnia to minimize ventilator-induced lung injury. It is the standard of care for ARDS and is used in all mechanically ventilated patients to reduce barotrauma, volutrauma, and biotrauma.

Lung Surgery

A medical procedure, treatment, device, or care topic related to lung surgery; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Lung Transplant

Surgical replacement of one or both lungs from a donor for end-stage lung disease: COPD (most common), idiopathic pulmonary fibrosis, cystic fibrosis, pulmonary hypertension, and other advanced conditions. Types: single, bilateral, heart-lung.

Lung Transplantation

Surgical replacement of a diseased lung with a healthy lung from a donor. Indications include IPF, COPD, CF, PAH, and bronchiectasis. Options include single lung transplant, double lung transplant, or heart-lung transplant. Post-transplant immunosuppression is required lifelong. Complications include rejection and infection.

Lung, Diseases Of

Conditions affecting the airways, alveoli, pleura, or pulmonary circulation, including infection, asthma, COPD, fibrosis, and cancer.

Lung Volume Reduction Surgery

A surgical palliative procedure for patients with severe, heterogeneous emphysema (predominantly upper-lobe emphysema with low baseline exercise capacity) refractory to medical therapy. Performed through video-assisted thoracoscopic surgery or median sternotomy, approximately 20 to 30 percent of the most severely diseased, hyperinflated, non-functional lung tissue is excised, which decompresses adjacent healthier parenchyma, improves diaphragm curvature, enhances chest wall respiratory mechanics, and increases dynamic lung elastic recoil.

Alternate Names:

LVRs; Reduction Pneumoplasty; Bilateral Lung Volume Reduction

Lungs

The paired respiratory organs in the chest that exchange oxygen and carbon dioxide between air and blood; they also contribute to acid–base regulation.

Lungs Design And Purpose

The lungs exchange oxygen and carbon dioxide through branching airways and microscopic alveoli surrounded by capillaries. The airways filter, warm, and humidify air, while respiratory muscles drive ventilation; disease can impair airflow, diffusion, or blood flow.

Alternate Names:

Lung Anatomy (Lungs Design And Purpose)

Lungs Fluid (Pleural Effusion (Fluid In The Chest Or On Lung))

Alternate index label for Pleural Effusion (Fluid In the Chest or On Lung).

Lunula

The pale crescent-shaped area at the base of a fingernail or toenail.

Lupus

A group of autoimmune diseases in which the immune system attacks the body's own tissues. Systemic lupus erythematosus may affect the skin, joints, kidneys, blood cells, nervous system, and other organs. Also called SLE.

Alternate Names:
SLE.

Lupus (Systemic Lupus)

Alternate index label for Systemic Lupus.

Lupus Erythematosus

Systemic lupus erythematosus is a chronic autoimmune disease characterized by production of autoantibodies against nuclear antigens, leading to immune complex-mediated inflammation and tissue damage in multiple organ systems. The disease predominantly affects women of childbearing age, with a striking female predominance of 9 to 1.

Lupus Erythematosus (Systemic Lupus Erythematosus - SLE)

A chronic multisystem autoimmune disease predominantly affecting women (9:1 female:male) of childbearing age, characterized by autoantibody production (ANA 98%, anti-dsDNA 70%, anti-Sm 30%) and immune complex deposition causing tissue injury.

Alternate Names:

Systemic Lupus Erythematosus - SLE

Lupus Nephritis

Kidney inflammation caused by systemic lupus erythematosus. It can cause blood or protein in the urine, high blood pressure, and reduced kidney function. Classification is based largely on kidney-biopsy findings, and treatment depends on the class, severity, kidney function, and individual risks.

Lupus Panniculitis

A chronic inflammatory form of cutaneous lupus affecting subcutaneous fat, producing firm deep nodules that may heal with lipoatrophy, scarring, or overlying discoid changes.

Lupus Pernio

A chronic, violaceous skin lesion of the face and extremities associated with sarcoidosis, indicating a higher risk of systemic involvement and chronic disease.

Lupus Vulgaris

A chronic, progressive form of cutaneous tuberculosis (TB of the skin) caused by *Mycobacterium tuberculosis*. Once common in Europe, now rare in developed countries but still seen in developing regions.

Lurtotecan

Lurtotecan is an investigational topoisomerase-I inhibitor studied for anticancer activity by interfering with DNA replication and repair.

Luteal Cell

luteal cell refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Luteal Phase Defect

An endocrinopathy of the menstrual cycle characterized by insufficient progesterone production by the corpus luteum or inadequate endometrial secretory responsiveness, resulting in an abnormally shortened luteal phase (typically fewer than 10 to 11 days from ovulation to menses). Associated with abnormal endometrial maturation, failed embryonic implantation, and recurrent early pregnancy loss.

Alternate Names:

Luteal Phase Deficiency; LPD

Lutein

A carotenoid pigment found in leafy greens and concentrated in the retina.

Luteinization

Luteinization is the transformation of an ovarian follicle after ovulation into a corpus luteum that produces progesterone.

Luteinizing Hormone

LH: a gonadotropin secreted by the anterior pituitary, regulating gonadal steroidogenesis. In females: stimulates theca cells to produce androgens (aromatized to estradiol); mid-cycle LH surge triggers ovulation (used in ovulation prediction and timing

of intercourse/IVF). In males: stimulates Leydig cells to produce testosterone.

Luteinizing Hormone

A pituitary gonadotropin that triggers ovulation and corpus-luteum formation and stimulates testosterone production in the testes.

Luteinizing Hormone Blood Test

A blood test measuring luteinizing hormone, which stimulates ovulation and ovarian hormone production in females and testosterone production in males; it helps evaluate puberty, fertility, and pituitary or gonadal disorders.

Luteinizing Hormone-Releasing Hormone

An older name for gonadotropin-releasing hormone (GnRH), a hypothalamic hormone released in pulses that stimulates the anterior pituitary to secrete luteinizing hormone and follicle-stimulating hormone.

Luteinizing Hormone-Releasing Hormone

Another name for gonadotropin-releasing hormone, which stimulates pituitary release of LH and FSH.

Luteolin

Luteolin is a plant flavonoid studied for antioxidant and anti-inflammatory effects; clinical benefits and safe therapeutic dosing are not established for routine treatment.

Luteolysis

Luteolysis is the breakdown of the corpus luteum, causing progesterone levels to fall when pregnancy has not occurred.

Luteoma

A luteoma is a usually benign ovarian mass of hormone-producing lutein cells, sometimes associated with pregnancy and androgen excess.

Luteoma Of Pregnancy

A benign, pregnancy-associated ovarian proliferation of luteinized stromal cells driven by hormonal

stimulation. It may cause maternal or fetal androgen excess and usually regresses after delivery.

Luteotropic Hormone

A hormone that supports the corpus luteum; the term traditionally refers mainly to prolactin, although usage varies by species and source.

Lutetic

Relating to syphilis, an infection caused by the bacterium *Treponema pallidum*. This term is related to “luetetic,” from an older name for syphilis; “luteal” is the term for the corpus luteum.

Lutetium-177

Beta and gamma emitter, half-life 6.7 days. Used in peptide receptor radionuclide therapy (PRRT) and PSMA therapy. Both therapeutic and imaging capabilities.

Luxation

Complete dislocation of a joint, in which the articular surfaces lose their normal contact.

LVAD

Left-ventricular assist device, an implanted pump that helps the left ventricle circulate blood.

Alternate Names:

Left-ventricular assist device

LVNC

Alternate name; see *Left Ventricular Noncompaction*.

LVRS

Alternate name; see *Lung Volume Reduction Surgery*.

Lyase

A lyase is an enzyme that breaks or forms chemical bonds without using hydrolysis or oxidation as the main reaction.

Lycopene

Lycopene is a red plant pigment and antioxidant

found in tomatoes and some other foods; supplements have not been proven to prevent disease reliably.

Lyme Disease

A tick-borne infection caused by *Borrelia burgdorferi* (*Ixodes scapularis*, deer tick), endemic to the northeastern and upper midwestern US. Early localized: erythema migrans (bullseye rash, >5cm) at tick bite site, fatigue, fever, myalgia.

Alternate Names:

Arthritis Lyme (Lyme Disease)

Lyme Disease Blood Test

Serologic testing for antibodies to *Borrelia burgdorferi* and related organisms, usually using a two-step algorithm; results must be interpreted with symptoms, exposure, and timing.

Lymph

A clear, watery fluid that circulates through the lymphatic system, derived from interstitial fluid that has entered the lymphatic capillaries.

Lymph Leakage

Lymph leakage is escape of lymphatic fluid after injury, surgery, or obstruction and may cause swelling, fluid collections, or chylous drainage.

Lymph Node

A lymph node is a small immune organ that filters lymph and helps activate immune responses to infection, inflammation, or abnormal cells.

Lymph Node / Gland

Small, bean-shaped organs of the lymphatic system that filter lymph and serve as sites for immune cell activation. Lymph nodes are distributed throughout the body (approximately 500-600 in total) and are concentrated in regions: cervical, axillary, inguinal, mediastinal, mesenteric, para-aortic, and iliac chains.

Lymph Node Biopsy

Removal of part or all of a lymph node for micro-

scopic and sometimes microbiologic or molecular examination to evaluate malignancy, infection, or inflammatory disease.

Lymph Node Culture

Laboratory culture of lymph-node tissue or aspirate to identify bacteria, fungi, or mycobacteria causing lymphadenitis; culture is interpreted with histology and other tests.

Lymph Node Dissection

Removal of lymph nodes for staging or treatment. Sentinel node biopsy less invasive alternative.

Lymph Node Structure

Small bean-shaped lymphoid organs (1-25 mm) distributed along lymphatic vessels, filtering lymph and mounting immune responses. Each has a cortex (outer, containing B-cell follicles with germinal centers), paracortex (deep cortex, containing T-cells and dendritic cells), and medulla (inner, containing medullary cords and sinuses).

Lymph Nodes

Small immune organs that filter lymph and help detect infection or abnormal cells.

Alternate Names:

Lymph glands

Lymph Nodes, Swollen

Alternate index label; see *Swollen lymph nodes*.

Lymph Swollen Glands (Swollen Lymph Nodes)

Alternate index label for Swollen Lymph Nodes.

Lymph Swollen Nodes (Swollen Lymph Nodes)

Alternate index label for Swollen Lymph Nodes.

Lymph System

The lymph system includes lymph, lymphatic vessels, lymph nodes, spleen, thymus, and related tissues that return fluid and support immune defense.

Lymphadenectomy

Surgical removal of lymph nodes, either sentinel or regional, for staging or therapeutic purposes; examples include axillary, inguinal, cervical, and retroperitoneal lymph node dissection.

Lymphadenitis

Lymphadenitis is inflammation or infection of lymph nodes, causing localized tenderness and enlargement from bacterial, viral, mycobacterial, cat-scratch, or other disease. infection. Affected nodes may be tender, warm, or fluctuant, and the condition may be localized or generalized.

Lymphadenitis, Mesenteric

Alternate index label; see *Mesenteric lymphadenitis*.

Lymphadenopathy

Enlargement of lymph nodes (greater than 1 cm in diameter, or >1.5 cm for inguinal nodes). Lymphadenopathy can be localised (single or contiguous region) or generalised (three or more non-contiguous regions).

Lymphangiectasis

Abnormal dilatation of lymphatic vessels. It may be congenital or acquired and can cause lymph leakage, oedema, protein-losing enteropathy, chylous effusions, or pulmonary and pleural complications depending on the affected site.

Lymphangiogenesis

lymphangiogenesis is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

Lymphangiogram

A lymphangiogram uses contrast imaging to show lymphatic vessels and nodes, helping evaluate obstruction, leakage, malformation, or spread of disease.

Lymphangiography

Contrast imaging of lymphatic vessels. Evaluates

lymphatic obstruction, fistulas. Largely replaced by MRI/CT.

Lymphangioleiomyomatosis

A rare, progressive cystic lung disease caused by proliferation of abnormal smooth muscle-like cells (LAM cells) in the lungs, lymphatics, and kidneys. It occurs almost exclusively in women of childbearing age. HRCT shows thin-walled cysts throughout both lungs. It may be associated with tuberous sclerosis complex.

Lymphangioma

A benign congenital malformation of the lymphatic system, composed of dilated lymphatic channels. Lymphangiomas are typically present at birth (90% diagnosed by age 2) and result from failure of the lymphatic system to develop normal connections with the venous system.

Lymphangiomatosis

An uncommon disorder involving excessive or abnormal growth of lymphatic vessels in one or more tissues.

Lymphangiomyoma

Lymphangiomyoma is a benign proliferation of lymphatic-type smooth-muscle cells, usually discussed in relation to lymphangioleiomyomatosis.

Lymphangiosarcoma

Lymphangiosarcoma is a rare aggressive cancer arising from cells of lymphatic vessels, sometimes developing in chronically lymphedematous tissue.

Lymphangitis

Inflammation and infection of lymphatic vessels, usually spreading from an infected skin wound or cellulitis; tender red streaks, fever, and enlarged regional lymph nodes may occur.

Lymphatic Basin

A lymphatic basin is the group of lymph nodes and drainage pathways receiving lymph from a defined body region.

Lymphatic Disease

A clinical condition or finding involving lymphatic disease. Its features, causes, evaluation, and management depend on the clinical context.

Lymphatic Filariasis

A mosquito-borne parasitic infection caused by filarial worms, most commonly *Wuchereria bancrofti*; adult worms inhabit lymphatic vessels and can cause chronic lymphatic obstruction, lymphedema, and elephantiasis.

Lymphatic Mapping

A clinical condition or finding involving lymphatic mapping. Its features, causes, evaluation, and management depend on the clinical context.

Lymphatic Obstruction

Impaired flow of lymph through lymphatic vessels or nodes, causing accumulation of protein-rich interstitial fluid and swelling known as lymphedema.

Lymphatic Obstruction (Lymphedema)

Alternate index label for Lymphedema.

Lymphatic System

A network of lymphatic vessels, lymph nodes, and lymphoid organs (tonsils, thymus, spleen, Peyer patches) that returns interstitial fluid (lymph) to the bloodstream, transports dietary fat (chyle), and serves as the conduit for immune surveillance.

Lymphatic Tissue

Lymphatic tissue contains immune cells and structures that filter lymph, trap antigens, and coordinate immune defense.

Lymphatic Vessel

A lymphatic vessel transports lymph from tissues through lymph nodes and eventually returns fluid to the bloodstream.

Lymphedema

Persistent swelling caused by accumulation of lymphatic fluid in tissues, usually in an arm or leg.

Alternate Names:

Lymphatic Obstruction (Lymphedema)

Lymphedema (Lymphoedema)

Chronic swelling of a body part due to impaired lymphatic drainage, leading to accumulation of protein-rich interstitial fluid. Primary lymphedema: caused by congenital or hereditary lymphatic maldevelopment.

Alternate Names:

Lymphoedema

Lymphedema Management

Measures used to reduce swelling and preserve function, including compression, exercise, skin care, and selected forms of manual lymphatic therapy.

Lymphoedema

A misspelling of lymphoedema, swelling caused by accumulation of protein-rich lymph when lymphatic drainage is impaired.

Lymphoblast

A lymphoblast is an immature lymphoid precursor that normally develops into a B or T lymphocyte; uncontrolled accumulation occurs in acute lymphoblastic leukemia.

Lymphoblast Count

A lymphoblast count measures immature lymphoid cells in blood or bone marrow and may help evaluate or monitor acute lymphoblastic leukemia.

Lymphocele

A lymphocele is a collection of lymphatic fluid caused by disruption or blockage of lymph vessels, often after surgery or transplantation.

Lymphocyte

A type of white blood cell (leukocyte) that is the primary cellular component of the adaptive immune system. Lymphocytes account for 20-40% of circulating white blood cells ($1.0\text{--}4.8 \times 10^9/\text{L}$). Three main types: (1) T lymphocytes (T cells): develop in the thymus, responsible for cell-mediated immunity.

Lymphocyte Activation

A clinical condition or finding involving lymphocyte activation. Its features, causes, evaluation, and management depend on the clinical context.

Lymphocyte Count

A lymphocyte count measures lymphocytes in the blood and can help assess infection, immune deficiency, inflammation, or blood disorders.

Lymphocyte Proliferation

A clinical condition or finding involving lymphocyte proliferation. Its features, causes, evaluation, and management depend on the clinical context.

Lymphocytic

Relating to lymphocytes or characterized by an increased or predominant number of lymphocytes.

Lymphocytic Colitis

Chronic inflammatory bowel disease characterized by increased intraepithelial lymphocytes exceeding twenty per one hundred surface epithelial cells in the colonic mucosa without significant subepithelial collagen band thickening.

Alternate Names:

Colitis Collagenous (Lymphocytic Colitis) Colitis Lymphocytic (Lymphocytic Colitis) Colitis Microscopic (Lymphocytic Colitis)

Lymphocytic Interstitial Pneumonia

A rare ILD characterized by diffuse polyclonal lymphocytic infiltration of the lung parenchyma. It is strongly associated with Sjgren syndrome and HIV. HRCT shows ground-glass opacities, thin-walled cysts, and lymphadenopathy. Treatment is corticosteroids for symptomatic disease.

Lymphocytic Leukemia

Lymphocytic leukemia is a blood cancer in which abnormal lymphoid cells multiply in the bone marrow, blood, lymph nodes, or other tissues.

Lymphocytic Mastitis

A benign fibroinflammatory breast lesion with dense

lymphocytic infiltration and stromal fibrosis, classically associated with diabetes or autoimmune disease and also called diabetic mastopathy. It can mimic carcinoma clinically and radiologically.

Lymphocytoma Cutis

Lymphocytoma cutis is a benign skin lymphoid proliferation presenting as red or violaceous plaques or nodules and sometimes associated with infection or immune stimulation.

Lymphocytopenia

A reduced lymphocyte count ($< 1.0 \times 10^9/L$). Causes: acute (stress, steroids, sepsis, trauma, burns), infections (HIV, viral, tuberculosis, typhoid), immunosuppressive drugs, radiation, marrow failure (aplasia, leukemia, lymphoma), autoimmune (SLE), and congenital immunodeficiencies.

Lymphocytosis

An abnormally increased number or proportion of lymphocytes in the blood, often associated with viral infection, some bacterial infections, or lymphoproliferative disorders.

Lymphocytosis (High Lymphocyte Count)

An increased number of lymphocytes in the blood, often associated with infection, inflammation, or a lymphoproliferative disorder.

Lymphoedema

Chronic swelling caused by impaired lymphatic drainage, most often affecting a limb but potentially involving other regions.

Lymphofollicular Hyperplasia

Lymphofollicular hyperplasia is enlargement or increased formation of lymphoid follicles in response to immune stimulation, infection, inflammation, or other triggers.

Lymphogranuloma Venereum

Lymphogranuloma venereum is a sexually transmitted infection caused by invasive Chlamydia tra-

chomatis strains, often producing a small lesion followed by painful regional lymphadenopathy or proctitis. L1–L3, classically producing transient genital lesions and painful inguinal lymphadenopathy.

Lymphoid

Resembling or relating to lymphatic tissue, lymphocytes, or organs involved in lymphocyte development and immune function.

Lymphoid Hyperplasia

Lymphoid hyperplasia is benign increase in lymphoid tissue caused by immune stimulation, infection, inflammation, or sometimes a reactive response near a tumor.

Lymphoid Tissue

Tissue containing lymphocytes and supporting immune responses, found in lymph nodes, spleen, thymus, tonsils, and mucosal sites.

Lymphokine

A cytokine produced by lymphocytes (a subset of cytokines; the term lymphokine is largely historical, now 'cytokine'). Examples: IL-2, IL-4, IFN-gamma (from T cells), and B-cell growth factors. Mediate lymphocyte communication, activation, and regulation of immune responses.

Lymphoma

A malignancy of lymphocytes, divided into Hodgkin lymphoma (HL—Reed-Sternberg cells, cervical/supraclavicular nodes, B symptoms, younger adults) and non-Hodgkin lymphoma (NHL—heterogeneous, more common, aggressive or indolent).

Lymphoma (Hodgkin'S And Non-Hodgkin'S)

A group of cancers arising from lymphocytes, including Hodgkin lymphoma and the many types of non-Hodgkin lymphoma.

Alternate Names:

Hodgkin's and Non-Hodgkin's

Lymphoma, Hodgkin

Alternate index label; see *Hodgkin lymphoma* (*Hodgkin disease*).

Lymphoma, Non-Hodgkin

Alternate index label; see *Non-Hodgkin lymphoma*.

Lymphomatoid Papulosis

Lymphomatoid papulosis is a chronic recurrent skin disorder with cancer-like lymphoid cells; the bumps often heal spontaneously but require monitoring for lymphoma.

Lymphopenia

Lymphopenia is an abnormally low number of lymphocytes, caused by infection, medicines, immune disease, malnutrition, marrow disorders, or other conditions.

Lymphoplasmacytic Lymphoma

Alternate index label; see *Waldenstrom macroglobulinemia*.

Lymphopoiesis

The production and maturation of lymphocytes from hematopoietic stem and progenitor cells. It occurs in primary lymphoid organs such as bone marrow and thymus and continues in peripheral lymphoid tissues during immune responses.

Lymphoproliferative Disorder

A clinical condition or finding involving lymphoproliferative disorder. Its features, causes, evaluation, and management depend on the clinical context.

Lymphoscintigraphy

Lymphatic system imaging using Tc-99m nanocolloid injected near lesion. Used for sentinel lymph node biopsy (melanoma, breast cancer), lymphedema evaluation.

Lynch Syndrome

Hereditary nonpolyposis colorectal cancer syndrome caused by mismatch repair gene mutations including MLH1, MSH2, MSH6, and PMS2 with autosomal

dominant inheritance. It increases the risk of colorectal, endometrial, ovarian, gastric, and urinary tract cancers.

Lysergic Acid Diethylamide

A potent hallucinogenic drug (psychedelic) classified as a Schedule 1 controlled substance (high abuse potential, no accepted medical use). LSD acts as a partial agonist at serotonin 5-HT_{2A} receptors in the prefrontal cortex, leading to altered sensory perception, mood, and cognition.

Lysine

Lysine is an essential amino acid needed for protein production, growth, and tissue repair; it must be obtained from food.

Lysinibacillus

Lysinibacillus is a group of environmental, spore-forming bacteria; recovery from a clinical sample requires correlation with symptoms and specimen quality.

Lysis

The breakdown, dissolution, or destruction of cells or tissue; examples include hemolysis, the breakdown of red blood cells, and thrombolysis, the dissolution of a blood clot.

Lysogenic Conversion

The acquisition of new properties (genes) by a bacterium when a temperate bacteriophage integrates its genome as a prophage and expresses phage-encoded genes.

Lysogeny

Lysogeny is a state in which a bacteriophage's genetic material is maintained inside a bacterial cell and replicated with the host genome.

Lysol

A historical trade name for cresol-containing disinfectant preparations; products and formulations vary, and ingestion or concentrated exposure is hazardous.

Lysophagy

A biochemical process or molecule involving lysophagy. Its role depends on its structure, pathway, and physiological context.

Lysophosphatidylcholine

A biochemical process or molecule involving lysophosphatidylcholine. Its role depends on its structure, pathway, and physiological context.

Lysophospholipids

lysophospholipids is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Lysosome

Membrane-bound organelles containing hydrolytic enzymes (acid hydrolases: proteases, lipases, nucleases, glycosidases) functioning at low pH (4.5-5.0) maintained by V-ATPase proton pump. Degrade macromolecules from endocytosis, phagocytosis, and autophagy.

Lysozyme

An antimicrobial enzyme that cleaves bacterial cell-wall peptidoglycan and is found in tears, saliva, breast milk, and some leukocytes.

Lysozyme Test

A lysozyme test measures the enzyme lysozyme in a sample and may support evaluation of selected blood, inflammatory, or infectious disorders.

Lyssa

Rabies, a fatal viral infection of the central nervous system transmitted most often through saliva from an infected animal.

Alternate Names:

Compact bone

Lyssavirus

lyssavirus is a virus or viral group classified by its genetic and biologic features. Clinical importance depends on the strain, host, route of transmission,

tissue tropism, and ability to cause disease.

Lytic

Causing or involving lysis, or the breakdown of cells, tissue, or another biological structure; a lytic bone lesion is an area of bone destruction.

Laparoscopic Surgery

Surgery performed through small cuts using a camera and long instruments. It often causes less pain and faster recovery than open surgery, but still has risks such as bleeding, infection, and injury to nearby organs.

Leber's Hereditary Optic Neuropathy

An inherited mitochondrial disorder that causes painless loss of central vision, usually first in one eye and then the other. It mainly affects young men, and genetic counseling and specialist eye care may help.

Leigh's Syndrome

A rare progressive neurologic disorder, usually beginning in infancy or childhood, caused by problems with cellular energy production. It can damage the brainstem and cause developmental regression, movement problems, seizures, or breathing difficulties.

Leprosy

A long-term infection caused mainly by *Mycobacterium leprae* that affects skin and peripheral nerves. Early treatment with multiple antibiotics prevents nerve damage and disability; casual contact does not usually spread it.

Lewy Bodies

Abnormal deposits of the protein alpha-synuclein inside nerve cells. They are seen in Parkinson disease and dementia with Lewy bodies and are associated with movement, thinking, sleep, and visual-perception problems.

Lichen Striatus

A usually harmless skin condition causing small,

flat, pink, brown, or pale bumps in a line along a limb. It often affects children and usually clears without treatment.

Linear Nevus Sebaceous Syndrome

A rare disorder involving a linear sebaceous nevus, a skin lesion caused by abnormal skin glands, together with possible eye, brain, or skeletal abnormalities. It requires evaluation based on the organs involved.

Lipitor (Atorvastatin)

Lipitor is a brand name for atorvastatin, a statin medicine that lowers low-density lipoprotein cholesterol and reduces the risk of heart attack and stroke. Muscle symptoms and liver-related effects should be discussed with a clinician.

Lowe's Syndrome

A rare inherited disorder, also called oculocerebrorenal syndrome, that mainly affects the eyes, brain, and kidneys. Features may include congenital cataracts, developmental difficulties, low muscle tone, and kidney-related loss of minerals.

L-theanine

An amino acid found mainly in tea leaves. It may influence relaxation and alertness, but supplements can interact with medicines and should not be assumed to treat a medical condition.

Lung Capacity

The amount of air the lungs can hold or move, measured with breathing tests such as spirometry and lung-volume testing. Results help assess conditions including asthma, chronic obstructive pulmonary disease, and restrictive lung disease.

Lysosomal Storage Disorders

A group of inherited diseases in which missing or faulty lysosomal enzymes cause substances to build up inside cells. Accumulation can damage organs, bones, nerves, or other tissues; treatment depends on the specific disorder.

Lytic Lesion

A lytic lesion is an area of bone destruction caused by processes such as cancer, infection, or some metabolic bone disorders.

M

M Phase

The part of the cell cycle when a cell separates its copied genetic material and divides into two new cells.

MacConkey Agar

A laboratory growth medium used mainly to grow and distinguish certain intestinal bacteria. It helps show whether bacteria can break down lactose, a sugar.

Macerate

To soften tissue by soaking and enzymatic digestion, as may occur in a stillborn fetus after death.

Maceration

Softening and breakdown of tissue caused by prolonged exposure to moisture or fluid; it may occur in skin, wounds, or a fetus after death.

Macewen Sign

An unusually hollow sound heard when part of the skull is tapped. It may occur with fluid buildup in the brain or, rarely, a brain abscess, but it is not diagnostic by itself.

Machine Learning

A computational approach in which algorithms learn patterns from data and use them to make predictions or decisions without being explicitly programmed for every rule; medical uses include image analysis and risk prediction.

Machine, CPM

A continuous passive motion machine that repeat-

edly moves a limb, such as a surgically treated knee, through a prescribed range of motion while the patient relaxes.

Machupo Virus

An arenavirus that causes Bolivian hemorrhagic fever, a potentially fatal illness characterized by fever, pain, and bleeding; it is endemic in parts of Bolivia.

Macroamylasemia

Macroamylasemia is a benign condition in which amylase binds to immunoglobulin and remains in blood, causing high serum amylase with low urinary clearance.

Macroangiopathy

Disease of large blood vessels, often involving atherosclerotic buildup or thrombosis that narrows or blocks blood flow; examples include coronary, cerebrovascular, and peripheral vascular disease.

Macroautophagy

A process cells use to enclose and break down damaged cell parts or proteins so their materials can be reused.

Macrobiotic

Relating to the macrobiota, the living organisms in a region that are large enough to be seen with the naked eye.

Macrobiotics

Diet emphasizing whole grains, vegetables, beans. May be nutritionally inadequate if restrictive. Long-

term followers generally healthy but may have deficiencies.

Macrocephalus

Having an abnormally large head, usually defined by head circumference above the expected range for age and sex.

Macrocephaly

An unusually large head for a person's age and sex. It may run in a family or be linked to fluid buildup, increased brain growth, or another condition.

Macrococcus

A genus of gram-positive cocci related to staphylococci and found mainly on animals; human infection is rare.

Macrococcus Caseolyticus

A gram-positive bacterium found mainly on animals and dairy products that is rarely associated with human infection.

Macrocyte

An abnormally large red blood cell, commonly seen in macrocytosis and megaloblastic or other anemias.

Macrocytic

Describing a cell, especially a red blood cell, that is abnormally large; macrocytic anemia features enlarged red blood cells.

Macrocytic Anaemia

Anemia in which red blood cells are larger than normal. Common causes include low vitamin B12 or folate, other illnesses, and some medicines.

Macrocytic Anemia

Anemia in which red blood cells are larger than normal, commonly because of vitamin B12 or folate deficiency.

Macroductyly

Abnormally large fingers or toes, usually caused by overgrowth of bone and soft tissue.

Macrodonia

Teeth that are larger than expected. It may affect one tooth or many teeth and can cause crowding, bite problems, or difficulty cleaning; treatment depends on the cause and symptoms.

Macrogonitosomia

Premature or abnormal enlargement of the external genitalia, usually associated with a hormonal disorder that may also affect the internal sex organs.

Macroglobulin

A plasma globulin with a high molecular mass, generally formed by the association of several immunoglobulin or other protein subunits; immunoglobulin M is a principal example.

Macroglossia

Macroglossia is an abnormally enlarged tongue that can affect feeding, speech, airway, or dental development and may be congenital or acquired.

Macrognathia

Abnormal enlargement of the jaw, which may be associated with pituitary gigantism, tumors, or other disorders; also called a prognathic mandible.

Macrolide

A group of antibiotics, including erythromycin, azithromycin, and clarithromycin, that stop bacteria from making proteins.

Macrolides

A class of bacteriostatic antibiotics that bind to the 50S ribosomal subunit and inhibit translocation of peptidyl-tRNA during protein synthesis. The major macrolides include erythromycin, clarithromycin, and azithromycin.

Macronucleus

The larger, transcriptionally active nucleus of a ciliate protozoan that controls routine cellular functions; it differs from the smaller micronucleus involved in genetic reproduction.

Macronutrients

Nutrients needed in large amounts: carbohydrates, protein, fat. Provide energy and structural components.

Macrophage

A large immune cell that surrounds and removes germs, dead cells, and debris. It also helps coordinate inflammation and tissue repair.

Macrophage Activation

The process by which macrophages respond to signals such as microbial products or cytokines and increase phagocytosis, antigen presentation, and production of inflammatory or tissue-repair mediators.

Macrophage Activation Syndrome

A dangerous complication of some rheumatic diseases in which immune cells become overactive and cause severe inflammation, fever, low blood counts, and organ problems.

Macrophage Count

The measured number or proportion of macrophages in a tissue, fluid, or laboratory sample; interpretation depends on the specimen, method, and clinical context.

Macropsia

A visual disturbance in which objects appear larger than they actually are.

Macroscopic

Large enough to be seen without a microscope. A macroscopic examination describes the appearance, size, shape, and surface of a specimen.

Macroscopic Hematuria

Visible blood in the urine, also called gross hematuria; it may arise from the kidneys, ureters, bladder, prostate, or urethra and requires evaluation for causes such as infection, stones, trauma, or malignancy.

Macrosomia

Macrosomia means unusually large fetal or newborn size, often associated with diabetes, prolonged pregnancy, parental size, or other factors.

Macrostomia

An abnormally wide mouth or oral opening, usually a congenital facial cleft caused by incomplete fusion of the embryonic facial processes.

Macula

The central part of the retina that provides sharp, detailed, and color vision.

Macula Lutea

The small yellowish area in the center of the retina responsible for sharp vision. Its center, called the fovea, provides the clearest vision.

Macular

Relating to a macule, a flat, circumscribed change in skin color without a change in texture or elevation. Macules may be caused by pigment, inflammation, vascular change, or other processes and are distinguished from raised lesions such as papules.

Macular (Skin)

Relating to a macule, a small, flat, circumscribed change in skin color that is neither raised nor depressed.

Macular Cyst

A cystic defect in the macula, the central retinal area responsible for sharp vision, often associated with vitreous traction and potentially causing distortion or loss of central vision.

Macular Degeneration

A progressive degenerative disease of the central retina (macula) and the leading cause of irreversible vision loss in individuals over age 50 in developed countries, affecting approximately 10 percent of those over 65 and 30 percent over 80.

Alternate Names:

Age Related Macular Degeneration (Macular De-

generation)

Macular Degeneration, Dry

Alternate index label; see *Dry macular degeneration*.

Macular Degeneration, Wet

Alternate index label; see *Wet macular degeneration*.

Macular Drusen

Small yellow deposits beneath the retina. A few may occur with aging, while many or larger deposits may be linked to age-related macular degeneration.

Macular Edema

Swelling of the macula caused by fluid leaking from retinal blood vessels.

Macular Hole

A small opening in the center of the retina that can cause a missing or distorted area in central vision. Some cases need surgery.

Macular Pucker

A thin layer of scar-like tissue on the retina that can wrinkle the macula and cause distorted or blurred central vision.

Macule

A macule is a flat, circumscribed change in skin color without palpable elevation or depression.

Macules

Small, flat, circumscribed changes in skin color that are neither raised nor depressed; they are distinguished from raised papules and fluid-filled vesicles.

Maculopapular Lesion

A skin lesion combining flat areas of altered color (macules) with small raised solid lesions (papules); it can occur in infections, drug eruptions, inflammatory diseases, and other conditions.

Mad Cow Disease

Alternate index label; see *Creutzfeldt-Jakob disease*.

Madarosis

Loss or absence of eyelashes, eyebrows, or other hair, caused by local disease, inflammation, trauma, or systemic conditions.

Maddock'S Disease

A rare historical eponym whose meaning is not consistent across medical references; the original source should be checked before clinical use.

Madura Foot

A chronic localized infection of the foot or other tissue, also called mycetoma, producing swelling, draining sinuses, and grains.

Madura Foot (Mycetoma)

A chronic localized infection of the skin and deeper tissues of the foot, caused by fungi or certain bacteria and characterized by swelling, draining sinuses, and granules.

Alternate Names:

Mycetoma

Maduramycosis

Mycetoma, a chronic subcutaneous infection caused by true fungi or filamentous bacteria and characterized by swelling, sinuses, and granules.

Madurella

Madurella is a genus of fungi that can cause mycetoma, a chronic infection of skin and deeper tissue after implantation through the skin.

Madurella Mycetomatis

A fungus that commonly causes eumycetoma, a chronic infection producing nodules, draining sinuses, and grains, usually after traumatic implantation in the foot or limb.

Maf Protein

maf protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Maffucci Syndrome

A rare congenital disorder characterized by multiple enchondromas together with soft-tissue hemangiomas or lymphangiomas. Skeletal deformity, limb shortening, pathological fractures, and increased risk of cartilage or other malignancy may occur.

Mafosfamide

An activated oxazaphosphorine alkylating compound related to ifosfamide and cyclophosphamide, studied for antineoplastic activity and capable of cross-linking DNA.

MAG3 Renal Scan

A nuclear medicine scan that shows how well each kidney works and whether urine is draining properly. It can help identify a blockage.

Magenblase Syndrome

Stomach discomfort and bloating caused by swallowing excessive air while eating.

Magic Bullet

An idealized treatment that selectively cures a disease with little or no harm to the patient; the term was introduced by Paul Ehrlich in connection with targeted treatment of infection.

Magnesium

A mineral needed for healthy nerves, muscles, bones, heart rhythm, and many body processes. Too little can cause weakness, tremor, muscle cramps, or abnormal heart rhythms.

Magnesium Blood Test

A blood test measuring serum magnesium, an electrolyte involved in neuromuscular function, cardiac rhythm, and metabolism; it helps evaluate deficiency, excess, and related electrolyte disorders.

Magnesium Carbonate

A magnesium salt used in some antacid or laxative preparations and as a magnesium supplement; excessive intake may cause toxicity, especially in renal failure.

Magnesium Chloride

A magnesium salt used in some oral supplements and medical preparations to provide magnesium or, in concentrated solutions, to help correct magnesium deficiency; dosing depends on the elemental magnesium content.

Magnesium Deficiency

An abnormally low body magnesium level, often caused by poor intake, gastrointestinal loss, renal wasting, or medications. It may cause weakness, tremor, muscle cramps, seizures, cardiac arrhythmias, hypokalemia, and hypocalcemia.

Magnesium Hydroxide

An osmotic laxative and antacid that neutralizes gastric acid and draws water into the bowel.

Magnesium In Diet

Dietary magnesium comes from foods such as nuts, seeds, legumes, whole grains, and leafy vegetables and supports nerve, muscle, bone, and heart function.

Magnesium Oxide

An inorganic magnesium compound used in some supplements and antacids; it can also have a laxative effect, and excessive use may cause hypermagnesemia, especially with kidney impairment.

Magnesium Sulfate

A magnesium salt used intravenously or intramuscularly to treat selected magnesium deficiencies and conditions such as eclampsia, and used orally as an osmotic laxative; it is also known as Epsom salt in its hydrated form.

Magnesium Sulfate For Neuroprotection

Magnesium given through a vein before some very early preterm births to lower the baby's risk of brain injury. The timing and dose are guided by obstetric and newborn-care specialists.

Magnesium Sulphate

A magnesium salt used medically for severe magne-

sium deficiency, prevention or treatment of eclamptic seizures, and selected arrhythmias or asthma indications.

Magnet

An object that produces a magnetic field and attracts ferromagnetic materials; magnets are used in devices such as magnetic-resonance imaging systems, while unproven magnet therapies should not replace effective treatment.

Magnet Therapy

An alternative therapy that places magnets on or near the body to relieve pain or treat disease. Scientific evidence does not support the claimed therapeutic benefits.

Magnetic Field

The region around a magnet or electric current in which magnetic forces act; in medicine, controlled magnetic fields are used in MRI and some other technologies.

Magnetic Resonance Angiography

A special MRI that creates pictures of blood vessels. It can help find narrowing, bulging, tears, blockages, or abnormal vessels without using x-rays.

Magnetic Resonance Cholangiopancreatography

A special MRI that shows the bile ducts and pancreatic duct. It can help find gallstones, narrowing, inflammation, or other problems without placing a scope inside the ducts.

Magnetic Resonance Cholangiopancreatography

Non-invasive MRI of the biliary and pancreatic ducts using heavily T2-weighted sequences that highlight static fluid. Used for: choledocholithiasis (CBD stones), biliary strictures, primary sclerosing cholangitis, pancreatic duct anatomy, and congenital biliary anomalies.

Alternate Names:

Magnetic Resonance Cholangiopancreatography

Magnetic Resonance Imaging

A scan that uses magnets and radio waves to make detailed pictures of organs and tissues. It does not use x-rays and is especially useful for viewing soft tissues.

Magnetic Resonance Imaging

A non-invasive diagnostic imaging modality that utilizes strong static magnetic fields (typically 1.5 to 3.0 Tesla), magnetic field gradients, and radiofrequency pulses to generate detailed cross-sectional anatomical images without ionizing radiation. Operates by exciting the nuclear spin of abundant tissue hydrogen protons and detecting RF signals emitted during T1 (longitudinal) and T2 (transverse) relaxation. Provides soft-tissue contrast resolution superior to CT for imaging the central nervous system, musculoskeletal joints, spinal cord, and pelvic organs.

Magnetic Resonance Safety

The practices used to prevent injury from the static magnetic field, gradient fields, radiofrequency energy, and implanted or ferromagnetic objects in the MRI environment. Screening must address implants, foreign bodies, devices, pregnancy, burns, hearing protection, and projectile risk.

Magnetic Resonance Spectroscopy

MRI technique measuring metabolic compounds. Used for tumor characterization, metabolic disorders.

Magnetic Resonance Venography

MRI technique to visualize veins, using time-of-flight or contrast-enhanced sequences. Indications: cerebral venous sinus thrombosis, dural sinus stenosis, abdominal/pelvic venous thrombosis, portal vein thrombosis, and renal vein thrombosis. Differentiates acute vs. chronic thrombus.

Alternate Names:

Magnetic Resonance Venography

Magnetic Seed

Sentinel lymph node localization using magnetic seed. Alternative to radioactive tracer.

Magnetic Therapy

The clinical application of static or pulsed electromagnetic fields to biological tissues to stimulate healing, modulate pain, or alter neuronal activity. While consumer static magnet products lack robust empirical clinical evidence, pulsed electromagnetic field therapy is FDA-approved as an adjunctive bioelectric treatment for established orthopedic nonunions and failed joint fusions to stimulate osteoblast proliferation and extracellular matrix synthesis. In neuropsychiatry, high-intensity pulsed magnetic stimulation is utilized in repetitive transcranial magnetic stimulation (rTMS) to modulate focal cortical excitability in treatment-resistant major depressive disorder.

Magnetism

The physical property associated with magnetic fields and their effects on materials and charged particles. In MRI, strong static and changing magnetic fields help generate images; screening is required for ferromagnetic objects and implants because they may become projectiles, move, heat, malfunction, or distort the image.

Magnetocardiography

Recording of the magnetic fields produced by electrical activity of the heart, usually with highly sensitive external sensors.

Magnetoencephalography

Recording of the magnetic fields generated by neuronal electrical activity, used to localize brain function or epileptic activity.

Magnetosomes

Intracellular, membrane-bound structures in certain bacteria that contain magnetic minerals, commonly magnetite or greigite, and help the bacteria orient along magnetic-field lines.

Magnusiomyces Capitatus

An opportunistic yeast formerly known as *Geotrichum capitatum* or *Saprochaete capitata*; it can cause invasive infections, especially in people with severe immunosuppression or hematologic ma-

lignancy.

Mahvash Disease

A rare inherited disorder of glucagon signaling caused by inactivating variants in the glucagon receptor. It may cause pancreatic alpha-cell hyperplasia, enlarged pancreas, abnormal glucose regulation, and elevated circulating glucagon.

Main-En-Griffe

A claw-hand deformity caused by lower brachial-plexus or ulnar-nerve dysfunction, with hyperextension at the MCP joints and flexion at the IP joints.

Maintenance

Ongoing care or treatment intended to preserve health, prevent relapse or deterioration, or sustain a therapeutic result; maintenance therapy is continued after initial control of a condition.

Maintenance Dose

The regular amount of a medicine needed to keep its effect at the desired level. The dose depends on how quickly the body removes the medicine and how much the body absorbs.

Maintenance Of Wakefulness Test

A sleep test that measures how long a person can remain awake in a quiet setting during the day.

Maintenance Therapy

Long-term treatment to prevent recurrence. Examples: hormonal therapy, targeted therapy.

Maize

Corn, a cereal grain used as food and feed; contaminated maize can expose people to fungal toxins such as aflatoxin.

Majeed Syndrome

A rare autoinflammatory disorder caused by LPIN2 variants, characterized by chronic recurrent multifocal osteomyelitis, congenital dyserythropoietic anemia, and inflammatory skin disease.

Majewski Syndrome

A rare inherited skeletal disorder involving abnormal bone growth and distinctive craniofacial or limb findings; the exact features depend on the genetic subtype.

Major

Larger, greater, or more significant than another related structure or condition; for example, the teres major muscle is larger than the teres minor muscle.

Major Depression

A depressive disorder causing persistent low mood or loss of interest with significant functional impairment.

Alternate Names:

Major depressive disorder

Major Depression With Psychotic Features

A major depressive episode accompanied by delusions or hallucinations, usually mood-congruent, requiring prompt psychiatric assessment and treatment.

Major Depressive Disorder

A mood disorder characterized by at least one major depressive episode consisting of five or more symptoms during the same two-week period. At least one symptom must be either depressed mood or loss of interest or pleasure (anhedonia).

Major Histocompatibility Complex

A group of genes and cell-surface proteins that display pieces of germs or abnormal cells to the immune system. In humans, these proteins are called HLA.

Major Histocompatibility Complex Molecule

A cell-surface molecule that presents protein fragments to immune cells.

Alternate Names:

MHC molecule

Major Tranquillizers

An older term for antipsychotic medicines, used to reduce psychosis, severe agitation, or mania.

Make Peak Flow A Habit

Regular peak-flow measurement can help some people with asthma recognize worsening airflow early and follow an agreed action plan.

Malabsorption

A condition in which the body cannot properly digest or absorb nutrients from food. It may cause chronic diarrhea, greasy stools, weight loss, anemia, or vitamin and mineral deficiencies.

Malabsorption Syndrome

Impaired absorption of nutrients from the small intestine, causing diarrhea, weight loss, anemia, vitamin deficiencies, or other nutritional complications.

Malacia

Abnormal softening of tissue, such as cartilage, bone, or brain tissue.

Malacoplakia

A rare long-term inflammation in which immune cells collect mineral deposits. It most often affects the bladder or digestive tract and can form a mass that looks like cancer.

Maladaptation

An adjustment to a situation or environment that is ineffective or harmful to health or functioning.

Maladaptive Stress Response

A persistent or disproportionate stress reaction that harms health or functioning.

Malaise

Malaise is a general feeling of illness, discomfort, or lack of well-being that commonly accompanies infection, inflammation, chronic disease, medication effects, or other systemic conditions.

Malakoplakia

Rare chronic inflammatory condition characterized by accumulation of macrophages containing calcified inclusion bodies called Michaelis-Gutmann bodies, most commonly affecting the urinary bladder but also occurring in the gastrointestinal tract.

Malar

Pertaining anatomically to the zygomatic bone (cheekbone) or the prominence of the cheek. Clinically prominent in rheumatology for the pathognomonic malar rash (the classic "butterfly rash" of systemic lupus erythematosus, featuring an erythematous, fixed, flat or raised eruption over the malar prominences and nasal bridge while characteristically sparing the nasolabial folds) and in maxillofacial trauma for malar or zygomaticomaxillary complex (ZMC / tripod) fractures caused by direct lateral facial impact, presenting with cheek flattening, trismus, and infraorbital nerve hypoesthesia.

Malar Rash

A red or violaceous rash across the cheeks and bridge of the nose, often sparing the folds beside the nose. It is classically associated with systemic lupus erythematosus but can occur with other conditions; appearance alone does not establish a diagnosis.

Malaria

Malaria is a mosquito-borne infection caused by Plasmodium parasites. It commonly causes cyclical fever, chills, headache, and hemolytic anaemia; severe disease may cause cerebral malaria, respiratory distress, kidney injury, hypoglycaemia, shock, organ failure, or death. Diagnosis and treatment depend on the species, illness severity, and exposure or travel history.

Malassezia

Malassezia is a yeast normally found on skin that can contribute to dandruff, seborrheic dermatitis, pityriasis versicolor, and some folliculitis.

Malassezia Furfur

Malassezia furfur is a skin yeast associated with

dandruff, seborrheic dermatitis, and pityriasis versicolor.

Malassezia Pachydermatis

Malassezia pachydermatis is a yeast common on dogs that can rarely cause opportunistic infection in people with weakened immunity.

Malassimilation

Failure to properly digest or absorb nutrients, encompassing maldigestion and malabsorption.

Malate Dehydrogenase

An enzyme involved in the process cells use to make energy from nutrients.

Malathion

An organophosphate insecticide that inhibits acetylcholinesterase; topical formulations have also been used to treat head lice, but exposure or ingestion can cause cholinergic toxicity.

Malathion Poisoning

Malathion poisoning involves toxic or environmental exposure to malathion poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

MALDI-TOF Mass Spectrometry

A laboratory method that identifies bacteria or fungi by analyzing their protein pattern. It can provide a quick identification but does not show which antibiotics will work.

Male

Describing a sex associated with reproductive anatomy that produces or is organized around small gametes (sperm); chromosomes, hormones, anatomy, and gender identity do not always fit a simple binary pattern.

Male Breast Cancer

Cancer developing in breast tissue in a man. It is uncommon, but a new lump, nipple discharge, skin change, or nipple retraction needs medical evaluation.

tion.

Alternate Names:

Breast Cancer, Male

Male Breast Pathology

Disorders affecting male breast tissue, including gynecomastia, benign epithelial lesions, inflammatory conditions, and carcinoma. Evaluation of a persistent mass or nipple change requires clinical examination and appropriate imaging, with biopsy when indicated.

Male Condom

A thin sheath placed over the penis before sexual contact to reduce the risk of pregnancy and transmission of many sexually transmitted infections by acting as a physical barrier.

Male Genitalia

The external and internal reproductive organs of a male, including the penis, scrotum, testes, epididymides, vas deferens, seminal vesicles, prostate, and associated ducts and glands.

Male Hypoactive Sexual Desire Disorder

A persistent or recurrent lack of sexual or erotic thoughts and desire in a man that causes personal distress or relationship difficulty. It is distinct from erectile dysfunction, although the conditions may coexist.

Male Hypogonadism

Reduced production of testosterone, impaired sperm production, or both due to disease of the testes or the hypothalamic-pituitary system. Possible features include low libido, erectile difficulty, infertility, reduced muscle mass, fatigue, and loss of bone density.

Alternate Names:

Low Testosterone Testosterone Deficiency

Male Infertility

Reduced ability to achieve a pregnancy because of factors affecting sperm production, sperm transport, ejaculation, sexual function, or other reproductive

processes.

Alternate Names:

Infertility, Male

Male Menopause

A nontechnical term sometimes used for age-related decline in testosterone, although it is not equivalent to female menopause. Low testosterone may cause reduced libido, erectile difficulty, fatigue, depressed mood, or loss of muscle mass, but symptoms have many causes and require appropriate hormone testing before treatment.

Male Pattern Baldness

Androgenetic alopecia, a patterned progressive loss of scalp hair caused by genetic susceptibility and androgen effects on hair follicles.

Male Pelvis

The lower part of the abdomen between the hip bones in a male; compared with the female pelvis, it is generally narrower, taller, and more robust, with a narrower pubic arch and sacrum.

Male Phenotype

The observable reproductive anatomy, secondary sex characteristics, and other traits associated with male sex development, produced by interacting genetic, hormonal, and developmental factors and showing natural variation.

Male Reproductive System

The organs and tissues that produce sperm and male sex hormones and deliver sperm, including the testes, ducts, accessory glands, penis, and scrotum.

Malformation

An abnormal structural development present from birth, caused by disturbed formation of an organ or body part.

Malignancy

Malignancy is a cancerous neoplasm capable of invading nearby tissue or spreading to distant sites; diagnosis requires classification of tumor type, grade,

stage, and molecular features.

Malignancy-Associated Hypercoagulability

A cancer-related tendency toward excessive clot formation caused by tumor-associated coagulation activation, inflammation, platelet interaction, treatment, immobility, or vascular injury. See *Cancer-Associated Thrombosis*.

Malignant

Cancerous and capable of invading nearby tissue or spreading to distant sites.

Malignant Acanthosis Nigricans

A paraneoplastic syndrome in which velvety, hyperpigmented, verrucous plaques develop rapidly in flexural and mucosal areas as a marker of an underlying internal malignancy, most commonly gastric adenocarcinoma. Unlike benign acanthosis nigricans, the malignant form is extensive, abrupt in onset, and may involve the oral mucosa.

Malignant Ameloblastoma

A rare cancer arising from ameloblastoma-forming tissue, usually in the jaw, with potential to invade locally or spread to distant organs.

Malignant Ascites

Intraperitoneal fluid accumulation caused by peritoneal tumor spread, most often ovarian or gastrointestinal cancer. Management includes therapeutic paracentesis and, in selected cases, intraperitoneal chemotherapy or shunt placement.

Malignant Bone Neoplasm

A malignant bone neoplasm is a cancer arising in bone or nearby tissue; treatment depends on the tumor type, location, and spread.

Malignant Fibrous Histiocytoma

Alternate index label; see *Undifferentiated pleomorphic sarcoma*.

Malignant Giant Cell Tumor Of Tendon

Sheath

A rare locally aggressive malignant tumor resembling a giant cell tumor of tendon sheath, characterized by destructive growth and potential for metastasis; diagnosis requires expert soft-tissue pathology review.

Malignant Glioma

An aggressive primary tumor arising from glial or glial-like cells of the central nervous system; high-grade examples include anaplastic astrocytoma and glioblastoma.

Malignant Hypertension

Severely elevated BP greater than 180/120 with end-organ damage. Renal findings include hyperplastic arteriolosclerosis with onion-skinning and fibrinoid necrosis. Treat with IV antihypertensives. Poor prognosis if untreated. May cause AKI, encephalopathy, and retinopathy.

Malignant Hyperthermia

A rare, life-threatening pharmacogenetic disorder of skeletal muscle triggered by volatile inhalation anesthetics and succinylcholine, with incidence of approximately 1 in 15,000 to 50,000 anesthetics.

Malignant Mastocytosis

An older term for an aggressive systemic mast-cell neoplasm characterized by abnormal mast-cell proliferation and organ infiltration; modern classification distinguishes aggressive systemic mastocytosis and mast-cell leukemia.

Malignant Melanoma

A highly aggressive malignancy arising from melanocytes, characterized by uncontrolled proliferation and potential for early metastasis via lymphatic and haematogenous spread.

Malignant Melanoma (Melanoma)

Alternate index label for Melanoma.

Malignant Mesothelioma

A cancer of the mesothelial lining of the pleura (most

common), peritoneum, or pericardium. Strongly associated with asbestos exposure, presenting with effusion, chest pain, and dyspnea; prognosis is generally poor.

Malignant Myoepithelioma

A malignant tumor showing myoepithelial differentiation, arising most often in a salivary gland or other glandular tissue and capable of local invasion and metastasis.

Malignant Neoplasm

Malignant neoplasms, commonly called cancers, are uncontrolled proliferations of cells that invade surrounding tissues and have the capacity to metastasize to distant sites through lymphatic, hematogenous, or transcoelomic routes.

Alternate Names:

cancers, are uncontrolled proliferations of cells.

Malignant Otitis Externa

An invasive infection of the external ear canal and skull base, usually caused by *Pseudomonas aeruginosa* in older adults with diabetes or immunocompromise; it can cause severe pain and cranial-nerve complications.

Malignant Peripheral Nerve Sheath Tumor

An uncommon soft-tissue cancer arising from or near peripheral nerves. It may cause a growing painful mass, numbness, or weakness and is treated with specialist surgery, radiation, or medicines when appropriate.

Malignant Pleural Effusion

Pleural fluid accumulation from pleural or metastatic disease, causing dyspnea. Managed with thoracentesis, pleurodesis, or an indwelling pleural catheter.

Malignant Pustule

An older name for the skin form of anthrax, caused by *Bacillus anthracis* and beginning as an itchy papule that develops into a painless black eschar.

Malignant Syphilis

A severe, destructive form of secondary syphilis presenting with necrotic, gummatous, or ulcerative skin lesions, often in immunocompromised patients, particularly those with HIV co-infection. It represents an aberrant immune response to heavy *Treponema pallidum* infection and requires aggressive intravenous penicillin therapy.

Malignant Teratoma Of The Mediastinum

A malignant germ-cell tumor containing tissues from more than one embryonic layer and arising in the mediastinum; evaluation uses imaging, tumor markers, and tissue diagnosis.

Malignant Thymoma

An older term for an invasive thymic epithelial tumor; modern usage distinguishes invasive thymoma from thymic carcinoma, which is a separate, more aggressive thymic malignancy.

Malignant Tumor

A cancerous growth capable of invading nearby tissue or spreading to distant sites. Its behavior and treatment depend on its type, grade, stage, and molecular features.

Malingering

The intentional fabrication or exaggeration of physical or psychological symptoms for external incentives (avoiding work, obtaining financial compensation, evading criminal prosecution, obtaining drugs). Not a psychiatric illness (coded as a V-code/Z-code).

Mallampati Classification

A simple scoring system used to predict the ease of endotracheal intubation based on the anatomical structures visible in the oral cavity when the patient opens their mouth wide and protrudes their tongue without phonating. Class I: soft palate, fauces, uvula, and tonsillar pillars visible.

Malleolus

A bony prominence at the ankle formed by the lower end of the tibia medially or fibula laterally.

Mallet

A surgical hammer used with instruments such as osteotomes to cut or shape bone.

Mallet Finger

An injury to the extensor tendon at the distal finger joint, causing inability to actively straighten the fingertip. It may result from a forced flexion injury and sometimes includes an avulsion fracture.

Mallet Toe And Hammertoe

Alternate index label; see *Hammertoe and mallet toe*.

Malleus

The largest of the three ossicles in the middle ear.

Common name: Hammer

Mallory Body

An eosinophilic cytoplasmic inclusion in a hepatocyte, composed largely of damaged intermediate filaments and associated proteins; it is classically seen in alcohol-associated liver disease but is not specific to it.

Mallory-Weiss Tear

A superficial tear in the lining of the lower esophagus or upper stomach, usually caused by forceful vomiting or retching. It commonly causes vomiting of blood. Many tears stop bleeding on their own within a few days, but upper endoscopy may be needed for diagnosis and treatment.

Malnutrition

Malnutrition includes inadequate, excessive, or imbalanced nutrient intake and can impair growth, immunity, wound healing, muscle function, and organ reserve. form, and function. Undernutrition: protein-energy malnutrition, micronutrient deficiencies. Overnutrition: overweight, obesity, related comorbidities. Screen with MNA (Mini Nutritional Assessment), MUST (Malnutrition Universal Screening Tool).

Malocclusion

Misalignment of teeth or incorrect relation between dental arches. Types: Class I (normal molar relationship, crowding), Class II (retrognathic mandible), Class III (prognathic mandible).

Malocclusion Of Teeth

Misalignment of the upper and lower teeth or jaws that affects the bite, chewing, speech, appearance, or oral hygiene.

Malondialdehyde

A reactive aldehyde produced during oxidation of polyunsaturated lipids; it is commonly measured as an indirect marker of lipid peroxidation and oxidative stress.

Malpighian Bodies

Renal glomeruli within Bowman's capsules, where blood filtration begins; the term may also refer historically to lymphoid nodules in the spleen.

Malposition

An abnormal position of an organ, body part, or fetus.

Malpresentation

A fetal presentation other than the usual vertex presentation, including breech, face, brow, shoulder, or compound presentation. It may complicate labor and influence delivery planning.

Malrotation

Abnormal rotation or fixation of an organ during development, most often referring to abnormal rotation of the intestine and its risk of volvulus.

MALS

Alternate index label; see *Median arcuate ligament syndrome*.

MALT Lymphoma

Alternate index label; see *Extranodal marginal zone lymphoma of mucosa-associated lymphoid tissue*.

Malt Soup Extract

Malt extract is a concentrated food ingredient made from germinated grain and contains sugars and other grain components. Its nutritional value and suitability depend on portion, ingredients, gluten content, diabetes management, and the reason it is being used.

Malt-Worker'S Lung

An occupational hypersensitivity pneumonitis caused by inhalation of organic dusts associated with malting or grain processing.

Malta Fever

Brucellosis, a zoonotic infection caused by *Brucella* species and characterized by intermittent fever, sweats, fatigue, and joint or systemic symptoms.

Maltase

An intestinal enzyme that breaks maltose into two glucose molecules.

Maltodextrin

A mixture of short glucose polymers produced by partial hydrolysis of starch, used as a rapidly digestible carbohydrate and as a thickener, filler, or carrier in foods and medicines.

Maltol

A flavoring compound used in some foods and medicines to provide a sweet, caramel-like odor or taste.

Maltose

A reducing disaccharide composed of two glucose molecules joined by an alpha-1,4 glycosidic bond, produced during starch digestion and hydrolyzed by maltase.

Mamillary

A misspelling or variant of mamillary, meaning relating to the breast or to a rounded nipple-like structure.

Mammaglobin A

A secretory protein expressed predominantly in mammary tissue and used as an immunohistochemical marker that can help identify breast origin in some metastatic carcinomas.

Mammals

Warm-blooded vertebrate animals that have hair or fur, three middle-ear bones, and mammary glands that produce milk; humans are mammals.

Mammaplasty

Mammaplasty is surgery to reshape, enlarge, reduce, or reconstruct the breast.

Mammary

Pertaining to the breast or the mammary gland, the specialized apocrine exocrine gland present in both sexes but functionally developed in females for lactation (milk synthesis and ejection). Composed of 15 to 20 glandular lobes embedded within adipose tissue, supported by fibrous Cooper suspensory ligaments and drained by lactiferous ducts converging at the nipple-areolar complex. Glandular growth and alveolar differentiation are regulated by estrogen, progesterone, and prolactin during puberty and pregnancy, with oxytocin mediating alveolar myoepithelial contraction during milk ejection. Major clinical conditions include fibrocystic changes, fibroadenomas, and invasive mammary (breast) carcinomas.

Mammary Disease

A disorder of breast tissue, including benign proliferative disease, infection, cysts, tumors, and malignant neoplasms.

Mammary Duct Ectasia

Widening and inflammation of a milk duct beneath the nipple.

Mammary Epithelium

The epithelial lining of the mammary ducts and secretory alveoli; these cells help produce, secrete, and transport milk and can give rise to many breast carcinomas.

Mammary Gland

Modified sweat (apocrine) gland in the breast, overlying pectoralis major, with 15-20 lactiferous ducts converging on the nipple. Composed of glandular lobules (alveoli), fibrous stroma (Cooper's ligaments), and fat. Development regulated by estrogen, progesterone, prolactin, and oxytocin (milk let-down).

Mammary Glands

Paired milk-producing glands in the breasts, composed of lobules and ducts that develop and function under hormonal control.

Mammary Glands (Breasts)

Paired glands of the anterior chest that produce milk after childbirth. Each breast contains lobules, ducts, connective tissue, and fat and is influenced by hormonal and reproductive changes.

Alternate Names:

breasts; mammary glands

Mammary Implant

Breast augmentation/reconstruction device. Types: saline (silicone shell, saline fill), silicone gel (cohesive gel). Incisions: inframammary, periareolar, axillary. Placement: subglandular or submuscular. Complications: capsular contracture, rupture, infection, BIA-ALCL (anaplastic large cell lymphoma).

Mammary Paget Disease

An intraepidermal spread of malignant glandular cells into the nipple epidermis, usually associated with underlying breast carcinoma and presenting as persistent eczematous or crusted nipple change.

Mammillary Body

One of a pair of rounded nuclei on the underside of the hypothalamus that participate in memory circuits connecting the hippocampus with the thalamus; injury can contribute to memory impairment.

Mammogram

A mammogram is a low-dose x-ray examination of breast tissue used for screening and evaluation of

masses, asymmetry, calcifications, or other abnormalities.

Mammogram - Calcifications

Mammographic assessment of calcium deposits in breast tissue; their morphology and distribution help distinguish benign findings from changes requiring additional imaging or biopsy.

Mammography

X-ray imaging of the breast used to screen for or evaluate breast abnormalities. Screening intervals depend on age, risk, symptoms, and the guideline being followed. Standard views include the cranio-caudal and mediolateral-oblique projections.

Mammoplasty

Plastic or reconstructive surgery to alter the size, shape, or contour of the breast.

Man Boobs (Gynecomastia)

Alternate index label for Gynecomastia.

Managed Care

A system of organizing and financing health care through provider networks, utilization review, care coordination, and negotiated payment arrangements intended to control costs and maintain quality.

Managing Pain During Labor

Pain relief during labor may include breathing and movement, support, injected or intravenous medicines, nitrous oxide, or neuraxial anesthesia, chosen according to preference and clinical circumstances.

Mandatory Reporting

A legal or regulatory duty to report specified findings or circumstances—such as suspected child or elder abuse, certain communicable diseases, or some injuries—to designated authorities; requirements vary by jurisdiction.

Mandible

Largest facial bone forming the lower jaw, with

horseshoe-shaped body and two rami ending in condylar (TMJ) and coronoid processes. Mental foramen transmits the mental nerve. Mandibular foramen is the entry point for inferior alveolar nerve blocks. Most commonly fractured facial bone, typically at the condyle, angle, or symphysis.

Mandible (Lower Jaw)

The large movable bone forming the lower jaw and carrying the lower teeth.

Alternate Names:

Lower Jaw

Mandibular

Pertaining to the mandible, the horseshoe-shaped single bone forming the lower jaw and the only mobile osseous structure of the facial skeleton. Articulates bilaterally with the temporal bones at the synovial temporomandibular joints and houses the lower dentition within its alveolar process. Traversed internally by the mandibular canal transmitting the inferior alveolar neurovascular bundle (supplying lower teeth and sensory branches to the chin and lower lip via the mental nerve). Important in maxillofacial trauma, micrognathia (Pierre Robin sequence), and surgical mandibular osteotomy for severe malocclusion.

Mandibular Advancement Device

An oral appliance that holds the lower jaw or tongue forward during sleep to enlarge or stabilize the upper airway, usually for selected patients with obstructive sleep apnea or snoring.

Mandibular Condyle

The rounded superior end of each mandibular ramus that articulates with the temporal bone at the temporomandibular joint and permits jaw movement.

Mandibular Fracture

A break in the lower jaw bone typically caused by trauma, presenting with pain, swelling, malocclusion, and difficulty opening the mouth; may require surgical fixation.

Mandibular Prosthesis

An artificial implant or device used to replace, reconstruct, stabilize, or restore part of the mandible after trauma, tumor removal, congenital deformity, or other loss of jaw structure.

Mandibulofacial Dysostosis

A congenital craniofacial disorder, classically Treacher Collins syndrome, involving underdevelopment of the mandible and cheekbones with variable abnormalities of the ears, eyes, and palate.

Manganese

An essential trace element required in small amounts. Excessive exposure, especially by inhalation, can injure the nervous system and cause manganism, a movement disorder resembling parkinsonism.

Mania

A distinct period of abnormally elevated, expansive, or irritable mood with increased goal-directed activity or energy, lasting ≥ 1 week (or any duration if hospitalization required).

Maniac-Depressive Psychosis

An obsolete term for bipolar disorder, characterized by episodes of mania or hypomania and episodes of depression.

Manic

Relating to mania, a pathological episode of abnormally elevated, expansive, or irritable mood with increased energy or activity and associated changes in thought, speech, sleep, or judgment.

Manic Disorder

A condition characterized by a distinct period of abnormally elevated, expansive, or irritable mood with increased energy and activity; persistent mania is a defining feature of bipolar I disorder.

Manic Episode

A distinct period lasting at least seven days (or any duration if hospitalization is required) of abnormally elevated, expansive, or irritable mood with increased

energy or activity.

Manic Mood

An abnormally elevated, expansive, or persistently irritable mood accompanied by increased energy or activity, reduced need for sleep, rapid speech, racing thoughts, inflated self-esteem, or risky behavior; it is characteristic of a manic episode.

Manic-Depression

An older term for bipolar disorder, a mood disorder characterized by episodes of mania or hypomania and episodes of depression.

Manic-Depressive Illness

Alternate index label; see *Bipolar disorder*.

Manifest

Clearly apparent or expressed; in clinical usage, a disease may manifest through particular signs or symptoms.

Manifestation

A sign, symptom, or other observable expression of a disease or condition.

Manipulation

Deliberate physical movement of a body part or joint, often performed therapeutically or diagnostically by a trained clinician.

Manipulation Procedure

A medical procedure, treatment, device, or care topic related to manipulation procedure; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Mannan

A polysaccharide composed primarily of mannose units, found in the cell walls or capsules of many fungi and in some plants; fungal mannans can be recognized by the immune system and used in laboratory testing.

Mannheimia

A genus of gram-negative bacteria that mainly infects livestock, especially the respiratory tract of cattle and sheep.

Mannheimia Haemolytica

A gram-negative bacterium that causes bovine respiratory disease and pneumonia in other animals; human infection is rare.

Mannitol

An osmotic diuretic that is freely filtered at the glomerulus but not reabsorbed, increasing tubular osmotic pressure and water excretion. Used to reduce intracranial pressure (cerebral edema) and intraocular pressure (acute glaucoma), and to promote diuresis in rhabdomyolysis/contrast nephropathy prophylaxis.

Mannomustine

Mannomustine is an older nitrogen-mustard alkylating agent investigated or used historically in lymphoma and other malignancies; it cross-links DNA and can cause myelosuppression and other cytotoxic effects.

Mannose

A six-carbon monosaccharide related to glucose that forms part of glycoproteins and glycolipids and is important in protein glycosylation and cell recognition.

Mannose-Binding Lectin Deficiency

An inherited or acquired deficiency of mannose-binding lectin, a protein that activates the lectin pathway of complement. It may increase susceptibility to infection in selected people, especially when other immune defenses are impaired.

Mannosidosis

An inherited lysosomal storage disorder caused by deficient alpha-mannosidase activity, leading to accumulation of mannose-rich oligosaccharides and variable intellectual, skeletal, immune, hearing, and neurologic abnormalities.

Manometer

An instrument for measuring pressure in a fluid or gas, including pressure in blood vessels or body cavities.

Manometry

Measurement of pressure within a body organ or passage, such as the esophagus or rectum.

Manorexia

An informal, nonmedical term sometimes used for anorexia nervosa in males; it is not an officially recognized diagnostic term.

Mansonella Perstans

A filarial worm that causes mansonellosis, usually acquired through bites of infected midges and often producing mild or no symptoms.

Mansonella Streptocerca

A filarial worm transmitted by biting midges that lives mainly in the skin and can cause itchy skin disease or small nodules.

Mansonelliasis

Infection with filarial nematodes of the genus *Mansonella*, transmitted by biting midges or blackflies; many infections are asymptomatic, but some cause itching, skin lesions, fever, or eosinophilia.

Mantle Cell Lymphoma

An aggressive B-cell lymphoma characterized by t(11;14) translocation leading to cyclin D1 overexpression and CCND1-IGH fusion. Clinical: older males, widespread lymphadenopathy, splenomegaly, GI involvement (lymphomatous polyposis), bone marrow, peripheral blood (leukemic phase).

Mantle Cell Lymphoma

Alternate index label for MCL.

Mantle Field

A historical radiation-treatment field encompassing lymph-node regions in the neck, mediastinum, and upper chest, formerly used for Hodgkin lym-

phoma; modern treatment generally uses more limited involved-site fields.

Mantoux Test

An intradermal tuberculin skin test in which induration is measured after 48 to 72 hours; it indicates immune sensitization, not by itself active tuberculosis.

Manual

Performed by hand, or a written guide describing procedures, instructions, or reference information.

Manual Removal Of Placenta

A procedure in which a clinician removes a placenta that has not separated or cannot be delivered after birth. The timing and need depend on bleeding, maternal condition, and local clinical protocols.

Manual Vacuum Aspiration

A minor surgical method of uterine evacuation that uses a handheld, portable locking vacuum syringe attached to a semi-rigid plastic cannula to generate suction equivalent to an electric vacuum pump. Recommended by the World Health Organization and American College of Obstetricians and Gynecologists as a safe, effective, and cost-efficient technique for managing first-trimester incomplete miscarriage, missed abortion, retained products of conception, and legal pregnancy termination under local paracervical block.

Alternate Names:

MVA; Mini-Suction Curettage

Manus

The hand, including the wrist and fingers, in anatomical terminology.

MAOIs

Monoamine oxidase inhibitors are a class of antidepressant drugs that inhibit the enzyme monoamine oxidase, which breaks down serotonin, norepinephrine, and dopamine in the brain. By inhibiting this enzyme, MAOIs increase the levels of these neurotransmitters in the synaptic cleft.

Map-Dot-Fingerprint Type Corneal Dystrophy

A usually bilateral corneal epithelial basement membrane dystrophy producing map-like, dot-like, or fingerprint-like patterns and sometimes recurrent corneal erosions or visual blurring.

Mapatumumab

An investigational monoclonal antibody that targets a death receptor on cells and has been studied as an anticancer treatment.

Maple Syrup Urine Disease

An autosomal recessive inborn error of branched-chain amino acid metabolism caused by deficiency of the branched-chain alpha-ketoacid dehydrogenase complex (BCKDC) — mutations in BCKDHA, BCKDHB, DBT, or DLD.

Mapping

Charting the location of genes or other identifiable regions on chromosomes; the term may also describe charting functional or anatomical regions in other medical contexts.

Marantic

Relating to a sterile, noninfective process associated with wasting; marantic endocarditis refers to nonbacterial thrombotic endocarditis.

Marasmus

A severe form of protein-energy malnutrition resulting from chronic total calorie and protein deprivation (starvation). Clinical features include severe muscle wasting, loss of subcutaneous fat ("skin and bones" appearance), stunted growth, a "monkey-like" facial appearance, and alertness.

Maraviroc

A CCR5 antagonist (entry inhibitor) used in combination antiretroviral therapy for HIV-1 infection in patients with CCR5-tropic virus. Maraviroc binds to the human CCR5 coreceptor on CD4+ T cells, preventing HIV-1 gp120 binding and viral entry.

Marble Bone Disease

Osteopetrosis, an inherited disorder of defective bone resorption causing abnormally dense but fragile bones and possible marrow failure.

Marburg Virus History, Symptoms, And Treatment

Marburg virus disease is a severe filovirus infection spread through contact with infected body fluids and contaminated materials. Fever, weakness, gastrointestinal symptoms, rash, bleeding, and shock may occur; isolation, supportive critical care, and public-health response are essential.

Marburgvirus

A genus of filoviruses that causes Marburg virus disease, a severe viral hemorrhagic fever transmitted through infected body fluids or animal exposure.

Marek'S Disease

A contagious herpesvirus disease of chickens that can cause nerve paralysis, tumors, weight loss, or death.

Marfan Syndrome

An autosomal dominant connective tissue disorder caused by mutations in the FBN1 gene (fibrillin-1). Cardiovascular manifestations include aortic root dilation and dissection, mitral valve prolapse, and aortic regurgitation. Skeletal features include tall stature, arachnodactyly, pectus deformity, and joint hypermobility.

Marfan'S Syndrome

An inherited connective-tissue disorder, usually caused by FBN1 variants, affecting the aorta, eyes, skeleton, and other organs.

Marfanoid Habitus

A body habitus characterized by tall stature, long limbs, long fingers (arachnodactyly), and joint laxity. Seen in Marfan syndrome, but also in other connective tissue disorders and homocystinuria. Differentiated from Marfan syndrome by absence of aortic root dilation and lens subluxation.

Marfan'S Syndrome

An autosomal dominant connective tissue disorder caused by mutations in the FBN1 gene encoding fibrillin-1. Neurological manifestations include dural ectasia (widening of the dural sac, causing back pain and headaches), spontaneous intracranial hypotension from CSF leaks, and increased risk of stroke from arterial dissection.

Margaric Acid

margaric acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Marginal Ulcer

An ulcer occurring at or near a gastrojejunal anastomosis, often after gastric bypass or other gastric surgery, where acid, ischemia, smoking, nonsteroidal anti-inflammatory drugs, or other factors may contribute.

Marginal Zone Lymphoma

A slow-growing non-Hodgkin lymphoma that begins in immune cells in the marginal zone of lymphoid tissue.

Alternate Names:

MZL

Maribavir

Maribavir is an antiviral medicine used to treat certain cytomegalovirus infections that are resistant or refractory to other treatment after transplantation.

Marie-Strumpell Disease

Ankylosing spondylitis, a chronic inflammatory disease primarily affecting the sacroiliac joints and spine that can cause back pain, stiffness, and progressive spinal fusion.

Marijuana

Cannabis preparations containing cannabinoids such as THC; medical effects and risks depend on dose, formulation, route, and patient factors.

Alternate Names:

Pot Marijuana (Marijuana)

Marijuana Intoxication

Marijuana intoxication involves toxic or environmental exposure to marijuana intoxication; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Marimastat

An investigational synthetic broad-spectrum inhibitor of matrix metalloproteinases, enzymes involved in extracellular-matrix breakdown, studied as a potential anticancer and anti-inflammatory drug.

Marine Animal Stings Or Bites

Injuries caused by marine animals through biting, stinging, spines, or venom; effects range from local pain and swelling to allergic, neurologic, or systemic toxicity.

Marine Toxin

A poisonous substance produced or accumulated by marine organisms, such as some fish, shellfish, algae, or bacteria, that can cause neurologic, gastrointestinal, or other poisoning.

Marital Disharmony

Persistent conflict or distress in a marriage or partnership that may contribute to psychological symptoms or require relationship-focused support.

Marital Status

A demographic or social-status variable describing whether a person is unmarried, married or partnered, separated, divorced, widowed, or in another legally or culturally recognized relationship; it may be relevant to social and health assessments.

Marital Therapy

Marital therapy is counseling for couples that addresses communication, conflict, emotional distress, and relationship problems.

Marked

Pronounced, conspicuous, or substantially greater than usual; in a clinical report, the exact meaning depends on the finding and the comparison stan-

dard.

Marker

An identifiable biological feature used to track a gene, cell, disease, or process; a genetic marker is a detectable DNA region inherited with a nearby gene, while a blood or tumor marker is a measurable substance associated with a condition.

Marker, Blood

A measurable sign of a disease or condition that can be isolated or detected in a blood sample, such as a disease-associated antibody, hormone, protein, or other substance.

Maroteaux-Lamy Syndrome

An autosomal recessive lysosomal storage disease (Mucopolysaccharidosis Type VI [MPS VI]) caused by deficiency of the lysosomal enzyme *N*-acetylgalactosamine-4-sulfatase (arylsulfatase B, *ARSB*), which leads to the progressive accumulation of the glycosaminoglycan dermatan sulfate in tissues. Characterized by progressive coarse facial features, severe dysostosis multiplex (skeletal dysplasia), joint stiffness, corneal clouding, cardiac valvular thickening, hepatosplenomegaly, and restrictive pulmonary compromise, notably with normal cognitive development and preserved intellectual function.

Alternate Names:

Mucopolysaccharidosis Type VI (MPS VI); Arylsulfatase B Deficiency

Married

Describing a person who is legally or socially joined to a spouse or partner; marital status is a demographic characteristic and does not by itself indicate health or relationship quality.

Marrow

The soft tissue inside bones, including red marrow that produces blood cells and yellow marrow rich in fat.

Marrow Hyperplasia

Increased cellularity of the bone marrow due to accelerated production of blood cells, typically seen

as a compensatory response to chronic hemolysis, hemorrhage, or hypoxia.

Marshall Syndrome

A rare periodic-fever syndrome, usually associated with PFAPA features, including recurrent fever, aphthous ulcers, pharyngitis, and cervical adenitis, often beginning in childhood.

Marsupialization

A surgical technique that opens a cyst or abscess and sutures its edges to the surrounding skin or mucosa to permit continuing drainage.

Martin-Bell Syndrome

An older name for fragile X syndrome, an inherited neurodevelopmental disorder caused by CGG-repeat expansion in the FMR1 gene.

MASA Syndrome

An X-linked neurodevelopmental disorder characterized by intellectual disability, absent or limited speech, shuffling gait, spasticity, and adducted or clasped thumbs; it may also include short stature and lumbar lordosis. The name is an older acronym and terminology should be used sensitively.

Masculinization

Development of male-typical physical characteristics, caused by normal puberty, androgen excess, androgen treatment, or certain disorders.

MASH

Alternate index label; see *Fatty liver disease*.

Mask

A device placed over the face to deliver oxygen, anesthesia, ventilation, or protection; the meaning depends on clinical context.

Masked Data

Data altered, obscured, or replaced so that identifying values or sensitive details are hidden while selected analytical properties may be retained; masking is used to protect privacy and can be reversible

or irreversible.

Masklike Face

An expressionless face with little spontaneous animation, also called masklike facies; it may occur in Parkinson disease, myotonic dystrophy, and other disorders.

MASLD

Alternate index label; see *Fatty liver disease*.

Masochism

Sexual or nonsexual arousal or gratification associated with receiving pain, humiliation, or degradation; distress or impairment determines clinical significance.

Masoprocol

A synthetic derivative of nordihydroguaiaretic acid that inhibits lipoxygenase pathways and has been investigated for topical treatment of actinic keratoses and for antineoplastic activity.

Mass

A localized area of tissue that is larger or more substantial than surrounding tissue and may be benign, malignant, inflammatory, or cystic.

Mass Casualty Incident

Event overwhelming available resources, requiring triage and resource allocation. Triage systems: START (Simple Triage and Rapid Treatment), SALT. Categories: immediate (red), delayed (yellow), minor (green), expectant (black). Incident command system (ICS) coordinates response.

Mass Screening

A diagnostic or laboratory method related to mass screening. Results are interpreted with the method, reference range, and clinical findings.

Mass Spectrometer

An instrument that ionizes chemical substances and separates or detects the resulting ions according to their mass-to-charge ratios, producing a mass

spectrum.

Mass Spectrometry

An analytical method that identifies and measures molecules by their mass-to-charge ratios; coupled with chromatography, it is widely used in clinical chemistry, toxicology, pharmacology, and proteomics.

Massage

Manual manipulation of soft tissues using techniques such as stroking, kneading, or pressure, used for relaxation or symptom relief; it is not a substitute for diagnosis or treatment of an underlying disease.

Massage Therapy

Massage therapy uses hands-on manipulation of soft tissues to promote relaxation or help manage selected pain and movement problems.

Masseter

A powerful muscle of chewing that elevates the mandible and lies over the lateral surface of the mandibular ramus.

Masseter Muscle

Thick rectangular muscle of mastication on the mandibular ramus, from the zygomatic arch to mandibular angle/ramus. Innervated by the masseteric nerve (V3). Most powerful masticatory muscle, elevating the mandible with up to 70 kg force. Involved in bruxism, TM disorders, and myofascial pain. Hypertrophy can widen facial appearance.

Massive Hemoptysis

Life-threatening coughing of blood that threatens the airway, breathing, or circulation; a fixed volume threshold is not required. It requires urgent airway assessment, stabilization, and definitive treatment of the bleeding source.

Massive Ovarian Edema

Marked stromal edema causing enlargement of one or both ovaries, usually due to partial torsion or hormonal stimulation. It can mimic an ovarian

neoplasm and may cause pain or virilization.

Massive Transfusion Protocol

A coordinated protocol for life-threatening hemorrhage that provides rapid, balanced delivery of red cells, plasma, and platelets with monitoring and correction of fibrinogen, calcium, temperature, and acid-base abnormalities.

Mast Cell

A tissue-resident immune cell with large granules containing histamine, heparin, tryptase, and cytokines; bears high-affinity IgE receptors (Fc-epsilon-RI).

Mast Cell Activation Syndrome

A condition involving recurrent symptoms from inappropriate release of mast-cell mediators, such as flushing, itching, hives, abdominal symptoms, wheezing, or low blood pressure. Diagnosis requires compatible episodes, objective evidence of mediator release, and response to appropriate treatment; many similar conditions must be excluded.

