A long, flexible catheter inserted into the basilic or cephalic vein and advanced so the tip sits in the superior vena cava. Inserted at the bedside, often by a specialized PICC nurse, with ultrasound and ECG or X-ray confirmation. Indications: long-term IV antibiotics (>2 weeks), TPN, chemotherapy, and frequent blood draws.

Peripherally Inserted Central Catheter - Dressing Change

Replacing the sterile covering over a peripherally inserted central catheter while checking the skin and catheter position. A clean technique reduces infection risk; redness, drainage, pain, fever, leakage, or a changed catheter length requires prompt review.

Peripherally Inserted Central Catheter -

Flushing

Passing a prescribed sterile solution through a peripherally inserted central catheter to keep it open and clear blood or medicine residue. The catheter should be flushed only with the specified solution and technique; resistance, pain, swelling, leakage, or fever needs assessment.

Peripherally Inserted Central Catheter - Insertion

Placement of a long flexible tube through a vein in the arm until its tip lies near the heart. It allows repeated intravenous medicines, nutrition, or blood tests, but can cause infection, blockage, bleeding, or a blood clot.

Periplasm

The periplasm is the space between the inner and outer membranes of Gram-negative bacteria, containing enzymes, transport proteins, and structural components.

Periprosthetic Joint Infection

Infection involving an artificial joint and nearby tissues. It may cause persistent pain, swelling, drainage, fever, or loosening. Diagnosis uses examination, blood tests, joint-fluid testing, cultures, and imaging; treatment may require antibiotics and surgery.

Perirenal Abscess

A perirenal abscess is a collection of pus around the kidney, usually from spread of a urinary or kidney infection, causing fever, flank pain, and possible sepsis.

Perirenal Extramedullary Hematopoiesis

Production of blood cells in tissue around the kidney instead of mainly in the bone marrow. It is an unusual response to severe long-term anemia or bone-marrow disease and may appear as masses on imaging.

Perirenal Hematoma

A collection of blood around the kidney, usually caused by trauma, a bleeding lesion, a procedure,

or anticoagulation.

Peristalsis

Peristalsis is coordinated, wave-like contraction of smooth muscle that propels food, fluid, or other contents through the gastrointestinal tract and some ducts.

Peritoneal

Peritoneal means relating to the peritoneum, the thin membrane lining the abdominal cavity and covering many abdominal organs.

Peritoneal Carcinomatosis

Cancer that has spread widely across the lining of the abdomen, often from the bowel, stomach, ovary, or another organ. It may cause abdominal swelling, pain, fluid buildup, weight loss, or bowel blockage; scans and fluid or tissue tests guide treatment.

Peritoneal Cavity

The narrow space inside the abdominal lining around the abdominal and pelvic organs. A small amount of fluid normally lubricates it; blood, pus, excess fluid, or cancer cells can collect there during disease.

Peritoneal Dialysis

A treatment for kidney failure that uses the lining of the abdomen to remove waste and extra water. Clean dialysis fluid enters through a permanent tube and is later drained; it can be done at home but may cause infection, fluid imbalance, or catheter problems.

Peritoneal Dialysis Catheter

A soft tube placed through the abdominal wall into the abdominal cavity for dialysis. Dialysis fluid enters and leaves through it to remove waste and extra water; infection, blockage, leakage, or displacement can occur.

Peritoneal Diseases

Disorders affecting the thin lining of the abdomen, including infection, inflammation, cancer, bleeding,

scar tissue, or abnormal fluid buildup. Symptoms depend on the cause and may include abdominal pain, swelling, fever, or vomiting.

Peritoneal Fluid

The small amount of slippery fluid normally present inside the abdominal cavity. Excess fluid, blood, pus, or cancer cells can collect there and may cause swelling, pain, infection, or other signs of abdominal disease.

Peritoneal Fluid Analysis

Laboratory testing of fluid collected from the abdominal cavity. Cell counts, protein, albumin, cultures, and other tests help determine whether the fluid is caused by liver disease, infection, cancer, bleeding, or another problem.

Peritoneal Fluid Culture

Culture of ascitic fluid to detect microorganisms, particularly in suspected spontaneous bacterial peritonitis or secondary peritoneal infection.

Peritoneal Infection

Infection of the lining of the abdominal cavity, often called peritonitis. Causes include a ruptured appendix or bowel, abdominal surgery, pelvic infection, or contamination during dialysis. Severe abdominal pain, fever, vomiting, or a rigid abdomen requires urgent assessment.

Peritoneal Lavage

Washing or sampling the abdominal cavity with sterile fluid. It was once used more often to detect internal bleeding or intestinal contents after injury; imaging and other tests now commonly provide this information.

Peritoneal Necrosis

Death of peritoneal tissue caused by ischemia, severe infection, inflammation, trauma, or tumor, potentially leading to peritonitis, adhesions, sepsis, or organ failure.

Peritoneal Sac

The space formed by the abdominal lining around the abdominal and pelvic organs. It normally contains only a small amount of lubricating fluid, but blood, pus, excess fluid, or cancer can collect there.

Peritoneum

A thin, slippery lining that covers the inside of the abdomen and many abdominal organs. It allows organs to move smoothly; inflammation, infection, bleeding, fluid, or cancer in this lining can cause severe abdominal symptoms.

Peritoneum Neoplasm

An abnormal growth in the lining of the abdominal cavity. It may begin there or spread from cancer in another organ and can cause abdominal pain, swelling, fluid buildup, or bowel blockage.

Peritonitis

Inflammation or infection of the abdominal lining, often caused by a perforated organ, surgery, appendicitis, abdominal injury, or infected abdominal fluid. It can cause severe pain, a swollen or rigid abdomen, fever, vomiting, sepsis, or shock and needs urgent care.

Peritonitis - Secondary

Infection of the abdominal lining caused by leakage from a perforated or injured digestive or other abdominal organ. It can rapidly cause severe pain, a rigid abdomen, sepsis, or shock and requires urgent treatment.

Peritonitis - Spontaneous Bacterial

Infection of fluid in the abdominal cavity without an obvious hole or other surgical source. It occurs most often in people with advanced liver disease and can cause pain, fever, confusion, or sepsis.

Peritonitis In PD

Infection of the abdominal lining in a person receiving peritoneal dialysis. Cloudy drainage, abdominal pain, fever, nausea, or feeling unwell needs prompt testing of the drainage and antibiotics; severe or repeated infection may require catheter removal.

Peritonsillar Abscess

A collection of pus beside a tonsil, usually after a throat infection. It can cause severe one-sided throat pain, fever, muffled speech, drooling, difficulty opening the mouth, or trouble breathing and requires urgent treatment and drainage.

Periungual Fibroma

A noncancerous, firm growth arising beside or beneath a fingernail or toenail. It may distort the nail and can occur alone or as one of several skin findings in tuberous sclerosis complex.

Periurethral

Located around the urethra, the tube that carries urine out of the body. The term may describe glands, infection, an abscess, a urethral diverticulum, or tissue and treatments used for urinary leakage.

Periventricular Leukomalacia

Injury to the brain's developing nerve fibers near its fluid-filled spaces, most often in premature infants. It may later affect movement, muscle tone, vision, learning, or development and is associated with cerebral palsy.

Perivitelline Space

The perivitelline space is the narrow region between an egg's plasma membrane and surrounding vitelline or zona material, important in fertilization and early development.

Perleche

Inflammation, soreness, and cracking at one or both corners of the mouth. Saliva, ill-fitting dentures, yeast or bacterial infection, skin irritation, and iron or vitamin shortages can contribute; treatment depends on the cause and keeping the area dry.

Permanent Teeth

The adult set of teeth that replaces the deciduous teeth.

Permease

A permease is a membrane transport protein that

facilitates movement of a specific molecule or ion across a cell membrane.

Permethrin

A skin-applied medicine that kills scabies mites and head lice. It is usually applied as directed and washed off later; itching may continue briefly after treatment even when parasites are gone.

Permissive Hypercapnia

A ventilator approach that allows carbon dioxide in the blood to remain above normal so that gentler pressures and smaller breaths can protect injured lungs. It is used selectively and requires close monitoring because excessive acidity or carbon dioxide can be harmful.

Pernicious Anaemia

A form of vitamin B12 deficiency caused by immune damage to stomach cells needed for B12 absorption. It can cause anemia, tiredness, sore tongue, numbness, balance problems, and nerve damage.

Pernicious Anemia

Anemia caused by vitamin B12 deficiency when the immune system damages stomach cells that make a substance needed for B12 absorption. It may cause tiredness, sore tongue, numbness, balance problems, or permanent nerve damage if untreated.

Alternate Names:

Addisons Anemia (Pernicious Anemia)

Pernio

Alternate index label; see *Chilblains*.

Peroneal

Relating to the fibula or the muscles and nerve on the outer side of the lower leg.

Peroneal Muscular Atrophy

Alternate index label; see *Charcot-Marie-Tooth disease*.

Peroneal Nerve

The common fibular nerve, a branch of the sciatic

nerve that winds around the fibular neck and supplies sensation and muscles responsible for ankle dorsiflexion and eversion.

Peroxidase

An enzyme that uses hydrogen peroxide or another peroxide to oxidize a substrate; thyroid peroxidase is essential for thyroid-hormone synthesis.

Peroxisomal Disorder

An inherited condition in which small cell structures that process certain fats do not form or work properly. It may affect the brain, nerves, liver, eyes, hearing, bones, or development.

Peroxisome

A small structure inside a cell that breaks down certain fats and harmful substances. It also helps control hydrogen peroxide and makes substances needed for cell membranes and nerve function.

Peroxisome Proliferation

An increase in the number or size of peroxisomes, small cell structures that process certain fats and harmful chemicals. It can be triggered by some medicines, chemicals, hormones, or metabolic conditions and may alter cell function.

Perphenazine

A first-generation (typical) phenothiazine antipsychotic used for schizophrenia and, in some settings, severe nausea or vomiting. Adverse effects can include sedation, orthostatic hypotension, extrapyramidal symptoms, tardive dyskinesia, and neuroleptic malignant syndrome.

Perseveration

Involuntary repetition of a word, idea, movement, or response after the appropriate stimulus has changed, associated with frontal or basal-ganglia disease, aphasia, delirium, or psychiatric illness.

Persistent Asthma

Asthma symptoms or airway narrowing that occur regularly rather than only occasionally and usually

require ongoing controller treatment. Severity is judged by symptoms, night waking, reliever use, lung function, and activity limits; treatment is adjusted over time.

Persistent Cloaca

Persistent cloaca is a congenital malformation in which the rectum, vagina, and urinary tract join into one channel, requiring specialist evaluation and reconstructive care.

Persistent Depressive Disorder

A long-lasting depressive disorder, formerly called dysthymia, with depressed mood or irritability for at least two years in adults or one year in children and adolescents, often with low energy, poor self-esteem, or hopelessness.

Persistent Pulmonary Hypertension Of The Newborn

Failure of the normal fall in pulmonary vascular resistance after birth, causing right-to-left shunting and hypoxaemia. Management requires urgent neonatal respiratory and circulatory support.

Persistent Pupillary Membranes

Strands left from a temporary membrane that covered the developing eye before birth. They may cross the pupil and are usually harmless, but dense strands can interfere with vision and occasionally need treatment.

Person With Disability

A person with disability has a long-term physical, sensory, intellectual, or mental-health impairment that may interact with barriers to limit participation; care should be accessible and person-centered.

Personal Emergency Response System

A wearable or nearby device that lets a person summon help during an emergency.

Alternate Names:

Medical alert system

Personal Protective Equipment

Clothing or equipment that protects a person from infection, chemicals, blood, or other hazards. It may include gloves, gowns, masks, respirators, goggles, or face shields; the correct items depend on the hazard and must be put on, removed, and disposed of safely.

Personality

Personality is the relatively enduring pattern of thoughts, emotions, motivations, and behaviors through which a person experiences and responds to the world.

Personality Change

Personality change is a new or marked alteration in behavior, emotional responses, judgment, or interpersonal style, which may reflect neurologic disease, psychiatric illness, substances, or medical conditions.

Personality Disorder

A group of mental disorders characterized by enduring maladaptive patterns of thinking, feeling, and behaving that deviate from cultural expectations and cause functional impairment. Cluster A (odd/eccentric): paranoid, schizoid, schizotypal. Cluster B (dramatic/erratic): antisocial, borderline, histrionic, narcissistic.

Personality Disorder Antisocial (Antisocial Personality Disorder)

Alternate index label for Antisocial Personality Disorder.

Personality Disorder, Antisocial

Alternate index label; see *Antisocial personality disorder*.

Personality Disorder, Borderline

Alternate index label; see *Borderline personality disorder*.

Personality Disorder, Narcissistic

Alternate index label; see *Narcissistic personality*

disorder.

Personality Disorder, Schizoid

Alternate index label; see *Schizoid personality disorder*.

Personality Disorder, Schizotypal

Alternate index label; see *Schizotypal personality disorder*.

Personality Disorders

Personality disorders are enduring patterns of thought, emotion, and behavior that differ markedly from cultural expectations and cause distress or impaired functioning.

Personality Test

A psychological assessment using structured questions or stimuli to describe enduring traits, patterns, or possible personality pathology; results require validated instruments and clinical interpretation.

Perspiration

Sweat released by skin glands. Eccrine glands mainly help cool the body, while apocrine glands contribute to odor after their secretions are changed by skin bacteria; unusually heavy sweating is called hyperhidrosis.

Persuasive Communication

Communication intended to influence beliefs, decisions, or behavior through information, reasoning, emotion, or framing; healthcare use should preserve informed choice and avoid coercion.

Pertussis

A contagious bacterial infection of the airways that causes repeated, severe coughing fits. Vomiting, a high-pitched breath after coughing, and pauses in breathing can occur, especially in infants. Vaccination helps prevent it.

Pertussis Toxin

A toxin produced by *Bordetella pertussis* that disrupts cell signaling and contributes to the cough

and systemic effects of whooping cough.

Pertuzumab

A monoclonal antibody targeting the HER2 receptor and blocking its dimerization, used with other medicines for selected HER2-positive cancers.

Pervasive Developmental Disorders

An obsolete group term for childhood conditions involving social communication difficulties and restricted or repetitive behavior. Modern classification uses autism spectrum disorder and other specific developmental diagnoses.

Pes

Pes means foot; it is also used in terms describing foot shape or deformity, such as pes planus or pes cavus.

Pes Anserinus

The combined tendon insertion of the sartorius, gracilis, and semitendinosus muscles on the antero-medial proximal tibia; inflammation there is pes-anserine bursitis.

Pes Planus

Alternate index label; see *Flatfeet*.

Pes Planus (Flatfoot (Pes Planus))

Alternate index label for Flatfoot (Pes Planus).

Pessaries

Devices placed inside the vagina to support organs that have descended, such as the bladder, uterus, or rectum. Ring, cube, and other designs suit different shapes and needs; regular removal and follow-up help prevent sores, discharge, or infection.

Pessary

A device placed inside the vagina to support pelvic organs, treat prolapse, or sometimes prevent leakage of urine.

Pessimism

A tendency to expect negative outcomes or interpret

situations unfavorably.

Pesticide

A substance used to control insects, weeds, fungi, or other pests; exposure can cause poisoning.

Pesticides

Chemicals used to kill insects, weeds, fungi, rodents, or other pests. Exposure can irritate the skin, eyes, lungs, or digestive tract; some pesticides can cause sweating, vomiting, weakness, seizures, or breathing failure.

Pesticides On Fruits And Vegetables

Small pesticide residues on properly washed produce usually do not cause acute poisoning. Swallowing concentrated pesticide or developing vomiting, sweating, breathing difficulty, weakness, or confusion requires immediate poison-control or emergency advice.

Pestilence

Pestilence is an old term for a severe, widespread, often fatal infectious disease outbreak; modern usage usually specifies the pathogen and epidemiologic event.

Pet Allergy

An allergic reaction to proteins in an animal's skin flakes, saliva, or urine, commonly causing rhinitis, conjunctivitis, or asthma.

Alternate Names:

Allergy, Pet

PET Scan

An imaging study using a positron-emitting tracer to measure metabolism, receptor activity, or tissue function.

PET Scan (Positron Emission Tomography)

Nuclear medicine imaging using radioactive tracers (most commonly FDG, a glucose analog) to detect metabolically active tissues.

Alternate Names:

Positron Emission Tomography

PET Scan For Breast Cancer

Positron-emission tomography, usually combined with computed tomography, used selectively to assess metabolically active breast cancer, staging, recurrence, or treatment response.

PET Scanner

A machine that detects radiation from a tracer inside the body and creates images showing how actively tissues use substances such as glucose. It is used to assess selected cancers and other disorders.

PET Tracers

Radioactive substances used during a PET scan to highlight particular body processes. Different tracers show glucose use, bone activity, or specific cell receptors; the appropriate tracer depends on the clinical question.

PET/CT

A scan that combines PET, which shows active body processes, with CT, which shows detailed anatomy. It helps locate disease and assess selected cancers, heart conditions, and brain disorders; it uses a radioactive tracer and X-rays.

PET/MRI

A scan that combines information about tissue activity with detailed MRI images of soft tissues. It is useful for selected brain, cancer, and heart problems and does not use X-rays, but takes longer than many other imaging tests.

Petechia

A petechia is a tiny nonblanching red, purple, or brown spot caused by bleeding from small vessels into the skin or mucosa; numerous or rapidly spreading petechiae need assessment.

Petechiae

Tiny nonblanching red or purple spots caused by small areas of bleeding into the skin or mucosa.

Petit Mal

An older term for absence seizures, brief episodes of impaired awareness with characteristic generalized EEG activity.

Petit Mal Seizure

Alternate index label; see *Absence seizure*.

Petrissage

A massage technique involving kneading, squeezing, or lifting soft tissues. It should be adapted or avoided when there is acute injury, infection, clot risk, or fragile skin.

Petrolatum

A semisolid purified mixture of hydrocarbons used on skin as a protective ointment and moisture barrier. It reduces water loss, shields minor irritation, and supports healing of dry, cracked, or chafed skin.

Petroleum Jelly Overdose

Swallowing a small amount of petroleum jelly usually causes little harm, but larger amounts can cause diarrhea or vomiting. If it enters the lungs, it may cause inflammation and breathing problems; contact poison control after a significant exposure.

Petrositis

Inflammation or infection of the petrous portion of the temporal bone, usually arising from complicated otitis media and potentially affecting nearby cranial nerves.

Petrous

Describing dense, hard bone, especially the part of the temporal bone that houses inner-ear structures.

Pets And The Immunocompromised Person

People with weakened immunity can often keep pets but should reduce exposure to animal waste, scratches, bites, and unsafe food and follow individualized medical advice.

Peutz-Jeghers Syndrome

An inherited condition causing dark spots on the lips, mouth, fingers, or skin and multiple growths in the digestive tract. These growths can bleed or block the bowel and increase the risk of several cancers.

Alternate Names:

PJS

Peutz-Jeghers'S Syndrome

An inherited condition causing dark patches around the mouth and many growths in the stomach or intestines. The growths may bleed, cause blockage, or increase the risk of digestive and other cancers.

PEWS

Alternate name; see *Pediatric Early Warning Score*.

Pexophagy

A cell-cleaning process that removes damaged or unneeded peroxisomes, the small structures that process certain fats and harmful chemicals. The cell breaks them down and reuses some of their materials.

Peyer Patches

Clusters of immune tissue in the wall of the lower small intestine. They sample material from the gut and help the immune system recognize and respond to germs while tolerating normal food and bacteria.

Peyer'S Patches

Organized lymphoid tissue in the mucosa and submucosa of the ileum. These aggregates sample intestinal contents and contribute to immune surveillance of the gastrointestinal tract.

Alternate Names:

ileal lymphoid nodules

Peyronie Disease

Scar tissue forming inside the penis, causing a new bend or indentation that may make erections painful or intercourse difficult. Symptoms may stabilize or worsen; treatment ranges from observation and injections to surgery in selected severe cases.

Peyronie'S Disease

A condition in which scar tissue inside the penis causes curved, painful erections and sometimes erectile difficulty.

Alternate Names:

Peyronie disease

Pfeiffer Syndrome

An autosomal dominant craniosynostosis syndrome caused by FGFR1 or FGFR2 mutations. Features: craniosynostosis (bilateral coronal), midface hypoplasia, proptosis, hypertelorism, broad thumbs and great toes (medial deviation), and variable syndactyly.

Alternate Names:

Syndrome Pfeiffer (Pfeiffer Syndrome)

PH Meter

An instrument that measures acidity or alkalinity as pH in a solution or specimen; clinical applications include gastric, urinary, laboratory, and environmental measurements.

PH Monitoring

Measurement of acidity, usually in the esophagus, over time with a small sensor. It can help detect and measure acid reflux when symptoms or endoscopy do not give a clear answer.

Phacoemulsification

A cataract-surgery technique that uses ultrasound to break up and remove the cloudy lens through a small incision. An intraocular lens is usually implanted to restore focusing ability.

Phagocyte

An immune cell that surrounds, swallows, and breaks down germs, dead cells, or foreign particles. Phagocytes help prevent infection, remove damaged material, and alert other immune cells to danger.

Phagocytes

Immune cells that surround, swallow, and break down germs, dead cells, and foreign particles. They help prevent infection, clear damaged material, and

signal other immune cells during inflammation and tissue repair.

Phagocytic Vesicle

A small membrane-bound compartment formed inside a cell after it surrounds and swallows a germ, dead cell, or particle. It later joins a digestive compartment so the material can be broken down.

Phagocytosis

The process by which a cell surrounds, takes in, and breaks down a particle or microorganism. Immune cells use it to remove germs, dead cells, and harmful debris from tissues.

Phagolysosome

A compartment formed when an immune cell's swallowed-particle compartment joins a digestive compartment. Enzymes and other chemicals inside it destroy germs and break down cellular debris.

Phagophore

A temporary membrane that grows around damaged or unnecessary material inside a cell during recycling. It closes around the material so the cell can break it down and reuse some of its parts.

Phalanges

The bones of the fingers and toes. The thumb and big toe each have two, while the other digits usually have three. Fractures, arthritis, infection, or nerve problems in these bones can cause pain, swelling, stiffness, or difficulty using the hand or foot.

Phalanx

One of the bones of a finger or toe. Each phalanx has a base, shaft, and end; the end bone supports the fingertip or toenail. The thumb and big toe have two phalanges, while other digits usually have three.

Phalanx Unspecified

A phalanx is one of the bones of a finger or toe; "unspecified" indicates that the particular digit or proximal, middle, or distal segment is not identified.

Phalen Test

A test in which the wrists are bent to see whether numbness or tingling develops. Reproduced symptoms may support carpal tunnel syndrome, but the result must be interpreted with examination and other tests.

Phantom

A test object made to resemble human tissue or organs so medical imaging equipment can be checked and calibrated. Different phantoms test image quality, measurements, or specific body regions.

Phantom Limb

The feeling that an amputated body part is still present. Sensations may include position, movement, itching, pressure, or pain and often change over time after amputation.

Alternate Names:

Phantom-limb sensation

Phantom Limb Pain

Painful sensations perceived in a limb that has been amputated, caused by persistent or reorganized activity in peripheral nerves and central sensory pathways. It may feel burning, shooting, cramping, or electric.

Phantom Pain

Pain perceived in a body part that has been amputated, caused by changes in peripheral nerves and central pain-processing pathways.

Phantosmia

Perception of a smell when no corresponding odor is present. It may occur with sinonasal disease, migraine, seizures involving olfactory networks, head injury, neurodegenerative disease, infection, or other neurological conditions.

Pharmaceutical Adjuvant

A pharmaceutical adjuvant is an inactive or auxiliary ingredient added to improve a medicine's stability, absorption, preservation, delivery, or therapeutic effect.

Pharmaceutical Excipient

A pharmaceutical excipient is a non-active ingredient in a dosage form, such as a filler, binder, coating, solvent, preservative, or disintegrant.

Pharmaceutical Solutions

Liquid preparations in which one or more active pharmaceutical ingredients are dissolved in a suitable vehicle for administration, with concentration, sterility, stability, and route determining safe use.

Pharmacist

A medicine expert who prepares and dispenses drugs, checks safety, and explains correct use and possible side effects.

Pharmacodynamics

The study of the biochemical and physiological effects of drugs on the body and their mechanisms of action, describing what the drug does to the body.

Pharmacogenetic Testing

Testing for genetic variants that influence a person's response, metabolism, efficacy, or toxicity of particular medicines and may support individualized prescribing.

Pharmacogenetics

Pharmacogenetics studies how inherited genetic variation alters a person's response to medicines, including efficacy, metabolism, and adverse-effect risk, to support individualized prescribing.

Pharmacogenomic Testing

Testing that examines genetic variants affecting drug metabolism, transport, targets, or adverse reactions to help select or dose certain medicines.

Pharmacogenomics

The study of how genetic variations influence individual responses to drugs, including drug efficacy, toxicity, and metabolism. Genetic polymorphisms in drug-metabolizing enzymes, transporters, and receptors can lead to significant inter-individual variability in drug response.

Pharmacokinetics

The study of what the body does to a medicine, including its absorption, distribution, metabolism, and elimination. It helps explain drug concentrations over time and supports dose selection.

Pharmacologic Substance

A pharmacologic substance is a chemical that produces a biological effect by interacting with cells, receptors, enzymes, transporters, or other targets.

Pharmacological Stress Test

A heart stress test using medicine to imitate exercise when a person cannot exercise adequately. Imaging or heart recordings show blood flow and function, while possible effects include chest discomfort, breathlessness, or abnormal rhythm.

Pharmacologist

A pharmacologist studies how medicines and chemicals act in living systems, including mechanisms, metabolism, toxicity, and therapeutic effects.

Pharmacology

The study of medicines and other drugs, including how they work, how the body handles them, their uses, side effects, and interactions. This knowledge helps guide safe choice, dosing, testing, and monitoring of treatment.

Pharmacopoeia

A pharmacopoeia is an official reference specifying standards for identity, purity, strength, testing, and preparation of medicines.

Pharmacotherapy

Pharmacotherapy is treatment with medicines chosen to prevent, relieve, or control a disease or symptom.

Pharmacovigilance

The science and activities relating to the detection, assessment, understanding, and prevention of adverse drug reactions and other drug-related problems.

Pharmacy

The healthcare field concerned with preparing, checking, supplying, and explaining medicines. Pharmacists help choose safe doses, identify interactions and allergies, support treatment decisions, and teach people how to use medicines correctly.

Pharmacy Facility

A pharmacy facility is an authorized location where medicines may be stored, prepared, dispensed, monitored, and supplied under applicable professional and safety standards.

Pharyngeal

Relating to the pharynx, or throat. The pharynx connects the nose and mouth with the voice box, food pipe, and breathing passages. Infection, swelling, narrowing, or a tumor there may cause sore throat, swallowing difficulty, noisy breathing, or voice changes.

Pharyngeal Carcinoma

Pharyngeal carcinoma is cancer arising in the throat and may cause persistent sore throat, swallowing difficulty, hoarseness, or a neck mass.

Pharyngeal Disease

A disorder affecting the throat, including infection, inflammation, blockage, injury, muscle or nerve problems, or a tumor. Symptoms may include sore throat, swallowing difficulty, choking, voice changes, or breathing problems.

Pharyngeal Hemorrhage

Bleeding from the pharynx caused by trauma, surgery, infection, vascular lesions, tumor, or severe mucosal disease and potentially threatening the airway.

Pharyngeal Mucositis

Inflammation and ulceration of the throat lining, commonly caused by radiation, chemotherapy, infection, trauma, or medications and producing pain, difficulty swallowing, and reduced intake.

Pharyngeal Stenosis

Narrowing of the pharyngeal passage caused by scarring, congenital abnormality, tumor, inflammation, or surgery, which may impair swallowing or breathing.

Pharyngeal Tonsil

Adenoid tissue in the roof of the throat behind the nose that helps immune defense, especially in children.

Pharyngectomy

Surgery to remove part or all of the throat, usually to treat cancer. Depending on the extent, reconstruction or a temporary feeding tube may be needed, and treatment can affect swallowing, speech, breathing, or appearance.

Pharyngitis

Inflammation of the throat behind the mouth and nose. It commonly causes sore throat, painful swallowing, fever, cough, or swollen neck glands and is most often caused by a virus.

Alternate Names:

Sore Throat (Pharyngitis)

Pharyngitis (Sore Throat (Pharyngitis))

Alternate index label for Sore Throat (Pharyngitis).

Pharyngitis - Sore Throat

Pharyngitis is inflammation of the throat causing pain with swallowing, commonly from viral infection and sometimes from group A streptococcal infection or other causes.

Pharyngitis - Viral

Viral pharyngitis is inflammation of the throat caused by a virus, commonly producing sore throat, cough, runny nose, or fever and usually resolving with supportive care.

Pharyngolaryngeal Pain

Pain involving the pharynx and larynx, commonly associated with infection, inflammation, irritation, trauma, reflux, or malignancy.

Pharyngomaxillary Space Abscess

A pharyngomaxillary space abscess is a deep infection containing pus near the pharynx and maxilla that can cause severe pain, swelling, difficulty swallowing, and airway risk.

Pharynx

The muscular passage behind the nose and mouth that carries air toward the voice box and food toward the esophagus. It helps with breathing, swallowing, and speech.

Pharynx Necrosis

Death of tissue in the throat caused by severe infection, ischemia, radiation, caustic injury, or tumor, with risk of deep infection, bleeding, airway compromise, and sepsis.

Pharynx Neoplasm

A pharynx neoplasm is an abnormal growth in the throat that may be benign or malignant.

Phase I Metabolism

An early step in the body's breakdown of many medicines. Enzymes, mainly in the liver, chemically change a medicine by adding or exposing a reactive part; this may inactivate it, activate it, or prepare it for further breakdown.

Phase II Metabolism

A stage of drug breakdown in which the body attaches another chemical group to a medicine or its earlier breakdown product. This usually makes the substance easier to remove in urine or bile.

Phase-Contrast Microscopy

A microscope technique that makes transparent cells and other specimens easier to see by converting small differences in light passing through them into visible contrast. It is useful for examining living, unstained cells.

Phe

Phe is the standard abbreviation for phenylalanine, an essential amino acid incorporated into proteins

and metabolized through a pathway disrupted in phenylketonuria.

Phelan-McDermid Syndrome

A genetic disorder that commonly causes low muscle tone, delayed development, intellectual disability, very limited speech, and autism-related behaviors. Some people have reduced sensitivity to pain, seizures, feeding problems, or kidney and heart abnormalities. It usually results from loss of genetic material near the end of chromosome 22 or a change in the *SHANK3* gene.

Alternate Names:

22q13.3 Deletion Syndrome

Phenacetin

Phenacetin is a former analgesic and fever-reducing drug withdrawn or restricted because long-term use can cause kidney damage and increase cancer risk.

Phenazopyridine

Phenazopyridine is a urinary analgesic that temporarily relieves dysuria without treating its cause; it can turn urine orange and prolonged or excessive use may cause haemolysis or methemoglobinaemia.

Phencyclidine

A dissociative drug that can cause altered perception, agitation, hallucinations, impaired coordination, or dangerous behavior.

Phencyclidine Overdose

A dangerous amount of the dissociative drug phencyclidine can cause agitation, hallucinations, high body temperature, high blood pressure, seizures, loss of coordination, coma, or injury. Severe or unusual behavior requires emergency care.

Phenelzine

An antidepressant that blocks monoamine oxidase, an enzyme breaking down several brain chemicals. It has important interactions with medicines and tyramine-rich foods and can cause dangerous high blood pressure if precautions are ignored.

Phenethylamines

Phenethylamines are a chemical family including neurotransmitters, medicines, and psychoactive substances that can affect adrenergic, dopaminergic, or serotonergic signaling.

Phenformin

Phenformin is a former biguanide diabetes medicine withdrawn because it can cause life-threatening lactic acidosis.

Phenindione

An older oral anticoagulant that interferes with vitamin-K-dependent clotting factors.

Pheniramine Overdose

Taking too much pheniramine, an antihistamine, can cause extreme sleepiness or agitation, dry mouth, large pupils, fast heartbeat, seizures, abnormal rhythms, or coma. Immediate poison-control or emergency advice is needed.

Phenobarbital

Phenobarbital is a long-acting barbiturate anti-seizure medicine that enhances GABA-A receptor inhibition; sedation, respiratory depression, cognitive effects, dependence, and enzyme-inducing drug interactions are important risks.

Phenobarbital Overdose

Taking too much phenobarbital can cause severe drowsiness, poor coordination, low blood pressure, slowed breathing, coma, or death. Emergency treatment is required, especially if alcohol or another sedative was also taken.

Phenobarbitone

The British name for phenobarbital, a barbiturate anticonvulsant and sedative.

Phenol

A corrosive aromatic compound used in chemical and laboratory applications and in some medical preparations.

Phenols

A group of aromatic chemicals that can burn skin and mucous membranes and cause systemic poisoning if absorbed or swallowed.

Phenomenon

An observable event, sign, or pattern in the body. Examples include fingers changing color in Raynaud phenomenon, early-morning blood-sugar rises in the dawn phenomenon, and upward eye movement when the eyelids close in Bell phenomenon.

Phenothiazine

Phenothiazine is a chemical class that includes several antipsychotic and antiemetic medicines, with possible sedation, movement, and cardiac adverse effects.

Phenothiazine Overdose

Taking too much of a phenothiazine medicine can cause sleepiness, confusion, low blood pressure, seizures, abnormal heart rhythms, or severe muscle stiffness and fever. It requires immediate medical assessment.

Phenothiazines

A class of medicines that includes antipsychotics and antiemetics. They can cause sedation, low blood pressure, movement disorders, heart-rhythm changes, and other adverse effects.

Phenotype

The observable features of a person, such as appearance, growth, body functions, and behavior. These features result from the interaction between inherited genetic information and the environment.

Phenoxybenzamine

A long-acting alpha-blocker used mainly before surgery for a catecholamine-secreting tumor such as pheochromocytoma. It can cause dizziness, low blood pressure, rapid heartbeat, and nasal congestion.

Phenoxyethylpenicillin

Penicillin V, an oral penicillin used for selected susceptible infections.

Phenprocoumon

Phenprocoumon is a long-acting vitamin-K antagonist anticoagulant that reduces clotting-factor production and requires coagulation monitoring.

Phentermine

A stimulant medicine that reduces appetite and may be used short term with diet and activity changes for weight management. It can raise heart rate and blood pressure and may cause insomnia, anxiety, dependence, or dangerous interactions with some medicines.

Phenthoate

Phenthoate is an organophosphate insecticide that can inhibit acetylcholinesterase and cause cholinergic poisoning after exposure.

Phentolamine

Phentolamine is a short-acting alpha-adrenergic blocker used for catecholamine-related hypertension and to limit tissue injury after certain vasoconstrictor leaks.

Phenylacetate

A salt or ester of phenylacetic acid used in some metabolic and experimental medical applications; it can bind nitrogen-containing metabolites.

Phenylalanine

An essential amino acid incorporated into proteins and converted to tyrosine; impaired metabolism causes phenylketonuria and requires dietary or medical management.

Phenylbutazone

An older anti-inflammatory pain medicine whose use is limited by serious toxicity. It can cause stomach bleeding, kidney or liver injury, fluid retention, blood-cell problems, allergic reactions, and other dangerous effects.

Phenylbutyrate

A nitrogen-scavenging medicine converted to phenylacetate, which combines with glutamine and facilitates nitrogen excretion in selected urea-cycle disorders.

Phenylephrine

A medicine that narrows blood vessels. It may reduce a blocked nose, raise dangerously low blood pressure in hospital care, or widen the pupil in an eye examination; it can worsen high blood pressure, heart problems, or urinary difficulty in some people.

Phenylketonuria

An inherited metabolic disease, usually caused by reduced phenylalanine hydroxylase activity, that leads to phenylalanine accumulation and reduced tyrosine availability. Without early treatment, it can impair brain development and cause intellectual disability, seizures, eczema, or a musty odor. Newborn screening and lifelong dietary or medical treatment can prevent or reduce complications.

Alternate Names:

Phenylketonuria (PKU) PKU

Phenylpropanolamine

A sympathomimetic decongestant formerly used in some products; it can raise blood pressure and has been restricted because of safety concerns.

Phenytoin

A medicine used to prevent or control some seizures. It reduces repeated electrical activity in brain cells; levels in the blood may need monitoring because interactions and side effects can include dizziness, poor coordination, gum overgrowth, skin reactions, or serious toxicity.

Phenytoin Overdose

Too much phenytoin can cause nausea, severe dizziness, double vision, involuntary eye movements, poor coordination, confusion, abnormal heart rhythms, or coma. Significant or intentional overdoses need urgent medical assessment.

Phenytoin Sodium

The sodium salt of phenytoin, an anticonvulsant used for selected focal and generalized tonic-clonic seizures; toxicity can cause nystagmus, ataxia, arrhythmia, or severe skin reactions.

Pheochromocytoma

A rare tumor, usually in an adrenal gland, that may release excess adrenaline-like hormones. It can cause episodes of high blood pressure, headache, sweating, a pounding heartbeat, shakiness, or paleness.

Alternate Names:

Tumor Adrenal Gland (Pheochromocytoma)

Pheresis

A procedure that removes a selected part of blood, such as plasma, platelets, or white blood cells, and returns the remaining blood. It may treat disease or collect a needed blood component from a donor.

Pheromone

A pheromone is a chemical signal released by an organism that alters behavior or physiology in another member of the same species.

Phialophora

A genus of darkly pigmented fungi that can cause chromoblastomycosis or other subcutaneous and opportunistic infections.

Phialophora Verrucosa

A dark-pigmented fungus that commonly causes chromoblastomycosis, a long-lasting infection of skin and tissue beneath it. Infection usually follows implantation through injured skin and produces slowly enlarging warty or raised lesions.

Philadelphia Chromosome

A rearrangement of genetic material between chromosomes 9 and 22 that creates the BCR::ABL1 gene. It is found in most cases of chronic myeloid leukemia and some acute leukemias and helps guide treatment.

Philodendron Poisoning

Chewing philodendron leaves releases irritating crystals that can cause immediate burning and swelling of the mouth, tongue, or throat. Breathing or swallowing difficulty requires emergency care; contact poison control after ingestion.

Phimosis

Tightness of the foreskin that prevents it from being pulled back over the head of the penis. It can be normal in young children, but pain, repeated infection, scarring, or difficulty passing urine needs medical assessment.

Phimosis And Paraphimosis (Penis Disorders)

Alternate index label for Penis Disorders.

Phlebitis

Inflammation of a vein causing pain, warmth, redness, or tenderness along its course. It may follow irritation from an intravenous line or occur with a clot in a surface vein; sudden limb swelling or breathlessness needs urgent assessment.

Phlebitis And Thrombophlebitis

Phlebitis is inflammation of a vein, while thrombophlebitis includes a clot within the inflamed vein. Superficial disease causes localized pain and redness; deep-vein thrombosis can embolize to the lungs and is suspected with limb swelling, pain, or breathlessness.

Phlebography

An imaging test in which contrast dye is injected into a vein to show the veins on X-ray. It can detect a blood clot or an abnormal vein but is now often replaced by ultrasound.

Phlebotomy

Taking blood from a vein, usually with a needle, for testing, donation, or treatment. The procedure may cause brief pain, bruising, bleeding, fainting, or rarely infection; trained staff use safe collection and labeling practices.

Alternate Names:

Venipuncture

Phlebovirus

A genus of segmented RNA viruses, many transmitted by sandflies or mosquitoes; some cause fever, encephalitis, or hemorrhagic disease.

Phlegm

Thick mucus brought up by coughing from the lower airways. Its amount and appearance can change with infection, asthma, smoking, chronic lung disease, or other conditions.

Phlegmasia Cerulea Dolens

Phlegmasia cerulea dolens is a severe, extensive deep-vein thrombosis that obstructs venous outflow, causing painful swollen blue discoloration and risking limb ischemia or pulmonary embolism.

Phobia

An excessive, persistent fear of a specific object or situation that leads to avoidance or distress.

Phobia - Simple/Specific

A specific phobia is intense, persistent fear of a particular object or situation that is excessive, leads to avoidance, and interferes with life.

Phobia, Social

Alternate index label; see *Social anxiety disorder (social phobia)*.

Phobias

Persistent, excessive fear of a specific object or situation that leads to avoidance or significant distress.

Phobic Disorder

A disorder characterized by clinically significant fear and avoidance of a particular object or situation.

Phocomelia

A rare congenital limb-development defect in which hands or feet are attached close to the trunk because of absent or severely shortened long bones.

Phonation

Production of voiced sound when exhaled air makes the vocal folds vibrate in the larynx; disorders cause hoarseness, weak voice, or loss of voice.

Phonocardiogram

A graphic recording of heart sounds and murmurs, traditionally made with a microphone over the chest. It can document timing and duration but is usually interpreted with examination and echocardiography.

Phonocardiography

Recording heart sounds and murmurs with a microphone, producing a tracing that can help evaluate heart valve problems.

Phonological Disorder

A communication disorder involving persistent difficulty producing or organizing speech sounds beyond what is expected for age and language development.

Phonophobia

Unusual sensitivity to sound or distress caused by ordinary sounds. It often occurs with migraine but may also accompany concussion, infection, anxiety, or other conditions; new severe sound sensitivity with headache or neurological symptoms needs assessment.

Phorate

Phorate is a highly toxic organophosphate pesticide whose exposure can produce excessive cholinergic activity and medical emergency.

Phorbols

Phorbols are diterpene compounds related to phorbol esters that can activate cellular protein kinase C signaling.

Phorometer

An instrument used to measure ocular alignment and the amount of prism correction needed for binocular vision disorders.

Phosgene

A highly toxic industrial gas that reacts with moist respiratory tissues and can cause delayed pulmonary edema, cough, chest tightness, and respiratory failure after exposure.

Phosgene Oxime

A highly corrosive chemical warfare agent that causes immediate severe pain, skin and eye injury, airway damage, and tissue necrosis on contact.

Phosmet

Phosmet is an organophosphate insecticide that can inhibit acetylcholinesterase and cause cholinergic toxicity after substantial exposure.

Phosphamidon

A poisonous organophosphate insecticide. Exposure can cause sweating, excess saliva, vomiting, diarrhea, small pupils, muscle twitching, breathing difficulty, seizures, or weakness because it disrupts nerve signals; suspected poisoning needs urgent medical help.

Phosphate

An inorganic ion and component of nucleotides, phospholipids, proteins, and bone mineral. It participates in ATP energy transfer, phosphorylation-dependent signaling, intracellular buffering, and acid excretion by the kidney.

Phosphate Binders

Medicines taken with meals that bind phosphate in food inside the intestine, reducing its absorption. They are used mainly in advanced kidney disease when blood phosphate is high. The choice depends on calcium levels, vascular calcification, other illnesses, and treatment response.

Phosphate Homeostasis

The body keeps blood phosphate within a useful range through the coordinated actions of the parathyroid glands, vitamin D, kidneys, intestines, and bones. Kidney disease can disrupt this balance.

Phosphatidic Acid

A membrane phospholipid and signaling intermediate that serves as a precursor for other glycerolipids and influences membrane curvature, trafficking, and cell growth.

Phosphatidylcholine

A major membrane phospholipid and component of pulmonary surfactant, lipoproteins, and bile; it also participates in cell signaling.

Phosphatidylethanolamines

Membrane phospholipids containing ethanolamine that help determine membrane structure, fusion, and cell signaling. A group of cell-membrane fats that help maintain membrane shape, join membranes, and support cell signaling.

Phosphatidylinositol

A membrane phospholipid that serves as a precursor for signaling molecules and helps anchor proteins to cell membranes.

Phosphatidylserine

A membrane phospholipid normally concentrated on the inner cell surface that becomes exposed during apoptosis and helps signal cell removal.

Phosphatidylserines

Molecules of phosphatidylserine, a membrane phospholipid involved in apoptosis, coagulation, membrane structure, and cell signaling.

Phosphaturic Mesenchymal Tumor

A rare tumor that releases a substance causing the kidneys to lose too much phosphate. Low phosphate can soften bones and cause bone pain, weakness, or fractures; removing the tumor often corrects the problem.

Phosphine

A highly toxic gas used in some industrial or pest-control settings that can cause severe lung, heart, liver, kidney, and neurologic injury.

Phosphodiesterase-5 Inhibitors

Medicines that block an enzyme called PDE-5, increasing a chemical signal that relaxes blood vessels. They are used for erectile dysfunction and some forms of high blood pressure in the lung; nitrates must not be combined with them.

Phosphofructokinase-1

A key enzyme that controls how cells break down sugar to produce energy, especially when energy demand increases.

Phospholipase C Pathway

A system cells use to turn some hormone or nerve signals at their surface into internal actions. It can change calcium levels and control contraction, secretion, growth, or other cell responses.

Phospholipid

A type of lipid with a water-attracting phosphate-containing head and water-repelling fatty-acid tails. Phospholipids form the basic double-layered structure of cell membranes and also help with cell signaling and transport.

Phosphorus

An essential element in bone, nucleic acids, phospholipids, and ATP.

Phosphorus Blood Test

A blood test measuring inorganic phosphate, interpreted with calcium, parathyroid hormone, vitamin D, and kidney function to evaluate mineral and renal disorders.

Phosphorus In Diet

Dietary phosphorus comes from protein-rich foods and many processed foods; people with kidney disease may need individualized limits.

Phosphorylation

Addition of a phosphate group to a molecule, often regulating protein activity or energy transfer.

Photoallergy

An immune-mediated skin reaction that occurs when ultraviolet light activates a sensitizing substance on or in the skin, causing an eczematous rash.

Photocoagulation

Treatment that uses intense light, usually a laser, to heat and seal targeted tissue. In the eye, it can close leaking or abnormal blood vessels and limit damage from conditions such as diabetic retinopathy.

Photodermatosis

A skin disorder caused or aggravated by exposure to ultraviolet or visible light, including polymorphous light eruption, phototoxic reactions, and photoallergic reactions.

Photodynamic Therapy

A treatment that combines a photosensitizing agent with light to generate reactive oxygen species and destroy cancer cells, used for actinic keratosis, superficial skin cancers, and selected visceral tumors.

Photodynamic Therapy For Cancer

Treatment in which a light-sensitive medicine collects in selected abnormal cells and is activated by a specific light, producing substances that destroy nearby cancer cells. It is used for certain accessible cancers and may cause pain, swelling, or temporary light sensitivity.

Photoelectric Effect

An interaction in which tissue absorbs an X-ray and releases an electron. It contributes to how much radiation is absorbed and helps create contrast between tissues on an X-ray image.

Photographic Fixative Poisoning

Harm from swallowing or inhaling chemicals used to process photographs. Effects depend on the product but may include irritation, vomiting, breathing problems, or chemical burns; keep the container and contact poison control.

Photomultiplier Tube

A sensitive device that converts tiny flashes of light into electrical signals. In some medical scanners, groups of these devices help detect and locate radiation emitted by a tracer.

Photopeak

The part of a radiation-measurement graph showing photons that deposited their full energy in the detector. Clinicians use it to select the energy range for interpreting some nuclear medicine scans.

Photopheresis

A treatment in which some blood cells are removed, mixed with a light-sensitive medicine, exposed to ultraviolet light, and returned to the body. It is used for selected immune, blood, and skin disorders under specialist care.

Photophobia

Unusual discomfort or pain caused by light, sometimes leading a person to avoid bright surroundings. It may occur with migraine, corneal injury, eye inflammation, infection, concussion, or meningitis. Severe eye pain, vision loss, fever, stiff neck, or a sudden severe headache needs urgent care.

Photoreceptors

Specialized cells in the retina that detect light. Rods support dim-light and peripheral vision, while cones provide color and sharp central vision; damage can reduce sight or cause blind areas.

Photorefractive Keratectomy

Laser surgery that removes a very thin surface layer of the cornea and reshapes the layer beneath it. It can reduce short-sightedness, long-sightedness, or astigmatism, but recovery is slower than some procedures and pain, haze, infection, or imperfect vision can occur.

Photosensitivity

An unusually strong reaction of the skin to sunlight, causing redness, burning, itching, blistering, or a rash on exposed areas. It may result from a disease, inherited tendency, medicine, or chemical.

Photosensitization

Increased sensitivity to ultraviolet or visible light caused by a medication, chemical, or disease, producing an exaggerated skin reaction.

Phototherapy

Treatment using carefully controlled light for conditions such as newborn jaundice, psoriasis, eczema, or seasonal depression. The wavelength, dose, duration, and eye or skin protection depend on the condition treated.

Phototoxic Dermatitis

A sunburn-like skin injury caused when a medicine or chemical makes the skin react strongly to ultraviolet light. It affects exposed areas and may cause redness, pain, swelling, blisters, or later darkening.

Phototoxicity

Skin injury occurring when a chemical makes skin unusually sensitive to ultraviolet light. It resembles severe sunburn and may cause redness, pain, blistering, or later darkening after medicine or chemical exposure.

Phrenic

Relating to the diaphragm or the phrenic nerves, which arise from the neck and carry the main motor supply to the diaphragm for breathing.

Phrenic Nerve

The nerve arising mainly from C3-C5 that supplies the diaphragm and carries sensory fibers from nearby structures.

PHT

Alternate index label; see *Portal hypertension*.

Phthiriasis

Infestation with lice, especially pubic lice, causing itching and sometimes visible lice or eggs attached to hair. Treatment usually includes an approved lice-killing product, washing or sealing recently used clothing and bedding, and evaluation or treatment of close or sexual contacts.

Phyllodes Tumor

An uncommon breast growth made of supporting tissue and glandular tissue. It may be benign, borderline, or cancerous and often appears as a rapidly enlarging lump; a tissue examination determines its type and guides surgery.

Physiatrist

A doctor who specializes in rehabilitation and in improving movement, function, independence, and quality of life after illness, injury, or disability.

Physical Activity

Any movement produced by skeletal muscles that increases energy expenditure, including occupational, household, transportation, and recreational movement. Regular activity supports cardiovascular, metabolic, musculoskeletal, and mental health.

Physical Child Abuse

Physical child abuse is intentional physical injury or harmful force inflicted on a child, requiring immediate safety assessment, medical care, and safeguarding action.

Physical Dependence

A state in which the body adapts to a substance or medication and develops withdrawal symptoms when it is reduced or stopped.

Physical Exam Frequency

How often a person should receive a physical examination. The interval depends on age, symptoms, chronic conditions, medicines, pregnancy, and preventive-care recommendations rather than one schedule for everyone.

Physical Examination

A systematic assessment of the body using inspection, palpation, percussion, auscultation, and other examination methods.

Physical Half-Life

The time needed for half the radioactive atoms in a substance to change through radioactive decay. It

describes the substance itself and does not include how quickly the body removes it.

Physical Medicine

The medical specialty focused on function, rehabilitation, pain, and restoration of independence after illness or injury.

Physical Therapy

Rehabilitation using exercise, movement training, manual techniques, and physical modalities to improve function, mobility, and reduce disability.

Physical Therapy Assessment

A detailed evaluation of movement, strength, flexibility, sensation, balance, walking, pain, and daily activities. The findings guide treatment goals, exercise choices, equipment needs, safety advice, and progress monitoring.

Physician

A doctor trained and licensed to diagnose illness, provide medical treatment, prevent disease, and coordinate care within the scope of the relevant specialty and jurisdiction.

Physician Assistant

A nationally certified and state-licensed medical clinician who practices medicine collaboratively with or under the supervision of physicians. PAs obtain medical histories, perform physical examinations, order and interpret diagnostic studies, formulate medical diagnoses, prescribe pharmacotherapy, assist in surgery, and perform clinical procedures across primary care and surgical specialties.

Physicians' Desk Reference

A reference source containing prescribing information, indications, contraindications, dosing, warnings, and adverse effects for medicines and selected products.

Physiologic

Physiologic means relating to normal body function or a process occurring within the expected biological

range.

Physiologic Jaundice Of Newborn

A common temporary yellowing of a newborn's skin and eyes that begins after the first day of life. It results from normal newborn red-cell breakdown and immature liver processing of bilirubin; jaundice that starts earlier or becomes severe needs urgent assessment.

Physiologic Jaundice Of The Newborn

Physiologic newborn jaundice is a temporary bilirubin rise after birth caused by immature bilirubin processing, but early or severe jaundice needs urgent evaluation.

Physiological Dead Space

The part of a breath that does not exchange oxygen and carbon dioxide with blood. It includes the air passages and lung areas that receive little or no blood flow.

Physiology

The study of how healthy body parts, organs, and living organisms normally work together. It examines processes such as breathing, circulation, digestion, movement, hormone action, nerve signaling, and maintaining internal balance.

Physiotherapy

Assessment and treatment using movement, exercise, manual techniques, education, and physical modalities to improve function.

Physostigmine

A reversible acetylcholinesterase inhibitor that may reverse severe central anticholinergic delirium in carefully selected patients after assessment for contraindications and cardiac conduction abnormalities.

Phytomenadione

A form of vitamin K needed by the liver to make several blood-clotting proteins. It is used to prevent or treat bleeding caused by vitamin K deficiency or

by medicines that block vitamin K.

PI-RADS

A standard scoring system for prostate MRI findings. It estimates how likely an area is to contain an important prostate cancer and helps guide decisions about follow-up or biopsy; it does not diagnose cancer by itself.

Pia Mater

The thin, delicate inner covering that closely follows the surface of the brain and spinal cord. Together with the other coverings and fluid around the nervous system, it helps protect these organs.

Pica

Repeated eating of things that have no useful nutritional value, such as soil, paper, ice, or hair, when this is not expected for a person's age or culture. It may cause poisoning, infection, blockage, or poor nutrition and can be linked with iron deficiency or mental-health conditions.

Pickwickian Syndrome

An older name for obesity hypoventilation syndrome, involving obesity, daytime hypercapnia, and sleep-disordered breathing.

PID

Alternate index label; see *Pelvic inflammatory disease*.

Piebaldism

A rare condition present from birth in which some areas of skin and hair lack pigment. It usually causes stable, sharply outlined white patches and often a white section of hair at the front; it is commonly inherited through a change in the KIT gene.

Pierre Robin Sequence

A condition present at birth in which a small lower jaw allows the tongue to fall backward and may block breathing. Many affected infants also have a U-shaped opening in the roof of the mouth and feeding difficulty.

Pierson Syndrome

A rare inherited condition causing severe kidney protein loss from birth and unusually small pupils. It can lead to swelling, kidney failure, poor vision, and developmental problems.

Pigment

A substance that gives skin, hair, eyes, tissue, or other material its color. Pigments may be made by the body, received from outside, or altered by disease, injury, medicines, or aging.

Pigment Cirrhosis

Liver cirrhosis associated with abnormal pigment or iron deposition, as may occur in hereditary hemochromatosis.

Pigmentary Mosaicism

Uneven skin coloring caused by groups of skin cells carrying different genetic information. It may produce lighter or darker lines, swirls, or patches; most cases affect only the skin, but associated developmental problems should be assessed when present.

Pigmentation

Coloration of skin, hair, eyes, or other tissue produced mainly by melanin, carotenoids, blood, or exogenous material; abnormal changes may reflect inflammation, endocrine disease, drugs, or tumors.

Pigmentation Disorder

A condition causing abnormal increase, decrease, or uneven distribution of pigment in the skin, mucosa, hair, or eye.

Pilar Cyst

A usually harmless, firm lump beneath the skin that forms from a hair follicle, most often on the scalp. It may be inherited, become inflamed or painful, and can usually be removed if it causes symptoms or repeated problems.

Piles

Enlarged or swollen veins in the anus or lower rectum.

Alternate Names:

Hemorrhoids

Piles (Hemorrhoids (Piles))

Alternate index label for Hemorrhoids (Piles).

Piles (Hemorrhoids)

Swollen blood-vessel cushions in the anus or lower rectum. Internal piles may cause painless bright-red bleeding or tissue coming down; external piles may cause pain, itching, or a tender lump. Persistent or heavy bleeding needs assessment.

Alternate Names:

Hemorrhoids

Pill

A solid medicine designed to be taken by mouth. It may contain one or more active ingredients and may be made to release them immediately or slowly; pills should be taken as directed and not crushed unless the instructions allow it.

Alternate Names:

Tablet

Pilocarpine

A medicine that activates muscarinic receptors, causing pupil constriction and increased secretions. It may lower eye pressure in glaucoma or relieve dry mouth, but can cause sweating, blurred vision, headache, or breathing problems.

Pilocytic Astrocytoma

A usually slow-growing brain tumor arising from support cells, most often in children. It commonly affects the cerebellum or visual pathway and may cause headache, vomiting, seizures, balance problems, or vision changes.

Piloerection

Elevation of hair shafts producing gooseflesh, caused by contraction of arrector pili muscles under sympathetic stimulation from cold, fear, pain, fever, or certain drugs.

Pilomatrix Carcinoma

A rare skin cancer that develops from cells involved in hair formation. It usually appears as a firm lump on the head, neck, or arm and can grow into nearby tissue or spread elsewhere.

Pilomatrixoma

Pilomatrixoma is a usually benign skin tumor derived from hair-matrix cells, presenting as a firm subcutaneous nodule, often on the head or neck.

Pilonidal Cyst

A cyst or sinus in the cleft between the buttocks, usually containing hair and skin debris. It may become infected, painful, swollen, and drain pus.

Alternate Names:

Cyst, Pilonidal Pilonidal Sinus (Pilonidal Cyst)

Pilonidal Dimple

Alternate index label; see *Sacral dimple*.

Pilonidal Disease

A condition in which hair and skin debris collect in a small pit or tunnel in the cleft between the buttocks. It can cause repeated swelling, pain, drainage, or an abscess.

Pilonidal Fistula

An abnormal tunnel from a pilonidal sinus to the skin, usually in the natal cleft, that can drain pus or recur after abscess formation.

Pilonidal Sinus (Pilonidal Cyst)

Alternate index label for Pilonidal Cyst.

Pilonidal Sinus Disease

A chronic sinus or cyst in the natal cleft, usually containing hair and debris. It may cause recurrent pain, swelling, drainage, or abscess formation.

Pilus

A tiny hair-like structure on some bacteria. It may help bacteria attach to human cells, move, or transfer genetic material to other bacteria, which can contribute to infection or antibiotic resistance.

Pimozide

An antipsychotic medicine used for selected disorders involving severe tics or abnormal thoughts. It can cause movement problems, sleepiness, and dangerous heart-rhythm changes, so dosing and heart monitoring require careful medical supervision.

Pimple

A common lay term for a small inflamed or blocked skin lesion, often an acne papule or pustule.

Pimples (Acne)

Alternate index label for Acne.

Pin Care

Pin care keeps the skin around external fixation or traction pins clean and monitored for redness, swelling, drainage, loosening, or infection.

Pinch Strength

Pinch strength is the force produced when the thumb presses against one or more fingers and can help assess hand, nerve, muscle, and functional impairment.

Pinched Nerve

Compression or irritation of a nerve that can cause pain, tingling, numbness, or weakness along the nerve's distribution.

Alternate Names:

Compressed Nerve Nerve Compression

Pinched Nerve Overview

A pinched nerve is compression or irritation of a nerve root or peripheral nerve, causing pain, tingling, numbness, weakness, or radiating symptoms. Causes include disc disease, narrowing, injury, or entrapment; progressive weakness or bowel or bladder change is urgent.

Alternate Names:

Nerve Pinched (Pinched Nerve Overview)

Pindolol

Pindolol is a beta-blocker used for selected cardiovascular conditions; it can slow the heart rate and

worsen asthma in susceptible people.

Pine Oil Poisoning

Swallowing or inhaling concentrated pine oil can irritate the mouth and stomach and may cause drowsiness, seizures, or lung injury if aspirated. Do not induce vomiting; obtain immediate poison-control advice.

Pineal Cyst

A fluid-filled sac in the small gland deep in the brain that helps regulate sleep-related signals. Most are found incidentally and cause no harm, but a large cyst can rarely cause headache, eye problems, or fluid buildup.

Pineal Germinoma

A pineal germinoma is a malignant germ-cell tumor in the pineal region, often causing headache, eye-movement abnormalities, or hydrocephalus and usually responsive to radiotherapy and chemotherapy.

Pineal Gland

A small hormone-producing gland deep in the brain that releases melatonin. Melatonin helps coordinate the body's day-night clock and influences sleep timing, seasonal rhythms, and related biological functions.

Pineal Gland Tumor

A growth in or near the pineal gland. It may block the normal flow of brain fluid and cause headache, nausea, vomiting, sleepiness, or problems moving the eyes; symptoms and treatment depend on its type and size.

Pineal Parenchymal Tumor

A tumor arising from cells of the pineal gland, ranging from slow-growing to aggressive. It may block the flow of brain fluid and cause headache, vomiting, sleep changes, or abnormal eye movements.

Pineoblastoma

An aggressive cancer in the pineal region of the brain,

occurring mainly in children. It may block brain-fluid flow and cause headache, vomiting, sleepiness, or eye-movement problems and requires specialist treatment.

Pineocytoma

Pineocytoma is a usually slow-growing tumor of pineal cells that may obstruct cerebrospinal-fluid flow and cause raised intracranial pressure.

Pinguecula

A pinguecula is a benign yellowish raised growth on the conjunctiva near the cornea, often associated with ultraviolet light, wind, and dust; it may irritate the eye.

Pinhole Meatus

An unusually tiny external opening, most often the opening of the urethra. It can make urine flow weak or spraying, cause discomfort, or make catheter placement difficult.

Pink Eye

A common name for conjunctivitis, inflammation of the eye covering causing redness, irritation, watering, or discharge.

Alternate Names:

Conjunctivitis (Pink Eye)

Pink Eye (Conjunctivitis)

Inflammation or infection of the thin covering over the eye and inner eyelids. It can cause redness, discharge, itching, burning, tearing, or swollen eyelids and may spread when infectious.

Pink Puffer

An older, nonformal term for a person with emphysema who has severe breathlessness, a thin build, and pursed-lip breathing. The term is not a separate diagnosis and is less useful than describing the person's COPD and test results.

Pinky Broken Finger (Broken Finger)

Alternate index label for Broken Finger.

Pinna

The visible external part of the ear that collects sound.

Pinocytosis

A process in which a cell takes in small drops of surrounding fluid and dissolved substances. The cell membrane folds inward to form tiny bubbles that carry the material inside for use, transport, or breakdown.

Pint

A pint is a unit of volume; its exact amount varies by measurement system, so the local standard must be specified when measuring fluids or medicines.

Pinta

A long-lasting skin infection caused by *Treponema carateum* bacteria. It spreads through close skin contact and produces changing stages of discolored, scaly, or thickened patches, usually without damage to internal organs.

Pinworm

A small intestinal worm that commonly causes intense itching around the anus at night. Infection spreads when microscopic eggs are swallowed or transferred from contaminated hands or surfaces; treatment usually includes medicine, hygiene, and sometimes treating household contacts.

Pinworm Infection

Pinworm infection is an intestinal infestation by *Enterobius vermicularis*, causing nighttime anal itching, disturbed sleep, and sometimes abdominal or genital irritation. Treatment of the person and close household contacts, hygiene, and repeat dosing reduce reinfection.

Alternate Names:

Infection Pinworms (Pinworm Infection) Worms Pinworms (Pinworm Infection)

Pinworm Test

A test for *Enterobius vermicularis*, usually the early-morning adhesive-tape test applied to the perianal

skin before bathing or defecation.

Pinworms

Pinworms are intestinal nematodes, *Enterobius vermicularis*, that cause nighttime anal itching; treatment, hand hygiene, and laundering help prevent household reinfection.

Pioglitazone

A medicine for type 2 diabetes that helps muscle and fat cells respond better to insulin, lowering blood sugar. It can cause weight gain and swelling and may worsen heart failure, so it is unsuitable for some people.

Piperacillin

Piperacillin is an extended-spectrum penicillin antibiotic often combined with tazobactam to treat serious infections including *Pseudomonas*; allergy, diarrhoea, cytopenias, electrolyte effects, and renal dosing are important.

Piperazine

An older antiparasitic medicine that paralyzes certain intestinal worms, especially roundworms and pinworms. Its use depends on local guidance and the particular infection.

Piperonyl Butoxide

A pesticide synergist that inhibits insect detoxification enzymes and increases the activity of certain insecticides; it can irritate skin, eyes, or airways.

Piperonyl Butoxide With Pyrethrins Poisoning

Exposure to these insecticide ingredients can irritate the skin, eyes, or airways and may cause coughing, nausea, vomiting, dizziness, or wheezing. Severe breathing symptoms or swallowed product require urgent poison-control or emergency advice.

Pipotiazine

A long-acting phenothiazine antipsychotic given by injection in selected settings. It can cause movement disorders, drowsiness, and other adverse effects and

requires clinical monitoring.

Pipradrol

An older central nervous system stimulant with limited current use.

Piracetam

A nootropic compound used in some countries for selected neurologic indications; evidence and approval vary.

Pirfenidone

Pirfenidone is an antifibrotic medicine used to slow decline in idiopathic pulmonary fibrosis; nausea, photosensitivity, fatigue, and liver-enzyme elevation may occur and require monitoring.

Piriformis Syndrome

Pain or altered sensation in the buttock or down the leg when the piriformis muscle irritates or presses on the sciatic nerve. Other causes, especially a spinal nerve problem, must be considered before treatment.

Alternate Names:

PiriformSyndrome (Piriformis Syndrome)

PiriformSyndrome (Piriformis Syndrome)

Alternate index label for Piriformis Syndrome.

Pirimicarb

Pirimicarb is a selective carbamate insecticide targeting aphids; exposure can inhibit acetylcholinesterase and cause cholinergic symptoms.

Piromidic Acid

An older quinolone-like antibacterial investigated or used for urinary and gastrointestinal infections; current use depends on local availability, susceptibility, and safety guidance.

Piroxicam

A long-acting nonsteroidal anti-inflammatory drug used for pain and inflammation; gastrointestinal bleeding, kidney injury, cardiovascular events, and hypersensitivity are important risks.

Piroxicam Overdose

Taking too much piroxicam, an anti-inflammatory pain medicine, can cause stomach pain, vomiting, bleeding, kidney injury, drowsiness, seizures, or breathing problems. Large or intentional overdoses need immediate poison-control or emergency advice.

Pisa Syndrome

A sustained involuntary sideways flexion of the trunk, often associated with medicines, Parkinson disease, or other neurologic disorders.

Pisiform

A small, pea-shaped wrist bone embedded in a tendon on the little-finger side of the palm. It helps form the passageway for the ulnar nerve and artery and may hurt after injury or with arthritis.

Pisiform Bone

A small pea-shaped carpal bone embedded in the tendon of flexor carpi ulnaris on the ulnar side of the wrist; fracture or arthritis can cause localized wrist pain.

Pits

Small depressions or holes in a surface. In medicine, pits may occur in nails, skin, teeth, or other tissues and can result from normal anatomy, injury, infection, inflammation, or inherited conditions.

Pitting Edema

Swelling in which pressure applied to the skin leaves a temporary indentation, usually because of excess interstitial fluid.

Pituicytoma

A rare, usually slow-growing tumor near the pituitary gland. It may cause headache, vision problems, or hormone disturbances by pressing on nearby structures and is usually assessed with brain imaging and tissue examination.

Pituitary

The pituitary is an endocrine gland at the base of the brain that releases hormones controlling growth,

thyroid and adrenal function, reproduction, lactation, and water balance.

Pituitary Adenoma

A usually noncancerous growth arising from the front part of the pituitary gland. It may release too much of a hormone or press on nearby tissue, causing headache, vision changes, or hormone problems.

Pituitary Apoplexy

Sudden bleeding or loss of blood supply inside a pituitary growth, causing severe headache, vision changes, vomiting, eye-movement problems, or confusion. It is an emergency because hormone failure can cause life-threatening low blood pressure.

Pituitary Carcinoma

Pituitary carcinoma is a rare malignant pituitary tumor defined by spread to distant or separate sites, often producing excess hormones.

Pituitary Disease

A disorder of the pituitary gland that alters hormone secretion or causes mass effects, including adenomas, inflammation, hemorrhage, genetic disease, or hypopituitarism.

Pituitary Dwarfism

Pituitary dwarfism is severe short stature caused by deficient growth hormone or broader pituitary dysfunction, with evaluation focused on endocrine and genetic causes.

Pituitary Gland

An endocrine gland at the base of the brain that regulates growth, thyroid, adrenal, reproductive, lactation, and water-balance hormones.

Pituitary Hormone

A hormone secreted by the anterior or posterior pituitary that regulates growth, thyroid and adrenal function, reproduction, lactation, water balance, or other endocrine organs.

Pituitary Insufficiency

Alternate index label; see *Hypopituitarism*.

Pituitary Neoplasm

A pituitary neoplasm is an abnormal growth in or near the pituitary gland and may affect hormones, vision, or nearby brain structures.

Pituitary Neuroendocrine Tumor

Alternate index label; see *Pituitary tumors and adenomas*.

Pituitary Tumor

A pituitary tumor is a growth in the pituitary gland that may be noncancerous but can cause hormone excess, hormone deficiency, or visual problems.

Pituitary Tumor (Prolactinoma)

Alternate index label for Prolactinoma.

Pityriasis

A group of skin conditions marked by fine, flaky scaling. Examples include pityriasis rosea and pityriasis versicolor, which have different causes and may produce itching or lighter, darker, or pink patches.

Pityriasis Alba

Pityriasis alba is a common benign skin condition causing faint, dry, lighter patches, especially on children's faces, often more noticeable after tanning.

Pityriasis Lichenoides

An uncommon inflammatory skin disorder producing recurrent small scaly papules, with forms ranging from mild chronic lesions to an acute ulceronecrotic eruption.

Pityriasis Rosea

An acute, self-limited eruption often beginning with a herald patch followed by oval scaly lesions distributed along skin-cleavage lines. It usually resolves within several weeks; treatment is symptomatic, and atypical, severe, recurrent, or persistent disease should be reassessed.

Alternate Names:

Pityriasis Rosea Gibert (Pityriasis Rosea)

Pityriasis Rosea Gibert (Pityriasis Rosea)

Alternate index label for Pityriasis Rosea.

Pityriasis Rubra Pilaris

Pityriasis rubra pilaris is an uncommon inflammatory skin disorder producing reddish-orange scaly plaques, follicular bumps, and areas of relatively normal skin.

Pityriasis Versicolor

Alternate index label; see *Tinea versicolor*.

Pivampicillin

An orally absorbed prodrug of ampicillin used for selected bacterial infections; its use is limited in some settings by adverse effects and availability.

Pixantrone

Pixantrone is an anthracenedione antineoplastic drug developed for selected aggressive lymphomas, with potential marrow, infection, and cardiac risks.

PJI

Alternate index label; see *Periprosthetic joint infection*.

PJS

Alternate index label; see *Peutz-Jeghers syndrome*.

PKD

Alternate index label; see *Polycystic kidney disease*.

Placebo

An inactive substance, treatment, or procedure designed to resemble an active treatment. In a clinical trial, it is given to a control group so researchers can compare outcomes and estimate the specific effect of the treatment being studied.

Alternate Names:

Dummy Treatment Inactive Treatment

Placebo Control

A placebo control is an inactive treatment designed to resemble the intervention in a clinical trial, helping separate treatment effects from expectation and natural change.

Placebo Effect

A real change in symptoms or wellbeing that can occur after a person receives an inactive treatment, partly because of expectations, attention, and the treatment setting. It does not prove that the inactive treatment changed the disease itself.

Placenta

The temporary organ connecting mother and fetus, allowing exchange of oxygen, nutrients, wastes, and hormones.

Placenta Abruptio

Placental abruption is premature separation of the placenta from the uterine wall, causing bleeding, abdominal pain, uterine tenderness, fetal compromise, or maternal shock.

Placenta Abruptio - Definition

Placental abruption is premature separation of the placenta from the uterine wall before birth, causing bleeding, abdominal pain, uterine tenderness, and possible fetal or maternal compromise.

Placenta Accreta

Placenta accreta spectrum occurs when placental tissue abnormally attaches to or invades the uterine wall, creating major risk of hemorrhage during attempted delivery or removal.

Placenta Accreta Spectrum

Abnormal adherence or invasion of placental villi into the uterine wall, ranging from accreta to increta and percreta; it can cause severe postpartum hemorrhage and requires planned obstetric management.

Placenta Disorder

A disorder of placental implantation, structure, per-

fusion, or separation, including previa, accreta spectrum, abruption, infarction, or placental insufficiency.

Placenta Increta

Abnormal placental invasion into the myometrium without reaching the serosa, increasing the risk of massive hemorrhage at delivery and often requiring cesarean hysterectomy.

Placenta Percreta

Placenta percreta is the most invasive form of placenta accreta spectrum, with villi growing through the uterine wall and sometimes into nearby organs such as the bladder.

Placenta Praevia

A condition in which the placenta lies over or near the opening of the cervix. It can cause painless bleeding later in pregnancy and may require monitoring, activity advice, or cesarean delivery.

Placenta Previa

Implantation of the placenta over or near the internal cervical opening, which can cause painless bleeding during the second half of pregnancy.

Placenta, Succenturiate

A succenturiate placenta has one or more accessory placental lobes separate from the main placenta, which can cause retained tissue or fetal-vessel complications after delivery.

Placental Abnormalities

Disorders of placental location, attachment, structure, or separation that may affect pregnancy or cause bleeding.

Placental Abruption

Premature separation of the placenta from the uterine wall before delivery. It may cause vaginal bleeding, abdominal pain, uterine tenderness, fetal distress, and maternal or fetal compromise.

Placental Accreta Spectrum

Abnormal placental attachment to the myometrium, ranging from accreta (adherent to decidua basalis) to increta (invading myometrium) to percreta (invading through serosa). Major risk factor is prior caesarean section with anterior placenta previa.

Placental Hormone

A hormone produced by placental tissue, such as hCG, progesterone, estrogens, or human placental lactogen, that supports pregnancy, fetal growth, and maternal metabolic adaptation.

Placental Infarction

A region of placental tissue damaged by inadequate maternal blood flow and coagulation, which may be incidental or, when extensive, associated with fetal growth restriction or pregnancy complications.

Placental Insufficiency

Placental insufficiency is inadequate placental delivery of oxygen and nutrients, which can cause fetal growth restriction, abnormal Doppler findings, reduced fluid, or fetal distress.

Placental Lactogen

Placental lactogen is a hormone made by the placenta that alters maternal metabolism and supports breast development and fetal nutrient availability during pregnancy.

Placental Mesenchymal Dysplasia

A rare abnormal development of the placenta in which supporting tissue becomes enlarged and cyst-like. It can resemble a molar pregnancy on scans and may be associated with poor fetal growth, fetal abnormalities, or pregnancy complications.

Placental Separation Signs

Clinical signs indicating the placenta has separated from the uterine wall and is ready for delivery. Classic signs: lengthening of the umbilical cord (cord lengthens as the placenta descends), a sudden gush of blood, and uterine elevation and firming (the uterus rises and becomes globular as the placenta moves into the lower segment).

Placental Site Nodule

A benign, usually incidental remnant of intermediate trophoblast at a prior implantation site, composed of small nests of chorionic-type or extravillous trophoblast.

Placentation

The developmental process by which the placenta forms and attaches to the uterus, establishes maternal–fetal circulation, and develops the exchange and endocrine functions needed for pregnancy.

Plagiocephaly

Plagiocephaly is asymmetric flattening or shaping of an infant's skull, caused by position or premature suture fusion; its evaluation distinguishes benign molding from craniosynostosis.

Plague

A serious infection caused by *Yersinia pestis*, transmitted mainly by infected fleas or respiratory droplets in pneumonic disease.

Planar

Flat or arranged in one plane. In medical imaging, the term describes a two-dimensional view or projection, unlike three-dimensional imaging that shows depth and allows reconstruction from multiple directions.

Plane Warts (*Verruca Plana*)

Small, smooth, relatively flat warts caused by HPV, often occurring in groups on the face, hands, or legs.

Alternate Names:

Verruca Plana

Plant Fertilizer Poisoning

Fertilizer exposure may irritate the mouth, skin, eyes, stomach, or lungs. Some products can dangerously alter blood oxygen or body salts; keep the container and contact poison control after swallowing or significant exposure.

Plant Poisoning

Illness caused by eating, touching, or inhaling a toxic plant or plant product; effects range from local irritation to organ failure.

Plant Thorn Arthritis

Plant thorn arthritis is persistent joint inflammation after a thorn puncture introduces plant material, sometimes requiring removal of foreign material and treatment of infection or inflammation.

Plant Thorn Synovitis

Inflammation of a joint after penetration by a plant thorn or splinter, sometimes involving an infection introduced by the injury. Symptoms may develop gradually as persistent joint pain, swelling, and limited movement; evaluation may require removal of retained material and targeted treatment.

Alternate Names:

Arthritis Plant Thorn (Plant Thorn Synovitis)

Plantar

Relating to the sole or underside of the foot. Plantar problems include heel pain from plantar-fascia injury, warts, pressure ulcers, and abnormal reflexes; diabetes and nerve damage can increase the risk of foot injury.

Plantar Flexion

Downward movement of the foot at the ankle, pointing the toes away from the shin. It is produced mainly by the calf muscles and is used in standing on tiptoe, walking, running, and jumping.

Plantar Fasciitis

Pain from irritation and small injuries in the strong band of tissue supporting the sole of the foot. Heel pain is often worst with the first steps after waking or resting and may worsen after prolonged standing.

Plantar Nerve

A nerve supplying sensation to the sole of the foot and motor branches to intrinsic foot muscles; compression can cause burning pain, numbness, or altered toe movement.

Plantar Neuroma

Alternate index label; see *Morton neuroma*.

Plantar Reflex

Movement of the toes after the sole of the foot is gently stroked. In most adults the toes bend downward; upward movement of the big toe may indicate a problem in brain or spinal nerve pathways controlling movement.

Plantar Response

Movement of the toes and foot after the sole is stimulated. The pattern helps clinicians assess pathways between the brain, spinal cord, and leg; an unusual upward movement of the big toe in an adult may indicate neurologic disease.

Plantar Wart (Verruca Plantaris)

A wart on the sole of the foot caused by human papillomavirus. Pressure from standing and walking can push it inward and make it painful; small black dots may represent tiny clotted blood vessels.

Alternate Names:

Verruca Plantaris

Plantaris Muscle

A small posterior-leg muscle with a long tendon that assists weakly with knee flexion and plantar flexion; it can be strained during sudden athletic movement.

Plaque

A localized buildup or raised area of material. In the skin, a plaque is a broad, raised lesion often formed by joined papules; in an artery, plaque is a fatty deposit in the vessel wall that can narrow the artery.

Plaque And Tartar On Teeth

Dental plaque is a bacterial biofilm that forms on teeth, while tartar is hardened mineralized plaque; both contribute to cavities, gingivitis, and periodontitis.

Plaque Assay

A laboratory test that estimates the number of infectious virus particles in a sample. The sample is placed on living cells, and each infectious particle may produce a visible area of damaged cells that can be counted.

Plaque Psoriasis

The most common form of psoriasis, producing well-demarcated raised red plaques with silvery scale, commonly on elbows, knees, scalp, and lower back and sometimes associated with arthritis.

Plasma

The liquid part of blood carrying cells, proteins, nutrients, hormones, wastes, and other dissolved substances through the body.

Plasma Amino Acids

A blood test that measures amino acids in plasma. It can help evaluate inherited metabolic disorders, poor nutrition, liver disease, or other conditions affecting amino-acid processing.

Plasma Cell

An immune cell that develops from a B cell and produces antibodies. Antibodies help recognize and control germs and other foreign substances.

Plasma Cell Mastitis

A chronic benign inflammatory breast lesion with prominent plasma-cell infiltration, often involving ducts beneath the nipple and potentially causing a mass, nipple retraction, or discharge. It can clinically mimic carcinoma.

Plasma Cell Myeloma

A cancer of antibody-producing plasma cells, usually in the bone marrow. It can produce an abnormal antibody and damage bones, kidneys, blood-cell production, or calcium balance, causing bone pain, fractures, anemia, infections, or kidney problems.

Plasma Cell Neoplasm

A clonal disorder of antibody-producing plasma

cells, ranging from localized plasmacytoma to multiple myeloma with marrow, bone, kidney, calcium, or blood abnormalities.

Plasma Cells

Immune cells that make antibodies. They develop from B cells after the body recognizes an infection or other foreign substance. Abnormal plasma-cell growth can cause diseases such as multiple myeloma and may produce excessive abnormal antibodies.

Plasma Concentration

The amount of a substance present in a defined volume of plasma at a given time. It is used to interpret exposure, toxicity, therapeutic drug monitoring, and pharmacokinetic relationships.

Plasma Expanders

Fluids given through a vein to increase circulating blood volume. Crystalloid solutions are commonly used, while selected colloids have limited roles; treatment depends on the cause of fluid loss and patient condition.

Plasma Kallikrein

A blood enzyme that helps produce bradykinin, a substance that widens blood vessels and increases leakage from them. It contributes to inflammation and swelling and is involved in some inherited swelling disorders.

Plasma Membrane

The selectively permeable lipid bilayer surrounding a cell, containing proteins that control transport, signaling, adhesion, recognition, and communication with the extracellular environment.

Plasma Osmolarity

The concentration of dissolved particles in the liquid part of blood. It mainly reflects water balance and substances such as sodium, glucose, and urea; abnormal values can indicate dehydration, excess water, or metabolic disease.

Plasma Substitutes

Intravenous fluids intended to expand plasma volume, including crystalloids and colloid solutions; choice depends on the clinical indication and risks.

Plasmablastic Lymphoma

Plasmablastic lymphoma is an aggressive B-cell lymphoma often associated with immune deficiency, HIV infection, or immunosuppression.

Plasmacytoma

A solitary mass of neoplastic plasma cells, which may occur in bone (solitary plasmacytoma of bone) or soft tissue (extramedullary plasmacytoma). It can progress to multiple myeloma.

Plasmalogen

A special type of fat found in cell membranes, especially in the brain, nerves, and heart. The body makes it partly in structures called peroxisomes; very low levels occur in some inherited metabolic disorders.

Plasmapheresis

Removal of plasma from blood, with return of cellular components and replacement fluid, to remove pathogenic antibodies or substances.

Plasmid

A plasmid is a small usually circular DNA molecule separate from a bacterial chromosome that can replicate independently and sometimes carries antibiotic-resistance genes.

Plasmids

Small DNA rings found separately from the main chromosome in many bacteria. They can copy themselves and may carry genes that help bacteria survive, including genes for antibiotic resistance or disease-causing traits.

Plasmin

An enzyme that breaks down fibrin, the protein mesh holding a blood clot together. It is formed from plasminogen and helps remove clots after a

damaged blood vessel has been repaired.

Plasminogen

An inactive blood protein that can be changed into plasmin, an enzyme that breaks down the protein framework of blood clots. The body activates it when a clot needs to be removed.

Plasminogen Activator

An enzyme or medicine that changes plasminogen into plasmin, which breaks down the protein mesh of blood clots. These medicines can dissolve dangerous clots but may cause serious bleeding.

Plasminogen Inactivators

Substances or medicines that reduce the conversion of plasminogen into plasmin, thereby slowing breakdown of blood clots. They may be used or studied when limiting bleeding is important.

Plasmodium

A group of parasites spread through bites from infected *Anopheles* mosquitoes and responsible for malaria. The parasites first infect the liver, then red blood cells, causing fever and potentially severe organ complications.

Plasmodium Vivax

A parasite spread by infected *Anopheles* mosquitoes that causes malaria. It infects red blood cells and can remain dormant in the liver, allowing illness to return months or years after the first infection.

Plasmodium Vivax Malaria

Malaria caused by the parasite *Plasmodium vivax* and spread by infected mosquitoes. Fever attacks may recur about every two days, and dormant liver forms can cause later relapses; treatment must clear both blood and liver stages when safe.

Alternate Names:

Vivax malaria; Benign tertian malaria

Plaster Of Paris

A powder that hardens when mixed with water. In healthcare it is used to make casts and splints that

hold an injured bone or joint still while it heals; swelling, numbness, or increasing pain under a cast needs urgent review.

Plastic Bronchitis

A rare condition producing large, branching mucous casts that form in the airways, causing life-threatening airway obstruction, often associated with congenital heart disease or post-fontan circulation.

Plastic Casting Resin Poisoning

Exposure to uncured casting resin or its solvents can irritate or burn the skin, eyes, lungs, and digestive tract. Swallowing or breathing fumes may cause vomiting, dizziness, or lung injury and requires poison-control advice.

Plastic Resin Hardener Poisoning

Resin hardeners may contain corrosive or irritating chemicals that burn the skin, eyes, mouth, throat, or stomach. Fumes can injure the lungs; rinse exposed areas and seek urgent poison-control advice after significant exposure.

Plastic Surgery

Surgery that repairs, rebuilds, or changes body tissues to improve physical function, appearance, or both.

Platelet

A small piece of a blood cell that helps stop bleeding. Platelets have no nucleus, gather at damaged blood vessels, and stick together to form an early blood clot. They are made in the bone marrow from larger cells called megakaryocytes.

Platelet Aggregation

The clumping of platelets at an injured blood vessel to form an early plug that helps stop bleeding.

Platelet Aggregation Test

A laboratory test measuring platelet clumping in response to agonists such as ADP, collagen, or epinephrine, used to evaluate platelet function dis-

orders and medication effects.

Platelet Antibodies Blood Test

A blood test detecting antibodies directed against platelet antigens, used selectively in suspected immune thrombocytopenia, neonatal alloimmune thrombocytopenia, or platelet-transfusion refractoriness.

Platelet Count

The number of platelets in a given volume of blood, used to assess bleeding or clotting risk.

Platelet Count Low (Thrombocytopenia (Low Platelet Count))

Alternate index label for Thrombocytopenia (Low Platelet Count).

Platelet Disorder - Immune Thrombocytopenia

Alternate index label for ITP.

Platelet Function Disorders

Conditions in which platelets do not adhere, activate, or aggregate normally, causing impaired primary hemostasis. They may be inherited or acquired and can cause easy bruising, nosebleeds, heavy menstrual bleeding, or bleeding after procedures.

Platelet Plug Formation

The first step in stopping bleeding after a blood vessel is injured. Platelets attach to the damaged area, become active, and clump together to form a temporary plug.

Alternate Names:

Thrombocytes

Platelets (Thrombocytes)

Small cell fragments made in the bone marrow that circulate in the blood and help stop bleeding. They attach to damaged blood vessels, become activated, and join together to form an initial plug.

Alternate Names:

Thrombocytes

Platybasia

An unusually flattened base of the skull. It may cause no symptoms, but in some people it narrows the space around the lower brain or spinal cord and contributes to headache, imbalance, weakness, or other nerve problems.

Platypnea

Dyspnea that occurs in the upright position and is relieved by lying down. It is the opposite of orthopnea. It is rare and may be associated with hepatopulmonary syndrome, intracardiac shunting, or pulmonary arteriovenous malformations.

Platypnea-Orthodeoxia Syndrome

A rare condition in which breathing becomes difficult and blood oxygen falls when a person sits or stands, then improves when lying down. It is usually caused by abnormal blood flow through the heart or lungs. Testing may include oxygen measurements, heart imaging, and lung scans; treatment addresses the underlying cause.

Alternate Names:

Orthodeoxia-Platypnea Syndrome; Postural Dyspnea and Deoxygenation

Platysma

A thin superficial muscle of the neck that tenses the skin and assists lower-jaw and lower-lip movement.

Pleiotropic Cytokine

An immune-signaling protein that affects several types of cells or produces more than one effect, such as changing inflammation, blood-cell production, immune activity, or tissue repair.

Pleiotropy

The ability of one gene change to influence several traits or body systems. For example, one inherited disorder may affect the brain, skin, blood, and other organs at the same time.

Pleomorphic

Pleomorphic means having multiple forms or marked variation in cell or tissue appearance; in

pathology, it may be a feature of malignancy but is not diagnostic alone.

Pleomorphic Adenoma

A usually noncancerous tumor of a salivary gland, most often the parotid gland near the ear. It usually grows slowly as a painless lump, but long-standing tumors can rarely become cancerous.

Pleomorphic Adenoma Of The Vulva

An exceptionally rare benign mixed epithelial and mesenchymal tumor of the vulva, resembling pleomorphic adenoma of salivary tissue and requiring histopathologic confirmation.

Pleomorphic Dermal Sarcoma

An uncommon high-grade cutaneous sarcoma, usually on chronically sun-damaged skin of older adults, composed of markedly pleomorphic cells and capable of local recurrence or metastasis.

Pleomorphic Xanthoastrocytoma

A circumscribed astrocytic tumor, often arising superficially in the cerebral hemispheres of younger patients and associated with seizures. Most are low grade, but anaplastic transformation can occur.

Pleomorphism

Variation in the size and shape of cells or their nuclei within a tissue. Marked pleomorphism is a feature of many high-grade malignancies but can also occur in some reactive or degenerative conditions.

Plethoric

Plethoric means unusually full, congested, or ruddy, often describing the appearance associated with increased blood volume or red-cell mass.

Plethysmography

A test that measures changes in the size of a body part or the amount of blood or air it contains. It can assess circulation in the limbs, lung volume, or changes in blood flow during breathing or exercise.

Pleura

A thin, two-layered lining surrounding each lung and covering the inside of the chest wall. A small amount of fluid between its layers allows the lungs to move smoothly during breathing.

Pleural

Relating to the pleura, the membranes surrounding the lungs and lining the inside of the chest.

Pleural Cavity

The narrow space between the two slippery layers surrounding each lung. A small amount of fluid normally allows smooth breathing, while extra air, blood, pus, or fluid can restrict lung expansion.

Pleural Decortication

An operation that removes a thick scar-like layer from the lung's covering so a trapped lung can expand again. It may be used for long-standing infected fluid, blood, or inflammation around the lung when other treatment is insufficient. Risks include bleeding, infection, air leakage, and breathing complications.

Alternate Names:

Decortication of the Lung; Pulmonary Decortication; Thoracoscopic Decortication

Pleural Disorders

Conditions affecting the lung lining, including fluid buildup, trapped air, inflammation, infection, bleeding, and tumors. They may cause chest pain, cough, breathlessness, fever, or reduced lung expansion.

Pleural Effusion

An abnormal buildup of fluid in the space between a lung and the chest wall. It may result from heart failure, infection, inflammation, cancer, or injury, and can cause shortness of breath, cough, or chest pain.

Pleural Effusion (Fluid In The Chest Or On Lung)

Alternate index label for Fluid In the Chest or On Lung.

Pleural Fluid Analysis

Laboratory testing of fluid collected from around the lung. Cell counts, protein, acidity, glucose, cultures, and other tests help determine whether the fluid is caused by infection, cancer, heart failure, inflammation, or another problem.

Pleural Fluid Culture

Culture of pleural fluid to detect bacteria, fungi, or mycobacteria in suspected pleural-space infection; specimens should be collected appropriately, often in blood-culture bottles.

Pleural Fluid Glucose

Pleural-fluid glucose may be reduced in empyema, complicated parapneumonic effusion, rheumatoid pleuritis, tuberculosis, and malignancy. It is interpreted with pH, cell count, protein, LDH, microbiology, imaging, and the clinical setting.

Pleural Fluid Gram Stain

A pleural-fluid Gram stain looks for bacteria in fluid around the lung and may support evaluation of empyema or bacterial pleural infection.

Pleural Fluid PH

Pleural-fluid pH helps assess infection and other causes of effusion. A markedly low pH supports a complicated parapneumonic effusion in the appropriate clinical setting, but drainage decisions also depend on imaging, fluid appearance, microbiology, glucose, and the patient's condition.

Pleural Fluid Smear

Microscopic examination of fluid removed from the space around the lung. It may show inflammatory cells, bacteria, fungi, cancer cells, or other material and is interpreted with fluid chemistry, cultures, imaging, and symptoms.

Pleural Friction Rub

A scratchy or grating sound heard through a stethoscope when inflamed layers around the lung rub together during breathing. It may occur with infection, a blood clot in the lung, or other causes of pleural inflammation.

Pleural Needle Biopsy

A pleural needle biopsy removes a small sample of the pleural lining through a needle for evaluation of cancer, infection, or inflammation.

Pleural Neoplasm

A pleural neoplasm is an abnormal growth in the lining around the lung, such as mesothelioma or metastatic cancer.

Pleural Perforation

A breach in the pleural lining allowing air or fluid to enter the pleural space, potentially causing pneumothorax or hydropneumothorax, often from trauma, procedures, or underlying lung disease.

Pleural Plaque

A usually harmless area of thickened or calcified tissue on the lining around the lung, most often caused by past asbestos exposure. It is not the same as asbestos-related lung scarring.

Pleural Sac

The potential space and enclosing pleural membranes around a lung, normally containing a small amount of lubricating fluid.

Pleural Space

The narrow potential space between the lung's inner covering and the chest wall's lining. It normally contains a small amount of lubricating fluid; air, blood, or excess fluid can impair breathing.

Pleural Tuberculosis

Tuberculous infection or inflammation of the pleura, often producing a lymphocyte-rich pleural effusion, chest pain, fever, and breathlessness and requiring microbiologic or tissue evaluation.

Pleurectomy

Surgical removal of part or all of the pleura, used in the treatment of malignant pleural mesothelioma and recurrent malignant pleural effusion.

Pleurisy

Inflammation of the thin layers around the lungs, often causing sharp chest pain that worsens with deep breathing or coughing. Causes include viral infection, pneumonia, a blood clot, autoimmune disease, or injury and must be assessed with other symptoms.

Alternate Names:

Pleuritis (Pleurisy)

Pleuritic Pain

Sharp chest pain that worsens with breathing or coughing, often caused by inflammation of the pleura or nearby tissues.

Pleuritis

Inflammation of the pleural membranes (visceral and parietal pleura). Presents with pleuritic chest pain: sharp, stabbing pain exacerbated by deep breathing, coughing, or sneezing.

Pleuritis (Pleurisy)

Alternate index label for Pleurisy.

Pleurodesis

A procedure that makes the two layers around a lung stick together so air or fluid cannot collect repeatedly. It may use a chemical or surgery and can cause pain, fever, infection, or breathing complications.

Pleurodynia

Severe, repeated pain in the chest or upper abdomen caused by inflammation of breathing muscles, often during infection with coxsackievirus. Pain may worsen with breathing or movement and usually resolves as infection improves.

Pleuropulmonary Blastoma

A rare aggressive childhood cancer arising in the lung or pleura, usually associated with DICER1-related tumor predisposition.

Plexiform Fibrohistiocytic Tumor

A rare low-grade malignant fibroblastic and histi-

ocytic tumor, usually arising in the dermis or subcutis of the upper extremities of young people; local recurrence is common and metastasis is uncommon.

Plexiform Neurofibroma

A plexiform neurofibroma is a diffuse nerve-sheath tumor, strongly associated with neurofibromatosis type 1, that can grow along multiple nerve branches and sometimes become malignant.

Alternate Names:

PN PNF

Plexus

A network formed by intersecting nerves, blood vessels, lymphatic vessels, or other structures. Examples include the brachial nerve plexus and the celiac vascular plexus.

Pliability

Pliability is the ability of a material or tissue to bend, stretch, or deform without breaking; it is relevant to skin, vessels, lungs, and medical devices.

Plica

A fold of tissue, especially a fold in the lining of a joint. Plicae are often normal, but an irritated plica around the knee can cause pain, clicking, swelling, or a catching feeling with movement.

Plitidepsin

Plitidepsin is an antineoplastic compound that targets eukaryotic elongation factor 1A and has been studied for selected cancers and viral infections.

Ploidies

Ploidy describes the number of complete chromosome sets in a cell, such as haploid, diploid, or polyploid; abnormal ploidy can characterize tumors or developmental disorders.

PLS

Alternate index label; see *Primary lateral sclerosis*.

Plug (Vascular)

A vascular occlusion device used to block a selected

vessel under image guidance. A device placed in a blood vessel to block selected blood flow during image-guided treatment.

Alternate Names:

Vascular occlusion plug; embolization plug

Plummer-Vinson Syndrome

A condition involving iron-deficiency anemia, difficulty swallowing, and thin webs in the upper swallowing tube. Treating the iron deficiency and stretching the web can improve swallowing and may reduce complications.

Pluralibacter Gergoviae

A gram-negative environmental bacterium that can contaminate medicines or cosmetics and rarely cause opportunistic infection.

Pluripotential

Able to develop into many, but not every, type of cell in the body. Pluripotent stem cells can produce cells from the three early tissue groups and are studied for development, disease, and regenerative treatment.

Plutonium

A radioactive heavy metal whose inhalation or ingestion can cause internal radiation exposure and toxicity.

Pm

An abbreviation that may mean afternoon, post-mortem, or picometer; meaning depends on clinical context.

PMBCL

Alternate index label; see *Primary mediastinal large B-cell lymphoma*.

PMBL

Alternate index label; see *Primary mediastinal large B-cell lymphoma*.

PMDD

Premenstrual dysphoric disorder is a severe cyclic

mood disorder occurring before menstruation with irritability, depression, anxiety, and functional impairment that improve after menses.

PML

PML commonly means progressive multifocal leukoencephalopathy, a JC-virus demyelinating brain infection during severe immune suppression, but it may have other meanings.

PN

Alternate index label; see *Plexiform neurofibroma*.

Pneumatic

Relating to air or gas under pressure. Medical examples include an air-pressure ear examination, inflatable compression sleeves used to reduce clot risk, and an inflatable tourniquet used during some operations.

Pneumatic Otoscopy

Examination of the eardrum with a lighted instrument while gently changing the air pressure in the ear canal. Reduced eardrum movement may suggest fluid behind it or poor middle-ear ventilation.

Pneumatic Retinopexy

A procedure for selected retinal detachments in which an intravitreal gas bubble is injected and laser or cryotherapy seals the retinal break while positioning helps the bubble support the repair.

Pneumatic Tourniquet

An inflatable cuff used to temporarily reduce blood flow to a limb during surgery or selected procedures.

Pneumatocele

A thin-walled, air-filled space in the lung that often develops after infection, inflammation, or injury. Many resolve naturally, but large or infected spaces can impair breathing or require drainage or surgery.

Pneumatosis

Gas trapped within the wall of an organ or other tissue, most often the bowel. It may be harmless,

but when caused by poor blood flow, infection, or a tear, it can signal a life-threatening abdominal emergency.

Pneumatosis Cystoides Coli

Multiple gas-filled cysts within the wall of the large intestine. They may be harmless and found by chance, or may signal bowel blockage, poor blood flow, infection, or another serious illness when pain or other warning signs occur.

Pneumatosis Cystoides Intestinalis

Gas-filled cysts within the bowel wall. They may be harmless and found incidentally, but can also result from poor blood flow, infection, blockage, lung disease, or medicines. Severe pain, fever, or shock requires urgent evaluation.

Pneumatosis Intestinalis

Gas within the wall of the intestine, seen as small bubbles or lines on an imaging test. It may be harmless, but pain, fever, shock, or signs of poor blood flow require urgent evaluation for bowel injury.

Pneumocephalus

Air or another gas inside the skull, usually after a head injury, brain surgery, or a skull fracture near the sinuses. A large or trapped collection can press on the brain and cause headache, vomiting, confusion, or reduced alertness.

Pneumococcal Infection

Infection caused by *Streptococcus pneumoniae*, ranging from ear or sinus infection to pneumonia, meningitis, or bloodstream infection.

Pneumococcal Meningitis

A dangerous infection of the brain and spinal-cord coverings caused by *Streptococcus pneumoniae*. It can cause fever, headache, stiff neck, confusion, seizures, hearing loss, or death and requires immediate treatment.

Pneumococcal Sepsis

Sepsis caused by *Streptococcus pneumoniae*, often

arising from pneumonia, meningitis, or another invasive pneumococcal infection.

Pneumoconiosis

A group of work-related lung diseases caused by breathing mineral or industrial dust over time. Dust can scar lung tissue and cause cough, breathlessness, reduced oxygen, and progressive breathing disability.

Pneumocystis

A genus of fungi that includes *Pneumocystis jirovecii*, which can cause pneumonia in people with weakened cellular immunity.

Pneumocystis Carinii

An older name associated with *Pneumocystis*; in humans, the usual species causing pneumonia is *Pneumocystis jirovecii*.

Pneumocystis Carinii Pneumonia

The historical name for *Pneumocystis jirovecii* pneumonia, an opportunistic lung infection in immunocompromised people.

Pneumocystis Infection

Infection by *Pneumocystis jirovecii*, most often causing pneumonia with dry cough, fever, and progressive shortness of breath in immunocompromised people.

Pneumocystis Jiroveci

A fungus that can cause a serious pneumonia when the immune system is weakened, especially by advanced HIV, cancer treatment, or transplantation. It often causes gradually worsening dry cough, fever, breathlessness, and low blood oxygen.

Pneumocystis Jirovecii Pneumonia

Opportunistic pneumonia caused by *Pneumocystis jirovecii*, especially in people with advanced HIV infection or other cellular immunodeficiency. It causes progressive exertional dyspnea, dry cough, fever, and hypoxemia.

Pneumocystis Pneumonia

Opportunistic pneumonia caused by *Pneumocystis jirovecii*, usually in people with impaired cell-mediated immunity. It may cause progressive exertional dyspnea, dry cough, fever, and hypoxemia with diffuse ground-glass changes. Diagnosis and treatment require clinical, microbiologic, and radiologic assessment; trimethoprim-sulfamethoxazole is commonly used.

Pneumocyte

A cell lining the air sacs of the lungs. Type I cells allow oxygen and carbon dioxide to pass between air and blood, while type II cells make surfactant, which helps keep the air sacs open.

Pneumolysis

Surgical separation or freeing of lung tissue or pleural adhesions.

Pneumomediastinum

Air trapped in the central space of the chest between the lungs. It may follow severe coughing, an injury, a medical procedure, or a tear in the airway or swallowing tube and can cause chest pain or breathlessness.

Pneumonectomy

Surgery to remove an entire lung. It is usually performed for selected lung cancers or severe one-sided lung disease when removing only part of the lung is not suitable.

Pneumonia

Infection of the lung tissue that fills air sacs with fluid or inflammatory material. It can cause cough, fever, chills, chest pain, breathlessness, low oxygen, or confusion and may be caused by bacteria, viruses, fungi, or aspiration.

Pneumonia - Weakened Immune System

Lung infection in a person whose immune defenses are weakened by illness or treatment. Bacteria, viruses, fungi, and unusual organisms can cause it; symptoms may be subtle but disease can worsen quickly and needs prompt assessment.

Pneumonia, Bilateral

Pneumonia affecting both lungs. Because more lung tissue may be involved, it can cause greater breathing difficulty and lower oxygen levels than disease limited to one lung, although severity depends on the cause and person's health.

Pneumonitis

Inflammation of lung tissue, often caused by a medicine, radiation, an immune reaction, inhaled irritants, or material entering the lungs rather than by infection. It may cause dry cough and breathlessness.

Pneumopericardium

Air around the heart, usually after a chest injury, surgery, a medical procedure, or a tear in the esophagus. A large or trapped collection can prevent the heart from filling and pumping properly and requires urgent assessment.

Pneumoperitoneum

Air or gas inside the abdominal cavity around the organs. It may be expected after abdominal surgery, but unexpected gas can indicate a torn intestine and requires urgent assessment, especially with pain or illness.

Pneumoplasty

Surgery to repair or reshape part of the lung or an airway. It may be used to remove a damaged area, improve airflow, or restore the shape of tissue after injury or disease.

Pneumotachometer

An instrument that measures the speed and amount of air moving during breathing. It can help assess airflow limitation and is used in lung-function testing, often together with other measurements.

Pneumothorax

Air trapped between the lung and the chest wall, causing part or all of the lung to collapse. It may happen spontaneously, after injury, or after a procedure and can cause sudden chest pain and breathlessness; severe symptoms are an emergency.

Pneumothorax - Infants

Air trapped between an infant's lung and chest wall, which can compress the lung and cause rapid breathing, low oxygen, poor feeding, or circulatory instability. Severe cases require immediate drainage and breathing support.

Pneumovirinae

Pneumovirinae is a subfamily of viruses that includes respiratory pathogens such as respiratory syncytial virus and human metapneumovirus.

Pneumovirus

A group or genus of respiratory viruses; human pneumovirus terminology often refers to human metapneumovirus or related paramyxoviruses.

PNF

Alternate index label; see *Plexiform neurofibroma*.

Pocket Erosion

Loss of tissue at the margin or base of a periodontal or surgical pocket, potentially exposing deeper structures and promoting infection, bleeding, or impaired healing.

Podagra

A sudden gout attack in the big-toe joint, causing intense pain, redness, warmth, and swelling.

Podiatrist

A healthcare professional specializing in diseases and injuries of the feet, ankles, and related lower limbs. Care may include examination, wound treatment, medicines, footwear advice, procedures, and prevention of complications.

Podiatry

The healthcare field focused on the feet, ankles, and related lower-limb conditions. It includes prevention, diagnosis, treatment, wound care, mobility support, and management of problems linked with diabetes or circulation.

Podocyte

A specialized cell covering the tiny blood vessels that filter blood in the kidney. Its delicate extensions help keep proteins in the bloodstream; damage can cause protein to leak into urine.

Podofilox

Podofilox is a topical antimitotic medicine used to treat selected external anogenital warts caused by human papillomavirus; irritation and correct application are important.

Podophyllin

Podophyllin is a plant-derived resin with antimitotic activity formerly used topically for warts; it can be severely toxic if absorbed and is generally replaced by safer products.

Podophyllum

A plant genus containing podophyllotoxin, used in some topical wart treatments but toxic if misused.

Podosome

A temporary attachment structure on the surface of some cells, including immune cells and bone-removing cells. It helps the cell grip tissue and break down nearby material while moving or carrying out its function.

POEMS Syndrome

A rare disorder linked to abnormal plasma cells that affects several body systems. It may cause nerve damage, enlarged organs, hormone problems, skin changes, fluid buildup, eye swelling, and unusual bone changes.

Poikilocytosis

The presence of red blood cells with unusually varied shapes on a blood smear. It may occur with anemia, inherited blood disorders, or damage to red blood cells.

Poikiloderma

A skin pattern combining mottled pigmentation, visible small vessels, and epidermal thinning, seen

in connective-tissue disease, chronic sun damage, inflammation, and some cutaneous lymphomas.

Poikilotherm

An organism whose body temperature changes with surroundings, unlike humans, who normally maintain a relatively stable temperature.

Poinsettia Plant Exposure

Chewing poinsettia usually causes mild mouth irritation, nausea, or stomach upset, not severe poisoning. Rinse the mouth and contact poison control if symptoms are severe, a large amount was swallowed, or another product was involved.

Point

A specific location, spot, or value; in medicine it may refer to a tender point, pressure point, or measurement point.

Point Mutation

A change affecting one DNA building block. Depending on its location, it may have no effect, change the protein made by a gene, stop protein production early, or contribute to an inherited condition or cancer.

Point Tenderness - Abdomen

Abdominal point tenderness is sharply localized pain when a particular abdominal site is pressed, which may indicate inflammation, infection, obstruction, or another focal process.

Point-Of-Care Testing

A test performed near the patient, such as in a clinic, ambulance, home, or hospital ward, instead of a central laboratory. Results are available quickly, but trained users, quality checks, and clinical interpretation remain essential.

Point-Of-Care Ultrasound

Ultrasound performed and interpreted at the bedside by the treating clinician to answer a focused question or guide a procedure. It can assess the heart, lungs, abdominal fluid, blood vessels, and

bladder, but does not replace a complete imaging study when one is needed.

Poison

A substance that can cause injury, illness, or death when enough enters the body. Harm depends on the substance, amount, route, timing, and person's health; suspected exposure needs immediate poison-control advice.

Poison Control

A specialist service that gives immediate advice after exposure to a medicine, chemical, plant, or other possible poison. They assess the substance and amount and advise on first aid, observation, emergency care, or further treatment.

Poison Control Center - Emergency Number

A poison-control center provides immediate expert advice after a possible poisoning or toxic exposure; the correct emergency number depends on the country and life-threatening symptoms require emergency services.

Poison Ivy - Oak - Sumac

Poison ivy, oak, and sumac cause allergic contact dermatitis through urushiol oil, producing intensely itchy red patches and blisters after skin exposure.

Poison Ivy - Oak - Sumac Rash

A poison-ivy, oak, or sumac rash is itchy allergic contact dermatitis caused by urushiol, often appearing in streaks and spreading as exposed oil remains on skin or clothing.

Poison Ivy, Oak, And Sumac

Poison ivy, oak, and sumac cause allergic contact dermatitis through urushiol oil, producing intensely itchy streaks or patches of redness, blisters, and swelling. Washing exposed skin and clothing promptly helps; breathing difficulty or facial swelling is an emergency.

Alternate Names:

Allergy Plant Contact (Poison Ivy, Oak, And Sumac)

Poison-Center Consultation

Specialist toxicology advice used to identify hazards, interpret exposure and laboratory data, select antidotes, guide observation or disposition, and coordinate public-health response. Consultation is appropriate for significant, uncertain, mixed, pediatric, or unusual exposures.

Poisoning

Harmful effects caused by swallowing, inhaling, injecting, or absorbing a toxic substance. Suspected poisoning requires urgent advice from emergency services or a poison center and should not be treated by inducing vomiting.

Poisoning - Fish And Shellfish

Toxin-related illness after eating contaminated fish or shellfish. Vomiting, diarrhea, flushing, tingling, weakness, or breathing difficulty may occur; sudden neurologic or breathing symptoms require emergency care.

Poisoning Arsenic (Arsenic Poisoning)

Alternate index label for Arsenic Poisoning.

Poisoning Ciguatera (Ciguatera Poisoning)

Alternate index label for Ciguatera Poisoning.

Poisoning First Aid

Move away from fumes, rinse chemicals from skin or eyes, and call poison control with the product container available. Do not induce vomiting or give food unless advised; breathing problems, seizures, collapse, or inability to wake require emergency services.

Poisoning Thallium (Thallium)

Alternate index label for Thallium.

Pokeweed Poisoning

Eating pokeweed, especially its roots or unripe parts, can cause burning in the mouth, vomiting, diarrhea, weakness, low blood pressure, or seizures. Significant ingestion requires immediate poison-control or

emergency advice.

Pol Gene

The HIV gene encoding enzymes required for viral replication, including protease, reverse transcriptase, and integrase; antiretroviral drugs target these products.

Poland Syndrome

A congenital condition characterized by absence or underdevelopment of part of the pectoral muscles on one side, sometimes accompanied by abnormalities of the hand on the same side.

Polar

Relating to a pole or direction, or describing a molecule with slightly different electrical charges at its ends. In biology and chemistry, polarity affects how substances dissolve, move across cell membranes, and interact with other molecules.

Polarity

The arrangement or direction of positive and negative electrical, chemical, or biological properties. Cell polarity helps organize tissue structure and directs processes such as movement, division, absorption, and secretion.

Polarography

Polarography is an electrochemical analytical method that measures current while voltage changes at an electrode to identify or quantify reducible substances.

Polidocanol

Polidocanol is a detergent sclerosant injected to close selected varicose veins or vascular lesions by damaging the vessel lining and promoting fibrosis.

Polio

Polio is poliomyelitis, an infection caused by poliovirus, an enterovirus of the Picornaviridae family. It is usually asymptomatic or mild but can cause meningitis or irreversible asymmetric flaccid paralysis; transmission is primarily fecal-oral.

Poliomyelitis

An infection caused by poliovirus, usually spread by the fecal-oral route. Most infections are asymptomatic or cause a mild febrile illness, but some cause meningitis or damage to anterior-horn motor neurons, resulting in acute asymmetric flaccid paralysis and sometimes permanent weakness.

Poliosis

A localized patch of white or depigmented hair caused by reduced melanin in follicles, occurring in vitiligo, alopecia areata, inflammatory disease, genetic syndromes, or after injury.

Poliovirus

An enterovirus that causes poliomyelitis. It is transmitted mainly by the fecal-oral route; most infections are asymptomatic, but a small proportion cause meningitis or acute flaccid paralysis by damaging motor neurons in the spinal cord. Diagnosis uses molecular testing, usually reverse-transcription PCR of stool or other appropriate specimens.

Polish (Dental)

Smoothing restorative surfaces to reduce plaque accumulation. Essential for longevity.

Alternate Names:

Dental polishing

Pollakisuria

Pollakisuria is unusually frequent urination, often in small amounts, caused by irritation, infection, stones, bladder disorders, anxiety, or other urinary conditions.

Pollakiuria

Frequent urination, often in small amounts. It may occur with urinary infection, irritation, diabetes, pregnancy, medicines, or anxiety; in some children it is a temporary benign pattern, but pain, fever, blood, thirst, or weight loss needs assessment.

Pollen

Tiny plant grains released for reproduction that can trigger allergies, asthma symptoms, or eye inflam-

mation.

Pollex

The anatomical term for the thumb, the first and most mobile digit of the hand. It has two bones and can touch the fingertips, allowing precise grasping; injury or arthritis can cause pain and loss of hand function.

Pollution

Contamination of air, water, soil, or surroundings by substances that may harm health or ecosystems.

Poly A

A sequence of adenine nucleotides added to the end of many messenger RNA molecules, helping regulate stability, transport, and translation.

Polyadenylation

Addition of a polyadenosine tail to the 3' end of many eukaryotic messenger RNAs, promoting stability, nuclear export, and efficient translation.

Polyamine

A small positively charged molecule, such as putrescine, spermidine, or spermine, required for cell growth and nucleic-acid function.

Polyamine Catabolism

The enzyme-controlled breakdown of polyamines, natural substances involved in cell growth and function. This process produces chemicals that can affect cell signals, oxidative stress, inflammation, development, and cancer biology.

Polyarteritis

Inflammation of several arteries, which can reduce blood flow and damage organs. Causes and effects vary; polyarteritis nodosa is a rare form that mainly affects medium-sized arteries and may cause fever, muscle pain, skin changes, nerve problems, or abdominal pain.

Polyarteritis Nodosa

A rare disease in which inflammation damages

medium-sized arteries. It can reduce blood flow to the skin, nerves, kidneys, muscles, or intestines, causing fever, weight loss, nerve pain or weakness, skin changes, high blood pressure, or abdominal pain.

Alternate Names:

PAN (Polyarteritis Nodosa)

Polyarthritis

Inflammation involving multiple joints, commonly defined as five or more. It is a clinical pattern rather than a single diagnosis and may result from autoimmune, infectious, crystal-related, or other inflammatory disorders.

Polybrominated Biphenyl

A group of brominated industrial chemicals that can persist in the environment and cause toxic effects after exposure.

Polychlorinated Biphenyl

A group of persistent industrial chemicals that can accumulate in body fat and are associated with cancer, endocrine, immune, and neurologic effects.

Polychondritis

A relapsing immune-related disease that inflames and damages cartilage. It may affect the ears, nose, joints, voice box, windpipe, or inner ear, causing pain, deformity, breathing problems, hearing loss, or balance symptoms.

Polychromasia

The presence of unusually bluish, immature red blood cells on a blood smear. It usually means bone marrow is releasing cells quickly, often because of blood loss, red-cell destruction, or treatment response.

Polychromatophilia

Polychromatophilia is bluish-gray staining of red blood cells on a blood smear, reflecting increased circulating immature reticulocytes from stimulated red-cell production.

Polycystic Kidney Disease

An inherited disorder in which numerous kidney cysts enlarge the kidneys and may cause hypertension and renal failure.

Alternate Names:

PKD

Polycystic Liver Disease

An inherited condition in which many fluid-filled cysts develop in the liver. The cysts may enlarge the liver and cause abdominal fullness or pain; liver function is often preserved, but kidney cysts may also occur.

Polycystic Ovarian Syndrome

A hormonal and metabolic disorder involving ovulatory dysfunction and androgen excess, often causing irregular periods, acne, excess hair, infertility, or metabolic risk.

Polycystic Ovary

Polycystic ovaries contain many small follicles and may occur as a normal variant or with polycystic ovary syndrome. PCOS additionally involves ovulatory dysfunction, androgen excess, irregular periods, infertility, acne, or metabolic risk and requires clinical—not ultrasound alone—diagnosis.

Alternate Names:

PCOS (Polycystic Ovary)

Polycystic Ovary Syndrome

A common hormone and metabolic disorder that may cause irregular or absent ovulation, higher androgen levels, acne, excess facial hair, or difficulty becoming pregnant. Ovaries with many small follicles may occur but are not required for diagnosis.

Polycythaemia

An increased red-cell mass or concentration, which may be primary or secondary to another condition.

Polycythemia

An abnormally high red-cell concentration or total red-cell amount. It may result from a bone-marrow disorder, low oxygen, dehydration, smoking,

medicines, or another illness and can increase the risk of blood clots.

Polycythemia (High Red Blood Cell Count)

Alternate index label for High Red Blood Cell Count.

Polycythemia - Newborn

Neonatal polycythemia is an abnormally high red-cell concentration in a newborn that can increase blood viscosity and cause poor feeding, lethargy, breathing problems, or low glucose.

Polycythemia Vera

A long-term bone-marrow cancer that produces too many red blood cells and sometimes too many white cells and platelets. The thicker blood can cause headaches, itching, clots, bleeding, or an enlarged spleen.

Alternate Names:

Primary Polycythemia

Polydactylism (Polydactyly)

A birth condition in which a person has one or more extra fingers or toes. The extra digit may be on the thumb or big-toe side, the little-finger or little-toe side, or between the usual digits. It may occur alone or as part of a genetic syndrome. Treatment depends on its size and function and may involve reconstructive surgery.

Polydactyly

A birth condition in which a person has one or more extra fingers or toes. The extra digit may be small or fully formed and may occur alone or with a genetic syndrome; treatment depends on its structure, function, and effect on nearby digits.

Polydipsia

Excessive thirst that leads to drinking unusually large amounts of fluid. Common causes include uncontrolled diabetes, water-balance disorders, medicines, and some mental health conditions.

Polyene

A molecule containing multiple carbon-carbon double bonds; polyene medicines such as amphotericin B act against fungal cell membranes.

Polyethylene

A plastic polymer used in packaging and medical devices; implanted polyethylene components may wear over time and produce foreign-body reactions.

Polyethylene Glycol

A polymer used in medicines, especially laxatives that draw water into stool to ease constipation.

Polygenic

Influenced by variants in many genes, often together with environmental factors. Height, blood pressure, and risk for many common diseases are polygenic traits.

Polygenic Disease

A disease influenced by small effects from many genes together with environment and lifestyle. Examples include common diabetes, high blood pressure, heart disease, and some cancers; risk is inherited, not certainty.

Polygenic Inheritance

Inheritance in which many genes, each with a small effect, together influence a trait or disease risk. Height, skin color, blood pressure, diabetes risk, and heart-disease risk are examples; environment also contributes.

Polygenic Obesity

Obesity influenced by many small genetic differences together with eating patterns, activity, sleep, medicines, and the surrounding environment.

Polygenic Risk Score

An estimate of a person's inherited tendency toward a disease, calculated from many small genetic differences. It changes risk assessment but does not predict certainty and must be considered with family history, environment, and other health factors.

Polyglandular Autoimmune Syndrome

An autoimmune disorder in which two or more endocrine glands are damaged, causing combinations of thyroid, adrenal, parathyroid, pancreatic, or gonadal dysfunction.

Polygraphy

Polygraphy is the simultaneous recording of several physiologic signals, such as breathing, heart rate, oxygen level, and movement, often during sleep testing.

Polyhydramnios

An unusually large amount of amniotic fluid during pregnancy. It may cause abdominal discomfort, breathlessness, or swelling and can increase the risks of early birth, abnormal fetal position, cord problems, or heavy bleeding after delivery.

Polyketide Synthase

An enzyme system that builds complex natural products from repeated carbon units, producing many antibiotics, toxins, and other biologically active molecules.

Polymagia (Polyphagia)

An unusually strong or excessive appetite. It may occur with diabetes, an overactive thyroid, certain medicines, genetic disorders, or some eating and mental health conditions.

Polymastia

The presence of extra breast tissue, sometimes with an additional nipple, along the embryonic milk line. Accessory breast tissue can enlarge or develop the same benign or malignant conditions as normal breast tissue.

Polymenorrhea

Menstrual periods that occur unusually often, commonly at intervals shorter than about 21 days. Causes include hormonal changes, thyroid disease, fibroids, bleeding disorders, medicines, and the menopausal transition; persistent frequent bleeding needs evaluation.

Polymenorrhoea

British spelling of polymenorrhea: menstrual periods occurring unusually often, commonly at intervals shorter than about 21 days.

Polymer

A large molecule made of repeating smaller units called monomers; polymers are widely used in biology, medicines, and medical materials.

Polymerase Chain Reaction

A laboratory method that makes millions of copies of a selected piece of DNA so it can be detected and studied. It is used to identify infections, inherited conditions, cancer-related gene changes, and other genetic material. The test must be chosen and interpreted for the specific question.

Polymerization

Chemical joining of many small monomers into a larger polymer, a process important in biomolecules, plastics, dental materials, drug delivery, and laboratory techniques.

Polymicrobial Infections

Infections caused by two or more kinds of germs at the same time. They commonly affect contaminated wounds, the abdomen, or the lungs and may require treatment directed at several different organisms.

Polymicrogyria

A brain-development abnormality in which the outer brain surface has too many small, unusually formed folds. It may cause seizures, developmental delay, movement problems, or learning difficulties, depending on the areas involved.

Polymorphic

Having more than one form or appearance. The term may describe a rash, crystal, cell, gene variant, heart rhythm, or tumor. Its medical importance depends on the structure being described and the other clinical findings.

Polymorphism

The presence of two or more inherited genetic forms or visible traits within a population.

Polymorphonuclear Leukocyte

A white blood cell with a multilobed nucleus, especially a neutrophil, eosinophil, or basophil, involved in innate immune defense and inflammation.

Polymorphous

Having lesions or clinical features that differ in shape, size, or stage and therefore show multiple forms.

Polymorphous Light Eruption

Polymorphous light eruption is an itchy inflammatory rash triggered by sunlight, usually appearing hours to days after exposure and recurring seasonally in susceptible people.

Alternate Names:

Sun Poisoning

Polymyalgia Rheumatica

An inflammatory disorder causing aching and morning stiffness around the shoulders and hips in older adults.

Alternate Names:

PMR (Polymyalgia Rheumatica)

Polymyositis

An uncommon immune-related disease causing gradual, usually symmetrical weakness in muscles close to the body, especially the shoulders, hips, and thighs. It can make climbing stairs, lifting, or swallowing difficult and may raise muscle-enzyme levels.

Alternate Names:

PM (Polymyositis)

Polymyositis - Adult

Adult polymyositis is an uncommon immune-mediated inflammatory muscle disease causing progressive symmetric proximal weakness and elevated muscle enzymes, after exclusion of mimics.

Polymyxin

A group of antibiotics that disrupt bacterial cell membranes, used mainly for selected gram-negative infections.

Polymyxin B

An antibiotic active against selected gram-negative bacteria; kidney and nerve toxicity limit its use to difficult infections.

Polyneuritis

Inflammation or injury affecting multiple peripheral nerves, causing symmetric pain, numbness, weakness, or autonomic dysfunction; causes include immune disease, infection, toxins, and deficiency.

Polyneuritis, Acute Idiopathic

Sudden inflammation or dysfunction of several peripheral nerves without an identified cause. It may cause tingling, weakness, pain, or loss of reflexes in the limbs and can sometimes affect breathing or swallowing. Rapidly worsening weakness requires urgent assessment because an immune nerve disorder such as Guillain-Barré syndrome may be responsible.

Polyneuropathy

A generalized disorder affecting multiple peripheral nerves, often causing symmetric numbness, tingling, burning pain, weakness, or impaired reflexes in the limbs.

Polynucleotide

A chain of linked nucleotides forming DNA, RNA, or a related laboratory molecule. Its sequence stores or carries genetic information and determines how cells make proteins or regulate biological processes.

Polyoma Virus

A polyomavirus; some human polyomaviruses are widespread and cause serious disease mainly in immunocompromised people.

Polyomavirus Hominis 2

A human polyomavirus designation associated with

a virus found in people; clinically important disease is uncommon and mainly associated with immune suppression.

Polyp

A growth projecting from a mucous membrane; it may be benign, precancerous, or rarely cancerous.

Polyp Biopsy

A polyp biopsy removes part or all of a polyp for microscopic examination to determine whether it is benign, precancerous, or cancerous.

Polyp Surveillance Colonoscopy

A follow-up colon examination after polyps have been found or removed. The timing depends on the number, size, type, and microscopic features of the polyps and on the person's overall risk.

Polypeptide

A chain of amino acids joined by peptide bonds. One or more folded polypeptide chains make up many proteins.

Polyphagia

Unusually strong or persistent hunger that may lead to eating much more than usual. Causes include poorly controlled diabetes, an overactive thyroid, certain medicines, inherited conditions, and some mental-health disorders.

Polypharmacy

Use of several medicines at the same time, often five or more. Some combinations are necessary, but taking many medicines increases the risk of interactions, side effects, confusion, missed doses, and prescribing errors, especially in older adults.

Polyposis

A condition in which many polyps develop, especially in the bowel or other digestive organs. Polyposis may be inherited or acquired, and some types increase the risk of colorectal or other cancers.

Polypropylene

A synthetic plastic polymer used in medical supplies, sutures, meshes, and containers; implanted materials may rarely cause infection or foreign-body reactions.

Polyps Colon (Colon Polyps)

Alternate index label for Colon Polyps.

Polyps Rectal (Colon Polyps)

Alternate index label for Colon Polyps.

Polyps Uterus (Uterine Fibroids)

Alternate index label for Uterine Fibroids.

Polyps, Colon

Alternate index label; see *Colon polyps*.

Polyps, Endometrial

Alternate index label; see *Uterine polyps*.

Polyps, Nasal

Alternate index label; see *Nasal polyps*.

Polyps, Stomach

Alternate index label; see *Stomach polyps*.

Polyps, Uterine

Alternate index label; see *Uterine polyps*.

Polyradiculitis

Inflammation or other disease affecting several spinal nerve roots. It may cause weakness, numbness, pain, and reduced reflexes; causes include infections, autoimmune disorders, and toxins.

Polyradiculopathy

Disease affecting multiple spinal nerve roots, producing pain, weakness, sensory loss, or reflex changes in a distribution determined by the involved roots.

Polysaccharide

A carbohydrate made of many linked simple sugar units. Examples include starch, glycogen, cellulose,

and some bacterial capsules.

Polysome

A group of ribosomes attached to one messenger RNA molecule at the same time. Together they make many copies of the protein instructions, helping cells produce proteins efficiently.

Polysomnography

An overnight sleep study that records brain activity, eye movements, muscle activity, heart rhythm, air-flow, breathing effort, and blood oxygen. It helps identify sleep-related breathing problems, unusual movements, seizures, and other sleep disorders.

Polysomnography (Sleep Study)

An overnight recording of sleep, breathing, body movement, heart rhythm, and blood oxygen. It helps diagnose sleep apnea and other sleep disorders by showing how breathing and body functions change during sleep.

Alternate Names:

Sleep Study

Polysplenia

A congenital condition with multiple small spleens and variable abnormalities of organ arrangement, heart, blood vessels, or intestinal rotation.

Polystyrene

A synthetic plastic polymer used in containers and laboratory materials; burning it can release hazardous fumes.

Polytene Chromosome

An enlarged chromosome formed by repeated DNA replication without cell division, displaying visible bands and commonly used to study gene activity in insect tissues.

Polythelia

The presence of one or more additional nipples, usually along the embryonic milk line. It is often harmless, although accessory tissue can rarely have the same disorders as normal breast tissue.

Polythiazide

A thiazide diuretic formerly used to treat high blood pressure and fluid retention by increasing renal salt and water excretion.

Polyunsaturated Fat

A type of fat usually liquid at room temperature, found in fish, vegetable oils, nuts, and seeds. Some are essential because the body cannot make them.

Polyurethane

A family of synthetic polymers used in medical tubing, implants, dressings, and other products; tissue response depends on formulation and site.

Polyuria

Producing unusually large amounts of urine, commonly more than about three liters daily in an adult. Causes include diabetes, excess fluids, medicines, kidney problems, hormone disorders, and some inherited conditions.

Pompe Disease

A rare inherited disorder in which a missing enzyme causes stored sugar to build up inside muscle cells. Babies may develop severe weakness, an enlarged heart, and breathing or feeding problems; later-onset disease mainly weakens the limbs and breathing muscles. Enzyme replacement and supportive care can slow or improve the disease.

Alternate Names:

Glycogen storage disease type II; Acid maltase deficiency; GSD II

Polyvalent

Effective against or involving multiple types, strains, antigens, or targets.

Polyvinyl

A family of polymers used in plastics and medical materials; properties vary according to attached chemical groups.

Pomalidomide

An immunomodulatory medicine used with other

treatments for selected multiple myeloma and related blood cancers; it can cause severe birth defects and blood abnormalities.

Pompholyx

A form of dyshidrotic eczema causing intensely itchy small blisters on the hands or feet.

Pompholyx Eczema

Pompholyx, or dyshidrotic eczema, causes intensely itchy small blisters on the palms, sides of fingers, or soles and may leave painful peeling or cracks.

Pons

The middle part of the brainstem, containing pathways and nuclei involved in movement, sensation, breathing, and cranial-nerve function.

Pontiac Fever

A mild, self-limited flu-like illness caused by *Legionella* bacteria without the pneumonia typical of Legionnaires' disease.

Pontine

Relating to the pons, a part of the brainstem between the midbrain and medulla. The pons helps carry movement and feeling signals and contains centers involved in eye movement, facial movement, hearing, balance, and breathing. A stroke or bleed there can cause weakness, loss of sensation, trouble speaking or swallowing, coma, or a locked-in state. Rapid correction of very low sodium can also damage it.

Poor Circulation

Reduced or abnormal blood flow, usually referring to arterial insufficiency or venous disease, causing coolness, color change, pain, swelling, ulcers, or delayed wound healing.

Poor Color Vision

Alternate index label; see *Color blindness*.

Popcorn Lung Bronchiolitis Obliterans

Bronchiolitis obliterans is irreversible scarring and

narrowing of small airways that can follow toxic inhalation, infection, transplantation, or autoimmune disease. It causes persistent cough and breathlessness with obstructive lung testing; exposure avoidance and specialist care are important.

Popliteal

Relating to the hollow behind the knee. This area contains the popliteal artery, vein, and nerves and can be affected by an artery aneurysm, a blood clot, or a Baker cyst.

Popliteal Aneurysm

A weakened, bulging section of the artery behind the knee. It may form blood clots, block blood flow, or send clots into the lower leg, causing pain, coldness, numbness, or tissue damage. Larger aneurysms may need repair.

Popliteal Artery

The main artery behind the knee. It continues from the thigh artery and divides into arteries supplying the lower leg and foot; blockage or injury can cause pain, coldness, numbness, or loss of circulation.

Popliteal Vein

A deep vein behind the knee formed by the union of the anterior and posterior tibial veins. It continues as the femoral vein and can be affected by deep-vein thrombosis.

Popliteal Artery Aneurysm

An abnormal enlargement of the artery behind the knee that may cause limb ischemia, clotting, or embolization.

Popliteal Cyst

A fluid-filled swelling behind the knee, also called a Baker cyst, caused by communication between the joint and a bursa and often associated with arthritis, meniscal injury, or inflammation.

Popliteal Cyst (Baker Cyst)

Alternate index label for Baker Cyst.

Popliteal Fossa

Diamond-shaped space on the posterior knee, bounded by hamstrings superiorly and gastrocnemius heads inferiorly. Contains popliteal artery/vein, tibial nerve, and common peroneal nerve. The popliteal pulse is palpated at the inferior margin.

Population Attributable Fraction

The estimated proportion of disease in a whole population that could be prevented if a specific harmful exposure were removed, assuming the exposure truly causes the disease and other conditions stayed the same.

Population Attributable Risk

The estimated amount of disease in a population linked to a specific exposure. It helps show the potential public-health benefit of reducing that exposure, but it depends on accurate data and a causal relationship.

Population Genetics

The study of how gene frequencies and genetic variation change within and between populations through inheritance, mutation, selection, migration, and genetic drift.

Population Group

A defined set of people sharing a characteristic such as age, location, exposure, ancestry, occupation, or health condition for epidemiologic or clinical analysis.

Porcelain Gallbladder

Hard calcium deposits in the wall of the gallbladder, usually after long-standing inflammation or gallstones. It may cause no symptoms but can be associated with gallbladder disease; imaging findings guide discussion of monitoring or removal.

Porcine

Porcine means derived from or relating to pigs; porcine tissues, enzymes, and biologic products may be used in medicine after appropriate processing and screening.

Pore

A pore is a small opening or channel in a surface, membrane, tissue, or material that permits passage of fluid, gas, particles, or cellular contents.

Porencephaly

A fluid-filled cavity within the brain caused by abnormal development or damage before or after birth. Effects vary with its size and location and may include seizures, weakness, movement problems, or developmental delay.

Porfimer Sodium

A photosensitizing medicine used with light therapy to destroy selected abnormal tissues, including some tumors; it causes prolonged light sensitivity.

Porin

A porin is a channel-forming protein in an outer membrane, especially of Gram-negative bacteria, allowing passage of selected small molecules.

Pork Tapeworm

A parasite acquired by eating undercooked pork; its larvae can invade tissues and cause cysticercosis.

Porokeratosis

A group of skin conditions that cause one or more ring-shaped, scaly patches with a raised border. Some forms can rarely develop into skin cancer, so changing, bleeding, or persistent lesions need dermatology assessment.

Poroma

A usually noncancerous tumor arising from a sweat gland. It often appears as a flesh-colored, pink, or red lump on the palms, soles, or other skin and may be removed if painful, bleeding, or uncertain in diagnosis.

Porphria

Alternate index label; misspelling of *Porphyria*.

Porphyria

A group of inherited or acquired disorders in which

the body cannot make heme, a substance needed for hemoglobin and other proteins, normally. Porphyrin chemicals build up and may cause severe abdominal or nerve symptoms, fragile sun-sensitive skin, or both.

Porphyria Cutanea Tarda

The most common porphyria, caused by a deficiency of hepatic uroporphyrinogen decarboxylase (UROD), leading to accumulation of uroporphyrinogens. Triggered by hepatitis C virus (HCV), alcohol abuse, iron overload (hemochromatosis), and estrogen therapy.

Porphyrias

Metabolic disorders of heme synthesis causing cutaneous and neurological symptoms. Cutaneous porphyrias include porphyria cutanea tarda (blisters on sun-exposed skin, hypertrichosis, sclerodermoid changes), erythropoietic protoporphyria (immediate pain and burning on sun exposure without visible changes), and variegate porphyria.

Porphyrin

A ring-shaped compound involved in heme and other biological molecules; abnormal accumulation occurs in porphyrias.

Porphyrins Blood Test

A blood porphyrin test measures porphyrins or related compounds and helps evaluate suspected porphyria and disorders of haem production.

Porphyrins Urine Test

A urine porphyrin test measures porphyrins or their precursors and helps investigate suspected porphyria or abnormal haem metabolism.

Porphyromonas

A genus of anaerobic gram-negative bacteria found especially in the mouth and associated with periodontal and other infections.

Porphyromonas Bennonis

An anaerobic oral bacterium rarely isolated from

human specimens and occasionally associated with mixed infection.

Porphyromonas Catoniae

An anaerobic gram-negative bacterium found in the mouth and occasionally associated with periodontal or mixed infection.

Porphyromonas Endodontalis

A mouth bacterium that grows without oxygen and is associated with infected tooth pulp and root canals. It may contribute to dental infection, but diagnosis depends on symptoms, examination, imaging, and laboratory findings.

Porphyromonas Levii

A Porphyromonas species found mainly in animals and rarely associated with human infection. An animal-associated bacterium rarely linked to human infection, usually in wounds or other opportunistic settings.

Porphyromonas Somerae

A bacterium that grows without oxygen and is occasionally found in human wounds, abscesses, or other samples. When it causes infection, treatment depends on laboratory identification, infection location, and antibiotic susceptibility.

Port-Wine Stain

A permanent birthmark caused by widened small blood vessels, appearing as flat pink, red, or purple skin.

Portacaval Shunting

A surgical or image-guided connection that diverts blood around the liver to lower dangerously high pressure in the portal veins. It may reduce bleeding risk but can worsen confusion caused by liver disease.

Portal Hypertension

Abnormally high pressure in the veins carrying blood from the digestive organs to the liver, most often because of cirrhosis. It can enlarge veins in

the esophagus or stomach, cause abdominal fluid buildup, enlarge the spleen, or lead to bleeding.

Alternate Names:

PHT

Portal Hypertensive Gastropathy

Changes in the stomach lining caused by high pressure in the veins around the liver. The lining may look mottled and bleed slowly or suddenly, causing anemia or vomiting of blood in severe cases.

Portal System

A network of veins that carries blood from the stomach, intestines, spleen, pancreas, and gallbladder to the liver. The liver processes nutrients and many absorbed substances before the blood returns to the general circulation.

Portal Vein

The large vein that carries blood from the digestive organs, spleen, pancreas, and gallbladder to the liver. A clot or increased pressure in this vein can cause enlarged abdominal veins, bleeding, or fluid buildup.

Portal Vein Thrombosis

A blood clot partly or completely blocking the main vein to the liver or one of its branches. Causes include cirrhosis, cancer, inflammation, inherited clotting tendency, or surgery; complications include high portal pressure and, rarely, bowel damage.

Portion Of Cytosol

A region of the cell's aqueous internal fluid outside membrane-bound organelles, containing ions, metabolites, proteins, and enzymes that support cellular reactions.

Portion Size

The amount of food or drink served or eaten at one time, distinct from a standardized serving size and important for estimating energy, carbohydrate, sodium, and nutrient intake.

Portopulmonary Syndrome

High blood pressure in the arteries of the lungs occurring with portal hypertension or serious liver disease. It can cause breathlessness, tiredness, chest discomfort, or fainting and affects decisions about liver treatment or transplantation.

Position

The location or arrangement of a body part, organ, fetus, or patient. Position can affect examination findings, movement, comfort, circulation, breathing, childbirth, medical procedures, and interpretation of imaging.

Positional Asphyxia

Fatal or potentially fatal impairment of breathing caused by body position that restricts chest movement, airway patency, or venous return. Risk is increased by restraint, intoxication, obesity, and inability to reposition; findings are nonspecific and require scene and medical correlation.

Positive

Positive means that a test, finding, result, or response is present or above a defined threshold; interpretation depends on the test and clinical setting.

Positive Airway Pressure Treatment

Treatment that uses pressurized air delivered through a mask or similar device to keep the airway open during sleep or breathing difficulty. It is commonly used for obstructive sleep apnea; mask discomfort, dry airways, leaks, or skin irritation may occur.

Positive End-Expiratory Pressure

Pressure kept in the airways at the end of breathing out, usually by a ventilator. It helps keep the lung's air sacs open and improve oxygen levels, but excessive pressure can injure the lungs or lower blood pressure.

Positive Feedback

A body-control process in which a response strengthens the original change, making the process grow until a specific event is completed. Examples include

contractions during labor and blood clotting.

Positive Finding

A positive finding is an observed symptom, examination sign, image, laboratory result, or test response that supports the presence of a specified condition or feature.

Positive Predictive Value

The chance that a person with a positive test result truly has the condition being tested for. It depends on test accuracy and how common the condition is among the people tested.

Positive Predictive Value In Surveillance

The proportion of reported signals or alerts that represent true events meeting the surveillance case definition. It is influenced by the specificity of the signal and the underlying prevalence of the condition.

Positive Pressure Ventilation

Breathing support that pushes air or oxygen into the lungs under pressure. It may be delivered through a mask or a breathing tube and can support or replace a person's own breathing during respiratory failure.

Positive Psychology

The study of wellbeing, strengths, resilience, relationships, and factors that help people function and thrive. Its practices may support coping and quality of life but do not replace treatment for illness.

Positive Symptoms

Symptoms reflecting an excess or distortion of normal mental functions, such as hallucinations, delusions, disorganized speech, or grossly disorganized behavior. They are contrasted with negative symptoms, which reflect loss or reduction of function.

Positive-Strand RNA Virus

A virus whose RNA can be read directly by an infected cell as instructions for making viral proteins. This allows the virus to begin producing new parts soon after entering the cell.

Positron

A particle with the same mass as an electron but a positive charge. Some medical tracers release positrons; when one meets an electron, energy is produced and detected during a PET scan.

Positron Camera

A positron camera detects paired gamma rays from positron annihilation and is used in positron-emission tomography to map tracer distribution.

Positron Emission Mammography

PET imaging of breast. Higher sensitivity than mammography for dense breasts. Limited availability. A breast imaging test combining positron emission scanning with mammography to show tissue activity and structure.

Positron Emission Tomography

An imaging test that uses a small amount of radioactive tracer to show tissue activity, such as glucose use, blood flow, or specific proteins. It is often combined with CT or MRI to locate abnormal areas more precisely.

Post Cibum

A medication instruction meaning that a medicine should be taken after meals. Clear instructions should spell this out to prevent confusion with other uses of the abbreviation P.C.

Alternate Names:

P.C.; After Meals

Post-Acute Rehabilitation

Time-limited interdisciplinary care after an acute illness, injury, or hospitalization to restore mobility, self-care, cognition, communication, and safe community function. Intensity and setting depend on medical stability and rehabilitation potential.

Post-Cardiac Arrest Management

Care after return of spontaneous circulation that supports breathing and circulation, identifies and treats the cause of the arrest, manages temperature and seizures when indicated, and assesses neurologic

recovery over time.

Post-Cardiac Injury Syndrome

Alternate index label; see *Dressler syndrome*.

Post-Chemotherapy Cognitive Impairment

Alternate index label; see *Chemo brain*.

Post-Concussion Syndrome

Ongoing symptoms after a concussion, such as headache, dizziness, tiredness, poor concentration, sleep problems, or mood changes. Symptoms usually improve gradually; evaluation and a stepwise return to activity help guide recovery.

Post-Concussional Syndrome

Persistent physical, cognitive, emotional, or sleep symptoms after a concussion or mild traumatic brain injury.

Post-Dural Puncture Headache

A headache that begins after a spinal tap or accidental puncture during an epidural. It is usually worse when sitting or standing and improves when lying down because spinal fluid has leaked; neck stiffness, nausea, ringing ears, or light sensitivity may occur.

Post-Exposure Prophylaxis

Medicine or vaccination given after a possible exposure to prevent infection from developing. It is used for selected exposures to HIV, hepatitis B, rabies, and other infections; the correct treatment depends on the pathogen and must begin promptly.

Post-Hepatic Jaundice (Obstructive Jaundice)

Jaundice caused by obstruction of bile flow after bilirubin has been processed by the liver, commonly from gallstones, strictures, or tumours.

Alternate Names:

Obstructive Jaundice

Post-Hoc

Performed or analyzed after an event; in statistics,

a post-hoc analysis follows the planned primary analysis.

Post-Infectious Cough

A chronic cough persisting 3–8 weeks after a URI, caused by transient bronchial hyperresponsiveness and airway inflammation. It is self-limited and usually resolves without treatment. Inhaled corticosteroids, antitussives, and time are the mainstays of management.

Post-Mortem

Occurring after death or relating to examination of a body afterward. A post-mortem examination can help determine the cause of death, identify disease, and provide information for families or legal investigations.

Post-Nasal Drip (Chronic Rhinitis)

Alternate index label for Chronic Rhinitis.

Post-Natal Depression

Depression beginning during pregnancy or after childbirth, with persistent low mood or loss of interest and possible effects on sleep, bonding, and daily functioning.

Post-Obstructive Pneumonia

Lung infection developing beyond a blocked airway. A tumor, inhaled object, thick mucus, or narrowing can prevent drainage and allow infection; antibiotics may not cure it until the blockage is found and relieved.

Post-Operative Atelectasis

Partial collapse of air sacs in the lung after surgery. Anesthesia, pain, shallow breathing, mucus, and lying still can contribute, causing shortness of breath or low oxygen. Pain control, movement, and breathing exercises may help prevent or treat it.

Post-Orgasmic Illness Syndrome

A rare condition in which flu-like symptoms, extreme tiredness, headache, nasal or eye symptoms, and difficulty thinking begin soon after orgasm and

last for days. The cause is uncertain; repeated episodes need medical assessment to exclude other conditions.

Postcoital Bleeding

Bleeding from the vagina after sexual intercourse. Causes include infection, dryness, injury, polyps, pregnancy-related conditions, or cancer.

Alternate Names:

POIS

Post-Partum Haemorrhage

Excessive bleeding after childbirth, most commonly caused by failure of the uterus to contract, retained placental tissue, genital-tract trauma, or clotting problems.

Post-Pneumonectomy Syndrome

A rare problem after removal of one lung in which the remaining chest structures shift and press on the airway or major blood vessels. It may cause breathlessness, noisy breathing, repeated infections, or difficulty swallowing.

Post-Prandial

Occurring after a meal. Post-prandial blood glucose helps assess diabetes, while post-prandial low blood pressure or chest pain may indicate a circulation or heart problem and needs assessment.

Post-Splenectomy Complications

Post-splenectomy complications include infection by encapsulated bacteria, blood clots, bleeding, and changes in blood-cell counts; vaccination and follow-up reduce risk.

Post-Streptococcal Glomerulonephritis

Kidney inflammation that can develop after a group A streptococcal throat or skin infection. It may cause dark urine, swelling, reduced urine, high blood pressure, tiredness, or kidney failure and needs medical evaluation.

Post-Surgical Pain

Pain after an operation caused by tissue injury and

inflammation. Its severity depends on the procedure and the person; uncontrolled pain can limit breathing, movement, sleep, and recovery and should be discussed with the care team.

Post-Surgical Rehabilitation

A planned program to restore movement, strength, independence, and safe return to daily activities after surgery. It may include wound care, pain control, exercises, mobility training, and advice tailored to the operation and the person's recovery.

Post-Term Pregnancy

Pregnancy lasting 42 completed weeks or longer. The placenta may provide less support, the baby may become unusually large, and amniotic fluid may decrease. Clinicians monitor parent and baby and discuss delivery timing to reduce complications.

Post-Test Probability

The estimated chance that a person has a disease after a test result is known. It depends on the original likelihood of disease and how accurately the test distinguishes people with and without the condition.

Post-Thrombotic Syndrome

Chronic pain, heaviness, edema, skin change, and sometimes ulceration developing after deep-vein thrombosis because of persistent venous obstruction and valvular damage. Compression, exercise, skin care, and selected interventions may reduce disability.

Post-Transfusion Purpura

A rare immune reaction that causes a severe fall in platelets about 5–10 days after a blood transfusion. It can produce pinpoint skin bleeding, bruising, nosebleeds, or dangerous internal bleeding and requires urgent treatment.

Post-Traumatic Headache

A headache beginning or continuing after a head or neck injury. It may resemble migraine or tension headache and can occur with dizziness, poor concentration, sleep problems, nausea, or light sensitivity.

Post-Traumatic Stress Disorder

A mental-health disorder that may follow actual or threatened death, serious injury, sexual violence, or another traumatic event. It causes ongoing unwanted memories, nightmares, avoidance, emotional changes, and heightened alertness that interfere with daily life.

Post-Vasectomy Pain Syndrome

Persistent or recurring testicular or scrotal pain lasting at least three months after vasectomy. The pain may result from nerve irritation, inflammation, or pressure in the reproductive tract.

Alternate Names:

PVPS; Chronic Post-Vasectomy Pain

Post-Void Residual

The amount of urine remaining in the bladder after urination, measured by ultrasound or catheterization. A persistently high residual may indicate incomplete emptying, but its significance depends on the volume, timing, symptoms, and clinical context.

Post-Void Residual Volume

The amount of urine remaining in the bladder immediately after urination, measured by ultrasound or catheterization. An elevated residual suggests incomplete emptying but must be interpreted with timing, bladder volume, symptoms, and repeated measurements.

Postanesthesia Care Unit

The postanesthesia care unit is a monitored recovery area where patients are observed during the immediate postoperative period. Admission assessment includes vital signs, level of consciousness, pain assessment, and surgical site evaluation.

Postcholecystectomy Syndrome

Persistence or recurrence of symptoms after cholecystectomy. Causes include retained common bile duct stones, sphincter of Oddi dysfunction, bile salt malabsorption, irritable bowel syndrome, and other gastrointestinal conditions. Evaluation includes liver function tests, MRCP, and endoscopic ultrasound.

Postconcussion Syndrome

Persistent symptoms after a concussion, such as headache, dizziness, fatigue, sleep disturbance, slowed thinking, or mood change. Recovery varies, and worsening neurologic symptoms need urgent assessment.

Posterior

Located behind or toward the back of the body or a body structure. The term is used to describe anatomical direction, position, movement, imaging findings, and areas affected by disease or injury.

Posterior Chamber

The eye space between the iris and lens, filled with clear fluid that nourishes tissues and helps maintain pressure.

Posterior Cruciate Ligament Injury

A stretch or tear of the ligament deep inside the knee that prevents the shinbone from moving too far backward. It may follow a blow to the shin, a fall on a bent knee, or severe twisting and can cause pain, swelling, and instability.

Posterior Cruciate Ligament Tear

A partial or complete tear of the strong ligament deep inside the knee that limits backward movement of the shinbone. It often follows a forceful blow to the shin or a fall on a bent knee and may cause pain, swelling, and knee instability. Treatment depends on severity and other injuries.

Posterior Descending Artery

A heart artery that runs along the back groove between the lower chambers and supplies part of the back and lower heart muscle. It usually branches from the right coronary artery but may arise from another heart artery.

Posterior Drawer Test

A knee examination in which the lower leg is gently pushed backward while the knee is bent. Excessive backward movement may indicate injury to the ligament that stabilizes the back of the knee.

Posterior Fossa Tumor

A growth in the lower back part of the skull, where the cerebellum and brainstem are located. It may cause headache, vomiting, unsteady movement, eye problems, or changes in breathing by pressing on nearby tissue or blocking brain fluid.

Posterior Heel Bursitis

Inflammation of a bursa near the back of the heel, causing pain and swelling.

Alternate Names:

Retrocalcaneal bursitis

Posterior Keyhole Foraminotomy

An operation through a small opening in the back that enlarges the passage where a spinal nerve leaves the spine. It relieves pressure from causes such as a disk bulge or arthritis and may reduce radiating pain or weakness.

Posterior Myocardial Infarction

A heart attack affecting the back wall of the heart, usually because a coronary artery is blocked. It may be missed on a standard ECG, so additional ECG leads or imaging may be needed when symptoms suggest it.

Posterior Pituitary

The back part of the pituitary gland, which stores and releases hormones made in the brain. Vasopressin helps control body water and blood pressure, while oxytocin supports uterine contractions and release of breast milk.

Posterior Prolapse

Alternate index label; see *Posterior vaginal prolapse (rectocele)*.

Posterior Reversible Encephalopathy Syndrome

Brain swelling caused by disturbed blood-flow regulation, often linked to very high blood pressure, pregnancy-related hypertension, kidney disease, severe infection, or immune-suppressing medicines. Headache, seizures, confusion, or vision loss require

emergency treatment because prompt care can prevent lasting injury.

Posterior Rhinorrhea

Posterior rhinorrhea is mucus draining from the nose into the throat, commonly causing throat clearing or cough from allergy, infection, irritation, or sinus disease.

Posterior Subcapsular Cataract

A cloudy area at the back of the eye's lens, just beneath its outer capsule. Because it often lies in the path of light, it can cause glare, blurred vision, and difficulty reading, especially in bright light.

Posterior Tibial Artery

A major artery running down the back of the lower leg and behind the inner ankle. It supplies the lower leg and sole of the foot; its pulse is checked when assessing blood flow to the foot.

Posterior Urethral Valves

Abnormal tissue folds present in the urethra of some male babies that block urine leaving the bladder. They can cause a weak urine stream, swollen kidneys, urinary infection, or kidney damage and require specialist treatment.

Posterior Uveitis

Inflammation at the back of the eye involving the retina, the layer beneath it, or both. It may cause floaters, blurred or missing vision, or eye pain and can result from infection, immune disease, or another inflammatory condition.

Posterior Vitreous Detachment

Separation of the jelly inside the eye from the retina, usually as an age-related change. It may cause new flashes or floaters; urgent eye examination is needed because a retinal tear or detachment can occur at the same time.

Posteroanterior

Posteroanterior means directed from back to front; a PA chest radiograph uses this projection to reduce

magnification of the heart.

Postganglionic Fiber

An autonomic nerve fiber extending from a ganglion to its target organ after the synapse, carrying sympathetic or parasympathetic signals to smooth muscle, glands, or the heart.

Postherpetic Neuralgia

Persistent nerve pain in an area affected by shingles after the rash has healed.

Alternate Names:

Neuralgia, Postherpetic

Posthitis

Inflammation of the foreskin, causing redness, swelling, itching, pain, discharge, or difficulty retracting it; infection, irritation, diabetes, and poor hygiene are possible contributors.

Posthumous

Occurring, discovered, or published after a person's death. A posthumous diagnosis may be based on records, stored samples, or autopsy findings.

Postinflammatory Hyperpigmentation

Darkening of skin after inflammation or injury, caused by increased melanin production or its deposition in the epidermis or dermis.

Postmenopausal

Postmenopausal describes the period after menopause, when ovarian estrogen production and menstrual periods have permanently ceased.

Postmenopausal Bleeding

Vaginal bleeding after menopause. Even light or one-time bleeding needs medical evaluation because causes include tissue thinning, polyps, hormone effects, and cancer.

Postmenopausal Osteoporosis

Bone loss caused by lower estrogen levels associated with menopause. Sometimes called type I osteoporosis.

Postmenopause

The stage of life after menopause, when menstrual periods have permanently stopped because the ovaries no longer release eggs regularly and produce much less estrogen.

Postmortem Artifact

A change that happens to a body after death and can look like disease or injury. Causes include decomposition, medical resuscitation, embalming, insects, animals, or movement of blood after death; examiners must distinguish it from changes before death.

Postmortem Interval

The estimated time between death and the examination or discovery of a body. Investigators consider body temperature, stiffness, pooling of blood, chemical changes, environment, and insect activity, but the estimate is not exact.

Postmortem Toxicology

Testing blood, tissues, or other samples after death for medicines, alcohol, poisons, or their breakdown products. Results must be interpreted with the medical history, dose, sample site, decomposition, and possible movement of substances after death.

Postmyocardial Infarction Syndrome

Alternate index label; see *Dressler syndrome*.

Postnatal

Relating to the period after birth, especially the newborn and infant period. Postnatal care includes checking breathing, feeding, temperature, weight, jaundice, development, and signs of infection or other illness.

Postnatal Care

Health care for the parent and baby after birth. It includes checking bleeding, blood pressure, wounds, pain, feeding, mood, newborn growth, and warning signs, while providing guidance about recovery, contraception, vaccination, and follow-up.

Postnatal Depression

A depressive episode occurring after childbirth, with persistent low mood, anhedonia, sleep or appetite disturbance, guilt, impaired bonding, or suicidal thoughts.

Postop

Postop is an abbreviation for postoperative, meaning relating to the period after a surgical procedure.

Postoperative

Postoperative means occurring or provided after surgery, including recovery, wound care, pain control, rehabilitation, and complication monitoring.

Postoperative Care

Care after surgery that monitors breathing, circulation, pain, fluids, the wound, movement, eating, and possible complications. It may include early walking, exercises, medicines, and prevention of blood clots.

Postoperative Cognitive Dysfunction

Problems with memory, attention, thinking, or planning after surgery. They may be temporary or persistent, especially after major operations; assessment compares the person with their usual abilities and checks for delirium, medicines, infection, or other causes.

Postoperative Complications

Problems that develop after an operation, including infection, bleeding, blood clots, breathing problems, organ dysfunction, wound separation, or medication reactions. Risk depends on the procedure and the person's health; severe pain, fever, breathlessness, or heavy bleeding needs urgent care.

Postoperative Delirium

A sudden change in attention and thinking after surgery. A person may become confused, restless, unusually sleepy, or see things that are not there; symptoms may fluctuate and require prompt assessment for medical causes.

Postoperative Hemorrhage

Bleeding after surgery that may occur at the operative site or internally and can cause shock, anemia, or the need for urgent intervention.

Postoperative Ileus

Temporary slowing or stopping of bowel movement after surgery, especially abdominal surgery. It can cause bloating, nausea, vomiting, pain, and inability to pass gas or stool; medicines, electrolyte problems, and the operation may contribute.

Postoperative Infection

An infection developing after surgery, involving the incision, an organ space, implanted material, or the bloodstream.

Postoperative Nausea And Vomiting

Nausea, retching, or vomiting occurring after surgery. Risk is influenced by factors such as previous motion sickness or postoperative nausea, anesthetic technique, opioid use, and patient characteristics. Prevention and treatment are tailored to the individual risk and procedure.

Postoperative Pain Management

Management of pain after surgery using a combination of medicines, regional techniques, physical measures, and rehabilitation. The plan is tailored to the procedure, pain severity, medical conditions, and risks of adverse effects.

Postoperative Period

The postoperative period is the time after an operation when recovery, pain control, wound care, mobility, nutrition, complications, and follow-up are monitored.

Postoperative Pulmonary Complication

A breathing problem developing after surgery, such as partial lung collapse, pneumonia, aspiration, worsening asthma or COPD, or respiratory failure. Risk is reduced by suitable pain control, movement, breathing exercises, and careful monitoring.

Postpartum

Relating to the period after childbirth. Recovery includes changes in bleeding, pain, breasts, hormones, sleep, mood, and body function; important complications include heavy bleeding, infection, high blood pressure, blood clots, depression, and psychosis.

Alternate Names:

Postnatal

Postpartum Anxiety

Excessive, persistent, or distressing anxiety during pregnancy or after childbirth that interferes with sleep, daily function, bonding, or self-care. It may occur with panic, intrusive worries, or depression and deserves clinical assessment; thoughts of self-harm or harm to the baby require emergency help.

Postpartum Blues

A common, short-lived period of tearfulness, mood changes, irritability, or anxiety beginning soon after childbirth and usually improving within two weeks. Support, rest, and practical help are important; persistent, severe, psychotic, or suicidal symptoms require prompt assessment for a postpartum mental-health disorder.

Postpartum Cardiomyopathy (Peripartum Cardiomyopathy)

A dilated cardiomyopathy causing heart failure toward the end of pregnancy or during the months after delivery. Symptoms may include breathlessness, difficulty lying flat, swelling, fatigue, or chest discomfort and require prompt assessment.

Alternate Names:

Peripartum Cardiomyopathy

Postpartum Care

Clinical care during the weeks after childbirth that assesses bleeding, uterine involution, blood pressure, infection, wound healing, breastfeeding, mental health, contraception, and recovery.

Postpartum Contraception

Contraceptive counseling and care after childbirth, taking account of breastfeeding, venous-thromboembolism risk, medical conditions, fertility

intentions, and the timing of method initiation.

Postpartum Depression

Depression that begins during pregnancy or after childbirth and lasts beyond ordinary short-term mood changes. It may cause persistent sadness, loss of interest, guilt, anxiety, sleep or appetite changes, difficulty bonding, or thoughts of self-harm and needs treatment.

Alternate Names:

Depression, Postpartum PPD (Postpartum Depression)

Postpartum Endometritis

Infection of the inner lining of the uterus after childbirth, more common after cesarean birth. It may cause fever, lower-abdominal pain, uterine tenderness, fast heartbeat, or foul-smelling discharge and needs prompt treatment.

Postpartum Haemorrhage

Excessive bleeding after childbirth, commonly defined by blood loss of at least 1,000 mL or bleeding with hypovolemia after birth.

Postpartum Hemorrhage

Excessive bleeding after childbirth, usually caused by poor uterine contraction, retained placental tissue, genital-tract trauma, or a clotting disorder. It can cause shock and requires urgent obstetric assessment and treatment.

Postpartum Hemorrhage (Secondary)

Heavy or abnormal bleeding occurring more than 24 hours and up to 12 weeks after childbirth. Causes include retained placental tissue, infection, poor healing where the placenta was attached, or a bleeding disorder. Heavy bleeding, dizziness, fainting, fever, or severe pain requires urgent care.

Alternate Names:

Secondary

Postpartum Infection

An infection after childbirth, commonly involving the uterus, surgical wound, bladder, breasts, or

bloodstream. Fever, worsening abdominal or pelvic pain, foul-smelling discharge, wound redness, breast redness, or feeling very unwell requires prompt medical assessment.

Postpartum Preeclampsia

New-onset hypertension with pre-eclampsia features after childbirth, sometimes occurring several days or weeks postpartum. Severe headache, visual symptoms, chest pain, shortness of breath, or seizures require urgent assessment.

Postpartum Psychosis

A rare but severe psychiatric emergency that can begin suddenly during the days or weeks after childbirth. Symptoms may include hallucinations, delusions, paranoia, severe confusion, mania, depression, disorganized behavior, or rapidly changing moods. It can worsen quickly and may threaten the safety of the mother or baby, so immediate medical assessment is required.

Alternate Names:

Postnatal Psychosis Puerperal Psychosis

Postpartum Thyroiditis

Inflammation of the thyroid during the first year after childbirth, caused by an immune reaction. It may first cause anxiety, sweating, and a fast heart-beat, followed by tiredness, cold intolerance, or low thyroid function; recovery varies.

Postpartum Urinary Retention

Inability to empty the bladder adequately after childbirth, sometimes associated with epidural anesthesia, perineal trauma, swelling, or prolonged labor. Prompt assessment prevents bladder overdistension and injury.

Postprandial

Postprandial means occurring after a meal, especially the changes in glucose, insulin, digestion, and circulation after eating.

Postprandial Period

The postprandial period is the interval after eating when digestion and nutrient absorption occur

and glucose, insulin, and other metabolic responses change.

Postrenal AKI

Sudden loss of kidney function caused by blocked urine flow. Prostate enlargement, stones, tumors, scarring, or bladder-nerve problems may be responsible; kidney damage becomes more likely when the blockage is severe or lasts a long time.

Poststreptococcal Glomerulonephritis

Poststreptococcal glomerulonephritis is kidney inflammation occurring after certain streptococcal infections, causing blood or protein in urine, swelling, high blood pressure, and reduced kidney function.

Poststreptococcal Pustulosis

A rare immune-related outbreak of pus-filled spots after a streptococcal throat infection. The spots usually appear on reddened skin of the trunk or limbs and should be assessed to confirm the cause and exclude infection or a medicine reaction.

Postsurgical Pain Treatment In Adults

Adult postsurgical pain treatment may combine acetaminophen, anti-inflammatory medicines, regional anesthesia, limited opioids, movement, and wound care according to the operation and patient risks.

Postsynaptic Membrane

The receiving surface of a nerve or muscle cell where a neighboring nerve releases a chemical signal. Receptors in this surface detect the signal and help start or change an electrical response.

Postterm Pregnancy

Pregnancy continuing beyond 42 completed weeks. The placenta may work less effectively and the baby may become unusually large or pass stool before birth, so fetal wellbeing and delivery timing require medical monitoring.

Posttraumatic Stress Disorder

A mental-health disorder that may follow a frightening or life-threatening event. It can cause unwanted

memories or dreams, avoidance, emotional numbness, guilt, poor sleep, and constant alertness that disrupt daily life.

Alternate Names:

PTSD (Posttraumatic Stress Disorder)

Postural

Postural means relating to body position or posture, including symptoms or vital signs that change when a person sits, stands, or lies down.

Postural Drainage

Using specific body positions so gravity helps mucus move from smaller airways into larger ones, where it can be coughed out. A respiratory clinician selects positions based on the affected lung area and the person's condition.

Postural Hypotension

A drop in blood pressure after standing that may cause dizziness, blurred vision, weakness, or fainting. It can result from dehydration, medicines, nerve disorders, blood loss, or heart problems and increases fall risk.

Postural Orthostatic Tachycardia Syndrome

A condition in which the heart rate rises unusually much after standing, causing dizziness, racing heart-beat, fatigue, weakness, nausea, difficulty thinking, or fainting. It can resemble symptoms caused by dehydration, medicines, anemia, heart disease, and other conditions.

Posture

The alignment and position of the body while resting or moving. Posture depends on bones, joints, muscles, nerves, vision, and balance and can affect comfort, breathing, movement, and injury risk.

Potassium

An essential mineral and body salt needed for nerve signals, muscle movement, and normal heart rhythm.

Potassium (K)

The chemical symbol for potassium, a major intracellular electrolyte needed for nerve signaling, muscle contraction, and cardiac electrical activity.

Potassium Acetate

A potassium salt used to replace potassium or provide acetate in selected medical and laboratory applications; dosing requires monitoring of kidney function and serum potassium.

Potassium Binders

Medicines taken by mouth that trap potassium in the intestine so it leaves the body in stool. They help lower persistently high blood potassium in selected people, especially with kidney disease, but require monitoring for constipation, swelling, and other electrolyte changes.

Potassium Carbonate Poisoning

Swallowing potassium carbonate can irritate or burn the mouth, throat, and stomach and may raise blood potassium dangerously. Vomiting, weakness, abnormal heartbeat, or breathing difficulty requires emergency care.

Potassium Channel

A membrane protein that allows potassium ions to cross cells and helps control electrical excitability, heart rhythm, and hormone release.

Potassium Chloride

A salt used to prevent or treat low blood potassium. It may be taken by mouth or given into a vein; too much can cause dangerous heart-rhythm problems, especially when kidney function is reduced.

Potassium Citrate

A medicine that makes urine less acidic and increases urinary citrate, helping prevent some kidney stones. It can dangerously raise blood potassium in people with kidney disease or those taking certain medicines.

Potassium Cyanide

A highly poisonous chemical that prevents cells from using oxygen. Swallowing or inhaling it can rapidly cause headache, confusion, seizures, collapse, heart failure, and death and requires emergency treatment.

Potassium Deficiency

An abnormally low blood potassium level, which can cause weakness, cramps, constipation, abnormal heart rhythms, or paralysis.

Potassium Dichromate

A toxic, corrosive chemical that can burn the skin, eyes, mouth, and digestive tract. Swallowing or inhaling it may damage the kidneys, liver, blood, or lungs and requires urgent poison-control or emergency care.

Potassium Hydroxide Poisoning

A severe chemical burn caused by swallowing or contacting potassium hydroxide, a strong alkali. It can damage the mouth, throat, stomach, skin, eyes, and lungs; rinse exposed areas and seek emergency help immediately.

Potassium In Diet

Dietary potassium comes from fruits, vegetables, beans, dairy, and other foods; intake may need adjustment in kidney disease or with medicines that change potassium levels.

Potassium Iodide

Potassium iodide supplies iodide and is used in selected thyroid conditions, radiation emergencies, and some expectorant preparations; excess can disturb thyroid function.

Potassium Ion

The positively charged form of potassium, the principal intracellular cation that helps establish resting membrane potential, nerve transmission, muscle contraction, and cardiac rhythm.

Potassium Permanganate

A chemical sometimes used as a very dilute skin antiseptic or drying solution. Concentrated material can burn tissue, stain skin, and poison if swallowed, so it must be prepared and used carefully.

Potassium Test

A potassium test measures potassium in blood, usually to assess heart, muscle, kidney, or medication-related electrolyte problems.

Potassium Urine Test

A urine potassium test measures potassium excretion and helps determine whether abnormal blood potassium is related to kidney losses or other causes.

Potassium-Sparing Diuretic

A diuretic that promotes sodium excretion while reducing potassium loss, such as spironolactone or amiloride.

Potassium-Sparing Diuretics

Water tablets that help remove salt and water while limiting potassium loss. They are used for selected blood-pressure, heart, liver, or hormone conditions, but can raise potassium dangerously, especially in kidney disease or with certain medicines.

Potato Plant Poisoning - Green Tubers And Sprouts

Green potatoes, sprouts, and leaves can contain high levels of natural toxins that cause nausea, vomiting, diarrhea, abdominal pain, confusion, weakness, or rarely seizures. Contact poison control after significant ingestion.

Potbellies And Toddlers

A rounded abdomen in a toddler is often normal body shape or posture, but persistent distension with pain, vomiting, poor growth, constipation, or a mass needs medical assessment.

Potency

The amount of a drug required to produce a specified effect. A more potent drug produces that effect at

a lower dose, but potency does not indicate the maximum effect.

Potential

Potential describes a capacity, possibility, or stored energy that may become clinically relevant depending on circumstances and additional findings.

Potential Acuity Meter

An eye-testing device that estimates the vision a person might achieve after treatment of an eye problem such as a cataract. Results can be limited by retinal, nerve, or other disease.

Potocki-Lupski Syndrome

A genetic condition caused by an extra copy of a small section of chromosome 17. It may cause low muscle tone, feeding and growth problems, developmental or learning difficulties, autism-related features, behavior differences, and congenital heart defects.

Alternate Names:

PTLS; Duplication 17p11.2 Syndrome

Pott Disease

Tuberculosis infection of the bones of the spine. It can cause persistent back pain, collapse or bending of the spine, an abscess, and pressure on the spinal cord leading to weakness or paralysis.

Pott'S Disease

Tuberculosis of the spine, causing vertebral destruction, back pain, deformity, or neurologic compromise.

Pott'S Fracture

An ankle fracture-dislocation involving the malleoli, the bony prominences on each side of the ankle. The historical term is used variably, so the exact fracture pattern should be described on imaging.

Potter Syndrome

A pattern of birth abnormalities caused by very low amniotic fluid, often because both fetal kidneys are absent or cannot make urine. It may cause

underdeveloped lungs, distinctive facial features, and limb changes and is usually life-threatening.

Pouch

A sac-like body structure or a surgically created reservoir. Examples include a cheek pouch, a pouch in the digestive tract, and an ileal pouch made from small intestine.

Pouch Of Douglas

The pouch of Douglas is the peritoneal recess between the uterus and rectum, also called the rectouterine pouch, where fluid may collect.

Pound

A unit measuring weight or force, with meaning determined by context. In healthcare, pounds may describe body weight, pressure, equipment loads, or medicine instructions and should be distinguished from metric units.

Povidone

Povidone is a water-soluble polymer used in medicines, eye products, and other preparations; it is also part of povidone-iodine antiseptic.

Povidone-Iodine

Povidone-iodine is an iodine-containing antiseptic used on skin or tissue before selected procedures; it can irritate skin and affect the thyroid with extensive use.

Powassan Encephalitis

Inflammation of the brain caused by Powassan virus, a tick-borne flavivirus. It can cause fever, headache, vomiting, confusion, seizures, or weakness and may require hospitalization.

Powassan Virus Disease

Powassan virus disease is a rare tick-borne infection that can cause fever, headache, vomiting, confusion, seizures, meningitis, or encephalitis. Treatment is supportive, and prevention relies on avoiding ticks and removing them promptly.

Powder Diffraction

An analytical method that identifies crystalline substances by measuring how an X-ray or other beam is diffracted by powdered material.

Power

The rate at which work is performed; in exercise, it combines force and movement speed.

Power Training

Exercise designed to improve the ability to produce force rapidly.

Alternate Names:

Explosive training

Pox

A disease producing vesicles, pustules, or pitted scars; the term is used in names such as smallpox and cowpox.

Poxviridae

A family of large DNA viruses that includes orthopoxviruses, molluscipoxvirus, and parapoxviruses; some cause significant human disease.

Poxviridae Infection

An infection caused by a poxvirus, ranging from localized skin lesions to severe systemic disease depending on the virus and host.

Poxvirus

A family of large DNA viruses that includes variola, vaccinia, mpox, and molluscum contagiosum viruses.

Ppar Alpha

A protein inside cells that helps control how the body uses fats. Fibrate medicines activate it to lower some blood fats, especially triglycerides.

Ppar Delta

A protein inside cells that helps regulate fat use, energy balance, inflammation, and the development of some tissues. It is mainly studied in laboratory and drug research.

PPD

PPD may mean purified protein derivative used in tuberculosis skin testing or post-partum depression; context determines the intended meaning.

PPD Skin Test

A PPD skin test places a small amount of tuberculin under the skin to assess immune evidence of tuberculosis exposure; interpretation depends on risk and the size of the reaction.

PR Interval

The ECG interval from the start of atrial depolarization to the start of ventricular depolarization, reflecting atrioventricular conduction.

Practitioner

A person qualified and authorized to practice a healthcare profession.

Prader-Labhart-Willi Syndrome

Alternate index label; see *Prader-Willi syndrome*.

Prader-Willi Syndrome

A genetic disorder that often causes weak muscle tone and feeding difficulty in infancy, followed later by unusually strong hunger, obesity, short stature, learning difficulties, hormone problems, and behavioral changes.

Alternate Names:

Prader-Labhart-Willi Syndrome

Pragmatic

Focused on what works in ordinary real-world conditions. A pragmatic clinical trial studies how an intervention performs in usual healthcare rather than under highly controlled conditions.

Pragmatic Trial

A pragmatic trial evaluates an intervention under usual real-world care conditions to estimate how well it works in routine practice.

Pralatrexate

A folate-blocking chemotherapy medicine used for

some relapsed or treatment-resistant peripheral T-cell lymphomas. It can cause mouth sores, low blood counts, infection, fatigue, nausea, and other serious treatment-related effects.

Pralidoxime

An oxime that can reactivate inhibited acetylcholinesterase when administered early after organophosphate poisoning, particularly for nicotinic weakness and respiratory-muscle dysfunction. It is used with atropine and supportive care according to exposure and local guidance.

Pramipexole

A medicine that stimulates dopamine receptors and is used mainly for Parkinson disease or restless legs syndrome. It can cause nausea, sleepiness, dizziness, sudden sleep, hallucinations, or impulse-control problems.

Prandial

Prandial means relating to a meal, as in preprandial before eating or postprandial after eating.

Prasugrel

An antiplatelet medicine that prevents blood cells from clumping. It is used in selected people with acute coronary syndrome receiving coronary stents, but it increases bleeding risk and is unsuitable for some patients.

Pravastatin

A statin that lowers LDL cholesterol by inhibiting HMG-CoA reductase.

Pravastatin Sodium

A statin medicine that lowers harmful LDL cholesterol by reducing cholesterol production in the liver. It helps reduce heart attack and stroke risk alongside diet, exercise, and other risk-factor treatment.

Praziquantel

A medicine used to treat several infections caused by parasitic worms, including schistosomiasis, tapeworms, and flukes. It damages the worms so the

body can remove them; dizziness, sleepiness, nausea, or abdominal discomfort may occur.

Pre-Cancerous

Describing abnormal cells or tissue that are not cancer but have a higher-than-usual chance of becoming cancer. The risk varies by the tissue and the severity of change; monitoring or removal may reduce the risk.

Pre-Eclampsia

A pregnancy complication involving new high blood pressure after 20 weeks, with protein in the urine or signs that organs or the placenta are affected. Severe headache, vision changes, upper-abdominal pain, or seizures require urgent care.

Pre-Existing Diabetes And Pregnancy

Pre-existing type 1 or type 2 diabetes during pregnancy increases risks to parent and fetus, so glucose control, medicines, fetal growth, blood pressure, and eye and kidney health need coordinated care.

Pre-Hepatic Jaundice (Haemolytic Jaundice)

Jaundice caused by excessive breakdown of red blood cells before bilirubin reaches the liver, producing increased unconjugated bilirubin.

Alternate Names:

Haemolytic Jaundice

Pre-MiRNA

A pre-miRNA is an early hairpin-shaped microRNA transcript processed in the nucleus before becoming a mature regulator of gene expression.

Pre-Synaptic

Located before a synapse, especially on the nerve ending that releases a chemical messenger. Presynaptic activity controls how much signal reaches the next nerve cell, muscle, or gland.

Prealbumin

Another name for transthyretin, a protein made mainly by the liver that carries thyroid hormone and

vitamin A in the blood. Its blood level changes with inflammation, illness, kidney disease, and nutrition, so it is not a nutrition measure by itself.

Prebiotics

Food components, usually nondigestible fibers, that feed selected helpful bacteria in the large intestine. Sources include garlic, onions, leeks, asparagus, bananas, and whole grains; increasing them gradually may reduce gas.

Prebiotics And Probiotics

Prebiotics are food components that feed certain helpful gut bacteria. Probiotics are live microorganisms found in some foods or supplements. Their effects depend on the specific product and health condition; they are not interchangeable treatments.

Precancerous Condition

A precancerous condition contains abnormal changes that may progress to cancer but are not cancer themselves.

Precancerous Polyp

A precancerous polyp is a growth with cellular changes that can become cancerous over time if not removed or monitored appropriately.

Precaution

An action taken in advance to lower the chance of harm, infection, or error. Examples include hand-washing, protective equipment, checking a medicine, using a seat belt, and avoiding a known trigger.

Precipitate Labour

Unusually rapid labour, often defined as delivery within three hours of the onset of regular contractions.

Precipitating Factor

A precipitating factor is an event or exposure that triggers the onset or worsening of symptoms or disease in a susceptible person.

Preclinical

Before human testing, or describing disease changes that occur before symptoms become noticeable or cause recognized illness.

Precocious Puberty

Development of puberty-related body changes earlier than expected. It may result from early brain signals, hormone-producing disorders, medicines, or other conditions and requires evaluation to protect growth and emotional wellbeing.

Alternate Names:

Early Puberty Premature Puberty

Preconception Care

Health care before pregnancy to improve the chance of a healthy pregnancy. It reviews medical conditions, medicines, vaccinations, genetic risks, nutrition, folic acid, substance exposure, and lifestyle, and helps plan changes before conception.

Preconception Counseling

Healthcare advice before pregnancy to improve the health of the pregnant person and future baby. It reviews medicines, vaccines, chronic diseases, nutrition, genetic risks, harmful exposures, and recommended supplements.

Precordial Catch Syndrome

Brief, sharp, localized chest pain near the heart that worsens with breathing and usually occurs in otherwise healthy children or adolescents.

Precordium

The area of the front chest wall over the heart and nearby large blood vessels. A clinician examines this area by looking, feeling for the heartbeat or unusual movement, and listening for heart sounds and murmurs.

Precursor

A substance that the body can change into another substance with a useful biological effect. For example, some vitamins, hormones, and medicines begin as precursors and are changed by enzymes in

particular tissues.

Prediabetes

Blood glucose higher than normal but below the diagnostic threshold for diabetes, usually identified by A1C, fasting glucose, or an oral glucose-tolerance test; it increases future diabetes and cardiovascular risk.

Alternate Names:

Diabetes Pre (Prediabetes)

Prediabetes Syndrome

Blood glucose levels above normal but below the diabetes threshold, associated with increased future risk of type 2 diabetes and cardiovascular disease.

Predictive Test

A test that estimates whether a person or disease is likely to respond to a particular treatment.

Predispose

To predispose is to increase a person's susceptibility or likelihood of developing a disease or response when additional triggers occur.

Prednimustine

Prednimustine is a former antineoplastic drug combining a corticosteroid-related group with an alkylating component and causing immunosuppression and marrow toxicity.

Prednisolone

Prednisolone is a corticosteroid used to reduce inflammation and immune activity; prolonged or high-dose use can cause infection, bone loss, and other effects.

Prednisone

Prednisone is a corticosteroid used for inflammatory, allergic, and autoimmune conditions; it should often be tapered after prolonged use.

Preeclampsia

A pregnancy complication involving new high blood pressure after 20 weeks together with protein in the

urine or signs of injury to organs such as the kidneys, liver, brain, lungs, or blood-clotting system. It can progress to seizures, stroke, or harm to the placenta and fetus.

Alternate Names:

Pregnancy-Related Hypertension

Preeclampsia With Severe Features

A severe form of preeclampsia involving very high blood pressure or damage to organs such as the brain, liver, kidneys, lungs, or blood-clotting system. Severe headache, vision changes, breathing difficulty, or upper-abdominal pain requires emergency care.

Preexcitation Syndrome

A heart-rhythm condition in which an extra electrical pathway activates the lower heart chambers too early. It can cause episodes of a very fast heartbeat, dizziness, or fainting and may require specialist assessment.

Prefrontal

Relating to the anterior part of the frontal lobe involved in planning, judgment, working memory, and behavior.

Prefrontal Cortex

The prefrontal cortex is the front part of the frontal lobe involved in planning, judgment, working memory, impulse control, and social behavior.

Pregabalin

Pregabalin is used for certain nerve pain and seizures and may cause dizziness, sleepiness, swelling, or dependence.

Preganglionic Fiber

A nerve fiber that carries automatic body signals from the brain or spinal cord to a relay station before they reach an organ. These signals help control the heart, blood vessels, glands, digestion, and bladder.

Pregnancy

The period during which an embryo or fetus develops in the uterus, usually lasting about 40 weeks from

the first day of the last menstrual period until birth.

Pregnancy - Health Risks

Health risks in pregnancy vary with medical conditions, medicines, infections, age, exposures, and obstetric history; prenatal assessment identifies preventable complications and needed monitoring.

Pregnancy - Identifying Fertile Days

Fertile days are the interval around ovulation when intercourse can lead to pregnancy; cycle timing, cervical mucus, basal temperature, and ovulation tests can provide estimates but are imperfect.

Pregnancy And Herpes

Genital herpes during pregnancy can affect delivery planning and rarely infect the newborn; antiviral treatment and examination of lesions near labor help reduce transmission risk.

Pregnancy And The Flu

Influenza during pregnancy can be more severe and affect the fetus; vaccination is recommended in pregnancy, and suspected illness should receive prompt clinical advice about antiviral treatment.

Pregnancy And Travel

Travel during pregnancy depends on gestational age, health, destination infections, transport, and access to care; prevention includes vaccines as appropriate, food and water safety, movement, and medical planning.

Pregnancy And Work

Work during pregnancy is usually possible but may require adjustments for heavy lifting, prolonged standing, heat, chemicals, radiation, infection, night work, or other occupational hazards.

Pregnancy Care

Pregnancy care includes regular maternal and fetal checkups, screening, nutrition and medicine review, vaccination, and advice about warning symptoms.

Pregnancy Complication

A maternal, fetal, placental, or labor-related problem that disrupts an otherwise expected pregnancy, such as preeclampsia, hemorrhage, diabetes, growth restriction, or preterm labor.

Pregnancy Ectopic (Ectopic Pregnancy)

Alternate index label for Ectopic Pregnancy.

Pregnancy High Blood Pressure (Pregnancy: Preeclampsia And Eclampsia)

Alternate index label for Pregnancy: Preeclampsia and Eclampsia.

Pregnancy Nutrition

Food and supplements during pregnancy that support the pregnant person and fetal growth. Needs vary, but a varied diet usually includes enough protein, folate, iron, iodine, calcium, vitamin D, and other nutrients; individual advice is important.

Pregnancy Of Unknown Location

A positive pregnancy test without a confirmed intrauterine or ectopic pregnancy on ultrasound. Serial human chorionic gonadotropin measurements and repeat imaging help determine whether the pregnancy is early, failing, or ectopic.

Pregnancy Outcome

Pregnancy outcome describes what happens to a pregnancy, such as live birth, miscarriage, stillbirth, preterm birth, or other maternal or fetal result.

Pregnancy Planning (Preparing For Pregnancy)

Alternate index label for Preparing for Pregnancy.

Pregnancy Status

Pregnancy status indicates whether a person is pregnant, not pregnant, or of unknown status and can affect medication, imaging, and treatment decisions.

Pregnancy Test

A urine or blood test that detects human chorionic

gonadotropin, a hormone made soon after an embryo attaches to the uterus. Testing too early can be falsely negative; an unexpected result may need repeat testing or medical assessment.

Pregnancy Trimester

One of three approximate stages of pregnancy: first through 13 weeks, second from 14 through 27 weeks, and third from 28 weeks until birth. The stages help organize fetal development, screening, and care.

Pregnancy Tubal (Ectopic Pregnancy)

Alternate index label for Ectopic Pregnancy.

Pregnancy-Induced Hypertension

New-onset hypertension during pregnancy without the proteinuria or organ dysfunction that defines preeclampsia. Diagnosis and treatment depend on repeated blood-pressure measurements, gestational age, symptoms, and evidence of maternal or fetal complications.

Pregnancy-Related Hypertension

Alternate index label; see *Preeclampsia*.

Pregnancy: Bleeding During The First Trimester

First-trimester bleeding may occur with implantation, cervical changes, miscarriage, ectopic pregnancy, or other causes. Assessment uses symptoms, examination, serial pregnancy hormone testing, and ultrasound; heavy bleeding, severe pain, faintness, or shoulder pain is urgent.

Pregnancy: Pain Relief Options For Birth

Labor pain relief may include breathing and movement, water, massage, nitrous oxide, intravenous medicines, epidural analgesia, or spinal anesthesia. Choice depends on labor stage, maternal and fetal status, contraindications, availability, and informed preference.

Pregnancy: Placenta Previa

Placenta previa occurs when the placenta lies over or near the cervical opening and can cause painless

bright-red bleeding, especially later in pregnancy. Digital vaginal examination is avoided until location is known; recurrent bleeding requires obstetric planning and sometimes cesarean delivery.

Pregnancy: Preeclampsia And Eclampsia

Preeclampsia is new hypertension during pregnancy with proteinuria or organ dysfunction; eclampsia is the occurrence of seizures. Severe headache, visual symptoms, upper-abdominal pain, shortness of breath, or seizure requires emergency obstetric treatment.

Alternate Names:

Eclampsia Pregnancy (Pregnancy: Preeclampsia And Eclampsia) Pregnancy High Blood Pressure (Pregnancy: Preeclampsia And Eclampsia)

Pregnane

Pregnane is a 21-carbon steroid hydrocarbon that forms the structural backbone of progesterone and several corticosteroid and progestin compounds.

Pregnanolone

Pregnanolone is a neuroactive steroid metabolite that can modulate GABA-A receptors and influence neuronal excitability, mood, and sedation.

Pregnant

Pregnant means carrying a developing embryo or fetus in the uterus after conception; pregnancy status affects medicines, imaging, and clinical decisions.

Pregnant (Pregnancy Planning (Preparing For Pregnancy))

Alternate index label for Pregnancy Planning (Preparing for Pregnancy).

Pregnenolone

Pregnenolone is a steroid hormone precursor made from cholesterol that can be converted into progesterone, corticosteroids, and sex hormones.

Prehn Sign

A test in which lifting the painful testicle is said to relieve pain in epididymitis but not testicular torsion.

This finding is unreliable and cannot safely rule out torsion. Sudden severe testicle pain, swelling, nausea, or a high-riding testicle requires urgent assessment, usually with Doppler ultrasound and immediate surgery when torsion cannot be excluded.

Alternate Names:

Prehn's Sign

Prehypertension

An older term for blood pressure that is higher than ideal but below the level once used to diagnose high blood pressure. Current guidelines use different categories; repeated readings, overall heart risk, and lifestyle are considered when deciding what help is needed.

Alternate Names:

Elevated blood pressure

Preimplantation Genetic Testing

Genetic testing of cells from an embryo created through in-vitro fertilization before possible transfer to the uterus, used in selected situations to identify specific inherited disorders or chromosome-number abnormalities.

Preload

The amount of blood filling the heart's lower chambers and stretching their muscle just before each heartbeat. It mainly depends on blood returning to the heart and influences how strongly the heart can pump.

Preload Reduction

A decrease in the amount of blood returning to the heart, which lowers the heart's filling pressure and workload. It may occur with fluid loss or medicines and can help some forms of heart failure.

Premalignant

Describing cells or tissue changes that have a higher chance of becoming cancer but have not grown into nearby tissues. Not every premalignant change becomes cancer; follow-up or removal depends on its type, location, size, and risk.

Premature

Occurring earlier than expected or before the usual developmental or pregnancy-related time. A premature birth occurs before thirty-seven completed weeks and may increase risks involving breathing, feeding, temperature, and development.

Premature (Early) Ejaculation

A persistent or recurrent pattern of ejaculation that occurs sooner than desired, with limited control and associated personal distress. Assessment considers the person's typical experience and sexual context.

Alternate Names:

Early

Premature Adrenarche

Early appearance of pubic or axillary hair, body odor, or mild acne from adrenal androgen production without true central puberty; evaluation excludes virilizing disorders.

Premature Atrial Contraction

An early heartbeat that starts in the upper chambers of the heart rather than at the usual pacemaker. It may feel like a skipped or extra beat and is often harmless, but frequent episodes or fainting need assessment.

Premature Baby

An infant born before 37 completed weeks of pregnancy, with risks related to immature lungs, brain, feeding, temperature control, immunity, and other organ systems.

Premature Birth

Birth before 37 completed weeks of pregnancy; the earlier the birth, the greater the risks of respiratory, neurological, and developmental complications.

Premature Closure

Closing of a body opening, growth plate, or developmental connection earlier than expected. The result depends on the site and may include blockage, abnormal body shape, or restricted growth; treatment depends on the cause.

Premature Ejaculation

Ejaculation that occurs sooner than desired with poor control and causes persistent personal or relationship distress.

Premature Infant

An infant born before 37 completed weeks of pregnancy. Earlier birth increases the risk of breathing, feeding, temperature-control, infection, and developmental problems.

Premature Labor

Regular uterine contractions with cervical change before 37 completed weeks of pregnancy, which can lead to preterm birth and requires assessment of membranes, infection, and fetal well-being.

Premature Labour (Preterm Labour)

Labour that begins before 37 completed weeks of pregnancy and may result in preterm birth.

Alternate Names:

Preterm Labour

Premature Menopause

Loss of ovarian function and menstruation before age 40, now often termed primary ovarian insufficiency.

Premature Menopause (Medical Procedural Causes)

Alternate index label for Medical Procedural Causes.

Premature Ovarian Failure

Premature ovarian failure is loss of normal ovarian function before age 40, causing irregular or absent periods, infertility, and low-estrogen symptoms; causes may be genetic, autoimmune, toxic, or unknown.

Premature Ovarian Insufficiency

Reduced or intermittent ovarian function before age 40, causing irregular or absent periods, reduced fertility, and sometimes hot flashes, vaginal dryness, or low bone density. Causes include genetic condi-

tions, autoimmune disease, chemotherapy, radiation, surgery, or no identifiable cause.

Premature Puberty

Alternate index label; see *Precocious puberty*.

Premature Rupture Of Membranes

Breaking of the amniotic sac before labor begins. If it happens before 37 weeks, it is called preterm rupture; a gush or continuing leak of fluid needs prompt obstetric assessment because infection and early birth may follow.

Premature Thelarche

Isolated breast development in a young child without other signs of puberty, often transient but assessed for growth acceleration, estrogen exposure, or true precocious puberty.

Premature Ventricular Contraction

An early heartbeat that starts in a ventricle instead of following the heart's usual rhythm. It may feel like a skipped or extra beat and is often harmless, but frequent PVCs may occur with fainting, chest pain, or breathlessness.

Alternate Names:

PVC

Premature Ventricular Contractions

Ectopic beats originating from the ventricles, appearing as wide, bizarre QRS complexes that occur earlier than expected. PVCs are common in the general population and are usually benign. Frequent PVCs (>10% of total beats) may cause left ventricular dysfunction.

Alternate Names:

Extrasystole (Premature Ventricular Contractions)
PVC (Premature Ventricular Contractions)

Premature Ventricular Contractions (PVCs)

Early extra heartbeats originating in the heart's ventricles, often felt as fluttering, skipped beats, or pounding and frequently benign.

Alternate Names:

Extrasystole PVCs Ventricular Premature Contraction VPCs

Premenstrual

Occurring during the days before menstruation; the term commonly refers to cyclical symptoms such as mood change, breast tenderness, bloating, headache, or fatigue.

Premenstrual Breast Changes

Premenstrual breast changes include cyclic fullness, tenderness, swelling, or lumpiness caused by hormonal variation; a persistent one-sided mass, skin change, or bloody discharge needs evaluation.

Premenstrual Dysphoric Disorder

A severe form of premenstrual symptoms that repeatedly causes depression, irritability, anxiety, mood swings, or loss of control along with physical symptoms and major disruption of work, relationships, or daily life before menstruation.

Premenstrual Syndrome

A recurring group of physical and emotional symptoms in the days or weeks before menstruation that improves when bleeding begins. Symptoms may include irritability, mood changes, bloating, breast tenderness, headache, tiredness, or appetite changes.

Premolar (Bicuspid)

One of the permanent teeth between the canine teeth and molars. Premolars usually have two raised points and help tear and crush food; decay, crowding, or infection may require dental treatment.

Prenatal

Prenatal means occurring during pregnancy before birth, including care, testing, development, counseling, and treatment of the pregnant person or fetus.

Prenatal Care

Regular health care during pregnancy to monitor the pregnant person and developing baby. Visits may include blood-pressure and urine checks, blood

tests, ultrasound, screening, vaccination, nutrition and medicine review, and advice about warning signs.

Prenatal Development

Prenatal development is growth and differentiation of the embryo and fetus from conception to birth, influenced by genes, nutrition, maternal health, and exposures.

Prenatal Diagnosis

Testing during pregnancy to identify a possible genetic, chromosome, or structural condition in the fetus. It may use ultrasound, blood-based screening, or diagnostic tests such as chorionic-villus sampling and amniocentesis, depending on the clinical question and stage of pregnancy.

Prenatal Exposure

Contact of a fetus with a medicine, substance, infection, or environmental factor during pregnancy. Effects depend on the agent, dose, timing, and fetal susceptibility.

Prenatal Genetic Counseling

A consultation that reviews the risk of inherited or chromosomal conditions, available screening and diagnostic tests, possible results, and reproductive options before or during pregnancy.

Prenatal Testing

Screening and diagnostic tests performed during pregnancy to assess fetal health and development or identify genetic, chromosomal, and structural conditions. Tests may include ultrasound, maternal blood tests, cell-free DNA screening, chorionic-villus sampling, and amniocentesis.

Prenatal Vitamins

Supplements designed to provide nutrients needed during pregnancy, commonly including folic acid, iron, iodine, and vitamin D. The appropriate product and dose depend on diet, medical conditions, laboratory results, and pregnancy needs; excessive doses can be harmful.

Prenylation

A cell process that attaches a fat-like group to a protein, helping direct where the protein works and how it interacts with other proteins. Abnormal prenylation can contribute to some inherited disorders and cancers.

Preop

Preop is an abbreviation for preoperative, meaning relating to preparation and assessment before surgery.

Preoperative Assessment

A medical review before surgery that checks illnesses, medicines, allergies, previous anesthesia problems, heart and lung function, and the airway. Tests are ordered when indicated, and correctable risks are addressed before anesthesia and the operation.

Preoperative Care

Assessment and preparation before an operation. It may include reviewing illnesses and medicines, checking allergies, performing needed tests, explaining anesthesia and recovery, planning fasting and medicines, and reducing risks such as infection or blood clots.

Preoperative Evaluation

Medical assessment before surgery to identify and reduce risks. It reviews health history, medicines, allergies, physical findings, needed tests, anesthesia concerns, and preparations that improve safety during and after surgery.

Preoptic Area

The preoptic area is a hypothalamic region involved in temperature regulation, sleep, reproductive behavior, and hormone control.

Preparing Children For Pregnancy And A New Baby

Preparing a child for a new baby involves age-appropriate explanation, routine and attention planning, safe involvement, reassurance, and support for emotional or behavioral changes.

Preparing For Surgery When You Have Diabetes

Planning surgery with the diabetes team to keep blood sugar safe before, during, and after the operation. The plan may adjust food, insulin, or other medicines and includes monitoring for low sugar, high sugar, infection, and delayed healing.

Prepubertal

Prepubertal means before the physical and hormonal changes of puberty have begun or progressed to reproductive maturity.

Prepuce

A fold of skin covering and protecting the end of an external sex organ. The penile prepuce is the foreskin over the head of the penis; the clitoral prepuce is the hood over the clitoris.

Prerenal Azotemia

A rise in kidney waste products because the kidneys receive too little effective blood flow, without initial damage to the kidney tissue itself. Dehydration, blood loss, severe infection, heart failure, or liver disease may cause it and can lead to kidney injury if untreated.

Presbycusis

Gradual age-related sensorineural hearing loss, often affecting high-pitched sounds first and making speech hard to understand in noise. Hearing aids and communication strategies may help.

Presbycusis (Presbycusis)

Age-related, usually gradual sensorineural hearing loss, particularly affecting the ability to hear high-frequency sounds and understand speech in noise.

Alternate Names:

Presbycusis

Presbycusis

Bilateral, usually symmetric age-related sensorineural hearing loss, initially affecting high frequencies and speech discrimination in noise. Management includes hearing rehabilitation, hearing aids, com-

munication strategies, and cochlear implantation in selected severe cases.

Presbyopia

The gradual loss of the eye's ability to focus on nearby objects with age. It commonly causes difficulty reading small print or doing close work and is corrected with reading glasses, contact lenses, or other prescribed lenses.

Preschooler Development

Preschooler development includes rapid gains in language, motor skills, thinking, self-care, play, and social-emotional regulation; milestones vary, but loss of skills warrants assessment.

Preschooler Test Or Procedure Preparation

Preparing a preschooler for a test or procedure uses simple explanations, play, comfort objects, and caregiver support while following any fasting or medicine instructions.

Prescription

A written or electronic instruction from an authorized healthcare prescriber for a medicine, device, or treatment. It states what is needed and how to use it, allowing a pharmacy or service to provide care safely.

Prescription Medications

Pharmaceutical drugs that require authorization from a licensed healthcare provider before they can be dispensed to a patient. These medications are regulated because they carry risks that necessitate professional oversight, including potential side effects, drug interactions, and the need for precise dosing.

Presenile Dementia

Presenile dementia is an older term for dementia beginning before the usual older-adult age range; modern diagnosis specifies the underlying disease and age at onset.

Presenilin

Presenilin is a component of the gamma-secretase complex that processes membrane proteins; inherited variants can cause familial early-onset Alzheimer disease.

Presentation

The part of a fetus that is directed toward the birth canal, or the symptoms and signs with which a patient seeks care.

Preseptal Cellulitis

An infection of the eyelid and tissues around the eye, without infection inside the eye socket. It causes redness, swelling, pain, and fever; pain with eye movement, reduced vision, or a bulging eye may indicate deeper orbital infection and needs emergency assessment.

Alternate Names:

Periorbital Cellulitis

Preservation

Maintenance of tissue, cells, organs, or function by preventing deterioration.

Preservative

A substance added to food, medicine, or cosmetics to prevent microbial growth or chemical breakdown.

Pressor

Raising blood pressure, usually by tightening blood vessels or increasing heart output. Pressor medicines may treat dangerously low blood pressure but require monitoring because they can reduce circulation to some tissues.

Pressoreceptor

A pressure-sensitive receptor, especially a baroreceptor in the carotid sinus or aortic arch, that detects arterial stretch and helps regulate heart rate and blood pressure.

Pressure

Force applied over a particular area. Medical pressure measurements include blood pressure, pressure

inside the skull, eye pressure, and airway pressure, and abnormal values can damage organs or impair function.

Pressure Atrophy

Thinning or wasting of tissue caused by prolonged pressure. Pressure can compress small blood vessels, reduce oxygen delivery, and gradually damage the affected tissue; the result depends on its location and duration.

Pressure Injury

Localized damage to the skin and/or underlying soft tissue caused by prolonged pressure, shear, or friction, most commonly over bony prominences.

Pressure Sore

Alternate index label; see Bedsores (pressure ulcers). A localized injury to skin and underlying tissue caused by prolonged pressure or shear, also called a pressure ulcer.

Pressure Support Ventilation

A ventilator mode in which the machine gives extra pressure with each breath the person starts, making breathing easier and reducing the work of the breathing muscles. It is often used while reducing ventilator support.

Pressure Ulcer

An area of skin and deeper tissue damaged by prolonged pressure, sliding, or rubbing, usually over a bony point such as the heel, hip, or tailbone. It may begin as persistent discoloration and progress to an open wound or deep tissue damage.

Pressure Ulcer Prevention

Measures that reduce prolonged pressure and tissue injury, including repositioning, support surfaces, skin inspection, moisture control, nutrition, and mobility.

Pressure Urticaria

A form of chronic inducible urticaria in which sustained pressure causes localized swelling, erythema,

and pain, usually after a delay of several hours. Lesions may last 8 to 72 hours and commonly affect the hands, feet, buttocks, or areas compressed by clothing or sitting.

Pressure-Flow Study

A bladder test that measures pressure while the bladder fills and while a person urinates, together with urine flow. It helps identify blockage or weak bladder muscle when difficulty emptying cannot be explained by symptoms alone.

Presynaptic Terminals

Presynaptic terminals are the ends of neurons that release neurotransmitters into synapses in response to electrical activity.

Presyncope

A feeling that fainting is about to occur without actually losing consciousness. It may cause lightheadedness, weakness, sweating, nausea, or blurred vision and can result from low blood pressure, dehydration, abnormal heart rhythm, medicines, or other illness.

Preterm Birth

Birth before 37 completed weeks of gestation. It may follow spontaneous labor or rupture of the membranes, or may be medically indicated because of maternal or fetal complications.

Preterm Infant

A baby born before 37 completed weeks of pregnancy. Earlier birth increases the chance of breathing, feeding, temperature-control, infection, and developmental problems; care depends on the baby's maturity, weight, and health.

Preterm Labor

Regular uterine contractions causing cervical change before 37 weeks gestation. Risk factors include prior preterm delivery, multiple gestation, infection, and cervical insufficiency. Diagnosis requires regular contractions with documented cervical change.

Preterm Premature Rupture Of

Membranes

Breaking of the amniotic sac before labor begins and before 37 completed weeks of pregnancy. It may cause a gush or continuing leak of fluid and increases the risks of infection, early birth, and problems from too little amniotic fluid.

Pretest Probability

The estimated probability that a patient has a disease before the result of a diagnostic test is known. It is based on prevalence, symptoms, examination findings, risk factors, and prior test results and should guide test selection and interpretation.

Pretibial Myxedema

Thickened, firm skin over the shins caused by an immune reaction associated with Graves disease. The skin may look swollen, waxy, or dimpled and usually does not leave a lasting indentation when pressed.

Pretibial Myxoedema

Thickened, waxy swelling of the skin over the shins, most often associated with Graves disease.

Prevalence

The proportion of people in a defined population who have a disease or characteristic at a particular time or during a stated period. It includes both newly diagnosed and previously existing cases.

Preventing Falls

Fall prevention combines strength and balance activity, vision and medication review, safe footwear, adequate lighting, handrails, removal of hazards, and appropriate assistive devices.

Preventing Food Poisoning

Reduce foodborne illness by washing hands, separating raw and cooked foods, cooking foods thoroughly, refrigerating them promptly, using safe water, and avoiding unpasteurized or contaminated products.

Preventing Head Injuries In Children

Children's head injuries can be reduced with age-

appropriate car seats, helmets, supervision, safe play areas, window and stair protection, and prevention of abusive shaking or impact.

Preventing Hepatitis A

Hepatitis A prevention relies on vaccination, hand-washing, safe food and water, sanitation, and post-exposure advice when close contact with an infected person occurs.

Preventing Hepatitis B Or C

Hepatitis B prevention includes vaccination and avoiding blood or sexual exposure; hepatitis C prevention centers on sterile injection equipment, screened blood, and testing and treatment of infection.

Preventing Pressure Injuries

Pressure-injury prevention uses regular repositioning, skin inspection, moisture control, nutrition, pressure-redistributing surfaces, and minimizing friction and shear in people with limited mobility.

Preventing Stroke

Stroke prevention includes controlling blood pressure, diabetes and cholesterol, avoiding tobacco, treating atrial fibrillation when indicated, exercising, and addressing other vascular risks.

Prevention

Actions that lower the chance of disease, detect problems early, prevent complications, or reduce disability. Examples include vaccination, healthy habits, screening, safety measures, controlling chronic conditions, and avoiding harmful exposures.

Preventive Dentistry

Dental care that lowers the risk of tooth decay, gum disease, and tooth loss. It includes brushing with fluoride toothpaste, cleaning between teeth, protective sealants when appropriate, healthy eating advice, and regular dental examinations.

Preventive Health Care

Preventive health care aims to prevent disease or de-

test it early through vaccination, screening, healthy behaviors, and routine medical care.

Preventive Medicine

The medical field focused on preventing illness and promoting health through individual care, screening, vaccination, and community programs.

Prevertebral Air

Air seen in the soft tissues in front of the spine on a neck X-ray. It can indicate injury or a hole in the swallowing or breathing passages, a deep infection, or recent surgery and may require urgent evaluation.

Priapism

Prolonged, painful erection lasting longer than 4 hours, occurring independently of sexual desire or stimulation. Medical emergency categorized into two types: ischemic (low-flow, veno-occlusive) and non-ischemic (high-flow, arterial).

Alternate Names:

Prolonged erection; persistent erection Low-Flow Priapism Nonischemic Priapism

Priapism (Penis Disorder)

Alternate index label for Penis Disorder.

Prick Test

A skin test in which small amounts of suspected allergens are introduced into the skin.

Alternate Names:

Skin-prick test

Prickly Heat

Miliaria, an itchy rash caused by blockage of sweat ducts.

Primary

First in time, origin, importance, or site; in disease classification it often means arising independently rather than secondary to another cause.

Primary Adrenal Insufficiency

Alternate index label; see *Addison's disease*.

Primary Adrenal Insufficiency (Addison's Disease)

Destruction or dysfunction of the adrenal cortex causing deficiency of cortisol and aldosterone, presenting with fatigue, hyperpigmentation, weight loss, and salt craving. Lifelong hormone replacement is required.

Alternate Names:

Addison's disease

Primary Adrenal Lymphoma

A rare lymphoma arising primarily in the adrenal gland, most commonly diffuse large B-cell lymphoma. It often presents bilaterally and may cause adrenal insufficiency.

Primary Aldosteronism

Excess production of aldosterone by the adrenal glands, usually from an adrenal nodule or enlargement of both glands. It increases sodium retention and may cause hypertension, low potassium, or suppressed renin.

Primary Alveolar Hypoventilation

A rare disorder of inadequate automatic breathing, often related to PHOX2B or other autonomic-control abnormalities, causing elevated carbon dioxide especially during sleep.

Primary Amyloidosis

Primary amyloidosis, usually AL amyloidosis, results from abnormal plasma-cell proteins depositing as amyloid in organs such as the heart, kidneys, nerves, or gastrointestinal tract.

Primary And Secondary Hyperaldosteronism

Excess aldosterone production, from an adrenal source in primary disease or from increased renin stimulation in secondary disease, causing hypertension, sodium retention, and sometimes low potassium.

Primary Angioplasty

Angioplasty used as the initial treatment to reopen

an artery during an acute heart attack.

Primary Biliary Cholangitis

A chronic autoimmune liver disease in which small intrahepatic bile ducts are progressively damaged. It can cause cholestasis, itching, fatigue, and eventually cirrhosis; antimitochondrial antibodies often support the diagnosis.

Primary Biliary Cirrhosis

Alternate index label; see *Primary biliary cholangitis*.

Primary Biliary Cirrhosis Treatment

Alternate index label for PBC.

Primary Care

The usual first place people go for healthcare. It includes prevention, check-ups, treatment of common illnesses, care of long-term conditions, basic mental-health support, and referral or coordination with specialists when needed.

Primary Ciliary Dyskinesia

An inherited disorder in which tiny moving hairs lining the airways do not clear mucus properly. It can cause repeated sinus and lung infections, permanent airway widening, hearing problems, infertility, and organs arranged differently from usual.

Primary Clear Cell Adenocarcinoma Of The Vulva

A rare cancer of the vulva made up of clear-looking cells. Diagnosis requires examination of a tissue sample and tests that distinguish it from cancer that has spread from the kidney or another organ.

Primary Cutaneous B-Cell Lymphoma

A type of lymphoma that starts in the skin and has not spread elsewhere when diagnosed. It may cause one or more painless lumps or plaques; behavior and treatment depend on the subtype.

Primary Endpoint

The main outcome chosen in advance to judge

whether a treatment or other intervention works in a clinical trial. It may be a symptom, laboratory result, complication, quality-of-life measure, or survival.

Primary Hyperaldosteronism

Excess production of the hormone aldosterone by the adrenal glands, usually from a small gland growth or enlargement of both glands. It can cause difficult-to-control high blood pressure, low potassium, muscle weakness, or abnormal heart rhythms.

Primary Hyperoxaluria

A group of inherited disorders in which the liver makes too much oxalate. This can cause repeated kidney stones, calcium deposits, kidney damage, and eventually failure of the kidneys.

Primary Hyperparathyroidism

Overproduction of parathyroid hormone by one or more abnormal parathyroid glands, usually from a noncancerous gland growth. It raises blood calcium and may cause kidney stones, bone loss, abdominal symptoms, thirst, tiredness, or no symptoms at all.

Primary Hypersomnia

Excessive daytime sleepiness that is not explained by too little sleep, another sleep disorder, a medicine, substance use, or another illness. It can cause unintended sleep, long sleep, and difficulty becoming fully alert after waking.

Primary Hypertension

Persistently high blood pressure without one identifiable underlying disease. It results from a combination of genetic, environmental, vascular, and lifestyle factors and can often be controlled with lifestyle changes and medicines.

Primary Hypertrophic Osteoarthropathy

A rare inherited condition causing enlarged, rounded fingertips, thickened facial or scalp skin, and new bone growth along the limbs. It may cause joint pain, stiffness, swelling, and excessive sweating.

Primary Hypoparathyroidism

Inadequate parathyroid hormone production causing low calcium and high phosphate, with possible tingling, cramps, tetany, seizures, cataracts, or chronic bone and dental effects.

Primary Hypothyroidism

Reduced thyroid-gland production of thyroxine and triiodothyronine, usually causing high TSH and symptoms such as fatigue, cold intolerance, constipation, dry skin, and slowed heart rate.

Primary Immune Response

The body's first targeted immune response to a new germ or other foreign substance. It develops over days, produces antibodies and immune cells, and creates memory that allows a faster response next time.

Primary Immunodeficiency

A group of usually inherited disorders in which part of the immune system is missing or does not work properly. They can cause repeated or unusually severe infections and may also cause autoimmune disease or inflammation.

Primary Immunodeficiency Disease

An inherited or genetic disorder of immune development or function that causes unusual, recurrent, severe, or persistent infections and sometimes autoimmunity.

Primary Immunodeficiency Disease PIDD

Primary immunodeficiency diseases are inherited disorders of immune development or function that cause unusual, severe, recurrent, or persistent infections and sometimes autoimmunity or inflammation. Evaluation may include blood counts, immunoglobulins, functional tests, and genetic testing.

Alternate Names:

Deficiency Primary Immunodeficiency (Primary Immunodeficiency Disease PIDD)

Primary Lactase Deficiency

Reduced lactase enzyme activity developing with

age, causing lactose malabsorption and possible bloating, abdominal pain, gas, or diarrhea after dairy consumption.

Primary Lateral Sclerosis

A rare progressive nerve disorder causing increasing muscle stiffness and weakness, usually beginning in the legs. Speech, swallowing, walking, and emotional control may become affected over time.

Primary Lymphoma Of The Brain

Primary central-nervous-system lymphoma is a lymphoma arising in the brain, spinal cord, eyes, or surrounding fluid without systemic disease at diagnosis.

Primary Metabolism

The essential chemical activity inside cells that produces energy, builds needed substances, breaks down waste, and keeps cells alive and functioning.

Primary MicroRNA

The first RNA copy made from a microRNA gene. It is processed inside and outside the cell nucleus into a shorter molecule that helps control which proteins cells make.

Primary Myelofibrosis

A long-term bone-marrow disorder in which scar tissue replaces healthy marrow. Blood-cell production may move to the spleen or liver, causing anemia, tiredness, easy bleeding or infection, bone pain, and an enlarged spleen.

Alternate Names:

Agnogenic Myeloid Metaplasia

Primary Open-Angle Glaucoma

A slowly progressive disease that damages the optic nerve, usually without pain or early symptoms. Vision is gradually lost from the sides inward; lowering pressure inside the eye can slow or prevent further damage.

Primary Osteoporosis

Weakening and thinning of bone caused mainly by

aging, loss of estrogen after menopause, or age-related changes, rather than by another disease or medicine. It increases the risk of fractures, especially in the hip, spine, and wrist.

Primary Ovarian Insufficiency

Loss of normal ovarian activity before age 40, characterized by irregular or absent menses, reduced estrogen, and intermittently or persistently elevated gonadotropins. Causes include genetic, autoimmune, iatrogenic, toxic, infectious, and unknown factors.

Primary Polycythemia

Alternate index label; see *Polycythemia vera*.

Primary Prevention

Actions taken before a disease begins to prevent it, such as vaccination, avoiding tobacco, reducing harmful exposures, using sun protection, and controlling health risks. It differs from screening, which looks for disease that may already be present.

Primary Progressive Multiple Sclerosis

A form of multiple sclerosis that gradually worsens from the beginning, without clear attacks and recoveries. It commonly affects walking, strength, balance, bladder control, and thinking; medicines and rehabilitation may slow disability.

Alternate Names:

PPMS; Primary-progressive MS

Primary Progressive Aphasia

A neurodegenerative disorder causing gradual worsening of language abilities, including speaking, naming, comprehension, reading, or writing.

Primary Sclerosing Cholangitis

A long-term disease in which inflammation and scarring narrow the bile tubes inside and outside the liver. It can cause itching, tiredness, jaundice, repeated infections, and liver damage and is often associated with inflammatory bowel disease.

Primary Tuberculosis

The first infection with the bacterium that causes

tuberculosis. It often begins in the lungs and nearby lymph nodes; the immune system may contain it without symptoms, or it may progress to active disease.

Primary Tumor

The original tumor, or site where a cancer began, from which cancer cells may spread to form secondary or metastatic tumors. A cancer may be described as having an unknown primary when the original site cannot be identified.

Primidone

Primidone is an antiseizure medicine used for epilepsy and sometimes essential tremor; it can cause sleepiness, dizziness, and drug interactions.

Primigravida

A person who is pregnant for the first time. First pregnancies may have a longer labor and require monitoring for conditions such as high blood pressure, but the term itself does not indicate a problem.

Primipara

A person who has given birth once after the fetus could survive outside the womb, regardless of outcome.

Primitive

Relating to an early developmental stage or a basic, less specialized form. In medicine, primitive cells may be immature and capable of developing into several more specialized cell types.

Primitive Node

The primitive node is an embryonic organizer at the cranial end of the primitive streak that helps establish body axes and germ-layer formation.

Primitive Streak

The primitive streak is an embryonic structure through which cells migrate during gastrulation to form the three germ layers and establish body organization.

Primordial

Present at the earliest stage of development or existing in an original, basic form. Examples include primordial germ cells and primordial follicles.

Primordial Prevention

Preventing the emergence of disease risk factors by addressing social, economic, behavioural, and environmental conditions early. Examples: promoting healthy diets and physical activity in children, reducing tobacco exposure, and creating safe environments for exercise.

Prion

An infectious protein folded into an abnormal shape that can make other proteins fold incorrectly. Prions cause rare, serious brain diseases that worsen over time; they are not ordinary bacteria or viruses and currently have no cure.

Prion Disease

A neurodegenerative disease caused by abnormal folding and propagation of prion protein. These disorders are rare and usually progressive and fatal, although their course varies by the specific disease.

Prism

A clear optical device that bends light. In eye care, prisms can measure or correct eye misalignment, reduce double vision, and be built into glasses or used during examinations.

Privacy

Privacy is a person's right and expectation that personal information, communications, and bodily matters are protected from unauthorized access or disclosure.

Privacy Breach

A privacy breach is unauthorized access, use, disclosure, loss, or exposure of personal or health information.

Private Mutation

A genetic variant confined to a family, individual,

tumor, or small population rather than commonly seen in the general population; its significance requires genetic and clinical interpretation.

PRK

Photorefractive keratectomy is laser eye surgery that reshapes the cornea to reduce short-sightedness, long-sightedness, or astigmatism. The surface layer is removed and grows back during healing; pain, haze, infection, or imperfect vision can occur.

Pro Re Nata

A medication or treatment instruction meaning that it should be used only when a specified symptom or clinical circumstance occurs, within clearly prescribed dose and frequency limits.

Alternate Names:

P.R.N.; As Needed

Probe

A blunt instrument used to examine an opening, cavity, wound, tooth, or narrow passage. Different probes can measure depth, check whether a passage is open, guide a procedure, or trace a sinus or fistula.

Probenecid

A uricosuric medicine used to prevent gout attacks in selected patients and to alter renal excretion of some drugs.

Probiotic

A live microorganism that may provide a health benefit when taken in sufficient amounts. Benefits depend on the specific strain and condition; a probiotic is not automatically effective or safe for every person.

Probiotics

Probiotics are live microorganisms that may provide a health benefit when consumed in adequate amounts, although effects are strain-specific and vary by condition.

Problem

A symptom, sign, diagnosis, or issue requiring as-

assessment or management.

Problems Sleeping During Pregnancy

Sleep problems during pregnancy may result from discomfort, reflux, urination, anxiety, hormonal change, or sleep apnea; safe sleep habits and clinician-guided treatment are important.

Probucol

Probucol is a lipid-lowering drug that reduces cholesterol but may prolong the QT interval and is not widely used in current practice.

PROC

PROC is the gene symbol for protein C, an anticoagulant protein that limits clot formation; inherited deficiency increases thrombosis risk.

Procainamide

An antiarrhythmic medicine that can slow abnormal electrical conduction in the heart. It is used in selected rhythm disorders and requires monitoring because it can affect blood pressure, the heart rhythm, and immune or blood systems.

Procaine

An ester local anesthetic that temporarily blocks nerve signals and reduces pain. It is now used mainly in limited or historical settings because newer anesthetics are commonly preferred and allergic reactions can occur.

Procalcitonin

A biomarker that may rise during some bacterial infections and systemic inflammation. It can support assessment of infection and antibiotic decisions, but it cannot by itself diagnose or exclude bacterial infection or determine sepsis severity.

Procarbazine

A chemotherapy medicine used in some lymphomas and brain tumors. It damages the DNA of rapidly growing cells and can cause nausea, low blood counts, infertility, or other side effects; alcohol and many medicines may interact with it.

Procarbazine Hydrochloride

A salt form of procarbazine, a chemotherapy medicine that damages cancer cells. It is used for selected lymphomas and brain tumors and can cause low blood counts, nausea, infertility, or serious medicine and food interactions.

Procedural Memory

Memory for how to perform learned skills, such as riding a bicycle, typing, or playing an instrument. It usually works without consciously recalling each step and differs from memory for facts or events.

Procedural Sedation

Use of medicines to reduce anxiety, discomfort, and awareness during a medical procedure while maintaining breathing and protective reflexes. Continuous monitoring is required because sedation can unexpectedly become deeper and slow breathing.

Procedure

A planned medical or surgical action performed to diagnose, treat, prevent, monitor, or relieve a health problem. It may involve an examination, sample collection, medicine delivery, device placement, or operation, with risks depending on the method and person.

Procentriole

An immature structure that forms next to an existing centriole as a cell prepares to divide. It later matures into a centriole, which helps organize the fibers that separate chromosomes.

Procerus Muscle

A small facial muscle over the bridge of the nose that draws the medial eyebrows downward and produces horizontal wrinkles between the eyebrows.

Process

A process is an ordered series of biological, physical, chemical, or operational changes that produces a result.

Processing Bodies

Processing bodies are cytoplasmic RNA-protein granules where messenger RNAs may be stored, decapped, degraded, or regulated.

Prochlorperazine

A phenothiazine medicine used mainly for severe nausea or vomiting and, in selected cases, psychotic disorders. It can cause drowsiness, low blood pressure, and movement disorders.

Prochlorperazine Overdose

Taking too much prochlorperazine can cause severe sleepiness, confusion, low blood pressure, abnormal heart rhythms, seizures, or muscle stiffness with fever. It requires immediate emergency or poison-control advice.

Procidentia

The most severe form of uterine prolapse, in which the uterus and cervix descend through and outside the vaginal opening. It may cause pressure, bleeding, sores, difficulty urinating, or bowel problems and requires gynecologic assessment.

Alternate Names:

Complete Uterovaginal Prolapse; Third-Degree Uterine Prolapse

Procollagen

An unfinished form of collagen made inside cells. After chemical changes and removal of its end sections outside the cell, it joins with other molecules to form strong collagen fibers in skin, bone, tendons, and other tissues.

Proctalgia

Pain in or around the rectum or anal canal. Causes include fissures, hemorrhoids, abscesses, inflammation, injury, and functional muscle pain; sudden severe pain or pain with fever, bleeding, or a lump needs medical assessment.

Proctitis

Inflammation of the rectum. It can cause a constant urge to pass stool, rectal pain, bleeding, mucus or

pus, and pelvic discomfort. Causes include inflammatory bowel disease, sexually transmitted infections, radiation treatment, and diversion of stool through an opening in the abdomen. Diagnosis may require an examination, stool or swab tests, and a small tissue sample. Treatment depends on the cause.

Alternate Names:

Rectal Inflammation

Proctocolitis

Inflammation of the rectum and nearby lower colon. It may cause bleeding, mucus, diarrhea, urgency, pain, or difficulty passing stool and can result from infection, inflammatory bowel disease, reduced blood flow, radiation, or other causes.

Proctology

The part of medicine concerned with diseases of the anus and rectum. Care may include assessment and treatment of hemorrhoids, fissures, fistulas, abscesses, bowel-control problems, infections, inflammation, and cancers.

Proctoscope

An instrument used to inspect the anal canal and rectum.

Proctoscopy

Examination of the anal canal and rectum with a short viewing instrument. It can help investigate bleeding, pain, inflammation, ulcers, polyps, or a lump and may allow a small tissue sample to be taken.

Proctostomy

An operation that creates an opening from the rectum through the abdominal wall or nearby skin so stool can leave the body. It may be temporary or permanent and requires care of the opening and surrounding skin.

Prodromal

Describing early, nonspecific signs or symptoms that occur before the characteristic clinical features of a disease become apparent.

Prodrome

An early symptom or group of symptoms that appears before a disease episode or major event. Examples include tiredness before migraine, tingling before a seizure, or fever before an infection becomes obvious.

Prodrug

A medicine given in a form that the body changes into its active form. This design may improve absorption, delivery to a target tissue, duration of action, or tolerability.

Productive Cough

A cough that brings up mucus or phlegm from the airways. It can occur with infections, asthma, chronic lung disease, or other conditions and does not by itself identify the cause.

Profunda

A deep artery or vessel, commonly referring to the profunda femoris artery in the thigh. This artery supplies muscles and nearby tissues and can be important in bleeding, circulation, or vascular procedures.

Profunda Miliaria (Heat Rash)

Alternate index label for Heat Rash.

Progenitor

A partly developed cell that can multiply and mature into one or a limited range of specialized cell types. Progenitor cells help replace or repair tissues but have less developmental potential than stem cells.

Progeny

Biological offspring or descendants. In genetics, the term usually means children or later descendants whose traits may be studied to understand how characteristics or disorders are inherited. In cell biology, it can mean daughter cells produced by one parent cell.

Progeria

A rare inherited condition causing features of accelerated aging during childhood. Children may develop poor growth, hair loss, stiff joints, thin skin, and heart or blood-vessel disease while intelligence is usually preserved.

Progestational

Relating to progesterone-like effects or preparation of the uterus for pregnancy. Progestational medicines can alter menstrual bleeding, prevent ovulation, support the uterine lining, or protect it from excessive estrogen stimulation.

Progesterone

A steroid hormone produced mainly by the corpus luteum and placenta that supports the endometrium and pregnancy.

Progesterone Test

A blood test that measures the level of progesterone, a hormone involved in ovulation and pregnancy. It may help assess ovulation, infertility, abnormal uterine bleeding, fertility treatment, or certain pregnancy problems. Results depend on the timing of the menstrual cycle and whether the person is pregnant.

Alternate Names:

Serum Progesterone Progesterone Blood Test

Progesterone Antagonist

A progesterone antagonist blocks progesterone receptors and may be used for selected reproductive, gynecologic, or other medical purposes.

Progesterone Supplementation

Use of progesterone during pregnancy in selected people at risk of preterm birth, especially when ultrasound shows a short cervix. Vaginal progesterone may be considered in that situation; routine use after a previous preterm birth without a short cervix is not recommended, and 17-hydroxyprogesterone caproate is no longer FDA-approved for this purpose.

Progestin

A progestin is a synthetic progesterone-like hormone used in contraception, hormone therapy, and treatment of selected gynecologic conditions.

Progestogen

A natural or synthetic hormone with effects like progesterone. Progestogens help regulate the menstrual cycle and pregnancy and are used in some contraceptives and hormone treatments.

Proglottid

One segment of a tapeworm. Each mature segment contains reproductive organs and may release eggs in stool.

Prognathism

Forward projection of the upper or lower jaw relative to the facial skeleton, affecting bite, appearance, chewing, speech, and sometimes airway function.

Prognosis

The expected course and outcome of a disease or condition.

Prognostic Factor

A prognostic factor is a clinical, pathologic, or biologic feature associated with the likely course, outcome, or survival of a disease.

Prognostic Test

A test that provides information about a disease's likely course or outcome. Results may estimate risks, guide treatment choices, or monitor response, but they cannot predict an individual future with certainty.

Progression

Worsening or advancement of a disease, such as increasing tumor size, new lesions, or spread to another site.

Progression-Free Survival

The length of time after a defined starting point, such as diagnosis or treatment, during which a per-

son remains alive without the cancer worsening. It is a group measure used in research and cannot predict exactly what will happen to one person.

Progressive

Increasing, worsening, or spreading over time, or moving forward in a particular direction. A progressive disease may cause gradually increasing symptoms, but the word alone does not explain the cause, speed, or expected outcome.

Progressive Disease

A disease that is worsening, spreading, or becoming more active over time. In cancer, progression may mean that tumors have grown, new tumors have appeared, or existing disease has clearly worsened on examination or imaging.

Progressive Lenticular Degeneration

An older name for Wilson disease, an inherited disorder causing copper buildup. Excess copper can damage the liver, brain, eyes, kidneys, and other organs unless treatment lowers copper levels.

Progressive Multifocal Leukoencephalopathy

A serious brain infection caused by reactivation of JC virus in people with severely weakened immune systems. It damages the brain's nerve insulation and may cause worsening weakness, clumsiness, vision or speech problems, confusion, or seizures.

Progressive Muscular Atrophy

A motor-neuron disorder predominantly affecting lower motor neurons and causing progressive muscle wasting and weakness.

Progressive Supranuclear Palsy

A progressive brain disorder that causes balance problems, frequent falls, stiffness, slowed movement, speech or swallowing difficulty, and trouble moving the eyes, especially looking down. It resembles Parkinson disease but has different features and treatment needs.

Alternate Names:

Steele-Richardson-Olszewski Syndrome Supranu-

clear Palsy

Proinflammatory

Describing a substance, cell, or immune response that starts or increases inflammation. Such activity can help fight infection or repair injury, but excessive or prolonged inflammation can damage healthy tissue.

Proinsulin

An unfinished hormone made by pancreatic beta cells before it is split into insulin and C-peptide. Measuring proinsulin can provide information about insulin production and certain disorders of glucose regulation.

Projectile Vomiting

Forceful vomiting expelled with unusual intensity, which may occur with gastric outlet obstruction, raised intracranial pressure, infection, migraine, or other causes; severity and associated signs guide evaluation.

Projection

A view or image made by directing X-rays or other imaging energy through the body toward a detector. Different projections show body structures from different angles and can help locate an abnormality.

Prokaryote

A prokaryote is a cell or organism without a membrane-bound nucleus, including bacteria and archaea.

Prokinetic

A medicine that promotes gastrointestinal motility and movement of contents through the digestive tract; use depends on the underlying disorder and safety profile.

Prolactin

A hormone released mainly by the pituitary gland that supports breast development and milk production. Abnormal levels can affect periods, fertility, sexual function, pregnancy, breastfeeding, and some-

times vision because of pituitary growths.

Prolactin Blood Test

A prolactin blood test measures the hormone prolactin and helps evaluate abnormal milk production, menstrual or fertility problems, and some pituitary disorders.

Prolactin Physiology

Prolactin is a hormone made by the pituitary gland that supports breast development and milk production. Levels normally rise during pregnancy, breastfeeding, sleep, stress, and breast stimulation.

Prolactin Receptor

A cell-surface receptor activated by prolactin to regulate mammary development, milk production, reproduction, immune effects, and other tissue responses.

Prolactinoma

A usually benign pituitary tumor that produces too much prolactin. It may cause milk production, menstrual or fertility problems, low sex hormones, headache, or vision loss and is often treated with dopamine-agonist medicines.

Alternate Names:

Pituitary Tumor (Prolactinoma)

Prolactinoma Treatment

Treatment may include a dopamine agonist, surgery, radiation, or observation, depending on tumor size, symptoms, hormone levels, treatment response, and patient preferences. Dopamine agonists often lower prolactin levels and reduce tumor size.

Prolapse

Downward displacement or protrusion of an organ or tissue from its normal position, often through a supporting structure or body opening.

Prolapse Of Orbital Fat

Bulging of the eye's normal cushioning fat through a weak spot in the thin tissue around the eye. It usually appears as a soft, painless lump in an upper

or lower eyelid, often with aging, but other lumps may look similar.

Prolapse Of The Uterus (Uterine Prolapse)

Descent of the uterus into the vaginal canal due to weakening of pelvic floor supports, most commonly the uterosacral and cardinal ligaments.

Alternate Names:

Uterine Prolapse

Prolapse, Mitral Valve

Alternate index label; see *Mitral valve prolapse*.

Prolapsed Bladder

Alternate index label; see *Anterior vaginal prolapse (cystocele)*.

Prolapsed Cord

A prolapsed umbilical cord descends beside or ahead of the fetus after membrane rupture, risking cord compression and reduced fetal oxygen; it is an obstetric emergency.

Prolapsed Disk

A spinal disk that bulges or ruptures and may compress a nearby nerve; also called a herniated disk.

Alternate Names:

a herniated disk.

Prolapsed Uterus

Alternate index label; see *Uterine prolapse*.

Proliferating Trichilemmal Tumor

A usually low-grade follicular tumor arising from a trichilemmal cyst, most often on the scalp; large or recurrent lesions may show locally aggressive or malignant behavior.

Proliferation

Increase in the number of cells or organisms through growth and division. It may be normal, part of healing, or abnormal as in uncontrolled tumor growth.

Proliferative

Characterized by increased cell multiplication or new tissue growth. The meaning depends on context: some proliferative changes are normal or healing, while others are precancerous or cancerous.

Proliferative Diabetic Retinopathy

An advanced form of diabetic eye disease in which poor blood supply causes fragile new blood vessels to grow on the retina or nearby structures. They can bleed, scar, detach the retina, and threaten vision; specialist treatment can reduce these risks.

Proliferative Fasciitis

A benign, reactive fibroblastic proliferation resembling nodular fasciitis but containing distinctive ganglion-like cells; it usually grows quickly and resolves or stabilizes after local treatment.

Proliferative Myositis

A benign reactive proliferation within skeletal muscle that may present as a rapidly enlarging mass and mimic sarcoma. Imaging and biopsy are used to establish the diagnosis.

Proliferative Retinopathy

Advanced retinal disease in which abnormal new blood vessels grow and may bleed or impair vision.

Proline

An amino acid used to build proteins. Its ring-shaped side chain helps give collagen and other proteins their structure.

Prolonged Deceleration

A temporary slowing of the fetal heart rate lasting at least two minutes but less than ten minutes. It may result from reduced blood flow, excessive contractions, cord problems, or placental separation and requires prompt assessment during labor.

Prolonged Second Stage

The pushing stage of labor lasting longer than expected. The safe duration depends on whether it is a first birth, use of epidural anesthesia, progress,

and the health of the parent and fetus; the team reassesses before deciding on further care.

Prolymphocyte Count

The number or proportion of prolymphocytes, immature-appearing lymphoid cells, in blood or marrow; an increased count may occur in selected lymphoid leukemias and requires morphology and immunophenotyping.

Prolymphocytic Leukemia

Prolymphocytic leukemia is a rare aggressive leukemia with large abnormal lymphocytes in the blood, bone marrow, spleen, or lymph nodes.

Promazine

A first-generation phenothiazine antipsychotic with sedative properties; it is now used infrequently in many settings and availability varies by country. It can cause drowsiness, orthostatic hypotension, anticholinergic effects, extrapyramidal symptoms, and other serious antipsychotic adverse effects.

Promecarb

Promecarb is a carbamate insecticide that inhibits acetylcholinesterase and can cause cholinergic poisoning after substantial exposure.

Prometaphase

Prometaphase is the stage of mitosis after nuclear-envelope breakdown when spindle microtubules attach to chromosome kinetochores.

Promethazine

Promethazine is an antihistamine used for allergy symptoms, nausea, motion sickness, and sometimes sedation; it can cause marked sleepiness and breathing problems in young children.

Promethazine Overdose

Too much promethazine can cause extreme drowsiness, confusion, agitation, fast heartbeat, seizures, breathing problems, or coma. Children are particularly vulnerable; significant or intentional overdoses need immediate emergency advice.

Prominent Iris Collarette

A visible thickening or ridge of the iris at the junction of the pupillary and ciliary zones, representing the site where the embryonic pupillary membrane was attached. It is typically a normal anatomical variant but can be a clinical sign in conditions such as Axenfeld-Rieger syndrome or iridocorneal endothelial syndrome.

Promonocyte Count

The number or proportion of promonocytes, immature monocyte precursors, in blood or marrow; increased cells may support evaluation of acute or chronic myeloid leukemia.

Promontory

A part of the body that projects outward like a small ridge or bump. Examples include the sacral promontory in the pelvis and the cochlear promontory in the inner ear; the exact meaning depends on the structure named.

Promoter

A region of DNA near a gene where proteins attach to start copying the gene into RNA. Promoters help determine when a gene is active and how much of its protein is made.

Promoters

DNA control regions that help start gene activity when regulatory proteins attach. They influence how much messenger RNA and protein a gene makes and are important in development, normal function, and disease.

Promyelocytes

Immature cells in the bone-marrow pathway that normally develops into several types of white blood cells. Large numbers in blood or marrow may occur in leukemia and need examination with other blood and cell tests.

Pronation

Turning the forearm so the palm faces down when the elbow is bent, or backward when the arm hangs at the side. During this movement, the radius ro-

tates across the ulna.

Pronator

A muscle that turns a limb or part of it into a pronated position. In the forearm, pronator muscles rotate the palm downward and help stabilize the elbow during movement.

Prone

Prone means lying face downward with the front of the body against a surface; positioning affects breathing, pressure injury, and procedures.

Prone Position

A position in which the patient lies face down, commonly providing access to the back, spine, buttocks, or posterior legs.

Prone Positioning

Placing a person face down to improve breathing, especially during severe acute respiratory distress syndrome. It can improve oxygen levels by helping more of the lung take part in breathing, but requires careful monitoring of the airway, skin, eyes, and pressure points.

Pronephric

Relating to the earliest temporary kidney system formed in an embryo. In humans it does not provide effective kidney function and is replaced during development by later kidney structures.

Pronephros

The first temporary kidney structure formed in a human embryo. It is not functional as a kidney and largely disappears as the permanent kidneys develop.

Propafenone

A heart-rhythm medicine that slows electrical signals through the heart. It is used for selected irregular rhythms, including episodes of atrial fibrillation, but can worsen or cause dangerous rhythms and is unsuitable for some people with structural heart disease.

Propane

Propane is a flammable hydrocarbon gas used as fuel; inhalation or displacement of oxygen can cause suffocation, and liquid contact can cause cold burns.

Propane Poisoning

Breathing concentrated propane can displace oxygen and cause dizziness, headache, confusion, unconsciousness, abnormal heart rhythms, or suffocation. Leave the area if safe, avoid flames, and call emergency services for symptoms or significant exposure.

Propanol

Propanol is an alcohol solvent with two structural isomers; ingestion or substantial exposure can depress the nervous system and irritate tissues.

Propanolol

A nonselective beta-adrenergic blocker used for hypertension, arrhythmias, angina, tremor, migraine prevention, and other indications.

Propantheline

An older medicine that reduces certain nerve signals to relax the gut and decrease sweating. It can cause dry mouth, blurred vision, constipation, difficulty urinating, fast heartbeat, or confusion and is rarely used today.

Propellant

A propellant is a gas or volatile substance that expels a product from a container or delivers medicine in an inhaler.

Properdin

A blood protein that strengthens one part of the body's early immune defense. It helps mark and damage certain germs; too little properdin can increase susceptibility to serious bacterial infections.

Properdin Deficiency

A rare inherited immune-system disorder in which a complement protein is missing or low. It increases the risk of severe infections, especially meningococcal disease, and is evaluated with immune tests and

a history of recurrent infections.

Propetamphos

Propetamphos is an organophosphate insecticide that can inhibit acetylcholinesterase and cause cholinergic toxicity after exposure.

Prophage

A prophage is bacteriophage genetic material integrated into a bacterial chromosome or maintained in a dormant state inside a bacterium.

Prophase

Prophase is the early stage of cell division when chromosomes condense, the spindle begins forming, and the nucleolus disappears.

Prophenofos

Prophenofos is an organophosphate pesticide whose toxicity results mainly from acetylcholinesterase inhibition and excess cholinergic activity.

Prophylactic

Prophylactic means intended to prevent disease, infection, injury, or another unwanted outcome before it occurs.

Prophylactic Mastectomy

Prophylactic mastectomy removes one or both breasts to greatly reduce cancer risk in selected people at very high genetic or clinical risk.

Prophylaxis

Medicine or other preventive care used to lower risk of disease, infection, or recurrence before it occurs.

Propionates

Salts or esters of propionic acid used in food preservation, metabolism, and some medicines; clinical effects depend on the specific compound and exposure.

Propionibacterium

A former bacterial genus name now largely replaced by *Cutibacterium*; its members are common skin

organisms and can cause acne or device-related infection.

Propionic Acidemia

A rare inherited disorder in which the body cannot properly break down certain proteins and fats. Harmful acids can build up, especially during illness or fasting, causing vomiting, extreme sleepiness, poor feeding, seizures, or coma. Newborn screening can detect it; treatment uses a controlled diet, avoids fasting, and manages attacks urgently.

Alternate Names:

Propionic Aciduria (PA); Propionyl-CoA Carboxylase Deficiency

Propofol

A short-acting medicine given through a vein to start or maintain anesthesia and provide procedural sedation. It acts quickly but can lower blood pressure, slow breathing, or cause dangerous reactions without monitoring.

Propofol Infusion Syndrome

A rare, potentially fatal illness after prolonged or high-dose propofol infusion. It may cause severe blood acidity, muscle breakdown, high potassium, kidney failure, heart failure, or dangerous heart rhythms. Stopping propofol and urgent intensive care are required when it is suspected.

Propoxur

Propoxur is a carbamate insecticide that inhibits acetylcholinesterase and may cause sweating, salivation, vomiting, breathing difficulty, or weakness after exposure.

Propoxycaine

A local anesthetic formerly used in some topical or dental preparations; toxicity can affect the nervous system and heart.

Propoxyphene

Propoxyphene is a former opioid analgesic withdrawn in many countries because of overdose toxicity, respiratory depression, and dangerous cardiac arrhythmias.

Propranolol

A beta-blocking medicine that slows heart rate and reduces the body's response to adrenaline. It treats selected heart conditions, tremor, migraine prevention, anxiety symptoms, and other problems, but can worsen asthma or low blood sugar.

Proprioception

Awareness of body position and movement without looking, based on signals from muscles, tendons, joints, skin, and balance organs. Reduced proprioception can cause clumsiness, poor coordination, falls, or difficulty walking.

Proprioceptor

A sensory receptor that detects position, movement, or muscle stretch.

Proptosis (Exophthalmos)

Forward bulging of one or both eyes. Causes include thyroid eye disease, infection, inflammation, bleeding, or a growth behind the eye; sudden onset requires urgent medical assessment.

Propulsion

Movement that drives the body or another object forward. In some neurologic disorders, impaired forward movement can cause short, shuffling steps or a tendency to lean and fall forward.

Propyl Alcohol

Propyl alcohols are flammable solvents; ingestion or substantial exposure can irritate tissues and depress the central nervous system, with toxicity depending on the isomer and dose.

Propylene Glycol

Propylene glycol is a solvent and humectant used in medicines, foods, and cosmetics; large exposures can cause metabolic or kidney problems.

Propylthiouracil

Propylthiouracil is an antithyroid drug that reduces thyroid-hormone synthesis and conversion of T4 to T3; liver injury and fetal risks require careful use.

Prosencephalon

The front part of the early developing brain. It later forms the cerebral hemispheres, thalamus, hypothalamus, and related structures that control thought, sensation, movement, hormones, and other functions.

Prosopagnosia

Difficulty or inability to recognize familiar faces despite adequate vision and general intelligence. It may be developmental or result from brain injury or disease.

Prosoplasia

Development of a more specialized cell function or structure within a tissue. The change may occur during normal development or as an adaptation, and its medical meaning depends on the tissue and surrounding disease process.

Prosoposchisis

A rare congenital facial cleft or fissure caused by abnormal fusion of facial processes during embryonic development, potentially affecting the nose, mouth, eyes, and feeding or breathing.

Prostacyclin Analogs

Medications that mimic prostacyclin (PGI₂), causing vasodilation and inhibiting platelet aggregation in the pulmonary vasculature. They include epoprostenol (continuous IV), treprostinil (subcutaneous, IV, inhaled, oral), and iloprost (inhaled). They are used for severe PAH.

Prostaglandin

A locally acting lipid mediator derived from arachidonic acid that influences pain, inflammation, fever, vascular tone, platelet function, gastric protection, kidney function, and uterine contraction.

Prostaglandin Analogs

Eye-drop medicines that lower pressure inside the eye by helping fluid drain. They treat glaucoma or ocular hypertension and may cause eye redness, eyelash growth, or darkening of the iris or skin around the eye.

Prostaglandin Degradation

Enzymatic inactivation and removal of prostaglandins, which limits the duration and intensity of their local effects on vessels, inflammation, smooth muscle, kidneys, stomach, and reproductive tissues.

Prostaglandin E2

A prostaglandin that mediates inflammation, pain, fever, vasodilation, gastric protection, cervical ripening, and uterine contraction and is used in selected obstetric and cardiovascular treatments.

Prostaglandin F2-Alpha

A prostaglandin that promotes smooth-muscle contraction and luteolysis; analogues are used in glaucoma, postpartum hemorrhage, labor-related care, and veterinary medicine.

Prostaglandin Receptor

A protein on or inside a cell that recognizes a prostaglandin and starts signals affecting blood-vessel width, inflammation, pain, smooth-muscle activity, platelets, or reproduction.

Prostaglandins

Locally acting lipid mediators involved in pain, inflammation, vascular tone, gastric protection, and reproductive physiology.

Prostaglandins E

The E series of prostaglandins, lipid mediators that influence inflammation, vascular tone, gastric protection, kidney blood flow, cervical ripening, and uterine contraction.

Prostaglandins F

The F series of prostaglandins, lipid mediators involved in smooth-muscle contraction, luteal function, vascular responses, inflammation, and labor-related uterine activity.

Prostate

A gland below the bladder surrounding part of the urine tube. It adds fluid to semen and may enlarge,

become inflamed, or develop cancer, causing urinary, sexual, or pelvic symptoms.

Prostate Adenocarcinoma

The most common type of prostate cancer, arising from gland cells in the prostate. It often grows slowly but can spread, and its growth is usually stimulated by male sex hormones; grade and stage help determine treatment.

Prostate Biopsy

Removal of small samples of prostate tissue with a needle to look for cancer under a microscope. The needle may pass through the skin between the scrotum and anus or through the rectum; bleeding, infection, and temporary difficulty urinating are possible risks.

Prostate Brachytherapy

Radiation treatment in which small radioactive sources are placed inside or next to the prostate to destroy cancer cells. It is used for selected cancers and may cause temporary urinary or bowel symptoms and later erectile problems.

Prostate Cancer

Cancer that forms in the prostate gland. It may grow slowly or behave aggressively and may cause no symptoms early on. Risk increases with age, family history, inherited gene changes, and certain racial or ethnic backgrounds. Prostate-specific antigen testing and sometimes a digital rectal examination may help evaluate risk, but diagnosis requires a prostate biopsy. Tumor grade and stage help guide treatment.

Alternate Names:

Cancer, Prostate Prostatic Carcinoma (Prostate Cancer)

Prostate Cancer Screening

Prostate cancer screening may use a PSA blood test with or without a digital rectal examination after discussing possible benefits, false positives, and harms.

Prostate Cancer Staging

Determining how far prostate cancer has grown or spread. Clinicians combine examination, PSA level, tumor grade, biopsy findings, and imaging to decide whether it is confined to the prostate, nearby, or in distant organs.

Prostate Cancer Treatment

Care for cancer of the prostate, chosen according to cancer grade, stage, growth rate, age, and health. Options may include active surveillance, surgery, radiation, hormone-blocking treatment, or medicines for advanced disease.

Prostate Carcinoma

Prostate carcinoma is cancer arising from the prostate gland and may grow slowly or behave aggressively.

Prostate Disease

Any disorder affecting the prostate, including benign enlargement, inflammation, infection, or cancer. It may cause difficulty urinating, weak flow, urgency, pelvic pain, blood in urine, or no symptoms initially.

Prostate Enlargement

An increase in prostate size, most often benign prostatic hyperplasia, which can obstruct urine flow and cause lower urinary-tract symptoms.

Prostate Gland

The prostate, a gland below the bladder that surrounds the urethra and contributes secretions to semen.

Prostate Gland Enlargement

Noncancerous enlargement of the prostate that can narrow the urine channel. It may cause a weak stream, difficulty starting, urgency, frequent nighttime urination, dribbling, or incomplete emptying.

Prostate Infection

Infection or inflammation of the prostate, usually causing pelvic or urinary symptoms and sometimes fever or bloodstream infection.

Prostate Neoplasm

An abnormal mass of cells arising in the prostate. It may be noncancerous, such as a glandular growth, or cancerous; symptoms and treatment depend on its type, size, and spread.

Prostate Resection - Minimally Invasive

A procedure that removes part of an enlarged prostate through the urine channel or through small openings. It aims to improve urine flow while avoiding a large incision; bleeding, infection, scarring, or leakage can occur.

Prostate-Specific Antigen

A protein made mainly by the prostate and measured in blood. A high or rising level can occur with prostate cancer, but also with prostate enlargement, infection, urine retention, ejaculation, or recent procedures. The result is considered with age, examination, trends, and other tests rather than used alone.

Prostate-Specific Antigen Blood Test

A PSA blood test measures prostate-specific antigen; an elevated result may reflect enlargement, inflammation, infection, or cancer and is not diagnostic by itself.

Prostatectomy

Surgery to remove part or all of the prostate, commonly for prostate cancer or severe urinary obstruction. Possible effects include urinary leakage, erectile dysfunction, bleeding, and infertility.

Prostatic Carcinoma (Prostate Cancer)

Alternate index label for Prostate Cancer.

Prostatic Fluid

Prostatic fluid is a mildly alkaline secretion that forms part of semen and contains substances supporting sperm function and survival.

Prostatic Obstruction

Blockage of urine flow caused by enlargement, inflammation, scarring, stones, or a tumor of the

prostate or nearby structures.

Prostatic Urethral Stent

A small device placed in the prostatic urethra to help maintain urine flow when the prostate obstructs it.

Prostatism

Urinary symptoms caused by blockage or poor function at the bladder outlet, often related to an enlarged prostate. Symptoms include weak flow, straining, urgency, frequent urination, nighttime urination, or incomplete emptying.

Prostatitis

Inflammation or infection of the prostate gland that may cause pelvic pain, painful urination, difficulty passing urine, sexual pain, fever, or feeling unwell. It may be caused by bacteria or by other inflammatory or pelvic conditions.

Prostatitis - Bacterial

Bacterial prostatitis is infection and inflammation of the prostate, causing pelvic or urinary pain, fever, urinary symptoms, or recurrent infection.

Prostatitis - Nonbacterial

Persistent pain or urinary symptoms in the prostate and pelvis without evidence of a bacterial infection. Symptoms may fluctuate and can involve pelvic muscles, nerves, inflammation, or bladder function; care is tailored to the person's findings.

Prostatodynia

Prostatodynia is an older term for pelvic or prostate-region pain without proven bacterial infection, now often considered within chronic pelvic pain syndrome.

Prosthesis

An artificial device replacing or supporting a missing body part or function. Prostheses may replace limbs, joints, teeth, eyes, or heart valves and require fitting, care, adjustment, and monitoring.

Prosthetic

Relating to an artificial device that replaces or supports a missing or damaged body part. Examples include artificial limbs, joints, heart valves, teeth, and blood-vessel grafts; complications can include wear, loosening, skin problems, or infection.

Prosthetic Graft

A prosthetic graft is an artificial tube or patch used to replace or bypass a damaged blood vessel or other tubular structure; infection and thrombosis are important risks.

Prosthetic Heart Valve

An artificial valve that replaces a diseased heart valve and keeps blood moving in the correct direction. Mechanical valves usually require lifelong blood-thinning medicine; tissue valves may wear out sooner and have different medication needs.

Prosthetic Limb

An artificial limb used to replace some or all of a missing arm or leg. It may improve movement, balance, or daily activities and is fitted to the person's remaining limb, strength, goals, and comfort. Training helps with safe use and skin care.

Prosthetic Training

Rehabilitation teaching a person to use an artificial limb safely and effectively. Training includes skin and residual-limb care, putting it on, walking, balance, stairs, transfers, daily activities, and community mobility.

Prosthetics

The design, fitting, and use of artificial replacements for missing body parts, such as arms, legs, teeth, or eyes. Successful use depends on comfort, strength, balance, skin health, goals, and rehabilitation.

Prosthodontics

The dental specialty that replaces missing teeth and restores chewing, speech, and appearance. Treatment may use crowns, bridges, implants, dentures, or facial prostheses and is planned around oral health and remaining tissues.

Protamine

A medicine that binds to and reverses the blood-thinning effect of heparin. It is given carefully because it can cause low blood pressure, allergic reactions, slow heart rate, or dangerous clotting.

Protanopia

Protanopia is complete absence of red-cone function, causing a form of red-green color-vision deficiency and altered perception of red and related colors.

Protean

Highly variable in form, appearance, or behavior; in medicine it may describe a disease with changing or diverse manifestations.

Proteaphagy

The process by which a cell uses its recycling system to remove whole proteasomes, the structures that normally break down unwanted proteins. It helps adjust protein disposal during stress or changes in nutrition.

Protease

An enzyme that breaks proteins into smaller pieces by cutting the chemical links between their amino acids. Proteases help digest food and control many processes inside and outside cells.

Protease Inhibitors

Antiviral medicines that block an enzyme viruses need to cut newly made proteins into working parts. They are used for selected viral infections and may interact with many other medicines.

Proteasome

A barrel-shaped protein machine inside cells that breaks down unwanted, damaged, or short-lived proteins. This controls cell growth and signaling and prevents harmful protein buildup.

Proteasome Binding

The attachment of a medicine or other molecule to a cell's protein-destroying machine. This can increase, reduce, or otherwise change the breakdown

of proteins and may alter cell survival or function.

Protecting Yourself From Cancer Scams

Protection from cancer scams includes checking claims with qualified clinicians, avoiding guaranteed cures, reviewing evidence, and being cautious about costly unproven treatments.

Protective

Serving to prevent or reduce injury, infection, or other harm.

Protective Agent

A substance, device, or treatment used to reduce harm to the body. Examples include sunscreen protecting skin from ultraviolet light, barrier creams protecting skin, and medicines that protect the stomach or bones during selected treatments. The appropriate agent depends on the hazard and the person's health.

Protegrin

A small antimicrobial peptide, usually derived from pig immune cells, that can disrupt microbial membranes.

Protein

A molecule made of amino acids that performs structural, enzymatic, transport, signaling, or immune functions.

Protein Acetylation

Addition of an acetyl group to a protein, often changing its activity, localization, stability, or interactions; histone acetylation is a major regulator of gene expression.

Protein Binding

The temporary attachment of a medicine to proteins in the blood. The unattached portion can usually leave the bloodstream, reach tissues, and produce effects; changes in protein levels or other medicines can alter the amount available.

Protein Biosynthesis

The way cells make proteins: they copy information from DNA into messenger RNA, then use ribosomes to join amino acids in the instructed order. The new chain folds and may be modified before it works.

Protein C

A natural blood-clotting regulator that helps prevent excessive clotting. Low levels may be inherited or acquired and increase clot risk; starting warfarin in severe deficiency can rarely cause skin injury.

Protein C Blood Test

A protein C blood test measures a natural anticoagulant and may help evaluate unexplained or recurrent blood clots or suspected inherited deficiency.

Protein C Deficiency

A condition in which too little or poorly functioning protein C reduces the body's natural control of blood clotting. It may be inherited or acquired and increases the risk of deep-vein thrombosis and pulmonary embolism.

Protein Deficiency

Inadequate protein intake, digestion, absorption, or use, causing loss of muscle, impaired immunity and wound healing, edema, or growth failure when severe or prolonged.

Protein Denaturation

Loss of a protein's normal three-dimensional structure from heat, chemicals, pH, or mechanical stress, often impairing its biological function without breaking its peptide backbone.

Protein Dephosphorylation

Removal of a phosphate group from a protein by a phosphatase, often reversing or modifying signaling, enzyme activity, localization, or cell-cycle control.

Protein Electrophoresis

A laboratory test that separates proteins in serum or urine according to their electrical properties, helping detect abnormal protein patterns.

Protein Electrophoresis - Serum

Serum protein electrophoresis separates blood proteins into patterns and helps evaluate abnormal antibodies, myeloma, inflammation, and some liver or kidney disorders.

Protein Engineering

Design or modification of proteins through genetic, biochemical, or computational methods to alter activity, stability, specificity, expression, or therapeutic usefulness.

Protein Expression

The process by which a cell uses genetic instructions to make a protein, then folds, changes, and transports that protein so it can perform its function.

Protein Folding

The process by which a newly made protein bends into the three-dimensional shape needed for its job. Incorrect folding can stop the protein from working or cause harmful protein deposits in cells.

Protein Glycosylation

The attachment of sugar chains to proteins. This helps proteins fold, remain stable, reach the correct part of a cell, and work properly; inherited problems with this process can affect many organs.

Protein Import

Movement of a newly made protein into a cell structure or across a cell membrane. Address labels on the protein and transport systems guide it to the correct location, where it can fold and work properly.

Protein In Diet

Dietary protein supplies amino acids needed for muscle, enzymes, hormones, immunity, and tissue repair; requirements vary with age, health, and kidney function.

Protein In Urine (Proteinuria)

An abnormal amount of protein in the urine, which may be temporary or indicate kidney disease, di-

abetes, high blood pressure, infection, or another condition.

Protein Isoform

One of several related protein forms produced from different genes, alternative splicing, or post-translational processing, with potentially different locations or functions.

Protein Kinase

An enzyme that adds a small chemical group to a protein and changes how it works. Protein kinases help control cell signals, metabolism, growth, division, and other functions.

Protein Malnutrition

Poor health caused by inadequate protein or energy intake, leading to weight loss, muscle wasting, weak immunity, or impaired healing.

Protein Metabolism

The synthesis, folding, modification, breakdown, and recycling of proteins and amino acids in cells and tissues.

Protein Methylation

Addition of small chemical groups called methyl groups to selected parts of a protein. This can change the protein's activity or location and can alter how cells switch genes on or off.

Protein Overexpression

Production of an abnormally large amount of a protein, caused by gene amplification, transcriptional activation, altered degradation, or other mechanisms and potentially driving disease or serving as a biomarker.

Protein Phosphorylation

Attachment of a small phosphate group to a protein by a cell enzyme. This acts like a reversible switch that can change the protein's activity, location, or interactions and helps control cell signals and division.

Protein Prenylation

Attachment of a fat-like chemical group to a protein, helping position it in a cell membrane. This placement allows some proteins to send signals or help move materials within the cell.

Protein Purification

Separation of a desired protein from cells or a mixture using properties such as charge, size, solubility, affinity, or binding, while preserving its structure and activity.

Protein Refolding

Return of a denatured or newly synthesized protein to its functional three-dimensional structure, sometimes requiring chaperones or controlled laboratory conditions.

Protein S

A natural blood protein that helps activated protein C limit clotting. Too little or abnormal protein S can increase the risk of clots in deep veins or the lungs.

Protein S Blood Test

A protein S blood test measures a natural anticoagulant and may help evaluate suspected inherited or acquired tendency to form blood clots.

Protein S Deficiency

A condition in which the blood has too little or poorly functioning protein S, reducing natural control of clotting. It may be inherited or acquired and can increase the risk of deep-vein thrombosis or pulmonary embolism.

Protein Secretion

Release of a protein from a cell or into a particular cell compartment. Cells use this process to send hormones, digestive enzymes, antibodies, and other proteins to where they are needed.

Protein Sequence

The precise order of amino acids joined together to make a protein. This order helps determine the

protein's three-dimensional shape, location, interactions, and biological job.

Protein Splicing

A process in which a newly made protein removes an internal section and joins the remaining sections together. The finished protein may then fold into the form needed for its normal function.

Protein Subunit

One protein component of a larger protein assembly. Several subunits may join to create the final structure and allow the assembly to perform its biological function.

Protein Synthesis

The process by which a cell uses messenger RNA instructions to join amino acids into a protein. The resulting protein folds into a working shape and may be changed or moved before performing its function.

Protein Translocation

Movement of a newly synthesized or mature protein across a membrane or to a different cellular compartment, directed by targeting signals and transport machinery.

Protein Transport

Cellular movement of proteins between compartments, across membranes, or outside the cell, ensuring that each protein reaches its functional location.

Protein Unfolding

Loss of a protein's native three-dimensional structure, caused by heat, chemicals, mutations, or cellular stress, which can impair function or promote aggregation.

Protein-Energy Malnutrition

Severe lack of calories, protein, or both. It can cause weight loss, muscle wasting, weakness, swelling, poor growth, weak immunity, and slow healing; nutrition must often be restored gradually and carefully.

Protein-Losing Enteropathy

Excessive loss of plasma proteins through the gastrointestinal tract, causing low albumin, swelling, diarrhea, or nutritional deficiency.

Proteinaceous Plug

A blockage made primarily of protein-rich material, mucus, cellular debris, or secretions that can obstruct an airway, duct, catheter, or other passage.

Proteinuria

An unusually high amount of protein in urine. It can result from kidney disease, diabetes, high blood pressure, infection, exercise, fever, or pregnancy and may require repeat testing to find the cause.

Proteobacteria

A large group of bacteria containing many gram-negative species, including *Escherichia*, *Salmonella*, *Pseudomonas*, and *Vibrio*. Some are harmless or helpful, while others cause intestinal, urinary, lung, wound, or bloodstream infections.

Proteogenomics

Integration of genomic, transcriptomic, and proteomic data to identify proteins, discover coding variants, characterize tumors or microbes, and connect DNA changes with protein function.

Proteoglycan

A large molecule made of a protein with many attached sugar chains. It helps connective tissues and cartilage hold water, resist pressure, maintain structure, and send signals between cells.

Proteolipid Protein

A protein containing a substantial fat component, especially important in the myelin sheath around nerve fibers.

Proteolipids

Proteins tightly associated with lipid molecules or lipid membranes, important in myelin, mitochondrial membranes, ion transport, and other membrane structures.

Proteolysis

Enzymatic breakdown of proteins into smaller peptides or amino acids. It is needed for digestion, cell regulation, tissue remodeling, and removal of damaged proteins.

Proteolytic

Relating to the breakdown of proteins by cutting the links between their amino acids. Proteolytic enzymes help digest food, activate clotting and immune proteins, remove damaged proteins, and control cell death; medicines can block some of these enzymes.

Proteome

The complete set of proteins produced by a cell, tissue, organism, or biological condition at a particular time.

Proteomic Profile

A proteomic profile is a pattern of proteins measured in a biological sample to study disease, treatment response, or biological processes.

Proteomics

The large-scale study of proteins, including their abundance, structure, modifications, interactions, and functions. Large-scale study of proteins, including their amounts, structures, changes, interactions, and roles in cells or disease.

Proteus

A group of Gram-negative bacteria that can cause urinary, wound, bloodstream, or other infections. *Proteus* urinary infections may produce urease, raising urine pH and encouraging certain kidney stones.

Proteus Hauseri

A gram-negative bacterium in the *Proteus* group that is rarely isolated from human clinical specimens.

Proteus Mirabilis

A gram-negative bacterium that commonly causes urinary-tract infection and can produce urease-

related kidney or bladder stones.

Proteus Penneri

A gram-negative *Proteus* species that can rarely cause urinary, wound, bloodstream, or other opportunistic infections.

Proteus Syndrome

A rare mosaic overgrowth disorder, usually caused by AKT1 variants, producing asymmetric enlargement of bones, skin, or other tissues and an increased risk of tumors.

Proteus Vulgaris

A gram-negative bacterium that can cause urinary, wound, bloodstream, and other infections and often produces urease.

Prothionamide

A thioamide antimycobacterial drug used as part of selected multidrug regimens for drug-resistant tuberculosis; gastrointestinal, hepatic, neurologic, and thyroid adverse effects require monitoring.

Prothrombin

A blood protein made with the help of vitamin K. When a blood vessel is injured, it is changed into thrombin, which helps form a stable blood clot.

Prothrombin Deficiency

A rare bleeding disorder caused by too little or poorly functioning prothrombin, a protein needed for blood clotting. It can cause easy bruising, nosebleeds, heavy menstrual bleeding, or prolonged bleeding after injury or surgery.

Prothrombin Time

A blood test measuring how quickly a sample forms a clot. It is often reported as the INR and helps assess clotting disorders, liver disease, vitamin K deficiency, and the effect of warfarin.

Alternate Names:

PT

Proto-Oncogene

A normal gene that helps control cell growth, division, or survival. If it becomes abnormally active because of a genetic change or extra copies, it can act as an oncogene and contribute to cancer.

Protocol

A written plan describing the steps, timing, responsibilities, and safety rules for a study, examination, or treatment. Protocols improve consistency, protect participants, guide documentation, and define how results or complications are handled.

Proton Pump Inhibitors

Proton pump inhibitors suppress gastric acid secretion and treat reflux, ulcers, and other acid-related disorders; prolonged or inappropriate use should be periodically reviewed.

Proton Therapy

Radiation treatment using high-energy protons to damage cancer cells. The beam can deliver much of its dose at a selected depth, potentially reducing radiation to nearby healthy tissue; suitability depends on the tumor and treatment plan.

Protozoa

A traditional group of single-celled organisms with nuclei. Some cause human disease, including malaria, giardiasis, and amoebiasis; modern biological classification places them in several different groups.

Protractile

Able to move forward or outward from its usual position. The tongue and lower jaw are examples of body structures that can be actively protruded.

Protractor

An instrument or muscle that moves a body part forward or outward. In anatomy, a protractor muscle may move the jaw, shoulder blade, or another structure away from its usual position.

Protrusion

A part that projects outward or a disc or tissue displaced beyond its normal boundary.

Protuberance

A protuberance is a structure or area that projects outward from a surface, such as a normal bone prominence, swelling, or mass.

Provisional Diagnosis

A temporary working diagnosis made from available evidence before all test results are known, and subject to change.

Provisional Tic Disorder

A disorder with motor or vocal tics lasting less than one year, beginning in childhood and not better explained by another condition.

Provocation

An action or stimulus that brings on a symptom, response, or test finding. Clinicians may use controlled provocation during examination, but it should be stopped if it causes dangerous pain or other harm.

Proximal

Proximal means nearer to the point of attachment or origin; in a limb, the shoulder or hip end is proximal to the hand or foot.

Proximal Humerus Fractures

Breaks near the upper end of the upper-arm bone, close to the shoulder. They may cause pain, swelling, bruising, and difficulty moving the arm; treatment depends on displacement, joint involvement, bone quality, nerve or blood-vessel injury, and the person's needs.

Proximal Neuropathy Diabetic (Diabetic Neuropathy)

Alternate index label for Diabetic Neuropathy.

Proximal Radioulnar Joint

The joint near the elbow where the two forearm bones rotate around each other. It allows the palm

to turn up or down; injury or dislocation can limit rotation and cause pain.

Proximal Renal Tubular Acidosis

Proximal renal tubular acidosis occurs when the kidney cannot reclaim enough bicarbonate, causing excess acid in the blood and often low potassium.

Proximal Tubule

The first part of the kidney's microscopic filtering tube after the filtering unit. It returns much of the filtered water, salt, bicarbonate, sugar, amino acids, and phosphate to the blood.

Proximal Tubule Reabsorption

The kidney's return of much of the filtered water and useful substances, including salt, bicarbonate, glucose, amino acids, and phosphate, from the first tubule back into the blood.

Prune Belly Syndrome

A condition present at birth, usually in boys, involving weak or absent abdominal muscles, undescended testicles, and abnormalities of the urinary tract. Kidney problems, repeated infections, breathing difficulty, and impaired growth may occur.

Prurigo

A group of intensely itchy skin disorders with papules or nodules caused by inflammation and scratching.

Pruritic

Itchy or causing an urge to scratch; pruritus can result from skin inflammation, allergy, infection, systemic disease, medications, or neuropathic mechanisms.

Pruritic Eruption

An itchy skin eruption that may result from allergic, inflammatory, infectious, drug-related, or autoimmune disease; diagnosis depends on its morphology, distribution, timing, and associated findings.

Pruritis Ani

Alternate index label; see *Anal itching*.

Pruritus

An unpleasant itchy feeling that creates the desire to scratch. It may result from dry skin, allergy, infection, medicines, liver or kidney disease, nerve problems, or other conditions; severe or widespread itching needs assessment.

Pruritus (Itch)

Alternate index label for Itch.

Pruritus Ani

Persistent itching around the anus with multiple potential causes including hemorrhoids, fissures, infections such as pinworms and candidiasis, dermatologic conditions including psoriasis and lichen sclerosus, and idiopathic causes.

Pruritus In CKD

Persistent itching associated with advanced chronic kidney disease, often worse in people receiving dialysis. It may occur without a visible rash and can disturb sleep and quality of life; treatment is individualized after other causes are assessed.

Prussian Blue

A blue pigment used in laboratory staining and as an antidote for selected radioactive cesium or thallium poisoning.

PSA

Prostate-specific antigen, a protein made mainly by prostate cells and measured in blood. A raised level may occur with enlargement, inflammation, infection, or cancer and does not diagnose cancer alone.

Alternate Names:

Prostate-specific antigen

PSA Velocity

The rate at which prostate-specific antigen concentration changes over time. It may provide additional information in prostate evaluation but should not

be used alone to diagnose cancer.

Psammoma

A tumor or lesion containing rounded, layered calcium deposits called psammoma bodies. These deposits can occur in several tumors and are identified by microscopic examination rather than symptoms alone.

Psyciatry

Alternate index label; misspelling of *Psychiatry*.

Pseudarthrosis

Failure of a broken bone to heal, leaving persistent movement or a false joint at the fracture site. It can cause pain, weakness, deformity, and loss of function and may require surgery.

Pseudoaneurysm

A weak area or leak in an artery in which blood collects outside the normal artery but remains connected to it. It may follow injury, surgery, infection, or a catheter procedure and can enlarge, burst, or send clots downstream.

Pseudoangiomatous Stromal Hyperplasia

A benign breast stromal proliferation forming slit-like spaces within dense collagen that may mimic vascular channels. It can be incidental or present as a palpable or imaging-detected mass.

Pseudobulbar Affect

Sudden, difficult-to-control episodes of laughing or crying that do not match how a person feels or the situation. It can occur after stroke or with other brain and nerve diseases and is different from depression.

Alternate Names:

Pathological Laughter And Crying PBA

Pseudoclubbing

Nail-tip broadening or flattening that resembles clubbing but does not have the characteristic change in the angle between the nail and surrounding skin. It may occur with some bone, joint, skin, or inher-

ited conditions and needs assessment of the underlying cause.

Pseudocyesis

A condition in which a person has pregnancy-like symptoms, such as missed periods, abdominal enlargement, nausea, or breast changes, without an actual pregnancy. A pregnancy test and examination distinguish it from pregnancy and identify other possible causes.

Pseudodementia

Memory and thinking complaints caused by depression or another potentially reversible problem rather than progressive brain-cell loss. Careful assessment is needed because depression and true dementia can occur together or resemble each other.

Pseudoephedrine

An oral decongestant that shrinks swollen blood vessels in the nose and improves blockage from colds or sinus problems. It may raise blood pressure, cause sleeplessness or palpitations, and interact with some medicines.

Pseudogout

A joint disease caused by calcium pyrophosphate crystals collecting in cartilage. It can cause sudden pain, swelling, warmth, and stiffness, often in a knee or wrist, and may also produce longer-term joint symptoms.

Alternate Names:

Arthritis Pseudogout (Pseudogout)

Pseudogout Flare

A sudden attack of joint pain and swelling caused by calcium pyrophosphate crystals. The knee or wrist is often affected; the joint may be red and warm, and fluid testing can confirm the diagnosis.

Pseudohypertrophic Muscular Dystrophy

An older name for Duchenne or related muscular dystrophy with enlarged-appearing muscles caused by fat and connective tissue.

Pseudohypoparathyroidism

A group of inherited disorders in which the body does not respond properly to parathyroid hormone. This can cause low calcium, high phosphate, muscle cramps, seizures, and sometimes short fingers or other physical features.

Pseudomelanosis Duodeni

A usually harmless dark discoloration of the first part of the small intestine seen during endoscopy. It results from pigment-containing material in the lining and may be associated with chronic illness, medicines, or mineral deposits.

Pseudomembranous Colitis

Severe inflammation of the colon, usually caused by overgrowth of *Clostridioides difficile* after antibiotics. It can cause frequent watery diarrhea, fever, abdominal pain, dehydration, and serious complications.

Alternate Names:

C. Difficile Colitis Colitis, Pseudomembranous

Pseudomonas

A group of Gram-negative bacteria that can cause opportunistic infections, especially in damaged tissues or people with weakened immunity.

Pseudomonas Aeruginosa

A gram-negative bacterium that can cause pneumonia, bloodstream, urinary, wound, and ear infections, especially in hospitalized or immunocompromised people; it often has antibiotic resistance.

Pseudomonas Aeruginosa Infection

Infection caused by *Pseudomonas aeruginosa*, an opportunistic gram-negative bacterium that can affect the lungs, wounds, urinary tract, blood, or other sites.

Pseudomonas Aeruginosa Resistance

The ability of *Pseudomonas aeruginosa* to survive medicines that would normally kill it. Resistance may be natural or develop through genetic changes, so laboratory testing is needed to choose an effective

antibiotic.

Pseudomyxoma Peritonei

A rare condition in which jelly-like tumor material gradually fills the abdomen, usually after a mucus-producing appendix tumor ruptures. It can cause increasing abdominal size, pain, bowel blockage, or poor nutrition and requires specialist treatment.

Pseudophakia

Having an artificial lens inside the eye after the natural lens has been removed, usually during cataract surgery. The replacement lens focuses light, but later clouding of its supporting capsule or other eye problems can still affect vision.

Pseudorabies

Aujeszky disease, a herpesvirus infection mainly affecting pigs and other animals. People are rarely infected, but exposed humans may develop serious nervous-system disease; it is different from rabies.

Pseudothrombocytosis Due To Red Cell Fragments

A falsely high platelet count caused when automated equipment mistakes very small broken red-cell fragments for platelets. A blood-smear examination can distinguish this error from a genuinely high platelet count.

Pseudotumor Cerebri

An older name for idiopathic intracranial hypertension, a condition in which pressure around the brain rises without a tumor. It can cause daily headache, brief dimming of vision, whooshing in the ears, and swelling of the optic nerves that may threaten sight.

Pseudoxanthoma Elasticum

A rare inherited disorder in which elastic tissue becomes hardened and damaged. It can cause yellowish or loose skin, bleeding or vision loss from eye blood vessels, and narrowing or bleeding in arteries.

Alternate Names:

PXE (Pseudoxanthoma Elasticum)

Psittacosis

An infection caused by *Chlamydia psittaci*, usually acquired by breathing dust from infected birds or their droppings. It commonly causes fever, headache, cough, and pneumonia and requires appropriate antibiotic treatment.

PSMA

A protein found in large amounts on many prostate cancer cells and in smaller amounts in some normal tissues. Special tracers can use it to show prostate cancer on scans or deliver radiation to cancer cells.

Psoas

A large muscle running from the lower spine to the thigh bone. It helps bend the hip, lift the leg, maintain upright posture, and stabilize the spine during movement.

Psoas Abscess

A collection of pus in or around the psoas muscle, caused by infection spreading through the blood or from nearby tissues. It may cause back or hip pain, fever, difficulty walking, or few symptoms and usually requires imaging and targeted treatment.

Psoriasis

A long-lasting skin condition in which an overactive immune system makes skin cells grow too quickly. It causes well-defined red or darker patches with scale and may also affect the nails or joints.

Psoriatic Arthritis

An inflammatory arthritis associated with psoriasis of the skin or nails. It may affect the spine, peripheral joints, digits, or tendon insertions, and diagnosis uses the clinical pattern together with appropriate laboratory and imaging findings.

Alternate Names:

Arthritis Psoriatic (Psoriatic Arthritis)

PSP

PSP commonly means progressive supranuclear palsy, a neurodegenerative disorder causing early postural instability, vertical gaze impairment, rigid-

ity, and cognitive change.

Psychiatric

Relating to the assessment, diagnosis, treatment, or prevention of disorders of mood, thought, perception, behavior, or emotional functioning.

Psychiatrist

A medical doctor who assesses, diagnoses, and treats mental-health conditions. A psychiatrist may provide talking therapy, prescribe medicines, coordinate other treatments, and assess how mental or physical illness affects safety and daily life.

Psychiatry

The medical specialty concerned with mental health and the diagnosis and treatment of mental disorders.

Psycho-Oncology

The clinical field addressing psychological, social, behavioral, and communication needs of people with cancer and their families during diagnosis, treatment, survivorship, and end-of-life care.

Psychoacoustics

The study of how people perceive and interpret sound, including loudness, pitch, masking, localization, speech, and hearing thresholds.

Psychoactive

Affecting mood, thought, perception, behavior, alertness, or other mental processes. Psychoactive substances include prescribed medicines, alcohol, and recreational drugs.

Psychoactive Substance

A substance that alters mood, perception, cognition, behavior, or consciousness.

Psychoanalysis

A psychological theory and talking treatment emphasizing unconscious thoughts, feelings, memories, and conflicts. Traditional treatment explores patterns in relationships and behavior, while modern approaches vary in methods, goals, and evidence.

Psychodermatology

The area of care that considers links between skin conditions and emotional health. Stress can worsen problems such as eczema, psoriasis, acne, or hives, while visible skin disease can cause anxiety or low mood; both aspects may need treatment.

Psychodidae

A family of small hairy flies that includes sand flies; some species transmit pathogens such as *Leishmania* and therefore have public-health importance.

Psychodrama

A therapy using guided acting to explore emotions, relationships, and behavior in a supportive setting.

Psychodynamic Therapy

Talking therapy that explores how past experiences, relationships, feelings, and patterns outside a person's immediate awareness may influence current distress and behavior. The therapist and patient use the therapeutic relationship to develop insight and healthier ways of coping.

Psychogenic

Caused or strongly influenced by psychological factors such as stress, trauma, or emotional conflict. The symptoms are real and not deliberately produced, and physical causes should still be considered.

Psychogenic Erectile Dysfunction

Difficulty getting or keeping an erection mainly related to stress, anxiety, depression, relationship concerns, or other emotional factors. Physical causes can coexist, so medical assessment should consider health, medicines, and psychological wellbeing.

Psychogenic Non-Epileptic Seizures

Episodes that resemble epileptic seizures but are not caused by the abnormal electrical discharges of epilepsy. They are real and involuntary and may involve shaking, stiffening, unresponsiveness, or altered movement; video-EEG can help establish the diagnosis.

Psycholinguistics

The study of how the brain and mind produce, understand, acquire, and remember language, including speech, reading, grammar, and meaning.

Psychological

Relating to thoughts, feelings, behavior, or the way these affect health. Psychological factors can influence pain, sleep, coping, treatment choices, and recovery, but describing a factor as psychological does not mean symptoms are imagined.

Psychological Adjustment

The process of adapting thoughts, emotions, and behavior to stress, illness, disability, loss, developmental change, or other life circumstances.

Psychological Dependence

A pattern in which a person feels a strong emotional or mental need for a substance or behavior, often with craving, preoccupation, or distress when it is unavailable.

Psychological Support

Emotional and practical help for people coping with illness, disability, pain, or difficult treatment. It may include counseling, coping skills, support groups, and assessment or treatment of anxiety, depression, and adjustment problems.

Psychological Transfer

The process in which feelings, expectations, or relationship patterns from earlier experiences become directed toward someone in the present, especially a therapist. Recognizing this pattern can help understand distress and relationships during therapy.

Psychologist, Clinical

A licensed mental-health professional who assesses and treats psychological, emotional, behavioral, and cognitive problems using psychotherapy and other evidence-based interventions within local scope of practice.

Psychology

The scientific study of behavior, emotion, learning, and mental processes. Psychological care may include assessment, counseling, and behavioral therapies.

Alternate Names:

Mental Health (Psychology)

Psychometrics

The design and use of tests that measure mental abilities, feelings, behavior, or personality. It also examines whether a test gives consistent results and truly measures the quality it claims to measure.

Psychomotor

Relating to the connection between mental activity and physical movement, including the speed, coordination, and purposeful control of actions.

Psychomotor Agitation

Restless, excessive, or purposeless movement associated with inner tension, anxiety, mania, delirium, depression, substance effects, or medication reactions.

Psychomotor Disorder

A condition affecting the speed, starting, coordination, or expression of movement and mental activity. A person may move unusually slowly or quickly, seem restless, or have difficulty organizing purposeful actions.

Psychomotor Performance

The ability to coordinate mental processing with physical movement, assessed through tasks involving speed, precision, reaction time, balance, or sequencing.

Psychoneuroimmunology

The study of how thoughts, emotions, the brain, hormones, and the immune system influence one another in health and illness. It examines links involving stress, inflammation, infection, and recovery.

Psychopathic

Describing severe, persistent antisocial traits such as limited empathy, deceitfulness, and disregard for others; it is not a precise diagnosis.

Psychopathology

The study and description of abnormal mental processes, symptoms, behaviors, and mechanisms underlying psychiatric disorders. The study or description of abnormal mental states and behavior.

Psychopharmacology

The study of how medicines affect mood, behavior, thinking, sleep, and other mental functions in people.

Psychophysics

The study of how physical stimuli, such as light, sound, pressure, or heat, are experienced by a person. It measures detection thresholds, ability to distinguish stimuli, and perceived strength.

Psychophysiology

The study of links between psychological processes and measurable bodily functions such as heart rate, skin conductance, muscle activity, and brain signals.

Psychosexual

Relating to how psychological factors interact with sexual development, feelings, behavior, relationships, or function. Mental health, past experiences, body image, culture, medicines, and physical conditions can all influence sexuality.

Psychosexual Development

Development of sexual identity, interest, relationships, and behavior across the lifespan as influenced by biology, cognition, attachment, culture, and experience.

Psychosis

A state in which a person loses contact with reality. It may involve strongly held false beliefs, hearing or seeing things others do not, confused speech, or markedly disorganized behavior and can result from

mental, medical, neurologic, or substance-related causes.

Psychosis ICU (ICU Psychosis)

Alternate index label for ICU Psychosis.

Psychosocial Rehabilitation

Support that helps a person with mental illness build skills, relationships, confidence, and independence. It may include daily-living training, education, work support, peer support, therapy, and help taking part in family and community life.

Psychosocial Support

Practical, emotional, and social help for people facing illness or difficult treatment. It may include counseling, support groups, help with work or money worries, family support, and care for anxiety, depression, fear, loneliness, or grief.

Psychosomatic

Relating to physical symptoms influenced by psychological processes or stress.

Psychosurgery

Surgery intended to alter brain circuits for severe, treatment-resistant psychiatric illness; it is rarely used and highly specialized.

Psychotherapy

Structured treatment using therapeutic communication and psychological techniques to reduce distress, change unhelpful patterns, and improve coping or relationships. Common approaches include cognitive behavioral and interpersonal therapies.

Psychotic

Describing a loss of contact with reality. A person may have fixed false beliefs, hear or see things others do not, speak in a confused way, or behave in a very disorganized or unusually still manner. Psychosis can occur with schizophrenia, severe mood disorders, drugs, medicines, delirium, brain disease, or other medical problems. Urgent assessment is needed when safety, self-care, or basic functioning

is affected.

Psychotic Disorder

A mental disorder involving loss of contact with reality, such as delusions, hallucinations, disorganized thinking, or markedly disorganized behavior.

Psychotic Disorder Brief (Brief Psychotic Disorder)

Alternate index label for Brief Psychotic Disorder.

Psychotic Disorders

Psychotic disorders involve impaired reality testing, such as hallucinations, delusions, disorganized thought, or marked behavioral change. Causes include schizophrenia-spectrum illness, mood disorders, substances, medicines, neurologic disease, and medical illness; new psychosis requires prompt assessment and safety planning.

PTCA

Percutaneous transluminal coronary angioplasty, a procedure using a small balloon to open a narrowed heart artery. A stent is often placed afterward to help keep the artery open and restore blood flow.

Alternate Names:

Percutaneous coronary intervention

PTCL

Alternate index label; see *Peripheral T-cell lymphoma*.

PTE

Alternate name; see *Pulmonary Thromboendarterectomy*.

Pteridine

A nitrogen-containing chemical structure found in folate vitamins, natural pigments, and other active body compounds. Pteridine-containing molecules participate in cell growth, chemical reactions, color production, and inherited metabolic disorders.

Pterygium

A raised, often triangular growth of the clear cover-

ing of the eye that extends onto the cornea. Long-term sun, wind, dust, or dry-eye exposure may contribute; it can cause irritation, redness, blurred vision, or astigmatism.

PTH-Related Peptide

A hormone-like substance sometimes made in excess by cancer cells. It acts partly like parathyroid hormone and can raise blood calcium, causing thirst, constipation, weakness, confusion, dehydration, or kidney problems.

Pthirus Pubis

The insect commonly called the pubic louse. It lives mainly in coarse genital hair and causes intense itching and visible lice or eggs; it spreads mainly through close body or sexual contact.

Ptilosis

An abnormal hair pattern or hair disorder, including excess growth, unusual direction, or loss. The term is nonspecific, so the body site, appearance, timing, and underlying cause must be assessed.

PTLD

Post-transplant lymphoproliferative disorder, an abnormal overgrowth of immune cells after organ or stem-cell transplantation. It ranges from a reversible response to lymphoma and may cause fever, swollen lymph nodes, organ problems, or unexplained weight loss.

Ptoxis

Drooping of an eyelid or another body structure. Eyelid ptosis may result from muscle, nerve, tendon, aging, injury, or a neurologic disorder.

Ptoxis - Infants And Children

Ptoxis in an infant or child is drooping of the upper eyelid, which may obstruct vision or cause amblyopia and can reflect congenital, muscular, nerve, or other disease.

PTSD

Post-traumatic stress disorder, a condition involv-

ing persistent trauma-related memories, avoidance, negative mood or cognition, and heightened arousal after a severe traumatic event.

Ptyalin

An older name for salivary amylase, the enzyme that begins starch digestion in the mouth.

Ptyalism (Sialorrhoea)

Excessive saliva or drooling. It may result from increased saliva production or difficulty swallowing, and can occur with pregnancy, mouth irritation, reflux, medicines, or disorders affecting the brain, nerves, or muscles.

Pubertal Failure

Puberty that does not begin or stops progressing as expected. Causes may involve the brain's hormone centers, pituitary gland, testes or ovaries, chromosomes, chronic illness, inadequate nutrition, excessive exercise, or other factors.

Puberty

The stage when hormone changes cause the body to mature sexually and become capable of reproduction. It includes growth, development of breasts or testes and genitals, body hair, voice changes, and menstrual periods or sperm production.

Puberty In Boys

Puberty in boys is the hormone-driven development of testes, penis, body hair, voice, muscle, and fertility, usually progressing through predictable physical stages.

Puberty In Girls

Puberty in girls is the hormone-driven development of breasts, body hair, growth, menstrual cycles, and reproductive maturity, usually progressing through predictable stages.

Pubes

The area in front of the pelvis over the pubic bone, or the coarse hair that grows there during puberty. Changes in pubic hair can help assess sexual devel-

opment, but must be interpreted with other physical findings.

Pubic

Relating to the pubis, the front part of the pelvis, or the area covered by hair above the genitals.

Pubic Lice

Pubic lice are parasitic insects infesting coarse body hair, causing intense itching and visible nits; treatment and assessment of close or sexual contacts are needed.

Pubic Lice (Crabs)

Infestation of coarse body hair by lice, usually causing intense itching and requiring treatment and contact precautions.

Alternate Names:

Crabs

Pubis

The front part of the pelvic bone, meeting its opposite side at the pubic symphysis.

Public Assistance

Government or community support providing eligible people with food, housing, income, healthcare, disability, or other essential services.

Public Exposure

Radiation received by other people from a patient who has undergone nuclear medicine treatment. The amount depends on the radioactive substance and treatment; the medical team gives specific instructions to limit exposure when needed.

Public Health

The science and practice of protecting and improving the health of communities through education, policy-making, and research for disease and injury prevention.

Public Health Emergency

A serious event threatening the health of many people, such as a pandemic, disaster, or deliberate

biological attack.

Puborectalis Muscle

A loop-shaped pelvic muscle that surrounds the lower rectum and helps control bowel movements. At rest it pulls the rectum forward to make a bend that helps hold stool; relaxing it helps stool pass.

Pudendal

Relating to the external genitalia, anus, or perineum. The pudendal nerve carries sensation from these areas and helps control several muscles involved in continence and sexual function.

Pudendal Arteries

Arteries supplying blood to the external genital and perineal region.

Pudendal Block

Injection of local anesthetic near the pudendal nerve to numb the lower vagina, vulva, anus, and perineum. It may reduce pain during late labor, assisted delivery, or repair of a birth-related tear.

Pudendal Nerve

The nerve carrying sensation and motor signals to much of the perineum and pelvic floor.

Puerperal

Relating to the period after childbirth, usually the first six weeks. During this time the body recovers from pregnancy and birth, the womb becomes smaller, bleeding gradually settles, and problems such as infection, heavy bleeding, or blood clots may occur.

Puerperal Disorder

A physical or mental health disorder occurring during the postpartum period, including infection, bleeding, hypertension, depression, or psychosis.

Puerperal Fever

Fever occurring after childbirth, often caused by infection of the uterus, birth canal, urinary tract, breast, wound, or bloodstream. It requires prompt

assessment because untreated infection can spread and become life-threatening.

Puerperal Infection

An infection after childbirth, commonly involving the uterus, surgical wound, urinary tract, breast, or bloodstream, often causing fever, pain, or foul discharge.

Puerperal Psychosis

A rare, severe mental-health emergency that begins soon after childbirth. Rapid mood changes, confusion, false beliefs, hallucinations, or disorganized behavior can develop quickly and may threaten the safety of the parent or baby, requiring immediate assessment.

Puerperal Sepsis

A serious infection of the reproductive tract during labor or the six weeks after childbirth. Fever, pelvic pain, foul-smelling discharge, weakness, or fast breathing require urgent medical assessment and antibiotic treatment.

Alternate Names:

Postpartum Sepsis; Puerperal Septicemia

Puerperium

The period after childbirth, usually about six weeks, when the body recovers from pregnancy and birth. The uterus shrinks, bleeding settles, milk production develops, and health problems may still arise.

Puffy Eyes

Alternate index label; see *Bags under eyes*.

Pugilistic Stance

A flexed posture of the arms, hands, and legs sometimes seen in bodies exposed to intense heat. It results from heat-related muscle and tendon contraction, not from purposeful movement, and does not by itself show when or how death occurred.

Pugilistica Dementia (Dementia)

Alternate index label for Dementia.

Pulled Hamstring (Hamstring Injury)

Alternate index label for Hamstring Injury.

Pulling A Patient Up In Bed

A safe repositioning technique using adequate staff, friction-reducing equipment, and coordinated movement to move a patient toward the head of the bed while preventing falls, shear, and staff injury.

Pulmonary

Relating to the lungs or the blood vessels and airways that support breathing. Pulmonary disease may involve infection, asthma, chronic obstructive lung disease, high pressure in lung vessels, blood clots, fluid, scarring, or cancer.

Pulmonary Actinomycosis

Pulmonary actinomycosis is a chronic bacterial infection of the lungs caused by *Actinomyces* and may form mass-like lesions or spread across tissue planes.

Pulmonary Alveolar Hemorrhage

Bleeding into the lung's air sacs. It may cause coughing up blood, breathlessness, low oxygen, anemia, and widespread lung shadows and can result from immune disease, infection, medicines, injury, or a clotting problem.

Pulmonary Alveolar Microlithiasis

A rare inherited lung disease in which tiny mineral deposits build up inside the air sacs. It may cause no symptoms at first, but later can lead to cough, breathlessness, low oxygen, and progressive lung scarring.

Pulmonary Alveolar Proteinosis

A rare lung disease in which a fatty material builds up inside the air sacs and interferes with oxygen exchange. It can cause gradually worsening breathlessness, cough, tiredness, and low oxygen and may be immune-related or secondary to another illness.

Pulmonary Angiography

Contrast imaging of the pulmonary arteries, usually by catheter. It can diagnose pulmonary vascular ab-

normalities but is now used less often for pulmonary embolism because CT pulmonary angiography is less invasive.

Pulmonary Arterial Hypertension

High blood pressure in the arteries carrying blood from the heart to the lungs because these vessels become narrowed or damaged. It can cause breathlessness, tiredness, chest discomfort, dizziness, or fainting and may strain the right side of the heart.

Pulmonary Arteries

The two large blood vessels carrying oxygen-poor blood from the right side of the heart to the lungs. In the lungs, the blood releases carbon dioxide and picks up oxygen.

Alternate Names:

pulmonary artery

Pulmonary Arteriovenous Fistula

An abnormal direct connection between an artery and vein in the lung that lets blood bypass normal oxygen exchange. It can cause low oxygen, breathlessness, blue skin, stroke-causing clots, or rarely a brain abscess.

Pulmonary Arteriovenous Malformation

An abnormal direct connection between an artery and vein in the lung. Blood bypasses normal oxygen exchange, which can cause low oxygen, breathlessness, coughing blood, stroke, or a brain abscess; some cases are linked to an inherited blood-vessel disorder.

Pulmonary Artery

The large blood vessel carrying oxygen-poor blood from the right side of the heart to the lungs. There, blood releases carbon dioxide, receives oxygen, and returns through pulmonary veins.

Pulmonary Artery Catheter

A thin tube passed through the right side of the heart into a lung artery to measure pressures, blood flow, and heart performance. It is used selectively in severe heart or lung disease and critical illness because insertion has risks.

Pulmonary Artery Pulsatility Index

A measurement calculated during right-heart catheterization from pulmonary-artery pressure and right-atrial pressure. A low result may indicate weak right-ventricle pumping and a higher risk of right-sided heart failure in seriously ill patients.

Alternate Names:

PAPi; PAP Index

Pulmonary Aspergilloma

A pulmonary aspergilloma is a ball of *Aspergillus* fungus and debris growing in a pre-existing lung cavity, sometimes causing coughing of blood.

Pulmonary Atresia

A heart defect present from birth in which the valve or passage from the right ventricle to the pulmonary artery does not open normally. Blood cannot reach the lungs through the usual route, so newborns may become blue or severely unwell and need urgent specialist care.

Alternate Names:

Tetralogy of Fallot With Pulmonary Atresia

Pulmonary Blastoma

A rare malignant lung tumor composed of primitive epithelial and mesenchymal tissue, usually treated with specialist oncology care.

Pulmonary Capillary Wedge Pressure

A pressure measured with a special catheter in a small lung artery to estimate pressure on the left side of the heart. It can help assess heart failure or fluid overload in critically ill patients, but breathing support and other conditions affect its meaning.

Pulmonary Circuit

The circulation in which blood travels from the right ventricle to the lungs for gas exchange and returns to the left atrium.

Pulmonary Circulation

The blood-flow circuit from the right ventricle through the pulmonary arteries and lung capillaries to the left atrium, where blood releases carbon

dioxide and gains oxygen.

Pulmonary Compliance

How easily the lungs expand when pressure changes during breathing. Low compliance means the lungs are stiff and harder to inflate; high compliance can mean they expand easily but may not recoil effectively.

Pulmonary Contusion

Bruising of the lung after a blow or crush injury to the chest. Bleeding and swelling inside the lung can reduce oxygen exchange and worsen during the first day or two; treatment supports breathing and addresses associated injuries.

Pulmonary Edema

A buildup of fluid in the lungs that can make breathing difficult. It is often caused by heart failure but may also result from kidney problems, lung injury, medicines, or high altitude. Sudden severe breathing difficulty is an emergency.

Alternate Names:

Edema, Pulmonary Edema Pulmonary (Pulmonary Edema)

Pulmonary Embolism

Blockage of a pulmonary artery, usually by a clot that traveled from a deep vein.

Alternate Names:

Blood Clot In The Lung (Pulmonary Embolism)
Embolism Pulmonary (Pulmonary Embolism)

Pulmonary Embolism Treatment

Treatment for a blood clot in the lung usually uses anticoagulant medicine to stop growth and prevent new clots. Severe or unstable cases may need clot-dissolving medicine or a procedure; choice and duration depend on the person's risks and cause.

Pulmonary Embolus

A blockage of a pulmonary artery, usually by a blood clot that traveled from a deep vein, causing sudden breathlessness, chest pain, low oxygen, or collapse.

Pulmonary Emphysema

Permanent damage and enlargement of the lung's air sacs, reducing the surface available for oxygen exchange. It commonly occurs with smoking or other long-term irritant exposure and can cause breathlessness, cough, and reduced exercise ability.

Pulmonary Fibrosis

Permanent scarring of lung tissue that makes the lungs stiff and reduces oxygen transfer into the blood. It may cause breathlessness, dry cough, and reduced exercise ability. Causes include idiopathic disease, autoimmune conditions, medicines, workplace exposures, radiation, and some infections.

Pulmonary Fistula

An abnormal passage between the lung or an airway and another structure, such as the space around the lung, skin, or swallowing tube. It can allow air or infected fluid to travel where it should not.

Pulmonary Function Tests

Breathing tests that measure how much air the lungs hold, how quickly air can be moved, and how well oxygen passes into the blood. They help assess asthma, chronic obstructive lung disease, scarring, and other breathing problems. Results depend on effort, technique, age, and body size.

Pulmonary Hemorrhage

Bleeding into the airways or lung tissue, which may cause coughing blood, low oxygen, anemia, or respiratory failure.

Pulmonary Hemosiderosis

A condition in which repeated bleeding into the lung's air sacs leaves iron deposits behind. It may cause cough, breathlessness, coughing blood, anemia, and low oxygen and can result from immune disease or other causes.

Pulmonary Hypertension

Abnormally high pressure in the blood vessels that carry blood from the heart to the lungs. It can result from disease of these vessels, left-sided heart disease, lung disease or low oxygen, chronic blood clots, or

several other causes. It may cause breathlessness, fatigue, chest discomfort, fainting, and heart strain.

Alternate Names:

PH (Pulmonary Hypertension)

Pulmonary Hypertension - At Home

Home care for pulmonary hypertension includes taking prescribed medicines, monitoring symptoms, conserving energy, following oxygen advice, and seeking urgent help for severe breathlessness or chest pain.

Pulmonary Hypertension Classification

A clinical grouping based on cause: disease of the pulmonary arteries, left-sided heart disease, lung disease or low oxygen, chronic blood clots, or several other mechanisms. Identifying the group guides testing and treatment because medicines useful for one group may be harmful in another.

Pulmonary Infarction

Death of a small area of lung tissue after its blood supply is blocked, usually by a pulmonary embolism. It may cause sharp pain with breathing, coughing up blood, breathlessness, or a shadow on imaging.

Pulmonary Infection

An infection of the lungs or lower respiratory tract caused by bacteria, viruses, fungi, or other organisms.

Pulmonary Langerhans Cell Histiocytosis

A rare lung disease strongly linked to cigarette smoking, in which unusual immune cells damage small airways and form lung cysts. It can cause cough, breathlessness, chest pain, or a collapsed lung. Stopping smoking is essential and may stabilize the disease; specialist treatment is needed if it progresses.

Alternate Names:

PLCH; Histiocytosis X of the Lung; Pulmonary Eosinophilic Granuloma

Pulmonary Lobes

The anatomical divisions of the lungs separated by interlobar fissures. The right lung has superior,

middle, and inferior lobes; the left lung has superior and inferior lobes and a lingula.

Pulmonary Mass

A space-occupying lesion in or near the lung, which may represent infection, inflammation, benign growth, or cancer and requires appropriate imaging assessment.

Pulmonary Nocardiosis

A lung infection caused by *Nocardia* bacteria, usually affecting people with weakened immunity and sometimes spreading to the brain or skin.

Pulmonary Nodule

A rounded opacity in the lung, usually smaller than 3 cm, caused by scar, infection, inflammation, or tumor and assessed according to size and risk factors.

Pulmonary Oedema

Fluid collecting in lung tissue or air sacs, making breathing difficult and reducing oxygen transfer. It often results from heart failure but can also follow infection, toxins, kidney disease, or severe injury.

Pulmonary Reactance

A measure of how the stretch and movement of the lungs and chest wall affect airflow during breathing. It is obtained during specialized tests and can help describe stiffness or altered movement of the respiratory system.

Pulmonary Rehabilitation

A supervised, multidisciplinary program combining exercise training, education, behavioral support, and self-management for chronic respiratory disease. It improves exercise capacity, dyspnea, functional status, and quality of life.

Pulmonary Sequestration

A birth-related area of lung tissue that does not connect normally to the airways and receives blood from an unusual artery. It may cause repeated lung infections, cough, or breathing problems, although some cases cause no symptoms.

Pulmonary Stenosis

Narrowing that obstructs blood leaving the right side of the heart on its way to the lungs, usually at the pulmonary valve. It is often present from birth and may cause a heart murmur, tiredness, breathlessness, or fainting.

Pulmonary Surfactant

A slippery mixture made by cells lining the lung's air sacs that reduces surface tension and helps keep the sacs open. Too little in premature babies can cause serious breathing difficulty.

Pulmonary Thromboendarterectomy

Major surgery to remove old clots and scar tissue from the arteries of the lungs. It may improve or cure long-term clot-related high blood pressure in the lungs in selected people, but it carries serious surgical risks.

Alternate Names:

PTE; Pulmonary Endarterectomy; PEA (Pulmonary Endarterectomy)

Pulmonary Trunk

The large vessel leaving the right ventricle that divides into the right and left pulmonary arteries.

Pulmonary Tuberculosis

Tuberculosis infection involving the lungs, caused by *Mycobacterium tuberculosis*. It may cause prolonged cough, fever, night sweats, weight loss, or coughing blood and can spread through the air.

Pulmonary Valve

A one-way valve between the right lower heart chamber and the artery leading to the lungs. It opens to let blood leave the heart and closes to prevent backward flow; narrowing or leakage can strain the right side of the heart.

Pulmonary Valve Regurgitation

Leakage through the pulmonary valve that allows blood to flow back into the right lower heart chamber as the heart relaxes. Mild leakage may cause no symptoms; severe leakage can enlarge and weaken

the right side of the heart.

Alternate Names:

Pulmonic regurgitation; Pulmonary valve insufficiency

Pulmonary Valve Insufficiency

Leakage of blood backward through the pulmonary valve into the right lower heart chamber while the heart relaxes. Mild leakage may cause no symptoms, but severe disease can enlarge the heart and reduce exercise ability.

Pulmonary Vascular Resistance

The opposition to blood flow through the lung blood vessels. High resistance makes the right side of the heart pump harder and can lead to high pressure in the lungs, right-heart enlargement, and heart failure.

Pulmonary Vasodilator Therapy

Treatment with medicines that widen blood vessels in the lungs and lower pressure on the right side of the heart. It is used for selected types of pulmonary hypertension after specialist testing because it may be harmful in other types.

Pulmonary Vein

The four veins (two from each lung) returning oxygenated blood from the lungs to the left atrium, a unique exception in the venous system (carrying oxygenated blood). Superior and inferior pulmonary veins enter the left atrium posteriorly.

Pulmonary Vein Isolation

A catheter procedure for selected people with atrial fibrillation. The clinician creates small areas of scar around the veins entering the upper heart chamber to block abnormal electrical signals. It can reduce episodes but may not cure them; bleeding, stroke, narrowing of a vein, or other complications are possible.

Alternate Names:

PVI; Antral Pulmonary Vein Isolation; AFib Catheter Ablation

Pulmonary Veins

Usually four veins that carry oxygen-rich blood from the lungs to the heart's left upper chamber. They are unusual veins because they carry oxygen-rich rather than oxygen-poor blood.

Pulmonary Veno-Occlusive Disease

A rare progressive disease in which small veins in the lungs become narrowed or blocked. Pressure then rises in the lung circulation, causing breathlessness and low oxygen; some medicines for pulmonary hypertension can trigger life-threatening fluid in the lungs.

Pulmonary Ventilation

The movement of air into and out of the lungs. It brings oxygen into the air sacs and removes carbon dioxide; inadequate ventilation can cause low oxygen or a buildup of carbon dioxide.

Pulmonary Ventilation/Perfusion Scan

An imaging test comparing air reaching different lung regions with blood flow through those regions. A mismatch may suggest a blood clot in the lung, while other patterns can indicate lung or blood-vessel disease.

Pulmonary Wedge Pressure

A pressure measured through a special catheter in a small lung artery to estimate the pressure in the left side of the heart. It helps assess fluid overload or heart failure in seriously ill patients.

Pulmonary-Artery Dissection

A rare, life-threatening tear in the wall of an artery carrying blood from the heart to the lungs. It may cause sudden chest pain, breathlessness, low blood pressure, or collapse and requires emergency specialist care.

Pulmonic Valve Stenosis

Pulmonic valve stenosis is narrowing of the valve between the right ventricle and pulmonary artery, creating outflow obstruction and sometimes right-heart strain.

Pulmonologist

A pulmonologist is a physician specializing in diseases of the lungs and breathing system, including asthma, COPD, infections, and sleep-related breathing disorders.

Pulp

The soft living tissue in the center of a tooth, containing nerves and blood vessels. It can become inflamed or infected after decay, cracks, or injury and may then require root-canal treatment or removal.

Pulp Canal

The pulp canal is the passage within a tooth root containing dental pulp, nerves, and blood vessels; infection may require root-canal treatment.

Pulp Disease

A problem affecting the living tissue inside a tooth, including inflammation, infection, loss of blood supply, or tissue death. It may cause toothache or sensitivity and can follow decay, a crack, a filling, or injury.

Pulp Stone

A small area of hardened mineral inside the soft center of a tooth. It often causes no symptoms and is found on dental imaging, but it may complicate root-canal treatment if it blocks the canal.

Pulpectomy

Complete removal of infected or damaged pulp from inside a tooth, usually a primary tooth. The space is cleaned and filled with a material that can safely resorb as the adult tooth develops.

Pulpitis

Inflammation of the dental pulp, usually caused by caries, trauma, cracks, or restorative treatment. Reversible pulpitis causes brief pain provoked by cold or sweet stimuli; irreversible pulpitis causes spontaneous or lingering pain and may progress to pulp necrosis, requiring endodontic treatment or extraction.

Pulposus

Relating to the nucleus pulposus, the gelatinous central portion of an intervertebral disk. Relating to the soft, jelly-like center of an intervertebral disk, which helps cushion spinal movement.

Pulpotomy

Removal of inflamed soft tissue from the crown of a baby tooth while keeping the root tissue alive. It treats suitable decay or injury and preserves the tooth until it naturally falls out.

Pulse

A pulse is the rhythmic expansion of an artery produced by each heartbeat; its rate, rhythm, strength, and symmetry provide clues about circulation and cardiac function.

Pulse - Bounding

A bounding pulse feels unusually strong or full and can occur with fever, anemia, hyperthyroidism, exercise, anxiety, aortic regurgitation, or high-output states.

Pulse Examination

Checking arterial pulses for speed, regularity, strength, and equality on both sides. It helps assess blood flow, heart rhythm, circulation to limbs, and possible blockage or reduced blood supply.

Pulse Irregular

An irregular pulse has uneven timing or varying beats and may reflect premature beats, atrial fibrillation, other arrhythmias, or measurement variation.

Pulse Oximeter

A small device, often placed on a fingertip, that estimates blood oxygen and pulse rate using light. Movement, cold fingers, poor circulation, nail products, and device limitations can make the reading inaccurate.

Pulse Oximetry

A painless method of estimating blood oxygen with

a light-based sensor, usually on a finger, toe, or ear. The result must be interpreted with symptoms and circulation because it can be inaccurate in some situations.

Pulse Pressure

The systolic blood pressure minus the diastolic blood pressure. A widened or narrowed value may provide clues about circulation but must be interpreted with the full blood-pressure reading and clinical context.

Pulse Rate

Pulse rate is the number of palpable arterial beats per minute and usually approximates heart rate, although some arrhythmias produce a pulse deficit.

Pulseless Disease

Takayasu arteritis, an inflammation of large arteries that can narrow or block blood flow. It may cause weak pulses, unequal blood pressure, limb pain, dizziness, vision problems, or organ damage.

Pulseless Electrical Activity

A cardiac-arrest rhythm in which the heart's electrical activity continues but the heart does not pump enough blood to produce a pulse. It requires immediate resuscitation.

Pulsus

A term used in medicine to describe the pulse and named patterns of arterial beats. The pattern may provide clues about heart rhythm, pumping strength, blood-vessel resistance, breathing, or circulation.

Pulsus Paradoxus

An unusually large drop in blood pressure during breathing in, usually more than 10 millimeters of mercury. It can occur when the heart is compressed by fluid, or during severe asthma, chronic lung disease, or other heart conditions.

Pulvinar

A region at the back of the thalamus, a deep brain structure. It helps direct visual attention, combine

sensory information, and communicate with areas of the cerebral cortex.

Pumice

A porous volcanic stone used as an abrasive; excessive dust inhalation can irritate the lungs.

Pump Failure

Severe weakening of the heart's pumping ability, causing inadequate blood flow to organs.

Alternate Names:

Cardiogenic pump failure

Pump-Oxygenator

The part of a heart-lung machine that moves blood and adds oxygen while removing carbon dioxide during some heart operations. It temporarily replaces the pumping and gas-exchange work of the heart and lungs. Use can be associated with bleeding, inflammation, clots, or organ complications.

Punch Biopsy

A circular, usually full-thickness skin specimen obtained with a punch instrument. It is useful for inflammatory, infectious, melanocytic, and other cutaneous lesions; small wounds may be closed with a suture.

Punctate

Made up of, or marked by, small spots, dots, or points. The term describes appearance and does not by itself identify a diagnosis.

Punctate Hemorrhages (Tardieu Spots)

Tiny pinpoint areas of bleeding under the skin or on internal surfaces. They can form when small blood vessels rupture during severe pressure or oxygen deprivation, but their presence alone cannot establish the cause or timing of death.

Alternate Names:

Tardieu Spots

Punctate Palmoplantar Keratoderma

An inherited condition causing many small, hard areas of thickened skin on the palms and soles. It

often begins in adolescence or adulthood and can make walking or using the hands painful; rarely, a skin cancer develops.

Puncture

A small hole or wound made by a pointed object, needle, bite, or sharp instrument. A puncture may be intentional for an injection or sample, or accidental and may carry infection, bleeding, or deeper injury risks.

Puncture Biopsy

Alternate index label for needle biopsy: removal of cells or tissue through a percutaneous puncture for microscopic, molecular, or microbiologic examination; imaging may guide the target and route.

Puncture Wound

A wound produced when a pointed object penetrates the skin and underlying tissue, creating a small surface opening with potentially deep tissue damage and infection risk.

Pungent

Describes a strong, sharp smell or taste that may irritate the nose, mouth, eyes, or other moist linings.

Punicic Acid

A conjugated polyunsaturated fatty acid found mainly in pomegranate seed oil and studied for lipid and inflammatory effects; clinical supplement benefits remain uncertain.

Punishment

Punishment is a consequence intended to reduce a behavior; in healthcare, coercive or harmful punishment is inappropriate and behavior support should prioritize safety and dignity.

Pupil

The central opening in the colored iris through which light enters the eye. Muscles change its size to control incoming light, and unequal or poorly reactive pupils may indicate eye or nerve disease.

Pupil - White

A white pupil, or leukocoria, may result from reflection, cataract, retinal disease, infection, or retinoblastoma and requires prompt eye assessment, especially in a child.

Pupillary

Relating to the pupil, the opening in the iris that controls how much light enters the eye. The pupil normally becomes smaller in bright light and larger in dim light; unequal size or poor reaction can indicate an eye, nerve, or brain problem.

Pure Red Cell Aplasia

A rare disorder in which the bone marrow stops making red blood cells while other blood cells may remain normal. It causes severe anemia, tiredness, breathlessness, and pale skin and may be inherited or acquired from infection, immune disease, cancer, or medicines.

Alternate Names:

PRCA; Pure red-cell aplasia

Pure Tone Audiometry

A hearing test in which a person signals whenever they hear tones of different pitches and loudness. It measures the quietest sounds detectable through air and bone and helps identify the type and degree of hearing loss.

Pure-Tone Audiometry

A hearing test that measures the softest tones a person can hear at selected frequencies through air and bone conduction. The results are plotted on an audiogram and help distinguish conductive from sensorineural hearing loss.

Alternate Names:

Pure-tone threshold audiometry; pure-tone hearing test.

Purgative

A strong laxative that causes rapid emptying of the bowel. It may be used for bowel preparation before some procedures, but excessive use can cause diarrhea, dehydration, and dangerous changes in body salts.

Purge

To empty the bowel, stomach, or body of a substance; the term may also mean forceful vomiting or diarrhea.

Purging

Deliberate behaviors intended to compensate for eating, such as self-induced vomiting or misuse of laxatives, diuretics, or excessive exercise.

Purging Disorder

Repeated self-induced vomiting or misuse of laxatives, diuretics, or other methods to influence weight or body shape without recurrent binge eating. It can cause dangerous salt disturbances, tooth damage, dehydration, heart-rhythm problems, and tears in the food pipe.

Purine

A nitrogen-containing building block of DNA, RNA, and energy-carrying molecules. The body breaks down purines into uric acid, which can accumulate and contribute to gout or kidney stones.

Purine Nucleosides

Molecules made from a purine base, such as adenine or guanine, joined to a sugar. Examples include adenosine and guanosine, which help form genetic material and participate in cell energy and signaling.

Purine Nucleotides

Molecules containing adenine or guanine joined to a sugar and phosphate groups. They build DNA and RNA and include ATP and GTP, which store energy and help transmit signals inside cells.

Purines

Nitrogen-containing building blocks, mainly adenine and guanine, used to make DNA, RNA, and energy-carrying molecules. The body breaks them down into uric acid, which can form crystals and contribute to gout or kidney stones.

Purinoceptor

A protein on a cell's surface that detects substances

such as ATP, ADP, or adenosine outside the cell. It helps regulate cell communication, inflammation, blood-vessel activity, and other body responses.

Purkinje Cell

A major nerve cell in the cerebellum, the brain region that coordinates movement and balance. It sends signals that help fine-tune posture, coordination, and learned movements.

Purkinje Fibers

Special electrical fibers spread through the lower chambers of the heart. They rapidly carry each heartbeat's signal so the ventricles contract together and pump blood efficiently.

Purkinje Fibres

Specialized heart-muscle fibers that rapidly spread electrical signals through the ventricles. Their coordinated activity helps the lower chambers contract together and pump blood efficiently to the lungs and body.

Purpura

Purple or red spots caused by blood leaking under skin or mucous membranes; they do not fade when pressed.

Purpura Fulminans

A rapidly worsening, life-threatening condition in which widespread blood clots and clotting-system failure cause purple skin patches, bleeding, and tissue death. It can follow severe infection, loss of natural anticoagulants, or another serious illness.

Purulent

Containing or producing pus, a thick fluid made of immune cells, dead tissue, and often germs. Purulent drainage can occur in an abscess or infected wound, but its appearance alone does not identify the organism or the treatment needed.

Purulent Pericarditis

A serious bacterial infection of the sac around the heart, causing pus and fluid to collect there. Fever,

chest pain, breathlessness, and pressure on the heart may occur; urgent drainage and antibiotic treatment are needed.

Pus

A thick fluid made of dead cells, germs, immune cells, and damaged tissue. It commonly collects during infection and may appear in wounds, abscesses, infected organs, or other inflamed body spaces.

Push Enteroscopy

An examination of the upper small intestine using a long flexible camera passed through the mouth. It allows clinicians to see the lining, take samples, stop bleeding, or treat selected lesions.

Pustule

A small raised skin lesion filled with pus. Pustules can occur with acne, follicle infection, impetigo, psoriasis, or a medicine reaction; their cause is determined from their location, appearance, symptoms, and timing.

Pustules

Pustules are small raised skin lesions filled with pus, occurring in acne, folliculitis, infections, inflammatory disorders, or drug reactions.

Pustulosis

A skin disorder characterized by sterile or infectious pustules, which may be localized or widespread and associated with inflammation, fever, psoriasis, drug reactions, or infection.

Putamen

A deep brain structure that helps select and smooth purposeful movements and supports learning of repeated movement habits. Damage to it can cause abnormal movements, weakness, or changes in behavior.

Putrefaction

Decomposition of body tissues after death caused mainly by bacteria and natural enzymes. It can produce color changes, swollen tissues from gas, visible

veins, a strong odor, and gradual breakdown into liquid material; the rate depends on the environment.

Putrescine

A chemical with a strong unpleasant smell made when proteins break down. It is found in decaying material and is also produced in small amounts during normal cell processes; its presence alone does not diagnose disease.

PUVA

A light treatment that combines a light-sensitizing medicine called psoralen with ultraviolet-A exposure. It can treat selected skin diseases but may cause burns, eye injury, premature skin aging, and increased skin-cancer risk.

PVC

A PVC, or premature ventricular contraction, is an early heartbeat arising in a ventricle; occasional PVCs are common, while frequent or symptomatic beats need evaluation.

PVD

Alternate index label; see *Peripheral artery disease*.

PVI

Alternate name; see *Pulmonary Vein Isolation*.

PVPS

Alternate index label; see *Post-vasectomy pain syndrome*.

Pyarthrosis

Infection of a joint with pus in the joint space, usually bacterial septic arthritis, causing acute pain, swelling, restricted movement, fever, and risk of cartilage destruction.

Pycnodysostosis

A rare inherited bone disorder in which bones are unusually dense but fragile. It can cause short stature, frequent fractures, short fingers, delayed closure of skull bones, crowded teeth, and problems

with the jaw.

Pyelitis

Inflammation of the renal pelvis, the funnel-shaped part of the kidney that drains urine. It is often associated with urinary infection and may cause flank pain, fever, or painful urination.

Pyelo

Pyelo is an informal shortening usually referring to pyelonephritis, an infection of the kidney and renal pelvis that can cause fever and flank pain.

Pyelogram

An image of the kidney drainage area and ureters after contrast material is given. It can show blockage, stones, narrowing, leaks, or structural changes in the urinary collecting system.

Pyelography

Imaging of the renal pelvis and ureters using contrast, by X-ray or another imaging method. It can show obstruction, stones, leaks, strictures, or structural abnormalities.

Pyelolithotomy

Surgical removal of a kidney stone through an incision into the renal pelvis. Less invasive stone treatments are often preferred when suitable.

Pyelonephritis

Infection and inflammation of the kidney and its urine-collecting area, usually caused by bacteria traveling upward from the bladder. Symptoms may include fever, chills, side pain, nausea, and painful urination.

Pyelotomy

An incision into the renal pelvis, usually made to remove an obstruction or kidney stone.

Pylephlebitis

An infected blood clot in the large vein carrying blood from the abdominal organs to the liver. It may follow appendicitis, diverticulitis, or another

abdominal infection and can cause fever, abdominal pain, jaundice, and life-threatening sepsis.

Pyloric Antrum

The pyloric antrum is the lower stomach region that grinds food and regulates its passage toward the pyloric canal and duodenum.

Pyloric Sphincter

A ring of muscle at the outlet of the stomach. It opens in a controlled way to let partly digested food enter the first part of the small intestine and helps prevent the intestine's contents from flowing backward.

Alternate Names:

Pylorus

Pyloric Stenosis

Narrowing of the pyloric outlet, classically causing projectile vomiting in infants or gastric-outlet symptoms in adults.

Alternate Names:

Stenosis, Pyloric

Pyloric Stenosis In Infants

Infantile pyloric stenosis is narrowing of the stomach outlet that causes forceful, non-bilious vomiting in young infants and usually requires surgical treatment.

Pyloroplasty

Surgery to widen the pylorus, the outlet of the stomach, to improve passage of stomach contents. It may be used with treatment for obstruction or selected gastric-motility disorders.

Pylorus

The distal part of the stomach leading into the duodenum.

Pyoderma

A bacterial infection of the skin that can produce pus-filled spots, crusts, open sores, or deeper inflammation. Staphylococcus and Streptococcus are common causes; the infection may spread and re-

quire medical treatment, especially with fever, pain, or rapidly worsening redness.

Pyoderma Gangrenosum

A rare inflammatory skin disease that causes very painful ulcers, often with a dark purple edge. It may occur with bowel inflammation, arthritis, or blood disorders; injury can make it worse, so treatment differs from ordinary wound infection.

Pyogenesis

The formation of pus, a thick fluid made mainly of immune cells, dead tissue, and germs. It commonly occurs during bacterial infection or severe inflammation.

Pyogenic

Producing pus or associated with a pus-forming infection. Pyogenic infections commonly cause redness, warmth, swelling, pain, and a collection of pus, although the cause and treatment vary.

Pyogenic Granuloma

A noncancerous, rapidly growing lump made of extra small blood vessels. It is usually red, soft, and prone to bleeding and may occur after minor injury or during pregnancy; examination or biopsy confirms the diagnosis and guides removal.

Pyogenic Liver Abscess

A pyogenic liver abscess is a pus-filled infection in the liver, usually from biliary, abdominal, or blood-stream spread, causing fever, pain, and possible sepsis.

Pyometra

A collection of pus inside the uterus, usually caused by infection combined with blockage of drainage through the cervix. It may cause lower abdominal pain, fever, tenderness, or foul-smelling discharge; in older adults it can be linked to cervical narrowing or a tumor and needs prompt evaluation.

Pyonephrosis

Pus trapped in the kidney's urine-collecting system,

usually because infection occurs behind a blockage. It is a medical emergency requiring urgent drainage, antibiotics, and treatment of the obstruction.

Pyosalpinx

A fallopian tube filled with pus, usually because of pelvic infection. It may cause lower abdominal pain, fever, unusual discharge, infertility, or an abscess and generally requires prompt treatment.

Pyostomatitis Vegetans

A rare inflammatory mouth condition causing many small yellowish pus-filled spots on red, swollen tissue, especially the inner cheeks and gums. It is strongly associated with inflammatory bowel disease and may appear before bowel symptoms.

Pyramid

A structure shaped like a pyramid. In the brain, the medullary pyramids contain nerve fibers that carry movement commands from the brain to the spinal cord; other pyramids include pyramid-shaped areas in the kidney.

Pyramidal Cell

A triangular-shaped excitatory neuron with a prominent apical dendrite, found especially in the cerebral cortex and hippocampus and involved in long-range brain signaling.

Pyramidal Tract

The pyramidal tract is a major motor pathway from the cerebral cortex to the brainstem and spinal cord that controls voluntary movement.

Pyramidal Tracts

Nerve pathways from brain movement areas down the brainstem and spinal cord, carrying signals controlling voluntary movement.

Pyrazinamide

An antibiotic used with other medicines during the initial treatment of tuberculosis. It helps shorten treatment but can injure the liver or raise uric acid, so monitoring and prescribed dosing are important.

Pyrazines

A family of chemical compounds found naturally in some foods and used in flavors, medicines, and industry. Their effects on health depend on the specific compound, amount, and route of exposure.

Pyrazole

A small five-membered chemical structure used to build medicines, pesticides, and other compounds. The word names a chemical family and does not identify one particular treatment or effect.

Pyrazoles

Pyrazoles are a family of chemical compounds containing a pyrazole ring, including some medicines and pesticides.

Pyrenochaeta

A group of fungi found mainly in soil and plants that rarely infect people. When infection occurs, it usually affects tissue beneath injured skin or people with weakened immunity.

Pyrethrins

Natural insect-killing chemicals derived from chrysanthemum flowers and used in some pest-control products. Exposure can irritate skin and airways and, in large amounts, may cause vomiting, tremors, seizures, or breathing problems.

Pyrethrum

The dried flower heads of certain Chrysanthemum species, used as a natural source of pyrethrins, insecticidal compounds that affect insect sodium channels. Pyrethrum and pyrethrins differ from synthetic pyrethroids; exposure may irritate the skin or airways and can cause toxicity with substantial exposure.

Pyrexia (Fever)

An abnormally high body temperature, usually 38°C (100.4°F) or higher. Fever is a controlled response in which the brain raises the body's temperature setting, often because of infection or inflammation. It differs from hyperthermia, in which temperature rises without that change in setting,

such as during heat stroke. Treatment depends on the cause and the person's symptoms.

Pyridine

A nitrogen-containing ring-shaped chemical structure found in many medicines, vitamins, and biologically active substances. Pyridine groups can change how compounds dissolve, react, travel through the body, and produce medical effects.

Pyridostigmine

A medicine that increases acetylcholine, a chemical helping nerves activate muscles. It mainly treats myasthenia gravis and may cause stomach cramps, diarrhea, sweating, increased saliva, muscle twitching, or slow heartbeat.

Pyridostigmine Bromide

Pyridostigmine bromide increases communication between nerves and muscles and is used mainly for myasthenia gravis; it may cause abdominal cramps, diarrhea, or excess secretions.

Pyridoxal Phosphate

The active form of vitamin B6 used by many enzymes. It helps the body process amino acids, make certain brain chemicals and red blood cells, and maintain normal nerve function.

Pyridoxine

One form of vitamin B6, a vitamin needed for processing food, making red blood cells, and supporting nerves and the immune system. It is found in many foods; deficiency can cause anemia or nerve problems, while excessive supplements can damage nerves.

Alternate Names:

Vitamin B6

Pyridoxine (Vitamin B6)

A vitamin converted to pyridoxal phosphate, a coenzyme for transamination, decarboxylation, and other amino-acid reactions. Deficiency can cause neuropathy, dermatitis, seizures, and sideroblastic anemia; excessive supplementation can also cause neuropathy.

Alternate Names:

Vitamin B6

Pyrimethamine

A parasite-fighting medicine that blocks folate use in certain protozoa. It is used for selected infections, often with another medicine, and can suppress bone marrow or cause serious skin reactions.

Pyrimidine

A six-membered nitrogen-containing ring that forms the bases cytosine, thymine, and uracil in nucleic acids.

Pyrimidine Analog

A medicine or chemical resembling a pyrimidine nucleotide that can interfere with DNA or RNA synthesis, often for cancer or antiviral treatment.

Pyrimidine Dimer

A DNA lesion formed when adjacent pyrimidine bases bond abnormally after ultraviolet exposure, potentially causing mutations if unrepaired.

Pyrimidine Nucleosides

Nucleosides containing cytosine, thymine, or uracil bases linked to a sugar, serving as components or precursors of DNA and RNA.

Pyrimidine Nucleotides

Genetic and energy-related building blocks containing pyrimidine bases, including cytidine, uridine, and thymidine. Cells use them to make DNA, RNA, cell membranes, and other substances needed for growth and repair.

Pyrimidines

Nitrogenous bases containing a single six-membered heterocyclic ring, serving as structural building blocks for nucleic acids. The primary pyrimidines are cytosine (C), thymine (T, present in DNA), and uracil (U, present in RNA).

Pyrogen

A pyrogen is a substance that induces fever, com-

monly through immune signaling; bacterial endotoxin is an important example in contaminated medicines or fluids.

Pyroglyphidae

Pyroglyphidae is a mite family that includes house-dust mites whose allergens can trigger allergic rhinitis, asthma, or atopic dermatitis.

Pyrophosphatase

An enzyme that hydrolyzes inorganic pyrophosphate and helps drive many biosynthetic reactions forward. An enzyme that breaks down pyrophosphate, helping many chemical reactions needed to build cellular materials.

Pyropoikilocytosis

A rare inherited disorder that makes red blood cells unusually small, irregular, and fragile. The cells break down easily, causing hemolytic anemia with tiredness, jaundice, pale skin, or an enlarged spleen, often beginning in infancy or childhood.

Pyroptosis

A form of controlled cell death that causes inflammation. The cell swells, breaks open, and releases signals that alert the immune system, often in response to infection or severe cell stress.

Pyrosequencing

A laboratory method for reading selected DNA sequences by detecting light produced as DNA building blocks are added. It can identify some genetic changes or microbes but is not suitable for every sequencing need.

Pyrosis

Heartburn, a burning feeling behind the breastbone usually caused by stomach contents flowing backward into the swallowing tube. Frequent symptoms may reflect reflux disease and can damage the esophagus without treatment.

Pyrroles

A group of five-membered nitrogen-containing ring

compounds found in heme, bile pigments, medicines, and other biologically active molecules.

Pyrrolidonecarboxylic Acid

A cyclic amino-acid derivative, also called pyroglutamic acid, found in proteins and metabolic pathways; abnormal accumulation may occur in selected metabolic or medication-related conditions.

Pyrrolnitrin

Pyrrolnitrin is an antimicrobial compound produced by some bacteria and studied for antifungal activity and biological control.

Pyruvate

A small molecule produced when cells break down glucose. Cells can use it to make more energy, convert it into other substances, or produce lactate when oxygen or energy-processing pathways are limited.

Pyruvate Decarboxylase

Pyruvate decarboxylase is an enzyme that converts pyruvate to acetaldehyde and carbon dioxide during fermentation in some organisms.

Pyruvate Dehydrogenase

An enzyme complex that changes pyruvate, made when cells break down sugar, into acetyl-CoA for energy production. Inherited deficiency can cause excess lactic acid, poor growth, developmental problems, or neurologic disease.

Pyruvate Kinase

An enzyme that helps red blood cells make energy from glucose. If it is inheritedly deficient, red cells may break down too early, causing chronic hemolytic anemia, jaundice, gallstones, tiredness, or an enlarged spleen.

Pyruvate Kinase Blood Test

A pyruvate kinase blood test measures the enzyme in red blood cells and may help evaluate pyruvate kinase deficiency, an inherited cause of hemolytic anemia.

Pyruvate Kinase Deficiency

A rare inherited condition in which red blood cells cannot make enough energy and break down early. It causes anemia of varying severity, jaundice, tiredness, gallstones, an enlarged spleen, and sometimes excess iron in the body.

Pyuria

Presence of white blood cells or pus in urine, often indicating urinary-tract inflammation or infection.

Paget's Disease

An ambiguous term that may refer to Paget disease of bone or Paget disease of the breast. Paget disease of bone is a chronic disorder of abnormal bone breakdown and regrowth that can enlarge, weaken, or deform bone; mammary Paget disease is a malignancy involving the nipple and areola, often associated with underlying breast cancer.

Paget's Disease of the Nipple

A rare breast cancer involving the skin of the nipple and areola. It may cause redness, scaling, itching, discharge, or a lump and requires breast evaluation.

Paget's Disease of the Vulva

A rare cancer or precancerous condition affecting the skin of the vulva. It may cause persistent itching, burning, redness, or a scaly patch and needs biopsy assessment.

Paleo Diet

An eating pattern based on foods thought to resemble those available to early humans, such as meat, fish, vegetables, fruits, nuts, and seeds. It excludes or limits grains, legumes, and dairy and may not provide balanced nutrition for everyone.

Papillomatosis

A condition in which multiple papillomas, or wart-like overgrowths of epithelial tissue, develop. Causes and risks vary by body site, virus, inherited condition, or other disease.

Paracetamol

Also called acetaminophen, paracetamol reduces pain and fever. Excessive doses can cause serious liver injury, especially with alcohol or other products containing paracetamol.

Paraneoplastic Neurologic Syndromes

Rare disorders in which an immune response to cancer also attacks the nervous system. Symptoms may include weakness, imbalance, seizures, memory change, or sensory problems and can precede cancer diagnosis.

Paraneoplastic Pemphigus

A rare, often severe autoimmune blistering disease associated with an underlying tumor, especially a lymphoid cancer. It causes painful mouth sores and skin lesions and requires specialist treatment.

Parechovirus

A group of viruses that commonly cause mild respiratory or gastrointestinal illness but can cause severe sepsis-like illness, meningitis, or encephalitis in newborns and young infants.

Parenting

The care, protection, guidance, and support provided to a child. Healthy parenting includes meeting basic needs, setting safe limits, nurturing development, and seeking help when concerns arise.

Paresthesia (Pins and Needles)

An abnormal sensation such as tingling, prickling, burning, or numbness. Temporary pressure on a nerve is common, but persistent or spreading symptoms may indicate nerve, metabolic, vascular, or spinal disease.

Paruresis

Difficulty urinating in the presence of other people or in public places, often called shy bladder syndrome. It is related to anxiety and can improve with behavioral therapy and gradual exposure.

Passive Heat Therapy

Use of external heat, such as warm packs, baths, or saunas, to relax muscles and temporarily reduce pain or stiffness. Excessive heat can cause burns, dehydration, or fainting.

Passive Smoking

Breathing smoke from another person's tobacco or nicotine product. Secondhand smoke increases the risk of respiratory disease, heart disease, stroke, and lung cancer and is especially harmful to children and during pregnancy.

Patau's Syndrome

A congenital disorder caused by an extra copy of chromosome 13. It can cause severe developmental problems, brain and heart defects, cleft lip or palate, and other organ abnormalities.

Paternal Depression

Depression occurring in a father during pregnancy or after a child is born. Symptoms may include low mood, irritability, withdrawal, sleep or appetite changes, and loss of interest; treatment can help both parent and family.

Paternal Postnatal Depression

Depression in a father during the first year after a baby's birth. It may be linked to stress, sleep loss, previous depression, or a partner's depression and deserves professional assessment.

Pelvic Inflammatory Disease (PID)

Infection and inflammation of the upper female reproductive organs, often caused by sexually transmitted bacteria. Untreated PID can cause chronic pelvic pain, infertility, or ectopic pregnancy.

Pemphigus Foliaceus

An autoimmune blistering skin disease caused by antibodies against proteins that hold skin cells together. It causes superficial fragile blisters and crusted sores but usually does not affect mucous membranes.

Penile Intraepithelial Neoplasia (PeIN or PIN)

Abnormal precancerous cells in the surface lining of the penis. It may appear as a persistent red, white, or thickened patch and can progress to invasive cancer if untreated.

Percutaneous Closure

Closing a heart or blood-vessel opening using a device delivered through a catheter inserted through the skin. It can avoid open surgery in selected patients but has procedure-related risks.

Personalized Medicine

Healthcare that uses a person's genes, biological measurements, environment, and lifestyle to guide prevention or treatment. It can improve treatment selection but does not guarantee a response.

Peyronie's Disease

A condition in which scar tissue forms in the penis and causes a curved or painful erection, shortening, or difficulty with sexual activity. Treatment depends on severity and symptoms.

pH

A measure of how acidic or alkaline a solution is, usually on a scale from 0 to 14. Body fluids have tightly controlled pH ranges, and major changes can be dangerous.

Phantom Pregnancy

A false belief or physical state in which a person has pregnancy-like symptoms without an ongoing pregnancy. Symptoms can include abdominal enlargement, breast changes, nausea, or missed periods and require medical evaluation.

Pharmacoepidemiology

The study of how medicines are used and affect health in large populations. It helps assess effectiveness, safety, adverse effects, and patterns of prescribing.

Pharmacoproteomics

The study of how a person's protein patterns influence medicine response, drug effects, or toxicity. It is an emerging part of precision medicine.

Photoplethysmography

A noninvasive optical method that detects blood-volume changes in tissue. It is used in devices such as pulse oximeters and some heart-rate monitors.

Phyllodes Tumors

Uncommon fibroepithelial tumors of the breast that can be benign, borderline, or malignant. They often appear as a rapidly growing lump and are treated mainly with complete surgical removal.

Pick's Disease

An older term often referring to frontotemporal dementia, a group of disorders causing progressive changes in behavior, personality, language, or executive function. The term is now used less consistently.

Piles (Haemorrhoids)

Swollen veins in the anus or lower rectum that may cause bleeding, itching, pain, or a lump. Fiber, fluids, avoiding straining, medicines, and procedures may help depending on severity.

Pins and Needles

A common name for paresthesia, an abnormal tingling, prickling, or numb sensation. Brief episodes often follow pressure on a nerve; persistent symptoms need evaluation.

Polymorphic Light Eruption

An itchy rash triggered by sunlight, often appearing in spring or after the first strong sun exposure. It may improve as the skin adapts, and sun protection reduces recurrences.

Polypharmacology

The study or use of a medicine that affects several targets in the body. This can be helpful when one disease involves multiple pathways, but it may also increase side effects and medicine interactions.

Portal Hypertensive Colopathy

Changes in the colon caused by high pressure in veins around the liver, usually from advanced liver disease. Enlarged fragile blood vessels may cause visible or hidden bleeding and anemia.

Post-Adoptive Depression

Depression that begins after adopting a child. Stress, sleep loss, adjustment demands, past trauma, or unmet expectations may contribute; persistent sadness, loss of interest, or thoughts of self-harm need prompt mental-health assessment.

Posterior Cruciate

Usually referring to the posterior cruciate ligament, a strong knee ligament that limits backward movement of the shinbone. Injury can cause pain, swelling, and knee instability.

Postnatal Anxiety

Excessive anxiety occurring after childbirth. It may involve persistent worry, panic, intrusive thoughts, restlessness, or physical symptoms and can be treated with therapy, support, and sometimes medicine.

Post-Traumatic Stress Disorder (PTSD)

A mental-health condition that can develop after experiencing or witnessing trauma. Symptoms may include intrusive memories, avoidance, negative mood or beliefs, and increased alertness lasting long enough to impair life.

Powassan Virus

A tick-borne virus that can cause encephalitis or meningitis. Severe infection may cause headache, fever, confusion, seizures, or weakness; there is no specific antiviral treatment.

Precision Medicine

An approach that matches prevention or treatment to biological differences between people, often using genetic, molecular, or clinical information. It is related to but not identical to personalized medicine.

Prenatal Depression

Depression during pregnancy. Symptoms may include persistent sadness, loss of interest, guilt, hopelessness, sleep or appetite changes, and thoughts of self-harm; prompt professional support is important.

Programmed Cell Death

A controlled process by which cells die as part of normal development, tissue maintenance, or disease. Apoptosis is the best-known form; other regulated forms include necroptosis and pyroptosis.

Proteasome Inhibitor

A medicine that blocks the proteasome, a cell structure that breaks down unwanted proteins. These drugs are used especially in multiple myeloma and some blood cancers.

Proteostasis

The balance of protein production, folding, movement, and breakdown that keeps cells functioning. Failure of proteostasis can contribute to aging, neurodegeneration, and other diseases.

Pruritis

The medical term for itching, an unpleasant urge to scratch. Causes include dry skin, allergy, inflammation, infection, medicines, nerve disorders, and internal disease.

Psychosomatic Disorder

An older broad term for physical symptoms influenced by psychological and social factors. The symptoms are real; modern assessment considers both body and mind rather than assuming symptoms are imagined.

Psychosomatic Medicine

Medical care that considers how body processes, thoughts, emotions, relationships, and social conditions interact in illness. Physical symptoms are real, and assessment looks for both medical and psychological factors without assuming symptoms are imagined.

Pulmonary Hypoplasia

Underdevelopment of one or both lungs, resulting in too little lung tissue for normal breathing. It may occur with congenital abnormalities, low amniotic fluid, or compression before birth.

Pulmonology

The medical specialty concerned with the lungs and breathing system. Pulmonologists diagnose and treat asthma, chronic lung disease, infections, sleep-related breathing disorders, and other respiratory conditions.

PYY

Peptide YY is a hormone released by the intestine after eating. It helps signal fullness and slows movement of food through the digestive tract; abnormal signaling is being studied in obesity and other metabolic disorders.

Q

Q Arm Of A Chromosome

The longer arm of a chromosome, identified by the letter q. A genetic report may use this label to show where a gene change or missing, extra, or rearranged DNA segment is located.

Q Fever

An infection caused by the bacterium *Coxiella burnetii*, usually caught by breathing dust contaminated by infected cattle, sheep, goats, or their birth products. It often causes sudden fever, severe headache, tiredness, and muscle aches; some people develop pneumonia, hepatitis, or long-term heart-valve infection.

Q Wave

A downward movement that may begin the electrical pattern of a heartbeat on an electrocardiogram. It can be normal in some recording positions or suggest previous heart-muscle injury, depending on its size and location.

Q-T Interval

The time from the start of electrical activation to the end of recovery of the heart's lower chambers on an electrocardiogram. An unusually long interval can increase the risk of a dangerous abnormal rhythm.

QRS Complex

The group of waves on an electrocardiogram showing the electrical signal that makes the heart's lower chambers contract. An unusually wide or shaped complex may indicate a conduction problem, abnormal rhythm, or electrolyte disturbance.

QT Interval

The time on an electrocardiogram representing electrical activation and recovery of the heart's lower chambers. Because heart rate changes this time, clinicians often use a corrected value when assessing rhythm risk.

QT Prolongation

An unusually long QT interval on an electrocardiogram. It may result from an inherited condition, a medicine, or abnormal body salts and can increase the risk of a rapid, dangerous rhythm that may cause fainting or cardiac arrest.

Quad Screen (Maternal Serum Screening)

A second-trimester blood screening test that estimates the chance of certain chromosome conditions and neural-tube defects in the fetus. It estimates risk rather than making a diagnosis; an abnormal result may require ultrasound or diagnostic testing.

Alternate Names:

Maternal Serum Screening

Quadrant

One of four sections used to describe a location, especially in the abdomen. The four abdominal quadrants help clinicians record where pain, tenderness, a lump, or another finding is located.

Quadrantanopia

Loss of vision in one quarter of the normal visual field, often from damage to the brain pathways carrying sight. The missing area may occur on the same side in both eyes and can affect reading, driving, walking, or safety.

Quadrantectomy

Surgery to remove one section of an organ, most often part of the breast containing a tumor plus a margin of healthy tissue. The need for lymph-node surgery or further treatment depends on the tumor and test results.

Quadriceps

The four muscles on the front of the thigh that extend the knee; the rectus femoris also assists hip flexion. The quadriceps tendon connects them to the patella and contributes to the extensor mechanism.

Quadriceps Femoris

The group of four muscles at the front of the thigh. It straightens the knee for standing, walking, climbing, and kicking; one part also helps bend the hip.

Quadriceps Femoris Muscle

The four-muscle group at the front of the thigh that straightens the knee. It is essential for standing, walking, climbing, and rising from a chair; injury can cause pain and difficulty extending the leg.

Quadriceps Injury

Damage to the quadriceps muscle or tendon caused by sudden force, overuse, or direct trauma. It may cause front-of-thigh pain, bruising, weakness, or difficulty extending the knee. Severe pain, a palpable defect, or inability to bear weight requires assessment for a significant tear or tendon rupture.

Quadriceps Tendinitis

Overuse-related inflammation or degeneration of the quadriceps tendon, causing pain above the kneecap that worsens with jumping, running, or resisted knee extension.

Quadriceps Tendon Rupture

A tear of the tendon connecting the quadriceps muscle to the patella, causing pain, swelling, and inability to actively extend the knee.

Quadriceps Tendon Ruptures

A tear of the tendon connecting the quadriceps

muscle to the patella, causing weakness or inability to extend the knee. Complete tears often require surgical repair; treatment depends on the extent of injury and the person's functional needs.

Quadriplegia

Weakness affecting both arms and both legs. It may result from disease or injury to the neck spinal cord, brain, nerves, or muscles and can impair movement, breathing, and bladder or bowel control.

Quadriplegia

Paralysis affecting both arms and both legs, usually with weakness of the trunk, because of damage to the neck portion of the spinal cord or another major nervous-system injury. It can impair breathing and bladder or bowel control.

Quadruple Screen Test

A second-trimester blood test that combines four pregnancy-related markers to estimate the chance of selected chromosome conditions and neural-tube defects. It does not diagnose a condition; abnormal results need further assessment.

Quadruplet Pregnancy

A pregnancy involving four fetuses. It carries increased risks of preterm birth, fetal growth restriction, hypertensive and metabolic complications, and maternal morbidity and therefore requires specialized multidisciplinary antenatal care.

Quality Of Life

A person's experience of physical health, emotional well-being, relationships, independence, and ability to do meaningful activities. Illness and treatment may affect these areas differently for each person.

Quantitative Bence-Jones Protein Test

A urine test measuring abnormal light-chain proteins made by some plasma-cell cancers. It can help diagnose or monitor disorders such as multiple myeloma, but results are interpreted with blood tests and other findings.

Quantitative Computed Tomography

A CT scan that measures bone density while showing bone structure. It can help assess osteoporosis, unusual bone loss, or fracture risk when standard bone-density testing is unsuitable or more detail is needed.

Quantitative Immunoglobulins

A blood test measuring the main classes of antibodies. Low levels may suggest an immune deficiency, while high or uneven levels may occur with infection, inflammation, liver disease, or some blood cancers; results need clinical interpretation.

Quantitative Nephelometry Test

A laboratory test that estimates the amount of selected proteins by measuring how much light they scatter. It can measure antibodies, complement proteins, and other proteins involved in immune, kidney, or blood disorders.

Quantitative PET

Analysis of a PET scan that estimates how much radioactive tracer is taken up by tissue. Standardized measurements can help compare disease activity or treatment response, but results are affected by the tracer, timing, blood sugar, and scanning method.

Quarantine

Temporary separation or movement restrictions for people exposed to an infectious disease while monitoring whether they become ill. It differs from isolation, which separates people who are already infected.

Quartan Fever

A fever pattern in which attacks recur about every 72 hours, classically seen with the malaria parasite *Plasmodium malariae*. Fever timing alone cannot diagnose malaria; testing is needed in anyone with possible exposure and fever.

Quetiapine Fumarate

A form of quetiapine, a medicine used for schizophrenia, bipolar disorder, and selected depression treatment. It can cause sleepiness, dizziness on standing,

weight or blood-sugar changes, and movement problems.

Quick Relievers

Fast-acting asthma medicines used when symptoms suddenly worsen. They quickly relax tightened airway muscles and can ease wheezing, coughing, chest tightness, and breathlessness, but they do not replace regular treatment that controls airway inflammation.

Alternate Names:

Rescue medicines

Quickening

The first time a pregnant person feels fetal movement, often as a flutter or tapping sensation during the second trimester. Timing varies with the pregnancy, body shape, and position of the placenta.

Quinalphos

A poisonous insecticide that disrupts nerve-signal control. Significant exposure can cause sweating, excess saliva, vomiting, muscle twitching, weakness, seizures, breathing failure, or death and requires emergency poison treatment.

Quinapril

Quinapril is an angiotensin-converting-enzyme inhibitor used for hypertension and heart failure; cough, hyperkalaemia, renal-function changes, angioedema, and fetal toxicity are important risks.

Quincke'S Disease (Angioneurotic Oedema)

Sudden swelling of deeper layers of the skin or mucosa, commonly affecting the lips, face, tongue, throat, or bowel; airway involvement is an emergency.

Alternate Names:

Angioneurotic Oedema

Quincke'S Pulse

Visible flushing and paling of the nail bed or skin with each heartbeat. It may occur when the difference between the upper and lower blood-pressure

numbers is unusually wide, especially with severe aortic-valve leakage, but it is not diagnostic alone.

Quincke'S Sign

Alternating redness and paling of the nail bed or skin with each heartbeat, usually caused by a wide pulse pressure. It can be seen in severe aortic-valve leakage but is not diagnostic by itself.

Quinidine

A heart-rhythm medicine that changes electrical conduction in the heart. It is used selectively because it can cause dangerous abnormal rhythms, low blood pressure, low platelets, diarrhea, or other serious side effects.

Quinine

A medicine derived from cinchona bark that can treat selected malaria infections. It is used less often because safer options are available and it can cause low blood sugar, ringing in the ears, blood-cell problems, or abnormal heart rhythms.

Quinolone

A class of antibiotics that stop bacteria from copying and repairing their DNA. Some treat serious infections, but side effects can include tendon injury, nerve symptoms, abnormal heart rhythms, or severe diarrhea, so use depends on the infection and risks.

Quinsy

An abscess beside a tonsil, usually after a throat infection. It can cause severe one-sided throat pain, fever, muffled speech, drooling, difficulty opening the mouth, or breathing difficulty and needs urgent treatment.

Quinupristin-Dalfopristin

An intravenous antibiotic combination used rarely for selected serious infections caused by resistant gram-positive bacteria. It can cause muscle or joint pain, liver problems, infusion reactions, and medicine interactions.

Quit Smoking (Smoking And Quitting

Smoking)

Alternate index label for Smoking and Quitting Smoking.

Quincke's Edema

An older term for angioedema, sudden swelling in the deeper layers of the skin or mucous membranes. It commonly affects the lips, face, tongue, or throat; throat swelling or breathing difficulty is an emergency.

Quotidian Fever

A fever pattern in which fever rises or attacks occur about every 24 hours. It can occur with malaria and other infections, but the timing of fever alone does not identify the cause.

R

R-Factor

A laboratory measure comparing the amount of an antibiotic needed to stop a bacterium with the expected effective amount. A higher value suggests reduced susceptibility and may help guide antibiotic choice.

Rabeprazole

A medicine that greatly reduces acid made by the stomach. It treats reflux and ulcers and may be combined with antibiotics for *Helicobacter pylori* infection; possible effects include headache, diarrhea, and rarely low magnesium or bowel infection.

Rabies

A usually fatal viral infection of the brain and nerves, most often spread through the saliva of an infected animal by a bite or scratch. Immediate wound cleaning and preventive treatment after exposure can prevent illness before symptoms begin.

Rabies Vaccination

Immunization used before or after exposure to reduce the risk of rabies. Post-exposure management also includes wound care and, when indicated, rabies immunoglobulin.

Rabies Virus

The virus that causes rabies, a usually fatal viral infection of the central nervous system transmitted most often through the saliva of an infected animal.

Radial

Relating to the radius bone or the thumb side of the forearm and hand. The word can also describe

structures arranged like spokes spreading from a central point.

Radial Artery

An artery that runs along the thumb side of the forearm to the wrist and hand. Its pulse can be felt at the wrist, and it supplies blood to the forearm and parts of the hand.

Radial Vein

Veins running alongside the radial artery on the thumb side of the forearm. They drain blood from the forearm and join other deep veins near the elbow.

Radial Artery Thrombosis

A blood clot blocking the artery on the thumb side of the forearm, sometimes after an arterial catheter or injury. It may cause a painful, pale, cold, numb, or weak hand and needs urgent assessment if circulation is threatened.

Radial Club Hand

A birth-related difference in which the thumb-side forearm bone is small or absent and the hand bends toward the thumb side. The thumb may also be underdeveloped, and treatment depends on movement, function, and associated conditions.

Radial Head Subluxation

A common elbow injury in young children, often called nursemaid's elbow, caused when a sudden pull partly slips a forearm bone out of its supporting band. The child may stop using the arm but usually has little swelling. A trained clinician can gently put it back in place; do not pull or twist the arm

yourself.

Alternate Names:

Nursemaid's Elbow (Radial Head Subluxation);
Pulled Elbow; Annular Ligament Displacement

Rabies (Hydrophobia)

A viral infection of the brain and nerves, usually spread through the saliva of an infected animal, most often by a bite. Early wound cleaning and urgent preventive treatment with rabies vaccine, with immune globulin when indicated, can prevent illness. Once symptoms begin, rabies is almost always fatal.

Radioiodine

A radioactive form of iodine used in nuclear medicine to image or treat thyroid tissue. It is taken up by thyroid cells; precautions are needed to limit radiation exposure to others.

Rat Lungworm Disease

Infection caused by the rat lungworm parasite *Angiostrongylus cantonensis*, usually after eating contaminated raw or undercooked produce or animals. It can cause eosinophilic meningitis with headache, neck stiffness, or neurologic symptoms.

Raynaud's Syndrome

Episodes in which fingers or toes change color and become cold, numb, or painful after cold exposure or stress because small blood vessels narrow. It may occur alone or with autoimmune disease.

Refractive Disorder

A vision problem caused by the eye not focusing light correctly on the retina. Nearsightedness, farsightedness, astigmatism, and presbyopia are common refractive disorders and may be corrected with glasses, lenses, or surgery.

Renal Disease

Any condition affecting the kidneys, including infection, inflammation, stones, obstruction, inherited disease, or chronic loss of filtering function. Kidney disease can alter fluid balance, blood pressure, and body chemistry.

Reproductive Hormones

Hormones that regulate sexual development, reproductive organs, ovulation, menstruation, sperm production, pregnancy, and lactation. Examples include estrogen, progesterone, testosterone, luteinizing hormone, and follicle-stimulating hormone.

Respiratory Disease

Any disease affecting the airways, lungs, breathing muscles, or gas exchange. Examples include asthma, chronic obstructive pulmonary disease, pneumonia, tuberculosis, and lung cancer.

Respiratory Illness

A short-term or long-term illness affecting breathing or the respiratory tract. Symptoms may include cough, fever, congestion, wheezing, shortness of breath, or chest discomfort, depending on the cause.

Respiratory Syncytial Virus (RSV)

A common virus that causes respiratory infection. It may cause mild cold symptoms in adults but can cause bronchiolitis or pneumonia in infants, older adults, and people with certain health conditions.

Radial Nerve

A major nerve of the arm that helps straighten the elbow, wrist, and fingers and carries feeling from part of the back of the hand. Injury can cause wrist drop, finger weakness, or numbness.

Radial Nerve Dysfunction

Impaired function of the radial nerve causing weakness of wrist or finger extension and sensory changes over part of the posterior arm or hand; causes include compression, trauma, and systemic neuropathy.

Radial Nerve Palsy

Dysfunction of the radial nerve causing weakness of wrist and finger extension, often producing wrist drop, with sensory loss over part of the back of the hand in some cases.

Radial Tunnel Syndrome

Irritation or pressure on the radial nerve near the elbow, causing aching outer-forearm pain and sometimes weakness. Symptoms may worsen with repeated wrist or forearm movement and require evaluation to exclude other causes.

Radiation

Energy traveling as particles or electromagnetic waves, including X-rays, gamma rays, ultraviolet light, and radio waves. Depending on its type and amount, radiation can diagnose disease, treat cancer, or damage living tissue.

Radiation Biology

The study of how radiation affects cells, tissues, organisms, and populations. It examines injury, repair, mutations, cancer risk, treatment effects, and protective measures after exposure to ionizing or nonionizing radiation.

Radiation Contamination

Radioactive material present on or inside a person, object, surface, or body site when it should not be. It can spread or continue exposing tissue and may require isolation, monitoring, removal of the material, and specialist advice.

Radiation Dosage

The amount of radiation given during an imaging test or radiation treatment. The dose is planned to obtain the needed benefit while limiting unnecessary exposure.

Radiation Dose

The amount of ionizing radiation absorbed or received by a person or tissue. Dose varies with the examination, equipment, protocol, and patient size; imaging should be justified and optimized to obtain the needed information with the lowest reasonable exposure.

Radiation Emergency

An event involving actual or suspected harmful radiation exposure or contamination that requires urgent protective and medical measures.

Radiation Enteritis

Inflammation or injury of the small or large intestine after radiation treatment. Early symptoms may include diarrhea, cramps, nausea, or urgency; months or years later, scarring can cause narrowing, poor absorption, bleeding, or blockage.

Radiation Exposure

Contact with ionizing or non-ionizing radiation from medical imaging, treatment, sunlight, workplaces, or other sources. The possible harm depends mainly on the type, dose, body area, and duration of exposure.

Radiation Fibrosis

Long-term thickening and stiffening of tissue caused by radiation injury, sometimes appearing months or years after treatment. It can affect skin, lungs, bowel, or other organs and may cause pain, reduced movement, or shortness of breath.

Radiation Field

The area and distribution of radiation delivered during imaging or radiation treatment. In therapy, its size, shape, direction, and dose are planned to cover the target while limiting exposure to nearby healthy tissue.

Radiation Leukemia

Radiation leukemia is leukemia that develops after significant exposure to ionizing radiation; it is a late treatment- or exposure-related complication.

Radiation Monitoring

Measurement of radiation levels or individual exposure using devices such as personal dosimeters and area monitors.

Radiation Necrosis

Permanent death of tissue caused by radiation injury, often developing months or years after treatment. In the brain it may cause headache, seizures, swelling, weakness, or speech and vision problems and can resemble returning cancer on scans.

Radiation Oncologist

A doctor who plans and oversees radiation treatment for cancer and selected noncancerous conditions. They choose treatment areas and doses, coordinate care, monitor side effects, and adjust therapy during treatment.

Radiation Oncology

A medical specialty that uses ionizing radiation to treat cancer. Treatment may aim to destroy or control tumors, prevent cancer from returning, or relieve symptoms.

Radiation Physics

The study of how radiation is produced, travels, interacts with tissues, and is measured. It supports medical imaging, radiation treatment, dose calculation, and protection from unnecessary exposure.

Radiation Pneumonitis

Inflammation of lung tissue occurring weeks or months after radiation to the chest. It may cause dry cough, fever, breathlessness, or low oxygen and can later leave permanent scarring; new breathing symptoms need medical assessment.

Radiation Poisoning

Illness caused by substantial exposure to ionizing radiation, potentially producing skin injury, bone-marrow suppression, gastrointestinal symptoms, or organ failure.

Radiation Pregnancy Screening

Assessment of pregnancy status before procedures involving ionizing radiation or radioactive materials when pregnancy is possible. The decision to proceed requires clinical justification, risk optimization, and consideration of gestational age and fetal dose.

Radiation Proctitis

Inflammation and injury of the rectum after pelvic radiation therapy, causing rectal pain, urgency, diarrhea, mucus, or bleeding.

Radiation Protection

The practice of keeping radiation exposure as low as reasonably achievable while obtaining the required diagnostic or therapeutic result. It relies on justification, optimization, time reduction, distance, shielding, and appropriate contamination control.

Radiation Recall

Inflammation that returns in an area previously treated with radiation after a later trigger, often a medicine. The skin or lining may become red, sore, swollen, peel, or blister, and the treating team should review the suspected trigger.

Radiation Safety

Measures that limit unnecessary exposure to ionizing radiation while allowing needed imaging or treatment. They include using the shortest practical exposure time, keeping as much distance as possible, using shielding, preventing contamination, and following pregnancy-related precautions when relevant.

Radiation Sickness

Acute radiation syndrome caused by high-dose whole-body or substantial partial-body exposure to ionizing radiation. It may produce nausea, vomiting, marrow failure, infection, bleeding, gastrointestinal injury, neurovascular collapse, and death depending on dose.

Radiation Therapy

Treatment that uses carefully aimed ionizing radiation to damage cancer cells so they stop dividing or die. It may be given from outside the body or from a source placed near or inside a tumor. Side effects depend on the body area and dose and may include tiredness or skin changes.

Radiation Therapy - Skin Care

Care for skin exposed to radiation treatment. Keep the area clean and gently moisturized as advised, protect it from sun and friction, and do not apply unapproved products or remove treatment markings; report severe redness, blistering, drainage, or pain.

Radiation Tolerance

The amount of radiation that a tissue or organ can receive before injury becomes likely. It varies with the tissue, dose, treatment schedule, and previous radiation.

Radiation-Induced Angiosarcoma

A rare, fast-growing cancer of blood-vessel lining cells that develops years after radiation in previously treated tissue. It may appear as a bruise, purple patch, swelling, or lump and requires prompt specialist assessment.

Radiation-Recall Dermatitis

An inflammatory skin reaction that occurs in a previously irradiated area after exposure to a triggering substance, often months or years later. The area may become red, swollen, painful, or blistered and requires clinical evaluation.

Radical Cystoprostatectomy

Radical cystoprostatectomy removes the urinary bladder, prostate, and nearby structures, usually to treat invasive bladder cancer in men.

Radical Hysterectomy

An operation that removes the uterus and cervix together with surrounding parametrial tissues and the upper vagina, usually with pelvic lymph-node assessment or removal. It is used mainly for selected invasive cervical cancers and is more extensive than a simple or total hysterectomy.

Radical Lymphadenectomy

Extensive surgery to remove lymph nodes and nearby tissue to look for or treat cancer spread. It may provide important staging information but can cause pain, nerve or vessel injury, and long-term swelling from lymph-fluid blockage.

Radical Mastectomy

Radical mastectomy removes the breast, chest muscles, and many underarm lymph nodes; it is now rarely used because less extensive cancer surgery is often effective.

Radical Nephrectomy

Radical nephrectomy removes an entire kidney and sometimes nearby tissues, usually to treat a kidney tumor.

Radical Prostatectomy

Surgery to remove the whole prostate gland and usually the nearby seminal vesicles, most often to treat prostate cancer that has not spread widely. The urinary passage is rejoined to the bladder; possible effects include urine leakage, erection problems, bleeding, and infection.

Radicular Cyst

An inflammatory odontogenic cyst arising at the apex of a nonvital tooth, usually from chronic pulpal infection and apical periodontitis.

Radiculitis

Irritation or inflammation of a nerve root where it leaves the spine. It can cause pain spreading along an arm or leg, tingling, numbness, weakness, or changed reflexes because of a disk problem, narrowing, infection, or other disease.

Radiculopathy

Dysfunction of a spinal nerve root, usually from disc herniation, narrowing, or inflammation. It may cause shooting pain, tingling, numbness, weakness, or altered reflexes along the affected nerve pathway.

Radio-Opaque

Blocking X-rays and appearing relatively white on a radiograph; radiopaque is the modern spelling.

Radioactive Iodine

A radioactive form of iodine taken up by thyroid cells. It is used to image the thyroid or destroy overactive thyroid tissue and selected thyroid cancer cells; radiation-safety precautions are needed after some treatments.

Radioactive Iodine Ablation

Treatment using radioactive iodine to destroy remaining thyroid tissue or selected thyroid cancer

cells after surgery. Thyroid cells absorb the iodine; the decision depends on cancer type, spread, recurrence risk, and the person's overall health.

Radioactive Iodine Uptake

A test measuring the percentage of administered radioactive iodine taken up by the thyroid over time, used to evaluate hyperthyroidism and selected thyroid disorders.

Radioactive Iodine Uptake Test

A nuclear medicine test that measures how much radioactive iodine the thyroid gland absorbs. It helps evaluate hyperthyroidism and some thyroid disorders.

Radioactivity

Energy released when unstable atoms change into more stable forms. The energy may be particles or rays and can be used in medical imaging or treatment, but enough exposure can damage living tissue.

Radiobiology

The study of how radiation affects living cells and tissues, including DNA damage, cell death, repair, mutations, treatment effects, and the development of cancer.

Radiocarpal Joint

The main wrist joint between the forearm bone on the thumb side and several wrist bones. It allows the hand to bend forward, backward, and from side to side and may be injured by falls or arthritis.

Radiochemical Purity

The proportion of a radioactive medicine present in the intended chemical form. Unwanted forms can make a scan less accurate, send radiation to the wrong tissues, or reduce treatment effectiveness.

Radiochemistry

The chemistry of radioactive substances and compounds. In medicine it includes making and labeling radiopharmaceuticals, studying radioactive decay, separating products, and checking radiochemical

purity and safety.

Radiocontrast

A substance given during an imaging test to make selected tissues, blood vessels, or body spaces easier to see. Depending on the agent, allergic reactions, kidney injury, or leakage-related damage may occur.

Radiodermatitis

Skin injury caused by ionizing radiation, such as radiation treatment. It may cause redness, dryness, itching, hair loss, peeling, sores, or long-term skin changes; severity depends on the dose, treatment area, and repeated exposure.

Radioembolisation

Alternate index label; see *Radioembolization*.

Radioembolization

A treatment that delivers tiny radioactive beads through an artery to selected liver tumors. The beads reduce the tumor's blood supply and release radiation nearby; suitability depends on liver function, tumor extent, and blood flow.

Radiofrequency

A type of electromagnetic energy, between some radio waves and microwaves, used in communication and in selected medical tests and treatments. Medical uses include heating tissue or delivering energy during procedures.

Alternate Names:

RF energy

Radiofrequency Ablation

A procedure that uses high-frequency electrical energy to heat and destroy selected tissue, often under imaging guidance.

Radiofrequency Ablation For Chronic Pain

A procedure that applies radiofrequency energy to selected sensory nerves or other targets to interrupt pain signaling for a limited period in carefully selected chronic pain conditions.

Radiograph

An image made with X-rays. Dense structures such as bone appear light, while air appears dark and soft tissues appear in shades of gray. Radiographs are used to assess bones, the chest, teeth, and selected abdominal or foreign-body problems; they use a small amount of radiation.

Alternate Names:

X-ray

Radiographer

A trained professional who performs diagnostic imaging examinations or delivers radiotherapy, depending on specialty and jurisdiction.

Radiography

Creation of images using X-rays. It is useful for bones, chest disease, dental structures, and many other conditions; radiation exposure is kept as low as reasonably achievable.

Radioimmunoassay

A laboratory test that uses an antibody and a small radioactive label to measure a hormone, medicine, or protein in a sample. It can be very sensitive but is often replaced by newer nonradioactive tests.

Radioimmunoguided Surgery

Surgery in which a radioactive tracer attached to an antibody helps the surgeon locate tissue carrying a particular marker, often tumor tissue. Special equipment detects the tracer during the operation.

Radioimmunotherapy

Treatment that attaches a radioactive substance to an antibody so the antibody carries radiation toward cells with a particular marker, often cancer cells. Radiation can still affect nearby normal tissue and cause side effects.

Radioiodine Therapy

Treatment using radioactive iodine, which is taken up mainly by thyroid cells to destroy overactive thyroid tissue or selected thyroid cancer cells. It requires individualized dosing and temporary

radiation-safety precautions; pregnancy and breast-feeding are contraindications.

Radioisotope

An unstable isotope that emits radiation as it decays; radioisotopes are used in imaging, treatment, research, and industrial applications.

Radioisotope (Radionuclide)

An unstable isotope that emits radiation as it decays; radioisotopes are used in medical imaging, diagnosis, and selected treatments.

Alternate Names:

Radionuclide

Radiologic Health

The safe use of medical imaging and radiation-based treatment to protect patients, workers, and the public from unnecessary ionizing radiation while preserving clinical benefit. Safety measures include appropriate justification, shielding, and dose optimization.

Radiologic Response

The change seen on medical scans after treatment, such as shrinkage, disappearance, stability, growth, or new lesions. Standard measurement rules help classify the response, but scans do not always show the full biological effect.

Radiologic Technologist

A trained health professional who performs selected medical-imaging examinations and helps protect patients from unnecessary radiation exposure.

Radiologic-Pathologic Correlation

Comparing scan findings with tissue examined under a microscope to determine whether the sample explains the abnormal area. If they do not match, another sample or further testing may be needed.

Radiologist

A doctor trained to interpret medical images and sometimes perform image-guided procedures. Radiologists evaluate X-rays, ultrasound, CT, MRI, and

other scans to diagnose disease, guide treatment, or obtain tissue samples.

Radiology

The medical field that uses images to find and monitor disease and guide procedures. Radiologists interpret X-rays, ultrasound, CT, MRI, and other scans and may perform image-guided biopsies, drainages, injections, or treatments.

Radiology Report

A written explanation of an imaging study. It describes why the study was done, the important findings, and their meaning; urgent or unexpected findings should be communicated promptly to the treating team.

Radiology-Patient Identification

Verification of the correct patient, examination, body site, indication, pregnancy status when relevant, allergies, renal function, and prior imaging before image acquisition or intervention. It is a core diagnostic and procedural safety step.

Radiolucent

Describing a material that lets more X-rays pass through and therefore appears darker on an X-ray or CT image. Air is highly radiolucent; some stones, foreign bodies, and abnormal tissues can also have this appearance.

Radiomimetic

Radiomimetic describes a chemical or treatment that produces cellular or DNA damage resembling the effects of ionizing radiation.

Radionuclide

An unstable form of an atom that releases radiation as it changes into a more stable form. In medicine, radionuclides can be attached to substances for imaging or used to deliver treatment to selected tissues.

Radionuclide Angiography

An imaging test in which a small amount of radioactive tracer is used to follow blood flow through the

heart or blood vessels. A camera detects the tracer and produces information about circulation or heart pumping.

Radionuclide Cystogram

A nuclear medicine examination that tracks radio-labeled urine to detect vesicoureteral reflux or evaluate bladder emptying.

Radionuclide Generator

A device that produces a short-lived radioactive substance from a longer-lasting radioactive substance. It supplies certain tracers for nuclear scans or treatment when needed and must be operated under strict safety and quality controls.

Radionuclide Heart Scan

A nuclear medicine study that uses a radioactive tracer to evaluate myocardial blood flow, heart muscle viability, or ventricular function.

Radionuclide Imaging

A scan that uses a small amount of radioactive tracer to show the structure or activity of an organ. A camera detects the tracer, helping evaluate blood flow, bone, thyroid, kidney, heart, or cancer-related changes.

Radionuclide Imaging Or Scan

A scan that detects radiation from a small amount of radioactive tracer given to a person. The tracer collects in selected organs or tissues, allowing clinicians to examine blood flow, structure, or function and identify some diseases.

Alternate Names:

Nuclear scan; scintigraphy

Radionuclide Therapy

Treatment that delivers radiation from inside the body using a radioactive substance directed toward selected tissue. It can treat some thyroid diseases, cancers, or painful bone lesions. The medicine, dose, precautions, and side effects depend on the target and the person's kidney, blood, and overall health.

Radionuclides

Radioactive forms of atoms used in nuclear medicine. Attached to a suitable substance, they can show how an organ works on a scan or deliver radiation to selected diseased tissue during treatment.

Radionuclidic Purity

The proportion of radioactivity in a preparation that comes from the intended radioactive atom rather than unwanted radioactive contaminants. High purity helps ensure the expected scan or treatment and limits unnecessary radiation to other tissues.

Radiopaque

Describing a material that attenuates X-rays strongly and therefore appears relatively white on a radiograph or CT image. Bone, metal, and some contrast agents are radiopaque.

Radiopharmaceutical

A medicine containing a small amount of radioactive material. It can show how an organ or tissue works on a scan or deliver radiation to selected diseased cells; its distribution determines the information or treatment it provides.

Radiopharmaceutical Extravasation

Leakage of a radioactive medicine from the vein into nearby tissue during an injection. It can reduce the accuracy of a scan and, with treatment doses, injure local tissue; staff assess and document the event.

Radiopharmaceutical Labeling Kit

A prepared set of sterile ingredients used to attach a radioactive atom to a substance that travels to a particular organ or follows a body process. The finished product is tested before it is given for imaging.

Radiopharmaceutical Quality Control

Testing performed to verify identity, radionuclidic purity, radiochemical purity, pH, sterility, endotoxin limits, and other release specifications before clinical administration. Requirements depend on the preparation and jurisdiction.

Radiopharmacy

The preparation, testing, storage, and dispensing of medicines containing radioactive materials. Radiopharmacy requires accurate activity measurement, cleanliness, sterility checks, quality control, safe handling, and protection of workers and patients.

Radioprotective Agent

A medicine or substance intended to reduce injury to healthy tissue from ionizing radiation. It may limit chemical damage or support cell repair, but its benefit and risks depend on the type, dose, and treatment setting.

Radiosensitization

Making cells more vulnerable to radiation damage. Some medicines or treatments are combined with radiotherapy to increase damage to cancer cells, while treatment planning aims to limit harm to nearby healthy tissue.

Radiosurgery

Radiosurgery delivers highly focused radiation to a small target, usually in the brain or body, without making a conventional surgical incision.