Mast Cell Sarcoma

An exceptionally rare, aggressive neoplasm composed of immature or atypical mast cells forming a destructive mass in tissue or bone. Unlike systemic mastocytosis, it is characterized by a localized sarcomatous tumor and may progress to disseminated mast-cell disease or acute leukemia. Clinical manifestations depend on the involved site and may include pain, swelling, organ dysfunction, or mediator-related symptoms such as flushing and hypotension. Diagnosis requires histopathology, mast-cell immunophenotyping, and systemic staging; management generally involves specialist-directed intensive antineoplastic therapy.

Mast-Cell Sarcoma

mast-cell sarcoma refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Mastalgia

Breast pain or tenderness, which may be cyclical with menstruation or noncyclical. Causes include hormonal changes, cysts, infection, trauma, and musculoskeletal pain.

Mastectomy

Surgical removal of all or part of a breast, performed to treat or prevent selected breast cancers and sometimes for other breast conditions. areola, and nipple. Modified radical mastectomy (MRM): total mastectomy + axillary lymph node dissection (levels I-III), for invasive breast cancer.

Masticate

To chew food, using the teeth, tongue, and muscles of mastication to mechanically break it down and mix it with saliva before swallowing.

Mastication

Chewing, the mechanical breakdown of food in the mouth before swallowing.

Masticatory Muscle

One of the muscles that moves the mandible during chewing, chiefly the masseter, temporalis, medial pterygoid, and lateral pterygoid muscles.

Mastitis

Inflammation of breast tissue, often occurring during lactation but also possible outside lactation. It may cause localized pain, warmth, swelling, and fever; infection and inflammatory causes must be distinguished clinically.

Alternate Names:

Lactation Mastitis

Mastocytoma

A localized collection or tumor of mast cells, usually presenting in the skin as a solitary cutaneous mastocytoma; rubbing the lesion can cause itching, redness, or swelling from mediator release.

Mastocytosis

A clonal disorder in which abnormal mast cells ac-

accumulate in the skin or internal organs. Cutaneous disease commonly causes urticaria pigmentosa: tan-brown macules or papules that swell and itch after rubbing (Darier sign).

Mastodynia

Pain or tenderness in one or both breasts, also called mastalgia. It may follow the menstrual cycle or result from injury, infection, medicines, cysts, or other breast conditions; a new persistent lump, skin change, or bloody discharge needs assessment.

Mastoid

Relating to or forming the mastoid portion of the temporal bone behind the ear.

Mastoid Antrum

An air-containing cavity in the mastoid portion of the temporal bone that communicates with the middle-ear attic.

Mastoid Bone

The portion of the temporal bone located behind the ear.

Mastoid Process

The rounded bony projection of the temporal bone behind the ear, providing attachment for neck muscles.

Mastoidectomy

Surgical removal of infected, diseased, or abnormal mastoid air cells behind the ear, commonly performed for chronic ear infection, cholesteatoma, or complications of otitis media. from the mastoid portion of the temporal bone, performed for chronic otitis media with cholesteatoma, mastoiditis, or as a component of surgery for acoustic neuroma and other skull base tumors.

Mastoiditis

Mastoiditis is infection and inflammation of the mastoid air cells behind the ear, usually following middle-ear infection and potentially causing serious spread.

Mastopexy

Breast-lift surgery that removes extra skin and reshapes breast tissue to raise the breasts and nipples. It can improve shape but does not necessarily reduce breast size; scars, altered sensation, asymmetry, and changes in breastfeeding ability are possible risks.

Alternate Names:

Breast lift

Masturbation

Self-stimulation of the genitals for sexual pleasure. It is a common human behavior; it is generally not harmful unless it causes injury, distress, or interferes with daily life.

Alternate Names:

Self Gratification Sexual (Masturbation)

Match-Box Test

A historical clinical test whose exact purpose varies by source; it should not be interpreted without the original examination description.

Materia Medica

An older term for the body of medicinal substances and information about their properties and uses.

Material

Any substance or matter, including a tissue, specimen, biological product, implant, or foreign body, considered in a medical or scientific context.

Maternal

Maternal means relating to a mother or the pregnant person, especially in connection with pregnancy, childbirth, or postpartum health.

Maternal Age

Maternal age is the age of the pregnant person and can influence fertility, pregnancy risks, screening choices, and obstetric care.

Maternal Mortality

Maternal mortality is death during pregnancy or within the defined postpartum period from a pregnancy-related cause, measured as a population

health indicator.

Maternal Mortality Rate

The number of maternal deaths related to pregnancy per 100,000 live births in a specified population and period.

Maternal Obesity

Obesity during pregnancy, generally defined using pre-pregnancy or early-pregnancy body mass index, which can increase risks for diabetes, hypertension, cesarean birth, and complications for the fetus.

Maternal Physiologic Changes In Pregnancy

Extensive adaptive changes across all organ systems to support the growing fetus.

Maternal Pushing (Second Stage)

Maternal expulsive efforts during the second stage of labor to facilitate fetal descent. Directed (closed-glottis, Valsalva) pushing: sustained breath-hold for 10 seconds with three pushes per contraction. Spontaneous (open-glottis) pushing: shorter pushes with the mother pushing when she feels an urge.

Alternate Names:

Second Stage

Maternal Sepsis

Organ dysfunction caused by a dysregulated maternal response to infection during pregnancy, childbirth, or the postpartum period. It may arise from uterine, urinary, respiratory, wound, or other infection and requires prompt cultures, antimicrobial therapy, source control, and hemodynamic support.

Maternal Serum Alpha-Fetoprotein

A second-trimester maternal serum screening biomarker measured at 15–20 weeks gestation, reported as multiples of the median (MoM). Elevated levels (> 2.0 – 2.5 MoM) suggest open neural tube defects (spina bifida, anencephaly), ventral wall defects (gastroschisis, omphalocele), multiple gestation, or underestimation of gestational age. Decreased levels are associated with fetal chromosomal aneuploidies (trisomy 21 / Down syndrome, trisomy

18 / Edwards syndrome). Abnormal values warrant targeted diagnostic fetal ultrasonography and genetic counseling.

Maternal Vaccine

A vaccine given during pregnancy to protect the pregnant person and, through transferred antibodies, provide early protection to the fetus or newborn; recommended products and timing depend on current guidance.

Maternity

The state or service relating to pregnancy, childbirth, and the care of the mother and newborn.

Maternity Services

Healthcare for pregnancy, labor and birth, the postpartum period, and the newborn. Services may include prenatal checks, midwifery or obstetric care, delivery support, breastfeeding help, and emergency care.

Materteral

Relating to a maternal aunt or to the genetic relationship between an aunt and her niece or nephew; synonymous with materterine.

Mathematics

The study of numbers, quantities, patterns, structures, and logical relationships; it supports medical statistics, modeling, imaging, epidemiology, and quantitative research.

Mathematics Disorder

A learning disorder involving persistent difficulty understanding numbers, calculation, quantity, or mathematical reasoning despite appropriate instruction.

Mating

Sexual pairing or reproduction between organisms that permits exchange or transfer of gametes and may lead to fertilization.

Matrix Band

A thin dental strip placed around a prepared tooth to temporarily replace a missing wall and contain restorative material while a filling or crown buildup is formed.

Matrix Metalloproteinase

matrix metalloproteinase is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Maturation

The process by which cells, tissues, organs, or an individual develop toward functional maturity.

Mature Onset Diabetes

An older term generally referring to type 2 diabetes mellitus, which often develops in adulthood, though diabetes classification depends on cause rather than age alone.

Mature Teratoma

A germ-cell tumor composed of well-differentiated tissues from one or more embryonic germ layers; many are benign, but behavior depends on the site, age, and tumor type, and some can undergo malignant transformation.

Maturity Onset Diabetes Of The Young

A group of monogenic forms of diabetes mellitus inherited in an autosomal dominant pattern, typically presenting before age 25 in non-obese individuals without autoantibodies. Caused by single-gene mutations affecting pancreatic beta-cell development and insulin secretion, most commonly involving *HNF1A* (MODY 3) and *GCK* (glucokinase, MODY 2).

Alternate Names:

MODY; Maturity-Onset Diabetes of the Young

Matuzumab

An investigational monoclonal antibody targeting the epidermal growth factor receptor and studied

for cancer treatment.

Maxilla

Paired bone forming the upper jaw, central face, and parts of orbit, nasal cavity, and hard palate. Body contains the maxillary sinus (largest paranasal sinus). Four processes: frontal, zygomatic, alveolar (upper teeth), and palatine (anterior hard palate). Fractures classified using the Le Fort system.

Maxilla (Upper Jaw)

The paired bones forming the upper jaw, the front part of the hard palate, and parts of the walls of the nose and eye sockets.

Alternate Names:

Upper Jaw

Maxillary

Pertaining to the maxilla, the paired irregular facial bone that forms the upper jaw, the floor of the orbit, the lateral and inferior boundaries of the nasal cavity, and the anterior hard palate. Houses the maxillary teeth within the maxillary alveolar ridge and encloses the large air-filled maxillary sinus (antrum of Highmore), the largest paranasal sinus, which drains into the middle meatus via the ostiomeatal complex. Subject to odontogenic infections, acute and chronic maxillary sinusitis, and complex midface impact fractures categorized by the Le Fort classification.

Maxillary Sinus

The maxillary sinus is a paired, air-filled cavity in the maxilla beneath each orbit. It drains into the nasal cavity and may become inflamed or infected in sinusitis.

Maxillary Sinusitis

Inflammation or infection of the air-filled sinus cavities behind the cheekbones.

Maxillofacial Prosthesis

Artificial replacement of maxillofacial structures. Obturator for cleft palate or surgical defect. Ocular, nasal, auricular prostheses.

Maximal Breathing Capacity

The greatest volume of air that can be moved in and out of the lungs in a specified period during maximal effort; it is related to but distinct from standard spirometric measures.

Maximum

The maximum is the greatest value in a set of measurements or the highest level reached by a variable, such as a recorded temperature, blood pressure, or drug concentration.

Maximum Allowable Concentration

The highest permitted concentration of a substance in a workplace or environment under a specified regulatory standard and exposure period.

Maximum Plasma Concentration (C_{max})

The highest measured plasma concentration after a dose. C_{max} and the time to reach it are used to describe absorption rate, peak-related toxicity, and comparative pharmacokinetics.

Alternate Names:

C_{max}

Maximum Thickness

Maximum thickness is the greatest measured thickness of a structure or specimen. It may be reported in imaging, pathology, or assessment of a lesion, organ, or tissue layer.

Maximum Tolerated Dose

The highest dose of a drug that produces acceptable, manageable toxicity without causing unacceptable adverse effects, determined through dose-escalation studies, most commonly in Phase I clinical trials. The MTD identifies the dose range for subsequent efficacy studies.

May-Hegglin Anomaly

An inherited MYH9-related disorder with macrothrombocytopenia, giant platelets, and characteristic leukocyte inclusions; hearing, kidney, or cataract abnormalities may occur.

May-Thurner Syndrome

Compression of left common iliac vein by right common iliac artery. Causes left lower extremity DVT. Diagnosis: CT/MR venography, phlebography. Treatment: angioplasty and stenting.

Mayer-Rokitansky-Küster-Hauser Syndrome

A congenital malformation syndrome characterized by agenesis or severe hypoplasia of the Müllerian duct derivatives, resulting in the congenital absence of the uterus and the upper two-thirds of the vagina in phenotypic and genetic 46,XX females. Affected individuals have normal functional ovaries, normal androgen and estrogen levels, and normal female secondary sexual characteristics (breast development and pubic hair), classically presenting in adolescence with primary amenorrhea. Associated with renal anomalies (such as unilateral renal agenesis or pelvic kidney) and skeletal defects.

Alternate Names:

MRKH Syndrome; Müllerian Agenesis; Vaginal Agenesis

Mayo Scissors

Heavy surgical scissors used to cut fascia, muscle, sutures, and other relatively tough material.

Maytansine

Maytansine is a potent antimetabolic compound that binds tubulin and inhibits microtubule assembly. Its derivatives are used as cytotoxic payloads in some antibody-drug conjugates.

Maze Procedure

A cardiac surgical operation developed by James Cox (the Cox-Maze procedure) designed to cure atrial fibrillation. Through surgical incisions or lines of thermal ablation (bipolar radiofrequency or cryoablation), a precise maze-like pattern of transmural scar lesions is created across both atria, which prevents the propagation of macro-reentrant electrical wavelets and isolates pulmonary vein triggers while preserving an organized electrical conduit from the sinoatrial node to the atrioventricular node, restoring atrial transport function.

Alternate Names:

Cox-Maze Procedure; Surgical Ablation for Atrial Fibrillation; Maze Operation

Mazindol

Mazindol is a sympathomimetic appetite suppressant that affects central catecholamine signaling. It has been used for short-term obesity treatment in some countries and may cause stimulant-related adverse effects.

MB ChB

Abbreviation for Bachelor of Medicine and Bachelor of Surgery, a medical degree awarded in many countries.

MC Lymphoma (Mantle Cell Lymphoma)

Alternate index label for Mantle Cell Lymphoma.

MCA Peak Systolic Velocity

Doppler measurement of the peak systolic velocity in the fetal middle cerebral artery. An indicator of fetal anemia: elevated MCA PSV (>1.5 MoM) correlates with moderate-to-severe anemia. The most important application is surveillance of Rh-sensitized pregnancies (detect anemia before hydrops develops).

MCAD Deficiency

An inherited disorder in which the body cannot properly break down certain medium-chain fats for energy.

McArdle Disease

An autosomal recessive metabolic myopathy and inborn error of glycogen metabolism (Glycogen Storage Disease Type V [GSD V]) caused by homozygous or compound heterozygous mutations in the *PYGM* gene on chromosome 11q13, resulting in deficiency of muscle glycogen phosphorylase (myophosphorylase). Prevents the breakdown of muscle glycogen into glucose-1-phosphate during anaerobic exercise. Characterized by exercise-induced muscle fatigue, stiffness, severe muscle cramps, and recurrent rhabdomyolysis with myoglobinuria, with characteristic relief and resurgence of muscle endurance after 8–10

minutes of moderate activity known as the “second-wind” phenomenon.

Alternate Names:

Glycogen Storage Disease Type V (GSD V); Myophosphorylase Deficiency

McBurney’S Point

A surface point in the right lower abdomen, classically near the junction of the lateral and middle thirds of a line from the anterior superior iliac spine to the umbilicus, where maximal tenderness may occur in acute appendicitis.

Mcc Gene

mcc gene is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

McCune-Albright Syndrome

Sporadic condition caused by activating mutations in the *GNAS1* gene encoding the Gs alpha subunit leading to constitutive activation of adenylyl cyclase.

McDonald Cerclage

A transvaginal cervical cerclage using a purse-string suture (Mersilene tape or Prolene) placed at the cervicovaginal junction, without bladder dissection. The most common cerclage technique. Indications: cervical insufficiency (history-indicated or ultrasound-indicated short cervix <25 mm before 24 weeks). Placed at 12–14 weeks.

MCF-7 Cell

MCF-7 cell refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

MCH

Mean corpuscular hemoglobin: the calculated average amount of hemoglobin in each red blood cell, reported as part of a complete blood count.

MCHC

Mean corpuscular hemoglobin concentration: the calculated average concentration of hemoglobin in a given volume of packed red blood cells, derived from hemoglobin and hematocrit values and reported in a complete blood count.

MCL Injury (Medial Collateral Ligament Injury)

Alternate index label for Medial Collateral Ligament Injury.

McMurray Test

A knee examination in which the leg is flexed, rotated, and extended to place stress on the menisci. Pain or a palpable click may suggest a meniscal lesion but is not diagnostic alone.

McRoberts Maneuver

A positioning maneuver for managing shoulder dystocia where the mother's legs are hyperflexed onto her abdomen, with thighs against the abdomen. This flattens the sacrum, increases the anteroposterior diameter of the pelvis, and rotates the symphysis pubis superiorly. Often combined with suprapubic pressure.

MCRPC

Alternate index label; see *Metastatic castration-resistant prostate cancer (mCRPC)*.

MCV

Mean corpuscular volume: the calculated average volume of a red blood cell, derived from hematocrit and red-cell count and reported as part of a complete blood count.

MDMA

3,4-Methylenedioxymethamphetamine, a psychoactive stimulant and hallucinogen commonly known as ecstasy or molly; it can produce serious cardiovascular, neurologic, and temperature-regulation effects.

MDS

Alternate index label; see *Myelodysplastic syndromes*.

ME/CFS

Alternate index label; see *Myalgic encephalomyelitis/chronic fatigue syndrome (ME/CFS)*.

Mead Acid

mead acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Meadow Saffron

Colchicum autumnale, a plant containing colchicine; ingestion can cause severe gastrointestinal illness, multiorgan toxicity, and death.

Mean

The mean is the arithmetic average, calculated by adding all values and dividing by the number of values. It is commonly used to summarize clinical measurements but can be distorted by extreme values.

Mean Arterial Pressure

The average pressure driving systemic blood flow during one cardiac cycle. It is influenced by cardiac output and systemic vascular resistance and is approximated clinically as diastolic pressure plus one-third of pulse pressure at normal heart rates.

Mean Cell Volume

The average volume of a red blood cell, calculated from the hematocrit and red-cell count and reported as MCV in a complete blood count.

Mean Corpuscular Hemoglobin Concentration

The mean concentration of hemoglobin within packed erythrocytes, calculated from hemoglobin and hematocrit. A reduced MCHC indicates hypochromia; an increased value may occur with spherocytosis or analytical interference.

Mean Corpuscular Volume

The average volume of an erythrocyte, reported in femtoliters as part of the CBC. A low MCV indicates microcytosis, whereas a high MCV indicates macrocytosis; interpretation requires correlation with hemoglobin, reticulocytes, and other indices.

Mean Diameter

Mean diameter is the average diameter of a structure or lesion, usually calculated from one or more measured dimensions. The method used should be specified when measurements are clinically compared.

Mean Thickness

Mean thickness is the average thickness calculated from multiple measurements of a tissue, structure, or specimen. It is used in imaging, pathology, and physiologic measurements.

Measles

Measles is a highly contagious measles-virus infection causing fever, cough, conjunctivitis, and a spreading maculopapular rash, with possible pneumonia, encephalitis, or other complications. droplets. Prodrome of fever, coryza, cough, and conjunctivitis, followed by Koplik spots (white buccal mucosal lesions) and maculopapular rash spreading cephalocaudally. Complications: pneumonia, encephalitis, and subacute sclerosing panencephalitis.

Measles (Rubeola)

Alternate index label for Rubeola.

Measles Virus

A negative-sense RNA virus that causes measles, a highly contagious respiratory illness. The virus is transmitted by respiratory droplets and is one of the most infectious pathogens known. Symptoms include fever, cough, coryza, conjunctivitis, and rash.

Measles, German

Alternate index label; see *Rubella*.

Measurable Residual Disease

The burden of cancer remaining after therapy that can be quantified using a validated assay. The term is increasingly preferred to minimal residual disease because residual disease may be clinically important even when not minimal.

Measurement

The process of determining the size, amount, concentration, or value of a clinical or biological variable.

Meatal

Pertaining to a meatus, a natural anatomical canal, opening, or passageway in the body. Most commonly refers in urology to the external urethral meatus (with meatal stenosis describing pathologic narrowing of the urethral orifice, often secondary to instrumentation or circumcisions, causing a forceful, narrow urinary stream) and in otolaryngology to the external auditory meatus (the canal leading from the auricle to the tympanic membrane) or the nasal meatuses (superior, middle, inferior) underlying the nasal turbinates.

Meatal Stenosis

Narrowing of the urethral meatus, which may cause a deflected or narrow urinary stream, spraying, dysuria, or difficulty emptying the bladder.

Meatus

An opening or passage leading into or out of a body structure, such as the urethral or auditory meatus.

Meatus, Female Urethral

The external opening of the female urethra, through which urine leaves the body; it is located anterior and superior to the vaginal opening.

Meatuses

The nasal meatuses are the air passages located beneath each corresponding turbinate on the lateral wall of the nasal cavity, and they serve as the drainage pathways for the paranasal sinuses and the nasolacrimal duct.

Mebendazole

An anthelmintic medicine used to treat several intestinal worm infections by impairing parasite microtubules.

Mebrofenin Scan

A hepatobiliary nuclear-medicine scan using technetium-99m mebrofenin to follow liver uptake and bile flow. It can evaluate gallbladder function, obstruction, leaks, and selected causes of jaundice or abdominal pain. obstruction.

Mecamylamine

Mecamylamine is an orally active ganglionic nicotinic-receptor blocker that reduces sympathetic nerve transmission and lowers blood pressure. It has been used for severe hypertension and may cause postural hypotension, dizziness, constipation, and dry mouth.

Mecarazole

Mecarazole is a synonym for carbendazim, a benzimidazole fungicide that interferes with fungal microtubule formation. It is an agricultural chemical rather than a routine human medicine and may be toxic if exposure occurs.

Mechanical Circulatory Support

Devices that provide temporary or permanent cardiac support. Options include intra-aortic balloon pump (IABP), Impella (percutaneous ventricular assist device), TandemHeart, extracorporeal membrane oxygenation (ECMO), and durable left ventricular assist devices (LVADs).

Mechanical Insufflation-Exsufflation

A device that delivers positive pressure (insufflation) followed by rapid negative pressure (exsufflation) to simulate a cough. It is used in neuromuscular disease (Duchenne muscular dystrophy, spinal cord injury, ALS) to augment cough effectiveness and clear secretions.

Mechanical Ventilation

Mechanical ventilation provides respiratory support by delivering controlled or spontaneous breaths

through an endotracheal tube or tracheostomy.

Mechanical Ventilator

A mechanical ventilator is a machine that supports or replaces spontaneous breathing by delivering controlled or assisted breaths, usually through a mask or an endotracheal tube. Settings are adjusted to oxygenation, ventilation, mechanics, and patient needs.

Mechanical Ventilator - Infants

A machine that supports or replaces spontaneous breathing in an infant by delivering controlled breaths through an endotracheal tube or, in selected cases, another airway interface.

Mechanism Of Death

The physiologic or biochemical derangement that causes death (the final failure) as opposed to the underlying disease or injury (cause of death) and the circumstances (manner). Examples: ventricular fibrillation, cerebral hemorrhage, sepsis, respiratory failure, exsanguination, cardiac tamponade.

Mechanism Of Toxicity

How substance causes harm. Examples: enzyme inhibition, membrane disruption, receptor binding, oxidative stress, DNA damage.

Mechanoreceptor

mechanoreceptor is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Mechlorethamine

Mechlorethamine is an alkylating antineoplastic agent that cross-links DNA and inhibits cell division. Topical gel is used for cutaneous T-cell lymphoma; systemic use is limited by toxicities such as myelosuppression and tissue injury.

Meckel Diverticulectomy

Surgical removal of a Meckel diverticulum, usually

performed when it causes bleeding, inflammation, obstruction, perforation, or is found incidentally in a high-risk setting.

Meckel Diverticulum

Congenital remnant of the omphalomesenteric duct located on the antimesenteric border of the distal ileum approximately sixty centimeters from the ileocecal valve.

Meckel'S Diverticulum

A congenital pouch of the small intestine caused by persistence of the embryonic vitelline duct; it may bleed, obstruct, or become inflamed.

Meckel-Gruber Syndrome

A lethal autosomal recessive primary developmental ciliopathy caused by pathogenic biallelic variants in genes encoding components of the primary ciliary transition zone (including *TMEM216*, *RPGRIP1L*, *CC2D2A*, and *CEP290*). Classically diagnosed prenatally by the pathognomonic diagnostic triad of an occipital encephalocele, bilateral massive multicystic dysplastic kidneys, and postaxial polydactyly (affecting both hands and feet), often accompanied by hepatic ductal plate malformations (microscopic bile duct proliferation) and pulmonary hypoplasia secondary to severe oligohydramnios.

Alternate Names:

Meckel Syndrome; Dysencephalia Splanchnocystica

Meclizine

Meclizine is a first-generation antihistamine with anticholinergic and vestibular-suppressant effects. It is used to prevent or treat motion sickness and vertigo and may cause drowsiness, dry mouth, and blurred vision.

Meclofenamate Overdose

Meclofenamate overdose involves toxic or environmental exposure to meclufenamate overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Meconium

The thick, dark first stool of a newborn, composed

of intestinal secretions, shed cells, mucus, and swallowed amniotic material.

Meconium Aspiration

Meconium aspiration syndrome: aspiration of meconium-stained amniotic fluid into the fetal/neonatal airway causing airway obstruction, chemical pneumonitis, and surfactant dysfunction—respiratory distress in term/post-term infants. Risk: fetal distress/hypoxia (passage of meconium in utero).

Meconium Aspiration Syndrome

Respiratory distress in newborns born through meconium-stained amniotic fluid, caused by aspiration of meconium into the airways. Presents with respiratory distress, barrel-shaped chest, and coarse crackles. Meconium is thick, greenish-black fetal stool passed in utero. Risk factors include post-term pregnancy and fetal distress.

Meconium Ileus

Intestinal obstruction in neonates caused by inspissated meconium most commonly associated with cystic fibrosis. Presents with abdominal distension, bilious vomiting, and failure to pass meconium within forty-eight hours.

Meconium Peritonitis

Sterile chemical peritonitis resulting from in utero intestinal perforation allowing meconium to spill into the peritoneal cavity. Most commonly associated with cystic fibrosis causing inspissated meconium obstruction, intestinal atresia, and volvulus. May be detected prenatally as fetal ascites with echogenic peritoneal calcifications.

Meconium-Stained Amniotic Fluid

Greenish or yellowish discoloration of amniotic fluid due to fetal meconium passage in utero. Associated with fetal distress, post-term pregnancy, and fetal growth restriction. Thick meconium increases risk of meconium aspiration syndrome. Management of non-vigorous newborns: tracheal suctioning before positive pressure ventilation.

Medial

Medial means toward or situated nearer the body's midline; it contrasts with lateral and is used to describe anatomical position, movement, or imaging findings.

Medial Collateral Ligament Injury

Alternate index label for MCL) Injur.

Medial Collateral Ligament Injury

Tear of the MCL, the most common knee ligament injury. Mechanism: valgus stress to the knee (direct blow to lateral knee). Presents with medial knee pain, swelling, and valgus laxity. Grading: I (pain, no laxity), II (partial tear, some laxity), III (complete tear, significant laxity).

Medial Cuneiform

Largest cuneiform, on the medial foot between navicular and first metatarsal. Insertion for tibialis anterior and posterior tendons supporting the medial longitudinal arch. The first tarsometatarsal joint (Lisfranc joint) is an important landmark; Lisfranc injuries involve fracture-dislocation at this level.

Medial Epicondylitis

Alternate index label; see *Golfer's elbow (Medial epicondylitis)*.

Medial Epicondylitis - Golfer'S Elbow

Overuse-related tendinopathy at the common flexor tendon origin on the medial elbow, causing pain with gripping or resisted wrist and forearm flexion.

Medial Meniscus

The medial meniscus is a crescent-shaped fibrocartilage pad between the medial femoral condyle and medial tibial plateau. It distributes load and contributes to knee stability; tears may cause joint-line pain, swelling, or locking.

Medial Rotation

Rotation of a limb toward the median plane of the body.

Medial Tibial Stress Syndrome

Alternate index label; see *Shin splints*.

Median

Located in or relating to the middle plane or midpoint of a structure.

Median Arcuate Ligament Syndrome

Compression of the celiac artery by a ligament near the diaphragm, sometimes causing abdominal pain.

Median Arcuate Ligament Syndrome

Compression of the celiac artery and nearby nerves by the median arcuate ligament, potentially causing post-meal abdominal pain and weight loss.

Alternate Names:

Dunbar Syndrome MALS

Median Nerve

From lateral and medial cords (C5-T1), passing through the arm without branching, through the cubital fossa, into the forearm innervating most flexor muscles. In the hand innervates thenar muscles (opponens, abductor brevis, flexor brevis pollicis) and first two lumbricals. Sensation to lateral 3.5 digits.

Median Nerve Compression (Carpal Tunnel Syndrome)

Alternate index label for Carpal Tunnel Syndrome.

Median Plane

A sagittal plane that passes directly through the midline of the body, dividing it into equal right and left halves.

Median Rhomboid Glossitis

A smooth, red, diamond-shaped depapillated area on the dorsum of the tongue caused by chronic *Candida* infection, usually asymptomatic and managed with antifungal therapy.

Median Survival

The time by which half of the people in a study have experienced the specified event, such as death. It is a summary measure of survival in a defined

population.

Mediastinal Cyst

A mediastinal cyst is a fluid- or tissue-filled cystic lesion in the mediastinum. Common types include bronchogenic, thymic, and pericardial cysts; symptoms depend on size and compression, and imaging guides evaluation.

Mediastinal Disease

A disorder affecting structures in the mediastinum, including the heart, great vessels, thymus, lymph nodes, nerves, and tumors or cysts within the central chest.

Mediastinal Emphysema

Mediastinal emphysema, or pneumomediastinum, is the presence of free air in the mediastinum. It can follow alveolar rupture, trauma, surgery, or esophageal injury and may cause chest pain, neck crepitus, or respiratory compromise.

Mediastinal Hemorrhage

Bleeding into the mediastinum, commonly caused by trauma, vascular rupture, surgery, or invasive procedures, and potentially causing airway or cardiovascular compression.

Mediastinal Mass

An abnormal growth or collection of tissue in the mediastinum, the central compartment of the chest. Causes include tumors, enlarged lymph nodes, cysts, and vascular abnormalities.

Mediastinal Neoplasm

A mediastinal neoplasm is an abnormal growth in the central space of the chest between the lungs; it may arise from lymph nodes, thymus, nerves, or other tissues.

Mediastinal Pleura

The mediastinal pleura is the portion of parietal pleura lining the lateral surfaces of the mediastinum. It separates the mediastinal contents from the pleural cavity and reflects around the lung root.

Mediastinal Shift

Mediastinal shift is displacement of the mediastinal structures away from their usual position. It may result from increased pressure on one side, such as a tension pneumothorax, or loss of volume on the other, such as lung collapse.

Mediastinal Tumor

A mediastinal tumor is a mass in the central chest compartment between the lungs and may be benign or malignant.

Mediastinitis

Mediastinitis is inflammation or infection of the central chest compartment, often after esophageal rupture, surgery, trauma, or spread of infection.

Mediastinoscopes

Mediastinoscopes are slender endoscopic instruments used during mediastinoscopy to inspect the mediastinum and obtain tissue samples, especially from mediastinal lymph nodes. The procedure is performed through a small incision near the sternum.

Mediastinoscopy

A surgical procedure that accesses the mediastinum through a small incision near the sternum to inspect or biopsy mediastinal lymph nodes or masses. It is one option for staging lung cancer when less-invasive sampling is nondiagnostic or unsuitable.

Mediastinoscopy With Biopsy

A procedure using an instrument inserted through a small incision near the sternum to inspect the mediastinum and obtain lymph-node or mass samples for diagnosis and staging.

Mediastinum

The central compartment of the thoracic cavity between the lungs, containing the heart, major blood vessels, esophagus, and trachea.

Mediators Of Inflammation

Inflammatory mediators are soluble molecules that

initiate, amplify, or regulate the inflammatory response.

Medical Cannabis And Cannabidiol

Cannabis (marijuana) and cannabidiol are cannabinoid compounds derived from *Cannabis sativa* that interact with the endocannabinoid system (CB1 and CB2 receptors) to modulate pain, appetite, mood, and inflammation.

Medical Certificate

A document completed by an authorized healthcare professional that records a medical finding, diagnosis, fitness status, or period of illness.

Medical Condition

A state affecting health or bodily function, whether acute, chronic, symptomatic, or asymptomatic.

Medical Device

A medical device is an instrument, apparatus, implant, software, or similar article intended for diagnosis, prevention, monitoring, treatment, or alleviation of disease or injury. Its primary action is not achieved by chemical or metabolic means.

Medical Economics

Medical economics is the study of how health-care resources are produced, distributed, financed, and used. It evaluates costs, outcomes, efficiency, access, and value in health-care decisions.

Medical Entomology

The study of insects and related arthropods that cause disease or transmit disease-causing organisms to humans, including their biology, ecology, physiology, and genetics.

Medical Ethics

Moral principles guiding healthcare practice, including autonomy, beneficence, non-maleficence, and justice.

Medical Etymology

The study of the origins and historical development

of medical words and terms, including their roots, prefixes, suffixes, and changes in meaning.

Medical Examiner

An appointed physician, usually a board-certified forensic pathologist, charged with investigating sudden, unexpected, violent, or suspicious deaths, ordering autopsies, determining cause and manner of death, and certifying the death certificate. Unlike the elected coroner, a medical examiner must meet professional qualifications.

Medical Geography

The study of how diseases, health, health-care resources, and health-related environmental factors are distributed and vary across geographic areas and populations.

Medical History

A medical history is a structured account of a person's current concerns, past illnesses and operations, medications, allergies, family history, social history, and relevant exposures. It helps guide examination, diagnosis, and treatment.

Medical Illness

The subjective experience of being unwell, which may or may not correspond to an identifiable disease.

Medical Indigency

Medical indigency is inability to obtain needed medical care because of insufficient financial resources or lack of adequate coverage. The term describes a social and economic circumstance, not a disease.

Medical Jargon

Specialized terminology used by healthcare professionals. Unexplained medical jargon can hinder communication with patients.

Medical Jurisprudence

The branch of law (and its study) that deals with the rights and duties of physicians and the legal aspects of medical practice, distinct from but overlapping

with forensic medicine.

Medical Marijuana

Medical marijuana involves toxic or environmental exposure to medical marijuana; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Medical Marijuana (Medical Cannabis)

Alternate index label for Medical Cannabis.

Medical Marijuana (Medical Marijuana (Medical Cannabis))

Alternate index label for Medical Marijuana (Medical Cannabis).

Medical Negligence (Malpractice)

Legal tort occurring when a healthcare provider fails to exercise the standard of reasonable care, skill, or diligence expected of a prudent practitioner of similar standing, resulting in injury, harm, or death to a patient.

Alternate Names:

Malpractice

Medical Nutrition Therapy

Individualized nutrition intervention by registered dietitian. Conditions: diabetes, renal disease, GI disorders, cancer, obesity.

Medical Officer

A physician appointed to provide clinical care or medical oversight for an institution, service, or organization.

Medical Physicist

A board-certified healthcare professional with specialized advanced training in medical physics, applying the principles of physics to diagnostic imaging, nuclear medicine, and radiation oncology. Responsibilities include calculating and verifying individualized radiation therapy dose distributions (treatment planning for external beam radiotherapy, stereotactic radiosurgery, and brachytherapy), ensuring radiation dosimetry calibration accuracy, maintain-

ing strict radiation safety protocols, and conducting quality assurance for linear accelerators, CT, MRI, and PET scanners to protect patients and clinical personnel.

Medical Physics

The application of physics to medicine, including diagnostic imaging, radiation therapy, radiation safety, and physiological measurement.

Medical Pin

A medical pin is a slender metal fixation device inserted into bone or across a joint to stabilize a fracture or support orthopedic treatment. Pins may be temporary or permanent and require monitoring for infection and displacement.

Medical Practitioner

A licensed physician qualified to diagnose, prevent, and treat illness.

Medical Privacy

Protection of identifiable patient information and control of its disclosure in healthcare.

Medical Record

A medical record is the documented account of a patient's health information, including history, findings, diagnoses, test results, treatments, and clinical decisions. It supports continuity, communication, quality improvement, and legal documentation.

Medical Records

A documented account of a patient's clinical history, examination, investigations, treatment, and outcome maintained by providers. In medicolegal practice, records are contemporaneous evidence in malpractice, injury, criminal, and death cases, so accuracy, timeliness, and unaltered amendments are essential.

Medical Repository

The first medical magazine and scientific journal published in the United States; founded in New York in 1797, it was published quarterly until 1824.

Medical School

An institution whose curriculum leads to a medical degree and includes foundational sciences, clinical training, patient care, and often medical research.

Medical Symbol

A commonly recognized sign representing medicine, especially the Rod of Asclepius: a staff with one serpent. The winged, two-serpent caduceus is often used incorrectly as a medical symbol.

Medical Tattooing

Medical tattooing (permanent makeup, micropigmentation) covers depigmented skin (vitiligo, vitiligo camouflage), restores areolas after mastectomy, and masks scars. Trichopigmentation simulates hair on bald scalp. Medical tattooing uses specialized pigments and techniques.

Medical Tests

Diagnostic procedures used to screen for, confirm, or monitor disease through analysis of biologic specimens, imaging, physiologic measurements, or genetic material.

Medication

A combination of aspirin, phenacetin, and caffeine; phenacetin-containing APC products were associated with kidney injury and are no longer widely used.

Medications And Treatments

all pharmacologic and therapeutic interventions used to prevent, manage, or cure disease, classified by mechanism of action, therapeutic class, and route of administration.

Medications Type 2 Diabetes (Antidiabetics-Oral)

Alternate index label for antidiabetics-oral.

Medicinal

Used for the prevention, diagnosis, relief, or treatment of disease.

Medicines For Back Pain

Medicines for back pain may include selected anti-inflammatory drugs, acetaminophen, muscle relaxants, or other treatments depending on the cause and patient risks.

Medicines For Osteoporosis

Osteoporosis medicines reduce bone loss or increase bone formation and may include bisphosphonates, denosumab, or anabolic treatments chosen according to fracture risk.

Medicines For Sleep

Medicines for sleep may help short-term insomnia but can cause dependence, falls, confusion, or next-day impairment; treatment should also address the cause of poor sleep.

Medico-Legal

Relating to the application of medical knowledge to legal questions or proceedings.

Medicolegal

Pertaining to the application of medical knowledge to legal questions and the intersection of medicine and the law. Covers forensic pathology, toxicology, psychiatry, and clinical issues: informed consent, malpractice, medical records, disability, personal injury, occupational disease, and public health law.

Meditation

Meditation is a practice of intentionally directing attention, often toward the breath, a sensation, or an object, while observing thoughts without judgment. It may promote relaxation and stress management but does not replace indicated medical treatment.

Mediterranean Anemia

Alternate index label; see *Thalassemia*.

Mediterranean Fever

An older name for brucellosis, a bacterial infection that can cause prolonged fever, sweats, fatigue, and joint or muscle pain.

Medium

A substance or condition through which something occurs; in microbiology, a culture medium supports the growth of microorganisms.

MEDLARS

Medical Literature Analysis and Retrieval System, an electronic bibliographic system developed by the U.S. National Library of Medicine to index and retrieve biomedical literature; it preceded MEDLINE.

Medroxyprogesterone

Medroxyprogesterone is a progestogen used for contraception, abnormal uterine bleeding, endometriosis, and hormone therapy; depot injections may cause irregular bleeding, weight change, delayed fertility return, and reduced bone density.

Medroxyprogesterone Acetate

Medroxyprogesterone acetate is a synthetic progestin used in hormonal contraception, treatment of endometriosis or abnormal uterine bleeding, and hormone therapy. It suppresses ovulation and produces progestational effects; formulation-specific risks and contraindications apply.

Medulla

The inner or central part of an organ, such as the renal medulla or adrenal medulla.

Medulla Oblongata

Most inferior brainstem segment, continuous with the spinal cord at the foramen magnum. Contains vital autonomic centers: cardiovascular center (heart rate, blood pressure), respiratory center (dorsal/ventral respiratory groups), and area postrema (vomiting center).

Medullary

Relating to the medulla or inner portion of an organ.

Medullary Carcinoma

Medullary carcinoma is a cancer with sheets of malignant cells and a prominent immune-cell response; the exact meaning depends on the organ involved,

especially the breast or thyroid.

Medullary Sponge Kidney

Congenital malformation characterized by cystic dilatation of the collecting ducts in the renal papillae predisposing to nephrolithiasis and nephrocalcinosis. Presents with recurrent kidney stones, hematuria, and urinary tract infections.

Medullary Thyroid Carcinoma

Neuroendocrine tumor arising from parafollicular C cells that produce calcitonin. Accounts for approximately five percent of thyroid carcinomas. May be sporadic or hereditary as part of multiple endocrine neoplasia type two A or two B. Serum calcitonin serves as a tumor marker. Diagnosis requires FNA with calcitonin immunohistochemistry.

Medulloblastoma

A fast-growing embryonal tumor of the cerebellum and the most common malignant brain tumor of childhood. Treated with surgical resection, craniospinal radiation, and chemotherapy.

Medulloepithelioma

A medulloepithelioma is a rare embryonal tumor arising most often from the nonpigmented ciliary epithelium of the eye in children. It may cause visual symptoms, neovascular glaucoma, or a visible mass and is treated according to its extent and pathology.

Mefenamic Acid

mefenamic acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Mefloquine

Mefloquine is an antimalarial drug used for prevention and treatment of susceptible malaria. It has a long half-life but can cause neuropsychiatric, vestibular, and cardiac adverse effects, so patient-specific contraindications and warnings are important.

Mega-Trial

A mega-trial is a very large clinical trial designed to enroll enough participants to detect clinically important differences, including relatively uncommon outcomes or modest treatment effects.

Megabecquerel

A megabecquerel (MBq) is a unit of radioactivity equal to one million nuclear disintegrations per second. It is used to state the activity of radiopharmaceuticals and other radioactive materials.

Megacalycosis

Megacalycosis is congenital, nonobstructive dilatation of the renal calyces, usually with otherwise preserved renal architecture and function. It is often incidental but must be distinguished from obstructive hydronephrosis.

Megacolon

Abnormal enlargement and dilation of the colon, which may be congenital, acquired, toxic, or inflammatory.

Megakaryocyte

A large bone-marrow cell that extends cytoplasmic processes and releases platelets.

Megakaryocytopoiesis

Megakaryocytopoiesis is the formation and maturation of megakaryocytes in the bone marrow, followed by platelet production. It is regulated in large part by thrombopoietin and other hematopoietic signals.

Megaloblast

An abnormally large, immature red-cell precursor in bone marrow, typically reflecting impaired DNA synthesis.

Megaloblastic Anaemia

Macrocytic anemia caused by defective DNA synthesis, most often from vitamin B12 or folate deficiency.

Megaloblastic Anemia

Anemia caused by impaired DNA synthesis, usually

related to vitamin B12 or folate deficiency, with abnormally large red blood cells.

Megalocephaly

Abnormally large head size, which may be familial, developmental, metabolic, or associated with brain disease.

Megamonas

Megamonas is a genus of anaerobic, gram-negative bacteria found mainly in the intestinal microbiota of humans and animals. Some species have been recovered from clinical specimens, although their disease-causing role depends on the clinical setting.

Megamonas Funiformis

Megamonas funiformis is an anaerobic bacterium of the genus Megamonas, commonly associated with the intestinal microbiota. Its detection in a clinical specimen requires interpretation alongside symptoms, specimen quality, and other microbiologic findings.

Megamonas Hypermegale

Megamonas hypermegale is an anaerobic bacterium in the genus Megamonas, primarily associated with the gastrointestinal microbiota. Its presence in a specimen is interpreted in relation to the site, clinical symptoms, and other microbiologic results.

Megasphaera

Megasphaera is a genus of anaerobic bacteria found in the oral cavity and gastrointestinal and genital microbiota. Species identification may be relevant in microbiome studies or when recovered from a clinical specimen.

Megasphaera Elsdenii

Megasphaera elsdenii is an anaerobic bacterium commonly found in the rumen and other microbial communities. It ferments organic acids and is mainly of relevance in microbiology and animal or microbiome research.

Megestrol

Megestrol is a synthetic progestin used in some settings to treat hormone-responsive cancers and, in certain formulations, anorexia or severe weight loss. It can cause glucocorticoid-like effects, thromboembolic risk, and adrenal suppression.

Megestrol Acetate

Megestrol acetate is the acetate salt of the progestin megestrol. Depending on formulation and indication, it is used for advanced endometrial or breast cancer and for appetite stimulation in selected patients with severe weight loss.

Meglitinides

Short-acting medicines that stimulate pancreatic insulin release to lower blood glucose.

Megrim

An older term for migraine, a recurrent headache disorder often associated with nausea and sensitivity to light or sound.

Meibomian Glands

Sebaceous glands in the eyelids that produce the oily layer of the tear film and help prevent tear evaporation.

Meibomianitis

Meibomianitis is inflammation or blockage of oil-producing eyelid glands, causing irritated eyelid margins, dry eye, crusting, or recurrent styes.

Meige Syndrome

A segmental cranial dystonia characterized by involuntary bilateral blepharospasm with dystonic contractions of the lower face, jaw, or tongue. Symptoms fluctuate and may be worsened by stress, speech, chewing, or sensory stimuli.

Meigs Syndrome

The triad of benign ovarian fibroma, ascites, and pleural effusion. The effusions typically resolve after removal of the ovarian tumour and should be distinguished from malignant ovarian disease.

Meigs' Syndrome

The triad of an ovarian fibroma, ascites, and pleural effusion, with resolution of the fluid after tumor removal.

Meiosis

A specialized cell division that produces haploid eggs or sperm from a diploid precursor cell and creates genetic variation through recombination and chromosome assortment.

Meiotic Recombination

Meiotic recombination is exchange of DNA between homologous chromosomes during meiosis, usually through crossing over. It creates new combinations of alleles and contributes to genetic variation.

Meissner's Corpuscles

Encapsulated sensory receptors in hairless skin that detect light touch and low-frequency vibration.

Melancholia

An older term for severe depression, often describing pervasive sadness, loss of pleasure, psychomotor change, and biological symptoms.

Melancholic Features

A specifier for major depressive episodes characterized by a loss of interest or pleasure in all or almost all activities, a depressed mood that is qualitatively distinct from grief, prominent psychomotor retardation or agitation, significant anorexia or weight loss, excessive guilt, and worsening of mood in the morning.

Melanin

Melanin is a pigment produced by melanocytes that gives skin, hair, and eyes their colour and absorbs ultraviolet radiation; its amount and distribution influence pigmentation disorders and melanoma biology.

Melanoblast

A precursor cell that develops into a melanocyte and produces pigment after migrating into the skin

and other tissues.

Melanocyte

A melanocyte is a pigment-producing cell derived from the neural crest. It makes melanin in specialized organelles called melanosomes and transfers the pigment to neighboring keratinocytes, helping protect skin from ultraviolet radiation.

Melanocytes

Dendritic pigment-producing neural crest-derived cells in the epidermal basal layer and hair follicles, comprising approximately 5-10 percent of basal keratinocytes. Produce melanin (eumelanin, brown-black; pheomelanin, yellow-red) in melanosomes, transferred to keratinocytes via dendritic processes for UV protection.

Melanocytic Nevus

A melanocytic nevus is a usually benign, localized proliferation of melanocytes that appears as a macule, papule, or nodule. Changes in size, color, border, or symptoms may require assessment for atypia or melanoma.

Melanocytic Tumor Of The Central Nervous System

A tumor showing melanocytic differentiation within the CNS or meninges, ranging from benign melanocytoma to malignant melanoma. Evaluation includes imaging, histology, and molecular assessment to determine behavior.

Melanoderma

Increased pigmentation or darkening of the skin caused by increased melanin production or an increased number of melanocytes.

Melanoma

Melanoma is a malignant tumor of melanocytes, most often arising in skin but also in eye or mucosal sites; early detection matters because it can invade and metastasize.

Alternate Names:

Malignant Melanoma (Melanoma) Skin Cancer, Melanoma

Melanoma (Skin Cancer Overview)

Alternate index label for Skin Cancer Overview.

Melanoma Of The Eye

Melanoma of the eye concerns melanoma of the eye, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Melanoma Surveillance

regular skin examination, patient education on self-examination, and dermoscopic monitoring of atypical nevi. High-risk patients (personal or family history, numerous atypical nevi, immunosuppression) require 6-month follow-up. Standard patients require annual examination. Total body photography establishes baseline for change detection.

Melanoma Treatment

Stage-dependent. Stage 0 to IA: wide local excision. Stage IB to IIA: wide excision with sentinel lymph node biopsy. Stage IIB to IIC: wide excision, SLNB, and adjuvant therapy.

Melanoma, Benign

An older or imprecise term for a benign melanocytic growth, such as a melanocytic nevus or mole; unlike malignant melanoma, it is not cancerous.

Melanophore

A melanophore is a pigment-containing cell, especially one in lower vertebrates, whose melanin granules can disperse or aggregate to alter visible coloration. In mammals, melanocytes are the principal melanin-producing cells.

Melanosis

Abnormal accumulation or increased production of melanin in skin, mucosa, an organ, or other tissue.

Melanosis Coli

Melanosis coli is dark pigmentation of the colon lining caused by lipofuscin accumulation, classically associated with prolonged stimulant-laxative use. It is usually benign and may fade after stopping

the trigger, but the underlying constipation and medication use should be reviewed.

Melanosome

A melanosome is a specialized organelle in a melanocyte in which melanin is synthesized, stored, and transported. Melanosomes are transferred to keratinocytes and influence skin, hair, and eye pigmentation.

MELAS Syndrome

A mitochondrial disorder involving encephalopathy, lactic acidosis, and stroke-like episodes, often beginning before adulthood and caused by pathogenic mitochondrial DNA variants.

Melasma

Melasma is acquired, usually symmetric brown or gray facial hyperpigmentation associated with ultraviolet exposure, hormones, pregnancy, and genetic susceptibility; it is benign but often recurrent.

Alternate Names:

Chloasma (Melasma)

Melasma (Chloasma)

An acquired, chronic pigmentary disorder characterized by symmetric, hyperpigmented, light-to-dark brown macules and patches on sun-exposed areas of the face (malar, forehead, upper lip, chin). It primarily affects women of childbearing age and individuals with darker skin types (Fitzpatrick types III-V).

Alternate Names:

Chloasma

Melatonin

A hormone produced mainly by the pineal gland that helps regulate sleep-wake timing.

Melatonin Receptor

melatonin receptor is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Melatonin Receptor Agonists

Medications that act on MT1 and MT2 receptors in the suprachiasmatic nucleus to regulate circadian rhythms. Ramelteon is approved for insomnia with sleep onset difficulty. It has no abuse potential and does not cause dependence. It is a useful alternative to benzodiazepines for sleep initiation problems.

MELD

Model for End-Stage Liver Disease, a laboratory-based score used to estimate severity of advanced liver disease and help prioritize adults for liver transplantation. Traditional versions use bilirubin, creatinine, and INR; current implementations may include additional variables.

MELD Score

Model for End-Stage Liver Disease predicting three-month mortality in advanced liver disease used for liver transplant allocation. The score is calculated using serum bilirubin, creatinine, and international normalized ratio generating a continuous score from approximately six to forty points.

Melena

Black, tarry, often foul-smelling stool caused usually by digested blood from upper gastrointestinal bleeding.

Melengestrol Acetate

Melengestrol acetate is a synthetic progestin used primarily in veterinary medicine to suppress estrus and improve feed efficiency in cattle. It is not approved for use in humans.

Melibiose

A disaccharide composed of galactose and glucose, produced by hydrolysis of raffinose and metabolized by some microorganisms.

Melio

An older shortened form related to melioidosis, the infection caused by *Burkholderia pseudomallei*.

Melioidosis

An infectious disease caused by *Burkholderia pseudomallei*, usually acquired from contaminated soil or water through inoculation or inhalation. It may cause pneumonia, skin infection, abscesses, sepsis, or chronic disease and is more severe in people with diabetes or other risk factors.

Melitensis

A species designation, especially *Brucella melitensis*, a bacterium that causes brucellosis and is associated with goats and sheep.

Melitten

Melitten, more commonly spelled melittin, is the principal peptide toxin in honeybee venom. It disrupts cell membranes and contributes to pain, inflammation, hemolysis, and other effects of envenomation.

Melorheostosis

A rare sclerosing bone dysplasia producing irregular, flowing cortical hyperostosis on imaging. It may cause pain, stiffness, limb deformity, restricted movement, contractures, or soft-tissue fibrosis and can affect one or several contiguous bones.

Meloxicam

Meloxicam is a nonsteroidal anti-inflammatory drug that inhibits cyclooxygenase enzymes and reduces prostaglandin synthesis. It is used for pain and inflammation, but can cause gastrointestinal, renal, cardiovascular, and hypersensitivity adverse effects.

Melphalan

An alkylating antineoplastic medicine used in selected plasma-cell disorders and other cancers.

Memantine

An NMDA receptor antagonist (uncompetitive, low-to-moderate affinity) used for moderate to severe Alzheimer disease, often added to an acetylcholinesterase inhibitor. Blocks excessive glutamate-mediated excitotoxicity while preserving normal synaptic transmission. Once or twice daily oral.

Memantine Hydrochloride

Memantine hydrochloride is an NMDA-receptor antagonist used to help manage moderate-to-severe Alzheimer disease. It reduces pathologic glutamate-mediated excitotoxicity; common adverse effects include dizziness, headache, constipation, and confusion.

Membrane

A thin tissue layer that surrounds a cell, organ, or body cavity.

Membrane Channel

A membrane channel is a protein-forming pore across a cell membrane that permits selected ions or molecules to pass down an electrochemical or concentration gradient. Many channels are gated by voltage, ligands, or mechanical forces.

Membrane Fusion

Membrane fusion is merging of two lipid bilayers into one continuous membrane. It is required for processes such as synaptic vesicle release, enveloped-virus entry, fertilization, and intracellular vesicle trafficking.

Membrane Lipids

membrane lipids is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Membrane Microdomain

A membrane microdomain is a small, specialized region of a cell membrane with a distinct composition of lipids and proteins. It can organize receptors, signaling molecules, transporters, and cytoskeletal interactions.

Membrane Part

A membrane part is a structural or molecular component of a biological membrane, such as a lipid, protein, carbohydrate, channel, or receptor. These components determine membrane integrity, transport, signaling, and cell recognition.

Membrane Potential

The electrical potential difference across a cell membrane, approximately -70 mV in most neurons (resting membrane potential). Established by the unequal distribution of ions (primarily K⁺, Na⁺, Cl⁻) across the membrane and selective permeability.

Membrane Protein

membrane protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Membrane Raft

A membrane raft is a cholesterol- and sphingolipid-enriched membrane microdomain that helps cluster selected proteins and signaling molecules. Raft organization is dynamic and may change during receptor signaling or membrane trafficking.

Membranoproliferative Glomerulonephritis

Pattern of glomerular injury with mesangial proliferation and capillary wall thickening creating tram-track appearance on silver stain. Hepatitis C is common cause of immune complex MPGN. C3 glomerulopathy represents complement-mediated disease. Associated with monoclonal gammopathies.

Membranous

Relating to, consisting of, or resembling a membrane. In medicine, the term may describe a thin tissue layer or a disease pattern involving such a layer.

Membranous Nephropathy

A glomerular disease caused by immune-complex deposition along the glomerular basement membrane. It commonly causes proteinuria and nephrotic syndrome and may be primary or secondary to another disease, medication, or infection.

Memory

The cognitive process of encoding, storing, and retrieving information, mediated by distributed neural networks involving the hippocampus, medial tem-

poral lobe, prefrontal cortex, and limbic system.

Memory Cell

Long-lived lymphocytes (memory B cells and memory T cells) that survive after an immune response and mount rapid, enhanced responses to re-exposure to the same antigen (immunological memory).

Memory Disorder

Impairment of encoding, storage, retrieval, or recognition of information that exceeds normal variation and may result from neurodegeneration, injury, vascular disease, medication, or other causes.

Memory Impairment

Memory impairment is reduced ability to learn, store, retrieve, or recognize information. It may be transient or persistent and can result from normal aging, medications, sleep problems, neurologic disease, psychiatric illness, or other medical conditions.

Memory Loss

Reduced ability to recall or learn information. It may result from normal aging, medical illness, medicines, brain injury, or a neurocognitive disorder.

Memory Loss (Amnesia)

Reduced ability to recall past information, form new memories, or both. Causes include normal aging, medications, head injury, seizures, stroke, infection, substance use, neurocognitive disorders, and psychological conditions; sudden memory loss requires urgent assessment.

Memory Span

The number of items, such as words or digits, that a person can briefly retain and recall, usually in the original order; it is a measure of short-term or working memory.

Memory T Cells And B Cells

Long-lived immune cells that respond rapidly when they encounter a previously recognized antigen.

Alternate Names:
Memory lymphocytes

Memory Training

Memory training consists of structured exercises or strategies intended to improve encoding, storage, retrieval, or compensatory organization of information. Benefits vary by method and condition and do not establish treatment for an underlying disorder.

MEN 2

Alternate index label; see *Multiple endocrine neoplasia, type 2 (MEN 2)*.

Men Night Sweats (Night Sweats)

Alternate index label for Night Sweats.

Menarche

The first menstrual period, marking the onset of menstruation. Its timing varies with genetics, nutrition, health, and pubertal development; markedly early or delayed menarche may require assessment.

Mendelian Inheritance

Inheritance of traits determined by single genes and transmitted according to dominant, recessive, or sex-linked patterns.

Mendelism

The principles of inheritance based on Gregor Mendel's work, including segregation of alleles and independent assortment of genes; Mendelian traits may follow autosomal or X-linked dominant or recessive patterns.

Mendelson Syndrome

A chemical pneumonitis caused by inhalation of acidic stomach contents, classically during anesthesia or childbirth. It can cause cough, breathing difficulty, and impaired oxygenation.

Meniere Disease

An inner ear disorder characterized by recurrent episodes of vertigo lasting 20 minutes to 12 hours, with fluctuating sensorineural hearing loss, tinnitus,

and aural fullness. Due to endolymphatic hydrops. Diagnosis: clinical criteria; audiometry shows low-frequency SNHL during attacks.

Alternate Names:
Menieres Disease (Meniere Disease)

Meniere'S Disease

An inner-ear disorder causing episodic vertigo, fluctuating sensorineural hearing loss, tinnitus, and aural pressure.

Menieres Disease (Meniere Disease)

Alternate index label for Meniere Disease.

Meningeal Carcinomatosis

Meningeal carcinomatosis is spread of cancer cells to the membranes and fluid surrounding the brain and spinal cord.

Meningeal Leukemia

Meningeal leukemia is leukemia involving the membranes or fluid around the brain and spinal cord, potentially causing headache, weakness, or cranial-nerve problems.

Meningeal Lymphoma

Meningeal lymphoma is lymphoma affecting the membranes or fluid spaces around the brain and spinal cord.

Meningeal Neoplasm

A meningeal neoplasm is an abnormal growth arising in or near the membranes surrounding the brain and spinal cord.

Meninges

The three membranes enveloping the brain and spinal cord: dura mater (outermost, tough), arachnoid mater (middle, avascular), and pia mater (innermost, adherent to the CNS surface). The subarachnoid space (between arachnoid and pia) contains cerebrospinal fluid. The epidural and subdural spaces are sites of hemorrhage.

Meningioma

A usually slow-growing tumor arising from cells associated with the meninges. Most are benign, but some are atypical or malignant and can cause symptoms by compressing the brain, spinal cord, or cranial nerves.

Meningism

Meningism is a syndrome of neck stiffness, headache, and sometimes photophobia or vomiting that resembles meningeal irritation without necessarily indicating meningitis. Serious causes, including infection or subarachnoid hemorrhage, require prompt evaluation.

Meningismus

Neck stiffness and other meningeal-irritation signs without proven inflammation of the meninges.

Meningitis

Meningitis is inflammation of the membranes around the brain and spinal cord, caused by infection or noninfectious inflammation and presenting with headache, fever, neck stiffness, or altered mental status. Infection but also by bacteria, fungi, parasites, medicines, or autoimmune disease. Symptoms may include fever, headache, neck stiffness, light sensitivity, or altered mental status and require urgent assessment.

Meningitis - Cryptococcal

Meningitis caused by *Cryptococcus* species, usually affecting people with impaired cellular immunity; symptoms may develop gradually and diagnosis uses cerebrospinal-fluid studies and fungal testing.

Meningitis - Tuberculous

Subacute or chronic meningitis caused by *Mycobacterium tuberculosis*, characterized by inflammation of the meninges and requiring urgent multidrug treatment.

Meningocele

A congenital defect in which the membranes surrounding the spinal cord or brain protrude through an opening in the skull or spine, forming a fluid-filled

sac. It may occur with other neural-tube defects and can cause neurologic problems; evaluation commonly includes imaging and specialist assessment.

Meningocele Repair

A medical procedure, treatment, device, or care topic related to meningocele repair; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Meningococcal Disease

A bacterial infection caused by *Neisseria meningitidis* (serogroups A, B, C, W, Y), transmitted via respiratory droplets. Meningococcemia: sudden onset fever, petechial/purpuric rash, hypotension, and DIC. Meningococcal meningitis: fever, nuchal rigidity, headache, photophobia.

Meningococcal Infection

Infection with *Neisseria meningitidis*, which may cause meningitis, bloodstream infection, or localized respiratory disease. Severe illness can progress rapidly.

Meningococcal Meningitis

Acute bacterial meningitis caused by *Neisseria meningitidis*, often accompanied by bloodstream infection; it is a medical emergency requiring immediate antibiotics and public-health measures.

Meningococcemia

Meningococcemia is bloodstream infection with *Neisseria meningitidis*, causing fever, rash, shock, clotting failure, and potentially fatal sepsis.

Meningococcus

Neisseria meningitidis, a bacterium that can cause meningitis and rapidly progressive bloodstream infection.

Meningoencephalitis

Inflammation of both the meninges surrounding the brain and the brain tissue itself, usually caused by infection or autoimmune disease. Fever, headache, neck stiffness, confusion, seizures, or reduced con-

sciousness requires urgent medical assessment.

Meningoencephalitis Toxoplasma (Toxoplasmosis)

Alternate index label for Toxoplasmosis.

Meningomyelocele

A neural-tube defect in which meninges and spinal cord tissue protrude through a vertebral opening.

Meniscal Allograft Transplantation

A medical procedure, treatment, device, or care topic related to meniscal allograft transplantation; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Meniscal Injuries

Tears or other damage to the knee menisci, which are crescent-shaped pieces of cartilage that help distribute load and stabilize the knee. Symptoms may include joint-line pain, swelling, clicking, or restricted motion. Diagnosis is based on examination and, when needed, imaging.

Meniscal Tear

Tear of the C-shaped fibrocartilage (medial or lateral meniscus) that provides shock absorption and stability in the knee. Medial meniscus tears more common (attached to capsule). Mechanism: twisting injury with weight-bearing. Presents with joint line tenderness, pain with deep squatting, catching, locking, and giving way.

Meniscectomy

Surgical removal of part or all of a torn knee meniscus.

Meniscus

A crescent-shaped fibrocartilage structure in the knee, or a curved fluid surface in a container.

Meniscus Tear

Alternate index label; see *Torn meniscus*.

Menkes Disease

An X-linked recessive disorder of copper metabolism caused by ATP7A mutations, resulting in impaired intestinal copper absorption and defective copper transport across the blood-brain barrier. Copper accumulates in intestinal and renal cells but is deficient in the liver and brain.

Menkes Kinky Hair Syndrome

An X-linked disorder of copper transport caused by ATP7A dysfunction. It produces progressive neurodegeneration, seizures, developmental delay, hypopigmented or brittle kinky hair, connective-tissue abnormalities, and failure to thrive.

Menogaril

Menogaril is a semisynthetic anthracycline derivative of nogalamycin. It intercalates into DNA and inhibits topoisomerase II, thereby impairing DNA replication and repair; it was investigated as an antineoplastic agent.

Menometrorrhagia

Excessive uterine bleeding occurring both at expected menstrual times and at irregular intervals; the older term corresponds broadly to heavy and irregular menstrual bleeding and warrants evaluation for underlying causes.

Menopausal

Relating to menopause or the transition around the end of menstrual periods.

Menopausal Hormone Therapy

Menopausal hormone therapy, formerly called hormone replacement therapy, is the use of estrogen with or without progesterone to alleviate moderate-to-severe menopausal vasomotor symptoms (hot flashes, night sweats), genitourinary syndrome of menopause (vaginal dryness, dyspareunia, urinary urgency), and prevent osteoporosis.

Menopause

The permanent end of menstrual periods because of loss of ovarian activity, usually diagnosed after 12 consecutive months without menstruation. Hor-

monal changes may cause hot flashes, night sweats, vaginal symptoms, sleep problems, or other symptoms.

Menopause And Perimenopause

Menopause is the permanent cessation of menstruation for 12 consecutive months, reflecting ovarian follicle depletion and estrogen decline, occurring at a median age of 51–52 years in North America.

Menopause Hot Flashes (Hot Flashes)

Alternate index label for Hot Flashes.

Menopause Status

Menopause status describes whether a person is premenopausal, perimenopausal, or postmenopausal. Natural menopause is clinically defined after 12 consecutive months without menstruation when no other cause explains the amenorrhea.

Menopause Syndrome

A nontechnical term for the group of symptoms that may occur during the menopausal transition, such as hot flashes, night sweats, sleep problems, mood changes, vaginal dryness, and menstrual irregularity. Menopause itself is a normal life stage, not a disease.

Menorrhagia

Heavy or prolonged menstrual bleeding that interferes with physical, social, emotional, or material quality of life. Causes include fibroids, adenomyosis, endometrial polyps, bleeding disorders, thyroid disease, and ovulatory dysfunction; it may cause iron-deficiency anemia.

Menotropin

Menotropin is a urinary-derived preparation containing follicle-stimulating and luteinizing hormone activity, used to stimulate follicular development or spermatogenesis; ovarian hyperstimulation and multiple pregnancy are important risks.

Mensa

A table or flat surface; in anatomy, the term may describe a flat surface of a structure and is context-

dependent.

Menses Duration

Menses duration is the number of days of menstrual bleeding in a cycle, counted from the first day of bleeding until bleeding stops. Persistently prolonged, heavy, or irregular bleeding warrants clinical assessment.

Menstrual

Relating to menstruation or the menstrual cycle, including the monthly shedding of the uterine lining and the bleeding that follows. Cycle length and bleeding vary, but very heavy, painful, irregular, or unexpected bleeding may need evaluation.

Menstrual Cramps

Cramping pain in the lower abdomen during or around menstruation, medically called dysmenorrhea. Pain may radiate to the back or thighs and may occur with nausea, diarrhea, headache, or fatigue. Severe, worsening, or newly developed pain requires evaluation for causes such as endometriosis or fibroids.

Alternate Names:

Cramps, Menstrual Painful periods Cramps Menstrual (Menstrual Cramps) Painful Periods

Menstrual Cycle

The recurring hormonal and uterine changes that prepare the body for possible pregnancy. Cycle length and bleeding pattern vary among individuals and across life stages.

Menstruation

The periodic shedding of the endometrial lining as part of the menstrual cycle when pregnancy does not occur. The timing, duration, and amount of bleeding vary with age, hormonal state, medicines, and health conditions.

Menstruation Disturbance

A menstruation disturbance is an abnormality in the timing, regularity, duration, amount, or associated symptoms of menstrual bleeding. Causes include pregnancy, endocrine disorders, structural disease,

medications, systemic illness, and perimenopause.

Menstruation, Cessation Of

Cessation of menstrual periods, called amenorrhea; it is a normal part of menopause but may also result from pregnancy, illness, endocrine disorders, medications, stress, excessive exercise, or inadequate nutrition.

Mental

Relating to thinking, memory, emotion, behavior, or other functions of the mind. It does not by itself mean that a condition is psychiatric.

Mental Age

An estimate of cognitive functioning expressed as the age level at which a standardized test score is typical; it is not the same as chronological age.

Mental Disorder

A clinically significant disturbance in cognition, emotion regulation, or behavior that causes distress, impairment, or both.

Mental Disorders

Health conditions involving clinically significant disturbances in cognition, emotion regulation, behavior, or functioning, including mood, anxiety, psychotic, neurodevelopmental, and substance-use disorders.

Mental Fatigue

Mental fatigue is a subjective feeling of reduced mental energy, concentration, or cognitive endurance after sustained effort or illness. Persistent or severe symptoms may accompany sleep disorders, depression, neurologic disease, medication effects, or other medical conditions.

Mental Health

Mental health encompasses emotional, psychological, and social well-being, affecting how individuals think, feel, behave, and handle stress, relationships, and decision-making.

Mental Health (Psychology)

Alternate index label for Psychology.

Mental Illness

A broad term for mental disorders that affect mood, thinking, behavior, or functioning.

Mental Illness In Children

Mental illness in children may appear as persistent changes in mood, behavior, learning, sleep, appetite, relationships, or development. Evaluation considers age, medical causes, trauma, school context, family history, safety, and the child's strengths and supports.

Mental Process

A mental process is a cognitive or affective activity of the mind, such as perception, attention, memory, reasoning, language, emotion, or decision-making.

Mental Recall

Mental recall is retrieval of previously learned or stored information from memory. It may be assessed by asking a person to remember facts, events, words, or experiences after a delay.

Mental Status Examination

A structured assessment of the patient's current psychological functioning performed during the clinical interview. It evaluates appearance, behaviour, speech, mood, affect, thought process, thought content, perceptions, cognition, insight, and judgment.

Mental Status Testing

A structured assessment of appearance, behavior, alertness, orientation, attention, memory, language, thought, perception, mood, insight, and judgment.

Mentation

The process of thinking, perceiving, reasoning, and other mental activity.

Menthol

A mint-derived or synthetic compound producing a cooling sensation and used in some topical and

respiratory preparations.

Menthol Poisoning

Menthol poisoning involves toxic or environmental exposure to menthol poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Mepacrine

An older antimalarial and antiprotozoal medicine, also called quinacrine, now used only in selected indications.

Meperidine

An opioid analgesic, also called pethidine, whose use is limited by adverse effects and an active neurotoxic metabolite.

Meperidine Hydrochloride

Meperidine hydrochloride is the hydrochloride salt of the opioid analgesic meperidine. It produces analgesia through opioid-receptor activity and carries risks of sedation, respiratory depression, seizures, dependence, and serotonin toxicity with interacting drugs.

Meperidine Hydrochloride Overdose

Meperidine hydrochloride overdose involves toxic or environmental exposure to meperidine hydrochloride overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Mephenesin

An older centrally acting muscle relaxant with sedative effects. It is rarely used now and can impair alertness, coordination, and breathing when combined with other sedatives.

Mephentermine

A sympathomimetic medicine formerly used to raise blood pressure in selected hypotensive states.

Mephentyoin

Mephentyoin is a hydantoin anticonvulsant formerly

used to treat seizures. It is metabolized partly to ethotoin and has limited modern use because of potentially serious adverse effects, including hypersensitivity and blood dyscrasias.

Mepivacaine

An amide local anesthetic used for infiltration, nerve blocks, and regional anesthesia.

Meprobamate

An older anxiolytic and sedative medicine with dependence and overdose risks.

Meprobamate Overdose

Meprobamate overdose involves toxic or environmental exposure to meprobamate overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Mepyramine

An antihistamine that blocks H1 receptors and may cause sedation; it is also called pyrilamine.

Meralgia Paresthetica

Burning, tingling, or numbness over the outer thigh caused by compression of the lateral femoral cutaneous nerve.

Alternate Names:

Burning Thigh Pain

Merbromin Poisoning

Merbromin poisoning involves toxic or environmental exposure to merbromin poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Mercaptopurine

A thiopurine antimetabolite used in selected leukemias and inflammatory disorders, requiring monitoring for marrow and liver toxicity.

Mercurialism

Chronic poisoning by mercury, potentially causing neurologic, psychiatric, renal, gastrointestinal, or oral effects.

Mercuric Chloride Poisoning

Mercuric chloride poisoning involves toxic or environmental exposure to mercuric chloride poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Mercuric Oxide Poisoning

Mercuric oxide poisoning involves toxic or environmental exposure to mercuric oxide poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Mercury

Liquid metal combining with other metals to form amalgam. Concerns about toxicity, proper handling essential.

Mercury Poisoning

Three forms: elemental (inhalation, neurological), inorganic (renal, GI), organic (methylmercury, neurological). Minamata disease from methylmercury. Treatment: chelation (dimercaprol, DMSA), remove exposure.

Meridian

A reference line or plane; in traditional acupuncture it denotes a proposed pathway for qi, while in anatomy it may describe a longitudinal line.

Merkel Cell Carcinoma

An aggressive neuroendocrine skin cancer arising from Merkel cells. It presents as a rapidly growing, painless, red-violet nodule on sun-exposed skin of elderly patients. Approximately 80 percent are associated with Merkel cell polyomavirus. Risk factors include immunosuppression, UV exposure, and fair skin.

Alternate Names:

Cancer, Merkel Cell Neuroendocrine Carcinoma Of The Skin

Merkel Cells

Specialized touch-sensing cells in the deepest layer of the skin that help detect light touch and sustained pressure.

Mermaid Syndrome

An extremely rare congenital anomaly in which the legs are fused to varying degrees, also called sirenomelia.

Meropenem

Meropenem is a broad-spectrum carbapenem antibiotic that inhibits bacterial cell-wall synthesis and treats severe susceptible infections, including meningitis; allergy, gastrointestinal effects, seizures, and resistance are possible.

Meropenem-Vaborbactam

A combination of the carbapenem meropenem with the cyclic boronate beta-lactamase inhibitor vaborbactam. Vaborbactam inhibits class A and class C beta-lactamases, including KPC carbapenemases, but does not inhibit class D or metallo-beta-lactamases. This combination has activity against many carbapenem-resistant Enterobacteriaceae.

MERRF Syndrome

Myoclonic epilepsy with ragged-red fibres, a mitochondrial disorder usually caused by a pathogenic mitochondrial DNA variant. It features myoclonus, generalized epilepsy, ataxia, and skeletal-muscle mitochondrial abnormalities, with variable multisystem involvement.

Mersalyl

Mersalyl is an organomercury compound formerly used as a diuretic. Because mercury compounds can cause serious renal and neurologic toxicity, it has been replaced by safer diuretics.

Merthiolate Poisoning

Merthiolate poisoning involves toxic or environmental exposure to merthiolate poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Merycism

Rumination, the repeated regurgitation and rechewing of food after eating.

Mesalamine

Mesalamine, or 5-aminosalicylic acid, is an anti-inflammatory drug used to induce and maintain remission in ulcerative colitis and some other inflammatory bowel conditions. It acts mainly topically in the intestinal mucosa and can rarely affect renal function.

Mesangiolytic

Mesangiolytic is dissolution or disruption of the mesangial tissue within a renal glomerulus. It may occur in severe endothelial injury and can be associated with microvascular lesions and glomerular capillary aneurysmal changes.

Mesangium

The mesangium is the supportive tissue between glomerular capillary loops, composed of mesangial cells and extracellular matrix. Mesangial cells provide structural support, regulate capillary flow, and clear certain substances; abnormal expansion occurs in several glomerular diseases.

Mescaline

A naturally occurring psychedelic substance found in certain cacti that alters perception and may cause hallucinations and autonomic effects.

Mesencephalon

The mesencephalon, or midbrain, is the part of the brainstem between the pons and diencephalon. It contains pathways and nuclei involved in eye movements, motor control, arousal, and auditory and visual reflexes.

Mesenchymal Cell

Mesenchymal cell refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Mesenchymal Chondrosarcoma

Mesenchymal chondrosarcoma is a rare aggressive cancer containing cartilage-forming tissue, often arising in bone or soft tissue.

Mesenchymal Tumor Of The Central Nervous System

A tumor arising from non-neural supporting tissues of the CNS, including meningeal, vascular, fibroblastic, or other mesenchymal lineages. Diagnosis requires correlation of morphology, immunophenotype, molecular findings, and site.

Mesenchyme

Embryonic connective tissue that gives rise to much of the skeleton, connective tissue, blood vessels, and smooth muscle.

Mesenchymoma

A mesenchymoma is a rare tumor containing more than one type of mesenchymal tissue, sometimes including cartilage, bone, fat, or vascular elements. Behavior depends on the site, age, histology, and presence of malignant components.

Mesenteric

Relating to the mesentery or its blood vessels, nerves, lymphatics, and fat.

Mesenteric Angiography

Contrast imaging of the arteries supplying the intestines, used to evaluate mesenteric ischemia, bleeding, aneurysm, stenosis, occlusion, or vascular anatomy.

Mesenteric Artery

A mesenteric artery supplies blood to portions of the intestine and associated abdominal organs. The superior and inferior mesenteric arteries are the major vessels; obstruction or embolism can cause acute mesenteric ischemia.

Mesenteric Artery Ischemia

Inadequate blood flow through the mesenteric arteries, usually caused by embolism, thrombosis, or severe low-flow states. Acute disease presents with severe abdominal pain out of proportion to examination and can progress to bowel infarction.

Mesenteric Cyst

A mesenteric cyst is a fluid-filled cystic lesion within the mesentery. It may be congenital, lymphatic, enteric, or traumatic; symptoms depend on size and complications such as infection, hemorrhage, torsion, or bowel obstruction.

Mesenteric Ischemia

Reduced blood flow to intestines. Acute: embolism, thrombosis. Chronic: atherosclerosis. CT angiography diagnosis.

Mesenteric Lymphadenitis

Inflammation of lymph nodes in the membrane that attaches the intestines to the abdominal wall.

Alternate Names:

Lymphadenitis, Mesenteric

Mesenteric Veins

Mesenteric veins drain blood from the small and large intestines and carry it mainly through the superior and inferior mesenteric veins to the portal venous system. Thrombosis or impaired flow can cause intestinal congestion and ischemia.

Mesenteric Venous Thrombosis

A blood clot in a mesenteric vein that impairs intestinal venous drainage and can cause abdominal pain, bowel edema, ischemia, infarction, or gastrointestinal bleeding.

Mesentery

The fan-shaped double layer of peritoneum attaching the small intestine (jejunum and ileum) to the posterior abdominal wall, carrying the superior mesenteric artery, vein, lymphatics, and autonomic nerves between its layers. Root extends from duodenojejunal junction to ileocecal junction.

Mesh

A synthetic or biological implant used to provide structural support in pelvic organ prolapse and stress urinary incontinence surgery. Types: polypropylene (most common, mid-urethral slings for SUI, vaginal mesh for prolapse), biological

(porcine, bovine, or cadaveric dermis).

Mesial

Situated toward the midline; in dentistry, toward the front or midline of a tooth.

Mesial Surface

The mesial surface is the surface of a tooth or other structure oriented toward the midline. In dentistry, mesial surfaces contact adjacent teeth and can be involved in caries, periodontal disease, or restoration margins.

Mesna

Mesna is a sulfhydryl-containing uroprotective drug that binds the toxic acrolein metabolite of ifosfamide and cyclophosphamide in the urine. It is used to reduce hemorrhagic cystitis during treatment with these oxazaphosphorine chemotherapy agents.

Mesoderm

The middle germ layer in an embryo, which develops into muscles, bones, cartilage, blood vessels, and the kidneys.

Mesomorph

A body-build classification characterized traditionally by relatively prominent muscle and bone; it is descriptive, not a diagnosis.

Mesonephric

Mesonephric means relating to the mesonephros, a temporary embryonic kidney, or to structures derived from its ducts and tubules. Mesonephric remnants can give rise to uncommon benign or malignant lesions of the genital tract.

Mesonephric Adenocarcinoma

A rare HPV-independent cervical adenocarcinoma arising from mesonephric remnants, usually presenting as a cervical mass or abnormal bleeding and requiring histopathologic diagnosis.

Mesonephric Tumor

A mesonephric tumor is a rare tumor arising from

remnants of embryonic mesonephric ducts, usually in the female reproductive tract.

Mesonephroma

Mesonephroma is an older, context-dependent term for a tumor formerly thought to arise from mesonephric remnants, including some clear-cell or mesonephric tumors of the female genital tract and historically some yolk-sac tumors. Modern pathology uses more specific diagnostic names.

Mesothelial Neoplasm

A mesothelial neoplasm is a growth arising from the lining of body cavities, such as the pleura, peritoneum, or pericardium.

Mesothelin

Mesothelin is a cell-surface glycoprotein expressed mainly by mesothelial cells and overexpressed in several cancers, including mesothelioma and some ovarian and pancreatic cancers. It is being studied as a biomarker and therapeutic target.

Mesothelioma

A malignant tumor of mesothelial surfaces, most often the pleura and commonly associated with asbestos exposure.

Mesothelium

The mesothelium is a single layer of specialized cells lining serous body cavities and covering their organs, including the pleura, peritoneum, and pericardium. It produces lubricating fluid and participates in inflammation and repair.

Messenger RNA

A single-stranded RNA molecule transcribed from a DNA template that carries coding information to ribosomes for protein synthesis. Mature eukaryotic mRNA typically contains 5' and 3' untranslated regions, a coding sequence, a 5' cap, and a poly(A) tail; it is usually produced by processing a precursor RNA, including splicing, capping, and polyadenylation. Also called mRNA.

Mestranol

A synthetic estrogen formerly used in some combined oral contraceptives.

Met

Abbreviation for methionine, an essential sulfur-containing amino acid; it is also represented by the one-letter code M and the codons AUG.

Meta-Analysis

A statistical method that combines quantitative results from multiple studies addressing a related question. Its validity depends on the quality and comparability of the studies.

Metabolic

Relating to metabolism, the chemical processes by which cells produce and use energy and materials.

Metabolic Acidosis

A primary acid-base disorder characterized by decreased serum bicarbonate (<22 mEq/L) and pH <7.35. Causes are classified by anion gap (AG). High AG: diabetic ketoacidosis, lactic acidosis, renal failure, starvation, toxins (methanol, ethylene glycol, salicylates).

Metabolic Alkalosis

A primary increase in plasma bicarbonate or loss of hydrogen ions. Causes include vomiting, diuretic use, mineralocorticoid excess, and chloride depletion; respiratory compensation increases carbon dioxide but is limited by hypoxemia and acidosis.

Metabolic Disease

A disorder of biochemical pathways or energy metabolism that disrupts normal processing of carbohydrates, fats, proteins, minerals, or hormones.

Metabolic Dysfunction-Associated Steatohepatitis

Alternate index label; see *Fatty liver disease*.

Metabolic Dysfunction-Associated

Steatotic Liver Disease

Alternate index label; see *Fatty liver disease*.

Metabolic Equivalents

Units estimating the energy cost of physical activity relative to resting metabolism.

Alternate Names:

METs

Metabolic Myopathies

Muscle disorders caused by impaired energy metabolism, often producing exercise intolerance, cramps, weakness, muscle pain, or episodes of rhabdomyolysis.

Metabolic Neuropathies

Metabolic neuropathies concerns metabolic neuropathies, a body structure, substance, or clinical concept whose meaning depends on location, function, and patient context.

Metabolic Rate

The rate at which the body uses energy to maintain life and perform activity.

Metabolic Response

A metabolic response is a change in energy use, substrate metabolism, or biochemical pathways in response to conditions such as fasting, exercise, infection, trauma, or medication. The response may be adaptive or contribute to illness when excessive or prolonged.

Metabolic Syndrome

Cluster of conditions: abdominal obesity, hypertension, hyperglycemia, high triglycerides, low HDL. Increases cardiovascular disease and diabetes risk.

Alternate Names:

Insulin Resistance Syndrome Syndrome X

Metabolic Tumor Volume

Total volume of metabolically active tumor on PET. Prognostic in lymphoma.