Radiotherapy

Treatment using high-energy radiation to damage and control abnormal cells, especially cancer. It may be given from outside or inside the body and can cause temporary or lasting effects in nearby healthy tissue.

Radiotherapy Bolus

A layer of material placed on the skin during selected radiation treatments so more radiation reaches the skin surface. It is positioned carefully to deliver the planned dose to the target area.

Radiotherapy Dosage

Radiotherapy dosage is the amount of ionizing radiation prescribed for a treatment target, usually divided into carefully planned fractions.

Radiotracer

A small amount of radioactive material attached to a substance that travels through a specific body process. A scanner detects where it goes, helping show blood flow, organ function, bone activity, or selected disease-related changes.

Radium

A naturally radioactive chemical element that releases penetrating radiation as it breaks down. Internal exposure can damage bone and other tissues and increase cancer risk, so handling requires strict safety controls.

Radium-223

A radioactive medicine that behaves like calcium and collects in areas of increased bone activity. It is used for selected prostate cancers that have spread to bone and may cause low blood counts or other side effects.

Radius

The forearm bone on the thumb side. It joins the elbow and wrist and rotates around the ulna, allowing the palm to turn up or down.

Radius Fracture

A break in the radius, one of the two bones of the forearm, often occurring near the wrist after a fall onto an outstretched hand.

Radon

A naturally occurring radioactive gas that can accumulate indoors and increase lung-cancer risk when inhaled over time.

Ragged Red Fibers

An appearance seen in a muscle biopsy when abnormal mitochondria build up around muscle fibers. It supports the diagnosis of some mitochondrial muscle diseases but is not specific to one condition. The biopsy result must be interpreted with symptoms, blood tests, genetic testing, and other findings.

Alternate Names:

RRF; Ragged-Red Muscle Fibers

Raised Hemidiaphragm

A raised hemidiaphragm is elevation of one side of the diaphragm, caused by abdominal pressure, lung volume loss, phrenic-nerve dysfunction, or diaphragmatic disease.

Rale

A rale, or crackle, is an abnormal discontinuous breath sound produced by fluid, collapsed airways, or opening of small airways during breathing.

Rale (Rhonchus)

An abnormal sound heard through a stethoscope during breathing, caused by air moving through fluid, mucus, narrowed airways, or abnormal lung tissue.

Alternate Names:

Rhonchus

Raloxifene

A medicine that acts like estrogen in bones but blocks some estrogen effects elsewhere. It may reduce spine fractures and selected breast-cancer risk after menopause, but can increase blood-clot risk.

Raloxifene Hydrochloride

Raloxifene hydrochloride is a selective estrogen-receptor modulator used to prevent or treat osteoporosis and reduce breast-cancer risk in selected postmenopausal women.

Raltegravir Potassium

Raltegravir potassium is an HIV integrase inhibitor used with other antiretroviral medicines to suppress HIV replication.

Raltitrexed

A chemotherapy medicine used for some colorectal cancers. It blocks a cell process needed to make DNA, slowing the growth of cancer cells; possible effects include diarrhea, mouth sores, low blood counts, tiredness, and liver problems.

Ramipril

Ramipril is an angiotensin-converting-enzyme in-

hibitor used for hypertension, heart failure, and cardiovascular risk reduction; cough, hyperkalaemia, renal-function changes, angioedema, and fetal toxicity are important risks.

Rampant Caries

Severe tooth decay affecting many teeth or surfaces at once. It may be linked with frequent sugar, dry mouth, vomiting, poor oral hygiene, limited dental care, medicines, or other health problems.

Ramsay Hunt Syndrome

Reactivation of the shingles virus near the facial nerve, causing severe ear pain, a blistering rash in or around the ear or mouth, and weakness on one side of the face. Hearing loss or dizziness may occur; early treatment can improve recovery.

Ramucirumab

A monoclonal antibody that blocks vascular endothelial growth factor receptor 2 and is used in selected advanced cancers, including gastric, colorectal, lung, and liver cancers.

Ramus

A ramus is a branch-like extension of a bone, nerve, artery, or other structure, such as the mandibular ramus.

Random Allocation

Assignment of participants to study groups by chance to reduce selection bias and balance known and unknown factors.

Randomised Controlled Trial

A study in which participants are assigned by chance to interventions or controls and outcomes are compared.

Randomization Validation

Checking that a clinical trial's assignment process truly places participants into study groups by chance and is implemented as planned. This helps reduce selection bias and protects the reliability of comparisons between treatments.

Randomized Controlled Trial

An experimental study in which participants are assigned by chance to different interventions or a control condition and followed for specified outcomes.

Range Of Motion

The amount a joint can move in different directions. It may be measured by a healthcare professional or by the person moving alone; pain, swelling, stiffness, weakness, injury, or a shortened muscle can reduce it.

Ranibizumab

An intravitreal monoclonal antibody fragment that inhibits vascular endothelial growth factor and treats neovascular macular degeneration, diabetic macular edema, retinal vein occlusion, and related retinal disease.

Ranolazine

Ranolazine is an antianginal drug that inhibits the late sodium current in cardiac cells and reduces chronic angina without substantially lowering heart rate or blood pressure; QT prolongation and drug interactions require caution.

Ranson Criteria

An older scoring system that estimates the severity and risk of death in acute pancreatitis using clinical and blood-test findings at admission and again after 48 hours. It is less commonly used now because newer scores and organ-failure assessment may be more practical.

RANTES

RANTES, now called CCL5, is a chemokine that attracts immune cells and participates in inflammation, antiviral defense, and immune signaling.

Ranula

A mucocele (mucus extravasation cyst) of the sublingual salivary gland, presenting as a blue-translucent, fluctuant swelling in the floor of the mouth, typically lateral to the lingual frenulum. A ranula results from trauma or obstruction of a sublingual gland

duct, causing mucus accumulation in the sublingual space.

Raoultella

Raoultella is a genus of gram-negative bacteria that can cause opportunistic urinary, respiratory, wound, or bloodstream infections.

Rape

Nonconsensual sexual penetration or sexual violence; it is a serious crime and a medical, safeguarding, and trauma-care concern.

Rape (Sexual Assault)

Alternate index label for Sexual Assault.

Raphe

A seam-like line or ridge where structures join, such as the median raphe or raphe nuclei of the brainstem.

Raphe Nuclei

The raphe nuclei are brainstem groups of neurons that produce serotonin and influence mood, pain, sleep, arousal, and autonomic functions.

Rapid Eye Movement Sleep

A sleep stage with rapid eye movements, vivid dreaming, and active brain patterns. Most skeletal muscles are temporarily relaxed during it, while breathing and heart rate can become more variable.

Alternate Names:

REM sleep

Rapid Eye Movement Sleep Behavior Disorder

Alternate index label; see *REM sleep behavior disorder*.

Rapid Gastric Emptying

Abnormally rapid movement of food from the stomach into the small intestine, sometimes called dumping syndrome.

Rapid Heartbeat

Alternate index label; see *Tachycardia*.

Rapid Plasma Reagin Test

A blood test that detects antibodies associated with syphilis. It is useful for screening and monitoring treatment, but false-positive and false-negative results occur, so reactive results need a confirmatory treponemal test.

Rapid Sequence Induction

A method of giving anesthetic and muscle-relaxing medicines to place a breathing tube quickly while reducing the chance of vomit entering the lungs. It is used when urgent airway control is needed and requires preparation for difficult intubation.

Rapid Shallow Breathing

Breathing that is faster than normal but moves only small amounts of air each time. It may occur with lung disease, pain, anxiety, metabolic illness, or tiring breathing muscles and can be a warning sign of respiratory failure.

Rapid Strep Test

A test performed on a throat swab to detect Group A Streptococcus. It provides a rapid result, but a negative result may require confirmatory testing depending on the patient's age, symptoms, and local guidance.

Rapid-Sequence Intubation

An emergency method for placing a breathing tube quickly after giving medicines that induce unconsciousness and temporarily relax the muscles. It is used when airway protection is urgent, with oxygen preparation, backup equipment, blood-pressure monitoring, and confirmation that the tube is correctly positioned.

Rapidly Progressive Glomerulonephritis

Severe inflammation of the kidney's filtering units that causes kidney function to worsen over days or weeks. It may cause blood or protein in urine, swelling, high blood pressure, or reduced urine and requires urgent testing and treatment.

Rare Disease

A condition affecting relatively few people in a defined population; many rare diseases are genetic, require specialized diagnosis, and may have limited evidence or treatment options.

Rarefaction

A reduction in density or pressure, such as the low-pressure part of a sound wave. In medicine, understanding rarefaction helps explain ultrasound imaging, sound transmission, and pressure changes in tissues.

Ras Peptide

A small protein fragment related to Ras proteins, which help control cell growth and division. Changes in Ras signaling can contribute to cancer.

Rasburicase

A recombinant urate-oxidase enzyme that converts uric acid to the more soluble allantoin. It is used in selected patients at risk of or experiencing tumorlysis-related hyperuricemia. It can cause serious hypersensitivity or hemolysis in people with glucose-6-phosphate dehydrogenase deficiency and requires appropriate screening and monitoring.

Rash

A visible change in skin color, texture, or surface, such as spots, bumps, blisters, or scaling. Causes include infection, allergy, medicines, inflammation, and other disease; rapid or severe rashes need assessment.

Alternate Names:

Allergy Rash (Rash)

Rash - Child Under 2 Years

A rash in a child under 2 can result from infection, allergy, heat, irritation, or inflammation; breathing difficulty, lethargy, fever, blistering, or rapid spread needs urgent care.

Rash Heat (Heat Rash)

Alternate index label for Heat Rash.

Rash, Poison Ivy

Alternate index label; see *Poison ivy rash*.

Rashes

Alternate index label; see *Rash*.

Rasp

A roughened surgical instrument used to file, shape, or smooth bone or other hard tissue.

RAST

An older name for a blood test that measures IgE antibodies directed against specific allergens. Modern laboratories usually use newer specific-IgE immunoassays; results show sensitization and must be interpreted with symptoms and exposure history.

Alternate Names:

Radioallergosorbent test

Rastelli Procedure

Open-heart surgery for certain complex birth defects involving the heart's major arteries, a hole between the lower chambers, and a narrowed route to the lungs. A patch directs blood from the left ventricle to the aorta, and a tube with a valve connects the right ventricle to the lung arteries. The tube may need later replacement.

Alternate Names:

Rastelli Operation; Rastelli Repair

Rat Bite Fever

A systemic bacterial infection caused by *Streptobacillus moniliformis* or *Spirillum minus*, transmitted through rat bites or contact with rat-contaminated food or water. It presents with relapsing fever, rash, polyarthritis, and lymphadenopathy. The characteristic rash is petechial or maculopapular on the extremities.

Rat-Bite Fever

Alternate index label; see *Rat Bite Fever*.

Ratio

A ratio compares two quantities by division, such as a measurement of risk, concentration, or body

proportions.

Rationalization

A psychological defense in which a person creates plausible explanations for behavior or feelings while avoiding the underlying motive or conflict.

RATS

Alternate name; see *Robotic-Assisted Thoracoscopic Surgery*.

Ravuconazole

Ravuconazole is a triazole antifungal medicine studied and used in some settings for invasive fungal infections.

Raw Egg

Raw eggs may contain Salmonella and are safest when properly refrigerated, handled hygienically, and cooked unless pasteurized products are used.

Raynaud Phenomenon

Episodes in which small blood vessels in the fingers or toes suddenly narrow after cold or stress. The digits may turn white, blue, then red and become numb or painful; severe or new symptoms may indicate another disease.

Raynaud Syndrome

Episodes in which small blood vessels in the fingers or toes narrow after cold or stress, causing numbness, pain, and color changes that may progress from white to blue to red. It may occur alone or result from another disease; severe attacks can damage tissue.

Raynaud'S Disease

Primary episodic vasospasm of fingers or toes triggered by cold or stress, causing color changes and numbness.

Raynaud'S Phenomenon

Episodic constriction of small arteries in the fingers or toes, causing color changes, numbness, or pain after cold exposure or emotional stress.

Alternate Names:

Raynauds Phenomenon (Raynaud's Phenomenon)
Raynauds Syndrome (Raynaud's Phenomenon)

Raynauds Phenomenon (Raynaud'S Phenomenon)

Alternate index label for Raynaud's Phenomenon.

Raynauds Syndrome (Raynaud'S Phenomenon)

Alternate index label for Raynaud's Phenomenon.

Razor Bumps

Inflamed bumps caused by hairs curling back into the skin after shaving or other hair removal. They are more common with coarse or curly hair and may cause itching, pain, dark marks, or scarring; avoiding very close shaving and using proper shaving technique can reduce recurrence.

RâLe

An older term for an abnormal crackling or bubbling respiratory sound, now generally described as a crackle.

RBC Count

A measurement of the number of red blood cells in a volume of blood, interpreted with hemoglobin, hematocrit, and red-cell indices to evaluate anemia or erythrocytosis.

RBC Indices

Measurements describing the size, hemoglobin content, and variation of red blood cells. They help classify anemia and interpret a complete blood count alongside hemoglobin and other results.

RBC Nuclear Scan

An imaging test using a small amount of the person's blood labeled with a radioactive tracer. It can help locate ongoing bleeding in the digestive tract or assess blood flow through the heart.

RBC Urine Test

A urine examination detecting or counting red blood

cells, used to evaluate hematuria from urinary-tract infection, stones, glomerular disease, tumors, trauma, or other causes.

RDA

Recommended dietary allowance, the daily nutrient intake sufficient for nearly all healthy people in a defined group.

Alternate Names:

Recommended dietary allowance

Reabsorption

The transport of a substance from a body cavity or tubular fluid back into tissue or the bloodstream, such as renal tubular recovery of water and filtered solutes.

Reaction

A response of the body or mind to a stimulus, illness, medicine, treatment, or event. Examples include an allergic reaction, an immune reaction, a treatment response, and a psychological reaction; the cause and severity determine its importance.

Reactivation Tuberculosis

Active tuberculosis developing when a previously contained infection becomes active again, often years later. It commonly affects the upper lungs and may cause a long-lasting cough, coughing blood, fever, night sweats, weight loss, and spread to others through the air.

Reactive Arthritis

Painful inflammation of joints that develops during or after certain intestinal or genital infections. It may also cause eye inflammation, skin changes, or urinary symptoms, and the triggering infection may already have cleared.

Alternate Names:

Arthritis Reactive (Reactive Arthritis) Arthritis Re-
iters (Reactive Arthritis)

Reactive Attachment Disorder

A rare childhood condition in which a child persistently avoids or barely responds to comfort from

caregivers. It is linked to severe neglect or unstable care early in life and may involve sadness, irritability, limited trust, and difficulty forming relationships.

Reactive Attachment Disorder Of Infancy Or Early Childhood

A childhood disorder characterized by markedly disturbed and developmentally inappropriate attachment behavior associated with severe insufficient caregiving, including limited comfort-seeking or response to caregivers.

Reactive Hypoglycemia

A fall in blood sugar occurring within a few hours after eating. It may cause shakiness, sweating, hunger, weakness, dizziness, or confusion; repeated episodes need assessment to confirm low sugar and identify the cause.

Reactive Oxygen Species

Unstable oxygen-containing molecules produced during normal cell activity, infection, or inflammation. Small amounts can help cells signal and defend against germs, but excess amounts can damage cell membranes, proteins, and DNA.

Reactive Perforating Collagenosis

A skin condition in which damaged collagen from deeper skin is pushed through the surface. It causes small, firm, very itchy bumps with a central plug, often on the arms, legs, or hands, and may be associated with diabetes or kidney disease.

Reading Disability, Specific

Alternate index label; see *Dyslexia*.

Reality Testing

The ability to recognize whether perceptions, thoughts, and beliefs match shared reality. Clinicians assess it during a mental-status examination; impaired reality testing can occur with psychosis, severe mood episodes, delirium, or some brain disorders.

Rebound Effect

Worsening or return of symptoms after stopping or reducing a treatment that had been suppressing them.

Rebound Headache

Alternate index label; see *Medication overuse headaches*.

Rebound Insomnia

Return or worsening of insomnia after stopping a sleep medicine.

Recalcitrant

Resistant to treatment, control, healing, or change; the term often describes a persistent disease or infection.

Receiver Operating Characteristic

A graph showing how a diagnostic test's ability to detect disease changes as its cutoff is changed. It compares true-positive and false-positive results; the area under the curve summarizes overall discrimination, not clinical usefulness by itself.

Recent Memory

Recent memory is the ability to recall information or events from the near past and can be impaired by aging, delirium, brain disease, depression, or medicines.

Receptor

A protein on or inside a cell that recognizes a specific signal, such as a hormone, nerve chemical, or medicine, and starts or changes a cell response.

Receptor Binding

The attachment of a signaling molecule, medicine, or other ligand to a receptor on or inside a cell. Binding can activate, block, or change the receptor and its downstream cellular response.

Receptor Desensitization

A reduced cell response after a receptor is stimulated continuously or repeatedly. The change can develop

quickly and helps prevent excessive signaling, but it may also reduce the effect of a medicine or natural body signal.

Receptor Downregulation

A decrease in the number or sensitivity of cell receptors after a signal stimulates them for a long time. The cell may remove receptors from its surface or break them down, becoming less responsive to the signal or medicine.

Receptor Tyrosine Kinases

Cell-surface proteins that receive signals from hormones and growth factors. When switched on, they activate internal pathways controlling growth, survival, movement, and repair; abnormal activity can contribute to cancer and other disease.

Receptor Upregulation

An increase in the number or sensitivity of cell receptors after prolonged blocking of a signal or reduced stimulation. This adjustment can make a cell respond more strongly when the signal or medicine is later present.

Receptors

Proteins or structures on or inside cells that recognize specific signals and start responses such as growth, movement, or hormone action.

Recession Of Medial Rectus Muscle

An eye operation that moves the medial rectus muscle backward to weaken its pull and correct certain inward eye deviations.

Recessive

Describing a gene change whose effect usually appears only when a person has two altered copies, one inherited from each parent. A person with one copy may carry it without having the condition.

RECIST

Standard rules for judging how a solid tumor changes on scans during treatment. Using measured lesions, they classify disease as completely

gone, partly reduced, stable, or worsened; the categories support research and clinical decisions but do not replace overall assessment.

Recognizing Medical Emergencies

Recognizing a medical emergency includes identifying severe breathing difficulty, chest pain, stroke signs, major bleeding, seizure, collapse, poisoning, or altered consciousness and calling emergency services.

Recognizing Teen Depression

Recognizing depression in adolescents involves looking for persistent low mood or irritability, loss of interest, sleep or appetite changes, poor concentration, hopelessness, or self-harm thoughts.

Recombinant

Produced by combining genetic material from different sources or by using engineered DNA in a cell or organism.

Recombinant DNA

DNA made by joining genetic material from different sources. It is used in biotechnology to produce medicines such as insulin and growth hormone, develop some vaccines, and create vehicles for gene therapy.

Recombinant Protein

A protein produced by putting its gene into a laboratory cell and growing the cell so it makes the protein. This method supplies some hormones, vaccines, antibodies, enzymes, and research materials.

Recombinant Tissue Plasminogen Activator

A laboratory-made form of tissue plasminogen activator that helps convert plasminogen to plasmin and dissolve blood clots. It is used in selected emergencies, such as some ischemic strokes, heart attacks, or pulmonary emboli, when benefits outweigh bleeding risk.

Alternate Names:

Recombinant tPA

Recombinase

An enzyme that cuts, joins, or rearranges DNA segments. It helps cells exchange genetic material, repair some DNA damage, and assemble the gene parts needed to make a varied immune response.

Recombinational Repair

A way cells repair a serious DNA break by using a matching, undamaged DNA copy as a guide. It restores genetic information accurately; inherited problems with this repair can increase cancer risk and treatment sensitivity.

Recommended Daily Allowance

The Recommended Dietary Allowance is the average daily nutrient intake sufficient for nearly all healthy people in a specified age and sex group.

Recommended Dietary Allowance

The average daily intake expected to meet the nutrient needs of nearly all healthy people in a defined group.

Alternate Names:

RDA

Reconstructive (Plastic) Surgery

Surgery that restores form or function after congenital difference, injury, disease, or removal of tissue.

Record

A health record is a documented account of a person's history, findings, tests, diagnoses, treatments, decisions, and outcomes.

Recovered Memory Syndrome

A controversial and nonstandard label for memories recalled after an alleged period of amnesia; recovered memories require careful, non-leading assessment.

Recovery Position

A side-lying position used for an unconscious but normally breathing person to help keep the airway open and reduce aspiration risk.

Recreation Therapy

Recreation therapy uses adapted games, arts, exercise, and leisure activities to support physical, emotional, cognitive, or social functioning.

Recrudescence

Recurrence of symptoms or infection after apparent improvement, often from persistence of the original organism or disease process.

Rectal

Rectal means relating to the rectum, the final section of the large intestine before the anal canal.

Rectal (Adjective)

Rectal means relating to the rectum, the final part of the large intestine before the anal canal.

Rectal Biopsy

Removal of a small piece of tissue from the rectum for examination under a microscope. It can help investigate missing nerve cells, inflammation, infection, abnormal growth, or other rectal disease.

Rectal Bleeding

Passage of bright-red or dark blood from the rectum, caused by hemorrhoids, fissures, polyps, inflammatory bowel disease, diverticular disease, or cancer. Persistent, heavy, or unexplained bleeding requires evaluation.

Alternate Names:

Blood In The Stool (Rectal Bleeding)

Rectal Bleeding (Blood In The Stool (Rectal Bleeding))

Alternate index label for Blood in the Stool (Rectal Bleeding).

Rectal Cancer

Cancer developing in the rectum, the final part of the large intestine. Symptoms may include bleeding, altered bowel habits, pain, or weight loss; treatment may combine surgery, radiation, chemotherapy, immunotherapy, or targeted therapy.

Alternate Names:

Cancer, Rectal

Rectal Carcinoma

Rectal carcinoma is cancer arising in the rectum and may cause bleeding, altered bowel habits, pain, or anemia.

Rectal Culture

Laboratory culture of a rectal specimen to detect selected bacterial pathogens or colonization, depending on the clinical indication.

Rectal Disease

A disorder affecting the rectum, including inflammation, infection, bleeding, obstruction, prolapse, functional disease, or neoplasm.

Rectal Fistula

A rectal fistula is an abnormal tract connecting the rectum with skin or another organ, often causing drainage, infection, or passage of stool through an abnormal route.

Rectal Hemorrhage

Bleeding from the rectum, which may result from hemorrhoids, fissure, inflammation, ischemia, polyps, cancer, trauma, or other gastrointestinal disease.

Rectal Inflammation

Alternate index label; see *Proctitis*.

Rectal Itching

Alternate index label; see *Anal itching*.

Rectal Mucositis

Rectal mucositis is inflammation and injury of the rectal lining, often after radiation, chemotherapy, infection, inflammatory disease, or trauma.

Rectal Necrosis

Rectal necrosis is death of rectal tissue from inadequate blood flow, severe inflammation, infection, pressure, or another destructive process.

Rectal Neoplasm

An abnormal growth in the rectum that may be noncancerous, precancerous, or cancerous. It can cause bleeding, altered bowel habits, pain, anemia, or no symptoms and may require examination and biopsy.

Rectal Obstruction

Impaired passage through the rectum caused by fecal impaction, stricture, tumor, foreign body, inflammation, or functional outlet disorder.

Rectal Perforation

A tear or hole through the rectal wall that can release bowel contents and cause peritonitis, sepsis, or severe bleeding.

Rectal Polyposis

Rectal polyposis is the presence of multiple polyps in the rectum, which may be sporadic or part of an inherited syndrome and can increase cancer risk.

Rectal Prolapse

The rectum slipping downward and partly or completely coming through the anus. It may cause a visible bulge, bleeding, mucus, discomfort, or difficulty controlling or passing stool and can result from weakened pelvic support, straining, or nerve problems.

Rectal Prolapse Repair

A surgical or procedural treatment that restores a prolapsed rectum to its normal position and secures or removes affected tissue according to the prolapse and patient factors.

Rectal Route

The rectal route administers a medicine or fluid through the anus into the rectum, where it may act locally or be absorbed systemically.

Rectal Stenosis

Abnormal narrowing of the rectal lumen caused by inflammation, scarring, surgery, radiation, ischemia, trauma, or neoplasm.

Rectal Tenesmus

Rectal tenesmus is a persistent or urgent feeling of needing to pass stool despite an empty or nearly empty rectum, caused by inflammation, infection, mass, or motility disorder.

Rectal Ulcer

Alternate index label; see *Solitary rectal ulcer syndrome*.

Rectocele

Bulging of the rectum into the back wall of the vagina because supporting tissues have weakened. It may cause pelvic pressure, difficulty emptying the bowel, or a vaginal bulge.

Rectosigmoid Neoplasm

A rectosigmoid neoplasm is an abnormal growth where the sigmoid colon joins the rectum and may be benign or malignant.

Rectouterine Pouch

The rectouterine pouch, or pouch of Douglas, is the peritoneal recess between the uterus and rectum where fluid or disease may collect.

Rectovaginal Fistula

Abnormal connection between the rectum and vagina causing passage of stool or gas through the vagina. Causes include obstetric injury particularly third and fourth degree perineal tears, Crohn disease, radiation therapy, and surgical complications. Presents with vaginal discharge of stool, flatus, or recurrent vaginal infections.

Rectum

The final straight section of the large intestine, approximately 12-15 cm long, extending from the sigmoid colon to the anal canal. The rectum stores feces before defecation.

Rectus Abdominis

The rectus abdominis is a paired abdominal muscle that flexes the trunk, stabilizes the pelvis, and helps compress abdominal contents.

Rectus Abdominis Muscle

The paired vertical muscles at the front of the abdomen, commonly called the “six-pack.” They bend the trunk forward, stabilize the pelvis, and help increase pressure inside the abdomen; stretching can cause separation during pregnancy or after major weight change.

Rectus Abdominis Sheath

A fibrous aponeurotic envelope formed by the abdominal wall muscles and surrounding the rectus abdominis muscle. It contains the superior and inferior epigastric vessels and related nerves.

Recur

To recur means to return or happen again, as symptoms, disease, infection, or a tumor after a period of improvement or treatment.

Recurrence

The return of a disease after it improved or seemed to disappear. Cancer may return at the original site, nearby lymph nodes, or another part of the body; recurrence does not always mean that treatment is no longer possible.

Recurrence Risk

The chance that a disease or condition will return after treatment or occur again in a future pregnancy or family member. The estimate depends on the condition, previous history, test results, inheritance pattern, and other risk factors.

Recurrence-Free Survival

The length of time after treatment during which a disease does not return. In cancer studies, it usually ends when cancer is found again or when a person dies, depending on the study rules. It measures control of disease, not a guarantee that treatment has cured it.

Recurrent

Happening again after a period of improvement, remission, or apparent absence. A recurrent condition may return at the original site or elsewhere; examples include repeated urinary infections, repeated

seizures, or cancer returning after treatment.

Recurrent Breast Cancer

Breast cancer that returns after a period when tests found no detectable disease. It may recur near the original site or elsewhere and is assessed with examination, imaging, biopsy, and other tests.

Recurrent Caries

Tooth decay that develops beneath or beside an existing filling, crown, or other restoration. It may result from leaking edges, plaque, frequent sugar, or dry mouth and can cause sensitivity, pain, or further tooth damage.

Recurrent Disease

Return of a disease after a period of improvement, remission, or apparent absence, either at the original site or elsewhere.

Recurrent Fractures

Repeated bone fractures, suggesting persistent trauma, osteoporosis, bone fragility, metabolic disease, tumor, or an inherited skeletal disorder.

Recurrent Laryngeal Nerve

A branch of the vagus nerve supplying most intrinsic muscles of the larynx; injury can cause hoarseness.

Recurrent Oral Ulcers

Alternate index label; see *Canker sore*.

Recurrent Pregnancy Loss

Two or more miscarriages. Possible causes include chromosome changes, an unusual shape of the uterus, hormone or thyroid problems, antiphospholipid syndrome, or other medical conditions, although no cause is found in many people. Evaluation is individualized and may identify treatment that improves the chance of a future healthy pregnancy.

Alternate Names:

Recurrent Miscarriage; Habitual Abortion; RPL

Recurrent Prostate Cancer

Alternate index label; see *Prostate cancer recurrence*.

Red Birthmarks

Red birthmarks are vascular skin marks present at or soon after birth, ranging from harmless capillary marks to lesions requiring monitoring or specialist treatment.

Red Blood Cell

A blood cell that carries oxygen from the lungs to the body's tissues. It contains hemoglobin, has a flattened, indented shape, and lacks a nucleus, which helps it bend through small blood vessels. Red blood cells also carry some carbon dioxide back to the lungs and help keep the blood's acid level balanced. They are made mainly in the bone marrow and normally live for about 120 days.

Red Blood Cell Labeling

A nuclear-medicine technique in which a person's red blood cells are marked with a small amount of radioactive material. Scans can then show ongoing digestive-tract bleeding or measure blood flow and heart function.

Red Eye

Redness of the white part of the eye caused by irritation, dryness, allergy, infection, injury, inflammation, or increased surface blood flow.

Red Flag

A symptom, sign, or test result suggesting a potentially serious condition that requires urgent assessment or escalation of care. Red flags are context-specific and should not be used as a substitute for clinical judgment.

Red Infarction

Tissue death caused by loss of blood flow in which blood also leaks into the damaged area, making it dark red. It is more likely in organs with a second blood supply or when a vein is blocked.

Alternate Names:

Hemorrhagic Infarction

Red Nucleus

A group of nerve cells in the midbrain that helps coordinate movement through connections with the cerebellum and spinal cord. Damage to nearby pathways can cause weakness, tremor, or abnormal movement.

Reductase Deficiency

A disorder or laboratory finding caused by inadequate activity of a reductase enzyme, impairing a specific metabolic or hormone pathway.

Reduction

Restoration of a displaced fracture or joint to better alignment, or decrease in amount, size, or activity.

Reduction Division

The first division of meiosis, when a reproductive cell's chromosome number is reduced by half. It produces cells with one chromosome from each pair and helps create genetic variation in eggs and sperm.

Reduction Mammoplasty

Surgery that removes breast tissue, fat, and excess skin to reduce breast size and relieve symptoms such as neck, shoulder, or back discomfort; it may also reshape the breasts.

Redundant Mitral Valve

Excess leaflet tissue of the mitral valve, most commonly the posterior leaflet, which may prolapse into the left atrium during systole. Often associated with myxomatous degeneration and mitral valve prolapse. May be asymptomatic or cause mild mitral regurgitation detected incidentally on echocardiography.

Reduviidae

A family of insects including assassin bugs; some species transmit pathogens such as the parasite causing Chagas disease.

Reed-Sternberg Cells

Large abnormal immune cells derived from B lym-

phocytes and commonly found in classic Hodgkin lymphoma. Their appearance in a tissue sample helps pathologists confirm that diagnosis.

Reexpansion Pulmonary Edema

A sudden buildup of fluid in a lung after it rapidly expands from a collapsed state, often after drainage of a large or long-standing pneumothorax. It can cause severe breathlessness and low oxygen and needs urgent treatment.

Refeeding Syndrome

Dangerous changes in body salts and fluid balance when food is restarted after severe or prolonged undernutrition. Low phosphate, potassium, or magnesium can cause weakness, swelling, abnormal heart rhythms, breathing failure, or death and requires careful medical monitoring.

Reference Interval

The range of results usually found in a selected healthy reference group, often covering the middle 95 percent. A result outside it does not by itself prove disease and must be interpreted with symptoms, history, and the laboratory's own method.

Referral

A request for assessment or treatment by another healthcare professional or service. Referrals help patients access specialized expertise, tests, procedures, rehabilitation, or coordinated care for a particular concern.

Referred Pain

Pain felt in an area away from the tissue causing it because nearby or connected nerves share pathways to the brain. Examples include shoulder pain from irritation below the diaphragm or arm and jaw pain during a heart attack.

Reflex

A rapid, automatic response to a stimulus, such as pulling the hand away from heat. Reflex testing helps assess pathways involving the nerves, spinal cord, and brain.

Reflex Action

A rapid, automatic response to a stimulus that occurs through a nerve pathway called a reflex arc. Reflexes protect the body, maintain posture, and provide information about nerve and spinal-cord function.

Reflex Anoxic Seizure

A brief fainting episode that can look like a seizure after sudden pain, fright, or emotional stress. The heart slows briefly, the person becomes pale and unresponsive, and jerking may occur before rapid recovery.

Reflex Arc

The nerve pathway that produces a rapid, automatic response. It includes a sensor, a sensory nerve, a processing center in the spinal cord or brain, a motor nerve, and the muscle or gland that responds.

Reflex Epilepsy

Reflex epilepsy is epilepsy in which specific stimuli such as flashing light, sound, reading, or touch reliably trigger seizures.

Reflexes

Automatic, rapid responses to stimuli carried through nerve pathways called reflex arcs. Testing them helps assess sensory nerves, motor nerves, the spinal cord, and parts of the brain.

Reflux

The backward flow of a body fluid, especially stomach contents into the esophagus or urine from the bladder toward the kidneys. Symptoms and risks depend on the type, frequency, and underlying cause.

Reflux Nephropathy

Renal scarring and chronic kidney damage caused by vesicoureteral reflux, recurrent urinary infection, or both. It may lead to hypertension, proteinuria, impaired growth, and chronic kidney disease.

Reflux, Bile

Alternate index label; see *Bile reflux*.

Reflux, Vesicoureteral

Alternate index label; see *Vesicoureteral reflux*.

Refraction

The bending of light as it passes through the cornea, aqueous humour, lens, and vitreous humour. In an eye examination, refraction determines the optical power needed to focus a clear image on the retina; refractive power is measured in dioptres.

Refractive Error

A refractive error occurs when the eye does not focus light correctly on the retina, causing nearsightedness, farsightedness, astigmatism, or presbyopia.

Refractive Errors And Astigmatism

Refractive errors are vision disorders caused by the eye's inability to properly focus light onto the retina, resulting in blurred vision.

Refractive Surgery

Eye surgery that changes the shape of the cornea or another part of the eye to reduce short-sightedness, long-sightedness, or astigmatism. It may reduce dependence on glasses but can cause dry eyes, glare, infection, or imperfect vision.

Refractometer

A refractometer measures how much light bends through a substance and is used for fluid concentration, optical properties, or eye refraction.

Refractometry

Measurement of the eye's refractive power to determine the optical correction needed for myopia, hyperopia, astigmatism, or presbyopia.

Refractory

Resistant to a treatment or not responding adequately to it. The term may refer to cancer or other diseases.

Refractory Anemia

An older term for anemia that does not improve with usual treatment. It may refer to a myelodysplastic

syndrome or another cause, so evaluation looks for blood-cell disorders, bleeding, nutritional problems, kidney disease, and other conditions.

Refractory Cancer

Refractory cancer is cancer that does not respond adequately to a treatment or begins progressing during treatment.

Refractory Disease

Disease that does not improve adequately with appropriate standard treatment or that continues to worsen despite therapy. The term does not mean that every possible treatment has failed.

Refractory Period

The brief recovery time after a nerve or muscle cell sends an electrical signal. During this time it cannot, or can only partly, send another signal, which helps control the speed and direction of nerve and heart activity.

Refrigerant Poisoning

Poisoning from inhaling or contacting a refrigerant gas or liquid. Exposure can cause dizziness, abnormal heart rhythms, suffocation, frostbite, chemical burns, or lung injury; move to fresh air and seek urgent help for symptoms.

Refsum Disease

A rare inherited disorder in which a fatty substance builds up in the body. It may cause night blindness, loss of smell, nerve damage, poor coordination, hearing loss, and scaly skin.

Regadenoson Pharmacological Stress

A medicine used during a heart scan to widen the heart's arteries when a person cannot exercise adequately. It can cause flushing, headache, chest discomfort, shortness of breath, or abnormal heart rhythms.

Regeneration

Growth or replacement of damaged or lost cells and tissues, helping restore structure or function after

injury.

Regimen

A planned schedule for medicines, treatments, diet, exercise, or other healthcare steps. It states what to do, how much or how often, and for how long, and may be changed according to response or side effects.

Regional

Relating to a particular body area, geographic area, or localized distribution rather than the whole body.

Regional Anaesthesia

Loss of sensation in a larger body region produced by blocking nerves or a nerve plexus while consciousness is usually preserved.

Regional Anesthesia

Numbing a larger body area by injecting local anesthetic near the nerves supplying it. The person is usually awake, although sedation may be added; the block can provide numbness during surgery and pain relief afterward.

Regional Chemotherapy

Treatment that delivers anticancer medicine directly to a body region or organ to produce a high local concentration while reducing, but not eliminating, exposure elsewhere. It is suitable only for selected cancers and carries procedure-related and medicine-related risks.

Regional Enteritis

An older name for Crohn disease, a chronic inflammatory bowel disease that can affect any part of the digestive tract.

Regional Ileitis

An older name for Crohn disease affecting mainly the terminal ileum. It causes long-term inflammation that may lead to abdominal pain, diarrhea, weight loss, narrowing, fistulas, or nutritional problems.

Regulation Of Health Professions

Legal and professional systems that govern health-care workers' education, licensing, permitted duties, conduct, and accountability. Regulation aims to protect patients, maintain competence, support ethical care, and address unsafe practice.

Regulatory Approval

Authorization by a competent regulatory authority for a medicine, device, or procedure to be marketed or used for specified purposes after review of evidence.

Regulatory Authority

A regulatory authority is a government or official body that sets and enforces standards for medicines, devices, facilities, professionals, or public health.

Regulatory Gene

A gene that controls when, where, or how strongly another gene is used. Changes in regulatory genes or their control regions can alter development, cell growth, metabolism, or disease risk.

Regulatory T Cells

Immune cells that limit excessive immune reactions and help prevent attacks against the body's own tissues. They develop mainly in the thymus or from other T cells in tissues. Problems with their function can contribute to autoimmune disease.

Regurgitation

Backward flow of blood through a heart valve that does not close fully. Mild leakage may cause no symptoms; more severe leakage can enlarge or weaken the heart and cause breathlessness, tiredness, or swelling.

Regurgitation, Aortic Valve

Alternate index label; see *Aortic valve regurgitation*.

Regurgitation, Mitral Valve

Alternate index label; see *Mitral valve regurgitation*.

Rehab

A structured rehabilitation program that helps restore function, independence, participation, or quality of life after illness or injury.

Rehabilitation

A coordinated process that helps a person restore or adapt physical, cognitive, psychological, and social function after illness, injury, surgery, or disability.

Rehabilitation Clinic

An outpatient facility where a team helps people regain or adapt movement, communication, thinking, daily activities, or independence after illness, injury, surgery, or disability. Services may include physical, occupational, speech, or other rehabilitation therapies.

Rehabilitation Engineering

The use of engineering and technology to improve independence after illness or disability. It includes artificial limbs, braces, wheelchairs, communication aids, home adaptations, and devices that help control the environment.

Rehabilitation Motivation

A person's willingness and ability to take part in rehabilitation and work toward functional goals. Pain, mood, fatigue, cognition, support, confidence, and the expected benefit can all influence participation.

Rehabilitation Potential

The expected capacity to improve function, independence, participation, or quality of life through rehabilitation. It depends on diagnosis, prognosis, cognition, motivation, comorbidity, social support, and environmental resources.

Rehabilitation Unit

A hospital unit for people who need coordinated medical care and intensive therapy after a serious illness or injury, such as stroke, brain or spinal-cord injury, or major surgery. The team works to restore safe movement, daily skills, communication, and independence.

Rehydration

Replacement of water and electrolytes lost through dehydration, commonly using oral fluids or intravenous treatment when necessary.

Reifenstein Syndrome

An inherited disorder of androgen action, usually involving partial androgen insensitivity in an individual with a 46,XY chromosome pattern.

Reiki

Reiki is a complementary practice involving light touch or hands near the body; evidence for treating disease is limited and it should not replace effective medical care.

Reinfection

A new episode of infection by the same or a related pathogen after the original infection has resolved. Reinfection is distinct from relapse, in which the original infection persists or returns from an incompletely eradicated focus.

Reinnervation

Restoration of nerve supply to a muscle or tissue after nerve repair, regeneration, or collateral nerve growth.

Reiter'S Syndrome

An older name for reactive arthritis, an inflammatory arthritis occurring after certain infections.

Rejection

An immune response in which the body recognizes transplanted tissue or an organ as foreign and attacks it. Rejection can damage or destroy the transplant, may be sudden or gradual, and is monitored and treated with immune-suppressing medicines.

Alternate Names:

Transplant rejection

Relapse

Return or worsening of a disease after a period of improvement or remission. The term is used for cancer and many noncancerous disorders.

Relapse-Free Survival

The time from completion of treatment to recurrence of the cancer or death from any cause.

Relapsing Fever

An acute febrile illness caused by *Borrelia* species, characterized by recurrent episodes of fever separated by afebrile intervals.

Relapsing Polychondritis

A rare immune disease in which episodes of inflammation damage cartilage. It commonly affects the ears, nose, eyes, joints, or windpipe and may cause pain, swelling, hearing or breathing problems; airway involvement can be life-threatening.

Relapsing-Remitting Multiple Sclerosis

A form of multiple sclerosis in which neurological symptoms appear in attacks and then improve partly or completely for periods of time. Symptoms may include vision changes, numbness, weakness, balance problems, or fatigue. Treatment can reduce relapses and new nerve damage, although the course varies between people.

Alternate Names:

RRMS; Relapsing-remitting MS

Relative Afferent Pupillary Defect

Unequal response of the pupils because one eye or optic nerve sends less light information to the brain than the other. During a swinging-light test, both pupils may appear to dilate when the light moves to the affected eye; it can indicate retinal or optic-nerve disease.

Alternate Names:

Marcus Gunn Pupil

Relative Biological Effectiveness

A comparison of how strongly two types of radiation produce the same biological effect at the same absorbed dose. It depends on the radiation type, dose, tissue, and biological outcome.

Relative Risk

A comparison of the chance of an outcome in an

exposed group with its chance in an unexposed group. A value above 1 suggests higher risk, a value below 1 suggests lower risk, and 1 suggests no difference.

Relaxation

A reduction in muscle tension, physiologic arousal, or psychological stress; techniques may include breathing, biofeedback, or progressive muscle relaxation.

Relaxation Response

The body's calming changes after activities such as slow breathing, meditation, or progressive muscle relaxation. Heart rate, breathing, muscle tension, and stress-related alertness may decrease; these practices can support health but do not replace needed medical treatment.

Relaxation Techniques For Stress

Relaxation techniques for stress include slow breathing, progressive muscle relaxation, meditation, guided imagery, and other methods that reduce physical arousal.

Relaxation Therapy

Techniques such as breathing, muscle relaxation, or imagery used to reduce stress, arousal, or symptom burden.

Relaxin

Relaxin is a reproductive hormone that helps remodel connective tissue and may contribute to cervical, pelvic, and vascular changes during pregnancy.

Religion

A system of spiritual beliefs and practices that may influence health decisions, coping, diet, treatment preferences, and end-of-life care.

REM

Rapid eye movement, a sleep stage associated with vivid dreams and intense brain activity.

Alternate Names:

Rapid eye movement sleep

REM Behavior Disorder

A sleep disorder where a person physically acts out dreams because normal muscle relaxation during REM sleep is lost.

Alternate Names:

REM sleep behavior disorder

REM Rebound

An increase in rapid-eye-movement sleep after sleep loss, REM deprivation, or stopping a medicine that suppresses REM sleep. It may cause vivid dreams, nightmares, or temporary changes in sleep patterns.

REM Sleep

A sleep stage with rapid eye movements, active brain activity, and temporary relaxation of most skeletal muscles. Vivid dreams are common, and REM sleep supports memory, learning, emotional processing, and healthy development.

REM Sleep Behavior Disorder

A sleep disorder in which the normal muscle paralysis of REM sleep is reduced or absent, allowing a person to move or vocalize while dreaming.

Alternate Names:

Rapid Eye Movement Sleep Behavior Disorder

Remedy

A treatment or measure intended to relieve a symptom or illness; safety and effectiveness depend on the specific remedy and condition.

Remifentanil

A very short-acting opioid pain medicine given by infusion during anesthesia or intensive procedures. Its effects wear off quickly after the infusion stops, but it can slow breathing, lower blood pressure, and cause opioid-related complications.

Remission

A period when the signs and symptoms of a disease decrease or disappear. Complete remission means no evidence of the disease can be found with available tests; partial remission means it has improved but remains detectable.

Remittent Fever

Fever that rises and falls during the day but remains above normal temperature, rather than returning completely to normal.

Remitting Seronegative Symmetrical Synovitis With Pitting Edema

A condition, usually in older adults, causing sudden swelling and pain in matching joints with indentation-forming swelling of the hands or feet. Routine rheumatoid tests are negative, and it may respond well to treatment; associated cancer or other disease may need assessment.

Remodeling

The body's ongoing process of removing old tissue and building new tissue to adapt to use, injury, growth, or disease. Bone remodeling responds to stress, hormones, nutrition, and medicines throughout life.

Removal Technique

The method used to take away a foreign object, diseased tissue, stone, clot, or other material from the body. The appropriate method depends on its location, size, cause, and risk of bleeding, infection, or injury to nearby structures.

Renal

Renal means relating to the kidneys, which filter blood, regulate fluid and electrolytes, produce hormones, and excrete urine.

Renal Abscess

A localized collection of pus within or around the kidney, usually caused by infection. Diagnosis and treatment may require imaging, antibiotics, and drainage.

Renal Adenoma

A renal adenoma is a usually benign kidney tumor, often discovered incidentally; its size, imaging features, and growth determine whether follow-up is needed.

Renal Agenesis

A condition present at birth in which one or both kidneys fail to form. One absent kidney may cause no symptoms if the other works well, but absence of both kidneys is usually fatal before or shortly after birth.

Renal And Urological Diseases

Renal and urological diseases affect the kidneys, urinary tract, bladder, urethra, or male reproductive urinary organs.

Renal Anemia

Anemia associated with chronic kidney disease. Diseased kidneys make less erythropoietin, a hormone that stimulates red-cell production, and iron deficiency or inflammation may add to the problem, causing tiredness and breathlessness.

Renal Arteriography

Renal arteriography uses contrast X-rays to visualize kidney arteries and may identify narrowing, bleeding, aneurysm, or vascular anatomy during an intervention.

Renal Artery

One of the two main arteries carrying blood from the abdominal aorta to the kidneys. Each divides into smaller branches inside the kidney so blood reaches the filtering tissue.

Renal Artery Aneurysm

A focal enlargement of a renal artery, often asymptomatic but capable of causing hypertension, thromboembolism, or rupture. Management depends on size, symptoms, anatomy, pregnancy, and growth, and may involve surveillance, endovascular treatment, or surgery.

Renal Artery Disease

Alternate index label; see *Renal artery stenosis*.

Renal Artery Doppler

Doppler ultrasound that measures blood flow in the renal arteries. It may help assess narrowing or

blockage that can contribute to renovascular hypertension.

Renal Artery Embolism

Sudden blockage of an artery supplying the kidney, often by a clot from the heart in atrial fibrillation or another heart condition. It may cause abrupt side pain, blood in urine, nausea, or kidney injury and requires urgent evaluation.

Renal Artery Stenosis

Narrowing of an artery supplying a kidney. It can reduce kidney blood flow and cause difficult-to-control high blood pressure or worsening kidney function. Causes include fatty buildup and fibromuscular dysplasia.

Alternate Names:

Renal Artery Disease Renal Vascular Disease

Renal Biopsy

Alternate index label; see *Kidney biopsy*. It is used selectively for unexplained acute kidney injury, nephrotic syndrome, glomerular hematuria, or transplant dysfunction; bleeding is the main complication.

Renal Calculi

Renal calculi are kidney stones formed from crystallized minerals in urine and may cause colicky flank pain, blood in urine, obstruction, or infection.

Renal Calculi (Kidney Stones)

Crystalline mineral deposits that form in the kidneys or urinary tract. They may cause severe colicky pain, blood in the urine, urinary obstruction, or infection.

Alternate Names:

Kidney Stones

Renal Cancer

Alternate index label; see *Kidney cancer*.

Renal Carcinoma

Renal carcinoma is cancer arising from kidney tissue, most commonly renal cell carcinoma. Cancer arising from kidney tissue, most often from cells lining the

kidney's small filtering tubes.

Renal Cell Carcinoma

A cancer beginning in the kidney's small filtering tubes, most often the clear-cell type. It may cause blood in urine, pain, weight loss, fever, or no symptoms until found on imaging.

Renal Changes In Pregnancy

Pregnancy increases renal blood flow and glomerular filtration. These changes lower usual serum creatinine values and may increase urinary loss of glucose and amino acids.

Renal Circulation

Blood flow through the kidneys, which supports filtration, oxygen delivery, hormone production, and regulation of fluid and electrolytes.

Renal Clearance

A measure of how quickly the kidneys remove a substance from the blood. It is usually calculated from blood and urine levels and helps assess kidney function or adjust some medicine doses.

Renal Colic

Severe, wave-like pain caused when a kidney stone or other blockage stretches the urine tube. Pain usually starts in the side and may move toward the groin, with nausea, vomiting, or blood in urine; fever with blockage is an emergency.

Renal Corpuscle

The first part of a kidney filtering unit, made of a tiny ball of blood vessels inside a cup-shaped capsule. Water and small dissolved substances pass out of the blood here to begin urine formation.

Renal Cortex

The outer layer of the kidney. It contains many of the structures that filter blood and process the first fluid that will become urine, while extensions of the cortex separate the inner kidney pyramids.

Renal Cryptococcosis

Infection of the kidney by *Cryptococcus* species, usually as part of disseminated cryptococcosis in an immunocompromised person.

Renal Cyst

A renal cyst is a fluid-filled sac in or on the kidney, commonly benign but sometimes complex or associated with inherited cystic disease.

Renal Dialysis

Alternate term for dialysis: kidney replacement therapy using hemodialysis or peritoneal dialysis to remove excess fluid and dissolved waste products when kidney function is inadequate.

Renal Diet

An eating plan adjusted for kidney disease. Depending on kidney function and treatment, it may limit sodium, potassium, phosphorus, or fluid while providing enough calories and protein; needs differ between people and during dialysis.

Renal Diseases

Disorders affecting kidney tissue or function, including glomerular, tubular, vascular, infectious, obstructive, and neoplastic disease.

Renal Dose Adjustment

Modification of a medication dose, dosing interval, or both to account for reduced kidney clearance. The adjustment should use an appropriate estimate of renal function, drug-specific pharmacokinetics, treatment indication, and therapeutic monitoring when available.

Renal Failure

Severe loss of kidney function, causing waste, extra fluid, and abnormal body salts to build up. It may develop suddenly and sometimes improve, or progress gradually as chronic kidney disease; dialysis or transplant may be needed.

Renal Failure (Kidney Failure)

Alternate index label for Kidney Failure.

Renal Function

The kidneys' ability to filter blood, remove waste, regulate fluids and electrolytes, maintain acid-base balance, and produce or activate hormones.

Renal Glomerulus

A tiny ball of blood vessels inside each kidney filtering unit. Water and small dissolved substances pass from the blood through its walls to begin urine formation, while blood cells and most proteins remain in the bloodstream.

Renal Hamartoma

A renal hamartoma is a benign disorganized overgrowth of mature tissues in the kidney, sometimes used to describe an angiomyolipoma-like lesion.

Renal Hypertension

High blood pressure caused by kidney disease or narrowing of the renal arteries. High blood pressure caused by kidney disease or narrowed renal arteries, often requiring treatment of both causes.

Renal Hypertrophy

Renal hypertrophy is enlargement of kidney tissue, often compensating for loss or reduced function of the other kidney but sometimes caused by disease.

Renal Hypoperfusion

Reduced blood flow to the kidneys, causing decreased glomerular filtration and potentially acute kidney injury. Causes include dehydration, blood loss, shock, heart failure, renal artery disease, and severe hypotension. Management requires treating the cause and restoring adequate circulation while avoiding further kidney injury.

Renal Infarction

Death of part of the kidney caused by a blocked blood vessel. It may cause sudden flank or abdominal pain, nausea, blood in the urine, or reduced kidney function and requires prompt assessment.

Renal Insufficiency

Renal insufficiency is reduced kidney function that

impairs waste removal, fluid and electrolyte balance, acid handling, or hormone production.

Renal Leukemia Infiltration

Spread of leukemia cells into kidney tissue. It may enlarge both kidneys and reduce kidney function, sometimes causing sudden kidney injury, blood or protein in urine, or high blood pressure; treatment focuses on the underlying leukemia.

Renal Lithiasis

Alternate index label; see *Kidney stones*.

Renal Mass

An abnormal area seen in or on a kidney during imaging. It may be a harmless cyst, infection, scar, benign growth, or cancer; its appearance, size, growth, and sometimes biopsy determine the next step.

Renal Medulla

The inner part of the kidney containing tubes and blood vessels that help concentrate urine. It receives the fluid processed by the outer kidney and directs the finished urine toward the kidney's central collecting area.

Renal Necrosis

Renal necrosis is death of kidney tissue caused by severe ischemia, toxins, infection, obstruction, or other injury and can cause acute kidney failure.

Renal Oncocytoma

A renal oncocytoma is a usually benign kidney tumor arising from oncocytic cells; imaging may not always distinguish it reliably from renal cancer.

Renal Osteodystrophy

Bone and mineral changes caused by advanced chronic kidney disease. Abnormal calcium, phosphate, vitamin D, and parathyroid hormone levels can weaken or deform bones, cause bone pain, and increase fracture risk; treatment corrects these imbalances.

Renal Papillary Necrosis

Renal papillary necrosis is death of the kidney papillae from ischemia, infection, obstruction, diabetes, sickle-cell disease, or analgesic injury and may cause blood or obstruction.

Renal Parenchyma

The working tissue of the kidney, containing the tiny filtering units and supporting structures that remove waste from blood, balance body fluids, and produce urine.

Renal Pelvis

The funnel-shaped expansion of the ureter within the kidney, formed by the union of major calyces. It collects urine from the renal papillae and directs it into the ureter.

Renal Pelvis Or Ureter Cancer

Cancer of the renal pelvis or ureter usually arises from urothelial cells lining the urinary tract and may cause blood in the urine.

Renal Perfusion Scintiscan

A nuclear medicine study using a radiotracer to evaluate renal blood flow and relative perfusion of the kidneys.

Renal Pyramids

Cone-shaped structures in the renal medulla that contain tubules and collecting ducts and drain urine toward the renal papillae.

Renal Reabsorption

The return of water and useful substances, such as salt, sugar, and bicarbonate, from kidney tubes into the blood. This prevents their unnecessary loss and helps control body fluids and chemistry.

Renal Replacement Therapy

Treatment that takes over some functions of severely damaged kidneys, including removing waste and extra fluid and correcting dangerous chemical imbalances. Options include hemodialysis, peritoneal dialysis, continuous treatment in intensive care, or

kidney transplantation.

Renal Replacement Therapy Indications

Reasons to consider urgent dialysis include dangerously high potassium, severe acid buildup, certain poisonings, fluid overload causing breathing difficulty, or symptoms from waste buildup. The decision also considers kidney recovery, overall health, and the person's goals.

Renal Sarcoma

Renal sarcoma is a rare malignant tumor arising from connective or supporting tissues of the kidney.

Renal Scan

A nuclear medicine test using a small radioactive tracer to assess kidney blood flow, drainage, or separate function. The tracer and scan method are chosen according to the clinical question.

Renal Scintigraphy

Nuclear imaging that follows a radioactive tracer through the kidneys. It can compare kidney function, assess blood flow and urine drainage, detect obstruction, or monitor a transplanted kidney.

Renal Stone

A renal stone is a solid crystal aggregate formed in the kidney that can pass through the urinary tract or obstruct urine flow.

Renal Transplant (Renal Transplantation)

Surgical placement of a functioning donor kidney into a person with advanced kidney failure. It can restore kidney function but requires suitability assessment and long-term immunosuppression.

Alternate Names:

Renal Transplantation

Renal Trauma

Kidney injury caused by a blow, fall, crash, sports injury, or penetrating wound. Assessment may include urine testing and CT imaging; treatment ranges from observation to procedures or surgery depend-

ing on severity.

Renal Tubular Acidosis

A group of disorders in which kidney tubules do not remove enough acid or return enough bicarbonate to the blood. This makes the blood too acidic and may cause weakness, kidney stones, bone disease, or high potassium.

Renal Tubule

A tiny nephron tube that reabsorbs needed water and substances and removes others into urine.

Renal Tubule Acidosis

A group of disorders in which the kidney tubules do not remove enough acid or conserve enough bicarbonate. The blood becomes too acidic, and complications may include low potassium, kidney stones, bone disease, weakness, or poor growth.

Renal Ultrasound

Noninvasive imaging used to assess kidney size, structure, blood flow, and urinary obstruction. It is particularly useful when obstruction, cystic disease, or structural abnormality is suspected and is often used in the evaluation of acute or chronic kidney disease.

Renal Vascular Disease

Alternate index label; see *Renal artery stenosis*.

Renal Vein

One of two large veins that carry blood away from the kidneys to the body's main abdominal vein. A clot in a renal vein can impair drainage and damage kidney function.

Renal Vein Thrombosis

Renal vein thrombosis is a clot in a kidney vein that can cause flank pain, blood or protein in urine, kidney dysfunction, swelling, or pulmonary embolism.

Renal Venogram

Contrast imaging of the renal veins used selectively to evaluate venous anatomy, thrombosis, obstruction,

or vascular abnormalities.

Renaut Body

A Renaut body is a specialized cluster of cells in the peripheral nerve endoneurium, associated with pressure sensitivity and sometimes nerve pathology.

Renin

An enzyme from kidney cells that starts a hormone chain controlling blood pressure, salt balance, and fluid levels.

Renin Blood Test

A blood test measuring renin concentration or activity, interpreted with aldosterone, posture, sodium status, medications, and blood pressure to evaluate hypertension or mineralocorticoid disorders.

Renin-Angiotensin System

A hormone and enzyme system that regulates blood pressure, fluid balance, and vascular tone. Renin initiates formation of angiotensin II, which promotes vasoconstriction and aldosterone release; excessive activation contributes to hypertension and heart failure.

Renin-Angiotensin-Aldosterone System

A hormone system that raises blood pressure and preserves body fluid when circulation or kidney blood flow falls. It narrows blood vessels and signals the adrenal glands to retain salt and water; overactivity contributes to hypertension and heart failure.

Renin-Angiotensin-Aldosterone System Physiology

When blood pressure or kidney blood flow falls, the kidneys release renin. A chain of chemical signals then narrows blood vessels and prompts the adrenal glands to retain salt and water, raising blood pressure and restoring circulation.

Rennin

An older spelling that may refer to renin or to rennet enzyme; in humans, renin regulates blood pressure

and fluid balance.

Renography

A kidney scan that follows a small amount of radioactive tracer as it enters and leaves the kidneys. It can compare kidney function and help identify reduced blood flow or blocked urine drainage.

Renovascular Hypertension

High blood pressure caused by reduced blood flow through one or both kidney arteries, usually from narrowing. It may be suspected when hypertension begins suddenly or is difficult to control; treatment addresses blood pressure and, in selected cases, the narrowed artery.

Renshaw Cell

A nerve cell in the spinal cord that helps limit and regulate the activity of motor neurons.

Reoviridae Infection

An infection caused by a reovirus; illness varies by virus and host and is often mild or asymptomatic in humans.

Rep

An abbreviation most often meaning one repetition of an exercise or movement. In medical records it can also mean representative or another phrase, so the full wording should be used when the meaning is important.

Repair Of Webbed Fingers Or Toes

Surgery to separate joined fingers or toes and reconstruct the skin between them. It may improve movement, growth, function, or appearance; wound problems, scarring, and recurrence of joining are possible.

Repeat Surgery

Repeat surgery is a second or subsequent operation on the same or related area to treat persistent disease, recurrence, complications, or failure of prior treatment.

Reperfusion

Restoration of blood flow to tissue after it has been reduced or interrupted. Reperfusion can save injured tissue but may also cause additional inflammation or oxidative injury.

Reperfusion Injury

Damage that occurs when blood flow returns to tissue after a period of inadequate flow. The returning oxygen and inflammation can worsen injury, causing swelling, bleeding, or loss of function in organs such as the heart, brain, kidneys, or limbs.

Reperfusion Therapy

Treatment that restores blood flow to tissue deprived of oxygen, such as clot-dissolving medicine, angioplasty, stenting, or surgery. Benefit depends on the tissue, duration of blockage, and risk of bleeding.

Repetitive Motion Disorders (RMDs)

Conditions caused or worsened by repeated movement, force, vibration, or awkward posture. They may affect muscles, tendons, nerves, or joints and can cause pain, numbness, weakness, or reduced function.

Repetitive Nerve Stimulation

A test that gives a nerve several small electrical impulses while recording the muscle's response. A changing response may support a disorder in communication between nerves and muscles, such as myasthenia gravis or Lambert-Eaton syndrome. The result is interpreted with the examination and other tests.

Alternate Names:

RNS; Repetitive Stimulation Test

Repetitive Strain Injury

Pain or dysfunction caused by repeated forceful movements, sustained positions, or overuse of muscles, tendons, nerves, or other tissues.

Replantation Of An Avulsed Tooth

Putting a completely knocked-out permanent tooth back into its socket after an injury. The tooth

should be handled by its crown, kept moist, and seen urgently; later splinting, root treatment, and follow-up may be needed to prevent loss.

Replantation Of Digits

Microsurgical replacement of a completely amputated finger or toe, reconnecting bone, tendons, nerves, arteries, and veins when feasible.

Replication Initiation

The time and process when copying of DNA or another genetic molecule begins. Specific proteins recognize a starting region, separate the strands, and recruit enzymes that build matching new genetic material.

Replicon

A unit of genetic material that can replicate from one origin, such as a chromosome segment, plasmid, or viral genome.

Repolarization

The return of the membrane potential toward the resting value after depolarization. In neurons and skeletal/cardiac muscle, repolarization is primarily caused by the efflux of potassium through voltage-gated potassium channels and inactivation of sodium channels.

Reportable Diseases

Reportable diseases are illnesses that must be notified to public-health authorities under applicable laws to support surveillance and outbreak control.

Reporting Standards

Agreed rules for recording and communicating clinical or imaging findings. Structured reports improve completeness and consistency and can make important results, follow-up needs, and comparisons easier for clinicians to understand.

Repressed Memory Therapy

A controversial approach aimed at recovering allegedly repressed memories; suggestive techniques can create false memories and require caution.

Repression

The reduction or stopping of gene activity, cell activity, behavior, or a body process. In genetics, regulatory proteins can silence genes; in psychology, the term may describe unconsciously keeping distressing thoughts outside awareness.

Reproduction

The biological process by which living organisms produce new offspring, either sexually or without combining reproductive cells. In humans, it involves reproductive organs, hormones, eggs, sperm, pregnancy, and childbirth.

Reproductive Cells

Cells used for reproduction, mainly sperm in males and eggs in females. Each normally carries half the usual number of chromosomes.

Reproductive History

Reproductive history records pregnancies, births, miscarriages, abortions, menstrual function, fertility, contraception, and related conditions relevant to health assessment.

Reproductive Organs

The organs involved in reproduction. Female: ovaries (produce eggs and hormones), fallopian tubes (transport eggs, site of fertilization), uterus (nurtures the developing fetus), cervix (lower part of uterus, dilates during labor), vagina (passage for sperm and baby), and vulva (external genitalia).

Reproductive Organs, Female

Female reproductive organs include the ovaries, fallopian tubes, uterus, cervix, vagina, and external genitalia, which support hormones, ovulation, menstruation, pregnancy, and birth.

Reproductive System

The organs and tissues responsible for producing gametes, reproductive hormones, conception, and in some bodies pregnancy and birth.

Reproductive Technique

A reproductive technique is a medical or laboratory method used to assist conception, preserve fertility, diagnose reproductive disease, or manage pregnancy.

Reproductive Toxicity

Harmful effects of a substance on fertility, pregnancy, the developing baby, birth outcomes, or later growth. Risks depend on the substance, dose, timing, route, and individual health and require careful exposure assessment.

Reproductive Years

The part of life when a person may be able to become pregnant or produce sperm. Fertility varies widely and is affected by age, health, reproductive organs, hormones, and medicines; it should not be assumed from age alone.

Reprogram

To reprogram a cell means to alter its gene-expression state so it acquires a different developmental potential or function.

Resectable

Describing a tumor or lesion that can be removed completely by surgery with acceptable risk and an appropriate margin, based on its extent and relationship to vital structures.

Resection

Surgical removal of part or all of an organ, tissue, or abnormal growth. The removed material may be examined to confirm diagnosis, determine treatment, or reduce disease while preserving useful function.

Alternate Names:

Resection, Intestinal

Resection, Intestinal

Alternate index label; see *Resection* and *Small bowel resection*.

Resectoscope

An endoscopic surgical instrument with a viewing system and working loop used to remove or cau-

terize tissue, especially during prostate or bladder procedures.

Reserve Volume

The additional amount of air that can be inhaled or exhaled beyond a normal tidal breath.

Reservoir

A human, animal, or environmental habitat in which an infectious agent normally lives, multiplies, and persists. A reservoir may serve as the source from which the agent is transmitted to a susceptible host.

Reservoir Of Infection

A reservoir of infection is a person, animal, environment, or material in which an infectious organism normally lives and from which transmission can occur.

Resident

A resident is a physician or other trainee receiving supervised specialty education after initial professional qualification; the term can also mean a person living in a place.

Residential Mobility

Residential mobility is movement between homes or communities and can affect continuity of care, social support, exposure, and health access.

Residual

Residual means remaining after a process, treatment, measurement, or event, such as residual urine, disease, risk, or volume.

Residual Limb

The portion of a limb remaining after amputation. Care includes edema control, skin inspection, shaping, strengthening, desensitization, contracture prevention, and prosthetic preparation.

Residual Limb Pain

Pain in the remaining portion of a limb after amputation.

Alternate Names:

Stump Pain

Residual Neoplasm

A residual neoplasm is tumor tissue that remains after treatment intended to remove or destroy the original tumor.

Residual Risk

Residual risk is the chance of harm that remains after preventive measures, treatment, screening, or controls have been applied.

Residual Tumor

A residual tumor is cancer or other tumor tissue that remains after surgery, radiation, chemotherapy, or another treatment.

Residual Volume

The amount of air remaining in the lungs after breathing out as forcefully as possible. It keeps small airways open and cannot be measured accurately by ordinary spirometry alone.

Resistance

The ability of a microorganism to survive a medicine that previously inhibited or killed it. Resistance can make infections harder to treat and may spread between organisms through genetic material.

Alternate Names:

Drug resistance

Resistance Training

Exercise in which muscles work against weights, bands, body weight, or other resistance. Regular training can improve strength, endurance, balance, bone health, function, and independence when progressed safely.

Resistant Hypertension

High blood pressure remaining above goal despite appropriate use of three or more medicines, including a water pill.

Alternate Names:

Treatment-resistant hypertension

Resistant Starch

Starch that resists digestion in the small intestine and is fermented by gut bacteria in the colon.

Resistin

A signaling protein associated with adipose tissue and inflammation; its human clinical significance remains under study.

Resolution

The ability of an imaging system to distinguish separate structures, or the improvement or disappearance of a disease or symptom.

Resonance

Amplification or characteristic vibration produced when a system is driven at a suitable frequency; used in sound and MRI contexts.

Resorcinol

A phenolic compound used in selected topical dermatologic preparations; concentrated exposure can irritate or poison.

Resorption

The body's breakdown and removal of tissue or material, especially old bone. The released components may be absorbed, reused, or removed from the body.

Resorption Atelectasis

Atelectasis caused by complete obstruction of an airway, leading to absorption of trapped air by the pulmonary capillaries. Common causes include mucus plugging, foreign body, tumor, and post-surgical shallow breathing. The affected area appears as increased density on CXR with volume loss.

Respiration

The processes of breathing, gas exchange, and cellular energy production involving oxygen and carbon dioxide.

Respiratory

Respiratory means relating to breathing, the airways, lungs, gas exchange, or the organs and muscles

that move air.

Respiratory Acidosis

A condition in which breathing does not remove enough carbon dioxide, making the blood too acidic. It can result from lung disease, blocked airways, weak breathing muscles, brain disorders, or medicines that slow breathing.

Respiratory Alkalosis

A condition in which breathing removes too much carbon dioxide, making the blood less acidic. It can occur with anxiety, pain, fever, low oxygen, pregnancy, severe infection, or other conditions that cause rapid breathing.

Respiratory Arrest

Stopping of effective breathing. It is an immediate emergency requiring airway support, rescue breathing or ventilation, emergency response, and treatment of the cause.

Respiratory Burst

A rapid release of chemically reactive oxygen molecules by certain immune cells after they engulf germs. This helps kill the germs inside the cell, although excessive activity can also damage nearby tissue.

Respiratory Changes In Pregnancy

Pregnancy changes breathing as the growing uterus raises the diaphragm and hormones increase the drive to breathe. Breaths may become deeper, overall ventilation increases, and the amount of air left after a normal breath out decreases.

Respiratory Depression

Breathing that is abnormally slow or shallow, causing inadequate ventilation and possible carbon-dioxide retention or low oxygen. Medicines, brain disorders, and metabolic illness can cause it.

Respiratory Disorder

A disease affecting the airways, lungs, pleura, respiratory muscles, or control of breathing and causing

impaired ventilation, oxygenation, or gas exchange.

Respiratory Distress

Difficult or labored breathing caused by problems such as asthma, infection, a blood clot, a collapsed lung, an allergic reaction, or heart failure. Fast breathing, struggling to speak, blue lips, or severe exhaustion requires urgent care.

Respiratory Distress Syndrome

A serious breathing problem in premature newborns whose lungs do not make enough surfactant, a substance that keeps the tiny air sacs open. Babies may breathe rapidly, grunt, or need oxygen and breathing support. Antenatal steroids, noninvasive breathing support, and surfactant treatment improve survival.

Respiratory Drive

The brain's signal to the breathing muscles that controls how often and how deeply a person breathes. It responds mainly to carbon-dioxide and oxygen levels and can be reduced by brain disease, severe illness, or sedating medicines.

Respiratory Failure

A life-threatening inability of the lungs to provide enough oxygen or remove enough carbon dioxide. It may cause severe breathlessness, confusion, blue or gray lips, extreme sleepiness, or collapse. Causes include lung disease, infection, heart problems, weak breathing muscles, brain injury, and drug overdose; urgent treatment is required.

Respiratory Gating

A radiation-treatment method that tracks breathing and delivers the beam only during a selected part of the breathing cycle. It helps account for movement of tumors in the chest or upper abdomen and may reduce radiation to nearby healthy tissue.

Respiratory Health

The proper functioning of the lungs and airways, enabling efficient gas exchange and oxygen delivery to the body. Maintaining respiratory health involves avoiding tobacco smoke, minimizing exposure to air pollutants and occupational hazards, and receiv-

ing vaccinations against respiratory infections like influenza and pneumococcal disease.

Respiratory Infection

An infection of the upper or lower respiratory tract caused by viruses, bacteria, fungi, or other organisms.

Respiratory Infections

Illnesses caused by pathogens including viruses, bacteria, and fungi that affect the airways and lungs.

Respiratory Insufficiency

Inadequate breathing or gas exchange that causes low oxygen, high carbon dioxide, or both. It can result from lung or airway disease, weak breathing muscles, or problems in the brain's breathing control and may progress to respiratory failure.

Respiratory Muscle

A muscle used for breathing, especially the diaphragm and muscles between the ribs. These muscles expand and contract the chest to move air into and out of the lungs.

Respiratory Neoplasm

A respiratory neoplasm is an abnormal growth in the airways or lungs and may be benign or malignant.

Respiratory Paralysis

Respiratory paralysis is failure of the muscles needed for breathing because of nerve, muscle, brainstem, toxin, or spinal-cord dysfunction and is an emergency.

Respiratory Physiology

The study of how breathing works, including movement of air, exchange of oxygen and carbon dioxide in the lungs, transport of gases in blood, and control of breathing.

Respiratory Protection

Measures and equipment used to reduce inhalation of harmful dusts, fumes, gases, aerosols, or infectious particles.

Respiratory Quotient

The ratio of carbon dioxide produced to oxygen used by the body's cells. The value changes according to whether the body is mainly using carbohydrate, fat, or protein and helps estimate metabolism and energy needs.

Respiratory Rate

The number of breaths taken per minute. The expected rate varies with age, activity, temperature, illness, and other factors.

Respiratory Rehabilitation

A program of exercise, education, breathing techniques, and self-management that improves function and quality of life in people with chronic respiratory disease.

Respiratory Syncytial Virus

A respiratory virus that commonly causes bronchiolitis and pneumonia in infants and young children. Infection is usually mild in adults but may be severe in infants, older adults, and people with chronic heart or lung disease.

Alternate Names:

RSV (Respiratory Syncytial Virus)

Respiratory System

The airways, lungs, respiratory muscles, and related structures that move air and exchange oxygen and carbon dioxide.

Respiratory Therapy

Respiratory therapy includes treatments and breathing support that improve ventilation, oxygenation, airway clearance, or lung function.

Respiratory Tract Infections

Infections affecting any part of the respiratory tract, classified by anatomical location into upper respiratory tract infections (URTIs) and lower respiratory tract infections (LRTIs).

Respiratory Transport

Respiratory transport is movement of oxygen and

carbon dioxide between lungs, blood, and tissues, largely through hemoglobin and dissolved gas.

Respiratory Viruses

Viruses that cause respiratory tract infections. Major respiratory viruses include influenza, respiratory syncytial virus (RSV), parainfluenza virus, adenovirus, and human metapneumovirus. SARS-CoV-2 causes COVID-19. Symptoms range from mild upper respiratory illness to severe pneumonia.

Respiratory Viruses And Face Masks

Face masks can reduce spread of respiratory viruses by blocking droplets and some aerosols, especially in crowded or healthcare settings; fit and local guidance matter.

Respirologist

A doctor specializing in diseases of the lungs and breathing system. They assess breathing problems, interpret tests, manage chronic and acute illness, and may evaluate people for lung transplantation.

Respirovirus

A genus of paramyxoviruses that includes human parainfluenza viruses, which can cause croup and other respiratory infections.

Respite Care

Temporary care for a person who needs support so that a usual family or unpaid caregiver can rest, attend appointments, or manage other responsibilities. It may be provided at home, in a facility, or through short-term services.

Response Assessment

Evaluation of how a disease responds to treatment. Clinicians may use symptoms, examination, blood tests, scans, tumor measurements, or activity levels to decide whether treatment is helping, failing, or needs adjustment.

Response Evaluation Criteria

Standardized rules for judging whether a disease, especially a tumor, has responded to treatment,

remained stable, or progressed. RECIST mainly uses tumor measurements on imaging; other systems may use metabolic or blood-based findings.

Responsible Drinking

Responsible drinking means limiting alcohol according to health guidance, avoiding driving or hazardous activities after drinking, and avoiding alcohol when it is unsafe or contraindicated.

Rest

Rest is reduced physical or mental activity used to recover, though excessive inactivity can impair strength and function in some conditions.

Restenosis

Re-narrowing of a blood vessel after it has been opened by angioplasty or another procedure.

Resting Energy Expenditure

The energy the body uses while resting to keep essential functions going, such as breathing, circulation, temperature control, and cell activity. It is affected by body size, age, muscle, illness, hormones, and recent food or activity.

Alternate Names:

Resting metabolic rate

Resting Membrane Potential

The small electrical difference across a nerve or muscle cell when it is not sending a signal. Unequal amounts of charged particles inside and outside the cell create it and allow the cell to respond quickly to stimulation.

Resting Phase

The resting phase is a period of relative inactivity, such as G0 in the cell cycle or a physiologic interval between active events.

Restless Anal Syndrome

An uncommon term for uncomfortable sensations around the anus with an urge to move, touch, or relieve the area. The cause and best treatment are uncertain, so other anal and bowel conditions should

be assessed.

Restless Leg Syndrome

Restless legs syndrome causes an urge to move the legs with uncomfortable sensations that worsen at rest and in the evening and improve temporarily with movement. Iron deficiency, kidney disease, medicines, pregnancy, and genetics may contribute.

Alternate Names:

Legs Restless (Restless Leg Syndrome) Syndrome
Restless Legs (Restless Leg Syndrome)

Restless Legs

Restless-legs syndrome causes an urge to move the legs with uncomfortable sensations, beginning or worsening at rest and in the evening and improving temporarily with movement; iron deficiency and medicines may contribute.

Restless Legs Syndrome

A condition causing an urge to move the legs with uncomfortable sensations that worsen during rest and in the evening or night and improve temporarily with movement.

Restlessness

Restlessness is an uncomfortable need to move or inability to remain still, caused by anxiety, akathisia, restless-legs syndrome, pain, stimulants, withdrawal, or medical illness.

Restorative Dentistry

Specialty of restoring damaged teeth. Procedures: fillings, inlays, onlays, crowns, bridges, implants. Goals: function, aesthetics, durability.

Restraint

A device, medicine, or other measure used to limit a person's movement. Restraints can cause injury, distress, falls, and loss of independence, so trained staff should use the least restrictive option only when necessary and monitor closely.

Restraint-Related Harm

Physical or psychological injury associated with

using a device, medication, or environmental restriction to limit a person's movement. Older adults are at risk of falls, pressure injury, delirium, aspiration, and functional decline; the least restrictive alternatives should be prioritized.

Restriction Enzyme

An enzyme made by bacteria that cuts DNA at particular short sequences. Scientists use these enzymes to analyze, join, or modify DNA in laboratory research and medical testing.

Restrictive Cardiomyopathy

A disease in which stiff heart muscle cannot relax and fill normally. It may cause breathlessness, tiredness, swelling, or abnormal rhythms and can result from conditions such as amyloidosis, sarcoidosis, iron overload, or scarring.

Resuscitation

Emergency measures used to restore or support breathing and circulation, including opening the airway, rescue breathing, chest compressions, defibrillation, medicines, and treatment of the cause.

Alternate Names:

CPR; revival

Retained Placenta

Failure of the placenta to come out after childbirth, usually when it remains in the uterus for about 30 minutes or longer or bleeding is excessive. It can cause severe bleeding or infection and needs urgent medical care.

Retained Products Of Conception

Pregnancy tissue that remains in the uterus after childbirth, miscarriage, or abortion. It may cause continuing or heavy bleeding, cramping, fever, or infection and needs medical assessment and, sometimes, medicine or a procedure to remove it.

Retainer

A dental appliance worn after orthodontic treatment to help keep teeth in their corrected positions.

Retching

Repeated involuntary effort to vomit without necessarily producing stomach contents.

Retention Of Urine

Inability to empty the bladder completely or at all despite making urine. It may cause painful fullness, leaking, or kidney damage and can result from blockage, weak bladder muscles, medicines, or nerve disease.

Retention Time

The time a substance takes to pass through a laboratory separation system from injection until it is detected. Comparing it with a tested reference can help identify a substance, but timing alone is not definitive proof.

Reticular

Net-like or arranged in a network pattern, describing the appearance or distribution of a skin lesion, rash, or vascular pattern.

Reticular Activating System

A network of brain structures that helps maintain wakefulness, alertness, attention, and transitions between sleep and waking. Damage or severe disturbance can cause unusual sleepiness, reduced awareness, or coma.

Reticular Dermis

The deeper layer of the dermis containing dense connective tissue, collagen, elastin, blood vessels, nerves, glands, and hair follicles.

Reticular Formation

A network of nerve cells in the brainstem that helps control alertness, sleep, attention, muscle tone, posture, breathing, heart function, and responses to pain.

Reticulin

A network-forming type of collagen that supports bone marrow, liver, lymph nodes, and other organs.

Reticulo-Endothelial System

An older name for the body's network of macrophages and related immune cells in the blood, liver, spleen, lymph nodes, and tissues. These cells remove germs, particles, and worn-out blood cells.

Reticulocyte

A young red blood cell recently released from bone marrow. The number of reticulocytes shows how actively the marrow is replacing red cells and helps distinguish reduced production from blood loss or red-cell breakdown.

Reticulocyte Count

The number or percentage of immature red blood cells in blood. It reflects recent bone-marrow red-cell production and helps assess anemia, especially when interpreted with the hemoglobin and clinical context.

Reticulocytes

Immature red blood cells recently released from bone marrow; their proportion helps assess red-cell production.

Reticulocytopenia

An abnormally low reticulocyte count indicating reduced effective red-cell production, which may occur with marrow failure, nutrient deficiency, inflammation, or kidney disease.

Reticulocytosis

Reticulocytosis is an increased number of immature red blood cells in blood, usually indicating stimulated marrow production after blood loss or hemolysis.

Reticuloendothelial System

An older term for the mononuclear phagocyte system, including macrophages and related cells that remove particles and aged cells.

Reticulophagy

A cell-cleaning process that removes worn or damaged parts of the endoplasmic reticulum, the cell's

internal membrane network. The material is broken down and recycled, helping cells control quality and respond to stress.

Reticulum

A network-like structure; in anatomy or cell biology it may refer to a tissue network, endoplasmic reticulum, or ruminant stomach compartment.

Retina

The light-sensitive neural tissue lining the back of the eye that converts light into nerve signals.

Retina Disorder

A disease affecting the retina, including vascular, degenerative, inflammatory, infectious, traumatic, inherited, or neoplastic conditions that can impair vision.

Retina Hemorrhage

Bleeding within or beneath the retina caused by vascular disease, diabetes, hypertension, trauma, retinal vein occlusion, inflammation, or other disorders.

Retina, Disorders Of

Diseases affecting the light-sensing layer at the back of the eye. Causes include blood-vessel problems, inherited conditions, aging, inflammation, infection, injury, and cancer, potentially causing blurred vision or blindness.

Retinal Artery Occlusion

Blockage of a retinal artery causing sudden, usually painless loss of vision. It requires urgent ophthalmic and vascular evaluation because it may indicate a systemic embolic or vascular disorder.

Retinal Cone

A light-sensing cell in the retina that provides color vision and sharp detail, especially in daylight. Damage to cone cells can reduce color perception and central vision.

Retinal Damage

Injury or disease affecting the retina, potentially causing blurred vision, field loss, flashes, floaters, or permanent visual impairment.

Retinal Degeneration

Progressive damage or loss of light-sensitive cells in the retina at the back of the eye. It may cause blurred or reduced central vision, night blindness, or loss of side vision and can result from inherited disease, aging, or other injury.

Retinal Detachment

An emergency in which the retina, the light-sensitive tissue at the back of the eye, separates from the layer beneath it. It may follow a retinal tear, pulling from scar tissue, or fluid buildup. Sudden floaters, flashes, a curtain-like shadow, or reduced vision require urgent eye assessment because sight may be permanently lost.

Retinal Detachment Repair

Surgical or pneumatic treatment to close retinal breaks and reattach the retina. Techniques include vitrectomy, scleral buckling, and pneumatic retinopexy, selected according to the type and location of detachment.

Retinal Diseases

Disorders that damage the retina, the light-sensitive tissue at the back of the eye. They may cause flashes, floaters, distorted vision, blind spots, night-vision problems, or gradual or sudden sight loss.

Retinal Dysplasia

Abnormal development and arrangement of the retina, the light-sensing layer at the back of the eye. It may impair vision and can occur with conditions present from birth, genetic disorders, or problems affecting development before birth.

Retinal Dystrophy

Gradual loss or damage of retinal cells, often caused by an inherited condition. It may begin with night blindness, difficulty seeing in dim light, or loss of side vision and can progress to serious sight impairment.

Retinal Fold

A retinal fold is a crease or ridge in the retina caused by traction, developmental abnormality, detachment, swelling, or another ocular process.

Retinal Ganglion

A nerve cell in the retina that collects signals from other retinal cells and sends them through the optic nerve to the brain. It is essential for carrying visual information out of the eye.

Retinal Hemorrhages

Bleeding in the light-sensitive tissue at the back of the eye. It may result from diabetes, high blood pressure, injury, bleeding disorders, or increased pressure in the skull; in infants and children, the pattern must be assessed carefully for its cause.

Retinal Ischemia

Too little blood and oxygen reaching the retina, often because a retinal artery is blocked or blood-vessel disease is severe. It may cause sudden, painless sight loss and is an emergency because prolonged injury can become permanent.

Retinal Layers

The organized layers of nerve cells, supporting cells, and blood vessels that make up the retina. Together they detect light, begin visual processing, and send signals through the optic nerve to the brain.

Retinal Macula

The macula is the central region of the retina responsible for detailed straight-ahead vision, reading, and color discrimination.

Retinal Neoplasm

A retinal neoplasm is an abnormal growth arising in or near the retina, such as retinoblastoma or a metastatic tumor.

Retinal Perforation

A full-thickness hole or tear in the retina. Fluid can pass through the opening and separate the retina from the tissue beneath it, causing flashes, floaters,

or loss of vision and requiring urgent eye assessment.

Retinal Pigment

Retinal pigment refers to melanin-containing pigment in the retinal pigment epithelium, which supports photoreceptors and absorbs excess light.

Retinal Prosthesis

An implanted device designed to provide limited visual signals when the retina is severely damaged. A camera and electronic system stimulate remaining visual pathways; it may provide light or simple pattern perception, not normal sight.

Retinal Tear

A break through the retina, often caused when the jelly inside the eye pulls on it. Fluid can pass through the tear and detach the retina; new flashes, floaters, or a curtain-like shadow require urgent eye examination and possible laser or freezing treatment.

Retinal Vasculitis

Inflammation of blood vessels in the retina. Leaking or blocked vessels can cause blurred vision, bleeding, swelling, or permanent sight loss; it may be linked to infection, autoimmune disease, or inflammation elsewhere in the body.

Retinal Vein Occlusion

A blockage in a vein that drains the retina. It can cause sudden or gradual blurred vision from bleeding and swelling, especially in the macula, and may lead to abnormal blood-vessel growth or permanent sight loss.

Retinaldehyde

A form of vitamin A used in the eye's light-sensing cycle. Light changes it inside photoreceptor cells, helping start the nerve signals that allow vision.

Retinitis

Inflammation or infection of the retina, the light-sensitive tissue at the back of the eye. It may cause blurred vision, floaters, flashes, or loss of sight and

needs prompt eye assessment.

Retinitis Pigmentosa

A group of inherited diseases in which the retina's light-sensing cells gradually stop working. Early symptoms often include poor night vision and loss of side vision, followed by narrowing of the visual field and possible severe sight loss.

Retinoblastoma

A cancer that starts in the retina, usually in babies or young children. A white reflection in the pupil, a crossed eye, redness, or poor vision may be signs; urgent specialist assessment is important because treatment can save life and sight.

Alternate Names:

Cancer, Retinoblastoma

Retinoblastoma Protein

A protein made from the RB1 gene that helps prevent cells from dividing when they should not. Loss of its protective function can contribute to retinoblastoma and other cancers.

Retinoic Acid

An active form of vitamin A that helps control how cells develop and which genes they use. Related medicines are used for selected skin conditions and some cancers but can cause irritation or serious pregnancy risks.

Retinoid

A vitamin-A-related substance used in selected skin treatments and other medical care. Retinoids can improve acne or abnormal cell growth but may irritate skin, interact with medicines, and harm an unborn baby.

Retinoids

Vitamin-A-related compounds used in selected dermatologic, ophthalmic, and oncologic treatments.

Retinol

A form of vitamin A needed for vision, healthy skin and body linings, growth, and immune function. It

comes from animal foods and some supplements; too much can be harmful, especially during pregnancy.

Retinol (Vitamin A)

A fat-soluble vitamin required for vision, epithelial health, immune function, and normal growth; deficiency may cause night blindness and xerophthalmia.

Alternate Names:

Vitamin A

Retinopathy

Damage or disease of the retina, the light-sensing layer at the back of the eye. Diabetes, high blood pressure, prematurity, blocked vessels, aging, inflammation, and inherited conditions can cause it and may lead to sight loss.

Retinopathy Of Prematurity

Abnormal growth of blood vessels in the retina of a premature or very low-birth-weight infant. Mild disease may resolve, but severe disease can cause retinal detachment and blindness, so eligible infants need scheduled eye examinations.

Retinopathy, Diabetic

Alternate index label; see *Diabetic retinopathy*.

Retinoschisis

Splitting between layers of the retina. It may result from aging or an inherited condition and can cause reduced sharpness or loss of part of the visual field; it differs from retinal detachment but may look similar on examination.

Retinoscope

An instrument that shines light into the eye to help determine refractive error. A lighted instrument used to estimate focusing error by observing how light reflects from the retina.

Retirement

Retirement is withdrawal from regular employment or a career; changes in income, activity, social contact, and health coverage can affect wellbeing.

Retract (Vascular)

To pull a vessel or tissue away from an operative field using a surgical retractor.

Alternate Names:

Vascular retraction

Retractile Testis

A testis that moves between the scrotum and groin because of a strong reflex but can be gently brought into the scrotum. It should be monitored because it may later become undescended.

Retraction (Self-Retaining)

Holding tissue away from an operative field with a retractor that remains in position without continuous manual support.

Alternate Names:

Self-Retaining

Retractor

A surgical instrument used to hold tissue or an organ aside so the area can be seen and reached during an examination or operation. Some retractors are held by hand; others stay in place by themselves.

Retractor (Abdominal)

A surgical instrument used to hold back the abdominal wall or organs to improve access and visibility during an operation.

Alternate Names:

Abdominal retractor

Retractor (Hand)

A handheld surgical instrument used to hold tissue or an organ away from the operative field.

Alternate Names:

Hand retractor

Retractor (Surgical)

A surgical instrument used to hold tissues apart, giving doctors a clearer and safer view of the operating area.

Alternate Names:

Surgical retractor

Retreatment

Retreatment is giving a therapy again after incomplete response, recurrence, treatment interruption, or later progression.

Retrobulbar Hemorrhage

Bleeding behind the eyeball within the orbit, often after trauma or surgery, that can rapidly increase orbital pressure and threaten vision.

Retrobulbar Neuritis

Inflammation of the optic nerve behind the eyeball, causing reduced or blurred vision and pain, especially when the eye moves. It may be associated with multiple sclerosis or another immune condition and needs prompt assessment.

Retroesophageal

Retroesophageal means located behind the esophagus, such as a mass, lymph node, vessel, or collection in the posterior mediastinum.

Retrognathia

Retrognathia is backward positioning of the lower jaw relative to the upper jaw and may affect facial structure, bite, airway, or sleep breathing.

Retrograde

Moving backward or against the normal direction, such as retrograde amnesia or retrograde blood flow.

Retrograde Amnesia

Loss of memory for events that occurred before an injury, illness, or other triggering event, with variable preservation of more remote memories.

Retrograde Cystography

Retrograde cystography uses contrast placed through the urethra to outline the bladder and detect leaks, injury, or structural abnormalities.

Retrograde Degeneration

Breakdown of a nerve fiber that spreads back toward the nerve cell body after the fiber is injured. It can reduce movement, sensation, or organ function

depending on which nerve is affected and how severe the injury is.

Retrograde Ejaculation

A condition in which semen enters the bladder instead of leaving through the penis during orgasm. It may cause little or no semen to appear and can result from diabetes, surgery, nerve problems, or medicines. It may affect fertility.

Retrograde Intrarenal Surgery

RIRS is a minimally invasive procedure using a flexible scope passed through the urinary tract to inspect and fragment or remove kidney stones.

Retroperitoneal Fibrosis

Formation of abnormal scar-like tissue in the space behind the abdominal organs. It often surrounds the tubes draining urine from the kidneys, causing back or abdominal pain, urine blockage, and reduced kidney function; medicines, immune disease, or cancer can cause it.

Retroperitoneal Hemorrhage

Bleeding in the space behind the abdominal lining. It may follow injury, blood-thinning treatment, a procedure, or rupture of a blood vessel and can cause back or abdominal pain, weakness, low blood pressure, and life-threatening blood loss.

Retroperitoneal Inflammation

Retroperitoneal inflammation is inflammatory disease in the space behind the peritoneum, caused by infection, pancreatitis, urinary disease, trauma, medicines, or fibrosis.

Retroperitoneal Neoplasm

A retroperitoneal neoplasm is an abnormal growth in the tissue space behind the abdominal lining and may be benign or malignant.

Retroperitoneal Space

The retroperitoneal space is the area behind the peritoneal lining containing the kidneys, adrenal glands, pancreas, parts of the bowel, vessels, nerves,

and lymphatics.

Retroperitoneum

The space behind the abdominal lining. It contains the kidneys, adrenal glands, ureters, major blood vessels, and parts of the bowel and pancreas; bleeding, infection, tumors, or inflammation there can cause back or abdominal symptoms.

Retropharyngeal Abscess

A collection of pus in the tissues behind the throat, usually after infection or injury. Fever, severe throat or neck pain, difficulty swallowing, drooling, noisy breathing, or a stiff neck can occur and require emergency treatment.

Retrospective Studies

Retrospective studies examine existing records or past exposures and outcomes; they are efficient but vulnerable to missing data, bias, and confounding.

Retrospective Study

A study that examines existing records or past exposures to investigate disease causes, treatments, or outcomes. It can be efficient, but missing information and differences between groups may limit reliable conclusions.

Retrosternal Thyroid Surgery

An operation to remove part or all of a thyroid gland that extends behind the breastbone. It may relieve pressure on the airway or swallowing tube and requires planning around nearby nerves, blood vessels, and the parathyroid glands.

Retrotracheal

Retrotracheal means located behind the trachea, such as a mass, lymph node, vessel, or collection in the posterior mediastinum.

Retrotransposition

The copying and insertion of a genetic sequence into a new place in the genome using an RNA copy as an intermediate. New insertions can be harmless or disrupt a gene and cause disease.

Retroversion

Backward tilting or turning of an organ, especially the uterus toward the spine. A backward-tilted uterus is often normal, but in some people it is linked with pain, endometriosis, or difficult examinations.

Retroversion Of The Uterus

A uterine position in which the uterus tilts backward toward the spine; it is often a normal variant but can be associated with pain or endometriosis.

Retroviridae

A family of RNA viruses that make a DNA copy of their genetic material and insert it into infected cells. HIV is a member; these viruses can cause persistent infection, immune disease, or cancer.

Retroviridae Infection

An infection caused by a retrovirus, which may persist through genomic integration and cause immune, neurologic, or malignant disease.

Retrovirus

An RNA virus that uses reverse transcriptase to make DNA from its RNA genome, including HIV.

Rett Syndrome

A rare genetic neurodevelopmental disorder, usually affecting girls, in which early development is followed by loss of hand skills, speech, and coordinated movement. Breathing changes, seizures, feeding problems, and scoliosis may occur.

Return Of Spontaneous Circulation

Restoration of a sustained heartbeat and blood flow after cardiac arrest, shown by a pulse, blood pressure, or other signs of circulation. Intensive post-arrest care then supports breathing, blood pressure, brain function, temperature, and treatment of the cause.

Reuptake

The removal of a released nerve chemical from the space between nerve cells by returning it to the releasing cell or taking it into a nearby cell. This

limits and ends the signal.

Revalidation

Formal reassessment that a healthcare professional remains fit, competent, and up to date to practice.

Revascularisation

Restoration of blood flow to an organ or limb by a procedure such as angioplasty, stenting, or surgical bypass.

Revascularization

Restoration of blood flow to an area by bypass surgery, balloon treatment, stent placement, or another procedure. It can relieve symptoms, preserve tissue, and reduce damage caused by a blocked or narrowed vessel.

Revascularization Surgery

Revascularization surgery restores blood flow around a blocked or narrowed vessel, such as in coronary artery bypass or limb bypass surgery.

Reverberation Artifact

An ultrasound image error caused by repeated reflections, sometimes reduced by changing the angle or using specialized imaging.

Reversal Learning

Reversal learning is the ability to change a learned response when the previously rewarded or correct choice is no longer so.

Reverse Total Shoulder Replacement

Shoulder-replacement surgery that places the rounded joint surface on the shoulder blade and the socket on the upper-arm implant. This changes shoulder mechanics and can help when severe arthritis occurs with an irreparable rotator cuff.

Reverse Transcriptase

An enzyme that synthesizes DNA using RNA as a template.

Reverse Transcriptase Inhibitor

An antiviral medicine that blocks reverse transcriptase, used in combination treatment for HIV or selected infections.

Reverse Transcription

The production of DNA using RNA as a template, carried out by reverse transcriptase. Some viruses use this process to copy their genetic material, and laboratories use it to study RNA.

Reverse Trendelenburg Position

A supine position in which the head and upper body are elevated above the feet.

Reversible Cell Injury

Temporary cell damage that can resolve when the harmful cause is removed. Cells may swell, store excess fat, or produce less energy, but their membranes and genetic material remain sufficiently intact to recover.

Revision Arthroplasty

Surgical replacement, exchange, or repair of a failed or painful joint prosthesis. Indications include infection, aseptic loosening, instability, periprosthetic fracture, wear, and recurrent dislocation.

Reye Johnson Syndrome (Reye Syndrome)

Alternate index label for Reye Syndrome.

Reye Syndrome

A rare, serious illness causing sudden brain swelling and liver dysfunction, usually in a child or teenager recovering from a viral infection. Repeated vomiting, confusion, unusual sleepiness, seizures, or loss of consciousness require emergency care; aspirin exposure is associated with increased risk.

Alternate Names:

Reye Johnson Syndrome (Reye Syndrome)

Reye'S Syndrome

A rare, potentially fatal illness causing acute brain dysfunction and liver injury, associated particularly

with viral illness and aspirin exposure in children.

Reynolds Pentad

A combination of fever or chills, pain in the upper right abdomen, jaundice, low blood pressure, and confusion. Together these signs suggest severe infection and blockage of the bile ducts, which requires emergency treatment.

Rezafungin

A long-acting echinocandin antifungal medicine that inhibits fungal cell-wall synthesis. It is used for selected invasive candidiasis infections; its long duration permits an intermittent dosing schedule under specialist supervision.

Rgs Proteins

Regulators of G-protein signaling are proteins that speed the switch-off of signals from G-protein-coupled receptors. They help control responses to hormones, neurotransmitters, and other signals and may influence disease when altered.

Rh Factor

A blood-group antigen system, especially the D antigen, found on red blood cells. Rh status is important for blood transfusion and pregnancy because an Rh-negative person can form antibodies against Rh-positive cells.

Rh Incompatibility

An immune reaction that can occur when an Rh-negative pregnant person carries an Rh-positive fetus and forms antibodies against fetal red blood cells. Anti-D immune globulin can prevent sensitization.

Rh Isoimmunization

Maternal alloantibody production against fetal Rh D-positive red blood cells in an Rh D-negative mother, occurring when fetal RBCs enter the maternal circulation (fetomaternal hemorrhage).

Rhabdoid Tumor

A rare, fast-growing cancer that usually affects infants and young children. It may begin in the kidney,

brain, or other tissues; changes in genes that control cell growth, especially SMARCB1, are common.

Rhabdomyolysis

Rhabdomyolysis is rapid breakdown of skeletal muscle that releases myoglobin, potassium, and other intracellular contents into the bloodstream. Causes include crush injury, extreme exertion, seizures, heat illness, medicines, and metabolic disease. It may cause muscle pain, weakness, dark urine, hyperkalemia, acute kidney injury, arrhythmias, or compartment syndrome. Markedly elevated creatine kinase supports the diagnosis and requires prompt medical assessment.

Rhabdomyolysis And AKI

Severe muscle breakdown releases myoglobin and other intracellular contents, potentially causing acute kidney injury, electrolyte abnormalities, and cardiac arrhythmias. Findings may include muscle pain, weakness, dark urine, and elevated creatine kinase; treatment requires urgent assessment and cause-directed fluid and supportive therapy.

Rhabdomyoma

A usually noncancerous tumor made of heart-muscle cells, seen mainly in infants and children. It is strongly associated with tuberous sclerosis and may shrink on its own, but large or multiple tumors can block blood flow or disturb the heart rhythm.

Rhabdomyosarcoma

Rhabdomyosarcoma is a malignant tumor showing skeletal-muscle differentiation, occurring most often in children but also in adults.

Rhegmatogenous Retinal Detachment

The commonest type of retinal detachment, caused by a hole or tear that lets the eye's internal fluid pass beneath the retina. It can cause flashes, floaters, a curtain-like shadow, or sight loss and requires urgent treatment.

Rhesus (Rh) Factor

A system of antigens on the surface of red blood cells, especially the D antigen. A person is Rh-positive

when the D antigen is present and Rh-negative when it is absent. Rh incompatibility can affect pregnancy and transfusion safety.

Alternate Names:

Rh

Rhesus Factor

The Rh blood-group antigen, especially the D antigen, whose presence or absence is important in transfusion and pregnancy.

Rhesus Incompatibility

Rhesus incompatibility occurs when an RhD-negative pregnant person forms antibodies against RhD-positive fetal red cells, risking haemolytic disease in a later or affected pregnancy; anti-D immunoglobulin prevents sensitization.

Rhesus System

The Rh blood-group system, a group of inherited red-cell antigens including D, C, c, E, and e. RhD status is commonly reported as positive or negative and is important in transfusion compatibility and prevention of hemolytic disease of the fetus and newborn.

Rheumatic Chorea

Involuntary, irregular, fidgety movements caused by an immune reaction after group A streptococcal infection. It is a feature of acute rheumatic fever and may affect the face, arms, legs, speech, or handwriting.

Rheumatic Disease

A broad group of disorders affecting joints, muscles, bones, connective tissue, or immune function, including arthritis and lupus.

Rheumatic Fever

An inflammatory complication of untreated or inadequately treated group A streptococcal throat infection, affecting joints, heart, skin, or brain.

Rheumatic Heart Disease

Permanent damage to heart valves after rheumatic

fever, an immune reaction following group A streptococcal throat infection. It most often affects the mitral valve and can cause breathlessness, tiredness, swelling, abnormal rhythms, or heart failure.

Rheumatism

Pain, stiffness, or discomfort in joints and surrounding soft tissues.

Rheumatoid Arthritis

A disease in which the immune system mistakenly attacks the lining inside the joints. This causes swelling and inflammation and can damage the smooth tissue covering the ends of the bones, as well as the bones themselves. It often affects corresponding joints on both sides of the body and commonly involves the wrists, hands, and feet.

Alternate Names:

RA

Rheumatoid Arthritis Cause Gastrointestinal Issues

Rheumatoid arthritis can affect the gastrointestinal system indirectly through inflammation, associated autoimmune disease, reduced mobility, or medicines such as nonsteroidal anti-inflammatory drugs. Abdominal pain, bleeding, persistent diarrhea, or weight loss needs evaluation rather than attribution to arthritis alone.

Rheumatoid Arthritis Inflammation Of The Brain

Direct brain inflammation is uncommon in rheumatoid arthritis, but vasculitis, medication effects, infection, stroke risk, or another autoimmune process can cause neurologic symptoms. New confusion, seizure, weakness, severe headache, or vision change requires urgent assessment.

Rheumatoid Factor

An antibody that mistakenly recognizes part of another antibody. A blood test may support the diagnosis of rheumatoid arthritis, but it can also be positive in other diseases or in healthy people.

Rheumatoid Lung Disease

Lung involvement associated with rheumatoid arthritis, including interstitial lung disease, pleural disease, nodules, or airway abnormalities.

Rheumatoid Nodule

A rheumatoid nodule is a firm inflammatory lump under the skin or near a joint in rheumatoid arthritis, often over pressure points.

Rheumatoid Pneumoconiosis

Rheumatoid pneumoconiosis is lung disease involving rheumatoid arthritis and dust-related lung nodules, historically called Caplan syndrome.

Rheumatoid Synovitis

Long-lasting immune inflammation of the tissue lining a joint in rheumatoid arthritis. It causes pain and swelling and can gradually damage cartilage, bone, and joint movement.

Rheumatologist

A medical doctor who diagnoses and treats diseases affecting joints, muscles, bones, and connective tissues, especially autoimmune and inflammatory conditions such as rheumatoid arthritis, lupus, gout, and vasculitis.

Rheumatology

The medical specialty concerned with inflammatory, autoimmune, and musculoskeletal disorders.

Rhinencephalon

An older term for brain regions involved mainly in smell and closely connected with emotion and memory. Modern anatomy usually names the individual structures instead of using this broad term.

Rhinitis

Inflammation or irritation of the lining of the nose. It can cause a blocked or runny nose, sneezing, itching, and reduced smell and may result from allergy, infection, smoke, strong smells, medicines, or other triggers.

Rhinitis, Allergic

Alternate index label; see *Hay fever*.

Rhinitis, Nonallergic

Alternate index label; see *Nonallergic rhinitis*.

Rhinitis, Vasomotor

Alternate index label; see *Nonallergic rhinitis*.

Rhinocephaly

A very rare birth defect involving severe abnormal development of the face and forebrain, with a nose-like structure that may lie unusually high or between the eyes. It is usually associated with major neurologic and developmental abnormalities.

Rhinophyma

Progressive thickening and enlargement of the nose caused by long-standing changes often associated with rosacea. It may produce a rough, irregular appearance and can sometimes interfere with breathing or require surgical treatment.

Rhinoplasty

Surgery to reshape, repair, or reconstruct the nose for breathing, injury, birth differences, or appearance. Recovery includes swelling and bruising, and results depend on anatomy, technique, healing, and patient goals.

Rhinorrhea

Excessive watery or mucoid discharge from the nose, commonly caused by infection, allergy, irritants, or changes in temperature.

Rhinorrhoea

British spelling of rhinorrhea, meaning drainage of watery or mucus-like fluid from the nose. Causes include allergy, infection, irritation, and rarely a cerebrospinal-fluid leak.

Rhinoscopy

Examination of the nasal cavity and nasopharynx using an instrument or endoscope to assess the mucosa, septum, turbinates, masses, bleeding, or ob-

struction.

Rhinovirus

A genus of non-enveloped, positive-sense RNA viruses in the Picornaviridae family. Rhinoviruses are a common cause of the common cold and spread mainly through respiratory secretions and contaminated hands or surfaces.

Rhinovirus A

A species group of rhinoviruses that commonly causes the common cold and can worsen asthma or trigger wheezing.

Rhinovirus C

A rhinovirus group associated with common-cold symptoms and, in some children, more severe wheezing or lower-respiratory illness.

Rhinoviruses

A group of viruses that commonly cause colds. They spread through droplets, hands, and contaminated surfaces and may worsen asthma or cause more serious breathing illness in vulnerable people.

Rhizomucor

A genus of molds that can cause mucormycosis, especially in people with diabetes, neutropenia, or severe immune suppression.

Rhizomucor Pusillus

A mold that can cause invasive mucormycosis involving the lungs, sinuses, skin, or other organs in severely immunocompromised people.

Rhizopus

A genus of molds that includes important causes of mucormycosis, a rapidly invasive infection of sinuses, lungs, skin, or other tissues.

Rhizopus Oryzae

A mold, also called *Rhizopus arrhizus*, that is a common cause of invasive mucormycosis.

Rhizotomy

A procedure that cuts or heats selected nerve roots to reduce severe pain, muscle stiffness, or abnormal reflexes. It is used only in carefully selected cases because it can cause permanent numbness, weakness, or other nerve problems.

Rhodium

A chemical element used in industrial and dental materials; its compounds can irritate tissues and may cause allergic reactions.

Rhodococcus

A genus of gram-positive bacteria that includes *Rhodococcus equi*, an opportunistic pathogen causing pneumonia mainly in immunocompromised people.

Rhodococcus Equi

A gram-positive bacterium that can cause cavitory pneumonia and disseminated infection, especially in people with advanced immune suppression.

Rhodopsin

A light-sensitive protein in rod cells of the retina that enables vision in dim light.

Rhodospirillaceae

A family of metabolically diverse bacteria found in soil and water; some species carry out photosynthesis or nitrogen fixation.

Rhodospirillum

A genus of spiral-shaped aquatic bacteria capable of photosynthesis or nitrogen fixation; human infection is rare.

RhoGAM

A brand name for Rh immune globulin, which contains anti-D antibodies. It is given to eligible RhD-negative pregnant people after specified pregnancy events and around delivery to reduce formation of antibodies that could harm an RhD-positive fetus or newborn.

Rhombencephalon

The hindbrain region of an early embryo. It develops into the pons, medulla, cerebellum, and related structures that help control breathing, balance, movement, swallowing, and other essential functions.

Rhonchi

Low-pitched breathing sounds caused by air moving through narrowed or mucus-filled larger airways, often changing after coughing.

Rhubarb Leaves Poisoning

Poisoning after eating large amounts of rhubarb leaves, which contain oxalates and other irritants. It may cause burning, vomiting, abdominal pain, low calcium, kidney injury, weakness, or abnormal heart rhythms and needs medical advice.

Rhythm Method

A fertility-awareness method that estimates fertile days from menstrual-cycle timing to avoid or achieve pregnancy.

Rib

One of 12 paired, curved bones forming the thoracic cage, protecting the heart, lungs, and great vessels. True ribs (1–7) attach directly to the sternum via costal cartilage. False ribs (8–10) attach indirectly to the sternum via the costal cartilage of rib 7. Floating ribs (11–12) have no anterior attachment.

Alternate Names:

Ribs

Rib Cage

The rib cage consists of ribs, sternum, thoracic vertebrae, muscles, and connective tissues that protect chest organs and assist breathing.

Rib Fracture

A break in one or more ribs, usually causing localized chest pain worsened by breathing, coughing, or movement and sometimes associated with injury to underlying organs.

Ribavirin

An antiviral medicine used in selected viral infections, usually in combination and under specialist supervision.

Ribcage Pain

Ribcage pain may arise from muscles, ribs, joints, lungs, heart, or other organs; sudden severe pain or breathing difficulty requires urgent assessment.

Riboflavin

Vitamin B2, needed to help cells produce energy and maintain healthy skin, nerves, blood, and body tissues.

Riboflavin (Vitamin B2)

A water-soluble vitamin that forms the coenzymes FAD and FMN. These cofactors participate in oxidation-reduction reactions, including electron transfer, fatty-acid oxidation, and energy metabolism.

Alternate Names:

Vitamin B2

Riboflavin Deficiency

Deficiency of vitamin B2, which can cause inflammation or fissuring of the mouth and lips, sore throat, dermatitis, anemia, and other mucosal or systemic findings.

Ribonuclease

An enzyme that cuts RNA, a molecule involved in reading genetic instructions, into smaller pieces. Ribonucleases help control how long RNA lasts, recycle cell material, and protect cells from some unwanted genetic material.

Ribonuclease H

An enzyme that removes the RNA strand when RNA and DNA are joined together. Cells use it during DNA copying, and some viruses depend on related activity when making DNA from their RNA.

Ribonuclease III

An enzyme that cuts double-stranded RNA into

smaller pieces. The products can help control gene activity, make proteins, or process genetic material in cells and some microorganisms.

Ribonucleic Acid

RNA is a nucleic acid that carries genetic instructions, helps make proteins, and regulates cell activity; some viruses use RNA as their genetic material.

Ribonucleoprotein

A structure made of RNA joined to one or more proteins. It helps make, process, transport, or control RNA; antibodies against certain ribonucleoproteins can occur in autoimmune diseases.

Ribonucleoside

A molecule made of a ribose sugar joined to one of the bases used in RNA. Examples include adenosine, guanosine, cytidine, and uridine; adding phosphate groups produces RNA building blocks.

Ribonucleotide Reductase

An enzyme that changes RNA building blocks into the related building blocks needed to make DNA. Cells require it to copy and repair DNA, so it is important for growth and is a target of some cancer medicines.

Ribonucleotides

Nucleotides containing ribose sugar and RNA bases, serving as RNA building blocks and cellular energy or signaling molecules.

Ribophagy

A cell-cleaning process that breaks down some ribosomes, the structures that make proteins, so their parts can be recycled. It helps cells adjust protein production when nutrients or growth conditions change.

Ribose

A five-carbon sugar used to build RNA, ATP, and other molecules involved in storing genetic information and transferring energy. Cells make ribose from other nutrients and use it in many normal chemical

processes.

Ribosomal Protein

A protein that combines with ribosomal RNA to form a ribosome, the cell structure that builds proteins. Inherited changes in some ribosomal proteins can cause bone-marrow failure or developmental syndromes.

Ribosomal RNA

RNA that forms the main structural and working part of ribosomes, the cell structures that make proteins. It helps position messenger RNA and joins amino acids together; its genes are also used in some laboratory studies to identify organisms.

Ribosome

A cellular structure made of RNA and proteins that reads messenger RNA and links amino acids together to make proteins.

Ribosome Subunit

One of the two RNA-and-protein parts of a ribosome. The small and large parts join around messenger RNA and work together to assemble amino acids into a protein.

Richter'S Syndrome

Transformation of chronic lymphocytic leukemia or small lymphocytic lymphoma into an aggressive lymphoma, most often diffuse large B-cell lymphoma.

Ricin

Ricin is a highly toxic plant protein that blocks protein synthesis; ingestion, inhalation, or injection can cause severe organ injury and death.

Rickets

Defective mineralization of growing bone, usually due to vitamin D, calcium, or phosphate deficiency.

Alternate Names:

Osteomalacia (Rickets)

Rickettsia

A group of small intracellular bacteria transmitted

mainly by arthropods and causing diseases such as typhus and spotted fevers.

Rickettsia Felis

A flea-associated bacterium that can cause a spotted-fever-like illness in people. Infection may produce fever, headache, rash, fatigue, or muscle aches and is assessed with exposure history and laboratory testing.

Rickettsia Infections

Rickettsial infections are illnesses caused by intracellular bacteria spread mainly by ticks, fleas, lice, or mites and often causing fever and rash.

Rickettsia Japonica

A bacterium spread by ticks and associated with Japanese spotted fever. Infection may cause fever, headache, rash, and a dark mark where the tick bit; diagnosis and treatment require medical assessment and suitable antibiotics.

Rickettsia Prowazekii

A bacterium that causes epidemic typhus and is mainly spread through infected body-lice feces. Disease can cause high fever, headache, rash, confusion, and serious organ complications without prompt antibiotic treatment.

Rickettsia Rickettsii

A bacterium spread by infected ticks that causes Rocky Mountain spotted fever. Fever, severe headache, rash, muscle aches, or confusion may develop; prompt antibiotic treatment is important because the illness can rapidly become life-threatening.

Rickettsia Typhi

A bacterium spread mainly by infected fleas and responsible for murine typhus. The illness commonly causes fever, headache, chills, and sometimes a rash; prompt antibiotic treatment usually works, but untreated infection can become severe.

Rickettsiaceae

A family of bacteria that live inside cells and in-

cludes several organisms spread by ticks, fleas, lice, or mites. They can cause fever, rash, blood-vessel inflammation, and serious organ complications.

Rickettsialpox

An infection spread by house mites and caused by *Rickettsia akari*. It usually begins with a small dark sore at the bite site, followed by fever and a blister-like rash.

Ridge Preservation

A dental procedure performed after a tooth is removed to reduce loss of the jawbone that held the tooth. Material is placed in the empty socket, sometimes with a covering, to help maintain shape for healing or a future implant.

Ridged Nail

A ridged nail has longitudinal or transverse grooves in its surface, which may result from aging, trauma, inflammation, nutritional problems, or systemic disease.

Riedel'S Thyroiditis

A rare form of thyroid inflammation in which tough scar-like tissue makes the thyroid hard and may spread into nearby structures. It can cause a neck lump, difficulty swallowing or breathing, or reduced thyroid function.

Rieger Syndrome

A genetic condition affecting development of the front of the eye and often the teeth. It may cause glaucoma, unusual teeth, or changes around the navel and can result from changes in genes such as PITX2 or FOXC1.

Rifabutin

A rifamycin antibiotic used mainly for selected mycobacterial infections and tuberculosis regimens; it has important drug interactions and can discolor body fluids.

Rifampicin

A rifamycin antibiotic used in tuberculosis and se-

lected other bacterial infections, usually in combination to prevent resistance.

Rifampin

Rifampin is a rifamycin antibiotic that inhibits bacterial DNA-dependent RNA polymerase and is a key component of tuberculosis treatment; it causes orange body fluids and has many drug interactions and hepatotoxicity risk.

Rifamycin

Rifamycin is an antibiotic that inhibits bacterial RNA polymerase; related rifamycin medicines are used for tuberculosis and other infections.

Rifaximin

Rifaximin is a minimally absorbed rifamycin antibiotic used for selected intestinal infections, prevention of recurrent hepatic encephalopathy, and some diarrhoeal syndromes; indication and resistance patterns guide use.

Rift Valley Fever

A mosquito-borne viral disease affecting animals and humans, usually causing fever but sometimes severe eye, brain, or hemorrhagic disease.

Right Atrium

The upper-right chamber of the heart. It receives oxygen-poor blood from the body and passes it through the tricuspid valve into the right ventricle, which sends it to the lungs.

Right Bundle Branch

A group of heart fibers that carries the electrical signal to the right lower chamber so it contracts. If conduction is delayed or blocked, the ECG shows right bundle-branch block; this may be harmless or reflect heart or lung disease.

Right Coronary Artery

A blood vessel that branches from the aorta and supplies much of the right side and lower part of the heart. A blockage can cause a heart attack or abnormal heart rhythm.

Right Coronary Artery Occlusion

A blockage of the artery supplying much of the right and lower heart. It can cause a heart attack, slow or abnormal rhythms, low blood pressure, or failure of the right side of the heart.

Right Heart Failure

Failure of the right side of the heart to pump blood effectively to the lungs. It may result from left-sided heart failure, high pressure in the lung arteries, a heart attack, lung clots, heart-muscle disease, or a stiff sac around the heart. It can cause swollen legs, neck veins, an enlarged liver, abdominal fluid, and weight gain.

Right Heart Ventricular Angiography

An imaging test in which contrast dye and X-rays show the right lower heart chamber and how it pumps blood. It is used selectively to assess structure, movement, or blood flow during heart evaluation.

Right Hypochondriac Region

The upper-right area of the abdomen, beneath the lower ribs. It contains much of the liver, the gallbladder, and part of the intestine. Pain there may arise from these organs.

Right Iliac Region

The lower-right area of the abdomen, containing the appendix, beginning of the large intestine, and part of the small intestine. Pain there may occur with appendicitis, bowel disease, urinary problems, or a hernia and must be interpreted with other findings.

Right Lymphatic Duct

A short vessel that returns lymph from the right arm, right side of the head and neck, and right upper chest to the bloodstream near the right side of the neck. Damage or blockage can cause swelling in these areas.

Right Sixth Cranial Nerve Palsy

Weakness of the nerve that moves the right eye outward. It can cause double vision, usually worse when looking to the right or at a distance, and

may result from diabetes, high pressure in the skull, inflammation, stroke, or other disease.

Right Ureterovesical Calculus

A stone lodged at the junction of the right ureter and bladder, causing flank pain, hematuria, and urinary urgency or frequency. May require endoscopic or lithotripsy intervention.

Right Ventricle

The lower-right chamber of the heart. It receives oxygen-poor blood from the right atrium and pumps it through the pulmonary valve into the lung arteries to receive oxygen.

Righting Reflex

The righting reflex is an automatic response that restores head and body orientation when balance or position changes.

Rigid And Flexible Sigmoidoscopy

A sigmoidoscopy examines the rectum and lower colon with a flexible or rigid instrument. It can evaluate bleeding, pain, altered bowel habits, inflammation, polyps, or tumors; preparation, reach, comfort, and biopsy capability differ by technique.

Rigidity

Abnormally increased resistance when a relaxed limb is moved by another person. It can occur with Parkinson disease, brain or spinal injury, severe infection, certain medicines, or other movement disorders.

Rigor

Marked stiffness or rigidity; rigor mortis is post-mortem muscle stiffening, while rigor may also mean a severe chill.

Rigor Mortis

Stiffening of the body's muscles after death. It develops as the muscles lose the energy needed to relax and later fades as decomposition advances; its timing is affected by temperature, activity, illness, and the environment.

Rilpivirine

An HIV medicine that blocks an enzyme the virus needs to copy itself. It is taken with other antiretroviral medicines, and missed doses or drug interactions can allow resistance to develop.

Riluzole

A medicine used to modestly slow disease progression in amyotrophic lateral sclerosis and to treat selected forms of spinal muscular atrophy.

Rimmed Vacuoles

Small empty-looking spaces with a visible border seen inside muscle cells on biopsy. They indicate that muscle cells are breaking down or recycling parts of themselves and can occur in conditions such as inclusion-body myositis and GNE myopathy. The finding must be interpreted with symptoms and other tests.

Alternate Names:

Autophagic Rimmed Vacuoles

Ring Block

Local anesthetic injected around the base of a finger or toe to numb the entire digit.

Ring Chromosome

A chromosome whose two ends have joined to form a ring, often with loss or disruption of genetic material. It may cause developmental or other health problems, depending on the chromosome and changes involved.

Ring Schatzki (Schatzki Ring)

Alternate index label for Schatzki Ring.

Ring Vaccination

A public-health strategy in which close contacts and contacts of contacts around an identified case are vaccinated to create a protective ring and limit transmission.

Ringing In The Ear

Alternate index label; see *Tinnitus*.

Ringing In The Ears

Perception of ringing, buzzing, hissing, or other sound without an external source, medically called tinnitus. It may be associated with hearing loss, loud-noise exposure, earwax, ear infection, medicines, or jaw disorders. Sudden hearing loss, one-sided symptoms, or pulsatile ringing requires medical evaluation.

Alternate Names:

Tinnitus (Ringing In The Ears)

Ringing In The Ears (Tinnitus (Ringing In The Ears))

Alternate index label for Tinnitus (Ringing in the Ears).

Ringworm

A contagious fungal infection of the skin, scalp, hair, or nails. It commonly causes an itchy, scaly rash with a ring-like edge; scalp infection may cause broken hairs or hair loss. Treatment depends on the affected site.

Alternate Names:

Scalp And Body (Ringworm)

Ringworm (Tinea)

Ringworm is a superficial dermatophyte fungal infection of skin, scalp, or nails that produces scaly annular lesions or hair loss; treatment depends on the site and may require topical or oral antifungals.

Ringworm Of The Body

A contagious fungal infection of body skin causing an itchy, scaly, ring-shaped rash. It spreads through contact with infected people, animals, or objects and usually responds to antifungal treatment.

Ringworm Of The Foot

Alternate index label; see *Athlete's foot*.

Ringworm Of The Scalp

A fungal infection of the scalp and hair that can cause scaling, broken hairs, and hair loss.

Rinne Test

The Rinne test is a screening test that compares air conduction and bone conduction hearing using a vibrating tuning fork (typically 512 Hz) to help differentiate between conductive and sensorineural hearing loss.

Rinnes Test

Rinne's test compares air and bone conduction with a tuning fork to help assess conductive hearing loss.

RIPE Therapy

Standard 4-drug regimen for active TB: Rifampin, Isoniazid, Pyrazinamide, Ethambutol. Intensive phase 2 months, continuation phase 4 months (total 6 months). Pyridoxine prevents isoniazid-induced neuropathy.

Rippling Muscle Disease

A rare, benign myopathy characterized by mechanically-induced muscle contractions that spread across the muscle as a visible wave (rippling), typically triggered by stretch, percussion, or movement.

Risedronate Sodium

The sodium salt of risedronate, a bisphosphonate used to prevent or treat osteoporosis and other disorders of excessive bone resorption.

Risk

Risk is the probability of an unwanted event or outcome, considered together with its severity and the circumstances that influence it.

Risk Adjustment

Risk adjustment accounts for differences in baseline patient characteristics so outcomes or payments can be compared more fairly across groups.

Risk Factor

A characteristic, exposure, or behavior linked with a higher chance of disease or another outcome. It may be changeable, such as smoking, or unchangeable, such as age or inherited traits.

Risk Management

Finding possible sources of harm, judging how likely and serious they are, and taking steps to reduce them. In healthcare, it includes safe systems, reporting problems, learning from errors, and checking whether safety measures work.

Risk Register

A documented list of identified risks, their likelihood, impact, controls, owners, and review status.

Risk-Taking

Risk-taking is behavior involving deliberate or inadvertent exposure to possible harm, influenced by perception, reward, development, mental health, and circumstances.

Risks Of Hip And Knee Replacement

Possible problems after joint replacement include infection, blood clots, bleeding, nerve or vessel injury, dislocation, stiffness, loosening, wear, persistent pain, and need for repeat surgery. Risk varies with the operation and the person's health.

Risks Of Tobacco

Tobacco use increases risks of cancer, heart and blood-vessel disease, stroke, lung disease, pregnancy complications, addiction, and harm from second-hand smoke.

Risks Of Underage Drinking

Alcohol use by minors can impair brain development, judgment, learning, safety, and mental health and increases risks of injury, dependence, and unsafe sexual or substance-related behavior.

Risky Drinking

Alcohol use that increases the chance of health, safety, work, relationship, or social problems. Risk depends on amount, frequency, pattern, personal health, medicines, pregnancy, age, and circumstances such as driving.

Alternate Names:

Hazardous drinking

Risperidone

Risperidone is an atypical antipsychotic that blocks dopamine and serotonin receptors and treats schizophrenia, bipolar disorder, and selected severe behavioral symptoms; hyperprolactinaemia, metabolic effects, movement disorders, and sedation may occur.

Ristocetin-Induced Platelet Aggregation

A blood test that checks how platelets clump when exposed to ristocetin, a substance that requires von Willebrand factor and a platelet surface protein. It helps investigate von Willebrand disease and some platelet disorders.

Risus Sardonicus

A fixed, strained grin caused by painful facial-muscle spasms. It is classically associated with tetanus or strychnine poisoning and reflects severe muscle overactivity requiring urgent medical attention.

Ritonavir

Ritonavir is an HIV protease inhibitor mainly used at low doses to boost levels of other antiviral medicines by slowing their breakdown.

Ritual

A ritual is a repeated, structured behavior or ceremony; repetitive rituals may also occur as compulsions in obsessive-compulsive disorder.

Rituximab

Rituximab is a monoclonal antibody against CD20 that depletes B cells and is used for B-cell malignancies and selected autoimmune diseases; infusion reactions, infections, hepatitis-B reactivation, and rare PML are important risks.

Rivaroxaban

Rivaroxaban is an oral direct factor Xa inhibitor used to prevent or treat venous thromboembolism and reduce stroke risk in selected atrial fibrillation; bleeding and renal-function-dependent dosing are important considerations.

Rivastigmine

A medicine that increases acetylcholine signaling and may temporarily improve thinking or daily function in Alzheimer disease or Parkinson disease dementia. Common effects include nausea, vomiting, diarrhea, appetite loss, dizziness, and slow heart-beat.

River Blindness

Onchocerciasis, a parasitic infection caused by *Onchocerca volvulus* and transmitted by blackflies. It can cause severe itching, skin disease, and visual impairment.

RLS

Restless legs syndrome, an urge to move the legs with uncomfortable sensations, especially at night.

Alternate Names:

Restless legs syndrome

RMDs (Repetitive Motion Disorders (RMDs))

Alternate index label for Repetitive Motion Disorders (RMDs).

RNA

Ribonucleic acid, a molecule that helps cells read genetic instructions and make proteins. Some RNA carries messages from DNA, some helps build proteins, and some controls cell activity or forms part of viruses.

RNA Binding

The attachment of a protein or other molecule to RNA, affecting RNA stability, transport, folding, processing, or translation.

RNA Biosynthesis

The cellular production of RNA from a DNA template or, for some viruses, from an RNA template.

RNA Degradation

The enzyme-controlled breakdown of RNA molecules. It controls how long genetic messages last, removes damaged or unnecessary messages,

recycles their building blocks, and helps regulate protein production and cell behavior.

RNA Folding

The process by which an RNA strand forms secondary and three-dimensional structures that influence its function.

RNA Helicase

An enzyme that uses energy to separate, reshape, or move RNA structures and RNA-protein complexes. It helps cells copy, process, transport, and destroy RNA and is important for some viruses.

RNA Interference

A gene-silencing process in which small RNAs guide proteins to degrade or block specific messenger RNA molecules.

RNA Splicing

Removal of introns and joining of exons from a precursor RNA to produce mature messenger RNA or other functional RNA.

RNA Transport

Movement of RNA within a cell or between cells, often mediated by transport proteins and required for translation or signaling.

RNA Virus

A virus whose genetic material is RNA; its replication often involves an RNA-dependent polymerase and may have a high mutation rate.

RNase P

An RNA-protein enzyme complex that processes precursor transfer RNA by removing its extra 5-prime sequence.

Road Rage

Alternate index label; see *Intermittent explosive disorder*.

Remote Surgery

Surgery performed when the surgeon is physically

separated from the patient and controls robotic instruments through a telecommunications system. It may also include remote surgical assistance or guidance, with a qualified local team available to manage the patient and respond to emergencies.

Alternate Names:

Telesurgery Telepresence Surgery

Robinow Syndrome

A rare inherited skeletal-development disorder with distinctive facial features, short stature, vertebral or rib abnormalities, and genital differences.

Robot-Assisted Rehabilitation

Robotic devices for repetitive task training. Upper extremity, lower extremity, gait training. Objective measurement, high repetition.

Robotic Hysterectomy

Hysterectomy performed through minimally invasive abdominal access using a surgeon-controlled robotic platform. The extent of uterine, cervical, tubal, and ovarian removal depends on the indication and operative plan.

Robotic Surgery

A surgical technique in which a surgeon controls a computer-assisted system that moves a camera and small instruments. It is usually performed through small incisions and may allow precise movements, but the system does not operate independently.

Alternate Names:

Robotics Surgery Robot-Assisted Surgery

Robotic-Assisted Thoracoscopic Surgery

Chest surgery performed through several small openings using instruments controlled by a surgeon from a console. The camera provides a magnified three-dimensional view and the instruments can move precisely. It may reduce the size of the incisions, but bleeding, infection, air leakage, and conversion to open surgery remain possible.

Alternate Names:

RATS; Robotic Thoracic Surgery; Robotic Lobectomy

Rod

A rod is a long cylindrical structure; in the retina, a rod photoreceptor supports dim-light and peripheral vision.

Rod Photoreceptor

A light-sensitive cell in the retina that supports vision in dim light and the peripheral field. Rods do not provide color vision; their loss can cause night blindness and narrowing of the visual field.

Rodent Ulcer

An older name for basal cell carcinoma, a common locally invasive skin cancer.

Rods

Retinal photoreceptor cells that provide vision in dim light and contribute to peripheral vision but do not detect color.

Rofecoxib

Rofecoxib is a selective COX-2 anti-inflammatory drug withdrawn in many countries because of increased cardiovascular risk.

Romberg Sign

Loss of balance when standing with the feet together and the eyes closed, suggesting impaired proprioception or vestibular function.

Romberg Test

The Romberg test is a clinical neurological test used to assess the integrity of the dorsal column-medial lemniscus pathway (proprioception) and the cerebellum in maintaining balance. The test is performed by asking the patient to stand with feet together and eyes open, and then to close the eyes.

Romberg's Sign

Increased unsteadiness when a person stands with the feet together and closes the eyes, suggesting impaired proprioception or vestibular function.

Rombergism

Unsteadiness or falling when standing with feet

together and eyes closed, indicating impaired proprioception or vestibular function.

Romidepsin

A histone deacetylase inhibitor used for selected T-cell lymphomas; it can cause cytopenias, infection risk, and ECG-related effects.

Romiplostim

A thrombopoietin-receptor agonist that stimulates platelet production and is used mainly for chronic immune thrombocytopenia.

Rongeur

A strong, jawed surgical instrument used to bite and remove small pieces of bone or other hard tissue.

Ronnel

Ronnel is an organophosphate insecticide that can inhibit acetylcholinesterase and cause cholinergic toxicity after exposure.

Root (Dental Root)

The part of a tooth below the gum that anchors it in the jawbone. It contains a canal with nerves and blood vessels and is covered by cementum and supported by a ligament. Infection, decay, cracks, or loss of bone around the root can cause pain and tooth loosening.

Root Canal

The channel inside a tooth root containing the pulp and its nerves and blood vessels.

Root Canal Therapy

Dental treatment in which infected or inflamed pulp is removed from a tooth, the canal is cleaned and sealed, and the tooth is restored.

Root Caries

Tooth decay affecting exposed root surfaces after gum recession or loss of protective covering. It is more common with aging, dry mouth, or limited cleaning and may be slowed with fluoride and dental care.

Root Filling

Dental treatment sealing a cleaned tooth root canal to prevent bacteria entering again and causing reinfection.

Root Fracture

A crack or break in the root of a tooth. A horizontal fracture may sometimes be stabilized and monitored, while a vertical fracture often allows bacteria to enter and may require removal of the tooth. Treatment depends on the fracture's location and extent.

Rooting Reflex

A primitive reflex present from birth to 3-4 months, triggered by stroking the infant's cheek or corner of the mouth. The infant turns toward the stimulus and opens the mouth, searching for the nipple. Facilitates breastfeeding. Absence may indicate neurologic impairment. Disappears as voluntary feeding develops.

Ropinirole

A medicine that stimulates dopamine receptors and is used for Parkinson disease and restless legs syndrome. It may cause nausea, dizziness, sleepiness, low blood pressure, hallucinations, swelling, or impulse-control problems such as gambling.

Ropivacaine

A long-acting local anesthetic used for regional nerve blocks and epidural anesthesia; excessive blood levels can cause neurologic or cardiac toxicity.

Ropivacaine Hydrochloride

The hydrochloride salt of ropivacaine, a long-acting local anesthetic used for regional and epidural anesthesia.

Rorschach Test

A projective psychological test using inkblots; its diagnostic validity is limited and interpretation requires specialist training.

Rosacea

A chronic inflammatory facial skin disorder causing flushing, persistent redness, visible vessels, papules, pustules, or ocular symptoms.

Rose Bengal

Rose bengal is a dye used in eye-surface testing and laboratory or diagnostic procedures; it highlights damaged or poorly protected conjunctival cells.

Roseola

Roseola infantum is a common viral illness, usually caused by human herpesvirus 6, with several days of high fever followed by a pink trunk rash as the fever resolves; febrile seizures may occur.

Alternate Names:

Sixth Disease (Roseola)

Roseola Infantum

A common childhood viral illness, usually caused by human herpesvirus 6, with high fever followed by a trunk rash as fever resolves.

Roseolovirus

A genus of herpesviruses that includes human herpesvirus 6 and 7, commonly associated with roseola and sometimes serious disease after reactivation.

Rosiglitazone

A medicine for type 2 diabetes that helps the body respond better to insulin and lower blood sugar. It can cause weight gain, swelling, fractures, or worsening heart failure and is used selectively.

Rosiglitazone Maleate

The maleate salt of rosiglitazone, a thiazolidinedione that improves insulin sensitivity in type 2 diabetes but may cause weight gain, edema, fractures, and heart-failure worsening.

Ross Procedure

An operation for severe aortic-valve disease, especially in some children and young adults. The patient's own pulmonary valve is moved to the aortic position, and a donor valve or tube replaces it. The

moved valve can grow in children and usually avoids lifelong blood-thinning medicine, but either valve may later narrow or leak.

Alternate Names:

Pulmonary Autograft Procedure; Ross Operation

Ross River Virus

A mosquito-borne alphavirus that causes Ross River fever, with fever, rash, and often prolonged joint pain or swelling.

Rostral

Positioned toward the nose or front of the head. In descriptions of the brain, it usually means toward the forehead or front rather than toward the back of the head.

Rosuvastatin Calcium

Rosuvastatin calcium is a statin medicine that lowers LDL cholesterol and reduces the risk of cardiovascular events.

Rotation

Movement around an axis; in anatomy it describes turning a body part inward, outward, or around its longitudinal axis.

Rotator Cuff

The group of four shoulder muscles and tendons that stabilize the glenohumeral joint and rotate the arm.

Alternate Names:

Tendinitis Rotator Cuff (Rotator Cuff)

Rotator Cuff Arthropathy

Shoulder-joint damage that develops after long-standing, irreparable tears of the rotator-cuff tendons. It can cause pain, weakness, grinding, and inability to raise the arm; severe cases may need specialized shoulder replacement.

Rotator Cuff Exercises

Rotator cuff exercises strengthen and stretch shoulder muscles and are selected according to the injury, pain, range of motion, and rehabilitation plan.

Rotator Cuff Injury

Damage to one or more shoulder tendons or muscles that stabilize and move the arm. It may cause pain, weakness, night discomfort, or limited movement after overuse, aging, or sudden injury.

Rotator Cuff Problems

Rotator cuff problems include tendinopathy, bursitis, and tears that cause shoulder pain, weakness, painful motion, and difficulty with overhead activity.

Rotator Cuff Repair

Surgery to reattach a torn shoulder tendon to the upper-arm bone, usually with small instruments or an open approach. Recovery requires structured rehabilitation and may take months; stiffness, weakness, recurrent tearing, or infection can occur.

Rotator Cuff Tear

A partial or complete tear of one or more tendons stabilizing the shoulder, causing pain, weakness, and difficulty raising or rotating the arm.

Rotavirus

A very contagious virus that commonly causes vomiting and watery diarrhea in infants and young children. It can cause dangerous dehydration; vaccination greatly reduces severe illness, and testing is not always needed.

Rotavirus Antigen Test

A rotavirus antigen test detects rotavirus proteins in stool and can help diagnose viral gastroenteritis, especially in infants and young children.

Rotavirus Infection

A highly contagious viral gastroenteritis causing vomiting and watery diarrhea, especially in infants and young children; vaccination prevents most severe disease.

Rotaviruses

A group of viruses causing vomiting and watery diarrhea, especially in young children; vaccination lowers severe disease risk.

Rotenone

Rotenone is a naturally occurring pesticide that inhibits mitochondrial complex I and can be toxic to people and animals after exposure.

Roth Spots

Small areas of bleeding in the retina with pale centers, seen during an eye examination. They may occur with infection of the heart valves, severe anemia, leukemia, diabetes, or other illnesses and are not specific to one diagnosis.

Roth's Spots

Small retinal haemorrhages with pale centres, associated with conditions such as infective endocarditis, severe anaemia, leukaemia, and diabetes.

Rothmund-Thomson Syndrome

A rare inherited condition that causes a mottled, red, and thin skin rash beginning in infancy, short stature, sparse hair, skeletal or dental problems, and sometimes cataracts. It also increases the risk of certain cancers.

Rotterdam Criteria

A commonly used approach for diagnosing polycystic ovary syndrome in adults. After other causes are excluded, diagnosis generally requires at least two of: irregular or absent ovulation, signs or blood-test evidence of high androgen levels, or polycystic-appearing ovaries on ultrasound. Ultrasound alone does not establish the diagnosis.

Rouleau

A stack or column of red blood cells, commonly seen in blood with increased plasma proteins.

Rouleaux

A pattern where red blood cells stack like coins, often because blood plasma contains extra proteins.

Round

Round means circular or approximately spherical; in anatomy or pathology it describes shape and must be interpreted with the structure being described.

Round Back

Alternate index label; see *Kyphosis*.

Round Ligament

A round ligament is a cord-like supporting structure, including the uterine ligaments that pass toward the groin and help maintain uterine position.

Round Ligament Pain

Sharp or aching pain in the lower abdomen or groin caused by stretching of the round ligaments as the uterus enlarges during pregnancy. Persistent, severe, or bleeding-associated pain requires medical evaluation.

Round Pneumonia

A lung infection that appears as a rounded shadow on a chest X-ray rather than the usual patchy pattern. It occurs especially in children and can resemble a tumor, so follow-up imaging may be needed after treatment.

Roundworm

A parasitic worm, often referring to *Ascaris lumbricoides*, acquired by swallowing eggs from contaminated soil, food, or water. It may cause abdominal symptoms, poor nutrition, or intestinal blockage when many worms are present.

Roundworms

Nematode parasites that may infect intestines or tissues, causing disease depending on their species and number.

Route Of Administration

The way a medicine enters the body, such as by mouth, under the tongue, injection, inhalation, skin application, or through a vein. The route affects how quickly and how much of the medicine reaches the bloodstream.

Rovsing Sign

Pain in the lower right abdomen that occurs when the lower left abdomen is pressed. This examination finding can support suspicion of appendicitis, but it

is not diagnostic by itself and must be interpreted with the symptoms and other tests.

Roxithromycin

A macrolide antibiotic used in some countries for selected bacterial infections. It stops bacteria making proteins, but resistance, medicine interactions, stomach upset, liver problems, and heart-rhythm changes can occur.

RPR Test

A blood screening test for syphilis that detects antibodies produced during tissue injury from the infection. A reactive result does not prove active syphilis and requires a second, more specific test and clinical assessment.

RSI

Repetitive strain injury, a group of pain and dysfunction syndromes associated with repeated movement or sustained posture.

RSV

A common respiratory virus that can cause mild cold symptoms or serious bronchiolitis and pneumonia, especially in infants and older adults.

RSV Antibody Test

An RSV antibody test detects antibodies to respiratory syncytial virus and may help assess past exposure or immune response, but is not usually the main test for acute infection.

RT-PCR

A laboratory test that converts RNA into DNA and then makes many copies of a selected genetic sequence so it can be detected. It can identify RNA viruses and measure selected genes in clinical samples.

Ruba Miliaria (Heat Rash)

Alternate index label; misspelling of *Rubra Miliaria*.

Rubber

Rubber is an elastic material used in gloves, devices,

and equipment; natural-rubber latex can cause irritant or allergic reactions.

Rubber Cement Poisoning

Poisoning from swallowing or inhaling rubber cement, which contains volatile solvents. It may cause dizziness, drowsiness, confusion, breathing problems, or chemical pneumonitis if aspirated; do not induce vomiting and obtain poison-control advice.

Rubber Dams

Sheets used in dentistry to isolate teeth from saliva and the rest of the mouth during procedures.

Rubella

A contagious viral infection causing mild fever and rash but potentially severe congenital abnormalities when acquired during pregnancy.

Alternate Names:

Measles, German Three-Day Measles

Rubella Virus

The virus that causes rubella, a contagious illness with fever, swollen glands, and rash. Infection during pregnancy can seriously harm the developing baby, causing hearing loss, eye disease, heart problems, or other birth defects.

Rubeola

Measles, a highly contagious viral illness caused by measles virus and characterized by fever, cough, conjunctivitis, and a widespread maculopapular rash.

Alternate Names:

Measles (Rubeola)

Rubeola (Measles (Rubeola))

Alternate index label for Measles (Rubeola).

Rubeosis Iridis

Growth of abnormal new blood vessels on the colored part of the eye. It usually results from poor blood flow in the retina, often caused by diabetes or a blocked retinal vein, and can lead to painful glaucoma and vision loss.

Rubidium

A chemical element whose radioactive isotopes can be used in medical imaging; nonmedical rubidium compounds can affect potassium-related physiology.

Rubin Maneuver

An emergency childbirth technique for shoulder dystocia, when a baby's shoulder is stuck behind the birthing person's pelvic bone. A clinician applies pressure and rotates the baby's shoulder to reduce its width and help complete delivery safely.

Rubinstein-Taybi Syndrome

A genetic developmental disorder associated with characteristic facial features, short stature, broad thumbs and toes, and intellectual disability. It is commonly caused by pathogenic variants in CREBBP or EP300.

Rubivirus

A genus of viruses that includes rubella virus, which causes rubella and congenital rubella syndrome.

Rubredoxins

Small proteins containing iron that help move electrons in some bacteria and other organisms. They take part in chemical reactions that release energy and protect cells from harmful oxygen-related chemicals.

Rubricyte Count

A measurement of rubricytes, an older name for immature red blood cells, in blood or bone marrow. It may help assess how actively the marrow is making red cells, but modern tests usually report reticulocytes or other marrow findings.

Rule Of Nines

A quick method for estimating the percentage of body surface burned by assigning simple proportions to body regions. The estimate helps guide fluids and emergency care, but children and unusual body shapes require more accurate methods.

Rule Out

Rule out means evaluate a possibility and determine whether it is present; it does not mean the condition has already been excluded.

Rumination

Repeated regurgitation and rechewing of food after eating, without the usual vomiting process; persistent symptoms can cause weight loss and dental damage.

Rumination Disorder

Repeated, usually effortless return of recently eaten food to the mouth, followed by rechewing, reswallowing, or spitting. It differs from ordinary vomiting and can cause weight loss, poor nutrition, tooth damage, and social distress.

Ruminococcus Gnavus

An intestinal bacterium involved in mucin and carbohydrate metabolism and studied in relation to gut inflammation.

Runner'S Knee

Alternate index label; see *Patellofemoral pain syndrome*.

Runny Nose

Excess fluid or mucus draining from the nose, commonly caused by infection, allergy, irritants, or sinus disease.

Rupture

A tear or complete break in an organ, vessel, muscle, or other tissue, often causing bleeding or loss of function.

Ruptured Abdominal Aortic Aneurysm

A burst in a weakened section of the main artery in the abdomen, causing severe internal bleeding. Sudden abdominal or back pain, fainting, sweating, or collapse requires immediate emergency treatment and surgery.

Ruptured Disk

A spinal disk whose outer layer has torn, allowing inner material to bulge outward.

Alternate Names:

Herniated disk; slipped disk

Ruptured Eardrum

A ruptured eardrum is a tear in the tympanic membrane caused by infection, pressure, trauma, or foreign objects and may cause pain, drainage, hearing loss, or dizziness.

Ruptured Eardrum (Perforated Eardrum)

A hole or tear in the eardrum that may cause pain, drainage, hearing loss, or ringing and can result from infection, injury, or pressure changes.

Alternate Names:

Eardrum, Ruptured Perforated Eardrum

Ruptured Perforated Eardrum

A perforated eardrum is a tear in the tympanic membrane from infection, pressure change, trauma, or an inserted object. Pain, drainage, hearing loss, or ringing may occur; keeping the ear dry and avoiding unprescribed drops helps while healing or repair is assessed.

Russell-Silver Syndrome

A condition present from birth that causes poor growth before and after birth, a relatively large head, feeding difficulty, uneven growth of the limbs or body, and characteristic facial features. It is usually related to changes in gene regulation.

Russell-Siver Syndrome

Alternate index label; misspelling of *Russell-Silver Syndrome*.

Rx

A common abbreviation for prescription or prescribed treatment. It comes from the Latin word meaning “take” and is used on medication orders and in medical writing.

Ryle’S Tube

A soft tube passed through the nose into the stomach to remove stomach contents or give fluids, nutrition, or medicines. Position must be checked before use because a misplaced tube can enter the airway and cause serious harm.

S

S Phase

The stage of the cell cycle when a cell copies all of its DNA before dividing. This duplication allows each new cell to receive a complete set of genetic instructions.

S-Adenosylmethionine

A substance made naturally in the body that helps chemical reactions involving cell membranes, genetic material, and brain chemicals. It is also sold as a supplement, but its benefits and interactions vary by condition and require medical advice.

S3 Gallop Pathology

An extra heart sound heard just after the normal second heart sound as the lower chambers fill rapidly. It can be normal in children and pregnancy but may suggest excess fluid or heart failure in an older adult.

S4 Gallop Pathology

An extra heart sound heard just before the normal first heart sound when an upper chamber pushes blood into a stiff lower chamber. It may occur with long-standing high blood pressure, a narrowed aortic valve, or thickened heart muscle.

SA Node

A small group of specialized cells in the upper right heart chamber that normally starts each heartbeat. It produces regular electrical signals that spread through the heart and coordinate its rhythm.

SAA

Usually an abbreviation for serum amyloid A, a blood protein that rises during inflammation. Per-

sistently high levels can contribute to abnormal protein deposits in organs during some long-lasting inflammatory diseases.

Sabin Vaccine

The oral polio vaccine containing live attenuated poliovirus strains. It produces strong intestinal immunity but, rarely, vaccine-derived poliovirus can occur, so vaccine policy depends on local public-health guidance.

Saccade

A quick, coordinated eye movement that shifts the eyes from one target to another. Abnormal saccades can occur with disorders affecting the eye muscles, balance system, or brain and nerves.

Saccular Aneurysm

A rounded pouch bulging from one side of an artery because that part of the vessel wall is weak. It may enlarge, form clots, or burst; risk depends on its location, size, shape, and growth.

Sachet Poisoning

Illness caused by swallowing, inhaling, or getting the contents of a sachet on the skin or in the eyes. Effects depend on the substance and amount; some sachets contain medicines or dangerous chemicals.

Sacral

Sacral means relating to the sacrum, the triangular bone at the base of the spine that connects with the pelvis.

Sacral Dimple

A small indentation in the skin over the lower spine that is present at birth. Most are harmless, but a deep, large, high, hairy, discolored, or draining dimple may need imaging for an underlying spinal abnormality.

Alternate Names:

Pilonidal Dimple

Sacral Fistula

An abnormal channel near the lower spine that connects the skin with deeper tissue or another body space. It may cause persistent drainage, pain, repeated infection, or a skin opening and can result from birth differences, injury, or pilonidal disease.

Sacral Nerve Stimulation

Treatment that sends mild electrical pulses to nerves near the lower spine to improve bladder or bowel control. It may help selected people with persistent urinary or fecal leakage, retention, or constipation after other treatments have not worked.

Sacral Nerve Stimulator

An implanted device that sends mild electrical signals to nerves near the lower spine to improve bladder or bowel control in selected people. It may help incontinence or some emptying problems when other treatments have not worked.

Sacral Nerves

The spinal nerves arising from the sacral spinal cord and supplying the pelvis, pelvic floor, bladder, bowel, and lower limbs.

Sacral Region

The lower back and posterior pelvic region overlying the sacrum, a fused triangular bone that connects the lumbar spine with the pelvis.

Sacral Vertebra

One of the fused vertebrae forming the sacrum, which supports the spine, joins the pelvic bones, and transmits trunk weight to the lower limbs.

Sacral Vertebrae

Five spinal bones that fuse to form the sacrum at the back of the pelvis. They transfer weight from the spine to the hips and contain openings through which sacral nerves pass.

Sacral Vertebrae (S1-S5)

The five sacral vertebrae that fuse to form the sacrum, connect the spine to the pelvis, and provide foramina for sacral nerve roots.

Sacroccocygeal

Sacroccocygeal means relating to the sacrum and coccyx at the lower end of the vertebral column.

Sacroccocygeal Teratoma

A tumor present from birth at the base of the spine and made of several tissue types. It may grow outside or inside the pelvis; a large fetal tumor can strain the heart and increase amniotic fluid.

Sacrocolpopexy

An operation that supports a prolapsed top of the vagina or uterus by attaching it to the strong tissue over the sacrum, usually with surgical mesh. It may be performed through open or small incisions; bleeding, infection, mesh problems, bowel or bladder injury, and recurrent prolapse are possible.

Sacroileitis

Alternate index label; misspelling of *Sacroiliitis*.

Sacroiliac Joint

The joint connecting the triangular sacrum at the base of the spine to each hip bone. It transfers weight between the spine and legs and may become painful or inflamed after injury, pregnancy, arthritis, or infection.

Sacroiliac Joint Dysfunction (Sacroiliac Joint Pain)

Alternate index label for Sacroiliac Joint Pain.

Sacroiliac Joint Dysfunction (SI Joint

Pain)

Pain or abnormal movement from the joint between the lower spine and pelvis. It may cause pain in the lower back, buttock, or thigh and can follow injury, pregnancy, arthritis, or changes in walking.

Sacroiliac Joint Pain

Sacroiliac-joint pain arises near the junction of the lower spine and pelvis and may follow injury, pregnancy, arthritis, leg-length or gait changes, or inflammation. Pain can radiate to the buttock or thigh; examination distinguishes it from hip or spine disease.

Alternate Names:

Sacroiliac Joint Dysfunction (Sacroiliac Joint Pain)

Sacroiliitis

Inflammation of one or both joints connecting the lower spine to the pelvis. It can cause pain in the lower back, buttock, or back of the thigh and may result from inflammatory arthritis, infection, injury, or wear.

Sacrospinous Ligament Fixation

An operation through the vagina that attaches the top of the vagina or cervix to a strong pelvic ligament to treat prolapse. It avoids an abdominal incision but may cause buttock pain, bleeding, infection, nerve injury, or recurrent prolapse.

Alternate Names:

Sacrospinous Colpopexy; Sacrospinous Suspension

Sacrum

A large triangular bone at the back of the pelvis formed by five fused spinal bones. It connects the spine to the hip bones, transfers body weight to the legs, and contains openings for nerves supplying the pelvis and lower limbs.

SAD

An abbreviation for seasonal affective disorder, a recurring pattern of depression or mood change linked to a particular season, often winter and reduced daylight. Treatment may include therapy, medicines, or supervised light therapy.

Alternate Names:

Seasonal Affective Disorder (SAD)

Sad Mood

Sad mood is a feeling of unhappiness or low mood that may be a normal response or a symptom of depression, grief, illness, or another condition.

Saddle Pulmonary Embolism

A large blood clot lodged where the main artery from the heart divides toward both lungs. It can severely block blood flow, causing sudden breathlessness, chest pain, fainting, low blood pressure, or cardiac arrest and requires emergency treatment.

Alternate Names:

Saddle Embolus; Bifurcation Pulmonary Embolism

Sadism

Sexual arousal or gratification from inflicting pain, humiliation, or suffering; clinical significance depends on distress, impairment, or nonconsent.

Safe Sex

Sexual practices that reduce the risk of sexually transmitted infections and unintended pregnancy, including condoms or other barriers, testing, vaccination, and informed consent.

Safety Of Drugs

The process of balancing a medicine's expected benefits against side effects, interactions, and reasons it may be unsafe. Safe use includes checking the person, dose, allergies, other medicines, monitoring needs, and instructions.

Safety Plan

A collaboratively written, practical plan for responding to escalating suicidal thoughts or emotional crisis. It identifies warning signs, internal coping strategies, supportive contacts, professional resources, and methods to restrict access to lethal means.

Safety Study

A safety study evaluates whether a medicine, device, procedure, or treatment causes harmful effects and

identifies risks before or during clinical use.

Safrole

Safrole is a natural aromatic compound found in some plants and oils; high or prolonged exposure is toxic and has carcinogenic concern.

Sagittal

Oriented in a vertical direction that divides the body or a structure into right and left parts. A midsagittal plane divides the parts equally; a parasagittal plane does not.

Sagittal Plane

An imaginary vertical plane dividing the body or an organ into right and left portions. A midsagittal plane divides them equally; a parasagittal plane divides them unequally.

Salaam Attacks

Brief repeated bending spasms or sudden head drops in infants. They may be seizures and require urgent specialist assessment because early treatment can protect development and reduce the risk of continuing epilepsy.

Salbutamol (Albuterol)

A quick-relief inhaled medicine that relaxes tightened airway muscles in asthma and chronic obstructive lung disease. It eases wheezing and breathlessness but may cause shaking, a fast heartbeat, or palpitations and does not replace treatment that controls airway inflammation.

Alternate Names:

Albuterol

Salicylate

A group of chemicals that includes aspirin and can reduce pain, fever, or inflammation. Excessive amounts may cause poisoning with vomiting, ringing ears, fast breathing, confusion, dehydration, or dangerous blood chemistry changes.

Salicylate Toxicity

Poisoning caused by too much aspirin or another

salicylate. It may cause vomiting, ringing in the ears, fever, sweating, fast or deep breathing, dehydration, confusion, seizures, or coma and requires urgent medical advice.

Salicylic Acid

A medicine applied to the skin to soften and remove excess surface skin. It is used for acne, psoriasis, warts, corns, and similar thickened or blocked skin; irritation is common and large exposures can be toxic.

Saline

A sterile solution of sodium chloride in water. Different concentrations are used for intravenous fluids, wound or eye irrigation, inhalation, laboratory work, or dilution of medicines.

Alternate Names:

Normal saline

Saline Infusion Sonohysterography

An ultrasound test in which sterile salt water is placed inside the uterus to outline its cavity. It can show polyps, fibroids, scar tissue, or an unusually shaped cavity and may cause temporary cramping or light bleeding.

Saline Nasal Washes

Rinsing the nasal passages with sterile, distilled, or appropriately treated saline to loosen mucus and reduce nasal irritants; unsafe water can cause serious infection.

Saliva

Fluid made by the salivary glands that moistens food, begins digestion, protects the mouth and teeth, and helps swallowing and taste. Too little saliva can cause dry mouth, mouth soreness, and tooth decay.

Salivary Duct Stones

Calcified deposits obstructing a salivary duct, most often the submandibular duct, causing recurrent painful swelling of a gland during meals and sometimes infection.

Salivary Gland

A gland that makes saliva and releases it into the mouth. The three major paired glands are the parotid, submandibular, and sublingual glands; many smaller glands lie in the mouth lining.

Salivary Gland Biopsy

Removal of salivary-gland tissue or a needle sample for microscopic examination of suspected autoimmune disease, inflammation, infection, or neoplasm.

Salivary Gland Cancer

Cancer arising in a salivary gland, most often the parotid near the ear. It may cause a persistent lump, pain, numbness, dry mouth, or facial weakness; imaging and biopsy identify the type and guide treatment.

Salivary Gland Infection

Infection of a salivary gland, usually bacterial and often involving the parotid or submandibular gland. Painful swelling, fever, dry mouth, and purulent drainage from the duct may occur.

Salivary Gland Infections

Infections of a salivary gland or its duct, commonly bacterial or viral, causing painful swelling, tenderness, fever, dry mouth, or purulent drainage.

Salivary Gland Neoplasm

An abnormal growth in a salivary gland that may be noncancerous or cancerous. It can cause a lump, pain, facial weakness, dry mouth, or swallowing problems and may require imaging and biopsy.

Salivary Gland Scintigraphy

An imaging test that measures salivary-gland function after a small radioactive tracer is given. It may help assess dryness from Sjögren syndrome, blocked ducts, inflammation, radiation injury, or other gland problems.

Salivary Gland Tumors

Tumors arising in the salivary glands. Many are benign, especially in the parotid gland; pleomorphic

adenoma is a common benign type. Malignant types include mucoepidermoid, adenoid cystic, and acinic cell carcinoma.

Alternate Names:

Tumor, Salivary Gland

Salivary Glands

Glands that make saliva, including the parotid, submandibular, and sublingual glands. Saliva moistens food, begins digestion, protects teeth, helps swallowing, and supports taste and mouth health.

Salivation

Production and release of saliva by the salivary glands. Saliva moistens food, begins digestion, protects teeth, and helps swallowing; excessive or reduced salivation can have many causes.

Salk Vaccine

The inactivated poliovirus vaccine, given by injection to protect against poliomyelitis. It contains killed virus and cannot cause polio; it differs from the older oral live-attenuated vaccine.

Salmon Patches

Flat pink or red capillary birthmarks, commonly on the eyelids, forehead, or nape; many fade during infancy.

Salmonella

A genus of Gram-negative, facultatively anaerobic, rod-shaped bacteria in the Enterobacteriaceae family. It includes non-typhoidal strains that cause gastroenteritis and typhoidal strains that can cause enteric fever.

Salmonella Choleraesuis

A Salmonella serotype adapted to pigs that can cause severe, invasive infection in humans, including bloodstream infection and pneumonia.

Salmonella Enterica

A major Salmonella species causing human disease. It can produce diarrhea and fever, enteric fever, or bloodstream infection after contaminated food, wa-

ter, animals, or infected people spread the bacteria.

Salmonella Enterocolitis

Salmonella enterocolitis is intestinal infection causing diarrhea, fever, abdominal cramps, and sometimes bacteremia after contaminated food, water, or animal exposure.

Salmonella Food Poisoning (Salmonellosis)

Alternate index label for Salmonellosis.

Salmonella Infection

An infection caused by Salmonella bacteria, usually acquired through contaminated food, water, animals, or hands. It commonly causes diarrhea, fever, cramps, and vomiting but can spread into blood or other organs.

Salmonella Infections

Infections caused by Salmonella bacteria, ranging from gastroenteritis to enteric fever or invasive bloodstream disease.

Salmonella Typhi

The bacterium that causes typhoid fever, usually acquired through contaminated food or water and capable of spreading through the bloodstream.

Salmonella Typhimurium

A common Salmonella serotype that usually causes foodborne gastroenteritis but can cause invasive disease in vulnerable people.

Salmonella Typhisuis

A Salmonella serotype mainly associated with swine; human infection is uncommon but may cause enteric or invasive disease.

Salmonella Vaccines

Vaccines used mainly to prevent typhoid fever, including typhoid conjugate, Vi polysaccharide, and oral live-attenuated vaccines; routine vaccination does not prevent all Salmonella gastroenteritis.

Salmonellosis

Infection with Salmonella bacteria (non-typhoidal), typically acquired from contaminated food (eggs, poultry, meat). Presents with acute gastroenteritis: diarrhea, fever, and abdominal cramps within 6-72 hours of ingestion. Self-limited in immunocompetent patients. Bacteremia can occur, especially in immunocompromised.

Alternate Names:

Salmonella Food Poisoning (Salmonellosis)

Salpingectomy

Surgical removal of a fallopian tube. It may be used to treat a tubal ectopic pregnancy, hydrosalpinx, or other tubal disease. The approach and whether the tube is removed depend on the clinical condition, fertility plans, and the state of the opposite tube.

Salpingitis

Inflammation or infection of one or both fallopian tubes, usually as part of pelvic inflammatory disease spreading upward from the vagina or cervix. It may cause lower-abdominal pain, fever, unusual discharge, infertility, or pregnancy outside the uterus.

Salpingitis Isthmica Nodosa

Small thickened areas and side pockets in the narrow part of a fallopian tube, often after inflammation. They can narrow the tube, making pregnancy harder to achieve and increasing the risk of an ectopic pregnancy.

Alternate Names:

SIN

Salpingo-Oophorectomy

Surgery to remove one or both fallopian tubes and ovaries. It may treat cancer, an ovarian or tubal problem, or reduce cancer risk in people with certain inherited gene changes. Removing both ovaries causes permanent loss of ovarian hormone production.

Salpingo-OöPhorectomy

Surgical removal of a fallopian tube and ovary, also called salpingo-oophorectomy.

Salpingography

Contrast imaging of the fallopian tubes, usually performed as part of hysterosalpingography to assess whether the tubes are open and to examine the uterine cavity.

Salpingostomy (Salpingotomy)

An operation that opens a fallopian tube to remove an ectopic pregnancy while leaving the tube in place. It may preserve fertility in selected cases, but persistent pregnancy tissue, bleeding, scarring, or another ectopic pregnancy can occur.

Alternate Names:

Salpingotomy

Salt

An ionic chemical compound; dietary sodium chloride is essential in small amounts but excess intake can increase blood pressure.

Saltatory Conduction

The rapid movement of an electrical signal along a nerve fiber covered by myelin. The signal travels between small uncovered gaps in the covering, allowing fast communication with other nerves and muscles.

Salter-Harris Fracture

A break involving the growth plate of a child or adolescent's bone. The fracture pattern helps predict the risk of disturbed growth; pain, swelling, and inability to use the limb require prompt assessment and follow-up.

Salvage Therapy

Treatment used when a disease, especially cancer, has not improved with earlier treatment or has returned. The choice depends on the disease, previous treatments, overall health, and treatment goals.

Sample Fixation

Preserving a tissue or cell sample soon after collection so it does not decay or change shape. The preserved sample can then be processed, stained, and examined under a microscope for diagnosis.

Sandfly Fever

An acute viral illness transmitted by phlebotomine sandflies, causing fever, headache, muscle pain, and sometimes rash.

Sandhoff Disease

A rare inherited disorder in which fatty substances build up in nerve cells. It usually begins in infancy or childhood with loss of skills, weakness, seizures, movement problems, and sometimes an enlarged liver or spleen.

Sandpaper Tooth

A tooth with a rough, grainy enamel surface that can hold plaque and feel uneven to the tongue. It may result from weak enamel, early mineral loss, fluorosis, or wear and should be checked by a dental professional.

Sanfilippo Syndrome

A rare inherited disorder in which the body cannot break down part of a complex sugar. The buildup mainly affects the brain and causes progressive developmental and behavioral changes.

Alternate Names:

Mucopolysaccharidosis Type III (MPS III)

Sanguineous

Containing or resembling fresh blood. The word often describes bright-red drainage from a wound; a large or rapidly increasing amount after surgery may indicate active bleeding and needs urgent assessment.

Sanitation

Public-health measures that safely manage human waste, water, food, hygiene, and environmental contamination to prevent infection and disease transmission.

Sano Shunt

A temporary tube connecting the lower-right heart chamber to the lung artery during the first operation for some babies with severe left-sided heart defects. It sends blood to the lungs while the heart

is reconstructed; blockage or abnormal flow can be dangerous.

Alternate Names:

RV-PA Conduit; Norwood-Sano Modification

Saphenous

Relating to the superficial veins of the lower limb, especially the great or small saphenous vein.

Saphenous Vein

A superficial vein of the lower limb that drains the foot and leg. The great and small saphenous veins are clinically important in venous disease and may be used as graft material in selected vascular or cardiac bypass procedures.

Small Saphenous Vein

A superficial vein running up the back of the calf and usually joining the popliteal vein behind the knee. It helps return blood from the foot and calf to the heart.

SAPHO Syndrome

A rare inflammatory condition combining bone or joint pain with acne or pus-filled skin lesions. It often affects the breastbone, collarbone, spine, or jaw and can resemble infection or cancer, so diagnosis and treatment require specialist assessment.

Sapovirus

A virus that can cause vomiting and watery diarrhea, especially in children. It spreads through contaminated food, water, surfaces, or close contact.

Sapporo Virus

An older name for sapovirus, a virus that can cause vomiting and watery diarrhea.

Sapropterin

A synthetic form of tetrahydrobiopterin used for some people with phenylketonuria and certain tetrahydrobiopterin deficiencies; response and diet requirements vary.

Saquinavir

An HIV protease inhibitor used with other antiretroviral medicines; drug interactions, gastrointestinal effects, and cardiovascular concerns limit its use.

Saquinavir Mesylate

The mesylate salt form of saquinavir, an HIV medicine that blocks viral protein processing. It is used with other antiretroviral drugs, but interactions, liver problems, and dangerous heart-rhythm changes require careful monitoring.

Sarcocystis Hominis

A protozoan parasite acquired by eating undercooked beef; people may develop intestinal symptoms, while cattle serve as an intermediate host.

Sarcocystis Suihominis

A protozoan parasite acquired by eating undercooked pork that can cause intestinal sarcocystosis; pigs serve as an intermediate host.

Sarcocystosis

Parasitic infection by *Sarcocystis* species, acquired from undercooked meat or contaminated food and sometimes causing muscle pain, fever, diarrhea, or no symptoms.

Sarcoglycan Complex

A group of proteins that helps strengthen the outer covering of muscle cells during movement. Inherited problems with these proteins can cause progressive muscle weakness and sometimes heart-muscle disease.

Sarcoglycanopathy

A group of inherited muscle diseases caused by changes in sarcoglycan genes. They usually cause progressive weakness of the hips and shoulders and may affect the heart.

Alternate Names:

Sarcoglycan-Deficient Limb-Girdle Muscular Dystrophy; LGMD R3-R6

Sarcoidosis

An inflammatory disease in which clusters of immune cells form in one or more organs, most often the lungs and nearby lymph nodes. It can also affect the skin, eyes, heart, nervous system, or other organs.

Alternate Names:

Arthritis Sarcoid (Sarcoidosis)

Sarcoidosis Skin Manifestations

Skin involvement in sarcoidosis can cause firm bumps, raised or discolored patches, scars that change, or lupus pernio on the nose or face. The appearance varies and may require a skin examination or biopsy.

Sarcolemma

The thin outer covering of a muscle cell. It carries electrical signals that start contraction and helps maintain the cell's structure and internal chemical balance.

Sarcoma

A malignant tumor arising from connective or supporting tissues, including bone, cartilage, fat, muscle, and blood vessels. Examples include osteosarcoma, liposarcoma, and rhabdomyosarcoma.

Sarcoma, Bone Cancer

Alternate index label; see *Bone cancer*.

Sarcoma, Soft Tissue

Alternate index label; see *Soft tissue sarcoma*.

Sarcomere

The smallest working unit that makes skeletal and heart muscle contract. It contains protein threads that slide past one another, shortening the muscle and producing force.

Sarcopenia

Loss of muscle strength and muscle mass that reduces physical function, often with aging but also with inactivity, poor nutrition, or chronic disease. It can cause weakness, slower walking, falls, and

difficulty with daily activities.

Sarcopenic Obesity

Excess body fat together with low muscle mass, strength, or physical ability. It can increase the risk of falls, disability, metabolic disease, and complications after surgery.

Sarcoplasm

The material inside a muscle cell surrounding its specialized structures. It contains energy-producing parts, stored fuel, oxygen-holding myoglobin, and the protein machinery that produces contraction.

Sarcoplasmic Reticulum

A network inside muscle cells that stores calcium. It releases calcium to start contraction and takes calcium back up so the muscle can relax.

Sarcoptes

The mite genus containing *Sarcoptes scabiei*, the cause of scabies.

Sarcoptes Scabiei

The microscopic mite that causes scabies. It burrows into the outer layer of skin and lays eggs, producing intense itching and a rash or thin lines. It spreads mainly through prolonged close skin contact.

Sarcoptic Mange (Scabies)

Alternate index label for Scabies.

Sargramostim

A recombinant granulocyte-macrophage colony-stimulating factor used to promote white-cell recovery after selected cancer treatments or transplantation; bone pain and fever may occur.

Sarnat Staging

A three-level examination used to describe the severity of brain dysfunction in a newborn after reduced oxygen or blood flow. Mild disease causes increased alertness, moderate disease causes poor responsiveness and seizures, and severe disease causes coma and weak or absent reflexes; the stage helps guide

urgent treatment and prognosis.

Alternate Names:

Sarnat and Sarnat Grading; Sarnat Score; HIE Staging

SARS

Severe acute respiratory syndrome, a serious lung infection caused by the SARS coronavirus. It can cause fever, cough, breathing difficulty, and pneumonia and spreads mainly through close contact with respiratory droplets; suspected cases require public-health and medical guidance.

SARS Virus

The coronavirus that causes severe acute respiratory syndrome, a serious respiratory infection that can spread through respiratory droplets and close contact.

SARS-CoV-2

The coronavirus that causes COVID-19. It spreads mainly through particles released when an infected person breathes, talks, coughs, or sneezes and can cause anything from no symptoms to severe lung or other organ disease.

Sassafras Oil Overdose

Poisoning from swallowing or otherwise being exposed to too much sassafras oil. It may cause nausea, vomiting, seizures, breathing problems, liver injury, or other serious effects and requires urgent medical advice.

Satellite DNA

Repeated stretches of DNA found mainly in tightly packed parts of chromosomes. They help organize chromosome structure and can vary between people, usually without providing instructions for making proteins.

Satellite Virus

A small virus-like infectious agent that can multiply only when a separate helper virus is present. It uses the helper's machinery and may change how severe or persistent the combined infection becomes.

Satiation

The feeling of fullness that terminates a meal, produced by gastrointestinal stretch, nutrients, hormones, and brain signals regulating food intake.

Satiety

The feeling of fullness that reduces the desire to eat after a meal. It is influenced by stomach stretching, food composition, hormones, and brain signals; persistent early fullness can indicate illness.

Satiety - Early

Feeling full sooner than expected while eating, sometimes after only a small amount of food. It may result from stomach or digestive disease and should be assessed if persistent or associated with weight loss.

Saturated Fat

A dietary fat whose fatty-acid chains contain no carbon-carbon double bonds. It is found in foods such as fatty meat, butter, full-fat dairy, coconut oil, and palm oil; replacing some saturated fat with unsaturated fat can help lower LDL cholesterol and cardiovascular risk.

Saturation

A state in which available binding, transport, or processing capacity is nearly full. Once capacity is reached, extra medicine or substance may remain in the blood or produce a disproportionately larger effect.

Sausage Digit

Diffuse swelling of an entire finger or toe, often caused by inflammation in joints, tendons, and surrounding tissues.

Alternate Names:

Dactylitis

Saxitoxin

A powerful poison made by some marine algae that can build up in shellfish. Eating contaminated seafood may cause tingling, weakness, trouble breathing, or paralysis.

SBBO

Alternate index label; see *Small intestinal bacterial overgrowth*.

Scab

A crust of dried blood, serum, pus, or tissue fluid over a healing skin injury.

Scabies

An infestation caused by tiny mites that burrow into the skin, causing intense itching that is often worse at night and a rash or thin burrows. It spreads mainly through prolonged close skin-to-skin contact.

Alternate Names:

Sarcoptic Mange (Scabies)

SCAD

Alternate index label; see *Spontaneous coronary artery dissection*.

Scaffold

A three-dimensional framework used in tissue engineering to hold cells in place while they grow and organize into new tissue. It may be made from natural or synthetic material and may gradually dissolve.

Scaffold Seeding

Placing living cells onto or inside a three-dimensional framework so they can attach, multiply, and begin forming tissue in laboratory or regenerative-medicine research.

Scalded Mouth Syndrome

Alternate index label; see *Burning mouth syndrome*.

Scalded Skin Syndrome

Alternate index label; see *Scalded-Skin Syndrome*.

Scalded-Skin Syndrome

A serious infection, usually in young children, in which toxins from *Staphylococcus* bacteria make the outer skin layer separate. The skin becomes painful, red, and easily blistered or peeled; prompt treatment is needed to prevent dehydration and

infection.

Scalds

Burns caused by hot liquids or steam. They may damage only the surface skin or extend into deeper tissue; severity depends on depth, size, location, and age. Large, deep, facial, genital, hand, or circumferential burns need urgent specialist assessment, and unusual patterns in children require safeguarding evaluation.

Scale

Visible flakes or plates of stratum corneum shed from the skin surface, commonly caused by abnormal keratinization, inflammation, infection, or dryness.

Scales

Scales are flakes or plates of shed skin on the surface, occurring with dryness, eczema, psoriasis, fungal infection, or other dermatologic conditions.

Scaling

Scaling is flaking or shedding of the outer skin layer and may occur with dryness, eczema, psoriasis, fungal infection, or other skin disease.

Scaling And Root Planing

A deep dental cleaning that removes hardened plaque and bacteria above and below the gumline and smooths tooth roots. It reduces gum inflammation and may slow periodontal disease, but severe damage may need additional treatment.

Scalp

The skin and underlying tissues covering the skull. It contains hair follicles, glands, blood vessels, nerves, and connective tissue and can be affected by injury, infection, or skin disease.

Scalp And Body (Ringworm)

Alternate index label for Ringworm.

Scalp Psoriasis

Psoriasis affecting the scalp, causing sharply demar-

cated red plaques covered by silvery scale that may extend beyond the hairline. It can itch, crack, or bleed and is not contagious. Treatment may include medicated shampoos, topical corticosteroids, vitamin-D analogues, or systemic therapy for extensive disease.

Alternate Names:

Psoriasis Of The Scalp (Scalp Psoriasis)

Scalpel

Surgical knife with interchangeable blades. Blade numbers indicate size and shape. #10: common for incisions. #11: puncture. #15: precise work.

Scalpel Handle

The reusable handle that holds a detachable scalpel blade. Different handle and blade sizes are chosen for the type and precision of the incision.

Scan

An imaging examination that creates pictures of body structures or functions using methods such as ultrasound, X-rays, CT, MRI, or radioactive tracers. The method and interpretation depend on the clinical question.

Scan Gallium

A nuclear-medicine scan using radiolabeled gallium to identify areas of inflammation, infection, or some tumors; uptake is interpreted with anatomy and clinical context.

Scanning

Systematic examination of a body region or specimen using imaging, microscopy, or another detection method to locate, characterize, or monitor abnormalities.

Scanning Electron Microscopy

A method that scans a specimen's surface with an electron beam to produce a highly magnified, three-dimensional-looking image of its shape and surface details.

Scanning Speech

Speech that is unusually slow, broken into separate syllables, and spoken with uneven rhythm or emphasis. It can occur when disease affects the cerebellum or other parts of the nervous system.

Scanning Techniques

Methods used to create images or measurements of the body or a sample. Examples include ultrasound, X-ray, CT, MRI, and nuclear-medicine scans; the method is chosen according to the clinical question.

Scaphoid

A small wrist bone on the thumb side, commonly injured when someone falls onto an outstretched hand. Pain in the hollow just behind the thumb may indicate a fracture, which sometimes heals poorly because part of the bone has limited blood flow.

Scaphoid Abdomen

A scaphoid abdomen is an unusually hollowed abdominal contour, classically seen with severe diaphragmatic hernia in a newborn but also possible with marked wasting.

Scaphoid Bone

The largest proximal-row carpal bone on the thumb side of the wrist; its waist is vulnerable to fracture and avascular necrosis because of its blood supply.

Scaphoid Fractures

Breaks in the small wrist bone near the base of the thumb, often after falling onto an outstretched hand. Pain may be felt in the hollow beside the thumb; some fractures heal poorly because part of the bone has a limited blood supply.

Scaphycephaly

A long, narrow head shape caused when the major seam running from front to back of the skull closes too early. It is a form of craniosynostosis and may require specialist assessment to protect brain and skull development.

Scapula

The shoulder blade, a flat triangular bone at the back of the chest. It connects the upper arm to the collarbone and provides attachment for muscles that move and stabilize the shoulder.

Scapulothoracic Joint

The functional gliding connection between the shoulder blade and the back of the chest wall. It is not a true joint but works with nearby joints to position and move the arm.

Scar

Fibrous tissue formed during healing after injury, inflammation, or surgery.

Scar Excessive (Keloid)

Alternate index label for Keloid.

Scar Management

Measures used to reduce symptoms and abnormal scar formation. Options include silicone products, pressure therapy, massage, corticosteroid injections, or other specialist treatments, depending on the scar and its cause.

Scar Revision

A procedure that improves the appearance, contour, flexibility, or symptoms of a scar through excision, rearrangement, grafting, laser, injection, or other selected techniques.

Scarlatina

Scarlet fever, an illness caused by toxin-producing group A Streptococcus and characterized by sore throat, fever, and a fine rough-textured rash.

Alternate Names:

Scarlet Fever (Scarlatina)

Scarlatina (Scarlet Fever (Scarlatina))

Alternate index label for Scarlet Fever (Scarlatina).

Scarlet Fever

An illness caused by toxin-producing group A Streptococcus. It usually causes sore throat, fever, and a

widespread fine, rough-textured rash; a red tongue and pale skin around the mouth may also occur.

Scarlet Fever (Scarlatina)

Alternate index label for Scarlatina.

Scarring Alopecia

Permanent hair loss caused when inflammation or injury destroys hair follicles and replaces them with scar tissue. Early scalp redness, scaling, itching, pain, or spreading hair loss needs dermatologic assessment because lost follicles cannot regrow hair.

Scars

A scar is fibrous tissue formed during healing after injury, surgery, inflammation, or burns. Scars may be flat, depressed, raised, or contractured and can itch, hurt, restrict movement, or affect appearance; treatment depends on maturity and type.

Scatter Correction

A medical-imaging method that estimates and reduces errors caused when detected radiation changes direction after passing through tissue. It can improve the accuracy of a nuclear-medicine image or measured activity.

Scatter Events

Radiation particles that change direction after interacting with tissue or another material. In medical imaging they can place signals in the wrong location or reduce contrast, so scanners use design and correction methods to limit their effect.

Scavenger Receptor

A protein on or inside a cell that recognizes and helps remove altered fats, germs, cell debris, or dying cells. It supports early immune defense but can also help fatty material build up in artery walls.

Scavenging System

Equipment that collects and removes waste anesthetic gases from an operating room. It protects staff from repeated exposure and may use a vacuum system or passive venting to carry gases safely away.

Scedosporium

A genus of environmental molds that can cause difficult-to-treat lung, sinus, skin, bone, or disseminated infections, especially in immunocompromised people.

Scedosporium Apiospermum

A mold that can cause localized or disseminated infection, including mycetoma, pneumonia, sinusitis, and brain abscesses; treatment often requires specialist antifungal care.

Scedosporium Prolifican

An environmental mold, now commonly classified as *Lomentospora prolificans*, that causes severe disseminated infection and is often resistant to antifungal drugs.

Schaalia Radingae

A normally slow-growing anaerobic bacterium of the human mouth and skin that can rarely cause abscesses or other invasive infections.

Schaalia Turicensis

A filamentous anaerobic bacterium that may be part of normal flora but can cause actinomycosis-like abscesses and other opportunistic infections.

Schatzki Ring

A thin ring of tissue narrowing the lower esophagus, often near a hiatus hernia. It may cause occasional difficulty swallowing solid food or a piece of food becoming stuck; treatment can widen the narrowed area.

Alternate Names:

Ring Schatzki (Schatzki Ring) Strictures Esophagus (Schatzki Ring)

Schedule I

A United States controlled-substance category for drugs with high misuse potential and no accepted medical use under federal law.

Schedule II

A United States legal category for medicines with ac-

cepted medical uses but high misuse, dependence, or overdose potential. Prescribing, dispensing, refills, and storage are subject to strict rules.

Schedule III

A United States legal category for medicines with accepted medical uses and less misuse potential than Schedule II substances, although dependence and misuse remain possible. Rules vary by medicine and jurisdiction.

Schedule IV

A United States controlled-substance category for drugs with accepted medical uses and lower misuse potential than Schedule III drugs.

Schedule V

A United States controlled-substance category for drugs with the lowest level of misuse potential among the federal schedules.

Scheduled Notification

A planned alert or message delivered at a specified time to remind a person about an appointment, medicine, monitoring task, or health-related action.

Scheuermann Disease

A juvenile osteochondrosis of the spine in which vertebral end plates develop irregularities and anterior wedging during skeletal growth. It commonly produces a rigid thoracic kyphosis, although the thoracolumbar or lumbar spine may also be involved. Symptoms can include back pain, fatigue, limited spinal motion, and postural deformity that becomes more apparent during adolescence. Diagnosis is based on clinical examination and characteristic radiographs; management depends on deformity severity, skeletal maturity, pain, and progression.

Scheuermann'S Disease

A growth disorder beginning in adolescence that causes several spinal bones to become wedge-shaped. This can produce a lasting rounded upper back, stiffness, pain, and sometimes breathing or activity limitations.

Schiff Base

A chemical compound formed when a primary amine reacts with an aldehyde or ketone; Schiff bases occur in biochemistry and drug chemistry.

Schiller Test

An examination of the cervix in which iodine solution is applied to highlight areas of abnormal tissue. Areas that do not stain may need further examination or biopsy; the test alone cannot diagnose cancer.

Schilling Test

An older test that measured how well the body absorbed vitamin B12, sometimes used to investigate pernicious anemia or intestinal disease. It is rarely performed now because blood tests and antibody testing have largely replaced it.

Schirmer Test

A test in which standardized filter paper strips measure tear production over a set time, commonly used to evaluate aqueous-deficient dry eye.

Schistocyte Count

Measurement of fragmented red blood cells on a blood smear, supporting evaluation of microangiopathic hemolysis, mechanical valve damage, disseminated intravascular coagulation, or severe burns.

Schistocytes

Broken, irregular, or helmet-shaped red blood cells seen on a blood-smear test. They form when red cells are damaged in abnormal small vessels, by artificial heart valves, or in other illnesses and may signal serious red-cell destruction.

Schistomicide

A medicine that kills parasitic blood flukes responsible for schistosomiasis. Treatment choice depends on the parasite species and the organs affected, and medical advice is needed because infection may cause lasting damage.

Schistosoma

A group of parasitic worms that live in blood vessels. Their young forms can enter through skin exposed to contaminated fresh water and later cause intestinal, urinary, liver, or other disease.

Schistosoma Haematobium

A parasitic blood fluke that can cause urinary schistosomiasis, including hematuria and chronic injury of the urinary tract.

Schistosoma Intercalatum

A parasitic blood fluke that causes intestinal schistosomiasis, mainly in parts of Central and West Africa, after freshwater exposure.

Schistosomiasis

A parasitic disease caused by *Schistosoma* blood flukes acquired through freshwater exposure, potentially causing intestinal or urinary inflammation, bleeding, liver disease, or chronic organ damage.

Alternate Names:

bilharzia, caused by blood flukes of the genus. Bilharzia (Schistosomiasis)

Schizencephaly

A rare condition present from birth in which a fluid-filled cleft extends through part of the brain. It results from abnormal early brain development and may cause seizures, weakness, movement problems, or delayed development, depending on the cleft's size and location.