Metabolism

Metabolism comprises the chemical reactions that produce energy and synthesize or break down molecules in cells, including catabolism, anabolism, and regulated handling of nutrients and drugs. anabolism (synthesis, consumes energy). Central pathways: glycolysis, TCA cycle, oxidative phosphorylation, pentose phosphate pathway. Metabolic regulation ensures energy homeostasis.

Metabolite

A substance produced or consumed during metabolism of a drug, nutrient, or endogenous molecule.

Metabolomics

Metabolomics is the comprehensive study of small-molecule metabolites in cells, tissues, or biological fluids. It uses analytical methods such as mass spectrometry or nuclear magnetic resonance to investigate physiology, disease, and treatment effects.

Metacarpal

Relating to one of the five bones forming the palm of the hand.

Metacarpal Bone

A metacarpal bone is one of the five long bones of the hand between the wrist bones and the proximal phalanges. Each has a base, shaft, and head; fractures can affect alignment, grip, and joint function.

Metacarpals

Five long bones (I-V) forming the palm framework. Each has base, shaft, and head. The first is shortest and most mobile, articulating with the trapezium at a saddle joint for opposition. Second/third are firmly fixed; fourth/fifth more mobile. Bennett's fracture affects the first metacarpal base; boxer's fracture affects the fifth neck.

Metacarpophalangeal Joint

A condyloid synovial joint between a metacarpal head and the base of a proximal phalanx. It permits flexion, extension, abduction, adduction, and limited circumduction.

Metacarpus

The part of the hand between the wrist and fingers, containing the five metacarpal bones.

Metachromatic Leukodystrophy

An inherited lysosomal-storage disorder caused by deficient arylsulfatase A activity, leading to sulfatide accumulation and progressive demyelination.

Metadata

Metadata is information describing other data, such as its source, format, time, units, author, processing history, or quality. In health care it helps identify, interpret, exchange, and govern clinical and research data.

Metagenome

A metagenome is the total genetic material recovered from a microbial community or other mixed biological sample, including genomes from organisms that may not be cultured.

Metagenomic Sequencing

Sequencing of nucleic acid recovered directly from a clinical or environmental specimen to identify microbial genetic material without requiring growth in culture. It can detect unusual or polymicrobial infections but is vulnerable to contamination and requires clinical interpretation.

Metagenomics

Metagenomics is the study of genetic material collected directly from an environmental or clinical sample containing multiple organisms. It can characterize microbial composition and functional genes without isolating each organism in culture.

Metagonimus Yokogawai

Metagonimus yokogawai is a small intestinal fluke acquired by eating raw or inadequately cooked freshwater fish. Infection can cause abdominal symptoms and, rarely, ectopic migration of eggs or adult worms.

Metal

A metal is an element or alloy with characteristic physical and chemical properties such as electrical conductivity and metallic bonding. In medicine, metals may be nutrients, toxic exposures, laboratory analytes, or components of implants and devices.

Metal Artifact

Image degradation from metal implants. Reduced by metal artifact reduction sequences (MRI), iterative reconstruction (CT).

Metal Cleaner Poisoning

Metal cleaner poisoning involves toxic or environmental exposure to metal cleaner poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Metal Fume Fever

A short-lived influenza-like illness caused by inhalation of fumes from heated metals, especially zinc; symptoms include fever, chills, headache, muscle aches, and cough.

Metal Polish Poisoning

Metal polish poisoning involves toxic or environmental exposure to metal polish poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Metalloendopeptidase

A metalloendopeptidase is an endopeptidase whose catalytic activity depends on a bound metal ion, commonly zinc. It cleaves peptide bonds within proteins and includes enzymes involved in extracellular matrix remodeling and signaling.

Metalloporphyrins

Metalloporphyrins are porphyrin molecules containing a centrally coordinated metal ion. Heme, which contains iron, is a biologically important example and forms the functional group of hemoglobin, myoglobin, and many enzymes.

Metalloprotease

A metalloprotease is a proteolytic enzyme that requires a metal ion, commonly zinc, for catalytic activity. Metalloproteases regulate extracellular matrix turnover, cell signaling, inflammation, and tissue remodeling; dysregulation contributes to disease.

Metalloprotein

metalloprotein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Metallothionein

Metallothionein is a small, cysteine-rich protein that binds metals such as zinc, copper, and cadmium. It helps regulate essential metals and may protect cells from metal toxicity and oxidative stress.

Metamorphosis

Metamorphosis is a major change in body form during development, especially the transition from larva to adult in insects or other animals.

Metanephrine

Metanephrine is a metabolite of epinephrine formed mainly by catechol-O-methyltransferase. Plasma or urinary metanephrine measurements are used in evaluation for catecholamine-secreting tumors such as pheochromocytoma and paraganglioma.

Metaphase

The stage of cell division in which chromosomes align at the cell's equatorial plane.

Metaphase Plate

The metaphase plate is the plane at the center of a dividing cell where chromosomes align during metaphase. It is a geometric arrangement rather than a discrete anatomical structure.

Metaphyseal Corner Fractures

Bucket-handle or corner fractures at the metaphysis

of long bones, characteristic of child abuse. Caused by twisting or pulling forces on extremities. Most common in the knee, ankle, and elbow. Seen on skeletal survey; may not be visible initially. Highly specific for non-accidental trauma in infants.

Metaphyseal Widening

Metaphyseal widening is enlargement of the growth-plate or metaphyseal region of a developing long bone. It may be seen in disorders such as rickets, skeletal dysplasia, infection, or healing injury and must be interpreted with imaging and clinical findings.

Metaphysis

The region of a long bone between the epiphysis (end) and diaphysis (shaft), containing the epiphyseal growth plate (physis) in children—the zone of active cartilage growth (endochondral ossification).

Metaplasia

A reversible adaptive change in which one differentiated adult cell type is replaced by another, representing the body's attempt to better withstand a chronic stress or irritation. The process involves reprogramming of tissue stem cells to differentiate along a different lineage that is more resilient to the new environment. Persistent metaplasia may impair normal tissue function and, in some settings, increase susceptibility to dysplasia and malignant transformation. Examples include intestinal metaplasia in the stomach and squamous metaplasia in chronically irritated respiratory epithelium.

Metaplastic Carcinoma

Metaplastic carcinoma is a cancer in which malignant cells have changed into a different cell type; the term is used especially for an aggressive form of breast cancer.

Metapneumovirus

A respiratory virus that can cause cough, fever, bronchiolitis, or pneumonia, especially in infants, older adults, and people with chronic disease.

Metastasectomy

Surgical removal of one or more metastases, which may be curative in selected oligometastatic disease, e.g., colorectal liver and lung metastases and sarcoma pulmonary metastases.

Metastases To The Breast

Secondary malignant deposits in breast tissue from a nonmammary primary tumor, most often melanoma, lymphoma, or carcinoma from another organ. Imaging and biopsy are needed because the treatment differs from primary breast carcinoma.

Metastasis

Metastasis is spread of malignant cells from a primary tumor to noncontiguous tissues through lymphatic, blood, or body-cavity routes, forming secondary tumors. hematogenous, direct extension, transcoelomic. Common sites: lungs, liver, bone, brain. Distant metastasis indicates Stage IV disease.

Metastasis Of Colorectal Cancer

Spread of colorectal malignancy to distant organs via lymphatic, hematogenous, or peritoneal routes, most commonly involving the liver, lungs, and peritoneum. The liver is the first site of metastasis due to portal venous drainage, and hepatic metastases may be resectable with curative intent.

Metastasis-Free Survival

The time from treatment until the development of distant metastasis or death; an important endpoint in adjuvant therapy trials.

Metastatic Adenocarcinoma

An adenocarcinoma that has spread from its primary site to distant organs, commonly the liver, lungs, bones, or brain. The prognosis and treatment depend on the primary tumor origin and the extent of metastatic disease.

Metastatic Brain Tumor

A metastatic brain tumor is cancer that has spread to the brain from a primary tumor elsewhere in the body.

Metastatic Breast Cancer

Breast cancer that has spread from the breast to distant parts of the body.

Metastatic Cancer

Cancer that has spread from its original site to distant organs or tissues. The spread may occur through the blood or lymphatic system and can form new tumors. Metastatic cancer is often called stage 4 cancer, although staging depends on the cancer type. The new tumors retain the characteristics of the original cancer; for example, breast cancer that spreads to the lung remains metastatic breast cancer, not lung cancer.

Alternate Names:

Stage 4 Cancer Advanced Metastatic Cancer Secondary Cancer

Metastatic Calcification

The deposition of calcium salts in otherwise normal tissues due to systemic hypercalcemia, where elevated serum calcium levels exceed the tissue ability to maintain calcium homeostasis.

Metastatic Cascade

Sequence of events in metastasis: local invasion, intravasation, circulation, extravasation, colonization. Many cells die during process.

Metastatic Castration-Resistant Prostate Cancer

Prostate cancer that has spread and continues to grow despite treatments that lower testosterone.

Metastatic Colon Cancer

Advanced colonic malignancy that has spread beyond the bowel to distant sites, most commonly the liver, lungs, and peritoneum, via lymphatic and hematogenous dissemination. Staging uses CT of chest, abdomen, and pelvis, and PET-CT may identify occult metastases.

Metastatic Colorectal Cancer

Alternate index label; see *Stage 4 (metastatic) colon cancer*.

Metastatic Inguinal Lymphadenopathy

Enlargement of inguinal lymph nodes due to metastatic cancer cells, often from primary tumors of the lower extremities, pelvis, or anorectal region. It may indicate advanced disease requiring systemic therapy.

Metastatic Lung Cancer

Lung cancer that has spread beyond the lungs to other organs, such as the brain, bones, liver, or adrenal glands. It represents advanced stage disease with limited treatment options.

Metastatic Pleural Tumor

A cancer deposit in the pleura that has spread from another primary tumor, commonly from the lung, breast, or other organs.

Metastin

Metastin is an older name for kisspeptin, a peptide derived from the KISS1 gene. It stimulates hypothalamic gonadotropin-releasing hormone secretion and helps regulate puberty, reproductive function, and tumor-cell signaling.

Metatarsal

Relating to one of the five long bones forming the forefoot.

Metatarsal Bone

A metatarsal bone is one of the five long bones of the forefoot between the tarsal bones and proximal phalanges. Metatarsal fractures and alignment abnormalities can affect weight bearing and gait.

Metatarsal Valgus

Metatarsal valgus is outward deviation of one or more metatarsal bones relative to the foot's normal axis. It may contribute to forefoot deformity and altered load distribution and is assessed clinically and radiographically.

Metatarsalgia

Pain in the front or ball of the foot, often arising from pressure or irritation around the metatarsal

heads.

Metatarsals

Five long bones (I-V) forming the forefoot. Each has base, shaft, and head. First is shortest/thickest, bearing approximately one-third of forefoot load. Stress fractures commonly affect the second and third (march fractures). Morton's neuroma typically affects the nerve between 3rd/4th metatarsal heads.

Metatarsus

The part of the foot between the tarsal bones and toes, containing the five metatarsal bones.

Metatarsus Adductus

A foot deformity in which the forefoot is angled inward relative to the hindfoot, often recognized in infancy and ranging from flexible to rigid.

Metatarsus Varus

Metatarsus varus is inward deviation of the forefoot caused by medial angulation of the metatarsal bones. It is often recognized in infancy and may be flexible or rigid; management depends on severity and persistence.

Metathesis

Transposition or rearrangement of sounds in a word; in chemistry or biology, it can mean exchange of parts or groups.

Metencephalon

The metencephalon is the embryonic brain region that develops into the pons and cerebellum. These structures participate in motor coordination, balance, cranial-nerve functions, and relay of signals between the brain and spinal cord.

Meteorism

Abdominal distension caused by excessive gas in the gastrointestinal tract.

Meter

A metric unit of length equal to 100 centimeters; medical usage may also refer to a measuring device.

Metered-Dose Inhaler

A pressurized inhaler delivering a metered dose of medication. Requires proper technique for effective delivery. Spacer devices improve drug delivery and reduce oropharyngeal deposition. Most common delivery device for asthma and COPD maintenance.

Metestrus

A diagnostic or laboratory method related to metestrus. Results are interpreted with the method, reference range, and clinical findings.

Metformin

Metformin is a biguanide antihyperglycemic drug that lowers hepatic glucose production and improves insulin sensitivity. It is commonly used for type 2 diabetes; gastrointestinal effects are common, and rare lactic acidosis risk increases with certain severe conditions.

Metformin Hydrochloride

Metformin hydrochloride is the hydrochloride salt of metformin, an oral biguanide used chiefly for type 2 diabetes. It lowers blood glucose without directly stimulating pancreatic insulin release and is available in immediate- and extended-release formulations.

Metformin In Prediabetes

Metformin may reduce progression from prediabetes to type 2 diabetes, especially in people at high risk. Its use depends on age, body size, prior gestational diabetes, kidney function, other conditions, and patient preference; lifestyle intervention remains important.

Methacholine Challenge Test

A bronchoprovocation test used when asthma is suspected but routine spirometry is nondiagnostic. Inhaled methacholine may cause bronchoconstriction, and spirometry is repeated after increasing doses. The result must be interpreted with symptoms, treatment, and other test findings because the test is not specific for asthma.

Methacholine Chloride

Methacholine chloride is a muscarinic cholinergic agonist used in bronchoprovocation testing. In susceptible people it causes airway narrowing, allowing assessment for bronchial hyperresponsiveness under controlled medical supervision.

Methadone

A long-acting opioid used for pain in selected cases and for opioid-use-disorder treatment.

Methadone Hydrochloride

Methadone hydrochloride is the hydrochloride salt of methadone. It provides long-lasting opioid-receptor activity for selected analgesic and opioid-use-disorder indications, with risks of respiratory depression, dependence, overdose, and cardiac arrhythmia.

Methadone Overdose

Methadone overdose involves toxic or environmental exposure to methadone overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Methaemoglobinaemia

A condition in which haemoglobin is oxidized to methaemoglobin and cannot release oxygen effectively, causing tissue hypoxia and sometimes cyanosis.

Methamidophos

Methamidophos is a highly toxic organophosphorus insecticide that inhibits acetylcholinesterase. Exposure can cause cholinergic poisoning with sweating, salivation, vomiting, bronchospasm, bradycardia, muscle weakness, and potentially respiratory failure.

Methamphetamine

Methamphetamine is a potent central nervous system stimulant that increases synaptic catecholamines. It has limited medical use in some settings but is commonly misused; toxicity and chronic use can cause cardiovascular complications, psychosis, dependence, and neurocognitive harm.

Methamphetamine Overdose

Methamphetamine overdose involves toxic or environmental exposure to methamphetamine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Methamphetamines

Powerful synthetic stimulant drugs with substantial risks of dependence, cardiovascular toxicity, psychosis, and neurotoxicity.

Methane

Methane is a colorless, odorless, highly flammable gas produced by anaerobic decomposition and normal intestinal microbial activity. It can displace oxygen in enclosed spaces and cause asphyxiation; it is not itself a direct systemic poison at ordinary exposure levels.

Methane Sulfonate

Methane sulfonate, or mesylate, is the anion or ester derived from methanesulfonic acid. Mesylate salts are commonly used to improve the formulation of medicines; some methanesulfonate esters are potent alkylating agents and toxic impurities.

Methanobacteriaceae

A family of methane-producing archaea found in oxygen-free environments such as sediments, wetlands, and the digestive tracts of animals.

Methanobrevibacter Smithii

A methane-producing archaeon commonly found in the human intestine. It consumes hydrogen made by other gut microorganisms and may influence intestinal fermentation and gas production.

Methanol

A toxic alcohol whose metabolites can cause metabolic acidosis, visual injury, and death.

Methanol Poisoning

Toxic ingestion or exposure to methanol, whose metabolites cause high-anion-gap metabolic acidosis and visual or neurologic injury. Treatment requires

urgent toxicology consultation, antidotal fomepizole or selected ethanol therapy, correction of acidosis, and hemodialysis in severe cases.

Methanol Test

Methanol test involves toxic or environmental exposure to methanol test; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Methantheline

An older anticholinergic medicine formerly used for gastrointestinal spasm and hyperhidrosis.

Methaqualone

Methaqualone is a sedative-hypnotic formerly used for insomnia and anxiety. It is no longer widely marketed because of misuse, dependence, dangerous respiratory and central nervous system depression, and overdose risk.

Methazolamide

Methazolamide is a carbonic anhydrase inhibitor used mainly to lower intraocular pressure in glaucoma. It reduces aqueous humor production and can cause metabolic acidosis, electrolyte abnormalities, kidney stones, or sulfonamide-related reactions.

Methemoglobin

Hemoglobin in which iron has been oxidized so it cannot carry oxygen normally. High levels cause methemoglobinemia, with cyanosis, headache, breathlessness, confusion, or severe tissue oxygen deficiency.

Methemoglobinemia

Methemoglobinemia occurs when hemoglobin iron is oxidized and cannot carry oxygen normally, causing cyanosis, headache, breathlessness, or severe tissue hypoxia.

Methemoglobinemia - Acquired

Abnormally high methemoglobin caused by oxidizing drugs, chemicals, or toxins, impairing hemoglobin oxygen delivery and potentially causing

cyanosis, headache, confusion, or hypoxia.

Methenamine

Methenamine is a urinary antiseptic that decomposes in acidic urine to release formaldehyde, which inhibits bacterial growth. It is used for prevention of recurrent urinary tract infection in selected patients, not for treatment of active upper-tract infection.

Methicillin

A former penicillin antibiotic used historically to treat staphylococcal infections; resistance is mediated by altered penicillin-binding protein.

Methicillin-Resistant Staphylococcus Aureus

Staphylococcus aureus resistant to beta-lactam antibiotics through acquisition of the *mecA* gene encoding penicillin-binding protein 2a (PBP2a). MRSA is a major cause of healthcare-associated and community-associated infections. Treatment options include vancomycin, daptomycin, linezolid, and trimethoprim-sulfamethoxazole.

Methicillin-Resistant Staphylococcus Aureus

Methicillin-resistant *Staphylococcus aureus* is a strain of *S. aureus* resistant to several beta-lactam antibiotics and capable of causing skin, wound, lung, bloodstream, or other infections.

Methicillin-Resistant Staphylococcus Aureus Infection

Alternate index label; see *MRSA infection*.

Methidathion

Methidathion is an organophosphorus insecticide and acaricide that inhibits acetylcholinesterase. Exposure can produce a cholinergic toxidrome with secretions, bronchospasm, bradycardia, gastrointestinal symptoms, weakness, and respiratory failure.

Methimazole

A medicine that reduces production of thyroid hormones and is used mainly for hyperthyroidism and

Graves disease. It can rarely cause severe low white-cell counts or liver injury; fever or sore throat during treatment needs prompt medical advice.

Methiocarb

Methiocarb is a carbamate pesticide that inhibits acetylcholinesterase reversibly. Poisoning causes excessive muscarinic and nicotinic cholinergic activity and may require urgent supportive care and antidotal treatment.

Methionine

An essential sulfur-containing amino acid used in protein synthesis and methyl-group metabolism.

Methionine Enkephalin

Methionine enkephalin is an endogenous opioid pentapeptide that binds opioid receptors and participates in modulation of pain, stress, reward, and neuroendocrine function. It is one of the products of proenkephalin processing.

Methisazone

An older antiviral compound investigated or used historically against poxvirus infections.

Methocarbamol

Methocarbamol is a centrally acting skeletal-muscle relaxant used with rest and physical measures for acute painful musculoskeletal conditions. It can cause drowsiness, dizziness, impaired coordination, and additive central nervous system depression.

Methodology

Methodology is the systematic set of principles, methods, procedures, and assumptions used to conduct and evaluate an investigation or clinical study. Sound methodology addresses design, measurement, bias, analysis, and reproducibility.

Methohexital

Methohexital is an ultra-short-acting barbiturate anesthetic used for induction of general anesthesia and, in selected settings, procedural sedation. It depresses central nervous system activity and may

cause respiratory or cardiovascular depression.

Methomyl

Methomyl is a carbamate insecticide that reversibly inhibits acetylcholinesterase. Poisoning produces cholinergic symptoms such as salivation, sweating, vomiting, bronchospasm, bradycardia, weakness, and respiratory compromise.

Methotrexate

An antimetabolite that inhibits folate-dependent enzymes and is used in cancer and selected autoimmune or inflammatory disorders.

Methotrexate In Dermatology

An immunomodulatory antimetabolite used in selected inflammatory and autoimmune skin diseases, including psoriasis, eczema, and some connective-tissue disorders. Treatment requires attention to liver disease, blood counts, infection risk, drug interactions, and strict pregnancy precautions.

Methotrimeprazine

Methotrimeprazine, also called levomepromazine, is a phenothiazine with antipsychotic, sedative, antiemetic, and analgesic properties. It is used in some countries for psychiatric illness and palliative-care symptoms and can cause sedation, hypotension, and anticholinergic effects.

Methoxamine

Methoxamine is a predominantly alpha-adrenergic agonist that increases vascular tone and blood pressure. It has been used as a vasopressor for hypotension but is not a routine first-line agent in many current practice settings.

Methoxsalen

Methoxsalen is a psoralen that intercalates into DNA and, after exposure to UVA, forms cross-links that suppress abnormal lymphocyte or skin-cell activity. It is used with UVA phototherapy for selected skin diseases; photosensitivity and skin-cancer risk require precautions.

Methoxyamine Hydrochloride

Methoxyamine hydrochloride is the hydrochloride salt of methoxyamine, a sympathomimetic compound with predominantly alpha-adrenergic activity. It has been used experimentally or historically as a vasopressor and pharmacologic probe.

Methoxyflurane

A volatile anesthetic formerly used for general anesthesia and, in some settings, low-dose analgesia.

Methoxyhydroxyphenylglycol

Methoxyhydroxyphenylglycol is a major metabolite of norepinephrine. Measurement in blood, urine, or cerebrospinal fluid has been used in research and selected neuroendocrine evaluations of sympathetic or central noradrenergic activity.

Methyclothiazide

Methyclothiazide is a thiazide diuretic that inhibits sodium and chloride reabsorption in the distal convoluted tubule. It is used for hypertension or edema and may cause hypokalemia, hyponatremia, hyperuricemia, and glucose intolerance.

Methyl Alcohol

Another name for methanol, a toxic alcohol that can cause severe acidosis and blindness.

Methyl Bromide

Methyl bromide, or bromomethane, is a volatile fumigant and alkylating chemical. Inhalation can cause severe neurologic, respiratory, renal, and cardiovascular toxicity, including delayed seizures and pulmonary edema.

Methyl Chloride

Methyl chloride, or chloromethane, is a volatile industrial gas formerly used in refrigerants and other applications. High-level inhalation exposure can depress the central nervous system and cause headache, ataxia, seizures, or cardiac effects.

Methyl Green

Methyl green is a cationic dye used in histology,

often to stain DNA and nuclei. It is a laboratory reagent rather than a therapeutic drug, and handling should follow appropriate chemical-safety procedures.

Methyl Group

A methyl group is a chemical group consisting of one carbon atom bonded to three hydrogen atoms, written -CH_3 . Methyl transfer reactions are important in metabolism, epigenetic regulation, and drug biotransformation.

Methyl Isocyanate

Methyl isocyanate is a highly volatile and reactive industrial chemical. Inhalation or eye and skin exposure can cause severe irritation, pulmonary edema, and delayed respiratory injury; it was the toxic agent in the Bhopal disaster.

Methyl Methanesulfonate

Methyl methanesulfonate is an alkylating agent that methylates DNA and other cellular molecules. It is used experimentally to induce mutagenesis and is hazardous because of its genotoxic and carcinogenic potential.

Methyl Parathion

Methyl parathion is an organophosphorus insecticide that inhibits acetylcholinesterase. Exposure can produce severe cholinergic poisoning with secretions, bronchospasm, bradycardia, weakness, seizures, and respiratory failure.

Methyl Salicylate Overdose

Methyl salicylate overdose involves toxic or environmental exposure to methyl salicylate overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Methylation

Addition of methyl group to DNA (cytosine) or histones. DNA methylation at CpG islands typically silences genes. Hypomethylation associated with cancer.

Methylcellulose

A cellulose derivative used as a bulk-forming laxative, thickener, and excipient.

Methylcholanthrene

Methylcholanthrene is a polycyclic aromatic hydrocarbon used experimentally as a carcinogen. It can form reactive metabolites that damage DNA and is used in research on tumor initiation and chemical carcinogenesis.

Methyldopa

A centrally acting alpha-2 agonist used mainly in selected cases of hypertension, including pregnancy.

Methylene Blue

An oxidizing-reducing agent used primarily to treat clinically significant methemoglobinemia by facilitating conversion of methemoglobin to functional hemoglobin. It may be ineffective or hazardous in glucose-6-phosphate dehydrogenase deficiency and can interact with serotonergic drugs.

Methylene Blue Test

Methylene blue test involves toxic or environmental exposure to methylene blue test; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Methylene Chloride

Methylene chloride, or dichloromethane, is a volatile industrial solvent. Inhalation can cause central nervous system depression and metabolism to carbon monoxide can produce tissue hypoxia; high exposure may be fatal.

Methylenedioxymethamphetamine

3,4-Methylenedioxymethamphetamine, abbreviated MDMA and commonly called ecstasy or molly, is a psychoactive drug with stimulant and hallucinogenic effects that increases serotonergic signaling and can cause serious toxicity.

Methylergometrine

An ergot alkaloid that increases uterine contraction

and may be used to control postpartum hemorrhage when appropriate.

Methylguanidine

Methylguanidine is a guanidine compound formed during protein and amino-acid metabolism. It can accumulate in advanced kidney failure and is studied as a uremic toxin that may contribute to oxidative and cellular injury.

Methylisazone

Another spelling of methisazone, an older antiviral compound investigated for poxvirus infection.

Methylmalonic Acid Blood Test

Methylmalonic acid blood test involves toxic or environmental exposure to methylmalonic acid blood test; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Methylmalonic Acid Level

A blood or urine measurement used to assess functional vitamin B12 status. Elevated methylmalonic acid supports vitamin B12 deficiency, particularly when the serum vitamin B12 concentration is borderline. Renal impairment can also increase the level and should be considered during interpretation.

Methylmalonic Acidemia

Methylmalonic acidemia involves toxic or environmental exposure to methylmalonic acidemia; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Methylmalonic Aciduria

methylmalonic aciduria is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Methylmercury Compounds

Methylmercury compounds are organic mercury compounds that can accumulate in aquatic food chains and cross the blood–brain and placental barriers. Exposure primarily injures the nervous system

and can impair fetal neurodevelopment.

Methylmercury Poisoning

Methylmercury poisoning involves toxic or environmental exposure to methylmercury poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Methylmethacrylate

Methyl methacrylate is a volatile monomer used to make acrylic plastics and dental or orthopedic bone cement. Vapors may irritate the eyes and airways, and liquid exposure can cause dermatitis or sensitization.

Methylmorphine

Another name for codeine, an opioid medicine used for selected pain or cough indications. It can cause drowsiness, constipation, dependence, and dangerous breathing suppression, especially with alcohol or other sedatives.

Methylnaltrexone

Methylnaltrexone is a peripherally acting mu-opioid-receptor antagonist used to treat opioid-induced constipation when laxatives are insufficient. It generally preserves central analgesia but can cause abdominal pain, diarrhea, and rarely gastrointestinal perforation.

Methylnaltrexone Bromide

Methylnaltrexone bromide is the bromide salt of methylnaltrexone, a peripherally restricted opioid antagonist. It reverses opioid effects in the gastrointestinal tract and is used for opioid-induced constipation under indication-specific precautions.

Methylnitrosourea

Methylnitrosourea is a potent alkylating and mutagenic compound used experimentally to induce DNA damage and tumors. It is not a therapeutic drug and requires strict laboratory handling because of its carcinogenicity.

Methylobacteriaceae

A family of bacteria that can use one-carbon compounds such as methanol and are common in soil, water, and plants.

Methylobacterium

A genus of pink-pigmented, methylotrophic bacteria found in water, soil, and plants that can rarely cause opportunistic infection.

Methylphenidate

A central nervous system stimulant used mainly for ADHD and narcolepsy.

Methylprednisolone

A synthetic glucocorticoid used to suppress inflammation and immune activity.

Methyltestosterone

An androgen medicine formerly used in selected hypogonadal or palliative indications; it can cause hepatic and other adverse effects.

Methylthioinosine

Methylthioinosine is a sulfur-containing purine nucleoside involved in cellular methylthio and purine metabolism. Its derivatives and related metabolites are studied in biochemical pathways and cancer biology rather than used routinely as medicines.

Methyltransferase

A methyltransferase is an enzyme that transfers a methyl group from a donor, commonly S-adenosylmethionine, to DNA, RNA, proteins, lipids, or small molecules. Methylation can alter gene expression, protein activity, or metabolism.

Metoclopramide

A dopamine (D2) receptor antagonist and 5-HT3 antagonist used as a prokinetic antiemetic for gastroparesis, chemotherapy-induced and postoperative nausea, and GERD (facilitates gastric emptying).

Metolazone

A thiazide-like diuretic used for hypertension and

fluid retention, often with a loop diuretic.

Metolcarb

Metolcarb is a carbamate insecticide that can inhibit acetylcholinesterase. Exposure may cause cholinergic poisoning with excessive secretions, gastrointestinal symptoms, bronchospasm, bradycardia, weakness, or respiratory compromise.

Metopic Ridge

A metopic ridge is a palpable or visible line along the forehead from fusion of the metopic suture; it may be normal or associated with trigonocephaly.

Metoprolol

Metoprolol is a relatively beta-1-selective blocker used for hypertension, angina, heart failure, rate control, and some post-infarction settings; bradycardia, hypotension, fatigue, and bronchospasm can occur.

Metric System

The metric system is a decimal system of measurement based on units such as the meter, kilogram, and liter. Modern medicine generally uses the International System of Units, with conventional units retained for some measurements.

Metritis

Inflammation of the uterus, often occurring after childbirth, miscarriage, or uterine infection.

Metronidazole

A nitroimidazole antibiotic and antiprotozoal agent that is selectively toxic to anaerobic organisms and certain parasites. The drug is activated by reduction of its nitro group within anaerobic cells, generating toxic free radicals that damage DNA.

Metronidazole-Associated Encephalopathy

A rare complication of prolonged or high-dose metronidazole therapy, causing cerebellar dysfunction (ataxia, dysarthria, nystagmus) and sometimes confusion or seizures. MRI may show T2-

hyperintense lesions in the cerebellar dentate nuclei, corpus callosum splenium, and brainstem. Symptoms typically resolve with drug discontinuation.

Metronomic Chemotherapy

Metronomic chemotherapy gives chemotherapy in frequent low doses over an extended period, aiming to inhibit tumor growth and its blood supply with less intensive cycles.

Metrorrhagia

Uterine bleeding occurring at irregular times, including between expected menstrual periods.

METs

Metabolic equivalents, units used to express the intensity or energy cost of physical activity.

Alternate Names:

Metabolic equivalents

Metschnikowia

A genus of yeasts found on plants and in fermented foods; human infection is rare but can occur opportunistically.

Metirapone

A medicine that inhibits 11-beta-hydroxylase and is used in selected endocrine tests or treatment.

Metzenbaum Scissors

Fine, lightweight surgical scissors used to dissect and cut delicate soft tissue.

Mevinphos

Mevinphos is a highly toxic organophosphorus insecticide that inhibits acetylcholinesterase. Exposure can rapidly cause cholinergic crisis, including bronchorrhea, bronchospasm, muscle weakness, seizures, and respiratory failure.

Mexacarbate

Mexacarbate is a carbamate insecticide that interferes with acetylcholinesterase. Toxic exposure may produce muscarinic and nicotinic cholinergic symptoms and requires prompt decontamination and

medical evaluation.

Mexican Tea

A traditional name for medicinal plants or preparations used in Mexico; the exact species and safety depend on the source.

Mexiletine

Mexiletine is an oral class IB antiarrhythmic and sodium-channel blocker used for selected ventricular arrhythmias and sometimes neuropathic pain. It can cause gastrointestinal and neurologic effects and may worsen or provoke arrhythmias in some patients.

Meyerozyma Guilliermondii

Meyerozyma guilliermondii is a yeast formerly classified as *Candida guilliermondii*. It is usually an environmental or colonizing organism but can cause opportunistic bloodstream or other infections, particularly in immunocompromised patients.

Mezlocillin

A penicillin antibiotic of the acylureido group, formerly used against susceptible gram-negative and other bacteria.

MéNéTrier'S Disease

A rare acquired gastropathy characterized by massive hypertrophy of the gastric mucosal folds, particularly in the body and fundus, with foveolar hyperplasia, cystic dilation of gastric glands, and glandular atrophy. It presents with epigastric pain, nausea, vomiting, weight loss, and protein-losing enteropathy causing hypoalbuminemia.

MéNièRe'S Disease

An inner-ear disorder causing episodes of vertigo, fluctuating hearing loss, tinnitus, and ear pressure.

MéNièRe'S Disease

An inner-ear disorder associated with episodic vertigo, fluctuating hearing loss, tinnitus, and ear pressure.

Alternate Names:

Meniere disease

MF

Alternate index label; see *Mycosis fungoides*.

MFS

Alternate index label; see *Myxofibrosarcoma*.

MG

Alternate index label; see *Myasthenia gravis*.

MGUS

See *Monoclonal Gammopathy of Undetermined Significance*.

Monoclonal Gammopathy Of Undetermined Significance

A condition in which abnormal plasma cells make a small amount of one unusual antibody. It usually causes no symptoms or organ damage but can rarely progress to multiple myeloma or another blood cancer, so monitoring is recommended.

MHC Molecule

A major histocompatibility complex molecule that displays antigens to T cells.

Alternate Names:

Major histocompatibility complex molecule

Mianserin

A tetracyclic antidepressant with noradrenergic and antihistamine effects, used in some countries.

Miasma

A poisonous vapor or foul-smelling mist once believed to arise from decomposing matter and cause disease; the miasma theory is historically important but scientifically incorrect.

MIBG Scan

Nuclear medicine imaging using I-123 or In-111 MIBG. Detects pheochromocytoma, neuroblastoma.

MIBG Scintiscan

A nuclear medicine scan using radiolabeled metaiodobenzylguanidine to image tissues derived from the sympathetic nervous system, including selected pheochromocytomas, paragangliomas, and neuroblastomas.

Mica

A group of sheet silicate minerals; inhalation of mica dust can cause occupational lung disease.

Micafungin

An echinocandin antifungal agent used in the treatment and prophylaxis of invasive candidiasis and esophageal candidiasis. Micafungin inhibits beta-(1,3)-D-glucan synthase, disrupting fungal cell wall synthesis and leading to osmotic instability and cell death.

Mice

Plural of mouse; laboratory mice are widely used in biomedical research and can also transmit zoonotic infections.

Micelle

micelle refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Michaelis-Menten Kinetics

The mathematical model describing the rate of enzyme-catalyzed reactions as a function of substrate concentration.

Miconazole

An imidazole antifungal used topically or orally in selected fungal infections.

Micro-Surgery

Surgery performed with magnification and fine instruments to repair very small structures such as nerves and vessels.

Microabscess

A microabscess is a small, localized collection of pus consisting of neutrophils, necrotic material, and microorganisms or inflammatory debris. It may occur in skin, glands, organs, or tissue affected by infection or inflammatory disease.

Microalbuminuria

Excretion of 30 to 300 mg of albumin daily undetectable by standard dipstick. Earliest marker of diabetic nephropathy and cardiovascular risk predictor. Detected by urine albumin-to-creatinine ratio on spot specimen. Normal less than 30 mg/g creatinine. Signals early glomerular damage in diabetes warranting RAAS blockade initiation.

Microalbuminuria Test

A urine test measuring small amounts of albumin, usually by an albumin-to-creatinine ratio, to detect early kidney damage, especially in diabetes or hypertension.

Microaneurysm

A minute, localized, focal saccular outpouching of a capillary wall, typically measuring 10 to 100 micrometers in diameter. In ophthalmology, retinal capillary microaneurysms represent the earliest clinically detectable sign of non-proliferative diabetic retinopathy. Caused by selective loss of vascular pericytes and basement membrane thickening under chronic hyperglycemic stress, leading to weakened capillary walls that balloon under intravascular hydrostatic pressure; appear on fundoscopy as tiny, well-demarcated red dots and on fluorescein angiography as hyperfluorescent pinpoint foci that may leak fluid, causing macular edema.

Microangiopathic Hemolysis

Red-cell fragmentation and intravascular hemolysis caused by passage through abnormal small vessels, producing schistocytes, elevated LDH, and reduced haptoglobin.

Microangiopathic Hemolytic Anemia

An anemia caused by mechanical fragmentation of red blood cells as they pass through damaged or

narrowed small blood vessels, producing schistocytes and often elevated hemolysis markers.

Microangiopathy

Disease of small blood vessels, especially capillaries, in which vessel walls become thickened or damaged, impairing flow and allowing leakage or bleeding; diabetes is a common cause.

Microarray

Technology measuring expression of thousands of genes simultaneously or detecting copy number variations. Gene expression microarrays: compare expression patterns. SNP arrays: detect genetic variations. Comparative genomic hybridization (CGH): detect deletions/duplications.

Microarray Analysis

Microarray analysis measures the abundance or hybridization of many nucleic-acid sequences simultaneously using an array of immobilized probes. It can assess gene expression, copy-number changes, or selected genetic variants.

Microbacterium

A genus of gram-positive bacteria found in soil and water that can rarely cause bloodstream or other opportunistic infections.

Microbe

A microorganism, such as a bacterium, fungus, protozoan, or virus.

Alternate Names:

Microorganism

Microbial Biofilms

Microbial biofilms are organized communities of microorganisms attached to a surface and enclosed in a self-produced extracellular matrix. Biofilms can form on tissues and medical devices and often show increased tolerance to antimicrobials and host defenses.

Microbicide

A microbicide is a chemical or biological agent that

kills microorganisms or inactivates them. The term may refer to disinfectants, topical agents, or investigational products intended to reduce sexual transmission of infection.

Microbiology

The study of microorganisms, including bacteria, viruses, fungi, and parasites.

Microbiome

The collection of microorganisms (bacteria, archaea, fungi, viruses—the microbiota) and their genetic material inhabiting a host's body surfaces, particularly the gastrointestinal tract.

Microbody

A microbody is a small membrane-bound cytoplasmic organelle, a term that includes peroxisomes and related organelles. Microbodies contain enzymes involved in oxidation, detoxification, and lipid metabolism.

Microcalcification

A very small calcium deposit in tissue, sometimes an early sign of breast cancer.

Microcephaly

Microcephaly is head size substantially smaller than expected for age and sex, reflecting genetic, developmental, infectious, toxic, or acquired brain causes.

Microchip Site

A microchip site is the anatomical location where an implanted identification or monitoring microchip is placed, commonly in subcutaneous tissue. The site should be recorded for identification and assessed for migration, irritation, or infection when relevant.

Microcirculation

Blood flow through arterioles, capillaries, and venules, where tissue exchange occurs.

Micrococcaceae

Micrococcaceae is a family of generally gram-positive, catalase-positive cocci that includes Micro-

coccus and related genera. These organisms commonly inhabit skin and the environment, although some can cause opportunistic infection.

Micrococcus

A genus of generally harmless gram-positive cocci that can occasionally cause opportunistic infection.

Micrococcus Luteus

Micrococcus luteus is a gram-positive, aerobic coccus commonly present on human skin and in the environment. It is usually a contaminant or colonizer but can rarely cause bacteremia or device-associated infection in susceptible patients.

Micrococcus Lylae

Micrococcus lylae is a gram-positive, aerobic coccus associated mainly with skin flora and environmental samples. Its recovery from a clinical specimen requires correlation with symptoms and the possibility of contamination or colonization.

Microcolon

Microcolon is an abnormally small-caliber colon, often identified on contrast imaging. It may result from reduced fetal intestinal use or obstruction and is associated with conditions such as small-left-colon syndrome, meconium ileus, or distal intestinal obstruction.

Microcornea

Microcornea is an abnormally small cornea, usually defined in adults by a horizontal diameter below about 10 mm. It may be isolated or associated with microphthalmia, glaucoma, cataract, or genetic syndromes.

Microcurie

A microcurie (μCi) is a unit of radioactivity equal to one-millionth of a curie, or approximately 37 kilobecquerels. It may be used to express the activity of radioactive tracers or sources.

Microcystic Adnexal Carcinoma

A rare, slow-growing but locally aggressive malignancy.

nant adnexal tumor, usually on the head or neck, with follicular and ductal differentiation; it may extend deeply and requires complete excision.

Microcytic Anemia

Anemia in which red blood cells are smaller than normal, commonly because of iron deficiency or a thalassemia.

Microdermabrasion

A cosmetic procedure that mechanically removes a superficial layer of skin.

Microdialysis

Microdialysis is a sampling technique in which a semipermeable probe perfused with fluid collects small molecules from extracellular tissue fluid. It can monitor local concentrations of metabolites or drugs, including in the brain or subcutaneous tissue.

Microdissection

Microdissection is separation or isolation of very small tissue regions or structures under microscopic or highly magnified visualization. It is used in surgery, pathology, and molecular research to obtain selected cells or tissue.

Microdissection Testicular Sperm Extraction

A specialized advanced microsurgical sperm retrieval procedure performed under an operating microscope (15× to 25× magnification) to locate and extract focal areas of spermatogenesis in men with non-obstructive azoospermia. Through a wide testicular incision, the surgeon microsurgically surveys the testicular parenchyma to selectively identify and excise enlarged, opaque, fuller seminiferous tubules that are most likely to harbor active spermatogenesis while sparing thin, collapsed tubules and minimizing parenchymal devascularization. Retrieved spermatozoa are subsequently utilized for intracytoplasmic sperm injection.

Alternate Names:

Micro-TESE; Microsurgical TESE

Microdontia

Abnormally small teeth, which may affect one or several teeth and can be inherited or developmental.

Microelectrode

A microelectrode is a very small electrode used to record electrical activity from, or deliver stimulation to, individual cells, nerves, or small tissue regions. It is common in electrophysiology and neuroscience research.

Microfauna

Small or microscopic animals, including protozoa and tiny invertebrates, found in an environment or specimen.

Microfibril

A microfibril is a fine, threadlike structural unit composed of proteins such as fibrillin or cellulose, depending on the tissue. In connective tissue, microfibrils help organize elastic fibers and provide extracellular support.

Microfilament

A microfilament is a thin cytoskeletal filament composed mainly of actin, about 7 nm in diameter. Microfilaments support cell shape, motility, contraction, cytokinesis, and intracellular transport.

Microfilament Proteins

microfilament proteins is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Microfilaria

The larval form of filarial worms, circulating in blood or skin and transmitted by insect vectors.

Microflora

An older term for the microorganisms inhabiting a body site or environment; microbiota is preferred.

Microfluidics

Microfluidics is the manipulation of very small volumes of fluid in channels or systems with dimensions typically in the micrometer range. It enables compact assays, cell sorting, diagnostics, and laboratory-on-a-chip devices.

Microglandular Adenosis

Microglandular adenosis is an uncommon benign proliferation of small glands in the breast, often associated with hormonal influences such as pregnancy or progestin use. It can mimic invasive carcinoma and is diagnosed histologically.

Microglia

Microglia are resident immune cells of the central nervous system. They survey neural tissue, remove debris, and respond to injury or infection; persistent activation can contribute to neuroinflammation.

Microgliosis

Microgliosis is proliferation or increased activation of microglia in the central nervous system, usually in response to injury, infection, degeneration, or other inflammation. It is a histopathologic finding rather than a specific disease.

Micrognathia

Micrognathia is an unusually small lower jaw that may affect feeding, teeth, facial development, or airway breathing.

Micrognathism

Micrognathism is abnormal smallness of the jaw, usually referring to the mandible. It may be congenital or acquired and can affect feeding, dentition, airway patency, speech, or facial development.

Micrograms

A unit of mass equal to one millionth of a gram, written as μg .

Micrographia

Abnormally small handwriting, commonly associated with Parkinson disease and other neurologic

disorders.

Microinjection

Microinjection is delivery of a very small volume of fluid into a cell, tissue, or other microscopic target using a fine needle or micropipette. It is used in assisted reproduction, experimental biology, and some therapeutic procedures.

Micrometastasis

A small deposit of cancer cells that has spread from the primary tumor but is not detectable clinically or on standard imaging, e.g., isolated tumor cells in a sentinel lymph node; relevant to staging and prognosis.

Micrometer

An instrument or unit used to measure very small distances; one micrometer is one-millionth of a meter.

Micromolar

A concentration unit equal to one millionth of a mole per liter, written as $\mu\text{mol}/L$.

Micromole

A micromole (μmol) is an amount of substance equal to one-millionth of a mole, or approximately 6.022×10^{17} entities. It is commonly used for small quantities and concentrations of biochemical substances.

Micron

A unit of length equal to one micrometer, or one-millionth of a meter.

Microneme

A microneme is a small secretory organelle in many apicomplexan parasites. It releases proteins that support host-cell attachment, motility, and invasion during the parasite life cycle.

Micronization

Micronization is a process that reduces particles to micrometer-scale dimensions, often to increase

surface area and improve dissolution or absorption of a drug. The resulting particle size and formulation still determine clinical performance.

Micronized

Processed into very small particles to improve dispersion or absorption.

Micronutrient

A micronutrient is a vitamin or mineral required in small amounts for normal growth, metabolism, and physiologic function. Deficiency or excess can cause disease, and requirements vary with age, pregnancy, illness, and other factors.

Micronutrients

Vitamins and minerals required in small amounts for enzymatic, hormonal, structural, hematologic, neurologic, and immune functions. They include fat-soluble vitamins (A, D, E, and K), water-soluble vitamins, and essential minerals.

Microorchidism

Abnormally small testes, which may result from impaired development, genetic syndromes, or testicular atrophy after injury or infection.

Microorganism

A microscopic living organism, such as a bacterium, fungus, protozoan, or alga; viruses are acellular infectious agents.

Microorganism Genetics

The study of genetic material, inheritance, variation, and gene function in microorganisms.

Micropenis

An unusually small penis caused by inadequate androgen effect or other developmental conditions, defined clinically by a stretched penile length more than 2.5 standard deviations below the mean for age and population. Evaluation may identify endocrine or genetic causes.

Micropexophagy

Micropexophagy is a form of selective autophagy in which a cell degrades peroxisomes by enclosing them in an autophagic structure and delivering them to the vacuole or lysosome. It is studied mainly in fungal and cellular biology.

Microphallus

An abnormally small penis, also called micropenis, usually defined relative to age and developmental standards; it may reflect hormonal or developmental disorders.

Microphone

A device that converts sound into an electrical signal, used in hearing assessment, recording, or communication equipment.

Microphthalmia

A birth defect in which one or both eyes are smaller than usual. It may occur with other eye or genetic conditions and can reduce vision. Treatment depends on the cause and may include glasses, treatment for poor vision, or surgery.

Microphthalmos

A developmental ocular malformation characterized by an abnormally small eyeball with an axial length at least two standard deviations below the age-adjusted mean. May be unilateral or bilateral and can occur as an isolated ocular defect or as a component of genetic syndromes (such as trisomy 13, CHARGE syndrome, or microphthalmia with linear skin defects) or intrauterine congenital infections (TORCH complex: cytomegalovirus, toxoplasmosis, rubella). Can be associated with coloboma, persistent fetal vasculature, cataracts, and orbital hypoplasia, which often requires sequential orbital expanders and conformers to promote symmetric craniofacial development and maximize visual potential.

Micropsia

A visual disturbance in which objects appear smaller than they are.

Microradiography

Microradiography is radiographic imaging of very small specimens or structures, often using high magnification and fine-detail techniques. It can demonstrate microarchitecture in bone, tissue, teeth, or experimental samples.

MicroRNA

A very small, non-coding RNA that helps control which genes are active, mainly by reducing the production of specific proteins. MicroRNAs are being studied as possible disease markers and treatment targets.

Microsatellite Instability

A molecular pattern caused by deficient DNA mismatch-repair function, resulting in length changes in short repetitive DNA sequences. MSI-high tumors may have increased mutation burden and can be eligible for particular immunotherapies.

Microscope

Magnifies small structures. Types: light, electron, fluorescent. Essential for histology, hematology, microbiology.

Microscopic

Visible only with a microscope or relating to microscopic examination.

Microscopic Anatomy

The study of cells, tissues, and fine structural details that require magnification for examination; it includes cytology and histology.

Microscopic Colitis

Umbrella term encompassing both collagenous colitis and lymphocytic colitis which share the clinical presentation of chronic watery non-bloody diarrhea and the pathophysiological feature of colonic mucosal inflammation. Endoscopic appearance is typically normal necessitating random biopsies for diagnosis.

Alternate Names:

Colitis, Microscopic

Microscopic Examination

The pathologic evaluation of tissue or cells under the light or electron microscope, complementing the gross examination to form the complete morphologic diagnosis. Routine light microscopy uses hematoxylin and eosin sections to assess architecture, cellular morphology, mitotic activity, and relation to margins.

Microscopic Hematuria

Alternate index label; see *Blood in urine (hematuria)*.

Microscopic Polyangiitis

A necrotizing vasculitis affecting small blood vessels (capillaries, venules, arterioles) with few or no immune deposits (pauci-immune). Part of the ANCA-associated vasculitis group. Strongly associated with MPO-ANCA (p-ANCA, 80%).

Microscopy

Examination of cells, tissues, organisms, or materials using a microscope.

Microsecond

A unit of time equal to one-millionth of a second.

Microsome

A microsome is a small membrane vesicle formed from fragments of endoplasmic reticulum when cells are disrupted and centrifuged. Microsomes are laboratory preparations used to study membrane enzymes, including drug-metabolizing cytochrome P450 systems.

Microspectrophotometry

Microspectrophotometry measures the absorption or emission spectrum of a microscopic region or individual cell. It can quantify pigments, nucleic acids, proteins, or other chromophores in small biological samples.

Microsphere

A microsphere is a small spherical particle, often made of polymer, glass, or another material, used in

drug delivery, imaging, embolization, or laboratory assays. Its size, composition, and surface properties determine its biologic behavior.

Microspherophakia

Microspherophakia is an abnormally small, spherical crystalline lens. It can occur in inherited disorders such as Weill–Marchesani syndrome and may cause lens displacement, pupillary block, angle-closure glaucoma, or reduced vision.

Microsporidia

A group of microscopic, spore-forming parasites now classified among fungi; several species can infect humans.

Microsporidiosis

An infection caused by microsporidia, often affecting the intestine, eyes, muscles, or other organs in people with weakened immunity.

Microsporum

Microsporum is a genus of dermatophyte fungi that can cause ringworm of the skin, scalp, or hair.

Microsporum Audouinii

Microsporum audouinii is a dermatophyte that mainly infects the scalp and can cause tinea capitis, especially in children.

Microsporum Distortum

Microsporum distortum is a rare dermatophyte related to *M. canis* that can cause skin or scalp infection.

Microsporum Equinum

Microsporum equinum is an animal-associated dermatophyte that rarely causes infection in humans.

Microsporum Ferrugineum

Microsporum ferrugineum is a dermatophyte that can cause scalp ringworm, particularly in children.

Microsporum Gypseum

Microsporum gypseum is a soil-associated dermatophyte that can cause ringworm of the skin or scalp.

phyte that can cause ringworm of the skin or scalp.

Microstomia

Microstomia is abnormal narrowing or smallness of the mouth opening. It may be congenital or result from scarring, burns, surgery, trauma, or connective-tissue disease and can impair eating, speech, oral hygiene, and dental treatment.

Microsurgery

Microsurgery uses magnification and very small instruments to repair tiny blood vessels, nerves, or other structures.

Microtechnology

Microtechnology is the design and manufacture of devices or structures with micrometer-scale features. Medical applications include microfluidic diagnostics, sensors, drug-delivery systems, and minimally invasive instruments.

Microtia

A birth defect in which the outer ear is smaller than usual or does not form fully. The ear canal may also be narrow or absent, which can reduce hearing.

Microtome

An instrument that cuts extremely thin sections of tissue for microscopic examination.

Microtubule

A microtubule is a hollow cytoskeletal polymer made of tubulin dimers. Microtubules maintain cell shape, organize intracellular transport, form the mitotic spindle, and support cilia and flagella.

Microtubule Bundle

A microtubule bundle is an organized group of parallel or otherwise coordinated microtubules within a cell. Bundles provide structural support and guide transport or movement, including in axons, cilia, and dividing cells.

Microvascular

Relating to the microvasculature, the network

of small blood vessels—generally those with an internal diameter of about 100 micrometers or less—including arterioles, capillaries, and venules.

Microvascular Disease

Disease affecting small blood vessels, which may reduce blood flow to organs or tissues.

Microvasculature

The network of the body's smallest blood vessels, including arterioles, capillaries, and venules.

Microvillus

A microvillus is a microscopic, actin-supported projection of a cell membrane that increases surface area. Microvilli are abundant on intestinal epithelial cells, where they support nutrient absorption, and on renal tubular cells.

Microvolt

A microvolt (μV) is one-millionth of a volt. It is used to express small bioelectric signals, such as those recorded by electroencephalography, electromyography, electrocardiography, or evoked-potential testing.

Microwave Ablation

A procedure that uses microwave energy to heat and destroy selected tissue, usually under imaging guidance.

Microwave Therapy

Microwave therapy uses electromagnetic energy to heat tissue and is used in selected medical or surgical treatments.

Microwell Plate

A microwell plate is a laboratory plate containing an array of small wells used to hold separate samples or reactions. It supports high-throughput assays, cell culture, immunoassays, and biochemical testing.

Micturition

The process of urination, coordinated by the pontine micturition center, parasympathetic (pelvic nerve,

S2-S4) contraction of the detrusor muscle, and relaxation of the internal (involuntary) and external (voluntary, pudendal nerve) urethral sphincters.

Mid-Brain

The midbrain, or mesencephalon, is the upper part of the brainstem involved in eye movements, motor pathways, and auditory and visual reflexes.

Mid-Day

The middle part of the day; in clinical instructions it may specify a medication or measurement time.

Mid-Dorsal

Situated in the middle region of the back or on the dorsal side of a structure.

Mid-Forearm

The middle part of the forearm, between the elbow and wrist. Measurements or injections described as mid-forearm use this region as a reference point.

Mid-Gut

The embryonic middle portion of the primitive gut, which develops into much of the small intestine and proximal colon.

Midgut Volvulus

A life-threatening pediatric surgical emergency caused by clockwise twisting of the small intestine and its mesenteric vascular pedicle around the superior mesenteric artery axis, occurring on the background of congenital intestinal malrotation with a narrow mesenteric base. Leads rapidly to midgut venous occlusion, arterial compromise, bowel ischemia, transmural infarction, and catastrophic short bowel syndrome or death. Classically presents in a previously thriving neonate or young infant with sudden bilious vomiting, abdominal tenderness, and hematochezia; diagnosis is confirmed urgently by upper GI contrast series showing a "corkscrew" duodenal sign, followed immediately by the Ladd procedure.

Alternate Names:

Volvulus Neonatorum; Midgut Torsion

Mid-Leg

The central region of the lower limb between the knee and ankle.

Mid-Line

The imaginary or anatomical line dividing a structure or body into right and left portions.

Mid-Sized

Of intermediate size; it is a descriptive term rather than a specific medical diagnosis.

Mid-Stream Urine Specimen

A urine sample collected after initial urine is voided, reducing contamination from the urethral opening and used commonly for culture.

Mid-Systolic Click

A sharp, high-pitched sound occurring in mid-to-late systole, associated with mitral valve prolapse. The click represents sudden tensing of the elongated chordae tendineae as the prolapsing leaflet billows into the left atrium. It may be followed by a late systolic murmur of mitral regurgitation.

Mid-Upper-Arm Circumference

The circumference of the upper arm measured at the midpoint between the acromion and olecranon processes. It is a practical anthropometric measure of muscle and fat stores, particularly useful when body weight or height cannot be measured reliably.

Midaxillary Line

An imaginary vertical line on the side of the body passing through the apex of the axilla (armpit).

Midazolam

Midazolam is a short-acting benzodiazepine used for procedural sedation, anesthesia, and treatment of acute seizures in appropriate settings. It enhances GABA-A receptor activity and can cause profound sedation and respiratory depression, especially with opioids or other depressants.

Midazolam Hydrochloride

Midazolam hydrochloride is the hydrochloride salt of the short-acting benzodiazepine midazolam. It is used for procedural sedation, anesthesia, and selected seizure emergencies and can cause dose-related sedation, hypotension, and respiratory depression.

Midbrain

Most superior brainstem segment connecting pons to diencephalon. Contains cerebral peduncles (corticospinal/corticobulbar tracts), substantia nigra (dopaminergic neurons degenerated in Parkinson's), red nucleus (rubrospinal tract for coordination), and periaqueductal gray (pain modulation).

Midclavicular Line

An imaginary vertical line on the front of the body passing through the midpoint of the clavicle (collarbone).

Middle Ear

An air-filled space between the eardrum and inner ear that contains the malleus, incus, and stapes. These ossicles transmit sound vibrations to the inner ear, and the auditory tube helps equalize middle-ear pressure.

Middle East Respiratory Syndrome

A severe respiratory infection caused by Middle East respiratory syndrome coronavirus, usually acquired through close contact with infected camels or people. It can cause pneumonia, respiratory failure, and renal or multiorgan complications.

Alternate Names:

MERS (Middle East Respiratory Syndrome)

Middle East Respiratory Syndrome (MERS (Middle East Respiratory Syndrome))

Alternate index label for MERS (Middle East Respiratory Syndrome).

Middle East Respiratory Syndrome

A serious respiratory illness caused by MERS coron-

avirus, usually associated with fever, cough, breathing difficulty, and exposure to infected people or camels.

Middle Insomnia

Middle insomnia is repeated or prolonged awakening during the middle portion of the sleep period, often with difficulty returning to sleep. It may occur with stress, mood disorders, sleep apnea, pain, substances, medications, or other sleep disorders.

Middle Lobe Syndrome

Chronic or recurrent atelectasis and infection of the right middle lobe due to bronchial obstruction. The long, narrow right middle lobe bronchus is susceptible to compression by lymph nodes, tumors, or mucous plugging. It may be caused by bronchiectasis, malignancy, or granulomatous disease. Treatment depends on the underlying cause.

Midline Venous Catheters - Infants

A medical procedure, device, or treatment involving midline venous catheters - infants. Its purpose, risks, and follow-up depend on the specific intervention and patient.

Midnight Disease

An older term for hypergraphia, an unusual or excessive drive to write, sometimes associated with temporal-lobe epilepsy or other neurologic or psychiatric conditions.

Midodrine

Midodrine is an oral prodrug whose active metabolite stimulates alpha-1 adrenergic receptors and increases vascular tone. It is used for symptomatic orthostatic hypotension and may cause supine hypertension, piloerection, urinary retention, or scalp tingling.

Midomafetamine

Midomafetamine is another name for 3,4-methylenedioxymethamphetamine, a psychoactive amphetamine derivative. It is being studied in controlled psychotherapy-assisted research but can cause hyperthermia, hyponatremia, cardiovascular

toxicity, serotonin toxicity, and misuse.

Midostaurin

Midostaurin is a multikinase inhibitor used with chemotherapy for newly diagnosed acute myeloid leukemia with a susceptible FLT3 mutation and for advanced systemic mastocytosis. It can cause nausea, cytopenias, infection, and other treatment-related toxicities.

Midriff

The region of the trunk around the diaphragm and upper abdomen.

Midtrimester

The middle third of pregnancy, from 14 to 28 weeks gestation. The midtrimester is when many women feel their best: nausea and fatigue of the first trimester resolve, and the physical discomforts of the third trimester have not yet developed.

Midwife

A trained and regulated professional who provides care during pregnancy, labor, birth, and the postnatal period.

Midwifery

The professional practice of supporting and managing normal pregnancy, childbirth, postpartum recovery, and newborn care.

Mifepristone

Mifepristone is a progesterone-receptor antagonist and, at higher doses, a glucocorticoid-receptor antagonist. It is used with misoprostol for medication abortion under applicable protocols and for selected cases of hyperglycemia associated with Cushing syndrome.

Migraine

A recurrent neurologic disorder that causes attacks of moderate or severe headache and may also cause nausea, vomiting, sensitivity to light or sound, or reversible aura symptoms. Some attacks occur without headache.

Alternate Names:
Migraine Headache

Migraine And Stroke Symptoms

Migraine aura usually develops gradually and resolves, whereas stroke symptoms often begin suddenly and cause persistent focal deficits such as weakness, speech trouble, facial droop, or vision loss. New or atypical neurologic symptoms require emergency stroke assessment.

Migraine With Aura

A primary headache disorder characterized by recurrent attacks of fully reversible visual, sensory, or speech symptoms that develop gradually over at least five minutes and last no more than sixty minutes, followed by headache with the characteristics of migraine.

Migraine Without Aura

A primary headache disorder characterized by recurrent attacks of moderate to severe, pulsating, unilateral headache lasting four to seventy-two hours, associated with nausea, vomiting, photophobia, and phonophobia.

Migrainous Neuralgia

An older term for cluster headache, a disorder causing recurrent attacks of severe unilateral pain, usually around one eye, with ipsilateral autonomic symptoms such as tearing or nasal congestion.

Migrating Motor Complex

Cyclical patterns of intense gastrointestinal motility occurring during fasting (interdigestive period), sweeping residual food, bacteria, and debris from the stomach through the small intestine to the colon.

Migration

Movement of cells, organisms, substances, or a body structure from one location to another.

Migratory Thrombophlebitis

Recurrent or shifting venous thrombosis associated with an underlying malignancy; an alternate term

for the thrombotic manifestation of Trousseau syndrome.

Mikulicz Disease

An older term for persistent, usually symmetric enlargement and inflammation of the lacrimal and salivary glands, now commonly associated with IgG4-related disease.

Mikulicz'S Disease

An older term for persistent, usually symmetrical enlargement of the lacrimal and salivary glands, now often considered within IgG4-related disease or Sjögren syndrome.

Milan System For Reporting Salivary Gland Cytopathology

A standardized six-category framework for salivary-gland fine-needle aspiration, reporting nondiagnostic, non-neoplastic, benign neoplasm, uncertain, suspicious, and malignant findings with associated risk estimates.

Milatuzumab

An investigational monoclonal antibody directed at CD74 and studied for blood cancers and other immune-related conditions.

Mild

Mild describes relatively low intensity, severity, or extent of a symptom, sign, disease, or abnormality. The meaning depends on the condition and the clinical scale used and does not by itself indicate that no treatment or evaluation is needed.

Mild Cognitive Impairment

A transitional cognitive state between normal aging and dementia, characterized by subjective cognitive complaints confirmed by objective cognitive impairment that is not severe enough to significantly interfere with daily activities.

Mildew Remover Poisoning

Mildew remover poisoning involves toxic or environmental exposure to mildew remover poisoning; dose,

route, timing, symptoms, and organ involvement determine urgency and treatment.

Mile

A mile is a unit of distance equal to 1,609.344 meters. It may be used in descriptions of walking or running distance, although scientific and clinical measurements generally use SI units.

Milia

Milia are tiny, firm, white or yellow bumps caused by small cysts containing keratin, a protein in the skin. They are common in newborns and may appear on the face in adults; they are harmless and usually go away on their own.

Miliaria

A sweat-retention disorder caused by blockage of eccrine ducts, producing small itchy or prickly papules.

Miliaria Crystallina

A benign, asymptomatic eruption of small, clear, superficial vesicles caused by obstruction of eccrine sweat ducts in the stratum corneum, occurring in hot, humid environments or during high fevers. The vesicles resemble dewdrops on the skin and rupture easily, leaving fine scales.

Miliaria Rubra

An itchy prickly heat rash caused by sweat-duct blockage in the epidermis, producing small red papules or vesicles.

Miliary

Resembling millet seeds; in medicine, describing numerous tiny lesions, especially the pattern of disseminated tuberculosis.

Miliary TB

Hematogenous dissemination of *M. tuberculosis* causing innumerable 1–3 mm granulomas throughout lungs and other organs. CXR shows “millet seed” pattern. More common in immunocompromised patients.

Miliary Tuberculosis

Disseminated tuberculosis caused by hematogenous spread of *Mycobacterium tuberculosis*, producing numerous tiny granulomatous lesions in the lungs and potentially multiple organs. Symptoms may include prolonged fever, weight loss, night sweats, cough, and organ-specific manifestations.

Milieu Therapy

Milieu therapy uses the structured social environment of a treatment setting as part of care, especially in some psychiatric and rehabilitation programs.

Military Personnel

Military personnel are members of the armed forces, including active-duty, reserve, and related service members. Their health care may address occupational exposures, injuries, infectious risks, combat-related trauma, and deployment-related mental-health conditions.

Milium

A small, firm, white or yellow keratin-filled cyst, usually on the face; plural milia.

Milk

A nutrient-rich secretion of mammary glands used to feed an infant.

Milk Allergy

An immune reaction to proteins in cow’s milk that may cause skin, gastrointestinal, or respiratory symptoms and, rarely, anaphylaxis.

Milk Fever

Hypocalcemia around calving in dairy cattle; in human medicine, the term is sometimes used loosely for postpartum hypocalcemia but is not a standard diagnosis.

Milk Intolerance

Alternate index label; see *Lactose intolerance*.

Milk Intolerance (Lactose Intolerance)

Alternate index label for Lactose Intolerance.

Milk Of Magnesia

A suspension of magnesium hydroxide used as an antacid and osmotic laxative.

Milk-Alkali Syndrome

Hypercalcemia, metabolic alkalosis, and kidney dysfunction caused by excessive calcium and absorbable alkali intake.

Milk-Leg

An older term for postpartum swelling of a leg, historically associated with deep venous thrombosis or lymphatic obstruction.

Milk-Sickness

A historical poisoning caused by drinking milk from cattle that have eaten white snakeroot containing tremetol.

Milker'S Node

A localized nodular skin infection caused by parapoxvirus acquired from infected cattle, also called orf-like milker's nodule.

Milky Urine

Urine with a cloudy or white appearance caused by chyle, pus, crystals, fat, or other substances; evaluation identifies the cause.

Miller'S Lung

Hypersensitivity pneumonitis caused by inhaling material associated with the granary weevil (wheat weevil, *Sitophilus granarius*), especially in people working with contaminated grain or flour.

Millicurie

A millicurie (mCi) is one-thousandth of a curie, equal to approximately 37 megabecquerels. It is used to express the activity of radioactive sources and some radiopharmaceutical doses.

Milliequivalent

A unit expressing the chemical combining power of an ion, equal to one-thousandth of an equivalent.

Milligram

A unit of mass equal to one-thousandth of a gram.

Milligram-Percent

An older concentration unit meaning milligrams per 100 milliliters, numerically equivalent to mg/dL.

Milligray

A unit of absorbed ionizing-radiation dose equal to one-thousandth of a gray, or 0.001 joule per kilogram; its abbreviation is mGy.

Milliliter

A unit of volume equal to one-thousandth of a liter and one cubic centimeter.

Millimeter

A unit of length equal to one-thousandth of a meter.

Millimolar

A concentration unit equal to one thousandth of a mole per liter, written as mmol/L.

Millimole

A unit of amount of substance equal to one-thousandth of a mole.

Million

A number equal to 1,000,000; laboratory counts may use it as a numerical multiplier.

Milliosmole

A milliosmole (mOsm) is one-thousandth of an osmole, a unit reflecting the number of osmotically active particles in a solution. Osmolality and osmolarity are commonly reported in mOsm/kg or mOsm/L.

Millipede Toxin

Millipede toxin involves toxic or environmental exposure to millipede toxin; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Millisecond

A millisecond (ms) is one-thousandth of a second. It is used to measure brief physiologic events, reaction times, nerve conduction intervals, and timing of electrical or imaging signals.

Milliunit

A milliunit (mU) is one-thousandth of a unit of biologic or enzymatic activity. Because a unit is defined according to the substance or assay, the clinical meaning of a milliunit depends on the specific test or medication.

Millivolt

A unit of electrical potential equal to one-thousandth of a volt.

Milrinone

A phosphodiesterase-3 inhibitor with positive inotropic and vasodilatory (inodilator) actions, increasing cAMP in cardiac and vascular smooth muscle.

Milroy Disease

An inherited primary lymphedema caused most often by pathogenic variants affecting VEGFR3 signaling. It typically presents with chronic swelling of the lower limbs from birth or early infancy and may be associated with papillomatosis, hydrocele, or recurrent skin infection.

Milroy'S Disease

An inherited form of primary lymphedema, usually present from birth or early life and caused commonly by lymphatic-development abnormalities.

Mima

A rare or historical term whose clinical meaning is not consistent across references; the source-specific definition should be verified.

Mimesis

Imitation or mimicry; in medicine, the term can refer to simulation of an organic disease by psychological symptoms or to one organic disease resembling

another.

Mimicry

Resemblance of one organism, structure, or clinical pattern to another; in medicine, it may describe a disorder that imitates another disease.

Minamata Disease

A neurologic disorder caused by methylmercury poisoning, classically from contaminated seafood or industrial pollution.

Mind

The collection of mental processes and capacities involved in consciousness, thought, perception, memory, emotion, judgment, and behavior.

Mindful Eating

Paying attention to hunger cues, eating slowly, savoring food. May reduce overeating, improve digestion.

Miner'S Anaemia

Anemia associated historically with mining, commonly due to hookworm infection, chronic blood loss, nutritional deficiency, or occupational exposure.

Miner'S Asthma

Asthma or asthma-like airway disease associated with inhalation of dusts encountered in mining.

Miner'S Nystagmus

An older term for visual disturbance and nystagmus reported in underground miners, associated with poor lighting and occupational conditions.

Mineral

An inorganic element or compound required for body structure, fluid balance, enzyme activity, or other physiological functions.

Mineral Oil

Mineral oil is a purified mixture of liquid hydrocarbons derived from petroleum. It is used in some topical products, cosmetics, and laxatives; aspiration

of liquid mineral oil can cause lipoid pneumonia.

Mineral Oil Overdose

Mineral oil overdose involves toxic or environmental exposure to mineral oil overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Mineral Spirits Poisoning

Mineral spirits poisoning involves toxic or environmental exposure to mineral spirits poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Mineralocorticoid

A mineralocorticoid is a steroid hormone that regulates sodium, potassium, and extracellular-fluid balance, chiefly through receptors in the renal distal nephron. Aldosterone is the principal endogenous mineralocorticoid; excess causes hypertension and hypokalemia.

Mineralocorticoid Receptor

An intracellular steroid receptor activated primarily by aldosterone in the kidney, colon, sweat glands, and other tissues. Its activation increases sodium reabsorption and potassium and hydrogen secretion and contributes to blood-pressure regulation and tissue remodeling.

Mineralocorticoids

Steroid hormones, chiefly aldosterone, that promote sodium retention and potassium and hydrogen secretion in the kidney.

Mini Stroke (Transient Ischemic Attack (TIA, Mini-Stroke))

Alternate index label for Transient Ischemic Attack (TIA, Mini-Stroke).

Mini-Mental State Examination

A brief structured cognitive screening instrument assessing orientation, registration, attention, calculation, recall, language, and visuospatial ability. Scores are affected by education, language, sensory

impairment, culture, and delirium and do not establish a dementia diagnosis alone.

Mini-Stroke

A lay term usually referring to a transient ischemic attack, in which focal neurologic symptoms resolve without persistent infarction.

Minim

A very small amount or unit; the term is historical and may refer to a small volume in old pharmaceutical measurement.

Minimal Brain Dysfunction

An obsolete term formerly used for children with attention, learning, or behavior problems; it has no precise modern diagnostic meaning.

Minimal Change Disease

A cause of nephrotic syndrome, especially in children, in which the glomeruli appear nearly normal by light microscopy but podocyte foot processes are effaced on electron microscopy. It causes marked protein loss in the urine and edema.

Minimal Residual Disease

The small number of malignant cells that remain after treatment and are below detection by conventional clinical examination or routine microscopy. Sensitive flow-cytometric, molecular, or imaging methods may detect MRD and refine relapse-risk assessment.

Minimally Invasive Gastrointestinal Surgery

Gastrointestinal operations performed through small incisions or natural orifices using laparoscopic, robotic, or endoscopic techniques, often reducing recovery time while retaining procedure-specific risks.

Minimally Invasive Hip Replacement

A medical procedure, treatment, device, or care topic related to minimally invasive hip replacement; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Minimally Invasive Surgery

Surgery performed through small incisions or natural openings using specialized instruments, usually reducing tissue disruption and recovery time.

Minimization

A psychological or communication process of downplaying the importance or severity of symptoms, events, or problems.

Minimum Alveolar Concentration

The alveolar concentration of an inhaled anesthetic that prevents movement in half of people exposed to a standardized painful surgical stimulus. It is used to compare the potency of volatile anesthetics.

Minimum Bactericidal Concentration

The lowest concentration of an antimicrobial that kills a defined proportion of the original bacterial inoculum, commonly demonstrated by subculture without growth. MBC is distinct from MIC and is not routinely required for every infection.

Minimum Effect Concentration

The lowest concentration of a drug in the blood or at its site of action that produces a defined measurable effect.

Minimum Inhibitory Concentration

The lowest concentration of an antimicrobial that prevents visible growth of a microorganism under standardized laboratory conditions. It helps characterize susceptibility, but results must be interpreted with the organism, specimen, assay, and clinical context.

Minimum Lethal Concentration

The lowest concentration of a substance associated with death in a defined test population or experimental setting.

Minimum Lethal Dose

The smallest dose of a substance reported to cause death under specified conditions; it varies by species, route, and individual.

Minisatellite Repeat

A minisatellite repeat is a tandemly repeated DNA sequence with repeat units commonly ranging from about 10 to 100 base pairs. Variation in repeat number can serve as a genetic marker and, in some loci, influence gene regulation or disease risk.

MINOCA

Myocardial infarction with non-obstructive coronary arteries: an acute myocardial infarction with no coronary stenosis of 50 percent or greater and no other immediately apparent cause for the presentation. It is a working diagnosis requiring evaluation for mechanisms such as plaque disruption, coronary spasm, coronary embolism, spontaneous coronary artery dissection, myocarditis, or Takotsubo syndrome.

Minocycline

A tetracycline antibiotic used for selected bacterial infections and inflammatory acne.

Minor

Smaller, lesser, or less significant than a related structure or condition; for example, the teres minor muscle is smaller than the teres major muscle.

Minor Response

A minor response is a limited improvement after treatment that does not meet the predefined criteria for a partial or complete response. The exact threshold depends on the disease, study protocol, and outcome being measured.

Minority Health

Minority health concerns the health status, health determinants, access, quality of care, and outcomes of populations that experience social, economic, cultural, or structural marginalization. Differences in outcomes often reflect modifiable inequities rather than inherent biology.

Minoxidil

A vasodilator used topically for pattern hair loss and orally in selected cases of resistant hypertension.

Minretumomab

An investigational monoclonal antibody studied as a targeted treatment for cancers expressing its selected tumor-associated antigen.

Minute Ventilation

The total volume of air breathed in one minute (tidal volume x respiratory rate). Normal is 6–8 L/min. Elevated in increased metabolic demand, pain, anxiety, and sepsis. Reduced in neuromuscular disease and sedation.

Miosis

Constriction of the pupil, produced mainly by parasympathetic activity through the oculomotor nerve and sphincter pupillae muscle. It may be physiologic or caused by medicines, toxins, neurologic disease, or ocular conditions.

Miosis Disorder

Abnormally small pupils or an abnormal pupillary constriction response, caused by medications, neurologic disease, ocular disease, or exposure to certain toxins.

Miotic

A medicine or substance that makes the pupil smaller. Miotics may be used in glaucoma or during some eye procedures and can affect vision in dim light.

Alternate Names:

Miotic agent

Miracidium

The ciliated larval stage of a trematode that hatches from an egg and infects a suitable snail host.

Mirage Syndrome

A rare genetic disorder, usually related to SAMD9 variants, that can cause growth restriction, adrenal insufficiency, recurrent infections, and distinctive developmental findings.

MIRD Schema

Medical Internal Radiation Dose. Method for calcu-

lating radiation absorbed doses.

Mirex

Mirex is a persistent organochlorine insecticide and industrial chemical. It bioaccumulates and is environmentally hazardous; exposure has been associated with toxic effects in experimental studies and is controlled or prohibited in many jurisdictions.

Mirizzi Syndrome

Condition where a gallstone impacted in the cystic duct or Hartmann pouch extrinsic compression of the common hepatic duct causing obstructive jaundice. Classified into four types based on the degree of erosion and fistula formation. Type one is extrinsic compression without fistula.

Mirror Therapy

Mirror reflection of unaffected limb movement creates visual illusion of affected limb moving. Reduces phantom limb pain, improves stroke recovery.

Mirror-Writing

Writing in which letters or words are reversed as if seen in a mirror; it may occur transiently in childhood or with neurologic disease.

Mirtazapine

Mirtazapine is a noradrenergic and specific serotonergic antidepressant used for major depressive disorder. It commonly causes sedation and increased appetite or weight and can rarely cause neutropenia or other serious adverse effects.

Misalignment

Misalignment is abnormal positioning or orientation of two or more structures relative to their intended relationship. It may affect bones, joints, teeth, eyes, implants, or medical devices and can impair function or healing.

Miscarriage

Spontaneous loss of a pregnancy before fetal viability, commonly caused by chromosomal abnormalities but requiring clinical assessment.

Alternate Names:
Spontaneous Abortion

Miscarriage - Threatened

Vaginal bleeding during early pregnancy without cervical dilation or passage of pregnancy tissue; the pregnancy may continue or progress to pregnancy loss.

Miscarriage, Spontaneous

Pregnancy loss occurring without an intentional medical or surgical procedure.

Misdiagnosis

Misdiagnosis is assignment of an incorrect diagnosis or failure to recognize the correct condition. It can lead to inappropriate treatment, delayed care, avoidable harm, or unnecessary testing and may result from atypical presentation, incomplete information, or system factors.

Miserere

An obsolete term for feculent vomiting associated with severe intestinal obstruction.

Mismatch Repair

Mismatch repair is a DNA-repair pathway that recognizes and corrects incorrectly paired bases or small insertion–deletion loops generated during replication. Defects in mismatch-repair genes cause microsatellite instability and increase risk of several cancers, including Lynch-syndrome cancers.

Mismatch Repair Deficiency

Loss of DNA mismatch-repair function that produces microsatellite instability and a high tumor mutational burden. Seen in Lynch syndrome and some sporadic colorectal, endometrial, and other cancers, and associated with responsiveness to immune checkpoint inhibitors.

MISME

Alternate index label; see *NF2-related schwannomatosis (neurofibromatosis type 2)*.

Misonidazole

Misonidazole is an older investigational radiosensitizer designed to make low-oxygen tumor cells more sensitive to radiation.

Misophonia

Misophonia is an intense emotional or physiologic reaction to specific repetitive sounds, such as chewing or tapping. It is not simple annoyance; behavioral strategies, sound management, and therapy can reduce impairment, while assessment considers anxiety, obsessive-compulsive symptoms, and sensory sensitivity.

Misoprostol

A prostaglandin E1 analogue used for ulcer prevention in selected patients, medical abortion, cervical preparation, and obstetric indications.

Misoprostol (Cytotec)

A synthetic prostaglandin analogue used for selected gynecologic and obstetric indications, including cervical ripening, labor induction, and medical management of some pregnancies. It can cause uterine contractions, bleeding, gastrointestinal effects, or uterine tachysystole; use depends on the clinical setting and gestational age.

Alternate Names:
Cytotec

Missed Dose

A missed dose is a scheduled dose of a medicine that was not taken or administered. The appropriate response depends on the drug and timing; doubling a dose can be dangerous, so the product instructions or a clinician or pharmacist should guide the next dose.

Missed Miscarriage

A nonviable intrauterine pregnancy that has not been expelled and may produce few or no symptoms of miscarriage. Diagnosis requires appropriate ultrasound or other clinical evaluation before management is selected.

Alternate Names:
Missed abortion; delayed miscarriage.

Missense Mutation

A missense mutation is a DNA sequence change that substitutes one amino acid for another in a protein. Its effect may be harmful, beneficial, or neutral depending on the affected residue, protein function, and genetic context.

Missense Variant

A single-nucleotide substitution that changes one amino acid in a protein. Its clinical effect ranges from benign to pathogenic and must be assessed using molecular, functional, population, and clinical evidence.

Mistletoe Poisoning

Mistletoe poisoning involves toxic or environmental exposure to mistletoe poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Mite

A tiny arachnid; some mites cause dermatitis or transmit disease, and house-dust mites can trigger allergy.

Mithramycin

An older antineoplastic antibiotic, also called plitcamycin, whose use is limited by substantial toxicity.

Mitigate

To mitigate means to lessen the severity, impact, or likelihood of a symptom, risk, injury, or disease complication. Mitigation may involve prevention, treatment, environmental changes, or supportive care.

Mitobronitol

Mitobronitol is an alkylating antineoplastic compound formerly investigated or used in selected hematologic malignancies. Its cytotoxic effects can damage DNA and cause myelosuppression and other treatment-related toxicities.

Mitochondria

Double-membrane organelles known as the "power-

house of the cell," generating ATP through oxidative phosphorylation. Outer membrane is permeable; inner membrane is highly folded (cristae) and contains the electron transport chain and ATP synthase.

Mitochondrial Cristae

Mitochondrial cristae are folds of the inner mitochondrial membrane that increase surface area for the electron-transport chain and ATP synthase. Their structure supports oxidative phosphorylation and changes with cellular energy demands.

Mitochondrial Diabetes

Diabetes caused by mutations in mitochondrial DNA particularly the m.3243A>G mutation in the MT-TL1 gene. Maternally inherited. Often associated with sensorineural hearing loss termed maternally inherited diabetes and deafness. Patients are typically lean with impaired insulin secretion. Diagnosis requires genetic testing.

Mitochondrial Disease

A group of genetic disorders caused by impaired mitochondrial energy production. Symptoms vary and may affect the brain, muscles, nerves, heart, eyes, or multiple organs; onset and severity can differ widely even within one family.

Mitochondrial DNA

Small circular DNA molecules located primarily in mitochondria that encode some components of oxidative phosphorylation and are inherited predominantly through the maternal line.

Mitochondrial DNA Depletion Syndrome MDS MDDS

A group of inherited disorders in which affected tissues contain abnormally reduced amounts of mitochondrial DNA, impairing cellular energy production. Forms may predominantly affect muscle, liver, or brain and muscle; many are autosomal recessive.

Mitochondrial Fission

Mitochondrial fission is division of one mitochondrion into two or more mitochondria. It helps distribute mitochondria, remove damaged portions

through mitophagy, and respond to cell-cycle or metabolic signals; excessive fission may contribute to disease.

Mitochondrial Fusion

Mitochondrial fusion is joining of mitochondria into a connected network. It permits exchange of mitochondrial contents and helps maintain bioenergetic function and genome integrity; fusion and fission are normally balanced dynamically.

Mitochondrial Inheritance

Inheritance of mitochondrial DNA, which is transmitted predominantly through the egg and therefore usually from the mother. Examples include Leber hereditary optic neuropathy and MELAS. Heteroplasmy means that mutant and normal mitochondrial DNA coexist in a cell.

Mitochondrial Matrix

The mitochondrial matrix is the protein-rich compartment enclosed by the inner mitochondrial membrane. It contains mitochondrial DNA, ribosomes, and enzymes for the citric-acid cycle, fatty-acid oxidation, and other metabolic processes.

Mitochondrial Membrane

The mitochondrial membrane system consists of an outer membrane and a highly folded inner membrane separated by an intermembrane space. It controls transport and houses the respiratory chain and ATP-producing machinery.

Mitochondrial Myopathy

Muscle weakness or dysfunction caused by abnormalities of mitochondria, the energy-producing structures of cells.

Mitochondrial Ribosome

A mitochondrial ribosome is a ribosome within mitochondria that translates proteins encoded by mitochondrial DNA. Its structure differs from cytosolic ribosomes and defects in mitochondrial translation can cause energy-production disorders.

Mitochondrial Swelling

Enlargement of mitochondria caused by disruption of ion and water balance, often indicating cellular injury, impaired oxidative phosphorylation, or permeability-transition changes.

Mitochondrion

A mitochondrion is a membrane-bound organelle that generates much of a cell's ATP through oxidative phosphorylation. It also participates in apoptosis, calcium handling, metabolism, and production or regulation of reactive oxygen species.

Mitogen

A mitogen is a substance that stimulates a cell, especially a lymphocyte, to enter the cell cycle and proliferate. Mitogens include growth factors, lectins, and other signals that activate proliferative pathways.

Mitoguazone

Mitoguazone, also called methylglyoxal bis(guanyldrazone), is an experimental antineoplastic agent that interferes with polyamine metabolism and cell proliferation. It has been investigated in hematologic and other cancers.

Mitolactol

Mitolactol is an alkylating antineoplastic compound formerly used or investigated in cancer treatment. It damages DNA and can cause cytotoxic effects such as myelosuppression and gastrointestinal toxicity.

Mitomycin

Mitomycin is a chemotherapy medicine that damages DNA and is used for selected cancers; it can suppress bone marrow and injure the kidneys or bladder.

Mitomycins

Mitomycins are antitumor antibiotics that become activated in cells and cross-link DNA, inhibiting replication and transcription. Mitomycin C is the best-known member and is used in selected cancers and ophthalmic or surgical applications.

Mitophagy

Mitophagy is selective autophagic removal of damaged, excess, or otherwise targeted mitochondria. It maintains mitochondrial quality and cellular homeostasis; impaired or excessive mitophagy is implicated in some neurodegenerative and metabolic disorders.

Mitosis

Cell division that produces two genetically similar daughter cells with the same chromosome number as the parent cell.

Mitosporic Fungi

Fungi that reproduce by asexual spores; the term is mainly used for fungi whose sexual stage is unknown or not observed.

Mitotane

Mitotane is an adrenolytic drug used for selected adrenocortical carcinomas and to suppress excess adrenal steroid production. It can cause gastrointestinal and neurologic effects, adrenal insufficiency, and numerous drug interactions.

Mitotic Anaphase

Mitotic anaphase is the stage of mitosis in which sister chromatids separate and move toward opposite poles of the cell. Accurate spindle attachment and chromosome segregation are required for formation of genetically similar daughter cells.

Mitotic Figure

A cell undergoing nuclear division that can be identified microscopically. Mitotic count contributes to assessment of proliferative activity and tumor grade, although counting method and area must be standardized.

Mitotic Metaphase

Mitotic metaphase is the stage of mitosis in which duplicated chromosomes align at the cell equator with sister kinetochores attached to opposite spindle poles. A checkpoint helps prevent premature chromosome separation.

Mitotic Prophase

Mitotic prophase is the early stage of mitosis in which chromatin condenses into visible chromosomes, the nucleolus disappears, and the mitotic spindle begins to form. In late prophase or prometaphase, the nuclear envelope breaks down.

Mitotic Recombination

Mitotic recombination is exchange or rearrangement of DNA between homologous chromosomes during or around mitotic cell division. It can repair DNA or generate loss of heterozygosity and is relevant to tumor evolution and genetic disease.

Mitotic Telophase

Mitotic telophase is the stage after chromosome separation when chromosomes reach opposite poles, decondense, and become enclosed in newly forming nuclear envelopes. Cytokinesis usually follows or overlaps with telophase.

Mitoxantrone

A chemotherapy and immunosuppressive medicine that interferes with DNA and is used for selected cancers and some forms of multiple sclerosis.

MitraClip

A transcatheter device that creates a double orifice in the mitral valve by clipping the anterior and posterior leaflets together, reducing mitral regurgitation. It is indicated for patients with significant (3+ or 4+) mitral regurgitation who are at high risk for surgical mitral valve repair.

Mitral

Relating to the mitral or bicuspid valve between the left atrium and left ventricle.

Mitral Atresia

Congenital absence or complete closure of the mitral-valve opening, causing severe obstruction of blood flow into the left ventricle.

Mitral Insufficiency

Failure of the mitral valve to close completely, allow-

ing blood to leak back into the left atrium during systole.

Mitral Regurgitation

Incomplete closure of the mitral valve allowing blood to flow backward from the left ventricle to the left atrium during systole. Causes include mitral valve prolapse, papillary muscle dysfunction, rheumatic disease, and ischemic heart disease. Murmur: pansystolic (holosystolic) blowing murmur at the apex radiating to the axilla.

Mitral Stenosis

Narrowing of the mitral valve opening, obstructing left atrial to left ventricular blood flow. Most commonly caused by rheumatic heart disease. Symptoms include dyspnea, fatigue, and atrial fibrillation. Murmur: low-pitched, rumbling mid-diastolic murmur at the apex with opening snap.

Mitral Stenosis Murmur

Low-pitched, rumbling mid-diastolic murmur at the apex, best heard with the bell of the stethoscope in the left lateral decubitus position. Accompanied by an opening snap (early diastolic high-pitched click) and loud S1 in pliable valves. Severe MS may show a diastolic murmur without a preceding S2 gap.

Mitral Valve

Left atrioventricular (bicuspid) valve with anterior and posterior cusps supported by chordae tendineae and papillary muscles. Anterior cusp is larger and proximate to the aortic valve. Mitral valve prolapse is the most common valvular abnormality. Mitral stenosis (most commonly rheumatic) and regurgitation are significant.

Mitral Valve Insufficiency

Leakage of the mitral valve that allows blood to flow back into the left atrium.

Mitral Valve Prolapse

A valvular heart disease where the mitral valve leaflets prolapse into the left atrium during systole. Most patients are asymptomatic; some develop palpitations, atypical chest pain, or dyspnea. Diagnosis

by echocardiography. Complications include mitral regurgitation, infective endocarditis, and arrhythmias.

Alternate Names:

Barlow's Syndrome Barlow Syndrome (Mitral Valve Prolapse) Click-Murmur Syndrome Prolapse, Mitral Valve

Mitral Valve Regurgitation

Backward leakage of blood through the mitral valve when the left ventricle contracts, which can cause breathlessness, fatigue, atrial enlargement, or heart failure.

Alternate Names:

Regurgitation, Mitral Valve

Mitral Valve Stenosis

Narrowing of the mitral valve that restricts blood flow from the left atrium to the left ventricle.

Alternate Names:

Stenosis, Mitral Valve

Mitral Valve Surgery - Minimally Invasive

A medical procedure, treatment, device, or care topic related to mitral valve surgery - minimally invasive; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Mitral Valve Surgery - Open

A medical procedure, treatment, device, or care topic related to mitral valve surgery - open; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Mitral Valvotomy

An operation or catheter procedure that splits or widens a narrowed mitral valve.

Mitral Valvuloplasty

Mitral valvuloplasty is a procedure that widens a narrowed mitral valve, often with a balloon catheter or surgical repair.

Mitral-Valve Repair

A surgical or transcatheter procedure to restore mitral valve competence without replacement, typically for regurgitation from prolapse, chordal rupture, or ischemic dysfunction. Repair preserves native valve tissue, maintains left ventricular function, and avoids lifelong anticoagulation required by mechanical prostheses.

Mitsuokella

Mitsuokella is a genus of anaerobic bacteria found mainly in the mouth and digestive tract; human infection is uncommon.

Mitsuokella Multacida

An anaerobic bacterium found mainly in the mouth and intestine that is rarely associated with human infection.

Mittelschmerz

Recurrent one-sided lower-abdominal or pelvic pain occurring around ovulation. It is usually brief or lasts up to a day or two, but severe, persistent, or atypical pain requires assessment for other causes.

Mixed Connective Tissue Disease

An overlap syndrome with features of systemic lupus erythematosus, systemic sclerosis, and polymyositis/dermatomyositis. Highly associated with anti-U1 RNP antibodies. Presents with Raynaud phenomenon (nearly universal), puffy hands, arthritis, myositis, esophageal dysmotility, and serositis. Renal disease is less common than in SLE.

Alternate Names:

Arthritis MCTD (Mixed Connective Tissue Disease)

Mixed Glioma

Mixed glioma is an older term for a glial tumor showing features of more than one glial lineage, historically including oligoastrocytoma. Modern classification relies mainly on molecular findings and generally assigns such tumors to a more specific entity.

Mixed Hearing Loss

A combination of both conductive and sensorineural hearing loss occurring in the same ear, resulting in a hearing deficit that involves impaired sound transmission through the outer or middle ear in addition to cochlear or neural dysfunction.

Mixed Oedema

Edema caused by more than one mechanism or affecting more than one tissue compartment; interpretation depends on clinical context.

Mixed Urinary Incontinence

Involuntary leakage of urine, significantly affecting psychological, social, and physical well-being. See urinary incontinence.

Mixed-Lineage Leukemia

An acute leukemia in which the malignant blasts show defining features of more than one hematopoietic lineage, commonly both myeloid and lymphoid; it is also called mixed-phenotype acute leukemia.

Mixovirus

An older group name for certain myxovirus-like viruses, including viruses historically associated with influenza and other respiratory infections.

MME

Membrane metalloendopeptidase, also called neprilysin, CD10, neutral endopeptidase, or CALLA; it is a cell-surface enzyme and marker expressed in several tissues and in some acute lymphoblastic leukemias.

Miyoshi Myopathy

An autosomal recessive distal muscular dystrophy belonging to the dysferlinopathy spectrum, caused by homozygous or compound heterozygous mutations in the *DYSF* gene on chromosome 2p13.2. Characteristically presents in early adulthood (ages 15–25) with selective, progressive weakness and severe atrophy of the posterior calf muscles (gastrocnemius and soleus), rendering patients unable to stand on their tiptoes or perform heel rises, while the anterior compartment (tibialis anterior) is initially

spared. Associated with massive serum creatine kinase elevations (often > 10,000 U/L), progressing slowly over decades to involve the proximal thigh and pelvic girdle musculature.

Alternate Names:

Miyoshi Distal Myopathy; Distal Dysferlinopathy

Mobile

Capable of moving or being moved; a mass or structure described as mobile is not fixed to adjacent tissue.

Mobile Genetic Elements

Genetic elements that can move within and between genomes. These include plasmids, transposons, and integrons. Mobile genetic elements can carry antibiotic resistance genes and virulence factors. They facilitate horizontal gene transfer and contribute to the rapid evolution of bacteria.

Mobile Health (MHealth)

Use of mobile devices for health. Examples: health apps, text message reminders, wearable devices.

Alternate Names:

mHealth

Mobile Health Unit

A mobile health unit is a vehicle or transportable facility equipped to provide health services at changing locations. It may deliver screening, vaccination, primary care, diagnostic testing, emergency support, or outreach to underserved communities.

Mobility

The ability to move or be moved, including functional movement of a person or range of motion of a joint.

Mobilization

The process of restoring or encouraging movement, such as early patient activity, joint movement, or surgical release of tissue.

Mobiluncus

A genus of curved anaerobic bacteria associated

with bacterial vaginosis and occasionally isolated from other clinical specimens.

Mobiluncus Curtisii

An anaerobic curved bacterium associated with bacterial vaginosis and changes in the vaginal microbiota.

Mobiluncus Mulieris

An anaerobic curved bacterium associated with bacterial vaginosis and vaginal microbial imbalance.

Mobius Syndrome

A rare congenital disorder causing facial weakness or paralysis and limited outward eye movement.

Mocetinostat

Mocetinostat is an investigational histone deacetylase inhibitor studied as an antineoplastic agent. By altering histone acetylation and gene expression, it may inhibit tumor-cell growth; clinical use depends on regulatory approval and indication.

Modafinil

A wakefulness-promoting agent (mechanism not fully understood, likely dopaminergic) used for narcolepsy, obstructive sleep apnea residual sleepiness, and shift work sleep disorder; used off-label for fatigue and ADHD. Less abuse potential and fewer sympathomimetic effects than amphetamines.

Modality

A method or form of treatment, diagnosis, imaging, or sensory stimulation.

Mode

The most frequent value in a dataset or a particular manner or method of operation.

Model

A simplified representation used to describe, explain, predict, or study a biological or clinical process.

Moderate To Severe Disabilities

Moderate to severe disability describes substantial

limitations in physical, cognitive, sensory, communication, or adaptive functioning that require ongoing support. Needs vary widely and may include medical care, rehabilitation, assistive technology, education, and assistance with daily activities.

Moderation

Moderation is reduction or control of the intensity, amount, or severity of a process, symptom, behavior, or treatment effect. In clinical research, a moderator is a factor that changes the strength or direction of an association.

Moderator

A factor that changes the strength or direction of a relationship or treatment effect; it may also mean a person who guides a discussion.

Modes Of Inheritance

Patterns by which genetic traits pass through families, including autosomal dominant, autosomal recessive, X-linked, mitochondrial, and other patterns.

Modification

A change made to a structure, process, treatment, or behavior.

Modified Biophysical Profile (Modified BPP)

A simplified antepartum test combining the non-stress test with the amniotic fluid index (AFI). The NST assesses acute fetal status (heart rate reactivity over 20-40 minutes) and the AFI assesses chronic uteroplacental function (oligohydramnios suggests chronic hypoxia or placental insufficiency).

Alternate Names:

Modified BPP

Modulator

A substance or factor that alters the activity of a biological pathway, receptor, gene, or physiological process.

Modus Operandi

The characteristic method by which a person per-

forms an action; it is chiefly a forensic or legal term.

Modus Vivendi

A practical arrangement or way of living that allows people or groups with differences to coexist.

Moebius Syndrome

A congenital disorder characterized mainly by facial paralysis and inability to abduct the eyes, caused by developmental cranial-nerve abnormalities.

Moeller'S Glossitis

An older term for a smooth, painful, inflamed tongue associated especially with nutritional deficiency, including iron, folate, or vitamin B12 deficiency.

Moellerella

Moellerella is a rare gram-negative bacterium that can occasionally cause opportunistic human infection.

Moellerella Wisconsensis

A rare gram-negative bacterium that can occasionally cause urinary, bloodstream, or other opportunistic infection.

MOG Antibody-Associated Disorder

Alternate index label; see *Myelin oligodendrocyte glycoprotein antibody-associated disease*.

MOGAD

Alternate index label; see *Myelin oligodendrocyte glycoprotein antibody-associated disease*.

Mogibacterium

A genus of anaerobic bacteria found in the mouth and intestine and occasionally associated with dental or other infection.

Mohs Micrographic Surgery

A medical procedure, treatment, device, or care topic related to mohs micrographic surgery; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Mohs Surgery

A micrographically controlled technique in which skin cancer is excised in thin layers and examined margin-by-margin, achieving high cure rates for basal cell and squamous cell carcinoma while sparing normal tissue.

Moisture

Water or other liquid present on a surface or in tissue; excessive moisture can cause maceration and skin breakdown.

Molar

Relating to a molar tooth or, in chemistry, to one mole per liter.

Molar Pregnancy

A type of gestational trophoblastic disease characterized by abnormal proliferation of trophoblastic tissue. See Hydatidiform Mole.

Molar Pregnancy (Hydatidiform Mole)

An abnormal pregnancy in which placental tissue proliferates excessively and the embryo is absent or abnormal; it is a form of gestational trophoblastic disease.

Alternate Names:
Hydatidiform Mole

Molasses

A viscous syrup produced during sugar refining; it is rich in sugar and may contain variable amounts of minerals.

Mold

A multicellular fungus that grows as branching filaments; molds can cause allergy, food spoilage, or opportunistic infection.

Mold Allergy

An allergic response to mold spores that may cause nasal, eye, skin, or lower-respiratory symptoms.

Mold Exposure

Mold exposure can irritate the eyes, skin, and air-

ways and may worsen asthma or allergic rhinitis; invasive infection is uncommon and mainly affects severely immunocompromised people. Reducing moisture and remediating contaminated areas are more useful than unproven detoxification.

Mole

Nevus: a benign proliferation of melanocytes, the most common skin lesion; also used for other nevi (moles are melanocytic nevi). Types: junctional (flat, brown—childhood), compound (slightly raised), intradermal (dome-shaped, flesh/pigmented).

Molecular

Relating to molecules or processes occurring at the molecular level.

Molecular Chaperone

A molecular chaperone is a protein that assists other proteins with folding, assembly, transport, or refolding without becoming part of the final structure. Chaperones can also help prevent or resolve protein aggregation.

Molecular Diagnosis

Molecular diagnosis uses analysis of DNA, RNA, proteins, or other molecular markers to identify a disease, pathogen, inherited variant, tumor subtype, or treatment-relevant characteristic. Results require appropriate assay validation and clinical interpretation.

Molecular Dynamic

Molecular dynamics is a computational method that simulates movement and interactions of atoms or molecules over time using physical force fields. It is used to study biomolecular structure, flexibility, binding, and drug interactions.

Molecular Imaging

A diagnostic or laboratory method related to molecular imaging. Results are interpreted with the method, reference range, and clinical findings.

Molecular Pathology

The investigation of disease using nucleic-acid, genomic, epigenomic, or molecular protein alterations in cells and tissues. It may establish diagnosis, estimate prognosis, identify inherited risk, or select targeted therapy.

Molecular Pathology Of Colorectal Cancer

The assessment of molecular alterations that classify colorectal tumors and guide prognosis or therapy, including mismatch-repair deficiency or microsatellite instability, RAS mutations, BRAF mutation, HER2 amplification, and selected gene fusions.

Molecular Probe

A molecular probe is a labeled or otherwise detectable molecule designed to bind a particular nucleic-acid sequence, protein, metabolite, or other target. Probes are used in imaging, assays, microscopy, and molecular diagnostics.

Molecular Response

A molecular response is a measurable change in a molecular marker, such as a pathogen load, oncogenic transcript, mutation burden, or biomarker, after disease progression or treatment. Its definition and clinical significance depend on the disease and assay.

Molecular Testing

Analysis of DNA, RNA, or other molecular features to identify variants, fusions, expression patterns, or infectious agents for diagnosis, prognosis, or treatment selection.

Molecular Weight

The mass of one molecule, usually expressed in atomic mass units; for a substance used in chemistry, its numerical value corresponds to molar mass in grams per mole. It helps calculate concentrations and doses.

Molecule

A group of chemically bonded atoms forming the smallest unit of a substance that retains its chemical

properties.

Moles

Moles are common collections of pigment-producing melanocytes and are usually benign. A lesion that changes in size, shape, color, symmetry, or symptoms, or differs markedly from others, should be examined for melanoma.

Molimina

The symptoms and physical changes that occur before menstruation, including breast tenderness, bloating, or mood changes.

Mollusc

A soft-bodied invertebrate; the term is also used in names of mollusc-borne or mollusc-associated parasitic diseases.

Mollusca

mollusca is a parasitic or invertebrate taxon; its medical relevance depends on the species, life cycle, exposure, host, and site of infection or tissue involvement.

Molluscipoxvirus

A poxvirus genus containing molluscum contagiosum virus, which causes umbilicated skin papules in humans.

Molluscum Contagiosum

A viral skin infection caused by a poxvirus, presenting as firm, dome-shaped, umbilicated papules with central dimpling, 2 to 5 mm in diameter. It is transmitted by direct skin contact, autoinoculation, and sexual contact in adults. Immunocompetent hosts clear lesions spontaneously within 6 to 12 months.

Molluscum Sebaceum

An obsolete name historically applied to sebaceous-gland lesions; terminology is inconsistent and the original source should be checked.

Molt

A molt is shedding and replacement of an outer

covering, such as the exoskeleton of an arthropod or the skin, feathers, or hair of an animal. The process is controlled by developmental and hormonal signals.

Molten Metal Fumes

Fumes produced during welding, smelting, or casting that can cause metal-fume fever, airway irritation, or metal toxicity.

Molybdenum

An essential trace element required in small amounts for enzymes; excessive exposure can affect copper balance.

Molybdenum-99

Parent isotope of Tc-99m, half-life 66 hours. Produced in nuclear reactors. Generator systems provide Tc-99m for 1 week.

Molybdosis

Illness caused by excessive molybdenum exposure, which may disturb copper metabolism and cause systemic effects.

Moment

A brief interval or, in biomechanics, the turning effect of a force around a point or joint.

Mometasone

Mometasone is a potent synthetic glucocorticoid used topically or by inhalation for inflammatory skin or airway disease. It reduces local inflammation but may cause skin atrophy, oral candidiasis, adrenal effects, or other corticosteroid adverse effects.

Mometasone Furoate

Mometasone furoate is the furoate ester of the corticosteroid mometasone. Depending on formulation, it is used for inflammatory skin disease, allergic rhinitis, or asthma; local and systemic corticosteroid precautions apply.

Momordica

A genus of plants including bitter melon; preparations may affect blood glucose and can interact with

medicines.

Monascus

Monascus is a genus of fungi used in some fermented foods; some species produce pigments, while contamination can produce harmful mycotoxins.

Monascus Ruber

Monascus ruber is a red-pigment-producing fungus found in environmental and food settings; it is not a usual human pathogen.

Mondor's Disease

Superficial thrombophlebitis of the anterior chest wall veins, typically the lateral thoracic, thoracoepigastric, or superior epigastric veins. Presents as a tender, cord-like subcutaneous structure with skin retraction. Usually self-limited; associated with breast surgery, trauma, or hypercoagulable states.

Monensin

Monensin is a polyether ionophore antibiotic used mainly in veterinary and agricultural settings to alter rumen fermentation or prevent coccidiosis. It can be toxic to animals and humans, especially through effects on cardiac and skeletal muscle.

Mongol

An obsolete and offensive term formerly used for a person with Down syndrome; it should not be used clinically.

Mongolian Spot

A Mongolian spot, now preferably called congenital dermal melanocytosis, is a flat blue-gray patch caused by melanocytes in the dermis, usually present at birth. It is benign and often fades during childhood but should be documented to distinguish it from bruising.

Mongolism

An obsolete and offensive term for Down syndrome, a chromosomal condition usually caused by trisomy 21.

Monilethrix

Monilethrix is an inherited hair-shaft disorder in which hair has regularly spaced narrow segments and breaks easily, producing a beaded appearance. It commonly causes short, brittle scalp hair and may involve follicles elsewhere.

Monitored Anesthesia Care

A distinct service where an anesthesia professional provides premedication, administration of analgesics and/or sedatives, continuous monitoring of the patient's cardiorespiratory status, and intervention for any emergent or unavoidable complications that may arise during a diagnostic or therapeutic procedure.

Monitoring Device

A monitoring device measures and displays or records a physiologic variable, such as heart rhythm, oxygen saturation, blood pressure, glucose, temperature, or respiratory rate. Accuracy, calibration, and clinical context determine how results should be interpreted.

Monitoring Test

A test repeated over time to follow a disease, treatment response, medicine safety, or a possible complication. The result is interpreted with symptoms and earlier measurements.

Monkeypox

Monkeypox, now generally called mpox, is a zoonotic infection caused by monkeypox virus, an orthopoxvirus. It can cause fever, lymphadenopathy, and a characteristic rash or lesions and spreads through close contact, including skin-to-skin or respiratory contact.

Mono

Alternate index label; see *Mononucleosis*.

Mono (Infectious Mononucleosis)

Alternate index label for Infectious Mononucleosis.

Monoamine Oxidase Inhibitors

Antidepressants that inhibit monoamine oxidase, the enzyme responsible for breaking down serotonin, norepinephrine, and dopamine. MAOIs include phenelzine, tranylcypromine, isocarboxazid, and selegiline (transdermal). They are effective for atypical depression and treatment-resistant depression.

Monobactams

Monobactams are beta-lactam antibiotics containing a single beta-lactam ring, rather than the fused rings of penicillins or cephalosporins. Aztreonam is the principal clinical example and primarily targets aerobic gram-negative bacteria.

Monoblast

An immature precursor cell in the monocyte lineage found mainly in bone marrow.

Monoblast Count

A monoblast count is the number or proportion of monoblasts, immature precursors of monocytes, in a blood or bone-marrow sample. Increased blasts may support evaluation for acute myeloid leukemia or another marrow disorder and require expert morphologic or immunophenotypic interpretation.

Monoclonal

Derived from a single cell and therefore composed of cells or molecules that are genetically or immunologically identical to that original cell; monoclonal antibodies recognize one target or epitope.

Monoclonal Antibodies

Antibodies produced from a single B-cell clone and directed against one antigenic target; they are used in diagnosis and treatment.

Monoclonal Antibody

An antibody produced by a single cloned B-cell line, specific for one epitope, generated by hybridoma technology or recombinant methods (name suffix -mab).

Monocrotophos

Monocrotophos is a highly toxic organophosphorus insecticide that inhibits acetylcholinesterase. Exposure can cause acute cholinergic poisoning with secretions, bronchospasm, vomiting, bradycardia, weakness, seizures, and respiratory failure.

Monocular

Involving or affecting one eye, or occurring with vision from one eye.

Monocyte

A circulating leukocyte (2-8 percent) that differentiates into macrophages and dendritic cells in tissues. Monocytes phagocytose pathogens, present antigens, and secrete cytokines (TNF, IL-1, IL-6); participate in innate immunity, inflammation, and tissue repair. Subsets differ in function (classical, nonclassical, intermediate).

Monocytes

Large circulating white blood cells that can enter tissues and become macrophages or dendritic cells.

Monocytopenia

An abnormally low number of monocytes, a type of white blood cell, in the blood. It may occur with bone-marrow disorders, medicines, infections, or severe illness and is interpreted with the full blood count.

Monocytosis

An abnormally high number of monocytes in the blood. It may occur with infection, inflammation, recovery from low blood counts, or some blood cancers.

Monogenic

Pertaining to or caused by a mutation or pathogenic variant in a single gene locus (Mendelian disorder). Contrasts with polygenic and multifactorial traits, which result from the cumulative interactions of multiple genes and environmental factors. Monogenic diseases follow classic Mendelian inheritance patterns (autosomal dominant, autosomal recessive, X-linked, or mitochondrial); classic examples in-

clude cystic fibrosis (*extitCFTR* gene), Huntington disease (*extitHTT* gene), sickle cell disease (*extitHBB* gene), and Duchenne muscular dystrophy (*extitDMD* gene). Diagnosed with targeted single-gene sequencing or next-generation sequencing gene panels.

Monogenic Obesity

Monogenic obesity is severe or early-onset obesity caused primarily by a pathogenic variant in a single gene involved in appetite, energy balance, or leptin-melanocortin signaling. Genetic evaluation may guide counseling and selected targeted treatment.

Monograph

A monograph is a detailed, authoritative document devoted to one subject. In health care it may describe a drug's identity, quality, pharmacology, indications, dosing, safety, or regulatory standards.

Monoiodotyrosine

Monoiodotyrosine is an iodinated tyrosine residue formed during thyroid-hormone synthesis. Coupling of iodinated tyrosine residues within thyroglobulin contributes to production of thyroxine and triiodothyronine.

Monokines

Monokines are cytokines produced chiefly by monocytes and macrophages, including mediators such as tumor necrosis factor and interleukin-1. They regulate inflammation, immune responses, fever, and communication among cells.

Monomer

A monomer is a relatively small molecule that can chemically bond with other monomers to form a polymer. Biological examples include amino acids and nucleotides; some industrial monomers can irritate tissues or be toxic.

Monomethylhydrazine

Monomethylhydrazine is a volatile, corrosive, highly toxic chemical used as a rocket propellant. Exposure can injure the eyes, skin, lungs, liver, and nervous system and may cause seizures or systemic

poisoning.

Mononegavirales

An order of viruses with nonsegmented, negative-sense RNA genomes, including rabies, measles, Ebola, and respiratory syncytial viruses.

Mononeuropathy

Mononeuropathy is dysfunction or injury of a single peripheral nerve. Common causes include compression, trauma, ischemia, inflammation, and metabolic disease; symptoms follow the nerve's distribution and may include pain, numbness, weakness, or autonomic changes.

Mononuclear Leukocyte

A mononuclear leukocyte is a white blood cell with a single, non-lobed nucleus, chiefly a lymphocyte or monocyte. These cells participate in adaptive immunity, innate immune responses, antigen presentation, and inflammation.

Mononucleosis

Mononucleosis is an infectious syndrome commonly caused by Epstein-Barr virus, with fever, sore throat, swollen lymph nodes, and fatigue.

Alternate Names:

Kissing Disease Mono

Mononucleosis Spot Test

A rapid blood test detecting heterophile antibodies associated with infectious mononucleosis; it may be negative early in illness or in young children, so other testing may be needed.

Monoplegia

Complete motor paralysis affecting a single anatomical limb (an arm or a leg); distinct from monoparesis, which describes partial weakness. Caused either centrally by a focal lesion in the contralateral primary motor cortex (e.g., a small cortical ischemic stroke, localized tumor, or cerebral abscess involving a discrete segment of the motor homunculus) or peripherally by a severe focal nerve trunk lesion, spinal nerve root avulsion, or isolated brachial or lumbosacral plexopathy. Evaluated through de-

tailed neurological localization testing, electromyography/nerve conduction studies (EMG/NCS), and brain/spine MRI.

Monopodium

A single foot or one-sided foot structure; the term is uncommon and may be used descriptively in developmental anatomy.

Monorchidism

The presence of only one testis, either because the other failed to develop, descended, or was removed.

Monosaccharide

A simple sugar that cannot be hydrolyzed into a smaller carbohydrate, such as glucose or fructose.

Monosodium Glutamate

MSG, the sodium salt of glutamic acid, used as a flavor enhancer because it contributes umami taste; it occurs naturally in foods such as tomatoes and aged cheese.

Monosodium Urate

The crystalline salt that precipitates in tissues when serum uric acid levels exceed the saturation point, forming needle-shaped, negatively birefringent crystals under polarized light microscopy. It is the pathological hallmark of gout, depositing in joints, soft tissues, and kidneys.

Monosomy

Presence of one copy of a chromosome instead of the usual two. Complete autosomal monosomies are generally not compatible with life; monosomy X and some mosaic or structural forms can survive and have variable features.

Monospot (EBV Heterophile Antibody)

A rapid blood test that detects heterophile antibodies associated with infectious mononucleosis. It may be negative early in illness or in young children and does not directly detect Epstein-Barr virus; specific antibody testing may be needed.

Alternate Names:

EBV Heterophile Antibody

Monoterpenes

Monoterpenes are terpenoid compounds built from two isoprene units and containing 10 carbon atoms. They occur widely in plant essential oils and may have aromatic, biologic, or toxic effects depending on the compound and exposure.

Monotest

A rapid heterophile-antibody test historically used to support diagnosis of infectious mononucleosis.

Monounsaturated Fat

A fat whose fatty acids contain one carbon-carbon double bond. It occurs in foods such as olive oil, avocados, nuts, and some seeds.

Monozygotic Twin

A monozygotic twin develops when one fertilized egg divides into two embryos. The twins share nearly identical nuclear genomes but can differ through developmental, epigenetic, mitochondrial, and environmental factors.

Mons Veneris

The rounded fatty prominence over the pubic bone in front of the external female genitalia.

Monster

An obsolete and stigmatizing term for a person or fetus with severe congenital anomalies; modern medical language describes the specific anomalies.

Montelukast

Montelukast is a leukotriene CysLT₁-receptor antagonist used for asthma prevention and allergic rhinitis; it is not a rescue bronchodilator, and neuropsychiatric adverse effects require attention.

Montelukast Sodium

Montelukast sodium is the sodium salt of montelukast, a leukotriene-receptor antagonist used for asthma prevention and allergic rhinitis. It is not a rescue bronchodilator and carries an important

warning for possible neuropsychiatric adverse effects.

Montenegro Test

A delayed-type hypersensitivity skin test using *Leishmania* antigen, historically used to indicate exposure to leishmaniasis.

Montevideo Units

A quantitative measure of uterine contraction intensity, calculated by summing the peak contraction pressures (in mm Hg) minus the resting tone for each contraction in a 10-minute window. Adequate labor: ≥ 200 MVU (spontaneous) or ≥ 250 MVU (augmented). Measured with an intrauterine pressure catheter (IUPC).

Montgomery Tubercles

Small, raised sebaceous glands visible on the areola of the breast during pregnancy and lactation. They appear as small bumps surrounding the nipple and secrete an oily substance that lubricates the nipple and areola, protecting against infection. Their prominence increases during pregnancy under hormonal influence.

Montreal Cognitive Assessment

A brief cognitive screening instrument with greater emphasis on executive function, visuospatial ability, attention, memory, language, and orientation than many shorter screens. Interpretation requires consideration of education, language, sensory deficits, and acute illness.

Mood

A sustained emotional state perceived by the person and observed by others.

Mood Disorder

A group of mental disorders characterized primarily by pathological depression, mania, hypomania, or their combination.

Mood Stabilizers

Medications used to treat mood episodes in bipolar

disorder and prevent recurrence. The primary mood stabilizers are lithium, valproate, carbamazepine, and lamotrigine. Each has a different mechanism and side effect profile. Lithium is the only agent with demonstrated anti-suicide properties.

Mood Swing

A mood swing is a noticeable change in emotional state or affect over time. Occasional changes can be normal, while frequent, severe, or impairing swings may occur with mood disorders, substance use, medical illness, medications, or sleep disruption.

Mopidamol

Mopidamol is a phosphodiesterase inhibitor that inhibits platelet aggregation. It was formerly investigated or used as an antineoplastic and is not a routine contemporary treatment in most clinical settings.

MOPP Protocol

The MOPP protocol is a chemotherapy regimen consisting of mechlorethamine, vincristine (Oncovin), procarbazine, and prednisone. It was historically used for Hodgkin lymphoma and has largely been replaced by regimens with different efficacy and toxicity profiles.

Moral

Moral refers to principles or judgments concerning right and wrong conduct. In health care, moral reasoning may inform ethical decisions but is distinct from clinical diagnosis and from legally enforceable rules.

Morale

Morale is the confidence, motivation, and sense of shared purpose within a person or group. It can affect teamwork and occupational well-being but is not itself a specific medical diagnosis.

Moraxella

Moraxella is a genus of bacteria that can colonize the respiratory tract and cause ear, sinus, eye, or respiratory infections.

Moraxella Atlantae

Moraxella atlantae is a rare Moraxella species; its recovery from a clinical sample should be interpreted with the site and evidence of infection.

Moraxella Bovis

Moraxella bovis is a bacterium that causes infectious bovine keratoconjunctivitis, commonly called pinkeye, in cattle.

Moraxella Canis

Moraxella canis is a bacterium associated with dogs and can rarely cause opportunistic infection in humans.

Moraxella Lacunata

Moraxella lacunata is a bacterium historically associated with conjunctivitis and occasionally recovered from the upper respiratory tract.

Moraxella Lincolnii

Moraxella lincolnii is a rare respiratory-tract bacterium; clinical importance depends on the specimen and evidence of infection.

Moraxella Nonliquefaciens

Moraxella nonliquefaciens commonly colonizes the upper airway and can occasionally cause respiratory or invasive infection.

Moraxella Oblonga

Moraxella oblonga is a rare Moraxella species found in respiratory or oral specimens; significance depends on clinical evidence of infection.

Moraxella Osloensis

Moraxella osloensis is an uncommon bacterium that can cause opportunistic bloodstream, respiratory, or other infections.

Moraxellaceae

Moraxellaceae is a family of gram-negative bacteria that includes Moraxella and related respiratory-tract organisms.

Morbid Obesity

Severe obesity defined clinically as BMI ≥ 40 kg/m² or BMI ≥ 35 kg/m² with obesity-related comorbidities (type 2 diabetes, hypertension, obstructive sleep apnoea, non-alcoholic fatty liver disease, osteoarthritis, cardiovascular disease).

Morbidity

Illness or disability in a person or group of people. It can also mean how many people have a disease or how much illness or disability a disease causes.

Morbilli

The medical or Latin name for measles, an acute contagious viral infection with fever and a characteristic rash.

Morbilli Form

Resembling measles in appearance, especially a rash with widespread maculopapular lesions.

Morbillivirus

A genus of paramyxoviruses that includes measles virus and related animal viruses causing fever, respiratory illness, rash, or neurologic disease.

Morbus

A Latin term meaning disease, used in some historical disease names.

Morcellation

The division of tissue into smaller fragments, often during minimally invasive surgery; it may spread an unrecognized cancer and requires appropriate case selection.

Mordant

A substance that helps fix a dye to tissue or a material, used in some histological staining methods.

Morgagni Hernia

A congenital diaphragmatic hernia occurring through the anterior retrosternal foramen of Morgagni, resulting from incomplete fusion of parts of the diaphragm. Abdominal contents may move into

the chest and cause respiratory or gastrointestinal symptoms.

Morgagni'S Syndrome

A historical eponym used inconsistently; in some sources it refers to a combination of obesity, virilism, and diabetes associated with adrenal or endocrine disease.

Morganella

Morganella is a genus of gram-negative bacteria that can cause urinary, wound, bloodstream, and other opportunistic infections.

Morganella Morganii

Morganella morganii is a gram-negative bacterium that can cause urinary, wound, bloodstream, and postoperative infections.

Morgellons Disease

Morgellons is a controversial condition involving distressing skin sensations and the belief that fibers or materials emerge from the skin. Symptoms are real to the person and require respectful evaluation for dermatologic, neurologic, psychiatric, toxic, or infectious causes without reinforcing an unproven explanation.

Moribund

In a state of imminent dying; rapidly approaching physiological expiration. In clinical medicine, describes a patient in the final, irreversible agonal phase of a terminal illness or catastrophic physiologic collapse. Characterized by profound obtundation, mottled or cyanotic extremities with cold skin from extreme circulatory failure, Cheyne-Stokes respiration or agonal respiratory efforts with accumulation of pharyngeal secretions (terminal respiratory secretions / "death rattle"), progressive bradycardia, and profound hypotension; marks the clinical transition to comfort-focused palliative end-of-life care.

Morning Sickness

Nausea and vomiting of pregnancy: nausea (and sometimes vomiting) commonly in the first trimester

(6-12 weeks), typically resolving by 14-16 weeks; multifactorial (hCG, estrogen, progesterone, odor sensitivity).

Moro Reflex

A primitive reflex present from birth to 3-6 months, elicited by suddenly startling the infant (loud noise, head drop). The infant extends both arms outward with fingers spread, then draws arms inward as if embracing. Absence at birth suggests central nervous system injury or brachial plexus palsy.

Morphea

A localized sclerosing skin disorder that produces areas of thickened, hardened, or discolored skin and differs from systemic sclerosis by usually lacking internal-organ involvement.

Morpheus

The Greek and Roman mythological god of dreams; the name is the source of *morphine*, an opioid named for its association with sleep and dreams.

Morphinans

Morphinans are a group of chemical compounds with a fused-ring structure related to morphine. The class includes opioid analgesics and other compounds with varying receptor activity, potency, and clinical effects.

Morphine

Morphine is a potent opioid analgesic used for selected moderate-to-severe pain and palliative-care indications. It activates opioid receptors and can cause respiratory depression, sedation, constipation, nausea, tolerance, dependence, and overdose.

Morphine Overdose

Morphine overdose involves toxic or environmental exposure to morphine overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Morphine Sulfate

Morphine sulfate is a salt formulation of the opioid

analgesic morphine. It is available in immediate- and extended-release preparations for selected pain indications and carries risks of respiratory depression, misuse, dependence, and fatal overdose.

Morphogenesis

morphogenesis is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

Morpholino

A morpholino is a synthetic antisense oligomer with a morpholine-ring backbone that binds complementary RNA sequences and alters splicing or translation. Morpholinos are used mainly in research and selected experimental applications.

Morphologic Response

A morphologic response is a treatment-related change in the visible or microscopic structure of a lesion, tumor, tissue, or cell population. It may include shrinkage, necrosis, differentiation, or altered cellular features and is interpreted using disease-specific criteria.

Morphology

The study or description of the form, shape, and structural features of organisms, organs, tissues, cells, or other biological structures.

Morquio Syndrome

An autosomal recessive lysosomal storage disorder (Mucopolysaccharidosis Type IV [MPS IV]) characterized by the defective degradation of keratan sulfate and chondroitin-6-sulfate. Subtyped into MPS IVA (caused by deficiency of *N*-acetylgalactosamine-6-sulfate sulfatase, encoded by *GALNS*) and MPS IVB (caused by β -galactosidase deficiency, encoded by *GLB1*). Clinically distinguished from other mucopolysaccharidoses by severe spondyloepiphyseal dysplasia, marked short-trunk dwarfism, pectus carinatum, flail joints, corneal opacification, and severe odontoid hypoplasia predisposing to atlantoaxial subluxation and life-threatening cervical spinal cord compression, while preserving normal intellectual

function.

Alternate Names:

Mucopolysaccharidosis Type IV (MPS IV)

Mortality

Death rate in population. Elderly mortality: higher rates, common causes: cardiovascular disease, cancer, dementia, respiratory disease, fall-related injuries. Life expectancy varies by sex, race, socioeconomic status.

Mortality Rate

Deaths from disease in population. Crude: total deaths / total population. Specific: disease-specific deaths / population at risk.

Morton Neuroma

A perineural fibrosis of the plantar digital nerve, most commonly between the third and fourth metatarsal heads. It presents as burning pain, numbness, and a feeling of walking on a pebble. It is not a true neuroma but a mechanical entrapment neuropathy.

Alternate Names:

Interdigital Neuroma Neuroma, Plantar Plantar Neuroma

Morton'S Metatarsalgia

Pain in the forefoot beneath the metatarsal heads, caused by pressure or irritation and distinct from Morton neuroma.

Morton'S Neuroma

Thickening of tissue around a nerve in the forefoot, causing burning pain or numbness between the toes.

Alternate Names:

Mortons Neuroma (Morton's Neuroma)

Mortons Neuroma (Morton'S Neuroma)

Alternate index label for Morton's Neuroma.

Morton'S Neuroma

Thickening and irritation of a nerve, usually between the toes, causing burning forefoot pain.

Alternate Names:

Morton neuroma; interdigital neuroma

Morula

A morula is an early embryo consisting of a compact ball of blastomeres formed after several cleavage divisions. It develops into a blastocyst before implantation in the uterine lining.

Morvan'S Disease

A rare autoimmune neurologic syndrome with severe insomnia, hallucinations, confusion, pain, and peripheral nerve hyperexcitability.

Mosaic

Describing a person or tissue composed of two or more genetically different cell populations derived from one zygote, often because of a post-zygotic mutation or chromosomal event; mosaicism can alter the severity and distribution of a genetic disorder.

Mosaicism

The presence of two or more genetically distinct cell populations arising from a single zygote, which can cause variable distribution and severity of clinical features.

Mosquito

A small blood-feeding insect whose bites may transmit malaria, dengue, West Nile virus, and other infections.

Mosquito Clamp

A small hemostatic clamp used to compress small blood vessels.

Mosquito-Borne

Transmitted by mosquitoes, usually referring to an infectious disease or parasite.

Motexafin Gadolinium

Motexafin gadolinium is an experimental texaphyrin compound designed to catalyze redox reactions and increase oxidative stress in tumor cells. It was investigated as a radiosensitizer and antineoplastic agent but is not a routine standard therapy.

Motexafin Lutetium

Motexafin lutetium is an investigational texaphyrin compound containing lutetium that can participate in redox chemistry and has been studied for photodynamic or other antineoplastic applications. It is not a routinely used approved treatment.

Motilin

A hormone that helps regulate contractions and movement in the upper gastrointestinal tract.

Motility

The ability of an organ, especially the intestine, to move its contents.

Motion Analysis

Assessment of movement patterns. 3D gait analysis, video analysis. Identifies abnormalities, guides treatment.

Motion Artifact

Image distortion or blurring caused by movement of the patient, organs, or equipment during image acquisition.

Motion Correction

Processing or acquisition methods that reduce image blurring and errors caused by patient, breathing, or organ motion. Examples include image registration, tracking, gating, and navigator methods.

Motion Perception

Motion perception is the ability of the visual, vestibular, and proprioceptive systems to detect and interpret movement of the body or surrounding objects. Disturbance may cause vertigo, oscillopsia, imbalance, or visual-motion sensitivity.

Motion Sickness

Nausea, dizziness, sweating, or vomiting caused by sensory mismatch during travel or other motion. It can occur in cars, boats, aircraft, amusement rides, or virtual-reality environments and usually improves when motion stops. Severe or persistent symptoms require assessment for other causes.

Motion Sickness (Sea Sickness, Car Sickness)

Alternate index label for Sea Sickness, Car Sickness.

Motivation

Motivation is the set of processes that initiate, direct, and sustain goal-directed behavior. Reduced or excessive motivation may occur with mood disorders, neurologic disease, substance use, medication effects, or other conditions.

Motivational Interviewing

A client-centered, directive counseling method for enhancing intrinsic motivation to change by exploring and resolving ambivalence. Developed by Miller and Rollnick, it uses the spirit of partnership, acceptance, compassion, and evocation. Core skills include open-ended questions, affirmations, reflections, and summaries.

Motor

Relating to movement or to nerves and pathways that control movement.

Motor Aphasia

Motor aphasia, often called expressive or Broca aphasia, is impaired ability to produce spoken or written language despite relatively preserved motivation to communicate. It commonly follows injury to dominant frontal language networks, especially from stroke.

Motor Cortex

The frontal-lobe regions that plan and initiate voluntary movement. The primary motor cortex lies in the precentral gyrus and controls the opposite side of the body in an orderly somatotopic map.

Motor Delay

Motor delay is slower-than-expected acquisition of gross- or fine-motor skills in a child. It may reflect neuromuscular, developmental, genetic, sensory, environmental, or systemic causes and warrants age-appropriate developmental assessment.

Motor End-Plate

The specialized postsynaptic region of a skeletal-muscle fiber at the neuromuscular junction.

Motor Fluctuations Causes In Parkinson'S Disease

Motor fluctuations in Parkinson disease are changes between good mobility and wearing-off or medication-related involuntary movements as dopamine treatment duration and disease progression change. Adjusting timing, formulations, adjunct medicines, infusion, or surgery may help.

Motor Learning

A relatively lasting change in the ability to perform a motor skill resulting from practice, experience, feedback, and adaptation. Rehabilitation uses task-specific repetition and meaningful practice to promote motor learning.

Motor Neuron

A nerve cell that controls skeletal or smooth muscle activity.

Alternate Names:

Motor nerve cell

Motor Neurone Disease

A group of progressive disorders affecting upper and lower motor neurons, including amyotrophic lateral sclerosis.

Motor Neurones

Nerve cells that transmit signals to skeletal muscle or other effectors to produce movement.

Motor Stereotypy

A motor stereotypy is a repetitive, patterned, seemingly purposeless movement, such as hand flapping, rocking, or body waving. It may occur in typical development or with autism, intellectual disability, neurologic disease, or other conditions.

Motor Tic

A motor tic is a sudden, brief, repetitive movement such as blinking, facial grimacing, or shoulder shrug-

ging. Tics are often temporarily suppressible and may occur in transient tic disorder, persistent tic disorder, or Tourette syndrome.

Motor Unit

A single alpha motor neuron and all the skeletal muscle fibers it innervates. The number of muscle fibers per motor unit determines precision of control: small motor units (few fibers, e.g., extraocular and hand muscles) provide fine movement; large motor units (hundreds to thousands of fibers, e.g., gastrocnemius) provide gross power.

Motor Vehicle Accident

A collision or other road-traffic event causing injury or property damage. Medical evaluation may be needed for visible or delayed injuries, including head, neck, chest, abdominal, or musculoskeletal trauma.

Mottled Enamel

Patchy, discolored, or structurally altered tooth enamel, classically caused by excessive fluoride during tooth development.

Mottled Teeth

Teeth with irregular white, brown, or pitted enamel, often due to dental fluorosis or developmental enamel defects.

Moulage

A model, cast, or realistic reproduction of a body part or lesion used for teaching, simulation, or forensic documentation.

Mould

British spelling of mold, a multicellular fungus that grows as branching filaments.

Mountain Sickness

Illness caused by rapid ascent to high altitude, ranging from acute mountain sickness to life-threatening pulmonary or cerebral edema.

Mouth

The oral cavity that serves as the entry point of

the digestive tract, used for eating, breathing, and speaking.

Mouth (Oral Cavity)

The entry to the digestive tract, containing the teeth, tongue, and openings of salivary glands. It supports chewing, taste, swallowing, speech, and initial digestion.

Alternate Names:

oral cavity; mouth

Mouth Cancer

Cancer arising in the lips, gums, tongue, cheeks, floor of the mouth, palate, or other oral tissues.

Alternate Names:

Cancer, Mouth

Mouth Diseases

Disorders affecting the oral cavity, including infections, ulcers, inflammatory disease, dental disease, mucosal lesions, and tumors.

Mouth Neoplasm

A mouth neoplasm is an abnormal growth in the oral cavity that may be benign or malignant; persistent sores, lumps, or patches need assessment.

Mouth Sores

Mouth sores are painful ulcers, blisters, erosions, or inflamed areas caused by trauma, infection, immune disease, medicines, nutritional deficiency, or cancer.

Mouth Ulcer

Open sores affecting the oral mucosa, commonly caused by aphthous ulcers, trauma, infection, irritation, or systemic inflammatory disease. Most resolve within two weeks; persistent, recurrent, unusually large, or indurated ulcers require evaluation.

Alternate Names:

Oral Ulcer

Mouth-To-Mouth Resuscitation

Rescue breathing in which air is delivered from a rescuer to a person who is not breathing normally, usually as part of CPR.

Mouth-Wash

A liquid used to rinse the mouth, freshen breath, or deliver an antiseptic, fluoride, or other active ingredient.

Mouthwash

A liquid rinsed around the mouth and then expelled to freshen breath, deliver an active ingredient, or reduce selected oral microorganisms.

Mouthwash Overdose

Mouthwash overdose involves toxic or environmental exposure to mouthwash overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Movement

Movement is a change in position of the body or a body part produced by coordinated activity of the nervous system, muscles, and joints. Abnormal movement may be excessive, reduced, involuntary, poorly coordinated, or restricted.

Movement - Uncontrollable

Involuntary movement that cannot be suppressed, such as tremor, chorea, dystonia, myoclonus, or tics; its pattern helps identify the cause.

Movement - Uncontrolled Or Slow

Abnormally slow or poorly controlled movement, which may reflect bradykinesia, rigidity, dystonia, medication effects, or basal-ganglia disease.

Movement - Uncoordinated

Ataxic or poorly coordinated movement caused by dysfunction of the cerebellum, sensory pathways, vestibular system, peripheral nerves, or their connections.

Movement - Unpredictable Or Jerky

Sudden, irregular, or jerky involuntary movements, including myoclonus, chorea, or dyskinesia, arising from neurologic disease, medications, metabolic disorders, or seizures.

Movement Disorder

A neurologic condition causing excessive, reduced, or otherwise abnormal movement. Hyperkinetic disorders include tremor, dystonia, chorea, myoclonus, tics, and dyskinesia; hypokinetic disorders include bradykinesia and parkinsonism.

Movement Disorders

Neurologic conditions characterized by excessive, reduced, or abnormal voluntary or involuntary movement, including tremor, dystonia, chorea, tics, ataxia, and parkinsonism.

Moxalactam

Moxalactam is a beta-lactam antibiotic of the oxacephem group with activity against many gram-negative bacteria and some gram-positive organisms. It is rarely used today and may cause allergic reactions, diarrhea, or bleeding related to impaired coagulation.

Moxibustion

A traditional therapy involving heat from burning mugwort near or on selected skin points; burns and other adverse effects can occur.

Moxifloxacin

Moxifloxacin is a fluoroquinolone antibiotic that inhibits bacterial DNA gyrase and topoisomerase IV; tendon injury, neuropathy, QT prolongation, dysglycaemia, and other class toxicities limit use.

Moyamoya Disease

A progressive occlusive arteriopathy of the terminal internal carotid arteries and their proximal branches, with development of fragile collateral vessels at the brain base. It can cause transient ischemic attacks, strokes, seizures, headaches, or cognitive impairment.

MPH

Master of Public Health, a graduate degree focused on population health, disease prevention, health policy, epidemiology, and related public-health practice.

MPO

Myeloperoxidase, an enzyme in neutrophil and monocyte granules that uses hydrogen peroxide and halide ions to generate antimicrobial oxidants; MPO antibodies are also used in evaluating some autoimmune vasculitides.

Mpox

Mpox is a zoonotic infection caused by monkeypox virus, producing fever, lymph-node enlargement, and a characteristic rash or lesions that can occur on skin, mouth, or genital areas. nodes, and a distinctive rash that may include deep-seated vesicles or pustules.

Mpox (Monkeypox)

A zoonotic viral disease caused by the monkeypox virus, an orthopoxvirus in the same genus as smallpox (variola) and vaccinia. The virus has two clades: clade I (formerly Congo Basin, Central African) with higher virulence and mortality (up to 10 percent), and clade II (formerly West African) with lower mortality (less than 1 percent).

Alternate Names:

monkeypox

MPS I Mucopolysaccharidosis Type I Hurler Syndrome

Mucopolysaccharidosis type I is an inherited lysosomal storage disease caused by alpha-L-iduronidase deficiency. Hurler syndrome is the severe form, with developmental regression, skeletal and airway disease, organ enlargement, corneal clouding, and cardiac involvement; early specialist treatment matters.

Alternate Names:

MPS I (MPS I Mucopolysaccharidosis Type I Hurler Syndrome)

MPS I Mucopolysaccharidosis Type I Hurler Syndrome (MPS I)

Alternate index label for MPS I Mucopolysaccharidosis Type I Hurler Syndrome.

MPS II Mucopolysaccharidosis II Hunter Syndrome (Hunter Syndrome)

Mucopolysaccharidosis II MPS)

Alternate index label for Hunter Syndrome Mucopolysaccharidosis II MPS.

MPTP

A neurotoxin that can produce permanent parkinsonism by damaging dopaminergic neurons in the substantia nigra.

MR Angiography

Vascular imaging using MRI without ionizing radiation. Time-of-flight or contrast-enhanced (CE-MRA). Used for cerebral aneurysms, renal artery stenosis, peripheral arterial disease.

MR Enterography

MRI of the small bowel after oral contrast administration. Superior soft tissue contrast for evaluating Crohn disease activity, fistulas, and abscesses without ionizing radiation. Demonstrates mural thickening, edema, enhancement patterns, and extraintestinal complications. Diffusion-weighted imaging helps assess disease activity.

MR Neurography

Magnetic resonance imaging optimized to show peripheral nerves and abnormalities such as swelling, compression, or injury.

MRA

Magnetic resonance angiography, a noninvasive MRI-based technique that produces images of blood vessels and can help evaluate aneurysms, stenoses, malformations, and atherosclerosis.

MRCP

Magnetic resonance cholangiopancreatography, an MRI technique that noninvasively images the bile ducts, gallbladder, and pancreatic duct without requiring endoscopic catheterization.

MRD

Minimal residual disease: a small number of malignant cells remaining after treatment, detectable by sensitive methods such as flow cytometry or PCR

even when routine tests show remission.

MRI

Magnetic resonance imaging uses a strong magnetic field, radiofrequency energy, and computer processing to produce detailed images of body tissues without ionizing radiation. Contrast material may be used when clinically appropriate.

MRI And Low Back Pain

MRI may be used for low back pain when serious disease is suspected, neurologic deficits are present, or symptoms persist despite appropriate care; many uncomplicated cases do not need early MRI.

MRI Brain

Excellent for brain pathology: tumors, stroke, demyelination, infection, degeneration. Sequences: T1, T2, FLAIR, DWI, SWI, contrast-enhanced. DWI detects acute ischemia within minutes.

MRI Contrast

A contrast agent administered during magnetic resonance imaging to improve visibility of selected tissues or abnormalities.

MRI Joint

Evaluation of musculoskeletal structures: cartilage, ligaments, tendons, menisci, labrum. Knee: ACL, meniscus tears. Shoulder: rotator cuff, labrum. Hip: labral tears, FAI.

MRI Sequences

T1-weighted: anatomy, fat bright. T2-weighted: pathology, fluid bright. FLAIR: suppresses CSF, lesions bright. DWI: restricted diffusion bright (acute stroke, abscess). STIR: fat suppression, fluid bright.

MRI-Targeted Fusion Prostate Biopsy

An advanced diagnostic biopsy technique for prostate cancer detection that digitally co-registers and overlays pre-acquired multiparametric magnetic resonance imaging (mpMRI) images with real-time transrectal ultrasound. Suspicious lesions identified on mpMRI (scored using the PI-RADS classifica-

tion) are digitally mapped and tracked, enabling the urologist to accurately guide biopsy needles directly into the targeted index lesions under real-time ultrasound imaging. Compared with conventional random systematic 12-core TRUS biopsies, MRI-fusion biopsy significantly improves the detection rate of clinically significant prostate cancers while reducing the overdiagnosis of clinically insignificant indolent tumors.

Alternate Names:

Fusion Biopsy; MRI-Ultrasound Fusion Biopsy

Mrna Precursor

An initial RNA transcript that is processed by capping, splicing, and polyadenylation to form mature messenger RNA.

MRSA

Methicillin-resistant *Staphylococcus aureus*, resistant to beta-lactam antibiotics through acquisition of the *mecA* gene encoding PBP2a. MRSA is a major cause of healthcare-associated and community-associated infections. Treatment options include vancomycin, daptomycin, and linezolid.

MRSA Decolonization

Measures intended to reduce MRSA carriage on the skin or in the nose. Protocols may include topical agents and antiseptic bathing, but the indication, regimen, and duration depend on the person's risk, infection history, setting, and local guidance.

MRSA Infection

Methicillin-resistant *Staphylococcus aureus* is a strain of *staphylococcus* resistant to several beta-lactam antibiotics. It can colonize without illness or cause skin, wound, lung, bone, joint, or bloodstream infection; culture-guided treatment and hygiene reduce spread.

Alternate Names:

Methicillin-Resistant *Staphylococcus Aureus* Infection

MS Alternative And Complementary Therapies (Alternative Therapy For

Multiple Sclerosis)

Alternate index label for Alternative Therapy for Multiple Sclerosis.

MS/MS

Tandem mass spectrometry, an analytical technique in which ions are selected, fragmented, and analyzed by a second stage of mass spectrometry; it is used to identify and quantify molecules in clinical and research samples.

MSG Symptom Complex

A group of symptoms such as headache, flushing, or palpitations attributed by some people to monosodium glutamate; evidence for a consistent syndrome is limited and symptoms may have other causes.

MST

Multiple subpial transection, a neurosurgical procedure in which shallow cuts are made in the cerebral cortex to interrupt seizure pathways when the epileptogenic region cannot safely be removed.

MTOR

Mammalian target of rapamycin. Controls cell growth, proliferation. Inhibited by rapamycin.

Mu-Chain Disease

A rare B-cell disorder in which abnormal immunoglobulin heavy chains are produced, sometimes causing anemia, enlarged lymph nodes, or other features of lymphoproliferative disease.

Mucilage

A viscous plant-derived polysaccharide or similar substance that swells in water and may act as a soothing or bulking agent.

Mucin

A glycoprotein forming the principal component of mucus and helping protect epithelial surfaces.

Mucinous

Mucinous means containing, producing, or resem-

bling mucin. In pathology, the term describes lesions or tumors with extracellular or intracellular mucin and must be interpreted with the organ, architecture, and other histologic features.

Mucinous Adenocarcinoma

Mucinous adenocarcinoma is a gland-forming cancer that produces abundant mucus and can arise in organs such as the colon, pancreas, lung, or breast.

Mucinous Borderline Ovarian Tumor

An ovarian mucinous epithelial tumor with cellular proliferation and atypia but without destructive stromal invasion; it may be large and unilateral.

Mucinous Cyst Adenomas Pancreas (Pancreatic Cysts)

Alternate index label for Pancreatic Cysts.

Mucinous Cyst Of The Vulva

A benign mucus-filled cyst of the vulva, arising from obstruction or metaplastic mucinous epithelium in a vulvar gland or duct; persistent or atypical masses require examination and possible biopsy.

Mucinous Cystadenoma

A mucinous cystadenoma is a usually benign cystic epithelial tumor that produces mucin, commonly arising in the ovary or pancreas. Large lesions may cause pain or pressure, and pathology is needed to distinguish benign from borderline or malignant mucinous tumors.

Mucinous Ovarian Carcinoma

A malignant ovarian epithelial tumor composed of invasive mucin-producing cells; metastatic gastrointestinal or pancreatobiliary carcinoma must be excluded.

Mucocele

Mucus extravasation cyst of minor salivary gland. Lower lip most common. Treatment: excision.

Mucocutaneous Lymph Node Syndrome

Alternate index label; see *Kawasaki disease*.

Mucocutaneous Lymph Node Syndrome (Kawasaki Disease)

Alternate index label for Kawasaki Disease.

Mucoepidermoid Carcinoma

Mucoepidermoid carcinoma is a cancer containing mucus-producing and squamous-like cells, most often arising in salivary glands or the lungs.

Mucoid

Resembling mucus or having a thick, slippery, mucus-like appearance. The word describes a substance or finding and does not by itself identify its cause.

Mucolipidoses

mucolipidoses is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Mucolytic Therapy

Medications that reduce mucus viscosity and elasticity, facilitating clearance. N-acetylcysteine (NAC) breaks disulfide bonds in mucus glycoproteins. Dornase alfa (Pulmozyme) cleaves extracellular DNA in CF sputum. Hypertonic saline aerosol draws water into the airway surface liquid.

Mucolytics

Medicines that reduce the viscosity of mucus and facilitate its clearance from the airways.

Mucopolysaccharides

Mucopolysaccharides, or glycosaminoglycans, are long sugar chains in connective-tissue matrix; abnormal breakdown causes mucopolysaccharidosis storage disorders.

Mucopolysaccharidoses

Mucopolysaccharidoses are inherited lysosomal storage diseases in which glycosaminoglycans accumulate, causing variable skeletal, organ, airway, neurologic, and developmental problems.

MucopolysaccharidosII Hunter Syndrome

(Hunter Syndrome Mucopolysaccharidosis II MPS)

Alternate index label for Hunter Syndrome Mucopolysaccharidosis II MPS.

Mucopolysaccharidosis

A group of inherited lysosomal-storage disorders in which glycosaminoglycans accumulate, causing variable skeletal, organ, neurologic, and developmental abnormalities.

Mucopolysaccharidosis Type I

Mucopolysaccharidosis type I is an inherited alpha-L-iduronidase deficiency ranging from severe Hurler syndrome to milder forms, with skeletal, airway, cardiac, eye, and neurologic disease.

Mucopolysaccharidosis Type II

Mucopolysaccharidosis type II, or Hunter syndrome, is an X-linked iduronate-2-sulfatase deficiency causing accumulation of glycosaminoglycans and multi-system disease.

Mucopolysaccharidosis Type III

Mucopolysaccharidosis type III, or Sanfilippo syndrome, is an inherited disorder of heparan-sulfate breakdown causing progressive neurodevelopmental and behavioral decline.

Mucopolysaccharidosis Type IV

Mucopolysaccharidosis type IV, or Morquio syndrome, is an inherited disorder of keratan-sulfate breakdown causing skeletal and connective-tissue abnormalities with variable neurologic involvement.

Mucopolysaccharidosis VII

Mucopolysaccharidosis VII, or Sly syndrome, is a lysosomal storage disorder caused by deficient beta-glucuronidase activity. Accumulation of glycosaminoglycans can cause skeletal, connective-tissue, visceral, developmental, and sometimes neurologic abnormalities.

Mucopus

Pus mixed with mucus, commonly seen in infected

mucous membranes or sinuses.

Mucor

Mucor is a genus of molds; related Mucorales fungi can cause mucormycosis, a serious invasive infection mainly in people with severe immune or metabolic problems.

Mucor Ramosissimus

Mucor ramosissimus is an environmental mold that rarely causes opportunistic infection.

Mucorales

Mucorales is an order of molds that includes fungi capable of causing mucormycosis, a rapidly invasive infection of the sinuses, lungs, skin, or other tissues.

Mucormycosis

Mucormycosis is an invasive infection by Mucorales fungi, typically affecting immunocompromised people and causing rapidly destructive sinus, orbital, pulmonary, cutaneous, or disseminated disease. Mucor, and Rhizomucor species. The infection primarily affects immunocompromised patients, particularly those with uncontrolled diabetes mellitus and hematologic malignancies. The fungi invade blood vessels causing thrombosis and tissue infarction.

Mucosa

Mucosa is the moist epithelial lining of body passages such as the mouth, nose, airways, gastrointestinal tract, and reproductive or urinary tracts.

Mucosa-Assisted Lymphoid Tissue Lymphoma

Alternate index label; see *Extranodal marginal zone lymphoma of mucosa-associated lymphoid tissue*.

Mucosal

Pertaining to a mucous membrane (mucosa), the moist, epithelial lining that lines body cavities and hollow organs opening to the external environment (gastrointestinal, respiratory, urogenital tracts). Composed of an overlying epithelial layer, a vascular connective tissue lamina propria, and often

a thin smooth-muscle muscularis mucosae. Functions in selective barrier defense, nutrient absorption, and mucosal immunity, supported by mucosal-associated lymphoid tissue and plasma cell secretion of dimeric secretory immunoglobulin A (sIgA) to neutralize luminal pathogens without inducing tissue-damaging inflammation.

Mucosal Immunity

Mucosal immunity is immune defense at surfaces lining the respiratory, gastrointestinal, genitourinary, and other tracts. It includes epithelial barriers, mucus, secretory IgA, antimicrobial molecules, innate cells, and locally regulated adaptive responses.

Mucosal Infection

An infection involving a moist epithelial lining such as the mouth, eye, nose, airway, gastrointestinal tract, or genital tract.

Mucosal Irritation

Chemical injury to mucous membranes. Eyes, nose, throat, GI tract. Treatment: irrigation, supportive care.

Mucosal Melanoma

A melanoma arising from melanocytes in mucosal surfaces such as the sinonasal tract, oral cavity, anorectal region, or genital tract; it is uncommon and often diagnosed at an advanced stage.

Mucosal Warts

HPV-associated warts arising on mucous membranes, including the oral, genital, or anorectal mucosa.

Mucositis

Inflammation and ulceration of the oral or gastrointestinal mucosa caused by chemotherapy or radiation, causing pain, dysphagia, and poor intake and predisposing to local infection.

Mucous

Relating to mucus, the viscous fluid produced by mucous membranes and glands that lubricates sur-

faces and helps trap particles and microorganisms.

Mucous Cysts

Small fluid-filled cysts near the end joint of a finger, often associated with osteoarthritis.

Alternate Names:

Digital mucous cyst

Mucous Membrane

A moist tissue lining body cavities that open to the outside, including the nose, mouth, and lungs.

Alternate Names:

Mucosa

Mucous Membrane Pemphigoid

A chronic autoimmune subepidermal blistering disease affecting mucous membranes, especially the eyes and mouth; scarring can impair vision or function.

Mucus

A slippery secretion containing mucins, water, salts, and cells that protects and lubricates mucous membranes.

Mucus Plugging

Accumulation of thick, tenacious mucus within airways causing obstruction. It is common in asthma, CF, bronchiectasis, and chronic bronchitis. It impairs gas exchange, promotes infection, and causes atelectasis. Treatment includes airway clearance techniques, mucolytics, and bronchodilators.

Muehrcke'S Nails

Paired transverse white bands in the nail beds, usually associated with hypoalbuminemia or other systemic illness. The bands remain fixed as the nail grows because they arise from the nail bed rather than the nail plate.

Muenke Syndrome

A craniosynostosis syndrome caused by a pathogenic FGFR3 variant. Premature fusion of one or more skull sutures may produce an abnormal head shape and can be accompanied by developmental, hearing,

limb, or neurological findings.

MUGA Scan (Multigated Acquisition Scan)

ECG-gated radionuclide imaging using technetium-labeled red blood cells to measure ventricular ejection fraction and wall motion. It can be used when reproducible ejection-fraction measurement is needed, although echocardiography and cardiac MRI are also important alternatives.

Alternate Names:

Multigated Acquisition Scan

Mulberry Molars

Permanent molars with irregular, multiple rounded cusps, classically associated with congenital syphilis.

Mule-Spinner'S Cancer

An obsolete occupational term for scrotal squamous-cell cancer associated historically with soot exposure in chimney sweeps and textile workers.

Mulibrey Nanism

Mulibrey nanism is a rare inherited multisystem disorder, usually caused by biallelic variants in *TRIM37*. It may cause severe growth restriction, characteristic facial features, pericardial or hepatic disease, insulin resistance, and other organ involvement.

Muller Cells

Supporting glial cells of the retina that help nourish retinal nerve cells and maintain the retina's structure and chemical environment.

Multi-Infarct Dementia

Cognitive decline caused by the cumulative effects of multiple small strokes.

Alternate Names:

Vascular dementia

Multi-Minicore Disease

An autosomal recessive congenital myopathy caused in most cases by mutations in the selenoprotein N (*SEPN1*) gene or the ryanodine receptor 1 (*RYR1*)

gene. Characterized histopathologically by the presence of multiple, small, circumscribed, longitudinally restricted zones of sarcomeric disorganization devoid of oxidative enzyme activity (minicores) throughout muscle fibers. Clinically features neonatal hypotonia, early progressive axial and neck muscle weakness, rigid spine syndrome, progressive scoliosis, and early disproportionate diaphragmatic weakness leading to nocturnal hypoventilation and respiratory failure.

Alternate Names:

MmD; Minicore Myopathy; Multicore Disease

Multicenter Study

A multicenter study is a clinical or research investigation conducted at two or more sites under a coordinated protocol. It can improve enrollment and generalizability but requires harmonized methods, quality control, and site-specific oversight.

Multicentric

Having more than one center or focus; in oncology, describing separate primary tumor foci, often also called multifocal or polycentric.

Multicystic Dysplastic Kidney

A congenital renal anomaly where one or both kidneys are replaced by multiple non-communicating cysts of varying sizes, with no functioning renal parenchyma. The most common cause of an abdominal mass in a newborn (unilateral). The ureter is typically atretic. The contralateral kidney may have VUR (20%) or UPJ obstruction (10%).

Multidetector Computed Tomography

MDCT is CT imaging using a two-dimensional array of detector elements to acquire multiple slices simultaneously, increasing acquisition speed and enabling high-resolution applications such as CT angiography and virtual colonoscopy.

Multidisciplinary Disaster Victim Identification

The coordinated process of identifying victims of mass-fatality incidents (natural disasters, transport crashes, terrorist attacks) using multiple disciplines:

fingerprinting, dental records, DNA profiling, forensic anthropology/radiology, and personal effects, with ante-mortem data collection and comparison.

Multidisciplinary Team

Rehabilitation team includes: physiatrist, physical therapist, occupational therapist, speech-language pathologist, psychologist, social worker, case manager, nursing, recreation therapist.

Multidrug-Resistant TB

TB resistant to at least isoniazid and rifampin. Requires second-line drugs for 18–24 months. Worse outcomes and higher mortality than drug-susceptible TB.

Multienzyme Complexes

Groups of enzymes arranged together so sequential reactions occur efficiently within a shared molecular complex.

Multifactorial

Caused or influenced by multiple genetic, environmental, behavioral, or other factors.

Multifocal

Arising from or involving two or more distinct foci or sites, such as separate tumor foci or vascular lesions.

Multifocal Atrial Tachycardia

An atrial tachyarrhythmia with at least three distinct P-wave morphologies, irregular rhythm, and a rate above 100 beats per minute. It is strongly associated with severe pulmonary disease, hypoxia, and metabolic stress.

Multigravida

A person who has been pregnant two or more times, regardless of outcome.

Multilocular

Having many compartments or locules, as in a cyst or lesion.

Multimodal Analgesia

Use of analgesic techniques with different mechanisms to improve pain control while reducing reliance on any single drug, especially opioids. Components may include acetaminophen, nonsteroidal anti-inflammatory drugs, regional anesthesia, local anesthetics, and selected adjuvants.

Multimodal Imaging

A diagnostic or laboratory method related to multimodal imaging. Results are interpreted with the method, reference range, and clinical findings.

Multimorbidity

The coexistence of two or more chronic health conditions in the same person, without requiring one to be considered the primary disease. It complicates treatment, increases polypharmacy risk, and requires coordinated patient-centered care.

Multinodular Goiter

An enlarged thyroid containing multiple nodules. Thyroid function may be normal, underactive, or overactive; evaluation commonly includes thyroid-function tests and ultrasound, with further assessment of suspicious nodules or compressive symptoms.

Multinucleated Hepatocyte

A multinucleated hepatocyte is a liver cell containing two or more nuclei, usually from nuclear division without complete cytokinesis. It may be a normal or reactive finding, but its significance depends on the number, morphology, and associated liver abnormalities.

Multipara

A person who has had two or more pregnancies that reached the stage of potential fetal viability, regardless of whether the pregnancies resulted in live births.

Multiparametric MRI Of The Prostate

MRI protocol combining T2-weighted, diffusion-weighted, and dynamic contrast-enhanced sequences to detect and characterize clinically significant

prostate cancer. Findings are commonly reported using the PI-RADS system.

Multiparous

Having given birth two or more times to a fetus or fetuses beyond the stage of viability.

Multiple Bacterial Abscesses

Numerous circumscribed collections of pus within an organ or tissue, caused by hematogenous seeding or direct extension of bacterial infection. They appear as multiple, low-attenuation lesions on imaging, often with peripheral enhancement. Common sites include the liver, brain, and kidneys.

Multiple Biliary Hamartomas

Benign, congenital malformations of the intrahepatic bile ducts appearing as multiple, small, well-defined cystic lesions scattered throughout the liver parenchyma on imaging. They are typically asymptomatic and discovered incidentally. They must be distinguished from metastatic disease and Caroli disease.

Multiple Endocrine Neoplasia

An inherited disorder causing tumors or overactivity in two or more endocrine glands.

Multiple Endocrine Neoplasia Type 2A

An autosomal dominant hereditary cancer syndrome caused by activating germline mutations in the *RET* proto-oncogene on chromosome 10. Characterized by the triad of medullary thyroid carcinoma (occurring in almost 100% of affected individuals and prompting prophylactic thyroidectomy in childhood), pheochromocytoma (typically bilateral, 50%), and primary hyperparathyroidism due to parathyroid hyperplasia (20–30%).

Alternate Names:

MEN 2A; MEN2A; Sipple syndrome

Multiple Endocrine Neoplasia I

MEN type 1 is an inherited tumor syndrome involving parathyroid, pituitary, and pancreatic or duodenal neuroendocrine tumors, often caused by MEN1 variants.

Multiple Endocrine Neoplasia II

MEN type 2 is an inherited syndrome with medullary thyroid cancer, pheochromocytoma, and sometimes parathyroid disease, commonly involving RET variants.

Multiple Endocrine Neoplasia Type 1

An autosomal dominant tumor syndrome caused by MEN1 gene mutation (menin).

Multiple Endocrine Neoplasia Type 2

An inherited tumor syndrome caused by pathogenic variants in the RET gene. Type 2A is associated with medullary thyroid carcinoma, pheochromocytoma, and hyperparathyroidism. Type 2B is associated with medullary thyroid carcinoma, pheochromocytoma, mucosal neuromas, and a marfanoid habitus.

Multiple Endocrine Neoplasia Type 2B

An inherited RET-associated syndrome characterized by medullary thyroid carcinoma, pheochromocytoma, mucosal neuromas, and a marfanoid habitus. The thyroid-cancer risk is high and requires early specialist genetic and surgical assessment.

Multiple Exostoses

Multiple exostoses, or hereditary multiple osteochondromas, is an inherited disorder causing multiple cartilage-capped bony projections near growth plates. Lesions can deform bones, restrict motion, compress nerves or vessels, and rarely undergo malignant transformation.

Multiple Fibrofolliculomas

Multiple fibrofolliculomas are benign hair-follicle tumors appearing as numerous small skin-colored papules, especially on the face and trunk. They are characteristic of Birt–Hogg–Dubé syndrome, which also carries risks of renal tumors and spontaneous pneumothorax.

Multiple Inherited Schwannomas, Meningiomas, And Ependymomas

Alternate index label; see *NF2-related schwannomatosis (neurofibromatosis type 2)*.

Multiple Mononeuropathy

Multiple mononeuropathy is patchy dysfunction of separate individual nerves, often caused by vasculitis, diabetes, infection, inflammation, or infiltrative disease.

Multiple Myeloma

A cancer of plasma cells that usually develops in the bone marrow and often produces a monoclonal immunoglobulin. It can cause bone lesions, anemia, kidney dysfunction, high calcium, infection, or other organ damage.

Alternate Names:

Cancer, Multiple Myeloma Kahlers Disease (Multiple Myeloma)

Multiple Myeloma: Deadly To Chronic

Multiple myeloma is a plasma-cell cancer that produces a monoclonal protein and can cause bone lesions, anemia, kidney injury, high calcium, infections, and fatigue. It is often treatable as a chronic illness, though relapse and complications remain possible.

Multiple Organ Failure

Multiple organ failure, also called multiple organ dysfunction syndrome, is progressive dysfunction of two or more organ systems, usually during severe critical illness. Causes include sepsis, shock, trauma, and major inflammation; treatment is supportive and directed at the underlying cause.

Multiple Pregnancy

Gestation with more than one fetus: twins (most common), triplets, higher order. Types: dizygotic (two eggs, two placentas—fraternal, more common, familial and increased with IVF) vs. monozygotic (one egg split—identical, sharing determined by timing: dichorionic-diamniotic, monochorionic-diamniotic, monoamniotic, conjoined).

Multiple Sclerosis

A chronic disease of the central nervous system—the brain, spinal cord, and optic nerves. The immune system damages myelin, the protective covering of nerve fibers, which can disrupt messages between

the brain and body. Symptoms may include vision problems, numbness, weakness, balance problems, fatigue, or bladder and bowel difficulties. The disease may occur in attacks with periods of improvement, progress gradually, or follow another pattern. Diagnosis is based on the medical history, examination, magnetic resonance imaging, and sometimes other tests.

Alternate Names:

Sclerosis, Multiple

Multiple Sclerosis

Alternate index label for MS.

Multiple Sclerosis

Alternate index label for Multiple Sclerosis.

Multiple Sclerosis MS And Pregnancy

Multiple sclerosis usually does not prevent pregnancy, but symptoms, disease-modifying medicines, relapse risk, delivery planning, and postpartum care require coordination. Some treatments must be stopped or changed, and relapse risk can shift after delivery.

Multiple Sclerosis MS Early Signs And Types

Multiple sclerosis is an immune-mediated disease of the central nervous system with episodes or progression of visual, sensory, motor, balance, bladder, cognitive, or fatigue symptoms. Relapsing, progressive, and other patterns guide testing and treatment.

Multiple Sleep Latency Test

A daytime sleep study that measures how quickly a person falls asleep during scheduled naps.

Multiple System Atrophy

A progressive, fatal neurodegenerative disorder characterized by varying combinations of autonomic failure, cerebellar ataxia, parkinsonism, and pyramidal signs.

Alternate Names:

Shy-Drager Syndrome

Multiple System Atrophy - Cerebellar Subtype

The cerebellar subtype of multiple-system atrophy is a progressive neurodegenerative disorder causing ataxia, coordination problems, autonomic dysfunction, and sometimes parkinsonism.

Multiple System Atrophy - Parkinsonian Type

The parkinsonian subtype of multiple-system atrophy causes poorly levodopa-responsive rigidity and slowed movement together with autonomic failure and possible cerebellar signs.

Multiple System Failure

Failure of two or more organ systems, also called multiple-organ failure or multiple-organ dysfunction syndrome; it may occur during severe illness such as sepsis, shock, or major trauma.

Multiple Vitamin Overdose

Multiple vitamin overdose involves toxic or environmental exposure to multiple vitamin overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Multiplex PCR (BioFire, FilmArray)

A molecular test that detects genetic material from multiple organisms in one clinical sample. Different panels are designed for respiratory, gastrointestinal, bloodstream, or other specimens. Results require interpretation with the symptoms and may detect colonization or nonviable organisms as well as active infection.

Alternate Names:

BioFire, FilmArray

Multiplicity

Multiplicity is the state of having more than one occurrence, copy, lesion, tumor, or pregnancy component. Its interpretation depends on context, such as multiple gestation, multifocal disease, or copy number in genetics.

Multipolar Neuron

A multipolar neuron is a nerve cell with one axon and multiple dendrites. It is the most common neuronal form in the central nervous system and includes many motor neurons and interneurons.

Multisystem Inflammatory Syndrome In Children

A serious inflammatory condition occurring after SARS-CoV-2 infection, affecting multiple organs and sometimes causing shock or cardiac dysfunction.

Multivesicular Body

A multivesicular body is an endosomal compartment containing many small intraluminal vesicles. It can fuse with the plasma membrane to release exosomes or with a lysosome to degrade its cargo.

Mummification

Postmortem alteration occurring in hot, dry, arid, ventilated environments where rapid desiccation of tissues occurs before putrefaction can proceed, resulting in dry, leathery, dark brown skin clinging to underlying skeleton.

Mumps

Mumps is a contagious paramyxovirus infection causing painful salivary-gland swelling and fever, with possible meningitis, orchitis, pancreatitis, or hearing complications. include orchitis (rarely causing infertility), meningitis, pancreatitis, and sensorineural hearing loss. Prevention by MMR vaccination. Outbreaks occur in unvaccinated populations. Diagnosis by serology or RT-PCR from saliva.

Alternate Names:

Parotitis (Mumps)

Mumps Virus

A paramyxovirus that causes mumps, a contagious respiratory illness. The virus is transmitted by respiratory droplets. Symptoms include fever, headache, and parotitis. Complications include orchitis, oophoritis, meningitis, and deafness. Diagnosis involves serology and PCR.

Munchausen Syndrome

Alternate index label; see *Factitious disorder*.

Munchausen Syndrome By Proxy

An obsolete term for factitious disorder imposed on another, in which a caregiver falsifies, exaggerates, or causes illness in someone under their care.

Alternate Names:

MSBP (Munchausen Syndrome By Proxy)

Munchausen Syndrome By Proxy

Alternate index label for Munchausen Syndrome by Proxy.

Muparfostat

Muparfostat is a mixture of highly sulfated, phosphorylated mannose oligosaccharides investigated as a heparanase inhibitor and antiangiogenic agent. It has been studied experimentally in cancer and is not a routine approved therapy.

Mupirocin

Mupirocin is a topical antibiotic that inhibits bacterial isoleucyl-tRNA synthetase. It is used for selected skin infections and nasal eradication of certain staphylococci; resistance can develop with inappropriate or prolonged use.