Schizoaffective Disorder

A mental-health disorder in which a person has symptoms of schizophrenia, such as hallucinations or disorganized thinking, together with major depression or mania. Psychotic symptoms also occur for a period without a major mood episode.

Schizogony

A way some single-celled parasites reproduce without mating. One parasite cell grows and divides internally to produce many new cells, which are then released to infect other cells.

Schizoid Personality Disorder

A long-standing pattern of limited interest in close relationships and restricted emotional expression. It differs from schizophrenia because hallucinations and fixed delusions are not central features.

Alternate Names:

Personality Disorder, Schizoid

Schizophrenia

A serious mental-health disorder that can cause hallucinations, fixed false beliefs, disorganized thinking or behavior, reduced emotional expression, and difficulty functioning. Symptoms and severity vary, and treatment can reduce them.

Schizophrenia, Adolescent

Alternate index label; see *Childhood schizophrenia*.

Schizophrenia, Childhood

Alternate index label; see *Childhood schizophrenia*.

Schizophrenia, Juvenile

Alternate index label; see *Childhood schizophrenia*.

Schizotypal Personality Disorder

A long-term pattern of discomfort with close relationships, unusual beliefs or perceptions, unusual speech or behavior, and difficulty interpreting social situations. It is different from schizophrenia because persistent hallucinations and major loss of reality testing are not typical.

Alternate Names:

Personality Disorder, Schizotypal

Schlemm'S Canal

A circular drainage channel at the edge of the cornea that carries fluid from the front of the eye into blood vessels. Poor drainage can raise pressure inside the eye and contribute to glaucoma.

Alternate Names:

Canal of Schlemm

Schnitzler Syndrome

A rare inflammatory disease causing a long-lasting hives-like rash, repeated fever, bone or joint pain,

and raised inflammation tests. It is usually associated with an abnormal IgM blood protein and requires specialist evaluation.

School Age Test Or Procedure Preparation

Preparing a school-age child for a test or procedure includes age-appropriate explanations, comfort measures, caregiver support, and following any fasting or medicine instructions.

School Sores (Impetigo)

Alternate index label for Impetigo.

School-Age Children Development

School-age development includes advances in growth, coordination, language, learning, independence, social relationships, and emotional regulation, with broad normal variation.

School-Based Rehabilitation

Therapy and other support services provided in a school setting to help a child participate in education and daily school activities.

Schwann Cell

A supporting cell of the peripheral nervous system. It wraps around many nerve fibers to form their insulating myelin covering and helps maintain or repair peripheral nerves.

Schwann Cells

Glial cells of the peripheral nervous system that form myelin around many axons and support the repair and maintenance of peripheral nerves.

Schwannoma

A usually noncancerous, slow-growing tumor arising from cells that support nerves. It may cause a lump, pain, numbness, or weakness; a tumor involving the hearing and balance nerve can cause hearing loss, ringing, or dizziness.

Alternate Names:

Neurilemmoma

Schwannomatosis

A condition in which multiple schwannomas, usually slow-growing tumors of the covering of nerves, develop. The main problem is often long-lasting pain, although numbness, weakness, or other nerve symptoms can occur depending on tumor location.

Alternate Names:

Neurinomatosis

SCI

Alternate index label; see *Spinal cord injury*.

Sciatic Nerve

The body's largest nerve, running from the lower spine through the buttock and down the back of the leg. It supplies movement and sensation to much of the leg and foot.

Sciatic Neuritis (Sciatica)

Alternate index label for Sciatica.

Sciatica

Pain, tingling, numbness, or weakness that travels from the lower back or buttock down the leg, usually because a nerve root is irritated by a disk problem or narrowing of the spine.

Alternate Names:

Sciatic Neuritis (Sciatica)

Sciatica: Causes, Treatment, And Symptoms

Sciatica is radiating pain, tingling, numbness, or weakness along the sciatic-nerve distribution, commonly from lumbar disc herniation or spinal narrowing. Most cases improve with conservative care, but saddle numbness, bowel or bladder dysfunction, or progressive weakness is urgent.

Scimitar Syndrome

A birth defect in which some veins from the right lung drain to the wrong large vein instead of directly to the heart. The right lung may be smaller, and the condition can cause repeated chest infections, breathing problems, high pressure in the lung arteries, or heart failure.

Scintigraphy

Nuclear-medicine imaging in which a small amount of radioactive tracer is given and a camera records where it collects. The pattern can show the function, blood flow, or activity of organs such as bone, thyroid, kidneys, or heart.

Scintillation

The brief release of light by a material after it absorbs radiation. Detectors measure these flashes to estimate radiation and create images in some medical scans.

Scintillation Crystal

A material in some medical detectors that changes incoming radiation into tiny flashes of light. The flashes are measured to create images or estimate the amount of radioactive tracer present.

Scintillations

Flashes, sparkles, or zigzag lines seen in the field of vision. They often occur during a migraine aura but may also result from an eye or brain problem; sudden new flashes with floaters or a curtain-like shadow need urgent eye assessment.

Scirrhus

An older term for a hard cancer containing a large amount of scar-like tissue. It was used especially for some breast or stomach cancers and describes texture rather than a separate cancer type.

Scissors

Instruments with two blades used to cut tissue, sutures, dressings, or other material. Surgical types vary in length, blade shape, and sharpness; examples include Mayo and Metzenbaum scissors.

Scissors (Surgical)

Surgical instruments designed to cut tissue, sutures, dressings, or other materials. Different shapes and blade types are selected for delicate, deep, curved, or heavy-duty work.

Alternate Names:

Surgical scissors

Scissors (Vascular)

A surgical instrument with two blades used to cut tissue, sutures, dressings, or other materials during vascular procedures.

Alternate Names:

Vascular scissors

Sclera

The sclera is the tough white outer coat of the eye that protects the globe and provides attachment for eye muscles.

Scleral Buckling

A retinal-detachment repair procedure in which a silicone band or buckle is placed around the outside of the eye to support the retinal break and reduce traction.

Scleredema Diabeticorum

Scleredema diabeticorum is thickening and hardening of the skin on the upper back and neck, usually associated with long-standing diabetes and obesity.

Scleritis

Painful inflammation of the white outer coat of the eye. It is often associated with autoimmune disease and can damage the eye or threaten vision, so prompt eye assessment is needed.

Alternate Names:

Inflammation Sclera (Scleritis)

Scleroderma

A group of autoimmune diseases that make skin thick and tight. In systemic sclerosis, scarring and blood-vessel changes can also damage the swallowing tube, lungs, kidneys, heart, and other organs.

Alternate Names:

Arthritis Scleroderma (Scleroderma) Sclerosis, Systemic

Scleroma

A long-lasting infection, usually of the nose and upper airway, caused by *Klebsiella rhinoscleromatis*. It can produce scar tissue, blocked breathing, nasal discharge, voice changes, or facial deformity.

Scleromyxedema

A rare long-term skin disorder in which many small, firm, waxy bumps and thickened skin develop, especially on the face, neck, and hands. It may also affect muscles, joints, swallowing, lungs, or other organs.

Sclerosing Cholangitis

Inflammation and scarring that narrow or block the tubes carrying bile from the liver. It may cause itching, jaundice, abdominal pain, repeated infections, and liver damage; the cause guides treatment and follow-up.

Sclerosing Mesenteritis

A rare inflammatory condition causing thickening and scarring in the tissue that supports the intestines. It may cause abdominal pain, nausea, weight loss, or bowel blockage, although some people have no symptoms.

Sclerosing Peritonitis

Thickening and scarring of the lining inside the abdomen, sometimes after long-term peritoneal dialysis. The scar tissue can restrict the intestines and cause pain, vomiting, poor nutrition, or bowel blockage.

Sclerosing Sialadenitis

Long-term inflammation that makes a salivary gland swollen and hard because scar-like tissue forms inside it. It may be related to an immune disorder and can cause dry mouth, pain, or repeated swelling.

Sclerosis

Abnormal hardening or scarring of tissue, often from excess connective tissue, chronic inflammation, degeneration, or neurologic plaques; the affected organ determines the specific disease.

Sclerosis, Multiple

Alternate index label; see *Multiple sclerosis*.

Sclerosis, Systemic

Alternate index label; see *Scleroderma*.

Sclerosteosis

A rare inherited condition in which bones, especially the skull, become abnormally thick. It may cause a broad or tall build, joined fingers, headaches, hearing loss, facial weakness, or pressure on nerves inside the skull.

Sclerotherapy

A treatment in which an irritating or closing agent is injected into a blood vessel or body cavity to make it scar and seal, commonly used for varicose veins and selected vascular lesions.

Scoliosis

A lasting sideways curve of the spine that may also twist the spine and rib cage. It may begin without a known cause, be present from birth, result from nerve or muscle disease, or develop with aging.

Alternate Names:

Spinal Curvature

Scopolamine

Scopolamine is a muscarinic antagonist used mainly to prevent motion sickness and postoperative nausea; dry mouth, blurred vision, urinary retention, confusion, and other anticholinergic effects may occur.

Scopolamine Hydrobromide

The hydrobromide salt of scopolamine, an anticholinergic medicine used mainly to prevent motion sickness and postoperative nausea.

Scopulariopsis

Scopulariopsis is a mold genus that rarely causes opportunistic infection, especially in people with immune suppression or implanted devices.

Scorbutic

Relating to scurvy caused by severe vitamin C deficiency. It can cause easy bruising, bleeding gums, poor wound healing, anemia, bone or joint pain, and weakness; treatment with vitamin C and an adequate diet usually leads to recovery.

Scorpion Fish Sting

A painful injury from the venomous spines of a scorpion fish, causing severe local pain and swelling and sometimes whole-body symptoms. The wound needs urgent medical assessment because spines or venom may remain in the injury.

Scorpion Sting

A venomous injury from a scorpion, usually causing immediate pain, burning, redness, or tingling. Some species can cause muscle twitching, abnormal eye movements, breathing difficulty, or dangerous autonomic symptoms.

Alternate Names:

Stings, Scorpion

Scorpions

Venomous arachnids whose stings can cause local pain and, depending on the species, sweating, muscle spasms, breathing problems, or other serious symptoms.

Scotoma

A blind or blurred spot within an otherwise usable field of vision. It may result from retinal disease, optic-nerve damage, migraine, stroke, or another eye or brain disorder.

Scrape

A scrape is a superficial abrasion in which friction removes part of the skin surface; cleaning, protection, and monitoring for infection support healing.

Screen Time And Children

Time children spend using televisions, computers, phones, tablets, or game devices; excessive or poorly timed use can affect sleep, activity, learning, mood, and family routines.

Screening

Testing people without symptoms to identify a disease or an increased risk of disease. The appropriate test, age range, interval, and follow-up depend on the condition, individual risk, and current guidance; screening benefits must be balanced against harms.

Screening (Geriatric)

Checking older adults who have no symptoms for diseases or risks that may benefit from early detection. Decisions should consider expected benefit, possible harm, life expectancy, health goals, and preferences; examples include falls, depression, osteoporosis, and selected cancers.

Alternate Names:

Geriatric screening; screening in older adults

Screening And Diagnosis For HIV

Testing for human immunodeficiency virus using an antigen-antibody assay or nucleic-acid test, followed by confirmatory testing and assessment of immune status when positive.

Screening Guidelines

Recommendations describing who should be screened for a disease, which test to use, and when to begin or repeat testing.

Screening Procedure

A test or examination offered to people without symptoms to detect disease or risk early enough for effective prevention or treatment; eligibility and intervals depend on evidence and risk.

Screening Program

An organized public-health service that systematically invites a defined population to undergo testing for an asymptomatic condition, with quality-assured follow-up, diagnosis, treatment, and evaluation of benefits and harms.

Screening Study

A planned investigation of an asymptomatic population to identify early disease, precursor lesions, or risk factors using a validated test and follow-up pathway.

Screening Test

A test applied to people without symptoms or a known diagnosis to identify those at increased risk of a condition. A screening result usually requires a diagnostic or confirmatory evaluation before treat-

ment is initiated.

Screws

Threaded metal devices used to hold broken bones together or attach plates and other implants securely to bone.

Script

A script is a written set of instructions or a prescription; in healthcare, a prescription specifies the medicine, dose, route, timing, and duration.

Scrivener'S Palsy

An older term for task-specific hand dystonia or cramp occurring during writing.

Scrofula

Tuberculous infection of cervical lymph nodes, producing chronic neck swellings that may suppurate or form draining sinuses; nontuberculous mycobacteria can cause a similar presentation.

Scrofulous

Scrofulous is an old term for tuberculous infection of lymph nodes, especially in the neck, which can cause chronic swelling and draining sinuses.

Scrombotoxin Poisoning

Alternate index label; misspelling of *Scombroid poisoning*.

Scrotal Calcinosis

Firm, usually painless calcium deposits in the skin of the scrotum that appear as one or more whitish or yellowish lumps. They may become tender, ulcerate, or release a chalky material; removal is considered if they cause symptoms.

Scrotal Infection

Infection of the scrotal skin or underlying structures, which may cause redness, swelling, warmth, pain, or drainage. Rapidly worsening pain, fever, discoloration, or severe swelling is an emergency because serious soft-tissue infection must be excluded.

Scrotal Masses

Lumps or swellings in the scrotum, arising from the skin, fluid around a testicle, veins, infection, hernia, or a testicular tumor. A new, firm, painless, or rapidly growing lump needs prompt examination and ultrasound.

Scrotal Pain

Pain in the scrotum caused by infection, trauma, hernia, fluid collections, varicocele, or testicular torsion. Sudden severe pain, nausea, a high-riding testis, or abnormal testicular position requires immediate assessment for torsion.

Scrotal Swelling

Enlargement of the scrotum caused by fluid, inflammation, infection, hernia, varicocele, hydrocele, tumor, trauma, or testicular torsion; sudden pain is an emergency.

Scrotal Ultrasound

Ultrasound imaging of the scrotum and testes used to evaluate pain, swelling, masses, torsion, infection, trauma, and blood flow.

Scrotum

The scrotum is the external skin-and-muscle sac containing the testes and epididymides; its muscles help regulate testicular temperature, and swelling or pain may indicate infection, torsion, hernia, or tumor.

Scrub In

To scrub in is to perform surgical hand antisepsis and put on sterile clothing and gloves before participating in a sterile procedure.

Scrub Up

To scrub up means to clean and antiseptically prepare the hands and forearms before a sterile procedure.

Scrubs

Scrubs are protective work garments commonly worn by healthcare staff; they reduce clothing con-

tamination but do not replace hand hygiene or other precautions.

Scurf

Fine flakes or scales shed from the skin, especially the scalp. It may occur with dry skin, dandruff, eczema, psoriasis, infection, or irritation and may be accompanied by itching or redness.

Scurvy

A disease caused by severe vitamin C deficiency. It can cause bleeding or swollen gums, easy bruising, small skin bleeds, poor wound healing, anemia, bone or joint pain, and fatigue.

Sea-Blue Histocyte

An immune cell that appears blue-green under a microscope because it contains stored fats or cell-waste pigment. It may be seen in some storage, blood, or metabolic disorders, but the finding alone does not identify a disease.

Sea-Sickness

Motion sickness caused by conflicting signals from the inner ear, eyes, and body during travel on a boat or ship. It may cause nausea, vomiting, dizziness, sweating, headache, and pallor.

Seasonal Affective Disorder

Depression that repeatedly begins during a particular season, most often autumn or winter, and improves at another time of year. Symptoms may include low mood, loss of interest, tiredness, oversleeping, increased appetite, and social withdrawal.

Seasonal Affective Disorder Syndrome

A recurring depression pattern linked to a particular season, often beginning in autumn or winter. Symptoms may include low mood, tiredness, oversleeping, increased appetite, withdrawal, and reduced interest in activities.

Seasonal Allergies (Hay Fever)

Alternate index label for Hay Fever.

Seasonal Allergy

Alternate index label; see *Hay fever*.

Sebaceous Adenoma

A sebaceous adenoma is a usually benign tumor of sebaceous glands that can appear as a yellowish skin nodule and may be associated with Muir-Torre syndrome.

Sebaceous Carcinoma

An uncommon cancer arising from sebaceous, or oil-producing, glands. It often appears as a firm or yellowish eyelid or skin nodule and may require biopsy and specialist treatment.

Sebaceous Cyst

A common but imprecise term for an epidermoid cyst, a keratin-filled cyst beneath the skin.

Sebaceous Epithelioma

A benign sebaceous neoplasm, often presenting as a yellowish papule or nodule. Multiple or unusual lesions may warrant assessment for a DNA mismatch-repair syndrome such as Muir-Torre syndrome.

Sebaceous Gland

A small gland in the skin that secretes sebum (oil) into hair follicles to lubricate and waterproof the skin and hair.

Sebaceous Gland Carcinoma

Sebaceous gland carcinoma is an uncommon skin cancer arising from oil glands, often appearing as a firm yellowish eyelid or skin lump.

Sebaceous Glands

Skin glands that produce sebum, an oily substance usually released into hair follicles. They are most abundant on the face and scalp and contribute to acne when blocked or inflamed.

Sebaceous Hyperplasia

A benign enlargement of sebaceous glands, presenting as small yellowish papules with central umbilication, usually on the face of adults.

Seborrhea

Seborrhea is excessive or altered oil production that contributes to greasy scale and inflammation, commonly in seborrheic dermatitis of the scalp, face, or chest. Gentle cleansing, medicated shampoos, and topical anti-inflammatory or antifungal treatment may help.

Seborrheic Dermatitis

A common long-term inflammation of oily skin, especially the scalp, eyebrows, sides of the nose, chest, and skin folds. It causes red or pink patches with greasy white or yellow scale; dandruff is a mild scalp form.

Alternate Names:

Dermatitis, Seborrheic

Seborrheic Keratoses

Common, benign, epidermal skin tumors presenting as waxy, stuck-on, pigmented plaques with a rough, verrucous surface, typically appearing on the trunk and face of middle-aged and older adults. They are the most common benign skin neoplasm and are caused by keratinocyte proliferation.

Seborrheic Keratosis

A benign epidermal tumor appearing as stuck-on, waxy, hyperpigmented plaques with a verrucous surface. They are extremely common in older adults and increase in number with age. Seborrheic keratoses are not premalignant.

Alternate Names:

Keratosis, Seborrheic

Seborrhoea

A chronic inflammatory skin condition affecting sebum-rich areas: scalp, face (nasolabial folds, eyebrows), chest, and intertriginous areas. See Seborrheic Dermatitis.

Seborrhoeic

Relating to increased or altered activity of sebaceous glands or to areas rich in these glands, such as the scalp, face, chest, and upper back.

Seborrheic Keratosis

A common harmless skin growth that may be brown, black, or light-colored with a waxy, rough, or stuck-on appearance. It is not contagious or cancerous, but changing lesions should be checked.

Sebum

An oily substance made by skin glands that lubricates and protects the skin and hair. Excess production can contribute to oily skin, acne, and dandruff, while changes may accompany some skin disorders.

Seckel Syndrome

A rare inherited condition causing severe growth restriction before and after birth, a very small head, characteristic facial features, and often developmental or intellectual disability. Bone, blood, and other birth differences may also occur.

Secobarbital Overdose

Poisoning from taking too much secobarbital, a sedative medicine. It can cause extreme sleepiness, confusion, slowed breathing, coma, or death and requires emergency care.

Second Malignancy

A new, separate cancer that develops after an earlier cancer. The risk may be influenced by inherited factors, previous radiation or chemotherapy, age, and other exposures; it is different from recurrence of the first cancer.

Second Messenger Systems

Internal signaling systems that carry a message from a hormone, nerve chemical, or growth factor at the cell surface to processes inside the cell. They can change contraction, secretion, metabolism, gene activity, or cell growth.

Second Messengers

Small molecules inside cells that pass along messages received from hormones, nerve chemicals, or other outside signals. They help control contraction, secretion, metabolism, gene activity, and cell growth.

Second Opinion

An independent medical assessment by another qualified clinician to help confirm or clarify a diagnosis, prognosis, or treatment plan.

Second Stage Of Labor

The part of childbirth that begins when the cervix is fully open and ends when the baby is born. It includes descent of the baby and pushing; its length varies with previous births, pain relief, the baby's position, and the health of parent and baby.

Second Trimester

The middle part of pregnancy, from 14 through 27 completed weeks. The fetus grows rapidly, movement is often felt, and ultrasound and blood screening may assess development and certain conditions; the timing and tests vary by pregnancy and local care.

Second-Degree AV Block

A heart-rhythm problem in which some electrical signals from the upper chambers fail to reach the lower chambers. The heartbeat may be slow or irregular; certain patterns can progress to complete heart block and need urgent assessment.

Second-Degree Burn

A burn that damages the outer skin and part of the layer beneath it. The area is usually painful, red, moist, and blistered; deeper burns may look pale and heal slowly. Large, deep, or sensitive-area burns need medical assessment.

Second-Hand Smoke

Smoke inhaled from burning tobacco products or exhaled by a person who is smoking. It contains toxic substances and increases health risks in exposed people.

Second-Look Surgery

Second-look surgery is a planned or follow-up operation performed to inspect healing, remove remaining disease, assess treatment response, or manage complications.

Secondary Adrenal Insufficiency

Reduced production of adrenal hormones because the pituitary or brain does not provide enough stimulation, often after long-term steroid treatment is stopped suddenly. It can cause fatigue, weakness, nausea, low blood pressure, and low blood sugar; skin darkening and salt loss are less typical than in primary adrenal failure.

Secondary Amenorrhea

Absence of menstruation for at least three months in someone with previously regular cycles or six months with previously irregular cycles, caused by pregnancy, endocrine, ovarian, uterine, or systemic factors.

Secondary Attack Rate

The proportion of susceptible people who become infected after contact with an initial case during a defined period. It helps estimate how readily an infection spreads in households, schools, healthcare settings, or other close-contact groups.

Secondary Brain Cancer

Alternate index label; see *Brain metastases*.

Secondary Hyperparathyroidism

Overactivity of the parathyroid glands in response to low calcium, abnormal phosphate, vitamin-D deficiency, or kidney disease. It can weaken bones, cause bone pain, and contribute to calcium deposits in blood vessels.

Secondary Hypertension

High blood pressure caused by another condition, medicine, or substance. Possible causes include kidney disease, hormone disorders, sleep apnea, narrowed arteries, pregnancy, steroids, stimulants, or certain pain medicines.

Secondary Hypothyroidism

Low thyroid-hormone production because the pituitary or nearby brain area does not provide enough thyroid-stimulating signal. It may cause tiredness, feeling cold, constipation, dry skin, slow heart rate, or menstrual changes.

Secondary Immune Response

A faster and stronger defense when the body meets a germ or foreign substance again. Memory immune cells from the first exposure respond quickly and usually produce antibodies and other defenses more effectively.

Secondary Immunodeficiency

Reduced immune function caused by an acquired condition or exposure rather than a primary genetic disorder. Causes include HIV infection, cancer, malnutrition, medicines, and chronic disease; the manifestations depend on which immune functions are impaired.

Secondary Infections

Infections that develop during or after another disease, injury, or treatment because of tissue damage, altered defenses, or immunosuppression.

Secondary Osteoporosis

Bone loss caused by another illness, medication, or prolonged immobility.

Secondary Parkinsonism

Secondary parkinsonism is slowed movement, rigidity, tremor, or postural instability caused by another condition, medicine, toxin, vascular injury, or structural brain disease.

Secondary Prevention

Finding and treating a disease early to stop it worsening or causing complications. Examples include screening for some cancers, checking blood pressure, testing for early diabetes, and treating an abnormality before it produces serious symptoms.

Secondary Sexual Characteristics

Physical changes that develop during puberty and are not directly part of the reproductive organs, such as breast development, facial or body hair, voice changes, and changes in body shape.

Secondary Progressive Multiple Sclerosis

A phase of multiple sclerosis in which disability

gradually worsens over time after an earlier relapsing pattern. Relapses may still occur, but progressive walking, strength, vision, bladder, thinking, or other problems can develop even between attacks.

Alternate Names:

SPMS; Secondary-progressive MS

Secondary Syphilis

The stage of syphilis that occurs weeks or months after the first sore when the bacteria spread through the body. It may cause a widespread rash, including the palms and soles, swollen glands, fever, tiredness, mouth patches, or moist lesions and requires treatment.

Secondary Systemic Amyloidosis

Secondary systemic amyloidosis results when chronic inflammation or infection drives production of serum amyloid A, which deposits in organs such as the kidneys, liver, and spleen.

Secondary Tumor

A tumor formed when cancer cells spread from the original site to another part of the body.

Secretin

A hormone released by the first part of the small intestine when acidic stomach contents enter it. Secretin prompts the pancreas and bile ducts to release alkaline fluid, helping neutralize acid and support digestion.

Secretin Stimulation Test

A test in which secretin is given and changes in blood or digestive fluid are measured. It may assess pancreatic function or investigate a rare tumor that releases excess gastrin and stomach acid.

Secretion

The release of a substance from cells or glands into the blood, a body passage, or outside the body. Examples include saliva, hormones, digestive juices, mucus, and substances removed into urine or bile.

Secretory Diarrhea

Watery diarrhea caused when the intestine releases too much water and salt or absorbs too little. It may continue even without eating and can result from infection, medicines, bile-acid problems, hormone-producing tumors, or inflammation.

Section

A defined part or subdivision of an organ, document, study, or procedure; in anatomy and imaging, the term identifies a specific slice or region examined.

Section, Cesarean

Cesarean section, an operation delivering a baby through incisions in the abdomen and uterus when vaginal birth is unsafe, impossible, or not advisable.

Sed Rate

A blood test measuring how quickly red blood cells settle, used as a nonspecific marker of inflammation.

Alternate Names:

Erythrocyte sedimentation rate; ESR

Sedation

The use of medicines to make a person relaxed, drowsy, or less aware during a procedure while maintaining appropriate monitoring and breathing.

Sedation Dentistry

The use of medicine during dental care to reduce fear, discomfort, or awareness. It may involve inhaled gas, tablets, or medicines through a vein; deeper sedation can affect breathing and requires trained staff and continuous monitoring.

Sedation Levels

The depth of medicine-induced drowsiness, ranging from minimal relaxation with normal responses to deep sedation with limited response and possible breathing or airway support. Sedation can deepen unexpectedly, so appropriate monitoring is required.

Sedative-Hypnotic

A medicine or substance that slows brain activity to reduce anxiety or cause sleep. Examples in-

clude benzodiazepines, barbiturates, and some sleep medicines. Too much can cause confusion, coma, or dangerously slow breathing, especially with alcohol or opioids.

Sedative-Hypnotic Toxidrome

A pattern of poisoning caused by substances that slow brain activity. It may cause extreme sleepiness, slurred speech, poor coordination, slow breathing, coma, or loss of airway protection, especially when combined with alcohol or opioids.

Sedatives

Medicines or substances that slow brain activity and produce calmness, sleepiness, or reduced anxiety. Excessive amounts can impair coordination, lower blood pressure, or dangerously slow breathing, especially with alcohol or opioids.

Sedimentation Rate

The erythrocyte sedimentation rate, a nonspecific blood test measuring how quickly red cells settle in a tube and sometimes supporting assessment of inflammation when interpreted with other findings.

Segmental Pressures

Blood-pressure readings taken at several points on the arms and legs to compare circulation. A large difference between levels can help locate a narrowed or blocked artery in peripheral artery disease.

Segmentation

Repeated squeezing of short sections of the intestine that mixes food with digestive fluids and brings it against the intestinal lining for absorption. Unlike peristalsis, it mainly mixes contents rather than pushing them forward.

Segmentectomy

Surgery removing one or more defined sections of a lung rather than an entire lobe. It may treat a small, localized lung cancer or another focal problem while preserving more lung tissue; bleeding, air leakage, infection, and reduced breathing capacity are possible.

Alternate Names:

Sublobar Resection; Anatomical Segmentectomy; Pulmonary Segmentectomy

SEID

Alternate index label; see *Myalgic encephalomyelitis/chronic fatigue syndrome (ME/CFS)*.

Seizure

A temporary episode caused by abnormal electrical activity in the brain. It may cause shaking, stiffening, unusual sensations, staring, confusion, or loss of awareness and can be triggered by fever, illness, injury, medicines, or epilepsy.

Seizure Disorder

Alternate index label; see *Epilepsy*.

Seizure Disorders

Conditions characterized by recurrent unprovoked seizures or an enduring predisposition to them, classified by seizure type and cause and treated according to epilepsy syndrome and risk.

Seizure Febrile (Febrile Seizures)

Alternate index label for Febrile Seizures.

Seizure Fever Induced (Febrile Seizures)

Alternate index label for Febrile Seizures.

Seizure, Absence

Alternate index label; see *Absence seizure*.

Seizure, Febrile

Alternate index label; see *Febrile seizure*.

Seizure, Grand Mal

Alternate index label; see *Tonic-clonic (grand mal) seizure*.

Seizure, Petit Mal

Alternate index label; see *Absence seizure*.

Seizure, Temporal Lobe

Alternate index label; see *Temporal lobe seizure*.

Seizures

Seizures are transient episodes of abnormal excessive brain electrical activity causing changes in awareness, movement, sensation, behavior, or autonomic function.

Selective Deficiency Of IgA

A usually inherited immune problem in which the antibody IgA is very low or absent while other antibodies are near normal. Some people have repeated sinus, chest, or bowel infections, allergies, or autoimmune disease; others have no symptoms.

Selective Estrogen Receptor Modulator

A medicine that acts like estrogen in some tissues and blocks estrogen effects in others. Different medicines in this group are used for conditions such as osteoporosis, breast-cancer risk reduction, or breast cancer.

Selective Estrogen Receptor Modulators

Medicines that act like estrogen in some tissues and block estrogen effects in others, depending on the organ.

Alternate Names:

SERMs

Selective IgA Deficiency

An immune condition with very low or absent immunoglobulin A, an antibody protecting mucous-lined surfaces. Some people have repeated respiratory or intestinal infections, allergies, autoimmune disease, or no symptoms.

Selective Antibody Deficiency With Normal Immunoglobulins

An immune problem in which the total amount of antibodies is normal but the body does not make enough protective antibodies against some germs after vaccination. Repeated ear, sinus, or chest infections may occur.

Selective Mutism

A childhood anxiety disorder in which a person speaks comfortably in some settings but repeatedly

cannot speak in others, such as school or unfamiliar social situations. It lasts at least one month and can interfere with learning, relationships, or daily life.

Selective Serotonin Reuptake Inhibitors

Antidepressants that increase serotonin signaling by slowing its reabsorption by nerve cells. They treat depression and several anxiety disorders, but effects take time and may include nausea, sexual problems, sleep changes, or withdrawal symptoms.

Alternate Names:

SSRIs

Selective Serotonin-Reuptake Inhibitors (SSRIs)

Antidepressants that increase the availability of serotonin, a chemical used for communication between nerve cells. They treat depression and anxiety disorders; nausea, sleep changes, sexual problems, and withdrawal symptoms can occur.

Selegiline

A medicine that blocks monoamine oxidase B, used for Parkinson disease and sometimes depression; interactions require caution.

Selenium

A mineral needed for antioxidant enzymes, thyroid function, reproduction, and immune activity. Deficiency is uncommon in many regions, while excessive supplements can cause hair or nail changes, stomach upset, nerve problems, or toxicity.

Selenium In Diet

Selenium in diet provides a trace mineral needed for antioxidant enzymes, thyroid hormone metabolism, and reproduction. Excess supplements can cause toxicity, so intake should remain within recommended limits.

Selenium Sulphide

A skin-applied medicine that reduces certain fungi and excess scaling. It is used for dandruff and seborrheic dermatitis and may cause irritation, dryness, discoloration, or an unpleasant smell if misused.

Selenium-75

A radioactive form of selenium used mainly as a calibration or testing source in imaging and measurement equipment. It releases radiation as it decays and has a half-life of about 120 days.

Self Catheterization - Female

Intermittent insertion and removal of a catheter through the female urethra to empty the bladder when normal urination is inadequate, reducing retention and protecting kidney function.

Self Catheterization - Male

Intermittent insertion and removal of a catheter through the male urethra to drain the bladder when neurologic, obstructive, or other conditions prevent adequate emptying.

Self Gratification Sexual (Masturbation)

Alternate index label for Masturbation.

Self Harming

Alternate index label; see *Self-injury/cutting*.

Self-Diagnosing Body Dysmorphic Disorder

Alternate index label for BDD.

Self-Efficacy

A person's confidence in their ability to manage a health condition, follow a treatment plan, and handle symptoms. It can influence participation in care and health outcomes.

Self-Harm

Deliberate injury or poisoning of oneself. It may be related to overwhelming emotions, mental illness, trauma, or suicidal thoughts, and can include cutting, burning, hitting, or taking too much medicine. Every episode deserves compassionate safety assessment.

Self-Help Group

A peer group in which members support one another while changing a harmful behavior or coping with a

problem.

Alternate Names:

Support group

Self-Injury/Cutting

Deliberate injury to one's own body, often used to cope with overwhelming emotions and requiring compassionate assessment of safety and mental health.

Alternate Names:

Self Harming

Self-Management

Actions a person takes to monitor and manage a health condition, including treatment use, symptom monitoring, and lifestyle measures.

Self-Poisoning

Intentional ingestion or exposure to a potentially harmful substance, often requiring urgent medical and mental-health assessment.

Self-Testing For COVID-19

Testing a sample collected at home, usually from the nose, to check for COVID-19 infection. A negative result does not always rule out infection, especially early in illness.

Sella Turcica

A saddle-shaped hollow in a bone at the base of the skull that holds the pituitary gland. The pituitary controls many hormones, so changes in this area can affect growth, reproduction, metabolism, and the body's response to stress.

Semaglutide

Semaglutide is a glucagon-like peptide-1 receptor agonist used for selected patients with type 2 diabetes or chronic weight management. It slows gastric emptying and reduces appetite and glucose levels; nausea, gallbladder disease, pancreatitis risk, and contraindications require review.

Semen

The fluid released during ejaculation, containing

sperm from the testes mixed with fluids from the seminal vesicles, prostate, and other glands. It carries and supports sperm; changes in amount, color, blood, or pain may need assessment.

Semen Analysis

A laboratory examination measuring semen volume and sperm number, movement, shape, and vitality. It is a common first test when assessing fertility; results vary, so an abnormal result is often repeated and interpreted with the couple's history.

Semen Blood (Blood In Semen)

Alternate index label for Blood In Semen.

Semen DNA Analysis

A test that examines genetic material inside sperm, usually for selected infertility or repeated-pregnancy-loss evaluations. It may detect increased DNA damage, but its usefulness and treatment implications depend on the clinical situation.

Semi-Fowler Position

A semiupright position in which the head and upper body are elevated about 30 to 45 degrees.

Semicircular Canals

Three curved, fluid-filled tubes in each inner ear that sense head rotation and help maintain balance. Problems affecting them can cause spinning dizziness, nausea, or difficulty keeping the eyes steady when the head moves.

Semilunar Cartilages

The two crescent-shaped pads of tough cartilage inside the knee, commonly called the menisci. They cushion the joint, spread weight, and improve stability; a tear can cause pain, swelling, catching, or locking.

Semilunar Valves

The aortic and pulmonary valves, which open during ventricular contraction and close during ventricular relaxation to prevent backflow into the ventricles.

Seminal Vesicle

One of a paired set of male accessory reproductive glands behind the urinary bladder. Its fructose-rich secretion contributes substantially to semen and joins the vas deferens through the ejaculatory duct.

Seminal Vesicles

Paired glands behind the bladder that produce much of the fluid in semen. Their secretions contain nutrients and other substances that support sperm movement and help form the ejaculate.

Seminiferous Tubules

Tiny, coiled tubes inside the testes where sperm are made. Supporting cells nourish developing sperm and help create the environment needed for sperm production.

Seminoma

A cancerous tumor arising from sperm-forming cells in the testis. It often grows slowly and is highly treatable with surgery, radiation, chemotherapy, or careful monitoring depending on its stage.

Senescence

Changes and gradual loss of function associated with aging. In cells, senescence is a lasting state in which a cell stops dividing but remains active; an accumulation of such cells may contribute to aging and disease.

Alternate Names:

Biological aging

Senile Lentigines

Flat, sharply defined brown or tan spots caused by chronic ultraviolet exposure, commonly appearing on sun-exposed skin with age.

Senility

Senility is an outdated, imprecise term for cognitive decline in older age; modern assessment identifies specific causes such as dementia, delirium, depression, or medical illness.

Senna

A plant-derived stimulant laxative containing sennosides, used short term for constipation and sometimes to empty the bowel before a procedure. It increases intestinal activity and may cause abdominal cramps or diarrhea; prolonged or excessive use can cause dependence or fluid and electrolyte disturbances.

Sensate Focus Techniques

Structured, gradual touch exercises used in sex therapy to reduce performance pressure, improve body awareness, and rebuild comfortable intimacy. Partners agree on boundaries and initially avoid goals such as intercourse or orgasm.

Alternate Names:

Sensate focus

Sensation

Awareness of changes such as touch, pain, temperature, sound, movement, or body position. Special nerve endings detect these changes and send messages to the brain, where they are experienced and interpreted.

Sense

A sense is a capacity to detect and interpret stimuli such as touch, temperature, pain, sound, light, smell, taste, position, or internal body signals.

Sensitisation

A process in which repeated exposure makes the body's immune, nerve, or behavioral response stronger or easier to trigger. Sensitization can contribute to allergy, chronic pain, and some learned responses.

Sensitivity

In testing, the proportion of people who truly have a condition and receive a positive result. In other settings, it means how strongly a person, cell, or instrument responds to a stimulus.

Sensitivity Analysis

Sensitivity analysis tests how much a study's con-

clusion changes when assumptions, measurements, or input values are varied.

Sensitivity, Gluten (Nonceliac Gluten Sensitivity (Intolerance))

Alternate index label for Nonceliac Gluten Sensitivity (Intolerance).

Sensitized

Having antibodies against human-cell markers called HLA. This can happen after pregnancy, transfusion, or transplantation and may make it harder to find a suitable organ donor or increase the risk of transplant rejection.

Sensorimotor Polyneuropathy

Damage to many nerves causing both altered sensation and weakness, usually starting in the feet or hands. Numbness, burning pain, poor balance, reduced reflexes, and muscle wasting may occur; diabetes is one possible cause.

Sensorineural Deafness

Sensorineural deafness is hearing loss from dysfunction of the inner ear, auditory nerve, or central pathways rather than blockage of sound conduction.

Sensorineural Hearing Loss

Hearing loss caused by damage to the inner ear or the nerve carrying sound to the brain. It may cause difficulty understanding speech, especially in noise, and can result from aging, loud noise, infection, inherited conditions, or medicines.

Sensorium

A person's level of consciousness, awareness, attention, and understanding of surroundings. Changes may include confusion, drowsiness, agitation, disorientation, or reduced responsiveness and can signal illness, medicines, intoxication, or brain injury.

Sensory

Relating to sensation or to nerves and pathways that carry information such as touch, pain, temperature,

position, hearing, or vision to the brain.

Sensory Cortex

Areas of the brain that receive and interpret information about touch, pain, temperature, pressure, and body position. Damage can cause numbness, altered sensation, or difficulty recognizing where a body part is.

Sensory Deprivation

A major reduction in normal input from sight, sound, touch, movement, or other senses. Prolonged deprivation can affect mood, thinking, sleep, orientation, and perception, especially in isolated or vulnerable people.

Sensory Level

A clear line on the body below which feeling is reduced or changed. It can suggest a problem in the spinal cord, especially when accompanied by weakness, altered reflexes, or bladder and bowel problems, and needs prompt assessment.

Sensory Nerves

Nerves that carry information such as touch, pain, temperature, and position from the body to the spinal cord and brain. Damage may cause numbness, tingling, burning pain, or reduced awareness of injury.

Sensory Neuron

A nerve cell that carries information from receptors toward the brain and spinal cord. It helps detect touch, pain, temperature, pressure, body position, sound, light, smell, and taste.

Sensory Processing Disorder

Difficulty noticing, interpreting, or responding to sound, touch, movement, light, or body position. It may affect behavior, learning, coordination, or daily activities and can occur with other developmental conditions; assessment and support are individualized.

Sensory Receptors

Specialized cells or nerve endings that detect stimuli such as touch, temperature, pain, light, sound, or chemical changes.

Sentinel Event

An unexpected healthcare event that causes death or serious physical or psychological harm, or creates a major risk of such harm. It requires prompt investigation and system changes to reduce the chance of recurrence.

Sentinel Injury

An unexpected injury in an infant who cannot yet move independently, such as bruising, a mouth injury, or a fracture. It may be an early sign of serious harm and requires careful examination, explanation, safeguarding assessment, and documentation.

Sentinel Lymph Node

The first lymph node or group of nodes most likely to receive fluid draining from a tumor. Removing and examining them can show whether cancer has begun to spread and help determine its stage.

Sentinel Lymph Node Biopsy For Melanoma

Sentinel lymph-node biopsy identifies and removes the first draining lymph node or nodes from a melanoma site to detect microscopic spread. The result helps stage disease and guide further treatment; it does not remove all regional nodes routinely.

Sentinel Lymph-Node Biopsy

Surgical removal and pathologic examination of the first draining lymph node or nodes from a primary tumor. It is used for selected melanomas, breast cancers, and other tumors to assess regional metastatic risk and guide staging.

Sentinel Node Biopsy

Alternate index label for sentinel lymph-node biopsy: removal and examination of the first draining node or nodes to which a tumor is likely to spread, used to assess regional metastasis.

Sentinel Surveillance

Ongoing collection of health information from selected clinics, laboratories, or communities to track disease trends. It can provide early warning of outbreaks but does not count every case in the population.

Separation Anxiety

Separation anxiety is developmentally excessive fear or distress when apart from an attachment figure, causing avoidance, physical complaints, sleep problems, or impairment. Treatment may include gradual exposure, family-based support, cognitive behavioral therapy, and selected medication.

Separation Anxiety Disorder

Excessive and persistent fear about being apart from a parent, partner, or other attachment figure. It may cause repeated reassurance-seeking, refusal to leave home, nightmares, physical symptoms, or difficulty attending school or work.

Separation Anxiety In Children

Developmentally excessive distress when separated from an attachment figure, with worry, refusal, physical symptoms, nightmares, or school avoidance that impairs daily life.

Separation Of The Iris

A tear that pulls the colored part of the eye away from its normal attachment, usually after a blunt injury. It may cause double vision, glare, an irregular pupil, bleeding, or increased eye pressure and needs eye-specialist assessment.

Sepsis

A life-threatening condition in which the body's response to an infection damages its own organs. It may cause confusion, very fast breathing or heart-beat, low blood pressure, reduced urine, or severe weakness and needs emergency treatment.

Alternate Names:

Septicemia (Sepsis)

Sepsis Syndrome

A range of severe responses to infection, from infection-related organ dysfunction to septic shock and failure of several organs. The condition can worsen quickly and requires urgent assessment and treatment.

Septal Defect

An abnormal opening in the septum between the heart's chambers that permits blood to pass between the right and left sides of the heart.

Septal Defect, Atrioventricular

Alternate index label; see *Atrioventricular canal defect*.

Septal Defect, Ventricular

Alternate index label; see *Ventricular septal defect*.

Septal Hematoma

A collection of blood inside the wall dividing the two sides of the nose, usually after an injury. It causes blockage and painful swelling and needs urgent drainage because untreated blood can destroy cartilage and deform the nose.

Septate Uterus

A congenital difference in which a band of tissue partly or completely divides the inside of the uterus. Many people have no symptoms, but it can increase miscarriage or some pregnancy risks; imaging confirms it, and selected cases are treated by removing the dividing tissue.

Alternate Names:

Uterine Septum

Septic

Relating to a serious infection or to harmful germs in a normally sterile body site. For example, septic arthritis is an infected joint, while septic shock is life-threatening organ and circulation failure caused by an overwhelming infection.

Septic Abortion

A miscarriage or induced pregnancy loss compli-

cated by infection of the uterus or surrounding tissues. Fever, chills, worsening abdominal pain, foul discharge, fast heartbeat, or faintness may occur; it is an emergency requiring antibiotics, supportive care, and removal of infected retained tissue when necessary.

Alternate Names:

Septic Miscarriage; Infected Abortion

Septic Arthritis

Infection of a joint, usually bacterial, causing acute pain, swelling, restricted movement, and systemic illness.

Alternate Names:

Arthritis Infectious (Septic Arthritis)

Septic Embolism

A piece of infected material travels through the bloodstream and blocks a smaller blood vessel, spreading infection to another organ. It often starts with an infected heart valve and can cause abscesses or tissue damage.

Septic Pulmonary Infarction

Death of part of the lung after infected clots or other infected material block small lung arteries. It may cause fever, chest pain worse with breathing, cough, coughing blood, and lung abscesses, and requires urgent treatment of the infection.

Septic Shock

A life-threatening complication of sepsis in which infection causes dangerously low blood pressure and poor blood flow to organs, even after initial fluids. It requires immediate hospital treatment with antibiotics, fluids, and medicines to support circulation.

Septicaemia

An older term for bloodstream infection, often used to describe bacteremia with systemic illness.

Septicemia

Septicemia is an older term for serious bloodstream infection; modern assessment distinguishes bacteremia from sepsis, which is life-threatening organ

dysfunction caused by infection.

Septicemia (Sepsis)

Alternate index label for Sepsis.

Septo-Optic Dysplasia

A condition present from birth involving underdevelopment of one or both optic nerves, parts of the brain's midline, and sometimes the pituitary gland. It may cause poor vision, involuntary eye movements, seizures, developmental differences, or hormone deficiencies.

Septoplasty

Septoplasty is surgery to straighten or reshape the nasal septum to improve airflow or address structural obstruction.

Septum

A wall or partition separating two spaces or tissues, such as the nasal septum or the septum between heart chambers.

Septum Deviated (Deviated Septum)

Alternate index label for Deviated Septum.

Septum, Heart

The wall separating the right and left chambers of the heart, consisting of atrial and ventricular portions and preventing normal mixing of oxygenated and deoxygenated blood.

Sequela

A lasting consequence or condition that remains after an earlier disease, injury, infection, or treatment has ended, such as paralysis after stroke or scarring after infection.

Sequelae

Lasting effects or complications that remain after an illness or injury. Examples include weakness after a stroke, breathing problems after severe infection, or pain after an injury; sequelae may be physical, mental, emotional, or social.

Sequential Therapy

Treatment in which different medicines or interventions are given one after another rather than at the same time. The sequence may improve safety, effectiveness, or tolerance.

Sequester

To sequester means to isolate or set apart; in medicine, sequestered tissue or material is separated from its normal circulation or surroundings.

Sequestrum

A piece of dead bone that has separated from healthy bone, usually because of a long-lasting bone infection. It can prevent healing, cause drainage or pain, and may need surgery after infection is treated.

Ser

Ser is the standard abbreviation for serine, an amino acid incorporated into proteins and involved in metabolism and cell signaling.

Serine

Serine is a nonessential amino acid used in protein synthesis, one-carbon metabolism, membrane formation, and signaling.

Serious Diseases And Health Problems (Symptoms Of Serious Diseases And Health Problems)

Alternate index label for Symptoms of Serious Diseases and Health Problems.

SERMs

Selective estrogen receptor modulators that have estrogen-like effects in some tissues and blocking effects in others.

Alternate Names:

Selective estrogen receptor modulators

Seroconversion

Development of detectable antibodies in blood after infection, vaccination, or another immune-triggering event, showing a changed immune status.

Serodiagnostic

Relating to diagnosis using antibodies, antigens, or other markers measured in blood serum. These tests can show infection, immunity, inflammation, or other conditions but must be interpreted with timing and clinical findings.

Serologic Test

A blood test that detects antibodies, antigens, or other immune markers to help diagnose infection, assess immunity, or monitor response to treatment.

Serology

The laboratory evaluation of serum for antibodies, antigens, or other immune markers. Results may indicate current infection, previous exposure, vaccination, autoimmune reactivity, or passive antibody transfer and must be interpreted with timing and clinical context.

Serology For Brucellosis

Blood testing for antibodies to *Brucella* species, interpreted with exposure history and symptoms because cross-reactions and early false-negative results can occur.

Seroma

A pocket of clear body fluid that forms near a surgical incision or injured tissue. It may cause swelling, pressure, or discomfort and often resolves, though large or painful collections may need drainage.

Seronegative Arthritis

Inflammatory arthritis in which common blood tests for rheumatoid factor and anti-CCP antibodies are negative. It includes several diseases with different patterns, such as spine, skin, bowel, or eye involvement, so symptoms and examination guide diagnosis.

Serosanguineous

Serosanguineous describes thin wound or body fluid containing both clear serum and a small amount of blood, often appearing pink or pale red.

Serositis

Inflammation of the smooth lining around the lungs, heart, or abdominal organs. It can cause sharp pain that worsens with breathing or movement and may cause fluid to collect around the affected organ.

Serotonin

A chemical messenger used by nerve cells and other tissues. It helps regulate mood, sleep, appetite, bowel function, and pain; too much activity from medicines can cause serotonin syndrome.

Alternate Names:

5-hydroxytryptamine; 5-HT

Serotonin Blood Test

A blood test measuring serotonin, used selectively in evaluating suspected serotonin-producing neuroendocrine tumors; many medicines and specimen factors affect results.

Serotonin Syndrome

A potentially life-threatening reaction caused by too much serotonin activity, usually after combining or taking too much of certain medicines. Agitation, sweating, diarrhea, shaking, fever, muscle stiffness, or confusion may occur.

Serotonin-Norepinephrine Reuptake Inhibitors

Antidepressants that increase the activity of serotonin and norepinephrine, chemical messengers between nerve cells. They treat depression, some anxiety disorders, and certain nerve or long-lasting pain conditions; nausea, sweating, sleep changes, and withdrawal symptoms can occur.

Serotonin-Norepinephrine-Dopamine Reuptake Inhibitors

A proposed group of medicines that increase signaling by slowing the reuptake of serotonin, norepinephrine, and dopamine. The term is not a standard class for routine prescribing, and specific medicines and uses require careful definition.

Serotype

A distinct version of a microorganism or antigen identified by how antibodies react to it.

Serous

Thin, watery, and usually clear, resembling blood serum. Serous fluid can occur normally or collect in a wound, body cavity, or blister.

Serous Borderline Ovarian Tumor

An ovarian tumor whose cells look abnormal but have not invaded nearby supporting tissue. It may stay in the ovary or form deposits on its surface; treatment and follow-up depend on its extent and microscopic features.

Serous Cyst Adenomas Pancreas (Pancreatic Cysts)

Alternate index label for Pancreatic Cysts.

Serous Fluid Cytology

Examination of cells in fluid collected from around the lungs, heart, or abdominal organs. It can look for cancer cells, infection, or inflammation; additional tests may be needed when the result is unclear.

Serous Membranes

Thin, smooth linings that cover organs and reduce friction inside closed spaces, including the linings around the lungs, heart, and abdominal organs.

Serous Tubal Intraepithelial Carcinoma

An early, noninvasive cancerous change in cells at the end of a fallopian tube near the ovary. It is thought to be the starting point for many high-grade cancers of the ovary, tube, or abdominal lining.

Serpentine Supravenous Hyperpigmentation

A pattern of dark, wavy skin discoloration that follows the paths of surface veins, usually on the upper chest or neck. It can occur with vein inflammation, poor blood flow, some medicines, or cancer and requires assessment of the underlying cause.

Serrated Pathway

One route by which some colon cancers develop from flat or saw-toothed polyps. These polyps may be easy to miss during colonoscopy and can acquire cell changes that increase cancer risk, so removal and follow-up are important.

Serrated Polyposis Syndrome

A disorder characterized by multiple serrated lesions or polyps in the colon and an increased risk of colorectal cancer, requiring colonoscopic surveillance and removal of significant lesions.

Serration

A row of small tooth-like projections or notches along an edge, used to describe anatomy, cells, instruments, or imaging appearances.

Serratus Anterior Muscle

A muscle along the side of the chest that holds the shoulder blade against the ribs and helps raise the arm. Injury to its nerve can make the shoulder blade stick out and weaken pushing or overhead movements.

Sertoli-Cell Tumor

A tumor arising from Sertoli cells, which support sperm development in the testicle. It is often benign but may produce estrogen or other hormones and cause breast enlargement, infertility, or a testicular mass.

Sertoli-Leydig Cell Tumor

A rare ovarian tumor that may produce male hormones, causing increased facial hair, acne, a deeper voice, or irregular periods. Treatment depends on the tumor's stage and features.

Serum

The clear liquid left after blood has clotted. It contains water, salts, hormones, antibodies, nutrients, and waste products but lacks fibrinogen and most clotting proteins, making it useful for laboratory tests.

Serum Concentration

The amount of a substance measured in the liquid part of clotted blood. Results may reflect when the sample was taken, how the substance is absorbed and removed, and whether the level is expected to help or harm.

Serum Free Hemoglobin Test

A blood test measuring hemoglobin not contained within red cells, used to support evaluation of intravascular hemolysis, transfusion reactions, or mechanical red-cell destruction.

Serum Glutamic Oxaloacetic Transaminase

SGOT, now called AST, is an enzyme released by injured liver, heart, skeletal muscle, or other cells; its level must be interpreted with other findings.

Serum Glutamic Pyruvic Transaminase

SGPT, now called ALT, is an enzyme concentrated in liver cells and commonly measured as a marker of hepatocellular injury.

Serum Herpes Simplex Antibodies

A blood test for antibodies against herpes simplex virus types 1 or 2. IgG usually indicates previous infection, while IgM is less reliable; results do not show the infection site or prove that a current lesion is caused by herpes.

Serum Iron Test

A blood test measuring circulating iron bound mainly to transferrin; it is interpreted with ferritin, transferrin saturation, and blood counts rather than used alone to diagnose iron deficiency.

Serum Osmolal Gap

The difference between the measured concentration of dissolved particles in blood and the calculated value. A high gap may suggest an unmeasured substance, including a toxic alcohol, but other illnesses and laboratory factors can also affect it.

Serum Phenylalanine Screening

A blood test measuring phenylalanine, used in newborn screening and follow-up of phenylketonuria or other disorders of phenylalanine metabolism.

Serum Progesterone

A blood test measuring progesterone, a hormone made mainly after ovulation and during pregnancy. The result can help assess ovulation, ovarian function, fertility treatment, or early pregnancy, but interpretation depends strongly on timing and pregnancy status.

Serum Protein Electrophoresis

A blood test that separates proteins in serum into groups. It can show abnormal antibody production or low protein levels and is often followed by immunofixation when a plasma-cell disorder is suspected.

Serum Sickness

A delayed immune reaction, usually one to three weeks after exposure to certain medicines, injected proteins, or antiserum. It can cause fever, rash or hives, painful swollen joints, enlarged lymph nodes, and sometimes organ problems.

Serum Therapy

Prevention or treatment using antibody-containing plasma, immunoglobulin, antitoxin, or antivenom. It provides immediate but usually temporary protection against a specific infection or toxin; allergic reactions and other infusion-related problems are possible.

Serving Size

Serving size is the standardized amount used to describe the nutrients or calories in food and may differ from the amount a person actually eats.

Sesamoid Bones

Small bones embedded within or beside tendons, where they protect the tendon and improve leverage. Examples include the kneecap and the small bones beneath the big toe.

Sesamoiditis

Painful inflammation of tissues around a sesamoid bone, most often beneath the big toe. Pain usually worsens with walking, running, dancing, or pressure on the front of the foot.

Sesquipedalian

Sesquipedalian means characterized by very long words; clear healthcare communication favors language that patients can understand.

Sessile

Attached directly by a broad base rather than a narrow stalk. A sessile polyp can be harder to remove completely and may require careful examination because its shape can hide abnormal tissue.

Set

In exercise, a group of consecutive repetitions performed before a rest period. In medicine, “set” can also mean a prepared group of instruments, tests, or equipment.

Sever Disease

A painful irritation of the growth area at the back of the heel in growing children, often during sports. Heel pain worsens with running or jumping and usually improves with activity adjustment, heel support, calf stretching, and time.

Severe Acute Respiratory Syndrome

A serious contagious respiratory illness caused by the SARS coronavirus, with fever, dry cough, and breathing difficulty that may progress to pneumonia and respiratory failure. The term usually refers to the 2002–2004 SARS outbreak; SARS-CoV-2 causes COVID-19, a different disease.

Severe Obesity

Obesity with a Body Mass Index of 40 kg/m² or higher, or 35 kg/m² or higher together with a serious obesity-related health problem. Body Mass Index does not fully measure health.

Alternate Names:

Severe Acute Respiratory Syndrome (Severe Acute

Respiratory Syndrome (SARS))

Severe Acute Respiratory Syndrome (Severe Acute Respiratory Syndrome)

Alternate index label for Severe Acute Respiratory Syndrome.

Severe Brain Injury, Coma

Alternate index label; see *Coma*.

Severe Combined Immunodeficiency

A group of inherited conditions in which important immune cells do not develop or work properly. Affected babies can develop severe, repeated infections early in life and need urgent specialist care, protective measures, and immune-restoring treatment.

Severe Condition (Sever Condition)

Alternate index label for Sever Condition.

Sevoflurane

An inhaled anesthetic gas used to start and maintain general anesthesia. It acts in the brain to produce unconsciousness and reduces awareness of pain; it can lower breathing and blood pressure and may trigger malignant hyperthermia in susceptible people.

Sex Change

A nontechnical term for gender transition or medical gender-affirming care; respectful, current terminology should be used.

Sex Chromosomes

The X and Y chromosomes, which contribute to sex development and carry many other genes.

Sex Education

Teaching about bodies, relationships, consent, contraception, sexually transmitted infections, and sexual health. Accurate, age-appropriate education supports safer decisions, respectful relationships, prevention, and access to appropriate healthcare.

Sex Headaches

Headaches brought on by sexual activity, including a gradually increasing ache or a sudden severe headache at orgasm. A first or thunderclap headache requires urgent assessment to exclude bleeding or other dangerous causes.

Sex Hormones

Hormones involved in sexual development, reproduction, menstrual cycles, pregnancy, and related body functions. Major groups include estrogens, progesterone, and androgens, which also affect bones, muscles, mood, and tissues.

Sex Therapy

Structured psychological or behavioral therapy for sexual concerns or dysfunction.

Sex-Linked Dominant

A pattern of inheritance in which a disease-causing gene variant lies on a sex chromosome and one altered copy can cause the condition. The chance of passing it on differs for mothers and fathers and for children of different sexes.

Sex-Linked Inheritance

Inheritance of a trait caused by a gene on a sex chromosome, commonly the X chromosome.

Sex-Linked Recessive

A pattern in which a disease-causing gene variant, usually on the X chromosome, commonly causes disease in males with one altered copy. Females usually need two altered copies, while those with one may be carriers or have milder symptoms.

Sexual (Sex) Problems In Men

Alternate index label for sexual problems in men.

Sexual Abuse

Nonconsensual sexual contact, exploitation, or behavior; it is a safeguarding and health emergency when immediate danger or injury exists.

Sexual Assault

Any sexual contact or sexual act without freely given consent, including unwanted touching, penetration, coercion, or sexual activity when a person cannot consent. It can cause injury, infection, pregnancy, and psychological trauma and may require medical and safeguarding support.

Alternate Names:

Rape (Sexual Assault)

Sexual Assault - Prevention

Sexual-assault prevention includes consent education, recognizing coercion, safer environments, bystander intervention, and access to confidential support; responsibility always lies with the person who commits the assault.

Sexual Dysfunction

Ongoing difficulty with sexual desire, arousal, erection, ejaculation, orgasm, or pain that causes distress or relationship problems. Causes may be physical, psychological, medication-related, hormonal, or linked with communication and life circumstances.

Sexual Dysfunction, Female

Alternate index label; see *Female sexual dysfunction*.

Sexual Health Overview

Sexual health includes physical, emotional, mental, and social well-being in relation to sexuality and relationships. It includes consent, contraception, sexually transmitted infection prevention and testing, fertility, sexual function, safety, and respectful communication.

Sexual Intercourse (Coitus)

Sexual activity involving penetration, most commonly penile-vaginal, but sometimes penile-anal or other forms depending on the people involved. It may be for pleasure, intimacy, or reproduction and requires freely given consent.

Alternate Names:

Coitus

Sexual Masochism Disorder

A mental-health diagnosis involving repeated sexual arousal from being humiliated, beaten, bound, or otherwise made to suffer, when the pattern causes significant distress or disrupts daily life, or involves a person who has not freely consented.

Sexual Obsession

Alternate index label; see *Compulsive sexual behavior*.

Sexual Rehabilitation

Assessment and treatment to help restore or adapt sexual function after illness, injury, surgery, disability, or medicine effects. It may include education, counseling, pelvic-floor therapy, devices, or medicines.

Sexual Sadism

Sexual sadism involves recurrent arousal from another person's suffering or humiliation; acts without consent are abuse, and safety-focused clinical care is required.

Sexual Sadism Disorder

A mental-health diagnosis involving repeated sexual arousal from another person's physical or emotional suffering, when it causes significant distress or disrupts daily life, or involves acting with someone who has not freely consented.

Sexual Violence

Sexual violence is any sexual act, attempt, contact, or coercion without freely given consent and can cause physical injury, infection, pregnancy, trauma, and long-term health effects.

Sexually Transmitted Disease Treatments

Alternate index label for STD) Treatment.

Sexually Transmitted Diseases

Infections transmitted primarily through sexual contact; also called sexually transmitted infections.

Alternate Names:

sexually transmitted infections.

Sexually Transmitted Diseases (STDs In Women)

Alternate index label for Sexually Transmitted Diseases (STDs In Women).

Sexually Transmitted Diseases (STDs)

Infections mainly spread through sexual contact, including chlamydia, gonorrhea, syphilis, HIV, HPV, and others.

Alternate Names:
STDs

Sexually Transmitted Diseases And Pregnancy (STDs)

Alternate index label for STDs.

Sexually Transmitted Infection

An infection caused by a virus, bacterium, fungus, or parasite that spreads mainly through sexual contact, including vaginal, anal, or oral sex and genital skin-to-skin contact. Some can also spread through blood exposure or from a pregnant person to a baby. Many cause no early symptoms, so testing, treatment, and partner care are important.

Sezary Disease

Alternate index label; see *Sezary syndrome*.

Sezary Syndrome

An uncommon form of cutaneous T-cell lymphoma involving widespread red skin and abnormal lymphocytes in the blood.

Alternate Names:
Sezary Disease

Sézary Syndrome

An uncommon form of skin lymphoma in which abnormal immune cells are found in the skin and blood. It usually causes widespread red, scaly, itchy skin and enlarged lymph nodes and requires specialist care.

Sgarbossa Criteria

A set of electrocardiogram findings used to look for a heart attack when an existing conduction problem

or pacemaker makes the tracing difficult to read. The findings can support, but cannot prove, an acute blocked heart artery.

Alternate Names:

Modified Sgarbossa Criteria; Smith-Modified Sgarbossa Rule

Shadowing Artifact

An ultrasound artifact in which a strongly attenuating or reflecting structure produces a dark area behind it because little sound reaches the tissues beyond. Stones, bone, and gas commonly cause shadowing.

Shaken Baby Syndrome

An older term for abusive head trauma in an infant or young child caused by violent shaking, with or without impact. It can cause brain and eye injuries, seizures, breathing problems, vomiting, unusual sleepiness, or death and requires emergency protection and care.

Shaken Baby Syndrome (Abusive Head Trauma)

Alternate index label for Abusive Head Trauma.

Shaken Impact Syndrome

A term for abusive head trauma involving shaking with or without impact, especially in infants.

Shampoo - Swallowing

Accidental swallowing of a small amount of shampoo usually causes mouth or stomach irritation; larger or concentrated exposures may cause vomiting or breathing problems and warrant poison-control advice.

Shared Decision-Making

A collaborative process in which clinicians and patients combine best available evidence with patient values, preferences, goals, and circumstances to choose among reasonable options.

Shark Attack

A shark attack can cause severe lacerations, bleed-

ing, tissue loss, drowning, and shock; emergency rescue, hemorrhage control, and trauma care are critical.

Sharp Force Trauma

An injury caused by a sharp or pointed object, such as a knife, broken glass, or needle. It may produce a cut or a deeper puncture and can damage blood vessels, nerves, organs, or bones; deep or heavily bleeding wounds need emergency care.

Sharps Container

A strong, leak-resistant container for used needles, lancets, blades, and other sharp medical items. It helps prevent injury and infection and should be clearly labeled, kept upright, and closed or replaced before it becomes too full.

Sharps Injury

A percutaneous or mucocutaneous injury caused by a needle or other sharp instrument that may expose a person to blood or body fluids. Immediate wound care, incident reporting, risk assessment, and pathogen-specific post-exposure management are required.

Shave Biopsy

Removal of a raised or superficial skin lesion by shaving off a thin layer with a sterile blade. The tissue is examined under a microscope; bleeding, infection, scarring, or an inadequate sample can occur.

Shaving Cream Poisoning

Poisoning after swallowing shaving cream or inhaling its propellant. Small accidental amounts often cause mild stomach upset, but larger exposures can cause vomiting, choking, drowsiness, or breathing problems; seek product-specific advice.

Sheehan Syndrome

Damage to the pituitary gland after severe blood loss or very low blood pressure during childbirth. It can cause failure to produce breast milk, extreme tiredness, low blood pressure, menstrual or fertility problems, and deficiencies of several hormones.

Sheehan Syndrome (Postpartum Pituitary Necrosis)

Permanent injury to the pituitary gland caused by severe bleeding or very low blood pressure during or after childbirth. Because the gland makes several hormones, symptoms may include inability to breastfeed, low blood pressure, fatigue, and menstrual or fertility problems.

Alternate Names:

Postpartum Pituitary Necrosis

Shellac Poisoning

Poisoning from swallowing or inhaling shellac, a coating product that may contain alcohol or other solvents. It can cause irritation, vomiting, dizziness, drowsiness, or lung injury after aspiration; do not induce vomiting.

Shellfish Allergy

An immune reaction to proteins in crustaceans or mollusks that can cause hives, digestive or respiratory symptoms, or anaphylaxis.

Alternate Names:

Allergy, Shellfish

Shellfish Poisoning

Illness caused by toxins accumulated in contaminated shellfish. Depending on the toxin, symptoms may include vomiting, diarrhea, tingling, weakness, confusion, breathing difficulty, or paralysis and require urgent medical advice.

Shielding

Material placed between a person and a source of radiation to reduce exposure. The material depends on the radiation: lead or tungsten is used for many X-rays and gamma rays, while plastic or acrylic can be useful for beta radiation.

Shift Work Sleep Disorder

A circadian rhythm sleep-wake disorder caused by work schedules that overlap the usual sleep period, producing insomnia, excessive sleepiness, or both.

Shigella

A genus of bacteria causing shigellosis, an acute diarrheal illness that may include fever and bloody stools.

Shigellosis

Shigellosis is intestinal infection caused by *Shigella* bacteria, producing diarrhea that may be bloody, fever, cramps, and dehydration.

Shin Bone Fever

An older nonspecific term for painful inflammation or infection involving the shin or nearby tissues.

Shin Splints

Pain along the inner border of the shin, often referring to medial tibial stress syndrome from repetitive loading.

Alternate Names:

Medial Tibial Stress Syndrome

Shin Spot

A shin spot is a nonspecific mark or lesion on the lower leg; its significance depends on appearance, duration, symptoms, injury, and associated disease.

Shingles

Herpes zoster, reactivation of varicella-zoster virus in sensory nerves causing a painful unilateral vesicular rash.

Shingles (Herpes Zoster)

Alternate index label for Herpes Zoster.

Shingles And Pregnancy

Shingles is reactivation of varicella-zoster virus and usually causes a painful one-sided blistering rash. It is not the same as primary chickenpox exposure, but pregnancy requires prompt clinical advice about treatment, pain, and contact with people at risk.

Shirodkar Cerclage

An operation that places a strong stitch high around the cervix to help prevent it opening too early during pregnancy. It is used in selected people at risk of

late miscarriage or premature birth and can cause bleeding, infection, or injury to nearby organs.

Shivering

Repeated, involuntary muscle contractions that generate heat, usually in response to cold or fever. Severe or unexplained shivering may occur with infection, medicine reactions, or other illness and should be assessed with the other symptoms.

Shock

A life-threatening failure of circulation in which organs do not receive enough blood and oxygen. It can result from severe blood or fluid loss, heart failure, overwhelming infection, a severe allergic reaction, or an obstruction to blood flow. Signs may include confusion, faintness, cold or mottled skin, rapid breathing, little urine, or very low blood pressure and require emergency treatment.

Shock Lung

An older term for acute respiratory distress syndrome (ARDS), a life-threatening form of lung inflammation in which fluid and injury make it difficult for oxygen to enter the blood.

Shock Therapy

An imprecise term that may refer to electroconvulsive therapy or outdated shock treatments; the specific intervention should be named.

Shock Wave Lithotripsy

A procedure that focuses repeated sound-pressure waves from outside the body onto a kidney or ureter stone to break it into smaller pieces that can pass in urine. Blood in the urine, pain, blockage, infection, or incomplete stone removal can occur.

Shock, Secondary

Circulatory failure occurring as a consequence of another condition, such as infection, trauma, bleeding, heart failure, allergy, or endocrine crisis, with inadequate tissue perfusion.

Shone Complex

A group of congenital left-sided obstructive heart lesions, classically including supravulvar mitral ring, parachute mitral valve, subaortic stenosis, and coarctation of the aorta. The combination and severity vary and may lead to heart failure or systemic outflow obstruction.

Short Arm Of A Chromosome

The shorter section of a chromosome, labeled p from the French word for “small.” Missing, extra, or rearranged DNA in this section can alter genes and cause disease.

Short Bones

Small, roughly cube-shaped bones that provide stability and limited movement. The wrist and ankle contain most of the body’s short bones.

Short Bowel Syndrome

A condition in which the small intestine is shortened or damaged and cannot absorb enough nutrients from food. It most often occurs after surgery to remove part of the small intestine and may cause diarrhea, weight loss, and nutritional deficiencies.

Short QT Syndrome

A rare inherited heart-rhythm disorder in which the heart’s electrical recovery time is unusually short. It can cause atrial or ventricular arrhythmias, fainting, or sudden cardiac death; diagnosis requires specialist ECG and family-history assessment, and treatment may include an implantable defibrillator.

Alternate Names:

SQTS

Short Philtrum

A short philtrum is reduced distance between the nose and upper lip and may be an isolated feature or part of a genetic, developmental, or prenatal-exposure syndrome.

Short Stature

Height substantially below the expected range for age and sex, requiring assessment of growth pattern

and cause.

Short-Sight

Myopia, a refractive error in which distant objects are focused in front of the retina.

Short-Term Memory

The ability to hold and use a small amount of information for seconds or minutes. It helps with following instructions, doing mental tasks, and remembering a recent conversation before information is stored more permanently or forgotten.

Alternate Names:

Working memory

Shortness Of Breath

An uncomfortable awareness of difficult or insufficient breathing. See Dyspnea.

Shotty

Shotty describes small, firm, discrete lymph nodes, often reactive after infection; persistent, enlarging, hard, or generalized nodes require evaluation.

Shoulder

The area where the upper limb joins the body, including the shoulder blade, collarbone, and upper-arm bone. Its main joint allows a wide range of arm movement but is less stable and can be injured or dislocated.

Shoulder Arthroscopy

A minimally invasive procedure using a camera and instruments through small incisions to diagnose and treat selected disorders of the shoulder joint and surrounding tissues.

Shoulder Bursitis

Shoulder bursitis is inflammation of a fluid-filled sac around the shoulder, often associated with rotator-cuff disease or repetitive overhead activity. Pain with elevation and lying on the affected side is common; activity modification, therapy, medicines, injection, or treatment of the underlying cause may help.

Alternate Names:

Bursitis Shoulder (Shoulder Bursitis)

Shoulder CT Scan

Computed tomography of the shoulder used to evaluate fractures, bone alignment, arthritis, tumors, infection, and complex bony anatomy.

Shoulder Dislocation

Complete displacement of the upper arm bone from the shoulder socket, usually caused by a fall, collision, or forceful twisting. It causes severe pain, deformity, and inability to move the arm; urgent reduction and assessment for associated fractures or nerve and blood-vessel injury are required.

Shoulder Dystocia

A childbirth emergency in which the baby's head is born but a shoulder becomes stuck behind the mother's pelvic bone. It requires immediate maneuvers because delay can cause lack of oxygen, fractures, or nerve injury in the baby and heavy bleeding in the mother.

Shoulder Impingement

Pain associated with movement of the shoulder, often involving the rotator-cuff tendons or subacromial tissues. Symptoms include pain with overhead activity and sometimes weakness; assessment and treatment are individualized and may include exercise-based rehabilitation.

Shoulder Instability

Excessive or recurrent movement of the shoulder joint caused by injury, laxity, or altered joint anatomy. Associated lesions may include a Bankart tear, Hill-Sachs lesion, or injury to the joint capsule or ligaments.

Shoulder MRI Scan

Magnetic resonance imaging of the shoulder used to evaluate rotator-cuff tendons, labrum, cartilage, ligaments, muscles, bone marrow, and joint fluid.

Shoulder Pain

Pain in or around the shoulder caused by injury, tendon or bursa disorders, arthritis, nerve disease, or referred pain. Sudden weakness, deformity, chest symptoms, fever, or pain after major trauma requires prompt evaluation.

Shoulder Replacement

Surgery replacing damaged surfaces of the shoulder with artificial parts to relieve severe pain and improve movement. The implant may replace the joint in the usual or reverse configuration; infection, stiffness, dislocation, loosening, or nerve injury can occur.

Shulmans Syndrome (Eosinophilic Fasciitis)

Alternate index label for Eosinophilic Fasciitis.

Shunt

A passage that diverts blood, cerebrospinal fluid, urine, or another fluid from one channel to another.

Shunt (Vascular)

A surgically created or implanted pathway that redirects blood or another fluid from one vessel or body space to another.

Alternate Names:

Vascular shunt; blood-vessel shunt

Shwachman Syndrome

An inherited multisystem disorder usually involving exocrine pancreatic insufficiency, bone-marrow dysfunction, and skeletal abnormalities. Children may have steatorrhea, poor growth, recurrent infections, neutropenia, anemia, or increased risk of myeloid malignancy.

Shy-Drager Syndrome

Alternate index label; see *Multiple system atrophy*.

SI Units

The International System of Units used for standardized measurements, including meter, kilogram, second, mole, and pascal.

SIADH

A condition in which the body releases too much antidiuretic hormone, causing it to retain water and dilute the blood sodium level. It may cause nausea, headache, confusion, seizures, or coma and requires treatment of the cause and sodium abnormality.

Sialadenitis

Inflammation or infection of a salivary gland, causing painful swelling near the cheek or under the jaw, often worse during meals. Causes include bacteria, viruses, dehydration, or a blocked duct; persistent fever or pus needs medical care.

Sialagogues

Substances or medicines that increase saliva production. They may help some people with dry mouth, but treatment also considers hydration, medicines, oral care, and the cause of reduced saliva.

Sialogram

An imaging study of a salivary gland and its ducts after contrast is introduced through the duct opening, used to assess obstruction, stones, strictures, or chronic inflammation.

Sialography

An imaging procedure that uses contrast material to show salivary glands and their ducts. It can help identify blockage, stones, narrowing, chronic inflammation, or tumors, although newer imaging is often preferred.

Sialolithiasis

Formation of a stone in a salivary gland or its drainage tube, most often beneath the jaw. It can cause repeated swelling and pain during meals and may lead to blockage or infection.

Sialorrhea

Excess saliva or difficulty controlling and swallowing it, causing drooling. It commonly occurs with neurologic disease, swallowing difficulty, dental problems, or some medicines; treatment addresses the cause and may include swallowing therapy or selected medicines.

Sialorrhoea

Excess saliva that pools in the mouth or dribbles out as drooling. It is often caused by difficulty controlling or swallowing saliva rather than making too much. It may occur with cerebral palsy, Parkinson disease, motor-neuron disease, or other conditions and can cause skin irritation or choking. Swallowing therapy and other treatments may help.

Sialuria

A rare inherited disorder in which cells make and release too much sialic acid, a sugar used on cell surfaces. It may cause developmental delay, enlarged liver and spleen, distinctive facial features, and variable learning difficulties.

Sibling

A person's brother or sister; family history from siblings can inform genetic and disease risk assessment.

SIBO

Alternate index label; see *Small intestinal bacterial overgrowth*.

Sicca Syndrome

Persistent dryness of the eyes and mouth caused by reduced tears and saliva. It may result from Sjögren syndrome, medicines, dehydration, radiation, or other illnesses and can lead to eye irritation, mouth sores, tooth decay, or difficulty swallowing.

Sick Sinus Syndrome

A problem with the heart's natural pacemaker that causes the heartbeat to become too slow, pause, or alternate between fast and slow. It may cause dizziness, fainting, tiredness, palpitations, or reduced exercise ability.

Alternate Names:

Bradycardia-Tachycardia Syndrome

Sickle Cell

An inherited group of blood disorders caused by abnormal hemoglobin. Red blood cells may become rigid and curved, causing anemia, severe pain,

blocked blood flow, and damage to organs.

Sickle Cell Anemia

An inherited blood disorder in which abnormal haemoglobin makes red blood cells stiff, sticky, and crescent-shaped. These cells break down easily and can block small blood vessels, causing anaemia, severe pain, stroke, lung problems, jaundice, and serious infections.

Sickle Cell Anemia (Sickle Cell)

See *Sickle Cell Anemia*.

Sickle Cell Crisis

A sudden complication of sickle-cell disease, usually caused by sickled red cells blocking blood flow and causing severe pain. Other crises can damage the lungs, reduce blood-cell production, or trap blood in the spleen; urgent care may be needed.

Sickle Cell Dactylitis

Painful swelling of the hands or feet caused by blockage of small blood vessels during a sickle-cell episode, especially in infants and young children. It may be an early sign of sickle-cell disease and requires appropriate clinical evaluation.

Sickle Cell Disease

Alternate index label; see *Sickle Cell*.

Sickle Cell Test

A laboratory test detecting hemoglobin S or assessing sickling, used in screening and diagnosis of sickle-cell trait or sickle-cell disease; definitive testing identifies hemoglobin variants.

Sickle Cell Trait

An inherited state in which a person has one gene for hemoglobin S and one usual hemoglobin gene. Most people have no symptoms and do not develop sickle cell disease, but rare problems can occur with severe dehydration, low oxygen, or extreme exertion.

Sickle-Cell Anaemia

See *Sickle Cell Anemia*.

Sickness

A general term for illness or nausea; clinical assessment should identify the specific symptom or disease.

Sickness Motion (Motion Sickness (Sea Sickness, Car Sickness))

Alternate index label for Motion Sickness (Sea Sickness, Car Sickness).

Side Effect

An unintended effect that occurs while a medicine is used at a normal dose. It may be mild, such as nausea or drowsiness, or serious, such as bleeding, severe allergy, organ injury, or an abnormal heart rhythm.

Side Effects

Unintended effects that occur while a medicine or treatment is used. They range from mild symptoms to serious harm; the risk depends on the treatment, dose, duration, other medicines, and the person's health.

Side-Effects

Unintended effects that occur while a medicine or treatment is used. They range from mild symptoms to serious harm; the risk depends on the treatment, dose, duration, other medicines, and the person's health.

Sideroblastic Anemia

Anemia caused by faulty hemoglobin production. Iron builds up inside developing red blood cells instead of being used properly; causes include inherited disorders, alcohol, some medicines or toxins, vitamin B6 deficiency, and bone-marrow disease.

Siderosis

Accumulation of iron in body tissues, or lung disease from breathing iron-containing dust. It may cause no symptoms, but long-term dust exposure can produce cough, breathing difficulty, and permanent lung damage.

SIDS

Sudden infant death syndrome, the sudden unexplained death of an infant younger than one year after thorough investigation.

Sievert (Sv)

A unit used to estimate how much biological harm ionizing radiation could cause. It accounts for the type of radiation and the sensitivity of different tissues and is used when discussing radiation risk.

Alternate Names:

Sv

Sight

The ability to see, involving the eyes and visual nervous system.

Sigmoid

Sigmoid means S-shaped; the sigmoid colon is the curved section of large intestine between the descending colon and rectum.

Sigmoid Colon

The curved, S-shaped section of the large intestine between the descending colon and rectum. It stores stool before bowel movements and is a common site for diverticular disease, twisting, and colorectal cancer.

Sigmoid Volvulus

Twisting of the S-shaped lower colon around the tissue that supports it, blocking the bowel. It can cause severe abdominal swelling, pain, vomiting, and inability to pass stool or gas and needs urgent treatment because the blood supply may be cut off.

Sigmoidoscopy

Endoscopic examination of the rectum and lower colon using a flexible or rigid sigmoidoscope. It can identify inflammation, bleeding, polyps, or tumors and may allow biopsy or treatment.

Sign

An observable or measurable finding that may show disease or a change in health. Examples include a

rash, fever, swelling, abnormal heartbeat, or high blood pressure; a sign differs from a symptom, which is felt and reported by the person.

Sign Language

Sign language is a complete visual language using hand shape, movement, position, facial expression, and body movement rather than spoken sound.

Signal Peptide

A short part of a newly made protein that acts like an address label, directing the protein to the cell membrane, outside the cell, or a particular internal compartment. It is often removed after delivery.

Signal Transduction

The chain of events by which a hormone, nerve chemical, or medicine attaches to a cell and produces a response inside it. The response can change cell activity, movement, growth, survival, or gene use.

Signal-To-Noise Ratio

A comparison between the useful information in a test or image and the unwanted background variation. A higher ratio usually produces a clearer image or more reliable measurement.

Signature

A signature is a person's identifying mark or electronic confirmation of approval, consent, authorship, or verification.

Signature Strengths

Personal character strengths that a person values and naturally uses.

Signet Ring Cell Carcinoma

A cancer whose cells contain mucus that pushes the cell nucleus to one side, giving a ring-like appearance under a microscope. It most often begins in the stomach or colon and may grow widely or aggressively.

Signs Of An Asthma Attack

An asthma attack may cause worsening wheeze,

cough, chest tightness, breathlessness, rapid breathing, difficulty speaking, or reduced peak flow; severe symptoms need emergency care.

Sildenafil Citrate

The citrate salt of sildenafil, a phosphodiesterase-5 inhibitor used for erectile dysfunction and pulmonary arterial hypertension.

Silent Heart Attack

A heart attack that causes no recognized pain or typical warning signs. It may be discovered later through an electrocardiogram or imaging and still damages heart muscle and increases future risks.

Alternate Names:

Unrecognized myocardial infarction

Silent Ischemia

Reduced blood flow to heart muscle without typical chest pain or other recognized symptoms. It may still damage the heart and is detected through testing rather than symptoms alone.

Alternate Names:

Asymptomatic ischemia

Silent Mutation

A DNA change that usually does not alter the amino acid in the protein made from the gene. It may still affect how the gene is copied, how long its RNA lasts, or how much protein is produced.

Silent Sinus Syndrome

Silent sinus syndrome is painless inward collapse of the maxillary sinus and floor of the orbit, often causing facial asymmetry, enophthalmos, or a sunken eye. Imaging confirms the diagnosis, and endoscopic treatment restores sinus ventilation when indicated.

Silent Thyroiditis

Silent thyroiditis is painless autoimmune inflammation of the thyroid that may briefly release excess hormone before causing temporary hypothyroidism and eventual recovery.

Silicate

A salt or ester containing silicon and oxygen, found in minerals and industrial materials; inhalation of some silicate dusts can irritate the lungs or contribute to pneumoconiosis.

Silicon Dioxide

A mineral found in soil, rock, dust, and industrial materials. Breathing crystalline forms over time can scar the lungs, cause silicosis, and increase the risk of lung cancer.

Silicone

A family of synthetic silicon-containing polymers used in medical devices, implants, sealants, and consumer products; medical risks depend on the product and exposure.

Silicone Elastomer

A flexible, rubber-like silicone material used in implants, tubing, dressings, and other devices; complications may include infection, leakage, allergy, or device failure.

Silicone Implants

Medical implants containing silicone gel or elastomer used for breast reconstruction or augmentation; complications may include rupture, capsular contracture, infection, malposition, or need for revision.

Silicone Mastitis

A granulomatous inflammatory reaction to silicone released from a breast implant or injected silicone. It may cause nodules, pain, lymphadenopathy, or imaging findings that mimic malignancy.

Silicone Oil Hyperoleon

A complication after eye surgery in which silicone oil breaks into tiny droplets and moves into the front of the eye. It can raise eye pressure, irritate the eye, damage the cornea, and sometimes requires removal or washing of the oil.

Silicones

Synthetic polymers used in medical devices, implants, dressings, and other products; adverse effects depend on formulation and site.

Silicosis

A permanent lung-scarring disease caused by breathing crystalline silica dust. It can cause cough, breathlessness, reduced lung function, tuberculosis risk, and progressive respiratory disability after workplace or environmental exposure.

Silk

Silk is a protein fiber used in textiles and some medical sutures or biomaterials; reactions and tissue response depend on the product and processing.

Silk Road Disease (Behcet's Syndrome)

Alternate index label for Behcet's Syndrome.

Siltuximab

A monoclonal antibody that binds interleukin-6 and is used to treat adults with multicentric Castleman disease who are negative for HIV and human herpesvirus 8.

Silver

A metal used in some dressings, creams, and medical devices for antimicrobial activity; excessive exposure can cause permanent blue-gray skin discoloration called argyria.

Silver Diamine Fluoride

A liquid applied to a tooth to slow or stop active tooth decay. It usually turns the treated decayed area black and may be useful when drilling or immediate restorative treatment is difficult.

Silver Nitrate

A caustic antiseptic used topically to cauterize tissue, control minor bleeding, or treat some wounds; it can burn healthy skin and permanently stain tissue.

Silver Poisoning

Silver poisoning, or argyria, follows excessive silver

exposure and can cause permanent blue-gray skin discoloration and, rarely, organ or neurologic effects.

Silver Sulfadiazine

A topical antimicrobial cream formerly used widely for burns; it may delay healing in some wounds and is not appropriate for everyone, including some newborns and people with sulfonamide allergy.

Silver-Russell Syndrome

A growth disorder usually present from birth, marked by poor growth before and after birth, a small or asymmetrical body, and characteristic facial features. Most cases are linked to changes in gene activity rather than a change in the gene itself.

Silymarin

A mixture of flavonolignans from milk thistle marketed as a dietary supplement; evidence for treating liver disease is limited and product quality varies.

Simeprevir

An older hepatitis C virus NS3/4A protease inhibitor formerly used with other antivirals; it is no longer a usual first-line treatment because better direct-acting regimens are available.

Simethicone

Simethicone is a non-absorbed antifoaming agent that coalesces gas bubbles in the gastrointestinal tract and is used for symptomatic relief of bloating; it does not treat the underlying cause of pain.

Simian Crease

A simian crease is a single transverse crease across the palm, which may be a normal variant or occur with some chromosomal or developmental conditions.

Simmonds Disease

An older term for severe pituitary-gland failure. It can cause extreme tiredness, weight loss, low blood pressure, loss of menstrual periods or sexual function, and deficiencies of several hormones.

Simmonds' Disease

An older term for hypopituitarism, especially pituitary failure causing wasting and endocrine deficiency.

Simple Febrile Seizure

A brief, generalized seizure caused by fever in a child, usually between six months and five years old. It lasts less than 15 minutes and does not recur during the same illness. The child should be assessed to find the cause of fever, but most children recover fully and do not develop epilepsy.

Alternate Names:

Benign Febrile Seizure; Typical Febrile Seizure

Simple Goiter

A simple goiter is noncancerous enlargement of the thyroid without obvious thyroid-hormone excess or deficiency, caused by iodine imbalance, stimulation, or other factors.

Simple Mastectomy

Simple mastectomy removes the breast tissue and nipple while leaving most chest muscles and usually the underarm lymph nodes.

Simple Prostatectomy

Surgical removal of the enlarged central portion of the prostate to relieve bladder-outlet obstruction from benign prostatic hyperplasia; it does not remove the entire prostate.

Simple Pulmonary Eosinophilia

A usually mild lung reaction in which eosinophils, a type of white blood cell, collect temporarily in the lungs. It may cause cough, fever, or wheezing and can follow medicines, parasites, or other exposures. Symptoms and chest shadows often clear on their own, but the cause should be assessed.

Simple, Heart-Smart Substitutions

Easy food changes that may support heart health, such as choosing unsaturated oils instead of butter, whole grains instead of refined grains, and less processed or salty food.

Simplexvirus

A genus of herpesviruses that includes herpes simplex virus types 1 and 2, which cause cold sores, genital herpes, and other infections.

Simuliidae

The family of black flies; bites can cause itchy skin reactions, and some species transmit *Onchocerca volvulus*, the parasite that causes river blindness.

Simultanagnosia

An inability to see more than one object, or the whole visual scene, at the same time even though basic eyesight may be adequate. It usually results from damage to brain areas that combine visual information.

Simvastatin

A statin medicine that lowers LDL, often called bad cholesterol, by reducing cholesterol production in the liver. It helps lower the risk of heart attack and stroke; muscle pain, liver problems, and medicine interactions are possible.

Sin Nombre Virus Infection

Alternate index label; see *Hantavirus pulmonary syndrome*.

Sincalide

A synthetic form of cholecystokinin used during gallbladder imaging to stimulate contraction and measure bile flow; it may cause abdominal pain, nausea, or flushing.

Sindbis Virus

A mosquito-borne virus that can cause fever, rash, and joint pain. It occurs mainly in parts of Africa, Europe, Asia, and Australia.

Sinding-Larsen-Johansson Syndrome

A painful overuse injury at the lower tip of the kneecap in growing children and adolescents. Pain usually worsens with running or jumping and improves as growth finishes and the irritated area heals.

Sinecatechins

A topical green-tea catechin ointment used for external genital and perianal warts caused by human papillomavirus; it can cause local irritation and should not be used internally.

Singer'S Nodule

A small, usually noncancerous thickening on a vocal fold caused by repeated voice strain. It can cause lasting hoarseness, a rough voice, or reduced vocal range; voice therapy and reducing strain are often helpful.

Single Nucleotide Polymorphism

A common inherited difference in one DNA building block. Most have little or no effect, but some are linked with disease risk, ancestry, or how a person responds to a medicine.

Single Palmar Crease

A single transverse palmar crease is one crease crossing the palm instead of the usual two; it can be a normal variant or a feature of genetic syndromes.

Single Photon Emission Computed Tomography

A nuclear medicine scan that uses a radioactive tracer and a rotating camera to create three-dimensional images of blood flow or organ function. It can assess the heart, bones, brain, kidneys, or other organs.

Single Ventricle

A group of heart defects present at birth in which one lower chamber does most of the work of pumping blood to both the body and lungs. Babies usually need specialist care and staged operations.

Single-Dose Toxicity

Harm caused by one exposure to a substance or medicine, assessed according to dose, route, timing, and the exposed person's characteristics.

Single-Fiber Electromyography

A specialized electrical test that records signals from

individual muscle fibers. It measures small variations in the timing of nerve-to-muscle communication and can detect disorders such as myasthenia gravis, even when routine nerve tests are normal. A fine needle is used, and the test may be uncomfortable.

Alternate Names:

SFEMG; Single-Fiber EMG

Single-Photon Absorptiometry

An older scan that used a small amount of radiation to estimate bone density, usually in an arm or other peripheral bone. More accurate bone-density methods have largely replaced it.

Alternate Names:

SPA

Single-Photon Emission Computed Tomography

A nuclear-medicine scan that uses a radioactive tracer and a rotating camera to create three-dimensional images of blood flow or organ activity. It can assess the heart, brain, bones, kidneys, and other organs.

Singlet Oxygen

A highly reactive form of oxygen involved in oxidative reactions, immune defenses, photodynamic therapy, and tissue injury from oxidative stress.

Sinoatrial Node

The heart's natural pacemaker in the right atrium that normally initiates each heartbeat.

Alternate Names:

Pacemaker, natural

Sinuatrial Node

The sinoatrial node, a group of specialized cells in the right atrium that normally initiates the heartbeat and sets the cardiac rhythm.

Sinus

A sinus is a cavity, channel, or tract; in anatomy it may mean a paranasal air space, venous channel, or abnormal passage from a diseased area to the

surface.

Sinus Arrhythmia

Sinus arrhythmia is normal variation in sinus-heart rate, commonly speeding during inhalation and slowing during exhalation, especially in young people.

Sinus Bradycardia

Sinus bradycardia is a sinus rhythm slower than the expected rate; it can be normal during sleep or athletic conditioning but may also reflect drugs or disease.

Sinus CT Scan

Computed tomography of the paranasal sinuses used to evaluate chronic or complicated sinusitis, anatomic obstruction, trauma, inflammatory disease, or tumors.

Sinus Headache

Pain attributed to a sinus headache is often migraine, but sinus inflammation can cause facial pressure, congestion, reduced smell, and pain that worsens with bending. Fever, purulent discharge, persistent symptoms, or eye or neurologic signs guide evaluation.

Sinus Histiocytosis

An increase in cleanup immune cells within the open spaces of a lymph node. It is often a response to nearby inflammation, infection, a tumor, or tissue breakdown and is interpreted with the rest of the biopsy.

Sinus Lift

A dental procedure that adds bone beneath the lining of the maxillary sinus in the upper jaw. It may create enough support for a dental implant when the jawbone has become too thin.

Sinus MRI Scan

Magnetic resonance imaging of the paranasal sinuses and surrounding soft tissues used to evaluate tumors, invasive infection, orbital or intracranial extension, and selected inflammatory disease.

Sinus Node

The heart's natural pacemaker, located in the right atrium.

Alternate Names:

Sinoatrial node

Sinus Pain

Pressure or pain around the forehead, cheeks, nose, or eyes caused by sinus inflammation, infection, migraine, or other conditions. Severe headache, eye swelling, vision change, high fever, or neurologic symptoms requires urgent assessment.

Sinus Rhomboidalis

A diamond-shaped depression forming the floor of the fourth brain ventricle, near structures controlling movement and vital functions.

Sinus Rhythm

A heart rhythm started by electrical impulses from the sinoatrial node, the natural pacemaker. It is usually regular, although sinus rhythm can be too fast, too slow, or affected by illness.

Sinus Tachycardia

A heart rhythm originating in the sinoatrial node with a rate faster than normal, commonly occurring as a physiologic response to exercise, fever, pain, dehydration, or stress.

Sinus X-Ray

Plain radiographic imaging of the paranasal sinuses; it has limited sensitivity and is often replaced by CT when detailed evaluation is needed.

Sinuses

Air-filled cavities within the skull bones lined by respiratory mucosa, connected to the nasal cavity via ostia.

Sinusitis

Inflammation of the paranasal sinuses, usually causing facial pressure, nasal obstruction, discharge, or reduced smell.

Sinusitis And Sinus Problems

Inflammation or infection of the paranasal sinuses that may cause nasal congestion, discharge, facial pressure, headache, or reduced smell. Symptoms may also arise from other nasal or facial conditions and require assessment when persistent or severe.

Sinusitis, Acute

Alternate index label; see *Acute sinusitis*.

Sinusitis, Chronic

Alternate index label; see *Chronic sinusitis*.

Sinusoid

A small, wide blood vessel with unusually open walls, found especially in the liver, spleen, and bone marrow. Its structure allows blood to exchange cells, proteins, nutrients, and waste with nearby tissue.

Sinusoidal Fetal Heart Rate Pattern

A rare, smooth, regular wave pattern on an unborn baby's heart-rate tracing with little normal variation. It can indicate severe anemia or low oxygen and requires immediate assessment and monitoring.

Sipuleucel-T

A personalized cancer immunotherapy made from a patient's immune cells and used for selected advanced prostate cancers. The cells are trained to recognize a prostate-cancer target before being returned to the patient.

Sirenomelia

A rare congenital malformation in which the lower limbs are partially or completely fused. It is usually associated with severe abnormalities of the genitourinary, gastrointestinal, vascular, and spinal systems and is often fatal in the neonatal period.

Sirolimus

Sirolimus is an mTOR inhibitor used for immunosuppression after transplantation and selected vascular or lymphatic disorders; mouth ulcers, hyperlipidaemia, cytopenias, infection, impaired wound healing, and pneumonitis can occur.

Sisomicin

An aminoglycoside antibiotic related to gentamicin that has activity against some aerobic gram-negative bacteria; use is limited by kidney and hearing toxicity.

Sister Mary Joseph Nodule

A metastatic tumor deposit in or around the umbilicus, usually from an intra-abdominal or pelvic malignancy.

Sister Mary Joseph's Nodule

A firm, hard nodule in the umbilicus resulting from metastatic malignancy, most commonly from intra-abdominal or pelvic cancers including gastric, ovarian, and colorectal carcinoma. It indicates advanced, disseminated disease with a poor prognosis. Diagnosis is by fine needle aspiration biopsy.

Sitagliptin Phosphate

Sitagliptin phosphate is a DPP-4 inhibitor that prolongs incretin activity and improves glucose-dependent insulin secretion in type 2 diabetes; dose adjustment in kidney disease and rare pancreatitis or severe joint pain are important considerations.

Sitosterolemia

A rare inherited disorder in which the body absorbs and stores too much plant sterol, a substance found in plant foods. The buildup can cause early artery disease, skin lumps, anemia, easy bleeding, or low platelets.

Sitting Position

An upright or semiupright position in which the patient's torso is elevated and the hips and knees are flexed; it is used for selected shoulder and neurosurgical procedures.

Situational Syncope

A reflex faint triggered by a specific situation such as coughing, urination, defecation, swallowing, laughter, or prolonged standing, caused by transient reduced cerebral perfusion.

Situs Ambiguus

A birth difference in which internal organs are arranged irregularly rather than in the usual left-right pattern. It is often associated with congenital heart defects and an absent, small, or abnormally functioning spleen.

Situs Inversus

A congenital condition in which the thoracic and abdominal organs are reversed or mirrored from their normal positions. Complete situs inversus (situs inversus totalis) involves all organs.

Situs Inversus Totalis

A congenital condition in which the major visceral organs are mirrored from their normal positions, with the liver on the left, heart on the right, and other viscera similarly reversed.

Sitz Bath

Immersion of the perineal and anal region in warm or prescribed water for symptom relief in conditions such as hemorrhoids, anal fissures, or postpartum discomfort.

Six Fingers Or Toes

Six fingers or toes is polydactyly, a congenital extra-digit difference that may occur alone or as part of a genetic syndrome.

Six-Minute Walk Test

A simple test measuring how far a person can walk in six minutes on a flat path. Clinicians record distance, symptoms, heart rate, and oxygen level to assess exercise ability and monitor heart or lung disease. Rest breaks are allowed, and the result is interpreted with other findings.

Alternate Names:

6MWT; Six-Minute Walk; 6-Minute Walk Test

Sixth Disease (Roseola)

Alternate index label for Roseola.

Size Perception

The brain's judgment of how large or small an ob-

ject or body part is. Vision, touch, distance, and context all contribute; eye or brain disorders can make objects appear unusually large or small.

Sjogren Syndrome

An autoimmune disease in which the body attacks glands that make tears and saliva, causing dry eyes and dry mouth. It may also affect joints, lungs, kidneys, nerves, or other organs, so persistent symptoms need medical assessment.

Sjogren-Larsson Syndrome

An inherited disorder causing dry, scaly skin, muscle stiffness, and problems with movement or development. It results from changes in a gene involved in breaking down certain fats.

SjöGren Syndrome

An autoimmune disease in which the immune system attacks glands that make tears and saliva, causing dry eyes and dry mouth. It may also affect joints, lungs, kidneys, nerves, or other organs and slightly raises lymphoma risk.

SjöGren'S Disease

Alternate index label; see *Sjögren's Syndrome*.

SjöGren'S Syndrome

An autoimmune disease that damages the glands producing tears and saliva, causing persistent dry eyes and dry mouth. It can also affect other organs and may increase the risk of certain lymphomas.

Alternate Names:

SjöGren's Disease

SJS

Alternate index label; see *Stevens-Johnson syndrome*.

Skeletal Development

Skeletal development is formation, growth, remodeling, and maturation of bones and cartilage from embryonic life through adulthood.

Skeletal Dysplasia

An inherited disorder of bone or cartilage development that may cause short or uneven growth, unusually shaped limbs, spine problems, or other differences in the skeleton. Effects vary widely between conditions.

Skeletal Limb Abnormalities

Skeletal limb abnormalities are differences in the formation, length, alignment, or structure of an arm or leg caused by genetic, developmental, vascular, injury, or other factors.

Skeletal Muscle

Striated muscle attached to bones and generally under voluntary control.

Skeletal Muscle Tissue

Voluntary striated muscle attached to bones or other structures, composed of contractile fibers that generate movement, posture, heat, and joint stability.

Skeletal Muscles

Muscles attached to bones by tendons that produce movement, maintain posture, and generate heat. They are usually under voluntary control but also support automatic actions such as breathing.

Skeletal Myocytes

Skeletal myocytes are striated muscle cells responsible for voluntary movement, posture, heat production, and stabilization of joints.

Skeletal Survey

A set of X-rays of most of a child's bones, used especially when multiple injuries or a medical condition affecting bone development is suspected. It can show fractures, bone abnormalities, and signs of healing and must be interpreted with the full clinical assessment.

Skeletal System

The skeletal system consists of bones, cartilage, joints, and supporting ligaments that provide structure, protect organs, enable movement, and store

minerals.

Skeleton

The body's framework of bones and cartilage that supports movement and protects organs. It also stores minerals, contains marrow that makes blood cells, and provides attachment points for muscles and ligaments.

Skeleton, Bones Of The

The body's framework of bones and cartilage, providing support, protection, leverage for movement, mineral storage, and marrow-based blood-cell production.

Skeletonization

Final stage of postmortem decomposition where soft tissues, organs, and skin have completely decayed or been scavenged, leaving only clean osseous skeletal remains.

Skene Gland Cyst

A fluid-filled lump near the opening of the urethra, caused by blockage of a small gland beside it. Small cysts may cause no symptoms; larger or infected cysts can cause pain, painful urination, difficult urine flow, or pain during sex. Treatment may include drainage or removal.

Skilled Nursing Facility

A facility where people receive 24-hour nursing care and rehabilitation after illness, injury, surgery, or a hospital stay. Care may include wound care, medicines, injections, therapy, and help with daily activities until the person can return home or move to another setting.

Skilled Nursing Or Rehabilitation Facilities

Facilities that provide 24-hour nursing care, rehabilitation, medication management, and assistance with daily activities after illness, injury, surgery, or functional decline.

Skin

The body's outer covering, consisting mainly of epidermis and dermis with appendages such as hair and glands.

Skin Lesion

An abnormal area of skin that may result from infection, inflammation, injury, allergy, or a benign or malignant growth.

Skin - Clammy

Skin that feels cool, damp, or unusually sweaty. It may occur with heat, anxiety, pain, low blood sugar, shock, or other illness.

Skin Abscess

A painful, swollen pocket of pus under the skin, usually caused by a bacterial infection. It may need drainage and antibiotics.

Skin Absorption

Movement of a substance through the skin into underlying tissues or the bloodstream. Absorption depends on the substance, skin condition, contact time, and exposed area.

Skin Aging

Natural aging and long-term sun exposure gradually thin and dry the skin, reduce elasticity, slow healing, and cause wrinkles or dark spots. Limiting ultraviolet exposure, using protective clothing, and applying broad-spectrum sunscreen can reduce further damage.

Skin Aging And Appearance

Skin aging is a complex biological process influenced by both intrinsic factors, such as genetics and natural aging, and extrinsic factors, particularly ultraviolet radiation exposure.

Skin Allergies And Contact Dermatitis

Inflammatory skin reactions triggered by exposure to allergens or irritants that come into direct contact with the skin.

Skin Allergy Testing

Tests in which small amounts of suspected allergens are placed on or just under the skin and the reaction is observed. They can show sensitization to foods, medicines, venoms, or environmental allergens but must be interpreted with symptoms and exposure history.

Skin And Aging

Skin aging involves intrinsic and extrinsic changes. Intrinsic aging causes thinning, wrinkling, and fragility. Extrinsic (photo)aging causes wrinkles, telangiectasias, lentigines, and actinic keratoses. Collagen loss, elastin degradation, and decreased cell turnover contribute to aging skin.

Skin And Environment

Environmental factors significantly affect skin health. Pollution causes oxidative stress, inflammation, and accelerated aging. Particulate matter penetrates skin, generating free radicals. Blue light from screens causes hyperpigmentation, particularly in darker skin tones. Indoor heating and air conditioning cause dryness.

Skin And Hair Changes During Pregnancy

Pregnancy can alter pigmentation, hair growth or shedding, acne, stretch marks, and vascular features through hormonal and circulatory changes; concerning lesions need assessment.

Skin Appendages

Structures that grow from or lie within the skin, including hair follicles, oil glands, and sweat glands. They help lubricate and cool the body and can be affected by acne, infection, inflammation, or inherited disorders.

Skin Barrier Function

The outer skin barrier limits water loss and helps keep out irritants, allergens, and germs. Its tightly packed surface cells and natural oils maintain protection; injury or inflammation can make skin dry, cracked, and more vulnerable.

Skin Biopsy Methods

The sampling method is chosen according to the lesion's appearance and depth. A punch takes a round full-thickness sample, a shave removes a superficial layer, and an excision removes the whole lesion when complete removal is appropriate.

Skin Biopsy Techniques

Skin biopsy is selected according to the suspected diagnosis and lesion depth. Punch biopsy samples full-thickness skin; shave biopsy samples superficial lesions; excisional biopsy removes an entire small lesion; and incisional biopsy samples part of a large lesion.

Skin Blushing/Flushing

Temporary reddening or warming of the skin caused by widening of small blood vessels. It may result from heat, emotion, exercise, fever, medicines, or hormone changes.

Skin Cancer

Cancer that begins in skin cells. Common types include basal-cell cancer, squamous-cell cancer, and melanoma. It may appear as a changing, bleeding, growing, or nonhealing spot.

Alternate Names:

Cancer, Skin

Skin Cancer Epidemiology

Skin cancers are common and include basal-cell carcinoma, squamous-cell carcinoma, and melanoma. Incidence and mortality vary by tumor type, geography, skin phenotype, ultraviolet exposure, immune status, and access to diagnosis and treatment.

Skin Cancer Overview

Skin cancer includes basal-cell carcinoma, squamous-cell carcinoma, melanoma, and less common tumors. Ultraviolet exposure, immune suppression, genetic susceptibility, and certain lesions increase risk; a changing, bleeding, nonhealing, or unusual lesion needs examination.

Alternate Names:

Melanoma (Skin Cancer Overview)

Skin Cancer Prevention

Prevention focuses on reducing ultraviolet exposure through shade, protective clothing, hats, sunglasses, and appropriately used broad-spectrum sunscreen. Avoiding tanning beds also reduces ultraviolet exposure.

Skin Cancer Screening

Examination of the skin for new or changing spots, especially in people at increased risk. Clinicians may use a full-body examination, a magnifying instrument, or a biopsy; routine screening recommendations vary by individual risk.

Skin Cancer Staging

Skin cancer staging guides treatment and prognosis. Melanoma: Breslow thickness (most important prognostic factor), ulceration, mitotic rate, sentinel lymph node status (AJCC 8th edition).

Skin Cancer Surgery

Surgery to remove skin cancer with a margin of apparently healthy tissue. The method depends on the cancer type, size, location, and spread and may include standard excision or Mohs surgery, which checks the edges during removal.

Skin Cancer, Melanoma

Alternate index label; see *Melanoma*.

Skin Carcinoma

Cancer arising from skin cells, most commonly basal-cell or squamous-cell carcinoma. It may appear as a changing sore, lump, scaly patch, or wound that does not heal and needs examination.

Skin Care

Measures that protect and maintain the skin, including gentle cleansing, moisturization, sun protection, wound care, avoidance of irritants, and treatment of identified disease.

Skin Care And Incontinence

Skin protection for people with urine or stool leakage, including gentle cleansing, thorough drying,

absorbent products, barrier creams, regular changing, and treatment of the underlying cause.

Skin Color

The visible color of skin, determined mainly by melanin, blood flow, oxygenation, and other pigments.

Skin Erosion

A shallow loss of the epidermis that leaves a moist or crusted surface but does not extend deeply into the dermis, often caused by friction, scratching, blister rupture, or inflammation.

Skin Examination

Systematic inspection and palpation of the skin, hair, nails, and mucous membranes to assess color, lesions, texture, distribution, vascular signs, infection, and cancer warning features.

Skin Findings In Newborns

Common skin changes in newborns, such as milia, newborn rash, peeling, birthmarks, or bluish hands and feet. Most are harmless, but fever, blisters, widespread redness, or a sick appearance needs prompt assessment.

Skin Flaps

Pieces of skin and underlying tissue moved to cover a wound while keeping or reconnecting their blood supply. Flaps may come from nearby tissue or another part of the body and are used after injury, cancer removal, or reconstructive surgery.

Skin Graft

Skin taken from one area of the body and placed over a wound, burn, ulcer, or surgical defect. A graft must obtain blood from the wound surface to survive and may fail, scar, change color, or require further surgery.

Skin Graft, Pedicle

A piece of skin moved to cover a wound while remaining attached to its original blood supply through a tissue bridge.

Skin Immune System

The cells and protective substances in skin that recognize germs, remove damaged cells, and control inflammation. It works with the skin barrier to prevent infection and support healing after injury.

Skin Induration

Unusual hardness or firmness of the skin or tissue beneath it. Causes include scar formation, inflammation, swelling, infection, an infiltrating disease, or a growth; examination determines the cause.

Skin Infection

Infection of the skin or underlying soft tissue, commonly caused by bacteria, fungi, or viruses. Redness, warmth, swelling, pain, drainage, or fever may occur; rapidly spreading redness, severe pain, blisters, or systemic illness requires prompt medical assessment.

Skin Integrity

The condition of skin and underlying tissue when it remains intact and protected from injury. Prolonged pressure, friction, moisture, poor blood flow, and illness can cause breakdown, especially over bony areas.

Skin Irritation

Inflammation or discomfort caused by direct contact with an irritant, often producing redness, burning, itching, dryness, or scaling.

Skin Lesion Aspiration

Removal of fluid or cells from a skin lump with a needle for testing or drainage.

Skin Lesion Biopsy

Removal of part or all of a skin lesion for microscopic examination to diagnose infection, inflammatory disease, benign tumor, or skin cancer.

Skin Lesion KOH Exam

Microscopic examination of skin scrapings treated with potassium hydroxide to detect fungal hyphae or yeast in suspected superficial fungal infection.

Skin Lesion Of Blastomycosis

A blastomycosis skin lesion results from dissemination of *Blastomyces* fungal infection and may appear as verrucous or ulcerated lesions with raised borders.

Skin Lesion Removal

Removal of an unwanted, suspicious, or diseased area of skin by shaving, cutting, freezing, scraping, or another method. Tissue may be sent for laboratory examination; bleeding, infection, scarring, and incomplete removal are possible.

Skin Lumps

Skin lumps are localized bumps or masses caused by cysts, lipomas, inflamed follicles, infections, benign tumors, or less commonly cancer; persistence or change warrants assessment.

Skin Mastocytoma

A localized collection of mast cells in the skin, usually a yellow-brown or reddish plaque or nodule in a child that may swell, itch, or redden when rubbed.

Skin Microbiome

The community of bacteria, fungi, viruses, and other microorganisms normally living on the skin. They interact with the skin and immune system; changes in this community may contribute to some skin diseases.

Skin Necrosis

Death of skin tissue from ischemia, infection, pressure, toxins, trauma, vasculitis, or severe inflammation, producing discoloration, blisters, ulcers, or black eschar.

Skin Neoplasm

A skin neoplasm is an abnormal growth in the skin that may be benign, precancerous, or malignant.

Skin Nodules

Firm, raised lumps in or under the skin. They may result from inflammation, infection, injury, cysts, or benign or malignant growths.

Skin Of Color

A broad term for people with more deeply pigmented skin. Some conditions may appear differently, and dark marks or raised scars may develop more readily after inflammation or injury; skin cancer can occur in every skin tone.

Skin Or Nail Culture

Laboratory culture of skin, hair, or nail material to identify bacteria or fungi when infection is suspected; results require clinical correlation.

Skin Pigmentation

Skin color is produced mainly by melanin made by pigment-producing cells. Sun exposure, hormones, inflammation, medicines, and illness can make areas darker or lighter; new or changing discoloration may need examination.

Skin Resurfacing

Procedures that improve skin texture, scars, wrinkles, or uneven color by removing or changing surface skin layers. Methods include lasers, chemical peels, and abrasion; risks include infection, pigment changes, and scarring.

Skin Sagging Treatment - Underarms

Treatment for loose skin beneath the upper arms. Options may include exercise, weight management, energy-based procedures, or surgery, depending on the amount of loose skin and the person's goals.

Skin Self-Exam

A skin self-exam is a regular check of the skin for new or changing moles, sores, lumps, or patches that may need medical assessment.

Skin Tag

A skin tag is a benign soft growth of connective tissue, commonly in body folds and associated with friction, age, pregnancy, obesity, or insulin resistance. Removal may be performed for irritation or appearance, but a changing or atypical lesion should be diagnosed first.

Alternate Names:

Acrochordon (Skin Tag)

Skin Tags

Soft, usually harmless skin growths that commonly occur in body folds such as the neck, armpits, groin, or beneath the breasts. They may become irritated or bleed; a changing growth should be examined before removal.

Skin Test

Alternate index label for diagnostic or immunologic skin tests, including prick, patch, and tuberculin testing.

Skin Turgor

The skin's ability to return to its normal position after being gently pinched. Reduced turgor may occur with dehydration, although it is less reliable in older adults.

Skin Writing

A skin condition in which light scratching or pressure causes temporary raised red lines or welts.

Skin, Diseases Of

Conditions affecting skin, hair, nails, glands, or subcutaneous tissue, including infection, inflammation, neoplasia, and genetic disorders.

Skin, Itchy

Alternate index label; see *Itchy skin (pruritus)*.

Skin-Grafting

Surgery that moves skin from a donor area to cover a wound, burn, ulcer, or tissue defect. The graft needs blood supply from the wound bed and may fail, scar, or change color.

Skipped Heartbeats

Alternate index label; see *Heart palpitations*.

Skull

The bony framework of the head that protects the brain and supports the face, eyes, ears, and jaw.

Skull Fracture

A break in one or more skull bones caused by trauma. It may occur with bleeding inside the skull, brain injury, or leakage of clear fluid from the nose or ear and requires medical assessment.

Skull X-Ray

A skull X-ray uses low-dose radiation to show skull bones and may help assess selected fractures, foreign bodies, or bone abnormalities.

Slanted Ear

An ear whose upper edge slopes unusually compared with typical ear orientation; it may be isolated or part of a genetic condition.

SLAP Lesion

A tear in the upper rim of the shoulder socket, sometimes where the biceps tendon attaches. It may follow a fall, lifting injury, or repeated overhead activity and can cause pain, clicking, weakness, or instability.

SLAP Tears

Tears of the superior glenoid labrum extending from anterior to posterior, sometimes involving the biceps tendon attachment. They may cause pain, clicking, or instability, especially with overhead activity.

Slapped Cheek Disease

Alternate index label; see *Parvovirus infection*.

Slapped Cheek Syndrome

Erythema infectiosum, a parvovirus B19 infection causing a slapped-cheek rash and sometimes joint or hematologic complications.

SLE

Systemic lupus erythematosus, a chronic autoimmune disease that can affect skin, joints, kidneys, blood, nervous system, and other organs.

Sleep

A naturally recurring state in which awareness and responses to the surroundings decrease while the

brain and body follow organized patterns. Sleep supports learning, memory, emotional health, physical recovery, immune function, and metabolism.

Alternate Names:

Disorders Sleep (Sleep)

Sleep (Geriatric)

Sleep patterns and sleep problems in older adults, including insomnia, sleep apnea, circadian changes, and medication-related disturbances.

Alternate Names:

Sleep care for older adults; geriatric sleep problems

Sleep And Sleep Disorders In Children And Teens

Children and teens need age-appropriate sleep, and disorders may involve insomnia, circadian delay, sleep apnea, parasomnias, restless legs, or insufficient opportunity. Snoring, pauses in breathing, unusual daytime sleepiness, mood change, or poor school performance warrants evaluation.

Sleep Apnea

Repeated pauses or reductions in breathing during sleep. It can result from the airway closing, the brain failing to signal breathing, or both, and may cause loud snoring, gasping, poor sleep, daytime sleepiness, and low oxygen.

Sleep Apnea (Dental)

A custom mouth device worn during sleep that moves the lower jaw or tongue forward to keep the throat open. It may help selected people with obstructive sleep apnea, especially when positive-airway-pressure treatment is unsuitable; dental and sleep follow-up is needed.

Alternate Names:

Dental oral appliance

Sleep Apnea (Obstructive Sleep Apnea - OSA)

A sleep disorder in which the upper airway repeatedly narrows or closes during sleep, briefly reducing or stopping airflow. Snoring, choking or gasping, morning headache, poor concentration, and daytime sleepiness are common; untreated disease can affect

blood pressure and heart health.

Alternate Names:

Obstructive Sleep Apnea - OSA

Sleep Apnea, Central

Alternate index label; see *Central sleep apnea*.

Sleep Apnea, Obstructive

Alternate index label; see *Obstructive sleep apnea*.

Sleep Apnoea

Repeated pauses or reductions in breathing during sleep, most commonly because of upper-airway obstruction or less commonly inadequate respiratory drive.

Sleep Apnoeas

Repeated pauses or reductions in breathing during sleep, caused by airway obstruction, impaired respiratory drive, or both.

Sleep Architecture

The pattern and order of sleep stages during a night or other sleep period. It includes lighter sleep, deep sleep, and dream-related REM sleep; illness, medicines, age, stress, and sleep disorders can change how much time is spent in each stage.

Sleep Bruxism

Repeated grinding or clenching of the teeth during sleep, which may cause tooth wear, jaw pain, or headaches.

Sleep Debt

The accumulated difference between the amount of sleep a person needs and the amount obtained over time; it may impair alertness, mood, cognition, and performance.

Sleep Diary

A daily record of sleep and wake times, awakenings, naps, medicines, caffeine, and related factors used to assess sleep patterns and treatment response.

Sleep Disorder Periodic Limb Movement

(Periodic Limb Movement Disorder)

Alternate index label for Periodic Limb Movement Disorder.

Sleep Disorders

Conditions affecting quality, timing, and amount of sleep; includes insomnia, sleep apnea, narcolepsy, restless legs syndrome, and parasomnias.

Sleep Disorders In Older Adults

Sleep problems in later life, including insomnia, sleep apnea, restless legs, and circadian changes; medication effects, pain, depression, and medical illness should be assessed.

Sleep Efficiency

The percentage of time in bed that a person is actually asleep. It is calculated by dividing total sleep time by time in bed; a low value may occur with insomnia, repeated awakenings, or other sleep disorders.

Sleep Fragmentation

Repeated brief awakenings or partial arousals that interrupt otherwise continuous sleep. It can reduce restorative sleep and occur with sleep apnea, pain, noise, movement disorders, medicines, or illness.

Sleep Hygiene

Habits and surroundings that support regular, restorative sleep. Helpful measures include a consistent schedule, a dark and quiet bedroom, relaxing before bed, and limiting caffeine, alcohol, nicotine, and stimulating screen use near bedtime.

Sleep Medications And Supplements

Pharmacological agents used to treat insomnia and other sleep disorders when behavioral interventions alone are insufficient.

Sleep Onset Latency

The time required to fall asleep after attempting to sleep; prolonged latency may occur with insomnia, anxiety, circadian misalignment, stimulants, or another sleep disorder.

Sleep Paralysis

Temporary inability to move or speak when falling asleep or waking, while awareness is partly or fully preserved. Episodes usually last seconds to minutes and may include frightening hallucinations. Recurrent episodes can be associated with sleep deprivation, irregular sleep, narcolepsy, or other sleep disorders.

Sleep Related Breathing Disorders

Sleep-related breathing disorders cause abnormal ventilation or oxygenation during sleep, including obstructive and central sleep apnea and sleep-related hypoventilation. Snoring, witnessed pauses, gasping, morning headache, or daytime sleepiness may prompt sleep testing and treatment.

Alternate Names:

Breathing Disorders Sleep Related (Sleep Related Breathing Disorders)

Sleep Spindles

Short bursts of regular brain activity that occur mainly during stage 2 non-REM sleep. They are seen on a sleep recording and are thought to help protect sleep and process newly learned information.

Sleep Studies (Polysomnography)

Overnight tests that record brain activity, eye movements, heart rate, breathing, blood oxygen, body position, and limb movements. They help identify sleep apnea, unusual movements, seizures during sleep, and other sleep disorders.

Alternate Names:

Polysomnography

Sleep, Disorders Of

Health conditions that disturb how much a person sleeps, when they sleep, or how restful sleep is. They may involve insomnia, breathing pauses, unusual movements, excessive sleepiness, unusual nighttime behavior, or a body clock that is out of step.

Sleep-Related Hypoventilation

Breathing that is too shallow during sleep to remove enough carbon dioxide or maintain normal oxygen. It can result from obesity, lung or muscle disease,

chest-wall problems, brain disorders, or sedating medicines.

Sleep-Related Hypoxemia

Abnormally low blood oxygen during sleep that may occur with sleep-disordered breathing, lung disease, neuromuscular weakness, hypoventilation, or other medical conditions.

Sleepiness, Daytime

Alternate index label; see *Narcolepsy*.

Sleeping Sickness

An infection caused by *Trypanosoma* parasites and spread by tsetse flies in sub-Saharan Africa. It may begin with fever and swollen nodes, then progress to sleep disturbance, confusion, and other nervous-system problems.

Sleeplessness

Ongoing difficulty falling asleep, staying asleep, or waking too early despite having enough opportunity to sleep. It may cause tiredness or problems with daytime activities.

Sleepwalking

Recurrent walking or other complex behavior during sleep, usually with little memory afterward. It is more common in children and may be triggered by sleep deprivation, stress, fever, medicines, or other sleep disorders; injury prevention is important.

Sleepwalking And Children

Sleepwalking in children is usually benign and often resolves with age; regular sleep, hazard prevention, and evaluation of frequent, violent, injurious, or atypical episodes are important.

Sleeve Gastrectomy

An operation that removes most of the stomach, leaving a narrow sleeve-shaped section. It limits how much food the stomach can hold and changes appetite hormones; bleeding, leakage, reflux, and nutritional problems can occur.

Sleeve Lobectomy

An operation that removes a lung lobe and the nearby affected part of the main breathing tube, then reconnects the remaining airway. It can remove a centrally located tumor while preserving more healthy lung than removing the whole lung. Possible complications include air leakage, narrowing of the airway, infection, and bleeding.

Alternate Names:

Bronchial Sleeve Resection; Sleeve Resection of the Lung

Sliding Filament

The process by which muscles contract: two protein fibers slide past each other, shortening the muscle's working units. Calcium and energy from ATP allow the fibers to attach, pull, release, and repeat the cycle.

Sliding Hiatal Hernia

A sliding hiatal hernia occurs when the stomach and gastroesophageal junction move upward through the diaphragm, often contributing to reflux.

Sling

A supportive device or surgically placed strip used to support an injured limb or urinary structures.

Slipped Capital Femoral Epiphysis

A hip problem in growing children or teenagers in which the upper end of the thigh bone slips through its growth area. It may cause hip, groin, thigh, or knee pain and a limp and needs urgent assessment to prevent further slipping.

Slipped Disk

A spinal disk whose tough outer layer tears or weakens, allowing its inner material to bulge and irritate nearby nerves. It may cause back or neck pain, numbness, weakness, or sciatica.

Alternate Names:

Herniated disk

Slipped Vertebra

Forward movement of one spinal bone compared

with the bone below it, also called spondylolisthesis. It may cause back pain, stiffness, hamstring tightness, or pressure on a nerve, although some people have no symptoms.

Alternate Names:

Spondylolisthesis

Slipping Rib Syndrome

Pain caused by excessive movement of the lower ribs, usually from loosened cartilage. The pain may be sharp and can sometimes be reproduced by pressing or moving the rib.

Slit Lamp

An eye-examination microscope that uses magnification and a narrow beam of light to inspect the eyelids, cornea, lens, and other eye structures. It helps detect infection, injury, cataract, and glaucoma-related changes.

Alternate Names:

Biomicroscope

Slit Lamp Biomicroscopy

A detailed eye examination using a bright, narrow beam of light and a microscope to view the front of the eye. Additional lenses can help examine the retina and other structures farther back.

Slit-Lamp Biomicroscope

An instrument that provides a magnified, illuminated view of the eye, especially the cornea, anterior chamber, iris, lens, and conjunctiva.

Slit-Lamp Exam

A focused eye examination using a microscope and narrow beam of light to inspect the eyelids, conjunctiva, cornea, anterior chamber, iris, lens, and selected posterior structures.

SLL

Alternate index label; see *Small lymphocytic lymphoma*.

Slough

Soft, dead, or detached tissue covering or separating

from a wound, ulcer, or inflamed surface. It can delay healing and may need gentle removal after blood flow, infection, and the wound's depth are assessed.

Slow Heart Rate - Bradycardia

A heart rate slower than expected, often below 60 beats per minute in an adult. It may be normal in some people but can cause dizziness, fainting, tiredness, or shortness of breath when it reduces blood flow.

Slow Heartbeat

Alternate index label; see *Bradycardia*.

Slow-Twitch Fiber

A type of muscle fiber suited to steady activity over a long time. It uses oxygen efficiently and resists tiredness, helping with posture, walking, and endurance activities rather than short bursts of maximum force.

Alternate Names:

Type I muscle fiber

Slow-Wave Sleep

The deepest stage of non-REM sleep, marked by slow brain waves and reduced response to sounds or touch. It supports physical recovery, memory, and hormone release and is often reduced by ageing, illness, alcohol, or sleep disruption.

Alternate Names:

Deep sleep

Small Airway Disease

Narrowing, inflammation, or blockage of the smallest breathing tubes in the lungs. It may cause cough, wheezing, breathlessness, or trapped air and can occur with asthma, COPD, infection, or other lung disease.

Small Bowel Adenocarcinoma

A malignant gland-forming epithelial tumor of the small intestine. It is uncommon and may cause occult bleeding, obstruction, abdominal pain, or weight loss; risk is increased in selected inherited

and inflammatory disorders.

Small Bowel Bacterial Overgrowth

Excess bacteria in the small intestine, where fewer bacteria are normally present. It can cause bloating, abdominal discomfort, diarrhea, weight loss, and poor absorption of nutrients; some cases involve methane-producing organisms instead.

Small Bowel Follow-Through

A series of X-rays taken after swallowing contrast, usually barium, to follow its movement through the small intestine. It can show narrowing, obstruction, inflammation, or abnormal transit.

Small Bowel Obstruction

Partial or complete blockage of the small intestine. Common causes include adhesions, hernias, tumors, and inflammatory narrowing. Symptoms may include abdominal pain, vomiting, distension, and inability to pass stool or gas.

Small Bowel Prolapse

Alternate index label; see *Small bowel prolapse (enterocele)*.

Small Bowel Resection

Surgical removal of a diseased segment of the small intestine followed by reconnection or stoma formation when needed.

Small Bowel Series

A series of X-ray images of the small intestine after swallowing contrast material, usually barium. It can show narrowing, blockage, abnormal movement, inflammation, tumors, or changes from Crohn disease.

Small Bowel Tissue Smear/Biopsy

Examination of cells or a tissue sample from the small intestine to investigate poor nutrient absorption, celiac disease, inflammation, infection, or a tumor.

Small Calorie (Calorie)

A small calorie is a unit of heat energy; food labels usually use a kilocalorie, written Calorie with a capital C, equal to 1,000 small calories.

Small Cell Carcinoma

A fast-growing cancer made of small cells, most often beginning in the lung and strongly linked to smoking. It may shrink at first with treatment but often returns or spreads early, including to the brain.

Small Cell Carcinoma Of The Ovary, Hypercalcemic Type

A rare, highly aggressive ovarian tumor in young patients, often associated with alterations in SMARCA4 and sometimes presenting with hypercalcemia.

Small Cell Lung Cancer

An aggressive lung cancer strongly associated with smoking and early spread. It often responds initially to chemotherapy or radiation, but recurrence is common and treatment depends on the stage and overall health.

Small Eye

An eye that is smaller than usual because it did not develop fully before birth. Vision may be reduced, especially when other eye structures are also affected, and assessment can identify associated conditions.

Small Fiber Neuropathy

Damage to tiny nerves that carry pain, temperature, and automatic body signals. It can cause burning feet, tingling, poor temperature sensation, abnormal sweating, digestive symptoms, or heart-rate changes; diabetes is one possible cause.

Small For Gestational Age

Birth weight or size below the expected range for gestational age, caused by constitutional small size, placental insufficiency, infection, genetic disease, or maternal factors.

Small Intestinal Bacterial Overgrowth

An abnormal increase or change in bacteria within the small intestine, often causing bloating, abdominal pain, nausea, diarrhea, fullness, weight loss, or nutrient deficiency. Causes include impaired intestinal movement, structural problems, surgery, and some systemic diseases; persistent symptoms require medical evaluation.

Small Intestinal Bacterial Overgrowth (Small Intestinal Bacterial Overgrowth)

Alternate index label; see *Small Intestinal Bacterial Overgrowth*.

Small Intestinal Ischemia And Infarction

Inadequate blood supply to the small intestine that can progress to irreversible tissue death, perforation, sepsis, and shock.

Small Intestine

The long, coiled part of the digestive tract between the stomach and large intestine. It receives bile and pancreatic juices, completes digestion, and absorbs most nutrients and much of the body's water.

Small Intestine Aspirate And Culture

Collection and culture of fluid aspirated from the small intestine to evaluate suspected bacterial overgrowth or selected infections; the procedure is invasive and results require clinical correlation.

Small Intestine Prolapse

Alternate index label; see *Small bowel prolapse (enterocele)*.

Small Round Blue Cell Tumor

A tumor whose cells look small, round, and blue under a microscope. This appearance occurs in several cancers, especially in children, so additional tissue tests are needed to identify the exact type.

Small Vessel Disease

Disease affecting small blood vessels, which can impair blood flow and contribute to brain, heart, kidney, or other organ problems.

Alternate Names:

Coronary Microvascular Disease

Small-Bowel Transplantation

Surgery replacing a severely diseased or nonfunctioning small intestine with donor bowel. It may help people unable to receive enough nutrition through the gut but requires lifelong rejection-preventing medicines and monitoring.

Small-Bowel Volvulus

Twisting of the small intestine that can block its contents and cut off its blood supply. It may cause severe abdominal pain, vomiting, swelling, and inability to pass stool or gas and requires urgent treatment.

Small-Cell Carcinoma

A fast-growing cancer, most often starting in the lung and strongly linked with smoking. It may shrink quickly with chemotherapy or radiation but often returns or spreads early, including to the brain.

Smallpox

A severe contagious disease caused by variola virus, producing fever and rash; global eradication was certified in 1980.

SMART

A way to set goals that are specific, measurable, achievable, relevant, and time-limited. SMART goals state exactly what is wanted, how progress will be checked, and when the goal should be reached.

Alternate Names:

SMART goals

Smashed Fingers

A smashed finger may injure skin, nail, bone, tendon, or nerve; deformity, severe pain, numbness, impaired movement, or blood under the nail may require urgent evaluation.

Smear Of Duodenal Fluid Aspirate

A smear of duodenal fluid aspirate examines fluid from the first part of the small intestine for selected

parasites or other microscopic findings.

Smegma

A collection of shed cells, oils, and moisture around the genital folds, which may promote irritation if hygiene is poor.

Smell

The sense of detecting airborne chemicals through receptors in the nasal lining and processing the signals in the brain. Reduced or lost smell can follow infection, nasal disease, head injury, medicines, or neurologic disease.

Smell - Impaired

Reduced or absent ability to detect odors, called hyposmia or anosmia, caused by nasal obstruction, viral injury, head trauma, neurodegeneration, medications, or other disease.

SMILE

A laser eye operation that corrects short-sightedness and some short-sighted astigmatism. The laser creates a thin piece of tissue inside the cornea, which is removed through a small opening without making a larger corneal flap.

Smile Design

Planning smile based on facial features, gum display, tooth proportions. Digital smile design software available.

Smith-Lemli-Opitz Syndrome

A rare inherited disorder affecting cholesterol production before birth. It may cause growth and developmental problems, distinctive facial features, heart or limb abnormalities, feeding difficulty, and genital differences.

Smith-Magenis Syndrome

A genetic neurodevelopmental disorder, usually involving deletion of 17p11.2 or an RAI1 variant. It causes developmental delay, intellectual disability, distinctive facial features, sleep disturbance, behavioral dysregulation, and variable congenital abnor-

malities.

Smoke Evacuator

A device that captures and filters smoke produced during surgery by electrical, laser, or ultrasonic instruments. Removing the plume reduces staff and patient exposure to particles, irritating gases, and potentially infectious material.

Smoke Inhalation

Injury from breathing smoke, hot gases, or combustion products, potentially causing airway burns, poisoning, and lung injury.

Smoke Inhalation Injury

Pulmonary injury caused by inhalation of toxic products of combustion.

Smoke Secondhand (Secondhand Smoke)

Alternate index label for Secondhand Smoke.

Smokeless Tobacco

Smokeless tobacco delivers nicotine and causes dependence, oral lesions, gum recession, tooth loss, cardiovascular risk, and cancers of the mouth, throat, and pancreas. Quitting reduces harm, and counseling plus approved medicines improve cessation success.

Alternate Names:

Tobacco Chewing (Smokeless Tobacco)

Smokers Keratosis (Leukoplakia)

Alternate index label for Leukoplakia.

Smokers Lung (Smoker'S Lung: Pathology Photo Essay)

Alternate index label for Smoker's Lung: Pathology Photo Essay.

Smoking

Inhalation of smoke from burning tobacco or other substances, associated with addiction, cancer, cardiovascular disease, and lung disease.

Smoking And Asthma

Smoking irritates and inflames airways, worsens asthma control, increases attacks, and reduces treatment response; stopping smoking and avoiding secondhand smoke improve outcomes.

Smoking And COPD

Smoking is the major preventable cause of COPD and accelerates lung-function loss; quitting reduces progression and exacerbations even after COPD is established.

Smoking And Surgery

Smoking before or after an operation increases the risk of breathing problems, wound infection, poor healing, blood clots, heart complications, and failure of repaired tissue. Stopping as early as possible improves recovery, even if surgery is soon.

Smoking Cessation

The process of stopping tobacco or nicotine use. It may involve counseling, behavioral support, medicines, or nicotine replacement.

Smoking Cessation Medications

Medicines that reduce nicotine withdrawal and cravings, including nicotine replacement, bupropion, and varenicline, used with behavioral support and individualized for health risks and preferences.

Smoldering Multiple Myeloma

An asymptomatic plasma-cell disorder with increased clonal plasma cells or monoclonal protein but no myeloma-defining organ damage; it requires risk-based monitoring for progression to active multiple myeloma.

Alternate Names:

Voluntary muscles

Smooth Muscle

Muscle that works automatically in the walls of hollow organs, blood vessels, and airways. It controls processes such as bowel movement, bladder emptying, blood-vessel width, airway narrowing, and childbirth contractions.

Smothering

Mechanical obstruction of the external nose and mouth that prevents effective ventilation. It may be caused by a covering, compression, or an obstructing soft material; findings are often nonspecific and must be interpreted with the scene, history, and complete examination.

Snacking When You Have Diabetes

Planning snacks for diabetes by considering hunger, glucose pattern, activity, carbohydrate amount, medicine timing, and hypoglycemia risk rather than relying on unrestricted grazing.

Snacks And Sweetened Drinks - Children

Frequent sugary snacks and drinks increase children's risk of tooth decay and excess weight; water, nutritious foods, portions, and regular meals are healthier defaults.

Snacks For Adults

Healthy adult snacks emphasize nutrient-dense foods such as fruit, vegetables, legumes, nuts, yogurt, or whole grains while limiting excess sugar, salt, and highly processed calories.

Snake Bite

Snake bites can cause puncture wounds, tissue injury, bleeding, paralysis, or venom-related effects on clotting, nerves, muscles, kidneys, or the heart. Call emergency services, keep the person still, and do not cut, suck, ice, or tourniquet the wound.

Alternate Names:

Bite Snake (Snake Bite)

Snake Bites

Wounds caused by a snake's teeth; venomous bites may cause pain, swelling, bleeding, tissue damage, paralysis, abnormal clotting, or shock. Seek emergency care immediately, keep the person still, and do not cut, suck, ice, or tourniquet the wound.

Snake-Bite

A wound from a snake that may cause local injury, envenomation, infection, or systemic toxicity.

Snapping Finger

Trigger finger, painful catching or locking of a finger caused by stenosing inflammation around a flexor tendon.

Snapping Hip Syndrome

A clicking or snapping sensation in the hip, sometimes with pain, caused by a tendon moving over bone or by a problem inside the joint. Activity adjustment and exercises often help; persistent pain may need imaging or other treatment.

Sneddon Syndrome

A rare disorder in which small arteries become blocked, causing a net-like purplish skin pattern and repeated strokes or stroke-like events. Headache, high blood pressure, memory problems, or heart-valve changes may also occur.

Sneezing

A forceful reflex expulsion of air through the nose and mouth, often triggered by nasal irritation.

Snellen Chart

A chart of letters or symbols used to measure visual acuity at a specified distance.

Snoring

Noisy breathing during sleep caused by vibration of relaxed or narrowed tissues in the throat. It can be harmless, but loud frequent snoring with pauses in breathing, choking, morning headaches, or daytime sleepiness may indicate sleep apnoea.

Snoring - Adults

Noisy breathing during sleep caused by vibration of relaxed tissues in the nose, mouth, or throat; loud habitual snoring with witnessed pauses or daytime sleepiness may indicate obstructive sleep apnea.

Snoring And Sleep Apnea

Snoring is the sound produced by vibrating soft tissues in the upper airway during sleep, often resulting from partial airway obstruction. Sleep apnea is a more serious condition characterized by repeated

episodes of complete or partial airway collapse during sleep, leading to intermittent hypoxia, frequent arousal, and fragmented sleep.

Snort

A snort is a forceful nasal or respiratory sound; it may occur with congestion, sleep-disordered breathing, irritation, or inhalation of a substance.

Snot

Snot is an informal term for nasal mucus, which traps particles and helps protect the respiratory lining; its appearance changes with infection, allergy, and irritation.

Snow Blindness

A painful temporary burn of the eye's clear front surface caused by intense ultraviolet light, often reflected from snow, ice, water, or sand. Symptoms may include gritty pain, tearing, redness, light sensitivity, and blurred vision.

SNRIs

A class of antidepressants that increase the activity of serotonin and norepinephrine, chemical messengers between nerve cells. They treat depression, some anxiety disorders, and certain nerve or long-lasting pain conditions.

Snuff

Snuff is finely ground tobacco inhaled through the nose or placed in the mouth and can cause nicotine dependence, oral disease, and cardiovascular harm.

Snuffles

A runny or congested nose; in newborns, persistent snuffles can be a sign of congenital syphilis.

Social And Psychological Causes Of Alcoholism

Alcohol-use disorder reflects interactions among genetics, brain reward pathways, stress, trauma, mental illness, social environment, and alcohol availability—not a moral failure. Treatment may include withdrawal care, counseling, peer support,

and medicines that reduce drinking or relapse.

Social Anxiety Disorder

Intense, persistent fear of being judged, embarrassed, or rejected in social or performance situations. It can lead to avoidance, physical anxiety symptoms, and difficulty with school, work, relationships, or daily activities.

Social Anxiety Disorder (Social Phobia)

Intense fear and avoidance of social or performance situations because of concern about embarrassment, judgment, or scrutiny.

Alternate Names:

Phobia, Social

Social Isolation

Limited contact or interaction with other people. Persistent isolation may adversely affect mental and physical health.

Social Worker

A professional who helps patients and families manage practical, emotional, and social problems related to illness. They may arrange community resources, support discharge planning, assist with benefits, and provide counseling or referrals.

Sociophobia

An older term for social anxiety disorder, involving excessive fear of scrutiny, embarrassment, humiliation, or negative evaluation in social or performance situations.

Sodium

A mineral and body salt helping control fluid balance, nerves, muscles, and blood pressure; abnormal levels can be harmful.

Sodium Bicarbonate Therapy

Treatment using sodium bicarbonate to make overly acidic blood less acidic in selected conditions, such as some cases of kidney disease. It can increase sodium and fluid load and requires monitoring.

Sodium Bisulfate Poisoning

Poisoning from sodium bisulfate, an acidic chemical used in some cleaners and pool products. It can burn the skin, eyes, mouth, and digestive tract; fumes may irritate breathing passages, and ingestion requires urgent advice.

Sodium Blood Test

A blood test measuring serum sodium, a major extracellular electrolyte involved in water balance and nerve and muscle function; results are interpreted with fluid status and other electrolytes.

Sodium Carbonate Poisoning

Poisoning from sodium carbonate, an alkaline chemical found in some cleaning products. It may irritate or burn the eyes, skin, mouth, and digestive tract; do not induce vomiting after swallowing it.

Sodium Chloride

The salt sodium chloride; sterile solutions are used for fluid replacement, irrigation, and drug dilution.

Sodium Cromoglycate

A mast-cell stabilizer used in selected allergy and asthma treatments; also called cromolyn.

Sodium Diatrizoate

A water-soluble iodinated contrast agent used for selected radiographic examinations. It can cause allergic-like reactions, kidney stress, or aspiration complications, so its use depends on the procedure and patient risks.

Sodium Hydroxide Poisoning

Severe poisoning from sodium hydroxide, a strong alkali in some drain and oven cleaners. It can rapidly burn the mouth, throat, esophagus, stomach, skin, and eyes; emergency assessment is required and vomiting must not be induced.

Sodium Hypochlorite

The active chemical in many bleach and disinfectant products. It kills many germs when used correctly, but concentrated liquid can burn skin, eyes, and the

digestive tract; mixing it with acids or ammonia can release dangerous gas.

Sodium Hypochlorite Poisoning

Poisoning from bleach containing sodium hypochlorite. Swallowing may irritate or burn the mouth and digestive tract; mixing bleach with acids or ammonia can release dangerous gases causing cough, chest pain, or breathing failure.

Sodium In Diet

Dietary sodium helps regulate fluid balance and nerve and muscle function, but excess intake can raise blood pressure; processed foods are a major source and intake should follow individual health advice.

Sodium Low Levels In The Blood (Hyponatremia)

Alternate index label for Hyponatremia.

Sodium Polystyrene Sulfonate

A resin that binds potassium in the intestine and has been used to lower high blood potassium. It can cause constipation and serious intestinal injury, so its use requires careful medical assessment.

Sodium Urine Test

A urine test measuring sodium excretion, used with blood tests and clinical findings to assess volume status, kidney handling of sodium, and causes of hyponatremia or hypertension.

Sodium Valproate

An anticonvulsant and mood stabilizer; it carries important pregnancy and reproductive risks and requires specialist prescribing.

Soft Markers For Aneuploidy

Ultrasound findings during pregnancy that are common in healthy fetuses but occur somewhat more often when there is an extra or missing chromosome. They do not diagnose a chromosome condition and are interpreted with other screening results.

Soft Tissue Augmentation

Restoration or enhancement of volume and contour in skin or underlying soft tissue using fillers, fat transfer, implants, or other reconstructive techniques.

Soft Tissue Injury

Damage to muscles, tendons, ligaments, fascia, skin, or other non-bony tissues, often caused by trauma or overuse.

Soft Tissue Rheumatism

An older broad term for pain or inflammation affecting muscles, tendons, ligaments, or bursae. Modern diagnosis usually names the specific condition, such as tendinitis, bursitis, or a muscle strain.

Soft Tissue Sarcoma

A group of malignant tumors arising in muscle, fat, fibrous tissue, blood vessels, or other connective tissues. Treatment depends on the subtype, location, stage, and relationship to nearby structures.

Alternate Names:

Cancer, Soft Tissue Sarcoma Sarcoma, Soft Tissue

Soft Tissue Tumors

Growths arising in muscle, fat, fibrous tissue, blood vessels, nerves, or other supporting tissues. Many are harmless, but some are cancerous; a growing, deep, firm, painful, or persistent lump needs assessment.

Soft-Tissue Calcinosis

Buildup of calcium deposits in skin, muscles, tendons, or other soft tissues. The deposits may form hard lumps, cause pain or limited movement, break through the skin, or occur because of kidney disease, abnormal calcium levels, inflammation, or tissue damage.

Soil Contamination

The presence of harmful substances in soil, such as heavy metals, pesticides, fuel, or industrial waste. People may be exposed through food, water, dust, or skin; testing, removal, covering, or treatment of

the soil can reduce risk.

Solar Keratosis

Alternate index label; see *Actinic keratosis*.

Solar Keratosis (Actinic Keratosis)

Alternate index label for Actinic Keratosis.

Solar Lentigines

Alternate index label; see *Age spots (liver spots)*.

Solar Plexus

A network of involuntary nerves in the upper abdomen, centered around the celiac plexus. It helps regulate abdominal organs, and irritation or injury may contribute to upper-abdominal pain or altered organ function.

Solar Urticaria

A rare allergic-type reaction to sunlight or other light that causes itchy red raised patches within minutes on exposed skin. The rash usually improves after leaving the light, but severe widespread symptoms need medical care.

Solder Poisoning

Poisoning from swallowing solder or inhaling fumes or dust during heating. Products may contain lead, tin, antimony, or other metals and can cause stomach symptoms, anemia, nerve injury, or kidney damage; exposure needs evaluation.

Sole Sweating Excessive (Hyperhidrosis)

Alternate index label for Hyperhidrosis.

Soleus Muscle

A deep calf muscle that joins the Achilles tendon and helps point the foot downward. It is important for standing, walking, and running; injury or overuse can cause calf pain and weakness.

Solitary Fibrous Tumor

A solitary fibrous tumor is a usually slow-growing growth of connective tissue that can arise in the pleura, meninges, or other sites and may rarely

behave aggressively.

Solitary Pulmonary Nodule

A single small spot in the lung surrounded by otherwise normal lung tissue. It may be a scar, infection, harmless growth, or early cancer; its size, appearance, and change over time determine whether follow-up or biopsy is needed.

Solution

A homogeneous mixture in which one or more substances are dissolved in a solvent; medical solutions include saline and antiseptics.

Solvent Abuse (Misuse)

Harmful inhalation or ingestion of volatile solvents, which can cause neurologic, cardiac, liver, kidney, or respiratory injury.

Solvent Exposure

Contact with organic solvents by inhalation, ingestion, or skin absorption. Acute exposure may cause irritation or central nervous system effects; repeated exposure may damage organs.

Somatic

Relating to the body, especially the body wall and musculoskeletal system, or to physical symptoms.

Somatic Mutation

A genetic change acquired by a body cell during life rather than inherited from a parent. It is passed to descendants of that cell and may contribute to cancer, but it usually is not passed to children.

Somatic Symptom Disorder

A condition in which physical symptoms cause significant distress or disrupt daily life, together with excessive worry, fear, or time spent dealing with them. The symptoms are real; assessment still looks for physical causes and offers support for both body and mind.

Somatic Variant

A change in DNA acquired by a body cell after

conception rather than inherited from a parent. It usually cannot be passed to children but may affect only some tissues or contribute to cancer.

Somatization

The experience or expression of psychological distress through physical symptoms such as pain, fatigue, or stomach problems. The symptoms are real and not intentional; assessment should consider both physical and psychological causes.

Somatostatin

A hormone made in the brain, pancreas, and digestive tract that slows growth hormone, insulin, glucagon, and digestive-hormone release. It also reduces movement and secretion within parts of the digestive system.

Somatostatin Analog

A medicine that imitates somatostatin, a hormone that slows the release of several hormones and digestive secretions. It is used for selected hormone-producing tumors, acromegaly, severe diarrhea, and some bleeding conditions.

Somatostatinoma

A rare hormone-producing tumor usually arising in the pancreas or small intestine. It may cause diabetes, diarrhea or greasy stools, gallstones, weight loss, or no symptoms; treatment depends on whether it has spread and may include surgery or cancer medicines.

Somatotropic Pituitary Adenoma

A usually noncancerous pituitary tumor that makes too much growth hormone. In adults it causes acromegaly, with enlargement of the hands, feet, jaw, or other tissues; in children it can cause excessive height before growth ends.

Somatotropin

Growth hormone, produced by the pituitary gland. It supports childhood growth and influences protein, fat, and carbohydrate metabolism; excess or deficiency can cause characteristic growth and metabolic disorders.

Somatotype

A descriptive body-build classification; it is not a disease diagnosis.

Somnambulism

Sleepwalking or performing other activities while only partly awake, usually during deep sleep. Episodes are more common in children and may be triggered by lack of sleep, stress, illness, or medicines; safety measures are important, especially if wandering or injury occurs.

Somniloquy (Sleep-Talking)

Talking, laughing, or making sounds during sleep without knowing it. It is usually harmless, but frequent or disruptive episodes may occur with sleepwalking, nightmares, breathing problems during sleep, medicines, or other sleep disorders.

Alternate Names:

Sleep talking

Somnolence

Unusual sleepiness or a tendency to fall asleep when a person should be awake. It may result from too little sleep, medicines, alcohol or drugs, sleep disorders, metabolic illness, or neurologic disease.

Somnolent

Somnolent means unusually sleepy or drowsy, which may result from sleep deprivation, medicines, intoxication, metabolic illness, or neurologic disease.

Sonographer

A healthcare professional trained to obtain diagnostic ultrasound images. They position the patient, operate the scanner, record appropriate views and measurements, and document findings for interpretation by a qualified clinician.

Soporifics

Medicines or substances that cause sleepiness or promote sleep. They may impair alertness, coordination, and breathing, especially when combined with alcohol or other sedatives.

Sorbitol

A sugar alcohol used as a sweetener and in some medicines. Larger amounts draw water into the bowel and act as a laxative, but may cause gas, cramps, diarrhea, or dehydration.

Sore

Painful or tender, or describing an open area on skin or a moist body lining. A sore may result from injury, infection, inflammation, pressure, allergy, or another medical condition.

Sore Throat

Pain, scratchiness, or irritation in the throat. Common causes include viral infections, bacterial infections, allergies, dry air, smoke, voice strain, and acid reflux; persistent, severe, or breathing-related symptoms need medical assessment.

Sore Throat (Pharyngitis)

Alternate index label for Pharyngitis.

Sores Canker (Canker Sores)

Alternate index label for Canker Sores.

Sotalol

A medicine with beta-blocking and class III antiarrhythmic effects, used for selected cardiac rhythm disorders.

Sotos Syndrome

A genetic disorder that causes unusually rapid growth in childhood, a large head, distinctive facial features, and delayed development or learning difficulties. Coordination, behavior, seizures, heart problems, or kidney problems may also occur. Growth usually slows with age. A change in the *NSD1* gene causes most cases.

Alternate Names:

Cerebral Gigantism; NSD1-Related Overgrowth Syndrome

Sound

Mechanical energy transmitted as waves and perceived by hearing; clinical sound assessment includes

speech and respiratory or cardiac sounds.

Source Control

A procedure or intervention that eliminates, drains, debrides, or otherwise controls an anatomic focus of infection or contamination. Examples include drainage of an abscess, removal of infected tissue or device, and repair of a perforation.

Soy

Soy is a legume providing protein and isoflavones; it is nutritious for many people but can cause allergy and may interact with some medicines or thyroid treatment timing.

Soy Protein Intolerance

Adverse gastrointestinal reaction to soy proteins, most often seen in infants and young children. It may cause vomiting, diarrhoea, abdominal pain, blood or mucus in the stool, feeding difficulty, or poor growth.

Soya

Soybean and products made from it; soy is a food source and can cause allergy in susceptible people.

Space Medicine

The medical specialty concerned with human health and performance during aviation and space travel. It addresses altered gravity, radiation, isolation, motion sickness, sleep, emergencies, exercise, and returning safely to Earth.

Spacer

A chamber attached to a metered-dose inhaler that holds the released medicine briefly, making it easier to breathe into the lungs and reducing medicine left in the mouth or throat.

Alternate Names:

Valved holding chamber

Spanish Fly

A historical name for cantharidin-containing blister beetles; ingestion is poisonous and it is not a safe aphrodisiac.

Spasm

An involuntary, often painful tightening of one muscle or a group of muscles. Spasms may result from fatigue, dehydration, nerve disease, injury, medicines, inflammation, or problems affecting the brain or spinal cord.

Spasmodic Dysphonia

Spasmodic dysphonia is a focal laryngeal dystonia causing involuntary voice-box spasms and strained, breathy, or interrupted speech.

Spasmodic Torticollis

A form of neck dystonia with involuntary muscle contractions causing twisting, tilting, or abnormal neck posture.

Spasmus Nutans

An uncommon early-childhood syndrome of rapid shimmering eye movements, head nodding, and torticollis that usually resolves but requires evaluation to exclude neurologic or ocular disease.

Spastic

Describes muscles that are unusually tight and resist being stretched, especially when moved quickly. It may cause stiffness, jerking, abnormal posture, and difficulty controlling movement after nervous-system injury.

Spastic Colon (Irritable Bowel Syndrome)

Alternate index label for Irritable Bowel Syndrome.

Spasticity

Velocity-dependent increase in muscle tone caused by an upper motor-neuron lesion, producing stiffness, spasms, abnormal reflexes, and restricted movement.

Spasticity Management

Assessment and treatment of abnormal muscle stiffness and spasms. Measures may include stretching, therapy, positioning, medicines, injections, or surgery.

Spatial Resolution

The ability of an imaging system to show two nearby small objects as separate. Better resolution shows finer detail, but the result depends on the scanner, movement, body part, scan settings, and the type of imaging used.

Special Care Baby Unit

A ward within a hospital that provides specialist care for newborn babies who need additional support but not intensive care.

Special Stain

A histochemical stain that highlights a particular tissue component, organism, or deposited substance not adequately demonstrated by routine hematoxylin and eosin. Examples include periodic acid-Schiff, Ziehl-Neelsen, Congo red, and Gomori methenamine silver stains.

Specific Absorbed Fraction

The portion of energy released by radiation in one body area that is absorbed by a particular organ or tissue. It helps calculate the radiation dose during nuclear-medicine treatment or testing.

Specific Activity

The amount of radioactivity in a given amount of material. It matters when preparing radioactive medicines because enough activity is needed for imaging or treatment while limiting the amount of substance and unnecessary exposure.

Specific Gravity

A comparison of urine density with water that gives an estimate of how concentrated the urine is. It may rise with dehydration, sugar, or protein in urine and fall when the kidneys cannot concentrate urine or when excess fluid is present.

Specific Learning Disorder

A developmental condition causing lasting difficulty learning or using reading, writing, or mathematics skills despite appropriate teaching. The difficulty interferes with school, work, or daily activities and is not explained only by poor instruction, vision,

hearing, or intellectual disability.

Specific Phobia

A disorder involving marked, persistent fear or anxiety about a particular object or situation. The fear is excessive relative to the actual danger, leads to avoidance or intense distress, and interferes with daily functioning.

Specific Reading Disability

Alternate index label; see *Dyslexia*.

Specificity

A test's ability to correctly identify people who do not have the condition being tested.

Specimen Adequacy

The degree to which a collected clinical specimen is sufficient in quantity, correctly identified, properly transported, and representative of the site being tested. Inadequacy can cause invalid, misleading, or falsely negative results.

Specimen Container

A clean, suitable container used to collect, identify, protect, and transport a patient sample for laboratory testing. The container depends on the sample and test; it should be labeled correctly, closed securely, and kept free from contamination.

Specimen Transport Medium

A special liquid or gel that keeps germs or cells suitable for testing while a patient sample travels to the laboratory. The medium, temperature, container, and delivery time depend on the sample and suspected infection.

SPECT Scan (Single Photon Emission CT)

A nuclear-medicine scan that uses a small radioactive tracer and a rotating camera to create three-dimensional pictures of blood flow or organ function. It can examine the heart, brain, bones, kidneys, or other organs.

Alternate Names:

Single Photon Emission CT

Spectral Analysis

Examination of the different energy levels within radiation or another signal. In medical imaging, it can separate useful information from background scatter and help identify materials or improve image interpretation.

Speculum

An instrument used to gently separate or hold open the walls of a body passage so that the area can be visualized, examined, sampled, or treated. Common types include vaginal, nasal, ear, and rectal specula; design and size depend on the body site and intended procedure.

Speculum, Ear

A small cone-shaped tip fitted to an otoscope to direct light into the external ear canal and permit examination of the canal and tympanic membrane. Disposable and reusable types are available in different sizes.

Speech

The production of spoken language using breathing, voice, and movements of the tongue, lips, palate, and other structures. Hearing, brain function, teeth, illness, and dental appliances can affect speech.

Speech Audiometry

Hearing testing that measures detection or recognition of speech at different loudness levels. It commonly includes speech reception threshold and word-recognition testing, complementing pure-tone audiometry.

Alternate Names:

Speech testing; speech audiometric testing.

Speech Delay

Speech or language development that is slower than expected for a child's age. Causes may include hearing loss, developmental differences, autism, neurologic disease, or limited language access; loss of previously learned skills needs prompt assessment.

Speech Discrimination

A hearing test that measures how well a person understands spoken words at a comfortable loudness. The result helps assess hearing function beyond the ability to detect pure tones.

Speech Disorders

Conditions that affect making speech sounds, speaking smoothly, using the voice, or controlling the movements needed for speech. They may follow hearing loss, developmental differences, brain injury, stroke, nerve disease, or other conditions and can often be assessed by a speech therapist.

Speech Impairment In Adults

Difficulty producing or understanding speech caused by aphasia, dysarthria, apraxia, hearing loss, neurologic disease, structural problems, or cognitive disorder; sudden onset requires stroke assessment.

Speech Therapy

Assessment and treatment to help with speaking, understanding language, voice, communication, or swallowing. A speech and language therapist may use exercises, practice, communication aids, and advice for the person and family.

Speech-Language Pathologist

A clinician who evaluates and treats disorders of speech, language, voice, communication, cognition, and swallowing across childhood, adulthood, and older age.

Speech-Language Pathology Assessment

An evaluation of speech, language, voice, communication, swallowing, and sometimes related cognitive skills. It combines interview, clinical observation, and standardized or functional tests to guide therapy.

Sperm

Mature male reproductive cells that can fertilize an egg. Semen contains sperm plus fluids from the reproductive glands; sperm are produced in the testes.

Spermarche

The onset of sperm production and the first ejaculation, marking an important stage of male puberty.

Spermatic

Relating to sperm or structures that produce, transport, or support sperm. Spermatic structures include the testes, ducts, blood vessels, nerves, and tissues involved in male reproductive function.

Spermatic Cord

A cord-like structure carrying the vas deferens, testicular blood vessels, nerves, lymph vessels, and supporting tissue. It extends through the groin to the testis and may be affected by hernia, twisting, or infection.

Spermatocele

A usually harmless, fluid-filled cyst beside or within the epididymis, the coiled tube behind the testicle. It often causes no symptoms but may feel like a lump and should be checked if newly noticed or painful.

Alternate Names:

Cyst, Spermatic

Spermatogenesis

The production and maturation of sperm in the seminiferous tubules of the testes. It depends on germ cells, Sertoli cells, hormones, and suitable testicular temperature.

Spermatogonium

An early male reproductive cell in the testis that divides and develops into primary spermatocytes, beginning sperm production.

Spermatorrhea

Involuntary leakage or discharge of semen, sometimes occurring during sleep or without orgasm. Occasional nocturnal emissions can be normal; persistent discharge, pain, blood, or urinary symptoms needs assessment.

Spermatozoa

Mature male reproductive cells, also called sperm. Each normally carries half the usual chromosome number and has a head, middle section, and tail that helps it move toward an egg.

Spermatozoon

A single mature male reproductive cell, or sperm cell. The singular form of spermatozoa: one mature male reproductive cell capable of carrying genetic material to an egg.

Spermicide

A contraceptive substance that kills or immobilizes sperm, often used with condoms or other barrier methods.

Sphenoid

Relating to the sphenoid bone, a central bone at the base of the skull. It helps form the eye sockets and skull base and contains the hollow spaces called the sphenoid sinuses.

Sphenoid Bone

A central bone at the base of the skull that helps form the eye sockets and skull base. It contains the sphenoid sinuses and a hollow that holds the pituitary gland.

Sphenoid Sinusitis

Inflammation or infection of the sphenoid sinus, which lies deep behind the nasal cavity. It may cause deep headache, facial pain, or visual symptoms and can rarely spread to nearby nerves or the brain; persistent or severe symptoms require medical assessment.

Sphenoidal Sinus

A paired air-filled sinus within the sphenoid bone at the base of the skull. It lies near important nerves and blood vessels, so inflammation or surgery in this area requires careful assessment.

Spherocytes

Red blood cells that are unusually round and dense

instead of having their normal flattened shape. They may occur when the cell membrane is damaged or removed, especially in hereditary spherocytosis or immune red-cell destruction.

Spherocytos (Spherocytosis (Hereditary, HS))

Alternate index label; misspelling of *Spherocytosis*.

Spherocytosis (Hereditary, HS)

Alternate index label for Hereditary, HS.

Sphincter

A ring-shaped muscle that opens and closes a body passage. Sphincters help control urine, stool, food, bile, and other fluids; examples include the muscles around the anus, bladder outlet, and stomach outlet.

Sphincter Of Oddi

A muscular valve controlling the release of bile and pancreatic juice into the first part of the small intestine. It opens during digestion and abnormal blockage or tightening can cause pain or pancreatitis.

Sphygmograph

An instrument or sensor that records the shape and timing of the pulse in an artery. The tracing can provide information about circulation and arterial stiffness.

Sphygmomanometer

The cuff-and-gauge device used to measure blood pressure. The cuff briefly squeezes the arm, and the device detects pressure as blood begins and continues to flow; correct cuff size and positioning improve accuracy.

Spider Angioma

A spider angioma is a central red blood vessel with radiating fine vessels that blanches with pressure and may occur normally or with liver or hormonal disease.

Spider Bite

An injury caused by a spider, usually producing a small painful or itchy area. Some species can cause worsening tissue damage, severe muscle cramps, sweating, vomiting, breathing problems, or other serious effects; rapidly worsening symptoms need emergency care.

Spider Bites (Black Widow And Brown Recluse)

Alternate index label for Black Widow and Brown Recluse.

Spina Bifida

A birth defect in which the neural tube and the bones protecting the spinal cord do not close completely during early development. It can range from mild to severe and may cause weakness, loss of feeling, or problems controlling the bladder or bowel.

Spina Bifida Meningocele

A form of spina bifida in which the protective coverings around the spinal cord bulge through an opening in the backbone and form a fluid-filled sac. The spinal cord is usually not inside the sac, so weakness or loss of bladder and bowel control may be less severe.

Spina Bifida Myelomeningocele

The most severe common form of spina bifida, in which the spinal cord and its coverings bulge through an opening in the backbone. It can cause weakness or paralysis, loss of feeling, and difficulty controlling the bladder or bowel below the affected area.

Spina Bifida Occulta

A usually mild form of spina bifida in which the vertebral arch does not fully close without herniation of the spinal cord or meninges. It is often asymptomatic but may be associated with a skin dimple, hair tuft, or other finding over the lower spine.

Spinal Anaesthesia

An injection of numbing medicine into the fluid

around the spinal nerves in the lower back. It temporarily blocks pain and movement in the lower body while the person remains awake, although blood pressure, headache, infection, or nerve complications can occur.

Spinal Analgesia

Pain relief produced by injecting numbing medicine, sometimes with an opioid, into the fluid around the lower spinal nerves. It may cause temporary leg weakness, itching, difficulty urinating, low blood pressure, headache, or slowed breathing.

Spinal And Bulbar Muscular Atrophy

An inherited disorder that gradually damages the nerve cells controlling movement. It usually affects adult men, causing weakness and wasting of the arms, legs, face, and throat, with muscle twitching, difficulty speaking or swallowing, and sometimes breast enlargement or reduced fertility. Treatment supports movement, swallowing, breathing, and daily activities.

Alternate Names:

Kennedy Disease; SBMA

Spinal And Epidural Anesthesia

Spinal and epidural anesthesia deliver local anesthetic near spinal nerves to numb the lower body; spinal is a single injection, while epidural uses a catheter for adjustable dosing.

Spinal Anesthesia

An injection of numbing medicine into the fluid around the lower spinal nerves to temporarily block pain and movement in the lower body. Possible effects include low blood pressure, difficulty urinating, headache, infection, bleeding, or rarely excessive numbness and breathing problems.

Spinal Anesthesia For Cesarean Delivery

A regional anesthetic injected into the fluid around the lower spinal nerves to numb the lower body during a cesarean birth. The mother remains awake, while blood pressure, breathing, and the baby's condition are monitored.

Spinal Angiography

X-ray imaging of blood vessels supplying the spinal cord after contrast is injected. It is used to locate vascular malformations, fistulas, aneurysms, or sources of bleeding and may guide treatment.

Spinal Artery

An artery supplying the spinal cord and its coverings, including the anterior spinal artery and paired posterior spinal arteries; blockage can cause characteristic neurologic deficits.

Spinal Block

A spinal block is injection of local anesthetic into cerebrospinal fluid in the lower back, producing temporary numbness and weakness for surgery or pain control.

Spinal Canal

The spinal canal is the bony passage through the vertebral column containing the spinal cord, its coverings, nerve roots, and blood vessels.

Spinal Cavity

The posterior body cavity formed by the vertebral column that contains and protects the spinal cord.

Spinal Column

The vertebral column, consisting of vertebrae, discs, ligaments, and joints that support and protect the spinal cord.

Spinal Cord

The cylindrical nervous tissue within the vertebral canal that carries signals between brain and body and mediates reflexes.

Spinal Cord Abscess

A spinal cord or epidural abscess is a collection of infection near the spinal cord that can compress neural tissue and cause pain, fever, weakness, paralysis, or bladder problems.

Spinal Cord Compression

Pressure on the spinal cord or its nerve roots, of-

ten from a tumor, infection, bleeding, fracture, or slipped disc. It can cause severe back pain, weakness, numbness, walking difficulty, or loss of bladder or bowel control and requires urgent medical assessment.

Spinal Cord Disease

A disorder affecting the spinal cord, including compression, inflammation, vascular injury, infection, tumor, degeneration, or trauma, and potentially causing weakness, sensory loss, or autonomic dysfunction.

Spinal Cord Injury

Damage to the spinal cord that can cause weakness, paralysis, altered sensation, or loss of bladder and bowel control. Severity is often graded from complete to incomplete using a standardized neurological examination.

Alternate Names:

SCI

Spinal Cord Injury: Treatments And Rehabilitation

Spinal-cord injury can cause temporary or permanent weakness, sensory loss, autonomic dysfunction, and bowel or bladder problems. Acute care protects the spine and treats complications; rehabilitation addresses mobility, skin, breathing, function, equipment, sexuality, and community participation.

Spinal Cord Neoplasms

Tumors arising in the spinal cord, its coverings, or nearby tissues. They may be noncancerous or cancerous and can cause pain, weakness, numbness, walking problems, or bladder and bowel changes by pressing on nerves.

Spinal Cord Stimulation

An implanted treatment that delivers electrical impulses to the epidural space to alter pain signaling, used for selected chronic neuropathic or ischemic pain after careful assessment.

Spinal Cord Trauma

Spinal cord trauma is injury to the cord from force

such as fracture, dislocation, or penetrating damage, potentially causing weakness, sensory loss, autonomic dysfunction, or paralysis.

Spinal Curvature

Alternate index label; see *Scoliosis*.

Spinal Disease

Any disorder affecting the vertebrae, discs, joints, ligaments, spinal cord, or nerve roots. It may cause back or neck pain, stiffness, weakness, numbness, walking difficulty, or changes in bladder or bowel control.

Spinal Dysraphism

A group of birth defects caused by incomplete development or closure of the spine and spinal cord before birth. Some forms have an open sac on the back, while others are hidden and may later cause weakness, pain, or bladder and bowel problems.

Spinal Epidural Abscess

A collection of pus between the covering of the spinal cord and the surrounding bone, usually caused by infection. Severe back pain, fever, weakness, numbness, difficulty walking, or loss of bladder or bowel control requires emergency assessment.

Spinal Fluid Leak

Alternate index label; see *CSF leak (Cerebrospinal fluid leak)*.

Spinal Fracture

A fracture of one or more vertebrae caused by trauma, osteoporosis, tumor, or other bone-weakening disease.

Spinal Fusion

Surgery that joins two or more spinal bones so they heal into one stable segment. Bone and often screws, rods, or cages are used; the operation may reduce movement and pain from selected conditions but can cause infection, nerve injury, or problems at nearby levels.

Spinal Ganglion

A small group of nerve-cell bodies beside the spinal cord. It contains sensory nerve cells that carry information about touch, pain, temperature, and body position from the skin, muscles, and joints.

Spinal Injury

Damage to the spinal cord, vertebrae, discs, ligaments, or nearby nerves caused by trauma or another disease. It may cause pain, weakness, numbness, paralysis, or bladder and bowel problems and requires urgent assessment when severe.

Spinal Muscular Atrophy

An inherited disorder causing progressive loss of motor neurons and muscle weakness, often beginning in infancy or childhood but sometimes appearing in adulthood. Severity varies; breathing, swallowing, and mobility may be affected. Early diagnosis allows genetic counseling and disease-modifying care.

Spinal Neoplasms

Tumors arising in the spinal cord, its coverings, vertebrae, or nearby tissues. They may be non-cancerous or cancerous and can cause back pain, weakness, numbness, walking difficulty, or bladder and bowel changes when they press on nerves.

Spinal Nerve

One of 31 pairs of nerves leaving the spinal cord through openings between the spinal bones. Each carries messages for sensation, movement, and automatic functions between the body and spinal cord.

Spinal Precautions

Measures used after possible spinal injury to limit movement until the spine and spinal cord have been assessed. They may include careful positioning, support of the neck, and safe transfer; the exact approach depends on the injury and examination.

Spinal Shock

A temporary loss of reflexes, muscle tone, and automatic functions below a spinal-cord injury. The affected limbs may initially be limp, and blood-pressure, bladder, bowel, or sexual problems can

occur while the injury is assessed and treated.

Spinal Stenosis

Narrowing of the passage containing the spinal cord or nerve roots. It may cause back pain, numbness, weakness, or leg pain with walking that improves when sitting or leaning forward.

Alternate Names:

Stenosis, Spinal

Spinal Tap

Alternate index label; see *Lumbar puncture*.

Spinal Tumor

An abnormal growth in the spinal bones, spinal cord, its coverings, or nearby tissues. It may be noncancerous or cancerous; symptoms depend on its location and may include pain, weakness, numbness, or loss of bladder control.

Spindle Pole

One end of the temporary structure formed during cell division. Fibers extending from each pole attach to duplicated chromosomes and pull the copies into the two new cells.

Spindle Pole Body

A structure in fungal cells that organizes the fibers used to separate duplicated chromosomes during cell division. It performs a role similar to the centrosome in animal cells.

Spindle-Cell Sarcoma

A group of cancers made of long, narrow cells under the microscope. They can arise from muscle, fibrous tissue, or nerve coverings; their behavior and treatment vary by the exact tumor type and location.

Spine

The vertebral column, consisting of stacked vertebrae that support the body and protect the spinal cord.

Spine And Spinal Cord, Diseases And

Injuries Of

Diseases or injuries affecting the spinal bones, discs, ligaments, spinal cord, or nerve roots. They may cause pain, weakness, numbness, balance problems, deformity, or changes in bladder and bowel function.

Spine Disorders

Conditions affecting the bones, discs, joints, ligaments, nerves, or spinal cord. They may cause back or neck pain, stiffness, weakness, numbness, balance problems, or changes in bladder and bowel control.

Spine Injury

Damage to the bones, discs, ligaments, nerves, or spinal cord. It may cause back pain, weakness, numbness, loss of movement, or bladder and bowel problems and can require emergency care.

Spinocerebellar Ataxia

Spinocerebellar ataxias are inherited neurodegenerative disorders causing progressive incoordination, gait problems, dysarthria, abnormal eye movements, and sometimes other neurologic signs.

Spinocerebellar Ataxias

A group of inherited disorders that progressively damage brain areas controlling balance and coordination. They may cause unsteady walking, clumsy movements, slurred speech, abnormal eye movements, and other neurologic problems.

Spinous Process

The backward-pointing bony projection of a vertebra that can be felt along the middle of the back. Muscles and ligaments attach to it and help support and move the spine.

Spiradenocarcinoma

A rare malignant sweat-gland tumor that may arise in a long-standing spiradenoma, presenting as a rapidly enlarging, painful, or ulcerated nodule.

Spiradenoma

A usually benign painful sweat-gland tumor presenting as a dermal nodule; multiple spiradenomas may

occur in Brooke-Spiegler syndrome.

Spiral Organ

The organ of Corti, a sensory structure in the cochlea containing hair cells that convert sound vibrations into nerve signals.

Spiramycin

A macrolide antibiotic used for selected bacterial infections and sometimes during pregnancy for toxoplasmosis. Choice depends on the infection, local guidance, pregnancy stage, allergies, resistance, and other treatment needs.

Spirillum Minus

Spirillum minus is a spiral Gram-negative bacterium that causes rat-bite fever, characterized by fever, rash, and migratory joint pain after rodent exposure; culture is difficult and diagnosis may be clinical or molecular.

Spirit

A volatile liquid preparation or alcohol; the meaning depends on the medical, pharmaceutical, or general context.

Spiritual Pain

Distress involving meaning, purpose, beliefs, identity, or connection, often addressed in palliative and supportive care.

Spiritual Support

Support that helps a person address meaning, values, faith, hope, or existential distress during illness; it may be provided by chaplains, spiritual leaders, clinicians, or trusted people.

Spirochaetaceae

A family of spiral-shaped bacteria that includes medically important spirochetes such as *Borrelia*, *Treponema*, and *Leptospira*.

Spirochaetales Infection

Infection caused by spiral-shaped bacteria in the order Spirochaetales, including syphilis, Lyme disease,

relapsing fever, and leptospirosis.

Spirochaete

Another spelling of spirochete, a thin, flexible, spiral-shaped bacterium. Important genera include *Treponema*, *Borrelia*, and *Leptospira*.

Spirochete

A thin, spiral-shaped bacterium that moves with a corkscrew-like motion. Important examples cause syphilis, Lyme disease, relapsing fever, and leptospirosis; diagnosis depends on the organism and may use blood tests or other samples.

Spirogram

A graph recording how much air a person breathes and how quickly it moves during a lung-function test. It helps identify patterns suggesting airway narrowing, restricted lung expansion, or poor effort.

Spirometer

An instrument that measures airflow and the volume of air moved during specified breathing maneuvers, especially forced expiration. It does not by itself measure all lung volumes; residual volume and total lung capacity require additional pulmonary-function testing.

Spirometry

A breathing test that measures how much air a person can blow out and how quickly. It helps identify narrowing of the airways, as in asthma or chronic obstructive pulmonary disease, and can monitor treatment. The person must follow instructions and blow forcefully several times; results are interpreted with age, height, and symptoms.

Spiroinolactone

An aldosterone antagonist and potassium-sparing diuretic used for heart failure, hypertension, hyperaldosteronism, and other indications.

Spit

Saliva or other fluid expelled from the mouth. Increased saliva or repeated spitting may occur with

mouth irritation, nausea, reflux, difficulty swallowing, medication effects, or habit.

Spitting

Forceful expulsion of saliva or other material from the mouth. New or excessive spitting may occur with oral disease, reflux, nausea, difficulty swallowing, medication effects, or habit.

Spitz Nevus

A benign melanocytic nevus, often a pink or pigmented papule in children or young adults, that may resemble melanoma clinically or histologically.

Splanchnic

Relating to internal organs, especially abdominal organs and their blood vessels or nerves. Splanchnic circulation supplies the digestive organs, while splanchnic nerves carry involuntary signals that regulate their function.

Splanchnic Nerve

A nerve carrying automatic signals between the spinal cord and internal organs, especially organs in the chest and abdomen. It helps regulate digestion, blood-vessel tone, and other functions that do not require conscious control.

Spleen

A lymphoid organ in the upper-left abdomen. Its red pulp filters blood and removes aged or abnormal blood cells; its white pulp supports immune responses. It also stores platelets and helps clear blood-borne microorganisms.

Spleen Development

The formation and maturation of the spleen before and after birth. The spleen gradually develops its blood-filtering and immune functions, including removal of aged blood cells and responses to germs in the bloodstream.

Spleen Disorder

A disease affecting the spleen, such as enlargement, infection, infarction, rupture, inflammation, cyst,

or tumor, with possible effects on blood cells and immunity.

Spleen Enlarged (Enlarged Spleen)

Alternate index label for Enlarged Spleen.

Spleen Hemangioma

A spleen hemangioma is a usually benign blood-vessel tumor of the spleen, often incidental but occasionally associated with enlargement, anemia, or rupture risk.

Spleen Hilum

The indented area on the inner surface of the spleen where its blood vessels, nerves, and lymph vessels enter or leave. The splenic vein carries blood from the spleen toward the liver through the portal circulation.

Spleen Removal

Surgery to remove the spleen, which may be needed for injury, an enlarged or overactive spleen, blood disease, or a tumor. Without a spleen, the risk of severe infection increases, so vaccination and medical advice about fever are important.

Spleen, Diseases Of

Disorders affecting splenic structure or function, including splenomegaly, infarction, infection, cysts, abscess, rupture, vascular disease, and hematologic or infiltrative disorders.

Splenectomy

Surgical removal of the spleen, performed for selected traumatic, hematologic, malignant, vascular, or other disorders. It increases the risk of severe infection with encapsulated bacteria and requires preventive planning.

Splenic Abscess

A localized collection of pus in the spleen, usually from bloodstream infection, trauma, infarction, or spread from nearby disease and potentially causing fever, left-upper-quadrant pain, and sepsis.

Splenic Cyst

A fluid-filled lesion within the spleen, classified as true cysts with an epithelial lining, including congenital, epidermoid, and dermoid cysts, or pseudocysts without a lining, typically resulting from trauma, infection, or pancreatitis. Most are asymptomatic and discovered incidentally on imaging.

Splenic Flexure

The bend of the colon where the transverse colon becomes the descending colon, near the spleen.

Splenic Flexure Syndrome

Pain, fullness, or bloating in the upper-left abdomen caused by gas collecting at the bend where the transverse colon meets the descending colon. Symptoms may improve after passing gas or stool.

Splenic Infarction

Ischemic necrosis of splenic tissue caused by obstruction of splenic arterial or venous blood flow. Causes include embolism, thrombosis, hematologic disease, hypercoagulability, infection, trauma, or vasculitis; it often causes sudden left-upper-quadrant pain and is evaluated with imaging.

Splenic Infection

Infection of the spleen, often an abscess caused by bacteria spreading through the bloodstream or from nearby tissue. It may cause fever, chills, left-upper-abdominal pain, and severe illness and usually needs urgent medical treatment.

Splenic Neoplasm

An abnormal growth in the spleen. It may be non-cancerous, cancerous, or cancer that has spread from another organ; symptoms and treatment depend on its type, size, and effect on nearby tissues or blood cells.

Splenic Rupture

A tear of the spleen, usually after blunt abdominal trauma but sometimes spontaneous in an enlarged or diseased spleen. It can cause life-threatening internal bleeding; diagnosis and treatment depend on hemodynamic stability and imaging, with urgent

surgery or embolization sometimes required.

Splenomegaly

Abnormal enlargement of the spleen, usually secondary to infection, liver or portal-venous disease, hemolysis, hematologic malignancy, storage disease, or inflammation. It may cause left-upper-quadrant fullness or pain and increases rupture risk.

Splenomegaly Gaucher (Gaucher Disease)

Alternate index label for Gaucher Disease.

Splice-Site Variant

A variant affecting the sequences required for accurate removal of introns and joining of exons during RNA processing. It may cause abnormal transcripts, exon skipping, intron retention, or reduced functional protein.

Spliceosome

The spliceosome is a nuclear RNA-protein complex that removes introns from pre-messenger RNA and joins exons to form mature RNA.

Splint

A device that supports and limits movement of an injured or painful body part. Splints may be temporary or definitive and should not be so tight that they impair circulation or sensation.

Splint (Dental)

Fixation of mobile teeth or fractured tooth. Wire and composite, orthodontic bracket splint. A dental device or wire used to stabilize loose teeth or a fractured tooth while healing occurs.

Alternate Names:

Dental splint; tooth splint

Splinter Haemorrhages

Small, narrow lines of bleeding beneath a nail. They often follow minor injury but can also occur with heart-valve infection, blood-vessel inflammation, psoriasis, or other illnesses and need context for interpretation.

Splinter Hemorrhages

Thin, lengthwise lines of bleeding beneath a nail. Minor injury is common, but they can also occur with heart-valve infection, blood-vessel inflammation, psoriasis, or other illnesses; their meaning depends on the overall clinical picture.

Splinter Removal

Taking a piece of wood, metal, glass, or another material out of the skin. Small superficial splinters may be removed with clean tweezers, while deep, painful, infected, or eye- or nail-area splinters need clinical care.

Splints

Devices that support, immobilize, align, or protect an injured body part, reducing pain and allowing healing.

Split Brain

A state after surgical or pathological disruption of the corpus callosum in which information transfer between cerebral hemispheres is reduced, producing characteristic disconnection findings.

Split-Thickness Skin Graft

A graft containing the epidermis and part of the dermis, used to cover wounds or burns and allowing the donor site to heal from remaining skin structures.

Splitting

A psychological defense pattern in which a person or situation is viewed as entirely good or entirely bad, with difficulty integrating positive and negative qualities. It can occur in several mental-health conditions and is not diagnostic by itself.

Spondees

A two-syllable word with equal emphasis on both parts, used during speech-hearing tests. Examples help measure the quietest loudness at which a person can recognize spoken words accurately.

Spondylarthritis

A family of inflammatory rheumatic diseases affect-

ing the spine, sacroiliac joints, entheses, peripheral joints, skin, eyes, or bowel, including ankylosing spondylitis and psoriatic arthritis.

Spondylitis

Inflammation of one or more vertebrae or parts of the spine. Causes include infection, autoimmune disease, and inflammatory arthritis; pain, stiffness, fever, or neurologic symptoms may occur.

Spondyloarthritis

A group of inflammatory joint diseases that often affect the spine and joints between the spine and pelvis. They may also cause tendon pain, swollen fingers or toes, eye inflammation, psoriasis, or bowel inflammation.

Spondylolisthesis

Slipping of one spinal bone forward or backward compared with the bone below it. It may cause back pain, stiffness, leg pain, numbness, or weakness, although some people have no symptoms.

Spondylolysis

A small stress crack or defect in part of a spinal bone, usually in the lower back. It may cause back pain in adolescents or athletes and can sometimes allow one spinal bone to slip on another.

Spondylosis

Wear-related changes in the bones, discs, and small joints of the spine. It becomes more common with age and may cause stiffness or pain, but many people have no symptoms; nerve pressure can cause numbness or weakness.

Spondylosis, Cervical

Alternate index label; see *Cervical spondylosis*.

Sponge

A sponge is a porous material used to absorb fluid, clean or dress wounds, or deliver a product; retained surgical sponges are a preventable complication.

Sponge (Vascular)

A sterile absorbent material used during blood-vessel procedures to absorb blood, apply pressure, or protect delicate tissue. It must be counted and removed when required to prevent retained-material complications.

Alternate Names:

Vascular surgical sponge

Spongiform Encephalopathy

A serious progressive brain disease in which brain tissue develops tiny sponge-like spaces. Prion diseases are important examples and can cause worsening memory, movement, coordination, behavior, and eventually loss of independence.

Spongy Bone

Porous trabecular bone found inside many bones, especially near joints.