Mural

Relating to a wall, especially the wall of a body cavity, organ, or blood vessel.

Mural Thrombosis

Formation of a blood clot along the wall of a heart chamber or blood vessel rather than freely within the lumen.

Mural Thrombus

A mural thrombus is a blood clot that forms on the wall of a heart chamber or large blood vessel, typically in areas of damaged endothelium, stasis, or turbulent flow.

Muramidase

Muramidase, or lysozyme, is an enzyme that cleaves

the peptidoglycan backbone of bacterial cell walls. It is present in secretions and innate immune cells and contributes to defense against susceptible bacteria.

Murmur

An extra sound heard during a heartbeat, usually caused by fast or turbulent blood flow through the heart or nearby blood vessels. Some murmurs are harmless, while others may be caused by heart valve or structural problems.

Murmur Classification

Heart murmurs are classified by timing, grade, shape, location, radiation, and pitch. Timing: systolic (between S1 and S2), diastolic (between S2 and S1), or continuous. Grade: I (barely audible) to VI (heard without stethoscope). Shape: crescendo, decrescendo, or plateau.

Murmur Congenital (Heart Murmur)

Alternate index label for Heart Murmur.

Murmur Heart (Heart Murmur)

Alternate index label for Heart Murmur.

Murphy's Sign

Inspiratory arrest caused by pain when the right upper quadrant is palpated, traditionally suggesting acute cholecystitis.

Musca

A genus of flies, including the housefly; some species can mechanically carry pathogens.

Muscae Volitantes

Moving spots, threads, or cobweb-like shapes seen in the visual field, usually caused by shadows from vitreous opacities.

Muscarine

A mushroom-derived parasympathomimetic toxin that stimulates muscarinic receptors and can cause salivation, sweating, bradycardia, and bronchospasm.

Muscarinic Antagonist

A muscarinic antagonist blocks acetylcholine at muscarinic receptors in smooth muscle, glands, the heart, and the central nervous system. Examples include atropine, ipratropium, and oxybutynin; effects can include dry mouth, blurred vision, urinary retention, tachycardia, and confusion.

Muscidae

Muscidae is a family of flies that includes the housefly. Some species can mechanically carry pathogens to food or wounds, and their larvae may occasionally cause myiasis.

Muscimol

Muscimol is a psychoactive compound found in some *Amanita* mushrooms and an agonist at GABA-A receptors. Ingestion can cause altered perception, sedation, agitation, incoordination, or seizures and may require toxicologic evaluation.

Muscle

A specialized contractile tissue responsible for movement, posture, and heat production.

Muscle Aches

Pain or soreness in one or more muscles. Common causes include overuse, injury, infection, medicines, and conditions affecting the whole body.

Muscle Atrophy

Loss or wasting of muscle tissue caused by disuse, nerve injury, inflammation, malnutrition, or systemic disease. It may lead to weakness and reduced function; treatment focuses on the cause, nutrition, and appropriately supervised rehabilitation.

Muscle Biopsy

Removal of a small sample of skeletal muscle for microscopic, histochemical, immunologic, or molecular examination in suspected myopathy, inflammation, infection, or infiltrative disease.

Muscle Cell

muscle cell refers to a defined body structure, tis-

sue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Muscle Contraction

The shortening or tension generation of muscle produced by the interaction of actin and myosin myofilaments. In skeletal and cardiac muscle, contraction follows excitation-contraction coupling: calcium binds troponin, tropomyosin moves aside, and myosin cross-bridges cycle against actin (sliding filament mechanism) using ATP.

Muscle Contracture

A sustained, involuntary, non-relaxing shortening and hardening of muscle tissue that resists passive stretch and limits joint range of motion. Occurs either as a mechanical, structural contracture caused by chronic fibrosis and shortening of connective tissue, muscle fibers, and ligaments following prolonged spasticity or immobilization, or as an electrically silent metabolic contracture, which occurs in inborn errors of glycogenolysis (such as McArdle disease) due to complete depletion of intracellular ATP, preventing the dissociation of actin-myosin cross-bridges and calcium reuptake into the sarcoplasmic reticulum.

Alternate Names:

Skeletal Muscle Contracture; Metabolic Contracture

Muscle Cramp

A muscle cramp is a sudden, involuntary, painful contraction of a muscle. It may follow exertion, dehydration, electrolyte disturbance, pregnancy, medication use, nerve disease, or vascular disease; recurrent cramps need assessment of the cause.

Alternate Names:

Cramp, Muscle Muscle Cramps

Muscle Development

Muscle development is the formation, growth, differentiation, and maturation of muscle tissue. It depends on genetic programs, neural input, hormones, nutrition, mechanical loading, and repair processes.

Muscle Disorder

A disease affecting muscle structure or function, causing weakness, pain, cramps, stiffness, or abnormal movement.

Muscle Fatigue

Reduced ability of a muscle to generate force after sustained or repeated activity.

Muscle Fiber

A muscle fiber is an individual muscle cell containing contractile myofibrils. Skeletal muscle fibers vary in size and metabolic properties, while cardiac and smooth muscle cells have distinct structures and functions.

Muscle Fibers

Individual muscle cells containing contractile proteins. Skeletal muscle fibers vary in size and properties, including endurance-oriented slow fibers and powerful, faster-fatiguing fibers.

Alternate Names:

Muscle cells

Muscle Function Loss

Reduced ability of a muscle or muscle group to generate movement or force, caused by muscle disease, nerve injury, neuromuscular-junction disorders, pain, or disuse.

Muscle Hypertrophy

Muscle hypertrophy is enlargement of individual muscle fibers, usually in response to resistance, hormonal stimulation, or compensatory workload. It can be physiologic or associated with disease, depending on the muscle and cause.

Muscle Neoplasm

A muscle neoplasm is an abnormal growth in skeletal or smooth muscle or nearby soft tissue and may be benign or malignant.

Muscle Pain

Pain, soreness, or aching in one or more muscles caused by exertion, injury, infection, inflammation,

medicines, or an underlying medical condition. Persistent, severe, or weakness-associated pain needs assessment.

Alternate Names:

Myalgia Muscle Pain (Myalgia)

Muscle Protein

muscle protein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Muscle Relaxant

A muscle relaxant is a medicine that reduces skeletal-muscle spasm or contraction. Centrally acting agents reduce muscle spasm through the nervous system, whereas neuromuscular blockers interrupt transmission at the neuromuscular junction and require respiratory support.

Muscle Relaxants

Medicines that reduce skeletal-muscle spasm or neuromuscular transmission; they include centrally acting drugs and peripheral neuromuscular blockers.

Muscle Rigidity

Muscle rigidity is abnormal resistance to passive movement caused by sustained muscle contraction or altered tone. It occurs in conditions such as Parkinson disease, dystonia, meningitis, neuroleptic malignant syndrome, and tetanus.

Muscle Spasm

Sudden involuntary contraction of a muscle that may cause pain, stiffness, or abnormal posture.

Muscle Spasms

Muscle spasms are sudden involuntary contractions caused by exertion, dehydration, electrolyte disturbance, nerve disease, medicines, pregnancy, or musculoskeletal problems. Recurrent, widespread, painful, or weakness-associated spasms need evaluation for an underlying cause.

Muscle Spindle

A muscle spindle is a sensory receptor within skeletal muscle that detects muscle length and the rate of length change. Its afferent signals contribute to the stretch reflex, muscle tone, posture, and coordinated movement.

Muscle Strain Treatment

A medical procedure, treatment, device, or care topic related to muscle strain treatment; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Muscle Strength

Muscle strength is the maximal force a muscle or muscle group can generate under specified conditions. It is assessed by functional or resisted testing and may be reduced by muscle, nerve, neuromuscular-junction, central, or systemic disorders.

Muscle Tissue

A highly specialized tissue capable of contracting to produce body movement, posture, and heat.

Muscle Tonus

Muscle tonus, or muscle tone, is the continuous, low-level activity and resistance to passive stretch present in resting muscle. It depends on spinal and supraspinal reflexes and may be abnormally increased or decreased in neurologic disease.

Muscle Twitching

Brief involuntary contractions of a small group of muscle fibers, often called fasciculations; persistent or widespread twitching may require evaluation.

Muscle Weakness

Reduced ability to generate force with one or more muscles. Causes include nerve or muscle disease, pain, inactivity, medicines, metabolic disorders, and aging.

Muscle-Contraction Headache

A pressure-like headache related to sustained con-

traction of scalp, neck, or jaw muscles.

Alternate Names:

Tension-type headache

Muscular

Relating to muscle or made of muscle tissue. It may describe strength, body build, pain, weakness, or a structure containing muscle.

Muscular Dystrophy

A group of inherited disorders characterized by progressive skeletal-muscle weakness and degeneration. The pattern, age of onset, and complications vary by genetic type; some forms also affect the heart, respiratory muscles, or other organs.

Alternate Names:

MD

Muscular Endurance

The ability of a muscle or muscle group to sustain repeated or prolonged effort.

Muscularis

A smooth-muscle layer in the wall of a hollow organ, especially the intestine.

Alternate Names:

Muscular layer

Musculocutaneous Nerve

From lateral cord (C5-C7), piercing coracobrachialis, running between biceps and brachialis to supply these muscles and lateral forearm skin (lateral antebrachial cutaneous nerve). Sole motor supply to the anterior arm compartment. Injury causes weakness of elbow flexion/forearm supination with lateral forearm sensation loss.

Musculoskeletal

Relating to muscles, bones, joints, tendons, ligaments, and related tissues.

Musculoskeletal Deformity

A musculoskeletal deformity is an abnormal shape, alignment, or structure of bone, joint, muscle, or related tissue. It may be congenital, developmental,

traumatic, degenerative, neuromuscular, or caused by disease.

Musculoskeletal Disease

A disorder affecting bones, joints, muscles, tendons, ligaments, cartilage, or related connective tissues.

Musculoskeletal Injury

Trauma to muscles, bones, joints, tendons, ligaments, cartilage, or related soft tissues, ranging from strains and sprains to fractures and dislocations.

Musculoskeletal Pain

Pain arising from muscles, bones, joints, ligaments, tendons, or related soft tissues. Common causes include injury, overuse, arthritis, and inflammation; persistent pain, weakness, swelling, or neurologic symptoms should be assessed.

Musculoskeletal System

The musculoskeletal system consists of bones, joints, cartilage, ligaments, tendons, muscles, and associated connective tissues. It provides support, protects organs, enables movement, and contributes to mineral storage and blood-cell production.

Musculus

The formal anatomical Latin noun for muscle (abbreviated extitM. in the singular and extitMm. in the plural), utilized in international Nomina Anatomica terminology to designate individual skeletal muscles based on their geometry, attachments, fiber orientation, or physiological action (e.g., extitMusculus rectus abdominis, extitMusculus sternocleidomastoideus, extitMusculus deltoideus).

MUSE

A medicated urethral system that delivers a pellet into the urethra to treat erectile dysfunction.

Alternate Names:

Medicated urethral system for erection

Mushroom Poisoning

Illness caused by eating toxic fungi, with effects

ranging from gastrointestinal upset to liver failure, neurologic toxicity, or death.

Music Therapy

Use of music for therapeutic purposes. Pain reduction, emotional expression, cognitive stimulation.

MuSK-Positive Myasthenia Gravis

A distinct, clinically aggressive subtype of autoimmune myasthenia gravis, accounting for approximately 5–10% of generalized myasthenia gravis cases (and up to 40–50% of AChR-seronegative generalized cases), mediated by pathogenic IgG4 autoantibodies against muscle-specific tyrosine kinase (*MuSK*), an agrin-activated receptor essential for postsynaptic acetylcholine receptor clustering. Marked by a strong female preponderance, prominent early involvement of bulbar, facial, neck flexor, and respiratory muscles with frequent tongue and facial muscle atrophy, relative sparing of extraocular muscles, high risk of precipitous myasthenic crisis, and characteristically poor responsiveness (or clinical worsening) with standard acetylcholinesterase inhibitors (pyridostigmine).

Alternate Names:

MuSK Myasthenia Gravis; MuSK-Ab-Positive MG

Mussolini'S Disease

An obsolete eponym historically used for a form of peripheral neuropathy; its meaning is inconsistent and should be verified from the original source.

Mustard Compounds

Mustard compounds are chemical agents containing reactive sulfur or nitrogen mustard groups that can alkylate DNA and other molecules. Some are chemotherapy drugs; others are highly toxic chemical-warfare agents.

Mustard Gas

Mustard gas, or sulfur mustard, is a vesicant chemical-warfare agent that damages skin, eyes, and respiratory tissues and can cause blistering, airway injury, and delayed complications. It is not a true gas at ordinary temperatures and has no specific widely available antidote.

Mutagen

A chemical, physical agent, or biological factor capable of causing a genetic mutation. Mutagenicity does not by itself prove that an agent causes cancer.

Mutagenicity Test

A diagnostic or laboratory method related to mutagenicity test. Results are interpreted with the method, reference range, and clinical findings.

Mutant

A mutant is a cell, organism, or genetic sequence carrying a mutation relative to a reference or parental form. The change may have no effect, alter a trait, or cause disease, depending on its location and functional consequence.

Mutant Proteins

mutant proteins is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Mutate

To mutate means to undergo a change in genetic sequence. Mutations arise spontaneously or from replication errors, DNA damage, or mutagen exposure and may be inherited, acquired in somatic cells, harmful, neutral, or beneficial.

Mutation

A heritable or acquired alteration in the DNA sequence. Variants may be single-nucleotide substitutions, insertions, deletions, copy-number changes, or larger rearrangements and may be benign, pathogenic, or of uncertain significance.

Mutation Abnormality

A mutation abnormality is an atypical change in DNA sequence or chromosome structure identified relative to a reference. Its clinical significance must be classified using evidence, such as pathogenic, likely pathogenic, uncertain significance, likely benign, or benign.

Mutation Rate

Frequency of new mutations per generation or per base pair per replication. Varies by gene, genomic region, organism. High mutation rate in repetitive sequences.

Mute

Describing a person who does not speak, whether because of a physical, neurologic, developmental, or psychological reason or by choice; current clinical language should describe the specific communication limitation or preference.

Mutism

Absence or refusal of speech despite adequate ability to speak, occurring in conditions such as catatonia, selective mutism, or neurologic disease.

Myalgia

Pain, aching, or tenderness originating within skeletal muscle tissue. May be localized (secondary to unaccustomed eccentric exercise causing delayed-onset muscle soreness [DOMS], muscle strain, or local trauma) or diffuse and systemic. Systemic myalgia is a cardinal symptom of acute viral infections (influenza, COVID-19, dengue), autoimmune rheumatologic disorders (polymyalgia rheumatica, systemic lupus erythematosus), drug-induced myopathies (HMG-CoA reductase inhibitors / statin-associated muscle symptoms [SAMS]), endocrine dysfunction (hypothyroidism), and chronic centralized pain syndromes (fibromyalgia). Evaluated with serum creatine kinase to rule out rhabdomyolysis and inflammatory markers.

Alternate Names:

Myodynia

Myalgic Encephalomyelitis

A complex illness characterized by substantial reduction in activity, post-exertional malaise, and unrefreshing sleep, often with cognitive or autonomic symptoms.

Myalgic Encephalomyelitis/Chronic Fatigue Syndrome

A complex illness characterized by substantial reduc-

tion in activity, post-exertional malaise, unrefreshing sleep, and cognitive or autonomic symptoms. Management is individualized and focuses on pacing, symptom relief, and treatment of coexisting conditions.

Myalgic Encephalomyelitis/Chronic Fatigue Syndrome (ME/CFS)

A complex illness involving substantial activity-limiting fatigue, post-exertional worsening, unrefreshing sleep, and often cognitive or orthostatic symptoms.

Alternate Names:

ME/CFS SEID Systemic Exertional Intolerance Disease

Myasthenia

Muscle weakness, often becoming worse with activity and improving with rest. It may refer generally to weakness or to conditions such as myasthenia gravis; drooping eyelids, trouble swallowing, or breathing difficulty require prompt assessment.

Myasthenia Gravis

A chronic autoimmune disease that disrupts communication between nerves and voluntary muscles. It causes weakness that worsens with activity and improves with rest. It commonly affects the eyelids, eye movements, facial muscles, speech, swallowing, neck, arms, or legs. Severe weakness can affect breathing and requires emergency care. Antibody and other tests may help confirm the diagnosis.

Alternate Names:

MG

Myasthenia Gravis

Alternate index label for Myasthenia Gravis.

Myasthenic (Lambert-Eaton) Syndrome

An autoimmune presynaptic neuromuscular-junction disorder caused by antibodies against voltage-gated calcium channels, producing proximal weakness and autonomic symptoms.

Alternate Names:

Lambert-Eaton

Myasthenic Crisis

A life-threatening, acute neurological emergency occurring in patients with myasthenia gravis, defined as exacerbation of myasthenic muscle weakness resulting in acute respiratory failure requiring endotracheal intubation and mechanical ventilation or non-invasive positive pressure ventilation. Triggered in up to 80% of cases by acute intercurrent respiratory tract infections, surgery, pregnancy, emotional stress, or administration of medications that impair neuromuscular transmission (such as aminoglycosides, fluoroquinolones, macrolides, or beta-blockers). Differentiated from cholinergic crisis by lack of muscarinic toxidrome signs and managed with prompt ventilatory support, plasmapheresis or intravenous immunoglobulin, and aggressive treatment of the underlying trigger.

Alternate Names:

Myasthenia Gravis Crisis; Acute Myasthenic Exacerbation

Myasthenic Syndrome

A disorder of neuromuscular transmission causing fluctuating weakness; it may refer to myasthenia gravis or a congenital or Lambert-Eaton syndrome depending on context.

Mycelium

A mycelium is the network of branching hyphae that forms the vegetative body of a fungus. It grows through soil, tissue, or other substrates and produces or supports formation of reproductive structures.

Mycetoma

A chronic localized infection of skin and subcutaneous tissue caused by fungi or filamentous bacteria, producing swelling, sinuses, and grains.

Mycobacteriaceae

A family of slow-growing or rapidly growing, acid-fast bacteria that includes *Mycobacterium* species causing tuberculosis, leprosy, and nontuberculous infections.

Mycobacterial Culture

Laboratory culture of a clinical specimen for Mycobacterium species, including tuberculosis and nontuberculous mycobacteria; cultures may require prolonged incubation.

Mycobacterium

A genus of acid-fast bacteria that includes the causes of tuberculosis and leprosy and several nontuberculous infections.

Mycobacterium Abscessus

A rapidly growing nontuberculous mycobacterium that can cause pulmonary, skin, and soft-tissue infections and is often difficult to treat because of multidrug resistance.

Mycobacterium Avium

A member of the Mycobacterium avium complex that can cause lung disease, lymph-node infection, or disseminated infection, especially in people with weakened immunity.

Mycobacterium Avium Complex

A group of nontuberculous mycobacteria that can cause chronic pulmonary disease or disseminated infection, particularly in people with impaired immunity. Treatment depends on the species, site, severity, susceptibility, and patient factors.

Mycobacterium Bovis

A tuberculosis-complex bacterium that mainly infects cattle but can cause tuberculosis in humans through unpasteurized dairy or animal exposure.

Mycobacterium Chelonae

A rapidly growing nontuberculous mycobacterium that can cause skin, soft-tissue, bone, eye, or disseminated infection.

Mycobacterium Flavescens

A rapidly growing or environmental nontuberculous mycobacterium that rarely causes human infection.

Mycobacterium Fortuitum

A rapidly growing nontuberculous mycobacterium that can cause wound, catheter, bone, lung, or other opportunistic infections.

Mycobacterium Gordoniae

A usually nonpathogenic water-associated nontuberculous mycobacterium that can occasionally cause disease in people with weakened immunity.

Mycobacterium Haemophilum

A nontuberculous mycobacterium that can cause skin, joint, and bone infections, especially in people with impaired immunity.

Mycobacterium Infection

Infection caused by a Mycobacterium species, including tuberculosis, leprosy, and nontuberculous mycobacterial disease.

Mycobacterium Kansaii

A nontuberculous mycobacterium that commonly causes chronic lung disease resembling tuberculosis and can occasionally cause disseminated infection.

Mycobacterium Leprae

An acid-fast bacillus that causes leprosy (Hansen's disease), a chronic infection affecting the skin and peripheral nerves. The organism is transmitted through respiratory droplets, though the exact mechanism is not fully understood. The incubation period is long (2-5 years).

Mycobacterium Marinum

A nontuberculous mycobacterium associated with fish tanks and aquatic exposure that can cause chronic skin and soft-tissue infection.

Mycobacterium Scrofulaceum

A nontuberculous mycobacterium associated especially with cervical lymph-node infection in children and occasional other disease.

Mycobacterium Smegmatis

A rapidly growing environmental mycobacterium

that rarely causes opportunistic wound, catheter, or other infection.

Mycobacterium Szulgai

A rare nontuberculous mycobacterium that can cause chronic lung disease or other opportunistic infection.

Mycobacterium Terrae

A nontuberculous mycobacterium found in soil and water that rarely causes human disease.

Mycobacterium Tuberculosis

An acid-fast bacillus that causes tuberculosis, a chronic respiratory infection. The organism is transmitted by respiratory droplets and primarily affects the lungs but can disseminate to other organs. Latent TB infection is asymptomatic and non-transmissible. Active TB presents with cough, haemoptysis, fever, and weight loss.

Mycobacterium Ulcerans

A mycobacterium that causes Buruli ulcer, a chronic destructive skin infection associated with the toxin mycolactone.

Mycobiome

The mycobiome is the community of fungi living in a particular environment or body site, including the human microbiome. Its composition can be influenced by immunity, antibiotics, diet, and disease, and detection does not by itself prove infection.

Mycology

The branch of microbiology that studies fungi, including yeasts, moulds, and mushrooms. Medical mycology focuses on fungal pathogens that cause disease in humans. Fungal infections (mycoses) are classified as superficial, cutaneous, subcutaneous, or systemic.

Mycophenolate Mofetil

Mycophenolate mofetil is a prodrug of mycophenolic acid that inhibits inosine monophosphate dehydrogenase and lymphocyte proliferation. It is used

as an immunosuppressant, especially after organ transplantation, and can cause infection, cytopenias, gastrointestinal effects, and serious fetal harm.

Mycophenolic Acid

mycophenolic acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Mycoplasma

A genus of very small bacteria lacking a cell wall, including organisms that cause respiratory and genitourinary infections.

Mycoplasma Genitalium

A sexually transmitted bacterium that can cause urethritis, cervicitis, pelvic inflammatory disease, and, less commonly, proctitis. Many infections are asymptomatic. Diagnosis is usually by a nucleic acid amplification test, and macrolide resistance is common, so treatment should follow current susceptibility-informed guidance.

Mycoplasma Hominis

A wall-less bacterium associated with the genital tract that can cause pelvic, postpartum, urinary, wound, or joint infection.

Mycoplasma Orale

A bacterium found mainly in the mouth and respiratory tract that rarely causes opportunistic infection.

Mycoplasma Pneumonia

Atypical pneumonia most common in ages 5–35. Dry cough, low-grade fever, headache. Patchy infiltrates on CXR disproportionate to symptoms (“walking pneumonia”).

Mycoplasma Pneumoniae

A wall-less bacterium that causes atypical respiratory infection, including tracheobronchitis and community-acquired pneumonia.

Mycoplasma Pneumoniae-Associated

Mucositis

Inflammatory lesions of the oral, ocular, or genital mucosa occurring as an extrapulmonary manifestation of *Mycoplasma pneumoniae* infection, often presenting with target-like skin lesions.

Mycoplasmal Pneumonia

Pneumonia caused by *Mycoplasma* species, most often *Mycoplasma pneumoniae*, usually producing a gradual cough and fever.

Mycoplasmataceae

A family of very small bacteria that lack a cell wall and includes *Mycoplasma* and related genera.

Mycosis

Any pathological infectious disease caused by a microscopic fungus (yeast, mold, or dimorphic fungus). Categorized by anatomical depth and invasiveness: superficial mycoses (tinea versicolor, pityriasis), cutaneous mycoses or dermatophytoses (tinea pedis, tinea capitis, tinea corporis caused by *Trichophyton*, *Microsporum*, or *Epidermophyton*), subcutaneous mycoses (sporotrichosis, mycetoma), and invasive systemic/opportunistic mycoses (candidiasis, aspergillosis, mucormycosis, cryptococcosis, and endemic dimorphic mycoses like histoplasmosis and coccidioidomycosis). Diagnosed via direct microscopy (10–20% KOH prep), fungal culture on Sabouraud dextrose agar, histopathology (GMS, PAS stains), and fungal antigen testing (galactomannan, beta-D-glucan).

Mycosis Fungoides

The most common cutaneous T-cell lymphoma, presenting with progressive patches, plaques, and tumors on the skin with an indolent course. Staging and therapy depend on skin involvement and extracutaneous spread.

Alternate Names:

MF

Mycosis Fungoides Lymphoma

Mycosis fungoides is a type of cutaneous T-cell lymphoma that usually begins with persistent patches or plaques on the skin.

Mycotic Aneurysm

An infected arterial wall or aneurysm, usually caused by bacteria rather than fungi. It may develop from bloodstream infection or an infected embolus and can rupture, causing life-threatening hemorrhage.

Mycotoxin

A toxic substance produced by certain fungi, including aflatoxins and ergot alkaloids.

Mydriasis

Dilation of the pupil, produced mainly by sympathetic activity through the dilator pupillae muscle or by reduced parasympathetic activity. Causes include darkness, medicines, toxins, neurologic disease, and ocular injury.

Mydriatic (Mydriatics)

A pharmacological agent or substance that induces pupillary dilation (mydriasis). Functions through one of two distinct autonomic mechanisms: parasympatholytic agents (anticholinergics/cycloplegics such as tropicamide, cyclopentolate, and atropine) that block muscarinic receptors on the circular pupillary sphincter muscle and ciliary body, paralyzing accommodation; or sympathomimetic agents (such as phenylephrine) that stimulate alpha-1 adrenergic receptors on the radially oriented pupillary dilator muscle without inducing cycloplegia. Indicated to facilitate comprehensive diagnostic fundoscopic examinations of the retina and vitreous, and therapeutically in anterior uveitis to alleviate ciliary muscle spasm and prevent posterior synechiae formation; can precipitate acute angle-closure glaucoma in patients with anatomically narrow anterior chamber angles.

Myelin

Myelin is an insulating sheath around nerve fibers that speeds electrical conduction; it is produced by oligodendrocytes in the CNS and Schwann cells in the PNS.

Myelin Sheath

The lipid-rich insulating layer around axons formed

by Schwann cells (peripheral nervous system) and oligodendrocytes (central nervous system), which wrap the axon in concentric membrane layers.

Myelination

Myelination is formation of a myelin sheath around an axon by oligodendrocytes in the central nervous system or Schwann cells in the peripheral nervous system. It increases the speed and efficiency of nerve conduction.

Myelitis

Myelitis is inflammation of the spinal cord or, less commonly, other neural tissue described by the term. Transverse myelitis can cause weakness, sensory changes, and bladder or bowel dysfunction and requires urgent evaluation for infectious, immune, vascular, or compressive causes.

Myeloablative Agonist

A myeloablative agent, likely intended by this term, is a treatment that severely or completely destroys bone-marrow blood-forming cells. It is used before selected stem-cell transplants and requires stem-cell rescue because of profound, prolonged cytopenias.

Myeloablative Chemotherapy

Myeloablative chemotherapy destroys or severely suppresses bone-marrow blood-cell production and is often used before a stem-cell transplant.

Myeloblast

An immature precursor of granulocytes in the bone marrow; excess myeloblasts are characteristic of acute myeloid leukemia.

Myelocyte

A developing granulocyte precursor in bone marrow that is more mature than a myeloblast and normally absent or rare in peripheral blood.

Myelocytic Leukaemia

Leukemia arising from the myeloid cell line, including acute myeloid and chronic myeloid leukemia.

Myelodysplastic Neoplasms

Alternate index label; see *Myelodysplastic syndromes*.

Myelodysplastic Or Myeloproliferative Neoplasms

Myelodysplastic and myeloproliferative neoplasms are clonal bone-marrow disorders causing abnormal blood-cell production. They may produce anemia, infection, bleeding, high counts, enlarged spleen, thrombosis, or progression to acute leukemia; classification and mutation testing guide care.

Myelodysplastic Syndrome

MDS: a group of clonal stem cell disorders characterized by ineffective hematopoiesis, cytopenias, and risk of transformation to acute myeloid leukemia (AML). Features: anemia (most common), neutropenia, thrombocytopenia; dysplasia (abnormal morphology) in marrow and blood; cytogenetic abnormalities (del5q, trisomy 8, del7q).

Myelodysplastic Syndromes

Alternate index label for MDS.

Myeloencephalitis

Myeloencephalitis is inflammation involving the spinal cord and brain, caused by infection, immune disease, toxins, or other neurologic processes.

Myelofibrosis

Myelofibrosis is a myeloproliferative neoplasm in which abnormal marrow signaling causes fibrosis, disordered blood production, anemia, enlarged spleen, and variable constitutional symptoms. hematopoiesis, and JAK2, CALR, or MPL mutations. Presents with anemia, massive splenomegaly, constitutional symptoms (fever, night sweats, weight loss), and leukoerythroblastic blood smear.

Alternate Names:

Idiopathic Myelofibrosis

Myelogram

An imaging study of the spinal canal performed after contrast material is introduced around the

spinal cord.

Myelography

Contrast injected into subarachnoid space for spinal imaging. Used when MRI contraindicated. CT myelography more common now.

Myelogenous

Relating to blood-forming cells that develop from the bone marrow's myeloid cell line.

Alternate Names:

Myeloid

Myeloid

Relating to bone marrow or to the non-lymphoid blood-cell lineages derived from hematopoietic stem cells.

Myeloid Cell

myeloid cell refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Myeloid Leukemia

Myeloid leukemia is a blood cancer arising from abnormal myeloid precursor cells in the bone marrow and blood.

Myeloid Sarcoma

Myeloid sarcoma is a mass of immature myeloid cells occurring outside the bone marrow, often associated with acute myeloid leukemia.

Myelolipoma

A usually benign tumor composed of mature adipose tissue and blood-forming tissue, most often arising in the adrenal gland and often found incidentally.

Myeloma

Multiple myeloma: plasma cell malignancy. Features: bone pain, anemia, renal failure, hypercalcemia.

Myeloma Cast Nephropathy

Light chain cast formation in tubules causing AKI in multiple myeloma. Friable waxy casts with giant cells. Bence Jones proteinuria. Treat myeloma and consider plasmapheresis to reduce light chain burden.

Myelomalacia

Softening of the spinal cord, usually due to ischemia, trauma, hemorrhage, or other cord injury.

Myelomeningocele

Myelomeningocele is an open neural-tube defect in which spinal cord and meninges protrude through a vertebral opening, causing variable paralysis, sensory loss, bladder dysfunction, and hydrocephalus. through a vertebral defect into a sac on the back. Presents with a visible, fluid-filled sac at birth. Associated with hydrocephalus, Arnold-Chiari malformation, and lower extremity paralysis.

Myelomonocyte

A bone-marrow precursor that can develop toward either the monocyte or granulocyte lineages.

Myelopathy

A general term for any neurological deficit resulting from spinal cord pathology, encompassing a wide range of causes and clinical presentations.

Myeloperoxidase

An enzyme in neutrophil and monocyte granules that uses hydrogen peroxide and chloride to generate antimicrobial oxidants; antibodies against it occur in some autoimmune diseases.

Myelopoiesis

The production and development of myeloid blood cells, including granulocytes, monocytes, and some precursor cells, in the bone marrow.

Myeloproliferative Disorders

Clonal bone-marrow disorders causing overproduction of one or more blood-cell lineages, including polycythemia vera, essential thrombocythemia, and

myelofibrosis.

Myeloproliferative Neoplasm

A myeloproliferative neoplasm is a blood cancer in which the bone marrow produces too many mature or immature blood cells.

Myelosuppression

Reduced bone marrow production of red cells, white cells, and platelets, causing anemia, neutropenia, and thrombocytopenia; a common dose-limiting toxicity of chemotherapy and radiation that increases infection and bleeding risk.

Myelosuppressive Therapy

Myelosuppressive therapy reduces bone-marrow production of blood cells, sometimes intentionally during cancer treatment but with risk of anemia, infection, and bleeding.

Myenteric Plexus

A network of enteric nerves between the circular and longitudinal muscle layers of the gastrointestinal tract that coordinates intestinal motility.

Myhre Syndrome

A rare inherited connective-tissue disorder caused by variants in SMAD4 and characterized by short stature, stiff joints, distinctive facial features, hearing loss, and cardiovascular abnormalities.

Myiasis

Infestation of living tissue by larvae (maggots) of various fly species, which feed on host tissue and can cause pain, secondary infection, and tissue destruction. It may be cutaneous, involving the skin and subcutaneous tissue, or affect other body sites including the nose, ears, and wounds.

Myoblast

An embryonic precursor cell that fuses or differentiates to form skeletal muscle fibers.

Myoblastoma

A rare tumor composed of cells resembling develop-

ing muscle; the exact entity depends on the source and modern classification.

Alternate Names:

Aerophagia; stomach bubble syndrome

Myocardial

Relating to the myocardium, the muscular wall of the heart.

Myocardial Biopsy

Removal of a small sample of heart muscle, usually by catheter, for microscopic or molecular examination of suspected myocarditis, rejection, infiltrative disease, or other cardiomyopathy.

Myocardial Bridging

Myocardial bridging occurs when a segment of a coronary artery tunnels through heart muscle and may be compressed during contraction.

Myocardial Contusion

A bruise of the heart muscle caused by blunt chest trauma, which may produce chest pain, arrhythmias, or impaired heart function.

Myocardial Infarction

Irreversible death of heart-muscle tissue caused by prolonged inadequate blood flow. See Heart Attack.

Myocardial Infarction (Heart Attack)

Alternate index label for Heart Attack.

Myocardial Ischemia

Reduced blood flow and oxygen supply to heart muscle, usually from narrowed coronary arteries, potentially causing chest pain or heart damage.

Alternate Names:

Cardiac Ischemia

Myocardial Perfusion Imaging

Nuclear cardiology technique using radiotracers (Tc-99m sestamibi, Tl-201) to assess blood flow to the myocardium. Performed at rest and during stress (exercise or pharmacological) to detect reversible ischemia (stress defect with rest redistribution) or

fixed defects (scar from prior MI).

Myocardial Reperfusion

Restoration of blood flow to heart muscle after ischemia, which can limit injury but may also cause reperfusion-related tissue damage.

Myocardial Rupture

A tear in the heart wall or other heart structure, usually a severe complication of myocardial infarction.

Myocardial Viability

PET assessment of hibernating myocardium. FDG uptake indicates viable myocardium.

Myocarditis

Myocarditis is inflammation of heart muscle, often infectious or immune-mediated, that can cause chest pain, arrhythmias, heart failure, or sudden cardiac dysfunction. (coxsackievirus, adenovirus, SARS-CoV-2). Presents with chest pain, dyspnea, arrhythmias, and elevated troponin. Diagnosis: ECG, echocardiography, cardiac MRI with Lake Louise criteria, and endomyocardial biopsy.

Myocarditis - Pediatric

Pediatric myocarditis is inflammation of the heart muscle, often after infection or immune injury, causing chest symptoms, arrhythmia, heart failure, or shock.

Myocarditis Diagnosis

Cardiac MRI (Lake Louise criteria) shows myocardial edema (T2-weighted imaging), late gadolinium enhancement (typically epicardial/mid-wall in non-ischemic distribution), and increased myocardial T1/T2 mapping values.

Myocarditis Treatment

No specific antiviral therapy for most cases. Treatment is supportive: heart failure therapy (diuretics, ACE inhibitors, beta-blockers) for reduced EF, arrhythmia management, and avoidance of exercise during acute phase (risk of sudden death). Im-

munosuppression may be considered in autoimmune myocarditis or cardiac sarcoidosis.

Myocardium

The muscular middle layer of the heart wall that contracts to pump blood.

Myoclonic Epilepsy

An epilepsy syndrome in which seizures include brief, shock-like involuntary muscle jerks; the specific syndrome determines associated seizure types, age of onset, and prognosis.

Myoclonic Seizure

A generalized seizure characterized by brief, shock-like, involuntary single or multiple muscle contractions without loss of consciousness. Commonly affects the upper extremities, resulting in sudden dropping or throwing of objects, and is a hallmark feature of juvenile myoclonic epilepsy.

Myoclonus

A sudden, brief, involuntary muscle jerk or group of jerks.

Myocyte

A differentiated muscle cell specialized for contraction. Skeletal myocytes are long, multinucleated fibers; cardiac myocytes are branching cells joined by intercalated discs; and smooth-muscle myocytes are spindle-shaped cells without organized sarcomeres. Myocyte injury or death contributes to myopathy, rhabdomyolysis, and myocardial infarction.

Alternate Names:

Muscle cell

Myodegeneration

Degeneration or breakdown of muscle fibers, caused by inherited, inflammatory, ischemic, toxic, or other disorders.

Myoepithelial Cell

myoepithelial cell refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting re-

lated disease or injury.

Myoepithelioma

A myoepithelioma is a tumor composed of myoepithelial cells and can be benign or malignant, commonly arising in salivary or other glands.

Myoepithelioma Of Soft Tissue

A rare soft-tissue neoplasm showing myoepithelial differentiation, ranging from benign to malignant. Diagnosis uses morphology and immunohistochemistry, with treatment guided by behavior and complete excision.

Myofascial Pain Syndrome

A regional pain disorder involving sensitive trigger points in muscle and fascia, with pain that may be referred to other areas and often worsens with pressure or movement.

Myofibril

A contractile thread-like structure inside a muscle fiber, composed of repeating sarcomeres containing actin and myosin.

Myofibrillar Myopathy

Myofibrillar myopathy is a group of inherited muscle disorders with abnormal protein aggregates and progressive skeletal-muscle weakness, sometimes involving heart or breathing muscles.

Myofibrils

Long contractile structures inside muscle fibers, made of repeating sarcomeres containing actin and myosin. Their shortening produces muscle contraction.

Myofibroblastoma

A benign mesenchymal tumor composed of myofibroblastic cells in collagenous or myxoid stroma, most often arising in the mammary or inguinal region but potentially occurring at other soft-tissue sites.

Myofibroblastoma Of The Breast

A rare benign stromal tumor composed of spindle-shaped myofibroblastic cells, usually occurring in older adults. It is typically a well-circumscribed painless mass and is diagnosed by histology with immunohistochemistry.

Myofibroblasts

Cells that combine features of fibroblasts and smooth muscle cells and help contract wounds and produce scar tissue.

Myofibromatosis

Myofibromatosis is a benign proliferation of myofibroblastic tumors, often in infants or children and involving skin, muscle, bone, or internal organs.

Myofilament

A contractile protein filament within a muscle fiber; actin and myosin myofilaments interact through cross-bridges to produce muscle contraction.

Myofilaments

Actin and myosin protein filaments that slide past each other to produce muscle contraction.

Alternate Names:

Contractile filaments

Myogenesis

myogenesis is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

Myogenin

A muscle-specific transcription factor required for skeletal-muscle differentiation and used as an immunohistochemical marker in diagnosing some soft-tissue tumors.

Myoglobin

An oxygen-binding protein in skeletal and cardiac muscle; it can enter blood and urine after muscle injury.

Myoglobin Blood Test

A blood test measuring myoglobin released from injured skeletal or cardiac muscle; it rises early after muscle injury but is nonspecific and is not preferred over troponin for myocardial infarction.

Myoglobin Urine Test

A urine test detecting myoglobin released during muscle breakdown, used in evaluating rhabdomyolysis; substantial myoglobinuria can contribute to acute kidney injury.

Myoglobinuria

Presence of myoglobin in urine, usually due to muscle breakdown such as rhabdomyolysis.

Myokymia

Involuntary, fine, continuous rippling contractions of muscle fibers, often seen around the eye but also associated with nerve hyperexcitability or neurologic disease.

Myoma

A benign tumor arising from muscle tissue, commonly referring to a uterine leiomyoma.

Myomalacia

Softening or degeneration of muscle tissue, including the heart muscle after severe injury.

Myomectomy

Surgical removal of uterine fibroids while leaving the uterus in place. It may improve bleeding, pain, or pressure symptoms and can preserve the possibility of pregnancy, although risks and recurrence remain.

Myometrium

The thick smooth-muscle layer of the uterus responsible for contractions during menstruation and labor.

Myopathy

A disease of muscle causing weakness, fatigue, pain, or abnormal muscle enzymes.

Myopericytoma

A myopericytoma is a usually benign perivascular tumor composed of cells around small blood vessels, often occurring in skin or soft tissue.

Myopia

Short-sightedness, a refractive error in which distant objects focus in front of the retina and appear blurred.

Myosin

A motor protein that interacts with actin to generate muscle force.

Myosin Atpase

The enzyme activity of myosin that uses ATP to power interactions with actin and generate muscle contraction.

Myosis (Miosis)

Abnormal, excessive pupillary constriction, typically resulting in a pupil diameter < 2 mm under ambient lighting conditions. Results from either hyperactivation of the parasympathetic pupillary constrictor pathway (cranial nerve III via Edinger-Westphal nucleus) or loss of sympathetic pupillary dilator tone. Cardinal clinical causes include acute opioid intoxication (classic "pinpoint pupils"), organophosphate or nerve agent toxicity (cholinergic excess), pontine hemorrhage, Horner syndrome (unilateral miosis with ptosis and anhidrosis), and topical miotic eye drops (e.g., pilocarpine for angle-closure glaucoma).

Myositis

Inflammation of skeletal muscle, caused by autoimmune disease, infection, medicines, or other injury.

Myositis Ossifican

Abnormal bone formation within muscle or other soft tissue, often after injury; the usual term is myositis ossificans.

Myositis Ossificans

Formation of mature bone within muscle or other soft tissue, usually after trauma or repeated injury.

Myotatic (Stretch Reflex)

Pertaining to the myotatic reflex (deep tendon reflex / muscle stretch reflex), a fundamental monosynaptic spinal reflex that resists unexpected passive elongation of a skeletal muscle to maintain muscle tone and posture. Initiated when rapid stretch activates intrafusal primary (Ia) sensory afferents within neuromuscular spindles; these fibers enter the dorsal horn of the spinal cord and synapse directly on alpha motor neurons innervating the same (homonymous) muscle, eliciting rapid muscle contraction while simultaneously inhibiting the antagonist muscle via Ia inhibitory interneurons (reciprocal inhibition). Clinically assessed at the patellar, Achilles, biceps, and triceps tendons to evaluate lower and upper motor neuron integrity.

Myotonia

Delayed relaxation of a muscle after voluntary contraction or stimulation, often caused by an inherited or acquired muscle-channel disorder.

Myotonia Congenita

An inherited skeletal-muscle channelopathy causing delayed relaxation after voluntary contraction. Stiffness often improves with repeated movement and may be accompanied by muscle hypertrophy; onset and severity vary between genetic forms.

Myotonia Fluctuans

A mild, atypical form of non-dystrophic skeletal muscle sodium channelopathy belonging to the potassium-aggravated myotonias, caused by heterozygous missense mutations in the *SCN4A* gene on chromosome 17q23. Characterized by fluctuating, episodic muscle stiffness and delayed relaxation that is characteristically exacerbated or triggered 10 to 30 minutes following strenuous physical exercise (delayed post-exercise stiffness) or by oral potassium loading, but completely lacks the cold-sensitivity characteristic of paramyotonia congenita and is not associated with episodes of permanent or prolonged muscle weakness.

Alternate Names:

Potassium-Aggravated Myotonia Fluctuans

Myotonia Permanens

A severe, continuous form of non-dystrophic sodium channelopathy caused by specific heterozygous gain-of-function missense mutations in the *SCN4A* gene (such as p.Gly1306Glu). Clinically characterized by persistent, severe, generalized muscle stiffness that is continuous and present even at rest, profoundly exacerbated by potassium intake, and often presenting in infancy with severe generalized stiffness, facial and laryngeal myotonia, stridor, and life-threatening episodic respiratory insufficiency due to persistent rigidity of intercostal and laryngeal musculature.

Alternate Names:

Severe Sodium Channel Myotonia; Continuous Myotonia

Myotonic Disorder

A neuromuscular disorder characterized by delayed relaxation after muscle contraction, often with weakness, stiffness, or progressive muscle wasting.

Myotonic Dystrophy

The most common adult-onset muscular dystrophy, an autosomal dominant multisystem disorder caused by CTG trinucleotide repeat expansions in the DMPK gene (type 1, DM1) or CCTG tetranucleotide repeat expansions in the CNBP gene (type 2, DM2) on chromosome 19q13.3. DM1 is more common and more severe than DM2.

Myotonic Dystrophy Type 2

An inherited multisystem disorder caused by CCTG repeat expansion in CNBP, producing myotonia, proximal or axial weakness, muscle pain, cataracts, and variable endocrine or cardiac features.

Myriad

Myriad means a very large or indefinite number; in healthcare writing, specific counts or ranges are preferable when they are known.

Myringitis

Inflammation of the tympanic membrane, sometimes producing painful blisters and associated hearing symptoms.

Myringotomy

A small incision in the eardrum, often used to drain middle-ear fluid and insert a ventilation tube.

Myringotomy With Tympanostomy Tube

Incision of the tympanic membrane with placement of a ventilation tube to equalize middle-ear pressure and permit drainage. It is used selectively for persistent middle-ear effusion, recurrent acute otitis media, or associated hearing and developmental problems.

Myristic Acid

A saturated 14-carbon fatty acid found in some animal fats, coconut oil, and palm oil; high dietary intake can raise LDL cholesterol.

Myristica Oil Poisoning

Myristica oil poisoning involves toxic or environmental exposure to myristica oil poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Myroides

A genus of gram-negative environmental bacteria that can rarely cause opportunistic infections, often with notable antibiotic resistance.

Myroides Odoratus

A gram-negative environmental bacterium that can rarely cause wound, bloodstream, urinary, or other opportunistic infections.

Myxedema

Severe hypothyroidism causing accumulation of mucin in tissues, with swelling, slowed body functions, and other symptoms.

Myxedema Coma

Severe decompensated hypothyroidism characterized by altered mental status, hypothermia, bradycardia, hypoventilation, hyponatremia, and hypoglycemia. Most commonly occurs in elderly patients with long-standing untreated hypothyroidism precipitated by infection, surgery, or sedative medications.

Mortality rates exceed fifty percent.

Alternate Names:

Coma Myxedema (Myxedema Coma)

Myxococcales

An order of soil bacteria known for coordinated movement, predation on other microbes, and formation of multicellular fruiting structures.

Myxococcus

A genus of predatory soil bacteria that move in groups and form fruiting bodies when nutrients are scarce.

Myxofibroma

A myxofibroma is a benign tumor containing fibrous and gelatinous myxoid tissue, often arising in the jaw or other connective tissue.

Myxoid Cyst

A myxoid cyst is a gelatinous fluid-filled lesion near a joint or tendon, commonly on a finger near the distal joint and nail.

Myxoma

A usually benign primary cardiac tumour composed of myxoid tissue, most often arising in the left atrium from the interatrial septum. It may cause positional obstruction of the mitral valve, constitutional symptoms, or systemic embolism; echocardiography is the usual initial diagnostic test.

Myxomycete

A slime mold, a fungus-like organism that forms mobile amoeboid stages and spore-producing structures; it is not a typical human pathogen.

Myxopapillary Ependymoma

Myxopapillary ependymoma is a usually slow-growing spinal tumor arising from ependymal cells, commonly in the conus or filum terminale.

Myxosarcoma

Myxosarcoma is a rare malignant soft-tissue tumor containing abundant gelatinous or myxoid material.

Alternate Names:

It may cause vaginal bleeding, cramping, and an open cervix and requires clinical assessment. Incomplete abortion; incomplete pregnancy loss.

Mallet Toe

A flexion deformity of the distal interphalangeal joint, causing the end of a lesser toe to bend downward. It may be flexible or rigid and can cause pain, rubbing, corns, or difficulty wearing shoes; it differs anatomically from hammertoe and claw toe.

Marburg Virus

A virus that can cause severe viral hemorrhagic fever, with fever, weakness, vomiting, diarrhea, bleeding, and shock. It spreads through contact with infected body fluids and requires strict infection control.

Marden-Walker Syndrome

A rare inherited disorder characterized by a distinctive facial appearance, low muscle tone, limited joint movement, poor growth, and developmental delay. Care is supportive and involves several specialties.

Marijuana/Cannabis

Cannabis is a plant containing active chemicals such as THC and cannabidiol. THC can affect memory, coordination, mood, and judgment; cannabis may also interact with medicines and can cause dependence.

Maternal Health

The physical and mental health of a person during pregnancy, childbirth, and the postpartum period. Care includes prevention, antenatal monitoring, safe delivery, and treatment of complications.

Maxillofacial

Relating to the jaw, face, mouth, and associated bones and soft tissues. Maxillofacial care may include treatment of injuries, congenital differences, infections, and tumors.

Mayer-Rokitansky-Küster-Hauser**Syndrome**

A congenital condition in which the uterus and upper vagina are absent or underdeveloped, while the ovaries and chromosomes are usually typical. It can cause absent periods and requires individualized gynecologic and emotional support.

Meal Timing

The schedule and spacing of meals and snacks during the day. Timing can influence blood glucose, appetite, sleep, and medication effects, but recommendations depend on health needs and lifestyle.

Meat

Animal muscle tissue eaten as food, providing protein, iron, zinc, and other nutrients. Health effects depend on portion size, preparation, and whether the meat is processed; excessive processed meat intake is associated with health risks.

Mechanobiology

The study of how physical forces, such as stretch, pressure, and flow, affect cells, tissues, and disease. It helps explain processes including bone remodeling, wound healing, and cancer invasion.

Meckel's Diverticulum

A small pouch present from birth in the small intestine, left over from an embryonic connection. It is often harmless but can cause bleeding, inflammation, obstruction, or intussusception.

MECP2 Duplication Syndrome

A rare X-linked genetic disorder caused by extra copies or increased dosage of the MECP2 gene. It often causes developmental delay, low muscle tone, seizures, recurrent infections, and breathing or feeding problems, especially in boys.

Medical Devices

Tools, implants, equipment, or software intended to diagnose, prevent, monitor, or treat disease without working mainly through a drug effect. Examples include pacemakers, imaging devices, prostheses, and test kits.

Medical Imaging

Methods that create pictures of body structures or function, including X-ray, ultrasound, computed tomography, magnetic resonance imaging, and nuclear medicine. The best test depends on the clinical question and possible risks.

Medical Research

Systematic study of health, disease, prevention, diagnosis, and treatment. It includes laboratory, observational, and clinical research and should follow ethical review and informed-consent requirements when people are involved.

Medical Tourism

Traveling to another region or country to receive medical or dental care. It may involve lower cost or shorter waits but carries risks related to quality, infection, follow-up, complications, and travel after surgery.

Medicine

A substance or treatment used to prevent, diagnose, relieve, or treat disease. Medicines may be prescription, over-the-counter, biological, or traditional, and all can have benefits, risks, and interactions.

Mediterranean Diet

An eating pattern rich in vegetables, fruits, beans, whole grains, nuts, olive oil, and fish, with less red and processed meat and added sugar. It can support cardiovascular health as part of an overall balanced diet.

MEK Inhibitor

A targeted medicine that blocks MEK proteins in the MAPK signaling pathway, which can slow growth of some cancers with pathway changes. Side effects vary and may include rash, diarrhea, heart effects, and eye problems.

Melanocytic Nevi

Common moles formed by collections of pigment-producing melanocytes. Most are harmless, but a mole that changes in size, shape, color, or symptoms should be assessed for possible melanoma.

Meniere's Disease

An inner-ear disorder causing episodes of vertigo, fluctuating hearing loss, tinnitus, and a feeling of fullness in one ear. Treatment aims to reduce attacks and protect hearing.

Men's Health

Healthcare addressing conditions and risks that affect men, including heart disease, cancers, sexual and reproductive health, mental health, and preventive screening. Needs vary with age, anatomy, genetics, and lifestyle.

MERS-CoV

Middle East respiratory syndrome coronavirus, the virus that causes MERS. Infection can cause fever and respiratory illness ranging from mild disease to severe pneumonia, especially in people with other health conditions.

Microdosing

Taking very small amounts of a substance, often a psychoactive drug, with the intention of producing subtle effects. Benefits and safety are not established for many substances, and legal, interaction, and toxicity risks remain.

Microplastics

Very small plastic particles, generally less than five millimeters across, found in the environment and sometimes in food, water, and air. Human health effects are still being studied.

Mikulicz Syndrome

A historical term for symmetrical, persistent swelling of the tear and salivary glands, often associated with IgG4-related disease or other autoimmune conditions. The underlying cause should be evaluated rather than assumed.

Minerals

Naturally occurring elements needed by the body for bones, nerves, muscles, blood formation, fluid balance, and other functions. They include calcium, iron, magnesium, potassium, sodium, and zinc; both deficiency and excess can be harmful.

Minimally Invasive Spine Surgery

Spine surgery performed through small incisions using specialized instruments, often reducing muscle disruption and recovery time. It still carries risks such as nerve injury, infection, bleeding, and persistent symptoms.

Mites

Tiny arthropods related to ticks and spiders. Some live harmlessly on skin, while others cause allergy, scabies, or irritation; treatment depends on the species and condition.

Moringa oleifera

A tree whose leaves, seeds, and pods are used as food or in supplements. It provides nutrients, but claims that it treats disease are not well established and supplements can interact with medicines.

Morton's Neuroma

Thickening and irritation of tissue around a nerve, usually between the third and fourth toes. It causes burning forefoot pain or a feeling of a pebble in the shoe and may improve with wider footwear.

Morton's Toe

A foot shape in which the second toe is longer than the big toe, often because the first metatarsal is relatively short. It is usually a normal variation but may contribute to pressure or forefoot pain.

Mucinoses

A group of disorders in which excessive mucin, a gel-like substance in connective tissue, builds up in the skin or other tissues. Causes may be primary, metabolic, autoimmune, or associated with another disease.

Muckle-Wells Syndrome

An inherited cryopyrin-associated autoinflammatory syndrome causing recurrent fever, rash, joint or muscle pain, and progressive sensorineural hearing loss. Anti-inflammatory treatment can reduce inflammation and prevent complications.

Multiomics

The combined study of several biological data types, such as genomics, transcriptomics, proteomics, and metabolomics. Integrating these layers can help investigate disease mechanisms and support precision medicine.

Mushroom

The visible fruiting body of a fungus. Edible mushrooms can provide nutrients, but wild mushrooms may be poisonous or confused with safe species; uncertain mushrooms should not be eaten.

Mycobacterial Infection

Infection caused by bacteria in the genus *Mycobacterium*. It includes tuberculosis, leprosy, and nontuberculous mycobacterial disease; symptoms and treatment depend on the species and affected organs.

MZL

Alternate index label; see *Marginal zone lymphoma*.

N

N-Acetylcysteine

An antidote used mainly for acetaminophen overdose. It helps protect the liver and may still help when treatment starts late or liver injury has already begun.

Na (Sodium)

A clinical or physiological concept involving na (sodium). Its meaning and clinical importance depend on the relevant body system and context.

Na⁺/K⁺ ATPase

A cell-membrane pump that moves sodium out of cells and potassium into cells. It helps maintain the electrical balance needed for nerves, muscles, and other cell functions.

Nabothian Cyst

A benign mucus-retention cyst of the uterine cervix caused by obstruction of an endocervical gland. It is common, usually asymptomatic, and generally requires no treatment.

Nabumetone

A nonsteroidal anti-inflammatory drug used to reduce pain and inflammation in selected musculoskeletal disorders.

NAD⁺

Nicotinamide adenine dinucleotide in its oxidized form, a coenzyme that carries electrons in cellular energy metabolism.

NAD⁺ (Nicotinamide Adenine

Dinucleotide)

A helper molecule that carries energy during the chemical reactions cells use to turn food into energy. It changes between NAD⁺ and NADH forms.

Alternate Names:

Nicotinamide Adenine Dinucleotide

Nadir

The lowest point of something. After chemotherapy, it often refers to the time when the white blood cell count is lowest and infection risk is highest.

Naegle Rule

A way to estimate a baby's due date by adding 7 days and about 9 months to the first day of the last menstrual period. It is most accurate when menstrual cycles are regular.

Naegleria Fowleri

A free-living amoeba that can cause primary amoebic meningoencephalitis after contaminated water enters the nose. The infection is rare but rapidly progressive, with fever, severe headache, meningism, altered consciousness, seizures, and high mortality.

Naegleria Infection

A rare infection caused by the free-living amoeba *Naegleria fowleri*, usually acquired when contaminated warm fresh water enters the nose. It can cause rapidly progressive primary amoebic meningoencephalitis with severe headache, fever, vomiting, confusion, seizures, and coma. It is a medical emergency.

Naevus

The British spelling of nevus, a usually benign localized skin or mucosal lesion such as a mole.

NAFLD

Alternate index label; see *Fatty liver disease*.

Nail

A protective plate of hardened keratin covering the dorsal surface of the distal phalanges of the fingers and toes.

Nail Abnormalities

Changes in nail color, shape, thickness, texture, or attachment caused by trauma, infection, inflammatory disease, systemic illness, medication, or congenital conditions.

Nail Care

A medical procedure, treatment, device, or care topic related to nail care; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Nail Care For Newborns

A medical procedure, treatment, device, or care topic related to nail care for newborns; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Nail Changes

Alterations in nail color, shape, texture, or attachment that may result from local injury, skin disease, infection, medicines, nutritional deficiency, or systemic illness. Their significance depends on the pattern and other clinical findings.

Nail Clubbing

Abnormal enlargement of the distal digit with increased nail curvature and loss of the normal nail-fold angle. It may be familial or associated with pulmonary, cardiovascular, gastrointestinal, or malignant disease and should be interpreted with the clinical context.

Nail Fungus

A fungal infection of a fingernail or toenail causing thickening, discoloration, brittleness, distortion, or separation from the nail bed.

Alternate Names:

Toenail Fungus

Nail Furrows

Nail furrows are grooves or depressions running across or along a nail; transverse Beau lines can follow systemic illness or trauma, while longitudinal ridges are often age-related but may reflect local or systemic disease.

Nail Infection

Infection of the nail or surrounding tissue, commonly caused by fungi or bacteria. It may cause thickening, discoloration, separation of the nail, pain, swelling, or drainage; diabetes and poor circulation increase the risk of complications.

Nail Injuries

Trauma to the nail plate, nail bed, nail folds, or fingertip that may cause bruising, laceration, avulsion, fracture, or later nail-growth abnormalities.

Nail Pits

Small, sharply circumscribed depressions in the nail plate caused by abnormal focal keratinization of the proximal nail matrix. They are classically associated with psoriasis but may also occur in alopecia areata, eczema, lichen planus, or other nail disorders.

Nail Polish Poisoning

Nail polish poisoning involves toxic exposure to nail polish poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Nail Psoriasis

Nail psoriasis affects 50 percent of patients with psoriasis and 80 percent with nail involvement having joint disease. Features include pitting (most common), onycholysis (nail separation), oil drop sign (salmon patch), subungual hyperkeratosis, and nail

plate crumbling. Nail psoriasis is associated with psoriatic arthritis.

Nail-Patella Syndrome

A rare inherited disorder, usually caused by a change in the *LMX1B* gene, affecting the fingernails, kneecaps, elbows, and pelvis. The kneecaps may be small, absent, or dislocated, and some people develop glaucoma or kidney disease. It is usually inherited in an autosomal-dominant pattern.

Nalbuphine

An opioid analgesic with mixed agonist-antagonist activity, used for moderate to severe pain.

Nalidixic Acid

An older quinolone antibacterial formerly used for some urinary-tract infections.

Naloxone

A medicine that blocks opioids and can quickly restore breathing during an opioid overdose. It comes as a nasal spray or injection. Emergency help is still needed because its effect may wear off before the opioid does.

Naltrexone

A longer-acting opioid antagonist used in selected treatment of opioid or alcohol use disorder.

Nanism

An older term for dwarfism or markedly short stature; modern usage specifies the underlying condition.

Nanocolloid

Tc-99m labeled colloidal particles for lymphatic imaging. Particle size 10-100 nm. Used for sentinel node detection.

Nanomedicine

The use of very small materials or devices in medicine to help diagnose, prevent, monitor, or treat disease. Examples include nanoparticle drug carriers, imaging agents, biosensors, and some vac-

cine or cancer treatments; their effects and safety depend on the material, size, dose, and how the body handles them.

Nanosomia

Abnormally small body size or stature; the term is uncommon and context-dependent.

Nantenine

An alkaloid found in *Nandina domestica*; it has pharmacologic activity but is not a routine clinical medicine.

Napelline

A toxic diterpenoid alkaloid related to aconite, capable of causing neurologic and cardiac poisoning.

Naphazoline

A topical alpha-adrenergic agonist used as a nasal decongestant or ocular vasoconstrictor; prolonged use can worsen congestion.

Naphthalene Poisoning

Naphthalene poisoning involves toxic exposure to naphthalene poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Naproxen

A nonsteroidal anti-inflammatory drug used for pain, fever, and inflammation.

Naproxen Sodium Overdose

Naproxen sodium overdose involves toxic exposure to naproxen sodium overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Narcissism

Excessive self-focus or need for admiration; clinically significant persistent patterns may occur in narcissistic personality disorder.

Narcissistic Personality Disorder

A pattern of grandiosity, need for admiration, and

lack of empathy.

Alternate Names:

NPD (Narcissistic Personality Disorder) Personality Disorder, Narcissistic

Narcissistic Personality Disorder

Alternate index label for Narcissistic Personality Disorder.

Narcolepsy

Narcolepsy is a chronic sleep-wake disorder with excessive daytime sleepiness and, in some people, cataplexy, sleep paralysis, and hypnagogic hallucinations. sleep attacks, with or without cataplexy (sudden bilateral loss of muscle tone triggered by strong emotions). Narcolepsy type 1: with cataplexy, caused by loss of hypocretin/orexin neurons in the hypothalamus.

Alternate Names:

Excessive Daytime Sleepiness Sleepiness, Daytime

Narcotic

A historical term for opioid drugs and, in legal usage, certain controlled substances; meaning varies by context.

NARP Syndrome

A maternally inherited mitochondrial disorder caused by a heteroplasmic point mutation at nucleotide position 8993 of mitochondrial DNA (most commonly *m.8993T>G* or *m.8993T>C*) in the *MT-ATP6* gene, which encodes subunit 6 of mitochondrial ATP synthase (Complex V). The clinical acronym reflects its core manifestations: Neurogenic muscle weakness, Ataxia, and Retinitis Pigmentosa. Typically manifests with proximal sensory neuropathy, progressive cerebellar ataxia, pigmentary retinal retinopathy, developmental delay, and dementia, corresponding to moderate mutant heteroplasmy levels (70–90%), whereas higher heteroplasmy (> 90%) results in the more severe, fatal maternally inherited Leigh syndrome.

Alternate Names:

Neurogenic Muscle Weakness, Ataxia, and Retinitis Pigmentosa Syndrome

Narrow Angle Glaucoma

A condition in which the drainage area inside the eye is unusually narrow, raising the risk of a sudden rise in eye pressure. Severe eye pain, blurred vision, halos, nausea, or vomiting requires emergency care.

Narrow Therapeutic Index

A medicine for which the helpful dose is close to the harmful dose. It requires careful dosing and sometimes blood tests to avoid toxicity.

Narrow-Complex Tachycardia

A fast heart rhythm that usually starts in the upper chambers of the heart. The electrical signals travel through the usual pathways, producing narrow beats on an ECG.

Narrowband UVB Phototherapy

A treatment that uses carefully measured ultraviolet light for conditions such as psoriasis, vitiligo, and eczema. Treatment requires eye protection and monitoring of the skin.

Nasal

Pertaining to the nose (*extitnasus*) or the internal nasal cavity, the primary upper respiratory airway responsible for warming, humidifying, and filtering inspired air, as well as providing olfaction and speech resonance. Divided by the midline osteo-cartilaginous nasal septum and flanked laterally by three scroll-like turbinates (conchae) that increase mucosal surface area. Houses the Kiesselbach plexus (Little area) on the anterior septum, the site of over 90% of anterior epistaxis episodes. Serves as a direct route for topical and systemic intranasal drug delivery (e.g., corticosteroids for allergic rhinitis, naloxone for acute opioid overdose).

Nasal Cannula

A device with two small prongs placed in the nostrils to deliver supplemental oxygen. The flow rate is adjusted to the patient's needs and the device used.

Nasal Cavity

The paired space inside the nose, extending from the nostrils to the nasopharynx. It warms, humidifies,

and filters inspired air and contains the receptors responsible for smell.

Nasal Congestion

A blocked or stuffy nose caused by swelling inside the nasal passages. It can occur with colds, allergies, sinus disease, irritants, or structural problems.

Nasal Congestion And Rhinorrhea

Nasal obstruction or stuffiness together with a runny nose, commonly caused by viral infection, allergic or nonallergic rhinitis, sinus disease, irritants, or structural blockage. Persistent unilateral symptoms, recurrent bleeding, fever, facial swelling, or breathing difficulty requires evaluation.

Nasal Corticosteroid Sprays

Nasal corticosteroid sprays reduce mucosal inflammation and congestion in allergic rhinitis, nasal polyps, and some chronic sinus disorders; correct direction away from the septum limits irritation and nosebleeds.

Nasal Endoscopy

An examination in which a thin camera is used to look inside the nose and upper throat. It can help find swelling, polyps, a foreign object, bleeding, or a growth.

Nasal Flaring

Widening and outward movement of the nostrils during breathing. It is a visible sign of increased work of breathing, particularly in infants and children, and may accompany airway obstruction, bronchiolitis, pneumonia, asthma, or severe systemic illness.

Nasal Implant

A device placed in or near the nose to support nasal structures or improve airflow. Its purpose depends on the device and condition.

Nasal Mucosal Biopsy

Removal of a small sample of nasal lining for microscopic, immunologic, or microbiologic examination of suspected inflammatory, infectious, neoplastic, or

infiltrative disease.

Nasal Obstruction

Blocked airflow through one or both nasal passages. Causes include congestion, allergy, infection, a deviated septum, polyps, trauma, or a mass. Persistent one-sided obstruction or bleeding requires medical evaluation.

Nasal Passage

The nasal passages are air channels inside the nose that warm, humidify, filter, and conduct air toward the throat and lungs.

Nasal Polyps

Soft, usually noncancerous growths in the lining of the nose or sinuses. They can cause a blocked nose, runny nose, and reduced sense of smell.

Alternate Names:

Polyps, Nasal

Nasal Septal Hematoma

A collection of blood inside the wall dividing the nostrils, usually after a nose injury. It can block breathing and damage the nose if it is not drained promptly.

Nasal Septum

The wall that divides the nasal cavity into right and left sides. It consists mainly of cartilage in front and bone behind and helps support the nose and direct airflow.

Nasal Septum Perforation

A hole through the cartilage or bone separating the nasal passages, which may cause crusting, nosebleeds, whistling, or obstruction and can result from trauma, surgery, intranasal drugs, or inflammatory disease.

Nasal Stent

Support for nasal septum/airway. Materials: silicone, metal. Indications: septal hematoma, post-septoplasty support, nasal valve collapse. Complications: crusting, infection, pressure necrosis.

Nasal Vestibulitis

Inflammation or infection of the nasal vestibule, commonly caused by *Staphylococcus* bacteria and producing tenderness, crusting, redness, or small pustules near the nostrils.

Nasogastric Feeding Tube

A flexible tube passed through the nose into the stomach to deliver enteral nutrition or medicines, or to decompress or aspirate the stomach.

Nasogastric Tube

A tube passed through the nose into the stomach to remove contents or deliver nutrition, fluids, or medicines when clinically indicated.

Nasolabial Folds

Skin creases running from the sides of the nose toward the corners of the mouth.

Nasopharyngeal Airway

A soft tube inserted through the nose to maintain a passage between the nares and pharynx. It may be useful in a spontaneously breathing patient with partial upper-airway obstruction but is relatively contraindicated in suspected basal skull fracture or significant nasal trauma.

Nasopharyngeal Carcinoma

A malignancy arising from the epithelial lining of the nasopharynx, and it has a unique geographical and ethnic distribution, with highest incidence in southern China, Southeast Asia, and North Africa.

Alternate Names:

Cancer, Nasopharyngeal

Nasopharyngeal Culture

A laboratory culture of a specimen from the nasopharynx used to identify selected respiratory pathogens; molecular tests are often more sensitive for many organisms.

Nasopharynx

The upper part of the pharynx behind the nose, above the soft palate and connected to the auditory

tubes.

Natal Cleft

The groove between the buttocks, also called the intergluteal or sacral cleft.

Natal Teeth

Teeth present at birth, most often involving the lower central incisors. They may be loose, interfere with feeding, or injure the infant's tongue and require dental assessment.

National Formulary

A clinical or physiological concept involving national formulary. Its meaning and clinical importance depend on the relevant body system and context.

Natriuresis

The physiological or pharmacological excretion of sodium in the urine. Driven by neurohormonal mediators—most notably atrial natriuretic peptide and B-type natriuretic peptide, released from cardiac atria and ventricles in response to myocardial stretch and intravascular volume expansion—which inhibit renal tubular sodium reabsorption in the collecting ducts and suppress renin and aldosterone secretion. Pathologic pressure natriuresis occurs with elevated renal perfusion pressure; pharmacologically induced by diuretic agents (loop, thiazide, and potassium-sparing diuretics) to treat fluid overload and hypertension.

Natriuretic

Pertaining to, stimulating, or promoting the excretion of sodium ions in the urine (natriuresis). Refers to endogenous peptide hormones (atrial natriuretic peptide [ANP], B-type natriuretic peptide [BNP], C-type natriuretic peptide [CNP], and urodilatin) that promote urinary sodium and water loss while reducing systemic vascular resistance, as well as pharmacological diuretic medications. In clinical diagnostics, elevated serum concentrations of BNP or N-terminal pro-BNP (NT-proBNP) serve as primary biomarkers for diagnosing heart failure and monitoring hemodynamic congestion.

Natural Immunity

A clinical or physiological concept involving natural immunity. Its meaning and clinical importance depend on the relevant body system and context.

Natural Killer Cell

An immune cell that can quickly destroy virus-infected or abnormal cells without needing prior exposure to a specific germ.

Natural Killer Cells

Immune cells that destroy infected or abnormal cells without prior exposure to a specific antigen.

Alternate Names:

NK cells

Natural Short Sleeper

A natural short sleeper is a person who functions well with substantially less sleep than usual without daytime sleepiness, often because of an inherited sleep pattern.

Naturopathy

Naturopathy is a system of complementary care emphasizing lifestyle and natural products; evidence and safety vary, and proven medical treatment should not be delayed.

Nausea

An unpleasant sensation of an impending need to vomit, often accompanied by autonomic symptoms such as salivation, sweating, pallor, or dizziness. Common causes include gastrointestinal illness, pregnancy, medication effects, migraine, vestibular disorders, metabolic disease, and serious abdominal or neurologic conditions.

Nausea And Acupressure

Acupressure may help some people with nausea by applying pressure to selected points, but evidence varies and serious or persistent nausea requires evaluation.

Nausea And Vomiting

Nausea is the urge to vomit; vomiting is forceful

emptying of stomach contents. Causes include infection, medicines, pregnancy, migraine, obstruction, and other illnesses.

Nausea And Vomiting During Early Pregnancy

Nausea and vomiting are common in early pregnancy, but persistent symptoms with inability to keep fluids down, weight loss, dehydration, abdominal pain, fever, blood, or altered mental status may indicate hyperemesis gravidarum or another condition and require medical evaluation.

Nausea And Vomiting – Adults

Nausea and vomiting in adults can result from gastrointestinal disease, infection, medication, pregnancy, metabolic illness, neurologic disease, or obstruction; dehydration and alarm features guide urgency.

Navel

The navel, or umbilicus, is the scar left after the umbilical cord separates and marks the former connection between fetus and placenta.

Navicular

A boat-shaped bone in the middle of the foot that helps support the arch. Injury to it can cause foot pain and may heal slowly because part of the bone has a limited blood supply.

NCS

NCS commonly means nerve-conduction study, which measures electrical signals in peripheral nerves to evaluate neuropathy, nerve compression, or other disorders.

NDM-1

An enzyme made by some bacteria that makes them resistant to many important antibiotics. Infections caused by these bacteria can be difficult to treat and require laboratory testing and careful infection control.

Nearsightedness

Nearsightedness, or myopia, occurs when light focuses in front of the retina, causing distant blur that is corrected with lenses, contact lenses, or selected procedures. light focuses in front of the retina. It is corrected with diverging lenses, contact lenses, or refractive surgery.

Alternate Names:

myopia, in which distant objects appear blurred because.

Nebulizer

A device that converts a liquid medicine into an inhalable aerosol, using a jet compressor, ultrasonic mechanism, or vibrating mesh. Medication is delivered through a mouthpiece or face mask and may include a bronchodilator, corticosteroid, antibiotic, or saline solution when prescribed for the relevant condition. Nebulizers can be useful when a person cannot coordinate an inhaler, is very young, or is severely breathless, but a properly used inhaler with a spacer may be equally effective for many medicines. Treatment choice depends on the medication, device, patient, and clinical situation. Follow the prescribed dose and treatment time, and clean and dry the device according to the manufacturer's and medication instructions to reduce contamination.

Alternate Names:

Nebuliser

NEC

Alternate index label; see *Neuroendocrine tumors*.

Necator

A genus of hookworms that inhabit the small intestine and can cause iron-deficiency anemia.

Necator Americanus

A hookworm species that infects humans through skin penetration by larvae and causes intestinal blood loss.

Neck

The neck connects the head to the trunk and contains the cervical spine, airway, esophagus, thyroid, vessels, nerves, muscles, and lymph nodes.

Neck And Back Pain

Pain in the cervical, thoracic, or lumbar spine and surrounding tissues, commonly caused by strain, degenerative disease, disc problems, or trauma. Weakness, numbness, gait difficulty, bowel or bladder changes, fever, cancer history, or major trauma requires urgent assessment.

Neck Cancer

Human papillomavirus, particularly HPV-16, is an increasingly important etiological factor in head and neck squamous cell carcinoma, particularly oropharyngeal cancer, and it is responsible for the rising incidence of oropharyngeal cancer in younger patients without traditional risk factors of tobacco and alcohol use.

Neck Dissection

Surgical removal of cervical lymph nodes and sometimes surrounding tissues to treat or stage head and neck cancer.

Neck Lump

A localized swelling or mass in the neck caused by enlarged lymph nodes, thyroid or salivary disease, cyst, infection, or tumor; persistent or concerning masses require evaluation.

Neck Mass

A lump or swelling in the neck caused by an enlarged lymph node, congenital cyst, thyroid or salivary-gland lesion, infection, or tumor. A persistent, enlarging, firm, fixed, or unexplained mass—especially in an adult—requires prompt medical evaluation.

Neck Pain

Pain or stiffness in the cervical region, commonly caused by muscle strain, degenerative disease, poor posture, or injury. Severe pain after trauma or pain with weakness, numbness, fever, or neurologic deficits requires prompt assessment.

Alternate Names:

Pain, neck

Alternate Names:

Cervical Pain Cervical Pain (Neck Pain) Pain, Neck

Neck Pain And Dizziness

Neck pain with dizziness may reflect muscle strain, migraine, inner-ear disease, medication, blood-pressure change, or less commonly vascular or neurologic disease. Sudden severe symptoms, weakness, speech or vision change, fainting, or inability to walk require emergency care.

Neck Pain Or Spasms - Self Care

Self-care for uncomplicated neck pain or muscle spasm may include gentle movement, heat or cold, posture changes, and appropriate over-the-counter pain relief; weakness, numbness, fever, trauma, or severe worsening requires medical assessment.

Neck Pain: Symptom

Pain or stiffness in the neck caused by muscle strain, injury, arthritis, disc disease, nerve compression, or other conditions.

Neck X-Ray

Plain radiographic imaging of the cervical spine or neck soft tissues used to evaluate alignment, fractures, degenerative change, foreign bodies, or selected airway abnormalities.

Neck, Chronic Stiff

Chronic neck stiffness may result from muscle strain, arthritis, disc disease, inflammatory illness, or neurologic problems; weakness, fever, trauma, or severe headache needs assessment.

Necrobiosis Lipoidica

A chronic inflammatory skin disorder characterized by yellow-brown, atrophic plaques, usually on the shins. It is associated with diabetes but can occur without diabetes.

Necrobiosis Lipoidica Diabeticorum

A chronic inflammatory skin disorder producing yellow-brown atrophic plaques with a raised border, most often on the shins and associated with diabetes, although it can occur without diabetes.

Necrolytic Migratory Erythema

A recurrent, erosive, erythematous eruption that often affects periorificial and intertriginous skin. It is classically associated with glucagonoma but may have other causes, so evaluation should consider nutritional, hepatic, pancreatic, and metabolic disease.

Necropsy

A post-mortem examination of an animal or human body to determine disease or cause of death.

Necroptosis

A regulated, programmed form of necrosis that shares features of both classical necrosis and apoptosis, serving as a backup cell death mechanism when apoptosis is inhibited. It is particularly important during viral infections, as many viruses encode proteins that block caspase-mediated apoptosis to ensure their own replication.

Necrosis

Necrosis is death of cells or tissue within a living body caused by ischemia, infection, toxins, trauma, inflammation, or other injury.

Necrotizing Anterior Scleritis

A severe, sight-threatening form of scleral inflammation characterised by ischaemic necrosis of the sclera with visible underlying uvea through thinned, grey-white scleral patches.

Necrotizing Enterocolitis

An acquired inflammatory disease that can cause intestinal necrosis, primarily affecting premature infants. Risk factors include prematurity, enteral feeding, and bacterial colonization. It may cause abdominal distension, bloody stools, bilious vomiting, and feeding intolerance. Pneumatosis intestinalis on imaging strongly supports the diagnosis but must be interpreted with the clinical findings.

Necrotizing Fasciitis

A life-threatening soft tissue infection characterized by rapid necrosis of the subcutaneous fascia and subcutaneous tissue, with relative sparing of

the overlying skin in early stages. It is a surgical emergency requiring immediate wide surgical debridement and broad-spectrum antibiotics.

Necrotizing Granuloma

A granulomatous inflammatory lesion containing central tissue necrosis, commonly associated with infections such as tuberculosis or fungal disease but requiring clinical and histologic correlation.

Necrotizing Infections

Severe infections that cause tissue death through microbial invasion, toxin production, thrombosis, or intense inflammation. Examples include necrotizing fasciitis, necrotizing pneumonia, and necrotizing enterocolitis; rapidly progressive pain, swelling, skin changes, systemic toxicity, or organ dysfunction requires emergency evaluation and source control.

Necrotizing Pneumonia

Severe pneumonia in which infection causes necrosis and cavitation of lung tissue, often accompanied by sepsis, respiratory failure, or abscess formation.

Necrotizing Soft Tissue Infection

A rapidly progressive infection of fascia, subcutaneous tissue, or muscle causing severe pain, swelling, systemic toxicity, and tissue necrosis. It is a surgical emergency requiring immediate assessment, broad antimicrobial therapy, and aggressive debridement.

Necrotizing Vasculitis

Inflammation of blood-vessel walls causing fibrinoid necrosis and potential vessel narrowing, thrombosis, hemorrhage, ischemia, or organ injury.

Needle

Hollow metal tube for fluid withdrawal or injection. Gauge: larger number = smaller diameter. Common gauges: 18G (blood draw), 22G (IV), 25-27G (injection).

Needle Biopsy

Removal of cells, fluid, or a tissue sample through a needle for cytologic or histopathologic examina-

tion. Fine-needle aspiration primarily collects cells, whereas core biopsy collects tissue architecture.

Needle Driver

A surgical instrument with gripping jaws and handles used to hold and guide a suture needle through tissue. Its design helps control the needle while protecting the operator's fingers.

Needle Driver (Perineal)

A hand instrument used to hold and guide a suture needle during a perineal repair.

Alternate Names:

Perineal

Needle Driver (Vascular)

A hand instrument used to hold and guide a suture needle during vascular repair.

Alternate Names:

Vascular

Needle Holder

A surgical instrument with jaws used to grasp and guide a suture needle during tissue repair.

Needlestick Injury

A puncture from a needle or sharp object that may expose someone to blood or body fluids; wash the area, report it promptly, and obtain urgent assessment for infection testing and possible HIV or hepatitis post-exposure treatment.

Negative Feedback

A regulatory mechanism in which the output of a system feeds back to decrease or reverse the initiating stimulus, maintaining homeostasis around a set point.

Negative Predictive Value

The chance that a person with a negative test result truly does not have the condition being tested for. This chance depends on how common the condition is and on the person's initial risk.

Negative Pressure Ventilation

Breathing support that uses pressure around the chest to help the lungs expand, instead of pushing air directly through the airway. It is used rarely, including for some neuromuscular conditions.

Negative Symptoms

Reduced normal abilities such as emotional expression, speech, motivation, pleasure, or social interest. They can occur in schizophrenia and other mental-health or neurologic conditions.

Negative-Strand RNA Virus

A virus whose genetic material must first be copied into a readable form before the virus can make its proteins inside a cell.

Neglect

A form of child maltreatment: the failure to provide for a child's basic needs—physical (food, clothing, shelter, medical care), educational, or emotional—causing harm or risk of harm. Features: failure to thrive, poor hygiene, untreated illness/injury, missed healthcare appointments, inadequate supervision, and developmental delay.

Neglect Syndrome

Hemispatial neglect (unilateral neglect, hemineglect) is a neurological condition characterized by failure to attend to, respond to, or orient toward stimuli on the side of space contralateral to the brain lesion, in the absence of primary sensory or motor deficits sufficient to explain the neglect.

Neisseria Gonorrhoeae

A gram-negative diplococcus that causes gonorrhea, a sexually transmitted infection. The organism has developed resistance to many antibiotics including fluoroquinolones and macrolides.

Neisseria Meningitidis

A gram-negative diplococcus that causes meningitis and meningococcemia. The organism has a polysaccharide capsule that is the target of conjugate vaccines. Serogroups A, B, C, W, X, and Y cause most disease. Meningitis presents with fever,

headache, neck stiffness, and altered mental status.

Nelson Syndrome

Enlargement and hypersecretion of an adrenocorticotrophic-hormone-producing pituitary tumour after bilateral adrenalectomy, usually for Cushing disease. It may cause rapid skin hyperpigmentation, headache, visual-field loss, and other effects of an expanding sellar mass.

Nemaline Myopathy

A genetically heterogeneous congenital myopathy characterized histopathologically by the presence of numerous abnormal, thread-like or rod-shaped structures (nemaline rods) composed of α -actinin and actin within muscle fibers on modified Gömöri trichrome staining. Caused by mutations in thin-filament and sarcomeric structural genes, most frequently nebulin (*NEB*) and skeletal muscle α -actin (*ACTA1*). Clinically ranges from severe neonatal forms with profound hypotonia and respiratory failure to mild adult-onset weakness, typically presenting with infantile hypotonia, symmetrical proximal muscle weakness, facial weakness with an elongated “tent-shaped” upper lip, high-arched palate, and early respiratory muscle compromise.

Alternate Names:

Rod Body Myopathy; Nemaline Rod Myopathy

Neoadjuvant Therapy

Treatment before primary treatment to shrink tumor. Examples: chemotherapy before surgery.

Neonatal

Relating to a newborn, especially during the first 28 days after birth.

Neonatal Abstinence Syndrome

A withdrawal syndrome in neonates following in utero exposure to opioids (most common) or other substances (benzodiazepines, SSRIs, alcohol). Onset within 24-72 hours of birth (varies by half-life of substance).

Neonatal Cephalohematoma

A collection of blood beneath the periosteum of a

newborn's skull, usually caused by birth trauma. It is limited by skull sutures and generally resolves over time, although it requires assessment for associated injury or jaundice.

Neonatal Conjunctivitis

Inflammation of the conjunctiva during the first month of life, caused by chemical irritation, bacteria, or viruses acquired during delivery. Purulent discharge, eyelid swelling, and corneal involvement require urgent evaluation.

Neonatal Cystic Fibrosis Screening Test

A newborn screening test, usually measuring immunoreactive trypsinogen with reflex DNA or sweat testing, used to identify infants at increased risk for cystic fibrosis.

Neonatal Diabetes Mellitus

Diabetes diagnosed within the first six months of life. Can be transient or permanent. Transient neonatal diabetes mellitus is caused by abnormalities at chromosome 6q24 and usually resolves but may relapse in adolescence.

Neonatal Herpes Simplex

Herpes simplex virus infection in the first 28 days of life, usually HSV-2 from maternal genital infection. Three forms: skin, eye, and mouth disease; CNS disease; and disseminated disease. Disseminated form mimics sepsis with high mortality. Diagnosis by viral PCR, culture, or Tzanck smear. Treatment: IV acyclovir for 14-21 days.

Neonatal Herpes Simplex Virus

A severe neonatal infection caused by herpes simplex virus, typically acquired during passage through the birth canal, presenting within the first month of life as skin, eye, and mouth disease, central nervous system disease, or disseminated disease with multiorgan involvement.

Neonatal Hyperbilirubinemia

Elevated unconjugated bilirubin levels in newborns exceeding 5 mg per deciliter, potentially causing jaundice and, if severe, kernicterus with neurological

damage. Phototherapy is the standard treatment.

Neonatal Hypocalcemia

Low serum calcium in a newborn, which may cause jitteriness, poor feeding, hypotonia, apnea, or seizures. Causes include prematurity, maternal diabetes, birth asphyxia, and disorders of parathyroid function.

Neonatal Hypoglycemia

Blood glucose less than 40-45 mg/dL in term infants or less than 25 mg/dL in preterm infants. Risk factors include prematurity, small for gestational age, large for gestational age, and maternal diabetes. Presents with jitteriness, lethargy, poor feeding, and seizures. Treatment: early feeding, IV dextrose infusion, and monitoring.

Neonatal Hypothermia

Core body temperature below 36.5 degrees Celsius in a newborn. Classified as mild (36-36.4), moderate (32-35.9), or severe (below 32). Occurs due to rapid heat loss through evaporation, convection, conduction, and radiation. Prevention: skin-to-skin contact, drying, warm environment, and delayed bathing.

Neonatal Hypothyroidism

Insufficient thyroid hormone production in a newborn, which can impair brain development and growth if untreated; newborn screening enables early diagnosis and treatment.

Neonatal Hypoxic-Ischemic Encephalopathy

Brain dysfunction in a newborn caused by inadequate oxygenation and/or cerebral blood flow around the time of birth. Moderate or severe HIE may produce altered consciousness, abnormal tone, seizures, and multiorgan injury; selected term or near-term infants may benefit from early therapeutic hypothermia.

Neonatal Infections

Early-onset sepsis (EOS, <72h): GBS, *E. coli*, *Listeria*. Risk factors: maternal GBS+, chorioamnionitis,

PROM >18h. Kaiser sepsis calculator for management. Late-onset sepsis (LOS, >72h): CoNS, S.

Neonatal Jaundice

Yellow discoloration of a newborn's skin or eyes caused by elevated bilirubin. It is common but may require treatment or investigation when severe, early, or prolonged.

Alternate Names:

Newborn Jaundice (Neonatal Jaundice)

Neonatal Jaundice (Jaundice Of The Newborn)

Yellow discoloration of a newborn's skin or eyes caused by elevated bilirubin. It is often physiologic but requires assessment when severe, early, rapidly increasing, or prolonged.

Alternate Names:

Jaundice of the Newborn

Neonatal Opioid Withdrawal Syndrome

A complex neurobehavioral and autonomic withdrawal syndrome affecting newborns following intrauterine exposure to opioids (including methadone, buprenorphine, heroin, or prescribed analgesics). Clinical manifestations include central nervous system hyperirritability (high-pitched crying, tremors, hypertonia, sleep fragmentation), autonomic dysregulation (sweating, sneezing, nasal congestion, tachypnea, temperature instability), and gastrointestinal dysfunction (poor feeding, uncoordinated sucking, vomiting, diarrhea). Managed using non-pharmacological care (Eat, Sleep, Console [ESC] model, low-stimulation environment, skin-to-skin contact, rooming-in) and pharmacological therapy (morphine or methadone) when supportive measures are insufficient.

Alternate Names:

NOWS; Neonatal Abstinence Syndrome (Opioid); Opioid-Induced NAS

Neonatal Polycythemia

An abnormally high red-cell concentration in a newborn, often defined by a venous hematocrit of at least 65 percent. It may increase blood viscosity and cause respiratory, neurologic, or metabolic symp-

toms.

Neonatal Respiratory Distress Syndrome

Breathing difficulty in a premature newborn caused mainly by insufficient pulmonary surfactant, leading to stiff lungs and impaired oxygen exchange.

Neonatal Resuscitation

The systematic approach to stabilizing a newborn after delivery, guided by the Neonatal Resuscitation Program (NRP).

Neonatal Sepsis

Systemic bacterial infection in the first 28 days of life, classified as early-onset (within 72 hours, usually from vertical transmission) or late-onset (after 72 hours, often nosocomial). Common organisms: Group B Streptococcus, E. coli, Listeria.

Neonatal Skin Conditions

Common and usually benign. Erythema toxicum neonatorum (red papules and pustules on erythematous base, appears day 2 to 3, resolves by 2 weeks). Milia (tiny white cysts on nose and cheeks). Miliaria crystallina (clear vesicles from sweat duct obstruction). Sebaceous hyperplasia (yellow papules on nose and cheeks).

Neonatal Thyrotoxicosis

Transient hyperthyroidism in newborns caused by transplacental transfer of maternal thyroid-stimulating immunoglobulins, presenting with tachycardia, irritability, and poor weight gain in the first weeks of life.

Neonatal Transition

The physiologic adaptation from placental gas exchange to pulmonary respiration after birth. It includes lung aeration, falling pulmonary vascular resistance, closure of fetal circulatory shunts, and changes in cardiac output and thermoregulation.

Neonatal Weight Gain And Nutrition

A clinical or physiological concept involving neonatal weight gain and nutrition. Its meaning and

clinical importance depend on the relevant body system and context.

Neonate

A neonate is a newborn infant during the first 28 completed days after birth, a period requiring attention to feeding, temperature, jaundice, infection, breathing, and transition to extrauterine life.

Neonatologist

A pediatrician who specializes in the medical care of newborn infants, particularly premature and critically ill neonates.

Neoplasia

Abnormal clonal proliferation of cells producing a new growth, called a neoplasm, that may be benign or malignant. Neoplastic growth persists beyond normal regulatory controls and may show genetic, epigenetic, morphologic, or functional abnormalities. Benign neoplasms are usually localized, whereas malignant neoplasms can invade adjacent tissues and metastasize to distant sites. Classification requires integration of morphology, immunophenotype, molecular findings, anatomic behavior, and clinical staging when applicable.

Neoplasm

Abnormal growth of tissue, may be benign or malignant. Benign neoplasms: localized, slow-growing, do not metastasize. Malignant neoplasms (cancer): invasive, metastasize, can be fatal. Classification: carcinoma (epithelial origin), sarcoma (mesenchymal origin), leukemia (hematopoietic), lymphoma (lymphoid).

Neoplasm Thymomic (Thymoma)

Alternate index label for Thymoma.

Neoplastic

Relating to a neoplasm or abnormal new growth of tissue.

Neostigmine

An acetylcholinesterase inhibitor used to reverse se-

lected nondepolarizing neuromuscular blockade and to treat some disorders of neuromuscular transmission or bowel and bladder motility.

Nephoptosis

Abnormal downward movement or mobility of a kidney, also called floating kidney.

Nephrectomy

Surgical removal of a kidney. Radical nephrectomy: kidney + Gerota fascia + adrenal gland (for renal cell carcinoma). Partial nephrectomy (nephron-sparing): for small renal tumors (<7 cm, renal function preservation). Simple nephrectomy: for benign disease (non-functioning kidney, chronic infection, massive hydronephrosis).

Nephric

Relating to the kidney. In embryology, nephric structures are involved in development of the urinary system.

Nephritic Syndrome

Characterized by hematuria with dysmorphic RBCs and RBC casts, oliguria, hypertension, and mild proteinuria less than 3.5 g/day. Results from glomerular inflammation increasing permeability to cells and reducing GFR. Hypertension from sodium and water retention.

Nephritis

Inflammation of kidney tissue, often affecting the glomeruli or interstitium and potentially impairing renal function.

Nephroblastoma

Wilms tumor, a malignant embryonal renal tumor of childhood that commonly presents as an asymptomatic abdominal mass.

Nephrocalcinosis

Nephrocalcinosis is deposition of calcium salts within kidney tissue, caused by metabolic, hormonal, genetic, medication-related, or renal disorders.

Nephrogenic Diabetes Insipidus

Inability of the renal collecting ducts to respond adequately to antidiuretic hormone, causing excessive dilute urine production and intense thirst. Causes include inherited defects, chronic kidney disease, electrolyte disorders, and medication exposure.

Nephrogenic Fibrosing Dermopathy

A rare fibrosing disorder of the skin causing thickening and hardening, primarily of the extremities and trunk, associated with kidney failure and gadolinium-based contrast exposure.

Nephrogenic Systemic Fibrosis

A rare fibrosing disorder associated mainly with exposure to certain gadolinium contrast agents in people with severe kidney impairment.

Nephrolithiasis

Formation of stones in the urinary tract. Calcium-containing stones are common, but stone composition varies and may include uric acid, struvite, or cystine. Risk factors include dehydration, hypercalciuria, hyperoxaluria, hypocitraturia, and low urine volume. Evaluation includes 24-hour urine analysis.

Nephrolithiasis (Kidney Stones)

Alternate index label for Kidney Stones.

Nephrologist

Physician specializing in kidney diseases, including dialysis management and transplant care.

Nephrology

The medical specialty concerned with kidney disease, fluid and electrolyte disorders, hypertension, dialysis, and kidney transplantation.

Nephrolysis

Surgical freeing of a kidney from surrounding adhesions or tissue.

Nephron

Functional unit of the kidney comprising the glomerulus, proximal tubule, loop of Henle, distal

tubule, and collecting duct. Each kidney contains approximately one million nephrons responsible for filtering blood, reabsorbing solutes and water, and excreting waste to form urine.

Nephron Function

The nephron is the functional unit of the kidney, with approximately 1 million per kidney. Each nephron consists of a renal corpuscle (glomerulus and Bowman's capsule) and a renal tubule (proximal convoluted tubule, loop of Henle, distal convoluted tubule, and collecting duct).

Nephronophthisis

An autosomal-recessive tubulointerstitial kidney disease causing progressive loss of concentrating ability, polyuria, polydipsia, anemia, and chronic kidney failure. It may be isolated or part of a ciliopathy with retinal, skeletal, hepatic, or neurological manifestations.

Nephropathy

Disease or damage of the kidneys, which may impair filtration, fluid balance, or other kidney functions.

Nephroptosis (Floating Kidney)

Abnormal downward movement of a kidney when a person stands, sometimes causing flank discomfort, urinary symptoms, or intermittent obstruction.

Alternate Names:

Floating Kidney

Nephrosclerosis

Hardening and scarring of kidney tissue, commonly caused by long-standing hypertension or vascular disease.

Nephrosis

An older broad term for noninflammatory kidney disease, historically associated particularly with nephrotic states.

Nephrostomy

An artificial opening created between the kidney and the skin to drain urine directly when the normal

pathway is blocked. See urology.

Nephrostomy Tube

A percutaneously placed catheter in the renal pelvis to drain urine, bypassing a ureteral obstruction. Indications: ureteral obstruction (calculus, tumor, stricture) causing hydronephrosis, pyonephrosis (infected, obstructed kidney — emergency drainage), and as a temporary measure before definitive surgery.

Nephrotic Range Proteinuria

Protein excretion greater than 3.5 g/day or urine protein-to-creatinine ratio greater than 3.5 g/g. Reflects severe glomerular damage with significant protein loss. Degree correlates with severity of injury and risk of complications including thromboembolism, infection, and progression to ESRD.

Nephrotic Syndrome

Clinical constellation of heavy proteinuria greater than 3.5 g/day, hypoalbuminemia less than 3.0 g/dL, generalized edema, hyperlipidemia, and lipiduria. Results from increased glomerular permeability to albumin. Reduced oncotic pressure causes fluid extravasation. Hepatic lipoprotein synthesis increases causing hyperlipidemia.

Nephrotoxic

Describing a substance or condition capable of damaging the kidneys or impairing their function.

Nephrotoxicity

Kidney damage from toxins, drugs, contrast. Aminoglycosides, cisplatin, contrast media, ethylene glycol. Monitoring: creatinine, urine output. Prevention: hydration, dose adjustment.

Nerve

A bundle of axons (nerve fibers) surrounded by connective tissue sheaths that transmits electrical impulses between the central nervous system and the periphery. Structure: epineurium (outer layer), perineurium (surrounds fascicles), endoneurium (surrounds individual axons).

Nerve Biopsy

Removal of a small segment of a peripheral nerve for microscopic examination, used selectively to evaluate vasculitis, infiltrative disease, leprosy, amyloidosis, or selected neuropathies.

Nerve Block

Injection of local anesthetic, sometimes with other agents, near a nerve or nerve plexus to interrupt pain signals.

Nerve Compression

Alternate index label; see *Pinched nerve*.

Nerve Conduction Studies

Measurement of the speed and amplitude of electrical impulses along peripheral nerves. Sensory NCS: stimulate at one point, record distally. Motor NCS: stimulate at two or more points along the nerve, record from muscle. Parameters: conduction velocity (m/s), amplitude (microvolts/millivolts), and distal latency.

Nerve Conduction Study

A diagnostic test that measures the speed and strength of electrical signals traveling through a nerve to detect nerve damage or dysfunction.

Nerve Conduction Velocity

Measurement of the speed and strength of electrical signals traveling along peripheral nerves, used to evaluate neuropathy, nerve compression, demyelination, and axonal injury.

Nerve Deafness (Sensorineural Deafness)

Hearing loss caused by damage to the cochlea, auditory nerve, or central auditory pathways rather than blockage of sound transmission through the outer or middle ear.

Alternate Names:

Sensorineural Deafness

Nerve Endings

The terminal branches of sensory or motor nerves that detect stimuli or communicate with muscles

and glands.

Nerve Growth Factor

A neurotrophin that supports the survival, growth, and maintenance of selected sensory and sympathetic neurons.

Nerve Injury

Damage to a peripheral or central nerve causing pain, numbness, weakness, altered reflexes, or autonomic dysfunction.

Nerve Pinched (Pinched Nerve Overview)

Alternate index label for Pinched Nerve Overview.

Nerve Sheath Myxoma

A benign myxoid peripheral-nerve-sheath tumor, usually presenting as a slow-growing papule or nodule on the fingers, hands, or upper extremities.

Nerve Sparing

Surgical preservation of nerves needed for erectile function, especially during prostate surgery.

Nerve Tract

A bundle of nerve fibers traveling together within the central nervous system.

Nerve, Trigeminal

The trigeminal nerve is the fifth cranial nerve and carries sensation from the face while also controlling the main muscles used for chewing.

Nerve-Muscle Preparation

An experimental isolated nerve and muscle arrangement used to study neuromuscular transmission and muscle contraction.

Nervine

A clinical or physiological concept involving nervine. Its meaning and clinical importance depend on the relevant body system and context.

Nervous Breakdown

A nonmedical lay term for severe emotional or psy-

chological distress; a clinician should assess for a specific mental or physical disorder.

Nervous Colon Syndrome

An older name for irritable bowel syndrome, a disorder causing recurrent abdominal pain with changes in bowel habits without an identifiable structural cause.

Nervous System

The brain, spinal cord, peripheral nerves, and related cells that coordinate sensation, movement, autonomic function, cognition, and behavior.

Nervous System, Peripheral

The peripheral nervous system includes nerves and ganglia outside the brain and spinal cord and carries sensory, motor, and autonomic signals.

Nervous Tissue

The tissue of the nervous system, composed of neurons and supporting cells, that detects stimuli and transmits electrical signals.

Nervus

The formal anatomical Latin noun for a nerve (abbreviated extitN. in the singular and extitNn. in the plural), utilized in Nomina Anatomica terminology to designate specific cranial nerves, spinal nerves, or peripheral nerve branches (e.g., extitNervus vagus for cranial nerve X, extitNervus ischiadicus for the sciatic nerve, extitNervus medianus for the median nerve).

NET

Alternate index label; see *Neuroendocrine tumors*.

Nettle Rash

Urticaria, an itchy eruption of transient raised wheals caused by release of inflammatory mediators in the skin.

Nettles

Plants of the genus *Urtica* whose hairs inject irritants and cause transient stinging, itching, and

wheals.

Neural

Pertaining to a nerve, neuron, neuroglia, or the nervous system in its entirety. Derived embryologically from the neuroectoderm, which folds during primary neurulation (gestational weeks 3–4) to form the neural tube (giving rise to the brain, spinal cord, and motor neurons) and the neural crest (giving rise to the peripheral nervous system, dorsal root sensory ganglia, autonomic ganglia, Schwann cells, and adrenal chromaffin cells). Failure of neural tube closure results in open neural tube defects, including spina bifida and anencephaly.

Neural Tube Defects

Congenital malformations resulting from failure of the neural tube to close during the third to fourth week of gestation. Include anencephaly (incomplete cranial closure), encephalocele (herniation through skull defect), and spina bifida (incomplete spinal closure).

Neuralgia

Neuralgia is sharp, burning, or electric pain along the distribution of a nerve, caused by irritation, compression, infection, injury, or other disease.

Neuralgia, Postherpetic

Alternate index label; see *Postherpetic neuralgia*.

Neuralgia, Trigeminal

Alternate index label; see *Trigeminal neuralgia*.

Neuraminidase Inhibitors

A class of antiviral drugs that inhibit the neuraminidase enzyme on the surface of influenza viruses, preventing the release of newly formed viral particles from infected cells and thereby limiting viral spread. The two available agents are oseltamivir, administered orally, and zanamivir, administered by inhalation.

Neurilemma

The outer nucleated layer of a Schwann cell sur-

rounding a peripheral nerve fiber.

Neurilemmoma

Alternate index label; see *Schwannoma*.

Neurinomatosis

Alternate index label; see *Schwannomatosis*.

Neuritic Plaques

Abnormal deposits of beta-amyloid surrounded by damaged nerve processes in Alzheimer disease.

Alternate Names:

Amyloid plaques

Neuritis

Inflammation or injury of a nerve, causing pain, sensory change, weakness, or altered nerve function.

Neuro-Ophthalmology

The subspecialty dealing with visual disorders caused by the nervous system, optic nerve, or eye-movement pathways.

Neuroanatomy

The study of the structure and organization of the nervous system.

Neurobiological Disorder

A disorder involving the structure, function, development, or chemistry of the nervous system and its biological pathways.

Neuroblastoma

Neuroblastoma is a childhood cancer of immature sympathetic nervous-system cells, commonly arising in the adrenal or paraspinal region and ranging from spontaneously resolving to aggressive disease. as abdominal mass, opsoclonus-mycoclonus syndrome. Spontaneous regression possible in infants.

Alternate Names:

Cancer, Neuroblastoma

Neurocardiogenic Syncope

Alternate index label; see *Vasovagal syncope*.

Neurocognitive Disorder

A condition involving acquired decline in one or more cognitive abilities that affects daily function. Causes include neurodegenerative disease, vascular disease, injury, infection, and medicines.

Neurocysticercosis

The most common parasitic infection of the central nervous system worldwide and is caused by the larval stage (cysticercus) of the pork tapeworm *Taenia solium*. It is endemic in Latin America, Asia, and Africa, and is an important cause of epilepsy in endemic regions.

Neurocytoma

A neuronal tumor composed of relatively uniform neurocytes, most often arising in the lateral ventricles as a central neurocytoma. It may obstruct cerebrospinal-fluid flow and is graded by proliferative activity and other features.

Neurodegeneration

The progressive loss of structure and function of neurons, culminating in their death, and represents the underlying mechanism of many devastating neurological disorders.

Neurodegeneration With Brain Iron Accumulation

NBIA is a group of inherited disorders in which iron accumulates in specific brain regions and causes progressive movement, muscle, or cognitive problems.

Neurodermatitis

A chronic itchy skin condition in which repeated scratching or rubbing causes thickened, irritated patches.

Alternate Names:

Dermatitis, Scratch

Neuroendocrine

Relating to interaction between the nervous and endocrine systems or to cells with both neural and hormone-related features.

Neuroendocrine Carcinoma

A malignant epithelial neoplasm showing neuroendocrine differentiation, characterized by tumor cells that express neuroendocrine markers and may secrete bioactive substances. It can arise in the lung, gastrointestinal tract, pancreas, genitourinary tract, or other organs and may be classified as well differentiated or poorly differentiated. Clinical findings vary by the primary site and stage; advanced disease may cause obstruction, bleeding, metastases, or hormone-mediated syndromes. Diagnosis integrates morphology, immunohistochemistry, grading, and staging, while treatment depends on differentiation, anatomic site, molecular features, and disease extent.

Neuroendocrine Carcinoma Of The Skin

Alternate index label; see *Merkel cell carcinoma*.

Neuroendocrine Integration

Coordination between the nervous and endocrine systems, in which neural signals regulate hormone secretion and hormones influence neural activity, behavior, metabolism, and physiological responses.

Neuroendocrine Tumor

A tumor arising from cells with both neural and hormone-producing features. These tumors can occur throughout the body and may produce hormones or be nonfunctioning.

Neuroendocrine Tumors

Tumors arising from cells that receive signals from the nervous system and produce hormones; they may be benign or malignant.

Alternate Names:

Cancer, Neuroendocrine NEC NET

Neuroendocrine Tumors Grading

Classification of neuroendocrine tumors by proliferative rate using Ki-67 index and mitotic count. Well-differentiated low-grade tumors have Ki-67 less than three percent and fewer than two mitoses per ten high-power fields. Intermediate-grade tumors have Ki-67 of three to twenty percent.

Neuroendocrinology

The study of interactions between the nervous system and the endocrine system, including how the brain regulates hormone release.

Neurofibrillary Tangles

Twisted tau-protein fibers inside damaged neurons, characteristic of Alzheimer disease.

Alternate Names:

Tau tangles

Neurofibroma

A benign peripheral nerve sheath tumor. Solitary neurofibromas are common and present as soft, flesh-colored papules or nodules. Multiple neurofibromas are characteristic of neurofibromatosis type 1 (NF1).

Neurofibromatosis

A group of autosomal dominant genetic disorders causing tumor growth along nerves. Type 1 (NF1, chromosome 17) causes café-au-lait spots, neurofibromas, optic gliomas, and learning disabilities. Type 2 (NF2, chromosome 22) causes bilateral vestibular schwannomas, meningiomas, and ependymomas.

Neurofibromatosis 2

Neurofibromatosis type 2 is an inherited tumor-predisposition disorder characterized especially by bilateral vestibular schwannomas and possible meningiomas, ependymomas, cataracts, or neuropathy.

Neurofibromatosis Type 1

Autosomal dominant disorder caused by mutations in the NF1 gene encoding neurofibromin on chromosome seventeen.

Alternate Names:

Neurofibromatosis Type I NF1 Peripheral Neurofibromatosis Von Recklinghausen's Disease Von Recklinghausen's Neurofibromatosis Von Recklinghausen's Phakomatosis

Neurofibromatosis Type 2

An autosomal dominant disorder caused by NF2

gene mutation on chromosome 22. Characterized by bilateral vestibular schwannomas (acoustic neuromas), meningiomas, and ependymomas. Features: hearing loss, tinnitus, and balance problems. Diagnosis: MRI showing bilateral vestibular schwannomas.

Neurofibromatosis Type I

Alternate index label; see *Neurofibromatosis type 1*.

Neurofibromatosis Type II

Alternate index label; see *NF2-related schwannomatosis (neurofibromatosis type 2)*.

Neurofibromatosis-1

Neurofibromatosis type 1 is an inherited condition featuring café-au-lait macules, neurofibromas, axillary freckling, optic pathway gliomas, bone lesions, and variable learning or vascular complications.

Neurofibrosarcoma

Alternate index label; see *Malignant peripheral nerve sheath tumors*.

Neurogenic

A clinical or physiological concept involving neurogenic. Its meaning and clinical importance depend on the relevant body system and context.

Neurogenic Bladder

Lower urinary-tract dysfunction caused by a neurologic lesion affecting central or peripheral control of storage and voiding. It may produce urgency, retention, incontinence, high bladder pressures, recurrent infection, and upper-tract damage.

Neurogenic Megacolon

Massive dilation of the colon due to loss of autonomic innervation, most commonly from Chagas disease, Hirschsprung disease, or diabetic autonomic neuropathy. It presents with chronic constipation, abdominal distension, fecal impaction, and risk of toxic megacolon.

Neurogenic Orthostatic Hypotension

A fall in blood pressure on standing caused by failure of the autonomic nervous system to produce an adequate vasoconstrictor response. It may cause dizziness, fainting, or falls.

Neurogenic Shock

Distributive shock caused by loss of sympathetic vascular tone, usually after acute spinal-cord injury above T6. It is characterized by hypotension with relative bradycardia and warm skin, distinguishing it from hemorrhagic shock when the clinical findings are complete.

Neuroglia

Supporting cells of the nervous system that nourish, protect, and maintain neurons.

Neurography

MRI technique visualizing peripheral nerves. Used for nerve tumors, entrapment, trauma.

Neurohormone

A hormone released by a neuron or neurosecretory cell into the blood or surrounding tissue.

Neurohypophysis

The posterior lobe of the pituitary gland, which stores and releases oxytocin and vasopressin.

Neurolathyrism

A toxic neurologic disorder caused by excessive consumption of *Lathyrus sativus*, producing progressive spastic weakness of the legs.

Neuroleptic

An older term for antipsychotic medications, derived from their ability to produce a state of mental indifference and motor slowing. The term is now largely replaced by “antipsychotic,” though it is still used in specific contexts such as neuroleptic malignant syndrome. Typical neuroleptics are first-generation antipsychotics.

Neuroleptic Agents

Antipsychotic medicines used for conditions such as schizophrenia, bipolar disorder, severe agitation, or nausea, depending on the drug. They can cause movement, metabolic, heart-rhythm, and sedation-related effects.

Alternate Names:

Antipsychotics

Neuroleptic Malignant Syndrome

A rare but life-threatening idiosyncratic reaction to dopamine receptor-blocking agents, typically antipsychotics, characterized by hyperthermia, severe muscle rigidity, altered mental status, and autonomic dysfunction.

Neurologic Deficit

Loss or impairment of a neurologic function, such as strength, sensation, coordination, vision, language, or consciousness, caused by dysfunction of the nervous system.

Neurologic Localization

The process of using the pattern of deficits in strength, sensation, reflexes, coordination, cranial-nerve function, and cognition to identify the anatomic site of nervous-system dysfunction. Localization guides differential diagnosis and selection of investigations.

Neurological

A clinical or physiological concept involving neurological. Its meaning and clinical importance depend on the relevant body system and context.

Neurological Examination

A clinical assessment of mental status, cranial nerves, motor function, reflexes, coordination, sensation, and gait. It helps localize nervous-system dysfunction and determine the need for further testing.

Neurological Rehabilitation

Rehabilitation for stroke, spinal cord injury, traumatic brain injury, Parkinson disease, multiple scler-

rosis. Goals: maximize function, independence, quality of life. Multidisciplinary team: physiatrist, PT, OT, speech therapy, psychology.

Neurologist

A physician specializing in disorders of the brain, spinal cord, nerves, and muscles.

Neurology

The medical specialty concerned with diseases of the brain, spinal cord, peripheral nerves, and muscles.

Neurology PET

PET imaging used in selected neurologic disorders to assess brain metabolism or receptor activity, such as in some dementias, epilepsy evaluations, and movement disorders.

Neurolysis

Surgical or chemical freeing or destruction of a nerve, depending on context.

Neuroma

A benign growth or reactive thickening involving nerve tissue, often producing pain or altered sensation.

Neuroma, Acoustic

Alternate index label; see *Acoustic neuroma (vestibular schwannoma)*.

Neuroma, Plantar

Alternate index label; see *Morton neuroma*.

Neuromuscular

Relating to nerves and muscles or to their junction and communication.

Neuromuscular Blocking Agents

Medications administered intraoperatively to induce skeletal muscle relaxation and facilitate endotracheal intubation and surgical exposure.

Neuromuscular Hamartoma

A rare benign developmental lesion in which mature

skeletal muscle and nerve fascicles are intermixed, typically involving a major peripheral nerve and causing enlargement or neuropathic symptoms.

Neuromuscular Junction

The neuromuscular junction is the synapse between motor neuron and skeletal muscle fiber, where acetylcholine released from presynaptic terminals binds to nicotinic acetylcholine receptors on the postsynaptic motor end plate, causing depolarization and muscle contraction.

Neuromuscular Junction (Myoneural Junction)

The specialized synapse where a motor nerve ending communicates with a skeletal-muscle fibre to initiate contraction.

Alternate Names:

Myoneural Junction

Neuromyelitis Optica Spectrum Disorder

An autoimmune disorder of the central nervous system that causes attacks affecting the optic nerves, spinal cord, or certain brain regions. Attacks may cause optic neuritis, extensive transverse myelitis, area postrema syndrome, or brainstem and diencephalic symptoms. Aquaporin-4 immunoglobulin G (AQP4-IgG) testing can support the diagnosis, but results must be interpreted with the clinical findings and imaging.

Alternate Names:

Neuromyelitis Optica NMO NMOSD Devic Disease Devic's Disease

Neuromyotonia

A rare disorder of peripheral nerve hyperexcitability characterized by continuous, spontaneous motor unit activity of peripheral nerve origin that drives involuntary skeletal muscle contraction. May be acquired (autoimmune, frequently associated with autoantibodies against voltage-gated potassium channel complex proteins, particularly *CASPR2*) or hereditary. Clinically manifested by undulating, visible, involuntary muscular rippling (myokymia), generalized muscle stiffness, delayed muscle relaxation (pseudomyotonia), muscle cramps, persistent fasci-

culations, muscle hypertrophy, and profuse hyperhidrosis, with electromyography demonstrating diagnostic continuous high-frequency doublet, triplet, or multiplet discharges (neuromyotonic discharges).

Alternate Names:

Isaacs Syndrome; Continuous Muscle Fiber Activity Syndrome

Neuron

The fundamental excitable cell of the nervous system specialized for receiving, integrating, and transmitting electrical and chemical signals. Structural components: cell body (soma), dendrites (receptive), axon (conducting), and synaptic terminals (releasing neurotransmitters).

Neuron-Specific Enolase

Neuron-specific enolase is an enzyme marker that can rise in neuroendocrine tumors or neuronal injury but is not diagnostic by itself.

Neuronal Ceroid Lipofuscinoses

A group of inherited lysosomal storage disorders characterized by accumulation of ceroid lipopigment and progressive loss of vision, cognition, motor function, and sometimes seizures.

Neurone

The British spelling of neuron, an excitable nerve cell that receives and transmits signals.

Neuropathic

Caused by disease or dysfunction of nerves; neuropathic skin symptoms may include burning, electric-shock pain, altered sensation, numbness, or itch.

Neuropathic Pain

Chronic pain caused by damage or disease affecting the somatosensory nervous system, including the peripheral nerves, dorsal root ganglia, spinal cord, or brain.

Neuropathic Pain (Nerve Pain)

Alternate index label for Nerve Pain.

Neuropathic Pain (Pain Management: Neuropathic Pain)

Alternate index label for Pain Management: Neuropathic Pain.

Neuropathic Ulcer

A chronic wound of the foot in a patient with diabetes, resulting from peripheral neuropathy, peripheral artery disease, and impaired wound healing. See diabetic foot ulcer.

Neuropathy

Disease or dysfunction of peripheral nerves causing pain, numbness, tingling, weakness, or altered reflexes. Common causes include diabetes, alcohol, nutritional deficiency, toxins, compression, autoimmune disease, and inherited disorders.

Neuropathy (Peripheral Neuropathy)

Damage to peripheral nerves causing sensory, motor, or autonomic dysfunction. Common causes: diabetes mellitus, alcohol use disorder, vitamin B12 deficiency, chemotherapy, autoimmune diseases, and hereditary conditions (Charcot-Marie-Tooth disease). Presents with numbness, tingling, burning pain, weakness, and gait instability.

Alternate Names:

Peripheral Neuropathy

Neuropathy Autonomic Diabetic (Diabetic Neuropathy)

Alternate index label for Diabetic Neuropathy.

Neuropathy Diabetic (Diabetic Neuropathy)

Alternate index label for Diabetic Neuropathy.

Neuropathy Diabetic Peripheral (Diabetic Neuropathy)

Alternate index label for Diabetic Neuropathy.

Neuropathy Focal Diabetic (Diabetic Neuropathy)

Alternate index label for Diabetic Neuropathy.

Neuropathy Proximal Diabetic (Diabetic Neuropathy)

Alternate index label for Diabetic Neuropathy.

Neuropathy, Autonomic

Alternate index label; see *Autonomic neuropathy*.

Neuropathy, Diabetic

Alternate index label; see *Diabetic neuropathy*.

Neuropathy, Hereditary Motor And Sensory

Alternate index label; see *Charcot-Marie-Tooth disease*.

Neuropathy, Peripheral

Alternate index label; see *Peripheral neuropathy*.

Neuropeptide

A peptide released by neurons that acts as a signaling molecule in the nervous or endocrine system.

Neuropeptides

Short chains of amino acids that act as signaling molecules in the nervous system.

Neuropharmacology

The study of how medicines and other substances affect the nervous system.

Neuroplasticity

The brain's ability to reorganize its structure, function, and connections in response to experience, learning, and injury. It is relevant to psychiatric treatment because antidepressants, psychotherapy, and ECT are thought to promote neuroplastic changes including neurogenesis in the hippocampus and synaptic remodeling.

Neuroplegic

Causing paralysis or profound reduction of nervous or muscular activity; the term is uncommon.

Neuropsychiatry

The clinical field linking neurologic and psychiatric disorders, including cognitive and behavioral consequences of brain disease.

Neuroradiology

The use of imaging to diagnose disorders of the brain, spine, head and neck, and peripheral nerves.

Neuroretinitis

Neuroretinitis is inflammation of the optic nerve and retina, often causing vision loss and a characteristic macular star, with infectious or inflammatory causes.

Neurosarcoidosis

Neurosarcoidosis is sarcoid inflammation affecting the nervous system, potentially involving cranial nerves, meninges, brain, spinal cord, or peripheral nerves.

Neurosciences

Neurosciences are the scientific disciplines studying the nervous system, including its structure, function, development, disease, and treatment.

Neurosurgeon

Surgeon specializing in surgical treatment of disorders of the brain, spine, and peripheral nerves.

Neurosurgery

Surgical treatment of disorders of the brain, spinal cord, peripheral nerves, and supporting structures.

Neurosyphilis

Neurosyphilis is infection of the nervous system by *Treponema pallidum* and can cause meningitis, stroke, sensory loss, cognitive change, or tabes dorsalis.

Neurotoxicity

Injury or dysfunction of the nervous system caused by a medicine, drug, toxin, heavy metal, infection, or other harmful exposure.

Neurotransmitter

Neurotransmitters are endogenous chemical messengers that transmit signals across synapses from one neuron to another or to target cells such as muscle or gland cells.

Neurotransmitter Receptors

Cell proteins that recognize neurotransmitters and alter cell activity when bound.

Neurotrophic

Relating to factors that support the growth, survival, or maintenance of nerve cells.

Neurotropic

Having an affinity for or acting primarily on nervous tissue.

Neurovascular Examination

Assessment of distal motor function, sensation, pulses, capillary refill, skin temperature, and color in an injured limb. Serial examination is essential for detecting nerve injury, vascular compromise, compartment syndrome, and evolving ischemia.

Neutral Alignment

A posture in which the body is arranged in a straight, balanced line while preserving normal spinal curves.

Neutralization

Removal or reduction of an effect by counteraction, such as an acid-base reaction or antibody-antigen binding.

Neutralizing Antibodies

Antibodies that bind a pathogen or its toxin and block its ability to enter cells, attach to tissues, or cause its usual biologic effects.

Neutropenia

A reduced neutrophil count ($< 1.5 \times 10^9/L$; severe < 0.5), increasing risk of bacterial and fungal infection, especially febrile neutropenia.

Alternate Names:

Low Neutrophil Count (Neutropenia)

Neutropenia - Infants

Infant neutropenia is an abnormally low absolute neutrophil count for age, increasing susceptibility to bacterial or fungal infection; causes include infection, immune destruction, marrow disease, and medicines.

Neutrophil

The most common circulating granulocyte, an innate immune cell important in early defense against bacterial and fungal infection.

Neutrophil Extracellular Traps

NETs: web-like structures of chromatin + granular proteins (MPO, NE, histone) released by neutrophils (NETosis: suicidal vs vital).

Neutrophil Recruitment

A multistep process essential for acute inflammation and host defense, involving sequential adhesive interactions between neutrophils and endothelial cells. The process begins with the rolling phase, where neutrophils loosely attach to endothelial cells through selectin-mediated interactions.

Neutrophilic Dermatosi

A group of inflammatory skin conditions characterised by dense neutrophilic infiltrate in the dermis without evidence of infection, which includes Sweet syndrome (acute febrile neutrophilic dermatosis), pyoderma gangrenosum, and Behçet disease.

Neutrophilic Eccrine Hidradenitis

A neutrophilic dermatosis characterized by neutrophilic infiltration of the eccrine glands and surrounding dermis, typically occurring in patients receiving chemotherapy, particularly cytarabine. It presents with painful, erythematous plaques or nodules, most commonly on the trunk and extremities.

Neutrophils

The most abundant type of white blood cell. Neutrophils rapidly migrate to sites of infection or injury and ingest microorganisms and cellular debris.

Nevoid Basal Cell Carcinoma Syndrome

Nevoid basal cell carcinoma syndrome refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Nevus

A benign hamartoma of the skin; most commonly melanocytic nevus (mole). Other nevi: congenital, dysplastic/atypical, Spitz, blue nevus, halo nevus; non-melanocytic: epidermal, sebaceous, vascular (strawberry hemangioma, port-wine stain).

Nevus Comedonicus

A congenital hamartoma of the pilosebaceous unit presenting as a localised cluster of dilated follicular ostia filled with keratinous plugs, resembling closely grouped open comedones. It typically appears at birth or in early childhood on the face, neck, or trunk, and may be associated with other developmental anomalies.

Nevus Sebaceus

A congenital or early-onset hamartoma of sebaceous and other adnexal structures, usually a yellow-orange hairless plaque on the scalp or face; secondary tumors may rarely arise within it.

New Daily Persistent Headache

A headache that begins on a clearly remembered day and becomes continuous within 24 hours, persisting for at least three months. It may resemble migraine or tension-type headache; a new persistent headache requires medical evaluation to exclude secondary causes such as infection, pressure disorders, or vascular disease.

Newborn

An infant in the neonatal period, conventionally the first 28 days after birth.

Newborn Circumcision

Surgical removal of the foreskin from the penis, typically performed within the first few days of life. Medical benefits include reduced risk of urinary tract infections, sexually transmitted infections, and

penile cancer. Complications include bleeding, infection, and meatal stenosis.

Newborn Head Molding

Temporary shaping or overlapping of a newborn's skull bones during passage through the birth canal; it usually resolves as the skull returns to its normal contour.

Newborn Hearing Screen

Universal screening for congenital hearing loss, performed before hospital discharge. Two-step protocol: otoacoustic emissions (OAE: measures cochlear outer hair cell response to click stimulus) and automated auditory brainstem response (AABR: measures neural response from the cochlea to the brainstem). Pass/refer.

Newborn Jaundice

Newborn jaundice is yellow discoloration from elevated bilirubin; physiologic patterns are common, but early, severe, rapidly rising, or conjugated jaundice requires evaluation for serious disease.

Newborn Jaundice (Neonatal Jaundice)

Alternate index label for Neonatal Jaundice.

Newborn Metabolic Screen

A dried blood spot test (heel stick) collected 24-48 hours after birth to screen for congenital disorders before symptoms develop.

Newborn Screening

A public health program testing newborns for treatable genetic, metabolic, and endocrine disorders 24-48 hours after birth. Blood spot (heel stick) on filter paper (Guthrie card). Conditions vary by state (Recommended Uniform Screening Panel: 35 core conditions).

Newborn Screening Tests

Tests performed shortly after birth to detect selected treatable genetic, endocrine, metabolic, hematologic, hearing, or critical congenital heart conditions before symptoms develop.

Next-Generation Sequencing

Massively parallel sequencing technology that analyzes many DNA molecules simultaneously. It supports gene panels, whole-exome sequencing, whole-genome sequencing, and tumor sequencing, with limitations involving coverage, structural variants, mosaicism, and interpretation.

Nexus

A clinical or physiological concept involving nexus. Its meaning and clinical importance depend on the relevant body system and context.

NF1

Alternate index label; see *Neurofibromatosis type 1*.

NF2

Alternate index label; see *NF2-related schwannomatosis (neurofibromatosis type 2)*.

NF2-Related Schwannomatosis (Neurofibromatosis Type 2)

A genetic disorder characterized by tumors involving nerves, especially bilateral vestibular schwannomas, with possible hearing loss, balance problems, and other nerve tumors.

Alternate Names:

BANF Bilateral Acoustic Neurofibromatosis
Central Neurofibromatosis
MISME Multiple Inherited Schwannomas, Meningiomas, And Ependymomas
Neurofibromatosis Type II
NF2

Niacin

Vitamin B3, required to form NAD and NADP coenzymes; deficiency causes pellagra.

Niacin (Nicotinic Acid, Vitamin B3)

A water-soluble vitamin required for cellular energy metabolism; severe deficiency causes pellagra, with dermatitis, diarrhoea, and cognitive changes.

Alternate Names:

Nicotinic Acid, Vitamin B3

Niacin (Vitamin B3)

A water-soluble vitamin that forms NAD⁺ and

NADP⁺, essential electron carriers in oxidation-reduction reactions and biosynthetic pathways. Severe deficiency causes pellagra, characterized by dermatitis, diarrhea, and dementia.

Alternate Names:

Vitamin B3

Niacin For Cholesterol

Niacin lowers triglycerides and can raise HDL cholesterol, but its routine cardiovascular benefit is limited when added to effective statin therapy; flushing, liver injury, hyperglycaemia, and hyperuricaemia limit high-dose use.

Niacinamide

The amide form of vitamin B3, used as a nutritional supplement and in selected dermatologic preparations.

Nialamide

An older monoamine-oxidase-inhibitor antidepressant that is no longer commonly used.

Nicardipine

A dihydropyridine calcium-channel blocker used to lower blood pressure and treat selected vascular conditions.

Niche

A specialized site or microenvironment supporting particular cells, organisms, or biological processes.

Nickel Allergy

An allergic skin reaction caused by contact with nickel-containing materials.

Nickel-Chromium

Base metal alloy for crowns. Less expensive than noble metals. Nickel allergy concern.

Niclosamide

An antiparasitic medicine used in some countries to treat selected intestinal tapeworm infections. It acts mainly in the gut and does not reliably treat larval tapeworm infections in tissues, such as neuro-

cysticercosis.

Nicotinamide

Also called niacinamide, a form of vitamin B3 needed for cellular energy and repair reactions. Unlike niacin, it usually does not cause flushing at nutritional doses.

Nicotine

An addictive stimulant found in tobacco and some vaping products that acts on neuronal nicotinic receptors.

Nicotine Addiction

Alternate index label; see *Nicotine dependence*.

Nicotine And Tobacco

Nicotine and tobacco involves toxic exposure to nicotine and tobacco; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Nicotine Dependence

A pattern of compulsive nicotine use with cravings, loss of control, tolerance, and withdrawal symptoms when use is reduced or stopped.

Alternate Names:

Dependence, Nicotine Nicotine Addiction

Nicotine Poisoning

Nicotine poisoning causes early nausea, vomiting, salivation, dizziness, tachycardia, and agitation followed by weakness, bradycardia, seizures, or respiratory failure in severe exposure.

Nicotine Replacement Therapy

Nicotine replacement therapy involves toxic exposure to nicotine replacement therapy; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Nicotine Replacement Therapy

Use of nicotine patches, gum, lozenges, spray, or inhaler to reduce withdrawal and cravings while stopping tobacco use.

Nicotinic

Relating to nicotine or to nicotinic acetylcholine receptors. These receptors respond to acetylcholine and help control nerve signaling, skeletal-muscle contraction, and some automatic body functions.

Nictitating Membrane

A transparent or translucent third eyelid found in some animals; humans have only a small vestigial fold.

NICU Consultants And Support Staff

NICU consultants and support staff are specialists and professionals who help care for critically ill or premature newborns, including physicians, nurses, therapists, and social workers.

NICU Staff

NICU staff are the healthcare professionals who monitor and treat newborns in a neonatal intensive care unit and support their families.

Nidation

Implantation of a fertilized egg into the lining of the uterus early in pregnancy. The term is largely synonymous with implantation.

Nidus

A nidus is a focus or central site from which a process develops, such as a stone-forming core, infection focus, or vascular malformation.

Niemann-Pick Disease

A group of autosomal recessive lysosomal storage disorders caused by sphingomyelinase deficiency (ASM, types A and B, SMPD1 mutations) or NPC1/NPC2 cholesterol transport defects (type C).

Nifedipine

A dihydropyridine calcium-channel blocker used for hypertension, angina, and selected pregnancy-related hypertensive conditions.

Night Blindness

Impaired vision in dim light (nyctalopia). Causes:

vitamin A deficiency (most common cause worldwide, leading to retinol deficiency and rod dysfunction), retinitis pigmentosa (progressive rod-cone degeneration, genetic), congenital stationary night blindness, advanced glaucoma, and cataract.

Night Eating Syndrome

Delayed circadian pattern of eating. Evening hyperphagia, morning anorexia, insomnia. Associated with obesity, depression.

Night Leg Cramps

Sudden, painful involuntary contractions of leg muscles occurring during sleep or rest, often affecting the calf or foot.

Night Sweats

Episodes of excessive sweating during sleep that soak clothing or bedding. They may occur with infection, hormonal changes, cancer, medication effects, or other systemic illness; persistent unexplained night sweats warrant assessment.

Alternate Names:

Men Night Sweats (Night Sweats)

Night Terrors

Episodes of abrupt partial awakening from deep non-REM sleep with intense fear, screaming, autonomic arousal, and limited recall afterward, occurring most often in children.

Night Terrors In Children

Night terrors are episodes of sudden fear, screaming, autonomic arousal, and apparent confusion during non-REM sleep; children usually remain difficult to awaken and have little memory afterward.

Night-Blindness

Difficulty seeing in dim light, called nyctalopia; causes include vitamin A deficiency, retinal disease, and inherited disorders.

Night-Sweats

Episodes of excessive sweating during sleep; causes include infection, malignancy, hormonal change,

medicines, and environmental heat.

Nightmare Disorder

Repeated disturbing dreams that cause significant distress or interfere with sleep and daytime function.

Nightmares

Disturbing, vivid dreams that cause fear or distress and may awaken the sleeper.

NIH Stroke Scale

The National Institutes of Health Stroke Scale is a standardized, validated clinical assessment tool used to quantify the severity of acute ischemic stroke.

Nijmegen Breakage Syndrome

A rare autosomal recessive chromosomal instability and DNA double-strand break repair deficiency disorder caused by homozygous hypomorphic mutations in the *NBN* gene on chromosome 8q21, which encodes nibrin (p95), a critical component of the MRN complex (*MRE11-RAD50-NBN*). Characterized by progressive microcephaly, characteristic facial dysmorphism (bird-like facies with sloping forehead, prominent nose, and retrognathia), mild-to-moderate intellectual disability, severe combined immunodeficiency with hypogammaglobulinemia, extreme sensitivity to ionizing radiation, and a striking predisposition to early-onset lymphoid malignancies, particularly B-cell non-Hodgkin lymphomas.

Alternate Names:

NBS; Ataxia-Telangiectasia Variant 1

Nikethamide

An obsolete respiratory stimulant with limited historical use and potential toxicity.

Nikolsky Sign

A clinical dermatological sign in which light lateral pressure applied to normal-appearing skin causes epidermal detachment or sloughing. Positive sign indicates intraepidermal loss of cell-cell cohesion (acantholysis).

Nikolsky'S Sign

Shearing or peeling of the superficial epidermis when apparently normal skin beside a blister is rubbed; it may occur in pemphigus and other blistering disorders.

Nil Disease

A phrase meaning that no disease or abnormality was found; it is not a specific medical diagnosis.

NIncontinence

Likely a misspelling or truncated form of incontinence, meaning loss of voluntary control over urination, bowel movements, or another bodily function.

Nipah Virus Infection

A zoonotic viral infection that may cause fever, respiratory illness, encephalitis, seizures, and coma. It can spread from infected animals or people through close contact. There is no widely available licensed vaccine or specific antiviral treatment; suspected infection requires urgent isolation and specialist care.

Nipple

The projection at the centre of the breast through which milk is released from the mammary ducts; it contains smooth muscle and sensory nerve endings.

Nipple Inversion Or Retraction

Inward turning or pulling-in of the nipple. It may be longstanding and benign, but new unilateral inversion or retraction requires assessment for duct disease or breast cancer.

Niridazole

An older antischistosomal medicine with significant adverse effects and limited current use.

Nisbet'S Canker

A rare historical term whose clinical meaning is not consistent across references; the original source should be checked.

Nisin

An antimicrobial peptide produced by *Lactococcus*

lactis and used mainly as a food preservative.

Nit

A clinical or physiological concept involving nit. Its meaning and clinical importance depend on the relevant body system and context.

Nitrates

Vasodilator drugs that release nitric oxide, causing relaxation of vascular smooth muscle through activation of guanylyl cyclase and increased cyclic GMP. They primarily cause venodilation at low doses, reducing preload and myocardial oxygen demand, and arterial dilation at higher doses, reducing afterload.

Nitrazepam

A benzodiazepine hypnotic with sedative and anticonvulsant effects; dependence and respiratory depression are risks.

Nitric Acid

A corrosive mineral acid that can cause severe chemical burns and toxic inhalational injury.

Nitric Acid Poisoning

Nitric acid poisoning involves toxic exposure to nitric acid poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Nitric Oxide

A short-lived signaling molecule that relaxes vascular smooth muscle and participates in immune and neural signaling.

Nitroblue Tetrazolium Blood Test

A functional test of neutrophil oxidative burst in which activated cells reduce nitroblue tetrazolium; it was historically used to evaluate chronic granulomatous disease and has largely been replaced by flow cytometry.

Nitrofurantoin

An antibacterial medicine used mainly for susceptible lower urinary-tract infections.

Nitrogen

An essential element in amino acids, proteins, nucleic acids, and other biological molecules; atmospheric nitrogen is largely inert to humans.

Nitrogen Balance

The difference between dietary nitrogen intake, estimated mainly from protein intake, and nitrogen loss, primarily in urine. Positive balance supports growth or tissue repair; negative balance occurs with inadequate intake, inflammation, trauma, or catabolic disease.

Nitrogenous Base

A nitrogen-containing component of nucleic acids; adenine, guanine, cytosine, thymine, and uracil pair in DNA or RNA to encode genetic information.

Nitroglycerin Overdose

Nitroglycerin overdose involves toxic exposure to nitroglycerin overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Nitromors

A trade name for paint or varnish stripper formulations; exposure can cause chemical burns or toxic inhalation.

Nitrosoureas

A group of chemotherapy medicines that can cross the blood-brain barrier and damage DNA; examples include carmustine and lomustine.

Nitrous Oxide

An inhaled anesthetic gas with analgesic and anesthetic-sparing properties. It has rapid onset and offset but relatively low potency, expands closed gas spaces, and may contribute to diffusion hypoxia or postoperative nausea.

Nitrous Oxide For Labor

A 50:50 mixture of nitrous oxide and oxygen (Entonox) inhaled by the mother during labor for analgesia. Self-administered via a mask or mouth-

piece; the woman controls her own dosing, taking a breath 30 seconds before a contraction.

Nizatidine

An H₂-receptor antagonist that reduces gastric acid secretion; availability varies by country.

NMR

NMR, or nuclear magnetic resonance, measures how atomic nuclei respond to a magnetic field and is used in chemical analysis and imaging.

No-Reflow Phenomenon

Failure of microvascular perfusion to resume despite reopening of a previously blocked larger vessel, especially after myocardial infarction or stroke.

Nocardia Asteroides Infection

Infection by *Nocardia asteroides*, an environmental bacterium that can cause lung, skin, or brain infection, especially in immunocompromised people.

Nocardia Infection

An infection caused by *Nocardia* bacteria, often affecting the lungs, skin, or brain.

Nocardiosis

A bacterial infection caused by *Nocardia* species (*N. asteroides*, *N. brasiliensis*), found in soil. Most common in immunocompromised patients (transplant, HIV, chronic steroid use). Pulmonary nocardiosis (most common): cough, fever, necrotizing pneumonia, cavitary lesions.

Nocebo

A harmful or unpleasant symptom or treatment effect caused or amplified by negative expectations rather than by the treatment's specific pharmacologic action.

Nociception

Neural processing of noxious thermal, mechanical, or chemical stimuli that may result in the perception of pain. It includes transduction, transmission, modulation, and projection; nociception and pain

are related but not identical concepts.

Nociceptor

A sensory receptor that detects potentially tissue-damaging mechanical, thermal, or chemical stimuli.

Nociceptors

Sensory nerve endings that detect potentially tissue-damaging stimuli and transmit pain signals.

Nocturnal Enuresis

Alternate index label; see *Bed-wetting*.

Nocturia

Complaint of waking one or more times during the night to void, with each void preceded and followed by sleep. Highly prevalent in older adults and significantly impairs sleep quality and quality of life.

Nocturnal

Pertaining to, occurring in, or characteristic of the nighttime hours or periods of sleep. Clinically prominent in sleep-related disorders, chronobiology, and diagnostic symptom patterns: nocturnal enuresis (bedwetting), paroxysmal nocturnal dyspnea (PND; sudden severe breathlessness awakening a patient from sleep in congestive heart failure), nocturnal hypoxemia in obstructive sleep apnea, nocturnal cough in asthma or gastroesophageal reflux disease, and nocturnal hypertension on 24-hour ambulatory blood pressure monitoring (loss of the normal $\geq 10\%$ nighttime blood pressure "dip").

Nocturnal Emission

Involuntary ejaculation during sleep, sometimes called a wet dream. It is a common and normal event during male puberty and adolescence.

Nocturnal Enuresis

Involuntary urination during sleep in a child old enough for continence, without another defining lower urinary-tract disorder.

Nocturnal Enuresis (Bed-Wetting)

Repeated involuntary urination during sleep in a

child old enough to have achieved bladder control.

Alternate Names:

Bed-Wetting

Nocturnal Lagophthalmos

Incomplete closure of the eyelids during sleep, which may cause dryness, irritation, and exposure injury to the cornea.

Nodal Rhythm

A cardiac rhythm arising from the atrioventricular junction when the sinoatrial node does not control the heartbeat.

Node

A localized swelling, structure, or point of connection; examples include lymph nodes and electrical conduction nodes.

Nodular

Pertaining to, characterized by, or consisting of one or more nodules (circumscribed, solid, palpable anatomical or pathological lesions typically $> 0.5\text{--}1.0$ cm in diameter). In dermatology, describes firm, raised, dermal or subcutaneous lesions such as nodular melanoma or nodular basal cell carcinoma; in endocrinology, describes multi-nodular goiter of the thyroid; and in rheumatology, describes subcutaneous rheumatoid nodules developing over mechanical pressure points (e.g., the olecranon).

Nodular Fasciitis

A rapidly growing benign self-limited fibroblastic and myofibroblastic proliferation, usually presenting as a painful or tender superficial mass. It can mimic sarcoma clinically and microscopically.

Nodular Lymphoid Hyperplasia

Benign aggregates of lymphoid tissue occurring in the gastrointestinal tract, most commonly in the small intestine, presenting as multiple small nodules on endoscopy or imaging. It may be associated with immunodeficiency states, particularly common variable immunodeficiency, and *Giardia lamblia* infection.

Nodular Melanoma

An invasive melanoma characterized by early vertical growth and a rapidly enlarging papule or nodule that may be pigmented or amelanotic.

Nodule

Small, palpable mass <2 cm. Can be solid or cystic. Examples: thyroid nodule, rheumatoid nodule, pulmonary nodule. Evaluation depends on location.

Nodule Thyroid (Thyroid Nodules)

Alternate index label for Thyroid Nodules.

Noise

Unwanted sound or signal that can interfere with communication, measurement, imaging, or hearing.

Noise Induced Hearing Loss And Its Prevention

Noise-induced hearing loss is permanent injury to inner-ear hair cells from repeated or intense sound exposure, often with tinnitus or difficulty understanding speech. Limiting exposure, increasing distance, taking quiet breaks, and using well-fitted hearing protection reduce risk.

Noise-Related Hearing Loss

Alternate index label; see *Hearing loss*.

Noma

Noma is a rapidly progressive gangrenous infection of the mouth and face, usually in severely malnourished or immunocompromised children; it destroys oral and facial tissue and requires urgent antibiotics, nutrition, and surgery.

Nomenclature

Nomenclature is the organized system used to name and classify diseases, organisms, chemicals, anatomy, medicines, or other entities.

Nomogram

A graphical tool that estimates a quantity or risk from related measurements. The Rumack–Matthew nomogram is used in selected cases of acute ac-

etaminophen ingestion.

Non Communicating Hydrocephalus

Non-communicating (obstructive) hydrocephalus is a type of hydrocephalus in which there is obstruction to the flow of cerebrospinal fluid (CSF) within the ventricular system, preventing CSF from reaching the arachnoid granulations for absorption.

Non-Accidental Trauma

Injuries inflicted on a child, suspected when history and examination findings are inconsistent with the reported mechanism. Red flags: multiple fractures at different stages of healing, posterior rib fractures, metaphyseal corner fractures, and retinal hemorrhages.

Non-Adherence

Failure to follow an agreed treatment plan, which may result from access barriers, side effects, beliefs, misunderstanding, or other circumstances.

Non-Alcoholic Fatty Liver Disease

Hepatic steatosis in the absence of significant alcohol consumption, strongly associated with metabolic syndrome, obesity, and type 2 diabetes. NAFLD includes simple steatosis and non-alcoholic steatohepatitis (NASH) with inflammation and fibrosis. NASH can progress to cirrhosis and hepatocellular carcinoma.

Non-Allergic Rhinitis

Nasal congestion, discharge, or sneezing not caused by an allergic immune response. Triggers may include changes in temperature or humidity, smoke, odors, medicines, or hormonal changes.

Non-Articular Rheumatism

An older term for painful disorders of muscles, tendons, bursae, or other tissues outside the joints.

Non-Asthmatic Eosinophilic Bronchitis

A cause of chronic cough characterized by airway eosinophilia without the variable airflow obstruction or bronchial hyperresponsiveness typical of

asthma. Symptoms often improve with inhaled corticosteroids, whereas bronchodilators alone may provide little benefit.

Non-Bacterial Thrombotic Endocarditis

A form of non-infectious endocarditis pathologically characterized by the deposition of sterile, small, friable vegetations composed almost exclusively of platelets and fibrin aggregates along the coaptation lines of heart valves (most frequently aortic and mitral valves), occurring in the absence of systemic bacteremia or destructive valvular inflammation. Pathophysiologically driven by endothelial injury combined with systemic hypercoagulable states, classically associated with advanced mucin-secreting adenocarcinomas of the pancreas, lung, or gastrointestinal tract (marantic endocarditis, Trousseau syndrome), systemic lupus erythematosus (Libman-Sacks endocarditis), and antiphospholipid syndrome; vegetations are loosely attached and carry an exceptionally high risk of recurrent systemic thromboembolism (ischemic stroke).

Alternate Names:

NBTE; Marantic Endocarditis; Libman-Sacks Endocarditis Spectrum

Non-Celiac Gluten Sensitivity

Symptom improvement with gluten-free diet without celiac disease or wheat allergy. Diagnosis of exclusion.

Non-Communicable Disease

Disease not transmitted between persons. Examples: cancer, heart disease, diabetes.

Non-Contact Tonometry

A method of estimating intraocular pressure with a brief puff of air directed at the cornea. It does not touch the eye and is useful for screening, although abnormal or uncertain results may require confirmation with another method.

Non-Distensible Balloon (Vascular)

A catheter balloon designed to maintain its shape during high-pressure dilation of a narrowed vessel.

Alternate Names:

Vascular

Non-Fatal Drowning

Survival after respiratory impairment caused by submersion or immersion in liquid; complications may include hypoxic brain injury, lung injury, aspiration, and secondary respiratory failure.

Non-Functioning Pituitary Adenoma

Pituitary adenomas that do not secrete clinically significant hormones. The most common pituitary adenomas to present with mass effects.

Nonbacterial Thrombotic Endocarditis

A form of non-infective endocarditis characterized by the deposition of sterile, friable, non-inflammatory platelet and fibrin vegetations along the closure lines of cardiac valves (most frequently aortic and mitral). Strongly associated with advanced malignancies (especially mucin-secreting adenocarcinomas of the lung, pancreas, or GI tract, termed marantic endocarditis), systemic lupus erythematosus, and hypercoagulable states; vegetations easily detach, causing recurrent systemic and cerebral embolic strokes.

Alternate Names:

NBTE; Marantic endocarditis; Libman-Sacks-like nonbacterial endocarditis

Non-Hodgkin Lymphoma

A group of malignant lymphoid tumors arising from B cells, T cells, or natural-killer cells. Subtypes differ in biology, clinical behavior, affected organs, and treatment.

Alternate Names:

Cancer, Non-Hodgkin Lymphoma Lymphoma, Non-Hodgkin

Non-Hodgkin Lymphoma In Children

A group of malignant lymphoid tumors in children, including B-cell, T-cell, and anaplastic large-cell types, classified and treated according to histology and stage.

Non-Hodgkin'S Lymphoma

A diverse group of malignant lymphoid tumors that may arise from B cells, T cells, or natural-killer cells.

Non-Hodgkins Lymphomas

Non-Hodgkin lymphomas are a diverse group of cancers of B, T, or other lymphocytes, ranging from slow-growing to aggressive. Painless lymph-node enlargement, fever, night sweats, weight loss, or extranodal symptoms may occur; biopsy and staging determine treatment.

Alternate Names:

NHL (Non-Hodgkins Lymphomas)

Non-Hodgkins Lymphomas

Alternate index label for Non-Hodgkins Lymphomas.

Non-Infectious Cystitis

Inflammation of the bladder that is not caused by an infectious organism.

Non-Invasive Prenatal Testing

Screening of cell-free placental DNA in maternal blood for selected fetal chromosomal abnormalities, especially trisomies 21, 18, and 13. It is highly sensitive screening, not a definitive diagnosis; positive results require confirmatory invasive testing.

Non-Invasive Procedure

A procedure that does not intentionally enter a body cavity, organ, or tissue with an instrument.

Non-Invasive Ventilation

Positive pressure ventilation delivered via a face mask or nasal mask without endotracheal intubation. BiPAP (bilevel positive airway pressure) is most commonly used for acute hypercapnic respiratory failure (COPD exacerbation) and cardiogenic pulmonary edema. It reduces the need for intubation and improves outcomes in selected patients.

Non-Obstructive Azoospermia

A severe form of male factor infertility character-

ized by the complete absence of spermatozoa in the ejaculate due to severe intrinsic testicular spermatogenic failure rather than physical blockage of the ductal tract. Underlying causes include genetic abnormalities (such as Klinefelter syndrome 47,XXY and Y-chromosome microdeletions in the AZF regions), cryptorchidism, mumps orchitis, gonadotoxic chemotherapy or radiation, varicocele-induced atrophy, or idiopathic maturation arrest and Sertoli-cell-only syndrome. Clinically distinguished by elevated serum follicle-stimulating hormone, decreased testicular volume, and low inhibin B levels. Fertility management relies on microsurgical testicular sperm extraction (Micro-TESE) combined with in-vitro fertilization and intracytoplasmic sperm injection.

Alternate Names:

NOA; Secretory Azoospermia; Testicular Failure Azoospermia

Non-Proliferative Diabetic Retinopathy

The early stage of diabetic retinopathy, characterized by structural abnormalities of the retinal vasculature resulting from chronic hyperglycemia-induced damage to the endothelial cells and pericytes of retinal capillaries, without neovascularization.

Non-Radiographic Axial Spondyloarthritis

Inflammatory arthritis affecting the spine and sacroiliac region without definite structural changes on plain X-ray. It may cause chronic inflammatory back pain, morning stiffness, enthesitis, uveitis, psoriasis, or inflammatory bowel disease. MRI, laboratory findings, and clinical assessment help establish the diagnosis.

Non-Rapid Eye Movement Sleep

Sleep consisting of stages N1, N2, and N3, with progressively deeper sleep and reduced responsiveness to the environment.

Non-Rebreather Mask

A face mask with a reservoir bag and one-way valves that can deliver a high concentration of supplemental oxygen when fitted and used correctly.

Non-REM Sleep

Sleep stages that do not include rapid eye movements, including deep slow-wave sleep.

Alternate Names:

NREM sleep

Non-Responder

A person or disease that shows little or no expected response to a treatment, vaccine, or test stimulus.

Non-Small Cell Lung Cancer

Most common lung cancer type. Includes adenocarcinoma, squamous cell, large cell.

Non-Specific Urethritis

Urethral inflammation without identification of a specific cause, often associated with sexually transmitted organisms such as *Chlamydia trachomatis*.

Non-Steroidal Anti-Inflammatory Drugs (NSAIDs)

Medicines that inhibit cyclooxygenase and reduce prostaglandin production, providing analgesic, antipyretic, and anti-inflammatory effects.

Non-Stress Test

Antepartum fetal monitoring assessing fetal heart rate reactivity. Reactive NST: ≥ 2 accelerations of 15 bpm for 15 seconds (≥ 32 weeks) or 10 bpm for 10 seconds (<32 weeks) within 20 minutes. Non-reactive: insufficient accelerations after 40 minutes (may indicate fetal sleep, acidosis, or CNS depression). False positive rate high.

Non-Tuberculous Mycobacteria

NTM: environmental mycobacteria (*M. avium* complex - MAC, *M. kansasii*, *M. abscessus*). Pulmonary NTM: ATS/IDSA criteria (clinical + radiographic + microbiologic: 2+ sputum or 1 BAL + nodules/cavities/bronchiectasis on CT).

Nonagenarian

A nonagenarian is a person aged 90 through 99 years.

Nonalcoholic Fatty Liver Disease

NAFLD: hepatic steatosis (>5 percent of hepatocytes) in the absence of significant alcohol use, associated with the metabolic syndrome (obesity, type 2 diabetes, dyslipidemia, hypertension).

Nonalcoholic Steatohepatitis

Progressive form of NAFLD characterized by hepatic steatosis with lobular inflammation and hepatocyte ballooning with significant risk of progression to fibrosis, cirrhosis, and hepatocellular carcinoma. NASH affects approximately three to five percent of the general population.

Nonallergic Rhinitis

Nasal congestion, sneezing, or runny nose caused by irritants or other triggers rather than an allergy.

Alternate Names:

Rhinitis, Nonallergic Rhinitis, Vasomotor

Nonallergic Rhinopathy

Nonallergic rhinopathy causes congestion, runny nose, or sneezing without an allergic immune reaction, often triggered by odors, smoke, weather changes, or irritants.

Nonceliac Gluten Intolerance (Nonceliac Gluten Sensitivity (Intolerance))

Alternate index label for Nonceliac Gluten Sensitivity (Intolerance).

Nonceliac Gluten Sensitivity (Intolerance)

Alternate index label for Intolerance.

Noncompetitive Antagonist

A noncompetitive antagonist is a drug that reduces the effect of an agonist by a mechanism that cannot be overcome by increasing the agonist concentration.

Noncompetitive Inhibition

A type of enzyme inhibition where the inhibitor binds at a site distinct from the active site (allosteric site), and can bind to both the free enzyme (E) and the enzyme-substrate complex (ES) with equal

affinity. The inhibitor does not compete with the substrate and cannot be overcome by increasing substrate concentration.

Nonconvulsive Status Epilepticus

Ongoing seizure activity without prominent rhythmic limb jerking, often presenting as prolonged confusion, impaired awareness, or subtle twitching and requiring electroencephalographic confirmation and urgent treatment.

Nondisjunction

Failure of homologous chromosomes or sister chromatids to separate properly during cell division, producing cells with abnormal chromosome numbers.

Noninvasive

A medical device or care approach involving noninvasive. Its purpose, indications, risks, and follow-up depend on the patient and clinical setting.

Noninvasive Prenatal Testing

A maternal blood test that analyzes cell-free DNA to estimate the chance of selected fetal chromosomal conditions. It is a screening test, not a definitive diagnosis.

Noninvasive Ventilation

Positive-pressure ventilatory support delivered without an endotracheal tube, commonly by a mask or helmet. CPAP provides continuous positive pressure; bilevel support provides separate inspiratory and expiratory pressures. It is used selectively when the patient can protect the airway and cooperate.

Nonischemic Priapism

Alternate index label; see *Priapism*.

Nonketotic Hyperglycemic Hyperosmolar Syndrome

A severe complication of diabetes marked by very high blood glucose, dehydration, and increased blood osmolality, usually without substantial ketoacidosis.

Nonmelanoma Skin Cancer

A group of skin cancers that arise from the cells of the epidermis, excluding melanoma. The two most common types are basal cell carcinoma (BCC) and squamous cell carcinoma (SCC), which together account for the vast majority of all skin cancers diagnosed globally.

Nonpathogenic

Nonpathogenic means not ordinarily capable of causing disease in a given host or setting; an organism can still cause opportunistic infection when immunity or barriers are impaired.

Nonproliferative Retinopathy

Retinal disease in which small vessels leak or become damaged without abnormal new-vessel growth.

Alternate Names:

Background retinopathy

Nonselective Beta-Blockers

Nonselective beta-adrenergic blocking agents block both beta-1 and beta-2 adrenergic receptors, reducing heart rate, myocardial contractility, and cardiac output through beta-1 blockade, while also blocking beta-2 receptors in the bronchial smooth muscle and peripheral vasculature.

Nonseminomatous Germ Cell Tumor

A major category of malignant testicular and extragonadal germ cell tumors, comprising embryonal carcinoma, yolk sac tumor, choriocarcinoma, teratoma, and mixed histologic subtypes. Characterized by a younger age of onset, aggressive early hematogenous metastasis, and frequent secretion of serum tumor markers (alpha-fetoprotein and beta-human chorionic gonadotropin), which are used for risk stratification, staging, and monitoring response to platinum-based chemotherapy.

Alternate Names:

NSGCT; Nonseminoma

Nonsense Variant

A sequence variant that creates a premature stop codon, potentially producing a truncated protein or triggering nonsense-mediated mRNA decay. The

effect depends on the gene, location, transcript, and residual protein production.

Nonspecific Interstitial Pneumonia

A pattern with uniform, temporally homogeneous inflammation and/or fibrosis. Most common ILD associated with connective tissue disease. HRCT shows bilateral ground-glass opacities with subpleural sparing.

Nonspecific Interstitial Pneumonitis

An interstitial lung disease characterized by relatively uniform inflammation and fibrosis of the lung interstitium, often associated with connective-tissue disease, medications, or an unknown cause.

Nonsteroidal Anti-Inflammatory Drugs

Analgesic and anti-inflammatory drugs that inhibit cyclooxygenase enzymes and prostaglandin synthesis. Perioperative use requires assessment of renal function, gastrointestinal bleeding risk, platelet effects, cardiovascular risk, and surgical bleeding considerations.

Nonsteroidal Anti-Inflammatory Drugs And Ulcers

Nonsteroidal anti-inflammatory drugs can reduce stomach-protective prostaglandins and cause gastritis, ulcers, and gastrointestinal bleeding. Risk rises with age, prior ulcer, anticoagulants, steroids, kidney disease, and high doses; safer alternatives or acid protection may be needed.

Alternate Names:

Nonsteroidal Antiinflammatory Drugs (Nonsteroidal Anti-Inflammatory Drugs And Ulcers)

Nonsteroidal Antiinflammatory Drugs (Nonsteroidal Anti-Inflammatory Drugs And Ulcers)

Alternate index label for Nonsteroidal Anti-inflammatory Drugs and Ulcers.

Nonsyndromic

Nonsyndromic means occurring without the additional characteristic features of a recognized syndrome; it may still be genetic, congenital, or clinically significant.

Nontropical Sprue

Alternate index label; see *Celiac disease*.

Nontuberculous Mycobacterial Infection

Infection caused by Mycobacterium species other than *M. tuberculosis*, often affecting the lungs but sometimes the lymph nodes, skin, or other organs. Disease is more likely in people with structural lung disease or impaired immunity.

Nontuberculous Mycobacterial Lung Disease

Chronic lung infection caused by environmental Mycobacterium species other than *M. tuberculosis*. It may produce cough, fatigue, weight loss, breathlessness, or coughing blood, especially in people with structural lung disease. Diagnosis requires compatible imaging and repeated microbiologic testing; treatment is prolonged and individualized.

Nonulcer Dyspepsia

Alternate index label; see *Functional dyspepsia*.

Nonulcer Stomach Pain

Alternate index label; see *Functional dyspepsia*.

Nonunion And Malunion

Nonunion is failure of a fractured bone to heal after an adequate period (generally 6-9 months for long bones) without clinical or radiographic evidence of progression toward union for 3 months. Classification: hypertrophic (viable ends, inadequate stability), atrophic (devitalized ends, poor biology), oligotrophic (intermediate).

Nonunion Fracture

Failure of a broken bone to heal within the expected time and without progressive healing, often causing persistent pain, instability, or deformity.

Noonan Syndrome

An inherited disorder of the RAS-MAPK signaling pathway, characterized by distinctive facial features,

short stature, congenital heart disease, and variable developmental or bleeding problems.

Noonan Syndrome

Noonan syndrome is a RASopathy causing characteristic facial features, short stature, congenital heart disease, developmental variation, and sometimes bleeding or lymphatic abnormalities; it is usually autosomal dominant and genetically heterogeneous.

Noonan Syndrome With Multiple Lentigines

A genetic disorder also called LEOPARD syndrome, characterized by multiple lentigines, distinctive facial features, heart disease, short stature, and sometimes deafness or genital abnormalities.

Noradrenaline

A hormone and neurotransmitter involved in alertness, stress responses, and blood-vessel constriction.

Alternate Names:

Norepinephrine

Norepinephrine

A hormone and neurotransmitter that supports alertness, heart function, and the stress response.

Alternate Names:

Noradrenaline

Norethisterone

A synthetic progestogen used for contraception and selected menstrual or endometriosis-related disorders.

Norfloxacin

A quinolone antibiotic formerly used for selected urinary or gastrointestinal bacterial infections.

Norgestrel

A synthetic progestogen used in some hormonal contraceptives. It helps prevent pregnancy by suppressing ovulation and changing cervical mucus and the uterine lining.

Norketamine

Norketamine is an active metabolite of ketamine with NMDA-receptor antagonist activity; it contributes to ketamine's analgesic and psychoactive effects and may persist after the parent drug is cleared.

Normal

Within an expected range or consistent with usual anatomy, physiology, or function for a specified population.

Normal Flora

The resident microorganisms (commensals) colonizing body surfaces—skin, oropharynx, gastrointestinal tract, genitourinary tract—without causing disease under normal conditions. They provide protection (colonization resistance, immune priming), synthesis of vitamins, and nutrient metabolism.

Normal Growth And Development

Normal growth and development describes expected physical growth, movement, language, learning, and social progress for a person's age and stage of life.

Normal Labour

Spontaneous labour at term with regular uterine contractions, progressive cervical dilatation, and delivery through the birth canal without major complication.

Normal Pressure Hydrocephalus

A disorder of cerebrospinal-fluid circulation causing enlarged ventricles and a clinical pattern that may include gait impairment, cognitive decline, and urinary urgency or incontinence.

Normal Range

A normal range is the interval of results commonly found in a reference population; a result outside it does not by itself prove disease.

Normal Saline

A sterile approximately 0.9

Normal-Pressure Hydrocephalus

A disorder in which cerebrospinal fluid accumulates and causes gait difficulty, cognitive decline, and urinary problems despite near-normal measured pressure.

Normalization

Correction for detector efficiency variations. Performed daily with uniform source.

Normoblast

A nucleated immature red-cell precursor in bone marrow that normally loses its nucleus before entering circulation.

Normocalcemic Hyperparathyroidism

Condition of elevated parathyroid hormone with persistently normal serum calcium and normal vitamin D levels. Exclusion of secondary causes of elevated PTH including vitamin D deficiency, renal insufficiency, and medications is required. Represents an early or mild form of primary hyperparathyroidism. May progress to overt hypercalcemia.

Normocytic Anaemia

Anemia in which red blood cells are of approximately normal mean volume, despite a reduced total red-cell mass.

Normotensive

Having blood pressure within the expected range for the individual and measurement setting.

Norovirus

A single-stranded RNA virus that is the leading cause of gastroenteritis outbreaks worldwide. The virus is highly contagious and can cause large outbreaks in closed settings including hospitals, cruise ships, and nursing homes. Norovirus causes acute onset of vomiting and diarrhea. Diagnosis is made by PCR or antigen detection in stool.

Norovirus - Hospital

Hospital-associated norovirus is an acute, highly contagious gastroenteritis causing vomiting and watery

diarrhoea; control depends on isolation, handwashing with soap and water, environmental disinfection, and rehydration.

Norovirus Infection

A highly contagious viral gastroenteritis causing sudden nausea, vomiting, watery diarrhea, abdominal cramps, and sometimes fever. Illness is usually short but can cause dangerous dehydration, especially in infants, older adults, or medically vulnerable people. Oral rehydration and careful hand hygiene are central to management and prevention.

Norrie Disease

An X-linked retinal disorder, usually caused by pathogenic variants in NDP, characterized by congenital or early-onset blindness from abnormal retinal development. Hearing loss, developmental differences, and peripheral vascular or vitreoretinal complications may occur.

Nortriptyline

A tricyclic antidepressant used for depression and selected neuropathic pain disorders.

Norwegian Scabies

A severe, highly contagious form of crusted scabies with large numbers of mites, often occurring in immunocompromised people.

Norwood Procedure

The first-stage, high-complexity neonatal reconstructive cardiac surgical operation for hypoplastic left heart syndrome and related single-right-ventricle anomalies, performed within the first few days of life. Consists of three core surgical maneuvers: (1) neo-aortic reconstruction, transecting the main pulmonary trunk and anastomosing it to the hypoplastic ascending aorta and aortic arch with extensive patch augmentation; (2) wide atrial septectomy to guarantee uninhibited pulmonary venous return to the single right ventricle; and (3) placement of a source of controlled pulmonary blood flow, classically utilizing a modified Blalock-Taussig shunt (from innominate artery to pulmonary artery) or a Sano shunt (valveless conduit from right ventricle

to pulmonary artery confluence).

Alternate Names:

Stage 1 Norwood Reconstruction; Norwood Operation

Nose

The external nasal structure and nasal cavities, the primary organ of olfaction and the entry to the respiratory tract. External nose: bone (nasal bones, frontal process of maxilla) and cartilage (septal, upper/lower lateral cartilages).

Nose Fracture

A break in one or more nasal bones caused by trauma, potentially causing pain, swelling, deformity, bleeding, or nasal obstruction.

Nose, Disorders Of

Conditions affecting the nose or nasal passages, including infection, allergy, trauma, obstruction, polyps, and tumors.

Nosebleed

A nosebleed, or epistaxis, is bleeding from nasal blood vessels caused by dryness, trauma, inflammation, medications, hypertension, vascular disease, or less commonly a tumor or bleeding disorder. anterior nasal septum and result from local trauma, dryness, inflammation, or vascular disease; persistent or severe bleeding may require medical intervention.

Alternate Names:

epistaxis.

Nosebleeds

Bleeding from blood vessels in the nose, commonly caused by dryness, irritation, injury, infection, allergies, medicines, or high blood pressure.

Nosocomial

Acquired during healthcare, especially in a hospital, rather than being present or incubating when the person entered care. A nosocomial infection may be caused by bacteria, viruses, fungi, or other organisms and can involve drug-resistant organisms.

Nosocomial Infection

A hospital-acquired infection developing during or after hospitalization that was not present or incubating at admission, classically defined by onset beyond 48 hours. Common sites are bloodstream, urinary tract, lungs, and surgical wounds; causative organisms are frequently multidrug-resistant, prevented by hand hygiene and stewardship.

Nostril

The anterior external opening or aperture of the nasal cavity; anatomically termed the anterior naris (plural: nares). Flanked laterally by the mobile fibrofatty ala of the nose and separated medially by the columella and caudal nasal septum. Leads directly into the nasal vestibule, which is lined by stratified squamous keratinized epithelium and coarse protective hairs (vibrissae) that trap large airborne particulates and foreign debris before inspired air enters the respiratory nasal cavity.

Notencephalocele

A rare congenital neural-tube defect involving protrusion of brain tissue or meninges through a skull defect; terminology varies by source.

Notifiable Disease

Disease required by law to be reported to health authorities. Examples: tuberculosis, measles, HIV, COVID-19.

Notochord

A flexible embryonic rod that guides axial development and largely disappears as the vertebral column forms.

Novobiocin

An older aminocoumarin antibiotic formerly used for selected staphylococcal infections and in laboratory differentiation of staphylococci.

NOWS

Alternate name; see *Neonatal Opioid Withdrawal Syndrome*.

Noxious

Harmful, poisonous, or capable of causing tissue injury or pain. Noxious stimuli activate protective sensory pathways such as pain and withdrawal reflexes.

NREM Sleep

NREM sleep is non-rapid-eye-movement sleep, comprising stages from light sleep to deep slow-wave sleep and alternating with REM sleep.

NSAID

A nonsteroidal anti-inflammatory drug used to reduce pain, fever, and inflammation.