Alternate Names:

Cancellous bone; trabecular bone

Spontaneous Abortion

Pregnancy loss before fetal viability that occurs without intentional intervention, commonly caused by chromosomal abnormalities but also by uterine, endocrine, immune, infectious, or other factors.

Spontaneous Abortion (Miscarriage)

Unintentional loss of a pregnancy before fetal viability. Causes include chromosomal abnormalities, uterine or cervical problems, infection, and maternal medical conditions.

Alternate Names:

Miscarriage

Spontaneous Bacterial Peritonitis

An infection of ascitic fluid without an identifiable abdominal source, usually occurring in people with cirrhosis and ascites. It may cause fever, abdominal pain, tenderness, or worsening illness. Diagnosis is made by testing ascitic fluid, usually showing at least 250 neutrophils per mm³.

Spontaneous Coronary Artery Dissection

A tear within the wall of an artery supplying the heart, which can narrow or block blood flow and cause a heart attack. It often affects women and may be associated with pregnancy, severe stress, or fibromuscular dysplasia. Treatment depends on blood flow and stability; medicines or a stent may be used, and emergency care is needed for chest pain.

Alternate Names:

SCAD

Spontaneous Breathing Trial

A monitored period during which a person on a breathing machine does most of the breathing with little or no machine assistance. It helps clinicians judge whether the person may breathe safely after the tube is removed.

Spontaneous Perforation

Unexpected rupture of a hollow organ without a clear external injury, allowing contents to escape and potentially causing peritonitis, mediastinitis, sepsis, or hemorrhage.

Spontaneous Pneumothorax

Air leaking into the space around a lung without a direct injury. It may occur in an otherwise healthy person or because of lung disease and can cause sudden chest pain or breathlessness.

Sporadic

Occurring irregularly or as an isolated case rather than in a predictable pattern or family cluster.

Sporothrix

A genus of environmental fungi that can cause sporotrichosis, usually after inoculation through the skin and sometimes through inhalation or dissemination.

Sporothrix Schenckii

A group of fungi that causes sporotrichosis, a typically nodular skin and lymphatic infection acquired from plants, soil, or animal scratches.

Sporotrichosis

Sporotrichosis is a fungal infection caused by *Sporothrix* species, often introduced through plant matter and producing nodules along lymphatic channels.

Sporozoa

An older group name for spore-forming protozoan parasites, including *Plasmodium*.

Sporozoites

Moving, infective forms produced by certain parasites. For example, mosquitoes inject *Plasmodium* sporozoites into people, after which they travel to the liver and begin the malaria infection cycle.

Sports Cream Overdose

Excessive use or swallowing of a muscle or joint pain cream, often containing menthol, methyl salicylate, or capsaicin. It may cause skin burns, salicylate poisoning, vomiting, ringing ears, confusion, or seizures.

Sports Physical

A preparticipation health evaluation that reviews medical history, symptoms, medications, family risks, and examination findings to identify conditions needing evaluation before sports.

Sports Rehabilitation

Treatment and training that help a person recover safe movement, strength, fitness, and confidence after a sports injury. It may include exercises, hands-on care, education, gradual return to activity, and steps to reduce the chance of another injury.

Spots Before The Eyes

Visual floaters, flashes, or scotomata perceived in the visual field; sudden onset requires urgent assessment.

Spots In Front Of The Eyes

Floaters or visual spots caused by shadows from vitreous opacities, inflammation, bleeding, retinal tears, migraine, or other eye or neurologic conditions;

sudden flashes or a curtain-like loss are urgent.

Spotted Fever

A group of infections usually spread by ticks and caused by *Rickettsia* bacteria. They can produce fever, headache, rash, muscle aches, and serious illness requiring prompt diagnosis and antibiotic treatment.

Spousal Abuse

Spousal abuse is physical, sexual, emotional, financial, or coercive harm by an intimate partner; immediate safety planning and confidential support may be needed.

Spouse

A spouse is a person's legally or socially recognized partner; involving a spouse in healthcare requires the patient's consent unless law provides otherwise.

Sprain

An injury in which a ligament that supports a joint is stretched or torn. It can cause pain, swelling, bruising, and looseness; severity ranges from minor stretching to a complete tear and joint instability.

Sprain Neck (Whiplash)

Alternate index label for Whiplash.

Sprained Ankle

Stretching or tearing of one or more ankle ligaments, usually after rolling the ankle inward. It may cause pain, swelling, bruising, and instability.

Alternate Names:

Strains (Sprained Ankle)

Sprains

Injuries in which ligaments around a joint are stretched or torn. They can cause pain, swelling, bruising, and joint looseness; severity ranges from minor stretching to complete tearing.

Spray Drying

Spray drying converts a liquid mixture into a dry powder by atomizing it into a heated gas stream,

often used in pharmaceutical and food manufacturing.

Sprengel Deformity

A birth difference in which one shoulder blade sits higher than usual because it did not move to its normal position during development. It may cause uneven shoulders, limited arm movement, or neck and back discomfort.

Spring Fever (Henoch-Schonlein Purpura)

Alternate index label for Henoch-Schonlein Purpura.

Sprue

A condition causing poor absorption of nutrients from the small intestine. The term may describe celiac disease or tropical sprue, which have different causes and require appropriate testing and treatment.

Sprue, Nontropical

Nontropical sprue is an older term for celiac disease, an immune reaction to gluten that damages the small-intestinal lining and impairs absorption.

Spur Heel (Heel Spurs)

Alternate index label for Heel Spurs.

Spur-Cell Hemolytic Anemia

A severe anemia in which abnormal, spiky red blood cells are rapidly removed from the blood, usually because of advanced liver disease. It can cause jaundice, weakness, and worsening anemia.

Sputum

Mucus or other material brought up by coughing from the airways or lungs. Its amount, color, smell, and blood content may provide clues, but sputum alone cannot identify the cause; laboratory testing may be needed.

Sputum Culture

A laboratory test that grows germs from mucus coughed up from the lungs or collected by suction. It

can help identify bacterial, fungal, or mycobacterial infection and guide treatment, but a poor sample can give misleading results.

Sputum Direct Fluorescent Antibody Test

A laboratory test that uses glowing antibody markers to look for selected germs in mucus from the lungs. It can provide a rapid result, but culture or molecular testing may also be needed.

Sputum Fungal Smear

Examination of coughed-up lung mucus under a microscope to look for fungi. A culture, blood test, or molecular test may be needed to confirm the specific infection.

Sputum Gram Stain

A quick microscope test that colors a sputum sample to show some bacteria and inflammatory cells and to judge whether the sample is suitable for culture.

Sputum Stain For Mycobacteria

A microscope test that looks for tuberculosis-causing and related bacteria in mucus from the lungs. A positive result supports infection, but a negative result does not exclude it; culture or molecular testing may also be needed.

Squamous Cell

A flat cell that forms part of the covering or lining of the skin and many body passages. These cells protect against friction and infection; changes in them can cause inflammation, precancer, or squamous cell cancer in organs such as the skin, mouth, cervix, lungs, or esophagus.

Squamous Cell Carcinoma

A cancer of flat cells that line the skin or certain body passages. On the skin it may appear as a rough, scaly, crusted, wart-like, or nonhealing sore and can invade nearby tissue or spread if untreated.

Squamous Cell Carcinoma Of The Lung

A type of non-small-cell lung cancer that usually

begins in the lining of a larger airway. It is strongly linked to smoking but can occur in nonsmokers. Symptoms may include a persistent cough, coughing blood, chest pain, breathlessness, or repeated chest infections; treatment depends on stage and tumor features.

Squamous Cell Carcinoma Of The Skin

A skin cancer arising from squamous cells, often appearing as a scaly, crusted, wart-like, or ulcerated growth.

Alternate Names:

Cancer, Squamous Cell

Squamous Cell Skin Cancer

Squamous cell skin cancer is a malignant keratinocyte tumor often arising on sun-exposed skin and capable of local invasion or metastasis, especially when high risk.

Squamous Cells

Flat epithelial cells with scale-like appearance that line surfaces such as skin, mouth, cervix, and esophagus; abnormal numbers or forms can reflect irritation, infection, dysplasia, or cancer.

Squamous Intraepithelial Lesion Cervical (Cervical Dysplasia)

Alternate index label for Cervical Dysplasia.

Square Foot

A square foot is a unit of area equal to a square measuring one foot on each side, used to describe surfaces, rooms, wounds, or treatment areas.

Square Inch

A square inch is a unit of area equal to a square measuring one inch on each side, used for small surfaces or wound measurements.

Squint

Misalignment of the eyes so they do not point in the same direction. It may be constant or intermittent and can cause double vision, poor depth perception, or reduced vision in one eye.

SSRI

An SSRI is a selective serotonin-reuptake inhibitor antidepressant used for depression and several anxiety-related disorders; effects and withdrawal symptoms require monitoring.

SSRIs

Selective serotonin reuptake inhibitors, a group of medicines that increase serotonin signaling in the brain. They are used for depression and several anxiety-related disorders; effects and side effects develop over time, not immediately.

St John'S Wort

A herbal product made from *Hypericum perforatum* and sometimes used for depressive symptoms. It can cause side effects and reduce the effectiveness of many medicines, including some contraceptives, anticoagulants, transplant medicines, and HIV treatments.

ST Segment

The part of an electrocardiogram between the electrical activation and recovery signals of the heart's lower chambers. Abnormal elevation or depression can occur with a heart attack, inflammation, or other conditions and must be interpreted with symptoms and the full tracing.

St Vitus'S Dance

An older name for Sydenham chorea, involuntary movements following group A streptococcal infection.

ST-Segment Elevation

Elevation of the ECG ST segment above the isoelectric baseline, reflecting abnormal ventricular repolarization. It may indicate acute coronary occlusion but can also occur in pericarditis, early repolarization, ventricular aneurysm, or other conditions; interpretation requires clinical context and serial testing.

St. John'S Wort

An herbal product sometimes used for depressive symptoms. It can cause side effects and reduce the

effectiveness of many medicines, including some contraceptives, anticoagulants, transplant medicines, and HIV treatments.

Stab Wound

A deep puncture caused by a pointed or sharp object. The wound may damage blood vessels, nerves, organs, or bone even when the skin opening looks small; heavy bleeding, severe pain, or a wound to the chest or abdomen requires emergency care.

Stable Angina

Repeated, predictable chest pressure or discomfort brought on by activity or stress because the heart muscle receives too little blood. It usually improves with rest or prescribed medicine; new, severe, prolonged, or rest pain may be a heart attack and needs emergency care.

Alternate Names:

Chronic stable angina

Stable Coronary Artery Disease

Coronary artery narrowing causing a consistent, predictable pattern of angina.

Alternate Names:

Stable ischemic heart disease

Stable Disease

An oncology response category in which a cancer has neither shrunk enough to meet criteria for partial response nor grown enough to meet criteria for progressive disease. It describes change over a specified assessment interval and does not mean that the cancer is cured or inactive.

Stabs

Brief, sharp pains or penetrating injuries described as stabbing. Causes vary with location and may include nerve irritation, muscle strain, infection, inflammation, injury, or serious disease requiring urgent assessment.

Stage 4 Prostate Cancer

Alternate index label; see *Metastatic (stage 4) prostate cancer*.

Stage I

A cancer stage that generally indicates limited disease, although the exact definition and prognosis depend on the cancer type and staging system.

Stage II

A cancer stage that usually indicates a larger or more locally advanced tumor than stage I, without distant spread. The exact tumor size, lymph-node findings, prognosis, and treatment vary by cancer type and staging system.

Stage III

A cancer stage that often indicates more extensive local or regional disease, with the precise criteria depending on the cancer type.

Stage IV

A cancer stage that generally indicates spread to distant organs or sites. Prognosis and treatment vary by cancer type and individual factors.

Stages Of Change

A model describing common steps people may pass through when changing a behavior. These include not yet considering change, thinking about it, preparing, taking action, and maintaining the change; people may move backward or forward between stages.

Alternate Names:

Transtheoretical model

Stages Of Labor

The first stage is cervical opening, the second is birth of the baby, and the third is delivery of the placenta. The first stage has early and active phases; length and symptoms vary, and the uterus is monitored after delivery.

Staghorn Calculi

Large branching kidney stones that fill part or all of the kidney's urine-collecting system. They are often linked with infection, can damage kidney tissue, and usually require specialist treatment to remove them.

Staghorn Calculus

A branching kidney stone that fills part or all of the renal pelvis and calyces, often associated with infection.

Staging

Determining how far a cancer has grown or spread by assessing the original tumor, nearby lymph nodes, and distant organs. The stage helps estimate outlook and choose treatment.

Staining

A laboratory method that uses colored dyes to make cells, tissue structures, or microorganisms easier to see under a microscope. Different stains highlight different features and can help guide diagnosis, although results may need culture or other tests for confirmation.

Stainless Steel

A corrosion-resistant alloy containing iron and chromium, used for instruments, implants, orthodontic appliances, and some dental crowns. Its suitability depends on the grade, strength, and tissue exposure.

Stammering

Alternate name for stuttering, a speech-fluency difficulty involving repeated sounds or words, prolonged sounds, or blocks that interrupt speaking. It is common in childhood and may continue into adulthood; speech-language therapy can help.

Standard Deviation

A number that shows how widely measurements differ from their average. A small standard deviation means values are close together, while a large one means they are more spread out; it does not by itself show whether results are good or bad.

Standard Eye Exam

A comprehensive eye examination assessing visual acuity, refraction, pupils, eye movements, external structures, anterior eye, intraocular pressure, and ocular fundus as indicated.

Standard Of Care

The conduct, skill, diligence, and judgment a reasonably prudent practitioner of the same specialty would exercise under similar circumstances; the benchmark for medical negligence. It is established through guidelines, peer practice, and expert testimony rather than fixed statute.

Standard Precautions

Basic infection-control measures used for every patient, because blood, body fluids, nonintact skin, and mucous membranes may carry germs. They include hand hygiene, appropriate protective equipment, safe injections, sharps safety, and respiratory etiquette.

Standardized Extract

An herbal extract adjusted to contain a measured amount of selected ingredient, improving consistency but not guaranteeing safety or effectiveness.

Standardized Uptake Value

A number used on a PET scan to estimate how much radioactive tracer a tissue has taken up, adjusted for the injected amount and body size. It can help compare areas or follow change, but it does not by itself prove cancer or another disease.

Stannosis

A usually mild form of pneumoconiosis caused by long-term inhalation of tin oxide dust. It may produce visible lung changes on imaging, often without major breathing impairment.

Stanozolol

A synthetic anabolic androgenic steroid with limited medical use and potential liver, lipid, and cardiovascular toxicity.

Stapedectomy

Surgical removal or replacement of the stapes, usually to treat otosclerosis and conductive hearing loss.

Stapedius

A small middle-ear muscle that helps limit movement of the stapes and may protect the inner ear from loud sounds.

Stapes

The smallest middle-ear bone, passing sound vibrations from the incus to the inner ear for hearing.

Staph Infection

An infection caused by Staphylococcus bacteria, most often Staphylococcus aureus. It commonly affects the skin but can also involve the blood, lungs, bones, joints, or heart valves; treatment depends on the site and antibiotic susceptibility.

Alternate Names:

Staphylococcus Infection (Staph Infection)

Staph Infections In The Hospital

Infections caused by Staphylococcus bacteria that begin during or after healthcare treatment, or require hospital care. They may involve wounds, blood, lungs, bones, or devices and can be difficult to treat when the bacteria resist antibiotics.

Staphylococcal Infection

An infection caused by Staphylococcus aureus or another Staphylococcus species. It may affect the skin, bone, joints, lungs, heart valves, blood, or other tissues. Diagnosis and antimicrobial treatment depend on the site, severity, and susceptibility of the organism.

Staphylococcal Meningitis

Staphylococcal meningitis is infection and inflammation of the meninges caused by Staphylococcus bacteria, often after surgery, trauma, bloodstream infection, or an invasive device.

Staphylococcal Pneumonia

Pneumonia caused by Staphylococcus bacteria, sometimes after influenza or another viral infection. It may cause fever, cough, chest pain, breathlessness, lung abscesses, or infected fluid around the lung and needs medical treatment.

Staphylococcal Scalded Skin

A toxin-producing Staphylococcus aureus infection that causes the outer skin to separate, usually in infants or young children. Widespread redness, tenderness, and fragile blisters can leave painful areas resembling a burn and require prompt treatment.

Staphylococcal Scalded Skin Syndrome

A toxin-mediated skin disorder caused by Staphylococcus aureus, usually affecting infants or young children and producing widespread superficial blistering and peeling of the skin.

Staphylococcus

A genus of gram-positive cocci that includes *S. aureus* and common skin colonizers and pathogens.

Staphylococcus Aureus

A bacterium that commonly lives on the skin or in the nose but can cause infections of the skin, blood, lungs, bones, joints, or heart valves. Some strains are resistant to several antibiotics.

Staphylococcus Infection (Staph Infection)

Alternate index label for Staph Infection.

Staple (Vascular)

A small metal or polymer device used to close tissue or join selected blood-vessel structures. It provides rapid closure but can cause narrowing, bleeding, thrombosis, or tissue injury if unsuitable or misplaced.

Alternate Names:

Vascular staple; vessel-closure staple

Stapling

Closing or joining tissue with metal or absorbable surgical staples. Staples may be used for skin, blood vessels, or parts of the digestive tract and must be selected and removed or absorbed appropriately.

Starch Poisoning

Illness after swallowing a starch product, most often causing choking, blockage, or stomach upset rather

than systemic poisoning. Inhaled powder can irritate the airways; breathing difficulty or persistent vomiting requires medical care.

Stargardt Disease

An inherited eye disorder that gradually damages the macula, the central part of the retina. It usually begins in childhood or young adulthood and causes loss of detailed central vision; side vision is often preserved.

Starling Forces

The balance of pressures that pushes water out of small blood vessels or pulls it back in. Changes can cause swelling in tissues, dehydration of tissues, or fluid buildup around organs.

Starvation

Severe lack of food or usable energy over time, causing weight and muscle loss, weakness, changes in body chemistry, reduced immunity, and eventually organ failure. Restarting nutrition after prolonged starvation must be done carefully because dangerous shifts can occur.

Stasis

Slowing or stopping of normal movement of blood, lymph, intestinal contents, or other body fluids.

Stasis Dermatitis

Inflammation of the lower-leg skin caused by chronic venous hypertension and edema. It may cause itching, redness, scaling, brown discoloration, weeping, or ulcers around the ankles. Management focuses on treating venous disease, compression when safe, skin care, and evaluation for infection or arterial insufficiency.

Stasis Dermatitis And Ulcers

Stasis dermatitis and ulcers result from chronic venous hypertension in the lower legs, causing swelling, brown skin change, inflammation, itching, and slow-healing wounds.

Stasis Ulcer

A stasis ulcer is a chronic lower-leg wound caused by venous hypertension and poor return of blood, commonly near the ankle and associated with edema and skin changes.

STAT

A medical instruction meaning immediately or with urgent priority, such as a stat test, medicine, or consultation.

Statin

A cholesterol-lowering medicine that reduces the liver's production of cholesterol and lowers LDL, often called bad cholesterol. Statins reduce the risk of heart attack and stroke in appropriate people; muscle symptoms and medicine interactions should be reviewed.

Statin-Induced Myopathy

Muscle pain, weakness, or tenderness caused by a statin cholesterol-lowering medicine. Symptoms may occur without muscle damage or, rarely, with severe muscle breakdown that can injure the kidneys. A clinician may check the medicine, symptoms, muscle enzymes, and other causes before changing treatment.

Alternate Names:

Statin-Associated Muscle Symptoms (SAMS);
Statin Myotoxicity

Statins

A class of medicines that lowers LDL cholesterol by reducing cholesterol production in the liver. They reduce the risk of heart attack and stroke in appropriate people; muscle symptoms, liver problems, and medicine interactions should be reviewed.

Alternate Names:

HMG-CoA reductase inhibitors

Statins In Diabetes

Cholesterol-lowering treatment for people with diabetes who may benefit from reduced risk of heart attack and stroke. The medicine and dose depend on age, cardiovascular risk, kidney function, other medicines, and possible side effects.

Station

A measure of how far the baby's presenting part, usually the head, has descended through the pelvis during labor. It is compared with the mother's pelvic bones and helps clinicians follow progress toward birth.

Status Asthmaticus

A severe asthma attack that does not improve enough with the first treatments. Breathing may become dangerously difficult, with exhaustion, inability to speak normally, or low oxygen, and emergency hospital treatment is required.

Status Epilepticus

A prolonged seizure or repeated seizures without recovery, requiring emergency treatment to prevent brain injury and complications.

Status Migrainosus

A severe migraine attack that persists for more than 72 hours and may require urgent medical treatment, especially when dehydration, vomiting, or medication overuse is present.

Stay Away From Asthma Triggers

Avoiding asthma triggers such as smoke, allergens, infections, fumes, and cold air can reduce symptoms and attacks, alongside prescribed controller and reliever treatment.

STDs

Alternate index label; see *Sexually transmitted diseases (STDs)*.

Steady State

The point during regular medicine use when the amount entering the body over time is about equal to the amount leaving it. Blood levels then become relatively stable; reaching this point usually takes several doses and depends on the medicine's half-life.

Steal Syndrome

Reduced blood flow to a hand, foot, or other area because a bypass graft or dialysis fistula diverts

too much blood. It may cause pain, coolness, pale or blue skin, numbness, or weakness and requires vascular assessment.

Steam Iron Cleaner Poisoning

Poisoning from a steam-iron cleaning product, which may contain acids or other corrosive chemicals. It can burn the mouth, digestive tract, skin, or eyes and may irritate the lungs; do not induce vomiting.

Steatoma

A fatty or sebaceous mass; the term may refer to a lipoma or, in the ear, a cholesteatoma depending on context.

Steatorrhea

The passage of excess fat in the stool, causing greasy, pale, foul-smelling, floating stools—a hallmark of fat malabsorption.

Steatorrhoea

Excess fat in stool, causing pale, bulky, greasy, foul-smelling bowel movements. It suggests poor fat digestion or absorption from pancreatic, liver, bile-duct, intestinal, or other digestive disease.

Steele-Richardson-Olszewski Syndrome

Alternate index label; see *Progressive supranuclear palsy*.

Stein-Leventhal Syndrome

Alternate index label; see *Polyendocrine metabolic ovarian syndrome*.

Stem Cell

A cell that can make more stem cells and develop into one or more specialized cell types. Some stem cells produce blood cells; others help form or repair different tissues.

Stem Cell Donation

The collection of healthy blood-forming stem cells from a donor for transplantation into another person. Cells may be collected from the bloodstream by apheresis after medication increases their number

in the blood, or directly from bone marrow under anesthesia. Donor and recipient compatibility, especially human leukocyte antigen matching, helps improve transplant success.

Stem Cell Transplantation

Hematopoietic stem cell transplantation replaces diseased or ablated bone marrow with healthy donor or autologous stem cells.

STEMI

A type of heart attack caused by sudden blockage of a heart artery, usually producing characteristic changes on an electrocardiogram. It is an emergency because quickly restoring blood flow can limit permanent heart damage.

Stenosing Tenosynovitis

Alternate index label; see *Trigger finger*.

Stenosis

Abnormal narrowing of a passage, blood vessel, heart valve, spinal canal, or other opening. Narrowing may restrict flow or compress nearby structures.

Stenosis Lumbar (Lumbar Stenosis)

Alternate index label for Lumbar Stenosis.

Stenosis Of The Left Anterior Descending Artery

Narrowing of a major artery supplying the front of the heart. Reduced blood flow may cause chest pain during exertion or a heart attack if the narrowing becomes severe or the artery suddenly blocks.

Stenosis Spinal (Lumbar Stenosis)

Alternate index label for Lumbar Stenosis.

Stenosis, Aortic Valve

Alternate index label; see *Aortic valve stenosis*.

Stenosis, Mitral Valve

Alternate index label; see *Mitral valve stenosis*.

Stenosis, Pulmonary Valve

Alternate index label; see *Pulmonary valve stenosis*.

Stenosis, Pyloric

Alternate index label; see *Pyloric stenosis*.

Stenosis, Spinal

Alternate index label; see *Spinal stenosis*.

Stenotic

Stenotic means narrowed, as in a stenotic heart valve, blood vessel, airway, intestine, or other passage.

Stenotrophomonas Maltophilia Resistance

The ability of *Stenotrophomonas maltophilia* bacteria to survive several antibiotics. Treatment depends on the infected body site, illness severity, and laboratory testing that identifies which medicines are likely to work.

Stent

A tube or scaffold placed inside a vessel or other passage to keep it open.

Stent (Vascular)

A small mesh or tube placed inside a narrowed or blocked vessel to help keep it open.

Alternate Names:

Vascular stent

Stent Balloon (Vascular)

A balloon on a catheter used to expand a vascular stent against the vessel wall and restore an open channel. Inflation can cause vessel injury, bleeding, clotting, or rarely rupture.

Alternate Names:

Stent-expansion balloon; vascular angioplasty balloon

Stent Graft

A fabric-covered stent placed inside a blood vessel to reinforce the vessel wall or exclude an aneurysm from blood flow.

Stent Placement

Insertion of a mesh tube or other support to keep a narrowed or blocked passage open. Stents may be used in arteries, bile ducts, ureters, airways, or the esophagus; bleeding, blockage, infection, movement, or repeated narrowing can occur.

Stent Restenosis

Re-narrowing of a blood vessel within or adjacent to a previously placed stent, usually caused by tissue growth, recurrent atherosclerosis, or thrombosis.

Stent-Graft (Vascular)

A fabric-covered metal frame placed inside a blood vessel to reinforce a weak wall or seal an aneurysm, tear, or leak. Follow-up imaging checks for movement, blockage, or leakage around the graft.

Alternate Names:

Vascular stent-graft; endovascular graft

Stenting

Placement of a small mesh tube to keep a narrowed or blocked passage open. Vascular stents restore blood flow, while drug-coated types release medicine to reduce repeated narrowing.

Stepping Reflex

A primitive reflex present from birth to 2 months, elicited by holding the infant upright with feet touching a flat surface. The infant makes stepping-like movements as if walking. Disappears by 2 months as voluntary motor control develops. Reappears around 9-10 months as voluntary walking emerges.

Steps To Take Before You Get Pregnant

Preconception care includes reviewing health conditions and medicines, folic acid, vaccinations, dental and genetic considerations, substance avoidance, and planning prenatal care.

Stereognosis

The ability to recognize a familiar object by feeling it without looking. It requires intact skin sensation, nerve pathways, and areas of the brain that interpret touch; loss may occur after nerve or brain injury.

Stereotactic

Stereotactic describes a technique using three-dimensional coordinates to target a precise location in the brain or another body structure.

Stereotactic Biopsy

Image-guided biopsy using three-dimensional coordinates to target a lesion that may be difficult to localize by direct palpation. It is used in the breast and, with specialized systems, the brain, lung, and other organs.

Stereotactic Body Radiation Therapy

A focused form of external radiation that delivers a high dose to a small body tumor in a few treatments. It may treat selected lung, liver, kidney, pancreatic, or spinal tumors while limiting exposure to nearby tissue.

SRT

Stereotactic radiotherapy, a precise form of external radiation treatment that uses three-dimensional imaging and careful positioning to target a small tumor or other abnormal area. It is often given in two to five sessions to limit exposure to nearby tissue.

Stereotactic Radiosurgery

Precise radiation treatment delivering one or a few high doses to a small target, often in the brain, without open surgery.

Stereotactic Radiosurgery - CyberKnife

CyberKnife is a robotic system that delivers many precisely aimed radiation beams to a tumor or other target without an open operation.

Stereotactic Radiosurgery - Gamma Knife

Gamma Knife is a focused radiation system that delivers multiple precisely aimed beams, mainly to selected brain tumors and vascular or other brain lesions.

Stereotaxis

A technique using a three-dimensional coordinate system to target deep structures, especially in brain procedures.

Stereotypic Movement Disorder

Repeated, apparently purposeless movements such as hand flapping, rocking, or head banging that interfere with activities or cause injury. It is more common in childhood and developmental conditions and requires assessment for other causes.

Sterile Field

A designated area maintained free of viable microorganisms during an invasive procedure. Only sterile equipment and materials may contact the field or the sterile portions of instruments.

Sterile Site

A body area or sample that normally contains no living microorganisms, such as blood, spinal fluid, joint fluid, or tissue from a closed space. Finding a germ there is usually important, although accidental contamination must be considered.

Sterile Technique

Methods used to prevent introduction of microorganisms into a sterile field, wound, tissue, device, or body site through hand hygiene, barriers, aseptic handling, and appropriate preparation.

Sterilisation

Destruction or removal of all forms of microbial life, or permanent contraception depending on context.

Sterility

Inability to reproduce, or complete absence of living microorganisms from an object or preparation, depending on context. In healthcare, sterile equipment, implants, and medicines must remain free from contamination to prevent infection.

Sterilization

A process that destroys or removes all forms of microbial life, including spores, from equipment,

medicines, or other materials. In another context, sterilization means a permanent method intended to prevent pregnancy.

Sternal Exploration Or Closure

Surgical reopening or repair of the breastbone after median sternotomy, performed to treat infection, bleeding, instability, dehiscence, or other postoperative chest complications.

Sternoclavicular Joint

A saddle-type synovial joint between the clavicle and manubrium of the sternum. It is the only bony connection between the upper limb and axial skeleton and permits movement of the shoulder girdle.

Sternocleidomastoid Muscle

A prominent muscle on each side of the neck that turns and bends the head and helps stabilize the neck. It can also assist forceful breathing; strain or spasm may cause neck pain and limited movement.

Sternotomy

Surgical division of the sternum, usually along the midline, to provide access to the heart or mediastinal structures.

Sternum

The breastbone forming the front of the central chest wall.

Sternutation

Sneezing, a reflex forceful expulsion of air through the nose and mouth triggered by irritation of nasal or upper-airway sensory receptors.

Steroid Myopathy

Muscle weakness caused by prolonged exposure to corticosteroid medicines or excessive cortisol. It usually develops gradually and affects the hips, thighs, shoulders, and upper arms, making it hard to rise from a chair or climb stairs. Weakness may improve when the cause is treated, but steroid doses must be changed only with medical guidance.

Alternate Names:

Corticosteroid-Induced Myopathy; Glucocorticoid Myopathy

Steroids

A broad family of compounds with a characteristic four-ring structure, including body hormones, corticosteroids, and sex hormones. Their effects depend on the type; prolonged corticosteroid use can suppress immunity and bone health.

Alternate Names:

Corticosteroids

Stertor

A low-pitched snoring, gurgling, or rattling sound caused by partly blocked air passages in the nose or throat. It may occur during sleep or illness; noisy breathing with severe sleepiness, blue lips, or breathing difficulty is an emergency.

Stethoscope

A medical tool used to listen to sounds inside the body, especially from the heart and lungs. It has a small chest piece, flexible tubing, and earpieces. It can also help doctors hear blood flow and bowel sounds.

Stevens-Johnson Syndrome

A rare, life-threatening reaction usually caused by a medicine or infection. It causes painful widespread skin and mucous-membrane damage, blistering, and peeling and requires emergency hospital treatment.

Alternate Names:

SJS

STI

An STI is a sexually transmitted infection spread through sexual contact, including infections caused by bacteria, viruses, parasites, or fungi.

Stickler Syndrome

An inherited connective-tissue disorder that may cause severe nearsightedness, retinal detachment, hearing loss, early arthritis, and differences in the jaw or palate. Regular eye and hearing checks are important.

Stiff Baby Syndrome

A nonspecific description of unusual stiffness or increased muscle tone in an infant, not a single diagnosis. Causes include brain, nerve, muscle, genetic, or metabolic disorders; persistent stiffness, poor feeding, seizures, or breathing problems need urgent assessment.

Stiff-Person Syndrome

A rare immune-related nervous-system disorder causing persistent muscle stiffness and sudden painful spasms. Noise, touch, movement, or emotional stress may trigger spasms, leading to falls and difficulty walking. Blood tests may find related antibodies. Treatment can reduce stiffness and immune activity, but symptoms often require long-term care.

Alternate Names:

SPS; Stiff-Man Syndrome; Moersch-Woltman Syndrome

Stiffness

Difficulty or discomfort when moving a body part. It may result from joint disease, muscle problems, nerve disorders, inflammation, injury, prolonged rest, or aging and can limit everyday activities.

Stigma

A mark, characteristic, or social discrediting label; in medicine it may refer to a sign or to harmful social attitudes.

Stilboestrol

An older name for diethylstilbestrol, a synthetic estrogen no longer used routinely because of serious risks.

Stilet

A thin, pointed instrument placed inside a cannula or tube to guide insertion, clear a blockage, or provide firmness. It must be used carefully because it can injure tissue or blood vessels.

Still Disease

An inflammatory disease that can affect the whole body. In children it is called systemic juvenile idio-

pathic arthritis; in adults it is called adult-onset Still disease. It can cause fever, joint pain or swelling, and a rash.

Alternate Names:

Still's Disease; Arthritis Still (Still's Disease)

Stillbirth

The birth of a baby who has died before or during birth after the locally defined gestational-age or birth-weight threshold. Causes vary and may involve the placenta, infection, fetal conditions, or maternal illness; evaluation can help guide future care.

Still's Murmur

A common harmless heart murmur in children, usually heard between ages 2 and 7. It has a soft, musical sound, becomes louder with fever or exercise, and usually disappears as the child grows; the heart is otherwise normal.

Alternate Names:

Innocent Vibratory Murmur; Normal Pediatric Murmur; Twanging-String Murmur

Stimulant

A substance that increases activity in the brain or other body systems. Stimulants may improve alertness and attention, but excessive or inappropriate use can cause dependence, anxiety, fast heartbeat, high blood pressure, or seizures.

Stimulant Use Disorder

A pattern of using stimulant drugs that causes significant problems or loss of control despite harm. Stimulants include cocaine and amphetamine-type drugs; stopping may cause tiredness, low mood, increased appetite, or excessive sleep.

Stimulants

Substances that increase activity in the brain or the body's fight-or-flight system. They may improve alertness and attention but can also cause insomnia, anxiety, dependence, fast heartbeat, high blood pressure, or seizures.

Stimulus

A stimulus is a physical, chemical, sensory, or social change that evokes a response from a cell, tissue, organism, or person.

Stingray

A sea-animal injury caused by a stingray spine, usually producing severe pain, swelling, and a puncture wound. Medical care may be needed to clean the wound, remove retained spines, and treat whole-body reactions.

Stings

Injuries caused when an insect, animal, or plant injects venom or irritating material. They may cause pain, swelling, itching, allergic reactions, tissue damage, or serious poisoning depending on the source.

Stings, Bee

Alternate index label; see *Bee sting*.

Stings, Jellyfish

Alternate index label; see *Jellyfish stings*.

Stings, Scorpion

Alternate index label; see *Scorpion sting*.

Stippling (Tattooing)

Patterned dermal abrasions and punctate hemorrhages surrounding a firearm entrance wound, caused by unburned and partially burned gunpowder grains striking the skin at close range (15–75 cm).

Alternate Names:

Tattooing

Stitch

A suture used to close tissue, or a sharp transient pain, often in the side during exercise.

Stochastic Effects

Possible effects of radiation, especially cancer or inherited genetic changes, whose chance increases with dose. The severity cannot be predicted from

the dose, and even low exposure may carry some risk.

Stoddard Solvent Poisoning

Poisoning from Stoddard solvent, a petroleum-based cleaning solvent. Inhalation or swallowing can cause headache, dizziness, drowsiness, skin irritation, or aspiration-related lung injury; do not induce vomiting and seek advice.

Stokes-Adams Syndrome

Sudden fainting caused by a temporary dangerous slowing or stopping of the heartbeat, often from heart block or another abnormal rhythm. It requires urgent heart assessment because injury or cardiac arrest can occur.

Stoma

A natural opening or a surgically created opening connecting an organ to the skin or another organ.

Stoma Complications

Problems involving an opening made from the intestine or urinary tract to the skin. They include skin irritation, bleeding, retraction, prolapse, narrowing, blockage, high output, infection, and a parastomal hernia; sudden severe pain, color change, or no output needs urgent care.

Stomach

A muscular digestive organ between the oesophagus and small intestine that stores and begins digestion of food.

Stomach Cancer

Cancer that begins in the stomach, most often in gland-forming cells lining the stomach. Risk factors include *Helicobacter pylori* infection, smoking, chronic inflammation, certain foods, and inherited conditions; symptoms and treatment depend on type and stage.

Alternate Names:

Cancer, Gastric Cancer, Stomach

Stomach Cramps

Intermittent gripping or spasmodic upper-abdominal pain caused by gas, infection, indigestion, ulcer disease, gallbladder or pancreatic disease, obstruction, or other causes.

Stomach Fat (Belly Fat, Abdominal Fat)

Adipose tissue stored beneath the skin or around abdominal organs; excess visceral fat is metabolically active and associated with insulin resistance, fatty liver, and cardiovascular risk.

Stomach Flu

Alternate index label; see *Viral gastroenteritis (stomach flu)*.

Stomach Paralysis

Stomach paralysis, or gastroparesis, is delayed emptying of stomach contents without obstruction, causing early fullness, nausea, vomiting, and bloating.

Stomach Tube

A tube passed through the mouth or nose into the stomach for drainage, feeding, sampling, or treatment.

Stomach Ulcer

An open sore in the lining of the stomach, commonly associated with *Helicobacter pylori* infection or medicines such as NSAIDs.

Stomach Ulcer (Peptic Ulcer)

Alternate index label for Peptic Ulcer.

Stomach Washout

A procedure that rinses and removes stomach contents through a tube. It is rarely used for selected serious poisonings because it can cause choking, lung injury, bleeding, or other complications.

Stomach, Diseases Of

Disorders affecting the stomach, including inflammation, ulcers, movement problems, blockage, bleeding, and tumors. Symptoms may include pain, nausea, vomiting, early fullness, weight loss, indigestion, or

blood in vomit or stool.

Stomatitis

Inflammation, soreness, redness, or ulcers of the lining of the mouth. Causes include infection, irritation, nutritional deficiency, medicines, and cancer treatment; severe pain, dehydration, fever, or inability to eat or drink needs medical care.

Stomatodynia

Alternate index label; see *Burning mouth syndrome*.

Stone

A hard lump formed inside an organ or tube, commonly from mineral salts or other body substances. Stones may block flow, cause pain or infection, and occur in kidneys, gallbladder, or ducts.

Stonefish Sting

A puncture injury from the venomous spines of a stonefish, causing severe pain, swelling, bleeding, and sometimes weakness, breathing problems, or shock. Seek emergency care; hot-water immersion may reduce pain while help is obtained.

Stool

Fecal material expelled from the bowel, composed of water, undigested residue, bacteria, cells, mucus, and bile pigments; color, form, frequency, and blood can provide clinical clues.

Stool C Difficile Toxin

A stool test for harmful substances made by *Clostridioides difficile* bacteria. A positive result supports active infection when a person has compatible diarrhea, but bacteria can be present without causing illness.

Stool Examination

Laboratory analysis of a stool sample for blood, infection, parasites, inflammation, malabsorption, or other digestive abnormalities.

Alternate Names:

Stool test

Stool Gram Stain

Microscopic examination of a stool specimen after Gram staining; it may provide limited information about bacterial flora or inflammatory cells but is not a general test for infectious diarrhea.

Stool Guaiac Test

A chemical fecal occult blood test that detects the peroxidase activity of heme in stool. Dietary factors, medicines, and specimen collection can affect results. It is a screening or detection test rather than a diagnosis; a positive result requires clinical follow-up and usually evaluation for a gastrointestinal source.

Stool Holding

Alternate index label; see *Encopresis*.

Stool Occult Blood Test

Alternate index label; see *Fecal occult blood test*.

Stool Ova And Parasites Exam

Microscopic examination of stool for parasite eggs, cysts, larvae, or other forms, sometimes requiring multiple specimens to improve detection.

Stools

Feces, the material expelled from the digestive tract. Changes in color, consistency, frequency, or blood can provide clues about digestive health but are not diagnostic alone.

Stools - Foul Smelling

Strongly odorous feces that may result from diet, infection, bleeding, malabsorption, altered gut bacteria, or rapid transit; persistent change with weight loss or diarrhea warrants review.

Stools - Pale Or Clay-Colored

Light-colored stool caused by reduced bile pigment reaching the intestine, potentially indicating bile-duct obstruction, gallbladder disease, liver disease, or certain transient conditions.

Stools – Floating

Feces that remain on the water surface, often from

trapped gas or diet but sometimes from excess fat in malabsorption; persistent greasy, pale, foul-smelling stool needs evaluation.

Stop Smoking Support Programs

Counseling, quit plans, telephone or digital coaching, and medicines such as nicotine replacement, varenicline, or bupropion used to help people stop tobacco use.

STOPP/START

A checklist used to review medicines in older adults. STOPP identifies medicines that may be inappropriate or harmful, while START identifies useful treatments that may have been missed; clinical judgment is still required.

Storage Diseases

A group of inherited metabolic disorders characterized by accumulation of substrates within cells due to specific enzyme deficiencies. Lysosomal storage diseases result from defects in lysosomal hydrolytic enzymes, leading to accumulation of undigested macromolecules within lysosomes.

Stork Bite

A stork bite is a common harmless pink birthmark, usually a nevus simplex on the forehead, eyelids, nose, or neck, that often fades during childhood.

Strabismus

Misalignment of the eyes so they do not point in the same direction. One eye may turn in, out, up, or down; it can cause double vision or reduced vision in one eye and is especially important to assess in children.

Strain

An injury from overstretching or tearing a muscle or tendon, or a force applied to tissue.

Strain Imaging

Ultrasound or magnetic-resonance imaging that measures how much tissue deforms during movement, especially how heart muscle shortens or thick-

ens with each heartbeat. It can reveal early weakness even when the total amount of blood pumped appears normal.

Strain Neck (Whiplash)

Alternate index label for Whiplash.

Strains

A strain is overstretching or tearing of a muscle or tendon, causing pain, tenderness, swelling, weakness, or reduced function after force or overuse.

Strains (Sprained Ankle)

Alternate index label for Sprained Ankle.

Strangulated Hernia

A hernia in which the blood supply to the trapped tissue is cut off, causing ischaemia and possible tissue death; it is a surgical emergency.

Strangulation

Compression of a body structure, especially the neck or a hernia, that compromises blood flow or airway.

Strapping

Application of adhesive tape or bandage to support, protect, or restrict movement of a body part.

Strategies For Getting Through Labor

Practical approaches for coping with labor, including breathing, movement, position changes, support people, relaxation, analgesia, and communication with the maternity team.

Stratum Corneum

The outermost skin layer, made mainly of flattened dead cells filled with keratin. It forms a protective barrier that limits water loss and helps block chemicals, germs, and physical injury.

Strawberry Hemangioma

Alternate index label; see *Hemangioma*.

Strength

The ability of a muscle or group of muscles to

produce force. Healthcare professionals may test strength by comparing movements against resistance; reduced strength can result from pain, poor effort, muscle disease, nerve problems, or brain injury.

Strength Testing

Assessment of how much force a muscle or muscle group can produce, using examination or equipment. It helps identify weakness and monitor recovery, progression, or response to treatment.

Strength Training

Exercise against resistance to improve muscle force, endurance, power, bone health, and function. The program should be progressed safely according to ability and medical needs.

Alternate Names:

Resistance training; weight training

Strep Throat

A bacterial infection of the throat and tonsils caused by group A *Streptococcus*, also called *Streptococcus pyogenes*. It commonly causes a sudden sore throat, pain when swallowing, fever, and swollen or red tonsils, sometimes with white patches.

Streptococcal Cellulitis With Lymphangitis

A streptococcal skin infection with inflammation spreading along nearby lymphatic vessels. Redness, warmth, pain, swelling, fever, and red streaks may occur and require prompt antibiotic treatment.

Streptococcal Infection

An infection caused by bacteria of the *Streptococcus* group. Depending on the species and site, it may cause strep throat, scarlet fever, impetigo, cellulitis, pneumonia, heart-valve infection, bloodstream infection, or severe tissue infection.

Streptococcal Infections

Infections caused by *Streptococcus* bacteria, which may affect the throat, skin, lungs, heart valves, blood, or other tissues. Diagnosis and antibiotic choice depend on the site and species; rapidly wors-

ening illness, severe pain, or breathing difficulty is urgent.

Streptococcal Pharyngitis

A throat infection caused by group A *Streptococcus*. It often begins suddenly with a sore throat, painful swallowing, fever, red or swollen tonsils, and tender neck glands, usually without a cough.

Streptococcal Pharyngitis (Strep Throat)

Alternate index label for Strep Throat.

Streptococcal Screen

A streptococcal screen looks for group A *Streptococcus*, usually from a throat swab, to help diagnose strep throat.

Streptococcus

A group of round bacteria that can cause throat infections, pneumonia, skin infections, heart-valve infection, or serious bloodstream illness. Different species spread and respond to antibiotics differently, so testing may guide treatment.

Streptococcus Agalactiae

Group B *Streptococcus*, a bacterium that can live in the bowel or genital tract without causing symptoms. It can pass to a baby during birth and cause serious newborn infection, so pregnancy screening and preventive antibiotics are used when indicated.

Streptococcus Pneumoniae (Pneumococcus)

A gram-positive bacterium that can cause pneumonia, meningitis, sinusitis, otitis media, and bloodstream infection; vaccines reduce disease risk.

Streptococcus Pyogenes

Group A *Streptococcus*, a bacterium that causes strep throat, scarlet fever, impetigo, cellulitis, and sometimes severe invasive infection. Untreated infection can occasionally lead to rheumatic fever or kidney inflammation.

Streptokinase

A thrombolytic protein that activates plasminogen and dissolves clots; use is limited by bleeding risk and alternatives.

Streptomycin

An aminoglycoside antibiotic used in selected tuberculosis and other infections.

Stress

A physical and emotional response to perceived demands or threats. It can change heart rate, breathing, muscle tension, attention, sleep, and digestion; persistent or overwhelming stress may affect health.

Stress Cardiomyopathy

A temporary weakening of the heart muscle that often follows severe emotional or physical stress. It can cause chest pain, breathlessness, or fainting and may resemble a heart attack, even when no heart artery is blocked.

Stress Echocardiography

An ultrasound scan of the heart performed while the heart works harder through exercise or medicine. It looks for changes in heart-muscle movement that may suggest reduced blood flow.

Stress Fracture

A small crack in a bone caused by repeated activity or loading. Pain usually develops gradually in one spot and worsens with activity; continuing to stress the bone can make the crack larger or complete.

Stress Fractures

Small cracks in bone caused by repeated loading that exceeds the bone's ability to repair itself. They commonly affect the feet or legs and cause localized pain that worsens with activity.

Stress Incontinence

Involuntary leakage of urine during activities that increase intra-abdominal pressure, such as coughing, sneezing, lifting, or exercise.

Stress Injuries

Tissue injuries caused by repeated loading or overuse without sufficient recovery. Examples include stress fractures, tendinopathy, and muscle strain.

Stress Response

Body changes that prepare a person to respond to a perceived threat or challenge. Hormones and nerve signals alter heart rate, breathing, blood flow, attention, digestion, immunity, and energy use.

Alternate Names:

Fight-or-flight response

Stress Shielding

Loss or weakening of bone next to an implant because the implant carries more force than the bone normally would. Over time, this can reduce bone density and affect how securely the implant stays in place.

Stress Tests

Diagnostic tests that assess organ function under controlled physical, pharmacologic, or physiologic stress, commonly evaluating the heart for inducible ischemia or abnormal rhythm.

Stress Ulcer Prophylaxis

Measures used to reduce the risk of stomach or duodenal bleeding in selected critically ill people. The need for treatment depends on bleeding risk, other medicines, and the person's overall condition.

Stress Urinary Incontinence

Leakage of urine when coughing, sneezing, laughing, lifting, exercising, or otherwise increasing pressure inside the abdomen. It commonly results from weakness of the pelvic-floor muscles or the bladder outlet and can often be treated.

Stressors

Events, conditions, or circumstances that trigger a physical or emotional stress response. Examples include illness, pain, sleep loss, trauma, work demands, and relationship difficulties.

Stretch Marks

Linear bands of atrophic skin, also called striae, caused by stretching and hormonal or corticosteroid effects; they commonly occur during pregnancy, growth, weight change, or steroid exposure.

Stretch Reflex

An automatic tightening of a muscle when it is suddenly stretched, such as the lower-leg movement after tapping the knee tendon. It helps maintain posture and provides information about nerve and spinal-cord function.

Stria

A line, streak, or band in tissue, such as a stretch mark. Striae may result from skin stretching, growth, hormone changes, medicines, or underlying disease and can fade over time.

Alternate Names:

Striae

Striae

Linear bands or streaks in the skin, commonly called stretch marks. They develop when deeper skin layers stretch or change rapidly during growth, pregnancy, weight change, muscle gain, or hormone treatment.

Striae Atrophicae

Linear bands of thin, wrinkled skin caused by stretching and disruption of dermal connective tissue; commonly called stretch marks.

Alternate Names:

stretch marks.

Striae Gravidarum

Stretch marks that develop during pregnancy, commonly on the abdomen, breasts, thighs, or buttocks. They may begin as red or purple lines and gradually fade to lighter bands.

Stricture (Stenosis)

An abnormal narrowing of a passage in the body, such as the esophagus, intestine, bile duct, or urethra. Scarring, inflammation, injury, surgery, or

cancer may cause blockage and symptoms related to the affected organ.

Strictures Esophagus (Schatzki Ring)

Alternate index label for Schatzki Ring.

Stridor

A harsh, high-pitched sound, usually heard during breathing in, caused by narrowing of the upper airway. New or severe stridor is an emergency because airflow may become blocked.

String Test For Intestinal Parasites

A string test collects a sample from the upper digestive tract on a swallowed capsule and string to look for selected intestinal parasites.

Stripping Of Membranes (Membrane Sweep)

A procedure performed during a cervical exam where the examiner inserts a finger through the internal os and sweeps the membranes circumferentially, separating them from the lower uterine segment. Releases endogenous prostaglandins, promoting cervical ripening and potentially initiating labor.

Alternate Names:

Membrane Sweep

Stroke

A sudden loss of brain function caused by blocked blood flow or bleeding in the brain. It may cause facial drooping, arm weakness, speech trouble, vision loss, or confusion.

Stroke Rehabilitation

Rehabilitation after a stroke helps improve movement, speech, swallowing, thinking, mood, and daily activities while reducing complications and preventing another stroke.

Stroke Heat (Heat Stroke)

Alternate index label for Heat Stroke.

Stroke Index

A measure of the amount of blood pumped by the heart with each beat, adjusted for body-surface area. It helps assess heart function and is interpreted with other examination, imaging, and hemodynamic findings.

Stroke Risk Factors

Stroke risk factors include high blood pressure, smoking, diabetes, high cholesterol, atrial fibrillation, prior stroke, and certain blood or vascular disorders.

Stroke Volume

The volume of blood ejected by the left ventricle with each heartbeat, normally 60-100 mL. It is determined by three factors: preload, afterload, and myocardial contractility. Stroke volume equals end-diastolic volume minus end-systolic volume. Reduced stroke volume occurs in heart failure, hypovolemia, and cardiogenic shock.

Stroma

The supporting tissue of an organ that surrounds and holds its working cells. It may contain connective tissue, blood vessels, nerves, and immune cells; the exact structure and role vary between organs.

Strongyloides Stercoralis

A soil-transmitted roundworm that can enter through skin and live in the human intestine. Infection may cause rash, abdominal symptoms, or no symptoms, but severe hyperinfection can occur when immunity is weakened.

Strongyloidiasis

An intestinal worm infection that can spread throughout the body and become life-threatening when immunity is weakened.

Structured Reporting

Reporting that uses a standard format, headings, and required fields to organize findings. It can improve completeness, consistency, and communication in imaging, pathology, and other clinical reports, but does not replace professional judgment.

Struma Ovarii

A specialized mature ovarian teratoma composed predominantly of thyroid tissue; it may be hormonally active or develop malignant thyroid-type transformation.

Struvite Stones

Kidney or urinary-tract stones formed during infection with certain bacteria. They can grow into large branching stones that fill the kidney and may damage it or block urine flow.

Strychnine

A poison causing severe painful muscle spasms and convulsions while awareness may remain; emergency treatment is required.

Student'S Elbow

Olecranon bursitis, an inflammation of the bursa over the point of the elbow, often related to repeated pressure or trauma.

Stuffy Nose

Blocked or difficult nasal breathing caused by swollen tissue, mucus, allergy, infection, irritants, or structural narrowing.

Stuffy Or Runny Nose - Children

A stuffy or runny nose in a child is usually caused by a viral infection or allergy; breathing difficulty, dehydration, prolonged fever, or symptoms in an infant need prompt assessment.

Stuffy Or Runny Nose – Adult

A stuffy or runny nose in an adult commonly results from viral infection, allergy, irritants, or sinus disease; persistent, severe, bloody, or one-sided symptoms need review.

Stump Pain

Alternate index label; see *Residual limb pain*.

Stupor

A state of reduced consciousness in which the patient is unresponsive to most environmental stimuli but

can be temporarily aroused by vigorous, repeated stimulation (painful stimuli, loud shouting).

Sturge-Weber Syndrome

A condition present from birth involving abnormal blood vessels in the skin and sometimes on the surface of the brain. It may cause a port-wine birthmark, seizures, weakness, headaches, developmental problems, or glaucoma, depending on which areas are affected.

Stuttering

A speech-flow problem involving repeated sounds or words, stretched sounds, pauses, or blocks when speaking. It is not caused by low intelligence; support may include speech therapy, communication strategies, and help with anxiety or teasing.

Sty (Stye)

Alternate index label for Stye.

Stye

A tender localized infection or inflammation of an eyelid gland, also called a hordeolum.

Alternate Names:

Sty (Stye)

Styptics

Substances that help stop minor surface bleeding by tightening tissue, narrowing small blood vessels, or supporting clot formation. They are used for limited bleeding and do not replace emergency care for severe blood loss.

Subacute

Developing or lasting longer than an acute condition but not as long as a chronic one. The exact time range varies with the disease.

Subacute Bacterial Endocarditis

A slowly developing infection of the inner lining or valves of the heart, usually caused by bacteria entering the bloodstream. It may cause fever, tiredness, weight loss, a new heart murmur, or embolic complications and requires prolonged antibiotic treatment.

Subacute Combined Degeneration

Damage to parts of the spinal cord, usually from vitamin B12 deficiency. It can cause numbness, weakness, poor balance, and difficulty walking.

Subacute Combined Degeneration Of The Cord

Damage to the spinal cord, usually caused by vitamin B12 deficiency, affecting nerve pathways for vibration, position sense, and movement. It may cause tingling, weakness, poor balance, or difficulty walking and can become permanent without treatment.

Subacute Rehabilitation

Rehabilitation provided after the early phase of illness or injury for people who still need nursing care and therapy but no longer need intensive hospital treatment. It may occur in a specialized facility or outpatient setting.

Subacute Sclerosing Panencephalitis

A rare, progressive brain disease caused by measles virus remaining in the brain years after the original infection. It can cause behavior or learning changes, jerking movements, seizures, loss of coordination, and severe disability; prevention depends on measles vaccination.

Subacute Thyroiditis

Temporary inflammation of the thyroid, often after a viral illness, causing painful neck swelling, fever, and tiredness. Thyroid hormone levels may first be high and later low before returning to normal; treatment relieves pain and other symptoms.

Subaortic Stenosis

Narrowing just below the aortic valve that obstructs blood leaving the heart. It may cause a heart murmur, chest pain, fainting, breathlessness, or damage to the aortic valve and sometimes requires surgery.

Subarachnoid

Situated beneath the arachnoid, one of the thin coverings around the brain and spinal cord. The subarachnoid area contains protective fluid and blood

vessels; bleeding there can cause a sudden severe headache and is an emergency.

Subarachnoid Haemorrhage

Bleeding into the space around the brain containing cerebrospinal fluid, often causing sudden severe headache.

Subarachnoid Hemorrhage

Bleeding into the space around the brain, often from a ruptured blood-vessel bulge. It typically causes a sudden, extremely severe headache and may cause vomiting, neck stiffness, confusion, weakness, or loss of consciousness.

Subarachnoid Space

The space between two thin coverings of the brain and spinal cord, called the arachnoid and pia mater. It contains cerebrospinal fluid and blood vessels and helps cushion the nervous system.

Subareolar Abscess

A pus-filled infection beneath the areola, often associated with periductal inflammation and smoking, causing a painful lump, redness, drainage, or recurrent fistula.

Subchorionic Hemorrhage

Bleeding between the chorion and the uterine wall caused by partial separation of the gestational sac membranes. It may produce vaginal bleeding in early or mid-pregnancy and is assessed according to bleeding, gestational age, and ultrasound findings.

Subclavian

Relating to structures beneath the clavicle, especially the subclavian arteries and veins that supply or drain the upper limbs.

Subclavian Artery

A major artery beneath the collarbone that supplies the arm and contributes blood flow to the neck, chest, and brain. Narrowing or blockage can cause arm pain, weakness, or symptoms from reduced blood flow to the brain.

Subclavian Steal Syndrome

A condition in which narrowing of an artery supplying the arm redirects blood away from the back of the brain, especially during arm exercise. It may cause arm pain or weakness, dizziness, fainting, blurred vision, or imbalance. Treatment controls vascular risk factors and may restore blood flow when symptoms are significant.

Subclavian Vein

The continuation of the axillary vein beyond the lateral border of the first rib. It joins the internal jugular vein behind the sternoclavicular joint to form the brachiocephalic vein.

Subclavian Vein Thrombosis

A blood clot in the large vein beneath the collarbone. It may follow a catheter, repeated strenuous arm activity, or compression near the shoulder and can cause arm swelling, pain, bluish skin, or a dangerous clot in the lungs.

Subclinical

Present without clear symptoms or signs that a person or clinician can notice. A subclinical problem may be found through a blood test, scan, screening examination, or other test and may or may not later cause symptoms.

Subclinical Disease

Disease that produces no obvious symptoms or signs but can be detected by screening, examination, or laboratory testing. It may remain mild or later become clinically apparent, depending on the condition.

Subclinical Hypothyroidism

A blood-test pattern showing that the thyroid is beginning to underperform: the pituitary sends extra stimulation, but thyroid-hormone levels remain normal. Many people have no symptoms; others have mild tiredness, cold intolerance, or constipation.

Subclinical Infection

An infection that produces no noticeable symptoms or signs but may still be detectable by testing and

may sometimes be transmissible.

Subconjunctival Hemorrhage

Bleeding beneath the conjunctiva that appears as a sharply demarcated red patch on the white of the eye; it is usually harmless but recurrent cases or trauma require assessment.

Subconjunctival Hemorrhage (Broken Blood Vessel In Eye)

A small blood vessel broken beneath the clear surface of the eye, causing a sharply demarcated red patch that usually resolves without treatment.

Alternate Names:

Broken Blood Vessel In Eye

Subconscious

Mental processes outside immediate awareness; it is a psychological term rather than a specific diagnosis.

Subcorneal Pustular Dermatitis

A rare recurring skin disorder causing shallow, non-infectious pus-filled blisters just beneath the outer skin layer, usually on the trunk or skin folds. It may resemble psoriasis and can be associated with blood or immune disorders.

Subcu

Subcu is an abbreviation for subcutaneous, meaning beneath the skin; clear clinical instructions should spell out the route.

Subculture

The transfer of microorganisms from one culture to fresh culture medium, used to maintain pure cultures, isolate colonies, increase viability, prepare standardized inocula, and perform identification/susceptibility testing. On solid media, subculture aims to obtain isolated single colonies from a mixed or stock culture.

Subcutaneous

Subcutaneous means beneath the skin; injections by this route deliver medicine into the fatty tissue between skin and muscle.

Subcutaneous Injections

Administration of a medicine into the fatty tissue beneath the skin, commonly used for insulin, anti-coagulants, and selected biologic medicines.

Subcutaneous Emphysema

Air trapped beneath the skin, often after chest injury, surgery, a punctured lung, or a breathing procedure. It may cause swelling and a crackling feeling; treatment addresses the air leak, and breathing difficulty or rapid spread requires urgent care.

Subcutaneous Implantable Cardioverter-Defibrillator

A device placed under the skin that detects and treats dangerous fast heart rhythms with an electrical shock. Its wires run outside the heart and blood vessels; infection, inappropriate shocks, movement, or device failure are possible.

Subcutaneous Layer

The tissue layer beneath the dermis, made mainly of fat and connective tissue. It cushions deeper structures, insulates the body, stores energy, and contains larger blood vessels and nerves.

Subcutaneous Tissue

The layer beneath the skin that connects it to deeper structures. It contains fat, connective tissue, larger blood vessels, and nerves and provides insulation, cushioning, and energy storage.

Subdural

Located beneath the dura, one of the protective coverings around the brain and spinal cord. A subdural hematoma is bleeding in this space, often after head injury, and may cause headache, vomiting, confusion, weakness, seizures, or loss of consciousness. Significant bleeding needs urgent assessment.

Subdural Effusion

Accumulation of usually clear fluid in the subdural space, often after trauma, surgery, infection, or cerebrospinal-fluid disturbance and sometimes causing headache or pressure effects.

Subdural Haematoma

A collection of blood between protective coverings of the brain, usually after small veins tear during a head injury. It may develop suddenly or gradually and cause headache, confusion, drowsiness, weakness, seizures, or loss of consciousness.

Subdural Hematoma

A collection of blood between two protective coverings of the brain, usually after small veins tear during a head injury. It can cause headache, confusion, weakness, seizures, or sleepiness and may require urgent treatment.

Subdural Hemorrhage

Bleeding between two protective coverings of the brain, usually after tearing of small veins during a head injury. It may cause sudden or gradually worsening headache, confusion, drowsiness, weakness, seizures, or loss of consciousness and is diagnosed with brain imaging.

Subendocardial Myocytes

Heart-muscle cells in the inner layer of the myocardium, which are especially vulnerable to reduced blood flow.

Subependymal Giant Cell Astrocytoma

A usually slow-growing brain tumor that develops near a passage where fluid leaves the brain's cavities. It is strongly associated with tuberous sclerosis and can block fluid flow, causing headache, vomiting, or enlarged brain cavities.

Subependymoma

A rare, usually benign slow-growing ependymal tumor, commonly arising in the ventricular system of adults. Symptoms result from obstruction of cerebrospinal-fluid pathways or incidental detection.

Subfertility

Alternate index label; see *Infertility*.

Subgaleal Hemorrhage

A potentially life-threatening accumulation of blood

in the space beneath the scalp's epicranial aponeurosis. It can expand rapidly in a newborn, particularly after vacuum-assisted delivery, and requires urgent recognition and treatment.

Subinvolution

Slower-than-expected return of an organ to its usual size, especially the uterus after childbirth. It may cause prolonged or heavy bleeding, pelvic pain, or an enlarged tender uterus and needs assessment for retained tissue, infection, or other causes.

Subjacent

An anatomical term describing a structure, tissue, or lesion located beneath another structure. It indicates relative position and does not necessarily mean that the two structures are touching; the relationship may be described on physical examination, imaging, or during surgery.

Subjective

Based on a person's own experience or report rather than a directly measured finding. Pain, nausea, fatigue, dizziness, and mood are subjective symptoms, while temperature and blood pressure are objective measurements.

Sublimation

A psychological defense process in which unacceptable impulses are redirected into socially acceptable activity; in chemistry it is solid-to-gas transition.

Sublingual

Sublingual means beneath the tongue; medicines given this way can be absorbed through oral mucosa and may bypass much first-pass liver metabolism.

Sublingual Epidermoid Cyst

A benign cyst lined by stratified squamous epithelium beneath the tongue mucosa, presenting as a slow-growing midline swelling that may require surgical excision if symptomatic.

Sublingual Gland

One of the paired major salivary glands, located

beneath the tongue. It produces mainly mucous saliva that enters the mouth through several small ducts and helps lubricate the oral cavity.

Subluxation

Partial displacement of a joint in which some contact between the joint surfaces remains. It may cause pain, swelling, instability, limited movement, nerve injury, or repeated episodes after injury or disease.

Submandibular Gland

One of the major salivary glands, located beneath the lower jaw. It makes much of the saliva present when a person is not eating and releases it into the floor of the mouth through a small duct.

Submucosa

The supportive layer beneath the moist lining of organs such as the intestine, airway, and bladder. It contains blood vessels, nerves, glands, and connective tissue and helps nourish and anchor the lining.

Subphrenic Abscess

A collection of pus beneath the diaphragm, usually caused by infection after abdominal surgery, a burst abdominal organ, or spread from nearby tissue. It may cause fever, upper-abdominal or shoulder pain, breathing discomfort, and sepsis and usually needs drainage and antibiotics.

Subq

Subq is an abbreviation for subcutaneous, referring to tissue beneath the skin and the route used for some injections.

Subscapular Artery

A branch of the axillary artery that supplies the shoulder blade region, chest wall, and nearby muscles. It contributes to the network of vessels supporting the shoulder and upper limb.

Substance

A substance is a material with defined or variable chemical composition; medical effects depend on

identity, dose, route, duration, and host factors.

Substance Abuse

Legacy, nonspecific label; see *Substance Use Disorder*.

Substance Abuse Disorder

Legacy label; see *Substance Use Disorder*.

Substance Abuse Psychiatry

Medical care for people with substance-use disorders and coexisting mental-health conditions. Assessment considers the substance, withdrawal risk, physical health, mood, and safety; treatment addresses both substance use and mental health together.

Substance Dependence

A state in which repeated substance use produces physiologic adaptation, so that reducing or stopping the substance may cause withdrawal. It is distinct from, but may occur with, substance-use disorder.

Substance Intoxication

A temporary change in thinking, behavior, or body function caused by recent use of alcohol, a drug, or another substance. Effects depend on the substance, amount, timing, combinations, and the person's health.

Substance Use

The consumption of alcohol, drugs, or other chemical substances, which can lead to health, social, and psychological issues if used excessively.

Substance Use - Amphetamines

Amphetamine use can cause dependence, insomnia, anxiety, psychosis, high blood pressure, arrhythmias, overheating, and overdose; urgent symptoms require emergency care.

Substance Use - Cocaine

Use of cocaine, a stimulant that can cause dependence, agitation, seizures, heart attack, stroke, dangerous overheating, and severe psychiatric or car-

diovascular complications.

Substance Use - Inhalants

Inhalant misuse involves breathing fumes or gases from household or industrial products and can cause sudden cardiac arrest, brain injury, organ damage, dependence, or death.

Substance Use - LSD

LSD is a potent hallucinogen that alters perception, mood, and thought and can cause panic, accidents, persistent perceptual symptoms, or psychosis in susceptible people.

Substance Use - Marijuana

Marijuana or cannabis can impair attention, memory, coordination, and driving and may cause dependence, anxiety, psychosis, or respiratory harm when smoked.

Substance Use - Phencyclidine

Phencyclidine is a dissociative drug that can cause agitation, hallucinations, loss of coordination, high blood pressure, seizures, dangerous behavior, or coma.

Substance Use - Prescription Drugs

Use of prescription medicines in a way not directed by a clinician, including taking someone else's medicine, taking extra doses, or using them for intoxication; dependence, overdose, and interactions may result.

Substance Use Disorder

A pattern of alcohol or drug use that is difficult to control and causes health problems, unsafe behavior, or trouble at home, work, or school. It may cause cravings, tolerance, or withdrawal.

Substance Use In Pregnancy

Use of alcohol, tobacco, cannabis, opioids, cocaine, or other substances during pregnancy. Effects depend on the substance, dose, timing, and other factors and may include maternal complications, impaired fetal growth, preterm birth, or neonatal

withdrawal. Evaluation and treatment should be individualized.

Substance Withdrawal

Physical or mental symptoms that occur after reducing or stopping heavy or prolonged substance use. Symptoms range from anxiety and nausea to seizures, severe confusion, dangerous blood-pressure changes, or breathing problems, depending on the substance.

Substernal Goiter

An enlarged thyroid gland that extends from the neck into the upper chest. It may press on the windpipe or esophagus, causing shortness of breath, cough, or difficulty swallowing. Imaging helps assess its size and position.

Substrate

A substance on which an enzyme acts or a material used by a biochemical pathway.

Subungual Exostosis

A benign osteocartilaginous outgrowth arising beneath the nail, usually of a toe or finger. It causes a painful firm subungual mass and nail deformity and is treated by excision when symptomatic.

Succenturial Lobe

An accessory lobe of the placenta, connected to the main placenta by blood vessels that traverse the membranes. If undetected after delivery, the succenturial lobe may be retained in the uterus, causing postpartum hemorrhage or infection. Diagnosis: careful inspection of the placenta and membranes after delivery.

Succenturiate Placenta

A succenturiate placenta has one or more accessory lobes separate from the main placenta, which can increase risk of retained tissue or fetal-vessel injury.

Succinate Dehydrogenase

An enzyme inside mitochondria that helps cells make energy. It changes one small molecule

into another while passing electrons through the energy-producing system; inherited or tumor-related changes can have clinical importance.

Succinylcholine

A very fast, short-acting medicine that temporarily paralyzes skeletal muscles to help place a breathing tube or perform emergency procedures. It can dangerously raise potassium, stop breathing longer than expected, or trigger malignant hyperthermia in susceptible people.

Succumb

To succumb means to die from or be overcome by a disease, injury, exposure, or other serious process.

Sucking Blister

A blister or worn area of skin in a newborn, usually on a hand, finger, forearm, or lip, caused by repeated sucking before or during feeding. It is usually harmless and heals on its own.

Sucking Reflex

A primitive reflex present from birth, elicited by placing an object in the infant's mouth. The infant rhythmically sucks on the object. Coordinated sucking and swallowing typically develop by 34-36 weeks gestational age. Premature infants may lack coordinated suck-swallow, requiring gavage feeding.

Sucrose

Common table sugar, a disaccharide made of glucose and fructose. Digestive enzymes split it into these simpler sugars for absorption.

Sucrose Lysis Test

An older blood test once used to look for paroxysmal nocturnal hemoglobinuria, a disorder in which red blood cells are unusually vulnerable to destruction. Flow-cytometry testing has largely replaced it because it is more specific and reliable.

Suction

Removal of fluid, secretions, blood, or other material using negative pressure. It may be used in airway

care, surgery, wound care, or drainage.

Suction (Vascular)

A suction device used during a vascular procedure to remove blood or other fluid from the operative field.

Alternate Names:

Vascular suction device

Suction Device

Equipment that creates negative pressure to remove fluid, blood, mucus, or other material. It usually includes a pump, tubing, collection container, and suction catheter or tip and is used in airway care, surgery, or wound drainage.

Suction Tip

The end attachment of a suction device used to remove blood, fluid, secretions, or debris. Common types include the Yankauer tip for oropharyngeal suction and surgical suction tips such as the Frink tip.

Sudden Cardiac Arrest

An abrupt loss of effective heart pumping that causes collapse, unresponsiveness, and absent or abnormal breathing. Immediate emergency action includes calling for help, starting chest compressions, and using an automated defibrillator if available.

Alternate Names:

Cardiac Arrest, Sudden

Sudden Cardiac Death

Unexpected death from a cardiac cause, usually occurring rapidly after symptom onset or without witnessed symptoms. Causes include coronary disease, cardiomyopathy, inherited arrhythmia syndromes, and bradyarrhythmia; prevention depends on the underlying risk.

Alternate Names:

Arrest Cardiac (Sudden Cardiac Death) Death Sudden Cardiac (Sudden Cardiac Death)

Sudden Infant Death Syndrome

The unexplained sudden death of an infant younger

than one year after a complete investigation, including medical history, death-scene review, and autopsy. Safe sleep on the back on a firm, clear surface and avoiding smoke reduce risk, but do not prevent every case.

Sudden Sensorineural Hearing Loss

A rapid loss of hearing caused by a problem in the inner ear or hearing nerve, often noticed on waking or over a few days. It may be accompanied by ringing or dizziness and needs urgent assessment because early treatment can improve recovery in some cases.

Sudden Unexpected Death In Infancy

The sudden, unexpected death of an infant that requires investigation of the medical history, circumstances, death scene, and sometimes autopsy. The cause may be identified, or the death may meet the definition of sudden infant death syndrome.

Sudden Unexpected Infant Death

The sudden and unexpected death of an infant younger than 1 year, whether or not the cause is known before investigation. Sudden infant death syndrome is the unexplained subtype after complete scene, history, and autopsy evaluation.

Sudek'S Atrophy

An older name for complex regional pain syndrome with pain, swelling, autonomic change, and regional bone loss.

Sudorifics (Diaphoretics)

Medicines or other treatments that increase sweating. They have limited specific medical uses; excessive sweating caused by a treatment can lead to dehydration, overheating, or abnormal body salts.

Suffocation

Inability to breathe enough because the airway is blocked, oxygen is unavailable, the chest is compressed, or another problem prevents normal breathing. It quickly causes unconsciousness and death without immediate rescue.

Sugammadex

A medicine used during anesthesia to quickly reverse muscle paralysis caused by selected muscle-relaxing medicines. It binds those medicines so the body can remove them; allergic reactions and changes in heart rate are possible.

Sugar-Water Hemolysis Test

An older laboratory test assessing red-cell resistance to hypotonic sugar solution, historically used in evaluating paroxysmal nocturnal hemoglobinuria and now largely replaced by flow-cytometric testing.

Suicidal Ideation

Thoughts about dying or killing oneself, with or without a plan or intention to act. Any current plan, intent, access to a method, recent attempt, or inability to stay safe is an emergency requiring immediate support and professional help.

Suicide

Death caused by an intentional action to end one's life. Suicidal thoughts, plans, or behavior are urgent medical concerns; immediate support, safety measures, and professional assessment can help protect the person.

Suicide And Suicidal Behavior

Thoughts, plans, attempts, or acts intended to cause one's own death; any current intent, plan, access to means, or inability to stay safe requires immediate emergency support.

Suicide Risk Assessment

A clinical evaluation of suicidal thoughts, intent, plan, access to means, past attempts, self-harm, psychiatric and medical illness, substance use, protective factors, and immediate safety. It informs but does not replace ongoing clinical judgment and safety planning.

Sulcus

A groove or shallow furrow on an organ or body surface, especially the brain or heart. Brain sulci separate raised areas and increase the cerebral cortex's folded surface area.

Sulfa Drugs

A group of medicines, especially sulfonamide antibiotics, that block a chemical pathway bacteria need to grow. They treat selected infections but can cause allergic reactions and other side effects; the term may also refer to nonantibiotic sulfonamides.

Sulfamethoxazole

A sulfonamide antibiotic used commonly with trimethoprim in selected infections.

Sulfasalazine

An anti-inflammatory medicine used for inflammatory bowel disease and rheumatoid or other inflammatory arthritis. It changes immune activity and can cause nausea, rash, low blood counts, liver problems, or kidney problems.

Sulfatide

A fatty substance containing sulfate found mainly in myelin, the insulating covering of nerve fibers. Abnormal buildup or deficiency can disrupt nerve function and occurs in some inherited metabolic disorders.

Sulfite Sensitivity

Sulfite sensitivity is an adverse reaction to sulfite preservatives, sometimes causing wheeze, flushing, headache, or other symptoms, especially in people with asthma.

Sulfonamide

A medicine containing a sulfonamide chemical group. Some are antibiotics that stop bacteria making folate, which they need to grow; others reduce inflammation or increase urine flow. Allergic reactions and other side effects are possible.

Sulfonamides

Sulfonamides are drugs containing a sulfonamide group, including antibacterial agents that inhibit bacterial folate synthesis; allergic reactions, severe skin reactions, cytopenias, renal effects, and crystaluria are possible.

Sulfonylurea

An oral diabetes medicine that makes the pancreas release more insulin. It can lower blood sugar but may cause dangerously low blood sugar, hunger, or weight gain.

Sulfonylureas

Oral medicines for type 2 diabetes that stimulate the pancreas to release more insulin. They can lower blood glucose but may cause low blood sugar, hunger, or weight gain.

Sulfur Colloid Scan

A nuclear-medicine scan in which a small radioactive tracer is used to show activity in the liver, spleen, bone marrow, or lymph nodes. It can help assess how these organs work or identify abnormal tissue distribution.

Sulfuric Acid Poisoning

Severe poisoning from sulfuric acid, a highly corrosive chemical. It can cause deep burns of the skin, eyes, mouth, throat, and digestive tract and dangerous fumes; emergency care is required and vomiting must not be induced.

Sulindac Overdose

Taking too much sulindac, a nonsteroidal anti-inflammatory drug, may cause nausea, vomiting, stomach bleeding, drowsiness, kidney injury, liver injury, seizures, or metabolic acidosis. A suspected overdose needs prompt medical or poison-control advice.

Sulphonamides

A group of medicines, including some antibiotics, that block a chemical pathway bacteria need to grow. They are used for selected infections and other conditions; allergic reactions, interactions, and blood or kidney problems can occur.

Sulphonylureas

Oral medicines that stimulate pancreatic insulin release to lower blood glucose in type 2 diabetes.

Sumatriptan

A migraine medicine that narrows certain blood vessels and changes nerve signaling to stop acute migraine or cluster headaches.

Summer Diarrhoea

An older term for seasonal diarrheal illness, often referring to infectious diarrhea in children.

Sun Poisoning

Alternate index label; see *Polymorphous light eruption*.

Sun Protection

Sun protection reduces ultraviolet exposure through shade, protective clothing, and broad-spectrum sunscreen and helps prevent sunburn, premature skin aging, and skin cancer.

Sun Protection (Photoprotection)

Measures that reduce exposure to ultraviolet radiation, including shade, protective clothing, sunglasses, and broad-spectrum sunscreen. They help prevent sunburn, premature skin aging, eye damage, and ultraviolet-related skin cancers.

Alternate Names:

Photoprotection

Sun-Sensitive Drugs (Photosensitivity To Drugs)

Alternate index label for Photosensitivity to Drugs.

Sunburn

An acute inflammatory injury of the skin caused by excessive ultraviolet radiation, resulting in redness, pain, warmth, and sometimes blistering or peeling.

Sundowning

Late-day or evening worsening of confusion, agitation, wandering, or behavioral symptoms in some people with dementia or delirium, influenced by fatigue, light, routines, and unmet needs.

Sunflower Syndrome

A rare epilepsy in which a person repeatedly turns

toward bright light and waves a hand near the eyes, often triggering absence seizures. It usually begins in childhood and requires neurologic assessment and seizure treatment.

Sunken Chest

Alternate index label; see *Pectus excavatum*.

Sunstroke

A life-threatening form of heat illness in which body temperature rises dangerously high and the nervous system is impaired.

Superantigen

A substance made by some bacteria that activates many immune cells at once. This can cause an excessive release of inflammatory chemicals and contribute to illnesses such as toxic shock syndrome or some forms of scarlet fever.

Superficial

Near the surface of the body or an organ, rather than deep inside it. The term may describe tissues, veins, burns, wounds, or infections that mainly affect the skin and tissue just beneath it.

Superficial Fascia

The soft tissue layer just beneath the skin. It contains fat, small blood vessels, nerves, and connective tissue and helps insulate the body and allow the skin to move.

Alternate Names:

subcutaneous tissue.

Superficial Spreading Melanoma

The most common cutaneous melanoma subtype, characterized initially by radial growth across the epidermis and an irregularly pigmented patch or plaque before invasion develops.

Superficial Thrombophlebitis

Inflammation and a blood clot in a vein just beneath the skin, causing a tender, firm, red cord. It often improves with treatment, but a spreading clot or symptoms of deep-vein thrombosis require medical

assessment.

Superimposed Preeclampsia

Preeclampsia developing in a person who already has chronic hypertension. It may present with new or worsening proteinuria, thrombocytopenia, abnormal liver or kidney tests, neurologic symptoms, or other features of maternal organ dysfunction.

Superinfection

A new infection that develops during or after treatment of a previous infection, often involving an antimicrobial-resistant organism or an organism not susceptible to the original therapy, such as *Clostridioides difficile* after antibiotic exposure.

Superior

Above or toward the head in the body, or higher than another structure. For example, the neck is superior to the chest. The opposite direction is inferior, meaning below or toward the feet.

Superior Mesenteric Artery

A major artery branching from the abdominal aorta. It supplies blood to much of the small intestine and to parts of the large intestine, including the right colon and nearby transverse colon.

Superior Mesenteric Artery Syndrome

Pressure on part of the small intestine where it passes between two major arteries, causing blockage. It may follow major weight loss and cause fullness, upper-abdominal pain, nausea, and vomiting; treatment restores nutrition and relieves the obstruction.

Superior Semicircular Canal Dehiscence

A gap or very thin area in the bone covering one balance canal in the inner ear. Loud sounds or pressure may cause dizziness, imbalance, hearing changes, or hearing one's own voice unusually loudly; diagnosis uses symptoms, hearing tests, and imaging.

Superior Vena Cava

A large vein in the chest that carries oxygen-poor

blood from the head, neck, arms, and upper chest to the right side of the heart.

Superior Vena Cava Syndrome

Blockage or compression of the large vein carrying blood from the upper body to the heart. It can cause swelling of the face, neck, or arms, visible neck veins, cough, or shortness of breath and may require urgent treatment.

Alternate Names:

SVCS (Superior Vena Cava Syndrome)

Superior Vena Caval Obstruction

Blockage or compression of the large vein returning blood from the head, neck, and arms to the heart. It is often caused by a chest tumor or a blood clot around a catheter and may cause facial or arm swelling, prominent neck veins, cough, or breathlessness.

Supernumerary Nipples

Supernumerary nipples are extra nipples along the embryonic milk line, usually harmless but occasionally associated with underlying breast or urinary-tract developmental anomalies.

Supernumerary Rib

An extra rib beyond the typical twelve pairs, most commonly a cervical rib above the first thoracic rib, which may compress the brachial plexus or subclavian vessel causing thoracic outlet syndrome.

Supernumerary Teeth

Teeth that develop in addition to the usual number. They may remain hidden or appear in the mouth and can crowd, displace, or prevent nearby teeth from erupting; a common type develops between the upper front teeth.

Supervised Exercise Therapy

A structured, monitored exercise program used to improve walking ability and reduce claudication symptoms in people with peripheral artery disease. The exercise plan is adjusted to the person's symptoms and functional capacity.

Supination

Rotation of the forearm so that the palm faces anteriorly in anatomical position, or upward when the elbow is flexed. The radius and ulna become parallel.

Supine

Lying flat on the back with the face and front of the body facing upward. This position is commonly used for examinations, imaging, and surgery. Staying in this position for a long time can increase the risk of pressure injuries; late in pregnancy, it may also reduce blood return to the heart.

Supine Hypotensive Syndrome

A drop in blood pressure that can occur when a pregnant person lies flat on the back, because the enlarged uterus reduces blood return to the heart. Dizziness, nausea, sweating, or faintness may improve by turning onto the side.

Supine Position

Lying on the back with the face and front of the body upward. It is commonly used for examination, imaging, and surgery, but prolonged use can cause pressure injury and late pregnancy may reduce blood return to the heart.

Supplemental Oxygen Therapy

Administration of oxygen at a concentration above that of room air to treat or prevent clinically important hypoxemia. Delivery method and oxygen target depend on the illness, baseline oxygenation, risk of carbon-dioxide retention, and monitoring results; excessive oxygen can also cause harm.

Supplementation

Use of a vitamin, mineral, protein, fiber, or other nutrient preparation to correct a deficiency or meet a clinically identified increased requirement. The indication, dose, interactions, product quality, and risk of toxicity should be assessed before use.

Supportive Care

Treatment that maintains essential body functions, relieves symptoms, prevents complications, and sup-

ports recovery while the underlying cause is treated.

Suppository

A solid preparation inserted into the rectum, vagina, or urethra where it dissolves or melts.

Suppression

Reduction or inhibition of a function, response, symptom, or process.

Suppuration

The formation or discharge of pus, a thick fluid made from immune cells, germs, and damaged tissue. It usually occurs with infection and may form an abscess that needs drainage and treatment.

Supracondylar Humerus Fracture

A break in the upper part of the elbow end of the arm bone, common in children after a fall on an outstretched hand. Swelling, pain, deformity, or inability to move the elbow may occur. Doctors must check circulation and nerves because severe fractures can damage an artery or cause dangerous swelling; some need urgent surgery.

Alternate Names:

Gartland Supracondylar Fracture; Pediatric Elbow Fracture

Supraglottic Airway Device

A breathing device placed above the vocal cords to help deliver oxygen and ventilation during anesthesia or emergencies. It can be inserted more quickly than a breathing tube but does not protect against aspiration as reliably.

Supranuclear Ophthalmoplegia

Weakness or loss of control of eye movements caused by damage to brain pathways above the eye-movement nerves. It may make it difficult to look in certain directions.

Supranuclear Palsy

Alternate index label; see *Progressive supranuclear palsy*.

Suprapubic

Located above the pubic bone in the lower abdomen. The term may describe pain or examination in this area, or a procedure such as inserting a catheter through the lower abdominal wall directly into the bladder when a tube cannot be passed through the urethra.

Suprapubic Catheter Care

Care of a drainage tube that enters the bladder through the lower abdomen, including cleaning the site, keeping the tube unobstructed, securing it, and monitoring urine. Fever, increasing pain, leakage, bleeding, or no urine flow needs medical advice.

Suprarenal Glands (Adrenal Glands)

Two small glands above the kidneys. Their outer layer makes hormones that regulate salt, blood pressure, stress, and metabolism; their inner layer makes adrenaline and related hormones.

Suprascapular Nerve

A nerve from the brachial plexus supplying shoulder muscles that help lift the arm and rotate it outward.

Supraventricular Tachycardia

A fast heart rhythm beginning above the ventricles, often starting and stopping suddenly, causing palpitations, dizziness, or weakness.

Alternate Names:

SVT

Supraventricular Tachycardia Paroxysmal (Paroxysmal Supraventricular Tachycardia)

Alternate index label for Paroxysmal Supraventricular Tachycardia.

Suramin

An antiparasitic medicine used mainly for selected early forms of African trypanosomiasis. It requires specialist use because it can cause serious kidney, nerve, allergic, and other adverse effects.

Surfactant

A substance that lowers surface tension. In the lungs, it coats the tiny air sacs and helps keep them open when a person breathes out; babies born very early may have too little and need treatment.

Surgeon

A physician trained to perform operations and invasive procedures, and to evaluate and care for patients before and after surgery.

Surgery

Treatment in which a clinician operates on tissues or organs to diagnose, remove, repair, replace, or improve a body structure. Risks and recovery depend on the procedure and the patient's health.

Surgery For Pancreatic Cancer

An operation to remove a pancreatic tumor and sometimes nearby organs or lymph nodes when the cancer can be safely removed. It is major surgery and may cause bleeding, infection, digestive problems, diabetes, or delayed stomach emptying.

Surgery For Pilonidal Cyst

An operation to drain or remove a recurrent or complicated tunnel or cyst near the cleft of the buttocks. Wound care and keeping the area clean are important; infection, slow healing, and recurrence can occur.

Surgical Drain

A tube or device placed during or after surgery to remove blood, pus, bile, urine, or other fluid. The amount and appearance of drainage are monitored; infection, bleeding, blockage, and tissue injury are possible.

Surgical Drill

A powered instrument used to cut, shape, or make holes in bone during surgery. It requires careful control to avoid heat injury, damage to nearby tissues, infection, or unintended bone weakening.

Surgical Excision

Cutting out a lesion, tumor, organ, or other unwanted tissue using an operation. The removed material may be examined under a microscope; bleeding, infection, scarring, damage to nearby structures, and incomplete removal are possible.

Surgical Fixation

Stabilization of a bone, joint, or other structure with devices such as plates, screws, rods, wires, or external frames.

Surgical Hemostasis

Control of bleeding during an operation using pressure, ligation, sutures, clips, electrosurgery, topical agents, vessel sealing, or other techniques. Effective hemostasis requires identification of the bleeding source and correction of coagulopathy when present.

Surgical Instruments

Tools used during operations, including scalpels, scissors, forceps, clamps, retractors, needle holders, and devices controlling bleeding. Each instrument is designed for a specific task and must be cleaned, sterilized, and handled safely.

Surgical Margin

The outer edge of tissue removed during an operation. A laboratory examination checks whether disease reaches that edge: a clear margin suggests no disease was seen there, while an involved margin may mean more treatment is needed.

Surgical Repair

An operation that restores or rebuilds damaged tissue, an organ, or a body function. It may close wounds, reconnect structures, stabilize bones, repair blood vessels, or correct defects present from birth.

Surgical Risk Stratification

Estimation of the likelihood of perioperative complications using patient factors, urgency, procedure risk, functional capacity, and disease-specific assessment. It informs optimization, monitoring level, shared decisions, and postoperative planning but cannot eliminate uncertainty.

Surgical Safety Checklist

A structured checklist used at defined points before anesthesia, before incision, and before leaving the operating room to verify patient identity, procedure, site, consent, equipment, specimens, and team communication.

Surgical Site Infection

Infection involving the incision, organ, or operative space within the surveillance period after surgery. It may be superficial incisional, deep incisional, or organ-space and requires appropriate culture, antimicrobial therapy, drainage, debridement, or reoperation when indicated.

Surgical Stapler

A device that places metal or absorbable staples to close skin, join tissue, or seal a hollow organ during an operation. Incorrect placement can cause bleeding, leakage, narrowing, or injury and must be checked before completion.

Surgical Time-Out

A deliberate team pause immediately before incision to verify patient identity, procedure, site, consent, allergies, antibiotics, imaging, implants, equipment, and anticipated critical events. It is a core surgical-safety intervention.

Surgical Wound Care - Closed

Care of an incision whose edges are closed with sutures, staples, adhesive, or strips, including keeping it clean and dry as instructed and watching for infection or separation.

Surgical Wound Care - Open

Care of a surgical wound left partly or completely open to drain or heal gradually, usually with dressings and scheduled assessment for infection, bleeding, and healthy tissue growth.

Surgical Wound Classification

Categorization of an operative wound as clean, clean-contaminated, contaminated, or dirty/infected according to the degree of microbial exposure and existing infection. The class helps estimate surgical-

site infection risk and guide prophylaxis.

Surgical Wound Infection - Treatment

Management of infection in or around a surgical wound, including assessment of depth and severity, drainage or debridement when needed, wound care, and targeted antimicrobial therapy when indicated.

Surrogacy

Surrogacy is an arrangement in which a person carries a pregnancy for intended parent or parents; medical, legal, ethical, and psychosocial requirements vary by jurisdiction.

Surrogate

A substitute or proxy. In medical research, a surrogate outcome is a measurable change, such as a blood-test result, used to estimate a patient-important outcome such as fewer symptoms or longer survival.

Surrogate Decision-Maker

A person authorized to make healthcare decisions for someone who lacks decision-making capacity, guided by the person's known values and preferences.

Surveillance

The planned collection and review of health information to detect changes in disease, follow a known condition, or identify problems early. It may involve routine reports, active case finding, selected monitoring sites, or regular follow-up of an individual.

Surveillance Imaging

Planned repeat imaging used to monitor disease, treatment response, or possible recurrence. The timing and type of scan depend on the condition, previous treatment, symptoms, risks, and expected usefulness of results.

Survival Rate

The percentage of people alive after a specified time from diagnosis or treatment, commonly measured at five years.

Survivorship

The period of living during and after cancer treatment, together with the care provided during that time. It may include checking for return of cancer, treating late effects, supporting emotional health, improving quality of life, and managing other illnesses.

Survivorship Care Plan

A written summary of cancer treatment, recommended follow-up, possible late effects, screening, medicines, and contacts for ongoing care. It helps the person and healthcare team coordinate care after treatment.

Susac Syndrome

A rare disease in which inflammation and blockage of tiny blood vessels can affect the brain, eyes, and inner ears. It may cause confusion or headache, vision loss, and hearing loss; all features may not appear at once.

Susceptibility

The likelihood of being affected by a disease, exposure, medicine, or microorganism. Susceptibility can reflect genetics, age, immunity, health conditions, previous exposure, dose, or the organism's drug resistance.

Susceptibility Testing

Laboratory testing that shows which antibiotics are likely to stop a person's bacterial infection. The result helps clinicians choose treatment, especially when resistance is possible.

Suspected Cause

A condition, exposure, or factor believed to explain a symptom or disease but not yet proven. Further history, examination, testing, or observation may support or reject the suspected cause.

Suspension

A liquid medicine in which fine drug particles are spread through the liquid rather than dissolved. The container may need shaking so each dose contains the intended amount; settling, inaccurate measuring,

and contamination can cause problems.

Suture

A stitch or material used to close or join tissue.

Suture (Perineal)

A thread or strand of material used to approximate tissues (bring wound edges together) and hold them in place until healing occurs. See Suture.

Alternate Names:

Perineal

Suture Anchor

A small implant that secures a tendon, ligament, or other soft tissue to bone. It may be made from metal, polymer, or bioabsorbable material and can fail through pullout, breakage, migration, or inflammatory reaction.

Sutures - Ridged

Ridged cranial sutures are raised skull seams in an infant and may reflect normal molding or premature suture fusion, which requires assessment for craniosynostosis.

Sutures - Separated

Separated cranial sutures in an infant can reflect normal growth or increased intracranial pressure, hydrocephalus, prematurity, or other illness and require clinical assessment.

SUV

Standardized uptake value, a number estimating how much radioactive tracer is concentrated in tissue during a PET scan. Clinicians compare it with surrounding tissue and clinical findings to assess tumors or inflammation.

SVC Obstruction

Blockage or compression of the superior vena cava, the large vein returning blood from the head, neck, arms, and upper chest to the heart. It may cause facial or arm swelling, prominent neck veins, cough, headache, or breathing difficulty.

SVC Syndrome

Blockage or compression of the superior vena cava, the large vein returning blood from the upper body to the heart. It may cause swelling of the face, neck, or arms, visible neck veins, cough, or breathing difficulty.

SVT

Alternate index label; see *Supraventricular tachycardia*.

Swab

A small absorbent stick used to collect a sample from the skin, throat, nose, wound, or another body site. The sample can be tested for infection or other conditions, and correct collection affects the result.

Swallow Study

An X-ray test that records a person swallowing food or liquid mixed with barium. It shows how the mouth and throat work, whether material enters the airway, and whether changes could make swallowing safer.

Swallowing

The movement of food, liquid, or saliva from the mouth through the throat and esophagus into the stomach. Problems may cause coughing, choking, food sticking, or material entering the airway.

Alternate Names:

Difficulty Swallowing (Swallowing)

Swallowing Assessment

An evaluation of how safely and effectively a person moves food, liquid, or saliva from the mouth to the stomach. It may include observation, X-ray or camera testing, and recommendations about exercises, posture, or food and drink textures.

Swallowing Chalk

Ingestion of chalk, which is usually low in toxicity in small amounts but can cause choking, constipation, or gastrointestinal upset; repeated eating may indicate pica.

Swallowing Difficulty

Dysphagia, or impaired movement of food or liquid from the mouth to the stomach, caused by oropharyngeal, esophageal, neuromuscular, structural, or functional disorders.

Swallowing Problems

Difficulty moving food, liquid, or saliva safely from the mouth to the stomach; dysphagia can cause choking, aspiration, weight loss, or dehydration and may need evaluation.

Swallowing Soap

Ingestion of soap, which commonly causes mouth or stomach irritation, nausea, or diarrhea; concentrated or large exposures can injure tissue or affect breathing.

Swallowing Sunscreen

Ingestion of sunscreen, usually causing mild gastrointestinal upset but potentially causing choking or aspiration depending on amount and product; breathing difficulty or persistent vomiting requires urgent help.

Swallowing Syncope

Fainting triggered by swallowing, usually through an abnormal reflex that slows the heart or lowers blood pressure; recurrent episodes require evaluation for rhythm and structural heart disease.

Swallowing Therapy

Assessment and treatment to make swallowing safer and more effective. A speech-language therapist may teach exercises, positioning, food-texture changes, and strategies to reduce aspiration into the airway.

Swan-Ganz - Right Heart Catheterization

A procedure in which a thin catheter is passed through the right side of the heart into a lung artery to measure heart pressures and blood flow. It is used selectively in critically ill patients because bleeding, infection, rhythm problems, or vessel injury can occur.

Swan-Ganz Catheter

A thin tube passed through the right side of the heart into a lung artery to measure pressures and estimate how much blood the heart pumps. It is used selectively in seriously ill patients because complications are possible.

Sweat

Fluid produced by sweat glands, mainly to cool the body as it evaporates. Sweating can also increase with exercise, fever, stress, hormones, or some medicines.

Sweat Chloride Test

A test that measures salt levels in sweat to help diagnose cystic fibrosis. A high result supports the diagnosis, but it is interpreted with symptoms and may be repeated or followed by genetic testing because other factors can affect results.

Sweat Electrolytes Test

A sweat electrolytes test measures salts, especially chloride, in sweat and is commonly used to help diagnose cystic fibrosis.

Sweat Gland

A skin gland that produces sweat, which contributes mainly to temperature regulation and skin surface function.

Sweat Gland Tumor

A growth arising from cells of a sweat gland. Most are benign skin lumps, but some are cancerous and may grow, ulcerate, bleed, or spread. Examination and biopsy determine the type; complete removal is often used, with wider treatment and follow-up for cancerous tumors.

Sweat Glands

Eccrine and apocrine glands that produce sweat or related secretions.

Sweating

Production of sweat by eccrine and apocrine glands for heat regulation and other responses; excessive,

absent, or asymmetric sweating can indicate medication, autonomic, endocrine, or neurologic disease.

Sweating And Body Odor

Excess perspiration or noticeable odor produced when skin bacteria break down sweat; it may be influenced by hygiene, diet, medicines, hormones, or disease.

Alternate Names:

Body Odor And Sweating

Sweating, Abnormally Excessive

Alternate index label; see *Hyperhidrosis*.

Sweating, Gustatory

Sweating triggered by eating or smelling food, usually over the cheek or temple after parotid-nerve injury or surgery and known as Frey syndrome.

Sweet Syndrome

An inflammatory skin disorder characterized by sudden fever and tender red or violaceous plaques or nodules containing many neutrophils. It may be associated with infection, medicines, inflammatory disease, or cancer.

Sweet'S Syndrome

An inflammatory skin disorder causing sudden fever and painful red or purple raised patches or nodules. It may follow infection, result from a medicine, or occur with inflammatory disease or cancer, especially blood cancers.

Sweetened Beverages

Sweetened beverages contain added sugars and can increase calorie intake, dental caries, obesity, and diabetes risk when consumed frequently.

Sweeteners - Sugar Substitutes

Sugar substitutes provide sweetness with little or no sugar; types differ in energy, digestion, aftertaste, and effects on glucose and gastrointestinal symptoms.

Sweeteners - Sugars

Sugars are simple carbohydrates that provide energy but can raise blood glucose and contribute to dental decay or excess calories when consumed in excess.

Swelling

Abnormal enlargement caused by fluid accumulation, inflammation, bleeding, infection, tumor, or tissue injury; location, onset, pain, and associated symptoms identify the likely cause.

Swimmer'S Ear

An infection or inflammation of the ear canal, often after water remains in the ear. It can cause ear pain, itching, redness, drainage, and pain when the outer ear is touched.

Alternate Names:

Ear Infection, Outer Ear Outer Ear Infection

Swimmer'S Itch

An itchy rash caused by an allergic reaction to microscopic parasites released by infected snails in freshwater or saltwater.

Alternate Names:

Cercarial Dermatitis Dermatitis, Cercarial

Swimmers Ear (Otitis Externa)

Alternate index label for Otitis Externa.

Swimming Pool Cleaner Poisoning

Poisoning from pool chemicals such as chlorine compounds, acids, or alkalis. They may burn tissues or release toxic gases, causing cough, chest pain, breathing difficulty, vomiting, or shock; leave fumes and seek emergency help.

Swimming Pool Granuloma

A slowly developing skin infection caused by a water-dwelling bacterium after exposure to an aquarium, swimming pool, or natural water. It can cause persistent bumps or sores, often spreading along the arm or hand, and needs specific antibiotic treatment.

Swine Flu

An informal term for infection with an influenza A

virus that normally circulates in pigs or has swine-origin genes. In people, the term often refers to the 2009 H1N1 pandemic virus or to a swine-origin variant infection. Symptoms may resemble seasonal flu, including fever, cough, sore throat, headache, and muscle aches; the term does not refer to one single virus.

Swollen Ankles And Swollen Feet

Enlargement of the ankles or feet caused by injury, venous insufficiency, lymphatic disease, medication, pregnancy, or systemic fluid retention from heart, kidney, or liver disease. Sudden one-sided swelling with pain, redness, warmth, or breathlessness may indicate thrombosis or infection and requires urgent assessment.

Alternate Names:

Ankle Swollen (Swollen Ankles And Swollen Feet)

Swollen Lymph Nodes

Swollen lymph nodes are enlarged immune glands, commonly from infection but sometimes from inflammation, medication, or cancer; persistent, hard, or generalized nodes need evaluation.

Alternate Names:

Lymph Nodes, Swollen Lymph Swollen Glands (Swollen Lymph Nodes) Lymph Swollen Nodes (Swollen Lymph Nodes)

Swollen Tongue

Enlargement of the tongue caused by injury, infection, allergy, inflammation, bleeding, or another condition; sudden breathing difficulty is an emergency.

Sycosis Barbae

Long-lasting inflammation or infection of hair follicles in the beard area, usually involving bacteria and ingrown hairs. It can cause painful bumps, pus, crusting, scarring, and hair loss and needs appropriate treatment.

Sydenham Chorea

A delayed neurologic complication of group A streptococcal infection causing involuntary jerky movements, hypotonia, emotional lability, and coordina-

tion problems, usually in children.

Sydenham'S Chorea

A delayed immune complication of group A streptococcal infection, usually in children. It causes involuntary, irregular movements and may cause clumsiness, muscle weakness, emotional changes, or difficulty with speech and daily tasks.

Symblepharon

Scar tissue that joins the inside of the eyelid to the eye's surface, usually after a severe burn, inflammation, or eye disease. It can restrict eye movement, cause dryness or pain, and may need specialist treatment.

Symbolism

The use of an image, object, or action to represent an idea or feeling; in clinical settings, symbolic meaning may be relevant to communication, culture, or psychotherapy.

Sympathectomy

Surgical interruption or destruction of sympathetic nerves to reduce abnormal vasoconstriction, sweating, or pain in selected conditions.

Sympathetic

Relating to the part of the autonomic nervous system that prepares the body for activity or stress by changing heart rate, blood-vessel tone, sweating, breathing, and digestion. In everyday language, it can also mean showing concern for another person.

Sympathetic Ganglion

A small group of nerve cells outside the brain and spinal cord that relays automatic signals to blood vessels, sweat glands, and internal organs. These signals help control heart rate, blood pressure, digestion, and body responses to stress.

Sympathetic Nervous System

The autonomic division that prepares the body for activity or stress by increasing heart rate and altering vascular, airway, and digestive function.

Sympatholytic

A medicine or treatment that reduces adrenaline-like nerve activity. It may lower blood pressure, slow the heart, or reduce excessive sweating, but the effects and risks depend on the specific medicine and require appropriate prescribing.

Sympathomimetic Drugs

Medicines that imitate the body's adrenaline-like nerve activity, often by stimulating alpha or beta receptors. They may open airways, raise blood pressure, or reduce congestion but can cause fast heartbeat, anxiety, or dangerous effects.

Sympathomimetic Toxicidrome

A poisoning pattern caused by excessive adrenergic stimulation, producing agitation, sweating, dilated pupils, rapid heart rate, high blood pressure, elevated temperature, tremor, or seizures.

Symphysis

A joint where two bones are joined by a pad of tough cartilage. The pubic symphysis connects the front pelvic bones and normally allows slight movement, especially during pregnancy and childbirth.

Symphysis-Fundal Height

The distance from the top of the pubic bone to the top of the uterus, measured through the abdomen during pregnancy. From about 24 to 36 weeks, the measurement often roughly matches the number of weeks of pregnancy. A larger or smaller result may lead to an ultrasound to check fetal growth, fluid, or the pregnancy dates.

Alternate Names:

Fundal Height Measurement; SFH

Symphysis Pubis

The fibrocartilaginous joint connecting the left and right pubic bones at the front of the pelvis.

Symptom

A change or problem felt or reported by a patient that may suggest illness, such as pain, nausea, or breathlessness.

Symptomatic

Having symptoms caused by a disease or condition; symptomatic treatment relieves those symptoms without necessarily treating the underlying cause.

Symptomatic Treatment

Care aimed at relieving symptoms such as pain, fever, nausea, itching, or cough without directly removing the underlying cause. It may be used alone or alongside treatment for the disease itself.

Synapse

A connection where one nerve cell communicates with another nerve cell, muscle, or gland. Signals cross the small gap using chemicals or electrical changes to control movement, sensation, thought, and body functions.

Synapse Assembly

The developmental process by which neurons form organized connections with other neurons or target cells, using cell-adhesion molecules and signaling proteins.

Synapsins

A family of neuronal proteins that help organize synaptic vesicles and regulate the release of neurotransmitters.

Synaptic Cleft

The very small gap between a presynaptic neuron and its target cell across which neurotransmitters travel.

Synaptic Membrane

The specialized membrane at a neuronal junction, including the neurotransmitter-releasing presynaptic membrane and receptor-containing postsynaptic membrane.

Synaptic Plasticity

The ability of connections between nerve cells to become stronger, weaker, or structurally different in response to activity. It supports learning, memory, adaptation, and some changes in chronic pain.

Synaptic Transmission

Communication between nerve cells or between a nerve cell and another target across a synapse. Electrical signals trigger release of chemical messengers, which bind receptors and change the receiving cell's activity.

Synaptic Vesicle

A small membrane-bound sac in a nerve ending that stores neurotransmitters and releases them into the synaptic cleft when the neuron is activated.

Synaptonemal Complex

A temporary protein structure that pairs matching chromosomes during egg or sperm formation. It helps chromosomes exchange genetic material accurately before cells divide and is important for normal reproductive development.

Synaptosome

A sealed nerve-terminal structure produced when brain tissue is mechanically disrupted; it is used to study neurotransmitter release and synaptic function.

Synaptotagmin

A calcium-sensing protein on nerve-cell storage sacs that helps trigger rapid release of chemical nerve signals. It is essential for communication between nerve cells and between nerves and muscles.

Synarthrosis

A joint with little or no movement, such as a skull suture or tooth anchored in its socket, in which bones are joined by fibrous tissue or cartilage.

Syncope

A sudden, brief loss of consciousness and postural tone caused by temporary global cerebral hypoperfusion, followed by spontaneous, usually complete recovery. Common mechanisms are reflex syncope, orthostatic hypotension, and cardiac disease; prolonged confusion or seizure-like features may indicate another cause.

Syncope (Fainting)

A brief loss of consciousness and muscle control caused by a temporary reduction in blood flow to the brain, followed by spontaneous recovery. Common causes include reflex fainting, a sudden blood-pressure drop, dehydration, and heart disease; prolonged confusion may suggest another cause.

Alternate Names:

Fainting

Syncope, Coughing

A brief faint caused by coughing, which raises chest pressure, reduces venous return and cardiac output, and transiently lowers cerebral blood flow.

Syndactyly

Congenital joining or webbing of two or more fingers or toes. It may occur alone or with a genetic syndrome and sometimes requires reconstructive surgery.

Syndecan

A group of proteins on the cell surface that help cells attach to their surroundings and receive signals. They contribute to tissue development, healing, and responses to injury.

Syndesmophyte

A thin, bony growth that forms along the edges of the vertebrae, often in ankylosing spondylitis, and may bridge adjacent vertebrae.

Syndrome

A group of symptoms, signs, or test findings that commonly occur together. A syndrome may have several possible causes and does not always name one specific disease.

Syndrome Asperger (Asperger Syndrome)

Alternate index label for Asperger Syndrome.

Syndrome Cauda Equina (Cauda Equina Syndrome)

Alternate index label for Cauda Equina Syndrome.

Syndrome Compartment (Compartment Syndrome)

Alternate index label for Compartment Syndrome.

Syndrome Cyclic Vomiting (Cyclic Vomiting Syndrome)

Alternate index label for Cyclic Vomiting Syndrome.

Syndrome Loeys-Dietz (Loeys-Dietz Syndrome)

Alternate index label for Loeys-Dietz Syndrome.

Syndrome Of Inappropriate ADH Secretion

Excessive antidiuretic hormone activity causing water retention and low blood sodium despite no major swelling or dehydration. It may result from lung disease, medicines, cancer, or brain disorders and can cause confusion or seizures.

Syndrome Of Inappropriate Antidiuretic Hormone

Excessive release or effect of antidiuretic hormone causing impaired free-water excretion, low serum sodium, and inappropriately concentrated urine in the absence of an appropriate physiologic stimulus.

Syndrome Of Inappropriate Antidiuretic Hormone Secretion

Excessive activity of the water-retaining hormone vasopressin causes the body to retain water and lowers the blood sodium level. Causes include medicines, lung disease, cancer, and brain disorders; severe cases can cause confusion or seizures.

Alternate Names:

Syndrome of Inappropriate Antidiuretic Hormone Secretion

Syndrome Pfeiffer (Pfeiffer Syndrome)

Alternate index label for Pfeiffer Syndrome.

Syndrome Restless Legs (Restless Leg Syndrome)

Alternate index label for Restless Leg Syndrome.

Syndrome X

Alternate index label; see *Metabolic syndrome*.

Syndrome, Nervous Colon

An older name for irritable bowel syndrome, a disorder causing recurrent abdominal pain with diarrhea, constipation, or both without a structural explanation. Symptoms may improve with individualized diet, medicines, and stress management.

Syndrome, Post-Polio

New or worsening weakness, fatigue, muscle pain, breathing problems, or swallowing difficulty occurring years after recovery from polio. It reflects late effects on previously affected motor neurons and is managed with pacing, rehabilitation, and support.

Syndrome, TAR

Thrombocytopenia-absent-radius syndrome, an inherited condition causing low platelet counts and absent or severely shortened radius bones in the forearms. It may also cause limb differences, heart defects, kidney problems, or milk intolerance.

Synechia

An abnormal band of scar-like tissue joining surfaces that should remain separate. In the eye, it may attach the iris to the lens or cornea and interfere with fluid drainage or vision.

Synechiae

Abnormal bands of scar-like tissue joining surfaces that should remain separate. They may occur in the eye, uterus, nose, or other sites and can restrict movement, block passages, or impair function.

Synergist

A muscle, drug, or factor that works together with another to produce or enhance an effect.

Synesthesia

Synesthesia is a stable perceptual phenomenon in which stimulation of one sensory pathway automatically produces an experience in another, such as seeing colors with sounds.

Synostosis

Fusion of two bones by bone tissue, present from birth or developing later. It may be harmless, but fusion in the skull, forearm, or other important area can restrict growth or movement.

Synovectomy

An operation to remove part or all of an inflamed lining inside a joint. It may reduce pain and swelling in selected cases of arthritis or repeated joint inflammation and can be done through small cuts or open surgery.

Synovial Biopsy

A synovial biopsy removes a small sample of the joint lining to investigate infection, inflammatory arthritis, crystal disease, or an unusual joint lesion.

Synovial Bursa

A small, fluid-filled sac near a joint that reduces rubbing between moving tissues such as tendons, muscles, skin, and bone. Irritation or inflammation of a bursa causes bursitis, pain, and swelling.

Synovial Chondromatosis

A usually noncancerous condition in which the joint lining forms many small cartilage nodules that may break loose. It can cause pain, swelling, catching, and limited movement, often in the knee, hip, or elbow.

Synovial Cyst

A synovial cyst is a fluid-filled sac arising from or near a joint or tendon sheath, sometimes compressing nearby nerves and causing pain or weakness.

Synovial Fluid

A slippery fluid inside a freely movable joint that reduces friction and helps nourish cartilage. Changes in its amount or contents can occur with injury, infection, bleeding, crystals, or arthritis.

Synovial Fluid Analysis

Testing fluid removed from a swollen or painful joint. The laboratory examines its appearance, cells, crys-

tals, and germs to help distinguish injury, arthritis, gout, bleeding, and joint infection; a very hot painful joint needs urgent assessment.

Synovial Joint

A freely movable joint in which the articulating bones are separated by a fluid-filled joint cavity enclosed by a capsule.

Synovial Membrane

The thin lining inside a freely moving joint. It makes synovial fluid, which reduces rubbing and helps nourish the smooth joint surfaces; inflammation of this lining causes swelling and pain.

Synovial Reaction To Implanted Prostheses

Inflammation or tissue change around an artificial joint caused by wear particles, loosening, corrosion, infection, or an immune reaction. Pain, swelling, or reduced function after replacement needs evaluation to identify the cause.

Synovial Sarcoma

A cancer of soft tissue that often develops near a joint in an arm or leg, especially in adolescents and young adults. Diagnosis requires tissue testing; treatment may include surgery, radiation, or chemotherapy.

Synoviocytes

Synoviocytes are cells lining the joint synovium that produce lubricating fluid and inflammatory mediators and help maintain or damage joint tissue.

Synovitis

Inflammation of the lining inside a joint, causing swelling, warmth, pain, or reduced movement. It may follow injury or occur with arthritis, gout, autoimmune disease, or infection; a hot, very painful joint needs urgent assessment.

Synovium

Tissue lining a joint or tendon sheath that makes lubricating fluid and helps support smooth move-

ment.

Synovography

An imaging test in which contrast is placed inside a joint to outline its capsule, lining, or possible tear. It is used selectively; MRI, ultrasound, or other scans are often preferred for joint problems.

Synthetic Androgen

A synthetic androgen is a manufactured compound that activates androgen receptors and may mimic testosterone; therapeutic and anabolic use can suppress gonadal function and cause acne, mood effects, infertility, liver injury, or cardiovascular harm.

Syphilis

A sexually transmitted infection caused by *Treponema pallidum* that progresses through primary, secondary, latent, and tertiary stages and can affect the nervous system, eyes, heart, or fetus.

Syphilis In Women Overview

Syphilis is a sexually transmitted infection caused by *Treponema pallidum* and progresses through stages that may include painless sores, rash, neurologic or cardiovascular disease, or no symptoms. Penicillin treatment cures infection and is essential in pregnancy to prevent congenital disease.

Alternate Names:

STD (Syphilis In Women Overview)

Syphilis Serology (RPR/VDRL)

Blood tests used to screen for syphilis and monitor response to treatment. A reactive result usually needs confirmation with a different test and interpretation alongside symptoms, examination, and treatment history.

Alternate Names:

Syphilis Serology

Syphilitic Alopecia

Non-scarring hair loss occurring as a manifestation of secondary syphilis, presenting with diffuse thinning or patchy, moth-eaten alopecia of the scalp, eyebrows, or beard. It is thought to result from

direct spirochaetal invasion of hair follicles during the spirochaetaemic phase.

Syphilitic Aseptic Meningitis

Syphilitic aseptic meningitis is inflammation of the meninges caused by *Treponema pallidum*, producing headache, neck stiffness, cranial-nerve symptoms, or other neurologic findings.

Syphilitic Gumma

A destructive lump or area of inflammation caused by long-standing untreated syphilis. It can affect the skin, bones, liver, brain, or other organs and may form a firm mass or ulcer; appropriate antibiotic treatment can prevent further damage.

Syringe

A device with a barrel and plunger used to draw up, measure, inject, or remove fluids.

Syringe Drivers

Small pumps that push medicine from a syringe continuously or at programmed times. They provide controlled delivery when precise dosing is needed, including pain relief, symptom control, or medicines given under the skin.

Syringocystadenoma Papilliferum

A usually harmless sweat-gland skin growth, often appearing as a small bump or plaque on the scalp or face. It may develop within a birthmark and can resemble other lesions, so diagnosis may require examination or biopsy.

Syringoma

A syringoma is a benign tumor of sweat-duct cells, usually appearing as small skin-colored or yellowish papules around the eyelids or elsewhere.

Syringomyelia

A fluid-filled cavity that develops inside the spinal cord. It can slowly damage the cord and cause pain, weakness, loss of pain or temperature sensation, stiffness, or problems with bladder, bowel, or sexual function.

Syrinx

A fluid-filled cavity within the spinal cord, usually related to disturbed movement of the fluid around the brain and spinal cord. It can damage nerve tissue and cause pain, weakness, stiffness, or loss of sensation; a syrinx in the cord is called syringomyelia.

Syrup

A syrup is a viscous liquid preparation, often sweetened, used as a medicine vehicle or oral dosage form; concentration and ingredients determine safe dosing.

Systemic

Affecting the whole body or relating to an entire system rather than a localized site.

Systemic Antifungals

Antifungal medicines taken orally or given intravenously for infections that are extensive, invasive, refractory, or unsuitable for topical treatment. Choice and duration depend on the organism, site, severity, drug interactions, organ function, and local resistance patterns.

Systemic Chemotherapy

Systemic chemotherapy uses medicines that travel through the bloodstream to kill or slow cancer cells throughout the body.

Systemic Circuit

The circulation that carries oxygenated blood from the left ventricle through the body and returns deoxygenated blood to the right atrium.

Systemic Disease

A disease that affects the whole body or several organs rather than one local area. Examples include autoimmune disease, widespread infection, hormonal disorders, and some cancers.

Systemic Effects

Effects involving the whole body rather than one local area. A medicine, infection, toxin, or disease may produce systemic cardiac, neurologic, kidney, liver, blood, or other effects.

Systemic Exertional Intolerance Disease

Alternate index label; see *Myalgic encephalomyelitis/chronic fatigue syndrome (ME/CFS)*.

Systemic Inflammatory Response Syndrome

A widespread inflammatory reaction that may follow infection, injury, burns, pancreatitis, or surgery. It can cause abnormal temperature, heart rate, breathing rate, or white blood-cell count and may progress to organ failure.

Systemic Juvenile Idiopathic Arthritis

A childhood inflammatory disease causing repeated high fevers, a temporary pink rash, and swollen or painful joints. It can also enlarge lymph nodes, liver, or spleen and may affect other organs, requiring specialist monitoring and treatment.

Systemic Lupus

Systemic lupus erythematosus is an autoimmune disease that can affect skin, joints, kidneys, blood, nervous system, lungs, and heart. Symptoms fluctuate, and treatment is tailored to organ involvement with sun protection, monitoring, and immunomodulatory medicines.

Alternate Names:

Arthritis SLE (Systemic Lupus) Lupus (Systemic Lupus) SLE (Systemic Lupus)

Systemic Lupus Erythematosus

A long-term illness in which the immune system mistakenly attacks the body's tissues. It may affect the skin, joints, kidneys, blood, lungs, heart, or brain, causing rashes, joint pain, tiredness, fever, swelling, or organ problems. Symptoms often flare and improve. Treatment lowers inflammation and protects affected organs.

Systemic Mastocytosis

A disorder in which too many mast cells build up in the skin, bone marrow, digestive tract, or other organs. The cells can release chemicals causing flushing, itching, faintness, stomach symptoms, bone problems, or severe allergic reactions.

Systemic Scleroderma

An autoimmune disease that causes tight, thickened skin and may scar blood vessels and internal organs. The esophagus, lungs, kidneys, heart, fingers, and other areas can be affected, so care depends on the organs involved.

Systemic Sclerosis

An autoimmune disease in which the body makes too much scar-like tissue. The skin may become tight and hard, and blood vessels, the esophagus, lungs, kidneys, or heart may also be affected.

Systemic Therapy

Treatment that travels through the bloodstream or otherwise affects the whole body. Examples include chemotherapy, hormone treatment, targeted treatment, and immunotherapy; it differs from local treatment such as surgery or focused radiation.

Systemic Vascular Resistance

The opposition to blood flow in the body's arteries, controlled mainly by how narrow or wide the small arteries are. It helps determine blood pressure and the work required of the heart.

Supracervical Hysterectomy

Hysterectomy in which the uterine body is removed while the cervix is left in place; it is also called subtotal or partial hysterectomy. The fallopian tubes and ovaries may be managed separately.

Systemic Venous

Systemic venous refers to veins returning deoxygenated blood from the body to the right side of the heart, excluding the pulmonary circulation.

Sustained Virologic Response

No detectable hepatitis C virus in the blood 12 or more weeks after antiviral treatment. This is considered a cure of that infection, but it does not protect against catching hepatitis C again.

Systole

The part of each heartbeat when a heart chamber

contracts and pushes blood forward. Ventricular systole sends blood to the lungs and body, while arterial pressure rises and the heart's valves coordinate flow.

Systolic

Systolic means relating to contraction of the heart, especially the pressure in arteries when the ventricles eject blood.

Systolic Anterior Motion

Movement of the mitral valve toward the path where blood leaves the heart during each heartbeat. It can partly block blood flow and cause the valve to leak, especially in hypertrophic cardiomyopathy. Symptoms may include breathlessness, chest pain, dizziness, or fainting; treatment depends on the cause and severity.

Alternate Names:

SAM; SAM of the Mitral Valve

Systolic Murmurs

Extra heart sounds heard while the heart is contracting. They may result from fast blood flow, a narrowed heart valve, or another structural problem; their significance depends on the sound and the person's symptoms.

Systolic Pressure

The maximum arterial pressure during ventricular contraction, recorded as the upper number of a blood-pressure reading.

Saffron

Saffron is a spice made from the dried stigmas of *Crocus sativus*. It is used in food and studied as a possible supplement, but it is not a substitute for proven medical treatment.

Science Communication

Science communication is the clear sharing of scientific information with patients, professionals, policymakers, or the public.

Sclerotomy

A sclerotomy is a surgical opening made through the sclera, the white outer layer of the eye, often during vitreoretinal surgery.

Seasonal Affective Disorder (SAD)

Seasonal affective disorder is a form of depression that follows a seasonal pattern, often beginning in autumn or winter. Treatment may include psychotherapy, medication, and supervised bright-light therapy.

Secondary Cancer

A secondary cancer is a tumor that has spread from its original site to another part of the body. It is also called a metastasis or metastatic cancer.

Sedative

A sedative is a medicine or substance that reduces alertness and may cause relaxation or sleepiness. It can impair coordination and breathing, especially when combined with alcohol or opioids.

Selective Serotonin Reuptake Inhibitor (SSRI)

A selective serotonin reuptake inhibitor is an antidepressant that increases serotonin signaling in the brain. Examples include fluoxetine, sertraline, and escitalopram.

Self-Diagnosis

Self-diagnosis is identifying a health problem without a professional assessment. It can be inaccurate, so concerning or persistent symptoms should be evaluated by a clinician.

Sentinel Node

A sentinel node is the first lymph node or group of nodes to which cancer cells are most likely to spread from a primary tumor. A sentinel lymph-node biopsy helps assess spread.

Severe Combined Immunodeficiency (SCID)

A group of inherited disorders in which the immune

system cannot make effective defenses against germs. Babies may develop repeated, severe infections, persistent diarrhea, or poor growth; early diagnosis and treatment can be lifesaving.

Sexual Health

Sexual health includes physical, emotional, mental, and social well-being related to sexuality. It includes contraception, fertility, consent, relationships, and prevention of sexually transmitted infections.

Sexually Transmitted Disease (STD)

A sexually transmitted disease is an infection spread mainly through sexual contact. The term sexually transmitted infection is also used because some infections cause no symptoms.

Sheehan's Syndrome

Loss of pituitary hormones caused by damage to the pituitary gland after severe bleeding or dangerously low blood pressure during or after childbirth. It may cause inability to breastfeed, extreme tiredness, low blood pressure, menstrual changes, or other hormone deficiencies.

Shilajit

Shilajit is a mineral-rich, resin-like substance used in some traditional medicines. Product purity and safety vary, and contamination with heavy metals is possible.

Shisha

Shisha is tobacco or another smoking mixture used in a water pipe. The water does not remove the main toxic substances, and smoking shisha can expose users to nicotine, carbon monoxide, and cancer-causing chemicals.

Short-Chain Fatty Acids

Small fatty substances made when bacteria in the large intestine break down dietary fiber. They help nourish the bowel lining and may influence inflammation and metabolism; their effects vary with diet and the person's gut bacteria.

Singing

Singing is producing musical sounds with the voice. It can support communication and social well-being, while excessive or improper voice use may cause vocal strain.

Sirtuins

A family of enzymes that change other proteins and help regulate how cells use energy, respond to stress, and switch genes on or off. Their possible roles in aging and disease are still being studied.

Sjogren's Syndrome

Sjogren's syndrome is an autoimmune disease in which the immune system commonly damages tear- and saliva-producing glands, causing dry eyes and dry mouth. It may also affect other organs.

Skin Cells

Skin cells form the layers of the skin and include keratinocytes, melanocytes, immune cells, and sensory cells. They provide protection, pigmentation, sensation, and repair.

Skin Cyst

A skin cyst is a closed sac under or within the skin, often filled with fluid, keratin, or other material. Many are harmless, but a painful, infected, or changing cyst should be assessed.

Skincare

Skincare means routine care that protects and cleans the skin, such as gentle washing, moisturizing, and sun protection. Products should be chosen for skin type and any known conditions.

Sleep Disorder

A sleep disorder is a condition that disrupts sleep quality, timing, duration, or behavior. Examples include insomnia, sleep apnea, narcolepsy, and restless legs syndrome.

Small Incision Lenticule Extraction Surgery

Small incision lenticule extraction, or SMILE, is

a laser eye procedure that removes a small piece of corneal tissue through a tiny incision to correct some cases of nearsightedness and astigmatism.

Smoking and Pregnancy

Smoking during pregnancy exposes the fetus to nicotine and other harmful chemicals and increases risks such as poor growth, preterm birth, placental problems, and stillbirth. Stopping at any time is beneficial.

Social Media

Social media consists of online platforms where people create, share, and discuss content. Its effects on health vary and may involve social support, sleep disruption, stress, or exposure to misinformation.

Social Media Addiction

Social media addiction is a pattern of difficult-to-control use that causes distress or interferes with sleep, work, school, relationships, or daily activities. It is not a universally defined formal diagnosis.

Solar Elastosis

Solar elastosis is degeneration and thickening of elastic fibers in skin after long-term ultraviolet exposure. It contributes to leathery, wrinkled, yellowish sun-damaged skin.

Solitary Kidney

A solitary kidney means a person has one functioning kidney, because the other kidney is absent, removed, or not working. Many people remain healthy but may need blood-pressure and kidney-function monitoring.

Sonohysterography

Sonohysterography is an ultrasound examination in which sterile fluid is placed in the uterus to outline the uterine cavity and assess problems such as polyps or fibroids.

Soybeans

Soybeans are legumes that provide protein, fiber, and compounds called isoflavones. They are used in

foods such as tofu and soy milk; allergy is possible.

Spirulina

Spirulina is a type of cyanobacterium sold as a dietary supplement. Products may provide nutrients, but contamination and medication interactions are possible, and it is not a reliable substitute for a balanced diet.

Splinter

A splinter is a small piece of wood, glass, metal, or another material embedded in the skin. It should be removed carefully; medical care may be needed if it is deep, infected, or near an eye or joint.

Splinter Hemorrhage

A splinter hemorrhage is a thin line of bleeding under a fingernail or toenail. It may follow injury, but multiple or unexplained lesions can occur with medical conditions and deserve evaluation.

Sports Medicine

Medical care focused on preventing, diagnosing, and treating exercise- and sports-related injuries and conditions. It also supports safe training, rehabilitation, performance, and return to activity.

Squamous Cell Carcinoma in Situ

Squamous cell carcinoma in situ, also called Bowen disease, is an early skin cancer limited to the outer skin layer. It can become invasive if untreated.

Stafne Bone Defect

A Stafne bone defect is a usually harmless, developmental indentation in the lower jaw caused by nearby salivary-gland tissue. It is often found incidentally on imaging.

Stem Cells

Stem cells are cells that can self-renew and develop into specialized cell types. They are important in normal tissue repair and in some established treatments, such as blood-forming stem-cell transplantation.

Still's Disease

An inflammatory illness that can affect children or adults. It commonly causes repeated high fevers, a fleeting rash, joint pain or swelling, and marked inflammation; it can affect other organs and usually requires specialist treatment.

Stomach Pain

Stomach pain is discomfort in the upper abdomen. Causes range from indigestion and infection to ulcers, gallbladder disease, or pancreatitis; severe or persistent pain needs medical assessment.

Streptococcus pneumoniae

Streptococcus pneumoniae is a bacterium that can cause pneumonia, meningitis, ear infection, sinusitis, and bloodstream infection. Vaccination helps prevent serious disease.

Stress Related

Describes symptoms or health problems that are triggered or worsened by physical or emotional stress. Stress can affect sleep, pain, digestion, mood, heart rate, and blood pressure, but symptoms still require assessment for other causes.

Stretch Mark

A stretch mark is a linear scar caused by stretching and changes in the deeper skin, often during pregnancy, growth, or rapid weight change. It is harmless and usually fades over time.

Stunted Growth

Stunted growth is height substantially below expected levels for age, often due to long-term undernutrition, chronic illness, infection, or other factors. Children with poor growth should be evaluated.

Stutter

Stuttering is a speech-fluency disorder involving repetitions, prolongations, or blocks in speech. Speech-language therapy can improve communication and confidence.

Sudden Infant Death Syndrome (SIDS)

Sudden infant death syndrome is the sudden, unexplained death of an infant younger than one year, usually during sleep. Safe-sleep practices reduce risk: place babies on their backs on a firm, flat surface without loose bedding.

Sudden Unexpected Death in Epilepsy

An unexpected death in a person with epilepsy that is not caused by drowning, injury, prolonged seizure, or another known condition. It is uncommon; controlling seizures, taking prescribed treatment, and discussing nighttime safety may reduce risk.

Superfood

Superfood is a marketing term for a food promoted as especially nutritious. No single food provides all needed nutrients, and health claims should be judged against scientific evidence.

Supplements

Dietary supplements contain substances such as vitamins, minerals, herbs, or amino acids. They can have side effects and interactions, so patients should discuss their use with a healthcare professional.

Synaesthesia

Synaesthesia is a neurological trait in which stimulation of one sense or mental process automatically produces an additional sensory experience, such as seeing colors when hearing sounds.

Synthetic Biology

Synthetic biology combines biology and engineering to design or modify biological systems. It has potential medical uses but also requires careful safety and ethical oversight.

T

T Cell

A type of white blood cell that matures in the thymus and helps protect the body from infections and abnormal cells. Some T cells kill infected cells, while others coordinate or limit immune responses.

T Wave

The part of an ECG that shows the heart's lower chambers resetting electrically after each beat. Changes in its height or direction can occur with reduced blood flow, abnormal body salts, heart strain, or other conditions.

T-Cell Count

A laboratory measurement of T lymphocytes in blood, often including CD4 cells, used to assess immune function and monitor conditions such as HIV infection or immunosuppression.

T-Cell Lymphoma

A cancer of T lymphocytes, a type of white blood cell. It includes several different diseases that may affect lymph nodes, skin, blood, or organs and can cause swollen nodes, fever, weight loss, rash, or other symptoms.

T-Cell Lymphomas

Cancers that arise from T cells, a type of white blood cell. Different forms may affect lymph nodes, skin, blood, or internal organs and can cause swollen nodes, fever, weight loss, rash, infections, or other symptoms.

T-Cell Receptor

A protein on a T cell that recognizes a particular

piece of a germ or abnormal cell when another cell displays it. This recognition helps start or direct a targeted immune response.

T-Cells (T-Lymphocytes)

White blood cells that mature in the thymus and direct immune responses against infections and abnormal cells. Different types kill affected cells, coordinate defenses, remember threats, or reduce excessive inflammation.

Alternate Names:

T-Lymphocytes

T-Lymphocyte

A white blood cell that matures in the thymus and directs cell-based immune responses. Different T cells kill infected cells, coordinate immunity, remember previous threats, or reduce excessive immune activity.

T-Wave Alternans

T-wave alternans is a beat-to-beat change in the size or shape of the heart's T wave and may indicate increased risk of dangerous ventricular rhythms.

T3

Triiodothyronine, the more active of the main thyroid hormones. It helps control how quickly the body uses energy and supports normal growth, development, heart activity, and body temperature.

T3 Test

A blood test measuring triiodothyronine, used with thyroid-stimulating hormone and thyroxine to evaluate thyroid function, particularly suspected hyper-

thyroidism.

T3RU Test

An older blood test that indirectly estimated how much thyroid hormone could bind to blood proteins. It was once used with other thyroid tests but has largely been replaced by direct free-thyroxine measurements.

T4

Thyroxine, the main hormone released by the thyroid gland. Much of it is changed into the more active T3 in body tissues. T4 helps control energy use, growth, development, and body temperature.

TAB Vaccine

An older vaccine against typhoid fever and paratyphoid A and B. It has largely been replaced by newer typhoid vaccines and does not protect against every cause of fever or every type of paratyphoid infection.

Tabes Dorsalis

A late nervous-system complication of untreated syphilis that damages sensory nerves and parts of the spinal cord. It can cause severe brief pains, numbness, poor balance, loss of reflexes, and bladder or sexual problems.

Tablet

A solid medicine made to be swallowed, chewed, dissolved in the mouth, or used in another specified way. Some tablets release medicine immediately, while others are coated or designed to release it slowly.

Tablet Splitting

Dividing a tablet to take a smaller dose; only tablets designed for splitting should be divided, because extended-release, enteric-coated, and some specialized tablets may not work safely when split.

TAC Regimen

A chemotherapy combination of docetaxel, doxorubicin, and cyclophosphamide, used for selected

breast cancers; it can cause infection risk, nausea, hair loss, heart effects, and other toxicities.

Tacalcitol

A vitamin-D-like medicine applied to skin affected by psoriasis or selected scaling disorders. It helps regulate skin-cell growth and inflammation but can irritate skin or raise calcium if overused.

Tache Noire

A dark scab or area of dead tissue at the site of a tick bite. It can occur with some spotted-fever infections and should be assessed with the person's fever, rash, travel, and exposure history.

Tachyarrhythmia

An abnormally fast heart rhythm, which may arise from the atria, ventricles, or the heart's conduction system. Symptoms can include palpitations, dizziness, chest discomfort, shortness of breath, or fainting; fainting or severe symptoms require urgent assessment.

Tachycardia

A heart rate faster than expected for a person's age and situation. It may be a normal response to exercise, stress, fever, or dehydration, or may result from a heart or other medical problem.

Alternate Names:

Rapid Heartbeat

Tachycardia Paroxysmal Atrial (Paroxysmal Supraventricular Tachycardia)

Alternate index label for Paroxysmal Supraventricular Tachycardia.

Tachycardia Paroxysmal Supraventricular (Paroxysmal Supraventricular Tachycardia)

Alternate index label for Paroxysmal Supraventricular Tachycardia.

Tachycardia-Induced Cardiomyopathy

Weakening and dilation of the heart muscle caused

by a persistent or frequently recurring rapid heart rhythm, often improving when the arrhythmia is controlled.

Tachykinin

A family of small signaling proteins, including substance P, that help regulate pain, inflammation, smooth-muscle activity, and communication between nerve cells.

Tachyphrenia

Tachyphrenia is rapid flow of thoughts or accelerated mental activity, often described in association with mania, stimulants, or other psychiatric states.

Tachyphylaxis

A rapid loss of a medicine's effect after repeated doses over a short time. It differs from tolerance, which usually develops more slowly; changing treatment may restore the effect under medical supervision.

Tachypnea

Abnormally rapid breathing. It may occur with exercise or anxiety, but can also signal fever, low oxygen, pneumonia, blood clot in the lung, heart failure, severe infection, pain, or acid buildup.

Tachypnoea

Breathing faster than expected for a person's age and situation. It may result from exercise, fever, pain, anxiety, lung disease, low oxygen, heart failure, severe infection, or acid buildup and must be interpreted with other findings.

Tachysystole (Uterine Hyperstimulation)

More than five uterine contractions in 10 minutes, averaged over 30 minutes, during labor. It can reduce the baby's oxygen supply, especially when the fetal heart rate is abnormal, and may follow medicines used to start or strengthen labor.

Alternate Names:

Uterine Hyperstimulation

TACO

Transfusion-associated circulatory overload is breathing difficulty caused by too much fluid entering the circulation during or soon after a blood transfusion. It can cause lung fluid, high blood pressure, and swelling, especially in people with heart or kidney disease or those receiving rapid or large transfusions.

Tacrolimus

A medicine that suppresses immune activity. It is used to prevent rejection after an organ transplant and, in different preparations, to treat eczema and some other inflammatory skin conditions; infection risk and other side effects require monitoring.

Tactile

Relating to the sense of touch, including feeling pressure, texture, vibration, temperature, or pain. Touch signals travel through nerves to the brain; reduced or abnormal touch sensation may result from nerve, spinal-cord, brain, or skin disease.

Tactile Agnosia

Inability to recognize a familiar object by touch even though basic sensation is intact. It usually results from a problem in areas of the brain that interpret sensory information.

Tactile Fremitus

Vibrations felt on the chest when a person speaks. Changes in these vibrations can help clinicians identify lung problems such as pneumonia, fluid around the lung, a collapsed lung, or reduced air movement.

Tactile Sense

The ability to perceive touch, pressure, vibration, texture, and related mechanical stimuli through receptors in the skin and deeper tissues.

Tadalafil

Tadalafil is a phosphodiesterase-5 inhibitor used for erectile dysfunction, benign prostatic hyperplasia, and pulmonary hypertension; headache, flushing, hypotension, priapism, and dangerous nitrate interactions are important risks.

Taenia

A group of tapeworms that includes *Taenia solium*, the pork tapeworm, and *Taenia saginata*, the beef tapeworm. Adult worms can live in the intestine; *T. solium* eggs can also cause cysts in body tissues.

Taenia Saginata

Taenia saginata is the beef tapeworm acquired from undercooked infected beef; intestinal infection may cause abdominal symptoms or passage of motile segments but does not usually cause human cysticercosis.

Taenia Solium

A pork tapeworm that infects people who eat undercooked pork or swallow its eggs. Adult worms live in the intestine, while eggs can cause cysticercosis, including dangerous infection of the brain.

Taeniasis

Intestinal infection caused by adult *Taenia* tapeworms, usually acquired by eating undercooked beef or pork containing larval cysts. It may cause abdominal symptoms or passage of worm segments; swallowing *Taenia solium* eggs causes cysticercosis in tissues, which is a different infection.

Taeniasis (Tapeworm Infection)

Intestinal infection caused by adult *Taenia* tapeworms, usually acquired by eating undercooked meat containing larval cysts. *Taenia solium* and *Taenia saginata* are important species; *Taenia solium* eggs can also cause cysticercosis in tissues.

Alternate Names:

Tapeworm Infection

Tailbone Trauma

Injury to the coccyx, the small bone at the bottom of the spine, usually after a fall or prolonged pressure. It causes pain when sitting, standing, or passing stool. Most injuries are bruises and improve with time, cushions, and pain relief; persistent or severe pain needs medical assessment.

Takayasu Arteritis

A rare disease in which the body's immune system inflames the aorta and its major branches. It can narrow or weaken these arteries, causing weak pulses, unequal blood pressure, limb pain, fever, or fatigue.

Takayasu Disease

A large-vessel vasculitis that primarily affects the aorta and its major branches. It may cause limb claudication, weak or unequal pulses, blood-pressure differences, bruits, fever, fatigue, or arterial narrowing and aneurysms. Imaging and inflammatory assessment guide immunosuppressive and vascular treatment.

Takayasu'S Arteritis

Inflammation of the aorta and its major branches that can narrow or weaken the arteries. It may cause weak pulses, unequal blood pressure, arm or leg pain with use, fever, fatigue, or high blood pressure.

Takotsubo Cardiomyopathy

A temporary weakening of the heart muscle, often after intense emotional or physical stress. It can resemble a heart attack with chest pain and ECG changes, but the heart arteries are usually not blocked; most people recover with appropriate care.

Talactoferrin Alfa

Talactoferrin alfa is a recombinant lactoferrin-related immunomodulatory protein studied as a treatment or adjunct in cancer and infectious disease.

Talaporfin Sodium

Talaporfin sodium is a photosensitizer used or studied in photodynamic therapy, where light activation produces local cytotoxic effects.

Talc

A soft mineral; inhalation of talc dust can cause talcosis, and contaminated injected talc can injure vessels and lungs.

Talcosis

Lung damage caused by breathing talc dust or, rarely, injecting talc-containing crushed medicines. It can cause scarring, cough, and shortness of breath; severity depends on the amount and type of exposure.

Talcum Powder Poisoning

Harmful effects from swallowing or inhaling talcum powder. Swallowing usually causes mild stomach upset, but inhaling it can injure the lungs and make breathing difficult.

Talipes

A deformity of the foot and ankle present at birth or acquired later. It may affect position, flexibility, walking, and shoe fit, and treatment depends on severity, cause, age, and function.

Talipes Calcaneovalgus

A foot deformity in which the heel is turned outward and the ankle is dorsiflexed so the foot points upward; flexible newborn cases often improve, while rigid cases need evaluation.

Talipes Equinovarus

Clubfoot, a birth condition in which the foot turns inward and downward and is difficult to move into a normal position. Early treatment usually uses gentle stretching, repeated casts, and a brace to support walking development.

Tall Stature

Tall stature means height substantially above the expected range for age and sex and may be familial, endocrine, genetic, or associated with another condition.

Talus

The ankle bone between the shinbones and the heel and foot bones. It transfers body weight through the ankle and has a limited blood supply, so some fractures can damage the bone and cause delayed healing or bone death.

Tamoxifen (Nolvadex)

A medicine that blocks or changes oestrogen effects in breast tissue. It treats and helps prevent some breast cancers, but can increase the risk of blood clots and, rarely, cancer of the uterine lining.

Tamoxifen Citrate

The citrate salt of tamoxifen, a selective estrogen-receptor modulator used to treat or prevent some breast cancers; blood clots and endometrial cancer are important uncommon risks.

Tampon

A material inserted into the vagina to absorb menstrual blood; prolonged use can rarely lead to toxic shock syndrome.

Tamponade

Pressure on an organ caused by accumulated fluid, blood, or gas. Cardiac tamponade occurs when fluid or blood around the heart prevents it from filling and pumping properly.

Tamsulosin Hydrochloride

The hydrochloride salt of tamsulosin, an alpha-1 blocker that relaxes prostate and bladder-neck muscle to improve urinary symptoms from benign prostatic enlargement.

Tangier Disease

A rare inherited disorder causing extremely low HDL cholesterol and buildup of cholesterol in tissues. It may cause enlarged yellow-orange tonsils, enlarged liver or spleen, nerve symptoms, or clouding of the cornea; cardiovascular risk varies and specialist testing is needed.

Tanner Staging

A five-stage scale describing physical changes during puberty, including breast or genital development and pubic hair. It helps clinicians assess whether development is absent, typical, early, delayed, or progressing unevenly.

Tantalum

A corrosion-resistant metal used in some surgical implants and medical devices; exposure risk depends on the form, dose, and route.

Tap, Joint (Aspiration)

A needle procedure that removes fluid from a joint for testing or symptom relief, helping assess infection, bleeding, crystals, or inflammation.

Tapentadol

A prescription pain medicine with opioid-like and nerve-signal effects, used for selected moderate or severe pain. It can cause sleepiness, constipation, dependence, seizures, and dangerously slow breathing, especially with alcohol or other sedatives.

Tapeworm

A parasitic flatworm with a segmented body that may live in the intestine or form larval cysts in tissues. People acquire different species by eating infected meat or fish or by ingesting eggs from contaminated sources. Symptoms and complications depend on the species and site.

Tapeworm Infection

Infection caused by parasitic tapeworms. *Taenia* species may live as adult worms in the intestine, while some tapeworm larvae can form cysts in tissues.

Tapeworm Infection - Beef Or Pork

Intestinal infection with *Taenia saginata* or *Taenia solium* acquired from undercooked beef or pork; *T. solium* eggs can also cause cysticercosis in tissues.

Tapeworm Infection - Hymenolepis

Intestinal infection with *Hymenolepis nana* or *H. diminuta*, acquired by ingesting eggs or infected arthropods and causing variable gastrointestinal symptoms.

Tapotement

A massage technique using rhythmic tapping, patting, or percussion. It should be avoided over in-

jured areas or in people at risk of bleeding unless a trained clinician recommends it.

Tapping

Repeated light striking or percussion used during an examination, treatment, or test. It may help assess reflexes, pain, body sounds, or fluid and can also be used in chest physiotherapy or other treatments.

TAPSE

Alternate name; see *Tricuspid Annular Plane Systolic Excursion*.

TAPVR

Alternate index label; see *Total anomalous pulmonary venous return*.

Tar Remover Poisoning

Poisoning from swallowing, inhaling, or skin contact with tar-removing chemicals. Effects vary by product and may include irritation, dizziness, vomiting, or breathing problems; contact poison-control services promptly.

Tarantula Spider Bite

A bite from a tarantula that usually causes local pain, redness, and swelling. Some species also release irritating hairs that can affect the skin or eyes.

Tardive Dyskinesia

Repeated, involuntary movements that may develop after long-term use of some antipsychotic medicines. They often affect the mouth, tongue, face, arms, or legs and may continue after the medicine is reduced or stopped.

Target Cell

A cell that responds to a particular hormone, medicine, toxin, antigen, or other chemical signal because it has the needed receptor or other binding site.

Target Organ

An organ especially affected by a disease, hormone, toxin, medicine, or other exposure. Effects may

occur because the organ has specific receptors, receives the substance, or is especially vulnerable to damage.

Target Tissue

Tissue that responds to a hormone, medicine, toxin, or other signal because its cells have the appropriate receptor or molecular target. The response may change growth, activity, metabolism, or survival.

Target-Controlled Infusion

A computer-controlled pump that adjusts the rate of an intravenous medicine to reach and maintain a planned concentration in the blood or at its site of action. It is used mainly during anesthesia and requires close monitoring.

Targeted Radiation Therapy

Radiation directed precisely at a tumor or other abnormal tissue to damage its DNA while limiting exposure to nearby healthy tissue. It may be delivered from outside the body or through an implanted source.

Targeted Temperature Management

Careful control of body temperature after cardiac arrest or another critical illness, usually in an unconscious patient. It aims to limit further brain injury and requires continuous monitoring while the person is cooled or kept from developing fever.

Targeted Therapies For Cancer

Cancer medicines designed to act on specific features of cancer cells or their surroundings. They may be more selective than traditional chemotherapy, but can still cause important side effects.

Targeted Therapy

Treatment that acts on a specific change or feature helping cancer cells grow, survive, or spread. Testing the tumor may identify a target and predict benefit. These treatments can be more selective than traditional chemotherapy but may still cause serious side effects and resistance.

Tarlov Cyst

A fluid-filled sac around a nerve near the lower spine. Many cause no symptoms and are found by chance, but a larger cyst can cause lower-back or buttock pain, numbness, weakness, or bladder, bowel, or sexual problems.

Tars

A thick black substance from organic material; tobacco tar contains chemicals that can damage lungs and cause cancer.

Tarsal

Relating to the tarsus, the group of bones forming the ankle and hindfoot. Tarsal bones help support body weight and allow foot movement.

Tarsal Bones

The seven bones of the hindfoot and midfoot that connect the ankle to the metatarsals and form the arches and load-bearing framework of the foot.

Alternate Names:

Tarsals

Tarsal Coalition

An abnormal connection between two foot bones, usually present from birth. It can make the foot stiff or flat and cause pain, repeated ankle sprains, or difficulty walking, often becoming noticeable during adolescence.

Tarsal Joints

The articulations among the tarsal bones and between the tarsals and metatarsals, providing stability and controlled movement for walking and adapting the foot to surfaces.

Tarsal Tunnel Syndrome

Pressure on the tibial nerve as it passes through a narrow space near the inner ankle. It can cause burning pain, tingling, or numbness in the sole and may result from injury, swelling, diabetes, or a mass. Treatment depends on the cause.

Tarsorrhaphy

A procedure that partially or completely closes the eyelids to protect the cornea or reduce exposure in conditions such as severe dry eye or facial nerve palsy.

Tarsus

The group of seven bones forming the ankle and the back and middle parts of the foot. These bones connect the lower-leg bones to the metatarsals and help support body weight, absorb forces, and adapt the foot during walking.

Tartar

A hard deposit of mineralized dental plaque, also called calculus.

Tarui Disease

A rare inherited muscle-energy disorder caused by deficiency of an enzyme needed to break down sugar for energy. Exercise can trigger early fatigue, cramps, muscle breakdown, and dark urine; some people also have chronic anemia or high uric acid.

Alternate Names:

Glycogen Storage Disease Type VII (GSD VII); Muscle Phosphofructokinase Deficiency

Tassinari Syndrome

An older term for a childhood epilepsy disorder with frequent abnormal brain activity during sleep, seizures, and possible effects on learning or development. Modern clinicians usually use a more specific diagnosis based on the child's seizures and sleep recording.

Taste

The sensation produced by the interaction of chemical substances with taste receptor cells (TRCs) on the tongue, palate, pharynx, epiglottis, and upper esophagus. Taste is one of the five primary senses (gustation).

Taste - Impaired

Impaired taste is reduced, distorted, or absent ability to taste and may result from infection, medicines,

oral disease, nerve injury, or changes in smell.

Taste Bud

A taste bud is a cluster of specialized sensory cells in papillae of the tongue and some oral tissues that detects sweet, sour, salty, bitter, and umami stimuli and transmits signals through cranial nerves.

Taste Disorder

Abnormal reduction, loss, distortion, or unpleasant alteration of taste, caused by infection, medications, oral disease, nerve injury, neurologic disease, or other factors.

Taurodontism

A tooth-development difference with an enlarged pulp chamber and shortened roots, usually affecting molars. It may occur alone or with genetic conditions and can complicate dental treatment or root-canal procedures.

Taussig-Bing Anomaly

A rare birth defect in which both major arteries leave the right lower heart chamber and a hole lies between the lower chambers below the pulmonary artery. It can cause severe low oxygen and heart failure in infancy and usually requires early specialist surgery.

Alternate Names:

Taussig-Bing Syndrome; DORV with Subpulmonic VSD

TAVR

Alternate name; see *Transcatheter Aortic Valve Replacement*.

Taxanes

Chemotherapy medicines, including paclitaxel and docetaxel, that disrupt cell division by stabilizing tiny internal structures. They treat several cancers but may cause low blood counts, nerve symptoms, hair loss, allergic reactions, or fluid retention.

Tay-Sachs Disease

A rare inherited disorder in which a fatty substance

builds up in nerve cells because of an enzyme deficiency. The infant form causes loss of skills, weakness, an exaggerated startle, and seizures; later forms progress more slowly. Supportive care and genetic counseling are important.

Tazarotene

A topical retinoid used for acne, plaque psoriasis, and some sun-damaged skin. It can irritate skin and increases sun sensitivity; pregnancy precautions are important.

TB

Alternate index label; see *Tuberculosis*.

TB Test

A tuberculosis test looks for infection with *Mycobacterium tuberculosis* using a skin test, blood test, or examination of respiratory specimens.

TBG Blood Test

A blood test measuring thyroxine-binding globulin, the principal thyroid-hormone transport protein; it helps interpret abnormal total thyroid-hormone levels when binding-protein changes are suspected.

TBI

Alternate index label; see *Traumatic brain injury*.

TCA Cycle

A series of chemical reactions inside cells that breaks down products of carbohydrates, fats, and proteins. It produces carbon dioxide and energy-carrying molecules used to make the cell's energy supply.

TCAs (Tricyclic Antidepressants)

Antidepressants that block reuptake of serotonin and norepinephrine, with additional anticholinergic, antihistaminic, and alpha-adrenergic blocking effects. Examples include amitriptyline, nortriptyline, imipramine, and desipramine. They are effective for depression, neuropathic pain, and migraine prophylaxis.

Alternate Names:

Tricyclic Antidepressants

Td

Td is a vaccine protecting against tetanus and diphtheria, generally used as a booster in adolescents and adults according to local schedules.

Td Immunization

Vaccination against tetanus and reduced-dose diphtheria, used for routine boosters, catch-up immunization, and wound-related protection according to age and vaccination history.

Tdap Vaccination In Pregnancy

Administration of tetanus, diphtheria, and acellular pertussis (Tdap) vaccine during each pregnancy, optimally at 27-36 weeks. The goal: boost maternal antibodies to protect the newborn from pertussis (whooping cough) before the infant can be vaccinated at 2 months.

Tear

A split or rupture in tissue, such as a muscle, tendon, ligament, meniscus, skin, or organ, caused by trauma, overuse, degeneration, or pressure.

Tearing

Excessive production or inadequate drainage of tears, commonly caused by irritation, allergy, dry-eye reflex tearing, infection, eyelid malposition, or lacrimal-duct obstruction.

Tears

Fluid made mainly by the lacrimal glands that lubricates, nourishes, cleans, and protects the eye's surface. Tears contain water, salts, oils, mucus, and immune substances that help maintain clear, comfortable vision.

Tears, Decreased Production

Alternate index label; see *Dry eyes*.

Technetium-99

A radioactive form of technetium that changes slowly by radioactive decay and is related to technetium-99m, the more widely used imaging isotope. Technetium isotopes are used in nuclear

medicine and research.

Technetium-99M

A short-lived radioactive form of technetium used in many nuclear-medicine scans. It is attached to different substances so doctors can examine bones, the heart, kidneys, brain, or other organs; the radiation is detected by a special camera.

Technique

The method, equipment, and sequence of steps used for a medical examination, procedure, or imaging study. Correct technique improves safety, accuracy, and consistency of results.

TEE

TEE, or transesophageal echocardiography, uses an ultrasound probe in the esophagus to obtain detailed images of heart valves, chambers, clots, and nearby vessels.

Teen Depression

Depression in an adolescent, causing persistent sadness, irritability, loss of interest, low energy, sleep or appetite changes, hopelessness, or thoughts of death. Symptoms last long enough to impair school, relationships, or daily life and need assessment.

Alternate Names:

Depression, Teen

Teenage Pregnancy

Pregnancy in a person aged 19 years or younger. Compared with adult pregnancy, it may carry higher risks of anemia, high blood pressure, preterm birth, and low birth weight, although outcomes improve with timely prenatal care and support.

Teenagers And Drugs

Drug use during adolescence can affect brain development, school and relationships, safety, and mental health; early, nonjudgmental screening and support can reduce harm.

Teenagers And Sleep

Teenagers commonly need about eight to ten hours

of sleep, but schedules, screens, caffeine, mood, school demands, and sleep disorders can reduce sleep quality.

TEER

Alternate name; see *Transcatheter Edge-to-Edge Repair*.

Teeth

Hard, mineralized structures in the mouth used for cutting, tearing, and grinding food. They are held in the jaw by surrounding bone and gums and can be affected by decay, infection, injury, or wear.

Teeth Grinding

Alternate index label; see *Teeth grinding (bruxism)*.

Teeth Grinding (Bruxism)

Alternate index label for Bruxism.

Teeth, Disorders Of

Conditions affecting teeth, including decay, developmental differences, infection, injury, poor alignment, wear, and tumors. Problems may cause pain, sensitivity, swelling, difficulty chewing, altered appearance, or tooth loss.

Teeth-Grinding

Alternate index label; see *Teeth grinding (bruxism)*. Bruxism, repetitive clenching or grinding of teeth, often during sleep and capable of causing tooth wear and jaw pain.

Teething

Teething is eruption of an infant's primary teeth through the gums and may cause gum discomfort, drooling, and chewing; high fever or severe illness suggests another cause.

Teichopsia

A visual disturbance involving shimmering zigzags, flashing patterns, or fortress-like shapes. It commonly occurs as a migraine aura but can have other causes, especially when new, persistent, or associated with vision loss.

Teicoplanin

A glycopeptide antibiotic used for selected serious infections caused by susceptible Gram-positive bacteria, including some resistant staphylococci. Kidney function and blood levels may need monitoring.

Telangiectasia

A visible, permanently dilated small blood vessel near the skin or mucosal surface, occurring alone or with conditions such as rosacea, liver disease, or inherited vascular syndromes.

Telangiectasis

Widening of small blood vessels near the skin or a moist body lining, producing visible red or purple lines or patches. Causes include sun exposure, rosacea, hormones, liver disease, and inherited conditions.

Tele Radiology (Teleradiology)

The remote review of medical images, such as X-rays, CT scans, or MRI scans, by a qualified radiologist who is not at the imaging site. It can provide urgent or specialist interpretation when local expertise is unavailable and must protect patient information.

Tele-Rehabilitation

Rehabilitation provided remotely through video visits, phone calls, apps, or monitoring devices. It may include assessment, home exercises, education, and progress checks when in-person care is difficult to access.

Telehealth

Delivery of healthcare through secure electronic communication or remote monitoring, including video visits, telephone care, messaging, and transmission of clinical data.

Telemedicine

Delivery of medical care at a distance using information and communication technology. It may include video or telephone consultations, secure messages, remote diagnosis, treatment, and review of clinical information.

Telogen Effluvium

A common, non-scarring form of diffuse hair shedding that occurs when more hairs than usual enter the resting (telogen) phase. Shedding often begins 2–4 months after illness, fever, surgery, childbirth, major stress, rapid weight loss, nutritional deficiency, or certain medicines. It is usually temporary, with regrowth after the trigger is corrected, although recovery may take several months.

Telomere

A protective DNA region at the end of each chromosome. It helps keep genetic material stable during cell division and usually becomes shorter as cells divide and age.

Temazepam

A sedative medicine sometimes used for short-term insomnia. It can cause drowsiness, poor coordination, memory problems, dependence, and dangerously slow breathing, especially when combined with alcohol, opioids, or other sedatives.

Temperature

A measurement of body heat. The result varies with the measurement site, time, activity, age, and illness.

Temperature (Body Temperature)

A measure of the body's heat, controlled by balancing heat production and heat loss. It changes with the measurement site, time, activity, age, and illness; fever and unusually low temperature can signal serious disease.

Alternate Names:

Body Temperature

Temperature Measurement

Measurement of body or environmental temperature using a thermometer or sensor at a specified site, interpreted with method, age, timing, and clinical context.

Temple

The region of the skull at the side of the head

between the forehead and ear.

Temple Syndrome

A genomic-imprinting disorder involving chromosome 14q32 that causes prenatal and postnatal growth restriction, hypotonia, developmental delay, feeding difficulty, short stature, and abnormal pubertal development.

Temporal

Relating either to time or to the temple area on the side of the skull, including the temporal lobe.

Temporal Arteritis

Inflammation of arteries, especially those at the temples, usually in adults over 50. It may cause a new headache, scalp tenderness, jaw pain while chewing, fever, or vision problems and needs urgent treatment to protect sight.

Temporal Artery

An artery running along the side of the scalp, supplying nearby tissues; inflammation can cause temporal arteritis.

Temporal Bones

The two skull bones on the sides and base of the head. They contain the ear structures and passages for important nerves and blood vessels and help protect the brain.

Temporal Lobe

One of the main areas on each side of the brain, near the ears. It helps process sounds, understand language, form memories, and process emotions.

Temporal Lobe Epilepsy

Epilepsy in which seizures begin in the part of the brain near the ears that helps process memory, emotion, and sound. Episodes may cause unusual feelings, déjà vu, staring, loss of awareness, or repetitive movements.

Temporal Lobe Seizure

A seizure that begins in the temporal lobe of the

brain and may cause altered awareness, unusual sensations, or repetitive movements.

Alternate Names:

Seizure, Temporal Lobe

Temporary Loss Of Consciousness

A brief period of unresponsiveness with loss of posture, followed by recovery. Fainting is common, but seizures, abnormal heart rhythms, low blood sugar, and other illnesses can also cause it; unexplained or repeated episodes need assessment.

Temporomandibular Disorders

Alternate index label; see *TMJ disorders*.

Temporomandibular Joint

The jaw joint in front of each ear, where the lower jaw meets the skull. It allows the mouth to open, close, and move side to side; problems can cause pain, clicking, stiffness, or limited movement.

Temporomandibular Joint Disorder

Pain or impaired movement involving the jaw joint or chewing muscles. It may cause jaw pain, clicking, stiffness, headache, or difficulty opening the mouth. Clenching, grinding, injury, arthritis, and muscle tension can contribute; treatment usually begins with simple pain relief and jaw-rest measures.

Temporomandibular Joint Replacement

Surgery that removes a severely damaged jaw joint and replaces it with an artificial joint. It may be considered for ankylosis, advanced joint destruction, or persistent severe symptoms after other treatments have failed.

Temporomandibular Joint Syndrome

Pain or dysfunction involving the jaw joint and chewing muscles, often causing jaw pain, clicking, restricted opening, headache, or tooth-related symptoms. Causes include clenching, trauma, arthritis, and stress-related muscle tension. Persistent locking, severe pain, or inability to eat requires dental or medical evaluation.

TEN

Alternate index label; see *Toxic epidermal necrolysis*.

Tenascin

A group of proteins in the tissue surrounding cells that help organize tissue structure and influence growth, healing, and inflammation. Levels may change in wounds, developing tissues, and some tumors.

Tender

Painful or sensitive when touched or pressed, a finding that may indicate inflammation, infection, trauma, ischemia, or another underlying process.

Tenderness

Pain or discomfort caused by pressing or touching a body part. It may indicate inflammation, injury, infection, or another local or systemic problem.

Tendinitis

Inflammation of a tendon, often from repetitive loading or injury, causing localized tenderness and pain with movement.

Tendinitis Rotator Cuff (Rotator Cuff)

Alternate index label for Rotator Cuff.

Tendinitis, Achilles

Alternate index label; see *Achilles tendinitis*.

Tendinitis, Patellar

Alternate index label; see *Patellar tendinitis*.

Tendinopathy

Pain and abnormal structure or function of a tendon, often related to repeated loading, aging, or injury. It can cause tenderness and weakness; treatment usually combines activity adjustment with rehabilitation.

Tendon

A strong band of tissue that connects a muscle to a bone and transfers the muscle's pull to move a

joint. Tendons have a limited blood supply, so some injuries heal slowly.

Tendon Injury

Damage to a tendon ranging from microscopic overuse injury to partial or complete rupture, causing localized pain, weakness, swelling, or loss of function.

Tendon Repair

Surgery to reconnect a torn tendon to itself or to bone so that movement can be restored. It is followed by protected movement and rehabilitation; re-tearing, stiffness, weakness, infection, and nerve or vessel injury can occur.

Tendon Sheath

A thin lubricated covering around some tendons that reduces friction as the tendon moves; inflammation is called tenosynovitis.

Tendon Transfer

Surgical relocation of a functioning tendon to restore movement or balance when the original muscle-tendon unit is absent, paralyzed, or irreparable. Successful transfer requires an adequate donor, appropriate excursion, and a stable recipient joint.

Tendonitis

A common term for pain and inflammation or degeneration in a tendon, often after repeated use or injury. It can cause localized tenderness, swelling, and pain with movement; treatment depends on the site and cause.

Tenecteplase

A clot-dissolving medicine that helps restore blood flow during selected ischemic strokes and heart attacks. It is given through a vein, usually as one dose, but can cause serious bleeding, including bleeding in the brain.

Tenericutes

A former classification group for bacteria that lack a rigid cell wall, including Mycoplasma. The name

is mainly used in older biological classifications; it is not a diagnosis or a routine clinical test result.

Tenesmus

A distressing sensation of needing to empty the bowel or bladder despite little output, commonly caused by rectal inflammation, infection, tumor, constipation, or urinary irritation.

Teniposide

Teniposide is a podophyllotoxin-derived antineoplastic drug that inhibits topoisomerase II and is used in selected leukemia or lymphoma regimens.

Tennis Elbow

Pain and tendon damage at the outer elbow, usually from repeated gripping or wrist movement rather than tennis alone. Pain and tenderness worsen when lifting, gripping, or extending the wrist.

Alternate Names:

Epicondylitis, Lateral Elbow Tendinopathy
Lateral Epicondylitis Lateral Epicondylolysis

Tennis Elbow (Lateral Epicondylitis)

Alternate index label for Lateral Epicondylitis.

Tennis Elbow Surgery

An operation to remove or repair damaged tendon tissue at the outer elbow when persistent tennis-elbow pain has not improved with nonsurgical care. Recovery requires rehabilitation, and pain, stiffness, nerve injury, or continued symptoms are possible.

Tenodesis

Surgical fixation of a tendon to bone or another tendon to restore function, stabilize a joint, or treat tendon imbalance.

Tenofovir

An antiviral medicine used with other drugs to treat HIV and, in some forms, to treat or prevent hepatitis B. It stops viruses copying their genetic material; kidney and bone effects require appropriate monitoring.

Tenosynovitis

Tenosynovitis is inflammation of the sheath surrounding a tendon, producing pain, swelling, and restricted gliding, commonly in the hand or wrist.

Tenosynovitis, De Quervain'S

Alternate index label; see *De Quervain tenosynovitis*.

Tenotomy

Surgery that cuts or releases a tendon to reduce tightness, correct a deformity, relieve pressure, or change movement. It may be performed through a small opening or a larger incision; weakness, bleeding, infection, nerve injury, or recurrence can occur.

Tenovaginitis

Inflammation of a tendon and its surrounding sheath, also called tenosynovitis.

Tensile Strength

The ability of a tissue or material to resist being pulled apart; it is important in wound healing and the integrity of sutures, tendons, and other connective tissues.

Tension

A pulling force or state of being stretched; in medicine it may describe tissue tension, blood-vessel wall tension, muscle tightness, or psychological strain depending on context.

Tension Headache

A common headache causing mild or moderate pressure or tightness, often on both sides or like a band around the head. It usually lacks vomiting and may be linked with stress, poor sleep, muscle tension, or prolonged screen or neck strain.

Tension Pneumothorax

A life-threatening buildup of air around a lung that presses on the lung and heart, reducing breathing and blood flow. It can cause severe breathlessness, chest pain, low blood pressure, or collapse and needs immediate emergency treatment.

Tension-Type Headache

A usually bilateral, pressing or tightening headache of mild-to-moderate intensity without prominent nausea, often associated with stress, muscle tenderness, or poor sleep.

Tentorium

A strong fold of the brain's protective covering separating the cerebellum from the back parts of the cerebrum. It supports brain structures and contains an opening through which the brainstem passes.

Teprotumumab

A monoclonal antibody targeting the insulin-like growth factor 1 receptor and used to treat thyroid eye disease in selected patients.

Teratocarcinoma

A teratocarcinoma is a malignant germ-cell tumor containing tissues from more than one embryonic layer, often arising in the testis or ovary.

Teratogen

A medicine, chemical, infection, radiation exposure, or other influence that can harm an embryo or fetus and cause birth defects, growth problems, abnormal development, or pregnancy loss. Risk depends on the exposure, amount, timing, and individual factors; exposure should be discussed promptly with a clinician.

Teratogenesis

The development of a birth defect, impaired growth, abnormal function, or pregnancy loss after harmful exposure during pregnancy. Risk depends on the substance or infection, amount, timing, route, and genetic factors; exposure does not automatically mean that harm will occur.

Teratogenic

Capable of causing congenital malformations, growth impairment, functional deficits, or pregnancy loss when an embryo or fetus is exposed during a vulnerable developmental period.

Teratogenic Drugs

Medicines that can harm an embryo or fetus and cause birth defects, poor growth, abnormal development, or pregnancy loss. The risk depends on the medicine, dose, timing, and stage of pregnancy; prescribed treatment should not be stopped without advice.

Teratogenicity

The ability of a medicine, chemical, infection, or other exposure to harm an embryo or fetus. Risk depends on the substance, amount, timing, and individual factors; exposure does not guarantee harm, but should be discussed promptly with a healthcare professional.

Teratoma

A tumor made of several types of tissue, such as skin, muscle, bone, or nerve tissue, because it develops from cells capable of forming different body tissues. It may be noncancerous or cancerous and can occur in the ovary, testicle, or other sites.

Teratozoospermia

Teratozoospermia is a high proportion of abnormally shaped sperm and may contribute to reduced fertility, though semen results must be interpreted as a whole.

Terazosin Hydrochloride

The hydrochloride salt of terazosin, an alpha-1 blocker used for urinary symptoms from benign prostatic enlargement and sometimes for hypertension; dizziness and first-dose fainting can occur.

Terbinafine

An antifungal medicine that damages the outer covering of fungi, stopping their growth or killing them. It is used on the skin or taken by mouth for selected fungal infections; liver problems and taste changes are possible.

Terbufos

Terbufos is a highly toxic organophosphate pesticide that inhibits acetylcholinesterase and can cause severe cholinergic poisoning.

Terbutaline

A beta-2 agonist used as a bronchodilator; it has limited and specialist use as a tocolytic.

Terfenadine

An older antihistamine withdrawn or restricted in many places because interactions and excessive blood levels can cause dangerous heart-rhythm abnormalities.

Teriparatide For Osteoporosis

An injectable medicine related to parathyroid hormone that stimulates new bone formation. It is used for selected people with severe osteoporosis or high fracture risk, usually for a limited period, and is followed by treatment that helps maintain the bone gained.

Terlipressin

A medicine similar to vasopressin that tightens certain blood vessels. It is used in selected hospital treatments for life-threatening bleeding from enlarged esophageal veins or kidney failure related to advanced liver disease; reduced blood flow and breathing problems are important risks.

Term

Describing a pregnancy or birth at 37 or more completed weeks. Birth before 37 weeks is called preterm; birth after the expected period may be called post-term.

Term Birth

Birth at or after 37 completed weeks of pregnancy. Early term is 37 to 38 weeks, full term is 39 to 40 weeks, and late or post-term describes later births; gestational age helps guide newborn care.

Terminal Care

Care focused on comfort, symptom relief, dignity, and support for a person with an advanced illness who is approaching the end of life.

Terminal Delirium

Delirium occurring near the end of life, often

caused by advanced organ failure, medication effects, metabolic disturbance, infection, or reduced cerebral perfusion. Management prioritizes comfort, reversible contributors when consistent with goals, and support for the patient and family.

Terminal Ileitis

Inflammation of the distal ileum, commonly associated with Crohn disease but also caused by infection, ischemia, medication, or other inflammatory conditions and producing pain, diarrhea, or bleeding.

Terminal Illness

An advanced disease that is expected to lead to death, although the timing is uncertain and treatment may sometimes slow it. Care may focus on comfort, symptom relief, personal goals, and support for the patient and family.

Terminal Insomnia

Waking too early and being unable to return to sleep, a pattern that can occur in depression, circadian-rhythm disorders, aging, or other insomnia conditions.

Terms Medical Abbreviations (Common Medical Abbreviations And Terms)

Alternate index label for Common Medical Abbreviations and Terms.

Terry'S Nails

A nail change in which most of the nail plate appears white with a narrow pink or brown distal band; it may be associated with liver disease, heart failure, diabetes, or ageing.

Tertian Fever

A fever that returns about every 48 hours. This pattern can occur with some malaria infections, especially those caused by *Plasmodium vivax* or *P. falciparum*; the pattern alone does not confirm malaria.

Tertiary Hyperparathyroidism

Persistent overproduction of parathyroid hormone

after long-standing kidney disease or another cause of parathyroid overactivity. It can raise the blood calcium level and damage bones or kidneys.

Tertiary Prevention

Care that reduces complications, disability, or suffering from an established disease. Examples include rehabilitation, long-term disease management, preventing relapses, controlling symptoms, restoring function, and providing palliative care.

Test Meal

A meal with known ingredients and amounts given before measuring a body response, such as stomach emptying, acid production, blood sugar, or hormone release. The person follows specific preparation and timing instructions.

Test Strips

Narrow strips containing chemicals that react with a sample to measure or detect a substance. Common examples test urine for blood or infection, or test blood for glucose or ketones. Results can be affected by storage, timing, contamination, and incorrect use.

Testes

The paired male reproductive organs in the scrotum. They produce sperm and testosterone and may be affected by infection, injury, torsion, tumors, or disorders of development.

Testicle

One of the male reproductive glands in the scrotum. It produces sperm and testosterone; sudden severe testicular pain is an emergency because it may indicate torsion.

Testicle Lump

A localized mass or enlargement in or around a testis caused by cyst, infection, inflammation, torsion, trauma, or tumor; a new intratesticular mass requires prompt evaluation.

Testicle Pain

Pain in one or both testes or the surrounding structures, with urgent causes including torsion, infection, trauma, and incarcerated hernia.

Testicle, Diseases Of

Conditions affecting the testis, including twisting, infection, injury, tumors, blood-vessel problems, and abnormal development. Symptoms may include pain, swelling, a lump, fertility problems, or changes in hormone production.

Testicle, Retractable

Alternate index label; see *Retractable testicle*.

Testicle, Undescended

Alternate index label; see *Undescended testicle*.

Testicles

The paired male reproductive glands in the scrotum that produce sperm and testosterone; pain, enlargement, a new lump, or sudden change requires examination.

Testicular Atrophy

Shrinkage of a testicle with loss of some functioning tissue. Causes include an undescended testicle, infection, twisting, injury, varicocele, hormone problems, aging, or other damage; it may reduce sperm or testosterone production.

Testicular Biopsy

Removal of a small sample of testicular tissue for microscopic examination, used selectively to evaluate infertility, atypical lesions, or suspected testicular disease.

Testicular Cancer

Cancer arising in a testicle, most often in younger adult men. It commonly appears as a painless lump, enlargement, heaviness, or ache. Ultrasound and blood tests help assess a suspected tumor; treatment is highly effective for many people, especially when found early.

Alternate Names:

Testicular Disorders

Conditions affecting the testes or surrounding structures, including torsion, infection, inflammation, trauma, tumors, and hormonal disorders. Symptoms may include pain, swelling, a mass, infertility, or changes in sexual development and require appropriate evaluation.

Alternate Names:

Infection Testicle (Testicular Disorders) Pain Scrotum (Testicular Disorders) Torsion Testicle (Testicular Disorders) Tumor Testicle (Testicular Disorders)

Testicular Gonadoblastoma

A rare tumor made from developing reproductive cells and supporting cells in an abnormally developed or undescended testicle. It is often associated with Y-chromosome material and may increase the risk of another germ-cell cancer.

Testicular Hydrocele

A buildup of clear fluid around a testicle, causing painless swelling of the scrotum. It may be present from birth or develop after injury, infection, inflammation, or another condition; examination helps exclude other causes of swelling.

Testicular Mass

A lump or enlargement within or around a testicle caused by tumor, infection, inflammation, cyst, hematoma, or torsion; a solid intratesticular mass requires urgent ultrasound and specialist assessment.

Testicular Microlithiasis

Multiple tiny calcifications within the testicular tissue seen on ultrasound. The finding alone does not establish cancer, and follow-up depends on other risk factors and clinical findings.

Testicular Self-Exam

A testicular self-exam is a gentle check for new lumps, swelling, heaviness, or changes in size or shape; a new abnormality should be medically assessed.

Testicular Torsion

A medical emergency in which the cord supplying a testicle twists and cuts off its blood supply. It usually causes sudden, severe one-sided scrotal pain, swelling, nausea, or vomiting and needs immediate surgery.

Alternate Names:

Torsion, Testicular

Testicular Torsion Emergency

Rotation of the spermatic cord that compromises testicular blood flow, causing sudden unilateral scrotal pain, nausea, a high-riding testis, and an abnormal cremasteric reflex. Immediate surgical exploration and detorsion are required; imaging must not delay treatment when suspicion is high.

Testicular Torsion Repair

Urgent surgery to untwist a spermatic cord and restore testicular blood flow, followed by fixation of the affected and usually opposite testis to prevent recurrence.

Testis

A male reproductive gland in the scrotum that produces sperm and the hormone testosterone.

Testis (Testicle)

One of the two male reproductive glands in the scrotum. It produces sperm and testosterone and is surrounded by protective tissue. Sudden pain, swelling, or a new lump needs prompt medical assessment.

Alternate Names:

Testicle

Testis Disorder

A condition affecting a testicle, including torsion, infection, tumor, trauma, infertility-related damage, hormonal dysfunction, or abnormal development.

Testis Neoplasm

A tumor arising in testicular tissue, most commonly a germ-cell tumor in younger adults; painless enlargement, heaviness, or a solid mass requires

prompt ultrasound and evaluation.

Testosterone

A steroid sex hormone produced mainly by the testes and, in smaller amounts, by the ovaries and adrenal glands. It supports reproductive development, muscle and bone maintenance, red-blood-cell production, libido, and other physiologic functions; levels vary with age, sex, time of day, illness, and medicines.

Testosterone Deficiency

Alternate index label; see *Male hypogonadism*.

Testosterone Low (Low Testosterone (Low T))

Alternate index label for Low Testosterone (Low T).

Testosterone Propionate

A short-acting injectable testosterone ester used in selected hormone-replacement or androgen-deficiency settings; risks include erythrocytosis, infertility, acne, mood effects, and prostate-related monitoring needs.

Tests And Visits Before Surgery

Preoperative tests and visits review health conditions, medicines, anesthesia risk, needed laboratory or imaging tests, and instructions for the operation.

Tests For H Pylori

Tests for *Helicobacter pylori* infection, including urea breath testing, stool antigen testing, biopsy-based testing, or selected blood tests; choice depends on treatment and clinical context.

Tet Spell

A sudden episode of severe bluish coloring and low oxygen in a child with unrepaired tetralogy of Fallot. Crying, feeding, or exertion may trigger it; the child may breathe rapidly, become limp, or faint. It is an emergency requiring calming, positioning, oxygen, and urgent specialist care.

Alternate Names:

Hypercyanotic Spell; Paroxysmal Dyspneic Attack; Blue Spell

Tetanus

A serious infection caused by bacteria entering a wound and producing a toxin that causes severe muscle stiffness and painful spasms. It can cause lockjaw, breathing problems, and death without urgent treatment.

Alternate Names:

Lockjaw

Tetanus Toxin

A neurotoxin made by the bacterium *Clostridium tetani*. It blocks inhibitory signals in the nervous system, causing painful muscle stiffness and spasms, including lockjaw; vaccination and urgent wound care help prevent tetanus.

Tetany

Muscle cramps, spasms, or twitching caused by increased nerve and muscle excitability, most often from low calcium or magnesium. Tingling around the mouth or in the hands may occur; severe spasms or breathing difficulty require urgent care.

Tethered Cord Syndrome

A condition in which the spinal cord is abnormally attached and stretched inside the spinal canal. It may cause back or leg pain, weakness, numbness, foot changes, or bladder and bowel problems, sometimes worsening during growth.

Tetrabenazine

A medicine that reduces storage and release of certain brain chemicals involved in movement. It treats selected involuntary movement disorders but may cause sleepiness, depression, restlessness, stiffness, swallowing problems, or abnormal movements.

Tetracaine

Tetracaine is a potent ester local anaesthetic used topically or for spinal anaesthesia; excessive dose can cause seizures, cardiovascular toxicity, and methemoglobinaemia.

Tetrachloroethylene

Tetrachloroethylene, or perchloroethylene, is an industrial solvent used in dry cleaning; substantial exposure can affect the nervous system, liver, and kidneys.

Tetrachlorvinphos

An organophosphate insecticide that can block acetylcholinesterase. Significant exposure may cause sweating, vomiting, pinpoint pupils, muscle twitching, slow breathing, seizures, or coma and requires urgent treatment.

Tetracycline

An antibiotic that stops bacteria making proteins needed for growth. It treats selected infections but can cause stomach upset, sensitivity to sunlight, and permanent tooth discolouration if used during tooth development.

Tetracycline Stain

Gray, yellow, or brown tooth discolouration caused by tetracycline-family antibiotics taken while teeth are developing. The colour is within the tooth and may require professional whitening, veneers, or crowns for cosmetic improvement.

Tetracyclines

A group of antibiotics that stop bacteria making proteins needed for growth. Examples include tetracycline, doxycycline, and minocycline. Side effects can include stomach upset and increased sensitivity to sunlight.

Tetrahydrozoline Poisoning

Poisoning from swallowing eye drops or nasal drops containing tetrahydrozoline. It can cause extreme sleepiness, slow heart rate, low blood pressure, and breathing problems, especially in children.

Tetralogy Of Fallot

A heart defect present from birth with four changes: a hole between the lower chambers, narrowed blood flow to the lungs, a misplaced main artery, and thickening of the right lower chamber. It can reduce oxygen in the blood.

Tetraplegia

Paralysis or severe weakness affecting both arms and both legs, usually because the spinal cord in the neck has been injured or damaged by disease. Trunk movement, sensation, breathing, and bladder or bowel control may also be affected.

Tetraplegia (Quadriplegia)

Paralysis or severe weakness affecting all four limbs and usually the trunk, commonly caused by cervical spinal-cord injury or disease.

Alternate Names:

Quadriplegia

TGA

Alternate index label; see *Transient global amnesia*.

Th1/Th2/Th17/Tfh/Treg Balance

A description of how several types of helper immune cells work together. They help fight infections, support antibody production, promote inflammation, or limit excessive immune activity; disruption may contribute to allergy or autoimmune disease.

Thalamus

A pair of structures deep within the brain that relay most sensory information, such as touch, vision, and hearing, to the outer brain. They also help regulate movement, alertness, and memory.

Thalassaemia

The British spelling of thalassemia, inherited reduced production of alpha- or beta-globin chains causing anemia.

Thalassemia

A group of inherited blood disorders in which the body makes too little of one part of hemoglobin, the oxygen-carrying protein in red blood cells. This causes anemia, ranging from mild to severe, and may require regular treatment.

Alternate Names:

Cooley's Anemia Mediterranean Anemia

Thalassemia Major

A severe inherited blood disorder in which the body makes too little hemoglobin. It causes serious anemia beginning in childhood and may require regular blood transfusions, with monitoring for iron buildup and organ damage.

Thalidomide

A medicine that changes immune activity and is used for selected cancers and inflammatory conditions. It can cause severe birth defects, nerve damage, blood clots, sleepiness, and other harms, requiring strict safety controls.

Thallium

Thallium is a toxic heavy metal that can cause gastrointestinal illness followed by painful peripheral neuropathy, hair loss, skin changes, kidney or liver injury, seizures, and cardiovascular or neurologic toxicity. Suspected exposure requires immediate poison-control or emergency guidance.

Alternate Names:

Poisoning Thallium (Thallium)

Thallium Scan

A nuclear-medicine test using thallium-201 to show blood flow to heart muscle or selected tumors. It is now less common because other tracers are often preferred, but may still have specific uses.

Thallium-201

A radioactive substance sometimes used in heart-blood-flow scans. Heart muscle takes it up in relation to its blood supply, and a special camera shows areas receiving less blood.

Thanatophoric Dysplasia

A severe inherited disorder of bone growth causing extremely short limbs, a narrow chest, a large head, and abnormal skull and spine development. The small chest can prevent adequate breathing after birth and is often life-threatening.

Theca

A connective-tissue sheath, especially the theca sur-

rounding an ovarian follicle.

Theca Lutein Cyst

A usually temporary ovarian cyst caused by strong stimulation from pregnancy-related hormones or fertility treatment. It is often present in both ovaries and may cause abdominal pressure or pain; it commonly shrinks when hormone levels return to normal.

Thecoma

A usually benign ovarian sex-cord stromal tumor composed of theca-like cells, often producing estrogen and presenting with abnormal uterine bleeding or an incidental adnexal mass.

Thelarche

The onset of breast development, usually the first visible sign of female puberty. It commonly begins between ages 8 and 13, with substantial normal variation.

Thenar Eminence

The fleshy mound at the base of the thumb, formed by muscles that move the thumb. Damage to the supplying nerve or muscles can weaken thumb opposition and make grasping difficult.

Theophylline

A medicine that can relax airway muscles and improve breathing in selected lung diseases. Its safe and harmful doses are close together, so blood levels, medicine interactions, heart rhythm, and side effects need monitoring.

Theranostic Pair

Two related medical substances designed to find and treat the same target in the body. One helps show where the target is on an image; the other delivers treatment to cells carrying that target.

Theranostics

A medical approach that uses one targeted substance to find abnormal cells and a related substance to treat them. In some cancers, the treatment sub-

stance carries radiation directly to cells with the target.

Therapeutic Abortion

Intentional termination of a pregnancy because of medical, fetal, or other legally recognized indications, according to applicable law and clinical guidance.

Therapeutic Alliance

The working relationship between a patient and a therapist. It includes trust, agreement about treatment goals, and cooperation on the steps of therapy, and can influence how well treatment works.