Alternate Names:

Nonsteroidal anti-inflammatory drug

NSAIDs (Nonsteroidal Anti-Inflammatory Drugs)

A class of analgesic, antipyretic, and anti-inflammatory drugs that inhibit cyclooxygenase (COX-1 and/or COX-2), reducing prostaglandin and thromboxane synthesis.

Alternate Names:

Nonsteroidal Anti-Inflammatory Drugs

NSTEMI

Non-ST-elevation myocardial infarction: acute myocardial necrosis (elevated cardiac troponin) without persistent ST-segment elevation on ECG, caused by subtotal occlusion or distal embolization of a coronary artery. Features: chest pain, ECG changes (ST depression, T-wave inversion), elevated troponin.

NTD

NTD commonly means neural-tube defect, a congenital brain or spinal-cord malformation associated with inadequate folate and other factors.

Nuchal

Pertaining anatomically to the back or nape of the neck (the nuchal region). Clinically prominent in infectious disease and neurology for nuchal rigidity (inability to passively flex the neck toward the chest due to severe spasm of extensor neck muscles, a

cardinal physical finding of meningeal irritation in bacterial or viral meningitis and subarachnoid hemorrhage). Also high-yield in prenatal ultrasonography for the first-trimester nuchal translucency measurement at 11–14 weeks gestation, where increased subcutaneous fluid thickness at the fetal nape indicates elevated risk for fetal chromosomal aneuploidies (trisomy 21 / Down syndrome) and congenital cardiac malformations.

Nuchal Cord

Wrapping of the umbilical cord around the fetal neck, occurring once or more times. It is common and often harmless, but monitoring during labor is needed if fetal heart-rate abnormalities occur.

Nuchal Rigidity

Abnormal stiffness and resistance to passive flexion of the neck, classically associated with irritation or inflammation of the meninges, including meningitis or subarachnoid hemorrhage.

Nuchal Translucency Screening

An ultrasound measurement of the fluid-filled space at the posterior fetal nuchal region, performed at 11–14 weeks (crown-rump length 45–84 mm). Increased NT (>95th percentile or >3.0–3.5 mm) is associated with trisomies 21, 18, 13, Turner syndrome, and cardiac defects.

Nuchal Translucency Test

An ultrasound measurement of fluid at the back of the fetal neck during early pregnancy, used with other factors for screening chromosomal abnormalities and selected structural conditions.

Nuclear

Relating to a cell nucleus, atomic nucleus, or nuclear medicine depending on context.

Nuclear Magnetic Resonance

The absorption and emission of electromagnetic energy by atomic nuclei in a magnetic field; it is the physical basis of MRI and spectroscopy.

Nuclear Sclerosis

A common age-related cataract in which the central lens becomes increasingly yellow and hard. It can gradually reduce vision, alter color perception, and sometimes temporarily improve near vision.

Nuclear Stress Test

A test that compares blood flow to heart muscle at rest and during exercise or medicine-induced stress using a radioactive tracer. It can identify areas of reduced perfusion that suggest coronary artery disease.

Nuclear Tests

Diagnostic tests using small amounts of radioactive material to assess organs or identify disease.

Alternate Names:

Nuclear medicine tests

Nuclear Ventriculography

A radionuclide imaging test that tracks labeled blood through the heart to measure ventricular ejection fraction and wall motion.

Nucleic Acid

DNA or RNA, polymers that store, transmit, or express genetic information.

Nucleic Acid Hybridization

A laboratory method in which complementary DNA or RNA strands bind to each other to detect, identify, or measure genetic sequences.

Nucleolus

A dense region within the cell nucleus where ribosomal RNA is produced and ribosome subunits begin assembly.

Nucleoside

A nitrogenous base linked to a sugar, without a phosphate group.

Nucleoside Analogs

A class of antiviral drugs that structurally resemble natural nucleosides and inhibit viral replication by

interfering with DNA or RNA synthesis.

Nucleoside Bypass Therapy

Nucleoside bypass therapy is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

Nucleotide

A nucleoside linked to one or more phosphate groups; nucleotides form DNA and RNA and carry cellular energy.

Nucleus

The membrane-bound cell organelle containing most genetic material, or a defined cluster of neurons in the central nervous system.

Nucleus Accumbens

A group of neurons involved in reward, motivation, learning, reinforcement, and addiction-related behavior. It forms part of the ventral striatum.

Nucleus Pulposus

The soft, gel-like central portion of an intervertebral disk, surrounded by the annulus fibrosus.

Null Mutation

A genetic variant that prevents a gene from producing a functional protein or RNA product.

Nulligravida

An obstetrical term designating a woman who is not currently pregnant and has never experienced a pregnancy (gravidity = 0). Differentiated from nullipara, which designates a woman who has never carried a pregnancy beyond 20 weeks of gestation (or delivered an infant weighing ≥ 500 g), even if she has experienced previous early miscarriages or elective terminations. Nulligravidity is an epidemiological risk factor for endometrial cancer and breast cancer (due to a greater cumulative number of lifetime ovulatory cycles and uninterrupted estrogen exposure).

Nullipara

A person who has never carried a pregnancy beyond the stage of fetal viability; the adjective is nulliparous.

Numb

Numb means lacking normal sensation or emotional responsiveness; physical numbness can result from nerve, brain, circulation, metabolic, or medication-related problems.

Number Needed To Harm

The number of people exposed to an intervention for one additional person to experience a specified adverse outcome compared with the control over a defined time. It is the reciprocal of absolute risk increase.

Number Needed To Treat

The number of people who must receive an intervention for one additional person to experience the specified beneficial outcome compared with the control over a defined time. It is the reciprocal of absolute risk reduction.

Numbness

Reduced or absent sensation, often caused by nerve compression, injury, neuropathy, circulation problems, or brain or spinal disease.

Numbness (Numb)

Numbness is reduced or absent sensation, often from nerve compression, neuropathy, stroke, spinal disease, circulation problems, or anesthetic effects.

Numbness And Tingling

Abnormal sensations, also called paresthesias, that may result from nerve compression, peripheral neuropathy, spinal disease, vitamin deficiency, vascular problems, or neurologic disorders. Sudden one-sided symptoms require urgent evaluation for stroke.

Alternate Names:

paresthesias, that may result from nerve compression,.

Numbness In Hands

Reduced or absent sensation in one or both hands, commonly caused by nerve compression, neuropathy, injury, circulation problems, or systemic disease.

Nummular

Coin-shaped or round. The term is commonly used for nummular eczema, which causes itchy, coin-shaped patches of inflamed skin.

Nummular Eczema

Nummular eczema is an inflammatory skin disorder producing intensely itchy coin-shaped patches, often worsened by dry skin, irritation, or barrier disruption. erythematous, vesicular, or crusted plaques, typically on the extremities. The lesions are intensely pruritic and may be triggered by dry skin, skin trauma, or allergic contact dermatitis. It is more common in adults with atopic predisposition.

Nurse

A regulated healthcare professional who provides assessment, treatment, education, monitoring, and supportive care.

Nurse Assistant

A nurse assistant helps provide basic patient care such as bathing, mobility, feeding, measurements, and comfort under the direction of licensed staff.

Nurse Practitioner

A nurse practitioner is an advanced-practice nurse who can assess patients, diagnose and treat many conditions, prescribe medicines where authorized, and provide preventive care.

Nursemaid'S Elbow

Nursemaid's elbow is subluxation of the radial head after sudden traction on a young child's extended or pronated arm; the child avoids using the arm, and gentle clinician reduction usually restores movement.

Nursery

A place or service for the care of infants, including

specialized newborn care in a hospital.

Nursing

The professional practice of caring for people, promoting health, preventing illness, and supporting recovery or comfort.

Nursing Home

A residential facility that provides ongoing nursing care, assistance with daily activities, and medical or rehabilitation services for people who cannot live independently.

Nut

A seed or fruit used as food; it may cause IgE-mediated food allergy in susceptible people.

Nut Allergies

Nut allergy is an immune-mediated reaction to tree nuts or peanuts that can cause hives, gastrointestinal or respiratory symptoms, or life-threatening anaphylaxis.

Nut-Allergy

An immune-mediated reaction to one or more nuts, potentially causing urticaria, anaphylaxis, or gastrointestinal and respiratory symptoms.

Nutation

A nodding or rocking movement; in anatomy it commonly describes movement of the sacrum relative to the pelvis.

Nutcracker Esophagus

Esophageal motility disorder characterized by high-amplitude peristaltic contractions exceeding 180 mmHg in the distal esophagus on manometry, with preserved peristaltic coordination. Presents with intermittent chest pain and dysphagia to solids and liquids.

Nutcracker Syndrome

Compression of left renal vein between aorta and SMA causing hematuria and flank pain. Managed conservatively. Stenting or surgery for severe cases.

Nutraceutical

A food-derived product marketed as providing health or medicinal benefits beyond basic nutrition; evidence, composition, and regulatory oversight vary by product.

Nutrient

A substance required by the body for energy, growth, repair, or physiological function.

Nutrient Density

Amount of nutrients per calorie. Whole foods more nutrient-dense than processed foods. Importance for weight management, health.

Nutriment

Food or a nutrient that supplies energy or building material needed for body maintenance, growth, and repair.

Nutrition

The intake, digestion, absorption, metabolism, and use of food components by the body.

Nutrition (Geriatric)

Nutritional assessment and intervention in elderly. Risks: malnutrition (undernutrition, obesity), micronutrient deficiencies (vitamin D, B12, calcium), dehydration. Assessment: weight, BMI, dietary intake, lab values. Interventions: supplementation, meal delivery, appetite stimulants, feeding assistance.

Alternate Names:

Geriatric

Nutrition (Oncology)

Nutritional care for people with cancer, addressing intake, symptoms, treatment effects, weight, muscle mass, and personal goals.

Alternate Names:

Oncology

Nutrition And Athletic Performance

A clinical or physiological concept involving nutrition and athletic performance. Its meaning and

clinical importance depend on the relevant body system and context.

Nutrition Education

Teaching patients about healthy eating. Cultural sensitivity, health literacy appropriate. Motivational interviewing effective.

Nutrition In Pregnancy

A balanced diet providing adequate calories, protein, vitamins, and minerals to support maternal and fetal health. Additional caloric needs: 300 kcal/day in the second and third trimesters. Key nutrients: folic acid (400 mcg/day), iron (27 mg/day), calcium (1000 mg/day), vitamin D (600 IU/day), iodine (220 mcg/day), DHA (200-300 mg/day).

Nutrition Risk Screening 2002

A validated screening tool for hospitalized adults that considers nutritional status and disease severity to identify patients likely to benefit from nutrition support. Screening is not itself a complete malnutrition diagnosis.

Nutrition-Focused Physical Examination

A structured examination for physical findings associated with malnutrition, including loss of subcutaneous fat, muscle wasting, edema, ascites, reduced functional status, and micronutrient-related signs. It complements dietary history, anthropometry, laboratory data, and disease assessment.

Nutritional Anemia

Anemia caused by inadequate intake, absorption, or use of nutrients needed for red-cell production, especially iron, vitamin B12, or folate.

Nutritional Assessment

Comprehensive evaluation: dietary intake, anthropometrics, biochemical tests, clinical examination. Dietitian involvement essential.

Nutritional Dermatoses

Nutritional deficiencies cause distinctive skin findings. Vitamin C deficiency (scurvy): perifollicu-

lar hemorrhage, corkscrew hairs, gingival bleeding. Niacin deficiency (pellagra): photosensitive dermatitis in sun-exposed areas, diarrhea, dementia.

Nutritional Disorders

Conditions caused by deficiency, excess, imbalance, or impaired use of nutrients.

Nutritional Science

The study of nutrients, dietary patterns, metabolism, and their effects on health and disease.

Nutritional Screening

Rapid assessment for malnutrition risk. Tools: MST, MNA, MUST. Screening all elderly patients recommended. Identifies need for comprehensive assessment.

Nutritive

Pertaining to, promoting, or providing biological nutrition and sustenance. Refers to dietary constituents (macronutrients: carbohydrates, proteins, fats; and micronutrients: vitamins, essential minerals) capable of undergoing metabolic absorption to supply cellular energy, sustain cellular homeostasis, and support tissue growth and repair. Contrasts with non-nutritive substances (e.g., non-nutritive artificial sweeteners like aspartame and sucralose) that supply sweetness without contributing significant metabolic calories.

Nux Vomica

The seed of *Strychnos nux-vomica*, containing strychnine and brucine; ingestion can cause severe convulsant poisoning.

Nyctalga

Pain occurring at night; the term is uncommon and requires clinical context.

Nyctalopia

Impaired vision in dim light or darkness, also called night blindness.

Nycteralgia

Night pain, an uncommon term sometimes used interchangeably with nyctalgalia.

NYHA Functional Classification

A four-class system grading heart failure severity based on symptoms and exercise tolerance. Class I: no limitation of physical activity. Class II: slight limitation; comfortable at rest but ordinary activity causes symptoms. Class III: marked limitation; comfortable at rest but less than ordinary activity causes symptoms.

Nystagmus

Nystagmus is involuntary rhythmic eye movement that can arise from vestibular disease, neurologic disorders, impaired vision, medication, or normal infant development. rotational, or mixed in pattern, and it is classified based on the underlying cause as infantile (developing in the first six months of life), acquired (developing later in life), or periodic alternating.

Nail Patella Syndrome

Usually an autosomal-dominant disorder caused by a pathogenic variant in *LMX1B*, characterized by abnormal or absent nails, small or absent kneecaps, and elbow or pelvic abnormalities such as iliac horns. Glaucoma and kidney disease with proteinuria may also occur.

Nails

Hard plates of keratin covering the ends of fingers and toes. Changes in color, shape, thickness, or attachment can result from injury, infection, skin disease, nutritional problems, or other illness.

Nanoparticle

An extremely small particle, commonly measured in nanometers. Nanoparticles are studied for imaging, diagnosis, drug delivery, and other technologies, but their safety depends on their material, dose, and route of exposure.

Nanoscience

The study of materials and biological structures at

the nanometer scale, where properties can differ from those of larger materials.

Nanotechnology

The design and use of materials or devices at the nanometer scale. Medical applications include targeted drug delivery, diagnostic sensors, and imaging tools.

Nasal Spray

A liquid or mist delivered into the nose. Different sprays contain saline, corticosteroids, antihistamines, or decongestants; correct use and duration depend on the product.

Neem

A tree used in traditional medicine and personal-care products. Evidence for treating disease is limited, and neem products can be toxic or interact with medicines, especially when swallowed.

Neglected Tropical Disease

An infectious or parasitic disease that mainly affects populations in tropical or subtropical regions with limited resources. Examples include schistosomiasis, leprosy, dengue, and lymphatic filariasis.

Neocortex

The outer part of the cerebral hemispheres involved in conscious perception, language, planning, memory, and voluntary movement.

Neoehrlichiosis

An infection caused by the bacterium *Candidatus Neoehrlichia mikurensis*, usually transmitted by ticks. It can cause fever and blood-vessel inflammation, especially in people with weakened immunity.

Neuroacanthocytosis

A group of rare inherited disorders causing movement or psychiatric symptoms together with abnormal spiny red blood cells called acanthocytes. Neurologic assessment and genetic evaluation may be needed.

Neurocutaneous Syndrome

A disorder affecting both the nervous system and the skin, often because of an inherited genetic change. Examples include neurofibromatosis and tuberous sclerosis.

Neurodegenerative Disease

A disease in which nerve cells progressively lose function or die. Examples include Alzheimer disease, Parkinson disease, and Huntington disease.

Neurodegenerative Disorder

Another term for a condition involving progressive damage or loss of nerve cells, which can affect movement, memory, behavior, sensation, or autonomic function.

Neurogenesis

The formation of new nerve cells from precursor cells. It is especially active during development and may continue in limited areas of the adult brain.

Neuroimmunology

The study of interactions between the nervous and immune systems. It helps explain conditions such as multiple sclerosis, autoimmune neuropathies, and neuroinflammation.

Neurological Disease

Any disease affecting the brain, spinal cord, peripheral nerves, muscles, or their connections. Symptoms may include weakness, numbness, seizures, headache, movement changes, or problems with thinking.

Neuromodulation

Changing nerve activity with electrical, magnetic, chemical, or other signals. Treatments include spinal cord stimulation, deep brain stimulation, and some noninvasive brain-stimulation methods.

Neuromyelitis Optica

An autoimmune disorder that mainly causes inflammation of the optic nerves and spinal cord. It can cause vision loss and weakness or altered sensation

and is treated with immune-directed therapy.

Neuronal Migration Disorder

A developmental brain disorder in which nerve cells do not move to their normal positions before birth. It can cause abnormal brain structure, seizures, developmental delay, or learning problems.

Neuronopathy

A disorder caused mainly by damage to nerve-cell bodies, often in sensory or motor nerve groups. It may cause numbness, imbalance, weakness, or loss of reflexes.

Neurons

Specialized nerve cells that receive, process, and transmit electrical or chemical signals. They communicate with one another and with muscles or glands.

Neurophysiology

The study of how the nervous system functions. Tests such as electroencephalography and nerve-conduction studies assess electrical activity in the brain, nerves, and muscles.

Neurophysiotherapy

Physical therapy focused on movement and function problems caused by disorders of the brain, spinal cord, or nerves. Treatment may address strength, balance, walking, coordination, and daily activities.

Neuropsychopharmacology

The study of how medicines and other substances affect brain function, behavior, and mental processes.

Neuroscience

The scientific study of the nervous system, including its structure, development, function, diseases, and treatment.

Nevus Comedonicus Syndrome

A rare disorder in which multiple comedone-like skin lesions occur with abnormalities of the eyes, bones, nervous system, or other organs. It is usually

present from birth or early childhood.

Nexium

A brand name for esomeprazole, a proton-pump inhibitor that reduces stomach-acid production. It is used for conditions such as reflux and ulcers; prolonged or inappropriate use can have risks and interactions.

Nipah Virus

A virus that can cause fever, breathing problems, and inflammation of the brain. It spreads mainly through infected animals, contaminated food, or close contact with an infected person and can be severe.

Non-Coding RNA (ncRNA)

RNA that does not provide instructions for making proteins. It can regulate gene activity, RNA processing, cell structure, and other biological functions.

Non-Hodgkin's Lymphoma

A broad group of cancers arising from lymphocytes, a type of white blood cell. It includes many subtypes with different behavior and treatments.

Nontuberculous Mycobacteria

Mycobacteria other than the tuberculosis complex and *M. leprae*. They are found in soil and water and can cause lung, skin, lymph-node, or disseminated infections, especially in people with underlying illness.

Nootropics

Substances marketed or used to affect attention, memory, alertness, or other cognitive functions. Evidence and safety vary widely, and supplements may interact with medicines or contain unlisted ingredients.

Nuclear Medicine

A medical specialty that uses small amounts of radioactive substances to diagnose or treat disease. Scans show body function or chemical activity, while treatments deliver radiation to selected tissues.

Nummular Dermatitis

An inflammatory skin condition causing itchy, coin-shaped patches, often on the arms or legs. Dry skin, irritants, and skin injury may contribute; treatment commonly includes moisturizers and prescribed anti-inflammatory medicines.

Nutrigenomics

The study of how genes influence responses to nutrients and how diet can affect gene activity. It may support research into personalized nutrition, but many consumer genetic diet claims remain uncertain.

O

OAB

Alternate index label; see *Overactive bladder*.

Oat Cell Carcinoma

An older name for small-cell carcinoma of the lung, an aggressive neuroendocrine cancer strongly associated with tobacco exposure.

Oath Of Maimonides

The Oath of Maimonides is a historical ethical prayer emphasizing compassion, dedication, humility, and responsibility in the practice of medicine.

OB/GYN

OB/GYN refers to obstetrics and gynecology, the medical specialties concerned with pregnancy and reproductive-system health.

Obatoclax

An investigational anticancer drug that blocks BCL-2 family proteins, which help cancer cells avoid programmed cell death.

Obatoclax Mesylate

The mesylate salt form of obatoclax, an investigational BCL-2 family inhibitor studied as an anti-cancer medicine.

Obese

Obese describes a body-mass index of 30 or higher in adults, though BMI is an imperfect measure and health assessment should include overall risk and function.

Obesity

A condition in which excess body fat affects health. It is influenced by genes, metabolism, environment, behavior, and social factors and can increase the risk of diabetes, high blood pressure, heart disease, sleep apnea, joint disease, and some cancers.

Obesity (Weight Loss)

Alternate index label for Weight Loss.

Obesity Hypoventilation Syndrome

A condition in which a person with obesity does not breathe deeply enough while awake, causing too much carbon dioxide in the blood. It often occurs with obstructive sleep apnea and may require weight treatment and breathing support.

Obesity Hypoventilation Syndrome

Alternate index label; see *Obesity Hypoventilation Syndrome*.

Obesity Rating

A classification or score describing excess body weight, commonly based on body-mass index and sometimes waist circumference or health risk.

Obesity, Exogenous

Obesity attributed mainly to excess energy intake relative to expenditure, rather than to a primary endocrine disorder; genetics, medicines, sleep, and environment can also contribute.

Obex Region

A small area at the bottom of one of the brain's fluid-filled spaces, where it narrows toward the spinal

cord.

Objective

Based on observable findings or measurements rather than personal feelings or impressions.

Objective Response Rate

The percentage of people in a cancer study whose tumors shrink by a defined amount during treatment.

Objects Or Insects In Ear

An object or insect in the ear canal can cause pain, hearing loss, bleeding, discharge, or a sensation of movement. Do not insert tools or liquids; removal by a clinician is safest when the object is deep, sharp, chemical, or near the eardrum.

Alternate Names:

Ear Object In (Objects Or Insects In Ear)

Obligate

Required for a process or able to live only under certain conditions, such as a microorganism that cannot live with oxygen.

Oblimersen Sodium

Oblimersen sodium is an investigational antisense drug designed to reduce BCL-2 protein expression and increase cancer-cell sensitivity to treatment.

Oblique Fracture

A break in a bone that runs diagonally across it.

Oblique Plane

A plane that passes through the body or an organ at an angle other than a right angle (diagonal plane).

Obliteration

Complete closure, destruction, or disappearance of a space, channel, or lumen.

Observation

Deliberate monitoring of a person, symptom, disease, or test result without immediate intervention.

Observational Study

observational study is a developmental, reproductive, family, or study-design term describing how a person, embryo, pregnancy, or research subject is classified or observed.

Observer Variation

Differences between observers when they assess, measure, or interpret the same finding, which can affect clinical reliability and research results.

Obsession

A recurrent, intrusive, unwanted thought, image, or urge that causes distress and is difficult to control.

Obsessions

Recurrent, persistent, intrusive, and unwanted thoughts, urges, or images that are experienced as intrusive and cause marked anxiety or distress. Common obsessions include contamination fears, fears of harming oneself or others, need for symmetry, taboo thoughts (sexual, religious, or aggressive), and doubt.

Obsessive Compulsive Disorder

Alternate index label for OCD.

Obsessive-Compulsive Disorder

Characterized by the presence of obsessions, compulsions, or both. Obsessions are recurrent, persistent, intrusive, and unwanted thoughts, urges, or images that cause marked anxiety or distress. The individual attempts to ignore or suppress them or neutralize them with some other thought or action.

Obsessive-Compulsive Disorder

A disorder involving recurrent obsessions, compulsions, or both, which are time-consuming or cause significant distress or impairment.

Obsessive-Compulsive Personality Disorder

A pattern of preoccupation with orderliness, perfectionism, and mental and interpersonal control, at the expense of flexibility and efficiency.

Obstetric Anal Sphincter Injury

A severe tear during childbirth that involves the muscles controlling bowel movements. It needs careful repair and follow-up because it can affect bowel control.

Obstetric Cholestasis

Alternate index label; see *Cholestasis of pregnancy*.

Obstetric Fistula

A hole that forms between the birth canal and the bladder or rectum after prolonged, obstructed labour without timely medical care. It causes continuous leakage of urine or stool and may lead to skin infections, kidney problems, and social isolation. Most cases can be prevented with timely maternity care, and many can be repaired with surgery.

Obstetric Nursing

Obstetric nursing provides care during pregnancy, labor, birth, and the postpartum period, including monitoring, education, support, and recognition of complications.

Obstetric Ultrasound

An ultrasound scan during pregnancy used to check the baby's age, growth, anatomy, position, heart-beat, and sometimes the placenta and fluid.

Obstetrical Forceps

A surgical instrument used in selected vaginal deliveries to guide the baby's head when delivery needs assistance; use requires appropriate position, skilled assessment, and informed consent.

Obstetrician

A medical doctor who specializes in the care of women during pregnancy, labor, and the postpartum period (obstetrics). Obstetricians manage normal and high-risk pregnancies, perform cesarean deliveries and assisted vaginal deliveries, and treat pregnancy complications (pre-eclampsia, gestational diabetes, hemorrhage, preterm labor).

Obstetrics

The branch of medicine and surgery concerned with the care of women during pregnancy, childbirth, and the postpartum period.

Obstipation

Severe constipation with inability to pass stool or gas, often suggesting intestinal obstruction.

Obstructed Infected Urinary System

A blocked urinary tract with an infection behind the blockage. It is a medical emergency because infection can spread quickly and the blockage often must be relieved urgently.

Obstructed Labour

Failure of the fetus to pass through the birth canal despite adequate uterine contractions, commonly because of disproportion, abnormal presentation, or an obstructing lesion.

Obstruction

A blockage that prevents urine from flowing normally. Stones, narrowing, tumors, or an enlarged prostate can cause it and may lead to infection or kidney damage.

Obstructive Azoospermia

A form of male infertility characterized by the complete absence of spermatozoa in the ejaculate despite normal spermatogenesis within the testicular parenchyma, caused by physical obstruction or absence of the excurrent reproductive duct system. Etiologies include congenital bilateral absence of the vas deferens (CBAVD, strongly associated with CFTR gene variants in cystic fibrosis), previous vasectomy, post-infectious scarring (epididymitis, gonococcal urethritis), ejaculatory duct obstruction, or iatrogenic surgical injury during hernia repair. It is characterized by normal testicular volume, normal serum FSH and testosterone levels, and dilated epididymides. Treatment options include microsurgical reconstructive surgery (vasovasostomy or vasoepididymostomy) or percutaneous/microsurgical epididymal or testicular sperm aspiration (PESA/MESA/TESE) for use in in-vitro

fertilization.

Alternate Names:

OA; Excretory Azoospermia

Obstructive Hydrocephalus

A buildup of cerebrospinal fluid caused by a blockage in its normal flow through the brain's ventricles.

Obstructive Jaundice

Jaundice caused by obstruction of bile flow from the liver to the duodenum, resulting in accumulation of conjugated bilirubin in the blood. See Jaundice for complete overview.

Obstructive Nephropathy

Kidney damage caused by blockage of urine flow anywhere from the kidney to the urethra. Causes include stones, tumors, strictures, enlarged prostate, and congenital abnormalities; untreated obstruction can lead to hydronephrosis, infection, and kidney failure.

Obstructive Parotitis

Inflammation of the parotid gland resulting from obstruction of the parotid duct, most commonly by sialolithiasis, presenting with painful glandular swelling that worsens with meals. The obstruction leads to stasis, secondary bacterial infection, and recurrent episodes of swelling and tenderness.

Obstructive Shock

A life-threatening drop in blood flow caused by a physical blockage, such as a large blood clot in the lungs, pressure around the heart, or a collapsed lung under pressure.

Obstructive Sleep Apnea

Repeated narrowing or closing of the upper airway during sleep, causing pauses in breathing, snoring, poor sleep, and daytime tiredness. Treatment may include a breathing device, weight management, an oral appliance, position changes, or surgery.

Alternate Names:

Sleep Apnea, Obstructive

Obstructive Sleep Apnea - Adults

Obstructive sleep apnea is repeated upper-airway collapse during sleep, causing pauses in breathing, oxygen fluctuation, snoring, fragmented sleep, and daytime impairment.

Obstructive Uropathy

Urinary tract obstruction at any level from the renal pelvis to the urethra, leading to impaired urine flow and potential renal damage. Causes include nephrolithiasis, benign prostatic hyperplasia, ureteral strictures, tumors of the bladder, prostate, or cervix, and external compression from lymphadenopathy or retroperitoneal fibrosis.

Obtunded

Having reduced alertness and slowed responses, but being more responsive than a person who is comatose.

Obturator

A structure that occludes an opening. In anatomy, the obturator foramen is a large opening in the pelvic bone, closed by the obturator membrane. The obturator nerve (L2–L4) innervates the adductor muscles of the thigh and provides sensory innervation to the medial thigh. The obturator artery supplies the adductor compartment.

Obturator Hernia

A rare hernia in which part of the intestine pushes through an opening in the pelvic bone. It can block the bowel and may cause pain in the inner thigh.

Obtuse Marginal Artery

A branch of the circumflex coronary artery that runs along the obtuse margin of the heart and supplies the lateral wall of the left ventricle. Its size and number vary with coronary anatomy.

Occam's Razor

Occam's razor is the reasoning principle favoring the simplest explanation that accounts for the findings, while recognizing that patients can have multiple conditions.

Occipital

Relating to the back of the head, the occipital bone, or the occipital lobe.

Occipital Bone

The bone at the back and base of the skull. It surrounds the opening where the spinal cord joins the brain and connects with the first neck vertebra.

Occipital Diastasis

Occipital diastasis is separation or widening of an occipital skull suture, usually related to birth trauma or developmental abnormality and assessed with imaging.

Occipital Hematoma

A collection of blood in the scalp or tissues over the back of the head, often after trauma; a rapidly enlarging swelling or associated neurologic symptoms requires urgent assessment.

Occipital Lobe

The part of the brain at the back of the head that processes vision.

Occipital Neuralgia

A paroxysmal, severe, stabbing or electric shock-like pain in the distribution of the greater, lesser, or third occipital nerves (posterior scalp, from the nuchal line to the vertex).

Occiput

The posterior part of the skull or the back of the head.

Occiput Posterior Position

A fetal head position in which the occiput faces the maternal sacrum. It may cause back pain or slow labor, although the fetus may rotate during labor.

Occiput Transverse Position

The fetal head presenting with the sagittal suture oriented transversely. Usually the normal descent position; most rotate to OA with contractions. When persistent, it can cause protracted descent

and prolonged second stage.

Occlude

To occlude means to block or close a passage, vessel, airway, duct, or opening.

Occlusal Adjustment

Selective reshaping of tooth surfaces to improve how the upper and lower teeth meet and reduce abnormal contact or bite interference.

Occlusal Guard

Appliance protecting teeth from attrition. Night guard for bruxism. Sports mouthguard.

Occlusal Splint

A removable dental appliance that changes or protects tooth contact and may reduce effects of grinding, jaw-joint strain, or selected bite problems.

Occlusion

Complete blockage of vessel. May be natural (thrombosis) or iatrogenic (embolization).

Occlusive Vascular Disease

Disease in which narrowing or blockage of a blood vessel reduces or stops blood flow to tissues.

Occult

Hidden or not readily visible or detectable on routine examination. An occult disease or bleeding may be found only with imaging, microscopy, or laboratory testing.

Occult Blood

Blood that is not visible to the naked eye and is detected by laboratory testing. In stool, it may be detected by a chemical guaiac test or an immunochemical test; the method and specimen determine the collection instructions and possible dietary or medicine effects. A positive stool test indicates blood is present but does not establish its cause.

Occult Blood Screen

Alternate index label; see *Fecal occult blood test*.

Occult Gastrointestinal Bleeding

Chronic or intermittent gastrointestinal blood loss that is not visible to the patient and may not produce melaena or haematochezia. It commonly presents with iron-deficiency anaemia or a positive faecal blood test.

Occult Primary Cancer

Alternate index label; see *Carcinoma of unknown primary*.

Occupation

A person's usual work or activity; occupational history can identify exposures relevant to health.

Occupational Asthma

Asthma from workplace exposures to sensitizers (isocyanates, flour, latex) or irritants. Improves away from work and worsens at work. Serial peak flow monitoring supports diagnosis.

Occupational COPD

Chronic obstructive pulmonary disease associated with workplace exposure to dust, chemicals, fumes, or other inhaled hazards. Symptoms and risk depend on the exposure and other factors, including smoking.

Occupational Dermatoses

Work-related skin diseases. Occupational contact dermatitis accounts for 90 percent of occupational skin diseases. Irritant contact dermatitis is more common (hands, wet work) than allergic contact dermatitis. Occupations at risk include healthcare workers, hairdressers, construction workers, food handlers, and metalworkers.

Occupational Disease

An illness caused or substantially contributed to by workplace exposures or conditions.

Occupational Exposure

Radiation exposure to nuclear medicine staff. Monitored with dosimeters. Limits: 50 mSv/year whole body, 150 mSv/year lens, 500 mSv/year extremities.

Occupational Exposure Limit

A regulatory or advisory concentration or dose limit intended to reduce worker exposure to a hazardous substance over a defined averaging period. Limits vary by substance, jurisdiction, route, and whether the value is a ceiling, short-term limit, or time-weighted average.

Occupational Health

The field concerned with protecting and promoting workers' physical, mental, and social health.

Occupational Hearing Loss

Permanent sensorineural hearing impairment caused by repeated or prolonged exposure to workplace noise or ototoxic hazards. Prevention depends on reducing exposure and using effective hearing protection.

Occupational Rehabilitation

Services that help a person regain or adapt the skills needed for work after illness, injury, or disability.

Occupational Safety And Health

Policies and practices that prevent work-related injury, illness, hazardous exposure, and unsafe conditions.

Occupational Therapist

A healthcare professional who helps people perform daily activities through rehabilitation, adaptive techniques, environmental changes, and assistive equipment.

Occupational Therapy

OT helps patients perform daily activities (ADLs, IADLs) through therapeutic activities, adaptive equipment, environmental modification. Focus on upper extremity function, cognition, sensory integration.

Occupational Therapy Assessment

Evaluation of a person's ability to perform daily activities, work, and other meaningful occupations, including factors affecting performance and the need

for adaptive strategies or equipment.

OCD

Obsessive-compulsive disorder, a condition involving recurrent unwanted thoughts or urges and/or repetitive behaviors or mental acts that cause distress or interfere with daily life.

Alternate Names:

Obsessive Compulsive Disorder (OCD)

Ochre

A yellow-brown earth pigment; ochre discoloration may describe skin or tissue pigmentation.

Ochrobactrum

A genus of gram-negative environmental bacteria that can rarely cause opportunistic human infection.

Ochrobactrum Anthropi

A gram-negative environmental bacterium that can cause opportunistic bloodstream, wound, device-related, or other infections, especially in vulnerable patients.

Ochrobactrum Intermedium

A gram-negative *Ochrobactrum* species found in the environment that can rarely cause opportunistic infection.

Ochronosis

A blue-black or brownish pigmentation of connective tissues (cartilage, skin, sclerae, tendons) caused by accumulation of homogentisic acid and its oxidation products.

OCP

OCP commonly means oral contraceptive pill, a medicine containing estrogen, progestin, or both to prevent pregnancy and sometimes treat menstrual disorders.

Octadecadienoic Acid

octadecadienoic acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and

metabolism.

Octanoic Acid

octanoic acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Octopamine

A chemical messenger found mainly in invertebrates that regulates movement, metabolism, arousal, and other physiological functions.

Octreoscan

Nuclear-medicine imaging using indium-111 octreotide, which binds to somatostatin receptors. It was used to locate some neuroendocrine tumors and their spread; newer receptor-targeted PET scans are often preferred.

Octreotide

Octreotide is a somatostatin analogue that suppresses growth hormone, several gastrointestinal hormones, and intestinal secretion; it is used for acromegaly, certain neuroendocrine tumors, and selected secretory diarrhoeas.

Ocular

Relating to, affecting, or situated within the eye (*oculus*) or the visual apparatus. Clinically used in ophthalmology to describe structures (ocular adnexa, ocular media, ocular fundus), diagnostic examinations (optical coherence tomography [OCT], ocular ultrasonography), and systemic diseases with eye involvement, such as ocular toxoplasmosis, ocular manifestations of rheumatoid arthritis (scleritis, peripheral ulcerative keratitis), and ocular emergencies including acute angle-closure glaucoma and central retinal artery occlusion.

Ocular Albinism

Ocular albinism is an inherited disorder with reduced pigment primarily in the eyes, causing decreased visual acuity, nystagmus, photophobia, and abnormal retinal development.

Ocular Fixation

The ability to hold the eyes steadily on a target; abnormal fixation can impair visual acuity, tracking, or alignment.

Ocular Histoplasmosis Syndrome

An eye condition linked to an earlier histoplasmosis infection. It can cause scars in the retina and, in some people, abnormal blood vessels that damage central vision.

Ocular Hypertension

Higher-than-normal pressure inside the eye without current signs of glaucoma damage. It increases the future risk of glaucoma and needs regular eye checks.

Ocular Melanoma

A cancer that begins in pigment-producing cells of the eye.

Ocular Migraine

A migraine-related visual disturbance, often involving flashing lights, zigzag lines, or a temporary blind spot. It may occur with or without headache.

Ocular Myasthenia Gravis

A localized, organ-specific clinical presentation of autoimmune myasthenia gravis in which muscle weakness is strictly confined to the extraocular muscles, levator palpebrae superioris, and orbicularis oculi, with no clinical involvement of bulbar, facial, or extremity musculature. Manifests with fluctuating, fatigable, asymmetric ptosis and binocular diplopia that characteristically worsens toward the end of the day or with prolonged gaze; serologically positive for acetylcholine receptor antibodies in approximately 50–70% of cases, with up to 50–80% of patients progressing to generalized myasthenia gravis within two years of symptom onset if untreated.

Alternate Names:

OMG; Ocular MG

Ocular Myiasis

Infestation of the eye or nearby tissues by fly larvae. It can cause pain, irritation, tearing, and vision

problems and requires prompt eye care.

Ocular Orbit

The ocular orbit is the bony cavity containing the eye, extraocular muscles, nerves, vessels, glands, and protective connective tissue.

Ocular Pain

Pain in or around the eye caused by surface irritation, infection, inflammation, trauma, glaucoma, or orbital disease. Severe pain with vision loss, light sensitivity, nausea, or injury requires urgent ophthalmic assessment.

Ocular Rosacea

Inflammation affecting the eyes and eyelids in people with rosacea, causing irritation, redness, or dryness.

Ocular Surface Disease

A group of conditions affecting the eye's surface, eyelids, or tears, including dry eye and eyelid inflammation. Symptoms may include burning, redness, irritation, and blurred or changing vision.

Ocular Toxoplasmosis

A retinal infection or inflammation caused by *Toxoplasma gondii*, which can produce blurred vision, floaters, pain, and recurrent retinal scars.

Oculist

An older term for an eye specialist; modern usage distinguishes ophthalmologists and optometrists.

Oculocardiac Reflex

A slowing of the heartbeat or similar body response caused by pressure or pulling on the eye or tissues around it.

Oculocerebrorenal Syndrome

A rare inherited disorder, also called Zellweger spectrum disorder, that affects the brain, eyes, kidneys, liver, and other organs. Severe forms begin in newborns and can cause weak muscles, seizures, feeding problems, and major developmental problems.

Alternate Names:

Zellweger spectrum disorder, affecting.

Oculocutaneous Albinism

Alternate index label; see *Albinism*.

Oculogyric Crisis

A prolonged, involuntary upward turning of the eyes, often caused by a medicine or neurologic disorder.

Oculomotor Nerve

Cranial nerve III, controlling most eye movements, eyelid elevation, and pupil constriction.

Oculomotor Nerve Palsy

Weakness or paralysis of muscles supplied by the third cranial nerve, causing eyelid drooping, double vision, abnormal eye position, and sometimes a dilated pupil.

Oculomotor Nucleus

The oculomotor nucleus is a midbrain group of motor neurons controlling most eye movements, eyelid elevation, and pupil constriction through the third cranial nerve.

Oculopharyngeal Muscular Dystrophy

An adult-onset, autosomal dominant (or rarely autosomal recessive) myopathy caused by short expansions of a GCN trinucleotide repeat encoding an expanded polyalanine tract in the polyadenylate-binding protein nuclear 1 (*PABPN1*) gene on chromosome 14q11. Typically presents in the fifth to sixth decade of life with progressive bilateral ptosis, severe dysphagia due to pharyngeal muscle involvement, tongue atrophy, and proximal lower and upper limb girdle weakness. Characterized histopathologically by intranuclear filamentous tubulofilamentous inclusions in skeletal muscle fibers.

Alternate Names:

OPMD

Oculoplastic Procedures

A medical procedure, treatment, device, or care topic related to oculoplastic procedures; indications, benefits, risks, and follow-up depend on the specific

intervention and patient.

Oculosympathetic Palsy

Alternate index label; see *Horner syndrome*.

ODD

Alternate index label; see *Oppositional defiant disorder*.

Oddi, Sphincter Of

A circular muscle regulating the flow of bile and pancreatic juice into the duodenum.

Odontalgia

Toothache or pain arising from a tooth or its supporting tissues.

Odontoblast

A cell that produces dentin during tooth development and repair.

Odontoclast

A cell that resorbs dental hard tissue, analogous to an osteoclast.

Odontodysplasia

Odontodysplasia is abnormal development of tooth enamel and dentin, producing thin, weak, discolored teeth that may erupt late or be easily damaged.

Odontogenesis

The complex, highly regulated developmental process by which teeth form from embryonic oral ectoderm (giving rise to enamel via ameloblasts) and neural crest-derived ectomesenchyme (giving rise to dentin, dental pulp, cementum, and periodontal ligament via odontoblasts and cementoblasts). Progresses through discrete morphological stages: dental lamina formation, bud stage, cap stage, bell stage (histodifferentiation and morphodifferentiation), and root development. Perturbations during odontogenesis produce developmental anomalies, including hypodontia, amelogenesis imperfecta, and dentinogenesis imperfecta.

Odontogenic Cutaneous Fistula

An abnormal tract connecting the skin surface to a periapical dental infection, typically presenting as a draining sinus tract on the chin, cheek, or submandibular region. It results from chronic dental infection eroding through the bone and soft tissue to the skin surface.

Odontogenic Cyst

A fluid-filled sac that develops from tissues involved in tooth formation, usually in the jaw.

Odontogenic Fibroma

An odontogenic fibroma is a rare benign tumor arising from tooth-forming connective tissue, usually presenting as a jaw lesion.

Odontogenic Keratocyst

Aggressive cyst with high recurrence. Associated with nevoid basal cell carcinoma syndrome (Gorlin syndrome). Treatment: enucleation, resection, or decompression.

Odontogenic Neoplasm

An odontogenic neoplasm is a growth arising from tissues involved in tooth formation, usually in the jaw; it may be benign or malignant.

Odontogenic Tumors And Cysts

Alternate index label; see *Jaw tumors and cysts*.

Odontoid Process

A peg-like projection from the second neck vertebra that fits into the first neck vertebra and allows the head to turn from side to side.

Odontology

The study of teeth, their structure, development, diseases, and treatment.

Odontoma

Hamartomatous dental tissue mass. Compound (multiple tooth-like structures) or complex (amorphous calcified mass). Treatment: surgical removal.

Odontopathy

Any disease, structural anomaly, or pathological disorder affecting the teeth or their immediate supporting structures. Encompasses infectious processes (dental caries driven by *Streptococcus mutans*, pulpitis, periapical abscesses), non-carious hard tissue loss (attrition, abrasion, erosion, abfraction), developmental defects (microdontia, enamel hypoplasia), and traumatic dental injuries. Without timely operative or endodontic intervention, localized odontopathies can breach the alveolar bone to trigger deep neck space infections (e.g., Ludwig angina) or systemic odontogenic bacteremia.

Odor Threshold

Lowest concentration detectable by smell. Important for warning properties of toxins.

Odorant

An odorant is a chemical molecule detected by olfactory receptors and perceived as a smell.

Odoribacter Splanchnicus

An anaerobic bacterium found in the human intestine that produces short-chain fatty acids and is rarely associated with infection.

Odour

A smell detected by the olfactory system; unusual body or breath odor can be a clinical clue.

Odynophagia

Painful swallowing, characterized by a burning, squeezing, or sticking sensation behind the sternum during deglutition. Strongly suggests mucosal inflammation or ulceration of the esophagus.

Oedema

British spelling of edema: abnormal fluid accumulation in tissues that causes swelling. Causes include injury, infection, venous disease, heart or kidney failure, medicines, and lymphatic blockage.

Oedipus Complex

A historical psychoanalytic concept describing un-

conscious sexual attachment to one parent and rivalry with the other; it is not a modern medical diagnosis.

Oerskovia

A genus of gram-positive bacteria, now often classified within *Cellulosimicrobium*, found in soil and occasionally in clinical specimens.

Oerskovia Turbata

A gram-positive environmental bacterium now generally called *Cellulosimicrobium turbata*; it rarely causes opportunistic infection.

Oesophageal

Relating to the oesophagus, the muscular tube carrying swallowed material from the pharynx to the stomach.

Oesophageal Atresia

A congenital interruption or blind ending of the oesophagus, often associated with a tracheoesophageal fistula.

Oesophageal Ulcer

A mucosal ulceration of the oesophagus caused by gastro-oesophageal reflux, infection, medication or corrosive injury, inflammatory disease, or malignancy. It may cause odynophagia, dysphagia, chest pain, haematemesis, or melaena.

Oesophageal Varices

Dilated submucosal veins of the oesophagus, usually caused by portal hypertension and capable of life-threatening bleeding.

Oesophagitis

Inflammation of the oesophageal mucosa. Common causes include gastro-oesophageal reflux, infection in immunocompromised patients, medication-related injury, eosinophilic inflammation, radiation, and caustic ingestion. Symptoms include heartburn, odynophagia, dysphagia, and chest pain.

Oesophagoscopy

Direct endoscopic visualization of the lumen and mucosal lining of the esophagus using either a flexible fiberoptic/video endoscope (most common, typically as part of esophagogastroduodenoscopy [EGD]) or a rigid metal esophagoscope (primarily used in ENT and thoracic surgery for foreign body removal or stent deployment). Indicated for diagnostic evaluation of dysphagia, odynophagia, gastroesophageal reflux disease refractory to medical therapy, suspected Barrett esophagus, and upper gastrointestinal hemorrhage (e.g., esophageal varices requiring endoscopic band ligation), as well as therapeutic dilation of benign esophageal strictures.

Oesophagus

The muscular tube that transports swallowed food and liquid from the pharynx to the stomach.

Oesophagus, Diseases Of

Disorders affecting the oesophagus, including reflux, inflammation, strictures, motility disorders, cancer, and congenital abnormalities.

Oestradiol

British spelling of estradiol, the main naturally occurring estrogen during the reproductive years. It supports reproductive development, the menstrual cycle, bone health, and other body functions.

Oestriol

An estrogen produced in substantial amounts by the placenta during pregnancy.

Oestrogen

The primary female sex hormone, produced mainly by the ovaries (granulosa cells of developing follicles) and in smaller amounts by adipose tissue, the adrenal glands, and the placenta during pregnancy.

Oestrogen Replacement Therapy

The administration of exogenous estrogen (with or without progestogen) to relieve symptoms of estrogen deficiency and prevent long-term health consequences in postmenopausal women. See Hormone Replacement Therapy (HRT).

Oestrogens

A group of steroid hormones involved in reproductive development, menstrual cycling, pregnancy, bone, and other physiological functions.

Oestrone

An estrogen produced by the ovaries and peripheral conversion of androgens, especially after menopause.

Ofatumumab

A monoclonal antibody against CD20 used for selected blood cancers and relapsing multiple sclerosis; it can increase infection risk and reduce B cells.

Off-Label

Use of an approved medicine for an indication, dose, route, or population not specified in its regulatory approval.

Off-Label Use

The use of a licensed medication for an indication, dose, route, or patient population not included in its marketing authorisation (product licence).

Offspring

Offspring are the descendants or young produced by an organism or pair of organisms.

Ofloxacin

A fluoroquinolone antibiotic used for selected susceptible bacterial infections. It can cause serious tendon, nerve, heart-rhythm, and other adverse effects, so it should be used only when clinically appropriate.

Ogilvie Syndrome

Acute colonic pseudo-obstruction characterized by massive colonic dilation in the absence of mechanical obstruction typically occurring in hospitalized patients with serious comorbidities including post-surgical states, severe infections, and medication effects.

Ogilvie'S Syndrome

Acute colonic pseudo-obstruction characterized by

massive dilation of the colon, particularly the cecum and right colon, without mechanical obstruction. It occurs in hospitalized patients with serious medical or surgical conditions, often postoperatively, and results from autonomic nervous system imbalance.

Ohm

The SI unit of electrical resistance, equal to one volt per ampere.

OHSS

Alternate index label; see *Ovarian hyperstimulation syndrome*.

Oidiodendron

Oidiodendron is a genus of environmental molds that rarely causes opportunistic infection.

Oidiomycosis

An older term for infection caused by yeast-like fungi, historically including candidiasis.

Oidium

A fragment or spore-like fungal element formed by fragmentation of a hypha; the term is also used in older fungal classifications.

Oil

A hydrophobic liquid used as a nutrient, solvent, emollient, or medicinal preparation; safety depends on the specific oil.

Oil-Based Paint Poisoning

Oil-based paint poisoning involves toxic or environmental exposure to oil-based paint poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Oily Hair

Oily hair involves toxic or environmental exposure to oily hair; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Oily Skin

Oily skin involves toxic or environmental exposure to

oily skin; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Ointment

A semi-solid, greasy topical preparation for application to the skin, mucous membranes, or eyes. Ointments are typically composed of a hydrophobic base (petrolatum, lanolin, paraffin, beeswax, vegetable oils) and may contain dissolved or suspended active pharmaceutical ingredients.

Ointment Bases

Semisolid vehicles used to carry medicines applied to the skin or mucous membranes; they influence spread, absorption, moisture retention, and stability.

Okadaic Acid

okadaic acid is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Okihiro Syndrome

A congenital disorder, usually caused by pathogenic variants in SALL4, combining radial-ray limb abnormalities with Duane retraction anomaly or other eye-movement defects. Hearing, cardiac, renal, and vertebral anomalies may also occur.

Olanzapine

Olanzapine is an atypical antipsychotic that blocks dopamine and serotonin receptors and treats schizophrenia and bipolar disorder; weight gain, diabetes, dyslipidaemia, sedation, and movement disorders are important risks.

Olaparib

Olaparib is a PARP inhibitor used for selected cancers with BRCA or other homologous-recombination repair defects; anaemia, nausea, fatigue, myelosuppression, and rare myelodysplastic syndrome or acute myeloid leukaemia may occur.

Olaratumab

A monoclonal antibody formerly studied for soft-

tissue sarcoma; it was withdrawn in several jurisdictions after confirmatory benefit was not demonstrated.

Old Age

Later life; health assessment should consider function, comorbidity, cognition, and social circumstances rather than age alone.

Oleander Poisoning

Oleander poisoning involves toxic or environmental exposure to oleander poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Oleandomycin

Oleandomycin is an older macrolide antibiotic that is now rarely used because of limited availability, resistance, and adverse effects.

Olecranon

The prominent bony process at the proximal end of the ulna forming the point of the elbow.

Oleic Acid

A monounsaturated fatty acid abundant in olive oil and many other dietary fats.

Oleum

A concentrated preparation of sulfur trioxide in sulfuric acid, highly corrosive and hazardous.

Olfaction

The sense of smell. Odor molecules stimulate special cells in the upper part of the nose, which send signals to the brain to identify and perceive odors.

Olfactory

Relating to the sense of smell or the olfactory nerve and pathways.

Olfactory Bulb

The olfactory bulb is a forebrain structure that receives signals from nasal smell receptors and begins processing odor information.

Olfactory Cortex

The olfactory cortex is a group of brain regions that interprets smell signals and links them with memory, emotion, and behavior.

Olfactory Gyrus

The olfactory gyrus is a cortical region associated with processing olfactory information and includes areas near the medial temporal and frontal lobes.

Olfactory Learning

Olfactory learning is acquisition or modification of behavior or memory through exposure to odors and their associations.

Olfactory Mucosa

The olfactory mucosa is specialized nasal lining containing receptor neurons, supporting cells, and glands that detect odor molecules.

Olfactory Nerve

Cranial nerve I (CN I), responsible for the sense of smell. Olfactory receptor neurons in the olfactory epithelium of the nasal roof project axons through the cribriform plate of the ethmoid bone to the olfactory bulb, then via the olfactory tract to the primary olfactory cortex (piriform cortex, amygdala, entorhinal cortex).

Olfactory Neuroblastoma

A rare malignant tumor arising in the upper nasal cavity near the olfactory nerves, often causing nasal blockage, nosebleeds, or reduced smell.

Olfactory Tract

The olfactory tract is a bundle of nerve fibers carrying smell information from the olfactory bulb to cerebral regions involved in odor perception.

Olfactory Tubercle

The olfactory tubercle is a ventral forebrain region involved in odor processing, reward, motivation, and integration with limbic circuits.

Oligella

Oligella is a genus of bacteria that can rarely cause opportunistic urinary, bloodstream, or other infections.

Oligella Ureolytica

A gram-negative bacterium that can rarely cause urinary, bloodstream, wound, or other opportunistic infections.

Oligella Urethralis

A gram-negative bacterium associated with the urinary tract that rarely causes opportunistic infection.

Oligoasthenoteratozoospermia

A combined semen abnormality characterized by concurrent deficits across all three primary quantitative and qualitative semen parameters: low sperm count or concentration (oligozoospermia, <16 million/mL), impaired progressive motility (asthenozoospermia, <32% progressively motile sperm), and an abnormally low percentage of morphologically normal forms (teratozoospermia, <4% normal morphology by strict Kruger criteria). OAT syndrome is a frequent presentation in idiopathic male subfertility and can result from clinical varicoceles, heat exposure, endocrine disruption, oxidative stress, tobacco or gonadotoxin exposure, or genetic factors. When severe, assisted reproduction via intracytoplasmic sperm injection is frequently indicated.

Alternate Names:

OAT Syndrome; OAT

Oligoclonal Bands

Immunoglobulin G (IgG) proteins produced by a limited number of B-cell clones in the cerebrospinal fluid (CSF), detected by isoelectric focusing of CSF and serum samples.

Oligocythaemia

An abnormally low number of cells in the blood, especially red blood cells; the term is uncommon.

Oligodendrocyte

A supporting cell in the central nervous system that

forms myelin around axons. Myelin helps nerve signals travel quickly; oligodendrocytes can be damaged in disorders such as multiple sclerosis.

Oligodendroglia

Oligodendroglia are glial cells of the central nervous system that produce myelin around axons and support nerve conduction.

Oligodendroglial Neoplasm

An oligodendroglial neoplasm is a brain tumor with features of oligodendrocyte-lineage cells; diagnosis depends on microscopic and molecular findings.

Oligodendroglioma

A slow-growing glioma arising from oligodendrocytes, most often in the cerebral hemispheres. Associated with IDH mutation and 1p/19q codeletion, which confer a better prognosis and chemosensitivity.

Oligodontia

Congenital absence of many teeth, usually more than six permanent teeth, excluding third molars.

Oligogenic Inheritance

Oligogenic inheritance occurs when variants in a small number of genes together influence a trait or disease, often with variable expression.

Oligohydramnios

Insufficient amniotic fluid volume, defined as amniotic fluid index less than 5 cm or single deepest pocket less than 2 cm. Causes include fetal renal anomalies, post-term pregnancy, premature rupture of membranes, maternal dehydration, and placental insufficiency.

Oligomenorrhoea

Oligomenorrhoea is infrequent or widely spaced menstrual bleeding, often from anovulation, polycystic ovary syndrome, endocrine disease, undernutrition, excessive exercise, stress, or perimenopause.

Oligomenorrhoea

Infrequent menstrual periods, usually with cycles longer than about 35 days.

Oligometastasis

A limited number of metastatic deposits, often defined as up to five, amenable to aggressive local treatment (surgery, stereotactic radiation, or ablation) with the potential for prolonged control.

Oligomycin

Oligomycin is a research compound that blocks ATP production in mitochondria; it is not a routine clinical medicine.

Oligonucleotide

An oligonucleotide is a short single- or double-stranded DNA or RNA sequence used in molecular biology, diagnostics, antisense therapy, gene silencing, or sequencing.

Oligopeptide

Oligopeptide is a defined chemical or biologic substance involved in oligopeptide and studied in physiology, pharmacology, laboratory medicine, or treatment.

Oligosaccharide

An oligosaccharide is a short chain of monosaccharides found in glycoproteins, glycolipids, and foods; its structure influences cell recognition, digestion, and the intestinal microbiome.

Oligospermia

A low sperm concentration in semen, assessed using current laboratory reference standards.

Oliguria

Reduced urine output, defined as <400 mL/day or <0.5 mL/kg/hour in adults. Oliguria is an important sign of acute kidney injury (AKI) and prerenal azotaemia.

Olivary

Relating to the olive-shaped inferior olivary nucleus

of the medulla or to an olive-like structure.

Olivary Nucleus

The olivary nucleus is a brainstem structure that sends timing and motor-learning signals to the cerebellum through climbing fibers.

Olive Oil

A plant oil rich in monounsaturated fatty acids, used as food and in some topical preparations.

Olive Pontocerebellar Atrophy

A group of neurodegenerative disorders characterized by progressive loss of neurons in the inferior olives, pons, and cerebellum. They cause worsening ataxia, dysarthria, incoordination, and sometimes pyramidal, autonomic, or cognitive features.

Olivomycin

Olivomycin is an older antitumor antibiotic studied experimentally; it is not a standard routine treatment.

Olivopontocerebellar Atrophy

Olivopontocerebellar atrophy is a degenerative condition affecting the inferior olives, pons, and cerebellum, causing progressive ataxia and other neurologic dysfunction.

Ollier'S Disease

A nonhereditary skeletal disorder with multiple enchondromas, causing deformity, limb-length discrepancy, and an increased risk of malignancy.

Olmesartan Medoxomil

An oral prodrug converted to olmesartan, an angiotensin II receptor blocker used to treat high blood pressure.

Olopatadine Hydrochloride

Olopatadine hydrochloride is an antihistamine used in eye drops or nasal spray to treat allergic conjunctivitis or rhinitis.

OLP

Alternate index label; see *Oral lichen planus*.

Olsenella

Olsenella is a genus of anaerobic bacteria found mainly in the mouth and digestive tract; human infection is uncommon.

Olsenella Uli

An anaerobic gram-positive bacterium found in the mouth and associated with periodontal disease; invasive infection is rare.

Oltipraz

Oltipraz is an investigational dithiole compound studied for activation of cellular antioxidant defenses and cancer prevention.

Omacetaxine Mepesuccinate

Omacetaxine mepesuccinate is a protein-synthesis inhibitor used for selected chronic myeloid leukemia resistant or intolerant to tyrosine-kinase inhibitors.

Omalizumab

Omalizumab is a monoclonal antibody that binds circulating IgE and reduces allergic inflammation; it is used for selected allergic asthma, chronic urticaria, nasal polyps, and food allergy, with rare anaphylaxis.

Omasum

The omasum is the third compartment of a ruminant stomach, absorbing water and small particles before contents reach the abomasum.

Omega-3

Polyunsaturated fatty acids. Anti-inflammatory, cardiovascular benefits. Sources: fatty fish, flaxseed, walnuts. Supplementation common.

Omega-3 Fatty Acids

Polyunsaturated fats found especially in fatty fish and some plant foods.

Omega-6

Polyunsaturated fatty acids (linoleic acid). Pro-inflammatory in excess. Balance with omega-3 important. Sources: vegetable oils, nuts, seeds.

Omega-6 Fatty Acids

Essential polyunsaturated fats found in many plant oils and foods.

Alternate Names:

n-6 fatty acids

Omega-N-Methylarginine

Omega-N-methylarginine is a methylated arginine compound that can inhibit nitric-oxide synthase and affect vascular signaling.

Omenn Syndrome

A severe combined immunodeficiency caused by hypomorphic defects affecting lymphocyte-receptor gene rearrangement or related pathways. It presents in infancy with erythroderma, lymphadenopathy, hepatosplenomegaly, diarrhea, failure to thrive, and recurrent or opportunistic infections.

Omentectomy

Removal of part or all of the greater omentum, commonly performed during staging and cytoreduction for ovarian and other intra-abdominal cancers.

Omentum

A double layer of peritoneum connecting the stomach to other abdominal organs. The greater omentum (gastrocolic omentum) hangs from the greater curvature of the stomach, covers the transverse colon and small intestine, and is rich in fat and immune cells (milky spots—aggregates of macrophages and lymphocytes).

Omeprazole

Omeprazole is a proton-pump inhibitor that irreversibly suppresses gastric H⁺/K⁺-ATPase; it treats reflux and peptic-ulcer disease and supports *Helicobacter pylori* eradication, while prolonged use may affect magnesium, B12, bone, and infection risk.

Ommaya Reservoir

A surgically implanted reservoir connected to a catheter in a brain ventricle, used to sample cerebrospinal fluid or deliver selected medicines.

Omnivore

An organism that eats both plant and animal matter; it is a dietary term rather than a disease.

Omphalitis

Infection of the umbilical stump in neonates, typically occurring within the first 1–2 weeks of life. Omphalitis is a potentially serious condition requiring prompt treatment due to the risk of spread to the liver (portal vein thrombosis, portal hypertension) and peritoneum via the umbilical vessels.

Omphalocele

Omphalocele is a congenital abdominal-wall defect in which abdominal organs protrude into a membrane-covered sac at the umbilicus and may coexist with chromosomal or structural anomalies. umbilical cord, covered by a peritoneal-amniotic membrane. Associated with chromosomal abnormalities (trisomies 13, 18) and other anomalies. Differentiated from gastroschisis by membrane coverage and midline location.

Omphalocele Repair

A medical procedure, treatment, device, or care topic related to omphalocele repair; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

On Call

On call means available and responsible to respond to clinical or operational needs during a designated period outside routine scheduled activity.

Onchocerca Volvulus

A filarial nematode that causes onchocerciasis (river blindness), transmitted by repeated bites of infected blackflies (*Simulium* species) breeding near fast-flowing rivers. Adult worms reside in subcutaneous nodules (onchocercomata), where they can survive for years, producing microfilariae that mi-

grate through the skin and eyes.

Onchocerciasis

A parasitic disease caused by the filarial nematode *Onchocerca volvulus*, transmitted by repeated bites of infected blackflies (*Simulium* species) breeding near fast-flowing rivers. Adult worms form subcutaneous nodules (onchocercomata).

Oncocytic Neoplasm

An oncocytic neoplasm is a growth made of cells with abundant mitochondria and granular cytoplasm; it may be benign or malignant depending on the organ and tumor type.

Oncocytoma

A usually benign epithelial tumor, commonly arising in the kidney and composed of cells with abundant eosinophilic mitochondria-rich cytoplasm.

Oncogene

A gene that, when activated, overexpressed, or altered, can promote uncontrolled cell proliferation or survival. Oncogenes commonly arise from normal proto-oncogenes through mutation, amplification, translocation, or abnormal regulation.

Oncogenic

Capable of causing or promoting cancer. An oncogenic change, virus, gene, or chemical can increase abnormal cell growth or reduce normal control of cell division.

Oncogenic Virus

A virus capable of contributing to cancer by altering cell growth, suppressing tumor defenses, or integrating or maintaining oncogenic genetic material.

Oncogenicity

The ability of a substance, infection, genetic change, or other factor to contribute to the development of cancer.

Oncologic Emergency

A cancer-related condition that threatens life, organ

function, or neurologic integrity and requires urgent treatment. Examples include malignant spinal-cord compression, superior vena cava syndrome, tumor lysis syndrome, hypercalcemia, airway obstruction, and febrile neutropenia.

Oncologist

A physician who specializes in the diagnosis and treatment of cancer. Includes medical oncologists (systemic therapy), radiation oncologists (radiotherapy), and surgical oncologists (operative management).

Oncology

The medical specialty concerned with cancer prevention, diagnosis, treatment, and survivorship.

Oncology Nursing

Oncology nursing provides cancer-related assessment, treatment support, symptom control, education, coordination, survivorship, and end-of-life care.

Oncology PET

PET, often combined with CT, used in selected cancers to assess disease distribution, treatment response, or recurrence.

Oncology Rehabilitation

Cancer rehabilitation: fatigue, pain, neuropathy, lymphedema, functional impairment. Pre- and post-treatment support.

Oncolytic Virotherapy

Oncolytic virotherapy uses modified viruses that preferentially infect and destroy cancer cells and may stimulate an immune response against the tumor.

Oncolytic Virus

A genetically modified virus that selectively replicates in and destroys cancer cells while sparing normal tissue, e.g., talimogene laherparepvec (T-VEC) for melanoma.

Oncolytic Viruses

Viruses selected or engineered to infect and destroy cancer cells while stimulating an immune response against the tumor.

Oncoprotein

oncoprotein is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Oncosis

A form of cell death characterized by cellular swelling, derived from the Greek word *onkos* meaning swelling, representing a pre-lethal state that precedes necrosis. It is typically caused by ischemic injury leading to ATP depletion, which impairs the sodium-potassium pump and causes osmotic water influx.

Oncostatin M

Oncostatin M is a cytokine involved in inflammation, immune regulation, and tissue repair; it is mainly studied as a biological research target.

Oncotic Pressure

The osmotic pressure exerted by plasma proteins (predominantly albumin) that do not freely cross the capillary wall. Normal plasma oncotic pressure is approximately 25-28 mmHg. It opposes the hydrostatic pressure that drives fluid out of capillaries, favoring fluid reabsorption at the venular end.

Oncotoxic

Toxic to tumor cells or relating to substances that damage cancer cells.

Ondansetron

Ondansetron is a selective 5-HT₃-receptor antagonist used to prevent nausea and vomiting after chemotherapy, radiotherapy, surgery, or other triggers; constipation, headache, and QT prolongation can occur.

Ondansetron Hydrochloride

The hydrochloride salt of ondansetron, a serotonin 5-HT₃ receptor blocker used to prevent nausea and vomiting.

Ondine's Curse

A rare disorder in which automatic breathing is impaired, especially during sleep; also called congenital central hypoventilation syndrome.

Alternate Names:

congenital central hypoventilation syndrome.

Ondine's Curse

A rare disorder of automatic breathing in which ventilation may fail during sleep.

Alternate Names:

Congenital central hypoventilation syndrome

One-Hour Glucose Challenge Test

A screening test for gestational diabetes mellitus performed at 24-28 weeks. The patient drinks 50 g of glucose (regardless of fasting state), and plasma glucose is measured at 1 hour. Thresholds vary by protocol; a result in the range of 130–140 mg/dL positive, warranting diagnostic 3-hour oral glucose tolerance test (OGTT).

Oneirophrenia

A dreamlike state with confusion or impaired reality testing; the term is uncommon and does not represent a specific modern psychiatric diagnosis.

Onset

Onset is the time or manner in which a symptom, disease, or physiologic change begins, such as sudden, gradual, acute, or insidious onset.

Onychia

Inflammation or infection of the nail matrix (the proliferative tissue beneath the proximal nail fold that generates the nail plate), frequently extending to the nail bed (onychia and paronychia complex). Etiologies include localized pyogenic bacterial infection (frequently *Staphylococcus aureus* following microtrauma or nail-biting), fungal invasion (tinea

unguim / candidal onychia), or chronic dermatologic disorders such as nail psoriasis or lichen planus. Clinically manifests with erythema, throbbing pain, edema of the proximal nail fold, and potential nail dystrophy, onycholysis, or permanent subungual scarring if untreated.

Onychocryptosis

Onychocryptosis is an ingrown nail, usually at the great toe, in which the nail edge penetrates surrounding skin and causes pain or inflammation.

Onychocryptosis (Ingrowing Toenail)

A condition in which the edge of a nail grows into the surrounding skin, causing pain, inflammation, and sometimes infection.

Alternate Names:

Ingrowing Toenail

Onychocryptosis (Ingrown Toenail)

Alternate index label for Ingrown Toenail.

Onychogryphosis

Marked thickening and curvature of a nail, often resembling a claw.

Onycholysis

Separation of the nail plate from the underlying nail bed, beginning distally or laterally. Causes include trauma, psoriasis, fungal infection, thyroid disease, medications, and chemical exposure; the underlying cause should be identified.

Onychomadesis

Onychomadesis is proximal separation and shedding of a nail caused by temporary arrest of nail-matrix growth, often after infection, systemic illness, trauma, or medication exposure.

Onychomycosis

Fungal nail infection, most commonly caused by dermatophytes (*Trichophyton rubrum*), affecting toenails more than fingernails. It presents as nail thickening, discoloration (yellow-brown), subungual debris, and nail separation. Diagnosis is confirmed

by KOH preparation or fungal culture.

Onychomycosis (Fungal Nails)

Alternate index label for Fungal Nails.

Oocyte

The female gamete (egg cell) produced in the ovary through oogenesis. Oocytes develop from primordial germ cells, which undergo mitosis to form oogonia, then enter meiosis I before birth and arrest in prophase I until puberty.

Oocyte Cryopreservation

An assisted reproductive technology procedure involving the retrieval, rapid dehydration, and ultrafast cooling (vitrification) of mature unfertilized female gametes (metaphase II oocytes) in liquid nitrogen at -196°C for long-term storage. Indicated for medical fertility preservation prior to gonadotoxic cancer therapy, surgical oophorectomy, or genetic conditions causing premature ovarian insufficiency, as well as for elective (planned) age-related fertility preservation.

Alternate Names:

Egg Freezing; Oocyte Vitrification

Oocyte Retrieval

An operative assisted reproductive technology procedure in which mature oocytes are harvested from ovarian follicles following controlled ovarian stimulation and a trigger injection. Performed under transvaginal ultrasound guidance using a specialized needle puncturing the vaginal fornix into each ovarian follicle, with gentle negative-pressure aspiration of follicular fluid containing the cumulus-oocyte complexes into sterile tubes for embryological evaluation and fertilization.

Alternate Names:

Ovum Pick-Up (OPU); Egg Retrieval; Follicular Aspiration

Oogenesis

The formation and maturation of egg cells, or ova, in the ovaries. It begins before birth and continues through the reproductive years, with changes during each menstrual cycle.

Oogonium

An oogonium is an early female germ cell that proliferates during embryonic development and gives rise to primary oocytes.

Oophorectomy

Surgical removal of one ovary, unilateral oophorectomy, or both ovaries, bilateral oophorectomy. It may treat disease or reduce cancer risk and can cause immediate menopause if both ovaries are removed before natural menopause.

Oophoritis

Inflammation of an ovary, usually associated with pelvic infection or, less commonly, autoimmune disease. It may cause lower abdominal or pelvic pain, fever, abnormal discharge, or menstrual changes; severe pain requires assessment to exclude ovarian torsion or abscess.

Ooplasm

Ooplasm is the cytoplasm of an egg cell, containing organelles, nutrients, and molecular factors that support fertilization and early embryo development.

Opacity

Lack of transparency of a normally transparent ocular structure (cornea, lens, vitreous, or aqueous humour). Corneal opacity results from scarring (trauma, infection—herpes simplex keratitis, trachoma), dystrophies (Fuchs endothelial dystrophy, granular/lattice/macular dystrophies), or edema.

Open Bite

An open bite is a malocclusion in which upper and lower teeth do not meet in part of the mouth when the jaws are closed.

Open Fractures

Fractures in which the broken bone or fracture hematoma communicates with an external wound. They have increased risks of infection and soft-tissue injury and require urgent assessment and specialized treatment.

Open Gallbladder Removal

A medical procedure, treatment, device, or care topic related to open gallbladder removal; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Open Lung Biopsy

An open lung biopsy removes a small piece of lung through a surgical chest incision for microscopic diagnosis when less invasive tests are insufficient.

Open Pleural Biopsy

An open pleural biopsy removes a sample of the lining around the lung through surgery to investigate cancer, infection, or unexplained pleural disease.

Open Prostatectomy

Surgical removal of enlarged prostate tissue through an abdominal incision.

Open Reduction And Internal Fixation

Operative exposure and realignment of a fracture followed by fixation with implants such as plates, screws, wires, or nails. It is used when closed treatment cannot provide acceptable alignment, stability, or joint restoration.

Open Surgery

Traditional surgical approach with incision. Used for bypass, aneurysm repair, thrombectomy.

Open-Angle Glaucoma

A chronic optic-nerve disease in which the drainage angle of the eye remains anatomically open but aqueous humour outflow is impaired, often causing progressive, initially symptomless visual-field loss.

Open-Book Fracture

A pelvic ring disruption with diastasis of the pubic symphysis or sacroiliac joints, often from high-energy trauma, carrying risk of massive hemorrhage and organ injury.

Open-Heart Surgery

Any surgical procedure involving opening the chest

wall (sternotomy or thoracotomy) and operating on the heart, usually with cardiopulmonary bypass (the heart–lung machine).

Operable

Able to be treated or corrected by surgery, or suitable for surgical intervention.

Operant Conditioning

Learning in which the likelihood of a behavior changes because of its consequences, such as reinforcement or punishment.

Operating Room

An operating room is a controlled sterile or semi-sterile clinical area equipped for surgical procedures, anesthesia, monitoring, and recovery support.

Operating Tables

Adjustable tables designed to support and position patients during surgery or other procedures while allowing access and maintaining safety.

Operation

A planned surgical procedure or, more generally, an action or process.

Operative Dentistry

The branch of dentistry concerned with restoring teeth affected by caries, fracture, or defects.

Operative Vaginal Delivery

Vaginal delivery assisted by vacuum or forceps. Indications: prolonged second stage, suspected fetal compromise, need to shorten the second stage for maternal benefit (exhaustion, cardiac disease, hypertensive crisis).

Operator

A person who performs a procedure or operates equipment; in healthcare, training and authorization are essential.

Operculum

A lid, covering, or flap-like structure; in anatomy it

may cover an opening or cortical region.

Operon

An operon is a group of adjacent prokaryotic genes controlled by a shared promoter and regulatory elements and transcribed as one messenger-RNA unit.

Ophthalmia

Inflammation of the eye, especially the conjunctiva or other superficial ocular tissues.

Ophthalmia Neonatorum

Eye inflammation or infection in a newborn, often acquired during delivery.

Ophthalmic

Relating to the eye; an ophthalmic medicine is intended for ocular use.

Ophthalmic Emergency

An eye or visual condition requiring urgent evaluation to prevent irreversible vision loss or severe ocular injury. Examples include acute angle closure, retinal detachment, central retinal artery occlusion, endophthalmitis, chemical injury, orbital cellulitis, and open-globe trauma.

Ophthalmic Solution

A sterile liquid medicine or preparation intended for application to the eye.

Ophthalmitis

Ophthalmitis is inflammation of the eye and can result from infection, immune disease, trauma, or surgery.

Ophthalmologist

A medical doctor specializing in diseases and surgery of the eyes.

Ophthalmology

The medical specialty concerned with eye disease, vision, and ocular surgery.

Ophthalmomyiasis

Infestation of the eye by fly larvae (most commonly Oestridae), which may be superficial (conjunctival) or deep (intraocular), with the latter carrying a risk of retinal detachment, endophthalmitis, and permanent vision loss.

Ophthalmoplegia

Weakness or paralysis of one or more eye muscles, causing limited eye movement, double vision, or abnormal eye position. Causes include nerve disorders, stroke, diabetes, thyroid disease, trauma, and neuromuscular conditions.

Ophthalmoscope

Instrument for examining retina and optic nerve. Direct: larger, brighter image. Indirect: wider field. Essential for fundoscopic examination.

Ophthalmoscopy

Ophthalmoscopy examines the inside of the eye, including the retina, optic nerve, and blood vessels, using an ophthalmoscope.

Opiate

A natural alkaloid derived from the opium poppy (*Papaver somniferum*) or a semi-synthetic derivative that binds to opioid receptors.

Opiate Alkaloid

An opiate alkaloid is a naturally occurring alkaloid from the opium poppy, such as morphine or codeine, with opioid analgesic and dependence potential.

Opiate And Opioid Withdrawal

Opioid withdrawal is a predictable syndrome after reducing or stopping opioid exposure, producing anxiety, sweating, muscle aches, diarrhea, abdominal cramps, nausea, and autonomic symptoms.

Opiate Assay

A diagnostic or laboratory method related to opiate assay. Results are interpreted with the method, reference range, and clinical findings.

Opiate Overdose

opiate overdose refers to harmful exposure to the named substance or condition; severity depends on dose, route, timing, symptoms, and patient factors, and urgent professional assessment may be required.

Opioid

A natural or synthetic substance that acts on opioid receptors to relieve pain and may cause sedation or dependence.

Opioid Agonist Treatment

Treatment of opioid use disorder with a prescribed opioid agonist or partial agonist, most commonly methadone or buprenorphine, together with psychosocial and medical support. It reduces withdrawal, craving, illicit opioid use, overdose, and mortality.

Opioid Intoxication

Opioid intoxication can cause euphoria, drowsiness, slowed breathing, pinpoint pupils, impaired coordination, coma, and death; respiratory depression requires immediate emergency treatment.

Opioid Overdose

A medical emergency characterized by the classic triad of respiratory depression, miosis (pinpoint pupils), and decreased level of consciousness. It can progress to respiratory arrest, cardiovascular collapse, and death.

Opioid Receptor

opioid receptor is a protein or protein-related molecule that performs a defined structural, signaling, transport, immune, or enzymatic function in cells; abnormal amounts or activity may contribute to disease.

Opioid Reversal

Emergency treatment of opioid toxicity with naloxone, a competitive opioid-receptor antagonist. It is titrated to restore adequate breathing, with repeated doses or monitoring sometimes needed because its effect may wear off before the opioid.

Opioid Toxicity

Toxic effects of opioid agonists, classically respiratory depression, central nervous system depression, and miosis. Management prioritizes ventilation and airway support; naloxone is titrated to restore adequate breathing while recognizing the risk of recurrent toxicity and withdrawal.

Opioid Toxidrome

A poisoning pattern caused by opioid excess, characterized by respiratory depression, reduced consciousness, and small pupils; naloxone and ventilatory support may be required.

Opioid Use Disorder

A problematic pattern of opioid use leading to significant impairment or distress. Opioids include heroin, fentanyl, morphine, oxycodone, and hydrocodone. Criteria are the same eleven as for substance use disorders generally. Overdose presents with respiratory depression, miosis, and decreased level of consciousness.

Opioid Withdrawal

A characteristic group of symptoms occurring after abrupt reduction or cessation of prolonged opioid use, including anxiety, muscle aches, sweating, abdominal cramps, diarrhea, nausea, and insomnia.

Opisthorchis Felineus

A liver fluke acquired by eating raw or undercooked freshwater fish; chronic infection can cause bile-duct inflammation and increase cholangiocarcinoma risk.

Opisthotonos

Opisthotonos is severe backward arching of the head, neck, and spine from sustained muscle spasm, classically associated with tetanus, meningitis, strychnine poisoning, or severe neurologic injury.

Opium

The dried latex of *Papaver somniferum* containing opioid alkaloids; it can cause dependence and respiratory depression.

Opponens

A muscle that produces opposition, especially the thumb's movement across the palm.

Opportunistic Infection

An infection caused by organisms that ordinarily do not cause disease in immunocompetent hosts but cause significant illness when host defences are impaired.

Opposition

Movement of the thumb across the palm to contact the fingertips. It combines abduction, flexion, and medial rotation at the first carpometacarpal joint.

Oppositional Defiant Disorder

A childhood/adolescent disorder characterized by a persistent pattern (≥ 6 months) of angry/irritable mood, argumentative/defiant behavior, and vindictiveness.

Oprelvekin

A recombinant interleukin-11 medicine formerly used to reduce chemotherapy-related thrombocytopenia; fluid retention and cardiac effects limit its use.

Opsoclonus

Rapid, involuntary, multidirectional, conjugate eye movements without an intersaccadic interval. It may occur with myoclonus and ataxia as part of an autoimmune or paraneoplastic syndrome, particularly in children with neuroblastoma.

Opsonin

A molecule, such as IgG or complement C3b, that coats a microbe and enhances its uptake by phagocytes.

Opsonization

The process by which pathogens or particles are coated with opsonins (antibodies—IgG, complement—C3b, or acute-phase proteins) that enhance recognition and phagocytosis by phagocytes bearing corresponding receptors (Fc receptors, complement

receptors).

Optic Atrophy

End-stage degeneration of the optic nerve fibers resulting from any optic neuropathy. Causes: glaucoma, ischemic optic neuropathy, multiple sclerosis, compressive lesions (pituitary tumor, aneurysm), toxins (methanol, ethambutol), and hereditary (Leber hereditary optic neuropathy).

Optic Chiasm

The X-shaped junction where nasal retinal fibers of the optic nerves cross.

Optic Chiasma

The optic chiasma is the brain structure where fibers from the nasal halves of the optic nerves cross, enabling coordinated visual-field processing.

Optic Disc

The point on the retina where the optic nerve exits the eye, lacking photoreceptors and creating the natural blind spot.

Optic Disc Edema

Swelling of the optic-nerve head caused by axoplasmic-flow disruption. Bilateral optic-disc edema from raised intracranial pressure is papilledema; unilateral or non-pressure causes require separate evaluation for optic-nerve, retinal, inflammatory, ischemic, or infiltrative disease.

Optic Disk

The point where the optic nerve leaves the retina; it has no photoreceptors and forms the blind spot.

Optic Glioma

A usually slow-growing glioma of the optic nerve or optic pathway, occurring most often in children. It may cause progressive visual loss, optic atrophy, proptosis, or visual-field defects and is associated with neurofibromatosis type 1.

Alternate Names:

Optic Nerve Glioma Optic Pathway Glioma

Optic Nerve

CN II exiting through the optic disc (blind spot), passing through the optic canal, and partially decussating at the optic chiasm. Technically a CNS tract with oligodendrocyte myelination and meningeal coverings, making it susceptible to demyelinating disease (optic neuritis in MS).

Optic Nerve Atrophy

Pallor and degeneration of the optic nerve caused by loss of retinal ganglion-cell axons. It produces permanent visual impairment and may result from ischemia, inflammation, compression, glaucoma, trauma, or raised intracranial pressure.

Optic Nerve Disorder

A disease affecting the optic nerve, which carries visual signals from the eye to the brain; it can cause reduced vision, color loss, or visual-field defects.

Optic Nerve Glioma

Alternate index label; see *Optic glioma*.

Optic Neuritis

Inflammation or demyelination of the optic nerve, often causing subacute vision loss, impaired color vision, and pain with eye movement. It may be associated with multiple sclerosis or other inflammatory, infectious, or immune-mediated disorders.

Optic Pathway Glioma

Alternate index label; see *Optic glioma*.

Optic Tract

The optic tract is a neural pathway carrying post-chiasmal visual signals to the lateral geniculate nucleus and other brain regions.

Optical Coherence Tomography

A non-invasive imaging technique that uses low-coherence interferometry to produce high-resolution, cross-sectional images of the retina and other ocular structures, providing quantitative measurements of retinal layer thickness and detecting structural abnormalities with micrometer-level resolution.

Optical Illusion

optical illusion is a pharmacologic, physiologic, or clinical-care concept used to describe a measurable effect, intervention, or patient-management issue.