Therapeutic Exercise

Planned physical activity used to improve strength, flexibility, balance, movement, endurance, or daily function and to reduce pain or disability. A clinician selects and gradually adjusts exercises according to the person's condition, abilities, symptoms, and goals.

Therapeutic Hypothermia

Deliberate, closely monitored cooling of the body to reduce tissue damage in selected emergencies, such as after some cardiac arrests or in severe overheating-related illness. Cooling is used with treatment of the underlying cause and can cause abnormal heart rhythms, shivering, or electrolyte changes.

Therapeutic Index

A measure of how close a medicine's effective dose is to a dose that causes harm. A narrow index means small dose changes may be risky and require careful monitoring.

Therapeutic Window

The range of medicine exposure that is high enough to work but low enough to avoid unacceptable harm. Medicines with a narrow window require careful dosing and sometimes blood-level monitoring.

Therapeutics

The part of medicine concerned with treating disease

and improving health. It includes medicines, procedures, surgery, rehabilitation, and other treatments used to prevent, control, or cure illness.

Therapy

Treatment intended to prevent, relieve, or cure disease or to improve function and quality of life.

Thermal Injury

Damage to body tissue caused by heat, flame, hot liquid, steam, or extreme cold. Severity depends on depth, size, location, breathing injury, other injuries, and health conditions; serious injuries need urgent assessment.

Thermal Injury (Burns)

Tissue damage caused by heat. Initial care includes stopping the exposure, removing loose constricting material, cooling briefly with clean water, covering the injury, and assessing depth and extent. Larger or deeper burns require specialized evaluation, fluid management, pain control, wound care, and tetanus assessment.

Alternate Names:

Burns

Thermal Therapy

Treatment using heat or cold to influence pain, swelling, muscle tension, or tissue temperature. Effects and safety depend on the condition and method used.

Thermogenesis

The production of heat by the body. It comes mainly from normal metabolism, muscle activity such as shivering, digestion, and specialized fat tissue that releases stored energy as heat.

Thermography

Recording the pattern of heat released from the body surface with a special camera. It may show temperature differences, but these are not specific for one disease and usually require confirmation with standard examination or tests.

Thermoluminescent Dosimeter

A small radiation-monitoring device that records accumulated exposure. When the device is heated, its detector releases light in proportion to the radiation it absorbed, allowing the exposure to be measured.

Thermometer

A device used to measure body temperature. Common types measure temperature in the mouth, ear, armpit, or across the forehead. Readings vary with the site and method, so the measurement site and scale should be recorded.

Thermometer Scales

Numbering systems used to report temperature, such as Celsius, Fahrenheit, and Kelvin. The scale should be identified when a temperature is communicated.

Thermoneutral Zone

The range of surrounding temperatures in which the body can maintain its normal temperature without shivering or sweating. The range varies with clothing, activity, age, health, and humidity.

Thermoplasty

A procedure for selected adults with severe asthma that uses controlled heat delivered through a bronchoscope to reduce extra muscle in the airway walls. It may reduce severe attacks but does not cure asthma and has procedural risks.

Thermoreceptor

A nerve ending that senses warmth or cold in the skin and other tissues. Signals travel through the spinal cord to the brain, helping a person recognize temperature and helping the body control heat through sweating, shivering, and changes in skin blood flow. Damage to these nerves can reduce temperature sensation and increase the risk of burns or cold injury.

Thermoregulation

The body's control of internal temperature by balancing heat production and heat loss. It uses sweating, shivering, changes in skin blood flow, behavior,

and brain signals to keep temperature within a safe range.

Thiabendazole

An antiparasitic medicine used for selected worm infections and, historically, some fungal infections. It can cause nausea, dizziness, liver problems, or nervous-system effects, so safer alternatives are often preferred.

Thiamin

Vitamin B1, a water-soluble vitamin required for carbohydrate metabolism and neural function; severe deficiency can cause beriberi or Wernicke encephalopathy.

Thiamine

Vitamin B1, a water-soluble vitamin required for carbohydrate metabolism and nerve function. Severe deficiency can cause beriberi or Wernicke encephalopathy.

Thiamine (Vitamin B1)

A water-soluble vitamin needed to turn food into energy and to keep nerves and the heart working. Severe deficiency can cause beriberi or Wernicke encephalopathy, a serious brain disorder.

Alternate Names:

Vitamin B1

Thiazide Diuretics

Water tablets that make the kidneys remove more salt and water in urine. They are used mainly for high blood pressure and some fluid-retention disorders and can lower sodium or potassium levels.

Thiazide Overdose

Taking too much of a thiazide diuretic can cause dehydration, low blood pressure, abnormal sodium or potassium levels, confusion, or abnormal heart rhythms.

Thiazides

Water tablets that make the kidneys remove more salt and water in urine. They are used mainly

for high blood pressure and some fluid-retention disorders and can lower sodium or potassium levels.

Thiazolidinedione Drugs

A group of diabetes medicines that make body tissues more sensitive to insulin by activating a protein called PPAR-gamma. Pioglitazone is the main example; possible effects include weight gain, swelling, bone fractures, and worsening heart failure.

Thiazolidinediones

A group of diabetes medicines that make the body more sensitive to insulin, helping lower blood glucose. They can cause weight gain and swelling and may worsen heart failure or increase fracture risk.

Thigh

The part of the lower limb between the hip and knee. It contains the femur, large muscles, major blood vessels, and nerves that help move and support the leg.

ThinPrep Pap Test

A cervical screening test in which cells collected from the cervix are placed in a liquid vial and examined for precancerous changes, cancer, or sometimes HPV-related abnormalities.

Alternate Names:

Thin Prep Pap Screen

Thiopental Sodium

A very short-acting anesthetic given through a vein to start general anesthesia or, in selected critical situations, reduce brain activity and pressure. It can dangerously slow breathing, lower blood pressure, or cause allergic reactions.

Thiopentone Sodium

A very short-acting anesthetic medicine given into a vein to start general anesthesia in selected settings. It can suppress breathing, lower blood pressure, and cause allergic reactions, so close monitoring is required.

Thioridazine

An older antipsychotic medicine used only in selected situations because it can cause severe sleepiness, movement problems, and dangerous changes in heart rhythm, especially at high doses or with interacting medicines.

Thioridazine Overdose

Poisoning from taking too much thioridazine, an antipsychotic medicine. It can cause severe sleepiness, low blood pressure, seizures, and dangerous heart rhythms.

Thiotepa

A chemotherapy medicine that damages DNA and stops cells from multiplying. It is used for selected cancers and sometimes before a stem-cell transplant; side effects may include low blood counts, infection, nausea, mouth sores, and organ injury.

Third Stage Of Labor

The part of childbirth between the baby's birth and delivery of the placenta. The placenta normally separates and is delivered within minutes; heavy bleeding or a placenta that does not deliver requires urgent care.

Third Trimester

The period of pregnancy from 28 weeks until birth. The fetus grows rapidly and continues developing its lungs, brain, and other organs. Prenatal visits monitor blood pressure, growth, movement, and symptoms; tests and screening are scheduled according to local guidance and individual risk.

Third-Degree AV Block

A severe heart-rhythm problem in which electrical signals from the upper heart chambers do not reach the lower chambers. The chambers beat independently, often causing a very slow pulse, dizziness, fainting, or collapse; urgent assessment is needed.

Third-Degree Burn

A full-thickness burn that destroys the epidermis and dermis and may extend into subcutaneous tissue. The skin may appear white, brown, or charred and

sensation may be reduced. Assessment includes burn depth, extent, inhalation injury, and associated trauma; deep or extensive burns require specialist treatment and may need grafting.

Third-Degree Perineal Tear

A severe tear during vaginal birth that extends from the vaginal opening into the muscles controlling the anus. It needs prompt examination and careful repair, followed by bowel-softening treatment and follow-up; pain, infection, difficulty controlling stool, or a fistula can result.

Alternate Names:

Third-Degree Tear; Obstetric Anal Sphincter Tear

Thirst

The conscious desire to drink, regulated mainly by body-fluid concentration and circulating blood volume. Excessive thirst may occur with dehydration, diabetes, medicines, kidney problems, or other conditions and may need evaluation.

Thirst - Absent

Reduced or absent desire to drink despite a potential need for fluids, which can occur with hypothalamic disease, aging, altered consciousness, medications, or severe illness.

Thirst - Excessive

Polydipsia, an abnormally strong or persistent desire to drink, commonly associated with dehydration, diabetes mellitus, diabetes insipidus, medicines, or psychiatric conditions.

Thomsen Disease

An inherited muscle disorder causing stiffness because muscles relax slowly after they contract. Symptoms often begin in childhood, affect the hands, legs, eyelids, or jaw, and improve after repeated movement. Strength and life expectancy are usually preserved, although stiffness can interfere with activity.

Alternate Names:

Autosomal Dominant Myotonia Congenita; Myotonia Congenita (Thomsen Type)

Thoracentesis

Insertion of a needle or catheter into the pleural space to remove fluid for diagnosis or to relieve respiratory symptoms caused by a pleural effusion.

Thoracic

Thoracic means relating to the chest, the thoracic spine, or structures within the thorax such as the heart and lungs.

Thoracic Aortic Aneurysm

A weakened, widened area of the aorta within the chest. It may cause no symptoms but can press on nearby structures or rupture, with risks increased by hypertension, inherited disorders, or a bicuspid valve.

Thoracic Cage

The bony and cartilaginous framework formed by the thoracic vertebrae, ribs, costal cartilages, and sternum. It protects thoracic organs and assists respiratory movements.

Thoracic Cavity

The space inside the chest, enclosed by the ribs and breathing muscles. It contains the lungs, heart, esophagus, trachea, major blood vessels, and other structures protected by the chest wall.

Thoracic Duct

The body's largest lymph vessel. It collects excess fluid and immune cells from most of the body and returns them to the bloodstream near the neck; injury can cause lymph fluid to leak into the chest.

Thoracic Endometriosis

Endometriosis involving the chest, usually around the lung. Symptoms such as chest pain, breathlessness, or coughing may recur around menstruation and can rarely result in air or blood around the lung.

Thoracic Outlet Syndrome

Pressure on nerves or blood vessels as they pass from the neck into the arm. It may cause neck,

shoulder, or arm pain, tingling, weakness, swelling, color change, or a cold hand. Treatment depends on the cause and may include physical therapy or surgery.

Alternate Names:

TOS (Thoracic Outlet Syndrome)

Thoracic Spine CT Scan

Computed tomography of the thoracic spine used to evaluate vertebral fractures, alignment, bone lesions, spinal canal narrowing, and other bony abnormalities.

Thoracic Spine X-Ray

Plain radiographic imaging of the thoracic spine used to assess vertebral alignment, fractures, curvature, degenerative change, and selected bone lesions.

Thoracic Surgeon

A surgeon who performs operations on organs and structures in the chest, such as the lungs, esophagus, mediastinum, and sometimes the heart.

Thoracic Vertebrae

The twelve bones of the spine in the chest region. They connect with the ribs, support the upper body, and surround and protect the spinal cord.

Thoracic Vertebrae (T1-T12)

The twelve vertebrae of the chest region, each articulating with ribs and protecting the thoracic spinal cord while supporting the trunk and rib cage.

Thoracolumbar Spine Trauma

Injury to the middle or lower back. Doctors assess the bones, supporting ligaments, spinal cord, and nerves to determine whether the spine is stable and whether treatment needs a brace, monitoring, or surgery.

Thoracoscopy

A minimally invasive procedure using a camera inserted through the chest wall to examine or treat the pleura, lungs, or mediastinum.

Thoracotomy

A surgical incision into the chest wall to access the thoracic cavity (pleural space, lungs, heart, great vessels, esophagus, diaphragm, mediastinum).

Thorax

The thorax is the chest region between the neck and abdomen, enclosed by ribs and containing the heart, lungs, major vessels, and mediastinal structures.

Thought Blocking

An abrupt interruption in the train of thought before it is completed, as if the thought was removed or pushed out of the patient's mind. The patient may pause mid-sentence, appear confused, and report that the thought was "taken out" or "blocked." It is a formal thought disorder seen in schizophrenia.

Thought Disorders

Conditions in which thinking is unusually disorganized, interrupted, fixed on false beliefs, or difficult to express. They can occur in psychosis, mood disorders, brain disease, substance effects, or other conditions and require assessment of the underlying cause.

Threadworm

A small intestinal worm, also called a pinworm, or the infection it causes. The female worm lays eggs around the anus, commonly causing intense itching at night; infection spreads when eggs are swallowed.

Threadworm (Enterobiasis)

An intestinal parasitic infection caused by *Enterobius vermicularis*, also called pinworm. Infection spreads when eggs are swallowed, often after contact with contaminated hands, bedding, food, or surfaces.

Threadworms (Pinworms)

Small intestinal worms, *Enterobius vermicularis*, whose females lay eggs around the anus and commonly cause nocturnal itching.

Alternate Names:

Pinworms

Threatened Miscarriage

Vaginal bleeding during early pregnancy with a closed cervix and no passage of pregnancy tissue; the pregnancy may remain viable. Evaluation commonly includes clinical assessment, serial human chorionic gonadotropin testing when indicated, and ultrasound.

Alternate Names:

Threatened abortion.

Three-Day Measles

Alternate index label; see *Rubella*.

Three-Dimensional Ultrasound

Ultrasound that combines many sound-wave measurements to create a three-dimensional image. It is used in obstetrics, gynecology, and other settings to show anatomy from several angles.

Threonine

An essential amino acid used to build proteins and other body molecules. The body cannot make enough of it, so it must come from food.

Threshold

The lowest amount of a stimulus or measurement needed to produce a detectable response or effect.

Thrill

A palpable vibration over the chest or a blood vessel caused by turbulent blood flow.

Throat

The passage behind the mouth and nose that connects them with the voice box and esophagus. It carries air toward the lungs and food toward the stomach and contains the tonsils and other protective tissues.

Throat Cancer

Cancer arising in the pharynx or nearby structures of the throat. Persistent hoarseness, difficulty or pain with swallowing, a neck lump, unexplained weight loss, or persistent sore throat requires medical evaluation, especially in people who use tobacco

or alcohol.

Alternate Names:

Cancer, Throat

Throat Cancer (Larynx Cancer)

Alternate index label for Larynx Cancer.

Throat Or Larynx Cancer

Throat or larynx cancer is malignant growth in the pharynx or voice box and may cause persistent hoarseness, swallowing difficulty, pain, or a neck lump.

Throat Swab Culture

Culture of a throat specimen to detect bacterial pathogens, especially group A Streptococcus, when evaluating pharyngitis.

Alternate Names:

Throat Culture

Throbbing

A pulsating or beating quality of pain or another sensation. It can occur with migraine, inflammation, injury, infection, or increased awareness of a pulse.

Thrombectomy

A procedure to remove a blood clot from a blood vessel and restore blood flow. A catheter may remove the clot from a blocked brain artery during some ischemic strokes; surgery is used in selected other situations.

Thrombectomy (Vascular)

Removal of a blood clot from a blood vessel using surgery or a catheter-based procedure. The aim is to restore blood flow and protect tissue from damage when a clot blocks an important artery or vein.

Alternate Names:

Vascular thrombectomy; clot-removal procedure

Thrombin

A blood-clotting substance that changes fibrinogen into fibrin, the protein threads that form a clot, and also activates platelets. The body makes thrombin after a blood vessel is injured; too much or too little

clotting can cause disease.

Thromboangiitis Obliterans

A tobacco-related inflammatory disease blocking small and medium arteries and veins, often causing painful fingers, toes, ulcers, or gangrene.

Thromboangiitis Obliterans (Buerger Disease)

An inflammatory disease of small and medium blood vessels, strongly associated with tobacco use. It can cause pain, color changes, ulcers, or gangrene in the hands or feet. Complete tobacco cessation is essential; further treatment depends on ischemia, tissue loss, and other complications.

Alternate Names:

Buerger Disease

Thrombocyte (Platelet)

A small blood-cell fragment made in the bone marrow. Platelets stick to damaged blood vessels, become activated, and join together to form the first plug that stops bleeding. Too few platelets or poorly working platelets can cause easy bruising, tiny skin spots, nosebleeds, or other bleeding. Too many or overly active platelets can increase the risk of unwanted clots.

Thrombocytes

Another name for platelets: small blood-cell fragments made in the bone marrow that form plugs to stop bleeding. Too few can cause bruising or bleeding, while too many or overly active platelets can increase the risk of unwanted clots.

Thrombocytopathy

A problem with how platelets work, even when the platelet count is normal or nearly normal. It may cause easy bruising, nosebleeds, heavy menstrual bleeding, or prolonged bleeding after an injury or procedure.

Thrombocytopenia

A low number of platelets, the blood cells that help stop bleeding. It may result from reduced production, increased destruction, trapping in an

enlarged spleen, or dilution and can cause bruising, bleeding, or no symptoms.

Alternate Names:

Low Platelet Count

Thrombocytopenia (Low Platelet Count)

Alternate index label for Low Platelet Count.

Thrombocytopenic

Characterized by too few circulating platelets. It may cause easy bruising, nosebleeds, heavy menstrual bleeding, or other bleeding, although some people have no symptoms.

Thrombocytosis

A higher-than-normal number of platelets in the blood. It may be a temporary response to infection, inflammation, bleeding, or iron deficiency, or result from a bone-marrow disorder. It can increase bleeding or clotting risk depending on the cause.

Thromboelastography

A blood test that shows how quickly a clot forms, how strong it becomes, and how it dissolves. It can help guide blood-product treatment during severe bleeding, major surgery, or critical illness.

Thromboembolism

Obstruction of a blood vessel by a clot that formed elsewhere and traveled through the circulation.

Thrombolysis

The dissolution of a blood clot using a medicine such as a fibrinolytic agent. It is used only in selected conditions because it can cause serious bleeding.

Thrombolysis For PE

Emergency treatment using a clot-dissolving medicine for a life-threatening lung clot causing low blood pressure or shock. It can restore blood flow quickly but carries a serious risk of bleeding.

Thrombolysis For Stroke

Emergency treatment for selected strokes caused by a blood clot. A clot-dissolving medicine is given

through a vein within a limited time after symptoms begin, after brain imaging excludes bleeding; serious bleeding is a possible complication.

Thrombolytic Agents

Medicines that dissolve an established blood clot by activating the body's clot-breaking system. They are reserved for selected emergencies because they can cause serious bleeding, including bleeding in the brain.

Thrombolytic Therapy

Treatment with a medicine that breaks down a blood clot and may restore blood flow in selected emergencies such as certain strokes, heart attacks, or lung clots. The main danger is serious bleeding, including bleeding in the brain.

Thrombophilia

A tendency for blood to form clots too easily. It may be inherited or develop with cancer, pregnancy, some medicines, inflammation, or other conditions and can increase the risk of clots in veins.

Thrombophilia Testing

Blood tests that look for inherited or acquired reasons a person may form blood clots too easily. Testing is considered selectively after a clot or with a strong family history because results may not change treatment.

Thrombophlebitis

Inflammation of a vein associated with a blood clot. It may affect a vein near the skin, causing tenderness and a firm red area, or a deep vein, which can lead to a lung clot.

Thrombopoiesis

The process by which the bone marrow makes platelets. Platelets develop from large marrow cells and enter the bloodstream, where they help stop bleeding.

Thrombosed Intracranial Aneurysm

A widened brain artery containing a blood clot. The

clot may partly block the aneurysm but can also press on nearby brain structures, causing headache, vision or nerve problems, or seizures.

Thrombosis

Formation of a blood clot inside a blood vessel or the heart. The clot can block blood flow and damage tissue, causing problems such as deep-vein thrombosis, stroke, heart attack, or loss of blood supply to a limb.

Thrombosis Of The Inferior Vena Cava

A blood clot in the large vein that returns blood from the legs and abdomen to the heart. It may cause swelling in both legs or abdominal pain and can extend from a deep-vein clot.

Thrombotic Microangiopathy

A group of disorders in which tiny clots form in small blood vessels, damaging red blood cells and lowering the platelet count. The clots can injure the kidneys, brain, heart, or other organs. Causes include immune disorders, infections, medicines, pregnancy, and severe illness; urgent specialist treatment is often needed.

Thrombotic Thrombocytopenic Purpura

A rare, life-threatening illness in which tiny blood clots form throughout small vessels and use up platelets. It can cause bruising, anemia, headache, confusion, fever, kidney problems, or other organ damage and requires urgent treatment.

Thrombotic Vasculopathy

Damage to blood vessels caused by clots forming within them. It can reduce blood flow and injure skin or organs and may occur with autoimmune disease, severe infection, cancer, or disorders that cause widespread clotting.

Thromboxane

A chemical made mainly by activated platelets that makes platelets stick together and narrows blood vessels. These actions help stop bleeding but can also contribute to harmful clot formation.

Thrombus

A blood clot that forms inside a blood vessel or the heart and remains attached where it formed. It may partly or completely block blood flow, or break loose and travel elsewhere as an embolus.

Thrombus Organization

The gradual healing of a blood clot as it is replaced by scar tissue and sometimes channels that allow blood to pass through again. This process can make an old clot firm and attached to the vessel wall.

Thrush

A *Candida* infection, usually of the mouth or throat, causing creamy white plaques, soreness, altered taste, or discomfort with eating or swallowing. Vaginal candidiasis is a separate condition. Risk increases with antibiotics, inhaled corticosteroids, diabetes, or immune suppression.

Alternate Names:

Oral Thrush

Thrush - Children And Adults

Oral candidiasis caused by *Candida* overgrowth, producing removable white plaques, soreness, redness, altered taste, or cracks at the mouth corners; risk rises with antibiotics, inhaled steroids, diabetes, or immune suppression.

Thrush And Other Yeast Infections In Children

Thrush is *Candida* overgrowth in the mouth, producing white plaques, soreness, or feeding difficulty; *Candida* can also affect skin folds or diaper areas. Persistent, recurrent, severe, or immune-associated infection needs pediatric evaluation and appropriate antifungal treatment.

Thrush In Newborns

Oral *Candida* infection in an infant, causing white plaques on the tongue or mouth lining that may interfere with feeding and can be passed between infant and breastfeeding parent.

Thrush, Oral

Alternate index label; see *Oral thrush*.

Thumb Arthritis

Degeneration or inflammation of a thumb joint, especially the joint at the base of the thumb, causing pain, stiffness, and reduced grip.

Alternate Names:

Basal Joint Arthritis

Thumb CMC Arthritis

Arthritis of the joint at the base of the thumb, where the thumb meets the wrist. It causes pain with gripping or pinching, stiffness, swelling, and reduced hand strength; advanced disease may change the joint's shape.

Thumb-Sucking

A common childhood habit of sucking the thumb; persistent habit can affect dental and facial development.

Thymic Hyperplasia

Thymic hyperplasia is enlargement of the thymus from increased lymphoid tissue or rebound growth and may be incidental. It can be associated with autoimmune disease, infection, endocrine conditions, or stress; imaging and clinical context distinguish it from a mass.

Thymocyte

An immature T lymphocyte developing in the thymus, where it undergoes selection before becoming a mature T cell.

Thymoma

A tumor arising from the thymus, an immune-system organ behind the breastbone. It may cause chest pressure or no symptoms and is associated with conditions such as myasthenia gravis; behavior depends on whether it grows beyond the thymus.

Alternate Names:

Neoplasm Thymomic (Thymoma)

Thymus

An immune-system organ behind the breastbone where immature T cells mature and learn not to attack the body's own tissues. It is most active in childhood and becomes smaller after puberty.

Thymus Gland

An immune-system organ behind the breastbone where immature T lymphocytes learn to recognize harmful foreign material without attacking the body's own tissues. It is most active during childhood and gradually becomes smaller after puberty.

Thyrocalcitonin

Another name for calcitonin, a hormone made by thyroid C cells that lowers blood calcium mainly by reducing bone resorption.

Thyroglobulin Surveillance

Blood testing for thyroglobulin after treatment of some thyroid cancers. A rising or unexpectedly detectable level may suggest remaining or returning thyroid tissue, but results must be interpreted with the treatment history and antibody testing.

Thyroglossal Duct Cyst

A fluid-filled lump in the middle of the neck caused by tissue left behind as the thyroid developed before birth. It often moves when swallowing or sticking out the tongue and is usually assessed with ultrasound.

Thyroid

An endocrine gland in the front of the neck that produces thyroid hormones, which regulate metabolism, growth, and development.

Thyroid Cancer

A malignant tumor of the thyroid. Major types include papillary, follicular, medullary, and anaplastic carcinoma, which differ in behavior and treatment.

Alternate Names:

Cancer, Thyroid

Thyroid Cancer - Medullary Carcinoma

Medullary thyroid carcinoma is cancer of thyroid C cells that produce calcitonin and may be inherited as part of a multiple endocrine neoplasia syndrome.

Thyroid Cancer - Papillary Carcinoma

Papillary thyroid carcinoma is the most common thyroid cancer and usually grows slowly, although it can spread to nearby lymph nodes.

Thyroid Cancer Staging

The process of determining how far thyroid cancer has grown or spread. Doctors consider the tumor's size, nearby lymph nodes, distant spread, cancer type, age, and other features to guide treatment and estimate outlook.

Thyroid Cartilage

The largest cartilage of the larynx, formed by two plates that meet in front and create the laryngeal prominence. It protects the vocal folds and provides attachment for muscles and ligaments.

Thyroid Disorders

Conditions affecting the thyroid gland, which makes hormones that regulate energy use, temperature, heart rate, growth, and development. Disorders may cause an underactive or overactive gland, inflammation, enlargement, nodules, or cancer.

Thyroid Eye Disease

An immune-related problem often associated with Graves disease that causes swelling of tissues around the eyes. It may cause dry or gritty eyes, pain, eyelid retraction, bulging eyes, double vision, or reduced vision.

Thyroid Fine-Needle Aspiration

A procedure that uses a thin needle, usually guided by ultrasound, to remove cells from a thyroid lump. A laboratory examines the cells to help determine whether the lump is benign or needs further treatment.

Thyroid Follicular Carcinoma

A cancer arising from thyroid follicle cells and the second most common differentiated thyroid cancer. It tends to spread through blood vessels to the lungs or bones; diagnosis requires showing invasion of the capsule or blood vessels.

Thyroid Function Tests

Blood tests, mainly thyroid-stimulating hormone and free T4, used to assess how well the thyroid is working. Results help identify an underactive or overactive thyroid but must be interpreted with symptoms and medicines.

Thyroid Gland

A butterfly-shaped gland at the front of the neck. It makes hormones that help control energy use, temperature, heart rate, growth, and development.

Thyroid Gland Enlargement

Alternate index label; see *Goiter*.

Thyroid Gland Removal

Surgery to remove part or all of the thyroid gland for cancer, overactivity, a large goiter, or a suspicious nodule. Possible effects include bleeding, voice changes from nerve injury, low calcium, and the need for lifelong thyroid hormone.

Thyroid Gland, Diseases Of

Conditions affecting the thyroid gland, including underactivity, overactivity, inflammation, enlargement, nodules, and cancer. They may change energy, weight, temperature tolerance, heart rate, bowel habits, mood, or neck appearance and are assessed with examination and blood tests.

Thyroid Hormone

The hormones T3 and T4, made by the thyroid gland, that help control energy use, temperature, heart rate, growth, and brain development. Too little can slow body functions, while too much can make them overactive.

Thyroid Hormones

Thyroxine (T4) and triiodothyronine (T3), hormones that regulate metabolic rate, growth, brain development, heat production, and cardiovascular and gastrointestinal activity.

Thyroid Nodule

A discrete lump within the thyroid gland that may be solid, cystic, benign, or malignant. Most are benign, but evaluation uses clinical assessment, thyroid testing, ultrasound, and biopsy when indicated.

Thyroid Nodule Evaluation

Assessment of a lump in the thyroid using examination, thyroid blood tests, and ultrasound. Ultrasound features help estimate cancer risk and decide whether repeat imaging or a needle sample is needed.

Thyroid Nodules

A thyroid nodule is a discrete growth within the thyroid and is often benign. Ultrasound, thyroid-function testing, and selected needle biopsy assess cancer risk; rapid growth, hoarseness, swallowing difficulty, or breathing problems needs prompt review.

Alternate Names:

Nodule Thyroid (Thyroid Nodules)

Thyroid Papillary Carcinoma

The most common type of thyroid cancer, arising from cells that make thyroid hormone. It often grows slowly and can spread to nearby lymph nodes; outlook depends on its size, spread, and other tumor features.

Thyroid Peroxidase Antibody

An immune protein directed against thyroid peroxidase, an enzyme needed to make thyroid hormones. A high level supports autoimmune thyroid disease, especially Hashimoto disease, but does not by itself show how well the thyroid is working.

Thyroid Peroxidase Test

A blood test measuring antibodies against thyroid peroxidase, an enzyme needed to make thyroid hor-

mones. Elevated levels support autoimmune thyroid disease but do not by themselves show how well the thyroid is working.

Thyroid Preparation Overdose

Taking too much thyroid hormone medicine can cause a fast or irregular heartbeat, shaking, sweating, anxiety, vomiting, fever, or, in severe cases, heart failure or a dangerous thyroid crisis.

Thyroid Scan

A nuclear-medicine test that shows how actively the thyroid or a thyroid lump takes up a small radioactive tracer. An overactive lump is rarely cancerous; a less-active lump needs assessment with other tests.

Thyroid Scintigraphy

Another name for a thyroid scan. It uses a small radioactive tracer to show thyroid activity, lumps, or thyroid tissue in an unusual location; results are interpreted with blood tests and ultrasound.

Thyroid Stimulating Hormone

A hormone made by the pituitary gland that tells the thyroid to make and release thyroid hormones. The brain adjusts its release according to the amount of thyroid hormone in the blood.

Thyroid Storm

A life-threatening, sudden worsening of an overactive thyroid. It can cause very high fever, a fast or irregular heartbeat, severe agitation or confusion, vomiting, heart failure, and organ failure, often after infection, surgery, or injury.

Thyroid Surgery

Operations that remove part or all of the thyroid gland. They may be performed for selected cancers, enlarging or compressive nodules, goiter, hyperthyroidism, or diagnostic uncertainty; the procedure depends on the disease and its extent.

Thyroid Ultrasound

An imaging test using sound waves to examine the

thyroid, thyroid lumps, cysts, and nearby lymph nodes. It can identify features that need monitoring or a needle sample but cannot by itself confirm cancer.

Thyroid, Overactive

Alternate index label; see *Hyperthyroidism (overactive thyroid)*.

Thyroid-Stimulating Hormone

A hormone made by the pituitary gland that tells the thyroid to make thyroid hormones. Blood TSH testing is commonly used to check thyroid function, although results must be interpreted with other hormone levels and the person's symptoms.

Alternate Names:

TSH

Thyroidectomy

Surgery to remove part or all of the thyroid gland. It may treat thyroid cancer, an overactive thyroid, or a large goiter; possible complications include bleeding, voice-nerve injury, and low calcium.

Thyroiditis

Inflammation of the thyroid gland. It may cause neck pain, fever, or temporary overactivity followed by underactivity; some forms are painless and autoimmune. Symptoms and treatment depend on the type and duration.

Thyroiditis Classification

Thyroid inflammation is classified by its cause and pattern. Hashimoto disease is usually long-term and autoimmune; subacute thyroiditis is often painful and follows an infection; other forms may occur after childbirth, medicines, or injury.

Thyroiditis, Chronic Lymphocytic

Alternate index label; see *Hashimoto's disease*.

Thyrotoxic Myopathy

Muscle weakness caused by an overactive thyroid, usually affecting the hips, thighs, shoulders, and upper arms. Weakness may occur without pain and

can improve when thyroid hormone levels return to normal; severe weakness or swallowing or breathing difficulty needs urgent care.

Alternate Names:

Hyperthyroid Myopathy

Thyrotoxic Periodic Paralysis

Repeated brief attacks of severe muscle weakness caused by an overactive thyroid, often with low blood potassium. Episodes commonly affect the hips and shoulders and may follow rest after exercise or a high-carbohydrate meal.

Thyrotoxicosis

A condition caused by too much thyroid hormone activity in the body, whatever the source. It may cause weight loss, fast heartbeat, tremor, sweating, anxiety, diarrhea, heat intolerance, or severe illness.

Thyrotroph Adenoma

A usually noncancerous pituitary tumor arising from cells that make thyroid-stimulating hormone. It may produce too much hormone, causing an overactive thyroid, headaches, or vision problems if it presses on nearby structures.

Thyrotrophin-Releasing Hormone

A hormone made in the hypothalamus, a part of the brain, that tells the pituitary gland to release thyroid-stimulating hormone and prolactin. It helps link brain signals with thyroid activity and some reproductive functions.

Thyrotrophin-Stimulating Hormone

Another name for thyroid-stimulating hormone, a pituitary hormone that tells the thyroid gland to make and release thyroid hormones. Blood levels help assess whether the thyroid is underactive or overactive.

Thyrotropin

Thyroid-stimulating hormone, a pituitary hormone that stimulates thyroid growth and thyroid-hormone production; it is also called TSH.

Thyrotropin Alfa

A recombinant form of thyroid-stimulating hormone used to stimulate residual thyroid tissue or differentiated thyroid cancer cells during selected diagnostic or treatment protocols.

Thyroxine

The thyroid hormone T4, which contains four iodine atoms. The thyroid releases it into the blood, and much of it is converted to the more active hormone triiodothyronine (T3).

Alternate Names:

T4

Thyroxine-Binding Globulin

A blood protein that carries most thyroid hormones through the bloodstream. Changes in its amount can alter measured total hormone levels without necessarily changing the amount of active, unbound hormone.

TI-RADS

An ultrasound scoring system for thyroid lumps. It uses features such as the lump's composition, shape, edges, and calcifications to estimate cancer risk and help decide whether follow-up or needle sampling is needed.

TIA

A brief episode of stroke-like symptoms caused by temporary reduced blood flow to part of the brain, without lasting brain injury on standard assessment. It is an emergency warning of possible stroke and needs prompt evaluation.

Alternate Names:

Transient ischemic attack; mini-stroke

Tibia

The larger, weight-bearing bone of the lower leg, extending from the knee to the ankle. It forms part of both joints and is commonly called the shinbone.

Tibia Vara

Tibia vara is inward angulation of the upper shinbone causing bowing of the leg, classically associated

with Blount disease or other growth disorders.

Tibial Artery

An artery of the lower leg, chiefly the anterior and posterior tibial arteries, supplying the leg, ankle, and foot and contributing to pedal pulses.

Tibial Fracture

A break in the tibia, the major weight-bearing bone of the lower leg, often caused by high-energy trauma, twisting injury, or repetitive stress.

Tibial Nerve

A large nerve running from the back of the knee down the back of the leg and behind the inner ankle. It controls several leg and foot muscles and carries sensation from parts of the foot.

Tibial Shaft Fractures

Breaks in the middle portion of the shinbone, often caused by a high-energy injury but sometimes by a twist or lower-force event. Pain, swelling, deformity, or inability to bear weight are common. Treatment depends on alignment, skin and muscle damage, and whether the fracture is open.

Tibialcrural Artery

A term describing the arteries and branching vessels near the lower leg and ankle, especially connections between the tibial and fibular arteries. These vessels supply blood to the ankle and foot.

Tibialis Anterior Muscle

A muscle along the front of the shin that lifts the front of the foot and helps turn it inward. Weakness can cause foot drop and make walking difficult.

Tibialis Posterior Muscle

A deep muscle behind the shin that points the foot downward, turns it inward, and helps support the foot's arch. Damage or weakness may contribute to pain or a gradually flattened foot.

Tic

A sudden, rapid, recurrent, nonrhythmic movement

or sound that a person may feel an urge to make. Tics can be motor or vocal and may worsen with stress.

Tic Disorder

A neurologic condition causing repeated, sudden movements or sounds that are difficult to control, such as blinking, shrugging, throat clearing, or grunting. Tics may be briefly suppressed, often worsen with stress, and vary in severity.

Tic Douloureux

A chronic pain condition characterized by recurrent, sudden, severe, electric shock-like pain in the distribution of the trigeminal nerve (typically V2/V3). See Trigeminal Neuralgia.

Tic Douloureux (Trigeminal Neuralgia)

Alternate index label for Trigeminal Neuralgia.

Ticarcillin

A penicillin antibiotic with activity against many gram-negative bacteria, including *Pseudomonas*; it is usually given with clavulanate and can cause allergy or electrolyte disturbances.

Tick

A small blood-feeding arachnid that can attach to people or animals and transmit infections such as Lyme disease, rickettsial diseases, and babesiosis.

Tick Bite

A bite from a tick, which may cause local irritation and can sometimes spread infections such as Lyme disease, ehrlichiosis, or Rocky Mountain spotted fever. Remove the tick promptly and watch for fever or a spreading rash.

Tick Paralysis

Rapidly worsening weakness caused by poison released by an attached tick. Weakness often starts in the legs and moves upward; breathing can become difficult, but symptoms usually improve after prompt tick removal.

Tick Removal

Promptly removing an attached tick with fine-tipped tweezers by pulling steadily close to the skin. Clean the site afterward and monitor for expanding redness, fever, or other illness; do not burn, crush, or cover the tick with chemicals.

Tick Typhus

A rickettsial infection transmitted by ticks, usually causing fever, headache, rash, and sometimes severe systemic illness.

Tick-Borne Encephalitis

A viral infection transmitted mainly by ticks that can cause fever, meningitis, encephalitis, or lasting neurological complications.

Tickborne Relapsing Fever

An infection caused by certain *Borrelia* bacteria and spread by soft ticks. It causes repeated episodes of fever, headache, muscle aches, and joint pain separated by periods of feeling better.

Ticks

Small arachnids that attach to skin and may transmit infections or cause tick paralysis.

Alternate Names:

Ticks Bite (Ticks)

Ticks Bite (Ticks)

Alternate index label for Ticks.

Ticlopidine

An antiplatelet medicine that reduces the blood's ability to form clots. It was used to prevent stroke or heart-related clots in selected people but is now less common because it can cause serious blood-count and bleeding problems.

Tics

Brief, repeated movements or sounds that are difficult to control, such as blinking, shrugging, throat clearing, or grunting. They may be held back for a short time and often worsen with stress; persistent or impairing tics need assessment.

Tidal Volume

The amount of air breathed in or out with one normal breath. It varies with body size, activity, illness, and breathing support and can be measured during lung-function testing.

Tidy Wound

A clean, sharply cut wound with little contamination, crushing, or dead tissue and clearly defined healthy edges. After examination and cleaning, it may often be closed immediately, depending on its depth, location, and age.

Tietze Syndrome (Costochondritis And Tietze Syndrome)

Alternate index label for Costochondritis and Tietze Syndrome.

Tigecycline

An antibiotic used in selected serious infections when other treatments are unsuitable. It stops bacteria making proteins and commonly causes nausea and vomiting; it is not appropriate for every type of infection.

Tight Junction

A seal between neighboring lining cells that controls what can pass between them. It helps keep separate the cell surfaces facing the body cavity and the underlying tissue.

Tilorone

Tilorone is a synthetic antiviral and immunomodulating compound used or studied in some countries; evidence and indications vary by setting.

Tilt Table Test

A supervised test for unexplained fainting. A person lies secured on a table that is tilted upright while blood pressure, heart rate, and symptoms are recorded to look for fainting caused by abnormal blood-pressure or heart-rate responses.

Tilt Table Testing

A supervised test in which a patient is moved from

a lying to an upright or head-up tilt position while blood pressure, heart rate, and symptoms are monitored. It may help evaluate reflex syncope, orthostatic hypotension, or selected autonomic disorders when the diagnosis remains uncertain; it does not replace assessment for cardiac or neurologic causes.

Tilted Disc Syndrome

A congenital appearance in which the optic disc is angled or rotated, often with an unusual shape of nearby retina and blood vessels. Vision may be normal, but some people have visual-field changes or other eye conditions.

Time In Range

Percentage of time that continuous glucose monitoring readings remain within the target glucose range of seventy to one hundred eighty milligrams per deciliter for most adults with diabetes. General target is greater than seventy percent corresponding to approximately seventeen hours per day.

Time Of Death

The actual or estimated time when a person died. After death, investigators may use body temperature, stiffening, settling of blood, decomposition, insect activity, and chemical changes to estimate it, but the estimate has limits.

Time-Of-Flight PET

A PET scanning method that uses the arrival times of detected radiation to better locate where it came from. This can improve image quality and help show disease more clearly.

Timed Up-And-Go Test

A functional mobility test measuring the time required to stand from a chair, walk a short distance, turn, return, and sit. Prolonged performance suggests impaired mobility and increased fall risk but must be interpreted with gait, vision, cognition, and environment.

TIMI Risk Score

A clinical score estimating short-term risk in people with unstable angina or a non-ST-elevation heart at-

tack. It uses age, risk factors, known artery disease, recent symptoms, ECG changes, and heart-injury blood tests to help guide treatment; it supports but does not replace clinical judgment.

Alternate Names:

TIMI Score; TIMI Risk Score for UA/NSTEMI; TIMI Score for STEMI

Timing Of Breastfeeding

The timing and frequency of breastfeeds, usually guided by early hunger cues and effective milk transfer rather than a rigid clock schedule, with special considerations for newborns and preterm infants.

Timolol

Timolol is a non-selective beta blocker used in glaucoma eye drops and for selected cardiovascular conditions; topical ocular use can still cause bradycardia, hypotension, bronchospasm, or fatigue.

Timolol Maleate

The maleate salt of timolol, a beta blocker used in glaucoma and selected cardiovascular conditions.

Timothy Syndrome

A rare inherited disorder affecting the heart and several body systems. It can cause a dangerously prolonged heart rhythm, heart defects, webbed fingers or toes, and developmental or immune problems.

Tinea

A fungal infection of the skin, hair, or nails caused by fungi that feed on a protein called keratin. Common forms include ringworm, athlete's foot, and jock itch.

Tinea (Dermatophytosis)

A fungal infection affecting skin, hair, or nails. It may cause a ring-shaped scaly rash, peeling or cracking between the toes, an itchy groin rash, scalp scaling, or thickened discolored nails.

Alternate Names:

Dermatophytosis

Tinea Barbae

A fungal infection of the beard or moustache area. It can cause an itchy, scaly rash, inflamed hair follicles, pus-filled spots, or painful lumps and may spread from infected animals or people.

Tinea Capitis

A fungal infection of the scalp and hair, most common in children. It may cause scaling, itching, broken or falling hair, swollen tender areas, or pus-filled sores and usually needs prescription treatment.

Tinea Corporis

A fungal infection of the body skin, often causing an itchy, scaly, ring-shaped rash with a clearer center. It spreads through contact with infected people, animals, or contaminated objects.

Tinea Cruris

Alternate index label; see *Jock itch*.

Tinea Faciei

A fungal infection of the face that can cause a red, scaly, ring-shaped or uneven rash. It may resemble eczema or rosacea and can spread from infected people, animals, or another infected body area.

Tinea Favosa

A long-lasting fungal infection of the scalp or skin that causes yellow, cup-shaped crusts around hair follicles. It can lead to scarring and permanent hair loss if untreated and is now uncommon in many regions.

Tinea Imbricata

A long-lasting fungal skin infection found mainly in parts of the Pacific and Southeast Asia. It causes overlapping, scaly rings that form a distinctive wood-grain pattern on the body.

Tinea Incognito

A fungal skin infection whose appearance has been changed by using a steroid cream or other immune-suppressing treatment. It may become less scaly but more widespread or unusual, so testing may be

needed before targeted treatment.

Tinea Nigra

A usually harmless fungal infection causing a painless brown or black patch, most often on the palm or sole. It may resemble a mole or skin cancer and can be confirmed with a skin examination or sample.

Tinea Pedis

A fungal infection of the feet, also called athlete's foot. It may cause itching, peeling or cracking between the toes, dry scaling on the soles, blisters, or sores and can spread to the nails.

Tinea Pedis (Athlete's Foot)

Alternate index label for Athlete's Foot.

Tinea Unguium

A fungal infection of the nail plate, also called onychomycosis, causing thickening, discoloration, brittleness, or separation of the nail.

Tinea Versicolor

A common yeast-related skin condition causing lighter or darker patches with fine scaling, usually on the chest, back, or upper arms. The patches become more noticeable after surrounding skin tans.

Alternate Names:

Pityriasis Versicolor

Tinel Sign

Tingling or an electric sensation felt along a nerve when the nerve is gently tapped. It may suggest nerve irritation or recovery after injury, but it is not diagnostic by itself and must be interpreted with the examination and other tests.

Tinidazole

Tinidazole is a nitroimidazole antimicrobial effective against anaerobic bacteria and protozoa such as *Giardia* and *Trichomonas*; metallic taste, gastrointestinal effects, neuropathy, and an alcohol interaction may occur.

Tinnitus

Tinnitus is perception of sound without an external source, often related to hearing loss, noise exposure, ear disease, medications, vascular causes, or neurologic factors.

Alternate Names:

Ringing In The Ear

Tinnitus (Ringing In The Ears)

Alternate index label for Ringing in the Ears.

Tinzaparin

A low-molecular-weight heparin anticoagulant used for prevention or treatment of venous thromboembolism; bleeding and heparin-induced thrombocytopenia are important risks.

Tinzaparin Sodium

The sodium salt of tinzaparin, a low-molecular-weight heparin used to prevent or treat venous blood clots; bleeding and heparin-induced thrombocytopenia are important risks.

Tiopronin

A thiol-containing medicine used in selected cases of cystinuria to increase urinary cystine solubility; rash, proteinuria, and blood abnormalities may occur.

Tiotropium Bromide

A long-acting inhaled medicine that relaxes airway muscles and keeps the airways open. It is used regularly to control COPD and sometimes asthma; it does not provide immediate relief during a sudden attack.

TIPS

A procedure that creates a channel inside the liver between veins carrying blood into and out of it. The channel lowers high pressure in the portal vein and may treat repeated variceal bleeding or difficult-to-control abdominal fluid.

Tirbanibulin

A topical medicine used in short courses to treat actinic keratoses on the face or scalp; local redness,

scaling, or irritation may occur.

Tired

Feeling a lack of energy or physical or mental stamina, which may result from sleep loss, exertion, infection, anemia, endocrine disease, medication, depression, or other illness.

Tiredness

Fatigue or reduced energy and endurance that can be physical, mental, or both; persistent unexplained fatigue warrants assessment for sleep, mood, systemic, medication, and metabolic causes.

Tiredness (Fatigue)

A subjective lack of energy or exhaustion that may result from inadequate sleep, illness, psychological stress, anaemia, or many other causes.

Alternate Names:

Fatigue

Tirofiban

An intravenous medicine that temporarily prevents platelets from sticking together. It is used in selected urgent heart conditions or coronary procedures to reduce clotting, but can cause serious bleeding and requires close monitoring.

Tissue

A group of cells and the supporting material around them that work together for a particular function. Examples include muscle, nerve, bone, connective, and lining tissues.

Tissue Adhesions

Bands of fibrous scar tissue that abnormally connect surfaces or organs, often after surgery, inflammation, infection, or bleeding and potentially causing pain, infertility, or obstruction.

Tissue Banks

Facilities that recover, screen, process, preserve, store, and distribute donated human tissue for transplantation, research, or reconstructive treatment under safety and traceability standards.

Tissue Congestion

Accumulation of blood or fluid within tissue because of impaired venous drainage, inflammation, obstruction, or increased vascular flow, producing swelling, redness, or impaired function.

Tissue Distribution

The movement of a medicine or other substance from the bloodstream into body tissues and organs. How much reaches each tissue depends on blood flow, binding, body composition, and the substance's properties.

Tissue Elastance

How strongly a tissue or organ resists being stretched. In the lungs and chest wall, high elastance means more pressure is needed to expand them, which can make breathing harder.

Tissue Engineering

The use of cells, supportive materials called scaffolds, and biologically active substances to create or repair tissues that restore, maintain, or improve body function.

Tissue Expander

A temporary balloon placed beneath the skin and gradually filled with fluid to stretch the skin. The extra skin can later be used for breast, scalp, burn, or other reconstruction.

Tissue Expansion

Gradual stretching of skin or soft tissue with an implanted or external expander so additional tissue can be created for reconstruction; it usually requires staged treatment and monitoring for infection, pain, or device problems.

Tissue Kallikrein

An enzyme made in several tissues that releases chemical messengers affecting local blood flow, blood-vessel leakiness, pain, and inflammation.

Tissue Membrane

A thin layer of tissue that covers a surface, sur-

rounds an organ, or separates spaces in the body. Its structure and function depend on the type of tissue forming it.

Tissue Plasminogen Activator

A natural blood protein that starts the process of breaking down clots. Manufactured forms are used in selected emergencies, such as some strokes, heart attacks, and lung clots, but can cause serious bleeding.

Tissue Plasminogen Activator-Associated Angioedema

Sudden swelling of the face, lips, tongue, or throat after treatment with a clot-dissolving medicine. Throat swelling can block breathing and requires immediate emergency treatment.

Tissue Transglutaminase (tTG)

An enzyme found throughout the body. In celiac disease, the immune system may make antibodies against it, so a blood test for these antibodies is commonly used during evaluation.

Tissue Typing

Testing tissue antigens, especially HLA, to assess compatibility for transplantation.

Tissues Of The Body

Groups of similar cells and extracellular material performing a common function: epithelial, connective, muscle, and nervous tissue.

Titanium

A strong, lightweight, corrosion-resistant metal used in implants, prostheses, dental devices, and surgical instruments. Bone can form a stable connection with some titanium implant surfaces.

Titer

A laboratory measure showing how much antibody or another detectable substance is present in a sample. It is often reported as the greatest dilution that still produces a measurable reaction; meaning depends on the test and timing.

Titration

Gradually changing a medicine dose to find the amount that gives the desired effect with acceptable side effects, or measuring a substance by reacting it with a solution of known strength.

Titre

A measure of antibody or another substance's concentration, determined by repeatedly diluting a sample until detection stops. Titres can help assess infection, immunity, or response, but interpretation depends on the test and timing.

Titubation

A regular, trembling or nodding movement of the head or body. It can occur when the part of the brain that helps control balance and coordination is diseased.

Tizanidine

A medicine that reduces nerve signals causing muscle tightness and spasms. It is used for selected painful spasms or spasticity but can cause sleepiness, dizziness, low blood pressure, dry mouth, and liver problems.

Alternate Names:

TLC

Tmax

The time after a dose when a medicine reaches its highest measured concentration in blood or plasma.

TMD

Alternate index label; see *TMJ disorders*.

TMJ Disorders

Temporomandibular joint disorders affect the jaw joints or chewing muscles and may cause jaw pain, clicking, stiffness, headaches, or limited movement.

Alternate Names:

Temporomandibular Disorders Temporomandibular Joint Disorders TMD

TNBC

Alternate index label; see *Triple-negative breast cancer*.

cer.

TNF Alpha

A chemical messenger made by immune cells that promotes inflammation. It helps fight infection but excessive or prolonged activity can contribute to autoimmune disease, fever, tissue damage, and some cancers.

TNM Classification

A cancer-staging system describing the primary tumor's size or spread, nearby lymph-node involvement, and distant metastases. Combined findings help estimate disease extent, guide treatment, compare outcomes, and discuss prognosis.

TNM Staging

A cancer-staging system describing the primary tumor, regional lymph nodes, and distant metastases to estimate disease extent and prognosis.

Tobacco

A plant product containing nicotine and many toxic combustion or processing chemicals. Its use causes dependence and increases the risk of cancer, cardiovascular disease, and lung disease.

Tobacco Chewing (Smokeless Tobacco)

Alternate index label for Smokeless Tobacco.

Tobacco Use

Tobacco use exposes the body to nicotine and toxic combustion or aerosol chemicals, causing addiction and increased risks of cancer, vascular disease, and lung disease.

Tobramycin

An aminoglycoside antibiotic used for selected serious bacterial infections, including some Gram-negative infections. It can damage the kidneys or hearing and is used with dosing and laboratory monitoring when appropriate.

Tocolysis

Use of medicine to slow contractions for a short

time when preterm birth may occur. The delay may allow treatment to help the baby's lungs mature or transfer to a hospital with newborn specialists; it does not usually prevent birth permanently.

Tocolytic Agents

Tocolytic agents suppress uterine contractions temporarily to delay preterm birth, often allowing time for corticosteroids or transfer to specialist care.

Tocolytic Therapy

Medicines used for a short time to slow contractions during threatened preterm birth. The delay may allow time for treatments that improve newborn outcomes or for transfer to a hospital with appropriate neonatal care; they do not usually stop preterm birth permanently.

Tocolytics

Medicines that temporarily slow contractions before term. They may provide time for corticosteroids, magnesium when indicated, or transfer to specialist care, but their use depends on pregnancy duration, the cause of labor, and risks to the pregnant person or fetus.

Tocopherol

A form of vitamin E, a fat-soluble vitamin that helps protect cell membranes. Deficiency is uncommon but may cause nerve problems, muscle weakness, or abnormal red blood cells; excessive supplements can also be harmful.

Toddler

A toddler is a young child, usually about one to three years old, developing rapidly in movement, language, behavior, feeding, and independence.

Toddler Test Or Procedure Preparation

Preparing a toddler for a test or procedure uses simple explanations, play, distraction, comfort objects, caregiver support, and any required fasting or medicine instructions.

Toddler'S Fracture

A small spiral crack in the lower shinbone of a young child, usually after a minor twist. The child may suddenly limp or refuse to walk, even though there is little swelling or deformity. The first X-ray may look normal; a repeat X-ray after about two weeks may show healing. Treatment commonly uses a supportive boot or cast, based on examination and imaging.

Alternate Names:

Cast-Tibia Fracture; Childhood Spiral Tibial Fracture

Toe Broken (Broken Toe)

Alternate index label for Broken Toe.

Toe Joint

Any joint connecting the bones of a toe. Toe joints include the metatarsophalangeal and interphalangeal joints; they permit toe movement and may be affected by arthritis, gout, injury, or deformity.

Alternate Names:

toe articulation.

Toe Pressure

The blood pressure measured in a toe, useful for assessing circulation in the foot. It can remain reliable when ankle arteries are too stiff to compress, as may occur with diabetes or kidney disease.

Toe-Brachial Index

The ratio between blood pressure measured at a toe and in the arm. It helps assess circulation in the legs, especially when stiff ankle arteries make ankle-pressure testing unreliable.

Toenail

A toenail is the hard keratin plate covering the end of a toe and protecting its underlying tissue; injury, fungus, and ingrowth can cause disease.

Toenail Fungus

Alternate index label; see *Nail fungus*.

Toes (Digits Of The Foot)

The five digits at the end of each foot. The big toe has two bones and helps with balance and push-off; the other toes usually have three bones each. Injury, arthritis, tight shoes, or nerve and muscle problems can cause pain or deformity.

Togaviridae

A family of viruses that includes some mosquito-borne viruses, such as chikungunya and eastern equine encephalitis virus, which can cause fever, rash, joint pain, or brain inflammation.

Togaviridae Infections

Infections caused by viruses in the Togaviridae family. Symptoms vary by virus and may include fever, rash, joint pain, or encephalitis.

Toilet Bowl Cleaners And Deodorizers Poisoning

Poisoning from swallowing or contacting toilet cleaners or deodorizers. Acidic or alkaline products can burn the mouth, throat, eyes, and skin; mixing cleaners may release dangerous gases.

Tolazamide

An older sulfonylurea diabetes medicine that increases insulin release; hypoglycemia and weight gain can occur, especially in older adults or people with kidney disease.

Tolcapone

A medicine used with levodopa for selected people with Parkinson disease to prolong levodopa's effect. It can cause diarrhea, involuntary movements, confusion, and potentially fatal liver injury, so liver monitoring is required.

Tolerable Upper Intake Level

The highest average daily intake of a nutrient unlikely to cause harm in almost all healthy people. It includes food, drinks, and supplements and is not a recommended amount to consume.

Alternate Names:

UL

Tolerance

A decreased response to a drug after repeated administration, requiring dose escalation to achieve the same effect. Unlike tachyphylaxis, tolerance develops over weeks to months of chronic use.

Toll-Like Receptor

A protein on certain immune cells that recognizes common features of germs or damaged tissue. Activating these receptors helps start inflammation and other defenses against infection.

Toll-Like Receptors

Receptors of the innate immune system that recognize characteristic molecules from microbes or damaged tissue. Their activation starts inflammatory and antimicrobial responses.

Alternate Names:

TLRs

Tolmetin

A nonsteroidal anti-inflammatory drug used for pain and arthritis; gastrointestinal bleeding, kidney injury, and cardiovascular events are important risks.

Tolmetin Overdose

Taking too much tolmetin, a nonsteroidal anti-inflammatory medicine, can cause stomach bleeding, vomiting, kidney injury, drowsiness, seizures, or other serious effects.

Tolnaftate

A topical antifungal medicine used for some dermatophyte infections such as athlete's foot and ringworm; it is not effective for every type of fungal infection.

Tolterodine Tartrate

Tolterodine tartrate is an antimuscarinic medicine used for overactive bladder and urinary urgency; dry mouth, constipation, and urinary retention can occur.

Toluene

Toluene is a volatile solvent that can irritate tissues

and, with substantial inhalation or ingestion, injure the nervous system, liver, kidneys, or heart.

Toluene And Xylene Poisoning

Poisoning from solvents containing toluene or xylene, often through swallowing or inhalation. It can cause dizziness, confusion, abnormal heart rhythms, breathing problems, or organ injury.

Tolvaptan

A vasopressin V2-receptor antagonist used in selected patients with hyponatremia or autosomal dominant polycystic kidney disease; thirst, rapid sodium correction, and liver injury require attention.

Tomogram

A tomogram is an image of a selected cross-sectional layer of the body or another object, produced by tomography such as CT or MRI.

Tomography

Imaging that produces cross-sectional views, or slices, through the body. Computed tomography uses X-rays, while other forms use ultrasound, magnetic fields, or radioactive tracers.

Tomosynthesis

An imaging test that takes several low-dose X-ray pictures from different angles and combines them into thin layers. It is commonly used to examine breast tissue in three dimensions.

Tomotherapy

Tomotherapy combines CT imaging with rotating, precisely shaped radiation beams to deliver radiation treatment while adjusting for the target and nearby tissues.

Tongue

A muscular organ in the mouth that helps move food, form speech sounds, swallow, and detect taste. Swelling, sores, weakness, numbness, or restricted movement may result from injury, infection, inflammation, nerve disease, or cancer.

Tongue Biopsy

A tongue biopsy removes a small tissue sample from a tongue lesion for microscopic examination of infection, inflammation, precancer, or cancer.

Tongue Carcinoma

Tongue carcinoma is cancer of the tongue, usually squamous-cell cancer, and may cause a persistent sore, lump, pain, or difficulty speaking or swallowing.

Tongue Disease

Any disorder affecting the tongue, such as infection, inflammation, injury, nerve disease, nutritional deficiency, or cancer. Symptoms may include pain, sores, swelling, altered taste, or difficulty speaking or swallowing.

Tongue Neoplasm

An abnormal growth in the tongue that may be non-cancerous, precancerous, or cancerous. A persistent lump, ulcer, pain, bleeding, numbness, or difficulty speaking or swallowing needs examination and may require biopsy.

Tongue Problems

Changes in the tongue, such as pain, swelling, sores, color change, numbness, or difficulty moving or tasting. Causes include injury, infection, inflammation, nutritional deficiency, and other disease.

Tongue Tie

A short or tight band of tissue under the tongue that limits tongue movement. It may interfere with breastfeeding, speech, or eating in some people.

Tongue, Disorders Of

Conditions affecting the tongue, including infection, inflammation, injury, tumors, ulcers, movement problems, and developmental differences. They may cause pain, swelling, altered taste, speech difficulty, swallowing problems, or breathing obstruction.

Tongue-Tie (Ankyloglossia)

Restricted movement of the tongue caused by an

unusually short or tight lingual frenulum, sometimes affecting feeding, speech, or oral hygiene.

Alternate Names:

Ankyloglossia

Tonic Neck Reflex

A normal early-infant reflex, sometimes called the fencing posture. When the infant's head turns to one side, the arm on that side straightens and the opposite arm bends. It usually fades by about six months; marked asymmetry may suggest a neurologic problem.

Alternate Names:

fencer's pose.

Tonic Pupil

A pupil that reacts poorly to light but constricts slowly when focusing on something nearby. It often results from injury to nerves controlling the pupil and should be assessed with other eye and neurologic findings.

Tonic Seizures

Seizures causing sustained stiffening of muscles, usually for seconds to minutes. They may affect one area or the whole body, cause falls or breathing difficulty, and require individualized seizure evaluation.

Tonic-Clonic Seizure

A seizure causing loss of awareness, first with stiffening of the body and then with repeated jerking movements. Sleepiness, confusion, headache, or muscle soreness commonly follows.

Tonics

Preparations traditionally claimed to improve strength, energy, appetite, or general health. Their ingredients, safety, and evidence vary widely, and some may interact with medicines or contain harmful amounts of active substances.

Tonometer

An instrument that measures pressure inside the eye. Eye-pressure readings help detect glaucoma or monitor treatment, but they must be interpreted

with the optic nerve, visual field, cornea, and other findings.

Tonometry

Measurement of pressure inside the eye, usually to assess for glaucoma or monitor its treatment. Methods include applanation, noncontact air-puff, rebound, and electronic devices; results must be interpreted with corneal thickness and the clinical context.

Tonsil

A small mass of immune tissue at the back of the throat. Tonsils help detect germs entering through the mouth and nose but can become enlarged or infected, causing sore throat, difficulty swallowing, or breathing problems.

Alternate Names:

Tonsils

Tonsil Inflammation (Adenoids And Tonsils)

Alternate index label for Adenoids and Tonsils.

Tonsil Stones

Small, hard lumps formed when food particles, mucus, dead cells, and bacteria become trapped and calcify in the folds of the tonsils. They are often harmless but may cause bad breath, throat irritation, or a feeling that something is stuck in the throat. Good oral hygiene and gargling may help; recurrent symptoms, bleeding, or one-sided tonsil enlargement requires examination.

Tonsillar Cancer

Cancer arising in a tonsil, most often from the surface lining cells. It may cause a persistent sore throat, pain felt in the ear, trouble swallowing, a tonsil that is larger on one side, or a lump in the neck.

Tonsillar Neoplasm

A tonsillar neoplasm is an abnormal growth in a tonsil that may be benign or malignant and can cause a persistent sore throat, swallowing difficulty, or neck swelling.

Tonsillectomy

Surgery to remove the tonsils, performed for selected repeated infections, obstructive sleep apnea, or other tonsil disease after the expected benefits and risks are assessed.

Tonsillitis

Inflammation or infection of the tonsils, usually caused by a virus and sometimes by group A streptococcal bacteria. It can cause sore throat, fever, swollen neck glands, painful swallowing, and white patches.

Tonus

The normal resting tension or partial contraction of a muscle or tissue. Abnormally low or high tone can occur with nerve, muscle, brain, spinal-cord, or developmental disorders.

Tooth

A hard mineralized structure anchored in the jaw, used for biting, tearing, chewing, and grinding food.

Tooth - Abnormal Colors

Abnormal tooth color can result from plaque, decay, trauma, fluorosis, medicines, enamel defects, or staining, and the cause determines treatment.

Tooth - Abnormal Shape

Abnormal tooth shape may result from developmental defects, genetic conditions, trauma, wear, or tumors and can affect function, appearance, and eruption.

Tooth Abrasion

Loss of tooth substance caused by external mechanical friction, such as aggressive brushing, abrasive products, or habits, producing grooves, notches, or sensitivity.

Tooth Abscess

A tooth abscess is a localized collection of pus from bacterial infection of the tooth or surrounding tissues, causing pain, swelling, and possible spreading infection.

Tooth Anatomy

A tooth has a hard outer covering called enamel, a supporting layer called dentin, and a living center called the pulp that contains nerves and blood vessels. The root anchors it in the jaw through surrounding tissues.

Tooth Ankylosis

Fusion of a tooth root to alveolar bone through loss of the periodontal ligament, preventing normal eruption and making the tooth appear infraoccluded as neighboring teeth grow.

Tooth Attrition

Wear of tooth surfaces caused by tooth-to-tooth contact, commonly from chewing, bruxism, or malocclusion, producing flattened cusps and possible sensitivity.

Tooth Calcification

Deposition of mineral that forms and hardens enamel, dentin, cementum, and other tooth structures during development; abnormal timing or amount can affect tooth strength and appearance.

Tooth Component

Tooth components include enamel, dentin, cementum, pulp, and supporting tissues, each contributing to tooth strength, sensation, nutrition, and attachment.

Tooth Crowding

Tooth crowding occurs when teeth lack enough space to align normally, often from tooth size, jaw size, eruption pattern, or retained primary teeth.

Tooth Crown

The tooth crown is the visible portion above the gum, covered mainly by hard enamel and containing underlying dentin and pulp.

Tooth Decay

Gradual destruction of tooth structure caused when mouth bacteria make acids from sugars. It can cause sensitivity, pain, holes, infection, and tooth

loss, but fluoride, cleaning, diet, and dental care help prevent progression.

Alternate Names:

Dental caries; cavities

Tooth Decay - Early Childhood

Early-childhood tooth decay is bacterial acid destruction of primary teeth, promoted by frequent sugars, poor brushing, enamel defects, and prolonged bottle or nursing exposure.

Tooth Discoloration

Change in tooth color caused by surface stains, dental decay, trauma, medications, fluorosis, aging, or changes within enamel or dentin.

Tooth Disease

Any disorder affecting a tooth, including decay, infection, cracks, developmental defects, or wear. It may cause pain, sensitivity, discoloration, swelling, or difficulty chewing and should be assessed by a dental professional.

Tooth Enamel

Tooth enamel is the highly mineralized outer covering of the crown that protects dentin and pulp from wear, acid, and bacteria.

Tooth Eruption

The process by which a developing tooth moves through the gum into the mouth. Baby teeth usually appear from about 6 months to 3 years, and permanent teeth from about 6 years onward; timing varies and delays may need assessment.

Tooth Extraction

Removal of a tooth from its socket because of severe decay, infection, periodontal disease, fracture, impaction, orthodontic planning, or another clinical indication.

Tooth Formation - Delayed Or Absent

Delayed or absent tooth formation means teeth develop or erupt later than expected or fail to form, due to local, genetic, endocrine, nutritional, or sys-

temic causes.

Tooth Fracture

A crack or break in a tooth caused by injury, biting hard material, decay, grinding, or weakened enamel. It may expose the inner nerve, causing pain, sensitivity, infection, or loss of the tooth.

Tooth Infection

Infection of the tooth, its pulp, or surrounding tissues, commonly caused by untreated decay, cracks, or gum disease. It may cause toothache, sensitivity, swelling, fever, or drainage. Facial swelling, difficulty swallowing or breathing, or spreading infection requires emergency assessment.

Tooth Loss

Tooth loss is absence of a tooth due to decay, gum disease, trauma, developmental absence, or extraction and can affect chewing, speech, and oral health.

Tooth Luxation

Injury that loosens or moves a tooth without completely knocking it out. The tooth may be pushed inward, outward, or sideways and needs prompt dental assessment to protect the tooth and surrounding tissues.

Tooth Replantation

Replacement of an accidentally displaced or avulsed tooth into its socket, followed by stabilization and dental follow-up.

Tooth Resorption

Breakdown of part of a tooth, usually starting inside the tooth or on its root. It may follow injury, infection, orthodontic treatment, or occur without a known cause and can weaken or destroy the tooth.

Tooth Root

The tooth root anchors a tooth in its socket and contains dentin, cementum, pulp, nerves, and blood vessels beneath the gum.

Tooth Sensibility Testing

Dental tests using cold, heat, electricity, or touch to see whether a tooth's nerve responds. The results do not directly measure blood flow inside the tooth and must be combined with examination and dental imaging.

Tooth Sensitivity

Brief pain caused by cold, heat, sweet or acidic foods, brushing, or touch. It often occurs when protective enamel or gum tissue is worn away and the inner dentin is exposed; persistent sensitivity needs dental assessment.

Tooth, Supernumerary

An extra tooth beyond the normal number that may crowd neighboring teeth, remain trapped, or interfere with normal eruption.

Toothache

Pain arising from a tooth or nearby gum, ligament, bone, or other supporting tissue. Common causes include decay, infection, cracks, trauma, and gum disease.

Toothache Overview

Toothache usually reflects decay, pulp inflammation, fracture, gum disease, abscess, trauma, or referred pain. Dental treatment is needed to correct the cause; facial swelling, fever, difficulty swallowing, or breathing difficulty requires urgent care.

Alternate Names:

Pain Tooth (Toothache Overview)

Toothaches

Toothache is pain arising from decay, pulp inflammation, abscess, gum disease, trauma, cracking, or referred facial pain and requires dental assessment if persistent.

Toothpaste Overdose

Swallowing too much toothpaste can cause stomach upset, vomiting, or diarrhea. Large amounts of fluoride toothpaste can cause serious salt and calcium disturbances, especially in children.

Tophaceous Gout

Advanced, long-lasting gout in which firm lumps of uric-acid crystals build up in and around joints. These lumps, called tophi, may develop on the toes, fingers, ears, or elbows and damage nearby tissue.

Tophus

A firm lump made of uric-acid crystals that collects in or around a joint or in soft tissue after long-standing gout. Tophi can cause pain, inflammation, skin breakdown, deformity, and damage to bone or cartilage.

Topical

Applied directly to skin or a moist lining, usually to act at the treatment site with limited whole-body exposure.

Topical Antibiotics

Antibiotics applied to the skin to treat selected superficial bacterial infections. The choice and duration depend on the organism, site, extent of infection, resistance patterns, and local guidance. Unnecessary or prolonged use can cause irritation and antimicrobial resistance.

Topical Antifungals

Medicines applied to the skin to treat fungal infections such as athlete's foot, ringworm, or jock itch. The product must match the fungus and body site; irritation or treatment failure can occur.

Topical Calcineurin Inhibitors

Non-steroid creams or ointments that reduce immune inflammation in eczema, especially on the face, eyelids, or skin folds. Burning or itching may occur briefly after application.

Topical Corticosteroid Potency

The strength of a steroid cream, ointment, lotion, or gel used on the skin. Mild products are used for sensitive areas or children, while stronger products may be needed briefly for thick or severe inflammation. Choice depends on the diagnosis, body site, age, duration, and risk of skin thinning or other effects.

Topical Retinoids

Vitamin-A-related medicines applied to the skin for acne and some sun-related skin changes. They help prevent blocked pores and increase skin-cell turnover but may cause dryness, irritation, and increased sun sensitivity; pregnancy precautions vary by product.

Topiramate

An antiseizure medicine also used to prevent migraine. It may cause tingling, slowed thinking, weight loss, kidney stones, or acid imbalance and can harm a developing fetus; pregnancy planning and medicine changes require medical advice.

Topoisomerase

An enzyme that temporarily cuts and rejoins DNA to control its twisting during replication, transcription, and chromosome separation.

Topoisomerase II

An enzyme that cuts both DNA strands, passes another DNA segment through the break, and rejoins the strands; it is targeted by some anticancer drugs.

Topoisomerase Inhibitors

Drugs that interfere with DNA topoisomerases; some are antibiotics and others are anticancer medicines, with toxicity depending on the drug and target enzyme.

Topotecan

A topoisomerase-I inhibitor used for selected ovarian, small-cell lung, and cervical cancers; bone-marrow suppression is a major toxicity.

Topotecan Hydrochloride

A salt form of topotecan, a chemotherapy medicine that interferes with DNA copying. It treats selected cancers but can cause dangerously low blood counts, infection, bleeding, diarrhea, nausea, or fatigue.

TORCH Panel

A group of blood tests used when pregnancy or newborn findings suggest infection acquired before birth. TORCH traditionally refers to Toxoplasma, other

infections, rubella, cytomegalovirus, and herpes; individual tests and antibody results need careful clinical interpretation.

TORCH Screen

Testing for selected congenital infections—classically Toxoplasma, Other infections, Rubella, Cytomegalovirus, and Herpes—when fetal or newborn findings suggest an in-utero infection; broad panels require careful interpretation.

Toremifene

A selective estrogen-receptor modulator used for metastatic breast cancer in postmenopausal women; hot flashes and, rarely, dangerous QT prolongation may occur.

Torn ACL

A torn anterior cruciate ligament is a knee injury commonly caused by sudden pivoting, landing, or contact, producing a pop, swelling, instability, and difficulty changing direction. Rehabilitation, bracing, or reconstruction is selected according to activity, associated injury, and goals.

Torn Meniscus

A torn meniscus is a split in the knee's shock-absorbing cartilage caused by twisting or degeneration. Pain, swelling, catching, or locking may occur; physical therapy or arthroscopic treatment depends on tear pattern, symptoms, age, and associated disease.

Alternate Names:

Meniscus Tear

Torpor

A state of greatly reduced activity, alertness, or responsiveness. In a patient, marked or new torpor may signal a serious illness, medicine effect, or metabolic problem.

Torsade De Pointes

A dangerous, fast heart rhythm in which the lower chambers beat in a twisting pattern. It is often linked with a prolonged electrical recovery time, abnormal body salts, certain medicines, or inherited

heart conditions and can cause collapse or cardiac arrest.

Torsades De Pointes

A dangerous, fast heart rhythm arising from the lower chambers and often associated with a prolonged QT interval. It may cause dizziness, fainting, or cardiac arrest and requires urgent treatment and correction of the cause.

Torsemide

A water tablet that helps the kidneys remove salt and water. It treats swelling caused by heart, kidney, or liver disease but can cause dehydration, low blood pressure, or abnormal body-salt levels.

Torsion

Twisting of a body structure around its supporting axis, which may reduce or stop blood flow. Torsion of the testicle, ovary, or bowel can destroy tissue and often requires emergency surgery.

Torsion Dystonia

A movement disorder in which repeated or sustained muscle contractions twist part of the body into abnormal postures. It may affect one area or many areas and can be inherited or develop after illness, injury, or medicine exposure.

Torsion Of The Appendix Testis

Twisting of a tiny leftover structure attached to the upper part of the testicle. It is common in boys before puberty and causes sudden, localized scrotal pain and tenderness; a small blue spot may be visible through the skin. The testicle usually still has normal blood flow. Rest, support, and pain medicine usually allow it to heal, but urgent assessment is needed to exclude testicular torsion.

Alternate Names:

Hydatid of Morgagni Torsion; Appendix Testis Torsion

Torsion Testicle (Testicular Disorders)

Alternate index label for Testicular Disorders.

Torsion, Testicular

Alternate index label; see *Testicular torsion*.

Torticollis

An abnormal neck position caused by muscle tightening, pain, nerve problems, injury, or birth-related conditions. The head may tilt or rotate, and treatment depends on the cause, age, and severity.

Torticollis (Wryneck)

A condition in which the neck muscles pull the head into a tilted or rotated position. It may be present from birth or result from pain, injury, muscle spasm, nerve disease, or another condition.

Alternate Names:

Wryneck

Torticollis, Spasmodic

Alternate index label; see *Cervical dystonia*.

Torulaspora

A genus of yeasts used in food and fermentation; human infection is rare and usually opportunistic.

Torus Fracture

A stable incomplete break in a child's bone caused by compression, often in the wrist after a fall. The bone bulges rather than breaking all the way through; it usually heals well with a splint or cast and follow-up as advised.

Alternate Names:

Buckle Fracture; Metaphyseal Buckle Fracture; Torus Fracture of Radius

Torus Mandibularis

A harmless, usually painless bony lump on the tongue side of the lower jaw, commonly near the premolar teeth. It usually needs no treatment unless it is repeatedly injured or interferes with dentures.

Torus Palatinus

A harmless, usually painless bony lump along the middle of the roof of the mouth. It grows slowly and usually needs no treatment unless it becomes irritated or interferes with eating or dentures.

Total Abdominal Colectomy

Surgery to remove the entire colon through an abdominal incision or keyhole approach. The small intestine may be joined to the rectum or brought through the abdominal wall as an ileostomy, depending on the disease and safety.

Total Anomalous Pulmonary Venous Connection

Alternate index label; see *Total anomalous pulmonary venous return*.

Total Anomalous Pulmonary Venous Return

A birth defect in which the veins returning oxygen-rich blood from the lungs connect to the wrong side of the heart. Babies may have blue skin, rapid breathing, poor feeding, or heart failure. Severe obstruction is an emergency, and surgery is needed to reroute the veins.

Total Artificial Heart

A mechanical device that replaces the pumping function of both ventricles and is used in selected patients with severe biventricular heart failure, usually as a bridge to transplantation. It requires specialized center-based management and carries risks including bleeding, infection, thrombosis, and device malfunction.

Total Body Surface Area

The percentage of the skin affected by a burn or another widespread process. Clinicians estimate it using the person's palm or body-area charts to judge severity and guide treatment.

Total Breech Extraction

A delivery procedure in which a clinician brings out a breech baby by the feet. It is mainly used for a second twin in selected circumstances, not routinely for a single full-term breech baby because of injury risks.

Total Cholesterol

Total cholesterol is the combined cholesterol carried in major blood lipoproteins; cardiovascular risk is

assessed with HDL, LDL, triglycerides, and other factors.

Total Daily Energy Expenditure

The total energy the body uses in one day, including energy needed at rest, digestion, movement, and physical activity. It varies with body size, age, muscle mass, health, and activity level.

Total Haemolytic Complement Test

A blood test that measures whether a group of immune proteins can work together to destroy cells. An abnormal result may suggest immune deficiency, autoimmune disease, infection, inflammation, or a laboratory problem.

Total Hysterectomy

Removal of the uterus and cervix. The fallopian tubes and ovaries are not necessarily removed and should be specified separately, such as salpingectomy or oophorectomy.

Total Hip Arthroplasty

Surgery that replaces a damaged hip joint with artificial parts. It is used for severe arthritis, fractures, or other joint damage when pain and loss of movement continue despite other treatment.

Total Hip Joint Replacement - Revision

Surgery to remove and replace some or all parts of a previous hip replacement that have loosened, worn out, become infected, dislocated repeatedly, or failed. It is more complex than first-time replacement and may require bone reconstruction.

Total Intravenous Anesthesia

General anesthesia given entirely through medicines injected into a vein rather than inhaled gases. It produces controlled unconsciousness during surgery, while trained anesthesia staff continuously monitor breathing, blood pressure, and other vital functions.

Total Iron Binding Capacity

A blood-test estimate of how much iron the protein transferrin can carry. It is interpreted with blood

iron, ferritin, blood counts, and other findings to assess iron deficiency, inflammation, or iron overload; it does not measure stored iron directly.

Total Knee Arthroplasty

Surgery that replaces damaged surfaces of the knee with artificial parts to relieve severe pain and improve movement. It may be recommended for advanced arthritis or major joint damage after other measures are inadequate; rehabilitation and monitoring help restore function and detect complications.

Total Knee Joint Replacement - Revision

Surgery to remove and replace parts of a previous knee replacement because of loosening, wear, infection, instability, stiffness, or persistent pain. It may require specialized implants or bone grafting and has higher risks than the first operation.

Total Knee Replacement

Surgery that replaces damaged surfaces of the knee with artificial parts to relieve severe pain and improve function. Recovery includes exercises and gradual activity; infection, blood clots, stiffness, loosening, persistent pain, or repeat surgery may occur.

Total Laryngectomy

Total laryngectomy removes the entire voice box and creates a permanent opening in the neck for breathing, usually to treat advanced laryngeal cancer.

Total Lesion Glycolysis

A PET-scan measurement combining the amount of active tumor tissue with how much radioactive sugar-like tracer it absorbs. It estimates the tumor's overall activity and may help monitor treatment, but does not determine outlook alone.

Total Lung Capacity

The greatest amount of air the lungs can hold after a full breath in. Lung-volume testing measures it; the amount may be too high when lungs are overinflated or too low when the lungs or chest cannot expand

normally.

Total Pancreatectomy

Total pancreatectomy removes the entire pancreas and causes permanent loss of insulin and digestive-enzyme production, requiring lifelong replacement treatment.

Total Parenteral Nutrition

Nutrition given through a vein when the digestive system cannot absorb enough food. The solution can provide water, sugar, protein, fat, vitamins, and minerals, but requires monitoring for infection, blood-sugar changes, and liver or electrolyte problems.

Total Parenteral Nutrition - Infants

Intravenous nutrition for infants who cannot receive enough nutrients through the gastrointestinal tract; it requires careful monitoring of glucose, electrolytes, liver function, infection, and catheter complications.

Total Proctocolectomy And Ileal-Anal Pouch

Total proctocolectomy with an ileal-anal pouch removes the colon and rectum and creates a pouch from the ileum that is connected to the anus.

Total Proctocolectomy With Ileostomy

Total proctocolectomy with ileostomy removes the colon and rectum and diverts the end of the small intestine through an abdominal stoma.

Total Protein

The combined amount of albumin and other proteins in the blood. A blood test may help assess nutrition, liver or kidney disease, inflammation, or abnormal antibody production.

Total Sleep Time

The total amount of time spent asleep during a defined sleep period or sleep study, excluding periods of wakefulness.

Touch

The sensory perception of contact, pressure, texture, vibration, or movement across the skin. Signals travel through sensory nerves to the spinal cord and brain.

Tourette Disorder

A condition beginning in childhood or adolescence that causes repeated movements and sounds, called tics, for at least one year. Tics may include blinking, shrugging, throat clearing, or words and often change over time.

Tourette Syndrome

A neurodevelopmental disorder characterized by multiple motor tics and at least one vocal tic occurring over at least one year. Tics are sudden, rapid, recurrent, stereotyped movements or vocalizations. They are often preceded by premonitory urges. Tics typically worsen in adolescence and may improve in adulthood.

Alternate Names:

Tourette's

Tourette's

Alternate index label; see *Tourette syndrome*.

Tourette's Syndrome

A neurodevelopmental disorder involving multiple motor tics and at least one vocal tic persisting for more than one year.

Tourniquet

A tight band or device placed around a limb to temporarily reduce blood flow. It can control life-threatening bleeding or provide a bloodless surgical field, but prolonged or incorrect use can damage nerves and tissue.

Towel Clamp

A surgical clamp used to secure drapes or hold materials in place during an operation. Its sharp points must be applied carefully because they can puncture skin or damage underlying tissue.

Townes Syndrome

A rare inherited birth disorder that commonly causes blockage or absence of the anal opening and unusual thumbs. Kidney, heart, hearing, foot, or genital abnormalities may also occur. The specific problems vary, so treatment is planned around each child's findings.

Toxaphene

A persistent organochlorine insecticide mixture that can accumulate in soil, water, and body fat. Significant exposure may overstimulate the nervous system and cause tremors, seizures, liver injury, or other toxic effects.

Toxbase

A clinical poison-information service that helps healthcare professionals assess chemical or medicine exposures. It provides evidence-based advice about expected symptoms, necessary tests, treatment, observation, and urgency for particular substances.

Toxic

Poisonous or capable of harming living cells, tissues, organs, or the whole body. Toxicity depends on the substance, dose, route, duration, and individual susceptibility.

Toxic Dose

The amount of a substance that causes harmful effects. It varies with the substance, route, duration of exposure, age, health, and individual susceptibility.

Toxic Effect

Harmful change caused by a chemical, medicine, poison, radiation, or other exposure. The effect may involve one or more organs and depends on the dose, route, duration, metabolism, and individual susceptibility.

Toxic Encephalopathy

Brain dysfunction caused by a poison, chemical, or medicine. It may cause confusion, unusual behavior, memory or movement problems, seizures, or reduced alertness and needs assessment for the exposure and its effects.

Toxic Epidermal Necrolysis

A rare, life-threatening reaction usually to a medicine in which widespread painful skin and moist body linings blister and peel. It can cause fluid loss, infection, and organ problems and requires emergency specialist care.

Alternate Names:

TEN

Toxic Megacolon

A life-threatening widening of the large intestine during severe bowel inflammation or infection. It may cause severe abdominal swelling and pain, fever, rapid heart rate, dehydration, or shock and requires urgent hospital treatment.

Toxic Metabolic Encephalopathy

Temporary or lasting brain dysfunction caused by a poison, medicine, organ failure, infection, or abnormal body chemistry. It may cause confusion, unusual sleepiness, agitation, seizures, or coma and requires treatment of the underlying problem.

Toxic Nodular Goiter

An enlarged thyroid containing one or more nodules that make too much thyroid hormone. It can cause weight loss, sweating, shaking, fast or irregular heartbeat, anxiety, or heat intolerance and is assessed with blood tests and imaging.

Toxic Shock Syndrome

A rare, life-threatening illness caused by toxins made by certain bacteria. It can cause sudden fever, a widespread rash, low blood pressure, vomiting or diarrhea, and failure of organs such as the kidneys or heart.

Toxic Synovitis

Temporary inflammation of the lining of the hip joint, usually in a child after a viral illness. It can cause hip pain and limping and must be distinguished from a serious joint infection.

Toxicity

The ability of a substance, treatment, or exposure to

cause harmful effects in a living organism. Severity depends on the dose, route, duration, metabolism, target organs, and individual susceptibility; effects may be temporary or permanent.

Toxicity Grade

A standardized rating of how severe a harmful effect is, often used for adverse effects of medicines or cancer treatment. Grades generally range from mild to life-threatening and help guide monitoring and management.

Toxicokinetic Description

An account of how a harmful substance enters the body, is absorbed, distributed, changed by metabolism, and eliminated. These processes determine the concentration and duration of exposure at target organs.

Toxicology

The study of poisons and harmful effects of chemicals, medicines, and other substances. It includes how exposure happens, how the body is affected, how poisoning is recognized, how it can be prevented, and how it is treated.

Toxicology Screen

A test of urine, blood, or another sample for medicines, drugs, alcohol, or poisons. Results must be interpreted with the person's symptoms, timing, and prescribed medicines.

Toxicology Specimen Preservation

Collection, labeling, storage, and transport of biological specimens to preserve analytes and prevent contamination or degradation. Appropriate specimens may include peripheral blood, urine, vitreous humor, bile, liver, hair, or gastric contents depending on the suspected exposure and timing.

Toxidrome

A recognizable group of symptoms and examination findings suggesting poisoning by a particular type of substance. Examples include opioid, stimulant, sedative, and cholinergic patterns; the pattern helps guide urgent treatment but does not identify the

exact poison by itself.

Toxin

A poisonous substance made by a living organism, such as a bacterium, plant, animal, or fungus. Toxins can damage specific tissues or disrupt nerve, muscle, or cellular functions.

Alternate Names:

Biological poison

Toxin Ciguatera (Ciguatera Poisoning)

Alternate index label for Ciguatera Poisoning.

Toxocara

A genus of parasitic roundworms that commonly infect dogs and cats. People acquire infection by swallowing eggs from contaminated soil or food; migrating larvae can cause fever, enlarged organs, or eye or nervous-system disease.

Toxocara Canis

A dog roundworm whose eggs can infect people. Larvae migrate through tissues and may cause toxocariasis, with fever, cough, enlarged liver, eye inflammation, or rarely nervous-system involvement.

Toxocara Cati

A cat roundworm whose eggs can infect people. The larvae may migrate through organs and cause toxocariasis, including fever, cough, enlarged liver, eye inflammation, or rarely neurologic disease.

Toxocariasis

Infection caused by dog or cat roundworm larvae after a person swallows eggs from contaminated soil, food, or hands. The larvae can migrate through the body and cause fever, cough, enlarged liver, eye inflammation, or rarely brain disease.

Toxoid

A bacterial toxin that has been chemically or otherwise inactivated so it cannot cause its usual harm but can still stimulate protective immunity. Toxoids are used in vaccines against diseases such as tetanus and diphtheria.

Toxoid Vaccines

Vaccines made from bacterial toxins that have been detoxified so they cannot cause their usual harm but can train the immune system to neutralize the toxin. Examples protect against tetanus and diphtheria.

Toxoplasma

A genus of intracellular parasites; *Toxoplasma gondii* is the species that infects people. Infection is often mild, but it can seriously affect a fetus or people with weakened immunity, especially the brain and eyes.

Toxoplasma Blood Test

A blood test detecting antibodies or genetic material related to *Toxoplasma gondii* infection, interpreted with symptoms, immune status, pregnancy, and timing of exposure.

Toxoplasma Gondii

A parasite that causes toxoplasmosis. Cats are its main host and can spread infective forms in their stool; people may also acquire it from undercooked meat, contaminated soil, or contaminated food and water.

Toxoplasmosis

An infection caused by the parasite *Toxoplasma gondii*. It is often mild in healthy people but can seriously affect the eyes or brain and can harm an unborn baby or a person with weakened immunity.

Alternate Names:

Chorioretinitis *Toxoplasma* (Toxoplasmosis) Meningoencephalitis *Toxoplasma* (Toxoplasmosis)

Toxoplasmosis (Toxo)

Infection with *Toxoplasma gondii*, often mild in healthy people but potentially severe in pregnancy or in people with weakened immunity.

TPA

Tissue plasminogen activator, a natural clot-dissolving protein or a laboratory-made medicine based on it. In selected emergencies it helps break down clots, but it can cause serious bleeding.

Alternate Names:

Tissue plasminogen activator

TPMT Polymorphism

An inherited difference in the thiopurine methyltransferase enzyme, which breaks down some immune-suppressing medicines. Low enzyme activity can cause dangerously low blood counts unless dosing is reduced or another treatment is chosen.

TPN

TPN, or total parenteral nutrition, supplies nutrients intravenously when the gastrointestinal tract cannot be used adequately.

Tra Gene

A gene involved in sex determination and sexual differentiation in some organisms, especially insects; its function and sequence vary by species.

Trabectedin

A chemotherapy medicine that attaches to DNA and disrupts cancer-cell growth and repair. It is used for selected advanced soft-tissue sarcomas and ovarian cancers and can cause low blood counts, liver injury, nausea, or muscle damage.

Trabecula

A small beam, strut, or partition of tissue, especially within spongy bone. Trabeculae form a supportive internal network that helps bones bear forces while keeping them relatively light.

Trabecular Bone

Light, honeycomb-like bone found inside many bones and near their ends and joints. It supports the body, contains bone marrow, and changes quickly when weight, hormones, medicines, or diseases such as osteoporosis affect bone strength.

Alternate Names:

Spongy bone; cancellous bone

Trabecular Meshwork

A sieve-like tissue near the front of the eye through which the clear fluid called aqueous humor drains.

If the drainage pathway becomes blocked, pressure inside the eye may rise and damage the optic nerve in glaucoma.

Trabeculectomy

An operation for glaucoma that creates a new drainage path for fluid inside the eye. Lowering eye pressure can protect the optic nerve, but bleeding, infection, scarring, or pressure that becomes too low can occur.

Trabeculoplasty

Laser treatment for some forms of glaucoma that improves drainage of the clear fluid inside the eye. Better drainage can lower eye pressure and reduce the risk of further optic-nerve damage.

Trace Elements

Minerals needed in very small amounts for normal enzyme function, blood formation, thyroid activity, and other body processes.

Trace Mineral

A mineral needed in very small amounts for health. Examples include iron, zinc, copper, iodine, and selenium; too little or too much can impair blood formation, thyroid function, immunity, growth, or other body processes.

Tracer

A detectable substance used to follow a biological, chemical, or physical process. Medical tracers can show blood flow, organ function, metabolism, or disease location through imaging or laboratory testing.

Trachea

The windpipe connecting the larynx to the right and left main bronchi. Cartilage rings help keep it open so air can move to and from the lungs.

Tracheal Agenesis With Bronchoesophageal Fistula

A very rare birth defect in which the windpipe is absent or severely underdeveloped and an abnormal passage connects the breathing system with the food

pipe. Newborns have extreme breathing difficulty and need immediate specialist care.

Tracheal Foreign Body

An object stuck in the windpipe. It can cause choking, noisy breathing, severe breathing difficulty, or complete blockage and is an emergency requiring immediate removal by trained clinicians.

Tracheal Rupture

A tear in the windpipe caused by severe injury, surgery, a medical instrument, or pressure inside the airway. It can let air leak into the chest and cause breathing difficulty, infection, or life-threatening complications.

Tracheal Stenosis

Narrowing of the windpipe, often after prolonged breathing-tube use, tracheostomy, injury, or inflammation. It may cause worsening breathlessness, noisy breathing, or wheezing and can require airway procedures or surgery.

Tracheitis

Inflammation or infection of the windpipe. Mild cases may occur with a viral illness, but bacterial infection can rapidly block a child's airway and cause high fever, a harsh cough, noisy breathing, and severe illness. It requires emergency airway and antibiotic treatment.

Trachelectomy

Trachelectomy is surgical removal of the cervix, sometimes with nearby tissue, used in selected cervical cancers or other conditions.

Tracheobronchomalacia

Weakness of the windpipe or larger airways that allows them to collapse during breathing. It may cause noisy breathing, chronic cough, repeated infections, or difficulty clearing mucus and may be present from birth or develop later.

Tracheobronchomegaly

Unusual widening of the windpipe and the main

airways, usually because their supporting tissue is weak. It can cause a weak cough, breathlessness, repeated chest infections, and difficulty clearing mucus.

Tracheoesophageal Fistula

An abnormal opening between the windpipe and food pipe, usually present from birth. It can let milk enter the lungs, causing coughing, choking, blue coloring, repeated chest infections, or poor growth, and usually needs surgery.

Tracheoesophageal Fistula And Esophageal Atresia Repair

Surgery in a newborn to close an abnormal connection between the windpipe and food pipe and join separated parts of the food pipe when possible. The operation is urgent; breathing problems, leakage, narrowing, reflux, and feeding difficulties may persist.

Tracheomalacia

Weakness of the windpipe wall that allows it to narrow or collapse during breathing out. It may cause noisy breathing, cough, breathlessness, repeated infections, or difficulty clearing mucus and may be present from birth or develop later.

Tracheomalacia - Acquired

Acquired tracheomalacia is weakening of the tracheal wall after injury, inflammation, compression, or prolonged ventilation, causing airway collapse and breathing symptoms.

Tracheomalacia - Congenital

Congenital tracheomalacia is weakness of the infant tracheal cartilage causing dynamic airway collapse, noisy breathing, cough, or recurrent respiratory symptoms.

Tracheostomy

A surgically created opening through the front of the neck into the windpipe, usually with a tube to keep the airway open. It may provide long-term breathing support or bypass an upper-airway blockage.

Tracheostomy Care

Care of a breathing tube and neck opening, including cleaning the skin and tube, suctioning mucus when needed, checking airflow, and keeping emergency equipment nearby. Blockage, bleeding, infection, or accidental tube displacement requires prompt attention.

Tracheostomy Tube

A tube inserted through a tracheostomy opening to maintain access to the airway and permit breathing, suction, or mechanical ventilation.

Tracheostomy Tube - Eating

Eating and drinking with a tracheostomy tube requires swallowing assessment and individualized precautions because aspiration risk depends on airway protection, secretions, and the underlying illness.

Tracheostomy Tube - Speaking

Speech with a tracheostomy tube may be supported by cuff deflation, a speaking valve, or other methods when airflow and airway protection are adequate; specialist assessment is required.

Tracheotomy

An operation that creates an opening through the neck into the trachea. The opening is called a tracheostomy.

Trachoma

A chronic eye infection caused by *Chlamydia trachomatis* that can scar the conjunctiva and cornea.

Trachyonychia

Rough, thin, ridged nails with many tiny pits, sometimes called twenty-nail dystrophy when most or all nails are affected. It may occur on its own or with psoriasis, alopecia areata, eczema, or lichen planus.

Traction

A controlled pulling force used to align or immobilize a fracture, reduce a dislocation, or relieve pressure on tissues. It may be applied manually, with weights, or through a medical device.

Tractional Retinal Detachment

Separation of the light-sensing retina from the back of the eye when bands of scar tissue pull it away. It commonly occurs in advanced diabetic eye disease and can cause vision loss.

Tractotomy

Surgery that cuts a selected nerve pathway in the brain or spinal cord, usually to reduce severe pain or another difficult neurologic symptom. It can cause permanent changes in sensation or movement.

Train-Of-Four Monitoring

A test used during anesthesia that gives four brief electrical signals to a nerve and measures the muscle responses. It shows how much a muscle-relaxing medicine remains active and whether muscle strength has recovered.

Trained Immunity

A lasting change in the body's first-line immune response after an earlier infection or exposure. The later response may be stronger or altered, although this process does not provide the same specific protection as ordinary immune memory.

Trajectory

The path a projectile follows in flight and, in wound ballistics, the course it traverses through tissue from entrance to exit or rest. Internal trajectory is reconstructed from entrance and exit defects, the organ track, recovered fragments, and clothing damage; angles disclose shooter position and victim posture.

TRALI

A rare, life-threatening lung reaction that develops during or within several hours after a blood transfusion. It causes sudden breathing difficulty and low blood oxygen from fluid leaking into the lungs, without being caused by excess fluid in the circulation.

Tram-Track Appearance

A double-line pattern seen under a microscope in some kidney biopsies. It reflects thickening or splitting of the kidney's filtering membranes and can

occur in certain types of glomerulonephritis.

Trance

An altered state of awareness with unusual attention, responsiveness, or sense of surroundings. It may occur during hypnosis, seizures, intoxication, sleep-related events, or psychological states and requires context for interpretation.

Tranexamic Acid

A medicine that helps control bleeding by preventing the body from breaking down blood clots too quickly. It is used for selected heavy bleeding, including some surgical, injury-related, menstrual, and postpartum bleeding.

Trans Fat

An unsaturated fat containing at least one trans-configured double bond. Industrial trans fats, formerly common in partially hydrogenated oils, can raise LDL cholesterol, lower HDL cholesterol, and increase cardiovascular risk; small amounts also occur naturally in some meat and dairy foods.

Trans Fatty Acid

An unsaturated fat with a trans shape, often formed during industrial processing and associated with higher heart disease risk.

Alternate Names:

Trans fat

Transabdominal Cerclage

Placement of a strong band around the upper cervix through abdominal surgery, usually before pregnancy or early in pregnancy, to reduce the risk of premature opening in severe cervical weakness. It requires cesarean birth and carries surgical, bleeding, infection, and pregnancy risks.

Alternate Names:

TAC; Cervico-Isthmic Cerclage

Transabdominal Scan

An ultrasound scan performed by moving the probe over the abdomen. It can examine pelvic organs and, during pregnancy, assess the baby's growth

and anatomy, the placenta, and the amount of fluid around the baby.

Transaminase, Serum Glutamic Pyruvic

An older name for alanine aminotransferase, or ALT, a substance measured in blood. A high level often suggests injury to liver cells, although other causes are possible.

Transaminitis

Higher-than-normal levels of liver-related enzymes in the blood. This may indicate liver-cell injury, but the result does not identify the cause; medicines, infection, alcohol, fatty liver, and muscle injury can contribute.

Transarterial Chemoembolization

A treatment in which a catheter delivers chemotherapy and blocks blood flow to a liver tumor. It can slow or shrink selected tumors that cannot be removed surgically, but may cause pain, fever, liver injury, or other complications.

Transbronchial Biopsy

Removal of a small lung-tissue sample using a camera passed through the airways. It can investigate infection, inflammation, cancer, or rejection after transplant; bleeding and a collapsed lung are possible complications.

Transcatheter Aortic Valve Replacement

Replacement of a narrowed aortic heart valve using a folded artificial valve delivered through a catheter, usually from an artery in the groin. It avoids open-heart surgery for selected people, but bleeding, stroke, blood-vessel injury, rhythm problems, leakage, or need for a pacemaker can occur.

Alternate Names:

TAVR; TAVI; Transcatheter Aortic Valve Implantation

Transcatheter Edge-To-Edge Repair

A catheter procedure that joins parts of the mitral-valve leaflets to reduce leakage. It may help selected people with severe symptoms who are not good candidates for open surgery; bleeding, infection,

stroke, valve narrowing, residual leakage, or device problems are possible.

Alternate Names:

TEER; MitraClip Procedure; Percutaneous Mitral Valve Repair

Transcervical Foley Catheter For Cervical Ripening

A soft balloon catheter placed through the cervix and inflated to help soften and open the cervix before labor induction. It is a mechanical method and may cause cramping, bleeding, infection, or accidental rupture of the membranes.

Transcervical Resection Of Endometrium

A camera-guided procedure through the cervix that removes or destroys the uterine lining to reduce heavy menstrual bleeding. It is not suitable for future pregnancy and requires careful evaluation beforehand.

Transcranial Doppler

An ultrasound test that measures blood-flow speed in arteries inside the skull. It can help detect narrowed vessels, spasm after brain bleeding, or increased stroke risk in selected conditions.

Transcranial Doppler Scanning

An ultrasound test measuring blood-flow speed and direction in major arteries inside the skull. It can help assess narrowing, blockage, vasospasm, emboli, or circulation after certain brain injuries.

Alternate Names:

Transcranial Doppler; TCD

Transcranial Doppler Ultrasound

An ultrasound test that measures blood-flow speed and direction in major arteries inside the skull. It can help assess stroke risk, vessel narrowing, bleeding-related spasm, and blood flow changes.

Transcription

The process by which a cell copies information from DNA into RNA. The RNA copy can direct protein production or help control cell activity.

Transcription Factor

A protein that attaches to DNA and increases or decreases the copying of selected genes into RNA. Transcription factors help control cell growth, development, specialization, and responses to hormones or injury.

Transcutaneous Electrical Nerve Stimulation

TENS: low-voltage electrical pulses delivered through electrodes on the skin to reduce pain for some people. It does not treat every cause of pain and should be used according to clinical guidance.

Alternate Names:

TENS

Transdermal

Delivering a medicine through the skin, usually with a patch or gel, so it enters the bloodstream gradually. The medicine, dose, skin condition, heat, and application site affect how much is absorbed.

Transfer Training

Teaching a person how to move safely between places, such as from a bed to a chair or toilet. Training may include correct body position, assistance from another person, a transfer board, or lifting equipment.

Transferase

An enzyme that moves a chemical group from one molecule to another. Transferases help cells make and break down substances, and some transferase levels in blood help identify tissue injury or disease.

Transference

Feelings or expectations that a patient developed in an earlier important relationship and now directs toward a therapist or another healthcare professional. Discussing this pattern can help explain relationship difficulties during therapy.

Transferrin

A blood protein made mainly by the liver that carries iron to tissues. Its level and the amount of iron

it carries help assess iron deficiency, inflammation, and iron overload when interpreted with other blood tests.

Transferrin Saturation

The percentage of transferrin's iron-binding sites occupied by iron. It is calculated from iron and total iron-binding capacity and helps evaluate iron deficiency and iron overload.

Alternate Names:

TSAT

Transfusion

Delivery of donated blood or blood components into a person's bloodstream. It can replace lost red cells, platelets, or clotting factors but carries risks including reactions, infection, fluid overload, and lung injury.

Transfusion Of Neonate

Administration of a blood product to a newborn for clinically significant anemia, bleeding, or another specific indication. The decision, product characteristics, volume, and rate depend on the infant's symptoms, laboratory results, gestational age, and local transfusion protocol.

Transfusion Reaction

A harmful response to donated blood or blood components. It may cause fever, chills, rash, breathing difficulty, pain, low blood pressure, or destruction of red cells. The transfusion must be stopped and the person assessed urgently if a reaction is suspected.

Transient Familial Hyperbilirubinemia

An inherited tendency for bilirubin, a yellow waste product, to rise temporarily in the blood and cause episodes of jaundice. It usually reflects slower processing by the liver without major liver injury and may worsen during illness, fasting, or stress.

Transient Global Amnesia

A sudden temporary inability to form new memories, often with repeated questions and uncertainty about recent events. The person remains awake and knows who they are; symptoms usually resolve within 24

hours, but urgent assessment is needed to exclude stroke or seizure.

Alternate Names:

Amnesia, Transient Global

Transient Hypogammaglobulinemia Of Infancy

A temporary delay in an infant's production of antibodies, the proteins that help fight infection. Some infants have repeated ear, sinus, or chest infections, but antibody levels usually improve as the immune system matures.

Alternate Names:

TGA

Transient Ischaemic Attack

A brief episode of stroke-like symptoms caused by temporarily reduced blood flow to the brain, eye, or spinal cord without lasting tissue damage. Weakness, numbness, speech trouble, or vision loss needs emergency assessment because stroke may follow.

Alternate Names:

TIA

Transient Ischaemic Attacks Or Episodes

Short episodes of weakness, numbness, speech trouble, vision loss, or other neurological symptoms caused by temporarily reduced blood flow to the brain. Symptoms resolve without lasting brain injury, but a TIA is an emergency warning of possible stroke.

Transient Ischemic Attack

A temporary episode of stroke-like symptoms caused by reduced blood flow to the brain, eye, or spinal cord without lasting tissue damage. It can be an early warning of a possible stroke even when symptoms resolve.

Transient Ischemic Attack (TIA, Mini-Stroke)

Alternate index label for Transient Ischemic Attack (TIA, Mini-Stroke).

Transient Pain

Pain that is brief and resolves rather than continuing or recurring persistently. Even brief pain may need assessment if it is severe, recurrent, or associated with warning symptoms.

Transient Synovitis

Temporary inflammation of the hip lining, usually in children ages 3 to 8 and often after a viral illness. It causes hip, groin, thigh, or knee pain and a limp, but usually little fever or illness. Rest and pain medicine generally help. Doctors must distinguish it from a dangerous joint infection, especially when fever, severe pain, or refusal to walk is present.

Alternate Names:

Toxic Synovitis; Irritable Hip; Transient Synovitis of the Hip

Transient Tachypnea - Newborn

Temporary rapid breathing in a newborn caused by delayed clearance of fetal lung fluid, usually beginning soon after birth and improving within one to three days with supportive care.

Transient Tachypnea Of The Newborn

Temporary rapid breathing after birth, usually caused by delayed clearance of fetal lung fluid. It is more common after caesarean birth and typically improves within one to three days with supportive care.

Transillumination

Transillumination shines light through a body part or structure to reveal fluid, cavities, or other differences in tissue density.

Transition To Adulthood

The process of moving from child-focused to adult healthcare, education, work, and community services. Planning helps young people develop self-management skills and maintain continuity of care.

Transitional Care

Coordinated healthcare when a person moves between settings or levels of care, such as from hospital

to home or from children's to adult services. It includes sharing information, arranging medicines and follow-up, and preventing avoidable complications.

Transitional Epithelium

A stretchable protective lining in the kidneys' drainage areas, ureters, bladder, and part of the urethra. It allows these organs to expand as urine collects without allowing urine to leak into surrounding tissue.

Alternate Names:

Transjugular Intrahepatic Portosystemic Shunt

Transjugular Intrahepatic Portosystemic Shunt

A channel created through the liver between veins that bring blood to it and veins that carry blood away. It lowers high pressure caused by advanced liver disease and can reduce repeated bleeding or severe abdominal fluid buildup; confusion and shunt blockage are possible.

Alternate Names:

Translational Medicines

Translation

The cellular process of making a protein from instructions carried by messenger RNA. A ribosome reads the message in order, while transfer molecules bring the matching amino acids. The process starts, builds the chain, and stops at a signal; the finished chain folds into a working protein.

Translation Initiation

The first stage of protein synthesis, when a ribosome recognizes messenger RNA, selects the start codon, and assembles the initiator transfer RNA and ribosomal subunits.

Translocation

Movement from one place to another. In genetics, it means that a piece of one chromosome moves to another chromosome or location, which can alter genes and sometimes cause cancer or inherited disease.

Transmembrane Transport

Movement of salts, nutrients, medicines, or other substances across a cell's outer membrane. Channels and carrier proteins may allow passage directly, while pumps use energy to move substances against a concentration difference.

Transmission

Passage of an infection, signal, genetic trait, force, or substance from one source to another; in infectious disease, route, dose, and host susceptibility determine risk.

Transmural Infarction

A heart attack that damages the full thickness of part of the heart muscle because blood flow has been blocked for a prolonged period. It can weaken the heart and cause dangerous complications.

Transplacental

Passing from the pregnant person's blood across the placenta to the fetus, or in the opposite direction. Antibodies, medicines, chemicals, and some infections can cross the placenta, with effects that depend on the substance and timing.

Transplant

Transfer of cells, tissue, or an organ from one site or person to another to replace damaged tissue or restore function. Donor matching, rejection prevention, infection risk, and long-term follow-up depend on the type of transplant.

Transplant Immunology

The study of how the immune system reacts to donated organs, tissues, or cells. Blood-group and tissue matching, antibody testing, and immunosuppressive medicines help reduce rejection, but they also increase infection risk and require regular monitoring of the transplant and medicine effects.

Transplant Rejection

An immune reaction in which the body attacks a donated organ or tissue. It may occur soon after transplantation or later and can reduce organ function; regular monitoring and medicines help prevent

or treat it.

Transplant Surgery

An operation that replaces a failing organ or tissue with a donated one. It requires careful donor and recipient assessment, medicines to reduce rejection, infection prevention, and long-term follow-up.

Transplantation

Transfer of an organ, tissue, or cells from a donor to a recipient to replace or restore failing function. Care includes donor matching, surgery, prevention of rejection, infection monitoring, and long-term follow-up.

Alternate Names:

Transplant

Transplantation Conditioning

Treatment given before some stem-cell transplants to suppress the recipient's bone marrow and immune system and make room for donated cells. It may use chemotherapy, radiation, or both and can cause infection, bleeding, infertility, or organ injury.

Transport

Movement of a substance, cell, signal, or person from one place to another. In healthcare, the term may describe movement through the body, across a cell membrane, or safe transfer between care settings.

Transport Protein

A protein that carries a substance through body fluids or across a cell boundary. It helps control how nutrients, medicines, salts, and waste products are absorbed, distributed, and used.

Transport Vesicle

A transport vesicle is a membrane-bound carrier that moves proteins, lipids, or other cargo between cellular compartments.

Transposition Of Great Vessels

Alternate index label; see *Transposition of the great arteries*.

Transposition Of The Great Arteries

A heart defect present at birth in which the two main arteries are connected to the wrong lower chambers. Blood returning to the body may not receive oxygen; newborns usually need urgent treatment and surgery.

Alternate Names:

Transposition Of Great Vessels

Transposons

Movable pieces of genetic material that can shift between locations in a cell's DNA. In bacteria, they may carry antibiotic-resistance genes and help resistance spread between bacteria.

Transrectal Ultrasonography

Ultrasound imaging of the prostate and nearby structures using a probe placed in the rectum. It can guide biopsies and assess size or abnormalities, but may cause discomfort, bleeding, or infection.

Alternate Names:

TRUS

Transtracheal

Transtracheal means passing through or relating to the trachea, such as a catheter, oxygen delivery route, or diagnostic procedure.

Transthyretin Amyloidosis

A disease in which abnormal transthyretin protein builds up in organs, especially the heart or nerves. It may be inherited or develop with age without an inherited gene change.

Alternate Names:

ATTR amyloidosis; ATTR-CM; Transthyretin-related amyloidosis

Transtympanic

Transtympanic means passing through the tympanic membrane, such as medicine delivered into the middle ear or a procedure crossing the eardrum.

Transudate

A thin fluid with little protein that leaks from blood vessels because of pressure or blood-protein changes

rather than inflammation. It may collect around organs, such as the lungs, heart, or abdomen.

Transudation

Movement of relatively watery, low-protein fluid out of blood vessels when pressure or blood-protein levels change. This process can cause some types of swelling or fluid collection around organs.

Transudative Pleural Effusion

A buildup of relatively thin fluid around a lung caused by changes in blood pressure or protein balance, most often heart failure. Treatment focuses on the underlying condition and drainage may be needed if breathing is affected.

Transurethral Incision Of The Prostate

An operation making small cuts in the prostate through an instrument passed in the urethra. It can improve urine flow in selected people with prostate enlargement while preserving most prostate tissue.

Alternate Names:

TUIP

Transurethral Microwave Thermotherapy

A treatment for some people with an enlarged prostate in which a catheter uses microwave heat to shrink or destroy prostate tissue blocking urine flow. It is less commonly used now and can cause pain, bleeding, infection, or temporary urinary problems.

Alternate Names:

TUMT

Transurethral Needle Ablation

A treatment using needles passed through the urethra to deliver radiofrequency heat into enlarged prostate tissue. The heat destroys selected tissue and may improve urine flow, but relief develops gradually and complications can occur.

Alternate Names:

TUNA

Transurethral

Performed through the urethra, the tube that carries urine out of the body. Instruments passed through

it can examine the urinary tract, remove tissue, treat blockage, or place a device.

Transurethral Resection

Removal of tissue through an instrument passed along the urethra, commonly for prostate or bladder disease.

Transurethral Resection Of The Prostate

An endoscopic operation that removes obstructing prostate tissue to improve urine flow in selected people with benign prostatic enlargement. Alternatives and indications depend on symptoms, prostate size, complications, and patient preference.

Transvaginal

Performed through the vagina, commonly describing an ultrasound examination or a procedure involving the uterus, cervix, ovaries, or other pelvic structures.

Transvaginal Ultrasound

Transvaginal ultrasound uses a covered probe in the vagina to produce images of the uterus, ovaries, cervix, pregnancy, or nearby pelvic structures.

Transverse

Running across or perpendicular to the long axis or midline.

Transverse Colon

The section of the large intestine that crosses the upper abdomen from the right side to the left. It absorbs water and moves partly digested food toward the descending colon.

Transverse Lie

A position in which the baby lies sideways across the uterus rather than head-down or bottom-down. A shoulder or arm may be closest to the birth canal; if the position persists near labor, vaginal birth is usually not possible and cesarean birth is recommended.

Transverse Myelitis

Inflammation across part of the spinal cord that

can develop over hours or days and cause weakness, numbness, pain, or problems controlling the bladder or bowel. It needs prompt evaluation because treatment may limit lasting disability.

Transverse Plane

An imaginary horizontal slice that divides the body or an organ into upper and lower parts. Medical scans often use this view to show structures at a particular level.

Transverse Vaginal Septum

A congenital band of tissue crossing the vagina and partly or completely blocking it. A complete blockage can cause absent periods and monthly pelvic pain after puberty; imaging confirms the condition, and surgery may create an open vaginal passage.

Transversus Abdominis Muscle

The deepest broad muscle of the abdominal wall. It tightens the abdomen, supports the spine, and helps with coughing, breathing out, lifting, and other movements that increase pressure inside the abdomen.

Transvestic Disorder

A mental-health diagnosis involving repeated sexual arousal from cross-dressing that causes significant distress, interferes with life, causes harm, or involves another person without consent. Cross-dressing alone is not a disorder and is different from gender identity.

Tranylcypromine

An antidepressant that increases certain brain chemicals by blocking their breakdown. It can interact dangerously with many medicines and foods high in tyramine, so careful prescribing and a medicine-free waiting period before or after some treatments are required.

TRAP Sequence

A rare complication of an identical-twin pregnancy in which one twin has a severely malformed heart or no heart and receives blood from the other twin through shared placental vessels. The healthy twin

may develop heart strain and needs specialist monitoring.

Trapezium (Multangulum Majus)

A small wrist bone at the base of the thumb. It forms the thumb's highly mobile joint with the hand and can be affected by fractures or arthritis that causes pain during gripping and pinching.

Trapezius Muscle

A large triangular muscle across the upper back and neck. It helps lift, lower, and draw the shoulder blades backward and supports movement and stability of the neck and shoulders.

Trapezoid

A small wedge-shaped wrist bone between the trapezium and capitate. It joins mainly with the index-finger metacarpal and helps stabilize the thumb-side of the wrist; fractures are uncommon.

Trapezoid Bone

A small distal-row carpal bone between the trapezium and capitate that articulates mainly with the index metacarpal and helps stabilize the radial side of the hand.

Trastuzumab

Trastuzumab is a monoclonal antibody targeting HER2 used for HER2-positive breast, gastric, and other cancers; infusion reactions and potentially reversible cardiomyopathy require cardiac monitoring.

Trauma

Physical injury caused by an outside force, or the mental response to a deeply distressing event. Physical trauma may damage organs, bones, or blood vessels; psychological trauma can affect emotions, sleep, and daily life.

Trauma (Vascular)

Injury to a blood vessel caused by blunt force, penetrating injury, fracture, medical procedures, or other mechanisms.

Alternate Names:

Vascular trauma; blood-vessel injury

Trauma Center

A hospital organized to provide rapid, coordinated care for seriously injured people. Trauma centers differ in available specialists, equipment, surgery, intensive care, and ability to treat complex injuries.

Trauma Surgery

Emergency surgery and other immediate care for seriously injured people. The team first checks and protects breathing, the neck and spine, circulation, brain function, and the whole body, while controlling bleeding and repairing damaged organs.

Traumatic Amputation

Loss of a body part caused by an injury. It can cause life-threatening bleeding, shock, infection, and lasting disability; emergency care controls bleeding, treats damaged tissue, preserves the separated part when possible, and begins rehabilitation and psychological support.

Traumatic Bleb

A fragile, fluid-filled area that forms after glaucoma drainage surgery and is damaged by an injury. It may leak or become infected and can cause dangerously low eye pressure or vision problems.

Traumatic Brain Injury

A change in brain function or brain damage caused by a blow, jolt, shaking, or penetrating injury. Symptoms range from brief confusion or headache to lasting disability, loss of consciousness, seizures, or life-threatening bleeding.

Alternate Names:

TBI

Traumatic Events And Children

Traumatic events can affect children's safety, behavior, sleep, learning, and emotions; supportive caregivers, stable routines, and professional assessment help identify persistent trauma responses.

Traumatic Grief

Alternate index label; see *Complicated grief*.

Traumatic Injury

Damage to the body caused by an external force, such as a fall, collision, blow, cut, burn, or penetrating object. Injury may affect skin, bones, organs, blood vessels, nerves, or the brain.

Traumatic Injury Of The Bladder And Urethra

Damage to the bladder or urethra caused by an accident, surgery, or penetrating injury. Blood in the urine, inability to urinate, pelvic pain, or shock requires urgent evaluation.

Traumatic Shock

A life-threatening failure of blood flow after serious injury, often because of major bleeding, but sometimes because of heart damage or another cause. It can cause pale clammy skin, confusion, rapid breathing, and collapse and requires immediate treatment.

Traumatic Spondylolisthesis Of The Axis (Hangman'S Fracture)

A break through the second neck bone caused by forceful bending or straightening of the neck, often in a crash or fall. It can make the spine unstable and may injure the spinal cord, so urgent immobilization and imaging are needed.

Alternate Names:

hangman's fracture

Traumatology

The medical field concerned with physical injuries and their consequences. It includes emergency assessment, control of bleeding, repair of damaged tissues, prevention of complications, surgery, and rehabilitation.

Traumeel S

Traumeel S is a multi-ingredient complementary product marketed for pain and inflammation; evidence, formulation, and safety depend on the product and it should not replace needed care.

Travel Sickness (Motion Sickness / Kinetosis)

Nausea, dizziness, sweating, or vomiting caused by conflicting signals from the eyes and balance organs during travel or other motion. Looking toward the horizon, fresh air, gradual exposure, and suitable preventive medicines may help; severe or persistent symptoms need assessment.

Travelers' Diarrhea

Acute diarrhea occurring during or shortly after travel, usually caused by contaminated food or water and commonly involving bacterial, viral, or parasitic infection.

Travoprost

Travoprost is a prostaglandin analogue eye drop that increases uveoscleral outflow and lowers intraocular pressure in glaucoma or ocular hypertension; iris pigmentation and eyelash changes may occur.

Trazodone

A prescription medicine used mainly for depression and sometimes for sleep problems. It can cause drowsiness, dizziness, low blood pressure, falls, and rare prolonged painful erection; dangerous reactions are more likely with certain medicines or substances.

Trazodone Overdose

Poisoning from taking too much trazodone. It can cause severe sleepiness, vomiting, low blood pressure, seizures, abnormal heart rhythms, or a prolonged painful erection.

Trb Gene

A gene involved in biological processes that vary by species; its precise identity and function must be interpreted from the organism and gene nomenclature used.

Trd Gene

The gene encoding the delta chain of the T-cell receptor in humans, contributing to gamma-delta T-cell antigen recognition.

Treacher Collins Syndrome

An inherited condition affecting development of the face and skull. It may cause small cheekbones and jaw, downward-slanting eyes, malformed ears, and hearing loss; breathing or feeding may also be difficult. Intelligence is usually normal. Care may include airway support, hearing treatment, and reconstructive surgery.

Treacle

A thick sugar syrup with little current medical use. Older medical writing sometimes used the word for a sweetened mixture or supposed antidote; it is not a modern treatment or diagnosis.

Treat-To-Target Strategy

A treatment approach in which care is checked and adjusted regularly toward a clear goal, such as no disease activity, controlled blood pressure, or a safe blood-glucose range. The goal and changes are agreed with the patient and based on ongoing monitoring.

Treatment-Resistant Depression

Depression that does not improve adequately after appropriate trials of standard treatments. It requires reassessment of diagnosis, adherence, comorbidity, and treatment options.

Trematoda

A class of parasitic flatworms called flukes; human infections include schistosomiasis and liver or lung fluke disease.

Tremelimumab

A monoclonal antibody that blocks CTLA-4 and enhances T-cell activity; it is used with durvalumab for selected unresectable hepatocellular carcinoma and other cancers, with immune-related adverse effects possible.

Tremor

An involuntary, rhythmic shaking of a body part. It may occur at rest, while holding a position, or during movement and can result from medicines, caffeine, anxiety, essential tremor, Parkinson disease,

or other neurologic or metabolic conditions.

Trench Fever

A louse-borne infection caused by *Bartonella quintana*, causing recurring fever, headache, weakness, and bone pain.

Trench Foot

An injury caused by keeping feet cold and wet for a long time. It can cause numbness, swelling, pain, skin color changes, blisters, infection, and tissue death without gradual warming and medical care.

Trench Mouth

Trench mouth is acute necrotizing ulcerative gingivitis causing painful bleeding gums, foul breath, and ulceration, often associated with plaque, smoking, stress, or poor nutrition.

Trendelenberg Position

A position in which the patient lies supine with the feet higher than the head; clinical uses and risks depend on context.

Trendelenburg

Trendelenburg position places the body supine with the feet higher than the head; its use is procedure-specific and may affect breathing, pressure, and circulation.

Trendelenburg Position

A position lying on the back with the head and upper body lower than the feet. It is used for selected procedures but can worsen breathing, pressure in the head, or blood pressure in some patients.

Treosulfan

An alkylating chemotherapy drug used in conditioning before allogeneic hematopoietic stem-cell transplantation; infection, mucositis, infertility, and organ toxicities may occur.

Trephine

A circular cutting instrument used to remove a disk of tissue or bone, such as during a bone-marrow

biopsy or corneal procedure.

Treponema

A group of spiral-shaped bacteria, including *Treponema pallidum*, which causes syphilis. Different species can live in people or the environment, and identifying the species helps determine whether disease and treatment are present.

Treponema Pallidum

The spiral-shaped bacterium that causes syphilis. It spreads mainly through contact with an infectious sore during sex and can cross the placenta to an unborn baby. Untreated infection can later affect the skin, nerves, eyes, heart, or brain.

Treponema Pallidum Infection

Infection with the bacterium *Treponema pallidum*, which causes syphilis and can affect the skin, nervous system, cardiovascular system, and other organs.

Treponemal Infections

Infections caused by spiral-shaped *Treponema* bacteria. They include syphilis and related diseases and may affect the skin, nerves, heart, eyes, or other organs; diagnosis usually combines clinical findings with blood or lesion tests.

Trepopnea

Breathlessness that occurs or becomes worse when lying on one side but not the other. It can result from disease affecting one lung, fluid around a lung, or pressure from a nearby mass and should be assessed with other symptoms.

Tretinoin

A vitamin-A-related medicine applied to the skin for acne and sun-related skin changes, or taken by mouth for a type of acute leukemia. Skin irritation is common; oral treatment can cause serious fluid buildup, fever, and breathing problems.

TRG Gene

A gene encoding the gamma chain of the T-cell receptor, contributing to gamma-delta T-cell devel-

opment and antigen recognition.

Triiodothyronine

The thyroid hormone T3, which contains three iodine atoms and has stronger biological activity than T4. It helps regulate metabolism, heart rate, temperature, and growth.

Triage

Sorting patients by urgency and resource needs so those at greatest risk receive timely care.

Trial Of Labor After Cesarean

An attempt to give birth vaginally after a previous cesarean delivery. Whether it is appropriate depends on the prior uterine incision, obstetric history, current pregnancy, facility resources, and the person's preferences. Counseling includes the possibility of successful VBAC, repeat cesarean delivery, and uterine rupture.

Triamcinolone

A corticosteroid medicine used on skin, by injection, or in other forms to reduce inflammation and itching.

Triamcinolone Acetonide

A synthetic corticosteroid used topically, by injection, or in other preparations to reduce inflammation; prolonged or extensive use can cause local and systemic steroid effects.

Triamterene

A water tablet that helps the kidneys remove salt and water while conserving potassium. It is used for high blood pressure or swelling, but can cause dangerously high potassium, kidney problems, or kidney stones.

Triazenes

A group of chemical compounds that includes some chemotherapy medicines. Their effects and risks depend on the specific drug; possible problems include nausea, low blood counts, infection, and damage to other organs.

Triaziquone

An older alkylating anticancer drug that cross-links DNA; its clinical use is limited by toxicity and availability.

Triazolam

Triazolam is a short-acting benzodiazepine hypnotic for short-term insomnia; amnesia, falls, dependence, respiratory depression, and dangerous interactions with opioids or other sedatives can occur.

Triazole

A five-membered nitrogen-containing chemical ring found in several antifungal medicines and other drugs; clinical effects depend on the specific compound.

Triazophos

An organophosphate insecticide that blocks acetylcholinesterase, allowing nerve signals to remain active. Significant exposure can cause sweating, vomiting, diarrhea, small pupils, breathing difficulty, weakness, seizures, or life-threatening poisoning.

Triceps

A muscle with three heads, especially the triceps brachii at the back of the upper arm. It straightens the elbow and helps stabilize the shoulder; injury or nerve problems can weaken pushing and lifting.

Triceps Brachii Muscle

The large muscle at the back of the upper arm. It straightens the elbow and helps move and stabilize the shoulder; injury or nerve damage can weaken pushing and lifting.

Trichiasis

Inward misdirection of eyelashes so they rub against the eye.

Trichilemmal Carcinoma

A rare malignant follicular tumor showing outer-root-sheath differentiation, usually occurring on sun-damaged skin of older adults as a papule or nodule; complete excision is generally required.

Trichilemmoma

A usually harmless tumor arising from a hair follicle, most often appearing as a small skin-colored bump on the face. Multiple growths can be associated with an inherited condition called Cowden syndrome.

Trichiniasis

An infection caused by *Trichinella* larvae, acquired from undercooked meat.

Trichinosis

Infection with *Trichinella* worms, usually acquired by eating undercooked infected pork or wild game. It may cause diarrhea, fever, muscle pain, and swelling around the eyes.

Trichobezoar

A mass of swallowed hair in the digestive tract, usually the stomach, which may cause pain, vomiting, or blockage.

Trichoblastoma

A rare benign follicular tumor of the scalp or face, usually presenting as a solitary dermal or subcutaneous nodule; it can resemble basal-cell carcinoma and is diagnosed histologically.

Trichoepithelioma

A rare benign follicular adnexal tumor that usually presents as a skin-coloured papule or nodule on the face or scalp; it can resemble basal-cell carcinoma and may require histopathologic confirmation.

Trichomonas

A flagellated protozoan, *Trichomonas vaginalis*, that infects the urogenital tract and causes trichomoniasis. It is transmitted mainly through sexual contact and may cause discharge, irritation, or no symptoms.

Trichomonas Vaginalis

A flagellated protozoan that causes trichomoniasis, a sexually transmitted infection.

Trichomoniasis

A sexually transmitted infection caused by the parasite *Trichomonas vaginalis*. It may cause genital irritation and discharge or no symptoms; testing and treatment of partners help prevent reinfection.

Trichophyton

A group of fungi that grow in keratin and cause ringworm infections of skin, hair, or nails. They spread through contact with infected people, animals, or objects and are treated with antifungal medicines.

Trichorrhexis Nodosa

A hair-shaft defect in which weakened points split into brush-like ends, caused by inherited disease, trauma, chemicals, heat, or nutritional or metabolic disorders.

Trichothiodystrophy Syndrome

A group of inherited disorders characterized by brittle sulfur-deficient hair with a distinctive banded appearance, often accompanied by photosensitivity, ichthyosis, developmental delay, short stature, or recurrent infection.

Trichotillomania

Recurrent compulsive pulling out of one's hair, causing hair loss and distress or impairment.

Trichuriasis

Intestinal infection caused by the whipworm *Trichuris trichiura*, usually acquired by swallowing eggs from contaminated soil or food. Heavy infection can cause abdominal pain, diarrhea, anemia, or rectal prolapse.

Tricuspid Annular Plane Systolic Excursion

A measurement made during an echocardiogram that shows how far part of the tricuspid valve moves as the right ventricle contracts. A low value may indicate reduced right-heart pumping and is interpreted with the complete scan and clinical findings.

Alternate Names:

TAPSE; Tricuspid Annular Excursion; RV Longitu-

dinal Systolic Function

Tricuspid Atresia

A birth defect in which the tricuspid valve is missing or completely closed, so blood cannot flow normally from the right upper heart chamber to the right lower chamber. Babies usually have low oxygen and need urgent specialist care and surgery.

Tricuspid Incompetence

Incomplete closure of the tricuspid heart valve, allowing blood to leak backward into the right upper chamber. Severe leakage can cause swelling, liver congestion, irregular heartbeat, fatigue, and breathlessness.

Tricuspid Regurgitation

Leakage through the tricuspid heart valve, allowing blood to flow backward when the heart contracts. Mild leakage may cause no symptoms; severe leakage can lead to fatigue, breathlessness, swelling, or liver congestion.

Tricuspid Stenosis

Narrowing of the tricuspid valve opening, making it harder for blood to move from the right upper chamber to the right lower chamber. It can cause fatigue, swelling, enlarged liver, or neck-vein fullness.

Tricuspid Valve

The heart valve between the right upper and right lower chambers. It opens to let blood move forward and closes to prevent backflow; leakage or narrowing can strain the heart.

Tricyclic Antidepressant Drugs

A group of older antidepressants that increase certain chemical signals in the brain. They can also cause dry mouth, constipation, sleepiness, dangerous heart rhythms, and serious poisoning in overdose.

Tricyclic Antidepressants

Older medicines used mainly for depression and some types of nerve pain or migraine prevention.

They can cause dry mouth, constipation, sleepiness, low blood pressure, dangerous heart rhythms, and serious overdose effects.

Trifluoperazine

A phenothiazine antipsychotic used for selected psychotic disorders. It can cause drowsiness, movement disorders, and other serious effects, so treatment requires medical supervision.

Trigeminal Nerve

The fifth cranial nerve, carrying sensation from the face and controlling muscles used for chewing.

Trigeminal Neuralgia

Sudden, severe, electric-shock-like pain in one side of the face along one or more branches of the trigeminal nerve. Attacks may be triggered by touching the face, brushing teeth, eating, speaking, or a light breeze.

Alternate Names:

Neuralgia, Trigeminal Tic Douloureux (Trigeminal Neuralgia)

Trigger

A trigger is an event, exposure, stimulus, or condition that initiates or worsens a symptom, disease episode, behavior, or physiologic response.

Trigger Finger

A condition in which a finger tendon catches as it moves through a tight covering. It can cause pain, clicking, stiffness, or locking and may improve with rest, injections, splinting, or surgery.

Alternate Names:

Stenosing Tenosynovitis Trigger Thumb (Trigger Finger)

Trigger Thumb

A condition in which the thumb tendon catches as it moves through a tight covering. It may cause pain, clicking, stiffness, or locking and can often be treated with rest, splinting, an injection, or surgery.

Trigger Thumb (Trigger Finger)

Alternate index label for Trigger Finger.

Triglyceride

A lipid composed of glycerol and three fatty acids, transported in blood and stored in adipose tissue.

Triglyceride Level

A triglyceride level measures a type of fat in the blood; persistently high levels can increase cardiovascular risk and, when very high, cause pancreatitis.

Triglycerides

Triglycerides are blood fats made of glycerol and three fatty acids; elevated levels contribute to cardiovascular risk and, when very high, pancreatitis risk.

Trigone

A triangular area, especially the smooth region at the base of the urinary bladder between the ureter openings and urine outlet. It helps direct urine flow and can be affected by inflammation or tumors.

Trimester

One of the three approximately three-month periods of pregnancy. Each trimester has typical developmental milestones and screening or care needs.

Trimethoprim

An antibiotic that blocks bacterial folate production and is often combined with sulfamethoxazole. It treats selected infections but can cause rash, blood-cell changes, high potassium, kidney effects, or medicine interactions.

Trimethoprim-Sulfamethoxazole

An antibiotic combination that blocks bacteria from making folate, which they need to grow. It treats selected urinary, lung, skin, and other infections but can cause allergy, blood-count changes, high potassium, or kidney problems.

Trimethylaminuria

A metabolic disorder in which impaired oxidation

of trimethylamine causes a characteristic fish-like body odor in sweat, urine, and breath. It may be inherited or acquired and can cause substantial psychosocial distress despite limited physical illness.

Trimipramine

A sedating tricyclic antidepressant used for depression in some countries. Its anticholinergic and cardiovascular effects can cause dry mouth, constipation, blurred vision, drowsiness, orthostatic hypotension, or dangerous toxicity in overdose; interactions and suicide risk require clinical monitoring.

Trinitrin

Another name for glyceryl trinitrate or nitroglycerin, a nitrate vasodilator.

Trinitrophenol

Picric acid, a corrosive and potentially explosive chemical once used in medicine, laboratories, and industry.

Trinucleotide Repeat

A short DNA sequence of three building blocks repeated many times. Extra copies can interfere with genes and cause inherited disorders such as Huntington disease, fragile X syndrome, myotonic dystrophy, or Friedreich ataxia.

Trip

A trip is a journey or an accidental stumble; in drug-related language it can also mean an episode of altered perception after a hallucinogen.

Tripe Palms

Diffuse, velvety, thickened hyperkeratosis of the palmar skin with a cerebriform, corrugated appearance resembling the lining of a cow's stomach (tripe), which is strongly associated with underlying malignancy, most commonly gastric adenocarcinoma. It may occur alone or in conjunction with acanthosis nigricans.

Triple X Syndrome

A sex-chromosome variation in which a female has

an extra X chromosome. Many affected people have typical sexual development and fertility, while some have tall stature, speech or learning difficulties, coordination problems, or anxiety; severity varies widely.

Alternate Names:

Trisomy X; 47,XXX Syndrome

Triple-Negative Breast Cancer

Breast cancer whose cells lack three common growth-related markers: estrogen receptors, progesterone receptors, and HER2. It does not respond to treatments aimed at those markers, so treatment may include surgery, chemotherapy, immunotherapy, or other options based on the cancer's features.

Triples

Three offspring born from the same pregnancy or three infants born in a multiple birth.

Triploidy Syndrome

A chromosome condition in which cells have three complete sets of chromosomes instead of two. It usually causes severe growth restriction and multiple birth defects and often prevents long-term survival; rare mosaic forms may be less severe.

Triptan

A medicine for stopping a migraine attack. It changes signals in pain pathways and narrows certain blood vessels. It is not suitable for everyone, especially people with some heart or blood-vessel conditions.

Triptans (Triptan)

A group of medicines used to stop a migraine attack. They act on serotonin receptors and pain pathways; they are not suitable for some people with heart or blood-vessel disease and can cause chest or pressure sensations.

Triquetrum

One of the small bones on the little-finger side of the wrist. It helps stabilize the wrist and can be injured by a fall or direct blow, causing pain and swelling.

Trismus

Difficulty opening the mouth because the jaw muscles are tight or painful. Causes include dental infection, injury, medicines, muscle disorders, and tetanus; severe or rapidly worsening restriction can interfere with eating or breathing and needs urgent assessment.

Trisodium Phosphate Poisoning

Poisoning from swallowing or contacting trisodium phosphate, a strong alkaline cleaner. It can burn the mouth, throat, eyes, and skin and may cause vomiting or breathing problems.

Trisomy

A chromosome condition in which a cell has three copies of one chromosome instead of the usual two. The effects depend on the chromosome involved and may include developmental differences, birth defects, or pregnancy loss.

Trisomy 13

Patau syndrome, a chromosomal disorder caused by an extra chromosome 13 and associated with severe developmental, brain, facial, heart, kidney, and limb abnormalities.

Trisomy 18

Edwards syndrome, a chromosomal disorder caused by an extra chromosome 18 and associated with growth restriction, characteristic craniofacial and limb findings, heart disease, and severe developmental impairment.

Trisomy 18 (Edwards Syndrome)

Alternate index label for Edwards Syndrome.

Trisomy 21

Down syndrome, a genetic condition caused by an extra copy of chromosome 21. It may affect learning, growth, muscle tone, the heart, hearing, vision, or other organs; the features and level of support needed vary widely.

Trisomy 21 (Down Syndrome Overview)

Alternate index label for Down Syndrome Overview.

Trisomy 21 Syndrome

Alternate index label; see *Down syndrome*.

Trisomy X

Alternate index label; see *Triple X syndrome*.

Trocar

A pointed instrument placed inside a hollow tube to enter a body cavity or tissue. It is used in minimally invasive procedures to create an opening for cameras, instruments, or drainage tubes.

Trochanter

A bony projection on the thigh bone, especially the larger outer or smaller inner projection. Muscles and tendons attach there, and irritation around the greater trochanter can cause outer-hip pain.

Trochanteric Bursitis (Hip Bursitis)

Alternate index label for Hip Bursitis.

Troche

A troche is a small medicated lozenge that dissolves slowly in the mouth or throat for local or systemic drug delivery.

Trochlear Nerve

Cranial nerve IV, which supplies the superior oblique eye muscle. Injury can cause vertical or tilted double vision, often worse when looking down or inward.

Trophic

Relating to the nutrition, growth, development, or maintenance of tissue. Trophic changes may occur when nerve supply or blood flow is impaired.

Trophoblast

The outer cell layer of an early embryo that attaches to the uterus and helps form the placenta. It supports implantation, exchanges nutrients, and produces hormones needed to maintain early preg-

nancy.

Trophoderm

The outer layer of cells in a very early embryo before it attaches to the uterus. It helps the embryo implant and develops into tissues that form much of the placenta.

Trophozoite

The active stage of a single-celled parasite. In this stage it feeds, grows, and often multiplies; it differs from the more resistant form that some parasites use to survive outside the body.

Tropical Diseases

Illnesses more common in warm tropical or subtropical regions, including malaria, dengue, schistosomiasis, and other neglected infections.

Tropical Medicine

The medical specialty concerned with diseases common in tropical and subtropical regions and illnesses related to travel. It includes infections, parasites, insect-borne diseases, environmental hazards, prevention, diagnosis, and treatment.

Tropical Sprue

A disorder causing long-lasting diarrhea and poor absorption of nutrients, reported mainly in tropical and subtropical areas. It can lead to weight loss and deficiencies of folate, iron, and vitamin B12. Testing helps exclude infection and other causes; treatment usually includes antibiotics and replacement of missing nutrients.

Tropical Ulcer

A chronic ulcer occurring in tropical regions, often associated with infection, trauma, or poor wound healing.

Troponin

A protein released into the blood when heart muscle is injured. A raised level can support a heart-attack diagnosis, but it may also result from other heart, lung, kidney, or severe systemic illnesses.

Troponin Test

A troponin test measures heart-muscle proteins in the blood and helps assess possible heart injury, especially during suspected heart attack.

Trouble Swallowing

Difficulty moving food or liquid from the mouth to the stomach. It may cause coughing, choking, pain, or a feeling that food is stuck in the throat or chest.

Trousseau Sign Of Latent Tetany

A hand spasm that may occur when blood flow to the arm is briefly reduced with a blood-pressure cuff. It can suggest low blood calcium, but it is not specific and must be interpreted with symptoms and blood tests.

Trousseau Syndrome

Repeated or shifting blood clots in veins associated with active cancer, especially some cancers of the pancreas, stomach, or lung. The cancer can make the blood clot too easily; it differs from the hand spasm called Trousseau sign.

Trp

Trp is the standard abbreviation for tryptophan, an essential amino acid used in protein synthesis and serotonin and niacin pathways.

True Ribs

The first seven pairs of ribs, each attached directly to the breastbone by its own flexible cartilage. They protect the heart and lungs and move with the chest during breathing.

Truncation

A shortened or incomplete form caused by removal of part of a sequence, structure, chromosome, protein, or process; the effect depends on what was lost and where.

Truncus Arteriosus

A birth defect in which one large blood vessel leaves the heart instead of separate vessels for the body and lungs. A large hole between the lower chambers

usually allows oxygen-poor and oxygen-rich blood to mix, causing blue skin and heart failure. Early surgery is usually required.

Trunk

The central part of the body excluding the head and limbs, or a major nerve or vessel trunk.

Trypanosoma

A genus of protozoan parasites causing African and American trypanosomiasis.

Trypanosoma Brucei

A protozoan parasite transmitted by tsetse flies that causes African trypanosomiasis, or sleeping sickness. The human-infecting subspecies differ in geographic distribution and typical disease course; infection can progress from fever and lymph-node enlargement to neurologic involvement.

Trypanosomiasis

Disease caused by *Trypanosoma* parasites, including African sleeping sickness and Chagas disease. Infected insects spread them, and illness may affect blood, lymph nodes, the nervous system, heart, or digestive organs.

Trypanosomiasis, American

Alternate index label; see *Chagas disease*.

Trypsin

A digestive enzyme made by the pancreas and activated in the small intestine. It breaks proteins in food into smaller parts and activates other pancreatic digestive enzymes.

Trypsin And Chymotrypsin In Stool

Stool trypsin and chymotrypsin testing measures digestive enzymes and may help assess pancreatic enzyme production, although other tests are often preferred.

Trypsinogen Test

A trypsinogen test measures a pancreatic enzyme precursor and may help evaluate pancreatic function

or newborn screening for cystic fibrosis.

Tryptophan

An amino acid the body cannot make and must obtain from food. It is used to make proteins and can be changed into serotonin, melatonin, and niacin, which help regulate mood, sleep, and other body functions.

Tsetse Fly

A blood-feeding fly found in parts of sub-Saharan Africa. Its bite can spread *Trypanosoma* parasites, which cause African sleeping sickness; infection may cause fever, headaches, behavior changes, sleep disturbance, and serious nervous-system disease.

TSH

Thyroid-stimulating hormone, made by the pituitary gland to tell the thyroid to produce its hormones. A blood TSH measurement is commonly the first test for many thyroid problems.

TSH Test

A TSH test measures thyroid-stimulating hormone in the blood and is a common initial test of thyroid function.

TSH-Receptor Antibody

An antibody that attaches to the thyroid's control receptor. Some antibodies overstimulate the thyroid and cause Graves disease, while others block its activity; testing can help diagnose thyroid disease and assess pregnancy-related risk.

TSI Test

A blood test that detects antibodies which overstimulate the thyroid. It can support the diagnosis or monitoring of Graves disease and may help assess risk to a fetus during pregnancy.

Tsutsugamushi Fever

Scrub typhus, a mite-borne infection caused by *Orientia tsutsugamushi*. It may cause fever, headache, rash, an eschar, and organ complications and is treated with an appropriate antibiotic.

Tubal Ligation

A permanent birth-control procedure that closes, cuts, or removes the fallopian tubes so sperm and egg cannot normally meet. It does not protect against sexually transmitted infections, and pregnancy after the procedure, though uncommon, can be ectopic.

Tubal Ligation Reversal

Microsurgical reconnection of previously divided or blocked fallopian-tube segments to restore a possible path for sperm and egg; success depends on remaining tube length, age, scarring, and original method.

Tubal Occlusion Procedure, Selective

Selective tubal occlusion blocks a fallopian tube to prevent sperm and egg from meeting and is a permanent contraceptive procedure.

Tubal Pregnancy

An ectopic pregnancy that implants in a fallopian tube instead of the uterus. It can rupture and cause internal bleeding; one-sided pain, vaginal bleeding, dizziness, or fainting needs urgent evaluation.

Tubercle

A small rounded projection or nodule; it may refer to bone anatomy or a tuberculous lesion.

Tuberculide

A skin eruption caused by an immune reaction to tuberculosis elsewhere in the body. The skin lesions usually contain no bacteria and may improve when the underlying tuberculosis is treated.

Tuberculin

Protein material from *Mycobacterium tuberculosis* used in a skin test for immune sensitization. A positive result suggests exposure or vaccination but does not by itself prove active tuberculosis or show when exposure occurred.

Tuberculin Skin Test

A small amount of tuberculosis protein is injected

into the skin. The raised, firm area is measured 2 to 3 days later; the result depends on its size and the person's risk factors and does not by itself distinguish latent from active tuberculosis.

Tuberculin Test

A skin test that checks whether the immune system has reacted to tuberculosis proteins. A positive result suggests infection or previous vaccination and does not by itself prove active disease.

Tuberculoid Leprosy

A form of leprosy in which the immune system keeps the number of bacteria low. It usually causes a few pale or reddish skin patches with reduced feeling and can injure nearby nerves, causing weakness or numbness.

Tuberculosis

An infection caused by *Mycobacterium tuberculosis*, most often affecting the lungs. It spreads through airborne particles and may cause cough, fever, night sweats, weight loss, or silent infection without symptoms.

Alternate Names:

TB

Tuberculosis In Children

Tuberculosis infection in a child, usually acquired by breathing air containing the bacteria from an infectious person. It may be silent or cause cough, fever, poor growth, night sweats, or swollen lymph nodes; testing and treatment depend on exposure and findings.

Tuberculosis, MDR

Tuberculosis caused by bacteria resistant to at least isoniazid and rifampicin, two important tuberculosis medicines. It requires specialist testing and a longer combination treatment chosen according to drug-susceptibility results.

Tuberculous Meningitis

A life-threatening infection of the coverings of the brain caused by tuberculosis bacteria. It may cause persistent headache, fever, vomiting, neck stiffness,

confusion, seizures, or weakness and requires urgent treatment.

Tuberous Sclerosis

A rare genetic disorder, also called tuberous sclerosis complex, that causes growths in the brain and other organs, including the skin, kidneys, heart, and lungs. It may cause seizures, developmental or behavioral problems, and skin changes; the severity varies widely.

Tuberous Sclerosis Complex

A genetic condition in which noncancerous growths develop in several organs, especially the brain, skin, kidneys, heart, and lungs. It may cause seizures, developmental or learning difficulties, skin changes, kidney problems, or breathing disease. Lifelong monitoring and treatment are tailored to the organs affected.

Tubes

Hollow structures that carry air, fluid, food, or medical instruments. Examples include breathing tubes, fallopian tubes, drainage tubes, and blood vessels; the specific structure must be named for the term to be clinically precise.

Tubes Ear Problems (Eustachian Tube Problems)

Alternate index label for Eustachian Tube Problems.

Tubo-Ovarian Abscess

A pocket of pus involving a fallopian tube and ovary, usually caused by a pelvic infection. It can cause pelvic pain, fever, and severe illness and may need antibiotics, drainage, or surgery.

Tubography

Contrast imaging of the fallopian tubes, usually as part of hysterosalpingography, to see whether they are open. It may help assess infertility but can cause temporary cramping, bleeding, infection, or rarely injury.

Tubular Adenoma

A benign glandular polyp, most often in the colon, that can develop dysplastic changes and is considered a precursor lesion for some colorectal cancers.

Tubular Reabsorption

The process by which kidney tubules return useful water and dissolved substances from filtered fluid to the blood. This prevents the loss of most water, salt, glucose, and other substances in urine.

Tubular Secretion

The movement of selected medicines, waste products, and extra ions from the blood into kidney tubules. This helps the kidneys remove substances from the body and regulate fluid and salt balance.

Tubule

A small tube in the body. In the kidney, tubules change filtered fluid by taking useful water and substances back into the blood and leaving waste to form urine; other tubules carry fluids in different organs.

Tubuloglomerular Feedback

A kidney control system that adjusts blood flow and filtration according to how much salt reaches part of a kidney tubule. It helps keep filtration and fluid balance reasonably stable.

Tularaemia

A zoonotic infection caused by *Francisella tularensis*, acquired from animals, ticks, contaminated water, or aerosols.

Tularemia

Tularemia is infection with *Francisella tularensis* acquired from ticks, animals, contaminated water, or aerosols and causing ulcer-glandular, pulmonary, or other disease.

Tularemia Blood Test

A tularemia blood test looks for antibodies or other evidence of infection with *Francisella tularensis*; antibodies may not appear early in illness.

Tulle Gras

A paraffin-impregnated gauze dressing used to cover wounds and burns.

Tumescence

Swelling or enlargement caused by increased blood flow, fluid, or tissue growth. The term commonly describes erection but can also refer to temporary or abnormal enlargement in other body tissues.

Tumor

An abnormal mass formed by cells growing more than they should or surviving when they should not. A tumor may be noncancerous and remain localized, or cancerous and invade nearby tissue or spread.

Tumor Adrenal Gland (Pheochromocytoma)

Alternate index label for Pheochromocytoma.

Tumor Board

A meeting in which doctors from different specialties review a person's cancer diagnosis and test results together. They discuss the possible treatment options and coordinate a care plan.

Tumor Brain Cancer (Brain Cancer)

Alternate index label for Brain Cancer.

Tumor Burden

The total amount of cancer in the body, estimated from the number, size, and spread of tumor deposits. It can help doctors assess disease extent and treatment response but does not alone determine a person's outlook.

Tumor Differentiation

How closely tumor cells resemble the normal cells from which they arose. Well-differentiated tumors look and behave more like normal tissue, while poorly differentiated tumors often behave more aggressively.

Tumor Embolism

A blockage caused when cancer cells or a piece of a

tumor travels through the bloodstream and lodges in another vessel, most often in the lungs. It can impair blood flow and may cause breathing or other organ problems.

Tumor Grade

A description of how abnormal cancer cells look under a microscope compared with normal cells. Lower-grade tumors often grow more slowly, while higher-grade tumors may grow or spread more quickly; grade is different from cancer stage.

Tumor Grading

The process of examining cancer cells under a microscope and assigning a grade according to how different they look from normal cells. Lower-grade tumors often grow more slowly, while higher-grade tumors may behave more aggressively; grade is different from stage.

Tumor Heterogeneity

Differences between cancer cells in the same tumor or between the original tumor and its spread. These differences can affect how quickly cancer grows and why some cells respond to treatment while others resist it.

Tumor Lysis Syndrome

A medical emergency caused by rapid cancer-cell breakdown, releasing substances that disturb blood chemistry. It can damage kidneys, trigger seizures or abnormal heart rhythms, and requires prevention, monitoring, and urgent treatment.

Tumor Marker

A substance found in blood, urine, tissue, or another body fluid that may be produced by cancer or by the body's response to it. Tumor markers can help monitor treatment or recurrence and sometimes guide diagnosis, but most are not specific enough to prove cancer alone.

Tumor Marker, CEA

Carcinoembryonic antigen, a substance measured mainly in blood to help monitor some colorectal and other cancers. Levels can also rise from smoking or

noncancerous conditions, so CEA cannot diagnose cancer by itself.

Tumor Marker, NSE

Neuron-specific enolase, a protein that may be increased in some neuroendocrine cancers or after nerve-cell injury. It can support monitoring in selected situations but is not specific enough to diagnose cancer alone.

Tumor Mutational Burden

The number of gene changes found in a sample of cancer. A high number may help predict response to some immunotherapy, but the result depends on the test, cancer type, and other tumor features.

Tumor Necrosis Factor

An immune-system messenger that promotes inflammation, fever, and activation of other immune cells. Helpful during infection, it can also contribute to autoimmune disease, tissue damage, and wasting when produced excessively.

Tumor Necrosis Factor Receptor-Associated Periodic Syndrome

A rare inherited autoinflammatory disorder caused by variants in the TNFRSF1A gene, producing recurrent prolonged fever, muscle pain, abdominal pain, rash, and inflammation; it is also called TRAPS.

Tumor Staging

The process of determining how large a cancer is and whether it has spread to nearby lymph nodes or distant organs. The results help guide treatment and estimate outlook.

Tumor Suppressor

A gene or protein that helps prevent abnormal cell growth by slowing cell division, repairing DNA damage, or removing damaged cells. Loss of this protection can contribute to cancer.

Tumor Suppressor Gene

A gene that helps prevent uncontrolled cell growth

by slowing division, repairing DNA damage, or directing abnormal cells to die. If both copies or the gene's function are lost or disabled, cells may grow abnormally and cancer risk can increase.

Tumor Testicle (Testicular Disorders)

Alternate index label for Testicular Disorders.

Tumor, Salivary Gland

Alternate index label; see *Salivary gland tumors*.

Tumor, Spinal

Alternate index label; see *Spinal tumor and spinal mass*.

Tumor-Suppressor Gene

A gene that helps prevent uncontrolled cell growth by slowing cell division, repairing damaged DNA, or removing abnormal cells. Loss of its protective function can increase the chance of cancer.

Tumors Uterine (Uterine Fibroids)

Alternate index label for Uterine Fibroids.

Tumour

An abnormal mass caused by uncontrolled or inappropriate cell growth; it may be noncancerous or cancerous.

Tumour (Neoplasm)

An abnormal mass of tissue produced by uncontrolled or inappropriate cell growth; it may be benign or malignant.

Alternate Names:

Neoplasm

Tungiasis

A skin infestation caused by the sand flea *Tunga* penetrans, producing an itchy or painful lesion, usually on the feet.

Tunica Adventitia

The tough outer layer of a blood vessel. It contains supportive tissue, nerves, and small vessels and helps anchor the vessel to nearby structures.

Tunica Media

The middle layer of a blood-vessel wall, made mainly of muscle and elastic tissue. It can tighten or relax to change vessel width and help control blood pressure and blood flow.

Tunnel Vision

Loss of peripheral visual field leaving a narrowed central field, caused by glaucoma, retinal disease, optic-nerve or brain lesions, severe hypoxia, or other conditions.

Turbinate Surgery

An operation that reduces or reshapes swollen tissues along the side walls of the nose to improve airflow. It may help persistent nasal blockage when other treatment fails; bleeding, crusting, dryness, scarring, or ongoing obstruction are possible.

Turbinates

Curved structures inside the nose that warm, moisten, and filter breathed air. They contain bone covered by soft tissue and can swell during allergies, infection, or irritation and make nasal breathing difficult.

Turbinates Hypertrophy

Long-lasting enlargement of the tissues inside the nose, often from allergies, irritation, sinus disease, or hormonal changes. It can block nasal airflow and cause a stuffy nose, mouth breathing, snoring, or reduced smell.

Turcot Syndrome

A rare inherited cancer-predisposition pattern involving colon polyps or colon cancer together with a brain tumor. It can result from mismatch-repair gene changes or the APC gene change seen in familial adenomatous polyposis, so genetic counseling and screening are important.

Alternate Names:

Brain Tumor-Polyposis Syndrome

Turgor

The firmness and springiness of body tissue caused

partly by its fluid content. Skin that remains tented after being gently pinched may suggest dehydration, but this sign is not reliable by itself.

Turner Hypoplasia

A defect in the enamel of a permanent tooth caused by infection or injury involving the baby tooth above it. The affected tooth may have a discolored, rough, or weakened area.

Turner Syndrome

A chromosome condition affecting females in which one X chromosome is missing or altered. It commonly causes short stature and reduced ovarian function, with delayed or absent puberty and infertility. Heart, kidney, hearing, and thyroid problems may also occur, so lifelong medical follow-up is important.

Turner's Syndrome

A chromosome condition affecting females in which one X chromosome is missing or altered. It commonly causes short stature and reduced ovarian function, with delayed or absent puberty and infertility. Heart, kidney, hearing, and thyroid problems may also occur, so lifelong medical follow-up is important.

Turning Patients Over In Bed

Repositioning a patient at planned intervals to protect skin, improve comfort and breathing, prevent pressure injuries and contractures, and reduce complications of immobility.

Turpentine Oil Poisoning

Poisoning from swallowing or inhaling turpentine oil. It can irritate or damage the lungs, stomach, and nervous system and may cause chemical pneumonia.

Tussis

Cough; a forceful reflex expiration that helps clear secretions, irritants, or foreign material from the airways.

TVS

TVS commonly means transvaginal sonography, an ultrasound examination using a probe in the vagina to assess pelvic organs and early pregnancy.

Twin

A twin is one of two offspring from the same pregnancy, either identical from one fertilized egg or fraternal from two eggs and two sperm.

Twin Placenta

The number and arrangement of placentas and the sacs surrounding twins. Knowing whether twins share a placenta or a sac helps estimate risks and determines how closely the pregnancy is monitored.

Twin Pregnancy

A pregnancy involving two fetuses. Clinical risk depends on chorionicity and amnionicity, with increased risks including preterm birth, fetal growth problems, and hypertensive disorders.

Twin-To-Twin Transfusion Syndrome

A serious complication of an identical-twin pregnancy in which shared placental blood vessels send too much blood to one twin and too little to the other. It requires urgent specialist monitoring and treatment.

Twin-Twin Transfusion Syndrome

A complication of an identical-twin pregnancy sharing one placenta, in which blood flows unevenly between the twins. One twin may receive too little blood and fluid, while the other receives too much; both need urgent specialist monitoring and treatment.

Twins

Two offspring from the same pregnancy, either monozygotic or dizygotic.

Twitch

A brief involuntary muscle contraction or movement, which may be benign, medication-related, stress-related, or a sign of nerve, muscle, or brain disease.

Twitching

Repeated involuntary muscle contractions or fasciculations, commonly caused by fatigue, stimulants, electrolyte disturbance, nerve irritation, medicines, or neurologic disease.

Tympanic

Tympanic means relating to the eardrum or middle ear, or resembling a drum in shape or sound.

Tympanic Bulla

The tympanic bulla is a hollow or expanded bony chamber surrounding the middle ear, especially prominent in many mammals.

Tympanic Cavity

The air-filled chamber of the middle ear. It contains the eardrum and three tiny bones that transmit sound vibrations toward the inner ear, while a passage to the throat helps equalize air pressure.

Tympanic Hyperectasis

Abnormal bulging or stretching of the eardrum, usually related to long-lasting pressure changes in the middle ear. It may cause blocked-ear sensations or reduced hearing and requires assessment for the underlying cause.

Tympanic Membrane

The thin eardrum separating the outer ear canal from the middle ear. Sound makes it vibrate, and those vibrations move the middle-ear bones; infection, injury, or pressure can tear it.

Tympanic Membrane Perforation

A tear or hole in the eardrum caused by infection, trauma, pressure changes, or instrumentation, potentially producing pain, drainage, or conductive hearing loss.

Tympanites

Abdominal distension caused by excessive gas in the stomach or intestines, producing a drum-like sound on percussion and sometimes pain, belching, or altered bowel movements.

Tympanometry

An objective test that varies air pressure in the ear canal while measuring movement of the tympanic membrane and middle-ear pressure. It helps assess middle-ear fluid, eustachian-tube dysfunction, perforation, and ossicular or tympanic-membrane abnormalities.

Tympanoplasty

Surgical repair or reconstruction of the tympanic membrane and, when necessary, the middle-ear ossicles to close a perforation or improve hearing.

Tympanosclerosis

Scarring and calcification of the tympanic membrane or middle-ear lining, often following recurrent infection or previous inflammation. It may be asymptomatic or cause conductive hearing loss when the ossicles are affected.

Alternate Names:

Tympanic-membrane sclerosis; myringosclerosis when limited to the tympanic membrane.

Tympanostomy Tubes

Small tubes placed through the eardrum to let air into the middle ear and help fluid drain. They may be recommended for repeated ear infections or persistent fluid causing hearing problems; drainage, blockage, scarring, or early tube loss can occur.

Tympanum

The middle-ear cavity or, in some contexts, the tympanic membrane.

Tympany

Tympany is a drumlike sound on percussion, often produced by gas in a hollow organ such as the stomach or intestine.

Type 1 Diabetes

A long-term disease in which the immune system destroys the pancreas cells that make insulin. Without insulin treatment, blood sugar rises dangerously and can lead to diabetic ketoacidosis.

Alternate Names:

Diabetes, Type 1 Diabetes Type 1 (Type 1 Diabetes)

Type 1 Diabetes In Children

Type 1 diabetes diagnosed during childhood, causing high blood sugar and requiring insulin, monitoring, nutrition planning, and education.

Type 1 Diabetes Mellitus

Type 1 diabetes is an autoimmune disease in which the immune system attacks and destroys the insulin-producing beta cells of the pancreas, resulting in absolute insulin deficiency.

Type 2 Diabetes

A long-term disease in which the body does not use insulin effectively and gradually makes less of it. High blood sugar can damage the eyes, kidneys, nerves, heart, and blood vessels.

Alternate Names:

Diabetes, Type 2 Diabetes Type 2 (Type 2 Diabetes)

Type 2 Diabetes - Oral Medicines

Oral medicines for type 2 diabetes lower glucose through effects on insulin, liver glucose production, kidney reabsorption, or intestinal absorption; choice depends on health and treatment goals.

Type 2 Diabetes In Children

Type 2 diabetes beginning during childhood or adolescence, often involving insulin resistance and requiring lifestyle and medical management.

Type 2 Diabetes Mellitus

Type 2 diabetes is a chronic metabolic disorder characterized by insulin resistance and progressive pancreatic beta-cell dysfunction, leading to hyperglycemia.

Type 3B Diabetes

Type 3b diabetes is a form of diabetes caused by disease or removal of the pancreas, which can impair both insulin and digestive-enzyme production.

Type I Hypersensitivity

A rapid allergic reaction in which the immune sys-

tem releases substances such as histamine after exposure to an allergen. It can cause hay fever, asthma symptoms, hives, food allergy, or life-threatening anaphylaxis.

Type II Hypersensitivity

An immune reaction in which antibodies attach to a person's cells or tissues and cause injury or destruction. It contributes to some blood-cell disorders, medicine reactions, and autoimmune diseases.

Type III Hypersensitivity

An immune reaction in which clusters of antibodies and foreign or abnormal proteins settle in tissues and trigger inflammation. It can damage the skin, joints, blood vessels, kidneys, or other organs.

Type III Hypersensitivity Reaction

Tissue injury caused when antigen-antibody clusters deposit in tissues and activate inflammation. This reaction can damage blood vessels, joints, kidneys, skin, or other organs, as in serum sickness or lupus.

Type IV Hypersensitivity

A delayed immune reaction driven mainly by T cells rather than antibodies. It usually develops hours to days after exposure and can cause contact dermatitis, some medicine reactions, or inflammation in an organ.

Type V Glycogen Storage Disease

An inherited muscle disorder, also called McArdle disease, in which muscle cells cannot properly break down glycogen for energy. Exercise can cause muscle pain, cramps, and sometimes dark urine from muscle injury.

Types Of Health Care Providers

Health professionals and services that diagnose, treat, prevent, or support health needs, including physicians, nurses, pharmacists, therapists, dentists, mental-health professionals, and community services.

Types Of Ileostomy

Types of ileostomy include end, loop, and continent procedures, which divert stool through an opening in the abdominal wall when the colon or rectum cannot be used normally.

Typhlitis

A serious infection and inflammation of the first part of the large intestine, usually in someone with very low white-cell counts after cancer treatment. It can cause right-sided abdominal pain, fever, diarrhea, and bowel damage and needs urgent care.

Alternate Names:

neutropenic enterocolitis.

Typhoid

A systemic infection caused by *Salmonella enterica* serovar Typhi, usually acquired through contaminated food or water and characterized by prolonged fever and gastrointestinal or systemic symptoms.

Typhoid Fever

A potentially serious whole-body infection caused by *Salmonella Typhi*, usually spread through contaminated food or water.

Alternate Names:

Enteric Fever (Typhoid Fever)

Typhus

A group of bacterial infections spread mainly by lice, fleas, or mites. They can cause fever, headache, rash, and serious illness affecting several organs; the type and treatment depend on the bacteria and insect involved.

Typhus Fever

A group of bacterial infections spread by lice, fleas, or mites. They commonly cause sudden fever, severe headache, weakness, and sometimes rash or organ injury; the exact illness determines testing and antibiotic treatment.

Typical Antipsychotics

Older antipsychotic medicines used for conditions such as psychosis, mania, or severe agitation. They

can reduce hallucinations and delusions but may cause stiffness, tremor, involuntary movements, sleepiness, or other serious effects.

Tyramine

A naturally occurring amine found in some aged or fermented foods. In people taking monoamine oxidase inhibitors, excessive tyramine can cause a dangerous rise in blood pressure.

Tyrosine

An amino acid used to build proteins and make thyroid hormones, melanin, and adrenaline-like chemicals. The body usually makes enough from phenylalanine, but inherited metabolic disorders can disrupt this pathway.

Alternate Names:

Full term

Tyrosinemia

An inherited disorder in which the body cannot break down the amino acid tyrosine normally. Harmful substances can build up and damage the liver, kidneys, nerves, or eyes; severity depends on the type and treatment.

Tzanck Smear

A microscope test of cells scraped from a blister or sore. It may suggest a herpes infection or pemphigus, but it cannot reliably identify the cause and is often replaced by more specific laboratory tests.

Tamiflu (Oseltamivir)

Tamiflu is the brand name for oseltamivir, an antiviral medicine used to treat or help prevent influenza. It works best when started early and does not replace flu vaccination.

Tamoxifen

Tamoxifen is a selective estrogen-receptor modulator used mainly to treat or prevent some estrogen-sensitive breast cancers. It can increase the risk of blood clots and, rarely, uterine cancer.

Tarlov Cysts

Tarlov cysts are fluid-filled sacs around the nerve roots, most often in the sacral spine. Many cause no symptoms, but larger or symptomatic cysts may cause pain, numbness, or bladder problems.

Taste Receptor

A sensor on taste-bud cells that detects chemicals in food and helps produce the sensations of sweet, salty, sour, bitter, and savory (umami). Signals then travel through nerves to the brain.

Tattoos

Tattoos are permanent designs made by placing pigment into the skin. Risks include infection, allergic reactions, scarring, and difficulty removing the pigment.

Taurine

Taurine is a sulfur-containing compound involved in normal cell, nerve, muscle, and bile-acid function. It is present in foods and added to some energy drinks; high caffeine intake in such drinks can be harmful.

Taxotere

Taxotere is the brand name for docetaxel, a chemotherapy medicine that interferes with cell division. It is used for several cancers and can cause low blood counts, infection risk, hair loss, and other side effects.

T-Cell

A type of white blood cell that helps direct immune responses or destroys infected and abnormal cells. T cells mature in the thymus and include several groups with different jobs.

Teledermatology

Teledermatology is the use of video, photographs, or other digital communication to assess and manage skin conditions remotely. Some problems still require an in-person examination or biopsy.

Tendinosis

Long-lasting wear and disorganization of tendon tissue, usually from repeated loading or an injury rather than sudden inflammation. It can cause pain and reduced strength; treatment may include activity changes and rehabilitation.

Testicular Failure

Testicular failure occurs when the testes do not produce enough testosterone, sperm, or both. Causes include genetic conditions, injury, infection, medicines, and damage from chemotherapy or radiation.

Thimerosal

A preservative containing ethylmercury that is used in some multidose vaccines and medical products. Ethylmercury leaves the body faster than methylmercury; its safety depends on the product, amount, and applicable regulations.

Threadworms

Threadworms, also called pinworms, are small intestinal worms that commonly cause itching around the anus at night. Treatment usually includes an antihelminthic medicine and hygiene measures for household contacts.

Thymine

Thymine is one of the four main bases in DNA. It pairs with adenine through hydrogen bonds and helps store genetic information.

Tick-borne Diseases

Tick-borne diseases are infections or other illnesses transmitted by ticks, including Lyme disease, babesiosis, ehrlichiosis, and some viral diseases. Removing ticks promptly can reduce risk.

Tokophobia

Tokophobia is an intense fear of pregnancy or childbirth that can cause substantial distress or avoidance. Support may include psychological therapy, birth planning, and specialist maternity care.

Tooth Brushing

Tooth brushing removes plaque and food from teeth and gums. Brushing twice daily with fluoride toothpaste helps prevent tooth decay and gum disease.

Tooth Erosion

Tooth erosion is the chemical loss of tooth enamel caused by acids, not by bacteria. Acidic foods, drinks, reflux, and repeated vomiting can contribute to it.

Traditional Medicine

Traditional medicine includes health practices, remedies, and healing systems developed within cultural traditions. Products and practices vary in evidence and safety, so they should not replace effective care without professional advice.

Travel Vaccinations

Travel vaccinations are vaccines recommended or required for protection against infections encountered in particular countries or regions. Recommendations depend on the destination, activities, health conditions, and previous vaccinations.

Trichinellosis

Trichinellosis is an infection caused by *Trichinella* worms, usually after eating undercooked infected meat. It may cause diarrhea followed by fever, muscle pain, and swelling around the eyes.

Tropical Disease

A tropical disease is an infection or other health condition more common in tropical and subtropical regions, often because of local climate, vectors, or living conditions. Travel history helps guide diagnosis.

Tubulointerstitial Nephropathy

Kidney damage involving the small tubes that process urine and the tissue around them. Medicines, infections, toxins, autoimmune disease, and inherited conditions can cause it and may reduce kidney function.

U

U Wave

A small wave that may appear after the T wave on an electrocardiogram. A prominent U wave can occur with low potassium, a slow heart rate, or some medicines and must be interpreted with the complete tracing and clinical findings.

UA

UA commonly means urinalysis, laboratory examination of urine for blood, protein, cells, glucose, infection, and other findings.

UBT

UBT commonly means urea breath test, which detects active *Helicobacter pylori* infection by measuring labeled carbon dioxide after ingested urea.

UDP-Glucuronosyltransferase

A group of enzymes, found mainly in the liver, that helps the body process and remove bilirubin, medicines, hormones, and other substances. Inherited differences in these enzymes can cause some types of jaundice or change how medicines work.

Uhl Anomaly

A rare heart defect present from birth in which much of the muscle of the right lower chamber is missing. The chamber may pump poorly, causing blue coloring, abnormal rhythms, or heart failure in infancy or childhood.

Ulcer

An open sore caused by loss of the skin or a moist body lining, sometimes extending into deeper tissue. Poor blood flow, pressure, infection, nerve damage,

inflammation, injury, and cancer can cause ulcers.

Ulcer (Vascular)

A persistent open wound caused or maintained by poor blood flow, high pressure in the veins, loss of protective feeling, or another blood-vessel problem. It usually affects the legs or feet and may heal slowly or become infected.

Alternate Names:

Vascular ulcer; ischemic ulcer

Ulcer Healing Drugs

Medicines used to promote healing of gastrointestinal ulcers, usually by suppressing acid secretion or protecting the mucosa; treatment also addresses causes such as *H. pylori* infection or NSAID use.

Ulcer, Aphthous

Alternate index label; see *Canker sore*.

Ulcer, Peptic

Alternate index label; see *Peptic ulcer*.

Ulcer, Rectal

Alternate index label; see *Solitary rectal ulcer syndrome*.

Ulceration

The formation of an open sore caused by loss of surface tissue, usually involving skin or a mucous membrane and sometimes extending into deeper tissue.

Ulcerative Colitis

A chronic inflammatory disease of the colon and rectum, usually causing continuous mucosal inflammation that begins in the rectum and extends proximally. Symptoms may include bloody diarrhea, urgency, abdominal pain, and extraintestinal manifestations.

Alternate Names:

Colitis, Ulcerative Colitis Ulcerative (Ulcerative Colitis)

Ulcerative Keratitis

An ulcerative infection or inflammatory defect of the cornea that can cause pain, redness, photophobia, and impaired vision and may threaten sight if untreated.

Ulcerative Proctitis

Inflammation and ulceration limited to the lining of the rectum, often causing rectal bleeding, urgency, tenesmus, mucus, and diarrhea.

Ullrich Congenital Muscular Dystrophy

An inherited muscle disease caused by problems with collagen VI, a protein that supports muscle and connective tissue. It begins in infancy with weakness, low muscle tone, tight joints near the body, unusually loose joints in the hands and feet, and later breathing problems.

Alternate Names:

UCMD; Ullrich Scleroatonic Muscular Dystrophy

Ulna

The forearm bone on the side of the little finger. Its upper end forms most of the hinge of the elbow, and its lower end helps form the wrist. Together with the radius, it supports rotation of the forearm and movement of the hand.

Ulnar

Relating to the ulna or to the side of the forearm and hand nearest the little finger. Pressure on the ulnar nerve in this area can cause tingling or numbness in the little and ring fingers.

Ulnar Artery

A major artery running along the little-finger side of the forearm and into the hand. It supplies blood to the forearm and hand and helps form the hand's arterial arches.

Ulnar Vein

Veins on the little-finger side of the forearm that carry blood away from the forearm and hand. They join other deep veins near the elbow to continue toward the heart.

Ulnar Hypoplasia

Underdevelopment or partial absence of the ulna, the forearm bone on the little-finger side. Present from birth in most cases, it may shorten or bend the forearm, limit elbow or wrist movement, and occur with finger or other body differences.

Ulnar Nerve

A nerve running from the neck through the inner arm and behind the elbow to the hand. It controls some hand and forearm muscles and carries feeling from the little finger and part of the ring finger.

Ulnar Nerve Dysfunction

Impairment of the ulnar nerve, commonly caused by compression at the elbow (cubital tunnel) or wrist (Guyon canal). Symptoms include numbness or tingling in the little and ring fingers, weakened grip, and hand-muscle wasting; severe lesions may produce an ulnar claw.

Ulnar Nerve Entrapment

Compression or irritation of the ulnar nerve, commonly at the elbow or wrist, causing numbness or tingling in the ring and little fingers and sometimes weakness of the hand.

Ulnar Paradox

The apparently unexpected finding that damage to the ulnar nerve at the wrist can cause more clawing of the fingers than damage higher in the arm. The difference occurs because some finger-bending muscles remain active after a wrist injury.

Ulnar Wrist Pain

Pain on the side of the wrist nearest the little finger, often involving the ulna or nearby tendons and ligaments.

Alternate Names:

Ulnar-Sided Wrist Pain

Ulnar-Sided Wrist Pain

Alternate index label; see *Ulnar wrist pain*.

Ultrafiltration

A process in which pressure pushes water and small dissolved substances through a very fine filter while larger particles remain behind. The kidneys use it to begin forming urine, and dialysis uses it to remove excess fluid.

Ultrasonic Therapy

Treatment using high-frequency sound energy to heat, move, break up, or otherwise affect tissue. It is used in selected physical-therapy procedures and some operations; benefits and risks depend on the device, body site, and condition.

Ultrasonography

A scan using high-frequency sound waves to create images of organs, tissues, vessels, or a fetus without radiation.

Ultrasound

An imaging test that uses high-frequency sound waves to show organs, blood vessels, tissues, or a developing fetus without ionizing radiation. Different examinations can assess the abdomen, pelvis, kidneys, thyroid, heart, blood flow, or testicles.

Ultrasound Biomicroscopy

Very high-frequency ultrasound that creates detailed images of the front part of the eye, including the cornea, iris, lens, and drainage angle when an ordinary eye examination is not enough.

Ultrasound Contrast

Tiny gas-filled bubbles given into a vein to improve ultrasound images of blood flow and selected organs.

They are usually cleared through the lungs but can rarely cause allergic or cardiopulmonary reactions.

Ultrasound Therapy

Use of sound waves at therapeutic intensity to heat or mechanically affect tissue. It is used in selected rehabilitation settings, but evidence and suitability vary by condition and it is not appropriate over every body area.

Ultrasound Transducer

The probe placed against the skin or inside a body opening during an ultrasound scan. It sends and receives sound waves to create images or guide a procedure; different probes are used for different body areas.

Ultraviolet Rays

Invisible electromagnetic radiation with wavelengths shorter than visible violet light. Excess exposure can cause sunburn, photoaging, eye injury, and skin cancers; controlled ultraviolet exposure has selected therapeutic uses.

Ultraviolet Therapy

Controlled exposure to ultraviolet light used for selected skin disorders such as psoriasis, eczema, and vitiligo; treatment requires eye and skin protection and monitoring for burns and long-term skin cancer risk.

Umbilical

Relating to the umbilicus or navel, including structures, lesions, discharge, or abnormalities located at or connected with it.

Umbilical Artery Doppler

An ultrasound measurement of blood flow through the umbilical cord. It helps assess how well the placenta is supplying the fetus, especially when fetal growth is reduced or pregnancy complications affect placental function.

Umbilical Catheters

Umbilical catheters provide vascular access through

a newborn's umbilical vessels for fluids, medicines, monitoring, or blood sampling while complications are monitored.

Umbilical Cord

The connection between a fetus and the placenta. It contains blood vessels that carry oxygen, nutrients, and waste between them and is protected by a soft, cushioning tissue.

Umbilical Cord Blood Gas

A test of blood taken from the umbilical cord after birth to assess the baby's oxygen supply and acid-base balance around delivery. Arterial and venous results provide different information and must be interpreted with the baby's condition, gestational age, and delivery circumstances.

Umbilical Cord Prolapse

The umbilical cord slips through the cervix ahead of or alongside the baby, usually after the waters break. The cord can be squeezed and reduce the baby's oxygen supply, making this an obstetric emergency.

Umbilical Granuloma

A small moist pink or red lump of healing tissue at a baby's navel after the cord falls off. It may ooze clear fluid but should not cause spreading redness, fever, or marked tenderness; a clinician can treat it and exclude infection or another abnormal connection.

Alternate Names:

Granuloma Umbilicale; Neonatal Umbilical Granuloma

Umbilical Hernia

A soft bulge caused when tissue pushes through the opening at the navel. Many infant hernias close as the child grows, while adult hernias may enlarge or become trapped and painful and sometimes need surgery.

Umbilical Region

The central part of the abdomen around the navel. Pain, swelling, a hernia, or a lump in this area may arise from the bowel, abdominal wall, blood vessels, or other organs and is assessed with examination

and, when needed, imaging.

Umbilical Vein

The umbilical vein carries oxygen- and nutrient-rich blood from the placenta to the fetus during pregnancy.

Umbilication

Formation of a central hollow or navel-like depression in a skin lesion or other body structure. It can occur in some infections, inflammatory lesions, tumors, or normal anatomical features and must be interpreted with the lesion's appearance.

Umbilicus

The navel, a scar on the anterior abdominal wall marking the former attachment of the umbilical cord. It can be affected by hernia, infection, discharge, or metastatic disease.

Umbilicus (Navel)

The navel, a scar on the front of the abdomen left after the umbilical cord separates at birth. It may be affected by a hernia, infection, discharge, or other skin changes.

Alternate Names:

Navel

Unconscious

Not awake and not responsive to ordinary external stimuli. Unconsciousness may result from syncope, seizure, trauma, intoxication, metabolic disease, stroke, or other emergencies.

Unconsciousness

Loss of awareness and normal response to surroundings, ranging from brief fainting to prolonged coma. It can result from reduced brain blood flow, injury, seizures, low blood sugar, drugs, or serious illness.

Unconsciousness, Temporary

A brief episode of loss of awareness and responsiveness, often caused by syncope but also possible with seizure, concussion, hypoglycemia, or other conditions requiring assessment.

Underventilation

Breathing that is too slow or shallow to remove enough carbon dioxide. It may also lower oxygen and can result from sedatives, weak breathing muscles, severe obesity, lung disease, or brain problems.

Underweight

Body weight that is lower than expected for a person's height, age, and build. It may be healthy for some people but can also reflect poor nutrition, illness, or unintentional weight loss and should be considered with the whole clinical picture.

Undescended Testicle

A testicle that has not moved into the scrotum before birth, also called cryptorchidism. It may descend during early infancy, but a testicle that remains high can have increased risks of infertility, twisting, injury, and cancer and should be assessed.

Alternate Names:

Testicle, Undescended

Undescended Testicle Repair

An operation that moves a testicle into the scrotum and fixes it there. It is usually performed in childhood to support fertility, allow examination, and reduce risks related to twisting, injury, and cancer.

Undescended Testis

Failure of one or both testes to descend into the scrotum. Some descend during early infancy, but persistent cryptorchidism can impair fertility and increase the risk of torsion, hernia, or testicular cancer.

Undescended Testis (Cryptorchidism)

Congenital failure of one or both testes to descend along the normal path into the scrotum. Persistent cases require evaluation because they may affect fertility and increase the risk of torsion, hernia, or testicular cancer.

Alternate Names:

Cryptorchidism

Undifferentiated

Not showing the recognizable features of a specialized cell or tissue. An undifferentiated tumor has cells that look very unlike normal tissue, so its origin and behavior may be difficult to determine.

Undifferentiated Cancer

Cancer made of cells that look very unlike normal cells and do not clearly show the tissue where they began. Special laboratory tests and imaging may be needed to identify its type and guide treatment.

Undifferentiated Carcinoma

A high-grade carcinoma whose cells lack recognizable features of a specific tissue or tumor subtype; diagnosis and treatment require pathology, immunostaining, and staging.

Undifferentiated Pleomorphic Sarcoma

An uncommon, often fast-growing cancer of soft tissue or bone whose cells vary greatly in shape and do not resemble a specific normal tissue. Treatment depends on its site, size, and spread.

Alternate Names:

Malignant Fibrous Histiocytoma

Undifferentiated Pleomorphic Sarcoma Of The Breast

A rare high-grade breast sarcoma formerly called malignant fibrous histiocytoma. It is a diagnosis of exclusion after other specific sarcomas and metastatic carcinoma have been ruled out histologically.

Undulant Fever

An infection caused by *Brucella* bacteria, usually acquired from infected animals or unpasteurized dairy products. It can cause repeated or fluctuating fever, sweats, tiredness, joint pain, and serious organ complications.

Unerupted Tooth

A tooth that has not emerged into the oral cavity at the expected time. It may be normally developing, delayed, impacted, or prevented from erupting by obstruction or abnormal position.

Ungual

Relating to a fingernail or toenail. The term may describe a finding beneath, around, or within the nail, such as a bruise, fungal infection, wart, or pigmented lesion.

Unicornuate Uterus

A congenital condition in which only one side of the uterus develops fully, usually with one fallopian tube. Some people have no symptoms, but it can increase risks of infertility, pregnancy outside the uterus, miscarriage, or premature birth and may require specialist pregnancy care.

Unilateral

Affecting, occurring on, or involving one side of the body or one paired organ, such as unilateral weakness or unilateral eye disease.

Unilateral Gynecomastia

Enlargement of breast glandular tissue affecting one breast in a male patient; a new, firm, fixed, painful, or nipple-associated mass requires clinical assessment.

Unilateral Microphthalmos

A congenital condition in which one eye is abnormally small. It may be associated with other ocular malformations and can cause substantial visual impairment.

Uninodular Goiter

An enlarged thyroid containing one main lump, or nodule. Blood tests and ultrasound help assess thyroid function and the chance of cancer; some nodules need follow-up or a needle sample.

Uniparental Disomy

A chromosome difference in which both copies of a chromosome, or part of one, come from the same parent. It can cause disease by disrupting genes that depend on parental origin or by giving a child two copies of a harmful gene variant.

Unopposed Estrogen

Estrogen treatment given without a progestogen to someone with a uterus. Long-term use can overstimulate the uterine lining and increase cancer risk, so protection is usually recommended when appropriate.

Unresectable

Describing a tumor or lesion that cannot be completely removed safely by surgery because of its location, extent, invasion of vital structures, or the patient's operative risk.

Unresponsive Coma

A state of profound unconsciousness in which a person cannot be awakened or follow commands. Causes include brain injury, stroke, seizures, poisoning, infection, and metabolic failure; emergency evaluation is required.

Unstable Angina

Chest pain caused by reduced blood flow to the heart that is new, worsening, lasts longer, or occurs at rest, without clear evidence of heart-muscle death. It is an emergency warning of possible heart attack and needs urgent assessment.

Unsteadiness

Impaired balance or gait stability, which may result from vestibular disease, neurologic disorders, weakness, medication effects, visual impairment, or musculoskeletal problems.

Untidy Wound

An irregular or contaminated wound with crushing, devitalized tissue, tissue loss, foreign material, or associated injury to vessels, nerves, tendons, or bone. It has increased infection risk and may require exploration, irrigation, debridement, and delayed or staged closure.