Optical Rotation

optical rotation is a pharmacologic, physiologic, or clinical-care concept used to describe a measurable effect, intervention, or patient-management issue.

Optical Trap

optical trap is a pharmacologic, physiologic, or clinical-care concept used to describe a measurable effect, intervention, or patient-management issue.

Optician

A technician who fits and dispenses eyeglasses or contact lenses.

Optics

The study and application of light, lenses, and image formation, including visual optics.

Optometrist

A trained eye-care professional who examines vision and many ocular conditions and prescribes optical correction within local scope of practice.

Optometry

A healthcare profession concerned with examining the eyes and visual system for defects and abnormalities, prescribing corrective lenses (spectacles, contact lenses), diagnosing eye disease, and providing pre- and post-operative care for surgical eye treatments.

Oral

Relating to the mouth, or taken through the mouth. Oral medicines are swallowed and absorbed through the digestive tract unless otherwise specified.

Oral Administration

Taking a medicine by mouth so it is absorbed through the digestive tract; absorption can be affected by food, vomiting, interactions, or gastroin-

testinal disease.

Oral Appliance Therapy

Treatment using a removable dental appliance during sleep, commonly to advance the mandible or retain the tongue and reduce upper-airway collapse in selected obstructive sleep apnea.

Oral Cancer

Malignancy of oral cavity, including lips, tongue, floor of mouth, buccal mucosa, palate, tonsils, oropharynx. Major risk factors: tobacco use, alcohol consumption, human papillomavirus (HPV, especially p16-positive oropharyngeal cancer). Presentation: persistent ulcer, leukoplakia, erythroplakia, mass, pain, difficulty swallowing.

Oral Candidiasis

Infection or overgrowth of *Candida* species on the oral mucosa, often presenting as removable white plaques, erythematous patches, or angular cheilitis. Risk factors include antibiotics, inhaled corticosteroids, immunosuppression, diabetes, xerostomia, and dentures.

Oral Cavity

The space extending from the lips to the oropharynx, bounded by the cheeks, palate, and tongue. It receives food, begins mechanical and chemical digestion, and contributes to speech.

Oral Cavity Cancer

Squamous cell carcinoma of the lip, tongue, buccal mucosa, floor of mouth, or palate, associated with tobacco, alcohol, and betel quid use. Treatment is primarily surgical resection, with adjuvant radiation or chemoradiation for adverse features.

Oral Cholecystogram

Oral cholecystogram is a laboratory test, imaging method, instrument, score, or measurement used to characterize a specimen or clinical finding; interpretation depends on the method and clinical context.

Oral Contraceptive

Birth control pill: combined oral contraceptive (COC—ethinylestradiol + progestin) or progestin-only pill (POP/minipill). Mechanisms: ovulation inhibition, cervical mucus thickening, endometrial change.

Oral Glucose Tolerance Test

A diagnostic test measuring plasma glucose response after a standardized oral glucose load. It is used in selected evaluations of diabetes, impaired glucose tolerance, and gestational diabetes when fasting glucose or HbA1c is insufficient.

Oral Health

Oral health is the condition of the teeth, gums, mouth, jaw, and related functions such as eating, speaking, and swallowing.

Oral Hemorrhage

Bleeding from the mouth, gums, tongue, throat, or nearby tissues, caused by trauma, dental disease, infection, medicines, or a bleeding disorder.

Oral Human Papillomavirus Infection

Oral human papillomavirus infection affects the mouth or throat; many infections clear without symptoms, while persistent high-risk types can contribute to some cancers.

Oral Hygiene

Practices maintaining oral health: brushing twice daily with fluoride toothpaste, flossing daily, mouthwash (optional), regular dental visits. Proper brushing technique: soft brush, 45-degree angle to gumline, gentle circular motions. Interdental cleaning essential for plaque removal.

Oral Hypoglycemics Overdose

Oral hypoglycemics overdose involves toxic or environmental exposure to oral hypoglycemics overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Oral Leukoplakia

A white patch or plaque on the oral mucosa that cannot be scraped off and cannot be characterized as any other diagnosable disease, considered a potentially malignant disorder. Risk factors: tobacco use (most common), alcohol, and betel nut chewing. Most common sites: buccal mucosa, alveolar ridge, and tongue.

Oral Lichen Planus

Chronic inflammatory condition. Reticular (lace-like white lines), erosive (painful ulcers). Associated with hepatitis C. Malignant transformation rare but possible.

Alternate Names:

Lichen Planus, Oral OLP

Oral Moniliasis

Oral moniliasis is oral candidiasis, a *Candida* yeast infection causing white plaques, soreness, burning, or altered taste.

Oral Mucosa

The moist stratified squamous epithelial lining of the oral cavity. It includes masticatory, lining, and specialized mucosa and provides barrier protection, sensation, lubrication, and sites for minor salivary glands.

Oral Mucous Cyst

An oral mucous cyst is a mucus-filled lesion caused by salivary-gland duct injury or blockage, often appearing on the lower lip or floor of the mouth.

Oral Nutritional Supplement

A calorie-, protein-, or micronutrient-containing product consumed by mouth to supplement, not automatically replace, usual food intake. The product and dose should match the patient's needs, swallowing ability, disease restrictions, and tolerance.

Oral Pathology

Study of diseases affecting oral tissues. Includes neoplasms, cysts, inflammatory conditions, developmental anomalies.

Oral Radiology

Specialty of producing and interpreting images of oral and maxillofacial region.

Oral Rehydration Salts

A balanced mixture of glucose and electrolytes dissolved in clean water to replace fluid and salts lost through diarrhea or vomiting.

Oral Rehydration Therapy

Replacement of water and electrolytes by drinking a balanced glucose-electrolyte solution, especially during diarrheal illness.

Oral Rehydration Therapy

Replacement of water and electrolytes by mouth using a balanced glucose-and-salt solution, especially to prevent or treat dehydration from diarrhoea or vomiting.

Alternate Names:

ORT

Oral Sex (Fellatio, Cunnilingus)

Oral stimulation of the genitals for sexual pleasure. Fellatio: oral stimulation of the penis. Cunnilingus: oral stimulation of the vulva and clitoris. Analingus (rimming): oral stimulation of the anus.

Alternate Names:

Fellatio, Cunnilingus

Oral Spray

A liquid medicine or preparation sprayed into the mouth or throat for local treatment or absorption through oral tissues.

Oral Squamous Cell Carcinoma

A malignant neoplasm arising from oral stratified squamous epithelium. Persistent induration, ulceration, red or white patches, unexplained bleeding, pain, or neck mass requires evaluation and biopsy; staging incorporates tumor, nodal, and metastatic findings.

Oral Surgery

Surgical procedures in oral and maxillofacial region.

Extractions, implant placement, biopsies, cyst removal, corrective jaw surgery.

Oral Thrush

A fungal infection of the mouth, usually caused by *Candida*, producing creamy white patches, soreness, or altered taste.

Alternate Names:

Candidiasis, Oral Thrush, Oral

Oral Toxicity

Harm caused by swallowing a toxic substance, medicine, or excessive dose.

Orange Peel Skin

Peau d'orange, a dimpled skin appearance caused by edema or lymphatic obstruction, classically considered in breast disease.

Orantinib

An investigational tyrosine-kinase inhibitor studied for cancer and abnormal blood-vessel growth.

Orbicularis

A circular muscle surrounding an opening, such as orbicularis oculi around the eye or orbicularis oris around the mouth.

Orbit

The bony cavity containing the eye, extraocular muscles, nerves, vessels, and supporting tissues.

Orbit CT Scan

An orbit CT scan uses X-rays and computer reconstruction to assess the eye sockets, eye muscles, bones, and surrounding tissues.

Orbital

Relating to the orbit, the bony cavity containing the eye, or to structures within it. Orbital disease may affect the eye, muscles, nerves, or surrounding tissues.

Orbital Cellulitis

A serious infection of the orbital tissues posterior

to the orbital septum, potentially sight-threatening and life-threatening due to the risk of optic nerve compression, cavernous sinus thrombosis, and intracranial extension.

Orbital Contusion

A bruise of the tissues around the eye caused by blunt trauma, often producing swelling, bruising, and tenderness.

Orbital Fracture

A break in one or more bones forming the eye socket, usually caused by facial trauma and potentially associated with double vision, eye-movement restriction, or injury to the eye.

Orbital Fractures

Breaks in the bones surrounding the eye, which may cause swelling, double vision, numbness, restricted eye movement, or injury to the eye itself.

Orbital Irradiation

Radiation treatment directed at tissues within the eye socket, sometimes used for severe thyroid eye disease.

Orbital Metastasis

Secondary cancer deposits in the orbit, most commonly from breast, lung, or prostate primaries. Symptoms include proptosis, diplopia, pain, and visual impairment.

Orbital Myositis

Orbital myositis is inflammation of extraocular muscles causing eye pain, swelling, double vision, and restricted movement.

Orbital Neoplasm

An orbital neoplasm is an abnormal growth in the eye socket that may affect the eye, optic nerve, muscles, or surrounding tissues.

Orbital Pseudotumor

Noninfectious, idiopathic inflammation of orbital tissues, also called idiopathic orbital inflammation.

It can cause painful eye movement, proptosis, eyelid swelling, diplopia, and restricted ocular motility.

Alternate Names:

idiopathic.

Orbivirus

A genus of double-stranded RNA viruses transmitted mainly by arthropods and associated with diseases in animals; some cause human illness.

Orchialgia

Pain originating within one or both testicles, categorized chronologically as acute (a surgical emergency) or chronic (persisting > 3 months, chronic orchialgia / testicular pain syndrome). Acute orchialgia mandates immediate clinical triage to rule out testicular torsion (which requires emergent surgical detorsion within 6 hours to preserve testicular viability) versus acute epididymitis, orchitis, incarcerated inguinal hernia, or torsion of testicular appendages. Chronic orchialgia may stem from varicocele, post-vasectomy pain syndrome, intermittent torsion, or pudendal nerve entrapment, often evaluated with scrotal Doppler ultrasonography.

Orchidectomy

Surgical removal of one or both testes, also called orchiectomy.

Orchiectomy

Surgical removal of one or both testicles. Radical inguinal orchiectomy is diagnostic and therapeutic for testicular cancer; bilateral orchiectomy is a hormonal therapy for prostate cancer.

Orchitis

Orchitis is inflammation of one or both testes, often from infection such as mumps or bacteria, causing pain, swelling, and sometimes impaired fertility.

Order Coleoptera

The insect order containing beetles, characterized by hardened forewings that protect the flying wings; some species affect health as pests or vectors.

Order Spirochaetales

An order of spiral-shaped bacteria that includes medically important families such as Spirochaetaceae and Leptospiraceae.

Oregovomab

An investigational monoclonal antibody targeting the tumor-associated CA-125 antigen, studied mainly in ovarian cancer.

Orexin

Orexin, or hypocretin, is a hypothalamic neuropeptide that promotes wakefulness, arousal, appetite, and energy regulation; loss of orexin signaling is strongly associated with narcolepsy type 1.

Orexin Receptor Antagonists

Medications that block orexin (hypocretin) receptors to promote sleep. Suvorexant and lemborexant are approved for insomnia. They reduce wakefulness by blocking the arousal system. They have lower abuse potential than benzodiazepines and do not cause respiratory depression.

Orf

A zoonotic viral skin infection caused by the parapoxvirus, transmitted to humans from infected sheep and goats (direct contact with lesions, fomites—virus survives in scabs for months). Orf is an occupational disease of farmers, butchers, and veterinarians. Incubation: 3–7 days.

Organ

A structure composed of two or more different types of tissues that has a recognizable shape and performs specific functions.

Organ Culture

Organ culture maintains a piece of tissue or an organ outside the body under controlled conditions for research or selected testing.

Organ Failure

Organ failure refers to an anatomical structure, biological substance, or physiologic concept used in

describing the human body and its function.

Organ System

A group of related organs that work together to perform major body functions.

Organ Transplant

Surgical transfer of an organ from a donor to a recipient to replace failing organ function.

Organ Transplantation

A medical procedure, treatment, device, or care topic related to organ transplantation; indications, benefits, risks, and follow-up depend on the specific intervention and patient.

Organ Transplants

The surgical transfer of an organ from a donor to a recipient whose organ function is severely impaired. Solid-organ transplantation may involve the kidney, liver, heart, lung, pancreas, or intestine and requires donor assessment, recipient selection, and ongoing follow-up.

Organelle

A specialized structure within a cell that performs a particular function.

Organic

Relating to living matter or carbon-containing chemistry; in psychiatry, an older term for symptoms caused by a physical brain disorder.

Organic Brain Syndrome

An obsolete term formerly used for cognitive or behavioral impairment attributed to a physical brain disorder. Current practice identifies the specific condition and symptoms, such as delirium, dementia, brain injury, or another neurological disease.

Organic Chemical

organic chemical is a biochemical reaction, pathway, or chemical process in which molecules are transformed; its rate and effects depend on substrates, enzymes, and cellular conditions.

Organic Disease

A disorder caused by demonstrable structural or physiological pathology, as opposed to symptoms without an identified organic basis.

Organic Impurity

An organic impurity is an unintended carbon-containing chemical in a medicine, material, or specimen that may affect safety, quality, or measurement.

Organic Oxide

An organic oxide is a carbon-containing compound bearing oxygen in an oxidized form; properties and toxicity depend on its molecular structure.

Organic Psychosis

An obsolete term for psychosis caused by a physical brain disease, substance, or medical condition.

Organism

An individual living thing, including a human, animal, plant, fungus, or microorganism.

Organization Name

The formal name of a group, institution, company, or agency; in healthcare records it should identify the responsible organization accurately.

Organogenesis

organogenesis is a gene, genetic trait, chromosome-related concept, or inherited process that affects biological function through DNA variation or gene regulation.

Organoid

An organoid is a three-dimensional cell culture that self-organizes to model selected structure or function of an organ for research or testing.

Organometallic Compound

An organometallic compound contains a chemical bond between carbon and a metal and may have industrial, laboratory, medicinal, or toxicologic significance.

Organophosphate

A class of chemicals that can inhibit acetylcholinesterase. Some are pesticides or nerve agents and can cause cholinergic poisoning.

Organophosphate Poisoning

Acetylcholinesterase inhibitors. SLUDGE syndrome: salivation, lacrimation, urination, defecation, GI upset, emesis. Miosis, bradycardia, bronchospasm, muscle fasciculations. Treatment: atropine, pralidoxime, supportive care.

Organosilicon Compounds

Organosilicon compounds contain silicon bonded to carbon and are used in materials, medicines, devices, and industry; biological effects depend on the specific compound.

Organotherapy

An obsolete treatment approach using extracts or tissues from organs to treat disease.

Orgasm

The peak of sexual pleasure accompanied by characteristic physiologic responses.

Orgasm Male (Sexual (Sex) Problems In Men)

Alternate index label for Sexual (Sex) Problems in Men.

Orgasmic Dysfunction

Persistent difficulty, delay, absence, or marked reduction of orgasm causing distress or impairment.

Orgasmic Dysfunction In Women

Orgasmic dysfunction in women is persistent difficulty reaching orgasm or reduced orgasmic intensity that causes distress and may have psychological, relationship, medication, hormonal, or medical causes.

Orientation

Awareness of personal identity, place, time, and situation. Clinicians assess orientation as part of mental-status and neurologic examinations.

Orifice

An opening into or out of a body structure, organ, or anatomical passage.

Orlistat

A gastrointestinal lipase inhibitor used with dietary measures for weight management.

Ornithine

A nonessential amino acid and intermediate in the urea cycle that helps convert toxic ammonia into urea.

Ornithine Decarboxylase

An enzyme that converts ornithine to putrescine, an early step in polyamine synthesis involved in cell growth.

Ornithine Transcarbamylase Deficiency

OTC deficiency is an inherited urea-cycle disorder causing ammonia accumulation, vomiting, confusion, seizures, or coma, especially during metabolic stress.

Orogastric Tube

A flexible tube passed through the mouth into the stomach. It may deliver nutrition or medicines, remove stomach contents, or decompress the stomach when nasal placement is unsuitable.

Oropharyngeal

Oropharyngeal means relating to the mouth and the part of the throat behind it, including structures involved in breathing, swallowing, and speech.

Oropharyngeal Airway

A rigid airway adjunct inserted through the mouth to displace the tongue and help maintain upper-airway patency in an unconscious patient without an intact gag reflex. It does not protect against aspiration.

Oropharyngeal Carcinoma

Malignancy arising in the oropharynx, including the tonsil, base of tongue, soft palate, and posterior

pharyngeal wall. HPV-associated tumors form an important subgroup; evaluation includes endoscopy, biopsy, imaging, and cervical-node assessment.

Oropharyngeal Dysphagia

Difficulty transferring food or liquid from the mouth through the throat, often causing coughing, choking, nasal regurgitation, or aspiration.

Oropharyngeal Neoplasm

An oropharyngeal neoplasm is an abnormal growth in the throat behind the mouth, including the tonsils and base of the tongue; it may be benign or malignant.

Oropharynx

The posterior portion of the mouth leading to the esophagus, containing the tonsils and base of tongue. Area for swallowing and speech. Examination with tongue depressor and light source. Pathology: pharyngitis, tonsillitis, malignancy.

Oropharynx Lesion Biopsy

Sampling of an oropharyngeal lesion, usually through the mouth under local or procedural anesthesia, for histopathologic evaluation of infection, dysplasia, or cancer. Persistent or suspicious lesions require specialist assessment.

Orotic Aciduria

orotic aciduria is a fatty acid or other lipid-related molecule whose chain structure influences membranes, energy storage, signaling, and metabolism.

Orphan Disease

A rare disease affecting relatively few people; definitions and eligibility for orphan-drug programs vary by jurisdiction.

Orphenadrine

A centrally acting medicine with anticholinergic properties used in some countries for painful muscle spasm; it can cause drowsiness, dry mouth, and confusion.

Ortataxel

Ortataxel is an investigational taxane-like antineoplastic drug studied for its ability to disrupt microtubules and inhibit cancer-cell division.

Orthobunyavirus

A genus of segmented negative-sense RNA viruses, many transmitted by mosquitoes or other arthropods; some cause fever, encephalitis, or fetal disease in humans or animals.

Orthodontic Appliance

A device used to move teeth, guide jaw growth, maintain alignment, or correct a bite problem.

Orthodontic Bracket

A bonded or banded attachment that transmits forces from an orthodontic archwire to a tooth. Bracket position and wire sequence guide controlled tooth movement.

Orthodontic Retainer

A removable or fixed appliance used after active orthodontic treatment to maintain tooth position while periodontal and alveolar tissues remodel. Retention is often needed long term because relapse can occur.

Orthodontic Treatment (Dental Braces)

Orthodontic treatment (dental braces) is a medical test, procedure, treatment, or clinical measure used in patient care; its purpose and interpretation depend on the clinical question.

Orthodontic Wires

Metal or other wires used with braces to apply controlled forces that move teeth or help maintain their position.

Orthodontics

Specialty of dental management of malocclusion and dental-facial discrepancies. Appliances: fixed braces, removable appliances, clear aligners. Treatment indications: crowding, spacing, overbite, underbite, crossbite, open bite, midline discrepancy. Treatment

duration: 12-24 months typically. Retention phase essential for stability.

Orthodontist

A dentist specializing in diagnosis and treatment of malocclusion and tooth or jaw alignment.

Orthognathic Surgery

Corrective jaw surgery for skeletal malocclusion. Le Fort I, Bilateral Sagittal Split Osteotomy. Combined with orthodontics.

Orthohepadnavirus

A genus of hepadnaviruses that includes hepatitis B virus and related viruses infecting mammals.

Orthokeratosis

Orthokeratosis is thickening of the outer skin layer with mature keratin cells lacking nuclei, occurring normally or in several skin disorders.

Orthomyxoviridae

A family of segmented, negative-sense RNA viruses that includes influenza A, B, and C viruses.

Orthopaedic Surgery

Surgical treatment of disorders and injuries of bones, joints, muscles, ligaments, and related tissues.

Orthopaedics

The British spelling of orthopedics, the medical and surgical specialty concerned with the musculoskeletal system.

Orthopedic Biologics

Biological or biomaterial products used to support bone or soft-tissue healing. Examples include autograft, allograft, demineralized bone matrix, bone-marrow products, and synthetic graft substitutes; their uses and evidence vary by procedure and condition.

Orthopedic Implant

Devices for bone/joint reconstruction. Types: plates, screws, rods, hinges, prostheses. Materials:

titanium, cobalt-chrome, stainless steel, polyethylene, ceramic. Used for fractures, arthritis, tumors, deformities. Complications: infection, loosening, fracture, wear.

Orthopedic Infections

Infections involving bones, joints, muscles, or orthopedic implants. Examples include osteomyelitis, septic arthritis, prosthetic-joint infection, and some diabetic foot infections.

Orthopedic Rehabilitation

Therapy that restores movement, strength, function, and independence after musculoskeletal injury or surgery.

Orthopedic Screws

Fixation devices for fractures. Materials: titanium, stainless steel. Types: cortical, cancellous, interfragmentary. Used with plates, rods, nails. Complications: loosening, breakage, infection.

Orthopedic Services

Orthopedic services diagnose and treat problems of bones, joints, muscles, ligaments, tendons, and related movement systems.

Orthopedics

The branch of surgery concerned with the musculoskeletal system, including bones, joints, ligaments, tendons, muscles, and nerves.

Orthopedist

A physician specializing in disorders and injuries of bones, joints, muscles, and related tissues.

Alternate Names:

Orthopedic surgeon

Orthopnea

Dyspnea that occurs when lying flat and is relieved by sitting upright. It is measured by the number of pillows the patient needs to sleep (two-pillow orthopnea). It is a hallmark of left heart failure and is caused by redistribution of fluid from the lower extremities to the lungs in the supine position.

Orthopneic Position

An upright sitting position that helps a person breathe more easily, often with the arms supported.

Orthopnoea

Shortness of breath that occurs when lying flat and is relieved by sitting or standing upright. Orthopnoea is a classic symptom of left-sided heart failure (elevated pulmonary venous pressure worsens pulmonary congestion in the supine position). Other causes: severe COPD, asthma exacerbation, diaphragmatic paralysis, ascites, and obesity.

Orthopod

Orthopod is an informal term for an orthopedic physician who diagnoses and treats disorders of bones, joints, muscles, and related tissues.

Orthopoxvirus

A genus of poxviruses that includes variola virus, monkeypox virus, vaccinia virus, and cowpox virus.

Orthoptera

The insect order containing grasshoppers, crickets, katydids, and locusts; some species cause bites, allergies, or crop-related health effects.

Orthoptic

Relating to assessment and treatment of binocular vision, eye alignment, and disorders such as strabismus.

Orthoreovirus

A genus of nonenveloped, segmented double-stranded RNA viruses; human infection is often mild or asymptomatic but can occasionally cause disease.

Orthorexia

A term used for an excessive or rigid preoccupation with eating foods considered healthy. It is not a universally recognized formal psychiatric diagnosis but may cause nutritional or social impairment.

Orthoscopic

Orthoscopic means providing a straight or undistorted view, as in an optical instrument or examination.

Orthosis

An externally applied device that supports, aligns, prevents deformity, protects, or assists movement of a body segment. It differs from a prosthesis, which replaces a missing body part.

Orthostatic Hypotension

Decrease in SBP ≥ 20 mmHg or DBP ≥ 10 mmHg within 3 minutes of standing. Causes: dehydration, medications (antihypertensives, diuretics, alpha-blockers, antidepressants), autonomic dysfunction (diabetes, Parkinson disease), and prolonged bed rest. Symptoms: dizziness, lightheadedness, syncope, falls.

Orthostatic Intolerance

Symptoms or signs that develop when standing because the cardiovascular and autonomic systems do not maintain adequate cerebral perfusion. Manifestations include light-headedness, palpitations, fatigue, visual dimming, presyncope, or syncope and may occur with or without orthostatic tachycardia or hypotension.

Orthotic

Orthotic means relating to a brace, splint, insert, or device that supports, aligns, protects, or improves function of a body part.

Orthotic Devices

A medical procedure, device, or treatment involving orthotic devices. Its purpose, risks, and follow-up depend on the specific intervention and patient.

Orthotic Training

Training for brace users: donning/doffing, skin care, gait training with brace.

Ortolani'S Sign

A palpable or audible clunk produced when a dis-

located but reducible infant hip is gently abducted and reduced; it is a screening sign of developmental dysplasia of the hip.

Ortolani'S Test

A hip examination maneuver in infants that detects a reducible dislocation by producing a palpable clunk as the femoral head enters the acetabulum.

Os

A bone or bony structure; in Latin anatomical terminology it means bone, while in obstetrics it means an opening.

Os Odontoideum

Os odontoideum is a separate ossicle near the second cervical vertebra's odontoid process that can cause atlantoaxial instability or spinal-cord risk.

Osborn Wave

A positive deflection at the junction of the QRS complex and ST segment on electrocardiography, also known as a J wave. It is classically associated with hypothermia, where its amplitude correlates with the degree of cooling.

Alternate Names:

a J wave.

Oschophoria

A rare or historical term whose precise clinical meaning varies across references; the source-specific definition should be verified.

Oscillation

Repeated movement or variation around a central position or value.

Oscillator

A device or system that produces repeated periodic movement or an electrical signal.

Oscillograph

An instrument that records changing electrical or mechanical signals over time.

Oscillometry

A method that measures pressure oscillations, commonly used in automated blood-pressure cuffs or vascular testing.

Oscillopsia

The disturbing illusion that the visual environment is moving or bouncing, often caused by vestibular or eye-movement dysfunction.

Oscitation

Yawning, a reflex involving opening the mouth and deep inhalation that is associated with sleepiness, fatigue, or other physiologic states.

Oseltamivir

Oseltamivir is an antiviral medicine used to treat or prevent influenza, with the greatest benefit when started early.

Oseltamivir Phosphate

Oseltamivir phosphate is the salt form of oseltamivir, an antiviral medicine used for treatment or prevention of influenza.

OSFED

Other Specified Feeding or Eating Disorder, used when the clinical presentation causes significant distress or impairment but does not meet full criteria for any of the specific eating disorders.

Osgood-Schlatter Disease

A traction apophysitis of the tibial tuberosity at the insertion of the patellar tendon, caused by repetitive microtrauma during periods of rapid growth.

Osiander'S Sign

An older sign described in pregnancy assessment; its use and definition vary by source and should be verified.

Osler Nodes

Painful, erythematous nodules on the pads of fingers and toes, caused by immune complex deposition in infective endocarditis. They are a minor criterion

in the Duke criteria. Osler nodes are tender and may last hours to days.

Osmidrosis

Offensive-smelling perspiration, usually from bacterial breakdown of sweat and skin material.

Osmium

A dense metallic element; some osmium compounds are highly toxic and can damage the eyes and respiratory tract.

Osmium Tetroxide

A highly toxic and volatile chemical used mainly in laboratory fixation and staining; exposure can severely injure the eyes, skin, and respiratory tract.

Osmolality

The concentration of osmotically active particles per kilogram of solvent. Plasma osmolality is determined mainly by sodium and its accompanying anions, glucose, and urea and governs water movement across cell membranes.

Osmolality Blood Test

A blood osmolality test measures the concentration of dissolved particles in blood and helps assess hydration, electrolyte disorders, and certain poisonings.

Osmolality Urine Test

A urine osmolality test measures how concentrated the urine is and helps evaluate the kidneys' ability to regulate water balance.

Osmolar

Relating to osmolarity, the concentration of osmotically active particles per liter of solution.

Osmolarity

The concentration of osmotically active particles per liter of solution.

Osmole

A unit representing the amount of a substance that

contributes one mole of osmotically active particles.

Osmoreceptor

A sensory cell or neural receptor that detects changes in osmotic concentration, especially in the hypothalamus.

Osmoregulation

Control of water and dissolved-solute balance in the body or an organism, maintaining appropriate cell volume and internal concentration.

Osmosis

The net movement of water molecules across a semipermeable membrane from a region of lower solute concentration (higher water concentration) to a region of higher solute concentration (lower water concentration). Driven by the osmotic pressure difference, which is proportional to the number of solute particles.

Osmotic Demyelination Syndrome

Demyelinating process affecting the pons and extrapontine regions caused by overly rapid correction of chronic hyponatremia. The brain adapts to chronic hyponatremia by extruding osmoles and when sodium is corrected too quickly water shifts out of brain cells causing osmotic injury to oligodendrocytes.

Osmotic Diarrhea

Diarrhea caused by poorly absorbed solutes retaining water in the intestinal lumen. It typically improves with fasting and may result from carbohydrate malabsorption, laxatives, or other osmotically active substances.

Osmotic Diuresis

Increased urine production caused by poorly reabsorbed solutes in the kidney tubules, such as glucose during marked hyperglycemia.

Osmotic Fragility Test

A test that measures the susceptibility of red blood cells to haemolysis when placed in progressively

more dilute saline solutions. Increased fragility supports hereditary spherocytosis, although the result may also be affected by other haemolytic disorders and recent transfusion.

Osmotic Pressure

The pressure needed to stop water from crossing a semipermeable membrane toward the side with the higher effective solute concentration. It depends mainly on the number of dissolved particles rather than their identity; for dilute solutions, it is described by the van't Hoff relation $\pi = iCRT$. In physiology, osmotic pressure helps determine how water moves between body compartments.

Osseointegration

Direct structural and functional connection between living bone and the surface of a load-bearing implant under appropriate conditions. It depends on implant stability, surface characteristics, bone quality, healing, and control of infection and occlusal forces.

Osseous

Relating to or composed of bone. For example, an osseous lesion is a bone lesion.

Osseous Metaplasia

Osseous metaplasia is formation of mature bone in tissue where bone is not normally present, sometimes after injury, inflammation, or within a lesion.

Ossicle

A small bone, especially one of the three auditory bones in the middle ear.

Ossicles

Three smallest body bones forming the ossicular chain in the middle ear: malleus (hammer, attached to tympanic membrane), incus (anvil), stapes (stirrup, footplate in oval window).

Ossicular Discontinuity

Partial or complete separation of the middle-ear ossicles, usually caused by trauma, chronic ear disease,

or surgery. It produces conductive hearing loss and may be evaluated with otoscopy, audiometry, and imaging.

Alternate Names:

Ossicular-chain discontinuity; ossicular disruption.

Ossicular Fusion

Abnormal joining or fixation of the middle-ear ossicles (malleus, incus, or stapes), which can restrict sound transmission and cause conductive hearing loss. Evaluation and treatment depend on the underlying congenital, inflammatory, traumatic, or postoperative cause.

Ossification

The physiological or pathological process of bone tissue formation, in which osteoblasts synthesize and secrete osteoid matrix that subsequently undergoes calcium hydroxyapatite mineralization. Occurs through two primary embryological pathways: intramembranous ossification (direct transformation of mesenchymal connective tissue into flat bones, such as the cranial vault, facial bones, and clavicles) and endochondral ossification (replacement of a hyaline cartilage intermediate scaffold, forming the long bones, axial skeleton, and base of the skull at epiphyseal growth plates). Pathologic heterotopic ossification entails abnormal extraskelatal bone formation within soft tissues or muscle (myositis ossificans) following severe trauma, burns, or central neurological injury.

Ossifying Fibroma

An ossifying fibroma is a usually benign fibroosseous tumor that replaces normal bone with fibrous tissue and mineralized material, often in the jaw.

Osteitis

Inflammation of bone, caused by infection, trauma, inflammatory disease, or other processes.

Osteitis Deformans

Osteitis deformans is Paget disease of bone, in which abnormal remodeling produces enlarged, weakened, or deformed bones.

Osteitis Deformans (Paget'S Disease)

Alternate index label for Paget's Disease.

Osteitis Fibrosa

Osteitis fibrosa is fibrous replacement and weakening of bone caused by prolonged excess parathyroid hormone, usually in severe hyperparathyroidism.

Osteoarthritis

A misspelling of osteoarthritis, a degenerative joint disorder involving cartilage and subchondral bone.

Osteoarthritis

Osteoarthritis is a degenerative joint disorder involving cartilage loss, subchondral bone change, pain, stiffness, and functional limitation, influenced by age, injury, and joint loading. bone sclerosis, osteophyte formation, and synovial inflammation, affecting knees, hips, hands (DIP/PIP Heberden/Bouchard nodes), spine. Risk factors: age, obesity, joint injury, malalignment, genetics, female sex.

Alternate Names:

Arthritis Degenerative (Osteoarthritis) Degenerative Arthritis

Osteoarthritis (Geriatric)

Osteoarthritis occurring in later life, commonly affecting the knees, hips, hands, or spine and causing joint pain, stiffness, and reduced movement. Management may include exercise, weight management, medicines, assistive measures, or joint replacement when appropriate.

Alternate Names:

Geriatric

Osteoarthritis, Cervical

Alternate index label; see *Cervical spondylosis*.

Osteoarthropathy

Osteoarthropathy is disease affecting bones and joints, often describing degenerative, hypertrophic, metabolic, or systemic-associated changes.

Osteoarthrosis

Another name for osteoarthritis, a joint disorder in which cartilage and nearby bone gradually change, causing pain, stiffness, and reduced movement.

Osteoblast

A bone-forming cell derived from mesenchymal stem cells in the bone marrow. Osteoblasts synthesise and deposit the bone matrix (osteoid), composed primarily of type I collagen and non-collagenous proteins (osteocalcin, osteonectin, alkaline phosphatase).

Osteoblastoma

A rare benign bone-forming tumor, usually in the spine or long bones, that can cause persistent pain and sometimes neurologic symptoms.

Osteoblasts

Specialized, mononuclear, bone-forming cells derived from multipotent mesenchymal stem cells under the direction of master transcription factors Runx2 and Osterix. Located along bone surfaces, active osteoblasts synthesize and secrete the organic components of the bone matrix (osteoid), predominantly type I collagen, osteocalcin, and alkaline phosphatase, and regulate its mineralization via calcium and phosphate deposition. Furthermore, osteoblasts orchestrate bone remodeling by expressing receptor activator of nuclear factor κ B ligand and its decoy receptor osteoprotegerin to regulate osteoclast differentiation and activity; upon entrapment within the mineralized matrix, they terminally differentiate into osteocytes.

Osteocalcin

A protein made mainly by osteoblasts that participates in bone mineralization and serves as a marker of bone formation.

Osteocalcin Assay

A diagnostic or laboratory method related to osteocalcin assay. Results are interpreted with the method, reference range, and clinical findings.

Osteochondritis

Inflammation or injury involving bone and its over-

lying cartilage, often near a joint. The term includes conditions such as osteochondritis dissecans, in which a fragment may loosen.

Osteochondritis Dissecans

A condition characterized by separation of a fragment of articular cartilage and subchondral bone from the joint surface, most commonly in the knee (lateral aspect of the medial femoral condyle). Most common in adolescents and young adults. Etiology: repetitive microtrauma, ischemia, or genetic predisposition.

Osteochondroma

A usually benign cartilage-capped bony projection arising from the surface of a bone and continuous with its cortex and medullary cavity. It may be solitary or occur in hereditary multiple exostoses.

Osteochondromatosis

Osteochondromatosis is formation of multiple cartilage-capped bony outgrowths, usually around growth plates, that can cause deformity, pain, or nerve and vessel compression.

Osteochondrosis

A disorder of bone and cartilage development, often affecting a growth center or joint surface.

Osteoclasia

Osteoclasia is surgical or mechanical breaking of bone, historically used to correct deformity.

Osteoclasia

Osteoclasia is deliberate fracture or manipulation of bone, usually to correct deformity or restore alignment.

Osteoclast

A large, multinucleated bone-resorbing cell derived from the monocyte–macrophage lineage (hematopoietic stem cells).

Osteoclasts

Large, multinucleated giant cells derived from the

monocyte/macrophage hematopoietic lineage, responsible for bone resorption and mineral mobilization during skeletal growth, repair, and calcium homeostasis. Activated by macrophage colony-stimulating factor (M-CSF) and RANKL binding to surface RANK receptors, osteoclasts seal against mineralized bone surfaces to create an isolated resorptive microenvironment (Howship lacunae). Resorption proceeds via proton pump (H^+ -ATPase) acidification of the sealed compartment to dissolve inorganic hydroxyapatite, coupled with secretion of cathepsin K and matrix metalloproteinases (MMPs) to degrade collagenous organic osteoid. Excess osteoclast activity drives bone loss in postmenopausal osteoporosis, Paget disease, and osteolytic bone metastases, and is targeted clinically by antiresorptive therapies including bisphosphonates and denosumab.

Osteocyte

The mature, terminally differentiated bone cell embedded within the bone matrix in lacunae, derived from osteoblasts. Osteocytes are connected to each other and to bone surface cells via canaliculi, forming a mechanosensory network that senses mechanical loading and fluid flow.

Osteocytes

Mature bone cells embedded within bone tissue that help maintain it.

Osteodystrophy

Abnormal bone growth or remodeling caused by a systemic or metabolic disorder.

Osteogenesis

The biological formation and structural development of bone during embryonic morphogenesis, postnatal skeletal maturation, and fracture repair. Encompasses both cellular differentiation (osteoblastogenesis from mesenchymal progenitors) and matrix deposition/mineralization (intramembranous and endochondral pathways). Derangements in osteogenesis underlie congenital skeletal dysplasias, most notably osteogenesis imperfecta (brittle bone disease), a heterogeneous genetic disorder caused by

mutations in *COL1A1* or *COL1A2* encoding type I procollagen, characterized by bone fragility, recurrent fractures, blue sclerae, dentinogenesis imperfecta, and conductive hearing loss.

Osteogenesis Imperfecta

A connective tissue disorder caused by collagen type I mutations, ranging from mild to lethal. Features: fractures with minimal trauma, blue sclerae, dental abnormalities, and hearing loss. Severe forms (type II) cause multiple fractures in utero and perinatal death. Diagnosis: clinical features, genetic testing, and bone biopsy.

Osteogenesis Imperfecta Brittle Bone Disease

Osteogenesis imperfecta is an inherited collagen disorder causing fragile bones, recurrent fractures, short stature, dentin abnormalities, hearing loss, and variable skeletal deformity. Care may include fracture prevention, rehabilitation, medicines, surgery, and monitoring of hearing and breathing.

Alternate Names:

Brittle Bone Disease (Osteogenesis Imperfecta Brittle Bone Disease)

Osteogenic Sarcoma

Osteosarcoma, a malignant bone tumor whose cells produce osteoid or immature bone.

Osteoid

The newly formed, unmineralized organic framework of bone, produced mainly by osteoblasts. Minerals are later deposited in it to make mature hard bone.

Osteoid Osteoma

A benign bone-forming tumor, usually in an adolescent or young adult, characterized by a small vascular nidus surrounded by reactive sclerosis. It commonly causes localized pain that is worse at night and may improve with nonsteroidal anti-inflammatory drugs.

Osteology

The scientific and medical branch of anatomy dedicated to the structure, morphology, developmental

biology, biomechanics, and pathology of the skeletal system and individual bones. In clinical practice, osteological principles underpin orthopedic surgery, musculoskeletal radiology, physical anthropology, and forensic medicine, guiding the classification and biomechanical management of fractures, skeletal deformities, metabolic bone disorders (rickets, osteomalacia), and neoplastic bone processes.

Osteolysis

Osteolysis is progressive destruction or resorption of bone caused by tumors, inflammation, prosthesis reactions, infection, metabolic disease, or other processes.

Osteolytic

Osteolytic means causing or characterized by breakdown and loss of bone tissue.

Osteoma

A benign, slow-growing, circumscribed osteogenic neoplasm composed predominantly of dense, mature lamellar or cortical bone (compact osteoma) or trabecular bone (cancellous osteoma). Most commonly arises in the craniofacial skeleton, particularly the paranasal sinuses (especially frontal and ethmoid sinuses) and the outer cortex of the mandible or calvarium. While frequently asymptomatic and discovered incidentally on facial CT scans, large lesions may cause mechanical sinus obstruction, recurrent sinusitis, headache, or facial asymmetry. Multiple osteomas of the skull, sinuses, and mandible are a cardinal diagnostic sign of Gardner syndrome (a phenotypic variant of familial adenomatous polyposis [FAP] carrying a nearly 100% risk of colorectal adenocarcinoma).

Osteoma Cutis

Osteoma cutis is formation of bone within the skin or subcutaneous tissue, occurring as a primary disorder or secondary to acne, trauma, or another condition.

Osteomalacia

Osteomalacia is inadequate mineralization of adult bone, commonly from vitamin-D deficiency or phosphate disorders, causing bone pain, weakness, and

fractures.

Osteomalacia (Rickets)

Alternate index label for Rickets.

Osteomyelitis

Osteomyelitis is infection and inflammation of bone caused by bacteria, fungi, or other organisms, producing pain, fever, swelling, and possible bone destruction or chronic drainage. *Staphylococcus aureus* responsible for the majority of cases.

Osteomyelitis In Children

Childhood osteomyelitis is infection of bone, often caused by bacteria entering through blood or trauma, producing pain, fever, swelling, and impaired movement.

Osteon

An osteon, or Haversian system, is the cylindrical structural unit of compact bone surrounding a central blood-vessel and nerve canal.

Osteonecrosis

Osteonecrosis is death of bone tissue from inadequate blood supply, causing pain, collapse, and joint damage, commonly in the hip or knee.

Osteonecrosis (Avascular Necrosis)

Osteonecrosis is bone death from vascular compromise, affecting femoral head (most common), humeral head, femoral condyles, talus. Risk factors: glucocorticoids (high dose, cumulative), alcohol, trauma, sickle cell disease, SLE, antiphospholipid syndrome, pancreatitis, decompression sickness, radiation, organ transplantation.

Alternate Names:

Avascular Necrosis

Osteonecrosis Of The Jaw

Death of jawbone tissue, often associated with antiresorptive or antiangiogenic medications, radiation, infection, or trauma, and characterized by exposed bone or a nonhealing oral wound.

Osteonectin

An extracellular-matrix protein involved in collagen organization, mineral binding, and tissue remodeling; it is also called SPARC.

Osteons

Cylindrical structural units of compact bone arranged around central canals.

Alternate Names:

Haversian systems

Osteopath

A physician trained in medicine and surgery who earns a Doctor of Osteopathic Medicine degree.

Alternate Names:

DO

Osteopathy

A system of manual medicine and healthcare founded by Andrew Taylor Still (1828–1917) based on the principle that the body's structure (musculoskeletal system) and function are interrelated, and that the body has inherent self-regulatory and healing mechanisms.

Osteopenia

Bone mineral density that is lower than normal but not low enough to be classified as osteoporosis. T-score between -1.0 and -2.5 on DXA scan. A risk factor for osteoporosis and fractures.

Osteopenia - Premature Infants

Osteopenia of prematurity is reduced bone mineralization in premature infants due to immature mineral stores, limited intake, illness, or prolonged intensive care.

Osteopetrosis

A rare inherited bone disease characterized by defective osteoclast function, leading to impaired bone resorption and abnormally dense, sclerotic bones. The bone is structurally abnormal—brittle despite increased density—and prone to fracture.

Osteophyte

A bony projection arising at a joint margin, commonly associated with osteoarthritis.

Osteoplasty

Surgery to repair, reshape, or reconstruct bone to restore structure, movement, or function. The technique depends on the bone problem and may be combined with fixation, grafting, or joint surgery.

Osteopoikilosis

Osteopoikilosis is an inherited benign bone condition with multiple small dense spots on imaging, usually asymptomatic and discovered incidentally.

Osteopontin

A phosphorylated protein involved in bone remodeling, immune signaling, inflammation, and cell adhesion.

Osteoporosis

Osteoporosis is a systemic skeletal disorder characterized by reduced bone strength and increased susceptibility to fragility fractures, which may occur after minimal trauma or ordinary activity. It commonly affects the spine, hip, wrist, and other bones and may remain asymptomatic until a fracture occurs. medicines, genetics, nutrition, smoking, alcohol, and other conditions; diagnosis and management use clinical assessment and bone-density testing when appropriate.

Osteoporosis Fracture Risk Assessment

Evaluation combining clinical risk factors, prior fragility fracture history, bone mineral density, and tools such as FRAX to estimate future fracture probability and guide treatment.

Osteoporotic Fracture

A fracture resulting from weakened, porous bone after a low-energy event that would not usually break healthy bone.

Osteoprotegerin Test

A diagnostic or laboratory method related to osteo-

protegerin test. Results are interpreted with the method, reference range, and clinical findings.

Osteoradionecrosis

Death of irradiated bone with poor healing, most often affecting the jaw after head-and-neck radiotherapy.

Osteosarcoma

Osteosarcoma is an aggressive malignant bone tumor that produces osteoid, most often affecting the metaphysis of long bones in children and young adults. leukemia), with a peak incidence during the adolescent growth spurt (ages 10-20 years), and a second smaller peak in older adults (usually secondary to Paget disease or prior radiation).

Osteosarcoma, Secondary

An osteogenic sarcoma arising in previously abnormal or treated bone, such as bone affected by Paget disease, prior radiation, or chronic bone lesions; prognosis and treatment depend on stage and resectability.

Osteosclerosis

Osteosclerosis is abnormal increased bone density caused by defective remodeling, inherited disease, chronic stress, inflammation, medicines, or malignancy.

Osteosynthesis

Surgical stabilization and repair of a broken bone using implants such as plates, screws, nails, or wires.

Osteotome

A sharp surgical instrument used to cut or shape bone.

Osteotomy

A surgical procedure involving cutting and repositioning of bone to correct deformity, realign joint surfaces, alter weight-bearing forces, or change limb length.

Osteotomy Of The Knee

Surgery that cuts and reshapes a knee-region bone to correct alignment and redistribute weight across the joint.

Ostium

A natural opening or mouth of a vessel, duct, cavity, or organ.

Ostomy

Surgical opening into bowel or urinary tract. Colostomy, ileostomy, urostomy. Appliances for collection.

Ostomy Appliance

Collection device for feces/urine after ostomy surgery. Types: urostomy (urine), colostomy (feces), ileostomy (ileum). One-piece or two-piece systems. Open or closed end. Skin care essential.

Ostraceous Psoriasis

A severe, chronic variant of plaque psoriasis in which the lesions become thick, hard, and shell-like (ostraceous), with laminated, greyish-brown crusts resembling oyster shells. It is often refractory to standard therapies and may require systemic agents, biologics, or combination treatment.

Otalgia

Pain originating in or referred to the ear, classified clinically as primary (otogenic) or secondary (referred). Primary otalgia stems from pathology within the external, middle, or inner ear, such as acute otitis media, otitis externa (swimmer's ear), mastoiditis, impacted cerumen, or trauma. Secondary (referred) otalgia accounts for up to 50% of adult ear pain complaints and arises because the external ear and auditory canal receive sensory innervation from cranial nerves V, VII, IX, and X, as well as cervical nerves C2–C3. Referred pain can originate from temporomandibular joint dysfunction, dental abscesses, tonsillitis, pharyngitis, cervical spine disorders, or base-of-tongue and laryngeal malignancies, requiring a systematic head and neck exam in adults with normal otoscopic findings.

Otalgia (Earache)

Pain in or around the ear, arising from the ear itself or referred from structures such as the teeth, jaw, throat, or cervical spine.

Alternate Names:

Earache

Othello Syndrome

A delusional belief that a partner is unfaithful despite insufficient evidence; it may occur with psychiatric, neurologic, or substance-related disorders.

Other

Other indicates a category or finding not fitting the listed alternatives; its medical meaning depends on the surrounding classification or clinical context.

Other Pain Conditions

Pain conditions that do not fit neatly into a single category, including nociplastic pain, fibromyalgia, chronic tension-type headache, temporomandibular pain, chronic pelvic pain, and complex regional pain syndrome. Diagnosis and treatment depend on the specific condition.

Other Race

Other race is a demographic category for a person who does not select or fit the available listed race categories; classification varies by system and should not be treated as a biological diagnosis.

Other Specified Sexual Dysfunction

A category for sexual dysfunction symptoms that cause distress but do not meet full criteria for any specific sexual dysfunction.

Otic Barotrauma

Injury to the ear caused by failure to equalize pressure during flying, diving, or other pressure changes.

Otic Capsule

The otic capsule is the dense bony shell (otic capsule bone) that surrounds and protects the inner ear structures, including the cochlea, vestibule, and semicircular canals, forming the hardest bone in the

human body.

Otic Ointment

A semisolid medicine formulated for application to the outer ear or ear canal; it should be used only as directed, especially when the eardrum may be perforated.

Otitis

Inflammation or infection involving any anatomical division of the ear, classified by location into otitis externa (infection of the external auditory canal, commonly bacterial [*Pseudomonas aeruginosa*, *Staphylococcus aureus*] or fungal), otitis media (inflammation of the middle ear cleft, subdivided into acute otitis media [AOM], otitis media with effusion [OME / serous otitis], and chronic suppurative otitis media [CSOM]), and otitis interna (labyrinthitis, involving the vestibulocochlear apparatus). Clinical presentation varies by subtype, ranging from canal erythema and tragus tenderness in otitis externa, to bulging erythematous tympanic membrane, fever, and otalgia in AOM, to vertigo and sensorineural hearing loss in labyrinthitis.

Otitis (Ear Infection)

Alternate index label for Ear Infection.

Otitis Externa

Inflammation or infection of the external ear canal, commonly causing ear pain and tenderness.

Alternate Names:

Swimmers Ear (Otitis Externa)

Otitis Media

Inflammation or infection of the middle ear, often following an upper-respiratory infection.

Otitis Media With Effusion

Nonpurulent fluid in the middle ear without acute signs of infection. It may cause conductive hearing loss, aural fullness, or speech and learning effects in children; many cases resolve spontaneously, but persistent or consequential effusion requires hearing assessment and ENT review.

Oto-Rhino-Laryngology

Another name for otolaryngology, the specialty of the ear, nose, throat, head, and neck.

Otoacoustic Emissions

Low-level sounds generated by the cochlea, usually by outer hair cells, that can be recorded with a sensitive probe in the ear canal. Testing is used for newborn hearing screening and for assessing cochlear function.

Alternate Names:

OAE; otoacoustic-emission testing; cochlear emissions.

Otocephaly

A severe congenital craniofacial malformation characterized by absent or markedly underdeveloped mandible, ventral displacement or fusion of the ears, and associated facial and airway abnormalities. It is usually lethal because of profound impairment of breathing and feeding.

Otolaryngologist

An otolaryngologist is a physician specializing in disorders of the ear, nose, throat, head, neck, voice, swallowing, and related surgery.

Otolaryngology

The medical specialty concerned with the ear, nose, throat, head, and neck.

Otolith

A small calcium-carbonate crystal in the vestibular organs of the inner ear that contributes to sensing gravity and linear acceleration; displaced otoliths can cause benign positional vertigo.

Otoliths

Calcium-carbonate crystals in the vestibular organs that sense gravity and linear acceleration.

Otology

The study and medical care of the ear and hearing.

Otoplasty

Surgery to alter the shape, position, or proportion of the external ear, commonly to correct prominent or congenital ear differences.

Otorhinolaryngology

The medical specialty concerned with diseases of the ear, nose, throat, head, and neck; also called otolaryngology.

Alternate Names:

otolaryngology.

Otorrhea

Discharge from the ear. Classification: acute otorrhea (<6 weeks) and chronic otorrhea (>6 weeks).

Otorrhoea

The drainage of fluid, discharge, or pus from the external auditory canal. Pathophysiologically categorized by fluid characteristics: purulent or mucopurulent discharge indicates active infection (acute otitis media with tympanic membrane perforation, otitis externa, or cholesteatoma); serosanguineous discharge may indicate ear canal trauma, acute myringitis, or barotrauma; clear watery discharge following head trauma or skull base fracture warns of cerebrospinal fluid otorrhoea (caused by temporal bone fracture tearing the dura and tympanic membrane, confirmed by beta-2 transferrin testing and carrying high risk of bacterial meningitis).

Otosclerosis

Abnormal remodeling and fixation of middle-ear bone, commonly causing progressive conductive hearing loss.

Otoscope

An instrument used to examine the ear canal and eardrum.

Otoscopy

Examination of the ear canal and tympanic membrane with an otoscope.

Ototoxicity

Functional damage to the cochlea or vestibular system caused by exposure to a toxic substance, including some medicines or industrial chemicals. It may present with hearing loss, tinnitus, or imbalance and can be temporary or permanent.

Alternate Names:

Auditory toxicity; vestibular toxicity; ototoxic effect.

Ouabain

A cardiac glycoside that inhibits sodium-potassium ATPase; it is mainly of historical or research interest.

Ounce

An ounce is a unit of mass or fluid volume whose exact conversion depends on the measurement system; medication instructions should use unambiguous units.

Outcome

The result or endpoint of a disease, treatment, exposure, or healthcare intervention.

Outcome Measurement

The use of defined measures to assess a patient's symptoms, function, quality of life, or other results before and after care.

Outcome Research

Research that studies what happens to patients after a treatment, procedure, or health program. It may measure survival, symptoms, function, quality of life, safety, patient experience, or cost in real-world care.

Outcomes Research

Outcomes research studies how healthcare interventions, services, and policies affect survival, function, quality of life, safety, cost, and patient experience.

Outdoor Fitness Routine

A planned program of physical activity performed outdoors, including aerobic, strength, balance, or

flexibility exercise adapted to weather, terrain, and fitness level.

Outer Ear

The visible auricle and the external auditory canal, which collect and conduct sound toward the eardrum.

Outer Ear Infection

Alternate index label; see *Swimmer's ear*.

Outpatient

A person who receives medical evaluation or treatment without being admitted overnight to a hospital or other inpatient facility.

Outpatient Rehabilitation

Rehabilitation provided without hospital admission to improve function after illness, injury, surgery, or disability. The setting, frequency, and duration are individualized.

Output

The amount of a substance produced or eliminated by the body or by an organ over a specified time, such as urine output or cardiac output.

Ova

Plural of ovum; eggs or egg cells, and in parasitology, eggs of worms or other parasites.

Ovalbumin

The main protein in egg white, used in nutrition and laboratory research and capable of triggering egg allergy.

Ovalocyte Count

An ovalocyte count estimates the number or proportion of oval-shaped red blood cells on a blood smear and may help evaluate anemia.

Ovarian

Pertaining to, originating from, or affecting the ovary, the primary female gonadal organ responsible for gametogenesis (oocyte maturation and ovu-

lation) and endocrine secretion of sex steroid hormones (estrogens, progesterone, and androgens). Clinically relevant across gynecologic, reproductive, and oncologic conditions, including ovarian cysts, polycystic ovary syndrome, ovarian torsion (an acute gynecologic surgical emergency requiring urgent detorsion to salvage ovarian blood flow), and ovarian neoplasms (epithelial, germ cell, and sex cord-stromal tumors).

Ovarian Cancer

A malignant tumor arising in the ovary or related tissues. It may cause abdominal or pelvic symptoms, but early disease can be asymptomatic.

Alternate Names:

Cancer, Ovarian

Ovarian Cyst

A fluid-filled sac within or on the ovary, most commonly functional (follicular or corpus luteum cysts) related to the menstrual cycle. Usually asymptomatic; can present with pelvic pain, pressure, and bloating. Complications: rupture, hemorrhage, torsion (sudden severe pain with nausea/vomiting).

Ovarian Cysts

Fluid-filled or partly solid sacs in or on an ovary; many are benign and resolve spontaneously, but some cause pain or complications.

Alternate Names:

Cyst, Ovarian Cysts Ovary (Ovarian Cysts)

Ovarian Failure

Ovarian failure is inadequate ovarian hormone production or ovulation, causing irregular or absent periods, infertility, and low-estrogen symptoms.

Ovarian Fibromata

Ovarian fibromata are usually benign fibrous tumors of the ovary that may be incidental or cause pelvic pressure, pain, or fluid in the abdomen.

Ovarian Follicle

An ovarian follicle is a fluid-containing structure holding an immature egg and supporting cells; one

usually matures and ovulates during each cycle.

Ovarian Gonadoblastoma

A rare ovarian tumor composed of germ-cell and sex-cord elements, often associated with abnormal gonadal development or a Y-chromosome material and potentially producing hormones.

Ovarian Hemorrhage

Bleeding into or around an ovary, which may result from a ruptured cyst, ovulation, trauma, pregnancy-related conditions, or a bleeding disorder.

Ovarian Hyperstimulation Syndrome

A potentially serious complication of ovarian stimulation in assisted reproduction caused by increased vascular permeability and fluid shift. It produces enlarged ovaries, abdominal distension, ascites, hemoconcentration, electrolyte abnormalities, thrombosis risk, and, in severe cases, organ dysfunction.

Alternate Names:

OHSS

Ovarian Infection

Infection involving an ovary, often as part of pelvic inflammatory disease or an abscess, causing pelvic pain, fever, and abnormal discharge.

Ovarian Metastasis

Secondary involvement of the ovary by a malignant tumor arising elsewhere, commonly from the gastrointestinal tract, breast, or gynecologic tract; the distinction from a primary ovarian tumor guides treatment.

Ovarian Overproduction Of Androgens

Ovarian androgen overproduction is excessive production of male-pattern hormones by the ovaries, which may cause acne, excess facial hair, irregular periods, or infertility.

Ovarian Pregnancy

A rare ectopic pregnancy implanted in ovarian tissue rather than in the uterine cavity or fallopian tube. Diagnosis uses clinical findings, serial human

chorionic gonadotropin measurements, ultrasound, and sometimes surgical or pathologic confirmation; treatment is individualized.

Ovarian Rupture

Ovarian rupture is tearing of an ovary or ovarian cyst, which may cause sudden pelvic pain and internal bleeding and sometimes requires urgent treatment.

Ovarian Teratoma

An ovarian teratoma is a germ-cell tumor containing tissues from one or more embryonic layers; mature teratomas are usually benign, while immature forms can be malignant.

Ovarian Thecoma

An ovarian thecoma is a usually benign sex-cord stromal tumor that may produce estrogen and cause abnormal uterine bleeding or other hormonal effects.

Ovarian Torsion

Twisting of the ovary (and often the fallopian tube) on its vascular pedicle, causing obstruction of blood flow—a gynecologic emergency. Risk: ovarian cysts/tumors (especially >5 cm), longer utero-ovarian ligament, younger women, pregnancy.

Ovariectomy (Oophorectomy)

The surgical excision of one ovary (unilateral oophorectomy) or both ovaries (bilateral oophorectomy), performed via laparoscopy or laparotomy. Indicated therapeutically for benign or malignant ovarian neoplasms, severe ovarian torsion with tissue necrosis, tubo-ovarian abscess refractory to medical therapy, endometriosis, or as risk-reducing bilateral salpingo-oophorectomy in patients carrying high-penetrance genetic mutations such as *BRCA1* or *BRCA2*. In premenopausal women, bilateral oophorectomy induces immediate surgical menopause (abrupt loss of ovarian estradiol and progesterone), precipitating vasomotor symptoms, accelerated bone mineral density loss, and elevated cardiovascular risk, often warranting hormone replacement therapy when not contraindicated by hormone-receptor-positive malignancy.

Ovaries

The paired female gonads that produce oocytes and secrete sex hormones, mainly estrogen and progesterone. They are located on either side of the uterus and participate in the menstrual cycle and reproduction.

Alternate Names:

ovary

Ovariectomy

An older term for surgical removal or incision of an ovary.

Ovary

A female reproductive organ that releases ova and produces hormones including estrogen and progesterone.

Ovary Disease

Any disorder affecting an ovary, including cysts, infection, inflammation, tumors, hormonal dysfunction, torsion, or bleeding.

Ovary Neoplasm

An ovarian neoplasm is an abnormal growth in an ovary that may be benign, borderline, or malignant.

Oven Cleaner Poisoning

Oven cleaner poisoning involves toxic or environmental exposure to oven cleaner poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Over-Counter

An incomplete or nonstandard form usually intended to mean over-the-counter, describing medicines available without a prescription.

Over-Hydration

Excess accumulation of body water, which may cause edema, dilutional hyponatremia, or heart and lung complications.

Over-Nutrition

Excessive intake or accumulation of energy or nu-

trients that can contribute to obesity, metabolic disease, or toxicity.

Over-The-Counter

Medications available without a prescription, considered safe and effective for self-care with appropriate labeling and low abuse potential. Examples: acetaminophen, ibuprofen, antacids, antihistamines, decongestants, laxatives. Regulated in the US by the FDA (OTC monograph system) and Rx-to-OTC switches (e.g., omeprazole, loratadine).

Over-The-Counter

Over-the-counter means available for purchase without a prescription, although safe use still requires attention to directions, interactions, and warnings.

Over-The-Counter Medications

Nonprescription drugs approved as safe and effective for self-management of common symptoms, available at pharmacies and retail stores without a prescription.

Over-The-Counter Medicines

Over-the-counter medicines can be bought without a prescription for common problems, but they may still cause side effects or interact with prescribed medicines.

Over-The-Counter Pain Relievers

Over-the-counter pain relievers include medicines such as acetaminophen and nonsteroidal anti-inflammatory drugs; choice depends on age, health conditions, and other medicines.

Overactive Bladder

A clinical syndrome of urinary urgency, usually with frequency and nocturia, with or without urge incontinence, due to detrusor overactivity during filling. Causes: idiopathic (most), neurogenic (stroke, spinal injury, MS, Parkinson), bladder outlet obstruction, and aging; worsened by caffeine and diuretics.

Alternate Names:

OAB OAB (Overactive Bladder)

Overactive Bladder

Alternate index label for Overactive Bladder.

Overactive Thyroid

Alternate index label; see *Hyperthyroidism (overactive thyroid)*.

Overactive Thyroid (Hyperthyroidism)

Alternate index label for Hyperthyroidism.

Overall Survival

In clinical oncology and clinical trial methodology, the duration of time measured from the date of trial randomization (or initiation of treatment) until death from any cause. Regarded by regulatory authorities (such as the FDA and EMA) as the gold-standard, most objective and definitive endpoint for demonstrating clinical efficacy in Phase III cancer trials, as it directly reflects clinical benefit without subjective interpretation or measurement bias. Statistically analyzed using Kaplan-Meier survival curves and Cox proportional hazards regression models, and compared with surrogate survival endpoints such as progression-free survival and disease-free survival.

Overbite

Vertical overlap of the upper front teeth over the lower front teeth; excessive overbite can damage gums, teeth, or jaw function.

Overcoming Breastfeeding Problems

Breastfeeding problems such as pain, poor latch, low supply, engorgement, or blocked ducts can often improve with feeding assessment, positioning help, and timely lactation or medical support.

Overcoming Job Stress

Managing job stress may include setting boundaries, taking breaks, improving workload or support, practicing relaxation, and seeking professional help when distress persists.

Overdenture

Removable denture supported by implants or natu-

ral teeth. Preservation of alveolar bone, improved stability.

Overdose

Exposure to a dose of a medicine or substance that exceeds the person's safe or intended amount and may cause toxicity.

Overflow Urinary Incontinence

Leakage of urine caused by incomplete bladder emptying and excessive bladder filling. It may occur with weak urinary flow, dribbling, urgency, or urinary retention.

Overgrowth Syndrome

A group of congenital disorders characterized by excessive growth of the body, a region, or specific tissues, often with developmental or tumor-predisposition features. Causes include genomic imprinting abnormalities, mosaic variants, and alterations in growth-signaling pathways.

Overlap Myositis

Patients with features of inflammatory myopathy (DM/PM/IMNM) plus another systemic autoimmune disease (SLE, SSc, MCTD, Sjogren). Anti-PM-Scl (Scl/PM overlap, limited SSc + myositis, good prognosis); anti-Ku (SLE/PM overlap); anti-U1-RNP (MCTD with myositis).

Overlay Denture

A removable denture that fits over remaining teeth, roots, or implants to improve support, chewing, and retention.

Overload Iron (Iron Overload)

Alternate index label for Iron Overload.

Overriding Aorta

A congenital heart defect in which the aorta is positioned over a ventricular septal defect and receives blood from both ventricles, classically in tetralogy of Fallot.

Oversedate

To give excessive sedation, causing unusually deep sleep, slowed responses, impaired breathing, or difficulty maintaining the airway.

Overt Proteinuria

Abnormally high protein loss in the urine that is detectable by routine testing and may indicate kidney disease.

Overuse Syndrome (Repetitive Motion Disorders (RMDs))

Alternate index label for Repetitive Motion Disorders (RMDs).

Overweight

Body weight above the usual range for height, commonly defined in adults as BMI 25 to less than 30 kg/m², with context-dependent limitations.

Oviduct

A tube carrying an ovum from the ovary toward the uterus; in humans it is the uterine or fallopian tube.

Oviposition

The laying or depositing of eggs by a female animal or insect.

Ovomucin

A glycoprotein in egg white that contributes to its gel-like viscosity and helps stabilize the egg-white structure.

Ovotestis

A diagnostic or laboratory method related to ovotestis. Results are interpreted with the method, reference range, and clinical findings.

Ovulation

Release of a mature egg from an ovarian follicle, usually around the middle of the menstrual cycle.

Ovulation Home Test

An ovulation home test detects the rise in urinary luteinizing hormone that usually occurs shortly be-

fore ovulation.

Ovule

An immature seed in plants or, historically, an ovum or small egg-like structure.

Ovum

The mature female haploid reproductive gamete (unfertilized secondary oocyte arrested at metaphase of meiosis II) released from the mature ovarian Graafian follicle during ovulation. Surrounded by the inner glycoprotein matrix of the zona pellucida and outer follicular support cells of the corona radiata. Upon penetration by a viable spermatozoon, the secondary oocyte undergoes cortical granule reaction (preventing polyspermy), completes meiosis II to form a mature ovum and a second polar body, and fuses paternal and maternal pronuclei to form a single diploid zygote (46 chromosomes).

Ownership

Ownership is legal or practical control of property, data, decisions, or responsibilities; healthcare decisions remain with the patient or authorized surrogate.

Oxacillin

A penicillinase-resistant penicillin used mainly to test for methicillin resistance in staphylococci; it is not commonly used as the preferred treatment for most infections.

Oxalate

A salt or ester of oxalic acid that can form kidney stones and binds calcium.

Oxalates

Oxalates are salts or esters of oxalic acid that can bind calcium and form calcium-oxalate kidney stones; excess dietary absorption or inherited hyperoxaluria can cause renal injury.

Oxalic Acid

A dicarboxylic acid whose oxalate salts can contribute to calcium-oxalate kidney stones; concen-

trated exposure is toxic.

Oxalic Acid Poisoning

Oxalic acid poisoning involves toxic or environmental exposure to oxalic acid poisoning; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Oxaliplatin

Oxaliplatin is a platinum chemotherapy drug that forms DNA cross-links and is used especially in colorectal cancer regimens; acute cold-triggered neuropathy and cumulative sensory neuropathy are characteristic toxicities.

Oxaloacetate

A four-carbon citric-acid-cycle intermediate that condenses with acetyl-CoA to form citrate. It is also a precursor for gluconeogenesis and participates in amino-acid transamination to aspartate.

Oxandrolone

An anabolic steroid used in selected conditions involving severe weight loss or catabolic stress; it can affect the liver, lipids, and hormone function.

Oxaprozin

A nonsteroidal anti-inflammatory drug used to relieve pain and inflammation in conditions such as osteoarthritis and rheumatoid arthritis.

Oxazepam

A benzodiazepine anxiolytic and sedative with risks of dependence, sedation, and respiratory depression.

Oxazepam Overdose

Oxazepam overdose involves toxic or environmental exposure to oxazepam overdose; dose, route, timing, symptoms, and organ involvement determine urgency and treatment.

Oxazole

Oxazole is a five-membered chemical ring containing oxygen and nitrogen that is used as a building block in medicinal and other chemistry.

Oxcarbazepine

Oxcarbazepine is an antiseizure medicine that blocks voltage-gated sodium channels and treats focal seizures; dizziness, ataxia, rash, and clinically important hyponatraemia may occur.

Oxidant

A reactive molecule that can damage cells and tissues by promoting oxidation.

Alternate Names:

Oxidizing agent

Oxidants

Substances or reactive molecules that accept electrons or promote oxidation; excessive oxidant activity can damage proteins, lipids, and DNA.

Oxidation

A chemical process that changes a substance through loss of electrons or reaction with oxygen.

Oxidation-Reduction

A chemical reaction involving transfer of electrons, in which one substance is oxidized and another is reduced.

Oxidative Phosphorylation

Process generating ATP using energy released by electron transfer through the electron transport chain. Protons pumped across inner mitochondrial membrane create electrochemical gradient (proton motive force). ATP synthase (Complex V) uses proton flow to phosphorylate ADP to ATP. P/O ratio: 2.5 ATP per NADH, 1.5 ATP per FADH₂.

Oxidative Stress

Imbalance between reactive oxygen species and antioxidants. DNA damage, protein oxidation, lipid peroxidation.

Oxide

A chemical compound in which oxygen is combined with another element. Oxides may be naturally occurring, industrial, medicinal, or toxic depending on the substance.

Oxidopamine

A toxic catecholamine analogue used experimentally to damage sympathetic nerve terminals and study autonomic function.

Oxidoreductase

An oxidoreductase is an enzyme that catalyzes transfer of electrons or hydrogen between molecules during oxidation-reduction reactions.

Oxime

A compound containing a carbon-nitrogen double bond with a hydroxyl group; some oximes, such as pralidoxime, help reactivate acetylcholinesterase after organophosphate poisoning.

Oximeter

A device that measures oxygen saturation or related optical signals, commonly by pulse oximetry.

Oximetry

oximetry is a laboratory test, imaging method, instrument, score, or measurement used to characterize a specimen or clinical finding; interpretation depends on the method and clinical context.

Oxonic Acid

A uricase inhibitor used mainly in laboratory research to increase uric-acid levels in animal models.

Oxprenolol

Oxprenolol is a beta-blocker formerly used for high blood pressure and heart disease; it can slow the heart rate and worsen asthma in susceptible people.

Oxter

Oxter is an anatomical term for the armpit or axilla.

Oxybuprocaine

A topical ester local anesthetic used mainly for ocular surface anesthesia.

Oxycephaly

A cone-shaped skull caused by premature fusion of cranial sutures, also called acrocephaly.

Oxycodone

Oxycodone is an opioid analgesic used for moderate-to-severe pain; sedation, constipation, respiratory depression, tolerance, dependence, and overdose risk increase with alcohol or other sedatives.

Oxycodone Hydrochloride

The hydrochloride salt of oxycodone, an opioid analgesic used for moderate-to-severe pain; it can cause sedation, constipation, dependence, and fatal respiratory depression in overdose.

OxyContin

OxyContin is an extended-release oxycodone opioid formulation used for selected severe persistent pain and carrying risks of misuse, dependence, and respiratory depression.

Oxygen

A gas essential for aerobic metabolism and tissue energy production.

Oxygen Consumption

The volume of oxygen consumed by the body per unit time, reflecting overall metabolic rate. Resting oxygen consumption (VO_2) in a normal adult is approximately 250 mL/min (about 3.5 mL/kg/min, 1 MET). It is calculated as cardiac output $\times$ (arterial O_2 content - venous O_2 content) by the Fick principle.

Oxygen Content

The amount of oxygen carried in blood, mainly bound to hemoglobin with a small dissolved component.

Oxygen Debt

An older term for the increased oxygen consumption after exercise needed to restore metabolic and physiologic conditions; excess post-exercise oxygen consumption is preferred.

Oxygen Delivery

The rate at which oxygen is transported from the lungs to the tissues, equal to cardiac output multi-

plied by arterial oxygen content: $\text{DO}_2 = \text{CO} \times \text{CaO}_2$. Arterial oxygen content = $(1.34 \times \text{hemoglobin} \times \text{SaO}_2) + (0.003 \times \text{PaO}_2)$. Normal oxygen delivery is approximately 1000 mL/min.

Oxygen Desaturation Index

The average number of oxygen desaturation events per hour of sleep, usually reported from a sleep study as the ODI; interpretation depends on the recording method and clinical context.

Oxygen Enhancement Ratio

Ratio of dose under hypoxic vs. aerobic conditions. Higher for low LET radiation.

Oxygen Mask

A mask that delivers supplemental oxygen through the nose and mouth. The type and flow rate are chosen according to oxygen needs; oxygen should be used as prescribed and monitored.

Oxygen Pulse

The amount of oxygen used by the body with each heartbeat, estimated during exercise as oxygen uptake divided by heart rate.

Oxygen Safety

Practices that reduce fire, explosion, pressure, and treatment risks during oxygen use, including keeping oxygen away from flames, smoking, oils, and unsafe equipment.

Oxygen Saturation

The percentage of hemoglobin carrying oxygen in blood. It may be estimated by pulse oximetry (SpO_2) or measured in an arterial blood sample by co-oximetry (SaO_2). The appropriate range depends on the person's condition, baseline oxygenation, and treatment goals.

Oxygen Tent

A canopy or enclosure used to deliver oxygen around a patient's head; modern oxygen masks, nasal cannulas, or ventilatory devices are usually more precise.

Oxygen Therapy

Administration of supplemental oxygen to correct or prevent inadequate tissue oxygenation.

Oxygen Therapy In Infants

Oxygen therapy in infants supplements inspired oxygen when gas exchange is inadequate, while careful monitoring limits complications from both hypoxemia and excessive oxygen exposure.

Oxygen Toxicity

Tissue injury caused by exposure to oxygen at excessively high partial pressures or concentrations, potentially affecting the lungs, eyes, or central nervous system.

Oxygen Transport

The movement of oxygen from the lungs to tissues, mainly bound to hemoglobin and partly dissolved in plasma, with delivery affected by blood flow and hemoglobin concentration.

Oxygen-Hemoglobin Dissociation Curve

The sigmoidal relationship between partial pressure of oxygen (PO₂) and hemoglobin oxygen saturation (SO₂). The curve reflects hemoglobin's cooperative binding: oxygen binding to one subunit increases affinity for subsequent oxygen molecules. At PO₂ of 100 mmHg (alveolar), hemoglobin is approximately 98 percent saturated.

Oxygenases

Enzymes that incorporate oxygen from molecular oxygen into a substrate; monooxygenases add one oxygen atom and dioxygenases add both.

Oxygenated Blood

Blood that has acquired oxygen in the lungs and carries it to body tissues.

Oxygenation

The process of supplying oxygen to blood and tissues, or the degree to which hemoglobin and tissues are adequately oxygenated.

Oxygenator

A device that adds oxygen to blood and removes carbon dioxide, used in cardiopulmonary bypass and extracorporeal life support.

Oxyhaemoglobin

The oxygen-saturated physiological form of hemoglobin formed within pulmonary alveolar capillaries when molecular oxygen (O₂) reversibly binds to the ferrous iron (Fe²⁺) atom within the protoporphyrin IX heme group of hemoglobin tetramers. Exhibits cooperative binding kinetics, giving rise to the characteristic sigmoidal oxyhemoglobin dissociation curve. Rightward shifts in the curve (facilitating oxygen unloading to metabolically active peripheral tissues) are driven by acidosis (low pH), hypercapnia (elevated pCO₂; the Bohr effect), elevated temperature, and increased red blood cell 2,3-bisphosphoglycerate (2,3-BPG); leftward shifts (increasing oxygen affinity) occur with alkalosis, hypothermia, decreased 2,3-BPG, and carboxyhemoglobinemia.

Oxyhemoglobin

Oxyhemoglobin is hemoglobin bound to oxygen, formed mainly in the lungs and carrying oxygen through arterial blood to tissues.

Oxylipins

Oxylipins are oxygenated fatty-acid derivatives that act as local mediators of inflammation, vascular tone, pain, and other physiologic responses.

Oxymetazoline

A topical alpha-adrenergic agonist used as a nasal decongestant or ocular vasoconstrictor; prolonged nasal use can cause rebound congestion.

Oxymetholone

Oxymetholone is an anabolic steroid used in selected severe anemias; it can cause liver injury, fluid retention, and hormonal side effects.

Oxymorphone

A potent opioid analgesic used for severe pain; it can cause sedation, constipation, dependence, and

life-threatening respiratory depression.

Oxyphil Cell

oxyphil cell refers to a defined body structure, tissue, or physiologic process; its normal location and function provide the basis for interpreting related disease or injury.

Oxyphil Cell Carcinoma

Alternate index label; see *Hurthle cell cancer*.

Oxyphilic Adenoma

An oxyphilic adenoma is a usually benign glandular tumor composed of cells rich in mitochondria, such as an oncocytic parathyroid or salivary-gland tumor.

Oxytocic

Causing or promoting uterine contraction, especially a medicine such as oxytocin.

Oxytocics

A class of medications that stimulate uterine contractions, used for induction and augmentation of labor and prevention/treatment of postpartum hemorrhage. Oxytocin (Syntocinon) — synthetic analog of endogenous oxytocin, administered IV infusion for labor induction or IM/IV for PPH prevention.

Oxytocin

A hormone that stimulates uterine contractions and milk ejection; it is also used therapeutically in obstetrics.

Oxytocin Infusion

Intravenous synthetic oxytocin used to induce or augment labor or, in selected settings, to manage postpartum bleeding. The dose is started and adjusted according to uterine activity, fetal status, maternal condition, and local protocol; excessive uterine stimulation can be harmful.

Oxyuriasis

Infection with pinworms, especially *Enterobius vermicularis*, causing perianal itching and disturbed sleep.

Alternate Names:

n-3 fatty acids

Oz.

Oz. is an abbreviation for ounce, a unit of mass or fluid volume whose exact conversion depends on the measurement system.

Ozaena

A chronic condition characterized by atrophic rhinitis with crusting, foul-smelling nasal discharge (fetor), and a sensation of nasal obstruction despite a patent airway. Ozaena is caused by progressive atrophy of the nasal mucosa and underlying bone, often associated with *Klebsiella ozaenae* infection.

Ozena

Ozena is a chronic form of atrophic rhinitis with widened nasal passages, crusting, foul odor, and impaired mucosal function.

Ocular Larva Migrans

Ocular toxocariasis caused by migrating larvae of *Toxocara* roundworms, usually affecting one eye. It can cause retinal or intraocular inflammation, a white pupil, reduced vision, strabismus, or retinal damage and requires ophthalmic assessment; diagnosis is based on the eye findings, exposure history, and supportive serology.

Omega-3 Fatty Acid

A type of polyunsaturated fat found in fish, seafood, flaxseed, chia, walnuts, and some oils. Omega-3s support cell membranes and cardiovascular function; supplements can interact with medicines and are not a substitute for treatment.

Omphalocele

A congenital abdominal-wall defect in which abdominal organs protrude through the umbilical opening and are covered by a membrane. It is treated after birth and may occur with other birth defects.

Opioids

Medicines and drugs that act on opioid receptors

to relieve pain. They can cause sleepiness, constipation, dependence, and life-threatening breathing suppression, especially with alcohol or sedatives; overdose may be reversed with naloxone.

Opsoclonus-Myoclonus Syndrome

A rare neurologic disorder causing rapid, involuntary eye movements, muscle jerks, poor coordination, and sometimes behavioral or cognitive changes. In children it may be associated with neuroblastoma or an immune reaction.

Optic Disc Swelling

Enlargement or elevation of the optic nerve head where it enters the eye. Causes range from raised pressure inside the skull to inflammation, ischemia, or local eye disease; sudden vision changes require urgent assessment.

Oral Hygiene

Daily care of the teeth, gums, tongue, and mouth to remove plaque and reduce tooth decay, gum disease, and bad breath. It includes brushing with fluoride toothpaste, cleaning between teeth, and regular dental care.

Oral-Facial-Digital Syndrome

A group of genetic disorders affecting the mouth, face, fingers, and toes. Features vary and may include oral abnormalities, unusual facial development, shortened or joined digits, and neurologic or kidney problems.

Orbital Blowout Fracture

A break in one of the thin bones forming the eye socket, usually after blunt trauma. It can cause swelling, double vision, numbness, or restricted eye movement and may need urgent evaluation.

Organic Food

Food produced under defined agricultural standards that generally restrict certain synthetic pesticides, fertilizers, genetically modified organisms, and routine antibiotic use. Organic does not automatically mean more nutritious or safer in every respect.

Orthodontic

Relating to the diagnosis, prevention, or treatment of problems with tooth and jaw position. Orthodontic treatment may use braces, aligners, retainers, or other appliances.

Orthorexia Nervosa

A term used for an unhealthy preoccupation with eating foods considered pure or healthy, leading to severe restriction, distress, or impaired daily life. It is not yet a formal standalone diagnosis in major classification systems, and professional assessment is important.

Ozone

Ozone is a reactive form of oxygen that can irritate and injure the airways and lungs when inhaled, despite useful atmospheric and disinfecting roles.

P

Oral Route

The administration of a medicine through the mouth for swallowing and absorption through the gastrointestinal tract. Clear instructions should spell out “by mouth” to reduce medication-route errors.

Alternate Names:

P.O.; Per Os; By Mouth

P Arm Of A Chromosome

The short arm of a chromosome, designated p for petit, opposite the longer q arm; cytogenetic locations are written with p-band coordinates.

P Wave

The first deflection on the ECG, representing atrial depolarization. Normal P waves are upright in leads I and II, inverted in aVR, and less than 0.12 seconds (3 small boxes) in duration and 2.5 mm in amplitude.

P-Glycoprotein

An ATP-dependent membrane transporter encoded by ABCB1 that pumps many drugs and other compounds out of cells, affecting intestinal absorption, tissue penetration, and drug interactions.

P-Value

A p-value is the probability, under a specified null hypothesis, of observing results at least as extreme as those found; it does not by itself measure clinical importance.

P53 Tumor Suppressor

The p53 protein, encoded by the TP53 gene on chromosome 17p, is a transcription factor and the most commonly mutated gene in human cancer, with mu-

tations found in over 50 percent of all malignancies.

PA X-Ray

A PA X-ray is a posteroanterior radiograph, commonly of the chest, taken with the beam traveling from back to front to reduce heart magnification.

PA/IVS

Alternate index label; see *Pulmonary atresia with intact ventricular septum*.

Pacemaker

An implanted electronic device that delivers electrical impulses to the heart to regulate heart rate and rhythm. Indications include symptomatic bradycardia, high-degree AV block, and sick sinus syndrome. Single-chamber pacemakers pace the atrium or ventricle; dual-chamber pacemakers pace both.

Alternate Names:

Pacemaker, artificial

Pacemaker Complications

Early: pneumothorax, hematoma, cardiac perforation/tamponade, lead dislodgement. Late: lead fracture, battery depletion, infection, tricuspid regurgitation from lead interference, venous thrombosis, and pacemaker syndrome (AV dyssynchrony in VVI pacing).

Pachyderma

Abnormal thickening and coarsening of the skin, which may occur with chronic inflammation, lymphedema, endocrine disease, or pachydermoperiostosis.

Pachygyria

A cortical malformation in which the cerebral gyri are abnormally broad and reduced in number because of impaired neuronal migration. It may cause developmental delay, intellectual disability, seizures, and motor or neurological impairment of variable severity.

Pachymeningitis

Inflammation of the dura mater (pachymeninx), the outermost layer of the meninges. Pachymeningitis is less common than leptomeningitis (inflammation of pia and arachnoid mater).

Pachyonychia Congenita

An inherited keratin disorder, usually caused by KRT6A, KRT16, or KRT17 variants, producing thick dystrophic nails, painful palmoplantar keratoderma, and sometimes cysts or oral leukokeratosis.