Upper Airway Biopsy

Removal of tissue from the nasal cavity, pharynx, larynx, or related upper airway for microscopic evaluation of suspected infection, inflammation, infiltrative disease, or tumor.

Upper Airway Obstruction

Narrowing or blockage of the breathing passage in the nose, throat, or voice box. It can cause noisy breathing, breathlessness, voice changes, or blue lips and is an emergency when severe or rapidly worsening.

Upper Airway Resistance Syndrome

Repeated extra effort to breathe through a partly narrowed upper airway during sleep. It can cause brief repeated awakenings, unrefreshing sleep, morning headache, and daytime sleepiness even without clearly positive standard sleep-apnea testing.

Alternate Names:

UARS

Upper Arm

The portion of the upper limb between the shoulder and elbow, containing the humerus and muscles, nerves, and vessels that serve the arm.

Upper Endoscopy

A flexible camera examination of the food pipe, stomach, and first part of the small intestine. It can identify inflammation, ulcers, bleeding, narrowing, or tumors and can allow tissue samples or treatment.

Upper Esophageal Sphincter

A ring of muscle at the top of the esophagus that opens during swallowing and coordinates food passage.

Alternate Names:

UES

Upper Extremity

The anatomic region extending from the shoulder through the arm, forearm, wrist, and hand. Disorders may involve its bones, joints, muscles, nerves, vessels, or skin.

Upper Extremity Venous Doppler

An ultrasound examination of the arm and related veins that assesses compressibility and blood flow, commonly to evaluate suspected venous thrombosis.

Upper Gastrointestinal Bleeding

Bleeding from the esophagus, stomach, or first part of the small intestine. It may cause vomiting of red or coffee-ground blood, black stools, dizziness, weakness, or fainting. Common causes include ulcers, inflammation, tears, and enlarged veins; significant bleeding requires urgent assessment and treatment.

Upper GI And Small Bowel Series

A fluoroscopic x-ray examination in which swallowed contrast outlines the esophagus, stomach, duodenum, and small intestine to evaluate structure and transit.

Upper GI Series

An X-ray examination of the food pipe, stomach, and first part of the small intestine after swallowing contrast material. It can show narrowing, blockage, ulcers, abnormal movement, or other structural problems.

Upper Leg

The portion of the lower limb between the hip and knee, containing the femur and the thigh muscles, nerves, and blood vessels.

Upper Limb Disorders

Conditions affecting the shoulder, arm, elbow, forearm, wrist, or hand, including musculoskeletal, nerve, vascular, and work-related disorders.

Upper Motor Neuron

A nerve cell in the brain or spinal cord that controls nerve cells supplying muscles. Damage to these pathways can cause weakness, stiffness, exaggerated reflexes, or difficulty controlling movement.

Upper Motor Neuron Syndrome

A group of findings caused by damage to movement pathways in the brain or spinal cord. It may cause weakness, stiffness, muscle spasms, exaggerated reflexes, or reduced control of movement.

Upper Respiratory Infection

An infection of the nose, sinuses, pharynx, or lar-

ynx, most often caused by a virus and producing symptoms such as congestion, sore throat, cough, or runny nose.

Upright Labor Positions

Maternal positions during labor, such as walking, standing, squatting, kneeling, or sitting upright. They may improve comfort and mobility and can be used when safe and acceptable to the laboring person and clinical team.

Urachal Carcinoma

A rare cancer arising from a leftover connection between the bladder and the navel, usually near the top of the bladder. It may cause blood or mucus in the urine, pelvic pain, or urinary changes.

Urachal Cyst

A fluid-filled sac left from the temporary fetal connection between the bladder and navel. It may cause no symptoms, but infection can produce lower-abdominal pain, fever, navel discharge, or urinary symptoms.

Urachal Mucinous Cystic Tumor

A rare tumor arising from the urachal remnant between the bladder dome and umbilicus. It may be benign or malignant, with mucinous histology, and requires surgical excision.

Urachus

An embryologic connection between the fetal bladder and umbilicus that normally becomes the median umbilical ligament after birth. Persistent urachal remnants can form cysts, sinuses, or other complications.

Uraemia

A serious illness caused by severe kidney failure and buildup of waste products in the blood. It may cause nausea, itching, tiredness, confusion, bleeding, or inflammation around the heart.

Uraemic Syndrome

The collection of symptoms and biochemical abnor-

malities caused by severe accumulation of uraemic waste products in advanced kidney failure.

Uranium

A naturally occurring radioactive heavy metal. Internal exposure can damage the kidneys, while inhaled or retained radioactive material can also expose tissues to ionizing radiation.

Urate

A form of uric acid, a waste product made when the body breaks down certain substances in food and cells. Too much urate in the blood can form crystals in joints and cause gout.

Urate-Lowering Therapy

Long-term treatment that lowers urate in the blood, helping dissolve gout crystals and prevent further attacks and joint damage. The medicine is chosen according to kidney function, other illnesses, and treatment goals.

Urates

Salts or ions of uric acid. Monosodium urate crystals can accumulate in joints in gout, and urate crystals may contribute to urinary stones.

Urea

The principal nitrogen-containing waste product of protein metabolism, formed in the liver and excreted mainly by the kidneys.

Urea Breath Test

A noninvasive test for active *Helicobacter pylori* infection: the person drinks labeled urea, and labeled carbon dioxide in exhaled breath indicates bacterial urease activity.

Urea Cycle

A series of chemical reactions in the liver that changes toxic ammonia, produced when the body breaks down protein, into urea. The kidneys then remove urea in urine.

Urea Cycle Disorder

An inherited problem in the liver's process for removing ammonia. Ammonia can build up in the blood and cause vomiting, poor feeding, sleepiness, confusion, seizures, or brain injury, especially during illness or fasting.

Urea Nitrogen Urine Test

A urine test measuring urea nitrogen excretion, interpreted with blood urea nitrogen, creatinine, diet, and urine volume to assess protein metabolism and renal handling.

Ureaplasma

A genus of very small bacteria without a cell wall that can colonize the genital or urinary tract and is sometimes associated with urethritis or pregnancy complications.

Ureaplasma Urealyticum

A cell-wall-free bacterium that can colonize the genital or urinary tract and is sometimes associated with nongonococcal urethritis, pregnancy complications, or infection in vulnerable newborns.

Uremia

A clinical syndrome caused by advanced kidney failure and accumulation of waste products and other biologically active substances. Symptoms may include nausea, itching, fatigue, confusion, bleeding, or pericarditis; laboratory values and symptoms must be interpreted together.

Uremic Encephalopathy

Brain dysfunction caused by the buildup of waste products in severe kidney failure. It may cause confusion, extreme sleepiness, muscle twitching, seizures, or coma. It is a medical emergency and usually requires urgent treatment of kidney failure, often including dialysis.

Uremic Frost

Rare white, powdery crystals of urea that appear on the skin when severe untreated kidney failure causes very high waste levels in the blood. It indicates advanced illness requiring urgent medical assessment

and treatment of the kidney failure.

Uremic Pericarditis

Inflammation of the sac around the heart caused by severe kidney failure and buildup of waste products. It may cause sharp chest pain, a scratchy heart sound, or fluid around the heart; urgent kidney treatment is needed because tamponade can occur.

Uremic Platelet Dysfunction

Reduced ability of platelets to stick together and stop bleeding because of advanced kidney failure. It can cause easy bruising, nosebleeds, heavy menstrual bleeding, or bleeding from the stomach or bowel and may improve when the kidney failure is treated.

Uremic Stomatitis

Inflammation of the mouth caused by severe kidney failure and buildup of waste products. It may cause a bad taste, mouth soreness, white patches, ulcers, or bleeding gums and tongue.

Ureter

One of two muscular tubes that carry urine from a kidney to the bladder. A stone or narrowing can block a ureter and cause severe side pain, swelling of the kidney, infection, or kidney damage.

Ureter Duplex

A birth variation in which one kidney has two urine tubes instead of one. It may cause no problems but can lead to urine flowing backward, blockage, repeated infections, or poor drainage.

Ureter Fissus

A birth difference in which a ureter is divided lengthwise or partly duplicated. It may cause no symptoms, but abnormal urine flow can lead to urine reflux, blockage, repeated infection, or poor kidney drainage.

Ureter Obstruction

Blockage of urine flow from a kidney to the bladder, commonly caused by a stone, stricture, tumor,

or external compression and potentially leading to hydronephrosis, infection, or kidney injury.

Ureteral Calculi

Stones that form in or pass through a ureter, the tube carrying urine from a kidney to the bladder.

Ureteral Catheters

Thin tubes passed into a ureter to drain urine, inject contrast, measure pressure, or guide a procedure. Possible complications include infection, bleeding, a tear, movement of the tube, or blockage.

Ureteral Obstruction

A blockage that prevents urine from flowing from a kidney to the bladder. It may cause side pain, infection, or kidney swelling and can damage the kidney; an infected blocked kidney needs urgent drainage.

Alternate Names:

Blocked Ureter

Ureteral Perforation

A tear or hole in the ureter, sometimes caused by a stone, trauma, surgery, or an endoscopic procedure. Urine may leak into surrounding tissues, causing pain, infection, or inflammation; prompt imaging and urologic assessment are required.

Ureteral Polyp

Usually a benign fibroepithelial growth arising from the ureter. It may cause hematuria, flank pain, or obstruction and must be distinguished from urothelial malignancy when evaluated.

Ureteral Retrograde Brush Biopsy

A small brush passed through a thin camera into the ureter to collect cells from its lining. A laboratory examines the cells for cancer or other abnormal changes.

Ureteral Stenosis

Narrowing of the ureter caused by scar tissue, prior surgery, radiation, stones, inflammation, or congenital disease, impairing urine drainage and possibly

causing hydronephrosis or recurrent infection.

Ureteral Stent

A thin tube placed inside the ureter to keep urine flowing from the kidney to the bladder when a stone, narrowing, tumor, or swelling blocks the passage. It can cause urinary urgency, discomfort, blood in the urine, infection, or mineral buildup and is usually temporary.

Ureteral Stent (Double-J Stent)

A thin flexible tube placed inside the ureter to keep urine flowing from the kidney to the bladder. Curled ends help hold it in place; it may cause urgency, discomfort, or blood in the urine while it remains.

Alternate Names:

Double-J Stent

Ureteral Stricture

Narrowing of the ureter caused by fibrosis, surgery, instrumentation, radiation, infection, malignancy, or congenital disease. It can produce upstream hydronephrosis, pain, infection, and declining renal function.

Ureteric Perforation

A tear or hole in the ureter that can allow urine to leak into surrounding tissue, usually after instrumentation, surgery, trauma, or a stone; it needs prompt urologic assessment.

Ureteritis

Inflammation of the ureter, usually related to infection, obstruction, stone passage, instrumentation, or adjacent inflammatory disease. It may cause flank or abdominal pain, urinary symptoms, hematuria, and fever.

Ureterocele

A balloon-like dilation of the lower ureter where it enters the bladder, usually congenital; it can obstruct urine flow and cause infection, hydronephrosis, reflux, stones, or impaired renal function.

Ureterolithiasis

A kidney stone located in the ureter, the tube from the kidney to the bladder. It can block urine and cause severe wave-like side pain, blood in the urine, nausea, infection, or kidney damage.

Ureteropelvic Junction Obstruction

A blockage where the kidney's urine-collecting area joins the ureter. It may be present from birth or develop later and can cause kidney swelling, side pain, infections, stones, or loss of kidney function.

Ureteroscope

A thin camera instrument passed through the urinary passage to examine the ureter and kidney. It can help remove stones, take tissue samples, or place a stent.

Ureteroscopes

Small endoscopes used to inspect the ureter and renal collecting system and to perform procedures such as stone removal, biopsy, or stent placement.

Ureteroscopy

Ureteroscopy uses a small endoscope passed through the urinary tract to inspect, biopsy, or treat ureteral or kidney stones and other lesions.

Ureterostomy Procedure

Surgery that creates an opening from a ureter to the skin or another urinary conduit to divert urine when normal drainage to the bladder is impossible or must be bypassed.

Urethra

The tube that carries urine from the bladder out of the body. In people with male reproductive anatomy it also carries semen; the shorter urethra in people with female reproductive anatomy makes bladder infections more likely.

Urethra Disorder

A condition affecting the urethra, such as infection, inflammation, stricture, trauma, congenital abnormality, or tumor, that may cause pain, discharge,

weak stream, or retention.

Urethral Carcinoma

A rare cancer arising from the urethra that may cause bleeding, a lump, discharge, pain, or difficult urination; diagnosis requires examination, imaging, and biopsy.

Urethral Catheter

A tube inserted through the urethra into the bladder to drain urine, obtain a specimen, instill medication, or monitor output. Urinary infection and urethral trauma are important risks.

Urethral Diverticulum

A pocket beside the urethra that connects with the urine tube, often developing after infection or blockage of nearby glands. It may cause burning urination, urine dribbling after voiding, repeated infections, pain during sex, or a vaginal-wall lump.

Urethral Fistula

An abnormal channel between the urethra and another epithelial surface, often the vagina or skin. It can cause continuous urine leakage, recurrent infection, and local irritation.

Urethral Hypermobility

Excessive movement of the urethra when abdominal pressure rises, contributing to urine leakage during coughing, lifting, or exercise.

Urethral Infection

Infection involving the urethra, commonly caused by bacteria, including sexually transmitted organisms. Symptoms may include burning urination, discharge, frequency, or pelvic discomfort; testing and appropriate treatment help prevent complications and transmission.

Urethral Meatus

The external opening of the urethra through which urine leaves the body. Its position may be abnormal in conditions such as hypospadias or epispadias.

Urethral Meatus, Female

The external opening of the female urethra, located in the vestibule anterior to the vaginal opening. Its position and appearance may be relevant in urinary symptoms, congenital variation, or examination.

Urethral Obstruction

Partial or complete blockage of urine leaving the bladder, often from stricture, stone, prostate disease, tumor, or a congenital valve; acute retention requires prompt treatment.

Urethral Pressure Profile

A test using a small catheter to measure pressure along the urethra and assess how well it closes. It may help investigate certain types of urine leakage or difficulty emptying the bladder.

Urethral Sling

A strip of synthetic material or the person's own tissue placed beneath the urethra to support it and reduce urine leakage during coughing, lifting, or exercise. Possible complications include urgency, difficulty urinating, infection, or erosion.

Urethral Sphincter

Muscles around the urine tube that help keep urine from leaking and relax when a person urinates. Nerve or muscle damage can weaken control and cause leakage or difficulty emptying the bladder.

Urethral Stenosis

Scar-related narrowing of the urethral channel that restricts urinary flow and can cause spraying, weak stream, recurrent infection, retention, or bladder damage.

Urethral Stricture

Narrowing of the urethra caused by scar tissue. It may produce a weak urinary stream, spraying, straining, incomplete emptying, infections, or urinary retention and can result from injury, instrumentation, infection, or inflammatory disease.

Urethral Syndrome

Urinary frequency, urgency, dysuria, or discomfort without a clear bacterial urinary-tract infection; causes may include irritation, pelvic-floor dysfunction, or inflammation.

Urethritis

Inflammation of the urethra, often caused by a sexually transmitted infection but sometimes by irritation or injury. It can cause burning urination, itching, or discharge and requires testing and appropriate treatment to prevent complications and transmission.

Urethrocele

Bulging or downward displacement of the urethra, usually into the front wall of the vagina. It may cause pressure, urinary leakage, difficulty emptying the bladder, discomfort, or no symptoms.

Urethrography

An X-ray test in which contrast liquid outlines the urethra, the tube carrying urine out of the body. It can show narrowing, leaks, injury, abnormal connections, or birth differences.

Urethroplasty

Surgery that rebuilds or widens the urine tube, most often to treat a narrowing called a stricture. It may use nearby tissue or a graft and aims to improve urine flow.

Urethroscopy

Examination of the urethra with a thin camera passed through its opening. It can identify narrowing, injury, inflammation, stones, tumors, or other abnormalities and may allow treatment during the same procedure.

Urge Urinary Incontinence

Involuntary leakage of urine, significantly affecting psychological, social, and physical well-being. See urinary incontinence.

Urgency

A sudden, difficult-to-delay need to urinate. It may result from a urinary infection, bladder irritation, overactive bladder, a stone, nerve disease, prostate enlargement, or pelvic-floor problems.

URI

URI usually means upper respiratory infection, commonly a viral infection of the nose, throat, or upper airways causing congestion, cough, and sore throat.

Uric Acid

A waste product formed when the body breaks down purines. High blood levels can cause gout or kidney stones, although many people with high levels have no symptoms.

Uric Acid - Blood

A blood test measuring uric acid, a purine-breakdown product. The result helps assess gout, kidney stones, kidney function, or effects of some cancer treatments.

Uric Acid Nephropathy

Kidney injury caused when too much uric acid forms crystals in the kidney's small tubes. It can occur during rapid breakdown of cancer cells or severe uric-acid excess and may require urgent treatment.

Uric Acid Stones

Kidney stones composed primarily of uric acid. They form more readily in acidic urine and are associated with hyperuricemia, gout, high purine intake, or chronic diarrhea. Some can dissolve when urine is alkalinized.

Uric Acid Urine Test

A urine test measuring uric acid excretion, used in evaluation of gout, kidney stones, uric-acid overproduction, and selected metabolic disorders.

Uricosuric Drug

A medicine that increases renal excretion of uric acid, such as probenecid, used in selected patients with gout.

Uridine Triacetate

An oral prodrug that supplies uridine and is used as an emergency antidote for severe or life-threatening toxicity from fluorouracil or related fluoropyrimidines, under specialist direction.

Urinal

A portable container used to collect urine from someone who cannot easily reach a toilet. It should be emptied, cleaned, and stored safely to reduce spills, odor, and infection risk.

Urinalysis

Laboratory examination of urine for its appearance, acidity, blood, cells, protein, sugar, ketones, bacteria, and other substances. It can provide clues to infection, kidney disease, bleeding, diabetes, dehydration, and other illness.

Urinary

Relating to urine or to the organs and processes involved in making, storing, and passing urine, including the kidneys, ureters, bladder, and urethra.

Urinary Bladder

A hollow muscular organ in the lower abdomen that stores urine until it is released through the urethra.

Urinary Bladder Disorder

A disease affecting bladder storage or emptying, including infection, overactivity, pain syndrome, stones, tumor, neurologic dysfunction, or outlet obstruction.

Urinary Bladder, Diseases Of

Disorders of the bladder, including infection, stones, tumors, neurogenic dysfunction, inflammation, obstruction, and impaired emptying.

Urinary Calculi

Stones formed from crystallized minerals in the urinary tract. They may cause colicky pain, hematuria, obstruction, infection, or kidney injury depending on their size and location.

Urinary Casts

Small tube-shaped particles formed inside kidney tubules and passed in urine. Their appearance can provide clues about kidney inflammation, bleeding, infection, or damage.

Urinary Catheter

A hollow, flexible tube inserted through the urethra into the bladder to drain urine; it may be used intermittently or left in place.

Urinary Catheterization

Insertion of a tube into the bladder to drain urine, measure output, obtain a specimen, or deliver treatment; infection, trauma, and blockage are possible complications.

Urinary Catheters

Urinary catheters drain the bladder when a person cannot empty it normally or accurate urine measurement is needed, with risks including infection, trauma, blockage, and discomfort.

Urinary Diversion

Surgical or catheter-based rerouting of urine when the normal passage from the kidneys to the urethra cannot be used, often to a stoma or bowel reservoir.

Urinary Fistula

An abnormal connection between part of the urinary tract and another organ or the skin, allowing urine to leak outside its normal pathway. Causes include surgery, childbirth injury, inflammation, and cancer.

Urinary Frequency

The need to urinate more often than usual, which may result from infection, bladder irritation, increased urine production, or other urinary disorders.

Urinary Hesitation

Difficulty starting or maintaining urination, which may result from prostate enlargement, urethral narrowing, medications, nerve disorders, pain, or impaired bladder contraction.

Urinary Incontinence

Unwanted leakage of urine. It may happen with coughing or exercise, a sudden strong urge, an overfull bladder, difficulty reaching the toilet, or nerve and muscle problems; assessment can identify treatable causes and suitable exercises, medicines, devices, or surgery.

Alternate Names:

Bladder Control, Loss Of Incontinence, Urinary Loss Of Bladder Control

Urinary Incontinence Products

Urinary-incontinence products such as pads, protective underwear, catheters, and mattress covers manage leakage but do not treat its underlying cause.

Urinary Lithiasis

The formation or presence of stones anywhere in the urinary tract, including the kidneys, ureters, bladder, or urethra.

Urinary Retention

Inability to empty the bladder fully. It may be sudden and painful or develop gradually with a weak stream, frequent small amounts of urine, or leakage from an overfull bladder. Blockage, medicines, nerve problems, or weak bladder muscles can cause it.

Urinary Retraining

Scheduled toilet visits and bladder-control techniques used to reduce urgency, frequent urination, or leakage. A clinician may combine it with pelvic-floor exercises, fluid changes, or treatment of the underlying cause.

Urinary Stasis

Slowing or stopping of normal urine flow, which can promote urinary infection, stone formation, or obstruction-related kidney injury.

Urinary System

The kidneys, ureters, bladder, and urethra. Together they make, transport, store, and remove urine and help control fluid, salts, acidity, and blood

pressure.

Urinary Tract

The kidneys, ureters, bladder, and urethra. Together these organs make urine, carry it to the bladder, store it, and remove it from the body.

Urinary Tract Disorder

Any disease of the kidneys, ureters, bladder, or urethra, including infection, stones, obstruction, congenital abnormalities, cancer, and functional or neurologic disorders.

Urinary Tract Infection

Infection of the urinary tract, classified as lower infection such as cystitis or urethritis, or upper infection such as pyelonephritis. Symptoms vary; dysuria, frequency, urgency, fever, flank pain, or nausea may occur. *Escherichia coli* is a common cause, but organisms vary by setting and patient factors.

Alternate Names:

Bladder Infection (Urinary Tract Infection)

Urinary Tract Infection In Pregnancy

A urinary infection or asymptomatic bacterial growth occurring during pregnancy. Pregnancy increases the risk of upper urinary infection, so screening and treatment follow pregnancy-specific clinical guidance.

Urinary Tract Neoplasm

A benign or malignant growth in the kidneys, ureters, bladder, or urethra; evaluation depends on its site, symptoms, tissue type, and extent of spread.

Urinary Urgency

A sudden, difficult-to-delay need to urinate. It may occur with urinary infection, bladder irritation, overactive bladder, stones, neurologic disease, or other conditions. Urgency with fever, flank pain, blood in the urine, or inability to urinate requires medical assessment.

Urination

The process of releasing urine from the bladder through the urethra and out of the body.

Alternate Names:

micturition.

Urination Disorder

Abnormal storage or emptying of urine causing frequency, urgency, dysuria, incontinence, hesitancy, weak stream, retention, or excessive or reduced urine output.

Urination, Difficulty

Trouble starting, maintaining, or emptying urine, often described as hesitancy, weak stream, straining, or incomplete emptying; causes include obstruction, infection, medicines, and nerve or muscle disorders.

Urine

The liquid waste produced by the kidneys, containing water and dissolved substances eliminated from the blood.

Urine 24-Hour Volume

Twenty-four-hour urine volume is the total urine produced in a day and helps assess hydration, kidney function, endocrine disease, or abnormal urine production.

Urine Albuminuria

An abnormal amount of the blood protein albumin in urine. Persistent albumin loss can be an early sign of kidney disease and also increases the risk of worsening kidney function and cardiovascular disease.

Urine Alkalinization

Treatment that makes urine less acidic, usually with a carefully monitored medicine, to help remove certain poisons such as salicylate. It can disturb body salts or fluid balance and is used only for selected cases.

Urine Analysis

Laboratory testing of urine for blood, cells, pro-

tein, sugar, microbes, and other clues to illness. It can help assess urinary infection, kidney disease, diabetes, dehydration, and other conditions.

Urine Chemistry

Measurement of chemical constituents in urine, such as glucose, protein, electrolytes, ketones, blood, and pH, to evaluate kidney function and systemic disease.

Urine Concentration Test

A test of the kidney's ability to concentrate urine, assessed by urine osmolality or specific gravity after controlled fluid conditions when appropriate.

Urine Conductivity

Urine conductivity measures how readily urine carries electrical current and reflects its dissolved electrolyte and solute concentration.

Urine Culture

A laboratory test that grows microorganisms from a urine specimen to identify urinary-tract infection and guide antimicrobial selection. Results may report the organism, quantity of growth, and antimicrobial susceptibility. Proper collection is important because contamination can produce misleading growth; results must be interpreted with symptoms and urinalysis.

Urine Culture - Catheterized Specimen

A urine culture performed on a specimen collected through urinary catheterization, usually when a clean-catch sample cannot be obtained or when catheter-associated infection is being assessed. Collection technique and timing affect interpretation because colonization and contamination may cause bacterial growth without symptomatic infection.

Urine Cytology

Microscopic examination of cells shed into urine, mainly used to help detect high-grade urothelial carcinoma and some other abnormalities. A negative result does not exclude all urinary-tract cancers.

Urine Drainage Bags

Urine drainage bags collect urine from a catheter or urinary diversion and require correct positioning, emptying, hygiene, and monitoring for blockage or infection.

Urine Formation

The process by which the kidneys make urine: they filter blood, return needed water and substances to the body, and add selected wastes and extra ions to the fluid that leaves as urine.

Urine HCG (Pregnancy Test)

A urine test that detects human chorionic gonadotropin, a hormone produced during pregnancy. Testing too early or using diluted urine can give a false-negative result; a positive result confirms pregnancy but does not show its location or health.

Alternate Names:

Pregnancy Test

Urine Hemoglobin

Hemoglobin detected in urine, which may reflect intravascular hemolysis or contamination with intact red blood cells. Interpretation requires comparison with urine microscopy and clinical findings.

Urine Osmolality

A measure of how concentrated urine is. It helps assess whether the kidneys can conserve or remove water and must be interpreted with fluid intake, medicines, kidney function, and blood tests.

Urine PH

A measurement of urine acidity or alkalinity. It varies with diet, metabolism, medications, infection, and kidney function and can influence the formation of some urinary stones.

Urine PH Test

A test measuring urine acidity or alkalinity, useful in evaluating acid-base handling, urinary infection, kidney stones, and some metabolic conditions.

Urine Protein Dipstick Test

A screening test using a reagent strip to detect mainly albumin in urine; positive results require confirmation and quantitative assessment when clinically indicated.

Urine Protein Electrophoresis Test

A laboratory test that separates urine proteins by electrical charge and size to help detect abnormal proteins, including monoclonal light chains associated with plasma-cell disorders.

Urine Retention

Inability to empty the urinary bladder completely or at all. Acute retention can cause severe pain and requires prompt medical assessment.

Urine Sediment

The cells, crystals, casts, and other particles seen under a microscope after urine is concentrated. Their appearance can provide clues to bleeding, infection, stones, or kidney inflammation.

Urine Sodium

The amount of sodium in urine. It can help assess fluid balance and kidney handling of salt, but results are strongly affected by diet, medicines, hydration, and the timing of the sample.

Urine Specific Gravity Test

A test comparing the density of urine with the density of water. It gives a rough estimate of how concentrated the urine is and can help assess hydration and the kidneys' ability to conserve water.

Urine Toxicology

Laboratory analysis of urine for medicines, drugs, or their metabolites. Results require interpretation because detection does not always establish impairment or the timing of exposure.

Urinometer

An instrument that measures how dense urine is compared with water. The result gives an estimate of urine concentration and may help assess hydra-

tion or the kidney's ability to conserve water.

Urobilinogen

A colourless product formed in the intestine from bilirubin and partly reabsorbed and excreted in urine; abnormal levels may provide clues to liver disease or haemolysis.

Urodynamic Testing

A group of tests that measures how the bladder and urethra store and release urine. It can help explain leakage, urgency, difficulty emptying, or repeated retention when simpler tests do not identify the cause.

Urodynamics

A group of tests that measures how the bladder stores urine, how pressure changes as it fills, and how the urethra and bladder release urine. It helps investigate leakage, urgency, weak stream, or difficulty emptying when simpler tests are inconclusive.

Uroflow

A test that measures how quickly and steadily urine leaves the body during urination. The result can suggest blockage, weak bladder muscles, or other emptying problems, but it is interpreted with symptoms and sometimes additional tests.

Uroflowmetry

A noninvasive test measuring how fast and steadily urine leaves the body. A low or abnormal flow may reflect blockage, weak bladder contraction, or an incomplete test and must be interpreted with symptoms and other findings.

Urogenital

Relating to the urinary and reproductive systems or structures involving both. The term may describe organs, infections, cancers, birth conditions, injuries, symptoms, tests, or treatments affecting these closely connected body systems.

Urogenital Fistula

An abnormal connection between the urinary and

genital tracts, such as a vesicovaginal or ureterovaginal fistula. It commonly causes continuous urinary leakage and requires specialist evaluation.

Urogenital System

The related urinary and reproductive organs and their associated ducts, vessels, and supporting tissues. The systems share developmental origins and anatomic relationships.

Urogenital Tract

The combined urinary and reproductive organs and passages. These include kidneys, urine tubes, bladder, urethra, reproductive organs, and connected structures that develop partly from related tissues before birth.

Urography

Imaging of the urinary tract, traditionally using X-rays after contrast dye is given. It can show the kidneys, urine tubes, bladder, narrowing, stones, leaks, blockage, or other structural problems.

Urokinase

A plasminogen activator produced by the body and also used as a thrombolytic medicine to help dissolve blood clots.

Urolithiasis

Formation of stones in the urinary tract, including the kidneys, ureters, bladder, or urethra. Stone composition varies by population and may include calcium oxalate, calcium phosphate, uric acid, struvite, or cystine.

Urologic Diagnostic Yield

The proportion of urinary-system tests or procedures that provide a clear, useful diagnosis. A test may have a low yield when the sample is too small, the disease is difficult to detect, or the result does not change care.

Urologist

A doctor who specializes in the urinary system and, in many practices, the male reproductive system.

Urologists diagnose and treat kidney stones, infections, urine leakage, prostate problems, cancers, infertility, and conditions requiring procedures or surgery.

Urology

The medical specialty that diagnoses and treats diseases of the kidneys, urine tubes, bladder, and urethra, as well as the male reproductive organs. Treatment may include medicines, procedures, or surgery.

Urosepsis

A life-threatening whole-body response to a severe urinary infection. It may start in the bladder or kidney and cause fever or low temperature, confusion, low blood pressure, reduced urine, organ failure, or shock; urgent hospital treatment is required.

Urostomy Leak

Escape of urine beneath or around a urostomy appliance or from a surgical connection. Persistent leakage can irritate the skin and may signal poor appliance fit, obstruction, infection, or a surgical complication.

Urostomy Procedure

Surgery that diverts urine through a stoma into an external pouch or conduit, commonly after bladder removal or when the lower urinary tract cannot safely transport urine.

Urostomy Prolapse

Protrusion of a segment of bowel used as a urostomy stoma beyond its usual level. It may cause bleeding, swelling, appliance problems, or impaired urine drainage and should be assessed clinically.

Urostomy Stenosis

Narrowing of a urinary stoma or conduit that impedes drainage, causing reduced urine output, leakage, infection, or kidney-pressure changes and sometimes requiring revision.

Urothelial Carcinoma

A cancer arising from the stretchable lining of the urinary tract, most often the bladder but also the kidney's drainage area, ureters, or urethra. Blood in the urine is common, and treatment depends on location, depth, grade, and spread.

Urothelium

A specialized stretchable lining of the renal pelvis, ureters, bladder, and part of the urethra. It forms a protective barrier between urine and underlying tissues and allows the bladder to expand.

Ursodeoxycholic Acid

A hydrophilic bile acid used for primary biliary cholangitis and selected cholestatic liver diseases; it may also dissolve certain small cholesterol gallstones when bile flow is preserved.

Urticaria

A skin reaction causing transient, itchy raised welts that change location and usually resolve within 24 hours. It may occur with angioedema, which is deeper swelling often affecting the lips, eyelids, tongue, or extremities.

Urticaria Multiforme

A short-lived allergic-type rash in children that causes widespread, ring-shaped or target-like raised patches, often with swelling of the hands, feet, or face. It may follow an infection or medicine and usually fades without scarring.

Urticaria Pigmentosa

A skin condition in which too many mast cells collect in the skin, causing tan or brown spots or bumps that swell and itch when rubbed. Flushing or other body-wide symptoms can occur.

Urticarial Vasculitis

Inflammation of small blood vessels causing hive-like patches that usually last longer than 24 hours and may burn, bruise, or leave dark marks. It can be limited to the skin or linked with joint, kidney, lung, or other disease.

Usher Syndrome

An inherited condition causing hearing loss together with gradually worsening vision from retinal disease. The age and severity vary by type; hearing, vision, balance, communication, and genetic support may all be needed.

Ustekinumab

A biologic medicine that blocks immune signals involved in inflammation. It is used for psoriasis, psoriatic arthritis, Crohn disease, ulcerative colitis, and other approved conditions; infections and allergic reactions are important risks.

Usual Interstitial Pneumonia

A pattern of permanent scarring in the lungs, often seen in idiopathic pulmonary fibrosis. Scarring is usually greatest near the outer and lower parts of the lungs and can form small spaces called honeycombing. It causes increasing breathlessness and cough and is assessed with lung tests and CT imaging.

Ut Dict.

An abbreviation of the Latin phrase “ut dictum,” meaning “as stated” or “as directed.” In medical notes it refers the reader to information already given or to an instruction previously specified.

Uterine (Fallopian) Tubes

Paired muscular tubes extending from the uterus toward the ovaries. They transport the oocyte and are the usual site of fertilization; blockage can contribute to infertility or ectopic pregnancy.

Alternate Names:

fallopian tubes; uterine tubes

Uterine Adnexae

The structures beside and connected to the uterus, mainly the fallopian tubes, ovaries, and supporting tissues. Problems in these structures can cause pelvic pain, abnormal bleeding, infertility, or an ectopic pregnancy.

Uterine Atony

Failure of the uterus to tighten properly after child-

birth, causing heavy bleeding. It is the most common cause of bleeding after delivery and requires prompt treatment with medicines, massage, procedures, or surgery when necessary.

Uterine Balloon Tamponade

A treatment for severe bleeding after childbirth when medicines do not control bleeding. A soft balloon is placed inside the uterus and filled with sterile fluid to press against the uterine wall and slow or stop blood loss while other treatment is arranged.

Uterine Bleeding

Bleeding from the uterus outside the expected menstrual pattern or in an abnormal amount. Causes include pregnancy complications, fibroids, polyps, hormonal changes, medicines, infection, and cancer; heavy or postmenopausal bleeding needs assessment.

Uterine Cancer

Cancer arising in the uterus, most commonly from the endometrium. Abnormal vaginal bleeding, bleeding after menopause, pelvic pain, or unusual discharge requires evaluation; early diagnosis often permits effective treatment.

Uterine Cavity

The hollow space inside the uterus, lined by the endometrium. A fertilized egg normally implants in this lining, which thickens during the menstrual cycle and supports pregnancy; polyps, fibroids, scar tissue, or abnormal shape may affect it.

Uterine Contraction

Tightening of the uterine muscle. Contractions normally occur during menstruation and labor, but painful or unusually frequent contractions can occur with pregnancy complications, dehydration, infection, or medicines and may require assessment.

Uterine Fibroid (Leiomyoma)

A benign tumor arising from the smooth muscle of the uterus. Fibroids may be submucosal, intramural, or subserosal and may cause heavy menstrual bleeding, pelvic pressure, pain, urinary symptoms,

or reproductive problems.

Alternate Names:

Leiomyoma

Uterine Fibroid Embolization

A minimally invasive procedure in which particles block blood flow to uterine fibroids, causing them to shrink. It can reduce heavy bleeding and pressure symptoms but may cause pain, infection, or effects on fertility.

Uterine Fibroids

Benign tumors of uterine smooth muscle, also called leiomyomas. They may cause heavy menstrual bleeding, pelvic pressure, pain, infertility, or no symptoms.

Alternate Names:

leiomyomas. Polyps Uterus (Uterine Fibroids) Tumors Uterine (Uterine Fibroids) Womb Growths (Uterine Fibroids)

Uterine Fistula

A uterine fistula is an abnormal passage connecting the uterus with another organ or the skin, often after surgery, childbirth injury, infection, or cancer.

Uterine Fornix

One of the shallow spaces at the top of the vagina surrounding the cervix. A clinician can examine these spaces during a pelvic examination, and selected procedures may use them as an access route.

Uterine Gland

A small gland in the lining of the uterus that produces fluid and helps support the early embryo. Its activity changes during the menstrual cycle and pregnancy.

Uterine Growths

Uterine growths may include fibroids, polyps, adenomyosis, or rarely cancer. They can cause heavy or irregular bleeding, pelvic pressure, pain, infertility, or no symptoms; examination and imaging determine the type and treatment.

Uterine Hemorrhage

Heavy or abnormal bleeding from the uterus, occurring during pregnancy, after childbirth, or at other times. Causes include pregnancy complications, fibroids, hormonal disorders, and malignancy; severe bleeding with dizziness or weakness is an emergency.

Uterine Inversion

A rare, life-threatening complication of childbirth in which the uterus turns partly or completely inside out and may protrude into or beyond the vagina. It can cause severe bleeding, shock, and intense pain and requires immediate obstetric treatment to restore the uterus and control blood loss.

Uterine Leiomyosarcoma

A rare malignant tumor of uterine smooth muscle that may cause abnormal bleeding, pelvic pain, or an enlarging mass; diagnosis is based on tissue examination and staging.

Uterine Monitoring

Recording how often, how long, and how strongly the uterus contracts. During labor it helps assess progress, response to induction medicines, and excessive contractions that could affect the baby.

Uterine Myomectomy

Surgical removal of uterine fibroids while preserving the uterus; it may be performed through hysteroscopy, laparoscopy, or open surgery depending on fibroid size and location.

Uterine Obstruction

Blockage that prevents normal passage through the uterus or cervix, which may cause menstrual outflow obstruction, infertility, pregnancy complications, or retained blood or tissue.

Uterine Perforation

A hole through the wall of the uterus, most often caused by an instrument used during a procedure such as hysteroscopy or removal of uterine tissue. It can cause internal bleeding or injury to nearby organs and may need urgent repair.

Uterine Polyps

Growths arising from the inner lining of the uterus that may cause irregular bleeding, heavy periods, or fertility problems.

Alternate Names:

Polyps, Endometrial Polyps, Uterine

Uterine Prolapse

Descent of the uterus toward or through the vaginal opening because pelvic-floor muscles and supporting tissues have weakened. It may cause pelvic pressure, a bulge, backache, urinary or bowel problems, or discomfort during sex; childbirth and aging increase risk.

Alternate Names:

Pelvic Support Problems, Uterine Prolapse Pro-lapsed Uterus

Uterine Rupture

A complete tear through the wall of the uterus, usually during pregnancy or labor. It can cause severe internal bleeding and reduce the baby's oxygen supply; previous cesarean surgery is an important risk factor and emergency delivery may be needed.

Uterine Sarcoma

Uterine sarcoma is a rare malignant tumor arising from uterine muscle, connective tissue, or related cells and may cause bleeding, pain, or an enlarging mass.

Uterine Tachysystole

More than five contractions in 10 minutes, averaged over 30 minutes during labor. Very frequent contractions can reduce the baby's oxygen supply, especially after labor medicines, and may require prompt treatment adjustment.

Uterine Tube

A paired muscular tube that transports the oocyte from the ovary toward the uterus and is the usual site of fertilization.

Utero-Ovarian Ligament

A band of tissue connecting each ovary to the uterus.

It helps hold the ovary in position within the pelvis and lies near the fallopian tube and other pelvic supporting tissues.

Alternate Names:

Ovarian Ligament; Proper Ovarian Ligament

Uterosacral Ligament

One of two strong bands of tissue supporting the uterus and top of the vagina by attaching them toward the sacrum at the back of the pelvis. Weakness can contribute to pelvic-organ prolapse; endometriosis can also affect or cause pain in this area.

Uterus

A hollow muscular organ in the pelvis between the bladder and rectum. Its inner lining thickens to prepare for pregnancy and is shed during menstruation. A fertilized egg normally implants in this lining, and a fetus develops in the uterus during pregnancy.

Common name: Womb

Uterus Didelphys

A congenital condition in which two separate uteruses develop, often with two cervixes and a dividing wall in the vagina. Many people can become pregnant, but miscarriage, premature birth, abnormal fetal position, or other pregnancy complications are more common.

Alternate Names:

Double Uterus; Didelphic Uterus

Uterus Disorder

A condition affecting the uterus, including fibroids, adenomyosis, endometriosis, infection, abnormal bleeding, congenital anomalies, prolapse, and cancer.

Uterus Neoplasm

A benign or malignant growth arising in the uterus, including fibroids, endometrial cancer, and sarcomas; diagnosis depends on examination, imaging, and tissue sampling.

Uterus, Diseases Of

Conditions affecting the womb, including fibroids,

adenomyosis, endometriosis, infection, unusual bleeding, prolapse, and cancer. Symptoms may include pain, heavy periods, infertility, pressure, discharge, or bleeding after menopause.

UTI

An infection anywhere in the urinary system. It may affect the bladder or urethra, or spread to the kidneys, causing burning urination, frequent urination, pain, fever, or blood in the urine.

Utricle

A small balance organ in the inner ear that senses head position and movement in a straight line, such as forward, backward, or side-to-side motion.

UV Light

Ultraviolet radiation, an invisible part of sunlight or artificial light that can affect the skin and eyes and may cause sunburn, aging, or skin cancer.

Unsaturated Fat

A dietary fat whose fatty-acid chains contain one or more carbon-carbon double bonds. Monounsaturated and polyunsaturated fats are common in vegetable oils, nuts, seeds, and fish; replacing saturated fat with unsaturated fat generally supports healthier LDL cholesterol levels.

Uvea

The middle layer of the eye, made up of the iris, ciliary body, and choroid. It controls the amount of light entering the eye, helps focus vision, and supplies blood to eye tissues.

Uveal Disease

A disorder of the iris, ciliary body, or choroid, including uveitis, tumors, vascular disease, and inflammation that may cause eye pain, photophobia, floaters, or visual loss.

Uveal Melanoma

The most common primary cancer inside the adult eye. It begins in pigment-producing cells of the iris, ciliary body, or choroid and may cause visual

changes or be found during an eye examination; it can spread to other organs.

Uveal Neoplasm

A tumor arising in the uveal tract of the eye—the iris, ciliary body, or choroid; malignant melanoma may threaten vision and spread to distant organs.

Uveitis

Inflammation of the uveal tract—the iris, ciliary body, and choroid—and sometimes nearby eye tissues. It may result from infection, autoimmune or other inflammatory disease, trauma, or an unknown cause. Symptoms can include eye pain, redness, light sensitivity, floaters, blurred vision, or reduced vision; prompt eye assessment is important because untreated inflammation can damage vision.

Alternate Names:

Chorioretinitis (Uveitis)

Uveoparotid Fever

A form of sarcoidosis causing fever, swelling of both parotid glands near the ears, and inflammation in the front of the eyes. It may also cause facial-nerve weakness; treatment depends on the organs affected and severity.

Uvula

A small, soft flap hanging from the back of the roof of the mouth. It helps with swallowing and speech; swelling can cause gagging, pain, snoring, or difficulty breathing.

Uvulitis

Inflammation and swelling of the uvula, the small tissue hanging at the back of the throat. Infection, allergy, injury, dehydration, or irritation may cause it; severe swelling or breathing difficulty requires urgent care.

Uvulopalatopharyngoplasty

An operation that removes or reshapes parts of the soft palate, the hanging uvula, and the throat to widen the breathing passage. It may help selected people with obstructive sleep apnea, but can cause pain, swallowing changes, bleeding, or recurrence.

Ultra-processed food

Ultra-processed food is an industrially formulated product made mostly from refined ingredients and additives, often with little intact whole food. Frequent high intake is associated with poorer health outcomes, although effects vary by the food and overall diet.

Ureteric Calculi

Kidney stones that have moved into a ureter, the tube carrying urine from a kidney to the bladder. They can cause severe wave-like side pain, blood in the urine, nausea, blockage, or infection.

Uropathy

Disease or damage affecting the kidneys or urinary tract. Blockage, infection, stones, urine flowing backward, medicines, and other conditions can cause it and may reduce kidney function.

Uterine Artery Embolization

A minimally invasive procedure that blocks blood flow to uterine fibroids so they shrink. It can reduce heavy bleeding and pelvic pressure, but may cause pain, infection, or effects on fertility and future pregnancy.

V

V-Fib

Alternate index label; see *Ventricular fibrillation*.

Vaccination

Giving a vaccine to train the immune system to recognize a specific infection. Vaccination lowers the risk of illness, severe complications, and sometimes transmission; the recommended schedule depends on age, health, and local guidance.

Vaccination Schedule

A time-based plan for administering vaccines according to age, previous doses, medical conditions, exposure risks, and public-health guidance. Schedules vary by country and are updated as recommendations change.

Vaccines

Preparations that train the immune system to recognize a particular germ or toxin before exposure. They reduce the risk of infection and severe illness and may also reduce complications and spread.

Vaccines - Immunizations

Vaccines train the immune system to recognize specific pathogens or toxins and reduce the risk of infection, severe disease, complications, and transmission.

Vaccinia

A virus used to make smallpox vaccines. Rare accidental infection can cause a sore at the contact site or more widespread illness, especially in people with weakened immunity.

Vaccinia Virus

Vaccinia virus is a poxvirus used to make smallpox vaccines and studied in some experimental cancer treatments; accidental infection is uncommon but possible.

VACTERL Association

A pattern of birth defects affecting at least several of the spine, anus, heart, food pipe, windpipe, kidneys, or limbs. There is no single test; doctors look for the combination and exclude other syndromes. Treatment addresses each child's specific abnormalities.

Vacuum Curettage

A procedure that removes tissue from the uterus using suction, commonly for uterine evacuation or endometrial sampling. Risks include bleeding, infection, retained tissue, and rarely uterine injury.

Vacuum Delivery

Assisted vaginal birth using a suction cup placed on the baby's scalp. It may be used when labor is not progressing or the baby needs to be born promptly and can cause scalp injury, bleeding, or tears.

Vacuum Erection Devices

Devices with a cylinder and pump that draw blood into the penis to produce an erection. A flexible ring may hold the erection during sex; bruising, numbness, or discomfort can occur, especially if the ring is left on too long.

Alternate Names:

Vacuum erection pump

Vacuum Extractor

A cup-shaped device applied to the fetal scalp to assist vaginal delivery when specific maternal or fetal indications are present.

Vacuum-Assisted Delivery

A vaginal birth assisted by a suction cup placed on the baby's scalp when labor is not progressing or the baby needs to be born promptly. It is used only when the cervix is fully open and the baby's position and head size are suitable. Possible complications include scalp injury, bleeding, or tears.

Vagal Paraganglioma

A usually slow-growing tumor arising from specialized nerve-related cells near the vagus nerve in the neck. It may cause a neck mass, hoarseness, swallowing difficulty, or nerve symptoms and requires imaging and specialist evaluation.

Vagina

A muscular, elastic canal connecting the cervix to the vaginal opening. It allows menstrual blood to leave the body, receives a penis or other objects during vaginal sex, and serves as the birth canal.

Vagina Carcinoma

Cancer arising from the vagina. It may cause unusual bleeding, discharge, pain, or a visible sore, although early cancer may cause no symptoms; examination and tissue testing are needed for diagnosis.

Vagina Neoplasm

An abnormal growth in the vagina that may be benign, precancerous, or cancerous. It can cause bleeding, discharge, pain, or a lump, although early growths may cause no symptoms.

Vaginal Agenesis

A condition in which the vagina is absent or has not fully formed before birth. It may occur with differences in the uterus, kidneys, hearing, or spine; care is individualized and may include counseling, gradual treatment, or surgery when wanted.

Vaginal Atresia

Congenital absence or complete obstruction of the vaginal canal. It may cause absent menstrual flow, cyclic pelvic pain, or difficulty with sexual activity and requires specialist evaluation.

Vaginal Atrophy

Thinning, dryness, and irritation of vaginal tissues, usually caused by lower estrogen after menopause or other hormone changes. It can cause burning, itching, pain during sex, bleeding, or urinary symptoms and may improve with moisturizers, lubricants, or prescribed hormone treatment.

Vaginal Bleeding

Unexpected, unusually heavy, or prolonged bleeding from the vagina, including bleeding between periods, after sexual intercourse, during pregnancy, or after menopause. Causes include hormonal changes, infection, pregnancy-related conditions, structural lesions, medications, and cancer.

Vaginal Bleeding Between Periods

Bleeding between menstrual periods may result from contraception, infection, pregnancy, polyps, fibroids, hormonal changes, or cancer and requires evaluation if persistent or heavy.

Vaginal Bleeding During Early Pregnancy

Bleeding from the vagina during the first part of pregnancy can result from cervical changes, miscarriage, ectopic pregnancy, infection, or other conditions; a small amount of bleeding may occur without a serious cause, but it should not be assumed to be implantation bleeding. Heavy bleeding, severe or one-sided pain, shoulder pain, dizziness, or fainting requires urgent assessment.

Vaginal Bleeding During Late Pregnancy

Bleeding from the vagina later in pregnancy may be caused by placenta previa, placental abruption, labor, cervical disease, or other complications. Any significant late-pregnancy bleeding requires immediate obstetric assessment.

Vaginal Bleeding In Early Pregnancy

Alternate index label; see *Vaginal Bleeding During Early Pregnancy*.

Vaginal Bleeding In Late Pregnancy

Alternate index label; see *Vaginal Bleeding During Late Pregnancy*.

Vaginal Bleeding In Pregnancy

Broad index label for bleeding during pregnancy; see *Vaginal Bleeding During Early Pregnancy* and *Vaginal Bleeding During Late Pregnancy*. Any bleeding during pregnancy should be assessed clinically, especially if heavy or accompanied by pain, dizziness, fainting, or reduced fetal movement.

Vaginal Cancer

A rare cancer of the vagina, most often arising from its surface lining. It may cause bleeding, discharge, pain, or a lump; treatment depends on its type, size, location, and spread.

Alternate Names:

Cancer, Vagina

Vaginal Candidiasis

Alternate index label; see *Yeast infection (vaginal)*.

Vaginal Cysts

Vaginal cysts are fluid-filled or tissue-lined sacs in or beside the vaginal wall, commonly benign but sometimes causing pain, pressure, infection, or obstruction.

Vaginal Delivery (Spontaneous)

Birth through the vagina without forceps, a vacuum device, or cesarean surgery. It usually occurs during the second stage of labor as contractions and pushing move the baby through the birth canal.

Alternate Names:

Spontaneous

Vaginal Dryness

Reduced vaginal lubrication, commonly associated with menopause, breastfeeding, hormonal changes, medications, or irritation. It may cause discomfort,

itching, painful intercourse, or minor bleeding.

Vaginal Dryness And Atrophy (Genitourinary Syndrome Of Menopause)

Vaginal dryness and atrophy, collectively termed genitourinary syndrome of menopause, result from declining estrogen levels that cause thinning, drying, and loss of elasticity of the vaginal tissues. Symptoms include vaginal dryness, irritation, burning, dyspareunia, and urinary symptoms such as frequency and recurrent infections.

Alternate Names:

Genitourinary Syndrome of Menopause

Vaginal Fistula

An abnormal passage between the vagina and another organ, commonly the bladder or rectum. It may cause continuous urine or stool leakage, infection, skin irritation, and emotional distress.

Vaginal Foreign Body

An object retained in the vagina, most often a tampon or other inserted material. It may cause discharge, odor, bleeding, pain, or infection and should be removed safely with examination when necessary.

Vaginal Fornix

One of the recesses surrounding the cervix where the vagina meets the cervix. The posterior fornix is adjacent to the peritoneal cul-de-sac and is relevant in pelvic examination and some procedures.

Vaginal Hematoma

A collection of blood within the vaginal wall or surrounding tissues, usually caused by childbirth, trauma, or surgery and potentially producing severe pain, swelling, or blood loss.

Vaginal Hemorrhage

Heavy or clinically significant bleeding from the vagina. Causes include childbirth, pregnancy complications, trauma, infection, structural disease, hormonal disorders, and gynecologic malignancy; severe or pregnancy-related bleeding requires urgent evaluation.

Vaginal Hysterectomy

Surgical removal of the uterus through the vagina. It may be used for selected benign uterine conditions and usually avoids an abdominal incision, although suitability depends on anatomy and disease.

Vaginal Intercourse

The insertion of the penis into the vagina for sexual pleasure or reproduction. The most common form of sexual intercourse. Vaginal intercourse can lead to pregnancy if sperm are deposited in the vagina.

Vaginal Intraepithelial Neoplasia

Abnormal, precancerous cells in the surface lining of the vagina, often related to human papillomavirus. The changes vary from mild to severe and may require monitoring, treatment, or removal.

Vaginal Introitus

The entrance to the vagina. It is part of the external genital area and may be examined when assessing pain, infection, injury, scarring, or pelvic-floor problems.

Vaginal Itching

Itching or irritation of the vulva or vagina caused by candidiasis, bacterial vaginosis, sexually transmitted infections, dermatitis, hormonal changes, or other conditions. It may occur with discharge, odor, soreness, or burning; recurrent or unexplained symptoms require examination and appropriate testing rather than self-diagnosis.

Vaginal Membrane

A thin mucosal or connective-tissue fold associated with the vaginal canal; the term may refer to the hymen at the vaginal opening or to an abnormal obstructing membrane, so the intended anatomical meaning should be specified.

Vaginal Microbiome

The community of microorganisms living in the vagina, commonly dominated by *Lactobacillus* species that help maintain an acidic environment. Changes in this community may contribute to bacterial vaginosis, candidiasis, or other symptoms.

Vaginal Odor

An unusual or unpleasant odor from vaginal discharge that may result from bacterial vaginosis, infection, retained material, hormonal changes, or other conditions.

Vaginal Opening

The external entrance to the vagina. It is part of the vulvar vestibule and may be affected by infection, inflammation, trauma, scarring, or congenital variation.

Vaginal Prolapse, Posterior

Alternate index label; see *Posterior vaginal prolapse (rectocele)*.

Vaginal Speculum

An instrument inserted into the vagina and gently opened to separate the vaginal walls and visualize the vagina and cervix. It may be used for pelvic examination, cervical cytology such as a Pap test, swab collection, assessment of bleeding or discharge, and selected procedures. Size and design are chosen according to anatomy, comfort, and the clinical purpose.

Vaginal Stenosis

Narrowing or shortening of the vaginal canal, which may result from surgery, radiation, scarring, inflammation, trauma, or congenital development. It can cause pain, difficult examination, or difficulty with penetration.

Vaginal Trauma

Injury to the vaginal tissues caused by childbirth, sexual activity, foreign objects, procedures, or blunt or penetrating trauma. Bleeding, pain, swelling, or urinary symptoms require assessment; severe bleeding or suspected deep injury is urgent.

Vaginal Vault Prolapse

Descent of the top of the vagina into or through the vaginal opening, usually after removal of the uterus. It may cause pelvic pressure, a bulge, backache, or difficulty emptying the bladder or bowel; pelvic-floor therapy, a support device, or surgery may help.

Alternate Names:

Post-Hysterectomy Vault Prolapse; Apical Prolapse

Vaginal Vestibule

The area of the vulva enclosed by the labia minora that contains the openings of the urethra and vagina and the ducts of several glands.

Vaginal Yeast Infection

A vaginal yeast infection is usually *Candida* overgrowth causing itching, burning, soreness, and thick discharge without the odor typical of many bacterial infections.

Vaginectomy

Surgical removal of part or all of the vagina, usually to treat selected cancers or severe disease; effects may include changes in sexual function, fertility, urination, and bowel function.

Vaginismus

Uncontrolled tightening of the muscles around the vaginal opening that makes penetration painful or impossible. It may be linked to fear, previous pain or trauma, pelvic-floor problems, or other causes and can be treated.

Vaginitis

Inflammation or irritation of the vagina that may cause discharge, itching, burning, odor, pain, or discomfort with urination or sex. Causes include infections, hormones, chemicals, allergies, and tissue dryness.

Vaginospasm

Involuntary contraction of the pelvic-floor muscles surrounding the vagina, causing pain or difficulty with vaginal penetration. It may be associated with fear of pain, prior trauma, pelvic-floor dysfunction, infection, hormonal factors, or other genitopelvic pain conditions.

Vagotomy

Surgery that cuts selected branches of the vagus nerve to reduce signals that stimulate stomach acid

and movement. It was once used for difficult stomach ulcers but is now uncommon because medicines and less invasive treatments are available.

Vagus Nerve

The tenth cranial nerve, carrying signals between the brain and the heart, lungs, throat, voice box, and digestive tract. It helps regulate heart rate, breathing, swallowing, voice, and digestion.

Vagus Nerve Stimulation

A treatment that sends regular, mild electrical pulses to the vagus nerve through an implanted device in the chest or, in some settings, a handheld device. It is used for selected epilepsy, treatment-resistant depression, and other conditions; benefits may take time and side effects can include voice change, cough, or throat discomfort.

Valacyclovir

An antiviral medicine that the body changes into acyclovir to stop herpes viruses from multiplying. It treats cold sores, genital herpes, and shingles; the dose may need adjustment in kidney disease, and excessive levels can affect the nervous system.

Valganciclovir

An antiviral medicine used mainly to prevent or treat cytomegalovirus infection after transplantation. The body changes it into ganciclovir, which blocks viral multiplication; it can lower blood counts, injure the kidneys, affect fertility, and harm a fetus.

Valgus

A limb or joint deformity in which the part farther from the body bends outward, away from the body's center line. Examples include a bunion and knock-knees.

Valinemia

A rare inherited condition in which the body cannot process the amino acid valine normally. High valine levels may cause feeding problems, low muscle tone, developmental delay, or other nervous-system symptoms.

Valley Fever

The common name for coccidioidomycosis, a fungal infection caused by *Coccidioides* species and acquired by inhaling airborne spores from soil. It usually causes a mild respiratory illness but can disseminate to skin, bone, joints, or meninges, especially in people at higher risk.

Valproate (Sodium Valproate)

An antiseizure medicine also used for selected mood disorders. It can affect the liver, pancreas, blood cells, weight, and fetal development, so age, pregnancy possibility, other illnesses, and medicines must be considered.

Alternate Names:

Sodium Valproate

Valproic Acid

A medicine used for certain seizures, bipolar disorder, and migraine prevention. It can cause liver injury, pancreatitis, birth defects, and developmental harm during pregnancy.

Valrubicin

A chemotherapy medicine placed directly into the bladder for selected bladder cancers that have not responded adequately to other treatment. It can cause bladder irritation, blood in the urine, infection, and, rarely, effects throughout the body.

Valsalva

Straining while trying to breathe out against a closed throat, like bearing down during a bowel movement. It changes pressure in the chest and can affect heart rate and blood pressure, so it is not safe for everyone.

Valsalva Maneuver

Alternate index label; see *Valsalva's Manoeuvre* and *Valsalva*.

Valsalva'S Manoeuvre

Forceful straining while trying to breathe out against a closed airway, like bearing down during a bowel movement. It changes pressure in the chest and can

affect heart rate and blood pressure; it is used in selected tests but may be unsafe for some people.

Alternate Names:

Valsalva Maneuver

Valsartan

Valsartan is an angiotensin-II receptor blocker used for hypertension, heart failure, and selected cardiovascular indications; hyperkalaemia, renal-function changes, hypotension, and fetal toxicity are important risks.

Valves

Structures that permit fluid or blood to move predominantly in one direction and prevent backward flow; cardiac valves and venous valves are important examples.

Valvotomy

Surgical or catheter-based division of narrowed valve tissue to improve blood flow, most often performed for selected stenotic heart valves.

Valvular Disease

Disease affecting one or more heart valves, causing stenosis, regurgitation, or both and potentially leading to heart failure or arrhythmia.

Valvular Heart Disease

Disease of one or more heart valves. A valve may become narrowed or fail to close completely, making the heart work harder and sometimes causing breathlessness, swelling, fatigue, abnormal rhythms, or heart failure.

Valvular Insufficiency

Incomplete closure of a heart valve, allowing blood to leak backward when the heart contracts or relaxes. It can affect the mitral, aortic, tricuspid, or pulmonary valve and may eventually strain the heart.

Valvuloplasty

A procedure used to widen or repair a narrowed or abnormal heart valve, by balloon catheter or open

surgery depending on the valve and condition.

Valvulotomy

A procedure that cuts open a narrowed heart valve to improve blood flow. It may be performed with a catheter or surgery; the valve can leak afterward and narrowing may recur.

Vancomycin

An antibiotic used for selected serious bacterial infections and, by mouth, for certain infections of the large intestine. It can cause infusion reactions, kidney injury, hearing problems, or low blood counts and requires medical monitoring.

Vancomycin-Resistant Enterococci - Hospital

Enterococcal bacteria that resist vancomycin and can spread in healthcare settings. They may cause urinary, wound, bloodstream, or other infections, particularly in people who are seriously ill or have devices such as catheters; treatment requires susceptibility testing.

Vancomycin-Resistant Enterococcus

Enterococcus bacteria that are resistant to vancomycin, usually because of altered cell-wall precursors. VRE can cause healthcare-associated urinary, bloodstream, wound, or other infections and may require susceptibility-guided treatment.

Vandetanib

A targeted cancer medicine used for selected medullary thyroid cancers. It blocks signals that help cancer cells grow and blood vessels form; diarrhea, high blood pressure, skin effects, and dangerous heart-rhythm changes require monitoring.

Vaporiser

A device that converts a liquid medicine or volatile substance into a vapor for inhalation or controlled delivery, such as in anesthesia.

Variable Decelerations

Brief drops in a baby's heart rate that vary in timing

and shape, often caused by pressure on the umbilical cord during labor. Occasional drops may be harmless, but frequent or prolonged drops require assessment of the baby's oxygen supply.

Variant Angina Pectoris

Chest pain caused by a temporary tightening of an artery supplying the heart, often occurring at rest or at night. Episodes may be severe and can disturb the heart rhythm; sudden or prolonged chest pain needs emergency care.

Alternate Names:

Prinzmetal angina; vasospastic angina

Variant CJD

Alternate index label; see *Creutzfeldt-Jakob disease*.

Variant Classification

The process of estimating whether a genetic change is harmless, uncertain, or likely to cause disease. Specialists use laboratory evidence, family history, population data, and the person's clinical findings.

Varibaculum Cambriense

A bacterial species in the genus *Varibaculum* reported from human clinical specimens. Its role may be opportunistic and requires identification with the clinical context and susceptibility data.

Variceal Hemorrhage

Severe bleeding from enlarged, fragile veins in the food pipe or stomach, usually caused by high pressure in the liver's blood vessels. It can cause vomiting blood, black stools, shock, and death without urgent treatment.

Varicella

A primary infection with varicella-zoster virus that causes fever and a generalized itchy rash. See Chickenpox.

Alternate Names:

Chickenpox (Varicella)

Varicella (Chickenpox)

Alternate index label; see *Varicella*.

Varicella-Zoster Virus

The virus that causes chickenpox and shingles. After chickenpox, it can remain inactive in nerve tissue and reactivate years later as a painful, blistering rash called shingles.

Varicellovirus

Varicellovirus is a genus of herpesviruses that includes varicella-zoster virus, the cause of chickenpox and shingles.

Varices

Abnormally dilated and tortuous veins, commonly occurring in the legs or in the oesophagus and stomach as a result of portal hypertension.

Varices, Esophageal

Alternate index label; see *Esophageal varices*.

Varicocele

Enlargement of veins in the scrotum, often on the left. It may cause aching, a soft “bag of worms” feeling, testicular growth differences, or reduced fertility, but many cause no symptoms.

Varicose Ulcer

An open sore near the ankle caused by long-term poor drainage through the leg veins. It may be surrounded by swelling or skin discoloration and often needs compression and treatment of the underlying vein problem.

Varicose Veins

Enlarged, twisted veins close to the skin, usually in the legs, caused by weak valves that allow blood to flow backward. They may cause aching, heaviness, swelling, skin changes, ulcers, or inflammation around a clot.

Variegate Porphyria

An inherited disorder of heme production that can cause attacks of abdominal pain, vomiting, nerve symptoms, confusion, or dark urine and can also cause fragile, blistering skin after sunlight exposure.

Variola

A highly contagious and deadly disease caused by variola virus, eradicated globally by 1980 through vaccination. See Smallpox.

Varix

An abnormally dilated, tortuous vein; multiple varices commonly occur in portal hypertension or chronic venous disease.

Varus

A limb or joint deformity in which the part farther from the body bends inward, toward the body's center line. Examples include bowlegs and some inward-turning foot deformities.

Vas

A duct or vessel; in reproductive anatomy, the vas deferens transports sperm from the epididymis toward the ejaculatory duct.

Vas Deferens

A muscular tube that carries sperm from the epididymis toward the urethra during ejaculation.

Vasa Deferentia

The paired muscular ducts that transport mature sperm from the epididymides toward the ejaculatory ducts during ejaculation.

Alternate Names:

vas deferens; ductus deferentes

Vasa Efferentia

Small tubes that carry sperm from the testicle's collecting channels to the epididymis, where sperm mature. They also remove some fluid and help move sperm onward.

Vasa Previa

A pregnancy complication in which fetal blood vessels run across or near the cervix without the usual protection of the placenta or umbilical cord. If the membranes break, the vessels can tear and cause rapid fetal blood loss, so specialist planning is essential.

Vascular

Relating to blood vessels or, sometimes, lymphatic vessels. Vascular conditions include narrowed or blocked arteries, aneurysms, blood clots, abnormal vessel connections, and problems with veins; the term may also describe tests, surgery, or medicines involving these vessels.

Vascular Access

A route into a blood vessel for medicines, fluids, blood tests, monitoring, or dialysis. It may be a short-term catheter, a surgically joined artery and vein, or a synthetic graft, depending on the purpose and expected duration.

Vascular Access For Hemodialysis

A route that allows blood to leave the body and return during dialysis. It may be a joined artery and vein, a synthetic graft, or a large vein catheter; each has different risks of infection, clotting, and failure.

Vascular Bed

The network of blood vessels supplying a particular organ or tissue. Its vessels widen or narrow to adjust blood flow according to the tissue's needs.

Vascular Claudication

Alternate index label; see *Claudication*.

Vascular Dementia

Problems with thinking, memory, mood, or walking caused by strokes or long-term damage to the brain's small blood vessels. Symptoms may appear suddenly or gradually, and treatment focuses on preventing further vessel damage and supporting daily function.

Alternate Names:

Dementia, Vascular

Vascular Disease

Vascular disease affects arteries, veins, or lymphatic vessels and includes atherosclerosis, aneurysm, peripheral artery disease, venous thrombosis, varicose disease, and inflammatory disorders. Symptoms

and treatment depend on the vessel and may involve risk-factor control, medicines, procedures, or surgery.

Vascular Ehlers-Danlos Syndrome

A rare inherited connective-tissue disorder that makes arteries and hollow organs unusually fragile. It may cause thin translucent skin, easy bruising, characteristic facial features, or serious spontaneous blood-vessel or bowel rupture; specialist care and genetic counseling are important.

Alternate Names:

vEDS; Ehlers-Danlos Syndrome Type IV

Vascular Graft

A tube used to replace or bypass a damaged or blocked blood vessel. It may be made from a person's vein or from a synthetic material; possible problems include infection, bleeding, narrowing, or a clot blocking the graft.

Vascular Graft Patency

The continued openness and useful blood flow through a blood-vessel graft or bypass. A clot, narrowing, infection, or scar growth can block it, so examination and sometimes ultrasound are used for monitoring.

Vascular Imaging

Tests that show blood vessels and sometimes measure blood flow. Ultrasound, CT, MRI, or catheter-based imaging can find narrowing, blockage, aneurysm, dissection, clot, bleeding, or abnormal vessels; the safest test depends on the body area, urgency, kidney function, and contrast risks.

Vascular Malformation

A blood-vessel or lymph-vessel structure that developed abnormally before birth. It may cause a skin mark, swelling, pain, bleeding, or pressure on nearby organs; effects depend on its type and location.

Vascular Ring

A birth defect in which blood vessels around the heart form a ring that can press on the windpipe or food pipe. It may cause noisy breathing, cough,

repeated chest infections, swallowing difficulty, or feeding problems. Some people need no treatment; symptomatic rings may require surgery.

Vascular Surgery

Operations that repair, widen, replace, or reroute blood vessels to restore circulation or prevent bleeding. Procedures may treat aneurysms, blocked arteries, blood-vessel injuries, or problems with veins and dialysis access.

Vascular System

The network of arteries, veins, and capillaries that carries blood throughout the body. It delivers oxygen, nutrients, and hormones to tissues and carries carbon dioxide and other waste products away. Disease may narrow, weaken, block, or inflame these vessels.

Vascular Trauma

Injury to an artery or vein caused by a blunt blow, penetrating wound, crush injury, or medical procedure. It may cause severe bleeding or loss of blood flow and needs urgent assessment of circulation and nearby nerves.

Vascularity

The amount and arrangement of blood vessels supplying a tissue or growth. A highly vascular area may heal or bleed differently and may look different on imaging; blood supply can also affect some treatments.

Vasculitis

Inflammation of blood vessels that can narrow them, reduce blood flow, or cause bleeding and tissue damage. It may affect large, medium, or small vessels and can involve the skin, nerves, kidneys, lungs, or other organs.

Alternate Names:

Angiitis (Vasculitis)

Vasculitis (Systemic)

Inflammation of blood vessels that may involve large, medium, or small vessels and impair blood flow or cause tissue injury. Examples include ANCA-

associated vasculitis and IgA vasculitis.

Alternate Names:

Systemic

Vasectomy

A permanent contraceptive procedure in which the vas deferens are divided or occluded to prevent sperm from entering the ejaculate. It does not immediately provide sterility and does not protect against sexually transmitted infections.

Vasectomy Reversal

Surgery to reconnect the tubes that carry sperm after a vasectomy. It may restore sperm to the semen, but pregnancy is not guaranteed.

Alternate Names:

Vasovasostomy; Vasoepididymostomy

Vasoactive Intestinal Peptide Test

A blood test measuring a hormone that affects the intestine and blood vessels. It is used mainly when a rare hormone-producing tumor is suspected in someone with severe watery diarrhea, dehydration, or abnormal body salts.

Vasoconstriction

Alternate index label; misspelling of *Vasoconstriction*.

Vasoconstriction

Narrowing of blood vessels caused by contraction of vascular smooth muscle, which can raise blood pressure or reduce blood flow to affected tissues.

Vasoconstrictor

A substance that narrows blood vessels by making their muscle walls contract. This can raise blood pressure and reduce local blood flow; vasoconstrictor medicines are used in selected emergencies or with local anesthetics and require careful monitoring.

Vasoconstrictors

Substances or medicines that narrow blood vessels by making their muscular walls contract. They can raise blood pressure or reduce local blood flow

and are used only for selected conditions because excessive narrowing can be harmful.

Vasodepressor Syncope

Fainting caused mainly by sudden widening of blood vessels and a fall in blood pressure. It often occurs as part of a vasovagal reaction and may be preceded by nausea, sweating, warmth, or lightheadedness.

Vasodilatation

Widening of blood vessels caused by relaxation of vascular smooth muscle, increasing blood flow and potentially lowering blood pressure.

Vasodilation

Widening of blood vessels when their muscular walls relax. It can increase blood flow and lower blood pressure and occurs with exercise, heat, medicines, and inflammation.

Vasodilator

A substance that relaxes blood-vessel walls and makes the vessels wider. It can lower blood pressure or improve blood flow and is used for selected heart, blood-pressure, or circulation problems; excessive widening may cause headache, flushing, dizziness, or fainting.

Vasodilators

Medicines or substances that relax vascular smooth muscle and widen blood vessels. They are used for conditions such as hypertension, angina, heart failure, or pulmonary hypertension depending on the agent.

Vasomotor

Relating to control of blood-vessel width by nerves, hormones, and local chemicals. Vasomotor changes narrow or widen vessels and help regulate blood pressure, body temperature, tissue blood flow, and skin color.

Vasomotor Centre

Groups of nerve cells in the brainstem that help control blood-vessel narrowing and widening. By

changing vessel tone, they influence blood pressure, heart and tissue blood flow, and the body's response to standing or stress.

Vasomotor Nerves

Autonomic nerves controlling blood-vessel widening and narrowing by changing smooth-muscle activity, helping regulate blood pressure and temperature.

Vasomotor Rhinitis

Nonallergic inflammation of the nasal lining causing congestion, runny nose, or sneezing, often triggered by odors, temperature changes, or irritants.

Vasopressin

Antidiuretic hormone, also called arginine vasopressin, which promotes renal water reabsorption and can constrict blood vessels.

Vasopressin (Antidiuretic Hormone, ADH)

A hormone that increases water reabsorption in the kidney and can constrict blood vessels. It is released from the posterior pituitary.

Alternate Names:

Antidiuretic Hormone, ADH

Vasopressin Receptor

A cell sensor that responds to the hormone vasopressin. Different types help the kidneys retain water and help blood vessels narrow, influencing body-fluid balance and blood pressure.

Vasopressor

A medicine or body signal that raises blood pressure, mainly by narrowing blood vessels and sometimes by strengthening the heartbeat. These medicines are used in selected emergencies such as shock and require close monitoring.

Vasopressors In Anesthesia

Medicines that increase vascular tone or cardiac output to support blood pressure during anesthesia or critical illness. The choice and dose depend on the cause of hypotension, heart rate, cardiac function,

and local protocol; monitoring is required.

Vasospasm

Sudden narrowing of a blood vessel caused by contraction of its muscular wall. It can temporarily reduce blood flow and cause chest pain, headache, stroke-like symptoms, or tissue injury, depending on the vessel affected.

Vasovagal Attack

A transient reflex episode caused by reduced sympathetic tone and increased vagal activity, producing hypotension and often bradycardia with fainting or near-fainting. Common triggers include prolonged standing, pain, fear, heat, dehydration, or emotional stress.

Vasovagal Reaction

A reflex that slows the heart and widens blood vessels, briefly lowering blood pressure and sometimes causing fainting; triggers include pain, fear, prolonged standing, heat, or blood exposure.

Vasovagal Syncope

A common faint caused by a reflex that briefly slows the heart or widens blood vessels, lowering blood pressure and brain blood flow. Triggers include standing still, heat, pain, fear, or seeing blood; warning symptoms often occur first.

Alternate Names:

Neurocardiogenic Syncope

VATS

Alternate name; see *Video-Assisted Thoracoscopic Surgery*.

Vaughan Williams Classification

A system that groups medicines used for abnormal heart rhythms according to their main effect on the heart's electrical activity. It helps describe treatment but does not replace patient-specific prescribing.

VCJD

Alternate index label; see *Creutzfeldt-Jakob disease*.

VDRL Test

A blood or spinal-fluid test that looks for an immune reaction associated with syphilis. A reactive result needs a more specific confirmatory test and may help monitor response to treatment.

Vector

A living carrier, usually an insect or tick, that spreads an infection between people or animals. Some vectors allow the germ to develop inside them; others transfer it mechanically without the germ changing.

Vector Control

Measures that reduce insects or other animals that spread infection. Examples include removing standing water, using insecticides, treating breeding areas, improving buildings, wearing protective clothing, and using repellents or bed nets.

Vector-Borne Disease

An infection spread by a living carrier such as a mosquito, tick, flea, or sandfly. Examples include malaria, dengue, Lyme disease, and some forms of viral encephalitis; prevention focuses on avoiding bites and controlling the carrier.

Vegetation

A mass that can form on a heart valve during infective endocarditis. It may contain bacteria, blood-clotting material, and immune cells and can damage the valve or break off and travel to other organs.

Vein

A blood vessel that carries blood toward the heart. Most veins carry oxygen-poor blood, but veins from the lungs and placenta carry oxygen-rich blood. Veins often contain valves that help prevent backward flow.

Vein-Graft Aneurysms

An abnormal widening of a vein used to bypass a blocked heart artery. It may contain a clot, block blood flow, press on nearby structures, or rupture and therefore needs specialist assessment.

Veins, Diseases Of

Conditions affecting veins, including blood clots, varicose veins, poor return of blood, inflammation, ulcers, injuries, and birth-related malformations. They may cause pain, swelling, skin changes, bleeding, or dangerous clots traveling to the lungs.

VeIP Regimen

A cancer-treatment combination of vinblastine, ifosfamide, and cisplatin, used mainly for selected germ-cell tumors. It can lower blood counts and damage the kidneys, nerves, or bladder, so specialist monitoring is required.

Velamentous Cord Insertion

An abnormal attachment in which the umbilical blood vessels travel through the membranes before reaching the placenta without the usual protective tissue. The vessels can be compressed or torn, increasing risks of poor fetal growth, bleeding, or vasa previa and requiring specialist pregnancy monitoring.

Alternate Names:

Velamentous Insertion of the Umbilical Cord

Velocardiofacial Syndrome

Alternate index label; see *DiGeorge syndrome* (*22q11.2 deletion syndrome*).

Vemurafenib

A targeted cancer medicine for tumors with a specific BRAF V600 gene change, including some melanomas. It can cause joint pain, sun sensitivity, abnormal heart rhythm, new skin cancers, or treatment resistance.

Vena Cava

Either of the two largest veins returning blood to the right side of the heart. The superior vena cava drains the upper body, and the inferior vena cava drains the abdomen, pelvis, and legs.

Alternate Names:

venae cava; vena cava

Venepuncture

Inserting a needle into a vein to collect blood or place intravenous access. It may cause brief pain, bruising, bleeding, infection, or fainting, and clean technique reduces complications.

Venereal Disease Research Laboratory Test

A blood test that looks for antibodies associated with syphilis. It is used for screening and monitoring treatment, but a reactive result needs confirmation with a treponemal test.

Venesection

The controlled removal of blood from a vein, used diagnostically or therapeutically, for example in selected cases of hemochromatosis or polycythemia.

Venesection (Phlebotomy)

Controlled removal of blood from a vein for treatment or testing, such as reducing excess red cells or iron.

Alternate Names:

Phlebotomy

Venipuncture

Puncture of a vein with a needle to obtain blood, administer fluids or medicines, or establish intravenous access. Bruising, infection, bleeding, and nerve or artery injury are uncommon complications.

Veno-Occlusive Disease

Blockage and injury of small veins in the liver, especially after some chemotherapy or stem-cell transplantation. It can cause painful liver enlargement, rapid weight gain, fluid retention, and jaundice and needs urgent specialist care.

Venogram

Contrast imaging of veins used to detect thrombosis, obstruction, abnormal anatomy, or selected venous flow disorders.

Venogram - Leg

Contrast imaging of the veins of a leg, used selec-

tively to evaluate suspected deep-vein thrombosis or venous obstruction when noninvasive imaging is inadequate.

Venography

Imaging of veins, usually after contrast material is administered, to assess venous anatomy, obstruction, thrombosis, or malformation.

Venom

A poisonous substance delivered by an animal through a bite, sting, or similar structure. Its effects vary by species and may include pain, swelling, nerve problems, bleeding, or dangerous changes in breathing or blood pressure.

Venomous Bite

A bite that injects venom from an animal such as a snake, spider, or arthropod. Effects range from local pain and swelling to bleeding, paralysis, or systemic toxicity.

Venous

Relating to veins, which usually carry blood back toward the heart. Vein problems include blood clots, varicose veins, poor return of blood, and ulcers; pulmonary veins are an exception because they carry oxygen-rich blood from the lungs to the heart.

Venous Aneurysm

A localized abnormal dilatation of a vein. It may be asymptomatic or present as a soft mass, pain, thrombosis, embolism, or bleeding depending on its location and size.

Venous Hum

A harmless continuous humming sound heard over the neck veins, most often in healthy children. It changes or disappears with body position or gentle pressure on the vein, helping distinguish it from heart murmurs that need further evaluation.

Alternate Names:

Cervical Venous Hum; Innocent Venous Hum

Venous Insufficiency

Poor return of blood through the veins, usually in the legs, because valves do not close well or veins are blocked. It can cause aching, swelling, skin changes, and chronic ulcers.

Venous Leak

Difficulty maintaining an erection because blood leaves the penis too readily during erection. It may reflect vascular, nerve, hormonal, or medication-related problems and should be evaluated as erectile dysfunction.

Alternate Names:

Veno-occlusive dysfunction

Venous Pressure

The pressure of blood inside the veins. It depends on blood volume, vein width, gravity, and how well the right side of the heart pumps; abnormally high pressure can cause swelling, enlarged veins, or fluid buildup.

Venous Stasis Ulcer

A long-lasting wound near the ankle caused by poor blood return through the leg veins. The leg may also be swollen, painful, or have darkened, thickened skin; compression and treatment of the vein problem may help.

Venous Thromboembolism

A blood clot that forms in a vein, usually deep in the leg, and may travel to the lungs. A clot in the lungs can cause sudden breathlessness, chest pain, collapse, or death and requires urgent care.

Venous Thromboembolism In Pregnancy

A blood clot in a deep vein or lungs during pregnancy or after birth. Pregnancy increases clot risk, and symptoms such as one-sided leg swelling, chest pain, sudden breathlessness, or coughing blood require urgent assessment.

Venous Thromboembolism Prophylaxis

Measures used to prevent dangerous vein clots, especially around surgery or hospitalization. They may

include walking early, compression devices or stockings, and blood-thinning medicine when bleeding risk is acceptable.

Venous Thrombosis

The formation of a blood clot (thrombus) within a vein, most commonly in the deep veins of the lower extremities (deep vein thrombosis, DVT).

Venous Ulcer

A chronic wound caused by impaired venous drainage, usually occurring near the ankle in a limb with chronic venous insufficiency.

Ventilation

Movement of air into and out of the lungs; effective ventilation brings oxygen to the alveoli and removes carbon dioxide.

Ventilation, Artificial

Support or replacement of breathing with a machine that moves air and oxygen into and out of the lungs when a person cannot breathe well enough alone. It may use a mask or a tube and requires close monitoring.

Ventilation-Perfusion Mismatch

A mismatch between air reaching parts of the lungs and blood reaching those same parts. It can lower blood oxygen and occur with pneumonia, COPD, asthma, heart failure, or a lung clot.

Ventilation-Perfusion Ratio

The relationship between air reaching the lungs and blood reaching the lung tissues. Good matching allows efficient oxygen exchange; poor matching can cause low blood oxygen.

Ventilation-Perfusion Scan

A nuclear-medicine scan that compares air movement in the lungs with blood flow through them. Areas with blood flow blocked but preserved air movement may suggest a pulmonary embolism. The test uses a breathed tracer and an injected tracer and is interpreted with symptoms and other find-

ings.

Ventilation/Perfusion Scan

A nuclear-medicine scan that compares air movement in the lungs with blood flow through them. A mismatch, with reduced blood flow but preserved air movement, may suggest a pulmonary embolism. The result is interpreted with symptoms and other tests.

Ventilator

A machine that supports or replaces breathing by delivering air and oxygen through a mask or breathing tube. Healthcare staff adjust its settings and monitor oxygen, carbon dioxide, blood pressure, and possible lung injury.

Ventilator-Associated Pneumonia

A lung infection that develops after a person has used a breathing machine for at least two days. It may cause fever, worsening oxygen levels, cough, or abnormal lung findings and requires prompt evaluation and treatment.

Ventilator-Induced Lung Injury

Lung damage caused or worsened by a breathing machine when pressure, volume, or oxygen levels are excessive. Clinicians use protective settings and close monitoring to support breathing while limiting further injury.

Ventouse

A vacuum extractor placed on the baby's scalp to assist a vaginal birth when delivery needs help. It is used only when specific safety conditions are met and can cause temporary scalp swelling or bruising.

Ventral

Relating to the belly or front side of the body; synonym for anterior in human anatomy.

Ventral Hernia

Protrusion of abdominal tissue through a weakness in the front abdominal wall, including incisional and umbilical hernias. It may cause a bulge or pain

and requires urgent assessment if incarceration or strangulation is suspected.

Ventricle

One of the two lower chambers of the heart that pump blood out of it. The right ventricle sends blood to the lungs to receive oxygen; the left ventricle sends oxygen-rich blood to the rest of the body.

Ventricle (Brain)

One of four connected spaces inside the brain that contain and help circulate cerebrospinal fluid. This fluid cushions the brain and spinal cord and helps remove waste.

Alternate Names:

Brain

Ventricular

Relating to a ventricle. In the heart, it concerns one of the lower pumping chambers; in the brain, it concerns the fluid-filled spaces that contain cerebrospinal fluid. The organ should be specified.

Ventricular Arrhythmia

An abnormal heart rhythm arising from the ventricles. It may cause palpitations, dizziness, fainting, chest discomfort, or sudden cardiac arrest; fainting or severe symptoms require emergency care.

Ventricular Arrhythmias

Abnormal heart rhythms arising from the ventricles. They range from premature ventricular contractions to ventricular tachycardia and fibrillation, which can cause sudden cardiac arrest.

Ventricular Assist Device

A mechanical pump that helps a weakened heart move blood. It may support the left side, right side, or both and can be temporary or long-term, but bleeding, infection, stroke, and clots are important risks.

Ventricular Fibrillation

A chaotic heart rhythm in which the lower chambers

quiver instead of pumping blood. It causes cardiac arrest and requires immediate CPR and an electric shock from a defibrillator.

Alternate Names:

V-Fib

Ventricular Hypertrophy

Thickening of the wall of one of the heart's lower chambers. It may develop from long-term high blood pressure, valve disease, inherited heart muscle disease, or intense training and can lead to stiffness, abnormal rhythms, or heart failure.

Ventricular Myocardium

The heart muscle forming the walls of the ventricles. Its contraction pumps blood to the lungs and the rest of the body.

Ventricular Premature Contraction

Alternate index label; see *Premature ventricular contractions (PVCs)*.

Ventricular Rupture

A tear in a heart-ventricle wall, often after a heart attack. It can cause life-threatening bleeding around the heart and requires emergency treatment.

Ventricular Septal Defect

A hole in the wall between the heart's lower chambers. Blood may flow from the stronger left side to the right and increase blood flow to the lungs. Small holes may cause no problems; larger ones can cause heart failure or lung-vessel damage.

Ventricular Tachycardia

A rapid heart rhythm that starts in the ventricles, usually producing a wide-complex rhythm. It may cause palpitations, dizziness, fainting, shock, or cardiac arrest and requires urgent assessment; unstable or pulseless VT needs immediate emergency treatment.

Ventriculoatrial

Relating to a connection between a ventricle and an atrium. In brain surgery, a ventriculoatrial shunt is

a tube that drains extra fluid from a brain cavity into the right upper chamber of the heart.

Ventriculography

Imaging used to measure how well the heart's ventricles pump blood. A radionuclide scan or cardiac MRI can estimate the amount of blood ejected with each heartbeat and show abnormal wall movement; the method is chosen for the clinical question.

Ventriculoperitoneal Shunt

A surgically implanted system that drains cerebrospinal fluid from a brain ventricle into the abdominal cavity, where the fluid can be absorbed.

Ventrosuspension

Surgical fixation of a displaced or prolapsed uterus to the anterior abdominal wall or nearby supporting tissues.

Venturi Mask

An oxygen mask designed to deliver a known, controlled oxygen concentration by mixing oxygen with room air through a specially shaped opening. It is useful when precise oxygen levels are important, including for some people with chronic lung disease; the setting must be adjusted by healthcare staff.

Venule

A small blood vessel that collects blood from capillaries and carries it into larger veins. Venules also allow white blood cells and fluid to leave the bloodstream during inflammation.

Venules

Small blood vessels that collect blood from capillaries and join to form veins. Their walls also participate in inflammation by allowing white blood cells to leave the bloodstream.

Verapamil

A non-dihydropyridine calcium-channel blocker used for selected hypertension, angina, and supraventricular tachyarrhythmias; it can cause bradycardia and constipation.

Vermicides

Medicines or chemicals that kill parasitic worms. The correct treatment depends on the worm, the body site affected, the person's age, and other health conditions.

Vernal Keratoconjunctivitis

Repeated allergic inflammation of the eye's surface, usually in children or teenagers. It causes intense itching, redness, watering, thick discharge, and sensitivity to light and can sometimes damage the cornea.

Vernix

A white, greasy protective coating on the skin of a fetus or newborn, composed mainly of water, lipids, and shed skin cells.

Vernix Caseosa

A white, greasy protective coating on the skin of a fetus or newborn, composed mainly of water, lipids, and shed skin cells.

Verruca

A benign epidermal growth caused by infection with a human papillomavirus. Common warts, plantar warts, and flat warts are clinical types; treatment depends on site, symptoms, and immune status.

Verruciform Xanthoma

A rare, noncancerous growth usually found in the mouth or genital area. It may look like a wart, so examination and sometimes a tissue sample are needed to distinguish it from cancer.

Verrucose

Having a rough, thickened, wart-like, or finger-like surface. It is a descriptive term for a skin, mucosal, or other lesion and does not by itself identify whether the lesion is benign, infectious, or cancerous.

Verrucous

Having a rough, thickened, irregular, or wart-like surface. The appearance can occur in benign

growths, infections, chronic inflammation, or some cancers.

Verrucous Carcinoma

A low-grade, well-differentiated variant of squamous cell carcinoma with a warty, exophytic appearance. It is locally invasive but rarely metastasizes, commonly affecting the oral cavity, skin, or genitalia.

Version

A change in the position or presentation of a body structure. In pregnancy, fetal version is a procedure or movement that changes the baby's position, often to place the head downward before birth.

Vertebra

One of the bones forming the spinal column. Each vertebra helps support the body, allows movement, provides attachment for muscles, and surrounds and protects the spinal cord.

Vertebrae

Vertebrae are the bones of the spinal column that protect the spinal cord, support the body, allow movement, and provide attachment for muscles and ligaments.

Vertebral Artery

One of two arteries that travel through the neck and join to supply the brainstem, cerebellum, and back of the brain. Narrowing or blockage can cause dizziness, imbalance, or stroke.

Vertebral Canal

The passage formed by the stacked spinal bones that surrounds and protects the spinal cord. Narrowing, bleeding, tumors, fractures, or disc disease inside it can compress nerves and cause weakness or pain.

Vertebral Column

The chain of bones running from the neck to the pelvis. It supports the head and trunk, protects the spinal cord, allows bending and twisting, and provides attachment for muscles and ribs.

Vertebral Compression Fracture

Collapse or cracking of one of the bones in the spine, often from osteoporosis, injury, or cancer. It may cause sudden or gradual back pain, loss of height, or a rounded back and can sometimes press on nerves.

Vertebral Hemangioma

Alternate index label; see *Spinal hemangioma*.

Vertebral Tumor

A growth arising in or near a spinal bone. It may be benign or cancerous, start in the spine or spread there, and cause pain, fracture, nerve compression, weakness, or paralysis.

Vertebrobasilar Circulatory Disorders

Conditions that reduce blood flow through the vertebral or basilar arteries supplying the brainstem, cerebellum, and posterior brain; symptoms may include vertigo, double vision, imbalance, weakness, or stroke.

Vertebrobasilar Insufficiency

Reduced blood flow through arteries supplying the back of the brain. It may cause dizziness, double vision, imbalance, weakness, trouble speaking, or stroke-like symptoms and needs urgent assessment when sudden.

Vertebrobasilar Insufficiency

Source spelling variant of *vertebrobasilar insufficiency*, reduced blood flow in the vertebral or basilar circulation supplying the brainstem, cerebellum, and posterior brain.

Vertical

Oriented from superior to inferior or perpendicular to a horizontal plane. In medicine, it may describe position, transmission from parent to child, or a body-oriented imaging or movement axis.

Vertical Talus

A stiff flatfoot present from birth in which one of the ankle bones points downward and the middle of the foot is bent upward. It may occur alone or with

other conditions and usually needs early orthopedic treatment.

Vertical Transmission

Passage of an infection or genetic condition from parent to child during pregnancy, delivery, or breast-feeding.

Vertigo

A false feeling that you or your surroundings are moving, spinning, tilting, or shifting when they are not. It is a symptom rather than a disease and often comes from the inner ear, but brain and other conditions can also cause it.

Vertigo Overview

Vertigo is the false sensation of movement, often caused by inner-ear disorders such as benign positional vertigo, vestibular neuritis, or Ménière disease, but sometimes by migraine or brain disease. New neurologic deficits, severe headache, or inability to walk is urgent.

Vertigo-Associated Disorders

Vertigo-associated disorders cause an illusion of movement from vestibular, neurologic, visual, medication-related, or systemic dysfunction and may be accompanied by imbalance, nausea, or hearing symptoms.

Alternate Names:

VLCD

Very Long-Chain Acyl-CoA Dehydrogenase Deficiency

A rare inherited disorder in which cells cannot use certain long-chain fats for energy, especially during fasting or illness. Infants may develop low blood sugar, heart disease, or liver problems; older children or adults may have exercise-triggered muscle breakdown and dark urine.

Alternate Names:

VLCAD Deficiency; VLCADD

Very-Low-Density Lipoprotein

A particle made by the liver that carries mainly

triglycerides through the blood. High levels can contribute to fatty deposits in artery walls and increase cardiovascular risk, although the result is interpreted with the full lipid profile.

Alternate Names:

VLDL

Vesical

Relating to the urinary bladder. For example, vesical inflammation affects the bladder lining, a vesical tumor is a bladder growth, and the vesical neck is the bladder outlet leading toward the urethra.

Vesicant

A substance that causes blistering and tissue injury on contact. In oncology, vesicant drugs can cause severe extravasation injury if they escape from a vein into surrounding tissue.

Vesicants

Substances that can cause severe blistering and tissue damage when they touch skin or escape from a vein. Some chemotherapy medicines and industrial chemicals are vesicants.

Vesicle

A small, raised, fluid-filled blister, usually less than 1 cm wide. It may result from viral infection, contact irritation, eczema, burns, friction, or an immune disorder; the appearance alone does not establish the cause.

Vesicles

Small, elevated, fluid-filled blisters on the skin or mucous membrane, generally less than 1 cm in diameter. Causes include viral infection, dermatitis, burns, and autoimmune blistering disease.

Vesico-Ureteric Reflux

Backward flow of urine from the bladder into one or both ureters and sometimes the kidneys, increasing the risk of recurrent urinary infection and renal scarring.

Vesicoureteral Reflux

Backward flow of urine from the bladder toward the kidneys because the valve where a ureter enters the bladder does not work normally. It can cause repeated kidney infections and scarring, especially in children.

Alternate Names:

Reflux, Vesicoureteral

Vesicoureteric Reflux

Backward flow of urine from the bladder into one or both ureters and sometimes the kidneys, increasing the risk of urinary infection and renal scarring.

Vesicovaginal Fistula

An abnormal connection between the bladder and vagina that causes continuous or frequent leakage of urine through the vagina. It may follow child-birth injury, pelvic surgery, radiation, or advanced infection and usually requires specialist repair.

Vesicular

Describing or containing small, fluid-filled blisters. A vesicular rash may occur with viral infection, allergy, eczema, burns, or other conditions; its appearance alone does not establish the cause.

Vesicular Breathing

The normal soft, gentle breath sound heard over most outer lung areas with a stethoscope. Changes in loudness or quality may suggest fluid, collapse, blockage, infection, or other lung disease.

Vesiculobullous Dermatoses

A group of skin diseases that cause small or large fluid-filled blisters. Causes include infection, allergy, autoimmune disease, inherited conditions, medicines, and injury; examination and sometimes a biopsy identify the cause.

Vessel

A vessel is a tube carrying blood, lymph, air, urine, bile, or another fluid through the body, depending on context.

Vestibular

Relating to the vestibular system of the inner ear and brain, which detects head motion and position and helps maintain balance and gaze stability.

Vestibular Migraine

Repeated attacks of dizziness or vertigo related to migraine, with or without headache. Episodes may include sensitivity to movement, light, sound, or visual patterns; other inner-ear and brain causes must be considered.

Vestibular Neuritis

Sudden inflammation or dysfunction of the balance nerve, causing severe spinning, nausea, vomiting, and unsteadiness that may last for days. Hearing is usually unaffected, but urgent assessment may be needed to exclude a stroke.

Vestibular Papillomatosis

A harmless normal variation in which several soft, small, finger-like bumps occur on the inner vulvar folds. It can resemble genital warts but is not caused by an infection and usually needs no treatment.

Vestibular Rehabilitation

Exercise-based therapy that improves balance, gaze stability, and adaptation in people with vestibular disorders or dizziness.

Vestibular Schwannoma

A benign, slow-growing tumor of the vestibular portion of the eighth cranial nerve. See Acoustic Neuroma.

Vestibular System

The inner-ear sensors and connected brain pathways that detect head movement and position and help maintain balance, posture, and steady vision. Problems can cause vertigo, unsteadiness, nausea, or blurred vision during movement.

Vestibule

A balance area of the inner ear between the cochlea and semicircular canals. It contains sensors that

detect head position and straight-line movement and send this information to the brain.

Vestibule, Vaginal

The space of the vulva between the labia minora that contains the external openings of the urethra and vagina and the ducts of the greater and lesser vestibular glands.

Vestibulo-Ocular Reflex

An automatic response that moves the eyes opposite to head movement so vision stays steady while a person turns or walks. Problems with it can cause blurred vision, dizziness, or imbalance.

Vestibulocochlear Nerve

The eighth cranial nerve, carrying information for hearing and balance from the inner ear to the brain.

Vestibulodynia

Persistent burning, stinging, or tenderness at the entrance to the vagina, often triggered by touch, penetration, or inserting a tampon. Examination rules out infection and other causes; care may include pelvic-floor therapy, pain treatment, and support for sexual and emotional health.

Alternate Names:

Provoked Vestibulodynia; Vulvar Vestibulitis Syndrome; PVD

Vestigial

Describing a structure or feature that has become greatly reduced through evolution and has little or no apparent original function.

VEXAS Syndrome

A serious inflammatory illness that begins in adulthood because of a gene change acquired in blood-forming cells. It can cause persistent fever, painful joints, skin rashes, inflamed blood vessels or cartilage, anemia, and other blood abnormalities.

Viable

Capable of surviving or developing under suitable conditions. In clinical contexts it may describe a

viable pregnancy, tissue, organism, cell, or treatment option.

Vibration Problem

Symptoms or injury caused by repeated exposure to vibrating tools or equipment, which may affect nerves, blood vessels, muscles, and joints in the hands or arms.

Vibrator

A device that produces mechanical vibration and may be used for sexual stimulation, therapeutic massage, or selected rehabilitation purposes.

Vibrio

A genus of curved, Gram-negative bacteria; species include *V. cholerae*, which causes cholera, and *V. vulnificus*, which can cause severe wound or blood-stream infection.

Vibrio Cholerae

A bacterium that causes cholera, a severe diarrheal illness spread mainly through contaminated water or food. It can cause sudden, large-volume watery diarrhea, dehydration, shock, and death without rapid fluid replacement.

Vibrio Infection

Infection caused by *Vibrio* bacteria, acquired through contaminated seafood or exposure of wounds to warm seawater. It may cause watery diarrhea, wound infection, or rapidly progressive sepsis, especially in people with liver disease or impaired immunity. Severe wound pain, blistering, fever, or shock requires emergency treatment.

Alternate Names:

vibriosis.

Vibrio Vulnificus Infections

Infections caused by *Vibrio vulnificus*, a gram-negative bacterium found in warm seawater and raw seafood. It can cause wound infection, bloodstream infection, or gastroenteritis, with particularly severe disease in people with chronic liver disease or other risk factors.

Vibrios

Comma-shaped bacteria, usually Gram-negative, that include species capable of causing cholera and wound or gastrointestinal infections.

Video Laryngoscope

An airway device with a small camera that shows the entrance to the windpipe on a screen. It helps clinicians place a breathing tube, especially when a direct view is difficult, but does not remove the risks of the procedure.

Video Laryngoscopy

A technique for viewing the entrance to the windpipe with a camera on a blade connected to a screen. It can help clinicians place a breathing tube when a direct view is difficult.

Video-Assisted Thoracoscopic Surgery

A chest operation performed through several small openings using a camera and long instruments rather than a large incision between the ribs. It may be used for lung or pleural biopsy, removing part of a lung, or other chest procedures and often allows faster recovery, though bleeding, air leakage, infection, or conversion to open surgery can occur.

Alternate Names:

VATS; Video Thoracoscopy; Thoracoscopic Surgery

Videofluoroscopic Swallow Study

A moving X-ray test that records swallowing after small amounts of food or liquid containing contrast are taken. It shows whether food enters the airway, where swallowing is delayed, and which textures or techniques may be safer.

Videostroboscopy

A voice examination that uses a camera and flashing light to create a slow-motion view of the vocal cords as they vibrate. It helps investigate hoarseness, voice strain, and vocal-cord injury.

Vildagliptin

An oral dipeptidyl-peptidase-4 inhibitor used in some countries for type 2 diabetes, alone or with

other medicines. It improves glucose-dependent insulin secretion; liver function and pancreatitis symptoms may require attention.

Villi

Tiny finger-like projections lining the small intestine that greatly increase the area available to absorb nutrients. Similar projections in the placenta help exchange substances between the pregnant person and fetus.

Villous Atrophy

Flattening or loss of the tiny projections lining the small intestine. This reduces nutrient absorption and may occur in celiac disease, some infections, immune disorders, or other intestinal conditions.

Villus

A small finger-like projection, especially one of the intestinal mucosa that increases absorptive surface area; chorionic villi mediate exchange between placenta and fetus.

Vinca Alkaloids

Cancer medicines including vincristine and vinblastine that disrupt microtubules, structures needed for cell division. They can treat several cancers but may cause nerve damage, low blood counts, constipation, or other toxicity.

Vincent Angina

An acute necrotizing infection of the gums and oropharynx associated with fusobacteria and spirochetes. It causes painful ulceration, bleeding, foul breath, and gingival necrosis and requires dental or medical treatment.

Vincent Disease

Acute necrotizing ulcerative gingivitis associated with fusospirochetal bacteria, causing painful bleeding gums, ulceration, and foul breath.

Vincent Infection

Vincent infection is acute necrotizing ulcerative gingivitis caused by mixed oral bacteria, producing

painful bleeding gums, ulcers, and foul breath.

Vincent Stomatitis

A painful necrotizing infection of the gums caused by mixed anaerobic bacteria, producing foul breath, bleeding, ulceration, and gray necrotic tissue; it is also called acute necrotizing ulcerative gingivitis.

Vincent's Angina

Acute necrotizing ulcerative gingivitis or tonsillitis associated with fusiform bacteria and spirochetes, causing painful ulcers, bleeding, and fetid breath.

Vinorelbine

A chemotherapy medicine that interferes with cell division. It is used for selected lung and breast cancers and can cause low blood counts, infection, constipation, nerve symptoms, nausea, or irritation if it leaks outside a vein.

Viomycin

An older aminoglycoside antibiotic related to capreomycin that was used against tuberculosis and other mycobacterial infections; kidney and hearing toxicity limit its use.

Viraemia

The presence of viruses in the bloodstream. It may be brief or long-lasting and can allow the infection to spread from its original site to other tissues.

Viral

Caused by or relating to a virus. Viruses enter living cells to multiply and can cause illnesses ranging from mild colds to serious brain, lung, liver, or bleeding diseases; testing and treatment depend on the specific virus.

Viral Antibody

A protective protein made by the immune system after infection or vaccination that recognizes a virus. Blood tests for these antibodies may show past exposure, immune response, or selected current infections, depending on timing and test design.

Viral Arthritis

Joint inflammation caused by or associated with a viral infection. It may cause sudden pain, swelling, and stiffness in several joints and often improves as the infection resolves, although some viruses can cause prolonged symptoms.

Viral Assembly

The stage of viral reproduction when newly made viral genetic material and proteins are put together to form complete new virus particles.

Viral Attachment

The first step of infection, when proteins on a virus bind to matching molecules on a host cell. This binding helps determine which species, tissues, or cell types the virus can infect.

Viral Carcinogenesis

Cancer development caused or promoted by a viral infection. Some viruses alter cell growth directly, weaken immune protection, or cause long-lasting inflammation; examples include human papillomavirus, hepatitis B and C viruses, and Epstein-Barr virus.

Viral Conjunctivitis

Infection of the thin lining over the eye and inside the eyelids, usually causing redness, watering, irritation, and discharge. It spreads easily through contact with infected secretions or contaminated hands and surfaces.

Viral Culture

Growth of a virus in susceptible cell cultures to identify an infectious agent. It can be useful for selected viruses, but molecular and antigen-based tests are often faster or more sensitive; the appropriate method depends on the suspected infection and specimen.

Viral Encephalitis

Inflammation of the brain caused by a virus. It may cause fever, headache, confusion, behavior change, seizures, weakness, or reduced consciousness. It is an emergency requiring hospital assessment, testing,

and treatment based on the suspected virus.

Viral Entry

The process by which a virus gets inside a host cell and releases its genetic material so the cell can make more virus.

Viral Exanthem

A widespread rash caused by a viral infection. It may occur with fever, tiredness, sore throat, cough, diarrhea, or other symptoms; the rash pattern and overall illness help determine the cause.

Viral Gastroenteritis

Inflammation of the stomach or intestines caused by a virus. Common symptoms include watery diarrhea, vomiting, abdominal cramps, and fever. Diagnosis is usually clinical; stool testing is reserved for selected situations. Treatment focuses on fluid replacement and symptom control.

Viral Gastroenteritis (Stomach Flu)

Viral gastroenteritis is infection of the stomach and intestines causing vomiting, watery diarrhea, cramps, and fever, with dehydration as the main acute risk.

Alternate Names:

Stomach Flu

Viral Haemorrhagic Fever

A severe illness caused by certain viruses that can damage blood vessels, disturb clotting, and cause bleeding, shock, or organ failure. The way it spreads and its treatment depend on the virus.

Viral Hemorrhagic Fevers

Severe illnesses caused by certain viruses that can damage blood vessels, disrupt clotting, and lead to bleeding, shock, or organ failure. Many require isolation, urgent supportive care, and public-health measures.

Alternate Names:

Bunyaviruses

Viral Hepatitis

Liver inflammation caused by hepatitis viruses A, B, C, D, or E. Hepatitis A and E usually spread through contaminated food or water; B, C, and D can spread through blood or body fluids and may become long-term infections that damage the liver.

Alternate Names:

Infectious Hepatitis

Viral Immune Evasion

Ways viruses avoid or weaken the body's immune defenses, allowing them to survive, multiply, or return after infection. These methods can make infections harder to clear and vaccines or treatments less effective.

Viral Infection

An illness that occurs when a virus enters body cells and makes more copies of itself. Symptoms depend on the virus and affected tissues and may range from mild local illness to severe disease involving several organs.

Viral Infections

Illnesses caused by viruses that enter cells and use them to make more virus. They range from mild colds and stomach infections to serious diseases such as influenza, hepatitis, HIV infection, or COVID-19; treatment depends on the virus and may include supportive care or antivirals.

Viral Latency

A state in which a virus remains inside cells without actively making new virus particles. Some latent viruses can become active again, especially when the immune system is weakened or the body is under stress.

Viral Latency Mechanisms

The ways some viruses remain inactive inside cells while avoiding immune detection. Reactivation can occur when immune defenses are weakened or after other triggers, depending on the virus.

Viral Load

The amount of virus or viral genetic material in a body fluid or tissue, measured by a laboratory assay; trends can help assess disease activity or response to antiviral treatment.

Viral Load (HIV RNA)

The amount of HIV genetic material in the blood. It shows how actively HIV is multiplying and whether treatment is working; an “undetectable” result means the amount is below the test’s detection limit, not that HIV has been cured.

Alternate Names:

HIV RNA

Viral Meningitis

Infection and inflammation of the coverings of the brain and spinal cord caused by a virus. It may cause fever, headache, neck stiffness, vomiting, light sensitivity, or confusion; severe symptoms require urgent assessment because bacterial meningitis can look similar.

Viral Pathogenesis

The ways a virus enters the body, infects and spreads through cells, and causes illness. Damage may come directly from infected cells or from the immune system’s response to the infection.

Viral Pneumonia

Infection and inflammation of lung tissue caused by a virus, producing cough, fever, chills, breathlessness, chest discomfort, fatigue, and variable impairment of oxygenation. Severe disease can cause respiratory failure or secondary bacterial infection.

Viral Release

The stage when newly made viruses leave an infected cell and spread to other cells. Some leave by pushing through the cell membrane, while others are released when the infected cell breaks apart.

Viral Replication

The process by which a virus uses an infected cell to copy its genetic material and make viral proteins.

The exact steps differ among viruses, but the result is production of new virus particles.

Viral Replication Cycle

The steps a virus uses to make more copies inside a living cell. Usually the virus attaches to the cell, enters, releases its genetic material, makes new parts, assembles new viruses, and leaves to infect other cells.

Viral Structure

The parts of a virus: genetic material made of DNA or RNA inside a protective protein coat. Some viruses also have an outer fatty covering taken from the infected cell’s membrane.

Viral Uncoating

The step after a virus enters a cell when its protective outer coat comes apart and releases the genetic material. The cell can then be directed to make new viral components.

Virchow’s Triad

Three conditions that make a blood clot more likely: damage to the vessel lining, blood that moves too slowly or irregularly, and blood that clots too easily. One or more may contribute to a vein or artery clot.

Viremia

The presence of a virus in the bloodstream. It may be brief or persistent and can allow infection to spread to other organs. Laboratory tests may detect the virus itself or its genetic material.

Virginal Membrane

A historical term usually referring to the hymen, a variable rim or fold of tissue at the vaginal opening. Its shape or appearance cannot reliably show whether a person has had sexual activity, and it may stretch or tear for many reasons.

Viridans Streptococci

Viridans streptococci are a group of bacteria commonly found in the mouth that can cause dental infections and, after entering the blood, infect heart

valves.

Virilisation

The development of male secondary sexual characteristics in females, resulting from excessive androgen production or exposure.

Virilism

Development of masculinizing features in a female, usually from excess androgen exposure or production, such as hirsutism, deep voice, acne, and menstrual disturbance.

Virilism Foetal

Prenatal or neonatal masculinization of a genetically female fetus or infant due to excess androgen exposure. Causes include congenital adrenal hyperplasia, maternal androgen-producing disease, or placental and fetal steroidogenic disorders.

Virilization

Virilization is development of typically male secondary sexual features, such as hirsutism, deep voice, acne, increased muscle mass, or clitoromegaly, from androgen excess or androgen exposure.

Virilize

To virilize is to develop or cause typically male physical changes from androgen excess or treatment, including facial hair, voice deepening, acne, muscle change, or genital enlargement.

Virology

The study of viruses, including their structure, reproduction, spread, effects on the body, diagnosis, treatment, and prevention.

Virtual Colonoscopy

Virtual colonoscopy is CT colonography, which uses bowel preparation and gas or carbon-dioxide insufflation to create images of the colon; it can detect polyps and masses but cannot remove lesions or biopsy them.

Virulence

How severely a microorganism can cause disease or tissue damage. It depends on the organism's harmful properties and on the person's immune defenses and other health factors.

Virulence Factor

A feature of a microorganism that helps it survive in the body, avoid immune defenses, attach to cells, damage tissue, or cause disease. Examples include toxins, protective coatings, and enzymes.

Virulent

Capable of causing severe disease or extensive harm. Virulence describes the harmfulness of a microorganism and is different from infectivity, which describes how easily it spreads or establishes infection.

Virus

An infectious agent made of genetic material inside a protective protein coat, sometimes with an outer membrane. It can reproduce only inside living cells and may cause illness by damaging cells or triggering inflammation.

Virus Activation

Virus activation is the switch from a dormant or inactive viral state to production of new viral components and particles.

Virus Assembly

Virus assembly is the stage of the viral life cycle when viral genetic material and proteins are packaged into new virus particles.

Virus Diseases

Illnesses caused by viruses. They range from mild infections of one area, such as a cold, to severe diseases affecting the lungs, liver, brain, blood, or several organs; prevention and treatment depend on the virus.

Virus Integration

Virus integration is insertion of viral genetic material into the DNA of a host cell, a process used by

some viruses and important in certain cancers.

Virus Protein

A virus protein is a protein made from viral genetic instructions that helps form the virus, enter cells, replicate, or evade immunity.

Virus Receptor

A virus receptor is a molecule on a host cell that a virus binds to in order to attach to and enter the cell.

Virus Replication

Virus replication is the process by which a virus copies its genetic material and makes proteins and new virus particles inside a host cell.

Virus Uncoating

Virus uncoating is removal of the virus's protective outer layer after entry into a host cell, releasing its genetic material for replication.

Viruses

Viruses are infectious particles containing DNA or RNA within a protein coat, sometimes with a lipid envelope; they replicate only inside host cells and cause disease through direct injury or immune responses.

Viscera

The internal organs of the body, particularly those within the thoracic and abdominal cavities. The thoracic viscera include the heart, lungs, esophagus, trachea, and thymus.

Visceral

Relating to the internal organs, especially those within the thorax or abdomen, rather than the body wall or limbs.

Visceral Larva Migrants

A syndrome caused by migration of animal nematode larvae through human tissues, most often from *Toxocara* species. It may produce fever, eosinophilia, liver lesions, or ocular and neurologic disease.

Visceromegaly

Abnormal enlargement of one or more internal organs, such as the liver, spleen, or kidneys. It is a physical finding with causes that include infection, congestion, storage disease, inflammation, and cancer.

Viscus

An internal organ, especially one in the chest or abdomen. The plural is viscera; examples include the heart, lungs, liver, stomach, and intestines.

Vision

The sensory ability to perceive light and interpret visual information processed by the eyes and brain, enabling recognition of shapes, colors, depth, and motion. Normal vision depends on the proper function of the cornea, lens, retina, and optic nerve, as well as intact neural pathways to the visual cortex.

Vision - Night Blindness

Difficulty seeing in dim light or adapting from bright to dark conditions, also called nyctalopia; causes include vitamin-A deficiency, retinal disease, cataract, and some inherited disorders.

Vision And Hearing

Two major senses used to understand and communicate with the world. Problems may develop separately or together because of aging, illness, injury, medicines, or inherited conditions and can affect learning, safety, communication, and daily activities.

Vision Impairment

Reduced visual acuity or visual-field function that affects daily activities. Causes include refractive error, cataract, glaucoma, retinal disease, optic-nerve injury, and neurologic disease. Evaluation and treatment depend on the cause; rehabilitation and visual aids may improve function.

Vision Loss

A decrease in the ability to see that cannot be fully corrected with eyeglasses, contact lenses, or medical treatment. It ranges from partial impairment to

complete blindness and can result from conditions such as macular degeneration, glaucoma, diabetic retinopathy, cataracts, and traumatic injury.

Vision Loss, Acute

Sudden reduction or loss of vision in one or both eyes caused by retinal vascular occlusion, retinal detachment, optic-nerve disease, stroke, acute glaucoma, inflammation, trauma, or other emergency. It requires immediate medical or ophthalmic assessment.

Vision Problems

Changes in visual acuity, field, color, or clarity caused by refractive error, eye disease, neurologic disease, or systemic illness. Sudden vision loss is an emergency.

Vision Receptors

Light-sensing cells in the retina, mainly rods and cones, that convert light into nerve signals. Rods support dim-light vision, while cones provide color and sharp detail in brighter conditions.

Vision Screening

Brief checks used to find possible eye or vision problems before symptoms are obvious. Newborn checks may detect cataracts or other serious disorders; screening in young children looks for poor vision, misaligned eyes, or risks for reduced vision and leads to a full eye examination when needed.

Vision Test

An examination that measures visual acuity, fields, color, alignment, or eye structures to detect refractive error, retinal disease, optic-nerve dysfunction, glaucoma, or other causes of visual impairment.

Vision, Blurred

Reduced sharpness or clarity of vision that may result from refractive error, dry eye, cataract, retinal or optic-nerve disease, neurologic disease, medication, or other causes. Sudden, painful, one-sided, or progressive blurring requires prompt evaluation.

Visual Acuity

How clearly a person can see fine details, usually measured by reading letters or symbols at a set distance. It can be reduced by focusing problems, eye disease, or disorders affecting the visual nerves or brain.

Visual Acuity Test

A test measuring the smallest standardized detail a person can resolve at a specified distance, usually reported as a fraction or decimal.

Visual Agnosia

Inability to recognize familiar objects, faces, or symbols by sight even though the eyes may see adequately. It usually results from damage to brain areas that interpret vision, such as after a stroke or head injury.

Visual Field

The entire area that can be seen while the eyes remain fixed in one position. Visual-field loss may result from retinal, optic-nerve, or brain lesions and is assessed by perimetry.

Visual Field Defect

Loss or change in part of the area a person can see while looking straight ahead. It may result from disease of the retina, optic nerve, or brain, and the pattern can help identify where the problem is.

Visual Field Perimetry

A test that maps how well a person sees in different parts of the visual field while looking at a fixed point. It can detect and monitor missing areas caused by eye-nerve, retinal, or brain disease.

Visual Fields

The total area that can be seen while the eyes are fixed in one position; defects may indicate retinal, optic-nerve, or brain disease.

Visual Impairment

Reduced vision that cannot be fully corrected by ordinary glasses or contact lenses. Causes include

refractive error, cataract, glaucoma, retinal disease, optic-nerve injury, and neurologic disease; new or sudden loss of vision requires urgent assessment.

Visualized Laser-Assisted Prostatectomy

A procedure that uses a laser, guided by a camera, to remove or vaporize prostate tissue blocking urine flow. It is used for some people with an enlarged prostate and may cause bleeding, infection, scar narrowing, or temporary urinary and sexual problems.

Alternate Names:

VLAP

Vital

Essential for life or relating to vital physiologic functions. Vital signs commonly include temperature, pulse, respiratory rate, blood pressure, and oxygen saturation.

Vital Capacity

The greatest amount of air a person can breathe out after filling the lungs as fully as possible. It is measured during lung-function testing and may be reduced by lung disease, weak breathing muscles, or restriction of chest movement.

Vital Signs

Basic measurements of physiologic status, commonly including temperature, pulse, respiratory rate, blood pressure, and oxygen saturation. Values vary with age, activity, illness, and measurement conditions; trends and clinical context are important.

Vitamin A

A fat-soluble vitamin needed for vision, immune function, skin and mucosal health, and growth; deficiency causes night blindness, while excess can injure the liver and developing fetus.

Vitamin A Blood Test

A blood test measuring circulating retinol, used to assess suspected vitamin A deficiency or toxicity in appropriate clinical settings.

Vitamin A Deficiency

A nutritional disorder resulting from inadequate intake or absorption of retinol, causing xerophthalmia, night blindness, follicular hyperkeratosis, and impaired immunity. Severe deficiency leads to corneal ulceration and blindness, and is a leading cause of preventable childhood blindness worldwide.

Vitamin A: Retinal

Vitamin A (retinol) is a fat-soluble vitamin essential for vision, immune function, cell differentiation, and reproduction. In the eye, retinol is oxidized to retinal (retinaldehyde), which binds to opsin in the photoreceptor outer segments forming rhodopsin (in rods) and photopsins (in cones).

Vitamin B Complex

A group of eight water-soluble vitamins that support energy metabolism, blood-cell production, nervous-system function, and other biochemical processes. The group includes vitamins B1 through B7 and B9, as well as vitamin B12.

Vitamin B1

Thiamine, a water-soluble vitamin needed for energy production and nerve function. Severe deficiency can cause beriberi or Wernicke encephalopathy.

Vitamin B1 (Thiamine)

A water-soluble vitamin that acts as a cofactor in carbohydrate and amino-acid metabolism and supports nerve function. Severe deficiency can cause beriberi or Wernicke-Korsakoff syndrome.

Alternate Names:

Thiamine

Vitamin B12

A vitamin needed for red-cell formation, DNA production, and normal nerve function. Deficiency can cause anemia, numbness, balance problems, or cognitive changes.

Vitamin B12 (Cobalamin)

A vitamin needed to make healthy red blood cells, DNA, and working nerves. Deficiency can cause

anemia, numbness, balance problems, or lasting nerve damage and may result from poor intake or poor absorption.

Alternate Names:

Cobalamin

Vitamin B12 Deficiency

Too little vitamin B12, which can cause large abnormal red cells, tiredness, numbness, balance problems, or nerve damage. Causes include poor intake, poor absorption, autoimmune disease, stomach surgery, and medicines.

Vitamin B12 Deficiency Anemia

Anemia caused by too little vitamin B12 or poor absorption of it. It can cause tiredness, pale skin, a sore tongue, numbness, balance problems, and permanent nerve damage if untreated for a long time.

Vitamin B12 Deficiency In Older Adults

Deficiency caused by inadequate intake, malabsorption, autoimmune intrinsic-factor deficiency, gastric surgery, or medications. It may cause megaloblastic anemia, neuropathy, cognitive changes, gait impairment, and glossitis; neurologic injury can occur without anemia.

Vitamin B12 Level

The amount of vitamin B12 measured in blood; results are interpreted with symptoms and related tests because serum levels may not fully reflect tissue deficiency.

Vitamin B12: Cobalamin

A water-soluble vitamin needed for red-blood-cell formation, DNA synthesis, and normal nerve function. Deficiency can cause megaloblastic anemia and neurologic abnormalities.

Vitamin B1: Thiamine

A water-soluble vitamin that acts as a cofactor in carbohydrate and amino-acid metabolism and supports nerve function. Severe deficiency can cause beriberi or Wernicke-Korsakoff syndrome.

Vitamin B2

Riboflavin, a water-soluble vitamin used to make energy and maintain skin, eyes, and mucous membranes. Deficiency can cause mouth sores, a sore throat, and anemia.

Vitamin B2 (Riboflavin)

A vitamin that helps cells produce energy and supports healthy skin, eyes, and the lining of the mouth. Deficiency can cause cracks at the mouth corners, a sore tongue, skin changes, or anemia.

Alternate Names:

Riboflavin

Vitamin B3 (Niacin)

A vitamin that helps cells use food for energy and supports the skin and nervous system. Severe deficiency causes pellagra, with diarrhea, skin inflammation, confusion, and other neurologic problems.

Alternate Names:

Niacin

Vitamin B3: Niacin

A water-soluble vitamin needed for energy production and healthy skin and nerves. Severe deficiency causes pellagra, which may include diarrhea, skin inflammation, confusion, and weakness.

Vitamin B5 (Pantothenic Acid)

A water-soluble vitamin needed to help the body use fats, carbohydrates, and proteins and make hormones and other substances. It is found in many foods, so deficiency is rare; very large supplement doses may cause stomach upset.

Alternate Names:

Pantothenic Acid

Vitamin B6

A group of related vitamins needed for amino-acid metabolism, red-cell production, and nerve function. Excess supplements can cause sensory nerve damage.

Vitamin B6 (Pyridoxine)

A vitamin needed for protein use, red-blood-cell

production, brain function, and nerve health. Too little can cause anemia or nerve and skin problems; excessive supplements can damage sensation.

Alternate Names:

Pyridoxine

Vitamin B6: Pyridoxine

A water-soluble vitamin needed for protein use, blood formation, brain function, and nerve health. Both deficiency and excessive supplement use can cause neurologic symptoms.

Vitamin B7 (Biotin)

A vitamin that helps the body use fats, carbohydrates, and proteins. Deficiency is uncommon but may cause hair loss, skin rash, or neurologic symptoms; large doses can interfere with some laboratory tests.

Alternate Names:

Biotin

Vitamin B9 (Folate)

A vitamin needed for DNA production and healthy red blood cells. Deficiency can cause large-cell anemia and, during pregnancy, increases the risk of neural-tube defects; folic acid is recommended before conception and early in pregnancy.

Alternate Names:

Folate

Vitamin B9: Folate

A water-soluble vitamin needed for cell division, DNA production, and red-blood-cell formation. Adequate folate before and during early pregnancy helps prevent some serious brain and spinal-cord birth defects.

Vitamin C

A water-soluble vitamin needed for collagen formation, wound healing, antioxidant activity, and iron absorption; severe deficiency causes scurvy.

Vitamin C (Ascorbic Acid)

A vitamin needed for collagen, wound healing, immune function, and absorption of iron from plant

foods. Severe deficiency causes scurvy, with bleeding gums, bruising, poor wound healing, and weakness.

Alternate Names:

Ascorbic Acid

Vitamin D

Vitamin D supports calcium and phosphate balance, bone mineralization, muscle function, and immune processes; deficiency causes rickets in children and osteomalacia or bone loss in adults.

Vitamin D Deficiency

Too little vitamin D for the body's needs. It can result from low intake or sunlight, poor absorption, or liver or kidney disease and may weaken bones, cause muscle weakness, or lead to rickets in children.

Vitamin D3

Cholecalciferol, a form of vitamin D made in skin and found in some foods and supplements. It helps the body absorb calcium and maintain healthy bones.

Vitamin D: Calcitriol

The active hormone form of vitamin D. It helps the intestine absorb calcium and phosphate and supports bones, muscles, and other body functions; abnormal levels can occur with kidney, liver, or parathyroid disease.

Vitamin Deficiency Anemia

Anemia caused by inadequate vitamin B-12, folate, or other nutrients needed for normal red blood cell production.

Vitamin E: Tocopherol

A fat-soluble vitamin that helps protect cell membranes. Deficiency is uncommon but can cause nerve or muscle problems; high-dose supplements may increase bleeding risk or interact with medicines.

Vitamin K

A fat-soluble vitamin required to activate several blood-clotting proteins and support bone metabolism; deficiency can cause bleeding and is

treated or prevented with replacement.

Vitamin K Deficiency

Too little vitamin K for normal production of clotting factors, causing an increased bleeding tendency. It can result from poor intake, malabsorption, liver disease, or certain medicines; newborns receive vitamin K prophylaxis.

Vitamin K Deficiency Bleeding Of The Newborn

Bleeding in an infant caused by inadequate vitamin K-dependent clotting factors; preventive vitamin K given at birth greatly reduces the risk.

Vitamin K Prophylaxis

Administration of vitamin K to a newborn soon after birth to prevent vitamin K deficiency

Vitamin K: Phylloquinone

The main dietary form of vitamin K, a fat-soluble vitamin needed to make several proteins that control blood clotting and support bone health. It is found especially in leafy green vegetables and some vegetable oils.

Vitamins

Organic nutrients needed in small amounts for normal metabolism, growth, and tissue maintenance; some are water-soluble and others fat-soluble, and both deficiency and excess can cause disease.

Vitrectomy

Eye surgery that removes some or all of the clear gel inside the eye. It may treat bleeding, a detached retina, a hole or scar on the retina, an object inside the eye, or a serious infection.

Vitreous

Relating to the transparent gel filling most of the space between the lens and retina, or describing a glass-like appearance. Vitreous disorders can cause floaters, hemorrhage, detachment, or retinal traction.

Vitreous Body

The transparent gel filling the large space between the lens and retina. It helps maintain the shape of the eye and transmits light; age-related liquefaction can cause floaters or contribute to retinal traction.

Alternate Names:

vitreous humor; vitreous

Vitreous Detachment

Separation of the vitreous gel from the retina, usually related to aging and often causing new floaters or flashes. Sudden symptoms require assessment for retinal tears or detachment.

Vitreous Hemorrhage

Bleeding into the vitreous cavity that causes sudden painless floaters, cobwebs, haze, or loss of vision. Common causes include proliferative diabetic retinopathy, retinal tear or detachment, trauma, and posterior vitreous separation.

Vitreous Humor

The clear gel that fills the space between the lens and retina. It helps maintain the shape of the eye and transmits light to the retina.

VLDL Test

A blood test that measures or estimates very-low-density lipoprotein, a particle carrying triglycerides. The result may help assess cardiovascular risk but is interpreted with the full cholesterol and triglyceride profile.

VO2 Max

The greatest amount of oxygen the body can use during intense exercise. It is a measure of aerobic fitness and is influenced by the heart, lungs, blood, muscles, age, health, and training.

Alternate Names:

Maximal oxygen consumption

Vocal Cord Nodules

Benign, usually paired thickened areas of the vocal folds caused by repeated voice strain or overuse. They can cause hoarseness, vocal fatigue, and a

rough or breathy voice.

Vocal Cord Paralysis

Inability of one or both vocal folds to move normally, often because of nerve damage. It may cause hoarseness, weak cough, choking, or difficulty protecting the airway; sudden breathing trouble is an emergency.

Alternate Names:

Vocal Fold Paralysis

Vocal Cord Paresis

Weakness or partial paralysis of one or both vocal cords, often from injury to the nerves that control them. It can cause a weak or breathy voice, voice fatigue, coughing during eating, or aspiration.

Vocal Cord Polyp

A usually noncancerous growth on a vocal fold, often after heavy or sudden voice use. It can cause persistent hoarseness, a rough voice, or voice fatigue and is assessed by examining the larynx.

Vocal Fold Paralysis

Alternate index label; see *Vocal cord paralysis*.

Vocal Folds

Two folds inside the voice box that vibrate as air passes between them to make sound. They also close during swallowing to protect the lungs from food and liquid.

Vocal Resonance

The sound of a person's voice heard through the chest with a stethoscope while they speak. Changes in the sound can provide clues to pneumonia, fluid around the lung, a collapsed lung, or other lung disease.

Vocal-Cord Dysfunction

Episodes in which the vocal cords narrow when a person breathes in, causing throat tightness, noisy breathing, or asthma-like attacks. It differs from asthma and may improve with breathing retraining, speech therapy, and trigger control.

Voice

Sound produced by vibration of the vocal folds as air passes through the larynx, then shaped by the throat, mouth, and nose for speech.

Voice And Speech

The products of complex coordinated activity of the respiratory, laryngeal, and articulatory systems. Communication produced by coordinated breathing, voice-box vibration, and movements of the mouth, tongue, and other speech structures.

Voice Box

The larynx, an organ in the neck containing the vocal folds and forming part of the airway. It produces voice and helps protect the lower respiratory tract during swallowing.

Voice Disorders

Conditions affecting voice quality, pitch, loudness, or ease of speaking because of problems involving the vocal folds, airway, nerves, or voice use.

Alternate Names:

Difficulty Speaking

Void

To empty the urinary bladder by urinating; in other medical contexts, void may mean an empty space or absence of a substance.

Voiding Cystourethrogram

An X-ray test that fills the bladder with contrast through a catheter and records the bladder and urethra while the person urinates. It can show urine flowing backward toward the kidneys, blockage, leakage, or structural problems, especially in children with selected urinary infections.

Volar

Relating to the palm of the hand or sole of the foot, especially the surface opposite the dorsum.

Volatile Anesthetics

Inhaled medicines used to produce and maintain unconsciousness during some operations. They can

lower blood pressure and breathing and rarely cause a dangerous rise in body temperature in susceptible people.

Alternate Names:

Essential oils

Volkmann Contracture

Permanent tightening of the forearm muscles that leaves the wrist and fingers bent. It usually follows severe swelling or loss of blood flow after an injury and can cause pain, weakness, numbness, and loss of hand function.

Volume Of Distribution

A calculated measure of how widely a medicine appears to spread through the body compared with the amount left in the blood. It helps guide dosing but does not represent a real space inside the body.

Volume Overload

Excess total body sodium and water, causing peripheral or pulmonary oedema; common causes include heart failure, kidney failure, liver disease, and excessive intravenous fluid, and treatment depends on the cause and severity.

Voluntary

Under conscious control or performed by choice, such as voluntary movement. Voluntary action is distinguished from reflex, autonomic, or involuntary activity.

Volutrauma

Lung injury caused by overstretching the lungs, usually when a breathing machine delivers breaths that are too large. Careful ventilator settings can reduce this risk.

Volvulus

Twisting of a loop of intestine that blocks passage through the bowel and may cut off its blood supply. It can cause severe pain, vomiting, swelling, and tissue death and often requires emergency treatment.

Volvulus - Childhood

Twisting of a loop of intestine around its mesentery, causing obstruction and potentially loss of blood supply. In children it is often related to intestinal malrotation and is a surgical emergency when acute.

Vomit

To eject stomach or upper gastrointestinal contents through the mouth; the expelled material may also be called vomitus. Persistent vomiting can cause dehydration and electrolyte abnormalities.

Vomiting

Forceful emptying of stomach contents through the mouth. It may result from infection, digestive disease, medicines, pregnancy, migraine, brain disorders, or poisoning. Repeated vomiting can cause dehydration, disturbed body salts, or inhalation of vomit; treatment addresses the cause and replaces lost fluids.

Vomiting Blood

The passage of blood or coffee-ground material in vomit, usually indicating upper gastrointestinal bleeding. It is a potentially serious symptom requiring prompt medical evaluation.

Vomitus

Material expelled from the stomach or upper gastrointestinal tract during vomiting. Its color and contents can provide clues but do not by themselves establish a diagnosis.

Von Gierke Disease

Glycogen storage disease type I, an inherited deficiency of glucose-6-phosphatase or its transport system that causes fasting hypoglycemia, lactic acidosis, enlarged liver, and excess uric acid or lipids.

Von Hippel-Lindau Disease

An inherited condition that increases the risk of tumors and cysts in several organs, including the brain, spinal cord, eyes, kidneys, adrenal glands, and pancreas. Some tumors can affect vision, blood pressure, or kidney function. Regular scans and eye, hearing, and blood-pressure checks help find

problems early.

Von Recklinghausen'S Disease

Alternate index label; see *Neurofibromatosis type 1*.

Von Recklinghausen'S Neurofibromatosis

Alternate index label; see *Neurofibromatosis type 1*.

Von Recklinghausen'S Phakomatosis

Alternate index label; see *Neurofibromatosis type 1*.

Von Willebrand Disease

A bleeding disorder caused by too little or poorly working von Willebrand factor, a blood protein that helps clots form. It commonly causes nosebleeds, easy bruising, heavy menstrual bleeding, or prolonged bleeding after procedures.

VOR Reflex

A reflex that moves the eyes opposite to head movement so vision stays steady while the head turns. Problems with this reflex can cause blurred or bouncing vision, dizziness, or imbalance.

Voriconazole

An antifungal medicine used for selected serious fungal infections. It stops fungi making an essential part of their outer structure; vision changes, liver problems, medicine interactions, and skin sensitivity require monitoring.

Voyeurism

A paraphilic disorder involving recurrent intense sexual arousal from observing an unsuspecting person who is naked, disrobing, or engaging in sexual activity, when it causes distress, impairment, or involves nonconsenting behavior.

Voyeuristic Disorder

A paraphilic disorder involving recurrent, intense sexual arousal from observing an unsuspecting person who is naked, disrobing, or engaging in sexual activity. The individual has acted on these urges or they cause marked distress or interpersonal difficulty. Duration $\geq$ 6 months. Most common in

males with onset in adolescence.

VPCs

Alternate index label; see *Premature ventricular contractions (PVCs)*.

VRE

Enterococcus bacteria that are no longer killed by vancomycin, an antibiotic. They may live harmlessly in the body or cause urinary, wound, bloodstream, or other infections that require infection-control measures and suitable treatment.

VSD

A hole in the wall between the heart's lower chambers. Small holes may close or cause no symptoms, while larger holes can make the heart and lungs work too hard and may need treatment.

Alternate Names:

Ventricular septal defect

Vulnerable

A substance traditionally believed to help heal wounds. Such products may lack good evidence and can cause allergy or contamination, so wound care should follow appropriate medical advice.

Vulva

The external female genital structures, including the mons pubis, labia, clitoris, and vestibule. It protects the openings of the urinary and reproductive tracts and contains specialized sensory and glandular tissue.

Alternate Names:

female external genitalia

Vulvar

Relating to the vulva, the external female genital structures including the labia, clitoris, vestibule, and associated glands.

Vulvar Carcinoma

Cancer of the external female genital area, most often arising from surface skin cells. It may appear as a persistent lump, sore, wart-like growth, itch-

ing, pain, or bleeding and requires examination and biopsy.

Alternate Names:

Vulvar cancer; Carcinoma of the vulva

Vulvar Intraepithelial Neoplasia

Abnormal cells limited to the surface layer of the vulva. Some forms can progress to invasive cancer, especially without treatment. It may cause itching, burning, sores, warty growths, or a color change, but some people have no symptoms.

Vulvar Melanoma

A rare cancer of the pigment-producing cells in the vulva. It may appear as a dark or skin-colored lump, patch, sore, or bleeding area; diagnosis requires a biopsy, and treatment depends on size and spread.

Vulvar Squamous Cell Carcinoma

The most common invasive vulvar malignancy, arising through HPV-related or HPV-independent pathways. It usually presents as a persistent mass, ulcer, plaque, or wart-like lesion and requires biopsy for diagnosis.

Vulvectomy

Surgical removal of part or all of the vulva, performed for selected cancers, precancerous lesions, or severe persistent disease.

Vulvitis

Inflammation or irritation of the external female genital area. It can cause itching, burning, redness, swelling, soreness, or discharge and may result from infection, allergy, skin disease, hormones, or friction.

Vulvitis, Yeast

Inflammation of the vulva associated with vulvovaginal candidiasis, usually caused by *Candida* species. It may cause itching, burning, redness, swelling, and soreness and should be distinguished from other causes of vulvar symptoms.

Vulvodynia

Vulvodynia is chronic vulvar pain without an iden-

tifiable specific cause, often described as burning or rawness and triggered by touch, pressure, or occurring spontaneously.

Alternate Names:

Chronic Vulvar Pain

Vulvovaginal Candidiasis

A yeast infection of the vulva and vagina, usually caused by *Candida*. It commonly causes intense itching, burning, soreness, redness, and thick discharge; recurrent, severe, unusual, or treatment-resistant symptoms need testing to confirm the cause.

Vaccine

A vaccine trains the immune system to recognize a specific infection or toxin and respond more effectively. Vaccination lowers the risk of severe disease and helps protect communities.

Vaginal Health

Vaginal health includes normal vaginal tissues, fluids, microorganisms, and comfort. Persistent odor, itching, pain, bleeding, or unusual discharge should be assessed by a healthcare professional.

Vaginal Hypoplasia

Vaginal hypoplasia is underdevelopment of the vagina, usually present from birth. It may occur with other reproductive or urinary-tract differences and can affect menstruation, sexual function, or fertility.

Vaginal Seeding

Placing vaginal fluid on a baby born by cesarean section in an attempt to expose the baby to the parent's vaginal microorganisms. Clear health benefits have not been established, and harmful infections may be transmitted.

Vaginoplasty

Vaginoplasty is surgery to create, repair, or reshape the vagina. It may be performed for congenital differences, injury, cancer treatment, pelvic-floor problems, or gender-affirming care.

Vaping

Vaping uses an electronic device to heat a liquid and produce an aerosol for inhalation. Aerosols may contain nicotine and other substances that can harm the lungs and cause dependence.

Vasculitic Neuropathy

Nerve damage caused by inflammation of the small blood vessels that supply nerves. It often causes painful, uneven numbness or weakness and may affect several limbs as the vessel inflammation continues.

Vegetarian

Vegetarian describes a diet that avoids meat and may include dairy products, eggs, or both. Nutritional needs can usually be met with varied foods, but iron, vitamin B12, protein, and other nutrients may need attention.

Verrucas

Verrucas are rough skin growths on the feet caused by human papillomavirus. They may be painful with pressure and often resolve without treatment, although treatment can reduce discomfort or spread.

Vertebroplasty

A procedure in which medical cement is injected into a collapsed spinal bone to help stabilize it and sometimes reduce pain. It is used selectively because cement leakage, infection, nerve injury, or other complications can occur.

Virotherapy

Treatment that uses a virus, often modified, to attack cancer cells or deliver a useful gene into cells. It is an evolving field; the possible benefits, risks, and availability depend on the specific therapy and disease.

Vitamin B

Vitamin B refers to a group of water-soluble vitamins that support energy metabolism, blood-cell formation, nerve function, and other processes. The group includes several distinct vitamins, not one single substance.

Vitamin B7

Vitamin B7, also called biotin, helps enzymes process fats, carbohydrates, and proteins. Deficiency is uncommon, and high-dose supplements can interfere with some laboratory tests.

Vitamin E

Vitamin E is a group of fat-soluble compounds with antioxidant activity. It is found in foods such as nuts, seeds, and vegetable oils; high-dose supplements can increase bleeding risk and interact with medicines.

Vitiligo

Vitiligo is a condition in which areas of skin lose pigment because melanocytes are destroyed or stop functioning. It is not contagious, and treatment may include camouflage, topical medicines, or light therapy.

Vocal Cords

Vocal cords, or vocal folds, are bands of tissue in the larynx that vibrate as air passes between them to produce the voice. Swelling, nodules, or injury can cause hoarseness.

Vocal Hemorrhage

Vocal hemorrhage is bleeding into a vocal fold, often after sudden or forceful voice use. It can cause abrupt hoarseness and usually requires prompt voice rest and specialist assessment.

Von Hippel-Lindau Syndrome

Von Hippel-Lindau syndrome is an inherited disorder caused by changes in the VHL gene. It increases the risk of tumors and cysts in organs such as the brain, retina, kidneys, pancreas, and adrenal glands.

Von Recklinghausen Disease

Von Recklinghausen disease is another name for neurofibromatosis type 1, an inherited condition causing multiple café-au-lait spots, neurofibromas, and increased risk of certain nerve, bone, eye, and other problems.

Vulval Intraepithelial Neoplasia

Vulval intraepithelial neoplasia is abnormal cell growth limited to the surface layers of the vulvar skin. Some types are linked to HPV, and untreated lesions may progress to invasive cancer.

Vulvar Cancer

Vulvar cancer is cancer arising in the external female genitalia. It may appear as a persistent lump, ulcer, wart-like lesion, itching, pain, or bleeding and requires examination and biopsy for diagnosis.

Vaginal Discharge

Vaginal discharge may be normal or may indicate infection, inflammation, hormonal change, or another condition. Normal discharge is usually clear to whitish and odourless and varies with the menstrual cycle, pregnancy, sexual arousal, and some contraceptives.

W

Waardenburg Syndrome

A group of inherited conditions that may cause hearing loss and unusual coloring of the eyes, hair, or skin. Some forms also affect the arms or the nerves controlling the bowel; findings vary by type.

WAGR Syndrome

A rare genetic condition that may cause an increased risk of Wilms kidney tumor, missing or poorly formed irises, urinary or reproductive differences, and developmental delay. Children need regular specialist monitoring, especially for kidney tumors.

Waist Circumference

The distance around the abdomen, measured at a standard level. A larger measurement can indicate more abdominal fat and a higher risk of diabetes and heart disease, but it must be interpreted with other health information.

Waist-Hip Ratio

A measurement comparing waist size with hip size. It provides an estimate of where body fat is stored and may add information about diabetes and cardiovascular risk, but it does not diagnose disease by itself.

Wait List

An official list of people waiting for an organ transplant. Placement and priority depend on medical urgency, expected benefit, compatibility, waiting time, and the rules of the transplant system.

Wakefulness

The state of being conscious and able to respond to the surroundings. Sleep, medicines, illness, brain injury, and metabolic problems can change the level of wakefulness.

Waldenstrom Macroglobulinemia

A rare blood cancer in which abnormal immune cells build up in the bone marrow and make too much of an antibody called IgM. It may cause anemia, bleeding, vision or nerve problems, enlarged lymph nodes, or no symptoms at first.

Alternate Names:

Lymphoplasmacytic Lymphoma

Waldenstrom'S Macroglobulinemia

A lymphoplasmacytic cancer of the bone marrow that produces excess IgM and may cause anemia, enlarged lymph nodes, or hyperviscosity symptoms.

Waldenström'S Macroglobulinemia

A slow-growing blood cancer in which abnormal immune cells make too much of an antibody called IgM. The blood can become unusually thick, causing blurred vision, headaches, bleeding, confusion, or numbness.

Walker-Warburg Syndrome

A rare inherited disorder causing severe muscle weakness together with major abnormalities of the brain and eyes from birth. Babies may have low muscle tone, seizures, poor feeding, enlarged fluid spaces in the brain, and abnormal eye development; the condition is usually life-threatening in infancy.

Alternate Names:

WWS; Muscle-Eye-Brain Disease (Severe Type);
HARD +/- E Syndrome

Walking Abnormalities

Walking abnormalities include changes in speed, balance, stride, posture, or coordination caused by pain, weakness, sensory loss, joint disease, or neurologic illness.

Walking Speed

The rate at which a person walks, often measured over a defined distance. It can provide information about mobility and function, but no single speed determines disability in every person.

Wall Stress

The strain placed on the wall of a heart chamber by the pressure inside it and the chamber's size. High wall stress makes pumping harder and may contribute to heart enlargement or failure.

Wallerian Degeneration

Breakdown of the part of a nerve beyond a severe injury after it loses contact with the nerve cell. The nerve may regrow slowly if the surrounding pathway remains intact, but recovery depends on the injury.

Walleyed

Walleyed describes eyes that appear misaligned or divergent; clinically, the condition may be strabismus and requires eye assessment when persistent.

Wandering Spleen

A spleen that can move unusually because its supporting bands are loose or missing. It may cause no symptoms or lead to abdominal pain, enlargement, twisting, loss of blood supply, or sudden severe illness.

Warfarin

A blood-thinning medicine that reduces production of vitamin-K-dependent clotting proteins. It prevents and treats clots but requires regular blood tests because food, illnesses, and many medicines alter its effect.

Warfarin Syndrome

A pattern of fetal abnormalities caused by warfarin exposure during pregnancy, including nasal and skeletal abnormalities, eye or neurologic defects, and fetal or neonatal bleeding.

Warm Autoimmune Hemolytic Anemia

An illness in which the immune system makes antibodies that cause red blood cells to be destroyed too early, mainly in the spleen. It can cause tiredness, pale or yellow skin, dark urine, shortness of breath, or a fast heartbeat and requires medical evaluation.

Alternate Names:

wAIHA; Warm antibody autoimmune hemolytic anemia

Warm Ischemia

Lack of blood and oxygen reaching tissue while it remains at body temperature. It can quickly cause cell damage and is important during some injuries, operations, and organ transplantation.

Wart

A usually harmless rough skin growth caused by human papillomavirus. Warts may spread by contact and often disappear without treatment, but painful, bleeding, changing, or uncertain growths should be examined.

Alternate Names:

Verruca

Wart Remover Poisoning

Toxic exposure to a wart-removal product, often involving salicylic acid or another keratolytic. Severity depends on the substance, amount, route, symptoms, and duration of exposure.

Warthin Tumor

A usually harmless tumor of a salivary gland, most often the parotid near the ear. It is strongly associated with tobacco use and may occur on both sides; evaluation distinguishes it from other growths.

Warty Dyskeratoma

A usually harmless skin growth, often on the head

or neck, with a small central dip filled with keratin. It may look like skin cancer, so examination and sometimes a biopsy are needed.

Wasting

Abnormal loss of body weight, muscle, or other tissue, often associated with chronic disease, inadequate nutrition, inflammation, or cancer. Severe wasting may impair strength, immunity, and recovery.

Watchful Waiting

Planned observation without immediate active treatment, with clinical review and treatment if symptoms develop or the condition progresses. It may be used for selected cancers and other slowly progressive conditions.

Water Birth (Underwater Delivery)

Delivery of a baby while the birthing person remains in a tub or pool of warm water. It may reduce perceived labor pain for some people, but evidence about delivery-related benefits and risks is limited. Eligibility, monitoring, and facility policies determine whether it is offered.

Alternate Names:

Underwater Delivery

Water Blister

A fluid-filled blister, usually containing clear serum, caused by friction, pressure, burns, or some skin disorders. The blister should be protected from further trauma and assessed if infected or widespread.

Water Brash

A sudden rise of watery or salty-tasting saliva into the mouth, usually because stomach acid has refluxed into the esophagus. It may occur with heartburn, sour taste, throat irritation, or regurgitation.

Water Channel

A protein pore in a cell membrane that lets water cross quickly. These pores help the kidneys and other tissues move water and maintain the body's fluid balance.

Water Consumption

Intake of water and other fluids to replace normal losses and maintain hydration. Requirements vary with body size, diet, activity, climate, pregnancy, illness, and kidney or heart function; thirst and urine concentration can help guide intake, while excessive intake can cause dangerous hyponatremia.

Water Intoxication

A dangerous fall in blood sodium caused by drinking or retaining more water than the body can remove. Severe cases can cause headache, confusion, seizures, or coma and need urgent treatment.

Water On The Brain

A nontechnical term usually referring to hydrocephalus, an abnormal accumulation or impaired circulation of cerebrospinal fluid that enlarges the ventricles and may increase intracranial pressure.

Water On The Knee

Alternate index label; see *Swollen knee*.

Water Retention

Excess accumulation of fluid in the body's tissues or cavities, commonly causing swelling and sometimes resulting from heart, kidney, liver, venous, hormonal, or medication-related disorders.

Water-Borne Disease

An illness acquired through water contaminated with infectious organisms or harmful chemicals. Examples include cholera, typhoid fever, and hepatitis A; prevention includes safe drinking water, sanitation, hand hygiene, and appropriate treatment of contaminated water.

Water-Deprivation Test

A supervised test that briefly limits drinking while urine concentration and blood results are monitored. It helps identify why a person produces excessive amounts of dilute urine and must be done under medical supervision because dehydration and high sodium can occur.

Water-Hammer Pulse (Corrigan Pulse)

A pulse that feels forceful at first and then suddenly collapses. It is often associated with severe leakage of the aortic valve or other causes of a wide pulse pressure.

Alternate Names:

Corrigan Pulse

Water-Soluble Vitamin

A vitamin that dissolves in water and is stored only in limited amounts. The group includes vitamin C and the B vitamins, so regular intake is generally needed.

Waterborne Bacterial Disease

An infection acquired from water contaminated with bacteria, such as cholera, typhoid fever, or leptospirosis; prevention depends on safe water, sanitation, and food hygiene.

Waterhouse-Friderichsen Syndrome

Waterhouse-Friderichsen syndrome is adrenal hemorrhage and acute adrenal failure associated with overwhelming sepsis, classically meningococcal infection, causing shock and coagulopathy.

Watery Eyes

Excessive tearing caused by irritation, allergy, infection, dry-eye reflex tearing, or blockage of the tear-drainage system. Persistent unilateral tearing or pain requires ocular assessment.

Wax

A water-resistant substance produced by ceruminous glands in the ear canal; earwax protects the canal and usually clears naturally.

Wax Poisoning

Toxic exposure to a wax product, usually causing little harm after a small accidental ingestion but potentially causing choking, aspiration, irritation, or toxicity when mixed with other chemicals.

Waxy Casts

Large, smooth, pale tube-shaped particles seen un-

der a microscope in urine. They form in damaged kidney tubules and can suggest severe or long-standing kidney disease, especially when other urine or blood tests are abnormal.

WBC Count

A measurement of the number of white blood cells in a volume of blood, used with the differential count to evaluate infection, inflammation, immune disorders, marrow disease, or treatment effects.

Weakness

Reduced ability to generate force, which may be generalized or limited to one body region. Causes include disorders of muscle, nerve, neuromuscular junction, brain, or spinal cord, as well as metabolic illness, infection, medication effects, and deconditioning; sudden one-sided weakness or weakness with breathing, swallowing, or speech difficulty requires emergency assessment.

Weakness, Generalized

Reduced strength affecting multiple body regions, caused by systemic illness, metabolic or electrolyte disturbance, medication, infection, muscle disease, nerve disease, neuromuscular-junction disease, or brain or spinal-cord disease. Sudden or progressive weakness, especially with speech, facial, breathing, or walking difficulty, requires urgent assessment.

Weaning

Gradual reduction and eventual discontinuation of breastfeeding, bottle-feeding, or a medicine or other treatment, according to the relevant clinical context.

Wear Debris

Tiny particles produced when an artificial joint or other implant wears down. The particles can trigger inflammation, damage nearby bone, loosen the implant, and eventually cause it to fail.

Weaver Syndrome

A rare genetic condition causing rapid growth before and after birth, a large head, distinctive facial features, low muscle tone, and delayed development or learning. Bone age may be advanced. Most cases

involve a change in the *EZH2* gene; care is tailored to the child's needs.

Weaver'S Bottom

Inflammation of the ischial bursa over the sitting bone, causing pain in the buttock that may worsen with prolonged sitting. It is also called ischial bursitis.

Webbed Fingers

Partial or complete joining of adjacent fingers by skin or soft tissue, known as syndactyly; it may be congenital or acquired.

Webbed Neck

Extra folds of skin extending from the sides of the neck toward the shoulders. They may be present from birth and can occur with conditions such as Turner syndrome or Noonan syndrome.

Webbing Of The Fingers Or Toes

Partial or complete joining of adjacent fingers or toes by skin or other tissue. It is called syndactyly and may be congenital or acquired.

Weber

A name used in hearing assessment, especially the Weber test, in which a vibrating tuning fork is placed on the forehead or skull. It helps compare hearing between the two ears but is not a unit of measurement.

Weber Test

A quick hearing test using a vibrating tuning fork placed on the middle of the forehead or skull. The examiner asks which ear hears the sound louder; the result helps distinguish blockage-related hearing loss from inner-ear or nerve-related loss.

Wedge Excision

Surgical removal of a triangular or wedge-shaped portion of tissue; commonly performed for breast biopsies, cervical lesions, and skin tumors.

Wedge Resection

Surgery that removes a small wedge-shaped piece of tissue, commonly from the lung or breast, to diagnose or treat a localized lesion. It removes less tissue than removal of an entire lobe.

Weever Fish

A venomous marine fish whose dorsal spines can cause a painful sting, local swelling, and occasionally systemic symptoms.

Wegener'S Granulomatosis

An older name for granulomatosis with polyangiitis, an autoimmune disease that inflames blood vessels, often affecting the nose, sinuses, lungs, and kidneys. It may cause sinus disease, cough, coughing blood, or kidney injury.

Wegeners Granulomatosis (Granulomatosis With Polyangiitis)

Alternate index label for Granulomatosis With Polyangiitis.

Weight Gain

Increase in body weight; may be intentional (muscle building, pregnancy) or unintentional (fluid retention, endocrine disorders, medication effects).

Weight Gain In Pregnancy

Recommended weight gain depends on weight before pregnancy and whether one or more babies are expected. For one baby, usual ranges are about 12.5–18 kg if underweight, 11.5–16 kg at usual weight, 7–11.5 kg if overweight, and 5–9 kg with obesity; prenatal clinicians monitor the pattern and fetal growth.

Weight Gain – Unintentional

Increase in body weight without a planned change in diet or activity, often caused by fluid retention, medicines, endocrine disease, reduced activity, or changes in eating; rapid swelling or breathlessness needs prompt assessment.

Weight Loss

A decrease in body weight that may be intentional or unintentional. Intentional loss is usually achieved through sustainable changes in eating, physical activity, and behavior; unintentional or rapid loss can indicate illness, inadequate nutrition, or medication effects and may require medical evaluation.

Weight Loss - Unintentional

Unintentional weight loss is reduction in body weight without planned dietary or activity change and may result from malignancy, endocrine disease, infection, gastrointestinal disease, medication, or mood disorder.

Weight Loss Medications

Medicines prescribed for selected people with obesity to help reduce weight, usually together with nutrition and activity changes. Choice depends on health conditions, other medicines, side effects, cost, and treatment goals.

Weight-Loss Medicines

Alternate index label; see *Weight Loss Medications*.

Weight-Reducing Diets

Dietary plans intended to create a sustained energy deficit and reduce excess body weight, ideally individualized with attention to nutrition, health conditions, and long-term adherence.

Weil's Disease

A zoonotic bacterial infection caused by spirochaetes of the genus *Leptospira*, transmitted through contact with water or soil contaminated with the urine of infected animals (rodents, cattle, dogs). See *Leptospirosis*.

Weils Disease (Leptospirosis)

Alternate index label for *Leptospirosis*.

Wellens Syndrome

A specific pattern on a heart tracing that can signal severe narrowing of a major heart artery, even after chest pain stops. It indicates high heart-attack

risk and needs urgent specialist assessment; exercise testing can be dangerous.

Alternate Names:

Wellens Pattern; LAD Coronary T-Wave Syndrome; Wellens Sign

Wells Score For Pulmonary Embolism

A clinical score estimating the likelihood of a blood clot in the lungs. It considers leg-clot signs, heart rate, recent surgery or immobility, previous clots, coughing blood, cancer, and alternative diagnoses; the result helps decide whether blood testing or lung imaging is needed.

Alternate Names:

Wells Criteria for PE; Wells Score (PE)

Welt

A raised, often itchy area of skin caused by localized swelling, commonly seen in hives or after an insect bite. A welt may fade within hours, but persistent or severe reactions need evaluation.

Wen (Epidermoid Cyst)

A common, usually harmless lump beneath the skin filled with a soft protein called keratin. It may become swollen, painful, or infected and can be removed if necessary.

Alternate Names:

Epidermoid Cyst

Wenckebach Phenomenon (Mobitz Type I AV Block)

A heart-rhythm pattern in which each heartbeat takes slightly longer to pass from the upper to lower chambers until one beat is missed. It may be harmless or reflect heart disease, depending on the setting.

Alternate Names:

Mobitz Type I AV Block

Wens

Alternate index label; see *Wen (Epidermoid Cyst)*.

Werdnig-Hoffmann Disease

The most severe early form of inherited spinal mus-

cular atrophy, also called type 1 spinal muscular atrophy. It usually begins before 6 months of age and causes very weak muscles, poor head control, reduced reflexes, a weak cry, feeding difficulty, and breathing problems. Babies generally cannot sit without support. New treatments can improve survival and function, but affected infants need urgent specialist care and breathing and feeding support.

Alternate Names:

Spinal Muscular Atrophy Type 1 (SMA 1); Severe Infantile Spinal Muscular Atrophy

Wermer Syndrome

Alternate index label; see *Multiple endocrine neoplasia, type 1 (MEN 1)*.

Wermer'S Syndrome

Alternate index label; see *Multiple endocrine neoplasia, type 1 (MEN 1)*.

Werner Syndrome

A rare inherited condition that causes signs of aging earlier than usual, often after puberty. Features may include short stature, early cataracts, thin or tight skin, gray hair, diabetes, weak bones, and increased cancer risk. Regular medical monitoring and treatment of each complication are needed.

Werner'S Syndrome

A rare inherited condition that causes signs of aging earlier than usual, often after puberty. It may cause early cataracts, short stature, thin skin, gray hair, diabetes, weak bones, and increased cancer risk.

Wernicke Area

A brain region, usually in the left temporal lobe, that helps a person understand spoken and written language. Damage can cause fluent speech that lacks meaning and poor understanding of language.

Wernicke Encephalopathy

A sudden brain disorder caused by severe vitamin B1 deficiency. It may cause confusion, difficulty walking, and abnormal eye movements and can lead to permanent damage without prompt treatment.

Wernicke'S Encephalopathy

An acute neurologic disorder caused by thiamine deficiency, classically involving confusion, eye-movement abnormalities, and gait or coordination impairment. It requires prompt thiamine treatment.

Wernicke-Korsakoff Syndrome

A brain disorder caused by severe vitamin B1 deficiency. It may begin with confusion and poor coordination and leave lasting memory problems, difficulty learning, and inaccurate made-up explanations; alcohol misuse, poor nutrition, and prolonged vomiting are common causes.

Wernicke'S Area

A brain region important for understanding spoken and written language.

Alternate Names:

Wernicke area

West Nile Encephalitis

Inflammation of the brain caused by neuroinvasive West Nile virus, transmitted mainly by mosquitoes. It may cause fever, headache, confusion, tremor, weakness, seizures, or coma. There is no specific routine antiviral treatment; severe illness requires hospital-based supportive care.

West Nile Virus

A mosquito-borne flavivirus that can cause asymptomatic infection, a febrile illness, or neuroinvasive disease such as meningitis, encephalitis, or acute flaccid paralysis. Risk of severe disease is higher in older adults and people with certain medical conditions.

West Nile Virus Infection

West Nile virus infection is a mosquito-borne illness ranging from fever and body aches to neuroinvasive meningitis, encephalitis, weakness, or paralysis.

West Syndrome

A serious seizure disorder beginning in infancy, with repeated sudden spasms and an abnormal brain-wave pattern. Development may slow or regress;

causes include brain injury, genetic conditions, and metabolic disease, and urgent treatment is needed.

Westermarck Sign

An area of unusually reduced blood-vessel markings on a chest X-ray, sometimes seen beyond a clot in a lung artery. It may suggest pulmonary embolism but is not reliable enough to diagnose it alone.

Westley Croup Score

A clinical score used to estimate how severely croup is obstructing a child's airway. It considers noisy breathing, chest retractions, air movement, bluish coloring, and alertness; a higher score suggests more severe illness and helps guide urgent treatment and observation.

Alternate Names:

Westley Clinical Scoring System for Croup; Croup Severity Score

Wet Age-Related Macular Degeneration

Alternate index label; see *Wet macular degeneration*.

Wet AMD

Alternate index label; see *Wet macular degeneration*.

Wet Dream

Involuntary ejaculation during sleep, usually occurring in adolescence or adulthood and generally a normal physiological event.

Wet Dry Drowning (Drowning)

Alternate index label for Drowning.

Wet Gangrene

Tissue death complicated by bacterial infection and tissue swelling, producing moist, discolored, rapidly spreading necrosis. It requires urgent medical assessment.

Wet Macular Degeneration

The neovascular form of age-related macular degeneration in which abnormal blood vessels grow beneath or within the retina and leak fluid or blood, causing rapid central-vision loss.

Alternate Names:

Macular Degeneration, Wet Wet Age-Related Macular Degeneration Wet AMD

Wharton Jelly

The soft, jelly-like tissue surrounding the blood vessels in the umbilical cord. It cushions the vessels and helps prevent them from being squeezed or bent during pregnancy and labor.

Wharton'S Jelly

Gelatinous connective tissue within the umbilical cord that surrounds and supports the umbilical blood vessels and helps protect them from compression.

Wheal

A temporary, raised, often itchy area of skin caused by swelling in the skin. It commonly occurs with hives, an allergic reaction, or an insect bite and may move or disappear within hours.

Wheal And Flare

A temporary raised, swollen area of skin surrounded by redness. It is usually caused by release of histamine during hives, an allergy, or another immediate skin reaction.

Wheat Allergy

An immune reaction to proteins in wheat that may cause hives, stomach symptoms, vomiting, or breathing problems.

Alternate Names:

Allergy, Wheat

Wheeled Stretcher

Mobile patient transport device with wheels; used in hospitals and emergency services for moving patients who cannot walk.

Wheeze

A high-pitched whistling sound caused by narrowed airways. It often occurs with asthma, infection, allergy, or chronic lung disease; sudden wheezing after choking or with severe breathlessness needs

urgent care.

Wheezing

A musical or whistling sound caused by narrowed lower airways, usually louder when breathing out. It may result from asthma, infection, chronic lung disease, allergy, airway swelling, mucus, or an inhaled object.

Whiplash

A neck injury caused by the head moving suddenly backward and forward, often in a vehicle crash but also after a fall or sports injury. Pain, stiffness, headache, dizziness, or arm tingling may appear immediately or later. Most cases improve over weeks, but weakness, numbness, trouble walking, or severe pain after major trauma needs urgent assessment.

Alternate Names:

Pain Whiplash (Whiplash) Sprain Neck (Whiplash) Strain Neck (Whiplash)

Whiplash Injury

Alternate index label; see *Whiplash*.

Whipple Disease

A rare bacterial infection that can damage the small intestine, joints, brain, heart, or other organs. It may cause years of joint pain followed by weight loss, persistent diarrhea, abdominal pain, and poor nutrient absorption.

Whipple Procedure

A major operation that removes the head of the pancreas and nearby parts of the small intestine, bile duct, and gallbladder, then reconnects the digestive tract. It is used for selected cancers and other serious diseases in this area.

Whipple Triad

Three findings supporting that symptoms are caused by low blood sugar: typical symptoms occur, blood sugar is low at that time, and symptoms improve after blood sugar is raised.

Whipple's Disease

A rare bacterial infection caused by *Tropheryma whipplei*, damaging intestinal absorption and potentially affecting joints, brain, or heart.

Alternate Names:

Intestinal Lipodystrophy Lipodystrophy, Intestinal

Whipworm

A parasitic roundworm of the genus *Trichuris*, usually *Trichuris trichiura* in humans. Infection occurs by ingesting embryonated eggs and may cause abdominal pain, diarrhea, anemia, or rectal prolapse when severe.

Whipworm (Trichuriasis)

Intestinal infection caused by the soil-transmitted helminth *Trichuris trichiura* (whipworm), endemic in tropical and subtropical regions with poor sanitation. Humans acquire infection by ingesting embryonated eggs from contaminated soil, food, or water.

Alternate Names:

Trichuriasis

Whipworm Infection

Intestinal infection with *Trichuris trichiura* acquired by ingesting eggs from contaminated soil or food; heavy infection can cause abdominal symptoms, anemia, or rectal prolapse.

Whirlpool Bath

Hydrotherapy device providing agitated water for therapeutic bathing; used in wound care, physical therapy, and rehabilitation.

Whispered Pectoriloquy

An examination finding in which whispered words sound unusually clear through a stethoscope over the lung. It may suggest that air-filled lung has become solid, as in pneumonia, but it is not diagnostic alone.

White Blood Cell

A cell of the immune system that helps protect the body from infections, foreign substances, and ab-

normal cells. White blood cells are made mainly in the bone marrow and include neutrophils, lymphocytes, monocytes, eosinophils, and basophils. Their number or function may change with infection, inflammation, immune disorders, or bone-marrow disease.

White Blood Cell Count

A blood test measuring the number of white blood cells. A high or low result can occur with infection, inflammation, medicines, immune disorders, or bone-marrow disease and must be interpreted with the differential count and clinical findings.

White Blood Cell Labeling

A scan method in which a person's white blood cells are removed, marked with a small amount of radioactive material, and returned to the body. The cells may collect at areas of infection or inflammation, which can then be seen on images.

White Cell

Another name for a white blood cell, an immune cell made mainly in the bone marrow that helps defend the body against infection, foreign substances, and abnormal cells.

White Cell Count

A blood test measuring the number of white blood cells and often the proportion of each type. Results help assess infection, inflammation, immune disorders, and bone-marrow problems.

White Finger

Episodic pallor or whitening of the fingers caused by vasospasm, commonly associated with Raynaud phenomenon or hand-arm vibration syndrome.

White Infarction

Tissue death caused by loss of blood flow in a solid organ such as the heart, kidney, or spleen. The damaged area looks pale because little blood can reach it through alternate vessels.

Alternate Names:

anemic infarction, occurs in solid organs with.

White Leg (Phlegmasia Alba Dolens)

Painful, marked swelling and pallor of a limb caused by extensive deep venous thrombosis, usually involving major venous outflow. It requires urgent assessment.

Alternate Names:

Phlegmasia Alba Dolens

White Matter

Tissue in the brain and spinal cord made mainly of nerve fibers covered by a protective substance called myelin. It carries signals between different brain areas and between the brain and spinal cord.

White Matter Of The Brain

The brain tissue composed mainly of myelinated axons and supporting glial cells, connecting different brain regions and the brain with the spinal cord; disease or injury can impair cognition, sensation, coordination, or movement.

White Of The Eye

The sclera, the tough, opaque outer coat of the eye surrounding the cornea and helping maintain the shape of the globe.

White Spot Disease

Alternate index label; see *Lichen sclerosus*.

White Tongue

A white coating or patches on the tongue caused by debris, dry mouth, irritation, infection, inflammation, or other oral conditions.

White-Coat Hypertension

Blood pressure that is high in a medical setting but normal outside it. Home or ambulatory readings help confirm the pattern, which may still predict higher future hypertension risk.

Alternate Names:

White-coat effect

Whiteheads

Whiteheads are closed comedones formed when oil and dead skin block a hair follicle, producing small

pale or skin-colored acne bumps.

Whitlow

An infection or inflammation of the tissues around a finger or toenail, often involving the nail fold; it may be bacterial, fungal, or herpetic.

Whitlow (Paronychia)

Acute or chronic infection and inflammation of the tissues around a fingernail or toenail, usually caused by bacteria, fungi, or repeated moisture and trauma.

Alternate Names:

Paronychia

Whole Breast Radiation Therapy

Whole breast radiation therapy treats remaining breast tissue after breast-conserving surgery to reduce local recurrence risk, with planned dosing and monitoring for skin and tissue effects.

Whole Exome Sequencing

A genetic test that reads most protein-coding sections of a person's DNA. It can identify changes causing some inherited disorders, but it may miss changes outside coding regions, structural changes, or causes not yet understood; results require clinical interpretation.

Whole Genome Sequencing

Laboratory analysis of nearly all of a person's nuclear DNA, including coding and noncoding regions, and sometimes mitochondrial DNA. It can identify many types of genetic variants but may produce uncertain or incidental findings and does not detect every cause of disease; results require appropriate clinical interpretation.

Whole-Body Irradiation

Radiation treatment directed at the entire body, most often given before a stem-cell transplant to suppress the immune system and make room for donated cells. It can affect the bone marrow, fertility, and other organs.

Whole-Body Scan

An imaging examination that surveys much or all of the body, using a technique such as PET/CT, CT, MRI, or a nuclear medicine scan. It may be used for selected cancer staging, infection localization, or evaluation of systemic disease; the coverage and usefulness depend on the test and clinical question.

Whole-Bowel Irrigation

A hospital treatment that flushes the intestines with a special polyethylene-glycol drink. It is used only for selected poisonings or swallowed objects after clinicians assess the airway and risks.

Whole-Brain Radiation Therapy

Radiation treatment directed at the entire brain, used in selected people with multiple brain metastases or cancer cells around the brain. It may also be used to reduce brain-spread risk in selected cancers; side effects depend on dose and treatment plan.

Whole-Genome Sequencing

Sequencing of nearly the complete nuclear genome, including coding and noncoding regions, together with mitochondrial DNA when covered by the assay. It can detect a broad range of variants but generates substantial interpretation and incidental-finding challenges.

Whooping Cough

A highly contagious respiratory infection caused by *Bordetella pertussis*. It causes prolonged bouts of rapid coughing that may be followed by a whooping sound or vomiting; infants may have pauses in breathing without the typical whoop. Also called pertussis.

Whooping-Cough

Alternate index label; see *Whooping Cough*.

Widal Reaction

An older blood test for antibodies associated with typhoid or paratyphoid fever. It is not very reliable because results may reflect past infection or vaccination, so culture or molecular testing is usually preferred.

Widely Spaced Teeth

Teeth separated by unusually large gaps, also called diastema when the gap is localized. Causes include normal development, missing teeth, tooth-size differences, habits, or jaw and gum conditions.

Williams Syndrome

A genetic condition caused by loss of a small section of chromosome 7, including a gene important for elastic tissues. It may cause characteristic facial features, heart-vessel narrowing, high blood calcium, developmental differences, learning difficulties, and connective-tissue problems. Regular heart, calcium, hearing, and developmental checks are important.

Wilm'S Tumour

Source spelling variant of *Wilms tumor*, a malignant embryonal kidney tumor occurring mainly in young children.

Wilms Tumor

A malignant embryonal tumor of the kidney in children. It may present as an abdominal mass, pain, hematuria, or an incidental finding and may be associated with syndromes such as WAGR or Beckwith-Wiedemann syndrome. Treatment and prognosis depend on stage and tumor biology.

Alternate Names:

Cancer, Wilms' Tumor

Wilms' Tumor (Nephroblastoma)

An embryonal malignant tumor of the kidney that usually occurs in young children. It may be associated with congenital syndromes, and treatment and prognosis depend on tumor stage, histology, and molecular features.

Alternate Names:

Nephroblastoma

Wilson Disease

An inherited disorder in which excess copper builds up in the liver, brain, eyes, and other organs. It can cause liver disease, tremor or other movement problems, mood or behavior changes, and colored rings around the cornea. Lifelong treatment removes or limits copper and prevents further buildup.

Wilson'S Disease

An inherited condition in which copper builds up in the liver, brain, eyes, and other organs. It may cause liver disease, movement or mood changes, and colored rings around the cornea, but lifelong treatment can prevent further damage.

Windowing

Adjusting the brightness and contrast of a CT image so particular tissues, such as bone, lung, or soft tissue, are easier to see.

Windpipe

The tube carrying air from the voice box to the two main airways leading to the lungs. It is supported by firm rings that help keep it open.

Winter Vomiting Disease

An acute gastroenteritis, usually caused by norovirus, characterized by sudden vomiting, diarrhea, and abdominal cramps.

Wireless Motility Capsule

A swallowed capsule that records pressure, acidity, temperature, and movement as it travels through the digestive tract. The measurements estimate how long food takes to pass through the stomach and intestines and may help investigate unexplained constipation, diarrhea, nausea, or bloating.

Wisdom Teeth

Wisdom teeth are the third molars that commonly emerge in late adolescence or adulthood. Impaction, infection, decay, cysts, gum disease, or crowding can cause pain and swelling; dental examination and imaging determine whether monitoring or removal is appropriate.

Wisdom Teeth, Impacted

Alternate index label; see *Impacted wisdom teeth*.

Wisdom Tooth (Third Molar)

The last molar in each dental quadrant, usually erupting in late adolescence or early adulthood. Impaction may cause pain, infection, or damage to

adjacent teeth.

Alternate Names:

Third Molar

Wiskott-Aldrich Syndrome

A rare inherited immune disorder that mainly affects boys and causes eczema, repeated infections, and a low number of unusually small platelets. It can also cause bleeding and autoimmune problems and requires specialist care.

Witch'S Milk

A temporary milky breast discharge in a newborn caused by maternal hormones crossing the placenta; it usually resolves without squeezing or treatment, which can otherwise cause infection.

Witch'S Milk (Neonatal Galactorrhea)

A temporary milk-like breast secretion in a newborn caused by exposure to maternal hormones. It usually resolves without treatment; the breasts should not be squeezed.

Alternate Names:

Neonatal Galactorrhea

Withdrawal

Physical or psychological symptoms that occur when a person who has developed dependence reduces or stops using a medicine or psychoactive substance. Symptoms vary by substance and may include anxiety, agitation, sweating, tremor, nausea, pain, insomnia, cravings, or seizures; some forms require urgent medical care.

Alternate Names:

Withdrawal syndrome

Withdrawal Reflex

An automatic response in which a painful stimulus makes a limb pull away from danger. The opposite limb may straighten to help maintain balance.

Withdrawal Symptoms

Physical or psychological symptoms that occur when a person stops or reduces a substance or medicine after the body has adapted to it. The symptoms

depend on the substance, duration of use, and the person's health.

Withdrawal Syndrome

A predictable set of signs and symptoms that occur when a drug is discontinued or the dose is reduced after chronic use, reflecting the physiological rebound from drug adaptation.

Wolf-Hirschhorn Syndrome

A rare genetic disorder caused by loss of part of chromosome 4. It can cause poor growth, a small head, distinctive facial features, developmental and intellectual disability, seizures, and heart or other organ abnormalities; lifelong specialist support is usually needed.

Alternate Names:

4p- Syndrome; 4p Deletion Syndrome

**Wolff Parkinson White Syndrome
(Wolff-Parkinson-White Syndrome)**

Alternate index label for Wolff-Parkinson-White Syndrome.

**Wolff-Parkinson-White Accessory
Pathway-Related Tachycardia**

Alternate index label; see *Wolff-Parkinson-White syndrome*.

Wolff-Parkinson-White Syndrome

A heart condition present from birth in which an extra electrical pathway can make the heart beat very fast. It may cause sudden palpitations, dizziness, fainting, or rarely cardiac arrest and can be treated by medicines or a procedure.

Alternate Names:

Wolff Parkinson White Syndrome (Wolff-Parkinson-White Syndrome)

Wolffian Ducts

Temporary tubes in the developing embryo that form parts of the male reproductive system, including the sperm-transport ducts. They usually shrink during typical female development, although small remnants may remain.

Wolfram Syndrome

A rare inherited disorder that commonly causes diabetes requiring insulin and progressive loss of vision from optic-nerve damage. It may also cause excessive thirst and urination, hearing loss, bladder problems, balance difficulty, or other nerve-system problems. Treatment monitors and supports each affected function.

Wolinella

Genus of anaerobic, Gram-negative bacteria found in the oral cavity and gastrointestinal tract; associated with periodontal disease.

Wolman Disease

A severe inherited disorder in which a missing enzyme causes fats to build up in organs. It usually begins in infancy with vomiting, diarrhea, poor growth, an enlarged liver and spleen, and adrenal-gland problems. Without treatment it can be fatal early; enzyme replacement and specialist care are required.

Wolman'S Disease

A severe lysosomal acid-lipase deficiency presenting in infancy with hepatosplenomegaly, adrenal calcification, malabsorption, vomiting, diarrhea, and failure to thrive. It is a severe form of lysosomal acid-lipase deficiency and can be fatal early without treatment.

Womb

Common name for the uterus; the muscular organ where a fetus develops during pregnancy.

Alternate Names:

Uterus

Womb Growths (Uterine Fibroids)

Alternate index label for Uterine Fibroids.

Women'S Health

Medical specialty focusing on conditions unique to or more prevalent in females, including reproductive health, pregnancy, menopause, and gender-specific disease patterns.

Alternate Names:

Womens Health (Women's Health)

Womens Health (Women'S Health)

Alternate index label for Women's Health.

Wood Lamp Examination

Examination of the skin in a dark room using special ultraviolet light. The light can make some color changes and infections easier to see, but the finding usually needs confirmation with the examination and other tests.

Wood Spirit

An old name for methanol, a toxic alcohol whose ingestion can cause metabolic acidosis, blindness, and death.

Wood'S Light

A special ultraviolet light used in a darkened room to make some skin colors, scales, and infections easier to see. It can support an examination but usually cannot identify the cause by itself.

Woods Corkscrew Maneuver

An emergency procedure used when a baby's shoulders become stuck during birth. A trained clinician rotates the baby's shoulders to help release them and complete delivery.

Woods Screw Maneuver

A rotational maneuver used during shoulder dystocia to rotate the fetal shoulders and assist delivery.

Woody Tongue

A rare long-lasting infection, usually caused by *Actinomyces*, that makes the tongue and nearby tissues hard and swollen. It can interfere with eating, speaking, or breathing.

Wool-Sorter'S Disease (Anthrax)

A form of inhaled anthrax acquired by breathing spores of *Bacillus anthracis*, historically associated with handling contaminated wool or animal products. It can cause severe breathing illness and re-

quires urgent treatment.

Alternate Names:

Anthrax

Word Blindness

An older term for alexia, an acquired inability to read or recognize written words despite adequate vision and previously developed language ability, usually caused by brain dysfunction or injury.

Word Blindness (Alexia)

An acquired neurological disorder in which a person loses or markedly impairs the ability to read despite adequate vision and previously acquired language skills.

Alternate Names:

Alexia

Word Deafness (Auditory Verbal Agnosia)

An acquired inability to understand spoken words even though ordinary hearing is intact. It usually results from damage to brain areas that connect hearing with language, such as after a stroke or head injury.

Alternate Names:

Auditory Verbal Agnosia

Word Recognition Scoring

A hearing test measuring how accurately a person repeats or identifies spoken words at a comfortable volume. It helps assess how well the hearing system and brain understand speech.

Word Salad

Speech made of words or phrases that have little or no logical connection, making the person difficult to understand. It can occur with severe psychosis, mania, brain disease, or intoxication and needs assessment in context.

Working Memory

The ability to hold a small amount of information briefly and use it while completing a task, such as remembering instructions while following them.

Attention, stress, sleep, illness, and brain conditions can affect it.

Worm Infestation (Helminthiasis)

Infection by parasitic worms, including roundworms, tapeworms, and flukes. Symptoms depend on the species and body site and may include abdominal problems, anemia, cough, itching, or no symptoms.

Alternate Names:

Helminthiasis

Worms Pinworms (Pinworm Infection)

Alternate index label for Pinworm Infection.

Wound

Damage to body tissue caused by trauma, surgery, pressure, heat, chemicals, or another cause. A wound may be open or closed and can vary in depth, contamination, bleeding, and injury to nearby nerves, vessels, or organs.

Wound Care

Assessment and treatment of a wound through cleansing, bleeding control, removal of dead or contaminated tissue when indicated, appropriate closure or dressing, pain control, and follow-up. Care also includes tetanus prevention, pressure relief, and treatment of infection or underlying conditions; antibiotics are reserved for selected contaminated wounds, bites, or infections.

Wound Complication

A problem that develops during healing, such as infection, separation of wound edges, bleeding, fluid collection, tissue death, or excessive scarring. Increasing pain, redness, swelling, drainage, fever, or wound opening should be assessed promptly.

Wound Dehiscence

Partial or complete reopening of a surgical wound after it has been closed. It may follow infection, poor blood supply, diabetes, increased pressure, or strain on the wound. New separation, drainage, fever, severe pain, or visible deeper tissue needs prompt medical assessment.

Wound Evisceration

Separation of a surgical wound with protrusion of internal organs or tissue through the opening. It is a surgical emergency requiring protection of the exposed tissue and urgent medical evaluation.

Wound Healing

The body's process of stopping bleeding, controlling inflammation, replacing damaged tissue, covering the surface, and strengthening the repair. Blood supply, infection, nutrition, diabetes, medicines, smoking, wound depth, and movement can affect healing.

Wound Healing Phases

Wound healing has overlapping stages: stopping bleeding, inflammation, building new tissue and skin, and strengthening the repair. The timing and result depend on the wound, blood supply, infection, nutrition, and general health.

Wound Infection

Infection of a wound by microorganisms, causing findings such as increasing pain, redness, warmth, swelling, pus, fever, or delayed healing.

Wound Management

Assessment and treatment of acute or chronic wounds through cleansing, debridement when indicated, moisture and exudate control, infection management, pressure relief, nutrition, and correction of underlying disease.

Wound VAC

A negative-pressure wound treatment in which a sealed dressing is connected to a pump that gently removes fluid and reduces swelling. It can support new tissue growth in selected complex wounds, but requires proper application and monitoring for bleeding, infection, or skin damage.

Wounds

Injuries in which tissue is damaged by trauma, surgery, pressure, heat, chemicals, or other causes; wounds may be open or closed and may require cleansing, closure, or debridement.

Wright Stain

A laboratory dye applied to a blood sample so different blood cells and abnormal cell changes can be seen and identified under a microscope.

Wrisberg Ganglion

A small cluster of nerve cells connected with the facial nerve. It helps relay taste signals from part of the tongue and sensory signals from nearby areas of the ear.

Wrist

The joint connecting the hand to the forearm. It contains eight small wrist bones, ligaments, tendons, nerves, and blood vessels and allows the hand to bend, turn, and move from side to side.

Wrist Arthroscopy

A procedure using a small camera and instruments inserted through tiny wrist openings to examine or treat damaged cartilage, ligaments, joint lining, or other wrist problems.

Wrist Drop

Inability to lift the wrist and fingers, usually caused by injury or compression of the radial nerve. It may cause weakness, numbness, or difficulty using the hand and needs assessment for the cause.

Wrist Fracture

A break in one or more bones near the wrist, most commonly the distal radius or ulna, usually caused by a fall, direct trauma, or weakened bone.

Wrist Injury

Damage to the bones, ligaments, tendons, nerves, or vessels of the wrist from a fall, twist, impact, or overuse; fracture, instability, severe swelling, or neurovascular symptoms require assessment.

Wrist Joint

The joint where the forearm bones meet the small bones of the hand. It allows bending, straightening, side-to-side movement, and limited rotation while ligaments and cartilage provide stability.

Wrist Pain

Pain in or around the wrist, commonly caused by sprain, fracture, tendinitis, arthritis, or nerve compression such as carpal tunnel syndrome. Persistent pain, deformity, numbness, or weakness requires assessment.

Alternate Names:

Pain, wrist

Alternate Names:

Pain, Wrist

Wrist Sprain

Stretching or tearing of one or more ligaments supporting the wrist, causing pain, swelling, bruising, and reduced movement after injury.

Writer'S Cramp

A movement disorder in which involuntary muscle tightening causes abnormal hand or arm positions while writing. It may also affect other closely related fine hand movements.

Written Documentation

Formal recording of patient information, clinical decisions, and treatment plans; essential for continuity of care and medicolegal purposes.

Wry-Neck

Torticollis, an abnormal tilt or rotation of the head caused by involuntary contraction, shortening, or dysfunction of neck muscles.

Wryneck (Torticollis)

Abnormal tilting or rotation of the head caused by involuntary contraction, shortening, or dysfunction of neck muscles. It may be congenital, acquired, painful, or neurological.

Wt

A medical abbreviation commonly meaning weight. Its meaning should be confirmed from the surrounding documentation because abbreviations can be ambiguous.

Wuchereria

A genus of filarial nematodes that includes *Wuchereria bancrofti*, a major cause of lymphatic filariasis. Infection is transmitted by mosquitoes and may cause lymphangitis, chronic lymphedema, hydrocele, and elephantiasis.

Wuchereria Bancrofti

A parasitic roundworm spread by mosquitoes and the main cause of lymphatic filariasis. Long-term infection can block lymph drainage and cause swelling of the limbs or genitals, sometimes becoming severe and permanent.

Wuhan Coronavirus (2019-NCoV)

Alternate index label for 2019-nCoV.

Weight Loss Surgery

Weight-loss surgery, or bariatric surgery, changes the stomach or digestive tract to help treat severe obesity and related conditions. It requires long-term nutritional, medical, and lifestyle follow-up.

Wheelchair

A wheelchair is a mobility device with a seat and wheels that helps a person move when walking is difficult or unsafe. Proper fitting and training improve comfort, safety, and independence.

Wheelchairs

Wheelchairs are mobility devices used by people who cannot walk safely or efficiently. They may be manual or powered and should be selected and adjusted to the person's posture, strength, environment, and daily needs.

X

X Chromosome

One of the two types of human sex chromosomes. It carries genes involved in sex development as well as many other body functions. Most people have one or two X chromosomes.

X, Factor

A blood-clotting protein that helps start the final steps of clot formation. Too little factor X can cause prolonged or unexpected bleeding and is assessed with clotting tests and other blood studies.

X-Inactivation

A process in early development that switches off most genes on one of two X chromosomes in each cell. It helps balance gene activity, although some genes remain active and the pattern can differ between cells.

X-Linked

Describing a gene or condition caused by a change on the X chromosome. The pattern differs between people with one X chromosome and those with two; fathers pass their X chromosome to daughters, not sons.

X-Linked Adrenoleukodystrophy

An inherited disorder, usually affecting boys, in which certain fats build up and damage the adrenal glands and nervous system. It can cause behavior or learning changes, movement problems, seizures, or adrenal failure.

X-Linked Agammaglobulinemia

An inherited immune disorder, usually affecting

boys, in which the body cannot make enough antibodies. Repeated bacterial infections often begin in infancy or early childhood and are treated with antibody replacement and infection care.

X-Linked Hypophosphatemia

An inherited disorder that causes the kidneys to lose too much phosphate. Low phosphate can lead to soft or poorly growing bones, bone pain, bowed legs, dental problems, and reduced height.

X-Linked Lymphoproliferative Syndrome

An inherited immune disorder, usually affecting boys, in which the body reacts abnormally to infections. Severe Epstein–Barr virus illness, persistent fever, liver or blood problems, lymphoma, and intestinal inflammation may occur.

X-Linked Ichthyosis

An inherited, usually X-linked recessive skin disorder caused by a variant or deletion affecting the STS gene and deficiency of steroid sulfatase. It usually affects males and causes widespread dry, dark, plate-like scales that often begin in infancy or early childhood.

X-Linked Inheritance

Inheritance of a gene change located on the X chromosome. The effects depend on the gene, the type of change, and whether a person has one or two X chromosomes; fathers do not pass an X chromosome to sons.

X-Linked Myotubular Myopathy

A rare inherited muscle disease, usually affecting

boys, that causes severe weakness and low muscle tone from birth. Babies may have drooping eyelids, feeding difficulty, and dangerous weakness of the breathing muscles.

Alternate Names:

XLMTM; Myotubularin Deficiency

X-Linked Retinoschisis

An inherited eye disorder, usually affecting boys, in which layers of the retina separate. It can cause blurred central or distance vision, crossed eyes, bleeding, or retinal detachment in severe cases.

X-Linked Severe Combined Immunodeficiency

A severe inherited immune disorder, usually affecting boys, in which T cells do not develop normally and antibody protection is poor. Babies are highly vulnerable to serious infections and need urgent specialist treatment.

X-Ray

An imaging test that uses a small amount of radiation to create a picture of structures inside the body. It is especially useful for bones, lungs, teeth, and some other tissues.

X-Ray (Plain Radiography)

An imaging method that uses X-rays to create a two-dimensional projection of internal structures. It is used to assess bones, the chest, abdomen, teeth, and other selected body regions.

Alternate Names:

Plain Radiography

X-Ray (Radiography)

Projectional imaging that uses ionizing radiation to create a two-dimensional picture of the body. Bone and contrast material usually appear light, while air appears dark; the method is fast and useful for bones, lungs, teeth, and selected breast examinations.

Alternate Names:

Radiography

X-Ray - Skeleton

A skeletal X-ray series uses radiographs of selected bones and joints to evaluate fractures, alignment, bone density patterns, arthritis, infection, tumors, and developmental abnormalities.

X-Ray Attenuation

The reduction in strength of an X-ray beam as it passes through the body. Bone, soft tissue, and air reduce the beam by different amounts, creating the differences seen in the image.

X-Ray Shield

Protective material, usually lead or another radiation-attenuating substance, used to reduce exposure to scattered X-rays during imaging; shielding is applied according to the procedure and current radiation-safety guidance.

X-Ray Therapy

Treatment that uses carefully aimed X-ray radiation to damage abnormal cells or relieve symptoms. It is used mainly for cancer and may be given from a machine outside the body or near the target.

X-Rays (Röntgen Rays)

Alternate index label; see *X-Ray*.

Alternate Names:

Röntgen Rays

Xanthelasma

Soft yellow patches or bumps, usually near the inner corners of the eyelids, caused by collections of fat in the skin. They may occur with high cholesterol but can also occur when blood lipids are normal.

Xanthine

A natural breakdown product of substances found in cells and foods. It normally changes into uric acid, but can build up when a rare enzyme disorder blocks this pathway and may then contribute to kidney or urinary stones.

Xanthine Oxidase

An enzyme that helps convert cell and food break-

down products into uric acid. Medicines used for gout can block this enzyme, lowering uric-acid production and helping prevent urate crystal deposits.

Xanthogranulomatous

Describing inflammation in which tissue contains many immune cells filled with fat. This pattern can occur in long-lasting infections and other inflammatory conditions.

Xanthogranulomatous Oophoritis

A rare long-lasting inflammation of an ovary, often linked to infection or endometriosis. It can form a mass that resembles ovarian cancer on scans and may cause pelvic pain, fever, or abnormal bleeding.

Xanthogranulomatous Pyelonephritis

A severe, long-lasting kidney infection that destroys normal kidney tissue and replaces it with inflamed tissue. It is often associated with blockage or stones and may require antibiotics, drainage, or removal of the damaged kidney.

Xanthoma

A yellow-orange papule, nodule, or plaque formed by deposits of fat-filled immune cells in the skin, tissue beneath the skin, or tendons. It may occur with high blood lipids, diabetes, cholestatic liver disease, or an inherited lipid disorder and warrants assessment of the underlying cause.

Xanthomatosis

A disorder in which fatty deposits called xanthomas develop in the skin, tendons, or organs. It may be associated with inherited or acquired lipid disorders and can signal increased cardiovascular or organ-specific risk requiring medical evaluation.

Xanthopsia

A visual disturbance in which objects appear yellow or yellowish. It can occur with certain eye disorders, medication toxicity such as digoxin toxicity, or other neurologic or retinal conditions and warrants evaluation when new or persistent.

Xanthosis

Yellow discoloration of skin or other tissues caused by carotene or another yellow substance. Unlike jaundice, it does not usually make the whites of the eyes yellow; the cause is assessed from the person's diet and health.

Xenobiotic

A chemical that does not naturally belong in the body, such as a medicine, pollutant, pesticide, or industrial compound. The body changes and removes it, but some resulting chemicals can be harmful.

Xenobiotic Metabolism

The body's processing of foreign chemicals, including medicines, pollutants, and toxins. Enzymes, especially in the liver, change them so they can be removed; the changed substances may remain active or become harmful.

Xenograft

Tissue, cells, or a biological material transplanted between different species, such as animal tissue used in a human. Rejection and infection are important risks, although some materials are used temporarily as tissue coverings or substitutes.

Xenograft (Heterograft)

Alternate index label; see *Xenograft*.

Alternate Names:

Heterograft

Xenotransplantation

Transplanting living cells, tissues, or organs between different species, usually from an animal to a human. It may increase the supply of transplant material but carries major risks of immune rejection, infection, and poor organ function.

Xeroderma

Abnormally dry skin that may cause scaling, roughness, itching, or cracking. It can result from environmental exposure, skin disease, age, or medicines.

Xeroderma Pigmentosum

A rare inherited disorder in which cells cannot repair much of the skin damage caused by ultraviolet light. Even brief sun exposure can cause severe sunburn, freckles, eye damage, and skin cancers at a young age. Strict ultraviolet protection and regular skin and eye checks are essential.

Xerophthalmia

Severe dryness and damage of the eye's surface, often caused by vitamin A deficiency. It can cause difficulty seeing in dim light, dry patches, and sores on the clear front of the eye; advanced disease may permanently reduce vision.

Xerosis

Abnormally dry skin that may feel rough, tight, itchy, or cracked. It is common with aging, cold weather, frequent washing, skin disease, or some medicines and may improve with gentle cleansing and regular moisturizer.

Xerostomia

The sensation of dry mouth caused by reduced or altered saliva production. It may result from medicines, dehydration, salivary-gland disease, radiation, or systemic illness and can impair speaking, swallowing, taste, and dental health.

Xerostomia (Dry Mouth)

Alternate index label; see *Xerostomia*.

Alternate Names:

Dry Mouth

Xiphoid Process

The small pointed lower part of the breastbone. Its shape varies between people and it provides attachment for some muscles and ligaments.

XX Male Syndrome

A difference in sex development in which a person with two X chromosomes develops typically male physical features, usually because a sex-development gene has moved onto an X chromosome. Infertility is common, and care is individualized.

XXX Syndrome

Alternate index label; see *Triple X syndrome* (trisomy X), a sex-chromosome variation in which a female has an additional X chromosome.

XXXX Syndrome

XXXX syndrome is a rare sex-chromosome variation in which a female has four X chromosomes; it may cause developmental or learning difficulties, distinctive physical features, and ovarian dysfunction, with severity varying widely.

Xylitol

A sugar alcohol used as a sweetener and in some oral-care products. Large human ingestions may cause gastrointestinal symptoms; it is highly toxic to dogs.

Xylose

A simple sugar found in some plants. A form called D-xylose has been used in tests of how well the small intestine absorbs nutrients and is also used in laboratory studies.

XYY Syndrome

A sex-chromosome variation in which a male has an extra Y chromosome. Many affected individuals have few or no obvious symptoms, though some have tall stature, learning difficulties, or developmental differences.

Y

Y Chromosome

One of the two human sex chromosomes. It usually carries genes involved in testis development and is passed by a biological father to a child who inherits it; chromosome patterns and body development can vary.

Y-Linked Inheritance

Inheritance of a condition caused by a gene on the Y chromosome. A biological father passes a Y-linked gene to sons who inherit his Y chromosome, but not to daughters who inherit his X chromosome.

YAG Capsulotomy

A laser procedure that makes a small opening in the cloudy membrane behind an artificial lens after cataract surgery. It can restore vision when this clouding causes blurring or glare and is usually done without another incision.

YAG Laser Capsulotomy

Alternate index label; see *YAG Capsulotomy*.

YAG Laser Surgery

Treatment using a focused laser to make a precise opening or alter tissue without a conventional surgical incision. It is used mainly for selected eye conditions, and risks depend on the part of the eye treated.

Yawn

An involuntary behavior consisting of a deep inhalation followed by a slower exhalation, often with stretching of the jaw and facial muscles. Yawning is common with fatigue but excessive or unusual yawn-

ing can occur with some medications or neurologic conditions.

Yawning

Alternate index label; see *Yawn*.

Yawning - Excessive

Excessive yawning is unusually frequent or difficult-to-control yawning. It may accompany sleep deprivation, excessive daytime sleepiness, medication effects, vasovagal reactions, or less commonly neurologic or cardiopulmonary disease; persistent unexplained episodes merit clinical evaluation.

Yaws

Yaws is a chronic infection caused by *Treponema pallidum* subsp. *pertenue* and spread mainly through close skin contact. It can cause an initial papilloma or ulcer and later destructive lesions of skin, bone, and cartilage; antibiotics can cure the infection.

Yaws (Frambesia)

Alternate index label; see *Yaws*.

Alternate Names:

Frambesia

Yeast

A type of fungus made of single cells. Some yeasts normally live on or in the body, while others can cause infections of the mouth, skin, vagina, lungs, blood, or other organs.

Yeast Infection

A *Candida* infection that may affect the mouth, skin, vagina, penis, or other tissues. Symptoms depend on

the site and may include itching, soreness, redness, white plaques, discharge, or rash. Diagnosis and treatment depend on the affected site, severity, and whether the finding represents colonization or true infection.

Yeast Infection (Vaginal)

Alternate index label; see *Vulvovaginal Candidiasis*.

Alternate Names:

Candidiasis, Vaginal Vaginal Candidiasis

Yeast Infection In Women And Men

Genital Candida infection may affect the vulva or vagina in women and the glans penis or foreskin in men. Symptoms can include itching, soreness, redness, discharge, or rash. Recurrent, severe, atypical, or treatment-resistant symptoms need confirmation and evaluation for contributing conditions.

Yeast Oral (Thrush)

Alternate index label; see *Oral Thrush*.

Yeast Present

A laboratory report indicating that yeast forms were detected in a specimen. The finding may represent colonization, contamination, or infection and must be interpreted with symptoms, specimen type, and organism identification.

Yellow Fever

Yellow fever is an acute mosquito-borne infection caused by yellow fever virus. Fever, headache, muscle aches, nausea, and vomiting may be followed by jaundice, bleeding, shock, and organ failure; vaccination is the main preventive measure.

Yellow Fever Virus

A flavivirus transmitted mainly by infected mosquitoes that can cause yellow fever, ranging from a mild febrile illness to jaundice, bleeding, shock, and organ failure.

Yellow Nail Syndrome

Alternate index label; see *Yellow-Nail Syndrome*.

Yellow Tongue

Yellow discoloration or coating of the tongue that may result from oral hygiene, smoking, dry mouth, diet, medicines, or an underlying illness.

Yellow-Nail Syndrome

A rare disorder causing yellow, thickened, slowly growing nails together with swelling from lymph fluid, usually in the legs, and lung problems such as repeated infections or fluid around the lungs. The cause is not fully understood.

Yergason Test

A shoulder examination in which a person turns the palm upward and rotates the arm outward against resistance. Pain or a snapping sensation near the front of the shoulder may suggest a problem involving the biceps tendon, but the test is not diagnostic by itself.

Yersinia

A group of bacteria that can cause intestinal illness, swollen lymph nodes in the abdomen, or plague. Different species spread through contaminated food or water, infected animals, or fleas.

Yersinia Enterocolitica

A bacterium that can cause diarrhea, fever, and abdominal pain, sometimes mimicking appendicitis. People usually acquire it from contaminated food, water, or contact with infected animals.

Yersinia Infection

Infection caused by Yersinia bacteria, usually producing diarrhea, abdominal pain, fever, or vomiting. Some cases resemble appendicitis; bloody diarrhea, dehydration, severe illness, or persistent symptoms require medical assessment.

Yersinia Pestis

The bacterium that causes plague, a severe infection usually spread by infected fleas or animals. It may cause painful swollen lymph nodes, bloodstream infection, or lung disease and requires urgent treatment and public-health measures.

Yersinia Pseudotuberculosis

A bacterium usually acquired from contaminated food or water. It can cause fever, diarrhea, and pain from swollen lymph nodes in the abdomen, sometimes resembling appendicitis.

Yersiniosis

Infection caused by Yersinia bacteria, most often *Y. enterocolitica* or *Y. pseudotuberculosis*, producing diarrhea, abdominal pain, fever, or pseudoappendicitis.

Yew Poisoning

Poisoning after eating parts of the yew plant, especially its leaves or seeds. The toxins can cause vomiting, dizziness, seizures, dangerous heart rhythms, collapse, and death and require urgent poison-control or emergency advice.

Yolk Sac

A temporary structure that supports an early embryo before the placenta is fully working. It helps form the first blood cells and part of the early intestine and can be seen on early pregnancy ultrasound.

Yolk Sac Tumor

A malignant ovarian germ-cell tumor that often occurs in children or young adults and produces alpha-fetoprotein; it requires prompt treatment.

Yolk Stalk

A temporary connection between the early yolk sac and the developing intestine. It normally disappears before birth; a remaining portion can form an abnormal intestinal pouch or other problem.

Yolk-Sac Tumor

Alternate index label; see *Yolk Sac Tumor*.

Yttrium-90

A radioactive substance used in selected treatments to deliver radiation to abnormal tissue, such as some liver tumors or inflamed joints. Its use requires specialist planning and radiation-safety measures.

Z

Z-Plasty

A reconstructive operation that rearranges nearby skin in a Z-shaped pattern. It can lengthen a tight scar, change the direction of a scar, and improve movement or appearance.

ZAP-70 Deficiency

A rare inherited immune disorder in which T cells cannot develop or work properly. Affected children may have repeated, severe infections and need specialist immune treatment and genetic evaluation.

Zafirlukast

A leukotriene-receptor antagonist used for long-term control and prevention of asthma symptoms. It is taken orally and is not a rescue treatment for an acute asthma attack; liver injury and drug interactions are important safety considerations.

Alternate Names:

Accolate

Zanamivir

An inhaled neuraminidase inhibitor used to treat or prevent influenza A and B when started appropriately. It may cause bronchospasm and is used cautiously in people with underlying airway disease.

Alternate Names:

Relenza

Zavanelli Maneuver

An emergency procedure for severe shoulder dystocia that does not respond to other measures. The clinician gently returns the baby's head to the birth canal, followed by immediate cesarean delivery.

Alternate Names:

cephalic replacement

Zellweger Syndrome

A severe inherited disorder in which cells cannot make peroxisomes, structures that help process fats and other substances. It begins in infancy and may cause weak muscle tone, feeding problems, seizures, liver disease, and impaired brain development.

Alternate Names:

Zellweger spectrum disorder

Zenker Diverticulum

A pouch that forms at the back of the throat when the inner lining pushes through a weak area of a swallowing muscle. It may cause difficulty swallowing, return of undigested food, bad breath, cough, or food entering the airway.

Alternate Names:

Zenker's diverticulum

Ziconotide

A strong pain medicine delivered continuously into the fluid around the spinal cord for selected severe chronic pain. It can cause dizziness, confusion, hallucinations, and other serious nervous-system or mental-health effects.

Alternate Names:

Prialt

Zidovudine

An HIV medicine that interferes with the virus's ability to copy itself. It may be used in selected treatment plans and to reduce transmission around childbirth; important risks include anemia, low white-cell counts, muscle problems, and other toxicity.

Alternate Names:
azidothymidine; AZT

Ziehl-Neelsen Stain

A laboratory stain used to find bacteria with a waxy coating that resists removal by acid, especially the bacteria that cause tuberculosis. These bacteria appear red against a contrasting background under a microscope.

Alternate Names:
acid-fast stain

Zieve Syndrome

A temporary complication of heavy alcohol use and sudden liver injury. It causes early breakdown of red blood cells, yellowing of the skin or eyes, and increased blood fats. Treatment includes stopping alcohol and managing liver complications.

Alternate Names:
Zieve's syndrome

Zika

An infection caused by Zika virus. It often causes no symptoms or a mild fever, rash, red eyes, joint pain, and muscle pain. Infection during pregnancy can harm the developing baby, and it can rarely trigger Guillain-Barré syndrome.

Alternate Names:
Zika virus disease

Zika Virus

A virus spread mainly by infected *Aedes* mosquitoes and also through sexual contact and, less commonly, blood or pregnancy-related transmission. Infection is often mild or symptom-free but can injure a developing fetus.

Alternate Names:
ZIKV

Zileuton

A 5-lipoxygenase inhibitor used for prevention and chronic control of asthma. It does not relieve acute bronchospasm; liver-enzyme elevations and interactions with other medicines require monitoring.

Alternate Names:

Zyflo

Zinc

An essential mineral needed for many body reactions, normal growth, immunity, reproduction, and wound healing. Too little can cause deficiency; excessive supplements can cause stomach symptoms and copper deficiency.

Alternate Names:
Zn

Zinc Acetate

An oral zinc salt used to treat zinc deficiency and, in specific formulations, to reduce intestinal copper absorption in Wilson disease. Dose and monitoring depend on the indication; nausea and gastrointestinal irritation may occur.

Zinc Deficiency

A state of inadequate available zinc caused by insufficient intake, malabsorption, excessive losses, or increased requirements. Manifestations may include impaired growth, dermatitis, alopecia, diarrhea, altered taste, delayed wound healing, and increased infection susceptibility.

Alternate Names:
zinc depletion

Zinc Ointment (Zinc Oxide)

A topical preparation containing zinc oxide that forms a protective barrier over irritated or moist skin. It is commonly used for diaper dermatitis and minor skin irritation.

Alternate Names:
zinc oxide ointment

Zinc Oxide

An insoluble zinc compound used topically as a skin protectant and barrier, including in preparations for diaper dermatitis and minor irritation. It can reduce contact with moisture and irritants but does not treat every cause of a rash.

Alternate Names:
ZnO

Zinc Sulfate

An oral or parenteral zinc salt used to prevent or treat zinc deficiency when clinically indicated. Gastrointestinal upset is common with oral therapy, and prolonged excessive use can cause copper deficiency.

Zinc Toxicity

Adverse effects caused by excessive zinc ingestion or exposure. Acute toxicity may cause nausea, vomiting, abdominal pain, and diarrhea; chronic excess can impair copper absorption and lead to anemia or neurologic and immune abnormalities.

Alternate Names:

zinc poisoning

Zirconia

A zirconium-oxide ceramic used in dentistry for crowns, bridges, implants, and other restorations. Its strength and tissue compatibility make it useful, although restoration design, surface treatment, and clinical indication affect performance.

Alternate Names:

zirconium dioxide

Zoledronic Acid

A potent intravenous bisphosphonate used for osteoporosis and certain cancer-related conditions, including hypercalcemia of malignancy and skeletal complications of bone metastases. Renal injury, hypocalcemia, acute-phase reactions, and rare osteonecrosis of the jaw are important risks.

Alternate Names:

zoledronate; Reclast; Zometa

Zollinger-Ellison Syndrome

A rare condition in which a hormone-producing tumor makes too much gastrin, causing the stomach to produce excess acid. It can lead to repeated ulcers, severe reflux, abdominal pain, and diarrhea.

Zolpidem

A nonbenzodiazepine sedative-hypnotic used for short-term treatment of insomnia. It can cause next-day impairment, complex sleep behaviors, dependence, and respiratory or central-nervous-system

depression, especially with other sedatives.

Alternate Names:

Ambien

Zonisamide

An antiseizure medicine used mainly for focal seizures. It can cause sleepiness, thinking problems, kidney stones, reduced sweating with overheating, acid imbalance, severe rash, or other serious reactions.

Alternate Names:

Zonegran

Zonule

Fine fibers that hold the eye's lens in place. They transfer tension from the ciliary muscle so the lens changes shape and the eye can focus at different distances.

Alternate Names:

zonular fibers; ciliary zonule

Zoon Balanitis

A chronic benign inflammation of the glans penis, usually seen in uncircumcised men. It commonly appears as a sharply demarcated shiny orange-red or rust-colored patch; diagnosis is clinical, with biopsy used when the diagnosis is uncertain.

Alternate Names:

plasma cell balanitis; balanitis circumscripta plasmacellularis

Zoonosis

An infection that naturally spreads between animals with backbones and people. Examples include rabies, brucellosis, leptospirosis, toxoplasmosis, and some influenza infections; spread may involve bites, food, water, droplets, or direct contact.

Alternate Names:

zoonotic disease

Zoster

A painful, usually unilateral vesicular eruption caused by reactivation of latent varicella-zoster virus in a sensory nerve ganglion. It may be complicated by postherpetic neuralgia, ocular disease, or neuro-

logic involvement.

Alternate Names:

shingles; herpes zoster

Zygoma (Zygomatic Bone)

A paired facial bone that forms the prominence of the cheek and part of the lateral orbital wall and floor. It articulates with the frontal, sphenoid, temporal, and maxillary bones.

Alternate Names:

zygomatic bone; cheekbone

Zygomatic Fracture

A break in the cheekbone or the group of bones joining it to the eye socket, usually caused by facial trauma. It may flatten the cheek, numb the skin below the eye, cause double vision, limit mouth opening, or injure the eye socket.

Alternate Names:

zygomaticomaxillary complex fracture

Zygote

The first cell formed when a sperm joins an egg. It contains genetic material from both parents, divides repeatedly, and develops into an embryo.

Alternate Names:

fertilized egg

Drugs

Generic Medicines and Medication Terms

5-Alpha Reductase Inhibitor

A medicine that lowers production of dihydrotestosterone, a hormone that affects the prostate and hair follicles. It is used mainly for an enlarged prostate and selected types of hair loss.

Abortifacient

A medicine or substance used to end a pregnancy. Some block progesterone, others cause uterine contractions and cervical opening, and certain medicines stop rapidly dividing pregnancy tissue in selected ectopic pregnancies.

Abortion - Medication

Medication abortion uses prescribed medicines, commonly mifepristone followed by misoprostol or misoprostol alone, to end an early intrauterine pregnancy; confirmation of completion and assessment for ectopic pregnancy are important.

Abuse Steroid (Anabolic Steroid Abuse)

Alternate index label for Anabolic Steroid Abuse.

Accident And Emergency Medicine (A&E Medicine)

The medical specialty concerned with the immediate assessment, resuscitation, diagnosis, and initial treatment of acute illness and injury.

Alternate Names:

A&E Medicine

ACE Inhibitor

A medicine that relaxes blood vessels and reduces strain on the heart by lowering production of angiotensin II. It treats high blood pressure, heart failure, and some kidney disease; cough, high potassium, kidney problems, or swelling can occur.

Acitretin

An oral retinoid used mainly for severe psoriasis and selected keratinization disorders. It is highly teratogenic and requires strict pregnancy precautions and monitoring for adverse effects.

Adenovirus Vaccine

A vaccine used primarily to prevent adenovirus types 4 and 7 among selected military personnel. It is an oral, live vaccine and is not part of routine vaccination for the general public. Vaccine use and eligibility depend on current public-health recommendations.

Adverse Drug Event

Harm related to the use of a medication, including harm caused by an adverse drug reaction, medication error, overdose, or inappropriate use.

Adverse Drug Reaction

An unwanted and harmful response to a medicine taken at a usual dose for prevention, testing, or treatment. It may result from the medicine's expected effects, an allergy, an interaction, or an unusual individual response.

Agent, Tocolytic

A medicine that reduces uterine contractions, used

selectively to delay preterm birth long enough for corticosteroids, transfer, or other preparations to take effect.

Agonist-Antagonist

A medicine that activates some receptors while blocking others, or activates a receptor only partly. Its mixed action can produce a desired effect while limiting another effect; examples include some opioid medicines.

AIDS Vaccine

A vaccine designed to prevent HIV infection or reduce its effects; no generally effective licensed vaccine currently exists.

Alendronate

A bisphosphonate that reduces bone resorption and is used to treat or prevent osteoporosis and selected other disorders of excessive bone turnover.

Alternate Names:

Alendronic acid; oral bisphosphonate therapy.

Anabolic Steroid Abuse

Anabolic-androgenic steroid misuse can cause infertility, testicular shrinkage, acne, mood changes, high blood pressure, adverse cholesterol changes, liver injury, and cardiovascular events. Stopping may produce withdrawal symptoms and is safest with medical support.

Alternate Names:

Abuse Steroid (Anabolic Steroid Abuse)

Analgesic

A medicine that relieves pain without necessarily causing loss of consciousness. Analgesics include nonopioid medicines, opioids, and other medicines chosen according to the type and severity of pain.

Analgesic Nephropathy

Chronic tubulointerstitial renal injury associated with prolonged or excessive use of analgesic medicines. It may cause impaired urinary concentration, sterile pyuria, haematuria, papillary necrosis, hypertension, and progressive chronic kidney dis-

ease.

Analgesics

Medicines used to relieve pain. They include nonopioid analgesics, opioid analgesics, and adjuvant medicines used for selected pain conditions.

Alternate Names:

Painkillers

Anesthetic

A medicine or technique that numbs part or all of the body. Depending on the method, a person may remain awake or become unconscious during a procedure; breathing, blood pressure, and other vital functions may need monitoring.

Angiogenesis Inhibitor

A medicine that slows the growth of new blood vessels. It may be used in selected cancers or eye diseases, where abnormal blood-vessel growth helps the disease progress; bleeding, high blood pressure, and other effects may occur.

Alternate Names:

Antiangiogenic agent

Angiotensin Converting-Enzyme Inhibitor

A medicine that lowers the production of angiotensin II, a hormone that narrows blood vessels and promotes salt retention. It can treat high blood pressure, heart failure, and some kidney disease but may cause cough, high potassium, kidney problems, or swelling.

Angiotensin Receptor Blocker

A medicine that blocks angiotensin II at the AT1 receptor, reducing vasoconstriction and aldosterone effects; it is used for hypertension, heart failure, and selected kidney disease.

Anti-Infective

A medicine or other agent used to prevent or treat an infection. The choice depends on whether the cause is a bacterium, virus, fungus, or parasite, as well as the infection site and the person's health.

Anti-Inflammatory

A medicine or treatment that reduces inflammation, which is the body's response to injury or illness. Different types work in different ways and may have important effects on the stomach, kidneys, heart, or immune system.

Antiarrhythmic

A medicine used to prevent or treat an abnormal heart rhythm. Different medicines alter the heart's electrical signals in different ways, and the choice depends on the rhythm, heart condition, kidney function, and other risks.

Antibiotic

A medicine that kills bacteria or stops them from multiplying. Antibiotics do not treat viral infections and should be selected for the suspected bacteria, infection site, allergies, and resistance risk.

Antibiotic Cycling

A strategy in which the preferred antibiotic for a particular clinical use is changed at planned intervals. It is intended to limit selection of resistant organisms, although its benefit depends on local conditions and implementation.

Antibiotic De-Escalation

The process of narrowing antimicrobial spectrum based on microbiological results and clinical response. De-escalation aims to reduce selective pressure for resistance while maintaining therapeutic efficacy.

Antibiotic Mixing

A strategy in which different antibiotics are assigned concurrently to different patients with the same indication. It is intended to reduce uniform selection pressure for resistance in a patient population.

Antibiotic Resistance

The ability of bacteria to survive or grow despite an antibiotic that would normally kill them or stop their growth. It can result from genetic changes and the spread of resistance genes; unnecessary or incorrect antibiotic use can accelerate it.

Alternate Names:

Resistance Antibiotic (Antibiotic Resistance)

Antibiotic Resistance Genes

Genes that help bacteria survive antibiotics. They may change the antibiotic's target, destroy or modify the medicine, or remove it from the cell. Bacteria can inherit these genes or acquire them from other bacteria.

Antibiotic Stewardship

Coordinated efforts to use antibiotics appropriately by selecting the right medicine, dose, route, and duration while reducing unnecessary treatment and resistance.

Antibiotic-Associated Colitis

Alternate Mayo Clinic label; see *Pseudomembranous colitis*.

Antibiotic-Associated Diarrhea

Loose or frequent stools that occur during or soon after antibiotic treatment.

Alternate Names:

Diarrhea, Antibiotic-Associated

Anticholinergic Cognitive Burden Scale

A medication-review tool that estimates the total anticholinergic load of a patient's medicines. It supports risk assessment and deprescribing but does not replace individualized clinical judgment.

Anticoagulant

A medicine that slows the body's blood-clotting process. It helps prevent or treat clots in veins, lungs, heart, or arteries but can cause bruising or serious bleeding.

Anticoagulant Agent

A drug that reduces blood clot formation by interfering with the coagulation cascade; examples include heparin, warfarin, and direct oral anticoagulants.

Anticoagulant Monitoring

Laboratory assessment used to measure the effect

or safety of an anticoagulant. The appropriate test depends on the drug and may include aPTT, anti-Xa activity, INR, or measurements of kidney function and blood counts.

Anticoagulant Rodenticides Poisoning

Poisoning from rat or mouse bait that interferes with blood clotting. Symptoms such as easy bruising, nosebleeds, blood in urine or stool, or weakness may appear later; suspected exposure requires immediate poison-control or emergency advice.

Anticonvulsant

A medicine used to prevent or control seizures. Some are also used for nerve pain, migraine prevention, or mood disorders; choice depends on the condition, other medicines, pregnancy, and side effects.

Alternate Names:

Antiseizure medicine

Anticonvulsant Mood Stabilizers

Antiepileptic drugs used as mood stabilizers in bipolar disorder. Valproate (divalproex) is effective for acute mania and rapid cycling. Carbamazepine is effective for acute mania but has numerous drug interactions via CYP3A4 induction. Lamotrigine is effective for bipolar depression prevention but not acute mania.

Antidepressant

A medicine used to treat depressive disorders and some other conditions involving mood, anxiety, pain, or sleep.

Antidiabetic Agent

A medicine that lowers blood glucose or improves glucose regulation in diabetes, such as insulin, metformin, sulfonylureas, or GLP-1 receptor agonists.

Antidiarrheal

A medicine that reduces the frequency or amount of diarrhea. It may be unsafe when stools contain blood, there is high fever or severe infection, or the bowel is blocked, so the cause should be considered first.

Antidiarrheal Medicine Overdose

Toxic effects caused by excessive exposure to Antidiarrheal medicine. Severity depends on the dose, route, timing, coexisting conditions, and clinical findings; suspected poisoning requires prompt assessment.

Antiemetic

A medicine that prevents or reduces nausea and vomiting. The choice depends on the cause, such as infection, migraine, pregnancy, surgery, or cancer treatment, and some medicines can cause sleepiness or movement problems.

Antiestrogen

A drug that blocks estrogen effects or reduces estrogen production; it may be used in hormone-sensitive breast cancer or to alter reproductive hormone signaling.

Antifungal

A medicine that kills fungi or stops them from growing. It may be applied to the skin or given by mouth or injection; the choice depends on the fungus, the body site, and the severity of infection.

Antifungal Agent

A drug or chemical that kills fungi or inhibits their growth, used to treat fungal infections of the skin, mucosa, or internal organs.

Antifungal Drug Classes

Major classes of antifungal agents include polyenes (amphotericin B), azoles (fluconazole, voriconazole), echinocandins (caspofungin, micafungin), and allylamines (terbinafine). Polyenes bind to ergosterol in fungal cell membranes. Azoles inhibit ergosterol synthesis. Echinocandins inhibit cell wall synthesis.

Antifungal Medication

A medicine used to treat fungal infection; the choice and route depend on the organism and site, and examples include azoles, terbinafine, polyenes, and echinocandins.

Antihistamine

A medicine that blocks histamine, a chemical involved in allergies. It can relieve sneezing, itching, hives, or watery eyes; older types may cause sleepiness, dry mouth, blurred vision, urinary retention, or confusion.

Antihypertensive

A medicine used to lower blood pressure. Classes include ACE inhibitors, angiotensin-receptor blockers, calcium-channel blockers, thiazide-type diuretics, beta-blockers, and other agents. Selection depends on blood pressure, kidney function, cardiovascular disease, pregnancy, and other clinical factors.

Antihypertensive Agent

A medicine or treatment that lowers high blood pressure. The choice depends on age, kidney function, heart disease, pregnancy, other medicines, and how high the pressure is.

Alternate Names:

Blood-pressure medicine

Antimalarial

A drug used to prevent or treat malaria caused by Plasmodium parasites; selection depends on species, disease severity, resistance, and geographic exposure.

Antimicrobial Drug

A medicine used to treat infection by bacteria, viruses, fungi, or parasites; the drug is selected according to the organism, infection site, and patient factors.

Antimicrobial Drug Interactions

Changes in the effect or level of an infection medicine caused by another medicine, food, or supplement. Some combinations reduce treatment effectiveness or increase toxicity, so the full medicine list should be checked.

Antineoplastic

A medicine or treatment that kills cancer cells or slows their growth. It may be used alone or with

surgery, radiation, immunotherapy, or other treatment and can also affect healthy fast-growing cells.

Antiparasitic

A medicine used to prevent or treat infection caused by parasites. The choice depends on the parasite, body site, disease severity, resistance patterns, pregnancy status, and other patient factors.

Antiparkinsonian

A medicine used to improve movement or other symptoms of Parkinson disease. Medicines may replace dopamine, imitate its effects, or alter other brain signals; benefits and adverse effects vary with the drug and the person.

Antiplatelet Agent

A medicine that makes blood platelets less likely to clump together. It lowers the risk of clots in arteries but can increase bruising and serious bleeding.

Alternate Names:

Antiplatelet medicine

Antiprotozoal Drug

A medicine used to prevent or treat disease caused by protozoa, including drugs directed against malaria, intestinal protozoa, or tissue parasites.

Antipruritic

A medicine or skin treatment that relieves itching. It may work by reducing inflammation, blocking allergy signals, numbing the skin, or changing nerve signals; treatment should also address the cause of the itching.

Antipsychotic

A medicine used to reduce hallucinations, delusions, severe agitation, or mania and to treat some mood disorders. Possible effects include sleepiness, movement problems, weight or blood-sugar changes, and rarely a dangerous fever-and-stiffness reaction.

Antipsychotic Agent

A medicine used to reduce hallucinations, fixed false beliefs, severe agitation, or disorganized think-

ing. Some are also used for bipolar disorder or selected behavioral symptoms and can cause sleepiness, movement problems, or metabolic effects.

Alternate Names:

Antipsychotic

Antipsychotic-Induced Parkinsonism

Drug-induced bradykinesia, rigidity, tremor, or postural instability caused by dopamine-receptor blockade, usually from antipsychotic treatment. Management involves reviewing the medication, dose, alternatives, and symptomatic treatment when appropriate.

Antipyretic

A medicine that lowers fever by reducing the brain's temperature-setting response. It may also relieve pain, but it does not treat every cause of fever; the cause and warning symptoms still need attention.

Antispasmodic

A medicine that relaxes involuntary muscle and may reduce cramping in the intestine, bladder, or other organs. Some types can cause dry mouth, blurred vision, constipation, urinary retention, or confusion.

Alternate Names:

Antispasmodics

Antithyroid

A medicine that lowers thyroid-hormone production or release, or reduces the effects of thyroid hormone. Treatment is selected according to the cause of hyperthyroidism, disease severity, pregnancy status, and other clinical factors.

Antithyroid Drug

A medicine that reduces thyroid hormone production or release, used to treat hyperthyroidism; examples include methimazole, propylthiouracil, and radioactive iodine.

Antitussive

A medicine that reduces the urge or reflex to cough. It may help a troublesome dry cough, but suppressing a productive cough can be unhelpful and serious

causes of cough still need assessment.

Antiviral

A medicine that slows or stops viruses from multiplying. It works only against certain viruses and is chosen according to the infection, timing, resistance, and the patient's health.

Antiviral Drug Classes

Groups of antiviral medicines classified by the step of viral growth they block. Some stop copying of viral genetic material, some block viral proteins or entry into cells, and others prevent newly formed viruses from being released.

Anxiolytic

A medicine or other treatment that reduces anxiety. Choice depends on the anxiety disorder, urgency, coexisting conditions, adverse effects, and patient preference; psychological therapies and, when appropriate, antidepressant medicines are commonly used for persistent anxiety.

ARB-Neprilysin Inhibitor

Sacubitril/valsartan combines an ARB with a neprilysin inhibitor, increasing natriuretic peptide levels while blocking the renin-angiotensin system. The PARADIGM-HF trial demonstrated superior reduction in cardiovascular death and heart failure hospitalization compared to enalapril.

Aromatase Inhibitor

A class of medications that inhibit aromatase, the enzyme that converts androgens (androstenedione, testosterone) to estrogens (estrone, estradiol) in peripheral tissues (adipose, breast, muscle, bone). Used primarily in hormone receptor-positive breast cancer in postmenopausal women.

Aspirin

Acetylsalicylic acid, a salicylate that relieves pain and fever, reduces inflammation, and irreversibly inhibits platelet aggregation; it can cause gastrointestinal bleeding and is generally avoided in children with viral illness.

Attenuated Vaccine

A vaccine made with a weakened microorganism that retains the ability to stimulate immunity.

Alternate Names:

Live attenuated vaccine

Bacterial Vaccine

A vaccine made from killed bacteria, weakened bacteria, purified bacterial parts, or bacterial toxins. It trains the immune system to prevent specific infections; protection and dosing depend on the vaccine and age group.

BCG Vaccine

A vaccine made from a weakened relative of the tuberculosis bacterium. It helps protect children from severe tuberculosis, especially meningitis, but protection against lung tuberculosis varies; use depends on local risk and policy.

Behavioral Medicine

An interdisciplinary field integrating behavioral science with medical practice to prevent, diagnose, and treat illness. It addresses psychological factors such as stress, coping, adherence, and health behaviors that influence disease outcomes.

Benzodiazepines

Medicines that strengthen the brain's main calming signal. They can reduce anxiety, stop some seizures, relax muscles, or cause sleepiness, but can also cause dependence, falls, confusion, and dangerously slow breathing, especially with opioids or alcohol.

Beta Agonists

Drugs that activate beta-adrenergic receptors, producing effects such as relaxation of airway smooth muscle or increased cardiac stimulation depending on receptor selectivity.

Alternate Names:

Beta-adrenergic agonists; beta-agonist drugs.

Beta Blocker

A drug that blocks beta-adrenergic receptors, lowering sympathetic effects such as heart rate and

contractility; beta blockers are used for conditions including hypertension, angina, arrhythmias, and heart failure.

Beta Blockers

A class of medicines that block the effects of adrenaline and related hormones at beta receptors. They usually slow the heart rate, reduce the force of heart contraction, and lower blood pressure. Depending on the medicine, they may be used for high blood pressure, angina, abnormal heart rhythms, heart failure, migraine prevention, tremor, or some symptoms of anxiety.

Beta-Adrenergic Blocker

A drug that antagonizes beta-adrenergic receptors, reducing heart rate, myocardial contractility, and renin release. It is used in selected patients with hypertension, angina, arrhythmias, post-myocardial infarction disease, and heart failure; abrupt withdrawal may worsen ischemia.

Beta-Agonist

A medicine that stimulates beta receptors. Beta-2 agonists relax airway muscles to improve breathing, while other types increase heart activity; possible effects include tremor, fast heartbeat, or low potassium.

Beta-Blocker Overdose

Toxic exposure to a beta-adrenergic blocker that may cause slow heart rate, low blood pressure, low blood glucose, bronchospasm, seizures, or altered consciousness. It requires urgent poison-control and medical management.

Beta-Lactamase Inhibitor Combinations

Combinations of beta-lactam antibiotics with beta-lactamase inhibitors that extend activity against beta-lactamase producing organisms. The major combinations include amoxicillin-clavulanate, ampicillin-sulbactam, piperacillin-tazobactam, cefoperazone-sulbactam, and ceftolozane-tazobactam.

C1 Esterase Inhibitor

A blood protein that helps control inflammation, swelling, and clotting reactions. Too little or abnormal activity can cause hereditary angioedema, with repeated attacks of swelling in the skin, bowel, or airway.

Calcium Channel Blocker

A medicine that reduces calcium movement into heart and blood-vessel muscle cells. It may relax arteries, lower blood pressure, reduce chest pain, or slow some abnormal heart rhythms; ankle swelling, constipation, dizziness, or a slow heartbeat may occur.

Calcium Channel Blocker Overdose

Toxic exposure to a calcium-channel blocker that may cause low blood pressure, slow heart rate, conduction abnormalities, high blood glucose, or shock. It requires urgent medical and poison-control management.

Calcium Channel Blockers

Medicines that reduce the movement of calcium into heart and blood-vessel muscle cells. Dihydropyridines, such as amlodipine and nifedipine, mainly relax arteries and are used for high blood pressure and angina. Other calcium channel blockers, such as diltiazem and verapamil, also slow the heart rate and electrical conduction and may be used for certain abnormal heart rhythms.

Camptothecin Analogue

A cancer medicine related to camptothecin that blocks an enzyme cancer cells need to copy DNA. It can damage rapidly dividing cells and commonly causes low blood counts, diarrhea, nausea, or other gastrointestinal effects.

Cancer Vaccine

A vaccine designed either to prevent infections that can cause cancer or to help the immune system attack an existing cancer. Its use depends on the specific vaccine and cancer; it does not replace other cancer treatment when needed.

Cardiotonic Agent

A drug or substance that increases the force or efficiency of cardiac contraction, used selectively in heart failure or shock because benefits must be balanced against arrhythmia and other risks.

Carvedilol Phosphate

The phosphate formulation of carvedilol, a medicine that blocks beta and alpha-1 receptors. It lowers heart rate and blood pressure and is used for heart failure and hypertension; dizziness, slow heartbeat, and worsening fluid retention can occur.

Cebocephaly

A rare birth defect in which the middle part of the face is severely underdeveloped, sometimes with a single nostril or a nose-like structure between closely spaced eyes. It usually occurs with major brain and facial-development abnormalities.

Celecoxib

A selective COX-2 anti-inflammatory medicine used for pain and arthritis. It can cause stomach, kidney, blood-pressure, and heart problems and may increase cardiovascular risk, especially with long-term use or in people with existing risk factors.

Checkpoint Inhibitor

A medicine that blocks an inhibitory immune-checkpoint pathway, helping selected immune cells recognize and attack tumor cells. Examples target PD-1, PD-L1, or CTLA-4.

Cholesterol - Drug Treatment

Medicines used to lower harmful blood cholesterol or triglycerides and reduce cardiovascular risk. Statins are used most often; other options may be added when needed, according to cholesterol levels, overall risk, other illnesses, and treatment tolerance.

Cholinesterase Inhibitor

A medicine that slows the breakdown of acetylcholine, a chemical used for nerve signalling. It can improve nerve communication in selected conditions but may cause nausea, diarrhoea, slow heartbeat, sweating, or muscle cramps.

Cold And Cough Medicine For Infants And Children

Many nonprescription cold and cough medicines are unsafe or ineffective for young children and can cause sedation, agitation, abnormal heart rate, overdose, or breathing problems. Age-appropriate fluids, saline, humidification, and clinician-guided treatment are safer approaches.

Conjugate Vaccine

A vaccine that joins a bacterial sugar to a carrier protein so the immune system makes a stronger, longer-lasting response. This design is especially useful in infants and young children.

Alternate Names:

Protein-conjugate vaccine; conjugated polysaccharide vaccine.

Conscious Sedation

Medicine given to make a person relaxed and drowsy during a procedure while allowing them to respond to voice or touch and usually breathe independently. Breathing, blood pressure, and alertness must be monitored because deeper sedation can occur.

Controlled Substance

A medicine or chemical whose production, supply, possession, or use is restricted by law because it may cause dependence, misuse, overdose, or other serious harm. Rules differ between countries and substances.

COX Inhibitor

A class of medicines that reduce production of chemicals involved in pain, fever, and inflammation. They can irritate the stomach, affect kidney function, raise blood pressure, or increase bleeding and cardiovascular risk.

Cox-1 Inhibitor

A medicine that blocks cyclooxygenase-1, an enzyme involved in pain, stomach protection, kidney function, and platelet clotting. Blocking it may relieve pain but can increase stomach irritation, bleeding, or kidney problems.

Crack (Drug)

A smokable, rapidly acting form of cocaine; it can cause dependence, severe cardiovascular effects, seizures, stroke, psychiatric symptoms, and overdose.

Cutaneous Drug Eruptions

Skin rashes or other skin reactions caused by medicines. They may appear as a widespread red rash, hives, sun-sensitive areas, or a lichen-planus-like eruption. Blisters, skin peeling, mouth sores, fever, or facial swelling require urgent assessment.

Cyclooxygenase Inhibitor

A medicine that reduces production of prostaglandins and may relieve pain and inflammation.

Designer Steroid

A chemically modified anabolic-androgenic steroid created to produce performance-enhancing effects or evade detection; products may be unapproved, contaminated, and medically dangerous.

Diarrhea, Antibiotic-Associated

Alternate index label; see *Antibiotic-associated diarrhea*.

Digitalis

A group of heart medicines from foxglove plants, including digoxin. They can strengthen heart contraction and slow some heart rhythms but have a narrow safety range and may cause dangerous toxicity.

Diphtheria Vaccine

A vaccine containing an inactivated form of diphtheria toxin. It trains the immune system to neutralize the toxin and is usually given in combination vaccines with protection against tetanus and pertussis.

Disease-Modifying Antirheumatic Drug

A medicine that reduces immune-driven inflammation and helps prevent lasting joint or organ damage, rather than only relieving symptoms. Different

types are chosen according to the disease, severity, other conditions, and monitoring needs.

Disulfiram

A medicine used as an adjunct for alcohol-use disorder that inhibits aldehyde dehydrogenase and can cause an unpleasant reaction if alcohol is consumed.

Diuretic

A medicine that helps the kidneys remove extra salt and water in urine. It can treat swelling, high blood pressure, heart failure, or selected kidney and liver conditions but may disturb salts or cause dehydration.

Doctor Of Osteopathic Medicine

A physician who has completed an accredited osteopathic medical degree and residency training and is licensed to diagnose, prevent, and treat disease.

Drug Addiction (Substance Use Disorder)

A chronic disorder involving compulsive substance use despite harmful consequences, with impaired control, cravings, tolerance, or withdrawal.

Alternate Names:

Chemical Dependency Substance Abuse Disorder

Drug Administration Route

The pathway by which a medicine enters the body, such as oral, intravenous, intramuscular, inhaled, topical, or subcutaneous administration.

Drug Allergies

Drug allergies are immune-mediated reactions to a medicine, ranging from rash to anaphylaxis; they must be distinguished from predictable side effects and nonimmune intolerance.

Drug Allergy

An adverse immune-mediated reaction to a medication, representing a hypersensitivity response that is distinct from side effects, toxicities, and idiosyncratic reactions.

Drug Antagonism

An interaction where one drug blocks or decreases the effectiveness of another, such as when an antidote blocks a poison.

Drug Bioavailability

The proportion of a dose that reaches the bloodstream in an active form. It depends on how the medicine is given, how well it is absorbed, and how much is broken down before reaching the blood; intravenous doses enter the bloodstream completely.

Drug Classification Systems

Systems that group medicines according to properties such as their chemical structure, mechanism of action, therapeutic use, or effects on the body.

Drug Clearance

The body's ability to remove a medicine from the bloodstream, mainly through the liver and kidneys. Clearance affects how long a medicine works and how often it should be taken; liver or kidney disease may require dose adjustment.

Drug Dependence

A state of physiological or psychological adaptation to a drug, characterized by a withdrawal syndrome upon discontinuation or dose reduction. Physical dependence: the body has adapted to the presence of the drug, and abrupt cessation produces a predictable withdrawal syndrome specific to the drug class.

Drug Emulsion

A medicine made by dispersing tiny droplets of one liquid throughout another liquid that normally would not mix with it. An added stabilizer keeps the mixture uniform so the medicine can be given safely.

Drug Eruption

A skin eruption caused by a medication, ranging from a mild morbilliform rash to severe reactions such as Stevens–Johnson syndrome or toxic epidermal necrolysis.

Drug Hypersensitivity Reactions

Immune-mediated adverse reactions to medicines. They may be immediate or delayed and can range from a mild rash to severe systemic illness.

Drug Hypersensitivity Syndrome

A serious delayed reaction to a medicine, usually beginning two to eight weeks after it is started. It may cause fever, widespread rash, facial swelling, enlarged lymph nodes, abnormal blood cells, and injury to the liver, kidneys, lungs, or heart.

Drug Implants

Implantable dosage forms or devices that release a medicine over time; selection and monitoring depend on the product and clinical indication.

Drug Induced Liver Disease

Drug-induced liver injury occurs when a medicine, supplement, or toxin damages liver cells or bile flow. It may cause fatigue, nausea, itching, dark urine, jaundice, or no symptoms; identifying and stopping the responsible exposure under medical guidance is central to care.

Drug Interaction

A change in the effect or concentration of one medicine caused by another medicine, food, substance, or disease.

Drug Metabolism

The enzymatic conversion of medicines into metabolites, mainly in the liver but also in the intestine, kidneys, lungs, and other tissues.

Drug Metabolism Pharmacogenomics

The study of how inherited genetic differences change the way a person breaks down medicines. This information can sometimes help clinicians choose a safer or more effective medicine or dose.

Drug Overdose

Harm caused by taking too much medicine or taking it by the wrong route. Effects range from sleepiness, vomiting, and confusion to seizures, organ damage,

or stopped breathing. Suspected overdose requires urgent poison-control or emergency advice.

Drug Overdose Management

Management of poisoning begins with assessment and support of airway, breathing, circulation, and neurologic status. Decontamination, enhanced elimination, and specific antidotes are considered only when appropriate for the substance, timing, and patient.

Drug Packaging

The container, labeling, and protective materials used to preserve a medicine and support correct identification, storage, and use.

Drug Resistance

The ability of microorganisms, cancer cells, or parasites to survive and proliferate despite exposure to drugs that were previously effective.

Drug Therapeutics

The use of medicines to prevent, diagnose, or treat disease while balancing expected benefit and potential harm.

Drug Tolerance

A decreased pharmacological response to a drug after repeated administration, requiring dose escalation to achieve the same effect.

Drug Toxicity

Harmful effects caused by a medicine or its metabolites. Toxicity may result from excessive exposure, accumulation, interactions, or an unpredictable individual reaction.

Drug Use First Aid

Immediate care for suspected drug intoxication, including assessment of breathing and responsiveness, emergency activation, overdose-specific support, and naloxone when opioid toxicity is suspected.

Drug Vehicle

An inactive substance or carrier used to deliver an

active drug ingredient in a formulation.

Drug Withdrawal

A clinically significant syndrome or return of symptoms caused by abrupt reduction or cessation of a drug after physiologic adaptation or dependence has developed. Tapering is required for some medications to reduce withdrawal and rebound effects.

Drug, Prescription

A medicine legally supplied under the order of an authorized prescriber, with its indication, dose, duration, interactions, and risks specified for the patient.

Drug, Sulfa

A sulfonamide drug; some are antibacterial medicines, while others are used as diuretics or for other indications, and sulfonamide reactions vary by drug and patient.

Drug-Drug Interactions

Changes in the effect or amount of one medicine caused by another medicine. The combination may make treatment less effective or increase side effects, so all prescription, nonprescription, and supplement use should be reviewed.

Drug-Eluting Balloon (Vascular)

A vascular balloon catheter that delivers a medicine to the vessel wall during dilation, without leaving a permanent implant.

Alternate Names:

Vascular

Drug-Eluting Stent

A vascular stent that slowly releases a medicine to reduce tissue growth and the risk of restenosis after angioplasty.

Drug-Eluting Stent (Vascular)

A vascular stent coated with medicine that is released gradually to reduce tissue growth and recurrent narrowing.

Alternate Names:

Vascular

Drug-Facilitated Sexual Assault

Sexual contact occurring when a person's capacity to consent or resist is impaired by alcohol, medication, or another drug, whether administered covertly or knowingly consumed. Medical care includes urgent safety assessment, treatment of injuries, toxicology sampling when indicated, prophylaxis, and trauma-informed support.

Drug-Induced Autoimmunity

An immune reaction caused by a medicine in which the body attacks its own tissues. It may resemble lupus, cause joint pain, fever, rash, or organ inflammation, and often improves after the responsible medicine is stopped under medical guidance.

Drug-Induced Diarrhea

Diarrhea caused by a medicine or drug interaction. Common causes include antibiotics, laxatives, metformin, and medicines that alter intestinal motility.

Drug-Induced Immune Hemolytic Anemia

An uncommon immune-mediated destruction of red blood cells triggered by a medication; evaluation includes blood tests and review of exposures, with specialist management.

Drug-Induced Liver Injury

Liver damage caused by a medicine, herbal product, or dietary supplement. It may produce abnormal liver tests, hepatitis, cholestasis, or liver failure; evaluation requires considering the exposure, timing, competing causes, and severity.

Drug-Induced Low Blood Sugar

Low blood glucose caused by a medicine, most often insulin or an insulin secretagogue. Symptoms may include sweating, tremor, confusion, seizure, or loss of consciousness.

Drug-Induced Lupus Erythematosus

A lupus-like autoimmune syndrome caused by cer-

tain medicines. Symptoms commonly include joint pain, muscle pain, and fever and usually improve after the causative medicine is stopped.

Drug-Induced Pulmonary Disease

Lung injury caused by a medicine or treatment. It may produce cough, breathlessness, fever, or abnormal lung imaging; the medicine, timing, and other possible causes must be reviewed promptly because some cases can progress to respiratory failure.

Drug-Induced Thrombocytopenia

A low platelet count caused by a medicine through immune destruction, reduced production, or other mechanisms, increasing bleeding risk.

Drug-Induced Tremor

Tremor caused or worsened by a medicine, stimulant, or toxin. Assessment considers timing, dose, other causes, and whether the medicine can be changed.

DTaP Vaccine

A vaccine against diphtheria, tetanus, and pertussis (whooping cough), given mainly to infants and young children in a multi-dose series. It reduces severe illness, complications, and spread; schedules vary by country.

Eflornithine

A medicine that slows cell growth by blocking an enzyme needed to make certain cell components. A skin cream can reduce unwanted facial hair; an intravenous form has been used for selected African trypanosome infections.

Enzyme Inhibitor

A substance that slows or blocks an enzyme, a protein that helps chemical reactions occur in the body. Medicines use this action to change processes such as blood pressure, inflammation, infection, hormone production, or cancer-cell growth.

Estrogen Inhibitor

A medicine that reduces estrogen production or blocks estrogen's effects. It may treat selected

hormone-sensitive cancers or other conditions; side effects can include hot flashes, bone loss, joint symptoms, or blood clots.

Etidronate

A bisphosphonate medicine that slows the breakdown and rebuilding of bone. It is used selectively for some disorders of abnormal bone remodeling; treatment depends on the condition and can affect the stomach, kidneys, or minerals.

Evidence-Based Medicine

The use of reliable research together with clinical expertise and the patient's values and circumstances to make healthcare decisions. It supports, but does not replace, discussion between patient and clinician.

Expectorant

A medicine intended to loosen or thin mucus so it is easier to cough up. Benefit varies with the cause of cough and the product; persistent breathlessness, fever, chest pain, or blood needs medical assessment.

Extensively Drug-Resistant TB

Tuberculosis caused by bacteria resistant to rifampicin and usually isoniazid, at least one fluoroquinolone, and at least one of the key drugs bedaquiline or linezolid. Diagnosis requires drug-susceptibility testing and specialist treatment.

Family Medicine

A medical specialty providing comprehensive continuing care for people of all ages, including prevention, acute illness, chronic disease, and coordination of referrals.

Fentanyl

A potent synthetic opioid analgesic used for severe pain and anesthesia. It can cause respiratory depression, sedation, constipation, nausea, tolerance, dependence, and fatal overdose, especially when combined with alcohol or other sedatives.

Fertility Agent

A medicine or biologic intervention intended to improve the chance of conception by inducing ovulation, supporting sperm production, or treating a reproductive mechanism.

Fidaxomicin

A narrow-spectrum oral macrocyclic antibiotic used to treat *Clostridioides difficile* infection. It has minimal systemic absorption and reduces disruption of normal intestinal flora compared with many alternatives, but recurrence can still occur.

Filgrastim

A recombinant granulocyte colony-stimulating factor that increases production and release of neutrophils from bone marrow. It is used to reduce or treat selected forms of chemotherapy-related neutropenia; bone pain and rare splenic complications can occur.

Finasteride

A medicine that lowers the conversion of testosterone to dihydrotestosterone. It can shrink an enlarged prostate and help some types of hair loss but may reduce libido, affect sexual function, or alter prostate-test results.

Fixed Drug Eruption

A medicine-related skin reaction that returns in the same place whenever the person takes the responsible medicine. It may appear as a sharply outlined red or dark patch, sometimes with a blister or sore, and can leave lasting discoloration.

Fluticasone

A corticosteroid available in inhaled, nasal, topical, and other formulations to reduce inflammation. Adverse effects depend on route and may include local irritation, oral candidiasis, skin thinning, adrenal suppression, or growth effects with prolonged exposure.

Food-Drug Interaction

A change in how a medicine works or is absorbed because of food, drink, nutrients, or supplements. Ex-

amples include grapefruit affecting some medicines, vitamin K changing warfarin's effect, and calcium reducing absorption of some antibiotics.

Forensic Medicine

Application of medical knowledge to legal questions, including injury interpretation, cause of death, toxicology, identification, sexual assault evaluation, and documentation.

Forensic Medicine (Legal Medicine)

Branch of medicine that applies medical, biological, and scientific knowledge to legal questions and the administration of justice.

Alternate Names:

Legal Medicine

Foscarnet

An intravenous antiviral agent used for selected cytomegalovirus or herpesvirus infections, especially when resistance or intolerance limits other treatment. Important toxicities include kidney injury and disturbances of calcium, magnesium, potassium, or phosphate.

Furosemide

A diuretic that makes the kidneys remove more salt and water in urine. It treats swelling and some blood-pressure or heart conditions but may cause dehydration, abnormal body salts, kidney problems, or hearing damage.

Ganglionic Blocker

A medicine that interrupts nerve signals at switching points controlling automatic body functions. It can affect blood pressure, heart rate, digestion, sweating, vision, and bladder function, so these medicines are rarely used clinically.

Generic Drug

A medicine equivalent to a brand-name medicine in active ingredient, strength, dosage form, and intended use, usually sold under a nonproprietary name.

Alternate Names:

Generic medicine

Generic Medicine

A medicine with the same active ingredient, strength, form, route, and intended effect as an approved reference medicine. It may look different or have different inactive ingredients but must meet regulatory quality and performance requirements.

Generic Name, Drug

The official nonproprietary name of a medicine's active ingredient, used consistently across manufacturers and countries. It identifies the medicine itself rather than a company's brand name and helps prevent confusion when products have different trade names.

Genomic Medicine

Use of a person's genetic or genomic information to guide disease diagnosis, risk assessment, prevention, or treatment.

Geriatric Medicine

The medical specialty focused on the health, function, diseases, medications, and goals of older adults, often using comprehensive and coordinated care.

Growth Inhibitor

A medicine or biological substance that slows or stops cell growth. In cancer treatment, it may block cell division or a growth signal, but it can also affect healthy cells and cause side effects.

Haemophilus Vaccine

A vaccine that protects against serious disease caused by *Haemophilus influenzae* type b, including meningitis, pneumonia, and bloodstream infection. It is given mainly in infancy according to the recommended immunization schedule.

Hepatic Drug Metabolism

The liver changes medicines into forms that the body can use or remove. This may stop a medicine's effect, activate a medicine that works after conversion, or produce a harmful product; age, illness, genetics,

and other medicines can alter the process.

Hepatitis B Vaccine

A recombinant vaccine that prevents hepatitis B infection, which can cause chronic liver disease, cirrhosis, and liver cancer. It is given in a series beginning at birth in many schedules; infants exposed at birth may also need hepatitis B immune globulin.

Hepatitis B Vaccine (Birth Dose)

The first hepatitis B vaccine dose, given soon after birth, helps prevent infection passed from a parent to the newborn. If the birth parent has hepatitis B, the infant also needs hepatitis B immune globulin promptly; local schedules determine later doses.

Alternate Names:

Birth Dose

HER2 Inhibitor

A targeted cancer treatment that blocks signaling through human epidermal growth factor receptor 2 in cancers with HER2 overexpression or amplification.

High Blood Pressure - Medicine-Related

Hypertension caused or worsened by a medicine or substance, such as NSAIDs, steroids, decongestants, stimulants, oral contraceptives, or immunosuppressants; review and substitution may improve control.

Histamine-2 Receptor Antagonist

A medicine that reduces stomach-acid production by blocking histamine signals in the stomach. It may treat reflux, indigestion, or ulcers; headache, diarrhea, confusion, and medicine interactions can occur.

Hormone Inhibitor

A medicine or biologic that blocks hormone synthesis, release, receptor binding, or downstream signaling, used in selected endocrine disorders and hormone-sensitive cancers.

HPV Vaccine

A vaccine that prevents infection with human pa-

pillomavirus types that cause several cancers and genital warts. It is routinely offered in early adolescence, can start from age 9, and may require two or three doses depending on age and immune status; it does not treat existing HPV infection.

Hypoglycemic Agent

A medicine that lowers blood glucose, including insulin, insulin secretagogues, insulin sensitizers, incretin-based drugs, and sodium–glucose cotransporter inhibitors; choice depends on diabetes type and patient risks.

Hypolipidemic Agent

A medicine that lowers fats in the blood, such as LDL cholesterol or triglycerides. It helps reduce cardiovascular risk when combined with appropriate diet, activity, and treatment of other risk factors.

Immunosuppressant

A drug that reduces immune system activity, used to prevent organ transplant rejection and to treat autoimmune and inflammatory diseases.

Immunosuppressant Drug

A medicine that reduces immune-system activity, often to prevent transplant rejection or treat autoimmune disease.

Immunosuppressive Drug

A drug that suppresses immune responses, used for organ transplantation, graft-versus-host disease, and autoimmune/inflammatory diseases.

Inactivated Polio Vaccine

An injected vaccine made from killed polioviruses. It trains the immune system to prevent poliomyelitis and is used in routine childhood immunization programs; the schedule and use of other polio vaccines vary by country.

Influenza Vaccine

A seasonal vaccine that reduces the risk of influenza and its complications. It is updated as needed and is offered each year to most people from early infancy;

some young children need two doses in their first vaccinated season, according to local recommendations.

Inotrope

A drug that changes myocardial contractility; positive inotropes increase the force of contraction. Dobutamine and milrinone may be used short term under specialist monitoring for cardiogenic shock or selected cases of acute decompensated heart failure with low output. Dopamine, epinephrine, and norepinephrine are primarily vasopressors or emergency agents with additional inotropic effects, while digoxin is a separate cardiac glycoside used in selected chronic heart-failure or rate-control settings. These medicines can cause arrhythmias, ischemia, or other serious effects and are not routine long-term treatment for chronic heart failure.

Intensive Care Medicine

Specialty managing critically ill patients. Components: monitoring, ventilatory support, hemodynamic support, infection control, nutrition, sedation, pain management. Common conditions: sepsis, ARDS, traumatic brain injury, post-cardiac arrest, multiorgan failure.

Internal Medicine

The medical specialty focused on prevention, diagnosis, and nonsurgical treatment of diseases in adults, including complex multisystem illness.

Japanese Encephalitis Vaccine

A vaccine that protects against Japanese encephalitis, a mosquito-borne viral infection of the central nervous system. Vaccine type, schedule, and eligibility depend on age, destination or exposure risk, and local recommendations.

Laxative

A medicine that helps empty the bowel and is used for constipation or bowel preparation. Some add fiber, some draw water into stool, and others stimulate bowel movement; the best choice depends on the cause, other medicines, and the person's health.

Legal Medicine

The application of medical knowledge to legal questions, including forensic examination, injury assessment, death investigation, and issues of capacity or consent.

Liquid Medication Administration

Giving a medicine in liquid form by mouth, feeding tube, injection, or another prescribed route. The dose must be measured accurately with the supplied device because liquid strengths differ; household spoons can cause dosing errors.

Local Anesthetic

A medicine that temporarily numbs a specific area without usually causing loss of consciousness. It blocks pain signals in nearby nerves and is used for procedures, dental work, wound repair, and some forms of regional pain relief.

Luteinizing Hormone-Releasing Hormone Agonist

A medicine that first stimulates and then, with continued use, suppresses signals from the pituitary gland that control the ovaries or testes. It is used for selected cancers, endometriosis, fibroids, and puberty disorders.

Alternate Names:

GnRH agonist; LHRH agonist

Macrolide Antibiotic

An antibiotic of the macrolide class that binds the bacterial 50S ribosomal subunit and usually inhibits protein synthesis; activity and resistance vary by organism and drug.

Malaria Vaccine

A vaccine intended to reduce malaria caused by *Plasmodium* parasites, especially *P. falciparum*; the RTS,S/AS01 and R21/Matrix-M vaccines are used in recommended childhood immunization programs in some endemic settings, alongside other preventive measures.

MAO Inhibitor

A medicine that slows breakdown of certain brain chemicals and is used for selected depression or Parkinson disease. It can interact dangerously with other medicines and some foods, so it requires careful prescribing and instructions.

Measles Vaccine

Measles vaccine is a live attenuated vaccine that induces active immunity against measles virus. It is usually given as part of the measles–mumps–rubella (MMR) or measles–mumps–rubella–varicella (MMRV) vaccine.

Measles-Rubella Vaccine

A combined live attenuated vaccine containing measles and rubella antigens without the mumps component, widely used in countries where mumps is not a significant public health burden, including India's Universal Immunization Schedule.

Medication

A substance or biological product used to prevent, diagnose, treat, or control a disease or symptom. Medicines may be prescribed, bought without a prescription, applied to the body, inhaled, swallowed, or given by injection.

Medication Adherence

The extent to which a patient's medication-taking behavior corresponds with the agreed treatment plan. Adherence is influenced by understanding, adverse effects, cost, access, regimen complexity, beliefs, and cognitive or social factors.

Medication Adverse-Effect Profile

The clinically relevant pattern of predictable pharmacologic effects and harmful reactions associated with a medication. It includes common dose-related effects, serious rare events, organ-specific toxicity, interactions, and monitoring requirements.

Medication Cascade

A prescribing sequence in which an adverse drug effect is misinterpreted as a new medical condition and another drug is prescribed to treat it. Recogn-

nizing cascades is an important goal of medication reconciliation and deprescribing.

Medication Deprescribing

A planned, supervised process of reducing the dose or stopping a medicine when its current or future harms outweigh its benefits or when treatment goals change. Tapering may be required to prevent withdrawal or rebound disease.

Medication Error

A preventable event that may cause or lead to inappropriate medication use or patient harm while the medication is in the control of a healthcare professional, patient, or consumer. Errors can occur during prescribing, transcribing, dispensing, administration, or monitoring.

Medication Management

The systematic process of optimizing pharmacotherapy to achieve therapeutic goals while minimizing adverse effects, encompassing prescribing, dispensing, administration, monitoring, and deprescribing.

Medication Overuse Headaches

Frequent headaches caused or worsened by regular overuse of headache medicines.

Alternate Names:

Rebound Headache

Medication Reconciliation

A structured process of obtaining and comparing the most accurate medication list with current prescriptions at transitions of care. It identifies omissions, duplications, incorrect doses, interactions, and unintended changes.

Medication Review

Systematic examination of all medications for appropriateness. Components: indication, efficacy, safety, adherence, interactions. Tools: Beers Criteria, STOPP/START. Goals: deprescribing, optimizing therapy, reducing adverse effects.

Medication Safety

Practices that reduce medication errors and prevent avoidable harm during prescribing, dispensing, administration, and use.

Medication Side Effects

Unintended harmful responses to medications occurring at standard doses, ranging from mild (nausea, rash, dry mouth) to severe (anaphylaxis, Stevens-Johnson syndrome, QT prolongation, hepatotoxicity).

Meningococcal Vaccine

Conjugate vaccine (MenACWY) and serogroup B vaccine (MenB) given at 11-12 years with booster at 16 years. Protects against *Neisseria meningitidis*, causing meningitis and septicemia. MenACWY booster at 16 years covers the high-risk period for serogroup C and Y disease.

Mineralocorticoid Receptor Antagonist

A medicine that blocks aldosterone, a hormone that makes the body retain salt and water. It is used for selected heart failure, high blood pressure, and hormone disorders but can raise blood potassium and worsen kidney problems.

MMR Vaccine

A live attenuated vaccine against measles, mumps, and rubella. It is given according to the immunization schedule and is generally avoided during pregnancy and in people with certain severe immune deficiencies.

Molecular Medicine

Molecular medicine applies molecular and cellular biology to understand, diagnose, prevent, and treat disease. It includes genomics, precision oncology, molecular biomarkers, targeted therapy, and other mechanism-based approaches.

Monoamine Oxidase Inhibitor

A medicine that blocks monoamine oxidase, an enzyme that breaks down certain brain chemicals. It can treat selected depression or neurologic disorders but has important interactions with other medicines

and some foods.

MRNA Vaccine

A vaccine that gives cells temporary instructions to make a harmless piece of a germ. The immune system learns to recognize that piece and respond later; the messenger RNA does not enter the cell nucleus or change DNA.

Multi-Drug Resistance

Multidrug resistance is resistance of a microorganism, cancer, or other disease process to multiple drugs that would otherwise be active. Mechanisms include target changes, drug inactivation, reduced uptake, efflux, and altered repair or survival pathways.

Multidrug-Resistant Extensively Drug-Resistant TB

Multidrug-resistant tuberculosis is resistant to key first-line drugs, while extensively drug-resistant TB has additional resistance that greatly limits options. Diagnosis requires molecular or culture testing, and treatment uses prolonged individualized combinations with public-health oversight.

Neuropathy Secondary To Drugs

Drug-induced neuropathy is peripheral nerve damage caused by a medicine or toxin, often producing numbness, burning pain, weakness, or altered reflexes; management may require dose reduction, withdrawal, and treatment of symptoms.

Nonsteroidal Anti-Inflammatory Drug

A medicine that inhibits cyclooxygenase enzymes and reduces prostaglandin production, producing analgesic, anti-inflammatory, and fever-reducing effects. NSAIDs can cause gastrointestinal, kidney, cardiovascular, or other adverse effects.

NSAIDs

Nonsteroidal anti-inflammatory drugs are a class of drugs that inhibit cyclooxygenase enzymes, COX-1 and COX-2, reducing the synthesis of prostaglandins and thromboxanes from arachidonic acid. They produce analgesic, anti-inflammatory, antipyretic,

and antiplatelet effects.

Occupational Medicine

The medical specialty concerned with the effects of work on health, prevention of work-related illness and injury, and safe return to work.

Opioid Analgesics

Strong pain medicines that act on opioid receptors in the brain, spinal cord, and other tissues. They can relieve severe pain but may cause sleepiness, constipation, dependence, and dangerously slow breathing or overdose.

Opioid Antagonist

A medicine that blocks opioid receptors and can reverse opioid effects such as respiratory depression. Naloxone is a commonly used example.

Oral Hypoglycemic

A medicine taken by mouth to lower blood glucose, used mainly in type 2 diabetes. Different medicines improve insulin sensitivity, increase insulin release, slow glucose absorption, or increase glucose loss in urine; choice depends on the patient's risks and kidney function.

Oral Medicine

Specialty diagnosing oral mucosal diseases, dental causes of facial pain, oral manifestations of systemic disease.

Oral Polio Vaccine

A live attenuated poliovirus vaccine administered by mouth. Its formulation and use depend on the public-health program and circulating poliovirus strains; it has played an important role in polio control.

Orphan Drug

A pharmaceutical agent developed specifically to treat a rare medical condition (affecting fewer than 200,000 people in the United States, as defined by the Orphan Drug Act of 1983).

Over-The-Counter (OTC) Drug

A medicine sold without a prescription for uses and doses described on its label. “Over the counter” does not mean risk-free; incorrect use, interactions, or excessive doses can still cause serious harm.

Over-The-Counter Drug

A medication that can be purchased without a prescription, deemed safe and effective for self-medication when used according to label instructions. OTC drugs have established safety profiles, low toxicity, and clear dosing guidelines suitable for consumer use.

P2Y12 Inhibitor

An antiplatelet drug that blocks the platelet P2Y12 ADP receptor, reducing activation and aggregation. Clopidogrel, prasugrel, and ticagrelor are used in selected acute coronary syndrome and percutaneous coronary intervention settings, with bleeding and drug-specific contraindications considered.

Palifermin

A laboratory-made form of a natural growth factor that helps mouth and throat lining cells repair themselves. It is used in selected people receiving intensive treatment before blood-forming stem-cell transplantation to reduce severe mouth sores.

Palonosetron

A long-acting anti-nausea medicine that blocks serotonin signals involved in vomiting. It is used to prevent nausea and vomiting from chemotherapy or surgery; headache, constipation, and rare heart-rhythm changes can occur.

Parasympatholytic

A medicine that blocks some signals of the parasympathetic nervous system. It may widen the airways, relax the bladder, reduce motion sickness, or speed a slow heartbeat, but can cause dry mouth, blurred vision, constipation, urinary retention, or confusion.

Parasympathomimetic

A drug that mimics or enhances parasympathetic (cholinergic) activity. Direct agonists: muscarinic

(pilocarpine—glaucoma, dry mouth) and nicotinic agonists.

Paroxetine

Paroxetine is a selective serotonin-reuptake inhibitor used for depression, anxiety disorders, obsessive-compulsive disorder, PTSD, and some other conditions; sexual dysfunction, withdrawal symptoms, serotonin syndrome, and pregnancy-related risks require consideration.

Pediatric Nuclear Medicine

Special considerations for children: lower doses, sedation often needed, distraction techniques. Dose reduction: weight-based activity, optimized protocols.

Pefloxacin

A fluoroquinolone antibiotic that blocks bacterial enzymes needed to copy and repair DNA. Its use is limited by resistance and potentially serious effects involving tendons, nerves, the heart, and the nervous system.

PEG

An abbreviation that may refer to polyethylene glycol, a laxative that draws water into stool, or to a polyethylene-glycol chemical group used to modify medicines. The exact meaning depends on the clinical context.

Pegaspargase

A long-acting enzyme medicine used in combination treatment for some acute lymphoblastic leukemias. It lowers asparagine needed by leukemia cells; allergic reactions, pancreatitis, liver injury, clotting problems, and bleeding are important risks.

Pegfilgrastim

A long-acting growth factor that stimulates the bone marrow to make neutrophils. It helps prevent infection caused by chemotherapy-related low white-cell counts; bone pain and rare spleen rupture or serious inflammation can occur.

Penicillamine

A medicine that binds certain metals and can also reduce immune activity. It is used selectively for copper overload and some autoimmune or connective-tissue disorders; serious blood, kidney, skin, or allergic reactions can occur.

Pentavalent Vaccine

A WHO-prequalified five-in-one combination vaccine containing Diphtheria toxoid, Tetanus toxoid, whole-cell Pertussis antigen, Hepatitis B (HBsAg), and Haemophilus influenzae type b (Hib) conjugate, administered as a single intramuscular injection.

Pentobarbital

A barbiturate medicine that depresses brain activity and can cause sedation or control seizures. It has a high risk of slowed breathing, coma, dependence, and fatal overdose, especially with alcohol or other sedatives.

Perioperative Antibiotic Prophylaxis

Administration of an appropriate antimicrobial within a defined interval before incision to reduce infection risk for selected procedures. Choice, timing, redosing, and discontinuation depend on procedure, organisms, patient factors, and local guidance.

Pertussis Vaccine

A vaccine containing selected antigens from Bordetella pertussis, given in combination vaccines to prevent whooping cough and reduce severe disease and transmission.

Pharmaceutical

Relating to medicines, including their development, preparation, manufacture, testing, storage, or use.

Pharmacodynamic Interaction

A drug interaction in which one drug changes the effect of another at its site of action without necessarily changing its concentration. Effects may be additive, synergistic, or antagonistic, such as combined respiratory depression or bleeding risk.

Pharmacokinetic Interaction

A drug interaction that changes absorption, distribution, metabolism, or excretion of another drug, thereby altering its concentration over time. Enzyme inhibition, enzyme induction, transporter effects, and altered gastric pH are common mechanisms.

Phosphodiesterase Inhibitor

A medicine that blocks enzymes which normally break down chemical signals inside cells. Different types relax airways or blood vessels, improve heart pumping, or treat erectile dysfunction; effects and risks depend on the specific type.

Pneumococcal Conjugate Vaccine

A vaccine that joins parts of the pneumococcus bacterium to a carrier protein so the immune system can build lasting protection. It helps prevent pneumonia, meningitis, bloodstream infection, and other disease; product and schedule depend on age and risk.

Pneumococcal Vaccine

A vaccine that protects against disease caused by Streptococcus pneumoniae, including invasive infection, pneumonia, meningitis, and otitis media; product and schedule depend on age and risk.

Poliovirus Vaccine

A vaccine that trains the immune system to prevent poliovirus infection and paralysis. Inactivated injectable and live oral forms are used in different programs; the schedule and product depend on age, health, and local public-health guidance.

Prazosin

An alpha-1 blocker that relaxes blood vessels and may relax the bladder outlet. It is used for high blood pressure and, in selected patients, trauma-related nightmares or urinary symptoms; dizziness and fainting are most likely after starting or increasing the dose.

Pre-Medication

Medicine given before a procedure, treatment, or

exposure to prevent a predictable problem such as pain, nausea, allergy, infection, or anxiety.

Prescription Drug

A medication whose dispensing or use is subject to prescription requirements under the applicable law. It requires professional oversight because of its risks, complexity, or need for monitoring; regulatory approval and prescribing rules vary by country and product.

Procalcitonin-Guided Antibiotic Therapy

Use of blood procalcitonin measurements, together with examination and other tests, to help decide whether to start or stop antibiotics in selected infections. The result cannot by itself confirm bacterial infection or safely replace clinical judgment.

Prostaglandin Antagonist

A drug that blocks a prostaglandin receptor or pathway, reducing selected prostaglandin-mediated effects such as inflammation, pain, uterine contraction, or gastric secretion.

Protease Inhibitor

An antiviral medicine that blocks a virus enzyme needed to cut newly made proteins into working parts. In HIV treatment, it prevents formation of mature infectious virus and is used with other medicines.

Proton Pump Inhibitor

A medicine that strongly reduces stomach-acid production by blocking the acid pump in stomach cells. It treats reflux and ulcers; long-term or unnecessary use can cause diarrhea, infections, low magnesium, or vitamin deficiencies.

Psychotropic Drug

A medicine that affects brain function and may change mood, thinking, behavior, sleep, or perception. The term includes antidepressants, antipsychotics, mood stabilizers, stimulants, and some medicines for anxiety or sleep.

Psychotropic Medication

A medicine that changes brain activity and may affect mood, thoughts, behaviour, sleep, or perception. Examples include antidepressants, antipsychotics, mood stabilizers, and some medicines for anxiety or attention disorders.

Rabies Vaccine

A vaccine containing inactivated rabies virus used for preexposure protection or postexposure prophylaxis after a possible rabies exposure, together with wound care and immune globulin when indicated.

Rehabilitation Medicine

The medical specialty that helps people restore or adapt movement, communication, thinking, work, and daily activities after illness or injury. It is also called physiatry.

Alternate Names:

physiatry.

Renal Drug Excretion

Removal of medicines from the body by the kidneys into urine. Kidney disease can slow this process, allowing some medicines to build up and requiring dose changes or closer monitoring.

Renin Inhibitor

A blood-pressure medicine that blocks renin, an enzyme involved in narrowing blood vessels and retaining salt. It lowers blood pressure but can raise potassium, affect kidney function, and harm a developing fetus.

Resistance Antibiotic (Antibiotic Resistance)

Alternate index label for Antibiotic Resistance.

Rock (Drug)

A street term commonly used for crack cocaine, a smokeable form of cocaine. It produces intense, short-lived stimulation but can cause dependence, dangerous heart rhythms, heart attack, stroke, seizures, overheating, or severe agitation.

Rotavirus Vaccine

An oral live attenuated vaccine that protects infants and young children against severe rotavirus gastroenteritis. The product, schedule, and age limits depend on the immunization program; mild fever or diarrhea may occur.

Scabicide

A medicine applied to the skin or taken by mouth to kill scabies mites. Treatment usually includes all close household or sexual contacts and washing or isolating recently used clothing and bedding to prevent reinfection.

Selective Serotonin Reuptake Inhibitor

A medicine that increases serotonin signalling between nerve cells by slowing serotonin reuptake. It treats depression and several anxiety-related disorders; nausea, sexual difficulties, withdrawal symptoms, and rarely serotonin toxicity can occur.

SGLT2 Inhibitor

A medicine that makes the kidneys pass more glucose and salt into the urine. It lowers blood sugar and can protect the heart and kidneys in selected people, but may cause dehydration, genital infections, or rarely ketoacidosis.

Skeletal Muscle Relaxant

A medicine that reduces excessive contraction of skeletal muscles. It may relieve short-term muscle spasm or longer-term spasticity, but sleepiness, weakness, dizziness, and impaired breathing can occur with some drugs.

Sleep Drug

A medicine used to help a person fall asleep, stay asleep, or maintain a regular sleep pattern. Benefits and risks vary widely; drowsiness, falls, impaired thinking, dependence, and interactions with alcohol or sedatives are important concerns.

Steroid

A group of chemicals with a characteristic structure. In medicine, steroids include corticosteroids that reduce inflammation and natural or replacement

hormones such as cortisol, estrogen, progesterone, and testosterone.

Steroid Abuse

Steroid misuse is non-prescribed or excessive use of corticosteroids or anabolic-androgenic steroids, which can cause endocrine suppression, psychiatric effects, infection, metabolic disease, liver injury, cardiovascular harm, or tissue damage.

Steroid Hormones

Lipid-soluble hormones derived from cholesterol, including cortisol, aldosterone, estrogen, progesterone, and testosterone.

Steroid Injections - Tendon, Bursa, Joint

Injection of a corticosteroid, often with local anesthetic, into or around a joint, bursa, or tendon sheath to reduce inflammation and pain; injections directly into tendons are generally avoided because of rupture risk.

Tamsulosin

Tamsulosin is a selective alpha-1A blocker that relaxes prostate and bladder-neck smooth muscle to improve urinary symptoms of benign prostatic hyperplasia; dizziness, postural hypotension, and ejaculatory dysfunction may occur.

TCAs

Tricyclic antidepressants are medicines that increase the effects of certain brain chemicals. They can treat depression, nerve pain, and some other conditions but may cause sleepiness, dry mouth, constipation, low blood pressure, abnormal heart rhythms, or overdose toxicity.

Tdap Vaccine

Tetanus, Diphtheria, and acellular Pertussis booster given at 11-12 years and during each pregnancy (27-36 weeks gestation). Replaces one dose of Td. Important for pertussis protection, particularly for protecting newborns through maternal antibody transfer. Also given to adolescents and adults to maintain tetanus and diphtheria immunity.

Terazosin

An alpha-blocking medicine that relaxes the prostate and blood vessels. It can improve urine flow in prostate enlargement and lower blood pressure, but dizziness or fainting may occur, especially after the first dose or dose increases.

Therapeutic Drug Levels

The range of medicine concentrations in blood associated with benefit while limiting toxicity for a particular drug. A measured level must be interpreted with the dose, timing, symptoms, kidney or liver function, and the person's response.

Therapeutic Drug Monitoring

Measuring selected medicine levels in blood to adjust the dose for the best balance of benefit and safety. It is most useful when small changes in level can cause treatment failure or serious toxicity.

Thrombolytic

A medicine that helps dissolve a blood clot by changing plasminogen into plasmin, which breaks down fibrin. It may be used urgently for selected strokes, heart attacks, or other life-threatening clots when benefits outweigh bleeding risk.

Thrombolytic Drugs For Heart Attack

Medicines that dissolve a clot blocking a coronary artery during selected heart attacks. They can restore blood flow when urgent artery-opening procedures are unavailable or delayed, but may cause dangerous bleeding and are not suitable for everyone.

Transfusion Medicine

The medical specialty that selects, prepares, tests, and gives blood or blood components such as red cells, platelets, plasma, and cryoprecipitate. It includes matching, preventing transfusion reactions, and monitoring patients.

Travel Medicine

Medical care concerned with prevention and treatment of health problems related to travel.

Tricyclic Antidepressant Overdose

Poisoning with a tricyclic antidepressant can cause drowsiness, confusion, dry mouth, seizures, low blood pressure, and dangerous heart rhythms. It is an emergency requiring immediate poison-control or hospital treatment.

Tumor Necrosis Factor Inhibitor

A biological medicine that blocks tumor-necrosis factor, an immune signal involved in inflammation. It treats selected arthritis, psoriasis, and bowel diseases but can increase serious infection risk, so screening and monitoring are important.

Tyrosine Kinase Inhibitor

A targeted medicine that blocks enzymes carrying growth signals inside cells. It can slow cancers driven by abnormal signaling, but side effects vary and may include diarrhea, skin changes, liver injury, high blood pressure, or heart problems.

Uricosuric Agent

A medicine that increases renal excretion of uric acid, lowering serum urate in selected patients with gout. Adequate kidney function and hydration are important, and urinary uric-acid stones may be a concern.

Urine Drug Screen

A preliminary urine test that looks for selected medicines or recreational drugs and their breakdown products. Results can be falsely positive or negative and may need confirmation with a more specific laboratory test.

Uterotonic

A medicine that makes the uterus contract. It is used under medical supervision to start or strengthen labor, prevent or treat heavy bleeding after birth, or complete selected pregnancy-related procedures; excessive contraction can harm the mother or fetus.

Vaccine Adjuvant

A substance added to some vaccines to enhance and prolong the immune response to the antigen. Ex-

amples include aluminum salts and newer adjuvant systems.

Vaccine Therapy

Treatment that uses a vaccine to stimulate an immune response against a disease. It may prevent infection or, in selected cancer treatments, help the immune system recognize abnormal cells; its benefits depend on the specific vaccine and condition.

Varicella Vaccine

A live attenuated vaccine that prevents or reduces the severity of chickenpox. The number and timing of doses depend on age, vaccination history, immune status, pregnancy, and local recommendations. It is generally avoided during pregnancy and in people with certain immune deficiencies.

Xanthine Oxidase Inhibitor

A medicine that lowers uric-acid production by blocking an enzyme involved in breaking down substances from cells and food. It is used mainly to prevent gout attacks and, in selected cases, complications from rapid cancer-cell breakdown.

Brand Medicines

Medical Prefix

Prefix	Meaning	Example of use in medical terms
Ab-	A medical prefix meaning away from, off, or separating from,	abduction (movement away from the midline) and ablation (removal or destruction of tissue)
Acou-	A medical combining form referring to hearing or sound,	acoustic nerve, audiology, and acoumeter
Acro-	Acro- is a medical word element meaning extremity, tip, or highest part,	acromegaly and acrocyanosis
Acu-	A combining form meaning sharp, pointed, or related to acuity; in medical terms it may refer to sharp sensation or vision,	acuity, acute, or acupuncture, depending on the word formed
Ad-	A medical prefix meaning toward, to, or near,	adduction (movement toward the midline) and adrenal (near the kidney)
Aden- Adeno-	A combining form meaning gland or glandular tissue, A combining form referring to a gland or glandular tissue,	adenitis and adenoma adenovirus, adenoid, and adenocarcinoma
Aer-, Aero-	A combining form meaning air or gas,	aerobic, aerosol, and aerophagia
Alb- Amyl-	A prefix derived from the Latin albus, meaning white, A combining form referring to starch or a starch-like substance,	albino and albinism amylase and amyloid
Amylo-	A combining form referring to starch-like material or amyloid protein deposits	amyloidosis and amyloidoma
An-	A prefix meaning without, lacking, or not,	anoxia, anesthesia, and anencephaly
Aniso-	A combining form meaning unequal or unequal in size, number, or degree	anisocytosis and anisometropia
Antero-	A combining form meaning anterior or toward the front	anteroposterior and anterolateral
Anti-	A prefix meaning against, opposed to, or preventing a specified process or condition	antibiotic and anticoagulant
Arthro- Bi-	A combining form meaning joint A prefix meaning two, twice, or involving two sides or components	arthritis and arthroscopy bilateral and bicuspid

Prefix	Meaning	Example of use in medical terms
Bio-	A combining form meaning life or living organisms	biochemistry and biopsy
Brachy-	A combining form meaning short or abnormally short	brachycephaly and brachydactyly
Cephal-	A combining form meaning head	cephalic and cephalalgia
Cholangi-	A combining form meaning bile duct or bile vessel	cholangitis and cholangiography
Circum-	A combining form meaning around or surrounding	circumcision and circumoral
Colpo-	A combining form meaning vagina	colposcopy and colpotomy
Cranio-	A combining form meaning skull or cranium	craniotomy and craniosynostosis
Cyto-	A combining form meaning cell	cytology and cytotoxic
Dacryo-	A combining form meaning tear or tear duct	dacryocystitis and dacryostenosis
Dactyl-, -Dactyl	A combining form or suffix meaning finger or toe	polydactyly and brachydactyly
Dextro-	A combining form meaning right, toward the right, or sometimes clockwise	dextrocardia and dextroposition
Di-	A combining form meaning two, twice, or double	diplopia and diplegia
Dia-	A combining form with meanings including through, across, apart, or complete, depending on the word	dialysis and diagnosis
Disto-	A combining form meaning distal, distant, or away from a point of attachment or origin	distal and distobuccal
Dys-	A prefix meaning abnormal, difficult, painful, or impaired,	dysphagia (difficulty swallowing) and dysuria (painful urination)
Entero-	A combining form meaning intestine or bowel,	enteropathy and enteroscopy
Epi-	A prefix meaning on, upon, over, or above,	epidermis and epigastric
Extra-	A clinical condition or finding involving extra-. Its defining features, causes, evaluation, and management depend on the clinical context	extraocular and extracellular
Gyne-	A combining form meaning woman or female,	gynecology
Haem- / Haema- / Haemato- / Haemo-	Prefixes derived from the Greek word haima (blood), used in medical terminology to denote blood-related conditions and procedures	hematology, hematoma, and hemoglobin
(Prefixes Relating To Blood)		
Hemi-	A prefix meaning half or one side,	hemiplegia and hemithorax
Hepat-	A combining form meaning liver,	hepatic and hepatocellular
Hepato-	A combining form meaning liver,	hepatobiliary and hepatomegaly
Hetero-	A prefix meaning different, other, or unequal,	heterozygous and heterogeneous
Histo-	A combining form meaning tissue,	histology and histopathology
Homo-	A prefix meaning same or alike,	homozygous and homologous
Hyper-	A prefix meaning excessive, above normal, or increased,	hyperglycemia and hypertension
Hypo-	A prefix meaning below, deficient, reduced, or less than normal,	hypoglycemia and hypothermia

Prefix	Meaning	Example of use in medical terms
Iatr-	A combining form meaning medical treatment or physician,	iatrogenic and iatrogeny
Infra-	A medical term referring to infra-. Its precise meaning and clinical importance depend on the context in which it is used	infrapatellar and infraorbital
Intra-	Intra- is an anatomical structure, tissue relationship, physiologic process, or body function; its location and mechanism explain its clinical significance	intraocular and intravenous
Iso-	A prefix meaning equal, same, or uniform,	isotonic and isometric
Juxta-	A prefix meaning next to, beside, or adjoining,	juxtaglomerular
Kerato-	A combining form relating to the cornea or to horny or keratinized tissue,	keratitis and keratosis
Leuk-	A combining form meaning white, especially in terms relating to white blood cells,	leukocyte
Leuko-	A combining form meaning white,	leukoderma or leukopenia
Levo-	A prefix meaning left or turning toward the left, often used in chemistry or to describe spatial orientation	levocardia and levodopa
Lieno-	A combining form meaning relating to the spleen	lienorenal and lienectomy
Lipo-	A combining form meaning relating to fat or lipids	lipoma and lipoprotein
Litho-	A combining form meaning stone,	lithotripsy and nephrolithiasis
Macro- (Prefix)	A prefix meaning large, abnormally large, or on a large scale,	macrocytic, meaning involving abnormally large cells
Medical Prefix	A prefix used in medical terminology to modify a word's meaning	hyper- (above or excessive), hypo- (below or deficient), macro- (large), and micro- (small)
Mega-	A combining form meaning large, great, or abnormally enlarged	megacolon and megakaryocyte
Mega- (Prefix)	A prefix derived from Greek meaning large, great, or abnormally enlarged,	megacolon, megacardia, and megaloccephaly
Melan- (Prefix)	A combining form meaning dark or black, derived from the Greek melas; it refers especially to melanin or dark pigmentation,	melanoma and melanocyte
Mes-	A combining form meaning middle	mesencephalon and mesoderm
Meso-	A combining form meaning middle	mesothelioma and mesocolon
Mi-	A combining form meaning small or relating to muscle, depending on the word in which it appears	micturition and miosis
Micro-	A combining form meaning small or millionth, depending on context	microscopy and microcephaly
Myc-	A combining form meaning fungus or pertaining to fungi, derived from the Greek mykes	mycosis and mycology
Myco-	The term Myco- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	mycosis and mycology
Myel-	A combining form relating to bone marrow or the spinal cord, depending on the word	myelitis and myelopathy

Prefix	Meaning	Example of use in medical terms
Myo- (Prefix)	A medical term referring to myo- (prefix). Its clinical meaning depends on the context in which it is used	myopathy and myocarditis
Naso-	The term Naso- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	nasogastric and nasopharyngeal
Neo- (Prefix)	Neo- is a prefix meaning new or recently formed	neoplasm and neonatal
Nephro-	The term Nephro- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	nephritis and nephrectomy
Oligo-	A combining form meaning few, scanty, or deficient	oliguria and oligospermia
Oligo- (Prefix)	Oligo- is a prefix meaning few, scanty, or small in number or amount	oliguria and oligospermia
Onco-	A combining form relating to tumors or cancer	oncology and oncogenesis
Onycho-	A combining form relating to the nail	onychomycosis and onycholysis
Onycho- (Prefix)	Onycho- is a prefix meaning relating to a nail or claw	onychomycosis and onycholysis
Ortho- (Prefix)	Ortho- is a prefix meaning straight, correct, upright, or related to orthopedic care depending on the term	orthopedics and orthostatic
Osteo- (Prefix)	Osteo- is a prefix meaning relating to bone	osteomyelitis and osteoporosis
Ot-	The term Ot- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	otitis and otalgia
Oto-	The term Oto- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	otology and otoscope
Oxy	Oxy- is a prefix relating to oxygen, sharpness, or acidity depending on the medical or chemical term	oxygen and oxyhemoglobin
Pachy- (Prefix)	A word-forming prefix meaning thick or thickness,	pachyonychia, pachyderma, and pachycephaly
Para	Para- is a prefix meaning beside, beyond, abnormal, or related to childbirth depending on the word; its exact meaning must be read in context	parathyroid and paranasal
Para-	A combining form meaning beside, beyond, abnormal, or closely related, depending on the word	paracentesis and paraesthesia
Para- (Prefix)	Para- is a medical prefix whose meaning varies by use, including beside, beyond, abnormal, or the number of births reaching a specified gestational age	parathyroid and parity in obstetric history
Patho-	The term Patho- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	pathology and pathogenesis
Peri-	The term Peri- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	pericardium and periosteum
Phago-	The term Phago- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	phagocytosis and phagocyte
Phlebo- (Prefix)	Phlebo- is a medical prefix meaning relating to a vein,	phlebitis, phlebectomy, or phlebography

Prefix	Meaning	Example of use in medical terms
Pneumo-	The term Pneumo- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	pneumothorax and pneumonia
Poly-	A combining form meaning many or much	polyuria and polyneuropathy
Post	Post- is a prefix meaning after,	post-operative, postpartum, or postprandial
Post-	A combining form meaning after or behind	postnatal and postprandial
Pre-	A combining form meaning before or in front of	prenatal and preoperative
Prefix	A prefix is a word element placed before a root to modify meaning; medical prefixes commonly indicate location, number, time, direction, or abnormality	hyper-, hypo-, peri-, and brady-
Prefixes, Medical	Word beginnings that modify medical terms by indicating location, number, time, speed, size, direction, deficiency, excess, or other meaning,	hyper-, hypo-, peri-, and brady-
Pro-	A combining form meaning before, forward, or in favor of	prolactin and prognosis
Pseudo-	A combining form meaning false or resembling but not truly	pseudocyst and pseudarthrosis
Retro-	A combining form meaning backward, behind, or posterior	retroperitoneal and retrosternal
Salpingo-	A combining form relating to a fallopian tube	salpingitis and salpingectomy
Sarco-	A combining form meaning flesh or soft tissue	sarcoma and sarcoidosis
Schizo-	A combining form relating to splitting or schizophrenia	schizophrenia and schizoid
Scler-	The term Scler- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	sclerosis and scleritis
Sclero-	The term Sclero- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	scleroderma and sclerotherapy
Sub-	A combining form meaning under, below, or less than normal	subcutaneous and subdural
Super-	A combining form meaning above, excessive, or superior	superinfection and supernumerary
Supra-	A combining form meaning above or beyond	suprarenal and suprapubic
Syn-	A combining form meaning together, with, or joined	syndactyly and synovitis
Teno-	A combining form relating to a tendon	tenosynovitis and tenodesis
Thermo-	A combining form relating to heat or temperature	thermoregulation and thermotherapy
Toc- (Prefix)	Toc- is a prefix used in some medical terms and often relates to childbirth or labor,	tocolysis; the complete word determines its meaning
Toco-	The term Toco- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	tocography and tocolysis
Toko- (Prefix)	Toko- is a prefix relating to childbirth or labor, derived from Greek terms for birth	tocolysis and tokodynamometry
Tom-	The term Tom- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	tomography and tomodensitometry

Prefix	Meaning	Example of use in medical terms
Tomo-	The term Tomo- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	tomography and tomographic
Trans- (Prefix)	The term Trans- (prefix) is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	transdermal and transcatheter
Trich- (Prefix)	The term Trich- (prefix) is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	trichiasis and trichology
Tricho-	A combining form relating to hair	trichoscopy and trichotillomania
Tricho- (Prefix)	The term Tricho- (prefix) is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	trichorrhexis and trichomycosis
Tympano-	The term Tympano- is a medical word element or prefix whose precise meaning depends on the word or clinical context in which it is used	tympanoplasty and tympanometry
Xanth- (Prefix)	Xanth- is a medical word element meaning yellow or yellowish,	xanthoma, xanthelasma, and xanthopsia
Xen- (Prefix)	A medical word element meaning foreign, strange, or originating outside the usual organism or system,	xenograft (a tissue transplanted between different species)
Xeno- (Prefix)	Xeno- is a medical word element meaning foreign, strange, or from another species,	xenograft and xenotransplantation
Xero-	Xero- is a medical word element meaning dry or dryness,	xeroderma, xerophthalmia, and xerostomia

Complete reference tables

These categorized tables reproduce the prefix reference structure from the Pressbooks resource cited below. Examples are retained as learning aids; the meaning of a word part can vary by term.

Prefix	Meaning	Example of use in medical terms
Common prefixes		
A-, An-	Without; lacking	Anemia
Andr/o-	Male	Androgen
Anti-	Against	Anticholinergic drugs
Auto-	Self	Autocrine
Bio-	Life	Biology
Chem/o-	Chemistry	Chemotherapy
Contra-	Against	Contraception
Cyt/o-	Cell	Cytokine
Dis-	Separation; taking apart	Dissection
Dys-	Difficult; abnormal	Dyspnea
Eu-	Good; well	Eupnea
Fibr/o-	Fiber	Fibrosis
Gluco-, Glyco-	Glucose; sugar	Glycogen

Prefix	Meaning	Example of use in medical terms
Gyn/o-, Gynec-	Female	Gynecology
Hydr/o-	Water	Hydrocephalus
Idio-	Self; one's own	Idiopathic
Lyso-, Lys-	Break down; destruction; dissolving	Lysosome
Mal-	Bad; abnormal	Malignant
Myc/o-	Fungus	Mycetoma
Necr/o-	Death	Necrosis
Neo-	New	Neonate
Oxy-	Sharp; acute; oxygen	Oxytocin
Pan-, Pant/o-	All or everywhere	Pancytopenia
Pharmaco-	Drug; medicine	Pharmacist
Re-	Again; backward	Rejuvenation
Somat/o-, Somatico-	Body; bodily	Somatic cell
Body-part prefixes		
Acous/o-	Hearing	Acoustic meatus
Aden/o-	Gland	Adenoid
Adip/o-	Fat	Adipocyte
Adren/o-	Gland	Adrenal cortex
Angi/o-	Blood vessel	Angioplasty
Arteri/o-	Artery	Arteriole
Arthr/o-	Joint	Arthroplasty
Bucc/o-	Cheek	Buccal cavity
Bronch/i-	Bronchus	Bronchioles
Burs/o-	Bursa	Bursa
Carcin/o-	Cancer	Basal cell carcinoma
Cardi/o-	Heart	Cardiology
Cephal/o-	Head	Cephalic flexure
Chol-	Bile	Cholesterol
Chondri-	Cartilage	Chondrosarcoma
Coron-	Heart	Coronary arteries
Cost-	Rib	Costal cartilage
Crani/o-	Brain	Cranium
Cutane-	Skin	Cutaneous
Cyst/o-, Cysti-	Bladder or sac	Cystoscopy
Derm-, Dermat/o-	Skin	Dermatologist
Duoden/o-	Duodenum	Duodenitis
Gastr-	Stomach	Gastrectomy
Gloss-	Tongue	Glossectomy
Hem-, Hema-, Hemat-, Hemo-, Hemat/o-	Blood	Hematopoiesis
Hepat/o-, Hepatico-	Liver	Hepatic portal system
Hist/o-, Histio-	Tissue	Histology
Hyster/o-	Uterus	Hysterectomy
Ileo-	Ileum	Ileostomy
Ischi/o-	Ischium	Ischial tuberosity
Kerat/o-	Cornea (eye or skin)	Keratin
Lacrim/o-	Tear	Lacrimal fluid
Lact/o-, Lacti-	Milk	Lactose
Laryng/o-	Larynx	Laryngitis
Lingu/o-	Tongue	Lingual tonsil

Prefix	Meaning	Example of use in medical terms
Lip/o-	Fat	Lipolysis
Lymph/o-	Lymph	Lymphocyte
Mamm-, Mast/o-	Breast	Mammary glands
Mening/o-	Meninges	Meningitis
Muscul/o-	Muscle	Musculoskeletal
My/o-	Muscle	Myocardium
Myel/o-	Spinal cord or bone marrow	Myelin
Nephr/o-	Kidney	Nephron
Neur/i-, Neur/o-	Nerve	Neuron
Oculo-	Eye	Oculomotor nerve
Onco-	Tumor; bulk; volume	Oncogene
Onych/o-	Fingernail; toenail	Onychodystrophy
Oo-	Egg; ovary	Oocyte
Oophor/o-	Ovary	Oophorectomy
Op-, Opt-	Vision	Optic nerve
Ophthalm/o-	Eye	Ophthalmic artery
Orchid/o-, Orchio-	Testis	Orchidectomy
Orth/o-	Straight; normal; correct	Orthostatic
Osseo-	Bony	Osseous tissue
Ossi-	Bone	Ossicles
Ost-, Oste/o-	Bone	Osteoporosis
Ot/o-	Ear	Otolaryngologist
Ovar/i-, Ovario-, Ovi-, Ovo-	Ovary	Ovarian follicle
Phalang-	Phalanx	Phalanges
Pharyng/o-	Pharynx; throat	Pharyngeal tonsil
Phleb/o-	Vein	Phlebotomist
Phren/i-, Phreno-, Phrenico-	Diaphragm	Phrenic nerve
Pleur-, Pleur/a-, Pleur/o-	Rib; pleura	Pleural cavity
Pneum/a-, Pneumat/o-	Air; lung	Pneumonia
Proct/o-	Anus; rectum	Proctoscopy
Prostat-	Prostate	Prostatectomy
Pseudo-	False	Pseudostratified
Psych/o-, Psyche-	Mind	Psychiatrist
Radio-	Radiation; radius	Radioisotopes
Ren/o-	Kidney	Renal cortex
Retin-	Retina	Retinitis pigmentosa
Rhin/o-	Nose	Rhinoscope
Salping/o-	Tube	Salpingo-oophorectomy
Sarco-	Muscular; flesh-like	Sarcomere
Schiz/o-	Split; cleft	Schizophrenia
Sclera-, Sclero-	Hardness	Sclerosis
Sigmoid/o-	Sigmoid colon	Sigmoidoscopy
Sperma-, Sperm-, Spermato-	Sperm	Spermatocyte
Splen/o-	Spleen	Splenomegaly
Sten/o-	Narrowed; blocked	Stenosis
Stern-	Sternum	Sternoclavicular joint

Prefix	Meaning	Example of use in medical terms
Stom/a-, Stomat/o-	Mouth	Stomatitis
Thorac/o-, Thoracico-	Chest	Thoracic cavity
Thromb/o-	Blood clot	Thrombolytic
Thyr/o-	Thyroid gland	Thyroiditis
Trache/o-	Trachea	Trachealis
Tympan/o-	Eardrum	Tympanic membrane
Ur/o-	Urine	Urologist
Vagin-	Vagina	Vaginal
Varic/o-	Duct; blood vessel	Varicose veins
Vasculo-	Blood vessel	Vasculitis
Ven/o-	Vein	Venae cavae
Vertbr-	Vertebra; spine	Vertebral column
Color prefixes		
Chlor/o-	Green	Chlorophyll
Chrom-, Chromato-	Color	Chromosome
Cyano-	Blue	Cyanosis
Erythr/o-	Red	Erythrocyte
Leuk/o-	White	Leukocyte
Melan/o-	Black	Melanin
Physical property and shape prefixes		
Cry/o-	Cold	Cryotherapy
Elect-	Electrical activity	Electrocardiogram
Kin/o-, Kine-, Kinesi/o-	Movement	Kinetic energy
Kyphy/o-	Humped	Kyphosis
Rhabd/o-	Rod-shaped; striated	Rhabdomyosarcoma
Phot/o-	Light	Photoreceptor
Reticul/o-	Net	Reticulocytes
Scoli/o-	Twisted	Scoliosis
Therm/o-	Heat	Thermotherapy
Direction and position prefixes		
Ab-, Abs-	Away from	Abductor
Ad-	Towards	Adductor
Ante-	Before; forward	Antenatal
Circum-	Around	Circumcision
Cycl-	Circle; cycle	Cyclic neutropenia
De-	Away from; ending	Dehydration
Dia-	Across; through	Diagnosis
Ect/o-, Exo-	Outer; outside	Exocrine gland
End/o-, Ent-, Enter/o-	Within; inner	Endocrine gland
Epi-	Upon; outside of	Epidermis
Ex-, Extra-	Beyond	Expiration
Infra-	Beneath; below	Infratemporal fossa
Inter-	Between	Interstitial fluid
Intra-	Within	Intracellular fluid
Meso-	Middle	Mesoderm
Meta-	Beyond; change	Metabolism
Para-	Alongside; abnormal	Parathyroid glands

Prefix	Meaning	Example of use in medical terms
Path/o-	Disease	Pathologist
Peri-	Around	Pericardium
Post-	Behind; after	Postpartum
Pre-	Before; in front	Precancerous
Retro-	Backward; behind	Retroperitoneum
Sub-	Under	Subcutaneous layer
Super-	Above	Superior
Supra-	Above; upon	Supraglottis
Sy-, Syl-, Sym-, Syn-, Sys-	Together	Syndrome
Trans-	Across; through	Transdermal
Quantity prefixes		
Bi-	Two	Biceps
Brady-	Slow	Bradycardia
Diplo-	Double	Diploid
Hemi-	Half	Hemihypertrophy
Hetero-	Other; different	Heterogeneous
Homo-	Same	Homozygous genotype
Hyper-	Above; beyond; excessive	Hypertension
Hypo-	Under; deficient	Hypotension
Iso-	Equal; like	Isointense
Macro-	Large; long; big	Macrophage
Mic-, Micro-	Small	Microglia
Mon-, Mono-	One	Monocyte
Olig/o-	Few; little	Oliguria
Poly-	Many; excessive	Polyuria
Quadri-	Four	Quadriceps
Semi-	Half	Semilunar valves
Tachy-	Fast	Tachycardia
Tetra-	Four	Tetralogy of Fallot
Tri-	Three	Triceps
Uni-	One	Unicellular

Medical Suffixes

Suffix	Meaning	Example of use in medical terms
-Stomy	A suffix meaning surgical creation of an opening,	colostomy or gastrostomy
-Tomy	A suffix meaning incision or cutting into	laparotomy or tracheotomy
Cidal	A suffix meaning killing or destroying,	bactericidal or fungicidal
Cide	A suffix meaning an agent or process that kills,	pesticide, bactericide, or homicide
Cyte	A suffix meaning cell,	erythrocyte or leukocyte
Cytosis	A suffix or term indicating a condition involving cells or, in some contexts, an increase in the number of a particular type of cell	leukocytosis or erythrocytosis
Dactyl-, -Dactyl	A combining form or suffix meaning finger or toe	polydactyly or brachydactyly
Ectomy	A suffix meaning surgical removal or excision,	appendectomy or mastectomy
Emia	A suffix meaning a condition of the blood or a substance present in the blood,	anemia or bacteremia
Iatrics	A suffix or word element referring to medical treatment or a medical specialty,	geriatrics and pediatrics
Iatry	A suffix meaning medical treatment or a medical specialty,	psychiatry and podiatry
Itis	A suffix meaning inflammation,	dermatitis, bronchitis, and arthritis
Kalemia	A suffix or term referring to the concentration of potassium in the blood,	hypokalemia or hyperkalemia
MAB	Abbreviation for monoclonal antibody; the suffix -mab in a generic drug name indicates a monoclonal antibody,	adalimumab or rituximab
Oma	-oma is a suffix commonly indicating a tumor or mass, although some words ending in -oma describe non-neoplastic conditions	lipoma or carcinoma
Pathy	A suffix meaning disease, disorder, or abnormality,	neuropathy, cardiomyopathy, and nephropathy
Plegia	-plegia is a suffix meaning paralysis,	paraplegia, hemiplegia, or quadriplegia

Complete reference tables

Suffix	Meaning	Example of use in medical terms
Common suffixes		
-ac	Pertaining to	Cardiac
-blast, -blasto, -blastic	Bud; germ	Myeloblast
-cyte, -cytic	Cell	Thrombocyte
-dynia	Pain; swelling	Thoracodynia
-eal, -ial	Pertaining to	Esophageal
-ectasis	Expansion; dilation	Atelectasis
-emia	Blood condition	Anemia
-ia	Condition	Hemophilia
-iasis	Condition; formation of	Psoriasis
-ism	Condition	Hypothyroidism
-ites, -itis	Inflammation	Arthritis
-ity	Pertaining to	Immunity
-ium	Structure or tissue	Epithelium
-lysis, -lytic	Breakdown; destruction; dissolving	Osteolytic
-malacia	Softening	Osteomalacia
-megaly	Enlargement	Acromegaly
-oid	Resembling	Arachnoid trabeculae
-oma	Tumor	Angiosarcoma
-osis	Condition; usually abnormal	Endometriosis
-ous	Pertaining to	Aqueous
-pathy	Disease	Lymphadenopathy
-penia	Deficiency; lack of	Thrombocytopenia
-phagia, -phagy	Eating; swallowing	Dysphagia
-phasia	Speech	Aphasia
-plasia, -plastic	Growth	Hyperplasia
-plegia	Paralysis	Hemiplegia
-pnea	Breathing	Sleep apnea
-poiesis	Production	Hemopoiesis
-ptosis	Falling; drooping	Apoptosis
-rrhage, -rrhagic	Bleeding	Hemorrhage
-rrhea	Flow or discharge	Diarrhea
-sclerosis	Hardening	Arteriosclerosis
-sis	Condition	Agranulocytosis
-stasis	Level; unchanging	Homeostasis
-trophy	Growth	Hypertrophy
-uria	In the urine	Anuria
Procedure suffixes		
-centesis	Surgical puncture to remove fluid	Thoracentesis
-desis	Surgical binding	Pleurodesis
-ectomy	Cut out; removal	Mastectomy
-gram	Record; picture	Electrocardiogram
-graph	Instrument used to create a record or picture	Electrocardiograph
-graphy	To record or take a picture	Echocardiography
-meter	Device used for measuring	Sphygmomanometer
-opsy	Visual examination	Biopsy

Suffix	Meaning	Example of use in medical terms
-ostomy	Opening	Colostomy
-otomy	Incision	Laparotomy
-pexy	Surgical fixation	Oophoropexy
-plasty	Surgical reconstruction	Vertebroplasty
-scope	For examining	Endoscope
-scopy	Examine	Endoscopy

Alternate Names

Primary term	Alternate names
ACE	angiotensin-converting enzyme
ACE Inhibitor	angiotensin-converting enzyme inhibitor
Acquired Immunodeficiency Syndrome	AIDS
Adenosine Triphosphate	ATP
AIDS	acquired immunodeficiency syndrome
Alcoholism	alcohol dependence: A chronic
Alimentary Canal	gastrointestinal
AMD	age-related macular degeneration
Angiotensin-Converting Enzyme	ACE
Angiotensin-Converting Enzyme Inhibitor	ACE
Amyloid Precursor Protein	APP
ARB	angiotensin II receptor blockers
ATP	adenosine triphosphate
AV Node	atrioventricular node
Balloon Dilation	Balloon dilatation
BMD	bone mineral density
BMI	body-mass index
BPH	benign prostatic hyperplasia
CABG	coronary artery bypass graft
CBC	complete blood count
	mdash
CCU	coronary care unit
Cerebral Hemorrhage	hemorrhagic stroke
CFS	chronic fatigue syndrome
CK	creatine kinase
COX-2 Inhibitors	cyclooxygenase-2 inhibitors
CPAP	continuous positive airway pressure
CPR	cardiopulmonary resuscitation
CRP	C-reactive protein
DNA	deoxyribonucleic acid
DNR	do-not-resuscitate order
DRI	dietary reference intake
EBCT	electron-beam computed tomography
ECG	electrocardiogram
ED	erectile dysfunction

Primary term	Alternate names
EEG	electroencephalogram
EKG	electrocardiogram
EMG	electromyography
	mdash
FSH	follicle-stimulating hormone
GERD	gastroesophageal reflux disease
GFR	glomerular filtration rate
Gingiva	gums: a form of oral tissue that covers the roots of teeth and surrounding bone
GnRH	gonadotropin-releasing hormone
HbA1C	hemoglobin A1c
HDL	high-density lipoprotein
HEPA Filter	high-efficiency particulate air
HIV	human immunodeficiency virus
HLA	human leukocyte antigen
HPA	hypothalamic-pituitary-adrenal axis
Human Immunodeficiency Virus	HIV
IBD	inflammatory bowel disease
ICD	implantable cardioverter defibrillator
IgE	immunoglobulin E
IU	international unit
LDL	low-density lipoprotein
LH	luteinizing hormone
LVAD	left-ventricular assist device
MAOIs	monoamine oxidase inhibitors
METs	metabolic equivalents
MHC Molecule	major histocompatibility complex molecule
Mitral Valve Prolapse	Barlow's Syndrome; Barlow Syndrome (Mitral Valve Prolapse)
MRI	magnetic resonance imaging—a scan that creates detailed pictures of internal organs
MUSE	medicated urethral system for erection
NK	natural killer cells
NMDA Receptor	N-methyl-D-aspartame receptor
NO	nitric oxide
NSAID	nonsteroidal anti-inflammatory drug
PAD	peripheral artery disease
PCOS	polycystic ovary syndrome
PDE5 Inhibitors	phosphodiesterase type 5 inhibitors
PET Scan	positron emission tomography
PSA	prostate-specific antigen
PTCA	percutaneous transluminal coronary angioplasty
PTSD	post-traumatic stress disorder
RAST	radioallergosorbent test
RCT	randomized controlled trial
RDA	recommended dietary allowance
REM	rapid eye movement
RLS	restless legs syndrome
SAD	seasonal affective disorder
SERMs	selective estrogen receptor modulators
SSRIs	selective serotonin reuptake inhibitors

Primary term	Alternate names
Steroids	corticosteroids
T Cell	mdash T lymphocyte
TDD	telecommunications device for the deaf
TENS	mdash transcutaneous electrical nerve stimulation
TIA	mdash transient ischemic attack
tPA	tissue plasminogen activator
TSH	thyroid-stimulating hormone
VLDL	very-low-density lipoprotein
VSD	ventricular septal defect
ABO Blood Group System	mdash ABO Blood Group; ABO Blood Groups; ABO Blood Types; ABO System
Absolute Neutrophil Count	ANC
Aarskog-Scott syndrome	Aarskog Syndrome
Banti Syndrome	Banti disease; Banti's syndrome
Barber itch	Barber's itch
Glycated Hemoglobin (A1C)	A1C; A1C test; Hemoglobin A1C; HbA1C

Common Medical Abbreviations

Abbreviation	Full form
ABG	Arterial blood gas
ACE	Angiotensin-converting enzyme
ACE inhibitor	Angiotensin-converting enzyme inhibitor
ACL	Anterior cruciate ligament
ACS	Acute coronary syndrome
ADHD	Attention-deficit/hyperactivity disorder
ADL	Activity of daily living
AED	Automated external defibrillator
AFib	Atrial fibrillation
AIDS	Acquired immunodeficiency syndrome
AKI	Acute kidney injury
ALP	Alkaline phosphatase
ALT	Alanine aminotransferase
AMI	Acute myocardial infarction
ALS	Amyotrophic lateral sclerosis; advanced life support, depending on context
ANC	Absolute neutrophil count
ANA	Antinuclear antibody
ANP	Atrial natriuretic peptide
APGAR	Appearance, pulse, grimace, activity, and respiration
ARDS	Acute respiratory distress syndrome
AST	Aspartate aminotransferase
ATN	Acute tubular necrosis
AV	Atrioventricular
AVM	Arteriovenous malformation
AVN	Atrioventricular node
BID	Twice a day; prescription shorthand that should be avoided when possible
BP	Blood pressure
BMI	Body mass index
BMR	Basal metabolic rate
BPH	Benign prostatic hyperplasia
BRCA	Breast cancer susceptibility gene; commonly referring to the BRCA1 or BRCA2 gene
BUN	Blood urea nitrogen
CABG	Coronary artery bypass graft
CA	Cancer antigen or calcium, depending on context
CA-125	Cancer antigen 125

Abbreviation	Full form
CAD	Coronary artery disease
CAT	Computed tomography; an older term for computerized axial tomography
CBC	Complete blood count
CBT	Cognitive behavioural therapy
CDC	Centers for Disease Control and Prevention
CEA	Carcinoembryonic antigen
CHF	Congestive heart failure
CHD	Congenital heart disease
CIN	Cervical intraepithelial neoplasia
CJD	Creutzfeldt–Jakob disease
CK	Creatine kinase
CMV	Cytomegalovirus
CNS	Central nervous system
COPD	Chronic obstructive pulmonary disease
CPAP	Continuous positive airway pressure
CPK	Creatine phosphokinase; an older name for creatine kinase
CPR	Cardiopulmonary resuscitation
CRF	Chronic renal failure; chronic kidney disease is preferred in current usage
CRP	C-reactive protein
CSF	Cerebrospinal fluid
CT	Computed tomography
CVS	Chorionic villus sampling
CVA	Cerebrovascular accident
CXR	Chest radiograph
D&C	Dilatation and curettage
DKA	Diabetic ketoacidosis
DJD	Degenerative joint disease
DM	Diabetes mellitus
DNA	Deoxyribonucleic acid
DTP	Diphtheria, tetanus, and pertussis
DVT	Deep-vein thrombosis
DX	Diagnosis
ECG	Electrocardiogram
EKG	Electrocardiogram
ECHO	Echocardiogram
EEG	Electroencephalogram
eGFR	Estimated glomerular filtration rate
EMG	Electromyography
ENT	Ear, nose, and throat
ERCP	Endoscopic retrograde cholangiopancreatography
ESR	Erythrocyte sedimentation rate
ESRD	End-stage renal disease
FBC	Full blood count
FEV1	Forced expiratory volume in the first second
FSH	Follicle-stimulating hormone
GABHS	Group A beta-haemolytic streptococcus
GERD	Gastroesophageal reflux disease
GFR	Glomerular filtration rate
GI	Gastrointestinal
GIST	Gastrointestinal stromal tumour
GU	Genitourinary
HbA1c	Glycated haemoglobin

Abbreviation	Full form
HDL	High-density lipoprotein
HAV	Hepatitis A virus
HBV	Hepatitis B virus
HCT	Hematocrit
HCV	Hepatitis C virus
HGB	Hemoglobin
HIV	Human immunodeficiency virus
HLA	Human leukocyte antigen
HPV	Human papillomavirus
HRT	Hormone replacement therapy
HTN	Hypertension
IBD	Inflammatory bowel disease
IBS	Irritable bowel syndrome
ICD	Implantable cardioverter-defibrillator
ICU	Intensive care unit
IDDM	Insulin-dependent diabetes mellitus; type 1 diabetes mellitus is preferred in current usage
IM	Intramuscular
IU	International unit
IUD	Intrauterine device
IV	Intravenous
IVP	Intravenous pyelography or intravenous pyelogram
LDL	Low-density lipoprotein
LH	Luteinizing hormone
LFT	Liver function test
MI	Myocardial infarction
MMR	Measles, mumps, and rubella
MRI	Magnetic resonance imaging
MRSA	Methicillin-resistant <i>Staphylococcus aureus</i>
MS	Multiple sclerosis; may have other meanings depending on context
NG	Nasogastric
NIDDM	Non-insulin-dependent diabetes mellitus; type 2 diabetes mellitus is preferred in current usage
NKDA	No known drug allergies
NSAID	Nonsteroidal anti-inflammatory drug
OCD	Obsessive-compulsive disorder
PAD	Peripheral arterial disease
PAP	Papanicolaou
PCOS	Polycystic ovary syndrome
PCR	Polymerase chain reaction
PE	Pulmonary embolism
PET	Positron emission tomography
PFT	Pulmonary function test
PID	Pelvic inflammatory disease
PMS	Premenstrual syndrome
PPD	Purified protein derivative
PRN	As needed (from the Latin <i>pro re nata</i>)
PSA	Prostate-specific antigen
PT	Prothrombin time
PTCA	Percutaneous transluminal coronary angioplasty
PTH	Parathyroid hormone
PTT	Partial thromboplastin time

Abbreviation	Full form
PUD	Peptic ulcer disease
PVC	Premature ventricular contraction
QID	Four times a day; prescription shorthand that should be avoided when possible
RA	Rheumatoid arthritis; may have other meanings depending on context
RAST	Radioallergosorbent test
RBC	Red blood cell
RCT	Randomized controlled trial
REM	Rapid eye movement
RLS	Restless legs syndrome
RNA	Ribonucleic acid
RSV	Respiratory syncytial virus
Rx	Prescription or treatment, depending on context
SaO ₂	Arterial oxygen saturation
SARS-CoV-2	Severe acute respiratory syndrome coronavirus 2
SIDS	Sudden infant death syndrome
SLE	Systemic lupus erythematosus
SOB	Shortness of breath
SSRI	Selective serotonin reuptake inhibitor
STD	Sexually transmitted disease; sexually transmitted infection is preferred in current usage
STI	Sexually transmitted infection
T ₃	Triiodothyronine
T ₄	Thyroxine; commonly referring to tetraiodothyronine
TAH	Total abdominal hysterectomy
TB	Tuberculosis
TIA	Transient ischemic attack
TIBC	Total iron-binding capacity
TID	Three times a day; prescription shorthand that should be avoided when possible
TMJ	Temporomandibular joint
TORCH	Toxoplasmosis, other infections, rubella, cytomegalovirus, and herpes simplex; a group of congenital-infection evaluations
TSH	Thyroid-stimulating hormone
TURP	Transurethral resection of the prostate
URI	Upper respiratory infection
UTI	Urinary tract infection
VSD	Ventricular septal defect
WBC	White blood cell
WDWN	Well-developed, well-nourished
WNL	Within normal limits; a finding is within the expected reference range or clinical appearance
WHO	World Health Organization
XRT	Radiotherapy

A.C. A prescription abbreviation meaning “before meals,” from the Latin *ante cibum*.

ALA An abbreviation for alpha-linolenic acid, an essential omega-3 fatty acid, or aminolevulinic acid, a heme-pathway compound used topically in some photodynamic treatments; context determines the meaning.

AP An abbreviation commonly meaning anteroposterior, or directed from front to back; in some contexts it may have another medical expansion.

ATM An abbreviation that may mean the temporomandibular joint or ataxia-telangiectasia mutated, a protein kinase involved in DNA-damage repair; context determines the meaning.

-
- BF** Physician's shorthand for Black female; demographic abbreviations should be used cautiously and replaced with precise, patient-preferred language when possible.
- BPD** An abbreviation commonly meaning bronchopulmonary dysplasia, chronic lung disease after premature birth; it can also mean borderline personality disorder in psychiatric contexts.
- CA** A medical abbreviation that may mean cancer, carcinoma, or calcium; the intended meaning depends on the surrounding clinical context.
- CKD** Abbreviation for Chronic Kidney Disease: a progressive loss of kidney function over months to years, defined by a glomerular filtration rate (GFR) less than 60 mL/min/1.73m² or markers of kidney damage (albuminuria, haematuria, structural abnormalities) persisting for at least 3 months.
- CLA** An abbreviation that commonly means conjugated linoleic acid, a group of fatty-acid isomers; in other medical contexts it may have a different expansion.
- CTG** Abbreviation for cardiotocography; continuous electronic monitoring of fetal heart rate and uterine contractions during labour.
- CVA** An abbreviation for cerebrovascular accident, meaning a stroke caused by interruption of blood flow to the brain or bleeding within the brain. It may cause sudden neurologic deficits.
- CVS** An abbreviation that may mean cardiovascular system or chorionic-villous sampling, a prenatal diagnostic procedure; context determines the meaning.
- DDAVP** The abbreviation for desmopressin, a synthetic vasopressin-like medicine used for some bleeding disorders, central diabetes insipidus, and nighttime urination.
- DES** An abbreviation that may mean diethylstilbestrol, a synthetic estrogen, or drug-eluting stent; diethylstilbestrol exposure during pregnancy is associated with later reproductive and cancer risks.
- DHHS** The abbreviation for the U.S. Department of Health and Human Services.
- DNR** An abbreviation for do-not-resuscitate, indicating that cardiopulmonary resuscitation should not be attempted if breathing or heartbeat stops.
- DNS** An abbreviation that may mean deviated nasal septum or dextrose in normal saline; the intended expansion depends on the clinical context.
- DPT** An older abbreviation for the combined diphtheria, pertussis, and tetanus vaccine; current formulations include DTaP and Tdap.
- DT** An abbreviation that may mean delirium tremens or diphtheria–tetanus vaccine; the intended meaning depends on context.
- DTC** An abbreviation that may mean differentiated thyroid carcinoma or direct-to-consumer, such as direct-to-consumer genetic testing; the intended meaning depends on context.
- DTP** An older abbreviation for diphtheria, tetanus, and pertussis vaccine; current childhood formulations are generally called DTaP.
- DV** An abbreviation that may mean domestic violence, ductus venosus, or another context-specific term; the full expression should be specified.
- DYS** An abbreviation or word root related to dysplasia, dystonia, dyslexia, or another condition beginning with dys-; the intended meaning depends on context.
- EC** An abbreviation that may mean enteric-coated, emergency contraception, or endothelial cell; the intended meaning depends on context.
- EFT** An abbreviation whose medical meaning depends on context, such as endocrine-function testing or emotional freedom technique; the intended expansion should be specified.
- ENT** Abbreviation for ear, nose, and throat; it commonly refers to the otolaryngology specialty or an otolaryngologist.
-

-
- EOS** Commonly an abbreviation for eosinophils or an eosinophil count in laboratory reports; the intended meaning should be confirmed from the report's context.
- EPA** Abbreviation for eicosapentaenoic acid, an omega-3 polyunsaturated fatty acid found in oily fish and fish-oil supplements.
- EPR** Abbreviation for electrophrenic respiration, also called diaphragm pacing, in which electrical stimulation helps activate the diaphragm in selected patients with respiratory muscle paralysis.
- EPT** Abbreviation for estrogen/progestin therapy, treatment using both an estrogen and a progestin, commonly discussed in menopausal hormone therapy when the uterus is present.
- ER** Abbreviation for emergency room or emergency department, the hospital service that evaluates and treats urgent illness and injury.
- FCC** In medicine, an abbreviation for familial colorectal cancer; in other contexts it may have nonmedical meanings.
- FFI** Abbreviation for fatal familial insomnia, a rare inherited prion disease causing progressively severe insomnia, autonomic dysfunction, and neurologic decline.
- FISH** Abbreviation for fluorescence in situ hybridization, a test that uses fluorescent DNA probes to detect specific genes, chromosomes, or chromosomal rearrangements in cells.
- FLAP** Abbreviation for 5-lipoxygenase-activating protein, a protein encoded by *ALOX5AP* that helps produce leukotrienes involved in inflammation.
- GALT** Abbreviation for gut-associated lymphoid tissue, immune tissue in the gastrointestinal tract that samples intestinal contents and helps defend against pathogens.
- GBV-C** Abbreviation for GB virus C, also called human pegivirus, a blood-borne virus that can persist in people but is not established as a cause of chronic hepatitis.
- GD** In the RxList medical-dictionary context, abbreviation for Gaucher disease, an inherited lysosomal storage disorder caused by deficient glucocerebrosidase.
- GI** Abbreviation for gastrointestinal, relating to the digestive tract from the mouth through the anus and its associated organs.
- GPO** Abbreviation for group purchasing organization, an organization that combines buyers' purchasing power to negotiate prices and contracts for medicines, supplies, or services.
- HAART** Abbreviation for highly active antiretroviral therapy, an older term for combination antiretroviral treatment used to suppress HIV replication and preserve immune function.
- HAPE** Abbreviation for high-altitude pulmonary edema, a life-threatening accumulation of fluid in the lungs after rapid ascent; immediate descent and supplemental oxygen are urgent treatments.
- HAV** Abbreviation for hepatitis A virus, an RNA virus spread mainly by the fecal-oral route that causes acute hepatitis but usually does not cause chronic infection.
- HBV** Abbreviation for hepatitis B virus, a DNA virus transmitted through infected blood or body fluids that can cause acute or chronic hepatitis and cirrhosis or liver cancer.
- HEPA** Abbreviation for high-efficiency particulate air, describing a filter designed to remove a very high proportion of airborne particles of specified sizes from an air stream.
- HGD** Commonly an abbreviation for high-grade dysplasia, a marked abnormality of cell development that may be a precursor to invasive cancer but is not itself invasive cancer.
- HNP** Abbreviation for herniated nucleus pulposus, in which the inner material of an intervertebral disk protrudes through the outer ring and may compress a nerve root.
- HPS** Common medical abbreviations include hantavirus pulmonary syndrome, a severe respiratory illness, and Hermansky-Pudlak syndrome, an inherited disorder with oculocutaneous albinism and platelet-storage abnormalities; context determines the meaning.
-

-
- HS** Commonly an abbreviation for hereditary spherocytosis, an inherited hemolytic anemia; it can also mean half-strength, heart sounds, hamstrings, heparan sulfate, hernia sac, or house surgeon, so context is essential.
- HSA** Abbreviation that may mean a US health savings account or human serum albumin, the main plasma protein that helps maintain oncotic pressure; context determines the meaning.
- ICU** Abbreviation for intensive care unit, a hospital unit providing continuous monitoring and specialized support for critically ill patients.
- ID** A context-dependent abbreviation that may mean infectious disease, infectious diseases specialist, intellectual disability, or identification; the surrounding clinical text determines the meaning.
- IFA** Abbreviation for indirect fluorescent antibody, a laboratory method that detects antibodies or antigens using fluorescent labels, commonly in serologic testing.
- IHS** Abbreviation for the Indian Health Service, a US federal agency providing health services to American Indians and Alaska Native people and communities.
- IPT** Abbreviation for interpersonal therapy, a structured psychotherapy that focuses on relationships, grief, role transitions, and interpersonal difficulties.
- IPV** Abbreviation for inactivated polio vaccine, an injectable vaccine containing killed poliovirus and used to prevent poliomyelitis.
- IQ** Abbreviation for intelligence quotient, a standardized score from cognitive testing; it describes performance on specified tests and is not a complete measure of a person's abilities or worth.
- ITC** Abbreviation for in-the-canal, describing a hearing aid or other device positioned within the ear canal.
- ITN** Abbreviation for insecticide-treated bednet, a net treated with insecticide to reduce mosquito bites and malaria transmission.
- IVC** Commonly abbreviation for inferior vena cava, the large vein returning blood from the lower body to the heart; it can also mean intravenous cholangiogram, an X-ray study of the biliary system.
- JIP** Abbreviation for juvenile intestinal polyposis, an inherited condition in which children develop multiple hamartomatous polyps in the gastrointestinal tract and may have increased cancer risk.
- KB** In medical usage, an abbreviation for keratoderma blennorrhagicum or kilobase of DNA; lower-case *kb* is preferred for kilobase, so context is important.
- KUB** Abbreviation for kidney, ureter, and bladder, commonly referring to a plain abdominal X-ray used to assess urinary tract calculi, bowel gas patterns, or other abdominal findings.
- L** Abbreviation for liter, a metric unit of volume equal to 1,000 milliliters.
- LAVH** Abbreviation for laparoscopically assisted vaginal hysterectomy, removal of the uterus through the vagina with laparoscopic assistance.
- LL** Commonly an abbreviation for lower lid of the eye or lower limit; the intended meaning depends on the clinical context.
- LLL** Abbreviation for the left lower lobe of the lung.
- LLQ** Abbreviation for left lower quadrant, usually referring to the lower-left quarter of the abdomen.
- LMP** Abbreviation for last menstrual period, the first day of the most recent menstrual bleeding, used in estimating gestational age when the date is reliable.
- LPA** LPA abbreviates Little People of America and may also refer to the left pulmonary artery.
- LUL** Abbreviation for the left upper lobe of the lung.
- LUQ** Abbreviation for the left upper quadrant of the abdomen.
- LVF** Abbreviation for left ventricular failure, meaning failure of the left side of the heart; it may also mean left ventricular function, depending on context.
-

-
- MAOI** Abbreviation for monoamine oxidase inhibitor, a drug that inhibits monoamine oxidase and is used in selected treatment of depression and other disorders.
- MAP** Common abbreviation for *Mycobacterium avium* subspecies *paratuberculosis*, an organism of the *M. avium* complex; the abbreviation can have other meanings in different clinical contexts.
- MCD** An abbreviation with several medical meanings, including minimal change disease, mean corpuscular diameter, and medullary cystic disease; the intended meaning depends on context.
- MCP** Membrane cofactor protein, also called CD46, is a cell-surface protein that regulates complement activation and helps protect host cells from complement-mediated injury; the abbreviation can have other meanings in different contexts.
- MDI** An abbreviation that may mean metered-dose inhaler, multiple daily injections, or mental developmental index; the intended meaning depends on context.
- MEDVAC** Abbreviation for medical evacuation: the transport of ill or injured people to a medical facility or to a location providing a higher level of care.
- MI** Abbreviation for myocardial infarction, or heart attack: death of heart-muscle tissue caused by prolonged inadequate blood flow, usually from acute coronary artery blockage.
- MM** An abbreviation that may mean meningomyelocele, malignant melanoma, or multiple myeloma; in lowercase, *mm* commonly means millimeter. The intended meaning depends on context.
- MP** Abbreviation for mercaptopurine, a purine-antimetabolite drug, or for molecular pathology; the intended meaning depends on context.
- MPS** Abbreviation for mucopolysaccharidosis, a group of inherited lysosomal storage disorders caused by deficient breakdown of glycosaminoglycans.
- MSG** Abbreviation for monosodium glutamate, the sodium salt of glutamic acid used as a flavor enhancer and contributing umami taste.
- MTX** Abbreviation for methotrexate, a folate-antagonist drug used in selected cancers, autoimmune diseases, and other conditions.
- MVP** Abbreviation for mitral valve prolapse, in which one or both mitral-valve leaflets bow into the left atrium during ventricular systole; it is often mild but can sometimes cause mitral regurgitation or arrhythmias.
- MYH** MYH is a gene-family abbreviation involving myosin or DNA-repair proteins; the specific gene and variant determine the clinical meaning.
- ND** ND is a context-dependent abbreviation that may mean naturopathic doctor, neurodevelopmental, or another term; the full meaning should be specified.
- NEP** NEP is a context-dependent abbreviation that may mean neuroendocrine pancreatic tumor, nasoendotracheal procedure, or another clinical term.
- NF** NF is a context-dependent abbreviation, including neurofibromatosis, a group of genetic disorders causing nerve-sheath tumors and other features.
- NG** NG commonly means nasogastric, referring to a tube passed through the nose into the stomach, but the abbreviation has other uses.
- NS** NS is a context-dependent abbreviation, commonly normal saline, a sterile sodium-chloride solution, or not significant; the full term should be stated.
- OB** OB is an abbreviation commonly meaning obstetrics, the care of pregnancy, labor, birth, and the postpartum period, but it may have other meanings.
- OBS** OBS is a context-dependent abbreviation that may mean observation, obstetric service, or organic brain syndrome; the intended term should be written out.

-
- OCG** OCG is a context-dependent abbreviation that may refer to oral contraceptive guidance, oculocardiac testing, or another clinical term; the full term should be specified.
- OMS** An abbreviation for oral and maxillofacial surgery; the intended meaning depends on the clinical context.
- PAP** PAP is an abbreviation with context-dependent meanings, including Papanicolaou testing, pulmonary alveolar proteinosis, or prostatic acid phosphatase; the full term should be specified.
- PAS** PAS is an abbreviation that may mean periodic-acid–Schiff staining, para-aminosalicylic acid, or pulmonary-artery systolic pressure; context determines the meaning.
- PAT** PAT is a context-dependent abbreviation that may refer to paroxysmal atrial tachycardia, a rapid rhythm beginning in the atria, or another clinical term.
- PCA** PCA is a context-dependent abbreviation, commonly meaning patient-controlled analgesia, in which a patient activates prescribed doses from an infusion device.
- PCT** PCT is a context-dependent abbreviation that may mean procalcitonin, porphyria cutanea tarda, or patient-care technician; the full term should be specified.
- PDR** PDR commonly means Physicians' Desk Reference, a drug-information reference, but the abbreviation has other uses and should be interpreted in context.
- PEP** PEP is a context-dependent abbreviation, including post-exposure prophylaxis, a preventive medicine course after a possible infection exposure.
- PHS** PHS is an abbreviation whose meaning depends on context, including public health service or primary hyperhidrosis; the full term should be specified.
- PI** PI is a context-dependent abbreviation, including principal investigator, pulmonary insufficiency, or protease inhibitor; the intended meaning must be specified.
- PLP** PLP commonly means pyridoxal 5'-phosphate, the active coenzyme form of vitamin B6 required by many enzymes, but the abbreviation has other uses.
- PMD** PMD is a context-dependent abbreviation, including Pelizaeus–Merzbacher disease, a rare inherited disorder of central myelination, or a professional medical designation.
- PON** PON is a context-dependent abbreviation that may refer to postoperative nausea, paraoxonase, or another clinical term; the full meaning should be stated.
- PTU** PTU is the abbreviation for propylthiouracil, an antithyroid medicine used selectively because of liver toxicity and other safety considerations.
- PV** PV is a context-dependent abbreviation, including polycythemia vera, plasma volume, or peripheral vision; the full term should be specified.
- PVB** PVB is a context-dependent abbreviation that may mean paravertebral block, a regional anesthetic technique, or another medical term.
- PX** PX is a context-dependent abbreviation that may mean prognosis, patient, prescription, or a genetic marker; clinical documentation should spell out the intended term.
- Q.2H** A prescription abbreviation meaning “every 2 hours.” Medication instructions should use clear wording because abbreviation misinterpretation can cause dosing errors.
- Q.3H.** A prescription abbreviation meaning “every 3 hours.” Medication instructions should use clear wording because abbreviation misinterpretation can cause dosing errors.
- Q.S.** A prescription abbreviation from the Latin “quantum sufficiat,” meaning “quantity sufficient” to make the required amount or concentration. The exact quantity must be specified by the formulation or prescription context.
- R/O** R/O is an abbreviation for rule out, indicating that a condition is being considered but has not been confirmed; clear documentation should state the actual diagnostic question.
-

-
- RAD** Acronym whose medical meaning depends on context, commonly radiation absorbed dose or right axis deviation on an ECG.
- RBC** RBC is the abbreviation for red blood cell, the cell that transports oxygen with hemoglobin and carries carbon dioxide back toward the lungs.
- RF** RF is a context-dependent abbreviation, including rheumatoid factor, radiofrequency, or risk factor; the complete term should be stated.
- RLL** RLL is the abbreviation for right lower lobe, usually referring to the lower lobe of the right lung.
- RLQ** RLQ is the abbreviation for right lower quadrant of the abdomen, containing structures including the appendix, cecum, and right adnexa.
- RML** RML is the abbreviation for right middle lobe, the middle lobe of the right lung.
- RP** RP is a context-dependent abbreviation, commonly retinitis pigmentosa, an inherited retinal degeneration causing night blindness and progressive visual-field loss.
- RUQ** RUQ is the abbreviation for right upper quadrant of the abdomen, containing the liver, gallbladder, duodenum, and portions of bowel and kidney.
- SGOT** SGOT is the former abbreviation for AST, an enzyme measured in blood that can rise with injury to liver, heart, muscle, or other tissues.
- SGPT** SGPT is the former abbreviation for ALT, a liver-associated enzyme that rises in many forms of hepatocellular injury.
- SHP** SHP is a context-dependent abbreviation that may refer to a healthcare professional, a gene or protein, or another clinical term; the full meaning should be specified.
- SLV** SLV is a context-dependent abbreviation that may mean single-lung ventilation, serum lithium value, or another term; the full meaning should be specified.
- STD(S)** Abbreviation for sexually transmitted disease(s), now often called sexually transmitted infections.
- STS** STS is a context-dependent abbreviation that may mean soft-tissue sarcoma, sodium thiosulfate, or another clinical term; the full term should be stated.
- TMR** TMR is a context-dependent abbreviation, including targeted muscle reinnervation, a surgical technique used to improve control of a prosthesis and reduce amputation pain.
- TPA/TPA** Abbreviation for tissue plasminogen activator.
- TSD** TSD is a context-dependent abbreviation that may mean total sleep deprivation, traumatic stress disorder, or another clinical term; the full term should be specified.
- TSE** TSE is a context-dependent abbreviation, including transmissible spongiform encephalopathy, the prion-disease group that includes Creutzfeldt-Jakob disease.
- UL** UL is a context-dependent abbreviation that may mean upper limit, ulnar or ulna-related, or another clinical term; the full meaning should be specified.
- URG** URG is a context-dependent abbreviation that may refer to urinary urgency or an urgent clinical priority; documentation should state the full term.
- URTI** Abbreviation for upper respiratory tract infection, commonly involving the nose, sinuses, pharynx, or larynx and often caused by viruses.
- VD** Abbreviation for venereal disease, an older term for a sexually transmitted infection.
- WBS** Abbreviation for Williams–Beuren syndrome, a genetic condition associated with characteristic facial features, developmental differences, and cardiovascular disease. In other clinical contexts, WBS may have a different meaning, so the full term should be specified.
-

Modern Terms

Old or obsolete term	Modern or preferred term
Acute renal failure	Acute kidney injury
Adult-onset diabetes mellitus	Type 2 diabetes mellitus
Ague	Malaria; a historical term for intermittent fever, usually associated with malaria
Apoplexy	Stroke or intracerebral haemorrhage, depending on the historical context
Arteriosclerosis obliterans	Peripheral arterial disease
Bright's disease	Glomerular kidney disease; the specific modern diagnosis should be stated when known
Chronic renal failure	Chronic kidney disease
Congestive heart failure	Heart failure
Consumption	Tuberculosis, especially pulmonary tuberculosis
Crippling arthritis	Disabling arthritis; describe the functional limitation specifically
Diabetic retinopathy, background	Mild or nonproliferative diabetic retinopathy, with severity stated
Dropsy	Oedema or fluid accumulation, with the affected site specified
Eclampsia toxemia	Preeclampsia or eclampsia, depending on the clinical condition
Essential hypertension	Primary hypertension
Fallopian tube	Uterine tube; fallopian tube remains an accepted anatomical term
Female hysteria	No single modern diagnosis; reassess using the presenting symptoms and an appropriate diagnosis
Gastric ulcer disease	Peptic ulcer disease, with the ulcer site specified
Heart attack	Myocardial infarction in formal medical usage
Herpes zoster	Shingles in common language; herpes zoster remains the preferred medical term
Hyperlipaemia	Hyperlipidaemia
Idiopathic thrombocytopenic purpura	Immune thrombocytopenia
Imbecile	Intellectual disability; the historical term is offensive and must not be used clinically
Insulin-dependent diabetes mellitus	Type 1 diabetes mellitus
Junkie's abscess	Injection-related abscess or skin and soft-tissue infection
Leprosy	Hansen disease; leprosy remains a recognized medical term, but person-first language is preferred

Old or obsolete term	Modern or preferred term
Manic depression	Bipolar disorder
Mongolism	Down syndrome; the historical term is unacceptable and must not be used
Multiple personality disorder	Dissociative identity disorder
Non-insulin-dependent diabetes mellitus	Type 2 diabetes mellitus
Old age dementia	Dementia or major neurocognitive disorder, with the cause specified when known
Palsy	Paralysis or the specific neurological disorder, depending on the context
Paralytic stroke	Stroke with paralysis; specify the neurological deficit and stroke type
Phthisis	Pulmonary tuberculosis; historically, progressive wasting disease
Senile dementia	Dementia or major neurocognitive disorder; age alone should not define the diagnosis
Senility	Cognitive impairment, dementia, or another specific diagnosis, after assessment
Spastic colon	Irritable bowel syndrome
Stomach flu	Acute gastroenteritis
Sunstroke	Heatstroke
Terminal illness	Advanced or life-limiting illness, with the diagnosis and prognosis specified
Toxemia of pregnancy	Preeclampsia or eclampsia
Venereal disease	Sexually transmitted infection
Wassermann reaction	A modern syphilis serologic test, such as a nontreponemal or treponemal test
Water on the brain	Hydrocephalus

Medical Specialties

Medical specialty	Principal area of practice
Allergy and Immunology	Allergic disease, asthma, immune deficiency, and immune-mediated disorders
Anesthesiology	Perioperative care, anesthesia, critical care, and pain medicine
Cardiology	Diseases of the heart and circulatory system
Cardiothoracic Surgery	Surgical treatment of diseases of the heart, lungs, and chest
Clinical Genetics	Diagnosis, counseling, and management of inherited and genomic disorders
Clinical Pharmacology	Effects, uses, interactions, and safe clinical use of medicines
Colon and Rectal Surgery	Surgical treatment of diseases of the colon, rectum, and anus
Critical Care Medicine	Assessment and treatment of life-threatening organ dysfunction
Dermatology	Diseases of the skin, hair, nails, and mucous membranes
Emergency Medicine	Immediate assessment and treatment of acute illness and injury
Endocrinology	Hormones, metabolism, diabetes, and endocrine glands
Family Medicine	Comprehensive continuing care for individuals and families of all ages
Forensic Medicine	Application of medical knowledge to legal and medicolegal questions
Gastroenterology	Diseases of the digestive tract, liver, gallbladder, and pancreas
General Practice	First-contact and continuing medical care across a broad range of conditions
General Surgery	Operative treatment of diseases involving multiple body systems
Geriatric Medicine	Health care of older adults, including multimorbidity and functional decline
Hematology	Blood cells, blood-forming organs, clotting, and blood disorders
Hepatology	Diseases of the liver and biliary system
Hospital Medicine	Comprehensive medical care of hospitalized adults
Infectious Disease Medicine	Diagnosis, treatment, and prevention of infections
Internal Medicine	Prevention, diagnosis, and treatment of adult medical disorders
Interventional Cardiology	Catheter-based diagnosis and treatment of cardiovascular disease
Interventional Radiology	Image-guided minimally invasive diagnosis and treatment
Medical Oncology	Systemic treatment and supportive care for cancer
Neonatology	Care of newborn infants, especially premature or critically ill infants
Nephrology	Diseases of the kidneys, fluid balance, electrolytes, and hypertension
Neurology	Diseases of the brain, spinal cord, peripheral nerves, and muscles

Medical specialty	Principal area of practice
Neurosurgery	Surgical treatment of disorders of the nervous system
Nuclear Medicine	Diagnosis and treatment using radioactive substances and molecular imaging
Obstetrics and Gynecology	Pregnancy, childbirth, and diseases of the female reproductive system
Occupational Medicine	Health, safety, and disease prevention in the workplace
Ophthalmology	Medical and surgical care of the eyes and visual system
Oral and Maxillofacial Surgery	Surgical treatment of diseases and injuries of the mouth, jaws, face, and neck
Orthopedic Surgery	Surgical and nonsurgical treatment of the musculoskeletal system
Otolaryngology–Head and Neck Surgery	Diseases and surgery of the ear, nose, throat, and head and neck
Pain Medicine	Assessment and treatment of acute, chronic, and cancer-related pain
Palliative Medicine	Relief of symptoms and support for people with serious or life-limiting illness
Pathology	Laboratory examination of tissues, cells, blood, and body fluids
Pediatric Surgery	Surgical care of infants, children, and adolescents
Pediatrics	Medical care of infants, children, and adolescents
Physical Medicine and Rehabilitation	Restoration of function and independence after illness or injury
Plastic and Reconstructive Surgery	Reconstruction, restoration, and alteration of body tissues
Preventive Medicine	Prevention of disease and promotion of health in individuals and populations
Psychiatry	Diagnosis and treatment of mental, emotional, and behavioral disorders
Public Health Medicine	Protection and improvement of population health
Pulmonary Medicine	Diseases of the lungs and respiratory system
Radiation Oncology	Use of ionizing radiation to treat cancer
Radiology	Diagnostic and image-guided evaluation of disease
Reproductive Endocrinology and Infertility	Hormonal and reproductive disorders and fertility care
Rheumatology	Autoimmune, inflammatory, and musculoskeletal disorders
Sleep Medicine	Sleep disorders and their effects on health
Sports Medicine	Prevention, diagnosis, treatment, and rehabilitation of activity-related conditions
Thoracic Surgery	Surgery of the chest, lungs, esophagus, and mediastinum
Transfusion Medicine	Collection, testing, processing, and clinical use of blood components
Trauma Surgery	Surgical management of serious and complex injuries
Urology	Diseases of the urinary tract and male reproductive system
Vascular Surgery	Surgical and endovascular treatment of blood-vessel disease

Human Organs

This reference maps individual organ headwords to related entries in the dictionary. Each headword is followed by a semicolon-separated list of related dictionary terms.

Adrenal Gland

Adrenal Gland; Addison's Disease; Cushing's Syndrome; Pheochromocytoma; Adrenaline.

Appendix

Appendix; Appendicitis; Appendectomy.

Bladder

Bladder; Cystitis; Urinary Retention; Bladder Cancer.

Brain

Brain; Brain Tumour; Stroke; Seizure; Meningitis; Cerebral Palsy; Parkinson's Disease.

Breast

Breast; Breast Cancer; Mastitis; Mammography.

Cervix

Cervix; Cervical Cancer; Cervicitis; Pap Smear.

Colon

Colon; Colitis; Constipation; Diarrhea; Colorectal Cancer; Colonoscopy.

Ear

Ear; Otitis Media; Tinnitus; Hearing Loss; Vertigo.

Esophagus

Esophagus; Dysphagia; Esophagitis; Achalasia; Gastroesophageal Reflux Disease.

Eye

Eye; Cataract; Glaucoma; Conjunctivitis; Retinal Detachment; Macular Degeneration.

Gallbladder

Gallbladder; Cholelithiasis; Cholecystitis; Bile Duct; Cholangiocarcinoma.

Heart

Heart; Heart Failure; Arrhythmia; Myocardial Infarction; Pericarditis; Congenital Heart Defect.

Kidney

Kidney; Acute Kidney Injury; Chronic Kidney Disease; Glomerulonephritis; Nephritis; Dialysis.

Liver

Liver; Hepatitis; Cirrhosis; Fatty Liver Disease; Jaundice; Portal Hypertension.

Lung

Lung; Asthma; COPD; Pneumonia; Bronchitis; Pulmonary Embolism; Pleural Effusion.

Mouth

Mouth; Dental Caries; Gingivitis; Periodontitis.

Nose

Nose; Sinusitis; Rhinitis; Nasal Polyps; Anosmia; Epistaxis.

Ovary

Ovary; Ovarian Cyst; Ovarian Cancer; Fallopian Tube; Ectopic Pregnancy.

Pancreas

Pancreas; Pancreatitis; Diabetes Mellitus; Pancreatic Cancer; Insulin.

Pituitary Gland

Pituitary Gland; Pituitary Tumor; Acromegaly; Diabetes Insipidus.

Prostate

Prostate; Benign Prostatic Hyperplasia; Prostatitis; Prostate Cancer.

Rectum

Rectum; Rectal Bleeding; Proctitis; Rectal Cancer.

Skin

Skin; Dermatitis; Eczema; Psoriasis; Cellulitis; Pressure Ulcer; Melanoma.

Small Intestine

Small Intestine; Enteritis; Celiac Disease; Malabsorption; Intestinal Obstruction.

Spinal Cord

Spinal Cord; Spinal Cord Injury; Myelitis; Spinal Stenosis; Paraplegia.

Spleen

Spleen; Splenomegaly; Splenectomy; Hypersplenism.

Stomach

Stomach; Gastritis; Peptic Ulcer Disease; Gastroesophageal Reflux Disease; Gastric Cancer.

Testis

Testis; Testicular Torsion; Testicular Cancer; Epididymis.

Thymus

Thymus; Thymoma.

Thyroid Gland

Thyroid Gland; Hyperthyroidism; Hypothyroidism; Goitre; Thyroid Cancer.

Ureter

Ureter; Ureteral Calculi; Ureteral Obstruction; Ureteritis; Ureteral Stricture.

Urethra

Urethra; Urethral Stricture; Urethritis; Urethral Obstruction.

Uterus

Uterus; Endometriosis; Fibroids; Uterine Cancer; Ectopic Pregnancy.

Vagina

Vagina; Vaginitis; Vaginal Discharge; Vaginal Cancer.

Lay Language Medical Terms

Lay term	Medical term	Lay-language explanation
Belly area	ABDOMEN/ABDOMINAL	The body cavity below the diaphragm containing the stomach, intestines, liver, and other organs.
Take in	ABSORB	To take up or take in a substance, such as fluid.
Too much acid in blood	ACIDOSIS	A condition in which the blood is more acidic than normal.
Sharpness or clarity	ACUITY	The clearness or keenness of a sense, especially vision.
Recent or sudden	ACUTE	New, recent, sudden, or requiring urgent attention.
Swollen glands	ADENOPATHY	Enlarged or swollen lymph nodes.
Helpful added treatment	ADJUVANT	Something that supports or assists the main treatment.
Added treatment	ADJUVANT TREATMENT	Treatment given in addition to the main or standard treatment.
Germ-killing drug	ANTIBIOTIC	A drug used to kill or control bacteria and some other germs.
Germ-killing treatment	ANTIMICROBIAL	A substance or treatment that acts against microorganisms such as bacteria, fungi, or parasites.
Antiviral drug	ANTIRETROVIRAL	A drug that slows or stops the growth of certain viruses.
Side effect	ADVERSE EFFECT	An unwanted or harmful response to a treatment or medicine.
Walking	AMBULATE/AMBULATION/ AMBULATORY	To walk, or to be able to walk.
Severe allergy	ANAPHYLAXIS	A serious, potentially life-threatening allergic reaction.
Low red-cell count	ANEMIA	A reduced number of red blood cells or a low red-cell blood count.
Numbing medicine	ANESTHETIC	A drug or agent that reduces or removes the feeling of pain, sometimes by causing sleep.
Heart pain	ANGINA	Chest pain caused by inadequate blood flow to the heart muscle.
Heart pain	ANGINA PECTORIS	Another medical term for chest pain caused by reduced blood flow to the heart.
Loss of appetite	ANOREXIA	Lack of appetite or, in some contexts, a disorder involving refusal to eat.

Lay term	Medical term	Lay-language explanation
Inner elbow area	ANTECUBITAL	Relating to the inner side of the elbow or forearm.
Protective protein	ANTIBODY	A protein made by the body in response to a foreign substance.
Seizure-prevention drug	ANTICONVULSANT	A medicine used to prevent or control seizures.
Cholesterol-lowering drug	ANTILIPEMIC	A drug that lowers fat or cholesterol levels in the blood.
Cough medicine	ANTITUSSIVE	A medicine used to reduce coughing.
Irregular heartbeat	ARRHYTHMIA	Any abnormal change in the normal heartbeat or rhythm.
Breathing material into the lungs	ASPIRATION	Entry of fluid, food, or other material into the lungs, often after vomiting.
Laboratory test	ASSAY	A laboratory test used to measure or identify something.
Check or evaluate	ASSESS	To examine, measure, evaluate, or look at something carefully.
Asthma	ASTHMA	A lung disease in which narrowed or tightened airways make breathing difficult.
Without symptoms	ASYMPTOMATIC	Having no noticeable symptoms.
Armpit	AXILLA	The armpit area.
Not cancerous	BENIGN	Not malignant and generally not cancerous.
Twice daily	BID	Prescription shorthand meaning twice a day.
Carried or stuck together	BINDING/BOUND	Carried by something, or made to stick or join together.
Drug availability	BIOAVAILABILITY	The amount or proportion of a drug that becomes available for the body to use.
Series of blood tests	BLOOD PROFILE	A group or panel of blood tests.
Large dose at once	BOLUS	A relatively large amount given all at one time.
Amount of mineral in bone	BONE MASS	The amount of calcium and other minerals in a given amount of bone.
Slow irregular heartbeats	BRADYARRHYTHMIAS	Slow heart rhythms that may also be irregular.
Slow heartbeat	BRADYCARDIA	A slower-than-usual heartbeat.
Narrowed airways	BRONCHOSPASM	Breathing difficulty caused by tightening of the airway muscles.
Cancer-causing	CARCINOGENIC	Capable of causing cancer.
Cancer type	CARCINOMA	A cancer that begins in lining or covering cells of the body.
Related to the heart	CARDIAC	Relating to the heart.
Resetting the heartbeat	CARDIOVERSION	Restoring a normal heart rhythm, often with a controlled electrical shock.
Tube	CATHETER	A thin tube used to give or remove fluids, or to perform certain medical procedures.
Epidural tube	CATHETER	A catheter placed near the spinal cord to deliver anesthesia during surgery.
Brain and spinal cord	CENTRAL NERVOUS SYSTEM (CNS)	The brain and spinal cord.
Brain injury	CEREBRAL TRAUMA	Damage to the brain caused by an injury.
Stopping	CESSATION	The act of stopping something.
Coronary heart disease	CHD	Disease of the blood vessels that supply the heart.
Cancer drug treatment	CHEMOTHERAPY	Treatment of disease, usually cancer, with chemical medicines.

Lay term	Medical term	Lay-language explanation
Long-lasting	CHRONIC	Continuing for a long time or ongoing.
Related to patient care	CLINICAL	Pertaining to medical care or the care of patients.
Human research study	CLINICAL TRIAL	A research study involving human participants.
Unconscious state	COMA	A prolonged state of unconsciousness in which a person cannot be awakened normally.
All disease gone	COMPLETE RESPONSE	Total disappearance of the detectable disease being treated.
Present from birth	CONGENITAL	Present before or at birth.
Pink, irritated eye	CONJUNCTIVITIS	Redness and irritation of the thin membrane covering the eye.
Treatment to keep improvement	CONSOLIDATION PHASE	A treatment phase intended to make a remission last, usually after initial treatment.
Comparison study	CONTROLLED TRIAL	A study comparing an experimental treatment with a standard or control treatment.
Research partnership	COOPERATIVE GROUP	An association of institutions that work together on clinical research.
Related to heart arteries	CORONARY	Relating to the heart or the blood vessels that supply it.
Computerized X-ray scan	CT SCAN (CAT)	A series of computer-processed X-ray images that show sections of the body.
Germ-growth test	CULTURE	A test that grows or detects organisms that may cause infection.
Added together	CUMULATIVE	Added up from the beginning.
Related to the skin	CUTANEOUS	Relating to the skin.
Stroke	CVA	A stroke, also called a cerebrovascular accident.
Related to the skin	DERMATOLOGIC	Pertaining to the skin.
Lower blood-pressure number	DIASTOLIC	Relating to the lower blood-pressure number, when the heart relaxes.
Farther away	DISTAL	Toward the end or away from the center of the body.
Water pill	DIURETIC	A drug that increases urination.
Sound-wave blood-flow test	DOPPLER	A device or test using sound waves to assess blood flow.
Masked study	DOUBLE BLIND	A study in which neither the participants nor investigators know which treatment is being given.
Improper function	DYSFUNCTION	A state in which something does not work normally.
Abnormal cells	DYSPLASIA	Abnormal changes in the size, shape, or organization of cells.
Heart sound-wave test	ECHOCARDIOGRAM	An ultrasound test that creates pictures of the heart.
Swelling from fluid	EDEMA	Excess fluid collecting in body tissues.
Brain-wave test	EEG	A recording of the brain's electrical activity.
Effectiveness	EFFICACY	How well a treatment works under specified conditions.
Heart electrical tracing	ELECTROCARDIOGRAM	A tracing of the heart's electrical activity, also called an ECG or EKG.
Mineral imbalance	ELECTROLYTE IMBALANCE	An abnormal level or balance of minerals in the blood.
Vomiting	EMESIS	The act of vomiting.

Lay term	Medical term	Lay-language explanation
Based on experience	EMPIRIC	Based on experience or likely cause rather than definitive test results.
Viewing inside the body	ENDOSCOPIC	Looking inside the body with a lighted tube or camera.
Through the intestines	ENTERAL	Given through or involving the digestive tract.
Outside the spinal cord	EPIDURAL	Located outside the spinal cord covering, or medicine given into that space.
Remove completely	ERADICATE	To get rid of a disease, infection, or other problem.
Examined	EVALUATED, ASSESSED	Examined or checked for a medical condition.
Fast ethics review	EXPEDITED REVIEW	A rapid research-protocol review allowed for certain lower-risk studies.
Outside the body	EXTERNAL	Located or occurring outside the body.
Leak out	EXTRAVASATE	To leak outside the intended area, such as from a blood vessel into nearby tissue.
U.S. drug agency	FDA	The U.S. Food and Drug Administration, which regulates medicines and medical products.
Scar-like	FIBROUS	Containing many fibers, often resembling scar tissue.
Irregular quivering	FIBRILLATION	Very rapid, uncoordinated activity of the heart or another muscle.
Being put fully to sleep	GENERAL ANESTHESIA	Use of medicines to cause unconsciousness and prevent pain during a procedure.
Related to pregnancy	GESTATIONAL	Pertaining to pregnancy.
Red-cell percentage	HEMATOCRIT	The proportion of blood made up of red blood cells.
Bruise or blood collection	HEMATOMA	A collection of blood under the skin or in a tissue, often appearing as a bruise.
Blood-flow measurement	HEMODYNAMIC MEASURING	Measuring blood flow and circulation.
Red-cell breakdown	HEMOLYSIS	Breakdown or destruction of red blood cells.
Heparin tube or port	HEPARIN LOCK	An intravenous access device kept open with a prescribed solution, sometimes containing heparin.
Liver tumor	HEPATOMA	A tumor of the liver, often referring to hepatocellular carcinoma.
Inherited disease	HERITABLE DISEASE	A disease that can be passed through genes to future children.
Tissue-disease examination	HISTOPATHOLOGIC	Relating to examination of tissues or cells for disease.
Portable heart monitor	HOLTER MONITOR	A portable device that records heartbeats, usually for a day or longer.
High blood calcium	HYPERCALCEMIA	An abnormally high calcium level in the blood.
High blood potassium	HYPERKALEMIA	An abnormally high potassium level in the blood.
High blood sodium	HYPERNATREMIA	An abnormally high sodium level in the blood.
High blood pressure	HYPERTENSION	Blood pressure that is higher than recommended.
Low blood calcium	HYPOCALCEMIA	An abnormally low calcium level in the blood.
Low blood potassium	HYPOKALEMIA	An abnormally low potassium level in the blood.
Low blood sodium	HYPONATREMIA	An abnormally low sodium level in the blood.
Low blood pressure	HYPOTENSION	Blood pressure that is lower than expected.
Low blood oxygen	HYPOXEMIA	A low level of oxygen in the blood.
Low tissue oxygen	HYPOXIA	Too little oxygen reaching body tissues.

Lay term	Medical term	Lay-language explanation
Removal of the uterus	HYSTERECTOMY	Surgical removal of the uterus; the ovaries and other structures may or may not also be removed.
Treatment-caused	IATROGENIC	Caused by medical treatment or a healthcare procedure.
Device research permission	IDE	Permission to study an unapproved medical device in people.
Cause unknown	IDIOPATHIC	Having no known cause.
Body protection	IMMUNITY	The body's defense against infection or other foreign substances.
Antibody protein	IMMUNOGLOBIN	A protein involved in making antibodies and immune defense; the standard spelling is immunoglobulin.
Immune-suppressing	IMMUNOSUPPRESSIVE	A drug or treatment that reduces the body's immune response.
Immune-based treatment	IMMUNOTHERAPY	Treatment that uses or changes the immune system, often against cancer or immune disease.
Abnormal function	IMPAIRED FUNCTION	Function that is reduced or not working normally.
Placed inside the body	IMPLANTED	Surgically or otherwise placed inside the body.
New-drug research permission	IND	Authorization to test an unapproved new drug in people.
Hardening	INDURATION	An area that has become unusually firm or hard.
Left in place	INDWELLING	Remaining in a particular location, such as a catheter.
Dead tissue from poor blood flow	INFARCT	Death of tissue caused by inadequate blood supply.
Disease that can spread	INFECTIOUS DISEASE	An illness caused by organisms that may spread between people or through other routes.
Swelling and irritation	INFLAMMATION	The body's response to injury or infection, often causing swelling, warmth, redness, or pain.
Slow delivery into the body	INFUSION	Slow delivery of a substance, usually through a vein or catheter.
Taking by mouth	INGESTION	Eating, drinking, or taking something into the body by mouth.
Antiviral immune protein	INTERFERON	A medicine or natural protein that helps the body act against viruses.
On and off	INTERMITTENT	Occurring repeatedly with pauses between episodes.
Inside the body	INTERNAL	Located or occurring within the body.
Inside	INTERIOR	Located on the inside.
Into a muscle	INTRAMUSCULAR	Given into a muscle.
Into the abdomen	INTRAPERITONEAL	Given into or located within the abdominal cavity.
Into spinal fluid	INTRATHECAL	Given into the fluid space around the spinal cord.
Into a vein	INTRAVENOUS (IV)	Given through a vein.
Into the bladder	INTRAVESICAL	Given into the bladder.
Place a breathing tube	INTUBATE	To place a tube into the airway.
Breaking the skin	INVASIVE PROCEDURE	A procedure that punctures, opens, or cuts the skin or enters the body.
Unapproved-drug study	INVESTIGATIONAL NEW DRUG (IND)	A new drug being studied before it has full approval for general use.

Lay term	Medical term	Lay-language explanation
Unproven treatment method	INVESTIGATIONAL METHOD	A treatment method still being studied and not established as standard care.
Reduced blood flow	ISCHEMIA	Too little blood and oxygen reaching a tissue, usually because blood flow is reduced.
Open abdominal surgery	LAPAROTOMY	Surgery using an incision in the abdominal wall to reach the organs inside.
Abnormal area	LESION	A wound, injury, or area of abnormal tissue.
Very tired or sleepy	LETHARGY	Sleepiness, tiredness, or reduced energy.
Low white-cell count	LEUKOPENIA	A lower-than-normal number of white blood cells.
Fat	LIPID	A fat or fat-like substance.
Amount of fat	LIPID CONTENT	The amount of fat in a substance, tissue, or blood sample.
Cholesterol and fat panel	LIPID PROFILE (PANEL)	Blood tests measuring fats and cholesterol.
Numbing a small area	LOCAL ANESTHESIA	Numbing medicine used to prevent pain in a limited area.
Limited to one area	LOCALIZED	Restricted to one area.
Inner space	LUMEN	The hollow space inside a tube or organ, such as a blood vessel.
Lymph-vessel X-ray	LYMPHANGIOGRAPHY	An X-ray study of lymph vessels or nodes after contrast dye is injected.
Immune white blood cell	LYMPHOCYTE	A type of white blood cell that helps protect against infection.
Lymph-node cancer	LYMPHOMA	A cancer of lymph nodes or related lymphatic tissue.
Feeling unwell	MALAISE	A vague feeling of illness or bodily discomfort.
Not working correctly	MALFUNCTION	A condition in which a device, organ, or system does not work properly.
Cancerous growth	MALIGNANCY	A cancer or other tumor capable of growing and spreading.
Brain tumor	MEDULLABLASTOMA	A type of tumor that begins in the brain.
Abnormal red-cell development	MEGALOBLASTOSIS	A change in blood-forming cells that produces unusually large, abnormal red-cell precursors.
Break down in the body	METABOLIZE	To chemically process or break down a substance in the body.
Cancer spread	METASTASIS	Spread of cancer cells from one body part to another.
Antibiotic medicine	METRONIDAZOLE	A medicine used for certain bacterial and parasitic infections.
Heart attack	MI	Myocardial infarction, or death of heart muscle from blocked blood flow.
Small or slight	MINIMAL	Very small or slight.
Reduce	MINIMIZE	To reduce something as much as possible.
Check or watch	MONITOR	To observe, measure, or keep track of something over time.
Ease of movement	MOBILITY	The ability to move easily.
Illness or complication	MORBIDITY	Illness, disability, or an unwanted result of disease or treatment.
Death rate or death	MORTALITY	Death, or the rate of death in a population.
Ability to move	MOTILITY	The ability of a body part, cell, or organism to move.
Magnetic body scan	MRI	Pictures of the inside of the body made with magnets and radio waves rather than X-rays.

Lay term	Medical term	Lay-language explanation
Moist body lining	MUCOSA, MUCOUS MEMBRANE	The moist lining of the digestive, respiratory, reproductive, and urinary passages.
Muscle aches	MYALGIA	Pain or aching in the muscles.
Related to heart muscle	MYOCARDIAL	Pertaining to the muscle of the heart.
Heart attack	MYOCARDIAL INFARCTION	Death of heart muscle caused by inadequate blood flow.
Nose-to-stomach tube	NASOGASTRIC TUBE	A tube passed through the nose into the stomach.
U.S. health institute	NCI	The National Cancer Institute.
Tissue death	NECROSIS	Death of cells or tissue.
Tumor	NEOPLASIA/NEOPLASM	An abnormal new growth that may be benign or malignant.
Nerve-tissue cancer	NEUROBLASTOMA	A cancer that develops from immature nerve tissue.
Related to the nervous system	NEUROLOGICAL	Pertaining to the brain, spinal cord, or nerves.
Low infection-fighting cells	NEUTROPENIA	A decrease in neutrophils, a major type of infection-fighting white blood cell.
U.S. health agency	NIH	The National Institutes of Health.
Not entering the body	NONINVASIVE	Not breaking, cutting, or entering the skin or body.
Hospital-acquired	NOSOCOMIAL	Acquired during a stay in a healthcare facility.
Blockage	OCCLUSION	Closing, blockage, or obstruction.
Cancer specialty	ONCOLOGY	The study and treatment of cancer and tumors.
Related to the eye	OPHTHALMIC	Pertaining to the eye.
Best choice	OPTIMAL	Best, most favorable, or most suitable.
By mouth	ORAL ADMINISTRATION	Giving a medicine through the mouth.
Related to bones	ORTHOPEDIC	Pertaining to bones, joints, muscles, or related structures.
Rare dense-bone disorder	OSTEOPETROSIS	A rare disorder in which bones become unusually dense but may be fragile.
Weak bones	OSTEOPOROSIS	A condition in which bones lose strength and become more likely to break.
Female sex glands	OVARIES	The organs that produce eggs and reproductive hormones.
Given by injection	PARENTERAL	Given by injection rather than through the digestive tract.
Open passage	PATENCY	The condition of being open and unobstructed.
How a disease develops	PATHOGENESIS	The process by which a disease or unhealthy condition develops.
Through the skin	PERCUTANEOUS	Done through or across the skin.
Away from the center	PERIPHERAL	At or toward the outer part rather than the center.
By mouth	PER OS (PO)	A prescription direction meaning by mouth.
How the body handles a drug	PHARMACOKINETICS	The study of how the body absorbs, distributes, changes, and removes a drug.
First drug-study phase	PHASE I	The first human study phase, usually focused on safety, effects, and dosing.
Early effectiveness study	PHASE II	A study phase examining safety and early evidence of benefit in people with a condition.
Large confirmation study	PHASE III	A larger study phase used to confirm safety and effectiveness and identify common side effects.

Lay term	Medical term	Lay-language explanation
After-approval study	PHASE IV	A study performed after approval to monitor safety or examine additional uses.
Vein irritation	PHLEBITIS	Irritation or inflammation of a vein.
Inactive treatment	PLACEBO	An inactive substance or treatment that looks like the real treatment.
Improvement from expectation	PLACEBO EFFECT	An improvement that occurs after an inactive treatment, often because of expectation or context.
Clotting blood particles	PLATELETS	Small blood components that help stop bleeding by forming clots.
Possible	POTENTIAL	Possible or capable of happening.
Make stronger	POTENTIATE	To increase or multiply the effect of a drug, treatment, or substance.
Effect booster	POTENTIATOR	An agent that helps another agent work more strongly.
Before birth	PRENATAL	Occurring before birth.
Preventive treatment	PROPHYLAXIS	A medicine or action used to prevent disease or infection.
As needed	PRN	Prescription shorthand meaning when needed.
Expected outlook	PROGNOSIS	The expected course and outcome of a disease.
Lying face down	PRONE	Lying on the stomach or front.
Study looking forward	PROSPECTIVE STUDY	A study that follows participants forward in time.
Artificial body part	PROSTHESIS	An artificial replacement for a body part.
Study plan	PROTOCOL	The written plan for a study or treatment.
Closer to the center	PROXIMAL	Closer to the center of the body or point of attachment.
Related to the lungs	PULMONARY	Pertaining to the lungs.
Every day	QD	Prescription shorthand meaning every day; clearer wording is preferred.
Four times daily	QID	Prescription shorthand meaning four times a day.
Radiation treatment	RADIATION THERAPY	Treatment using high-energy radiation to damage or destroy abnormal cells.
By chance	RANDOM	Selected or occurring by chance.
Chance assignment	RANDOMIZATION	Assigning participants to groups by chance.
Red blood cell	RBC	A red blood cell.
Genetically combined	RECOMBINANT	Made by combining genetic material from different sources.
Put back together	RECONSTITUTION	Restoring something by putting its parts back together or adding a liquid.
Happen again	RECUR	To happen again.
Not responding	REFRACTORY	Not responding adequately to treatment.
Regrowth or repair	REGENERATION	Growth again or replacement of lost or damaged tissue.
Treatment schedule	REGIMEN	The planned pattern, dose, and timing of treatment.
Return of disease	RELAPSE	Return of a disease after improvement or remission.
No detectable disease	REMISSION	Disappearance or reduction of evidence of disease; it may be partial or complete.
Related to kidneys	RENAL	Pertaining to the kidneys.
Can be repeated	REPLICABLE	Able to be repeated with similar results.

Lay term	Medical term	Lay-language explanation
Remove surgically	RESECT	To remove part or all of an organ or tissue by surgery.
Study looking back	RETROSPECTIVE STUDY	A study that examines past records or past events.
Connective-tissue cancer	SARCOMA	A cancer arising from connective, bone, muscle, fat, or related tissues.
Calming medicine	SEDATIVE	A medicine that calms or makes a person sleepy.
Testicular cancer	SEMINOMA	A type of cancer arising in the testicle.
In order	SEQUENTIALLY	Happening one after another in order.
Sleepiness	SOMNOLENCE	Unusual sleepiness or a tendency to fall asleep.
Air-measuring instrument	SPIROMETER	An instrument that measures the amount of air moved into and out of the lungs.
Extent of disease	STAGING	Assessment of how far a disease has progressed or spread.
Usual accepted treatment	STANDARD OF CARE	A treatment plan generally accepted by the medical community as appropriate.
Narrowing	STENOSIS	Narrowing of a passage, duct, or blood vessel.
Mouth inflammation	STOMATITIS	Sores or inflammation inside the mouth.
Group for comparison	STRATIFY	To arrange people or results into groups for analysis.
Barely responsive state	STUPOR	A greatly reduced level of alertness in which a person is difficult to awaken or respond to.
Under the collarbone	SUBCLAVIAN	Located beneath the collarbone.
Under the skin	SUBCUTANEOUS	Beneath the skin.
Lying on the back	SUPINE	Lying face up on the back.
Care focused on comfort	SUPPORTIVE CARE	General care that relieves symptoms and supports the person without directly curing the underlying disease.
Having symptoms	SYMPTOMATIC	Showing or having symptoms.
Group of related findings	SYNDROME	A condition identified by a characteristic group of symptoms and signs.
Upper blood-pressure number	SYSTOLIC	Relating to the upper blood-pressure number when the heart contracts.
Birth-defect-causing	TERATOGENIC	Capable of causing abnormalities in a developing fetus.
Male sex glands	TESTES/TESTICLES	The organs that produce sperm and male reproductive hormones.
Clot formation	THROMBOSIS	Formation of a blood clot inside a blood vessel or other location.
Blood clot	THROMBUS	A blood clot formed within a blood vessel or the heart.
Three times daily	TID	Prescription shorthand meaning three times a day.
Gradual dose adjustment	TITRATION	Gradually changing a dose or solution to reach a desired effect.
Immune white blood cells	T-LYMPHOCYTES	White blood cells that help coordinate or carry out immune responses.
On the surface	TOPICAL	Applied to the surface, usually the skin or a mucous membrane.
Surface numbing medicine	TOPICAL ANESTHETIC	A numbing medicine applied to a particular surface area.

Lay term	Medical term	Lay-language explanation
Harmful effects	TOXICITY	Harmful or unwanted effects caused by a drug, chemical, or treatment.
Through the skin	TRANSDERMAL	Delivered through the skin.
Temporarily	TRANSIENTLY	For a short time or temporarily.
Injury	TRAUMA	Physical injury or wound.
Walking exercise machine	TREADMILL	A moving walking surface used for exercise or heart testing.
Absorption into tissue	UPTAKE	Absorbing or taking in a substance by living tissue.
Heart-valve repair	VALVULOPLASTY	A procedure that repairs or widens a heart valve.
Enlarged veins	VARICES	Abnormally enlarged or twisted veins.
Blood-vessel spasm	VASOSPASM	Sudden narrowing of blood vessels.
Disease carrier	VECTOR	An organism or carrier that can transmit a disease-causing microorganism.
Blood draw	VENIPUNCTURE	Puncturing a vein with a needle to draw blood or give treatment.
Parent-to-child spread	VERTICAL TRANSMISSION	Spread of an infection from a parent to a child, often during pregnancy, birth, or breastfeeding.
White blood cell	WBC	A white blood cell involved in immune defense.

Source and adaptation: Terms and concepts were checked against the University of Iowa Human Subjects Office, “Medical Terms in Lay Language,” available at <https://hso.research.uiowa.edu/get-started/guides-and-standard-operating-procedures-sops/medical-terms-lay-language>. The explanations in this appendix are paraphrased for this dictionary and are not the only acceptable plain-language alternatives.

Bibliography and Sources

This is a selected bibliography of standard medical dictionaries and authoritative biomedical terminology resources used to guide terminology, spelling, synonyms, and general definitions in this dictionary. The source material is not mapped term-by-term, so this list should not be read as a claim that every entry was copied from every source. Clinical decisions should be based on current guidelines, specialist references, and primary literature.

BMA Illustrated Medical Dictionary

British Medical Association. *The British Medical Association Illustrated Medical Dictionary*. Dorling Kindersley; 2007. ISBN 978-1-4053-1997-3. Bibliographic record available from: <https://obnb.uk/p13578671-the-british-medical-association-illustrated-medical-dictionary>
